Subject: **Phase I Environmental Site Assessment (Assessment)**

Site: **Assessor's Parcel Numbers (APNs) 469-021-18, 469-130-37, -38, -39, & -42**
7401 Alvarado Road
La Mesa, California 91942

Dear Mr. Brekka:

SCS Engineers (SCS) is pleased to present this report (Report) of the Assessment of the above-described Site. This Report summarizes the results of the Assessment that was conducted in order to evaluate the Site's current environmental conditions. The work described in this Report was performed by SCS in general accordance with Exhibit 00 to the Consulting Agreement between SCS and A&I Development Company (Contract). Exhibit 00 was fully and the Contract were fully executed on October 3, 2018.

Because your full understanding of the Assessment is important to us, SCS recommends that you read the Report in its entirety. However, if time does not allow you a complete reading, summaries may be found in text boxes at the end of each section (pages 12, 25, and 30), and our conclusions may be found on page 31. A glossary of terms commonly used in environmental assessments is also provided in the Appendices to this Report.

SCS enjoyed working with you on this project. Providing economical environmental solutions to meet your needs is more than our goal—it is our mission and the measure of our success. If we may assist you in any way, now or in the future, please call our office at (858) 571-5500.

Sincerely,

Allison O'Neal
Associate Professional

1 BACKGROUND

Based on conversations with RV Communities, LLC (Client) and a review of in-house databases, SCS Engineers (SCS) understands that 7401 Alvarado Road La Mesa, California (Site), consists of five parcels of land in San Diego, California (Figure 1). The Site is developed with 174 full hookup RV sites, one two-story office/club house/supply office, one swimming pool and spa, two single story laundry/restroom/storage buildings, one landscaping shed, and one electrical building. The Client currently owns and is planning to redevelop the Site; however, specific redevelopment plans are reportedly not known at this time.

A review of the in-house ParcelQuest database of information from the San Diego County Assessor's Office provided the following information in connection with the Site.

APN	Address	Area	Description	Improvements Information
469-021-18	7401 Alvarado Road	11.7 acres	RV Park	509,261 square feet, constructed 1953
469-130-37	Alvarado Road	0.19 acres	RV Park	8,470 square feet, constructed 1953
469-130-38	Alvarado Road	0.16 acres	RV Park	6,994 square feet, constructed 1953
469-130-39	Alvarado Road	0.16 acres	RV Park	6,890 square feet, constructed 1953
469-130-42	Alvarado Road	0.37 acres	RV Park	16,300 square feet, constructed 1953

2 STANDARDS BACKGROUND

This Assessment was conducted in general accordance with the following:

- U.S. Environmental Protection Agency (EPA), 40 Code of Federal Regulations (CFR) 312, Standards and Practices for All Appropriate Inquiries; Final Rule (AAI)
- American Society for Testing and Materials (ASTM) Standard Practice for Phase I Environmental Site Assessment Process E1527-13
- The scope, conditions, and limitations of Exhibit 00

The Client understands that the above-referenced EPA and ASTM standards were not developed to identify all environmental risk to property. The standards were developed to allow a user (Client) to qualify for the innocent purchaser defense, bona fide prospective purchaser defense, and contiguous property owner defense to the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA, a.k.a. Superfund) liability. This Assessment is intended to constitute an appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice, as part of the due diligence

process required by CERCLA, the Superfund Amendments and Reauthorization Act of 1986, and the Small Business Liability Relief and Brownfields Revitalization Act of 2002 (collectively, Acts).

While this Assessment may initially qualify the Client for a CERCLA defense, after purchase, there may be continuing obligations that must be implemented in order to preserve this defense through the term of property ownership. There may be additional requirements under state law that also apply. The Client should contact qualified legal counsel regarding matters of liability, interpretation of the Acts, and potential continuing obligations. Although it is outside the scope of this Assessment, SCS would be pleased to work with the Client's legal counsel to develop and implement a strategy to preserve the Client's CERCLA liability defenses through the term of its ownership.

This Assessment focused on potential sources of hazardous substances and petroleum products that could be considered either a recognized environmental condition,[1] controlled recognized environmental condition[2], or historical recognized environmental condition[3], and potentially a liability due to their presence in significant concentrations (e.g., above acceptable limits set by the federal, state, or local government) or due to the potential for exposure and risk due to contaminant migration and complete exposure pathways (e.g., soil vapor inhalation or groundwater ingestion). Materials that contain substances that are not currently deemed hazardous by the EPA or the California Environmental Protection Agency were not considered as part of this Assessment.

Unless specifically included in SCS' scope of services, building materials such as asbestos, lead-based paint, urea formaldehyde, and pressure-treated lumber, as well as lead in drinking water, are not considered in this Assessment, nor are building issues such as fire safety, indoor air quality (with the possible exception of vapor intrusion), mold, or similar matters. SCS did not evaluate the Site for compliance with land use, zoning, wetlands, or similar laws. This

---

1 *Recognized environmental conditions,* as defined by ASTM, include the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. However, the term is not intended to include *de minimis* conditions (a condition that generally does not present a threat to human health or the environment and that generally would not be subject to an enforcement action if brought to the attention of appropriate governmental agencies). A condition considered de minimis is not a recognized environmental condition.

2 *Controlled recognized environmental condition*, as defined by ASTM, is a *recognized environmental condition* resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity use limitations, institutional controls, or engineering controls).

3 *Historical recognized environmental condition,* as defined by ASTM, is a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

Assessment also excludes regulatory compliance, cultural and historic resources, industrial hygiene, health and safety, ecological resources, endangered species, and high-voltage power lines. This Assessment is not intended to be an environmental compliance audit.

Hazardous substances occurring naturally in plants, soils, and rocks (e.g., heavy metals, naturally occurring asbestos, and radon) are not typically considered in these investigations. Similarly, construction debris (e.g., discarded concrete, asphalt) is not considered, unless obvious indications suggest that hazardous substances are likely to be present in significant concentrations or likely to migrate.

An evaluation of business environmental risk associated with a parcel of commercial real estate may necessitate investigation beyond that included herein.

3 OBJECTIVE

The objective of the scope of services was to assess the likelihood that recognized environmental conditions are present at the Site as a result of the current or historical Site land use or from a known and reported off-Site source.

4 SCOPE OF SERVICES

The scope of services designed and conducted to meet the objective was as follows:

- Site Reconnaissance, Site Research, Interviews, and User Requirements
- Topography, Geology, Hydrogeology, and Water Quality Survey
- Site Vicinity Reconnaissance and Off-Site Source Survey
- Historical Site and Site Vicinity Land Use Review
- Identification of Data Gaps
- Data Evaluation, Figure Preparation, and Assessment Report Preparation

SITE RECONNAISSANCE

On October 10, 2018, SCS personnel conducted a Site reconnaissance to observe and document existing Site conditions[i]. The general Site location is shown in Figure 1, and a Site and Site Vicinity Plan is shown in Figure 2. Selected color photographs of the Site and Site vicinity are presented as Figures 3a through 3j.

The interiors of the Site buildings were observed, and the Site grounds and Site perimeter were systematically traversed on foot during the Site reconnaissance. Adam Evans, General Manager, accompanied SCS personnel, provided access to the observed features, and answered questions posed by SCS personnel.

General Information

The following table summarizes general information in connection with the Site.

APN	469-021-18, 469-130-37, -38, -39, and -42
Address	7401 Alvarado Road La Mesa, California 91942
Area	12.58 acres
Site Land Use	Commercial
Occupant	San Diego RV Resort
Figure Reference	Figures 3a-1 and 3h-1

Site Buildings

The following table summarizes information in connection with the Site buildings.

Number of Buildings	*5*
Interpreted Construction Date	Circa 1953
Number of Stories	1 to 2
Construction Type	Wood frame, concrete slab-on-grade foundations
Figure Reference	Figures 3a-1, 3c-2, 3e-1, and 3g-2

The buildings consist of one two-story registration office/club room/supply office/conference space/fitness center, two single-story laundry room/restroom/storage buildings, one single story landscaping shed, and one single-story electrical housing building. There were no obvious indications of the storage of hazardous materials or hazardous waste observed.

The eastern portion of the Site was observed to be occupied by one single-story laundry room/restroom/storage building and one single story landscaping shed (Figure 3e-1). Storage of 1 – 5 gallon cans and a bucket of paint were observed in the storage room (Figure 3f-1). Several 1 to 3 gallon gas canisters were observed in use for lawn mowers and Mr. Evans noted that they are stored in the landscaping shed.

The western portion of the Site was observed to consist of one single-story laundry room/restroom/storage building and one single-story electrical housing building (Figure 3g-2).

The middle to eastern portion of the Site was observed to be occupied by one two-story registration office/club room/supply office/conference space/fitness center (Figure 3a-1). A chemical storage cabinet, small retails quantities of commercial cleaners, and a floor drain were observed in the supply office (Figures 3c-2 - 3d-2).

Site Grounds

The Site grounds were observed to be occupied by 174 full hookup RV sites that have water and sewer access (Figures 3a-2 – 3c-1). All sites and roads were paved with asphalt and concrete. The northern grounds adjoining Alvarado Road were observed to be enclosed by a metal post fence that had metal security coded gates and doors to access the RV park. The southern part of the grounds were observed to be enclosed by a 5-foot high by approximately 20-foot long concrete brick wall (Figure 3j-1). There were portions of chain-link fence and wooded fence also observed enclosing the Site in the eastern and western sections. The trash disposal area was observed to be three dumpsters and several recycle cans enclosed by a chain-link and wooden fence. Alvarado Creek was observed in a concrete lined drainage swale flowing west along the southwest perimeter of the Site then transecting through the Site grounds in the eastern portion (Figure 3h-1 and 3h-2). A propane tank was observed south of the registration office (Figure 3f-2). Five pole-mounted electrical transformers were observed throughout the Site (Figures 2, 3g-1, and 3g-2).

Hazardous Materials / Petroleum Products

With the possible exception of small retail quantities of paint, commercial cleaners/chemicals, gasoline, and propane (Figures 3f-1, 3d-1, 3d-2, and 3f-2), no obvious indications of the storage or use of hazardous materials and/or petroleum products were observed at the Site during the Site reconnaissance.

Hazardous Materials / Petroleum Products	Storage Location	Approximate Amount
Paint	Eastern storage building	SRQs
Commercial cleaners/chemicals: Limelite, Pinalen, Wasp & Hornet Killer, WD-40, etc.	Registration office/supply office	SRQs
Gasoline	Landscaping shed	SRQs
Propane	Tank	Unknown

Note:
SRQs = Small retail quantities; i.e., quantities of hazardous materials in containers of 5 gallons or less, and less than 50 gallons in aggregate.

The hazardous materials and petroleum products were observed to be stored in their original containers with no obvious evidence of spills or releases.

Hazardous Wastes

No obvious indications of the generation of hazardous wastes were observed at the Site during the Site reconnaissance.

On-Site Utilities

Gas and Electricity	Reported to be San Diego Gas and Electric (SDG&E)
High-power Transmission Lines	None observed at or adjacent to the Site
Storm Drains	None observed to be located at the Site
Source of Heating and Cooling	Reported to be SDG&E
Potable Water Source	Reported to be supplied by the City of La Mesa, Helix Water District
Wastewater Conveyance	Reported to be operated by the City of La Mesa Sewer Service

Five SDG&E pole-mounted electrical transformers were observed to be located at the Site. SDG&E has been contacted regarding the possibility of polychlorinated biphenyls (PCBs) being present in its transformers. SDG&E reported that it has never specified PCBs in their transformers. A copy of a letter from SDG&E explaining this and its PCB testing policy is included in the Appendices. No obvious indications of leaks, such as stained concrete, were noted near the transformers. No obvious indications of leaks, such as stained pavement, were noted beneath the transformers.

With the exception of the propane tank, no obvious indications of wells, cisterns, pits, sumps, dry wells, or bulk storage tanks were observed at the Site.

SITE RESEARCH

Department of Environmental Health (DEH) File Review

The DEH was contacted[ii] and the file for the Site was reviewed. The DEH file for the Site includes a Kleinfelder/San Diego Gas and Electric, *Natural Gas Line 49-17 60-Day Report* dated May 1, 2015 (60-Day Report) that was part of a Pipeline Safety Enhancement Program. The 60-Day Report documents three soil borings (B6, B7, and B8) that were drilled in the right-of-way on the southern portion of Alvarado Road, adjacent to the Site. Groundwater samples and soil samples were collected from various depths and analyzed by a laboratory for various environmental parameters, including total petroleum hydrocarbons (TPH), Title 22 metals, and volatile organic compounds (VOCs). A soil sample from 3 feet deep from soil boring B-6, advanced adjacent to the 70th Street Trolley Station off Alvarado Road, was reported with 120 micrograms per kilogram of TPH in the C9-C10 range. A groundwater sample collected from boring B6 was reported with 93 milligrams per liter of TPH. No TPH or VOCs were reported in groundwater from samples collected from borings B-7 and B-8. Soil borings B-7 and B-8 were advanced in the Alvarado Road right-of-way and on each side of Alvarado Creek, adjacent to the Site. A soil sample collected from boring B-8 at 2 feet deep was reported with 200 mg/kg of TPH and 40 mg/kg of arsenic. Note that deeper soil samples contained elevated arsenic as well (i.e. sample B-8-16 from 16 feet below grade was reported with 19.3 mg/kg of arsenic, and the

soil sample collected from 15 feet below grade from boring B7 contained 24.9 mg/kg arsenic); therefore, it is possible that the elevated arsenic is naturally occurring. No additional TPH was reported in deeper soil samples from boring B-8 or from any soil samples collected from boring B-7, and considering that the 2-foot sample collected from boring B-8 was adjacent to the road, it is likely that the TPH is a result of asphalt paving in the road. Based on the relatively low concentrations of TPH reported in groundwater in the Site vicinity, the reported arsenic and low concentration of shallow TPH in soil within the Alvarado Road right-of-way adjacent to the Site, and the lack of an open unauthorized release case related to these findings by the DEH, these reported constituents of concern are not considered to represent a recognized environmental condition to the Site.

Review of Client-Provided Documents

The Client provided a report titled *Review of Historical Land Uses and Assessment of the Likelihood of Toxic or Hazardous Materials Contamination for the La Mesan Mobile Lodge, La Mesa, California*, which was prepared by Michael Brandman Associates (MBA) and dated May 30, 1990. This report provided the following conclusions and recommendations in connection with the Site:

- Conclusions: In the course of interviews with the public officials and the current property manager, review of available aerial photographs and public records, and an inspection of the site and adjacent properties, no notable evidence was discovered indicating the presence of hazardous wastes or materials at the La Mesan Mobile Lodge located at 7401 Alvarado Road. However, due to the proximity of the subject property to the La Mesa RV Center, which had four leaking USTs, it is possible that the subject property could have soil and/or groundwater contamination from petroleum products (waste oil and leaded gasoline). However, the San Diego RWQCB and the Department of Health Services for San Diego County have identified the La Mesa RV Center as the point source of the contamination and are pursuing their investigations to assess liability to the La Mesa RV Center.

- Recommendations: Based on the data evaluated and presented in this report, MBA does not recommend that any soil or groundwater sampling be done at this time. With regard to the current stage of construction of the building scheduled for remodeling, no asbestos sampling would be required unless other demolition is planned. Prior to the demolition and/or renovation of any other structures, MBA recommends these other structures be tested for ACM.

The Client provided a report titled *Report of Preliminary Geotechnical Investigation, Paydar Apartment Project* which was prepared by GEi Geotechinical Exploration, Inc. and dated June 30, 2004. This report provided the following conclusions and recommendations in connection with the Site:

- Conclusions and recommendations: Our investigation reveal that the building site is underlain by a thin veneer of fill soils that are, in turn, underlain by cobble conglomerate formational materials. Stream deposits underlie the fill soils along the southern perimeter of the site. The prevailing formational materials encountered on the site are dense and are

of very low expansion and consolidation potential. These variable density fill soils and stream deposits will not provide a stable soil base for the proposed structures and associated improvements. As such, we recommend that these soils be removed and recompacted as part of site preparation prior to the addition of any new fill or structural improvements. It appears that excavation for the subterranean garage level will result in the removal of all of the fill soil and stream deposits in those areas. It is our opinion that the formation materials will provide adequate support for the proposed structures and improvements. Excavation for the subterranean parking garages will result in the removal of the 10 to 12 feet of soil at the structure locations. The encountered sandy soil and cobble material on the site are considered to be acceptable for export from the site. A shoring system may need to be installed in the areas of the planned garage basement excavations. In some areas of the site loose cohesionless soils may be encountered. Dewatering will most likely be necessary during excavation for the subterranean garage levels. Details on Site Preparation, Design Parameters for Foundation and Retaining Walls, Shoring Design Parameters, Retaining Walls, Slopes, Floor Slab Vapor Transmission, Site Drainage Considerations, and General Recommendations were included.

The Client provided a report titled *Preliminary Report* which was prepared by Ticor Title and dated November 18, 2013. This report provided the following conclusions and recommendations in connection with the Site:

- Response to the application for a policy of title insurance, policies are set forth insuring against loss.

The Client provided documents from Ticor Title dated November 4, 2013.

- No Environmental Lien or Activity and Use Limitations are included.

The Client provided a report titled *Civil Site Plan with Building BMPs* and dated May 21, 2018.

- Proposed stormwater Best Management Practices (BMPs) plan for the Site.

Fire Department Records Review

The City of La Mesa Fire Department (LMFD) was contacted regarding hazardous materials/waste or UST records for the current and historical Site addresses of 7407 Alvarado Road[iii].

A response from the LMFD had not been received as of the time of publication of this Report.

Building Department Records Review

La Mesa Building Department (LMBD) records were reviewed for the Site [OR for the current and historical Site addresses of 7407 Alvarado Road Le Mesa, CA 91942], and are summarized in the table below[iv]. Copies of the LMBD records for the Site are included in the Appendices.

Year	Description	Reported Applicant/Owner
1953	Build Two Restrooms	Cosgrove
1954	Drainage channel for Alvarado Creek*eroded neighbors land	Cosgrove
1954	Build Swimming Pool	Cosgrove
1954	Build Rest. Lounge & Rumpus Rm's & Mail Rm	Cosgrove
1954	Build Comfort Station for Trailer Court	Cosgrove
1954	Build Filter Room & Office Rooms, 2 story	Cosgrove
1955	Build Residence	Cosgrove
1957	Build 49 slabs, 49 storage lockers, Restroom & utility Bldg,	Cosgrove
1958	Build Patio cover	J.D. Anderson
1958	Build Office Addition	NA
1979	Install Carport 8x20	Cosgrove
1980	Build Porch	NA
1983	Verify embankments, placement of sandbags, and masonry block walls, Alvarado channel improved*	Catlin
1983	Alvarado channel improved accommodate 2000 cfs flow*	Bras
1983	Mobile home	NA
1984	Demolition of garage	Cosgrove
1984	Mobile Home set space 173	Hal Ansley
1984	Compliance inspection for mobile home	Bernard Kinney
1984	Build new structure around new existing electrical panel box	Cosgrove
1986	Installation of spa	Cook
1987	Change of ownership, permit to operate mobile home park	Bouse
1988	Unauthorized alterations to metal building	Billings and Kuntzel
1988	Mobile Home Installations	NA
1990	Repair to existing restroom	NA
1990	Remodel existing residence	NA
1990	Replace potable water system underground	NA
1995	Addition to mobile home site 168	Williams

Year	Description	Reported Applicant/Owner
1999	Insulation install	Williams-Duren
1999	Multi-family alteration	NA
2000	Combo building permit	NA
2000	Improvement, gunite spa	NA
2000	Bath/Laundry remodel	NA
2000	Sign permit	NA
2000	Fence and gates	Paydar
2001	Build deck an awning	NA
2001	Build deck and awning	Louis
2004	Replace 47 meter pedestals for pads	RV Communities LLC
2018	Keep non-conforming retaining wall, brick building, other	Brekka

*Historic records of flooding in western section of the Site from the Alvarado Creek Channel. Please see the 'Historical Site Land Use' section for more details.

San Diego Air Pollution Control District (SDAPCD) Records Review

The SDAPCD was contacted[v] regarding records for the Site. According to Ms. Cynthia Gould of the SDAPCD no records are found for the Site.

San Diego Industrial Wastewater Program (IWP) Records Review

The IWP was contacted[vi] regarding records for the Site. According to the IWP, there are no records for the Site.

Regional Water Quality Control Board (RWQCB) Records Review

The San Diego RWQCB was contacted[vii] regarding records for the Site. According to the RWQCB, one record for trenching the Alvarado Creek channel bank to repair a damaged sewer main and stabilize the bank was found.

Environmental Lien Search

An Environmental Lien Search was requested from Nationwide Environmental Title Research (NETR).[i] NETR reported that no environmental liens and no other activity and use limitations (AULs) were found for the Site. A copy of the NETR report is included in the Appendix.

INTERVIEWS

The previously referenced EPA and ASTM standards require that attempts be made to conduct interviews with past and present owners and occupants of the Site to obtain information indicating recognized environmental conditions in connection with the Site. As part of this Assessment, the following contacts were either interviewed or attempts were made to conduct interviews.

Contact	Affiliation to Site	Description	Interview Date
Mr. Michael Brekka	VP Real Estate Development	Discussed below	October 2, 2018
Mr. Adam Evans	General Manager	Discussed below	October 10, 2018

Mr. Evans stated that, to his knowledge, and with the possible exception of typical construction related activities, hazardous materials and petroleum products were not used or stored at the Site and that hazardous wastes were not generated at the Site. Also, to his knowledge, there have been no releases of hazardous materials, petroleum products, and hazardous waste at the Site.

Mr. Brekka stated that he was not aware of environmental cleanup liens or activity and use limitations (e.g., engineering controls, deed restrictions) that have been recorded for the Site. He was not aware of pending or threatened litigation or administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the Site. He was not aware of notices from governmental entities regarding possible violations of environmental laws or possible liability relating to hazardous substances or petroleum products at the Site.

USER REQUIREMENTS

In order to qualify for one of the landowner liability protections offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (discussed in the "Background" section), 40 CFR 312 requires that the user (Client) provide the following information to the environmental professional. Mr. Michael Brekka completed the User Questionnaire on October 2, 2018. The following table summarizes the responses by the Client.

Question	Response
Have environmental cleanup liens been filed or recorded against the Site?	No
Are activity or land use limitations in place at the Site, or have they been filed or recorded in the registry?	No
Does the user have specialized knowledge or experience in connection with the Site?	No
Does the purchase price being paid for the Site reasonably reflect the fair market value of the Site?	Yes

Is the Client aware of commonly known or reasonably ascertainable information about the Site that would indicate releases or threatened releases?	No
Are there obvious indications that point to the presence of contamination at the Site?	No

DATA GAPS IN CONNECTION WITH CURRENT SITE LAND USE

Based on observations and research, and with the possible exceptions discussed below, there are no obvious indications of data gaps in connection with the current Site land use:

- As of the time of publication of this Report, records had not been received from the LMFD. This data gap is not a significant data gap in our opinion based on the availability of other relevant information.

Findings and Opinions—Current Site Land Use
Based on observations and research, it is our opinion that there are no recognized environmental conditions at the Site as a result of the current Site land use.

TOPOGRAPHY, GEOLOGY, HYDROGEOLOGY, AND WATER QUALITY SURVEY

Topography

A topographic map for the Site vicinity was reviewed and is summarized in the following table.

Reported Elevation	420 feet above mean sea level
Reported Slope Direction	Slopes down to the northwest
Source	U.S. Geological Survey, 20120323, USGS US Topo 7.5-minute map for La Mesa, CA 2012: USGS - National Geospatial Technical Operations Center (NGTOC).

Alvarado Creek was observed in a concrete lined drainage swale flowing west along the southwest perimeter of the Site then transecting through the Site grounds in the eastern portion (Figures 2, 3h-1, and 3h-2).

Geology

A geological map for the Site vicinity was reviewed and is summarized in the following table.

Reported Formation	Stadium Conglomerate (middle Eocene)
Reported Description	The Stadium Conglomerate consists of a massive cobble conglomerate with dark yellowish-brown, coarse-grained sandstone matrix.

Source	Kennedy, Michael P., and Siang S. Tan, *Geologic Map of the San Diego 30′ × 60′ Quadrangle, California*, California Geological Survey, 2008

Hydrogeology

Data regarding depth to groundwater and flow direction for the Site were not readily available. In the absence of Site-specific data, depth to groundwater and flow direction information was reviewed for properties within the Site vicinity using the State Water Resources Control Board GeoTracker database. The following table summarizes the results of this review.

Property Location	7241 Alvarado Road (approximately 0.24 mile west of the Site)
Reported Depth	6 to 9 feet below grade
Reported Flow Direction	Northwest
Source	Voluntary Assistance Program (VAP), Former SID Auto Body, 7241 Alvarado Road, La Mesa, California, dated October 18, 2005

Many variables influence depth to groundwater and flow direction and that the actual depth to groundwater and flow direction at the Site may be different than presented in this section.

Water Quality Survey

The following table summarizes the reported water quality in the Site vicinity.

Reported Hydrologic Area	Lower San Diego Hydrologic Area (907.10)
Reported Hydrologic Unit	San Diego Hydrologic Unit (907.00).
Reported Beneficial Use	Agricultural, industrial, and municipal and domestic supply

SITE VICINITY RECONNAISSANCE AND OFF-SITE SOURCE SURVEY

Current Site Vicinity Conditions

The following table summarizes land use and observations in the immediate Site vicinity[viii]. For the purpose of this Report, the immediate Site vicinity includes those properties judged to be adjacent[4] to the Site.

4. *Adjacent* is defined by ASTM E1527-13 as any real property or properties the border of which is contiguous or partially contiguous with that of the Site or that would be contiguous or partially contiguous with that of the Site but for a street, road, or other public thoroughfare separating them.

Direction	Land Use	Comments
North	Single Family Residences (SFR) 5210 & 5215 Maryland Avenue, SFR 5210 & 5215 Guessman Avenue, Seta Apartment Homes (7300 – 7390 Parkway Drive) (Figure 3j-2), The Cove Apartments (7400 – 7490, Parkway Pointe Condominiums (7500 – 7510 Parkway Drive)	No obvious indications of the use, storage, or generation of hazardous materials/wastes or petroleum products were observed.
East	Bob Stall Chevrolet (7601 Alvarado Rd) (Figure 3i-2)	Hazardous materials/wastes or petroleum products use, storage, or generation were observed and are discussed in the Additional SCS Research section below.
South	La Questa Apartments (7272 Saranac St) (Figure 3j-1), SFR (5084 – 5090 Keeney Street), Colony Mobile Plaza (7440 Colony Dr) Comanche Hills Apartments (5040 Comanche Drive)	No obvious indications of the use, storage, or generation of hazardous materials/wastes or petroleum products were observed.
West	70th Street Trolley Station (Figure 3h-2) Family Auto Service (7191 Alvarado Rd) (Figure 3i-1)	Hazardous materials/wastes or petroleum products use, storage, or generation were observed and are discussed in the Additional SCS Research section below.

Environmental Regulatory Database Report

An environmental regulatory database report (Radius Map™ report[ix]) was prepared by EDR for the Site. Local, state, and federal regulatory databases were reviewed for the Site and for those facilities within up to 1 mile of the Site. The Radius Map™ report was reported to have been prepared in general accordance with the ASTM standard for the regulatory database review for Phase I Environmental Site Assessments. The locations of the referenced facilities relative to the Site are shown on the overview maps, included in the Radius Map™ report. A description of the various databases, as well as the date each database was most recently updated, is included in the Radius Map™ report. The Radius Map™ report is included in the Appendices to this Report.

Based on a review of the Radius Map™ report, the following table summarizes the facilities within the selected search radii and whether the Site or a facility that was interpreted to be adjacent to the Site was listed on each database.

Federal or State Government Database	Search Radius	Number of Reported Facilities	On Site	Adjacent to the Site
National Priorities List (NPL)	1.00 mile	0	No	No

Federal or State Government Database	Search Radius	Number of Reported Facilities	On Site	Adjacent to the Site
NPL Delisted	1.00 mile	0	No	No
Superfund Enterprise Management System (SEMS)	0.50 mile	0	No	No
No Further Remedial Action Planned (NFRAP)	0.50 mile	0	No	No
Resource Conservation and Recovery Act– Corrective Action (RCRA COR ACT)	1.00 mile	0	No	No
RCRA Treatment and Disposal Facilities (RCRA TSD)	0.50 mile	0	No	No
RCRA Generators (RCRA GEN)	0.25 mile	4	No	Yes
Federal Engineering and Institutional Controls (IC/EC)	0.50 mile	0	No	No
Emergency Response Notification System (ERNS)	0.12 mile	0	No	N/A
State/Tribal- Equivalent NPL	1.00 mile	0	No	No
State/Tribal-Equivalent CERCLIS (ENVIROSTOR)	1.00 mile	5	No	No
State/Tribal Solid Waste List (SWL)	0.50 mile	0	No	No
State/Tribal Leaking Underground Storage Tanks (LUST, San Diego County Site Assessment and Mitigation [SAM], Spills, Leaks, Investigation, and Cleanup [SLIC])	0.50 mile	52	No	Yes
State/Tribal Underground/Aboveground Storage Tanks (USTs/ASTs)	0.25 mile	1	No	Yes
State/Tribal Voluntary Cleanup Program (VCP)	0.50 mile	0	No	No
Federal Brownfields	0.50 mile			
Other Haz Sites (San Diego Hazardous Materials Management Division [HMMD])	Site only	0	No	No
Local Lists of Hazardous Waste/Contaminated Sites (San Diego HMMD)	Site only	0	No	No
Local Lists of Registered Storage Tanks (Statewide Environmental Evaluation and Planning System [SWEEPS UST], Historic UST, CA Facility Inventory Database [FID] UST)	0.25 mile	7	No	Yes
Local Land Records (DEED)	0.50 mile	0	No	No

Federal or State Government Database	Search Radius	Number of Reported Facilities	On Site	Adjacent to the Site
Other (RCRA NonGen, Drycleaners, Hist Cortese, Notify 65)	0.12 mile	16	No	Yes
EDR High Risk Historical Records (Historic Auto, Historic Cleaner, Manufactured Gas Plant [MGP])	0.125 mile	4	Yes	Yes

N/A = Not applicable

The Site was listed on the following databases:

- Historic Auto database as Wright Mobil Service 7407 Alvarado Rd, listed to occupy the Site from 2001 – 2005. EDR lists this facility as a gasoline service station; however, the Site has not been used as a gasoline service station based on research conducted for this Assessment. This interpretation is considered erroneous, the Mobil Service is likely related to a mobile car detailing or mobile automotive repair service that used the Site as a 'hub' or mailing address.

- CHMIRS, the California Hazardous Material Incident Report System, database at 7407 Alvarado Rd. Types of hazardous materials were not reported, and no violations were listed.

Regulatory agency files reviewed for the Site are discussed in the "Site Research" section above.

Off-Site facilities listed in the Radius Map™ report were evaluated as to their potential to impact the Site. The databases included in the Radius Map™ report can be grouped into two general categories: databases reporting unauthorized releases of hazardous substances or petroleum products (e.g., LUSTs, RCRA COR ACT facilities, National Priorities List [a.k.a. Superfund] sites) and databases reporting permitted hazardous materials users and hazardous waste generators for which a release has not been reported to, and recorded by, the regulatory agency.

SCS evaluated each of the off-Site facilities listed in the Radius Map™ report as to their potential to impact the Site, based on the following factors:

- Reported distance of the facility from the Site[5]

[5] Based on "Technical Justification for Groundwater Media-Specific Criteria," (Groundwater Study) (March 2012) developed to support the State of California "Low Threat Closure Policy" (adopted May 2012), "plume length studies recognize that petroleum plumes stabilize in length due to natural attenuation." The Groundwater Study goes on to cite Shih et. al., 2004 that a peer-reviewed study of plume lengths at 500 petroleum UST sites in the Los Angeles area is widely accepted as representative of plume lengths at California UST sites. Shih et. al. reports methyl tertiary butyl ether (MTBE), with 90th percentile maximum plume lengths of 540 feet. Therefore, the detailed review radius for open groundwater cases has been conservatively established by SCS at 0.20 miles (approximately 1,000 feet). For non-release cases (e.g., permitted facilities), only those facilities that were judged to be immediately adjacent to the Site were interpreted to have the potential to represent a recognized environmental condition.

- The nature of the database on which the facility is listed, and/or whether the facility was listed on a database reporting unauthorized releases of hazardous materials, petroleum products, or hazardous wastes
- Reported case type (e.g., soil only, failed UST test only)
- Reported substance released (e.g., chlorinated solvents, gasoline, metals)
- Reported regulatory agency status (e.g., case closed, "no further action")
- Location of the facility with respect to the reported groundwater flow direction and depth to groundwater (discussed in the "Hydrogeology" section of this Report)

Based on one or more of the factors listed above, and with possible exceptions discussed in the Additional SCS Research section below, there is a low likelihood that the off-Site facilities listed in the Radius Map™ report represent a recognized environmental condition in connection with the Site.

EDR listed nine facilities as being "orphans," which are facilities for which EDR does not have sufficient information to accurately locate them on a map. Based on a review of the orphans, it is interpreted that none of the facilities are within the requisite search radii for their reported database listings.

Additional SCS Research

Sid's Auto Body, 7241 Alvarado Rd (Located 800 feet to the west of the Site)

This facility is situated approximately 800 feet west of the Site, on Alvarado Road. Based on its listing on the SAM and CPS-SLIC databases and proximity to the Site, summaries of regulatory agency files for this facility were reviewed from the EDR report and from the State Water Resources Control Board Geotracker database.

The facility was reported in 2002 as a CPS-SLIC, Cleanup Program Sites formally known as Spills, Leaks, Investigations, and Cleanups and SAM, DEH Site Assessment & Mitigation, for potential diesel contamination of the aquifer used for drinking water supply. A Phase II environmental assessment, site mitigation, and a case closure was done by Ninyo & Moore in 2005. Only soils containing elevated concentrations of lead were mitigated in 2004 and the remaining contaminants in the soil and groundwater were either below contaminant levels or not detected above laboratory reporting limits. The DEH issued a case closure letter on October 18, 2005, indicating that the cleanup goals established for this project were met. Based on the reported mitigation of the project by Ninyo & Moore to below cleanup goals, the closure letter issued by the DEH, the distance from the Site, and the location of this facility with respect to the reported groundwater flow direction (i.e., downgradient from the Site), this facility is not considered to represent a recognized environmental condition to the Site.

Sport & Import Auto Service, Funston and Carol Johnson, 7243 Alvarado Road (Located 680 feet to the west of the Site)

This facility is situated approximately 680 feet west of the Site, on Alvarado Road. Based on its listing on the FINDS (Facility Index System/Registry System), RCRA-SQG, SWEEPS UST, HMMD, ECHO (Enforcement & Compliance History Information), and Historic Auto databases and proximity to the Site, summaries of regulatory agency files for this facility were reviewed from the EDR report.

The facility was reported in 1985 as a RCRA small quantity generator (SQG) for more than 100 and less than 1,000 kilograms of hazardous waste during any calendar month, and is listed as an automotive service. Types of hazardous materials were not reported, and no violations were listed.

Based on the lack of known and reported releases from this facility, the lack of reported violations, the location of this facility to the west of the Site and cross-to down-gradient position with respect to the groundwater flow direction, this facility is not considered to represent a recognized environmental condition to the Site.

Southern Paint 7 Auto Body Shop, 7245 Alvarado Rd (Located 680 feet to the west of the Site)

This facility is situated approximately 680 feet west of the Site, on Alvarado Road. Based on its listing on the Historic Auto databases and proximity to the Site, summaries of regulatory agency files for this facility were reviewed from the EDR report.

The facility was reported in 1971 as an automobile repair shop.

Based on its listing on the Historic Auto database and its proximity to the Site, the DEH file for these nearby facilities were reviewed. The DEH file includes CIRs for the period from 1991 through 2009. In addition, the September 2010 DEH HE-17 database of facilities storing hazardous materials, generating hazardous wastes, and discharging unauthorized releases was reviewed. The following table summarizes information obtained from review of CIRs and/or the in-house HE-17 database regarding hazardous materials and petroleum products reported to be used and stored, hazardous wastes reported to be generated, and violations of the hazardous waste control law.

H113326, H122103, H137324 7241 – 7245 Alvarado Road:

Year	Hazardous Materials, Petroleum Products, Hazardous Waste	Violations
1991	None	Records keeping
1993	Used batteries (600 pounds per year [lbs/yr])	Batteries recycled
1995	Used batteries (600lbs/yr)	Records keeping, none batteries recycled
1997	Used batteries (600lbs/yr)	None batteries recycled

Year	Hazardous Materials, Petroleum Products, Hazardous Waste	Violations
2000	Waste oil & Mixed oil (1500 gallons per year [gal/yr]) Used Batteries (600lbs/yr) Hydrocarbon solvents (80 gal/yr) Halogenated solvents (5 gal/yr) Used oil filters (100lbs/yr) Unspecified alkaline solution (20 gal/yr) Organic liquids with metals (110 gal/yr)	Records keeping, hazardous waste recycled
2001	Training records unavailable Waste oil & Mixed oil (1500 gallons per year [gal/yr]) Used Batteries (600lbs/yr) Hydrocarbon solvents (80 gal/yr) Halogenated solvents (5 gal/yr) Used oil filters (100lbs/yr) Unspecified alkaline solution (20 gal/yr) Organic liquids with metals (110 gal/yr)	Records keeping, hazardous waste recycled
2002	Training records unavailable UPF Permit not obtained for Hazwaste UPFP Permit not obtained for Hazwaste	Records keeping
2007	Waste oil & Mixed oil (not available [NA] lbs/yr) Used Batteries (not available [NA] lbs/yr) Hydrocarbon solvents (not available [NA] lbs/yr) Halogenated solvents (not available [NA] lbs/yr) Used oil filters (not available [NA] lbs/yr) Unspecified alkaline solution (not available [NA] lbs/yr) Organic liquids with metals (not available [NA] lbs/yr)	Records keeping, hazardous waste recycled, missing labels
2009	Waste oil & Mixed oil (2000 gallons per year [gal/yr]) Used Batteries (800lbs/yr) Halogenated solvents (5 gal/yr) Used oil filters (1000lbs/yr) Unspecified alkaline solution (20 gal/yr) Organic liquids with metals (700 gal/yr)	Records keeping, hazardous waste recycled
1991	One tank removed	
2004	One tank removed	

Conclusion:

Based on the types and quantities of hazardous materials and petroleum products used and stored and hazardous waste generated at this facility, the absence of disposal violations, and the lack of known and reported releases, the distance from the Site, and the location of this facility with respect to the reported groundwater flow direction (i.e., cross- to downgradient from the Site), there is a low likelihood that a recognized environmental condition exists at the Site in

connection with the listing of the reported hazardous materials and petroleum products at this facility.

Parkway Cleaners, 7200 Alvarado Rd (Located to the 600 feet northwest of the Site)

This facility is situated approximately 600 feet northwest of the Site, on Parkway Drive. Based on its listing on the Historic Cleaners databases and proximity to the Site, summaries of regulatory agency files for this facility were reviewed from the EDR report.

The facility was reported in 2004 - 2006 as a Dry-cleaning Plants, except rugs service.

Based on the lack of known and reported releases from this facility, the lack of reported violations, the down-gradient position of this facility with respect to the Site, the facility only being operated four years, and the location of this facility northwest, and the reported depth to groundwater, this facility is not considered to represent a recognized environmental condition to the Site.

Alvarado Creek Redevelopment site, 8181 Alvarado Road (Located 200 feet to the east of the Site)

This facility is situated approximately 200 feet east of the Site, on Alvarado Road. Based on its listing on the State Water Resources Control Board Geotracker database and proximity to the Site, summaries of regulatory agency files for this facility were reviewed from the State Water Resources Control Board Geotracker database.

Phase I and II site assessments done on the facility in 1996 shows soils only surface spillage of waste petroleum and asphaltic debris. Soil sample analytical data indicates there is very limited surficial impact to the environment, with TRPH levels ranging from 'none detected' to 1,615 ppm. In addition, a stockpile of construction type material, located adjacent to the concrete lined Alvarado Creek bed, was determined to be non-hazardous. The DEH issued a case closure letter on August 7, 1996, indicating that the cleanup goals established for this project were met. Based on the closure letter issued by the DEH, and the distance from the Site, this facility is not considered to represent a recognized environmental condition to the Site.

Bob Stall Chevrolet, 7601 Alvarado Rd (Located adjacent to the east of the Site)

This facility is situated adjacent to the east of the Site, on Alvarado Road. Note that due to the large size of this facility, the nearest structures at this facility where automotive repair bays would have been situated are 200 feet to the east or greater. Based on its listing on the RCRA-SQG, AST, HMMD, FINDS, ECHO, SAM, LOP, LUST, Hist UST, SWEEPS UST, EMI, Hist CORTESE and HAZNET databases and proximity to the Site, summaries of regulatory agency files for this facility were reviewed from the EDR report and from the State Water Resources Control Board Geotracker database.

The facility was reported in 1986 - 1996 in the Local Oversite Program (LOP), DEH Site Assessment & Mitigation agency, with a soils only case that was closed July 26, 1996. The

facility was also reported in 1996 as a RCRA small quantity generator (SQG) for more than 100 and less than 1,000 kilograms of hazardous waste during any calendar month, and is listed as an automotive service. Types of hazardous materials were not reported, and no violations were listed.

Based on its listing on various databases and its proximity to the Site, the DEH file for these adjacent facilities were reviewed. The DEH file includes CIRs for the period from 1991 through 2010. In addition, the September 2010 DEH HE-17 database of facilities storing hazardous materials, generating hazardous wastes, and discharging unauthorized releases was reviewed. The following table summarizes information obtained from review of CIRs and/or the in-house HE-17 database regarding hazardous materials and petroleum products reported to be used and stored, hazardous wastes reported to be generated, and violations of the hazardous waste control law.

H102651 7601 Alvarado Rd

Year	Hazardous Materials, Petroleum Products, Hazardous Waste	Violations
1991	Hazardous waste	Stored in excess, missing labels, inadequate training
1992	Hazardous waste Used oil filters	Records keeping, missing labels, not properly drained
1994	Hazardous waste Land Disposal Waste oil & Mixed oil (2500 gallons per year [gal/yr]) Used Batteries (2500 pounds per year [lbs/yr]) Hydrocarbon solvents (960 gal/yr) Used oil filters (750lbs/yr) Unspecified alkaline solution (60 gal/yr) Paint Sludge (40 gal/yr)	Records keeping, missing labels, hazardous waste recycled
1995	Waste oil & Mixed oil (2500 gallons per year [gal/yr]) Used Batteries (2500 pounds per year [lbs/yr]) Hydrocarbon solvents (960 gal/yr) Used oil filters (750lbs/yr) Unspecified alkaline solution (60 gal/yr) Paint Sludge (40 gal/yr)	Records keeping, missing labels, hazardous waste recycled
1997	Used oil filters Business plan	Not properly drained, records keeping
1998	Hazardous waste Used oil filters Training records unavailable/inadequate	Waste container not closed, Records keeping, improper management, improperly contaminated, not properly drained, hazardous waste recycled

Year	Hazardous Materials, Petroleum Products, Hazardous Waste	Violations
1999	Waste oil & Mixed oil (6000 gallons per year [gal/yr]) Unspecified oil containing waste (2100lbs/yr) Organic liquids with metals (300 gal/yr) Used Batteries (2500lbs/yr) Used oil filters (2000lbs/yr) Unspecified alkaline solution (80 gal/yr) Paint Sludge (40 gal/yr) Hydrocarbon solvents (960 gal/yr)	**Unauthorized disposal**, Records keeping, Waste container not closed, **Disposal or causing the disposal to an unauthorized point**, Not properly drained, Waste container not closed, Hazardous waste recycled
2001	Hazardous waste Used oil filters Training records unavailable/inadequate Waste oil & Mixed oil (6000 gallons per year [gal/yr]) Unspecified oil containing waste (2100lbs/yr) Organic liquids with metals (300 gal/yr) Used Batteries (2500lbs/yr) Used oil filters (2000lbs/yr) Unspecified alkaline solution (80 gal/yr) Paint Sludge (440 gal/yr) Hydrocarbon solvents (960 gal/yr)	Waste container not closed, generator of waste not determined, waste determination not made, Records keeping, improper management, improperly contaminated, not properly drained, hazardous waste recycled
2002	Waste oil & Mixed oil (not available [NA] lbs/yr) Used Batteries (NA lbs/yr) Hydrocarbon solvents (NA lbs/yr) Halogenated solvents (NA lbs/yr) Used oil filters (NA lbs/yr) Unspecified alkaline solution (NA lbs/yr) Organic liquids with metals (NA lbs/yr)	Waste onsite >90/180/270 days, Second containment not kept empty, Waste container not closed, generator of waste not determined, waste determination not made, Records keeping, improper management, improperly contaminated, not properly drained, hazardous waste recycled
2004	Hazardous waste Used oil filters Training records unavailable/inadequate	Without PE assessment, Waste onsite >90/180/270 days, Second containment not kept empty, Waste container not closed, generator of waste not determined, waste determination not made, Records keeping, improper management, improperly contaminated, not properly drained, hazardous waste recycled

Year	Hazardous Materials, Petroleum Products, Hazardous Waste	Violations
2005	Hazardous Waste	Second containment not kept empty, waste container without labels, records keeping, without proper labels, no daily tank inspection, waste determination not made
2007	Unspecified alkaline solution Paint Sludge Alkaline Solution without Hydrocarbon solvents Inorganic solid waste Oxygenated solvents Waste oil & Mixed oil Unspecified Oil Used Batteries Organic liquids with metals Used oil filters Unspecified organic liquid	Records keeping, hazardous waste recycled
2010	Unspecified aqueous (120 gal/yr) Paint Sludge (110 gal/yr) Alkaline Solution without (500 gal/yr) Unspecified alkaline (20 gal/yr) Oxygenated solvents (400 gal/yr) Waste oil & Mixed oil (8000 gal/yr) Unspecified Oil (2100 gal/yr) Used Batteries (2500 lbs/yr) Organic liquids with metals (2000 gal/yr) Used oil filters (9000 lbs/yr) Unspecified organic liquid (160 gal/yr)	Records keeping, hazardous waste recycled

Regarding the unauthorized disposal incident reported in 1999, details regarding the nature of this violation were not reported. It has been SCS's experience that typically, these violations involve relatively minor incidences, such as disposal of paint, oil filters, or used rags to the municipal trash, or spills of relatively minor quantities of constituents of concern to the ground surface. Overall, if these incidences were not the result of additional follow up by the regulatory agency through opening of an unauthorized release case or other repeated regulatory notices, these incidences are typically *de minimis* and present a low likelihood of a recognized environmental condition

Conclusion:

Based on the types and quantities of hazardous materials and petroleum products used and stored and hazardous waste generated at this facility, and the distance of auto repair bays at this facility

from the Site (200 feet away or greater), there is a low likelihood that a recognized environmental condition exists at the Site in connection with the various hazardous materials related permit listings of this facility. The unauthorized release case for the 7601 Alvarado Road property is separately discussed below.

LUST Case

H02651 La Mesa RV Center/Bob Stall Chevrolet, 7601 Alvarado Rd (Located to the east of the Site)

Based on its listing on the LUST database and its proximity to the Site (adjacent to the east), the regulatory file for this facility was reviewed. The following reports were included in the DEH file and reviewed as part of this Assessment:

- The *Quarterly Groundwater Monitoring Report for the First Quarter 1995 and Workplan Describing Additional Site Assessment Activities on* May 1, 1995 from Environmental Business Solutions (EBS), is summarized:

    - Four underground storage tanks (USTs) of various capacities were removed in 1988 from 7601 Alvarado Rd La Mesa, the adjacent property to the Site. The USTs stored new oil, used oil, and gasoline. The USTs were located immediately to the west and south of a service bay building that were approximately 200 feet to the east or greater from the Site on the adjacent property. The four USTs consisted of one 550-gallon used oil UST, two 550-gallon new oil USTs, and one 2,000-gallon regular gasoline UST. Samples indicated that groundwater was not impacted. Soils only were reportedly impacted, with total petroleum hydrocarbons (TPH) and total recoverable petroleum hydrocarbons (TRPH) in samples.

    - In March 1992, approximately 400 cubic yards of soil was excavated from the area of the former USTs. Numerous confirmation samples were collected during the excavation program. Confirmation samples indicated that soil with concentrations of both TPH and TRPH remains in the vicinity of the excavation.

    - In February 1994, a soil and groundwater investigation consisted of 11 soils borings, where 3 were converted into groundwater monitoring wells. Based on the soil sample results, the horizontal extent of gasoline-bearing and diesel-bearing soil was interpreted to be generally limited to the immediate vicinity of the former UST excavation, and to a maximum depth of approximately 15 feet below grade. The horizontal extent of TRPH-bearing soil was concluded to generally have been assessed, and was interpreted to extend a maximum of approximately 30 feet northwest from the former oil USTs. Groundwater was reported to be present in the wells at depths ranging from approximately 5 to 8 feet below grade, and was interpreted to be perched water. Groundwater sample results were reported to be below laboratory detection limits for TPH

as gasoline (TPHg) and as diesel (TPHd), and for benzene, toluene, ethylbenzene, and total xylenes (BTEX).

- In March 1996, the three groundwater monitoring wells were monitored, purged, and sampled by Environmental Business Solutions. Laboratory analytical results indicate that no TRPH, TPH-gas, TPH-diesel, BTEX, or MTBE were detected in groundwater samples collected from the three monitoring wells

- As of July 26, 1996 the State Water Resources Control Board Geotracker database shows the LUST case is closed.

  Based on the reported removal of the tanks and impacted soil, confirmation from the soil samples that the extent of the release was limited to 30 feet from the area of the former USTs that groundwater was not impacted, and that the case was closed by DEH, there is a low likelihood that a recognized environmental condition exists at the Site as a result of this known and reported release.

California Division of Oil and Gas

SCS personnel reviewed the California Division of Oil and Gas Map regarding oil and gas well locations within 1 mile of the Site[x]. There were no wells interpreted to be located within a 1-mile radius of the Site.

DATA GAPS IN CONNECTION WITH OFF-SITE SOURCES

Based on the Site vicinity reconnaissance and off-Site source survey, there are no obvious indications of data gaps in connection with off-Site sources.

Findings and Opinions—Off-Site Source Survey
Based on the off-Site source survey, two facilities in the Site vicinity were reported to have had releases of hazardous materials/waste or petroleum products. However, it is our opinion that there are no recognized environmental conditions at the Site as a result of known and reported releases of hazardous materials/wastes or petroleum products from an off-Site source. This opinion is based on one or more of the following: reported regulatory status (e.g., case closed), media affected (e.g., soil contamination only), distance from the Site, direction from the Site with respect to reported groundwater flow direction, and information obtained through a review of County of San Diego Department of Environmental Health files.

HISTORICAL LAND USE REVIEW

In accordance with the ASTM Standard and AAI rule, numerous reasonably ascertainable standard historical information sources were reviewed, and an attempt was made to interpret the historical Site and Site vicinity land use back to the obvious first developed use of the Site. Historical information was reviewed for current and historical Site addresses, including 7407

Alvarado Road La Mesa, California 91942. The following table summarizes the historical resources reviewed as part of this Assessment.

Resource	Source	Years Available
Aerial Photographs	NETR Online (http://www.historicaerials.com)	1953, 1964, 1966, 1968, 1980, 1989, 1995, 1996, 2002, 2003, 2005, 2009, 2010, 2012, 2014
City Directories	San Diego Central Library	1953, 1967, 1973, 1983, 1988, 1993, 1998, 2003, 2008, 2013
Sanborn Fire Insurance Maps	EDR	Unmapped property
Topographic Maps	US Geological Survey SCS's in-house collection	1903, 1909, 1913, 1920, 1927, 1929, 1934, 1940, 1942, 1947, 1955, 1959, 1960, 1969, 1975, 1978, 1984, 1998, 2012, 2015
Building Department Records	La Mesa Building Department	1953, 1954, 1955, 1957, 1958, 1979, 1980, 1983, 1984, 1986, 1987, 1988, 1990, 1995, 1999, 2000, 2001, 2004, 2018
Fire Department Records	La Mesa Fire Department	
Previous Environmental Report	Michael Brandman Associates. Kleinfelder	Discussed in the "Review of Client-Provided Documents" section above
Interviews	Not applicable	Discussed in the "Interviews" section above

Historical Site Land Use

The following table provides a chronology of the apparent historical Site land uses, as interpreted from a review of information from the sources referenced.

Year	Interpreted Site Tenants	Interpreted Site Use
1903	None	Vacant
1953	La Mesan Mobile Lodge Trailer Court	Multi- Family Residence (MFR) - RV Park
1967-1973	La Mesan Mobile Lodge Trailer Court, Alvarado Drafting Service, Alvarado Civil Engineering	MFR - RV Park and commercial
1983-1988	La Mesa Trailer Court various residential tenants	MFR - RV Park
1993	La Mesa Trailer Court, Camperland RV Park various residential tenants	MFR - RV Park

Year	Interpreted Site Tenants	Interpreted Site Use
1998	Apartments, ATD Applied Telecommunications & Data, Camperland RV Park	MFR - RV Park and commercial
2003-2018	Camperland RV Park, Ca RV Park Sales, SD RV Resort	MFR - RV Park

Because many of the dates listed above are based on a limited selection of historical resources, they are considered to be approximations only; the actual beginning/ending dates for many of the Site uses listed above may have been earlier or later than indicated.

With the possible exception discussed below, no obvious historical facilities, features of concern, or land uses indicative of the use, storage, or generation of hazardous materials/wastes or petroleum products were found in the historical resources reviewed.

Recreational Vehicle Park

The Site has been used as an RV park from approximately 1953 to present. SCS could not verify for this Assessment when the RV parking sites were first paved. Based on SCS's experience, it is not uncommon for vehicle storage lots to have surficial staining of the ground surface from motor oil and other automotive fluids. At the time of SCS's Site reconnaissance, minor surficial staining (interpreted to be from automotive lubricants) were observed within several of the RV parking sites; however, the parking Sites were paved with asphalt, and no obvious indications were observed that a release of hazardous materials/wastes or petroleum products had occurred at the Site. Considering the staining likely consists of motor oil and no obvious indications of a release were observed, the minor surficial releases identified above are considered likely to be *de minimis* as defined by ASTM.

If significant excavation and/or soil export are proposed, if obvious indications of significant staining or of a release of petroleum hydrocarbons are observed during grading operations for the proposed redevelopment of the Site, SCS recommends soil sampling should be conducted to assess whether the soil contains petroleum hydrocarbon concentrations that would cause the soil to be a health risk to future occupants of the Site, or if the soil is exported, if it may be classified as a hazardous or regulated waste.

Historical Site Vicinity Land Use

The following table provides a chronology of the apparent historical Site vicinity land uses as interpreted from a review of information from the sources referenced.

Years	Interpreted Site Vicinity Tenants	Interpreted Site Vicinity Use
7200 - 7500 Parkway Drive, 5210 – 5215 Maryland Avenue, 5211-5215 Guessman Avenue (North)		
1903	Vacant	None
1953	Vacant	None

Years	Interpreted Site Vicinity Tenants	Interpreted Site Vicinity Use
1967	La Mesa Bowling Alley, Vacant, Various residential tenants	Commercial, none, Single Family Residence (SFR)
1973	La Mesa Bowling Alley, Various residential tenants, Parkway Plaza Apartments, Vacant	Commercial, SFR & MFR, none

2008-2018	**Bob Bowen's Auto Service**	**Auto Service**

Because many of the dates listed above are based on a limited selection of historical resources, they are considered to be approximations only; the actual beginning/ending dates for many of the Site vicinity uses/development described above may have been earlier or later than indicated.

With the possible exceptions of auto repair at 7241, 7243, 7601 Alvarado Road discussed in the 'Additional SCS Research' section above, no obvious historical facilities, features of concern, or land uses indicative of the use, storage, or generation of hazardous materials/wastes or petroleum products were found in the historical resources reviewed.

DATA GAPS IN CONNECTION WITH THE HISTORICAL SITE LAND USE

Based on a review of historical sources, and with the possible exceptions below, there are no obvious indications of data gaps in connection with the historical Site and Site vicinity land use.

Readily available historical information was limited, and information was not available that would provide 5-year data intervals between the following years: 1903 and 1909, 1913 and 1920, 1920 and 1927, 1934 and 1940, and 1947 and 1953. Based on the corroborating data from the historical information reviewed (i.e., the Site was interpreted to have been vacant in each of these years), SCS judged it likely that the historical Site land use during this time period was not significantly different from the interpretation presented in the table above.

Findings and Opinions—Historical Site and Site Vicinity Land Use

With the possible exception of the use of the Site for an RV park, discussed below, based on a review of historical resources, it is our opinion that there are no recognized environmental conditions at the Site as a result of a release of hazardous materials/wastes or petroleum products from a known or interpreted historical Site or Site vicinity land use.

Recreational Vehicle Park

The Site has been used as an RV park from approximately 1953 to present. SCS could not verify for this Assessment when the RV parking sites were first paved. Based on SCS's experience, it is not uncommon for vehicle storage lots to have surficial staining of the ground surface from motor oil and other automotive fluids. At the time of SCS's Site reconnaissance, minor surficial staining (interpreted to be from automotive lubricants) were observed within

Findings and Opinions—Historical Site and Site Vicinity Land Use
several of the RV parking sites; however, the parking Sites were paved with asphalt, and no obvious indications were observed that a release of hazardous materials/wastes or petroleum products had occurred at the Site. Considering the staining likely consists of motor oil and no obvious indications of a release were observed, the minor surficial releases identified above are considered likely to be *de minimis* as defined by ASTM. If significant excavation and/or soil export are proposed, if obvious indications of significant staining or of a release of petroleum hydrocarbons are observed during grading operations for the proposed redevelopment of the Site, SCS recommends soil sampling should be conducted to assess whether the soil contains petroleum hydrocarbon concentrations that would cause the soil to be a health risk to future occupants of the Site, or if the soil is exported, if it may be classified as a hazardous or regulated waste.

5 CONCLUSION

SCS has performed an Assessment of 7401 Alvarado Road La Mesa, CA (Site), in general conformance with the ASTM Standard Practice for Phase I Environmental Site Assessment Process E 1527-13 and the EPA, 40 CFR 312, Standards and Practices for All Appropriate Inquiries, Final Rule (AAI). Any exceptions to, or deletions from, the ASTM and AAI Scope of Work were previously described in this Report where applicable.

This Assessment has revealed no evidence of a recognized environmental condition in connection with the Site.

This Assessment has been conducted by an environmental professional whose qualifications[6] were made known to the Client. The conclusions and recommendations presented above are based on the review of readily available data obtained as part of this Assessment, current regulatory guidelines, the Site and Site vicinity reconnaissance, and SCS' experience.

6 REPORT USAGE AND FUTURE SITE CONDITIONS

This Report is intended for the sole usage of the Client and other parties designated by SCS. The methodology used during this Assessment was in general conformance with the requirements of the Client and the specifications and limitations presented in the Consulting Agreement (Contract) between the Client and SCS. This Report contains information from a variety of public and other sources, and SCS makes no representation or warranty about the accuracy, reliability, suitability, or completeness of the information. Any use of this Report, whether by the

6. SCS declares that, to the best of its professional knowledge and belief, the reviewer meets the definition of Environmental Professional as defined in section 312.10 of 40 CFR 312 and has the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. SCS has developed and performed All Appropriate Inquiries in conformance with the standards and practices set forth in 40 CFR 312. The qualifications of the report preparers are included in the Appendices.

Client or by a third party, shall be subject to the provisions of the Contract between the Client and SCS. Any misuse of or reliance upon the Report shall be without risk or liability to SCS.

Assessments are qualitative, not comprehensive, in nature and may not identify all environmental problems or eliminate all risk. For every property, but especially for properties in older downtown or urban areas, it is possible for there to be unknown, unreported recognized environmental conditions, USTs, or other features of concern that might become apparent through demolition, construction, or excavation activities, etc. In addition, the scope of services for this project was limited to those items specifically named in the scope of services for this Report. Environmental issues not specifically addressed in the scope of services for this project are not included in this Report.

Land use, condition of the properties within the Site, and other factors may change over time. The information and conclusions of this Report are judged to have been relevant at the time the work described in this Report was conducted. This Report should not be relied upon to represent future Site conditions unless a qualified consultant familiar with the practice of Phase I Environmental Site Assessments in the County of San Diego is consulted to assess the necessity of updating this Report.

The property owners at the Site are solely responsible for notifying all governmental agencies and the public of the existence, release, or disposal of any hazardous materials/wastes or petroleum products at the Site, whether before, during, or after the performance of SCS' services. SCS assumes no responsibility or liability for any claim, loss of property value, damage, or injury that results from hazardous materials/wastes or petroleum products being present or encountered within the Site.

Although this Assessment has attempted to assess the likelihood that the Site has been impacted by a hazardous material/waste release, potential sources of impact may have escaped detection for reasons that include, but are not limited to, (1) inadequate or inaccurate information rightfully provided to SCS by third parties, such as public agencies and other outside sources; (2) the limited scope of this Assessment; and (3) the presence of undetected, unknown, or unreported environmental releases.

7 SPECIAL CONTRACTUAL CONDITIONS BETWEEN USER AND ENVIRONMENTAL PROFESSIONAL

There were no special contractual conditions between the user of this Assessment, the environmental professional, and SCS.

8 ENDNOTES

i. Site reconnaissance conducted by Allison O'Neal and Luke Montague (SCS) on October 10, 2018.

APPENDICES

GLOSSARY

adjacent property. Any real property or properties the border of which is contiguous or partially contiguous with that of the Site or that would be contiguous or partially contiguous with that of the Site but for a street, road, or other public thoroughfare separating them.

aerial photographs. Photographs taken from an airplane or helicopter of areas encompassing the Site.

asbestos. Six naturally occurring fibrous minerals found in certain types of rock formations. Of the six, the minerals chrysotile, amosite, and crocidolite have been the most commonly used in building products. When inhaled in sufficient quantities, asbestos fibers can cause serious health problems.

asbestos-containing material (ACM). Any material or product that contains more than 1% asbestos.

construction debris. Any concrete, brick, asphalt, and other building materials discarded in the construction of a building or other improvement to property.

Controlled recognized environmental conditions. A *recognized environmental condition* resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with *hazardous substances* or *petroleum products* allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity use limitations, institutional controls, or engineering controls).

de minimis condition. A condition that generally does not present a threat to human health or the environment and that generally would not be subject to an enforcement action if brought to the attention of appropriate governmental agencies). A condition considered *de minimis* is not a *recognized environmental condition*.

drum. A container (typically, but not necessarily, holding 55 gallons of liquid) that may be used to store hazardous substances or petroleum products.

dry well. Underground areas where soil has been removed and replaced with pea gravel, coarse sand, or large rocks. Dry wells are used for drainage, to control storm runoff, for the collection of spilled liquids (spilled intentionally or not), and for wastewater disposal (often illegal).

fill dirt. Dirt, soil, sand, or other earth that is obtained off site and that is used to fill holes or depressions, create mounds, or otherwise artificially change the grade or elevation of real property. It does not include material that is used in limited quantities for normal landscaping activities.

fire insurance map. Maps produced for private fire insurance map companies that indicate uses of properties at specified dates and that encompass the property.

hazardous material. Any material that, because of its quantity, concentration, or physical and chemical characteristics, poses a significant present or potential hazard to human health and safety or to the environment if released into the workplace or the environment. Hazardous materials include, but are not limited to, hazardous substances, hazardous waste, and any material which a handler or the administering agency has a reasonable basis for believing would be injurious to the health or safety of persons or harmful to the environment if released into the workplace or the environment.

hazardous substance. Pursuant to CERCLA, hazardous substances include the following:

1) All toxic pollutants and hazardous substances listed under the Clean Water Act
2) Hazardous wastes regulated under RCRA
3) Any hazardous air pollutant under the Clean Air Act
4) Chemicals designated as "immediately hazardous" under the Toxic Substance Control Act

The EPA is also allowed to designate additional substances as hazardous if they present a substantial danger to the public health or welfare or the environment when released.

hazardous waste. A substance defined pursuant to the Solid Waste Disposal Act amended by RCRA, a hazardous waste is a solid waste, or a combination of solid wastes, which because of its quantity, concentration, or physical, chemical, or infectious characteristics, may contribute to an increase in mortality or an increase in serious irreversible, or incapacitating illness or pose a substantial present or potential hazard to human health or the environment when improperly treated, stored, transported, or disposed of, or otherwise managed.

historical recognized environmental condition. A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

landfill. A place or area of land used for the disposal of solid wastes as defined by state solid waste regulations. Synonymous with the term *solid waste disposal site,* a landfill is also known as a garbage dump or trash dump.

likelihood. As used in this Report, the term *likelihood* pertains to the probability of a match between the prediction of an event and its actual occurrence. As used by SCS Engineers, the term *low likelihood* approximates a percentage range to 10 to 20 percent; *moderate likelihood* approximates 40 to 60 percent; and *high likelihood* approximates 80 to 90 percent.

Material Safety Data Sheet (MSDS). Written or printed material concerning a hazardous substance which is prepared by chemical manufacturers, importers, and employers for hazardous chemicals pursuant to OSHA standards.

obvious. That which is plain or evident. The term refers to a condition or fact that could not be ignored or overlooked by a reasonable observer while physically observing the property.

PCE. Perchloroethene/perchloroethylene, or "Perc"; also tetrachloroethene/tetrachloroethylene; commonly used as a solvent for dry-cleaning.

petroleum products. Petroleum, including crude oil, natural gas, natural gas liquids, liquefied natural gas, synthetic gas usable for fuel, kerosene, diesel oil, jet fuels, motor oil, hydraulic oil, gear oils, and fuel oil.

recognized environmental conditions (RECs). Recognized environmental conditions, as defined by the American Society for Testing and Materials (ASTM), include the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. However, the term is

not intended to include *de minimis* conditions.

retail quantities (RQs). Quantities of hazardous materials usually less than 50 gallons, 100 pounds, or 200 cubic feet of gas (under the regulatory reporting limits).

small retail quantities (SRQs). Quantities of hazardous materials in containers of 5 gallons or less, and less than 50 gallons in aggregate.

solvent. A chemical compound that is capable of dissolving another substance and is itself a hazardous substance, such as TCE, TCA, PCE, Stoddard solvent, paint thinner, mineral spirits, and acetone. Solvents are used in a number of manufacturing or industrial processes.

TCA. Trichloroethane; also 1,1,1 TCA; a commonly used industrial solvent for degreasing/cleaning.

underground storage tank (UST). Any tank, including underground piping connected to the tank, that is or has been used to contain hazardous substances or petroleum products and the volume of which is 10 percent or more beneath the surface of the ground.

visually and/or physically observed. This term refers to observations made by vision during the Site visit while walking through the Site or Site building(s), and observations made by the sense of smell, particularly awareness of noxious or foul odors.

SAN DIEGO GAS & ELECTRIC (SDG&E) PCB TRANSFORMERS

Dear Mr. Vasquez,

This letter is in response to your inquiry on March 5, 2008 regarding the transformers purchased by San Diego Gas & Electric (SDG&E).

SDG&E has never specified PCB transformers for its distribution system. Although only mineral oil transformers were purchased, some older, pre 1980, mineral oil transformers were inadvertently contaminated with PCBs by the manufacturer.

Based on the SDG&E statistical sampling and testing program, it is unlikely that the SDG&E equipment is PCB contaminated. The only way to know with certainty is by testing.

SDG&E is responsible for ensuring that its transformers comply with EPA regulations governing PCBs. However, EPA regulations do not require the testing of individual mineral oil transformers. Therefore, should you wish for that to be done, there will be a charge associated with the testing and if a service interruption is deemed necessary then there will be additional charges for any high voltage line work and associated labor costs.

Please call me at (858) 547-3069 if you need additional information.

Sincerely,

Willis G. Brull
Principal Environmental Specialist

MONITORING WELL PROGRAM
GEOTECHNICAL BORING CONSTRUCTION PERMIT

SITE NAME: SDG&E LINE 49-17 (6, 7, & 8)

SITE ADDRESS: IN CITY RIGHT OF WAY ADJACENT TO ALVARDO RD., AND SAN DIEGO WAY LA MESA CA 91942

PERMIT FOR: **THREE BORINGS**

PERMIT APPROVAL DATE: NOVEMBER 25, 2014

PERMIT EXPIRES ON: MARCH 25, 2015

RESPONSIBLE PARTY: SAN DIEGO GAS & ELECTRIC

PERMIT CONDITIONS:

1. All borings must be sealed from the bottom of the boring to the ground surface with an approved sealing material as specified in California Well Standards Bulletin 74-90, Part III, Section 19.D. **Drill cuttings are not an acceptable fill material.**

2. All borings must be properly destroyed within 24 hours of drilling.

3. Placement of any sealing material at a depth greater than 30 feet must be done using the tremie method.

4. This work is not connected to any known unauthorized release of hazardous substances. Any contamination found in the course of drilling and sampling must be reported to DEH. All water and soil resulting from the activities covered by this permit must be managed, stored and disposed of as specified in the SAM Manual in Section 5, II, E- 4. (**http://www.sdcounty.ca.gov/deh/water/sam_manual.html).** In addition, drill cuttings must be properly handled and disposed in compliance with the Stormwater Best Management Practices of the local jurisdiction.

5. Within 60 days of completing work, submit a well/boring construction report, including all well and/or boring logs and laboratory data to the Well Permit Desk. This report must include all items required by the SAM Manual, Section 5, Pages 6 & 7.

6. **This office must be given 48-hour notice of any drilling activity on this site and advanced notification of drilling cancellation. Please contact the Well Permit Desk at (858) 505-6688.**

Department of Environmental Health
Site Assessment Mitigation Program
5500 Overland Avenue, Suite 110
San Diego, California 92123

Subject: **60-Day Report**
San Diego Gas and Electric
Natural Gas Line 49-17 (Boring 6, 7 & 8)
City ROW Adjacent to Alvarado Road, and San Diego Way
La Mesa, California

APN: 469-021-18
Permit No. LMWP-001424
EST # NONE

Dear Ms. Tavizon:

Kleinfelder, Inc. (Kleinfelder), on behalf of Campos EPC, LLC performed a geotechnical and environmental study as part of a Pipeline Safety Enhancement Program (PSEP) for the proposed San Diego Gas and Electric (SDG&E) Natural Gas Line 49-17. Prior to our work at the site, Kleinfelder obtained permit number LMWP-001424 from the County Department of Environmental Health for three geotechnical soil borings. The project vicinity is shown on the attached Vicinity Map, Figure 1, and boring locations are presented on Figure 2, Boring Location Map.

The drilling was conducted between November 21 and November 25, 2014. Total depths, annular material volumes, and backfill dates are detailed in Table 1 below. A copy of the boring logs and the approved boring/well permit are included for your reference in Appendix A and B, respectively. Please note the following information concerning our exploration:

1. Cascade Drilling Company performed drilling of the borings using a track-mounted Resonant Sonic drill rig. The borings were drilled using 6-inch outside diameter (OD) sonic drilling stems.
2. After drilling, the test borings were backfilled with bentonite grout using the tremie method to one-foot bgs and patched at surface with concrete and or asphalt to match existing site conditions. The table below gives approximate volumes of backfill used:

Copyright 2015 Kleinfelder

550 West C Street, Suite 1200, San Diego, CA 92101 **p** | 619.831.4600 **f** | 619.232.1039

Table 1
Summary of Exploratory Borings

BORING NO.	TOTAL DEPTH (FT.)	VOLUME OF BENTONITE GROUT BACKFILL (CU.FT.)	DATE OF EXPLORATION	DATE OF BACKFILLING
B-6	45	8.8	11/21/2014	11/21/2014
B-7	39	8.0	11/24/2014	11/24/2014
B-8	45	8.8	11/25/2014	11/25/2014

3. The borings were drilled for in-situ soil sampling, visual soil classification purposes, and environmental testing. Excess soil cuttings were stored in Department of Transportation (DOT) approved 55-gallon drums and characterized prior to offsite disposal according to San Diego County SAM Manual guidelines. Laboratory analytical results are included in Appendix C. Based on the results of the analytical testing, environmental impairment of the soil cuttings was not found.
4. The following analytical methods were used for waste characterization of the soil:
   - Total Petroleum Hydrocarbons by EPA Method 8015B;
   - Volatile Organic Compounds (including BTEX) by EPA Method 8260B;
   - Organo Chlorine Pesticides (OCPS) by EPA Method 8081A;
   - Poly-Chlorinated Biphenyls (PCBs) by EPA Method 8082;
   - Poly-Aromatic Hydrocarbons (PAHs) by EPA Method 8270C; and
   - Title 22 Metals by EPA Method 6010B.
5. No monitoring wells were installed or destroyed as part of our study.

Please contact the undersigned at (619) 831-4600 if you have any questions.

Sincerely,

KLEINFELDER

Kevin Crennan, PE, GE 2511

NOTES

- The report and graphics key are an integral part of these logs. All data and interpretations in this log are subject to the explanations and limitations stated in the report.
- Lines separating strata on the logs represent approximate boundaries only. Actual transitions may be gradual or differ from those shown.
- No warranty is provided as to the continuity of soil or rock conditions between individual sample locations.
- Logs represent general soil or rock conditions observed at the point of exploration on the date indicated.
- In general, Unified Soil Classification System designations presented on the logs were based on visual classification in the field and were modified where appropriate based on gradation and index property testing.
- Fine grained soils that plot within the hatched area on the Plasticity Chart, and coarse grained soils with between 5% and 12% passing the No. 200 sieve require dual USCS symbols, ie., GW-GM, GP-GM, GW-GC, GP-GC, GC-GM, SW-SM, SP-SM, SW-SC, SP-SC, SC-SM.
- If sampler is not able to be driven at least 6 inches then 50/X indicates number of blows required to drive the identified sampler X inches with a 140 pound hammer falling 30 inches.

UNIFIED SOIL CLASSIFICATION SYSTEM (ASTM D 2487)

COARSE GRAINED SOILS (More than half of material is larger than the #200 sieve)	**GRAVELS** (More than half of coarse fraction is larger than the #4 sieve)	CLEAN GRAVEL WITH <5% FINES	$Cu \geq 4$ and $1 \leq Cc \leq 3$		**GW**	WELL-GRADED GRAVELS, GRAVEL-SAND MIXTURES WITH LITTLE OR NO FINES
			$Cu < 4$ and/ or $1 > Cc > 3$		**GP**	POORLY GRADED GRAVELS, GRAVEL-SAND MIXTURES WITH LITTLE OR NO FINES
		GRAVELS WITH 5% TO 12% FINES	$Cu \geq 4$ and $1 \leq Cc \leq 3$		**GW-GM**	WELL-GRADED GRAVELS, GRAVEL-SAND MIXTURES WITH LITTLE FINES
					GW-GC	WELL-GRADED GRAVELS, GRAVEL-SAND MIXTURES WITH LITTLE CLAY FINES
			$Cu < 4$ and/ or $1 > Cc > 3$		**GP-GM**	POORLY GRADED GRAVELS, GRAVEL-SAND MIXTURES WITH LITTLE FINES
					GP-GC	POORLY GRADED GRAVELS, GRAVEL-SAND MIXTURES WITH LITTLE CLAY FINES
		GRAVELS WITH > 12% FINES			**GM**	SILTY GRAVELS, GRAVEL-SILT-SAND MIXTURES
					GC	CLAYEY GRAVELS, GRAVEL-SAND-CLAY MIXTURES
					GC-GM	CLAYEY GRAVELS, GRAVEL-SAND-CLAY-SILT MIXTURES
	SANDS (More than half of coarse fraction is smaller than the #4 sieve)	CLEAN SANDS WITH <5% FINES	$Cu \geq 6$ and $1 \leq Cc \leq 3$		**SW**	WELL-GRADED SANDS, SAND-GRAVEL MIXTURES WITH LITTLE OR NO FINES
			$Cu < 6$ and/ or $1 > Cc > 3$		**SP**	POORLY GRADED SANDS, SAND-GRAVEL MIXTURES WITH LITTLE OR NO FINES
		SANDS WITH 5% TO 12% FINES	$Cu \geq 6$ and $1 \leq Cc \leq 3$		**SW-SM**	WELL-GRADED SANDS, SAND-GRAVEL MIXTURES WITH LITTLE FINES
					SW-SC	WELL-GRADED SANDS, SAND-GRAVEL MIXTURES WITH LITTLE CLAY FINES
			$Cu < 6$ and/ or $1 > Cc > 3$		**SP-SM**	POORLY GRADED SANDS, SAND-GRAVEL MIXTURES WITH LITTLE FINES
					SP-SC	POORLY GRADED SANDS, SAND-GRAVEL MIXTURES WITH LITTLE CLAY FINES
		SANDS WITH > 12% FINES			**SM**	SILTY SANDS, SAND-GRAVEL-SILT MIXTURES
					SC	CLAYEY SANDS, SAND-GRAVEL-CLAY MIXTURES
					SC-SM	CLAYEY SANDS, SAND-SILT-CLAY MIXTURES

FINE GRAINED SOILS (More than half of material is smaller than the #200 sieve)	SILTS AND CLAYS (Liquid Limit less than 50)	**ML**	INORGANIC SILTS AND VERY FINE SANDS, SILTY OR CLAYEY FINE SANDS, SILTS WITH SLIGHT PLASTICITY
		CL	INORGANIC CLAYS OF LOW TO MEDIUM PLASTICITY, GRAVELLY CLAYS, SANDY CLAYS, SILTY CLAYS, LEAN CLAYS
		CL-ML	INORGANIC CLAYS-SILTS OF LOW PLASTICITY, GRAVELLY CLAYS, SANDY CLAYS, SILTY CLAYS, LEAN CLAYS
		OL	ORGANIC SILTS & ORGANIC SILTY CLAYS OF LOW PLASTICITY
	SILTS AND CLAYS (Liquid Limit greater than 50)	**MH**	INORGANIC SILTS, MICACEOUS OR DIATOMACEOUS FINE SAND OR SILT
		CH	INORGANIC CLAYS OF HIGH PLASTICITY, FAT CLAYS
		OH	ORGANIC CLAYS & ORGANIC SILTS OF MEDIUM-TO-HIGH PLASTICITY

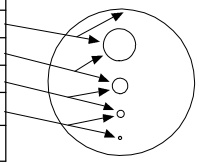
GRAIN SIZE

DESCRIPTION		SIEVE SIZE	GRAIN SIZE	APPROXIMATE SIZE
Boulders		>12 in. (304.8 mm.)	>12 in. (304.8 mm.)	Larger than basketball-sized
Cobbles		3 - 12 in. (76.2 - 304.8 mm.)	3 - 12 in. (76.2 - 304.8 mm.)	Fist-sized to basketball-sized
Gravel	coarse	3/4 -3 in. (19 - 76.2 mm.)	3/4 -3 in. (19 - 76.2 mm.)	Thumb-sized to fist-sized
	fine	#4 - 3/4 in. (#4 - 19 mm.)	0.19 - 0.75 in. (4.8 - 19 mm.)	Pea-sized to thumb-sized
Sand	coarse	#10 - #4	0.079 - 0.19 in. (2 - 4.9 mm.)	Rock salt-sized to pea-sized
	medium	#40 - #10	0.017 - 0.079 in. (0.43 - 2 mm.)	Sugar-sized to rock salt-sized
	fine	#200 - #10	0.0029 - 0.017 in. (0.07 - 0.43 mm.)	Flour-sized to sugar-sized
Fines		Passing #200	<0.0029 in. (<0.07 mm.)	Flour-sized and smaller

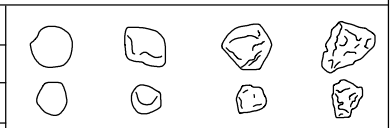


Munsell Color

NAME	ABBR
Red	R
Yellow Red	YR
Yellow	Y
Green Yellow	GY
Green	G
Blue Green	BG
Blue	B
Purple Blue	PB
Purple	P
Red Purple	RP
Black	N

ANGULARITY

DESCRIPTION	CRITERIA
Angular	Particles have sharp edges and relatively plane sides with unpolished surfaces
Subangular	Particles are similar to angular description but have rounded edges
Subrounded	Particles have nearly plane sides but have well-rounded corners and edges
Rounded	Particles have smoothly curved sides and no edges



Particles Present

Amount	Percentage
trace	<5
few	5-10
little	15-25
some	30-45
and	50
mostly	50-100

PLASTICITY

DESCRIPTION	LL	FIELD TEST
Non-plastic	NP	A 1/8-in. (3 mm.) thread cannot be rolled at any water content.
Low (L)	< 30	The thread can barely be rolled and the lump or thread cannot be formed when drier than the plastic limit.
Medium (M)	30 - 50	The thread is easy to roll and not much time is required to reach the plastic limit. The thread cannot be rerolled after reaching the plastic limit. The lump or thread crumbles when drier than the plastic limit
High (H)	> 50	It takes considerable time rolling and kneading to reach the plastic limit. The thread can be rerolled several times after reaching the plastic limit. The lump or thread can be formed without crumbling when drier than the plastic limit

MOISTURE CONTENT

DESCRIPTION	FIELD TEST
Dry	Absence of moisture, dusty, dry to the touch
Moist	Damp but no visible water
Wet	Visible free water, usually soil is below water table

REACTION WITH HYDROCHLORIC ACID

DESCRIPTION	FIELD TEST
None	No visible reaction
Weak	Some reaction, with bubbles forming slowly
Strong	Violent reaction, with bubbles forming immediately

APPARENT / RELATIVE DENSITY - COARSE-GRAINED SOIL

APPARENT DENSITY	SPT-N_{60} (# blows/ft)	MODIFIED CA SAMPLER (# blows/ft)	CALIFORNIA SAMPLER (# blows/ft)	RELATIVE DENSITY (%)
Very Loose	<4	<4	<5	0 - 15
Loose	4 - 10	5 - 12	5 - 15	15 - 35
Medium Dense	10 - 30	12 - 35	15 - 40	35 - 65
Dense	30 - 50	35 - 60	40 - 70	65 - 85
Very Dense	>50	>60	>70	85 - 100

NOTE: AFTER TERZAGHI AND PECK, 1948

CONSISTENCY - FINE-GRAINED SOIL

CONSISTENCY	UNCONFINED COMPRESSIVE STRENGTH (q_u)(psf)	CRITERIA
Very Soft	< 1000	Thumb will penetrate soil more than 1 in. (25 mm.)
Soft	1000 - 2000	Thumb will penetrate soil about 1 in. (25 mm.)
Firm	2000 - 4000	Thumb will indent soil about 1/4-in. (6 mm.)
Hard	4000 - 8000	Thumb will not indent soil but readily indented with thumbnail
Very Hard	> 8000	Thumbnail will not indent soil

STRUCTURE

DESCRIPTION	CRITERIA
Stratified	Alternating layers of varying material or color with layers at least 1/4-in. thick, note thickness
Laminated	Alternating layers of varying material or color with the layer less than 1/4-in. thick, note thickness
Fissured	Breaks along definite planes of fracture with little resistance to fracturing
Slickensided	Fracture planes appear polished or glossy, sometimes striated
Blocky	Cohesive soil that can be broken down into small angular lumps which resist further breakdown
Lensed	Inclusion of small pockets of different soils, such as small lenses of sand scattered through a mass of clay; note thickness
Homogeneous	Same color and appearance throughout

CEMENTATION

DESCRIPTION	FIELD TEST
Weakly	Crumbles or breaks with handling or slight finger pressure
Moderately	Crumbles or breaks with considerable finger pressure
Strongly	Will not crumble or break with finger pressure

The exploration was terminated at approximately 45 ft. below ground surface. The exploration was backfilled with bentonite and grout on November 21, 2014.

GROUNDWATER LEVEL INFORMATION:
▽ Groundwater was observed at approximately 9 ft. below ground surface during drilling.

GENERAL NOTES:
The exploration location and elevation are approximate and were estimated by Kleinfelder.
A Garmin E-trex GPS unit was used to locate the exploration with an accuracy of 10 feet.

BORING LOG B-8

Date Begin - End:	11/25/2014	**Drilling Company:**	Cascade Drilling		
Logged By:	E. Koprulu	**Drill Crew:**	Carlos/Daniel		
Hor.-Vert. Datum:	MSL - NAVD88	**Drilling Equipment:**	Spyder	**Hammer Type - Drop:**	N/A lb. N/A - N/A in.
Plunge:	-90 degrees	**Drilling Method:**	Resonant Sonic /		
Weather:	Not Available	**Exploration Diameter:**	6 in. O.D.		

EXPLORATION INFORMATION

Latitude: 32.77296° N
Longitude: -117.03631° W
Approximate Ground Surface Elevation (ft.): 419
Surface Condition: Asphalt

Approximate Elevation (feet)	Depth (feet)	Graphical Log	Lithologic Description	Sample Number	Sample Type	Recovery (in) (NR=No Recovery)	Recovery (%) (NR=No Recovery)	Box Number	Run Number	Remarks
			Clayey SAND with Gravel (SC): fine to coarse-grained, non-plastic, olive (5Y 5/6) to olive brown (2.5Y 4/4), moist, up to 3-4" diameter 20% cobbles	5 *(cont.)*						PID = 0.0 ppm
385	35		**Clayey SAND with Gravel (SC)**: fine to coarse-grained, non-plastic, olive (5Y 5/6), moist, up to 5" diameter 20-25% cobbles							
380	40		**Clayey SAND with Gravel (SC)**: fine to coarse-grained, non-plastic, olive (5Y 5/6), moist, up to 5-6" diameter 20-30% cobbles	6						PID = 0.0 ppm
375	45									
			The exploration was terminated at approximately 45 ft. below ground surface. The exploration was backfilled with bentonite and grout on November 25, 2014.							
370	50									
365	55									
360										

GROUNDWATER LEVEL INFORMATION:
▽ Groundwater was observed at approximately 19 ft. below ground surface during drilling.

GENERAL NOTES:
The exploration location and elevation are approximate and were estimated by Kleinfelder.
A Garmin E-trex GPS unit was used to locate the exploration with an accuracy of 10 feet.

APPENDIX B
DEH Permit

PERMIT #LMWP-001424
A.P.N. #469-021-18
EST #NONE

COUNTY OF SAN DIEGO
DEPARTMENT OF ENVIRONMENTAL HEALTH
LAND AND WATER QUALITY DIVISION
MONITORING WELL PROGRAM
GEOTECHNICAL BORING CONSTRUCTION PERMIT

SITE NAME: SDG&E LINE 49-17 (6, 7, & 8)

SITE ADDRESS: IN CITY RIGHT OF WAY ADJACENT TO ALVARDO RD., AND SAN DIEGO WAY LA MESA CA 91942

PERMIT FOR: **THREE BORINGS**

PERMIT APPROVAL DATE: NOVEMBER 25, 2014

PERMIT EXPIRES ON: MARCH 25, 2015

RESPONSIBLE PARTY: SAN DIEGO GAS & ELECTRIC

PERMIT CONDITIONS:

1. All borings must be sealed from the bottom of the boring to the ground surface with an approved sealing material as specified in California Well Standards Bulletin 74-90, Part III, Section 19.D. **Drill cuttings are not an acceptable fill material.**

2. All borings must be properly destroyed within 24 hours of drilling.

3. Placement of any sealing material at a depth greater than 30 feet must be done using the tremie method.

4. This work is not connected to any known unauthorized release of hazardous substances. Any contamination found in the course of drilling and sampling must be reported to DEH. All water and soil resulting from the activities covered by this permit must be managed, stored and disposed of as specified in the SAM Manual in Section 5, II, E- 4. (**http://www.sdcounty.ca.gov/deh/water/sam_manual.html).** In addition, drill cuttings must be properly handled and disposed in compliance with the Stormwater Best Management Practices of the local jurisdiction.

5. Within 60 days of completing work, submit a well/boring construction report, including all well and/or boring logs and laboratory data to the Well Permit Desk. This report must include all items required by the SAM Manual, Section 5, Pages 6 & 7.

6. **This office must be given 48-hour notice of any drilling activity on this site and advanced notification of drilling cancellation. Please contact the Well Permit Desk at (858) 505-6688.**

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

Work Order Narrative

Work Order: 14-11-1858 Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 11/21/14. They were assigned to Work Order 14-11-1858.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

New York NELAP air certification does not certify for all reported methods and analytes, reference the accredited items here: http://www.calscience.com/PDF/New_York.pdf

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Glossary of Terms and Qualifiers

Work Order: 14-11-1858 Page 1 of 1

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

Work Order Narrative

Work Order: 14-11-1959 Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 11/24/14. They were assigned to Work Order 14-11-1959.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

New York NELAP air certification does not certify for all reported methods and analytes, reference the accredited items here: http://www.calscience.com/PDF/New_York.pdf

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Glossary of Terms and Qualifiers

Work Order: 14-11-1959 Page 1 of 1

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

Work Order Narrative

Work Order: 14-11-2081 Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 11/25/14. They were assigned to Work Order 14-11-2081.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

New York NELAP air certification does not certify for all reported methods and analytes, reference the accredited items here: http://www.calscience.com/PDF/New_York.pdf

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Glossary of Terms and Qualifiers

Work Order: 14-11-2081 Page 1 of 1

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

La Mesa may oust 40 families at trailer park periled by floods

By Vern Griffin
Tribune Staff Writer

Nearly 40 families in a mobile home park near Interstate 8 face possible eviction because of a move by the city of La Mesa to solve what it calls a potentially life-threatening flood situation along Alvarado Creek.

The owner of La Mesan Mobile Home Park, 7407 Alvarado Road, has been told to either remove all of the mobile homes and trailers from the lower end of the park or to place as much as eight to 10 feet of fill along the creek bed which has flooded frequently in recent years.

"I don't agree with the city," said Chris Cosgrove, the park owner. He said he didn't like either one of the alternatives.

"All of this is the city's fault. We never had any flooding at all up until four years ago after the city allowed all the building upstream.

"Telling me to put in that fill is ridiculous."

On the other hand, Cosgrove said he didn't want to evict his tenants, either, if he can help it.

"They have no place else to go," said the 84-year-old owner who built the park in 1950.

The portion of the park that has been declared a public nuisance by the city is its west end where Alvarado Creek has caused repeated flooding in recent years, according to George Pope, the city's director of building and public safety.

"We've had excessive flooding there over the past three years and the fire and police departments had to rescue over 40 people there one year alone," said Pope.

He explained that the city is coming out with its abatement order now in order to solve the public safety problem before the winter's rains.

"The west end of the park is the part where children are allowed to live and that doubles our concern.

"We've had two to four feet of water in that part of the park. An adult might be able to wade through that, but there's no way a child could."

Pope also said a fireman almost drowned there during one rescue operation.

The order from the city was received by Cosgrove yesterday and gave him 10 days to tell the city his plans. He has 120 days to complete the abatement work.

Caught in the middle in the situation are the tenants who could be evicted.

"Most of the people who live here are young couples, and more than half of them have small children," said Barry Lewis, one of the residents of the park.

He said nearly 40 families could lose their park sites if Cosgrove has to remove all the mobile homes in the danger area.

"We live in smaller, older trailers, and some of these trailer bottoms are so old it's going to be hard to move them," he said. "They may have to be rebuilt.

"These trailers are all we've got. It's home to us."

Some of the residents are San Diego State University students. Others include military families, he said, who are on tight budgets. Lewis is serving as a spokesman for the tenants and said residents, who were invited to a public hearing on the problem last month, already have found that many mobile home parks won't even take their old, narrow trailers.

He said there's not another park in La Mesa that can take them, and one park that will, he said, is way out of the area.

Some park tenants feel CalTrans also is adding to the flood problem. The state is widening Interstate 8 in the area under a $3,763,000 contract and is putting in a concrete flood channel along Alvarado Creek east of the park. But both the city and CalTrans agree the state has no further responsibility to extending the work to the nearby adjacent private property to the west.

"The tenants are offering to mount their own flood watch and even sandbag if necessary so that rescues won't have to be made," said Lewis.

An unfortunate sidelight of the problem, according to Pope, is that there are no relocation funds available for hardship cases among tenants in the park.

"There would be disaster assistance available, but that would have to be after a flood," he said.

At the meeting on January 4, 1983, following presentation of the status report and discussion by the Board, the Board directed that a minimum of 85% compaction be required for any kind of backing or fill, with the understanding that Mr. Pope and Mr. Fogg were authorized to make a decision should it become impossible to achieve this compaction because of the location of utility poles, etc. Said meeting was then continued to January 18, 1983.

At the January 18, 1983 meeting, following the progress report by staff, the Board gave staff the flexibility to work with the property owner to the extent that if the 2000 cfs design criteria was found to be unreasonable, the sandbagging might be reduced to whatever the agreed capacity of the upstream and downstream culverts are, as agreed upon by city staff, Mr. Fogg and the property owner, and to authorize approval by staff of alternate solutions to the 85% compaction requirement, if staff found it was sound engineering. The hearing was then continued to January 25, 1983.

On January 18, 1983, the Board and the representatives of the property owner also agreed that the Board could act on January 25th or delay their action until February 8, 1983. Due to a lack of a quorum on January 25, 1983, the hearing was subsequently continued to February 8, 1983.

At the hearing on February 8, 1983, oral testimony was received and all persons desiring to be heard, were heard.

The Building Code Board of Appeals hereby FINDS as follows:

1. Seasonal flooding of the lower west end of the mobilehome park to depths from 2 to 4 feet or more, requiring the rescue of residents by Fire and Police personnel.

2. Mobilehome units and their accessory structures have been damaged by water and mud.

3. The specific area considered dangerous by the Building Official are all mobilehome spaces located west of the center line of "B" Street to the end of the park.

4. Maximum capacity of culverts is currently a 2000 cfs water flow.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED and RESOLVED by the Building Code Board of Appeals as follows:

1. The foregoing recitals are hereby found to be true.

2. The channel adjacent to the Cosgrove property shall be improved by the property owner to accommodate a 2000 cfs flow within

Subj: Cosgrove Notice of Abatement
La Mesan Mobile Lodge
7407 Alvarado Road

Gentlemen:

This is to verify that the embankments on the Cosgrove property have been installed to the elevations computed to be necessary to avoid significant overtopping and consequent danger to property and residents of the mobile home park as a result of a 2000 cubic foot per second flow of water through the channel. This letter also is to verify that the placement of the sandbags and modification of the masonry block walls have been designed to be structurally stable and durable enough to provide this protection for a period of at least five years so long as the channel system is appropriately maintained.

Very truly yours,

William G. Catlin RCE

CITY OF LA MESA

INTERCOMMUNICATING MEMORANDUM

TO Lee Knutson - City Attorney DATE January 26, 1983

FROM Charles R. Bras - Director of Public Works Chuck

SUBJECT Improvement of Alvarado Bridge Easterly of Trailer Park

Lee:

We have just received a design from Bob Fogg for a low wall on the bridge to insure that it will accommodate 2000 cubic feet per second volume of water. Our Public Works Department will order the materials and start the work sometime this week. We expect the wall to be completed within approximately 10 days.

I would suggest that we put this information in a letter to Jim Dawe and reiterate their commitment to improve the channel through their property to handle a 2000 cubic feet per second volume. We should also request a time schedule for completion of their work.

Since we are dealing with the owner's attorney and you have had conversations with Mr. Dawe, I suggest that the letter come from your office.

Mr. Cosgrove
La Mesa Mobile Court
Alvarado Road
La Mesa, California

Dear Mr. Cosgrove:

Some time ago, Mr. Delmas and I talked with you regarding the drainage ditch which you were constructing along the south line of your mobile court where it adjoins our property. At the time, we expressed the fear that this ditch and the elevation of the normal drainage channel might cause run off waters to damage our property.

The rains of the past week have eaten into the banks of the ditch you made and have eroded our land to some extent. The surveyors corner stakes at both the northeast and northwest corners of our property have been washed out by the water in this channel. These corners, of course, will have to be re-established and we will expect you to assume responsibility for the expense incurred.

We hope you will take immediate steps to avoid further damage to our property from this source.

You will find enclosed a copy of a letter sent to Mr. Holcomb acquainting him with the facts in this matter.

We regret the necessity of any inconvenience to you but should any further damage be suffered by us because of this diversion of the natural drainage channel in this area, we will be forced to take whatever steps are necessary to place responsibility and secure damages.

Respectfully yours,

V. M. Butterfield
Felch Delmas

March 24, 1954
5268 Gary Street
San Diego 15, California

Mr. L. H. Halcomb, Jr.
City Manager
La Mesa, California

Dear Sir:

You may recall our conversation with you and Mr. Cole some weeks ago regarding the drainage problem involved in the development of the area occupied by the La Mesa Mobile Court on Alvarado Road near 73rd.

At the time, we called your attention to the fact that the normal drainage channel had been filled in by Mr. Cosgrove and that a new channel was being dug along the south side of the area adjacent to our north property line. At the time, we expressed the fear that the ditch might prove inadequate and such a diversion of the normal drainage channel might endanger our land in times of high water.

The rainfall of the past week, although not exceptionally heavy, has taxed the capacity of the new channel and caused some damage to adjoining property. The banks have been eaten away on the sides of the ditch causing damage to our land. Both the northwest and northeast corner posts defining our north line have been washed out. These were surveyors one inch pipes, one of which had been recently established and the other, set in concrete, had survived several previous rainy seasons.

About a month ago, we discussed this drainage situation with Mr. Cosgrove, pointing out the menace to property along the channel he was constructing. However, he expressed no concern and apparently felt no responsibility.

Since your office is concerned with this matter and the city of La Mesa has jurisdiction over it, we are writing this to acquaint you with these facts and developments.

We trust that steps will be taken to insure proper flood control in the area so that the adjoining properties will not be endangered or damaged by Mr. Cosgrove's diversion of the natural drainage channel.

Respectfully yours,

[illegible]

Re: La Mesa Colony Property

Dear Madam and Sir:

We have requested from the owner of un-numbered Lot in La Mesa Colony the right of easement for sewer line at a point on the common boundary lines between said un-numbered lot and my lot No. 40 in La Mesa Colony, San Diego County, California. Said easement is more specifically described in a grant of easement prepared by the City of San Diego, a copy of which has been given to you, and as shown on Drawing No. 5257B of the City of San Diego Engineering Department.

In consideration of your granting me this easement, I hereby waive any damages that I have suffered or may suffer by reason of your rerouting surface waters coming upon your land that have and may come upon my land, provided, however, that such surface water does not encroach upon my land more than five feet south of my north boundary. You shall take the proper steps to see that such encroachment beyond said five feet shall not take place.

Very truly yours,

_____

CITY OF LA MESA

DEPARTMENT OF BUILDING INSPECTION & HOUSING

"APPEAL"
FROM ACTION OF BUILDING OFFICIAL

Date: October 22, 1982

I hereby submit an appeal to be heard before the Building Code Board of Appeals of the City of La Mesa.

Appeal of: Chris A. and Cecila C. Cosgrove
(name)

7407 Alvarado Road, La Mesa, California 92041 466-2181
(address) (phone)

Having legal interest in the proper / known as: La Mesan Mobile Lodge
(address)

7407 Alvarado Road, La Mesa, California 92041

Legal Description: 469-021-01 of unnumbered lot in La Mesa Colony Tract
(assessors parcel no., tract, block, lot, book no.)

I have legal interest in this property as: owner
(owner, holder of lease, mortgage, deed of trust or lien)

I hereby appeal the following action taken by the Building Official: Issuance of Notice and Order for the Abatement of a Public Nuisance dated October 8, 1982. Entire Notice.

(see attachment for continuation)

My reasons for this appeal and facts supporting my contentions are: The described condition is not the result of action or inaction by the appellant. Upstream and offsite construction appears to have greatly increased drainage in the area causing flooding

(see attachment for continuation)

I hereby request that the Board of Appeals reverse, modify or set aside the action of the Building Official because:

See answer to foregoing question.

(see attachment for continuation)

I/We, the undersigned, hereby declare under penalty of perjury that the above statements are true. (Based upon information and belief.)

Re: Notice of Abitment of a Public Nuisance dated Nov. 14, 1983, signed by George Pope, Building Official, requesting removal of certain trees and other items on the Northern portion of Parcel 469-100-03.

We are seriously objecting to the Abitment Notice for the following reasons.

We purchased this parcel about 37 years ago and moved in our newly built house in 1947 (36 years ago). Date of annexation to La Mesa. 9/25/60 (23 years ago).

May I call your attention to the fact that the new Alvarado Drainage ditch as it was constructed by Cosgrove with the APPROVAL of the City of La Mesa was designed to DIVERT water flow to a position adjoining our property prior to our annexation, and long after we acuired our property.

The facts concerning said drainage ditch and water flow are as follows:

Prior to the construction of the La Mesan Mobile Lodge no water flowed on our land. Johnson, the previous owner of the trailer court land (known as an unnumbered lot on the Map of La Mesa Colony, Map No. 346, said lot designed to include flooded areas), acuired a contract from the City of La Mesa which permitted him to install a trailer court in the bottom of a flood channel as a condition of annexation of his land to the City of La Mesa (Annexation date 11/16/31). Johnson's rights were transferred to Cosgrove who built the trailer court a few years after annexation, and who is the present owner. When Cosgrove built his trailer court, he had an engineer located in El Cajon (Miller ?) design a diversion ditch around his trailer court so as to divert the flow of water to a position adjoining our land. The trailer court construction was APPROVED by the CITY OF LA MESA at the time Eduards was City Engineer. A ditch (about 20 to 25 feet wide at the time it was built) was dug around the trailer court and the dirt that was removed was used to construct a large berm to attempt to prevent flooding in the new trailer court. As a side effect, it also subjected adjoining property (including ours to flooding since it was built higher than the adjoining land. The fact that the plans as approved were insufficient to prevent water from going over the berm into the trailer court or to cause water to flood adjacent land as is now happening is hardly sufficient reason to try to foist off the problem on adjoiners and have them provide

for increased channel flow area by removal of their protections from erosion. The trailer court with the approval of the city created the problem; not the adjoiners.

May I point out that a short distance east of my eastern property corner is a side canyon discharging into Alvarado Canyon. Because of natural erosion in that canyon over hundreds of years a large dyke of boulders and dirt accumulated at the exit of this canyon. This natural barrier (dyke), which prevented water from flowing onto our land, even at flood time, was removed during the construction of the berm around the trailer court. At the time A. W. Daniels surveyed our property (1947) there was a survey marker on this natural dyke located about 7 or 8 feet above the present bottom of the new diversion ditch. The marker and the soil under it were removed during the construction of the trailer court berm. Removal of this natural dyke barrier has caused erosion beyond it (including our land). As a minimum, at least 15 feet (horizontally) of soil nearby has been removed by erosion after the ditch construction.

The storm water flow, prior to the construction of the diversion ditch or Alvarado Road construction, was near what is now the freeway access road. Prior to the construction of Avarado Road (now the Freeway) there was a small date palm tree in the water flow channel (about 1948 or 1949) which I observed and wondered at its ability to hang onto the soil while flood water rushed by. I even went over and examined it. Today that date palm is still there; it was not removed during the construction of the trailer court, and it marks the flood channel as of that date. No wonder the trailer park floods during a storm; no fill was put in that area. Parts of the trailer court were built directly in the bottom of the flood channel! Why was it approved? Why did the City allow the water to be altered in its natural flow by a diversion ditch? Certainly I had nothing to say about it; we were part of the county at that time.

Adjoining our northern boundary and prior to the new ditch's construction, about 3 feet into Johnson's or the trailer park's land, the San Diego Gas and Electric Co installed a 16" or thereabouts high pressure gas main. At the time it was installed it was about 2 and a half feet below ground surface. After the construction of the diversion ditch, erosion created by the new diversion ditch caused exposure of the top of this pipe. In addition the erosion has progressed about 2 to 10 feet into my land area so as to remove vertically about 2 and a half feet of land. Damage has been done, and a dangerous situation created. A boulder or other forces during a storm can cause rupture of this high pressure gas pipe line. This pipe line prevented Cosgrove from deepening the new diversion ditch

CITY OF LA MESA

December 1, 1983

Mr. Curtis Brown
5075 Keeney Street
La Mesa, CA 92041

Dear Mr. Brown:

This letter will confirm the decisions made at our meeting Tuesday, November 29, 1983, relating to the requirements of the Notice and Order from the Building Official dated November 14, 1983.

The purpose of the meeting was to encourage the cooperation of all property owners to abate obstructions from their property through a joint effort or single contractor. The results of that meeting are as follows:

1. Mr. and Mrs. John S. McKee Property:

After considerable discussion of the McKee property, it was determined that the major portion of the property was clear of obstructions, except for a stand of bamboo and a palm tree at the edge of the channel.

The stand of bamboo and the palm tree are located in an area of the channel which helps prevent further erosion of the McKee property and prevents channeling of the Brown property. The location of this growth in the channel is also within an area where it does not contribute to the flooding of the mobilehome park due to the higher north bank at that location.

It was also determined that the removal of the bamboo and the palm tree would cause positive damage to the McKee and Brown properties, while leaving the growth at the channel edge would cause no damage to the Cosgrove property.

Based upon the above discussion, it was agreed that the McKees should be released from the abatement requirements of the Notice and Order.

2. Mr. Curtis M. Brown Property:

Mr. Brown reported that he had already completed 90% of the clearing of brush and weeds from his portion of the channel. He further indicated that he would be completed with the project within the next two or

three weeks, well before the January 16, 1984 deadline specified in the Notice and Order. He noted that he would not be interested in participating in the cost of a joint contract agreement.

3. Mr. Ralph Dalmas Property:

Mr. Dalmas stated that he would have preferred to have a contractor do the work and share the cost for his portion of the project, however, he would find a contractor of his own and have the work completed within the time period specified.

Note: Mr. Brown and Mr. Dalmas submitted copies of letters and documents which reflected the history of the Alvarado Channel diversion and letters of agreements with Mr. Chris Cosgrove. Mr. Brown also submitted a copy of an appeal which he had intended to file. However, he is now satisfied with the decisions made at this meeting and does not intend to file the appeal, based upon the information that Mr. Pope would not require the removal of any trees from his property that were not obstructing the main flow of the Alvarado Channel.

We greatly appreciate your contribution to the discussion in resolving the Alvarado Channel flooding problem. The cooperative spirit of all the property owners in attendance was highly commendable.

Best of holiday wishes to you and your family.

Sincerely,

GEORGE O. POPE
Director of Building Inspection and Housing

GOP/bjd

cc: City Manager
City Attorney

CITY OF LA MESA

John S. & Jean C. McKee
6409 Caminito Estrellado
San Diego, CA 92120

Dear Mr. and Mrs. McKee:

This letter will confirm the decision made at our meeting Tuesday, November 29, 1983, releasing you from the requirements of the Notice and Order dated November 14, 1983, to abate conditions on your property deemed by the Building Official to be contributing to the flooding conditions of the Alvarado Channel.

We appreciate your cooperation in resolving the flooding problem. Have a safe and happy holiday.

Sincerely,

GEORGE O. POPE
Director Building Inspection and Housing

GOP/bjd

cc: City Manager
City Attorney

to its proper depth; it crosses the ditch. Since the construction equipment struck the pipeline during the ditch construction, I presume that its location was unknown to those creating the diversion ditch.

May I also point out that some of the trees you have requested to be removed were in place before the construction of the diversion ditch (Eucalyptus, sycamore, sumac etc.). The sycamores were full grown at the time we purchased the property (about 1946), and were probably a hundred years old at that time. Are you requesting me to remove something existing prior to the original map of La Mesa Colony, existing prior to being included in La Mesa City and prior to the construction of the diversion ditch? I think this is out of line.

Before the construction of the new diversion ditch and also prior to the annexation of either the trailer court (annexed 11/15/51) or our land (annexed 9/26/60) to the City of La Mesa, we had an enclosure in our Northeast corner area in which we kept our dogs and at one time our sheep. Part of that fence is still existing. There was no flooding until after the diversion ditch was constructed. The portion of the fence adjoining the diversion ditch is now gone. Some of it remains.

At the present time we depend upon the trees to help decrease the noise pollution from the freeway as now existing, we depend on the trees to keep us from having to look down on an unsightly set of trailers, and we enjoy the birds the trees attract. There will be a definite damage to the enviornment of this property if the trees are removed.

I recognize that the city can condemn the area in question, but only with compensation. If the area is taken or the trees removed so as to make the area subject to additional water errosion, noise pollution or environmental deterioration, an injustice will be done. I intend to use the courts to attempt to prevent the removal of the trees.

Before you make a decision on enforcing the abatement notice please take time to read Sheffet v. County of Los Angeles 3 Cal. App. 3d 720 wherein the County (not the contractor) was held liable for damages to the adjoiners because of an inadequate approved design for a water drainage system.

From what I have read, it is the "duty of any person threatened with injury to his property by the flow of surface waters to take reasonable precautions to avoid or reduce an actual or potential injury." The trees and bamboo do just that. They are preventing additional errosion. The construction of the diversion ditch caused a potential damage situation to which I reacted at the time we were part of the county (not the city).

Questions come to mind. Have you asked Cosgrove to remove his berm to prevent errosion on my land? Certainly I do not have to tolerate water diverted on our land by a diversion ditch. Has Cosgrove been asked to remove the Cottonwood trees and widen his channel at that point? It is a bottle neck about 200 feet east of our land. Has Cosgrove been asked to remove the big Sycamore stump impeding flow and left on the bank of the ditch? Has Cosgrove been asked to remove all of his trees in the drainage ditch (about 10 of them, mostly palm trees, a sycamore, several eucaliptus, a cottonwood and an crinmental tree). Has Cosgrove been asked to remove the rocks in the ditch that cause turbulence? Why is it that Cosgrove is not and was not required to concrete line the ditch he created? This would have solved the flooding problem.

I believe that the City of La Mesa, who approved the trailer park and ditch diversion plans, has responsibility for damage to the adjoiners, and to date we have had damages. The problem of flooding in the La Mesan Trailer court was created by inadequate diversion ditch design, not by acts of us. It is an injustice to impose a burden of creating additional water flow on those that had nothing to do with the diversion ditch and who were not in the flood zone at the time of water diversion. Those who created the problem should be responsible for its correction, not the bystander.

Curtis M. Brown

Re: Notice of Abitment of a Public Nuisance dated Nov. 14, 1983, signed by George Pope, Building Official, requesting removal of certain trees and other items on the Northern portion of Parcel 469-100-03.

We are seriously objecting to the Ablitment Notice for the following reasons.

We purchased this parcel about 37 years ago and moved in our newly built house in 1947 (36 years ago). Date of annexation to La Mesa, 9/26/60 (23 years ago).

May I call your attention to the fact that the new Alvarado Drainage ditch as it was constructed by Cosgrove with the APPROVAL of the City of La Mesa was designed to DIVERT water flow to a position adjoining our property prior to our annexation, and long after we aquired our property.

The facts concerning said drainage ditch and water flow are as follows:

Prior to the construction of the La Mesan Mobile Lodge no water flowed on our land. Johnson, the previous owner of the trailer court land (known as an unnumbered lot on the Map of La Mesa Colony, Map No. 346, said lot designed to include flooded area), aquired a contract from the City of La Mesa which permitted him to install a trailer court in the bottom of a flood channel as a condition of annexation of his land to the City of La Mesa (Annexation date 11/16/51). Johnson's rights were transferred to Cosgrove who built the trailer court a few years after annexation, and who is the present owner. When Cosgrove built his trailer court, he had an engineer located in El Cajon (Miller ?) design a diversion ditch around his trailer court so as to divert the flow of water to a position adjoining our land. The trailer court construction was APPROVED by the CITY OF LA MESA at the time Edwards was City Engineer. A ditch (about 20 to 25 feet wide at the time it was built) was dug around the trailer court and the dirt that was removed was used to construct a large berm to attempt to prevent flooding in the new trailer court. As a side effect, it also subjected adjoining property (including ours) to flooding since it was built higher than the adjoining land. The fact that the plans as approved were insufficient to prevent water from going over the berm into the trailer court or to cause water to flood adjacent land as is now happening is hardly sufficient reason to try to foist off the problem on adjoiners and have them provide

for increased channel flow area by removal of their protections from erosion. The trailer court with the approval of the city created the problem; not the adjoiners.

May I point out that a short distance east of my eastern property corner is a side canyon discharging into Alvarado Canyon. Because of natural errosion in that canyon over hundreds of years a large dyke of boulders and dirt accumulated at the exit of this canyon. This natural barrier (dyke), which prevented water from flowing onto our land, even at flood time, was removed during the construction of the berm around the trailer court. At the time A. W. Daniels surveyed our property (1947) there was a survey marker on this natural dyke located about 7 or 8 feet above the present bottom of the new diversion ditch. The marker and the soil under it were removed during the construction of the trailer court berm. Removal of this natural dyke barrier has caused errosion beyond it (including our land). As a minimum, at least 15 feet (horizontally) of soil nearby has been removed by erosion after the ditch construction.

The storm water flow, prior to the construction of the diversion ditch or Alverado Road construction, was near what is now the freeway access road. Prior to the construction of Avarado Road (now the Freeway) there was a small date palm tree in the water flow channel (about 1948 or 1949) which I observed and wondered at its ability to hang onto the soil while flood water rushed by. I even went over and examined it. Today that date palm is still there; it was not removed during the construction of the trailer court, and it marks the flood channal as of that date. No wonder the trailer park floods during a storm; no fill was put in that area. Parts of the trailer court were built directly in the bottom of the flood channel! Why was it approved? Why did the City allow the water to be altered in its natural flow by a diversion ditch? Certainly I had nothing to say about it; we were part of the county at that time.

Adjoining our northern boundary and prior to the new ditch's construction, about 3 feet into Johnson's or the trailer park's land, the San Diego Gas and Electric Co installed a 16" or thereabouts high pressure gas main. At the time it was installed it was about 2 and a half feet below ground surface. After the construction of the diversion ditch, errosion created by the new diversion ditch caused exposure of the top of this pipe. In addition the errosion has progressed about 2 to 10 feet into my land area so as to remove vertically about 2 and a half feet of land. Damage has been done, and a dangerous situation created. A boulder or other forces during a storm can cause rupture of this high pressure gas pipe line. This pipe line prevented Cosgrove from deepening the new diversion ditch

to its proper depth; it crosses the ditch. Since the construction equipment struck the pipeline during the ditch construction, I presume that its location was unknown to those creating the diversion ditch.

May I also point out that some of the trees you have requested to be removed were in place before the construction of the diversion ditch (Eucalyptus, sycamore, sumac etc.). The sycamores were full grown at the time we purchased the property (about 1946), and were probably a hundred years old at that time. Are you requesting me to remove something existing prior to the original map of La Mesa Colony, existing prior to being included in La Mesa City and prior to the construction of the diversion ditch? I think this is out of line.

Before the construction of the new diversion ditch and also prior to the annexation of either the trailer court (annexed 11/16/51) or our land (annexed 9/26/60) to the City of La Mesa, we had an enclosure in our Northeast corner area in which we kept our dogs and at one time our sheep. Part of that fence is still existing. There was no flooding until after the diversion ditch was constructed. The portion of the fence adjoining the diversion ditch is now gone. Some of it remains.

At the present time we depend upon the trees to help decrease the noise pollution from the freeway as now existing, we depend on the trees to keep us from having to look down on an unsightly set of trailers, and we enjoy the birds the trees attract. There will be a definite damage to the enviornment of this property if the trees are removed.

I recognize that the city can condemn the area in question, but only with compensation. If the area is taken or the trees removed so as to make the area subject to additional water erosion, noise pollution or enviornmental deterioration, an injustice will be done. I intend to use the courts to attempt to prevent the removal of the trees.

Before you make a decision on enforcing the abatement notice please take time to read Sheffet v. County of Los Angeles 3 Cal. App. 3d 720 wherein the County (not the contractor) was held liable for damages to the adjoiners because of an inadequate approved design for a water drainage system.

From what I have read, it is the "duty of any person threatened with injury to his property by the flow of surface waters to take reasonable precautions to avoid or lessen an actual or potential injury." The trees and bamboo do just that. They are preventing additional errosion. The construction of the diversion ditch caused a potential damage situation to which I reacted at the time we were notified by the county (not the city).

Questions come to mind. Have you asked Cosgrove to remove his berm to prevent errosion on my land? Certainly I do not have to tolerate water diverted on our land by a diversion ditch. Has Cosgrove been asked to remove the Cottonwood trees and widen his channel at that point? It is a bottle neck about 200 feet east of our land. Has Cosgrove been asked to remove the big Sycamore stump impeding flow and left on the bank of the ditch? Has Cosgrove been asked to remove all of his trees in the drainage ditch (about 10 of them, mostly palm trees, a sycamore, several eucaliptus, a cottonwood and an crinmental tree). Has Cosgrove been asked to remove the rocks in the ditch that cause turbulence? Why is it that Cosgrove is not and was not required to concrete line the ditch he created? This would have solved the flooding problem.

I believe that the City of La Mesa, who approved the trailer park and ditch diversion plans, has responsibility for damage to the adjoiners, and to date we have had damages. The problem of flooding in the La Mesan Trailer court was created by inadequate diversion ditch design, not by acts of us. It is an injustice to impose a burden of creating additional water flow on those that had nothing to do with the diversion ditch and who were not in the flood zone at the time of water diversion. Those who created the problem should be responsible for its correction, not the bystander.

RE: Amended Permit to Operate a Mobilehome Park.

Dear Sirs:

It has come to our attention that the La Mesa Mobile Lodge has recently changed ownership. Section 1014(2) of the State of California Administrative Code, Title 25 states that an amended permit to operate shall be required when there is any change in the information on the permit to operate. Changes in information shall include, but not limited to, change of name of ownership; limits of occupancy; or number of lots resulting from the sale, lease, construction, or alteration of existing lots or facilities. A fee of ($10.00) shall be submitted to the enforcement agency with each application to amend the permit to operate.

Kindly complete the enclosed form HCD500A and return it to this office with the applicable ($10.00) fee within 10 days of the date of receipt of this letter. Make checks payable to the City of La Mesa, Attn: Building Department.

Thank you for your cooperation in compliance to this matter.

Sincerely,

Michael Bouse

Michael Bouse
Chief Building Official

La Mesa, California 92041

RE: Unauthorized alterations and Additions to Property Location at 7407 Alvarado Road, La Mesa, California 92041.

Dear Gentlemen:

It has come to the attention of the Building Inspection Department that unauthorized construction is in progress at the above referenced property.

On January 11, 1988, an inspection of the above referenced property resulted in the following findings:

Alterations to an existing metal building located at the southern portion of the property is currently under construction without a required building permit or inspection approval. (Uniform Building Code 1982 Edition, Section 301(a) and 305(e).

Section 205 of the Uniform Building Code (1982 Edition), and the City of La Mesa Municipal Code Chapter 14.04.060, provides that it is unlawful for any building or structure regulated by this code to be erected, constructed, enlarged, altered, etc., unless a building permit is first obtained.

8130 Allison Ave
La Mesa, CA 91941

RECEIVED
SEP 25 2000
COMMUNITY DEV. DEPT.

RE: SDRV, 7407 Alvarado Road, Fence and gates.

Dear David:

Per our phone conversation today, I am sending you the written information that will be used for the operations of the manual gates to be installed at SDRV. The installation of these gates will positively affect safety both inside and outside of the RV Park.

The external effect will direct all traffic to the safest entry to and exit from Alvarado road. Everyone with business in the park will use the main entry. It affords lengthy views of the Alvarado traffic so drivers can make safe decisions to enter or exit the park. Traffic on Alvarado will have fewer "streets" with which to contend.

The internal effect will create a safer environment for the park residents. The general public will no longer have "invisible" access in and out of the park. We have been working diligently to raise the quality of tenants in SDRV. This is the next step in our campaign.

The following is added to the site operations manual:

San Diego RV Operations Manual

SDRV manual street gates shall be operated in the following manner.

1. The manually operated street gates shall be kept closed and locked except for opening to load or unload vehicle sites.

2. At all times, the manual gates shall have a cutable lock installed for City of La Mesa fire and emergency service access.

3. Property management shall endeavor to register RV owners with extended stays on the following sites to minimize the gate opening periods: 12, 13, 24, 25, 35, 36, 49, 50, 63, 64, & 81.

4. The street gate at sites 24 & 25 may be set up for a "free" out exit. The gates will be able to open on a traffic loop sensor system. The location will be signed as an "exit only" location. The gates may stand open as needed to facilitate traffic out of the park. The exit will be marked and striped to establish the required 15'X15' exiting sight lines for active traffic.

5. Only site personnel shall open manual street gates. Site personnel shall remain at the gate during an open period and re-lock the gate when finished.

6. Directional signs shall be posted at each gate and along Alvarado road indicating the location of the active entry to the property.

This policy is implemented on September 19, 2000. No changes to this policy shall be made unless approved in writing by the City of La Mesa.

The policy begins immediately upon the installation of the gates. It will take approximately 6 – 7 weeks to finish the gate installation.

Thank you again for your participation and cooperation in making this a more attractive RV Park.

Sincerely,

Reza Paydar
Manager

ENVIRONMENTAL LIEN SEARCH REPORT

The NETR Environmental Lien and AUL Search Report

SAN DIEGO RV RESORT
7401–7407 ALVARADO ROAD
LA MESA, CALIFORNIA

Wednesday, October 17, 2018

Project Number: L18-01771

2055 East Rio Salado Parkway
Tempe, Arizona 85281

Telephone: 480-967-6752
Fax: 480-966-9422

ENVIRONMENTAL LIEN AND AUL REPORT

The NETR Environmental LienSearch Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied property information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' office, registries of deed, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved and description); and
- provide a copy of the deed or cite documents reviewed;

Thank you for your business
Please contact NETR at 480-967-6752
with any questions or comments

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by SCS Engineers were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL ---------- National Priority List
Proposed NPL ---------- Proposed National Priority List Sites

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/01/2018 has revealed that there are 4 RCRA-SQG sites within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 07/30/2018 has revealed that there are

5 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

SAN DIEGO CO. SAM: The listing contains all underground tank release cases and projects pertaining to properties contaminated with hazardous substances that are actively under review by the Site Assessment and Mitigation Program.

A review of the SAN DIEGO CO. SAM list, as provided by EDR, and dated 03/23/2010 has revealed that there are 17 SAN DIEGO CO. SAM sites within approximately 0.5 miles of the target property.

CPS-SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CPS-SLIC list, as provided by EDR, has revealed that there are 10 CPS-SLIC sites within approximately 0.5 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank

listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 4 SWEEPS UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/01/2018 has revealed that there is 1 RCRA NonGen / NLR site within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 3 EDR Hist Auto

sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist Cleaner site within approximately 0.125 miles of the target property.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
AIR EMISSIONS CLASSIFICATION UNKNOWN

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

- Owner/operator name: CHEVRON USA PRODUCTS CO
- Owner/operator address: PO BOX 2833
  LA HABRA, CA 90632
- Owner/operator country: Not reported
- Owner/operator telephone: 310-694-7452
- Owner/operator email: Not reported
- Owner/operator fax: Not reported
- Owner/operator extension: Not reported
- Legal status: Private
- Owner/Operator Type: Owner
- Owner/Op start date: Not reported
- Owner/Op end date: Not reported

Handler Activities Summary:
- U.S. importer of hazardous waste: No
- Mixed waste (haz. and radioactive): No
- Recycler of hazardous waste: No
- Transporter of hazardous waste: No
- Treater, storer or disposer of HW: No
- Underground injection activity: No
- On-site burner exemption: No
- Furnace exemption: No
- Used oil fuel burner: No
- Used oil processor: No
- User oil refiner: No
- Used oil fuel marketer to burner: No
- Used oil Specification marketer: No
- Used oil transfer facility: No
- Used oil transporter: No

Violation Status: No violations found

FINDS:

Registry ID: 110006484740

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

WALLY'S AUTO REPAIR (Continued) **S103994961**

Site History: The site was formerly operated as an automotive repair shop and filling station. Two underground storage tanks (USTs) which contained gasoline were removed from the site on November 16, 2004. Additional excavation in the vicinity of the dispenser islands resulted in the discovery of four additional USTs and fuel-impacted soil. Removal activities for the four USTs (contents were not determined) were conducted on December 2, 2004. The USTs were reported to have been in poor condition, and were filled with sand/slurry. Elevated concentrations of total petroleum hydrocarbons as gasoline (TPH-g) were reported in soil samples collected beneath the four USTs. Approximately 252 tons of impacted soil were transported off site for disposal. Between 2005 and 2014, ten groundwater monitoring wells were installed to determine the extent of contamination. Free product was reported in monitoring well MW-3 in 2007, with a maximum thickness of 4.19 feet reported in 2011. Sheens were occasionally observed in other monitoring wells. Soil vapor samples were collected on May 28, 2009 near the former UST pit and along the western boundary of the site. Based on the soil vapor survey results and a human-health risk evaluation, the consultant concluded that there are no significant on-site or off-site human-health risks associated with soil vapor. A dual-phase extraction (DPE) pilot test was conducted at the site in 2012. In 2013, a 7-day DPE event was conducted, and an estimated 937 pounds of TPH-g and 825 gallons of contaminated groundwater were removed. The consultant concludes that the DPE events conducted at the site were successful in mitigating free product to the extent practicable. The consultant concludes that remediation activities conducted at the site between 2005 and 2014 reduced contaminant concentrations in soil and groundwater to levels which fulfill the closure criteria in the State Water Resources Control Boards Low-Threat UST Case Closure Policy. Based on post-remediation quarterly groundwater monitoring events and concentration trend analyses, the consultant concludes that the dissolved contaminant plume is adequately defined and stable. DEH concurs with the consultants conclusions. Public notification of DEHs intent to close the case was completed. Comments were received from the Helix Water District regarding potential contamination impacts to potable water pipelines. In a response letter, DEH stated that because TPH-g was not detected in shallow soil, and the depth to groundwater at the site ranges from approximately 75 to 80 feet below ground surface, the pipelines should not be affected. In March 2015, Permit #DEH2015-LWMP-001592 was issued by DEH for the destruction of the ten groundwater monitoring wells associated with the site.

Local Agency:	SAN DIEGO COUNTY LOP
File Location:	Local Agency
Local Case Number:	H13427-002
Potential Media Affect:	Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern:	Gasoline
Site History:	This site is currently an active gas station. This case was opened in December 2002 due to elevated soil sample results from a tank and piping upgrade. From 2004 to 2013, eight groundwater monitoring wells were installed, at which time the groundwater plume was delineated. A June 2008 Site Assessment Report & Site Conceptual Model SAR) determined that results from benzene in soil indicated an excess cancer risk of 4.61 x 10-8 for the onsite building, which is less than the DEH threshold one in a million excess cancer risk . A March 2014 Corrective Action Plan (CAP) was submitted for natural attenuation and was approved by DEH. The consultant proposed natural attenuation because: The plume is shrinking. There are no supply wells within 1 mile of the site. All utilities are above the groundwater table, which is on an average of 11-21 feet bgs The San Diego aqueduct runs to the northwest of the site which does go as deep as 18 feet bgs. Because it is made out of steel and concrete, it is unlikely that the hydrocarbons from this site will impact the aqueduct. Since the aqueduct does go below the groundwater table, there is a possibility of migration from such. However, due to the low concentrations of groundwater hydrocarbons at this site, they would attenuate below detectable levels before they could reach the reservoir which is approximately 5.8 miles southeast of the site per the consultant. There are no health risks based on the 2008 SAR Based on degradation analyses, it is estimated that MtBE in groundwater will degrade to the secondary Maximum Concentration Level (MCL) of 5 ug/l by 2056 using MW-7 MtBE data. Benzene is currently below the primary MCL of 1 ug/l. The consultant states that approximately 851 cubic yards of soil remains on site with over 100 mg/kg TPHg. This soil is located in the area at the western dispenser islands from 5-30 per Figure 5 of the 2014 CAP. DEH concurs with the consultants conclusions and approves case closure. Permit # DEH2014-LMWP-000838 was issued by DEH for destruction of the 3 wells associated with the site. Permit # DEH2015-LMWP-002014 was issued by DEH for destruction of the 5 wells associated with the site.

Lead Agency:	SAN DIEGO COUNTY LOP
Case Type:	LUST Cleanup Site
Geo Track:	http://geotracker.waterboards.ca.gov/profile_report.asp?global_id=T06019790476
Global Id:	T06019790476
Latitude:	32.7683674535215
Longitude:	-117.04676002264
Status:	Completed - Case Closed
Status Date:	02/21/2014
Case Worker:	EM
RB Case Number:	Not reported
Local Agency:	SAN DIEGO COUNTY LOP
File Location:	Local Agency
Local Case Number:	H05480-004
Potential Media Affect:	Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern:	Gasoline
Site History:	12/95 Two soil borings (B-1 and B-2) were advanced near the use-oil UST and associated remote fill piping at the request of the DEH. Total petroleum recoverable petroleum hydrocarbons (TRPH) were detected at concentrations ranging from 59 milligrams per kilogram (mg/kg) to 4,260 mg/kg. 3/96 Based on sampling conducted in December 1995, the DEH notified ExxonMobil Oil Corporation that initial corrective action measures at the site were required and assigned DEH Case number H05480-003. 8/96 Five soil samples were collected and analyzed for petroleum hydrocarbons during fuel system upgrades. The maximum concentrations of TPH-g and benzene were 6,400 mg/kg and 5.0 mg/kg, respectively. Approximately 200 cubic yards of soil near the dispensers was excavated and disposed. 9/97 Eight soil borings (SB-1 through SB-8) were advanced to depths ranging from 18.5 feet bgs to 21.5 feet bgs near the northern dispenser island and the used-oil tank. TRPH, TPH-g, and benzene concentrations were not detected above the laboratory reporting limits. 3/00 Four soil borings (SB-9 through SB-12) were advanced to depths ranging from 7 feet bgs to 15 feet bgs, to the south and southeast of the used-oil tank.TRPH was detected at concentrations ranging from 13 mg/kg to 156 mg/kg. 2/01 In a letter dated 16 February 2001, the DEH granted regulatory closure for case H05480-003. 6/05 - 8/05 Three groundwater monitoring wells (MW-1 through MW-3) and three soil borings (TB-1 through TB-3) were advanced at the site. The maximum concentrations of TPH-g, TRPH, and benzene were 8.09 mg/kg,199.0 mg/kg, and 0.245 mg/kg, respectively. 10/05 In a letter dated 17 October 2005, the DEH opened environmental case #H05480-004 and requested additional assessment. 3/06 The Mobil service station, including the service station building, automotive hoists, fuel dispenser islands, dispenser pans/sumps, three single-walled fiberglass gasoline USTs (6000-, 10,000- and 12,000-gallon), one 500-gallon double-walled used-oil UST, and all associated product piping were removed from the site as part of site divestment activities. 5/06 In a letter dated 15 May 2006, the DEH approved the work plan dated 31 January 2006, with the condition of conducting a benzene vapor risk assessment. 4/07 Environmental consulting and management activities transferred from TRC to ETIC Engineering Inc. 9/07 ETIC submitted a vapor risk assessment report using historical soil and groundwater analytical results. The risk assessment report indicated that there does not appear to be a significant risk to public health and safety from vapor-phase benzene diffusion into a future site building. 11/07 DEH did not approve ETICs vapor risk assessment report, and requested additional information. 1/08 ETIC submitted a revised vapor risk

70TH MOBIL (Continued) **S104746189**

assessment report, based on the DEHs request. Again, the risk assessment report indicated that there does not appear to be a significant risk to public health and safety from vapor-phase benzene diffusion into a future site building. 6/08 ETIC submitted a vapor risk assessment workplan. 09/08 Four soil gas probes (SGP-1 through SGP-4) were installed at the site. A risk model was conducted and the Level I evaluation did not indicate a than the DEH threshold value of 1.0E-06 excess lifetime cancer risk. chronic health hazard due to vapor-phase migration for any of the compounds of concern. All calculated potential risks for occupants of a theoretical building are less than the DEH threshold value of 1.0E-06 excess lifetime cancer risk. 2013 CAP submitted for Natural Attenuation. 30-day review period ended and concurrence with natural attenuation.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

HAZARDOUS AIR POLLUTANT MAJOR

RISK AND TECHNOLOGY REVIEW

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/07/2016

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006
Date Data Arrived at EDR: 03/01/2007

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing
In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

CERS: CalEPA Regulated Site Portal Data
The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

ALVARADO CREEK RV PARK
7401 ALVARADO RD
LA MESA, CA 91942

TARGET PROPERTY COORDINATES

Latitude (North):	32.772336 - 32° 46' 20.41''
Longitude (West):	117.037863 - 117° 2' 16.31''
Universal Tranverse Mercator:	Zone 11
UTM X (Meters):	496453.9
UTM Y (Meters):	3625858.8
Elevation:	416 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5622828 LA MESA, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

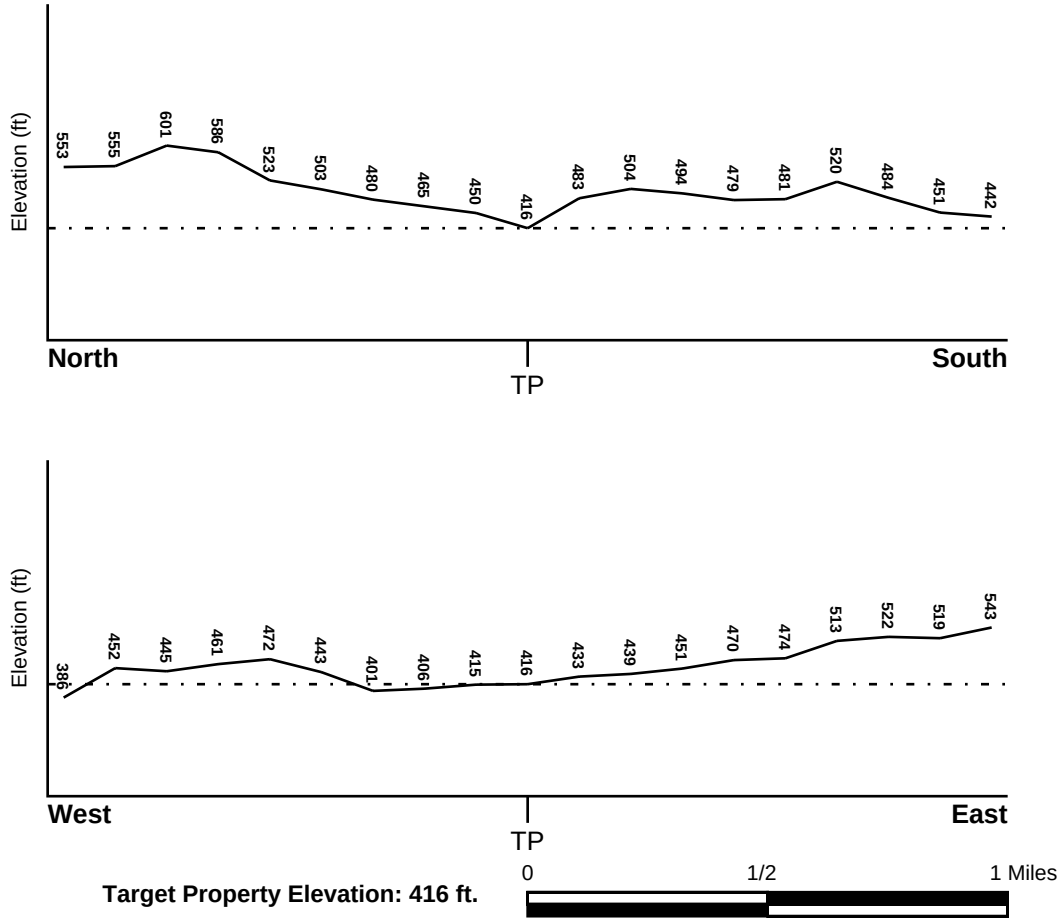
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06073C1643J	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06073C1641G	FEMA FIRM Flood data

06073C1644H	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
LA MESA	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
1	0 - 1/8 Mile NNE	W
2	1/2 - 1 Mile North	Not Reported
3	1/2 - 1 Mile WSW	Not Reported
4	1/2 - 1 Mile East	NW
5	1/2 - 1 Mile ESE	Not Reported
6	1/2 - 1 Mile East	Not Reported

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
1G	1/2 - 1 Mile North	Not Reported
2G	1/2 - 1 Mile East	Not Reported
3G	0 - 1/8 Mile NNE	W
4G	1/2 - 1 Mile East	NW
5G	1/2 - 1 Mile WSW	Not Reported
6G	1/2 - 1 Mile ESE	Not Reported

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: RIVERWASH

Soil Surface Texture: gravelly coarse sand

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Excessively drained

Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 168 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	5 inches	gravelly coarse sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILIS, Gravels, Clean Gravels, Well-graded gravel.	Max: 141 Min: 42	Max: Min:
2	5 inches	59 inches	stratified extremely gravelly coarse sand to gravelly sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILIS, Gravels, Clean Gravels, Well-graded gravel.	Max: 141 Min: 42	Max: Min:

Soil Map ID: 2

Soil Component Name: REDDING

Soil Surface Texture: gravelly loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	14 inches	gravelly loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	Not reported	Max: Min:	Max: Min:
2	14 inches	29 inches	gravelly clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	Not reported	Max: Min:	Max: Min:
3	29 inches	44 inches	indurated	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	Not reported	Max: Min:	Max: Min:

Soil Map ID: 3

Soil Component Name: REDDING

Soil Surface Texture: gravelly loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Well drained

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

SOIL (sub-surface)	0.55	11.6/1,610	16.9
WATER	N/A	N/A	N/A

ADDITIONAL COMMENTS: During a phase I site assessment of this redevelopment site, 9 areas of concern were identified at 5 business locations. Later, during a phase II site assessment, 61 soil samples were collected from bore holes and excavations, and 4 groundwater samples were collected using a strataprobe. Soil sample analytical data indicates that there is a very limited surficial impact to the environment. The volume of petroleum impacted soil in these areas is estimated to be 30 cubic yards with TRPH levels ranging from 'none detected' to 1,615 ppm. No further assessment/remedial action is required at these areas.

The phase I site assessment also identified a stockpile of construction type material located adjacent to the concrete lined creek-bed that runs parallel to Alvarado Road. The material is believed to have been debris removed from the creek by the City of La Mesa. The stockpile was sampled using SW-846 guidelines and was determined to be non-hazardous, even though one soil sample contained high levels of lead. RWQCB staff concurs with Ogden Environmental (consultant) that the on site use of the stockpile as industrial fill will not pose a threat to groundwater quality. The pile, consisting of 200-250 cubic yards of asphalt and 175 cubic yards of soil, will be covered with 6 to 7 feet of compacted fill material and then covered with asphaltic paving.

This redevelopment site is part of a larger grading project which involves importing soil from an adjacent property (5159 Baltimore Drive, La Mesa).

MAILROOM

September 17, 2001

Well Permitting Clerk
County of San Diego
Department of Environmental Health
Site Assessment and Mitigation Division
1255 Imperial Avenue, Suite 300
San Diego, CA 92101

Subject: **Thirty-Day Drilling Report for Well Permit Number W99875, On Street Adjacent to 7601 Alvarado Road, La Mesa, California 91941**

Well Monitoring Clerk:

In accordance with the well permit referenced above, one soil boring was drilled at the site on July 5, 2001. A groundwater monitoring well was constructed in the soil boring. In accordance with the requirements of the well permit, Earth Tech is pleased to submit this thirty-day report for your records.

Following this cover letter are a Site Location Map, Site Map, and a Well Location Map (Figures 1, 2, and 9 respectively). Soil boring and groundwater monitoring well construction logs, soil and groundwater sample analytical results, and monitoring well permit are also included.

All soil cuttings and rinsate water generated during the drilling activities, as was well purge water generated during the groundwater sampling activities (July 26, 2001) were placed into UN/DOT-rated 55-gallon drums, labeled, and left on-site pending approval for appropriate disposal. We anticipate that the drummed soil, rinsate water, and purged groundwater will be transported off-site to an appropriate disposal or recycling facility within approximately one week.

If you have any questions, please call the undersigned at (858) 536-5610.

Very truly yours,
Earth Tech, Inc.

Received: 07/26/01

DATA QUALIFIERS AND DEFINITIONS

L2	Laboratory Control Sample recovery was below method control limits. See Corrective Action Report.
M-HA	Due to high levels of analyte in the sample, the MS/MSD calculation does not provide useful spike recovery information. See Blank Spike (LCS).
M-NR1	There was no MS/MSD analyzed with this batch due to insufficient sample volume. See Blank Spike/Blank Spike Duplicate.
QD	Quantitated against a diesel fuel standard.
QG	Carbon range C6-C12 quantitated against a gasoline standard.
R-7	*LFB/LFBD RPD exceeded the method control limit. Recovery met acceptance criteria.*
RL-1	Reporting limit raised due to sample matrix effects.
ND	Analyte NOT DETECTED at or above the reporting limit or MDL, if MDL is specified.
NR	Not reported.
RPD	Relative Percent Difference

ADDITIONAL COMMENTS

For 8260 analyses:

Due to the high water solubility of alcohols and ketones, the calibration criteria for these compounds is <30% RSD. The average % RSD of all compounds in the calibration is 15%, in accordance with EPA methods.

Del Mar Analytical Number: IKG0960

Dear Mr. Delson:

Aquatic Testing Laboratories performed the Fathead Minnow Acute 96hr LC50 Bioassay (EPA 600/4-85/013), Fathead Minnow Larval Survival and Growth Test (EPA Method 1000), Ceriodaphnia Survival and Reproduction Test (EPA Method 1002), and Selenastrum Algal Growth Toxicity Test (EPA Method 1003) analyses requested for the project referenced above. Please use the following table when reviewing your results.

Client ID	Del Mar ID	Aquatic Testing Lab ID
MVE-7	IKG0960-01	A-01072708-001

Attached are the final reports from Aquatic Testing Lab. If you have any questions or require further assistance, please contact me at (949) 261-1022, extension 213.

Sincerely yours,

DEL MAR ANALYTICAL

Patty Mata
Project Manager

CA DOHS ELAP Cert. No.: 1775

Date: August 6, 2001

Client: Del Mar Analytical
2852 Alton Ave.
Irvine, CA 92606
Attn: Patty Mata

Laboratory No.: A-01072708-001
Sample I.D.: IKG0960-01

Sample Control: The sample was received by ATL with the chain of custody record attached.

Date Sampled: 07/26/01
Date Received: 07/27/01
Date Tested: 07/27/01 to 08/03/01

Sample Analysis: The following analyses were performed on your sample:

Fathead Minnow Acute 96hr LC50 Bioassay (EPA 600/4-85/013),
Fathead Minnow Larval Survival and Growth Test (EPA Method 1000),
Ceriodaphnia Survival and Reproduction Test (EPA Method 1002),
Selenastrum Algal Growth Toxicity Test (EPA Method 1003).

Result Summary:

Acute:	LC50	TUa
Fathead Minnow:	>100%	0.0
Chronic:	NOEC	TUc
Fathead Minnow Survival:	100%	1.0
Fathead Minnow Growth:	100%	1.0
Ceriodaphnia Survival:	6.25%	16.0
Ceriodaphnia Reproduction:	<6.25%	>16.0
Selenastrum Algae Growth:	12.5%	8.0

Quality Control: Reviewed and approved by:

Joseph A. LeMay
Laboratory Director

FATHEAD MINNOW ACUTE NPDES TOXICITY TEST

Lab No.: A-01072708-001 Client/ID: Dm1KG0960-01

TEST SUMMARY

Species: Pimephales promelas.
Test type: Static.
Test chamber volume: 800 ml.
Test chamber: 1000 ml beakers.
Number of replicates: 2.
Mean fish length: 11 mm.

Source: In-Lab Culture.
Endpoint: LC50 at 96 hrs.
Temperature: 20 +/- 2°C.
Number of fish per chamber: 10.
Photoperiod: 16/8 hrs light/dark.
Mean fish weight: 0.02 gm.

Age: 24 days (1-90).
Test Protocol: EPA/600/4-85/013.
Feeding: none.
Aeration: None, unless DO drops below 4.0 mg/l.
Dilution water: Mod. hard reconstituted water.
QA/QC Batch No.: QT-010706.

NOTICE: *You are hereby notified that on* 2/22/88, DOUG LIPERA, Hazardous Materials Specialist of County Department of Health Services, conducted an inspection for the removal and/or abandonment of underground storage tanks of hazardous substances. A summary of conditions found is noted as follows: FOUR

[ ] No indication of soil or groundwater contamination apparent this date. Excavation may be backfilled.

[X] The conditions noted below must be reported and corrected in accordance with Chapters 6.5 and 6.7 of the *California Health and Safety Code and Chapters 9 and 10 of the San Diego County Code.*

[ ] Hazardous substance/waste is ponded in the excavation. Immediately take steps to remove the ponded hazardous liquid from the excavation. This liquid is a hazardous waste that shall be properly transported, under manifest, by a licensed hazardous waste hauler to a licensed recycling or disposal facility.

[X] *Contaminated soil and/or contaminated groundwater is suspected in the excavation. Determining the* extent and impact of this contamination and completing any required clean-up is the responsibility of the tank owner/operator. Within 5 work days, the tank owner/operator or his agent must submit a written UNAUTHORIZED RELEASE REPORT to the Department of Health Services including all of the following information that is known at the time of filing the report:

a. Describe the type, quantity and concentration of the hazardous substance released.
b. Provide the results of all investigations completed at this time to determine the extent of soil, groundwater, or surface water contamination due to the release.
c. Describe the method of cleanup implemented to date, proposed cleanup actions, and approximate costs of actions taken to date.
d. Indicate the method and location of disposal of the released hazardous substance and any contaminated soils or groundwater or surface water. (If any contaminated soil/water is hauled off-site, include copies of the hazard waste manifests).
e. Include the tank operator's name and telephone number, the name and telephone number of any consultants retained, and a projection of proposed activity schedule.

Subsequent mitigation actions will be discussed upon review of the submitted Report and consultation with other appropriate agencies.

E. APPLICATION SUBMITTAL, PLAN APPROVAL, PERMIT ISSUANCE, AND REQUIRED INSPECTIONS:

Submit three (3) copies of this application package, including plan drawings, with the required fee to the Department of Health Services, Hazardous Materials Management Unit, Room 311, 1700 Pacific Highway, San Diego, CA 92101. Checks should be made payable to the County of San Diego.

A permit will be issued by the Department of Health Services (DHS) upon review and approval of the application and plans. The required fees must be submitted with the application package. Information in addition to that presented in this application package may be needed in order to obtain final approval. No work is to begin on the proposed project until a permit has been issued. The required inspections cannot be scheduled until a permit has been issued.

Once the permit has been issued, it is the permittee's responsibility to notify the DHS at least two (2) working days in advance to schedule each required inspection.

Construction stages at which inspections are required are indicated in each subpart of this application form (i.e., Part II, III and IV).

F. Indicate the Company/Person you wish to have our plan check comments directed to by circling the appropriate section letter above or if different enter below.

G. PROJECT WORK TO BE COMPLETED: Check Applicable Box	COMPLETE APPLICATION PARTS	FEE CODE (TABLE H.)	CODES FOR OFFICE USE ONLY

UNDERGROUND HAZARDOUS MATERIALS STORAGE TANK FACILITY

PART III

APPLICATION FOR PERMIT TO ABANDON

Complete all sections of Part III. If information is not known or applicable please indicate on application.

A. Total number of tanks to be abandoned 4

B. Tank Information - Complete the following information for each tank to be abandoned. Attach additional sheets as necessary.

Tank Number (Label tanks on plot plan to correspond to application)		1	2	3	4
Tank Capacity (gallons)		2000 gas	550 waste oil	550 waste oil	550 waste oil
Date Tank Installed		unknown	unknown	unknown	unknown
Tank Composition (Steel, Fiberglass, Fiberglass Coated Steel, Concrete, etc.)		steel	steel	steel	steel
Tank Manufacturer		unknown	unknown	unknown	unknown
Tank Presently in Use? (Yes-No)		no	yes	yes	yes
Materials Stored in Tank	Material: dates:	GAS ? to	w/o ? to 88	w/o ? to 88	w/o ? to 88

Is any part of the system cathodically protected? (Yes-No-Not Known)					
	Tank	no	no	no	no
	Piping Lines	"	"	"	"
Piping materials					

C. PREVIOUS OWNERS AND [redacted]RS OF THE TANK(S):

Dates	[redacted]ner/Operator

D. Approximate depth to groundwater: unknown

Basis of Determination: _____

E. Proposed method of abandonment: |XX| Removal |___| Destruction in place

NOTE: Removal of the tank(s) is the preferred method of abandonment. Destruction of the tank in place, for example, by filling with an inert substance, will only be considered in special cases upon submittal of additional information to determine the risks and hazards of contamination. Additional information required includes recent tank testing results, soils data, special site characteristics and approval from the local Fire Department.

F. Future use/disposal site of tank: scrap

G. ATTACH A PLOT PLAN ON 8-1/2" x 11" paper showing the following:

1. Property Lines, Site Address, Scale, North Arrow
2. Location of 100 year flood plain, if applicable
3. Location of all existing and proposed structures
4. Location of all existing and proposed underground storage tank facilities
5. Location of underground tank(s) to be abandoned (number tanks to correspond to application)
6. Location of underground utility lines and vaults

H. REQUIRED INSPECTION - PERMIT TO ABANDON

A representative of the Department of Health Services (DHS) must be on site at the time the tank(s) is removed from the ground to evaluate the condition of the tank and the surrounding soil and/or groundwater. Any evidence of an unauthorized release of a hazardous material from the tank will require the submittal of additional information by the permittee to the DHS.

When a permit has been issued by the DHS to destroy a tank in place, the DHS will inspect to verify that the tank has been properly emptied and purged of all hazardous materials immediately prior to filling with an approved inert substance.

I. I declare that to the best of my knowledge and belief the statements and information provided are correct and true. I understand that information in addition to that provided above may be needed in order to obtain final approval by the Department of Health Services.

I understand that tests and procedures that may be required by other departments and agencies to demonstrate adequate site safety or suitability for future development (e.g., soil compaction testing) are in addition to the requirements of the Department of Health Services.

I will notify the Department of Health Services at least two working days (48 hours) before work is to begin in order to schedule the required inspections. I understand that site and worker safety are solely the responsibility of the property owner or his agent and that this responsibility is not shared nor assumed by the County of San Diego.

OFFICIAL NOTICE

March 21, 1988
Jim Buchanan
La Mesa RV Center
7601 Alvarado Road
La Mesa, CA 92041

RE: UNAUTHORIZED RELEASE #T 1H02651
7601 Alvarado Road La Mesa, CA

Dear Mr. Buchanan:

Information provided to this Department by inspector during Tank Removal indicates that the underground hazardous substance storage facility at the location referenced above has experienced an Unauthorized Release (leak).

The conditions created by the Unauthorized Release must be reported and corrected in accordance with Sections 25295 and 25297 of Chapter 6.7 of the California Health and Safety Code (H&SC) and Section 2652, Subchapter 16, Chapter 3, Title 23 of the California Administrative Code (CAC), and Chapter 6.5 of the H&SC and Title 22 of the CAC.

As the owner/operator of the underground storage tank, it is your responsibility to:

1. Take immediate action to prevent further unauthorized release;
2. Determine the extent and impact of the unauthorized release;
3. Submit a written Unauthorized Release Report to this Department within five workdays of receipt of this Notice;
4. Complete and distribute within five workdays the enclosed State Water Resources Control Board's "Underground Storage Tank Unauthorized Release(Leak)/Contamination Site Report";
5. Submit supplemental report as required to update the initial report; and,
6. Complete any site mitigation (cleanup) required.

The Unauthorized Release Report must address all six Elements listed on the reverse side of this Official Notice, to the extent of the best information known at this time. Additional information and responsibilities are also listed. Please note Item G concerning responsibility for payment for staff time expended on the investigation.

Subsequent site characterization and mitigation actions will be determined upon evaluation of the written report and consultation with the Regional Water Quality Control Board and other appropriate regulatory agencies.

Please call me at (619) 236-2222 if you have any questions regarding this Official Notice.

Sincerely,

Hazardous Materials Specialist

7601 Alvarado Road
La Mesa, CA 92041

RE: UNAUTHORIZED RELEASE #T0427/H02651
7601 ALAVARDO ROAD, LA MESA

Dear Mr. Michand:

Your written supplemental report to update the Unauthorized Release Report for the site referenced above is PAST DUE. You are required to submit this report every two weeks to update the progress of activities at that site, in accordance with the provisions of the California Administrative Code, Title 23, Chapter 3, Subchapter 16, Article 5, Section 2652. The report was due November 1, 1986.

Please submit your written supplemental report to update the Unauthorized Release Report to this Department within five work days of receipt of this Notice.

If you have any questions on this matter, please contact me at (619) 236-2222.

Sincerely,

Mike Vernetti

TOPIC: Further S/A Work requirements

SUMMARY: A check w/ Mr. Buckner whether Mr. D. Eminhizer from Halliburton-NUS Co (451-2131) has been hired by La Mesa RV. To work on S/A because HMMD time on this case is chargable time Mr. Buckner confirmed w/ me that D. Eminhizer is working on this job. Next I called Dave Eminhizer & discussed the site history w/ him

12-6-91 at 9 AM Called Mr. Eminhizer & left a Ph. Message.

12-26-91 At 11 AM called Mr. Eminhizer 451-2131 & Discussed continuation S/AM activities at this site!!

12-27-91 Left a message for Mr. Jim Buckner at 9 AM

1-3-92 at 9 AM I called Mr. Jim Buckner & discussed S/AM requirements for this site. He is collecting bids for SB 2004 He has collected 2 & need one more He wanted to have meeting w/ HMMD & RWQCB The meeting was arranged for 1-10-92 at 11 AM

Dear Mr. Buckner:

RE: UNAUTHORIZED RELEASE #T0427/H02651-001
7601 ALVARADO ROAD, LA MESA, CA 92041

A review of the Hazardous Materials Management Division's (HMMD) files indicates that the unauthorized release issue associated with an underground storage tank at this site has not been resolved. The last activity on this site appears to be greater than three (3) months ago.

The California Code of Regulations, Title 23, Chapter 3, Subchapter 16, Section 2652 (d) states that until cleanup is complete, reports shall be submitted to the local agency and the Regional Water Quality Control Board (RWQCB) every three months or at a more frequent interval if specified.

Within thirty (30) days of receipt of this letter, submit a written update report to the HMMD and the RWQCB summarizing the site activities and the proposal for any further work. Submit the updates at the frequency previously specified by the HMMD, not to exceed the minimum of every three months (October 15th, January 15th, April 15th, July 15th). Updates must be submitted until which time the unauthorized release is resolved.

Please be reminded that the State Water Resources Control Board (SWRCB) will bill the responsible party for all local agency time expended on the unauthorized release investigation. Site assessments and remediation activities completed in a comprehensive and timely manner may minimize the amounts billed by the SWRCB.

Please contact Mo Lahsaie, Hazardous Materials Specialist, at (619) 338-2256, if you have questions regarding this matter.

Sincerely,

Darryl Fowler

OFFICIAL NOTICE

James Buckner 462-5660
La Mesa RV Center
7601 Alvarado Rd.
La Mesa, CA 92041

Dear Mr. Buckner:

RE: UNAUTHORIZED RELEASE #T0427/H02651-001
LA MESA RV CENTER
7601 ALVARADO RD., LA MESA, CA 92041

A review of the Hazardous Materials Management Division's (HMMD) files indicates that there has been no site assessment report submitted since the tanks were removed February 22, 1988. As the responsible party, you are required to take corrective action in response to an unauthorized release in accordance with the California Health and Safety Code, Chapter 6.75, Article 4, Section 25299.37 (a-c).

The HMMD letter to you dated January 16, 1992 states that the work plan you submitted was approved. The HMMD has not received any update reports that document completed or projected site assessment and mitigation activities. Your update report is **PAST DUE.**

In the HMMD letter to you dated May 23, 1991 you were instructed to submit update reports at a minimum of every 90 days. Until such time as the HMMD considers this case resolved, the HMMD will require that you submit an update report every 30 days in accordance with the provisions of the California Code of Regulations, Title 23, Chapter 3, Subchapter 16, Article 5, Section 2652 (d).

Additionally, you can not use the information from the old stockpiled soil data to characterize conditions on site. The disposal of the old stockpiled soil does not constitute significant progress towards defining the extent of contamination on-site. You

are required to perform a complete site assessment and any required remediation in order to protect the public health and the environment.

Please submit your written update report describing current and anticipated site activities. The report must contain conclusions and recommendations based on current site conditions. If further site assessment or remediation activities are necessary, you must submit a work plan outlining those activities. The update report is due within ten working days of receipt of this notice.

If you have any questions on this matter, please contact me at (619) 338-2396.

Sincerely,

LARS SKINNER, Hazardous Materials Specialist
Hazardous Materials Management Division

NOTICE OF REIMBURSEMENT RESPONSIBILITY

Fredna Gustavson
c/o: La Mesa RV Center
7601 Alvarado Rd.
La Mesa, Ca 91941

Dear Ms Gustavson:

RE: UNAUTHORIZED RELEASE #T0427/H02651-001
LA MESA RV CENTER, 7601 ALVARADO RD., LA MESA, CA 91941

This letter is to notify you of the billing procedure for the unauthorized release (leak) investigation at the above referenced underground storage tank site. The County of San Diego is under contract with the State Water Resources Control Board (SWRCB) to oversee the investigation and remediation (clean-up) of unauthorized releases. All costs incurred on this case by the Hazardous Materials Management Division (HMMD) are being invoiced to the SWRCB who will bill you.

A previous reimbursement notification may have been sent regarding this site. If this case is resolved, please retain this letter with your records. Active cases should be resolved in a prompt and effective manner to help minimize the amount billed by the SWRCB.

The HMMD has identified the following party(ies) as being responsible for the implementation of the environmental investigation and cleanup of this Unauthorized Release:

Fredna Gustavson 1100 Westwood Rd. Santa Cruz, CA 95060	La Mesa RV Ctr 7601 Alvarado Rd. La Mesa, CA 91941	Fredna Gustavson c/o: La Mesa RV Ctr. 7601 Alvardo Rd La Mesa, CA 91941

The California Health and Safety Code (HS&C) Chapters 6.7 and 6.75 requires the tank owner, tank operator, property owner or other responsible parties to take corrective action in response to an Unauthorized Release. The California Code of Regulations (CCR), Title 23, Division 3, Chapter 16, Underground Storage Tank Regulations provides the release reporting and initial abatement requirements.

With regard to the contract, the SWRCB requires the HMMD notify you of the following:

> *"Whereas the federal Petroleum Leaking Underground Storage Tank Trust Fund provides funding to pay the local agency administrative and oversight costs associated with the cleanup of releases from underground storage tanks; and Whereas the Legislature has authorized funds to pay the local and state agency administrative and oversight costs associated with the*

cleanup of releases from underground storage tanks; and Whereas the direct and indirect costs of overseeing removal or remedial action at the above site are funded, in whole or in part, from the federal Trust Fund; and Whereas the above individual(s) or entity(ies) have been identified as the party or parties responsible for investigation and cleanup of the above site; YOU ARE HEREBY NOTIFIED that pursuant to Title 42 of the United States Code, Section 6991b(h)(6) and Sections 25297.1 and 25360 of the Health and Safety Code, the above Responsible Party or Parties shall reimburse the State Water Resources Control Board the following:

FOR all direct and indirect costs incurred by any and all state and local agencies while overseeing the cleanup of the above referenced underground storage tank site (prior to January 1, 1991); FOR not more than 150 percent of the total amount of site specific oversight costs actually incurred while overseeing the cleanup of the above underground storage tank site (beginning January 1, 1991); and the above Responsible Party or Parties shall make full payment of such costs within 30 days of receipt of a detailed invoice from the State Water Resources Control Board."

The Underground Storage Tank (UST) Cleanup Fund provides funding to eligible responsible parties for corrective action and third party liability costs resulting from the unauthorized release of petroleum hydrocarbons. For more information on the UST Cleanup Fund, please contact the SWRCB at (916) 739-2475.

If you have any questions concerning this Notice, please contact the undersigned at (619) 338-2396.

Sincerely,

LARS SKINNER, Hazardous Materials Specialist

TOPIC: La Mesa RV SIA Update

SUMMARY: Dave called & update me on his SIA activities. He apparently has excavated the cont. soil in both Gasoline and W. end area & has removed 250 y^3 soil & even soil below H_2O table the G-H_2O looks impacted. Three St. Piles were generated Gasoline Pile, overburden & waste oil. He is planning to characterize all 3 piles before Disposal can be approved by HMMD. Two Excavation were connected & cross Contamination could have happen between both. we talked about remediation options & soil Lab analysis - He said one side wall Sample right above G-H_2O table had TPH = 980 PPM [redacted]. He said that his client wants to get rid of the stockpile as soon as possible.

RE: UNAUTHORIZED RELEASE #T0427/H02651-001
7601 ALVARADO RD., LA MESA, CA 92041

The proposed workplan for additional site assessment and remediation submitted by Halliburten Nus dated December 11, 1991 regarding the referenced site has been reviewed.

Based on the information within the workplan, this Department and the Regional Water Quality Control Board (RWQCB) finds the proposed scope of work acceptable.

Further site characterization and mitigation actions will be determined following evaluation of the written report and consultation with the RWQCB and other appropriate regulatory agencies.

If you have further questions, please call me at (619) 338-2256.

December 9, 1993

James Buckner
La Mesa RV Center
7601 Alvarado Rd.
La Mesa, CA 92041

Dear Mr. Buckner:

RE: UNAUTHORIZED RELEASE #T0427/H02651-001
LA MESA RV CENTER, 7601 ALVARADO RD., LA MESA, CA 92041

The staff of the Site Assessment and Mitigation Division (SAM) have reviewed this case. This letter has been prepared in accordance with the requirements set forth in Title 23 (State Underground Storage Tank Regulations), Division 3, Amendment to Chapter 16, Article 11, Section 2722. The purpose of this letter is to notify the Responsible Party of the status of the workplan dated November 24, 1993.

The workplan prepared by Dan Johnson/Environmental Business Solutions (EBS) covers one of the following phases of corrective action:

Interim Remedial Action	( )
Preliminary Site Assessment	(X)
Soil and Water Investigation	( )
Corrective Action Plan Implementation	( )
Verification Monitoring	( )

The workplan proposing to continue the soil and ground water investigation has been:

( ) approved.
( ) disapproved-call the undersigned for further instructions.
(X) approved with the following changes or conditions:

- The soil sample with the highest result for total petroleum hydrocarbons (TPH) must also be analyzed for volatiles by method 8020, and organic lead.

  The final report must include cross-sections of the soil contamination that depict the delineation achieved.

- The location proposed for MW-3 may not allow for accurate calculation of the ground water flow direction, based on the locations of wells MW-1 and 2 and the suspected local gradient to the north/northwest. It is recommended that well MW-3 be relocated to the east of sample points OES-15 and OES-6, approximately ten feet east of the edge of the previous excavation. This will also allow for lateral delineation of soil contamination in this area.

  However, there is still a requirement for lateral delineation of soil contamination in the vicinity of the previous location proposed for MW-3, i.e., to the south of OES-9 and OES-12. It is recommended that a soil boring, rather than a well, be placed at this location, in order to define the horizontal limits of soil contamination in this direction.

Keep this letter for your records as it may be required for corrective action cost reimbursement under Senate Bill 2004 (California Health and Safety Code, Chapter 6.75, Article 6).

Please submit a report describing the results of the activities described in the workplan to SAM and the Regional Water Quality Control Board (RWQCB) by January 30, 1994.

Please call me at (619) 338-2396, if you have any questions.

Sincerely,

LARS SKINNER, Hazardous Materials Specialist
Site Assessment and Mitigation Division

This letter has been prepared in accordance with the requirements set forth in Title 23 (State Underground Storage Tank Regulations), Division 3, Amendment to Chapter 16, Article 11, Section 2722. The purpose of this letter is to notify the Responsible Party of the status of the workplan dated November 24, 1993.

The workplan prepared by Dan Johnson/Environmental Business Solutions (EBS) covers one of the following phases of corrective action:

Interim Remedial Action	( )
Preliminary Site Assessment	(X)
Soil and Water Investigation	( )
Corrective Action Plan Implementation	( )
Verification Monitoring	( )

The workplan proposing to continue the soil and ground water investigation has been:

( ) approved.
( ) disapproved-call the undersigned for further instructions.
(X) approved with the following changes or conditions:

The soil sample with the highest result for total petroleum hydrocarbons (TPH) must also be analyzed for volatiles by method 8020, and organic lead.

The final report must include cross-sections of the soil contamination that depict the delineation achieved.

OFFICIAL NOTICE

James Buckner
La Mesa RV Center
7601 Alvarado Rd.
La Mesa, CA 92041

Dear Mr. Buckner:

RE: UNAUTHORIZED RELEASE #T0427/H02651-001
LA MESA RV CENTER
7601 ALVARADO RD., LA MESA, CA 92041

Your written update report for the site referenced above is **PAST DUE**. You are required to submit this report in accordance with the provisions of the California Code of Regulations, Title 23, Chapter 3, Subchapter 16, Article 5, Section 2652 (d). The report should contain a brief summary of completed and projected site assessment and mitigation activities. You are required to submit an update report every 30 days.

As a reminder, in order to qualify for SB 2004 funds you must be in compliance with all underground tank laws. Your lack of compliance can affect your eligibility to receive SB 2004 funds.

As a responsible party, you are required to complete the investigation to define the horizontal and vertical extent of contamination at this site. You are required to complete this additional investigation as part of corrective actions in accordance with the provisions of the California Health and Safety Code, Chapter 6.75, Article 4, section 25299.37 (a-c).

The Site Assessment and Mitigation Division (SAM) requires that a work plan be submitted for approval of all additional activities at the site. You were previously requested to submit a workplan in the letter to you dated June 2, 1993; the workplan was due July 5, 1993.

Please submit your written update report and a workplan for the next phase of work on this site no later than November 29, 1993. Failure to do so may result in the initiation of enforcement action.

If you have any questions on this matter, please contact me at (619) 338-2396.

Sincerely,

LARS SKINNER, Hazardous Materials Specialist
Site Assessment and Mitigation Division

OFFICIAL NOTICE

James Buckner
La Mesa RV Center
7601 Alvarado Rd.
La Mesa, CA 92041

Dear Mr. Buckner:

RE: UNAUTHORIZED RELEASE #T0427/H02651-001/LA MESA RV CENTER
7601 ALVARADO ROAD, LA MESA, CA 92041

Site Assessment and Mitigation (SA/M) staff have reviewed the Halliburton NUS report, dated August 28, 1992. Based on the information contained in the report, the extent of contamination of soil and groundwater has not been adequately defined. SA/M and the Regional Water Quality Control Board (RWQCB) require additional delineation of the soil and groundwater contamination. Please submit a proposed work plan for further site assessment activities. The work plan should specifically address the following:

- Investigate soil contamination in all areas, horizontally and vertically. Future sampling must follow SA/M guidelines for supplementary tests on waste oil-impacted samples. All additional samples must be analyzed for both Total Petroleum Hydrocarbons (TPH) and Total Recoverable Petroleum Hydrocarbons (TRPH).

- Provide a chain-of-custody for all of the samples designated "LMRV-OES", as well as copies of summary tables II and III, which were missing from the report. Please account for the discrepancy in total yards of soil stockpiled, versus the estimated number of yards of soil disposed of off-site, for which receipts have been provided.

- Describe the extent of ground water impact. Please refer to the SA/M manual for guidance on groundwater monitoring well

siting, design, installation, and sampling. You must provide a geologic explanation for the contaminant distribution in light of site geology, groundwater gradient, and contaminant source.

Please submit a work plan addressing the above points by July 5, 1993.

If you have any questions on this matter, please contact me at (619) 338-2396.

Sincerely,

L. Skinner

June 19, 1995

Mr. James Buckner
La Mesa RV Center, Inc.
c/o Stephen L. Marsh, Esq.
Luce, Forward, Hamilton & Scripps
600 W. Broadway, Suite #2600
San Diego, CA 92101

Dear Mr. Buckner:

RE: UNAUTHORIZED RELEASE H02651-001
LA MESA RV CENTER, 7601 ALVARADO RD., LA MESA, CA 92041

This letter has been prepared in accordance with the requirements set forth in Title 23 (State Underground Storage Tank Regulations), Division 3, Chapter 16, Article 11, Section 2722. The purpose of this letter is to notify the Responsible Party of the status of the Quarterly Groundwater Monitoring Report for the First Quarter 1995 and Workplan Describing Additional Site Assessment Activities (Workplan) dated May 1, 1995.

The Workplan prepared by Environmental Business Solutions, Inc. proposes to drill four soil borings to provide additional information on the horizontal and vertical spread of petroleum hydrocarbon contamination.

The Workplan has been approved with the following changes or conditions:

The Workplan proposes to use a pre-existing boring (B4A) to provide confirmation of the vertical extent of contamination at B4. This is acceptable if the registered professional can demonstrate that the soil samples collected at B4A are representative, ie; soil classification at both locations is the same and soil sample collection protocol was appropriate for collecting the soil samples at B4A.

Please include EPA 8240 or EPA 8010 to the analyses required for the next groundwater monitoring. The 1995 SAM manual requires that the groundwater monitoring wells be screened, at least once, for the presence of volatile organic compounds.

Keep this letter for your records as it may be required for corrective action cost reimbursement under Senate Bill 2004 (California Health and Safety Code, Division 20, Chapter 6.75, Article 6).

The need for further site characterization and mitigation actions will be determined following evaluation of the written report and consultation with the San Diego Regional Water Quality Control Board (RWQCB) .

If you have any questions, please call me at (619) 338-2257.

Sincerely,

Carol Spangenberg

La Mesa, CA 92041

Dear Mr. Buckner:

RE: UNAUTHORIZED RELEASE #T0427/H02651-001
LA MESA RV CENTER, 7601 ALVARADO RD., LA MESA, CA 92041

Staff of the Site Assessment and Mitigation Division (SAM) have reviewed the Environmental Business Solutions (EBS) report dated March 30, 1994. The report describes the second phase of soil and ground water investigation at this site.

Based on the information contained in the report, additional work should address the following points:

- Additional soil delineation is required in the following areas: west/northwest of GES-11 and MW-1, west of OES-11, southwest of OES-12 and 13, and vertically below B-4 and B-1. If soil data from MW-3, B-3 and B-6 are intended to provide lateral delineation of contamination, additional information must be provided as to the estimated mean and maximum concentrations and volumes of contaminated soil still in-place. This information must also be provided for all areas of the site as a whole. As part of this, please provide in the next report a contour map of soil contamination. In addition, to better clarify the differential distribution of waste oil versus gasoline, include a plot plan of sample results using a ratio of TPH to TRPH data.

- The apparent distribution of waste oil contamination at the site (versus gasoline contamination) is much broader than usual for such a contaminant, particularly in view of where the tanks were located. Please provide an explanation of contaminant distribution and migration based on site lithology and hydrogeology.

- The report stated that a number of samples were obtained using an air percussion drill rig. Please indicate what the protocol was to minimize excessive aeration of samples obtained in such a way.

- The report indicates that significant soil contamination was/is in close proximity to and below the water table at this site. It is somewhat unexpected that the monitoring wells did not show any resulting contamination. In addition, decisions on ground water contamination are made based on at least several rounds of sampling and the last samples were obtained some time ago. Consequently, SAM will require at least one to two additional rounds of quarterly sampling of the wells on-site.

Quarterly monitoring shall include collection of groundwater samples from all wells using acceptable purging and sampling procedures. Laboratory analysis for ground water samples must include Total Petroleum Hydrocarbons (DHS TPH Method), Total Recoverable Petroleum Hydrocarbons (TRPH), and Benzene, Toluene, Ethylbenzene, Xylene, and methyl tertiary-butyl ether (MTBE) (EPA Method 8020). For at least the next quarter, any samples that are not non-detect for TRPH should also be analyzed by method 8310 or 8270 for polyaromatic hydrocarbons (PAHs) to help characterize the more mobile constituents in the waste oil. Groundwater levels should be measured, and any free product detected should be removed on a weekly basis, or more or less frequently as conditions may warrant. This information shall be submitted in a report to SAM.

Quarterly sampling and reporting should be done according to the following schedule:

Sampling Period	Report Due Date
January, February, March	April 30
April, May, June	July 30
July, August, September	October 30
October, November, December	January 30

You should initiate your sampling/reporting program in the current quarter (January-March), and the report will be due to SAM by April 30, 1995. Based on the quarterly monitoring schedule you will be adhering to, it is not necessary to have your attorney continue to provide 30 or 90-day update reports.

Please submit a workplan for the next phase of work on this site no later than March 20, 1995. Due to administrative changes, this file has been transferred to Ms. Carol Spangenberg, to whom you should direct all future inquiries. She can be reached at (619) 338-2257, if you have any questions on this matter. If you have

any questions regarding the previous handling of this case, please contact me at (619) 338-2396.

Sincerely,

LARS SKINNER, Hazardous Materials Specialist

Subject: Suspect soil contamination at La Mesa RV 7601 Alvarado Rd La Mesa. AT1124

Dear Vicki Church:

After the tanks were removed from the excavation Alm Services took soil samples in several locations to determine the presence or degree of contamination.

The 8 soil samples were gathered in glass jars and placed in a cooler with ice. They were taken the same day (2/22/88) to QA Laboratoryfor analysis.

Please review the attatched lab report, plot plan and chain of custody.

I am told a few of the tanks have not stored product for several years. Please contact Jim Buckner with La Mesa RV 462-5660 for a more exact history of the site to make your determination.

Sincerely,

Robert Alm

La Mesa, Ca. 92041
Attn: Jim Buckner

Subject: Quotation for the removal of (4) underground fuel tanks.

Alm Services will perform the following work to remove your tanks;

- Pull all permits required
- Uncover (1) 2,000 gallon gas tank and (3) 550 gallon waste oil tanks. Assist the tank cleaner (hired by La Mesa RV), demo concrete and A/C over tanks on a Saturday to be determined.
- Remove the tanks on the following Monday during the scheduled inspection with the HMMD and S.D. Fire Dept.. Assuming there is no soil contamination, we will backfill and compact the soil to open the area for traffic.
- Patch tank hole areas with 3" A/C on a weekday of your choice.
- Haul away tanks, A/C, and concrete for disposal.
- Removal of contaminated soil or soil sampling is not included.

Total Cost $7,700.

Work could begin Feb. 20, 1988

Payment terms will be;

10%	Before pulling permits	$770
84%	After tank removal and backfill	$6468
6%	After paving	$462

Invoices will be due upon receipt, delinquent after 10 days. A late charge of 1½% per month on past due amounts.

Attn: Vicki Church- HAZMAT

Subject: Soil sampling at La Mesa RV, 7601 Alverado Rd., La Mesa
Plan check AT1124, EST #H02651.

Dear Vicki Church:

In order to resolve the high levels of TPH at the location of the old oil tanks, we have performed the following work:

- Excavated approximately 20 yds. of discolored and oily soil.
- Gathered 3 soil samples per plot plan.
- Backfilled hole with clean fill.
- Stockpiled oil soil at back of lot.

The samples were gathered in glass jars and placed in a cooler, on Saturday May 14th. They were stored in a refrigerator over the weekend and taken to QA Lab on Monday morning per chain of custody report.

The samples were taken in the native material. It was mostly clay with rocks roughly 3" round. No ground water was encountered.

Please review the attached lab results.

Contact myself or Jim Buckner at La Mesa RV with questions on the site.

Sincerely,

Robert Alm

INSTRUCTIONS

EMERGENCY
Indicate whether emergency response personnel and equipment were involved at any time. If so, a Hazardous Material Incident Report should be filed with the State Office of Emergency Services (OES) at 2800 Meadowview Road, Sacramento, CA 95832. Copies of the OES report form may be obtained at your local underground storage tank permitting agency. Indicate whether the OES report has been filed as of the date of this report.

LOCAL AGENCY ONLY
To avoid duplicate notification pursuant to Health and Safety Code Section 25180.7, a designated government employee should sign and date the form in this block. A signature here does not mean that the leak has been determined to pose a significant threat to human health or safety, only that notification procedures have been followed if required.

REPORTED BY
Enter your name, telephone number, and address. Indicate which party you represent and provide company or agency name.

RESPONSIBLE PARTY
Enter name, telephone number, contact person, and address of the party responsible for the leak. The responsible party would normally be the tank owner.

SITE LOCATION
Enter information regarding the tank facility and surrounding area. At a minimum, you must provide the facility name and full address.

IMPLEMENTING AGENCIES
Enter names of the local agency and Regional Water Quality Control Board involved.

SUBSTANCES INVOLVED
Enter the name and quantity lost of the hazardous substance involved. Room is provided for information on two substances if appropriate. If more than two substances leaked, list the two of most concern for cleanup.

DISCOVERY/ABATEMENT
Provide information regarding the discovery and abatement of the leak.

SOURCE/CAUSE
Indicate source(s) of leak. Provide details on tank age; capacity and material if known. Check box(es) indicating cause of leak.

CASE TYPE
Indicate the case type category for this leak. Check one box only. Case type is based on the most sensitive resource affected. For example, if both soil and ground water have been affected, case type will be "Ground Water". Indicate "Drinking Water" only if one or more municipal or domestic water wells have actually been affected. A "Ground Water" designation does not imply that the affected water cannot be, or is not, used for drinking water, but only that water wells have not yet been affected. It is understood that case type may change upon further investigation.

CURRENT STATUS
Indicate the category which best describes the current status of the case. Check one box only. The response should be relative to the case type. For example, if case type is "Ground Water", then "Current Status" should refer to the status of the ground water investigation or cleanup, as opposed to that of soil.

IMPORTANT: THE INFORMATION PROVIDED ON THIS FORM IS INTENDED FOR GENERAL STATISTICAL PURPOSES ONLY AND IS NOT TO BE CONSTRUED AS REPRESENTING THE OFFICIAL POSITION OF ANY GOVERNMENTAL AGENCY

REMEDIAL ACTION
Indicate which actions have been used to cleanup or remediate the leak. Descriptions of options follow:

Cap Site - install horizontal impermeable layer to reduce rainfall infiltration.
Containment Barrier - install vertical dike to block horizontal movement of contaminant.
Excavate and Dispose - remove contaminated soil and dispose in approved site.
Excavate and Treat - remove contaminated soil and treat (includes spreading or land farming).
Remove Free Product - remove floating product from water table.
Pump and Treat Groundwater - generally employed to remove dissolved contaminants.
Enhanced Biodegradation - use of any available technology to promote bacterial decomposition of contaminants.
Replace Supply - provide alternative water supply to affected parties.
Treatment at Hookup - install water treatment devices at each dwelling or other place of use.
No Action Required - incident is minor, requiring no remedial action.

COMMENTS - Use this space to elaborate on any aspects of the incident.
SIGNATURE - Sign the form in the space provided.
DISTRIBUTION

If the form is completed by the tank owner or his agent, retain the last copy and forward the remaining copies in tact to your local tank permitting agency for distribution.

1. Original - Local Tank Permitting Agency
2. State Water Resources Control Board, Division of Water Quality, Underground Tank Program, P. O. Box 100, Sacramento, CA 95801
3. Regional Water Quality Control Board
4. County Board of Supervisors or designee to receive Proposition 65 notifications.
5. Owner/responsible party.

INSTRUCTIONS ON THE BACK

1-10-92

December 11, 1991

Mr. James Buckner
La Mesa RV Center
7601 Alvarado Road
La Mesa, California 92041

Attention: Mr. James Buckner

Subject: Environmental Engineering Services
Relating to Unauthorized Release
Case Number T0427/H02651-001
HALLIBURTON NUS Proposal No. P9111053

Dear Mr. Buckner:

In response to your request, HALLIBURTON NUS Environmental Corporation (HALLIBURTON NUS) is pleased to submit this proposal to provide environmental engineering services relating to the unauthorized release (UAR) at the La Mesa RV Center. La Mesa RV is located at 7601 Alvarado Road in La Mesa, California.

The information presented below summarizes our understanding of the circumstances associated with the UAR at the site and proposes a scope of work to address these circumstances.

TECHNICAL UNDERSTANDING AND APPROACH

A representative of HALLIBURTON NUS previously visited the subject site with Mr. Chris Tomlin of Horizon Hoist Company of San Diego. During the survey of the site, Mr. Tomlin indicated that Alm Services, a local tank removal contractor, had removed four underground storage tanks (UST) from the site on February 22, 1988. The four UST's consisted of one 550 gallon used oil tank, two 550 gallon new oil tanks, and one 2000 gallon regular leaded gasoline tank.

While surveying the site, a concrete patch was observed at the location of the former gasoline UST at the southwest corner of the north service garage. In addition, an asphalt patch was observed at the location of the former oil UST on the south side of the southwest corner of the north service garage. An extensive asphalt parking and driveway complex surrounds the service

December 11, 1991
Proposal No. P9111053

and sales buildings. The former UST locations are situated in areas that could potentially disrupt the activities of the dealership during proposed excavation activities.

A survey of areas adjacent to the dealership indicate the site is bordered to the ~~south~~ North by Alvarado Road and Interstate 8, to the west and south by commercial properties and to the east by a residential property. Located immediately east of the residential property is the site of a former gasoline service station that is currently undergoing investigation and remediation activities associated with an unauthorized release at the site.

Review of Correspondence and Laboratory Data

A review of the "Abandoned Underground Tank Report", prepared by Mr. Donn Lipera of the San Diego County Department of Health Services-Hazardous Materials Management Division (DHS-HMMD) confirms that four UST's were removed from the site on February 22, 1988. The report further indicates that all of the tanks possessed holes ranging from pinhole size to three quarters of an inch in diameter. Odors within the excavation were indicated to be slight with some soil discoloration. Groundwater impact was not noted, although groundwater was observed within the excavation at a depth of seven feet below ground surface.

Correspondence from Mr. Bob Alm to Ms. Vicki Church of the DHS-HMMD, dated March 21, 1988 indicates that Alm Services obtained a total of six soil samples from the bottom of the two excavations. Four of the soil samples were obtained from the excavation, formerly containing the used oil tank and the two new oil tanks. A review of the laboratory results of these four soil samples indicates that total recoverable petroleum hydrocarbon (TRPH) concentrations (EPA Test Method 418.1) in the samples ranged from 32 to 2900 milligrams/kilogram (mg/kg). Benzene, toluene, and xylene concentrations (EPA Test Method modified 8020) in one sample were 7.7, 44, and 82 mg/kg , respectively. Two soil samples were obtained from the second excavation, formerly containing a regular leaded gasoline tank. A review of the laboratory results indicates that total petroleum hydrocarbon (TPH) concentrations (EPA Test Method modified 8015) in the samples was 20 and 100 mg/kg. Benzene, toluene, and xylene concentrations in one sample were <0.5, 1.4, and 19 mg/kg (EPA Test Method modified 8020), respectively. Two additional soil samples were obtained from two soil stockpiles generated from the excavation and removal of the four tanks. One soil sample obtained from a 20 cubic yard soil stockpile originating from the oil tank excavation possessed a TRPH concentration of 77 mg/kg. The other soil sample obtained from a 20 cubic yard soil stockpile originating from the gasoline tank excavation possessed a TPH concentration of 20 mg/kg.

ACCURATE Summary

December 11, 1991
Proposal No. P9111053

On May 14, 1988, Mr. Alm reportedly obtained three additional soil samples from the oil tank excavation. A review of the laboratory data for these three soil samples indicates that TRPH concentrations were 250, 340, and <930 mg/kg. Benzene, toluene, xylene and solvent concentrations were below detection limits.

Based on the information summarized above, it is the understanding of HALLIBURTON NUS that the client's objective is to obtain regulatory site closure of the UAR reported for the site. In accordance with current regulatory guidelines, the horizontal and vertical extent of hydrocarbon impacts to the soil at the site must be estimated and potential impacts to groundwater must be addressed. In the event that hydrocarbon impacts in excess of cleanup standards established by regulatory agencies are encountered, mitigation of this impact may be required by regulatory officials. HALLIBURTON NUS would recommend methods for the mitigation and could provide the necessary equipment and expertise to accomplish any required cleanup.

SCOPE OF SERVICES

Based on our understanding of your requirements as conveyed above, we propose to provide environmental engineering services on behalf of La Mesa RV for the purpose of obtaining regulatory closure of the UAR for the subject site. The scope of services proposed is designed to provide a cost effective approach to attempt to satisfy the goal of site closure. However, following regulatory review of the results of the first phase of services, the performance of additional services may be required.

- Provide consultation including a review of the proposed workplan with the appropriate representatives of the DHS-HMMD and the San Diego Regional Water Quality Control Board (RWQCB) prior to the commencement of the field activities. - Estimated man hours = 2 HALLIBURTON NUS

- Prepare a Health and Safety Plan that would identify potential health and safety hazards anticipated during the performance of the excavation activities. The plan would be prepared prior to the commencement of field activities and would be reviewed by all field personnel. - Estimated man hours = 2 HALLIBURTON NUS

- Obtain the services of an underground utility locating service and review available client "As Built" drawings in an effort to identify the presence of underground utilities in proximity to the proposed excavations. - Estimated man hours = 2 HALLIBURTON NUS and 3 contractor

- Notify Underground Service Alert as required by law and obtain a "Ticket Number" at least 48 hours prior to the commencement of excavation activities. - Estimated man hours = 1 HALIBURTON NUS

- Sawcut asphalt and concrete in the areas designated for excavation of the trenches. Estimated man hours = 1 HALLIBUTON NUS and 4 contractor

- Excavate trenches perpendicular to the perimeter of the excavation sidewalls in an attempt to identify the contact between the fill and formational soils. Based on the information obtained during the excavation of the perpendicular trenches, perimeter trenches would be excavated parallel to each sidewall, where possible. Soil samples would be collected at various depths as necessary to aid in the estimation of the extent of possible hydrocarbon impact to the soil. Based on available information, it is estimated that the trenches would extend to the depth of groundwater or a depth of approximately 13 feet below the ground surface, whichever is less. - Estimated man hours = 18 HALLIBURTON NUS and 18 contractor

- Provide site security either with barricades or trench plates. - Estimated man hours = 2 HALLIBURTON NUS

- Perform vapor headspace surveys on soil samples collected from the trenches at each former UST location. An organic vapor analyzer (OVA) would be used to attempt to obtain indicators of the presence of petroleum hydrocarbons. It should be noted that use of the headspace survey is generally more effective on soil impacted by gasoline than on soils containing used oil. - Hours required to perform this task are included as part of the excavation activities as referenced above.

- Obtain soil samples. Soil samples obtained throughout the performance of the field activities would be subjected to analysis by an on-site California Department of Health Services certified mobile laboratory. The results of the laboratory analysis would be used to guide additional trenching activities and provide analytical confirmation of the possible extent of hydrocarbon impact to the soil.

December 11, 1991
Proposal No. P9111053

It is anticipated that approximately 12 soil samples would be obtained and analyzed for the presence of TRPH using EPA Method 418.1. Approximately 12 additional soil samples would be obtained and analyzed for the presence of total petroleum hydrocarbons (TPH) using EPA Method DHS-8015. One soil sample from the used oil trenching would be analyzed for solvents by EPA Test Method 8010 while a soil sample from the gasoline UST trenching would be analyzed for benzene, toluene, xylene, and ethylbenzene (BTXE) by EPA Test Method 8020-modified. Analysis using EPA Test Methods 418.1 and DHS-8015 cost approximately $80 per sample while EPA Test Methods 8010 and 8020-modified cost approximately $100 per sample.

Quality assurance/control procedures would be followed during all excavation and soil sampling activities. Soil samples would be placed in laboratory prepared containers and transported to an on site mobile laboratory for analytical testing. Chain-of-custody documentation would be provided for all soil samples. - Hours required to perform this task are included as part of the excavation activity.

- Segregate soil. Soil excavated during the trenching activities at each former UST location according to origin and by estimates of TRPH and TPH concentrations. The soil would be stockpiled on-site and placed on, and covered with, visqueen in accordance with regulatory protocol. The client would be responsible for disposition of the stockpiled soil. Estimated man hours = 2 HALLIBURTON NUS. At The client's request, HALLIBURTON NUS can assist in arranging with third parties for transportation and disposal of the stockpiled soil. Fees for this service will be additional.

- Provide health and safety monitoring during all trenching/excavation activities. The hours required to perform this task are included as part of the excavation activities.

- Fill trenches with rock/gravel and replace asphalt and concrete at ground surface, whichever is appropriate. The cost for this item is not included in the proposal as the amount of rock/gravel and concrete and asphalt required cannot be determined at this time.

- Prepare a report summarizing the results of the field activities and provide recommendations for additional environmental services, if required. Estimated man hours = 20 HALLIBURTON NUS

- Provide consultation with the client and representatives of the regulatory agencies following completion of the field activities. The purpose of the consultation would be to present the results obtained during the performance of the field activities. - Estimated man hours = 4 HALLIBURTON NUS

Very important to remember

It should be noted that the scope of services referenced above is for a first phase exploration of the possible horizontal and vertical extent of the hydrocarbon impacts to the soil at the site. Based on discussions with regulatory representatives, additional services, consisting of monitoring of the groundwater will be required by regulatory agencies. The nature of the groundwater monitoring activities will be dependent upon the results obtained from the first phase of the exploration activities. HALLIBURTON NUS would keep the client apprised of work progress and the possible need for additional services. No additional services would be performed without the client's consent.

TERMS AND CONDITIONS

The terms and conditions of this agreement are specified in the "Master Environmental Services Agreement" attached as Exhibit "A".

PROJECT STAFFING

This project will be managed by Mr. David Eminhizer, an environmental scientist/geologist with more than 8 years experience as a science professional and more than 6 years as a consultant and site manager in San Diego County.

PROJECT SCHEDULE

HALLIBURTON NUS can begin to provide these services upon contract award and authorization. Based upon the above-referenced Scope of Services, it is anticipated that a report regarding the site trenching activities could be completed within four weeks of the completion of the field activities.

RE: Your Letter of May 23, 1991
Unauthorized Release #T0427/H02651-001
7601 Alvarado Road, La Mesa, CA 92041

Dear Mr. Fowler:

We were unaware of California Code of Regulations Title 23, Chapter 3, Subchapter 16, Section 2652 (d) prior to your letter.

We have been obtaining estimates from Leighton and Associates, Geotechnical and Environmental Engineering Consultants and Geocon, Environment Consultants, subconsultants to Horizon Hoists Company.

We have reached an agreement with Chris Tomlin of Horizon Hoists and signed a work order for Geocon. They will begin within the first two weeks of July 1991.

If you need more specific information please contact Chris Tomlin care of Horizon Hoist Co., 1991 Arnheim Court, El Cajon, CA 92021 (619) 444-9166.

Sincerely,

Jim Buckner
Director of Fixed Operations

UAR Case No. T0427/H02651-001
Interim Report on Soil Assessment and Mitigation, Dated August 28, 1992

Mr. Skinner:

At the request of Mr. James Buckner, representing La Mesa RV Center, the above-referenced report is released by HALLIBURTON NUS and is provided for your review and comment. A duplicate copy of this report has also been sent to the local office of the RWQCB.

(4 months)

The release of this report was delayed for administrative reasons and should not be interpreted as negligence on the part of La Mesa RV to comply with state and county reporting requirements. Although we recognize that some inconveniences have likely occurred, we hope that they have not impaired the progress of this project.

If you have any questions regarding the information provided, please call the undersigned. Your cooperation on issues regarding this project have been appreciated.

Sincerely,

Colin P. Young, CIH
Manager, San Diego District
Southwest Region

Interim Report on Soil Assessment and Mitigation

Gentlemen:

On behalf of La Mesa RV Center and in accordance with the "Proposal" dated December 11, 1992, HALLIBURTON NUS Environmental Corporation (HALLIBURTON NUS) has performed assessment and mitigation services for the subject site located at 7601 Alvarado Road in La Mesa, California.

During 1988, La Mesa RV Center removed four underground storage tanks from the subject property. In December 1991, representatives of La Mesa RV Center retained HALLIBURTON NUS to attempt to assess and mitigate potential hydrocarbon impacts to the soil at the site. The attached "Interim Report" presents a synopsis of the efforts of HALLIBURTON NUS to accomplish those tasks and provide recommendations for additional services.

If there are any questions concerning the contents of this report, please contact the undersigned at your convenience.

Sincerely,

David A. Eminhizer

INTERIM REPORT ON SOIL ASSESSMENT AND MITIGATION

SECTION ONE: INTRODUCTION AND BACKGROUND

INTRODUCTION

This report presents the results of a soil assessment and mitigation efforts conducted for the unauthorized release (UAR No. T0427/H02651-001) reported for a group of four underground storage tanks (USTs) formerly located at 7601 Alvarado Road in La Mesa, California. La Mesa RV Center operated the USTs at the site at the time of the reported UAR and remain the current occupants of the site. The Assessor's Parcel Number for the property is 469-021-02.

Site Location

The subject site, currently occupied by La Mesa RV Center is located at 7601 Alvarado Road in La Mesa, California. The business is engaged in the sale and maintenance of recreation vehicles. The site is located adjacent to, and on the south side of Alvarado Road. Alvarado Creek (a concrete lined channel) bounds Alvarado Road to the north and Interstate 8 bounds Alvarado Creek to the north. Motel "6" bounds the subject property to the east; a steep bank and residential housing bound the subject property to the south; and a drainage channel and mobile home and trailer park bound the site to the west. A gasoline service station, reportedly the site of a UAR, was formerly located several hundred yards to the east of the subject property. The approximate location of the site is presented on the Vicinity Map, Figure No. 1.

Site Improvements

Located on the site are several office, sales, storage, and service/maintenance structures. These facilities are contained in four separate structures, generally constructed of concrete blocks. Most of the subject site has been paved with asphaltic concrete with areas of soil and grass surfaces only along the south and western boundaries of the property and ranging as a strip with

a width generally ranging between 15 and 30 feet. A chain-link fence bounds the property to the east, south, and west. A wrought-iron fence bounds the property to the north with two gates providing access to the site. Most of the site is under surveillance with video cameras to monitoring site security. The Site Plan, presented on Figure 2, presents an approximate depiction of the site.

BACKGROUND

Preliminary Site Visit

A representative of HALLIBURTON NUS previously visited the subject site with Mr. Chris Tomlin of Horizon Hoist Company of San Diego. During the survey of the site, Mr. Tomlin indicated that Alm Services, a local tank removal contractor, had removed four underground storage tanks (UST) from the site on February 22, 1988. The four USTs consisted of one 550 gallon used oil tank, two 550 gallon new oil tanks, and one 2000 gallon regular leaded gasoline tank.

While surveying the site, a concrete patch was observed at the location of the former gasoline UST at the southwest corner of the north service garage. In addition, an asphalt patch was observed at the location of the former oil UST on the south side of the southwest corner of the north service garage. An extensive asphalt parking and driveway complex surrounds the service and sales buildings.

Review of Correspondence and Laboratory Data

A review of the "Abandoned Underground Tank Report", prepared by Mr. Donn Lipera of the San Diego County Department of Health Services-Hazardous Materials Management Division (DHS-HMMD) confirms that four UST's were removed from the site on February 22, 1988. The report further indicates that all of the tanks possessed holes ranging from pinhole size to three-quarters of an inch in diameter. Odors within the excavation were indicated to be slight

with some soil discoloration. Groundwater impact was not noted, although groundwater was observed within the excavation at a depth of seven feet below ground surface. Following the removal of the USTs from the site, La Mesa RV Center submitted an "Unauthorized Release Report" with the HMMD. Copies of the "Abandoned Underground Tank Report", the "Unauthorized Release Report", and the responsible party's UST Cleanup Fund Claim Form are provided in Appendix A.

Correspondence from Mr. Bob Alm to Ms. Vicki Church of the DHS-HMMD, dated March 21, 1988 indicates that Alm Services obtained a total of six soil samples from the bottom of the two excavations. Four of the soil samples were obtained from the excavation, formerly containing the used oil tank and the two new oil tanks. A review of the laboratory results of these four soil samples indicates that total recoverable petroleum hydrocarbon (TRPH) concentrations (EPA Test Method 418.1) in the samples ranged from 3.2 to 2900 milligrams/kilogram (mg/kg). Benzene, toluene, and xylene concentrations (EPA Test Method modified 8020) in one sample were 7.7, 44, and 82 mg/kg , respectively. Two soil samples were obtained from the second excavation, formerly containing a regular leaded gasoline tank. A review of the laboratory results indicates that total petroleum hydrocarbon (TPH) concentrations (EPA Test Method modified 8015) in the samples was 20 and 100 mg/kg. Benzene, toluene, and xylene concentrations in one sample were <0.5, 1.4, and 19 mg/kg (EPA Test Method modified 8020), respectively. Two additional soil samples were obtained from two soil stockpiles generated from the excavation and removal of the four tanks. One soil sample obtained from a 20 cubic yard soil stockpile originating from the oil tank excavation possessed a TRPH concentration of 77 mg/kg. The other soil sample obtained from a 20 cubic yard soil stockpile originating from the gasoline tank excavation possessed a TPH concentration of 20 mg/kg.

3 MONTHS LATER

On May 14, 1988, Mr. Alm reportedly obtained three additional soil samples from the oil tank excavation. A review of the laboratory data for these three soil samples indicates that TRPH concentrations were 250, 340, and 930 mg/kg. Benzene, toluene, and xylene concentrations

(using EPA Method 8020) and solvent concentrations (using EPA Method 8010) were below detection limits.

Based on the information summarized above, it is the understanding of HALLIBURTON NUS that the client's objective is to obtain regulatory site closure of the UAR reported for the site. In accordance with current regulatory guidelines, the horizontal and vertical extent of hydrocarbon impacts to the soil at the site must be estimated and potential impacts to groundwater must be addressed. In the event that hydrocarbon impacts in excess of cleanup standards established by regulatory agencies are encountered, mitigation of this impact may be required by regulatory officials. HALLIBURTON NUS would recommend methods for the mitigation and could provide the necessary equipment and expertise to accomplish any required cleanup.

SECTION TWO: SCOPE OF SERVICES

BACKGROUND

On January 10, 1992, a meeting was conducted at the office of the HMMD for the purpose of obtaining regulatory input concerning a proposed scope of services presented in a "Workplan for Site Assessment and Mitigation" for the La Mesa RV site by HALLIBURTON NUS. Present at the meeting were Mo Lahsaie and Darryl Fowler of the HMMD, James Munch of the RWQCB, James Buckner of La Mesa RV Center, and David Eminhizer of HALLIBURTON NUS. Based on our understanding of the regulatory requirements and La Mesa RV's desire to pursue assessment and eventual closure of the UAR reported for the site, HALLIBURTON NUS proposed and performed the following scope of services.

SCOPE OF SERVICES

- Provided consultation including a review of the proposed workplan with the appropriate representatives of the DHS-HMMD and the San Diego Regional Water Quality Control Board (RWQCB) prior to the commencement of the field activities.

- Prepared a Health and Safety Plan that identified potential health and safety hazards anticipated during the performance of the excavation activities. The plan, prepared prior to the commencement of field activities, was reviewed by all field personnel.

- Reviewed available client "As Built" drawings in an effort to identify the presence of underground utilities in proximity to the proposed excavations.

- Notified Underground Service Alert as required by law and obtained a "Ticket Number" at least 48 hours prior to the commencement of excavation activities.

- Attempted to excavate trenches perpendicular to the perimeter of the excavation sidewalls for the purpose of identifying the contact between the fill and formational soils. Based on the information obtained during the excavation of the perpendicular trenches, perimeter trenches were to be excavated parallel to each sidewall, where possible. Soil samples were to be collected at various depths as necessary to aid in the estimation of the extent of possible hydrocarbon impact to the soil. Based on available information, it was estimated that the trenches would extend to the depth of groundwater or a depth of approximately 13 feet below the ground surface, whichever was less.

- Provided site security with barricades.

- Performed vapor headspace surveys on soil samples collected from the excavations at each former UST location. An organic vapor analyzer (OVA) was used to attempt to obtain indicators of the presence of petroleum hydrocarbons. It should be noted that use of the headspace survey is generally more effective on soil impacted by gasoline than on soils containing used oil.

- Obtained soil samples throughout the performance of the field activities. The soil samples were subjected to analysis by an on-site California Department of Health Services certified mobile laboratory. The results of the laboratory analysis were used to guide additional excavation activities and provide analytical confirmation of the possible extent of hydrocarbon impact to the soil. It was anticipated that approximately 12 soil samples would be obtained and analyzed for the presence of TRPH using EPA Method 418.1. Approximately 12 additional soil samples would be obtained and analyzed for the presence of total petroleum hydrocarbons (TPH) using EPA Method DHS-8015. One soil sample from the used oil excavation soils was analyzed for solvents by EPA Test Method 8010 while a soil sample from the gasoline UST trenching was analyzed for benzene, toluene, xylene, and ethylbenzene (BTXE) by EPA Test Method 8020-modified.

  Quality assurance/control procedures were followed during all excavation and soil sampling activities. Soil samples were placed in laboratory prepared containers and transported to an on site mobile laboratory for analytical testing. Chain-of-custody documentation was provided for the soil samples. Sampling equipment was washed with an Alconox and tap water solution and rinsed with tap water before each sample was collected.

- Segregated soil excavated during the trenching activities at each former UST location according to origin and by estimates of TRPH and TPH concentrations. The soil was stockpiled on-site and placed on, and covered with, visqueen in

accordance with regulatory protocol. The client was responsible for disposition of the stockpiled soil.

- Provided health and safety monitoring during all trenching/excavation activities.
- Filled excavations with rock/gravel and replaced asphalt at the ground surface, as appropriate.
- Prepared this report summarizing the results of the field activities and provided recommendations for additional environmental services, as necessary.
- Provided consultation with the client and representatives of the regulatory agencies following completion of the field activities.

It should be noted that the scope of services referenced above was for a first phase exploration of the possible horizontal and vertical extent of the hydrocarbon impacts to the soil at the site. Based on discussions with regulatory representatives, additional services, consisting of monitoring of the groundwater will likely be required by regulatory agencies.

SECTION THREE: ASSESSMENT AND MITIGATION

PRE-FIELD ACTIVITIES

Review of Background Information

Information relating to the former UST located on the subject site, and the associated UAR reported for the site, was provided to HALLIBURTON NUS by Mr. Chris Tomlin of Horizon Hoist Company and Mr. James Buckner of La Mesa RV Center. The information reviewed was as follows:

- "Abandoned Underground Tank Report" prepared by Mr. Donn Lipera of the HMMD.

- Field notes prepared by Mr. Bob Alm of Alms Services, the underground storage tank removal contractor who removed the four USTs at the site.

- Laboratory data sheets prepared by Quality Assurance Laboratory of San Diego, California.

In addition to the review of this information, HALLIBURTON NUS surveyed the site and conducted informal interviews with a few of the employees at La Mesa RV Center.

Preparation of a Workplan

A "Workplan for Site Assessment and Mitigation" was prepared and submitted to the HMMD and the RWQCB on January 10, 1992 by HALLIBURTON NUS. The plan was prepared after reviewing the above referenced information and the guidelines presented in the HMMD's "Site Assessment and Mitigation Manual". During the meeting with the regulatory representatives on January 10, 1992, comments offered by the regulatory representatives were incorporated into the workplan.

Preparation of a Health and Safety Plan

A "Health and Safety Plan For La Mesa RV Center, La Mesa, California", was prepared by HALLIBURTON NUS prior to the performance of the field activities. Potential health hazards were addressed and action levels for ambient air monitoring in the field were established. These action levels identified situations in which levels of personal health protection are upgraded or field activities are terminated, pending a review of the potential health risks.

The personal protective equipment recommended in the Health and Safety Plan and utilized during field activities included Level D protection consisting of limited dermal protection including hardhats, steel-toed rubber boots, and chemically protective gloves.

FIELD ACTIVITIES/SOIL EXCAVATION

Introduction

Following completion of the pre-field activities, preparations were made to begin the trenching activities at the site during the week of March 9, 1992. Underground Dig Alert was notified of the intent to excavate at the site, with representatives of the various affected utilities visiting the site on Tuesday, March 10, 1992 and Wednesday, March 11, 1992. No commercial utilities were identified in the areas to be excavated, however, a sewer line was identified to the west of the excavation locations.

With concurrence from the HMMD and the RWQCB, and in accordance with the proposed "Workplan", excavation of soil at the site began on Wednesday, March 11, 1992. A copy of the "Workplan is provided in Appendix B. For the ease of presentation and understanding of the progression of the soil excavation field activities, details of the soil assessment and mitigation effort are presented in chronological order.

Completion of Field Activities/Soil Excavation

Wednesday, March 11, 1992. Following a survey of the site by representatives of potentially affected utilities in the area, and confirmation by these representatives as to the location of utilities in the area, removal of concrete and asphalt from the parking lot area adjacent to the west end of the service bays began by mid-morning. This area is identified on the Site Plan, Figure No. 2, as the former fuel tank location. After the asphalt was removed, a trench was excavated in the approximate center of the former UST location. At this time a

PVC water line connecting the service bays was encountered and cut by the backhoe. The existence of the water line was unknown prior to the initiation of the field activities. The water was shut off and the line repaired prior to continuing with the work with the release of approximately 10 gallons of water during the entire event.

The original "Workplan" called for trenching through the center and around the perimeter of each former UST location, however, upon initial excavation of soil from the area of the former location of the fuel UST, it became apparent that soil impacted with petroleum hydrocarbons had been placed back into the excavation following removal of the UST some three years earlier. The first excavation soil sample (LMRV-GES-1) was obtained from the capillary zone at a depth of approximately eight feet Below Ground Surface (BGS) from the center of the former location of the fuel UST. An analysis of the soil sample for total petroleum hydrocarbons (TPH) by an on-site DHS certified mobile laboratory indicated that the soil sample possessed a TPH concentration of 280 milligrams per kilogram (mg/kg) of gasoline and 130 mg/kg of diesel fuel. While only gasoline was reportedly stored in the fuel UST, the presence of diesel fuel suggests that either the fuel UST or the used oil UST had contained diesel fuel at one time.

Since concentrations of TPH exceeding the cleanup level of 100 mg/kg were encountered upon initial excavation of soil at the site, the client was consulted regarding whether he wished to pursue the trenching only or if he wished to removed soil potentially impacted with petroleum hydrocarbons above the cleanup level established for soil at the site. The client opted for soil removal and instructed HALLIBURTON NUS to proceed with soil removal in the area of the former location of the fuel UST.

Thursday, March 12, 1992. Excavation and removal of soil from the area of the former location of the fuel UST resumed in the morning with soil excavated from an area approximately ten foot square by approximately nine feet BGS, approximately one foot below the groundwater surface. Three soil samples were obtained from the north sidewall of the excavation. Soil sample LMRV-GES-2 was obtained at the east end of the north sidewall, from the capillary zone, at a depth of approximately eight feet BGS. Soil sample LMRV-GES-3 was obtained from

the west end of the north sidewall, from the capillary zone, from a depth of approximately eight feet BGS. Soil sample LMRV-GES-4 was obtained from the center of the north sidewall at a depth of approximately 5.5 feet BGS. The spacing between the samples was approximately six feet. An analysis of the three soil samples for TPH indicated that concentrations of TPH were not measured above the detection limit of the laboratory equipment and methods used.

Soil was removed from the excavation to the west end of the service bays with a vertical wall cut flush with the foundation of the building. Further excavation to the east was not possible without undermining the building. Three soil samples were obtained from the east sidewall of the excavation. Soil sample LMRV-GES-5 was obtained from the north end of the east sidewall, approximately five feet south of soil sample LMRV-GES-2 at a depth of approximately 8.5 feet BGS (the capillary zone). Soil sample LMRV-GES-6 was obtained at the south end of the east sidewall, approximately nine feet south of soil sample LMRV-GES-5 at a depth of approximately nine feet BGS (the capillary zone). Soil sample LMRV-GES-7 was obtained from the center of the east sidewall at a depth of approximately 5.5 feet BGS.

An analysis of soil sample LMRV-GES-5 for TPH indicated that concentrations of TPH were not measured above the detection limit of the equipment and methods used. An analysis of soil sample LMRV-GES-6 for TPH indicated a TPH concentration of 920 mg/kg. Odors indicative of oil were detected in the sample, therefore, this soil sample was also analyzed for total recoverable petroleum hydrocarbons (TRPH) using EPA Method 418.1. A review of the laboratory results indicated a TRPH concentration of 27,000 mg/kg. Soil sample LMRV-GES-7 was analyzed for TPH with a concentration of 27 mg/kg detected.

Three soil samples were obtained from the south sidewall of the excavation. Soil sample LMRV-GES-8 was obtained at the east end of the south sidewall, approximately six feet west of soil sample LMRV-GES- 6 at a depth of approximately 8.5 feet BGS (the capillary zone). Soil sample LMRV-GES-9 was obtained from the west end of the south sidewall, approximately six feet west of soil sample LMRV-GES-8, at a depth of approximately 8.5 feet BGS (the

capillary zone). Soil sample LMRV-GES-10 was obtained from the center of the south sidewall at a depth of approximately 6.5 feet BGS.

An analysis of the soil samples indicated that soil sample LMRV-GES-8 possessed a TPH concentration of 470 mg/kg; soil sample LMRV-GES-9 possessed a TPH concentration of 590 mg/kg; and soil sample LMRV-GES-10 did not possess a TPH concentration above the detection limit of the laboratory equipment and methods used.

The excavation was extended to the west several feet where a sewer pipe was encountered running in a north-south direction and bounding the excavation on the west side. The pipe was estimated to be buried at a depth of approximately five to six feet BGS. The existence of the sewer pipe was not identified by the representative of the responsible sewer authority. No further excavation was attempted to the west to avoid causing damage to the pipe.

Three soil samples were obtained from the west sidewall. Soil sample LMRV-GES-11 was obtained from the south end of the west sidewall, approximately six feet north of soil sample LMRV-GES-9, at a depth of approximately 8.5 feet BGS (the capillary zone). Soil sample LMRV-GES-12 was obtained from the north end of the west sidewall, approximately six feet north of soil sample LMRV-GES-11, at a depth of approximately 8.5 feet BGS (the capillary zone). Soil sample LMRV-GES-13 was obtained from the center of the west sidewall at a depth of approximately 6.5 feet BGS.

An analysis of the three soil samples for TPH indicated that soil sample LMRV-GES-11 possessed a TPH concentration of 980 mg/kg; soil sample LMRV-GES-12 possessed a TPH concentration of 140 mg/kg; and soil sample LMRV-GES-13 did not possess TPH at a concentration above the detection limit of the laboratory equipment and methods used.

Soil samples LMRV-GES-11 and LMRV-GES-12 were also analyzed for TRPH by EPA Method 418.1 with 3,300 mg/kg and 450 mg/kg detected, respectively.

The TPH laboratory results are presented on "Table I, Summary of Laboratory Test Results, Fuel Tank Excavation". The TRPH laboratory test results are presented on Table II, Summary of Laboratory Test Results, Fuel Tank Excavation".

The locations of the soil samples are presented on the Site Excavation Plan, Figure No. 3 and on the excavation cross-sections presented on Figure Nos. 4 and 5. The laboratory test results are presented in Appendix C, Excavation Laboratory Results.

Further excavation of soil from the area of the former location of the fuel UST was terminated at this time pending excavation of soil from the area of the former location of the three oil USTs and further analysis of the results obtained from the completed excavation activities.

After stopping any further soil removal from the first excavation at about noon, the excavation contractor moved to the former location of the oil USTs and proceeded to excavate a trench in the center of the former excavation. Within fifteen minutes, it became apparent that soil impacted with petroleum hydrocarbons had been placed into the excavation following the removal of the three 550 gallon tanks some three years earlier. It was decided by the client that soil removal in this area should be performed the same as in the first excavation.

Starting at around noon, soil was removed from the area formerly containing the three oil USTs. The excavation measured approximately ten feet north-south and 20 feet east-west, and extended to a depth of approximately 13 feet BGS. These dimensions appeared to roughly correspond to the dimensions and location of the original excavation created by the tank removal contractor when the tanks were removed. At about 1800 hours the soil removal was stopped pending the results of soil sampling to be performed on Saturday.

Friday, March 13, 1992. The excavation contractor moved the soil from the fuel UST excavation and stockpiled the soil on asphalt at the southwest corner of the property. This stockpile, identified as Soil Stockpile No. 3 on Figure No. 6, Soil Stockpiles, consisted of approximately 100 cubic yards of soil.

Saturday, March 14, 1992. As a result of logistical constraints, the client decided to have the fuel UST excavation backfilled before proceeding with additional excavation activities. The excavation contractor lined the bottom of the excavation with Typar filter fabric and placed three-quarter inch gravel on the filter fabric to a depth of approximately six to seven feet BGS. Typar filter fabric was placed on top of the gravel and the remaining excavation was backfilled to the ground surface with clean imported fill soil.

While backfilling of the fuel UST was being completed, the bottom of the oil UST excavation was being mucked out in preparation for soil sampling. Between thursday night and Saturday morning, groundwater accumulated in the bottom of the excavation and measured a depth of approximately two feet. While the surface of the water was approximately 11 feet BGS, it was apparent that the source of the water was a perched groundwater zone observed on the top of a heavily cemented zone of gravels, cobbles and boulders, encountered at a depth of approximately 6.5 feet BGS. An approximate one foot thick layer of organic soil was observed on top of the cemented zone with water seeping from this organic layer. No water was observed to be flowing from anywhere in the cemented layer.

Following removal of soil that had sloughed into the excavation, three-quarter inch gravel was placed into the excavation to a depth of approximately ten feet BGS to prevent any further sloughing of soil into the water.

The collection of soil samples started on the north sidewall with soil sample LMRV-OES-1 obtained from the east end of the north sidewall, approximately six feet west of the east end of the excavation, at a depth of approximately eight feet BGS, the depth estimated to be the capillary zone from the work performed in the previous excavation. In this excavation, however, this depth was approximately 1.5 feet below the surface of the cemented zone, and no water was observed in this area. Collection of the soil samples from the cemented layer was extremely difficult as penetration with any mechanical means met with great resistance.

Soil sample LMRV-OES-2 was obtained from the center of the east sidewall, approximately five feet south of soil sample LMRV-OES-1, at a depth of approximately eight feet BGS, from the cemented layer. Two soil samples were obtained from the south sidewall, both at a depth of approximately eight feet BGS, from the cemented layer. Soil sample LMRV-OES-3 was obtained approximately six feet west of soil sample LMRV-OES-2 and soil sample LMRV-OES-4 was obtained approximately thirteen feet west of soil sample LMRV-OES-3.

Analysis of these four soil samples for TRPH using EPA Method 418.1 indicated that these soil samples did not possess TRPH concentrations above the detection limit for the laboratory equipment and methods used. These results were not unexpected due to the high degree of cementation observed in this layer.

Based on observations of the excavation, such as groundwater seeping along the horizontal surface of the cemented zone, and a review of the laboratory data it became evident that the organic layer on the horizontal surface (contact) of the cemented zone was the likely location to observe the potential worst case impact created by the petroleum hydrocarbons in the area of this excavation. Some organic soil was observed in the north sidewall at a depth ranging from four to 6.5 feet, with a concentration of organic material observed between 5.5 and 6.5 feet. Soil sample LMRV-OES-5 was obtained from the north sidewall at a depth of approximately five feet BGS, directly above soil sample LMRV-OES-1. An analysis of this sample for TRPH indicated a concentration of 15 mg/kg. Soil sample LMRV-OES-6 was obtained between soil samples LMRV-OES-1 and LMRV-OES-5, at a depth of slightly more than six feet BGS. This soil sample was obtained from the organic layer, directly on top of the cemented layer. An analysis of this soil sample indicated a TRPH concentration of 8,200 mg/kg, supporting the hypothesis that the petroleum hydrocarbons had flowed along the upper surface of the cemented layer.

Following confirmation of the presence of petroleum hydrocarbons on the surface of the cemented layer, soil sample LMRV-OES-7 was obtained from the center of the east sidewall at a depth of slightly more than 5.5 feet BGS. An analysis of this sample indicated that the sample

did not possess concentrations TRPH above the detection limit of the laboratory equipment or methods used.

Soil samples LMRV-OES-8 and LMRV-OES-9 were obtained from the south sidewall at depth of approximately 5.5 feet BGS, from the organic layer on top of the cemented layer. Soil sample LMRV-OES-8 was obtained from a location directly above the location of soil sample LMRV-OES-3 and soil sample LMRV-OES-9 was obtained from an area directly above soil sample LMRV-OES-4. An analysis of the two soil samples indicated that soil sample LMRV-OES-8 did not possess concentrations of TRPH above the detection limit for the laboratory equipment and methods used and that soil sample LMRV-OES-9 possessed a TRPH concentration of 260 mg/kg.

At this time the excavation was extended around the corner of the service bays in the direction of the former location of the fuel UST. It appeared that the petroleum hydrocarbon impact extended to the south end of the previous excavation, therefore it was decided to connect the oil UST excavation with the now backfilled fuel UST location. Figure No. 3, Site Excavation Plan depicts the locations of the excavations and the connection that was made between the two.

From observations made during the collection and analysis of the soil samples, it was decided to remove the overburden soil from between the two excavations to a depth of approximately five feet and treat the soil as potentially clean. This approximate 80 cubic yards of soil was transported to the southwestern corner of the property and placed into a stockpile designated Soil Stockpile No. 2. The location of the stockpile is presented on the Stockpile Location Map, Figure No. 6. Following removal of the overburden soil, potentially impacted soil was removed to a depth of approximately 10 feet BGS. This soil was placed, along with soil from the oil UST location, on a stockpile located at the southwestern corner of the property. The total volume of this stockpile, designated Soil Stockpile No. 4 was estimated to be approximately 200 cubic yards.

Following removal of the soil to below the depth of the groundwater, soil sample LMRV-OES-10 was obtained from the east sidewall, approximately eight feet BGS, directly beneath the foundation of the service bays. An analysis of this soil sample indicated a TRPH concentration of 15,600 mg/kg. Further excavation in this direction was not possible at this time without undermining the service bay structure.

Soil sample LMRV-OES-11 was obtained from the west sidewall at a location approximately across from the location of soil sample LMRV-OES-10. The soil sample was obtained from a depth of approximately eight feet BGS (the capillary zone). An analysis of the sample indicated a TRPH concentration of 16,000 mg/kg.

Soil sample LMRV-OES-12 was obtained from the west sidewall, approximately nine feet west of soil sample LMRV-OES-9, at a depth of approximately eight feet (the capillary zone). An analysis of this sample indicated a TRPH concentration of 18,000 mg/kg.

Soil sample LMRV-OES-13 was obtained from the west sidewall, approximately nine feet north of soil sample LMRV-OES- 12, at a depth of approximately eight feet BGS (the capillary zone). An analysis of this soil sample indicated a TRPH concentration of 23,000 mg/kg.

Further excavation to the west was not attempted at this time due to the presence of a sewer pipeline.

The last excavating to be performed at the site in this phase was completed on the north sidewall of the oil UST excavation. Approximately three feet of the sidewall was removed in an attempt to estimate the possible extent of the TRPH impact on the surface of the cemented layer in that area. Soil sample LMRV-OES-14 was obtained from the north sidewall, approximately six feet east of the corner of the service bay structure, at a depth of approximately six feet. An analysis of this sample indicated a TRPH concentration of 8,000 mg/kg, relatively consistent with the concentration observed in soil sample LMRV-OES-6, previously obtained from this sidewall.

Soil sample LMRV-OES-15 was obtained from the north sidewall, approximately six feet east of soil sample LMRV-OES-14, from a depth of approximately six feet BGS. An analysis of this soil sample indicated a TRPH concentration of 7,700 mg/kg.

Further excavation in the direction of the service bays was not attempted at this time due to the risk of undermining the structure.

The TRPH laboratory results are presented on "Table III, Summary of Laboratory Test Results, Oil Tank Excavation".

The locations of the soil samples are presented on the Site Excavation Plan, Figure No. 3 and on the excavation cross-sections presented on Figure Nos. 4 and 5. The laboratory test results are presented in Appendix C, Excavation Laboratory Results.

Sunday, March 15, 1992. After completing the excavation and soil sampling activities at approximately 2130 hours the night before, the client opted to have the oil UST excavation backfilled to the ground surface with gravel and clean fill soil and pave the excavations at the surface with asphaltic concrete. The excavation contractor placed gravel to a depth of approximately eight to ten feet BGS and placed Typar filter fabric on top of the gravel. Clean fill soil was then placed and compacted into the excavation and the entire excavated area was paved over with asphaltic concrete. These services were completed by the end of the day with normal operations resuming at the facility the following day.

SUMMARY OF FIELD ACTIVITIES AND LABORATORY RESULTS

Soil Excavation

Overburden and hydrocarbon impacted soil was removed at the site from March 11, 1992 through March 15, 1992. Pre-excavation plans were to excavate trench through the center and around the perimeter of each former UST location, however, conditions encountered at the site necessitated the excavation and removal of soil from each of the former UST locations. The presence of the service bay structure and a sewer pipeline limited the extent to which soil could be excavated. In general, where possible, soil was removed until TPH or TRPH concentrations below the cleanup level were encountered.

Soil samples obtained from the north sidewall of the former location of the fuel UST indicate that the extent of the hydrocarbon impact to the soil in that direction had been reached during the excavation activities. Soil samples obtained from the east and south sidewall of the former location of the oil USTs indicates that in general the excavation approached the limit of the hydrocarbon impact in those directions.

Soil samples obtained from the east excavation sidewall along the service bay structure and along the north excavation sidewall of the former location of the oil USTs indicate that both TPH and TRPH concentrations above the cleanup level exist under the corner of the service bay structure. The zone of this impact appears to be generally limited to the capillary zone, a thickness of approximately one foot on the east sidewall and to a zone approximately one half to one foot thick on top of the cemented layer, at a depth of approximately 5.5 to 6.5 feet BGS. The dip of the cemented layer trends in the area of the former oil USTs towards the northwest, in the direction of the former location of the fuel UST.

Soil samples obtained from the west sidewall of both excavations indicate that both TPH and TRPH concentrations in the capillary fringe along that sidewall exceed the cleanup level established for the site. Additional excavation in that direction would have been performed a had a sewer pipeline not bounded the excavation on that side.

Both excavations were backfilled with gravel, Typar filter fabric, and clean import soil. Following completion of the backfilling, the entire excavation area was paved with asphaltic concrete.

Stockpile Disposition

During May 1988, four underground storage tanks (USTs) were excavated and removed from the subject site. Excavation work performed by the contractor generated a soil stockpile of approximately 30 cubic yard capacity from the former gasoline UST location. This soil was stockpiled on-site in the southwest corner of the property. This stockpile was designated as Soil Stockpile #1.

During the performance of the soil assessment and mitigation activities by HALLIBURTON NUS, three soil stockpiles were generated as the result of the excavation of soil from the former fuel tank excavation, a former used and new oil tank excavation (originally containing three tanks), and the area between the two tanks excavations. The approximately 80 cubic yards of soil excavated from the vadose zone between the two former UST locations was identified as Soil Stockpile No. 2. Approximately 100 cubic yards of soil excavated from the former fuel UST location is identified as Soil Stockpile No. 3. Soil Stockpile No. 4, comprising approximately 200 cubic yards of soil was generated from the excavation of soil from the former used and new oil UST location. The soil stockpiled at the site was placed on an asphalt surface and covered with visqueen pending its disposal following regulatory guidelines. The approximate location of the soil stockpiles is depicted on the Stockpile Location Map, Figure 6.

On March 24, 1992, HALLIBURTON NUS personnel obtained 19 soil samples from the four soil stockpiles. The soil samples were randomly selected from the stockpiles following the soil sampling protocol as outlined in the County of San Diego 1992 SA/M Manual, Soil Sampling, Section 3, pages 3 through 7. Three soil samples were obtained from Stockpile No. 1, containing approximately 20 cubic yards of soil (see Figure 6). Four soil samples were obtained from Soil Stockpile No. 2, containing approximately 80 cubic yards of soil and four soil samples were obtained from Soil Stockpile No. 3, containing approximately 100 cubic yards of soil (see Figure No. 6). Eight soil samples were obtained from Soil Stockpile No. 4, containing approximately 200 cubic yards of soil (see Figure No. 6). The soil samples were obtained using an Alconox washed and tap water rinsed stainless steel hand auger, placed in laboratory supplied glassware, and delivered to an on-site California certified mobile laboratory.

Review of laboratory analyses. The soil samples from Soil Stockpile No. 1 were analyzed for total petroleum hydrocarbons (TPH) by the DHS Method. A review of the results indicates that all three samples did not possess TPH concentrations above the laboratory detection limit of 10 milligrams/kilogram (mg/kg). The soil samples from Soil Stockpile No. 2 were analyzed for total recoverable petroleum hydrocarbons (TRPH) by EPA Method 418.1 A review of the laboratory results for these samples indicated TRPH concentrations of 156 mg/kg, 82 mg/kg, 73 mg/kg, and 312 mg/kg. The soil samples from Soil Stockpile No. 3 were analyzed for TPH by the DHS Method. A review of the laboratory results indicated that three of the samples possessed TPH concentrations of less than the laboratory detection limit of 10 mg/kg while one sample possessed a TPH concentration of 153.2 mg/kg. The sample possessing the TPH concentration of 153.2 mg/kg was analyzed for benzene, toluene, xylene, and ethylbenzene (BTXE). A review of the laboratory results indicates concentrations of BTXE of 1.190 mg/kg, .410 mg/kg, 1.390 mg/kg, and 1.180 mg/kg, respectively (EPA Method 8020, modified for DHS).

The soil samples from Soil Stockpile No. 4 were analyzed for TRPH by EPA Method 418.1. A review of the laboratory results indicates TRPH concentrations ranging from 156 mg/kg to 24,700 mg/kg. The soil sample possessing a TRPH concentration of 24,700 mg/kg was

analyzed for Title 22 Metals, purgeable halocarbons (EPA Method 8010), total PCBs (EPA Method 8080), cyanide, and flashpoint. For potential disposal purposes, an additional soil sample was obtained on March 31, 1992 from the location of the highest measured TRPH concentration. This sample was analyzed for pH and sulfide. Copies of the laboratory data sheets are provided in Appendix D.

Please note that in addition to the analyses performed on the soil stockpile samples, one soil sample from the gasoline tank excavation was analyzed for BTXE and organic lead. This sample, possessing the highest measured TPH concentration of the soil samples analyzed from the excavation or the stockpiles, possessed a TPH concentration of 980 mg/kg. A review of the laboratory results indicates BTE concentrations of less than the laboratory detection limit of 1.0 ug/kg and a xylene concentration of 585 ug/kg. The organic lead concentration was less than the laboratory detection limit of 0.5 mg/kg (DHS Method). Copies of these laboratory data sheets are provided in Appendix D.

The TRPH laboratory data for the soil stockpiles is provided on Table IV, Summary of Laboratory Test Results, Soil Stockpile. BTXE laboratory results for a soil sample from the fuel tank excavation and from Soil Stockpile No. 2 are provided on Table V, Summary of Laboratory Test Results, Fuel Tank Excavation and soil Stockpile. Laboratory test results for Title 22 metals on a soil stockpile sample are presented on Table VI, Summary of Laboratory Test Results, Soil Stockpile. Miscellaneous laboratory tests required for soil disposal are presented on Table VII, Summary of Laboratory Test Results, Soil Stockpile.

Stockpile statistics. Statistical analysis performed on the three soil stockpiles indicated that Stockpile Nos. 1, 2, and 3 were suitable for disposal at a Class III Landfill while Stockpile No. 4 was not suitable for Class III Landfill disposal.

Based on the results of the analysis of the soil samples obtained from the four soil stockpiles located on the subject site, La Mesa RV Center requested Hazardous Materials Management Division (HMMD) and Regional Water Quality Control Board (RWQCB) approval for the

disposal of Soil Stockpile Nos. 1, 2, and 3, totaling an estimated 200 cubic yards, at the County of San Diego Class III Landfill at Sycamore Canyon. A "Request for Class III Landfill Disposal of Hydrocarbon Contaminated Soil for 7601 Alvarado Road, La Mesa, California" was prepared and submitted to the HMMD and RWQCB on April 27, 1992.

Following an extended period of time in which La Mesa RV Center waited for permission to dispose of the three soil stockpiles at the Sycamore Canyon Class III Landfill, La Mesa RV Center elected to transport all four soil stockpiles to the Class II Landfill located at the Southwest Disposal facility in Somerton, Arizona. On May 25, 1992, the soil in all four stockpiles was transported and recycled at the Southwest Disposal facility. Copies of the Non-hazardous Waste Data Forms and the receipts for disposal are provided in Appendix E.

SITE GEOLOGY AND HYDROGEOLOGY

Geology

The subject site is located in Mission Valley, adjacent to Alvarado Creek. Located at an elevation of approximately 430 feet mean sea level (MSL), the site has been mapped in "Bulletin 200, Geology of the San Diego Area, California" as consisting of soils of the Poway Group, specifically the Stadium Conglomerate Formation. This formation, consisting mostly of non-marine sandstone and coarse cobble conglomerate is characterized by a cobble conglomerate with a dark yellowish brown coarse-grained sandstone matrix. Dispersed lenses of fossiliferous crossbedded sandstone are present as is general cementation of the soil matrix.

Soil encountered during the performance of the assessment and mitigation effort generally consisted of three to five of feet soils ranging from sandy to clayey in character. In the area of the former location of the oil USTs, this soil was underlain by organic soils possessing a silty fine sand matrix. This organic layer was observed to contain visible pieces of decomposed stems and leaves. This organic layer, generally one foot in thickness was underlain by heavily cemented gravels, cobbles, and boulders. Their appeared to be a general dip of the cemented

layer in a northwesterly direction. The cemented layer was generally encountered at a depth of approximately 6.5 feet BGS and extended to the maximum depth explored, approximately 13 feet BGS.

The area between the two excavations was characterized by what appeared to be a bisection of the previously described soil layers. Erosion of the formational material appeared to occur in an east-west trending direction, the general direction of flow of Alvarado Creek. The channel created by the erosion of the formational materials was then apparently filled with unconsolidated alluvial material consisting generally of coarse sand, gravel, cobbles, and boulders. This material was present from a depth of approximately five feet BGS to the maximum depth explored, approximately ten feet BGS.

The area of the former location of the fuel UST was characterized by a continuation of the channel and unconsolidated material observed in the areas between the two excavations.

The soils discussed in this report are depicted on the profiles of the locations of the soil samples. These profiles are provided on Cross-Sections (A-A' and B-B'), Figure No. 4; and on Cross-Sections (C-C' and D-D'), Figure No. 5.

Hydrogeology

A review of the "Comprehensive Water Quality Control Plan, Basin 9", indicates that the subject site is located in the Lower Sweetwater hydrographic subunit of the San Diego hydrographic unit. This RWQCB document dated 1975, designates the groundwater in this area as having beneficial uses for municipal and domestic supply, agricultural supply, and industrial uses. Potentially beneficial uses of this water are for industrial process water and for groundwater recharge.

General cleanup levels for soil and groundwater in beneficial groundwater use areas have been established by the RWQCB. The cleanup level for TPH in soil is generally 100 mg/kg, and 1.0

ug/l for benzene in groundwater. While these are general guidelines, each case is site specific and other levels may be established by the RWQCB.

Groundwater was generally encountered in the area of the former location of the oil USTs in a perched condition, generally seeping along the surface of the cemented layer. Groundwater was not generally observed in the cemented layer.

Groundwater in the area of the former location of the fuel UST was encountered at a depth of approximately 8.5 to 9 feet BGS. The capillary zone was generally observed at a depth ranging between 8 and 9 feet BGS. Soil of the capillary zone was generally characterized by unconsolidated materials consisting of coarse sands, gravel, cobbles, and scattered boulders.

Groundwater level measurements suggesting a general groundwater flow could not be estimated with the available data; however a general flow of groundwater to the northwest towards Alvarado Creek would be anticipated. The presence on cemented conglomerate material and the observation of groundwater at different depths would suggest the area of the site generally possesses areas of perched groundwater at different depths.

CONCLUSIONS

1. Soil and groundwater at the site was impacted by the release of petroleum hydrocarbons (gasoline, diesel, and new and used oil) on the site. Vadose and capillary zone soils were impacted as the hydrocarbons migrated vertically until they reached the groundwater surface. Soil impacted with petroleum hydrocarbons remain beneath the service bays and to the capillary soils to the west of the excavation.

2. Soil possessing TPH and TRPH concentrations above the cleanup level of 100 mg/kg were encountered and removed at the site with the exception of the two areas mentioned in item No. 1. The remaining volume of hydrocarbon impacted soil in these areas is unknown at this time.

3. Groundwater in the area of the excavations appears to have been impacted with petroleum hydrocarbons. The degree of this impact is unknown at this time.

4. Soil totaling approximately 400 cubic yards was excavated and stockpile on-site. Following regulatory protocol, the soil was statistically characterized and eventually transported off-site under non-hazardous waste data forms to the Southwest Disposal facility in Somerton, Arizona. The soils are reportedly being landfarmed and recycled.

5. The excavations created during the soil assessment and mitigation activities were backfilled with gravel and clean fill and paved over at the ground surface with asphaltic concrete.

RECOMMENDATIONS

1. Conduct a meeting with the appropriate regulatory representatives and discuss the results of the mitigation effort and additional work required at the site to complete the mitigation effort. Prepare and present a workplan to regulatory specialists that details the remaining services to be performed.

2. Perform an additional assessment of the extent of petroleum hydrocarbon impact to the soil and the groundwater at the site. This assessment would likely consist of the excavation of backhoe pits and the collection of soil samples to the west of the previously performed excavation activities. In general, this type of soil sampling will be necessary as a result of the cemented soil conditions and the presence of the hydrocarbon impact in a fairly thin capillary zone. Groundwater samples will likely be obtained through the installation of shallow temporary groundwater monitoring wells. The type of drillrig used to advance these wells must be capable of penetrating difficult soils comprised of cemented gravels, cobbles, and boulders.

3. Soil and groundwater samples should be analyzed for TPH, BTXE, and TRPH.

4. Prepare a final report summarizing the results of the additional assessment services performed following the submission of this report, as appropriate.

REPORT LIMITATIONS

This interim report has been prepared for the use of the La Mesa RV Center and for review by Mr. James Munch of the San Diego Regional Water Quality Control Board and Mr. Lars Skinner of the San Diego County Hazardous Materials Management Division.

The client should recognize that the assessment and mitigation effort including soil excavation and limited sampling and laboratory testing described in this report should not be interpreted as a characterization and statistical evaluation of the entire site but is intended to provide confirmation of the effort to assess and mitigate the hydrocarbon impact to the soil at the site created by the release of petroleum hydrocarbons from the USTs formerly located on the site. The assessment and mitigation of hydrocarbon impacts in the area of the former location of the USTs does not preclude the possibility of the presence of hazardous materials in other areas of the site.

The information obtained in assessing and mitigating the hydrocarbon impacts at the site can vary at different times and different locations and the interpolation or extrapolation of such data results in some degree of uncertainty. Additionally, the client should recognize that regulatory agencies possess the final authority relative to site closures and may require the performance of additional services beyond those proposed or performed and described in this report.

Therefore, the conclusions and recommendations presented in this report should only be considered conclusive with respect to the information contained herein. No guarantee of the results presented in this report is implied or intended. All services performed were conducted in accordance with the local standard of care in the geographic region at the time the services were rendered.

NOTICE: You are hereby notified that on 2/23/88, [illegible] Hazardous Materials Specialist of County Department of Health Services, conducted an inspection for the removal and/or abandonment of FOUR underground storage tanks of hazardous substances. A summary of conditions found is noted as follows:

[ ] No indication of soil or groundwater contamination apparent this date. Excavation may be backfilled.

[X] The conditions noted below must be reported and corrected in accordance with Chapters 6.5 and 6.7 of the California Health and Safety Code and Chapters 9 and 10 of the San Diego County Code.

[ ] Hazardous substance/waste is ponded in the excavation. Immediately take steps to remove the ponded hazardous liquid from the excavation. This liquid is a hazardous waste that shall be properly transported, under manifest, by a licensed hazardous waste hauler to a licensed recycling or disposal facility.

[X] Contaminated soil and/or contaminated groundwater is suspected in the excavation. Determining the extent and impact of this contamination and completing any required clean-up is the responsibility of the tank owner/operator. Within 5 work days, the tank owner/operator or his agent must submit a written UNAUTHORIZED RELEASE REPORT to the Department of Health Services including all of the following information that is known at the time of filing the report:

a. Describe the type, quantity and concentration of the hazardous substance released.
b. Provide the results of all investigations completed at this time to determine the extent of soil, groundwater, or surface water contamination due to the release.
c. Describe the method of cleanup implemented to date, proposed cleanup actions, and approximate costs of actions taken to date.
d. Indicate the method and location of disposal of the released hazardous substance and any contaminated soils or groundwater or surface water. (If any contaminated soil/water is hauled off-site, include copies of the hazard waste manifests).
e. Include the tank operator's name and telephone number, the name and telephone number of any consultants retained, and a projection of proposed activity schedule.

Subsequent mitigation actions will be discussed upon review of the submitted Report and consultation with other appropriate agencies.

- REFER TO REVERSE SIDE FOR ADDITIONAL INFORMATION/REQUIREMENTS -

HALLIBURTON NUS

APPENDIX B

WORKPLAN

December 11, 1991

Mr. James Buckner
La Mesa RV Center
7601 Alvarado Road
La Mesa, California 92041

Attention: Mr. James Buckner

Subject: Environmental Engineering Services
Relating to Unauthorized Release
Case Number T0427/H02651-001
Workplan

Dear Mr. Buckner:

In response to your request, HALLIBURTON NUS Environmental Corporation (HALLIBURTON NUS) is pleased to submit this Workplan proposing environmental engineering services relating to the unauthorized release (UAR) at the La Mesa RV Center. La Mesa RV is located at 7601 Alvarado Road in La Mesa, California.

The information presented below summarizes our understanding of the circumstances associated with the UAR at the site and proposes a scope of work to address these circumstances.

TECHNICAL UNDERSTANDING AND APPROACH

A representative of HALLIBURTON NUS previously visited the subject site with Mr. Chris Tomlin of Horizon Hoist Company of San Diego. During the survey of the site, Mr. Tomlin indicated that Alm Services, a local tank removal contractor, had removed four underground storage tanks (UST) from the site on February 22, 1988. The four UST's consisted of one 550 gallon used oil tank, two 550 gallon new oil tanks, and one 2000 gallon regular leaded gasoline tank.

While surveying the site, a concrete patch was observed at the location of the former gasoline UST at the southwest corner of the north service garage. In addition, an asphalt patch was observed at the location of the former oil UST on the south side of the southwest corner of the north service garage. An extensive asphalt parking and driveway complex surrounds the service

Quality assurance/control procedures would be followed during all excavation and soil sampling activities. Soil samples would be placed in laboratory prepared containers and transported to an on site mobile laboratory for analytical testing. Chain-of-custody documentation would be provided for all soil samples. - Hours required to perform this task are included as part of the excavation activity.

- Segregate soil. Soil excavated during the trenching activities at each former UST location according to origin and by estimates of TRPH and TPH concentrations. The soil would be stockpiled on-site and placed on, and covered with, visqueen in accordance with regulatory protocol. The client would be responsible for disposition of the stockpiled soil.

- Provide health and safety monitoring during all trenching/excavation activities.

- Fill trenches with rock/gravel and replace asphalt and concrete at ground surface, whichever is appropriate.

- Prepare a report summarizing the results of the field activities and provide recommendations for additional environmental services, if required.

- Provide consultation with the client and representatives of the regulatory agencies following completion of the field activities. The purpose of the consultation would be to present the results obtained during the performance of the field activities.

It should be noted that the scope of services referenced above is for a first phase exploration of the possible horizontal and vertical extent of the hydrocarbon impacts to the soil at the site. Based on discussions with regulatory representatives, additional services, consisting of monitoring of the groundwater will be required by regulatory agencies. The nature of the groundwater monitoring activities will be dependent upon the results obtained from the first phase of the exploration activities, consent.

- Notify Underground Service Alert as required by law and obtain a "Ticket Number" at least 48 hours prior to the commencement of excavation activities.

- Sawcut asphalt and concrete in the areas designated for excavation of the trenches.

- Excavate trenches perpendicular to the perimeter of the excavation sidewalls in an attempt to identify the contact between the fill and formational soils. Based on the information obtained during the excavation of the perpendicular trenches, perimeter trenches would be excavated parallel to each sidewall, where possible. Soil samples would be collected at various depths as necessary to aid in the estimation of the extent of possible hydrocarbon impact to the soil. Based on available information, it is estimated that the trenches would extend to the depth of groundwater or a depth of approximately 13 feet below the ground surface, whichever is less.

- Provide site security either with barricades or trench plates.

- Perform vapor headspace surveys on soil samples collected from the trenches at each former UST location. An organic vapor analyzer (OVA) would be used to attempt to obtain indicators of the presence of petroleum hydrocarbons. It should be noted that use of the headspace survey is generally more effective on soil impacted by gasoline than on soils containing used oil. - Hours required to perform this task are included as part of the excavation activities as referenced above.

- Obtain soil samples. Soil samples obtained throughout the performance of the field activities would be subjected to analysis by an on-site California Department of Health Services certified mobile laboratory. The results of the laboratory analysis would be used to guide additional trenching activities and provide analytical confirmation of the possible extent of hydrocarbon impact to the soil. It is anticipated that approximately 12 soil samples would be obtained and analyzed for the presence of TRPH using EPA Method 418.1. Approximately 12 additional soil samples would be obtained and analyzed for the presence of total petroleum hydrocarbons (TPH) using EPA Method DHS-8015. One soil sample from the used oil trenching would be analyzed for solvents by EPA Test Method 8010 while a soil sample from the gasoline UST trenching would be analyzed for benzene, toluene, xylene, and ethylbenzene (BTXE) by EPA Test Method 8020-modified.

On May 14, 1988, Mr. Alm reportedly obtained three additional soil samples from the oil tank excavation. A review of the laboratory data for these three soil samples indicates that TRPH concentrations were 250, 340, and 930 mg/kg. Benzene, toluene, xylene and solvent concentrations were below detection limits.

Based on the information summarized above, it is the understanding of HALLIBURTON NUS that the client's objective is to obtain regulatory site closure of the UAR reported for the site. In accordance with current regulatory guidelines, the horizontal and vertical extent of hydrocarbon impacts to the soil at the site must be estimated and potential impacts to groundwater must be addressed. In the event that hydrocarbon impacts in excess of cleanup standards established by regulatory agencies are encountered, mitigation of this impact may be required by regulatory officials. HALLIBURTON NUS would recommend methods for the mitigation and could provide the necessary equipment and expertise to accomplish any required cleanup.

SCOPE OF SERVICES

Based on our understanding of your requirements as conveyed above, we propose to provide environmental engineering services on behalf of La Mesa RV for the purpose of obtaining regulatory closure of the UAR for the subject site. The scope of services proposed is designed to provide a cost effective approach to attempt to satisfy the goal of site closure. However, following regulatory review of the results of the first phase of services, the performance of additional services may be required.

- Provide consultation including a review of the proposed workplan with the appropriate representatives of the DHS-HMMD and the San Diego Regional Water Quality Control Board (RWQCB) prior to the commencement of the field activities.

- Prepare a Health and Safety Plan that would identify potential health and safety hazards anticipated during the performance of the excavation activities. The plan would be prepared prior to the commencement of field activities and would be reviewed by all field personnel.

- Obtain the services of an underground utility locating service and review available client "As Built" drawings in an effort to identify the presence of underground utilities in proximity to the proposed excavations.

SAMPLE LOG #5538-92C THROUGH 5546-92C

DATE ANALYZED: MARCH 25, 1992

EXTRACTION METHOD: 5030
ANALYSIS METHOD: 8020
Concentrations were calculated using a 4 point curve of concentrations 2.5, 5, 10 and 20 ppb.

LABORATORY CONTROL STANDARD
A 15 ppb standard verification was run in the sample set up.

METHOD BLANK
NO TARGET ANALYTES WERE DETECTED IN METHOD BLANK.

COMPOUND	%RECOVERY
Benzene	80%
Toluene	85%
Ethylbenzene	96%
Xylenes	112%

SPIKE DATA
A QAL Method Blank was spiked in duplicate with 15 ppb 8020 standard.

COMPOUND	SPIKE % RECOVERY	RELATIVE % DIFFERENCE
Benzene	*	*
Toluene	97%	0%
Ethylbenzene	86%	4%
Xylenes	101%	8%

* Method Blank was not spiked with Benzene.

SOIL DISPOSAL MANIFESTS AND RECEIPTS

SOUTHWEST DISPOSAL

RECEIPT OF SOILS AND LANDFARM COMMENCEMENT ADVISORY LETTER

May 28, 1992

To Whom It May Concern:

Soils received by Southwest Disposal on 5-21-92, from La Mesa R.V. Center at 7601 Alvarado Road in La Mesa CA are currently in the process of being landfarmed. Once these soils have reached below California non-hazardous levels (non-detect per STLC, TTLC) they will be used for cover material and roadbase, thus establishing them as a recycled and reused solid waste.

Test results of your soils current level can be made available upon your request. There is a $250.00 charge for testing. You may contact our Montebello office for information concerning testing of landfarmed soils at (213) 724-3918.

The aforementioned soils pertain to Non-Hazardous Data Form numbers: 11283, 11285, 11276, 11278, 11286, 11279, 11281, 11282, 11280, 11291, 11289, 11277.

Sincerely,

Harold A. Arsenian
Hazardous Waste Coordinator

1228 S. 14TH STREET • MONTEBELLO CA 90640 • (213)724-3918

SOUTHWEST DISPOSAL

RECEIPT OF SOILS
AND
LANDFARM COMMENCEMENT
ADVISORY LETTER

May 28, 1992

To Whom It May Concern:

Soils received by Southwest Disposal on 5-22-92, from La Mesa R.V. Center at 7601 Alvarado Road in La Mesa CA are currently in the process of being landfarmed. Once these soils have reached below California non-hazardous levels (non-detect per STLC, TTLC) they will be used for cover material and roadbase, thus establishing them as a recycled and reused solid waste.

Test results of your soils current level can be made available upon your request. There is a $250.00 charge for testing. You may contact our Montebello office for information concerning testing of landfarmed soils at (213) 724-3918.

The aforementioned soils pertain to Non-Hazardous Data Form numbers: 11292, 11295, 11296, 11299, 11297, 11298, 11293, 11294.

Sincerely,

Harold A. Arsenian
Hazardous Waste Coordinator

SOUTHWEST DISPOSAL

RECEIPT OF SOILS
AND
LANDFARM COMMENCEMENT
ADVISORY LETTER

May 28, 1992

To Whom It May Concern:

Soils received by Southwest Disposal on 5-23-92, from La Mesa R.V. Center at 7601 Alvarado Road in La Mesa CA are currently in the process of being landfarmed. Once these soils have reached below California non-hazardous levels (non-detect per STLC, TTLC) they will be used for cover material and roadbase, thus establishing them as a recycled and reused solid waste.

Test results of your soils current level can be made available upon your request. There is a $250.00 charge for testing. You may contact our Montebello office for information concerning testing of landfarmed soils at (213) 724-3918.

The aforementioned soils pertain to Non-Hazardous Data Form numbers: 11301.

Sincerely,

Harold A. Arsenian
Hazardous Waste Coordinator

San Diego, California 92101

Attention: Mr. Mo Lahsaieza

Subject: La Mesa RV Center
Assessment Case No. T0427/H02651-001
Request for Class III Landfill Disposal
of Hydrocarbon Contaminated Soil

Gentlemen:

At the request of Mr. James Buckner, on behalf of the owners of the La Mesa RV Center, HALLIBURTON NUS Environmental Corporation (HALLIBURTON NUS) has provided environmental engineering consultation services for the subject property. The property is located at 7601 Alvarado Road in La Mesa, California. The approximate location of the site is depicted on the Vicinity Map, Figure 1.

HALLIBURTON NUS is presently preparing a report that contains the results of site exploration activities that were performed by HALLIBURTON NUS during March 1992. The report will likely be completed in May 1992. The purpose of this letter is to request Class III landfill disposal of three soil stockpiles generated during tank rmoval activities (February 1988) and site assessment and mitigation activities performed during March 1992. In accordance with the County of San Diego "Site Assessment and Mitigation Manual", prepared by the Department of Health Services, Environmental Health Services in January 1992, HALLIBURTON NUS has provided those items listed in "Stockpile Soil Sampling Protocol", Section 3, page 6, item 6 for each of the three soil stockpiles.

April 27, 1992
Project No. 2N60

BACKGROUND

During May 1988, four underground storage tanks (UST's) were excavated and removed from the subject site. These included one gasoline tank and three tanks used for the storage of either new or used oil. Excavation work performed by the contractor generated a soil stockpile of approximately 20 cubic yard capacity from the former gasoline UST location. This soil was stockpiled on-site in the southwest corner of the property. For the purposes of this letter, this stockpile will be referred to as Soil Stockpile No. 1.

During the recent performance of soil assessment and mitigation activities by HALLIBURTON NUS, three additional soil stockpiles were generated as the result of the excavation of soil from the previously referenced gasoline tank excavation, the former used and new oil tank excavation (originally containing three tanks), and the vadose zone between the two excavations. Approximately 80 cubic yards of soil excavated from the vadose zone between the two former UST locations is identified in this letter as Soil Stockpile No. 2. Approximately 100 cubic yards of soil excavated from the former gasoline UST location is identified in this letter as Soil Stockpile No. 3. Soil Stockpile No. 4, comprising approximately 200 cubic yards of soil generated from the excavation of soil from the former used and new oil UST location, while mentioned in this letter, was not found suitable for Class III landfill disposal and is not included in this request for Class III landfill disposal. Each of the stockpiles at the site was placed on an asphalt surface and covered with visqueen pending its disposal following regulatory guidelines. The approximate location of the soil stockpiles is depicted on the Stockpile Location Map, Figure 2.

On March 24, 1992, HALLIBURTON NUS personnel obtained 19 soil samples from the four soil stockpiles. The soil samples were randomly selected from the stockpiles following the soil sampling protocol as outlined in the County of San Diego 1992 SA/M Manual, Soil Sampling, Section 3, pages 3 through 7. Three soil samples were obtained from Stockpile No. 1, containing approximately 20 cubic yards of soil (see Figure 2).

April 27, 1992
Project No. 2N60

Four soil samples were obtained from Soil Stockpile No. 2, containing approximately 80 cubic yards of soil and four soil samples were obtained from Soil Stockpile No. 3, containing approximately 100 cubic yards of soil (see Figure No. 2). Eight soil samples were obtained from Soil Stockpile No. 4, containing approximately 200 cubic yards of soil (see Figure No. 2). The soil samples were obtained using an Alconox washed and tap water rinsed stainless steel hand auger, placed in laboratory supplied glassware, and delivered to an on-site California Department of Health Services (CDHS) Certified mobile laboratory.

REVIEW OF LABORATORY ANALYSES

The soil samples from Soil Stockpile No. 1 were analyzed for total petroleum hydrocarbons (TPH) by the DHS Method. A review of the results indicates that all three samples did not possess TPH concentrations above the laboratory detection limit of 10 milligrams/kilogram (mg/kg). The soil samples from Soil Stockpile No. 2 were analyzed for total recoverable petroleum hydrocarbons (TRPH) using EPA Method 418.1 A review of the laboratory results for these samples indicates TRPH concentrations of 156 mg/kg, 82 mg/kg, 73 mg/kg, and 312 mg/kg. The soil samples from Soil Stockpile No. 3 were analyzed for TPH using CDHS Method 8015. A review of the laboratory results indicates that three of the four samples possessed TPH concentrations of less than the laboratory detection limit of 10 mg/kg while one sample possessed a TPH concentration of 153.2 mg/kg. The sample possessing the TPH concentration of 153.2 mg/kg was also analyzed for benzene, toluene, xylene, and ethylbenzene (BTXE) using EPA Method 8020, modified for CDHS. A review of the laboratory results indicates concentrations of BTXE of 1.190 mg/kg, .410 mg/kg, 1.390 mg/kg, and 1.180 mg/kg, respectively.

The soil samples from Soil Stockpile No. 4 were analyzed for TRPH using EPA Method 418.1. A review of the laboratory results indicates TRPH concentrations ranging from 156 mg/kg to 24,700 mg/kg. The soil sample possessing a TRPH concentration of 24,700 mg/kg was also analyzed for Title 22 Metals, purgeable halocarbons (EPA Method 8010), total PCB's (EPA Method 8080), cyanide, and flashpoint. For potential

disposal purposes, an additional soil sample was obtained on March 31, 1992 from the location of the highest measured TRPH concentration and analyzed for pH and sulfide. Copies of the laboratory data sheets are provided in Appendix A.

Mr. Mo Lahsaieza of the HMMD indicated that analysis of excavation soil samples for BTXE and organic lead would be useful in assisting in characterizing the soil stockpiles. Please note that in addition to the analyses performed on the soil stockpile samples, one soil sample from the gasoline tank excavation was analyzed for BTXE and organic lead. This sample, possessing the highest measured TPH concentration of the soil samples analyzed from the excavation or the stockpiles, possessed a TPH concentration of 980 mg/kg. A review of the laboratory results indicates BTE concentrations of less than the laboratory detection limit of 1.0 ug/kg and a xylene concentration of 585 ug/kg. The organic lead concentration was less than the laboratory detection limit of 0.5 mg/kg (DHS Method). Copies of these laboratory data sheets are provided in Appendix A.

STOCKPILE STATISTICS

Soil Stockpile No. 1. Since the TPH concentrations of soil samples obtained from Soil Stockpile No. 1 were not above the laboratory detection limits for the method employed, and the organic lead concentration from one excavation soil sample was not above laboratory detection limits, no further statistical analysis of Soil Stockpile No. 1 is likely necessary. Please note that due to the age of the soil stockpile, which is greater than four years, and that relatively low levels of BTXE were observed in the soil samples, analysis of any soil samples from this stockpile for BTXE was deemed unnecessary by Mr. Mo Lahsaieza of the County of San Diego Hazardous Materials Management Division (HMMD). Based on this information, La Mesa RV Center requests regulatory approval for disposal of Soil Stockpile No. 1 at the County of San Diego Class III Landfill at Sycamore Canyon. The "Request For Class III Landfill Disposal of Hydrocarbon Contaminated Soil" form for Soil Stockpile No. 1 is enclosed.

Soil Stockpile No. 2. A total of four soil samples were obtained from Soil Stockpile No. 2 and analyzed for TRPH. The sample mean was calculated to be 155.75, the sample variance at 12233.58, the sample standard deviation at 110.606, the degrees of freedom

at 3, and the standard error of the mean was 55.30. Please refer to the "Stockpile Statistics Worksheet" provided in Appendix B for the completed required calculations. Given that the generally accepted regulatory threshold for disposal of TRPH impacted soil at Class III Landfills is 2000 mg/kg, and soil from Soil Stockpile No. 2 is below this threshold, La Mesa RV Center requests regulatory approval for disposal of Soil Stockpile No. 2 at the County of San Diego Class III Landfill at Sycamore Canyon. The "Request For Class III Landfill Disposal of Hydrocarbon Contaminated Soil" form for Soil Stockpile No. 2 is enclosed.

Soil Stockpile No. 3. A total of four soil samples were obtained from Soil Stockpile No. 3 and analyzed for TPH. The sample mean was calculated to be 38.30, the sample variance at 5867.56, the standard deviation at 76.60, the degrees of freedom at 3, and the standard error of the mean at 38.30. Please refer to the "Stockpile Statistics Worksheet" provided in Appendix B for the completed required calculations. Given that the generally accepted regulatory threshold for disposal of TPH impacted soil at Class III Landfills is 100 mg/kg, and soil from Soil Stockpile No. 3 is below this threshold, La Mesa RV Center requests regulatory approval for disposal of Soil Stockpile No. 3 at the County of San Diego Class III Landfill at Sycamore Canyon. The "Request For Class III Landfill Disposal of Hydrocarbon Contaminated Soil" form for Soil Stockpile No. 2 is enclosed.

Soil Stockpile No. 4. A total of eight soil samples were obtained from Soil Stockpile No. 4 and analyzed for TRPH. A review of the laboratory results of these analyses indicates that the concentration of TRPH in this soil stockpile exceeds the threshold concentration allowed for the disposal of TRPH impacted soil at County Class III landfills. Based on these results, La Mesa RV Center is planning to dispose of this soil stockpile at an approved Class II landfill. Additional analyses were performed on the soil from this stockpile and the results were submitted to the In-koo-pah Indian Reservation for their acceptance of the soil for disposal at their facility. A representative of the La Mesa RV Center has indicated that the Indian Reservation has accepted the soil for disposal.

April 27,1992
Project No. 2N60

Based on the results of the analysis of the soil samples obtained from the four soil stockpiles located on the subject site, La Mesa RV Center requests HMMD and Regional Water Quality Control Board (RWQCB) approval for the disposal of Soil Stockpile Nos. 1, 2, and 3, totaling an estimated 200 cubic yards, at the County of San Diego Class III Landfill at Sycamore Canyon. If there are any questions regarding the above information, please contact the undersigned at your convenience.

Sincerely,

David A. Eminhizer

SPIKE RECOVERY: 70% - 155%

LISA MACCLELLAN
QA/QC DIRECTOR

QUALITY CONTROL TERMINOLOGY

•LCS - LABORATORY CONTROL SAMPLE. REPORTED AS % RECOVERY OF AN INDEPENDENT STANDARD CARRIED THROUGH ALL SAMPLE PREPARATION PROCEDURES TO VERIFY METHOD PERFORMANCE. ACCEPTABLE RANGE IS BASED ON HISTORICAL LABORATORY CONTROL DATA, BUT IS GENERALLY WITHIN A 80%-120% RECOVERY RANGE.
•SPIKE - ENVIRONMENTAL SAMPLE IS MATRIX SPIKED WITH METHOD COMPOUNDS AND % RECOVERY OF CONCENTRATION SPIKED INTO SAMPLE IS CALCULATED. REPORTED AS % RECOVERY. ACCEPTABLE RANGE FOR "NORMAL MATRIX SAMPLE" IS BASED ON HISTORICAL LABORATORY CONTROL DATA, BUT IS GENERALLY WITHIN A 75%-125% RECOVERY RANGE.
•SURROGATES - COMPOUNDS REPRESENTATIVE OF A GROUP OF COMPOUNDS. SURROGATES ARE SPIKED INTO ENVIRONMENTAL SAMPLES AND % RECOVERY OF CONCENTRATION SPIKED IS CALCULATED AND REPORTED. ACCEPTABLE RANGE VARIES DEPENDING ON SAMPLE MATRIX AND ANALYSIS METHOD.

Stockpile Statistics Worksheets

STOCKPILE STATISTICS WORKSHEET
SIMPLE RANDOM SAMPLING AND SYSTEMATIC RANDOM SAMPLING

SOIL STOCKPILE NO. 2

1	List sample results from laboratory	1 156	2 82	3 73
	Analytical Method 418.1 (TRPH)	4 312	5 —	6 —
	Units (i.e. mg/kg) mg/Kg	7 —	8 —	9 —
2	Determine number of sample values n		n = 4	
3	Calculate sample mean With n = number of sample measurements $\bar{x} = \frac{\sum_{i=1}^{n} x_i}{n}$		$\bar{x} = \frac{(156+82+73+312)}{4} =$ 155.75	
4	Calculate sample variance $s^2 = \frac{\sum_{i=1}^{n} x_i^2 - \frac{(\sum_{i=1}^{n} x_i)^2}{n}}{n-1}$		$s^2 = \frac{(133733.0 - 97032.25)}{3} =$ 12233.58	
5	Calculate sample standard deviation $s = \sqrt{s^2}$		s = 110.606	
6	Calculate degrees of freedom $df = n-1$		df = 3	
7	Calculate standard error of the mean $s_{\bar{x}} = \frac{s}{\sqrt{n}}$		$s_{\bar{x}} = \frac{110.606}{\sqrt{4}} = 55.30$	
8	Obtain student's 't' value corresponding to the degree of freedom value determined in #6 above. (See attached Table reproduced on the back of this page.)		t_{20} = 1.638	
9	Calculate the confidence interval $CI = \bar{x} \pm t_{20}\, s_{\bar{x}}$		$CI = 155.75 \pm 1.638 \times 55.30$ $= 155.75 - 90.58 =$ 65.17, 246.33	
10	Obtain regulatory threshold for the contaminant of concern RT		RT = 2000	
11	Calculate $\Delta = RT - \bar{x}$		$\Delta = 2000 - 155.75 =$ 1844.25	
12	Estimate minimum number of samples $n_{min} = \frac{t_{20}^2\, s^2}{\Delta^2}$		$n_{min} = \frac{(1.638)^2 \cdot 12233.58}{\Delta^2} =$ 0.00965	

PLEASE NOTE: In accordance with the California Code of Regulations, Title 22, Section 66694, the HMMD follows the sampling guidelines set forth in "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods, SW-846, Third Edition", U.S. Environmental Protection Agency, 1986. This worksheet is based on information found in Volume II, Part III, Chapter 9, of "SW-846" and is provided as an aid for stockpile characterization. For circumstances requiring data manipulation beyond that indicated on the worksheet, refer to "SW-846".

Re: Unauthorized Release #T0427/H02651-001
La Mesa RV Center
7601 Alvarado Road, La Mesa, CA 92041

Subject: Thirty-Day Update Report

Dear Mr. Skinner:

I am writing to provide a thirty-day update report as required by your October 26, 1993 letter and official notice. This update will cover activities occurring since my last update of November 29,1993.

A workplan for additional site assessment activities prepared by Environmental Business Solutions on behalf of La Mesa RV was submitted on November 29, 1993. By your letter of December 9, 1993 the Site Assessment and Mitigation Division (SA/M) approved La Mesa RV's workplan with minor changes and conditions. La Mesa RV plans to utilize the suggested changes contained in that letter.

The drilling and installation of wells has been scheduled with the subcontractor, Tri-County Drilling. However, we are informed that due to a large volume of site assessment activities underway in the San Diego County area, the drilling rig which will be used pursuant to the approved workplan will not first become available until February 10 and 11, 1994. We have scheduled the rig for use on the site on those two dates. Consequently, we must request an extension of the date within which the report of site activities must be provided to your office.

Your December 9, 1993 letter required a report to be submitted

LUCE, FORWARD, HAMILTON & SCRIPPS

ATTORNEYS AT LAW
FOUNDED 1873

APPROVED, BUT NOTHING PAST THIS.

not later than January 30, 1994 to SA/M and the Regional Water Quality Control Board. We request that this date be extended an additional sixty days to March 30, 1994 to permit sampling activities to be performed, laboratory results to be analyzed and a formal report to be prepared. Please advise at your earliest convenience.

Additionally, in light of the schedule of activities described above, La Mesa RV requests that it be permitted to return to a ninety-day reporting schedule pursuant to Title 23, C.C.R. § 2652.

We thank you in advance for your courtesy and cooperation in this matter. If you have any questions, please do not hesitate to call me at (619) 699-2418.

Very truly yours,

Stephen L. Marsh

San Diego, CA 92186-5261

Re: Unauthorized Release #T0427/H02651-001
La Mesa RV Center
7601 Alvarado Road, La Mesa, CA 92041

Subject: Update Report and Work Plan Submittal

Dear Mr. Skinner:

This office has been retained by La Mesa RV Center to assist it in its efforts to respond to the County's official notices and comply with the requirements to conduct site assessment and mitigation activities with respect to the above-described unauthorized release. La Mesa RV Center requests that the County direct further communications concerning this matter to my attention.

This letter is intended to serve as an update report as required by your October 26, 1993 official notice and prior correspondence. This letter will also serve as the transmittal of the enclosed work plan describing the additional site assessment activities as required by your June 2, 1993 and October 26, 1993 official notices.

By correspondence dated July 12, 1993 and your telephone conversation of July 6, 1993, Mr. Jim Buckner of La Mesa RV provided a partial response to the requirements of the June 2, 1993 letter. Thereafter, Mr. Buckner contacted a number of prospective consultants in an attempt to obtain bids for preparation of a work plan. However, Mr. Buckner was unable to obtain the requisite three bids and therefore, subsequently retained our services to assist in this endeavor.

Over the past thirty days we have prepared a request for proposal regarding preparation of a work plan and the conducting of site assessment activities to determine the lateral and vertical extent of contamination at the site. We obtained bids from several consultants and ultimately awarded the contract to Environmental Business Solutions, Inc.

Enclosed you will find a work plan dated November 24, 1993, prepared by Environmental Business Solutions, which I believe you will find self explanatory. La Mesa RV Center is prepared to begin implementation of the site assessment activities described in the work plan upon approval of the work plan by the County of San Diego, Site Assessment and Mitigation Division.

If you have any questions concerning this update report or the enclosed work plan, please do not hesitate to contact me.

Very truly yours,

Stephen L. Marsh

RE: Workplan Describing the Additional Site Assessment Activities Pursuant to the Request of San Diego County Site Assessment and Mitigation Division for the La Mesa RV Center - 7601 Alvarado Road, La Mesa, California (site)

Dear Mr. Skinner:

Environmental Business Solutions, Inc. (EBS) is pleased to present this workplan for your consideration relative to the requirements of the Site Assessment and Mitigation Division (SAM) for the above-referenced site.

EBS has prepared this written workplan which is intended to satisfy the requirements of the SAM prior to performing additional soil and groundwater investigation at the site. This workplan describes the site background, the procedures to be utilized during the field investigation, the type of laboratory analyses to be performed on soil and groundwater samples, and the type of report to be prepared.

Background

We understand that four underground storage tanks (USTs) of various capacities were previously located at the site and were recently removed. The underground tanks were reported to store new and used oil, and gasoline. The USTs were located immediately west and south of a service-bay building at the site (Figure 1). The four USTs at the site were reported to consist of one 550-gallon used oil UST, two 550-gallon new oil USTs, and one 2,000-gallon regular gasoline UST.

The USTs were reported to have been removed by a contractor, Alm Services (Alm), in February, 1988. The "Abandoned Underground Tank Report" prepared for the site by the County inspector indicated that each of the USTs had holes ranging from pinhole size to three-quarters of an inch in diameter. Groundwater impact was not noted during the USTs removal, although groundwater was observed at a depth of approximately seven feet below grade in the excavation.

Correspondence from Alm to the County in March of 1988 indicates that six soil samples from the USTs excavation were collected. Detectable concentrations of both total petroleum hydrocarbons (TPH) and total recoverable petroleum hydrocarbons (TRPH) were found in each of the samples collected. In May of 1988, Alm was reported to have collected an additional three samples from the new and used oil USTs excavation. Detectable concentrations of TRPH were found in each of the three samples.

In March of 1992, subsequent to the submission and approval of a workplan, we understand that Halliburton NUS (Halliburton) conducted a multi-day exploratory excavation program at the site. We understand approximately 400 cubic yards of soil was excavated from the vicinity of the former gasoline and oil USTs. Numerous confirmation samples were collected during the excavation program (see Figure 1), but we understand that confirmation samples indicate that soil with elevated concentrations of both TPH and TRPH remains in the vicinity of the excavation (including laterally underneath the service bay building). We also understand that Halliburton concluded that groundwater in the area of the excavations may be impacted.

In preparing this workplan, EBS personnel reviewed two letters addressed to Mr. James Buckner from you. In addition, we contacted you to go over the contents of the letters and to discuss additional site assessment activities at the site. In addition to the above-described activities, personnel of EBS visited the site to confirm site conditions. The site visit took place on November 9, 1993.

The program described in this proposal has been designed in general accordance with the requirements of the SAM, our site visit, the data gathered and interpreted in preparing this workplan, as well as our professional judgment and experience in this type of investigation.

OBJECTIVES

The objectives of this proposed scope of services are to:

- Further assess the extent of petroleum hydrocarbon impacted soil in the vicinity of former gasoline, and new and used oil USTs at the site;
- To assess the groundwater depth, gradient and flow direction; and,
- To assess the degree of likelihood that the shallow groundwater at the site has or has not been impacted by petroleum hydrocarbons.

SCOPE OF SERVICES

The scope of services that will be used to meet the objectives includes the following Phases:

Phase I **Preparation of a Workplan and Site Health and Safety Plan, Groundwater Monitoring Well Design, Preparation of Well Permits, Subcontractor Management and Scheduling, and Utility Search and Mark Out**

EBS has prepared this written workplan which is intended to satisfy SAM requirements. This workplan is intended to describe the field procedures to be utilized in the field investigation, including the type of laboratory analyses to be performed on the soil and groundwater samples, and soil and groundwater sample collection methods. This workplan includes the proposed location for additional soil borings and groundwater monitoring wells (Figure 1). The soil boring program has been designed to assess the lateral and vertical extent of petroleum impacted soil in the vicinity of the former USTs. The groundwater monitoring wells are to be placed in locations

designed to reflect the anticipated groundwater flow direction at the site, and to detect a possible release into the groundwater from the former USTs.

A health and safety plan for the site will be prepared to reflect the current work scope. A health and safety plan for work conducted at the site and workers within the "exclusion" zone is required pursuant to the regulations found in 29 Code of Federal Regulations (CFR) Part 1910.120. As such, a health and safety plan will be prepared which will outline the potential chemical and physical hazards that may be encountered during drilling and sampling activities. The appropriate personal protective equipment and emergency response procedures for the site-specific chemical and physical hazards will be detailed in this plan. EBS and contracted personnel involved with the proposed field work will be required to sign this document in order to encourage proper health and safety practices.

Prior to drilling the soil borings and installing the monitoring wells, the monitoring wells must be designed and one permit per well (or soil boring which intersects groundwater) will be completed and submitted to the SAM for approval along with the required fee. The permits will reflect monitoring well designs and completions in accordance with California Department of Water Resource and San Diego County requirements. The permits will be signed by the appropriately licensed professional and submitted with the required fee to the SAM.

Prior to mobilizing for field work, EBS will notify and schedule the appropriate subcontractors including but not limited to, the laboratory, the drilling company, the surveyor, the concrete coring company, concrete masons, Underground Service Alert (USA), and the well material supply company. In addition, prior to drilling soil borings, time is included for EBS to work with USA and a private underground utility search company to attempt to locate subsurface utilities and improvements at the site to minimize the likelihood of drilling into an underground utility.

Phase II **Drilling and Sampling of Seven Soil Borings and the Conversion of Three Soil Borings to Groundwater Monitoring Wells**

Drilling and Sampling Seven Soil Borings

Seven soil borings will be drilled, logged, and sampled to depths of between 15 and 20 feet below grade at the site (or until a depth where soil samples with non-detectable concentrations of petroleum hydrocarbons are found). Three borings will be drilled to depths of 20 feet below grade (or until refusal is met) in the vicinity of the western and southern perimeter of excavation at the site. These soil borings will be converted to groundwater monitoring wells (MW1, MW2, and MW3, see Figure 1). Four soil borings (B1 through B4) will be drilled near the former new and used oil UST locations (see Figure 1).

The location of these borings has been designed to provide additional information about the possible migration of petroleum hydrocarbons west, south and east from the former new and used oil and gasoline USTs area.

We anticipate that one of the soil borings (B3) will be drilled inside the building at the site, to the east of the former gasoline UST and to the north of the former used and new oil USTs.

The drilling program at the site will be monitored by a professional geologist from EBS. Our on-site representative will be either a State-certified Engineering Geologist (CEG), or a Registered Geologist (RG) with over 10 years of experience in field investigation programs.

A brief presentation of the rationale for soil boring/groundwater monitoring well locations is presented below. The proposed soil boring/groundwater monitoring well locations are presented on the attached Figure 1.

Soil Boring/Monitoring Well No.	Location/Rationale
B1	Located in the immediate vicinity west of soil sample OES-13 (23,000 mg/kg) and near OES-11 (16,000 mg/kg) and OES-12 (18,000 mg/kg). To assess the vertical extent, migration and concentration of petroleum hydrocarbons near the above-mentioned soil sample locations.
B2	Located near the northeastern portion of the excavation near the former new and used oil USTs. Located near soil samples OES-15 (7,700 mg/kg) and OES-6 (8,200 mg/kg). To assess the lateral and vertical migration of petroleum hydrocarbons in this area.
B3	Located inside the RV service bay. To assess the potential horizontal migration of gasoline to the east of soil samples GES-6 and GES-8 (920 and 470 mg/kg, respectively) and to assess the possible migration of petroleum east of soil sample OES-10 (15,600 mg/kg) and to the north of the new and used oil USTs area.
B4	Located near soil sample GES-6 (920 mg/kg). To assess the vertical migration and extent of gasoline-impacted soil in this area.
MW1	Located west of the former gasoline UST. To assess the potential occurrence of impacted soil to the west of soil samples OES-9 and OES-11 and to provide an assessment of groundwater quality in the inferred downgradient direction from the former gasoline UST.
MW2	Located west of the used and new oil USTs excavation area. To assess the lateral extent of impacted soil to the west of samples OES-11, 12, and 13 and to provide an assessment of the groundwater

	quality to the west of the former new and used oil USTs.
MW3	Located south of the former new and used oil USTs. This soil boring/monitoring well is intended to provide baseline information about the possible migration of contaminants in the soil and groundwater to the south of the used and new oil UST area. This monitoring well is also intended to provide control on the assessment of gradient and groundwater flow direction at the site.

We will drill six soil borings outside using a truck-mounted Canterra 450 high-torque drill rig. The one boring inside the building will be drilled using a Simco 3000 truck-mounted drill rig (the boring inside the building will require the use of the Simco 3000 drill rig because of the low overhead clearance). Because difficult drilling conditions are anticipated at the site, EBS solicited drilling bids from three different drilling companies. We selected the bid from Tri-County Drilling based on their representations of having a high probability of success in drilling in the anticipated difficult-to-drill conditions at the site (Stadium Conglomerate).

Should site drilling conditions allow, the first soil boring drilled at the site will be profiled utilizing continuous coring. This should greatly assist in our assessment of the subsurface soil conditions at the site. In particular, it should assist us in our assessment of possible zones of greater or lesser permeability which could affect the migration of petroleum hydrocarbons in the subsurface soil or groundwater.

Because groundwater is reported at relatively shallow depths, and some distinct soil lithologies were reported at depths of five to six and eight to ten feet below grade, we anticipate collecting soil samples from soil borings at approximately 5, 8, 10, 15 and 20 feet below grade or at significant lithologic changes.

Each of the borings not converted to a groundwater monitoring well will be backfield with an approved grout. As required by San Diego County guidelines, either pre-steam washed augers will be on-site or a steam cleaner will be on-site to steam wash the augers between soil borings to minimize the likelihood of "cross-contaminating" the borings and to minimize the potential for a "false positive" in the soil samples analyzed.

During the drilling of the soil borings, soil samples will be collected, when possible, with a split-spoon type or similar sampler. Soil samples will be driven into brass or stainless steel tubes. The tubes will be covered with teflon sheeting, tightly closed with end caps, and taped for handling and transportation activities. The sample containers will be packed in ice-filled coolers or stored in the refrigerator of the on-site mobile laboratory. Chain-of-custody procedures will be implemented for sample tracking. A written analytical report will be provided by the laboratory upon the completion of the sample testing. Please note that site conditions may not allow for the collection of drive samples. If this is the case, we will make best efforts to collect representative samples from the subsurface.

Installation of Three Groundwater Monitoring Wells

Three groundwater monitoring wells (wells) will be installed at the site to the west and south of the former USTs. The well placements will be designed to investigate the possible impact to groundwater from a petroleum hydrocarbon release from the former USTs. Based upon a review of the United States Geologic Survey La Mesa Quadrangle Map, and the groundwater information provided by Halliburton for the site, we anticipate a groundwater depth of approximately 9 to 10 feet and a regional flow direction roughly corresponding with Alvarado Creek, generally towards the west.

Based on the reported depth to groundwater at the site, we anticipate the wells be drilled to a maximum depth of approximately 20 feet below grade. The wells will be constructed using four-inch diameter PVC casing and screen. The surface completion will consist of a flush-mounted traffic-rated road box. As required by the San Diego County, a well permit will be obtained prior to drilling the wells. Soil cuttings generated from drilling of the wells will be placed in 55 gallon drums and labeled and left on site.

During well installation, the wells will be developed in general accordance with SAM guidelines. Within approximately one week of well development, the newly installed wells will be purged and sampled in general accordance with SAM guidelines. Development and purging water will be placed in appropriately labeled drums and stored on site.

Surveying of Groundwater Monitoring Wells

The well locations and elevations will be surveyed by a licensed surveyor to allow an assessment of the depth to groundwater and hydraulic gradient. Both vertical and horizontal control will be surveyed to 1/100 of a foot.

Monitoring, Purging and Sampling of Groundwater Monitoring Wells

After surveying, the wells will be monitored using an electronic interface probe. This instrument is capable of detecting both product and groundwater, with a reported accuracy of 1/100 of a foot. The depth to water and depth to and thickness of product (if present) will be measured and recorded. A clear bailer will be lowered into each well to collect a sample of groundwater to visually evaluate the presence of product.

In order to prepare for sampling, we anticipate that each well will be purged using a submersible pump. Purged water will be placed in appropriate drums, labeled, and left on site. After one volume of water is purged, groundwater levels will be monitored. If the wells are interpreted to be slow recharging, groundwater samples will be collected after two hours of purging. Otherwise, samples will be collected after three borehole volumes of water have been removed. Samples will be collected using a disposable bailer. Samples will be decanted into appropriately preserved volatile organic analysis (VOA) vials, capped, sealed, labeled, and placed on ice. The samples will be delivered to a State certified hazardous waste laboratory using chain-of-custody documentation.

Sample Analyses

EBS will retain a mobile laboratory to conduct on-site analytical testing. This way, should impacted soil extend further vertically or laterally than target depths or soil boring locations, additional soil samples can be collected while personnel and equipment are already mobilized at the site. As many as four soil samples from each boring (including at least one sample collected from within the field interpreted saturated zone) will be analyzed for total petroleum hydrocarbons (TPH) in general accordance with modified EPA Method 8015 and for total recoverable petroleum hydrocarbons (TRPH) in general accordance with EPA Method 418.1 Based on our understanding of the June 2, 1993 letter to James Buckner, all additional samples collected from the site must be analyzed for both TPH and TRPH.

In addition, the soil sample with highest reported TRPH concentration from a soil boring in the vicinity of the former new and used oil USTs will be analyzed for polychlorinated biphenyls, chlorinated solvents, benzene, toluene, ethylbenzene and xylenes, (BTEX) and organic lead. This sample will be analyzed in general accordance with EPA methods 8010, 8020, and 8080, and the Department of Health Services Method for organic lead. These additional analyses are also based on our understanding of the June 2, 1993 letter to Mr. James Buckner. & HIGHEST TPH FOR 8020, O.Pb.

One water sample per well will be collected and will be analyzed for total petroleum hydrocarbons in general accordance with modified EPA Method 8015 and BTEX in general accordance with EPA Method 8020. One water sample per well will also be analyzed for total lead, in general accordance with SAM guidelines.

Phase III **Data Evaluation, Figure and Table Preparation, Soil Boring and Monitoring Well Log Preparation and Report Preparation**

Based on the findings of the field investigation and laboratory results from the above scope of services and the historical findings provided by the Client, an assessment report (Report) will be written in general accordance with SAM guidelines. The Report will include laboratory reports, chain-of-custodies, permits, illustrations reflecting the sampled subsurface, logs of the soil borings and construction "as builts" of the wells, tabulated analytical results, and appropriate support documentation. The report will include an assessment of the depth of groundwater, groundwater flow direction, gradient, and the impact to shallow soil and groundwater from TPH and BTEX.

The Report will be peer reviewed and signed by a California Certified Engineering Geologist.

In addition to the above described report, in order to comply with the requirements of the well/soil boring permits, a "thirty day" report will be prepared and submitted to the SAM.

Estimated Schedule

We estimate that the total time necessary to complete the above phased scope of services is approximately 30 to 35 working days.

EBS appreciates the opportunity to provide you with a workplan on this important project. Should you have any questions regarding this letter please contact the undersigned at (619) 571-5500.

Respectfully,
ENVIRONMENTAL BUSINESS SOLUTIONS, INC.

RE: Your letter of June 2, 1993 and our telephone conversation of July 6, 1993

Dear Mr. Skinner:

Enclosed are copies of the Chain of Custody LMRV-OES 1 thru 15 and summary tables II and III.

The estimated 400 cubic yards of soil was all hauled to the Class II site in Arizona. The weight was 460.99 tons. The explanation for the low conversion number of 1.15 may have something to do with the fact that some of the soil was dry from laying there since May 1988, along with the estimate of 400 cubic yards being high.

I left a message on your voice mail today requesting a copy of the consultants list. I have called Odgen, (no response) and Woodward Clyde, (not interested), hope I'll have better luck with list.

SENT 7-15 (.3)

Sincerely,

Jim Buckner
Director of Fixed Operations

Subject: Ninety-Day Update Report

Dear Mr. Skinner:

I am writing to provide a ninety-day update report pursuant to Title 23 C.C.R. § 2652 and as required by your official notices. This update will cover activities occurring since my last update of September 30, 1994.

We previously submitted a report of site assessment activities prepared by Environmental Business Solutions, as required. Subsequently, all purge water and soil cuttings were disposed of under permit and in accordance with applicable requirements. A report of these activities was submitted. According to the conclusions and recommendations of the report of Environmental Business Solutions, it would appear that no further action is required at this time. We continue to await your concurrence.

All additional required applicable information remains unchanged. Our next update report will be due on March 30, 1995.

If you have any questions, please do not hesitate to call me at (619) 699-2418.

Very truly yours,

Stephen L. Marsh

I am writing to provide a thirty-day update report pursuant to Title 23 C.C.R. § 2652 and as required by your official notices. This update will cover activities occurring since my last update of May 31, 1994.

During our telephone conversation on Tuesday, you advised you have no objections to our returning to a 90-day reporting schedule. Therefore, we will do so. Accordingly, our next report will be due on September 30, 1994.

You also suggested I contact Mark Fitzmaurice of SA/M since the case was being transferred to him. I spoke to Mr. Fitzmaurice Thursday, and he advised me that the matter has not yet been transferred to him and that I should continue reporting to you. Therefore, until further notice, we will continue to submit all communications to your attention.

All additional required applicable information remains unchanged.

If you have any questions, please do not hesitate to call me at (619) 699-2418.

Subject: Thirty-Day Update Report

Dear Mr. Skinner:

I am writing to provide a thirty-day update report pursuant to Title 23 C.C.R. § 2652 and as required by your official notices. This update will cover activities occurring since my last update of April 30, 1994.

Enclosed please find a Report of Disposal of Soil Cuttings and Groundwater prepared by Environmental Business Solutions. This report summarizes the disposal activities which took place on the site between March 18, 1994 and April 21, 1994.

All purge water and soil removed during previous site assessment activities have now been removed from the site.

At your request, we have been providing periodic status update reports on a 30-day reporting schedule pursuant to Title 23, C.C.R. § 2652. In light of the nature of activities at the site in compliance with applicable regulations, we request that we be returned to the usual 90-day reporting schedule. If you approve, our next report will be due August 30, 1994.

All additional required applicable information remains unchanged.

If you have any questions, please do not hesitate to call me at (619) 699-2418.

Very truly yours,

Stephen L. Marsh

RE: Disposal of Soil Cuttings and Purged Groundwater
La Mesa R. V. Center, 7601 Alvarado Road, La Mesa, California (site)

Dear Mr. Marsh:

Environmental Business Solutions, Inc. (EBS) is pleased to present this letter describing the disposal of soil cuttings and purged groundwater generated from the assessment that EBS recently performed at the subject site. The work described in this letter was conducted by EBS in response to your request and authorization, and in general accordance with Agreement For Services 93E1163.1, Change Order Number 3 and the contract between EBS and La Mesa R. V. Center, Inc. (client). The contract was fully executed on February 3, 1994.

BACKGROUND

The site assessment activities performed by EBS included the drilling of nine soil borings, converting three of the soil borings to groundwater monitoring wells (wells), and the sampling of the three wells. Soil cuttings from the soil borings and groundwater removed from the wells during well development and pre-sampling purging were placed in drums, labeled (including data on the material stored in each drum), sealed, and stored along the western wall of the service bay.

On March 3, 1994, Change Order Number 3 was submitted for the disposal of soil cuttings and purged groundwater. The change order was approved on March 11, 1994. Work in Change Order Number 3 included:

- Collecting one composite soil sample from the drums and testing the sample using TCLP procedures for chrome, lead, and cadmium;
- Preparation and submission of an application for batch discharge to the San Diego Industrial Waste Program (IWP);
- Disposal of the drummed groundwater into the sanitary sewer; and,
- Transportation by Alternative Disposal, Inc., of the drummed soil to the Pen-Rob facility in Joseph City, Arizona, for treatment and disposal.

Collecting one composite soil sample from the drums and testing the sample using TCLP procedures for chrome, lead, and cadmium

On March 18, 1994, a representative from EBS visited the site and collected one composite soil sample. The sample was collected from drums containing soil from soil borings B-4 and B-1, the soil borings with

the highest reported concentration of total recoverable petroleum hydrocarbons. Approximately equal volumes of soil were removed from each drum, mixed, and packed into a laboratory-supplied jar. The jar was labeled, sealed, and placed in an ice chest containing blue ice. A "Chain of Custody" form was filled out.

The soil sample was submitted to Analytical Technologies, Inc. (ATI) for analysis. As requested by Pen-Rob, a TCLP extract of the sample was made, and the extract tested for chrome, lead, and cadmium in general accordance with EPA Method 6010. As indicated on the attached laboratory test report, the sample was reported to contain no detectable concentrations of chrome, lead, and cadmium.

Preparation and submission of an application for batch discharge to the San Diego Industrial Waste Program (IWP)

On April 1, 1994, a Groundwater Discharge Authorization Request was submitted to Mr. Toby Shipley of the IWP. On April 11, 1994, the request was approved. A copy of the request is attached.

Disposal of purged groundwater and soil cuttings

On April 21, 1994, a representative from EBS was present at the site to assist in the disposal of the purged groundwater and soil cuttings. Four drums of purged groundwater were moved to the recreational vehicle sewage holding tank clean out located in the southwest portion of the site. Water from the drums was removed with a five-gallon bucket and placed into the sewer inlet at the disposal site. Approximately 100 gallons of water were disposed.

Approximately 15 drums of soil were loaded onto a truck provided by Alternative Disposal, Inc. A representative of La Mesa R. V. Center, Inc. was present to sign the necessary papers. All of the drums were transported to the Pen-Rob facility for treatment. A copy of the Non-Hazardous Waste Data Form is attached.

It was a pleasure working on you with this important project. If we may provide any further assistance, please do not hesitate to contact us.

Respectfully,
ENVIRONMENTAL BUSINESS SOLUTIONS, INC.

RE: Report of Soil and Groundwater Investigation Pursuant to the Requirements of the San Diego County Site Assessment and Mitigation Division (SAM) for La Mesa R. V. Center, Inc., Located at 7601 Alvarado Road, La Mesa, California (site)

Dear Mr. Marsh:

Environmental Business Solutions, Inc. (EBS) is pleased to submit this report which summarizes the soil and groundwater assessment recently conducted at the subject site (Figure 1). The work described in this Report was conducted by EBS in response to your request and authorization and in general accordance with Agreement For Services 93P1163.1 and Change Order's 1, 2, and 3 to the contract between EBS and La Mesa R. V. Center, Inc. (client). The contract was fully executed on February 3, 1994.

BACKGROUND

It is our understanding that four underground storage tanks (USTs) of various capacities were previously located at the site and were recently removed. The underground tanks were reported to store new and used oil and gasoline. The USTs were located immediately to the west and south of a service-bay building at the site (Figure 2). The four USTs at the site were reported to consist of one 550-gallon used oil UST, two 550-gallon new oil USTs, and one 2,000-gallon regular gasoline UST.

The USTs were reported to have been removed by a contractor, Alm Services (Alm), in February, 1988. The "Abandoned Underground Tank Report" prepared for the site by the County inspector indicated that each of the USTs had holes ranging from pinhole size to three-quarters of an inch in diameter. Groundwater impact was not noted during the USTs removal, although groundwater was observed at a depth of approximately seven feet below grade in the excavation.

Correspondence from Alm to the County in March of 1988 indicates that six soil samples from the USTs excavation were collected. Detectable concentrations of both total petroleum hydrocarbons (TPH) and total recoverable petroleum hydrocarbons (TRPH) were found in each of the samples collected. In May of 1988, Alm was reported to have collected an additional three samples from the new and used oil USTs excavation. Detectable concentrations of TRPH were found in each of the three samples.

In March of 1992, subsequent to the submission and approval of a workplan, we understand that Halliburton NUS (Halliburton) conducted a multi-day exploratory excavation program at the site. We understand that approximately 400 cubic yards of soil were excavated from the vicinity of the former gasoline and oil USTs. Numerous confirmation samples were collected during the excavation program (see Figure 2 and Tables 1 and 2), but we understand that confirmation samples indicated that soil with elevated concentrations of both TPH and TRPH remains in the vicinity of the excavation (including laterally underneath the service bay building).

We also understand that Halliburton concluded that groundwater in the area of the excavations may be impacted.

It is our understanding, based on review of a letter issued by the SAM on June 2, 1993, that the SAM had requested an additional assessment of the lateral and horizontal extent of petroleum-hydrocarbon-bearing soil and an assessment of groundwater quality.

Site Identification

Site Name:	La Mesa R. V. Center
Site Address:	7601 Alvarado Road, La Mesa, California 92401
SAM Case No.:	T0427/H02651-001
A. P. N.:	469-021-02

Site Location/Description

The site is located south of Interstate 8 in the commercial/retail section of La Mesa, California (Figure 1). Currently the site is used for the sales and service of recreational vehicles. Site improvements include offices, showrooms, service bay areas, and associated driveways and parking areas.

OBJECTIVES

The objectives of the scope of services were to:

- Further assess the vertical and horizontal extent of petroleum-hydrocarbon-bearing soil in the vicinity of the former gasoline, and new and used USTs at the site;
- To assess the groundwater depth, gradient, and flow direction; and,
- To assess the degree of the likelihood that the shallow groundwater at the site has, or has not, been impacted by petroleum-hydrocarbons.

SCOPE OF SERVICES

The scope of services that was developed to meet the objectives included the following phases:

Preparation of a Workplan and Site Health and Safety Plan, Groundwater Monitoring Well Design, Preparation of Well Permits, and Utility Search and Mark Out

EBS prepared a written workplan which was intended to satisfy SAM requirements. The workplan described the field procedures to be utilized in the field investigation, including the type of laboratory analyses to be performed on the soil and groundwater samples, and the soil and groundwater sample collection methods. The workplan included the proposed location for additional soil borings and groundwater monitoring wells. On November 24, 1993, the workplan was submitted to the SAM. On December 3, 1993, the SAM issued a letter stating that the workplan was approved on the condition that the soil sample with the highest reported TPH concentration be analyzed for volatiles in general accordance with EPA Method 8020 and organic lead, that

monitoring well MW-3 be located to the east of the former USTs, and that one additional soil boring be drilled and sampled. A copy of the SAM approval letter is attached in the Appendix.

A health and safety plan for the site was prepared to reflect the current work scope. A health and safety plan for work conducted at the site and workers within the "exclusion" zone is required pursuant to the regulations found in 29 Code of Federal Regulations (CFR) Part 1910.120. As such, a health and safety plan was prepared which outlined the potential chemical and physical hazards that may have to be encountered during drilling and sampling activities. The appropriate personal protective equipment and emergency response procedures for the site-specific chemical and physical hazards were detailed in this plan. EBS and contracted personnel involved with the proposed field work were required to sign this document in order to encourage proper health and safety practices.

Prior to drilling the soil borings and installing the monitoring wells, the monitoring wells were designed and one permit per well (or soil boring which intersects groundwater) was completed and submitted to the SAM for approval along with the required fee. The permits were submitted to the SAM on January 20, 1994. The permits were approved by the SAM on February 3, 1994. A copy of the approved well permit is attached in the Appendix.

Prior to mobilizing for field work, EBS notified the Underground Service Alert (USA). USA issued ticket number 698190 for the fieldwork and notified Cox Cable, Helix Water District, Pacific Bell, San Diego Gas and Electric, the City of San Diego Water District, the County of San Diego Water Authority, and the City of La Mesa. In addition, EBS used the services of a private underground utility search company to attempt to locate subsurface utilities and improvements at the site to minimize the likelihood of drilling into an underground utility.

Field Activities

TECH. USED TO AVOID AERATION OF SAMPLES—?

On February 10 and 11, 1994, eleven soil borings (B-1, B-1A, B-2, B-3, B-4, B-4A, B-5, B-6, MW-1, MW-2, and MW-3) were drilled, logged, and sampled to depths of between 15 and 20 feet below grade at the site. Groundwater monitoring wells (MW-1, MW-2, and MW-3) were installed in three of the soil borings. Because of the anticipated difficulty in drilling conditions, a Canterra 450 High Torque drill rig was used. Initially, the soil borings were drilled using hollow-stem augers. However, because of refusal encountered at approximately 10 feet below grade, the drill rig was converted to air percussion to continue the drilling operation. It should be noted that soil borings B-2 and B-3 were drilled using a Simco 2000 drill rig. This drill rig was used because of limited access in these two locations.

When possible, soil samples were collected at five-foot intervals using a split-spoon sampler. Due to difficult drilling and sampling conditions, it was not possible to continuously core the first soil boring drilled as originally planned. Additionally, due to difficult drilling and sampling conditions, no sample recoveries were obtained from the soil boring in which well MW-2 was installed. The soil samples were used for description and for laboratory testing. Soil samples were logged by a California certified engineering geologist who described samples in general accordance with the Unified Soil Classification System. Soil boring and well logs are attached in the Appendix. Samples for laboratory testing were tightly packed into laboratory supplied glass jars, sealed, labeled, double bagged and placed in an ice-filled cooler or stored in the refrigerator of an on-site mobile laboratory provided by Transglobal Environmental Geochemistry (TEG). Chain-of-Custody procedures were implemented for sample tracking.

Soil borings were backfilled using appropriate grout. As stipulated by San Diego County guidelines, a steam cleaner was on site to steam clean the augers between soil borings to minimize the likelihood of "cross-contaminating" a given boring and to minimize the potential for a "false-positive" in the soil samples analyzed.

Sampling equipment was cleaned using a four bucket wash; a tri sodium phosphate (TSP) water cleaner, two tap water rinses, and a final spray rinse with deionized water. Decontamination water from the steam cleaning and sampling wash was placed in drums, labeled, and left on site. Soil cuttings were placed in DOT rated 55-gallon drums, labeled, and left on site.

Three wells (MW-1, MW-2, and MW-3) were installed using four-inch diameter screen and casing. It was originally planned to install the wells to a depth of approximately 20 feet below grade. After the drilling of the soil borings in which wells MW-1 and MW-2 were to be installed, the lower five feet of each of the boreholes (approximately 15 to 20 feet below grade) collapsed, and sealed off the lower five feet of the soil boring. Therefore, wells MW-1 and MW-2 were installed to a depth of approximately 15 feet below grade. It should be noted that a distinctive cemented gravel layer was encountered in wells MW-1 and MW-2 at a depth of approximately 15 feet below grade. This same layer was encountered during the drilling of the soil boring in which well MW-3 was installed. In this boring, the cemented gravel layer was encountered at a depth of approximately eight feet below grade. Well MW-3 was terminated at a depth of approximately 15 feet below grade. Well construction diagrams are presented on the attached logs.

After the sand pack was placed and before bentonite was poured, the wells were developed using a surge block. Development water was removed from the casing using a bailer and poured into drums, labeled, and left on site. After the development was completed additional sand was placed, as needed, and the bentonite seal installed.

On February 17, 1994, the three wells were monitored, purged, and sampled. The wells were monitored using an electronic interface probe, which is capable of detecting both water and product. In addition, a bailer was lowered into each well to visually assess the presence of free product. Free product was not observed or detected. The wells were purged using a hand bailer. All downhole sampling and monitoring equipment was cleaned using a four bucket wash; a TSP-water cleaner, two tap rinses, and a final spray rinse with deionized water. Decontamination water was placed in drums, labeled, and left on site. Three borehole volumes of water were removed and placed in a drum, labeled, and left on site. After the water levels in the wells recharged to at least 80 percent of the pre-purging level, a water sample was collected using a disposable bailer. The water samples were decanted into laboratory-supplied containers, capped, labeled and placed in an ice-filled cooler. Chain-of-custody procedures were implemented for sample tracking. The samples were delivered to TEG and Analytical Technologies, Inc. (ATI) for analysis.

On February 26, 1994, Hopwood Surveying, a licensed land surveyor, established relative elevations for the top of the casing (TOC) for each well and also established the horizontal location of each well and soil boring.

Laboratory Analysis

All soil samples were tested for TPH as gasoline and diesel in general accordance with modified EPA Method 8015 (California DOHS Method) and TRPH in general accordance with EPA Method 418.1. The soil sample with the highest reported TRPH concentration (sample B1-10') was also tested for volatile halogenated and aromatic hydrocarbons in general accordance with EPA Method 8010/8020, organic lead in general accordance with EPA Method 6010, and organochlorine pesticides and PCBs in general accordance with EPA Method 8080. Soil sample laboratory test results are attached in the Appendix.

All groundwater samples were tested for TPH as gasoline and diesel in general accordance with modified EPA Method 8015 (California DOHS Method), and benzene, toluene, ethylbenzene, and xylenes (BTEX) in general accordance with EPA Method 8020. The groundwater sample collected from well MW-2 was also tested for total lead in general accordance with EPA Method 7421. Laboratory test results are attached in the appendix.

FINDINGS

Site Geology and Hydrogeology

As mapped by Kennedy (1975, Geology of the San Diego Metropolitan Area, California: C.D.M.G. Bull. 200), the site is interpreted to be underlain by the Eocene Stadium Conglomerate. Geologic materials encountered during our assessment include fill soils, topsoil, and Alluvium. A brief description of these units is presented below:

- Fill

  Fill soil was encountered in all the soil borings. These deposits generally consisted of dark gray brown gravelly silty sand (SM), black silty gravelly sand (SW), and yellow brown clayey sand (SC). Fill soil was observed to extend to a maximum depth of approximately eight feet below grade.

- Topsoil

  Topsoil was encountered in soil borings and wells B-1, B-3, B-4, B-5, MW-1, and MW-2. Topsoil generally consisted of a dark brown silty sand/sandy silt (SM/ML). Topsoil was encountered to a maximum depth of approximately 12 feet below grade.

- Alluvium

  Alluvium was encountered in all soil borings and wells. These deposits generally consisted of red brown gravel/silty gravel (GW/GM), yellow brown gravelly clayey sand (SC) and a distinctive and cemented yellow brown gravelly clayey sand (SC). It should be noted that the cemented layer was encountered in all soil borings and wells, and appeared to be dipping towards the west.

As interpreted from maps prepared by the Regional Water Quality Control Board, San Diego Region (RWQCB) Comprehensive Water Quality Control Plan Report, dated 1979, the site is located within the Chollas Hydrologic Subarea (8.22) of the San Diego Mesa Hydrologic Area (8.20) of the Pueblo San Diego Hydrologic Unit (8.00). As stated in the RWQCB Resolution No. 91-79, this basin does not have any existing or potential municipal and industrial beneficial uses of groundwater. It should be noted that the site is located near the northern boundary of the Chollas Hydrologic Subarea, and that the basin interpreted to be to the north (Mission San Diego Hydrologic Subarea) has potential beneficial municipal groundwater uses.

✓ w/ JRO

As shown on Table 3, the shallow groundwater beneath the site is generally encountered at a depth of approximately four and one half to nine feet below grade. The shallow groundwater is interpreted to generally flow towards the west (Figure 3) at a gradient of approximately 0.08 (eight feet of elevation difference for every 100 feet of horizontal distance). It should be noted that the interpreted flow direction is away from the Mission San Diego Hydrologic Subarea. - PARALLEL -

The shallow groundwater at the site is interpreted to be a perched water table. As previously stated, there was a cemented zone that was encountered during the drilling activities. It is our professional opinion that this cemented zone is a confining layer on which the shallow groundwater is perched. Figure 4 is an interpretation of the groundwater conditions at the site.

maybe..

Soil Sample Analytical Results

Total Petroleum Hydrocarbons as Gasoline and Diesel

Thirty soil samples were tested for TPH as gasoline (TPH_g) and diesel (TPH_d) in general accordance with modified EPA Method 8015. As shown on Table 4, and Figures 5, 6, 7, 8, and 9, soil samples with reported concentrations of TPH_g and TPH_d were only collected from soil borings B-1, B-4 and well MW-1.

Soil boring B-1 is located 15 feet southwest of the former gasoline UST. Soil samples collected from soil boring B-1 had reported TPH_g concentrations ranging from 66 to 174 milligrams/kiliograms (mg/kg), and TPH_d concentrations ranging from 131 to 271 mg/kg. It should be noted that the soil sample collected from a depth of approximately 15 feet below grade was reported to have no detectable concentrations of TPH_g and TPH_d.

Soil boring B-4 is located in the reported location of former gasoline UST. Soil samples collected from soil boring B-4 had reported TPH_g concentrations ranging from 14 to 82 mg/kg. It should be noted that the soil samples collected from below a depth of approximately 15 feet below grade were reported to have no detectable concentrations of TPH_g. Only one soil sample collected from soil boring B-4 was reported to have detectable TPH_d concentrations. The soil sample collected at a depth of approximately eight feet below grade was reported to have a TPH_d concentration of 87 mg/kg.

Well MW-1 is located approximately 15 feet west of the former gasoline UST. Only two soil samples collected from well MW-1 were reported to have a detectable TPH_g concentration. The soil samples collected from depths of approximately eight and ten feet below grade had reported TPH_g concentrations of 17 and 36 mg/kg, respectively. Only two soil samples collected from well MW-1were reported to have detectable TPH_d concentrations. The soil samples collected at depths of approximately eight and ten feet below grade were reported to have TPH_d concentrations of 14 and 29 mg/kg, respectively.

Total Recoverable Petroleum Hydrocarbons

Thirty soil samples were tested for TRPH in general accordance with EPA Method 418.1. As shown on Table 4, and Figures 5, 6, 7, 8, and 9, soil samples collected from all soil borings and wells, with the exception of soil boring B-5, had reported TRPH concentrations. Reported TRPH concentrations ranged from 11 to 9,140 mg/kg. It should be noted that the samples with the highest reported TRPH concentrations were collected from soil boring B-1, located to the west, in the interpreted downgradient direction of the former used and new oil USTs. It should also be noted that the soil samples collected from well MW-3, located to the east, upgradient of the former used and new oil USTs had reported TRPH concentrations of less than 100 mg/kg.

Benzene, Toluene, Ethylbenzene, and Xylenes

The soil sample with the highest reported TPH_g and TRPH concentrations (soil sample B1-10') was also tested for BTEX in general accordance with EPA Method 8020. It should be noted that this soil sample was collected near the field interpreted water table. As shown on the attached laboratory test report, this soil sample was reported to have no detectable BTEX concentrations.

Aromatic Hydrocarbons

Soil sample B1-10' was also tested for aromatic hydrocarbons in general accordance with EPA Method 8010. As shown on the attached laboratory test report, this soil sample was reported to have no detectable concentrations of aromatic hydrocarbons.

PCBs and Organochlorine Pesticides

Soil sample B1-10' was also tested for PCBs and organochlorine pesticides in general accordance with EPA Method 8080. As shown on the attached laboratory test report, this soil sample was reported to have no detectable concentrations of PCBs or organochlorine pesticides.

Organic Lead

Soil sample B1-10' was also tested for organic lead in general accordance with EPA Method 6010. As shown on the attached laboratory test report, this soil sample was reported to have an organic lead concentration of 1.5 mg/kg.

Groundwater Sample Test Results

Total Petroleum Hydrocarbons as Gasoline and Diesel

Groundwater samples were tested for TPH_g and TPH_d in general accordance with modified EPA Method 8015. As shown on Table 5, all three water samples were reported to have no detectable concentrations of TPH_g and TPH_d.

Benzene, Toluene, Ethylbenzene, and Xylenes

Each groundwater sample was tested for BTEX in general accordance with EPA Method 8020. As shown on Table 5, all three water samples were reported to have no detectable BTEX concentrations.

Total Lead

The groundwater sample collected from well MW-2 was tested for total lead by ATI in general accordance with EPA Method 7421. As shown on the attached laboratory test report, the sample collected from well MW-2 had a reported total lead concentration of 0.002 mg/l.

DISCUSSION

Assessment of the Vertical and Horizontal Extent of Petroleum-Hydrocarbon-Bearing Soil

Gasoline and Diesel-Bearing Soil

As shown on Figures 5, 6, 7, 8, and 9, the extent of gasoline and diesel-bearing soil has been interpreted to be limited to the immediate vicinity of the former gasoline UST pit. The basis for this interpretation is presented below:

- The northern extent of gasoline and diesel-bearing soil is estimated using the laboratory test results from soil samples GES-3, GES-4, and GES-2. As shown on Figure 5 and on Table 4, these soil samples were collected from approximately five to eight feet below grade and were reported to have no detectable TPH_g and TPH_d concentrations.

- The eastern extent of gasoline and diesel-bearing soil is estimated using the laboratory test results from soil samples GES-5, GES-7 and the soil samples collected from soil boring B-3. As shown on Figure 5 and on Table 4, with the exception of soil sample GES-7, all these soil

samples were reported to have no detectable concentrations of TPH. Soil sample GES-7 was reported to have a TPH_g concentration of 27 mg/kg.

Review of laboratory test results and observations made during the drilling activities indicate that the released fuel travelled along the top of the cemented layer which appears to dip towards the west. Therefore, this augments our professional opinion that the eastern extent of fuel-bearing soil is limited.

- The southern extent of gasoline and diesel-bearing soil is estimated using the laboratory test results from soil boring B-5. As shown on Figure 5 and on Table 4, all of the soil samples collected from soil boring B-5 were reported to have no detectable concentrations of TPH.

  It should be noted that soil boring B-5 was drilled south of the excavation, approximately 35 feet south of the former gasoline UST. It is our professional opinion that the southern extent of fuel-bearing soil is to the north of soil boring B-5.

- The western extent of gasoline-bearing soil can be estimated using the laboratory test results from soil boring B-6 and well MW-1. As shown on Figure 5 and on Table 4, all of the soil samples collected from soil boring B-6, located in an interpreted downgradient location from the former USTs, were reported to have no detectable concentrations of TPH_g and TPH_d. As shown on Figure 5 and on Table 4, only three soil samples collected from well MW-1, located in an interpreted downgradient location from the former USTs were reported to have detectable concentrations of TPH_g and TPH_d, and these three soil samples were reported to have TPH_g and TPH_d concentrations of less than 29 mg/kg.

  It should be noted that soil boring B-6 was drilled approximately 50 feet to the west of the former gasoline UST. It is our professional opinion that the western extent of fuel-bearing soil is well to the east of soil boring B-6.

The vertical extent of gasoline and diesel-bearing soil is interpreted to extend to a maximum depth of approximately 15 feet below grade. As shown on Figures 5, 6, 7, 8, and 9, and on Table 4, it is our professional opinion that the cemented layer has limited the vertical migration of gasoline and diesel fuel into the subsurface.

TRPH-Bearing Soil

- The southern extent of TRPH-bearing soil (soil with TRPH concentrations greater than 1,000 mg/kg) is estimated using the laboratory test results from soil boring B-5. As shown on Figure 5 and on Table 4, all of the soil samples collected from soil boring B-5 were reported to have no detectable concentrations of TRPH.

  It should be noted that soil boring B-5 was drilled south of the excavation, approximately 10 feet south of the former oil USTs. It is our professional opinion that the southern extent of TRPH-bearing soil is to the north of soil boring B-5.

- The eastern extent of TRPH-bearing soil is estimated using the laboratory test results from well MW-3. As shown on Figure 5 and on Table 4, all of the soil samples collected from soil boring MW-3 were reported to have TRPH concentrations of less than 100 mg/kg.

- The western extent of gasoline-bearing soil can be estimated using the laboratory test results

from soil boring B-6. As shown on Figure 5 and on Table 4, all of the soil samples collected from soil boring B-6, located in an interpreted downgradient location from the former USTs were reported to have TRPH concentrations of less than 100 mg/kg.

It should be noted that soil boring B-6 was drilled approximately 50 feet to the west of the former oil USTs. It is our professional opinion that the western extent of TRPH-bearing soil is well to the east of soil boring B-6.

Assessment of Groundwater Quality at the Site

Three wells have been installed and sampled at the site. Groundwater monitoring wells MW-1 and MW-2 are located adjacent to, and in the interpreted downgradient direction from the former gasoline and oil USTs. Well MW-3 is located adjacent to, and upgradient from the former gasoline and oil USTs. As shown on Table 5, all of the groundwater samples were reported to have no detectable TPH_g, TPH_d, and BTEX concentrations.

Because groundwater samples collected from the downgradient wells were reported to have no detectable BTEX concentrations, it is our professional opinion that there is a low likelihood that the shallow groundwater at the site has been impacted by petroleum-hydrocarbons.

Based on a review of the laboratory test results of the collected groundwater samples, and the observed westerly shallow groundwater flow direction, it is our professional opinion that there is a low likelihood that the shallow groundwater at the site is a source of groundwater degradation to the Mission San Diego Hydrologic Subarea. As stated previously, the Mission San Diego Hydrologic Subarea is interpreted to be located up and crossgradient from the site.

CONCLUSIONS

Based on the data reviewed and obtained as part of this assessment, current regulatory guidelines, and our experience, in our professional judgement we have made the following conclusions:

- The horizontal extent of gasoline and diesel-bearing soil is generally limited to the immediate vicinity of the former UST excavation at the site. Gasoline and diesel-bearing soil extends to a maximum depth of approximately 15 feet below grade.

- The horizontal extent of TRPH-bearing soil (soil with TRPH concentrations greater than 1,000 mg/kg) has generally been assessed. Using available data, the western, southern, and eastern limits of TRPH-bearing soil have been inferred. The maximum extent of TRPH-bearing soil has been inferred to extend approximately 30 feet in the interpreted downgradient direction from the former oil USTs.

- Shallow groundwater at the site is interpreted to exist as a perched groundwater table. Groundwater generally occurs at a depth of approximately five to eight feet below grade. Locally, groundwater generally flows towards the west at a gradient of 0.08.

- Groundwater samples collected from wells at the site indicate that there is a low likelihood that groundwater at the site has been impacted with petroleum-hydrocarbons.

RECOMMENDATION

- This report should be sent to the SAM and RWQCB for review. Upon SAM and RWQCB review of this report, we recommend that you request a meeting with representatives of the SAM and RWQCB to discuss establishing site action levels for TRPH and TPH in soil.

It has been a pleasure working with you on this project. If we may provide any further assistance, please do not hesitate to contact us.

Respectfully,
ENVIRONMENTAL BUSINESS SOLUTIONS, INC.

WORKPLAN APPROVAL LETTER

RECEIVED
DEC 17 1993
Environmental Business Solutions Inc

ROBERT K. ROSS, M.D.
DIRECTOR

County of San Diego

DEPARTMENT OF HEALTH SERVICES
ENVIRONMENTAL HEALTH SERVICES

OFFICE OF THE DEPUTY DIRECTOR
P. O. BOX 85261
SAN DIEGO, CA 92186-5261
(619) 338-2222
Fax #: 338-2174

SITE ASSESSMENT AND MITIGATION DIVISION
P.O. BOX 85261
SAN DIEGO, CA 92186-5261
(619) 338-2222

December 9, 1993

James Buckner
La Mesa RV Center
7601 Alvarado Rd.
La Mesa, CA 92041

Dear Mr. Buckner:

RE: UNAUTHORIZED RELEASE #T0427/H02651-001
LA MESA RV CENTER, 7601 ALVARADO RD., LA MESA, CA 92041

The staff of the Site Assessment and Mitigation Division (SAM) have reviewed this case. This letter has been prepared in accordance with the requirements set forth in Title 23 (State Underground Storage Tank Regulations), Division 3, Amendment to Chapter 16, Article 11, Section 2722. The purpose of this letter is to notify the Responsible Party of the status of the workplan dated November 24, 1993.

The workplan prepared by Dan Johnson/Environmental Business Solutions (EBS) covers one of the following phases of corrective action:

Interim Remedial Action	( )
Preliminary Site Assessment	(X)
Soil and Water Investigation	( )
Corrective Action Plan Implementation	( )
Verification Monitoring	( )

The workplan proposing to continue the soil and ground water investigation has been:

( ) approved.
( ) disapproved-call the undersigned for further instructions.
(X) approved with the following changes or conditions:

- The soil sample with the highest result for total petroleum hydrocarbons (TPH) must also be analyzed for volatiles by method 8020, and organic lead.

  The final report must include cross-sections of the soil contamination that depict the delineation achieved.

- The location proposed for MW-3 may not allow for accurate calculation of the ground water flow direction, based on the locations of wells MW-1 and 2 and the suspected local gradient to the north/northwest. It is recommended that well MW-3 be relocated to the east of sample points OES-15 and OES-6, approximately ten feet east of the edge of the previous excavation. This will also allow for lateral delineation of soil contamination in this area.

  However, there is still a requirement for lateral delineation of soil contamination in the vicinity of the previous location proposed for MW-3, i.e., to the south of OES-9 and OES-12. It is recommended that a soil boring, rather than a well, be placed at this location, in order to define the horizontal limits of soil contamination in this direction.

Keep this letter for your records as it may be required for corrective action cost reimbursement under Senate Bill 2004 (California Health and Safety Code, Chapter 6.75, Article 6).

Please submit a report describing the results of the activities described in the workplan to SAM and the Regional Water Quality Control Board (RWQCB) by January 30, 1994.

Please call me at (619) 338-2396, if you have any questions.

Sincerely,

LARS SKINNER, Hazardous Materials Specialist
Site Assessment and Mitigation Division

SOIL BORING AND WELL LOGS

Major Soil Divisions			Group Symbol	Descriptions
Coarse Grained Soils (>50 % of material is larger than No. 200 sieve.)	GRAVELS (% gravel > % sand.)	Clean Gravels (<5 % fines)	GW	Well graded gravels, little or no fines.
			GP	Poorly graded gravels or gravel-sand mixtures, little or no fines.
		Gravel With Fines (>15 % fines)	GM	Silty gravels, gravel-sand-silt mixtures, non-plastic fines.
			GC	Clayey gravels, gravel-sand-clay mixtures, plastic fines.
	SANDS (% sand ≥ % gravel.)	Clean Sands (<5 % fines)	SW	Well graded sands or gravelly sands, little or no fines.
			SP	Poorly graded sands, little or no fines.
		Sands With Fines (>15 % fines)	SM	Silty sands, sand-silt mixtures, non-plastic fines.
			SC	Clayey sands, sand-clay mixtures, plastic fines.
Fine Grained Soils (> 50 % of material is smaller than No. 200 sieve.)	SILTS AND CLAYS (Liquid limit is <50 %)		ML	Inorganic silts and very fine sands, rock flour, silty or clayey fine sands or clayey silts with slight plasticity.
			CL	Inorganic clays of low to medium plasticity, gravelly clays, sandy clays, silty clays, lean clays.
			OL	Organic silts and organic silty clays of low plasticity.
	SILTS AND CLAYS (Liquid limit is >50 %)		MH	Inorganic silts, micaceous or diatomaceous fine sandy or silty soils, elastic silts.
			CH	Inorganic clays of high plasticity, fat clays.
			OH	Organic clays of medium to high plasticity, organic silts.
Highly Organic Soils			Pt	Peat and other highly organic soils.

SUBJECT: DATA REPORT - LA MESA R.V. CENTER, 7601 ALVARADO RD., SAN DIEGO, CA - EBS PROJECT #93E1163.1

TEG Project #940210T3

Mr. Pulver:

Please find enclosed a data report for soil samples from the above referenced project for Environmental Business Solutions. The samples were analyzed in TEG's California DOHS certified mobile laboratories (CERT #1317). TEG personnel conducted the following analyses:

- 30 soils for total petroleum hydrocarbons (TPH) by DOHS Modified EPA Method 8015.
- 30 soils for total recoverable petroleum hydrocarbons (TRPH) by EPA Method 418.1

The results of the analyses are summarized in the attached tables. Applicable detection limits and QA/QC data are included on the tables.

TEG appreciates the opportunity to provide analytical services to Environmental Business Solutions for this project. If you have any questions relating to these data or report, please do not hesitate to contact us.

Sincerely,

Sheri W. Hartman

Ms. Sheri Hartman
President

ANALYTICAL PROCEDURES

SAMPLE PREPARATION

Waters

Separate water aliquots are extracted for TPH analysis (gasoline and diesel) by liquid-liquid extraction with freon 113 using a modified EPA Method 3510. For volatile aromatics and chlorinated hydrocarbons (EPA 601 & 602), water samples are purged of volatiles in a Tekmar LSC-2000 purge & trap following EPA Method 5030.

Soils

Soil samples are extracted with methanol for volatile chlorinated hydrocarbon compounds (EPA 8010) and with freon 113 for volatile aromatic hydrocarbon compounds (EPA 8020) and fuel compounds (DOHS approved EPA 8015m) by hand-shaking for 2 minutes and sonification for 10 minutes.

GAS CHROMATOGRAPHY

Volatile Chlorinated Hydrocarbons

Water samples and soil extracts are purged in a Tekmar LSC-2000 purge & trap, and backflushed into a Shimadzu 14A gas chromatograph equipped with megabore capillary columns and photoionization detector (PID) and Hall electrolytic detectors following EPA Methods 601/8010 and 602/8020.

Volatile Aromatic Hydrocarbons (BTEX) & Total Fuel Hydrocarbons (TPH)

An aliquot of the soil extract is injected on-column into a Shimadzu gas chromatograph equipped with megabore capillary columns, photoionization (PID) and flame ionization detectors (FID).

TOTAL RECOVERABLE HYDROCARBONS

Extracts are scrubbed with silica gel and measured on a BUCK 404 Infrared Analyzer following EPA 418.1 protocols.

DATA ACQUISITION & PROCESSING

Data from the gas chromatographs are integrated and plotted by Hewlett-Packard 3393A computing integrators. Separate chromatograms are printed for each detector. The resulting chromatograms are inspected at the end of each run and the data entered into an IBM-compatible computer for on-site processing and evaluation.

Attention: B. PULVER

Analytical Technologies, Inc. has received the following sample(s):

Date Received	Quantity	Matrix
February 14, 1994	1	SOIL

The sample(s) were analyzed with EPA methodology or equivalent methods as specified in the enclosed analytical schedule. The symbol for "less than" indicates a value below the reportable detection limit. Please note that the Sample Condition Upon Receipt Checklist is included at the end of this report.

The results of these analyses and the quality control data are enclosed.

SUBJECT: **DATA REPORT - LA MESA R.V. - EBS PROJECT #93E1165.1**

RECEIVED
MAR 02 1994
Environmental Business Solutions Inc

TEG Project #940217-8

Mr. Pulver:

Please find enclosed a data report for water samples from the above referenced site for Environmental Business Solutions. All samples were analyzed in TEG's California DOHS certified mobile laboratory (CERT #1839). TEG personnel conducted the following analyses:

- 3 waters for volatile aromatic hydrocarbons (BTEX) by EPA Method 8020.
- 3 waters for total petroleum hydrocarbons (TPH) by DOHS Modified EPA Method 8015.

The results of the analyses are summarized in the attached table. Applicable detection limits and QA/QC data are included on the table.

TEG appreciates the opportunity to provide analytical services to Environmental Business Solutions for this project. If you have any questions relating to these data or report, please do not hesitate to contact us.

Sincerely,

Sheri Hartman

ANALYTICAL PROCEDURES

SAMPLE PREPARATION

Waters

Separate water aliquots are extracted for TPH analysis (gasoline and diesel) by liquid-liquid extraction with freon 113 using a modified EPA Method 3510. For volatile aromatics and chlorinated hydrocarbons (EPA 601 & 602), water samples are purged of volatiles in a Tekmar LSC-2000 purge & trap following EPA Method 5030.

Soils

Soil samples are extracted with methanol for volatile chlorinated hydrocarbon compounds (EPA 8010) and with freon 113 for volatile aromatic hydrocarbon compounds (EPA 8020) and fuel compounds (DOHS approved EPA 8015m) by hand-shaking for 2 minutes and sonification for 10 minutes.

GAS CHROMATOGRAPHY

Volatile Chlorinated Hydrocarbons

Water samples and soil extracts are purged in a Tekmar LSC-2000 purge & trap, and backflushed into a Shimadzu 14A gas chromatograph equipped with megabore capillary columns and photoionization detector (PID) and Hall electrolytic detectors following EPA Methods 601/8010 and 602/8020.

Volatile Aromatic Hydrocarbons (BTEX) & Total Fuel Hydrocarbons (TPH)

An aliquot of the soil extract is injected on-column into a Shimadzu gas chromatograph equipped with megabore capillary columns, photoionization (PID) and flame ionization detectors (FID).

TOTAL RECOVERABLE HYDROCARBONS

Extracts are scrubbed with silica gel and measured on a BUCK 404 Infrared Analyzer following EPA 418.1 protocols.

DATA ACQUISITION & PROCESSING

Data from the gas chromatographs are integrated and plotted by Hewlett-Packard 3393A computing integrators. Separate chromatograms are printed for each detector. The resulting chromatograms are inspected at the end of each run and the data entered into an IBM-compatible computer for on-site processing and evaluation.

Facility Contact: Steven Tousdale Title: Asst. Staff Geologist

Phone: 571-5500 Fax: 571-5357

Facility Name: La Mesa R.V. Center

Facility Address: 7601 Alvarado Road, La Mesa CA 92041

Billing Address (if different):

Wastewater Information

Describe process generating wastewater: Purged groundwater from three groundwater monitoring wells

List known and suspected contaminants: Non-detect for Benzene, Toluene, Ethylbenzene, Xylenes and Total Petroleum Hydrocarbons

Describe any wastewater pretreatment methods used: N/A

Volume of wastewater to be discharged: Approx. 400 Gallon Flow 25 gal/min

Description of discharge point, include address and map as needed: Sewer hook-up used for Recreational Vehicle Sewage Holding Tank clean out

Proposed Date(s) of Discharge: 4-11-94 Time: 9:00 am

Lab Analysis

Attach a copy of lab analysis. For hydrocarbon only contaminated sites, analysis must include: Oil & Grease for TPH, Total Lead, Benzene, and Flash Point. For sites with contamination other than hydrocarbons, please contact the Industrial Waste Program for guidance prior to having the analysis performed. *Samples used for analysis must be representative of the wastewater to be discharged.*

Approval does not relieve the discharger of obligations regarding compliance with any and all applicable local, State, and Federal pretreatment standards or hazardous waste disposal requirements including any such standards or requirements that may become effective after the issuance of approval.

Subject: Thirty-Day Update Report

Dear Mr. Skinner:

I am writing to provide a thirty-day update report pursuant to Title 23 C.C.R. § 2652 and as required by your official notices. This update will cover activities occurring since my last update of March 30, 1994.

On April 21, 1994 Environmental Business Solutions accomplished removal and disposal of the soil cuttings and purge water, which has been temporarily stored on site, after obtaining all necessary permits. We expect that a report of those activities will be prepared by E.B.S. and we will provide a copy to SA/M with our next report.

Additionally, at your request, we will continue to provide periodic status update reports on a thirty-day reporting schedule pursuant to Title 23, C.C.R. § 2652. Accordingly, our next report will be due May 30, 1994.

All additional required applicable information remains unchanged.

If you have any questions, please do not hesitate to call me at (619) 699-2418.

Very truly yours,

Stephen L. Marsh

Subject: Thirty-Day Update Report

Dear Mr. Skinner:

I am writing to provide a thirty-day update report pursuant to Title 23 C.C.R. § 2652 and as required by your official notices. This update will cover activities occurring since my last update of January 28, 1994.

The drilling and installation of wells, pursuant to the approved workplan for additional site assessment activities prepared by Environmental Business Solutions with your suggested changes, was completed as scheduled on February 10 and 11, 1994. Additionally, samples of groundwater were taken and tested on February 18, 1994. Preliminary test results indicate that groundwater is not impacted.

We will submit a full report of site assessment activities, as required, on or before March 30th.

Additionally, at your request, we will continue to provide periodic status update reports on a thirty-day reporting schedule pursuant to Title 23, C.C.R. § 2652. Accordingly, our next report will accompany the site assessment report.

All additional required applicable information remains unchanged.

If you have any questions, please do not hesitate to call me at (619) 699-2418.

Very truly yours,

Stephen L. Marsh

Re: Unauthorized Release #T0427/H02651-001
La Mesa RV Center
7601 Alvarado Road, La Mesa, CA 92041

Subject: Thirty-Day Update Report

Dear Mr. Skinner:

I am writing to provide a thirty-day update report pursuant to Title 23 C.C.R. § 2652 and as required by your official notices. This update will cover activities occurring since my last update of December 29, 1993.

The drilling and installation of wells, pursuant to the approved workplan for additional site assessment activities prepared by Environmental Business Solutions with your suggested changes, is scheduled to take place February 10 and 11, 1994.

Your December 9, 1993 letter required a report to be submitted not later than January 30, 1994 to SA/M and the Regional Water Quality Control Board. On January 6, 1994 you telephonically approved our request that this date be extended an additional sixty days to March 30, 1994. We will submit a full report of site assessment activities on or before March 30th.

Additionally, at your request, we will continue to provide periodic status update reports on a thirty-day reporting schedule pursuant to Title 23, C.C.R. § 2652. Accordingly, our next report is due Feb. 28, 1994.

All additional required applicable information remains unchanged.

If you have any questions, please do not hesitate to call me at (619) 699-2418.

Very truly yours,

Stephen L. Marsh

RE: Well Purging/Sampling Logs for the La Mesa RV Center at 7601 Alvarado Road, La Mesa, California (Site)

Dear Ms. Spangenberg:

As you requested, please find enclosed copies of the Well Purging/Sampling Logs for the above-referenced Site. The Logs are for wells MW-1, MW-2, and MW-3, which were sampled on March 28, 1995.

Should you have any questions regarding these documents, please call us at (619) 571-5500.

Respectfully,

RE: Disposal of Groundwater Monitoring Well Purge Water at the Property Located at 215 East Main Street, El Cajon, California (Site)

Dear Mr. Shipley:

On May 9, 1995, EBS disposed of approximately 24 gallons of groundwater monitoring well purge water at the Site. This purge water was discharged to the sewer in accordance with the approved Groundwater Batch Discharge Authorization (enclosed).

If you have any questions regarding this matter, please contact us at (619) 571-5500.

RE: Quarterly Groundwater Monitoring Report for the First Quarter 1995 and Workplan Describing Additional Site Assessment Activities Pursuant to the Request of San Diego County Site Assessment and Mitigation Division (SAM) for the La Mesa RV Center at 7601 Alvarado Road, La Mesa, California (Site)

Dear Mr. Buckner:

Environmental Business Solutions, Inc. (EBS) is pleased to present this Quarterly Groundwater Monitoring Report for the first quarter 1995 pursuant to the requirements of the SAM for the above-referenced Site (Figure 1). The work described in this report was conducted in general accordance with the Scope of Services Change Number 4 to Exhibit "1" to the Consulting Agreement (Contract) between EBS and La Mesa RV, Inc. (Client). The Contract was fully executed on February 3, 1994.

EBS has prepared this written workplan which is intended to satisfy the requirements of the SAM prior to performing an additional soil investigation at the Site. This workplan describes the Site background, the procedures to be followed during the field investigation, the type of laboratory analyses to be performed on soil samples, and the type of report to be prepared.

BACKGROUND

The following background information is from previously reported data and reports prepared by others and by EBS. Four underground storage tanks (USTs) of various capacities were recently removed from the Site. The USTs stored new oil, used oil, and gasoline. The USTs were located immediately to the west and south of a service bay building at the Site (Figure 2). The four USTs consisted of one 550-gallon used oil UST, two 550-gallon new oil USTs, and one 2,000-gallon regular gasoline UST.

The USTs were removed in February 1988 by Alm Services (Alm). The "Abandoned Underground Tank Report" prepared for the Site by the county inspector indicated that each of the USTs had holes ranging from pinhole size to three-quarters of an inch in diameter. Groundwater impact was not noted during the USTs' removal, although groundwater was observed at a depth of approximately 7 feet below grade in the excavation.

Correspondence from Alm to the County of San Diego in March 1988 indicates that six soil samples from the UST excavation were collected. Detectable concentrations of both total petroleum hydrocarbons (TPH) and total recoverable petroleum hydrocarbons (TRPH) were found in each of the samples collected. In May 1988, Alm was reported to have collected an additional three samples from the new and used oil UST excavation. Detectable concentrations of TRPH were found in each of the three samples.

In March 1992, subsequent to the submission and approval of a workplan, we understand that Halliburton NUS (Halliburton) conducted a multi-day exploratory excavation program at the Site. Approximately 400 cubic yards of soil was excavated from the former vicinity of the USTs. Numerous confirmation samples were collected during the excavation program (Figures 2 and 5). Confirmation samples indicated that soil with concentrations of both TPH and TRPH remains in the vicinity of the excavation.

In February 1994, subsequent to the approval of a workplan, EBS conducted a soil and groundwater investigation at the Site. During this investigation, 11 soil borings were drilled, 3 of which were converted to groundwater monitoring wells MW1, MW2, and MW3 (Figure 2). Portions of the borings were drilled using air percussion drilling methods. To reduce the potential for aeration effects from the circulation of air down the boring during drilling, samples were collected with a split-spoon sampler driven 12 to 18 inches ahead of the bit, and only the lowermost sample tube was submitted to the laboratory for analysis to improve the likelihood that the sample was representative of the subsurface conditions.

Based on the soil sample results, the horizontal extent of gasoline-bearing and diesel-bearing soil was interpreted to be generally limited to the immediate vicinity of the former UST excavation, and to a maximum depth of approximately 15 feet below grade. The horizontal extent of TRPH-bearing soil was concluded to generally have been assessed, and was interpreted to extend a maximum of approximately 30 feet downgradient from the former oil USTs. Groundwater was detected in the wells at depths ranging from approximately 5 to 8 feet below grade, and was interpreted to be perched water. Groundwater sample results were reported to be below laboratory detection limits for TPH as gasoline (TPH_g) and as diesel (TPH_d), and for benzene, toluene, ethylbenzene, and total xylenes (BTEX).

GROUNDWATER MONITORING CONDUCTED BY ENVIRONMENTAL BUSINESS SOLUTIONS, INC.

On March 28, 1995, EBS personnel monitored the wells at the Site. Depth-to-water measurements were taken, and the potential presence of free floating product was monitored with an electronic interface probe with a manufacturer's reported accuracy of 1/100 of a foot. Free floating petroleum product was not detected in any of the three wells nor observed in a clear bailer lowered in the wells. The locations and elevations of the wells were previously surveyed by Hopwood Surveying, a licensed surveyor.

As shown on the attached Table 1, shallow groundwater was encountered at depths ranging from approximately 4.5 to 8 feet below grade. Based on the depth-to-groundwater measurements and the information from the licensed surveyor, a groundwater flow direction for the Site was estimated by solving a three-point problem. The shallow groundwater is interpreted to generally flow towards the west (Figure 3) with a gradient of approximately 0.07. The estimated groundwater flow direction and gradient are consistent with the previous groundwater flow direction estimated by EBS.

After being monitored, each well was prepared for sampling by the removal of approximately 1 borehole volume of water with a bailer. All three wells were interpreted to be slow-recharging wells. Sampling equipment was cleaned between wells with a soapy water wash and a tap water rinse. Purged water from the wells was placed in drums, labeled, and left on-site. Approximately 24 gallons of purged groundwater

was generated. EBS is in the process of obtaining permission to dispose of the purged water to the sanitary sewer. Samples were collected approximately 2 hours after purging was completed. The water samples were collected with a single-use disposable bailer. Groundwater samples were decanted into volatile organics analysis (VOA) vials, capped with Teflon-lined caps, sealed, labeled, and placed on ice. The samples were delivered to Analytical Technologies, Inc. (ATI), a state-certified hazardous waste laboratory, under chain-of-custody protocol.

The samples were tested for the following:

- TRPH in general accordance with EPA Method 418.1;
- TPH_g and TPH_d in general accordance with modified EPA Method 8015 (California Department of Health Services Method);
- BTEX and methyl tertiary butyl ether (MTBE) in general accordance with EPA Method 8020; and
- Polynuclear aromatic hydrocarbons (PAHs) in general accordance with EPA Method 8310.

The laboratory results from ATI indicated that TPH_g, TPH_d, BTEX, and PAHs were not detected. TRPH was detected in all three groundwater samples. TRPH concentrations were reported to range from 410 to 1,000 micrograms/liter (µg/l). Table 2 presents the latest and historical groundwater sampling results, and Figure 4 illustrates the latest groundwater sampling results. The laboratory report is included in the attached Appendix.

WORKPLAN

It is our understanding, based on review of a letter issued by the SAM on February 7, 1995, that the SAM has requested additional assessment of the vertical and horizontal extent of petroleum hydrocarbon-bearing soil.

The program described in this proposed workplan has been designed in general accordance with the requirements of the SAM, the data gathered and interpreted in preparing this workplan, as well as our professional judgment and experience in this type of investigation.

Objective

The objective of this proposed scope of services is to:

- Further assess the extent of petroleum hydrocarbon-bearing soil in the vicinity of the former gasoline and new and used oil USTs at the Site.

Scope of Services

The scope of services that will be used to meet the objective includes the following Phases:

Phase I **Preparation of a Workplan and Site Health and Safety Plan, Preparation of Soil Boring Permits, Subcontractor Management and Scheduling, and Utility Search and Mark Out**

EBS has prepared this written workplan which is intended to satisfy SAM requirements. This workplan is intended to describe the field procedures to be followed in the field investigation, including the type of laboratory analyses to be performed on the soil samples, and soil sample collection methods. This workplan includes the proposed locations and rationale for additional soil borings and sample locations (Figure 5). The soil boring program has been designed to further assess the lateral and vertical extent of petroleum hydrocarbon-bearing soil in the vicinity of the former UST locations.

The existing health and safety plan for the Site will be revised to reflect the current work scope. A health and safety plan for work conducted at the Site and workers within the "exclusion zone" is required pursuant to the regulations in 29 Code of Federal Regulations (CFR) Part 1910.120. Therefore, a health and safety plan will be prepared which will outline the potential chemical and physical hazards that may be encountered during drilling and sampling activities. The appropriate personal protective equipment and emergency response procedures for the site-specific chemical and physical hazards will be detailed in this plan. EBS and contracted personnel involved with the proposed field work will be required to sign this document in order to encourage proper health and safety practices.

Because the soil borings are anticipated to intersect groundwater, soil boring permits will be prepared and submitted to the SAM with the appropriate fee. The permits will be signed by the appropriately licensed professional.

Prior to mobilizing for field work, EBS will notify and schedule the appropriate subcontractors including but not limited to, the laboratory, the drilling company, the surveyor, the concrete coring company, concrete masons, Underground Service Alert (USA), and the material supply company. In addition, before the soil borings are drilled, EBS will work with USA and a private underground utility search company to attempt to locate subsurface utilities and improvements at the Site to minimize the likelihood of drilling into an underground utility.

Phase II **Drilling and Sampling of Four Soil Borings**

Drilling of Four Soil Borings

Four soil borings will be drilled, logged, and sampled to depths of approximately 20 feet below grade, or until refusal is met. The borings will be drilled in the vicinity of the western and southwestern perimeter of the former excavation at the Site. The proposed locations of the borings have been designed to provide additional information about the possible migration of petroleum hydrocarbons west and northeast of the former USTs at the Site.

The following is a brief presentation of the rationale for soil boring locations. The proposed soil boring locations are illustrated on the attached Figure 5.

Soil Boring No.	Location/Rationale
B-7	Located west/northwest of soil sample GES-11 (3,300 mg/kg of TRPH) and well MW-1 (59 to 962 mg/kg of TRPH). To further assess the vertical and lateral extent and concentration of petroleum hydrocarbons downgradient from the above-mentioned soil sample/well locations.
B-8	Located west of soil sample OES-11 (16,000 mg/kg of TRPH) and boring B-1 (31 to 9,140 mg/kg of TRPH). To further assess the lateral and vertical extent of petroleum hydrocarbons downgradient from the above-mentioned soil sample/boring locations.
B-9	Located adjacent to borings B-1 and B-1A. To assess the vertical extent of petroleum hydrocarbons beneath the 15-foot sample in B-1A (433 mg/kg of TRPH).
B-10	Located southwest of soil samples OES-12 and OES-13 (18,000 and 23,000 mg/kg of TRPH, respectively). To further assess the vertical and lateral extent of petroleum hydrocarbons in the vicinity of the above-mentioned soil samples.

An additional soil boring to assess the vertical extent of petroleum hydrocarbons beneath the bottom of B-4 is not proposed. Soil boring B-4A is located approximately 5 feet from boring B-4 and had two soil samples collected from a greater depth than the bottom of B-4. Therefore, it is our opinion that this data may be used to assess the vertical extent of petroleum hydrocarbons beneath B-4.

The soil borings are anticipated to be drilled by using an air rotary rig with a dual-wall drilling system or with driven casing. This type of rig will be used due to the difficult drilling conditions encountered previously at the Site (colluvium and alluvium with abundant gravel and cobble). In addition, caving occurred in some of the borings, resulting in difficulties in collecting samples. Sample collection is anticipated to be more efficient if a dual-wall or driven casing system is used. A qualified, licensed drilling contractor will be selected at a later date.

We anticipate collecting soil samples from soil borings at approximately 5, 8, 10, 15 and 20 feet below grade and at interpreted significant lithologic changes. The 8-foot sample is intended to provide data at the interpreted water table, but its depth may vary depending on the boring location.

The soil borings will be backfilled with an approved grout. As required by San Diego County guidelines, either pre-steam washed augers or down-hole air percussion drilling equipment will be on-site or a steam cleaner will be on-site to steam wash the augers or down-hole air percussion drilling equipment between soil borings to minimize the likelihood of "cross-contaminating" the borings and to minimize the potential for a "false positive" in the soil samples analyzed. All soil cuttings generated from drilling will be placed in 55-gallon drums, which will be labeled and left on-site pending laboratory analysis results.

A California-registered geologist will be on Site to observe the drilling activity, and describe collected soil samples in general accordance with the United Soil Classification System. During the drilling of the soil borings, soil samples will be collected, when possible, with a split-spoon type or similar sampler. Soil samples will be driven into brass or stainless steel tubes. The tubes will be covered with Teflon sheeting,

tightly closed with end caps, and delivered immediately to an on-site mobile laboratory. The sample containers will be packed in ice-filled coolers. Chain-of-custody procedures will be implemented for sample tracking. A written analytical report will be provided by the laboratory upon the completion of the sample testing. Please note that based on previous drilling, Site conditions may not allow for the collection of drive samples. If this is the case, we will attempt to collect representative samples from the subsurface.

Sample Analyses

EBS will retain a mobile laboratory to conduct on-site analytical testing of soil samples. This way, should impacted soil extend further vertically or laterally than target depths or soil boring locations, additional soil samples can be collected while personnel and equipment are already mobilized at the Site. As many as four soil samples from each boring (including at least one sample collected from within the field-interpreted saturated zone) will be analyzed for TPH_g and TPH_d in general accordance with modified EPA Method 8015 (California Department of Health Services Method), and for TRPH in general accordance with EPA Method 418.1

In addition, the one soil sample with the highest reported TPH concentration per soil boring will be analyzed for BTEX in general accordance with EPA Method 8020. Based on previous soil sampling results for polychlorinated biphenyls (PCBs), chlorinated solvents, and total lead, analyses for other constituents are not proposed.

Phase III Data Evaluation, Figure and Table Preparation, Soil Boring Log Preparation, and Report Preparation

Based on the findings of the field investigation and laboratory results from the above scope of services and the historical findings provided by the Client, an assessment report (Report) will be written in general accordance with SAM guidelines. The Report will include laboratory reports, chain-of-custody documents, permits, illustrations reflecting the sampled subsurface, logs of the soil borings, tabulated analytical results, and appropriate support documentation. The Report will include a description of the work performed, discussion of the results, and our conclusions and recommendations as deemed appropriate. In addition, the report will include figures illustrating the extent of petroleum hydrocarbon-impacted soil and the ratio of TPH to TRPH concentrations, and an explanation of petroleum hydrocarbon distribution and migration, in general accordance with SAM guidance as presented in the letter to Mr. Buckner, dated February 7, 1995.

The Report will be peer reviewed and signed by a California Certified Engineering Geologist.

In addition to the above-described Report, in order to comply with the requirements of the soil boring permits, a "thirty day" report will be prepared and submitted to the SAM.

Estimated Schedule

We estimate that the total time necessary to complete the above phased scope of services is approximately 30 to 35 working days.

EBS appreciates the opportunity to provide you with a Quarterly Groundwater Monitoring Report and workplan on this important project. Should you have any questions regarding this letter, please contact the undersigned at (619) 571-5500.

Respectfully,

Notes:

1. Samples collected on February 17, 1994, tested by Transglobal Environmental Geochemistry, and samples collected on March 28, 1995, tested by Analytical Technologies, Inc. Samples were tested for total recoverable petroleum hydrocarbons (TRPH) in general accordance with EPA Method 418.1, total petroleum hydrocarbons as gasoline (TPH_G) and as diesel (TPH_D) in general accordance with modified EPA Method 8015, and for benzene (B), toluene (T) ,ethylbenzene (E), total xylenes (X), and methyl tertiary butyl ether (MTBE) in general accordance with EPA Method 8020.

2. --- = Sample not tested for corresponding constituent.

Attention: CHUCK HOUSER

Analytical Technologies, Inc. has received the following sample(s):

Date Received	Quantity	Matrix
March 28, 1995	4	WATER

The sample(s) were analyzed with EPA methodology or equivalent methods as specified in th enclosed analytical schedule. The symbol for "less than" indicates a value below the reportab detection limit. If any flags appear next to the analytical data in this report, please see th attached list of flag definitions.

The results of these analyses and the quality control data are enclosed. Please note that th Sample Condition Upon Receipt Checklist is included at the end of this report.

SAMPLE CONDITION UPON RECEIPT CHECKLIST
(FOR RE-ACCESSIONS, COMPLETE #7 THRU #9)

1	Does this project require special handling according to NFESC Levels C, D, AFCEE or CLP protocols? If yes, complete a)and b) a) pH sample aliquoted: yes /no /na b) Either 1) Record Bottle Lot #'s: Or 2) Attach Sample Kit Request Form(s)	YES	(NO)
2	Number of Coolers Received If more than one cooler received attach Multiple Cooler Documentation Form (MCD) Indicate "see MCD"on Item 11 below	1	
3	Are custody seals required for this project ?	YES	(N/A)
	a) are Custody Seals present on Cooler(s) ?	YES	(NO)
	If yes, are seals intact ? (N/A)	YES	NO
	b) are Custody Seals present on the sample ?	YES	(NO)
	If yes, are seals intact ? (N/A)	YES	NO
4	Is there a Chain-Of-Custody (COC)* per cooler ? if not, if a problem is found indicate which samples/test were in the affected cooler on the MCD.	(YES)	NO
5	Is the COC* complete per cooler ? Relinquished: (yes)/no Requested analysis: (yes)/no	YES	NO
6	Is the COC* in agreement with the samples received? # Samples: yes/(no) Sample ID's: (yes)/no Date sampled: (yes)/no Matrix: (yes)/no # containers: yes/(no)	YES	(NO)
7	Are the samples preserved correctly?	(YES)	NO
8	Is there enough sample for all the requested analyses?	(YES)	NO
9	Are all samples within holding times for the requested analyses?	(YES)	NO
10	Record cooler temperature. Contact PM if temperature is not 4°C ± 2°C.	2.3 °C	
	Is ice present in cooler?	(YES)	NO
11	Were all sample containers received intact (ie. not broken, leaking, etc.)?	(YES)	NO
12	Are samples requiring no headspace, headspace free? N/A	(YES)	NO
13	Are VOA 1st stickers required?	YES	(NO)
14	Are there special comments on the Chain of Custody which require client contact?	YES	(N/A)
15	If yes, was ATI Project Manager notified?	YES	NO

Describe "no" items: * No Trip Blank Listed on C-O-C per Chris Myers added to C-O-C.

Was client contacted? yes / no

If yes, Date: _____ Name of Person contacted:

Describe actions taken or client instructions: _____

*Or other representative documents, letters, and/or shipping memos

Re: Unauthorized Release #T0427/H02651-001
La Mesa RV Center, 7601 Alvarado Rd., La Mesa, CA 92041

Dear Ms. Spangenberg:

I enjoyed talking with you on the telephone regarding this site and the additional work required by Lars Skinner's letter of February 7, 1995. During our telephone conversation you agreed to combine the dates for submission of a workplan and submission of the report of quarterly groundwater monitoring to be due on the same date, April 30, 1995. This will permit our consultant to have the groundwater monitoring data available for use in preparation of the workplan for further site work.

We thank you for your courtesy and cooperation.

Very truly yours,

Stephen L. Marsh

RE: Proposed Groundwater Monitoring Well Destruction Activities Performed Pursuant to the Approval of the San Diego County Site Assessment and Mitigation Division (SAM) at La Mesa R.V. Center, 7601 Alvarado Road, La Mesa, California

Dear Ms. Spangenberg:

Environmental Business Solutions, Inc. (EBS) is pleased to present this letter (Letter) regarding the proposed groundwater monitoring well destruction activities. Please find enclosed a copy of the well destruction permit that was submitted on July 12, 1996. We understand that Ms. Helen Dennin has approved the well destruction permit as of our conversation with her on July 15, 1996. The well destruction activities are scheduled for July 30, 1996. The wells will be destroyed in general accordance with SAM guidelines and the conditions of the approved well destruction permit. Cuttings and well destruction materials generated during the well destruction activities will be properly disposed of.

Lemon St 96161

In addition, on July 10, 1996, five soil drums were removed from the site and transported to Soil Wash Technologies, Inc. for treatment and disposal. A copy of the waste manifest is attached.

It has been a pleasure working with you on this project. If you have any questions or concerns, please do not hesitate to contact our office at (619) 571-5500.

Respectfully,
ENVIRONMENTAL BUSINESS SOLUTIONS, INC.

Re: La Mesa RV Center, 7601 Alvarado Road, La Mesa, California

see "Technical Reports" Section for this report

Dear Ms. Spangenberg:

Enclosed is the May 2, 1996 *Report of Groundwater Assessment Activities For the Property at 7601 Alvarado Road, La Mesa, California*, prepared by Environmental Business Solutions, Inc. On the basis of this report, previous environmental investigations of soil and groundwater and removal of approximately 400 cubic yards of impacted soils, we are requesting that a "no further action" letter be issued for the subject site.

The following is a summary of soil and groundwater investigations conducted at the subject facility by various environmental consulting firms. Our request for a "no further action" letter is based on the information provided in these reports.

ENVIRONMENTAL SUMMARY

La Mesa RV Center engages in the sale and maintenance of recreational vehicles. Several office, sales, storage, and service/maintenance structures are located on the subject site and most of the surface has been paved with asphaltic concrete with a few areas of vegetation. Four underground storage tanks (USTs) were located in the southern portion of the subject site and were removed in February 1988. One 550-gallon UST stored used oil, two 550-gallon USTs stored new oil, and one 2,000-gallon gasoline/diesel UST. According to the San Diego County Hazardous Materials Management Division (HMMD) inspector, each of the USTs had holes ranging from pinhole size to three-quarters of an inch in diameter. The inspector did not note any adverse impacts to groundwater during the USTs' removal, although perched groundwater was observed at a depth of approximately 7 feet below grade in the excavation.

Six soil samples from the UST excavation were collected and analyzed. Detectable concentrations of both total petroleum hydrocarbons (TPH) and total recoverable petroleum hydrocarbons (TRPH) were found in each of the samples collected. Three additional soil samples were collected from the new and used oil area of the UST excavation in May 1988 and detectable concentrations of TRPH were found in each of the three samples analyzed.

A removal program was conducted at the subject site in March 1992 in which approximately 400 cubic yards of soil was excavated in the vicinity of the former USTs. Confirmation soil samples collected and analyzed after the excavation project indicated that concentrations of both TPH and TRPH remained in the vicinity of the excavation.

Eleven soil borings were drilled at the subject site in February 1994, with three of these borings converted to groundwater monitoring wells. Shallow groundwater beneath the subject site was encountered at a depth of approximately 4 to 9 feet below grade and appeared to flow generally toward the west at a gradient of about 0.08. Thirty soil samples were collected and tested for TPH as gasoline (TPH-gas) and diesel (TPH-diesel). Soil samples with reported concentrations of TPH were only identified in three soil borings. TPH-gas concentrations ranged from 14 to 174 mg/kg and TPH-diesel concentrations ranged from 14 to 271 mg/kg. Thirty soil samples were analyzed for TRPH and ten of the eleven soil borings showed detectable concentrations ranging from 11 to 9,140 mg/kg. The sample with the highest TPH-gas and TRPH concentrations was analyzed for benzene, toluene, ethylbenzene, and total xylenes (BTEX) and aromatic hydrocarbons. No concentrations of BTEX or aromatic hydrocarbons were found in the sample. Organic lead was identified at a concentration of 1.5 mg/kg in one soil sample.

Samples from the three groundwater monitoring wells were analyzed. There were no concentrations of TPH-gas, TPH-diesel, or BTEX identified in any of the samples. One groundwater sample showed a concentration of 0.002 mg/l total lead.

Additional assessment activities were conducted at the subject site in November 1995. Three soil borings were drilled and a round of monitoring, purging and sampling of the three wells was conducted. TRPH, TPH-gas, TPH-diesel and benzene concentrations were not found in any of the groundwater well samples analyzed. Concentrations of toluene (32.9 ug/l), ethylbenzene (2.0 ug/l), total xylenes (12.5 ug/l), and MTBE (0.7 ug/l), none of which exceed MCL's or recommended action levels, were identified in one well.

In March 1996, the three groundwater monitoring wells were monitored, purged, and sampled. Laboratory analytical results indicate that no TRPH, TPH-gas, TPH-diesel, BTEX, or MTBE were detected in groundwater samples collected from the three monitoring wells.

CONCLUSION

On the basis of soil sample analytical results, the horizontal extent of petroleum hydrocarbon impacted soils is limited to the immediate vicinity of the former UST excavation and to a maximum vertical depth of approximately 15 feet below grade. Groundwater has not been impacted by releases from the former underground storage tanks (USTs). Four groundwater monitoring events have been conducted at the subject site over a period of two years. At no time has any concentration of BTEX been reported to exceed maximum contaminant levels (MCLs) for drinking water nor have any detectable levels of benzene ever been reported. The subject site has been adequately characterized and does not pose a threat to human health or the environment. Furthermore, based on these facts, the La Mesa RV site meets the April 1, 1996 Regional Water Quality Control Board *Interim Guidance on Required Cleanup at Low-Risk Fuel Contaminated Sites* criteria for a "low risk soils only case." As a result, we are requesting that a "no further action" letter be issued for the La Mesa RV site at your earliest convenience.

Very truly yours,

RE: Report of Groundwater Assessment Activities Performed Pursuant to the Request of San Diego County Site Assessment and Mitigation Division (SAM) for the La Mesa R.V. Center at 7601 Alvarado Road, La Mesa, California (Site)

Dear Ms Spangenberg:

Environmental Business Solutions, Inc. (EBS) is pleased to present this letter report (Report) which summarizes the results of a groundwater assessment recently performed at the Site. The work described in this report was conducted in general accordance Exhibit "2" to the Consulting Agreement (Contract) between EBS and La Mesa R.V., Inc. (Client). The Contract was fully executed on February 3, 1994.

SITE INFORMATION

SITE LOCATION/DESCRIPTION

The Site is located in a commercial/retail portion of the City of La Mesa (Figure 1). Topographically, the Site is located along a relatively level terrace. Steep slopes are located along the southern portion of the Site.

The Site is used as a recreational vehicle sales and service facility. Site improvements include offices, showrooms, service bays, and associated driveways and parking areas. The northern portion of the Site is generally used for showrooms, vehicle parking, and sales offices. The southern portion of the Site is used for the repair and servicing of vehicles. Four underground storage tanks (USTs) were formerly located in the southern portion of the Site (Figure 2).

SITE IDENTIFICATION

Site Name:	La Mesa R. V. Center
Site Location:	7601 Alvarado Road, La Mesa, California 92041
SAM Case Number:	HO2651-001, T0427

BACKGROUND

The following background information is from previously reported data and reports prepared by others and by EBS. Four USTs of various capacities were removed from the Site. The USTs stored new oil, used oil, and gasoline. The USTs were located immediately to the west and south of a service bay building at the Site (Figure 2). The four USTs consisted of one 550-gallon used oil UST, two 550-gallon new oil USTs, and one 2,000-gallon regular gasoline UST.

UST REMOVAL OF FEBRUARY 1988

The USTs were removed in February 1988 by Alm Services (Alm). The "Abandoned Underground Tank Report" prepared for the Site by the San Diego County Hazardous Materials Management Division (HMMD) inspector indicated that each of the USTs had holes ranging from pinhole size to three-quarters of an inch in diameter. Groundwater impact was not noted during the USTs' removal, although groundwater was observed at a depth of approximately 7 feet below grade in the excavation.

Correspondence from Alm to the HMMD in March 1988 indicated that six soil samples from the UST excavation were collected. Detectable concentrations of both total petroleum hydrocarbons (TPH) and total recoverable petroleum hydrocarbons (TRPH) were found in each of the samples collected. In May 1988, Alm was reported to have collected an additional three samples from the new and used oil area of the UST excavation. Detectable concentrations of TRPH were found in each of the three samples.

ASSESSMENT/REMEDIATION ACTIVITIES PERFORMED BY HALLIBURTON NUS IN MARCH 1992

In March 1992, subsequent to the submission and approval of a workplan, we understand that Halliburton NUS (Halliburton) conducted an exploratory excavation program at the Site. Approximately 400 cubic yards of soil was excavated from the vicinity of the former USTs. Numerous confirmation samples were collected during the excavation program. Confirmation samples indicated that soil with concentrations of both TPH and TRPH remained in the vicinity of the excavation.

WORKPLAN PREPARED BY EBS IN NOVEMBER 1993

In November 1993, EBS submitted a workplan to Mr. Lars Skinner of the SAM for review and approval. The workplan described an assessment which included the following:

- Drilling and sampling of seven soil borings and converting three of the soil borings to groundwater monitoring wells (wells);
- Monitoring, purging, and sampling the three wells; and
- Performing laboratory analysis on the collected soil and groundwater samples.

The workplan was approved by Mr. Skinner on December 9, 1993.

SOIL AND GROUNDWATER ASSESSMENT PERFORMED BY EBS IN FEBRUARY 1994

In February 1994, 11 soil borings (B-1, B-1A, B-2, B-3, B-4, B-4A, B-5, B-6, MW-1, MW-2, and MW-3) were drilled, three of which were converted to groundwater monitoring wells MW-1, MW-2, and MW-3. Work performed during this investigation included the collection and analysis of soil and groundwater samples. A report[1] summarizing the assessment activities was prepared and submitted to the SAM in March 1994.

Site Hydrogeology

The Site is interpreted to be located in the Mission San Diego Hydrologic Subarea of the Lower San Diego Hydrologic Area of the San Diego Hydrologic Unit. According to the Regional Water Quality Control Board (RWQCB), groundwater within this hydrologic subarea has existing or potential beneficial uses for municipal, agricultural, and/or industrial supplies.

The hydrologic areas and water use designations were presented in the RWQCB's "Comprehensive Water Quality Plan" (Plan) originally adopted in 1974. Recent amendments to the Plan, adopted in September 1994 by the RWQCB, were reviewed and used in the preparation of this Report.

---

[1] Report of Soil and Groundwater Investigation Pursuant to the Requirements of the San Diego County Site Assessment and Mitigation Division (SAM) for La Mesa R. V. Center, Inc., Located at 7601 Alvarado Road, La Mesa, California (Site).

As previously reported, the shallow groundwater at the Site is generally encountered at a depth of approximately 4 to 9 feet below grade. The shallow groundwater is interpreted to flow generally towards the west at a gradient of approximately 0.08 (8 feet of elevation difference for every 100 feet of horizontal distance).

SAM LETTER OF FEBRUARY 7, 1995

On February 7, 1995, Mr. Lars Skinner issued a letter regarding his review of the assessment report prepared by EBS, and subsequently requested that additional assessment of petroleum hydrocarbon-bearing soil and groundwater be performed.

WORKPLAN AND QUARTERLY GROUNDWATER MONITORING REPORT PREPARED BY EBS

On May 1, 1995, EBS submitted a workplan and quarterly groundwater monitoring report[2] to the SAM. Prior to preparing the May 1995 report, the three wells were monitored, purged, and sampled.

The workplan presented a scope of work intended to assess the shallow soil at the Site. This scope of work included the drilling, sampling, and logging of four additional soil borings; monitoring, purging and sampling of three wells; and laboratory analysis of collected soil and groundwater samples.

SAM WORKPLAN APPROVAL LETTER OF JUNE 19, 1995

On June 19, 1995, Ms. Carol Spangenberg of the SAM issued a workplan approval letter.

REPORT PREPARED BY EBS

In November, 1995, EBS conducted additional assessment activities at the Site which included drilling three soil borings and an additional round of monitoring, purging and sampling the three wells. Work performed during this investigation included

---

[2] Quarterly Groundwater Monitoring Report for the First Quarter of 1995 and Workplan Describing Additional Site Assessment Activities Pursuant to the Request of San Diego County Site Assessment and Mitigation Division (SAM) for the La Mesa R. V. Center at 7601 Alvarado Road, La Mesa, California (Site).

the collection and analysis of soil and groundwater samples. A report[3] summarizing the assessment activities was prepared and submitted to the SAM in March 1996.

OBJECTIVES

The objectives of this scope of services were to:

- Assess shallow groundwater at the Site for flow direction, gradient, and concentration of dissolved petroleum hydrocarbons.

SCOPE OF SERVICES

The scope of services that were used to meet the objectives are as follows:

AMENDMENTS TO THE PREVIOUSLY PREPARED SITE HEALTH AND SAFETY PLAN, SUBCONTRACTOR SCHEDULING, AND PROJECT MANAGEMENT

Preparation of a Site Health and Safety Plan

A health and safety plan for work conducted at the Site and workers within the "exclusion zone" is required pursuant to the regulations in 29 Code of Federal Regulations (CFR) Part 1910.120. Therefore, the previously prepared health and safety plan, which outlined the potential chemical and physical hazards that may be encountered during sampling activities, was amended for the current work scope. The appropriate personal protective equipment and emergency response procedures for the site-specific chemical and physical hazards were detailed in this plan. EBS personnel involved with the proposed field work were required to sign this document in order to encourage proper health and safety practices.

Subcontractor Management and Scheduling

Prior to mobilizing for field work, EBS notified and scheduled the analytical laboratories (Transglobal Environmental Geochemistry [TEG] and Geotest).

MONITORING, PURGING, AND SAMPLING THREE WELLS

On March 31, 1996, three groundwater monitoring wells (MW-1, MW-2, and MW-3) were monitored, purged, and sampled. The wells were monitored with an electronic

---

[3] Report of Soil and Groundwater Investigation Pursuant to the Requirements of the San Diego County Site Assessment and Mitigation Division (SAM) for La Mesa R. V. Center, Inc., Located at 7601 Alvarado Road, La Mesa, California (Site).

interface probe to measure depth to water. The interface probe is reported to measure groundwater level to within an accuracy of 1/100 foot. No free floating petroleum product was encountered during the monitoring activities. Both current and historical monitoring data are shown in Table 1.

After the wells were monitored they were purged and sampled in general accordance with SAM guidelines. Wells MW-1 and MW-3, were purged with a bailer. Purge water was placed in appropriate drums and left on-site. Well MW-2 was purged with a submersible pump. Approximately 1.5 borehole volumes of water was purged from each well. After approximately 2 hours after purging, the wells did not recharge to at least 80 percent of the pre-purging static water level. The wells were judged to be slow recharging and were sampled.

Groundwater was sampled with a disposable bailer. The groundwater samples were decanted into laboratory-supplied vials, capped, labeled, and placed in an ice-filled chest. Chain-of-custody procedures were implemented for sample tracking.

Laboratory Analysis of Collected Groundwater Samples

Groundwater samples were kept in an ice-filled cooler until analysis by TEG and analyzed for the following:

- TPH[4] in general accordance with modified EPA Method 8015;
- BTEX in general accordance with EPA Method 8020; and
- TRPH in general accordance with EPA Method 418.1.

In addition, a duplicate set of groundwater samples was submitted to Geotest and analyzed for the following:

- MTBE in general accordance with EPA Method 8020.

Groundwater laboratory test results are shown in Table 2. Laboratory test reports are attached.

---

[4] "Full scan" includes gasoline and diesel ranges.

FINDINGS

HYDROGEOLOGY

The shallow groundwater at the Site was generally encountered at a depth of approximately 4 to 8 feet below grade. The shallow groundwater is interpreted to generally flow towards the west (Figure 2) at a gradient of approximately 0.08 (8 feet of elevation difference for every 100 feet of horizontal distance).

GROUNDWATER SAMPLES

Total Petroleum Hydrocarbons

All groundwater samples were reported to have no detectable TPH concentrations.

Total Recoverable Petroleum Hydrocarbons

All groundwater samples were reported to have no detectable TRPH concentrations.

Benzene, Toluene, Ethylbenzene, and Xylenes

All groundwater samples were reported to have no detectable BTEX concentrations.

Methyl Tertiary Butyl Ether

All groundwater samples were reported to have no detectable MTBE concentrations.

DISCUSSION

- Groundwater samples have been analyzed for MTBE and for BTEX. These are typically very soluble components of gasoline,[5] and their presence is frequently an indicator of gasoline. No detectable concentrations of MTBE or BTEX were reported for the collected groundwater samples.

- Groundwater samples were also analyzed for TPH and TRPH. No detectable TPH or TRPH concentrations were reported for the collected groundwater samples.

---

[5] MTBE is a gasoline additive.

- Groundwater samples have previously been analyzed for polynuclear aromatic hydrocarbons[6] (PAHs). No detectable PAH concentrations were reported for the collected groundwater samples.

ASSESSMENT OF GROUNDWATER QUALITY AT THE SITE

Based on the groundwater samples collected from the Site to date, it is our opinion that groundwater at the Site has not been impacted[7] by release(s) from the former USTs.

There have been four groundwater monitoring events at this Site. As shown in Table 2, at no time has any concentration of BTEX been reported to exceed maximum contaminant levels[8] (MCLs) for drinking water. It should be stressed that all of the groundwater samples were reported to have no detectable benzene concentrations (Table 2).

No detectable MTBE concentrations were reported during this round of sampling. Groundwater sample MW-2, collected on November 28, 1995, was reported to have an MTBE concentration of 0.7 µg/l. It should be noted that the detection level for MTBE was 0.6 µg/l. The State "action level" for MTBE is 35 µg/l.

No detectable concentrations of TPH or TRPH were reported in collected groundwater samples.

CONCLUSIONS

Based on the data reviewed and obtained as part of this assessment, current regulatory guidelines, and our experience, in our professional judgement we have drawn the following conclusions:

- There is a low likelihood that the shallow groundwater at the Site has been impacted from a release(s) from the former USTs.

---

[6] Quarterly Groundwater Monitoring Report for the First Quarter of 1995 and Workplan Describing Additional Site Assessment Activities Pursuant to the Request of San Diego County Site Assessment and Mitigation Division (SAM) for the La Mesa R. V. Center at 7601 Alvarado Road, La Mesa, California (Site).

[7] Impact to groundwater for the purposes of this report is defined as concentrations of chemicals that exceed MCLs, as defined in CCR Title 22, or the presence of free product or groundwater.

[8] MCL as defined in California Code of Regulations, Title 23.

RECOMMENDATIONS

- We recommend, based on the groundwater sample analytical results collected at the Site to date, that the SAM consider issuing a "no further action" letter (Site closure).

- After receiving Site closure, the Client should consider properly destroying the existing three groundwater monitoring wells.

We have enjoyed working with you on the important project. If we may be of further assistance or you have any question, please feel free to contact the undersigned at 619-571-5500.

Respectfully,
ENVIRONMENTAL BUSINESS SOLUTIONS, INC.

REPORT USAGE AND FUTURE SITE CONDITIONS

This report is intended for the sole usage of La Mesa R.V. Center, its designated agents, and the SAM. Use of this report is subject to the provisions of the fully executed Consulting Agreement (Contract) between La Mesa R.V. Center and Environmental Business Solutions, Inc. Any third party usage of this report shall be subject to the provisions of the Contract and any unauthorized misuse of or reliance upon the report shall be without risk or liability to Environmental Business Solutions, Inc.

The conclusions of this report are judged to be relevant at the time the work described in this report was conducted. Future conditions may differ and this report should not be relied upon to represent future Site conditions unless a qualified consultant familiar with the practice of environmental assessments in San Diego County is consulted to assess the necessity of updating this report.

Although this assessment has attempted to assess the likelihood that the Site has been impacted by a hazardous material/waste release, potential sources of impact may have escaped detection for reasons which include, but are not limited to: 1) our reliance on inadequate or inaccurate information rightfully provided to us by third parties, such as public agencies and other outside sources; 2) the limited scope of this assessment; 3) the presence of undetected, unknown or unreported environmental releases; and 4) the heterogeneous and complex nature of subsurface materials.

Notes:

1. Samples were tested for total recoverable petroleum hydrocarbons (TRPH) in general accordance with EPA Method 418.1, total petroleum hydrocarbons as gasoline (TPH_g) and as diesel (TPH_d) in general accordance with modified EPA Method 8015, and for benzene (B), toluene (T) ,ethylbenzene (E), total xylenes (X), and methyl tertiary butyl ether (MTBE) in general accordance with EPA Method 8020.

2. --- = Sample not tested for corresponding constituent.

3. All sample results are reported in micrograms per liter (µg/l).

4. With the exception of the MTBE analysis, the groundwater samples collected in March 1996 were analyzed by TEG.

LABORATORY REPORTS

teg

April 9, 1996

Mr. Barry Pulver
Environmental Business Solutions
8799 Balboa Avenue
Suite 290
San Diego, CA 92123

RECEIVED
APR 12 1996

SUBJECT: DATA REPORT - LA MESA RV CENTER - 7691 ALVARADO ROAD, LA MESA, CA - EBS PROJECT #93E163.2

TEG Project # 960401-9

Mr. Pulver:

Please find enclosed a data report for the above referenced location. Water samples were analyzed in TEG's DOHS certified mobile laboratory (CERT #1746).

Project Summary

The following analyses were conducted:

- 3 waters for total petroleum hydrocarbons (TPH) by DOHS Modified EPA Method 8015
- 3 waters for volatile aromatic hydrocarbons (BTEX) by Modified EPA Method 8020
- 3 waters for total recoverable petroleum hydrocarbons (TRPH) by EPA Method 418.1

The samples were received chilled in appropriate containers with appropriate labels, seals, and chain-of-custody documentation.

Project Narrative

The results for all analyses and required QA/QC analyses are summarized in the enclosed tables. All calibrations, blanks, surrogates, and spike recoveries fulfill quality control criteria. No data qualifiers (flags) apply to any of the reported data.

TEG appreciates the opportunity to provide analytical services to EBS on this project. If you have any questions relating to this data or report, please do not hesitate to contact us.

Sincerely,

Sheri Hartman

REPORT TO:	BARRY PULVER	GEOTEST PROJECT NO.:	961138-03
		CLIENT ID:	93E1163.2
PROJECT NAME:	LA MESA RV CENTER		
SITE LOCATION:	7601 ALVARADO ROAD LA MESA, CA		

GEOTEST is pleased to provide you with analytical data for your above referenced project. Samples were collected on 03/31/96 and received intact and cool on 04/03/96. In accordance with the chain of custody, the samples were analyzed for the following analytical parameters:

ANALYTICAL TEST	PAGE
Total Lead	2-3
MBTE	4-5

In addition, the analysis for flashpoint was subcontracted to an outside laboratory with results issued on a separate laboratory report.

REVIEWED AND APPROVED: Richard Villafania, Laboratory Manager

REPORT DATE: 4-8-96

This report pertains only to the samples investigated and does not necessarily apply to other apparently identical or similar materials. All samples are analyzed on an as received (wet weight) basis. Any results listed as "ND" are not detected above the indicated limit of detection. All method numbers referenced are EPA method numbers except where otherwise noted. This report is submitted for the exclusive use of the client to whom it is addressed and is only valid in its entirety. ELAP certification #1225.

Mr. James Buckner
La Mesa R. V. Center
7601 Alvarado Road
La Mesa, California 92041

RE: Report of Soil and Groundwater Assessment Activities Performed Pursuant to the Request of San Diego County Site Assessment and Mitigation Division (SAM) for the La Mesa R.V. Center at 7601 Alvarado Road, La Mesa, California (Site)

Dear Mr. Buckner:

Environmental Business Solutions, Inc. (EBS) is pleased to present this letter report (Report) which summarizes the results of a soil and groundwater assessment recently performed at the Site. The work described in this report was conducted in general accordance Exhibit "2" to the Consulting Agreement (Contract) between EBS and La Mesa R.V., Inc. (Client). The Contract was fully executed on February 3, 1994.

SITE INFORMATION

SITE LOCATION/DESCRIPTION

The Site is located in a commercial/retail portion of the City of La Mesa (Figure 1). Topographically, the Site is located along a relatively level terrace. Steep slopes are located along the southern portion of the Site.

At the time of the assessment, the Site was observed to be used for the sale and repair of recreational vehicles. Site improvements include offices, showrooms, service bays, and associated driveways and parking areas. The northern portion of the Site is generally used for showrooms, vehicle parking, and sales offices. The southern portion of the Site is used for the repair and servicing of vehicles. Four underground storage tanks (USTs) were formerly located in the southern portion of the Site.

SITE IDENTIFICATION

Site Name:	La Mesa R. V. Center
Site Location:	7601 Alvarado Road, La Mesa, California 92041
SAM Case Number:	HO2651-001, T0427

BACKGROUND

The following background information is from previously reported data and reports prepared by others and by EBS. Four USTs of various capacities were removed from the Site. The USTs stored new oil, used oil, and gasoline. The USTs were located immediately to the west and south of a service bay building at the Site (Figure 2). The four USTs consisted of one 550-gallon used oil UST, two 550-gallon new oil USTs, and one 2,000-gallon regular gasoline UST.

UST REMOVAL OF FEBRUARY 1988

The USTs were removed in February 1988 by Alm Services (Alm). The "Abandoned Underground Tank Report" prepared for the Site by the San Diego County Hazardous Materials Management Division (HMMD) inspector indicated that each of the USTs had holes ranging from pinhole size to three-quarters of an inch in diameter. Groundwater impact was not noted during the USTs' removal, although groundwater was observed at a depth of approximately 7 feet below grade in the excavation.

Correspondence from Alm to the HMMD in March 1988 indicated that six soil samples from the UST excavation were collected. Detectable concentrations of both total petroleum hydrocarbons (TPH) and total recoverable petroleum hydrocarbons (TRPH) were found in each of the samples collected. In May 1988, Alm was reported to have collected an additional three samples from the new and used oil area of the UST excavation. Detectable concentrations of TRPH were found in each of the three samples.

ASSESSMENT/REMEDIATION ACTIVITIES PERFORMED BY HALLIBURTON NUS IN MARCH 1992

In March 1992, subsequent to the submission and approval of a workplan, we understand that Halliburton NUS (Halliburton) conducted an exploratory excavation program at the Site. Approximately 400 cubic yards of soil was excavated from the vicinity of the former USTs. Numerous confirmation samples were collected during the excavation program (Tables 1 and 2, and Figure 2, 3). Confirmation samples indicated that soil with concentrations of both TPH and TRPH remained in the vicinity of the excavation.

WORKPLAN PREPARED BY EBS IN NOVEMBER 1993

In November 1993, EBS submitted a workplan to Mr. Lars Skinner of the SAM for review and approval. The workplan described an assessment which included the following:

- Drilling and sampling of seven soil borings and converting three of the soil borings to groundwater monitoring wells (wells);
- Monitoring, purging, and sampling the three wells; and
- Performing laboratory analysis on the collected soil and groundwater samples.

The workplan was approved by Mr. Skinner on December 9, 1993.

SOIL AND GROUNDWATER ASSESSMENT PERFORMED BY EBS IN FEBRUARY 1994

During this investigation, 11 soil borings (B-1, B-1A, B-2, B-3, B-4, B-4A, B-5, B-6, MW-1, MW-2, and MW-3) were drilled, three of which were converted to groundwater monitoring wells MW-1, MW-2, and MW-3 (Figure 2). Work performed during this investigation included the collection and analysis of soil and groundwater samples. A report[1] summarizing the assessment activities was prepared and submitted to the SAM in March 1994. Pertinent portions of the March 1994 report are presented as follows.

Site Geology

Geologic materials encountered during the assessment included fill soils, topsoil, and alluvium. A brief description of these units is presented below:

Fill

Fill soil was encountered in all of the soil borings. These deposits generally consisted of dark gray brown gravelly silty sand (SM), black silty gravelly sand

[1] *Report of Soil and Groundwater Investigation Pursuant to the Requirements of* the San Diego County Site Assessment and Mitigation Division (SAM) for La Mesa R. V. Center, Inc., Located at 7601 Alvarado Road, La Mesa, California (Site).

(SW), and yellow brown clayey sand (SC). Fill soil was observed to extend to a maximum depth of approximately 8 feet below grade.

Topsoil

Topsoil was encountered in soil borings and wells B-1, B-3, B-4, B-5, MW-1, and MW-2. Topsoil generally consisted of a dark brown silty sand/sandy silt (SM/ML). Topsoil was encountered to a maximum depth of approximately 12 feet below grade. It should be noted that the topsoil layer was observed to contain significant amounts of naturally occurring organic matter such as plant roots and other plant matter in varying degrees of decomposition. The topsoil layer was observed to be underlain by alluvium.

Alluvium

Alluvium was encountered in all soil borings and wells. These deposits generally consisted of red brown gravel/silty gravel (GW/GM), yellow brown gravelly clayey sand (SC), and a distinctive and cemented yellow brown gravelly clayey sand (SC). The cemented layer was generally encountered at a depth of approximately 10 feet below grade. It should be noted that the cemented layer was encountered in all soil borings and wells, and appeared to be dipping towards the west. The cemented layer was observed to have a thickness of approximately 10 feet.

Site Hydrogeology

As interpreted from maps prepared by the Regional Water Quality Control Board, San Diego Region (RWQCB) in the Comprehensive Water Quality Control Plan Report, dated 1979, the Site is located within the Chollas Hydrologic Subarea of the San Diego Mesa Hydrologic Area of the Pueblo San Diego Hydrologic Unit. As stated in RWQCB Resolution 91-79, this basin does not have any existing or potential municipal and industrial beneficial uses of groundwater.

The shallow groundwater at the Site is generally encountered at a depth of approximately 4 to 9 feet below grade. The shallow groundwater is interpreted to flow generally towards the west at a gradient of approximately 0.08 (8 feet of elevation difference for every 100 feet of horizontal distance).

The shallow groundwater is interpreted to be a perched water table. The cemented layer encountered at the Site is interpreted to be a confining layer on which the shallow groundwater is perched.

Soil Sample Analytical Results

All soil samples collected during the February 1994 assessment were tested for TPH and TRPH in general accordance with modified EPA Method 8015 (California Department of Health Services modified) and EPA Method 418.1, respectively. Laboratory test results are presented in Figure 3 and Table 3. TPH concentrations were reported to range from not detected to 271 milligrams per kilogram (mg/kg). TRPH concentrations were reported to range from not detected to 9,140 mg/kg.

In addition, the soil sample with the highest reported TRPH concentration (sample B1-10) was also analyzed for the following:

- Benzene, toluene, ethylbenzene, and total xylenes (BTEX) in general accordance with EPA Method 8020;
- Halogenated volatile organic compounds (HVOCs) in general accordance with EPA Method 8010;
- Polychlorinated biphenyls (PCBs) in general accordance with EPA Method 8080; and
- Organic lead in general accordance with EPA Method 6010.

Soil sample B1-10 was reported to have no detectable concentrations of BTEX, HVOCs, and PCBs. Soil sample B1-10 was reported to have an organic lead concentration of 1.5 mg/kg.

Groundwater Sample Test Results

All groundwater samples collected during this assessment were tested for TPH and BTEX in general accordance with modified EPA Method 8015 and EPA Method 8020, respectively. Laboratory test results are presented in Table 4. All samples were reported to have no detectable concentrations of TPH or BTEX.

Conclusions

Conclusions presented in the March 1994 report included:

- The horizontal extent of gasoline- and diesel-bearing soil is generally limited to the immediate vicinity of the former UST excavation. Gasoline and diesel-bearing soil extends to a maximum depth of approximately 15 feet below grade.

- The horizontal extent of TRPH-bearing soil (soil with TRPH concentrations greater than 1,000 mg/kg) has generally been assessed. Based on available data, the western, southern, and eastern limits of TRPH-bearing soil have been inferred. The maximum extent of TRPH-bearing soil has been inferred to extend approximately 30 feet in the interpreted downgradient direction, with respect to shallow groundwater flow, from the former oil USTs.

- There were no reported concentrations of TRPH, TPH, or BTEX in the groundwater samples collected from wells at the Site.

SAM LETTER OF FEBRUARY 7, 1995

On February 7, 1995, Mr. Lars Skinner issued a letter regarding his review of the assessment report prepared by EBS. Mr. Skinner requested that the following be performed:

- Provide additional assessment of petroleum hydrocarbon-bearing soil in the following areas:

  — West/northwest of soil sample GES-11 and well MW-1;

  — West of soil sample OES-11;

  — Southwest of soil samples OES-12 and OES-13; and

  — Vertically below soil borings B-1 and B-4.

- Provide an estimate of the volume of petroleum hydrocarbon-bearing soil remaining on Site, and the mean and maximum TPH and TRPH concentration of this soil.

- Provide a contour map of TPH and TRPH concentrations remaining in the soil.

- Clarify the distribution of TPH and TRPH in soil.

- Provide an explanation for the distribution of TRPH-bearing soil.

- Perform additional groundwater monitoring and sampling.

WORKPLAN AND QUARTERLY GROUNDWATER MONITORING REPORT PREPARED BY EBS

On May 1, 1995, EBS submitted a workplan and quarterly groundwater monitoring report[2] to the SAM. Prior to preparing the May 1995 report, the three wells were monitored, purged, and sampled. Laboratory test results are presented in Table 4. Groundwater monitoring data are presented in Table 5. All samples were analyzed for the following:

- TRPH in general accordance with EPA Method 418.1;
- TPH in general accordance with modified EPA Method 8015;
- BTEX in general accordance with EPA Method 8020;
- Methyl tertiary butyl ether (MTBE) in general accordance with EPA Method 8020; and
- Polynuclear aromatic hydrocarbons (PNA) in general accordance with EPA Method 8310.

All groundwater samples were reported to have no detectable concentrations of TPH, BTEX, MTBE, and PNA. TRPH concentrations ranged from 410 (sample MW-1) to 1,000 (sample MW-2) micrograms per liter (µg/*l*).

The workplan presented a scope of work intended to assess the shallow soil at the Site. This scope of work included the drilling, sampling, and logging of four soil borings; monitoring, purging and sampling of three wells; and laboratory analysis of collected soil and groundwater samples.

SAM WORKPLAN APPROVAL LETTER OF JUNE 19, 1995

On June 19, 1995, Ms. Carol Spangenberg of the SAM issued a workplan approval letter, which is included in the Appendix.

OBJECTIVES

The objectives of this scope of services were to:

---

[2] Quarterly Groundwater Monitoring Report for the First Quarter of 1995 and Workplan Describing Additional Site Assessment Activities Pursuant to the Request of San Diego County Site Assessment and Mitigation Division (SAM) for the La Mesa R. V. Center at 7601 Alvarado Road, La Mesa, California (Site).

- Further assess the extent of petroleum hydrocarbon-bearing soil in the vicinity of the former gasoline and new and used oil USTs at the Site.

- Assess shallow groundwater at the Site for flow direction, gradient, and concentration of dissolved petroleum hydrocarbons.

SCOPE OF SERVICES

The scope of services that were used to meet the objectives are as follows:

PREPARATION OF A SITE HEALTH AND SAFETY PLAN; PREPARATION OF SOIL BORING PERMIT APPLICATIONS; SUBCONTRACTOR MANAGEMENT AND SCHEDULING; AND UTILITY SEARCH AND MARK OUT

Preparation of a Site Health and Safety Plan

A health and safety plan for work conducted at the Site and workers within the "exclusion zone" is required pursuant to the regulations in 29 Code of Federal Regulations (CFR) Part 1910.120. Therefore, a health and safety plan was prepared which outlined the potential chemical and physical hazards that may be encountered during drilling and sampling activities. The appropriate personal protective equipment and emergency response procedures for the site-specific chemical and physical hazards were detailed in this plan. EBS and contracted personnel involved with the proposed field work were required to sign this document in order to encourage proper health and safety practices.

Preparation of Soil Boring Permit Applications

Because the soil borings were anticipated to intersect groundwater, soil boring permit applications were prepared. The permit applications were signed by the appropriately licensed professional and submitted to the SAM with the appropriate fee on August 29, 1995.

The permits were approved on September 5, 1995. Copies of the approved permits are included in the Appendix.

Subcontractor Management and Scheduling

Prior to mobilizing for field work, EBS notified and scheduled the appropriate subcontractors including, but not limited to, the laboratories (Transglobal Environmental Geochemistry [TEG] and Geotest), the drilling company (West HazMat Drilling Corp. [West Hazmat]), Underground Service Alert (USA), and the private utility search company (Cable Pipe Locators [CPL]).

Utility Search and Mark Out

As required by state law, EBS contacted USA prior to performing field work. USA issued ticket numbers 196-623 and 210-149. USA contacted Cox Cable, Mt. Helix Water District, Pacific Bell, San Diego Gas and Electric, the cities of La Mesa and San Diego, and the San Diego County water utility districts. In addition, before the soil borings were drilled, EBS retained the services of CPL to attempt to locate subsurface utilities and improvements at the Site to minimize the likelihood of drilling into an underground utility.

DRILLING, LOGGING, AND SAMPLING FOUR SOIL BORINGS TO MAXIMUM DEPTHS OF APPROXIMATELY 21 FEET BELOW GRADE; MONITORING, PURGING, AND SAMPLING THREE WELLS; AND LABORATORY ANALYSIS OF COLLECTED SOIL AND GROUNDWATER SAMPLES

Drilling, Sampling, and Logging Four Soil Borings to Maximum Depths of Approximately 21 Feet Below Grade

Drilling Procedures

In general accordance with the approved workplan, four soil borings (soil borings B-7, B-8, B-9[3], and B-10) were drilled, logged, and sampled to depths of approximately 21 feet below grade. Soil boring locations are shown in Figure 2. The soil borings were drilled in the vicinity of the western and southwestern perimeter of the former excavation at the Site. The proposed locations of the borings were intended to provide additional information about the possible migration of petroleum hydrocarbons west, northeast and southwest of the former USTs at the Site.

The soil borings were drilled by West Hazmat using a CME-75 drill rig equipped with an Odex casing advance drilling system. This system used a down-hole air percussion hammer to advance the boring. Casing is advanced as the borehole is deepened. This type of rig was used due to the difficult drilling conditions encountered previously at the Site (colluvium and alluvium with abundant gravel and cobble with caving soil).

---

[3] Attempts were made to collect soil samples from soil boring B-9 at depths of approximately 15 and 20 feet below grade. The sample collected at a depth of approximately 15 feet below grade was judged to be possibly not representative based on the blow counts and the visual condition of the sample. Soil boring B-9A was drilled in the vicinity of soil boring B-9 in an attempt to collect a sample from a depth of approximately 15 to 16 feet below grade.

Soil cuttings were placed in appropriate 55-gallon drums and left on the Site pending disposal. Upon completion of drilling and sampling the soil borings, the boreholes were backfilled with a bentonite slurry from the bottom of the borehole to approximately 1 foot below grade. The upper foot was backfilled with concrete.

Sampling Procedures

A California-registered geologist was on the Site to observe the drilling activity and describe collected soil samples in general accordance with the Unified Soil Classification System. Soil boring logs are presented in the Appendix. Soil samples were generally collected at 5-foot intervals, at interpreted significant geologic contacts, and at the field interpreted water table.

During the drilling of the soil borings, soil samples were collected with a split-spoon type or similar sampler. In order to attempt to maximize the quality of the soil sample, the sampler was driven as far as possible from the bottom of the borehole.[4] The materials encountered during drilling limited the depth that the sampler could be driven. The sampler was "set" by driving the sampler an initial 6 inches[5] prior to driving the sampler to collect the sample. The initial 6 inches of sample collected in the sampler was discarded.

Soil samples were either collected in brass tubes or transferred to laboratory-supplied jars. When tubes were used, the tubes were covered with Teflon™ sheeting, tightly closed with end caps, and labeled. When laboratory-supplied jars were used, the jars were capped and labeled. All samples were either placed in an ice-filled chest or delivered immediately to an on-site mobile laboratory. Chain-of-custody procedures were implemented for sample tracking.

Decontamination Procedures

As required by San Diego County guidelines, a steam cleaner was on-site to steam-clean the augers, casing, and percussion hammer and connecting rods between each soil boring. The soil sampler was cleaned between sampling events with a four-bucket wash: a Alconox-water solution, followed by two tap water rinses, and a final spray rinse with distilled water. Steam cleaner and sampler cleaning water were placed in appropriate drums, labeled, and left on the Site.

---

[4] This method was also followed in the previous soil sampling performed by EBS.

[5] The number of blow counts recorded in the soil boring logs reflects the blows after the initial drive to "set" the sampler.

Monitoring, Purging, and Sampling Three Wells

On November 27, 1995, three groundwater monitoring wells (MW-1, MW-2, and MW-3) were monitored, purged, and sampled. The wells were monitored with an electronic interface probe to measure depth to water and depth to product (if encountered). Monitoring data are shown in Table 5.

After the wells were monitored they were purged and sampled in general accordance with SAM guidelines. The wells were purged with a bailer. Purge water was placed in appropriate drums and left on-site. Approximately 1 borehole volume of water was purged from each well. After approximately 2 hours after purging, the wells did not recharge to at least 80 percent of the pre-purging water table. The wells were judged to be slow recharging and were sampled. Well purging logs are included in the Appendix.

Groundwater was sampled with a disposable bailer. The groundwater samples were decanted into laboratory-supplied vials, capped, labeled, and placed in an ice-filled chest or immediately delivered to an on-site mobile laboratory. Chain-of-custody procedures were implemented for sample tracking.

Laboratory Analysis of Collected Soil and Groundwater Samples

Soil Samples

All soil samples were delivered to an on-site mobile laboratory supplied by TEG and analyzed for the following:

- TPH[6] in general accordance with modified EPA Method 8015;
- TRPH in general accordance with EPA Method 418.1; and
- BTEX in general accordance with EPA Method 8020.[7]

In addition, the sample with the highest reported TRPH concentration (sample B9-10) was submitted to Geotest and analyzed for California Code of Regulations (CCR) Metals in general accordance with EPA Method 6010. This analysis was performed as required for soil disposal approval.

---

[6] "Full scan" includes gasoline and diesel ranges.

[7] BTEX analysis was performed on the sample, per soil boring, with the highest reported TPH concentration, or if there were no reported TPH concentrations, the sample with the highest reported TRPH concentration.

TPH, TRPH, and BTEX results are shown in Figure 4, and Tables 6 and 7. Laboratory test reports are provided in the Appendix.

Groundwater Samples

Groundwater samples were delivered to an on-site mobile laboratory supplied by TEG and analyzed for the following:

- TPH[8] in general accordance with modified EPA Method 8015;
- BTEX in general accordance with EPA Method 8020; and
- TRPH in general accordance with EPA Method 418.1.

In addition, a duplicate set of groundwater samples was submitted to Geotest and analyzed for the following:

- HVOCs in general accordance with EPA Method 8010/8020; and
- MTBE in general accordance with EPA Method 8020.

Groundwater laboratory test results (with the exceptions of HVOCs and PNAs) are shown in Table 4. Laboratory test reports are attached.

FINDINGS

SITE GEOLOGY AND HYDROGEOLOGY

Geologic materials encountered during the most recent drilling activity were similar to those from previous assessment activities, with the exception that fill soil was not interpreted to have been encountered. A brief description of two units encountered during this phase of work is presented below:

Topsoil

Topsoil generally consisted of a dark brown silty sand/sandy silt (SM/ML). Topsoil was encountered to a maximum depth of approximately 12 feet below grade. The topsoil was observed to contain significant amounts of naturally occurring organic matter and be underlain by alluvium.

---

[8] "Full scan" includes gasoline and diesel ranges.

Alluvium

Alluvium generally consisted of red brown gravel/silty gravel (GW/GM), yellow brown gravelly clayey sand (SC), and a distinctive and cemented yellow brown gravelly clayey sand (SC). The top of the cemented layer was generally encountered at a depth of approximately 10 feet below grade. It should be noted that the cemented layer appeared to dip to the west.

Hydrogeology

The shallow groundwater at the Site was generally encountered at a depth of approximately 4 to 9 feet below grade (Table 5). The shallow groundwater is interpreted to generally flow towards the west (Figure 5) at a gradient of approximately 0.08 (8 feet of elevation difference for every 100 feet of horizontal distance). The shallow groundwater at the Site is interpreted to be a perched along the top of the cemented layer.

SOIL SAMPLE ANALYTICAL RESULTS

Total Petroleum Hydrocarbons

Fifteen soil samples were collected and analyzed for TPH. Only one soil sample (sample B9-10) was reported to have detectable TPH concentrations. As shown in Table 6, sample B9-10 was reported to have TPH as gasoline and diesel concentrations of 25 and 63 mg/kg, respectively.

Total Recoverable Petroleum Hydrocarbons

Fifteen soil samples were tested for TRPH. As shown in Table 6, these soil samples were reported to have TRPH concentrations ranging from not detected to 4,550 mg/kg (sample B9-10). In general, the soil samples collected near the top of the cemented layer (samples B7-10, B8-10, B9-10, and B10-10) were reported to have the highest TRPH concentration per soil boring.

Benzene, Toluene, Ethylbenzene, and Xylenes

All soil samples were reported to have no detectable concentrations of benzene and ethylbenzene. With the exception of soil sample B9-10, all soil samples were reported to have no detectable concentrations of toluene and xylenes. As shown in Table 7, soil sample B8-12 was reported to have toluene and xylene concentrations of 0.110 and 0.066 mg/kg, respectively.

GROUNDWATER SAMPLES

Total Petroleum Hydrocarbons

All groundwater samples were reported to have no detectable TPH concentrations.

Total Recoverable Petroleum Hydrocarbons

All groundwater samples were reported to have no detectable TRPH concentrations.

Benzene, Toluene, Ethylbenzene, and Xylenes

All three groundwater samples were reported to have no detectable benzene concentrations. Only one sample (the sample collected from well MW-2) was reported to have detectable concentrations of toluene (32.9 µg/l), ethlybenzene (2.0 µg/l), and xylenes (12.5 µg/l).

Methyl Tertiary Butyl Ether

With the exception of the groundwater sample collected from well MW-2 (sample MW-2), all groundwater samples were reported to have no detectable concentrations of MTBE. As shown in Table 4, groundwater sample MW-2 was reported to have a MTBE concentration of 0.7 µg/l.

Halogenated Volatile Organic Compounds

All groundwater samples were reported to have no detectable concentrations of HVOCs.

DISCUSSION

DESCRIPTION OF RELEASE

Substance Released

As reported by Halliburton,[9] gasoline, diesel fuel, and new and used oil were released from the former USTs. Based on review of laboratory test results of soil samples collected by EBS, it is our professional opinion that the vast majority of petroleum hydrocarbons released to the shallow subsurface are typical of oil. The rationale for this opinion is as follows:

---

[9] Interim Report on Soil Assessment and Mitigation for La Mesa RV Center, 7601 Alvarado Road, San Diego [sic], California report dated August 1992.

- The interpreted extent of gasoline- and diesel-bearing soil is limited to the immediate vicinity of the former USTs; TRPH-bearing soil appears to encompass a larger area.[10]

- An analysis of the reported TPH and TRPH concentrations of soil samples collected by EBS was performed in general accordance with the request and procedure detailed by Mr. Lars Skinner in his February 7, 1995, letter. The procedure used was to calculate the percentage of TRPH relative to TPH[11] in order to evaluate the amount of gasoline and diesel in relation to oil.

  The basis for this analysis is that the TRPH analysis (EPA Method 418.1) and TPH analysis (modified EPA Method 8015) have a slight overlap. The TRPH analysis quantifies petroleum hydrocarbons with carbon chain lengths of C_5 to C_{40}. This range includes gasoline, diesel, and waste oil. The TPH analysis performed by TEG quantified petroleum hydrocarbons with carbon chain lengths of C_5 to C_{24}. This range includes gasoline and diesel fuel, but not oil.

  The concentration of petroleum hydrocarbons with carbon lengths of C_{25} to C_{40} may be estimated using the difference between the reported TRPH and TPH concentrations. This carbon chain range includes oils, but not gasoline or diesel.

  The results of this analysis, as shown in Figure 6 and Table 8, indicate that the vast majority of reported petroleum hydrocarbons have carbon chain lengths of C_{25} to C_{40}. This suggests that the released petroleum hydrocarbons are predominantly oil.

- Selected soil samples were analyzed for BTEX. BTEX is a commonly found additive to gasoline and its presence is frequently an indicator of gasoline. Only relatively minor concentrations of BTEX compounds were reported. This suggests that gasoline was not a significant component of the released petroleum hydrocarbons.

- Groundwater samples were analyzed for PNAs. This analysis was performed per the request of the SAM. It is our understanding that

---

[10] The interpreted extent of petroleum hydrocarbon-bearing soil is discussed in a following section.

[11] For this analysis TPH is the sum of the reported concentration of TPH as gasoline and as diesel. A value of zero was assigned to samples with "no detectable" concentrations.

naphthalene is a highly soluble component of diesel fuel and frequently used as an indicator of diesel fuel. The laboratory reported no detectable concentrations of PNAs. This suggests that diesel fuel was not a significant component of the released petroleum hydrocarbons.

- Groundwater samples have been analyzed for MTBE and for BTEX. These components are very soluble components of gasoline,[12] and their presence is frequently an indicator of gasoline. Only minor quantities of MTBE, toluene, ethlybenzene, and xylenes have been reported for the collected groundwater samples. This suggests that gasoline was not a significant component of the released petroleum hydrocarbons.

Mechanisms of Migration of Released Petroleum Hydrocarbons

Based on review of the laboratory test results and our understanding of the Site geology and hydrogeology, it appears that the released petroleum hydrocarbons migrated in two pathways as described below:

- Initially the petroleum hydrocarbons migrated vertically from the point of release[13] within the vadose zone.

- After the petroleum hydrocarbons migrated and intersected the cemented layer, the petroleum hydrocarbons generally migrated towards the west, either along the perched water table or along the top of the previously described cemented layer.

INTERPRETED EXTENT OF PETROLEUM HYDROCARBON-BEARING SOIL[14]

Interpreted Horizontal Extent of Petroleum Hydrocarbon-Bearing Soil

As shown in Figures 7 and 8, it is our interpretation that the horizontal extent of petroleum hydrocarbon-bearing soil has been assessed. The rationale for this interpretation is as follows:

---

[12] MTBE is a gasoline additive.

[13] The exact location and mechanisms of the release(s) are unknown. However, it is assumed that the release(s) occurred from the UST system. The former USTs are assumed to be considered, for this discussion, the point of release.

[14] For discussion purposes only, petroleum hydrocarbon-bearing soil is defined as soil with TRPH concentrations in excess of 100 mg/kg.

- The highest reported TRPH concentrations were from soil samples collected at depths of approximately 8 to 10 feet below grade. This is consistent with the migration pathway along the perched water table as discussed above. Therefore, soil samples collected from depths of approximately 8 to 10 feet below grade have been used to assess the horizontal extent of petroleum hydrocarbon-bearing soil. Soil samples used to assess the horizontal extent of petroleum hydrocarbon-bearing soil are as follows:

  — The northern extent of petroleum hydrocarbon-bearing soil is assessed by using analysis of soil samples GES-2, GES-3, GES-5 and B7-8.

  — The eastern extent of petroleum hydrocarbon-bearing soil is assessed by using analysis of soil samples GES-5, MW3-8, and MW3-10.

  — The southern extent of petroleum hydrocarbon-bearing soil is assessed by using analysis of soil sample B5-10.

  — The western extent of petroleum hydrocarbon-bearing soil is assessed by using analysis of soil samples B6-8, B7-10, and B10-10.

Interpreted Vertical Extent of Petroleum Hydrocarbon-Bearing Soil

As in the March 1994 report,[15] it is our opinion that petroleum hydrocarbon-bearing soil extends to a maximum depth of approximately 15 feet below grade. The rationale for this opinion is as follows:

- The cemented layer encountered at the Site has acted as a confining layer for the perched groundwater. This layer would minimize the vertical downward movement not only of water, but also of petroleum hydrocarbons.

- Laboratory test results indicate that there is a marked decrease in TRPH concentrations between soil samples collected from the same soil boring

[15] Report of Soil and Groundwater Investigation Pursuant to the Requirements of the San Diego County Site Assessment and Mitigation Division (SAM) for La Mesa R. V. Center, Inc., Located at 7601 Alvarado Road, La Mesa, California (Site)

at depths of approximately 10 feet below grade and soil samples collected at depths of approximately 15 feet below grade. For example[16]:

- Soil samples B3-10' and B3-15' with TRPH concentrations of 904 and 17 mg/kg, respectively.
- Soil samples B7-10 and B7-16 with TRPH concentrations of 108 and <10 mg/kg, respectively.
- Soil samples B9-10' and B9-15' with TRPH concentrations of 4,550 and 79 mg/kg, respectively.
- Soil samples B10-10' and B3-15' with TRPH concentrations of 117 and <10 mg/kg, respectively.

- All soil samples collected from a depth of approximately 20 feet below grade were reported to have TRPH concentrations of less than 60 mg/kg as shown below:
  - Soil sample B4A-20 with a reported TRPH concentration of 27 mg/kg.
  - Soil sample B10-20 with a reported TRPH concentration of 19 mg/kg.
  - Soil sample MW1-20 with a reported TRPH concentration of 59 mg/kg.

Distribution of Petroleum Hydrocarbon-Bearing Soil

As previously stated, initially the released petroleum hydrocarbons migrated vertically from the point of release, and then migrated horizontally along the cemented layer. The soil excavation activity performed by Halliburton removed the majority of the petroleum hydrocarbon-bearing soil in the immediate vicinity of the former USTs. The remaining petroleum hydrocarbon-bearing soil is located in an approximately 7-foot thick zone, extending from approximately 7 to 14 feet below grade, along the top of the cemented layer.

As shown in Figure 8, the concentration distribution of petroleum hydrocarbon-bearing soil is as expected given the Site geology and hydrogeology and the nature of the release. The highest concentrations are generally in the immediate

[16] The examples include data only from soil borings from which soil samples were collected from depths of approximately 10 and 15 feet below grade.

vicinity of the former USTs. The concentrations of petroleum hydrocarbons generally decrease with distance from the former USTs.

VOLUME OF PETROLEUM HYDROCARBON-BEARING SOIL

Based on the available data, the volume of petroleum hydrocarbon-bearing soil remaining in place was estimated to be 1,212 cubic yards. The assumptions used in making this estimate are as follows:

- The areal extent of petroleum hydrocarbon-bearing soil is assumed to be rectangular with dimensions of approximately 85 feet in length and 55 feet in width.

- Hydrocarbon-bearing soil is limited to a layer encountered between approximately 7 and 14 feet below grade.

Based on these assumptions, the volume of petroleum hydrocarbon-bearing soil is estimated as follows:

- 85 ft. x 55 ft. x 7 ft. = 32,725 cubic feet

- 32,725 cubic feet x (1 cubic yard/27 cubic feet) = 1,212 cubic yards

ASSESSMENT OF GROUNDWATER QUALITY AT THE SITE

It is our opinion that groundwater at the Site has not been impacted[17] by release(s) from the former USTs. In addition, because the vast majority of the petroleum hydrocarbons present in the shallow soil appears to be similar to oil, and the solubility of oil in water is extremely low, it is our opinion that there is a low likelihood that the petroleum hydrocarbon-bearing soil remaining in place will result in impact to the shallow groundwater.

There have been three groundwater monitoring events at this Site. As shown in Table 4, at no time has any concentration of BTEX been reported to exceed maximum contaminant levels[18] (MCLs) for drinking water. It should be stressed that all of the groundwater samples were reported to have no detectable benzene concentrations (Table 4).

---

[17] Impact to groundwater for the purposes of this report is defined as concentrations of petroleum hydrocarbons that exceed MCLs, as defined in CCR Title 22, or the presence of free product or groundwater.

[18] MCL as defined in California Code of Regulations, Title 23.

MTBE was only reported to be detectable in one sample collected. Groundwater sample MW-2, collected on November 28, 1995, was reported to have an MTBE concentration of 0.7 µg/l. It should be noted that the detection level for MTBE was 0.6 µg/l. It should be noted the State action level for MTBE is 35 µg/l

In addition to TPH, TRPH, BTEX, and MTBE, groundwater samples collected during this and previous groundwater sampling events have been analyzed for PNAs and HVOCs. There have been no reported detectable concentrations of PNAs or HVOCs.

Detectable concentrations of TRPH were reported in collected groundwater samples. However, it should be noted that there are no known action levels for dissolved concentrations of TRPH in groundwater.

There are various means to estimate the potential for impact to groundwater from the release(s) from the former USTs. These methods may include modeling the solubility and transportation of petroleum hydrocarbons to groundwater, or using laboratory test methods to mimic the potential for leaching. All of these methods are indirect methods and as such are limited by the assumptions incorporated into the methodology.

At this Site we have a direct method of estimating the potential impact to groundwater. The USTs were removed almost eight years ago, and at that time evidence of a release from the USTs was noted. It is reasonable to assume that the release(s) had occurred prior to the time of the UST removal. However, at a minimum, petroleum hydrocarbon-bearing soil has been in contact with groundwater for at least eight years, and to date, there has been no evidence to indicate that groundwater has been impacted. This is strong direct evidence to suggest that the potential for future impact to groundwater is very low.

POTENTIAL RISK OF THE PRESENCE OF PETROLEUM HYDROCARBON-BEARING SOIL AT THE SITE

Potential Risk to Human Health[19]

It is our judgment that there is a very low risk to human health due to the presence of petroleum hydrocarbon-bearing soil at the Site. Our reasons for this judgment are as follows:

- The remaining petroleum hydrocarbon-bearing soil is located at least 7 feet below grade. This 7-foot separation from the surface to the zone of petroleum hydrocarbon-bearing soil effectively prevents human contact

[19] Potential risks to human health are based on the current Site land use.

with the soil, and therefore the potential for ingestion or for dermal exposure.

- The vast majority of released petroleum hydrocarbons are typical of oil. Laboratory test reports indicate that there is a very low concentration of BTEX in the soil. Therefore, the potential for the migration of vapors with BTEX concentrations which may pose a threat to human health is very low to nonexistent.

Also no PNAs

Potential Risk to Groundwater

As previously stated, due to the nature of the petroleum hydrocarbons present in soil, there is a very low potential risk to the shallow groundwater.

CONCLUSIONS

Based on the data reviewed and obtained as part of this assessment, current regulatory guidelines, and our experience, in our professional judgement we have drawn the following conclusions:

- The vast majority of the petroleum hydrocarbons released from the former USTs are typical of oil.
- The interpreted horizontal and vertical extent of petroleum hydrocarbon-bearing soil has generally been assessed.
- Approximately 1,200 cubic yards of petroleum hydrocarbon-bearing soil is present in the immediate vicinity of the former USTs.
- There is a low likelihood that the shallow groundwater at the Site has been impacted from a release(s) from the former USTs.

RECOMMENDATIONS

- Because the remaining petroleum hydrocarbon-bearing soil is judged not to pose a risk to public health nor present a potential impact to groundwater, the SAM should consider issuing a "no further action" letter (site closure).
- After receiving site closure, the Client should consider properly destroying the existing three groundwater monitoring wells.

RE: Proposed Groundwater Monitoring Well Destruction Activities Performed Pursuant to the Approval of the San Diego County Site Assessment and Mitigation Division (SAM) at La Mesa R.V. Center, 7601 Alvarado Road, La Mesa, California

Dear Ms. Spangenberg:

Environmental Business Solutions, Inc. (EBS) is pleased to present this letter (Letter) regarding the proposed groundwater monitoring well destruction activities. Please find enclosed a copy of the well destruction permit that was submitted on July 12, 1996. We understand that Ms. Helen Dennin has approved the well destruction permit as of our conversation with her on July 15, 1996. The well destruction activities are scheduled for July 30, 1996. The wells will be destroyed in general accordance with SAM guidelines and the conditions of the approved well destruction permit. Cuttings and well destruction materials generated during the well destruction activities will be properly disposed of.

Lemon St 96161

In addition, on July 10, 1996, five soil drums were removed from the site and transported to Soil Wash Technologies, Inc. for treatment and disposal. A copy of the waste manifest is attached.

It has been a pleasure working with you on this project. If you have any questions or concerns, please do not hesitate to contact our office at (619) 571-5500.

Respectfully,

Re: La Mesa RV Center, 7601 Alvarado Road, La Mesa, California

see "Technical Reports" Section for this report

Dear Ms. Spangenberg:

Enclosed is the May 2, 1996 *Report of Groundwater Assessment Activities For the Property at 7601 Alvarado Road, La Mesa, California*, prepared by Environmental Business Solutions, Inc. On the basis of this report, previous environmental investigations of soil and groundwater and removal of approximately 400 cubic yards of impacted soils, we are requesting that a "no further action" letter be issued for the subject site.

The following is a summary of soil and groundwater investigations conducted at the subject facility by various environmental consulting firms. Our request for a "no further action" letter is based on the information provided in these reports.

ENVIRONMENTAL SUMMARY

La Mesa RV Center engages in the sale and maintenance of recreational vehicles. Several office, sales, storage, and service/maintenance structures are located on the subject site and most of the surface has been paved with asphaltic concrete with a few areas of vegetation. Four underground storage tanks (USTs) were located in the southern portion of the subject site and were removed in February 1988. One 550-gallon UST stored used oil, two 550-gallon USTs stored new oil, and one 2,000-gallon gasoline/diesel UST. According to the San Diego County Hazardous Materials Management Division (HMMD) inspector, each of the USTs had holes ranging from pinhole size to three-quarters of an inch in diameter. The inspector did not note any adverse impacts to groundwater during the USTs' removal, although perched groundwater was observed at a depth of approximately 7 feet below grade in the excavation.

Six soil samples from the UST excavation were collected and analyzed. Detectable concentrations of both total petroleum hydrocarbons (TPH) and total recoverable petroleum hydrocarbons (TRPH) were found in each of the samples collected. Three additional soil samples were collected from the new and used oil area of the UST excavation in May 1988 and detectable concentrations of TRPH were found in each of the three samples analyzed.

A removal program was conducted at the subject site in March 1992 in which approximately 400 cubic yards of soil was excavated in the vicinity of the former USTs. Confirmation soil samples collected and analyzed after the excavation project indicated that concentrations of both TPH and TRPH remained in the vicinity of the excavation.

Eleven soil borings were drilled at the subject site in February 1994, with three of these borings converted to groundwater monitoring wells. Shallow groundwater beneath the subject site was encountered at a depth of approximately 4 to 9 feet below grade and appeared to flow generally toward the west at a gradient of about 0.08. Thirty soil samples were collected and tested for TPH as gasoline (TPH-gas) and diesel (TPH-diesel). Soil samples with reported concentrations of TPH were only identified in three soil borings. TPH-gas concentrations ranged from 14 to 174 mg/kg and TPH-diesel concentrations ranged from 14 to 271 mg/kg. Thirty soil samples were analyzed for TRPH and ten of the eleven soil borings showed detectable concentrations ranging from 11 to 9,140 mg/kg. The sample with the highest TPH-gas and TRPH concentrations was analyzed for benzene, toluene, ethylbenzene, and total xylenes (BTEX) and aromatic hydrocarbons. No concentrations of BTEX or aromatic hydrocarbons were found in the sample. Organic lead was identified at a concentration of 1.5 mg/kg in one soil sample.

Samples from the three groundwater monitoring wells were analyzed. There were no concentrations of TPH-gas, TPH-diesel, or BTEX identified in any of the samples. One groundwater sample showed a concentration of 0.002 mg/l total lead.

Additional assessment activities were conducted at the subject site in November 1995. Three soil borings were drilled and a round of monitoring, purging and sampling of the three wells was conducted. TRPH, TPH-gas, TPH-diesel and benzene concentrations were not found in any of the groundwater well samples analyzed. Concentrations of toluene (32.9 ug/l), ethylbenzene (2.0 ug/l), total xylenes (12.5 ug/l), and MTBE (0.7 ug/l), none of which exceed MCL's or recommended action levels, were identified in one well.

In March 1996, the three groundwater monitoring wells were monitored, purged, and sampled. Laboratory analytical results indicate that no TRPH, TPH-gas, TPH-diesel, BTEX, or MTBE were detected in groundwater samples collected from the three monitoring wells.

CONCLUSION

On the basis of soil sample analytical results, the horizontal extent of petroleum hydrocarbon impacted soils is limited to the immediate vicinity of the former UST excavation and to a maximum vertical depth of approximately 15 feet below grade. Groundwater has not been impacted by releases from the former underground storage tanks (USTs). Four groundwater monitoring events have been conducted at the subject site over a period of two years. At no time has any concentration of BTEX been reported to exceed maximum contaminant levels (MCLs) for drinking water nor have any detectable levels of benzene ever been reported. The subject site has been adequately characterized and does not pose a threat to human health or the environment. Furthermore, based on these facts, the La Mesa RV site meets the April 1, 1996 Regional Water Quality Control Board *Interim Guidance on Required Cleanup at Low-Risk Fuel Contaminated Sites* criteria for a "low risk soils only case." As a result, we are requesting that a "no further action" letter be issued for the La Mesa RV site at your earliest convenience.

Very truly yours,

Christine Baumgardt for

RE: Report of Groundwater Assessment Activities Performed Pursuant to the Request of San Diego County Site Assessment and Mitigation Division (SAM) for the La Mesa R.V. Center at 7601 Alvarado Road, La Mesa, California (Site)

Dear Ms Spangenberg:

Environmental Business Solutions, Inc. (EBS) is pleased to present this letter report (Report) which summarizes the results of a groundwater assessment recently performed at the Site. The work described in this report was conducted in general accordance Exhibit "2" to the Consulting Agreement (Contract) between EBS and La Mesa R.V., Inc. (Client). The Contract was fully executed on February 3, 1994.

SITE INFORMATION

SITE LOCATION/DESCRIPTION

The Site is located in a commercial/retail portion of the City of La Mesa (Figure 1). Topographically, the Site is located along a relatively level terrace. Steep slopes are located along the southern portion of the Site.

The Site is used as a recreational vehicle sales and service facility. Site improvements include offices, showrooms, service bays, and associated driveways and parking areas. The northern portion of the Site is generally used for showrooms, vehicle parking, and sales offices. The southern portion of the Site is used for the repair and servicing of vehicles. Four underground storage tanks (USTs) were formerly located in the southern portion of the Site (Figure 2).

SITE IDENTIFICATION

Site Name:	La Mesa R. V. Center
Site Location:	7601 Alvarado Road, La Mesa, California 92041
SAM Case Number:	HO2651-001, T0427

BACKGROUND

The following background information is from previously reported data and reports prepared by others and by EBS. Four USTs of various capacities were removed from the Site. The USTs stored new oil, used oil, and gasoline. The USTs were located immediately to the west and south of a service bay building at the Site (Figure 2). The four USTs consisted of one 550-gallon used oil UST, two 550-gallon new oil USTs, and one 2,000-gallon regular gasoline UST.

UST REMOVAL OF FEBRUARY 1988

The USTs were removed in February 1988 by Alm Services (Alm). The "Abandoned Underground Tank Report" prepared for the Site by the San Diego County Hazardous Materials Management Division (HMMD) inspector indicated that each of the USTs had holes ranging from pinhole size to three-quarters of an inch in diameter. Groundwater impact was not noted during the USTs' removal, although groundwater was observed at a depth of approximately 7 feet below grade in the excavation.

Correspondence from Alm to the HMMD in March 1988 indicated that six soil samples from the UST excavation were collected. Detectable concentrations of both total petroleum hydrocarbons (TPH) and total recoverable petroleum hydrocarbons (TRPH) were found in each of the samples collected. In May 1988, Alm was reported to have collected an additional three samples from the new and used oil area of the UST excavation. Detectable concentrations of TRPH were found in each of the three samples.

ASSESSMENT/REMEDIATION ACTIVITIES PERFORMED BY HALLIBURTON NUS IN MARCH 1992

In March 1992, subsequent to the submission and approval of a workplan, we understand that Halliburton NUS (Halliburton) conducted an exploratory excavation program at the Site. Approximately 400 cubic yards of soil was excavated from the vicinity of the former USTs. Numerous confirmation samples were collected during the excavation program. Confirmation samples indicated that soil with concentrations of both TPH and TRPH remained in the vicinity of the excavation.

WORKPLAN PREPARED BY EBS IN NOVEMBER 1993

In November 1993, EBS submitted a workplan to Mr. Lars Skinner of the SAM for review and approval. The workplan described an assessment which included the following:

- Drilling and sampling of seven soil borings and converting three of the soil borings to groundwater monitoring wells (wells);
- Monitoring, purging, and sampling the three wells; and
- Performing laboratory analysis on the collected soil and groundwater samples.

The workplan was approved by Mr. Skinner on December 9, 1993.

SOIL AND GROUNDWATER ASSESSMENT PERFORMED BY EBS IN FEBRUARY 1994

In February 1994, 11 soil borings (B-1, B-1A, B-2, B-3, B-4, B-4A, B-5, B-6, MW-1, MW-2, and MW-3) were drilled, three of which were converted to groundwater monitoring wells MW-1, MW-2, and MW-3. Work performed during this investigation included the collection and analysis of soil and groundwater samples. A report[1] summarizing the assessment activities was prepared and submitted to the SAM in March 1994.

Site Hydrogeology

The Site is interpreted to be located in the Mission San Diego Hydrologic Subarea of the Lower San Diego Hydrologic Area of the San Diego Hydrologic Unit. According to the Regional Water Quality Control Board (RWQCB), groundwater within this hydrologic subarea has existing or potential beneficial uses for municipal, agricultural, and/or industrial supplies.

The hydrologic areas and water use designations were presented in the RWQCB's "Comprehensive Water Quality Plan" (Plan) originally adopted in 1974. Recent amendments to the Plan, adopted in September 1994 by the RWQCB, were reviewed and used in the preparation of this Report.

---

[1] Report of Soil and Groundwater Investigation Pursuant to the Requirements of the San Diego County Site Assessment and Mitigation Division (SAM) for La Mesa R. V. Center, Inc., Located at 7601 Alvarado Road, La Mesa, California (Site).

As previously reported, the shallow groundwater at the Site is generally encountered at a depth of approximately 4 to 9 feet below grade. The shallow groundwater is interpreted to flow generally towards the west at a gradient of approximately 0.08 (8 feet of elevation difference for every 100 feet of horizontal distance).

SAM LETTER OF FEBRUARY 7, 1995

On February 7, 1995, Mr. Lars Skinner issued a letter regarding his review of the assessment report prepared by EBS, and subsequently requested that additional assessment of petroleum hydrocarbon-bearing soil and groundwater be performed.

WORKPLAN AND QUARTERLY GROUNDWATER MONITORING REPORT PREPARED BY EBS

On May 1, 1995, EBS submitted a workplan and quarterly groundwater monitoring report[2] to the SAM. Prior to preparing the May 1995 report, the three wells were monitored, purged, and sampled.

The workplan presented a scope of work intended to assess the shallow soil at the Site. This scope of work included the drilling, sampling, and logging of four additional soil borings; monitoring, purging and sampling of three wells; and laboratory analysis of collected soil and groundwater samples.

SAM WORKPLAN APPROVAL LETTER OF JUNE 19, 1995

On June 19, 1995, Ms. Carol Spangenberg of the SAM issued a workplan approval letter.

REPORT PREPARED BY EBS

In November, 1995, EBS conducted additional assessment activities at the Site which included drilling three soil borings and an additional round of monitoring, purging and sampling the three wells. Work performed during this investigation included

---

[2] Quarterly Groundwater Monitoring Report for the First Quarter of 1995 and Workplan Describing Additional Site Assessment Activities Pursuant to the Request of San Diego County Site Assessment and Mitigation Division (SAM) for the La Mesa R. V. Center at 7601 Alvarado Road, La Mesa, California (Site).

the collection and analysis of soil and groundwater samples. A report[3] summarizing the assessment activities was prepared and submitted to the SAM in March 1996.

OBJECTIVES

The objectives of this scope of services were to:

- Assess shallow groundwater at the Site for flow direction, gradient, and concentration of dissolved petroleum hydrocarbons.

SCOPE OF SERVICES

The scope of services that were used to meet the objectives are as follows:

AMENDMENTS TO THE PREVIOUSLY PREPARED SITE HEALTH AND SAFETY PLAN, SUBCONTRACTOR SCHEDULING, AND PROJECT MANAGEMENT

Preparation of a Site Health and Safety Plan

A health and safety plan for work conducted at the Site and workers within the "exclusion zone" is required pursuant to the regulations in 29 Code of Federal Regulations (CFR) Part 1910.120. Therefore, the previously prepared health and safety plan, which outlined the potential chemical and physical hazards that may be encountered during sampling activities, was amended for the current work scope. The appropriate personal protective equipment and emergency response procedures for the site-specific chemical and physical hazards were detailed in this plan. EBS personnel involved with the proposed field work were required to sign this document in order to encourage proper health and safety practices.

Subcontractor Management and Scheduling

Prior to mobilizing for field work, EBS notified and scheduled the analytical laboratories (Transglobal Environmental Geochemistry [TEG] and Geotest).

MONITORING, PURGING, AND SAMPLING THREE WELLS

On March 31, 1996, three groundwater monitoring wells (MW-1, MW-2, and MW-3) were monitored, purged, and sampled. The wells were monitored with an electronic

---

[3] Report of Soil and Groundwater Investigation Pursuant to the Requirements of the San Diego County Site Assessment and Mitigation Division (SAM) for La Mesa R. V. Center, Inc., Located at 7601 Alvarado Road, La Mesa, California (Site).

interface probe to measure depth to water. The interface probe is reported to measure groundwater level to within an accuracy of 1/100 foot. No free floating petroleum product was encountered during the monitoring activities. Both current and historical monitoring data are shown in Table 1.

After the wells were monitored they were purged and sampled in general accordance with SAM guidelines. Wells MW-1 and MW-3, were purged with a bailer. Purge water was placed in appropriate drums and left on-site. Well MW-2 was purged with a submersible pump. Approximately 1.5 borehole volumes of water was purged from each well. After approximately 2 hours after purging, the wells did not recharge to at least 80 percent of the pre-purging static water level. The wells were judged to be slow recharging and were sampled.

Groundwater was sampled with a disposable bailer. The groundwater samples were decanted into laboratory-supplied vials, capped, labeled, and placed in an ice-filled chest. Chain-of-custody procedures were implemented for sample tracking.

Laboratory Analysis of Collected Groundwater Samples

Groundwater samples were kept in an ice-filled cooler until analysis by TEG and analyzed for the following:

- TPH[4] in general accordance with modified EPA Method 8015;
- BTEX in general accordance with EPA Method 8020; and
- TRPH in general accordance with EPA Method 418.1.

In addition, a duplicate set of groundwater samples was submitted to Geotest and analyzed for the following:

- MTBE in general accordance with EPA Method 8020.

Groundwater laboratory test results are shown in Table 2. Laboratory test reports are attached.

---

[4] "Full scan" includes gasoline and diesel ranges.

FINDINGS

HYDROGEOLOGY

The shallow groundwater at the Site was generally encountered at a depth of approximately 4 to 8 feet below grade. The shallow groundwater is interpreted to generally flow towards the west (Figure 2) at a gradient of approximately 0.08 (8 feet of elevation difference for every 100 feet of horizontal distance).

GROUNDWATER SAMPLES

Total Petroleum Hydrocarbons

All groundwater samples were reported to have no detectable TPH concentrations.

Total Recoverable Petroleum Hydrocarbons

All groundwater samples were reported to have no detectable TRPH concentrations.

Benzene, Toluene, Ethylbenzene, and Xylenes

All groundwater samples were reported to have no detectable BTEX concentrations.

Methyl Tertiary Butyl Ether

All groundwater samples were reported to have no detectable MTBE concentrations.

DISCUSSION

- Groundwater samples have been analyzed for MTBE and for BTEX. These are typically very soluble components of gasoline,[5] and their presence is frequently an indicator of gasoline. No detectable concentrations of MTBE or BTEX were reported for the collected groundwater samples.

- Groundwater samples were also analyzed for TPH and TRPH. No detectable TPH or TRPH concentrations were reported for the collected groundwater samples.

---

[5] MTBE is a gasoline additive.

- Groundwater samples have previously been analyzed for polynuclear aromatic hydrocarbons[6] (PAHs). No detectable PAH concentrations were reported for the collected groundwater samples.

ASSESSMENT OF GROUNDWATER QUALITY AT THE SITE

Based on the groundwater samples collected from the Site to date, it is our opinion that groundwater at the Site has not been impacted[7] by release(s) from the former USTs.

There have been four groundwater monitoring events at this Site. As shown in Table 2, at no time has any concentration of BTEX been reported to exceed maximum contaminant levels[8] (MCLs) for drinking water. It should be stressed that all of the groundwater samples were reported to have no detectable benzene concentrations (Table 2).

No detectable MTBE concentrations were reported during this round of sampling. Groundwater sample MW-2, collected on November 28, 1995, was reported to have an MTBE concentration of 0.7 µg/l. It should be noted that the detection level for MTBE was 0.6 µg/l. The State "action level" for MTBE is 35 µg/l.

No detectable concentrations of TPH or TRPH were reported in collected groundwater samples.

CONCLUSIONS

Based on the data reviewed and obtained as part of this assessment, current regulatory guidelines, and our experience, in our professional judgement we have drawn the following conclusions:

- There is a low likelihood that the shallow groundwater at the Site has been impacted from a release(s) from the former USTs.

---

[6] Quarterly Groundwater Monitoring Report for the First Quarter of 1995 and Workplan Describing Additional Site Assessment Activities Pursuant to the Request of San Diego County Site Assessment and Mitigation Division (SAM) for the La Mesa R. V. Center at 7601 Alvarado Road, La Mesa, California (Site).

[7] Impact to groundwater for the purposes of this report is defined as concentrations of chemicals that exceed MCLs, as defined in CCR Title 22, or the presence of free product or groundwater.

[8] MCL as defined in California Code of Regulations, Title 23.

RECOMMENDATIONS

- We recommend, based on the groundwater sample analytical results collected at the Site to date, that the SAM consider issuing a "no further action" letter (Site closure).

- After receiving Site closure, the Client should consider properly destroying the existing three groundwater monitoring wells.

We have enjoyed working with you on the important project. If we may be of further assistance or you have any question, please feel free to contact the undersigned at 619-571-5500.

Respectfully,
ENVIRONMENTAL BUSINESS SOLUTIONS, INC.

REPORT USAGE AND FUTURE SITE CONDITIONS

This report is intended for the sole usage of La Mesa R.V. Center, its designated agents, and the SAM. Use of this report is subject to the provisions of the fully executed Consulting Agreement (Contract) between La Mesa R.V. Center and Environmental Business Solutions, Inc. Any third party usage of this report shall be subject to the provisions of the Contract and any unauthorized misuse of or reliance upon the report shall be without risk or liability to Environmental Business Solutions, Inc.

The conclusions of this report are judged to be relevant at the time the work described in this report was conducted. Future conditions may differ and this report should not be relied upon to represent future Site conditions unless a qualified consultant familiar with the practice of environmental assessments in San Diego County is consulted to assess the necessity of updating this report.

Although this assessment has attempted to assess the likelihood that the Site has been impacted by a hazardous material/waste release, potential sources of impact may have escaped detection for reasons which include, but are not limited to: 1) our reliance on inadequate or inaccurate information rightfully provided to us by third parties, such as public agencies and other outside sources; 2) the limited scope of this assessment; 3) the presence of undetected, unknown or unreported environmental releases; and 4) the heterogeneous and complex nature of subsurface materials.

Notes:

1. Samples were tested for total recoverable petroleum hydrocarbons (TRPH) in general accordance with EPA Method 418.1, total petroleum hydrocarbons as gasoline (TPH_g) and as diesel (TPH_d) in general accordance with modified EPA Method 8015, and for benzene (B), toluene (T) ,ethylbenzene (E), total xylenes (X), and methyl tertiary butyl ether (MTBE) in general accordance with EPA Method 8020.

2. --- = Sample not tested for corresponding constituent.

3. All sample results are reported in micrograms per liter (µg/l).

4. With the exception of the MTBE analysis, the groundwater samples collected in March 1996 were analyzed by TEG.

TABLE 1

LABORATORY REPORTS

teg

April 9, 1996

Mr. Barry Pulver
Environmental Business Solutions
8799 Balboa Avenue
Suite 290
San Diego, CA 92123

RECEIVED
APR 12 1996

SUBJECT: DATA REPORT - LA MESA RV CENTER - 7691 ALVARADO ROAD, LA MESA, CA - EBS PROJECT #93E163.2

TEG Project # 960401-9

Mr. Pulver:

Please find enclosed a data report for the above referenced location. Water samples were analyzed in TEG's DOHS certified mobile laboratory (CERT #1746).

Project Summary

The following analyses were conducted:

- 3 waters for total petroleum hydrocarbons (TPH) by DOHS Modified EPA Method 8015
- 3 waters for volatile aromatic hydrocarbons (BTEX) by Modified EPA Method 8020
- 3 waters for total recoverable petroleum hydrocarbons (TRPH) by EPA Method 418.1

The samples were received chilled in appropriate containers with appropriate labels, seals, and chain-of-custody documentation.

Project Narrative

The results for all analyses and required QA/QC analyses are summarized in the enclosed tables. All calibrations, blanks, surrogates, and spike recoveries fulfill quality control criteria. No data qualifiers (flags) apply to any of the reported data.

TEG appreciates the opportunity to provide analytical services to EBS on this project. If you have any questions relating to this data or report, please do not hesitate to contact us.

Sincerely,

Sheri Hartman
