Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Description: Failure to promptly correct visible discharges and promptly remove any accumulations of oil in diked areas.
Violation Notes: Returned to compliance on 04/17/2018. OBSERVATION: The fill box for the 10,000 gallon tank had aviation fuel in it. Due to airport procedures, the aviation fuel is checked daily resulting in the fuel being in the fill box. CORRECTIVE ACTION: By 4/21/2018, provide documentation to CCHSHMP that the fill box is free of petroleum and there is a procedure in place to prevent the aviation fuel being in the fill box.

Lead Agency:	CENTRAL VALLEY RWQCB (REGION 5F)
Lead Agency Case Number:	Not reported
Latitude:	37.831039
Longitude:	-121.614936
Case Type:	Cleanup Program Site
Case Worker:	CDH
Local Agency:	Not reported
RB Case Number:	2050199
File Location:	Regional Board
Potential Media Affected:	Under Investigation
Potential Contaminants of Concern:	Other Solvent or Non-Petroleum Hydrocarbon
Site History:	The Site is located at the intersection of Holey Road and Byron Highway in Byron on approximately 14 acres. Historically the Old Valley Pipeline (OVP) and the Tidewater Associated Oil Company (TAOC) pipelines operated under this property. They were in operation from the early 1900s to the 1960s transporting crude oil from Bakersfield to Richmond. The Site consists of two properties: The Union Pacific Railroad (UPRR) right of way (ROW) and the Mygrant property. The Mygrant property is a large commercial area, which is currently used for grazing pastures and as a boat storage and launch facility for the Clifton Forebay. Currently Kinder Morgan Energy Partners maintains a high-pressure, petroleum-product pipeline at the Site that transports: gasoline, jet fuel and diesel. Several soil and groundwater workplans have been completed to delineate the petroleum hydrocarbon impacts condcuted 2006 - 2011. Afteran earlier investigation, RB staff concurred in a 1/28/2010 letter that the estent had been defined and a risk screening assessment could be done. In June 2011 a health screening assessment was completed by Chevron's consultant - SAIC. The aggregate excess cancer risk was determined to be 9E-07, which is below the de minimus value of 1E-06. Water Board staff concurred with the findings and a request for no further action required (NFAR) could be provided. The NFAR, dated 28 March 2012 for closure consideration was submitted for review and comment. Also, a soil and groundwater management plan was submitted for the site. The plan provides contact names and phone numbers to contact in the event crude oil is encountered at the site that is attributable to the historical pipelines. On 2 August 2012 Water Board staff provided notification to owners of property at the site or at nearby properties within 200 feet of delineated soil or groundwater that an NFAR was being considered and public comments could be submitted. No comments were received. There were no groundwater wells at the site. Chevron remains as the responsible party if in the future it is determined that residual crude oil affected soil or groundwater is encountered. On 13 September 2012, Water Board staff issued an NFAR determination for the site and the case was closed.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 08/13/2018

Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 08/13/2018

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/07/2016

Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 09/21/2018

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006
Date Data Arrived at EDR: 03/01/2007

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing
In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 08/10/2018

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

AHA Hospitals:

East Map:	5640050 CLIFTON COURT FOREBAY, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

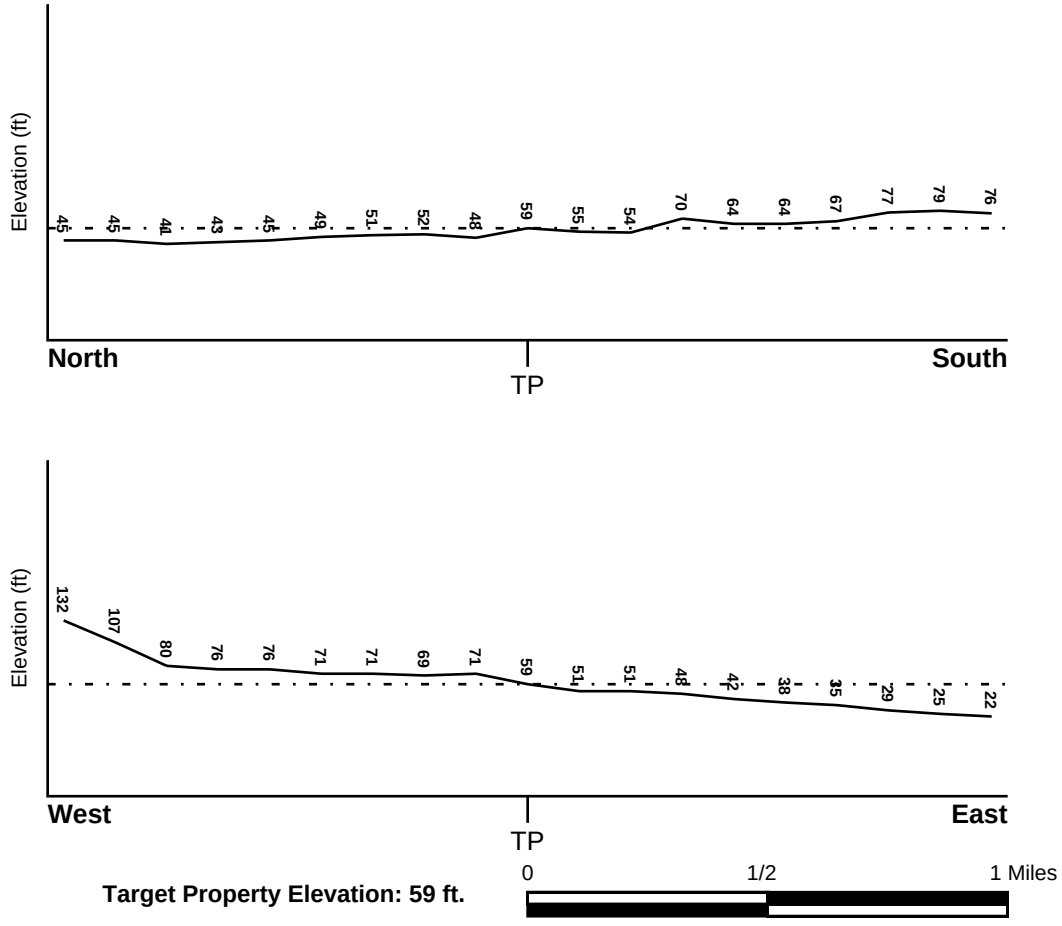
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General ENE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 59 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06013C0525F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06013C0530F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
BYRON HOT SPRINGS	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: SAN YSIDRO

Soil Surface Texture: loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Moderately well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	14 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 4 Min: 1.4	Max: 8.4 Min: 7.4
2	14 inches	53 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 4 Min: 1.4	Max: 8.4 Min: 7.4
3	53 inches	79 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 4 Min: 1.4	Max: 8.4 Min: 7.4

Soil Map ID: 2

Soil Component Name: LINNE

Soil Surface Texture: clay loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	29 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	Not reported	Max: 1.4 Min: 0	Max: Min:
2	29 inches	33 inches	weathered bedrock	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	Not reported	Max: 1.4 Min: 0	Max: Min:

Soil Map ID: 3

Soil Component Name: SOLANO

Soil Surface Texture: loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Somewhat poorly drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 107 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	9 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.42 Min: 0.01	Max: 9 Min: 7.9
2	9 inches	59 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.42 Min: 0.01	Max: 9 Min: 7.9

Soil Map ID: 4

Soil Component Name: Water

Soil Surface Texture: loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 5

Soil Component Name: SOLANO

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations
Source: Department of Conservation
Telephone: 916-323-1779
Oil and Gas well locations in the state.

RADON

State Database: CA Radon
Source: Department of Health Services
Telephone: 916-324-2208
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

Hazardous Materials

Does your facility have on site (for any purpose) at any one time, hazardous materials at or above 55 gallons for liquids, 500 pounds for solids, or 200 cubic feet for compressed gases (include liquids in ASTs and USTs); or is regulated under more restrictive inventory local reporting requirements (shown below if present); or the applicable Federal threshold quantity for an extremely hazardous substance specified in 40 CFR Part 355, Appendix A or B; or handle radiological materials in quantities for which an emergency plan is required pursuant to 10 CFR Parts 30, 40 or 70?	**Yes**

Underground Storage Tank(s) (UST)

Does your facility own or operate underground storage tanks?	**No**

Hazardous Waste

Is your facility a Hazardous Waste Generator?	**Yes**
Does your facility treat hazardous waste on-site?	**No**
Is your facility's treatment subject to financial assurance requirements (for Permit by Rule and Conditional Authorization)?	**No**
Does your facility consolidate hazardous waste generated at a remote site?	**No**
Does your facility need to report the closure/removal of a tank that was classified as hazardous waste and cleaned on-site?	**No**
Does your facility generate in any single calendar month 1,000 kilograms (kg) (2,200 pounds) or more of federal RCRA hazardous waste, or generate in any single calendar month, or accumulate at any time, 1 kg (2.2 pounds) of RCRA acute hazardous waste; or generate or accumulate at any time more than 100 kg (220 pounds) of spill cleanup materials contaminated with RCRA acute hazardous waste.	**No**
Is your facility a Household Hazardous Waste (HHW) Collection site?	**No**

Excluded and/or Exempted Materials

Does your facility recycle more than 100 kg/month of excluded or exempted recyclable materials (per HSC 25143.2)?	**No**
Does your facility own or operate ASTs above these thresholds? Store greater than 1,320 gallons of petroleum products (new or used) in aboveground tanks or containers.	**Yes**
Does your facility have Regulated Substances stored onsite in quantities greater than the threshold quantities established by the California Accidental Release prevention Program (CalARP)?	**No**

Additional Information

No additional comments provided.

CONSOLIDATED EMERGENCY RESPONSE / CONTINGENCY PLAN

Prior to completing this Plan, please refer to the INSTRUCTIONS FOR COMPLETING A CONSOLIDATED CONTINGENCY PLAN

A. FACILITY IDENTIFICATION AND OPERATIONS OVERVIEW

FACILITY ID # 1.	CERS ID A1.	DATE OF PLAN PREPARATION/REVISION A2.
07-000-770985	10011013	02/9/15

BUSINESS NAME *(Same as Facility Name or DBA - Doing Business As)* 3.
Contra Costa County - Byron Airport

BUSINESS SITE ADDRESS 103.
500 Eagle Court

BUSINESS SITE CITY 104.		ZIP CODE 105.
Byron	CA	94514

TYPE OF BUSINESS (e.g., Painting Contractor) A3.	INCIDENTAL OPERATIONS (e.g., Fleet Maintenance) A4.
Airport	Self-Fueling, Aircraft Owner Maintenance

THIS PLAN COVERS CHEMICAL SPILLS, FIRES, AND EARTHQUAKES INVOLVING: (Check all that apply) A5.

☒ 1. HAZARDOUS MATERIALS; ■ 2. HAZARDOUS WASTES

B. INTERNAL RESPONSE

INTERNAL FACILITY EMERGENCY RESPONSE WILL OCCUR VIA: (Check all that apply) B1.

■ 1. CALLING PUBLIC EMERGENCY RESPONDERS (i.e., 9-1-1)
■ 2. CALLING HAZARDOUS WASTE CONTRACTOR
■ 3. ACTIVATING IN-HOUSE EMERGENCY RESPONSE TEAM

C. EMERGENCY COMMUNICATIONS, PHONE NUMBERS AND NOTIFICATIONS

Whenever there is an imminent or actual emergency situation such as an explosion, fire, or release, the Emergency Coordinator (or his/her designee when the Emergency Coordinator is on call) shall:

1. Activate internal facility alarms or communications systems, where applicable, to notify all facility personnel.
2. Notify appropriate local authorities (i.e., call 9-1-1).
3. Notify the California Emergency Management Agency at (800) 852-7550.

Before facility operations are resumed in areas of the facility affected by the incident, the emergency coordinator shall notify the California Department of Toxic Substances Control (DTSC), the local Unified Program Agency (UPA), and the local fire department's hazardous materials program that the facility is in compliance with requirements to:

1. Provide for proper storage and disposal of recovered waste, contaminated soil or surface water, or any other material that results from an explosion, fire, or release at the facility; and
2. Ensure that no material that is incompatible with the released material is transferred, stored, or disposed of in areas of the facility affected by the incident until cleanup procedures are completed.

INTERNAL FACILITY EMERGENCY COMMUNICATIONS OR ALARM NOTIFICATION WILL OCCUR VIA: (Check all that apply) C1.

■ 1. VERBAL WARNINGS;	☐ 2. PUBLIC ADDRESS OR INTERCOM SYSTEM;	■ 3. TELEPHONE;
☐ 4. PAGERS;	☐ 5. ALARM SYSTEM;	■ 6. PORTABLE RADIO

NOTIFICATIONS TO NEIGHBORING FACILITIES THAT MAY BE AFFECTED BY AN OFF-SITE RELEASE WILL OCCUR BY: (Check all that apply) C2.

■ 1. VERBAL WARNINGS;	☐ 2. PUBLIC ADDRESS OR INTERCOM SYSTEM;	■ 3. TELEPHONE;
☐ 4. PAGERS;	☐ 5. ALARM SYSTEM;	☐ 6. PORTABLE RADIO

D. EMERGENCY CONTAINMENT AND CLEANUP PROCEDURES

SPILL PREVENTION, CONTAINMENT, AND CLEANUP PROCEDURES: (Check all boxes that apply to indicate your procedures for containing spills, releases, fires or explosions; and. preventing and mitigating associated harm to persons, property, and the environment.)

D1.

- ☑ 1. MONITOR FOR LEAKS, RUPTURES, PRESSURE BUILD-UP, ETC.;
- ☐ 2. PROVIDE STRUCTURAL PHYSICAL BARRIERS (e.g., Portable spill containment walls);
- ☑ 3. PROVIDE ABSORBENT PHYSICAL BARRIERS (e.g., Pads, pigs, pillows);
- ☑ 4. COVER OR BLOCK FLOOR AND/ OR STORM DRAINS;
- ☐ 5. BUILT-IN BERM IN WORK / STORAGE AREA;
- ☐ 6. AUTOMATIC FIRE SUPPRESSION SYSTEM;
- ☐ 7. ELIMINATE SOURCES OF IGNITION FOR FLAMMABLE HAZARDS (e.g. Flammable liquids, Propane);
- ☐ 8. STOP PROCESSES AND/OR OPERATIONS;
- ☐ 9. AUTOMATIC / ELECTRONIC EQUIPMENT SHUT-OFF SYSTEM;
- ☐ 10. SHUT-OFF WATER, GAS, ELECTRICAL UTILITIES AS APPROPRIATE;
- ☑ 11. CALL 9-1-1 FOR PUBLIC EMERGENCY RESPONDER ASSISTANCE / MEDICAL AID;
- ☑ 12. NOTIFY AND EVACUATE PERSONS IN ALL THREATENED AREAS;
- ☑ 13. ACCOUNT FOR EVACUATED PERSONS IMMEDIATELY AFTER EVACUATION CALL;
- ☑ 14. PROVIDE PROTECTIVE EQUIPMENT FOR ON-SITE RESPONSE TEAM;
- ☑ 15. REMOVE OR ISOLATE CONTAINERS / AREA AS APPROPRIATE;
- ☑ 16. HIRE LICENSED HAZARDOUS WASTE CONTRACTOR;
- ☑ 17. USE ABSORBENT MATERIAL FOR SPILLS WITH SUBSEQUENT PROPER LABELING, STORAGE, AND HAZARDOUS WASTE DISPOSAL AS APPROPRIATE;
- ☐ 18. SUCTION USING SHOP VACUUM WITH SUBSEQUENT PROPER LABELING, STORAGE, AND HAZARDOUS WASTE DISPOSAL AS APPROPRIATE;
- ☐ 19. WASH / DECONTAMINATE EQUIPMENT W/ CONTAINMENT and DISPOSAL OF EFFLUENT / RINSATE AS HAZARDOUS WASTE;
- ☑ 20. PROVIDE SAFE TEMPORARY STORAGE OF EMERGENCY-GENERATED WASTES;
- ☐ 21. OTHER (Specify):

D2.

E. FACILITY EVACUATION

THE FOLLOWING ALARM SIGNAL(S) WILL BE USED TO BEGIN EVACUATION OF THE FACILITY (CHECK ALL THAT APPLY): E1.

- ☐ 1. BELLS;
- ☐ 2. HORNS/SIRENS;
- ☑ 3. VERBAL (i.e., SHOUTING);
- ☐ 4. OTHER (Specify):

E2.

THE FOLLOWING LOCATION(S) IS/ARE EVACUEE EMERGENCY ASSEMBLY AREA(S) (i.e., Front parking lot, specific street corner, etc.) E3.

Corner of Eagle Court and Falcon Way

Note: The Emergency Coordinator must account for all on site employees and/or site visitors after evacuation.

☑ EVACUATION ROUTE MAP(S) POSTED AS REQUIRED E4.

Note: The map(s) must show primary and alternate evacuation routes, emergency exits, and primary and alternate staging areas, and must be prominently posted throughout the facility in locations where it will be visible to employees and visitors.

F. ARRANGEMENTS FOR EMERGENCY SERVICES

Explanation of Requirement: Advance arrangements with local fire and police departments, hospitals, and/or emergency services contractors should be made as appropriate for your facility. You may determine that such arrangements are not necessary.

ADVANCE ARRANGEMENTS FOR LOCAL EMERGENCY SERVICES (Check one of the following) F1.

- ☐ 1. HAVE BEEN DETERMINED NOT NECESSARY; *or*
- ☑ 2. THE FOLLOWING ARRANGEMENTS HAVE BEEN MADE (Specify): F2.

Letters of agreement with Contra Costa Fire and Contra Costa County Sheriff's Office.

G. EMERGENCY EQUIPMENT

Check all boxes that apply to list emergency response equipment available at the facility and identify the location(s) where the equipment is kept and the equipment's capability, if applicable. [e.g., ☒ CHEMICAL PROTECTIVE GLOVES | Spill response kit | One time use, Oil & solvent resistant only.]

TYPE	EQUIPMENT AVAILABLE G1.	LOCATION	CAPABILITY *(If applicable)*
Safety and First Aid	1. ☐ CHEMICAL PROTECTIVE SUITS, APRONS, OR VESTS	G2.	G3.
	2. ■ CHEMICAL PROTECTIVE GLOVES	G4. Spill Kit	G5.
	3. ■ CHEMICAL PROTECTIVE BOOTS	G6. Spill Kit	G7.
	4. ■ SAFETY GLASSES / GOGGLES / SHIELDS	G8. Spill Kit	G9.
	5. ■ HARD HATS	G10. With Operations Staff	G11.
	6. ☐ CARTRIDGE RESPIRATORS	G12.	G13.
	7. ■ SELF-CONTAINED BREATHING APPARATUS (SCBA)	G14. On ARFF Vehicle	G15.
	8. ■ FIRST AID KITS / STATIONS	G16. Admin Office, Airport Vehicles	G17.

H. EARTHQUAKE VULNERABILITY

Identify areas of the facility that are vulnerable to hazardous materials releases / spills due to earthquake-related motion. These areas require immediate isolation and inspection.

VULNERABLE AREAS: (Check all that apply)

- [x] 1. HAZARDOUS MATERIALS / WASTE STORAGE AREA
- [ ] 2. PROCESS LINES / PIPING
- [ ] 3. LABORATORY
- [ ] 4. WASTE TREATMENT AREA

H1. LOCATIONS (e.g., shop, outdoor shed, forensic lab)

H2. Fueling area, pump house, waste oil convau

H3.

H4.

H5.

Identify mechanical systems vulnerable to releases / spills due to earthquake-related motion. These systems require immediate isolation and inspection.

VULNERABLE SYSTEMS: (Check all that apply)

- [ ] 1. SHELVES, CABINETS AND RACKS
- [x] 2. TANKS (EMERGENCY SHUTOFF)
- [ ] 3. PORTABLE GAS CYLINDERS
- [ ] 4. EMERGENCY SHUTOFF AND/OR UTILITY VALVES
- [ ] 5. SPRINKLER SYSTEMS
- [ ] 6. STATIONARY PRESSURIZED CONTAINERS (e.g., Propane dispensing tank)

H6. LOCATIONS

H7. Fueling area, pump house

H8.

H9.

H10.

H11.

H12.

I. EMPLOYEE TRAINING

Explanation of Requirement: Employee training is required for all employees handling hazardous materials and hazardous wastes in day-to-day or clean-up operations including volunteers and/or contractors. Training must be:

- Provided within 6 months for new hires;
- Amended as necessary prior to change in process or work assignment;
- Given upon modification to the Emergency Response / Contingency Plan, and updated/refreshed annually for all employees.

Required content includes all of the following:

- Material Safety Data Sheets;
- Hazard communication related to health and safety;
- Methods for safe handling of hazardous substances;
- Fire hazards of materials / processes;
- Conditions likely to worsen emergencies;
- Coordination of emergency response;
- Notification procedures;
- Applicable laws and regulations;
- Communication and alarm systems;
- Personal protective equipment;
- Use of emergency response equipment (e.g. Fire extinguishers, respirators, etc.);
- Decontamination procedures;
- Evacuation procedures;
- Control and containment procedures;
- UST monitoring system equipment and procedures (if applicable).

INDICATE HOW EMPLOYEE TRAINING PROGRAM IS ADMINISTERED (Check all that apply) I1.

- [x] 1. FORMAL CLASSROOM; [x] 2. VIDEOS; [ ] 3. SAFETY / TAILGATE MEETINGS;
- [ ] 4. STUDY GUIDES / MANUALS (Specify): _____ I2.
- [x] 5. OTHER (Specify): Emails I3.
- [ ] 6. NOT APPLICABLE BECAUSE FACILITY HAS NO EMPLOYEES

Large Quantity Generator (LQG) Training Records: Large quantity hazardous waste generators (i.e., who generate more than 270 gallons/1,000 kilograms of hazardous waste per month) must retain written documentation of employee hazardous waste management training sessions which includes:

- A written outline/agenda of the type and amount of both introductory and continuing training that will be given to persons filling each job position having responsibility for the management of hazardous waste (e.g., labeling, manifesting, compliance with accumulation time limits, etc.).
- The name, job title, and date of training for each hazardous waste management training session given to an employee filling such a job position; and
- A written job description for each of the above job positions that describes job duties and the skills, education, or other qualifications required of personnel assigned to the position.
- Current employee training records must be retained until closure of the facility.
- Former employee training records must be retained at least three years after termination of employment.

J. LIST OF ATTACHMENTS

(Check one of the following) J1.

- [ ] 1. NO ATTACHMENTS ARE REQUIRED; *or*
- [ ] 2. THE FOLLOWING DOCUMENTS ARE ATTACHED: J2.

K. SIGNATURE / CERTIFICATION

Certification: Based on my inquiry of those individuals responsible for obtaining the information, I certify under penalty of law that I have personally examined and am familiar with the information submitted and believe the information is true, accurate, and complete, and that a copy is available on site.

Hazardous Materials

Does your facility have on site (for any purpose) at any one time, hazardous materials at or above 55 gallons for liquids, 500 pounds for solids, or 200 cubic feet for compressed gases (include liquids in ASTs and USTs); or is regulated under more restrictive inventory local reporting requirements (shown below if present); or the applicable Federal threshold quantity for an extremely hazardous substance specified in 40 CFR Part 355, Appendix A or B; or handle radiological materials in quantities for which an emergency plan is required pursuant to 10 CFR Parts 30, 40 or 70?	**Yes**

Underground Storage Tank(s) (UST)

Does your facility own or operate underground storage tanks?	**No**

Hazardous Waste

Is your facility a Hazardous Waste Generator?	**Yes**
Does your facility treat hazardous waste on-site?	**No**
Is your facility's treatment subject to financial assurance requirements (for Permit by Rule and Conditional Authorization)?	**No**
Does your facility consolidate hazardous waste generated at a remote site?	**No**
Does your facility need to report the closure/removal of a tank that was classified as hazardous waste and cleaned on-site?	**No**
Does your facility generate in any single calendar month 1,000 kilograms (kg) (2,200 pounds) or more of federal RCRA hazardous waste, or generate in any single calendar month, or accumulate at any time, 1 kg (2.2 pounds) of RCRA acute hazardous waste; or generate or accumulate at any time more than 100 kg (220 pounds) of spill cleanup materials contaminated with RCRA acute hazardous waste.	**No**
Is your facility a Household Hazardous Waste (HHW) Collection site?	**No**

Excluded and/or Exempted Materials

Does your facility recycle more than 100 kg/month of excluded or exempted recyclable materials (per HSC 25143.2)?	**No**
Does your facility own or operate ASTs above these thresholds? Store greater than 1,320 gallons of petroleum products (new or used) in aboveground tanks or containers.	**Yes**
Does your facility have Regulated Substances stored onsite in quantities greater than the threshold quantities established by the California Accidental Release prevention Program (CalARP)?	**No**

Additional Information

No additional comments provided.

CONSOLIDATED EMERGENCY RESPONSE / CONTINGENCY PLAN

Prior to completing this Plan, please refer to the INSTRUCTIONS FOR COMPLETING A CONSOLIDATED CONTINGENCY PLAN

A. FACILITY IDENTIFICATION AND OPERATIONS OVERVIEW

FACILITY ID # 1.	CERS ID A1.	DATE OF PLAN PREPARATION/REVISION A2.
07-000-770985	10011013	02/9/15

BUSINESS NAME *(Same as Facility Name or DBA - Doing Business As)* 3.
Contra Costa County - Byron Airport

BUSINESS SITE ADDRESS 103.
500 Eagle Court

BUSINESS SITE CITY 104.		ZIP CODE 105.
Byron	CA	94514

TYPE OF BUSINESS (e.g., Painting Contractor) A3.	INCIDENTAL OPERATIONS (e.g., Fleet Maintenance) A4.
Airport	Self-Fueling, Aircraft Owner Maintenance

THIS PLAN COVERS CHEMICAL SPILLS, FIRES, AND EARTHQUAKES INVOLVING: (Check all that apply) A5.

☒ 1. HAZARDOUS MATERIALS; ■ 2. HAZARDOUS WASTES

B. INTERNAL RESPONSE

INTERNAL FACILITY EMERGENCY RESPONSE WILL OCCUR VIA: (Check all that apply) B1.

■ 1. CALLING PUBLIC EMERGENCY RESPONDERS (i.e., 9-1-1)
■ 2. CALLING HAZARDOUS WASTE CONTRACTOR
■ 3. ACTIVATING IN-HOUSE EMERGENCY RESPONSE TEAM

C. EMERGENCY COMMUNICATIONS, PHONE NUMBERS AND NOTIFICATIONS

Whenever there is an imminent or actual emergency situation such as an explosion, fire, or release, the Emergency Coordinator (or his/her designee when the Emergency Coordinator is on call) shall:

1. Activate internal facility alarms or communications systems, where applicable, to notify all facility personnel.
2. Notify appropriate local authorities (i.e., call 9-1-1).
3. Notify the California Emergency Management Agency at (800) 852-7550.

Before facility operations are resumed in areas of the facility affected by the incident, the emergency coordinator shall notify the California Department of Toxic Substances Control (DTSC), the local Unified Program Agency (UPA), and the local fire department's hazardous materials program that the facility is in compliance with requirements to:

1. Provide for proper storage and disposal of recovered waste, contaminated soil or surface water, or any other material that results from an explosion, fire, or release at the facility; and
2. Ensure that no material that is incompatible with the released material is transferred, stored, or disposed of in areas of the facility affected by the incident until cleanup procedures are completed.

INTERNAL FACILITY EMERGENCY COMMUNICATIONS OR ALARM NOTIFICATION WILL OCCUR VIA: (Check all that apply) C1.

■ 1. VERBAL WARNINGS;	☐ 2. PUBLIC ADDRESS OR INTERCOM SYSTEM;	■ 3. TELEPHONE;
☐ 4. PAGERS;	☐ 5. ALARM SYSTEM;	■ 6. PORTABLE RADIO

NOTIFICATIONS TO NEIGHBORING FACILITIES THAT MAY BE AFFECTED BY AN OFF-SITE RELEASE WILL OCCUR BY: (Check all that apply) C2.

■ 1. VERBAL WARNINGS;	☐ 2. PUBLIC ADDRESS OR INTERCOM SYSTEM;	■ 3. TELEPHONE;
☐ 4. PAGERS;	☐ 5. ALARM SYSTEM;	☐ 6. PORTABLE RADIO

D. EMERGENCY CONTAINMENT AND CLEANUP PROCEDURES

SPILL PREVENTION, CONTAINMENT, AND CLEANUP PROCEDURES: (Check all boxes that apply to indicate your procedures for containing spills, releases, fires or explosions; and. preventing and mitigating associated harm to persons, property, and the environment.)

D1.

- ☑ 1. MONITOR FOR LEAKS, RUPTURES, PRESSURE BUILD-UP, ETC.;
- ☐ 2. PROVIDE STRUCTURAL PHYSICAL BARRIERS (e.g., Portable spill containment walls);
- ☑ 3. PROVIDE ABSORBENT PHYSICAL BARRIERS (e.g., Pads, pigs, pillows);
- ☑ 4. COVER OR BLOCK FLOOR AND/ OR STORM DRAINS;
- ☐ 5. BUILT-IN BERM IN WORK / STORAGE AREA;
- ☐ 6. AUTOMATIC FIRE SUPPRESSION SYSTEM;
- ☐ 7. ELIMINATE SOURCES OF IGNITION FOR FLAMMABLE HAZARDS (e.g. Flammable liquids, Propane);
- ☐ 8. STOP PROCESSES AND/OR OPERATIONS;
- ☐ 9. AUTOMATIC / ELECTRONIC EQUIPMENT SHUT-OFF SYSTEM;
- ☐ 10. SHUT-OFF WATER, GAS, ELECTRICAL UTILITIES AS APPROPRIATE;
- ☑ 11. CALL 9-1-1 FOR PUBLIC EMERGENCY RESPONDER ASSISTANCE / MEDICAL AID;
- ☑ 12. NOTIFY AND EVACUATE PERSONS IN ALL THREATENED AREAS;
- ☑ 13. ACCOUNT FOR EVACUATED PERSONS IMMEDIATELY AFTER EVACUATION CALL;
- ☑ 14. PROVIDE PROTECTIVE EQUIPMENT FOR ON-SITE RESPONSE TEAM;
- ☑ 15. REMOVE OR ISOLATE CONTAINERS / AREA AS APPROPRIATE;
- ☑ 16. HIRE LICENSED HAZARDOUS WASTE CONTRACTOR;
- ☑ 17. USE ABSORBENT MATERIAL FOR SPILLS WITH SUBSEQUENT PROPER LABELING, STORAGE, AND HAZARDOUS WASTE DISPOSAL AS APPROPRIATE;
- ☐ 18. SUCTION USING SHOP VACUUM WITH SUBSEQUENT PROPER LABELING, STORAGE, AND HAZARDOUS WASTE DISPOSAL AS APPROPRIATE;
- ☐ 19. WASH / DECONTAMINATE EQUIPMENT W/ CONTAINMENT and DISPOSAL OF EFFLUENT / RINSATE AS HAZARDOUS WASTE;
- ☑ 20. PROVIDE SAFE TEMPORARY STORAGE OF EMERGENCY-GENERATED WASTES;
- ☐ 21. OTHER (Specify):

D2.

E. FACILITY EVACUATION

THE FOLLOWING ALARM SIGNAL(S) WILL BE USED TO BEGIN EVACUATION OF THE FACILITY (CHECK ALL THAT APPLY): E1.

- ☐ 1. BELLS;
- ☐ 2. HORNS/SIRENS;
- ☑ 3. VERBAL (i.e., SHOUTING);
- ☐ 4. OTHER (Specify):

E2.

THE FOLLOWING LOCATION(S) IS/ARE EVACUEE EMERGENCY ASSEMBLY AREA(S) (i.e., Front parking lot, specific street corner, etc.) E3.

Corner of Eagle Court and Falcon Way

Note: The Emergency Coordinator must account for all on site employees and/or site visitors after evacuation.

☑ EVACUATION ROUTE MAP(S) POSTED AS REQUIRED E4.

Note: The map(s) must show primary and alternate evacuation routes, emergency exits, and primary and alternate staging areas, and must be prominently posted throughout the facility in locations where it will be visible to employees and visitors.

F. ARRANGEMENTS FOR EMERGENCY SERVICES

Explanation of Requirement: Advance arrangements with local fire and police departments, hospitals, and/or emergency services contractors should be made as appropriate for your facility. You may determine that such arrangements are not necessary.

ADVANCE ARRANGEMENTS FOR LOCAL EMERGENCY SERVICES (Check one of the following) F1.

- ☐ 1. HAVE BEEN DETERMINED NOT NECESSARY; *or*
- ☑ 2. THE FOLLOWING ARRANGEMENTS HAVE BEEN MADE (Specify): F2.

Letters of agreement with Contra Costa Fire and Contra Costa County Sheriff's Office.

G. EMERGENCY EQUIPMENT

Check all boxes that apply to list emergency response equipment available at the facility and identify the location(s) where the equipment is kept and the equipment's capability, if applicable. [e.g., ☒ CHEMICAL PROTECTIVE GLOVES | Spill response kit | One time use, Oil & solvent resistant only.]

I. EMPLOYEE TRAINING

Explanation of Requirement: Employee training is required for all employees handling hazardous materials and hazardous wastes in day-to-day or clean-up operations including volunteers and/or contractors. Training must be:

- Provided within 6 months for new hires;
- Amended as necessary prior to change in process or work assignment;
- Given upon modification to the Emergency Response / Contingency Plan, and updated/refreshed annually for all employees.

Required content includes all of the following:

- Material Safety Data Sheets;
- Hazard communication related to health and safety;
- Methods for safe handling of hazardous substances;
- Fire hazards of materials / processes;
- Conditions likely to worsen emergencies;
- Coordination of emergency response;
- Notification procedures;
- Applicable laws and regulations;
- Communication and alarm systems;
- Personal protective equipment;
- Use of emergency response equipment (e.g. Fire extinguishers, respirators, etc.);
- Decontamination procedures;
- Evacuation procedures;
- Control and containment procedures;
- UST monitoring system equipment and procedures (if applicable).

INDICATE HOW EMPLOYEE TRAINING PROGRAM IS ADMINISTERED (Check all that apply) I1.

- [x] 1. FORMAL CLASSROOM; [x] 2. VIDEOS; [ ] 3. SAFETY / TAILGATE MEETINGS;
- [ ] 4. STUDY GUIDES / MANUALS (Specify): _____ I2.
- [x] 5. OTHER (Specify): Emails I3.
- [ ] 6. NOT APPLICABLE BECAUSE FACILITY HAS NO EMPLOYEES

Large Quantity Generator (LQG) Training Records: Large quantity hazardous waste generators (i.e., who generate more than 270 gallons/1,000 kilograms of hazardous waste per month) must retain written documentation of employee hazardous waste management training sessions which includes:

- A written outline/agenda of the type and amount of both introductory and continuing training that will be given to persons filling each job position having responsibility for the management of hazardous waste (e.g., labeling, manifesting, compliance with accumulation time limits, etc.).
- The name, job title, and date of training for each hazardous waste management training session given to an employee filling such a job position; and
- A written job description for each of the above job positions that describes job duties and the skills, education, or other qualifications required of personnel assigned to the position.
- Current employee training records must be retained until closure of the facility.
- Former employee training records must be retained at least three years after termination of employment.

		Harold White - Manager Country 510 Sally Ride Dr. Concord 94520 646-5722.	
3/3/93	16:00	- I spoke with Charlie Voreux. He is building a containment area for the drums. - I recommend lining the bottom with thick polyethylene liners rather than tar paper. - Protect the area from rain. I will write a letter to Mr White ~~to~~ with information for tenants disposing of oil. I also left two labels with Mr Voreux & told him how to fill them out.

March 4, 1993

Mr. Harold White
Manager of Airports
Contra Costa County Public
Works Department
510 Sally Ride Drive
Concord, CA 94520

Dear Mr. White:

This letter follows my visit to Byron Airport on March 3, 1993. I visited the airport at the request of Chief Clary of East Diablo Fire Department who had previously noticed unlabelled drums of waste oil stored open and dripping at the airport.

I spoke with your employee Charlie Vouaux. He was working on a containment area to better manage the waste oil. I told Mr. Vouaux how to label the drums, and gave him a sample label.

The following are my recommendations for the waste oil area:

- Use a thick Visquene for lining the waste area (10 mil. thick). This is preferable to tar paper.
- Protect the drums and containment area from the rain.
- Locate the drums away from the creek.
- Keep drums closed when not pouring oil. This is a legal requirement of Title of Title 22 California Code of Regulations Section 6622265.173.
- Containment should be large enough to hold 110% of contents of one drum.
- Notify your tenants of the following: (1) Location of the oil drums. (2) They should use a funnel to pour the oil and close up the drum after use. (3) They should minimize spills and drip, use covered buckets to carry the oil. (4) They may not put anything in the other than used motor oil into the drums.

4333 Pacheco Boulevard • Martinez, California 94553 • (510) 646-2286

I am enclosing a brochure of requirements for hazardous waste generator for your information.

I understand that Byron Airport will undergo massive renovation in about two years.

If you have any questions, please feel free to call me.

Sincerely yours,

Elaine C. Wilson

Additional Comments: _____

This report may identify conditions observed this day that are alleged to be violations of one or more sections of the California Health and Safety Code (HSC) or the California Code of Regulations (CCR). The Violations may be described in more detail on an attached inspection sheet.

Failure to correct observed violations within the scheduled period provided may result in Contra Costa Health Services Hazardous Materials Programs (CCHSHMP) citing you for continuing and/or additional violations. Issuance of this Inspection Report does not preclude CCHSHMP from taking any administrative, civil, or criminal action as a result of the violations noted.

CCC BYRON AIRPORT SUSAN HILL 550 SALLY RIDE DR CONCORD CA 94520	CCC BYRON AIRPORT CCC BYRON AIRPORT 500 EAGLE CT BYRON, CA 94514

This business is permitted in the following CUPA Programs:

- ☑ Hazardous Material Business Plan/Hazardous Materials Management Plan (includes Uniform Fire Code, Article 80)
- ☐ California Accidental Release Plan (CalARP)/Accidental Release Plan (ARP)
- ☑ Hazardous Waste Generator.
- ☐ Hazardous Waste Treatment on site
- ☐ Storage of Hazardous Materials in Underground Tanks. (see attached permit)
- ☑ Aboveground Petroleum Storage Tanks(SPCC only).

☐ New ☑ Annual ☐ Other ☐ Renewal

AUTHORIZATION

This document is issued based on the condition that the applicant and the facility is in compliance with all applicable rules, regulations and laws pertaining to these CUPA programs. Failure to comply with all applicable codes and regulations will null and void this authorization/permit. See attached conditions of approval for each CUPA Program.

Employee Training Program

Training Coordinator: Barrett M. Schreiber

Day Telephone#: (925) 646-5722 (24-hour facility)

1. Every employee will be trained in the following:
   a. The facility's Contingency Plan.
   b. Proper handling and storage techniques associated with the Hazardous Materials located on-site.
   c. Proper use and maintenance of both Emergency Response and Personal Protective equipment.
   d. The human and environmental health hazards associated with the hazardous material on-site. This will include reviewing Material Safety and Data Sheets (MSDS).
   e. Emergency response training and simple spill remediation.
   f. The location, operations and maintenance of fire extinguishers and spill control equipment.
   g. Facility shutdown procedures.
   h. The location of the facility's Contingency Plan.
2. Refresher training will be given annually by management.
3. New employees will be trained immediately upon hire.
4. Employees receiving training will so attest by signing and dating the following training log. All training records will be continuously maintained on-site.

Employee Training Log

Employee Signature	Employee Name	Job Title	Date of Training	Trainer's Initials
	Barrett M. Schreiber	Administrative Intern		
	Ed Asbert	Airport Operations Specialist	2/20/08	
	Steve Callahan	Airport Operations Specialist		
	K.C. Coyle	Supervisor of Operations	2/20/08	
	Beth Lee	Airport Business Development Manager		
	Keith Freitas	Director of Airports	2/20/08	
	Mark Grosenheider	Airport Operations Specialist	2/20/08	
	Sue Hill	Accounting Technician		
	Mike Ivy	Airport Operations Specialist	2/19/08	
	Julie Conti	Real Properties Technician		
	Juan Valdivia	Airport Operations Technician		
	Mario Santos	Airport Operations Technician		
	Natalie Olesen	Airport Secretary		
	Bill Stockdale	Airport Operations Specialist		
	Rob Wangan	Airport Operations Technician		

Description of Training:

Initial: Training on the Hazardous Materials Contingency plan for Byron Airport

Hazardous Materials Contingency Plan

Cell Telephone #:	(925) 382-1715

Emergency Coordinators are familiar with all aspects of the facility. These designated persons have unrestricted access to the facility and have the authority to make decisions during an emergency.

Emergency Response Plan

In the event of a fire or a threatening Hazardous Materials release follow these emergency procedures immediately:

Assess the incident. Immediately and briefly assess the situation. Attempt to extinguish the fire or contain the threatening hazardous material spill if it can be done safely.

Evacuate the premises. If the fire or spill cannot be safely brought under control by on-site personnel, immediately evacuate the premises. Evacuate all personnel and customers from the premises by announcing: "THERE IS A (FIRE/HAZARDOUS MATERIALS SPILL) IN PROGRESS. PLEASE LEAVE THE PREMISES IMMEDIATELY THROUGH THE NEAREST SAFE EXIT." Make this announcement in a loud clear voice. Upon evacuating the premises, employees will meet at: The corner of Eagle Court and Falcon Way

Once employees meet at the designated assembly location, all employees will be accounted for and await further instructions.

Look Around. Before leaving, quickly look around to ensure that all others have vacated the premises, particularly those who might be working in remote areas of the premises. Assist or direct assistance to anyone having difficulty in evacuating.

Call for Help. DIAL 911. Give the following information:

- Your Name and Telephone Number
- Name and Address of the Facility
- Time and Type of Incident
- Name and Quantity of Materials Involved
- Extent of Injuries
- Possible Hazards to Human Health and the Environment

Inform the dispatcher if anyone is trapped. Stay on the phone and be prepared to answer questions concerning the situation (e.g., spill characteristics, source, quantities, and extent of area affected). If the telephones at the administration building are not usable, the nearest available telephones are located at: Bay Area Skydiving, 6900 Falcon Way, Byron, CA 94514

Help Injured Persons. Help all injured persons as much as possible.

Report to Emergency Responders. The emergency coordinator shall report to emergency response personnel immediately upon their arrival. The emergency coordinator shall provide the emergency response personnel with any information or assistance they request.

Immediately Notify. If the emergency situation is determined by the Emergency Coordinator to be a threat to human health or the environment, the Contra Costa County Health Services Department (CCCHSD), the State Office of Emergency Services (State O.E.S.), and the County O.E.S. must be immediately notified. Notify the CCCHSD at: (925) 646-1112, the State O.E.S. at: (800) 852-7550, and the County O.E.S at: (925) 228-5000. Be prepared to answer questions concerning the emergency situation.

Re-entry. Do not re-enter the premises until re-entry approval has been given by Fire Department or other authorized Emergency Personnel.

Submit. Submit a written follow-up spill notification to the State O.E.S. and the County Health Services Department. The report must include the following information:

- Name and Telephone Number of Reporter
- Name and Address of the Facility
- Time and Type of Incident
- Name and Quantity of Materials Involved
- Extent of Injuries
- Possible Hazards to Human Health and the Environment
- Estimated Quantities and Disposition of Recovered Material

Emergency Response Equipment. The emergency response equipment located on-site consists of the following:

- Fire Extinguishers
    - 30 located throughout the airport
- First Aid Kit
    - Administration Building
    - 1 in each airport vehicle

- Spill Control Equipment On-Site
    - Spill Kit which includes absorbent materials and shovels
- Location of Spill Equipment
    - Fuel Island, 100 yards southeast of the Administration Building
- Other Emergency Response Equipment
    - ARFF (Aircraft Rescue and Fire Fighting) truck

Following an Emergency, all Emergency Response Equipment must be restored to readiness.

Spill Response. If the spill response can be performed safely by on-site personnel, the following measures should be taken:

- Spill response personnel must utilize the appropriate personal protection.
- Stop the spill at its source to prevent the spill from increasing.
- Place the appropriate absorbent materials over the spilled materials and contain the boundaries of the spill.
- Special care must be taken to prevent the spill from reaching storm drains or unpaved areas.

The spill materials, along with the contaminated Spill Control Equipment, must be placed in an appropriate container and labeled as hazardous waste.

HAZARDOUS MATERIALS HANDLING, STORAGE AND DISPOSAL PROCEDURES

Contra Costa County-Buchanan Field and Byron Airports

SCOPE

This procedure applies to the Contra Costa County Airport System employees and pertains to the handling, storage and disposal of hazardous material.

PURPOSE

To provide general guidelines and procedures for the handling of hazardous materials. The procedure covers the following topics: handling, storage and disposal of hazardous material

PROGRAM

A. Definitions

1. Hazardous Characteristics: Are those distinguishing traits that identify waste as dangerous to the environment in accordance with CFR Part 261, Subpart C.
2. Ignitability: (40 CFR 261.21) under normal contiditions the wastes may ignite. Ignitable waste has an EPA waste code D001.
3. Corrosively: (40CFR 261.22) the ability of wastes to corrode steel, or wastes that have a pH lower than 2 to higher than 12.5. Corrosive wastes have an EPA waste code D002
4. Reactivity: (40 CFR 261.23) under normal conditions the waste is unstable and may explode, react violently with air, or produces toxic fumes, gases and vapors when mixed with water or when subjected to heat or pressure. Reactive wastes have an EPA waste code D003.
5. Toxicity: (40 DFR 261.24) includes wastes that when subjected to Toxic Characterize Leaching Procedure (TCPL) the extract contains any of the contaminates listed in Table I, 40 CFR Part 261.24
6. EPA waste codes for toxic wastes range from D004 to D043.

B. Satellite Accumulation Areas: Accumulation of as much as 55 gallons of hazardous waste or one quart of acutely hazardous waste is allowable in containers at or near the point of generation where accumulated under 40 CFR 262.34c.

C. Handling and Storage of Hazardous Waste

1. Waste containers:

a. Must be made of materials compatible with the waste being collected;
b. Must be of the appropriate size for the amount of waste to be stored;
c. Must be kept closed during storage, except when adding or removing waste;
d. Must be maintained in good condition (e.g. to avoid leaks)

D. Labeling of Waste Containers:

a. must have contents of container;
b. must have accumulation date;
c. Must use the standard label determined by the Airport Operations office.

MAR 03 2008
Contra Costa Health
Hazardous Materials

FACILITY/SITE ID: CCC BYRON AIRPORT/770985
500 EAGLE CT
BYRON 94514

PLEASE READ THE INSTRUCTIONS ON THE BACK BEFORE COMPLETING THIS FORM.
THE INSTRUCTIONS HAVE SIGNIFICANTLY CHANGED FROM PREVIOUS YEARS.

Please return this completed form along with your CUPA documents to the Hazardous Materials Programs Office by March 3, 2008. **Forms postmarked after March 3, 2008 will be assessed a 50% late filling fee.**
• Do not send payments at this time. • Retain a copy for your records.

1. Determine how much hazardous waste your business generated during the **2007** calendar year.

Total Tonnage of Hazardous Waste Generated: Waste Oil ONLY

2007 HAZARDOUS WASTE GENERATOR CATEGORIES

Quantity of Hazardous Waste Generated	Fee Category #
Less than 5 tons	1
5 or more tons, but less than 25 tons	2
25 or more tons, but less than 50 tons	3
50 or more tons, but less than 250 tons	4
250 or more tons, but less than 500 tons	5
500 or more tons, but less than 1,000 tons	6
1,000 or more tons, but less than 2,000 tons	7
2,000 or more tons	8
Used Oil Only - See instructions on reverse	10

1. Using the table above, determine the Fee Category for your business. Categories will be verified during inspections. Discrepancies may result in additional fees and penalties.

Category: 10 KB

I hereby certify that this form, including any accompanying statements, is true and correct to the best of my knowledge and belief.

Signature: _____ Date: Jan 31, 2008

Print Name: Barrett M. Schreiber

Title: Administrative Intern Phone # (925) 646-5722

Forms postmarked after March 3, 2008 will be assessed a 50% late filling fee.

NOTE: If you check YES to any part of this list, please submit the Business Owner/Operator Identification page (OES Form 2730).

Does your facility...		If Yes, please complete these pages of the UPCF....
A. HAZARDOUS MATERIALS Have on site (for any purpose) at any one time, hazardous materials at or above 55 gallons for liquids, 500 pounds for solids, or 200 cubic feet for compressed gases (include liquids in ASTs and USTs); or the applicable Federal threshold quantity for an extremely hazardous substance specified in 40 CFR Part 355, Appendix A or B; or handle radiological materials in quantities for which an emergency plan is required pursuant to 10 CFR Parts 30, 40 or 70?	☑ YES ☐ NO 4	BUSINESS OWNER/OPERATOR IDENTIFICATION HAZARDOUS MATERIALS INVENTORY – CHEMICAL DESCRIPTION
B. REGULATED SUBSTANCES Have Regulated Substances stored onsite in quantities greater than the threshold quantities established by the California Accidental Release prevention Program (CalARP)?	☐ YES ☑ NO 4a	Coordinate with your local agency responsible for CalARP.
C. UNDERGROUND STORAGE TANKS (USTs) Own or operate underground storage tanks?	☐ YES ☑ NO 5	UST FACILITY UST TANK (one page per tank)
D. ABOVE GROUND PETROLEUM STORAGE Store greater than 1,320 gallons of petroleum products (new or used) in aboveground tanks or containers.	☑ YES ☐ NO 8	A SPCC plan is required.
E. HAZARDOUS WASTE Generate hazardous waste?	☑ YES ☐ NO 9	EPA ID NUMBER – provide at the top of this page
Recycle more than 100 kg/month of excluded or exempted recyclable materials (per HSC 25143.2)?	☐ YES ☑ NO 10	RECYCLABLE MATERIALS REPORT (one per recycler)
Treat hazardous waste on-site?	☐ YES ☑ NO 11	ON-SITE HAZARDOUS WASTE TREATMENT – FACILITY ON-SITE HAZARDOUS WASTE TREATMENT – UNIT (one page per unit)
Treatment subject to financial assurance requirements (for Permit by Rule and Conditional Authorization)?	☐ YES ☑ NO 12	CERTIFICATION OF FINANCIAL ASSURANCE
Consolidate hazardous waste generated at a remote site?	☐ YES ☑ NO 13	REMOTE WASTE / CONSOLIDATION SITE ANNUAL NOTIFICATION
Need to report the closure/removal of a tank that was classified as hazardous waste and cleaned on-site?	☐ YES ☑ NO 14	HAZARDOUS WASTE TANK CLOSURE CERTIFICATION
Generate in any single calendar month 1,000 kilograms (kg) (2,200 pounds) or more of federal RCRA hazardous waste, or generate in any single calendar month, or accumulate at any time, 1 kg (2.2 pounds) of RCRA acute hazardous waste; or generate or accumulate at any time more than 100 kg (220 pounds) of spill cleanup materials contaminated with RCRA acute hazardous waste.	☐ YES ☑ NO 14a	Obtain federal EPA ID Number, file Biennial Report (EPA Form 8700-13A/B), and satisfy requirements for RCRA Large Quantity Generator.
Household Hazardous Waste (HHW) Collection site?	☐ YES ☑ NO 14b	See CUPA for required forms.

Additional Comments: _____

This report may identify conditions observed this day that are alleged to be violations of one or more sections of the California Health and Safety Code (HSC) or the California Code of Regulations (CCR). The Violations may be described in more detail on an attached inspection sheet.

Failure to correct observed violations within the scheduled period provided may result in Contra Costa Health Services Hazardous Materials Programs (CCHSHMP) citing you for continuing and/or additional violations. Issuance of this Inspection Report does not preclude CCHSHMP from taking any administrative, civil, or criminal action as a result of the violations noted.

AUTHORIZATION

This document is issued based on the condition that the applicant and the facility is in compliance with all applicable rules, regulations and laws pertaining to these CUPA programs. Failure to comply with all applicable codes and regulations will null and void this authorization/permit. See attached conditions of approval for each CUPA Program.

Signature 
Printed name Randall L. Sawyer

Title Dir of Hazardous Materials Programs

Date Issued 07/01/2009

Expiration Date 06/30/2010

Retain a copy of the operating permit and all conditions and attachments, including monitoring plans, at the facility.

PERMIT CONDITIONS

Permit No: 77-0985 Facility CCC BYRON AIRPORT

In order to maintain the operating permit, the permit holder must comply with all regulatory requirements, to include, but not all inclusive of the number items below:

* The unified program agency or CUPA fee shall be paid for per county or city ordinance and/or state law, whichever is the more strict.
* Hazardous Materials Business Plan Program, CHSC Division 20, Chapter 6.95, Article 1 and Title 19 CCR.
  1. Changes in the hazardous materials inventory which include the handling of a previously undisclosed or handling double the amount of a previously disclosed hazardous material must be reported to the CUPA or Participating Agency (PA) within thirty (30) days.
  2. Major changes in the business plan, including the change of name or phone number of 24 hour emergency contacts, must be reported to the CUPA or PA within thirty (30) days.
* Hazardous Waste Generator Program: CHSC Division 20, Chapter 6.5 Articles 1-13, Section 25100 et seq., and Title 22 CCR Chapter 20.

Night Telephone#:	(925) 382-1713
Address:	550 Sally Ride Drive, Concord, CA 94520

Emergency Response Plan

In the event of a fire or a threatening Hazardous Materials release follow these emergency procedures immediately:

Assess the incident. Immediately and briefly assess the situation. Attempt to extinguish the fire or contain the threatening hazardous material spill if it can be done safely.

Evacuate the premises. If the fire or spill cannot be safely brought under control by on-site personnel, immediately evacuate the premises. Evacuate all personnel and customers from the premises by announcing: "THERE IS A (FIRE/HAZARDOUS MATERIALS SPILL) IN PROGRESS. PLEASE LEAVE THE PREMISES IMMEDIATELY THROUGH THE NEAREST SAFE EXIT." Make this announcement in a loud clear voice. Upon evacuating the premises, employees will meet at: The corner of Eagle Court and Falcon Way

Once employees meet at the designated assembly location, all employees will be accounted for and await further instructions.

Look Around. Before leaving, quickly look around to ensure that all others have vacated the premises, particularly those who might be working in remote areas of the premises. Assist or direct assistance to anyone having difficulty in evacuating.

Call for Help. DIAL 911. Give the following information:

- Your Name and Telephone Number
- Name and Address of the Facility
- Time and Type of Incident
- Name and Quantity of Materials Involved
- Extent of Injuries
- Possible Hazards to Human Health and the Environment

Inform the dispatcher if anyone is trapped. Stay on the phone and be prepared to answer questions concerning the situation (e.g., spill characteristics, source, quantities, and extent of area affected). If the telephones at the administration building are not usable, the nearest available telephones are located at: Bay Area Skydiving, 6900 Falcon Way, Byron, CA 94514

Help Injured Persons. Help all injured persons as much as possible.

Report to Emergency Responders. The emergency coordinator shall report to emergency response personnel immediately upon their arrival. The emergency coordinator shall provide the emergency response personnel with any information or assistance they request.

Immediately Notify. If the emergency situation is determined by the Emergency Coordinator to be a threat to human health or the environment, the Contra Costa County Health Services Department (CCCHSD), the State Office of Emergency Services (State O.E.S.), and the County O.E.S. must be immediately notified. Notify the CCCHSD at: (925) 335-3232, the State O.E.S. at: (800) 852-7550, and the County O.E.S at: (925) 228-5000. If the spill contains hazardous waste also notify Cal/EPA-DTSC at: (800) 698-6942. Be prepared to answer questions concerning the emergency situation.

Re-entry. Do not re-enter the premises until re-entry approval has been given by Fire Department or other authorized Emergency Personnel.

Submit. Submit a written follow-up spill notification to the State O.E.S. and the County Health Services Department. The report must include the following information:

- Name and Telephone Number of Reporter
- Name and Address of the Facility
- Time and Type of Incident
- Name and Quantity of Materials Involved
- Extent of Injuries
- Possible Hazards to Human Health and the Environment
- Estimated Quantities and Disposition of Recovered Material

Emergency Response Equipment. The emergency response equipment located on-site consists of the following:

- Fire Extinguishers
    - 30 located throughout the airport
- First Aid Kit
    - Administration Building

    - 1 in each airport vehicle
- Spill Control Equipment On-Site
    - Spill Kit which includes absorbent materials and shovels
- Location of Spill Equipment
    - Fuel Island, 100 yards southeast of the Administration Building
- Other Emergency Response Equipment
    - ARFF (Aircraft Rescue and Fire Fighting) truck

Following an Emergency, all Emergency Response Equipment must be restored to readiness.

Spill Response. If the spill response can be performed safely by on-site personnel, the following measures should be taken:

- Spill response personnel must utilize the appropriate personal protection.
- Stop the spill at its source to prevent the spill from increasing and entering into the storm drain system.
- Place the appropriate absorbent materials over the spilled materials and contain the boundaries of the spill.
- Special care must be taken to prevent the spill from reaching storm drains or unpaved areas.

The spill materials, along with the contaminated Spill Control Equipment, must be placed in an appropriate container and labeled as hazardous waste.

Employee Training Program

Training Coordinator: Kenton "K.C." Coyle

Day Telephone#: (925) 646-5722 (24-hour facility)

1. Every employee will be trained in the following:
   a. The facility's Contingency Plan.
   b. Proper handling, storage and spill prevention techniques associated with the Hazardous Materials located on-site.
   c. Proper use and maintenance of both Emergency Response and Personal Protective equipment.
   d. The human and environmental health hazards associated with the hazardous material on-site. This will include reviewing Material Safety and Data Sheets (MSDS).
   e. Emergency response training and simple spill remediation.
   f. The location, operations and maintenance of fire extinguishers and spill control equipment.
   g. Facility shutdown procedures.
   h. The location of the facility's Contingency Plan.
   i. Evacuation and re-entry procedures
   j. Chemical spills mitigation and prevention.
   k. Safe methods for storage and handling of materials.
   l. Procedures for rescue and containment.
   m. Procedures for shutdown of operations.
2. Refresher training will be given annually by management.
3. New employees will be trained immediately upon hire.
4. Employees receiving training will so attest by signing and dating the following training log. All training records will be continuously maintained on-site.

Aboveground Petroleum Storage Tanks Inspection/Compliance Checklist

FACILITY NAME	SITE ID	INSPECTION DATE
Byron Airport	770985	5/25/10

INSPECTION TYPE: (Routine / Follow-Up / Other)	VIOLATION CLASSIFICATIONS: M = Minor, Cl I = Major, Cl II = Medium / Repeat Minor	TOTAL QUANTITY
Routine		10k + 250 gal + 220 gal

Date facility began operations:	Date of initial SPCC Plan:	Date of current SPCC Plan:	FACILITY CAPACITY/CLASSIFICATION
> 10 years		2009	☐ EXEMPT ☐ < 10,000 ☒ ≥ 10,000 Qualified Facility: ☐ Tier I ☐ Tier II

Code of Federal Regulations (CFR) Title 40, Chapter 1, Subpart D, Part 112
California Health & Safety Code (HSC) Division 20, Chapter 6.67, Section 2570

Viol Code	Authority	Violation Description	Viol Class	Violation Due Date/ Violation Corrected
AS01	CFR 112.3	Failed to prepare a SPCC Plan		
AS02	CFR 112.5(a)(d)	Failed to review or amend SPCC Plan		
AS03	CFR 112.3(e)	SPCC Plan not available onsite		
AS04	CFR 112.7(e)	Failed to conduct inspections & tests in accordance with written procedures		
AS05	CFR 112.7(e)	Failed to maintain records of inspections, tests and/or procedures		
AS06	CFR 112.7(e)	Record of inspections or tests not signed by supervisor or inspector		
		SPCC PLAN ELEMENTS – Pursuant to 25270.4.5(a), 25270.12(a) / The SPCC Plan is missing the following elements:		
AS07	CFR 112.6(a)(1), (b)(1)	Self-certification for Tier I or II Qualified Facility		
AS08	CFR 112.3(d) & CFR 112.6(b)(4)	Professional Engineer certification		
AS09	CFR 112.5(b)	Documentation of 5-year review & evaluation of the SPCC Plan		
AS10	CFR 112.7(f)	Training program		
AS11	CFR 112.5(a), CFR 112.6(a)(2), (b)(2)	Amendments required within 6 months of change/certification of technical amendments		
AS12	CFR 112.7, CFR 112.6(a)	Management authorization of resource commitment to implement the SPCC Plan		
AS13	CFR 112.7(a)(3)	Diagram with location & contents of regulated containers, transfer stations & connecting pipes		
AS14	CFR 112.7(a)(3)	Type of oil & storage capacity for each container		
AS15	CFR 112.7(a)(3)	Discharge prevention measures; procedures for routine handling		
AS16	CFR 112.7(a)(3)	Countermeasures for discovery, response & cleanup		
AS17	CFR 112.7(a)(3)	Required contact list & phone numbers		
		GENERAL SPCC REQUIREMENTS – Pursuant to 25270.4.5(a), 25270.5 & 25270.12(a)		
AS18	CFR 112.8(c)(4), (c)(5), (d)(1)	Failed to provide corrosion protection		
AS19	CFR 112.8(c)(1)	Containers not compatible with materials stored		
AS20	CCR 112.5(a), (d)	Failed to implement SPCC Plan review changes and/or amendment changes within 6 months		
AS21	CFR 112.7(f)	Failed to train oil-handling personnel in operation & maintenance of equipment to prevent discharges		
AS22	CCR 112.7(f)(3)	Failed to conduct annual spill prevention briefings		
AS23	CFR 112.7(d)	Failed to prepare an oil contingency plan or provide written control/removal commitments		
		FACILITY INSPECTION – Pursuant to 25270.4.5, 25270.5 & 25270.12(a)		
AS24	H&SC 25270.4.5(b)	Failed to meet provisions of conditional exemption 25270.4.5(b)		
AS25	CFR 112.7(g)	Facility security not adequate		
AS26	CFR 112.7(c)	Clean-up materials not readily available		
AS27	CFR 112.8(c)	Tank in poor condition/leaking		
AS28	CFR 112.8(c)(8)	Overfill protection procedures or devices missing, not maintained or inoperative		
AS29	CFR 112.8(c)(11)	Portable/mobile containers not positioned to prevent a discharge		
AS30	CFR 112.7(h)	Loading/unloading rack does not drain to containment		
AS31	CFR 112.8(b)(c)	Facility drainage not functioning, or improperly operated or engineered		
AS32	CFR 112.8(a), CFR 112.7(c)	Failed to provide appropriate containment or diversionary structures to prevent discharge		
AS33	CFR 112.8(c)	Secondary containment inadequate to contain capacity of largest container plus precipitation		
AS34	CFR 112.8(c)(10)	Failed to remove accumulation of oil in secondary containment		
AS35	CFR 112.8	Secondary containment valve(s) not closed		
AS36	CFR 1123	Failed to implement SPCC Plan element:		
AS37	—	Other:

Storm Water Discharge Inspection/Compliance Checklist

FACILITY NAME	SITE ID	INSPECTION DATE
Byron Airport	770985	5/25/10

INSPECTION TYPE: Regular / Follow-Up	SIC CODE / NAICS	NOI Facility	WDID # or NPDES Permit #
Regular	4581	☒ Yes ☐ No	5B071002606

Minor: Correct within 30 days **Class I Violation**: Cease activity/mitigate immed.
Class II: Correct within 10 business days/before the next rain (whichever 1st)

Contra Costa Co. Code, Title 10 Public Works and Flood Control, Division 1014 Stormwater Management and Discharge Control; California Porter-Cologne Water Quality Control Act and Federal Clean Water Act incorporated by reference

Viol Code	Authority	Requirement	Viol Class	Violation Due Date/ Violation Corrected
SW01	1014-4.006	Illicit discharge to the Contra Costa County stormwater system. **"Illicit discharge" means any discharge to the county's stormwater system that is not composed entirely of stormwater,** except a discharge in compliance with a NPDES permit.		
SW02	1014-4.008	Discharge that results in or contributes to a violation of the Contra Costa County NPDES permit.		
SW03	1014-4.010	Unlawful drainage connection to the Contra Costa County stormwater system.		
SW04	1014-4.012(a)	Any person engaging in activities that may result in pollutants entering the county's stormwater system shall undertake all practicable measures to reduce such pollutants.		
SW05	1014-4.012(b)	No person shall throw, deposit, leave, or keep trash (discarded objects) in or upon any street, alley, sidewalk, business place, creek, stormwater system, fountain, pool, lake, stream, river or any other body of water, or upon any public or private parcel of land, except in containers or in lawfully established waste disposal facilities.		
SW06	1014-4.012(d)	Facility cleans paved parking lots, paved areas of gasoline stations, paved private roads, or related stormwater systems as frequently and thoroughly as practicable in a manner that does not result in the discharge of pollutants to the county's stormwater system.		
SW07	1014-4.012(g)	Facility complies with any and all applicable **Best Management Practices** adopted by any federal, state or local agency.		
SW08	1014-4.016(c)	Facility maintains a notification procedure, trains personnel in the procedures, and personnel make notifications of any release or suspected release of pollutants to the Contra Costa County Stormwater system.		
SW09	1014-4.016(c)	Facility takes all necessary steps to ensure the discovery, containment, and clean up of any release constituting an illicit discharge to the Contra Costa County stormwater system.		

Viol Code	Authority	Notice of Intent Facilities	Viol I / II	Viol Due Date/ Viol Corrected
SW10	1014-4.012(f)	Notice of intent filed with State Water Quality Control Board		
SW11	1014-4.012(h)	Facility has a Storm Water Pollution Prevention Plan (SWPPP).		
SW12	1014.4.012(f)	Facility has submitted the results of annual storm water runoff analyses to the State Water Quality Control Board.		

	Best Management Practices	Exist, Recommended or (f/u Inspxn) Implemented
BMP 1	Outdoor storage of materials with a potential for polluting (chemicals, wastes, equipment etc.) moved indoors; alternatively, materials raised above the ground and covered to prevent contact with run-off and rain.	
BMP 2	Vehicle and equipment washing located away from drains or any area with a potential for run-off to the County stormwater system.	
BMP 3	Adequate spill control and spill mitigation materials are available (e.g. absorbents, rags, booms, oil absorbent pads, etc).	
BMP 4	Minimal spills in storage area. All spills promptly addressed to prevent discharge to soil or surface water.	
BMP 5	Secondary containment in place for hazardous materials/wastes storage tanks and containers.	
BMP 6	Facility personnel are trained in the SWPPP and/or SPCC (Spill Prevention, Control and Countermeasures).	
BMP 7	Other existing or recommended BMPs (see continuation sheet for description).

Name	Title	Organization
Michael Ivy	Airport op. spec.	Facility
Tod Holsman	Specialist	CCHMP

Facility Description/Comments:

Airport facility; HWG, 2185, ACT, and SW programs. Very clean facility.

This report may identify conditions observed this day that are alleged to be violations of one or more sections of the California Health and Safety Code (HSC), the California Code of Regulations (CCR), Code of Federal Regulations (CFR), or Contra Costa County Code (CCC). A person who receives a Notice to Comply (NTC) detailing a minor violation shall have not more than 30 days from the date of the NTC in which to correct any violation cited. Within five working days of correcting the violation, an authorized representative shall sign the NTC certifying the violation(s) have been corrected and return the NTC to Contra Costa Health Services Hazardous Materials Programs (CCHSHMP).

Failure to correct observed violations within the scheduled period provided may result in CCHSHMP citing the facility for continuing and/or additional violations. Issuance of this Inspection Report does not preclude CCHSHMP from taking any administrative, civil, or criminal action as a result of the violations noted.

Consent includes inspecting hazardous material/waste handling areas, taking photographs, reviewing and copying documents, questioning personnel and sampling activities to determine compliance with applicable laws and regulations.

Emergency Response Plan

In the event of a fire or a threatening Hazardous Materials release follow these emergency procedures immediately:

Assess the incident. Immediately and briefly assess the situation. Attempt to extinguish the fire or contain the threatening hazardous material spill if it can be done safely.

Evacuate the premises. If the fire or spill cannot be safely brought under control by on-site personnel, immediately evacuate the premises. Evacuate all personnel and customers from the premises by announcing: "THERE IS A (FIRE/HAZARDOUS MATERIALS SPILL) IN PROGRESS. PLEASE LEAVE THE PREMISES IMMEDIATELY THROUGH THE NEAREST SAFE EXIT." Make this announcement in a loud clear voice. Upon evacuating the premises, employees will meet at: The corner of Eagle Court and Falcon Way
Once employees meet at the designated assembly location, all employees will be accounted for and await further instructions.

Look Around. Before leaving, quickly look around to ensure that all others have vacated the premises, particularly those who might be working in remote areas of the premises. Assist or direct assistance to anyone having difficulty in evacuating.

Call for Help. DIAL 911. Give the following information:

- Your Name and Telephone Number
- Name and Address of the Facility
- Time and Type of Incident
- Name and Quantity of Materials Involved
- Extent of Injuries
- Possible Hazards to Human Health and the Environment

Inform the dispatcher if anyone is trapped. Stay on the phone and be prepared to answer questions concerning the situation (e.g., spill characteristics, source, quantities, and extent of area affected). If the telephones at the administration building are not usable, the nearest available telephones are located at: Bay Area Skydiving, 6900 Falcon Way, Byron, CA 94514

Help Injured Persons. Help all injured persons as much as possible.

Report to Emergency Responders. The emergency coordinator shall report to emergency response personnel immediately upon their arrival. The emergency coordinator shall provide the emergency response personnel with any information or assistance they request.

Immediately Notify. If the emergency situation is determined by the Emergency Coordinator to be a threat to human health or the environment, the Contra Costa County Health Services Department (CCCHSD), the California Emergency Management Agency (CalEMS), and the County O.E.S. must be immediately notified. Notify the CCCHSD at: (925) 335-3232, CalEMS at: (800) 852-7550, and the County O.E.S at: (925) 228-5000. If the spill contains hazardous waste also notify Cal/EPA-DTSC at: (800) 698-6942. Be prepared to answer questions concerning the emergency situation.

Re-entry. Do not re-enter the premises until re-entry approval has been given by Fire Department or other authorized Emergency Personnel.

Submit. Submit a written follow-up spill notification to the State O.E.S. and the County Health Services Department. The report must include the following information:

- Name and Telephone Number of Reporter
- Name and Address of the Facility
- Time and Type of Incident
- Name and Quantity of Materials Involved
- Extent of Injuries
- Possible Hazards to Human Health and the Environment
- Estimated Quantities and Disposition of Recovered Material

Emergency Response Equipment. The emergency response equipment located on-site consists of the following:

- Fire Extinguishers
    - 30 located throughout the airport
- First Aid Kit
    - Administration Building

    - 1 in each airport vehicle
- Spill Control Equipment On-Site
    - Spill Kit which includes absorbent materials and shovels
- Location of Spill Equipment
    - Fuel Island, 100 yards southeast of the Administration Building
- Other Emergency Response Equipment
    - ARFF (Aircraft Rescue and Fire Fighting) truck

Following an Emergency, all Emergency Response Equipment must be restored to readiness.

Spill Response. If the spill response can be performed safely by on-site personnel, the following measures should be taken:

- Spill response personnel must utilize the appropriate personal protection.
- Stop the spill at its source to prevent the spill from increasing and entering into the storm drain system.
- Place the appropriate absorbent materials over the spilled materials and contain the boundaries of the spill.
- Special care must be taken to prevent the spill from reaching storm drains or unpaved areas.

The spill materials, along with the contaminated Spill Control Equipment, must be placed in an appropriate container and labeled as hazardous waste.

BUSINESS SITE CITY Bryon 104 | CA | ZIP CODE 94514 105

II. ACTIVITIES DECLARATION

NOTE: If you check YES to any part of this list, please submit the Business Owner/Operator Identification page.

Does your facility...	If Yes, please complete these pages of the UPCF....	
A. HAZARDOUS MATERIALS Have on site (for any purpose) at any one time, hazardous materials at or above 55 gallons for liquids, 500 pounds for solids, or 200 cubic feet for compressed gases (include liquids in ASTs and USTs); or the applicable Federal threshold quantity for an extremely hazardous substance specified in 40 CFR Part 355, Appendix A or B; or handle radiological materials in quantities for which an emergency plan is required pursuant to 10 CFR Parts 30, 40 or 70?	☒ YES ☐ NO 4	HAZARDOUS MATERIALS INVENTORY – CHEMICAL DESCRIPTION
B. REGULATED SUBSTANCES Have Regulated Substances stored onsite in quantities greater than the threshold quantities established by the California Accidental Release prevention Program (CalARP)?	☐ YES ☒ NO 4a	Coordinate with your local agency responsible for CalARP.
C. UNDERGROUND STORAGE TANKS (USTs) Own or operate underground storage tanks?	☐ YES ☒ NO 5	UST FACILITY (Formerly SWRCB Form A) UST TANK (one page per tank) (Formerly Form B)
D. ABOVEGROUND PETROLEUM STORAGE Own or operate ASTs above these thresholds: Store greater than 1,320 gallons of petroleum products (new or used) in aboveground tanks **or containers**.	☒ YES ☐ NO 8	A SPCC Plan is required
E. HAZARDOUS WASTE Generate hazardous waste?	☒ YES ☐ NO 9	EPA ID NUMBER – provide at the top of this page
Recycle more than 100 kg/month of excluded or exempted recyclable materials (per HSC 25143.2)?	☐ YES ☒ NO 10	RECYCLABLE MATERIALS REPORT (one per recycler)
Treat hazardous waste on-site?	☐ YES ☒ NO 11	ON-SITE HAZARDOUS WASTE TREATMENT – FACILITY ON-SITE HAZARDOUS WASTE TREATMENT – UNIT (one page per unit)
Treatment subject to financial assurance requirements (for Permit by Rule and Conditional Authorization)?	☐ YES ☒ NO 12	CERTIFICATION OF FINANCIAL ASSURANCE
Consolidate hazardous waste generated at a remote site?	☐ YES ☒ NO 13	REMOTE WASTE / CONSOLIDATION SITE ANNUAL NOTIFICATION
Need to report the closure/removal of a tank that was classified as hazardous waste and cleaned on-site?	☐ YES ☒ NO 14	HAZARDOUS WASTE TANK CLOSURE CERTIFICATION
Generate in any single calendar month 1,000 kilograms (kg) (2,200 pounds) or more of federal RCRA hazardous waste, or generate in any single calendar month, or accumulate at any time, 1 kg (2.2 pounds) of RCRA acute hazardous waste; or generate or accumulate at any time more than 100 kg (220 pounds) of spill cleanup materials contaminated with RCRA acute hazardous waste.	☐ YES ☒ NO 14a	Obtain federal EPA ID Number, file Biennial Report (EPA Form 8700-13A/B), and satisfy requirements for RCRA Large Quantity Generator.
Household Hazardous Waste (HHW) Collection site?	☐ YES ☒ NO 14b	See CUPA for required forms.

Emergency Response Plan

In the event of a fire or a threatening Hazardous Materials release follow these emergency procedures immediately:

Assess the incident. Immediately and briefly assess the situation. Attempt to extinguish the fire or contain the threatening hazardous material spill if it can be done safely.

Evacuate the premises. If the fire or spill cannot be safely brought under control by on-site personnel, immediately evacuate the premises. Evacuate all personnel and customers from the premises by announcing: "THERE IS A (FIRE/HAZARDOUS MATERIALS SPILL) IN PROGRESS. PLEASE LEAVE THE PREMISES IMMEDIATELY THROUGH THE NEAREST SAFE EXIT." Make this announcement in a loud clear voice. Upon evacuating the premises, employees will meet at: The corner of Eagle Court and Falcon Way

Once employees meet at the designated assembly location, all employees will be accounted for and await further instructions.

Look Around. Before leaving, quickly look around to ensure that all others have vacated the premises, particularly those who might be working in remote areas of the premises. Assist or direct assistance to anyone having difficulty in evacuating.

Call for Help. DIAL 911. Give the following information:

- Your Name and Telephone Number
- Name and Address of the Facility
- Time and Type of Incident
- Name and Quantity of Materials Involved
- Extent of Injuries
- Possible Hazards to Human Health and the Environment

Inform the dispatcher if anyone is trapped. Stay on the phone and be prepared to answer questions concerning the situation (e.g., spill characteristics, source, quantities, and extent of area affected). If the telephones at the administration building are not usable, the nearest available telephones are located at: Bay Area Skydiving, 6900 Falcon Way, Byron, CA 94514

Help Injured Persons. Help all injured persons as much as possible.

Report to Emergency Responders. The emergency coordinator shall report to emergency response personnel immediately upon their arrival. The emergency coordinator shall provide the emergency response personnel with any information or assistance they request.

Immediately Notify. If the emergency situation is determined by the Emergency Coordinator to be a threat to human health or the environment, the Contra Costa County Health Services Department (CCCHSD), the California Emergency Management Agency (CalEMS), and the County O.E.S. must be immediately notified. Notify the CCCHSD at: (925) 335-3232, CalEMS at: (800) 852-7550, and the County O.E.S at: (925) 228-5000. If the spill contains hazardous waste also notify Cal/EPA-DTSC at: (800) 698-6942. Be prepared to answer questions concerning the emergency situation.

Re-entry. Do not re-enter the premises until re-entry approval has been given by Fire Department or other authorized Emergency Personnel.

Submit. Submit a written follow-up spill notification to the State O.E.S. and the County Health Services Department. The report must include the following information:

- Name and Telephone Number of Reporter
- Name and Address of the Facility
- Time and Type of Incident
- Name and Quantity of Materials Involved
- Extent of Injuries
- Possible Hazards to Human Health and the Environment
- Estimated Quantities and Disposition of Recovered Material

Emergency Response Equipment. The emergency response equipment located on-site consists of the following:

- Fire Extinguishers
    - 30 located throughout the airport
- First Aid Kit
    - Administration Building

    - 1 in each airport vehicle
- Spill Control Equipment On-Site
    - Spill Kit which includes absorbent materials and shovels
- Location of Spill Equipment
    - Fuel Island, 100 yards southeast of the Administration Building
- Other Emergency Response Equipment
    - ARFF (Aircraft Rescue and Fire Fighting) truck

Following an Emergency, all Emergency Response Equipment must be restored to readiness.

Spill Response. If the spill response can be performed safely by on-site personnel, the following measures should be taken:

- Spill response personnel must utilize the appropriate personal protection.
- Stop the spill at its source to prevent the spill from increasing and entering into the storm drain system.
- Place the appropriate absorbent materials over the spilled materials and contain the boundaries of the spill.
- Special care must be taken to prevent the spill from reaching storm drains or unpaved areas.

The spill materials, along with the contaminated Spill Control Equipment, must be placed in an appropriate container and labeled as hazardous waste.

Inspector Lacey Friedman

This letter is in response to the inspection report issued on September 1, 2011 to Chevron Station #94306, located at 795 Oak Grove Rd. Concord, CA 94518.

Below is our response regarding the 2 items noted in the attached inspection report.

- BP01 Observed 24 hour contact phone number or Business Owner (800-231-0623) Operator page is not adequate for this use/purpose. Upon calling the number the "operator" said this number could not contact employee of the station at any time of day – instead operator said it was for Chevron notification after 9-1-1 had been called. Recommend this number be a 24 hour contact for station manager. Additionally Emergency Response binder "Operational + Emergency Assistance Contact List" should include CC Haz Mat number 925-335-3232 for spill, etc.

    - The Chevron Emergency Information Center is used for all station related emergencies. The on call person is able to get in contact with the appropriate person need to address the emergency. Per your inspection report dated 11/9/2011, you, Inspector Lacey Friedman rechecked the e Chevron Emergency Information Center and found it to be adequate.
    - In addition the CC Haz Mat number was added to the "Operational + Emergency Assistance Contact List".

- BP10 Noted employee Haz Mat Business Plan training not conducted for 2 employees present.

    - The Designated Operator Facility Employee Training Log was on site at the time of the inspection. The employees in question had been trained in 2010 and one year had not gone by requiring training. The employees were listed on the 2010 log. All of the logs have been put together to avoid this situation in the future. Enclosed are the training logs that were on site at the time of inspection.

Please contact me directly if you have any questions or concerns.

Sincerely,

Andrea Vilchis
UST Compliance Coordinator

Designated Operator Facility Employee Training Log
Chevron #94306

Section 2715 of Title 23, California Code of Regulations, requires that Designated Underground Storage Tank Operators provide training to facility employees who have responsibilities associated with the operation and/or maintenance of underground storage tank (UST) systems. This training must be provided by July 1, 2005, and every 12 months thereafter. For facility employees hired after July 1, 2005, the initial training must be provided within 30 days of the date of hire. At least one of the facility employees present during operating hours must have current training. This training must include, but is not limited to, the following items as specified in 23 CCR Sections 2715(f)(1) and (2):

- ☑ Operation of the UST system in a manner consistent with the facility's Best Management Practices;
- ☑ The employee's role with regard to UST monitoring equipment as specified in the written UST Monitoring Plan;
- ☑ The employee's role with regard to spills and overfills as specified in the written UST Response Plan;
- ☑ Name(s) of contact person(s) for emergencies and monitoring equipment alarms;
- ☑ For facilities that are not routinely staffed, facility employee responsibilities as specified in the training program approved by the local UST regulatory agency.

II. ACTIVITIES DECLARATION

NOTE: If you check YES to any part of this list, please submit the Business Owner/Operator Identification page.

Does your facility...	If Yes, please complete these pages of the UPCF....	
A. HAZARDOUS MATERIALS Have on site (for any purpose) at any one time, hazardous materials at or above 55 gallons for liquids, 500 pounds for solids, or 200 cubic feet for compressed gases (include liquids in ASTs and USTs); or the applicable Federal threshold quantity for an extremely hazardous substance specified in 40 CFR Part 355, Appendix A or B; or handle radiological materials in quantities for which an emergency plan is required pursuant to 10 CFR Parts 30, 40 or 70?	☒ YES ☐ NO 4	HAZARDOUS MATERIALS INVENTORY – CHEMICAL DESCRIPTION
B. REGULATED SUBSTANCES Have Regulated Substances stored onsite in quantities greater than the threshold quantities established by the California Accidental Release prevention Program (CalARP)?	☐ YES ☒ NO 4a	Coordinate with your local agency responsible for CalARP.
C. UNDERGROUND STORAGE TANKS (USTs) Own or operate underground storage tanks?	☐ YES ☒ NO 5	UST FACILITY (Formerly SWRCB Form A) UST TANK (one page per tank) (Formerly Form B)
D. ABOVEGROUND PETROLEUM STORAGE Own or operate ASTs above these thresholds: Store greater than 1,320 gallons of petroleum products (new or used) in aboveground tanks **or containers.**	☒ YES ☐ NO 8	A SPCC Plan is required
E. HAZARDOUS WASTE Generate hazardous waste?	☒ YES ☐ NO 9	EPA ID NUMBER – provide at the top of this page
Recycle more than 100 kg/month of excluded or exempted recyclable materials (per HSC 25143.2)?	☐ YES ☒ NO 10	RECYCLABLE MATERIALS REPORT (one per recycler)
Treat hazardous waste on-site?	☐ YES ☒ NO 11	ON-SITE HAZARDOUS WASTE TREATMENT – FACILITY ON-SITE HAZARDOUS WASTE TREATMENT – UNIT (one page per unit)
Treatment subject to financial assurance requirements (for Permit by Rule and Conditional Authorization)?	☐ YES ☒ NO 12	CERTIFICATION OF FINANCIAL ASSURANCE
Consolidate hazardous waste generated at a remote site?	☐ YES ☒ NO 13	REMOTE WASTE / CONSOLIDATION SITE ANNUAL NOTIFICATION
Need to report the closure/removal of a tank that was classified as hazardous waste and cleaned on-site?	☐ YES ☒ NO 14	HAZARDOUS WASTE TANK CLOSURE CERTIFICATION
Generate in any single calendar month 1,000 kilograms (kg) (2,200 pounds) or more of federal RCRA hazardous waste, or generate in any single calendar month, or accumulate at any time, 1 kg (2.2 pounds) of RCRA acute hazardous waste; or generate or accumulate at any time more than 100 kg (220 pounds) of spill cleanup materials contaminated with RCRA acute hazardous waste.	☐ YES ☒ NO 14a	Obtain federal EPA ID Number, file Biennial Report (EPA Form 8700-13A/B), and satisfy requirements for RCRA Large Quantity Generator.
Household Hazardous Waste (HHW) Collection site?	☐ YES ☒ NO 14b	See CUPA for required forms.

BP10	H&SC 25504(c) & 19CCR 2732	Annual hazardous materials/emergency response refresher component of the employee training program implemented and adequate.		
BP11	19CCR 2731(c) & H&SC 25503(e)(1)	Procedures in place to mitigate, prevent or abate hazards to persons, property or the environment from a release or threatened release of hazardous materials. **See back for Best Management Practices (BMP).**		
BP12	—	Other:		

See back for Best Management Practices (BMP)

Observation: CCHSHMP reviewed the 2012 Hazardous Materials Busines plan while onsite. Minor changes were made to the "largest container" size on the following materials: ① Aviation Fuel; ② Diesel Fuel; ③ Waste Oil.

An emergency response/contingency plan was available onsite for review. Employee training documentation on the emergency response/contingency plan was available. The last employee training was conducted in January/February 2012.

A site map is on file with CCHSHMP.

No violations observed.

Total Time for Review and Inspection (in 15 minute increments): 12 ☐ Notice to Comply ☐ Notice of Violation ☒ No Violations Observed

NATALIE OLESEN	AIRPORT OFFICE ASSISTANT	CONTRA COSTA COUNTY AIRPORT
BETH LEE	ASSISTANT DIRECTOR	" "
MICHAEL VITALICH	AIRPORT OPS SPEC.	" "

Facility Description/Comments: CCHSHMP is onsite to conduct the following routine inspections: ① HMBP; ② HWG; ③ APSA; ④ SWP.

ISSUANCE OF NOTICES:

A **NOTICE TO COMPLY** or **NOTICE OF VIOLATION** is issued to identify conditions observed this day that are alleged to be violations of one or more sections of the California Health and Safety Code (HSC), the California Code of Regulations (CCR), Code of Federal Regulations (CFR), or Contra Costa County Code (CCC). The facility may be subject to reinspection at any time by Contra Costa Health Services Hazardous Materials Programs (CCHSHMP) to ensure that observed violations cited on the Notices are corrected. Failure to correct violations within the scheduled period provided may result in CCHSHMP citing the facility for continuing or additional violations. Issuances of Notices do not preclude CCHSHMP from taking any administrative, civil, or criminal action as a result of the violations noted. (See back)

CONSENT:

Consent includes inspecting hazardous material/waste handling areas, taking photographs, reviewing and copying documents, questioning personnel and sampling activities to determine compliance with applicable laws and regulations.

Comments:

SPCC plan reviewed on 11/2/11

Observation: Overfill protection procedures not followed as stated in SPCC plan. Tank level controls 40 CFR 112.8(c)(8) Spcc plan requires waste oil tank to be pumped out @ 25% of capacity. In practice at Facility they are pumping of at 75% of capacity.

Violation (A328) 40 CFR 112.8(c)(8) Over Fill protection procedures not followed

Corrective Action: Update SPCC plan to reflect 75% of capacity of tank for pump OFF. Or change procedures to 25% of capacity. 4/13/12

Observation: Failed to conduct training for staff

Violation: Failed to conduct annual spill prevention briefings CCR 112.7 (f)(3)

Corrective Action: ~~Conduct~~ Conduct training on SPCC plan by 4/13/12

FACILITY NAME	ADDRESS	INSPECTION DATE
Contra Costa County Airports Division Byron Airport	500 Eagle Court Byron CA 94514	3/13/12
		SITE ID: 770985

INSPECTION TYPE: Routine / Follow-Up	SIC CODE / NAICS	NOI Facility	WDID # or NPDES Permit #	
Routine	4581	☒ Yes ☐ No	5B07S00266	**Minor**: Correct within 30 days **Class I Violation**: Cease activity/mitigate immed. **Class II**: Correct within 10 business days/before the next rain (whichever 1st)

SELF CERTIFIED – NO EXPOSE ☐ Yes ☐ No

Contra Costa Co. Code, Title 10 Public Works and Flood Control, Division 1014 Stormwater Management and Discharge Control; California Porter-Cologne Water Quality Control Act and Federal Clean Water Act Incorporated by reference

Viol Code	Authority CCCT10	Requirement	Viol Class	Violation Due Date/ Violation Corrected
SW01	1014-4.006	Illicit discharge to the Contra Costa County stormwater system. **"Illicit discharge" means any discharge to the county's stormwater system that is not composed entirely of stormwater,** except a discharge in compliance with a NPDES permit.		
SW02	1014-4.008	Discharge that results in or contributes to a violation of the Contra Costa County NPDES permit.		
SW03	1014-4.010	Unlawful drainage connection to the Contra Costa County stormwater system.		
SW04	1014-4.012(a)	Any person engaging in activities that may result in pollutants entering the county's stormwater system shall undertake all practicable measures to reduce such pollutants.		
SW05	1014-4.012(b)	No person shall throw, deposit, leave, or keep trash (discarded objects) in or upon any street, alley, sidewalk, business place, creek, stormwater system, fountain, pool, lake, stream, river or any other body of water, or upon any public or private parcel of land, except in containers or in lawfully established waste disposal facilities.		
SW06	1014-4.012(d)	Facility cleans paved parking lots, paved areas of gasoline stations, paved private roads, or related stormwater systems as frequently and thoroughly as practicable in a manner that does not result in the discharge of pollutants to the county's stormwater system.		
SW07	1014-4.012(g)	Facility complies with any and all applicable **Best Management Practices** adopted by any federal, state or local agency.		
SW08	1014-4.016(c)	Facility maintains a notification procedure, trains personnel in the procedures, and personnel make notifications of any release or suspected release of pollutants to the Contra Costa County Stormwater system.		
SW09	1014-4.016(c)	Facility takes all necessary steps to ensure the discovery, containment, and clean up of any release constituting an illicit discharge to the Contra Costa County stormwater system.		
Viol Code	**Authority CCCT10**	**Notice of Intent Facilities**	**Viol Class**	**Viol Due Date/ Viol Corrected**
SW10	1014-4.012(f)	Notice of intent filed with State Water Quality Control Board		
SW11	1014-4.012(h)	Facility has a Storm Water Pollution Prevention Plan (SWPPP).		
SW12	1014.4.012(f)	Facility has submitted the results of annual storm water runoff analyses to the State Water Quality Control Board.		

	Best Management Practices	**Exist - E, Recommended - R or (follow-up) Implemented - I**
BMP 1	Outdoor storage of materials with a potential for polluting (chemicals, wastes, equipment etc.) moved indoors; alternatively, materials raised above the ground and covered to prevent contact with run-off and rain.	I
BMP 2	Vehicle and equipment washing located away from drains or any area with a potential for run-off to the County stormwater system.	I
BMP 3	Adequate spill control and spill mitigation materials are available (e.g. absorbents, rags, booms, oil absorbent pads, etc).	I
BMP 4	Minimal spills in storage area. All spills promptly addressed to prevent discharge to soil or surface water.	I
BMP 5	Secondary containment in place for hazardous materials/wastes storage tanks and containers.	I
BMP 6	Facility personnel are trained in the SWPPP and/or SPCC (Spill Prevention, Control and Countermeasures).	I
BMP 7	Other existing or recommended BMPs (see continuation sheet for description).

NATALIE OLESEN	AIRPORT OFFICE ASSISTANT	CONTRA COSTA COUNTY AIRPORT
BETH LEE	ASSISTANT DIRECTOR	" "
MICHAEL VITALICH	AIRPORT OPS SPEC.	" "

Facility Description/Comments: CCHSHMP is onsite to conduct the following routine inspections: (1) HMBP; (2) HWG; (3) APSA; (4) SWP.

ISSUANCE OF NOTICES:

A **NOTICE TO COMPLY** or **NOTICE OF VIOLATION** is issued to identify conditions observed this day that are alleged to be violations of one or more sections of the California Health and Safety Code (HSC), the California Code of Regulations (CCR), Code of Federal Regulations (CFR), or Contra Costa County Code (CCC). The facility may be subject to reinspection at any time by Contra Costa Health Services Hazardous Materials Programs (CCHSHMP) to ensure that observed violations cited on the Notices are corrected. Failure to correct violations within the scheduled period provided may result in CCHSHMP citing the facility for continuing or additional violations. Issuances of Notices do not preclude CCHSHMP from taking any administrative, civil, or criminal action as a result of the violations noted. (See back)

CONSENT:

Consent includes inspecting hazardous material/waste handling areas, taking photographs, reviewing and copying documents, questioning personnel and sampling activities to determine compliance with applicable laws and regulations.

BUSINESS NAME (Same as Facility Name of DBA-Doing Business As) Contra Costa County – Byron Airport		[3]
BUSINESS SITE ADDRESS 500 Eagle Ct.		[103]
BUSINESS SITE CITY Byron [104]	CA ZIP CODE 94514	[105]

II. ACTIVITIES DECLARATION

NOTE: If you check YES to any part of this list, please submit the Business Owner/Operator Identification page.

Does your facility...	If Yes, please complete these pages of the UPCF....	
A. HAZARDOUS MATERIALS Have on site (for any purpose) at any one time, hazardous materials at or above 55 gallons for liquids, 500 pounds for solids, or 200 cubic feet for compressed gases (include liquids in ASTs and USTs); or the applicable Federal threshold quantity for an extremely hazardous substance specified in 40 CFR Part 355, Appendix A or B; or handle radiological materials in quantities for which an emergency plan is required pursuant to 10 CFR Parts 30, 40 or 70?	☒ YES ☐ NO 4	HAZARDOUS MATERIALS INVENTORY – CHEMICAL DESCRIPTION FOR EACH HAZARDOUS MATERIAL
B. REGULATED SUBSTANCES Have Regulated Substances stored onsite in quantities greater than the threshold quantities established by the California Accidental Release prevention Program (CalARP)?	☐ YES ☒ NO 4a	Coordinate with your local agency responsible for CalARP.
C. UNDERGROUND STORAGE TANKS (USTs) Own or operate underground storage tanks?	☐ YES ☒ NO 5	UST FACILITY (Formerly SWRCB Form A) UST TANK (one page per tank) (Formerly Form B)
D. ABOVEGROUND PETROLEUM STORAGE Own or operate ASTs above these thresholds: Store greater than 1,320 gallons of petroleum products (new or used) in aboveground tanks **or containers**?	☒ YES ☐ NO 8	Aboveground Petroleum Storage Tank Facility Statement (if not already on file) SPCC Plan is required
E. HAZARDOUS WASTE Generate hazardous waste?	☒ YES ☐ NO 9	EPA ID NUMBER – provide at the top of this page
Recycle more than 100 kg/month of excluded or exempted recyclable materials (per HSC 25143.2)?	☐ YES ☒ NO 10	RECYCLABLE MATERIALS REPORT (one per recycler)
Treat hazardous waste on-site?	☐ YES ☒ NO 11	ON-SITE HAZARDOUS WASTE TREATMENT – FACILITY ON-SITE HAZARDOUS WASTE TREATMENT – UNIT (one page per unit)
Treatment subject to financial assurance requirements (for Permit by Rule and Conditional Authorization)?	☐ YES ☒ NO 12	CERTIFICATION OF FINANCIAL ASSURANCE
Consolidate hazardous waste generated at a remote site?	☐ YES ☒ NO 13	REMOTE WASTE / CONSOLIDATION SITE ANNUAL NOTIFICATION
Need to report the closure/removal of a tank that was classified as hazardous waste and cleaned on-site?	☐ YES ☒ NO 14	HAZARDOUS WASTE TANK CLOSURE CERTIFICATION
Generate in any single calendar month 1,000 kilograms (kg) (2,200 pounds) or more of federal RCRA hazardous waste, or generate in any single calendar month, or accumulate at any time, 1 kg (2.2 pounds) of RCRA acute hazardous waste; or generate or accumulate at any time more than 100 kg (220 pounds) of spill cleanup materials contaminated with RCRA acute hazardous waste?	☐ YES ☒ NO 14a	Obtain federal EPA ID Number, file Biennial Report (EPA Form 8700-13A/B), and satisfy requirements for RCRA Large Quantity Generator.
Household Hazardous Waste (HHW) Collection site?	☐ YES ☒ NO 14b	See CUPA for required forms.

Does your facility…		If Yes, please complete these pages of the UPCF….
A. HAZARDOUS MATERIALS Have on site (for any purpose) at any one time, hazardous materials at or above 55 gallons for liquids, 500 pounds for solids, or 200 cubic feet for compressed gases (include liquids in ASTs and USTs); or the applicable Federal threshold quantity for an extremely hazardous substance specified in 40 CFR Part 355, Appendix A or B; or handle radiological materials in quantities for which an emergency plan is required pursuant to 10 CFR Parts 30, 40 or 70?	☒ YES ☐ NO 4	HAZARDOUS MATERIALS INVENTORY – CHEMICAL DESCRIPTION FOR EACH HAZARDOUS MATERIAL
B. REGULATED SUBSTANCES Have Regulated Substances stored onsite in quantities greater than the threshold quantities established by the California Accidental Release prevention Program (CalARP)?	☐ YES ☒ NO 4a	Coordinate with your local agency responsible for CalARP.
C. UNDERGROUND STORAGE TANKS (USTs) Own or operate underground storage tanks?	☐ YES ☒ NO 5	UST FACILITY (Formerly SWRCB Form A) UST TANK (one page per tank) (Formerly Form B)
D. ABOVEGROUND PETROLEUM STORAGE Own or operate ASTs above these thresholds: Store greater than 1,320 gallons of petroleum products (new or used) in aboveground tanks **or containers**?	☐ YES ☒ NO 8	Aboveground Petroleum Storage Tank Facility Statement (if not already on file) SPCC Plan is required
E. HAZARDOUS WASTE Generate hazardous waste?	☒ YES ☐ NO 9	EPA ID NUMBER – provide at the top of this page
Recycle more than 100 kg/month of excluded or exempted recyclable materials (per HSC 25143.2)?	☐ YES ☒ NO 10	RECYCLABLE MATERIALS REPORT (one per recycler)
Treat hazardous waste on-site?	☐ YES ☒ NO 11	ON-SITE HAZARDOUS WASTE TREATMENT – FACILITY ON-SITE HAZARDOUS WASTE TREATMENT – UNIT (one page per unit)
Treatment subject to financial assurance requirements (for Permit by Rule and Conditional Authorization)?	☐ YES ☒ NO 12	CERTIFICATION OF FINANCIAL ASSURANCE
Consolidate hazardous waste generated at a remote site?	☐ YES ☒ NO 13	REMOTE WASTE / CONSOLIDATION SITE ANNUAL NOTIFICATION
Need to report the closure/removal of a tank that was classified as hazardous waste and cleaned on-site?	☐ YES ☒ NO 14	HAZARDOUS WASTE TANK CLOSURE CERTIFICATION
Generate in any single calendar month 1,000 kilograms (kg) (2,200 pounds) or more of federal RCRA hazardous waste, or generate in any single calendar month, or accumulate at any time, 1 kg (2.2 pounds) of RCRA acute hazardous waste; or generate or accumulate at any time more than 100 kg (220 pounds) of spill cleanup materials contaminated with RCRA acute hazardous waste?	☐ YES ☒ NO 14a	Obtain federal EPA ID Number, file Biennial Report (EPA Form 8700-13A/B), and satisfy requirements for RCRA Large Quantity Generator.
Household Hazardous Waste (HHW) Collection site?	☐ YES ☒ NO 14b	See CUPA for required forms.
F. LOCAL REQUIREMENTS		15

CALIFORNIA ENVIRONMENTAL REPORTING SYSTEM (CERS)

CONSOLIDATED EMERGENCY RESPONSE / CONTINGENCY PLAN

Prior to completing this Plan, please refer to the INSTRUCTIONS FOR COMPLETING A CONSOLIDATED CONTINGENCY PLAN

A. FACILITY IDENTIFICATION AND OPERATIONS OVERVIEW

FACILITY ID # 07-000-770985 (1.) | CERS ID (A1.) | DATE OF PLAN PREPARATION/REVISION (A2.): 1/31/13

BUSINESS NAME *(Same as Facility Name or DBA - Doing Business As)* (3.): Contra Costa County - Buchanan Field Airport

BUSINESS SITE ADDRESS (103.): 550 Sally Ride Drive

BUSINESS SITE CITY (104.): Concord | CA | ZIP CODE (105.): 94520

TYPE OF BUSINESS (e.g., Painting Contractor) (A3.): Airport

INCIDENTAL OPERATIONS (e.g., Fleet Maintenance) (A4.): Self-Fueling, Aircraft Owner maintenance

THIS PLAN COVERS CHEMICAL SPILLS, FIRES, AND EARTHQUAKES INVOLVING: (Check all that apply) (A5.)

☒ 1. HAZARDOUS MATERIALS; ☒ 2. HAZARDOUS WASTES

RECEIVED
FEB 06 2013
Contra Costa Health
Hazardous Materials

B. INTERNAL RESPONSE

INTERNAL FACILITY EMERGENCY RESPONSE WILL OCCUR VIA: (Check all that apply) (B1.)

☒ 1. CALLING PUBLIC EMERGENCY RESPONDERS (i.e., 9-1-1)
☒ 2. CALLING HAZARDOUS WASTE CONTRACTOR
☒ 3. ACTIVATING IN-HOUSE EMERGENCY RESPONSE TEAM

C. EMERGENCY COMMUNICATIONS, PHONE NUMBERS AND NOTIFICATIONS

Whenever there is an imminent or actual emergency situation such as an explosion, fire, or release, the Emergency Coordinator (or his/her designee when the Emergency Coordinator is on call) shall:

1. Activate internal facility alarms or communications systems, where applicable, to notify all facility personnel.
2. Notify appropriate local authorities (i.e., call 9-1-1).
3. Notify the California Emergency Management Agency at (800) 852-7550.

Before facility operations are resumed in areas of the facility affected by the incident, the emergency coordinator shall notify the California Department of Toxic Substances Control (DTSC), the local Unified Program Agency (UPA), and the local fire department's hazardous materials program that the facility is in compliance with requirements to:

1. Provide for proper storage and disposal of recovered waste, contaminated soil or surface water, or any other material that results from an explosion, fire, or release at the facility; and
2. Ensure that no material that is incompatible with the released material is transferred, stored, or disposed of in areas of the facility affected by the incident until cleanup procedures are completed.

INTERNAL FACILITY EMERGENCY COMMUNICATIONS OR ALARM NOTIFICATION WILL OCCUR VIA: (Check all that apply) (C1.)

☒ 1. VERBAL WARNINGS; ☐ 2. PUBLIC ADDRESS OR INTERCOM SYSTEM; ☒ 3. TELEPHONE;
☐ 4. PAGERS; ☐ 5. ALARM SYSTEM; ☒ 6. PORTABLE RADIO

NOTIFICATIONS TO NEIGHBORING FACILITIES THAT MAY BE AFFECTED BY AN OFF-SITE RELEASE WILL OCCUR BY: (Check all that apply) (C2.)

☒ 1. VERBAL WARNINGS; ☐ 2. PUBLIC ADDRESS OR INTERCOM SYSTEM; ☒ 3. TELEPHONE;
☐ 4. PAGERS; ☐ 5. ALARM SYSTEM; ☐ 6. PORTABLE RADIO

EMERGENCY RESPONSE PHONE NUMBERS:

AMBULANCE, FIRE, POLICE AND CHP	9-1-1
CALIFORNIA EMERGENCY MANAGEMENT AGENCY (CAL/EMA)	(800) 852-7550
NATIONAL RESPONSE CENTER (NRC)	(800) 424-8802
POISON CONTROL CENTER	(800) 222-1222
LOCAL UNIFIED PROGRAM AGENCY (UPA/CUPA)	(925) 335-3232 (C3.)
OTHER (Specify): (C4.) COUNTY OFFICE OF EMERGENCY SERVICES	(925) 228-5000 (C5.)
NEAREST MEDICAL FACILITY / HOSPITAL NAME: (C6.) JOHN MUIR MEDICAL CENTER - CONCORD CAMPUS	(925) 682-8200 (C7.)

AGENCY NOTIFICATION PHONE NUMBERS:

CALIFORNIA DEPT. OF TOXIC SUBSTANCES CONTROL (DTSC)	(916) 255-3545
REGIONAL WATER QUALITY CONTROL BOARD	(510) 622-2369 (C8.)
U.S. ENVIRONMENTAL PROTECTION AGENCY (US EPA)	(800) 300-2193
CALIFORNIA DEPT OF FISH AND GAME (DFG)	(916) 358-2900
U.S. COAST GUARD	(202) 267-2180
CAL/OSHA	(916) 263-2800
STATE FIRE MARSHAL	(916) 445-8200
OTHER (Specify): (C9.) DIRECTOR OF AIRPORTS	(925) 646-5722 (C10.)
OTHER (Specify): (C11.)	( ) (C12.)

D. EMERGENCY CONTAINMENT AND CLEANUP PROCEDURES

SPILL PREVENTION, CONTAINMENT, AND CLEANUP PROCEDURES: (Check all boxes that apply to indicate your procedures for containing spills, releases, fires or explosions; and. preventing and mitigating associated harm to persons, property, and the environment.)

D1.

- ☒ 1. MONITOR FOR LEAKS, RUPTURES, PRESSURE BUILD-UP, ETC.;
- ☐ 2. PROVIDE STRUCTURAL PHYSICAL BARRIERS (e.g., Portable spill containment walls);
- ☒ 3. PROVIDE ABSORBENT PHYSICAL BARRIERS (e.g., Pads, pigs, pillows);
- ☒ 4. COVER OR BLOCK FLOOR AND/ OR STORM DRAINS;
- ☐ 5. BUILT-IN BERM IN WORK / STORAGE AREA;
- ☐ 6. AUTOMATIC FIRE SUPPRESSION SYSTEM;
- ☐ 7. ELIMINATE SOURCES OF IGNITION FOR FLAMMABLE HAZARDS (e.g. Flammable liquids, Propane);
- ☐ 8. STOP PROCESSES AND/OR OPERATIONS;
- ☐ 9. AUTOMATIC / ELECTRONIC EQUIPMENT SHUT-OFF SYSTEM;
- ☐ 10. SHUT-OFF WATER, GAS, ELECTRICAL UTILITIES AS APPROPRIATE;
- ☒ 11. CALL 9-1-1 FOR PUBLIC EMERGENCY RESPONDER ASSISTANCE / MEDICAL AID;
- ☒ 12. NOTIFY AND EVACUATE PERSONS IN ALL THREATENED AREAS;
- ☒ 13. ACCOUNT FOR EVACUATED PERSONS IMMEDIATELY AFTER EVACUATION CALL;
- ☒ 14. PROVIDE PROTECTIVE EQUIPMENT FOR ON-SITE RESPONSE TEAM;
- ☒ 15. REMOVE OR ISOLATE CONTAINERS / AREA AS APPROPRIATE;
- ☒ 16. HIRE LICENSED HAZARDOUS WASTE CONTRACTOR;
- ☒ 17. USE ABSORBENT MATERIAL FOR SPILLS WITH SUBSEQUENT PROPER LABELING, STORAGE, AND HAZARDOUS WASTE DISPOSAL AS APPROPRIATE;
- ☐ 18. SUCTION USING SHOP VACUUM WITH SUBSEQUENT PROPER LABELING, STORAGE, AND HAZARDOUS WASTE DISPOSAL AS APPROPRIATE;
- ☐ 19. WASH / DECONTAMINATE EQUIPMENT W/ CONTAINMENT and DISPOSAL OF EFFLUENT / RINSATE AS HAZARDOUS WASTE;
- ☒ 20. PROVIDE SAFE TEMPORARY STORAGE OF EMERGENCY-GENERATED WASTES;
- ☐ 21. OTHER (Specify):

D2.

E. FACILITY EVACUATION

THE FOLLOWING ALARM SIGNAL(S) WILL BE USED TO BEGIN EVACUATION OF THE FACILITY (CHECK ALL THAT APPLY): E1.

- ☐ 1. BELLS;
- ☐ 2. HORNS/SIRENS;
- ☒ 3. VERBAL (i.e., SHOUTING);
- ☐ 4. OTHER (Specify):

E2.

THE FOLLOWING LOCATION(S) IS/ARE EVACUEE EMERGENCY ASSEMBLY AREA(S) (i.e., Front parking lot, specific street corner, etc.) E3.

Field directly across from office @ 550 Sally Ride Drive

Note: The Emergency Coordinator must account for all on site employees and/or site visitors after evacuation.

☒ EVACUATION ROUTE MAP(S) POSTED AS REQUIRED E4.

Note: The map(s) must show primary and alternate evacuation routes, emergency exits, and primary and alternate staging areas, and must be prominently posted throughout the facility in locations where it will be visible to employees and visitors.

F. ARRANGEMENTS FOR EMERGENCY SERVICES

Explanation of Requirement: Advance arrangements with local fire and police departments, hospitals, and/or emergency services contractors should be made as appropriate for your facility. You may determine that such arrangements are not necessary.

ADVANCE ARRANGEMENTS FOR LOCAL EMERGENCY SERVICES (Check one of the following) F1.

- ☐ 1. HAVE BEEN DETERMINED NOT NECESSARY; *or*
- ☒ 2. THE FOLLOWING ARRANGEMENTS HAVE BEEN MADE (Specify): F2.

Letters of Agreement with Contra Costa Fire and Contra Costa County Sheriff's Office.

G. EMERGENCY EQUIPMENT

Check all boxes that apply to list emergency response equipment available at the facility and identify the location(s) where the equipment is kept and the equipment's capability, if applicable. [e.g., ☒ CHEMICAL PROTECTIVE GLOVES | Spill response kit | One time use, Oil & solvent resistant only.]

TYPE	EQUIPMENT AVAILABLE G1.	LOCATION	CAPABILITY *(If applicable)*
Safety and First Aid	1. ☐ CHEMICAL PROTECTIVE SUITS, APRONS, OR VESTS	G2.	G3.
	2. ☒ CHEMICAL PROTECTIVE GLOVES	G4. Spill cart	G5.
	3. ☒ CHEMICAL PROTECTIVE BOOTS	G6. Spill cart	G7.
	4. ☒ SAFETY GLASSES / GOGGLES / SHIELDS	G8. Spill cart	G9.
	5. ☒ HARD HATS	G10. with each Operation staff	G11.
	6. ☐ CARTRIDGE RESPIRATORS	G12.	G13.

	31. ☐ INTERCOM / PA SYSTEM	G62.	G63.
	32. ☒ PORTABLE RADIOS	G64. Operations staff & airport vehicle	G65.
	33. ☐ AUTOMATIC ALARM CHEMICAL MONITORING EQUIPMENT	G66.	G67.
Other	34. ☐ OTHER	G68.	G69.
	35. ☐ OTHER	G70.	G71.

H. EARTHQUAKE VULNERABILITY

Identify areas of the facility that are vulnerable to hazardous materials releases / spills due to earthquake-related motion. These areas require immediate isolation and inspection.

VULNERABLE AREAS: (Check all that apply) H1.	LOCATIONS (e.g., shop, outdoor shed, forensic lab)
☒ 1. HAZARDOUS MATERIALS / WASTE STORAGE AREA	Waste oil convaults, diesel tank H2.
☐ 2. PROCESS LINES / PIPING	H3.
☐ 3. LABORATORY	H4.
☐ 4. WASTE TREATMENT AREA	H5.

Identify mechanical systems vulnerable to releases / spills due to earthquake-related motion. These systems require immediate isolation and inspection.

VULNERABLE SYSTEMS: (Check all that apply) H6.	LOCATIONS
☐ 1. SHELVES, CABINETS AND RACKS	H7.
☐ 2. TANKS (EMERGENCY SHUTOFF)	H8.
☐ 3. PORTABLE GAS CYLINDERS	H9.
☐ 4. EMERGENCY SHUTOFF AND/OR UTILITY VALVES	H10.
☐ 5. SPRINKLER SYSTEMS	H11.
☐ 6. STATIONARY PRESSURIZED CONTAINERS (e.g., Propane dispensing tank)	H12.

I. EMPLOYEE TRAINING

Explanation of Requirement: Employee training is required for all employees handling hazardous materials and hazardous wastes in day-to-day or clean-up operations including volunteers and/or contractors. Training must be:

- Provided within 6 months for new hires;
- Amended as necessary prior to change in process or work assignment;
- Given upon modification to the Emergency Response / Contingency Plan, and updated/refreshed annually for all employees.

Required content includes all of the following:

- Material Safety Data Sheets;
- Hazard communication related to health and safety;
- Methods for safe handling of hazardous substances;
- Fire hazards of materials / processes;
- Conditions likely to worsen emergencies;
- Coordination of emergency response;
- Notification procedures;
- Applicable laws and regulations;
- Communication and alarm systems;
- Personal protective equipment;
- Use of emergency response equipment (e.g. Fire extinguishers, respirators, etc.);
- Decontamination procedures;
- Evacuation procedures;
- Control and containment procedures;
- UST monitoring system equipment and procedures (if applicable).

INDICATE HOW EMPLOYEE TRAINING PROGRAM IS ADMINISTERED (Check all that apply) I1.

☒ 1. FORMAL CLASSROOM; ☒ 2. VIDEOS; ☐ 3. SAFETY / TAILGATE MEETINGS;

☐ 4. STUDY GUIDES / MANUALS (Specify): _____ I2.

☒ 5. OTHER (Specify): emails I3.

☐ 6. NOT APPLICABLE BECAUSE FACILITY HAS NO EMPLOYEES

Large Quantity Generator (LQG) Training Records: Large quantity hazardous waste generators (i.e., who generate more than 270 gallons/1,000 kilograms of hazardous waste per month) must retain written documentation of employee hazardous waste management training sessions which includes:

- A written outline/agenda of the type and amount of both introductory and continuing training that will be given to persons filling each job position having responsibility for the management of hazardous waste (e.g., labeling, manifesting, compliance with accumulation time limits, etc.).
- The name, job title, and date of training for each hazardous waste management training session given to an employee filling such a job position; and
- A written job description for each of the above job positions that describes job duties and the skills, education, or other qualifications required of personnel assigned to the position.
- Current employee training records must be retained until closure of the facility.
- Former employee training records must be retained at least three years after termination of employment.

J. LIST OF ATTACHMENTS

(Check one of the following) J1.

☐ 1. NO ATTACHMENTS ARE REQUIRED; *or*

☐ 2. THE FOLLOWING DOCUMENTS ARE ATTACHED: J2.

K. SIGNATURE / CERTIFICATION

Certification: Based on my inquiry of those individuals responsible for obtaining the information, I certify under penalty of law that I have personally examined and am familiar with the information submitted and believe the information is true, accurate, and complete, and that a copy is available on site.

INCIDENTAL OPERATIONS (e.g., Hazardous Waste) (A4.): Self-Fueling, Aircraft owner maintenance

THIS PLAN COVERS CHEMICAL SPILLS, FIRES, AND EARTHQUAKES INVOLVING: (Check all that apply) (A5.)

☒ 1. HAZARDOUS MATERIALS; ☒ 2. HAZARDOUS WASTES

B. INTERNAL RESPONSE

INTERNAL FACILITY EMERGENCY RESPONSE WILL OCCUR VIA: (Check all that apply) (B1.)

☒ 1. CALLING PUBLIC EMERGENCY RESPONDERS (i.e., 9-1-1)
☒ 2. CALLING HAZARDOUS WASTE CONTRACTOR
☒ 3. ACTIVATING IN-HOUSE EMERGENCY RESPONSE TEAM

C. EMERGENCY COMMUNICATIONS, PHONE NUMBERS AND NOTIFICATIONS

Whenever there is an imminent or actual emergency situation such as an explosion, fire, or release, the Emergency Coordinator (or his/her designee when the Emergency Coordinator is on call) shall:

1. Activate internal facility alarms or communications systems, where applicable, to notify all facility personnel.
2. Notify appropriate local authorities (i.e., call 9-1-1).
3. Notify the California Emergency Management Agency at (800) 852-7550.

Before facility operations are resumed in areas of the facility affected by the incident, the emergency coordinator shall notify the California Department of Toxic Substances Control (DTSC), the local Unified Program Agency (UPA), and the local fire department's hazardous materials program that the facility is in compliance with requirements to:

1. Provide for proper storage and disposal of recovered waste, contaminated soil or surface water, or any other material that results from an explosion, fire, or release at the facility; and
2. Ensure that no material that is incompatible with the released material is transferred, stored, or disposed of in areas of the facility affected by the incident until cleanup procedures are completed.

INTERNAL FACILITY EMERGENCY COMMUNICATIONS OR ALARM NOTIFICATION WILL OCCUR VIA: (Check all that apply) (C1.)

☒ 1. VERBAL WARNINGS; ☐ 2. PUBLIC ADDRESS OR INTERCOM SYSTEM; ☒ 3. TELEPHONE;
☐ 4. PAGERS; ☐ 5. ALARM SYSTEM; ☒ 6. PORTABLE RADIO

NOTIFICATIONS TO NEIGHBORING FACILITIES THAT MAY BE AFFECTED BY AN OFF-SITE RELEASE WILL OCCUR BY: (Check all that apply) (C2.)

D. EMERGENCY CONTAINMENT AND CLEANUP PROCEDURES

SPILL PREVENTION, CONTAINMENT, AND CLEANUP PROCEDURES: (Check all boxes that apply to indicate your procedures for containing spills, releases, fires or explosions; and. preventing and mitigating associated harm to persons, property, and the environment.)

D1.

- ☒ 1. MONITOR FOR LEAKS, RUPTURES, PRESSURE BUILD-UP, ETC.;
- ☐ 2. PROVIDE STRUCTURAL PHYSICAL BARRIERS (e.g., Portable spill containment walls);
- ☒ 3. PROVIDE ABSORBENT PHYSICAL BARRIERS (e.g., Pads, pigs, pillows);
- ☒ 4. COVER OR BLOCK FLOOR AND/ OR STORM DRAINS;
- ☐ 5. BUILT-IN BERM IN WORK / STORAGE AREA;
- ☐ 6. AUTOMATIC FIRE SUPPRESSION SYSTEM;
- ☐ 7. ELIMINATE SOURCES OF IGNITION FOR FLAMMABLE HAZARDS (e.g. Flammable liquids, Propane);
- ☐ 8. STOP PROCESSES AND/OR OPERATIONS;
- ☐ 9. AUTOMATIC / ELECTRONIC EQUIPMENT SHUT-OFF SYSTEM;
- ☐ 10. SHUT-OFF WATER, GAS, ELECTRICAL UTILITIES AS APPROPRIATE;
- ☒ 11. CALL 9-1-1 FOR PUBLIC EMERGENCY RESPONDER ASSISTANCE / MEDICAL AID;
- ☒ 12. NOTIFY AND EVACUATE PERSONS IN ALL THREATENED AREAS;
- ☒ 13. ACCOUNT FOR EVACUATED PERSONS IMMEDIATELY AFTER EVACUATION CALL;
- ☒ 14. PROVIDE PROTECTIVE EQUIPMENT FOR ON-SITE RESPONSE TEAM;
- ☒ 15. REMOVE OR ISOLATE CONTAINERS / AREA AS APPROPRIATE;
- ☒ 16. HIRE LICENSED HAZARDOUS WASTE CONTRACTOR;
- ☒ 17. USE ABSORBENT MATERIAL FOR SPILLS WITH SUBSEQUENT PROPER LABELING, STORAGE, AND HAZARDOUS WASTE DISPOSAL AS APPROPRIATE;
- ☐ 18. SUCTION USING SHOP VACUUM WITH SUBSEQUENT PROPER LABELING, STORAGE, AND HAZARDOUS WASTE DISPOSAL AS APPROPRIATE;
- ☐ 19. WASH / DECONTAMINATE EQUIPMENT W/ CONTAINMENT and DISPOSAL OF EFFLUENT / RINSATE AS HAZARDOUS WASTE;
- ☒ 20. PROVIDE SAFE TEMPORARY STORAGE OF EMERGENCY-GENERATED WASTES;
- ☐ 21. OTHER (Specify):

D2.

E. FACILITY EVACUATION

THE FOLLOWING ALARM SIGNAL(S) WILL BE USED TO BEGIN EVACUATION OF THE FACILITY (CHECK ALL THAT APPLY): E1.

- ☐ 1. BELLS;
- ☐ 2. HORNS/SIRENS;
- ☒ 3. VERBAL (i.e., SHOUTING);
- ☐ 4. OTHER (Specify):

E2.

THE FOLLOWING LOCATION(S) IS/ARE EVACUEE EMERGENCY ASSEMBLY AREA(S) (i.e., Front parking lot, specific street corner, etc.) E3.

Corner of Eagle Ct. and Falcon Way

Note: The Emergency Coordinator must account for all on site employees and/or site visitors after evacuation.

☒ EVACUATION ROUTE MAP(S) POSTED AS REQUIRED E4.

Note: The map(s) must show primary and alternate evacuation routes, emergency exits, and primary and alternate staging areas, and must be prominently posted throughout the facility in locations where it will be visible to employees and visitors.

F. ARRANGEMENTS FOR EMERGENCY SERVICES

Explanation of Requirement: Advance arrangements with local fire and police departments, hospitals, and/or emergency services contractors should be made as appropriate for your facility. You may determine that such arrangements are not necessary.

ADVANCE ARRANGEMENTS FOR LOCAL EMERGENCY SERVICES (Check one of the following) F1.

- ☐ 1. HAVE BEEN DETERMINED NOT NECESSARY; *or*
- ☒ 2. THE FOLLOWING ARRANGEMENTS HAVE BEEN MADE (Specify):

F2.

Letters of Agreement with Contra Costa Fire and Contra Costa County Sheriff's Office

G. EMERGENCY EQUIPMENT

Check all boxes that apply to list emergency response equipment available at the facility and identify the location(s) where the equipment is kept and the equipment's capability, if applicable. [e.g., ☒ CHEMICAL PROTECTIVE GLOVES | Spill response kit | One time use, Oil & solvent resistant only.]

H. EARTHQUAKE VULNERABILITY

Identify areas of the facility that are vulnerable to hazardous materials releases / spills due to earthquake-related motion. These areas require immediate isolation and inspection.

VULNERABLE AREAS: (Check all that apply) H1.	LOCATIONS (e.g., shop, outdoor shed, forensic lab)
☒ 1. HAZARDOUS MATERIALS / WASTE STORAGE AREA	Fueling area, pump house, waste oil convault, OMH H2.
☐ 2. PROCESS LINES / PIPING	H3.
☐ 3. LABORATORY	H4.
☐ 4. WASTE TREATMENT AREA	H5.

Identify mechanical systems vulnerable to releases / spills due to earthquake-related motion. These systems require immediate isolation and inspection.

VULNERABLE SYSTEMS: (Check all that apply) H6.	LOCATIONS
☐ 1. SHELVES, CABINETS AND RACKS	H7.
☒ 2. TANKS (EMERGENCY SHUTOFF)	Fueling area, pump house H8.
☐ 3. PORTABLE GAS CYLINDERS	H9.
☐ 4. EMERGENCY SHUTOFF AND/OR UTILITY VALVES	H10.
☐ 5. SPRINKLER SYSTEMS	H11.
☐ 6. STATIONARY PRESSURIZED CONTAINERS (e.g., Propane dispensing tank)	H12.

I. EMPLOYEE TRAINING

Explanation of Requirement: Employee training is required for all employees handling hazardous materials and hazardous wastes in day-to-day or clean-up operations including volunteers and/or contractors. Training must be:

- Provided within 6 months for new hires;
- Amended as necessary prior to change in process or work assignment;
- Given upon modification to the Emergency Response / Contingency Plan, and updated/refreshed annually for all employees.

Required content includes all of the following:

- Material Safety Data Sheets;
- Hazard communication related to health and safety;
- Methods for safe handling of hazardous substances;
- Fire hazards of materials / processes;
- Conditions likely to worsen emergencies;
- Coordination of emergency response;
- Notification procedures;
- Applicable laws and regulations;
- Communication and alarm systems;
- Personal protective equipment;
- Use of emergency response equipment (e.g. Fire extinguishers, respirators, etc.);
- Decontamination procedures;
- Evacuation procedures;
- Control and containment procedures;
- UST monitoring system equipment and procedures (if applicable).

INDICATE HOW EMPLOYEE TRAINING PROGRAM IS ADMINISTERED (Check all that apply) I1.

☒ 1. FORMAL CLASSROOM; ☒ 2. VIDEOS; ☐ 3. SAFETY / TAILGATE MEETINGS;

☐ 4. STUDY GUIDES / MANUALS (Specify): _____ I2.

☒ 5. OTHER (Specify): emails I3.

☐ 6. NOT APPLICABLE BECAUSE FACILITY HAS NO EMPLOYEES

Large Quantity Generator (LQG) Training Records: Large quantity hazardous waste generators (i.e., who generate more than 270 gallons/1,000 kilograms of hazardous waste per month) must retain written documentation of employee hazardous waste management training sessions which includes:

- A written outline/agenda of the type and amount of both introductory and continuing training that will be given to persons filling each job position having responsibility for the management of hazardous waste (e.g., labeling, manifesting, compliance with accumulation time limits, etc.).
- The name, job title, and date of training for each hazardous waste management training session given to an employee filling such a job position; and
- A written job description for each of the above job positions that describes job duties and the skills, education, or other qualifications required of personnel assigned to the position.
- Current employee training records must be retained until closure of the facility.
- Former employee training records must be retained at least three years after termination of employment.

J. LIST OF ATTACHMENTS

(Check one of the following) J1.

Facility Description/Comments:

ISSUANCE OF NOTICES:

A **NOTICE TO COMPLY** or **NOTICE OF VIOLATION** is issued to identify conditions observed this day that are alleged to be violations of one or more sections of the California Health and Safety Code (HSC), the California Code of Regulations (CCR), Code of Federal Regulations (CFR), or Contra Costa County Code (CCC). The facility may be subject to reinspection at any time by Contra Costa Health Services Hazardous Materials Programs (CCHSHMP) to ensure that observed violations cited on the Notices are corrected. Failure to correct violations within the scheduled period provided may result in CCHSHMP citing the facility for continuing or additional violations. Issuances of Notices do not preclude CCHSHMP from taking any administrative, civil, or criminal action as a result of the violations noted. (See back)

CONSENT:

Consent includes inspecting hazardous material/waste handling areas, taking photographs, reviewing and copying documents, questioning personnel and sampling activities to determine compliance with applicable laws and regulations.

Memo

December 22, 2014

TO: Contra Costa County Safety Coordinators

FROM: Brian Balbas, Deputy Director

SUBJECT: CUPA Reporting and Workshop for County Facilities

In the past, Public Works, Hazardous Materials and Risk Management have partnered to train and assist County departments that handle hazardous materials and wastes with their State-mandated, Certified Unified Program Agency (CUPA) submittals.

These submissions were traditionally done on paper, but in 2014, the State required these documents to be submitted online through the Environmental Protection Agency's California Environmental Reporting System (CERS) program.

While Public Works assists with the maintenance and inspections of the equipment and materials, by regulation it is the responsibility of each facility or "handler" to submit these documents to CERS annually.

Health and Safety Code, Section 25506. (a) The secretary, in coordination with the office, shall specify the hazardous materials inventory that shall be submitted by **handlers** and the data to be collected and submitted for hazardous materials in quantities equal to or greater than the quantities specified in Section 25507 or as otherwise established by the governing body of the unified program agency by a local ordinance.

(http://codes.lp.findlaw.com/cacode/HSC/1/d20/6.95/1/s25506).

Health and Safety Code, Section 25501(l) and (m) defines "Handle" as those who use, generate, process, produce, package, treat, store, emit, discharge, or dispose of a hazardous material in any fashion and "Handler" as a business that handles a hazardous material.

http://www.leginfo.ca.gov/pub/13-14/bill/sen/sb_1251-1300/sb_1261_bill_20140928_chaptered.pdf

In order to assist departments and building managers with CERS submissions, Public Works, Hazardous Materials, and Risk Management have partnered again to create two hands-on workshops in February. These workshops will enable attendees to complete their online submissions during the workshop in a simple and efficient manner. By law, submittals to CERS are required by March 1, 2015.

SAVE THE DATE:

WHO: All County Facility Managers with Hazardous Materials and Waste

WHAT: **CC COUNTY CUPA SUBMISSION WORKSHOP**

Facility representatives who have their CERS log-on and password will be able to complete their CUPA submittal by the end of the workshop. Computers will be provided and HazMat and Public Works will have representatives available to provide the documents and maps that are required for compliance.

WHEN: 2/12/2015 from 10:00 am – 12:00 pm, or

2/17/2015 from 1:00 pm – 3:00 pm

WHERE: Risk Management Training Room, 2530 Arnold Drive, Suite 125, Martinez

HOW: Email **targetsafety@riskm.cccounty.us** to enroll in the workshop.

If you have any questions or concerns, please contact me at (925) 313-2284 or Doug Parker at (925) 335-3662.

December 29, 2014

Subject: Certified Unified Program Agency (CUPA) Submittal for 2015

Dear Ccc Byron Airport:

All regulated businesses are required to review and submit information regarding the annual Hazardous Materials Business Plan, Hazardous Waste Generator Reporting, Underground Storage Tanks, Aboveground Storage Tanks, and/or California Accidental Release Prevention Program annually (CUPA data). State Law (Assembly Bill 2286) now requires your business to report this information electronically. Contra Costa County requires all facilities to use the California Environmental Reporting System (CERS) to submit this information: http://cers.calepa.ca.gov/.

All regulated businesses must use CERS to submit their 2015 CUPA data between January 1, 2015 and March 2, 2015. **All 2015 CUPA data must be submitted by March 2, 2015.**

As of December 29, 2014, your facility is registered in the following CUPA programs:

HAZARDOUS MATERIALS BUSINESS PLAN PROGRAM
HAZARDOUS WASTE GENERATOR PROGRAM
ABOVEGROUND PETROLEUM STORAGE ACT PROGRAM

For your convenience, the reverse side of this letter identifies the required CERS submittal element(s) for each CUPA program.

Assistance with submitting a complete and correct CERS submittal may be obtained by:

1. Visiting our website at: http://cchealth.org/hazmat/
2. Requesting to attend one of the CERS training classes offered by CCHSHMP (see enclosure)

If you have any questions regarding the 2015 CUPA submittal, please contact us at (925) 335-3200.

Sincerely,

Randall L. Sawyer
Chief Environmental Health and Hazardous Materials Officer
Contra Costa County

Hi Beth,

Contra Costa Health Services Hazardous Materials Programs has partnered with Contra Costa County Risk Management to offer classes for Contra Costa County facilities only. I will be sending you an email with the options for classes being offered. Therefore, I will cancel your request to attend the all facilities training on Tuesday, February 10, 2015.

I apologize for the confusion.

Kind Regards,

Matt Kaufmann

Subject: Certified Unified Program Agency (CUPA) Submittal for 2016

As a regulated business, your facility is required to review and submit information regarding the Hazardous Materials Business Plan, Hazardous Waste Generator, Underground Storage Tanks, Aboveground Petroleum Storage Act, and/or California Accidental Release Prevention Programs annually (CUPA data). State Law requires your business to report this information electronically.

Contra Costa Health Services Hazardous Materials Programs (CCHSHMP) requires the annual CUPA data to be submitted through the California Environmental Reporting System (CERS) (http://cers.calepa.ca.gov/) between **January 1, 2016 and March 1, 2016.**

Based on the 2015 CUPA data submitted by CCC BYRON AIRPORT, the following CUPA data submittal elements are required by **March 1, 2016**:

- ☐ **FACILITY INFORMATION**
- ☐ **HAZARDOUS MATERIALS INVENTORY**
- ☐ **EMERGENCY RESPONSE AND TRAINING PLANS**
- ☐ **ABOVEGROUND PETROLEUM STORAGE ACT (ONLY IF CHANGES HAVE OCCURRED SINCE LAST SUBMITTAL)**

A 2016 Hazardous Waste Generator Reporting Form is enclosed. This form must be completed and submitted to CCHSHMP by March 1, 2016 as part of the CUPA data submittal if your facility is in the Hazardous Waste Generator Program.

Assistance with submitting a complete CUPA submittal in CERS may be obtained by:

1. Visiting our website at: http://cchealth.org/hazmat/
2. Requesting to attend one of the CERS training classes (see enclosure)

If you have any questions regarding the 2016 submittal in CERS, please contact us at (925) 335-3200.

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Dudek & Associates were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

1 Introduction

1.1 Purpose and Scope of the TIA

The purpose of this Transportation Impact Analysis (TIA) is to identify traffic impacts associated with the Byron Airport Development Program (proposed project) located in Contra Costa County (County). This TIA has been prepared per the Contra Costa County Transportation Analysis Guidelines (TAG) and complies with the Contra Costa County General Plan Transportation and Circulation Element requirements, as well as methodologies outlined in the East County Action Plan (ECAP).

The objectives of this TIA are to:

- Document existing roadway, pedestrian, bicycle, transit and traffic conditions, including intersection levels of service in the study area;
- Estimate trip generation, distribution, and assignment characteristics for the proposed project;
- Provide a Vehicle Miles Traveled (VMT) analysis per Senate Bill 743 (SB 743), the updated California Environmental Quality Act (CEQA) Guidelines, and the Contra Costa Guidelines;
- Determine traffic levels of service (LOS) for study area intersections under the Existing and Future Year 2040 conditions;
- Identify CEQA-required mitigation measures for significant transportation impacts and/or other improvements needed to meet LOS standards (if any); and,
- Provide findings and recommendations based on the traffic analysis of the proposed project.

Figure 1 shows the project location and study area as approved by County Transportation Planning section. As shown in Figure 1, the study area is comprised of the following 16 intersections and 5 Routes of Regional Significance designated in the ECAP:

Intersections

1. Byron Highway/Holey Road
2. Byron Highway/Byron Hot Springs Road
3. Byron Highway/Camino Diablo
4. Holway Drive/Camino Diablo
5. Byron Highway/Holway Drive
6. Byron Highway/State Route 4 (SR-4)
7. Vasco Road/Camino Diablo
8. Walnut Boulevard/Vasco Road
9. SR-4 – Vasco Road/Marsh Creek (SR-4)
10. Walnut Boulevard/Marsh Creek Road (SR-4)
11. Byron Highway (SR-4)/Marsh Creek Road (SR-4)
12. Discovery Bay Boulevard/SR-4

13. Byron Road/Mountain House Parkway
14. Byron Road/Grant Line Road

16. Mountain House Parkway/I-205 eastbound ramps

Routes of Regional Significance

17. SR-4 – Marsh Creek Road
18. Vasco Road
19. Walnut Boulevard
20. Byron Highway
21. Camino Diablo

1.2 Project Description and Location

Byron Airport is located in the southeastern portion of the County, approximately 2.5 miles south of the community of Byron. The project site consists of the approximately 1,307-acre Byron Airport property south of Armstrong Road, and the 11.7-acre parcel located between the airport property and the Bethany Irrigation District Canal, for a total of 1,319 acres. Byron Airport also owns an additional 120 acres north of Armstrong Road that is not part of the project site.

The Byron Airport Development Program proposes to update the Airport Land Use Compatibility Plan (ALUCP) to reflect the latest planning and forecasts for the airport. The standards used in the current ALUCP for Byron Airport are based on the 1993 edition of the Airport Land Use Planning Handbook (Handbook). Caltrans has updated this guidance document twice since that time, in 2002 and 2011 (Caltrans 2011). Thus, the current ALUCP for Byron Airport does not reflect the latest planning and forecasts for the airport, and is based on dated compatibility planning guidance. The Airport Layout Plan was updated in 2016, and this is not reflected in the current ALUCP for Byron Airport. The proposed ALUCP update for Byron Airport would provide for lower development intensity than is allowed by the Handbook.

The airport property is currently zoned P-1, for Planned Unit District (Contra Costa County 2005). Currently, the Byron Airport P-1 zoning only allows aviation-related uses, agriculture, and open space. The amended Planned Unit District will identify four separate development areas: Aviation, Airport Related, Low-Intensity Use, and Habitat Management, as shown in Figure 2, Development Area and Safety Zones (which includes an overlay of the proposed ALUCP safety zones). The most important change would be to the airport-related uses, which would allow non-residential development that is compatible with the ALUCP for Byron Airport. These uses would include light industry, warehousing and logistics, commercial, and low-intensity office. In addition, the 11.7-acre parcel to be acquired by the County would be rezoned from Agriculture (A-3) to P-1. The size and location of each proposed development area shown in Figure 2 serves as the basis for project-related trip generation and distribution throughout the study area.

1.3 Analysis Methodology and Significance Thresholds

1.3.1 Vehicle Miles Traveled (VMT) Analysis for CEQA

On September 27, 2013, Senate Bill (SB) 743 was signed into law, which created a process to change the way that transportation impacts are analyzed under California Environmental Quality Act (CEQA). SB 743 required the Governor's Office of Planning and Research (OPR) to amend the CEQA Guidelines to provide an alternative to level of service (LOS) for evaluating transportation impacts. Under the new transportation guidelines, LOS, or vehicle delay, will no longer be considered an environmental impact under CEQA. OPR recommended Vehicle Miles Traveled (VMT) as the most appropriate measure of project transportation impacts for land use projects and land use plans. The updates to the CEQA Guidelines required under SB 743 were approved on December 28, 2018.

The Updated CEQA Guidelines state that "*…generally, vehicle miles traveled (VMT) is the most appropriate measure of transportation impacts…*" and define VMT as "*…the amount and distance of automobile travel attributable to a project…*". It should be noted that "automobile" refers to on-road passenger vehicles, specifically cars and light trucks. Heavy-duty truck VMT could be included for modeling convenience and ease of calculation (for example, where models or data provide combined auto and heavy truck VMT). Other relevant considerations may include the effects of the project on transit and non-motorized travel.

The new transportation impact guidelines were adopted for statewide implementation on July 1, 2020. The County of Contra Costa adopted Contra Costa County Transportation Analysis Guidelines (TAG), on June 23, 2020 and those guidelines have been used in the project's VMT analysis.

1.3.1.2 VMT Metric and Thresholds of Significance

Consistent with the OPR guidelines, the following specific VMT metrics are recommended by the County to complete a VMT impact assessment:

- **Residential Projects:** VMT per resident for all home-based trips.
- **Employment Projects:** VMT per employee for only the home-based-work trip purpose and would apply to office, industrial, and institutional projects.
- **Regional Retail (>50,000 square feet):** Total VMT per service population for trips taken by both workers and visitors.
- **Mixed-Use:** Total VMT per service population.
- **Other:** Total VMT per service population for trips taken by both workers and visitors.

The project proposes a mix of office, warehousing and commercial land uses and therefore is considered to be an employment project. Therefore, home-based work VMT per employee metric was chosen for the project's VMT analysis.

A proposed project should be considered to have a significant impact if the project VMT is greater than:

- **Employment Projects** (office, industrial and institutional projects): 15% below the Bay Area average commute VMT per employee.

The project's detailed VMT analysis was conducted using the Contra Costa Countywide Travel Demand Model and is provided in Chapter 4 of the TIA.

For significant VMT impacts found, appropriate VMT reduction strategies such as the implementation of Transportation Demand Management (TDM) measures, or other VMT-reducing measures, have been provided to mitigate project impacts.

1.3.2 Level of Service (LOS) for General Plan Consistency

Level of service (LOS) is commonly used as a qualitative description of intersection operations and Routes of Regional Significance and is based on the design capacity of the intersection configuration and roadway facility, compared to the volume of traffic using the facility.

The study area intersections and Routes of Regional Significance are analyzed in the TIA for the following scenarios per the Contra Costa County Transportation Analysis Guidelines (Contra Costa County 2020) and per the guidelines established in the Contra Costa Transportation Authority Technical Procedures (CCTA 2013):

Existing Condition

The TIA includes a description of existing traffic conditions in the site vicinity, including existing intersections and Routes of Regional Significance weekday AM and PM peak hour traffic volumes, and traffic operations. The existing condition is representative of the year 2015 which is consistent with the project's Notice of Preparation (NOP) and Draft Environmental Impact Report (DEIR).

Existing plus Project Condition

This condition includes analysis of traffic operations under existing conditions with project-related traffic, added to the existing AM and PM peak hour intersection and Routes of Regional Significance traffic volumes. The resulting LOS specific to the project under this condition were used as the basis for determining project's direct changes to intersection and roadway LOS.

Future Year 2040 Condition

This condition includes analysis of horizon year conditions with the implementation of all approved land use changes and any development that is consistent with the General Plan and expected to occur within the time frame of the project. Transportation projects programmed for implementation prior to the horizon year and any programmed capital improvements are also included in this condition.

Future Year 2040 plus Project Condition

This condition includes analysis of traffic operations under the Cumulative (Year 2040) (described above) condition with project-related traffic added to the AM and PM peak hour traffic volumes. The resulting LOS specific to the project under this condition were used as the basis for determining the project's contribution to cumulative LOS.

1.3.2.1 Intersections

The Highway Capacity Manual, 6th Edition (HCM 6) methodology was used to assess level of service for intersections within the study area per requirement of the respective jurisdiction.

The HCM intersection analysis methodology was used to analyze the operation of signalized and unsignalized study intersections. The HCM analysis methodology describes the operation of an intersection using a range of LOS from LOS A (free-flow conditions) to LOS F (severely congested conditions), based on the corresponding control delay experienced per vehicle for unsignalized intersections. The Synchro 10 LOS software was used to determine intersection LOS. Synchro is consistent with the HCM 6 methodology (TRB 2016). Table 1 shows the LOS values by delay ranges for unsignalized and signalized intersections under the HCM methodology.

Table 1. Levels of Service for Intersections using HCM Methodology

Level of Service	Unsignalized Intersections Control Delay (in seconds per vehicle)	Signalized Intersections Control Delay (in seconds per vehicle)
A	< 10.0	< 10.0
B	> 10.0 to < 15.0	> 10.0 to < 20.0
C	> 15.0 to < 25.0	> 20.0 to < 35.0
D	> 25.0 to < 35.0	> 35.0 to < 55.0
E	> 35.0 to < 50.0	> 55.0 to < 80.0
F	> 50.0	> 80.0

Source: HCM 6, 2016.

1.3.2.2 Routes of Regional Significance

Routes of Regional Significance are defined in the East County Action Plan as:

All portions of the Interstate and State highway systems, as well as major arterial roadways that service one or more of the following functions:

- *Connects two or more "regions" of the County*
- *Crosses County boundaries*
- *Carries a significant amount of through traffic*
- *Provides access to a regional highway or transit facility (e.g., a BART station or freeway interchange)*

As identified in Chapter 1, five roadways within the study area are designated as Routes of Regional Significance. The ECAP further organizes Routes of Regional Significance into four categories, each with specific multimodal transportation service objectives (MTSOs). A summary of these categories and their respective MTSOs if provided in Table 2 below.

Table 2. MTSO Summary for Routes of Regional Significance

Route of Regional Significance Category	MTSO Measure
Freeways	Delay Index
Suburban Arterial Routes	Signalized Intersection LOS
Rural Roads	Roadway Segment LOS
Freeways with HOV Lanes	HOV Lane Usage

Source: East County Action Plan (CCTA 2017a)

All five Routes of Regional Significance included in this TIA are identified as "rural roads" and are analyzed utilizing roadway segment evaluation criteria, as outlined in Chapter 15 of the Highway Capacity Manual (TRB 2016) through the Highway Capacity Software 7 (HCS 7). The ECAP identifies the following MTSO for rural roads:

- *Peak hour level-of-service shall not exceed level-of-service D for non-signalized rural roadways*

The Route of Regional Significance analysis is based on assessing roadway segments operations based on traffic volumes, roadway network and other segment-specific characteristics, and reporting speed and follower density. Follower density is a measure of the number of followers per mile per lane, which is used to determine LOS, and is a function of the percent of followers, flow rate, and the time mean speed. Table 3 presents the roadway segment criteria based on the service measure of follower density.

Table 3. Levels of Service for Two-Lane Highways

Level of Service	Follower Density (followers/mi/ln) for speeds ≥ 50 mph	Follower Density (followers/mi/ln) for speeds < 50 mph
A	FD ≤ 2	FD ≤ 2.5
B	2 < FD ≤ 4	2.5 < FD ≤ 5
C	4 < FD ≤ 8	5 < FD ≤ 10
D	8 < FD ≤ 12	10 < FD ≤ 15
E	12 < FD ≤ 99	15 < FD ≤ 99
F	>99	>99

Source: HCM 6; HCS 7
[1] followers/mi/ln– Followers per mile per lane
[2] mph = miles per hour

1.3.2.3 General Plan Consistency Requirements

Consistent with the acceptable LOS in the local agency's General Plan, the local agency may consider the following criteria for application in this traffic study to identify infrastructure improvements required to provide acceptable operations. The study area intersections are located within the jurisdictions either the Contra Costa County or San Joaquin County; therefore, the following consistency requirements would apply where applicable.

Contra Costa County General Plan Land Use Element

Per the Contra Costa County TAG, the County applies operational standards to ensure the levels of growth and development provided in the County General Plan Land Use Element are sufficiently accommodated. Therefore, this TIA uses the following level of service thresholds provided in the Contra Costa County TAG:

> Identifying improvements to address operational deficiencies would be required under the following circumstances:
>
> - Development projects where the addition of project traffic to an intersection(s) results in the degradation of intersection operations from acceptable LOS D or better to unacceptable operations (LOS E or LOS F).Priority Development Areas ("PDA") and routes of regional significance tolerate a higher level of congestion and therefore LOS E is considered acceptable operation. However, improvements are required if LOS degrades to F.

- Development projects where the addition of project traffic to an intersection(s) operating unacceptably before the addition of project trips results in the exacerbation of unacceptable operations by increasing the average control delay (for signalized and all-way stop-controlled intersections) or worst movement/approach delay (for side-street stop-controlled intersections) at the intersection by 5.0 seconds or less.

San Joaquin County Transportation and Mobility Element

The San Joaquin County Transportation and Mobility Element of the current General Plan includes the following level of service standards under TM-3.1, Roadway Provision:

> The County shall maintain LOS standards consistent with the San Joaquin Council of Governments (SJCOG) Congestion Management Program (CMP) for State highways and designated County roadways and intersections of regional significance. Per the CMP, all designated CMP roadways and intersection shall operate at LOS D or better except for roadways with "grandfathered" LOS. LOS for State highways shall be maintained in cooperation with Caltrans. The County LOS standards for intersections is LOS "D" or better on Minor Arterials and roadways of higher classification and LOS "C" or better on all other non-CMP designated County roadways and intersections.
>
> The County shall also maintain the following:
>
> - on State highways, LOS D or Caltrans standards whichever is stricter.
> - within a city's sphere of influence, LOS D, or the city planned standards for the level of service.
> - on Mountain House Gateways, as defined in the Master Plan, LOS D, on all other Mountain House roads, LOS C.

Project Access, Safety and Other Analyses

95th percentile queuing is analyzed at Project access intersections, and traffic signal warrant analysis are conducted for any deficient unsignalized intersections within the study area.

1.3.2.4 Caltrans Transportation Impact Study Guide

In anticipation of SB 743 implementation, Caltrans released the Transportation Impact Study Guide (TISG) in May 2020, replacing the 2002 Guide for the Preparation of Traffic Impact Studies. Per the 2020 TISG, consistent with SB 743, Caltrans' primary review focus is also now VMT, replacing LOS as the metric used to evaluate traffic impacts in CEQA transportation analyses. Caltrans recommends use of the State Office of Planning and Research's (OPR) recommended thresholds for land use projects and recommends following the guidance on methods of VMT assessment found in OPR's Technical Advisory (OPR 2018).

In addition to VMT, the 2020 TISG states that it may request a targeted operational and safety analysis to address a specific geometric or operational issue related to the State Highway System and connections with the State Highway System. Caltrans also notes that a future update of the TISG will include the basis for requesting transportation impact analysis not based on VMT and define elements to be included in non-VMT analysis.

INTENTIONALLY LEFT BLANK

2 Existing Conditions

This section describes existing conditions within the study area. Characteristics are provided for the existing roadway, transit, bicycle, and pedestrian facilities.

2.1 Roadway System

Interstate 205 (I-205) is an east-west divided state highway that is generally 8 lanes and is located between Interstate 5 to the east, to Interstate 580 to the west. I-205 is in San Joaquin County and runs near Lathrop on the east and near Tracy on the west. The posted speed limit is 65 MPH and primary interchanges within the vicinity of the project site are located at Mountain House Parkway and E Eleventh Street.

Vasco Road is a north-south, 2-lane undivided roadway within the study area, extending from John Marsh Highway (CA 4) from the north, to Contra Costa County limits to the south. The posted speed limit is 55 MPH. There are no paved sidewalks along either side of the roadway, and parking is generally not permitted along either side of the roadway. Vasco Road is designated as an Expressway in the Contra Costa County General Plan Roadway Network Plan, as shown in Figure 3.

State Route 4 (SR-4) is an east-west, 2-lane undivided roadway within the study area, extending from Marsh Creek Road to the west, to Byron Highway to the east. SR-4 then extends onto Byron Highway south of Marsh Creek Road for approximately one-half mile, at which point it splits from Byron Highway and continues towards the Contra Costa County limits to the east. SR-4 is a 4-lane undivided roadway when overlapping the one-half mile segment of Byron Highway. The posted speed limit is 50 MPH along the Marsh Creek Road/State Route 4 segment west of Byron Highway, and 55 MPH along the State Route 4 segment east of Byron Highway. There are no paved sidewalks along either side of the roadway, and parking is generally not permitted along either side of the roadway. The Marsh Creek Road/State Route 4 roadway segment is designated as an Expressway, and the State Route 4 roadway segment east of Byron Highway is designated an Arterial road in the Contra Costa County General Plan Roadway Network Plan.

Marsh Creek Road is an east-west, 2-lane undivided roadway within the study area, extending from Clayton City limits to the west, to Byron Highway to the east. East of Vasco Road, Marsh Creek Road becomes SR-4 until its junction with Byron Highway. The posted speed limit is 50 MPH. There are no paved sidewalks along either side of the roadway and parking is generally not permitted along either side of the roadway. West of Vasco Road, Marsh Creek Road is designated an Arterial road, whereas east of Vasco Road, the Marsh Creek/State Route 4 roadway segment is designated as an Expressway in the Contra Costa County General Plan Roadway Network Plan.

Byron Highway is a north-south, 2-lane undivided roadway within the study area, extending from Delta Road to the north to San Joaquin County to the south/southeast. Within San Joaquin County, Byron Highway becomes Byron Bethany Road which in turn becomes Byron Road at the San Joaquin County line. The posted speed limits within Byron City limits range between 25 and 35 MPH; outside of Byron City limits, posted speed limits range between 45 and 55 MPH. There are minimal sections of paved sidewalk along both sides of the roadway within both Byron and Tracy (San Joaquin County) city limits. There are no paved sidewalks outside of city limits, and parking is generally not permitted along either side of the roadway. Byron Highway is designated as an Arterial road in the Contra Costa County General Plan Roadway Network Plan and as a Principal Arterial (and a Minor Arterial when Byron Highway becomes Byron Road) in Figure TM-1 of the San Joaquin County Mobility Element.

Camino Diablo is an east-west, 2-lane undivided roadway within the study area, extending from Byron Highway to the east, to Marsh Creek Road to the west. East of Byron Highway, Camino Diablo extends east and ends at a private road. The posted speed ranges from 25 MPH to 35 MPH within the unincorporated, census-designated place of Byron , and increases to 50 MPH west of Byron. There are small sections of paved sidewalk along Camino Diablo between Byron Highway and Holway Drive, and parking is generally not permitted along either side of the roadway. Camino Diablo is designated as an Arterial road in the Contra Costa County General Plan Roadway Network Plan.

Walnut Boulevard is a north-south, 2-lane undivided roadway within the study area, extending from Brentwood City limits to the north, to Camino Diablo to the south. The posted speed limit is 45 MPH. There are no paved sidewalks along either side of the roadway (until Brentwood City limits are reached), and parking is generally not permitted along either side of the roadway. Walnut Boulevard is designated as an Arterial road in the Contra Costa County General Plan Roadway Network Plan.

Mountain House Parkway is a north-south, 6-lane divided roadway within the study area, extending from Byron Highway to the north, to W Schulte Road to the south. South of W Schulte Road, Mountain House Parkway becomes Patterson Pass Road. The posted speed limit is 45 MPH. There are small sections of paved sidewalk along both sides of the road at the I-205 ramps as well as longer sections of paved sidewalk along the west side of the roadway north of W Grant Line Road. Mountain House Parkway is designated as a Minor Arterial in Figure TM-1 of the San Joaquin County Mobility Element.

Byron Hot Springs Road is a north-south, 2-lane undivided roadway within the study area, extending from Byron Highway to the north, and Holey Road to the south. There is no posted speed limit. There are no paved sidewalks along either side of the roadway, and parking is generally not permitted along either side of the roadway. Bryon Hot Springs Road is designated as a Collector road in the Contra Costa County General Plan Roadway Network Plan.

Holey Road is an east-west, 2-lane undivided roadway within the study area, extending from Byron Hot Springs Road to the west, to Byron Highway to the east. There is no posted speed limit. There are no paved sidewalks along either side of the roadway, and parking is generally not permitted along either side of the roadway. Holey Road is designated as a Collector road in the Contra Costa County General Plan Roadway Network Plan.

2.2 Transit System

Eastern Contra Costa Transit Authority (Tri Delta) Tri Delta Transit serves the eastern parts of Contra Costa County (CCTA 2019). However, there are no transit systems near the project site. The nearest Tri Delta Transit bus service is located north of the project area in the City of Brentwood. Routes 385, 391 and 393 operate and provide service at the nearest bus stop.

Route 385 operates between Brentwood Park and Ride and Antioch BART Station via Slatten Ranch Shopping Center. The service is currently available on weekdays only at a frequency of approximately an hour throughout the day.

Route 391 operates between Brentwood Park & Ride and Pittsburg Center Station. The service is currently available on weekdays only at a variable frequency between 25 minutes to an hour throughout the day.

Route 393 operates between Brentwood Park & Ride and Antioch BART Station. The service is currently available on weekends only at a frequency of approximately an hour throughout the day. **TRACER** The City of Tracy offers seven fixed bus routes. Routes A, B, and F operate along Grant Line road; however, no routes extend past the City limits to service areas near the project site.

The nearest passenger train service, including Bay Area Rapid Transit (BART) and Amtrak, is located in the City of Antioch to the north.

There are no other transit system facilities that service the project area. Figure 4 identifies the nearest transit facilities within the study area.

2.3 Pedestrian and Bicycle Facilities

The Contra Costa Countywide Bicycle & Pedestrian Plan (CBPP) identifies the following bicycle facility classifications and descriptions:

Shared-Use Path (Class I Bikeway) – Bike paths provide a completely separate right of way that is designated for the exclusive use of people riding bicycles and walking with minimal cross-flow traffic.

Bike Lane (**Class II Bikeway)** – Using special lane markings, pavement legends, and signage, bike lanes provide designated street space for bicyclists, typically adjacent to the outer vehicle travel lanes.

Buffered Bike Lanes (Class II Bikeway) – Increase separations through painted buffers between vehicle lanes and/or parking, and green paint at conflict zones (such as driveways or intersections).

Bike Route (Class III Bikeway) – Provide enhanced mixed-traffic conditions for bicyclists through signage, sharrow striping, and/or traffic calming treatments, and provide continuity to a bikeway network.

Bicycle Boulevards (Class III Bikeway) – Further enhanced bike routes by encouraging slower speeds and discouraging non-local vehicle traffic using traffic diverters, chicanes, traffic circles, and speed tables.

Protected Bikeway (Class IV Bikeway) – Referred to as cycle tracks or separated bikeways, these are set aside for the exclusive use of bicycles and physically separated from vehicle traffic with vertical separation, including grade

separation, flexible posts, physical barriers, or on-street parking. As defined in the 2015 Federal Highway Administration Separated Bike Lane Planning and Design Guide, Class IV bikeways are differentiated from standard and buffered bike lanes by this vertical element (FHWA 2015).

In addition to the above classifications, the CBPP further categorizes existing and proposed bicycle facilities through a Level of Traffic Stress (LTS) analysis, which assigns a LTS score to the bicycle facility depending on the perceived stress of the cyclist. A brief description of each LTS score is provided below, as defined in the Contra Costa Countywide Bicycle and Pedestrian Plan. Low traffic stress correlates with a LTS score of 1 or 2, and high traffic stress correlates with a LTS score of 3 or 4.

LTS 1 – Physically separated from traffic or low-volume, mixed-flow traffic at 25 mph or less; bike lanes are six-feet wide or more

LTS 2 – Bicycle lanes are 5.5-feet wide or less, next to 30 mph auto traffic; unsignalized crossings of up to five lanes at 30 mph

LTS 3 – Bicycle lanes next to 35 mph auto traffic, or mixed-flow traffic at 30 mph or less

LTS 4 – No dedicated bicycle facilities; traffic speeds 40 mph or more

In the study area, Marsh Creek Trail, a shared-use path (Class I Bikeway), runs north of Concord Avenue from Creek Road to Central Boulevard, and is approximately 10 miles northwest from the project site. Marsh Creek Trail bikeway can be accessed via Marsh Creek Road, south of Concord Avenue. Currently, there are no bicycle facilities along Marsh Creek Road; however, Contra Costa County is proposing a low stress bikeway along Marsh Creek Road, as well as Byron Highway and Camino Diablo, as shown in Figure 4A.

Local Bicycle Network in the County is shown on Figure 4B. Per CBPP, as shown on Figure 4B, Class II bicycle lanes are proposed along Byron Hot Springs Road and Holey Road from project site to Byron Highway. The local bicycle network would connect to the low-stress bikeway (Class II) proposed along Byron Highway.

The San Joaquin County Bicycle Master Plan also identifies similar bicycle facilities to those noted above, including Class I Shared Use Paths, Class II Bicycle Lanes, Class II Buffered Bicycle Lanes, and Class III Bicycle Routes (San Joaquin County 2020). The Mountain House community area includes several Class III Bicycles Routes; however, no other San Joaquin County bicycle or pedestrian facilities are located near the project site.

3 Project Traffic

This section documents the trip generation, distribution, and assignment of project traffic in the study area.

3.1 Trip Generation

Trip generation estimates for the proposed project are based on daily and AM and PM peak hour trip generation rates and fitted curve equations obtained from the Institute of Transportation Engineers (ITE) *Trip Generation Manual, 9th and 10th Editions* (ITE 2012; 2017). As noted in Table 4 below, the ITE rate for General Aviation Airport (022) from the ITE *Trip General Manual, 9th Edition* was used for the proposed aviation land use. The 9th Edition provides rates per based aircraft (BA), which provides a more accurate representation of the proposed aviation trip generation compared to available rate per employee provided in the 10th Edition. Additionally, 10th Edition rates for ITE rate 022 are only derived from the empirical data of one study, which does not serve as a representative rate for the purposes of this analysis.

As the proposed project contains warehousing, industrial, general commercial, and office land uses, this project is considered a multi-use development. For the proposed general commercial land use, the ITE rate for Shopping Center (820) is the most reflective of trip generation and pass-by for this use. Pass-by trips were calculated using the average pass-by trip percentage presented within the ITE *Trip Generation Manual, 10th Edition,* for the Shopping Center land use. Although the project is not located in a highly populated setting, the project site is located within one mile of Byron Highway, which is a commute corridor between the City of Tracy and northern Contra Costa County. The site would be visible from Byron Highway and would have the potential to draw commuters to proposed commercial land uses that are not otherwise provided along this corridor. Therefore, pass-by trip percentages as provided for the Shopping Center land use in the *ITE Trip Generation Manual, 10th Edition*, are considered applicable to the proposed project.

Additionally, internal trip capture was estimated based on probable interactions between land uses that have potential to interact within the multi-use development. As such, internal trip capture is anticipated between the warehouse, industrial, general commercial, aviation, and office land uses and is shown under each land use in Table 4

Trip generation rates and the resulting trip generation estimates for the project are summarized in Table 4.

Table 4. Project Trip Generation for Byron Airport Development Program

Trip Rates[1]

Shopping Center Pass-by (15% AM, 30% PM reduction)				*0*	*-52*	*-21*	*-73*	*-45*	*-71*	*-116*
Net New Project Trips				**8,617**	**296**	**117**	**413**	**255**	**405**	**660**

Notes: BA = Based Aircraft; TSF = Thousand Square Feet

1 Trip rates based on fitted-curve equations or average rates from the ITE Trip Generation Manual, 10th Edition (ITE 2017).

2 Trips rate based on average rates for General Aviation Airport, provided in the Trip Generation Manual, 9th Edition (ITE 2012).

As shown in Table 4, the proposed project would generate 8,617 daily trips, 486 AM peak hour trips (348 inbound and 138 outbound), and 776 PM peak hour trips (300 inbound and 476 outbound). When accounting for shopping center pass-by trip reductions, the proposed project would generate 8,617 net new daily trips, 413 AM net new peak hour trips (296 inbound and 117 outbound), and 660 PM net new peak hour trips (255 inbound and 405 outbound).

3.2 Trip Distribution and Assignment

Project trip distribution percentages were based on logical travel paths to commute corridors throughout the study area and compared with empirical traffic counts and model distributions. Figure 5 identifies the project trip distribution percentages throughout the study area, and Figure 6 identifies the weekday AM and PM peak hour project trip assignments at all study area intersections.

4 Vehicle Miles Traveled Analysis

Pursuant to SB 743, the County Board of Supervisors has adopted the Contra Costa County Transportation Analysis Guidelines (TAG), June 2020, which establish the efficiency standards for VMT to ensure compliance with CEQA. Therefore, for purposes of this TIA, the VMT analysis methodologies and thresholds outlined in County's TAG and the Contra Costa Countywide Travel Demand Model (CCTA model) have been used.

4.1 Screening Analysis

Per the County's guidelines, if a project meets any one of the following criteria it would not require a detailed VMT analysis:

- Projects that:
  - Generate or attract fewer than 110 daily vehicle trips[1]: or,
  - Projects of 10,000 square feet or less of non-residential space or 20 residential units or less, or otherwise generating less than 836 VMT per day.

As shown in project trip generation, the project would generate 8,617 daily trips and therefore would not meet the small project screening criteria.

- Residential, retail, office projects, or mixed-use projects proposed within ½ mile of an existing major transit stop[2] or an existing stop along a high-quality transit corridor[3].

The project is not located within ½ mile of an existing major transit stop or an existing stop along a high-quality transit corridor per Public Resources Code Section 21155 and therefore, would not meet the transit proximity screening.

- Residential projects (home-based VMT) at 15% or below the baseline County-wide home-based average VMT per capita, or employment projects (employee VMT) at 15% or below the baseline Bay Area average commute VMT per employee in areas with low VMT that incorporate similar VMT reducing features (i.e., density, mix of uses, transit accessibility)

As shown in the following VMT analysis, the project is not located within area with low VMT and the project's employee VMT is above the baseline Bay Area average commute VMT per employee. Therefore, the project does not meet the low VMT screening.

- Public facilities (e.g., emergency services, passive parks (low-intensity recreation, open space), libraries, community centers, public utilities) and government buildings.

---

1 CEQA provides a categorical exemption for existing facilities, including additions to existing structures of up to 10,000 square feet, so long as the project is in an area where public infrastructure is available to allow for maximum planned development and the project is not in an environmentally sensitive area. (CEQA Guidelines, § 15301, subd. (e)(2).). Typical project types for which trip generation increases relatively linearly with building footprint (i.e., general office building, single tenant office building, office park, and business park) generate or attract an additional 110-124 trips per 10,000 square feet. Therefore, absent substantial evidence otherwise, it is reasonable to conclude that the addition of 110 or fewer trips could be considered not to lead to a significant impact.

2 Pub. Resources Code, § 21064.3 ("'Major transit stop' means a site containing an existing rail transit station, a ferry terminal served by either a bus or rail transit service, or the intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and afternoon peak commute periods.").

3 Pub. Resources Code, § 21155 ("For purposes of this section, a high-quality transit corridor means a corridor with fixed route bus service with service intervals no longer than 15 minutes during peak commute hours.").

The project proposes warehouse, office, and commercial uses which would complement the existing airport use. Since it is not proposing public facilities and government buildings, therefore, the project type screening would not apply.

The proposed project does not meet the screening criteria identified above; therefore, further assessment of project's VMT impact under base year conditions (year 2018) and cumulative conditions (year 2040) is provided below using available significance thresholds and guidance from the County.

4.2 VMT Analysis

4.2.1 Project Level Analysis

The 2010 CCTA model was utilized for VMT analysis of the proposed project. The CCTA is a trip-based model that has been developed using Metropolitan Transportation Commission (MTC) travel demand model. The 2010 Decennial update of the CCTA Model was a major update in which the land use, network assumptions and model processes were updated to reflect the most recent MTC travel demand model. The CCTA model uses TransCAD Version 5.0 (Build 1515) software and generally follows the processes of the MTC trip-based model while providing additional detail within Contra Costa. The model network is updated to reflect the MTC transportation 2035 (T-2035) RTP network. The traffic analysis zones (TAZs) in the Countywide Model began with MTC's 1,099-zone model for the Bay Area that existed at the time the Countywide Model was first developed. Later, approximately 1,700 TAZs were added in the Contra Costa/Tri-Valley Study Area.

The current MTC model consists of 3,120 TAZs, of which 1,495 are located within Contra Costa. Land use and demographic data are required for each TAZ. The demographic data provides the basis for estimating trip generation. Both the demographic and transportation network data are used in predicting trip distribution patterns and mode of travel. The land use data for the model is updated every two to four years. The model land use and demographic inputs for traffic zones within Contra Costa consist of variables such as number of households, residents, employment, household income, high school, and college enrollment etc. The highway and transit networks for the Countywide Model are based on the existing and planned transportation system, including freeways, arterials, major collectors, and selected minor collectors and include virtually all signalized intersections in the study area. The transit network is based on MTC's transit networks with refinements based upon local review by the transit operators. For both highway and transit networks, detailed networks within Contra Costa are combined with MTC networks outside the county. The CCTA Model uses the auto ownership, trip generation, trip distribution and mode choice modules within MTC's BAYCAST-90 model. The model is used to generate highway and transit outputs such as link volumes, intersection turn movements, volume to capacity ratios and vehicle miles traveled as standard outputs.

Consistent with standard modeling practice, to identify VMT from the project, a traffic analysis zone (TAZ) for the project was included in the CCTA model and select zone runs were conducted for year 2018 and 2040. Since the primary purpose of SB 743 is to reduce home-based automobile travel, only the employee VMT related to home-based work (HBW) passenger vehicle travel are reported from the model for the project, the County, and the Bay Area. The findings of the project's VMT analysis for the base year (Year 2018) with and without the project are shown in Table 5 below. Appendix A includes the VMT output from the CCTA model for year 2018 and 2040.

Table 5. Summary of Project's Home-Based-Work VMT per Employee

Criteria	Year 2018 (no Project)	Year 2018 (with Project)
Bay Area Commute VMT (Existing Baseline)	*14.9*	*14.9*
Contra Costa County VMT	14.0	14.0
Byron Airport Zone (Project) VMT	*22.7*	*21.2*
15% below Bay Area Average (Threshold of Significance)	12.7	12.7
Is the Project above or below Threshold?	-	Above the Threshold
% Reduction Required	-	*40%*

Source: Contra Costa Countywide Travel Demand Model

The HBW VMT per employee for the project is 21.2, for the County is 14.0 and for the Bay Area is 14.9. As shown in Table 5, the HBW VMT per employee under with Project scenario, decreases (from 22.7 to 21.2) nominally compared to the no project scenario. HBW VMT per employee is an efficiency metric which is the ratio of total HBW employee VMT and number of employees. Although the HBW VMT and number of employees in the airport zone increase under with project scenario compared to the no project scenario, the ratio of total HBW employee VMT and number of employees decreases nominally. A slight decrease in VMT per employee under with project conditions compared to without project indicates that the project would improve VMT efficiency in the region. However, it should be noted that the VMT significance of threshold requires comparison of the project VMT with the regional average (i.e. Bay Area Average), and not a comparison of with project and no projectscenario. The County threshold for Employment Projects (office, industrial, and institutional projects) is that the projectVMT should be 15% below Bay Area average commute VMT per employee (i.e., hone-based work VMT per employee).The project's HBW VMT per employee (21.2) is higher than the Bay Area VMT per employee (14.9). To meet thethreshold sof 15% below Bay Area Average and have a less than significant VMT impact, the HBW VMT per employeefor the project should be approximately 12.6, which would require a 40% reduction. Therefore, the proposed projectwould have a significant VMT impact. Transportation demand management strategies and mitigation measures thatcan potentially achieve VMT reduction are provided in Chapter 8.

It should be noted that the average trip length for home-based work trips for the Byron Airport Zone (Project) from the CCTA model is approximately 15.6 miles whereas the Bay Area average commute one-way trip length is 13.5 miles and the Contra Costa County home-based work trip length is 11.9 miles. The project site located within a low-density suburb where transit, walk or bike modes are not available. Therefore, a high home-based work VMT per employee for the project zone from the model is representative of the location of the project within the eastern portion of the County.

4.2.2 Cumulative Analysis

Per the County's guidelines, cumulative impacts should be evaluated for consistency with the County General Plan. If a project is consistent with the County General Plan (Envision 2040) and the General Plan remains consistent with its VMT projections as originally analyzed, the project's cumulative impacts shall be less-than significant. However, if the project is inconsistent with the adopted County General Plan, then the analysis should evaluate the project's cumulative VMT impacts and determine if the Countywide VMT increases or decreases with the proposed project relative to the VMT generated by full General Plan buildout.

It should be noted that the County is currently updating its General Plan (Envision 2040) and as mentioned in the project description, the project is proposing to update the ALUCP which would allow non-residential development

that are compatible with the land use plan for Byron Airport. Therefore, the project would be increasing jobs and hence employment related VMT compared to the current General Plan and ALUCP. Table6 provides the total employment VMT estimate from the CCTA model for the Contra Costa County and the Byron Airport zone for the year 2040. It should be noted that for VMT analysis, the cumulative analysis is based on comparing the total VMT with and without project for the Byron Airport Zone with the County, whereas the project analysis is based on comparing the efficiency metric i.e. the HBW VMT per employee of the project zone with the regional average (i.e. Bay Area Average).

Table 6. Cumulative VMT (Total Employment VMT) Criteria	Year 2040 (no Project)	Year 2040 (with Project)	Net Increase in VMT
Contra Costa County VMT	20,611,607	20,635,911	24,304
Byron Airport Zone (Project) VMT	2,557	32,046	29,489

Source: Contra Costa Countywide Travel Demand Model

Since the Countywide VMT would increase with the proposed project relative to the total VMT generated by the County under year 2040 conditions, the project's cumulative impacts would be considered significant.

5 Project Access, Queuing and Safety Considerations

5.1 Project Access

Regional access to Byron Airport and the project site is provided via SR-4 to the north, I-205 to the south, and Byron Highway to the east. Direct access to the project site is provided via Holey Road and Byron Hot Springs Road from Byron Highway. Both Holey Road and Byron Hot Springs Road are two-lane collector roads, with minor street stop control at their intersections with Byron Highway. Additionally, Armstrong Road provides a connection to Falcon Way and the western portion of the project site from Byron Hot Springs Road. Existing counts at these intersections are provided in Appendix B.

The levels of service at the two project access roads from Byron Highway (intersections #1 and #2) is provided in the following chapters and summarized in Table 7 below for all analysis scenarios.

Table 7. Project Access Level of Service

Scenario	Peak Hour	# 1. Byron Highway/Holey Road		#2. Byron Highway/Byron Hot Springs Road	
		Delay[1]	*LOS*[2]	*Delay*[1]	*LOS*[2]
Existing plus Project	AM	25.1	D	**85.6**	**F**
	PM	**183.7**	**F**	**1695.7**	**F**
Future Year 2040 plus Project	AM	29.6	D	**525.5**	**F**
	PM	**525.5**	**F**	**4007.9**	**F**

Notes
1 Delay in seconds per vehicle
2 Level of Service (LOS)
XX – Unsatisfactory Level of Service

Both intersections were analyzed as two-way stop controlled (TWSC) intersections. As such, the turning movement with the highest delay is reported. As shown in Table 4, both project access study intersections are forecast to operate at LOS F during the PM peak hour at Intersection 1, and during both peak hours at intersection 2 in both study scenarios. The western leg of the intersection is stop controlled at both intersections, and the eastbound left-turning movement is the primary cause for the deficient LOS during all scenarios. All other movements at the intersection operate at LOS A or B.

The detailed LOS worksheets for all project access intersections are included in Appendix C. Improvement measures are identified for both intersections in Chapter 8.3.1.

5.2 Queuing Analysis

5.2.1 Project Access Driveways

A queuing analysis was prepared at the intersections of Holey Road and Byron Hot Springs Road with Byron Highway to determine the potential for queuing hazards both on the minor streets and along Byron Highway. Queuing

summaries for Existing and Future Year 2040 conditions are provided in Tables 5 and 6, respectively. Queuing reports are provided in Appendix D.

As shown in Tables 8 and 9, calculated 95th percentile (design) queues for the Existing and Future Year plus Project conditions, respectively, exceed available vehicle storage capacities at both intersections. As no turning pockets or two-way-left-turn (TWLTL) facilities are provided along Byron Highway at the project access study intersections, storage capacity does not exist and therefore has been assumed to be zero. For stop-controlled side-street movements, storage capacity is measured from the study intersection to the nearest paved intersecting roadway for the purpose of this analysis.

Queuing on Byron Highway, specifically at the northbound left turning movements onto Byron Hot Springs Road and Holey Road, could lead to increased delays and degradation of Byron Highway traffic operations. Although the project would directly not add northbound left-turning movements to the intersection of Byron Highway/Byron Hot Springs Road, increased project traffic at other movements (i.e. eastbound left-turning movement from Byron Hot Springs Road) would impact queueing of the northbound travel lane. As discussed in Chapter 5.1 and shown in Table 7, both intersections operate at deficient levels of service, and improvement measures are identified for both intersections in Chapter 8.3.1. Implementation of these improvement measures would reduce queuing at both intersections with improvements to the delay.

Table 8. Project Access Queuing Summary - Existing plus Project

No.	Intersection	Movement	Vehicle Storage Length[1]	Existing				Existing plus Project				Improvement Warranted?
				AM Peak Hour		*PM Peak Hour*		*AM Peak Hour*		*PM Peak Hour*		
				95th Percentile Queue[2]	*Exceeds Vehicle Storage Length?*	*95th Percentile Queue[2]*	*Exceeds Vehicle Storage Length?*	*95th Percentile Queue[2]*	*Exceeds Vehicle Storage Length?*	*95th Percentile Queue[2]*	*Exceeds Vehicle Storage Length?*	
1	Byron Highway/Holey Road	EBLR	2040	22	No	28	No	56	No	330	No	No
		NBLT	0	3	**Yes**	15	**Yes**	207	**Yes**	204	**Yes**	**Yes[3]**
		SBTR	0	0	No	0	No	8	**Yes**	7	**Yes**	No[4]
2	Byron Highway/Byron Hot Springs Road	EBLR	1705	62	No	48	No	186	No	895	No	No
		NBLT	0	33	**Yes**	0	No	129	**Yes**	0	No	**Yes[3]**
		SBTR	0	9	**Yes**	7	**Yes**	16	**Yes**	20	**Yes**	No[4]

Source: Appendix D

Notes: NBLR = northbound left-through lane; EBLR = eastbound left-right lane; SBTR = southbound through-right lane.

1 Available storage length (feet) is measured from the study intersection to the nearest paved intersecting roadway for stop-controlled side-street movements. No existing storage lanes are provided along Byron Highway; therefore, the storage length is assumed to be zero.[2] Based on 95th percentile (design) queue length (feet) in SimTraffic 10

3 Queuing could result in delays and degradation of Byron Highway traffic operations.

4 Although queues may extend onto Byron Highway for SBTR movements, these lengths (less than one car length) would result in negligeable degradation to the flow of southbound traffic and would not warrant improvements.

Table 9. Project Access Queuing Summary – Future Year 2040 plus Project

No.	Intersection	Movement	Vehicle Storage Length1	Future Year 2040				Future Year 2040 plus Project				Improvement Warranted?
				AM Peak Hour		*PM Peak Hour*		*AM Peak Hour*		*PM Peak Hour*		
				95th Percentile Queue[2]	*Exceeds Vehicle Storage Length?*	*95th Percentile Queue[2]*	*Exceeds Vehicle Storage Length?*	*95th Percentile Queue[2]*	*Exceeds Vehicle Storage Length?*	*95th Percentile Queue[2]*	*Exceeds Vehicle Storage Length?*

		SBTR	0	13	**Yes**	0	No	16	**Yes**	8	**Yes**	No[4]

Source: Appendix D

Notes: NBLR = northbound left-through lane; EBLR = eastbound left-right lane; SBTR = southbound through-right lane.

1 Available storage length is measured from the study intersection to the nearest paved intersecting roadway for stop-controlled side-street movements. No existing storage lanes are provided along Byron Highway; therefore, the storage length is assumed to be zero.

2 Based on 95th percentile (design) queue length in SimTraffic 10

3 Although queuing would not impact the nearest paved intersection roadway, queuing could increase delays and degradation of Byron Highway traffic operations.

4 Although queues may extend onto Byron Highway for SBTR movements, these lengths (less than one car length) would result in negligeable degradation to the flow of southbound traffic and would not warrant improvements.

5.2.2 Caltrans Off-Ramps

Due to the potential for the proposed project to add traffic to Caltrans facilities within the study area, the following Caltrans freeway off-ramps were analyzed for queuing impacts:

- Mountain House Parkway/ I-205 westbound ramps
- Mountain House Parkway/I-205 eastbound ramps

As shown in Table 10, no peak 95th percentile queues are expected to exceed the storage pocket lengths in the Existing plus Project conditions. However, as shown in Table 11, peak 95th percentile queues are expected to exceed storage pocket lengths in the Future Year 2040 plus Project, AM peak hour conditions at the Mountain House Parkway/I-205 westbound ramp intersection and for the following turning movements:

- Westbound left-thru lane (WBLT): This is a storage lane that extends from the intersection to approximately 700 feet from the stop bar. It is expected that forecast queues would extend past the available pocket length and contribute to queuing in the adjacent westbound right turn lane (WBR1 and WBR2), which serve as the primary off-ramp lanes from the freeway mainline.
- Westbound right-turn lane 1 (WBR1): This is a primary off-ramp lane that extends from the intersection to approximately 1,515 feet to the gore line at the I-205 mainline. It is expected that forecast queues would extend past the available storage length and contribute to existing queueing into the mainline.
- Westbound right-turn lane 2 (WBR2): This is a primary off-ramp lane that extends from the intersection to approximately 1,515 feet to the gore line at the I-205 mainline, and serves as an exit-only lane from the 11th Street on-ramp, approximately 1-mile upstream. It is expected that forecast queues would extend past the available storage length and contribute to existing queueing into the mainline within this exit-only lane.

When comparing the Future Year 2040 scenario with the addition of the proposed project, queueing is forecast to increase for all movements during the AM peak hour at the Mountain House Parkway/I-205 westbound ramps; vehicle traffic would continue to spill into the mainline lanes in Future Year 2040 no Project and plus Project conditions.

No current funded or planned improvements are identified at the I-205 westbound ramps with Mountain House Parkway. The TriLink (SR-239) Feasibility Study Final Report identifies potential alignments for the proposed SR-239 corridor between SR-4 to the north and I-580 and/or I-205 to the south, which would reduce traffic volumes on I-580, Vasco Road, and Byron Highway (CCTA 2014). As such, shifts in regional traffic patterns could also reduce congestion and queuing at the Mountain House Parkway/I-205 westbound ramps. However, as the SR-239 Feasibility Study does not identify specific improvements, nor are specific improvements planned or funded in the area, hazards related to queuing at this off-ramp would remain significant and unavoidable.

Table 10. Existing plus Project Caltrans Off-Ramp Queuing Summary

No.	Intersection	Movement	Pocket Length[1]	Existing Conditions				Existing plus Project				Improvement Warranted
				AM Peak Hour		*PM Peak Hour*		*AM Peak Hour*		*PM Peak Hour*		
				95th Percentile Queue[2]	*Exceeds Turn Pocket Length?*	*95th Percentile Queue[2]*	*Exceeds Turn Pocket Length?*	*95th Percentile Queue[2]*	*Exceeds Turn Pocket Length?*	*95th Percentile Queue[2]*	*Exceeds Turn Pocket Length?*

Notes: Caltrans = California Department of Transportation; I = Interstate; EBL = eastbound left-turn lane; EBR = eastbound right-turn lane; EBLT = eastbound left-thru lane; WBLT = westbound left-thru lane; WBR = westbound right-turn lane (#1, 2, etc. indicates multiple right turn lanes)

Bold – Queue exceeds storage length; Highlight – Queue exceeds storage length and impacts the freeway mainline.

1 Measured in feet.

2 Based on 95th percentile (design) queue length in SimTraffic 10.

3 Primary off-ramp lane; approximate length measured from freeway mainline. Length measured from stop bar to gore line at mainline.

4 Although queue does not impact mainline lanes, queue would contribute to queueing in adjacent lanes.

5.3 Pedestrian and Bicycle Access

As discussed in Chapter 4.3, Marsh Creek Trail, the nearest bicycle facility is a shared-use path (Class I Bikeway) that runs north of Concord Avenue from Creek Road to Central Boulevard, located approximately 10 miles northwest from the project site. Currently, there are no pedestrian facilities within the project vicinity. Proposed Class II bicycle lanes are planned along Byron Highway, Byron Hot Springs Road, and Holey Road, and are identified in Figure 4B, per the CBPP.

Due to the lack of connectivity and significant development in the immediate project vicinity, it is expected that pedestrian activity will remain very light. However, per the County's guidelines, the project is expected to provide continuous sidewalks along the project frontage. Pedestrian sidewalks, crosswalks, and accessible paths of travel should be provided within the project area as follows:

- Within the developed core to allow easy access to each building
- Where feasible, configure sidewalks to channel pedestrians to crosswalks
- Between public street and the developed core

Additionally, the project must comply with the County's Complete Streets Policy, which requires the needs of all users (including pedestrians, cyclists, motorists, and transit riders) to be met during street design. The County's Complete Streets Policy was adopted by Resolution No. 2016-374 by the Board of Supervisors of Contra Costa County on July 12, 2016 (Contra Costa County 2016).

6 Existing Traffic Conditions

The existing traffic controls and geometrics at the study area intersections is shown in Figure 7. This section details the existing traffic volumes and the existing intersection and Routes of Regional Significance operations within the study area.

6.1 Existing Traffic Operations

6.1.1 Traffic Volumes

As was described previously in Section 1.3 Analysis Methodology, the existing condition is representative of the year 2015, consistent with the project's NOP and DEIR. Therefore, all traffic counts utilized within this analysis were either collected in the year 2015 or collected in different years and subsequently adjusted to reflect the year 2015 counts.

Traffic counts were balanced to be consistent with 2015 volumes. Many of the 2015 volumes were for intersections located within the immediate vicinity of the project site. In order to provide a consistent analysis, and because the existing condition relies on the year 2015 as the baseline condition, all other intersections were balanced according to the 2015 intersection volumes. Therefore, volumes for other intersections, which were collected from 2011 to 2017, were then balanced in an iterative and systematic approach, and applied using engineering judgement to create a comprehensive 2015 baseline existing condition. Additionally, it must be noted that volume balancing takes into consideration cross streets, driveways, or other intersecting roadway facilities between study intersections. As such, discrepancies may exist when one or more roadway facility intersects between two study intersections, where vehicle traffic can enter or exit the primary roadway. For example, Bixler Road along with several smaller roadways and driveways, exist between intersection 6 (Byron Highway/SR-4) and intersection 12 (Discovery Bay Boulevard/SR-4), in which large traffic volumes can flow to or from SR-4 between the two intersections. Similar observations were made between several study intersections, including those along Marsh Creek Road – SR-4, between intersections 10 and 11; along SR-4 between intersections 1 and 13; and along Mountain House Parkway, between intersections 13 and 15.

The traffic counts were also balanced to be consistent with the 2015 volumes based on their original turning movement percentages. All counts were collected on a typical weekday non-holiday period. Traffic counts were obtained from other traffic studies in the area, historical counts, and from CCTA. Raw traffic count worksheets are provided in Appendix B. The following details which year the traffic counts were used for each intersection in chronological order:

- Intersection 11 (collected in 2011)
- Intersections 10 and 12 (collected in 2013)
- Intersections 1-7, 9, and 14 (collected in 2015)
- Intersections 8 and 13 (collected in 2016)
- Intersections 15 and 16 (collected in 2017)

The existing conditions analysis focuses on the weekday daily, AM (7:00 a.m. to 9:00 a.m.) and the PM (4:00 p.m. to 6:00 p.m.) peak periods. The peak periods represent the highest volume of traffic for the adjacent street system. The adjusted existing weekday AM and PM peak hour volumes are summarized in Figure 8.

6.1.2 Intersection Operations

An intersection LOS analysis was prepared for existing conditions using the HCM 6th Edition methodology via the Synchro LOS software for all study intersections as described in Section 1.3 Analysis Methodology. Table 12 shows the results of the existing conditions analysis. LOS worksheets are provided in Appendix C.

As shown in the table, all the study area intersections are currently operating at satisfactory levels of service (at LOS D or better) except for the intersections of:

- Byron Highway/Byron Hot Springs Road – operates at LOS F (57.7 second delay) during the PM peak hour.
- Byron Highway/Holway Drive – operates at LOS F (65.9 second delay) during the PM peak hour.
- Walnut Boulevard/SR-4 – operates at LOS E (59.7 second delay) during the PM peak hour.
- Byron Road/Grant Line Road – operates at LOS E (65.9 second delay) during the AM peak hour and operates at LOS F (102.8 second delay) during the PM peak hour.

The intersections of Mountain House Parkway with I-205 ramps operate under the jurisdiction of Caltrans; therefore, as no LOS standards are currently available per the updated Caltrans TISG (May 2020) as discussed in Section 1.3, no inconsistencies can be concluded. However, both ramp intersections operate at satisfactory level of service goals (LOS D or better) per both Contra Costa County and San Joaquin County guidelines.

6.1.3 Routes of Regional Significance Operations

A rural two-lane roadway segment analysis as outlined in Chapter 15 of the Highway Capacity Manual intersection LOS analysis was prepared for existing conditions using the HCM 6th Edition methodology via the HCS 7 software for all study area routes of regional significance as described in Section 1.3 Analysis Methodology. Table 13 shows the results of the existing conditions analysis. LOS worksheets are provided in Appendix C. As shown in the table, all the study area routes of regional significance are currently operating at satisfactory levels of service (at LOS D or better) except for the segments of:

Vasco Road, between Marsh Creek Road and Camino Diablo -- operates at LOS E (58.8 average speed and 13.7 follower density) during the AM peak hour and operates at LOS E (58.4 average speed and 18.1 follower density) during the PM peak hour.

Byron Highway, between SR-4 and San Joaquin County Line -- operates at LOS E (47.2 average speed and 12.2 follower density) during the PM peak hour.

Table 13. Existing Routes of Regional Significance Level of Service

Roadway Facility	Extent	No. of Segments	Existing					
			AM Peak Hour			PM Peak Hour		
			Average Speed[1]	*Follower Density*[2]	*LOS*	*Average Speed*[1]	*Follower Density*[2]	*LOS*

Notes:
1 Speed in units of miles per hour averaged across all segments within the facility
2 Follower density in units of followers/mile/lane
XX – Unsatisfactory Level of Service

As shown in the table, all the study area routes of regional significance are currently operating at satisfactory levels of service (at LOS D or better) except for the segments of:

- Vasco Road, between Marsh Creek Road and Camino Diablo -- operates at LOS E (58.8 average speed and 13.7 follower density) during the AM peak hour and operates at LOS E (58.4 average speed and 18.1 follower density) during the PM peak hour.
- Byron Highway, between SR-4 and San Joaquin County Line -- operates at LOS E (47.2 average speed and 12.2 follower density) during the PM peak hour.

6.2 Existing plus Project Traffic Operations

This section details the Existing plus Project traffic volumes and intersection operations within the study area.

6.2.1 Traffic Volumes

Project traffic volumes shown in Figure 6 were added to the Existing traffic volumes shown in Figure 8 to derive the Existing plus Project traffic condition. Figure 9 shows the Existing plus Project traffic volumes.

6.2.2 Intersection Operations

An intersection LOS analysis was prepared for the Existing plus Project conditions using the HCM 6th Edition methodology via the Synchro LOS software for all study intersections as described in Section 1.3 Analysis Methodology. Table 14 shows the results of the Existing plus Project conditions analysis. LOS worksheets are provided in Appendix C.

As shown in the table, most of the study area intersections are forecast to operate at satisfactory levels of service (at LOS D or better), however the project's contribution to traffic to the following intersections would cause LOS to be inconsistent with LOS standards:

- Byron Highway/Holey Road – project adds 161.0 seconds of delay and degrades from LOS C to LOS F (183.7 second delay) during the PM peak hour.
- Byron Highway/Byron Hot Springs Road – project adds 61.6 seconds of delay and degrades from LOS C to LOS F (85.6 second delay) during the AM peak hour; remains at LOS F (>300 second delay) during the PM peak hour (project contribution is >300 second delay).
- Byron Highway/Camino Diablo – project adds 49.3 seconds of delay and degrades from LOS C to LOS F (82.6 second delay) during the PM peak hour.
- Holway Drive/Camino Diablo – project adds 98.3 seconds of delay and degrades from LOS D to LOS F (53.2 second delay) during the PM peak hour.
- Byron Highway/Holway Drive – remains at LOS F (164.2 second delay) during the PM peak hour (project contribution is 98.3 second delay).
- Vasco Road/Camino Diablo – project adds 23.8 seconds of delay and degrades from LOS D to LOS E (68.9 second delay) during the PM peak hour.
- Walnut Boulevard/Vasco Road – project adds 18.5 seconds of delay and degrades from LOS D to LOS E (57.9 second delay) during the PM peak hour.
- Walnut Boulevard/SR-4 – remains at LOS E (65.2 second delay) during the PM peak hour (project contribution is 5.5 second delay).
- Byron Road/Grant Line Road – remains at LOS E (72.0 second delay) during the AM peak hour (project contribution is 6.1 second delay); remains at LOS F (96.6 second delay) during the PM peak hour (project contribution is -6.2 second delay).

The intersections of Mountain House Parkway with I-205 ramps operate under the jurisdiction of Caltrans; therefore, as no LOS standards are currently available per the updated Caltrans TISG (May 2020) as discussed in Section 1.3, no inconsistencies can be concluded. However, both ramp intersections continue to operate at satisfactory level of service goals (LOS D or better) per both Contra Costa County and San Joaquin County guidelines.

6.2.3 Routes of Regional Significance Operations

A rural two-lane roadway segment analysis as outlined in Chapter 15 of the Highway Capacity Manual intersection LOS analysis was prepared for the Existing plus Project conditions using the HCM 6th Edition methodology via the HCS 7 software for all study area routes of regional significance as described in Section 1.3 Analysis Methodology. Table 15 shows the results of the Existing plus Project conditions analysis. LOS worksheets are provided in Appendix C.

As shown in the table, all the study area routes of regional significance are will continue to operate at satisfactory levels of service (at LOS D or better) except for the segments of:

- Vasco Road, between Marsh Creek Road and Camino Diablo – continues to operate at LOS E (58.7 average speed and 14.8 follower density) during the AM peak hour and at LOS E (58.3 average speed and 19.8 follower density) during the PM peak hour.
- Byron Highway, between SR-4 and San Joaquin County Line – continues to operate at LOS E (47.0 average speed and 15.1 follower density) during the PM peak hour.

Where routes of regional significance are found to operate at deficient levels of service under two-lane highway analysis per the HCM, addition of a travel lane and re-analysis of the route as a suburban arterial roadway is recommended. Therefore, for the purposes of this analysis, recommended improvements would include the addition of one travel lane in either direction and re-analysis of the routes of regional significance as suburban arterial roadways, in accordance with the MTSOs described in the East County Action Plan. Therefore, improvement measures at signalized intersections provided in Chapter 8.3.1 for deficient intersection operations identified in Chapter 5.2.2 would also correlate to recommended improvements for the deficient routes of regional significance identified in Table 15.

The improvements identified in Chapter 8.3.1 for deficient intersections which necessitate additional roadway improvements to achieve the County's LOS standards, include lane widening, lane restriping, signalization, and other similar physical modifications. These improvements would require funding from additional sources such as the County's Development Mitigation Program or the Capital Road Improvement & Preservation Program (CRIPP). Although improving road infrastructure (i.e. adding lanes, signalization at intersections) may ultimately induce some level of vehicle travel, it does not create unusual project or site circumstances. Additionally, as discussed in Chapter 4.2, the proposed project is located within a high VMT TAZ and the HBW VMT per employee of the proposed project is significantly above the regional average. It should be noted that the project area is served primarily by vehicular modes and does not have transit, pedestrian, and bike accessibility under existing or buildout conditions. The improvements have been identified based on regional traffic projections and are required to maintain an acceptable level of traffic operations per the County's LOS standards. In order to improve accessibility to jobs in the region, the improvements identified in this TIA would need to be implemented. Therefore, the transportation improvements would not warrant additional analysis, or environmental review and the indirect impacts would be less than significant.

7 Future Year 2040 Conditions

This section includes analysis of traffic operation under Future Year 2040 conditions which represents the long-term horizon period when the proposed project is constructed and fully occupied, and all approved land use changes and developments within the General Plan are implemented.

7.1 Future Year 2040 Traffic Operations

7.1.1 Traffic Volumes and Future Roadway Facility Improvements

As described in Section 4 Vehicle Miles Traveled Analysis, the CCTA model was utilized to determine the growth that is used within the Future Year 2040 condition. In addition to 2040 model growth, the following cumulative projects were also included in the Future Year 2040 volumes, as these projects were determined to not have been incorporated into the 2040 model. Cumulative projects are projects that are proposed and in the review process, but not yet fully approved; or projects that have been approved, but not fully constructed or occupied. Figure 10 identifies the locations of these cumulative projects and Table 16 identifies a summary of trip generation estimates.

[4] Trip generation estimates from the Draft Environmental Impact Report for the Priority Area 1 Specific Plan, June 2018.

Additionally, several roadway facility improvements within the study area were forecast within the 2040 model year analysis. It is important to note that there may be several roadway improvements reflected in the 2040 model year network that while not within the immediate study area, have the potential to affect the traffic flow patterns represented in the existing conditions analysis. However, as it pertains to the study area network and analysis in this report, the following are some of the major roadway facility improvements within the study area that are included in the CCTA 2040 model per the Table A-3 in the 2017 CCTA Comprehensive Transportation Plan (CCTA 2017b):

- SR-4 expansion to four-lane roadway south of Marsh Creek Road and extension to Vasco Road
- Marsh Creek Road expansion to four-lane roadway from its juncture with Vasco Road to Byron Highway
- Byron Highway expansion to four-lane roadway between Mountain House Parkway and Grant Line Road
- Armstrong Road extended to connect Vasco Road with Byron Hot Springs Road, allowing for an east-west connection between Vasco Road and Byron Highway

The CCTA model base year is 2018, and the Future Year base year used in this analysis is 2040. Traffic volumes for the Future Year 2040 condition were forecast by calculating the incremental growth for each link in the network (between the approach and departure volumes for each study area intersection) between the years 2040 and 2018. The resulting output was then adjusted and balanced based on the calibration and validation procedures as described in the CCTA Technical Procedures. Link-level output adjustments are a typical process in traffic volume forecasting whereby the model is fine-tuned to replicate observed travel behavior in the study area prior to developing forecasts. Due to the addition of several new intersections, legs of intersections, and roadway additions within the 2040 network, manual adjustments were also utilized to adjust and balance traffic volumes. The total growth calculated for each approach and departure volume based on the ambient annual growth rate over the 22-year period was then grown an additional 3 years to derive existing 2015 conditions. Total growth over the 25-year period was then divided based on the existing turning movements percentages, as validated in the existing traffic volume counts, for each study area intersection.

All model plots utilized within the analysis are provided in Appendix E. The Future Year 2040 weekday AM and PM peak hour volumes are summarized in Figure 11.

7.1.2 Intersection Operations

An intersection LOS analysis was prepared for the Future Year 2040 conditions using HCM 6th Edition methodology via the Synchro LOS software in Chapter 1.3. Table 17 shows the results of the Future Year 2040 analysis. LOS worksheets are provided in Appendix C.

As shown in the table, all the study area intersections are forecast to operate at satisfactory levels of service (at LOS D or better) except for the intersections of:

- Byron Highway/Holey Road – LOS F (57.2 second delay) during the PM peak hour.
- Byron Highway/Byron Hot Springs Road – LOS F (153.3 second delay) during the AM peak hour; (279.8 second delay) during the PM peak hour.
- Holway Drive/Camino Diablo – LOS E (38.5 second delay) during the PM peak hour.
- Byron Highway/Holway Drive – LOS F (155.2 second delay) during the PM peak hour.

- Vasco Road/Camino Diablo – LOS E (84.5 second delay) during the PM peak hour.
- Walnut Boulevard/Vasco Road – LOS E (61.1 second delay) during the PM peak hour.
- Walnut Boulevard/SR-4 – LOS F (121.6 second delay) during the PM peak hour.
- Mountain House Parkway/Byron Highway – LOS F (128.7 second delay) during the PM peak hour.
- Byron Road/Grant Line Road – LOS F (274.6 second delay) during the AM peak hour; LOS F (>300 second delay) during the PM peak hour.

The intersections of Mountain House Parkway with I-205 ramps operate under the jurisdiction of Caltrans; therefore, as no LOS standards are currently available per the updated Caltrans TISG (May 2020) as discussed in Section 1.3, no inconsistencies can be concluded. However, both ramp intersections continue to operate at satisfactory level of service goals (LOS D or better) per both Contra Costa County and San Joaquin County guidelines.

Table 17. Future Year 2040 Peak Hour Intersection Level of Service

7.1.3 Routes of Regional Significance Operations

A rural two-lane roadway segment analysis as outlined in Chapter 15 of the Highway Capacity Manual intersection LOS analysis was prepared for the Future Year 2040 conditions using the HCM 6th Edition methodology via the HCS 7 software for all study area routes of regional significance as described in Section 1.3 Analysis Methodology. It is important to note that due to the changes in the roadway network as described in Section 7.1.1 Traffic Volumes, the roadway segment of SR-4, between Marsh Creek Road and Discovery Bay Boulevard will no longer qualify as a two-lane rural highway under Future 2040 conditions. Therefore, for the purposes of the routes of regional significance analysis, and in accordance with the MTSOs described in the East County Action Plan, this segment has been analyzed as a suburban arterial roadway and therefore analyzed under the signalized intersection LOS operations analysis in Section 7.1.2 Intersection Operations. Table 18 shows the results of the Future Year 2040 conditions analysis. LOS worksheets are provided in Appendix C.

As shown in the table, all the study area routes of regional significance are forecast to operate at satisfactory levels of service (at LOS D or better) except for the segments of:

- Vasco Road, between Marsh Creek Road and Camino Diablo – forecast to operate at LOS E (57.8 average speed and 24.4 follower density) during the AM peak hour and at LOS E (57.8 average speed and 24.4 follower density) during the PM peak hour.
- Byron Highway, between SR-4 and San Joaquin County Line – forecast to operate at LOS E (47.1 average speed and 12.6 follower density) during the AM peak hour and at LOS E (46.4 average speed and 25.0 follower density) during the PM peak hour.

- Camino Diablo, between Vasco Road and Byron Highway – forecast to operate at LOS E (44.2 average speed and 15.5 follower density) during the PM peak hour.
- Walnut Boulevard, between Marsh Creek Road and Vasco Road – forecast to operate at LOS E (46.9 average speed and 23.1 follower density) during the PM peak hour.

Table 18. Future Year 2040 Routes of Regional Significance Level of Service

7.2 Future Year 2040 plus Project Traffic Operations

This section details the Cumulative (Year 2040) plus Project traffic volumes, as well as the intersection and Routes of Regional Significance operations within the study area.

7.2.1 Traffic Volumes

Project traffic volumes shown in Figure 6 were added to the Future Year 2040 traffic volumes shown in Figure 10 to derive the Future Year 2040 plus Project traffic condition. Figure 12 shows the Future Year 2040 plus Project traffic volumes.

7.2.2 Intersection Operations

An intersection LOS analysis was prepared for the Future Year 2040 plus Project conditions using the HCM 6th Edition methodology via the Synchro LOS software for all study intersections as described in Section 1.3 Analysis Methodology. Table 19 shows the results of the Future Year 2040 plus Project conditions analysis. LOS worksheets are provided in Appendix C.

As shown in the table, most of the study area intersections are forecast to operate at satisfactory levels of service (at LOS D or better), however the project's contribution to traffic to the following intersections would cause LOS to be inconsistent with LOS standards:

- Byron Highway/Holey Road – remains at LOS F (>300 second delay) during the PM peak hour (project contribution is >300 second delay).
- Byron Highway/Byron Hot Springs Road – remains at LOS F (>300 second delay) during both the AM and PM peak hours (project contribution is >300 second delay for both peak hours).
- Byron Highway/Camino Diablo – project adds 39.7 seconds of delay and degrades from LOS C to LOS E (72.4 second delay) during the AM peak hour; project adds 98.7 seconds of delay and degrades from LOS D to LOS F (152.3 second delay) during the PM peak hour.
- Holway Drive/Camino Diablo – project adds 24.1 seconds of delay and degrades from LOS E to LOS F (62.6 second delay) during the PM peak hour.
- Byron Highway/Holway Drive – project adds 15.1 seconds of delay and degrades from LOS D to LOS E (49.5 second delay) during the AM peak hour; remains at LOS F (> 300 second delay) during the PM peak hour (project contribution is 166.2 second delay).
- Vasco Road/Camino Diablo – remains at LOS F (125.9 second delay) during the PM peak hour (project contribution is 41.4 second delay).
- Walnut Boulevard/Vasco Road – project adds 7.2 seconds of delay and degrades from LOS D to LOS E (57.7 second delay) during the AM peak hour; remains at LOS E (75.2 second delay) during the PM peak hour (project contribution is 14.1 second delay).
- Walnut Boulevard/SR-4 – remains at LOS F (130.3 second delay) during the PM peak hour (project contribution is 8.7 second delay).

- Mountain House Parkway/Byron Highway – remains at LOS F (126.9 second delay) during the PM peak hour (project contribution is -1.8 second delay).
- Byron Road/Grant Line Road – remains at LOS F (>300 second delay) during both the AM and PM peak hours (project contribution is 9.5 second delay in the AM peak hour and 5.9 second delay in the PM peak hour).

The intersections of Mountain House Parkway with I-205 ramps operate under the jurisdiction of Caltrans; therefore, as no LOS standards are currently available per the updated Caltrans TISG (May 2020) as discussed in Section 1.3, no inconsistencies can be concluded. However, both ramp intersections continue to operate at satisfactory level of service goals (LOS D or better) per both Contra Costa County and San Joaquin County guidelines.

7.2.3 Routes of Regional Significance Operations

A rural two-lane roadway segment analysis as outlined in Chapter 15 of the Highway Capacity Manual intersection LOS analysis was prepared for the Future Year 2040 plus Project conditions using the HCM 6th Edition methodology via the HCS 7 software for all study area routes of regional significance as described in Section 1.3 Analysis Methodology. Table 20 shows the results of the Future Year 2040 plus Project conditions analysis. LOS worksheets are provided in Appendix C.

As shown in the table, all the study area routes of regional significance are forecast to continue to operate at satisfactory levels of service (at LOS D or better) except for the segments of:

- Vasco Road, between Marsh Creek Road and Camino Diablo – forecast to continue to operate at LOS E (57.8 average speed and 24.4 follower density) during the AM peak hour and at LOS E (57.8 average speed and 24.4 follower density) during the PM peak hour.
- Byron Highway, between SR-4 and San Joaquin County Line – forecast to operate at LOS E (46.9 average speed and 14.6 follower density) during the AM peak hour and at LOS E (46.5 average speed and 24.2 follower density) during the PM peak hour.
- Camino Diablo, between Vasco Road and Byron Highway – forecast to operate at LOS E (44.0 average speed and 17.8 follower density) during the PM peak hour.
- Walnut Boulevard, between Marsh Creek Road and Vasco Road – forecast to continue to operate at LOS E (46.9 average speed and 23.7 follower density) during the PM peak hour.

Where routes of regional significance are found to operate at deficient levels of service under two-lane highway analysis per the HCM, addition of a travel lane and re-analysis of the route as a suburban arterial roadway is recommended. Therefore, for the purposes of this analysis, recommended improvements would include the addition of one travel lane in either direction and re-analysis of the routes of regional significance as suburban arterial roadways, in accordance with the MTSOs described in the East County Action Plan. Therefore, improvement measures at signalized intersections provided in Chapter 8.3.1 for deficient intersection operations identified in Chapter 7.2.2 would also correlate to recommended improvements for the deficient routes of regional significance identified in Table 20.

The improvements identified in Chapter 8.3.1 for deficient intersections which necessitate additional roadway improvements to achieve the County's LOS standards, include lane widening, lane restriping, signalization, and other similar physical modifications. These improvements would require funding from additional sources such as the County's Development Mitigation Program or the Capital Road Improvement & Preservation Program (CRIPP). Although improving road infrastructure (i.e. adding lanes, signalization at intersections) may ultimately induce some level of vehicle travel, it

does not create unusual project or site circumstances. Additionally, as discussed in Chapter 4.2, the proposed project is located within a high VMT TAZ and the HBW VMT per employee of the proposed project is significantly above the regional average. It should be noted that the project area is served primarily by vehicular modes and does not have transit, pedestrian, and bike accessibility under existing or buildout conditions. The improvements have been identified based on regional traffic projections and are required to maintain an acceptable level of traffic operations per the County's LOS standards. In order to improve accessibility to jobs in the region, the improvements identified in this TIA would need to be implemented. Therefore, the transportation improvements would not warrant additional analysis, or environmental review and the indirect impacts would be less than significant.

8 Project Impacts, Mitigation Measures and Level of Service Improvements

8.1 Project Impacts

As shown in Chapter 4, the project would have a significant VMT impact. Following section provides a summary of measures that can implemented to mitigate the project's VMT impact.

8.2 Project Design Features and Mitigation Measures

Transportation Demand Management (TDM) measures can be implemented as project design features and/or mitigation measures for reducing VMT. The California Air Pollution Control Officers Association (CAPCOA) Quantifying Greenhouse Gas Mitigation Measures, 2010 report has identified actions and changes to project features that reduce VMT. Additionally, the County's Transportation Demand Management Ordinance Guide published in December 2009 by the Department of Conservation & Development has outlined effective ways to reduce vehicle trips (hence VMT) added by new development projects.

Table 21 describes strategies from the County's TDM Ordinance Guide and CAPCOA as sample options that would be most effective in areas like the community of Byron and are appropriate for the project to avoid or reduce the significant impact. VMT reductions for each of the strategy (using the applicable range of effectiveness) that can be applied to the project have been estimated per CAPCOA's mitigation measure calculation provided in Fact Sheets of the document. Only the strategies that would be applicable to suburban locations such as the project's location were used. Further, high-level assumptions regarding project's site design were made since it was not available at the time of preparation of this study and a conservative estimate of employee participation was applied to the VMT reduction calculations.

Table 21. Transportation Demand Management and VMT Reduction Measures

Contra Costa Transportation Demand Management Ordinance Guide (2009)	Applicable CAPCOA (2010) Transportation Measures for VMT Reduction	Range of Effectiveness of VMT Reduction and Calculation using CAPCOA (2010)
Project Site Design Features (including Pedestrian Facilities) A comprehensive design that features pedestrian amenities, covered bus stops and adequate accessibility, benches, passenger loading zones, etc. To encourage walking, safe, and convenient pedestrian access and movement need to ensure as part of the project site design, the proposed project would include the following design elements: 1. Minimize walking distances along the internal street/path network to provide convenient connections between the different buildings, services, etc. 2. Design gathering areas where enhanced landscaping, adequate lighting, signage, and street furniture are provided so that walking can be naturally encouraged with the provision of such design elements. 3. Establish traffic calming devices where feasible on the internal street system. 4. Other design considerations that are safety related include the provision of adequate sight triangles at project driveways and internal intersections, as well as preventing parking encroachment within pedestrian sidewalks and walkways.	**LUT-9/3.1.9 Improve Design of Development** – Project design elements that enhance walkability and connectivity can be measured in terms of sidewalk coverage, building setbacks, street widths, pedestrian crossings, presence of street trees, and a host of other physical variables that differentiate pedestrian-oriented environments from auto-oriented environments.	3.0% - 21.3% VMT reduction **% VMT Reduction = Intersections * B;** Where Intersections = Percentage increase in intersections versus a typical ITE suburban development; B = Elasticity of VMT with respect to % of intersections (0.12 from CAPCOA). Since the project's site plan was not available at time of the preparation of this document, it was conservatively assumed that a 3**% VMT reduction** would be achieved using this measure.
	SDT-1/3.2.1 Provide Pedestrian Network Improvements - Providing a pedestrian access network to link areas of the Project site encourages people to walk instead of drive. This mode shift results in people driving less and thus a reduction in VMT. A project should provide a pedestrian access network that internally links all uses and connects to all existing or planned external streets and pedestrian facilities contiguous with the project site. A project should minimize barriers to pedestrian access and interconnectivity. Physical barriers such as walls, landscaping, and slopes that impede pedestrian circulation will be eliminated.	0 – 2% VMT reduction **1% VMT reduction** is allowed for pedestrian accommodations within project site in urban and sub-urban context.
	SDT-2/3.2.2 Provide Traffic Calming Measures - Providing traffic calming measures encourages people to walk or bike instead of using a vehicle. This mode shift results in a decrease in VMT. Project design should include pedestrian/bicycle safety and traffic calming measures in excess of jurisdiction requirements. Roadways should be	0.25 – 1% VMT reduction The reduction is based on % of streets within project with traffic calming improvements and % of intersections within project with traffic calming improvements. Since the project's site plan was not available at time of the

Table 21. Transportation Demand Management and VMT Reduction Measures

Contra Costa Transportation Demand Management Ordinance Guide (2009)	Applicable CAPCOA (2010) Transportation Measures for VMT Reduction	Range of Effectiveness of VMT Reduction and Calculation using CAPCOA (2010)
5. Give a priority to establishing and maintaining pedestrian facilities such as sidewalks, marked crosswalks and stop bars, in-pavement lighted crossing, bulb-outs and other traffic calming devices, street and pedestrian lighting, sheltered seating areas, and landscaping.	designed to reduce motor vehicle speeds and encourage pedestrian and bicycle trips with traffic calming features. Traffic calming features may include: marked crosswalks, count-down signal timers, curb extensions, speed tables, raised crosswalks, raised intersections, median islands, tight corner radii, roundabouts or mini-circles, on-street parking, planter strips with street trees, chicanes/chokers, and others.	preparation of this document, it was conservatively assumed 50% of project's on-site streets and 50% of project's on-site intersections would be designed with these considerations. This would allow **0.5% VMT reduction.**
Bicycling Facilities: The design measures listed below can be established by the project and approved as part of the development application review process: 1. Provide secure short- and long-term bicycle parking (i.e., bicycle racks and lockers, respectively) at prime locations of the development sites. 2. Provide showers, change facilities, and clothes lockers at convenient locations within business buildings in order to encourage cycling for longer distances. 3. Ensure safe and convenient access and movements of cyclists within development sites.	**SDT-5/3.2.5 Incorporate Bike Lane Street Design (on-site)** - A project should incorporate bicycle lanes, routes, and shared-use paths into street systems, new subdivisions, and large developments. These on-street bike accommodations can provide a continuous network of routes, facilitated with markings and signage. These improvements can help reduce peak-hour vehicle trips by making commuting by bike easier and more convenient for more people.	Grouped Strategy (LUT-9)
	SDT-6/ 3.2.6 Provide Bike Parking in Non-Residential Projects- A non-residential project should provide short-term and long-term bicycle parking facilities to meet peak season maximum demand. Bike Parking in Non-Residential Projects has minimal impacts as a standalone strategy and should be grouped with the Improve Design of Development strategy to encourage bicycling by providing strengthened street network characteristics and bicycle facilities.	0.625% reduction in VMT (from literature per CAPCOA)
	SDT-9/3.2.9 Dedicate Land for Bike Trails - Larger projects may be required to provide for, contribute to, or dedicate land for the provision of off-site bicycle trails linking the project to designated bicycle commuting routes in accordance with an adopted citywide or countywide bikeway plan. The benefits of Land Dedication for Bike Trails have not been	Grouped Strategy (LUT-9)

Table 21. Transportation Demand Management and VMT Reduction Measures

Contra Costa Transportation Demand Management Ordinance Guide (2009)	Applicable CAPCOA (2010) Transportation Measures for VMT Reduction	Range of Effectiveness of VMT Reduction and Calculation using CAPCOA (2010)
	quantified and should be grouped with the Improve Design of Development strategy to strengthen street network characteristics and improve connectivity to off-site bicycle networks.	
Transit Facilities: 1. Provide safe and direct site access to the public streets where transit services are provided. 2. Provide necessary transit facilities in the vicinity of project site (such as bus shelter, bus turnout, concrete pad, seating, lighting, etc.), in order to support transit use. 3. Establish an on-site information kiosk where information on transit routes, schedules, and fares can be provided. 4. Intersection geometry and road structure should be capable of supporting the length and weight of buses, including internal project circulation roads if bus or shuttle service is anticipated to enter the project site. 5. Communicate with the local transit agency (Tri Delta Transit) to seek changes/addition to bus route to support transit ridership for the project. 6. Provide shuttle service to main transit station during the commute periods.	**TST-2/3.5.2 Implement Transit Access Improvements** This project should improve access to transit facilities through sidewalk/ crosswalk safety enhancements and bus shelter improvements. The benefits of Transit Access Improvements alone have not been quantified and need to grouped with Transit Network Expansion (TST-3) and Transit Service Frequency and Speed (TST-4).	Grouped Strategy (TST-3 and TST-4)
	TST-3/3.5.3 Expand Transit Network –A project should expand the local transit network by adding or modifying existing transit service to enhance the service near the project site. This will encourage the use of transit and therefore reduce VMT.	0.1– 8.2% VMT reduction % VMT Reduction = Coverage * B * Mode * D Where Coverage = % increase in transit network coverage; B = elasticity of transit ridership with respect to service coverage (value from CAPCOA);Mode = existing transit mode shar; D = adjustments from transit ridership increase to VMT (0.67, from Appendix D of CAPCOA) Since the project is located in a sub-urban area with no existing transit service, a low range % VMT reduction (10% expansion, sub-urban) was assumed. Therefore, **0.1% VMT reduction** would be achieved using this measure.
Commute Trip Reduction Strategies 1 Rideshare/Carshare Initiatives • Designate a number of on-site parking spaces at prime locations (i.e., close to buildings access, well lit, etc.) for carpools	**TRT-3/3.4.2 Provide Ride-sharing Programs -** Increasing the vehicle occupancy by ride sharing will result in fewer cars driving the same trip, and thus a decrease in VMT. Ride-sharing program and a permanent transportation management association membership and funding requirement. Funding may	1 1– 15% commute VMT reduction % VMT Reduction = Commute *Employee Where Commute = % reduction in commute VMT (from CAPCOA); Employee = % employees

Table 21. Transportation Demand Management and VMT Reduction Measures

Contra Costa Transportation Demand Management Ordinance Guide (2009)	Applicable CAPCOA (2010) Transportation Measures for VMT Reduction	Range of Effectiveness of VMT Reduction and Calculation using CAPCOA (2010)
and vanpools privately operated by tenants. Short-term parking spaces or passenger loading areas are also needed for taxi and outside shuttle services. Establishing carpool/vanpool initiatives can reduce the overall demand for on-site parking.	be provided by Community Facilities, District, or County Service Area, or other non-revocable funding mechanism. Ride-sharing programs can be promoted through a multi-faceted approach such as: • Designating a certain percentage of parking spaces for ride sharing vehicles • Designating adequate passenger loading and unloading and waiting areas for ride-sharing vehicles • Providing a web site or message board for coordinating rides	eligible; Commute: 5% (low density suburb annual reduction in commute VMT (from CAPCOA). For the project, 50% of the employees were assumed to be eligible for participation in the program as 10% of the employees are estimated to be County Airport staff. % VMT Reduction = 5%*50% = 2.5%
2. Establish on-site car rental or carshare services so that tenants do not need to rely on personal cars for work-related purposes.	TRT-9/3.4.9 Implement Car-Sharing Program- A car-sharing project to allows people to have on-demand access to a shared fleet of vehicles on an as-needed basis. User costs are typically determined through mileage or hourly rates, with deposits and/or annual membership fees. The car-sharing program could be created through a local partnership or through one of many existing car-share companies. Employer-based car-sharing programs provide a means for business/day trips for alternative mode commuters and provide a guaranteed ride home option.	0.4 – 0.7% commute VMT reduction % VMT Reduction = A * B / C; where A = % reduction in car-share member annual VMT (from the literature); B = number of car share members per shared car (from the literature); C = deployment level based on urban or suburban context; A= 37% (per 1); B=20 (per 2); C = 1 shared car per 2,000 population for sub urban project setting from CAPCOA % VMT Reduction = 37%*20/2000 = 0.4%
3. Employer Sponsored Vanpool/Shuttle	TRT-11/3.4.11 Provide Employer-Sponsored Vanpool/Shuttle- Implementing an employer-sponsored vanpool or shuttle will usually service employees' commute to work while a shuttle will service nearby transit stations and surrounding commercial centers. Employer-sponsored vanpool programs entail an employer purchasing or leasing vans for employee use, and often subsidizing the cost of at least program administration, if not more. The driver usually receives personal use of the van, often	0.3%-13.4% commute VMT reduction % VMT Reduction = A * B * C; where A = % shift in vanpool mode share of commute trips (from CAPCOA); B = % employees eligible; C = adjustments from vanpool mode share to commute VMT; A =20% for larger employer; B = 50%; C = 0.676 (See CAPCOA Appendix C)

Table 21. Transportation Demand Management and VMT Reduction Measures

Contra Costa Transportation Demand Management Ordinance Guide (2009)	Applicable CAPCOA (2010) Transportation Measures for VMT Reduction	Range of Effectiveness of VMT Reduction and Calculation using CAPCOA (2010)
	for a mileage fee. Scheduling is within the employer's purview, and rider charges are normally set on the basis of vehicle and operating cost.	% VMT Reduction = 20%*50%*0.67= 6.7%
4. Flexible Work Schedules and Telecommuting Flexible Work Schedule programs established by employers govern the time period in which employees travel to and from work. Such programs influence employees' propensity to consider using transit, carpooling, and other alternatives to driving alone to work. Telecommuting exists in several forms, such as working at home, working at a satellite center with shorter commuting distance, and working at neighboring work centers that can be leased to several employees and where office equipment is provided.	**TRT-6/ 3.4.6 Encourage Telecommuting and Alternative Work Schedules-** Encouraging telecommuting and alternative work schedules reduces the number of commute trips and therefore VMT traveled by employees. Alternative work schedules could take the form of staggered starting times, flexible schedules, or compressed work weeks.	0.07%-5.5% commute VMT % Commute VMT Reduction = Commute; where commute = % reduction in commute (from Table) Assuming 4-day/40 hour week for 25% of employees % VMT Reduction = 3.75%
5. TDM Coordinator and/or Marketing Strategies. A TDM Coordinator is typically responsible for developing, marketing strategies, implementing and evaluating the TDM programs. The TDM Coordinator can be a designated on-site staff person (half- to full-time) with specific TDM responsibilities and authority. The Coordinator's responsibilities can also be contracted out with a commute company. Since educational and promotional activities are needed to launch TDM program, the TDM coordinator plays a key role in coordinating with transportation service providers (such as 511 Contra Costa), hosting various event and providing pertinent information to all tenets and employees regarding the facilities, programs and services available at the project site.	**TRT-7/ 3.4.8 Implement Commute Trip (CTR) Reduction Marketing/ Launch Targeted Behavioral Interventions** Implementing marketing strategies to reduce commute trips and information sharing are important components to successful commute trip reduction strategies. Implementing commute trip reduction strategies without a complementary marketing strategy will result in lower VMT reductions. Marketing strategies may include: • New employee orientation of trip reduction and alternative mode options • Event promotions • Publications	0.8%-4.0% commute VMT % VMT Reduction = A*B*C ; Where A = % reduction in commute vehicle trips; B = % employees eligible (50%); C=Adjustment from commute VT to commute VMT; A = 4% (from CAPCOA); C = 1.0 (Appendix C of CAPCOA) % VMT Reduction = 4%*50%*1 = 2.0%

Table 21. Transportation Demand Management and VMT Reduction Measures

Contra Costa Transportation Demand Management Ordinance Guide (2009)	Applicable CAPCOA (2010) Transportation Measures for VMT Reduction	Range of Effectiveness of VMT Reduction and Calculation using CAPCOA (2010)
6. Transit Incentive Employees can be provided with incentives to take transit to commute to work by providing subsidized transit passes/fares, participating in the regional transportation programs.	**TRT-4/3.4.4 Implement Subsidized or Discounted Transit Program** - Providing subsidized/discounted daily or monthly public transit passes may also provide free transfers between all shuttles and transit to participants. These passes can be partially or wholly subsidized by the employer or development.	0.3%-20% commute VMT reduction % VMT Reduction = A*B*C; where A = % reduction in commute VMT (from CAPCOA); B = % employees eligible (50%); C=Adjustment from commute VT to commute VMT using preferred literature table. **% VMT Reduction = 1.9%*50%*1= 1.0%**
Parking Supply and Demand Management Strategies - Establishing fees for on-site parking combined with a strong TDM program can help shift driver's behavior to the use of alternative modes of transportation and higher occupancy vehicles. However, there are no existing transit or alternative transportation facilities near the project that employees can use to access the project. Therefore, only selective parking management strategies that have been included previously such as preferential parking for ridesharing/carpooling programs and design of development to limit on-site conflict locations between vehicular parking and pedestrian/cyclists movements would be applicable to the project.		

Source: County TDM Ordinance Guide 2009 and CAPCOA 2010

Based on Table 21, following mitigation measures and VMT reduction percentage has been summarized for the proposed project.

MM-TRAF-1 **Project Site Design:** The project shall provide site design features that facilitate pedestrian amenities and promote accessibility for on-site pedestrian movement as well connections to immediate off-site locations. As shown Table 21, this measure would result a range of reduction in VMT.

MM-TRAF-2 **Bicycling Facilities:** The project shall provide adequate bike parking, change, and shower facilities on-site and improve accessibility for on-site bicycle movement as well connections to immediate off-site locations. As shown in Table 21, this measure would result in a 0.63% reduction in VMT. Low stress bikeway proposed along Byron Highway can be made accessible to bicyclists from the project if bike routes can be planned along Holey Road and Byron Hot Springs Road.

MM-TRAF-3 **Access to Transit and Expansion of Transit Network:** The project shall provide access to transit and expand transit network. The project should work with Tri Delta Transit to add transit service in the project vicinity and provide connections with the cities of Antioch, Brentwood, Pittsburg and Oakley and other incorporated areas. As shown Table in 21,this measure was assumed to result in a conservative 0.1% reduction in VMT since there are no known transit service improvement or expansion projects near the project site. However, once transit coverage is increased, this VMT reduction could increase, however it would not reduce the Project's VMT to a less than significant level.

MM-TRAF-4 **Ride-Sharing and Car-Sharing Programs for Employees:** The project shall provide/promote/subsidize ride-sharing programs to the employees by utilizing approaches such as designating a certain percentage of parking spaces for ride sharing vehicles, designating adequate passenger loading/unloading and waiting areas for ride-sharing vehicles, and providing a website or message boards for coordinating rides. Increasing the vehicle occupancy by utilizing ride sharing will result in fewer cars driving the same trip, thereby decreasing the VMT. As shown in Table in 21, providing ride-sharing and car-sharing programs to approximately 50% of the employees would result in a 2.5% and 0.4% reduction in VMT.

MM-TRAF-5 **Employer-Sponsored Vanpool/Shuttle:** The project shall provide an employer-sponsored vanpool and shuttle for use by employees for commutes to work, and bus/transit station. The vanpool and shuttle will be available to all employees; however, the calculations conservatively assume the program would be offered to/utilized by 50 percent of employees. As shown in Table 6, providing employer-sponsored vanpool/shuttle to approximately 50% of the employees, would result in a 6.7% reduction in VMT.

MM-TRAF-6 **Encourage Telecommuting and Alternative Work Schedules for Employees:** According to CAPCOA, encouraging telecommuting and alternative work schedules would reduce the number of commute trips, thereby reducing the project's VMT. Staggered start times, flexible schedules, or compressed work weeks are examples of alternative work schedules. Because retail and industrial/warehouse operations may require most of the employees to be on-site 24-hours per day, alternative work schedules may be feasible for a majority of the employees. The project shall implement a 4-day/40-hour work schedules for approximately 25% of the employees. As shown in Table 21, with 25% employee participation in an alternate work schedule consisting of a 4-day/40- hour work week, a VMT reduction of 3.75% would result.

MM-TRA-7 **Implement Commute Trip Reduction Marketing:** The project shall implement marketing strategies to reduce commute trips. The marketing strategies would include new employee orientation of trip reduction and alternative mode options, event promotions and publications. Although the marketing would target all employees, a conservative assumption of marketing to only 50 percent of the employees was utilized in the calculation. As shown in Table 21, implementing/promoting commute trip reduction marketing to approximately 50% of the employees, would result in a 2.0% reduction in VMT.

MM-TRAF-8 **Implement Subsidized or Discounted Transit Program for Employees:** The project shall provide subsidized or discounted daily or monthly public transit passes to the employees. Although subsidized or discounted transit program would be available to all employees, the VMT reduction calculation conservatively assumes that the program would be available to and utilized by a maximum of 50% of employees. As shown in Table 22, implementing subsidized or discounted transit program to approximately 50% of the employees, would result in a 1.0% reduction in VMT.

Table 22. VMT Reduction Summary

Mitigation Measure	CAPCOA Category	Project VMT Reduction (%)
MM-TRAF-1 The Project shall provide site design features that facilitate pedestrian amenities and promote accessibility for pedestrians.	LUT-9 SDT-1 SDT-2	3.0% 1.0% 0.5%
MM-TRAF-2 The project shall provide adequate bike parking, change, and shower facilities on-site and improve accessibility for on-site bicycle movement as well connections to immediate off-site locations.	SDT-6	0.63%
MM-TRAF-3 The Project shall facilitate access to transit and expand transit network.	TST-3	0.10%
MM-TRAF-4 The Project shall provide ride-sharing and car-sharing programs for approximately 50% of the employees.	TRT-3 TRT-9	2.5% 0.40%
MM-TRAF-5 The Project shall provide employer sponsored vanpool/shuttle service for approximately 50% of the employees.	TRT-11	6.7%
MM-TRAF-6 The Project shall encourage alternative work schedules for approximately 25% of the employees (no telecommuting assumed).	TRT-6	3.75%
MM-TRAF-7 The Project shall Implement CTR Marketing/ Launch Targeted Behavioral Interventions for approximately 50% of the employees.	TRT-7	2.0%
MM-TRAF-8 The Project shall implement subsidized or discounted transit programs for approximately 50% of the employees.	TRT-4	1.0%
	Total	**19.7%**[1]

1 The calculated reductions do not sum to a total since the effect of individual strategy reductions are multiplicative not additive. Total % VMT Reduction = 1-(1-A)*(1-B)*(1-C) where A, B, C equals reductions for individual strategies.

The proposed project's VMT with mitigation is summarized in Table 23. The VMT reductions associated with the above mitigation measures are applied incrementally, resulting in a lower net reduction in comparison to the sum of the numbers. The 19.7 % reduction in VMT is applied to the Project's HBW VMT per employee and results in 17.0

HBW VMT per employee, which is still above the 15% below the Bay Area average threshold of 12.6 HBW VMT per employee. Even with the implementation of the mitigation measures, the proposed project's significant impact cannot be fully mitigated. Therefore, the proposed project would result in a significant and unavoidable impact.

Per preliminary estimates based on building square footage proposed for each use, the buildout of the project comprises of approximately 800 employees. Therefore, the County may require that as a condition of approval, the individual project tenants prepare TDM or CTR Program that establish performance standards (i.e., trip reduction requirements) which can be monitored on a regular basis. The project applicant/tenants should also work with 511 Contra Costa and use their county-wide program to reduce commuter trips by providing information, resources, and tools that promote mobility options such as biking, using transit, walk, micro mobility, car pool, van pool, working from home and guaranteed ride home.

Table 23. Project VMT with Mitigation Measures

Criteria	Year 2018 (with Project)
Bay Area Commute Average VMT ***(Existing Baseline)***	14.9
Contra Costa County VMT	14.0
Byron Airport Zone VMT (Project)	21.2
15% below Bay Area Average (Threshold)	***12.7***
Mitigation Reduction	19.7%
Project with Mitigation Measures	***17.0***
Is the Project above or below Threshold with Mitigation	Above the Threshold

Source: Contra Costa Countywide Travel Demand Model and Table 22

8.3 Level of Service Improvements

As shown in Chapter 6 and 7, several intersections within the study are operate or are forecast to operate at unsatisfactory levels of service per Contra Costa or San Joaquin County criteria. Recommended improvement measures are outlined for intersections operating at deficient levels of service for all plus Project scenarios in the following discussion. LOS worksheets detailing intersection operations with the addition of recommended improvement measures are provided in Appendix C.

8.3.1 Improvement Measures

8.3.1.1 Existing plus Project

The proposed project would create an impact to the delay in the Existing plus Project condition at the 9 intersections as described in Chapter 6. Improvements are described for each impacted intersection below:

Intersection #1 – Byron Highway/Holey Road

The delay at this intersection increases by 161.0 seconds during the PM peak hour (from LOS C to LOS F) with the addition of Project traffic. As such, the following improvement is recommended:

Improvement 1

- Add a center acceleration lane on Byron Highway to accommodate a two-stage gap acceptance from eastbound left turning movements.

Implementation of **Improvement 1** would improve intersection operations to satisfactory conditions and the intersection would be **compliant with the County's LOS standards**.

Additionally, as the intersection of Byron Highway/Holey Road is a TWSC intersection, a peak hour traffic signal warrant per the CA MUTCD was reviewed to determine whether the installation of a traffic signal may be warranted at this intersection. Based on the minimum volume requirements of the peak hour signal warrant, the Existing plus Project peak hour traffic volumes would satisfy the warrant (see Appendix F). As such, installation of a signal at this intersection would satisfy as an alternative improvement measure to **Improvement 1**.

Intersection #2 – Byron Highway/Byron Hot Springs Road

The delay at this intersection increases by 61.6 seconds during the AM peak hour (from LOS C to LOS F) and by greater than 300 seconds during the PM peak hour, further degrading the existing LOS F conditions, with the addition of Project traffic. Additionally, as the intersection of Byron Highway/Byron Hot Springs Road is a TWSC intersection, a peak hour traffic signal warrant per the CA MUTCD was reviewed to determine whether the installation of a traffic signal may be warranted at this intersection. Based on the minimum volume requirements of the peak hour signal warrant, the Existing plus Project peak hour traffic volumes would satisfy the warrant (see Appendix F).

As such, the following improvement is recommended:

Improvement 2

- Install a traffic signal at the intersection, maintaining existing lane geometrics.

Implementation of **Improvement 2** would improve intersection operations to satisfactory conditions and the intersection would be **compliant with the County's LOS standards**.

Intersection #3 – Byron Highway/Camino Diablo

The delay at this intersection increases by 49.3 seconds during the PM peak hour (from LOS C to LOS F) with the addition of Project traffic. As such, the following improvement is recommended:

Improvement 3

- Add eastbound right turn overlap phasing.

Implementation of **Improvement 3** would improve intersection operations to satisfactory conditions and the intersection would be **compliant with the County's LOS standards**.

Intersection #4 –Holway Drive/Camino Diablo

The delay at this intersection increases by 19.3 seconds during the PM peak hour (from LOS D to LOS F) with the addition of Project traffic. As the intersection of Holway Drive/Camino Diablo is a TWSC intersection, a peak hour traffic signal warrant per the CA MUTCD was reviewed to determine whether the installation of a traffic signal may be warranted at this intersection. Based on the minimum volume requirements of the peak hour signal warrant, the Existing plus Project peak hour traffic volumes would not satisfy the warrant (see Appendix F). A signal would not be recommended as an appropriate improvement measure.

Additionally, conversion of this intersection to an all-way stop controlled (AWSC) intersection would not be recommended due to high eastbound and westbound traffic volume on Camino Diablo due to the potential for queuing into the adjacent Byron Highway/Camino Diablo intersection approximately 850 to the west. Additionally, the construction of a TWLTL, east or westbound left turning pockets, or additional two-stage gap acceptance measures would not improve the intersection to satisfactory conditions. Therefore, no feasible improvement measures are recommended, and the intersection would **not be compliant with the County's LOS standards**. However, it should be noted that the northbound traffic volumes on Holway Drive serve as the primary driver for the intersection's deficient operations, with less than 10 vehicles utilizing the northbound lane (southern leg) of the intersection per hour.

Intersection #5 – Byron Highway/Holway Drive

The delay at this intersection increases by 98.3 seconds during the PM peak hour (from LOS C to LOS F) with the addition of Project traffic. As the intersection of Byron Highway/Holway Drive is a TWSC intersection, a peak hour traffic signal warrant per the CA MUTCD was reviewed to determine whether the installation of a traffic signal may be warranted at this intersection. Based on the minimum volume requirements of the peak hour signal warrant, the Existing plus Project peak hour traffic volumes would satisfy the warrant (see Appendix F).

As such, the following improvement is recommended:

Improvement 4

- Install a traffic signal at the intersection, maintaining existing lane geometrics.

Implementation of **Improvement 4** would improve intersection operations to satisfactory conditions and the intersection would be **compliant with the County's LOS standards**.

Intersection #7 – Vasco Road/Camino Diablo

The delay at this intersection increases by 23.8 seconds during the PM peak hour (from LOS D to LOS E) with the addition of Project traffic. As such, the following improvement is recommended:

Improvement 5

- Restripe the westbound thru-left turn lane to a westbound thru-right turn lane.

Implementation of **Improvement 5** would improve intersection operations to satisfactory conditions and the intersection would be **compliant with the County's LOS standards**.

Intersection #8 – Walnut Boulevard/Vasco Road

The delay at this intersection increases by 18.5 seconds during the PM peak hour (from LOS D to LOS E) with the addition of Project traffic. As such, the following improvement is recommended:

Improvement 6

- Convert the southbound left-turn phasing from protected to protected-permitted.

Implementation of **Improvement 6** would improve intersection operations to satisfactory conditions and the intersection would be **compliant with the County's LOS standards**.

Intersection #10 – Walnut Boulevard/SR-4

The delay at this intersection increases by 5.5 seconds during the PM peak hour, further degrading the existing LOS E conditions with the addition of Project traffic. As such, the following improvement is recommended:

Improvement 7

- Restripe the eastbound thru and eastbound right turn lanes to an eastbound thru-right lane.
- Add an additional receiving leg for eastbound traffic on the western leg of the intersection.

Implementation of **Improvement 7** would improve intersection operations to satisfactory conditions and the intersection would be **compliant with the County's LOS standards**.

Intersection #14 – Byron Road/Grant Line Road

The delay at this intersection increases by 6.1 seconds during the AM peak hour, further degrading the existing LOS E conditions, and decreases by 6.2 seconds during the PM peak hour at LOS F, with the addition of Project traffic. As such, the following improvement is recommended:

Improvement 8

- Add westbound right turn overlap phasing.

Implementation of **Improvement 8** would improve intersection operations to satisfactory conditions and the intersection would be **compliant with San Joaquin County LOS standards**.

8.3.1.2 Future Year 2040 plus Project

The proposed project would create an impact to the delay in the Future Year plus Project condition at the 10 intersections as described in Chapter 7. Improvements are described for each impacted intersection below:

Intersection #1 – Byron Highway/Holey Road

The delay at this intersection increases by 81.8 seconds during the AM peak hour, further degrading the Future Year 2040 LOS F conditions, with the addition of Project traffic. Although the delay does not increase in the PM peak hour with the addition of project traffic, the delay would remain greater than 50 seconds (LOS F). As the intersection of Byron Highway/Holey Road is a TWSC intersection, a peak hour traffic signal warrant per the CA MUTCD was reviewed to determine whether the installation of a traffic signal may be warranted at this intersection. Based on the minimum volume requirements of the peak hour signal warrant, the Future Year 2040 plus Project peak hour traffic volumes would satisfy the warrant during the PM peak hour (see Appendix F). As such, the following improvement is recommended:

Improvement 9

- Install a traffic signal at the intersection.
- Add a separate eastbound right turn lane and a separate northbound left turn lane.
- Add an additional receiving lane for southbound traffic on the southern leg of the intersection.

Implementation of **Improvement 9** would improve intersection operations to satisfactory conditions and the intersection would be **compliant with the County's LOS standards**.

Additionally, County of Contra Costa identifies several proposed (funded and unfunded) projects in the Capital Road Improvement & Preservation Program (CRIPP) for funding year (FY) 2020/21 and FY 2026/27. Although the improvements outlined in **Improvement 9** are not included in the CRIPP, projects listed in the CRIPP that may contribute to the necessary roadway widening or other intersection improvements at Byron Highway/Holey Road are included below for informational purposes:

- **(Unfunded) III-15. Byron Highway Safety Improvements (Various Locations)** – This project proposes to construct safety improvements at various locations along Byron Highway to include shoulder widening, drainage improvements, and intersection improvements.
- **(Unfunded) III-16. Byron Highway Widening – Camino Diablo to the Alameda County Line (East County Regional AOB)** – This project proposes to widen 5 miles of roadway shoulders on Byron Highway from Camino Diablo to the Alameda County Line.
- **(Unfunded) III-54. SR239/Trilink: Vasco Road-Byron Highway Connector –** This project proposes to construct a new roadway as part of the future Route 239 connector between Vasco Road and Byron Highway.

Intersection #2 – Byron Highway/Byron Hot Springs Road

The delay at this intersection increases by greater than 300 seconds during both the AM and PM peak hours, further degrading the Future Year 2040 LOS F conditions, with the addition of Project traffic. As recommended per **Improvement 2**, the intersection meets peak hour traffic signal warrants under Existing plus Project conditions, and a signal would be recommended. A peak hour traffic signal warrant per the CA MUTCD was reviewed for Future Year

2040 plus Project conditions to determine whether the installation of a traffic signal may be warranted at this intersection in this analysis scenario as well. Based on the minimum volume requirements of the peak hour signal warrant, the Future Year 2040 plus Project peak hour traffic volumes would satisfy the warrant (see Appendix F). As such, the following improvement is recommended:

Improvement 10

- Install a traffic signal at the intersection per **Improvement 2**.
- Add an additional northbound and southbound thru lane.
- Add an additional receiving lane for both northbound and southbound traffic on the northern and southern legs of the intersection, respectively.

Implementation of **Improvement 10** would improve intersection operations to satisfactory conditions and the intersection would be **compliant with the County's LOS standards**.

Additionally, although the improvements outlined in **Improvement 10** are not included in the County of Contra Costa CRIPP, projects listed in the CRIPP that may contribute to the necessary roadway widening or other intersection improvements at Byron Highway/Byron Hot Springs Road are included below for informational purposes:

- **(Unfunded) III-17. Byron Highway Widening – Chestnut Street to State Route 4 (East County Regional AOB)** – This project proposes to widen shoulders for 1.6 miles of Byron Highway from Chestnut Street to State Route 4.
- **(Unfunded) III-16. Byron Highway Widening – Camino Diablo to the Alameda County Line (East County Regional AOB)** – This project proposes to widen 5 miles of roadway shoulders on Byron Highway from Camino Diablo to the Alameda County Line.
- **(Unfunded) III-54. SR239/Trilink: Vasco Road-Byron Highway Connector –** This project proposes to construct a new roadway as part of the future Route 239 connector between Vasco Road and Byron Highway.

Intersection #3 – Byron Highway/Camino Diablo

The delay at this intersection increases by 109.5 seconds during the AM peak hour, and by 84.6 seconds during PM peak hour, further degrading the Future Year 2040 LOS F conditions, with the addition of Project traffic.

Implementation of **Improvement 3**, as recommended under Existing plus Project conditions, would improve intersection operations to satisfactory conditions during Future Year 2040 plus Project conditions as well. No additional improvement measures would be necessary, and the intersection would be **compliant with the County's LOS standards**.

Intersection #4 –Holway Drive/Camino Diablo

The delay at this intersection increases by 79.6 seconds during the AM peak hour and 24.1 seconds during the PM peak hour, further degrading the Future Year 2040 LOS F conditions, with the addition of Project traffic. As the intersection of Holway Drive/Camino Diablo is a TWSC intersection, a peak hour traffic signal warrant per the CA MUTCD was reviewed to determine whether the installation of a traffic signal may be warranted at this intersection. Based on the minimum

volume requirements of the peak hour signal warrant, the Future Year 2040 plus Project peak hour traffic volumes would satisfy the warrant (see Appendix F). As such, the following improvement is recommended:

Improvement 11

- Install a traffic signal at the intersection.
- Add a separate eastbound left turn lane with protected phasing.

Implementation of **Improvement 11** would improve intersection operations to satisfactory conditions and the intersection would be **compliant with the County's LOS standards**.

Additionally, although the improvements outlined in **Improvement 11** are not included in the County of Contra Costa CRIPP, projects listed in the CRIPP that may contribute to the necessary roadway widening or other intersection improvements at Holway Drive/Camino Diablo are included below for informational purposes:

- **(Unfunded) III-21. Camino Diablo Widening – Vasco Road to Byron Highway (East County Regional AOB)** – This project proposes to widen shoulders on Camino Diablo from Vasco Road east to Byron Highway.
- **(Unfunded) III-34. Holway Drive Safety Improvements – Main Street to Camino Diablo Road (CTPL) –** This project proposes to connect sidewalks, curb ramps, and crosswalks.

Intersection #5 – Byron Highway/Holway Drive

The delay at this intersection increases by 15.1 seconds during the AM peak hour (from LOS D to LOS E), and by 166.2 seconds during PM peak hour, further degrading the Future Year 2040 LOS F conditions with the addition of Project traffic.

Implementation of **Improvement 4**, as recommended under Existing plus Project conditions, would improve intersection operations to satisfactory conditions during Future Year 2040 plus Project conditions as well. No additional improvement measures would be necessary, and the intersection would be **compliant with the County's LOS standards**.

Additionally, although the improvements outlined in **Improvement 4** are not included in the County of Contra Costa CRIPP, projects listed in the CRIPP that may contribute to the necessary roadway widening or other intersection improvements at Byron Highway/Holway Drive are included below for informational purposes:

- **(Unfunded) III-15. Byron Highway Safety Improvements (Various Locations)** – This project proposes to construct safety improvements at various locations along Byron Highway to include shoulder widening, drainage improvements, and intersection improvements.
- **(Unfunded) III-19. Byron Highway Widening – SR 4 to Camino Diablo (East County Regional AOB)** – This project proposes to widen shoulders along Byron Highway from State Route 4 south to Camino Diablo.
- **(Unfunded) III-34. Holway Drive Safety Improvements – Main Street to Camino Diablo Road (CTPL) –** This project proposes to connect sidewalks, curb ramps, and crosswalks.

Intersection #6 – Byron Highway/SR-4

The delay at this intersection increases by 19.3 second during the AM peak hour (from LOS D to LOS E) with the addition of project traffic. As such, the following improvement is recommended:

Improvement 12

- Add eastbound right turn overlap phasing.

Implementation of **Improvement 12** would improve intersection operations to satisfactory conditions and the intersection would be **compliant with the County's LOS standards**.

Additionally, although the improvements outlined in **Improvement 12** are not included in the County of Contra Costa CRIPP, projects listed in the CRIPP that may contribute to the necessary roadway widening or other intersection improvements at Byron Highway/SR-4 are included below for informational purposes:

- **(Unfunded) III-17. Byron Highway Widening – Chestnut Street to State Route 4 (East County Regional AOB)** – This project proposes to widen shoulders for 1.6 miles of Byron Highway from Chestnut Street to State Route 4.
- **(Unfunded) III-19. Byron Highway Widening – SR 4 to Camino Diablo (East County Regional AOB)** – This project proposes to widen shoulders along Byron Highway from State Route 4 south to Camino Diablo.
- **(Unfunded) III-55. State Route 4 & Byron Highway (South) Intersection Widening – Phase 2 (East County Regional AOB)** – This project proposes to widen the existing pavement on Byron Highway's portion of the intersection to provide turn lanes onto State Route 4.
- **(Unfunded) III-57. State Route 4 Widening – Bixler Road to Discovery Bay Boulevard – Complete Streets and Bridge Widening (Discovery Bay AOB) –** This project proposes to widen about 1.2 miles of State Route 4 from Bixler Road to Discovery Bay Boulevard in cooperation with Caltrans.
- **(Unfunded) III-58. State Route 4 Widening – Byron Highway to Regatta Drive (Discovery Bay AOB) –** This project proposes to widen State Route 4 between Byron Highway and Regatta Drive.

Intersection #7 – Vasco Road/Camino Diablo

The delay at this intersection increases by 26.6 seconds during the PM peak hour, further degrading the Future Year 2040 LOS F conditions with the addition of Project traffic. As such, the following improvement is recommended:

Improvement 13

- Restripe the westbound left-turn lane as a thru-left turn lane .
- Restripe the westbound thru-left and right-turn lanes into one channelized right-turn lane.
- Add an additional southbound left-turn lane.
- Add an additional westbound thru lane.
- Add an additional receiving lane for northbound traffic on the northern leg of the intersection.

Implementation of **Improvement 13** would improve intersection operations to satisfactory conditions and the intersection would be **compliant with the County's LOS standards**.

Additionally, although the improvements outlined in **Improvement 13** are not included in the County of Contra Costa CRIPP, projects listed in the CRIPP that may contribute to the necessary roadway widening or other intersection improvements at Vasco Road/Camino Diablo are included below for informational purposes:

- **(Unfunded) III-21. Camino Diablo Widening – Vasco Road to Byron Highway (East County Regional AOB) –** This project proposes to widen shoulders on Camino Diablo from Vasco Road east to Byron Highway.
- **(Unfunded) III-54. SR239/Trilink: Vasco Road-Byron Highway Connector** – This project proposes to construct a new roadway as part of the future Route 239 connector between Vasco Road and Byron Highway.
- **(Unfunded) III-60. Vasco Road / Camino Diablo Intersection Improvements (East County Regional AOB)** – This project is to modify the intersection at Vasco Road and Camino Diablo. Improvements include dual left turn lanes on westbound Camino Diablo, dual right turn lanes on eastbound Camino Diablo, lengthen the 4-lane section on Vasco Road near the intersection, and maintain the exclusive right lane on northbound Vasco Road.

Intersection #8 – Walnut Boulevard/Vasco Road

The delay at this intersection increases by 7.2 seconds during the AM peak hour, further degrading the Future Year 2040 LOS E conditions, and by 14.1 seconds during the PM peak hour, further degrading the Future Year 2040 LOS F conditions with the addition of Project traffic. As such, the following improvement is recommended:

Improvement 14

- Convert the southbound left-turn phasing from protected to protected-permitted per **Improvement 6**.
- Add an additional westbound thru lane.
- Add an additional receiving lane for westbound traffic on the western leg of the intersection.
- Convert the existing westbound right turn lane to a channelized westbound right turn lane.

Implementation of **Improvement 14** would improve intersection operations to satisfactory conditions and the intersection would be **compliant with the County's LOS standards**.

Additionally, although the improvements outlined in **Improvement 14** are not included in the County of Contra Costa CRIPP, projects listed in the CRIPP that may contribute to the necessary roadway widening or other intersection improvements at Walnut Boulevard/Vasco Road are included below for informational purposes:

- **(Unfunded) III-54. SR239/Trilink: Vasco Road-Byron Highway Connector –** This project proposes to construct a new roadway as part of the future Route 239 connector between Vasco Road and Byron Highway.

Intersection #10 – Walnut Boulevard/SR-4

The delay at this intersection increases by 8.7 seconds during the PM peak hour, further degrading the Future Year 2040 LOS F conditions with the addition of Project traffic. As such, the following improvement is recommended:

Improvement 15

- Restripe the eastbound thru and eastbound right turn lanes to an eastbound thru-right lane and add an additional receiving leg for eastbound traffic on the western leg of the intersection per **Improvement 7.**
- Add an additional northbound thru lane.
- Add an additional receiving lane for northbound traffic on the northern leg of the intersection.

Implementation of **Improvement 15** would improve intersection operations to satisfactory conditions and the intersection would be **compliant with the County's LOS standards**.

Additionally, although the improvements outlined in **Improvement 15** are not included in the County of Contra Costa CRIPP, projects listed in the CRIPP that may contribute to the necessary roadway widening or other intersection improvements at Walnut Boulevard/Vasco Road are included below for informational purposes:

- **(Unfunded) III-42. Marsh Creek Road Improvements (East County Regional AOB)** – This project is to construct various roadway and intersection improvements along Marsh Creek Road to include shoulder widening to enhance bicycle use and drainage improvements.
- **(Unfunded) III-54. SR239/Trilink: Vasco Road-Byron Highway Connector –** This project proposes to construct a new roadway as part of the future Route 239 connector between Vasco Road and Byron Highway.

Intersection #13 – Mountain House Parkway/Byron Highway

The delay at this intersection decreases by 1.8 seconds during the PM peak hour at LOS F with the addition of Project traffic. However, delays are greater than 100 seconds in both Future Year 2040 and Future Year 2040 plus Project conditions. As such, the following improvement is recommended: **Improvement 16**

- Add northbound right turn overlap phasing.
- Add an additional westbound thru lane.
- Add an additional receiving lane for westbound traffic on the western leg of the intersection.

Implementation of **Improvement 16** would improve intersection operations to satisfactory conditions and the intersection would be **compliant with San Joaquin County LOS standards**.

Intersection #14 – Byron Road/Grant Line Road

The delay at this intersection increases by 9.5 seconds during the AM peak hour and 5.9 seconds during the PM peak hour, further degrading the Future Year 2040 LOS F conditions during both peak hours with the addition of Project traffic. As such, the following improvement is recommended: **Improvement 17**

- Add westbound right turn overlap phasing per Improvement **8**.
- Add an additional westbound right-turn lane.

- Add an additional southbound left-turn lane.
- Add an additional northbound thru lane.
- Add northbound right turn overlap phasing.

Implementation of **Improvement 17** would improve intersection operations to satisfactory conditions and the intersection would be **compliant with San Joaquin County LOS standards**. However, it must be noted that the following right-of way constraints exist at this intersection that could limit the construction of these improvement measures:

- Union Pacific Railroad (UPRR) line crossing the eastern leg of the intersection.
- Private residence on the western boundary of the intersection.
- Private residence at the southeastern corner of the intersection.

8.3.1.3 Fair-Share

Table 24 provides a summary of the recommended improvements discussed above and fair-share percentages at all study intersections under the Future Year 2040 plus Project conditions.

Table 24. Project Fair-Share and Improvement Summary

No.	Intersection	Jurisdiction	Future Year 2040 plus Project						Recommended Improvements
			AM Peak			*PM Peak*			
			Project Traffic Volume (vph)	*Other Related Projects Traffic Volume (vph)*	*Project Percentage Share (%)[1]*	*Project Traffic Volume (vph)*	*Other Related Projects Traffic Volume (vph)*	*Project Percentage Share (%)[1]*	
1	Byron Highway/Holey Road	Contra Costa County	224	594	27.38%	369	747	33.06%	**Improvement 9** • Install a traffic signal at the intersection. • Add a separate eastbound right turn lane and a separate northbound left turn lane. • Add an additional receiving lane for southbound traffic on the southern leg of the intersection.
2	Byron Highway/Byron Hot Springs Road	Contra Costa County	300	594	33.56%	489	747	39.56%	**Improvement 10** • Install a traffic signal at the intersection per Improvement 2. • Add an additional northbound and southbound thru lane. • Add an additional receiving lane for both northbound and southbound traffic on the northern and southern legs of the intersection, respectively.
3	Byron Highway/Camino Diablo	Contra Costa County	289	595	32.69%	462	748	38.18%	**Improvement 3** • Add eastbound right turn overlap phasing.
4	Holway Drive/Camino Diablo	Contra Costa County	161	347	31.69%	257	649	28.37%	**Improvement 11** • Install a traffic signal at the intersection.

Table 24. Project Fair-Share and Improvement Summary

No.	Intersection	Jurisdiction	Future Year 2040 plus Project						Recommended Improvements
			AM Peak			*PM Peak*			
			Project Traffic Volume (vph)	*Other Related Projects Traffic Volume (vph)*	*Project Percentage Share (%)[1]*	*Project Traffic Volume (vph)*	*Other Related Projects Traffic Volume (vph)*	*Project Percentage Share (%)[1]*	
									• Add a separate eastbound left turn lane with protected phasing.
5	Byron Highway/Holway Drive	Contra Costa County	124	314	28.31%	198	166	54.40%	**Improvement 4** • Install a traffic signal at the intersection, maintaining existing lane geometrics.
6	Byron Highway/SR-4	Contra Costa County	124	629	16.47%	198	520	27.58%	**Improvement 12** • Add eastbound right turn overlap phasing.
7	Vasco Road/Camino Diablo	Contra Costa County	161	479	25.16%	257	850	23.22%	**Improvement 13** • Restripe the westbound left-turn lane as a thru-left turn lane. • Restripe the westbound thru-left and right-turn lanes into one channelized right-turn lane. • Add an additional southbound left-turn lane. • Add an additional westbound thru lane. • Add an additional receiving lane for northbound traffic on the northern leg of the intersection.

Table 24. Project Fair-Share and Improvement Summary

No.	Intersection	Jurisdiction	Future Year 2040 plus Project						Recommended Improvements
			AM Peak			*PM Peak*			
			Project Traffic Volume (vph)	*Other Related Projects Traffic Volume (vph)*	*Project Percentage Share (%)[1]*	*Project Traffic Volume (vph)*	*Other Related Projects Traffic Volume (vph)*	*Project Percentage Share (%)[1]*	
8	Walnut Boulevard/Vasco Road	Contra Costa County	103	477	17.76%	165	846	16.32%	**Improvement 14** • Convert the southbound left-turn phasing from protected to protected-permitted per Improvement 6. • Add an additional westbound thru lane. • Add an additional receiving lane for westbound traffic on the western leg of the intersection. • Convert the existing westbound right turn lane to a channelized westbound right turn lane.
10	Walnut Boulevard/SR-4	Contra Costa County	75	584	11.38%	104	471	18.02%	**Improvement 15** • Restripe the eastbound thru and eastbound right turn lanes to an eastbound thru-right lane and add an additional receiving leg for eastbound traffic on the western leg of the intersection per Improvement 7. • Add an additional northbound thru lane. • Add an additional receiving lane for northbound traffic on the northern leg of the intersection.

Table 24. Project Fair-Share and Improvement Summary

No.	Intersection	Jurisdiction	Future Year 2040 plus Project						Recommended Improvements
			AM Peak			*PM Peak*			
			Project Traffic Volume (vph)	*Other Related Projects Traffic Volume (vph)*	*Project Percentage Share (%)[1]*	*Project Traffic Volume (vph)*	*Other Related Projects Traffic Volume (vph)*	*Project Percentage Share (%)[1]*	
13	Mountain House Parkway/Byron Highway	San Joaquin County	162	594	21.43%	271	747	26.62%	**Improvement 16** • Add northbound right turn overlap phasing. • Add an additional westbound thru lane. • Add an additional receiving lane for westbound traffic on the western leg of the intersection.
14	Byron Road/Grant Line Road	San Joaquin County	49	392	11.13%	82	513	13.71%	**Improvement 17** • Add westbound right turn overlap phasing per **Improvement 8**. • Add an additional westbound right-turn lane. • Add an additional southbound left-turn lane. • Add an additional northbound thru lane. • Add northbound right turn overlap phasing.

Notes: vph = vehicles per hour

[1] Project fair share percentage calculated as the project-related traffic at the study intersection divided by the addition of traffic from cumulative projects and the project traffic (Project Percentage Share = Project Traffic ÷ (Project + Other Related Project Traffic)).

9 Findings and Recommendations

Based on the traffic analysis of the proposed project, the following findings on VMT and LOS analysis are made:

- As discussed in Chapter 5.2.1, queuing at project access intersections are not forecast to exceed storage capacities. However, excessive queuing on Byron Highway could lead to increased delays and degradation of Byron Highway traffic operations. Both intersections are forecast to operate at deficient levels of service, and improvement measures are identified for both intersections under **Improvement 1** and **Improvement 2** under Existing plus Project conditions, and under **Improvement 9** and **Improvement 10** under Future Year 2040 plus Project conditions. Implementation of these improvement measures would reduce queuing at both intersections with improvements to the delay.
- As discussed in Chapter 5.2.2, queuing at the Mountain House Parkway/I-205 westbound off-ramps is forecast to extend into the mainline in the Future Year 2040 plus Project, AM peak hour conditions. When comparing the Future Year 2040 scenario with the addition of the proposed project, queueing is forecast to increase for all movements during the AM peak hour at the Mountain House Parkway/I-205 westbound ramps; however, 95th percentile queuing indicates that the total ramp queuing would only increase by approximately 1 foot. As this is a negligible amount (less than one vehicle car length), project impacts to the westbound mainline would be less-than-significant.
- The project's detailed VMT analysis was conducted using the Contra Costa Countywide Travel Demand Model. The County threshold for employment projects is that the project's home-based work VMT per employee should be 15% below Bay Area average commute VMT per employee (i.e., hone-based work VMT per employee). The HBW VMT per employee for the project is 21.2, for the County is 14.0 and for the Bay Area is 14.9. Since the project's HBW VMT per employee (21.2) is higher than the Bay Area VMT per employee (14.9), the proposed project would have a significant VMT impact.
- To meet the threshold of 15% below Bay Area Average and have a less than significant VMT impact, the HBW VMT per employee for the project should be approximately 12.6, which would require a 40% reduction. Transportation demand management strategies and mitigation measures that can potentially achieve VMT reduction are provided in Chapter 8.
- As shown in Chapter 8, a 19.7 % reduction in VMT in Project's HBW VMT per employee can be achieved from the mitigation measure that results in 17.0 HBW VMT per employee. Even with the implementation of the mitigation measures, the proposed project's significant impact cannot be fully mitigated. Therefore, the proposed project would result in a significant and unavoidable VMT impact.
- The County may require that as a condition of approval, the individual project tenants prepare TDM or CTR Program that establish performance standards (i.e., trip reduction requirements) which can be monitored on a regular basis. Or the County may require The TDM program to be developed comprehensively for the entire project with flexibility to adjust to changing conditions (i.e. lower or higher VMT generating tenants), innovation and technological advancements.
- The project applicant/tenants should also work with 511 Contra Costa and use their county-wide program to reduce commuter trips by providing information, resources, and tools that promote mobility options such as biking, using transit, walk, micro mobility, car pool, van pool, working from home and guaranteed ride home.
- Nine (9) intersections are forecast to operate at deficient levels of service per Contra Costa and San Joaquin County LOS standards during Existing plus Project conditions. Implementation of **Improvement 1** through **Improvement 8** would improve levels of service at all intersections to be in compliance with both County's standards, with the exception of intersection #4 (Holway Drive/Camino Diablo). Constraining right-of-way

widths and high traffic volumes on Camino Diablo limit the possibilities for intersection improvements. Peak hour traffic signal warrants are also not met at this intersection.

- Eleven (11) intersections are forecast to operate at deficient levels of service per Contra Costa and San Joaquin County LOS standards during Future Year 2040 plus Project conditions. Implementation of **Improvement 9** through **Improvement 17** would improve levels of service at all intersections to be in compliance with both County's standards.

TWO-LANE HIGHWAY SEGMENT ANALYSIS

File Name:	EXAM_SR-4.xuf
Analyst:	
Agency:	Dudek
Jurisdiction:	Contra Costa County
Date:	10/20/2020
Analysis Year:	2015 (Existing)
Time Period Analyzed:	AM Peak Hour
Project Description:	SR-4, Vasco Road to Discovery Bay Boulevard
Units:	United States Customary

Facility LOS and Performance Measures

Facility Length	6.04	mi
Facility Average Followers Density, FD	7.7	followers/mi/ln
Facility Level of Service, LOS	C	

Segment 1Vasco Road to Walnut Boulevard

LOS and Performance Measures

Coded Segment Type	Passing Constrained	
Analyzed Segment Type	Passing Constrained	
Actual Segment Length, L	4752	ft
Segment Length Used in Calculation	0.90	mi
Demand Flow Rate in Analysis Direction, vd	527	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Capacity, cap	1700	veh/h
Free-Flow Speed, FFS	56.7	mi/h
Speed, S	54.1	mi/h
Percent Followers, PF	56.0	%
Followers Density, FD	5.5	followers/mi/ln
Level of Service, LOS	C	

Step 1: Identify Facility Study Boundaries and Corresponding Segmentation

Segment Type	Passing Constrained	
Vertical Class	1	
Minimum Segment Length	0.25	mi
Maximum Segment Length	3.00	mi

Step 2: Determine Demand Flow Rates, Capacity, and d/c Ratio

Demand Volume in Analysis Direction, Vd	501	veh/h
Demand Volume in Opposing Direction, Vo	-	veh/h
Peak Hour Factor, PHF	0.95	
Demand Flow Rate in Analysis Direction, vd	527	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
d/c Ratio	0.31	

Step 3: Determine the Vertical Alignment Classification

Segment Length, L	4752	ft
Segment Percent Grade	0.00	%
Vertical Class	1	

Step 4: Determine the Free-Flow Speed

Posted Speed Limit, Sp	50	mi/h
Base Free-Flow Speed, BFFS	57.0	mi/h
Coeff. Value from Exhibit 15-12, a0	0.00000	
Coeff. Value from Exhibit 15-12, a1	0.00000	
Coeff. Value from Exhibit 15-12, a2	0.00000	
Coeff. Value from Exhibit 15-12, a3	0.00000	
Coeff. Value from Exhibit 15-12, a4	0.00000	

Coeff. Value from Exhibit 15-12, a5	0.00000	
Coeff. for Heavy Vehicle Adjustment, a	0.03330	
Percentage of Heavy Vehicles, %HV	3.00	%
Lane Width, LW	12	ft
Shoulder Width, SW	6	ft
Adjustment for Lane and Shoulder Width, fLS	0.0	mi/h
Access-Point Density, APD	1.0	access points/mi
Adjustment for Access-Point Density, fA	0.3	mi/h
Free-Flow Speed, FFS	56.7	mi/h

Step 5: Estimate the Average Speed

Vertical Class	1	
Free-Flow Speed, FFS	56.7	mi/h
Demand Flow Rate in Analysis Direction, vd	527	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Segment Length, L	0.90	mi
Percentage of Heavy Vehicles	3.00	%

Step 5a: Calculate the Slope Coefficient

Coeff. for Speed-Flow Slope Model, b0	0.05580	
Coeff. for Speed-Flow Slope Model, b1	0.05420	
Coeff. for Speed-Flow Slope Model, b2	0.32780	
Coeff. for b3 Segment Length Coeff. Model, c0	0.10290	
Coeff. for b3 Segment Length Coeff. Model, c1	0.00000	
Coeff. for b3 Segment Length Coeff. Model, c2	0.00000	
Coeff. for b3 Segment Length Coeff. Model, c3	0.00000	
Coeff. for Speed-Flow Slope Model, b3	0.10290	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d0	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d1	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d2	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d3	0.00000	
Coeff. for Speed-Flow Slope Model, b4	0.00000	
Coeff. for Speed-Flow Slope Model, b5	0.00000	
Slope Coefficient, m	3.62533	

Step 5b: Calculate the Slope Coefficient

Coeff. for Speed-Flow Slope Model, f0	0.67576	
Coeff. for Speed-Flow Slope Model, f1	0.00000	
Coeff. for Speed-Flow Slope Model, f2	0.00000	
Coeff. for Speed-Flow Slope Model, f3	0.12060	
Coeff. for Speed-Flow Slope Model, f4	-0.35919	
Coeff. for Speed-Flow Slope Model, f5	0.00000	
Coeff. for Speed-Flow Slope Model, f6	0.00000	
Coeff. for Speed-Flow Slope Model, f7	0.00000	
Coeff. for Speed-Flow Slope Model, f8	0.00000	
Power Coefficient, p	0.41674	

Step 5c: Calculate Average Speed for the Segment

Average Speed, S	54.1	mi/h

Average Speed, with consideration of horizontal curves, S	54.1	mi/h

Step 6: Estimate the Percent Followers

Segment Type	Passing Constrained	
Vertical Class	1	
Free-Flow Speed, FFS	56.7	mi/h
Demand Flow Rate in Analysis Direction, vd	527	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Directional Capacity, cap	1700	veh/h
Segment Length, L	0.90	mi
Percentage of Heavy Vehicles	3.00	%

Step 6a: Calculate Percent Followers at Capacity

Coeff. Value for Equation 15-18 or 15-19, b0	37.68080	
Coeff. Value for Equation 15-18 or 15-19, b1	3.05089	
Coeff. Value for Equation 15-18 or 15-19, b2	-7.90866	
Coeff. Value for Equation 15-18 or 15-19, b3	-0.94321	

Coeff. Value for Equation 15-18 or 15-19, b4	13.64266	
Coeff. Value for Equation 15-18 or 15-19, b5	-0.00050	
Coeff. Value for Equation 15-18 or 15-19, b6	-0.05500	
Coeff. Value for Equation 15-18 or 15-19, b7	7.13760	
Percent Followers at Capacity Flow Rate, PFcap	86.2	%

Step 6b: Calculate Percent Followers at 25% of Capacity

Coeff. Value for Equation 15-20 or 15-21, c0	18.01780	
Coeff. Value for Equation 15-20 or 15-21, c1	10.00000	
Coeff. Value for Equation 15-20 or 15-21, c2	-21.60000	
Coeff. Value for Equation 15-20 or 15-21, c3	-0.97853	
Coeff. Value for Equation 15-20 or 15-21, c4	12.05214	
Coeff. Value for Equation 15-20 or 15-21, c5	-0.00750	
Coeff. Value for Equation 15-20 or 15-21, c6	-0.06700	
Coeff. Value for Equation 15-20 or 15-21, c7	11.60410	
Percent Followers of 25% of Capacity Flow Rate, PF25cap	50.3	%

Step 6c: Calculate the Slope Coefficient

Coeff. Value for Equation 15-22, d1	-0.29764	
Coeff. Value for Equation 15-22, d2	-0.71917	
Slope Coefficient, m	-1.32874	

Step 6d: Calculate the Power Coefficient

Coeff. Value for Equation 15-23, e0	0.81165	
Coeff. Value for Equation 15-23, e1	0.37920	
Coeff. Value for Equation 15-23, e2	-0.49524	
Coeff. Value for Equation 15-23, e3	-2.11289	
Coeff. Value for Equation 15-23, e4	2.41146	
Power Coefficient, p	0.75238	

Step 6e: Calculate Percent Followers for the Segment

Percent Followers, PF	56.0	%

Step 7: Estimate Additional Performance Measure for Passing Lane

Step 8: Estimate Follower Density

Percent Followers, PF	56.0	%
Demand Flow Rate in Analysis Direction, vd	527	veh/h
Average Speed, with consideration of horizontal curves, S	54.1	mi/h
Follower Density, FD	5.5	followers/mi/ln

Step 9: Determine Potential Adjustment to Follower Density

Effective Length of Upstream Passing Lane	1.00	mi
Distance Downstream from Start of Passing Lane Segment	0.90	mi
PF for Upstream Passing Lane Seg., PF	0.0	%
PF for Analysis Segment, PF	56.0	%
Length of Passing Lane Segment, PassLaneLength	0.00	mi
Flow Rate Entering for Analysis Segment	527	veh/h
% Improve to PF, %ImprovePF	0.0	%
% Improve to the Average Speed, %ImproveS	0.0	%
Adjusted Average Speed for Analysis Segment, S	54.1	mi/h
Adjusted Follower Density, FDadj	5.5	followers/mi/ln

Step 10: Determine LOS

Posted Speed Limit, Sp	50	mi/h
Follower Density, FD	5.5	followers/mi/ln
Level of Service, LOS	C	

Segment 2Walnut Boulevard to Byron Highway

LOS and Performance Measures

Coded Segment Type	Passing Constrained	
Analyzed Segment Type	Passing Constrained	
Actual Segment Length, L	15832	ft
Segment Length Used in Calculation	3.00	mi
Demand Flow Rate in Analysis Direction, vd	514	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Capacity, cap	1700	veh/h
Free-Flow Speed, FFS	55.9	mi/h
Speed, S	53.4	mi/h
Percent Followers, PF	59.2	%
Followers Density, FD	5.7	followers/mi/ln
Level of Service, LOS	C	

Step 1: Identify Facility Study Boundaries and Corresponding Segmentation

Segment Type	Passing Constrained	
Vertical Class	1	
Minimum Segment Length	0.25	mi
Maximum Segment Length	3.00	mi

Step 2: Determine Demand Flow Rates, Capacity, and d/c Ratio

Demand Volume in Analysis Direction, Vd	483	veh/h
Demand Volume in Opposing Direction, Vo	-	veh/h
Peak Hour Factor, PHF	0.94	
Demand Flow Rate in Analysis Direction, vd	514	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
d/c Ratio	0.30	

Step 3: Determine the Vertical Alignment Classification

Segment Length, L	15832	ft
Segment Percent Grade	0.00	%
Vertical Class	1	

Step 4: Determine the Free-Flow Speed

Posted Speed Limit, Sp	50	mi/h
Base Free-Flow Speed, BFFS	57.0	mi/h
Coeff. Value from Exhibit 15-12, a0	0.00000	
Coeff. Value from Exhibit 15-12, a1	0.00000	
Coeff. Value from Exhibit 15-12, a2	0.00000	
Coeff. Value from Exhibit 15-12, a3	0.00000	
Coeff. Value from Exhibit 15-12, a4	0.00000	
Coeff. Value from Exhibit 15-12, a5	0.00000	
Coeff. for Heavy Vehicle Adjustment, a	0.03330	
Percentage of Heavy Vehicles, %HV	3.00	%
Lane Width, LW	12	ft
Shoulder Width, SW	6	ft
Adjustment for Lane and Shoulder Width, fLS	0.0	mi/h
Access-Point Density, APD	4.0	access points/mi
Adjustment for Access-Point Density, fA	1.0	mi/h
Free-Flow Speed, FFS	55.9	mi/h

Step 5: Estimate the Average Speed

Vertical Class	1	
Free-Flow Speed, FFS	55.9	mi/h
Demand Flow Rate in Analysis Direction, vd	514	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Segment Length, L	3.00	mi
Percentage of Heavy Vehicles	3.00	%

Step 5a: Calculate the Slope Coefficient

Coeff. for Speed-Flow Slope Model, b0	0.05580	
Coeff. for Speed-Flow Slope Model, b1	0.05420	
Coeff. for Speed-Flow Slope Model, b2	0.32780	
Coeff. for b3 Segment Length Coeff. Model, c0	0.10290	
Coeff. for b3 Segment Length Coeff. Model, c1	0.00000	

Coeff. for b3 Segment Length Coeff. Model, c2	0.00000	
Coeff. for b3 Segment Length Coeff. Model, c3	0.00000	
Coeff. for Speed-Flow Slope Model, b3	0.10290	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d0	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d1	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d2	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d3	0.00000	
Coeff. for Speed-Flow Slope Model, b4	0.00000	
Coeff. for Speed-Flow Slope Model, b5	0.00000	
Slope Coefficient, m	3.66524	
Step 5b: Calculate the Slope Coefficient		
Coeff. for Speed-Flow Slope Model, f0	0.67576	
Coeff. for Speed-Flow Slope Model, f1	0.00000	
Coeff. for Speed-Flow Slope Model, f2	0.00000	
Coeff. for Speed-Flow Slope Model, f3	0.12060	
Coeff. for Speed-Flow Slope Model, f4	-0.35919	
Coeff. for Speed-Flow Slope Model, f5	0.00000	
Coeff. for Speed-Flow Slope Model, f6	0.00000	
Coeff. for Speed-Flow Slope Model, f7	0.00000	
Coeff. for Speed-Flow Slope Model, f8	0.00000	
Power Coefficient, p	0.41674	
Step 5c: Calculate Average Speed for the Segment		
Average Speed, S	53.4	mi/h
Average Speed, with consideration of horizontal curves, S	53.4	mi/h

Step 6: Estimate the Percent Followers

Segment Type	Passing Constrained	
Vertical Class	1	
Free-Flow Speed, FFS	55.9	mi/h
Demand Flow Rate in Analysis Direction, vd	514	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Directional Capacity, cap	1700	veh/h
Segment Length, L	3.00	mi
Percentage of Heavy Vehicles	3.00	%
Step 6a: Calculate Percent Followers at Capacity		
Coeff. Value for Equation 15-18 or 15-19, b0	37.68080	
Coeff. Value for Equation 15-18 or 15-19, b1	3.05089	
Coeff. Value for Equation 15-18 or 15-19, b2	-7.90866	
Coeff. Value for Equation 15-18 or 15-19, b3	-0.94321	
Coeff. Value for Equation 15-18 or 15-19, b4	13.64266	
Coeff. Value for Equation 15-18 or 15-19, b5	-0.00050	
Coeff. Value for Equation 15-18 or 15-19, b6	-0.05500	
Coeff. Value for Equation 15-18 or 15-19, b7	7.13760	
Percent Followers at Capacity Flow Rate, PFcap	86.5	%
Step 6b: Calculate Percent Followers at 25% of Capacity		
Coeff. Value for Equation 15-20 or 15-21, c0	18.01780	
Coeff. Value for Equation 15-20 or 15-21, c1	10.00000	
Coeff. Value for Equation 15-20 or 15-21, c2	-21.60000

Coeff. Value for Equation 15-20 or 15-21, c4	12.05214	
Coeff. Value for Equation 15-20 or 15-21, c5	-0.00750	
Coeff. Value for Equation 15-20 or 15-21, c6	-0.06700	
Coeff. Value for Equation 15-20 or 15-21, c7	11.60410	
Percent Followers of 25% of Capacity Flow Rate, PF25cap	54.6	%
Step 6c: Calculate the Slope Coefficient		
Coeff. Value for Equation 15-22, d1	-0.29764	
Coeff. Value for Equation 15-22, d2	-0.71917	
Slope Coefficient, m	-1.40106	
Step 6d: Calculate the Power Coefficient		
Coeff. Value for Equation 15-23, e0	0.81165	
Coeff. Value for Equation 15-23, e1	0.37920	

Coeff. Value for Equation 15-23, e2	-0.49524	
Coeff. Value for Equation 15-23, e3	-2.11289	
Coeff. Value for Equation 15-23, e4	2.41146	
Power Coefficient, p	0.67143	

Step 6e: Calculate Percent Followers for the Segment

Percent Followers, PF	59.2	%

Step 7: Estimate Additional Performance Measure for Passing Lane

Step 8: Estimate Follower Density

Percent Followers, PF	59.2	%
Demand Flow Rate in Analysis Direction, vd	514	veh/h
Average Speed, with consideration of horizontal curves, S	53.4	mi/h
Follower Density, FD	5.7	followers/mi/ln

Step 9: Determine Potential Adjustment to Follower Density

Effective Length of Upstream Passing Lane	1.00	mi
Distance Downstream from Start of Passing Lane Segment	3.90	mi
PF for Upstream Passing Lane Seg., PF	0.0	%
PF for Analysis Segment, PF	59.2	%
Length of Passing Lane Segment, PassLaneLength	0.00	mi
Flow Rate Entering for Analysis Segment	514	veh/h
% Improve to PF, %ImprovePF	0.0	%
% Improve to the Average Speed, %ImproveS	0.0	%
Adjusted Average Speed for Analysis Segment, S	53.4	mi/h
Adjusted Follower Density, FDadj	5.7	followers/mi/ln

Step 10: Determine LOS

Posted Speed Limit, Sp	50	mi/h
Follower Density, FD	5.7	followers/mi/ln
Level of Service, LOS	C	

Segment 3Byron Highway to Bixler Road

LOS and Performance Measures

Coded Segment Type	Passing Constrained	
Analyzed Segment Type	Passing Constrained	
Actual Segment Length, L	5277	ft
Segment Length Used in Calculation	1.00	mi
Demand Flow Rate in Analysis Direction, vd	978	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Capacity, cap	1700	veh/h
Free-Flow Speed, FFS	62.3	mi/h
Speed, S	58.6	mi/h
Percent Followers, PF	71.5	%
Followers Density, FD	11.9	followers/mi/ln
Level of Service, LOS	D	

Step 1: Identify Facility Study Boundaries and Corresponding Segmentation

Segment Type	Passing Constrained	
Vertical Class	1	
Minimum Segment Length	0.25	mi
Maximum Segment Length	3.00	mi

Step 2: Determine Demand Flow Rates, Capacity, and d/c Ratio

Demand Volume in Analysis Direction, Vd	870	veh/h
Demand Volume in Opposing Direction, Vo	-	veh/h
Peak Hour Factor, PHF	0.89	

Demand Flow Rate in Analysis Direction, vd	978	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
d/c Ratio	0.58	

Step 3: Determine the Vertical Alignment Classification

Segment Length, L	5277	ft
Segment Percent Grade	0.00	%
Vertical Class	1	

Step 4: Determine the Free-Flow Speed

Posted Speed Limit, Sp	55	mi/h
Base Free-Flow Speed, BFFS	62.7	mi/h
Coeff. Value from Exhibit 15-12, a0	0.00000	
Coeff. Value from Exhibit 15-12, a1	0.00000	
Coeff. Value from Exhibit 15-12, a2	0.00000	
Coeff. Value from Exhibit 15-12, a3	0.00000	
Coeff. Value from Exhibit 15-12, a4	0.00000	
Coeff. Value from Exhibit 15-12, a5	0.00000	
Coeff. for Heavy Vehicle Adjustment, a	0.03330	
Percentage of Heavy Vehicles, %HV	5.00	%
Lane Width, LW	12	ft
Shoulder Width, SW	6	ft
Adjustment for Lane and Shoulder Width, fLS	0.0	mi/h
Access-Point Density, APD	1.0	access points/mi
Adjustment for Access-Point Density, fA	0.3	mi/h
Free-Flow Speed, FFS	62.3	mi/h

Step 5: Estimate the Average Speed

Vertical Class	1	
Free-Flow Speed, FFS	62.3	mi/h
Demand Flow Rate in Analysis Direction, vd	978	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Segment Length, L	1.00	mi
Percentage of Heavy Vehicles	5.00	%

Step 5a: Calculate the Slope Coefficient

Coeff. for Speed-Flow Slope Model, b0	0.05580	
Coeff. for Speed-Flow Slope Model, b1	0.05420	
Coeff. for Speed-Flow Slope Model, b2	0.32780

Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d0	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d1	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d2	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d3	0.00000	
Coeff. for Speed-Flow Slope Model, b4	0.00000	
Coeff. for Speed-Flow Slope Model, b5	0.00000	
Slope Coefficient, m	3.93591	

Step 5b: Calculate the Slope Coefficient

Coeff. for Speed-Flow Slope Model, f0	0.67576	
Coeff. for Speed-Flow Slope Model, f1	0.00000	
Coeff. for Speed-Flow Slope Model, f2	0.00000	
Coeff. for Speed-Flow Slope Model, f3	0.12060	
Coeff. for Speed-Flow Slope Model, f4	-0.35919	
Coeff. for Speed-Flow Slope Model, f5	0.00000	
Coeff. for Speed-Flow Slope Model, f6	0.00000	
Coeff. for Speed-Flow Slope Model, f7	0.00000	
Coeff. for Speed-Flow Slope Model, f8	0.00000	
Power Coefficient, p	0.41674	

Step 5c: Calculate Average Speed for the Segment

Average Speed, S	58.6	mi/h

Average Speed, with consideration of horizontal curves, S	58.6	mi/h

Step 6: Estimate the Percent Followers

Segment Type	Passing Constrained	
Vertical Class	1	
Free-Flow Speed, FFS	62.3	mi/h
Demand Flow Rate in Analysis Direction, vd	978	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Directional Capacity, cap	1700	veh/h
Segment Length, L	1.00	mi
Percentage of Heavy Vehicles	5.00	%
Step 6a: Calculate Percent Followers at Capacity		
Coeff. Value for Equation 15-18 or 15-19, b0	37.68080	
Coeff. Value for Equation 15-18 or 15-19, b1	3.05089	
Coeff. Value for Equation 15-18 or 15-19, b2	-7.90866	
Coeff. Value for Equation 15-18 or 15-19, b3	-0.94321	
Coeff. Value for Equation 15-18 or 15-19, b4	13.64266	
Coeff. Value for Equation 15-18 or 15-19, b5	-0.00050	
Coeff. Value for Equation 15-18 or 15-19, b6	-0.05500	
Coeff. Value for Equation 15-18 or 15-19, b7	7.13760	
Percent Followers at Capacity Flow Rate, PFcap	85.3	%
Step 6b: Calculate Percent Followers at 25% of Capacity		
Coeff. Value for Equation 15-20 or 15-21, c0	18.01780	
Coeff. Value for Equation 15-20 or 15-21, c1	10.00000	
Coeff. Value for Equation 15-20 or 15-21, c2	-21.60000	
Coeff. Value for Equation 15-20 or 15-21, c3	-0.97853	
Coeff. Value for Equation 15-20 or 15-21, c4	12.05214	
Coeff. Value for Equation 15-20 or 15-21, c5	-0.00750	
Coeff. Value for Equation 15-20 or 15-21, c6	-0.06700	
Coeff. Value for Equation 15-20 or 15-21, c7	11.60410	
Percent Followers of 25% of Capacity Flow Rate, PF25cap	48.5	%
Step 6c: Calculate the Slope Coefficient		
Coeff. Value for Equation 15-22, d1	-0.29764	
Coeff. Value for Equation 15-22, d2	-0.71917	
Slope Coefficient, m	-1.27719	
Step 6d: Calculate the Power Coefficient		
Coeff. Value for Equation 15-23, e0	0.81165	
Coeff. Value for Equation 15-23, e1	0.37920	
Coeff. Value for Equation 15-23, e2	-0.49524	
Coeff. Value for Equation 15-23, e3	-2.11289	
Coeff. Value for Equation 15-23, e4	2.41146	
Power Coefficient, p	0.76709	
Step 6e: Calculate Percent Followers for the Segment		
Percent Followers, PF	71.5	%

Step 7: Estimate Additional Performance Measure for Passing Lane

Step 8: Estimate Follower Density

Percent Followers, PF	71.5	%
Demand Flow Rate in Analysis Direction, vd	978	veh/h
Average Speed, with consideration of horizontal curves, S	58.6	mi/h
Follower Density, FD	11.9	followers/mi/ln

Step 9: Determine Potential Adjustment to Follower Density

Effective Length of Upstream Passing Lane	1.00	mi
Distance Downstream from Start of Passing Lane Segment	4.90	mi
PF for Upstream Passing Lane Seg., PF	0.0	%
PF for Analysis Segment, PF	71.5	%

Length of Passing Lane Segment, PassLaneLength	0.00	mi
Flow Rate Entering for Analysis Segment	978	veh/h
% Improve to PF, %ImprovePF	0.0	%
% Improve to the Average Speed, %ImproveS	0.0	%
Adjusted Average Speed for Analysis Segment, S	58.6	mi/h
Adjusted Follower Density, FDadj	11.9	followers/mi/ln

Step 10: Determine LOS

Posted Speed Limit, Sp	55	mi/h
Follower Density, FD	11.9	followers/mi/ln
Level of Service, LOS	D	

Segment 4Bixler Road to Discovery Bay Boulevard

LOS and Performance Measures

Coded Segment Type	Passing Constrained	
Analyzed Segment Type	Passing Constrained	
Actual Segment Length, L	6050	ft
Segment Length Used in Calculation	1.15	mi
Demand Flow Rate in Analysis Direction, vd	921	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Capacity, cap	1700	veh/h
Free-Flow Speed, FFS	62.0	mi/h
Speed, S	58.4	mi/h
Percent Followers, PF	69.8	%
Followers Density, FD	11.0	followers/mi/ln
Level of Service, LOS	D	

Step 1: Identify Facility Study Boundaries and Corresponding Segmentation

Segment Type	Passing Constrained	
Vertical Class	1	
Minimum Segment Length	0.25	mi
Maximum Segment Length	3.00	mi

Step 2: Determine Demand Flow Rates, Capacity, and d/c Ratio

Demand Volume in Analysis Direction, Vd	829	veh/h
Demand Volume in Opposing Direction, Vo	-	veh/h
Peak Hour Factor, PHF	0.90	
Demand Flow Rate in Analysis Direction, vd	921	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
d/c Ratio	0.54	

Step 3: Determine the Vertical Alignment Classification

Segment Length, L	6050	ft
Segment Percent Grade	0.00	%
Vertical Class	1	

Step 4: Determine the Free-Flow Speed

Posted Speed Limit, Sp	55	mi/h
Base Free-Flow Speed, BFFS	62.7	mi/h
Coeff. Value from Exhibit 15-12, a0	0.00000	
Coeff. Value from Exhibit 15-12, a1	0.00000	
Coeff. Value from Exhibit 15-12, a2	0.00000	
Coeff. Value from Exhibit 15-12, a3	0.00000	
Coeff. Value from Exhibit 15-12, a4	0.00000	
Coeff. Value from Exhibit 15-12, a5	0.00000	
Coeff. for Heavy Vehicle Adjustment, a	0.03330	
Percentage of Heavy Vehicles, %HV	5.00	%
Lane Width, LW	12	ft
Shoulder Width, SW	6	ft
Adjustment for Lane and Shoulder Width, fLS	0.0	mi/h

Access-Point Density, APD	2.0	access points/mi
Adjustment for Access-Point Density, fA	0.5	mi/h
Free-Flow Speed, FFS	62.0	mi/h

Step 5: Estimate the Average Speed

Vertical Class	1	
Free-Flow Speed, FFS	62.0	mi/h
Demand Flow Rate in Analysis Direction, vd	921	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Segment Length, L	1.15	mi
Percentage of Heavy Vehicles	5.00	%

Step 5a: Calculate the Slope Coefficient

Coeff. for Speed-Flow Slope Model, b0	0.05580
Coeff. for Speed-Flow Slope Model, b1	0.05420
Coeff. for Speed-Flow Slope Model, b2	0.32780
Coeff. for b3 Segment Length Coeff. Model, c0	0.10290
Coeff. for b3 Segment Length Coeff. Model, c1	0.00000
Coeff. for b3 Segment Length Coeff. Model, c2	0.00000
Coeff. for b3 Segment Length Coeff. Model, c3	0.00000
Coeff. for Speed-Flow Slope Model, b3	0.10290
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d0	0.00000
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d1	0.00000
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d2	0.00000
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d3	0.00000
Coeff. for Speed-Flow Slope Model, b4	0.00000
Coeff. for Speed-Flow Slope Model, b5	0.00000
Slope Coefficient, m	3.92963

Step 5b: Calculate the Slope Coefficient

Coeff. for Speed-Flow Slope Model, f0	0.67576
Coeff. for Speed-Flow Slope Model, f1	0.00000
Coeff. for Speed-Flow Slope Model, f2	0.00000
Coeff. for Speed-Flow Slope Model, f3	0.12060
Coeff. for Speed-Flow Slope Model, f4	-0.35919
Coeff. for Speed-Flow Slope Model, f5	0.00000
Coeff. for Speed-Flow Slope Model, f6	0.00000
Coeff. for Speed-Flow Slope Model, f7	0.00000
Coeff. for Speed-Flow Slope Model, f8	0.00000
Power Coefficient, p	0.41674

Step 5c: Calculate Average Speed for the Segment

Average Speed, S	58.4	mi/h

Average Speed, with consideration of horizontal curves, S	58.4	mi/h

Step 6: Estimate the Percent Followers

Segment Type	Passing Constrained	
Vertical Class	1	
Free-Flow Speed, FFS	62.0	mi/h
Demand Flow Rate in Analysis Direction, vd	921	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Directional Capacity, cap	1700	veh/h
Segment Length, L	1.15	mi
Percentage of Heavy Vehicles	5.00	%

Step 6a: Calculate Percent Followers at Capacity

Coeff. Value for Equation 15-18 or 15-19, b0	37.68080	
Coeff. Value for Equation 15-18 or 15-19, b1	3.05089	
Coeff. Value for Equation 15-18 or 15-19, b2	-7.90866	
Coeff. Value for Equation 15-18 or 15-19, b3	-0.94321	
Coeff. Value for Equation 15-18 or 15-19, b4	13.64266	
Coeff. Value for Equation 15-18 or 15-19, b5	-0.00050	
Coeff. Value for Equation 15-18 or 15-19, b6	-0.05500	
Coeff. Value for Equation 15-18 or 15-19, b7	7.13760	
Percent Followers at Capacity Flow Rate, PFcap	85.3	%

Step 6b: Calculate Percent Followers at 25% of Capacity		
Coeff. Value for Equation 15-20 or 15-21, c0	18.01780	
Coeff. Value for Equation 15-20 or 15-21, c1	10.00000	
Coeff. Value for Equation 15-20 or 15-21, c2	-21.60000	
Coeff. Value for Equation 15-20 or 15-21, c3	-0.97853	
Coeff. Value for Equation 15-20 or 15-21, c4	12.05214	
Coeff. Value for Equation 15-20 or 15-21, c5	-0.00750	
Coeff. Value for Equation 15-20 or 15-21, c6	-0.06700	
Coeff. Value for Equation 15-20 or 15-21, c7	11.60410	
Percent Followers of 25% of Capacity Flow Rate, PF25cap	48.5	%
Step 6c: Calculate the Slope Coefficient		
Coeff. Value for Equation 15-22, d1	-0.29764	
Coeff. Value for Equation 15-22, d2	-0.71917	
Slope Coefficient, m	-1.27530	
Step 6d: Calculate the Power Coefficient		
Coeff. Value for Equation 15-23, e0	0.81165	
Coeff. Value for Equation 15-23, e1	0.37920	
Coeff. Value for Equation 15-23, e2	-0.49524	
Coeff. Value for Equation 15-23, e3	-2.11289	
Coeff. Value for Equation 15-23, e4	2.41146	
Power Coefficient, p	0.76491	
Step 6e: Calculate Percent Followers for the Segment		
Percent Followers, PF	69.8	%

Step 7: Estimate Additional Performance Measure for Passing Lane

Step 8: Estimate Follower Density

Percent Followers, PF	69.8	%
Demand Flow Rate in Analysis Direction, vd	921	veh/h
Average Speed, with consideration of horizontal curves, S	58.4	mi/h
Follower Density, FD	11.0	followers/mi/ln

Step 9: Determine Potential Adjustment to Follower Density

Effective Length of Upstream Passing Lane	1.00	mi
Distance Downstream from Start of Passing Lane Segment	6.04	mi
PF for Upstream Passing Lane Seg., PF	0.0	%
PF for Analysis Segment, PF	69.8	%
Length of Passing Lane Segment, PassLaneLength	0.00	mi
Flow Rate Entering for Analysis Segment	921	veh/h
% Improve to PF, %ImprovePF	0.0	%
% Improve to the Average Speed, %ImproveS	0.0	%
Adjusted Average Speed for Analysis Segment, S	58.4	mi/h
Adjusted Follower Density, FDadj	11.0	followers/mi/ln

Step 10: Determine LOS

Posted Speed Limit, Sp	55	mi/h
Follower Density, FD	11.0	followers/mi/ln
Level of Service, LOS	D	

TWO-LANE HIGHWAY SEGMENT ANALYSIS

File Name:	EXAM_Vasco.xuf

Coeff. for Speed-Flow Slope Model, f5	0.00000	
Coeff. for Speed-Flow Slope Model, f6	0.00000	
Coeff. for Speed-Flow Slope Model, f7	0.00000	
Coeff. for Speed-Flow Slope Model, f8	0.00000	
Power Coefficient, p	0.41674	

Step 5c: Calculate Average Speed for the Segment

Average Speed, S	59.3	mi/h

Average Speed, with consideration of horizontal curves, S	59.3	mi/h

Step 6: Estimate the Percent Followers

Segment Type	Passing Constrained	
Vertical Class	1	
Free-Flow Speed, FFS	62.6	mi/h
Demand Flow Rate in Analysis Direction, vd	783	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Directional Capacity, cap	1700	veh/h
Segment Length, L	1.11	mi
Percentage of Heavy Vehicles	2.00	%

Step 6a: Calculate Percent Followers at Capacity

Coeff. Value for Equation 15-18 or 15-19, b0	37.68080	
Coeff. Value for Equation 15-18 or 15-19, b1	3.05089	
Coeff. Value for Equation 15-18 or 15-19, b2	-7.90866	
Coeff. Value for Equation 15-18 or 15-19, b3	-0.94321	

Coeff. Value for Equation 15-18 or 15-19, b4	13.64266	
Coeff. Value for Equation 15-18 or 15-19, b5	-0.00050	
Coeff. Value for Equation 15-18 or 15-19, b6	-0.05500	
Coeff. Value for Equation 15-18 or 15-19, b7	7.13760	
Percent Followers at Capacity Flow Rate, PFcap	85.2	%

Step 6b: Calculate Percent Followers at 25% of Capacity

Coeff. Value for Equation 15-20 or 15-21, c0	18.01780	
Coeff. Value for Equation 15-20 or 15-21, c1	10.00000	
Coeff. Value for Equation 15-20 or 15-21, c2	-21.60000	
Coeff. Value for Equation 15-20 or 15-21, c3	-0.97853	
Coeff. Value for Equation 15-20 or 15-21, c4	12.05214	
Coeff. Value for Equation 15-20 or 15-21, c5	-0.00750	
Coeff. Value for Equation 15-20 or 15-21, c6	-0.06700	
Coeff. Value for Equation 15-20 or 15-21, c7	11.60410	
Percent Followers of 25% of Capacity Flow Rate, PF25cap	48.4	%

Step 6c: Calculate the Slope Coefficient

Coeff. Value for Equation 15-22, d1	-0.29764	
Coeff. Value for Equation 15-22, d2	-0.71917	
Slope Coefficient, m	-1.27119	

Step 6d: Calculate the Power Coefficient

Coeff. Value for Equation 15-23, e0	0.81165	
Coeff. Value for Equation 15-23, e1	0.37920	
Coeff. Value for Equation 15-23, e2	-0.49524	
Coeff. Value for Equation 15-23, e3	-2.11289	
Coeff. Value for Equation 15-23, e4	2.41146	
Power Coefficient, p	0.76657	

Step 6e: Calculate Percent Followers for the Segment

Percent Followers, PF	65.1	%

Step 7: Estimate Additional Performance Measure for Passing Lane

Step 8: Estimate Follower Density

Percent Followers, PF	65.1	%
Demand Flow Rate in Analysis Direction, vd	783	veh/h
Average Speed, with consideration of horizontal curves, S	59.3	mi/h
Follower Density, FD	8.6	followers/mi/ln

Step 9: Determine Potential Adjustment to Follower Density

Effective Length of Upstream Passing Lane	1.00	mi
Distance Downstream from Start of Passing Lane Segment	1.11	mi
PF for Upstream Passing Lane Seg., PF	0.0	%
PF for Analysis Segment, PF	65.1	%

Coeff. Value from Exhibit 15-12, a5	0.00000	
Coeff. for Heavy Vehicle Adjustment, a	0.03330	
Percentage of Heavy Vehicles, %HV	2.00	%
Lane Width, LW	12	ft
Shoulder Width, SW	6	ft
Adjustment for Lane and Shoulder Width, fLS	0.0	mi/h
Access-Point Density, APD	1.0	access points/mi
Adjustment for Access-Point Density, fA	0.3	mi/h
Free-Flow Speed, FFS	62.4	mi/h

Step 5: Estimate the Average Speed

Vertical Class	1	
Free-Flow Speed, FFS	62.4	mi/h
Demand Flow Rate in Analysis Direction, vd	1215	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Segment Length, L	2.24	mi
Percentage of Heavy Vehicles	2.00	%

Step 5a: Calculate the Slope Coefficient

Coeff. for Speed-Flow Slope Model, b0	0.05580
Coeff. for Speed-Flow Slope Model, b1	0.05420
Coeff. for Speed-Flow Slope Model, b2	0.32780
Coeff. for b3 Segment Length Coeff. Model, c0	0.10290
Coeff. for b3 Segment Length Coeff. Model, c1	0.00000

Coeff. for b3 Segment Length Coeff. Model, c2	0.00000	
Coeff. for b3 Segment Length Coeff. Model, c3	0.00000	
Coeff. for Speed-Flow Slope Model, b3	0.10290	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d0	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d1	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d2	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d3	0.00000	
Coeff. for Speed-Flow Slope Model, b4	0.00000	
Coeff. for Speed-Flow Slope Model, b5	0.00000	
Slope Coefficient, m	3.99254	
Step 5b: Calculate the Slope Coefficient		
Coeff. for Speed-Flow Slope Model, f0	0.67576	
Coeff. for Speed-Flow Slope Model, f1	0.00000	
Coeff. for Speed-Flow Slope Model, f2	0.00000	
Coeff. for Speed-Flow Slope Model, f3	0.12060	
Coeff. for Speed-Flow Slope Model, f4	-0.35919	
Coeff. for Speed-Flow Slope Model, f5	0.00000	
Coeff. for Speed-Flow Slope Model, f6	0.00000	
Coeff. for Speed-Flow Slope Model, f7	0.00000	
Coeff. for Speed-Flow Slope Model, f8	0.00000	
Power Coefficient, p	0.41674	
Step 5c: Calculate Average Speed for the Segment		
Average Speed, S	58.2	mi/h
Average Speed, with consideration of horizontal curves, S	58.2	mi/h

Step 6: Estimate the Percent Followers

Segment Type	Passing Constrained	
Vertical Class	1	
Free-Flow Speed, FFS	62.4	mi/h
Demand Flow Rate in Analysis Direction, vd	1215	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Directional Capacity, cap	1700	veh/h
Segment Length, L	2.24	mi
Percentage of Heavy Vehicles	2.00	%
Step 6a: Calculate Percent Followers at Capacity		
Coeff. Value for Equation 15-18 or 15-19, b0	37.68080	
Coeff. Value for Equation 15-18 or 15-19, b1	3.05089	
Coeff. Value for Equation 15-18 or 15-19, b2	-7.90866	
Coeff. Value for Equation 15-18 or 15-19, b3	-0.94321	
Coeff. Value for Equation 15-18 or 15-19, b4	13.64266	
Coeff. Value for Equation 15-18 or 15-19, b5	-0.00050	
Coeff. Value for Equation 15-18 or 15-19, b6	-0.05500	
Coeff. Value for Equation 15-18 or 15-19, b7	7.13760	
Percent Followers at Capacity Flow Rate, PFcap	85.2	%
Step 6b: Calculate Percent Followers at 25% of Capacity		
Coeff. Value for Equation 15-20 or 15-21, c0	18.01780	
Coeff. Value for Equation 15-20 or 15-21, c1	10.00000	
Coeff. Value for Equation 15-20 or 15-21, c2	-21.60000	
Coeff. Value for Equation 15-20 or 15-21, c3	-0.97853	
Coeff. Value for Equation 15-20 or 15-21, c4	12.05214	
Coeff. Value for Equation 15-20 or 15-21, c5	-0.00750	
Coeff. Value for Equation 15-20 or 15-21, c6	-0.06700	
Coeff. Value for Equation 15-20 or 15-21, c7	11.60410	
Percent Followers of 25% of Capacity Flow Rate, PF25cap	50.2	%
Step 6c: Calculate the Slope Coefficient		
Coeff. Value for Equation 15-22, d1	-0.29764	
Coeff. Value for Equation 15-22, d2	-0.71917	
Slope Coefficient, m	-1.29570	
Step 6d: Calculate the Power Coefficient		
Coeff. Value for Equation 15-23, e0	0.81165	
Coeff. Value for Equation 15-23, e1	0.37920	

Coeff. Value for Equation 15-23, e2	-0.49524	
Coeff. Value for Equation 15-23, e3	-2.11289	
Coeff. Value for Equation 15-23, e4	2.41146	
Power Coefficient, p	0.72767	

Step 6e: Calculate Percent Followers for the Segment

Percent Followers, PF	77.5	%

Step 7: Estimate Additional Performance Measure for Passing Lane

Step 8: Estimate Follower Density

Percent Followers, PF	77.5	%
Demand Flow Rate in Analysis Direction, vd	1215	veh/h
Average Speed, with consideration of horizontal curves, S	58.2	mi/h
Follower Density, FD	16.2	followers/mi/ln

Step 9: Determine Potential Adjustment to Follower Density

Effective Length of Upstream Passing Lane	1.00	mi
Distance Downstream from Start of Passing Lane Segment	3.35	mi
PF for Upstream Passing Lane Seg., PF	0.0	%
PF for Analysis Segment, PF	77.5	%
Length of Passing Lane Segment, PassLaneLength	0.00	mi
Flow Rate Entering for Analysis Segment	1215	veh/h
% Improve to PF, %ImprovePF	0.0	%
% Improve to the Average Speed, %ImproveS	0.0	%
Adjusted Average Speed for Analysis Segment, S	58.2	mi/h
Adjusted Follower Density, FDadj	16.2	followers/mi/ln

Step 10: Determine LOS

Posted Speed Limit, Sp	55	mi/h
Follower Density, FD	16.2	followers/mi/ln
Level of Service, LOS	E	

TWO-LANE HIGHWAY SEGMENT ANALYSIS

Coeff. for Speed-Flow Slope Model, f5	0.00000	
Coeff. for Speed-Flow Slope Model, f6	0.00000	
Coeff. for Speed-Flow Slope Model, f7	0.00000	
Coeff. for Speed-Flow Slope Model, f8	0.00000	
Power Coefficient, p	0.41674	

Step 5c: Calculate Average Speed for the Segment

Average Speed, S	35.9	mi/h

Average Speed, with consideration of horizontal curves, S	35.9	mi/h

Step 6: Estimate the Percent Followers

Segment Type	Passing Constrained	
Vertical Class	1	
Free-Flow Speed, FFS	38.0	mi/h
Demand Flow Rate in Analysis Direction, vd	651	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Directional Capacity, cap	1700	veh/h
Segment Length, L	1.64	mi
Percentage of Heavy Vehicles	6.00	%

Step 6a: Calculate Percent Followers at Capacity

Coeff. Value for Equation 15-18 or 15-19, b0	37.68080	
Coeff. Value for Equation 15-18 or 15-19, b1	3.05089	
Coeff. Value for Equation 15-18 or 15-19, b2	-7.90866	
Coeff. Value for Equation 15-18 or 15-19, b3	-0.94321	

Coeff. Value for Equation 15-18 or 15-19, b4	13.64266	
Coeff. Value for Equation 15-18 or 15-19, b5	-0.00050	
Coeff. Value for Equation 15-18 or 15-19, b6	-0.05500	
Coeff. Value for Equation 15-18 or 15-19, b7	7.13760	
Percent Followers at Capacity Flow Rate, PFcap	86.4	%

Step 6b: Calculate Percent Followers at 25% of Capacity

Coeff. Value for Equation 15-20 or 15-21, c0	18.01780	
Coeff. Value for Equation 15-20 or 15-21, c1	10.00000	
Coeff. Value for Equation 15-20 or 15-21, c2	-21.60000	
Coeff. Value for Equation 15-20 or 15-21, c3	-0.97853	
Coeff. Value for Equation 15-20 or 15-21, c4	12.05214	
Coeff. Value for Equation 15-20 or 15-21, c5	-0.00750	
Coeff. Value for Equation 15-20 or 15-21, c6	-0.06700	
Coeff. Value for Equation 15-20 or 15-21, c7	11.60410	
Percent Followers of 25% of Capacity Flow Rate, PF25cap	54.2	%

Step 6c: Calculate the Slope Coefficient

Coeff. Value for Equation 15-22, d1	-0.29764	
Coeff. Value for Equation 15-22, d2	-0.71917	
Slope Coefficient, m	-1.39163	

Step 6d: Calculate the Power Coefficient

Coeff. Value for Equation 15-23, e0	0.81165	
Coeff. Value for Equation 15-23, e1	0.37920	
Coeff. Value for Equation 15-23, e2	-0.49524	
Coeff. Value for Equation 15-23, e3	-2.11289	
Coeff. Value for Equation 15-23, e4	2.41146	
Power Coefficient, p	0.67543	

Step 6e: Calculate Percent Followers for the Segment

Percent Followers, PF	64.7	%

Step 7: Estimate Additional Performance Measure for Passing Lane

Step 8: Estimate Follower Density

Percent Followers, PF	64.7	%
Demand Flow Rate in Analysis Direction, vd	651	veh/h
Average Speed, with consideration of horizontal curves, S	35.9	mi/h
Follower Density, FD	11.7	followers/mi/ln

Step 9: Determine Potential Adjustment to Follower Density

Effective Length of Upstream Passing Lane	1.00	mi
Distance Downstream from Start of Passing Lane Segment	1.64	mi
PF for Upstream Passing Lane Seg., PF	0.0	%
PF for Analysis Segment, PF	64.7	%

Segment 1Vasco Road to Camino Diablo

LOS and Performance Measures

Coded Segment Type	Passing Constrained	
Analyzed Segment Type	Passing Constrained	
Actual Segment Length, L	8630	ft
Segment Length Used in Calculation	1.63	mi
Demand Flow Rate in Analysis Direction, vd	468	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Capacity, cap	1700	veh/h
Free-Flow Speed, FFS	61.4	mi/h
Speed, S	58.8	mi/h
Percent Followers, PF	51.6	%
Followers Density, FD	4.1	followers/mi/ln
Level of Service, LOS	C	

Step 1: Identify Facility Study Boundaries and Corresponding Segmentation

Segment Type	Passing Constrained	
Vertical Class	1	
Minimum Segment Length	0.25	mi
Maximum Segment Length	3.00	mi

Step 2: Determine Demand Flow Rates, Capacity, and d/c Ratio

Demand Volume in Analysis Direction, Vd	407	veh/h
Demand Volume in Opposing Direction, Vo	-	veh/h
Peak Hour Factor, PHF	0.87	
Demand Flow Rate in Analysis Direction, vd	468	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
d/c Ratio	0.28	

Step 3: Determine the Vertical Alignment Classification

Segment Length, L	8630	ft
Segment Percent Grade	0.00	%
Vertical Class	1	

Step 4: Determine the Free-Flow Speed

Posted Speed Limit, Sp	55	mi/h
Base Free-Flow Speed, BFFS	62.7	mi/h
Coeff. Value from Exhibit 15-12, a0	0.00000	
Coeff. Value from Exhibit 15-12, a1	0.00000	
Coeff. Value from Exhibit 15-12, a2	0.00000	
Coeff. Value from Exhibit 15-12, a3	0.00000	
Coeff. Value from Exhibit 15-12, a4	0.00000	

Coeff. Value from Exhibit 15-12, a5	0.00000	
Coeff. for Heavy Vehicle Adjustment, a	0.03330	
Percentage of Heavy Vehicles, %HV	3.00	%
Lane Width, LW	12	ft
Shoulder Width, SW	6	ft
Adjustment for Lane and Shoulder Width, fLS	0.0	mi/h
Access-Point Density, APD	5.0	access points/mi
Adjustment for Access-Point Density, fA	1.3	mi/h
Free-Flow Speed, FFS	61.4	mi/h

Step 5: Estimate the Average Speed

Vertical Class	1	
Free-Flow Speed, FFS	61.4	mi/h
Demand Flow Rate in Analysis Direction, vd	468	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Segment Length, L	1.63	mi
Percentage of Heavy Vehicles	3.00	%

Step 5a: Calculate the Slope Coefficient

Coeff. for Speed-Flow Slope Model, b0	0.05580	
Coeff. for Speed-Flow Slope Model, b1	0.05420	
Coeff. for Speed-Flow Slope Model, b2	0.32780	
Coeff. for b3 Segment Length Coeff. Model, c0	0.10290	
Coeff. for b3 Segment Length Coeff. Model, c1	0.00000	
Coeff. for b3 Segment Length Coeff. Model, c2	0.00000	
Coeff. for b3 Segment Length Coeff. Model, c3	0.00000	
Coeff. for Speed-Flow Slope Model, b3	0.10290	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d0	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d1	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d2	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d3	0.00000	
Coeff. for Speed-Flow Slope Model, b4	0.00000	
Coeff. for Speed-Flow Slope Model, b5	0.00000	
Slope Coefficient, m	3.91400	

Step 5b: Calculate the Slope Coefficient

Coeff. for Speed-Flow Slope Model, f0	0.67576	
Coeff. for Speed-Flow Slope Model, f1	0.00000	
Coeff. for Speed-Flow Slope Model, f2	0.00000	
Coeff. for Speed-Flow Slope Model, f3	0.12060	
Coeff. for Speed-Flow Slope Model, f4	-0.35919	
Coeff. for Speed-Flow Slope Model, f5	0.00000	
Coeff. for Speed-Flow Slope Model, f6	0.00000	
Coeff. for Speed-Flow Slope Model, f7	0.00000	
Coeff. for Speed-Flow Slope Model, f8	0.00000	
Power Coefficient, p	0.41674	

Step 5c: Calculate Average Speed for the Segment

Average Speed, S	58.8	mi/h

Average Speed, with consideration of horizontal curves, S	58.8	mi/h

Step 6: Estimate the Percent Followers

Segment Type	Passing Constrained	
Vertical Class	1	
Free-Flow Speed, FFS	61.4	mi/h
Demand Flow Rate in Analysis Direction, vd	468	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Directional Capacity, cap	1700	veh/h
Segment Length, L	1.63	mi
Percentage of Heavy Vehicles	3.00	%

Step 6a: Calculate Percent Followers at Capacity

Coeff. Value for Equation 15-18 or 15-19, b0	37.68080	
Coeff. Value for Equation 15-18 or 15-19, b1	3.05089	
Coeff. Value for Equation 15-18 or 15-19, b2	-7.90866	
Coeff. Value for Equation 15-18 or 15-19, b3	-0.94321	

Coeff. Value for Equation 15-18 or 15-19, b4	13.64266	
Coeff. Value for Equation 15-18 or 15-19, b5	-0.00050	
Coeff. Value for Equation 15-18 or 15-19, b6	-0.05500	
Coeff. Value for Equation 15-18 or 15-19, b7	7.13760	
Percent Followers at Capacity Flow Rate, PFcap	85.2	%

Step 6b: Calculate Percent Followers at 25% of Capacity

Coeff. Value for Equation 15-20 or 15-21, c0	18.01780	
Coeff. Value for Equation 15-20 or 15-21, c1	10.00000	
Coeff. Value for Equation 15-20 or 15-21, c2	-21.60000	
Coeff. Value for Equation 15-20 or 15-21, c3	-0.97853	
Coeff. Value for Equation 15-20 or 15-21, c4	12.05214	
Coeff. Value for Equation 15-20 or 15-21, c5	-0.00750	
Coeff. Value for Equation 15-20 or 15-21, c6	-0.06700	
Coeff. Value for Equation 15-20 or 15-21, c7	11.60410	
Percent Followers of 25% of Capacity Flow Rate, PF25cap	49.1	%

Step 6c: Calculate the Slope Coefficient

Coeff. Value for Equation 15-22, d1	-0.29764	
Coeff. Value for Equation 15-22, d2	-0.71917	
Slope Coefficient, m	-1.28249	

Step 6d: Calculate the Power Coefficient

Coeff. Value for Equation 15-23, e0	0.81165	
Coeff. Value for Equation 15-23, e1	0.37920	
Coeff. Value for Equation 15-23, e2	-0.49524	
Coeff. Value for Equation 15-23, e3	-2.11289	
Coeff. Value for Equation 15-23, e4	2.41146	
Power Coefficient, p	0.75053	

Step 6e: Calculate Percent Followers for the Segment

Percent Followers, PF	51.6	%

Step 7: Estimate Additional Performance Measure for Passing Lane

Step 8: Estimate Follower Density

Percent Followers, PF	51.6	%
Demand Flow Rate in Analysis Direction, vd	468	veh/h
Average Speed, with consideration of horizontal curves, S	58.8	mi/h
Follower Density, FD	4.1	followers/mi/ln

Step 9: Determine Potential Adjustment to Follower Density

Effective Length of Upstream Passing Lane	1.00	mi
Distance Downstream from Start of Passing Lane Segment	1.63	mi
PF for Upstream Passing Lane Seg., PF	0.0	%
PF for Analysis Segment, PF	51.6	%
Length of Passing Lane Segment, PassLaneLength	0.00	mi
Flow Rate Entering for Analysis Segment	468	veh/h
% Improve to PF, %ImprovePF	0.0	%
% Improve to the Average Speed, %ImproveS	0.0	%
Adjusted Average Speed for Analysis Segment, S	58.8	mi/h
Adjusted Follower Density, FDadj	4.1	followers/mi/ln

Step 10: Determine LOS

Posted Speed Limit, Sp	55	mi/h
Follower Density, FD	4.1	followers/mi/ln
Level of Service, LOS	C

Coeff. Value for Equation 15-20 or 15-21, c7	11.60410	
Percent Followers of 25% of Capacity Flow Rate, PF25cap	50.3	%

Step 6c: Calculate the Slope Coefficient

Coeff. Value for Equation 15-22, d1	-0.29764	
Coeff. Value for Equation 15-22, d2	-0.71917	
Slope Coefficient, m	-1.32874	

Step 6d: Calculate the Power Coefficient

Coeff. Value for Equation 15-23, e0	0.81165	
Coeff. Value for Equation 15-23, e1	0.37920	
Coeff. Value for Equation 15-23, e2	-0.49524	
Coeff. Value for Equation 15-23, e3	-2.11289	
Coeff. Value for Equation 15-23, e4	2.41146	
Power Coefficient, p	0.75238	

Step 6e: Calculate Percent Followers for the Segment

Percent Followers, PF	65.3	%

Step 7: Estimate Additional Performance Measure for Passing Lane

Step 8: Estimate Follower Density

Percent Followers, PF	65.3	%
Demand Flow Rate in Analysis Direction, vd	740	veh/h
Average Speed, with consideration of horizontal curves, S	53.6	mi/h
Follower Density, FD	9.0	followers/mi/ln

Step 9: Determine Potential Adjustment to Follower Density

Effective Length of Upstream Passing Lane	1.00	mi
Distance Downstream from Start of Passing Lane Segment	0.90	mi
PF for Upstream Passing Lane Seg., PF	0.0	%
PF for Analysis Segment, PF	65.3	%
Length of Passing Lane Segment, PassLaneLength	0.00	mi
Flow Rate Entering for Analysis Segment	740	veh/h
% Improve to PF, %ImprovePF	0.0	%
% Improve to the Average Speed, %ImproveS	0.0	%
Adjusted Average Speed for Analysis Segment, S	53.6	mi/h
Adjusted Follower Density, FDadj	9.0	followers/mi/ln

Step 10: Determine LOS

Posted Speed Limit, Sp	50	mi/h
Follower Density, FD	9.0	followers/mi/ln
Level of Service, LOS	C	

Segment 2Walnut Boulevard to Byron Highway

LOS and Performance Measures

Coded Segment Type	Passing Constrained	
Analyzed Segment Type	Passing Constrained	
Actual Segment Length, L	15832	ft
Segment Length Used in Calculation	3.00	mi
Demand Flow Rate in Analysis Direction, vd	632	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Capacity, cap	1700	veh/h
Free-Flow Speed, FFS	55.9	mi/h
Speed, S	53.1	mi/h
Percent Followers, PF	64.3	%
Followers Density, FD	7.7	followers/mi/ln
Level of Service, LOS	C	

Step 1: Identify Facility Study Boundaries and Corresponding Segmentation

Segment Type	Passing Constrained	
Vertical Class	1	
Minimum Segment Length	0.25	mi
Maximum Segment Length	3.00	mi

Step 2: Determine Demand Flow Rates, Capacity, and d/c Ratio

Demand Volume in Analysis Direction, Vd	594	veh/h
Demand Volume in Opposing Direction, Vo	-	veh/h
Peak Hour Factor, PHF	0.94	
Demand Flow Rate in Analysis Direction, vd	632	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
d/c Ratio	0.37	

Step 3: Determine the Vertical Alignment Classification

Segment Length, L	15832	ft
Segment Percent Grade	0.00	%
Vertical Class	1	

Step 4: Determine the Free-Flow Speed

Posted Speed Limit, Sp	50	mi/h
Base Free-Flow Speed, BFFS	57.0	mi/h
Coeff. Value from Exhibit 15-12, a0	0.00000	
Coeff. Value from Exhibit 15-12, a1	0.00000	
Coeff. Value from Exhibit 15-12, a2	0.00000	
Coeff. Value from Exhibit 15-12, a3	0.00000	
Coeff. Value from Exhibit 15-12, a4	0.00000	
Coeff. Value from Exhibit 15-12, a5	0.00000	
Coeff. for Heavy Vehicle Adjustment, a	0.03330	
Percentage of Heavy Vehicles, %HV	3.00	%
Lane Width, LW	12	ft
Shoulder Width, SW	6	ft
Adjustment for Lane and Shoulder Width, fLS	0.0	mi/h
Access-Point Density, APD	4.0	access points/mi
Adjustment for Access-Point Density, fA	1.0	mi/h
Free-Flow Speed, FFS	55.9	mi/h

Step 5: Estimate the Average Speed

Vertical Class	1	
Free-Flow Speed, FFS	55.9	mi/h
Demand Flow Rate in Analysis Direction, vd	632	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Segment Length, L	3.00	mi
Percentage of Heavy Vehicles	3.00	%

Step 5a: Calculate the Slope Coefficient

Coeff. for Speed-Flow Slope Model, b0	0.05580	
Coeff. for Speed-Flow Slope Model, b1	0.05420	
Coeff. for Speed-Flow Slope Model, b2	0.32780	
Coeff. for b3 Segment Length Coeff. Model, c0	0.10290	
Coeff. for b3 Segment Length Coeff. Model, c1	0.00000	

Coeff. for b3 Segment Length Coeff. Model, c2	0.00000	
Coeff. for b3 Segment Length Coeff. Model, c3	0.00000	
Coeff. for Speed-Flow Slope Model, b3	0.10290	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d0	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d1	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d2	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d3	0.00000	
Coeff. for Speed-Flow Slope Model, b4	0.00000	
Coeff. for Speed-Flow Slope Model, b5	0.00000	
Slope Coefficient, m	3.66524	

Step 5b: Calculate the Slope Coefficient

Coeff. for Speed-Flow Slope Model, f0	0.67576	
Coeff. for Speed-Flow Slope Model, f1	0.00000	
Coeff. for Speed-Flow Slope Model, f2	0.00000	
Coeff. for Speed-Flow Slope Model, f3	0.12060	
Coeff. for Speed-Flow Slope Model, f4	-0.35919	
Coeff. for Speed-Flow Slope Model, f5	0.00000	
Coeff. for Speed-Flow Slope Model, f6	0.00000	
Coeff. for Speed-Flow Slope Model, f7	0.00000	
Coeff. for Speed-Flow Slope Model, f8	0.00000	
Power Coefficient, p	0.41674	

Step 5c: Calculate Average Speed for the Segment

Average Speed, S	53.1	mi/h
Average Speed, with consideration of horizontal curves, S	53.1	mi/h

Step 6: Estimate the Percent Followers

Segment Type	Passing Constrained	
Vertical Class	1	
Free-Flow Speed, FFS	55.9	mi/h
Demand Flow Rate in Analysis Direction, vd	632	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Directional Capacity, cap	1700	veh/h
Segment Length, L	3.00	mi
Percentage of Heavy Vehicles	3.00	%

Step 6a: Calculate Percent Followers at Capacity

Coeff. Value for Equation 15-18 or 15-19, b0	37.68080	
Coeff. Value for Equation 15-18 or 15-19, b1	3.05089	
Coeff. Value for Equation 15-18 or 15-19, b2	-7.90866	
Coeff. Value for Equation 15-18 or 15-19, b3	-0.94321	
Coeff. Value for Equation 15-18 or 15-19, b4	13.64266	
Coeff. Value for Equation 15-18 or 15-19, b5	-0.00050	
Coeff. Value for Equation 15-18 or 15-19, b6	-0.05500	
Coeff. Value for Equation 15-18 or 15-19, b7	7.13760	
Percent Followers at Capacity Flow Rate, PFcap	86.5	%

Step 6b: Calculate Percent Followers at 25% of Capacity

Coeff. Value for Equation 15-20 or 15-21, c0	18.01780	
Coeff. Value for Equation 15-20 or 15-21, c1	10.00000	
Coeff. Value for Equation 15-20 or 15-21, c2	-21.60000	
Coeff. Value for Equation 15-20 or 15-21, c3	-0.97853	
Coeff. Value for Equation 15-20 or 15-21, c4	12.05214	
Coeff. Value for Equation 15-20 or 15-21, c5	-0.00750	
Coeff. Value for Equation 15-20 or 15-21, c6	-0.06700	
Coeff. Value for Equation 15-20 or 15-21, c7	11.60410	
Percent Followers of 25% of Capacity Flow Rate, PF25cap	54.6	%

Step 6c: Calculate the Slope Coefficient

Coeff. Value for Equation 15-22, d1	-0.29764	
Coeff. Value for Equation 15-22, d2	-0.71917	
Slope Coefficient, m	-1.40106	

Step 6d: Calculate the Power Coefficient

Coeff. Value for Equation 15-23, e0	0.81165	
Coeff. Value for Equation 15-23, e1	0.37920	

Coeff. Value for Equation 15-23, e2	-0.49524	
Coeff. Value for Equation 15-23, e3	-2.11289	
Coeff. Value for Equation 15-23, e4	2.41146	
Power Coefficient, p	0.67143	

Step 6e: Calculate Percent Followers for the Segment

Percent Followers, PF	64.3	%

Step 7: Estimate Additional Performance Measure for Passing Lane

Step 8: Estimate Follower Density

Percent Followers, PF	64.3	%
Demand Flow Rate in Analysis Direction, vd	632	veh/h
Average Speed, with consideration of horizontal curves, S	53.1	mi/h
Follower Density, FD	7.7	followers/mi/ln

Step 9: Determine Potential Adjustment to Follower Density

Effective Length of Upstream Passing Lane	1.00	mi
Distance Downstream from Start of Passing Lane Segment	3.90	mi
PF for Upstream Passing Lane Seg., PF	0.0	%
PF for Analysis Segment, PF	64.3	%
Length of Passing Lane Segment, PassLaneLength	0.00	mi
Flow Rate Entering for Analysis Segment	632	veh/h
% Improve to PF, %ImprovePF	0.0	%
% Improve to the Average Speed, %ImproveS	0.0	%
Adjusted Average Speed for Analysis Segment, S	53.1	mi/h
Adjusted Follower Density, FDadj	7.7	followers/mi/ln

Step 10: Determine LOS

Posted Speed Limit, Sp	50	mi/h
Follower Density, FD	7.7	followers/mi/ln
Level of Service, LOS	C	

Segment 3Byron Highway to Bixler Road

LOS and Performance Measures

Coded Segment Type	Passing Constrained	
Analyzed Segment Type	Passing Constrained	
Actual Segment Length, L	5277	ft
Segment Length Used in Calculation	1.00	mi
Demand Flow Rate in Analysis Direction, vd	956	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Capacity, cap	1700	veh/h
Free-Flow Speed, FFS	62.4	mi/h
Speed, S	58.7	mi/h
Percent Followers, PF	70.9	%
Followers Density, FD	11.6	followers/mi/ln
Level of Service, LOS	D	

Step 1: Identify Facility Study Boundaries and Corresponding Segmentation

Segment Type	Passing Constrained	
Vertical Class	1	
Minimum Segment Length	0.25	mi
Maximum Segment Length	3.00	mi

Step 2: Determine Demand Flow Rates, Capacity, and d/c Ratio

Demand Volume in Analysis Direction, Vd	899	veh/h
Demand Volume in Opposing Direction, Vo	-	veh/h
Peak Hour Factor, PHF	0.94	

Demand Flow Rate in Analysis Direction, vd	956	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
d/c Ratio	0.56	

Step 3: Determine the Vertical Alignment Classification

Segment Length, L	5277	ft
Segment Percent Grade	0.00	%
Vertical Class	1	

Step 4: Determine the Free-Flow Speed

Posted Speed Limit, Sp	55	mi/h
Base Free-Flow Speed, BFFS	62.7	mi/h
Coeff. Value from Exhibit 15-12, a0	0.00000	
Coeff. Value from Exhibit 15-12, a1	0.00000	
Coeff. Value from Exhibit 15-12, a2	0.00000	
Coeff. Value from Exhibit 15-12, a3	0.00000	
Coeff. Value from Exhibit 15-12, a4	0.00000	
Coeff. Value from Exhibit 15-12, a5	0.00000	
Coeff. for Heavy Vehicle Adjustment, a	0.03330	
Percentage of Heavy Vehicles, %HV	3.00	%
Lane Width, LW	12	ft
Shoulder Width, SW	6	ft
Adjustment for Lane and Shoulder Width, fLS	0.0	mi/h
Access-Point Density, APD	1.0	access points/mi
Adjustment for Access-Point Density, fA	0.3	mi/h
Free-Flow Speed, FFS	62.4	mi/h

Step 5: Estimate the Average Speed

Vertical Class	1	
Free-Flow Speed, FFS	62.4	mi/h
Demand Flow Rate in Analysis Direction, vd	956	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Segment Length, L	1.00	mi
Percentage of Heavy Vehicles	3.00	%

Step 5a: Calculate the Slope Coefficient

Coeff. for Speed-Flow Slope Model, b0	0.05580	
Coeff. for Speed-Flow Slope Model, b1	0.05420	
Coeff. for Speed-Flow Slope Model, b2	0.32780	
Coeff. for b3 Segment Length Coeff. Model, c0	0.10290	
Coeff. for b3 Segment Length Coeff. Model, c1	0.00000	
Coeff. for b3 Segment Length Coeff. Model, c2	0.00000	
Coeff. for b3 Segment Length Coeff. Model, c3	0.00000	
Coeff. for Speed-Flow Slope Model, b3	0.10290	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d0	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d1	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d2	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d3	0.00000	
Coeff. for Speed-Flow Slope Model, b4	0.00000	
Coeff. for Speed-Flow Slope Model, b5	0.00000	
Slope Coefficient, m	3.93952	

Step 5b: Calculate the Slope Coefficient

Coeff. for Speed-Flow Slope Model, f0	0.67576	
Coeff. for Speed-Flow Slope Model, f1	0.00000	
Coeff. for Speed-Flow Slope Model, f2	0.00000	
Coeff. for Speed-Flow Slope Model, f3	0.12060	
Coeff. for Speed-Flow Slope Model, f4	-0.35919	
Coeff. for Speed-Flow Slope Model, f5	0.00000	
Coeff. for Speed-Flow Slope Model, f6	0.00000	
Coeff. for Speed-Flow Slope Model, f7	0.00000	
Coeff. for Speed-Flow Slope Model, f8	0.00000	
Power Coefficient, p	0.41674	

Step 5c: Calculate Average Speed for the Segment

Average Speed, S	58.7	mi/h

Average Speed, with consideration of horizontal curves, S	58.7	mi/h

Step 6: Estimate the Percent Followers

Segment Type	Passing Constrained	
Vertical Class	1	
Free-Flow Speed, FFS	62.4	mi/h
Demand Flow Rate in Analysis Direction, vd	956	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Directional Capacity, cap	1700	veh/h
Segment Length, L	1.00	mi
Percentage of Heavy Vehicles	3.00	%
Step 6a: Calculate Percent Followers at Capacity		
Coeff. Value for Equation 15-18 or 15-19, b0	37.68080	
Coeff. Value for Equation 15-18 or 15-19, b1	3.05089	
Coeff. Value for Equation 15-18 or 15-19, b2	-7.90866	
Coeff. Value for Equation 15-18 or 15-19, b3	-0.94321	
Coeff. Value for Equation 15-18 or 15-19, b4	13.64266	
Coeff. Value for Equation 15-18 or 15-19, b5	-0.00050	
Coeff. Value for Equation 15-18 or 15-19, b6	-0.05500	
Coeff. Value for Equation 15-18 or 15-19, b7	7.13760	
Percent Followers at Capacity Flow Rate, PFcap	85.3	%
Step 6b: Calculate Percent Followers at 25% of Capacity		
Coeff. Value for Equation 15-20 or 15-21, c0	18.01780	
Coeff. Value for Equation 15-20 or 15-21, c1	10.00000	
Coeff. Value for Equation 15-20 or 15-21, c2	-21.60000	
Coeff. Value for Equation 15-20 or 15-21, c3	-0.97853	
Coeff. Value for Equation 15-20 or 15-21, c4	12.05214	
Coeff. Value for Equation 15-20 or 15-21, c5	-0.00750	
Coeff. Value for Equation 15-20 or 15-21, c6	-0.06700	
Coeff. Value for Equation 15-20 or 15-21, c7	11.60410	
Percent Followers of 25% of Capacity Flow Rate, PF25cap	48.5	%
Step 6c: Calculate the Slope Coefficient		
Coeff. Value for Equation 15-22, d1	-0.29764	
Coeff. Value for Equation 15-22, d2	-0.71917	
Slope Coefficient, m	-1.27682	
Step 6d: Calculate the Power Coefficient		
Coeff. Value for Equation 15-23, e0	0.81165	
Coeff. Value for Equation 15-23, e1	0.37920	
Coeff. Value for Equation 15-23, e2	-0.49524	
Coeff. Value for Equation 15-23, e3	-2.11289	
Coeff. Value for Equation 15-23, e4	2.41146	
Power Coefficient, p	0.76697	
Step 6e: Calculate Percent Followers for the Segment		
Percent Followers, PF	70.9	%

Step 7: Estimate Additional Performance Measure for Passing Lane

Step 8: Estimate Follower Density

Percent Followers, PF	70.9	%
Demand Flow Rate in Analysis Direction, vd	956	veh/h
Average Speed, with consideration of horizontal curves, S	58.7	mi/h
Follower Density, FD	11.6	followers/mi/ln

Step 9: Determine Potential Adjustment to Follower Density

Effective Length of Upstream Passing Lane	1.00	mi
Distance Downstream from Start of Passing Lane Segment	4.90	mi
PF for Upstream Passing Lane Seg., PF	0.0	%
PF for Analysis Segment, PF	70.9	%

Length of Passing Lane Segment, PassLaneLength	0.00	mi
Flow Rate Entering for Analysis Segment	956	veh/h
% Improve to PF, %ImprovePF	0.0	%
% Improve to the Average Speed, %ImproveS	0.0	%
Adjusted Average Speed for Analysis Segment, S	58.7	mi/h
Adjusted Follower Density, FDadj	11.6	followers/mi/ln

Step 10: Determine LOS

Posted Speed Limit, Sp	55	mi/h
Follower Density, FD	11.6	followers/mi/ln
Level of Service, LOS	D	

Segment 4Bixler Road to Discovery Bay Boulevard

LOS and Performance Measures

Coded Segment Type	Passing Constrained	
Analyzed Segment Type	Passing Constrained	
Actual Segment Length, L	6050	ft
Segment Length Used in Calculation	1.15	mi
Demand Flow Rate in Analysis Direction, vd	957	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Capacity, cap	1700	veh/h
Free-Flow Speed, FFS	62.1	mi/h
Speed, S	58.4	mi/h
Percent Followers, PF	70.9	%
Followers Density, FD	11.6	followers/mi/ln
Level of Service, LOS	D	

Step 1: Identify Facility Study Boundaries and Corresponding Segmentation

Segment Type	Passing Constrained	
Vertical Class	1	
Minimum Segment Length	0.25	mi
Maximum Segment Length	3.00	mi

Step 2: Determine Demand Flow Rates, Capacity, and d/c Ratio

Demand Volume in Analysis Direction, Vd	900	veh/h
Demand Volume in Opposing Direction, Vo	-	veh/h
Peak Hour Factor, PHF	0.94	
Demand Flow Rate in Analysis Direction, vd	957	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
d/c Ratio	0.56	

Step 3: Determine the Vertical Alignment Classification

Segment Length, L	6050	ft
Segment Percent Grade	0.00	%
Vertical Class	1	

Step 4: Determine the Free-Flow Speed

Posted Speed Limit, Sp	55	mi/h
Base Free-Flow Speed, BFFS	62.7	mi/h
Coeff. Value from Exhibit 15-12, a0	0.00000	
Coeff. Value from Exhibit 15-12, a1	0.00000	
Coeff. Value from Exhibit 15-12, a2	0.00000	
Coeff. Value from Exhibit 15-12, a3	0.00000

Coeff. for Speed-Flow Slope Model, f7	0.00000
Coeff. for Speed-Flow Slope Model, f8	0.00000
Power Coefficient, p	0.41674

Step 5c: Calculate Average Speed for the Segment

Average Speed, S	58.4	mi/h

Average Speed, with consideration of horizontal curves, S	58.4	mi/h

Step 6: Estimate the Percent Followers

Segment Type	Passing Constrained	
Vertical Class	1	
Free-Flow Speed, FFS	62.1	mi/h
Demand Flow Rate in Analysis Direction, vd	957	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Directional Capacity, cap	1700	veh/h
Segment Length, L	1.15	mi
Percentage of Heavy Vehicles	3.00	%

Step 6a: Calculate Percent Followers at Capacity

Coeff. Value for Equation 15-18 or 15-19, b0	37.68080	
Coeff. Value for Equation 15-18 or 15-19, b1	3.05089	
Coeff. Value for Equation 15-18 or 15-19, b2	-7.90866	
Coeff. Value for Equation 15-18 or 15-19, b3	-0.94321	
Coeff. Value for Equation 15-18 or 15-19, b4	13.64266	
Coeff. Value for Equation 15-18 or 15-19, b5	-0.00050	
Coeff. Value for Equation 15-18 or 15-19, b6	-0.05500	
Coeff. Value for Equation 15-18 or 15-19, b7	7.13760	
Percent Followers at Capacity Flow Rate, PFcap	85.3	%

Step 6b: Calculate Percent Followers at 25% of Capacity		
Coeff. Value for Equation 15-20 or 15-21, c0	18.01780	
Coeff. Value for Equation 15-20 or 15-21, c1	10.00000	
Coeff. Value for Equation 15-20 or 15-21, c2	-21.60000	
Coeff. Value for Equation 15-20 or 15-21, c3	-0.97853	
Coeff. Value for Equation 15-20 or 15-21, c4	12.05214	
Coeff. Value for Equation 15-20 or 15-21, c5	-0.00750	
Coeff. Value for Equation 15-20 or 15-21, c6	-0.06700	
Coeff. Value for Equation 15-20 or 15-21, c7	11.60410	
Percent Followers of 25% of Capacity Flow Rate, PF25cap	48.5	%
Step 6c: Calculate the Slope Coefficient		
Coeff. Value for Equation 15-22, d1	-0.29764	
Coeff. Value for Equation 15-22, d2	-0.71917	
Slope Coefficient, m	-1.27495	
Step 6d: Calculate the Power Coefficient		
Coeff. Value for Equation 15-23, e0	0.81165	
Coeff. Value for Equation 15-23, e1	0.37920	
Coeff. Value for Equation 15-23, e2	-0.49524	
Coeff. Value for Equation 15-23, e3	-2.11289	
Coeff. Value for Equation 15-23, e4	2.41146	
Power Coefficient, p	0.76479	
Step 6e: Calculate Percent Followers for the Segment		
Percent Followers, PF	70.9	%

Step 7: Estimate Additional Performance Measure for Passing Lane

Step 8: Estimate Follower Density

Percent Followers, PF	70.9	%
Demand Flow Rate in Analysis Direction, vd	957	veh/h
Average Speed, with consideration of horizontal curves, S	58.4	mi/h
Follower Density, FD	11.6	followers/mi/ln

Step 9: Determine Potential Adjustment to Follower Density

Effective Length of Upstream Passing Lane	1.00	mi
Distance Downstream from Start of Passing Lane Segment	6.04	mi
PF for Upstream Passing Lane Seg., PF	0.0	%
PF for Analysis Segment, PF	70.9	%
Length of Passing Lane Segment, PassLaneLength	0.00	mi
Flow Rate Entering for Analysis Segment	957	veh/h
% Improve to PF, %ImprovePF	0.0	%
% Improve to the Average Speed, %ImproveS	0.0	%
Adjusted Average Speed for Analysis Segment, S	58.4	mi/h
Adjusted Follower Density, FDadj	11.6	followers/mi/ln

Step 10: Determine LOS

Posted Speed Limit, Sp	55	mi/h
Follower Density, FD	11.6	followers/mi/ln
Level of Service, LOS	D	

TWO-LANE HIGHWAY SEGMENT ANALYSIS

Coeff. for Speed-Flow Slope Model, b4	0.00000	
Coeff. for Speed-Flow Slope Model, b5	0.00000	
Slope Coefficient, m	3.95837	

Step 5b: Calculate the Slope Coefficient

Coeff. for Speed-Flow Slope Model, f0	0.67576	
Coeff. for Speed-Flow Slope Model, f1	0.00000	
Coeff. for Speed-Flow Slope Model, f2	0.00000	
Coeff. for Speed-Flow Slope Model, f3	0.12060	
Coeff. for Speed-Flow Slope Model, f4	-0.35919	
Coeff. for Speed-Flow Slope Model, f5	0.00000	
Coeff. for Speed-Flow Slope Model, f6	0.00000	
Coeff. for Speed-Flow Slope Model, f7	0.00000	
Coeff. for Speed-Flow Slope Model, f8	0.00000	
Power Coefficient, p	0.41674	

Step 5c: Calculate Average Speed for the Segment

Average Speed, S	59.0	mi/h

Average Speed, with consideration of horizontal curves, S	59.0	mi/h

Step 6: Estimate the Percent Followers

Segment Type	Passing Constrained	
Vertical Class	1	
Free-Flow Speed, FFS	62.6	mi/h
Demand Flow Rate in Analysis Direction, vd	905	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Directional Capacity, cap	1700	veh/h
Segment Length, L	1.11	mi
Percentage of Heavy Vehicles	3.00	%

Step 6a: Calculate Percent Followers at Capacity

Coeff. Value for Equation 15-18 or 15-19, b0	37.68080	
Coeff. Value for Equation 15-18 or 15-19, b1	3.05089	
Coeff. Value for Equation 15-18 or 15-19, b2	-7.90866	
Coeff. Value for Equation 15-18 or 15-19, b3	-0.94321	

Coeff. Value for Equation 15-18 or 15-19, b4	13.64266	
Coeff. Value for Equation 15-18 or 15-19, b5	-0.00050	
Coeff. Value for Equation 15-18 or 15-19, b6	-0.05500	
Coeff. Value for Equation 15-18 or 15-19, b7	7.13760	
Percent Followers at Capacity Flow Rate, PFcap	85.2	%

Step 6b: Calculate Percent Followers at 25% of Capacity

Coeff. Value for Equation 15-20 or 15-21, c0	18.01780	
Coeff. Value for Equation 15-20 or 15-21, c1	10.00000	
Coeff. Value for Equation 15-20 or 15-21, c2	-21.60000	
Coeff. Value for Equation 15-20 or 15-21, c3	-0.97853	
Coeff. Value for Equation 15-20 or 15-21, c4	12.05214	
Coeff. Value for Equation 15-20 or 15-21, c5	-0.00750	
Coeff. Value for Equation 15-20 or 15-21, c6	-0.06700	
Coeff. Value for Equation 15-20 or 15-21, c7	11.60410	
Percent Followers of 25% of Capacity Flow Rate, PF25cap	48.4	%

Step 6c: Calculate the Slope Coefficient

Coeff. Value for Equation 15-22, d1	-0.29764	
Coeff. Value for Equation 15-22, d2	-0.71917	
Slope Coefficient, m	-1.27137	

Step 6d: Calculate the Power Coefficient

Coeff. Value for Equation 15-23, e0	0.81165	
Coeff. Value for Equation 15-23, e1	0.37920	
Coeff. Value for Equation 15-23, e2	-0.49524	
Coeff. Value for Equation 15-23, e3	-2.11289	
Coeff. Value for Equation 15-23, e4	2.41146	
Power Coefficient, p	0.76663	

Step 6e: Calculate Percent Followers for the Segment

Percent Followers, PF	69.2	%

Step 7: Estimate Additional Performance Measure for Passing Lane

Step 8: Estimate Follower Density

Percent Followers, PF	69.2	%
Demand Flow Rate in Analysis Direction, vd	905	veh/h
Average Speed, with consideration of horizontal curves, S	59.0	mi/h
Follower Density, FD	10.6	followers/mi/ln

Step 9: Determine Potential Adjustment to Follower Density

Effective Length of Upstream Passing Lane	1.00	mi
Distance Downstream from Start of Passing Lane Segment	1.11	mi
PF for Upstream Passing Lane Seg., PF	0.0	%
PF for Analysis Segment, PF	69.2	%
Length of Passing Lane Segment, PassLaneLength	0.00	mi
Flow Rate Entering for Analysis Segment	905	veh/h
% Improve to PF, %ImprovePF	0.0	%
% Improve to the Average Speed, %ImproveS	0.0	%
Adjusted Average Speed for Analysis Segment, S	59.0	mi/h
Adjusted Follower Density, FDadj	10.6	followers/mi/ln

Step 10: Determine LOS

Posted Speed Limit, Sp	55	mi/h
Follower Density, FD	10.6	followers/mi/ln
Level of Service, LOS	D	

Segment 2Walnut Boulevard to Camino Diablo Road

LOS and Performance Measures

Coded Segment Type	Passing Constrained	
Analyzed Segment Type	Passing Constrained	
Actual Segment Length, L	11840	ft
Segment Length Used in Calculation	2.24	mi
Demand Flow Rate in Analysis Direction, vd	1519	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h

Coeff. for Speed-Flow Slope Model, f1	0.00000	
Coeff. for Speed-Flow Slope Model, f2	0.00000	
Coeff. for Speed-Flow Slope Model, f3	0.12060	
Coeff. for Speed-Flow Slope Model, f4	-0.35919	
Coeff. for Speed-Flow Slope Model, f5	0.00000	
Coeff. for Speed-Flow Slope Model, f6	0.00000	
Coeff. for Speed-Flow Slope Model, f7	0.00000	
Coeff. for Speed-Flow Slope Model, f8	0.00000	
Power Coefficient, p	0.41674	

Step 5c: Calculate Average Speed for the Segment

Average Speed, S	35.8	mi/h

Average Speed, with consideration of horizontal curves, S	35.8	mi/h

Step 6: Estimate the Percent Followers

Segment Type	Passing Constrained	
Vertical Class	1	
Free-Flow Speed, FFS	38.1	mi/h
Demand Flow Rate in Analysis Direction, vd	793	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Directional Capacity, cap	1700	veh/h
Segment Length, L	1.64	mi
Percentage of Heavy Vehicles	2.00	%

Step 6a: Calculate Percent Followers at Capacity

Coeff. Value for Equation 15-18 or 15-19, b0	37.68080	
Coeff. Value for Equation 15-18 or 15-19, b1	3.05089	
Coeff. Value for Equation 15-18 or 15-19, b2	-7.90866	
Coeff. Value for Equation 15-18 or 15-19, b3	-0.94321	

Coeff. Value for Equation 15-18 or 15-19, b4	13.64266	
Coeff. Value for Equation 15-18 or 15-19, b5	-0.00050	
Coeff. Value for Equation 15-18 or 15-19, b6	-0.05500	
Coeff. Value for Equation 15-18 or 15-19, b7	7.13760	
Percent Followers at Capacity Flow Rate, PFcap	86.4	%

Step 6b: Calculate Percent Followers at 25% of Capacity

Coeff. Value for Equation 15-20 or 15-21, c0	18.01780	
Coeff. Value for Equation 15-20 or 15-21, c1	10.00000	
Coeff. Value for Equation 15-20 or 15-21, c2	-21.60000	
Coeff. Value for Equation 15-20 or 15-21, c3	-0.97853	
Coeff. Value for Equation 15-20 or 15-21, c4	12.05214	
Coeff. Value for Equation 15-20 or 15-21, c5	-0.00750	
Coeff. Value for Equation 15-20 or 15-21, c6	-0.06700	
Coeff. Value for Equation 15-20 or 15-21, c7	11.60410	
Percent Followers of 25% of Capacity Flow Rate, PF25cap	54.2	%

Step 6c: Calculate the Slope Coefficient

Coeff. Value for Equation 15-22, d1	-0.29764	
Coeff. Value for Equation 15-22, d2	-0.71917	
Slope Coefficient, m	-1.39228	

Step 6d: Calculate the Power Coefficient

Coeff. Value for Equation 15-23, e0	0.81165	
Coeff. Value for Equation 15-23, e1	0.37920	
Coeff. Value for Equation 15-23, e2	-0.49524	
Coeff. Value for Equation 15-23, e3	-2.11289	
Coeff. Value for Equation 15-23, e4	2.41146	
Power Coefficient, p	0.67543	

Step 6e: Calculate Percent Followers for the Segment

Percent Followers, PF	69.6	%

Step 7: Estimate Additional Performance Measure for Passing Lane

Step 8: Estimate Follower Density

Percent Followers, PF	69.6	%
Demand Flow Rate in Analysis Direction, vd	793	veh/h
Average Speed, with consideration of horizontal curves, S	35.8	mi/h
Follower Density, FD	15.4	followers/mi/ln

Step 9: Determine Potential Adjustment to Follower Density

Effective Length of Upstream Passing Lane	1.00	mi
Distance Downstream from Start of Passing Lane Segment	1.64	mi
PF for Upstream Passing Lane Seg., PF	0.0	%
PF for Analysis Segment, PF	69.6	%
Length of Passing Lane Segment, PassLaneLength	0.00	mi
Flow Rate Entering for Analysis Segment	793	veh/h
% Improve to PF, %ImprovePF	0.0	%
% Improve to the Average Speed, %ImproveS	0.0	%
Adjusted Average Speed for Analysis Segment, S	35.8	mi/h
Adjusted Follower Density, FDadj	15.4	followers/mi/ln

Step 10: Determine LOS

Posted Speed Limit, Sp	35	mi/h
Follower Density, FD	15.4	followers/mi/ln
Level of Service, LOS	E	

Segment 2Camino Diablo Road to San Joaquin County Line

LOS and Performance Measures

Coded Segment Type	Passing Constrained	
Analyzed Segment Type	Passing Constrained	
Actual Segment Length, L	26662	ft
Segment Length Used in Calculation	3.00	mi
Demand Flow Rate in Analysis Direction, vd	912	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Capacity, cap	1700	veh/h
Free-Flow Speed, FFS	62.3	mi/h
Speed, S	58.6	mi/h
Percent Followers, PF	71.7	%
Followers Density, FD	11.2	followers/mi/ln
Level of Service, LOS	D	

Step 1: Identify Facility Study Boundaries and Corresponding Segmentation

Segment Type	Passing Constrained	
Vertical Class	1	
Minimum Segment Length	0.25	mi
Maximum Segment Length	3.00	mi

Step 2: Determine Demand Flow Rates, Capacity, and d/c Ratio

Demand Volume in Analysis Direction, Vd	848	veh/h
Demand Volume in Opposing Direction, Vo	-	veh/h
Peak Hour Factor, PHF	0.93	
Demand Flow Rate in Analysis Direction, vd	912	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
d/c Ratio	0.54	

Step 3: Determine the Vertical Alignment Classification

Segment Length, L	26662	ft
Segment Percent Grade	0.00	%
Vertical Class	1	

Step 4: Determine the Free-Flow Speed

Posted Speed Limit, Sp	55	mi/h
Base Free-Flow Speed, BFFS	62.7	mi/h
Coeff. Value from Exhibit 15-12, a0	0.00000	
Coeff. Value from Exhibit 15-12, a1	0.00000	
Coeff. Value from Exhibit 15-12, a2	0.00000	
Coeff. Value from Exhibit 15-12, a3	0.00000	
Coeff. Value from Exhibit 15-12, a4	0.00000	
Coeff. Value from Exhibit 15-12, a5	0.00000	
Coeff. for Heavy Vehicle Adjustment, a	0.03330	
Percentage of Heavy Vehicles, %HV	4.00	%
Lane Width, LW	12	ft
Shoulder Width, SW	6	ft
Adjustment for Lane and Shoulder Width, fLS	0.0	mi/h
Access-Point Density, APD	1.0	access points/mi
Adjustment for Access-Point Density, fA	0.3	mi/h
Free-Flow Speed, FFS	62.3	mi/h

Step 5: Estimate the Average Speed

Vertical Class	1	
Free-Flow Speed, FFS	62.3	mi/h
Demand Flow Rate in Analysis Direction, vd	912	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Segment Length, L	3.00	mi
Percentage of Heavy Vehicles	4.00	%

Step 5a: Calculate the Slope Coefficient

Coeff. for Speed-Flow Slope Model, b0	0.05580	
Coeff. for Speed-Flow Slope Model, b1	0.05420	
Coeff. for Speed-Flow Slope Model, b2	0.32780	
Coeff. for b3 Segment Length Coeff. Model, c0	0.10290	
Coeff. for b3 Segment Length Coeff. Model, c1	0.00000	

Coeff. for b3 Segment Length Coeff. Model, c2	0.00000	
Coeff. for b3 Segment Length Coeff. Model, c3	0.00000	
Coeff. for Speed-Flow Slope Model, b3	0.10290	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d0	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d1	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d2	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d3	0.00000	
Coeff. for Speed-Flow Slope Model, b4	0.00000	
Coeff. for Speed-Flow Slope Model, b5	0.00000	
Slope Coefficient, m	4.01307	

Step 5b: Calculate the Slope Coefficient

Coeff. for Speed-Flow Slope Model, f0	0.67576	
Coeff. for Speed-Flow Slope Model, f1	0.00000	
Coeff. for Speed-Flow Slope Model, f2	0.00000	
Coeff. for Speed-Flow Slope Model, f3	0.12060	
Coeff. for Speed-Flow Slope Model, f4	-0.35919	
Coeff. for Speed-Flow Slope Model, f5	0.00000	
Coeff. for Speed-Flow Slope Model, f6	0.00000	
Coeff. for Speed-Flow Slope Model, f7	0.00000	
Coeff. for Speed-Flow Slope Model, f8	0.00000	
Power Coefficient, p	0.41674	

Step 5c: Calculate Average Speed for the Segment

Average Speed, S	58.6	mi/h
Average Speed, with consideration of horizontal curves, S	58.6	mi/h

Step 6: Estimate the Percent Followers

Segment Type	Passing Constrained	
Vertical Class	1	
Free-Flow Speed, FFS	62.3	mi/h
Demand Flow Rate in Analysis Direction, vd	912	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Directional Capacity, cap	1700	veh/h
Segment Length, L	3.00	mi
Percentage of Heavy Vehicles	4.00	%

Step 6a: Calculate Percent Followers at Capacity

Coeff. Value for Equation 15-18 or 15-19, b0	37.68080	
Coeff. Value for Equation 15-18 or 15-19, b1	3.05089	
Coeff. Value for Equation 15-18 or 15-19, b2	-7.90866	
Coeff. Value for Equation 15-18 or 15-19, b3	-0.94321	
Coeff. Value for Equation 15-18 or 15-19, b4	13.64266	
Coeff. Value for Equation 15-18 or 15-19, b5	-0.00050	
Coeff. Value for Equation 15-18 or 15-19, b6	-0.05500	
Coeff. Value for Equation 15-18 or 15-19, b7	7.13760	
Percent Followers at Capacity Flow Rate, PFcap	85.7	%

Step 6b: Calculate Percent Followers at 25% of Capacity

Coeff. Value for Equation 15-20 or 15-21, c0	18.01780	
Coeff. Value for Equation 15-20 or 15-21, c1	10.00000	
Coeff. Value for Equation 15-20 or 15-21, c2	-21.60000	
Coeff. Value for Equation 15-20 or 15-21, c3	-0.97853	
Coeff. Value for Equation 15-20 or 15-21, c4	12.05214	
Coeff. Value for Equation 15-20 or 15-21, c5	-0.00750	
Coeff. Value for Equation 15-20 or 15-21, c6	-0.06700	
Coeff. Value for Equation 15-20 or 15-21, c7	11.60410	
Percent Followers of 25% of Capacity Flow Rate, PF25cap	52.7	%

Step 6c: Calculate the Slope Coefficient

Coeff. Value for Equation 15-22, d1	-0.29764	
Coeff. Value for Equation 15-22, d2	-0.71917	
Slope Coefficient, m	-1.34549	

Step 6d: Calculate the Power Coefficient

Coeff. Value for Equation 15-23, e0	0.81165	
Coeff. Value for Equation 15-23, e1	0.37920	

Coeff. Value for Equation 15-23, e2	-0.49524	
Coeff. Value for Equation 15-23, e3	-2.11289	
Coeff. Value for Equation 15-23, e4	2.41146	
Power Coefficient, p	0.68711	

Step 6e: Calculate Percent Followers for the Segment

Percent Followers, PF	71.7	%

Step 7: Estimate Additional Performance Measure for Passing Lane

Step 8: Estimate Follower Density

Percent Followers, PF	71.7	%
Demand Flow Rate in Analysis Direction, vd	912	veh/h
Average Speed, with consideration of horizontal curves, S	58.6	mi/h
Follower Density, FD	11.2	followers/mi/ln

Step 9: Determine Potential Adjustment to Follower Density

Effective Length of Upstream Passing Lane	1.00	mi
Distance Downstream from Start of Passing Lane Segment	6.69	mi
PF for Upstream Passing Lane Seg., PF	0.0	%
PF for Analysis Segment, PF	71.7	%
Length of Passing Lane Segment, PassLaneLength	0.00	mi
Flow Rate Entering for Analysis Segment	912	veh/h
% Improve to PF, %ImprovePF	0.0	%
% Improve to the Average Speed, %ImproveS	0.0	%
Adjusted Average Speed for Analysis Segment, S	58.6	mi/h
Adjusted Follower Density, FDadj	11.2	followers/mi/ln

Step 10: Determine LOS

Posted Speed Limit, Sp	55	mi/h
Follower Density, FD	11.2	followers/mi/ln
Level of Service, LOS	D

Lane Width, LW	12	ft
Shoulder Width, SW	6	ft
Adjustment for Lane and Shoulder Width, fLS	0.0	mi/h
Access-Point Density, APD	3.0	access points/mi
Adjustment for Access-Point Density, fA	0.8	mi/h
Free-Flow Speed, FFS	50.5	mi/h

Step 5: Estimate the Average Speed

Vertical Class	1	
Free-Flow Speed, FFS	50.5	mi/h
Demand Flow Rate in Analysis Direction, vd	718	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Segment Length, L	0.61	mi
Percentage of Heavy Vehicles	3.00	%

Step 5a: Calculate the Slope Coefficient

Coeff. for Speed-Flow Slope Model, b0	0.05580	
Coeff. for Speed-Flow Slope Model, b1	0.05420	
Coeff. for Speed-Flow Slope Model, b2	0.32780	
Coeff. for b3 Segment Length Coeff. Model, c0	0.10290	
Coeff. for b3 Segment Length Coeff. Model, c1	0.00000	
Coeff. for b3 Segment Length Coeff. Model, c2	0.00000	
Coeff. for b3 Segment Length Coeff. Model, c3	0.00000	
Coeff. for Speed-Flow Slope Model, b3	0.10290	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d0	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d1	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d2	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d3	0.00000	
Coeff. for Speed-Flow Slope Model, b4	0.00000	
Coeff. for Speed-Flow Slope Model, b5	0.00000	
Slope Coefficient, m	3.27234	

Step 5b: Calculate the Slope Coefficient

Coeff. for Speed-Flow Slope Model, f0	0.67576	
Coeff. for Speed-Flow Slope Model, f1	0.00000	
Coeff. for Speed-Flow Slope Model, f2	0.00000	
Coeff. for Speed-Flow Slope Model, f3	0.12060	
Coeff. for Speed-Flow Slope Model, f4	-0.35919	
Coeff. for Speed-Flow Slope Model, f5	0.00000	
Coeff. for Speed-Flow Slope Model, f6	0.00000	
Coeff. for Speed-Flow Slope Model, f7	0.00000	
Coeff. for Speed-Flow Slope Model, f8	0.00000	
Power Coefficient, p	0.41674	

Step 5c: Calculate Average Speed for the Segment

Average Speed, S	47.8	mi/h

Average Speed, with consideration of horizontal curves, S	47.8	mi/h

Step 6: Estimate the Percent Followers

Segment Type	Passing Constrained	
Vertical Class	1	
Free-Flow Speed, FFS	50.5	mi/h
Demand Flow Rate in Analysis Direction, vd	718	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Directional Capacity, cap	1700	veh/h
Segment Length, L	0.61	mi
Percentage of Heavy Vehicles	3.00	%

Step 6a: Calculate Percent Followers at Capacity

Coeff. Value for Equation 15-18 or 15-19, b0	37.68080	
Coeff. Value for Equation 15-18 or 15-19, b1	3.05089	
Coeff. Value for Equation 15-18 or 15-19, b2	-7.90866	
Coeff. Value for Equation 15-18 or 15-19, b3	-0.94321	

Coeff. Value for Equation 15-18 or 15-19, b4	13.64266	
Coeff. Value for Equation 15-18 or 15-19, b5	-0.00050	
Coeff. Value for Equation 15-18 or 15-19, b6	-0.05500	
Coeff. Value for Equation 15-18 or 15-19, b7	7.13760	
Percent Followers at Capacity Flow Rate, PFcap	87.3	%

Step 6b: Calculate Percent Followers at 25% of Capacity

Coeff. Value for Equation 15-20 or 15-21, c0	18.01780	
Coeff. Value for Equation 15-20 or 15-21, c1	10.00000	
Coeff. Value for Equation 15-20 or 15-21, c2	-21.60000	
Coeff. Value for Equation 15-20 or 15-21, c3	-0.97853	
Coeff. Value for Equation 15-20 or 15-21, c4	12.05214	
Coeff. Value for Equation 15-20 or 15-21, c5	-0.00750	
Coeff. Value for Equation 15-20 or 15-21, c6	-0.06700	
Coeff. Value for Equation 15-20 or 15-21, c7	11.60410	
Percent Followers of 25% of Capacity Flow Rate, PF25cap	52.6	%

Step 6c: Calculate the Slope Coefficient

Coeff. Value for Equation 15-22, d1	-0.29764	
Coeff. Value for Equation 15-22, d2	-0.71917	
Slope Coefficient, m	-1.39396	

Step 6d: Calculate the Power Coefficient

Coeff. Value for Equation 15-23, e0	0.81165	
Coeff. Value for Equation 15-23, e1	0.37920	
Coeff. Value for Equation 15-23, e2	-0.49524	
Coeff. Value for Equation 15-23, e3	-2.11289	
Coeff. Value for Equation 15-23, e4	2.41146	
Power Coefficient, p	0.73198	

Step 6e: Calculate Percent Followers for the Segment

Percent Followers, PF	66.5	%

Step 7: Estimate Additional Performance Measure for Passing Lane

Step 8: Estimate Follower Density

Percent Followers, PF	66.5	%
Demand Flow Rate in Analysis Direction, vd	718	veh/h
Average Speed, with consideration of horizontal curves, S	47.8	mi/h
Follower Density, FD	10.0	followers/mi/ln

Step 9: Determine Potential Adjustment to Follower Density

Effective Length of Upstream Passing Lane	1.00	mi
Distance Downstream from Start of Passing Lane Segment	0.61	mi
PF for Upstream Passing Lane Seg., PF	0.0	%
PF for Analysis Segment, PF	66.5	%
Length of Passing Lane Segment, PassLaneLength	0.00	mi
Flow Rate Entering for Analysis Segment	718	veh/h
% Improve to PF, %ImprovePF	0.0	%
% Improve to the Average Speed, %ImproveS	0.0	%
Adjusted Average Speed for Analysis Segment, S	47.8	mi/h
Adjusted Follower Density, FDadj	10.0	followers/mi/ln

Step 10: Determine LOS

Posted Speed Limit, Sp	45	mi/h
Follower Density, FD	10.0	followers/mi/ln
Level of Service, LOS	C	

TWO-LANE HIGHWAY SEGMENT ANALYSIS

File Name:	EX_PROJ_AM_SR-4.xuf
Analyst:	
Agency:	Dudek
Jurisdiction:	Contra Costa County
Date:	10/20/2020
Analysis Year:	2015 (Existing plus Project)
Time Period Analyzed:	AM Peak Hour
Project Description:	SR-4, Vasco Road to Discovery Bay Boulevard
Units:	United States Customary

Facility LOS and Performance Measures

Facility Length	6.04	mi
Facility Average Followers Density, FD	8.1	followers/mi/ln
Facility Level of Service, LOS	D	

Segment 1Vasco Road to Walnut Boulevard

LOS and Performance Measures

Coded Segment Type	Passing Constrained	
Analyzed Segment Type	Passing Constrained	
Actual Segment Length, L	4752	ft
Segment Length Used in Calculation	0.90	mi
Demand Flow Rate in Analysis Direction, vd	537	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Capacity, cap	1700	veh/h
Free-Flow Speed, FFS	56.7	mi/h
Speed, S	54.1	mi/h
Percent Followers, PF	56.5	%
Followers Density, FD	5.6	followers/mi/ln
Level of Service, LOS	C	

Step 1: Identify Facility Study Boundaries and Corresponding Segmentation

Segment Type	Passing Constrained	
Vertical Class	1	
Minimum Segment Length	0.25	mi
Maximum Segment Length	3.00	mi

Step 2: Determine Demand Flow Rates, Capacity, and d/c Ratio

Demand Volume in Analysis Direction, Vd	510	veh/h
Demand Volume in Opposing Direction, Vo	-	veh/h
Peak Hour Factor, PHF	0.95	
Demand Flow Rate in Analysis Direction, vd	537	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
d/c Ratio	0.32	

Step 3: Determine the Vertical Alignment Classification

Segment Length, L	4752	ft
Segment Percent Grade	0.00	%
Vertical Class	1	

Step 4: Determine the Free-Flow Speed

Posted Speed Limit, Sp	50	mi/h
Base Free-Flow Speed, BFFS	57.0	mi/h
Coeff. Value from Exhibit 15-12, a0	0.00000	
Coeff. Value from Exhibit 15-12, a1	0.00000	
Coeff. Value from Exhibit 15-12, a2	0.00000	
Coeff. Value from Exhibit 15-12, a3	0.00000	
Coeff. Value from Exhibit 15-12, a4	0.00000	

Coeff. Value from Exhibit 15-12, a5	0.00000	
Coeff. for Heavy Vehicle Adjustment, a	0.03330	
Percentage of Heavy Vehicles, %HV	3.00	%
Lane Width, LW	12	ft
Shoulder Width, SW	6	ft
Adjustment for Lane and Shoulder Width, fLS	0.0	mi/h
Access-Point Density, APD	1.0	access points/mi
Adjustment for Access-Point Density, fA	0.3	mi/h
Free-Flow Speed, FFS	56.7	mi/h

Step 5: Estimate the Average Speed

Vertical Class	1	
Free-Flow Speed, FFS	56.7	mi/h
Demand Flow Rate in Analysis Direction, vd	537	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Segment Length, L	0.90	mi
Percentage of Heavy Vehicles	3.00	%

Step 5a: Calculate the Slope Coefficient

Coeff. for Speed-Flow Slope Model, b0	0.05580	
Coeff. for Speed-Flow Slope Model, b1	0.05420	
Coeff. for Speed-Flow Slope Model, b2	0.32780	
Coeff. for b3 Segment Length Coeff. Model, c0	0.10290	
Coeff. for b3 Segment Length Coeff. Model, c1	0.00000	
Coeff. for b3 Segment Length Coeff. Model, c2	0.00000	
Coeff. for b3 Segment Length Coeff. Model, c3	0.00000	
Coeff. for Speed-Flow Slope Model, b3	0.10290	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d0	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d1	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d2	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d3	0.00000	
Coeff. for Speed-Flow Slope Model, b4	0.00000	
Coeff. for Speed-Flow Slope Model, b5	0.00000	
Slope Coefficient, m	3.62533	

Step 5b: Calculate the Slope Coefficient

Coeff. for Speed-Flow Slope Model, f0	0.67576	
Coeff. for Speed-Flow Slope Model, f1	0.00000	
Coeff. for Speed-Flow Slope Model, f2	0.00000	
Coeff. for Speed-Flow Slope Model, f3	0.12060	
Coeff. for Speed-Flow Slope Model, f4	-0.35919	
Coeff. for Speed-Flow Slope Model, f5	0.00000	
Coeff. for Speed-Flow Slope Model, f6	0.00000	
Coeff. for Speed-Flow Slope Model, f7	0.00000	
Coeff. for Speed-Flow Slope Model, f8	0.00000	
Power Coefficient, p	0.41674	

Step 5c: Calculate Average Speed for the Segment

Average Speed, S	54.1	mi/h

Average Speed, with consideration of horizontal curves, S	54.1	mi/h

Step 6: Estimate the Percent Followers

Segment Type	Passing Constrained	
Vertical Class	1	
Free-Flow Speed, FFS	56.7	mi/h
Demand Flow Rate in Analysis Direction, vd	537	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Directional Capacity, cap	1700	veh/h
Segment Length, L	0.90	mi
Percentage of Heavy Vehicles	3.00	%

Step 6a: Calculate Percent Followers at Capacity

Coeff. Value for Equation 15-18 or 15-19, b0	37.68080	
Coeff. Value for Equation 15-18 or 15-19, b1	3.05089	
Coeff. Value for Equation 15-18 or 15-19, b2	-7.90866	
Coeff. Value for Equation 15-18 or 15-19, b3	-0.94321	

Coeff. Value for Equation 15-18 or 15-19, b4	13.64266	
Coeff. Value for Equation 15-18 or 15-19, b5	-0.00050	
Coeff. Value for Equation 15-18 or 15-19, b6	-0.05500	
Coeff. Value for Equation 15-18 or 15-19, b7	7.13760	
Percent Followers at Capacity Flow Rate, PFcap	86.2	%

Step 6b: Calculate Percent Followers at 25% of Capacity

Coeff. Value for Equation 15-20 or 15-21, c0	18.01780	
Coeff. Value for Equation 15-20 or 15-21, c1	10.00000	
Coeff. Value for Equation 15-20 or 15-21, c2	-21.60000	
Coeff. Value for Equation 15-20 or 15-21, c3	-0.97853	
Coeff. Value for Equation 15-20 or 15-21, c4	12.05214	
Coeff. Value for Equation 15-20 or 15-21, c5	-0.00750	
Coeff. Value for Equation 15-20 or 15-21, c6	-0.06700	
Coeff. Value for Equation 15-20 or 15-21, c7	11.60410	
Percent Followers of 25% of Capacity Flow Rate, PF25cap	50.3	%

Step 6c: Calculate the Slope Coefficient

Coeff. Value for Equation 15-22, d1	-0.29764	
Coeff. Value for Equation 15-22, d2	-0.71917	
Slope Coefficient, m	-1.32874	

Step 6d: Calculate the Power Coefficient

Coeff. Value for Equation 15-23, e0	0.81165	
Coeff. Value for Equation 15-23, e1	0.37920	
Coeff. Value for Equation 15-23, e2	-0.49524	
Coeff. Value for Equation 15-23, e3	-2.11289	
Coeff. Value for Equation 15-23, e4	2.41146	
Power Coefficient, p	0.75238	

Step 6e: Calculate Percent Followers for the Segment

Percent Followers, PF	56.5	%

Step 7: Estimate Additional Performance Measure for Passing Lane

Step 8: Estimate Follower Density

Percent Followers, PF	56.5	%
Demand Flow Rate in Analysis Direction, vd	537	veh/h
Average Speed, with consideration of horizontal curves, S	54.1	mi/h
Follower Density, FD	5.6	followers/mi/ln

Step 9: Determine Potential Adjustment to Follower Density

Effective Length of Upstream Passing Lane	1.00	mi
Distance Downstream from Start of Passing Lane Segment	0.90	mi
PF for Upstream Passing Lane Seg., PF	0.0	%
PF for Analysis Segment, PF	56.5	%
Length of Passing Lane Segment, PassLaneLength	0.00	mi
Flow Rate Entering for Analysis Segment	537	veh/h
% Improve to PF, %ImprovePF	0.0	%
% Improve to the Average Speed, %ImproveS	0.0	%
Adjusted Average Speed for Analysis Segment, S	54.1	mi/h
Adjusted Follower Density, FDadj	5.6	followers/mi/ln

Step 10: Determine LOS

Posted Speed Limit, Sp	50	mi/h
Follower Density, FD	5.6	followers/mi/ln
Level of Service, LOS	C	

Segment 2Walnut Boulevard to Byron Highway

LOS and Performance Measures

Coded Segment Type	Passing Constrained	
Analyzed Segment Type	Passing Constrained	
Actual Segment Length, L	15832	ft
Segment Length Used in Calculation	3.00	mi
Demand Flow Rate in Analysis Direction, vd	523	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Capacity, cap	1700	veh/h
Free-Flow Speed, FFS	55.9	mi/h
Speed, S	53.3	mi/h
Percent Followers, PF	59.6	%
Followers Density, FD	5.9	followers/mi/ln
Level of Service, LOS	C	

Step 1: Identify Facility Study Boundaries and Corresponding Segmentation

Segment Type	Passing Constrained	
Vertical Class	1	
Minimum Segment Length	0.25	mi
Maximum Segment Length	3.00	mi

Step 2: Determine Demand Flow Rates, Capacity, and d/c Ratio

Demand Volume in Analysis Direction, Vd	492	veh/h
Demand Volume in Opposing Direction, Vo	-	veh/h
Peak Hour Factor, PHF	0.94	
Demand Flow Rate in Analysis Direction, vd	523	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
d/c Ratio	0.31	

Step 3: Determine the Vertical Alignment Classification

Segment Length, L	15832	ft
Segment Percent Grade	0.00	%
Vertical Class	1	

Step 4: Determine the Free-Flow Speed

Posted Speed Limit, Sp	50	mi/h
Base Free-Flow Speed, BFFS	57.0	mi/h
Coeff. Value from Exhibit 15-12, a0	0.00000	
Coeff. Value from Exhibit 15-12, a1	0.00000	
Coeff. Value from Exhibit 15-12, a2	0.00000	
Coeff. Value from Exhibit 15-12, a3	0.00000	
Coeff. Value from Exhibit 15-12, a4	0.00000

Step 1: Identify Facility Study Boundaries and Corresponding Segmentation

Segment Type	Passing Constrained	
Vertical Class	1	
Minimum Segment Length	0.25	mi
Maximum Segment Length	3.00	mi

Step 2: Determine Demand Flow Rates, Capacity, and d/c Ratio

Demand Volume in Analysis Direction, Vd	914	veh/h
Demand Volume in Opposing Direction, Vo	-	veh/h
Peak Hour Factor, PHF	0.89	

Demand Flow Rate in Analysis Direction, vd	1027	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
d/c Ratio	0.60	

Step 3: Determine the Vertical Alignment Classification

Segment Length, L	5277	ft
Segment Percent Grade	0.00	%
Vertical Class	1	

Step 4: Determine the Free-Flow Speed

Posted Speed Limit, Sp	55	mi/h
Base Free-Flow Speed, BFFS	62.7	mi/h
Coeff. Value from Exhibit 15-12, a0	0.00000	
Coeff. Value from Exhibit 15-12, a1	0.00000	
Coeff. Value from Exhibit 15-12, a2	0.00000	
Coeff. Value from Exhibit 15-12, a3	0.00000	
Coeff. Value from Exhibit 15-12, a4	0.00000	
Coeff. Value from Exhibit 15-12, a5	0.00000	
Coeff. for Heavy Vehicle Adjustment, a	0.03330	
Percentage of Heavy Vehicles, %HV	5.00	%
Lane Width, LW	12	ft
Shoulder Width, SW	6	ft
Adjustment for Lane and Shoulder Width, fLS	0.0	mi/h
Access-Point Density, APD	1.0	access points/mi
Adjustment for Access-Point Density, fA	0.3	mi/h
Free-Flow Speed, FFS	62.3	mi/h

Step 5: Estimate the Average Speed

Vertical Class	1	
Free-Flow Speed, FFS	62.3	mi/h
Demand Flow Rate in Analysis Direction, vd	1027	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Segment Length, L	1.00	mi
Percentage of Heavy Vehicles	5.00	%

Step 5a: Calculate the Slope Coefficient

Coeff. for Speed-Flow Slope Model, b0	0.05580	
Coeff. for Speed-Flow Slope Model, b1	0.05420	
Coeff. for Speed-Flow Slope Model, b2	0.32780	
Coeff. for b3 Segment Length Coeff. Model, c0	0.10290	
Coeff. for b3 Segment Length Coeff. Model, c1	0.00000	
Coeff. for b3 Segment Length Coeff. Model, c2	0.00000	
Coeff. for b3 Segment Length Coeff. Model, c3	0.00000	
Coeff. for Speed-Flow Slope Model, b3	0.10290	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d0	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d1	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d2	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d3	0.00000	
Coeff. for Speed-Flow Slope Model, b4	0.00000	
Coeff. for Speed-Flow Slope Model, b5	0.00000	
Slope Coefficient, m	3.93591	

Step 5b: Calculate the Slope Coefficient

Coeff. for Speed-Flow Slope Model, f0	0.67576	
Coeff. for Speed-Flow Slope Model, f1	0.00000	
Coeff. for Speed-Flow Slope Model, f2	0.00000	
Coeff. for Speed-Flow Slope Model, f3	0.12060	
Coeff. for Speed-Flow Slope Model, f4	-0.35919	
Coeff. for Speed-Flow Slope Model, f5	0.00000	
Coeff. for Speed-Flow Slope Model, f6	0.00000	
Coeff. for Speed-Flow Slope Model, f7	0.00000	
Coeff. for Speed-Flow Slope Model, f8	0.00000	
Power Coefficient, p	0.41674	

Step 5c: Calculate Average Speed for the Segment

Average Speed, S	58.5	mi/h

Average Speed, with consideration of horizontal curves, S	58.5	mi/h

Step 6: Estimate the Percent Followers

Segment Type	Passing Constrained	
Vertical Class	1	
Free-Flow Speed, FFS	62.3	mi/h
Demand Flow Rate in Analysis Direction, vd	1027	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Directional Capacity, cap	1700	veh/h
Segment Length, L	1.00	mi
Percentage of Heavy Vehicles	5.00	%
Step 6a: Calculate Percent Followers at Capacity		
Coeff. Value for Equation 15-18 or 15-19, b0	37.68080	
Coeff. Value for Equation 15-18 or 15-19, b1	3.05089	
Coeff. Value for Equation 15-18 or 15-19, b2	-7.90866	
Coeff. Value for Equation 15-18 or 15-19, b3	-0.94321	
Coeff. Value for Equation 15-18 or 15-19, b4	13.64266	
Coeff. Value for Equation 15-18 or 15-19, b5	-0.00050	
Coeff. Value for Equation 15-18 or 15-19, b6	-0.05500	
Coeff. Value for Equation 15-18 or 15-19, b7	7.13760	
Percent Followers at Capacity Flow Rate, PFcap	85.3	%
Step 6b: Calculate Percent Followers at 25% of Capacity		
Coeff. Value for Equation 15-20 or 15-21, c0	18.01780	
Coeff. Value for Equation 15-20 or 15-21, c1	10.00000	
Coeff. Value for Equation 15-20 or 15-21, c2	-21.60000	
Coeff. Value for Equation 15-20 or 15-21, c3	-0.97853	
Coeff. Value for Equation 15-20 or 15-21, c4	12.05214	
Coeff. Value for Equation 15-20 or 15-21, c5	-0.00750	
Coeff. Value for Equation 15-20 or 15-21, c6	-0.06700	
Coeff. Value for Equation 15-20 or 15-21, c7	11.60410	
Percent Followers of 25% of Capacity Flow Rate, PF25cap	48.5	%
Step 6c: Calculate the Slope Coefficient		
Coeff. Value for Equation 15-22, d1	-0.29764	
Coeff. Value for Equation 15-22, d2	-0.71917	
Slope Coefficient, m	-1.27719	
Step 6d: Calculate the Power Coefficient		
Coeff. Value for Equation 15-23, e0	0.81165	
Coeff. Value for Equation 15-23, e1	0.37920	
Coeff. Value for Equation 15-23, e2	-0.49524	
Coeff. Value for Equation 15-23, e3	-2.11289	
Coeff. Value for Equation 15-23, e4	2.41146	
Power Coefficient, p	0.76709	
Step 6e: Calculate Percent Followers for the Segment		
Percent Followers, PF	72.8	%

Step 7: Estimate Additional Performance Measure for Passing Lane

Step 8: Estimate Follower Density

Percent Followers, PF	72.8	%
Demand Flow Rate in Analysis Direction, vd	1027	veh/h
Average Speed, with consideration of horizontal curves, S	58.5	mi/h
Follower Density, FD	12.8	followers/mi/ln

Step 9: Determine Potential Adjustment to Follower Density

Effective Length of Upstream Passing Lane	1.00	mi
Distance Downstream from Start of Passing Lane Segment	4.90	mi
PF for Upstream Passing Lane Seg., PF	0.0	%
PF for Analysis Segment, PF	72.8	%

Length of Passing Lane Segment, PassLaneLength	0.00	mi
Flow Rate Entering for Analysis Segment	1027	veh/h
% Improve to PF, %ImprovePF	0.0	%
% Improve to the Average Speed, %ImproveS	0.0	%
Adjusted Average Speed for Analysis Segment, S	58.5	mi/h
Adjusted Follower Density, FDadj	12.8	followers/mi/ln

Step 10: Determine LOS

Posted Speed Limit, Sp	55	mi/h
Follower Density, FD	12.8	followers/mi/ln
Level of Service, LOS	E	

Segment 4Bixler Road to Discovery Bay Boulevard

LOS and Performance Measures

Coded Segment Type	Passing Constrained	
Analyzed Segment Type	Passing Constrained	
Actual Segment Length, L	6050	ft
Segment Length Used in Calculation	1.15	mi
Demand Flow Rate in Analysis Direction, vd	970	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Capacity, cap	1700	veh/h
Free-Flow Speed, FFS	62.0	mi/h
Speed, S	58.3	mi/h
Percent Followers, PF	71.2	%
Followers Density, FD	11.8	followers/mi/ln
Level of Service, LOS	D	

Step 1: Identify Facility Study Boundaries and Corresponding Segmentation

Segment Type	Passing Constrained	
Vertical Class	1	
Minimum Segment Length	0.25	mi
Maximum Segment Length	3.00	mi

Step 2: Determine Demand Flow Rates, Capacity, and d/c Ratio

Demand Volume in Analysis Direction, Vd	873	veh/h
Demand Volume in Opposing Direction, Vo	-	veh/h
Peak Hour Factor, PHF	0.90	
Demand Flow Rate in Analysis Direction, vd	970	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
d/c Ratio	0.57	

Step 3: Determine the Vertical Alignment Classification

Segment Length, L	6050	ft
Segment Percent Grade	0.00	%
Vertical Class	1	

Step 4: Determine the Free-Flow Speed

Posted Speed Limit, Sp	55	mi/h
Base Free-Flow Speed, BFFS	62.7	mi/h
Coeff. Value from Exhibit 15-12, a0	0.00000	
Coeff. Value from Exhibit 15-12, a1	0.00000	
Coeff. Value from Exhibit 15-12, a2	0.00000	
Coeff. Value from Exhibit 15-12, a3	0.00000	
Coeff. Value from Exhibit 15-12, a4	0.00000	
Coeff. Value from Exhibit 15-12, a5	0.00000	
Coeff. for Heavy Vehicle Adjustment, a	0.03330	
Percentage of Heavy Vehicles, %HV	5.00	%
Lane Width, LW	12	ft
Shoulder Width, SW	6	ft
Adjustment for Lane and Shoulder Width, fLS	0.0	mi/h

Access-Point Density, APD	2.0	access points/mi
Adjustment for Access-Point Density, fA	0.5	mi/h
Free-Flow Speed, FFS	62.0	mi/h

Step 5: Estimate the Average Speed

Vertical Class	1	
Free-Flow Speed, FFS	62.0	mi/h
Demand Flow Rate in Analysis Direction, vd	970	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Segment Length, L	1.15	mi
Percentage of Heavy Vehicles	5.00	%

Step 5a: Calculate the Slope Coefficient

Coeff. for Speed-Flow Slope Model, b0	0.05580	
Coeff. for Speed-Flow Slope Model, b1	0.05420	
Coeff. for Speed-Flow Slope Model, b2	0.32780	
Coeff. for b3 Segment Length Coeff. Model, c0	0.10290	
Coeff. for b3 Segment Length Coeff. Model, c1	0.00000	
Coeff. for b3 Segment Length Coeff. Model, c2	0.00000	
Coeff. for b3 Segment Length Coeff. Model, c3	0.00000	
Coeff. for Speed-Flow Slope Model, b3	0.10290	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d0	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d1	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d2	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d3	0.00000	
Coeff. for Speed-Flow Slope Model, b4	0.00000	
Coeff. for Speed-Flow Slope Model, b5	0.00000	
Slope Coefficient, m	3.92963	

Step 5b: Calculate the Slope Coefficient

Coeff. for Speed-Flow Slope Model, f0	0.67576	
Coeff. for Speed-Flow Slope Model, f1	0.00000	
Coeff. for Speed-Flow Slope Model, f2	0.00000	
Coeff. for Speed-Flow Slope Model, f3	0.12060	
Coeff. for Speed-Flow Slope Model, f4	-0.35919	
Coeff. for Speed-Flow Slope Model, f5	0.00000	
Coeff. for Speed-Flow Slope Model, f6	0.00000	
Coeff. for Speed-Flow Slope Model, f7	0.00000	
Coeff. for Speed-Flow Slope Model, f8	0.00000	
Power Coefficient, p	0.41674	

Step 5c: Calculate Average Speed for the Segment

Average Speed, S	58.3	mi/h

Average Speed, with consideration of horizontal curves, S	58.3	mi/h

Step 6: Estimate the Percent Followers

Segment Type	Passing Constrained	
Vertical Class	1	
Free-Flow Speed, FFS	62.0	mi/h
Demand Flow Rate in Analysis Direction, vd	970	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Directional Capacity, cap	1700	veh/h
Segment Length, L	1.15	mi
Percentage of Heavy Vehicles	5.00	%

Step 6a: Calculate Percent Followers at Capacity

Coeff. Value for Equation 15-18 or 15-19, b0	37.68080	
Coeff. Value for Equation 15-18 or 15-19, b1	3.05089	
Coeff. Value for Equation 15-18 or 15-19, b2	-7.90866	
Coeff. Value for Equation 15-18 or 15-19, b3	-0.94321	
Coeff. Value for Equation 15-18 or 15-19, b4	13.64266	
Coeff. Value for Equation 15-18 or 15-19, b5	-0.00050	
Coeff. Value for Equation 15-18 or 15-19, b6	-0.05500	
Coeff. Value for Equation 15-18 or 15-19, b7	7.13760	
Percent Followers at Capacity Flow Rate, PFcap	85.3	%

Step 6b: Calculate Percent Followers at 25% of Capacity		
Coeff. Value for Equation 15-20 or 15-21, c0	18.01780	
Coeff. Value for Equation 15-20 or 15-21, c1	10.00000	
Coeff. Value for Equation 15-20 or 15-21, c2	-21.60000	
Coeff. Value for Equation 15-20 or 15-21, c3	-0.97853	
Coeff. Value for Equation 15-20 or 15-21, c4	12.05214	
Coeff. Value for Equation 15-20 or 15-21, c5	-0.00750	
Coeff. Value for Equation 15-20 or 15-21, c6	-0.06700	
Coeff. Value for Equation 15-20 or 15-21, c7	11.60410	
Percent Followers of 25% of Capacity Flow Rate, PF25cap	48.5	%
Step 6c: Calculate the Slope Coefficient		
Coeff. Value for Equation 15-22, d1	-0.29764	
Coeff. Value for Equation 15-22, d2	-0.71917	
Slope Coefficient, m	-1.27530	
Step 6d: Calculate the Power Coefficient		
Coeff. Value for Equation 15-23, e0	0.81165	
Coeff. Value for Equation 15-23, e1	0.37920	
Coeff. Value for Equation 15-23, e2	-0.49524	
Coeff. Value for Equation 15-23, e3	-2.11289	
Coeff. Value for Equation 15-23, e4	2.41146	
Power Coefficient, p	0.76491	
Step 6e: Calculate Percent Followers for the Segment		
Percent Followers, PF	71.2	%

Step 7: Estimate Additional Performance Measure for Passing Lane

Step 8: Estimate Follower Density

Percent Followers, PF	71.2	%
Demand Flow Rate in Analysis Direction, vd	970	veh/h
Average Speed, with consideration of horizontal curves, S	58.3	mi/h
Follower Density, FD	11.8	followers/mi/ln

Step 9: Determine Potential Adjustment to Follower Density

Effective Length of Upstream Passing Lane	1.00	mi
Distance Downstream from Start of Passing Lane Segment	6.04	mi
PF for Upstream Passing Lane Seg., PF	0.0	%
PF for Analysis Segment, PF	71.2	%
Length of Passing Lane Segment, PassLaneLength	0.00	mi
Flow Rate Entering for Analysis Segment	970	veh/h
% Improve to PF, %ImprovePF	0.0	%
% Improve to the Average Speed, %ImproveS	0.0	%
Adjusted Average Speed for Analysis Segment, S	58.3	mi/h
Adjusted Follower Density, FDadj	11.8	followers/mi/ln

Step 10: Determine LOS

Posted Speed Limit, Sp	55	mi/h
Follower Density, FD	11.8	followers/mi/ln
Level of Service, LOS	D	

TWO-LANE HIGHWAY SEGMENT ANALYSIS

Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d2	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d3	0.00000	
Coeff. for Speed-Flow Slope Model, b4	0.00000	
Coeff. for Speed-Flow Slope Model, b5	0.00000	
Slope Coefficient, m	3.96017	

Step 5b: Calculate the Slope Coefficient

Coeff. for Speed-Flow Slope Model, f0	0.67576	
Coeff. for Speed-Flow Slope Model, f1	0.00000	
Coeff. for Speed-Flow Slope Model, f2	0.00000	
Coeff. for Speed-Flow Slope Model, f3	0.12060	
Coeff. for Speed-Flow Slope Model, f4	-0.35919	
Coeff. for Speed-Flow Slope Model, f5	0.00000	
Coeff. for Speed-Flow Slope Model, f6	0.00000	
Coeff. for Speed-Flow Slope Model, f7	0.00000	
Coeff. for Speed-Flow Slope Model, f8	0.00000	
Power Coefficient, p	0.41674	

Step 5c: Calculate Average Speed for the Segment

Average Speed, S	59.2	mi/h

Average Speed, with consideration of horizontal curves, S	59.2	mi/h

Step 6: Estimate the Percent Followers

Segment Type	Passing Constrained	
Vertical Class	1	
Free-Flow Speed, FFS	62.6	mi/h
Demand Flow Rate in Analysis Direction, vd	822	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Directional Capacity, cap	1700	veh/h
Segment Length, L	1.11	mi
Percentage of Heavy Vehicles	2.00	%

Step 6a: Calculate Percent Followers at Capacity

Coeff. Value for Equation 15-18 or 15-19, b0	37.68080	
Coeff. Value for Equation 15-18 or 15-19, b1	3.05089	
Coeff. Value for Equation 15-18 or 15-19, b2	-7.90866	
Coeff. Value for Equation 15-18 or 15-19, b3	-0.94321	

Coeff. Value for Equation 15-18 or 15-19, b4	13.64266	
Coeff. Value for Equation 15-18 or 15-19, b5	-0.00050	
Coeff. Value for Equation 15-18 or 15-19, b6	-0.05500	
Coeff. Value for Equation 15-18 or 15-19, b7	7.13760	
Percent Followers at Capacity Flow Rate, PFcap	85.2	%

Step 6b: Calculate Percent Followers at 25% of Capacity

Coeff. Value for Equation 15-20 or 15-21, c0	18.01780	
Coeff. Value for Equation 15-20 or 15-21, c1	10.00000	
Coeff. Value for Equation 15-20 or 15-21, c2	-21.60000	
Coeff. Value for Equation 15-20 or 15-21, c3	-0.97853	
Coeff. Value for Equation 15-20 or 15-21, c4	12.05214	
Coeff. Value for Equation 15-20 or 15-21, c5	-0.00750	
Coeff. Value for Equation 15-20 or 15-21, c6	-0.06700	
Coeff. Value for Equation 15-20 or 15-21, c7	11.60410	
Percent Followers of 25% of Capacity Flow Rate, PF25cap	48.4	%

Step 6c: Calculate the Slope Coefficient

Coeff. Value for Equation 15-22, d1	-0.29764	
Coeff. Value for Equation 15-22, d2	-0.71917	
Slope Coefficient, m	-1.27119	

Step 6d: Calculate the Power Coefficient

Coeff. Value for Equation 15-23, e0	0.81165	
Coeff. Value for Equation 15-23, e1	0.37920	
Coeff. Value for Equation 15-23, e2	-0.49524	
Coeff. Value for Equation 15-23, e3	-2.11289	
Coeff. Value for Equation 15-23, e4	2.41146	
Power Coefficient, p	0.76657	

Step 6e: Calculate Percent Followers for the Segment

Percent Followers, PF	66.5	%

Step 7: Estimate Additional Performance Measure for Passing Lane

Step 8: Estimate Follower Density

Percent Followers, PF	66.5	%
Demand Flow Rate in Analysis Direction, vd	822	veh/h
Average Speed, with consideration of horizontal curves, S	59.2	mi/h
Follower Density, FD	9.2	followers/mi/ln

Step 9: Determine Potential Adjustment to Follower Density

Effective Length of Upstream Passing Lane	1.00	mi
Distance Downstream from Start of Passing Lane Segment	1.11	mi
PF for Upstream Passing Lane Seg., PF	0.0	%
PF for Analysis Segment, PF	66.5	%
Length of Passing Lane Segment, PassLaneLength	0.00	mi
Flow Rate Entering for Analysis Segment	822	veh/h
% Improve to PF, %ImprovePF	0.0	%
% Improve to the Average Speed, %ImproveS	0.0	%
Adjusted Average Speed for Analysis Segment, S	59.2	mi/h
Adjusted Follower Density, FDadj	9.2	followers/mi/ln

Step 10: Determine LOS

Posted Speed Limit, Sp	55	mi/h
Follower Density, FD	9.2	followers/mi/ln
Level of Service, LOS	D	

Segment 2Walnut Boulevard to Camino Diablo Road

LOS and Performance Measures

Coded Segment Type	Passing Constrained	
Analyzed Segment Type	Passing Constrained	
Actual Segment Length, L	11840	ft
Segment Length Used in Calculation	2.24	mi
Demand Flow Rate in Analysis Direction, vd	1292	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Capacity, cap	1700	veh/h
Free-Flow Speed, FFS	62.4	mi/h
Speed, S	58.1	mi/h
Percent Followers, PF	79.0	%
Followers Density, FD	17.6	followers/mi/ln
Level of Service, LOS	E	

Step 1: Identify Facility Study Boundaries and Corresponding Segmentation

Segment Type	Passing Constrained	
Vertical Class	1	
Minimum Segment Length	0.25	mi
Maximum Segment Length	3.00	mi

Step 2: Determine Demand Flow Rates, Capacity, and d/c Ratio

Demand Volume in Analysis Direction, Vd	1240	veh/h
Demand Volume in Opposing Direction, Vo	-	veh/h
Peak Hour Factor, PHF	0.96	
Demand Flow Rate in Analysis Direction, vd	1292	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
d/c Ratio	0.76	

Step 3: Determine the Vertical Alignment Classification

Segment Length, L	11840	ft
Segment Percent Grade	0.00	%
Vertical Class	1	

Step 4: Determine the Free-Flow Speed

Posted Speed Limit, Sp	55	mi/h
Base Free-Flow Speed, BFFS	62.7	mi/h
Coeff. Value from Exhibit 15-12, a0	0.00000	
Coeff. Value from Exhibit 15-12, a1	0.00000	
Coeff. Value from Exhibit 15-12, a2	0.00000	
Coeff. Value from Exhibit 15-12, a3	0.00000	
Coeff. Value from Exhibit 15-12, a4	0.00000	
Coeff. Value from Exhibit 15-12, a5	0.00000	
Coeff. for Heavy Vehicle Adjustment, a	0.03330	
Percentage of Heavy Vehicles, %HV	2.00	%
Lane Width, LW	12	ft
Shoulder Width, SW	6	ft
Adjustment for Lane and Shoulder Width, fLS	0.0	mi/h
Access-Point Density, APD	1.0	access points/mi
Adjustment for Access-Point Density, fA	0.3	mi/h
Free-Flow Speed, FFS	62.4	mi/h

Step 5: Estimate the Average Speed

Vertical Class	1	
Free-Flow Speed, FFS	62.4	mi/h
Demand Flow Rate in Analysis Direction, vd	1292	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Segment Length, L	2.24	mi
Percentage of Heavy Vehicles	2.00	%

Step 5a: Calculate the Slope Coefficient

Coeff. for Speed-Flow Slope Model, b0	0.05580
Coeff. for Speed-Flow Slope Model, b1	0.05420
Coeff. for Speed-Flow Slope Model, b2	0.32780
Coeff. for b3 Segment Length Coeff. Model, c0	0.10290
Coeff. for b3 Segment Length Coeff. Model, c1	0.00000

Coeff. for b3 Segment Length Coeff. Model, c2	0.00000	
Coeff. for b3 Segment Length Coeff. Model, c3	0.00000	
Coeff. for Speed-Flow Slope Model, b3	0.10290	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d0	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d1	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d2	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d3	0.00000	
Coeff. for Speed-Flow Slope Model, b4	0.00000	
Coeff. for Speed-Flow Slope Model, b5	0.00000	
Slope Coefficient, m	3.99254	
Step 5b: Calculate the Slope Coefficient		
Coeff. for Speed-Flow Slope Model, f0	0.67576	
Coeff. for Speed-Flow Slope Model, f1	0.00000	
Coeff. for Speed-Flow Slope Model, f2	0.00000	
Coeff. for Speed-Flow Slope Model, f3	0.12060	
Coeff. for Speed-Flow Slope Model, f4	-0.35919	
Coeff. for Speed-Flow Slope Model, f5	0.00000	
Coeff. for Speed-Flow Slope Model, f6	0.00000	
Coeff. for Speed-Flow Slope Model, f7	0.00000	
Coeff. for Speed-Flow Slope Model, f8	0.00000	
Power Coefficient, p	0.41674	
Step 5c: Calculate Average Speed for the Segment		
Average Speed, S	58.1	mi/h
Average Speed, with consideration of horizontal curves, S	58.1	mi/h

Step 6: Estimate the Percent Followers

Segment Type	Passing Constrained	
Vertical Class	1	
Free-Flow Speed, FFS	62.4	mi/h
Demand Flow Rate in Analysis Direction, vd	1292	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Directional Capacity, cap	1700	veh/h
Segment Length, L	2.24	mi
Percentage of Heavy Vehicles	2.00	%
Step 6a: Calculate Percent Followers at Capacity		
Coeff. Value for Equation 15-18 or 15-19, b0	37.68080	
Coeff. Value for Equation 15-18 or 15-19, b1	3.05089	
Coeff. Value for Equation 15-18 or 15-19, b2	-7.90866	
Coeff. Value for Equation 15-18 or 15-19, b3	-0.94321	
Coeff. Value for Equation 15-18 or 15-19, b4	13.64266	
Coeff. Value for Equation 15-18 or 15-19, b5	-0.00050	
Coeff. Value for Equation 15-18 or 15-19, b6	-0.05500	
Coeff. Value for Equation 15-18 or 15-19, b7	7.13760	
Percent Followers at Capacity Flow Rate, PFcap	85.2	%
Step 6b: Calculate Percent Followers at 25% of Capacity		
Coeff. Value for Equation 15-20 or 15-21, c0	18.01780	
Coeff. Value for Equation 15-20 or 15-21, c1	10.00000	
Coeff. Value for Equation 15-20 or 15-21, c2	-21.60000	
Coeff. Value for Equation 15-20 or 15-21, c3	-0.97853	
Coeff. Value for Equation 15-20 or 15-21, c4	12.05214	
Coeff. Value for Equation 15-20 or 15-21, c5	-0.00750	
Coeff. Value for Equation 15-20 or 15-21, c6	-0.06700	
Coeff. Value for Equation 15-20 or 15-21, c7	11.60410	
Percent Followers of 25% of Capacity Flow Rate, PF25cap	50.2	%
Step 6c: Calculate the Slope Coefficient		
Coeff. Value for Equation 15-22, d1	-0.29764	
Coeff. Value for Equation 15-22, d2	-0.71917	
Slope Coefficient, m	-1.29570	
Step 6d: Calculate the Power Coefficient		
Coeff. Value for Equation 15-23, e0	0.81165	
Coeff. Value for Equation 15-23, e1	0.37920	

Coeff. Value for Equation 15-23, e2	-0.49524	
Coeff. Value for Equation 15-23, e3	-2.11289	
Coeff. Value for Equation 15-23, e4	2.41146	
Power Coefficient, p	0.72767	

Step 6e: Calculate Percent Followers for the Segment

Percent Followers, PF	79.0	%

Step 7: Estimate Additional Performance Measure for Passing Lane

Step 8: Estimate Follower Density

Percent Followers, PF	79.0	%
Demand Flow Rate in Analysis Direction, vd	1292	veh/h
Average Speed, with consideration of horizontal curves, S	58.1	mi/h
Follower Density, FD	17.6	followers/mi/ln

Step 9: Determine Potential Adjustment to Follower Density

Effective Length of Upstream Passing Lane	1.00	mi
Distance Downstream from Start of Passing Lane Segment	3.35	mi
PF for Upstream Passing Lane Seg., PF	0.0	%
PF for Analysis Segment, PF	79.0	%
Length of Passing Lane Segment, PassLaneLength	0.00	mi
Flow Rate Entering for Analysis Segment	1292	veh/h
% Improve to PF, %ImprovePF	0.0	%
% Improve to the Average Speed, %ImproveS	0.0	%
Adjusted Average Speed for Analysis Segment, S	58.1	mi/h
Adjusted Follower Density, FDadj	17.6	followers/mi/ln

Step 10: Determine LOS

Posted Speed Limit, Sp	55	mi/h
Follower Density, FD	17.6	followers/mi/ln
Level of Service, LOS	E	

TWO-LANE HIGHWAY SEGMENT ANALYSIS

Coeff. for Speed-Flow Slope Model, b4	0.00000	
Coeff. for Speed-Flow Slope Model, b5	0.00000	
Slope Coefficient, m	2.64602	

Step 5b: Calculate the Slope Coefficient

Coeff. for Speed-Flow Slope Model, f0	0.67576	
Coeff. for Speed-Flow Slope Model, f1	0.00000	
Coeff. for Speed-Flow Slope Model, f2	0.00000	
Coeff. for Speed-Flow Slope Model, f3	0.12060	
Coeff. for Speed-Flow Slope Model, f4	-0.35919	
Coeff. for Speed-Flow Slope Model, f5	0.00000	
Coeff. for Speed-Flow Slope Model, f6	0.00000	
Coeff. for Speed-Flow Slope Model, f7	0.00000	
Coeff. for Speed-Flow Slope Model, f8	0.00000	
Power Coefficient, p	0.41674	

Step 5c: Calculate Average Speed for the Segment

Average Speed, S	35.7	mi/h

Average Speed, with consideration of horizontal curves, S	35.7	mi/h

Step 6: Estimate the Percent Followers

Segment Type	Passing Constrained	
Vertical Class	1	
Free-Flow Speed, FFS	38.0	mi/h
Demand Flow Rate in Analysis Direction, vd	755	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Directional Capacity, cap	1700	veh/h
Segment Length, L	1.64	mi
Percentage of Heavy Vehicles	6.00	%

Step 6a: Calculate Percent Followers at Capacity

Coeff. Value for Equation 15-18 or 15-19, b0	37.68080	
Coeff. Value for Equation 15-18 or 15-19, b1	3.05089	
Coeff. Value for Equation 15-18 or 15-19, b2	-7.90866	
Coeff. Value for Equation 15-18 or 15-19, b3	-0.94321	

Coeff. Value for Equation 15-18 or 15-19, b4	13.64266	
Coeff. Value for Equation 15-18 or 15-19, b5	-0.00050	
Coeff. Value for Equation 15-18 or 15-19, b6	-0.05500	
Coeff. Value for Equation 15-18 or 15-19, b7	7.13760	
Percent Followers at Capacity Flow Rate, PFcap	86.4	%

Step 6b: Calculate Percent Followers at 25% of Capacity

Coeff. Value for Equation 15-20 or 15-21, c0	18.01780	
Coeff. Value for Equation 15-20 or 15-21, c1	10.00000	
Coeff. Value for Equation 15-20 or 15-21, c2	-21.60000	
Coeff. Value for Equation 15-20 or 15-21, c3	-0.97853	
Coeff. Value for Equation 15-20 or 15-21, c4	12.05214	
Coeff. Value for Equation 15-20 or 15-21, c5	-0.00750	
Coeff. Value for Equation 15-20 or 15-21, c6	-0.06700	
Coeff. Value for Equation 15-20 or 15-21, c7	11.60410	
Percent Followers of 25% of Capacity Flow Rate, PF25cap	54.2	%

Step 6c: Calculate the Slope Coefficient

Coeff. Value for Equation 15-22, d1	-0.29764	
Coeff. Value for Equation 15-22, d2	-0.71917	
Slope Coefficient, m	-1.39163	

Step 6d: Calculate the Power Coefficient

Coeff. Value for Equation 15-23, e0	0.81165	
Coeff. Value for Equation 15-23, e1	0.37920	
Coeff. Value for Equation 15-23, e2	-0.49524	
Coeff. Value for Equation 15-23, e3	-2.11289	
Coeff. Value for Equation 15-23, e4	2.41146	
Power Coefficient, p	0.67543	

Step 6e: Calculate Percent Followers for the Segment

Percent Followers, PF	68.4	%

Step 7: Estimate Additional Performance Measure for Passing Lane

Step 8: Estimate Follower Density

Percent Followers, PF	68.4	%
Demand Flow Rate in Analysis Direction, vd	755	veh/h
Average Speed, with consideration of horizontal curves, S	35.7	mi/h
Follower Density, FD	14.4	followers/mi/ln

Step 9: Determine Potential Adjustment to Follower Density

Effective Length of Upstream Passing Lane	1.00	mi
Distance Downstream from Start of Passing Lane Segment	1.64	mi
PF for Upstream Passing Lane Seg., PF	0.0	%
PF for Analysis Segment, PF	68.4	%
Length of Passing Lane Segment, PassLaneLength	0.00	mi

Coeff. Value for Equation 15-20 or 15-21, c2	-21.60000	
Coeff. Value for Equation 15-20 or 15-21, c3	-0.97853	
Coeff. Value for Equation 15-20 or 15-21, c4	12.05214	
Coeff. Value for Equation 15-20 or 15-21, c5	-0.00750	
Coeff. Value for Equation 15-20 or 15-21, c6	-0.06700	
Coeff. Value for Equation 15-20 or 15-21, c7	11.60410	
Percent Followers of 25% of Capacity Flow Rate, PF25cap	52.7	%
Step 6c: Calculate the Slope Coefficient		
Coeff. Value for Equation 15-22, d1	-0.29764	
Coeff. Value for Equation 15-22, d2	-0.71917	
Slope Coefficient, m	-1.34624	
Step 6d: Calculate the Power Coefficient		
Coeff. Value for Equation 15-23, e0	0.81165	
Coeff. Value for Equation 15-23, e1	0.37920	

Coeff. Value for Equation 15-23, e2	-0.49524	
Coeff. Value for Equation 15-23, e3	-2.11289	
Coeff. Value for Equation 15-23, e4	2.41146	
Power Coefficient, p	0.68736	

Step 6e: Calculate Percent Followers for the Segment

Percent Followers, PF	66.7	%

Step 7: Estimate Additional Performance Measure for Passing Lane

Step 8: Estimate Follower Density

Percent Followers, PF	66.7	%
Demand Flow Rate in Analysis Direction, vd	746	veh/h
Average Speed, with consideration of horizontal curves, S	58.8	mi/h
Follower Density, FD	8.5	followers/mi/ln

Step 9: Determine Potential Adjustment to Follower Density

Effective Length of Upstream Passing Lane	1.00	mi
Distance Downstream from Start of Passing Lane Segment	6.69	mi
PF for Upstream Passing Lane Seg., PF	0.0	%
PF for Analysis Segment, PF	66.7	%
Length of Passing Lane Segment, PassLaneLength	0.00	mi
Flow Rate Entering for Analysis Segment	746	veh/h
% Improve to PF, %ImprovePF	0.0	%
% Improve to the Average Speed, %ImproveS	0.0	%
Adjusted Average Speed for Analysis Segment, S	58.8	mi/h
Adjusted Follower Density, FDadj	8.5	followers/mi/ln

Step 10: Determine LOS

Posted Speed Limit, Sp	55	mi/h
Follower Density, FD	8.5	followers/mi/ln
Level of Service, LOS	D

Coeff. for Speed-Flow Slope Model, f8	0.00000	
Power Coefficient, p	0.41674	

Step 5c: Calculate Average Speed for the Segment

Average Speed, S	58.6	mi/h

Average Speed, with consideration of horizontal curves, S	58.6	mi/h

Step 6: Estimate the Percent Followers

Segment Type	Passing Constrained	
Vertical Class	1	
Free-Flow Speed, FFS	61.4	mi/h
Demand Flow Rate in Analysis Direction, vd	521	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Directional Capacity, cap	1700	veh/h
Segment Length, L	1.63	mi
Percentage of Heavy Vehicles	3.00	%

Step 6a: Calculate Percent Followers at Capacity

Coeff. Value for Equation 15-18 or 15-19, b0	37.68080	
Coeff. Value for Equation 15-18 or 15-19, b1	3.05089	
Coeff. Value for Equation 15-18 or 15-19, b2	-7.90866	
Coeff. Value for Equation 15-18 or 15-19, b3	-0.94321	

Coeff. Value for Equation 15-18 or 15-19, b4	13.64266	
Coeff. Value for Equation 15-18 or 15-19, b5	-0.00050	
Coeff. Value for Equation 15-18 or 15-19, b6	-0.05500	
Coeff. Value for Equation 15-18 or 15-19, b7	7.13760	
Percent Followers at Capacity Flow Rate, PFcap	85.2	%

Step 6b: Calculate Percent Followers at 25% of Capacity

Coeff. Value for Equation 15-20 or 15-21, c0	18.01780	
Coeff. Value for Equation 15-20 or 15-21, c1	10.00000	
Coeff. Value for Equation 15-20 or 15-21, c2	-21.60000	
Coeff. Value for Equation 15-20 or 15-21, c3	-0.97853	
Coeff. Value for Equation 15-20 or 15-21, c4	12.05214	
Coeff. Value for Equation 15-20 or 15-21, c5	-0.00750	
Coeff. Value for Equation 15-20 or 15-21, c6	-0.06700	
Coeff. Value for Equation 15-20 or 15-21, c7	11.60410	
Percent Followers of 25% of Capacity Flow Rate, PF25cap	49.1	%

Step 6c: Calculate the Slope Coefficient

Coeff. Value for Equation 15-22, d1	-0.29764	
Coeff. Value for Equation 15-22, d2	-0.71917	
Slope Coefficient, m	-1.28249	

Step 6d: Calculate the Power Coefficient

Coeff. Value for Equation 15-23, e0	0.81165	
Coeff. Value for Equation 15-23, e1	0.37920	
Coeff. Value for Equation 15-23, e2	-0.49524	
Coeff. Value for Equation 15-23, e3	-2.11289	
Coeff. Value for Equation 15-23, e4	2.41146	
Power Coefficient, p	0.75053	

Step 6e: Calculate Percent Followers for the Segment

Percent Followers, PF	54.4	%

Step 7: Estimate Additional Performance Measure for Passing Lane

Step 8: Estimate Follower Density

Percent Followers, PF	54.4	%
Demand Flow Rate in Analysis Direction, vd	521	veh/h
Average Speed, with consideration of horizontal curves, S	58.6	mi/h
Follower Density, FD	4.8	followers/mi/ln

Step 9: Determine Potential Adjustment to Follower Density

Effective Length of Upstream Passing Lane	1.00	mi
Distance Downstream from Start of Passing Lane Segment	1.63	mi
PF for Upstream Passing Lane Seg., PF	0.0	%
PF for Analysis Segment, PF	54.4	%
Length of Passing Lane Segment, PassLaneLength	0.00	mi
Flow Rate Entering for Analysis Segment	521	veh/h
% Improve to PF, %ImprovePF	0.0	%
% Improve to the Average Speed, %ImproveS	0.0	%
Adjusted Average Speed for Analysis Segment, S	58.6	mi/h
Adjusted Follower Density, FDadj	4.8	followers/mi/ln

Step 10: Determine LOS

Posted Speed Limit, Sp	55	mi/h
Follower Density, FD	4.8	followers/mi/ln
Level of Service, LOS	C

Coeff. for Speed-Flow Slope Model, f0	0.67576	
Coeff. for Speed-Flow Slope Model, f1	0.00000	
Coeff. for Speed-Flow Slope Model, f2	0.00000	
Coeff. for Speed-Flow Slope Model, f3	0.12060	
Coeff. for Speed-Flow Slope Model, f4	-0.35919	
Coeff. for Speed-Flow Slope Model, f5	0.00000	
Coeff. for Speed-Flow Slope Model, f6	0.00000	
Coeff. for Speed-Flow Slope Model, f7	0.00000	
Coeff. for Speed-Flow Slope Model, f8	0.00000	
Power Coefficient, p	0.41674	

Step 5c: Calculate Average Speed for the Segment

Average Speed, S	53.6	mi/h

Average Speed, with consideration of horizontal curves, S	53.6	mi/h

Step 6: Estimate the Percent Followers

Segment Type	Passing Constrained	
Vertical Class	1	
Free-Flow Speed, FFS	56.7	mi/h
Demand Flow Rate in Analysis Direction, vd	763	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Directional Capacity, cap	1700	veh/h
Segment Length, L	0.90	mi
Percentage of Heavy Vehicles	3.00	%

Step 6a: Calculate Percent Followers at Capacity

Coeff. Value for Equation 15-18 or 15-19, b0	37.68080	
Coeff. Value for Equation 15-18 or 15-19, b1	3.05089	
Coeff. Value for Equation 15-18 or 15-19, b2	-7.90866	
Coeff. Value for Equation 15-18 or 15-19, b3	-0.94321	

Coeff. Value for Equation 15-18 or 15-19, b4	13.64266	
Coeff. Value for Equation 15-18 or 15-19, b5	-0.00050	
Coeff. Value for Equation 15-18 or 15-19, b6	-0.05500	
Coeff. Value for Equation 15-18 or 15-19, b7	7.13760	
Percent Followers at Capacity Flow Rate, PFcap	86.2	%

Step 6b: Calculate Percent Followers at 25% of Capacity

Coeff. Value for Equation 15-20 or 15-21, c0	18.01780	
Coeff. Value for Equation 15-20 or 15-21, c1	10.00000	
Coeff. Value for Equation 15-20 or 15-21, c2	-21.60000	
Coeff. Value for Equation 15-20 or 15-21, c3	-0.97853	
Coeff. Value for Equation 15-20 or 15-21, c4	12.05214	
Coeff. Value for Equation 15-20 or 15-21, c5	-0.00750	
Coeff. Value for Equation 15-20 or 15-21, c6	-0.06700	
Coeff. Value for Equation 15-20 or 15-21, c7	11.60410	
Percent Followers of 25% of Capacity Flow Rate, PF25cap	50.3	%

Step 6c: Calculate the Slope Coefficient

Coeff. Value for Equation 15-22, d1	-0.29764	
Coeff. Value for Equation 15-22, d2	-0.71917	
Slope Coefficient, m	-1.32874	

Step 6d: Calculate the Power Coefficient

Coeff. Value for Equation 15-23, e0	0.81165	
Coeff. Value for Equation 15-23, e1	0.37920	
Coeff. Value for Equation 15-23, e2	-0.49524	
Coeff. Value for Equation 15-23, e3	-2.11289	
Coeff. Value for Equation 15-23, e4	2.41146	
Power Coefficient, p	0.75238	

Step 6e: Calculate Percent Followers for the Segment

Percent Followers, PF	66.2	%

Step 7: Estimate Additional Performance Measure for Passing Lane

Step 8: Estimate Follower Density

Percent Followers, PF	66.2	%
Demand Flow Rate in Analysis Direction, vd	763	veh/h
Average Speed, with consideration of horizontal curves, S	53.6	mi/h
Follower Density, FD	9.4	followers/mi/ln

Step 9: Determine Potential Adjustment to Follower Density

Effective Length of Upstream Passing Lane	1.00	mi
Distance Downstream from Start of Passing Lane Segment	0.90	mi
PF for Upstream Passing Lane Seg., PF	0.0	%
PF for Analysis Segment, PF	66.2	%
Length of Passing Lane Segment, PassLaneLength	0.00	mi
Flow Rate Entering for Analysis Segment	763	veh/h
% Improve to PF, %ImprovePF	0.0	%
% Improve to the Average Speed, %ImproveS	0.0	%
Adjusted Average Speed for Analysis Segment, S	53.6	mi/h
Adjusted Follower Density, FDadj	9.4	followers/mi/ln

Step 10: Determine LOS

Posted Speed Limit, Sp	50	mi/h
Follower Density, FD	9.4	followers/mi/ln
Level of Service, LOS	C	

Segment 2Walnut Boulevard to Byron Highway

LOS and Performance Measures

Coded Segment Type	Passing Constrained	
Analyzed Segment Type	Passing Constrained	
Actual Segment Length, L	15832	ft
Segment Length Used in Calculation	3.00	mi
Demand Flow Rate in Analysis Direction, vd	653	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Capacity, cap	1700	veh/h
Free-Flow Speed, FFS	55.9	mi/h
Speed, S	53.0	mi/h
Percent Followers, PF	65.1	%
Followers Density, FD	8.0	followers/mi/ln
Level of Service, LOS	C	

Step 1: Identify Facility Study Boundaries and Corresponding Segmentation

Segment Type	Passing Constrained	
Vertical Class	1	
Minimum Segment Length	0.25	mi
Maximum Segment Length	3.00	mi

Step 2: Determine Demand Flow Rates, Capacity, and d/c Ratio

Demand Volume in Analysis Direction, Vd	614	veh/h
Demand Volume in Opposing Direction, Vo	-	veh/h
Peak Hour Factor, PHF	0.94	
Demand Flow Rate in Analysis Direction, vd	653	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
d/c Ratio	0.38	

Step 3: Determine the Vertical Alignment Classification

Segment Length, L	15832	ft
Segment Percent Grade	0.00	%
Vertical Class	1	

Step 4: Determine the Free-Flow Speed

Posted Speed Limit, Sp	50	mi/h
Base Free-Flow Speed, BFFS	57.0	mi/h
Coeff. Value from Exhibit 15-12, a0	0.00000	
Coeff. Value from Exhibit 15-12, a1	0.00000	
Coeff. Value from Exhibit 15-12, a2	0.00000	
Coeff. Value from Exhibit 15-12, a3	0.00000	
Coeff. Value from Exhibit 15-12, a4	0.00000	
Coeff. Value from Exhibit 15-12, a5	0.00000	
Coeff. for Heavy Vehicle Adjustment, a	0.03330	
Percentage of Heavy Vehicles, %HV	3.00	%
Lane Width, LW	12	ft
Shoulder Width, SW	6	ft
Adjustment for Lane and Shoulder Width, fLS	0.0	mi/h
Access-Point Density, APD	4.0	access points/mi
Adjustment for Access-Point Density, fA	1.0	mi/h
Free-Flow Speed, FFS	55.9	mi/h

Step 5: Estimate the Average Speed

Vertical Class	1	
Free-Flow Speed, FFS	55.9	mi/h
Demand Flow Rate in Analysis Direction, vd	653	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Segment Length, L	3.00	mi
Percentage of Heavy Vehicles	3.00	%

Step 5a: Calculate the Slope Coefficient

Coeff. for Speed-Flow Slope Model, b0	0.05580	
Coeff. for Speed-Flow Slope Model, b1	0.05420	
Coeff. for Speed-Flow Slope Model, b2	0.32780	
Coeff. for b3 Segment Length Coeff. Model, c0	0.10290	
Coeff. for b3 Segment Length Coeff. Model, c1	0.00000	

Coeff. for b3 Segment Length Coeff. Model, c2	0.00000	
Coeff. for b3 Segment Length Coeff. Model, c3	0.00000	
Coeff. for Speed-Flow Slope Model, b3	0.10290	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d0	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d1	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d2	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d3	0.00000	
Coeff. for Speed-Flow Slope Model, b4	0.00000	
Coeff. for Speed-Flow Slope Model, b5	0.00000	
Slope Coefficient, m	3.66524	

Step 5b: Calculate the Slope Coefficient

Coeff. for Speed-Flow Slope Model, f0	0.67576	
Coeff. for Speed-Flow Slope Model, f1	0.00000	
Coeff. for Speed-Flow Slope Model, f2	0.00000	
Coeff. for Speed-Flow Slope Model, f3	0.12060	
Coeff. for Speed-Flow Slope Model, f4	-0.35919	
Coeff. for Speed-Flow Slope Model, f5	0.00000	
Coeff. for Speed-Flow Slope Model, f6	0.00000	
Coeff. for Speed-Flow Slope Model, f7	0.00000	
Coeff. for Speed-Flow Slope Model, f8	0.00000	
Power Coefficient, p	0.41674	

Step 5c: Calculate Average Speed for the Segment

Average Speed, S	53.0	mi/h
Average Speed, with consideration of horizontal curves, S	53.0	mi/h

Step 6: Estimate the Percent Followers

Segment Type	Passing Constrained	
Vertical Class	1	
Free-Flow Speed, FFS	55.9	mi/h
Demand Flow Rate in Analysis Direction, vd	653	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Directional Capacity, cap	1700	veh/h
Segment Length, L	3.00	mi
Percentage of Heavy Vehicles	3.00	%

Step 6a: Calculate Percent Followers at Capacity

Coeff. Value for Equation 15-18 or 15-19, b0	37.68080	
Coeff. Value for Equation 15-18 or 15-19, b1	3.05089	
Coeff. Value for Equation 15-18 or 15-19, b2	-7.90866	
Coeff. Value for Equation 15-18 or 15-19, b3	-0.94321	
Coeff. Value for Equation 15-18 or 15-19, b4	13.64266	
Coeff. Value for Equation 15-18 or 15-19, b5	-0.00050	
Coeff. Value for Equation 15-18 or 15-19, b6	-0.05500	
Coeff. Value for Equation 15-18 or 15-19, b7	7.13760	
Percent Followers at Capacity Flow Rate, PFcap	86.5	%

Step 6b: Calculate Percent Followers at 25% of Capacity

Coeff. Value for Equation 15-20 or 15-21, c0	18.01780	
Coeff. Value for Equation 15-20 or 15-21, c1	10.00000	
Coeff. Value for Equation 15-20 or 15-21, c2	-21.60000	
Coeff. Value for Equation 15-20 or 15-21, c3	-0.97853	
Coeff. Value for Equation 15-20 or 15-21, c4	12.05214	
Coeff. Value for Equation 15-20 or 15-21, c5	-0.00750	
Coeff. Value for Equation 15-20 or 15-21, c6	-0.06700	
Coeff. Value for Equation 15-20 or 15-21, c7	11.60410	
Percent Followers of 25% of Capacity Flow Rate, PF25cap	54.6	%

Step 6c: Calculate the Slope Coefficient

Coeff. Value for Equation 15-22, d1	-0.29764	
Coeff. Value for Equation 15-22, d2	-0.71917	
Slope Coefficient, m	-1.40106	

Step 6d: Calculate the Power Coefficient

Coeff. Value for Equation 15-23, e0	0.81165	
Coeff. Value for Equation 15-23, e1	0.37920	

Coeff. Value for Equation 15-23, e2	-0.49524	
Coeff. Value for Equation 15-23, e3	-2.11289	
Coeff. Value for Equation 15-23, e4	2.41146	
Power Coefficient, p	0.67143	

Step 6e: Calculate Percent Followers for the Segment

Percent Followers, PF	65.1	%

Step 7: Estimate Additional Performance Measure for Passing Lane

Step 8: Estimate Follower Density

Percent Followers, PF	65.1	%
Demand Flow Rate in Analysis Direction, vd	653	veh/h
Average Speed, with consideration of horizontal curves, S	53.0	mi/h
Follower Density, FD	8.0	followers/mi/ln

Step 9: Determine Potential Adjustment to Follower Density

Effective Length of Upstream Passing Lane	1.00	mi
Distance Downstream from Start of Passing Lane Segment	3.90	mi
PF for Upstream Passing Lane Seg., PF	0.0	%
PF for Analysis Segment, PF	65.1	%
Length of Passing Lane Segment, PassLaneLength	0.00	mi
Flow Rate Entering for Analysis Segment	653	veh/h
% Improve to PF, %ImprovePF	0.0	%
% Improve to the Average Speed, %ImproveS	0.0	%
Adjusted Average Speed for Analysis Segment, S	53.0	mi/h
Adjusted Follower Density, FDadj	8.0	followers/mi/ln

Step 10: Determine LOS

Posted Speed Limit, Sp	50	mi/h
Follower Density, FD	8.0	followers/mi/ln
Level of Service, LOS	C	

Segment 3Byron Highway to Bixler Road

LOS and Performance Measures

Coded Segment Type	Passing Constrained	
Analyzed Segment Type	Passing Constrained	
Actual Segment Length, L	5277	ft
Segment Length Used in Calculation	1.00	mi
Demand Flow Rate in Analysis Direction, vd	1020	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Capacity, cap	1700	veh/h
Free-Flow Speed, FFS	62.4	mi/h
Speed, S	58.5	mi/h
Percent Followers, PF	72.7	%
Followers Density, FD	12.7	followers/mi/ln
Level of Service, LOS	E	

Step 1: Identify Facility Study Boundaries and Corresponding Segmentation

Segment Type	Passing Constrained	
Vertical Class	1	
Minimum Segment Length	0.25	mi
Maximum Segment Length	3.00	mi

Step 2: Determine Demand Flow Rates, Capacity, and d/c Ratio

Demand Volume in Analysis Direction, Vd	959	veh/h
Demand Volume in Opposing Direction, Vo	-	veh/h
Peak Hour Factor, PHF	0.94	

Demand Flow Rate in Analysis Direction, vd	1020	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
d/c Ratio	0.60	

Step 3: Determine the Vertical Alignment Classification

Segment Length, L	5277	ft
Segment Percent Grade	0.00	%
Vertical Class	1	

Step 4: Determine the Free-Flow Speed

Posted Speed Limit, Sp	55	mi/h
Base Free-Flow Speed, BFFS	62.7	mi/h
Coeff. Value from Exhibit 15-12, a0	0.00000	
Coeff. Value from Exhibit 15-12, a1	0.00000	
Coeff. Value from Exhibit 15-12, a2	0.00000	
Coeff. Value from Exhibit 15-12, a3	0.00000	
Coeff. Value from Exhibit 15-12, a4	0.00000	
Coeff. Value from Exhibit 15-12, a5	0.00000	
Coeff. for Heavy Vehicle Adjustment, a	0.03330	
Percentage of Heavy Vehicles, %HV	3.00	%

Coeff. for b3 Segment Length Coeff. Model, c1	0.00000	
Coeff. for b3 Segment Length Coeff. Model, c2	0.00000	
Coeff. for b3 Segment Length Coeff. Model, c3	0.00000	
Coeff. for Speed-Flow Slope Model, b3	0.10290	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d0	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d1	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d2	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d3	0.00000	
Coeff. for Speed-Flow Slope Model, b4	0.00000	
Coeff. for Speed-Flow Slope Model, b5	0.00000	
Slope Coefficient, m	3.93324	

Step 5b: Calculate the Slope Coefficient

Coeff. for Speed-Flow Slope Model, f0	0.67576	
Coeff. for Speed-Flow Slope Model, f1	0.00000	
Coeff. for Speed-Flow Slope Model, f2	0.00000	
Coeff. for Speed-Flow Slope Model, f3	0.12060	
Coeff. for Speed-Flow Slope Model, f4	-0.35919	
Coeff. for Speed-Flow Slope Model, f5	0.00000	
Coeff. for Speed-Flow Slope Model, f6	0.00000	
Coeff. for Speed-Flow Slope Model, f7	0.00000	
Coeff. for Speed-Flow Slope Model, f8	0.00000	
Power Coefficient, p	0.41674	

Step 5c: Calculate Average Speed for the Segment

Average Speed, S	58.3	mi/h

Average Speed, with consideration of horizontal curves, S	58.3	mi/h

Step 6: Estimate the Percent Followers

Segment Type	Passing Constrained	
Vertical Class	1	
Free-Flow Speed, FFS	62.1	mi/h
Demand Flow Rate in Analysis Direction, vd	1021	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Directional Capacity, cap	1700	veh/h
Segment Length, L	1.15	mi
Percentage of Heavy Vehicles	3.00	%

Step 6a: Calculate Percent Followers at Capacity

Coeff. Value for Equation 15-18 or 15-19, b0	37.68080	
Coeff. Value for Equation 15-18 or 15-19, b1	3.05089	
Coeff. Value for Equation 15-18 or 15-19, b2	-7.90866	
Coeff. Value for Equation 15-18 or 15-19, b3	-0.94321	
Coeff. Value for Equation 15-18 or 15-19, b4	13.64266	
Coeff. Value for Equation 15-18 or 15-19, b5	-0.00050	
Coeff. Value for Equation 15-18 or 15-19, b6	-0.05500	
Coeff. Value for Equation 15-18 or 15-19, b7	7.13760	
Percent Followers at Capacity Flow Rate, PFcap	85.3	%

Step 6b: Calculate Percent Followers at 25% of Capacity		
Coeff. Value for Equation 15-20 or 15-21, c0	18.01780	
Coeff. Value for Equation 15-20 or 15-21, c1	10.00000	
Coeff. Value for Equation 15-20 or 15-21, c2	-21.60000	
Coeff. Value for Equation 15-20 or 15-21, c3	-0.97853	
Coeff. Value for Equation 15-20 or 15-21, c4	12.05214	
Coeff. Value for Equation 15-20 or 15-21, c5	-0.00750	
Coeff. Value for Equation 15-20 or 15-21, c6	-0.06700	
Coeff. Value for Equation 15-20 or 15-21, c7	11.60410	
Percent Followers of 25% of Capacity Flow Rate, PF25cap	48.5	%
Step 6c: Calculate the Slope Coefficient		
Coeff. Value for Equation 15-22, d1	-0.29764	
Coeff. Value for Equation 15-22, d2	-0.71917	
Slope Coefficient, m	-1.27495	
Step 6d: Calculate the Power Coefficient		
Coeff. Value for Equation 15-23, e0	0.81165	
Coeff. Value for Equation 15-23, e1	0.37920	
Coeff. Value for Equation 15-23, e2	-0.49524	
Coeff. Value for Equation 15-23, e3	-2.11289	
Coeff. Value for Equation 15-23, e4	2.41146	
Power Coefficient, p	0.76479	
Step 6e: Calculate Percent Followers for the Segment		
Percent Followers, PF	72.6	%

Step 7: Estimate Additional Performance Measure for Passing Lane

Step 8: Estimate Follower Density

Percent Followers, PF	72.6	%
Demand Flow Rate in Analysis Direction, vd	1021	veh/h
Average Speed, with consideration of horizontal curves, S	58.3	mi/h
Follower Density, FD	12.7	followers/mi/ln

Step 9: Determine Potential Adjustment to Follower Density

Effective Length of Upstream Passing Lane	1.00	mi
Distance Downstream from Start of Passing Lane Segment	6.04	mi
PF for Upstream Passing Lane Seg., PF	0.0	%
PF for Analysis Segment, PF	72.6	%
Length of Passing Lane Segment, PassLaneLength	0.00	mi
Flow Rate Entering for Analysis Segment	1021	veh/h
% Improve to PF, %ImprovePF	0.0	%
% Improve to the Average Speed, %ImproveS	0.0	%
Adjusted Average Speed for Analysis Segment, S	58.3	mi/h
Adjusted Follower Density, FDadj	12.7	followers/mi/ln

Step 10: Determine LOS

Posted Speed Limit, Sp	55	mi/h
Follower Density, FD	12.7	followers/mi/ln
Level of Service, LOS	E	

TWO-LANE HIGHWAY SEGMENT ANALYSIS

Coeff. for Speed-Flow Slope Model, f8	0.00000	
Power Coefficient, p	0.41674	

Step 5c: Calculate Average Speed for the Segment

Average Speed, S	58.8	mi/h

Average Speed, with consideration of horizontal curves, S	58.8	mi/h

Step 6: Estimate the Percent Followers

Segment Type	Passing Constrained	
Vertical Class	1	
Free-Flow Speed, FFS	62.6	mi/h
Demand Flow Rate in Analysis Direction, vd	989	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Directional Capacity, cap	1700	veh/h
Segment Length, L	1.11	mi
Percentage of Heavy Vehicles	3.00	%

Step 6a: Calculate Percent Followers at Capacity

Coeff. Value for Equation 15-18 or 15-19, b0	37.68080	
Coeff. Value for Equation 15-18 or 15-19, b1	3.05089	
Coeff. Value for Equation 15-18 or 15-19, b2	-7.90866	
Coeff. Value for Equation 15-18 or 15-19, b3	-0.94321	

Coeff. Value for Equation 15-18 or 15-19, b4	13.64266	
Coeff. Value for Equation 15-18 or 15-19, b5	-0.00050	
Coeff. Value for Equation 15-18 or 15-19, b6	-0.05500	
Coeff. Value for Equation 15-18 or 15-19, b7	7.13760	
Percent Followers at Capacity Flow Rate, PFcap	85.2	%

Step 6b: Calculate Percent Followers at 25% of Capacity

Coeff. Value for Equation 15-20 or 15-21, c0	18.01780	
Coeff. Value for Equation 15-20 or 15-21, c1	10.00000	
Coeff. Value for Equation 15-20 or 15-21, c2	-21.60000	
Coeff. Value for Equation 15-20 or 15-21, c3	-0.97853	
Coeff. Value for Equation 15-20 or 15-21, c4	12.05214	
Coeff. Value for Equation 15-20 or 15-21, c5	-0.00750	
Coeff. Value for Equation 15-20 or 15-21, c6	-0.06700	
Coeff. Value for Equation 15-20 or 15-21, c7	11.60410	
Percent Followers of 25% of Capacity Flow Rate, PF25cap	48.4	%

Step 6c: Calculate the Slope Coefficient

Coeff. Value for Equation 15-22, d1	-0.29764	
Coeff. Value for Equation 15-22, d2	-0.71917	
Slope Coefficient, m	-1.27137	

Step 6d: Calculate the Power Coefficient

Coeff. Value for Equation 15-23, e0	0.81165	
Coeff. Value for Equation 15-23, e1	0.37920	
Coeff. Value for Equation 15-23, e2	-0.49524	
Coeff. Value for Equation 15-23, e3	-2.11289	
Coeff. Value for Equation 15-23, e4	2.41146	
Power Coefficient, p	0.76663	

Step 6e: Calculate Percent Followers for the Segment

Percent Followers, PF	71.6	%

Step 7: Estimate Additional Performance Measure for Passing Lane

Step 8: Estimate Follower Density

Percent Followers, PF	71.6	%
Demand Flow Rate in Analysis Direction, vd	989	veh/h
Average Speed, with consideration of horizontal curves, S	58.8	mi/h
Follower Density, FD	12.0	followers/mi/ln

Step 9: Determine Potential Adjustment to Follower Density

Effective Length of Upstream Passing Lane	1.00	mi
Distance Downstream from Start of Passing Lane Segment	1.11	mi
PF for Upstream Passing Lane Seg., PF	0.0	%
PF for Analysis Segment, PF	71.6	%
Length of Passing Lane Segment, PassLaneLength	0.00	mi

Step 2: Determine Demand Flow Rates, Capacity, and d/c Ratio

Demand Volume in Analysis Direction, Vd	875	veh/h
Demand Volume in Opposing Direction, Vo	-	veh/h
Peak Hour Factor, PHF	0.95	
Demand Flow Rate in Analysis Direction, vd	921	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
d/c Ratio	0.54	

Step 3: Determine the Vertical Alignment Classification

Segment Length, L	8668	ft
Segment Percent Grade	0.00	%
Vertical Class	1	

Step 4: Determine the Free-Flow Speed

Posted Speed Limit, Sp	35	mi/h
Base Free-Flow Speed, BFFS	39.9	mi/h
Coeff. Value from Exhibit 15-12, a0	0.00000	
Coeff. Value from Exhibit 15-12, a1	0.00000	
Coeff. Value from Exhibit 15-12, a2	0.00000	
Coeff. Value from Exhibit 15-12, a3	0.00000	
Coeff. Value from Exhibit 15-12, a4	0.00000	

Coeff. Value from Exhibit 15-12, a5	0.00000	
Coeff. for Heavy Vehicle Adjustment, a	0.03330	
Percentage of Heavy Vehicles, %HV	2.00	%
Lane Width, LW	12	ft
Shoulder Width, SW	6	ft
Adjustment for Lane and Shoulder Width, fLS	0.0	mi/h
Access-Point Density, APD	7.0	access points/mi
Adjustment for Access-Point Density, fA	1.8	mi/h
Free-Flow Speed, FFS	38.1	mi/h

Step 5: Estimate the Average Speed

Vertical Class	1	
Free-Flow Speed, FFS	38.1	mi/h
Demand Flow Rate in Analysis Direction, vd	921	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Segment Length, L	1.64	mi
Percentage of Heavy Vehicles	2.00	%

Step 5a: Calculate the Slope Coefficient

Coeff. for Speed-Flow Slope Model, b0	0.05580	
Coeff. for Speed-Flow Slope Model, b1	0.05420	
Coeff. for Speed-Flow Slope Model, b2	0.32780	
Coeff. for b3 Segment Length Coeff. Model, c0	0.10290	
Coeff. for b3 Segment Length Coeff. Model, c1	0.00000	
Coeff. for b3 Segment Length Coeff. Model, c2	0.00000	
Coeff. for b3 Segment Length Coeff. Model, c3	0.00000	
Coeff. for Speed-Flow Slope Model, b3	0.10290	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d0	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d1	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d2	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d3	0.00000	
Coeff. for Speed-Flow Slope Model, b4	0.00000	
Coeff. for Speed-Flow Slope Model, b5	0.00000	
Slope Coefficient, m	2.65323	

Step 5b: Calculate the Slope Coefficient

Coeff. for Speed-Flow Slope Model, f0	0.67576	
Coeff. for Speed-Flow Slope Model, f1	0.00000	
Coeff. for Speed-Flow Slope Model, f2	0.00000	
Coeff. for Speed-Flow Slope Model, f3	0.12060	
Coeff. for Speed-Flow Slope Model, f4	-0.35919	
Coeff. for Speed-Flow Slope Model, f5	0.00000	
Coeff. for Speed-Flow Slope Model, f6	0.00000	
Coeff. for Speed-Flow Slope Model, f7	0.00000	
Coeff. for Speed-Flow Slope Model, f8	0.00000	
Power Coefficient, p	0.41674	

Step 5c: Calculate Average Speed for the Segment

Average Speed, S	35.6	mi/h

Average Speed, with consideration of horizontal curves, S	35.6	mi/h

Step 6: Estimate the Percent Followers

Segment Type	Passing Constrained	
Vertical Class	1	
Free-Flow Speed, FFS	38.1	mi/h
Demand Flow Rate in Analysis Direction, vd	921	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Directional Capacity, cap	1700	veh/h
Segment Length, L	1.64	mi
Percentage of Heavy Vehicles	2.00	%

Step 6a: Calculate Percent Followers at Capacity

Coeff. Value for Equation 15-18 or 15-19, b0	37.68080	
Coeff. Value for Equation 15-18 or 15-19, b1	3.05089	
Coeff. Value for Equation 15-18 or 15-19, b2	-7.90866	
Coeff. Value for Equation 15-18 or 15-19, b3	-0.94321	

Coeff. Value for Equation 15-18 or 15-19, b4	13.64266	
Coeff. Value for Equation 15-18 or 15-19, b5	-0.00050	
Coeff. Value for Equation 15-18 or 15-19, b6	-0.05500	
Coeff. Value for Equation 15-18 or 15-19, b7	7.13760	
Percent Followers at Capacity Flow Rate, PFcap	86.4	%

Step 6b: Calculate Percent Followers at 25% of Capacity

Coeff. Value for Equation 15-20 or 15-21, c0	18.01780	
Coeff. Value for Equation 15-20 or 15-21, c1	10.00000	
Coeff. Value for Equation 15-20 or 15-21, c2	-21.60000	
Coeff. Value for Equation 15-20 or 15-21, c3	-0.97853	
Coeff. Value for Equation 15-20 or 15-21, c4	12.05214	
Coeff. Value for Equation 15-20 or 15-21, c5	-0.00750	
Coeff. Value for Equation 15-20 or 15-21, c6	-0.06700	
Coeff. Value for Equation 15-20 or 15-21, c7	11.60410	
Percent Followers of 25% of Capacity Flow Rate, PF25cap	54.2	%

Step 6c: Calculate the Slope Coefficient

Coeff. Value for Equation 15-22, d1	-0.29764	
Coeff. Value for Equation 15-22, d2	-0.71917	
Slope Coefficient, m	-1.39228	

Step 6d: Calculate the Power Coefficient

Coeff. Value for Equation 15-23, e0	0.81165	
Coeff. Value for Equation 15-23, e1	0.37920	
Coeff. Value for Equation 15-23, e2	-0.49524	
Coeff. Value for Equation 15-23, e3	-2.11289	
Coeff. Value for Equation 15-23, e4	2.41146	
Power Coefficient, p	0.67543	

Step 6e: Calculate Percent Followers for the Segment

Percent Followers, PF	73.2	%

Step 7: Estimate Additional Performance Measure for Passing Lane

Step 8: Estimate Follower Density

Percent Followers, PF	73.2	%
Demand Flow Rate in Analysis Direction, vd	921	veh/h
Average Speed, with consideration of horizontal curves, S	35.6	mi/h
Follower Density, FD	18.9	followers/mi/ln

Step 9: Determine Potential Adjustment to Follower Density

Effective Length of Upstream Passing Lane	1.00	mi
Distance Downstream from Start of Passing Lane Segment	1.64	mi
PF for Upstream Passing Lane Seg., PF	0.0	%
PF for Analysis Segment, PF	73.2	%
Length of Passing Lane Segment, PassLaneLength	0.00	mi
Flow Rate Entering for Analysis Segment	921	veh/h
% Improve to PF, %ImprovePF	0.0	%
% Improve to the Average Speed, %ImproveS	0.0	%
Adjusted Average Speed for Analysis Segment, S	35.6	mi/h
Adjusted Follower Density, FDadj	18.9	followers/mi/ln

Step 10: Determine LOS

Posted Speed Limit, Sp	35	mi/h
Follower Density, FD	18.9	followers/mi/ln
Level of Service, LOS	E	

Segment 2Camino Diablo Road to San Joaquin County Line

LOS and Performance Measures

Coded Segment Type	Passing Constrained	
Analyzed Segment Type	Passing Constrained	
Actual Segment Length, L	26662	ft
Segment Length Used in Calculation	3.00	mi
Demand Flow Rate in Analysis Direction, vd	1073	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Capacity, cap	1700	veh/h
Free-Flow Speed, FFS	62.3	mi/h
Speed, S	58.3	mi/h
Percent Followers, PF	75.6	%
Followers Density, FD	13.9	followers/mi/ln
Level of Service, LOS	E	

Step 1: Identify Facility Study Boundaries and Corresponding Segmentation

Segment Type	Passing Constrained	
Vertical Class	1	
Minimum Segment Length	0.25	mi
Maximum Segment Length	3.00	mi

Step 2: Determine Demand Flow Rates, Capacity, and d/c Ratio

Demand Volume in Analysis Direction, Vd	998	veh/h
Demand Volume in Opposing Direction, Vo	-	veh/h
Peak Hour Factor, PHF	0.93	
Demand Flow Rate in Analysis Direction, vd	1073	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
d/c Ratio	0.63	

Step 3: Determine the Vertical Alignment Classification

Segment Length, L	26662	ft
Segment Percent Grade	0.00	%
Vertical Class	1	

Step 4: Determine the Free-Flow Speed

Posted Speed Limit, Sp	55	mi/h
Base Free-Flow Speed, BFFS	62.7	mi/h
Coeff. Value from Exhibit 15-12, a0	0.00000	
Coeff. Value from Exhibit 15-12, a1	0.00000	
Coeff. Value from Exhibit 15-12, a2	0.00000	
Coeff. Value from Exhibit 15-12, a3	0.00000	
Coeff. Value from Exhibit 15-12, a4	0.00000	
Coeff. Value from Exhibit 15-12, a5	0.00000	
Coeff. for Heavy Vehicle Adjustment, a	0.03330	
Percentage of Heavy Vehicles, %HV	4.00	%
Lane Width, LW	12	ft
Shoulder Width, SW	6	ft
Adjustment for Lane and Shoulder Width, fLS	0.0	mi/h
Access-Point Density, APD	1.0	access points/mi
Adjustment for Access-Point Density, fA	0.3	mi/h
Free-Flow Speed, FFS	62.3	mi/h

Step 5: Estimate the Average Speed

Vertical Class	1	
Free-Flow Speed, FFS	62.3	mi/h
Demand Flow Rate in Analysis Direction, vd	1073	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Segment Length, L	3.00	mi
Percentage of Heavy Vehicles	4.00	%

Step 5a: Calculate the Slope Coefficient

Coeff. for Speed-Flow Slope Model, b0	0.05580	
Coeff. for Speed-Flow Slope Model, b1	0.05420	
Coeff. for Speed-Flow Slope Model, b2	0.32780	
Coeff. for b3 Segment Length Coeff. Model, c0	0.10290	
Coeff. for b3 Segment Length Coeff. Model, c1	0.00000	

Coeff. for b3 Segment Length Coeff. Model, c2	0.00000	
Coeff. for b3 Segment Length Coeff. Model, c3	0.00000	
Coeff. for Speed-Flow Slope Model, b3	0.10290	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d0	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d1	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d2	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d3	0.00000	
Coeff. for Speed-Flow Slope Model, b4	0.00000	
Coeff. for Speed-Flow Slope Model, b5	0.00000	
Slope Coefficient, m	4.01307	
Step 5b: Calculate the Slope Coefficient		
Coeff. for Speed-Flow Slope Model, f0	0.67576	
Coeff. for Speed-Flow Slope Model, f1	0.00000	
Coeff. for Speed-Flow Slope Model, f2	0.00000	
Coeff. for Speed-Flow Slope Model, f3	0.12060	
Coeff. for Speed-Flow Slope Model, f4	-0.35919	
Coeff. for Speed-Flow Slope Model, f5	0.00000	
Coeff. for Speed-Flow Slope Model, f6	0.00000	
Coeff. for Speed-Flow Slope Model, f7	0.00000	
Coeff. for Speed-Flow Slope Model, f8	0.00000	
Power Coefficient, p	0.41674	
Step 5c: Calculate Average Speed for the Segment		
Average Speed, S	58.3	mi/h
Average Speed, with consideration of horizontal curves, S	58.3	mi/h

Step 6: Estimate the Percent Followers

Segment Type	Passing Constrained	
Vertical Class	1	
Free-Flow Speed, FFS	62.3	mi/h
Demand Flow Rate in Analysis Direction, vd	1073	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Directional Capacity, cap	1700	veh/h
Segment Length, L	3.00	mi
Percentage of Heavy Vehicles	4.00	%
Step 6a: Calculate Percent Followers at Capacity		
Coeff. Value for Equation 15-18 or 15-19, b0	37.68080	
Coeff. Value for Equation 15-18 or 15-19, b1	3.05089	
Coeff. Value for Equation 15-18 or 15-19, b2	-7.90866	
Coeff. Value for Equation 15-18 or 15-19, b3	-0.94321	
Coeff. Value for Equation 15-18 or 15-19, b4	13.64266	
Coeff. Value for Equation 15-18 or 15-19, b5	-0.00050	
Coeff. Value for Equation 15-18 or 15-19, b6	-0.05500	
Coeff. Value for Equation 15-18 or 15-19, b7	7.13760	
Percent Followers at Capacity Flow Rate, PFcap	85.7	%
Step 6b: Calculate Percent Followers at 25% of Capacity		
Coeff. Value for Equation 15-20 or 15-21, c0	18.01780	
Coeff. Value for Equation 15-20 or 15-21, c1	10.00000	
Coeff. Value for Equation 15-20 or 15-21, c2	-21.60000	
Coeff. Value for Equation 15-20 or 15-21, c3	-0.97853	
Coeff. Value for Equation 15-20 or 15-21, c4	12.05214	
Coeff. Value for Equation 15-20 or 15-21, c5	-0.00750	
Coeff. Value for Equation 15-20 or 15-21, c6	-0.06700	
Coeff. Value for Equation 15-20 or 15-21, c7	11.60410	
Percent Followers of 25% of Capacity Flow Rate, PF25cap	52.7	%
Step 6c: Calculate the Slope Coefficient		
Coeff. Value for Equation 15-22, d1	-0.29764	
Coeff. Value for Equation 15-22, d2	-0.71917	
Slope Coefficient, m	-1.34549	
Step 6d: Calculate the Power Coefficient		
Coeff. Value for Equation 15-23, e0	0.81165	
Coeff. Value for Equation 15-23, e1	0.37920	

Coeff. Value for Equation 15-23, e2	-0.49524	
Coeff. Value for Equation 15-23, e3	-2.11289	
Coeff. Value for Equation 15-23, e4	2.41146	
Power Coefficient, p	0.68711	

Step 6e: Calculate Percent Followers for the Segment

Percent Followers, PF	75.6	%

Step 7: Estimate Additional Performance Measure for Passing Lane

Step 8: Estimate Follower Density

Percent Followers, PF	75.6	%
Demand Flow Rate in Analysis Direction, vd	1073	veh/h
Average Speed, with consideration of horizontal curves, S	58.3	mi/h
Follower Density, FD	13.9	followers/mi/ln

Step 9: Determine Potential Adjustment to Follower Density

Effective Length of Upstream Passing Lane	1.00	mi
Distance Downstream from Start of Passing Lane Segment	6.69	mi
PF for Upstream Passing Lane Seg., PF	0.0	%
PF for Analysis Segment, PF	75.6	%
Length of Passing Lane Segment, PassLaneLength	0.00	mi
Flow Rate Entering for Analysis Segment	1073	veh/h
% Improve to PF, %ImprovePF	0.0	%
% Improve to the Average Speed, %ImproveS	0.0	%
Adjusted Average Speed for Analysis Segment, S	58.3	mi/h
Adjusted Follower Density, FDadj	13.9	followers/mi/ln

Step 10: Determine LOS

Posted Speed Limit, Sp	55	mi/h
Follower Density, FD	13.9	followers/mi/ln
Level of Service, LOS	E	

TWO-LANE HIGHWAY SEGMENT ANALYSIS

File Name:	EX_PROJ_PM_Camino Diablo.xuf
Analyst:	
Agency:	Dudek
Jurisdiction:	Contra Costa County

Units:	United States Customary

Facility LOS and Performance Measures

Facility Length	1.63	mi
Facility Average Followers Density, FD	6.7	followers/mi/ln
Facility Level of Service, LOS	C	

Segment 1Vasco Road to Camino Diablo

LOS and Performance Measures

Coded Segment Type	Passing Constrained	
Analyzed Segment Type	Passing Constrained	
Actual Segment Length, L	8630	ft
Segment Length Used in Calculation	1.63	mi
Demand Flow Rate in Analysis Direction, vd	647	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Capacity, cap	1700	veh/h
Free-Flow Speed, FFS	61.3	mi/h
Speed, S	58.2	mi/h
Percent Followers, PF	60.4	%
Followers Density, FD	6.7	followers/mi/ln
Level of Service, LOS	C	

Step 1: Identify Facility Study Boundaries and Corresponding Segmentation

Segment Type	Passing Constrained	
Vertical Class	1	
Minimum Segment Length	0.25	mi
Maximum Segment Length	3.00	mi

Step 2: Determine Demand Flow Rates, Capacity, and d/c Ratio

Demand Volume in Analysis Direction, Vd	615	veh/h
Demand Volume in Opposing Direction, Vo	-	veh/h
Peak Hour Factor, PHF	0.95	
Demand Flow Rate in Analysis Direction, vd	647	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
d/c Ratio	0.38	

Step 3: Determine the Vertical Alignment Classification

Segment Length, L	8630	ft
Segment Percent Grade	0.00	%
Vertical Class	1	

Step 4: Determine the Free-Flow Speed

Posted Speed Limit, Sp	55	mi/h
Base Free-Flow Speed, BFFS	62.7	mi/h
Coeff. Value from Exhibit 15-12, a0	0.00000	
Coeff. Value from Exhibit 15-12, a1	0.00000	
Coeff. Value from Exhibit 15-12, a2	0.00000	
Coeff. Value from Exhibit 15-12, a3	0.00000	
Coeff. Value from Exhibit 15-12, a4	0.00000	

Coeff. Value from Exhibit 15-12, a5	0.00000	
Coeff. for Heavy Vehicle Adjustment, a	0.03330	
Percentage of Heavy Vehicles, %HV	5.00	%
Lane Width, LW	12	ft
Shoulder Width, SW	6	ft
Adjustment for Lane and Shoulder Width, fLS	0.0	mi/h
Access-Point Density, APD	5.0	access points/mi
Adjustment for Access-Point Density, fA	1.3	mi/h
Free-Flow Speed, FFS	61.3	mi/h

Step 5: Estimate the Average Speed

Vertical Class	1	
Free-Flow Speed, FFS	61.3	mi/h
Demand Flow Rate in Analysis Direction, vd	647	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Segment Length, L	1.63	mi
Percentage of Heavy Vehicles	5.00	%

Step 5a: Calculate the Slope Coefficient

Coeff. for Speed-Flow Slope Model, b0	0.05580	
Coeff. for Speed-Flow Slope Model, b1	0.05420	
Coeff. for Speed-Flow Slope Model, b2	0.32780	
Coeff. for b3 Segment Length Coeff. Model, c0	0.10290	
Coeff. for b3 Segment Length Coeff. Model, c1	0.00000	
Coeff. for b3 Segment Length Coeff. Model, c2	0.00000	
Coeff. for b3 Segment Length Coeff. Model, c3	0.00000	
Coeff. for Speed-Flow Slope Model, b3	0.10290	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d0	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d1	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d2	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d3	0.00000	
Coeff. for Speed-Flow Slope Model, b4	0.00000	
Coeff. for Speed-Flow Slope Model, b5	0.00000	
Slope Coefficient, m	3.91039	

Step 5b: Calculate the Slope Coefficient

Coeff. for Speed-Flow Slope Model, f0	0.67576	
Coeff. for Speed-Flow Slope Model, f1	0.00000	
Coeff. for Speed-Flow Slope Model, f2	0.00000	
Coeff. for Speed-Flow Slope Model, f3	0.12060	
Coeff. for Speed-Flow Slope Model, f4	-0.35919	
Coeff. for Speed-Flow Slope Model, f5	0.00000	
Coeff. for Speed-Flow Slope Model, f6	0.00000	
Coeff. for Speed-Flow Slope Model, f7	0.00000	
Coeff. for Speed-Flow Slope Model, f8	0.00000	
Power Coefficient, p	0.41674	

Step 5c: Calculate Average Speed for the Segment

Average Speed, S	58.2	mi/h

Average Speed, with consideration of horizontal curves, S	58.2	mi/h

Step 6: Estimate the Percent Followers

Segment Type	Passing Constrained	
Vertical Class	1	
Free-Flow Speed, FFS	61.3	mi/h
Demand Flow Rate in Analysis Direction, vd	647	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Directional Capacity, cap	1700	veh/h
Segment Length, L	1.63	mi
Percentage of Heavy Vehicles	5.00	%

Step 6a: Calculate Percent Followers at Capacity

Coeff. Value for Equation 15-18 or 15-19, b0	37.68080	
Coeff. Value for Equation 15-18 or 15-19, b1	3.05089	
Coeff. Value for Equation 15-18 or 15-19, b2	-7.90866	
Coeff. Value for Equation 15-18 or 15-19, b3	-0.94321	

Coeff. Value for Equation 15-18 or 15-19, b4	13.64266	
Coeff. Value for Equation 15-18 or 15-19, b5	-0.00050	
Coeff. Value for Equation 15-18 or 15-19, b6	-0.05500	
Coeff. Value for Equation 15-18 or 15-19, b7	7.13760	
Percent Followers at Capacity Flow Rate, PFcap	85.2	%

Step 6b: Calculate Percent Followers at 25% of Capacity

Coeff. Value for Equation 15-20 or 15-21, c0	18.01780	
Coeff. Value for Equation 15-20 or 15-21, c1	10.00000	
Coeff. Value for Equation 15-20 or 15-21, c2	-21.60000	
Coeff. Value for Equation 15-20 or 15-21, c3	-0.97853	
Coeff. Value for Equation 15-20 or 15-21, c4	12.05214	
Coeff. Value for Equation 15-20 or 15-21, c5	-0.00750	
Coeff. Value for Equation 15-20 or 15-21, c6	-0.06700	
Coeff. Value for Equation 15-20 or 15-21, c7	11.60410	
Percent Followers of 25% of Capacity Flow Rate, PF25cap	49.1	%

Step 6c: Calculate the Slope Coefficient

Coeff. Value for Equation 15-22, d1	-0.29764	
Coeff. Value for Equation 15-22, d2	-0.71917	
Slope Coefficient, m	-1.28283	

Step 6d: Calculate the Power Coefficient

Coeff. Value for Equation 15-23, e0	0.81165	
Coeff. Value for Equation 15-23, e1	0.37920	
Coeff. Value for Equation 15-23, e2	-0.49524	
Coeff. Value for Equation 15-23, e3	-2.11289	
Coeff. Value for Equation 15-23, e4	2.41146	
Power Coefficient, p	0.75065	

Step 6e: Calculate Percent Followers for the Segment

Percent Followers, PF	60.4	%

Step 7: Estimate Additional Performance Measure for Passing Lane

Step 8: Estimate Follower Density

Percent Followers, PF	60.4	%
Demand Flow Rate in Analysis Direction, vd	647	veh/h
Average Speed, with consideration of horizontal curves, S	58.2	mi/h
Follower Density, FD	6.7	followers/mi/ln

Step 9: Determine Potential Adjustment to Follower Density

Effective Length of Upstream Passing Lane	1.00	mi
Distance Downstream from Start of Passing Lane Segment	1.63	mi
PF for Upstream Passing Lane Seg., PF	0.0	%
PF for Analysis Segment, PF	60.4	%
Length of Passing Lane Segment, PassLaneLength	0.00	mi
Flow Rate Entering for Analysis Segment	647	veh/h
% Improve to PF, %ImprovePF	0.0	%
% Improve to the Average Speed, %ImproveS	0.0	%
Adjusted Average Speed for Analysis Segment, S	58.2	mi/h
Adjusted Follower Density, FDadj	6.7	followers/mi/ln

Step 10: Determine LOS

Posted Speed Limit, Sp	55	mi/h
Follower Density, FD	6.7	followers/mi/ln
Level of Service, LOS	C

Facility Level of Service, LOS	D	

Segment 1Vasco Road to Camino Diablo

LOS and Performance Measures

Coded Segment Type	Passing Constrained	
Analyzed Segment Type	Passing Constrained	
Actual Segment Length, L	3245	ft
Segment Length Used in Calculation	0.61	mi
Demand Flow Rate in Analysis Direction, vd	741	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Capacity, cap	1700	veh/h
Free-Flow Speed, FFS	50.5	mi/h
Speed, S	47.7	mi/h
Percent Followers, PF	67.3	%
Followers Density, FD	10.4	followers/mi/ln
Level of Service, LOS	D	

Step 1: Identify Facility Study Boundaries and Corresponding Segmentation

Segment Type	Passing Constrained	
Vertical Class	1	
Minimum Segment Length	0.25	mi
Maximum Segment Length	3.00	mi

Step 2: Determine Demand Flow Rates, Capacity, and d/c Ratio

Demand Volume in Analysis Direction, Vd	674	veh/h
Demand Volume in Opposing Direction, Vo	-	veh/h
Peak Hour Factor, PHF	0.91	
Demand Flow Rate in Analysis Direction, vd	741	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
d/c Ratio	0.44	

Step 3: Determine the Vertical Alignment Classification

Segment Length, L	3245	ft
Segment Percent Grade	0.00	%
Vertical Class	1	

Step 4: Determine the Free-Flow Speed

Posted Speed Limit, Sp	45	mi/h
Base Free-Flow Speed, BFFS	51.3	mi/h
Coeff. Value from Exhibit 15-12, a0	0.00000	
Coeff. Value from Exhibit 15-12, a1	0.00000	
Coeff. Value from Exhibit 15-12, a2	0.00000	
Coeff. Value from Exhibit 15-12, a3	0.00000	
Coeff. Value from Exhibit 15-12, a4	0.00000	

Coeff. Value from Exhibit 15-12, a5	0.00000	
Coeff. for Heavy Vehicle Adjustment, a	0.03330	
Percentage of Heavy Vehicles, %HV	3.00	%
Lane Width, LW	12	ft
Shoulder Width, SW	6	ft
Adjustment for Lane and Shoulder Width, fLS	0.0	mi/h
Access-Point Density, APD	3.0	access points/mi
Adjustment for Access-Point Density, fA	0.8	mi/h
Free-Flow Speed, FFS	50.5	mi/h

Step 5: Estimate the Average Speed

Vertical Class	1	
Free-Flow Speed, FFS	50.5	mi/h
Demand Flow Rate in Analysis Direction, vd	741	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Segment Length, L	0.61	mi
Percentage of Heavy Vehicles	3.00	%

Step 5a: Calculate the Slope Coefficient

Coeff. for Speed-Flow Slope Model, b0	0.05580	
Coeff. for Speed-Flow Slope Model, b1	0.05420	
Coeff. for Speed-Flow Slope Model, b2	0.32780	
Coeff. for b3 Segment Length Coeff. Model, c0	0.10290	
Coeff. for b3 Segment Length Coeff. Model, c1	0.00000	
Coeff. for b3 Segment Length Coeff. Model, c2	0.00000	
Coeff. for b3 Segment Length Coeff. Model, c3	0.00000	
Coeff. for Speed-Flow Slope Model, b3	0.10290	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d0	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d1	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d2	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d3	0.00000	
Coeff. for Speed-Flow Slope Model, b4	0.00000	
Coeff. for Speed-Flow Slope Model, b5	0.00000	
Slope Coefficient, m	3.27234	

Step 5b: Calculate the Slope Coefficient

Coeff. for Speed-Flow Slope Model, f0	0.67576	
Coeff. for Speed-Flow Slope Model, f1	0.00000	
Coeff. for Speed-Flow Slope Model, f2	0.00000	
Coeff. for Speed-Flow Slope Model, f3	0.12060	
Coeff. for Speed-Flow Slope Model, f4	-0.35919	
Coeff. for Speed-Flow Slope Model, f5	0.00000	
Coeff. for Speed-Flow Slope Model, f6	0.00000	
Coeff. for Speed-Flow Slope Model, f7	0.00000	
Coeff. for Speed-Flow Slope Model, f8	0.00000	
Power Coefficient, p	0.41674	

Step 5c: Calculate Average Speed for the Segment

Average Speed, S	47.7	mi/h

Average Speed, with consideration of horizontal curves, S	47.7	mi/h

Step 6: Estimate the Percent Followers

Segment Type	Passing Constrained	
Vertical Class	1	
Free-Flow Speed, FFS	50.5	mi/h
Demand Flow Rate in Analysis Direction, vd	741	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Directional Capacity, cap	1700	veh/h
Segment Length, L	0.61	mi
Percentage of Heavy Vehicles	3.00	%

Step 6a: Calculate Percent Followers at Capacity

Coeff. Value for Equation 15-18 or 15-19, b0	37.68080	
Coeff. Value for Equation 15-18 or 15-19, b1	3.05089	
Coeff. Value for Equation 15-18 or 15-19, b2	-7.90866	
Coeff. Value for Equation 15-18 or 15-19, b3	-0.94321	

Coeff. Value for Equation 15-18 or 15-19, b4	13.64266	
Coeff. Value for Equation 15-18 or 15-19, b5	-0.00050	
Coeff. Value for Equation 15-18 or 15-19, b6	-0.05500	
Coeff. Value for Equation 15-18 or 15-19, b7	7.13760	
Percent Followers at Capacity Flow Rate, PFcap	87.3	%

Step 6b: Calculate Percent Followers at 25% of Capacity

Coeff. Value for Equation 15-20 or 15-21, c0	18.01780	
Coeff. Value for Equation 15-20 or 15-21, c1	10.00000	
Coeff. Value for Equation 15-20 or 15-21, c2	-21.60000	
Coeff. Value for Equation 15-20 or 15-21, c3	-0.97853	
Coeff. Value for Equation 15-20 or 15-21, c4	12.05214	
Coeff. Value for Equation 15-20 or 15-21, c5	-0.00750	
Coeff. Value for Equation 15-20 or 15-21, c6	-0.06700	
Coeff. Value for Equation 15-20 or 15-21, c7	11.60410	
Percent Followers of 25% of Capacity Flow Rate, PF25cap	52.6	%

Step 6c: Calculate the Slope Coefficient

Coeff. Value for Equation 15-22, d1	-0.29764	
Coeff. Value for Equation 15-22, d2	-0.71917	
Slope Coefficient, m	-1.39396	

Step 6d: Calculate the Power Coefficient

Coeff. Value for Equation 15-23, e0	0.81165	
Coeff. Value for Equation 15-23, e1	0.37920	
Coeff. Value for Equation 15-23, e2	-0.49524	
Coeff. Value for Equation 15-23, e3	-2.11289	
Coeff. Value for Equation 15-23, e4	2.41146	
Power Coefficient, p	0.73198	

Step 6e: Calculate Percent Followers for the Segment

Percent Followers, PF	67.3	%

Step 7: Estimate Additional Performance Measure for Passing Lane

Step 8: Estimate Follower Density

Percent Followers, PF	67.3	%
Demand Flow Rate in Analysis Direction, vd	741	veh/h
Average Speed, with consideration of horizontal curves, S	47.7	mi/h
Follower Density, FD	10.4	followers/mi/ln

Step 9: Determine Potential Adjustment to Follower Density

Effective Length of Upstream Passing Lane	1.00	mi
Distance Downstream from Start of Passing Lane Segment	0.61	mi
PF for Upstream Passing Lane Seg., PF	0.0	%
PF for Analysis Segment, PF	67.3	%
Length of Passing Lane Segment, PassLaneLength	0.00	mi
Flow Rate Entering for Analysis Segment	741	veh/h
% Improve to PF, %ImprovePF	0.0	%
% Improve to the Average Speed, %ImproveS	0.0	%
Adjusted Average Speed for Analysis Segment, S	47.7	mi/h
Adjusted Follower Density, FDadj	10.4	followers/mi/ln

Step 10: Determine LOS

Posted Speed Limit, Sp	45	mi/h
Follower Density, FD	10.4	followers/mi/ln
Level of Service, LOS	D

Coeff. Value for Equation 15-18 or 15-19, b4	13.64266	
Coeff. Value for Equation 15-18 or 15-19, b5	-0.00050	
Coeff. Value for Equation 15-18 or 15-19, b6	-0.05500	
Coeff. Value for Equation 15-18 or 15-19, b7	7.13760	
Percent Followers at Capacity Flow Rate, PFcap	86.4	%

Step 6b: Calculate Percent Followers at 25% of Capacity

Coeff. Value for Equation 15-20 or 15-21, c0	18.01780	
Coeff. Value for Equation 15-20 or 15-21, c1	10.00000	
Coeff. Value for Equation 15-20 or 15-21, c2	-21.60000	
Coeff. Value for Equation 15-20 or 15-21, c3	-0.97853	
Coeff. Value for Equation 15-20 or 15-21, c4	12.05214	
Coeff. Value for Equation 15-20 or 15-21, c5	-0.00750	
Coeff. Value for Equation 15-20 or 15-21, c6	-0.06700	
Coeff. Value for Equation 15-20 or 15-21, c7	11.60410	
Percent Followers of 25% of Capacity Flow Rate, PF25cap	54.2	%

Step 6c: Calculate the Slope Coefficient

Coeff. Value for Equation 15-22, d1	-0.29764	
Coeff. Value for Equation 15-22, d2	-0.71917	
Slope Coefficient, m	-1.39163	

Step 6d: Calculate the Power Coefficient

Coeff. Value for Equation 15-23, e0	0.81165	
Coeff. Value for Equation 15-23, e1	0.37920	
Coeff. Value for Equation 15-23, e2	-0.49524	
Coeff. Value for Equation 15-23, e3	-2.11289	
Coeff. Value for Equation 15-23, e4	2.41146	
Power Coefficient, p	0.67543	

Step 6e: Calculate Percent Followers for the Segment

Percent Followers, PF	69.5	%

Step 7: Estimate Additional Performance Measure for Passing Lane

Step 8: Estimate Follower Density

Percent Followers, PF	69.5	%
Demand Flow Rate in Analysis Direction, vd	791	veh/h
Average Speed, with consideration of horizontal curves, S	35.7	mi/h
Follower Density, FD	15.4	followers/mi/ln

Step 9: Determine Potential Adjustment to Follower Density

Effective Length of Upstream Passing Lane	1.00	mi
Distance Downstream from Start of Passing Lane Segment	1.64	mi
PF for Upstream Passing Lane Seg., PF	0.0	%
PF for Analysis Segment, PF	69.5	%
Length of Passing Lane Segment, PassLaneLength	0.00	mi
Flow Rate Entering for Analysis Segment	791	veh/h
% Improve to PF, %ImprovePF	0.0	%
% Improve to the Average Speed, %ImproveS	0.0	%
Adjusted Average Speed for Analysis Segment, S	35.7	mi/h
Adjusted Follower Density, FDadj	15.4	followers/mi/ln

Step 10: Determine LOS

Posted Speed Limit, Sp	35	mi/h
Follower Density, FD	15.4	followers/mi/ln
Level of Service, LOS	E	

Segment 2Camino Diablo Road to San Joaquin County Line

LOS and Performance Measures

Coded Segment Type	Passing Constrained	
Analyzed Segment Type	Passing Constrained	
Actual Segment Length, L	26662	ft
Segment Length Used in Calculation	3.00	mi
Demand Flow Rate in Analysis Direction, vd	944	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Capacity, cap	1700	veh/h
Free-Flow Speed, FFS	62.2	mi/h
Speed, S	58.5	mi/h
Percent Followers, PF	72.6	%
Followers Density, FD	11.7	followers/mi/ln
Level of Service, LOS	D	

Step 1: Identify Facility Study Boundaries and Corresponding Segmentation

Segment Type	Passing Constrained	
Vertical Class	1	
Minimum Segment Length	0.25	mi
Maximum Segment Length	3.00	mi

Step 2: Determine Demand Flow Rates, Capacity, and d/c Ratio

Demand Volume in Analysis Direction, Vd	859	veh/h
Demand Volume in Opposing Direction, Vo	-	veh/h
Peak Hour Factor, PHF	0.91	
Demand Flow Rate in Analysis Direction, vd	944	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
d/c Ratio	0.56	

Step 3: Determine the Vertical Alignment Classification

Segment Length, L	26662	ft
Segment Percent Grade	0.00	%
Vertical Class	1	

Step 4: Determine the Free-Flow Speed

Posted Speed Limit, Sp	55	mi/h
Base Free-Flow Speed, BFFS	62.7	mi/h
Coeff. Value from Exhibit 15-12, a0	0.00000	
Coeff. Value from Exhibit 15-12, a1	0.00000	
Coeff. Value from Exhibit 15-12, a2	0.00000	
Coeff. Value from Exhibit 15-12, a3	0.00000	
Coeff. Value from Exhibit 15-12, a4	0.00000	
Coeff. Value from Exhibit 15-12, a5	0.00000	
Coeff. for Heavy Vehicle Adjustment, a	0.03330	
Percentage of Heavy Vehicles, %HV	8.00	%
Lane Width, LW	12	ft
Shoulder Width, SW	6	ft
Adjustment for Lane and Shoulder Width, fLS	0.0	mi/h
Access-Point Density, APD	1.0	access points/mi
Adjustment for Access-Point Density, fA	0.3	mi/h
Free-Flow Speed, FFS	62.2	mi/h

Step 5: Estimate the Average Speed

Vertical Class	1	
Free-Flow Speed, FFS	62.2	mi/h
Demand Flow Rate in Analysis Direction, vd	944	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Segment Length, L	3.00	mi
Percentage of Heavy Vehicles	8.00	%

Step 5a: Calculate the Slope Coefficient

Coeff. for Speed-Flow Slope Model, b0	0.05580	
Coeff. for Speed-Flow Slope Model, b1	0.05420	
Coeff. for Speed-Flow Slope Model, b2	0.32780	
Coeff. for b3 Segment Length Coeff. Model, c0	0.10290	
Coeff. for b3 Segment Length Coeff. Model, c1	0.00000	

Coeff. for b3 Segment Length Coeff. Model, c2	0.00000	
Coeff. for b3 Segment Length Coeff. Model, c3	0.00000	
Coeff. for Speed-Flow Slope Model, b3	0.10290	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d0	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d1	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d2	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d3	0.00000	
Coeff. for Speed-Flow Slope Model, b4	0.00000	
Coeff. for Speed-Flow Slope Model, b5	0.00000	
Slope Coefficient, m	4.00585	
Step 5b: Calculate the Slope Coefficient		
Coeff. for Speed-Flow Slope Model, f0	0.67576	
Coeff. for Speed-Flow Slope Model, f1	0.00000	
Coeff. for Speed-Flow Slope Model, f2	0.00000	
Coeff. for Speed-Flow Slope Model, f3	0.12060	
Coeff. for Speed-Flow Slope Model, f4	-0.35919	
Coeff. for Speed-Flow Slope Model, f5	0.00000	
Coeff. for Speed-Flow Slope Model, f6	0.00000	
Coeff. for Speed-Flow Slope Model, f7	0.00000	
Coeff. for Speed-Flow Slope Model, f8	0.00000	
Power Coefficient, p	0.41674	
Step 5c: Calculate Average Speed for the Segment		
Average Speed, S	58.5	mi/h
Average Speed, with consideration of horizontal curves, S	58.5	mi/h

Step 6: Estimate the Percent Followers

Segment Type	Passing Constrained	
Vertical Class	1	
Free-Flow Speed, FFS	62.2	mi/h
Demand Flow Rate in Analysis Direction, vd	944	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Directional Capacity, cap	1700	veh/h
Segment Length, L	3.00	mi
Percentage of Heavy Vehicles	8.00	%
Step 6a: Calculate Percent Followers at Capacity		
Coeff. Value for Equation 15-18 or 15-19, b0	37.68080	
Coeff. Value for Equation 15-18 or 15-19, b1	3.05089	
Coeff. Value for Equation 15-18 or 15-19, b2	-7.90866	
Coeff. Value for Equation 15-18 or 15-19, b3	-0.94321	
Coeff. Value for Equation 15-18 or 15-19, b4	13.64266	
Coeff. Value for Equation 15-18 or 15-19, b5	-0.00050	
Coeff. Value for Equation 15-18 or 15-19, b6	-0.05500	
Coeff. Value for Equation 15-18 or 15-19, b7	7.13760	
Percent Followers at Capacity Flow Rate, PFcap	85.7	%
Step 6b: Calculate Percent Followers at 25% of Capacity		
Coeff. Value for Equation 15-20 or 15-21, c0	18.01780	
Coeff. Value for Equation 15-20 or 15-21, c1	10.00000	
Coeff. Value for Equation 15-20 or 15-21, c2	-21.60000	
Coeff. Value for Equation 15-20 or 15-21, c3	-0.97853	
Coeff. Value for Equation 15-20 or 15-21, c4	12.05214	
Coeff. Value for Equation 15-20 or 15-21, c5	-0.00750	
Coeff. Value for Equation 15-20 or 15-21, c6	-0.06700	
Coeff. Value for Equation 15-20 or 15-21, c7	11.60410	
Percent Followers of 25% of Capacity Flow Rate, PF25cap	52.7	%
Step 6c: Calculate the Slope Coefficient		
Coeff. Value for Equation 15-22, d1	-0.29764	
Coeff. Value for Equation 15-22, d2	-0.71917	
Slope Coefficient, m	-1.34624	
Step 6d: Calculate the Power Coefficient		
Coeff. Value for Equation 15-23, e0	0.81165	
Coeff. Value for Equation 15-23, e1	0.37920	

Coeff. Value for Equation 15-23, e2	-0.49524	
Coeff. Value for Equation 15-23, e3	-2.11289	
Coeff. Value for Equation 15-23, e4	2.41146	
Power Coefficient, p	0.68736	

Step 6e: Calculate Percent Followers for the Segment

Percent Followers, PF	72.6	%

Step 7: Estimate Additional Performance Measure for Passing Lane

Step 8: Estimate Follower Density

Percent Followers, PF	72.6	%
Demand Flow Rate in Analysis Direction, vd	944	veh/h
Average Speed, with consideration of horizontal curves, S	58.5	mi/h
Follower Density, FD	11.7	followers/mi/ln

Step 9: Determine Potential Adjustment to Follower Density

Effective Length of Upstream Passing Lane	1.00	mi
Distance Downstream from Start of Passing Lane Segment	6.69	mi
PF for Upstream Passing Lane Seg., PF	0.0	%
PF for Analysis Segment, PF	72.6	%
Length of Passing Lane Segment, PassLaneLength	0.00	mi
Flow Rate Entering for Analysis Segment	944	veh/h
% Improve to PF, %ImprovePF	0.0	%
% Improve to the Average Speed, %ImproveS	0.0	%
Adjusted Average Speed for Analysis Segment, S	58.5	mi/h
Adjusted Follower Density, FDadj	11.7	followers/mi/ln

Step 10: Determine LOS

Posted Speed Limit, Sp	55	mi/h
Follower Density, FD	11.7	followers/mi/ln
Level of Service, LOS	D

Coeff. for Speed-Flow Slope Model, f7	0.00000	
Coeff. for Speed-Flow Slope Model, f8	0.00000	
Power Coefficient, p	0.41674	

Step 5c: Calculate Average Speed for the Segment

Average Speed, S	52.6	mi/h

Average Speed, with consideration of horizontal curves, S	52.6	mi/h

Step 6: Estimate the Percent Followers

Segment Type	Passing Constrained	
Vertical Class	1	
Free-Flow Speed, FFS	55.7	mi/h
Demand Flow Rate in Analysis Direction, vd	780	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Directional Capacity, cap	1700	veh/h
Segment Length, L	1.21	mi
Percentage of Heavy Vehicles	3.00	%

Step 6a: Calculate Percent Followers at Capacity

Coeff. Value for Equation 15-18 or 15-19, b0	37.68080	
Coeff. Value for Equation 15-18 or 15-19, b1	3.05089	
Coeff. Value for Equation 15-18 or 15-19, b2	-7.90866	
Coeff. Value for Equation 15-18 or 15-19, b3	-0.94321	

Coeff. Value for Equation 15-18 or 15-19, b4	13.64266	
Coeff. Value for Equation 15-18 or 15-19, b5	-0.00050	
Coeff. Value for Equation 15-18 or 15-19, b6	-0.05500	
Coeff. Value for Equation 15-18 or 15-19, b7	7.13760	
Percent Followers at Capacity Flow Rate, PFcap	86.1	%

Step 6b: Calculate Percent Followers at 25% of Capacity

Coeff. Value for Equation 15-20 or 15-21, c0	18.01780	
Coeff. Value for Equation 15-20 or 15-21, c1	10.00000	
Coeff. Value for Equation 15-20 or 15-21, c2	-21.60000	
Coeff. Value for Equation 15-20 or 15-21, c3	-0.97853	
Coeff. Value for Equation 15-20 or 15-21, c4	12.05214	
Coeff. Value for Equation 15-20 or 15-21, c5	-0.00750	
Coeff. Value for Equation 15-20 or 15-21, c6	-0.06700	
Coeff. Value for Equation 15-20 or 15-21, c7	11.60410	
Percent Followers of 25% of Capacity Flow Rate, PF25cap	50.4	%

Step 6c: Calculate the Slope Coefficient

Coeff. Value for Equation 15-22, d1	-0.29764	
Coeff. Value for Equation 15-22, d2	-0.71917	
Slope Coefficient, m	-1.32612	

Step 6d: Calculate the Power Coefficient

Coeff. Value for Equation 15-23, e0	0.81165	
Coeff. Value for Equation 15-23, e1	0.37920	
Coeff. Value for Equation 15-23, e2	-0.49524	
Coeff. Value for Equation 15-23, e3	-2.11289	
Coeff. Value for Equation 15-23, e4	2.41146	
Power Coefficient, p	0.74659	

Step 6e: Calculate Percent Followers for the Segment

Percent Followers, PF	66.8	%

Step 7: Estimate Additional Performance Measure for Passing Lane

Step 8: Estimate Follower Density

Percent Followers, PF	66.8	%
Demand Flow Rate in Analysis Direction, vd	780	veh/h
Average Speed, with consideration of horizontal curves, S	52.6	mi/h
Follower Density, FD	9.9	followers/mi/ln

Step 9: Determine Potential Adjustment to Follower Density

Effective Length of Upstream Passing Lane	1.00	mi
Distance Downstream from Start of Passing Lane Segment	1.21	mi
PF for Upstream Passing Lane Seg., PF	0.0	%
PF for Analysis Segment, PF	66.8	%

Coeff. for Speed-Flow Slope Model, f7	0.00000	
Coeff. for Speed-Flow Slope Model, f8	0.00000	
Power Coefficient, p	0.41674	
Step 5c: Calculate Average Speed for the Segment		
Average Speed, S	36.8	mi/h
Average Speed, with consideration of horizontal curves, S	36.8	mi/h

Step 6: Estimate the Percent Followers

Segment Type	Passing Constrained	
Vertical Class	1	
Free-Flow Speed, FFS	38.6	mi/h
Demand Flow Rate in Analysis Direction, vd	480	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Directional Capacity, cap	1700	veh/h
Segment Length, L	0.43	mi
Percentage of Heavy Vehicles	3.00	%
Step 6a: Calculate Percent Followers at Capacity		
Coeff. Value for Equation 15-18 or 15-19, b0	37.68080	
Coeff. Value for Equation 15-18 or 15-19, b1	3.05089	
Coeff. Value for Equation 15-18 or 15-19, b2	-7.90866	
Coeff. Value for Equation 15-18 or 15-19, b3	-0.94321	
Coeff. Value for Equation 15-18 or 15-19, b4	13.64266	
Coeff. Value for Equation 15-18 or 15-19, b5	-0.00050	
Coeff. Value for Equation 15-18 or 15-19, b6	-0.05500	
Coeff. Value for Equation 15-18 or 15-19, b7	7.13760	
Percent Followers at Capacity Flow Rate, PFcap	87.7	%
Step 6b: Calculate Percent Followers at 25% of Capacity		
Coeff. Value for Equation 15-20 or 15-21, c0	18.01780	
Coeff. Value for Equation 15-20 or 15-21, c1	10.00000	
Coeff. Value for Equation 15-20 or 15-21, c2	-21.60000	
Coeff. Value for Equation 15-20 or 15-21, c3	-0.97853	
Coeff. Value for Equation 15-20 or 15-21, c4	12.05214	
Coeff. Value for Equation 15-20 or 15-21, c5	-0.00750	
Coeff. Value for Equation 15-20 or 15-21, c6	-0.06700	
Coeff. Value for Equation 15-20 or 15-21, c7	11.60410	
Percent Followers of 25% of Capacity Flow Rate, PF25cap	55.6	%
Step 6c: Calculate the Slope Coefficient		
Coeff. Value for Equation 15-22, d1	-0.29764	
Coeff. Value for Equation 15-22, d2	-0.71917	
Slope Coefficient, m	-1.45583	
Step 6d: Calculate the Power Coefficient		
Coeff. Value for Equation 15-23, e0	0.81165	
Coeff. Value for Equation 15-23, e1	0.37920	

Coeff. Value for Equation 15-23, e2	-0.49524	
Coeff. Value for Equation 15-23, e3	-2.11289	
Coeff. Value for Equation 15-23, e4	2.41146	
Power Coefficient, p	0.68320	

Step 6e: Calculate Percent Followers for the Segment

Percent Followers, PF	58.6	%

Step 7: Estimate Additional Performance Measure for Passing Lane

Step 8: Estimate Follower Density

Percent Followers, PF	58.6	%
Demand Flow Rate in Analysis Direction, vd	480	veh/h
Average Speed, with consideration of horizontal curves, S	36.8	mi/h
Follower Density, FD	7.7	followers/mi/ln

Step 9: Determine Potential Adjustment to Follower Density

Effective Length of Upstream Passing Lane	1.00	mi
Distance Downstream from Start of Passing Lane Segment	1.63	mi
PF for Upstream Passing Lane Seg., PF	0.0	%
PF for Analysis Segment, PF	58.6	%
Length of Passing Lane Segment, PassLaneLength	0.00	mi
Flow Rate Entering for Analysis Segment	480	veh/h
% Improve to PF, %ImprovePF	0.0	%
% Improve to the Average Speed, %ImproveS	0.0	%
Adjusted Average Speed for Analysis Segment, S	36.8	mi/h
Adjusted Follower Density, FDadj	7.7	followers/mi/ln

Step 10: Determine LOS

Posted Speed Limit, Sp	35	mi/h
Follower Density, FD	7.7	followers/mi/ln
Level of Service, LOS	C

Coeff. Value from Exhibit 15-12, a3	0.00000	
Coeff. Value from Exhibit 15-12, a4	0.00000	

Coeff. Value from Exhibit 15-12, a5	0.00000	
Coeff. for Heavy Vehicle Adjustment, a	0.03330	
Percentage of Heavy Vehicles, %HV	2.00	%
Lane Width, LW	12	ft
Shoulder Width, SW	6	ft
Adjustment for Lane and Shoulder Width, fLS	0.0	mi/h
Access-Point Density, APD	7.0	access points/mi
Adjustment for Access-Point Density, fA	1.8	mi/h
Free-Flow Speed, FFS	38.1	mi/h

Step 5: Estimate the Average Speed

Vertical Class	1	
Free-Flow Speed, FFS	38.1	mi/h
Demand Flow Rate in Analysis Direction, vd	1186	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Segment Length, L	1.64	mi
Percentage of Heavy Vehicles	2.00	%

Step 5a: Calculate the Slope Coefficient

Coeff. for Speed-Flow Slope Model, b0	0.05580	
Coeff. for Speed-Flow Slope Model, b1	0.05420	
Coeff. for Speed-Flow Slope Model, b2	0.32780	
Coeff. for b3 Segment Length Coeff. Model, c0	0.10290	
Coeff. for b3 Segment Length Coeff. Model, c1	0.00000	
Coeff. for b3 Segment Length Coeff. Model, c2	0.00000	
Coeff. for b3 Segment Length Coeff. Model, c3	0.00000	
Coeff. for Speed-Flow Slope Model, b3	0.10290	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d0	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d1	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d2	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d3	0.00000	
Coeff. for Speed-Flow Slope Model, b4	0.00000	
Coeff. for Speed-Flow Slope Model, b5	0.00000	
Slope Coefficient, m	2.65323	

Step 5b: Calculate the Slope Coefficient

Coeff. for Speed-Flow Slope Model, f0	0.67576	
Coeff. for Speed-Flow Slope Model, f1	0.00000	
Coeff. for Speed-Flow Slope Model, f2	0.00000	
Coeff. for Speed-Flow Slope Model, f3	0.12060	
Coeff. for Speed-Flow Slope Model, f4	-0.35919	
Coeff. for Speed-Flow Slope Model, f5	0.00000	
Coeff. for Speed-Flow Slope Model, f6	0.00000	
Coeff. for Speed-Flow Slope Model, f7	0.00000	
Coeff. for Speed-Flow Slope Model, f8	0.00000	
Power Coefficient, p	0.41674	

Step 5c: Calculate Average Speed for the Segment

Average Speed, S	35.3	mi/h

Average Speed, with consideration of horizontal curves, S	35.3	mi/h

Step 6: Estimate the Percent Followers

Segment Type	Passing Constrained	
Vertical Class	1	
Free-Flow Speed, FFS	38.1	mi/h
Demand Flow Rate in Analysis Direction, vd	1186	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Directional Capacity, cap	1700	veh/h
Segment Length, L	1.64	mi
Percentage of Heavy Vehicles	2.00	%

Step 6a: Calculate Percent Followers at Capacity

Coeff. Value for Equation 15-18 or 15-19, b0	37.68080	
Coeff. Value for Equation 15-18 or 15-19, b1	3.05089	
Coeff. Value for Equation 15-18 or 15-19, b2	-7.90866	
Coeff. Value for Equation 15-18 or 15-19, b3	-0.94321	

Coeff. Value for Equation 15-18 or 15-19, b4	13.64266	
Coeff. Value for Equation 15-18 or 15-19, b5	-0.00050	
Coeff. Value for Equation 15-18 or 15-19, b6	-0.05500	
Coeff. Value for Equation 15-18 or 15-19, b7	7.13760	
Percent Followers at Capacity Flow Rate, PFcap	86.4	%

Step 6b: Calculate Percent Followers at 25% of Capacity

Coeff. Value for Equation 15-20 or 15-21, c0	18.01780	
Coeff. Value for Equation 15-20 or 15-21, c1	10.00000	
Coeff. Value for Equation 15-20 or 15-21, c2	-21.60000	
Coeff. Value for Equation 15-20 or 15-21, c3	-0.97853	
Coeff. Value for Equation 15-20 or 15-21, c4	12.05214	
Coeff. Value for Equation 15-20 or 15-21, c5	-0.00750	
Coeff. Value for Equation 15-20 or 15-21, c6	-0.06700	
Coeff. Value for Equation 15-20 or 15-21, c7	11.60410	
Percent Followers of 25% of Capacity Flow Rate, PF25cap	54.2	%

Step 6c: Calculate the Slope Coefficient

Coeff. Value for Equation 15-22, d1	-0.29764	
Coeff. Value for Equation 15-22, d2	-0.71917	
Slope Coefficient, m	-1.39228	

Step 6d: Calculate the Power Coefficient

Coeff. Value for Equation 15-23, e0	0.81165	
Coeff. Value for Equation 15-23, e1	0.37920	
Coeff. Value for Equation 15-23, e2	-0.49524	
Coeff. Value for Equation 15-23, e3	-2.11289	
Coeff. Value for Equation 15-23, e4	2.41146	
Power Coefficient, p	0.67543	

Step 6e: Calculate Percent Followers for the Segment

Percent Followers, PF	79.0	%

Step 7: Estimate Additional Performance Measure for Passing Lane

Step 8: Estimate Follower Density

Percent Followers, PF	79.0	%
Demand Flow Rate in Analysis Direction, vd	1186	veh/h
Average Speed, with consideration of horizontal curves, S	35.3	mi/h
Follower Density, FD	26.5	followers/mi/ln

Step 9: Determine Potential Adjustment to Follower Density

Effective Length of Upstream Passing Lane	1.00	mi
Distance Downstream from Start of Passing Lane Segment	1.64	mi
PF for Upstream Passing Lane Seg., PF	0.0	%
PF for Analysis Segment, PF	79.0	%
Length of Passing Lane Segment, PassLaneLength	0.00	mi
Flow Rate Entering for Analysis Segment	1186	veh/h
% Improve to PF, %ImprovePF	0.0	%
% Improve to the Average Speed, %ImproveS	0.0	%
Adjusted Average Speed for Analysis Segment, S	35.3	mi/h
Adjusted Follower Density, FDadj	26.5	followers/mi/ln

Step 10: Determine LOS

Posted Speed Limit, Sp	35	mi/h
Follower Density, FD	26.5	followers/mi/ln
Level of Service, LOS	E	

Segment 2Camino Diablo Road to San Joaquin County Line

LOS and Performance Measures

Coded Segment Type	Passing Constrained	
Analyzed Segment Type	Passing Constrained	
Actual Segment Length, L	26662	ft
Segment Length Used in Calculation	3.00	mi
Demand Flow Rate in Analysis Direction, vd	1655	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Capacity, cap	1700	veh/h
Free-Flow Speed, FFS	62.3	mi/h
Speed, S	57.5	mi/h
Percent Followers, PF	85.1	%
Followers Density, FD	24.5	followers/mi/ln
Level of Service, LOS	E	

Step 1: Identify Facility Study Boundaries and Corresponding Segmentation

Segment Type	Passing Constrained	
Vertical Class	1	
Minimum Segment Length	0.25	mi
Maximum Segment Length	3.00	mi

Step 2: Determine Demand Flow Rates, Capacity, and d/c Ratio

Demand Volume in Analysis Direction, Vd	1539	veh/h
Demand Volume in Opposing Direction, Vo	-	veh/h
Peak Hour Factor, PHF	0.93	
Demand Flow Rate in Analysis Direction, vd	1655	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
d/c Ratio	0.97	

Step 3: Determine the Vertical Alignment Classification

Segment Length, L	26662	ft
Segment Percent Grade	0.00	%
Vertical Class	1	

Step 4: Determine the Free-Flow Speed

Posted Speed Limit, Sp	55	mi/h
Base Free-Flow Speed, BFFS	62.7	mi/h
Coeff. Value from Exhibit 15-12, a0	0.00000	
Coeff. Value from Exhibit 15-12, a1	0.00000	
Coeff. Value from Exhibit 15-12, a2	0.00000	
Coeff. Value from Exhibit 15-12, a3	0.00000	
Coeff. Value from Exhibit 15-12, a4	0.00000	
Coeff. Value from Exhibit 15-12, a5	0.00000	
Coeff. for Heavy Vehicle Adjustment, a	0.03330	
Percentage of Heavy Vehicles, %HV	4.00	%
Lane Width, LW	12	ft
Shoulder Width, SW	6	ft
Adjustment for Lane and Shoulder Width, fLS	0.0	mi/h
Access-Point Density, APD	1.0	access points/mi
Adjustment for Access-Point Density, fA	0.3	mi/h
Free-Flow Speed, FFS	62.3	mi/h

Step 5: Estimate the Average Speed

Vertical Class	1	
Free-Flow Speed, FFS	62.3	mi/h
Demand Flow Rate in Analysis Direction, vd	1655	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Segment Length, L	3.00	mi
Percentage of Heavy Vehicles	4.00	%

Step 5a: Calculate the Slope Coefficient

Coeff. for Speed-Flow Slope Model, b0	0.05580	
Coeff. for Speed-Flow Slope Model, b1	0.05420	
Coeff. for Speed-Flow Slope Model, b2	0.32780	
Coeff. for b3 Segment Length Coeff. Model, c0	0.10290	
Coeff. for b3 Segment Length Coeff. Model, c1	0.00000	

Coeff. for b3 Segment Length Coeff. Model, c2	0.00000	
Coeff. for b3 Segment Length Coeff. Model, c3	0.00000	
Coeff. for Speed-Flow Slope Model, b3	0.10290	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d0	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d1	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d2	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d3	0.00000	
Coeff. for Speed-Flow Slope Model, b4	0.00000	
Coeff. for Speed-Flow Slope Model, b5	0.00000	
Slope Coefficient, m	4.01307	

Step 5b: Calculate the Slope Coefficient

Coeff. for Speed-Flow Slope Model, f0	0.67576	
Coeff. for Speed-Flow Slope Model, f1	0.00000	
Coeff. for Speed-Flow Slope Model, f2	0.00000	
Coeff. for Speed-Flow Slope Model, f3	0.12060	
Coeff. for Speed-Flow Slope Model, f4	-0.35919	
Coeff. for Speed-Flow Slope Model, f5	0.00000	
Coeff. for Speed-Flow Slope Model, f6	0.00000	
Coeff. for Speed-Flow Slope Model, f7	0.00000	
Coeff. for Speed-Flow Slope Model, f8	0.00000	
Power Coefficient, p	0.41674	

Step 5c: Calculate Average Speed for the Segment

Average Speed, S	57.5	mi/h
Average Speed, with consideration of horizontal curves, S	57.5	mi/h

Step 6: Estimate the Percent Followers

Segment Type	Passing Constrained	
Vertical Class	1	
Free-Flow Speed, FFS	62.3	mi/h
Demand Flow Rate in Analysis Direction, vd	1655	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Directional Capacity, cap	1700	veh/h
Segment Length, L	3.00	mi
Percentage of Heavy Vehicles	4.00	%

Step 6a: Calculate Percent Followers at Capacity

Coeff. Value for Equation 15-18 or 15-19, b0	37.68080	
Coeff. Value for Equation 15-18 or 15-19, b1	3.05089	
Coeff. Value for Equation 15-18 or 15-19, b2	-7.90866	
Coeff. Value for Equation 15-18 or 15-19, b3	-0.94321	
Coeff. Value for Equation 15-18 or 15-19, b4	13.64266	
Coeff. Value for Equation 15-18 or 15-19, b5	-0.00050	
Coeff. Value for Equation 15-18 or 15-19, b6	-0.05500	
Coeff. Value for Equation 15-18 or 15-19, b7	7.13760	
Percent Followers at Capacity Flow Rate, PFcap	85.7	%

Step 6b: Calculate Percent Followers at 25% of Capacity

Coeff. Value for Equation 15-20 or 15-21, c0	18.01780	
Coeff. Value for Equation 15-20 or 15-21, c1	10.00000	
Coeff. Value for Equation 15-20 or 15-21, c2	-21.60000	
Coeff. Value for Equation 15-20 or 15-21, c3	-0.97853	
Coeff. Value for Equation 15-20 or 15-21, c4	12.05214	
Coeff. Value for Equation 15-20 or 15-21, c5	-0.00750	
Coeff. Value for Equation 15-20 or 15-21, c6	-0.06700	
Coeff. Value for Equation 15-20 or 15-21, c7	11.60410	
Percent Followers of 25% of Capacity Flow Rate, PF25cap	52.7	%

Step 6c: Calculate the Slope Coefficient

Coeff. Value for Equation 15-22, d1	-0.29764	
Coeff. Value for Equation 15-22, d2	-0.71917	
Slope Coefficient, m	-1.34549	

Step 6d: Calculate the Power Coefficient

Coeff. Value for Equation 15-23, e0	0.81165	
Coeff. Value for Equation 15-23, e1	0.37920	

Coeff. Value for Equation 15-23, e2	-0.49524	
Coeff. Value for Equation 15-23, e3	-2.11289	
Coeff. Value for Equation 15-23, e4	2.41146	
Power Coefficient, p	0.68711	

Step 6e: Calculate Percent Followers for the Segment

Percent Followers, PF	85.1	%

Step 7: Estimate Additional Performance Measure for Passing Lane

Step 8: Estimate Follower Density

Percent Followers, PF	85.1	%
Demand Flow Rate in Analysis Direction, vd	1655	veh/h
Average Speed, with consideration of horizontal curves, S	57.5	mi/h
Follower Density, FD	24.5	followers/mi/ln

Step 9: Determine Potential Adjustment to Follower Density

Effective Length of Upstream Passing Lane	1.00	mi
Distance Downstream from Start of Passing Lane Segment	6.69	mi
PF for Upstream Passing Lane Seg., PF	0.0	%
PF for Analysis Segment, PF	85.1	%
Length of Passing Lane Segment, PassLaneLength	0.00	mi
Flow Rate Entering for Analysis Segment	1655	veh/h
% Improve to PF, %ImprovePF	0.0	%
% Improve to the Average Speed, %ImproveS	0.0	%
Adjusted Average Speed for Analysis Segment, S	57.5	mi/h
Adjusted Follower Density, FDadj	24.5	followers/mi/ln

Step 10: Determine LOS

Posted Speed Limit, Sp	55	mi/h
Follower Density, FD	24.5	followers/mi/ln
Level of Service, LOS	E	

TWO-LANE HIGHWAY SEGMENT ANALYSIS

LOS and Performance Measures

Coded Segment Type	Passing Constrained	
Analyzed Segment Type	Passing Constrained	
Actual Segment Length, L	2253	ft
Segment Length Used in Calculation	0.43	mi
Demand Flow Rate in Analysis Direction, vd	781	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Capacity, cap	1700	veh/h
Free-Flow Speed, FFS	38.5	mi/h
Speed, S	36.3	mi/h
Percent Followers, PF	70.8	%
Followers Density, FD	15.2	followers/mi/ln
Level of Service, LOS	E	

Step 1: Identify Facility Study Boundaries and Corresponding Segmentation

Segment Type	Passing Constrained	
Vertical Class	1	
Minimum Segment Length	0.25	mi
Maximum Segment Length	3.00	mi

Step 2: Determine Demand Flow Rates, Capacity, and d/c Ratio

Demand Volume in Analysis Direction, Vd	742	veh/h
Demand Volume in Opposing Direction, Vo	-	veh/h
Peak Hour Factor, PHF	0.95	
Demand Flow Rate in Analysis Direction, vd	781	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
d/c Ratio	0.46	

Step 3: Determine the Vertical Alignment Classification

Segment Length, L	2253	ft
Segment Percent Grade	0.00	%
Vertical Class	1	

Step 4: Determine the Free-Flow Speed

Posted Speed Limit, Sp	35	mi/h
Base Free-Flow Speed, BFFS	39.9	mi/h
Coeff. Value from Exhibit 15-12, a0	0.00000	
Coeff. Value from Exhibit 15-12, a1	0.00000	
Coeff. Value from Exhibit 15-12, a2	0.00000	
Coeff. Value from Exhibit 15-12, a3	0.00000	
Coeff. Value from Exhibit 15-12, a4	0.00000	
Coeff. Value from Exhibit 15-12, a5	0.00000	
Coeff. for Heavy Vehicle Adjustment, a	0.03330	
Percentage of Heavy Vehicles, %HV	5.00	%
Lane Width, LW	12	ft
Shoulder Width, SW	6	ft
Adjustment for Lane and Shoulder Width, fLS	0.0	mi/h
Access-Point Density, APD	5.0	access points/mi
Adjustment for Access-Point Density, fA	1.3	mi/h
Free-Flow Speed, FFS	38.5	mi/h

Step 5: Estimate the Average Speed

Vertical Class	1	
Free-Flow Speed, FFS	38.5	mi/h
Demand Flow Rate in Analysis Direction, vd	781	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Segment Length, L	0.43	mi
Percentage of Heavy Vehicles	5.00	%

Step 5a: Calculate the Slope Coefficient

Coeff. for Speed-Flow Slope Model, b0	0.05580	
Coeff. for Speed-Flow Slope Model, b1	0.05420	
Coeff. for Speed-Flow Slope Model, b2	0.32780	
Coeff. for b3 Segment Length Coeff. Model, c0	0.10290	
Coeff. for b3 Segment Length Coeff. Model, c1	0.00000	

Coeff. for b3 Segment Length Coeff. Model, c2	0.00000	
Coeff. for b3 Segment Length Coeff. Model, c3	0.00000	
Coeff. for Speed-Flow Slope Model, b3	0.10290	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d0	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d1	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d2	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d3	0.00000	
Coeff. for Speed-Flow Slope Model, b4	0.00000	
Coeff. for Speed-Flow Slope Model, b5	0.00000	
Slope Coefficient, m	2.61029	

Step 5b: Calculate the Slope Coefficient

Coeff. for Speed-Flow Slope Model, f0	0.67576	
Coeff. for Speed-Flow Slope Model, f1	0.00000	
Coeff. for Speed-Flow Slope Model, f2	0.00000	
Coeff. for Speed-Flow Slope Model, f3	0.12060	
Coeff. for Speed-Flow Slope Model, f4	-0.35919	
Coeff. for Speed-Flow Slope Model, f5	0.00000	
Coeff. for Speed-Flow Slope Model, f6	0.00000	
Coeff. for Speed-Flow Slope Model, f7	0.00000	
Coeff. for Speed-Flow Slope Model, f8	0.00000	
Power Coefficient, p	0.41674	

Step 5c: Calculate Average Speed for the Segment

Average Speed, S	36.3	mi/h
Average Speed, with consideration of horizontal curves, S	36.3	mi/h

Step 6: Estimate the Percent Followers

Segment Type	Passing Constrained	
Vertical Class	1	
Free-Flow Speed, FFS	38.5	mi/h
Demand Flow Rate in Analysis Direction, vd	781	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Directional Capacity, cap	1700	veh/h
Segment Length, L	0.43	mi
Percentage of Heavy Vehicles	5.00	%

Step 6a: Calculate Percent Followers at Capacity

Coeff. Value for Equation 15-18 or 15-19, b0	37.68080	
Coeff. Value for Equation 15-18 or 15-19, b1	3.05089	
Coeff. Value for Equation 15-18 or 15-19, b2	-7.90866	
Coeff. Value for Equation 15-18 or 15-19, b3	-0.94321	
Coeff. Value for Equation 15-18 or 15-19, b4	13.64266	
Coeff. Value for Equation 15-18 or 15-19, b5	-0.00050	
Coeff. Value for Equation 15-18 or 15-19, b6	-0.05500	
Coeff. Value for Equation 15-18 or 15-19, b7	7.13760	
Percent Followers at Capacity Flow Rate, PFcap	87.7	%

Step 6b: Calculate Percent Followers at 25% of Capacity

Coeff. Value for Equation 15-20 or 15-21, c0	18.01780	
Coeff. Value for Equation 15-20 or 15-21, c1	10.00000	
Coeff. Value for Equation 15-20 or 15-21, c2	-21.60000	
Coeff. Value for Equation 15-20 or 15-21, c3	-0.97853	
Coeff. Value for Equation 15-20 or 15-21, c4	12.05214	
Coeff. Value for Equation 15-20 or 15-21, c5	-0.00750	
Coeff. Value for Equation 15-20 or 15-21, c6	-0.06700	
Coeff. Value for Equation 15-20 or 15-21, c7	11.60410	
Percent Followers of 25% of Capacity Flow Rate, PF25cap	55.6	%

Step 6c: Calculate the Slope Coefficient

Coeff. Value for Equation 15-22, d1	-0.29764	
Coeff. Value for Equation 15-22, d2	-0.71917	
Slope Coefficient, m	-1.45550	

Step 6d: Calculate the Power Coefficient

Coeff. Value for Equation 15-23, e0	0.81165	
Coeff. Value for Equation 15-23, e1	0.37920	

Coeff. Value for Equation 15-23, e2	-0.49524	
Coeff. Value for Equation 15-23, e3	-2.11289	
Coeff. Value for Equation 15-23, e4	2.41146	
Power Coefficient, p	0.68319	

Step 6e: Calculate Percent Followers for the Segment

Percent Followers, PF	70.8	%

Step 7: Estimate Additional Performance Measure for Passing Lane

Step 8: Estimate Follower Density

Percent Followers, PF	70.8	%
Demand Flow Rate in Analysis Direction, vd	781	veh/h
Average Speed, with consideration of horizontal curves, S	36.3	mi/h
Follower Density, FD	15.2	followers/mi/ln

Step 9: Determine Potential Adjustment to Follower Density

Effective Length of Upstream Passing Lane	1.00	mi
Distance Downstream from Start of Passing Lane Segment	1.63	mi
PF for Upstream Passing Lane Seg., PF	0.0	%
PF for Analysis Segment, PF	70.8	%
Length of Passing Lane Segment, PassLaneLength	0.00	mi
Flow Rate Entering for Analysis Segment	781	veh/h
% Improve to PF, %ImprovePF	0.0	%
% Improve to the Average Speed, %ImproveS	0.0	%
Adjusted Average Speed for Analysis Segment, S	36.3	mi/h
Adjusted Follower Density, FDadj	15.2	followers/mi/ln

Step 10: Determine LOS

Posted Speed Limit, Sp	35	mi/h
Follower Density, FD	15.2	followers/mi/ln
Level of Service, LOS	E

Coeff. Value for Equation 15-20 or 15-21, c7	11.60410	
Percent Followers of 25% of Capacity Flow Rate, PF25cap	50.1	%

Step 6c: Calculate the Slope Coefficient

Coeff. Value for Equation 15-22, d1	-0.29764	
Coeff. Value for Equation 15-22, d2	-0.71917	
Slope Coefficient, m	-1.29343	

Step 6d: Calculate the Power Coefficient

Coeff. Value for Equation 15-23, e0	0.81165	
Coeff. Value for Equation 15-23, e1	0.37920	
Coeff. Value for Equation 15-23, e2	-0.49524	
Coeff. Value for Equation 15-23, e3	-2.11289	
Coeff. Value for Equation 15-23, e4	2.41146	
Power Coefficient, p	0.72830	

Step 6e: Calculate Percent Followers for the Segment

Percent Followers, PF	84.7	%

Step 7: Estimate Additional Performance Measure for Passing Lane

Step 8: Estimate Follower Density

Percent Followers, PF	84.7	%
Demand Flow Rate in Analysis Direction, vd	2020	veh/h
Average Speed, with consideration of horizontal curves, S	57.8	mi/h
Follower Density, FD	24.4	followers/mi/ln

Step 9: Determine Potential Adjustment to Follower Density

Effective Length of Upstream Passing Lane	1.00	mi
Distance Downstream from Start of Passing Lane Segment	2.24	mi
PF for Upstream Passing Lane Seg., PF	0.0	%
PF for Analysis Segment, PF	84.7	%
Length of Passing Lane Segment, PassLaneLength	0.00	mi
Flow Rate Entering for Analysis Segment	2020	veh/h
% Improve to PF, %ImprovePF	0.0	%
% Improve to the Average Speed, %ImproveS	0.0	%
Adjusted Average Speed for Analysis Segment, S	57.8	mi/h
Adjusted Follower Density, FDadj	24.4	followers/mi/ln

Step 10: Determine LOS

Posted Speed Limit, Sp	55	mi/h
Follower Density, FD	24.4	followers/mi/ln
Level of Service, LOS	F	

TWO-LANE HIGHWAY SEGMENT ANALYSIS

File Name:	2040_PROJ_AM_Byron.xuf

Project Description:	Byron Highway, SR-4 to San Joaquin County Line
Units:	United States Customary

Facility LOS and Performance Measures

Facility Length	6.69	mi
Facility Average Followers Density, FD	14.6	followers/mi/ln
Facility Level of Service, LOS	E	

Segment 1SR-4 to Camino Diable Road

LOS and Performance Measures

Coded Segment Type	Passing Constrained	
Analyzed Segment Type	Passing Constrained	
Actual Segment Length, L	8668	ft
Segment Length Used in Calculation	1.64	mi
Demand Flow Rate in Analysis Direction, vd	894	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Capacity, cap	1700	veh/h
Free-Flow Speed, FFS	38.0	mi/h
Speed, S	35.5	mi/h
Percent Followers, PF	72.5	%
Followers Density, FD	18.2	followers/mi/ln
Level of Service, LOS	E	

Step 1: Identify Facility Study Boundaries and Corresponding Segmentation

Segment Type	Passing Constrained	
Vertical Class	1	
Minimum Segment Length	0.25	mi
Maximum Segment Length	3.00	mi

Step 2: Determine Demand Flow Rates, Capacity, and d/c Ratio

Demand Volume in Analysis Direction, Vd	769	veh/h
Demand Volume in Opposing Direction, Vo	-	veh/h
Peak Hour Factor, PHF	0.86	
Demand Flow Rate in Analysis Direction, vd	894	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
d/c Ratio	0.53	

Step 3: Determine the Vertical Alignment Classification

Segment Length, L	8668	ft
Segment Percent Grade	0.00	%
Vertical Class	1	

Step 4: Determine the Free-Flow Speed

Posted Speed Limit, Sp	35	mi/h
Base Free-Flow Speed, BFFS	39.9	mi/h
Coeff. Value from Exhibit 15-12, a0	0.00000	
Coeff. Value from Exhibit 15-12, a1	0.00000	
Coeff. Value from Exhibit 15-12, a2	0.00000	
Coeff. Value from Exhibit 15-12, a3	0.00000	
Coeff. Value from Exhibit 15-12, a4	0.00000	

Coeff. Value from Exhibit 15-12, a5	0.00000	
Coeff. for Heavy Vehicle Adjustment, a	0.03330	
Percentage of Heavy Vehicles, %HV	6.00	%
Lane Width, LW	12	ft
Shoulder Width, SW	6	ft
Adjustment for Lane and Shoulder Width, fLS	0.0	mi/h
Access-Point Density, APD	7.0	access points/mi
Adjustment for Access-Point Density, fA	1.8	mi/h
Free-Flow Speed, FFS	38.0	mi/h

Step 5: Estimate the Average Speed

Vertical Class	1	
Free-Flow Speed, FFS	38.0	mi/h
Demand Flow Rate in Analysis Direction, vd	894	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Segment Length, L	1.64	mi
Percentage of Heavy Vehicles	6.00	%

Step 5a: Calculate the Slope Coefficient

Coeff. for Speed-Flow Slope Model, b0	0.05580	
Coeff. for Speed-Flow Slope Model, b1	0.05420	
Coeff. for Speed-Flow Slope Model, b2	0.32780	
Coeff. for b3 Segment Length Coeff. Model, c0	0.10290	
Coeff. for b3 Segment Length Coeff. Model, c1	0.00000	
Coeff. for b3 Segment Length Coeff. Model, c2	0.00000	
Coeff. for b3 Segment Length Coeff. Model, c3	0.00000	
Coeff. for Speed-Flow Slope Model, b3	0.10290	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d0	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d1	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d2	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d3	0.00000	
Coeff. for Speed-Flow Slope Model, b4	0.00000	
Coeff. for Speed-Flow Slope Model, b5	0.00000	
Slope Coefficient, m	2.64602	

Step 5b: Calculate the Slope Coefficient

Coeff. for Speed-Flow Slope Model, f0	0.67576	
Coeff. for Speed-Flow Slope Model, f1	0.00000	
Coeff. for Speed-Flow Slope Model, f2	0.00000	
Coeff. for Speed-Flow Slope Model, f3	0.12060	
Coeff. for Speed-Flow Slope Model, f4	-0.35919	
Coeff. for Speed-Flow Slope Model, f5	0.00000	
Coeff. for Speed-Flow Slope Model, f6	0.00000	
Coeff. for Speed-Flow Slope Model, f7	0.00000	
Coeff. for Speed-Flow Slope Model, f8	0.00000	
Power Coefficient, p	0.41674	

Step 5c: Calculate Average Speed for the Segment

Average Speed, S	35.5	mi/h

Average Speed, with consideration of horizontal curves, S	35.5	mi/h

Step 6: Estimate the Percent Followers

Segment Type	Passing Constrained	
Vertical Class	1	
Free-Flow Speed, FFS	38.0	mi/h
Demand Flow Rate in Analysis Direction, vd	894	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Directional Capacity, cap	1700	veh/h
Segment Length, L	1.64	mi
Percentage of Heavy Vehicles	6.00	%

Step 6a: Calculate Percent Followers at Capacity

Coeff. Value for Equation 15-18 or 15-19, b0	37.68080	
Coeff. Value for Equation 15-18 or 15-19, b1	3.05089	
Coeff. Value for Equation 15-18 or 15-19, b2	-7.90866	
Coeff. Value for Equation 15-18 or 15-19, b3	-0.94321	

Coeff. Value for Equation 15-18 or 15-19, b4	13.64266	
Coeff. Value for Equation 15-18 or 15-19, b5	-0.00050	
Coeff. Value for Equation 15-18 or 15-19, b6	-0.05500	
Coeff. Value for Equation 15-18 or 15-19, b7	7.13760	
Percent Followers at Capacity Flow Rate, PFcap	86.4	%

Step 6b: Calculate Percent Followers at 25% of Capacity

Coeff. Value for Equation 15-20 or 15-21, c0	18.01780	
Coeff. Value for Equation 15-20 or 15-21, c1	10.00000	
Coeff. Value for Equation 15-20 or 15-21, c2	-21.60000	
Coeff. Value for Equation 15-20 or 15-21, c3	-0.97853	
Coeff. Value for Equation 15-20 or 15-21, c4	12.05214	
Coeff. Value for Equation 15-20 or 15-21, c5	-0.00750	
Coeff. Value for Equation 15-20 or 15-21, c6	-0.06700	
Coeff. Value for Equation 15-20 or 15-21, c7	11.60410	
Percent Followers of 25% of Capacity Flow Rate, PF25cap	54.2	%

Step 6c: Calculate the Slope Coefficient

Coeff. Value for Equation 15-22, d1	-0.29764	
Coeff. Value for Equation 15-22, d2	-0.71917	
Slope Coefficient, m	-1.39163	

Step 6d: Calculate the Power Coefficient

Coeff. Value for Equation 15-23, e0	0.81165	
Coeff. Value for Equation 15-23, e1	0.37920	
Coeff. Value for Equation 15-23, e2	-0.49524	
Coeff. Value for Equation 15-23, e3	-2.11289	
Coeff. Value for Equation 15-23, e4	2.41146	
Power Coefficient, p	0.67543	

Step 6e: Calculate Percent Followers for the Segment

Percent Followers, PF	72.5	%

Step 7: Estimate Additional Performance Measure for Passing Lane

Step 8: Estimate Follower Density

Percent Followers, PF	72.5	%
Demand Flow Rate in Analysis Direction, vd	894	veh/h
Average Speed, with consideration of horizontal curves, S	35.5	mi/h
Follower Density, FD	18.2	followers/mi/ln

Step 9: Determine Potential Adjustment to Follower Density

Effective Length of Upstream Passing Lane	1.00	mi
Distance Downstream from Start of Passing Lane Segment	1.64	mi
PF for Upstream Passing Lane Seg., PF	0.0	%
PF for Analysis Segment, PF	72.5	%
Length of Passing Lane Segment, PassLaneLength	0.00	mi
Flow Rate Entering for Analysis Segment	894	veh/h
% Improve to PF, %ImprovePF	0.0	%
% Improve to the Average Speed, %ImproveS	0.0	%
Adjusted Average Speed for Analysis Segment, S	35.5	mi/h
Adjusted Follower Density, FDadj	18.2	followers/mi/ln

Step 10: Determine LOS

Posted Speed Limit, Sp	35	mi/h
Follower Density, FD	18.2	followers/mi/ln
Level of Service, LOS	E	

Segment 2Camino Diablo Road to San Joaquin County Line

LOS and Performance Measures

Coded Segment Type	Passing Constrained	
Analyzed Segment Type	Passing Constrained	
Actual Segment Length, L	26662	ft
Segment Length Used in Calculation	3.00	mi
Demand Flow Rate in Analysis Direction, vd	1043	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Capacity, cap	1700	veh/h
Free-Flow Speed, FFS	62.2	mi/h
Speed, S	58.3	mi/h
Percent Followers, PF	75.0	%
Followers Density, FD	13.4	followers/mi/ln
Level of Service, LOS	E	

Step 1: Identify Facility Study Boundaries and Corresponding Segmentation

Segment Type	Passing Constrained	
Vertical Class	1	
Minimum Segment Length	0.25	mi
Maximum Segment Length	3.00	mi

Step 2: Determine Demand Flow Rates, Capacity, and d/c Ratio

Demand Volume in Analysis Direction, Vd	949	veh/h
Demand Volume in Opposing Direction, Vo	-	veh/h
Peak Hour Factor, PHF	0.91	
Demand Flow Rate in Analysis Direction, vd	1043	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
d/c Ratio	0.61	

Step 3: Determine the Vertical Alignment Classification

Segment Length, L	26662	ft
Segment Percent Grade	0.00	%
Vertical Class	1	

Step 4: Determine the Free-Flow Speed

Posted Speed Limit, Sp	55	mi/h
Base Free-Flow Speed, BFFS	62.7	mi/h
Coeff. Value from Exhibit 15-12, a0	0.00000	
Coeff. Value from Exhibit 15-12, a1	0.00000	
Coeff. Value from Exhibit 15-12, a2	0.00000

Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Directional Capacity, cap	1700	veh/h
Segment Length, L	1.21	mi
Percentage of Heavy Vehicles	3.00	%

Step 6a: Calculate Percent Followers at Capacity

Coeff. Value for Equation 15-18 or 15-19, b0	37.68080	
Coeff. Value for Equation 15-18 or 15-19, b1	3.05089	
Coeff. Value for Equation 15-18 or 15-19, b2	-7.90866	
Coeff. Value for Equation 15-18 or 15-19, b3	-0.94321	

Coeff. Value for Equation 15-18 or 15-19, b4	13.64266	
Coeff. Value for Equation 15-18 or 15-19, b5	-0.00050	
Coeff. Value for Equation 15-18 or 15-19, b6	-0.05500	
Coeff. Value for Equation 15-18 or 15-19, b7	7.13760	
Percent Followers at Capacity Flow Rate, PFcap	86.1	%

Step 6b: Calculate Percent Followers at 25% of Capacity

Coeff. Value for Equation 15-20 or 15-21, c0	18.01780	
Coeff. Value for Equation 15-20 or 15-21, c1	10.00000	
Coeff. Value for Equation 15-20 or 15-21, c2	-21.60000	
Coeff. Value for Equation 15-20 or 15-21, c3	-0.97853	
Coeff. Value for Equation 15-20 or 15-21, c4	12.05214	
Coeff. Value for Equation 15-20 or 15-21, c5	-0.00750	
Coeff. Value for Equation 15-20 or 15-21, c6	-0.06700	
Coeff. Value for Equation 15-20 or 15-21, c7	11.60410	
Percent Followers of 25% of Capacity Flow Rate, PF25cap	50.4	%

Step 6c: Calculate the Slope Coefficient

Coeff. Value for Equation 15-22, d1	-0.29764	
Coeff. Value for Equation 15-22, d2	-0.71917	
Slope Coefficient, m	-1.32612	

Step 6d: Calculate the Power Coefficient

Coeff. Value for Equation 15-23, e0	0.81165	
Coeff. Value for Equation 15-23, e1	0.37920	
Coeff. Value for Equation 15-23, e2	-0.49524	
Coeff. Value for Equation 15-23, e3	-2.11289	
Coeff. Value for Equation 15-23, e4	2.41146	
Power Coefficient, p	0.74659	

Step 6e: Calculate Percent Followers for the Segment

Percent Followers, PF	68.6	%

Step 7: Estimate Additional Performance Measure for Passing Lane

Step 8: Estimate Follower Density

Percent Followers, PF	68.6	%
Demand Flow Rate in Analysis Direction, vd	833	veh/h
Average Speed, with consideration of horizontal curves, S	52.5	mi/h
Follower Density, FD	10.9	followers/mi/ln

Step 9: Determine Potential Adjustment to Follower Density

Effective Length of Upstream Passing Lane	1.00	mi
Distance Downstream from Start of Passing Lane Segment	1.21	mi
PF for Upstream Passing Lane Seg., PF	0.0	%
PF for Analysis Segment, PF	68.6	%
Length of Passing Lane Segment, PassLaneLength	0.00	mi
Flow Rate Entering for Analysis Segment	833	veh/h
% Improve to PF, %ImprovePF	0.0	%
% Improve to the Average Speed, %ImproveS	0.0	%
Adjusted Average Speed for Analysis Segment, S	52.5	mi/h
Adjusted Follower Density, FDadj	10.9	followers/mi/ln

Step 10: Determine LOS

Posted Speed Limit, Sp	50	mi/h
Follower Density, FD	10.9	followers/mi/ln
Level of Service, LOS	D	

Segment 2St Anne Church Dwy to Byron Hwy

LOS and Performance Measures

Coded Segment Type	Passing Constrained	
Analyzed Segment Type	Passing Constrained	
Actual Segment Length, L	2253	ft
Segment Length Used in Calculation	0.43	mi
Demand Flow Rate in Analysis Direction, vd	533	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Capacity, cap	1700	veh/h
Free-Flow Speed, FFS	38.6	mi/h
Speed, S	36.7	mi/h
Percent Followers, PF	61.2	%
Followers Density, FD	8.9	followers/mi/ln
Level of Service, LOS	C	

Step 1: Identify Facility Study Boundaries and Corresponding Segmentation

Segment Type	Passing Constrained	
Vertical Class	1	
Minimum Segment Length	0.25	mi
Maximum Segment Length	3.00	mi

Step 2: Determine Demand Flow Rates, Capacity, and d/c Ratio

Demand Volume in Analysis Direction, Vd	464	veh/h
Demand Volume in Opposing Direction, Vo	-	veh/h
Peak Hour Factor, PHF	0.87	
Demand Flow Rate in Analysis Direction, vd	533	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
d/c Ratio	0.31	

Step 3: Determine the Vertical Alignment Classification

Segment Length, L	2253	ft
Segment Percent Grade	0.00	%
Vertical Class	1	

Step 4: Determine the Free-Flow Speed

Posted Speed Limit, Sp	35	mi/h
Base Free-Flow Speed, BFFS	39.9	mi/h
Coeff. Value from Exhibit 15-12, a0	0.00000	
Coeff. Value from Exhibit 15-12, a1	0.00000	
Coeff. Value from Exhibit 15-12, a2	0.00000	
Coeff. Value from Exhibit 15-12, a3	0.00000	
Coeff. Value from Exhibit 15-12, a4	0.00000	
Coeff. Value from Exhibit 15-12, a5	0.00000	
Coeff. for Heavy Vehicle Adjustment, a	0.03330	
Percentage of Heavy Vehicles, %HV	3.00	%
Lane Width, LW	12	ft
Shoulder Width, SW	6	ft
Adjustment for Lane and Shoulder Width, fLS	0.0	mi/h
Access-Point Density, APD	5.0	access points/mi
Adjustment for Access-Point Density, fA	1.3	mi/h
Free-Flow Speed, FFS	38.6	mi/h

Step 5: Estimate the Average Speed

Vertical Class	1	
Free-Flow Speed, FFS	38.6	mi/h
Demand Flow Rate in Analysis Direction, vd	533	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Segment Length, L	0.43	mi
Percentage of Heavy Vehicles	3.00	%

Step 5a: Calculate the Slope Coefficient

Coeff. for Speed-Flow Slope Model, b0	0.05580	
Coeff. for Speed-Flow Slope Model, b1	0.05420	
Coeff. for Speed-Flow Slope Model, b2	0.32780	
Coeff. for b3 Segment Length Coeff. Model, c0	0.10290	
Coeff. for b3 Segment Length Coeff. Model, c1	0.00000	

Coeff. for b3 Segment Length Coeff. Model, c2	0.00000	
Coeff. for b3 Segment Length Coeff. Model, c3	0.00000	
Coeff. for Speed-Flow Slope Model, b3	0.10290	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d0	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d1	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d2	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d3	0.00000	
Coeff. for Speed-Flow Slope Model, b4	0.00000	
Coeff. for Speed-Flow Slope Model, b5	0.00000	
Slope Coefficient, m	2.61390	
Step 5b: Calculate the Slope Coefficient		
Coeff. for Speed-Flow Slope Model, f0	0.67576	
Coeff. for Speed-Flow Slope Model, f1	0.00000	
Coeff. for Speed-Flow Slope Model, f2	0.00000	
Coeff. for Speed-Flow Slope Model, f3	0.12060	
Coeff. for Speed-Flow Slope Model, f4	-0.35919	
Coeff. for Speed-Flow Slope Model, f5	0.00000	
Coeff. for Speed-Flow Slope Model, f6	0.00000	
Coeff. for Speed-Flow Slope Model, f7	0.00000	
Coeff. for Speed-Flow Slope Model, f8	0.00000	
Power Coefficient, p	0.41674	
Step 5c: Calculate Average Speed for the Segment		
Average Speed, S	36.7	mi/h
Average Speed, with consideration of horizontal curves, S	36.7	mi/h

Step 6: Estimate the Percent Followers

Segment Type	Passing Constrained	
Vertical Class	1	
Free-Flow Speed, FFS	38.6	mi/h
Demand Flow Rate in Analysis Direction, vd	533	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Directional Capacity, cap	1700	veh/h
Segment Length, L	0.43	mi
Percentage of Heavy Vehicles	3.00	%
Step 6a: Calculate Percent Followers at Capacity		
Coeff. Value for Equation 15-18 or 15-19, b0	37.68080	
Coeff. Value for Equation 15-18 or 15-19, b1	3.05089	
Coeff. Value for Equation 15-18 or 15-19, b2	-7.90866	
Coeff. Value for Equation 15-18 or 15-19, b3	-0.94321	
Coeff. Value for Equation 15-18 or 15-19, b4	13.64266	
Coeff. Value for Equation 15-18 or 15-19, b5	-0.00050	
Coeff. Value for Equation 15-18 or 15-19, b6	-0.05500	
Coeff. Value for Equation 15-18 or 15-19, b7	7.13760	
Percent Followers at Capacity Flow Rate, PFcap	87.7	%
Step 6b: Calculate Percent Followers at 25% of Capacity		
Coeff. Value for Equation 15-20 or 15-21, c0	18.01780	
Coeff. Value for Equation 15-20 or 15-21, c1	10.00000	
Coeff. Value for Equation 15-20 or 15-21, c2	-21.60000	
Coeff. Value for Equation 15-20 or 15-21, c3	-0.97853	
Coeff. Value for Equation 15-20 or 15-21, c4	12.05214	
Coeff. Value for Equation 15-20 or 15-21, c5	-0.00750	
Coeff. Value for Equation 15-20 or 15-21, c6	-0.06700	
Coeff. Value for Equation 15-20 or 15-21, c7	11.60410	
Percent Followers of 25% of Capacity Flow Rate, PF25cap	55.6	%
Step 6c: Calculate the Slope Coefficient		
Coeff. Value for Equation 15-22, d1	-0.29764	
Coeff. Value for Equation 15-22, d2	-0.71917	
Slope Coefficient, m	-1.45583	
Step 6d: Calculate the Power Coefficient		
Coeff. Value for Equation 15-23, e0	0.81165	
Coeff. Value for Equation 15-23, e1	0.37920	

Coeff. Value for Equation 15-23, e2	-0.49524	
Coeff. Value for Equation 15-23, e3	-2.11289	
Coeff. Value for Equation 15-23, e4	2.41146	
Power Coefficient, p	0.68320	

Step 6e: Calculate Percent Followers for the Segment

Percent Followers, PF	61.2	%

Step 7: Estimate Additional Performance Measure for Passing Lane

Step 8: Estimate Follower Density

Percent Followers, PF	61.2	%
Demand Flow Rate in Analysis Direction, vd	533	veh/h
Average Speed, with consideration of horizontal curves, S	36.7	mi/h
Follower Density, FD	8.9	followers/mi/ln

Step 9: Determine Potential Adjustment to Follower Density

Effective Length of Upstream Passing Lane	1.00	mi
Distance Downstream from Start of Passing Lane Segment	1.63	mi
PF for Upstream Passing Lane Seg., PF	0.0	%
PF for Analysis Segment, PF	61.2	%
Length of Passing Lane Segment, PassLaneLength	0.00	mi
Flow Rate Entering for Analysis Segment	533	veh/h
% Improve to PF, %ImprovePF	0.0	%
% Improve to the Average Speed, %ImproveS	0.0	%
Adjusted Average Speed for Analysis Segment, S	36.7	mi/h
Adjusted Follower Density, FDadj	8.9	followers/mi/ln

Step 10: Determine LOS

Posted Speed Limit, Sp	35	mi/h
Follower Density, FD	8.9	followers/mi/ln
Level of Service, LOS	C

Coeff. for b3 Segment Length Coeff. Model, c1	0.00000	
Coeff. for b3 Segment Length Coeff. Model, c2	0.00000	
Coeff. for b3 Segment Length Coeff. Model, c3	0.00000	
Coeff. for Speed-Flow Slope Model, b3	0.10290	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d0	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d1	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d2	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d3	0.00000	
Coeff. for Speed-Flow Slope Model, b4	0.00000	
Coeff. for Speed-Flow Slope Model, b5	0.00000	
Slope Coefficient, m	4.00790	

Step 5b: Calculate the Slope Coefficient

Coeff. for Speed-Flow Slope Model, f0	0.67576	
Coeff. for Speed-Flow Slope Model, f1	0.00000	
Coeff. for Speed-Flow Slope Model, f2	0.00000	
Coeff. for Speed-Flow Slope Model, f3	0.12060	
Coeff. for Speed-Flow Slope Model, f4	-0.35919	
Coeff. for Speed-Flow Slope Model, f5	0.00000	
Coeff. for Speed-Flow Slope Model, f6	0.00000	
Coeff. for Speed-Flow Slope Model, f7	0.00000	
Coeff. for Speed-Flow Slope Model, f8	0.00000	
Power Coefficient, p	0.41674	

Step 5c: Calculate Average Speed for the Segment

Average Speed, S	57.8	mi/h

Average Speed, with consideration of horizontal curves, S	57.8	mi/h

Step 6: Estimate the Percent Followers

Segment Type	Passing Constrained	
Vertical Class	1	
Free-Flow Speed, FFS	62.7	mi/h
Demand Flow Rate in Analysis Direction, vd	2446	veh/h
Demand Flow Rate in Opposing Direction, vo	0	veh/h
Directional Capacity, cap	1700	veh/h
Segment Length, L	2.24	mi
Percentage of Heavy Vehicles	1.00	%

Step 6a: Calculate Percent Followers at Capacity

Coeff. Value for Equation 15-18 or 15-19, b0	37.68080	
Coeff. Value for Equation 15-18 or 15-19, b1	3.05089	
Coeff. Value for Equation 15-18 or 15-19, b2	-7.90866	
Coeff. Value for Equation 15-18 or 15-19, b3	-0.94321	

Coeff. Value for Equation 15-18 or 15-19, b4	13.64266	
Coeff. Value for Equation 15-18 or 15-19, b5	-0.00050	
Coeff. Value for Equation 15-18 or 15-19, b6	-0.05500	
Coeff. Value for Equation 15-18 or 15-19, b7	7.13760	
Percent Followers at Capacity Flow Rate, PFcap	85.1	%

Step 6b: Calculate Percent Followers at 25% of Capacity

Coeff. Value for Equation 15-20 or 15-21, c0	18.01780	
Coeff. Value for Equation 15-20 or 15-21, c1	10.00000	
Coeff. Value for Equation 15-20 or 15-21, c2	-21.60000	
Coeff. Value for Equation 15-20 or 15-21, c3	-0.97853	
Coeff. Value for Equation 15-20 or 15-21, c4	12.05214	
Coeff. Value for Equation 15-20 or 15-21, c5	-0.00750	
Coeff. Value for Equation 15-20 or 15-21, c6	-0.06700	
Coeff. Value for Equation 15-20 or 15-21, c7	11.60410	
Percent Followers of 25% of Capacity Flow Rate, PF25cap	50.1	%

Step 6c: Calculate the Slope Coefficient

Coeff. Value for Equation 15-22, d1	-0.29764	
Coeff. Value for Equation 15-22, d2	-0.71917	
Slope Coefficient, m	-1.29324	

Step 6d: Calculate the Power Coefficient

Coeff. Value for Equation 15-23, e0	0.81165	
Coeff. Value for Equation 15-23, e1	0.37920	
Coeff. Value for Equation 15-23, e2	-0.49524	
Coeff. Value for Equation 15-23, e3	-2.11289	
Coeff. Value for Equation 15-23, e4	2.41146	
Power Coefficient, p	0.72824	

Step 6e: Calculate Percent Followers for the Segment

Percent Followers, PF	84.7	%

Step 7: Estimate Additional Performance Measure for Passing Lane

Step 8: Estimate Follower Density

Percent Followers, PF	84.7	%
Demand Flow Rate in Analysis Direction, vd	2446	veh/h
Average Speed, with consideration of horizontal curves, S	57.8	mi/h
Follower Density, FD	24.4	followers/mi/ln

Step 9: Determine Potential Adjustment to Follower Density

Effective Length of Upstream Passing Lane	1.00	mi
Distance Downstream from Start of Passing Lane Segment	2.24	mi
PF for Upstream Passing Lane Seg., PF	0.0	%
PF for Analysis Segment, PF	84.7	%
Length of Passing Lane Segment, PassLaneLength	0.00	mi
Flow Rate Entering for Analysis Segment	2446	veh/h
% Improve to PF, %ImprovePF	0.0	%
% Improve to the Average Speed, %ImproveS	0.0	%
Adjusted Average Speed for Analysis Segment, S	57.8	mi/h
Adjusted Follower Density, FDadj	24.4	followers/mi/ln

Step 10: Determine LOS

Posted Speed Limit, Sp	55	mi/h
Follower Density, FD	24.4	followers/mi/ln
Level of Service, LOS	F

Coeff. for Speed-Flow Slope Model, f7	0.00000	
Coeff. for Speed-Flow Slope Model, f8	0.00000	
Power Coefficient, p	0.41674	

Step 5c: Calculate Average Speed for the Segment

Average Speed, S	35.2	mi/h

Average Speed, with consideration of horizontal curves, S	35.2	mi/h

Step 6: Estimate the Percent Followers

Segment Type	Passing Constrained	
Vertical Class	1	
Free-Flow Speed, FFS	38.1	mi/h
Demand Flow Rate in Analysis Direction, vd	1314	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Directional Capacity, cap	1700	veh/h
Segment Length, L	1.64	mi
Percentage of Heavy Vehicles	2.00	%

Step 6a: Calculate Percent Followers at Capacity

Coeff. Value for Equation 15-18 or 15-19, b0	37.68080	
Coeff. Value for Equation 15-18 or 15-19, b1	3.05089	
Coeff. Value for Equation 15-18 or 15-19, b2	-7.90866	
Coeff. Value for Equation 15-18 or 15-19, b3	-0.94321	

Coeff. Value for Equation 15-18 or 15-19, b4	13.64266	
Coeff. Value for Equation 15-18 or 15-19, b5	-0.00050	
Coeff. Value for Equation 15-18 or 15-19, b6	-0.05500	
Coeff. Value for Equation 15-18 or 15-19, b7	7.13760	
Percent Followers at Capacity Flow Rate, PFcap	86.4	%

Step 6b: Calculate Percent Followers at 25% of Capacity

Coeff. Value for Equation 15-20 or 15-21, c0	18.01780	
Coeff. Value for Equation 15-20 or 15-21, c1	10.00000	
Coeff. Value for Equation 15-20 or 15-21, c2	-21.60000	
Coeff. Value for Equation 15-20 or 15-21, c3	-0.97853	
Coeff. Value for Equation 15-20 or 15-21, c4	12.05214	
Coeff. Value for Equation 15-20 or 15-21, c5	-0.00750	
Coeff. Value for Equation 15-20 or 15-21, c6	-0.06700	
Coeff. Value for Equation 15-20 or 15-21, c7	11.60410	
Percent Followers of 25% of Capacity Flow Rate, PF25cap	54.2	%

Step 6c: Calculate the Slope Coefficient

Coeff. Value for Equation 15-22, d1	-0.29764	
Coeff. Value for Equation 15-22, d2	-0.71917	
Slope Coefficient, m	-1.39228	

Step 6d: Calculate the Power Coefficient

Coeff. Value for Equation 15-23, e0	0.81165	
Coeff. Value for Equation 15-23, e1	0.37920	
Coeff. Value for Equation 15-23, e2	-0.49524	
Coeff. Value for Equation 15-23, e3	-2.11289	
Coeff. Value for Equation 15-23, e4	2.41146	
Power Coefficient, p	0.67543	

Step 6e: Calculate Percent Followers for the Segment

Percent Followers, PF	81.3	%

Step 7: Estimate Additional Performance Measure for Passing Lane

Step 8: Estimate Follower Density

Percent Followers, PF	81.3	%
Demand Flow Rate in Analysis Direction, vd	1314	veh/h
Average Speed, with consideration of horizontal curves, S	35.2	mi/h
Follower Density, FD	30.3	followers/mi/ln

Step 9: Determine Potential Adjustment to Follower Density

Effective Length of Upstream Passing Lane	1.00	mi
Distance Downstream from Start of Passing Lane Segment	1.64	mi
PF for Upstream Passing Lane Seg., PF	0.0	%
PF for Analysis Segment, PF	81.3	%
Length of Passing Lane Segment, PassLaneLength	0.00	mi
Flow Rate Entering for Analysis Segment	1314	veh/h

Step 2: Determine Demand Flow Rates, Capacity, and d/c Ratio

Demand Volume in Analysis Direction, Vd	1121	veh/h
Demand Volume in Opposing Direction, Vo	-	veh/h
Peak Hour Factor, PHF	0.95	
Demand Flow Rate in Analysis Direction, vd	1180	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
d/c Ratio	0.69	

Step 3: Determine the Vertical Alignment Classification

Segment Length, L	6377	ft
Segment Percent Grade	0.00	%
Vertical Class	1	

Step 4: Determine the Free-Flow Speed

Posted Speed Limit, Sp	50	mi/h
Base Free-Flow Speed, BFFS	57.0	mi/h
Coeff. Value from Exhibit 15-12, a0	0.00000	
Coeff. Value from Exhibit 15-12, a1	0.00000	
Coeff. Value from Exhibit 15-12, a2	0.00000	
Coeff. Value from Exhibit 15-12, a3	0.00000	
Coeff. Value from Exhibit 15-12, a4	0.00000	

Coeff. Value from Exhibit 15-12, a5	0.00000	
Coeff. for Heavy Vehicle Adjustment, a	0.03330	
Percentage of Heavy Vehicles, %HV	5.00	%
Lane Width, LW	12	ft
Shoulder Width, SW	6	ft
Adjustment for Lane and Shoulder Width, fLS	0.0	mi/h
Access-Point Density, APD	5.0	access points/mi
Adjustment for Access-Point Density, fA	1.3	mi/h
Free-Flow Speed, FFS	55.6	mi/h

Step 5: Estimate the Average Speed

Vertical Class	1	
Free-Flow Speed, FFS	55.6	mi/h
Demand Flow Rate in Analysis Direction, vd	1180	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Segment Length, L	1.21	mi
Percentage of Heavy Vehicles	5.00	%

Step 5a: Calculate the Slope Coefficient

Coeff. for Speed-Flow Slope Model, b0	0.05580	
Coeff. for Speed-Flow Slope Model, b1	0.05420	
Coeff. for Speed-Flow Slope Model, b2	0.32780	
Coeff. for b3 Segment Length Coeff. Model, c0	0.10290	
Coeff. for b3 Segment Length Coeff. Model, c1	0.00000	
Coeff. for b3 Segment Length Coeff. Model, c2	0.00000	
Coeff. for b3 Segment Length Coeff. Model, c3	0.00000	
Coeff. for Speed-Flow Slope Model, b3	0.10290	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d0	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d1	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d2	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d3	0.00000	
Coeff. for Speed-Flow Slope Model, b4	0.00000	
Coeff. for Speed-Flow Slope Model, b5	0.00000	
Slope Coefficient, m	3.58298	

Step 5b: Calculate the Slope Coefficient

Coeff. for Speed-Flow Slope Model, f0	0.67576	
Coeff. for Speed-Flow Slope Model, f1	0.00000	
Coeff. for Speed-Flow Slope Model, f2	0.00000	
Coeff. for Speed-Flow Slope Model, f3	0.12060	
Coeff. for Speed-Flow Slope Model, f4	-0.35919	
Coeff. for Speed-Flow Slope Model, f5	0.00000	
Coeff. for Speed-Flow Slope Model, f6	0.00000	
Coeff. for Speed-Flow Slope Model, f7	0.00000	
Coeff. for Speed-Flow Slope Model, f8	0.00000	
Power Coefficient, p	0.41674	

Step 5c: Calculate Average Speed for the Segment

Average Speed, S	51.9	mi/h

Average Speed, with consideration of horizontal curves, S	51.9	mi/h

Step 6: Estimate the Percent Followers

Segment Type	Passing Constrained	
Vertical Class	1	
Free-Flow Speed, FFS	55.6	mi/h
Demand Flow Rate in Analysis Direction, vd	1180	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Directional Capacity, cap	1700	veh/h
Segment Length, L	1.21	mi
Percentage of Heavy Vehicles	5.00	%

Step 6a: Calculate Percent Followers at Capacity

Coeff. Value for Equation 15-18 or 15-19, b0	37.68080	
Coeff. Value for Equation 15-18 or 15-19, b1	3.05089	
Coeff. Value for Equation 15-18 or 15-19, b2	-7.90866	
Coeff. Value for Equation 15-18 or 15-19, b3	-0.94321	

Coeff. Value for Equation 15-18 or 15-19, b4	13.64266	
Coeff. Value for Equation 15-18 or 15-19, b5	-0.00050	
Coeff. Value for Equation 15-18 or 15-19, b6	-0.05500	
Coeff. Value for Equation 15-18 or 15-19, b7	7.13760	
Percent Followers at Capacity Flow Rate, PFcap	86.1	%

Step 6b: Calculate Percent Followers at 25% of Capacity

Coeff. Value for Equation 15-20 or 15-21, c0	18.01780	
Coeff. Value for Equation 15-20 or 15-21, c1	10.00000	
Coeff. Value for Equation 15-20 or 15-21, c2	-21.60000	
Coeff. Value for Equation 15-20 or 15-21, c3	-0.97853	
Coeff. Value for Equation 15-20 or 15-21, c4	12.05214	
Coeff. Value for Equation 15-20 or 15-21, c5	-0.00750	
Coeff. Value for Equation 15-20 or 15-21, c6	-0.06700	
Coeff. Value for Equation 15-20 or 15-21, c7	11.60410	
Percent Followers of 25% of Capacity Flow Rate, PF25cap	50.4	%

Step 6c: Calculate the Slope Coefficient

Coeff. Value for Equation 15-22, d1	-0.29764	
Coeff. Value for Equation 15-22, d2	-0.71917	
Slope Coefficient, m	-1.32636	

Step 6d: Calculate the Power Coefficient

Coeff. Value for Equation 15-23, e0	0.81165	
Coeff. Value for Equation 15-23, e1	0.37920	
Coeff. Value for Equation 15-23, e2	-0.49524	
Coeff. Value for Equation 15-23, e3	-2.11289	
Coeff. Value for Equation 15-23, e4	2.41146	
Power Coefficient, p	0.74669	

Step 6e: Calculate Percent Followers for the Segment

Percent Followers, PF	77.7	%

Step 7: Estimate Additional Performance Measure for Passing Lane

Step 8: Estimate Follower Density

Percent Followers, PF	77.7	%
Demand Flow Rate in Analysis Direction, vd	1180	veh/h
Average Speed, with consideration of horizontal curves, S	51.9	mi/h
Follower Density, FD	17.7	followers/mi/ln

Step 9: Determine Potential Adjustment to Follower Density

Effective Length of Upstream Passing Lane	1.00	mi
Distance Downstream from Start of Passing Lane Segment	1.21	mi
PF for Upstream Passing Lane Seg., PF	0.0	%
PF for Analysis Segment, PF	77.7	%
Length of Passing Lane Segment, PassLaneLength	0.00	mi
Flow Rate Entering for Analysis Segment	1180	veh/h
% Improve to PF, %ImprovePF	0.0	%
% Improve to the Average Speed, %ImproveS	0.0	%
Adjusted Average Speed for Analysis Segment, S	51.9	mi/h
Adjusted Follower Density, FDadj	17.7	followers/mi/ln

Step 10: Determine LOS

Posted Speed Limit, Sp	50	mi/h
Follower Density, FD	17.7	followers/mi/ln
Level of Service, LOS	E	

Segment 2St Anne Church Dwy to Byron Hwy

LOS and Performance Measures

Coded Segment Type	Passing Constrained	
Analyzed Segment Type	Passing Constrained	
Actual Segment Length, L	2253	ft
Segment Length Used in Calculation	0.43	mi
Demand Flow Rate in Analysis Direction, vd	883	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Capacity, cap	1700	veh/h
Free-Flow Speed, FFS	38.5	mi/h
Speed, S	36.1	mi/h
Percent Followers, PF	73.7	%
Followers Density, FD	18.0	followers/mi/ln
Level of Service, LOS	E	

Step 1: Identify Facility Study Boundaries and Corresponding Segmentation

Segment Type	Passing Constrained	
Vertical Class	1	
Minimum Segment Length	0.25	mi
Maximum Segment Length	3.00	mi

Step 2: Determine Demand Flow Rates, Capacity, and d/c Ratio

Demand Volume in Analysis Direction, Vd	839	veh/h
Demand Volume in Opposing Direction, Vo	-	veh/h
Peak Hour Factor, PHF	0.95	
Demand Flow Rate in Analysis Direction, vd	883	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
d/c Ratio	0.52	

Step 3: Determine the Vertical Alignment Classification

Segment Length, L	2253	ft
Segment Percent Grade	0.00	%
Vertical Class	1	

Step 4: Determine the Free-Flow Speed

Posted Speed Limit, Sp	35	mi/h
Base Free-Flow Speed, BFFS	39.9	mi/h
Coeff. Value from Exhibit 15-12, a0	0.00000	
Coeff. Value from Exhibit 15-12, a1	0.00000	
Coeff. Value from Exhibit 15-12, a2	0.00000	
Coeff. Value from Exhibit 15-12, a3	0.00000	
Coeff. Value from Exhibit 15-12, a4	0.00000	
Coeff. Value from Exhibit 15-12, a5	0.00000	
Coeff. for Heavy Vehicle Adjustment, a	0.03330	
Percentage of Heavy Vehicles, %HV	5.00	%
Lane Width, LW	12	ft
Shoulder Width, SW	6	ft
Adjustment for Lane and Shoulder Width, fLS	0.0	mi/h
Access-Point Density, APD	5.0	access points/mi
Adjustment for Access-Point Density, fA	1.3	mi/h
Free-Flow Speed, FFS	38.5	mi/h

Step 5: Estimate the Average Speed

Vertical Class	1	
Free-Flow Speed, FFS	38.5	mi/h
Demand Flow Rate in Analysis Direction, vd	883	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Segment Length, L	0.43	mi
Percentage of Heavy Vehicles	5.00	%

Step 5a: Calculate the Slope Coefficient

Coeff. for Speed-Flow Slope Model, b0	0.05580	
Coeff. for Speed-Flow Slope Model, b1	0.05420	
Coeff. for Speed-Flow Slope Model, b2	0.32780	
Coeff. for b3 Segment Length Coeff. Model, c0	0.10290	
Coeff. for b3 Segment Length Coeff. Model, c1	0.00000	

Coeff. for b3 Segment Length Coeff. Model, c2	0.00000	
Coeff. for b3 Segment Length Coeff. Model, c3	0.00000	
Coeff. for Speed-Flow Slope Model, b3	0.10290	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d0	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d1	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d2	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d3	0.00000	
Coeff. for Speed-Flow Slope Model, b4	0.00000	
Coeff. for Speed-Flow Slope Model, b5	0.00000	
Slope Coefficient, m	2.61029	
Step 5b: Calculate the Slope Coefficient		
Coeff. for Speed-Flow Slope Model, f0	0.67576	
Coeff. for Speed-Flow Slope Model, f1	0.00000	
Coeff. for Speed-Flow Slope Model, f2	0.00000	
Coeff. for Speed-Flow Slope Model, f3	0.12060	
Coeff. for Speed-Flow Slope Model, f4	-0.35919	
Coeff. for Speed-Flow Slope Model, f5	0.00000	
Coeff. for Speed-Flow Slope Model, f6	0.00000	
Coeff. for Speed-Flow Slope Model, f7	0.00000	
Coeff. for Speed-Flow Slope Model, f8	0.00000	
Power Coefficient, p	0.41674	
Step 5c: Calculate Average Speed for the Segment		
Average Speed, S	36.1	mi/h
Average Speed, with consideration of horizontal curves, S	36.1	mi/h

Step 6: Estimate the Percent Followers

Segment Type	Passing Constrained	
Vertical Class	1	
Free-Flow Speed, FFS	38.5	mi/h
Demand Flow Rate in Analysis Direction, vd	883	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Directional Capacity, cap	1700	veh/h
Segment Length, L	0.43	mi
Percentage of Heavy Vehicles	5.00	%
Step 6a: Calculate Percent Followers at Capacity		
Coeff. Value for Equation 15-18 or 15-19, b0	37.68080	
Coeff. Value for Equation 15-18 or 15-19, b1	3.05089	
Coeff. Value for Equation 15-18 or 15-19, b2	-7.90866	
Coeff. Value for Equation 15-18 or 15-19, b3	-0.94321	
Coeff. Value for Equation 15-18 or 15-19, b4	13.64266	
Coeff. Value for Equation 15-18 or 15-19, b5	-0.00050	
Coeff. Value for Equation 15-18 or 15-19, b6	-0.05500	
Coeff. Value for Equation 15-18 or 15-19, b7	7.13760	
Percent Followers at Capacity Flow Rate, PFcap	87.7	%
Step 6b: Calculate Percent Followers at 25% of Capacity		
Coeff. Value for Equation 15-20 or 15-21, c0	18.01780	
Coeff. Value for Equation 15-20 or 15-21, c1	10.00000	
Coeff. Value for Equation 15-20 or 15-21, c2	-21.60000	
Coeff. Value for Equation 15-20 or 15-21, c3	-0.97853	
Coeff. Value for Equation 15-20 or 15-21, c4	12.05214	
Coeff. Value for Equation 15-20 or 15-21, c5	-0.00750	
Coeff. Value for Equation 15-20 or 15-21, c6	-0.06700	
Coeff. Value for Equation 15-20 or 15-21, c7	11.60410	
Percent Followers of 25% of Capacity Flow Rate, PF25cap	55.6	%
Step 6c: Calculate the Slope Coefficient		
Coeff. Value for Equation 15-22, d1	-0.29764	
Coeff. Value for Equation 15-22, d2	-0.71917	
Slope Coefficient, m	-1.45550	
Step 6d: Calculate the Power Coefficient		
Coeff. Value for Equation 15-23, e0	0.81165	
Coeff. Value for Equation 15-23, e1	0.37920	

Coeff. Value for Equation 15-23, e2	-0.49524	
Coeff. Value for Equation 15-23, e3	-2.11289	
Coeff. Value for Equation 15-23, e4	2.41146	
Power Coefficient, p	0.68319	

Step 6e: Calculate Percent Followers for the Segment

Percent Followers, PF	73.7	%

Step 7: Estimate Additional Performance Measure for Passing Lane

Step 8: Estimate Follower Density

Percent Followers, PF	73.7	%
Demand Flow Rate in Analysis Direction, vd	883	veh/h
Average Speed, with consideration of horizontal curves, S	36.1	mi/h
Follower Density, FD	18.0	followers/mi/ln

Step 9: Determine Potential Adjustment to Follower Density

Effective Length of Upstream Passing Lane	1.00	mi
Distance Downstream from Start of Passing Lane Segment	1.63	mi
PF for Upstream Passing Lane Seg., PF	0.0	%
PF for Analysis Segment, PF	73.7	%
Length of Passing Lane Segment, PassLaneLength	0.00	mi
Flow Rate Entering for Analysis Segment	883	veh/h
% Improve to PF, %ImprovePF	0.0	%
% Improve to the Average Speed, %ImproveS	0.0	%
Adjusted Average Speed for Analysis Segment, S	36.1	mi/h
Adjusted Follower Density, FDadj	18.0	followers/mi/ln

Step 10: Determine LOS

Posted Speed Limit, Sp	35	mi/h
Follower Density, FD	18.0	followers/mi/ln
Level of Service, LOS	E	

TWO-LANE HIGHWAY SEGMENT ANALYSIS

File Name:	2040_PROJ_PM_Walnut.xuf
Analyst:

Speed, S	46.9	mi/h
Percent Followers, PF	82.3	%
Followers Density, FD	23.7	followers/mi/ln
Level of Service, LOS	E	

Step 1: Identify Facility Study Boundaries and Corresponding Segmentation

Segment Type	Passing Constrained	
Vertical Class	1	
Minimum Segment Length	0.25	mi
Maximum Segment Length	3.00	mi

Step 2: Determine Demand Flow Rates, Capacity, and d/c Ratio

Demand Volume in Analysis Direction, Vd	1226	veh/h
Demand Volume in Opposing Direction, Vo	-	veh/h
Peak Hour Factor, PHF	0.91	
Demand Flow Rate in Analysis Direction, vd	1347	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
d/c Ratio	0.79	

Step 3: Determine the Vertical Alignment Classification

Segment Length, L	3245	ft
Segment Percent Grade	0.00	%
Vertical Class	1	

Step 4: Determine the Free-Flow Speed

Posted Speed Limit, Sp	45	mi/h
Base Free-Flow Speed, BFFS	51.3	mi/h
Coeff. Value from Exhibit 15-12, a0	0.00000	
Coeff. Value from Exhibit 15-12, a1	0.00000	
Coeff. Value from Exhibit 15-12, a2	0.00000	
Coeff. Value from Exhibit 15-12, a3	0.00000	
Coeff. Value from Exhibit 15-12, a4	0.00000	

Coeff. Value from Exhibit 15-12, a5	0.00000	
Coeff. for Heavy Vehicle Adjustment, a	0.03330	
Percentage of Heavy Vehicles, %HV	3.00	%
Lane Width, LW	12	ft
Shoulder Width, SW	6	ft
Adjustment for Lane and Shoulder Width, fLS	0.0	mi/h
Access-Point Density, APD	3.0	access points/mi
Adjustment for Access-Point Density, fA	0.8	mi/h
Free-Flow Speed, FFS	50.5	mi/h

Step 5: Estimate the Average Speed

Vertical Class	1	
Free-Flow Speed, FFS	50.5	mi/h
Demand Flow Rate in Analysis Direction, vd	1347	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Segment Length, L	0.61	mi
Percentage of Heavy Vehicles	3.00	%

Step 5a: Calculate the Slope Coefficient

Coeff. for Speed-Flow Slope Model, b0	0.05580	
Coeff. for Speed-Flow Slope Model, b1	0.05420	
Coeff. for Speed-Flow Slope Model, b2	0.32780	
Coeff. for b3 Segment Length Coeff. Model, c0	0.10290	
Coeff. for b3 Segment Length Coeff. Model, c1	0.00000	
Coeff. for b3 Segment Length Coeff. Model, c2	0.00000	
Coeff. for b3 Segment Length Coeff. Model, c3	0.00000	
Coeff. for Speed-Flow Slope Model, b3	0.10290	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d0	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d1	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d2	0.00000	
Coeff. for b4 Heavy Vehicle Percentage Coeff. Model, d3	0.00000	
Coeff. for Speed-Flow Slope Model, b4	0.00000	
Coeff. for Speed-Flow Slope Model, b5	0.00000	
Slope Coefficient, m	3.27234	

Step 5b: Calculate the Slope Coefficient

Coeff. for Speed-Flow Slope Model, f0	0.67576	
Coeff. for Speed-Flow Slope Model, f1	0.00000	
Coeff. for Speed-Flow Slope Model, f2	0.00000	
Coeff. for Speed-Flow Slope Model, f3	0.12060	
Coeff. for Speed-Flow Slope Model, f4	-0.35919	
Coeff. for Speed-Flow Slope Model, f5	0.00000	
Coeff. for Speed-Flow Slope Model, f6	0.00000	
Coeff. for Speed-Flow Slope Model, f7	0.00000	
Coeff. for Speed-Flow Slope Model, f8	0.00000	
Power Coefficient, p	0.41674	

Step 5c: Calculate Average Speed for the Segment

Average Speed, S	46.9	mi/h

Average Speed, with consideration of horizontal curves, S	46.9	mi/h

Step 6: Estimate the Percent Followers

Segment Type	Passing Constrained	
Vertical Class	1	
Free-Flow Speed, FFS	50.5	mi/h
Demand Flow Rate in Analysis Direction, vd	1347	veh/h
Demand Flow Rate in Opposing Direction, vo	1500	veh/h
Directional Capacity, cap	1700	veh/h
Segment Length, L	0.61	mi
Percentage of Heavy Vehicles	3.00	%

Step 6a: Calculate Percent Followers at Capacity

Coeff. Value for Equation 15-18 or 15-19, b0	37.68080	
Coeff. Value for Equation 15-18 or 15-19, b1	3.05089	
Coeff. Value for Equation 15-18 or 15-19, b2	-7.90866	
Coeff. Value for Equation 15-18 or 15-19, b3	-0.94321	

Coeff. Value for Equation 15-18 or 15-19, b4	13.64266	
Coeff. Value for Equation 15-18 or 15-19, b5	-0.00050	
Coeff. Value for Equation 15-18 or 15-19, b6	-0.05500	
Coeff. Value for Equation 15-18 or 15-19, b7	7.13760	
Percent Followers at Capacity Flow Rate, PFcap	87.3	%

Step 6b: Calculate Percent Followers at 25% of Capacity

Coeff. Value for Equation 15-20 or 15-21, c0	18.01780	
Coeff. Value for Equation 15-20 or 15-21, c1	10.00000	
Coeff. Value for Equation 15-20 or 15-21, c2	-21.60000	
Coeff. Value for Equation 15-20 or 15-21, c3	-0.97853	
Coeff. Value for Equation 15-20 or 15-21, c4	12.05214	
Coeff. Value for Equation 15-20 or 15-21, c5	-0.00750	
Coeff. Value for Equation 15-20 or 15-21, c6	-0.06700	
Coeff. Value for Equation 15-20 or 15-21, c7	11.60410	
Percent Followers of 25% of Capacity Flow Rate, PF25cap	52.6	%

Step 6c: Calculate the Slope Coefficient

Coeff. Value for Equation 15-22, d1	-0.29764	
Coeff. Value for Equation 15-22, d2	-0.71917	
Slope Coefficient, m	-1.39396	

Step 6d: Calculate the Power Coefficient

Coeff. Value for Equation 15-23, e0	0.81165	
Coeff. Value for Equation 15-23, e1	0.37920	
Coeff. Value for Equation 15-23, e2	-0.49524	
Coeff. Value for Equation 15-23, e3	-2.11289	
Coeff. Value for Equation 15-23, e4	2.41146	
Power Coefficient, p	0.73198	

Step 6e: Calculate Percent Followers for the Segment

Percent Followers, PF	82.3	%

Step 7: Estimate Additional Performance Measure for Passing Lane

Step 8: Estimate Follower Density

Percent Followers, PF	82.3	%
Demand Flow Rate in Analysis Direction, vd	1347	veh/h
Average Speed, with consideration of horizontal curves, S	46.9	mi/h
Follower Density, FD	23.7	followers/mi/ln

Step 9: Determine Potential Adjustment to Follower Density

Effective Length of Upstream Passing Lane	1.00	mi
Distance Downstream from Start of Passing Lane Segment	0.61	mi
PF for Upstream Passing Lane Seg., PF	0.0	%
PF for Analysis Segment, PF	82.3	%
Length of Passing Lane Segment, PassLaneLength	0.00	mi
Flow Rate Entering for Analysis Segment	1347	veh/h
% Improve to PF, %ImprovePF	0.0	%
% Improve to the Average Speed, %ImproveS	0.0	%
Adjusted Average Speed for Analysis Segment, S	46.9	mi/h
Adjusted Follower Density, FDadj	23.7	followers/mi/ln

Step 10: Determine LOS

Posted Speed Limit, Sp	45	mi/h
Follower Density, FD	23.7	followers/mi/ln
Level of Service, LOS	E	

Appendix D

INTENTIONALLY LEFT BLANK

1 EXECUTIVE SUMMARY

The County of Contra Costa (the County) proposes to modify existing General and Land Use Compatibility Plan policies to accommodate modified land uses in accordance with the proposed Byron Airport Development Program (proposed project). Proposed modifications to Byron Airport (the Airport) include both aviation and non-aviation land uses, such as aviation hangars, maintenance and repair facilities, offices, and light industry. The proposed modifications require the preparation of this water supply assessment (WSA) in accordance with Senate Bill (SB) 610 because the proposed project is envisioned as having industrial uses (assumed to include logistics/ warehouse/distribution, aircraft storage, and aviation uses) of more than 40 acres in size and with more than 650,000 square feet of floor area. As required by SB 610, this WSA examines water supply and demand under existing conditions and with implementation of the proposed project. Identified water sources are evaluated under normal and dry conditions and as projected for 20 years, including existing and planned land uses.

The estimated construction water demand for the proposed project is 31 acre-feet (AF) spread out over a 10-year build-out period, equivalent to an average of 3.1 acre-feet per year (AFY). Operations and maintenance activities for the proposed project would require a water demand that would ramp up to approximately 36 AFY by the end of the 10-year build-out period. Because a definitive source of water for the proposed project has not yet been identified, three sources are examined as potential supplies: on-site groundwater, imported water from the Town of Discovery Bay (Discovery Bay), and additional imported water from the Byron–Bethany Irrigation District (BBID). On-site groundwater is determined to be the supply with the least potential as there is evidence of low yields and poor groundwater quality from existing wells. However, extraction of on-site groundwater may potentially be used to provide redundancy and backup for another supply. The Discovery Bay water supply is exclusively from groundwater and the analysis indicates that Discovery Bay could reliably support the proposed project currently and through the 20-year planning period. The BBID service area includes part of the proposed project and BBID supplies to the area are mainly surface water diverted from the State Water Project (SWP) facilities. The BBID supply would likely support the proposed project water demand through the planning period.

This WSA concludes that at the programmatic level of analysis, the proposed project would have sufficient water supplies available to serve its water demand under normal and dry conditions, including existing and planned land uses, over the 20-year projection period. As development under the proposed project proceeds, each of the potential supplies considered will require additional feasibility analysis to determine the actual potential for project implementation.

INTENTIONALLY LEFT BLANK

2 INTRODUCTION

2.1 Purpose of Document

SB 610 was passed on January 1, 2002, amending the California Water Code (CWC) to require detailed analysis of water supply availability for certain types of development projects, as specified in the legislation. The primary purpose of SB 610 is to improve the linkage between water and land use planning by ensuring greater communication between water providers and local planning agencies, and ensuring that land use decisions for specified large development projects are fully informed as to whether sufficient water supplies are available to meet project demands. SB 610 requires the preparation of a WSA for a project that is subject to the California Environmental Quality Act (CEQA) and that meets certain requirements. When a WSA is required per the CWC, it must examine the availability of an identified water supply under normal-year, single-dry-year, and multiple-dry-year conditions over a 20-year projection, accounting for the projected water demand of the proposed project in addition to other existing and planned future uses of the identified water supply.

The proposed Byron Airport Development Program (proposed project) has been determined to be subject to CEQA by the Contra Costa County Department of Conservation and Development, acting as lead agency. Following this determination, a public water system (PWS) is required to prove adequate water supply for the new project. The proposed project site is not located within the service area of a PWS. Therefore, this WSA will be included in the CEQA documentation and will be reviewed by the lead agency, which will make an independent determination as to whether there is adequate water supply for the proposed project. This WSA provides information on the proposed project's potential water supplies and provides data to evaluate the sufficiency of supply.

2.2 Project Description, Location, and Existing Resources

2.2.1 Project Background and Description

The County purchased the existing Byron Airpark and prepared an Airport Master Plan in the late 1980s. The County constructed a new airfield in the early 1990s and opened it to the public in 1994. In 2005, the County adopted a revised Airport Master Plan. The County proposes new and revised General Plan and Land Use Compatibility Plan policies consistent with economic development and enhanced operational growth of the airport. Proposed land uses include aviation-related uses such as hangar development and aircraft maintenance and repair, and non-aviation-related uses such as warehouses, offices, and light industry. The proposed project would allow for the implementation of these land uses and was determined by the County to require an

environmental impact report. As described in Section 2.3, Water Supply Assessment Applicability, the proposed project requires the preparation of this WSA.

2.2.2 Project Location

Byron Airport is located in the southeastern part of the County, approximately 2.5 miles south of the community of Byron (see Figure 1, Project Location). Approximately half (the eastern portion) of the project area is within the BBID, Byron Division. The Airport property consists of 1,307 acres on the western edge of the Sacramento–San Joaquin Delta (Delta) agricultural area. The Clifton Court Forebay is approximately 2 miles to the east, Bethany Reservoir approximately 3 miles to the south, and Los Vaqueros Reservoir about 5 miles to the west of the Airport. The Airport property is located at an elevation of 30 to 100 feet above mean sea level. About 814 acres to the west and south of the Airport is a designated wildlife preserve.

2.2.3 Existing Water Resources

Currently, Byron Airport extracts non-potable water from an on-site groundwater well and stores it in a 4,000-gallon water storage tank. BBID Canal 45 traverses the project area from northwest to southeast and passes along the north end of Runway 12/30. Water for fire suppression is pumped from an underground portion of the BBID canal into a 750,000-gallon capacity storage pond (Figure 2, Existing Airport Water Resources). There is currently no potable water supply source at the Airport. Instead, the Airport purchases bottled water for existing personnel and visitors (e.g., through 5-gallon dispensers).

2.3 Water Supply Assessment Applicability

SB 610 requires any proposed development that is subject to CEQA and defined as a "project" in accordance with the CWC, Section 10912, to prepare a WSA. The WSA must be prepared by the PWS, if there is one, or by the CEQA lead agency if there is no PWS. The WSA must be submitted to, and approved by, the lead agency.

Under the CWC, Section 10912, several project conditions require preparation of a WSA. According to the California Department of Water Resources (DWR) (2003), those with potential relevance to the proposed project include:

1. A proposed residential development of more than 500 dwelling units.
2. A proposed shopping center or business establishment employing more than 1,000 persons or having more than 500,000 square feet of floor space.

3. A proposed commercial office building employing more than 1,000 persons or having more than 250,000 square feet of floor space.
4. A proposed hotel or motel, or both, having more than 500 rooms.
5. A proposed industrial, manufacturing, or processing plant, or industrial park planned to house more than 1,000 persons, occupying more than 40 acres of land, or having more than 650,000 square feet of floor area.
6. A mixed-use project that includes one or more of the projects specified in this subdivision.
7. A project that would demand an amount of water equivalent to, or greater than, the amount of water required by a 500 dwelling unit project.

The proposed project requires preparation of a WSA in accordance with number 5 (see tables in Section 3.1, Construction Water Demand, for the proposed project land use categories).

The CWC, as amended by SB 610, requires that a WSA address the following questions:

- Is there a PWS that will service the project?
- Is there a current urban water management plan (UWMP) that accounts for the project demand?
- Is groundwater a component of the supplies for the project?
- Are there sufficient supplies to serve the project over the next 20 years?

SB 610 requires the evaluation of the adequacy of water supplies available during normal, single dry, and multiple dry water years during the 20-year projection period, including existing and future uses of the identified water supplies.

The following sections address the SB 610 WSA questions as they relate to the proposed project.

2.3.1 Public Water Systems and/or Local Water Agencies and Service Areas

The CWC, Section 10912, defines a "public water system" as a system that has 3,000 or more service connections and provides piped water to the public for human consumption. The proposed project site is not connected to a PWS. However, approximately half of the proposed project area is within the BBID service area, which supplies untreated water for agriculture and to the Community of Mountain House for domestic use. BBID also supplies untreated water to the Airport for fire suppression. Several water agencies or private water companies are located within an approximately 5-mile radius of the proposed project, including the Contra Costa Water District, South Delta Water Agency, Central Delta Water Agency, Mountain

House Community Services District (CSD), and Discovery Bay CSD (Figure 3, Water Agencies and Canals/Aqueducts) (DWR 2019a).

The site's water system is permitted as a transient non-community water system (Water System No. CA0706110), which means the water system regularly serves at least 25 non-residential (transient) individuals during 60 or more days per year (CA Drinking Water Watch 2016).

2.3.2 Urban Water Management Plan Coverage

UWMPs are prepared by California's urban water suppliers to support long-term resource planning and ensure adequate water supplies. Every urban water supplier that either delivers more than 3,000 AFY of water annually or serves more than 3,000 connections is required to assess the reliability of its water sources over a 20-year period under normal-year, dry-year, and multiple-dry-year scenarios. These are the same requirements as for a WSA, as specified by SB 610. UWMPs must be updated and submitted to DWR every 5 years for review and approval.

The proposed project is located partly within the BBID service area. As a supplier of more than 3,000 AFY of water for municipal and industrial purposes, BBID is required to prepare or adopt a UWMP. BBID has not prepared its own UWMP but has adopted those prepared for Mountain House CSD and the City of Tracy (Resolution 2017-6) and has prepared an Agricultural Water Management Plan (CH2M 2017). The proposed project is not within the any area addressed by a UWMP. However, the proposed project is located east of the Contra Costa Water District, south of Discovery Bay, and within the East Contra Costa County Integrated Water Management Plan Region (Region 7). Where appropriate, information from planning documents from these agencies has been used in the preparation of this WSA.

2.3.3 Groundwater as a Component of the Supplies for the Project

Groundwater extracted from the Tracy Subbasin of the San Joaquin Valley Groundwater Basin (DWR Basin No. 5-022.15) through an on-site groundwater well is the current source of Byron Airport's domestic water supply. Groundwater from this well is untreated and non-potable. Potential water sources for the proposed project include treatment of groundwater obtained from the existing or new on-site well(s) and/or importation of water from Discovery Bay, the source of which is groundwater extracted from the Tracy Subbasin. Therefore, groundwater is a potential source for the proposed project. Section 4.1.2, Groundwater, includes an analysis of the potential groundwater supply.

2.3.4 Sufficient Supplies to Serve the Project over the Next 20 Years

This WSA concludes that at the programmatic level of analysis, the proposed project would have sufficient water supplies available to serve its water demand under normal and dry conditions, including existing and planned land uses, over the 20-year projection period. As development under the proposed project proceeds, each of the potential supplies considered will require additional feasibility analysis to determine the actual potential for project implementation (see Chapter 4, Water Supply Assessment).

INTENTIONALLY LEFT BLANK

3 PROJECT WATER DEMAND

The proposed project would require about 31 AF of water to support construction over the 10-year build-out period. Thereafter, the project would require approximately 36 AFY to support operations and maintenance activities. The water demands for each phase of the proposed project are described in greater detail below.

3.1 Construction Water Demand

Construction details for the proposed project are not yet finalized; only building areas and land use acreage have been approximated. Therefore, this WSA makes broad assumptions regarding building type and schedule to estimate construction water demand. It is assumed that all construction acreage would require clearing, grubbing, grinding, and dust control and no areas would require filling and compacting. Buildings are assumed to be of the concrete tilt-up type, which are common for many uses including those planned for the proposed project (Exhibit 1). A single building is assumed to occupy the entire building area for each land use type. Building floors and walls are assumed (conservatively) to consist of 12-inch-thick concrete with non-concrete roofs. Note that for tilt-up buildings, wall thickness depends on panel height, loading, and other factors, with common thicknesses ranging from 3.9 to 10.4 inches (Glass 2000). All building walls are assumed to be 20 feet high.

Clearing, Grubbing, Grinding, and Dust Control

Table 1 lists the proposed project acreages associated with each planned land use. The total acreage assumed to be cleared and prepared for construction is 70 acres. The water required for land preparation is 24,204 gallons per acre (AECOM 2013). Therefore, the total estimated water demand for this phase of construction is 70 acres × 24,204 gallons per acre = 1,694,280 gallons (or 5.2 AF).

Building Construction

Slabs and walls of tilt-up buildings consist primarily of concrete (Exhibit 1). For estimating building construction water use, concrete preparation is assumed to require 202 gallons per cubic yard (CY) (AECOM 2013).

Exhibit 1: Typical Tilt-Up Construction

Tables 1 and 2 provide calculations of concrete volume and water required for each land use type given the assumptions described above. Table 2 indicates that the proposed project buildings would require an estimated 41,730 CY of concrete and 25.9 AF of water. Note that the proposed project build-out is estimated to be 10 years.

Table 1
Proposed Project Construction Estimated Concrete Volume

Land Use	Land Use Area (ac)	Building Area (sq ft)	Slab Volume (cf)[a]	Wall Volume (cf)[b]	Slab & Wall Volume Combined (cf)
Logistics/Warehouse/Distribution	21.0	274,000	274,000	41,876	315,876
Light Industry/Business Park	14.0	213,000	213,000	36,922	249,922
Office	4.7	81,000	81,000	22,768	103,768

Table 1
Proposed Project Construction Estimated Concrete Volume

Land Use	Land Use Area (ac)	Building Area (sq ft)	Slab Volume (cf)[a]	Wall Volume (cf)[b]	Slab & Wall Volume Combined (cf)
Commercial	7.0	91,000	91,000	24,133	115,133
Aircraft Storage	11.8	128,000	128,000	28,622	156,622
Aviation	11.8	154,000	154,000	31,394	185,394
Total	**70.3**	**941,000**	**941,000**	**185,715**	**1,126,715**

ac = acres; sq ft = square feet; cf = cubic feet.
[a] Slab volume is the floor area multiplied by 1 cubic foot thickness.
[b] Wall volume is the square root of the building floor area multiplied by an assumed 20-foot height and 1-foot wall thickness. This value is multiplied by 4 to account for each wall.

Table 2
Proposed Project Building Construction Estimated Water Demand

Land Use	Floor & Wall Volume Combined (CY)[a]	Construction Volume of Water (gal)[b]	Volume of Water (AF)
Logistics/Warehouse/Distribution	11,699	2,363,220	7.3
Light Industry/Business Park	9,256	1,869,783	5.7
Office	3,843	776,341	2.4
Commercial	4,264	861,365	2.6
Aircraft Storage	5,800	1,171,762	3.6
Aviation	6,866	1,387,023	4.3
Total	**41,730**	**8,429,496**	**25.9**

CY = cubic yards; gal = gallons; AF = acre-feet.
[a] Volumes are the cubic feet shown in the last column of Table 1 converted to cubic yards.
[b] Water volume required for tilt-up wall building construction was based on the volume assumed to be required for concrete preparation, which is 202 gal/CY; therefore, construction volume of water (gal) = floor and wall volume combined (CY) × 202 gal/CY.

Total Construction Phase Water Demand

The total estimated construction phase water demand for the proposed project is the sum of the site preparation (5.2 AF) and building construction water demand (25.9 AF), or about 31 AF. Project build-out is projected to take 10 years. Construction activities are assumed to occur at a steady rate throughout the build-out period, requiring about 3.1 AFY of water.

3.2 Operational Water Demand

Table 3 lists the proposed project land uses, building areas, and estimated water demand required for ongoing use of the proposed facilities.

Table 3
Proposed Project Operational Water Demand

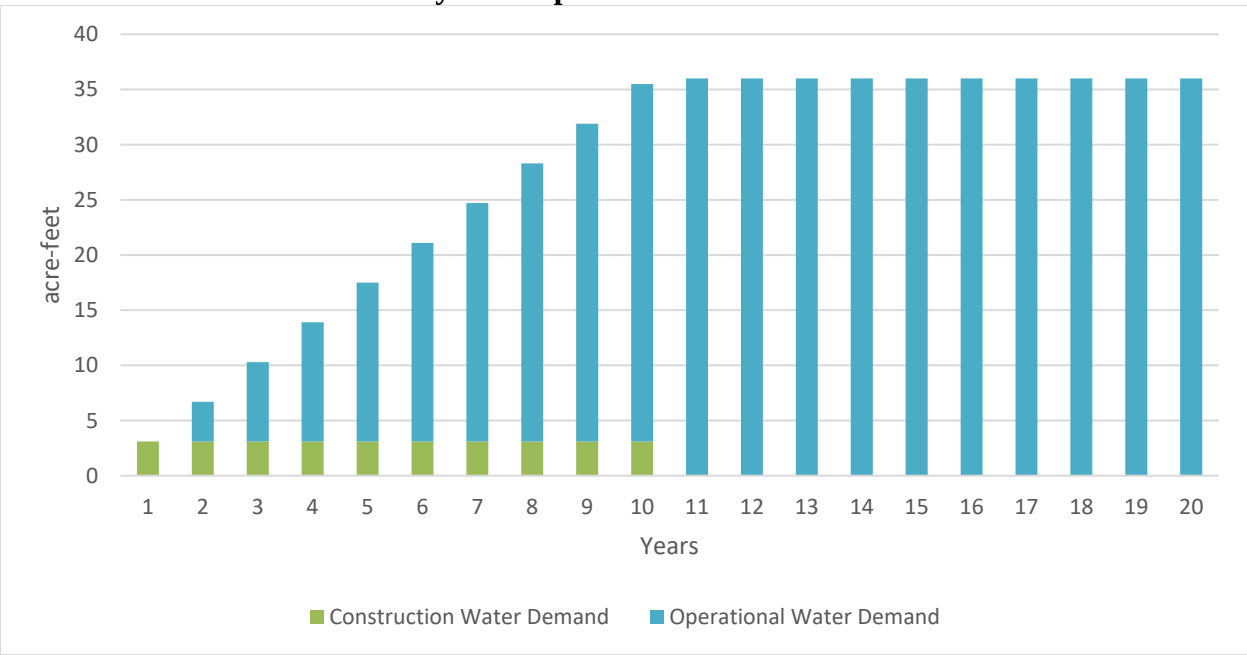
Land Use	Building Area (acres)	Land Use Category for Water Use Factor Determination	Water Use Factor (AF/acre/Yr)[a]	Total Water Demand (AFY)
Logistics/Warehouse/Distribution	6.3	Light Industrial	2.0	12.7
Light Industrial/Business Park	4.9	Light Industrial/Business Park	1.8	8.8
Office	1.9	Office	1.53	2.9
Commercial	2.0	Commercial	2.48	5.0
Aircraft Storage	2.9	Warehouse	0	0
Aviation	3.5	Light Industrial/Business Park	1.8	6.3
Total	**21.5**	**N/A**	**N/A**	**35.7**

Sources: VWD 2011, Table 2-3; CCWD 2007, Table A-2.
Notes: AF = acre-feet; yr = year; AFY = acre-feet per year; N/A = not applicable.
Light Industrial/Business Park Water Use = (Light Industrial Water Use Factor + Business Park Water Use Factor)/2.

3.3 Total Water Demand

The water demand is assumed to increase incrementally through the build-out period as structures are constructed and put into operation. The annual construction water demand is estimated to be 3.1 AFY and is included in calculations for the build-out period. It is anticipated that existing airport uses will continue after build-out and therefore that the existing water use would be in addition to that of the proposed project. However, there is currently no source of potable water and the on-site well yields less than 1 gallon per minute (gpm) (see Section 4.1.2.4, Groundwater as a Potential Project Water Source). Therefore, existing water use is considered negligible and unable to support the proposed development. Exhibit 2 illustrates the estimated water demand for the 20-year evaluation period.

Exhibit 2: Byron Airport Estimated Water Demand



INTENTIONALLY LEFT BLANK

4 WATER SUPPLY ASSESSMENT

A WSA is required to identify and describe the water supply sources in the PWS that will serve the proposed project. CWC, Section 10910(d), requires a WSA to include an identification of any existing water supply entitlements, water rights, or water service contracts relevant to the identified water supply for the proposed project, and a description of the quantities of water received in prior years by the PWS. Because the proposed project is not within the service area of any PWS, this WSA focuses on the potential sources for the project.

The current water sources for Byron Airport are not adequate to support the demand of the proposed project. Although specific water sources have not yet been secured for the proposed project, there are potential sources under consideration. These are as follows:

- On-site development and treatment of additional groundwater
- Importation of treated water from Discovery Bay
- Importation and on-site treatment of additional water from BBID

Note that the potential water sources are examined in general terms and will require additional feasibility analyses beyond that included in this WSA.

4.1 Water Resources

4.1.1 Surface Water

Surface water supplies within Contra Costa County include the SWP and the Central Valley Project (CVP), both of which originate from the Sacramento–San Joaquin Delta (Delta). Local reservoirs include the San Pablo and Briones Reservoirs in the west and Los Vaqueros Reservoir in the southeast part of the County. The northern County line bisects the Sacramento and San Joaquin Rivers. The proposed project is not within any water supplier service areas, except for being partially within that of BBID (Figure 3). Except during exceptional drought conditions, when some groundwater has been used, the BBID water supply consists only of surface water sources (see Section 4.1.3, Imported Water).

4.1.2 Groundwater

The Airport has historically used untreated, non-potable groundwater from an on-site well for its domestic supply. Potential proposed project supplies include extraction from additional on-site groundwater wells and importation of groundwater from the Discovery Bay CSD. The Discovery Bay water supply is exclusively from groundwater.

4.1.2.1 Hydrogeologic Setting

The proposed project is located within the San Joaquin River Hydrologic Region (Region 6), which includes approximately 15,200 square miles of Central California and all or part of Calaveras, Tuolumne, Mariposa, Madera, San Joaquin, Stanislaus, Merced, Amador, Alpine, Fresno, Alameda, Contra Costa, Sacramento, El Dorado, and San Benito Counties. Region 6 includes the northern and southern parts of the San Joaquin Valley and the Delta, respectively, and parts of the Sierra Nevada and the Diablo Mountain Range (DWR 2006).

The San Joaquin Valley is a sediment-filled depression bounded by the uplifted block of the Sierra Nevada Mountains to the east and the folded California Coastal Ranges to the west. The proposed project site is located at the western boundary of the Tracy Subbasin of the San Joaquin Valley Groundwater Basin (Figure 4, Hydrologic Areas). The Tracy Subbasin is about 540 square miles in area, bounded by the Diablo Mountain Range to the west and the San Joaquin Subbasin to the east. The southern end of the Tracy Subbasin is bounded by the San Joaquin–Stanislaus County line and the northern part of the Subbasin is bounded by the Mokelumne and San Joaquin Rivers. The Subbasin is drained by the San Joaquin River and Corral Hollow Creek. The San Joaquin River flows north to the Delta. Annual rainfall increases northward in the Subbasin from about 11 to 16 inches per year.

The Tracy Subbasin aquifers consist of late tertiary to quaternary age continental deposits ranging in thickness from about 300 feet in the west to about 3,000 feet in the east. Aquifer thickness beneath the proposed project site is likely about 300 feet, due its location near the western boundary of the Subbasin. Water-bearing formations within the Subbasin include the Tulare Formation, older alluvium, flood basin deposits, and younger alluvium (Figure 5, Geologic Map) (DWR 2006). Water wells within the Subbasin are reported to yield up to 3,000 gpm.

4.1.2.2 Groundwater Quality in the Tracy Subbasin

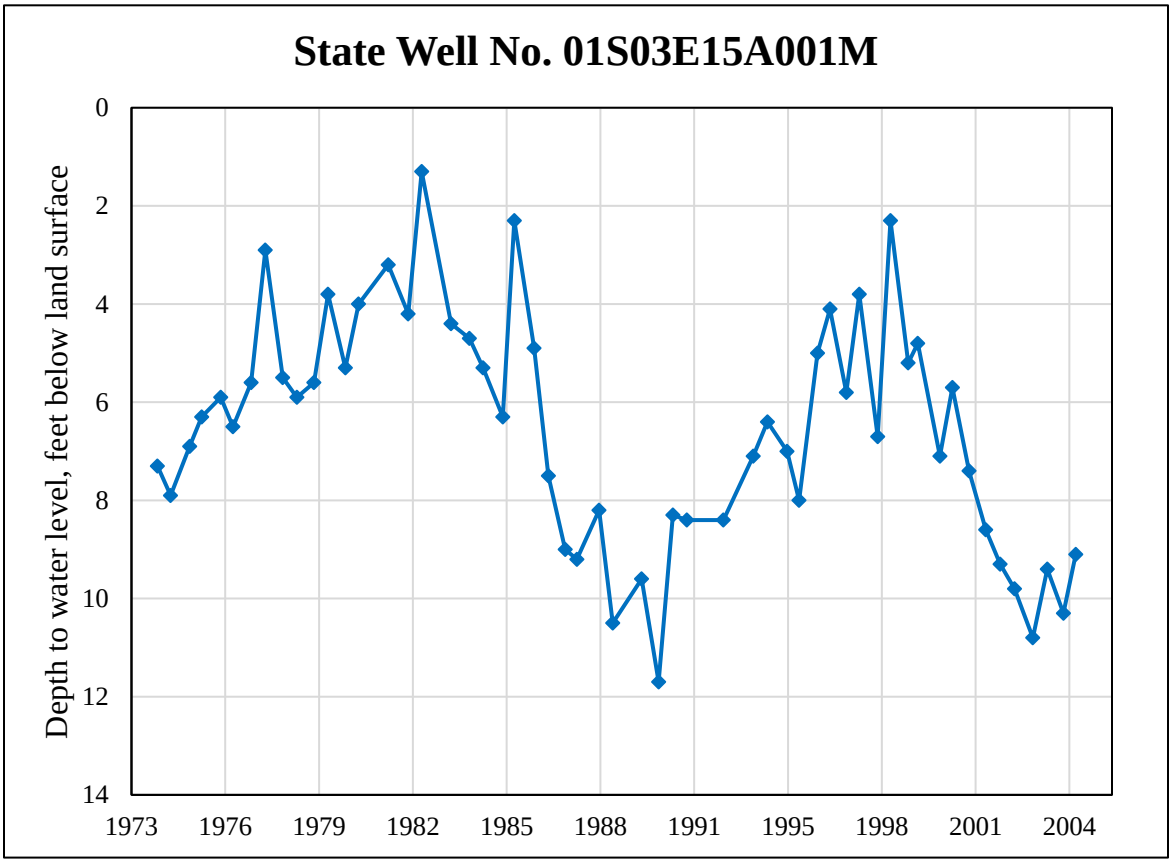
DWR evaluated groundwater quality for the 2014 basin prioritization process and noted "poor quality water throughout the subbasin" (DWR 2014). Total dissolved solids (TDS) concentrations in the Subbasin ranged from 210 to 7,800 milligrams per liter (mg/L) and averaged about 1,190 mg/L (the State Water Resources Control Board (SWRCB) secondary maximum contaminant level (MCL) standards for TDS in drinking water is 500 mg/L). Subbasin water quality impairments noted in DWR Bulletin 118 include elevated chloride in the west, elevated nitrate in the northwest, and elevated boron northwest of the City of Tracy (DWR 2006).

4.1.2.3 Groundwater Level Trends in the Tracy Subbasin

There are limited groundwater data for the Tracy Subbasin except in the south, proximate to the City of Tracy, and in the north, proximate to the Cities of Brentwood and Oakley. DWR reports relatively stable groundwater levels during the 10 years prior to 2006 (DWR 2006). Near the proposed project site, records from two off-site wells also indicate relatively stable groundwater elevations. Water levels from State Well No. 01S03E25M999M ranged from about 5 to 14 feet below ground surface (bgs) from July 2014 to March 2018, and those from State Well No. 01S03E15A001M ranged from about 2 to 12 feet bgs from October 1974 to March 2004 (DWR 2018). These wells are located about 1 mile east and 0.75 miles north of the project site, respectively.

Exhibit 3 shows historical water levels for State Well No. 01S03E15A001M. The data indicate declining water levels with the dry conditions of the late 1980s and recovery during the relatively wet period of the 1990s. Note that groundwater fluctuations may result from variations in seasonal rainfall, pumping patterns or intensity, irrigation return flow, and other factors.

Exhibit 3: U.S. Geological Survey Well Hydrograph (State Well No. 01S03E15A001M)



4.1.2.4 Groundwater as a Potential Project Water Source

DWR has designated the Tracy Subbasin as medium priority in accordance with the requirements of the Sustainable Groundwater Management Act (SGMA). SGMA requires all medium- and high-priority basins to be managed in accordance with a groundwater sustainability plan by January 31, 2022. Groundwater sustainability agencies (GSAs) formed in accordance with SGMA are responsible for complying with the requirements of SGMA.

In addition to requiring the sustainable management of priority California groundwater basins, the SGMA legislation states that nothing in the legislation "determines or alters surface water rights or groundwater rights under common law or any provisions of law that determines or grants surface water rights" (CWC, Section 10720.5(b)). California landowner rights include the right to use groundwater underlying their property for beneficial and non-wasteful use.

The west half of the proposed project area is located within the Contra Costa County GSA and the east half is within the jurisdiction of the BBID GSA (DWR 2019b). Per SGMA, these GSAs are responsible for coordinating with each other on issues of groundwater management. Note that, although nothing in SGMA allows for the alteration of existing groundwater rights, to achieve sustainable conditions within a groundwater basin the GSA may limit the construction of new wells or the amount of groundwater extracted.

The present Byron Airport domestic water supply is from a single on-site groundwater well. Groundwater from this well and additional on-site wells has been considered as a potential source of water for the proposed project. Data and information for the on-site and nearby groundwater wells provide an indication of the feasibility of on-site groundwater as a supply for the proposed project.

Constructed in 1994, the existing on-site well is 200 feet deep and screened through limited sand or sandy clay intervals (see Appendix A, Well Completion Report). Well test information from the time of drilling is unavailable, but in recent times, the well has been estimated to yield less than 1 gpm (Mead & Hunt 2013). Groundwater from the existing well contained about 13,000 mg/L TDS (Mead & Hunt 2013).

Despite greater yields documented throughout the Subbasin, data from wells in the vicinity of the proposed project site suggest very limited yield potential. Table 4 shows yields from groundwater wells located in the township/ranges surrounding the proposed project site.

Table 4
Yields from Nearby Wells

Township, Range, and Section	Year Completed	Well Depth (ft bgs)	Approximate Yield at the Time of Construction (gpm)	Well Type
01S03E16	1994	200	20	Test well
M01S03E23	2001	260	5	Domestic
M01S03E26	1986	250	5	Domestic
M01S03E22	1994	200	1[a]	Domestic

Source: USGS 2018.
Notes: ft bgs = feet below ground surface; gpm = gallons per minute.
[a] Yield estimate after 2010.

Based on the estimated water demand of the operational phase of the proposed project, extraction from one or multiple wells would have to support a continuous rate of about 22 gpm. If a yield of about 5 gpm is assumed for each well, then the proposed project would require four wells to meet the estimated demand. The use of the existing or additional storage tanks would provide greater flexibility to meet peak demand. However, yields from the Byron Airport well and surrounding wells have been documented to be low and it is unclear whether on-site wells could provide an adequate and reliable water supply for the proposed project.

In addition, groundwater quality within the Subbasin and at the proposed project location is known to be inadequate for potable uses. Groundwater supplies would need on-site treatment prior to use. Mead & Hunt (2013) describe the potential and cost for on-site water treatment using a packaged treatment plant. Additional hydrogeologic study consisting of on-site test borings, well tests, and water quality analysis would facilitate further evaluation of the feasibility of this option.

4.1.3 Imported Water

Byron Airport is located partially within the BBID service area and the Airport receives water from the BBID for fire suppression. BBID supplies untreated water for irrigation, municipal, and industrial uses within Alameda, Contra Costa, and San Joaquin Counties. It is a Special District with pre-1914 appropriative water rights and water from the CVP (CH2M 2017). BBID diverts water from the Harvey O. Banks Pumping Plant Intake Channel and the Delta Mendota Canal, primary facilities of the SWP and the CVP.

Per contract 14-06-200-785-LTR1 with the U.S. Bureau of Reclamation, BBID is allocated 20,600 AFY of CVP water. The contract acknowledges the variability of the CVP capacity and supply and references the availability of an average quantity of 13,555 AFY during the 5-year period

ending in 2004. The contract term ends February 28, 2030. In addition, a May 28, 2003, contract with DWR allows BBID to divert up to 50,000 AFY from the SWP (BBID 2017).

In 2015, SWRCB issued an order curtailing BBID water diversion from the Delta due to inadequate supply. BBID successfully defended their pre-1914 water rights in a lawsuit against SWRCB in which a Santa Clara County Superior Court ruled that SWRCB did not have jurisdiction over pre-1914 water rights and riparian water rights (Tracy Press 2018). With the drought-related curtailment of surface water supplies in 2015, BBID met system demand with groundwater and water transfers. Groundwater was pumped from the wells of private landowners for distribution by BBID.

Untreated water for fire protection at Byron Airport is imported from the BBID and stored on site in a lined 750,000-gallon storage pond. Additionally, a 96-inch-diameter pipe and emergency pump station is located southeast of the runway intersection and provides a supplemental supply for fire protection (Mead & Hunt 2013). There is no other source of imported water to the Airport.

4.1.3.1 Imported Byron–Bethany Irrigation District Water as a Potential Project Water Supply

BBID currently provides untreated water to Byron Airport for fire protection and has indicated the availability of additional year-round water supplies (Mead & Hunt 2013). BBID also supplies untreated water to the Mountain House CSD, located about 2 miles to the southeast of the Airport. The Mountain House CSD treats the water for potable uses.

Mead & Hunt (2013) describe two potential methods to convey water from the BBID system to the proposed project: via the existing irrigation canal or construction of a new pipeline. BBID Canal 45 traverses the north side of the Airport, and water could be diverted directly from it. Alternatively, a buried pipeline could be constructed from the existing BBID pump station at the California Aqueduct to the Airport, which is approximately 2 miles away. Due to complications related to the permitting of an open canal water supply, it is anticipated that the buried pipeline option would be preferable. The BBID pumping station currently supplies water to Mountain House CSD, and the pumping station capacity may need to be increased to accommodate the proposed project supply. Other required components of the BBID source would be a booster pump, storage tank, and a method of treating the water for potable uses (Mead & Hunt 2013). Additional water supply from the BBID to the proposed project would require additional feasibility analysis, including consideration of the cost and availability of the supply.

4.1.3.2 Imported Discovery Bay Community Services District Water as a Potential Project Water Supply

Another potential source of imported water is from the Discovery Bay CSD. The Town of Discovery Bay is an unincorporated community formed in 1998 that is about 5 miles north of Byron Airport. The Discovery Bay CSD provides treated water for about 16,000 residents and limited commercial and institutional uses. The Discovery Bay water supply is from six wells located in or near the town. The supply wells are screened to extract water from productive zones to a depth of about 350 feet bgs. Well testing indicates yields of up to 2,000 gpm, with water quality generally suitable, with treatment, for potable uses (L&S 2017). The Discovery Bay CSD is the exclusive GSA for SGMA implementation in the part of the Tracy Subbasin within its jurisdiction (DWR 2019b).

The 2012 Discovery Bay Water Master Plan did not contemplate a Byron Airport connection but indicated that existing facilities have the needed capacity for the proposed project (Mead & Hunt 2013). Additional facilities for implementation of this option include a tank, pipelines, and a water booster pump station. Outstanding questions of feasibility include an agreement with Discovery Bay CSD, County approval, and connection costs.

4.1.4 Recycled Water

There is no recycled water produced by, or used at, Byron Airport. Recycled water is not proposed as a water source for the proposed project.

4.2 Water Resources Plans and Programs

The proposed project site is not within any PWS jurisdiction. Approximately half of the proposed project area is within the BBID, Byron Division. Although not a PWS as defined by the CWC, Section 10912, which specifies supply for human consumption, BBID serves more than 3,000 AFY of water and is therefore required to adopt a UWMP. BBID has prepared an Agricultural Water Management Plan and has adopted the UWMPs from its municipal and industrial customers. Discovery Bay has prepared a UWMP.

4.3 Water Supply Sufficiency and Reliability

This WSA contemplates on-site groundwater, imported water from BBID, and imported groundwater from Discovery Bay as potential supplies for the proposed project. As noted, each potential source requires further analysis to determine the feasibility of implementation. The following sections examine each source in relation to the sufficiency and reliability of supply without consideration of implementation feasibility.

4.3.1 On-Site Groundwater Supply Sufficiency and Reliability

As noted in Section 4.1.2.4, the potential for groundwater extracted from on-site wells appears to be limited and a hydrogeologic investigation would be needed to more accurately evaluate the appropriate placement and number of wells. On-site groundwater could be developed in conjunction with more reliable sources to provide a backup supply in times of shortage or emergency. This might also allow for treatment of the groundwater using the facilities that will be required for the other potential water sources.

Relatively stable groundwater levels have been recorded near the proposed project site, and existing water rights would likely allow extraction of the required groundwater quantities. However, the SGMA implementation currently underway could result in the limitation of the number, location, and permitted extraction quantities of the wells. A final groundwater sustainability plan for the Tracy Subbasin is due January 31, 2022.

4.3.2 Discovery Bay Supply Sufficiency and Reliability

4.3.2.1 Discovery Bay Water Supply Sufficiency

The Discovery Bay water demand is primarily from residential customers, with smaller amounts of demand from commercial customers and non-residential landscaping. Table 5 lists existing (2015) and projected population estimates. Population estimates include data from the 2010 census and the number of houses constructed since 2010, along with build-out assumptions through 2040 (L&S 2017). Water demand was measured for 2015 and projected through 2040, assuming 200 gallons per day per person. The projected water demand is provided in Table 6.

Table 5
Discovery Bay Current and Projected Population

Groundwater	2,661	4,211	4,211	4,211	5,094	6,159

Source: L&S 2017.
Note: AF = acre-feet.

Discovery Bay obtains its entire water supply from groundwater wells. Historical records of groundwater levels indicate groundwater elevation near mean sea level (10 feet bgs) prior to significant development. Seasonal water level fluctuations of from 10 to 40 feet bgs were recorded with development of the area in the late 1900s. Groundwater level monitoring conducted by Discovery Bay CSD since the late 1980s indicates stable or rising groundwater levels since 2008, despite recent drought conditions. As noted by L&S, "The stability in groundwater levels in recent dry years indicates that groundwater pumpage is sustainable at current usage by the TODB [Town of Discovery Bay]" (L&S 2017).

4.3.2.2 Discovery Bay Water Supply Reliability

The Discovery Bay water supply is solely from groundwater wells. Therefore, impacts to Discovery Bay operations could occur from the SGMA process that is currently underway. However, impacts may be small or none may occur, depending on the stability of local water levels. In addition, SGMA will serve to enhance the sustainability of the Tracy Subbasin as a whole. Discovery Bay anticipates no water-supply-related projects at this time except for the construction of an additional water supply well. In 2019, the new well will be brought into service as a replacement for the existing Well 5A, which has yielded water of poor quality. It is anticipated that the replacement will not affect the overall groundwater availability to Discovery Bay CSD (L&S 2017).

In 2016, Discovery Bay CSD prepared a memorandum to comply with the 2016 California State Emergency Drought Regulations. The memorandum concluded that there were no restrictions to Discovery Bay CSD meeting current and projected demand. Similarly, the existing wells, with the exception of Well 5A (which is scheduled for replacement), are able to meet projected demands (L&S 2016).

4.3.2.3 Discovery Bay Water Supply Quality

The Discovery Bay groundwater supply meets all California primary drinking water standards. Groundwater is treated to bring manganese concentrations to levels that are below applicable standards. TDS concentrations from groundwater wells monitored from the mid-1980s through 2012 have generally been stable at 500 to 600 mg/L. Brackish or saline groundwater has been identified in an aquifer that is shallower than the Discovery Bay water supply aquifer. Discovery Bay constructs wells in such as way as to prevent excessive corrosion or cross-contamination from this aquifer (L&S 2017).

4.3.2.4 Discovery Bay Water Supply Reliability by Year Type

SB 610 includes the evaluation of the adequacy of water supplies available during normal, single dry, and multiple dry water years during the 20-year projection period, including existing and

future uses of the identified water supplies. The 2015 Discovery Bay UWMP determined the average or normal water year to be that with the highest water production of record (4,075 AF in 2008) and the dry years were based on the 2012 to 2015 drought years. Table 7 provides the classifications of water years and the specific periods used in the analysis.

Table 7
Discovery Bay Normal and Dry Year Classifications and Water Availability

Classification of Water Years	Period (Years)	Volume Available (AF)	% of Average Supply Available
Average year	2008	4,075	100
Single dry year	2007	4,075	100
Two consecutive dry years	2012–2013	4,075	100
Three consecutive dry years	2012–2014	4,075	100
Multiple dry years	2012–2015	4,075	100

Source: L&S 2017.
Notes: AF = acre-feet.

Table 8 provides an evaluation of projected supply and demand using the water year classifications from Table 7. Note that the total available supply is assumed as the operation of all existing wells for 12 hours per day on a continuous basis. The existing wells are designed to operate in this way.

Table 8
Discovery Bay Projected Supply/Demand Comparison (AF)

	2020	2025	2030	2035	2040
Total available supply for each type of year	7,672	7,672	7,672	7,672	7,672
Normal-year demand	4,201	4,201	4,201	5,067	6,116
Normal-year supply surplus/shortage	3,471	3,471	3,471	2,605	1,556
Single-dry-year demand	4,201	4,201	4,201	5,067	6,116
Single-dry-year supply surplus/shortage	3,471	3,471	3,471	2,605	1,556
Multiple-dry-year demand (3 years)	4,201	4,201	4,201	5,067	6,116
Multiple-dry-year demand for each of 3 years	3,471	3,471	3,471	2,605	1,556

Source: L&S 2017.
Note: AF = acre-feet.

Table 8 indicates that the Discovery Bay supply will exceed demand under normal-year, single-dry-year, and multiple-dry-year scenarios through 2040.

In addition to the availability of groundwater, Discovery Bay has implemented plans and programs that contribute to water supply reliability. In accordance with the requirements of CWC, Section 10632, Discovery Bay has developed a water shortage contingency plan consisting of a progressive four-stage response strategy for shortages of up to 50% of supply. Stages from least to most severe include public information and voluntary water conservation, mandatory water conservation, new water use prohibition and water consumption reduction ordinances, and water rationing. Related actions include end use restrictions and enforcement penalties and charges.

In addition, Discovery Bay has in place a program of comprehensive demand management measures. A 2014 ordinance prohibits water waste and imposes fees in certain circumstances. A program to meter all residential, commercial, and landscape accounts began in 2008, and is scheduled for completion in 2024. A conservation rate structure was planned for implementation with the completion of the metering program (L&S 2017). In addition, Discovery Bay has implemented a public education and outreach program for water conservation that includes newsletters, school programs and fairs, and residential water audits.

4.3.2.5 Discovery Bay Ability to Supply the Proposed Project

Table 9 demonstrates the ability of the Discovery Bay supply to fulfill the estimated proposed project demand in addition to Discovery Bay existing and forecasted demands. As indicated in Table 9, there is a substantial water surplus throughout the planning period.

Table 9
Current and Projected Water Supply/Demand Comparison
Source – Discovery Bay

Water Sources	Actual (AF)	Projected (AF)				
	2015	*2020*	*2025*	*2030*	*2035*	*2040*

Note: AF = acre-feet.

4.3.3 Byron–Bethany Irrigation District Supply Sufficiency and Reliability

4.3.3.1 Byron–Bethany Irrigation District Water Supply Sufficiency

BBID has adopted the UWMPs of its municipal and industrial customers as an alternative to preparing one of its own. As described in Section 4.1.3, the BBID supplies are primarily from Pre-1914 water rights and diversions from SWP and CVP facilities. Full contract amounts are 50,000 AFY and 20,600 AFY from the SWP and CVP, respectively. Byron Airport is within the Byron Division of the BBID service area and would therefore receive water only in accordance with pre-1914 water rights from the SWP. Therefore, the sufficiency and reliability of that supply is considered herein.

The BBID supply is primarily dictated by crop demand, which is in turn related to climate. Municipal and industrial demand within the Byron and Bethany Divisions of BBID are a small percentage of the total water demand (Table 10). Therefore, the BBID supply is largely a function of demand, with water sufficiency normally adequate. From a historical and water rights perspective, there is adequate water supply to meet all of the BBID water demand.

Table 10
Byron–Bethany Irrigation District Water Demand (AF)

Source	2013	2014	2015
Crop water use	21,970	24,321	17,065
Conveyance losses	1,005	1,005	1,005
Municipal and industrial	3,868	3,330	2,937
Total	**26,842**	**28,656**	**21,007**

Source: L&S 2017.
Notes: AF = acre-feet.

Table 11 lists the BBID surface water pre-1914 supplies for 2013 through 2015. The quantities shown are those available to the Byron and Bethany Divisions only. Note that each of these years was during drought conditions.

Table 11
Byron–Bethany Irrigation District Water Supply (AF)

Source	2013	2014	2015
Pre-1914 Rights	29,241	30,325	18,625
Groundwater	0	0	510
Water Transfers	0	0	2,224

Table 11
Byron–Bethany Irrigation District Water Supply (AF)

Source	2013	2014	2015
Total	29,241	30,325	21,359

Source: L&S 2017.
Notes: AF = acre-feet.

4.3.3.2 Byron–Bethany Irrigation District Water Supply Reliability

BBID's pre-1914 water rights water is diverted from the Harvey O. Banks Pumping Plant, which is operated in accordance with the 2003 agreement between BBID and DWR (DWR and BBID 2003). There has never been a shortage in this source until June 2015, when SWRCB issued a curtailment notice due to drought conditions (see Section 4.1.3). However, because of legal proceedings, the curtailment did not stand, and subsequent legislation resulting from the legal action serves to further protect water rights holders from unwarranted curtailment (as per Assembly Bill 747). Although aspects of the case are ongoing, the outcomes in the initial phases assist the sufficiency and reliability of the BBID pre-1914 water. The preponderance of water supply that is available to BBID for the Bethany Division demand is from the SWP. In addition to the reliability afforded by the recent legal action described above, the pre-2014 water rights supply to BBID may be considered very reliable due to the seniority of BBID water rights and the location of BBID diversion facilities within the Delta system (L&S 2017).

BBID water demand includes that from the Community of Mountain House and the City of Tracy, each of which has identified BBID pre-1914 water rights supply as being sufficient and reliable through the build-out period. The WSA prepared for the Tracy Hills Specific Plan indicates 100% supply availability to that project in normal years and 90% availability in single and multiple dry years (West Yost 2014). The 2016 Municipal Service Review and Sphere of Influence Plan for Mountain House CSD also concludes, "The pre-1914 right provides an adequate, reliable water supply for the community of Mountain House now and at buildout" (MHCSD 2016). This, in addition to the previous implementation of high-efficiency irrigation techniques and reliability measures for agriculture throughout the agricultural sector of the BBID service area, indicates a high probability of sufficient BBID water supply for the proposed project in the near term and throughout the planning period.

BBID has implemented other reliability measures. Since 2001, BBID has been investigating the feasibility of recycled water use to diversify its water supplies. The majority of agricultural growers in the BBID service area have implemented drip or micro-spray irrigation systems. BBID has an ongoing program of infrastructure improvement to increase efficiency and prevent waste, such as lining canals to reduce seepage. In addition, BBID has designated a water conservation coordinator (CH2M 2017).

4.3.3.3 Byron–Bethany Irrigation District Water Supply Quality

The vast majority of water supplied by DWR to its Byron Division is diverted from the intake channel of the Harvey O. Banks Pumping Plant. Water from this source is generally of good quality and without restriction for agricultural or urban uses. Groundwater extracted from within BBID's jurisdiction has rarely been used by BBID as a supply and has historically been of poor quality.

4.3.3.4 Byron–Bethany Irrigation District Water Supply Reliability by Year Type

Supply reliability by year classification under projected demand conditions is unavailable due to the lack of a BBID-specific UWMP. However, the 2017 BBID Agricultural Water Management Plan evaluates water supply and demand during 2013 through 2015, a period categorized as critically dry by the DWR California Data Exchange Center (DWR 2019c). Therefore, it represents a conservative evaluation of water supply reliability. With consideration of the outcome of the legal action concerning BBID water rights, the supply reliability for this multiple-dry-year period may be considered good (Tables 10 and 11).

4.3.3.5 Byron–Bethany Irrigation District Ability to Supply the Proposed Project

Table 12 compares BBID supply and demand for historical drought years. The table indicates that for each year, there would have been adequate supply for the BBID and proposed project estimated demand. Recent litigation has served to increase the likelihood of adequate future supplies for the proposed project.

Table 12
Byron–Bethany Irrigation District Historical Drought Year
Water Supply and Demand Comparison

Water Sources	Projected (AF)		
	2013	*2014*	*2015*
Demand			
Byron–Bethany Irrigation District	26,842	28,656	21,007

Source: L&S 2017.
Notes: AF = acre-feet.
Agriculture estimates are based on crop water demand.

5 CONCLUSIONS

Included in this WSA is an estimate of water demand for build-out and operation of the Byron Airport Development Program. Definitive water supply sources have not yet been secured for the proposed project, but three potential sources have been evaluated in regard to their ability to supply the proposed project. These are extraction of additional on-site groundwater, importation of Discovery Bay groundwater supplies, and importation of water from BBID in accordance with pre-1914 water rights.

On-site wells may not provide an adequate water supply due to low yields and poor groundwater quality at the site. This source may be considered as a backup or emergency supply. The sufficiency and reliability of BBID, Byron Division, water supply is examined based on the UWMPs of its municipal and industrial customers, water supply agreements, and previously implemented conservation measures. Both the Discovery Bay and BBID potential water sources would provide adequate supply for the proposed project construction and operational phases, including planned development of those sources, throughout the projected 20-year planning period. These potential water sources require additional study and vetting to confirm their availability and feasibility.
