# 1.0 INTRODUCTION

This report documents the results of an Energy Assessment completed for the Center Park Specific Plan Project (Project). The purpose of this Energy Assessment is to evaluate the potential construction and operational energy consumption associated with the Project and determine the level of impact the Project would have on the environment. A comparative analysis has been undertaken to determine whether the Project would result in any new or substantially more severe significant environmental impacts as compared to the conclusions discussed in The Ontario Plan (TOP) 2050, certified Final Supplemental Environmental Impact Report (FSEIR), pursuant to the California Environmental Quality Act (CEQA) Guidelines Section 15183 (Projects Consistent with a Community Plan, General Plan, or Zoning). Applicable mitigation measures from the FSEIR have been incorporated into this analysis.

## 1.1 Project Location

The Project site is comprised of 29 parcels totaling 257.34 acres within Ontario Ranch, City of Ontario (City), San Bernardino County (County), California; see **Figure 1: Regional Location Map.** The Assessor Parcel Numbers (APNs) comprising the Project site are 1053-301-01, -02; 1053-311-01, -02; 1053-321-01, -02, -03; 1053 331 01, 02, -03, -04; 1053-341-01, -02; 1053-351-01, -02; 1053-361-01, -02, -03; 1053-371-01, -02; 0216-311-01, -02, -09; 0216-321-03, -08; 0216-322-03, -04, -10; see **Figure 2: Project Site Assessor Parcel Numbers**. The Project site is bounded by a Southern California Edison (SCE) Easement to the north, Walker Avenue to the east, Eucalyptus Avenue to the south, and Campus Avenue to the west; see **Figure 3: Local Vicinity Map**. Land uses surrounding the Project site include a nursery, crop farms, rural residential uses, and dairy farm operations.

Regional access to the Project site is provided by State Route 60 (SR-60) located approximately 2.1 miles to the north, Interstate 15 (I-15) located approximately 4.0 miles to the east, State Route 71 (SR-71), which connects to State Route 91 (SR-91) to the south, located approximately 3.5 miles to the southwest, and Euclid Avenue, which connects SR-71, SR-60, and Interstate 10 (I-10) to the north, located approximately 0.8 mile to the west.

TOP 2050 designates the Project site land use as Medium Density Residential (MDR), Mixed-Use – Great Park (MU – Great Park), Open Space – Recreation (OS – R), and Open Space – Non-Recreation (OS – NR); see **Figure 4: Existing Land Use and Zoning**. The MDR designation permits single-family and multi-family residential uses. The MU – Great Park designation permits commercial, office, and multi-family residential uses. The OS – R designation permits recreational uses. The OS – NR designation permits utility easements and drainage channels and prohibits building development. TOP 2050 zones the Project site as Specific Plan (SP) with an Agriculture (AG) and Chino Airport (CNO) Overlay zoning overlay. The AG overlay requires a transition buffer area between the existing agricultural uses and the proposed urban uses. In addition, the Project site areas designated MDR or MU – Great Park have an Affordable Housing (AH) zoning overlay to increase affordable housing opportunities in compliance with the City's Housing Element and State Housing Element law.

## 1.2 Project Description

The proposed SP would implement the TOP 2050 vision, establish development standards and

procedures, become the governing zoning standards for the Project site, permit a maximum of 802 single-family dwelling units (DUs), 3,491 multi-family DUs, 250,920 square feet (SF) of commercial space, 55.98 acres of recreational open space, and 11.28 acres of non-recreational open space. The Project site is currently developed by ruderal vegetation, rural residences, and agricultural uses such as livestock raising, field crop farming, and dairy farm operations. The Project would remove all on-site uses and improvements to implement the proposed Project.

The proposed SP would divide the Project site into 22 planning areas (PAs); see **Figure 5: Land Use Plan**. The Project site land use designations would remain consistent with TOP 2050. The proposed SP would serve as the Project site zoning designation, consistent with TOP 2050. The Project would be classified as a Tier 2 affordable housing project, which designates at least 25 percent of the DUs as affordable housing. The Project would be developed in two phases; see **Figure 6: Project Phasing Plan**. Phase I would be developed by the private Applicant. Phase II would be dedicated to the City and would be developed at an unknown, later date following Phase I. This analysis conservatively evaluates the maximum Project development potential, with Phase II being evaluated at the programmatic level.

Phase I

Phase I would develop 256 single-family DUs, 768 multi-family DUs, 19.64 acres of recreational open space, and 3.38 acres of non-recreational open space within PAs 6, 12, 13, 17, 18, and 22; see **Table 1: Maximum Phase I Buildout**. The recreational open space would be designated as part of the City's Grand Park, a planned regional park within the Ontario Ranch area. The developer would construct the recreational open space in accordance with the City's Recreation and Parks Master Plan. The Applicant would submit a Development Plan and Tentative Parcel Map for the Phase I Project site following Project approval. Phase I is anticipated to begin construction as early as 2025 and be operational as early as 2029. For purposes of this analysis, it is conservatively assumed that Phase I would be operational as soon as construction is completed in 2027. This is a worst-case assumption as Phase I occupancy would be dependent on market conditions and permit approvals.

**Table 1: Maximum Phase I Buildout**

| Planning Area | Land Use | TOP 2050 Acreage (AC) | Maximum Residential Density (DU/AC)[1] | Maximum Residential (DU) |
|---|---|---|---|---|
| 6 | MDR | 7.33 | -- | 161 |
| 12 | MDR | 15.46 | 22.0 | 340 |
| 13 | MDR | 23.75 | 22.0 | 523 |
| 17 | OS – R | 6.20 | -- | -- |
| 18 | OS – R | 13.44 | -- | -- |
| 22 | OS – NR | 3.38 | -- | -- |
| | **Phase I Total** | **69.56** | **--** | **1,024** |

AC = acres; DU/AC = dwelling units/ acre; DU = dwelling unit; SF = square feet; MDR = Medium Density Residential; OS – R = Open Space – Recreation; and OS – NR = Open Space – Non-Recreation
1. Maximum residential density per The Ontario Plan 2050, Final Supplemental Environmental Impact Report.

Phase II

Phase II would develop 546 single-family DUs, 2,723 multi-family DUs, 250,920 SF of commercial space, 36.34 acres of recreational open space, and 7.9 acres of non-recreational open space

Kimley»Horn

within PAs 1 through 5, 7 through 11, 14 through 16, and 19 through 2; see **Table 2: Maximum Phase II Buildout**. The recreational open space would be designated as part of the City's Grand Park, a planned regional park within the Ontario Ranch area. The developer would construct the recreational open space in accordance with the City's Recreation and Parks Master Plan. For construction phasing purposes, Phase II is anticipated to begin construction as early as 2026 and be operational as early as 2034. It is conservatively assumed that Phase II would be operational as soon as construction is completed in 2030. This is a worst-case assumption as Phase II construction and occupancy would be dependent on market conditions and permit approvals.

**Table 2: Maximum Phase II Buildout**

| Planning Area | Land Use | TOP 2050 Acreage (AC) | Maximum Residential Density (DU/AC)[1] | Maximum Residential (DU) | Maximum Retail (SF) | Maximum Office (SF) |
|---|---|---|---|---|---|---|
| 1 | MDR | 15.91 | 22.0 | 350 | -- | -- |
| 2 | MDR | 15.57 | 22.0 | 343 | -- | -- |
| 3 | MDR | 7.70 | 22.0 | 169 | -- | -- |
| 4 | MU – Residential | 4.99 | 35.0 | 175 | -- | -- |
| 4 | MU – Retail | 1.43 | -- | -- | 18,635 | -- |
| 4 | MU – Office | 0.71 | -- | -- | -- | 21,741 |
| 5 | MU – Residential | 5.19 | 35.0 | 182 | -- | -- |
| 5 | MU – Retail | 1.48 | -- | -- | 19,367 | -- |
| 5 | MU – Office | 0.74 | -- | -- | -- | 22,595 |
| 7 | MDR | 23.67 | 22.0 | 521 | -- | -- |

| 9 | MDR | 12.18 | 22.0 | 268 | -- | -- |
| 10 | MU - Residential | 9.87 | 35.0 | 345 | -- | -- |
| 10 | MU – Retail | 2.82 | -- | -- | 36,852 | -- |
| 10 | MU – Office | 1.41 | -- | -- | -- | 42,994 |
| 11 | MU – Residential | 10.97 | 35.0 | 384 | -- | -- |
| 11 | MU – Retail | 3.13 | -- | -- | 40,955 | -- |
| 11 | MU – Office | 1.57 | -- | -- | -- | 47,781 |
| 14 | OS – R | 13.33 | -- | -- | -- | -- |
| 15 | OS – R | 13.11 | -- | -- | -- | -- |
| 16 | OS – R | 9.90 | -- | -- | -- | -- |
| 19 | OS – NR | 2.26 | -- | -- | -- | -- |
| 20 | OS – NR | 2.68 | -- | -- | -- | -- |
| 21 | OS – NR | 2.96 | -- | -- | -- | -- |
| | **Phase II Total** | **187.79** | **--** | **3,269** | **115,809** | **135,111** |

AC = acres; DU/AC = dwelling units/ acre; DU = dwelling unit; SF = square feet; MDR = Medium Density Residential; MU = Mixed-Use; OS – R = Open Space – Recreation; OS – NR = Open Space – Non-Recreation
1. Maximum residential density per The Ontario Plan 2050, Final Supplemental Environmental Impact Report.

Circulation

The Project would include a Circulation Plan to facilitate the movement of vehicles, pedestrians, and cyclists within the Project area. Local access to the Project site would be provided via Campus Avenue, Bon View Avenue, Cucamonga Avenue, Grove Avenue, Parco Avenue, Walker Avenue, and Edison Avenue/Ontario Ranch Road. Pedestrian circulation would be provided throughout the Project area via a paved sidewalk system that would interconnect with the roadway right-of-way. TOP 2050 proposed Class II bicycle lanes transversing in a north/south direction along the west

side of Walker Avenue. The City's Recreation and Parks Master Plan proposed Class I bicycle lanes transversing in an east/west direction along the Project site's southern property line. The Project would be connected to off-site areas through the City's master planned multipurpose trails/bikeways located along the neighborhood edges of the Project site. An Omnitrans Bus Rapid Transit (BRT) Corridor is proposed along Edison Avenue/Ontario Ranch Road as a part of future development.

On-site and Off-site Improvements

Roadway and utility infrastructure improvements (i.e., storm drains, sewer, potable water, recycled water, fiber optics, and underground electricity) would be constructed prior to the issuance of building occupancy permits. The developer would construct the improvements in accordance with the City's Master Plans, City's Ordinances, and proposed Specific Plan provisions or with the City Engineer's approval. Phasing and construction of the improvements would be determined by the City Engineer and Project requirements.

The Project would include landscaping along roadway frontages and between the pedestrian sidewalk and roadway. Landscaping would be developed in accordance with the City's development code and proposed Specific Plan provisions. Landscape and Construction Irrigation Documentation Plans would be submitted to the City prior to the issuance of building permits. The Project would comply with City Ordinance 2689, which requires the use of recycled water for all approved uses, including but not limited to landscape irrigation.

# 2.0 ENVIRONMENTAL SETTING

## 2.1 Energy Conservation

In 1975, largely in response to the oil crisis of the 1970s, the California State Legislature adopted Assembly Bill (AB) 1575, which created the California Energy Commission (CEC). The statutory mission of the CEC is to forecast future energy needs, license thermal power plants of 50 megawatts or larger, develop energy technologies and renewable energy resources, plan for and direct State responses to energy emergencies, and promote energy efficiency through the adoption and enforcement of appliance and building energy efficiency standards. AB 1575 also amended Public Resources Code Section 21100 to require Environmental Impact Reports (EIRs) to consider the consumption of energy caused by a project. Thereafter, the State Resources Agency created Appendix F, *Energy Conservation*, in the CEQA Guidelines. CEQA Guidelines Appendix F is an advisory document that assists EIR preparers in determining whether a project will result in the inefficient, wasteful, and unnecessary consumption of energy.

In addition, the California Natural Resources Agency finalized updates to the CEQA Guidelines in December 2018. CEQA Guidelines Section 15126.2(b) requires mitigation for "significant environmental effects due to wasteful, inefficient, or unnecessary" energy consumption as a significant environmental impact. As a result, energy thresholds have been incorporated into Appendix G of the CEQA Guidelines. This report has been prepared to assess energy impacts in accordance with Appendix G of the CEQA Guidelines.

## 2.2 Energy Consumption

Energy consumption is analyzed in this technical assessment due to the potential direct and indirect environmental impacts associated with the Project. Such impacts include the depletion of nonrenewable resources and emissions of pollutants from Project construction and operations.

Energy consumption is typically quantified using the British Thermal Unit (BTU). The total energy usage in California was 6,822.4 trillion BTUs in 2022 (the most recent year for which this specific data is available).[1] Of California's total energy usage, the breakdown by sector is 43 percent transportation, 22 percent industrial, 17 percent commercial, and 18 percent residential.[2] Electricity and natural gas in California are generally consumed by stationary users such as residences, and commercial, and industrial facilities, whereas petroleum consumption is generally accounted for by transportation-related energy use.

### Electricity

Southern California Edison (SCE) provides electrical services to the City through State-regulated public utility contracts. Over the past 15 years, electricity generation in California has undergone a transition. California has historically relied heavily on oil- and gas-fired plants to generate electricity. Spurred by regulatory measures and tax incentives, California's electrical system has become more reliant on renewable energy sources; including cogeneration, wind energy, solar

[1] U.S. Energy Information Administration, *Table F35: Total energy consumption, price, and expenditure estimates, 2024,* https://www.eia.gov/state/seds/data.php?incfile=/state/seds/sep_fuel/html/fuel_te.html&sid=CA, accessed January 2025.

[2] U.S. Energy Information Administration, *California State Energy Profile, 2025, https://www.eia.gov/state/print.php?sid=CA*, accessed January 2025.

energy, geothermal energy, biomass conversion, transformation plants, and small hydroelectric plants. Unlike petroleum production, electricity generation is not usually tied to the location of the fuel source and can be delivered great distances via the electrical grid. The generating capacity of a unit of electricity is expressed in megawatts (MW). Net generation refers to the gross amount of energy produced by a unit minus the amount of energy the unit consumes. Electrical consumption is typically measured in megawatt-hours (MWh), kilowatt-hours (kWh), or gigawatt-hours (GWh).

**Table 3: Electricity Consumption in San Bernardino County 2012 - 2022** shows the electricity consumption attributable to the County steadily increased by 16 percent from 2012 to 2022.

**Table 3: Electricity Consumption in San Bernardino County 2012 - 2022**

| Year | Total Electricity Consumption (Million Kilowatt-Hours) |
|---|---|
| 2012 | 14,308 |
| 2013 | 14,315 |
| 2014 | 14,680 |
| 2015 | 14,685 |
| 2016 | 14,902 |
| 2017 | 15,237 |
| 2018 | 15,326 |
| 2019 | 15,259 |
| 2020 | 15,910 |
| 2021 | 16,169 |
| 2022 | 16,630 |

Source: California Energy Commission, *Electricity Consumption by County*, http://www.ecdms.energy.ca.gov/, accessed January 2025.

### Natural Gas

Southern California Gas Company (SoCalGas) provides natural gas services to the City. Natural gas is a hydrocarbon fuel found in reservoirs beneath the Earth's surface and primarily composed of methane ($CH_4$). It is used for space and water heating, process heating and electricity generation, and as transportation fuel. Use of natural gas to generate electricity is expected to increase in coming years because it is a relatively clean alternative to other fossil fuels (e.g., oil and coal). In California and throughout the western United States, many new electrical generation plants fired by natural gas are being brought online. Thus, there is great interest in importing liquefied natural gas from other parts of the world. California's natural gas-fired electric generation decreased by 2 percent in 2023, accounting for approximately 44 percent of in-state generation.[3] Natural gas consumption is generally expressed in Therms, a unit of heat energy that is equal to 100,000 BTUs.

**Table 4: Natural Gas Consumption in San Bernardino County 2012 - 2022** presents the natural gas consumption attributable to the County from 2012 to 2022. As shown in **Table 4**, the natural gas consumption in the County increased by less than one percent from 2021 to 2022.

[3] California Energy Commission, *2023 Total System Electric Generation*, https://www.energy.ca.gov/data-reports/energy-almanac/california-electricity-data/2023-total-system-electric-generation, accessed January 2025.

### Transportation Fuel

Transportation energy demand in California is largely related to vehicular traffic (e.g., passenger vehicles, light duty trucks, semi-trucks, etc.), with most transportation-related energy demand currently met by gasoline and diesel fuel. Gasoline and diesel fuel is supplied by widely distributed service stations both inside and around the City and is generally expressed as gallons. **Table 5: Transportation Fuel Consumption in San Bernardino County 2012 - 2022** presents the automotive fuel consumption attributable to the County from 2011 to 2022. As shown in **Table 5**, gasoline consumption in the County increased by approximately five percent and diesel consumption increased by approximately 24 percent between 2011 and 2022.

# 3.0 REGULATORY SETTING

## 3.1 Federal

### National Energy Conservation Policy Act

The National Energy Conservation Policy Act serves as the underlying authority for federal energy management goals and requirements. Signed into law in 1978, it has been regularly updated and amended by subsequent laws and regulations. This act is the foundation of most federal energy requirements.

### Energy Policy Act of 1992 and 2005

The Energy Policy Act of 1992 was passed to reduce the country's dependence on foreign petroleum and improve air quality. The act includes several parts intended to build an inventory of alternative fuel vehicles (AFVs) in large, centrally fueled fleets in metropolitan areas. The act requires certain federal, state, and local government and private fleets to purchase a percentage of light-duty AFVs capable of running on alternative fuels each year. In addition, financial incentives are also included in the act. Federal tax deductions are allowed for businesses and individuals to cover the incremental cost of AFVs. States are also required by the Energy Policy Act to consider a variety of incentive programs to help promote AFVs. The Energy Policy Act of 2005 provides renewed and expanded tax credits for electricity generated by qualified energy sources, such as landfill gas; provides bond financing, tax incentives, grants, and loan guarantees for clean renewable energy and rural community electrification; and establishes a federal purchase requirement for renewable energy.

### Energy Independence and Security Act of 2007

The Energy Independence and Security Act (EISA; Public Law 110-140) was signed into law by President George W. Bush on December 19, 2007. The Act's goal is to achieve energy security in the United States by increasing renewable fuel production, improving energy efficiency and performance, protecting consumers, improving vehicle fuel economy, and promoting research on greenhouse gas (GHG) capture and storage. Under the EISA, the Renewable Fuel Standard (RFS) program was expanded in several keyways:

- Expanded the RFS program to include diesel, in addition to gasoline;
- Increased the volume of renewable fuel required to be blended into transportation fuel from 9 billion gallons in 2008 to 36 billion gallons by 2022;
- Established new categories of renewable fuel and set separate volume requirements for each; and
- Required the U.S. Environmental Protection Agency (U.S. EPA) to apply lifecycle GHG performance threshold standards to ensure that each category of renewable fuel emits fewer GHGs than the petroleum fuel it replaces.

The RFS program lays the foundation for achieving significant reductions of GHG emissions from the use of renewable fuels, for reducing imported petroleum, and encouraging the development and expansion of our nation's renewable fuels sector.

The EISA also includes a variety of new standards for lighting and for residential and commercial appliance equipment. The equipment includes residential refrigerators, freezers, refrigerator-freezers, metal halide lamps, and commercial walk-in coolers and freezers.

## 3.2 State of California

**State Energy Plan**

The CEC is responsible for preparing the State Energy Plan, which identifies emerging trends related to energy supply, demand, conservation, public health and safety, and the maintenance of a healthy economy. The State Energy Plan calls for the state to assist in the transformation of the transportation system to improve air quality, reduce congestion, and increase the efficient use of fuel supplies with the least environmental and energy costs. To further this policy, the plan identifies several strategies, including assistance to public agencies and fleet operators and encouragement of urban designs that reduce vehicle miles traveled (VMT) and accommodate pedestrian and bicycle access.

**2008 California Energy Action Plan Update**

The 2008 Energy Action Plan (EAP) Update provides a status update to the 2005 EAP II, which is the State's principal energy planning and policy document. The 2008 EAP continues the goals of the original EAP and describes a coordinated implementation plan for State energy policies and identifies specific action areas to ensure that California's energy is adequate, affordable, technologically advanced, and environmentally sound. First-priority actions to address California's increasing energy demands are energy efficiency, demand response (i.e., reduction of customer energy usage during peak periods in order to address system reliability and support the best use of energy infrastructure), and the use of renewable sources of power. If these actions are unable to satisfy the increasing energy and capacity needs, the plan supports clean and efficient fossil-fired generation.

**Renewable Portfolio Standard[4]**

In 2002, the State established its RPS program with the goal of increasing the annual percentage of renewable energy in the State's electricity mix by the equivalent of at least 1 percent of sales, with an aggregate total of 20 percent by 2017. The California Public Utilities Commission subsequently accelerated that goal to 2010 for retail sellers of electricity (Public Utilities Code Section 399.15(b)(1)). Then-Governor Schwarzenegger signed Executive Order S-14-08 in 2008, increasing the target to 33 percent renewable energy by 2020. In September 2009, Governor Schwarzenegger continued California's commitment to the Renewable Portfolio Standard by signing Executive Order S-21-09, which directs the California Air Resources Board (CARB) under its AB 32 authority to enact regulations to help the State meet its Renewable Portfolio Standard goal of 33 percent renewable energy by 2020. In September 2010, the California Air Resources Board adopted its Renewable Electricity Standard regulations, which require all of the State's load-serving entities to meet this target. In October 2015, then-Governor Brown signed into legislation Senate Bill (SB) 350, which requires retail sellers and publicly owned utilities to procure 50 percent of their electricity from eligible renewable energy resources by 2030. Signed in 2018, SB 100 revised the goal of the

[4] California Public Utilities Commission, *Renewable Portfolio Standard (RPS) Program, 2021,* https://www.cpuc.ca.gov/rps/, accessed April 2025.

program to achieve the 50 percent renewable resources target by December 31, 2026, and to achieve a 60 percent target by December 31, 2030. SB 100 also established a further goal to have an electric grid that is entirely powered by clean energy by 2045. Under the SB 100, the State cannot increase carbon emissions elsewhere in the western grid or allow resource shuffling to achieve the 100 percent carbon-free electricity target. Approved in 2022, SB 1020 revised the State policy to provide that eligible renewable energy resources and zero-carbon resources supply 90 percent of all retail sales of electricity to California end-use customers by December 31, 2035; 95 percent of all retail sales of electricity to California end-use customers by December 31, 2040; 100 percent of all retail sales of electricity to California end-use customers by December 31, 2045; and, 100 percent of electricity procured to serve all State agencies by December 31, 2035.

**California Building Energy Efficiency Standards: Title 24**

The California Building Energy Efficiency Standards (Title 24, Part 6) commonly referred to as the Energy Code, was created as part of the California Building Standards Code (Title 24 of the California Code of Regulations) by the California Building Standards Commission in 1978 to establish statewide building energy efficiency standards to reduce California's energy use. In general, the Energy Code is designed to reduce wasteful and unnecessary energy consumption in newly constructed and existing buildings. The CEC updates the Title 24 Energy Efficiency Standards every three years to allow for consideration and possible incorporation of new energy efficiency technologies and methods. The 2022 Energy Code was adopted by the CEC on August 11, 2022 and went into effective on January 1, 2023.

The California Green Building Standards Code (California Code of Regulations, Title 24, Part 11), commonly referred to as the CALGreen Code, is a statewide mandatory construction code that was developed and adopted by the California Building Standards Commission and the California Department of Housing and Community Development. CALGreen standards require new residential and commercial buildings to comply with mandatory measures under five topical areas: planning and design; energy efficiency; water efficiency and conservation; material conservation and resource efficiency; and environmental quality. CALGreen also provides voluntary measures (CALGreen Tier 1 and Tier 2) that local governments may adopt which encourage or require additional measures in the five green building topics. The 2022 CALGreen Code was adopted in 2022 and went into effect January 1, 2023. Projects whose permit applications are applied for on or after January 1, 2023, must comply with the 2022 CALGreen Code. [5]

## 3.3 Local

**City of Ontario General Plan**

The City of Ontario General Plan (TOP 2050) is a policy plan that guides the City's long-term development. TOP 2050 establishes energy conservation goals and policies within the Environmental Resources Element and Mobility Element. The following goals and policies are applicable to the Project:

[5] California Energy Commission, *2022 Building Energy Efficiency Standards*, https://www.energy.ca.gov/programs-and-topics/programs/building-energy-efficiency-standards/2022-building-energy-efficiency, accessed April 2025.

Environmental Resources Element

**Goal ER-3** **Cost-effective and reliable energy system sustained through a combination of low impact buildings, site and neighborhood energy conservation, and diverse sources of energy generation that collectively helps to minimize the region's carbon footprint.**

**Policy ER-3.1** **Conservation Strategy.** We require conservation as the first strategy to be employed to meet applicable energy-saving standards.

**Policy ER-3.2** **Green Development – Communities.** We encourage the use of the LEED Neighborhood Development rating system, or similar mechanism, to guide the planning and development of all new communities.

**Policy ER-3.3** **Building and Site Design.** We require new construction to incorporate energy efficient building and site design strategies, which could include appropriate solar orientation, maximum use of natural daylight, passive solar, and natural ventilation.

**Policy ER-3.4** **Green Development – Public Buildings**. We require all new and substantially renovated City buildings in excess of 10,000 square feet achieve a LEED Silver Certification standard, as determined by the U.S. Green Building Council.

**Policy ER-3.5** **Fuel Efficient and Alternative Energy Vehicles and Equipment.** We require purchase and use vehicles and equipment that are fuel efficient and meet or surpass state emissions requirements and/or use renewable sources of energy.

**Policy ER-3.6** **Generation – Renewable Sources. We promote the use of renewable energy**

Mobility Element

**Goal M-1** **A system of roadways that meets the mobility needs of a dynamic and prosperous Ontario.**

Policy M-1.6 **Reduce Vehicle Miles Traveled.** We will strive to reduce VMT through a combination of land use, transportation projects, travel demand management strategies, and other trip reduction measures in coordination with development projects and public capital improvement projects.

**Goal M-2** **A system of trails and corridors that facilitate and encourage active modes of transportation.**

Policy M-2.2 **Bicycle System.** We provide off-street multipurpose trails and Class II bikeways as our preferred paths of travel and use the Class III for connectivity in constrained circumstances. When truck routes and bicycle facilities share a right-of-way, we prefer Class I or Class IV bicycle facilities. We require new development to include bicycle facilities, such as bicycle parking and secure storage areas.

**City of Ontario Climate Action Plan**

The City adopted a Community Climate Action Plan (CCAP) in 2022 to reduce GHG emissions, provides guidance on how to analyze and determine the significance of project-level GHG

emissions, and foster a sustainable community. The CCAP includes Screening Tables, which are reduction measures related to transportation, water, solid waste, offroad equipment, energy, and renewable energy sources. The CCAP establishes a GHG emissions reduction target for 2030, 2040, and 2050, consistent with broader State and federal targets.

# 4.0 SIGNIFICANCE CRITERIA AND METHODOLOGY

State CEQA Guidelines Appendix G contains analysis guidelines related to energy impacts. A project would create a significant environmental impact if it would:

- Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during Project construction or operation; and/or
- Conflict with or obstruct a State or local plan for renewable energy or energy efficiency.

## Methodology

The impact analysis focuses on the three sources of energy that are relevant to the proposed Project: electricity, natural gas, and transportation fuel.

**Electricity and Natural Gas**: Electricity and natural gas usage would be generated by land uses developed by the Project. The CARB-approved California Emissions Estimator Model (CalEEMod) version 2022.1 was used to quantify energy use for occupancy based on default rates and Project-specific features such as number of units and building square footage.

**Transportation Fuel**: The construction fuel usage was calculated based on CalEEMod emissions outputs and conversion ratios from the Climate Registry. The operational fuel usage was estimated using default rates and VMT outputs from CalEEMod and the typical daily fuel use in San Bernardino County from CARB's EMissions FACtor (EMFAC) 2021 model.

# 5.0 POTENTIAL IMPACTS AND MITGATION

## Threshold 5.1 Would the Project result in potentially significant environmental impacts due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?

### Construction

The Project is anticipated to be constructed in two phases with construction activity to occur over a duration of approximately four years and three months, beginning in late-2025. This analysis conservatively assumes that the two phases would be developed simultaneously. The energy usage associated with Project construction includes electricity associated with water usage for dust control, diesel fuel from on-road hauling trips, vendor trips, and off-road construction diesel equipment, and gasoline fuel from on-road worker commute trips. Because construction activities typically do not require natural gas, it is not included in the following discussion. Energy usage during Project construction are provided in **Table 6: Energy Use During Construction**. The emissions outputs and energy calculations are included in **Appendix A: Energy Data**.

**Table 6: Energy Use During Construction**

| Source | Total Construction Energy | San Bernardino County Annual Energy[1,2] | Percentage of Countywide Consumption |
|---|---|---|---|
| **Electricity (GWh)** | | | |
| Water[3] | 0.034 | 16,630 | 0.0002% |
| **Diesel Use[4] (Gallons)** | | | |
| On-Road Construction Trips | 450,111 | 281,399,849 | 0.16% |
| Off-Road Construction Equipment | 319,574 | 281,399,849 | 0.11% |
| Construction Diesel Total | 769,685 | 281,399,849 | 0.27% |
| **Gasoline Use[4] (Gallons)** | | | |
| Mobile | 1,162,390 | 828,612,797 | 0.14% |

1. Total County electricity use from California Energy Commission energy reports available through ecdms.energy.ca.gov.
2. Total County fuel use per EMFAC 2021 model of projected fuel usage in 2025 – first year of construction.
3. Water usage is based on the CalEEMod default energy intensity for supply, distribution, and treatment of water per gallon of water, daily acreage disturbed, and estimated water use per acre.
4. Construction fuel use was calculated based on CalEEMod emissions outputs and conversion ratios from the Climate Registry.

Source: Refer to energy calculations in **Appendix A.**

<u>Electricity</u>

**Water for Construction Dust Control.** Electricity associated with water usage for construction dust control is calculated based on total water use and the energy intensity for supply, distribution, and treatment of water. The total number of gallons of water used is calculated based on acreage disturbed during grading and site preparation, as well as the daily watering rate per acre disturbed.

- The total acres disturbed are calculated using the methodology described in Chapter 4.2 of Appendix C of the CalEEMod User's Guide.
- The water application rate of 3,020 gallons per acre per day is from the Air and Waste Management Association's Air Pollution Engineering Manual (1992).
- The energy intensity value is based on the CalEEMod default energy intensity per gallon of water for San Bernardino County.

As summarized in **Table 6**, the electricity demand associated with Project water usage for the construction dust control would be approximately 0.034 GWh over the duration of construction and would represent approximately 0.0002 percent of the current electricity use in San Bernardino County. SCE's total energy sales are projected to be 111,670 GWh of electricity in 2025 (the first year of Project construction).[6] The Project construction-related net annual electricity consumption of 0.0024 GWh would represent less than one percent of SCE's projected sales. Therefore, it is anticipated that SCE's existing and planned electricity capacity and electricity supplies would be sufficient to serve the Project's temporary construction electricity demand. Impacts would be less than significant, and no mitigation is required.

Natural Gas

It is not anticipated that construction equipment used for the Project would be powered by natural gas. Impacts would be less than significant, and no mitigation is required.

Transportation Fuel

**On-Road Diesel Construction Trips.** The diesel fuel emissions associated with on-road construction mobile trips is calculated based on vehicle miles traveled (VMT) from vehicle trips (i.e., worker, vendor, and hauling), the CalEEMod default diesel fleet percentage, and vehicle fuel efficiency in miles per gallon (MPG). VMT for the entire construction period is calculated based on the number of trips multiplied by the trip lengths for each phase shown in CalEEMod. Construction diesel fuel was calculated based on CalEEMod emissions outputs and conversion ratios from the Climate Registry. Total diesel fuel consumption associated with on-road construction trips for the Project would be approximately 450,111 gallons (see **Table 6**).

**Off-Road Diesel Construction Equipment.** Similarly, the construction diesel fuel associated with the off-road construction equipment that is calculated based on CalEEMod emissions outputs and conversion ratios from the Climate Registry. The total diesel fuel associated with the Project off-road construction equipment is approximately 319,574 gallons (see **Table 6**). The combined diesel usage from on-road and off-road construction sources is 769,685 gallons.

**On-Road Gasoline Construction Trips.** The gasoline fuel associated with on-road construction mobile trips is calculated based on VMT from vehicle trips (i.e., worker, vendor, and hauling), the CalEEMod default gasoline fleet percentage, and vehicle fuel efficiency in MPG using the same methodology as the construction on-road trip diesel fuel calculation discussed above. The total gasoline fuel associated with Project on-road construction trips would be approximately 1,162,390 gallons (see **Table 6**).

San Bernardino County annual fuel use is anticipated to be 281,399,849 gallons of diesel and 828,62,797 gallons of gasoline in 2025.[7] The total Project construction diesel fuel would represent approximately 0.27 percent of the annual diesel used in the County. The total Project construction gasoline fuel would represent 0.14 percent of the annual gasoline used in the County. Due to the Project's relatively low construction fuel use proportional to annual County use, the Project would not substantially affect existing fuel supplies or resources and new capacity or additional sources

[6] California Energy Commission, *CED 2022 LSE and BA planning Forecast Tables,* https://www.energy.ca.gov/data-reports/reports/integrated-energy-policy-report/2022-integrated-energy-policy-report-update-2, accessed January 2025.

[7] Total annual county fuel per EMFAC 2021 model of projected fuel usage in 2025 – first year of construction.

of fuel are not anticipated to be required.

There are no unusual characteristics that would necessitate the use of construction equipment that would be less energy-efficient than at comparable construction sites in the region or state. Furthermore, the Project would reduce energy usage through compliance with State and federal requirements. In accordance with California Code of Regulations, Title 13, Sections 2485 and 2449, construction contractors are required to reduce diesel particulate matter and criteria pollutant emissions from in-use off-road diesel-fueled vehicles and limit the idling of heavy-duty construction equipment to no more than five minutes. This requirement indirectly relates to construction energy conservation as energy use is reduced when air pollutant emissions are reduced from monitoring and the efficient use of equipment and materials.

Due to increasing transportation costs and fuel prices, contractors and owners have a strong financial incentive to avoid wasteful, inefficient, and unnecessary use of energy during construction. There is growing recognition among developers and retailers that sustainable construction is not prohibitively expensive and that there is a significant cost-savings potential in green building practices. Substantial reduction in energy inputs for construction materials can be achieved by selecting building materials composed of recycled materials that require substantially less energy to produce than non-recycled materials. The Project-related incremental increase in the use of energy bound in construction materials such as asphalt, steel, concrete, pipes, and manufactured or processed materials (e.g., lumber and gas) would not substantially increase demand for energy compared to overall local and regional demand for construction materials. It is reasonable to assume that production of building materials such as concrete, steel, etc., would employ all reasonable energy conservation practices in the interest of minimizing the costs of business.

As described above, the Project's fuel consumption and energy usage from the entire construction period would constitute less than one percent of the total consumption in the County. It should be noted that the State CEQA Guideline Appendix G and Appendix F criteria require the Project's effects on local and regional energy supplies and on the requirements for additional capacity to be addressed. A less than one percent increase in temporary demand is not anticipated to trigger the need for additional capacity. Additionally, construction fuel consumption would be temporary and would cease once the Project is fully developed. As such, Project construction would have a nominal effect on the local and regional energy supplies. Impacts would be less than significant, and no mitigation is required.

**Operations**

Energy consumption associated with Project operations would occur from building energy (electricity and natural gas) usage, water use, and transportation-related fuel use. **Table 7: Annual Energy Use During Operations** presents the Project operational energy usage.

**Table 7: Annual Energy Use During Operations**

| Source | Annual Operational Energy[1] | San Bernardino County Annual Energy[2,3] | Percentage of Countywide |
|---|---|---|---|
| **Electricity Use (GWh)** | | | |
| Electricity Demand[4] | 27.13 | 16,630 | 0.16% |
| Water Electricity | 2.04 | | 0.01% |
| Total Electricity | 29.17 | | 0.18% |
| **Natural Gas Use (Therms)** | | | |
| Area | 959,999 | 562,123,065 | 0.17% |
| **Diesel Use (Gallons)** | | | |
| Mobile[4,5] | 1,403,826 | 276,486,333 | 0.51% |
| **Gasoline Use (Gallons)** | | | |
| Mobile[4,5] | 9,087,436 | 759,783,908 | 1.20% |

1. The electricity, natural gas, and water usage are based on Project-specific estimates and CalEEMod defaults.
2. County total energy values from California Energy Commission energy reports available through ecdms.energy.ca.gov
3. Total annual county fuel per EMFAC 2021 model of projected operational fuel usage in 2030 – Project buildout.
4. FSEIR MM 3-2 would require development projects to include access or linkages to alternative modes of transportation. FSIER MM AQ-1 would require development projects to provide bicycle parking, changing/shower, and supportive electric charging station facilities and Energy Star certified appliances.
5. Calculated based on the mobile source fuel use based on vehicle miles traveled (VMT) and fleet-average fuel consumption (in gallons per mile) from EMFAC2021 for operational year 2030.

Source: Refer to energy calculations in **Appendix A.**

Electricity

The electricity consumed by the Project is based on CalEEMod defaults. The Project is subject to FSEIR Mitigation Measure (MM) AQ-1, which requires new development projects to install Energy Star certified appliances. The Project's total electricity consumption would be approximately 29.17 GWh per year, which would account for 0.18 percent of consumption within the County (see **Table 7**). The Project would use approximately 321 million gallons of water per year, which would require approximately 2.04 GWh per year for conveyance and treatment. SCE's total energy sales are projected to be 120,378 GWh of electricity in 2030 (the first operational year).[8] The Project operational-related net annual electricity consumption of approximately 29.17 GWh would represent less than one percent of SCE's projected sales. Project operations would not substantially affect existing energy or fuel supplies or resources. Moreover, the Project would comply with applicable energy standards and new capacity would not be required. Impacts would be less than significant, and no mitigation is required.

Natural Gas

The natural gas use associated with the Project is based on CalEEMod default rates. The Project would consume approximately 960,000 therms of natural gas per year (see **Table 7**). The Project's operational natural gas use would constitute 0.17 percent of natural gas usage in the County. Project operations would not substantially affect existing energy or fuel supplies or resources. Moreover, the Project would comply with applicable energy standards and new capacity would not be required. Impacts would be less than significant, and no mitigation is required.

[8] California Energy Commission, *CED 2022 LSE and BA planning Forecast Tables,* https://www.energy.ca.gov/data-reports/reports/integrated-energy-policy-report/2022-integrated-energy-policy-report-update-2, accessed January 2025.

Transportation Fuel

The gasoline and diesel fuel associated with on-road vehicular trips is calculated based on the trip generation from the Traffic Analysis and average fuel efficiency from the EMFAC model.[9] The EMFAC fuel efficiency data incorporates the Pavley Clean Car Standards and the Advanced Clean Cars Program.[10] The Project is subject to FSEIR MM 3-2 and MM AQ-1, which requires development projects to provide access to alternative modes of transportation, bicycle parking, changing/shower and supportive electric charging station facilities, and Energy Star certified appliances. The total diesel and gasoline fuel associated with the Project would be approximately 16,745,350 gallons per year and 196,288,626 gallons per year, respectively (see **Table 7**). The County's annual diesel fuel use is anticipated to be 276,486,333 gallons and gasoline fuel use is anticipated to be 759,783,908 gallons in 2030.[11] The Project operational diesel and gasoline consumption would represent approximately 0.51 percent of diesel use and 1.2 percent of gasoline use in the County. Project operations would not substantially affect existing energy or fuel supplies or resources. Moreover, the Project would comply with applicable energy standards, would not require new capacity, and would include a Circulation Plan to provide connectivity to existing pedestrian sidewalks and bicycle lanes. The City is coordinating with regional transit agencies to implement a BRT service line along Edison Avenue/Ontario Ranch Road. These features and aspects of the Project would contribute to minimizing VMT and transportation-related fuel usage. Overall, it is expected that operation-related fuel usage associated with the Project would not be any more inefficient, wasteful, or unnecessary than similar development projects. Impacts would be less than significant, and no mitigation is required.

## Conclusion

The Project's consumption of electricity, natural gas, gasoline, and diesel would not require new infrastructure, nor would it be any more inefficient, wasteful, or unnecessary than similar development projects. The Project's impacts are within the limit of impacts identified in the FSEIR. As a result, the proposed Project would not result in any new or more severe impacts than previously analyzed in the FSEIR.

## Laws, Ordinances, and Regulations

Laws, ordinances, and regulations (LORs) are existing requirements that are based on local, State, or federal regulations or laws that are frequently required independent of CEQA review. Typical standard conditions and requirements include compliance with the provisions of the Building Code, SCAQMD Rules, etc. The City may impose additional conditions during the approval process, as appropriate. Because LORs are neither project-specific nor a result of development of the Project, they are not considered to be either project design features or mitigation measures.

[9] Urban Crossroads, *Center Park Specific Plan Traffic Analysis,* 2025.

[10] The CARB EMFAC 2017 Technical Documentation from March 2018 notes that emissions are estimated with all current controls active, except Low Carbon Fuel Standards (LCFS). The reason for excluding LCFS is that most of the emissions benefits due to the LCFS come from the production cycle (upstream emissions) of the fuel rather than the combustion cycle (tailpipe). As a result, LCFS is assumed to not have a significant impact on CO2 emissions from EMFAC's tailpipe emission estimates.

[11] Total annual county fuel per EMFAC 2021 model of projected fuel usage in 2030 – Project buildout.

**LOR EN-1** Construction activities are required to adhere to Title 13 California Code of Regulations Section 2499, which requires that nonessential idling of construction equipment is restricted to five minutes or less.

**LOR EN-2** New buildings are required to achieve the current Energy Code (Title 24, Part 6) and the CALGreen Code (Title 24, Part 11). The 2022 Energy Code was effective starting January 1, 2023. The Energy Code and the CALGreen Code are updated triennially with a goal to achieve 100 percent clean carbon neutrality by 2050 within the State.

**LOR EN-3** New buildings are required to adhere to the CALGreen Code requirement to provide bicycle parking for new non-residential buildings, or meet local bicycle parking ordinances, whichever is stricter (CALGreen Code Sections 5.106.4.1, 14.106.4.1, and 5.106.4.1.2).

**LOR EN-4** The CALGreen Code requires the recycling and/or salvaging for reuse at minimum of 65 percent of the nonhazardous construction and demolition waste generated during most "new construction" projects (CALGreen Code Sections 4.408 and 5.408). Construction contractors are required to submit a construction waste management plan that identifies the construction and demolition waste materials to be diverted from disposal by recycling, reuse on the project, or salvaged for future use or sale and the amount (by weight or volume).

**LOR EN-5** New buildings are required to adhere to the CALGreen Code and Water Efficient Landscape Ordinance requirements to increase water efficiency and reduce urban per capita water demand.

**LOR EN-6** CARB's RPS is a foundational element of the State's emissions reduction plan. These mandates apply directly to investor-owned utilities. On September 10, 2018, SB 100 was signed into law and established the following RPS targets: 50 percent renewable resources target by December 31, 2026, and 60 percent target by December 31, 2030. SB 100 also requires that retail sellers and local publicly owned electric utilities procure a minimum quantity of electricity products from eligible renewable energy resources so that the total kilowatt hours of those products sold to their retail end-use customers achieve 52 percent of retail sales by December 31, 2027, and 60 percent by December 31, 2030.

**FSEIR Mitigation Measures**

The FSEIR analyzed emission impacts associated with land development throughout the City and implemented the following mitigation measures, which are applicable to the Project.

**3-2** The City of Ontario shall evaluate new development proposals within the City and require all developments to include access or linkages to alternative modes of transportation, such as transit stops, bike paths, and/or pedestrian paths (e.g., sidewalks).

**AQ-1** Prior to discretionary approval by the City of Ontario for development projects subject to CEQA (California Environmental Quality Act) review (i.e., nonexempt projects), project applicants shall prepare and submit a technical assessment evaluating potential project

operation-phase-related air quality impacts to the City of Ontario Planning Department for review and approval. The evaluation shall be prepared in conformance with SCAQMD methodology in assessing air quality impacts. If operation-related air pollutants are determined to have the potential to exceed the SCAQMD–adopted thresholds of significance, the City of Ontario Planning Department shall require that applicants for new development projects incorporate mitigation measures to reduce air pollutant emissions during operational activities. The identified measures shall be included as part of the conditions of approval. Possible mitigation measures to reduce long-term emissions could include, but are not limited to the following:

- For site-specific development that requires refrigerated vehicles, the construction documents shall demonstrate an adequate number of electrical service connections at loading docks for plug-in of the anticipated number of refrigerated trailers to reduce idling time and emissions.
- Applicants for manufacturing and light industrial uses shall consider energy storage and combined heat and power in appropriate applications to optimize renewable energy generation systems and avoid peak energy use.
- Site-specific developments with truck delivery and loading areas and truck parking spaces shall include signage as a reminder to limit idling of vehicles while parked for loading/unloading in accordance with California Air Resources Board Rule 2845 (13 CCR Chapter 10 sec. 2485).
- Provide changing/shower facilities as specified in Section A5.106.4.3 of CALGreen (Nonresidential Voluntary Measures).
- Provide bicycle parking facilities per Section A4.106.9 of CALGreen (Residential Voluntary Measures).
- Provide preferential parking spaces for low-emitting, fuel-efficient, and carpool/van vehicles per Section A5.106.5.1 of CALGreen (Nonresidential Voluntary Measures).
- Provide facilities to support electric charging stations per Section A5.106.5.3 and Section A5.106.8.2 of CALGreen (Nonresidential Voluntary Measures; Residential Voluntary Measures).
- Applicant-provided appliances shall be Energy Star–certified appliances or appliances of equivalent energy efficiency (e.g., dishwashers, refrigerators, clothes washers, and dryers). Installation of Energy Star– certified or equivalent appliances shall be verified by the City during plan check.

**Mitigation Measures:** No additional mitigation is required.

**Level of Significance:** Less than significant impact.

## Threshold 5.2 Would the Project conflict with or obstruct a State or local plan for renewable energy or energy efficiency?

### Energy Efficient Measures

As discussed above, the Energy Code creates uniform building codes to reduce California's energy use and provide energy efficiency standards for residential and non-residential buildings. These standards are incorporated within the California Building Code and are expected to substantially reduce the growth in electricity and natural gas use. The 2022 Title 24 standards for new residential and nonresidential buildings will focus on encouraging electric heat pump technology and use, promote electric-ready buildings to incentivize owners to use cleaner electric heating, cooking, and vehicle charging, expanding solar photovoltaic systems and battery storage systems to reduce reliance on fossil fuel power plants. The Project would be constructed in accordance with Title 24 of the California Building Standards Code – Energy Efficiency Standards as well as the appliance energy efficiency standards in Title 20 of the California Code of Regulations. The Project would include bicycle parking and supportive electric charging station facilities and water conservation strategies. The buildings developed by the Project would have rooftops that can support solar panels (i.e., solar-ready), which would enable future tenants to install a PV system and would offset the amount of electricity needed from SCE's grid. As discussed below, the Project would comply and be consistent with the CCAP and TOP 2050.

It should also be noted that SCE is subject to the RPS, which requires investor-owned utilities, electric service providers, and community choice aggregators to increase total procurement from eligible renewable energy resources to achieve a 60 percent target by December 31, 2030. In addition, SB 100 established a further goal to have an electric grid that is entirely powered by clean energy by 2045.

The Project's operational energy consumption would constitute less than one percent of the corresponding energy consumption projections within the County. Therefore, Project operations would not substantially affect existing energy or fuel supplies or resources. In addition, the Project would comply with energy and fuel efficiency laws and regulations and would not result in the inefficient, wasteful, and unnecessary consumption of energy. Impacts would be less than significant, and no mitigation is required.

### Community Climate Action Plan

The primary purpose of the CCAP is to feasibly reduce GHG emissions generated by land development projects, consistent with the statewide GHG reduction efforts. The City has identified a series of reduction measures that improve building energy efficiency, increase use of public and active transit. alternative-fueled vehicles, and renewable energy, and reduce VMT and water consumption.

**Table 8: Community Climate Action Plan Consistency** evaluates the consistency of the Project to the applicable measures of the CCAP.

| **Table 8: Community Climate Action Plan Consistency** | | |
|---|---|---|
| **Strategy** | **Measure Description** | **Consistency** |
| **Energy** | | |
| Strategy 1 | **Building electrification.** Promote and incentivize the phase-out of gas appliances in new and existing homes and businesses throughout the community to advance GHG reductions, increase energy efficiency, and protect public safety and environmental health. | **N/A:** This measure is to be taken at the City level. Project implementation would not conflict with this strategy. Furthermore, the residential uses would not include natural gas hearths. |
| Strategy 2 | **Onsite solar energy for existing residential development.** Continue to support and facilitate installation of rooftop solar photovoltaic and onsite solar energy systems in existing residential development. | **N/A:** This measure only applies to existing residential development and is not applicable to the proposed Project. |
| Strategy 3 | **Onsite Solar Energy Systems for Nonresidential Development:** Ensure new large non-residential development, including City facilities, includes on-site renewable energy to support the site's energy needs by requiring solar photovoltaic panels or other appropriate on-site renewable energy generation systems for the following types of projects:<br>• New commercial and office buildings, or existing commercial and office building expansions greater or equal to 45,000 square feet in size.<br>• New industrial or existing industrial buildings expansions greater or equal to 100,000 square feet in size. | **Consistent:** The proposed commercial uses would incorporate energy efficient building designs such as flat roofs that allow for solar panels, subject to the City of Ontario policies and development regulations. |
| Strategy 4 | **Green roofs.** Promote and incentivize residents and business owners to install green roofs to conserve energy and reduce surface water runoff. | **N/A:** This measure is to be taken at the City level. Project implementation would not conflict with this strategy. |
| Strategy 5 | **Urban Cooling:** Maintain and expand the City's existing tree canopy, with a goal of planting 500 trees annually through 2050 and promote the use of pervious concrete and cool pavement for pavement projects. | **Consistent:** This measure is to be taken at the City level. The Project would require trees along streetscapes, neighborhood edges, parking lots, and open space areas. |
| Strategy 6 | **Energy efficiency retrofits for low-income households.** Promote and incentivize voluntary energy efficiency retrofits of homes to reduce natural gas and electricity usage, with the goal of retrofitting 9,000 low-income homes by 2050. Partner with community services agencies to fund energy efficiency projects, including heating, ventilation, air conditioning, indoor lighting, water heating equipment, insulation, and weatherization for low-income residents. | **N/A:** This measure is not applicable to the proposed Project, as retrofits only apply to existing structures. |
| Strategy 7 | **Energy efficiency retrofits.** Promote and incentivize voluntary energy efficiency retrofits to reduce in natural gas and electricity usage. Partner | **N/A:** This measure is not applicable to the proposed Project, as retrofits only apply to existing structures. |

| Table 8: Community Climate Action Plan Consistency | | |
|---|---|---|
| **Strategy** | **Measure Description** | **Consistency** |
| | with regional agencies to expand access to existing energy efficiency and conservation opportunities, incentives, and technical assistance for residents and businesses. | |
| Strategy 8 | **Smart Growth and Infill.** Encourage revitalization of neighborhoods through higher-density, mixed-use, infill development and creative reuse of underutilized sites within the urban core. | **Consistent:** The Project proposes a mixed-use development on an underutilized site in the City. |
| **Transportation** | | |
| Strategy 9 | **Transit-Oriented Development:** Encourage development of compact, mixed-use, and transit-oriented development to improve the regional jobs-housing balance, especially on corridors served by high-ridership transit and bus rapid transit, such as Holt Avenue. | **Consistent:** The Project proposes a mixed-use development along a high-volume corridor, Euclid Avenue. Transit turnouts would be constructed within the proposed Specific Plan area in coordination with Omnitrans. An Omnitrans BRT Corridor is planned along Edison Avenue/Ontario Ranch Road. |
| Strategy 10 | **Increase Transportation Ridership.** Ensure a reliable and responsive transit system with dedicated and secure funding and resources to support increased ridership. | **N/A:** This measure is to be taken at the City level. Project implementation would not conflict with this strategy. |
| Strategy 11 | **Traffic signal synchronization and roadway management.** Implement traffic and roadway management strategies to improve mobility and efficiency and reduce associated emissions. | **Consistent:** The Project would construct a roadway network in accordance with the City of Ontario Master Plan of Streets and Highways and The Ontario Ranch Streetscape Master Plan. The roadway network would be designed to maintain an efficient control of all modes of traffic. |
| Strategy 12 | **Community vehicle electrification.** Promote and incentivize the adoption of electric vehicles (EV) citywide, including light-duty and heavy-duty vehicles, for municipal, commercial, and residential uses. | **Consistent:** This measure is to be taken at the City level. The Project would construct facilities to support electric charging stations. |
| Strategy 13 | **Active Transportation Networks:** Work with transit agencies, school districts, and employers to facilitate an interconnected transportation system that allows a shift in travel from private passenger vehicles to alternative modes, including public transit, ride sharing, car sharing, bicycling, and walking. | **Consistent:** The Project would develop Multipurpose Trails along Euclid Avenue/Ontario Ranch Road, Campus Avenue, Grove Avenue, and Walker Avenue, which would connect to a Class II Bike Path and off-site Multipurpose Trails. Transit turnouts would be constructed within the proposed Specific Plan area in coordination with Omnitrans. An Omnitrans BRT Corridor is planned along Edison Avenue/Ontario Ranch Road. |

| **Table 8: Community Climate Action Plan Consistency** | | |
|---|---|---|
| **Strategy** | **Measure Description** | **Consistency** |
| Strategy 14 | **Vehicle Idling:** Limit idling of heavy-duty trucks. Support the SCAMQD and CARB anti-idling requirements and provide signage in key areas where idling that is not consistent with SCAMQD or CARB requirements might occur. | **Consistent:** Commercial motor vehicles are required to comply with CCR Section 2485 which would limit the idling of Diesel fueled vehicles to no more than five minutes. |
| Strategy 15 | **Parking policy and event parking.** Adopt a comprehensive parking policy that encourages carpooling and the use of alternative transportation, including providing parking spaces for car-share vehicles at convenient locations with access to public transportation. | **N/A:** This measure is to be taken at the City level. Project implementation would not conflict with this strategy. |
| **Off-road Equipment** | | |
| Strategy 16 | **Electrification of construction and landscaping equipment.** Promote and incentivize the transition to electric construction and landscaping equipment. | **N/A:** This measure is to be taken at the City level. Project implementation would not conflict with this strategy. |
| Strategy 17 | **Idling Ordinance for Construction Equipment:** Limit idling of heavy-duty off-road construction equipment to reduce air pollution and GHG emissions from construction activity. | **Consistent:** Construction would be required to comply with CCR Section 2485 and 2499 which would limit the idling of heavy-duty construction equipment to no more than five minutes. |
| **Water** | | |
| Strategy 21 | **Indoor water efficiency.** Encourage water-efficient retrofits of new and existing buildings by working with water providers and regional agencies. | **Consistent:** The Project would comply with CALGreen Code Section 4.303 and require the installation of low flow fixtures. In addition, the Project would comply with the City of Ontario Recycled Water Master Plan and irrigate landscaped areas with recycled water. The irrigations systems would have automatic controllers, including automatic rain shut-off devices. |
| Strategy 22 | **Water Efficient Landscapes and Water Recycling:** Promote drought-tolerant and fire-wise landscaping. Encourage increased use of reclaimed water for landscape irrigation, agricultural, and industrial use. | **Consistent:** The Project would include drought tolerant landscaping and would irrigate landscape areas with recycled water as required by the City of Ontario Recycled Water Master Plan. |
| Strategy 23 | **Water system and wastewater operations efficiency.** Maximize efficiency at drinking water treatment, pumping, and distribution facilities, including development of off-peak demand schedules for heavy commercial and industrial users. | **N/A:** This measure is not applicable to the proposed Project. |
| Strategy 24 | **Methane capture for wastewater treatment.** | **N/A:** This measure is not applicable to |

| Table 8: Community Climate Action Plan Consistency | | |
|---|---|---|
| **Strategy** | **Measure Description** | **Consistency** |
| | Work with Inland Empire Utilities Agency (IEUA), the local wastewater treatment provider, to increase methane capture rate. | the proposed Project. |
| N/A = not applicable | | |
| Source: City of Ontario, *Ontario Community Climate Action Plan,* 2022, https://content.ontarioca.gov/sites/default/files/2025-01/Ontario-CCAP_Adopted_20220816.pdf, accessed April 2025. | | |

As discussed in **Table 8**, the Project would be consistent with all applicable measures and would not conflict with the goals of the CCAP. Impacts would be less than significant, and no mitigation is required.

### City of Ontario General Plan

TOP 2050 establishes policies that address energy conservation within new land development projects. **Table 9: Consistency with The Ontario Plan 2050** evaluates the consistency of the Project to the applicable TOP 2050 policies.

| Table 9: Consistency with The Ontario Plan 2050 | | |
|---|---|---|
| **Policy** | **Goal/ Policy** | **Consistency** |
| **Policy ER 3-1** | **Conservation Strategy:** Require conservation as the first strategy to be employed to meet applicable energy saving standards. | **Consistent:** The Project would include energy-saving conservation strategies such as bicycle parking, drought-tolerant landscaping, and energy efficiency and sustainable building designs. |
| **Policy ER 3-2** | **Green Development – Communities:** Encourage the use of LEED Neighborhood Development rating system, or similar mechanism, to guide the planning and development of all new communities. | **Consistent:** The buildings developed by the Project would use passive design to improve building energy performance, have flat roofs for solar panels, and be designed in compliance with the CALGreen Code. |
| **Policy ER 3-3** | **Building and Site Design:** Require new construction to incorporate energy efficient building and site design strategies, which could include appropriate solar orientation, maximum use of natural daylight, passive solar and natural ventilation. | **Consistent:** The buildings developed by the Project would use passive design to improve building energy performance, have flat roofs that can support solar panels, include drought-tolerant landscaping, and be designed in compliance with the CALGreen Code. |
| **Policy ER 3-4** | **Green Development – Public Buildings:** We require all new and substantially renovated City buildings in excess of 10,000 square feet achieve a LEED Silver Certification standard, as determined by the U.S. Green Building Council. | **N/A:** This measure is not applicable to the proposed Project. |
| **Policy ER 3-5** | **Fuel Efficient and Alternative Energy Vehicles and Equipment:** We purchase and use vehicles and equipment that are fuel efficient and meet or surpass state emissions requirements and/or use renewable sources of energy. | **N/A:** This measure is not applicable to the proposed Project. Project implementation would not conflict with this policy. |
| **Policy ER 3-6** | **Generation – Renewable Sources:** Promote the use of renewable energy sources to serve public and private sector development. | **Consistent:** The buildings developed under the Project would have flat rooftops that can support solar panels (i.e., solar-ready), which would comply the Energy Code solar ready requirements and would enable future tenants |

| Table 9: Consistency with The Ontario Plan 2050 | | |
|---|---|---|
| **Policy** | **Goal/ Policy** | **Consistency** |
| | | to install a PV system. |
| N/A: not applicable | | |
| Source: City of Ontario, *TOP 2050, Environmental Resources Element, 2022,* https://www.ontarioca.gov/about-ontario-ontario-plan-policy-plan/environmental-resources, accessed January 2025. | | |

As discussed in **Table 9**, the Project would be consistent with all applicable TOP 2050 policies. Impacts would be less than significant, and no mitigation is required.

## Conclusion

The Project would be consistent with the applicable energy efficient measures outlined in Title 24, Title 20, CCAP, and TOP 2050. The Project's impacts are within the limit of impacts identified in the FSEIR. As a result, the proposed Project would not result in any new or more severe impacts than previously analyzed in the FSEIR.

**Mitigation Measure:** No mitigation is required.

**Level of Significance:** Less than significant impact.

### Cumulative Impacts

Potential cumulative impacts to energy would result if the proposed Project, in combination with past, present, and future projects, would result in the wasteful, inefficient, or unnecessary use of energy. This could result from development that would not incorporate sufficient building energy efficiency features, would not meet the Energy Code, or would result in the unnecessary use of energy during construction and/or operation.

The cumulative projects within the areas serviced by the energy service providers would be applicable to this analysis. Projects that include development of large buildings or other structures that would have the potential to consume energy in an inefficient manner would have the potential to contribute to a cumulative impact.

Project construction and operations would consume energy, but not in an inefficient, unnecessary, or wasteful manner. Energy consumption attributable to the Project would not be substantial in comparison to statewide electricity, natural gas, gasoline, and diesel demand; refer to **Table 6** and **Table 7**. The Project's construction electricity consumption would be negligible relative to SCE's generated electricity, and electricity supplies would be sufficient to serve the Project's temporary construction electricity demand. SCE will review the Project's estimated electricity consumption in order to ensure that the estimated power requirement would be part of the total load growth forecast for their service area and accounted for in the planned growth of the power system. It should be noted that SCE and SoCalGas consider planned development for their service areas and are in and of themselves providing for cumulative growth. Therefore, it is likely that cumulative growth associated with the related projects is already accounted for in the planning of future supplies to cover projected demand. Furthermore, SCE and SoCalGas have policies, programs, and projects in place to provide continued, adequate energy to their users, including the proposed Project. Substantial reductions to the cumulative demand for energy can result from an increased reliance on renewable energy systems (as required by the RPS) and the construction of energy-

efficient buildings. Cumulative projects would be subject to applicable Title 24 and CALGreen requirements similar to the Project, which includes energy efficiency standards to minimize the wasteful and inefficient use of energy.

Transportation fuels (gasoline and diesel) are produced from crude oil, which can be domestic or imported from various regions around the world. Based on current proven reserves, current crude oil production would be sufficient to meet worldwide consumption demand until 2050. As such, it is expected that existing and planned transportation fuel supplies would be sufficient to serve the Project's construction and operational demand. New capacity or supplies of energy resources would not be required. Additionally, the Project would be subject to compliance with all federal, state, and local requirements for energy efficiency. State regulations, including the Low Carbon Fuel Standard, Pavley Clean Car Standards, and Low Emission Vehicle Program, would serve to reduce the transportation fuel demand of cumulative projects.

The Project would represent a consistent continuation of the planned pattern of development within the Ontario Ranch area, as the City has long anticipated that this area would transition from dairy/agricultural to urban uses. The Project would not conflict with or obstruct a State or local plan for renewable energy or energy efficiency, nor would the Project require additional facilities other than local connections to, or undergrounding of, existing facilities in the Project area. Therefore, the proposed Project's incremental demand for electricity and natural gas facilities would not be cumulatively considerable. Thus, the Project would not contribute to a cumulative impact to the wasteful, unnecessary, or inefficient use of energy. Impacts would be less than significant, and no mitigation is required. The Project's impacts are within the limit of impacts identified in the FSEIR. As a result, the proposed Project would not result in any new or more severe cumulative impacts than previously analyzed in the FSEIR.

## Conclusion

**Table 10: Project Consistency with the FSEIR** summarizes the consistency of the Project's impacts with the findings of the FSEIR. The Project would not result in or contribute to a cumulative impact to the wasteful, unnecessary, or inefficient use of energy. Furthermore, the Project would not conflict with or obstruct applicable renewable energy or energy efficiency plans. As shown in **Table 10**, the Project's impacts are within the limit of impacts identified in the FSEIR. As a result, the proposed Project would not result in any new or more severe impacts than previously analyzed in the FSEIR.

**Table 10: Project Consistency with the FSEIR**

| Impact | FSEIR Findings | Project Findings |
|---|---|---|
| Construction and Operational Energy Consumption | Less than Significant | Less than Significant |
| Applicable Plans, Policies, and Regulations Consistency | Less than Significant | Less than Significant |
| Cumulative Considerable Net Increase of Energy Consumption | Less than Significant | Less than Significant |

# Appendix A

## Energy Data

# Center Park Specific Plan
## CalEEMod Assumptions

# Phase I

Planning Areas

| PA | Total Lot Size (AC)[1] | Land Use[2] | Size[2] | Unit[2] | DU/AC[1] | Building Lot Size (AC)[3] |
|---|---|---|---|---|---|---|
| 6 | 7.32 | Single Family Detached | 40 | DU | 22 | 1.82 |
| | | Multifamily (Low-Rise) Residential | 121 | DU | 22 | 5.50 |
| 12 | 15.45 | Single Family Detached | 85 | DU | 22 | 3.86 |
| | | Multifamily (Low-Rise) Residential | 255 | DU | 22 | 11.59 |
| 13 | 23.77 | Single Family Detached | 131 | DU | 22 | 5.95 |
| | | Multifamily (Low-Rise) Residential | 392 | DU | 22 | 17.82 |
| 17 | 6.20 | Public Park | 6.20 | AC | -- | -- |
| 18 | 13.44 | Active Park | 13.44 | AC | -- | -- |
| 22 | 3.38 | Non-Recreational Park | 3.38 | AC | -- | -- |

PA = planning area, AC = acres; DU = dwelling unit
1. Designated by TOP 2050.
2. Land use, size, and unit were taken from the Urban Crossroads, *Center Park Specific Plan Traffic Analysis*, 2025, except for PA 22, which was taken from TOP 2025.
3. The building lot size was calculated using the following equation: building lot size = dwelling units * (dwelling units/acre).

Land Use

| Land Use | Size | Unit | Building Size (SF) | Landscaping (SF) | Lot Size (AC) |
|---|---|---|---|---|---|
| Single Family Housing[1] | 256 | DU | 506,880 | -- | 11.64 |
| Apartments (Low-Rise)[1] | 768 | DU | 152,0640 | -- | 34.91 |
| City Park[2,3] | 19.64 | AC | -- | 855,518.40 | 19.64 |
| Other Non-Asphalt Surfaces[2,4] | 3.38 | AC | -- | 147,232.80 | 3.38 |

DU = dwelling unit; AC = acres; SF = square feet
1. Assumed the lot would be fully developed by a building. Therefore, the building size was assumed to be equal to the lot size in square feet.
2. The city park and other non-asphalt surfaces was assumed to be fully landscaped with “special landscaping” because the landscaping would be irrigated with recycled water per City of Ontario Ordinance 2689.
3. The public park and active park were modeled as city park.
4. The non-recreational park was modeled as non-asphalt surfaces.

# Construction

## Schedule

| Construction Phase | Start Date | End Date | Workdays |
|---|---|---|---|
| Demolition | 12/1/2025 | 6/1/2026 | 131 |
| Site Preparation | 12/15/2025 | 6/15/2026 | 131 |
| Grading | 4/1/2026 | 12/1/2026 | 175 |

## Demolition

| Construction Phase | Amount (tons) |
|---|---|
| Demolition | 12,744 |

## Notes

Construction would include (per SCAQMD Rule 403 and FSEIR MM 3-1)

- watering exposed areas 3 times per day during earthmoving activities (site preparation and grading)
- watering demolished areas 2 times per day during demolition
- watering unpaved roads 2 times per day and limit vehicle speeds on unpaved roads to 25 mph throughout construction

Hearths

| Land Use | # Electric | # Without Fireplaces |
|---|---|---|
| Single Family Housing | 174.4 | 81.6 |
| Apartments Low Rise | 523.2 | 244.8 |
| SCAQMD 445 (Wood Burning) prohibits permanently installed wood burning devices in new developments.<br>The Project would not include natural gas fireplaces.<br>The # wood burning and # gas fireplaces were split 75% to # electric and 25% to # without fireplaces. | | |

## Quantified Measures

| # | Measure | Notes[1] |
|---|---|---|
| **Construction** | | |
| C-2* | Limit Heavy-Duty Diesel Vehicle Idling | Construction equipment idling would be limited to 5 minutes per FSEIR MM 3-1 |
| C-5 | Use Advanced Engine Tiers | Construction equipment would have Tier 4 Final engines per FSEIR MM 3-1 |
| C-13 | Use Low-VOC Paints for Construction | Architectural coatings would have a VOC content <10 g/L per FSEIR MM 3-1 |
| **Operations** | | |
| T-10 | Provide End-of-Trip Bicycle Facilities | End-of-trip facilities (showers and lockers) would be provided for employee use per FSEIR MM AQ-1 |
| T-14* | Provide Electric Vehicle Charging Infrastructure | EV charging infrastructure per FSEIR MM AQ-1 |
| T-34* | Provide Bike Parking | Bicycle parking facilities would be provided for workers, residents, and visitors per FSEIR MM AQ-1 |
| T-39* | Implement Preferential Parking Permit Program | Fuel efficient and carpool vehicles would receive preferential parking per FSEIR MM AQ-1 |
| E-2 | Require Energy Efficient Appliances | Residential appliances (modeled refrigerator, clothes washer, dishwasher, and ceiling fans) would be Energy Star certified per FSEIR MM AQ-1 |

FSEIR = Final Supplemental Environmental Impact Report, MM = Mitigation Measure
* Qualitative or supporting measures. Emission reductions are not included in the mitigated emissions results.
1. Compliance with the applicable FSEIR and SCAQMD regulation has been applied in CalEEMod and is shown as the "Mitigated" emissions in the CalEEMod outputs. The "Mitigated" emission outputs would be unmitigated, as the Project would not include and would not require mitigation measures.

# Phase II

Planning Areas

| PA | Total Lot Size (AC)[1] | Land Use[2] | Size[2] | Unit[2] | DU/AC[1] | Building Lot Size (AC)[3] |
|---|---|---|---|---|---|---|
| 1 | 15.91 | Single Family Detached | 88 | DU | 22 | 4.00 |
| | | Multifamily (Low-Rise) Residential | 262 | DU | 22 | 11.91 |
| 2 | 15.59 | Single Family Detached | 86 | DU | 22 | 3.91 |
| | | Multifamily (Low-Rise) Residential | 257 | DU | 22 | 11.68 |

| 10 | 9.86 | Multifamily (Low-Rise) Residential | 345 | DU | 35 | 9.86 |
| | 2.82 | Retail | 36,852 | SF | -- | 0.85 |
| | 1.41 | General Office | 42,994 | SF | -- | 0.99 |
| 11 | 10.97 | Multifamily (Low-Rise) Residential | 384 | DU | 35 | 10.97 |
| | 3.13 | Retail | 40,955 | SF | -- | 0.94 |
| | 1.57 | General Office | 47,781 | SF | -- | 1.10 |
| 14 | 13.33 | Active Park | 13.33 | AC | -- | -- |
| 15 | 13.11 | Active Park | 13.11 | AC | -- | -- |
| 16 | 9.90 | Public Park | 9.90 | AC | -- | -- |
| 19 | 2.26 | Non-Recreational Park | 2.26 | AC | -- | -- |
| 20 | 2.68 | Non-Recreational Park | 2.68 | AC | -- | -- |
| 21 | 2.96 | Non-Recreational Park | 2.96 | AC | -- | -- |

PA = planning area; AC = acres; DU = dwelling unit; SF = square feet

1. Designated by TOP 2050.
2. Land use, size, and unit were taken from the Urban Crossroads, *Center Park Specific Plan Traffic Analysis*, 2025, except for PA 19 through 21, which were taken from TOP 2025.
3. The residential building lot size was calculated using the following equation: building lot size = dwelling units *(dwelling units/acre). The retail and general office building lot size was assumed to be equal to the land use size in acres.

## Land Use

| Land Use | Size | Unit | Building Size (SF) | Landscaping (SF) | Lot Size (AC) |
|---|---|---|---|---|---|
| Single Family Housing[1] | 546 | DU | 1,081,080 | -- | 24.82 |
| Apartments Low Rise[1] | 2,723 | DU | 4,592,864 | -- | 105.44 |
| Strip Mall[2,3,4] | 38.603 | KSF | 38,603 | 3,860.3 | 0.975 |
| Fast Food Restaurant w/o Drive Thru[2,3,4] | 38.603 | KSF | 38,603 | 3,860.3 | 0.975 |
| Fast Food Restaurant with Drive Thru[2,3,4] | 38.603 | KSF | 38,603 | 3,860.3 | 0.975 |
| General Office Building[3,4,5] | 67.556 | KSF | 67,556 | 6,755.55 | 1.706 |
| Medical Office Building[3,4,5] | 67.556 | KSF | 67,556 | 6,755.55 | 1.706 |
| City Park[6,7] | 36.34 | AC | -- | 158,2970.4 | 36.34 |
| Other Non-Asphalt Surfaces[6,8] | 7.90 | AC | -- | 344,124 | 7.9 |
| Parking Lot[9] | 6.954 | AC | -- | -- | 6.954 |

DU = dwelling unit; KSF = thousand square feet; AC = acres; SF = square feet

1. Assumed the lot would be fully developed by a building. Therefore, the building size was assumed to be equal to the lot size in square feet.
2. The retail size was evenly divided between the strip mall, fast food restaurant w/o drive thru, and fast food restaurant with drive thru land uses.
3. Per the proposed Specific Plan, the retail and office land uses would include landscaping equal to 10% of the building square footage.
4. The lot size included the building size and landscaping in acres.
5. The general office size was evenly divided between the general office building and medical office building land uses.
6. The city park and other non-asphalt surfaces was assumed to be fully landscaped with "special landscaping" because the landscaping would be irrigated with recycled water per City of Ontario Ordinance 2689.
7. The public park and active park were modeled as city park.
8. The non-recreational park was modeled as non-asphalt surfaces.
9. Assumed the retail and office lot acreage not occupied by buildings or landscaping would be dedicated to parking lots. The lot size in acres was calculated using the following equation: lot size = total lot size – building size – landscaping.

# Construction

## Schedule

| Construction Phase | Start Date | End Date | Workdays |
|---|---|---|---|
| Demolition | 12/2/2026 | 6/2/2027 | 131 |
| Site Preparation | 12/15/2026 | 6/15/2027 | 131 |
| Grading | 4/1/2027 | 12/1/2027 | 175 |
| Infrastructure Improvements | 8/1/2027 | 12/1/2028 | 350 |

## Quantified Measures

| # | Measure | Notes[1] |
|---|---|---|
| **Construction** | | |
| C-2* | Limit Heavy-Duty Diesel Vehicle Idling | Construction equipment idling would be limited to 5 minutes per FSEIR MM 3-1 |
| C-5 | Use Advanced Engine Tiers | Construction equipment would have Tier 4 Final engines per FSEIR MM 3-1 |
| C-13 | Use Low-VOC Paints for Construction | Architectural coatings would have a VOC content <10 g/L per FSEIR MM 3-1 |
| **Operations** | | |
| T-10 | Provide End-of-Trip Bicycle Facilities | End-of-trip facilities (showers and lockers) would be provided for employee use per FSEIR MM AQ-1 |
| T-14* | Provide Electric Vehicle Charging Infrastructure | EV charging infrastructure per FSEIR MM AQ-1 |
| T-34* | Provide Bike Parking | Bicycle parking facilities would be provided for workers, residents, and visitors per FSEIR MM AQ-1 |
| T-39* | Implement Preferential Parking Permit Program | Fuel efficient and carpool vehicles would receive preferential parking per FSEIR MM AQ-1 |
| E-2 | Require Energy Efficient Appliances | Residential appliances (modeled refrigerator, clothes washer, dishwasher, and ceiling fans) would be Energy Star certified per FSEIR MM AQ-1 |

FSEIR = Final Supplemental Environmental Impact Report, MM = Mitigation Measure
* Qualitative or supporting measures. Emission reductions are not included in the mitigated emissions results.
1. Compliance with the applicable FSEIR and SCAQMD regulation has been applied in CalEEMod and is shown as the "Mitigated" emissions in the CalEEMod outputs. The "Mitigated" emission outputs would be unmitigated, as the Project would not include and would not require mitigation measures.

# Project Buildout (Phase I + Phase II)

| 21 | 2.96 | Non-Recreational Park | 2.96 | AC | -- | -- |
| 22 | 3.38 | Non-Recreational Park | 3.38 | AC | -- | -- |

PA = planning area; AC = acres; DU = dwelling unit; SF = square feet

1. Designated by TOP 2050.
2. Land use, size, and unit were taken from the Urban Crossroads, *Center Park Specific Plan Traffic Analysis*, 2025, except for PA 19 through 22, which were taken from TOP 2025.
3. The residential building lot size was calculated using the following equation: building lot size = dwelling units * (dwelling units/acre). The retail and general office building lot size was assumed to be equal to the land use size in acres.

## Land Use

| Land Use | Size | Unit | Building Size (SF) | Landscaping (SF) | Lot Size (AC) |
|---|---|---|---|---|---|
| Single Family Housing[1] | 802 | DU | 1,587,960 | -- | 36.45 |
| Apartments Low Rise[1] | 3,491 | DU | 6,113,504.5 | -- | 140.35 |
| Strip Mall[2,3,4] | 38.603 | KSF | 38,603 | 3,860.3 | 0.975 |
| Fast Food Restaurant w/o Drive Thru[2,3,4] | 38.603 | KSF | 38,603 | 3,860.3 | 0.975 |
| Fast Food Restaurant with Drive Thru[2,3,4] | 38.603 | KSF | 38,603 | 3,860.3 | 0.975 |
| General Office Building[3,4,5] | 67.556 | KSF | 67,556 | 6,755.55 | 1.706 |
| Medical Office Building[3,4,5] | 67.556 | KSF | 67,556 | 6,755.55 | 1.706 |
| City Park[6,7] | 55.98 | AC | -- | 2,438,488.8 | 36.34 |
| Other Non-Asphalt Surfaces[6,8] | 11.28 | AC | -- | 491,356.8 | 7.9 |
| Parking Lot[9] | 6.954 | AC | -- | -- | 6.954 |

DU = dwelling unit; KSF = thousand square feet; AC = acres; SF = square feet

1. Assumed the lot would be fully developed by a building. Therefore, the building size was assumed to be equal to the lot size in square feet.
2. The retail size was evenly divided between the strip mall, fast food restaurant w/o drive thru, and fast food restaurant with drive thru land uses.
3. Per the proposed Specific Plan, the retail and office land uses would include landscaping equal to 10% of the building square footage.
4. The lot size included the building size and landscaping in acres.
5. The general office size was evenly divided between the general office building and medical office building land uses.
6. The city park and other non-asphalt surfaces was assumed to be fully landscaped with "special landscaping" because the landscaping would be irrigated with recycled water per City of Ontario Ordinance 2689.
7. The public park and active park were modeled as city park.
8. The non-recreational park was modeled as non-asphalt surfaces.
9. Assumed the retail and office lot acreage not occupied by buildings or landscaping would be dedicated to parking lots. The lot size in acres was calculated using the following equation: lot size = total lot size – building size – landscaping.

## Vehicle Data

| Land Use | Size | Unit | Trip Rate | Daily Trip Generation |
|---|---|---|---|---|
| Single Family Housing | 802 | DU | 7.291317 | 5,848 |
| Apartments Low Rise | 3,491 | DU | 5.685581 | 19,848 |
| Strip Mall | 38.603 | KSF | 15.387405 | 594 |
| Fast Food Restaurant w/o Drive Thru | 38.603 | KSF | 179.091068 | 6,913 |
| Fast Food Restaurant with Drive Thru | 38.603 | KSF | 185.846890 | 7,174 |
| General Office Building | 67.556 | KSF | 7.972543 | 539 |
| Medical Office Building | 67.556 | KSF | 26.488012 | 1789 |
| City Park | 55.98 | AC | 35.905681 | 2010 |
| Other Non-Asphalt Surfaces | 11.28 | AC | 0.000000 | 0 |
| Parking Lot | 6.954 | AC | 0 | 0 |
| | | | **Total** | **44,716** |

DU = dwelling unit; KSF = thousand square feet; AC = acres

| # | Measure | Notes[1] |
|---|---|---|
| **Operations** | | |
| T-10 | Provide End-of-Trip Bicycle Facilities | End-of-trip facilities (showers and lockers) would be provided for employee use per FSEIR MM AQ-1 |
| T-14* | Provide Electric Vehicle Charging Infrastructure | EV charging infrastructure per FSEIR MM AQ-1 |
| T-34* | Provide Bike Parking | Bicycle parking facilities would be provided for workers, residents, and visitors per FSEIR MM AQ-1 |
| T-39* | Implement Preferential Parking Permit Program | Fuel efficient and carpool vehicles would receive preferential parking per FSEIR MM AQ-1 |
| E-2 | Require Energy Efficient Appliances | Residential appliances (modeled refrigerator, clothes washer, dishwasher, and ceiling fans) would be Energy Star certified per FSEIR MM AQ-1 |

FSEIR = Final Supplemental Environmental Impact Report, MM = Mitigation Measure
* Qualitative or supporting measures. Emission reductions are not included in the mitigated emissions results.
1. Compliance with the applicable FSEIR and SCAQMD regulation has been applied in CalEEMod and is shown as the "Mitigated" emissions in the CalEEMod outputs. The "Mitigated" emission outputs would be unmitigated, as the Project would not include and would not require mitigation measures.

**Construction Water Energy**

| | | |
|---|---|---|
| Daily Soil Disturbance[1] | 3.5 | acres |
| Days of Soil Disturbance[2] | 612 | days |
| Water Concentration[3] | 3,020 | gallons/acre |
| Water Energy Intensity[4] | 5,306 | kWh/million gallons/year |
| Water Usage | 6.47 | million gallons/year |
| **Water Energy** | 34,324 | kWh/year |
| | 0.0343 | GWh/year |
| **San Bernardino County Annual Electricity** | 16,630 | GWh/year |
| **% Consumption** | 0.0002% | |

NOTES:

1. Total daily acres disturbed from offroad equipment per CalEEMod (3.0 Construction Emissions Detail) and maximum SCAQMD LST values for soil-disturbing equipment.
2. Number of days of construction with soil-disturbing equipment per CalEEMod (5.1 Construction Schedule).
3. Water application rate per Air and Waste Management Association's Air Pollution Engineering Manual.
4. Water energy intensity factor for subarea per CalEEMod User Guide, Appendix G, Tab G-32.

**Construction Emissions by Year**

**Phase I**

| Construction Year[1] | Demolition | | | Site Preparation | | | Grading | | |
|---|---|---|---|---|---|---|---|---|---|
| | On-Site Diesel (Off-Road) | Off-Site Diesel (Hauling/Vendor) | Off-Site Gas (Worker) | On-Site Diesel (Off-Road) | Off-Site Diesel (Hauling/Vendor) | Off-Site Gas (Worker) | On-Site Diesel (Off-Road) | Off-Site Diesel (Hauling/Vendor) | Off-Site Gas (Worker) |

NOTES:
1. Fuel used for off-road, hauling, and vendor trips assumed to be diesel.
2. Fuel used for worker trips assumed to be gasoline.
3. MTCO2e rates from CalEEMod (3.0 Construction Emissions Details).
4. For CO2e emissions, see Chapter 13 (page 94); Conversion Ratios: Climate Registry, General Reporting Protocol, 2016.

**Operational Water Energy**

| | | |
|---|---|---|
| Indoor Water Usage | 225.72 | million gallons |
| Indoor Energy Intensity Factor[1] | 6807 | kWh/MG/year |
| Outdoor Water Usage | 95.32 | million gallons |
| Outdoor Energy Intensity Factor[2] | 5306 | kWh/MG/year |
| **Water Energy** | 2,042,190 | kWh/year |
| | 2.04 | GWh/year |
| **San Bernardino County Annual Electricity** | 16,630 | GWh/year |
| **Percentage Increase** | 0.012% | |

| **Land Use[3]** | **(gal/year)** | |
|---|---|---|
| | **Indoor** | **Outdoor** |
| Single Family Housing | 33,428,302 | 0 |
| Apartments Low Rise | 145,508,982 | 0 |
| Strip Mall | 2,859,422 | 61,993 |
| Fast Food Restaurant w/o Drive Thru | 11,717,312 | 61,993 |
| Fast Food Restaurant with Drive Thru | 11,717,312 | 61,993 |
| General Office Building | 12,006,981 | 108,488 |
| Medical Office Building | 8,476,963 | 108,488 |
| City Park | 0 | 87,022,206 |
| Other Non-Asphalt Surfaces | 0 | 7,890,759 |
| Parking Lot | 0 | 0.00 |
| **Total Operational Water (million gallons/year)** | **226** | **95** |

NOTES:
1. Indoor water energy intensity factor for subarea per CalEEMod User Guide, Appendix G, Tab G-32. Factor includes supply, treatment, distribution, and wastewater.
2. Outdoor water energy intensity factor for subarea per CalEEMod User Guide, Appendix G, Tab G-32. Factor includes supply, treatment, and distribution.
3. Operational water use values per CalEEMod (5.12 Operational Water and Wastewater Consumption).

## Operational Elecricity/Natural Gas Energy

| | Energy Usage | San Bernardino County Annual Energy[3] | % Consumption |
|---|---|---|---|
| Electricity (kWh/yr) | 27,128,467.0190 | -- | -- |
| (GWh/yr) | 27.128 | 16,630 | 0.16% |
| Water Energy (GWh/yr) | 2.042 | 16,630 | 0.01% |
| Total Electrical Demad (GWh/yr) | 29.171 | 16,630 | 0.18% |
| Natural Gas (kBTU/yr) | 95,999,854 | -- | -- |
| Natural Gas (therms/yr) | 959,999 | 562,123,065 | 0.171% |

| Land Use | Electricity[1] (kWh/yr) | Natural Gas[2] (kBTU/yr) |
|---|---|---|
| | Mitigated | Unmitigated |
| Single Family Housing | 5,895,110 | 25,094,352 |
| Apartments Low Rise | 15,527,143 | 58,148,047 |
| Strip Mall | 375,543 | 227,584 |
| Fast Food Restaurant w/o Drive Thru | 1,353,678 | 4,411,198 |

| Gas Utility | Southern California Gas |
| App Version | 2022.1.1.29 |

## 1.2. Land Use Types

| Land Use Subtype | Size | Unit | Lot Acreage | Building Area (sq ft) | Landscape Area (sq ft) | Special Landscape Area (sq ft) | Population | Description |
|---|---|---|---|---|---|---|---|---|
| Single Family Housing | 256 | Dwelling Unit | 11.6 | 506,880 | 0.00 | — | 847 | — |

| | | | | | | | | |
|---|---|---|---|---|---|---|---|---|
| Apartments Low Rise | 768 | Dwelling Unit | 34.9 | 1,520,640 | 0.00 | — | 2,542 | — |
| City Park | 19.6 | Acre | 19.6 | 0.00 | 855,518 | 855,518 | — | — |
| Other Non-Asphalt Surfaces | 3.38 | Acre | 3.38 | 0.00 | 147,233 | 147,233 | — | — |

## 1.3. User-Selected Emission Reduction Measures by Emissions Sector

| Sector | # | Measure Title |
|---|---|---|
| Construction | C-2* | Limit Heavy-Duty Diesel Vehicle Idling |
| Construction | C-5 | Use Advanced Engine Tiers |
| Construction | C-13 | Use Low-VOC Paints for Construction |
| Transportation | T-10 | Provide End-of-Trip Bicycle Facilities |
| Transportation | T-14* | Provide Electric Vehicle Charging Infrastructure |
| Transportation | T-34* | Provide Bike Parking |
| Transportation | T-39* | Implement Preferential Parking Permit Program |
| Energy | E-2 | Require Energy Efficient Appliances |

* Qualitative or supporting measure. Emission reductions not included in the mitigated emissions results.

# 2. Emissions Summary

## 2.1. Construction Emissions Compared Against Thresholds

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Un/Mit. | TOG | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Unmit. | 608 | 607 | 79.2 | 90.4 | 0.15 | 3.23 | 12.0 | 13.6 | 2.97 | 4.07 | 7.04 | — | 21,497 | 21,497 | 0.99 | 0.90 | 40.2 | 21,830 |
| Mit. | 122 | 122 | 13.7 | 100 | 0.15 | 0.31 | 12.0 | 12.3 | 0.31 | 4.07 | 4.37 | — | 21,497 | 21,497 | 0.99 | 0.90 | 40.2 | 21,830 |
| % Reduced | 80% | 80% | 83% | -11% | — | 90% | — | 10% | 90% | — | 38% | — | — | — | — | — | — | — |

| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Annual | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

## 4.8. Stationary Emissions By Equipment Type

### 4.8.2. Mitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Equipment Type | TOG | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Annual | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

## 4.9. User Defined Emissions By Equipment Type

### 4.9.2. Mitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Equipment Type | TOG | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Annual | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

## 4.10. Soil Carbon Accumulation By Vegetation Type

### 4.10.2. Above and Belowground Carbon Accumulation by Land Use Type - Unmitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Land Use | TOG | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Annual | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

4.10.4. Soil Carbon Accumulation By Vegetation Type - Mitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Vegetation | TOG | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Annual | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

4.10.5. Above and Belowground Carbon Accumulation by Land Use Type - Mitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Land Use | TOG | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Annual | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

4.10.6. Avoided and Sequestered Emissions by Species - Mitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Species | TOG | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Avoided | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Subtotal | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Sequestered | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Subtotal | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Removed | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Subtotal | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Avoided | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Subtotal | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Sequestered | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Subtotal | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Removed | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Subtotal | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Annual | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Avoided | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

| Sequestered | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Subtotal | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

| | | | | | | | | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Remove | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Subtotal | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

# 5. Activity Data

## 5.1. Construction Schedule

| Phase Name | Phase Type | Start Date | End Date | Days Per Week | Work Days per Phase | Phase Description |
|---|---|---|---|---|---|---|
| Demolition | Demolition | 12/1/2025 | 6/1/2026 | 5.00 | 131 | — |
| Site Preparation | Site Preparation | 12/15/2025 | 6/15/2026 | 5.00 | 131 | — |
| Grading | Grading | 4/1/2026 | 12/1/2026 | 5.00 | 175 | — |
| Building Construction | Building Construction | 12/2/2026 | 5/2/2027 | 5.00 | 108 | — |
| Infrastructure Improvements | Building Construction | 8/1/2026 | 2/1/2027 | 5.00 | 131 | — |
| Paving | Paving | 2/2/2027 | 3/2/2027 | 5.00 | 21.0 | — |
| Architectural Coating | Architectural Coating | 5/3/2027 | 5/31/2027 | 5.00 | 21.0 | — |

## 5.2. Off-Road Equipment

### 5.2.2. Mitigated

| Phase Name | Equipment Type | Fuel Type | Engine Tier | Number per Day | Hours Per Day | Horsepower | Load Factor |
|---|---|---|---|---|---|---|---|
| Demolition | Rubber Tired Dozers | Diesel | Tier 4 Final | 2.00 | 8.00 | 367 | 0.40 |
| Demolition | Excavators | Diesel | Tier 4 Final | 3.00 | 8.00 | 36.0 | 0.38 |
| Demolition | Concrete/Industrial Saws | Diesel | Tier 4 Final | 1.00 | 8.00 | 33.0 | 0.73 |
| Site Preparation | Rubber Tired Dozers | Diesel | Tier 4 Final | 3.00 | 8.00 | 367 | 0.40 |
| Site Preparation | Tractors/Loaders/Back hoes | Diesel | Tier 4 Final | 4.00 | 8.00 | 84.0 | 0.37 |
| Grading | Graders | Diesel | Tier 4 Final | 1.00 | 8.00 | 148 | 0.41 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| Grading | Excavators | Diesel | Tier 4 Final | 2.00 | 8.00 | 36.0 | 0.38 |
| Grading | Tractors/Loaders/Back hoes | Diesel | Tier 4 Final | 2.00 | 8.00 | 84.0 | 0.37 |
| Grading | Scrapers | Diesel | Tier 4 Final | 2.00 | 8.00 | 423 | 0.48 |
| Grading | Rubber Tired Dozers | Diesel | Tier 4 Final | 1.00 | 8.00 | 367 | 0.40 |
| Building Construction | Forklifts | Diesel | Tier 4 Final | 3.00 | 8.00 | 82.0 | 0.20 |
| Building Construction | Generator Sets | Diesel | Average | 1.00 | 8.00 | 14.0 | 0.74 |
| Building Construction | Cranes | Diesel | Tier 4 Final | 1.00 | 7.00 | 367 | 0.29 |
| Building Construction | Welders | Diesel | Tier 4 Final | 1.00 | 8.00 | 46.0 | 0.45 |
| Building Construction | Tractors/Loaders/Back hoes | Diesel | Tier 4 Final | 3.00 | 7.00 | 84.0 | 0.37 |
| Infrastructure Improvements | Forklifts | Diesel | Tier 4 Final | 3.00 | 8.00 | 82.0 | 0.20 |
| Infrastructure Improvements | Generator Sets | Diesel | Average | 1.00 | 8.00 | 14.0 | 0.74 |
| Infrastructure Improvements | Cranes | Diesel | Tier 4 Final | 1.00 | 7.00 | 367 | 0.29 |
| Infrastructure Improvements | Welders | Diesel | Tier 4 Final | 1.00 | 8.00 | 46.0 | 0.45 |
| Infrastructure Improvements | Tractors/Loaders/Back hoes | Diesel | Tier 4 Final | 3.00 | 7.00 | 84.0 | 0.37 |
| Paving | Pavers | Diesel | Tier 4 Final | 2.00 | 8.00 | 81.0 | 0.42 |
| Paving | Paving Equipment | Diesel | Tier 4 Final | 2.00 | 8.00 | 89.0 | 0.36 |
| Paving | Rollers | Diesel | Tier 4 Final | 2.00 | 8.00 | 36.0 | 0.38 |
| Architectural Coating | Air Compressors | Diesel | Tier 4 Final | 1.00 | 6.00 | 37.0 | 0.48 |

## 5.3. Construction Vehicles

### 5.3.2. Mitigated

| Phase Name | Trip Type | One-Way Trips per Day | Miles per Trip | Vehicle Mix |
|---|---|---|---|---|
| Demolition | — | — | — | — |

| | | | | |
|---|---|---|---|---|
| Demolition | Worker | 15.0 | 18.5 | LDA,LDT1,LDT2 |
| Demolition | Vendor | — | 10.2 | HHDT,MHDT |
| Demolition | Hauling | 24.3 | 20.0 | HHDT |
| Demolition | Onsite truck | — | — | HHDT |
| Site Preparation | — | — | — | — |
| Site Preparation | Worker | 17.5 | 18.5 | LDA,LDT1,LDT2 |
| Site Preparation | Vendor | — | 10.2 | HHDT,MHDT |
| Site Preparation | Hauling | 0.00 | 20.0 | HHDT |

| Infrastructure Improvements | Hauling | 0.00 | 20.0 | HHDT |
| Infrastructure Improvements | Onsite truck | — | — | HHDT |

## 5.4. Vehicles

### 5.4.1. Construction Vehicle Control Strategies

| Control Strategies Applied | PM10 Reduction | PM2.5 Reduction |
|---|---|---|
| Water unpaved roads twice daily | 55% | 55% |
| Limit vehicle speeds on unpaved roads to 25 mph | 44% | 44% |

## 5.5. Architectural Coatings

| Phase Name | Residential Interior Area Coated (sq ft) | Residential Exterior Area Coated (sq ft) | Non-Residential Interior Area Coated (sq ft) | Non-Residential Exterior Area Coated (sq ft) | Parking Area Coated (sq ft) |
|---|---|---|---|---|---|
| Architectural Coating | 4,105,728 | 1,368,576 | 0.00 | 0.00 | 8,834 |

## 5.6. Dust Mitigation

### 5.6.1. Construction Earthmoving Activities

| Phase Name | Material Imported (cy) | Material Exported (cy) | Acres Graded (acres) | Material Demolished (Ton of Debris) | Acres Paved (acres) |
|---|---|---|---|---|---|
| Demolition | 0.00 | 0.00 | 0.00 | 12,744 | — |
| Site Preparation | — | — | 197 | 0.00 | — |
| Grading | — | — | 525 | 0.00 | — |
| Paving | 0.00 | 0.00 | 0.00 | 0.00 | 6.20 |

### 5.6.2. Construction Earthmoving Control Strategies

| Control Strategies Applied | Frequency (per day) | PM10 Reduction | PM2.5 Reduction |
|---|---|---|---|
| Water Exposed Area | 3 | 74% | 74% |
| Water Demolished Area | 2 | 36% | 36% |

## 5.7. Construction Paving

| Land Use | Area Paved (acres) | % Asphalt |
|---|---|---|
| Single Family Housing | 2.82 | 0% |
| Apartments Low Rise | — | 0% |
| City Park | 0.00 | 0% |
| Other Non-Asphalt Surfaces | 3.38 | 0% |

## 5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

| Year | kWh per Year | CO2 | CH4 | N2O |
|---|---|---|---|---|
| 2025 | 0.00 | 532 | 0.03 | < 0.005 |
| 2026 | 0.00 | 532 | 0.03 | < 0.005 |
| 2027 | 0.00 | 532 | 0.03 | < 0.005 |

## 5.9. Operational Mobile Sources

### 5.9.2. Mitigated

| Land Use Type | Trips/Weekday | Trips/Saturday | Trips/Sunday | Trips/Year | VMT/Weekday | VMT/Saturday | VMT/Sunday | VMT/Year |
|---|---|---|---|---|---|---|---|---|
| Single Family Housing | 2,416 | 2,416 | 2,416 | 881,840 | 28,649 | 28,649 | 28,649 | 10,456,835 |
| Apartments Low Rise | 5,176 | 5,176 | 5,176 | 1,889,240 | 61,377 | 61,377 | 61,377 | 22,402,558 |

| | | | | | | | | |
|---|---|---|---|---|---|---|---|---|
| City Park | 677 | 677 | 677 | 246,933 | 11,219 | 11,219 | 11,219 | 4,094,910 |
| Other Non-Asphalt Surfaces | 0.00 | 0.00 | 0.00 | 0.00 | 0.00 | 0.00 | 0.00 | 0.00 |

## 5.10. Operational Area Sources

### 5.10.1. Hearths

#### 5.10.1.2. Mitigated

| Hearth Type | Unmitigated (number) |
|---|---|
| Single Family Housing | — |
| Wood Fireplaces | 0 |
| Gas Fireplaces | 0 |
| Propane Fireplaces | 0 |
| Electric Fireplaces | 174 |
| No Fireplaces | 82 |
| Conventional Wood Stoves | 0 |
| Catalytic Wood Stoves | 0 |
| Non-Catalytic Wood Stoves | 0 |
| Pellet Wood Stoves | 0 |
| Apartments Low Rise | — |
| Wood Fireplaces | 0 |
| Gas Fireplaces | 0 |
| Propane Fireplaces | 0 |
| Electric Fireplaces | 523 |
| No Fireplaces | 245 |
| Conventional Wood Stoves | 0 |
| Catalytic Wood Stoves | 0 |
| Non-Catalytic Wood Stoves | 0 |

| | |
|---|---|
| Pellet Wood Stoves | 0 |

### 5.10.2. Architectural Coatings

| Residential Interior Area Coated (sq ft) | Residential Exterior Area Coated (sq ft) | Non-Residential Interior Area Coated (sq ft) | Non-Residential Exterior Area Coated (sq ft) | Parking Area Coated (sq ft) |
|---|---|---|---|---|
| 4105728 | 1,368,576 | 0.00 | 0.00 | 8,834 |

### 5.10.4. Landscape Equipment - Mitigated

| Season | Unit | Value |
|---|---|---|
| Snow Days | day/yr | 0.00 |
| Summer Days | day/yr | 250 |

## 5.11. Operational Energy Consumption

### 5.11.2. Mitigated

Electricity (kWh/yr) and CO2 and CH4 and N2O and Natural Gas (kBTU/yr)

| Land Use | Electricity (kWh/yr) | CO2 | CH4 | N2O | Natural Gas (kBTU/yr) |
|---|---|---|---|---|---|
| Single Family Housing | 1,881,731 | 532 | 0.0330 | 0.0040 | 8,010,167 |
| Apartments Low Rise | 3,415,883 | 532 | 0.0330 | 0.0040 | 12,792,237 |
| City Park | 0.00 | 532 | 0.0330 | 0.0040 | 0.00 |
| Other Non-Asphalt Surfaces | 0.00 | 532 | 0.0330 | 0.0040 | 0.00 |

## 5.12. Operational Water and Wastewater Consumption

### 5.12.2. Mitigated

| Land Use | Indoor Water (gal/year) | Outdoor Water (gal/year) |
|---|---|---|
| Single Family Housing | 10,670,381 | 0.00 |
| Apartments Low Rise | 32,011,142 | 0.00 |

| | | |
|---|---|---|
| City Park | 0.00 | 30,530,835 |
| Other Non-Asphalt Surfaces | 0.00 | 5,254,288 |

## 5.13. Operational Waste Generation

### 5.13.2. Mitigated

| Land Use | Waste (ton/year) | Cogeneration (kWh/year) |
|---|---|---|
| Single Family Housing | 247 | — |
| Apartments Low Rise | 568 | — |
| City Park | 1.69 | — |
| Other Non-Asphalt Surfaces | 0.00 | — |

## 5.14. Operational Refrigeration and Air Conditioning Equipment

### 5.14.2. Mitigated

| Land Use Type | Equipment Type | Refrigerant | GWP | Quantity (kg) | Operations Leak Rate | Service Leak Rate | Times Serviced |
|---|---|---|---|---|---|---|---|
| Single Family Housing | Average room A/C & Other residential A/C and heat pumps | R-410A | 2,088 | < 0.005 | 2.50 | 2.50 | 10.0 |
| Single Family Housing | Household refrigerators and/or freezers | R-134a | 1,430 | 0.12 | 0.60 | 0.00 | 1.00 |
| Apartments Low Rise | Average room A/C & Other residential A/C and heat pumps | R-410A | 2,088 | < 0.005 | 2.50 | 2.50 | 10.0 |
| Apartments Low Rise | Household refrigerators and/or freezers | R-134a | 1,430 | 0.12 | 0.60 | 0.00 | 1.00 |
| City Park | Other commercial A/C and heat pumps | R-410A | 2,088 | < 0.005 | 4.00 | 4.00 | 18.0 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| City Park | Stand-alone retail refrigerators and freezers | R-134a | 1,430 | 0.04 | 1.00 | 0.00 | 1.00 |

## 5.15. Operational Off-Road Equipment

### 5.15.2. Mitigated

| Equipment Type | Fuel Type | Engine Tier | Number per Day | Hours Per Day | Horsepower | Load Factor |
|---|---|---|---|---|---|---|

# 6. Climate Risk Detailed Report

## 6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

| Climate Hazard | Result for Project Location | Unit |
|---|---|---|
| Temperature and Extreme Heat | 19.8 | annual days of extreme heat |
| Extreme Precipitation | 3.10 | annual days with precipitation above 20 mm |
| Sea Level Rise | — | meters of inundation depth |
| Wildfire | 6.78 | annual hectares burned |

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

## 6.2. Initial Climate Risk Scores

| Climate Hazard | Exposure Score | Sensitivity Score | Adaptive Capacity Score | Vulnerability Score |
|---|---|---|---|---|
| Temperature and Extreme Heat | 2 | 0 | 0 | N/A |
| Extreme Precipitation | N/A | N/A | N/A | N/A |
| Sea Level Rise | 1 | 0 | 0 | N/A |
| Wildfire | 1 | 0 | 0 | N/A |
| Flooding | N/A | N/A | N/A | N/A |
| Drought | N/A | N/A | N/A | N/A |
| Snowpack Reduction | N/A | N/A | N/A | N/A |
| Air Quality Degradation | 0 | 0 | 0 | N/A |

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

## 6.3. Adjusted Climate Risk Scores

| Climate Hazard | Exposure Score | Sensitivity Score | Adaptive Capacity Score | Vulnerability Score |
|---|---|---|---|---|
| Temperature and Extreme Heat | 2 | 1 | 1 | 3 |
| Extreme Precipitation | N/A | N/A | N/A | N/A |
| Sea Level Rise | 1 | 1 | 1 | 2 |
| Wildfire | 1 | 1 | 1 | 2 |
| Flooding | N/A | N/A | N/A | N/A |
| Drought | N/A | N/A | N/A | N/A |
| Snowpack Reduction | N/A | N/A | N/A | N/A |
| Air Quality Degradation | 1 | 1 | 1 | 2 |

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

# 7. Health and Equity Details

## 7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

| Indicator | Result for Project Census Tract |
|---|---|
| Exposure Indicators | — |
| AQ-Ozone | 77.1 |
| AQ-PM | 93.4 |
| AQ-DPM | 57.1 |
| Drinking Water | 100.0 |
| Lead Risk Housing | 17.5 |
| Pesticides | 84.9 |
| Toxic Releases | 67.6 |
| Traffic | 18.1 |
| Effect Indicators | — |
| CleanUp Sites | 80.3 |
| Groundwater | 98.1 |
| Haz Waste Facilities/Generators | 86.6 |
| Impaired Water Bodies | 87.0 |
| Solid Waste | 98.9 |
| Sensitive Population | — |
| Asthma | 16.5 |
| Cardio-vascular | 29.1 |
| Low Birth Weights | 49.0 |
| Socioeconomic Factor Indicators | — |
| Education | 52.9 |
| Housing | 59.3 |

| | |
|---|---|
| Linguistic | 68.9 |
| Poverty | 35.4 |
| Unemployment | 36.4 |

## 7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

| Indicator | Result for Project Census Tract |
|---|---|
| Economic | — |
| Above Poverty | 73.60451687 |
| Employed | 6.274862056 |
| Median HI | 76.55588349 |
| Education | — |
| Bachelor's or higher | 64.85307327 |
| High school enrollment | 100 |
| Preschool enrollment | 66.93186193 |
| Transportation | — |
| Auto Access | 63.41588605 |
| Active commuting | 24.5989991 |
| Social | — |
| 2-parent households | 66.95752598 |
| Voting | 70.69164635 |
| Neighborhood | — |
| Alcohol availability | 97.0101373 |
| Park access | 52.77813422 |
| Retail density | 10.02181445 |
| Supermarket access | 6.557166688 |
| Tree canopy | 8.238162453 |
| Housing | — |

| | |
|---|---|
| Homeownership | 60.78532016 |
| Housing habitability | 61.41408957 |
| Low-inc homeowner severe housing cost burden | 71.53856025 |
| Low-inc renter severe housing cost burden | 18.38829719 |
| Uncrowded housing | 64.30129603 |
| Health Outcomes | — |
| Insured adults | 73.78416528 |
| Arthritis | 95.7 |
| Asthma ER Admissions | 84.6 |
| High Blood Pressure | 97.7 |
| Cancer (excluding skin) | 89.7 |
| Asthma | 34.7 |
| Coronary Heart Disease | 98.7 |
| Chronic Obstructive Pulmonary Disease | 94.6 |
| Diagnosed Diabetes | 96.0 |
| Life Expectancy at Birth | 75.7 |
| Cognitively Disabled | 56.3 |
| Physically  Disabled | 69.8 |
| Heart Attack ER Admissions | 68.4 |
| Mental Health Not Good | 54.9 |
| Chronic Kidney Disease | 97.1 |
| Obesity | 68.0 |
| Pedestrian Injuries | 19.6 |
| Physical Health Not Good | 86.2 |
| Stroke | 97.8 |
| Health Risk Behaviors | — |
| Binge Drinking | 28.2 |
| Current Smoker | 59.6 |

| | |
|---|---|
| No Leisure Time for Physical Activity | 76.7 |
| Climate Change Exposures | — |
| Wildfire Risk | 0.0 |
| SLR Inundation Area | 0.0 |
| Children | 9.0 |
| Elderly | 91.7 |
| English Speaking | 35.1 |
| Foreign-born | 48.1 |
| Outdoor Workers | 88.5 |
| Climate Change Adaptive Capacity | — |
| Impervious Surface Cover | 78.1 |
| Traffic Density | 21.6 |
| Traffic Access | 23.0 |
| Other Indices | — |
| Hardship | 45.2 |
| Other Decision Support | — |
| 2016 Voting | 74.7 |

## 7.3. Overall Health & Equity Scores

| Metric | Result for Project Census Tract |
|---|---|
| CalEnviroScreen 4.0 Score for Project Location (a) | 72.0 |
| Healthy Places Index Score for Project Location (b) | 55.0 |
| Project Located in a Designated Disadvantaged Community (Senate Bill 535) | No |
| Project Located in a Low-Income Community (Assembly Bill 1550) | No |
| Project Located in a Community Air Protection Program Community (Assembly Bill 617) | No |

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

## 7.4. Health & Equity Measures

No Health & Equity Measures selected.

## 7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

## 7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

# 8. User Changes to Default Data

| Screen | Justification |
|---|---|
| Land Use | per center park specific plan provisions and traffic study from Urban Crossroads<br>per the City Ordinance 2689, developments within Ontario Ranch would use recycled water to irrigate landscaping |
| Construction: Construction Phases | per construction questionnaire from client |
| Operations: Vehicle Data | per traffic study from Urban Crossroads |
| Operations: Hearths | SCAQMD 445 (Wood Burning) prohibits permanently installed wood-burning devices in new developments<br>the Project would not include natural gas fireplaces |

| City Park | 36.3 | Acre | 36.3 | 0.00 | 1,582,970 | 1,582,970 | — | — |
| Other Non-Asphalt Surfaces | 7.90 | Acre | 7.90 | 0.00 | 344,124 | 344,124 | — | — |
| Parking Lot | 6.95 | Acre | 6.95 | 0.00 | 0.00 | — | — | — |

## 1.3. User-Selected Emission Reduction Measures by Emissions Sector

| Sector | # | Measure Title |
|---|---|---|
| Construction | C-2* | Limit Heavy-Duty Diesel Vehicle Idling |
| Construction | C-5 | Use Advanced Engine Tiers |
| Construction | C-13 | Use Low-VOC Paints for Construction |
| Transportation | T-10 | Provide End-of-Trip Bicycle Facilities |
| Transportation | T-14* | Provide Electric Vehicle Charging Infrastructure |
| Transportation | T-34* | Provide Bike Parking |
| Transportation | T-39* | Implement Preferential Parking Permit Program |
| Energy | E-2 | Require Energy Efficient Appliances |

* Qualitative or supporting measure. Emission reductions not included in the mitigated emissions results.

# 2. Emissions Summary

## 2.1. Construction Emissions Compared Against Thresholds

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Un/Mit. | TOG | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |

## 4.7. Offroad Emissions By Equipment Type

### 4.7.2. Mitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Equipment Type | TOG | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Annual | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

## 4.8. Stationary Emissions By Equipment Type

### 4.8.2. Mitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Equipment Type | TOG | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Annual | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

## 4.9. User Defined Emissions By Equipment Type

### 4.9.2. Mitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Equipment Type | TOG | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

| | | | | | | | | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Annual | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

## 4.10. Soil Carbon Accumulation By Vegetation Type

### 4.10.2. Above and Belowground Carbon Accumulation by Land Use Type - Unmitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Land Use | TOG | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Annual | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

### 4.10.4. Soil Carbon Accumulation By Vegetation Type - Mitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Vegetation | TOG | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

| | | | | | | | | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Annual | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

4.10.5. Above and Belowground Carbon Accumulation by Land Use Type - Mitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Land Use | TOG | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Annual | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

4.10.6. Avoided and Sequestered Emissions by Species - Mitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Species | TOG | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Avoided | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

## 5.4. Vehicles

### 5.4.1. Construction Vehicle Control Strategies

| Control Strategies Applied | PM10 Reduction | PM2.5 Reduction |
|---|---|---|
| Water unpaved roads twice daily | 55% | 55% |
| Limit vehicle speeds on unpaved roads to 25 mph | 44% | 44% |

## 5.6. Dust Mitigation

### 5.6.1. Construction Earthmoving Activities

| Phase Name | Material Imported (cy) | Material Exported (cy) | Acres Graded (acres) | Material Demolished (Ton of Debris) | Acres Paved (acres) |
|---|---|---|---|---|---|
| Demolition | 0.00 | 0.00 | 0.00 | 30,810 | — |
| Site Preparation | — | — | 197 | 0.00 | — |
| Grading | — | — | 525 | 0.00 | — |
| Paving | 0.00 | 0.00 | 0.00 | 0.00 | 20.9 |

### 5.6.2. Construction Earthmoving Control Strategies

| Control Strategies Applied | Frequency (per day) | PM10 Reduction | PM2.5 Reduction |
|---|---|---|---|
| Water Exposed Area | 3 | 74% | 74% |
| Water Demolished Area | 2 | 36% | 36% |

## 5.7. Construction Paving

| Land Use | Area Paved (acres) | % Asphalt |
|---|---|---|
| Single Family Housing | 6.02 | 0% |
| Apartments Low Rise | — | 0% |
| Strip Mall | 0.00 | 0% |
| Fast Food Restaurant w/o Drive Thru | 0.00 | 0% |
| Fast Food Restaurant with Drive Thru | 0.00 | 0% |

| | | |
|---|---|---|
| General Office Building | 0.00 | 0% |
| Medical Office Building | 0.00 | 0% |
| City Park | 0.00 | 0% |
| Other Non-Asphalt Surfaces | 7.90 | 0% |
| Parking Lot | 6.95 | 100% |

## 5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

| Year | kWh per Year | CO2 | CH4 | N2O |
|---|---|---|---|---|
| 2026 | 0.00 | 532 | 0.03 | < 0.005 |
| 2027 | 0.00 | 532 | 0.03 | < 0.005 |
| 2028 | 0.00 | 532 | 0.03 | < 0.005 |
| 2029 | 0.00 | 532 | 0.03 | < 0.005 |
| 2030 | 0.00 | 532 | 0.03 | < 0.005 |

## 5.9. Operational Mobile Sources

### 5.9.2. Mitigated

| Land Use Type | Trips/Weekday | Trips/Saturday | Trips/Sunday | Trips/Year | VMT/Weekday | VMT/Saturday | VMT/Sunday | VMT/Year |
|---|---|---|---|---|---|---|---|---|
| Single Family Housing | 3,432 | 3,432 | 3,432 | 1,252,547 | 36,394 | 36,394 | 36,394 | 13,283,984 |
| Apartments Low Rise | 14,672 | 14,672 | 14,672 | 5,355,413 | 155,609 | 155,609 | 155,609 | 56,797,233 |

| Tree Type | Number | Electricity Saved (kWh/year) | Natural Gas Saved (btu/year) |
|---|---|---|---|

# 6. Climate Risk Detailed Report

## 6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

| Climate Hazard | Result for Project Location | Unit |
|---|---|---|
| Temperature and Extreme Heat | 17.8 | annual days of extreme heat |
| Extreme Precipitation | 3.00 | annual days with precipitation above 20 mm |
| Sea Level Rise | — | meters of inundation depth |
| Wildfire | 9.13 | annual hectares burned |

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

## 6.2. Initial Climate Risk Scores

| Climate Hazard | Exposure Score | Sensitivity Score | Adaptive Capacity Score | Vulnerability Score |
|---|---|---|---|---|
| Temperature and Extreme Heat | 2 | 0 | 0 | N/A |
| Extreme Precipitation | N/A | N/A | N/A | N/A |
| Sea Level Rise | 1 | 0 | 0 | N/A |
| Wildfire | 1 | 0 | 0 | N/A |
| Flooding | N/A | N/A | N/A | N/A |
| Drought | N/A | N/A | N/A | N/A |
| Snowpack Reduction | N/A | N/A | N/A | N/A |
| Air Quality Degradation | 0 | 0 | 0 | N/A |

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

## 6.3. Adjusted Climate Risk Scores

| Climate Hazard | Exposure Score | Sensitivity Score | Adaptive Capacity Score | Vulnerability Score |
|---|---|---|---|---|
| Temperature and Extreme Heat | 2 | 1 | 1 | 3 |
| Extreme Precipitation | N/A | N/A | N/A | N/A |
| Sea Level Rise | 1 | 1 | 1 | 2 |
| Wildfire | 1 | 1 | 1 | 2 |
| Flooding | N/A | N/A | N/A | N/A |
| Drought | N/A | N/A | N/A | N/A |
| Snowpack Reduction | N/A | N/A | N/A | N/A |
| Air Quality Degradation | 1 | 1 | 1 | 2 |

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

## 7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

| Indicator | Result for Project Census Tract |
|---|---|
| Exposure Indicators | — |
| AQ-Ozone | 77.1 |
| AQ-PM | 93.4 |
| AQ-DPM | 57.1 |

| | |
|---|---|
| Drinking Water | 100.0 |
| Lead Risk Housing | 17.5 |
| Pesticides | 84.9 |
| Toxic Releases | 67.6 |
| Traffic | 18.1 |
| Effect Indicators | — |
| CleanUp Sites | 80.3 |
| Groundwater | 98.1 |
| Haz Waste Facilities/Generators | 86.6 |
| Impaired Water Bodies | 87.0 |
| Solid Waste | 98.9 |
| Sensitive Population | — |
| Asthma | 16.5 |
| Cardio-vascular | 29.1 |
| Low Birth Weights | 49.0 |
| Socioeconomic Factor Indicators | — |
| Education | 52.9 |
| Housing | 59.3 |
| Linguistic | 68.9 |
| Poverty | 35.4 |
| Unemployment | 36.4 |

## 7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

| Indicator | Result for Project Census Tract |
|---|---|
| Economic | — |
| Above Poverty | 73.60451687 |
| Employed | 6.274862056 |

| | |
|---|---|
| Median HI | 76.55588349 |
| Education | — |
| Bachelor's or higher | 64.85307327 |

## 7.3. Overall Health & Equity Scores

| Metric | Result for Project Census Tract |
|---|---|
| CalEnviroScreen 4.0 Score for Project Location (a) | 72.0 |
| Healthy Places Index Score for Project Location (b) | 55.0 |
| Project Located in a Designated Disadvantaged Community (Senate Bill 535) | No |
| Project Located in a Low-Income Community (Assembly Bill 1550) | No |
| Project Located in a Community Air Protection Program Community (Assembly Bill 617) | No |

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

## 7.4. Health & Equity Measures

No Health & Equity Measures selected.

## 7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

## 7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

# 8. User Changes to Default Data

| Screen | Justification |
|---|---|

| | |
|---|---|
| Land Use | per center park specific plan provisions and traffic study from Urban Crossroads<br>per the City Ordinance 2689, developments within Ontario Ranch would use recycled water to irrigate landscaping |
| Construction: Construction Phases | per construction questionnaire from client |
| Operations: Vehicle Data | per traffic study from Urban Crossroads |
| Operations: Hearths | SCAQMD Rule 445 (Wood Burning) - prohibits permanently installed wood-burning devices in new developments<br>the Project would not include natural gas fireplaces |

## 4.8. Stationary Emissions By Equipment Type

### 4.8.2. Mitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Equipment Type | TOG | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|

| | | | | | | | | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Annual | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

## 4.9. User Defined Emissions By Equipment Type

### 4.9.2. Mitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Equipment Type | TOG | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Annual | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

## 4.10. Soil Carbon Accumulation By Vegetation Type

### 4.10.4. Soil Carbon Accumulation By Vegetation Type - Mitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Vegetation | TOG | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Annual | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

4.10.5. Above and Belowground Carbon Accumulation by Land Use Type - Mitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Land Use | TOG | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Annual | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

4.10.6. Avoided and Sequestered Emissions by Species - Mitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Species | TOG | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|

### 5.18.2. Sequestration

#### 5.18.2.2. Mitigated

| Tree Type | Number | Electricity Saved (kWh/year) | Natural Gas Saved (btu/year) |
|---|---|---|---|

# 6. Climate Risk Detailed Report

## 6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

| Climate Hazard | Result for Project Location | Unit |
|---|---|---|
| Temperature and Extreme Heat | 17.8 | annual days of extreme heat |
| Extreme Precipitation | 3.00 | annual days with precipitation above 20 mm |
| Sea Level Rise | — | meters of inundation depth |
| Wildfire | 9.13 | annual hectares burned |

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

## 6.2. Initial Climate Risk Scores

| Climate Hazard | Exposure Score | Sensitivity Score | Adaptive Capacity Score | Vulnerability Score |
|---|---|---|---|---|
| Temperature and Extreme Heat | 2 | 0 | 0 | N/A |
| Extreme Precipitation | N/A | N/A | N/A | N/A |
| Sea Level Rise | 1 | 0 | 0 | N/A |
| Wildfire | 1 | 0 | 0 | N/A |
| Flooding | N/A | N/A | N/A | N/A |
| Drought | N/A | N/A | N/A | N/A |
| Snowpack Reduction | N/A | N/A | N/A | N/A |
| Air Quality Degradation | 0 | 0 | 0 | N/A |

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

## 6.3. Adjusted Climate Risk Scores

| Climate Hazard | Exposure Score | Sensitivity Score | Adaptive Capacity Score | Vulnerability Score |
|---|---|---|---|---|
| Temperature and Extreme Heat | 2 | 1 | 1 | 3 |
| Extreme Precipitation | N/A | N/A | N/A | N/A |
| Sea Level Rise | 1 | 1 | 1 | 2 |

| | | | | |
|---|---|---|---|---|
| Wildfire | 1 | 1 | 1 | 2 |
| Flooding | N/A | N/A | N/A | N/A |
| Drought | N/A | N/A | N/A | N/A |
| Snowpack Reduction | N/A | N/A | N/A | N/A |
| Air Quality Degradation | 1 | 1 | 1 | 2 |

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

# 7. Health and Equity Details

## 7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

| Indicator | Result for Project Census Tract |
|---|---|
| Exposure Indicators | — |
| AQ-Ozone | 77.1 |
| AQ-PM | 93.4 |
| AQ-DPM | 57.1 |
| Drinking Water | 100.0 |
| Lead Risk Housing | 17.5 |
| Pesticides | 84.9 |
| Toxic Releases | 67.6 |
| Traffic | 18.1 |
| Effect Indicators | — |
| CleanUp Sites | 80.3 |
| Groundwater | 98.1 |
| Haz Waste Facilities/Generators | 86.6 |

| | |
|---|---|
| Impaired Water Bodies | 87.0 |
| Solid Waste | 98.9 |
| Sensitive Population | — |
| Asthma | 16.5 |
| Cardio-vascular | 29.1 |
| Low Birth Weights | 49.0 |
| Socioeconomic Factor Indicators | — |
| Education | 52.9 |
| Housing | 59.3 |
| Linguistic | 68.9 |
| Poverty | 35.4 |
| Unemployment | 36.4 |

## 7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

| Indicator | Result for Project Census Tract |
|---|---|
| Economic | — |
| Above Poverty | 73.60451687 |
| Employed | 6.274862056 |
| Median HI | 76.55588349 |
| Education | — |
| Bachelor's or higher | 64.85307327 |
| High school enrollment | 100 |
| Preschool enrollment | 66.93186193 |
| Transportation | — |
| Auto Access | 63.41588605 |
| Active commuting | 24.5989991 |
| Social | — |

| | |
|---|---|
| 2-parent households | 66.95752598 |
| Voting | 70.69164635 |
| Neighborhood | — |
| Alcohol availability | 97.0101373 |
| Park access | 52.77813422 |
| Retail density | 10.02181445 |
| Supermarket access | 6.557166688 |
| Tree canopy | 8.238162453 |
| Housing | — |
| Homeownership | 60.78532016 |
| Housing habitability | 61.41408957 |
| Low-inc homeowner severe housing cost burden | 71.53856025 |
| Low-inc renter severe housing cost burden | 18.38829719 |
| Uncrowded housing | 64.30129603 |
| Health Outcomes | — |
| Insured adults | 73.78416528 |
| Arthritis | 95.7 |
| Asthma ER Admissions | 84.6 |
| High Blood Pressure | 97.7 |
| Cancer (excluding skin) | 89.7 |
| Asthma | 34.7 |
| Coronary Heart Disease | 98.7 |
| Chronic Obstructive Pulmonary Disease | 94.6 |
| Diagnosed Diabetes | 96.0 |
| Life Expectancy at Birth | 75.7 |
| Cognitively Disabled | 56.3 |
| Physically  Disabled | 69.8 |
| Heart Attack ER Admissions | 68.4 |

| | |
|---|---|
| Mental Health Not Good | 54.9 |
| Chronic Kidney Disease | 97.1 |
| Obesity | 68.0 |
| Pedestrian Injuries | 19.6 |
| Physical Health Not Good | 86.2 |
| Stroke | 97.8 |
| Health Risk Behaviors | — |
| Binge Drinking | 28.2 |
| Current Smoker | 59.6 |
| No Leisure Time for Physical Activity | 76.7 |
| Climate Change Exposures | — |
| Wildfire Risk | 0.0 |
| SLR Inundation Area | 0.0 |
| Children | 9.0 |
| Elderly | 91.7 |
| English Speaking | 35.1 |
| Foreign-born | 48.1 |
| Outdoor Workers | 88.5 |
| Climate Change Adaptive Capacity | — |
| Impervious Surface Cover | 78.1 |
| Traffic Density | 21.6 |
| Traffic Access | 23.0 |
| Other Indices | — |
| Hardship | 45.2 |
| Other Decision Support | — |
| 2016 Voting | 74.7 |

## 7.3. Overall Health & Equity Scores

| Metric | Result for Project Census Tract |
|---|---|
| CalEnviroScreen 4.0 Score for Project Location (a) | 72.0 |
| Healthy Places Index Score for Project Location (b) | 55.0 |
| Project Located in a Designated Disadvantaged Community (Senate Bill 535) | No |
| Project Located in a Low-Income Community (Assembly Bill 1550) | No |
| Project Located in a Community Air Protection Program Community (Assembly Bill 617) | No |

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

## 7.4. Health & Equity Measures

No Health & Equity Measures selected.

## 7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

## 7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

# 8. User Changes to Default Data

| Screen | Justification |
|---|---|
| Land Use | per center park specific plan provisions and  traffic study from Urban Crossroads<br>per the City Ordinance 2689, developments within Ontario Ranch would use recycled water to irrigate landscaping |
| Operations: Vehicle Data | per traffic study from Urban Crossroads |
| Operations: Hearths | SCAQMD Rule 445 (Wood Burning) - prohibits permanently installed wood-burning devices in new developments<br>the Project would not include natural gas fireplaces |

# 1.0 INTRODUCTION

This report documents the results of an Air Quality Assessment completed for the Center Park Specific Plan (Project). The purpose of this Air Quality Assessment is to identify the potential construction and operations emissions associated with the Project and determine the level of impact the Project would have on the environment. A comparative analysis has been undertaken to determine whether the Project would result in any new or substantially more severe significant environmental impacts as compared to the conclusions discussed in The Ontario Plan (TOP) 2050, certified Final Supplemental Environmental Impact Report (FSEIR), pursuant to the California Environmental Quality Act (CEQA) Guidelines Section 15183 (Projects Consistent with a Community Plan, General Plan, or Zoning). Applicable mitigation measures from the FSEIR have been incorporated into this analysis.

## 1.1 Project Location

The Project site is comprised of 29 parcels totaling 257.34 acres within Ontario Ranch, City of Ontario (City), San Bernardino County (County), California; see **Figure 1: Regional Location Map.** The Assessor Parcel Numbers (APNs) comprising the Project site are 1053-301-01, -02; 1053-311-01, -02; 1053-321-01, -02, -03; 1053 331 01, 02, -03, -04; 1053-341-01, -02; 1053-351-01, -02; 1053-361-01, -02, -03; 1053-371-01, -02; 0216-311-01, -02, -09; 0216-321-03, -08; 0216-322-03, -04, -10; see **Figure 2: Project Site Assessor Parcel Numbers**. The Project site is bounded by a Southern California Edison (SCE) Easement to the north, Walker Avenue to the east, Eucalyptus Avenue to the south, and Campus Avenue to the west; see **Figure 3: Local Vicinity Map**. Land uses surrounding the Project site include a nursery, crop farms, rural residential uses, and dairy farm operations.

Regional access to the Project site is provided by State Route 60 (SR-60) located approximately 2.1 miles to the north, Interstate 15 (I-15) located approximately 4.0 miles to the east, State Route 71 (SR-71), which connects to State Route 91 (SR-91) to the south, located approximately 3.5 miles to the southwest, and Euclid Avenue, which connects SR-71, SR-60, and Interstate 10 (I-10) to the north, located approximately 0.8 mile to the west.

TOP 2050 designates the Project site land use as Medium Density Residential (MDR), Mixed-Use – Great Park (MU – Great Park), Open Space – Recreation (OS – R), and Open Space – Non-Recreation (OS – NR); see **Figure 4: Existing Land Use and Zoning**. The MDR designation permits single-family and multi-family residential uses. The MU – Great Park designation permits commercial, office, and multi-family residential uses. The OS – R designation permits recreational uses. The OS – NR designation permits utility easements and drainage channels and prohibits building development. TOP 2050 zones the Project site as Specific Plan (SP) with an Agriculture (AG) and Chino Airport (CNO) Overlay zoning overlay. The AG overlay requires a transition buffer area between the existing agricultural uses and the proposed urban uses. In addition, the Project site areas designated MDR or MU – Great Park have an Affordable Housing (AH) zoning overlay to increase affordable housing opportunities in compliance with the City's Housing Element and State Housing Element law.

## 1.2 Project Description

The proposed SP would implement the TOP 2050 vision, establish development standards and procedures, become the governing zoning standards for the Project site, permit a maximum of 802 single-family dwelling units (DUs), 3,491 multi-family DUs, 250,920 square feet (SF) of commercial

space, 55.98 acres of recreational open space, and 11.28 acres of non-recreational open space. The Project site is currently developed by ruderal vegetation, rural residences, and agricultural uses such as livestock raising, field crop farming, and dairy farm operations. The Project would remove all on-site uses and improvements to implement the proposed Project.

The proposed SP would divide the Project site into 22 planning areas (PAs); see **Figure 5: Land Use Plan**. The Project site land use designations would remain consistent with TOP 2050. The proposed SP would serve as the Project site zoning designation, consistent with TOP 2050. The Project would be classified as a Tier 2 affordable housing project, which designates at least 25 percent of the DUs as affordable housing. The Project would be developed in two phases; see **Figure 6: Project Phasing Plan**. Phase I would be developed by the private Applicant. Phase II would be dedicated to the City and would be developed at an unknown, later date following Phase I. This analysis conservatively evaluates the maximum Project development potential, with Phase II being evaluated at the programmatic level.

Phase I

Phase I would develop 256 single-family DUs, 768 multi-family DUs, 19.64 acres of recreational open space, and 3.38 acres of non-recreational open space within PAs 6, 12, 13, 17, 18, and 22; see **Table 1: Maximum Phase I Buildout**. The recreational open space would be designated as part of the City's Grand Park, a planned regional park within the Ontario Ranch area. The developer would construct the recreational open space in accordance with the City's Recreation and Parks Master Plan. The Applicant would submit a Development Plan and Tentative Parcel Map for the Phase I Project site following Project approval. Phase I is anticipated to begin construction as early as 2025 and be operational as early as 2029. For purposes of this analysis, it is conservatively assumed that Phase I would be operational as soon as construction is completed in 2027. This is a worst-case assumption as Phase I occupancy would be dependent on market conditions and permit approvals.

**Table 1: Maximum Phase I Buildout**

| Planning Area | Land Use | TOP 2050 Acreage (AC) | Maximum Residential Density (DU/AC)[1] | Maximum Residential (DU) |
|---|---|---|---|---|
| 6 | MDR | 7.33 | -- | 161 |
| 12 | MDR | 15.46 | 22.0 | 340 |
| 13 | MDR | 23.75 | 22.0 | 523 |
| 17 | OS – R | 6.20 | -- | -- |
| 18 | OS – R | 13.44 | -- | -- |
| 22 | OS – NR | 3.38 | -- | -- |
| | **Phase I Total** | **69.56** | **--** | **1,024** |

AC = acres; DU/AC = dwelling units/ acre; DU = dwelling unit; SF = square feet; MDR = Medium Density Residential; OS – R = Open Space – Recreation; and OS – NR = Open Space – Non-Recreation
1. Maximum residential density per The Ontario Plan 2050, Final Supplemental Environmental Impact Report.

Phase II

Phase II would develop 546 single-family DUs, 2,723 multi-family DUs, 250,920 SF of commercial space, 36.34 acres of recreational open space, and 7.9 acres of non-recreational open space within PAs 1 through 5, 7 through 11, 14 through 16, and 19 through 2; see **Table 2: Maximum Phase II Buildout**. The recreational open space would be designated as part of the City's Grand Park, a planned regional park within the Ontario Ranch area. The developer would construct the recreational

| | **Phase II Total** | **187.79** | **--** | **3,269** | **115,809** | **135,111** |

AC = acres; DU/AC = dwelling units/ acre; DU = dwelling unit; SF = square feet; MDR = Medium Density Residential; MU = Mixed-Use; OS – R = Open Space – Recreation; OS – NR = Open Space – Non-Recreation
1. Maximum residential density per The Ontario Plan 2050, Final Supplemental Environmental Impact Report.

Circulation

The Project would include a Circulation Plan to facilitate the movement of vehicles, pedestrians, and cyclists within the Project area. Local access to the Project site would be provided via Campus Avenue, Bon View Avenue, Cucamonga Avenue, Grove Avenue, Parco Avenue, Walker Avenue, and Edison Avenue/Ontario Ranch Road. Pedestrian circulation would be provided throughout the Project area via a paved sidewalk system that would interconnect with the roadway right-of-way. TOP 2050 proposed Class II bicycle lanes transversing in a north/south direction along the west side of Walker Avenue. The City's Recreation and Parks Master Plan proposed Class I bicycle lanes transversing in an east/west direction along the Project site's southern property line. The Project would be connected to off-site areas through the City's master planned multipurpose trails/bikeways located along the neighborhood edges of the Project site. An Omnitrans Bus Rapid

Transit (BRT) Corridor is proposed along Edison Avenue/Ontario Ranch Road as a part of future development.

On-site and Off-site Improvements

Roadway and utility infrastructure improvements (i.e., storm drains, sewer, potable water, recycled water, fiber optics, and underground electricity) would be constructed prior to the issuance of building occupancy permits. The developer would construct the improvements in accordance with the City's Master Plans, City's Ordinances, and proposed Specific Plan provisions or with the City Engineer's approval. Phasing and construction of the improvements would be determined by the City Engineer and Project requirements.

The Project would include landscaping along roadway frontages and between the pedestrian sidewalk and roadway. Landscaping would be developed in accordance with the City's development code and proposed Specific Plan provisions. Landscape and Construction Irrigation Documentation Plans would be submitted to the City prior to the issuance of building permits. The Project would comply with City Ordinance 2689, which requires the use of recycled water for all approved uses, including but not limited to landscape irrigation.

# 2.0 ENVIRONMENTAL SETTING

Certain gases in the earth's atmosphere classified as GHGs, play a critical role in determining the earth's surface temperature. Solar radiation enters the earth's atmosphere from space. A portion of the radiation is absorbed by the earth's surface and a smaller portion of this radiation is reflected back toward space. This absorbed radiation is then emitted from the earth as low-frequency infrared radiation. The frequencies at which bodies emit radiation are proportional to temperature. Because the earth has a much lower temperature than the sun, it emits lower-frequency radiation. Most solar radiation passes through GHGs; however, infrared radiation is absorbed by these gases. As a result, radiation that otherwise would have escaped back into space is instead "trapped," resulting in a warming of the atmosphere. This phenomenon, known as the greenhouse effect, is responsible for maintaining a habitable climate on earth.

The primary GHGs contributing to the greenhouse effect are carbon dioxide ($CO_2$), methane ($CH_4$), and nitrous oxide ($N_2O$). Fluorinated gases also make up a small fraction of the GHGs that contribute to climate change. Examples of fluorinated gases include chlorofluorocarbons (CFCs), hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), sulfur hexafluoride ($SF_6$), and nitrogen trifluoride ($NF_3$); however, it is noted that these gases are not associated with typical land use development. Human-caused emissions of GHGs exceeding natural ambient concentrations are believed to be responsible for intensifying the greenhouse effect and leading to a trend of unnatural warming of the Earth's climate, known as global climate change or global warming.

GHGs are global pollutants, unlike criteria air pollutants and toxic air contaminants (TACs), which are pollutants of regional and local concern. Whereas pollutants with localized air quality effects have relatively short atmospheric lifetimes (about one day), GHGs have long atmospheric lifetimes (one to several thousand years). GHGs persist in the atmosphere for long enough time periods to be dispersed around the globe. Although the exact lifetime of a GHG molecule is dependent on multiple variables and cannot be pinpointed, more $CO_2$ is emitted into the atmosphere than is sequestered by ocean uptake, vegetation, or other forms of carbon sequestration. Of the total annual human-caused $CO_2$ emissions, approximately 55 percent is sequestered through ocean and land uptakes every year, averaged over the last 50 years, whereas the remaining 45 percent of human-caused $CO_2$ emissions remains stored in the atmosphere.[1] **Table 3: Description of Greenhouse Gases** describes the primary GHGs attributed to global climate change, including their physical properties.

**Table 3: Description of Greenhouse Gases**

| Greenhouse Gas | Description |
|---|---|
| Carbon Dioxide ($CO_2$) | $CO_2$ is a colorless, odorless gas that is emitted naturally and through human activities. Natural sources include decomposition of dead organic matter; respiration of bacteria, plants, animals, and fungus; evaporation from oceans; and volcanic outgassing. Anthropogenic sources are from burning coal, oil, natural gas, and wood. The largest source of $CO_2$ emissions globally is the combustion of fossil fuels such as coal, oil, and gas in power plants, automobiles, and industrial facilities. The atmospheric lifetime of $CO_2$ is variable because it is readily exchanged in the atmosphere. $CO_2$ is the most widely emitted GHG and is the reference gas (Global Warming Potential of 1) for determining Global Warming Potentials for |

[1] Intergovernmental Panel on Climate Change, Carbon and Other Biogeochemical Cycles. *In: Climate Change 2013: The Physical Science Basis, Contribution of Working Group I to the Fifth Assessment Report of the Intergovernmental Panel on Climate Change*, 2013, https://www.ipcc.ch/site/assets/uploads/2018/02/WG1AR5_all_final.pdf, accessed December 2024.

**Table 3: Description of Greenhouse Gases**

| Greenhouse Gas | Description |
|---|---|
| | other GHGs. |
| Nitrous Oxide ($N_2O$) | $N_2O$ is largely attributable to agricultural practices and soil management. Primary human-related sources of $N_2O$ include agricultural soil management, sewage treatment, combustion of fossil fuels, and adipic and nitric acid production. $N_2O$ is produced from biological sources in soil and water, particularly microbial action in wet tropical forests. The atmospheric lifetime of $N_2O$ is approximately 120 years. The Global Warming Potential of $N_2O$ is 298. |
| Methane ($CH_4$) | $CH_4$, a highly potent GHG, primarily results from off-gassing (the release of chemicals from nonmetallic substances under ambient or greater pressure conditions) and is largely associated with agricultural practices and landfills. Methane is the major component of natural gas, about 87 percent by volume. Human-related sources include fossil fuel production, animal husbandry, rice cultivation, biomass burning, and waste management. Natural sources of $CH_4$ include wetlands, gas hydrates, termites, oceans, freshwater bodies, non-wetland soils, and wildfires. The atmospheric lifetime of $CH_4$ is about 12 years and the Global Warming Potential is 25. |
| Hydrofluorocarbons (HFCs) | HFCs are typically used as refrigerants for both stationary refrigeration and mobile air conditioning. The use of HFCs for cooling and foam blowing is increasing, as the continued phase out of CFCs and HCFCs gains momentum. The 100-year Global Warming Potential of HFCs range from 124 for HFC-152 to 14,800 for HFC-23. |
| Perfluorocarbons (PFCs) | PFCs have stable molecular structures and only break down by ultraviolet rays about 60 kilometers above Earth's surface. Because of this, they have long lifetimes, between 10,000 and 50,000 years. Two main sources of PFCs are primary aluminum production and semiconductor manufacturing. Global Warming Potentials range from 6,500 to 9,200. |
| Chlorofluorocarbons (CFCs) | CFCs are gases formed synthetically by replacing all hydrogen atoms in methane or ethane with chlorine and/or fluorine atoms. They are nontoxic, nonflammable, insoluble, and chemically unreactive in the troposphere (the level of air at the earth's surface). CFCs were synthesized in 1928 for use as refrigerants, aerosol propellants, and cleaning solvents. The Montreal Protocol on Substances that Deplete the Ozone Layer prohibited their production in 1987. Global Warming Potentials for CFCs range from 3,800 to 14,400. |
| Sulfur Hexafluoride ($SF_6$) | $SF_6$ is an inorganic, odorless, colorless, and nontoxic, nonflammable gas. It has a lifetime of 3,200 years. This gas is manmade and used for insulation in electric power transmission equipment, in the magnesium industry, in semiconductor manufacturing, and as a tracer gas. The Global Warming Potential of $SF_6$ is 23,900. |
| Hydrochlorofluorocarbons (HCFCs) | HCFCs are solvents, similar in use and chemical composition to CFCs. The main uses of HCFCs are for refrigerant products and air conditioning systems. As part of the Montreal Protocol, HCFCs are subject to a consumption cap and gradual phase out. The United States is scheduled to achieve a 100 percent reduction to the cap by 2030. The 100-year Global Warming Potentials of HCFCs range from 90 for HCFC-123 to 1,800 for HCFC-142b. |
| Nitrogen Trifluoride ($NF_3$) | $NF_3$ was added to Health and Safety Code Section 38505(g)(7) as a GHG of concern. This gas is used in electronics manufacture for semiconductors and liquid crystal displays. It has a high global warming potential of 17,200. |

# 3.0 REGULATORY SETTING

## 3.1 Federal

To date, national standards have not been established for nationwide GHG reduction targets, nor have any regulations or legislation been enacted specifically to address climate change and GHG emissions reduction at the project level. Various efforts have been promulgated at the federal level to improve fuel economy and energy efficiency to address climate change and its associated effects.

**Energy Independence and Security Act of 2007**

The Energy Independence and Security Act of 2007 (December 2007), among other key measures, requires the following, which would aid in the reduction of national GHG emissions:

- Increase the supply of alternative fuel sources by setting a mandatory Renewable Fuel Standard requiring fuel producers to use at least 36 billion gallons of biofuel in 2022.
- Set a target of 35 miles per gallon for the combined fleet of cars and light trucks by model year 2020 and direct the National Highway Traffic Safety Administration (NHTSA) to establish a fuel economy program for medium- and heavy-duty trucks and create a separate fuel economy standard for work trucks.
- Prescribe or revise standards affecting regional efficiency for heating and cooling products and procedures for new or amended standards, energy conservation, energy efficiency labeling for consumer electronic products, residential boiler efficiency, electric motor efficiency, and home appliances.

Additional provisions of the Energy Independence and Security Act (EISA) address energy savings in government and public institutions, promote research for alternative energy, additional research in carbon capture, international energy programs, and the creation of "green jobs."

**U.S. Environmental Protection Agency Endangerment Finding**

The U.S. Environmental Protection Agency (U.S. EPA) authority to regulate GHG emissions stems from the U.S. Supreme Court decision in *Massachusetts v. EPA* (2007). The Supreme Court ruled that GHGs meet the definition of air pollutants under the existing Federal Clean Air Act (FCAA) and must be regulated if these gases could be reasonably anticipated to endanger public health or welfare. Responding to the Court's ruling, the U.S. EPA finalized an endangerment finding in December 2009. Based on scientific evidence it found that six GHGs ($CO_2$, $CH_4$, $N_2O$, HFCs, PFCs, and $SF_6$) constitute a threat to public health and welfare. Thus, it is the Supreme Court's interpretation of the existing FCAA and the U.S. EPA's assessment of the scientific evidence that form the basis for the U.S. EPA's regulatory actions.

**Federal Vehicle Standards**

In response to the U.S. Supreme Court ruling discussed above, Executive Order 13432 was issued in 2007 directing the U.S. EPA, the Department of Transportation, and the Department of Energy to establish regulations that reduce GHG emissions from motor vehicles, non-road vehicles, and non-road engines by 2008. In 2009, the NHTSA issued a final rule regulating fuel efficiency and GHG emissions from cars and light-duty trucks for model year 2011, and in 2010, the U.S. EPA and NHTSA issued a final rule regulating cars and light-duty trucks for model years 2012–2016.

In 2010, an Executive Memorandum was issued directing the Department of Transportation, Department of Energy, U.S. EPA, and NHTSA to establish additional standards regarding fuel efficiency and GHG reduction, clean fuels, and advanced vehicle infrastructure. In response to this directive, the U.S. EPA and NHTSA proposed stringent, coordinated federal GHG and fuel economy standards for model years 2017–2025 light-duty vehicles. The proposed standards projected to achieve 163 grams per mile of $CO_2$ in model year 2025, on an average industry fleet-wide basis, which is equivalent to 54.5 miles per gallon if this level were achieved solely through fuel efficiency. The final rule was adopted in 2012 for model years 2017–2021. On January 12, 2017, the U.S. EPA finalized its decision to maintain the current GHG emissions standards for model years 2022–2025 cars and light trucks.

In 2021, the U.S. EPA reversed its previous decision and issued a final rule to strengthen the GHG emissions standards for cars and light trucks for model years 2023-2026. The proposed fuel efficiency standards would be the most stringent standards established by the U.S. EPA at 55 mpg in model year 2026. On March 20, 2024, the U.S. EPA established a final rule for cars and light trucks for model years 2027-2032 to reduce the projected fleet average emissions target levels by 50% relative to the projected model year 2026 standard.

In addition to the regulations applicable to cars and light-duty trucks described above, in 2011, the U.S. EPA and NHTSA announced fuel economy and GHG standards for medium- and heavy-duty trucks for model years 2014–2018. The standards for $CO_2$ emissions and fuel consumption are tailored to three main vehicle categories: combination tractors, heavy-duty pickup trucks and vans, and vocational vehicles. According to the U.S. EPA, this regulatory program will reduce GHG emissions and fuel consumption for the affected vehicles by 6 to 23 percent over the 2010 baselines.

In August 2016, the U.S. EPA and NHTSA announced the adoption of the phase two program related to the fuel economy and GHG standards for medium- and heavy-duty trucks. The phase two program will apply to vehicles with model year 2018 through 2027 for certain trailers, and model years 2021 through 2027 for semi-trucks, large pickup trucks, vans, and all types and sizes of buses and work trucks. The final standards are expected to lower $CO_2$ emissions by approximately 1.1 billion metric tons and reduce oil consumption by up to 2 billion barrels over the lifetime of the vehicles sold under the program.

In 2018, the President and the U.S. EPA stated their intent to halt various federal regulatory activities to reduce GHG emissions, including the phase two program. California and other states have stated their intent to challenge federal actions that would delay or eliminate GHG reduction measures and have committed to cooperating with other countries to implement global climate change initiatives. On September 27, 2019, the U.S. EPA and the NHTSA published the "Safer Affordable Fuel-Efficient (SAFE) Vehicles Rule Part One: One National Program." (84 Fed. Reg. 51,310 (Sept. 27, 2019.) The Part One Rule revokes California's authority to set its own GHG emissions standards and set zero-emission vehicle mandates in California. On March 31, 2020, the U.S. EPA and NHTSA finalized rulemaking for SAFE Part Two which sets $CO_2$ emissions standards and corporate average fuel economy (CAFE) standards for passenger vehicles and light duty trucks, covering model years 2021-2026. The U.S. EPA and NHSTA repealed SAFE Rule Part One, effective January 28, 2022, allowing states to set stricter GHG emissions standards.

In December 2021, the U.S. EPA finalized federal GHG emissions standards for passenger cars and

light trucks for Model Years 2023 through 2026. The updated standards will result in avoiding more than three billion tons of GHG emissions through 2050.[2]

On June 7, 2024, the NHSTA announced the final rule for passenger cars and light trucks for model years 2027-2031, which strengthened previous emission standards and proposed an industry-wide fleet average of approximately 50.4 mpg in model year 2031. The new CAFE standards for model years 2027-2031 would reduce fuel use by 70 billion gallons through 2050.[3]

## 3.2 State of California

**California Air Resources Board**

The California Air Resources Board (CARB) is responsible for the coordination and oversight of State and local air pollution control programs in California. Various statewide and local initiatives to reduce California's contribution to GHG emissions have raised awareness about climate change and its potential for severe long-term adverse environmental, social, and economic effects. California is a significant emitter of $CO_2e$ in the world and produced 381.3 million metric tons of $CO_2e$ in 2021.[4] In the state, the transportation sector is the largest emitter of GHGs, followed by industrial operations such as manufacturing and oil and gas extraction.

The State of California legislature has enacted a series of bills that constitute the most aggressive program to reduce GHGs of any state in the nation. Some legislation, such as the landmark Assembly Bill (AB) 32, *California Global Warming Solutions Act of 2006*, was specifically enacted to address GHG emissions. Other legislation, such as Title 24 building efficiency standards and Title 20 appliance energy standards, were originally adopted for other purposes such as energy and water conservation, but also provide GHG reductions. This section describes the major provisions of the legislation.

<u>AB 32 (California Global Warming Solutions Act of 2006)</u>

AB 32 instructs CARB to develop and enforce regulations for the reporting and verification of statewide GHG emissions. AB 32 also directed CARB to set a GHG emissions limit based on 1990 levels, to be achieved by 2020. It set a timeline for adopting a scoping plan for achieving GHG reductions in a technologically and economically feasible manner. The Scoping Plan was first approved by CARB in 2008 and must be updated every five years. Since 2008, there have been updates in 2013, 2017 and 2022, each with policies to guide the state to achieve its GHG targets. According to the latest Scoping Plan (2022 Scoping Plan), California met the target established by AB 32 ahead of schedule.[5]

Adopted December 15, 2022, CARB's 2022 Scoping Plan for Achieving Carbon Neutrality (2022 Scoping Plan) sets a path to achieve targets for carbon neutrality and reduce anthropogenic GHG

[5] California Air Resources Board, *Final 2022 Scoping Plan Update*, December 2022, https://ww2.arb.ca.gov/our-work/programs/ab-32-climate-change-scoping-plan/2022-scoping-plan-documents, accessed April 2025.

emissions by 85 percent below 1990 levels by 2045 in accordance with AB 1279. To achieve the targets of AB 1279, the 2022 Scoping Plan relies on existing and emerging fossil fuel alternatives and clean technologies, as well as carbon capture and storage. Specifically, the 2022 Scoping Plan focuses on zero-emission transportation; phasing out use of fossil gas use for heating homes and buildings; reducing chemical and refrigerants with high global warming potential; providing communities with sustainable options for walking, biking, and public transit; displacement of fossil-fuel fired electrical generation through use of renewable energy alternatives (e.g., solar arrays and wind turbines); and scaling up new options such as green hydrogen.

The key elements of the 2022 CARB Scoping Plan focus on transportation. Specifically, the 2022 Scoping Plan aims to rapidly move towards zero-emission transportation (i.e., electrifying cars, buses, trains, and trucks), which constitutes California's single largest source of GHGs. The regulations that impact the transportation sector are adopted and enforced by CARB on vehicle manufacturers and are outside the jurisdiction and control of local governments. The 2022 Scoping Plan accelerates development of new regulations as well as amendments to strengthen regulations and programs already in place.

Included in the 2022 Scoping Plan is a set of Local Actions (2022 Scoping Plan Appendix D) aimed at providing local jurisdictions with recommendations to reduce GHGs and assist the state in meeting the ambitious targets set forth in the 2022 Scoping Plan. Appendix D to the 2022 Scoping Plan is not regulatory, is not exhaustive, and does not include everything local governments can implement to support the State's climate goals. It focuses primarily on climate action plans (CAPs) and local authority over new residential development. It includes a section on evaluating plan-level and project-level alignment with the State's Climate Goals in CEQA GHG analyses. In this section, CARB identifies several recommendations and strategies that should be considered for new development in order to determine consistency with the 2022 Scoping Plan. CARB specifically states that Section 3 of Appendix D, which discusses land use plans and development projects, does not address land uses other than residential and mixed-use residential. However, CARB plans to explore new approaches for other land use types in the future.

<u>Advanced Clean Cars I and II</u>

Advanced Clean Cars combines several regulations into one package including the Low-Emission Vehicle (LEV) criteria and greenhouse gas regulations and the zero-emission vehicle (ZEV) regulation. Advanced Clean Cars I was adopted in 2012 and Advanced Clean Cars II was adopted in 2022. These regulations rapidly scale down emissions of light-duty passenger cars, pickup trucks and SUVs and require an increased number of zero-emission vehicles to meet air quality and climate change emissions goals. By 2035 all new passenger cars, trucks and SUVs sold in California will be zero-emissions (ZE). The Advanced Clean Cars II regulations take the State's already growing zero-emission vehicle market and robust motor vehicle emission control rules and augments them to meet more aggressive tailpipe emissions standards and ramp up to 100% ZEVs.

<u>Advanced Clean Truck Regulation</u>

CARB adopted the Advanced Clean Truck Regulation in June 2020 requiring truck manufacturers to transition from diesel trucks and vans to electric zero-emission trucks beginning in 2024. By 2045, every new truck sold in California is required to be zero-emission. This rule directly addresses disproportionate risks and health and pollution burdens and puts California on the path for an all

zero-emission short-haul drayage fleet in ports and railyards by 2035, and zero-emission "last-mile" delivery trucks and vans by 2040. The Advanced Clean Truck Regulation accelerates the transition of zero-emission medium-and heavy-duty vehicles from Class 2b to Class 8. The regulation has two components including a manufacturer sales requirement, and a reporting requirement:

- Zero-Emission Truck Sales: Manufacturers who certify Class 2b through 8 chassis or complete vehicles with combustion engines are required to sell zero-emission trucks as an increasing percentage of their annual California sales from 2024 to 2035. By 2035, zero-emission truck/chassis sales need to be 55 percent of Class 2b – 3 truck sales, 75 percent of Class 4 – 8 straight truck sales, and 40 percent of truck tractor sales.
- Company and Fleet Reporting: Large employers including retailers, manufacturers, brokers and others would be required to report information about shipments and shuttle services. Fleet owners with 50 or more trucks would be required to report about their existing fleet operations. This information would help identify future strategies to ensure that fleets purchase available zero-emission trucks and place them in service where suitable to meet their needs.

Advanced Clean Fleets Regulation

CARB approved the Advanced Clean Fleets Regulation (ACF) on April 28, 2023, which requires fleet owners to begin transitioning toward ZEVs starting in 2024. Due to the impact that truck traffic has on residents living near heavily trafficked corridors, drayage trucks will need to be ZE by 2035. All other fleet owners have the option to transition a percentage of their vehicles to meet expected zero-emission milestones, which gives owners the flexibility to continue operating combustion-powered vehicles as needed during the move toward cleaner technology.

On January 13, 2025 California withdrew its request for federal approval of the ACF and is evaluating next steps. CARB will not enforce portions of the regulation requiring federal authorization, such as those affecting high-priority and drayage fleets. However, State and local government fleet requirements remain unchanged.[6]

**Senate Bill 32 (California Global Warming Solutions Act of 2006: Emissions Limit)**

Signed into law in September 2016, Senate Bill (SB) 32 codifies the 2030 GHG reduction target in Executive Order B-30-15 (40 percent below 1990 levels by 2030). The bill authorizes CARB to adopt an interim GHG emissions level target to be achieved by 2030. CARB also must adopt rules and regulations in an open public process to achieve the maximum, technologically feasible, and cost-effective GHG reductions.

With SB 32, the Legislature passed companion legislation, AB 197, which provides additional direction for developing the Scoping Plan. On December 14, 2017, CARB adopted a second update to the Scoping Plan (CARB, 2017b). The 2017 Scoping Plan details how the State will reduce GHG emissions to meet the 2030 target set by Executive Order B-30-15 and codified by SB 32. Other objectives listed in the 2017 Scoping Plan are to provide direct GHG emissions reductions; support climate investment in disadvantaged communities; and support the Clean Power Plan and other

[6] California Air Resources Board, *ACF Waiver Update*, https://ww2.arb.ca.gov/our-work/programs/advanced-clean-fleets, accessed April 2025.

Federal actions. In 2022, CARB published the 2022 Scoping Plan, which is discussed above.

**SB 375 (The Sustainable Communities and Climate Protection Act of 2008)**

Signed into law on September 30, 2008, SB 375 provides a process to coordinate land use planning, regional transportation plans, and funding priorities to help California meet the GHG reduction goals established by AB 32. SB 375 requires metropolitan planning organizations to include sustainable community strategies in their regional transportation plans for reducing GHG emissions, aligns planning for transportation and housing, and creates specified incentives for the implementation of the strategies.

**AB 1493 (Pavley Regulations and Fuel Efficiency Standards)**

AB 1493, enacted on July 22, 2002, required CARB to develop and adopt regulations that reduce GHGs emitted by passenger vehicles and light duty trucks. Implementation of the regulation was delayed by lawsuits filed by automakers and by the U.S. EPA's denial of an implementation waiver. The U.S. EPA subsequently granted the requested waiver in 2009, which was upheld by the U.S. District Court for the District of Columbia in 2011. The regulations establish one set of emission standards for model years 2009–2016 and a second set of emissions standards for model years 2017 to 2025. By 2025, when all rules will be fully implemented, new automobiles will emit 34 percent fewer $CO_2e$ emissions and 75 percent fewer smog-forming emissions. In 2018, the U.S. EPA proposed the SAFE Vehicles Rule, which would roll back fuel economy standards and revoke California's waiver. However, in December 2021, the NHTSA repealed the SAFE Vehicle Rule Part One.

**SB 1368 (Emission Performance Standards)**

SB 1368 is the companion bill of AB 32, which directs the California Public Utilities Commission (CPUC) to adopt a performance standard for GHG emissions for the future power purchases of California utilities. SB 1368 limits carbon emissions associated with electrical energy consumed in California by forbidding procurement arrangements for energy longer than 5 years from resources that exceed the emissions of a relatively clean, combined cycle natural gas power plant. The new law effectively prevents California's utilities from investing in, otherwise financially supporting, or purchasing power from new coal plants located in or out of the State. The CPUC adopted the regulations required by SB 1368 on August 29, 2007. The regulations implementing SB 1368 establish a standard for baseload generation owned by, or under long-term contract to publicly owned utilities, for 1,100 pounds of $CO_2$ per megawatt-hour.

**SB 1078, SB 107, and SBX1-2 (Renewable Electricity Standards)**

SB 1078 (2002) required California to generate 20 percent of its electricity from renewable energy by 2017. SB 107 (2006) changed the due date to 2010 instead of 2017. On November 17, 2008, Governor Arnold Schwarzenegger signed Executive Order S-14-08, which established a Renewable Portfolio Standard target for California requiring that all retail sellers of electricity serve 33 percent of their load with renewable energy by 2020. Executive Order S-21-09 also directed CARB to adopt a regulation by July 31, 2010, requiring the State's load serving entities to meet a 33 percent renewable energy target by 2020. CARB approved the Renewable Electricity Standard on September 23, 2010, by Resolution 10-23. SBX1-2 (2011) codified the 33 percent by 2020 goal.

**SB 350 (Clean Energy and Pollution Reduction Act of 2015)**

Signed into law on October 7, 2015, SB 350 implements the goals of Executive Order B-30-15. The objectives of SB 350 are to increase the procurement of electricity from renewable sources from 33 percent to 50 percent (with interim targets of 40 percent by 2024, and 25 percent by 2027) and to double the energy efficiency savings in electricity and natural gas end uses of retail customers through energy efficiency and conservation. SB 350 also reorganizes the Independent System Operator to develop more regional electricity transmission markets and improve accessibility in these markets, which will facilitate the growth of renewable energy markets in the western United States.

**AB 398 (Market-Based Compliance Mechanisms)**

Signed on July 25, 2017, AB 398 extended the duration of the Cap-and-Trade program from 2020 to 2030. AB 398 required CARB to update the Scoping Plan and for all GHG rules and regulations adopted by the State. It also designated CARB as the statewide regulatory body responsible for ensuring that California meets its statewide carbon pollution reduction targets, while retaining local air districts' responsibility and authority to curb toxic air contaminants and criteria pollutants from local sources that severely impact public health. AB 398 also decreased free carbon allowances over 40 percent by 2030 and prioritized Cap-and-Trade spending to various programs including reducing diesel emissions in impacted communities.

**SB 150 (Regional Transportation Plans)**

Signed on October 10, 2017, SB 150 aligns local and regional GHG reduction targets with State targets (i.e., 40 percent below their 1990 levels by 2030). SB 150 creates a process to include communities in discussions on how to monitor their regions' progress on meeting these goals. The bill also requires the CARB to regularly report on that progress, as well as on the successes and the challenges regions experience associated with achieving their targets. SB 150 provides for accounting of climate change efforts and GHG reductions and identify effective reduction strategies.

**SB 100 (California Renewables Portfolio Standard Program: Emissions of Greenhouse Gases)**

Signed into law in September 2018, SB 100 increased California's renewable electricity portfolio from 50 to 60 percent by 2030. SB 100 also established a further goal to have an electric grid that is entirely powered by clean energy by 2045.

**AB 1346 (Air Pollution: Small Off-Road Engines)**

Signed into law in October 2021, AB 1346 requires CARB, to adopt cost-effective and technologically feasible regulations to prohibit engine exhaust and evaporative emissions from new small off-road engines, consistent with federal law, by July 1, 2022. The bill requires CARB to identify and, to the extent feasible, make available funding for commercial rebates or similar incentive funding as part of any updates to existing applicable funding program guidelines to local air pollution control districts and air quality management districts to support the transition to zero-emission small off-road equipment operations.

**AB 1279 (The California Climate Crisis Act)**

AB 1279 establishes the policy of the State to achieve carbon neutrality as soon as possible, but no

later than 2045; to maintain net negative GHG emissions thereafter; and to ensure that by 2045 statewide anthropogenic GHG emissions are reduced at least 85 percent below 1990 levels. The bill requires CARB to ensure that Scoping Plan updates identify and recommend measures to achieve carbon neutrality, and to identify and implement policies and strategies that enable $CO_2$ removal solutions and carbon capture, utilization, and storage technologies.

**SB 1020 (100 Percent Clean Electric Grid)**

Signed on September 16, 2022, SB 1020 provides additional goals for the path to the 2045 goal of 100 percent clean electricity retail sales. It creates a target of 90 percent clean electricity retail sales by 2035 and 95 percent clean electricity retail sales by 2040.

**SB 905 (Carbon Sequestration Program)**

Signed on September 16, 2022, SB 905 establishes regulatory framework and policies that involve carbon removal, carbon capture, utilization, and sequestration. It also prohibits the injecting of concentrated carbon dioxide fluid into a Class II injection well for the purpose of enhanced oil recovery.

**AB 1757 (Nature-Based Solutions)**

Signed on September 16, 2022, AB 1757 requires State agencies to develop a range of targets for natural carbon sequestration and nature-based climate solutions that reduce GHG emissions to meet the 2030, 2038, and 2045 goals which would be integrated into a scoping plan addressing natural and working lands.

## Executive Orders Related to GHG Emissions

California's Executive Branch has taken several actions to reduce GHGs using executive orders. Although not regulatory, they set the tone for the State and guide the actions of state agencies.

**Executive Order S-3-05**

Executive Order S-3-05 was issued on June 1, 2005, which established the following GHG emissions reduction targets:

- By 2010, reduce GHG emissions to 2000 levels.
- By 2020, reduce GHG emissions to 1990 levels.
- By 2050, reduce GHG emissions to 80 percent below 1990 levels.

The 2050 reduction goal represents what some scientists believe is necessary to reach levels that will stabilize the climate. The 2020 goal was established to be a mid-term target. Because this is an executive order, the goals are not legally enforceable for local governments or the private sector.

**Executive Order S-01-07**

Issued on January 18, 2007, Executive Order S 01-07 mandates that a statewide goal shall be established to reduce the carbon intensity of California's transportation fuels by at least 10 percent by 2020. The executive order established a Low Carbon Fuel Standard (LCFS) and directed the Secretary for Environmental Protection to coordinate the actions of the California Energy Commission, CARB, the University of California, and other agencies to develop and propose

protocols for measuring the "life-cycle carbon intensity" of transportation fuels. CARB adopted the LCFS on April 23, 2009.

**Executive Order S-13-08**

Issued on November 14, 2008, Executive Order S-13-08 facilitated the California Natural Resources Agency development of the 2009 California Climate Adaptation Strategy. Objectives include analyzing risks of climate change in California, identifying and exploring strategies to adapt to climate change, and specifying a direction for future research.

**Executive Order S-14-08**

Issued on November 17, 2008, Executive Order S-14-08 expands the State's Renewable Energy Standard to 33 percent renewable power by 2020. Additionally, Executive Order S-21-09 (signed on September 15, 2009) directs CARB to adopt regulations requiring 33 percent of electricity sold in the State come from renewable energy by 2020. CARB adopted the Renewable Electricity Standard on September 23, 2010, which requires 33 percent renewable energy by 2020 for most publicly owned electricity retailers.

**Executive Order S-21-09**

Issued on July 17, 2009, Executive Order S-21-09 directs CARB to adopt regulations to increase California's RPS to 33 percent by 2020. This builds upon SB 1078 (2002), which established the California RPS program, requiring 20 percent renewable energy by 2017, and SB 107 (2006), which advanced the 20 percent deadline to 2010, a goal which was expanded to 33 percent by 2020 in the 2005 Energy Action Plan II.

**Executive Order B-30-15**

Issued on April 29, 2015, Executive Order B-30-15 established a California GHG reduction target of 40 percent below 1990 levels by 2030 and directs CARB to update the Climate Change Scoping Plan to express the 2030 target in terms of million metric tons of $CO_2e$ ($MMTCO_2e$). The 2030 target acts as an interim goal on the way to achieving reductions of 80 percent below 1990 levels by 2050, a goal set by Executive Order S-3-05. The executive order also requires the State's climate adaptation plan to be updated every three years and for the State to continue its climate change research program, among other provisions. With the enactment of SB 32 in 2016, the Legislature codified the goal of reducing GHG emissions by 2030 to 40 percent below 1990 levels.

**Executive Order B-55-18**

Issued on September 10, 2018, Executive Order B-55-18 establishes a goal to achieve carbon neutrality as soon as possible, and no later than 2045, and achieve and maintain net negative emissions thereafter. This goal is in addition to the existing statewide targets of reducing GHG emissions. The executive order requires CARB to work with relevant state agencies to develop a framework for implementing this goal. It also requires CARB to update the Scoping Plan to identify and recommend measures to achieve carbon neutrality. The executive order also requires state agencies to develop sequestration targets in the Natural and Working Lands Climate Change Implementation Plan.

### Executive Order N-79-20

Signed in September 2020, Executive Order N-79-20 establishes as a goal that where feasible, all new passenger cars and trucks, as well as all drayage/cargo trucks and off-road vehicles and equipment, sold in California, will be zero-emission by 2035. The executive order sets a similar goal requiring that all medium and heavy-duty vehicles will be zero-emission by 2045 where feasible. It also directs CARB to develop and propose rulemaking for passenger vehicles and trucks, medium- and heavy-duty fleets where feasible, drayage trucks, and off-road vehicles and equipment "requiring increasing volumes" of new ZEVs "towards the target of 100 percent." The executive order directs the California Environmental Protection Agency, the California Geologic Energy Management Division, and the California Natural Resources Agency to transition and repurpose oil production facilities with a goal toward meeting carbon neutrality by 2045. Executive Order N-79-20 builds upon the CARB Advanced Clean Trucks regulation.

## California Regulations and Building Codes

California has a long history of adopting regulations to improve energy efficiency in new and remodeled buildings. These regulations have kept California's energy consumption relatively flat even with rapid population growth.

### Title 20 Appliance Efficiency Regulations

The appliance efficiency regulations (California Code of Regulations [CCR] Title 20, Sections 1601-1608) include standards for new appliances. Twenty-three categories of appliances are included in the scope of these regulations. These standards include minimum levels of operating efficiency, and other cost-effective measures, to promote the use of energy- and water-efficient appliances.

### Title 24 Building Energy Efficiency Standards

California's Energy Efficiency Standards for Residential and Nonresidential Buildings (CCR Title 24, Part 6) commonly referred to as the Energy Code, was first adopted in 1978 in response to a legislative mandate to reduce California's energy consumption. The standards are updated periodically to allow consideration and possible incorporation of new energy efficient technologies and methods. Energy efficient buildings require less electricity; therefore, increased energy efficiency reduces fossil fuel consumption and decreases GHG emissions. The California Energy Commission adopted the 2022 Energy Code on August 11, 2021, which was subsequently approved by the California Building Standards Commission for inclusion into the California Building Standards Code. The 2022 Title 24 standards will result in less energy use, thereby reducing air pollutant emissions associated with energy consumption across California. For example, the 2022 Title 24 standards will require efficient electric heat pumps, establishes electric-ready requirements for new homes, expands solar photovoltaic and battery storage standards, and strengthens ventilation standards.

### Title 24 California Green Building Standards Code

The California Green Building Standards Code (CCR Title 24, Part 11 code) commonly referred to as the CALGreen Code, is a statewide mandatory construction code developed and adopted by the California Building Standards Commission and the Department of Housing and Community Development. The CALGreen standards require new residential and commercial buildings to comply

with mandatory measures under the topics of planning and design, energy efficiency, water efficiency/conservation, material conservation and resource efficiency, and environmental quality. CALGreen also provides voluntary tiers and measures that local governments may adopt that encourage or require additional measures in the five green building topics. The most recent update to the CALGreen Code went into effect January 1, 2023 (2022 CALGreen). The 2022 CALGreen standards continue to improve upon the existing standards for new construction of, and additions and alterations to, residential and nonresidential buildings.

## 3.3 Regional

**Southern California Association of Governments**

The Southern California Association of Governments (SCAG) updates Connect SoCal, the Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS), every four years. The most recent Connect SoCal (*2024 - 2050* RTP/SCS) is a long-range vision plan for a more resilient and equitable future and contains policies and strategies for achieving the region's shared goals through 2050.[7]

The SCAG region strives toward sustainability through integrated land use and transportation planning. The SCAG region must achieve specific federal air quality standards and is required by state law to lower regional GHG emissions. Per SB 375, CARB has set GHG reduction targets at 8 percent below 2005 per capita emissions levels by 2020, and 19 percent below 2005 per capita emissions levels by 2035. On May 10, 2024, the Federal Highway Administration and the Federal Transit Administration completed their review and determined the 2024 – 2050 RTP/SCS conformed with the applicable State Implementation Plan.

## 3.4 Local

**City of Ontario General Plan**

The City of Ontario General Plan (TOP 2050) is a policy plan that guides the City's long-term development. TOP 2050 establishes GHG-reducing goals and policies within the Environmental Resources Element, Land Use Element, and Safety Element. The following goals and policies are applicable to the Project.

<u>Environmental Resources Element</u>

**Goal ER-2** **A cost effective, integrated waste management system that meets or exceeds state and federal recycling and waste diversion mandates.**

**Policy ER-2.1** **Waste Diversion.** We shall meet or exceed AB 939 requirements.

**Goal ER-3** **Cost-effective and reliable energy system sustained through a combination of low impact buildings, site and neighborhood energy conservation, and diverse sources of energy generation that collectively helps to minimize the region's carbon footprint.**

**Policy ER-3.1** **Conservation Strategy.** We require conservation as the first strategy to be employed

[7] Southern California Association of Governments, Connect SoCal (2024 – 2050 Regional Transportation Plan/Sustainable Communities Strategy), 2024.

to meet applicable energy-saving standards.

**Policy ER-3.2** **Green Development–Communities.** We encourage the use of the LEED Neighborhood Development rating system, or similar mechanism, to guide the planning and development of all new communities.

**Policy ER-3.3** **Building and Site Design**. We require new construction to incorporate energy efficient building and site design strategies, which could include appropriate solar orientation, maximum use of natural daylight, passive solar, and natural ventilation.

**Policy ER-3.5** **Fuel-Efficient and Alternative Energy Vehicles and Equipment.** We require purchase and use vehicles and equipment that are fuel efficient and meet or surpass state emissions requirements and/or use renewable sources of energy.

**Policy ER-3.6** **Generation- Renewable Sources.** We promote the use of renewable energy sources (e.g., solar, wind, biomass) in public and private sector development.

**Goal ER-4** **Improved indoor and outdoor air quality and reduced locally generated pollutant emissions.**

**Policy ER-4.1** **Land Use.** We reduce GHG and other local pollutant emissions through compact, mixed use, and transit-oriented development and development that improves the regional jobs-housing balance.

**Policy ER-4.3** **Greenhouse Gases (GHG) Emissions Reductions.** We will reduce GHG emissions in accordance with regional, state, and federal regulations.

**Policy ER-4.8** **Tree Planting.** We protect healthy trees within the City and plant new trees to increase carbon sequestration and help the regional/local air quality. We expand the tree canopy in environmental justice areas to enhance air quality and reduce the "heat island" effect.

<u>Land Use Element</u>

**Goal LU-2** **Compatibility between a wide range of uses and resultant urban patterns and forms.**

**Policy LU-2.2** **Buffers.** We require new uses to provide mitigation or buffers between existing uses where potential adverse impacts could occur. Additional mitigation is required when new uses could negatively impact environmental justice areas.

**Policy LU-2.4** **Regulation of Nuisances**. We regulate the location, concentration, and operation of potential nuisances

**Policy LU-2.8** **Transitional Areas**. We require development in transitional areas to protect the quality of life of current residents.

<u>Safety Element</u>

**Goal S-9** **Incorporate energy efficient practices and renewable energy systems to improve air quality, comfort, and energy reliability during temporary power outages.**

**Policy S-9.1** **Solar Energy.** We support and may incentivize the installation of residential and commercial solar panels and battery storage systems that can provide electricity during power outages.

### City of Ontario Community Climate Action Plan

The City adopted a Community Climate Action Plan (CCAP) in 2022 to reduce GHG emissions, foster a sustainable community, and streamline the GHG emissions environmental review for future development projects. The CCAP establishes a GHG emissions reduction target that is 40 percent below 1990 levels by 2030, consistent with SB 32, Executive Order S-03-05, Executive Order B-55-18, and the CARB 2017 Scoping Plan. The CCAP provides guidance on how to analyze and determine the significance of project-level GHG emissions. Pursuant to the CCAP guidelines, projects that exceed the project size thresholds identified in **Table 4: Project Size Thresholds for Land Use Development** are subject to the City's Development Plan Review (DPR) and are required to show consistency with the CCAP through Screening Tables.

**Table 4: Project Size Thresholds for Land Use Development**

| Project Type | Project Size Threshold |
|---|---|
| Single Family Residential (Single Family Detached) | 60 Units |
| Apartments / Condominiums / Townhouse | 20 Units |
| General Commercial / Retail / Office | 20,000 square feet |
| Supermarket / Grocery / Discount Club | 36,000 square feet |
| Restaurants (sit down) | 8,200 square feet |
| Fast-Food Restaurants (with or without drive thru) | 5,300 square feet |
| Gas Station | 4,200 square feet |
| Logistics / Warehouse | 45,000 square feet |
| Passive Park | 200 acres |
| Active Park | 60 acres |

Source: City of Ontario, *Ontario Community Climate Action Plan, Greenhouse Gas Emissions Screening Tables*, *Table 1, Project Size Thresholds for Land Use Development,* 2023, https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/CCAP/Screening%20Table/Ontario-CCAP_Screening-Tables-MARCH%202023.pdf, accessed February 2025.

<u>Screening Tables</u>

The City published Screening Tables for residential and non-residential land uses. The Screening Tables include reduction measures related to transportation, water, solid waste, offroad equipment, energy, and renewable energy sources. Projects that garner a minimum of 100 points from selected Screening Table Measures would be consistent with the CCAP and have a less than significant impact regarding GHG emissions. Mixed-use projects must achieve a minimum of 100 points from each applicable Screening Table.

# 4.0 SIGNIFICANCE CRITERIA AND METHODOLOGY

## 4.1 Thresholds and Significance Criteria

According to State CEQA Guidelines Appendix G, a project would normally have a significant effect on the environment if it would:

- Generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment; or
- Conflict with any applicable plan, policy or regulation adopted for the purpose of reducing the emissions of GHGs.

Addressing GHG emissions generation impacts requires an agency to determine what constitutes a significant impact. The amendments to the CEQA Guidelines specifically allow lead agencies to determine thresholds of significance that illustrate the extent of an impact and are a basis from which to apply mitigation measures. This means that each agency is left to determine whether a project's GHG emissions will have a "significant" impact on the environment. The guidelines direct that agencies are to use "careful judgment" and "make a good-faith effort, based to the extent possible on scientific and factual data, to describe, calculate or estimate" the project's GHG emissions.[8]

### Ontario Community Climate Action Plan

The CCAP establishes procedures and significance thresholds to evaluate project-level GHG emissions impacts for CEQA purposes. Developments that exceed the project size thresholds outlined in **Table 4** must undergo the DPR, which requires projects to achieve a minimum of 100 points from applicable Screening Tables. The Screening Tables include reduction measures that provide projects flexibility in reducing GHG emissions to levels that align with the City's reduction goals.

## 4.2 Methodology

Global climate change is, by definition, a cumulative impact of GHG emissions. Therefore, there is no project-level analysis. The baseline against which to compare potential impacts of the project includes the natural and anthropogenic drivers of global climate change, including worldwide GHG emissions from human activities which almost doubled between 1970 and 2010 from approximately 27 gigatons (Gt) of $CO_2$ per year to nearly 49 $GtCO_2$ per year.[9] As such, the geographic extent of climate change and GHG emissions cumulative impact discussion is worldwide.

The Project's construction and operational emissions were calculated using the CARB-approved California Emissions Estimator Model (CalEEMod) version 2022.1, designed to model emissions for land use development projects based on typical construction requirements. Details of the modeling assumptions and emission factors are provided in **Appendix A: Greenhouse Gas Emissions Data**.

### Construction

CalEEMod calculates emissions from off-road equipment usage and on-road vehicle travel

[8] 14 California Code of Regulations, Section 15064.4a
[9] Intergovernmental Panel on Climate Change, *Climate Change 2013 Mitigation of Climate Change Working Group III Contribution to the Fifth Assessment Report of the Intergovernmental Panel on Climate Change*, 2013.

associated with haul, delivery, and construction worker trips. GHG emissions during construction were forecasted based on the proposed construction schedule and applying the mobile-source and fugitive dust emissions factors derived from CalEEMod. The Project's construction-related GHG emissions would be generated from off-road construction equipment, on-road hauling and vendor (material delivery) trucks, and worker vehicles. It is assumed that Phase I construction would occur from late-2025 to mid-2027. At this stage of the planning process, the Phase II construction timeline is not yet available. As such, reasonable assumptions have been made as a conservative measure. It is assumed that Phase II construction would occur from late-2026 to early-2030 and would overlap with Phase I construction.

In accordance with the South Coast Air Quality Management District's (SQAMD's) guidance, GHG emissions from construction were amortized (i.e., averaged annually) over the lifetime of the Project. As impacts from construction activities occur over a relatively short-term period of time, they contribute a relatively small portion of the overall lifetime project GHG emissions. In addition, GHG emission reduction measures for construction equipment are relatively limited. Therefore, SCAQMD recommended that construction emissions be amortized over a 30-year project lifetime, so that GHG reduction measures will address construction GHG emissions as part of the operational GHG reduction strategies.[10] Thus, total construction GHG emissions were divided by 30 to determine an estimate of annual construction emissions comparable to operational emissions.

**Operations**

CalEEMod calculates the GHG emissions generated by mobile sources (Project generated vehicle trips), area sources (architectural coatings, landscaping equipment, and consumer product usage), energy sources (electrical and natural gas usage), water supply and wastewater treatment, solid waste generation and decomposition, and refrigerants. The Project vehicle trip generation was obtained from the Traffic Analysis.[11] The emissions generated by vehicles idling in drive-thru lanes were estimated using CARB's EMission FACtor (EMFAC) projected emissions rates in San Bernardino County, the miles traveled on-site, and the vehicle trip generation from the Traffic Analysis.[12] Project occupancy would be dependent on market conditions and permit approvals. As such, it is conservatively assumed Phase I and Phase II would be operational as soon as construction is completed. In addition, operational emissions associated with the maximum potential buildout are conservatively calculated based on an operational year of 2030.

# 5.0 POTENTIAL IMPACTS AND MITIGATION

## 5.1 Greenhouse Gas Emissions

**Threshold 5.1 Would the Project generate GHG emissions, either directly or indirectly, that could have a significant impact on the environment?**

Project construction would result in direct GHG emissions from construction equipment and the transport of materials and construction workers to and from the Project site. Construction GHG emissions are typically summed and amortized over the lifetime of the Project (assumed to be 30 years), then added to the operational emissions.[13] However, generation of construction-related GHG emissions would cease with construction completion.

Operational or long-term emissions would occur over the life of the Project. GHG emissions would result from mobile sources (Project generated vehicle trips), area sources (architectural coatings, landscaping equipment, and consumer product usage), energy sources (electrical and natural gas usage), water supply and wastewater treatment, solid waste generation and decomposition, refrigerants, and vehicles idling in drive-thru lanes.

### Phase I - Proposed Development

#### Construction Emissions

**Table 5: Phase I Construction Greenhouse Gas Emissions** includes the total and approximate daily GHG emissions generated during Phase I construction.

**Table 5: Phase I Construction Greenhouse Gas Emissions**

| Category | $MTCO_2e$ |
|---|---|
| 2025 | 85 |
| 2026 | 1,956 |
| 2027 | 749 |
| Total Construction Emissions[1] | 2,790 |
| 30-Year Amortized Construction | 93 |

$MTCO_2e$ = metric tons of carbon dioxide equivalent
1. Totals may not equal 100 percent due to rounding.

Source: CalEEMod version 2022.1. Refer to **Appendix A** for the model outputs.

As shown in **Table 5,** Phase I would generate approximately 2,790 $MTCO_2e$ over the course of construction. The amortized Phase I construction emissions would be approximately 93 $MTCO_2e$ per year.

#### Operational Emissions

Phase I is subject to FSEIR Mitigation Measure (MM) 3-2 and MM AQ-1, TOP 2050 Policy ER-3.5, and Laws, Ordinances, and Regulations (LOR) GHG-1 through GHG-8. FSEIR MM 3-2 requires development projects to include access to alternative modes of transportation. FSEIR MM AQ-1

[13] The project lifetime is based on the standard 30-year assumption of the South Coast Air Quality Management District (South Coast Air Quality Management District, *Minutes for the GHG CEQA Significance Threshold Stakeholder Working Group #13,* August 26, 2009).

requires development projects to provide bicycle parking, changing/shower, and supportive electric charging station facilities, preferential parking for fuel efficient and carpool vehicles, and Energy Star certified appliances. TOP 2050 Policy ER-3.5 requires Phase I occupants to purchase and use vehicles that comply with the Advanced Clean Cars II and Advanced Clean Trucks. LOR GHG-1 requires new buildings to comply with the Energy Code and CALGreen Code. LOR GHG-2 requires new buildings to provide bicycle parking for non-residential buildings according to the CALGreen Code or City ordinance. LOR GHG-3 requires construction to recycle a minimum of 65 percent of waste pursuant to the CALGreen Code. LOR GHG-4 requires new buildings to comply with the CALGreen Code and Water Efficient Landscape Ordinance. LOR GHG-5 requires investor-owned utilities to comply with the State's emissions reduction plan. LOR GHG-6 requires compliance with SB 375. LOR GHG-7 requires owners to retrofit their heavy-duty tractors and trailers fleet with U.S. EPA SmartWay certified vehicles. LOR GHG-8 requires medium-duty and heavy-duty vehicle engines to comply with the U.S. EPA's GHG and fuel efficiency standards.

**Table 6: Phase I Operational Greenhouse Gas Emissions** summarizes the total GHG emissions associated with Phase I operations.

**Table 6: Phase I Operational Greenhouse Gas Emissions**

| Source | $MTCO_2e$ per Year |
|---|---|
| Construction Amortized Over 30 Years | 93 |
| Mobile[1] | 13,186 |
| Area | 63 |
| Energy[2] | 2,390 |
| Waste | 174 |
| Water and Wastewater | 255 |
| Refrigerants | 2 |
| **Total Phase I Emissions[3]** | **16,071** |

$MTCO_2e$ = metric tons of carbon dioxide equivalent
1. FSEIR MM 3-2 requires development projects to include access to alternative modes of transportation. FSEIR MM AQ-1 requires development projects to provide bicycle parking, changing/shower, and supportive electric charging station facilities, and preferential parking for fuel efficient and carpool vehicles.
2. FSEIR MM AQ-1 requires development projects to provide Energy Star certified appliances.
3. Totals may not equal 100 percent due to rounding.

Source: CalEEMod version 2022.1. Refer to **Appendix A** for the model outputs.

Below is a description of the primary operational emission sources:

- **Area Sources**. Area source emissions occur from architectural coatings, landscaping equipment, and consumer product usage. The primary emissions from architectural coatings are volatile organic compounds, which are relatively insignificant as direct GHG emissions. Additionally, landscaping is anticipated to occur throughout the Phase I Project area.
- **Energy Consumption.** Energy source emissions would be generated due to electricity and natural gas usage, including heating and cooling, water heating, ventilation, lighting, appliances, and electronics. The residential uses would not include natural gas hearths.

- **Mobile Sources**. Mobile source emissions were calculated with CalEEMod based on the trip generation from the Traffic Analysis.[14] Phase I would generate 8,270 total daily vehicle trips.
- **Solid Waste**. Solid waste decomposes and releases GHG emissions in the form of methane.
- **Water and Wastewater**. Electricity consumption associated with water conveyance and treatment would generate GHG emissions.
- **Refrigerants**. Refrigerants used in refrigeration and air conditioning equipment generate GHG emissions.

**Table 6** shows that Phase I operations would generate approximately 16,071 $MTCO_2e$ per year. It should be noted that 82 percent of GHG emissions are associated with non-construction-related mobile sources. Vehicle fuel efficiency and emissions are regulated by federal and State standards and neither the Applicant nor the City has control over these standards.

Since Phase I would exceed the project size thresholds outlined in **Table 4**, Phase I would be required to incorporate project design features to achieve a minimum score of 100 points on the applicable Screening Tables. As stated above, projects that achieve a minimum score of 100 points are considered less than significant. At the time of this analysis, Phase I is in the design phase, where project design features needed to achieve consistency with the Screening Tables are being considered and implemented. The Applicant must complete and submit a final set of screening tables showing the achievement of the required 100 points prior to issuance of the building permit. Phase I would have a less than significant impact with implementation of FSEIR MM 3-2 and MM AQ-1 and compliance with the CCAP. Impacts would be less than significant, and no mitigation is required.

## Phase II - Future Development

### Construction Emissions

**Table 7: Phase II Construction Greenhouse Gas Emissions** includes the total and approximate daily GHG emissions generated during Phase II construction.

**Table 7: Phase II Construction Greenhouse Gas Emissions**

| Category | $MTCO_2e$ |
|---|---|
| 2026 | 107 |
| 2027 | 3,369 |
| 2028 | 5,963 |
| 2029 | 4,933 |
| 2030 | 892 |
| Total Construction Emissions[1] | 15,263 |
| 30-Year Amortized Construction | 509 |

$MTCO_2e$ = metric tons of carbon dioxide equivalent
1. Totals may not equal 100 percent due to rounding.

[14] Urban Crossroads, *Center Park Specific Plan Traffic Analysis,* 2025.

| **Table 7: Phase II Construction Greenhouse Gas Emissions** |
|---|
| Source: CalEEMod version 2022.1. Refer to **Appendix A** for the model outputs. |

As shown in **Table 7,** the Phase II would result in the generation of approximately 15,263 $MTCO_2e$ over the course of construction. The amortized Phase II construction emissions would be approximately 509 $MTCO_2e$ per year.

### Operational Emissions

Phase II is subject to FSEIR MM 3-2 and MM AQ-1, TOP 2050 Policy ER-3.5, and LOR GHG-1 through GHG-8. FSEIR MM 3-2 requires development projects to include access to alternative modes of transportation. FSEIR MM AQ-1 requires development projects to provide bicycle parking, changing/shower, and supportive electric charging station facilities, preferential parking for fuel efficient and carpool vehicles, and Energy Star certified appliances. TOP 2050 Policy ER-3.5 requires Phase II occupants to purchase and use vehicles that comply with the Advanced Clean Cars II and Advanced Clean Trucks. LOR GHG-1 requires new buildings to comply with the Energy Code and CALGreen Code. LOR GHG-2 requires new buildings to provide bicycle parking for non-residential buildings according to the CALGreen Code or City ordinance. LOR GHG-3 requires construction to recycle a minimum of 65 percent of waste pursuant to the CALGreen Code. LOR GHG-4 requires new buildings to comply with the CALGreen Code and Water Efficient Landscape Ordinance. LOR GHG-5 requires investor-owned utilities to comply with the State's emissions reduction plan. LOR GHG-6 requires compliance with SB 375. LOR GHG-7 requires owners to retrofit their heavy-duty tractors and trailers fleet with U.S. EPA SmartWay certified vehicles. LOR GHG-8 requires medium-duty and heavy-duty vehicle engines to comply with the U.S. EPA's GHG and fuel efficiency standards.

**Table 8: Phase II Operational Greenhouse Gas Emissions** summarizes the total GHG emissions associated with Phase II operations.

Below is a description of the primary operational emission sources:

- **Area Sources**. Area source emissions occur from architectural coatings, landscaping equipment, and consumer product usage. The primary emissions from architectural coatings are volatile organic compounds, which are relatively insignificant as direct GHG emissions. Additionally, landscaping is anticipated to occur throughout the Phase II Project area.
- **Energy Consumption.** Energy source emissions would be generated due to electricity and natural gas usage, including heating and cooling, water heating, ventilation, lighting, appliances, and electronics. The residential uses would not include natural gas hearths.
- **Mobile Sources**. Mobile source emissions were calculated with CalEEMod based on the trip generation from the Traffic Analysis.[15] Phase II would generate 36,446 total daily vehicle trips.
- **Solid Waste**. Solid waste decomposes and releases GHG emissions in the form of methane.
- **Water and Wastewater**. Electricity consumption associated with water conveyance and treatment would generate GHG emissions.
- **Refrigerants**. Refrigerants used in refrigeration and air conditioning equipment generate GHG emissions.
- **Drive-Thru Idling.** Vehicles idling in the drive-thru lanes would generate GHG emissions, which were calculated with EMFAC projected emission rates in San Bernardino County, the potential maximum miles traveled on-site within the MU – Great Park land use (PAs 4, 5, 10, and 11), and the trip generation from the Traffic Analysis.[16] It is conservatively assumed the potential maximum miles traveled on-site within a PA designated as MU – Great Park would be 0.20 miles.[17] Conservatively assuming that 70 percent of drive thru restaurant trips would utilize drive-thru lanes, Phase II would generate 5,022 total daily drive-thru trips.

**Table 8** shows that Phase II operations would generate approximately 71,830 $MTCO_2e$ per year. It should be noted that 84 percent of GHG emissions are associated with non-construction-related mobile sources. Vehicle fuel efficiency and emissions are regulated by federal and State standards and neither the Applicant nor the City has control over these standards.

Since Phase II would exceed the project size thresholds outlined in **Table 4**, developments within Phase II would be required to incorporate project design features to achieve a minimum score of 100 points on the applicable Screening Tables. As stated above, projects that achieve a minimum score

[15] Ibid.
[16] Ibid.
[17] The distance was measured on Google Earth, 2025.

of 100 points are considered less than significant. At the time of this analysis, Phase II is in the design phase, where project design features needed to achieve consistency with the Screening Tables are being considered and implemented. The Applicant must complete and submit a final set of screening tables showing the achievement of the required 100 points prior to issuance of the building permit. Phase II would have a less than significant impact with implementation of FSEIR MM 3-2 and MM AQ-1 and compliance with the CCAP. Impacts would be less than significant, and no mitigation is required.

### Project Buildout (Phase I + Phase II)

#### Construction Emissions

As it is speculative to assume the Phase II construction timeline, it is conservatively assumed that Phase I construction would overlap with Phase II construction. **Table 9: Project Construction Greenhouse Gas Emissions** includes the total and approximate daily GHG emissions generated during Phase I and Phase II construction.

**Table 9: Project Construction Greenhouse Gas Emissions**

| Category | $MTCO_2e$ |
|---|---|
| 2025 | 85 |
| 2026 | 2,062 |
| 2027 | 4,118 |
| 2028 | 5,963 |
| 2029 | 4,933 |
| 2030 | 892 |
| Total Construction Emissions | 18,053 |
| 30-Year Amortized Construction | 602 |

$MTCO_2e$ = metric tons of carbon dioxide equivalent
1. Totals may not equal 100 percent due to rounding.

Source: CalEEMod version 2022.1. Refer to **Appendix A** for the model outputs.

As shown in **Table 9,** the Project would result in the generation of approximately 18,053 $MTCO_2e$ over the course of construction. The amortized Project construction emissions would be 602 $MTCO_2e$ per year.

#### Operational Emissions

The Project would include all emission sources from Phase I and Phase II when the entire Project is built and operational. The Project operations are subject to FSEIR MM 3-2 and MM AQ-1, TOP 2050 Policy ER-3.5, and LOR GHG-1 through GHG-8. FSEIR MM 3-2 requires development projects to include access to alternative modes of transportation. FSEIR MM AQ-1 requires development projects to provide bicycle parking, changing/shower, and supportive electric charging station facilities, preferential parking for fuel efficient and carpool vehicles, and Energy Star certified appliances. TOP 2050 Policy ER-3.5 requires the Project occupants to purchase and use vehicles that comply with the Advanced Clean Cars II and Advanced Clean Trucks. LOR GHG-1 requires new buildings to comply with the Energy Code and CALGreen Code. LOR GHG-2 requires new buildings

to provide bicycle parking for non-residential buildings according to the CALGreen Code or City ordinance. LOR GHG-3 requires construction to recycle a minimum of 65 percent of waste pursuant to the CALGreen Code. LOR GHG-4 requires new buildings to comply with the CALGreen Code and Water Efficient Landscape Ordinance. LOR GHG-5 requires investor-owned utilities to comply with the State's emissions reduction plan. LOR GHG-6 requires compliance with SB 375. LOR GHG-7 requires owners to retrofit their heavy-duty tractors and trailers fleet with U.S. EPA SmartWay certified vehicles. LOR GHG-8 requires medium-duty and heavy-duty vehicle engines to comply with the U.S. EPA's GHG and fuel efficiency standards.

**Table 10: Project Operational Greenhouse Gas Emissions** summarizes the total GHG emissions associated with Project Buildout operations.

**Table 10: Project Operational Greenhouse Gas Emissions**

| Source | $MTCO_2e$ per Year |
|---|---|
| Construction Amortized Over 30 Years | 602 |
| Mobile[1] | 71,615 |
| Area | 271 |
| Energy[2] | 11,679 |
| Waste | 802 |
| Water and Wastewater | 1,587 |
| Refrigerants | 29 |
| Drive-Thru Idling | 3 |
| **Total Project Emissions[3]** | **85,987** |

$MTCO_2e$ = metric tons of carbon dioxide equivalent
1. FSEIR MM 3-2 requires development projects to include access to alternative modes of transportation. FSEIR MM AQ-1 requires development projects to provide bicycle parking, changing/shower, and supportive electric charging station facilities, and preferential parking for fuel efficient and carpool vehicles.
2. FSEIR MM AQ-1 requires development projects to provide Energy Star certified appliances.
3. Totals may not equal 100 percent due to rounding.

Source: CalEEMod version 2022.1. Refer to **Appendix A** for the model outputs.

Below is a description of the primary operational emission sources:

- **Area Sources**. Area source emissions occur from architectural coatings, landscaping equipment, and consumer product usage. The primary emissions from architectural coatings are volatile organic compounds, which are relatively insignificant as direct GHG emissions. Additionally, landscaping is anticipated to occur throughout the Project area.
- **Energy Consumption.** Energy source emissions would be generated due to electricity and natural gas usage, including heating and cooling, water heating, ventilation, lighting, appliances, and electronics. The residential uses would not include natural gas hearths.

- **Mobile Sources**. Mobiles source emissions were calculated with CalEEMod based on the trip generation from the Traffic Analysis.[18] The Project would generate 44,716 total daily vehicle trips.
- **Solid Waste**. Solid waste decomposes and releases GHG emissions in the form of methane.
- **Water and Wastewater**. Electricity consumption associated with water conveyance and treatment would generate GHG emissions.
- **Refrigerants**. Refrigerants used in refrigeration and air conditioning equipment generate GHG emissions.
- **Drive-Thru Idling.** Vehicles idling in the drive-thru lanes would generate GHG emissions, which were calculated with EMFAC projected emission rates in San Bernardino County, the maximum potential miles traveled on-site within the MU – Great Park land use (PAs 4, 5, 10, and 11), and the trip generation from the Traffic Analysis.[19] It is conservatively assumed the potential maximum miles traveled on-site within a PA designated as MU – Great Park would be 0.20 miles.[20] Conservatively assuming that 70 percent of drive thru restaurant trips would utilize drive-thru lanes, the Project would generate 5,022 total daily drive-thru trips.

**Table 10** shows that Project operations would generate approximately 85,987 $MTCO_2e$ per year. It should be noted that 83 percent of the mitigated GHG emissions are associated with non-construction-related mobile sources. Vehicle fuel efficiency and emissions are regulated by federal and State standards and neither the Applicant nor the City has control over these standards.

Since the Project would exceed the project size thresholds outlined in **Table 4**, developments within the Project would be required to incorporate project design features to achieve a minimum score of 100 points on the applicable Screening Tables. As stated above, projects that achieve a minimum score of 100 points are considered less than significant. At the time of this analysis, the Project is in the design phase, where project design features needed to achieve consistency with the Screening Tables are being considered and implemented. The Applicant must complete and submit a final set of screening tables showing the achievement of the required 100 points prior to issuance of the building permit.

The Project would have a less than significant impact with implementation of FSEIR MM 3-2 and MM AQ-1 and compliance with the CCAP. Impacts would be less than significant, and no mitigation is required.

## Conclusion

As shown in **Table 10**, the Project would generate approximately 85,987 $MTCO_2e$ per year with implementation of FSEIR MM 3-2 and MM AQ-1. Since the majority of emissions are from mobile sources, neither the Applicant nor the City have regulatory authority to control tailpipe emissions. Consistent with the DRP and CCAP, the Project would incorporate project design features to achieve a minimum score of 100 points on the Screening Tables. As stated in the CCAP, projects that achieve a minimum score of 100 points are considered less than significant. At the time of this analysis, the Project is in the design phase, where project design features needed to achieve consistency with the

[18] Urban Crossroads, Center Park Specific Plan Traffic Analysis, 2025.
[19] Ibid.
[20] The distance was measured on Google Earth, 2025.

Screening Tables are being considered and implemented. The Applicant must complete and submit a final set of screening tables showing the achievement of the required 100 points prior to issuance of the building permit. The Project's impacts are within the limit of impacts identified in the FSEIR. As a result, the proposed Project would not result in any new or more severe impacts than previously analyzed in the FSEIR

**Laws, Ordinances, and Regulations**

LORs are existing requirements that are based on local, State, or federal regulations or laws that are frequently required independent of CEQA review. Typical standard conditions and requirements include compliance with the provisions of the Building Code, SCAQMD Rules, etc. The City may impose additional conditions during the approval process, as appropriate. Because LORs are neither project-specific nor a result of development of the Project, they are not considered to be either project design features or mitigation measures.

**LOR GHG-1** New buildings are required to achieve the current Energy Code (Title 24, Part 6) and the CALGreen Code (Title 24, Part 11). The 2022 Energy Code become effective on January 1, 2023. The Energy Code and CALGreen Code are updated triennially with a goal to achieve 100 percent clean carbon neutrality by 2050 within the State.

**LOR GHG-2** New non-residential buildings are required to adhere to the CALGreen Code requirement to provide bicycle parking, or meet local bicycle parking ordinances, whichever is stricter (CALGreen Code Sections 5.106.4.1).

**LOR GHG-3** The CALGreen Code requires the recycling and/or salvaging for reuse at minimum of 65 percent of the nonhazardous construction and demolition waste generated during most "new construction" projects (CALGreen Code Sections 4.408 and 5.408). Construction contractors are required to submit a construction waste management plan that identifies the construction and demolition waste materials to be diverted from disposal by recycling, reuse on the project, or salvaged for future use or sale and the amount (by weight or volume).

**LOR GHG-4** New buildings are required to adhere to the CALGreen Code and Water Efficient Landscape Ordinance requirements to increase water efficiency and reduce urban per capita water demand.

**LOR GHG-5** CARB's RPS is a foundational element of the State's emissions reduction plan. These mandates apply directly to investor-owned utilities, which in the case of the proposed Project is SCE. On September 10, 2018, SB 100 was signed into law and established the following RPS targets: 50 percent renewable resources target by December 31, 2026, and 60 percent target by December 31, 2030. SB 100 also requires that retail sellers and local publicly owned electric utilities procure a minimum quantity of electricity products from eligible renewable energy resources so that the total kilowatt hours of those products sold to their retail end-use customers achieve 44 percent of retail sales by December 31, 2024; 52 percent by December 31, 2027; and 60 percent by December 31, 2030.

**LOR GHG-6** SB 375 requires the reduction of GHG emissions from light trucks and automobiles

through land use and transportation efforts that will reduce VMT. In essence, SB 375's goal is to control GHGs by curbing urban sprawl and through better land use planning. SB 375 essentially becomes the land use contribution to the GHG reduction requirements of AB 32, California's global warming bill enacted in 2006, and SB 32.

**LOR GHG-7** The heavy-duty tractors and trailers (i.e., trucks that are 53-foot or longer) must use U.S. EPA SmartWay certified tractors and trailers or retrofit their existing fleet with SmartWay verified technologies in accordance with CARB's Heavy-Duty (Tractor-Trailer) GHG Regulation. Owners are responsible for replacing or retrofitting their affected vehicles with compliant aerodynamic technologies and low rolling resistance tires. Sleeper cab tractors model year 2011 and later must be SmartWay certified. All other tractors must use SmartWay verified low rolling resistance tires. Trailers must have low rolling resistance tires and aerodynamic devices.

**LOR GHG-8** The medium-duty and heavy-duty vehicle engines are required to comply with the U.S. EPA's GHG and fuel efficiency standards. The federal and California Phase 1 standards took effect with model year 2014 tractors, vocational vehicles, and heavy-duty pick-up trucks and vans and the engines powering such vehicles (the Phase 1 standards excludes trailers). The federal Phase 2 standards cover model years 2018-2027 for certain trailers and model years 2021- 2027 for semi-trucks and large pick-up trucks, vans and all types and sizes of buses and work trucks. California is aligned with the federal Phase 2 standards in structure, timing, and stringency, but with some minor California differences. The California Phase 2 regulations became effective April 1, 2019.

**FSEIR Mitigation Measures**

The FSEIR analyzed emission impacts associated with land development throughout the City and implemented the following mitigation measures, which are applicable to the Project.

**3-2** The City of Ontario shall evaluate new development proposals within the City and require all developments to include access or linkages to alternative modes of transportation, such as transit stops, bike paths, and/or pedestrian paths (e.g., sidewalks).

**AQ-1** Prior to discretionary approval by the City of Ontario for development projects subject to CEQA (California Environmental Quality Act) review (i.e., nonexempt projects), project applicants shall prepare and submit a technical assessment evaluating potential project operation-phase-related air quality impacts to the City of Ontario Planning Department for review and approval. The evaluation shall be prepared in conformance with SCAQMD methodology in assessing air quality impacts. If operation-related air pollutants are determined to have the potential to exceed the SCAQMD–adopted thresholds of significance, the City of Ontario Planning Department shall require that applicants for new development projects incorporate mitigation measures to reduce air pollutant emissions during operational activities. The identified measures shall be included as part of the conditions of approval. Possible mitigation measures to reduce long-term emissions could include, but are not limited to the following:

- For site-specific development that requires refrigerated vehicles, the construction documents shall demonstrate an adequate number of electrical service connections at loading docks for plug-in of the anticipated number of refrigerated trailers to reduce idling time and emissions.
- Applicants for manufacturing and light industrial uses shall consider energy storage and combined heat and power in appropriate applications to optimize renewable energy generation systems and avoid peak energy use.
- Site-specific developments with truck delivery and loading areas and truck parking spaces shall include signage as a reminder to limit idling of vehicles while parked for loading/unloading in accordance with California Air Resources Board Rule 2845 (13 CCR Chapter 10 sec. 2485).
- Provide changing/shower facilities as specified in Section A5.106.4.3 of CALGreen (Nonresidential Voluntary Measures).
- Provide bicycle parking facilities per Section A4.106.9 of CALGreen (Residential Voluntary Measures).
- Provide preferential parking spaces for low-emitting, fuel-efficient, and carpool/van vehicles per Section A5.106.5.1 of CALGreen (Nonresidential Voluntary Measures).
- Provide facilities to support electric charging stations per Section A5.106.5.3 and Section A5.106.8.2 of CALGreen (Nonresidential Voluntary Measures; Residential Voluntary Measures).
- Applicant-provided appliances shall be Energy Star–certified appliances or appliances of equivalent energy efficiency (e.g., dishwashers, refrigerators, clothes washers, and dryers). Installation of Energy Star– certified or equivalent appliances shall be verified by the City during plan check.

**Mitigation Measures:** No additional mitigation is required.

**Level of Significance:** Less than significant impact.

## 5.2 Greenhouse Gas Reduction Plan Compliance

**Threshold 5.2 Would the Project conflict with an applicable plan, policy, or regulation of an agency adopted for the purpose of reducing GHG emissions?**

**City of Ontario Community Climate Action Plan**

The primary purpose of the CCAP is to feasibly reduce GHG emissions generated by land development projects, consistent with the statewide Scoping Plan GHG reduction efforts. The City has identified a series of reduction measures that improve building energy efficiency, increase use of public and active transit, alternative-fueled vehicles, and renewable energy, and reduce VMT and water consumption. **Table 11: Community Climate Action Plan Consistency** evaluates the consistency of the Project to the applicable measures of the CCAP.

| **Table 11: Community Climate Action Plan Consistency** | | |
|---|---|---|
| **Strategy** | **Measure Description** | **Consistency** |
| **Energy** | | |
| Strategy 1 | **Building electrification.** Promote and incentivize the phase-out of gas appliances in new and existing homes and businesses throughout the community to advance GHG reductions, increase energy efficiency, and protect public safety and environmental health. | **N/A:** This measure is to be taken at the City level. Project implementation would not conflict with this strategy. Furthermore, the residential uses would not include natural gas hearths. |
| Strategy 2 | **Onsite solar energy for existing residential development.** Continue to support and facilitate installation of rooftop solar photovoltaic and onsite solar energy systems in existing residential development. | **N/A:** This measure only applies to existing residential development and is not applicable to the proposed Project. |
| Strategy 3 | **Onsite Solar Energy Systems for Nonresidential Development:** Ensure new large non-residential development, including City facilities, includes on-site renewable energy to support the site's energy needs by requiring solar photovoltaic panels or other appropriate on-site renewable energy generation systems for the following types of projects:<br>• New commercial and office buildings, or existing commercial and office building expansions greater or equal to 45,000 square feet in size.<br>• New industrial or existing industrial buildings expansions greater or equal to 100,000 square feet in size. | **Consistent:** The proposed commercial uses would incorporate energy efficient building designs such as flat roofs that allow for solar panels, subject to the City of Ontario policies and development regulations. |
| Strategy 4 | **Green roofs.** Promote and incentivize residents and business owners to install green roofs to conserve energy and reduce surface water runoff. | **N/A:** This measure is to be taken at the City level. Project implementation would not conflict with this strategy. |
| Strategy 5 | **Urban Cooling:** Maintain and expand the City's existing tree canopy, with a goal of planting 500 trees annually through 2050 and promote the use of pervious concrete and cool pavement for pavement projects. | **Consistent:** This measure is to be taken at the City level. The Project would require trees along streetscapes, neighborhood edges, parking lots, and open space areas. |
| Strategy 6 | **Energy efficiency retrofits for low-income households.** Promote and incentivize voluntary energy efficiency retrofits of homes to reduce natural gas and electricity usage, with the goal of retrofitting 9,000 low-income homes by 2050. Partner with community services agencies to fund energy efficiency projects, including heating, ventilation, air conditioning, indoor lighting, water heating equipment, insulation, and weatherization for low-income residents. | **N/A:** This measure is not applicable to the proposed Project, as retrofits only apply to existing structures. |
| Strategy 7 | **Energy efficiency retrofits.** Promote and incentivize voluntary energy efficiency retrofits to reduce in natural gas and electricity usage. Partner | **N/A:** This measure is not applicable to the proposed Project, as retrofits only apply to existing structures. |

| **Table 11: Community Climate Action Plan Consistency** | | |
|---|---|---|
| **Strategy** | **Measure Description** | **Consistency** |
| | with regional agencies to expand access to existing energy efficiency and conservation opportunities, incentives, and technical assistance for residents and businesses. | |
| Strategy 8 | **Smart Growth and Infill.** Encourage revitalization of neighborhoods through higher-density, mixed-use, infill development and creative reuse of underutilized sites within the urban core. | **Consistent:** The Project proposes a mixed-use development on an underutilized site in the City. |
| **Transportation** | | |
| Strategy 9 | **Transit-Oriented Development:** Encourage development of compact, mixed-use, and transit-oriented development to improve the regional jobs-housing balance, especially on corridors served by high-ridership transit and bus rapid transit, such as Holt Avenue. | **Consistent:** The Project proposes a mixed-use development along a high-volume corridor, Euclid Avenue. Transit turnouts would be constructed within the proposed Specific Plan area in coordination with Omnitrans. An Omnitrans BRT Corridor is planned along Edison Avenue/Ontario Ranch Road. |
| Strategy 10 | **Increase Transportation Ridership.** Ensure a reliable and responsive transit system with dedicated and secure funding and resources to support increased ridership. | **N/A:** This measure is to be taken at the City level. Project implementation would not conflict with this strategy. |
| Strategy 11 | **Traffic signal synchronization and roadway management.** Implement traffic and roadway management strategies to improve mobility and efficiency and reduce associated emissions. | **Consistent:** The Project would construct a roadway network in accordance with the City of Ontario Master Plan of Streets and Highways and The Ontario Ranch Streetscape Master Plan. The roadway network would be designed to maintain an efficient control of all modes of traffic. |
| Strategy 12 | **Community vehicle electrification.** Promote and incentivize the adoption of electric vehicles (EV) citywide, including light-duty and heavy-duty vehicles, for municipal, commercial, and residential uses. | **Consistent:** This measure is to be taken at the City level. The Project would construct facilities to support electric charging stations. |
| Strategy 13 | **Active Transportation Networks:** Work with transit agencies, school districts, and employers to facilitate an interconnected transportation system that allows a shift in travel from private passenger vehicles to alternative modes, including public transit, ride sharing, car sharing, bicycling, and walking. | **Consistent:** The Project would develop Multipurpose Trails along Euclid Avenue/Ontario Ranch Road, Campus Avenue, Grove Avenue, and Walker Avenue, which would connect to a Class II Bike Path and off-site Multipurpose Trails. Transit turnouts would be constructed within the proposed Specific Plan area in coordination with Omnitrans. An Omnitrans BRT Corridor is planned along Edison Avenue/Ontario Ranch Road. |

| **Table 11: Community Climate Action Plan Consistency** | | |
|---|---|---|
| **Strategy** | **Measure Description** | **Consistency** |
| Strategy 14 | **Vehicle Idling:** Limit idling of heavy-duty trucks. Support the SCAMQD and CARB anti-idling requirements and provide signage in key areas where idling that is not consistent with SCAMQD or CARB requirements might occur. | **Consistent:** Commercial motor vehicles are required to comply with CCR Section 2485, which would limit the idling of diesel fueled vehicles to no more than five minutes. |
| Strategy 15 | **Parking policy and event parking.** Adopt a comprehensive parking policy that encourages carpooling and the use of alternative transportation, including providing parking spaces for car-share vehicles at convenient locations with access to public transportation. | **N/A:** This measure is to be taken at the City level. Project implementation would not conflict with this strategy. |
| **Off-road Equipment** | | |
| Strategy 16 | **Electrification of construction and landscaping equipment.** Promote and incentivize the transition to electric construction and landscaping equipment. | **N/A:** This measure is to be taken at the City level. Project implementation would not conflict with this strategy. |
| Strategy 17 | **Idling Ordinance for Construction Equipment:** Limit idling of heavy-duty off-road construction equipment to reduce air pollution and GHG emissions from construction activity. | **Consistent:** Construction would be required to comply with CCR Section 2485 and 2499 which would limit the idling of heavy-duty construction equipment to no more than five minutes. |
| **Waste** | | |
| Strategy 18 | **Methane capture at landfills.** Support efforts to reduce methane emissions from regional landfills. | **N/A:** This measure is not applicable to the proposed Project. |
| Strategy 19 | **Waste Diversion:** Exceed waste diversion goals recommended by AB 939 and CALGreen by adopting a citywide diversion target of at least 75 percent of waste. | **Consistent:** The Project would be subject to all applicable local, State, and federal waste diversion requirement. |
| Strategy 20 | **Construction and Demolition Waste Recovery Ordinance:** Increase the amount of waste recycled during construction and demolition of buildings. | **Consistent:** Contractors are required to comply with CALGreen Code Sections 4.408 and 5.408, requiring the recycling of a minimum of 65 percent of construction and demolition waste, refer to LOR GHG-3. |
| **Water** | | |
| Strategy 21 | **Indoor water efficiency.** Encourage water-efficient retrofits of new and existing buildings by working with water providers and regional agencies. | **Consistent:** The Project would comply with CALGreen Code Section 4.303 and require the installation of low flow fixtures. In addition, the Project would comply with the City of Ontario Recycled Water Master Plan and irrigate landscaped areas with recycled water. The irrigations systems would have automatic controllers, including automatic rain shut-off devices. |

**Table 11: Community Climate Action Plan Consistency**

| Strategy | Measure Description | Consistency |
|---|---|---|
| Strategy 22 | **Water Efficient Landscapes and Water Recycling:** Promote drought-tolerant and fire-wise landscaping. Encourage increased use of reclaimed water for landscape irrigation, agricultural, and industrial use. | **Consistent:** The Project would include drought tolerant landscaping and would irrigate landscape areas with recycled water as required by the City of Ontario Recycled Water Master Plan. |
| Strategy 23 | **Water system and wastewater operations efficiency.** Maximize efficiency at drinking water treatment, pumping, and distribution facilities, including development of off-peak demand schedules for heavy commercial and industrial users. | **N/A:** This measure is not applicable to the proposed Project. |
| Strategy 24 | **Methane capture for wastewater treatment.** Work with Inland Empire Utilities Agency (IEUA), the local wastewater treatment provider, to increase methane capture rate. | **N/A:** This measure is not applicable to the proposed Project. |
| **Other** | | |
| Strategy 25 | **Methane capture for dairy operations.** Encourage and incentivize local dairy operations to reduce methane emissions through methane capture technology. | **N/A:** This measure is not applicable to the proposed Project. |
| Strategy 26 | **Climate change awareness and education.** Promote climate change awareness and GHG reduction community-wide through a variety of mechanisms, including through support of climate change education in schools or community colleges. | **N/A:** This measure is to be taken at the City level. Project implementation would not conflict with this strategy. |
| Strategy 27 | **Carbon sequestration.** Establish a citywide carbon sequestration project and sequestration goal of 5,000 MT $CO_2$ per year. | **N/A:** This measure is to be taken at the City level. Project implementation would not conflict with this strategy. |
| Strategy 28 | **Green jobs.** Support green job trainings and opportunities to create sustainable, living wage, quality employment opportunities. | **N/A:** This measure is to be taken at the City level. Project implementation would not conflict with this strategy. |

N/A = not applicable

Source: City of Ontario, *Ontario Community Climate Action Plan,* 2022, https://content.ontarioca.gov/sites/default/files/2025-01/Ontario-CCAP_Adopted_20220816.pdf, accessed April 2025.

As discussed in **Table 11**, the Project would be consistent with all applicable measures and would not conflict with the goals of the CCAP.

The CCAP establishes a points system that assigns values for each GHG emissions mitigating design feature incorporated into a given development project. Projects with features that yield at least 100 points from the Screening Table points are considered consistent with the reduction quantities anticipated in the CCAP and would be determined to have a less than significant individual and cumulative GHG emissions impact. The Applicant may work with the City to determine point values for additional design features to achieve a minimum of 100 points. Since the Project contains both residential and commercial developments, both the residential and commercial screening tables

would need to achieve 100 points. The Project would have the opportunity to receive more points for additional measures including renewable energy installments, EV recharging stations, and land use based trips and VMT reductions. As noted above, the Applicant must complete and submit a final set of screening tables showing the achievement of the required 100 points prior to issuance of the building permit. This measure would ensure that future Project development is consistent with the City's CCAP and would reduce impacts to less than significant.

**SCAG Regional Transportation Plan/Sustainable Communities Strategy Consistency**

On April 4, 2024, SCAG's Regional Council adopted 2024-2050 RTP/SCS, which is long-range visioning plan that balances future mobility and housing needs with economic, environmental, and public health goals. 21 Under SB 375, SCAG's 2024-2050 RTP/SCS establishes GHG emissions goals to reduce GHG emissions in the region by eight percent from 2005 levels by 2020 and 19 percent below 2005 levels by 2035.[22]

SCAG plays a critical role in project selection, programming, and administration of federal funds available to the region. The 2024-2050 RTP/SCS account for operations and maintenance costs to ensure reliability, longevity, and cost effectiveness. Implementation of the 2024 RTP/SCS would add 181,200 new miles of transit revenue service, 4,000 new miles of bike lanes and 869 new miles to the Regional Express Lane Network. Strategic investments in infrastructure and transportation would improve access to employment centers and stimulate regional economic growth and opportunity in historically underserved areas.

The 2024-2050 RTP/SCS is supported by a combination of transportation and land use strategies that help the region achieve state GHG emissions reduction goals and FCAA requirements, increased housing production, improved equity and resilience, the preservation of natural lands, improvement of public health, increased transportation safety, support for the region's vital goods movement industries and more efficient use of resources. GHG emissions resulting from development-related mobile sources are the most potent source of emissions, and therefore project comparison to the 2024-2050 RTP/SCS is an appropriate indicator of whether the Project would inhibit the post-2020 GHG reduction goals promulgated by the state. The Project's consistency with the 2024-2050 RTP/SCS goals is analyzed in detail in **Table 12: 2024-2050 Regional Transportation Plan/Sustainable Communities Strategy Consistency**.

**Table 12: 2024-2050 Regional Transportation Plan/Sustainable Communities Strategy Consistency**

| RTP/SCS Goal | Consistency |
|---|---|
| **Mobility: Build and maintain an integrated multimodal transportation network.** | |
| Support investments that are well-maintained and operated, coordinated, resilient and result in improved safety, improved air quality and minimized greenhouse gas emissions | **Consistent:** This measure is to be taken at the regional level. Project implementation would not conflict with the goal. As discussed above, the Project would be constructed in accordance with the Title 24 of the California Building Standards Code, Title 20 of the California Code of Regulations, and CALGreen Code standards. Furthermore, the Project would |

| **RTP/SCS Goal** | **Consistency** |
| | include facilities that support electric charging station and flat roofs that allow for solar panels. |
| Ensure that reliable, accessible, affordable, and appealing travel options are readily available, while striving to enhance equity in the offerings in high-need communities | **Consistent**: This measure is to be taken at the regional level. Project implementation would not conflict with the goal. The Project proposes a mixed-use development in an area that is transitioning from dairy/agriculture uses to urban uses. The Project site would connect to a Class II Bike Path and off-site Multipurpose Trails and would provide bicycle parking. |
| Support planning for people of all ages, abilities, and backgrounds | **Consistent:** This measure is to be taken at the regional level. Project implementation would not conflict with the goal. The Project would include new market rate and affordable residential dwelling units. |
| **Communities: Develop, connect, and sustain communities that are livable and thriving** | |
| Create human-centered communities in urban, suburban, and rural settings to increase mobility options and reduce travel distances | **Consistent**: The Project proposes a mixed-use development that would support the transition from dairy/agriculture uses to urban uses. The proposed Project would provide Multipurpose Trails along Euclid Avenue/Ontario Ranch Road, Campus Avenue, Grove Avenue, and Walker Avenue, which would connect to a Class II Bike Path and off-site Multipurpose Trails. Transit turnouts would be constructed within the proposed Specific Plan area in coordination with Omnitrans. An Omnitrans BRT Corridor is planned along Edison Avenue/Ontario Ranch Road. |
| Produce and preserve diverse housing types in an effort to improve affordability, accessibility, and opportunities for all households | **Consistent**: The Project would include new market rate and affordable residential uses. |
| **Environment: Create a healthy region for the people of today and tomorrow** | |
| Develop communities that are resilient and can mitigate, adapt to, and respond to chronic and acute stresses and disruptions, such as climate change | **Consistent**: The Project would promote non-auto travel and reduce single-occupant vehicle trips by improving the pedestrian environment, connecting to Class II Bike Path and off-site Multipurpose Trails, and providing bicycle parking.<br><br>The Project would be constructed in accordance with the Title 24 of the California Building Standards Code, Title 20 of the California Code of Regulations, and CALGreen Code standards. Furthermore, the Project would include facilities that support electric charging stations and flat roofs that allow for solar panels.<br><br>The Project would include GHG-reducing project design features, consistent with the CCAP. The Project would include drought tolerant landscaping and would irrigate landscape areas with recycled water as required by the City of Ontario Recycled Water Master Plan.<br><br>The Project would develop a resilient community, integrating the region's development pattern and transportation network to improve air quality, reduce GHG emissions and enable more sustainable use of energy and water. |
| Integrate the region's development pattern and transportation network to improve air quality, reduce greenhouse gas emissions and enable more sustainable use of energy and water | |

| **Table 12: 2024-2050 Regional Transportation Plan/Sustainable Communities Strategy Consistency** | |
|---|---|
| **RTP/SCS Goal** | **Consistency** |
| Conserve the region's resources | **Consistent**: Although the Project would remove dairy/agriculture uses, the Project would represent a consistent and logical continuation of the existing and planned pattern of development in the Ontario Ranch area. Furthermore, the Project would develop open space areas between the existing agriculture uses and the proposed urban uses, consistent with TOP 2050 FSEIR and the Agriculture Overlay zoning. |
| **Economy: Support a sustainable, efficient, and productive regional economic environment that provides opportunities for all people in the region** | |
| Improve access to jobs and educational resources | **Consistent:** The Project proposes a mixed-use development that would connect residents to jobs and services. In addition, the Project would represent a consistent and logical continuation of the existing and planned pattern of development in the Ontario Ranch area. |
| Advance a resilient and efficient goods movement system that supports the economic vitality of the region, attainment of clean air and quality of life for our communities | **Consistent:** This measure is to be taken at the regional level. Project implementation would not conflict with the goal. As discussed above, the Project would promote clean air and non-auto travel by developing the pedestrian environment and providing bicycle parking. The Project would incorporate a flat roof design that would allow for solar panels. The Project would incorporate a variety of strategies for sustainability and water conservation as required by the CCAP. The Project would contribute toward and facilitate the City's long-term housing needs. |
| N/A = not applicable | |
| Source: Southern California Association of Governments, *Connect SoCal (2024 – 2050 Regional Transportation Plan/Sustainable Communities Strategy),* 2024, *https://scag.ca.gov/sites/default/files/2024-05/23-2987-connect-socal-2024-final-complete-040424.pdf*, accessed April 2025. | |

As shown in **Table 12**, the Project would be consistent with all applicable stated goals of the 2024-2050 RTP/SCS. Project implementation would not result in any significant impacts or interfere with SCAG's ability to achieve the region's post-2020 mobile source GHG reduction targets.

### California Air Resource Board Scoping Plan Consistency

The 2022 Scoping Plan sets a path to achieve targets for carbon neutrality and reduce anthropogenic GHG emissions by 85 percent below 1990 levels by 2045 in accordance with AB 1279. The transportation, electricity, and industrial sectors are the largest GHG contributors in the State. The 2022 Scoping Plan aims to achieve the AB 1279 targets primarily through zero-emission transportation (e.g., electrifying cars, buses, trains, and trucks) and decarbonizing the electricity and industrial sectors.

Statewide strategies to reduce GHG emissions in the latest 2022 Scoping Plan include:

- Implementing SB 100 (achieve 100 percent clean electricity by 2045);
- Achieving 100 percent ZEV sales in 2035 through Advanced Clean Cars II; and
- Implementing the ACF regulation to deploy ZEV buses and trucks.

The 2022 Scoping Plan would continue to implement SB 375. GHGs would be further reduced through the Cap-and-Trade Program carbon pricing and SB 905. SB 905 requires CARB to create the Carbon Capture, Removal, Utilization, and Storage Program to evaluate, demonstrate, and regulate carbon dioxide removal projects and technology.

While these measures are not directly applicable to the Project, any commercial activity associated with goods movement would be required to comply with these measures as adopted. The Project would not obstruct or interfere with efforts to increase ZEVs or State efforts to improve system efficiency. Compliance with applicable State standards would ensure consistency with State and regional GHG reduction planning efforts, including the 2022 Scoping Plan.

As discussed herein, the Project would comply with the Energy Code, the CALGreen Code, and energy efficiency measures implemented by the CCAP. Consistent with the CAP, the buildings developed under the Project would have rooftops that can support solar panels (i.e., solar-ready) which will comply with solar ready requirements of the Energy Code, which would enable future tenants to install a PV system. Therefore, implementation of the Project would support the statewide goal of decarbonization by 2045.

Appendix D (Local Actions)

The Appendix D of the 2022 Scoping Plan establishes guidelines on evaluating plan-level and project-level alignment with the State's Climate Goals in CEQA GHG analyses.

Appendix D notes that project consistency with the Scoping Plan can be determined through consistency with a qualified CAP, and absent consistency with a qualified CAP the State recommends that residential and mixed-use projects meet the following three priority areas will reduce GHG emissions and should accommodate growth in a manner consistent with State GHG reduction and equity prioritization goals. These project attributes are intended to help local jurisdictions qualitatively identify projects that are clearly consistent with the Scoping Plan. Appendix D also notes that lead agencies may determine, with adequate additional supporting evidence, that projects that incorporate some, but not all, of the key project attributes are consistent with the State's climate goals.[23]

- **Transportation Electrification.** Appendix D, Table 3 notes that to be clearly consistent with the State's goals, projects should provide EV charging infrastructure that, at minimum, meets the most ambitious voluntary standard in the CALGreen code.
- **VMT Reduction.** The Scoping Plan notes that to be consistent with the VMT reduction attribute, projects should be located on sites that are surrounded by existing urban uses and reuses or redevelops previously undeveloped or underutilized land; do not result in the loss or conversion of natural and working lands; and consist of transit-supportive densities (minimum of 20 residential dwelling units per acre).
- **Building Decarbonization.** Building decarbonization involves maximizing energy efficiency and reducing the use of fossil fuel energy.

The CCAP is a CEQA-qualified CAP and was adopted in 2022. **Table 11** demonstrates the Project

[23] California Air Resources Board, *2022 Scoping Plan for Achieving Carbon Neutrality*, Appendix D: Local Actions, Page 23, 2022. https://ww2.arb.ca.gov/sites/default/files/2022-11/2022-sp-appendix-d-local-actions.pdf, accessed December 2024.

would be consistent with the CCAP. Therefore, the Project is consistent with the 2022 Scoping Plan and would comply with all applicable regulatory requirements.

### Conclusion

As discussed above, the Project consistency with applicable Plan strategies and goals would reduce GHG emissions. In addition, the Project would include several sustainable design features as required by the CCAP that would further reduce GHG emissions. As stated in the CCAP, projects that achieve a minimum score of 100 points are considered less than significant. At the time of this analysis, the Project is in the design phase, where project design features needed to achieve consistency with the Screening Tables are being considered and implemented. The Applicant must complete and submit a final set of screening tables showing the achievement of the required 100 points prior to issuance of the building permit. The Project's impacts are within the limit of impacts identified in the FSEIR. As a result, the proposed Project would not result in any new or more severe impacts than previously analyzed in the FSEIR.

**Mitigation Measures:** No mitigation is required.

**Level of Significance:** Less than significant impact.

## 5.3 Cumulative Impacts

Project-related GHG emissions are not confined to a particular air basin but are dispersed worldwide. Therefore, impacts under Impact Threshold 5.1 are not Project-specific impacts, but the proposed Project's contribution to cumulative GHG impact. As discussed previously, the Project would be required to achieve a minimum of 100 points from the Screening Table Measures. Projects with features that yield at least 100 points are considered consistent with the reduction quantities anticipated in the CCAP and are determined to have a less than significant individual and cumulative GHG emissions impact. In addition, the Project would represent a consistent and logical continuation of the existing and planned pattern of development in the Ontario Ranch area. The City has long anticipated that this area would transition from dairy/agricultural to urban uses.[24] Therefore, Project-related GHG emissions and their contribution to global climate change would not be cumulatively considerable. Impacts would be less than significant. The Project's impacts are within the limit of impacts identified in the FSEIR. As a result, the proposed Project would not result in any new or more severe cumulative impacts than previously analyzed in the FSEIR.

### Conclusion

**Table 13: Project Consistency with the FSEIR** summarizes the consistency of the Project's impacts with the findings of the FSEIR. The Project would demonstrate consistency with the CCAP by achieving a minimum score of 100 points from the Screening Tables. Therefore, the Project construction and operational-related GHG emissions would not exceed the applicable thresholds. Furthermore, the Project would be consistent with the applicable GHG-reducing plans and policies. As shown in **Table 13**, the Project's impacts are within the limit of impacts identified in the FSEIR. As a result, the proposed Project would not result in any new or more severe impacts than previously

[24] City of Ontario, *The Ontario Plan 2050, Final Supplemental Environmental Impact Report, Section 5.8: Greenhouse Gas Emissions*, 2022, https://content.ontarioca.gov/sites/default/files/2024-12/Final_DraftSEIR_TOP2050.pdf, accessed April 2025.

analyzed in the FSEIR.

**Table 13: Project Consistency with the FSEIR**

| Impact | FSEIR Findings | Project Findings |
|---|---|---|
| GHG Emissions Violation | Less than Significant | Less than Significant |
| Cumulative Considerable Net Increase of GHGs | Less than Significant | Less than Significant |
| Applicable Plans, Policies, and Regulations Consistency | Less than Significant | Less than Significant |

Planning Areas

| PA | Total Lot Size (AC)[1] | Land Use[2] | Size[2] | Unit[2] | DU/AC[1] | Building Lot Size (AC)[3] |
|---|---|---|---|---|---|---|
| 6 | 7.32 | Single Family Detached | 40 | DU | 22 | 1.82 |
| | | Multifamily (Low-Rise) Residential | 121 | DU | 22 | 5.50 |
| 12 | 15.45 | Single Family Detached | 85 | DU | 22 | 3.86 |
| | | Multifamily (Low-Rise) Residential | 255 | DU | 22 | 11.59 |
| 13 | 23.77 | Single Family Detached | 131 | DU | 22 | 5.95 |
| | | Multifamily (Low-Rise) Residential | 392 | DU | 22 | 17.82 |
| 17 | 6.20 | Public Park | 6.20 | AC | -- | -- |
| 18 | 13.44 | Active Park | 13.44 | AC | -- | -- |
| 22 | 3.38 | Non-Recreational Park | 3.38 | AC | -- | -- |

PA = planning area, AC = acres; DU = dwelling unit
1. Designated by TOP 2050.
2. Land use, size, and unit were taken from the Urban Crossroads, *Center Park Specific Plan Traffic Analysis*, 2025, except for PA 22, which was taken from TOP 2025.
3. The building lot size was calculated using the following equation: building lot size = dwelling units * (dwelling units/acre).

Land Use

| Land Use | Size | Unit | Building Size (SF) | Landscaping (SF) | Lot Size (AC) |
|---|---|---|---|---|---|
| Single Family Housing[1] | 256 | DU | 506,880 | -- | 11.64 |
| Apartments (Low-Rise)[1] | 768 | DU | 152,0640 | -- | 34.91 |
| City Park[2,3] | 19.64 | AC | -- | 855,518.40 | 19.64 |
| Other Non-Asphalt Surfaces[2,4] | 3.38 | AC | -- | 147,232.80 | 3.38 |

DU = dwelling unit; AC = acres; SF = square feet
1. Assumed the lot would be fully developed by a building. Therefore, the building size was assumed to be equal to the lot size in square feet.
2. The city park and other non-asphalt surfaces was assumed to be fully landscaped with “special landscaping” because the landscaping would be irrigated with recycled water per City of Ontario Ordinance 2689.
3. The public park and active park were modeled as city park.
4. The non-recreational park was modeled as non-asphalt surfaces.

# Construction

## Schedule

| Construction Phase | Start Date | End Date | Workdays |
|---|---|---|---|
| Demolition | 12/1/2025 | 6/1/2026 | 131 |
| Site Preparation | 12/15/2025 | 6/15/2026 | 131 |
| Grading | 4/1/2026 | 12/1/2026 | 175 |
| Infrastructure Improvements | 8/1/2026 | 2/1/2027 | 131 |
| Building Construction | 12/2/2026 | 5/2/2027 | 108 |
| Paving | 2/2/2027 | 3/2/2027 | 21 |
| Architectural Coating | 5/3/2027 | 5/31/2027 | 21 |

## Construction Phase Overlap

| Construction Phase | Start Date | End Date |
|---|---|---|
| Demolition + Site Preparation | 12/15/2025 | 3/31/2026 |
| Demolition + Site Preparation + Grading | 4/1/2026 | 6/1/2026 |
| Site Preparation + Grading | 6/2/2026 | 6/15/2026 |
| Grading + Infrastructure Improvements | 8/1/2026 | 12/1/2026 |
| Infrastructure Improvements + Building Construction | 12/2/2026 | 2/1/2027 |
| Building Construction + Paving | 2/2/2027 | 3/2/2027 |

## Equipment

| Construction Phase | Equipment | Number per Day | Hours per Day |
|---|---|---|---|

| On-Site Truck | -- | -- |

## Demolition

| Construction Phase | Amount (tons) |
|---|---|
| Demolition | 12,744 |

## Notes

Construction would include (per SCAQMD Rule 403 and FSEIR MM 3-1)

- watering exposed areas 3 times per day during earthmoving activities (site preparation and grading)
- watering demolished areas 2 times per day during demolition
- watering unpaved roads 2 times per day and limit vehicle speeds on unpaved roads to 25 mph throughout construction

# Operations

## Vehicle Data

| Land Use | Size | Unit | Trip Rate | Daily Trip Generation |
|---|---|---|---|---|
| Single Family Housing | 256 | DU | 9.4375000 | 2,416 |
| Apartments Low Rise | 768 | DU | 6.739583333 | 5,176 |

Hearths

| Land Use | # Electric | # Without Fireplaces |
|---|---|---|
| Single Family Housing | 174.4 | 81.6 |
| Apartments Low Rise | 523.2 | 244.8 |
| SCAQMD 445 (Wood Burning) prohibits permanently installed wood burning devices in new developments.<br>The Project would not include natural gas fireplaces.<br>The # wood burning and # gas fireplaces were split 75% to # electric and 25% to # without fireplaces. | | |

## Quantified Measures

| # | Measure | Notes[1] |
|---|---|---|
| **Construction** | | |
| C-2* | Limit Heavy-Duty Diesel Vehicle Idling | Construction equipment idling would be limited to 5 minutes per FSEIR MM 3-1 |
| C-5 | Use Advanced Engine Tiers | Construction equipment would have Tier 4 Final engines per FSEIR MM 3-1 |
| C-13 | Use Low-VOC Paints for Construction | Architectural coatings would have a VOC content <10 g/L per FSEIR MM 3-1 |
| **Operations** | | |
| T-10 | Provide End-of-Trip Bicycle Facilities | End-of-trip facilities (showers and lockers) would be provided for employee use per FSEIR MM AQ-1 |
| T-14* | Provide Electric Vehicle Charging Infrastructure | EV charging infrastructure per FSEIR MM AQ-1 |
| T-34* | Provide Bike Parking | Bicycle parking facilities would be provided for workers, residents, and visitors per FSEIR MM AQ-1 |
| T-39* | Implement Preferential Parking Permit Program | Fuel efficient and carpool vehicles would receive preferential parking per FSEIR MM AQ-1 |
| E-2 | Require Energy Efficient Appliances | Residential appliances (modeled refrigerator, clothes washer, dishwasher, and ceiling fans) would be Energy Star certified per FSEIR MM AQ-1 |

FSEIR = Final Supplemental Environmental Impact Report, MM = Mitigation Measure
* Qualitative or supporting measures. Emission reductions are not included in the mitigated emissions results.
1. Compliance with the applicable FSEIR and SCAQMD regulation has been applied in CalEEMod and is shown as the "Mitigated" emissions in the CalEEMod outputs. The "Mitigated" emission outputs would be unmitigated, as the Project would not include and would not require mitigation measures.

# Phase II

Planning Areas

| PA | Total Lot Size (AC)[1] | Land Use[2] | Size[2] | Unit[2] | DU/AC[1] | Building Lot Size (AC)[3] |
|---|---|---|---|---|---|---|
| 1 | 15.91 | Single Family Detached | 88 | DU | 22 | 4.00 |
| | | Multifamily (Low-Rise) Residential | 262 | DU | 22 | 11.91 |
| 2 | 15.59 | Single Family Detached | 86 | DU | 22 | 3.91 |
| | | Multifamily (Low-Rise) Residential | 257 | DU | 22 | 11.68 |

| | | Multifamily (Low-Rise) Residential | 201 | DU | 22 | 9.14 |
| 10 | 9.86 | Multifamily (Low-Rise) Residential | 345 | DU | 35 | 9.86 |
| | 2.82 | Retail | 36,852 | SF | -- | 0.85 |
| | 1.41 | General Office | 42,994 | SF | -- | 0.99 |
| 11 | 10.97 | Multifamily (Low-Rise) Residential | 384 | DU | 35 | 10.97 |
| | 3.13 | Retail | 40,955 | SF | -- | 0.94 |
| | 1.57 | General Office | 47,781 | SF | -- | 1.10 |
| 14 | 13.33 | Active Park | 13.33 | AC | -- | -- |
| 15 | 13.11 | Active Park | 13.11 | AC | -- | -- |
| 16 | 9.90 | Public Park | 9.90 | AC | -- | -- |
| 19 | 2.26 | Non-Recreational Park | 2.26 | AC | -- | -- |
| 20 | 2.68 | Non-Recreational Park | 2.68 | AC | -- | -- |
| 21 | 2.96 | Non-Recreational Park | 2.96 | AC | -- | -- |

PA = planning area; AC = acres; DU = dwelling unit; SF = square feet

1. Designated by TOP 2050.
2. Land use, size, and unit were taken from the Urban Crossroads, *Center Park Specific Plan Traffic Analysis*, 2025, except for PA 19 through 21, which were taken from TOP 2025.
3. The residential building lot size was calculated using the following equation: building lot size = dwelling units *(dwelling units/acre). The retail and general office building lot size was assumed to be equal to the land use size in acres.

## Land Use

| Land Use | Size | Unit | Building Size (SF) | Landscaping (SF) | Lot Size (AC) |
|---|---|---|---|---|---|
| Single Family Housing[1] | 546 | DU | 1,081,080 | -- | 24.82 |
| Apartments Low Rise[1] | 2,723 | DU | 4,592,864 | -- | 105.44 |
| Strip Mall[2,3,4] | 38.603 | KSF | 38,603 | 3,860.3 | 0.975 |
| Fast Food Restaurant w/o Drive Thru[2,3,4] | 38.603 | KSF | 38,603 | 3,860.3 | 0.975 |
| Fast Food Restaurant with Drive Thru[2,3,4] | 38.603 | KSF | 38,603 | 3,860.3 | 0.975 |
| General Office Building[3,4,5] | 67.556 | KSF | 67,556 | 6,755.55 | 1.706 |
| Medical Office Building[3,4,5] | 67.556 | KSF | 67,556 | 6,755.55 | 1.706 |
| City Park[6,7] | 36.34 | AC | -- | 158,2970.4 | 36.34 |
| Other Non-Asphalt Surfaces[6,8] | 7.90 | AC | -- | 344,124 | 7.9 |
| Parking Lot[9] | 6.954 | AC | -- | -- | 6.954 |

DU = dwelling unit; KSF = thousand square feet; AC = acres; SF = square feet

1. Assumed the lot would be fully developed by a building. Therefore, the building size was assumed to be equal to the lot size in square feet.
2. The retail size was evenly divided between the strip mall, fast food restaurant w/o drive thru, and fast food restaurant with drive thru land uses.
3. Per the proposed Specific Plan, the retail and office land uses would include landscaping equal to 10% of the building square footage.
4. The lot size included the building size and landscaping in acres.
5. The general office size was evenly divided between the general office building and medical office building land uses.
6. The city park and other non-asphalt surfaces was assumed to be fully landscaped with "special landscaping" because the landscaping would be irrigated with recycled water per City of Ontario Ordinance 2689.
7. The public park and active park were modeled as city park.
8. The non-recreational park was modeled as non-asphalt surfaces.
9. Assumed the retail and office lot acreage not occupied by buildings or landscaping would be dedicated to parking lots. The lot size in acres was calculated using the following equation: lot size = total lot size – building size – landscaping.

# Construction

## Schedule

## Hearths

| Land Use | # Electric | # Without Fireplaces |
|---|---|---|
| Single Family Housing | 371.96 | 174.04 |
| Apartments Low Rise | 1,855.04 | 867.96 |
| SCAQMD 445 (Wood Burning) prohibits permanently installed wood burning devices in new developments<br>The Project would not include natural gas fireplaces<br>The # wood burning and # gas fireplaces were split 75% to # electric and 25% to # without fireplaces | | |

## Quantified Measures

| # | Measure | Notes[1] |
|---|---|---|
| **Construction** | | |
| C-2* | Limit Heavy-Duty Diesel Vehicle Idling | Construction equipment idling would be limited to 5 minutes per FSEIR MM 3-1 |
| C-5 | Use Advanced Engine Tiers | Construction equipment would have Tier 4 Final engines per FSEIR MM 3-1 |
| C-13 | Use Low-VOC Paints for Construction | Architectural coatings would have a VOC content <10 g/L per FSEIR MM 3-1 |
| **Operations** | | |
| T-10 | Provide End-of-Trip Bicycle Facilities | End-of-trip facilities (showers and lockers) would be provided for employee use per FSEIR MM AQ-1 |
| T-14* | Provide Electric Vehicle Charging Infrastructure | EV charging infrastructure per FSEIR MM AQ-1 |
| T-34* | Provide Bike Parking | Bicycle parking facilities would be provided for workers, residents, and visitors per FSEIR MM AQ-1 |
| T-39* | Implement Preferential Parking Permit Program | Fuel efficient and carpool vehicles would receive preferential parking per FSEIR MM AQ-1 |
| E-2 | Require Energy Efficient Appliances | Residential appliances (modeled refrigerator, clothes washer, dishwasher, and ceiling fans) would be Energy Star certified per FSEIR MM AQ-1 |

FSEIR = Final Supplemental Environmental Impact Report, MM = Mitigation Measure
* Qualitative or supporting measures. Emission reductions are not included in the mitigated emissions results.
1. Compliance with the applicable FSEIR and SCAQMD regulation has been applied in CalEEMod and is shown as the "Mitigated" emissions in the CalEEMod outputs. The "Mitigated" emission outputs would be unmitigated, as the Project would not include and would not require mitigation measures.

# Project Buildout (Phase I + Phase II)

| 21 | 2.96 | Non-Recreational Park | 2.96 | AC | -- | -- |
| 22 | 3.38 | Non-Recreational Park | 3.38 | AC | -- | -- |

PA = planning area; AC = acres; DU = dwelling unit; SF = square feet

1. Designated by TOP 2050.
2. Land use, size, and unit were taken from the Urban Crossroads, *Center Park Specific Plan Traffic Analysis*, 2025, except for PA 19 through 22, which were taken from TOP 2025.
3. The residential building lot size was calculated using the following equation: building lot size = dwelling units * (dwelling units/acre). The retail and general office building lot size was assumed to be equal to the land use size in acres.

## Land Use

| Land Use | Size | Unit | Building Size (SF) | Landscaping (SF) | Lot Size (AC) |
|---|---|---|---|---|---|
| Single Family Housing[1] | 802 | DU | 1,587,960 | -- | 36.45 |
| Apartments Low Rise[1] | 3,491 | DU | 6,113,504.5 | -- | 140.35 |
| Strip Mall[2,3,4] | 38.603 | KSF | 38,603 | 3,860.3 | 0.975 |
| Fast Food Restaurant w/o Drive Thru[2,3,4] | 38.603 | KSF | 38,603 | 3,860.3 | 0.975 |
| Fast Food Restaurant with Drive Thru[2,3,4] | 38.603 | KSF | 38,603 | 3,860.3 | 0.975 |
| General Office Building[3,4,5] | 67.556 | KSF | 67,556 | 6,755.55 | 1.706 |
| Medical Office Building[3,4,5] | 67.556 | KSF | 67,556 | 6,755.55 | 1.706 |
| City Park[6,7] | 55.98 | AC | -- | 2,438,488.8 | 36.34 |
| Other Non-Asphalt Surfaces[6,8] | 11.28 | AC | -- | 491,356.8 | 7.9 |
| Parking Lot[9] | 6.954 | AC | -- | -- | 6.954 |

DU = dwelling unit; KSF = thousand square feet; AC = acres; SF = square feet

1. Assumed the lot would be fully developed by a building. Therefore, the building size was assumed to be equal to the lot size in square feet.
2. The retail size was evenly divided between the strip mall, fast food restaurant w/o drive thru, and fast food restaurant with drive thru land uses.
3. Per the proposed Specific Plan, the retail and office land uses would include landscaping equal to 10% of the building square footage.
4. The lot size included the building size and landscaping in acres.
5. The general office size was evenly divided between the general office building and medical office building land uses.
6. The city park and other non-asphalt surfaces was assumed to be fully landscaped with "special landscaping" because the landscaping would be irrigated with recycled water per City of Ontario Ordinance 2689.
7. The public park and active park were modeled as city park.
8. The non-recreational park was modeled as non-asphalt surfaces.
9. Assumed the retail and office lot acreage not occupied by buildings or landscaping would be dedicated to parking lots. The lot size in acres was calculated using the following equation: lot size = total lot size – building size – landscaping.

## Vehicle Data

| Land Use | Size | Unit | Trip Rate | Daily Trip Generation |
|---|---|---|---|---|
| Single Family Housing | 802 | DU | 7.291317 | 5,848 |
| Apartments Low Rise | 3,491 | DU | 5.685581 | 19,848 |

Hearths

| Land Use | # Electric | # Without Fireplaces |
|---|---|---|
| Single Family Housing | 546.36 | 256.64 |
| Apartments Low Rise | 2,378.24 | 1,112.76 |
| SCAQMD 445 (Wood Burning) prohibits permanently installed wood burning devices in new developments<br>The Project would not include natural gas fireplaces<br>The # wood burning and # gas fireplaces were split 75% to # electric and 25% to # without fireplaces | | |

## Quantified Measures

| # | Measure | Notes[1] |
|---|---|---|
| **Operations** | | |
| T-10 | Provide End-of-Trip Bicycle Facilities | End-of-trip facilities (showers and lockers) would be provided for employee use per FSEIR MM AQ-1 |
| T-14* | Provide Electric Vehicle Charging Infrastructure | EV charging infrastructure per FSEIR MM AQ-1 |
| T-34* | Provide Bike Parking | Bicycle parking facilities would be provided for workers, residents, and visitors per FSEIR MM AQ-1 |
| T-39* | Implement Preferential Parking Permit Program | Fuel efficient and carpool vehicles would receive preferential parking per FSEIR MM AQ-1 |
| E-2 | Require Energy Efficient Appliances | Residential appliances (modeled refrigerator, clothes washer, dishwasher, and ceiling fans) would be Energy Star certified per FSEIR MM AQ-1 |

FSEIR = Final Supplemental Environmental Impact Report, MM = Mitigation Measure
* Qualitative or supporting measures. Emission reductions are not included in the mitigated emissions results.
1. Compliance with the applicable FSEIR and SCAQMD regulation has been applied in CalEEMod and is shown as the "Mitigated" emissions in the CalEEMod outputs. The "Mitigated" emission outputs would be unmitigated, as the Project would not include and would not require mitigation measures.

**Construction GHG Emissions**

## Table of Contents

1. Basic Project Information

1.1. Basic Project Information

1.2. Land Use Types

1.3. User-Selected Emission Reduction Measures by Emissions Sector

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

2.3. Construction Emissions by Year, Mitigated

2.4. Operations Emissions Compared Against Thresholds

2.6. Operations Emissions by Sector, Mitigated

3. Construction Emissions Details

3.2. Demolition (2025) - Mitigated

3.4. Demolition (2026) - Mitigated

3.6. Site Preparation (2025) - Mitigated

3.8. Site Preparation (2026) - Mitigated

3.10. Grading (2026) - Mitigated

3.12. Building Construction (2026) - Mitigated

3.14. Building Construction (2027) - Mitigated

3.16. Infrastructure Improvements (2026) - Mitigated

3.18. Infrastructure Improvements (2027) - Mitigated

3.20. Paving (2027) - Mitigated

3.22. Architectural Coating (2027) - Mitigated

4. Operations Emissions Details

4.1. Mobile Emissions by Land Use

4.1.2. Mitigated

4.2. Energy

4.2.2. Electricity Emissions By Land Use - Mitigated

4.2.4. Natural Gas Emissions By Land Use - Mitigated

4.3. Area Emissions by Source

4.3.2. Mitigated

4.4. Water Emissions by Land Use

4.4.2. Mitigated

4.5. Waste Emissions by Land Use

4.5.2. Mitigated

4.6. Refrigerant Emissions by Land Use

4.6.2. Mitigated

4.7. Offroad Emissions By Equipment Type

4.7.2. Mitigated

4.8. Stationary Emissions By Equipment Type

4.8.2. Mitigated

4.9. User Defined Emissions By Equipment Type

4.9.2. Mitigated

4.10. Soil Carbon Accumulation By Vegetation Type

4.10.2. Above and Belowground Carbon Accumulation by Land Use Type - Unmitigated

4.10.4. Soil Carbon Accumulation By Vegetation Type - Mitigated

4.10.5. Above and Belowground Carbon Accumulation by Land Use Type - Mitigated

4.10.6. Avoided and Sequestered Emissions by Species - Mitigated

5. Activity Data

5.1. Construction Schedule

5.2. Off-Road Equipment

5.2.2. Mitigated

5.3. Construction Vehicles

5.3.2. Mitigated

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

5.5. Architectural Coatings

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

5.6.2. Construction Earthmoving Control Strategies

5.7. Construction Paving

5.8. Construction Electricity Consumption and Emissions Factors

5.9. Operational Mobile Sources

5.9.2. Mitigated

5.10. Operational Area Sources

5.10.1. Hearths

5.10.1.2. Mitigated

5.10.2. Architectural Coatings

5.10.4. Landscape Equipment - Mitigated

5.11. Operational Energy Consumption

5.11.2. Mitigated

5.12. Operational Water and Wastewater Consumption

5.12.2. Mitigated

5.13. Operational Waste Generation

5.13.2. Mitigated

5.14. Operational Refrigeration and Air Conditioning Equipment

5.14.2. Mitigated

5.15. Operational Off-Road Equipment

5.15.2. Mitigated

5.16. Stationary Sources

5.16.1. Emergency Generators and Fire Pumps

5.16.2. Process Boilers

5.17. User Defined

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.2. Mitigated

5.18.1. Biomass Cover Type

5.18.1.2. Mitigated

5.18.2. Sequestration

5.18.2.2. Mitigated

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

6.2. Initial Climate Risk Scores

6.3. Adjusted Climate Risk Scores

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

7.2. Healthy Places Index Scores

7.3. Overall Health & Equity Scores

7.4. Health & Equity Measures

7.5. Evaluation Scorecard

7.6. Health & Equity Custom Measures

8. User Changes to Default Data

# 1. Basic Project Information

## 1.1. Basic Project Information

| Data Field | Value |
|---|---|
| Project Name | Center Park Specific Plan- Phase I |
| Construction Start Date | 12/1/2025 |
| Operational Year | 2027 |
| Lead Agency | — |
| Land Use Scale | Project/site |
| Analysis Level for Defaults | County |
| Windspeed (m/s) | 2.60 |
| Precipitation (days) | 18.8 |
| Location | 33.99350362244249, -117.62396749625904 |
| County | San Bernardino-South Coast |
| City | Ontario |
| Air District | South Coast AQMD |
| Air Basin | South Coast |
| TAZ | 5260 |
| EDFZ | 10 |
| Electric Utility | Southern California Edison |
| Gas Utility | Southern California Gas |
| App Version | 2022.1.1.29 |

## 1.2. Land Use Types

| Land Use Subtype | Size | Unit | Lot Acreage | Building Area (sq ft) | Landscape Area (sq ft) | Special Landscape Area (sq ft) | Population | Description |
|---|---|---|---|---|---|---|---|---|
| Single Family Housing | 256 | Dwelling Unit | 11.6 | 506,880 | 0.00 | — | 847 | — |

| | | | | | | | | |
|---|---|---|---|---|---|---|---|---|
| Apartments Low Rise | 768 | Dwelling Unit | 34.9 | 1,520,640 | 0.00 | — | 2,542 | — |
| City Park | 19.6 | Acre | 19.6 | 0.00 | 855,518 | 855,518 | — | — |
| Other Non-Asphalt Surfaces | 3.38 | Acre | 3.38 | 0.00 | 147,233 | 147,233 | — | — |

## 1.3. User-Selected Emission Reduction Measures by Emissions Sector

| Sector | # | Measure Title |
|---|---|---|
| Construction | C-2* | Limit Heavy-Duty Diesel Vehicle Idling |
| Construction | C-5 | Use Advanced Engine Tiers |
| Construction | C-13 | Use Low-VOC Paints for Construction |
| Transportation | T-10 | Provide End-of-Trip Bicycle Facilities |
| Transportation | T-14* | Provide Electric Vehicle Charging Infrastructure |
| Transportation | T-34* | Provide Bike Parking |
| Transportation | T-39* | Implement Preferential Parking Permit Program |
| Energy | E-2 | Require Energy Efficient Appliances |

* Qualitative or supporting measure. Emission reductions not included in the mitigated emissions results.

# 2. Emissions Summary

## 2.1. Construction Emissions Compared Against Thresholds

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Un/Mit. | TOG | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Unmit. | 608 | 607 | 79.2 | 90.4 | 0.15 | 3.23 | 12.0 | 13.6 | 2.97 | 4.07 | 7.04 | — | 21,497 | 21,497 | 0.99 | 0.90 | 40.2 | 21,830 |

| | | | | | | | | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Annual | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

## 4.8. Stationary Emissions By Equipment Type

### 4.8.2. Mitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Equipment Type | TOG | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Annual | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

## 4.9. User Defined Emissions By Equipment Type

### 4.9.2. Mitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Equipment Type | TOG | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Annual | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

## 4.10. Soil Carbon Accumulation By Vegetation Type

### 4.10.2. Above and Belowground Carbon Accumulation by Land Use Type - Unmitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Land Use | TOG | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Annual | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

4.10.4. Soil Carbon Accumulation By Vegetation Type - Mitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Vegetation | TOG | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Annual | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

4.10.5. Above and Belowground Carbon Accumulation by Land Use Type - Mitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Land Use | TOG | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Annual | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

4.10.6. Avoided and Sequestered Emissions by Species - Mitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Species | TOG | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |

# 5. Activity Data

## 5.1. Construction Schedule

| Phase Name | Phase Type | Start Date | End Date | Days Per Week | Work Days per Phase | Phase Description |
|---|---|---|---|---|---|---|
| Demolition | Demolition | 12/1/2025 | 6/1/2026 | 5.00 | 131 | — |
| Site Preparation | Site Preparation | 12/15/2025 | 6/15/2026 | 5.00 | 131 | — |
| Grading | Grading | 4/1/2026 | 12/1/2026 | 5.00 | 175 | — |
| Building Construction | Building Construction | 12/2/2026 | 5/2/2027 | 5.00 | 108 | — |
| Infrastructure Improvements | Building Construction | 8/1/2026 | 2/1/2027 | 5.00 | 131 | — |
| Paving | Paving | 2/2/2027 | 3/2/2027 | 5.00 | 21.0 | — |
| Architectural Coating | Architectural Coating | 5/3/2027 | 5/31/2027 | 5.00 | 21.0 | — |

## 5.2. Off-Road Equipment

### 5.2.2. Mitigated

| Phase Name | Equipment Type | Fuel Type | Engine Tier | Number per Day | Hours Per Day | Horsepower | Load Factor |
|---|---|---|---|---|---|---|---|
| Demolition | Rubber Tired Dozers | Diesel | Tier 4 Final | 2.00 | 8.00 | 367 | 0.40 |
| Demolition | Excavators | Diesel | Tier 4 Final | 3.00 | 8.00 | 36.0 | 0.38 |
| Demolition | Concrete/Industrial Saws | Diesel | Tier 4 Final | 1.00 | 8.00 | 33.0 | 0.73 |
| Site Preparation | Rubber Tired Dozers | Diesel | Tier 4 Final | 3.00 | 8.00 | 367 | 0.40 |
| Site Preparation | Tractors/Loaders/Back hoes | Diesel | Tier 4 Final | 4.00 | 8.00 | 84.0 | 0.37 |
| Grading | Graders | Diesel | Tier 4 Final | 1.00 | 8.00 | 148 | 0.41 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| Grading | Excavators | Diesel | Tier 4 Final | 2.00 | 8.00 | 36.0 | 0.38 |
| Grading | Tractors/Loaders/Back hoes | Diesel | Tier 4 Final | 2.00 | 8.00 | 84.0 | 0.37 |
| Grading | Scrapers | Diesel | Tier 4 Final | 2.00 | 8.00 | 423 | 0.48 |
| Grading | Rubber Tired Dozers | Diesel | Tier 4 Final | 1.00 | 8.00 | 367 | 0.40 |
| Building Construction | Forklifts | Diesel | Tier 4 Final | 3.00 | 8.00 | 82.0 | 0.20 |
| Building Construction | Generator Sets | Diesel | Average | 1.00 | 8.00 | 14.0 | 0.74 |
| Building Construction | Cranes | Diesel | Tier 4 Final | 1.00 | 7.00 | 367 | 0.29 |
| Building Construction | Welders | Diesel | Tier 4 Final | 1.00 | 8.00 | 46.0 | 0.45 |
| Building Construction | Tractors/Loaders/Back hoes | Diesel | Tier 4 Final | 3.00 | 7.00 | 84.0 | 0.37 |
| Infrastructure Improvements | Forklifts | Diesel | Tier 4 Final | 3.00 | 8.00 | 82.0 | 0.20 |
| Infrastructure Improvements | Generator Sets | Diesel | Average | 1.00 | 8.00 | 14.0 | 0.74 |
| Infrastructure Improvements | Cranes | Diesel | Tier 4 Final | 1.00 | 7.00 | 367 | 0.29 |
| Infrastructure Improvements | Welders | Diesel | Tier 4 Final | 1.00 | 8.00 | 46.0 | 0.45 |
| Infrastructure Improvements | Tractors/Loaders/Back hoes | Diesel | Tier 4 Final | 3.00 | 7.00 | 84.0 | 0.37 |
| Paving | Pavers | Diesel | Tier 4 Final | 2.00 | 8.00 | 81.0 | 0.42 |
| Paving | Paving Equipment | Diesel | Tier 4 Final | 2.00 | 8.00 | 89.0 | 0.36 |
| Paving | Rollers | Diesel | Tier 4 Final | 2.00 | 8.00 | 36.0 | 0.38 |
| Architectural Coating | Air Compressors | Diesel | Tier 4 Final | 1.00 | 6.00 | 37.0 | 0.48 |

## 5.3. Construction Vehicles

### 5.3.2. Mitigated

| Phase Name | Trip Type | One-Way Trips per Day | Miles per Trip | Vehicle Mix |
|---|---|---|---|---|
| Demolition | — | — | — | — |

| | | | | |
|---|---|---|---|---|
| Demolition | Worker | 15.0 | 18.5 | LDA,LDT1,LDT2 |

## 5.4. Vehicles

### 5.4.1. Construction Vehicle Control Strategies

| Control Strategies Applied | PM10 Reduction | PM2.5 Reduction |
|---|---|---|
| Water unpaved roads twice daily | 55% | 55% |
| Limit vehicle speeds on unpaved roads to 25 mph | 44% | 44% |

## 5.5. Architectural Coatings

| Phase Name | Residential Interior Area Coated (sq ft) | Residential Exterior Area Coated (sq ft) | Non-Residential Interior Area Coated (sq ft) | Non-Residential Exterior Area Coated (sq ft) | Parking Area Coated (sq ft) |
|---|---|---|---|---|---|
| Architectural Coating | 4,105,728 | 1,368,576 | 0.00 | 0.00 | 8,834 |

## 5.6. Dust Mitigation

### 5.6.1. Construction Earthmoving Activities

| Phase Name | Material Imported (cy) | Material Exported (cy) | Acres Graded (acres) | Material Demolished (Ton of Debris) | Acres Paved (acres) |
|---|---|---|---|---|---|
| Demolition | 0.00 | 0.00 | 0.00 | 12,744 | — |
| Site Preparation | — | — | 197 | 0.00 | — |
| Grading | — | — | 525 | 0.00 | — |
| Paving | 0.00 | 0.00 | 0.00 | 0.00 | 6.20 |

### 5.6.2. Construction Earthmoving Control Strategies

| Control Strategies Applied | Frequency (per day) | PM10 Reduction | PM2.5 Reduction |
|---|---|---|---|
| Water Exposed Area | 3 | 74% | 74% |
| Water Demolished Area | 2 | 36% | 36% |

## 5.7. Construction Paving

| Land Use | Area Paved (acres) | % Asphalt |
|---|---|---|
| Single Family Housing | 2.82 | 0% |
| Apartments Low Rise | — | 0% |
| City Park | 0.00 | 0% |
| Other Non-Asphalt Surfaces | 3.38 | 0% |

## 5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

| Year | kWh per Year | CO2 | CH4 | N2O |
|---|---|---|---|---|
| 2025 | 0.00 | 532 | 0.03 | < 0.005 |
| 2026 | 0.00 | 532 | 0.03 | < 0.005 |
| 2027 | 0.00 | 532 | 0.03 | < 0.005 |

## 5.9. Operational Mobile Sources

### 5.9.2. Mitigated

| Land Use Type | Trips/Weekday | Trips/Saturday | Trips/Sunday | Trips/Year | VMT/Weekday | VMT/Saturday | VMT/Sunday | VMT/Year |
|---|---|---|---|---|---|---|---|---|
| Single Family Housing | 2,416 | 2,416 | 2,416 | 881,840 | 28,649 | 28,649 | 28,649 | 10,456,835 |
| Apartments Low Rise | 5,176 | 5,176 | 5,176 | 1,889,240 | 61,377 | 61,377 | 61,377 | 22,402,558 |

| | | | | | | | | |
|---|---|---|---|---|---|---|---|---|
| City Park | 677 | 677 | 677 | 246,933 | 11,219 | 11,219 | 11,219 | 4,094,910 |
| Other Non-Asphalt Surfaces | 0.00 | 0.00 | 0.00 | 0.00 | 0.00 | 0.00 | 0.00 | 0.00 |

## 5.10. Operational Area Sources

### 5.10.1. Hearths

#### 5.10.1.2. Mitigated

| Hearth Type | Unmitigated (number) |
|---|---|
| Single Family Housing | — |
| Wood Fireplaces | 0 |
| Gas Fireplaces | 0 |
| Propane Fireplaces | 0 |
| Electric Fireplaces | 174 |
| No Fireplaces | 82 |
| Conventional Wood Stoves | 0 |
| Catalytic Wood Stoves | 0 |
| Non-Catalytic Wood Stoves | 0 |
| Pellet Wood Stoves | 0 |
| Apartments Low Rise | — |
| Wood Fireplaces | 0 |
| Gas Fireplaces | 0 |
| Propane Fireplaces | 0 |
| Electric Fireplaces | 523 |
| No Fireplaces | 245 |
| Conventional Wood Stoves | 0 |
| Catalytic Wood Stoves | 0 |
| Non-Catalytic Wood Stoves | 0 |

| | |
|---|---|
| Pellet Wood Stoves | 0 |

### 5.10.2. Architectural Coatings

| Residential Interior Area Coated (sq ft) | Residential Exterior Area Coated (sq ft) | Non-Residential Interior Area Coated (sq ft) | Non-Residential Exterior Area Coated (sq ft) | Parking Area Coated (sq ft) |
|---|---|---|---|---|
| 4105728 | 1,368,576 | 0.00 | 0.00 | 8,834 |

### 5.10.4. Landscape Equipment - Mitigated

| Season | Unit | Value |
|---|---|---|
| Snow Days | day/yr | 0.00 |
| Summer Days | day/yr | 250 |

## 5.11. Operational Energy Consumption

### 5.11.2. Mitigated

Electricity (kWh/yr) and CO2 and CH4 and N2O and Natural Gas (kBTU/yr)

| Land Use | Electricity (kWh/yr) | CO2 | CH4 | N2O | Natural Gas (kBTU/yr) |
|---|---|---|---|---|---|
| Single Family Housing | 1,881,731 | 532 | 0.0330 | 0.0040 | 8,010,167 |
| Apartments Low Rise | 3,415,883 | 532 | 0.0330 | 0.0040 | 12,792,237 |
| City Park | 0.00 | 532 | 0.0330 | 0.0040 | 0.00 |
| Other Non-Asphalt Surfaces | 0.00 | 532 | 0.0330 | 0.0040 | 0.00 |

## 5.12. Operational Water and Wastewater Consumption

### 5.12.2. Mitigated

| Land Use | Indoor Water (gal/year) | Outdoor Water (gal/year) |
|---|---|---|
| Single Family Housing | 10,670,381 | 0.00 |
| Apartments Low Rise | 32,011,142 | 0.00 |

| | | |
|---|---|---|
| City Park | 0.00 | 30,530,835 |
| Other Non-Asphalt Surfaces | 0.00 | 5,254,288 |

## 5.13. Operational Waste Generation

### 5.13.2. Mitigated

| Land Use | Waste (ton/year) | Cogeneration (kWh/year) |
|---|---|---|
| Single Family Housing | 247 | — |
| Apartments Low Rise | 568 | — |
| City Park | 1.69 | — |
| Other Non-Asphalt Surfaces | 0.00 | — |

## 5.14. Operational Refrigeration and Air Conditioning Equipment

### 5.14.2. Mitigated

| Land Use Type | Equipment Type | Refrigerant | GWP | Quantity (kg) | Operations Leak Rate | Service Leak Rate | Times Serviced |
|---|---|---|---|---|---|---|---|
| Single Family Housing | Average room A/C & Other residential A/C and heat pumps | R-410A | 2,088 | < 0.005 | 2.50 | 2.50 | 10.0 |
| Single Family Housing | Household refrigerators and/or freezers | R-134a | 1,430 | 0.12 | 0.60 | 0.00 | 1.00 |
| Apartments Low Rise | Average room A/C & Other residential A/C and heat pumps | R-410A | 2,088 | < 0.005 | 2.50 | 2.50 | 10.0 |
| Apartments Low Rise | Household refrigerators and/or freezers | R-134a | 1,430 | 0.12 | 0.60 | 0.00 | 1.00 |
| City Park | Other commercial A/C and heat pumps | R-410A | 2,088 | < 0.005 | 4.00 | 4.00 | 18.0 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| City Park | Stand-alone retail refrigerators and freezers | R-134a | 1,430 | 0.04 | 1.00 | 0.00 | 1.00 |

## 5.15. Operational Off-Road Equipment

### 5.15.2. Mitigated

| Equipment Type | Fuel Type | Engine Tier | Number per Day | Hours Per Day | Horsepower | Load Factor |
|---|---|---|---|---|---|---|

## 5.16. Stationary Sources

### 5.16.1. Emergency Generators and Fire Pumps

| Equipment Type | Fuel Type | Number per Day | Hours per Day | Hours per Year | Horsepower | Load Factor |
|---|---|---|---|---|---|---|

### 5.16.2. Process Boilers

| Equipment Type | Fuel Type | Number | Boiler Rating (MMBtu/hr) | Daily Heat Input (MMBtu/day) | Annual Heat Input (MMBtu/yr) |
|---|---|---|---|---|---|

## 5.17. User Defined

| Equipment Type | Fuel Type |
|---|---|

## 5.18. Vegetation

### 5.18.1. Land Use Change

### 5.18.1.2. Mitigated

| Vegetation Land Use Type | Vegetation Soil Type | Initial Acres | Final Acres |
|---|---|---|---|

### 5.18.1. Biomass Cover Type

#### 5.18.1.2. Mitigated

| Biomass Cover Type | Initial Acres | Final Acres |
|---|---|---|

### 5.18.2. Sequestration

#### 5.18.2.2. Mitigated

| Tree Type | Number | Electricity Saved (kWh/year) | Natural Gas Saved (btu/year) |
|---|---|---|---|

# 6. Climate Risk Detailed Report

## 6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

| Climate Hazard | Result for Project Location | Unit |
|---|---|---|
| Temperature and Extreme Heat | 19.8 | annual days of extreme heat |
| Extreme Precipitation | 3.10 | annual days with precipitation above 20 mm |
| Sea Level Rise | — | meters of inundation depth |
| Wildfire | 6.78 | annual hectares burned |

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

## 6.2. Initial Climate Risk Scores

| Climate Hazard | Exposure Score | Sensitivity Score | Adaptive Capacity Score | Vulnerability Score |
|---|---|---|---|---|
| Temperature and Extreme Heat | 2 | 0 | 0 | N/A |
| Extreme Precipitation | N/A | N/A | N/A | N/A |
| Sea Level Rise | 1 | 0 | 0 | N/A |
| Wildfire | 1 | 0 | 0 | N/A |
| Flooding | N/A | N/A | N/A | N/A |
| Drought | N/A | N/A | N/A | N/A |
| Snowpack Reduction | N/A | N/A | N/A | N/A |
| Air Quality Degradation | 0 | 0 | 0 | N/A |

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

## 6.3. Adjusted Climate Risk Scores

| Climate Hazard | Exposure Score | Sensitivity Score | Adaptive Capacity Score | Vulnerability Score |
|---|---|---|---|---|
| Temperature and Extreme Heat | 2 | 1 | 1 | 3 |
| Extreme Precipitation | N/A | N/A | N/A | N/A |
| Sea Level Rise | 1 | 1 | 1 | 2 |
| Wildfire | 1 | 1 | 1 | 2 |
| Flooding | N/A | N/A | N/A | N/A |
| Drought | N/A | N/A | N/A | N/A |
| Snowpack Reduction | N/A | N/A | N/A | N/A |
| Air Quality Degradation | 1 | 1 | 1 | 2 |

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

# 7. Health and Equity Details

## 7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

| Indicator | Result for Project Census Tract |
|---|---|
| Exposure Indicators | — |
| AQ-Ozone | 77.1 |
| AQ-PM | 93.4 |
| AQ-DPM | 57.1 |
| Drinking Water | 100.0 |
| Lead Risk Housing | 17.5 |
| Pesticides | 84.9 |
| Toxic Releases | 67.6 |
| Traffic | 18.1 |
| Effect Indicators | — |
| CleanUp Sites | 80.3 |
| Groundwater | 98.1 |
| Haz Waste Facilities/Generators | 86.6 |
| Impaired Water Bodies | 87.0 |
| Solid Waste | 98.9 |
| Sensitive Population | — |
| Asthma | 16.5 |
| Cardio-vascular | 29.1 |
| Low Birth Weights | 49.0 |
| Socioeconomic Factor Indicators | — |
| Education | 52.9 |
| Housing | 59.3 |

| | |
|---|---|
| Linguistic | 68.9 |
| Poverty | 35.4 |
| Unemployment | 36.4 |

## 7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

| Indicator | Result for Project Census Tract |
|---|---|
| Economic | — |
| Above Poverty | 73.60451687 |
| Employed | 6.274862056 |
| Median HI | 76.55588349 |
| Education | — |
| Bachelor's or higher | 64.85307327 |
| High school enrollment | 100 |
| Preschool enrollment | 66.93186193 |
| Transportation | — |
| Auto Access | 63.41588605 |
| Active commuting | 24.5989991 |
| Social | — |
| 2-parent households | 66.95752598 |
| Voting | 70.69164635 |
| Neighborhood | — |
| Alcohol availability | 97.0101373 |
| Park access | 52.77813422 |
| Retail density | 10.02181445 |
| Supermarket access | 6.557166688 |
| Tree canopy | 8.238162453 |
| Housing | — |

| | |
|---|---|
| Homeownership | 60.78532016 |
| Housing habitability | 61.41408957 |
| Low-inc homeowner severe housing cost burden | 71.53856025 |
| Low-inc renter severe housing cost burden | 18.38829719 |
| Uncrowded housing | 64.30129603 |
| Health Outcomes | — |
| Insured adults | 73.78416528 |
| Arthritis | 95.7 |
| Asthma ER Admissions | 84.6 |
| High Blood Pressure | 97.7 |
| Cancer (excluding skin) | 89.7 |
| Asthma | 34.7 |
| Coronary Heart Disease | 98.7 |
| Chronic Obstructive Pulmonary Disease | 94.6 |
| Diagnosed Diabetes | 96.0 |
| Life Expectancy at Birth | 75.7 |
| Cognitively Disabled | 56.3 |
| Physically  Disabled | 69.8 |
| Heart Attack ER Admissions | 68.4 |
| Mental Health Not Good | 54.9 |
| Chronic Kidney Disease | 97.1 |
| Obesity | 68.0 |
| Pedestrian Injuries | 19.6 |
| Physical Health Not Good | 86.2 |
| Stroke | 97.8 |
| Health Risk Behaviors | — |
| Binge Drinking | 28.2 |
| Current Smoker | 59.6 |

| | |
|---|---|
| No Leisure Time for Physical Activity | 76.7 |
| Climate Change Exposures | — |
| Wildfire Risk | 0.0 |
| SLR Inundation Area | 0.0 |
| Children | 9.0 |
| Elderly | 91.7 |
| English Speaking | 35.1 |
| Foreign-born | 48.1 |
| Outdoor Workers | 88.5 |
| Climate Change Adaptive Capacity | — |
| Impervious Surface Cover | 78.1 |
| Traffic Density | 21.6 |
| Traffic Access | 23.0 |
| Other Indices | — |
| Hardship | 45.2 |
| Other Decision Support | — |
| 2016 Voting | 74.7 |

## 7.3. Overall Health & Equity Scores

| Metric | Result for Project Census Tract |
|---|---|
| CalEnviroScreen 4.0 Score for Project Location (a) | 72.0 |
| Healthy Places Index Score for Project Location (b) | 55.0 |
| Project Located in a Designated Disadvantaged Community (Senate Bill 535) | No |
| Project Located in a Low-Income Community (Assembly Bill 1550) | No |
| Project Located in a Community Air Protection Program Community (Assembly Bill 617) | No |

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

## 7.4. Health & Equity Measures

No Health & Equity Measures selected.

## 7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

## 7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

# 8. User Changes to Default Data

| Screen | Justification |
|---|---|
| Land Use | per center park specific plan provisions and traffic study from Urban Crossroads<br>per the City Ordinance 2689, developments within Ontario Ranch would use recycled water to irrigate landscaping |
| Construction: Construction Phases | per construction questionnaire from client |
| Operations: Vehicle Data | per traffic study from Urban Crossroads |
| Operations: Hearths | SCAQMD 445 (Wood Burning) prohibits permanently installed wood-burning devices in new developments<br>the Project would not include natural gas fireplaces |

## 1.3. User-Selected Emission Reduction Measures by Emissions Sector

| Sector | # | Measure Title |
|---|---|---|
| Construction | C-2* | Limit Heavy-Duty Diesel Vehicle Idling |
| Construction | C-5 | Use Advanced Engine Tiers |
| Construction | C-13 | Use Low-VOC Paints for Construction |
| Transportation | T-10 | Provide End-of-Trip Bicycle Facilities |
| Transportation | T-14* | Provide Electric Vehicle Charging Infrastructure |
| Transportation | T-34* | Provide Bike Parking |
| Transportation | T-39* | Implement Preferential Parking Permit Program |
| Energy | E-2 | Require Energy Efficient Appliances |

* Qualitative or supporting measure. Emission reductions not included in the mitigated emissions results.

# 2. Emissions Summary

## 2.1. Construction Emissions Compared Against Thresholds

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Un/Mit. | TOG | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Unmit. | 16.2 | 13.6 | 78.2 | 199 | 0.17 | 3.06 | 35.3 | 36.9 | 2.82 | 8.81 | 10.3 | — | 51,258 | 51,258 | 1.54 | 2.88 | 124 | 52,281 |
| Mit. | 12.5 | 10.5 | 27.4 | 209 | 0.17 | 0.37 | 35.3 | 35.7 | 0.37 | 8.81 | 9.18 | — | 51,258 | 51,258 | 1.54 | 2.88 | 124 | 52,281 |
| % Reduced | 23% | 22% | 65% | -5% | — | 88% | — | 3% | 87% | — | 10% | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

## 4.9. User Defined Emissions By Equipment Type

### 4.9.2. Mitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Equipment Type | TOG | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

| | | | | | | | | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Annual | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

## 4.10. Soil Carbon Accumulation By Vegetation Type

### 4.10.2. Above and Belowground Carbon Accumulation by Land Use Type - Unmitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Land Use | TOG | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Annual | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

### 4.10.4. Soil Carbon Accumulation By Vegetation Type - Mitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Vegetation | TOG | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

| | | | | | | | | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Annual | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

4.10.5. Above and Belowground Carbon Accumulation by Land Use Type - Mitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Land Use | TOG | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Annual | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

4.10.6. Avoided and Sequestered Emissions by Species - Mitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Species | TOG | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Avoided | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Subtotal | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Sequestered | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Subtotal | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Removed | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

| | | | | | | | | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Subtotal | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Avoided | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Subtotal | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Sequestered | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Subtotal | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Removed | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Subtotal | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Annual | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Avoided | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Subtotal | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Sequestered | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Subtotal | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Removed | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Subtotal | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

# 5. Activity Data

## 5.1. Construction Schedule

| Phase Name | Phase Type | Start Date | End Date | Days Per Week | Work Days per Phase | Phase Description |
|---|---|---|---|---|---|---|
| Demolition | Demolition | 12/2/2026 | 6/2/2027 | 5.00 | 131 | — |

| | | | | | | |
|---|---|---|---|---|---|---|
| Site Preparation | Site Preparation | 12/15/2026 | 6/15/2027 | 5.00 | 131 | — |
| Grading | Grading | 4/1/2027 | 12/1/2027 | 5.00 | 175 | — |
| Building Construction | Building Construction | 10/1/2028 | 3/1/2030 | 5.00 | 370 | — |
| Infrastructure Improvements | Building Construction | 8/1/2027 | 12/1/2028 | 5.00 | 350 | — |
| Paving | Paving | 8/1/2028 | 2/1/2029 | 5.00 | 133 | — |
| Architectural Coating | Architectural Coating | 3/2/2030 | 3/30/2030 | 5.00 | 20.0 | — |

## 5.2. Off-Road Equipment

### 5.2.2. Mitigated

| Phase Name | Equipment Type | Fuel Type | Engine Tier | Number per Day | Hours Per Day | Horsepower | Load Factor |
|---|---|---|---|---|---|---|---|
| Demolition | Rubber Tired Dozers | Diesel | Tier 4 Final | 2.00 | 8.00 | 367 | 0.40 |
| Demolition | Excavators | Diesel | Tier 4 Final | 3.00 | 8.00 | 36.0 | 0.38 |
| Demolition | Concrete/Industrial Saws | Diesel | Tier 4 Final | 1.00 | 8.00 | 33.0 | 0.73 |
| Site Preparation | Rubber Tired Dozers | Diesel | Tier 4 Final | 3.00 | 8.00 | 367 | 0.40 |
| Site Preparation | Tractors/Loaders/Back hoes | Diesel | Tier 4 Final | 4.00 | 8.00 | 84.0 | 0.37 |
| Grading | Graders | Diesel | Tier 4 Final | 1.00 | 8.00 | 148 | 0.41 |
| Grading | Excavators | Diesel | Tier 4 Final | 2.00 | 8.00 | 36.0 | 0.38 |
| Grading | Tractors/Loaders/Back hoes | Diesel | Tier 4 Final | 2.00 | 8.00 | 84.0 | 0.37 |
| Grading | Scrapers | Diesel | Tier 4 Final | 2.00 | 8.00 | 423 | 0.48 |
| Grading | Rubber Tired Dozers | Diesel | Tier 4 Final | 1.00 | 8.00 | 367 | 0.40 |
| Building Construction | Forklifts | Diesel | Tier 4 Final | 3.00 | 8.00 | 82.0 | 0.20 |
| Building Construction | Generator Sets | Diesel | Average | 1.00 | 8.00 | 14.0 | 0.74 |
| Building Construction | Cranes | Diesel | Tier 4 Final | 1.00 | 7.00 | 367 | 0.29 |
| Building Construction | Welders | Diesel | Tier 4 Final | 1.00 | 8.00 | 46.0 | 0.45 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| Building Construction | Tractors/Loaders/Back hoes | Diesel | Tier 4 Final | 3.00 | 7.00 | 84.0 | 0.37 |
| Infrastructure Improvements | Forklifts | Diesel | Tier 4 Final | 3.00 | 8.00 | 82.0 | 0.20 |
| Infrastructure Improvements | Generator Sets | Diesel | Average | 1.00 | 8.00 | 14.0 | 0.74 |
| Infrastructure Improvements | Cranes | Diesel | Tier 4 Final | 1.00 | 7.00 | 367 | 0.29 |
| Infrastructure Improvements | Welders | Diesel | Tier 4 Final | 1.00 | 8.00 | 46.0 | 0.45 |
| Infrastructure Improvements | Tractors/Loaders/Back hoes | Diesel | Tier 4 Final | 3.00 | 7.00 | 84.0 | 0.37 |
| Paving | Pavers | Diesel | Tier 4 Final | 2.00 | 8.00 | 81.0 | 0.42 |
| Paving | Paving Equipment | Diesel | Tier 4 Final | 2.00 | 8.00 | 89.0 | 0.36 |
| Paving | Rollers | Diesel | Tier 4 Final | 2.00 | 8.00 | 36.0 | 0.38 |
| Architectural Coating | Air Compressors | Diesel | Tier 4 Final | 1.00 | 6.00 | 37.0 | 0.48 |

## 5.3. Construction Vehicles

### 5.3.2. Mitigated

| Phase Name | Trip Type | One-Way Trips per Day | Miles per Trip | Vehicle Mix |
|---|---|---|---|---|
| Demolition | — | — | — | — |
| Demolition | Worker | 15.0 | 18.5 | LDA,LDT1,LDT2 |
| Demolition | Vendor | — | 10.2 | HHDT,MHDT |
| Demolition | Hauling | 58.8 | 20.0 | HHDT |
| Demolition | Onsite truck | — | — | HHDT |
| Site Preparation | — | — | — | — |
| Site Preparation | Worker | 17.5 | 18.5 | LDA,LDT1,LDT2 |
| Site Preparation | Vendor | — | 10.2 | HHDT,MHDT |
| Site Preparation | Hauling | 0.00 | 20.0 | HHDT |

| Infrastructure Improvements | Hauling | 0.00 | 20.0 | HHDT |
| Infrastructure Improvements | Onsite truck | — | — | HHDT |

## 5.4. Vehicles

### 5.4.1. Construction Vehicle Control Strategies

| Control Strategies Applied | PM10 Reduction | PM2.5 Reduction |
|---|---|---|
| Water unpaved roads twice daily | 55% | 55% |
| Limit vehicle speeds on unpaved roads to 25 mph | 44% | 44% |

## 5.6. Dust Mitigation

### 5.6.1. Construction Earthmoving Activities

| Phase Name | Material Imported (cy) | Material Exported (cy) | Acres Graded (acres) | Material Demolished (Ton of Debris) | Acres Paved (acres) |
|---|---|---|---|---|---|
| Demolition | 0.00 | 0.00 | 0.00 | 30,810 | — |
| Site Preparation | — | — | 197 | 0.00 | — |
| Grading | — | — | 525 | 0.00 | — |
| Paving | 0.00 | 0.00 | 0.00 | 0.00 | 20.9 |

### 5.6.2. Construction Earthmoving Control Strategies

| Control Strategies Applied | Frequency (per day) | PM10 Reduction | PM2.5 Reduction |
|---|---|---|---|
| Water Exposed Area | 3 | 74% | 74% |
| Water Demolished Area | 2 | 36% | 36% |

## 5.7. Construction Paving

| Land Use | Area Paved (acres) | % Asphalt |
|---|---|---|
| Single Family Housing | 6.02 | 0% |
| Apartments Low Rise | — | 0% |
| Strip Mall | 0.00 | 0% |
| Fast Food Restaurant w/o Drive Thru | 0.00 | 0% |
| Fast Food Restaurant with Drive Thru | 0.00 | 0% |

| | | |
|---|---|---|
| General Office Building | 0.00 | 0% |
| Medical Office Building | 0.00 | 0% |
| City Park | 0.00 | 0% |
| Other Non-Asphalt Surfaces | 7.90 | 0% |
| Parking Lot | 6.95 | 100% |

## 5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

| Year | kWh per Year | CO2 | CH4 | N2O |
|---|---|---|---|---|
| 2026 | 0.00 | 532 | 0.03 | < 0.005 |
| 2027 | 0.00 | 532 | 0.03 | < 0.005 |
| 2028 | 0.00 | 532 | 0.03 | < 0.005 |
| 2029 | 0.00 | 532 | 0.03 | < 0.005 |
| 2030 | 0.00 | 532 | 0.03 | < 0.005 |

## 5.9. Operational Mobile Sources

### 5.9.2. Mitigated

| Land Use Type | Trips/Weekday | Trips/Saturday | Trips/Sunday | Trips/Year | VMT/Weekday | VMT/Saturday | VMT/Sunday | VMT/Year |
|---|---|---|---|---|---|---|---|---|
| Single Family Housing | 3,432 | 3,432 | 3,432 | 1,252,547 | 36,394 | 36,394 | 36,394 | 13,283,984 |
| Apartments Low Rise | 14,672 | 14,672 | 14,672 | 5,355,413 | 155,609 | 155,609 | 155,609 | 56,797,233 |
| Strip Mall | 593 | 593 | 593 | 216,323 | 9,717 | 9,717 | 9,717 | 3,546,684 |
| Fast Food Restaurant w/o Drive Thru | 6,898 | 6,898 | 6,898 | 2,517,742 | 113,094 | 113,094 | 113,094 | 41,279,181 |
| Fast Food Restaurant with Drive Thru | 7,158 | 7,158 | 7,158 | 2,612,719 | 117,360 | 117,360 | 117,360 | 42,836,349 |

| | | | | | | | | |
|---|---|---|---|---|---|---|---|---|
| General Office Building | 537 | 537 | 537 | 196,143 | 8,811 | 8,811 | 8,811 | 3,215,834 |
| Medical Office Building | 1,785 | 1,785 | 1,785 | 651,668 | 29,272 | 29,272 | 29,272 | 10,684,302 |
| City Park | 1,329 | 1,329 | 1,329 | 485,088 | 21,790 | 21,790 | 21,790 | 7,953,171 |
| Other Non-Asphalt Surfaces | 0.00 | 0.00 | 0.00 | 0.00 | 0.00 | 0.00 | 0.00 | 0.00 |
| Parking Lot | 0.00 | 0.00 | 0.00 | 0.00 | 0.00 | 0.00 | 0.00 | 0.00 |

## 5.10. Operational Area Sources

### 5.10.1. Hearths

#### 5.10.1.2. Mitigated

| Hearth Type | Unmitigated (number) |
|---|---|
| Single Family Housing | — |
| Wood Fireplaces | 0 |
| Gas Fireplaces | 0 |
| Propane Fireplaces | 0 |
| Electric Fireplaces | 372 |
| No Fireplaces | 174 |
| Conventional Wood Stoves | 0 |
| Catalytic Wood Stoves | 0 |
| Non-Catalytic Wood Stoves | 0 |
| Pellet Wood Stoves | 0 |
| Apartments Low Rise | — |
| Wood Fireplaces | 0 |
| Gas Fireplaces | 0 |
| Propane Fireplaces | 0 |
| Electric Fireplaces | 1855 |

| | |
|---|---|
| No Fireplaces | 868 |
| Conventional Wood Stoves | 0 |
| Catalytic Wood Stoves | 0 |
| Non-Catalytic Wood Stoves | 0 |
| Pellet Wood Stoves | 0 |

### 5.10.2. Architectural Coatings

| Residential Interior Area Coated (sq ft) | Residential Exterior Area Coated (sq ft) | Non-Residential Interior Area Coated (sq ft) | Non-Residential Exterior Area Coated (sq ft) | Parking Area Coated (sq ft) |
|---|---|---|---|---|
| 11489737.756275 | 3,829,913 | 376,382 | 125,461 | 38,822 |

### 5.10.4. Landscape Equipment - Mitigated

| Season | Unit | Value |
|---|---|---|
| Snow Days | day/yr | 0.00 |
| Summer Days | day/yr | 250 |

## 5.11. Operational Energy Consumption

### 5.11.2. Mitigated

Electricity (kWh/yr) and CO2 and CH4 and N2O and Natural Gas (kBTU/yr)

| Land Use | Electricity (kWh/yr) | CO2 | CH4 | N2O | Natural Gas (kBTU/yr) |
|---|---|---|---|---|---|
| Single Family Housing | 4,013,379 | 532 | 0.0330 | 0.0040 | 17,084,185 |
| Apartments Low Rise | 12,111,261 | 532 | 0.0330 | 0.0040 | 45,355,810 |
| Strip Mall | 375,543 | 532 | 0.0330 | 0.0040 | 227,584 |
| Fast Food Restaurant w/o Drive Thru | 1,353,678 | 532 | 0.0330 | 0.0040 | 4,411,198 |
| Fast Food Restaurant with Drive Thru | 1,353,678 | 532 | 0.0330 | 0.0040 | 4,411,198 |
| General Office Building | 1,178,980 | 532 | 0.0330 | 0.0040 | 1,853,738 |

| | | | | | |
|---|---|---|---|---|---|
| Medical Office Building | 1,178,980 | 532 | 0.0330 | 0.0040 | 1,853,738 |
| City Park | 0.00 | 532 | 0.0330 | 0.0040 | 0.00 |
| Other Non-Asphalt Surfaces | 0.00 | 532 | 0.0330 | 0.0040 | 0.00 |
| Parking Lot | 265,355 | 532 | 0.0330 | 0.0040 | 0.00 |

## 5.12. Operational Water and Wastewater Consumption

### 5.12.2. Mitigated

| Land Use | Indoor Water (gal/year) | Outdoor Water (gal/year) |
|---|---|---|
| Single Family Housing | 22,757,922 | 0.00 |
| Apartments Low Rise | 113,497,840 | 0.00 |
| Strip Mall | 2,859,422 | 61,993 |
| Fast Food Restaurant w/o Drive Thru | 11,717,312 | 61,993 |
| Fast Food Restaurant with Drive Thru | 11,717,312 | 61,993 |
| General Office Building | 12,006,981 | 108,488 |
| Medical Office Building | 8,476,963 | 108,488 |
| City Park | 0.00 | 56,491,371 |
| Other Non-Asphalt Surfaces | 0.00 | 12,280,733 |
| Parking Lot | 0.00 | 0.00 |

## 5.13. Operational Waste Generation

### 5.13.2. Mitigated

| Land Use | Waste (ton/year) | Cogeneration (kWh/year) |
|---|---|---|
| Single Family Housing | 528 | — |
| Apartments Low Rise | 2,014 | — |

|---|---|---|---|

# 6. Climate Risk Detailed Report

## 6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

| Climate Hazard | Result for Project Location | Unit |
|---|---|---|
| Temperature and Extreme Heat | 17.8 | annual days of extreme heat |
| Extreme Precipitation | 3.00 | annual days with precipitation above 20 mm |
| Sea Level Rise | — | meters of inundation depth |
| Wildfire | 9.13 | annual hectares burned |

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

## 6.2. Initial Climate Risk Scores

| Climate Hazard | Exposure Score | Sensitivity Score | Adaptive Capacity Score | Vulnerability Score |
|---|---|---|---|---|
| Temperature and Extreme Heat | 2 | 0 | 0 | N/A |
| Extreme Precipitation | N/A | N/A | N/A | N/A |
| Sea Level Rise | 1 | 0 | 0 | N/A |
| Wildfire | 1 | 0 | 0 | N/A |
| Flooding | N/A | N/A | N/A | N/A |
| Drought | N/A | N/A | N/A | N/A |
| Snowpack Reduction | N/A | N/A | N/A | N/A |
| Air Quality Degradation | 0 | 0 | 0 | N/A |

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

## 6.3. Adjusted Climate Risk Scores

| Climate Hazard | Exposure Score | Sensitivity Score | Adaptive Capacity Score | Vulnerability Score |
|---|---|---|---|---|
| Temperature and Extreme Heat | 2 | 1 | 1 | 3 |
| Extreme Precipitation | N/A | N/A | N/A | N/A |
| Sea Level Rise | 1 | 1 | 1 | 2 |
| Wildfire | 1 | 1 | 1 | 2 |
| Flooding | N/A | N/A | N/A | N/A |
| Drought | N/A | N/A | N/A | N/A |
| Snowpack Reduction | N/A | N/A | N/A | N/A |
| Air Quality Degradation | 1 | 1 | 1 | 2 |

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

# 7. Health and Equity Details

## 7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

| Indicator | Result for Project Census Tract |
|---|---|
| Exposure Indicators | — |
| AQ-Ozone | 77.1 |
| AQ-PM | 93.4 |
| AQ-DPM | 57.1 |

| | |
|---|---|
| Drinking Water | 100.0 |
| Lead Risk Housing | 17.5 |
| Pesticides | 84.9 |
| Toxic Releases | 67.6 |
| Traffic | 18.1 |
| Effect Indicators | — |
| CleanUp Sites | 80.3 |
| Groundwater | 98.1 |
| Haz Waste Facilities/Generators | 86.6 |
| Impaired Water Bodies | 87.0 |
| Solid Waste | 98.9 |
| Sensitive Population | — |
| Asthma | 16.5 |
| Cardio-vascular | 29.1 |
| Low Birth Weights | 49.0 |
| Socioeconomic Factor Indicators | — |
| Education | 52.9 |
| Housing | 59.3 |
| Linguistic | 68.9 |
| Poverty | 35.4 |
| Unemployment | 36.4 |

## 7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

| Indicator | Result for Project Census Tract |
|---|---|
| Economic | — |
| Above Poverty | 73.60451687 |
| Employed | 6.274862056 |

| | |
|---|---|
| Median HI | 76.55588349 |
| Education | — |
| Bachelor's or higher | 64.85307327 |
| High school enrollment | 100 |
| Preschool enrollment | 66.93186193 |
| Transportation | — |
| Auto Access | 63.41588605 |
| Active commuting | 24.5989991 |
| Social | — |
| 2-parent households | 66.95752598 |
| Voting | 70.69164635 |
| Neighborhood | — |
| Alcohol availability | 97.0101373 |
| Park access | 52.77813422 |
| Retail density | 10.02181445 |
| Supermarket access | 6.557166688 |
| Tree canopy | 8.238162453 |
| Housing | — |
| Homeownership | 60.78532016 |
| Housing habitability | 61.41408957 |
| Low-inc homeowner severe housing cost burden | 71.53856025 |
| Low-inc renter severe housing cost burden | 18.38829719 |
| Uncrowded housing | 64.30129603 |
| Health Outcomes | — |
| Insured adults | 73.78416528 |
| Arthritis | 95.7 |
| Asthma ER Admissions | 84.6 |
| High Blood Pressure | 97.7 |

| | |
|---|---|
| Cancer (excluding skin) | 89.7 |
| Asthma | 34.7 |
| Coronary Heart Disease | 98.7 |
| Chronic Obstructive Pulmonary Disease | 94.6 |
| Diagnosed Diabetes | 96.0 |
| Life Expectancy at Birth | 75.7 |
| Cognitively Disabled | 56.3 |
| Physically  Disabled | 69.8 |
| Heart Attack ER Admissions | 68.4 |
| Mental Health Not Good | 54.9 |
| Chronic Kidney Disease | 97.1 |
| Obesity | 68.0 |
| Pedestrian Injuries | 19.6 |
| Physical Health Not Good | 86.2 |
| Stroke | 97.8 |

| Climate Change Exposures | — |
| Wildfire Risk | 0.0 |
| SLR Inundation Area | 0.0 |
| Children | 9.0 |
| Elderly | 91.7 |
| English Speaking | 35.1 |
| Foreign-born | 48.1 |
| Outdoor Workers | 88.5 |
| Climate Change Adaptive Capacity | — |

| | |
|---|---|
| Impervious Surface Cover | 78.1 |
| Traffic Density | 21.6 |
| Traffic Access | 23.0 |
| Other Indices | — |
| Hardship | 45.2 |
| Other Decision Support | — |
| 2016 Voting | 74.7 |

## 7.3. Overall Health & Equity Scores

| Metric | Result for Project Census Tract |
|---|---|
| CalEnviroScreen 4.0 Score for Project Location (a) | 72.0 |
| Healthy Places Index Score for Project Location (b) | 55.0 |
| Project Located in a Designated Disadvantaged Community (Senate Bill 535) | No |
| Project Located in a Low-Income Community (Assembly Bill 1550) | No |
| Project Located in a Community Air Protection Program Community (Assembly Bill 617) | No |

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

## 7.4. Health & Equity Measures

No Health & Equity Measures selected.

## 7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

## 7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

# 8. User Changes to Default Data

| Screen | Justification |
|---|---|

| | |
|---|---|
| Land Use | per center park specific plan provisions and traffic study from Urban Crossroads<br>per the City Ordinance 2689, developments within Ontario Ranch would use recycled water to irrigate landscaping |
| Construction: Construction Phases | per construction questionnaire from client |
| Operations: Vehicle Data | per traffic study from Urban Crossroads |
| Operations: Hearths | SCAQMD Rule 445 (Wood Burning) - prohibits permanently installed wood-burning devices in new developments<br>the Project would not include natural gas fireplaces |

# 6. Climate Risk Detailed Report

## 6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

| Climate Hazard | Result for Project Location | Unit |
|---|---|---|
| Temperature and Extreme Heat | 17.8 | annual days of extreme heat |
| Extreme Precipitation | 3.00 | annual days with precipitation above 20 mm |
| Sea Level Rise | — | meters of inundation depth |
| Wildfire | 9.13 | annual hectares burned |

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

## 6.2. Initial Climate Risk Scores

| Climate Hazard | Exposure Score | Sensitivity Score | Adaptive Capacity Score | Vulnerability Score |
|---|---|---|---|---|
| Temperature and Extreme Heat | 2 | 0 | 0 | N/A |
| Extreme Precipitation | N/A | N/A | N/A | N/A |
| Sea Level Rise | 1 | 0 | 0 | N/A |
| Wildfire | 1 | 0 | 0 | N/A |
| Flooding | N/A | N/A | N/A | N/A |
| Drought | N/A | N/A | N/A | N/A |
| Snowpack Reduction | N/A | N/A | N/A | N/A |
| Air Quality Degradation | 0 | 0 | 0 | N/A |

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

## 6.3. Adjusted Climate Risk Scores

| Climate Hazard | Exposure Score | Sensitivity Score | Adaptive Capacity Score | Vulnerability Score |
|---|---|---|---|---|
| Temperature and Extreme Heat | 2 | 1 | 1 | 3 |
| Extreme Precipitation | N/A | N/A | N/A | N/A |
| Sea Level Rise | 1 | 1 | 1 | 2 |

| | | | | |
|---|---|---|---|---|
| Wildfire | 1 | 1 | 1 | 2 |
| Flooding | N/A | N/A | N/A | N/A |
| Drought | N/A | N/A | N/A | N/A |
| Snowpack Reduction | N/A | N/A | N/A | N/A |
| Air Quality Degradation | 1 | 1 | 1 | 2 |

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

# 7. Health and Equity Details

## 7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

| Indicator | Result for Project Census Tract |
|---|---|
| Exposure Indicators | — |
| AQ-Ozone | 77.1 |
| AQ-PM | 93.4 |
| AQ-DPM | 57.1 |
| Drinking Water | 100.0 |
| Lead Risk Housing | 17.5 |
| Pesticides | 84.9 |
| Toxic Releases | 67.6 |
| Traffic | 18.1 |
| Effect Indicators | — |
| CleanUp Sites | 80.3 |
| Groundwater | 98.1 |
| Haz Waste Facilities/Generators | 86.6 |

| | |
|---|---|
| Impaired Water Bodies | 87.0 |
| Solid Waste | 98.9 |
| Sensitive Population | — |
| Asthma | 16.5 |
| Cardio-vascular | 29.1 |
| Low Birth Weights | 49.0 |
| Socioeconomic Factor Indicators | — |
| Education | 52.9 |
| Housing | 59.3 |
| Linguistic | 68.9 |
| Poverty | 35.4 |
| Unemployment | 36.4 |

## 7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

| Indicator | Result for Project Census Tract |
|---|---|
| Economic | — |
| Above Poverty | 73.60451687 |
| Employed | 6.274862056 |
| Median HI | 76.55588349 |
| Education | — |
| Bachelor's or higher | 64.85307327 |
| High school enrollment | 100 |
| Preschool enrollment | 66.93186193 |
| Transportation | — |
| Auto Access | 63.41588605 |
| Active commuting | 24.5989991 |
| Social | — |

## 7.3. Overall Health & Equity Scores

| Metric | Result for Project Census Tract |
|---|---|
| CalEnviroScreen 4.0 Score for Project Location (a) | 72.0 |
| Healthy Places Index Score for Project Location (b) | 55.0 |
| Project Located in a Designated Disadvantaged Community (Senate Bill 535) | No |
| Project Located in a Low-Income Community (Assembly Bill 1550) | No |
| Project Located in a Community Air Protection Program Community (Assembly Bill 617) | No |

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

## 7.4. Health & Equity Measures

No Health & Equity Measures selected.

## 7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

## 7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

# 8. User Changes to Default Data

| Screen | Justification |
|---|---|
| Land Use | per center park specific plan provisions and  traffic study from Urban Crossroads<br>per the City Ordinance 2689, developments within Ontario Ranch would use recycled water to irrigate landscaping |
| Operations: Vehicle Data | per traffic study from Urban Crossroads |
| Operations: Hearths | SCAQMD Rule 445 (Wood Burning) - prohibits permanently installed wood-burning devices in new developments<br>the Project would not include natural gas fireplaces |

# INTRODUCTION

The following biological resources technical report describes a detailed assessment of potential sensitive natural resources located within and/or immediately adjacent to the "Center Park Specific Plan" project (Specific Plan Boundary). The report has been prepared to support compliance with the California Environmental Quality Act (CEQA) documentation including the preparation of an Initial Study (IS), Environmental Impact Report (EIR) and environmental review process conducted by the City of Ontario. As discussed below, the assessment included a thorough literature review, site reconnaissance characterizing existing conditions (including floral, faunal and dominant vegetation communities), impact analysis, and applicable standards and regulations to ensure impacts remain at a level below significance.

## SPECIFIC PLAN LOCATION

The Specific Plan boundary includes a total of 194.05-acres onsite (Project Site), 63.29-acres within a Programmatic Assessment Area (Project Level Assessment Area), and 19.81-acres of offsite right-of-way impact areas (Offsite Areas), as shown in Figure 1, *Regional Location Map*, Figure 2, *Specific Plan Map*, and summarized in Table 1, *Specific Plan Acreages*.

The 194.05-acre Project Site is located within the southern region of the Specific Plan Boundary including Assessor Parcel Numbers (APNs) 0216-311-01,-02, -09, 0216-321-03, -08, 0216-322-03, -04, 1053-301-01, -02, 1053-311-01, -02, 1053-321-01, -02, -03, 1053-331-01 to -04, 1053-341-01, -02, 1053-351-01, -02, 1053-361-01 to -03, 1053-371-01, -02, and portion of 0216-322-10.

The 63.29-acre Project Level Assessment Area is located within the northern region of the Specific Plan Boundary including APN's 0216-311-09, 1053-301-01, -02, 1053-311-01, -02, 1053-321-01, -02, and -03. Authorization to access this region of the project was not provided and therefore was analyzed programmatically based on aerial photographs and assessments from the adjacent parcel boundaries. To ensure that potential adverse effects to sensitive species and resources are reduced to a less than significant level, a focused biological resources assessment and impact analysis shall be conducted in this Project Level Assessment Area portion of the Specific Plan Boundary prior to approval of development within this region. In addition to completing CEQA review, any focused surveys and required mitigation measures shall be implemented prior to project approval and initiation of construction, **CM BIO-7** Programmatic Assessment Area CEQA Analysis.

The 19.81-acre Offsite Areas include existing right-of-ways within the Specific Plan Boundary including but not limited to Comet Avenue, Grove Avenue, Cucamonga Avenue, Bon View Avenue, and Ontario Ranch Road/Edison Avenue.

## SPECIFIC PLAN DESCRIPTION

The proposed action includes the development of medium density residential (22-35 Dwelling Units/Acre), mixed use (retail (379,029 SF), office (289,521 SF)) and open space-recreational (parkland) within the Specific Plan Boundary.

# METHODOLOGY

The following section details the methods implemented prior to and during the reconnaissance survey conducted throughout the Project Site and Offsite Areas.

## LITERATURE REVIEW

Existing biological resource conditions within and adjacent to the Specific Plan Boundary was initially investigated through review of pertinent scientific literature. Federal register listings, protocols, and species data provided by the United States Fish and Wildlife Service (USFWS) were also reviewed in conjunction with anticipated federally listed species potentially occurring within the region of the Specific Plan Boundary. The California Natural Diversity Database (CNDDB) (CDFW 2024a), a California Department of Fish and Wildlife (CDFW) Natural Heritage Division species account database, was also reviewed for all pertinent information regarding the locations of known occurrences of sensitive species in the vicinity of the property. In addition, numerous regional floral and faunal field guides were utilized in the identification of species and suitable habitats. Combined, the reviewed sources provided an excellent baseline from which to inventory the biological resources potentially occurring in the area. Other CDFW reports and publications consulted include the following:

- Special Animals (CDFW 2024b);
- State and Federally Listed Endangered and Threatened Animals of California (CDFW 2024c);
- Endangered, Threatened, and Rare Plants of California (CDFW 2024d); and
- Special Vascular Plants and Bryophytes List (CDFW 2024e).

## FIELD SURVEY

A reconnaissance survey of the Project Site and Offsite Areas was conducted by Ruben Ramirez of Cadre Environmental on June 13th, 2024 in order to characterize and identify potential sensitive plant and wildlife habitats, and to establish the accuracy of the data identified in the literature search. Geologic and soil maps were examined to identify local soil types that may support sensitive taxa. Aerial photograph, topographic maps, vegetation and rare plant maps prepared for previous studies in the region were used to determine community types and other physical features that may support sensitive plants/wildlife, uncommon taxa, or rare communities that occur within or adjacent to the Project Site and Offsite Areas. Habitat assessments were conducted for, but not limited to, the following target species/groups.

- Delhi sands flower loving fly – Federally Endangered (FE)
- Coastal California gnatcatcher – Federally Threatened (FT)/State Species of Special Concern (SSC)
- Burrowing owl - SSC
- San Bernardino kangaroo rat – FE/SSC
- Common and sensitive bat species
- Sensitive plants

As previously stated, authorization to access the Project Level Assessment Area was not provided and therefore was analyzed programmatically based on aerial photographs and assessments from the adjacent parcel boundaries. To ensure that potential adverse effects to sensitive species and resources are reduced to a less than significant level, a focused biological resources assessment and impact analysis shall be conducted in this Project Level Assessment Area portion of the Specific Plan Boundary prior to approval of development within this region. In addition to completing CEQA review, any focused surveys and required mitigation measures shall be implemented prior to project approval and initiation of construction, **CM BIO-7** Programmatic Assessment Area CEQA Analysis.

### Vegetation Communities/Habitat Classification Mapping

Natural community names and hierarchical structure follows the "*Manual of California Vegetation*" (Sayer and Keeler-Wolf 2009) classification system, which has been refined and augmented where appropriate to better characterize the habitat types observed throughout the Specific Plan Boundary.

All plants observed during the survey efforts were either identified in the field or collected and later identified using taxonomic keys. Plant taxonomy follows Hickman (1993). Scientific nomenclature and common names used in this report generally follow Roberts et al. (2004) or Baldwin et al. (2012) for updated taxonomy. Scientific names are included only at the first mention of a species; thereafter, common names alone are used.

### Wildlife Resources Inventory

All animals identified during the reconnaissance survey by sight, call, tracks, scat, or other characteristic sign were documented. In addition to species actually detected, expected use of the site by other wildlife was derived from the analysis of habitats on the site,

combined with known habitat preferences of regionally occurring wildlife species. Vertebrate taxonomy followed in this report is according to the Center for North American Herpetology (2024 for amphibians and reptiles), the American Ornithologists' Union (1988 and supplemental) for birds, and Baker et al. (2003) for mammals. Both common and scientific names are used during the first mention of a species; common names only are used in the remainder of the text.

### Jurisdictional Resources Assessment

The Project Site and Offsite Areas were assessed for the presence/absence of United States Army Corps of Engineers (USACE), California Department of Fish and Wildlife (CDFW), and Regional Water Quality Control Board (RWQCB) jurisdictional resources. Non-wetland waters of the United States were assessed based on the limits of the Ordinary High-Water Mark (OHWM) as determined by erosion, the deposition of vegetation or debris, and changes in vegetation and soil characteristics. The assessment utilized the methodology for routine wetland determination according to the methods outlined in the USACE Wetland Delineation Manual (Environmental Laboratory 1987) and the Arid West Wetland Delineation Supplement and updated regulatory guidance letters (USACE 2008). Wetlands are identified by the presence of three characteristics: hydrophytic vegetation, wetland hydrology, and hydric soils. If any of these criteria were met, one or more transects were run to determine the extent of the wetland. Specifically, the presence of wetland hydrology was evaluated throughout the Project Site and Offsite Areas by recording the extent of observed surface flows, depth of inundation, depth to saturated soils, and depth to free water in the soil pits, where applicable. In addition, indicators of wetland or riverine hydrology were recorded, including water marks, drift lines, rack, debris, and sediment deposits, as warranted. Any indicators of hydric soils, such as redoximorphic features, buried organic matter, organic streaking, reduced soil conditions, gleyed or low-chroma soils, or sulfidic odor were also recorded.

## EXISTING ENVIRONMENTAL SETTING

The following section presents the existing conditions of the Specific Plan Boundary. The Specific Plan Boundary is characterized primarily as heavily disturbed active dairy and agricultural facilities as shown in Figure 3, *Specific Plan Vegetation Communities Map*, Figures 4 to 9, *Current Specific Plan Photographs,* and outlined in Table 2, *Specific Plan Vegetation Community Acreages*. The Specific Plan Boundary is completely bordered by high traffic roads, commercial/residential development and active dairy and agricultural facilities.

The Soil Survey of the San Bernardino County Area has the following soils mapped within the Specific Plan Boundary as shown on Figure 10, *Specific Plan Soils Association Map*:

- Db – Delhi fine sand
- Hr – Hilmar loamy fine sand
- TuB – Tujunga loamy sand 0 to 5 percent slopes.

## VEGETATION COMMUNITIES

### Active Dairy

The majority of the Specific Plan Boundary has and continues to be utilized as active dairy facilities including dry lots, milking parlors/feed storage facilities and housing. These areas are either devoid of vegetation or dominated by ornamental, ruderal non-native and native species commonly detected in disturbed habitats including Palmer's amaranth (*Amaranthus palmeri*), summer cypress (*Bassia scoparia*), horseweed (*Erigeron canadensis*), Russian thistle (*Salsola tragus*), prostate knotweed (*Polygonum aviculare*), cheeseweed (*Malva parviflora*), red-stemmed filaree (*Erodium cicutarium*), castor bean (*Ricinus communis*), prickly lettuce (*Lactuca serriola*), Bermuda grass (*Cynodon dactylon*), truncate finger grass (*Chloris truncata*), barnyard grass (*Echinochloa crus-galli*), goose grass (*Eleusine indica*), wild oat (*Avena fatua*), foxtail barley (*Hordeum murinum*), and ripgut brome (*Bromus diandrus*). Several dairy effluent retention ponds are located onsite and are either devoid of vegetation or inundated with discharge. No riparian scrub, forest or woodland habitat is associated with these ponds.

### Active Agriculture

Several regions of the Specific Plan Boundary have and continue to be actively farmed including the current production of feed and hay products. These areas area also utilized as cattle pastures and fertilizer spreading grounds.

### Disturbed

Disturbed regions of the Specific Plan Boundary are either devoid of vegetation (dirt roads and fallow fields) or dominated by the following species including golden crown beard (*Verbesina encelioides*), tumbling pigweed (*Amaranthus albus*), puncture vine (*Tribulus terrestris*), London rocket (*Sisymbrium irio*), stinknet (*Oncosiphon pilulifer*), giant reed (*Arundo donax*), salt cedar (*Tamarisk ramosissima*), tree tobacco (*Nicotiana glauca*), sacred datura (*Datura wrightii*), milk thistle (*Silybum marianum*), Australian saltbush (*Atriplex semibaccata*), Boccone's sand spurrey (*Spergularia bocconi*), spiny cocklebur (*Xanthium spinosum*), Mediterranean canarygrass (*Phalaris minor*), field bindweed (*Convolvulus arvensis*), common sow thistle (*Sonchus oleraceus*), annual beard-grass (*Polypogon monspeliensis*), and annual sunflower (*Helianthus annus*).

### Developed

Developed regions of the Specific Plan Boundary include the existing roadways within the rights-of-way and ranch house compounds. Species documented within developed areas include Peruvian peppertree (*Schinus molle*), bougainvillea (*Bougainvillea* sp.), pine (*Pinus* sp.), California sycamore (*Platanus racemosa*), Mexican fan palm (*Washingtonia robusta*), white mulberry (*Morus alba*), ash (*Fraxinus* sp.), olive (*Olea europaea*), Chinese elm (*Ulmus parvifolia*), tree of heaven (*Ailanthus altissima*), and jacaranda (*Jacaranda* sp.).

### Ornamental (Eucalyptus)

Several blue gum (*Eucalyptus globulus*) and red gum trees (*Eucalyptus camaldulensis*) are located adjacent to the eastern and southeastern Specific Plan Boundary.

**Table 2.**
**Specific Plan Vegetation Community Acreages**

| Vegetation Community | Project Site Acres | *Project Level Assessment Area Acres | Offsite Areas Acres | Total Acres |
|---|---|---|---|---|
| Active Dairy | 133.55 | 38.56 | 7.55 | 179.66 |
| Active Agriculture | 45.92 | 2.77 | 1.01 | 49.70 |
| Disturbed | 1.11 | 2.31 | 0.19 | 3.61 |
| Developed | 13.19 | 19.65 | 10.60 | 43.44 |
| Ornamental (Eucalyptus) | 0.28 | 0.00 | 0.46 | 0.74 |
| **TOTAL** | **194.05** | **63.29** | **19.81** | **277.15** |

** The 63.29-acre Project Level Assessment Area is located within the northern region of the Specific Plan Boundary including APN's 0216-311-09, 1053-301-01, -02, 1053-311-01, -02, 1053-321-01, -02, and -03. Authorization to access this region of the project was not provided and therefore was analyzed programmatically based on aerial photographs and assessments from the adjacent parcel boundaries. To ensure that potential adverse effects to sensitive species and resources are reduced to a less than significant level, a focused biological resources assessment and impact analysis shall be conducted in this Project Level Assessment Area portion of the Specific Plan Boundary prior to approval of development within this region. In addition to completing CEQA review, any focused surveys and required mitigation measures shall be implemented prior to project approval and initiation of construction,* ***CM BIO-7*** *Programmatic Assessment Area CEQA Analysis.*

## GENERAL PLANT & WILDIFE SPECIES

All plant species documented within the Project Site and Offsite Areas are presented and listed in the previous section. General wildlife species documented on site or within the vicinity of the Project Site and Offsite Areas include white-faced ibis (*Plegadis chihi*), red-winged blackbird (*Agelaius phoeniceus*), red-tailed hawk (*Buteo jamaicensis*), turkey vulture (*Cathartes aura*), rock dove (*Columba livia*), American kestrel (*Falco sparverius*), northern mockingbird (*Mimus polyglottos*), Anna's hummingbird (*Calypte anna*), mourning dove (*Zenaida macroura*), black phoebe (*Sayornis nigricans*), Say's phoebe (*Sayornis saya*), western meadowlark (*Sturnella neglecta*), cliff swallow (*Petrochelidon pyrrhonota*), American crow (*Corvus brachyrhynchos*), hooded oriole (*Icterus cucullatus*), Brewer's blackbird (*Euphagus cyanocephalus*), brown-headed cowbird (*Molothrus ater*), European starling (*Sturnus vulgaris*), yellow rumped warbler (*Setophaga coronata*), lesser gold finch (*Spinus psaltria*), house finch (*Haemorhous mexicanus*), scaly-breasted munia (*Lonchura punctulate*), white-crowned sparrow (*Zonotrichia leucophrys*) house sparrow (*Passer domesticus*), desert cottontail rabbit (*Sylvilagus audubonii*), and California ground squirrel (*Otospermophilus beecheyi*).

## JURISDICTIONAL WETLAND RESOURCES

No wetlands or jurisdictional resources regulated by the USACE, CDFW, or RWQCB were documented within the Project Site and Offsite Areas. The artificially created

unvegetated dairy effluent retention ponds are isolated located in uplands and currently rotated in use resulting in a wet (inundated) and dry phase. All of the active retention ponds are devoid of wetland vegetation including but not limited to riparian scrub, forest or woodland habitat.

Impacts to water quality would be less than significant during both construction and operation following preparation of a Water Quality Management Plan (WQMP), Storm Water Pollution Prevention Plan (SWPPP) and compliance with National Pollutant Discharge Elimination System (NPDES) permit and San Bernardino County Regional Municipal Separate Stormwater Sewer System (MS4) code provisions.

## SENSITIVE BIOLOGICAL RESOURCES

The following discussion describes the plant and wildlife species present, or potentially present within the property boundaries, that have been afforded special recognition by federal, state, or local resource conservation agencies and organizations, principally due to the species' declining or limited population sizes, usually resulting from habitat loss. Also discussed are habitats that are unique, of relatively limited distribution, or of particular value to wildlife. Protected sensitive species are classified by state and/or federal resource management agencies, or both, as threatened or endangered, under provisions of the state and federal endangered species act. Vulnerable or "at-risk" species that are proposed for listing as threatened or endangered (and thereby for protected status) are categorized administratively as "candidates" by the USFWS. CDFW uses various terminology and classifications to describe vulnerable species.

Sensitive biological resources are habitats or individual species that have special recognition by federal, state, or local conservation agencies and organizations as endangered, threatened, or rare. The CDFW, USFWS, and special groups like the California Native Plant Society (CNPS) maintain watch lists of such resources. For the purpose of this assessment sources used to determine the sensitive status of biological resources are:

**Plants**: USFWS (2024), CNDDB (CDFW 2024a), CDFW (2024d, 2024e), CNPS (2024), and Skinner and Pavlik (1994),

**Invertebrate -** Crotch's bumble bee *Bombus crotchii:* Leif Richardson, Paul Williams, Robbin Thorp and Sheila Colla, et al. (2022), CDFW (2019), CDFW (2023), Hatfield, et al. (2019).

**Wildlife:** California Wildlife Habitat Relationships (2008), USFWS (2024), CNDDB (CDFW 2024a), CDFW (2024b, 2024c, 2024f), and Leif Richardson, Paul Williams, Robbin Thorp and Sheila Colla, et al. (2022).

**Habitats**: CNDDB (CDFW 2024a, 2024f).

## FEDERAL PROTECTION AND CLASSIFICATIONS

The Federal Endangered Species Act of 1973 (FESA) defines an endangered species as "any species that is in danger of extinction throughout all or a significant portion of its range..." Threatened species are defined as "any species which is likely to become an endangered species within the foreseeable future throughout all or a significant portion of its range." Under provisions of Section 9(a)(1)(B) of the FESA it is unlawful to "take" any listed species. "Take" is defined as follows in Section 3(18) of the FESA: "...harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in any such conduct." Further, the USFWS, through regulation, has interpreted the terms "harm" and "harass" to include certain types of habitat modification as forms of a "take." These interpretations, however, are generally considered and applied on a case-by-case basis and often vary from species to species. In a case where a property owner seeks permission from a federal agency for an action that could affect a federally listed plant and animal species, the property owner and agency are required to consult with USFWS. Section 9(a)(2)(b) of the FESA addresses the protections afforded to listed plants. Recently, the USFWS instituted changes in the listing status of former candidate species. Former C1 (candidate) species are now referred to simply as candidate species and represent the only candidates for listing. Former C2 species (for which the USFWS had insufficient evidence to warrant listing at this time) and C3 species (either extinct, no longer a valid taxon or more abundant than was formerly believed) are no longer considered as candidate species. Therefore, these species are no longer maintained in list form by the USFWS, nor are they formally protected. However, some USFWS field offices have issued memoranda stating that former C2 species are henceforth to be considered Federal Species of Concern. This term is employed in this document but carries no official protections. All references to federally protected species in this report (whether listed, proposed for listing or candidate) include the most current published status or candidate category to which each species has been assigned by USFWS. For purposes of this assessment, the following acronyms are used for federal status species:

| | |
|---|---|
| FE | Federal Endangered |
| FT | Federal Threatened |
| FPE | Federal Proposed Endangered |
| FPT | Federal Proposed Threatened |
| FC | Federal Candidate for Listing |

The designation of critical habitat can also have a significant impact on the development of land designated as "*critical habitat*." The FESA prohibits federal agencies from taking any action that will "*adversely modify or destroy*" critical habitat (16 U.S.C. § 1536(a)(2)). This provision of the FESA applies to the issuance of permits by federal agencies. Before approving an action affecting critical habitat, the federal agency is required to consult with the USFWS who then issues a biological opinion evaluating whether the action will "*adversely modify"* critical habitat. Thus, the designation of critical habitat effectively gives the USFWS extensive regulatory control over the development of land designated as critical habitat.

The Migratory Bird Treaty Act of 1918 (MBTA) makes it unlawful to "*take*" any migratory bird or part, nest, or egg of such bird listed in wildlife protection treaties between the United States and Great Britain, the Republic of Mexico, Japan, and the Union of Soviet States. For purposes of the MBTA, "*take*" is defined as to pursue, hunt, capture, kill, or possess or attempt to do the same.

The Bald Eagle and Golden Eagle Protection Act explicitly protects the bald eagle and golden eagle and imposes its own prohibition on any taking of these species. As defined in this act, take means to pursue, shoot, shoot at, poison, wound, kill, capture, trap, collect, or molest or disturb. Current USFWS policy is not to refer the incidental take of bald eagles for prosecution under the Bald Eagle and Golden Eagle Protection Act (16 U.S.C. 668-668d).

## STATE PROTECTION AND CLASSIFICATIONS

California's Endangered Species Act (CESA) defines an endangered species as "...a native species or subspecies of a bird, mammal, fish, amphibian, reptile, or plant which is in serious danger of becoming extinct throughout all, or a significant portion, of its range due to one or more causes, including loss of habitat, change in habitat, overexploitation, predation, competition, or disease." The State defines a threatened species as "...a native species or subspecies of a bird, mammal, fish, amphibian, reptile, or plant that, although not presently threatened with extinction, is likely to become an endangered species in the foreseeable future in the absence of the special protection and management efforts required by this chapter. Any animal determined by the commission as rare on or before January 1, 1985 is a threatened species." Candidate species are defined as "...a native species or subspecies of a bird, mammal, fish, amphibian, reptile, or plant that the commission has formally noticed as being under review by the department for addition to either the list of endangered species or the list of threatened species, or a species for which the commission has published a notice of proposed regulation to add the species to either list." Candidate species may be afforded temporary protection as though they were already listed as threatened or endangered at the discretion of the Fish and Game Commission. Unlike FESA, CESA does not include listing provisions for invertebrate species.

Article 3, Sections 2080 through 2085, of CESA addresses the taking of threatened or endangered species by stating "No person shall import into this state, export out of this state, or take, possess, purchase, or sell within this state, any species, or any part or product thereof, that the commission determines to be an endangered species or a threatened species, or attempt any of those acts, except as otherwise provided..." Under CESA, "take" is defined as "...hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture, or kill." Exceptions authorized by the state to allow "take" require "...permits or memorandums of understanding..." and can be authorized for "...endangered species, threatened species, or candidate species for scientific, educational, or management purposes." Sections 1901 and 1913 of the California Fish and Game Code provide that notification is required prior to disturbance.

Additionally, some sensitive mammals and birds are protected by the State as Fully Protected Mammals or Fully Protected Birds, as described in the California Fish and Game Code, Sections 4700 and 3511, respectively. SSC ("special" animals and plants)

listings include special status species, including all state and federal protected and candidate taxa, Bureau of Land Management (BLM) and US Forest Service (USFS) sensitive species, species considered to be declining or rare by the CNPS or National Audubon Society, and a selection of species which are considered to be under population stress but are not formally proposed for listing. This list is primarily a working document for the CDFW's CNDDB project. Informally listed taxa are not protected per se, but warrant consideration in the preparation of biotic assessments. For some species, the CNDDB is only concerned with specific portions of the life history, such as roosts, rookeries, or nest sites.

For the purposes of this assessment, the following acronyms are used for State status species:

| | |
|---|---|
| SE | State Endangered |
| ST | State Threatened |
| SCE | State Candidate Endangered |
| SCT | State Candidate Threatened |
| SFP | State Fully Protected |
| SP | State Protected |
| SR | State Rare |
| SSC | California Species of Special Concern |
| CWL | California Watch List |

Nesting birds, including raptors, are protected under California Fish and Game Code Section 3503, which reads, “It is unlawful to take, possess, or needlessly destroy the nest or eggs of any bird, except as otherwise provided by this code or any regulation made pursuant thereto.” In addition, under California Fish and Game Code Section 3503.5, “it is unlawful to take, possess, or destroy any birds in the orders Falconiformes or Strigiformes (birds-of-prey) or to take, possess, or destroy the nest or eggs of any such bird except as otherwise provided by this code or any regulation adopted pursuant thereto”. Passerines and non-passerine land birds are further protected under California Fish and Game Code 3513. As such, CDFW typically recommends surveys for nesting birds that could potentially be directly (e.g., actual removal of trees/vegetation) or indirectly (e.g., noise disturbance) impacted by project-related activities. Disturbance during the breeding season could result in the incidental loss of fertile eggs or nestlings, or otherwise lead to nest abandonment. Disturbance that causes nest abandonment and/or loss of reproductive effort is considered “take” by CDFW.

The CNPS is a private plant conservation organization dedicated to the monitoring and protection of sensitive species in the State. This organization has compiled an inventory comprised of the information focusing on geographic distribution and qualitative characterization of rare, threatened, or endangered vascular plant species of California (Tibor 2001). The list serves as the candidate list for listing as threatened and endangered by CDFW. The CNPS has developed five categories of rarity (CRPR):

| | |
|---|---|
| CRPR 1A | Presumed extinct in California |
| CRPR 1B | Rare, threatened, or endangered in California and elsewhere |
| CRPR 2A | Plants presumed extirpated in California but common elsewhere |
| CRPR 2B | Plants rare, threatened, or endangered in California but more common elsewhere |
| CRPR 3 | Plants about which we need more information – a review list |
| CRPR 4 | Species of limited distribution in California (i.e., naturally rare in the wild), but whose existence does not appear to be susceptible to threat |

As stated by the CNPS:

> "*Threat Rank is an extension added onto the California Rare Plant Rank and designates the level of endangerment by a 1 to 3 ranking with 1 being the most endangered and 3 being the least endangered. A Threat Rank is present for all California Rare Plant Rank 1B's, 2's, 4's, and the majority of California Rare Plant Rank 3's. California Rare Plant Rank 4 plants are seldom assigned a Threat Rank of 0.1, as they generally have large enough populations to not have significant threats to their continued existence in California; however, certain conditions exist to make the plant a species of concern and hence be assigned a California Rare Plant Rank. In addition, all California Rare Plant Rank 1A (presumed extinct in California), and some California Rare Plant Rank 3 (need more information) plants, which lack threat information, do not have a Threat Rank extension."* (CNPS 2024)

| | |
|---|---|
| 0.1 | Seriously threatened in California (over 80% of occurrences threatened / high degree and immediacy of threat) |
| 0.2 | Fairly threatened in California (20-80% occurrences threatened / moderate degree and immediacy of threat) |
| 0.3 | Not very threatened in California (<20% of occurrences threatened / low degree and immediacy of threat or no current threats known) |

## LOCAL PROTECTION AND CLASSIFICATIONS

<u>The following Local Protection and Classifications sections are excerpted from The Ontario Plan 2050 (Placeworks 2022).</u>

The City of Ontario Plan Environmental Resources Element contains goals and policies which pertain to the protection of biological resources in the City of Ontario:

**Goal ER5** Protected high value habitat and farming and mineral resource extraction activities that are compatible with adjacent development.

**Policy ER5-1** Habitat Conservation Areas. We support the protection of biological resources through the establishment restoration, and conservation of high-quality areas.

**Policy ER5-2** Entitlement and Permitting Process. We comply with state and federal regulations regarding protected species.

**Policy ER5-4** Transition of Farms. We protect both existing farms and sensitive uses around them as agricultural areas transition to urban uses.

### City of Ontario Municipal Codes

#### Municipal Code, Volume II, Chapter 2

Title 10, Parks and Recreation, Chapter 2, Parkway Trees, of the City's Municipal Code provides provisions on the preservation, regulation on the maintenance and removal of parkway trees, and establishes types and the locations for planting parkway trees. Parkway is defined as "…that portion of any public street right-of-way between the right-of-way boundary line and the curb line, and also the area enclosed within the curb lines of a medial divider."

The property owner abutting a public right-of-way is responsible for watering any tree in the parkway and for trimming that can be done from the ground to preserve the neat appearance and non-obstructed use of the parkway; the City is responsible for all major pruning. Removal or relocation of any parkway tree requires prior authorization from the City Public Works Agency through a permit process, and planting a replacement tree, whenever feasible, is a condition on any permit issued by the City for the removal of a parkway tree. Alternatively, an in-lieu deposit may be accepted as an alternate to the actual planting of any required parkway tree based on a fair value established by the Public Facilities Manager (The Ontario Plan 2022).

#### Municipal Code, Section 6.05.020

Section 6.05.020, Tree Preservation Policy and Protection Measures, of the Ontario Development Code establishes policies and measures that will further the preservation, protection, and maintenance of established and healthy heritage trees within the City. A Heritage Tree is one that is designated for preservation as a tree of historic or cultural significance, or a tree of importance to the community due to any one of the following factors:

- It is one of the largest or oldest trees of species located within the City and has a trunk diameter of 18 inches or greater when measured at 54 inches above grade;
- It has a historical significance due to association with a historic building, site, street, person, or event;
- It is a defining landmark or significant outstanding feature of a neighborhood or district, typical of early Ontario Landscapes. This includes Camphor Tree (*Cinnamomum camphora*), Deodar Cedar (*Cedrus deodara*), London Planetree (*Platanus acerifolia*), Cork Oak (*Quercus suber*), Holly Oak (*Quercus ilex*), and California Pepper (*Schinus molle*);

- It is a Native Tree. This means that it is one of the following California native tree species with a trunk diameter of more than 8 inches, measured at 54 inches above natural grade: California Sycamore (*Platanus racemose*), Torrey Pine (*Pinus torreyana*), Coast Live Oak (*Quercus agrifolia*), Engelmann Oak (*Quercus engelmannii*), Valley Oak (*Quercus lobata*), or California Bay (*Umbellularia californica*).

Healthy Heritage Trees that are approved for removal shall be replaced with new trees with a total trunk diameter equal to the tree(s) removed, or as deemed appropriate by the Approve Authority based on lot size and available planting space. Replacement trees are to be in addition to the quantity of trees required for landscaping. The Approving Authority is responsible for reviewing the landscape plan and approving appropriate species for tree replacement (The Ontario Plan 2022).

A tree inventory will be required and prepared by a City approved certified arborist or qualified horticulturalist, to determine the presence/absence of Heritage Trees including assessment of health, structure, condition, and expected life span of all affected specimens.

Property proposed for development on which a Heritage Tree exists, shall require the submittal of a Tree Inventory and Preservation Plan prepared by a licensed landscape architect, horticulturalist, certified arborist, or other related professional. Said plan shall be submitted concurrent with a Development Plan or building permit request for alterations of a site, and shall be reviewed and approved by the Approving Authority for the corresponding application request.

The Tree Inventory and Preservation Plan shall show all existing on-site trees, and those existing trees on abutting lots and public rights-of-way with a canopy or root zone that extends onto the site or within 8 feet of a construction, staging or storage area, or graded site. Furthermore, the Tree Inventory and Preservation Plan shall identify Tree Protection Areas and trees requested to be removed, and shall show replacement trees as required by this Division.

**Sphere of Influence General Plan Amendment, Final EIR, and Settlement Agreement**

In January 1998, the Ontario City Council approved a general plan amendment (GPA) and associated Final EIR for the sphere of influence (SOI), which is now known as the Ontario Ranch (previously the New Model Colony (NMC)). The GPA designated Ontario Ranch for a range of urban and suburban uses, including residential, commercial, business park, industrial, and open space. Most of Ontario Ranch was then in agricultural use. The Final EIR for the GPA assessed the impacts on biological resources of the conversion of Ontario Ranch from agricultural uses to developed urban and suburban uses. Before mitigation, significant impacts were identified for waterfowl and waterfowl habitat, raptors and raptor habitat, and the Delhi Sands Flower-Loving Fly (DSFLF) Ontario Recovery Unit. The EIR included three mitigation measures for impacts to biological resources:

- Mitigation Measure BR-1 modified the general plan to require the creation of new waterfowl habitat and specified a mitigation ratio of 2:1 for each acre of such habitat lost. This is off-site mitigation in the Prado Basin.
- Mitigation Measure BR-2 stipulated that the City shall create a Waterfowl and Raptor Conservation Area (WRCA), and included requirements and definitions for it; mitigation is off-site in the Prado Basin.
- Mitigation Measure BR-3 required the City to cooperate with the USFWS in taking specified actions to mitigate impacts to the Delhi Sands Flower-Loving Fly Recovery Unit.

Subsequent to the 1998 adoption of the SOI GPA and EIR, a lawsuit was filed against the City of Ontario by the Endangered Habitats League and the Sierra Club, challenging the City's CEQA compliance and approval of the SOI GPA. A Settlement Agreement was reached and agreed to by all parties that set forth revised mitigation measures for potential impacts in the New Model Colony (referred to as Annexation Area 163 in the agreement) to the burrowing owl, the DSFLF, raptor foraging and wildlife habitat, loss of open space, actual and potential habitat and agricultural land, and sensitive (listed and non-listed) species. These measures will be in effect until all the developable acres in the Ontario Ranch reach full buildout, as determined by the City.

- Prior to issuance of grading permits, Ontario shall impose a $4,320 per net acre mitigation fee on proposed developments in Annexation Area 163 that require discretionary approval or permitting from the City.
- Ontario, in consultation with CDFW, will identify, through CEQA review, lands occupied by burrowing owl and suitable as long-term habitat. The City will require avoidance of those lands to maintain a viable territory and require long-term maintenance through dedication in fee or grant of easement to the Land Trust. If the site is not viable long-term habitat, the developer shall pay the mitigation fee and make provisions for relocation of the owls.
- Since habitat that benefits DSFLF can be expected to benefit burrowing owl, up to 25 percent of the mitigation fee maybe used by the City for DSFLF recovery.
- All mitigation fees collected shall be used for the above-described purposes and may be used to purchase property, conservation easements, or other land with long-term conservation value for the environmental impacts; enhance/restore lands with such values; maintain and operates these lands; and pay for related administrative costs (not to exceed 10 percent of the total fees).
- Land/easements dedicated, conveyed, or purchased to benefit wildlife, waterfowl, raptors, and/or burrowing owl must have long-term conservation value for those species and must be managed by the land trust. The parcels must be in the habitat area designated as part of the settlement agreement. Unacceptable properties are those that would otherwise be purchased by another entity or group as open space mitigation for environmental impacts.

### City of Ontario Biological Resources Habitat Mitigation Fee

Since the Settlement Agreement, the City has established a habitat mitigation fee to cover potential environmental impacts to the Burrowing Owl, DSFLF, raptor foraging, loss of open space, and agricultural lands. Development impact fees for new development in Ontario Ranch were adopted on June 23, 2003, by the City Council. The Ontario Ranch

development impact fees include a habitat mitigation fee of $4,320 per net acre for proposed residential, commercial, hotel and restaurant, office, and industrial development. Mitigation fees have been collected by the City and have been deposited into a trust fund to be used for the acquisition, restoration, rehabilitation, and maintenance of lands deemed to have long-term conservation value. Up to $500 of the fees may be used for DSFLF. In addition, current City procedure is to require a habitat assessment to determine existing habitat and biological resources on proposed development sites. If the assessment determines that there is potential habitat for sensitive species, focused protocol surveys are required. If potential DSFLF habitat is present, two-year (consecutive) protocol surveys per the USFWS Interim General Survey Guidelines for DSFLF are required (The Ontario Plan 2022).

The land use plan for Ontario Ranch originally provided for establishment of the WRCA, a wetlands and habitat area near the confluence of the Cucamonga Creek and the Lower Deer Creek Channels. Creation of the WRCA as part of Ontario Ranch was intended to provide a concentrated area for wetlands that would receive storm drainage from the west. Funding for the environmental restoration of the existing 85-acre Lower Cucamonga flood control basin under the WRCA would have been provided through the USACE with matching funds from the City of Ontario. This conservation area plus acquisition of 145 acres of off-site mitigation land were intended to provide mitigation for impacts resulting from development of Ontario Ranch. However, under the conditions of the settlement agreement, the WRCA is no longer proposed (The Ontario Plan 2022).

In 2010, the Ontario City Council approved the selection of the Riverside Land Conservancy (today known as River and Land Conservancy) as the administrator of the habitat mitigation fees and to create a habitat program pursuant to the requirements of the Settlement Agreement between the City of Ontario, the Endangered Habitats League, and the Sierra Club. However, due to the economic downturn shortly after 2010, the contract between the City and the Riverside Land Conservancy was never ratified. It was anticipated that once development in Ontario Ranch began to commence, the City would ratify the contract (The Ontario Plan 2022).

In 2022, the City will be going out with a Request for Proposals (RFP) to select a non-profit land trust and/or organization specializing in habitat conservation. The selected non-profit and/or organization will be responsible for the administration of the habitat mitigation fees and creation of a habitat program pursuant to the requirements of the Settlement Agreement between the City of Ontario, the Endangered Habitats League, and the Sierra Club. In partnership with the CDFW, the City will work with the selected non-profit and/or organization to maintain an interactive mapping and current inventory of the burrowing owl occurrences and in the selection of adequate lands for passive relocation (The Ontario Plan 2022).

## SENSITIVE HABITATS

As stated by CDFW:

> "*One purpose of the vegetation classification is to assist in determining the level of rarity and imperilment of vegetation types. Ranking of alliances according to their degree of imperilment (as measured by rarity, trends, and*

*threats) follows NatureServe's Heritage Methodology, in which all alliances are listed with a G (global) and S (state) rank. For alliances with State ranks of S1-S3, all associations within them are also considered to be highly imperiled*". (CDFW 2024f)

No sensitive or undisturbed native habitats were documented within the Project Site and Offsite Areas. The Project Site and Offsite Areas are characterized primarily as heavily disturbed active dairy and agricultural facilities

## SENSITIVE PLANTS

Based on a review of the CNDDB, The Ontario Plan 2050 and existing conditions within and adjacent to the Specific Plan Boundary, a total of thirteen (13) sensitive plant species have potential to occur within the vicinity of the Project Site and Offsite Area. as presented in Table 3, *Sensitive Plant Species Assessment*.

**Table 3.**
**Sensitive Plant Species Assessment**

| **Species Name** (*Scientific Name*) Status | **Habitat Description** | **Comments** |
|---|---|---|
| | | |
| **Nevin's barberry** (*Berberis nevinii*)<br><br>FE/SE<br>CRPR 1B.1 | Perennial evergreen shrub which generally blooms from February to June within chaparral, cismontane woodland, coastal scrub, and riparian scrub in sandy, gravelly substrates (CNPS 2024). | Not detected. |
| **Plummer's mariposa-lily** (*Calochortus plummerae*)<br><br>CRPR 4.2 | Perennial bulbiferous herb which generally blooms from May to June within chaparral, cismontane woodland, coastal scrub, lower montane coniferous forest, and grassland habitats with granite and rocky substrates (CNPS 2024). | No Potential. Not expected to occur onsite based on a lack of suitable or undisturbed vegetation or soils. |
| **Lucky morning glory** (*Calystegia felix*)<br><br>CRPR 1B.1 | Annual rhizomatous herb generally blooming from March to September within meadows, seeps and riparian scrub habitat (CNPS 2024). | No Potential. Not expected to occur onsite based on a lack of suitable or undisturbed vegetation or soils. |
| **Parry's spineflower** (*Chorizanthe parryi var. parryi*)<br><br>CRPR 1B.1 | Annual herb which generally blooms from April to June within chaparral, cismontane woodland, coastal scrub and grassland habitats with sandy and/or rocky openings. (CNPS 2024) | No Potential. Not expected to occur onsite based on a lack of suitable or undisturbed vegetation or soils. |

| **Species Name**<br>(*Scientific Name*)<br>Status | **Habitat Description** | **Comments** |
|---|---|---|
| **Slender-horned spineflower**<br>(*Dodecahema leptoceras*)<br><br>CRPR 1B.1<br>FE/SE | Annual herb which generally blooms from April to June within chaparral, cismontane woodland and coastal scrub (alluvial fan) with sandy substrates. (CNPS 2024) | No Potential. Not expected to occur onsite based on a lack of suitable or undisturbed vegetation or soils. |
| **Mesa horkelia**<br>(*Horkelia cuneata ssp. puberula*)<br><br>CRPR 1B.1 | Perennial herb which generally blooms from February to September within chaparral (maritime), cismontane woodland and coastal scrub with sandy or gravelly substrates. (CNPS 2024) | Not detected. |
| **Robinson's pepper-grass**<br>(*Lepidium virginicum var. robinsonii*)<br><br>CRPR 4.3 | Annual herb which generally blooms from January to July within chaparral and coastal sage scrub habitats (CNPS 2024). | No Potential. Not expected to occur onsite based on a lack of suitable or undisturbed vegetation or soils. |
| **Prostate vernal pool navarretia**<br>(*Navarretia prostrata*)<br><br>CRPR 1B.2 | Annual herb generally blooming from April to July within coastal scrub, meadows and seeps, valley and foothill grasslands and vernal pools (CNPS 2024). | No Potential. Not expected to occur onsite based on a lack of suitable or undisturbed vegetation or soils. |
| **Brand's star phacelia**<br>(*Phacelia stellaris*)<br><br>CRPR 1B.1 | Annual herb generally blooming from March to June within coastal sage scrub and dune habitats (CNPS 2024). | No Potential. Not expected to occur onsite based on a lack of suitable or undisturbed vegetation or soils. |
| **White rabbit tobacco**<br>(*Pseudognaphalium leucocephalum)*<br><br>CRPR 2B.2 | Perennial herb generally blooming from July to December within chaparral, cismontane woodland, coastal scrub and riparian woodland habitats (CNPS 2024). | Not detected. |
| **Salt spring checkerbloom**<br>(*Sidalcea neomexicana*)<br><br>CRPR 2.2 | Perennial herb which generally blooms from March to June within chaparral, coastal scrub, lower montane coniferous forest, Mojavean desert scrub, and playas within alkaline/mesic gravelly substrates (CNPS 2024). | Not detected. |
| **San Bernardino aster**<br>(*Symphyotrichum defoliatum*)<br><br>CRPR 1B.2 | Perennial rhizomatous herb generally blooming from July to December within various vegetation communities in associating with wetland substrates (ditches, streams and springs) (CNPS 2024). | Not detected. |

| **Species Name** (*Scientific Name*) Status | **Habitat Description** | **Comments** |
|---|---|---|
| **Rigid fringepod** (*Thysanocarpus rigidus*)<br><br>CRPR 1B.2 | Annual herb generally blooming from February to May within pinyon and juniper woodland habitats (CNPS 2024). | No Potential. Not expected to occur onsite based on a lack of suitable or undisturbed vegetation or soils. |

**California Native Plant Society (CNPS): California Rare Plant Rank (CRPR)**
CRPR 1A – plants presumed extinct in California
CRPR 1B – plants rare, threatened, or endangered in California, but more common elsewhere
CRPR 2A – plants presumed extirpated in California but common elsewhere
CRPR 2B – plants rare, threatened, or endangered in California but more common elsewhere
CRPR 3 – plants about which we need more information, a review list
CRPR 4 – plants of limited distribution, a watch list
.1 – Seriously endangered in California
.2 – Fairly endangered in California
.3 – Not very endangered in California

**Federal (USFWS) Protection and Classification**
FE – Federally Endangered
FT – Federally Threatened
FC – Federal Candidate for Listing

**State (CDFW) Protection and Classification**
SE – State Endangered
ST – State Threatened

No suitable habitat for sensitive plant species including those listed as federal or state threatened/endangered was documented within the Project Site and Offsite Areas. No sensitive plant species listed in Table 3, *Sensitive Plant Species Assessment* or undisturbed native habitats were documented or expected to occur within the Project Site and Offsite Areas. The Project Site and Offsite Areas are primarily characterized as heavily disturbed active dairy and agricultural facilities.

## SENSITIVE WILDLIFE

Based on a review of the CNDDB, The Ontario Plan 2050 and existing site conditions, a total of fifty (50) sensitive invertebrate and wildlife species have the potential of occurring within the vicinity of the Specific Plan Boundary, as presented in Table 4, *Sensitive Wildlife Species Assessment*.

**Table 4. Sensitive Wildlife Species Assessment**

| **Species Name**<br>(*Scientific Name*)<br>Status | **Habitat Description** | **Comments** |
|---|---|---|
| **INVERTEBRATES** | | |
| **Crotch bumble bee**<br>(*Bombus crotchii*)<br><br>SC | Range extends from southern to northern California within a variety of habitats including grassland, scrub, chaparral and desert habitats. Food plants include but are not limited to the following genera: *Antirrhinum, Phacelia, Clarkia, Cordylanthus, Dendromecon, Medicago Eschscholzia, Chaenactis, Eriogonum, Hypericum, Lantana, Lupinus, Salvia, Asclepias, Cirsium, Monardella, Keckiella, Acmispon, Euthamia, Ehrendorferia, Vicia,* and/or *Trichostema*. | No Potential. Not expected to occur onsite based on a lack of suitable food sources and heavily disturbed condition of the Project Site and Offsite Areas. |
| **Delhi Sands flower-loving fly**<br>(*Rhaphiomidas terminatus abdominalis*)<br><br>FE | Restricted to Delhi sand formations in Riverside and San Bernardino Counties. | Low Potential. The Delhi Sands flower-loving fly is not expected to occur onsite based on the historic and ongoing impacts to the Project Site and Offsite Areas respective of active dairy and agricultural use. However, approximately 19-acres of the eastern region of the Project Site and Project Level Assessment Area are mapped as Delhi soils, as shown in Figure 10, *Soils Association Map*. |
| **AMPHIBIANS** | | |
| **Western spadefoot**<br>(*Spea hammondii*)<br><br>SSC | Primary habitat for this species includes suitable breeding habitat below 1500 meters (i.e., vernal pools or other standing water that is free of exotic species) with secondary habitats including adjacent chaparral, sage scrub, grassland, and alluvial scrub habitats. | No Potential. Not expected to occur onsite based on a lack of suitable undisturbed soils and continuous dairy and agricultural activities conducted throughout the Project Site and Offsite Areas. |

| **Species Name**<br>(*Scientific Name*)<br>Status | **Habitat Description** | **Comments** |
|---|---|---|
| **REPTILES** | | |
| **Southern California legless lizard**<br>(*Anniella stebbinsi*)<br><br>SSC | Broadleaved upland forest, chaparral, coastal dunes, and coastal scrub. Occurs in sandy or loose loamy soils under sparse vegetation, generally in moist, loose soil (Placeworks 2022). | No Potential. Not expected to occur within Project Site and Offsite Areas based on a lack of suitable undisturbed vegetation or soils. |
| **California glossy snake**<br>(*Arizona elegans occidentalis*)<br><br>SSC | Generalist reported from a range of scrub and grassland habitats, often with loose or sandy soils (Placeworks 2022). | No Potential. Not expected to occur within Project Site and Offsite Impact Area based on a lack of suitable undisturbed vegetation or soils. |
| **Coastal western whiptail**<br>(*Aspidoscelis tigris stejnegeri*)<br><br>SSC | The coastal western whiptail occurs in a wide variety of habitats including coastal sage scrub, desert scrub, Riversidean alluvial fan scrub, woodlands, grasslands, playas, and respective ecotones between these habitats. | No Potential. Not expected to occur within Project Site and Offsite Impact Area based on a lack of suitable undisturbed vegetation or soils. |
| **San Bernardino ringneck snake**<br>(*Diadophis punctatus modestus*) | Chaparral, coastal sage scrub, grassland, riparian, and woodlands (Placeworks 2022). | No Potential. Not expected to occur within Project Site and Offsite Areas based on a lack of suitable undisturbed vegetation or soils. |
| **Western pond turtle**<br>(*Actinemys marmorata*)<br><br>SSC | The western pond turtle inhabits slow moving permanent or intermittent streams, small ponds, small lakes, reservoirs, abandoned gravel pits, permanent and ephemeral shallow wetlands, stock ponds, and sewage treatment lagoons (Rathbun *et al*., 1992; Holland, 1994). Pools are the preferred habitat within streams (Bury, 1972,) | Not Detected. Not expected to occur within Project Site and Offsite Areas based on a lack of suitable undisturbed basking sites and permanent water. |

| **Species Name**<br>(*Scientific Name*)<br>Status | **Habitat Description** | **Comments** |
|---|---|---|
| **Coast horned lizard**<br>(*Phrynosoma blainvillii*)<br><br>SSC | Open areas of sandy soil with coastal sage scrub, chaparral, grassland, riparian, and washes and watercourses (Placeworks 2022). | No Potential. Not expected to occur within Project Site and Offsite Areas based on a lack of suitable undisturbed vegetation or soils. |
| **Coast patch-nosed snake**<br>(*Salvadora hexalepis virgultea*)<br><br>SSC | The coast patch-nosed snake prefers brushy coastal sage scrub/ chaparral habitats. | No Potential. Not expected to occur within Project Site and Offsite Areas based on a lack of suitable undisturbed vegetation or soils. |
| **Two-striped gartersnake**<br>(*Thamnophis hammondii*)<br><br>SSC | Marsh and swamp, riparian scrub, riparian woodland, and wetland. Highly aquatic, found in or near permanent fresh water. Often along streams with rocky beds and riparian growth (Placeworks 2022). | No Potential. Not expected to occur within Project Site and Offsite Areas based on a lack of suitable undisturbed vegetation, soils or permanent water. |
| **BIRDS** | | |
| **Cooper's hawk**<br>(*Accipiter cooperii*)<br><br>SSC | Cooper's hawk is most commonly found within or adjacent to riparian/oak forest and woodland habitats. This uncommon resident of California increases in numbers during winter migration. | Low Potential – May occasionally forage within Project Site and Offsite Areas and breed within the mature Eucalyptus trees. |
| **Sharp-shinned hawk**<br>(*Accipiter striatus*)<br><br>CWL | Potential habitat for the sharp-shinned hawk includes montane coniferous forest for potential breeding areas and riparian scrub, woodland, forest habitat, oak woodland and forest, chaparral, coastal sage scrub, desert scrub, and Riversidean alluvial fan sage scrub for foraging. | Low Potential – May occasionally forage within Project Site and Offsite Areas. |
| **Tri-colored blackbird**<br>(*Agelaius tricolor*)<br><br>ST/SSC | Marshes, grasslands. Breeding colonies require nearby water, nesting substrate, foraging habitat of grassland, woodland, agricultural cropland (Placeworks 2022). | No Potential. Not expected to occur onsite based on a lack of nesting habitat (cattail, rushes, and willows) within or adjacent to the Project Site and Offsite Areas. |

| **Species Name**<br>(*Scientific Name*)<br>Status | **Habitat Description** | **Comments** |
|---|---|---|
| **Golden eagle**<br>(*Aquila chrysaetos*)<br><br>CWL, SFP | Within southern California, the species prefers grasslands, brushlands (coastal sage scrub and chaparral), deserts, oak savannas, open coniferous forests, and montane valleys (Garrett and Dunn 1981) | Low Potential – May occasionally forage within Project Site and Offsite Areas. |
| **Great egret**<br>(*Ardea alba*)<br><br>Nesting Colony | Wet areas, fields, margins of open water. | Moderate Potential – Expected to occasionally forage within Project Site and Offsite Areas but not breed. |
| **Great blue heron**<br>(*Ardea herodias*)<br><br>Nesting Colony | Wet areas, fields, margins of open water. | Moderate Potential – Expected to occasionally forage within Project Site and Offsite Areas but not breed. |
| **Burrowing owl**<br>(*Athene cunicularia)*<br><br>SSC | The burrowing owl uses predominantly open land, including grassland, agriculture, playa, sparse coastal sage scrub, desert scrub habitats. Some breeding burrowing owls are year-round residents and additional individuals from the north may winter throughout the region. | Moderate Potential – Suitable burrows larger than 4 inches in diameter and foraging habitat documented within the fallow fields within Project Site and Offsite Areas. |
| **Ferruginous hawk**<br>(*Buteo regalis*)<br><br>CWL | Grasslands and other open terrain of the plains and foothills. Wintering species. Primarily open fields with low vegetation (Placeworks 2022). | Low Potential – May occasionally forage within Project Site and Offsite Areas. |
| **Swainson's hawk**<br>(*Buteo swainsoni*)<br><br>ST | Grasslands and other open terrain (Placeworks 2022). | Low Potential – May occasionally forage within Project Site and Offsite Areas. |
| **Mountain plover**<br>(*Charadrius montanus*)<br><br>SSC | Dry upland prairies and plains, semidesert, bare dirt fields (Placeworks 2022). | No Potential. Not expected to occur within Project Site and Offsite Areas based on a lack of suitable undisturbed vegetation. |
| **Northern harrier**<br>(*Circus cyaneus*)<br><br>SSC | The northern harrier frequents open wetlands, wet/lightly grazed pastures, fields, dry uplands/prairies, mesic | High Potential. Observed adjacent to within Project Site and Offsite Areas during previous surveys of adjacent |

| **Species Name**<br>(*Scientific Name*)<br>Status | **Habitat Description** | **Comments** |
|---|---|---|
| | grasslands, drained marshlands, croplands, meadows, grasslands, open rangelands, fresh and saltwater emergent wetlands. | properties in 2022 (Cadre Environmental 2023). |
| **Western yellow-billed cuckoo**<br>(*Coccyzus americanus occidentalis*)<br><br>FT/SE | Riparian. Uncommon to rare summer resident of valley foothill and desert riparian habitats (Placeworks 2022). | No Potential. Not expected to occur within Project Site and Offsite Areas based on a lack of suitable undisturbed riparian scrub, forest or woodland vegetation. |
| **Snowy egret**<br>(*Egretta thula*)<br><br>Nesting Colony | Wet areas, fields, margins of open water (Placeworks 2022). | Moderate Potential – Expected to occasionally forage within Project Site and Offsite Areas but not breed. |
| **White-tailed kite**<br>(*Elanus leucurus*)<br><br>SFP | The white-tailed kite is found in riparian, oak woodlands adjacent to large open spaces including grasslands, wetlands, savannahs and agricultural fields. This non-migratory bird species occurs throughout the lower elevations of California and commonly nests in coast live oaks (Unitt 2004). | Low Potential – May occasionally forage within Project Site and Offsite Areas. |
| **California horned lark**<br>(*Eremophila alpestris actia*)<br><br>CWL | Variety of open habitats, usually where trees and large shrubs are absent (Placeworks 2022). | Moderate Potential – Expected to occasionally forage and breed within Project Site and Offsite Areas. |
| **Merlin**<br>(*Falco columbarius*)<br><br>CWL | Grasslands, coastal sage scrub and estuaries, windrows, open fields (Placeworks 2022). | Low Potential – May occasionally forage within Project Site and Offsite Areas. |
| **Prairie falcon**<br>(*Falco mexicanus*)<br><br>CWL | Habitat use of the prairie falcon includes annual grasslands to alpine meadows. The prairie falcon is associated primarily with perennial grasslands, savannahs, rangeland, some agricultural fields during the winter season, and | Low Potential – May occasionally forage within Project Site and Offsite Areas. |

| **Species Name**<br>(*Scientific Name*)<br>Status | **Habitat Description** | **Comments** |
|---|---|---|
| | desert scrub areas, all typically dry environments of western North American where there are cliffs or bluffs for nest sites (Brown and Amadon 1968) | |
| **American peregrine falcon**<br>(*Falco peregrinus anatum*)<br><br>SFP | Throughout the species' range, peregrine falcons are found in a large variety of open habitats, including tundra, marshes, seacoasts, savannahs and high mountains (AOU 1998) | No Potential. Not expected to occur within Project Site and Offsite Areas based on a lack of suitable undisturbed vegetation. |
| **Loggerhead shrike**<br>(*Lanius ludovicianus*)<br><br>SSC | This species of shrike hunts in open or grassy areas and nests in large chaparral shrubs such as ceanothus and lemonade berry. | Low Potential – May occasionally forage within Project Site and Offsite Areas. |
| **California gull**<br>(*Larus californicus*)<br><br>CWL | Nearly all types of fresh and salt water, cropland, landfills, refuse areas, open lawns (Placeworks 2022). | Moderate Potential – Expected to occasionally forage within Project Site and Offsite Areas. |
| **California black rail**<br>(*Laterallus jamaicensis coturniculus*)<br><br>ST/SFP | Brackish marsh, freshwater marsh, marsh and swamp, salt marsh, wetland. Inhabits freshwater marshes, wet meadows and shallow margins of saltwater marshes bordering large bays (Placeworks 2022). | No Potential. Not expected to occur within Project Site and Offsite Areas based on a lack of suitable undisturbed habitats. |
| **Long-billed curlew**<br>(*Numenius americanus*)<br><br>CWL | Coastal estuaries, upland herbaceous areas, croplands, wet areas, open fields, shores of open water. | Moderate Potential – Expected to occasionally forage within Project Site and Offsite Areas. |
| **Double-crested cormorant**<br>(*Nannopterum auritum*)<br><br>CWL | Lakes, fresh, salt, and estuarine waters (Placeworks 2022). | Moderate Potential – Expected to occasionally forage within Project Site and Offsite Areas. |
| **White-faced ibis**<br>(*Plegadis chihi*)<br><br>CWL | Freshwater marshes and brackish areas (Placeworks 2022). | High Potential. Observed adjacent to within Project Site and Offsite Areas during previous surveys of adjacent properties in 2022 (Cadre Environmental 2023). |

| **Species Name**<br>(*Scientific Name*)<br>Status | **Habitat Description** | **Comments** |
|---|---|---|
| **Coastal California gnatcatcher**<br>(*Polioptila californica californica*)<br><br>FT/SSC | The coastal California gnatcatcher is a non-migratory bird species that primarily occurs within sage scrub habitats in coastal southern California dominated by California sagebrush. | No Potential. Not expected to occur within Project Site and Offsite Areas based on a lack of suitable undisturbed habitats including coastal sage scrub and associations. |
| **MAMMALS** | | |
| **Pallid bat**<br>(*Antrozous pallidus*)<br><br>SSC | Chaparral, coastal scrub, desert wash, Great Basin grassland, Great Basin scrub, Mojavean desert scrub, riparian woodland, Sonoran desert scrub, upper montane coniferous forest, and valley and foothill grassland. Oak and grassland ecotones. Prefers foraging in the open. Roosts in attics or rock cracks; in the open, near foliage at night (Placeworks 2022). | Low Potential. Expected to occasionally forage within Project Site and Offsite Areas. |
| **Northwestern San Diego pocket mouse**<br>(*Chaetodipus fallax fallax*)<br><br>SSC | The northwestern San Diego pocket mouse occurs in coastal sage, upland sage scrubs, and alluvial fan sage scrub, sage scrub/grassland ecotones, chaparral, and desert scrubs at all elevations up to 6,000 feet. | No Potential. Not expected to occur within Project Site and Offsite Areas based on a lack of suitable undisturbed habitats including coastal sage scrub and associations. |
| **Townsend's big-eared bat**<br>(*Corynorhinus townsendii*)<br><br>SSC | A wide variety of habitats including woodlands and arid grasslands. Roosts in mines and caves (Placeworks 2022). | Low Potential. Expected to occasionally forage within Project Site and Offsite Areas. |
| **San Bernardino kangaroo rat**<br>(*Dipodomys merriami parvus*)<br><br>FE/SSC | Prefers alluvial scrub, coastal sage scrub habitats with sandy and gravelly substrates. | No Potential. Not expected to occur within Project Site and Offsite Areas based on a lack of suitable undisturbed habitats including Riversidean alluvial fan sage scrub and associations. |
| **Stephens' kangaroo rat**<br>(*Dipodomys stephensi*) | The Stephens' kangaroo rat is found almost exclusively in open | No Potential. Not expected to occur within Project Site and Offsite Areas based on |

| **Species Name**<br>(*Scientific Name*)<br>Status | **Habitat Description** | **Comments** |
|---|---|---|
| FE/ST | grasslands or sparse shrublands with cover of less than 50 percent during the summer. | a lack of suitable undisturbed habitats. |
| **Western mastiff bat**<br>(*Eumops perotis californicus*)<br><br>SSC | Roosts in rocky areas and forages in grassland, shrublands, and woodlands. | No Potential. Not expected to occur within Project Site and Offsite Areas based on a lack of suitable undisturbed habitats. |
| **Western yellow bat**<br>(*Lasiurus xanthinus*)<br><br>SSC | Roosts in the skirts of palm trees and forages in adjacent habitats. | Low Potential. Scattered palm trees representing potential roosting habitat documented within the central region of the within Project Site and Offsite Areas. |
| **San Diego black-tailed jackrabbit**<br>(*Lepus californicus bennettii*)<br><br>SSC | The San Diego black-tailed jackrabbit in open habitats, primarily including grasslands, sage scrub, alluvial fan sage scrub, and Great Basin sage scrub. | No Potential. Not expected to occur within Project Site and Offsite Areas based on a lack of suitable undisturbed habitats. |
| **Western small-footed myotis**<br>(*Myotis ciliolabrum*) | Feeds among trees or over brush. Roosts in caves, mines, and in cliff or rock openings (Placeworks 2022). | No Potential. Not expected to occur within Project Site and Offsite Areas based on a lack of suitable undisturbed habitats. |
| **Yuma myotis**<br>(*Myotis yumanensis*) | Water and wooded canyon bottoms. Roosts in caves and abandoned buildings (Placeworks 2022). | No Potential. Not expected to occur within Project Site and Offsite Areas based on a lack of suitable undisturbed habitats. |
| **San Diego desert woodrat**<br>(*Neotoma lepida intermedia*)<br><br>SSC | Riversidean and coastal sage scrub, chaparral and nonnative grasslands. Shrub and desert habitats, primarily associated with rock outcroppings, boulders, cacti, or areas of dense undergrowth (Placeworks 2022). | No Potential. Not expected to occur within Project Site and Offsite Areas based on a lack of suitable undisturbed habitats. |
| **Pocketed free-tailed bat**<br>(*Nyctinomops femorosaccus*)<br><br>SSC | Desert habitats. Roosts in rock crevices in cliffs (Placeworks 2022). | No Potential. Not expected to occur within Project Site and Offsite Areas based on a lack of suitable undisturbed habitats. |

| **Species Name**<br>(*Scientific Name*)<br>Status | **Habitat Description** | **Comments** |
|---|---|---|
| **Big free-tailed bat**<br>(*Nyctinomops macrotis*)<br><br>SSC | Desert habitats. Roosts in rock crevices in cliffs (Placeworks 2022). | No Potential. Not expected to occur within Project Site and Offsite Areas based on a lack of suitable undisturbed habitats. |
| **Los Angeles pocket mouse**<br>(*Perognathus longimembris brevinasus*)<br><br>SSC | Low elevation grassland alluvial sage scrub and coastal sage scrub habitats. | No Potential. Not expected to occur within Project Site and Offsite Areas based on a lack of suitable undisturbed habitats. |

**Federal (USFWS) Protection and Classification**
FE – Federally Endangered
FT – Federally Threatened
FC – Federal Candidate for Listing

**State (CDFW) Protection and Classification**
SE – State Endangered
SSC – State Species of Special Concern
CWL – California Watch List
SFP – State Fully Protected
SC – State Candidate for Listing

The federally endangered Delhi Sands flower-loving fly (DSFLF) is not expected to occur within Project Site and Offsite Areas based on the historic and ongoing impacts to the Project Site respective of active dairy and agricultural use. However, approximately 19-acres of the eastern region of the Project Site and Project Level Assessment Area are mapped as Delhi soils, as shown in Figure 10, *Specific Plan Soils Association Map*.

The heavily disturbed active dairy and agricultural facilities documented within the within Project Site and Offsite Areas provide low to high likelihood of occurrence (foraging, breeding and roosting habitat) for the following sensitive or locally monitored species:

- Cooper's hawk (*Accipiter cooperii*), SSC
- Sharp-shinned hawk (*Accipiter striatus*), CWL
- Golden eagle (*Aquila chrysaetos*), CWL, SFP
- Great egret (*Ardea alba*), Nesting Colony
- Great blue heron (*Ardea herodias*), Nesting Colony
- Burrowing owl (*Athene cunicularia),* SSC
- Ferruginous hawk (*Buteo regalis*), CWL
- Swainson's hawk (*Buteo swainsoni*), ST
- Northern harrier (*Circus cyaneus*), SSC
- Snowy egret (*Egretta thula*), Nesting Colony
- White-tailed kite (*Elanus leucurus*), SFP
- California horned lark (*Eremophila alpestris actia*), CWL
- Merlin (*Falco columbarius*), CWL
- Prairie falcon (*Falco mexicanus*), CWL
- Loggerhead shrike (*Lanius ludovicianus*), SSC

- California gull (*Larus californicus*), CWL
- Long-billed curlew (*Numenius americanus*), CWL
- Double-crested cormorant (*Nannopterum auritum*), CWL
- White-faced ibis (*Plegadis chihi*), CWL
- Pallid bat (*Antrozous pallidus*), SSC
- Townsend's big-eared bat (*Corynorhinus townsendii*), SSC
- Western yellow bat (*Lasiurus xanthinus*), SSC

The Project Site and Areas do not occur within or adjacent to a USFWS designated critical habitat for any federally listed threatened or endangered species.

### JURISDICTIONAL WETLAND RESOURCES

No wetlands or jurisdictional resources regulated by the USACE, CDFW, or RWQCB were documented within the Project Site and Offsite Areas. The artificially created unvegetated dairy effluent retention ponds are isolated, located in uplands and currently rotated in use resulting in a wet (inundated) and dry phase. All of the active retention ponds are devoid of wetland vegetation including but not limited to riparian scrub, forest or woodland habitat.

Impacts to water quality would be less than significant during both construction and operation following preparation of a WQMP, SWPPP and compliance with NPDES permit and San Bernardino County Regional MS4 code provisions.

## ENVIRONMENTAL IMPACTS

The following section includes an analysis of the direct and/or indirect impacts of the proposed action on sensitive biological resources. This analysis characterizes the project related activities that are anticipated to adversely impact the species, and when feasible, quantifies such impacts. Direct effects are defined as actions that may cause an immediate effect on the species or its habitat, including the effects of interrelated actions and interdependent actions. Indirect effects are caused by or result from the proposed actions, are later in time, and are reasonably certain to occur. Indirect effects may occur outside of the area directly affected by the proposed action.

### THRESHOLD OF SIGNIFICANCE

The environmental impacts relative to biological resources are assessed using impact significance criteria which mirror the policy statement contained in the CEQA at Section 21001 (c) of the Public Resources Code. This section reflects that the legislature has established it to be the policy of the state to:

> "*Prevent the elimination of fish and wildlife species due to man's activities, ensure that fish and wildlife populations do not drop below self-perpetuating levels, and preserve for future generations representations of all plant and animal communities*…"

The following definitions apply to the significance criteria for biological resources:

- "*Endangered*" means that the species is listed as endangered under state or federal law.

- "*Threatened*" means that the species is listed as threatened under state or federal law.

- "*Rare*" means that the species exists in such small numbers throughout all or a significant portion of its range that it may become endangered if its environment worsens.

- "*Region*" refers to the area within southern California that is within the range of the individual species.

- "*Sensitive habitat*" refers to habitat for plants and animals (1) which plays a special role in perpetuating species utilizing the habitat on the property, and (2) without which there would be substantial danger that the population of that species would drop below self-perpetuating levels.

- "*Substantial effect*" means significance loss or harm of a magnitude which, based on current scientific data and knowledge, (1) would cause a species or a native plant or animal community to drop below self-perpetuating levels on a statewide or regional basis or (2) would cause a species to become threatened or endangered.

Also, the determination of impacts has been made according to the federal definition of "*take*". FESA prohibits the "*taking*" of a member of an endangered or threatened wildlife species or removing, damaging, or destroying a listed plant species by any person (including private individuals and private or government entities). FESA defines "*take*" as "*to harass, harm, pursue, hunt, shoot, would, kill, trap, capture or collect*" an endangered or threatened species, or to attempt to engage in these activities.

## DIRECT IMPACTS

Specifically, the biological resources assessment report addresses the following CEQA Environmental Checklist items.

| **Environmental Issues** | **Potentially Significant Impact** | **Less than Significant with Mitigation** | **Less than Significant Impact** | **No Impact** |
|---|---|---|---|---|
| Would the Project: | | | | |
| **a)** Have a substantial adverse effect, either directly or through habitat modification, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service? | | **X** | | |

| Environmental Issues | Potentially Significant Impact | Less than Significant with Mitigation | Less than Significant Impact | No Impact |
|---|---|---|---|---|
| **b)** Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service? | | **X** | | |
| **c)** Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means? | | | | **X** |
| **d)** Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites? | | **X** | | |
| **e)** Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance? | | X | | |
| **f)** Conflict with the provisions of an adopted Habitat Conservation Plan, Native Community Conservation Plan, or other approved local, regional, or state habitat conservation plan? | | | | **X** |

*a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the CDFW or USFWS?*

**Less than Significant with Mitigation**. The 213.86-acre Project Site and Offsite Areas would not have a substantial adverse effect, either directly or through habitat modifications, on any plant species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the CDFW or USFWS. No native undisturbed suitable habitat, soils or sensitive plant species observations were documented or expected to occur within the Project Site and Offsite Areas, as outlined in Table 3. *Sensitive Plant Species Assessment*. Therefore, no mitigation is required or proposed.

The 213.86-acre Project Site and Offsite Areas may result in a substantial adverse effect, either directly or through habitat modifications, on wildlife species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the CDFW or USFWS, as outlined in Table 4, *Sensitive Wildlife Species Assessment*.

The federally endangered Delhi Sands flower-loving fly is not expected to occur onsite based on the historic and ongoing impacts to the Project Site and Offsite Areas respective of active dairy and agricultural use. However, approximately 19-acres of the eastern region of the Project Site and Project Level Assessment Area is mapped as Delhi soils, as shown in Figure 10, *Soils Association Map*. Current City procedure is to require a habitat assessment to determine existing habitat and biological resources on proposed development sites. If the assessment determines that there is potential habitat for Delhi Sands flower-loving fly, two-year (consecutive) protocol surveys per the USFWS Interim General Survey Guidelines for DSFLF are required (The Ontario Plan 2022). Potential impacts to DSFLS would be mitigated to a level of less than significant following implementation of Mitigation Measure **MM BIO-1**: City of Ontario Biological Resources Habitat Mitigation Fee, and **CM BIO-3**: Delhi Sands Flower-loving Fly Habitat Assessment.

Suitable foraging and nesting habitat for the Cooper's hawk (SSC) was documented within the Project Site and Offsite Areas. Potential impacts to foraging and nesting habitat for this species would be mitigated to a level of less than significant following implementation of Mitigation Measure **MM BIO-1**: City of Ontario Biological Resources Habitat Mitigation Fee, and Conservation Measure **CM BIO-4**: Nesting Bird and Raptor Preconstruction Surveys.

Suitable foraging and/or breeding habitat for the *s*harp-shinned hawk *(*CWL), golden eagle (CWL, SFP), great egret, great blue heron, burrowing owl (SSC), ferruginous hawk (CWL), Swainson's hawk (ST), northern harrier (SSC), snowy egret, white-tailed kite (SFP), California horned lark (CWL), merlin (CWL), prairie falcon (CWL), loggerhead shrike (SSC), California gull (CWL), long-billed curlew (CWL), double-crested cormorant (CWL), and white-faced ibis *(*CWL) was documented within the agricultural fields and artificially created unvegetated dairy effluent retention ponds within the Project Site and Offsite Areas. Potential impacts to foraging and/or breeding habitat for these species would be mitigated to a level of less than significant following implementation of Mitigation Measure **MM BIO-1**: City of Ontario Biological Resources Habitat Mitigation Fee, and Conservation Measure **CM BIO-4**: Nesting Bird and Raptor Preconstruction Surveys.

Suitable burrows larger than 4-inches in diameter and foraging habitat for the burrowing owl (SSC) were documented within and adjacent to the Project Site and Offsite Areas. Potential impacts to refugia, nesting and foraging habitat for this species would be mitigated to a level of less than significant following implementation of Mitigation Measure **MM BIO-1**: City of Ontario Biological Resources Habitat Mitigation Fee, and Conservation Measure **CM-BIO-5:** Focused and Preconstruction Burrowing Owl Surveys.

Suitable foraging and/or roosting habitat for the following bat species including pallid bat (SSC), Townsend's big-eared bat (SSC), and western yellow bat (SSC) was documented onsite. Potential impacts to foraging habitat for these species would be mitigated to a

level of less than significant following implementation of Mitigation Measure **MM BIO-6**: Focused Bat Survey.

b) *Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by CDFW or USFWS?*

**Less than Significant with Mitigation**. A total of 194.05-acres within the Project Site and 19.81-acre Offsite Area (213.86-acres total) of vegetation communities and developed areas will be directly and permanently impacted as a result of project implementation, as summarized in Table 5, *Specific Plan Vegetation Community Impacts,* and illustrated on Figure 11*, Vegetation Communities Impact Map*. No riparian (scrub, forest, woodland), sensitive or undisturbed native/natural habitats were documented within or adjacent to the Project Site and Offsite Areas. The Project Site and Offsite Areas are characterized as heavily disturbed active dairy and agricultural facilities. Several artificially created dairy effluent retention ponds are located onsite and are either devoid of vegetation of inundated with discharge. Permanent impacts to primarily dairy, agricultural lands and artificially created dairy effluent retention ponds would be mitigated to a level of less than significant following implementation of Mitigation Measure **MM BIO-1**: City of Ontario Biological Resources Habitat Mitigation Fee.

**Table 5.**
**Specific Plan Vegetation Community Impacts**

| Vegetation Community | Project Site Acres | *Project Level Assessment Area Acres | Offsite Areas Acres | Project Site Impact Acres | Offsite Areas Impacts Acres | Total Project Site & Offsite Areas Impacts |
|---|---|---|---|---|---|---|
| Active Dairy | 133.55 | 38.56 | 7.55 | 133.55 | 7.55 | 141.1 |
| Active Agriculture | 45.92 | 2.77 | 1.01 | 45.92 | 1.01 | 46.93 |
| Disturbed | 1.11 | 2.31 | 0.19 | 1.11 | 0.19 | 1.3 |
| Developed | 13.19 | 19.65 | 10.60 | 13.19 | 10.60 | 23.79 |
| Ornamental | 0.28 | 0.00 | 0.46 | 0.28 | 0.46 | 0.74 |
| **TOTAL** | **194.05** | **63.29** | **19.81** | **194.05** | **19.81** | **213.86** |

** The 63.29-acre Project Level Assessment Area is located within the northern region of the Specific Plan Boundary including APN's 0216-311-09, 1053-301-01, -02, 1053-311-01, -02, 1053-321-01, -02, and -03. Authorization to access this region of the project was not provided and therefore was analyzed programmatically based on aerial photographs and assessments from the adjacent parcel boundaries. To ensure that potential adverse effects to sensitive species and resources are reduced to a less than significant level, a focused biological resources assessment and impact analysis shall be conducted in this Project Level Assessment Area portion of the Specific Plan Boundary prior to approval of development within this region. In addition to completing CEQA review, any focused surveys and required mitigation measures shall be implemented prior to project approval and initiation of construction,* ***CM BIO-7*** *Programmatic Assessment Area CEQA Analysis.*

c) *Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the CWA (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?*

**No Impact.** No wetlands or jurisdictional resources regulated by the USACE, CDFW, or RWQCB were documented within the Project Site and Offsite Areas. The artificially created unvegetated dairy effluent retention ponds are isolated, located in uplands and currently rotated in use resulting in a wet (inundated) and dry phase. All of the active retention ponds are devoid of wetland, riparian scrub, forest or woodland habitats.

Impacts to water quality would be less than significant during both construction and operation following preparation of a Water Quality Management Plan, Storm Water Pollution Prevention Plan and compliance with National Pollutant Discharge Elimination System permit and San Bernardino County Regional Municipal Separate Stormwater Sewer System (MS4) code provisions. Therefore, no mitigation is required or proposed.

d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

**Less than Significant with Mitigation.** The Project Site and Offsite Areas are completely bordered by high traffic roads, commercial/residential development, active dairy/agricultural facilities and does not represent a wildlife movement corridor or route between open space habitats. Therefore, no mitigation is required or proposed.

The Project Site and Offsite Areas possess vegetation including trees and shrubs expected to potentially provide nesting habitat for raptors and migratory birds protected under the CDFG Codes. Measures for potential direct/indirect impacts to common and sensitive bird and raptor species will require compliance with the CDFG Code Section 3503. Construction outside the nesting season (between September 1st and January 31st) does not require preconstruction nesting bird surveys. However, if construction is proposed between February 1st and August 31st, a qualified biologist will conduct a preconstruction nesting bird and raptor survey(s) no more than three (3) days prior to initiation of grading to document the presence or absence of nesting birds or raptors within or directly adjacent (200 feet, up to 500 feet for raptors) to the Project Site and Offsite Areas.

Loss of an active nest would be considered a potentially significant impact. Impacts to raptor foraging and potential nesting bird habitat would be reduced to less than significant with the implementation of Conservation Measure **CM BIO-4**: Nesting Bird and Raptor Preconstruction Surveys.

e) *Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?*

**Less than Significant with Mitigation.** Several mature trees including but not limited to pine, California sycamore white mulberry, California ash, olive, Chinese elm, tree of heaven, blue gum and red gum trees are scattered throughout the Project Site and Offsite Areas primarily within right-of-way's and adjacent to existing residences. Therefore, a

tree inventory will be required and prepared by a City approved certified arborist or qualified horticulturalist, to determine the presence/absence of Heritage Trees including assessment of health, structure, condition, and expected life span of all affected specimens.

Property proposed for development on which a Heritage Tree exists, shall require the submittal of a Tree Inventory and Preservation Plan prepared by a licensed landscape architect, horticulturalist, certified arborist, or other related professional. Said plan shall be submitted concurrent with a Development Plan or building permit request for alterations of a site, and shall be reviewed and approved by the Approving Authority for the corresponding application request. Permanent impacts to Heritage Trees would be mitigated to a level of less than significant following implementation of Mitigation Measure **MM BIO-2**: Tree Inventory and Preservation Plan.

*f) Conflict with the provisions of an adopted Habitat Conservation Plan, Native Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?*

**No Impact**. The Project Site and Offsite Areas are not located within or adjacent to a Conservation Program Area. Therefore, implementation of the project would not result in a conflict with the provisions of an adopted habitat conservation plan and no impact would occur. Therefore, no mitigation is required or proposed.

**INDIRECT IMPACTS**

**Water Quality**

Impacts to water quality would be less than significant during both construction and operation following preparation of a Water Quality Management Plan, Storm Water Pollution Prevention Plan and compliance with National Pollutant Discharge Elimination System permit and San Bernardino County Regional Municipal Separate Stormwater Sewer System (MS4) code provisions. Therefore, no mitigation is required or proposed.

**Toxics**

Toxic sources within the Project Site and Offsite Areas would be limited to those commonly associated with residential and mixed-use developments such as pesticides, insecticides, herbicides, fertilizers, and vehicle emissions. In order to mitigate for the potential effects of these toxics, the project will incorporate structural BMPs, as required in association with compliance with the NPDES permit system as warranted, in order to reduce the level of toxins introduced into the drainage system. Water quality measures will be implemented and no significant impacts are anticipated.

**Lighting**

No impacts related to lighting would occur during both construction and operation. The Project Site and Offsite Areas are not located adjacent to any open space habitats or sensitive biological resources. No impact.

**Figure 11 - Specific Plan Vegetation Communities Impact Map**
*Biological Resources Technical Report*
*Center Park Specific Plan, City of Ontario, California*

CADRE Environmental

1 inch = 450 feet

### Noise

Noise and vibration associated with the use of heavy equipment during project construction has the potential to disrupt bird nesting, foraging and breeding behavior within or adjacent to the Project Site and Offsite Areas. Conservation Measure **CM BIO-4:** Nesting Bird and Raptor Preconstruction Survey has been incorporated into the project to collectively contribute to reducing potential indirect noise impacts to nesting bird species located within or adjacent to the Project Site and Offsite Areas. No impact anticipated.

## CUMULATIVE IMPACTS

The direct and/or indirect impacts of the project would not result in significant cumulative impacts (CEQA Section 15310) to environmental resources within the region of the Project Site and Offsite Areas. Cumulative impacts refer to incremental effects of an individual project when assessed with the effects of past, current, and proposed projects. The project represents the development of 194.05-acres within the Project Site and 19.81-acre Offsite Areas (213.86-acres total) of primarily dairy, agricultural habitat and disturbed/developed habitats, surrounded by dairy/agricultural, commercial, residential development and high traffic roads, and therefore will not result in an adverse cumulative impact to sensitive resources. Impacts related to buildout of the City and Sphere of Influence are anticipated to be less than significant if projects comply with Ontario Ranch mitigation measures and The Ontario Plan 2050 policies and standard conditions. Following implementation of the following mitigation and conservation measures, the proposed action would not conflict with the general plan policies and standard conditions for the protection of sensitive resources.

## MITIGATION & CONSERVATION MEASURES

The following biological mitigation and conservation measures (Conditions of Approval) are relevant to the protection of biological resources to the extent practicable as part of ensuring all potential impacts to sensitive or regulated biological resources are in compliance with CEQA.

### MM BIO-1: City of Ontario Biological Resources Habitat Mitigation Fee

The City of Ontario has established a habitat mitigation fee to cover potential environmental impacts to the burrowing owl, DSFLF, raptor foraging, loss of open space, and agricultural lands. Development impact fees for new development in Ontario Ranch were adopted on June 23rd, 2003, by the City Council. The Ontario Ranch development impact fees include a habitat mitigation fee of $4,320 per net acre for proposed residential, commercial, hotel and restaurant, office, and industrial development. Mitigation fees have been collected by the City of Ontario and have been deposited into a trust fund to be used for the acquisition, restoration, rehabilitation, and maintenance of lands deemed to have long-term conservation value.

**MM BIO-2: Tree Inventory and Preservation Plan**

A tree inventory will be required and prepared by a City approved certified arborist or qualified horticulturalist, to determine the presence/absence of Heritage Trees including assessment of health, structure, condition, and expected life span of all affected specimens.

Property proposed for development on which a Heritage Tree exists, shall require the submittal of a Tree Inventory and Preservation Plan prepared by a licensed landscape architect, horticulturalist, certified arborist, or other related professional. Said plan shall be submitted concurrent with a Development Plan or building permit request for alterations of a site, and shall be reviewed and approved by the Approving Authority for the corresponding application request.

The Tree Inventory and Preservation Plan shall show all existing on-site trees, and those existing trees on abutting lots and public rights-of-way with a canopy or root zone that extends onto the site or within 8 feet of a construction, staging or storage area, or graded site. Furthermore, the Tree Inventory and Preservation Plan shall identify Tree Protection Areas and trees requested to be removed, and shall show replacement trees as required by this Division.

**CM BIO-3**: **Delhi Sands Flower-loving Fly Habitat Assessment**

The eastern region of the Project Site is mapped as Delhi fine sand soils and may represent suitable habitat for the Delhi sands flower-loving fly (NRCS 2024). Either 1) a habitat assessment is conducted by a USFWS permitted biologist and concurrence from the USFWS is received that suitable habitat for the Delhi sands flower-loving fly does not occur onsite and focused surveys are not warranted or, 2) a two-year protocol survey for the Delhi sands flower-loving fly shall be conducted to determine presence/absence. If the species is detected onsite, formal consultation with the USFWS will be required.

**CM BIO-4: Nesting Bird & Raptor Preconstruction Survey**

Regulatory requirement for potential direct/indirect impacts to nesting common and sensitive bird and raptor species will require compliance with the CDFG Code Section 3503. Construction outside the nesting season (between September 1$^{st}$ and January 31$^{st}$) do not require pre-removal nesting bird surveys. If construction is proposed between February 1$^{st}$ and August 31$^{st}$, a qualified biologist will conduct a nesting bird survey(s) no more than three (3) days prior to initiation of grading to document the presence or absence of nesting birds within or directly adjacent (200 feet, up to 500 feet for raptors) to the Project Site and Offsite Areas.

The survey(s) will focus on identifying any raptors and/or bird nests that are directly or indirectly affected by construction activities. If active nests are documented, species-specific measures will be prepared by a qualified biologist and implemented to prevent abandonment of the active nest. At a minimum, grading in the vicinity of a nest will be postponed until the young birds have fledged. The perimeter of the nest setback zone will be fenced or adequately demarcated with stakes and flagging at 20-foot intervals, and construction personnel and activities restricted from the area. A survey report by a

qualified biologist verifying that no active nests are present, or that the young have fledged, will be submitted to the City of Ontario for review and approval prior to initiation of grading in the nest-setback zone.

The qualified biologist will serve as a construction monitor during those periods when construction activities occur near active nest areas to ensure that no inadvertent impacts on these nests occur. A final monitoring report of the findings, prepared by a qualified biologist, will be submitted to the City of Ontario documenting compliance with the CDFG Code. Any nest permanently vacated for the season would not warrant protection pursuant to the CDFG Code.

### CM BIO-5 Focused and Preconstruction Burrowing Owl Surveys

Focused surveys for burrowing owl will be conducted in accordance with the March 7, 2022, CDFG staff report on Burrowing Owl Mitigation. Specifically, a total of 4 surveys will be conducted: 1) at least one site visit between February 15th and April 15th, and 2) a minimum of three (3) surveys, at least three weeks apart, between Apr$^{il}$ 15th and July 15th, with at least one visit after June 15th. A report of the findings prepared by a qualified biologist shall be submitted to the City of Ontario prior to any permit or approval for ground disturbing activities.

A 14-day burrowing owl preconstruction survey will be conducted immediately prior to the initiation of ground-disturbing construction to ensure protection for this species. The survey will be conducted in compliance with CDFW guidelines (CDFW 2012). A report of the findings prepared by a qualified biologist shall be submitted to the City of Ontario prior to any permit or approval for ground disturbing activities.

If burrowing owls are detected onsite during the focused surveys or 14-day preconstruction survey efforts, during the breeding season (February 1$^{st}$ to August 31$^{st}$) then construction activities shall be limited to beyond 300 feet of the active burrows until a qualified biologist has confirmed that nesting efforts are compete or not initiated. In addition to monitoring breeding activity, if construction is proposed to be initiated during the breeding season or active relocation is proposed, a burrowing owl relocation plan will be developed and approved by the City of Ontario, CDFW and USFWS.

### CM BIO-6 Preconstruction Focused Bat Survey

Prior to implementation of project activities, a qualified biologist shall be retained to determine whether potential roosting sites for bats may be affected. For large ornamental trees and palms suitable for bat roosting/nursery, exit counts and acoustic surveys shall be performed prior to initial ground disturbance, vegetation or structure removal to determine whether the Project Site, Offsite Areas and a 300-foot buffer supports a nursery or roost, and by which species. This work will occur between late -spring and late summer and/or in the fall (generally mid-March through late October).

If the results of the bat survey find a total of a single roosting individual of a special status bat species or 25 or more individuals of a non-special status bat species with potential to be present in the Project Site and Offsite Areas (i.e., pallid bat, Townsend's big-eared bat, and western yellow bat), a Bat Management Plan shall be developed to ensure

mortality to bats does not occur. For each location confirmed to be occupied by bats, the plan will provide details both in text and graphically where exclusion devises/and or staged tree removal will need to occur, the timing for exclusion work and the timeline and methodology needed to exclude the bats. The plan will need to be reviewed and approved by CDFW prior to disturbance of the roosts.

### CM BIO-7 Programmatic Assessment Area CEQA Analysis

The 63.29-acre Project Level Assessment Area is located within the northern region of the Specific Plan Boundary including APN's 0216-311-09, 1053-301-01, -02, 1053-311-01, -02, 1053-321-01, -02, and -03. Authorization to access this region of the project was not provided and therefore was analyzed programmatically based on aerial photographs and assessments from the adjacent parcel boundaries. To ensure that potential adverse effects to sensitive species and resources are reduced to a less than significant level, a focused biological resources assessment and impact analysis shall be conducted in this Project Level Assessment Area portion of the Specific Plan Boundary prior to approval of development within this region. In addition to completing CEQA review, any focused surveys and required mitigation measures shall be implemented prior to project approval and initiation of construction

# Executive Summary

This report contains the findings of a habitat suitability assessment for the Delhi Sands flower-loving fly (*Rhaphiomidas terminatus abdominalis*) (DSF), a federally endangered species, for the Sares-Regis proposed Brookfield site in the City of Ontario, San Bernardino County, California. The purpose of this assessment is to characterize existing site conditions at the project site and assess the quality of Delhi sand soils on the project to determine if they provide suitable habitat for DSF. DSF requires clean, aeolian deposited Delhi Sand soil that has not been mixed with clay soils. Delhi Sand soils mixed with clay soils will harden or consolidate. Consolidated soils prevent DSF from burrowing into the soils and, thus, are unsuitable for the species. The habitat suitability assessment was conducted by Thomas J. McGill, Ph.D. (ELMT Consulting) on July 30, 2024.

The project site is mapped by the United States Department of Agriculture (USDA) Natural Resources Conservation Service (NRCS) Soil Survey as Delhi Sand soils. However, the site has been subject to several decades of use as cattle ranches and dairy farms. Due to this long-standing agricultural use, there is no native habitat on the site. The site supports one (1) land cover type that is classified as heavily disturbed. Due to this regime of constant site disturbance, the site does not support clean Delhi sand soils and is unsuitable for DSF.

# Section 1 Introduction

ELMT Consulting (ELMT) prepared this Delhi Sands Flower-loving Fly (DSF) Habitat Suitability Assessment for the proposed Brookfield Project Site (project site or site) located in the City of Ontario, San Bernardino County, California. Thomas J. McGill, Ph.D., inventoried and evaluated the condition of the habitat on July 30, 2024. This assessment was conducted to determine the project site supports clean Delhi sand soils capable of providing suitable habitat for DSF. DSF requires clean, aeolian (wind) deposited Delhi Sand soil that has not been mixed with clay soils. Delhi Sand soil mixed with clay soil will harden or consolidate. Consolidated soils prevent DSF from burrowing into the soil and, thus, are unsuitable for DSF.

## 1.1 PROJECT LOCATION

The project site is generally located south of State Route 60, west of Interstate 15, north of the State Route 91, and east of State Route 83 in the City of Ontario, San Bernardino County, California. The project site is depicted on the Corona North and Prado Dam quadrangle of the United States Geological Survey's (USGS) 7.5-minute topographic map series in an unsectioned portion of Township 2 South, Range 7 (refer to Exhibit 1, *Site Vicinity*). Specifically, the project site is bordered by Ontario Ranch Road (Edison Avenue) to the north, Walker Avenue to the east, Eucalyptus Avenue to the south, and Grove Avenue to the west (refer to Exhibit 2, *Project Site*). The following Assessor Parcel Numbers (APNs) 0216-321-01, -02, -03, -06, -07, and -08, and 0216-322-01, -02, -03, -04, and -10 occur onsite.

## 1.2 PROJECT DESCRIPTION

The Brookfield project proposes the construction and operation of residential, industrial and commercial uses.

# Section 2 Background

It has been generally acknowledged that DSF occurs in Delhi sand soils, particularly clean dune formations composed of Aeolian sands. Conversely, soils and sands deposited by fluvial processes from the surrounding alluvial fans do not support DSF. These alluvial soils are composed of course sands, cobble and gravel (Tujunga soils) or coarse sands, silts and clays (Cieneba soils). In this part of San Bernardino County, the separation of soil types has been lost due to the mixing and cross contamination from years of agricultural activities, development, and other man-made disturbances.

Depending on the extent of mixing and contamination, some areas formally mapped as Delhi sand soils no longer have potential to support DSF populations. Conversely, some areas formally mapped as Cieneba soils may now support wind deposited Delhi sand soils and have potential to support DSF. Six DSF experts (Ken Osborne, Greg Ballmer, Rudy Matoni, Karin Cleary-Rose, Alison Anderson and Tom McGill) used this criterion, the relative abundance of clean Delhi sand soils versus the amount of Cienba or other alluvial soils, to rate the suitability of the habitat to support DSF (Michael Brandman Associates, 2003). Soils high in gravel and alluvial materials, or high in fine materials such as silts and clays, were rated low, while soils that appear to be high in Aeolian deposited sands were rated high. This qualitative assessment of DSF habitat was further refined by considering the relative degree of soil compaction. Alluvial soils have a tendency to solidify to a hard surface pavement, while Aeolian soils are easier to penetrate and provide good substrate for DSF.

Although it has been common to attribute the presence of four common plant species California buckwheat (*Eriogonum fasciculatum*), California croton (*Croton californicus*), deer weed (*Acmispon glaber*), and telegraph weed (*Heterotheca grandiflora*) as indicators of habitat suitability, for the assessment, vegetation composition was not given much weight in making this habitat evaluation. These dominant plant species, and plant species composition of habitats, may not be directly relevant to larval development (due to likely predatory or parasitic habitat of DSF larvae) (Osborne, et al. 2003). The known immature life histories of the nine asiloid fly families, including that to which the DSF is classified, are primarily predatory and/or parasitic on other invertebrate species (mainly insects) and the presence or absence of plant species appears not to be relevant to the life history of these flies. Regardless, none of these plant species were observed within the site boundary.

Land with suitable DSF habitat includes those areas with open, clean and unconsolidated Delhi Series soils that have not been permanently altered by residential, commercial, or industrial development, or other human actions. Areas known to contain Delhi sand soils and/or to be occupied by DSF have been divided by USFWS into three recovery units (Colton, Jurupa, and Ontario Recovery Units (USFWS, 1997)). These recovery units are defined as large geographic areas based on geographic proximity, similarity of habitat, and potential genetic exchange. The project site is located within the Ontario Recovery Unit (refer to Exhibit 3, *DSF Recovery Units*).

Exhibit 3

# Section 3 Methodology

The criteria discussed in detail below were used to rate the relative abundance of clean Delhi sand soils verses the amount of Cieneba Tujunga, or other alluvial soils, to rate the suitability of the habitat to support DSF. Soils high in gravel and alluvial materials, or high in fine materials such as silts and clays, were rated low, while soils that appear to be high in Aeolian deposited sands were rated high. This qualitative assessment of DSF habitat was further refined by considering the relative degree of soil compaction. Alluvial soils have a tendency to solidify to a hard surface pavement, while Aeolian soils are loose sandy soils that are easier to penetrate and provide good substrate for DSF.

## 3.1 SOIL

Onsite soils were researched prior to the field visit using the United States Department of Agricultural (USDA) Natural Resources Conservation Survey (NRCS) Soil Survey for San Bernardino County, California. In particular, the USDA NRCS was reviewed to determine the location of mapped Delhi sand soils on or within the immediate vicinity of the project site.

## 3.2 VEGETATION

Vegetative resources and surrounding land uses were also assessed as part of determining baseline conditions by walking meander transects and recording all species observed and adjacent land uses. Common plant species observed during the field investigation were identified by visual characteristics and morphology in the field and recorded in a field notebook. Unusual and less-familiar plants were photographed in the field and identified in the laboratory using taxonomic guides. Taxonomic nomenclature used in this study follows the 2012 Jepson Manual (Hickman 2012). In this report, scientific names are provided immediately following common names of plant species (first reference only).

## 3.3 HABITAT SUITABILITY ASSESSMENT

The scope of the habitat suitability assessment was to determine the presence or absence of unconsolidated Delhi sand deposits and to determine its quality as it pertains to DSF. DSF permitted biologist, ELMT biologist Tom McGill surveyed the project site on July 30, 2024. The habitat suitability assessment consisted of a visual and tactile inspection of all areas on the project site that contain Delhi sand soils. Soils along the eastern portion of the project site are mapped as Delhi fine sands (refer to Exhibit 4, *Soils*). The site was evaluated for the quality or purity of Delhi Sands and for its potential to support DSF. Areas were assigned one or more ratings ranging between 1 and 5, with 5 being the best quality and most suitable habitat, as detailed below in each paragraph:

Ratings

1 Soils dominated by heavy deposits of alluvial material including coarse sands and gravels with little or no Delhi sand soils and evidence of soil compaction. Developed areas, non-Delhi sands soils with high clay, silt, and/or gravel content. Delhi sands extensively and deeply covered by dumping of exotic soils, rubble, trash or organic debris. *Unsuitable.*

2 Delhi sand soils are present, but the soil characteristics include a predominance of alluvial materials (Tujunga Soils and Hilmar loamy sand), or predominance of other foreign contamination. Sever and frequent disturbance (such as maintenance yard or high use roadbed). *Very Low Quality*.

3 Although not clean, sufficient Delhi sand soil are present to prevent soil compaction. Moderately contaminated Delhi sands. Delhi sands with moderate to high disturbance (such as annual disking). Sufficient Delhi sands are present to prevent soil compaction (related to contamination by foreign soils). Some sandy soils exposed on the surface due to fossorial animal activity. *Low Quality*.

4 Abundant clean Delhi sand soils with little or no foreign soils (such as alluvial material, Tujunga soils or Hilmar loamy sand) present. Moderate abundance of exposed sands on the soil surface. Low vegetative cover. Evidence of moderate degree of fossorial animal activity by vertebrates and invertebrates. May represent high quality habitat with mild or superficial disturbance. *Moderate Quality*.

5 Sand dune habitat with clean Delhi sand soils. High abundance of exposed sands on the soil surface. Low vegetative cover. Evidence (soil surface often gives under foot) of high degree of fossorial animal activity by vertebrates and invertebrates. Sand associated plant and arthropod species may be abundant. *High Quality*.

It should be noted that habitat qualities often vary spatially within a site so that conditions on a site fall within a range of qualities. Further, overall habitat quality is affected by the overall habitat value of a site.

Exhibit 4

# Section 4 Results

## 4.1 EXISTING CONDITIONS

Due to historic and existing land uses, no native or natural/undisturbed plant communities were observed on the project site. The project site consists of a mixture of land uses, including rural residential structures, cattle stock yards, waste ponds, and other agricultural uses. These disturbances have eliminated the natural plant communities that once occurred on and surrounding the project site (refer to Appendix A, *Site Photographs*, for representative site photographs).

The disturbed from its decadence is a direct result of the long-standing use of the site as a cattle ranch resulting in barren, contaminated soils with little or no vegetation. The dominant land use feature are the numerous stockyards for cows. These areas are completely barren with a thick layer of cow mature on top of the native soil that is periodically removed. Stock ponds created to treat wastewater are the second most dominate feature and are in constant flux as ponds are filled, dried out and refilled.

Developed areas include several rural residences along the northern and western boundaries with landscaped yards. Facilities for hay storage, diary operations and equipment maintenance and repair and stock piling of soils are found in the central portion of the project site.

It should be noted that several small non-native grasslands occur in scattered patches across the site that are dominated by invasive non-native grasses and may contain a variety of native and other non-native species. Areas of non-native grassland are dominated by brome (*Bromus* spp.) and wild oats (*Avena fatua*). In addition, Russian thistle (*Salsola tragus*) and puncture vine (*Tribulus terrestris*), short-podded mustard (*Hirschfeldia incana*), common fiddleneck (*Amsinckia intermedia*), telegraph weed (*Heterotheca grandiflora*), and western ragweed (*Ambrosia psilostachya*) were also identified in these small patches on non-native grasses.

## 4.2 HABITAT SUITABILITY ASSESSMENT

Per USDA NRCS Soil Survey results, Delhi sand soils have been mapped along the eastern boundary of the project site. Since Delhi sand soils are wind deposited (aeolian) as surface soils, they(See Exhibit 1, Regional Location) are affected by surface disturbance. Land with suitable DSF habitat include those areas with open, undisturbed Delhi Series soils that have not been permanently altered by residential, commercial, or industrial development, or other human actions. Areas known to contain Delhi sand soils and/or to be occupied by DSF have been divided by USFWS into three recovery units (Colton, Jurupa, and Ontario Recovery Units (USFWS, 1997)). These recovery units are defined as large geographic areas based on geographic proximity, similarity of habitat, and potential genetic exchange. As noted above, the project site is within the Ontario Recovery Unit.

Areas that have been mapped as supporting Delhi Sand soils have either been converted into pastures/holding pins or large stock ponds used to process wastewater or rural residential housing and infrastructure needed for managing the dairy farms. The stockyards are covered by a thick continuous layer of cow mature that has been mixed over the decades into any underlying Delhi Sand soils by the

constant movement of cow in the stockyards. The underlying soils contaminated with the organic waste found in the cow mature has become compacted and no longer penetrable by DSF.

The stock ponds found throughout the project site are in continuous use and either contain wastewater or are in the process of drying out for the removal of the underlying contaminated soil and deposed of offsite in an appropriate landfill. The repetitive process of contaminating the underlying soils with organic waste products, drying out the ponds and removing and deposing of the soils have eliminated all of the underlying Delhi Sand soils.

All Delhi Sand soils that may have occurred on the project site have either been removed by maintenance of the stock ponds or is so contaminated with cow mature and other waste products that clean Delhi Sand soils needed by DSF no longer exist with the project site. All areas designated as supporting Delhi Sand soils were determined to no longer support clean Delhi Sands needed by the species and were rated as unsuitable with a habitat suitability rating of 1 (see Exhibit 5, *DSF Habitat Suitability*).

# Section 5 Conclusion and Recommendations

Based on his twenty-five years of experience with DSF and occupied DSF ecosystems, the information provided in this report, and information based on the referenced DSF habitat suitability scale (Ballmer, Osborne, McGill 2003), Dr. McGill determined that the site no longer supports clean Delhi Sand soils and was rated as unsuitable habitat with a habitat rating of 1. Implementation of the project will have no significant impacts on federally or State listed species known to have historically occurred in the general vicinity of the project site, specifically DSF. Critical Habitat has not been designated for the species. No further surveys are recommended.

Riverside, CA 92501

Kimley»Horn

## EXECUTIVE SUMMARY

Kimley-Horn and Associates, Inc. (Kimley-Horn) is under contract to complete a Cultural Resources Inventory and Evaluation Report for the proposed Center Park Specific Plan Project (Project) in City of Ontario (City), San Bernardino County, California. The proposed Project consists of a land use plan for residential and mixed-used retail/office development and is being reviewed pursuant to California Environmental Quality Act (CEQA) with the City of Ontario acting as the Lead Agency. This report is intended to support the City's review and consideration of the Project and potential impacts it may have on the environment specifically as it relates to cultural resources.

Kimley-Horn conducted research and cultural resources records searches through the Native American Heritage Commission (NAHC), South Central Coastal Information Center (SCCIC), California Office of Historic Preservation (OHP), and the City for the Project area and vicinity. Kimley-Horn staff identified 15 cultural resources in the Project area during the record search, all of which consist of historic-period dairy farms and associated homes. Kimley-Horn also conducted a survey of the Project area and revisited all 15 identified resources. As a result of the record search and survey, it was noted that some previously recorded sites had missing or incomplete records, to include missing data related to the original delineation of site boundaries. As such, Kimley-Horn re-created the site boundaries where possible based on record search data, while creating new ones for those with missing or incomplete information, based on the results of research and survey. Additionally, Kimley-Horn prepared preliminary evaluations for each site's eligibility for listing in the CRHR and local inventory. After survey and initial evaluations were completed, Kimley-Horn was notified that the City had obtained Urbana Preservation & Planning, LLC (Urbana) to complete an updated inventory and evaluation for the broader Ontario Ranch/New Model Colony Area, including the Project area. As such, recordation and evaluation efforts were undertaken in conjunction with Urbana for each resource to identify their potential eligibility for listing in the California Register of Historical Resources (CRHR) and/or designation as City of Ontario Historic Landmark.

As a result of these efforts, a total of 12 cultural resources with historic structures in the Project were identified as a result of this study. Three (3) of the identified resources are recommended eligible for listing in the CRHR and/or for designation as a City of Ontario Historic Landmark, and are considered historical resources under CEQA. Conditions related to reducing impacts to significance historic built environment resources are recommended, though with the understanding that such actions may not reduce impacts to these resources to less than significant. This study also concludes that the Project area has a high sensitivity for historic archaeological resources associated with the dairy farming industry, though maintains a relatively low sensitivity for buried prehistoric archaeological resources as a result of prior disturbance. However, both due to the high sensitivity of historic archaeological resources and due to the fact that the Project area was underlain by Holocene-age soils that would have maintained a moderate-to-high potential for prehistoric archaeological resources prior to disturbance, it is recommended that conditions related to archaeological monitoring during Project implementation and the process for inadvertent discoveries be included as a part of the proposed Project. With these conditions in place, impacts to unique archaeological resources would be reduced to less than significant.

## INTRODUCTION

Kimley-Horn and Associates, Inc. (Kimley-Horn) is under contract to complete a Cultural Resources Inventory and Evaluation Report for the proposed Center Park Specific Plan Project (Project) in the City of Ontario (City), San Bernardino County, California. The Project is subject to review pursuant to California Environmental Quality Act (CEQA) with the City of Ontario acting as the Lead Agency. This report is intended to support the City's review and consideration of the Project and potential impacts it may have on the environment specifically as it relates to cultural resources. Efforts conducted for this assessment include a pedestrian survey of the Project area, cultural resources records searches, a Sacred Lands File (SLF) search, literature review, a review of cultural databases and repositories, and a review of historic maps and imagery, as well as recordation and evaluation of each resource. Due to a concurrent effort being conducted by Urbana Preservation & Planning, LLC (Urbana) to update inventories and evaluations of the broader Ontario Ranch/New Model Colony Area, recordation and evaluations for resources within the Project area were completed in conjunction with Urbana and the City. This report presents the results of these collective efforts, as well as recommended mitigation measures for the Project.

## PROJECT DESCRIPTION

The Project area is in the southwestern portion of the City of Ontario within San Bernardino County (**Figure 1**). The Project area is bounded to the north by a Southern California Edison (SCE) Easement located approximately 330 feet north of Edison Avenue/Ontario Ranch Road, Eucalyptus Avenue to the south, Campus Avenue to the west, and Walker Avenue to the east (**Figure 2**). The Project area is made up of 29 existing parcels totaling 257.34 acres. The proposed Project consists of a Specific Plan to allow for a residential and mixed-used retail/office development on the existing 29 parcels. The development would include up to 250,919 square feet of commercial retail/office uses, up to 4,293 residential units across low, low-medium, and mixed-use residential uses, 67.26 acres of open space parkland/non-recreation uses, and associated on-site and off-site infrastructure improvements, as described further below. The Project area is anticipated to be developed in four phases within 22 planning areas.

## REGULATORY SETTING

### California Environmental Quality Act

The California Environmental Quality Act (CEQA) applies to all discretionary projects undertaken or subject to approval by the state's public agencies (California Code of Regulations 14(3), § 15002(i)). Under CEQA, "A project with an effect that may cause a substantial adverse change in the significance of a historical resource is a project that may have a significant effect on the environment" (Cal. Code Regs. Tit. 14(3), § 15064.5(b)). Guidelines for Implementation of the California Environmental Quality Act (State CEQA Guidelines) section 15064.5(a) defines a "historical resource" as a resource that meets one or more of the following criteria:

- Listed in, or eligible for listing in, the California Register of Historical Resources (California Register)
- Listed in a local register of historical resources (as defined at Cal. Public Res. Code § 5020.1(k))
- Identified as significant in a historical resource survey meeting the requirements of § 5024.1(g) of the Cal. Public Res. Code

Figure 1: Project Vicinity Map

Figure 2: Project Area Map

- Determined to be a historical resource by a project's lead agency (Cal. Code Regs. Tit. 14(3), § 15064.5(a))

A historical resource consists of "Any object, building, structure, site, area, place, record, or manuscript which a lead agency determines to be historically significant or significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California… Generally, a resource shall be considered by the lead agency to be 'historically significant' if the resource meets the criteria for listing in the California Register of Historical Resources" (Cal. Code Regs. Tit. 14(3), § 15064.5(a)(3)). The significance of a historical resource is impaired when a project demolishes or materially alters in an adverse manner those physical characteristics of a historical resource that convey its historical significance and that justify its eligibility for the California Register. If an impact on a historical or archaeological resource is significant, CEQA requires feasible measures to minimize the impact (State CEQA Guidelines § 15126.4 (a)(1)). Mitigation of significant impacts must lessen or eliminate the physical impact that the project will have on the resource. Section 5024.1 of the Cal. Public Res. Code established the California Register. Generally, a resource is considered by the lead agency to be "historically significant" if the resource meets the criteria for listing in the California Register (Cal. Code Regs. tit. 14(3), § 15064.5(a)(3)).

Finally, CEQA requires that significant effects on unique archaeological resources be considered and addressed. CEQA defines a unique archaeological resource as any archaeological artifact, object, or site about which it can be clearly demonstrated that, without merely adding to the current body of knowledge, there is a high probability that it meets any of the following criteria:

- Contains information needed to answer important scientific research questions and there is a demonstrable public interest in that information.
- Has a special and particular quality such as being the oldest of its type or the best available example of its type.
- Is directly associated with a scientifically recognized important prehistoric or historic event or person.

CEQA Guidelines Section 15064.5 Appendix G includes significance criteria relative to archaeological and historical resources. These have been utilized as thresholds of significance here, and a project would have a significant environmental impact if it would:

- Cause a substantial adverse change in the significance of a historical resource as defined in section 10564.5;
- Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 10564.5;
- Disturb any human remains, include those interred outside of formal cemeteries.

**California Public Resources Code**

California Public Resources Code (PRC) § 5024.1 establishes the California Register of Historical Resources (CRHR). The register lists all California properties considered to be significant historical resources. The

CRHR also includes all properties listed or determined eligible for listing in the NRHP, including properties evaluated and determined eligible under § 106.

California Public Resources Code (PRC) § 5020 to 5029.5 continued the former Historical Landmarks Advisory Committee as the State Historical Resources Commission. The commission oversees the administration of the California Register of Historical Resources and is responsible for designating State Historical Landmarks and Historical Points of Interest.

California Public Resources Code (PRC) § 5079 to 5079.65 define the functions and duties of the Office of Historic Preservation, which administers federal- and state-mandated historic preservation programs in California as well as the California Heritage Fund.

California Public Resources Code (PRC) § 5097.9 to 5097.991 provide protection to Native American historical and cultural resources and sacred sites; identify the powers and duties of the Native American Heritage Commission (NAHC); require that descendants be notified when Native American human remains are discovered; and provide for treatment and disposition of human remains and associated grave goods.

**California Health and Safety Code**

California Health and Safety Code § 7050.5-7055 govern the process for reporting inadvertent discoveries of human remains to the County Coroner; the process for the County Coroner to report human remains of Native American descent to the Native American Heritage Commission (NAHC); and the protections offered against removal or desecration of human remains.

**California Code of Regulations**

The California Code of Regulations govern the nomination of resources to the California Register of Historical Resources (CRHR) (14 California Code of Regulations [CCR] § 4850). The regulations set forth the criteria for eligibility as well as guidelines for assessing historical integrity and resources that have special considerations.

**California Register of Historical Resources (CRHR)**

The State Historical Resources Commission has designed this program for use by state and local agencies, private groups, and citizens to identify, evaluate, register, and protect California's historical resources. The California Register of Historic Resources (CRHR) is the authoritative guide to the state's significant historical and archeological resources.

The California Register of Historic Resources (CRHR) program encourages public recognition and protection of resources of architectural, historical, archeological, and cultural significance; identifies historical resources for state and local planning purposes; determines eligibility for state historic preservation grant funding; and affords certain protections under the California Environmental Quality Act (CEQA). To be eligible for listing in the CRHR, a resource must meet at least one of the following criteria:

- Is associated with events that have made a significant contribution to the broad patterns of local or regional history or the cultural heritage of California or the United States.
- Is associated with the lives of persons important to local, California, or national history.
- Embodies the distinctive characteristics of a type, period, region, or method of construction; represents the work of a master; or possesses high artistic values.
- Has yielded, or has the potential to yield, information important to the prehistory or history of the local area, California or the nation.

In addition to having significance, resources must have integrity for the period of significance. The period of significance is the date or span of time within which significant events transpired or significant individuals made their important contributions. Integrity is the authenticity of a historical resource's physical identity as evidenced by the survival of characteristics or historic fabric that existed during the resource's period of significance. Alterations to a resource or changes in its use over time may change its historical, cultural, or architectural significance. Simply, resources must retain enough of their historic character or appearance to be recognizable as historical resources and to convey the reasons for their significance. A resource that has lost its historic character or appearance may still have sufficient integrity for the CRHR if, under Criterion 4, it maintains the potential to yield significant scientific or historical information or specific data.

Isolated finds, such as a single artifact with no other associated cultural materials, are generally considered to be ineligible for listing in the CRHR. However, the nature of the isolated resource and any available ethnographic data regarding affiliated Native American populations should be carefully considered during the evaluation process, particularly as it relates to potential eligibility under Criterion 4.

**California Historical Landmarks**

California Historical Landmarks are buildings, structures, sites, or places that have been determined to have statewide historical significance. The resource must be approved for designation by the County Board of Supervisors or the City/Town Council in whose jurisdiction it is located; be recommended by the State Historical Resources Commission; and be officially designated by the Director of California State Parks. A resource must meet at least one of these following criteria:

- Be the first, last, only, or most significant of its type in the state or within a large geographic region (Northern, Central, or Southern California).
- Be associated with an individual or group having a profound influence on the history of California.
- Be a prototype of, or an outstanding example of, a period, style, architectural movement or construction or is one of the more notable works or the best surviving work in a region of a pioneer architect, designer, or master builder.

**California Points of Historical Interest**

California Points of Historical Interest are sites, buildings, features, or events that are of local (city or county) significance and have anthropological, cultural, military, political, architectural, economic, scientific or technical, religious, experimental, or other value. Points of Historical Interest designated after

December 1997 and recommended by the State Historical Resources Commission are also listed in the CRHR. No historical resource may be designated as both a landmark and a point. If a point is subsequently granted status as a landmark, the point designation is retired. To be eligible for designation as a Point of Historical Interest, a resource must meet at least one of the following criteria:

- Be the first, last, only, or most significant of its type within the local geographic region (city or county).
- Be associated with an individual or group having a profound influence on the history of the local area.
- Be a prototype of, or an outstanding example of, a period, style, architectural movement or construction or be one of the more notable works or the best surviving work in the local region of a pioneer architect, designer or master builder.

**California Historic Building Code**

The California Historic Building Code—California Code of Regulations, Title 24, Part 8—provides regulations for the preservation, restoration, rehabilitation, relocation, or reconstruction of buildings or properties designated as qualified historical buildings or properties. The California Historic Building Code is intended to provide solutions for the preservation of qualified historical buildings or properties, to promote sustainability, to provide access for persons with disabilities, to provide a cost-effective approach to preservation, and to provide for the reasonable safety of the occupants or users.

**City of Ontario**

The City of Ontario is a Certified Local Government (CLG) and a Preserve America Community that maintains a robust Historic Preservation Program (HPP) governed by the City's Historic Preservation Ordinance (HPO) and Article 26 of the City's Development Code. Per the City's process, all aspects of historic preservation are overseen by planning staff, the Historic Preservation Commission (HPC), and the Historic Preservation Subcommittee (HPSC). Cultural resources within the City are subject to evaluation for local listing under the City's Historic Landmark designation criteria:

a. It exemplifies or reflects special elements of the City's history;
b. It is identified with persons or events significant in local, state, or national history;
c. It is representative of the work of a notable builder, designer, architect, or artist;
d. It embodies distinguishing architectural characteristics of a style, type, period, or method of construction;
e. It is a noteworthy example of the use of indigenous materials or craftsmanship;
f. It embodies elements that represent a significant structural, engineering, or architectural achievement or innovation;
g. It has a unique location, a singular physical characteristic, or is an established and familiar visual feature of a neighborhood, community or the City; or
h. It is one of the few remaining examples in the City, region, state, or nation possessing distinguishing characteristics of an architectural or historical type or specimen.

Pursuant to Chapters 4 and 7 of the City's Development Code, minor alterations, restoration, rehabilitation, and demolition of historic resources listed in the local register require issuance of a

Certificate of Appropriateness with findings and an approved replacement structure/building prior to impact. Additionally, as outlined in Subsections G and H of Chapter 4, listed/eligible properties are designated a tier from a 3-tier system by the Historic Preservation Commission (or potentially a subcommittee of the commission) that helps identify a mitigation fee for properties based on size, type, and significance.

*Subsection G: Historic Resources Tiering System*

1. Tier I consists of historic resources that should not be demolished or significantly altered under any circumstances, regardless of their designation status, as they are the City's most significant historical or cultural resources:
    a. A resource listed on the Ontario Register that meets at least one of the criteria within the Architecture/Form category, and 3 criteria within the History category, listed in Subsection H; or
    b. A contributing resource within a district that meets at least one of the criteria within the Architecture/Form Category and 3 criteria within the History Category as listed below.
2. Tier II consists of historic resources wherein demolition of these properties should be avoided:
    a. Any historic resource listed or determined eligible for listing in the National Register of Historic Places;
    b. Any historic resource listed or determined eligible for listing in the California Register of Historic Resources;
    c. A historic resource listed on the Ontario Register and meets at least 2 criteria within the Architecture/Form or History categories, listed in Subsection H; or
    d. A contributing resource within an eligible historic district wherein the district meets at least 2 of the criteria in either the Architecture/Form or History categories as listed in Subsection H (Historic Resource Tiering Criteria) of this Section.
3. Tier III consists of historic resources that are Designated Local Historic Landmarks, are contributing properties within Designated Local Historic Districts, or are eligible historic resources. Demolition of these resources should be avoided where possible but may be appropriate under certain circumstances.

*Subsection H: Historic Resources Tiering Criteria*

1. Local Historic Landmark
    *a.* Architecture/Form
        (1) The resource is prototypical, or one of the finest examples, of a period, style, architectural movement, or construction in the City of a particular style of architecture, building type, or historical or archeological object. Only preeminent examples should be considered. Good representative examples of a style, period or method of construction are not appropriate; or
        (2) The resource is the first, last, only, or one of the finest examples, notable works, or the best surviving work by an architect or designer of major importance to the City, State or Nation.

*b.* History

(1) The resource is the location of a historic event(s) that has significantly contributed to the history of the City, State, or Nation;

(2) The resource is associated with a business, company, or individual that has made a significant cultural, social, or scientific contribution to the City, State, or Nation;

(3) The resource is identified with a person(s) who has exerted a major influence on the heritage or history of the City, State, or Nation;

(4) The resource embodies the ideals or principles of the "Model Colony" or furthers the ideals or principals established by the Chaffey Brothers;

(5) The resource has a direct relationship to one of the principal historic contexts in the City's history, including the "Model Colony," (includes the Chaffey Brothers, the Ontario Land and Improvement Company, or the citrus industry), the Guasti Winery or the wine industry, or the Dairy Preserve or the dairy industry;

(6) The resource is related with a business, company, or individual significant in the agricultural history of the City;

(7) The resource is related to the archeological past of the region.

2. Local Historic Districts

*a.* Architecture/Form

(1) The district contains resources that are a prototype of, or one of the finest examples of, or the first, last, only, or few remaining groupings of a period, style, architectural movement, or construction in the City of a particular style of architecture, building type, or historical or archeological object. Only preeminent examples should be considered. Good representative examples of a style, period or method of construction are not appropriate; or

(2) The district contains resources that are the first, last, only, or the finest examples, notable works, or the best surviving work by an architect or designer of major importance to the City, State or Nation.

*b.* History

(1) The district is the location of a historic event(s) that has significantly contributed to the history of the City, State, or Nation;

(2) The district is associated with a business, company, or individual that has made a significant, cultural, social, or scientific contribution to the City, State, or Nation;

(3) The district is identified with a person(s) who has exerted a major influence on the heritage or history of the City, State, or Nation;

(4) The district embodies the ideals or principles of the "Model Colony," or furthers the ideals or principals established by the Chaffey Brothers;

(5) The district has a direct relationship to one of the principal historic contexts in the City's history, including the "Model Colony," (includes the Chaffey Brothers, the Ontario Land and Improvement Company, or the citrus industry), the Guasti Winery or the wine industry, or the Dairy Preserve or the dairy industry, or the citrus industry; or

(6) The district is related with a business, company, or individual significant in the agricultural history of the City.

## ENVIRONMENTAL SETTING

The Project is situated in the northern Chino Valley region. The Chino Valley is characterized by a Mediterranean climate consisting of warm, dry summers and mild, wet winters. The Santa Ana River is located seven miles southeast of the Project area, and it originates in the San Bernardino Mountains and flows southwest through San Bernardino, Riverside, and Orange Counties to the Pacific Ocean. Elevation at the Project area is approximately 700 feet above mean sea level, and the topography is relatively flat across an alluvial fan. The late Quaternary Central Avenue fault line is located 5.5 miles to the west (U.S. Geological Survey 2024). Soil compositions consist mostly of Hilmar loamy fine sand (Hr) and Tujunga loamy sand (TuB) across the Project area (SoilWeb 2024). Geologic maps for this vicinity indicate that the Project area was originally underlaid by Holocene-age alluvial gravel and sand of valleys areas (Qa) (Dibblee and Ehrenspeck 2001; Dibblee and Minch 2002). However, the entire Project area has been graded and disced as a result of decades of agricultural activities. Minimal vegetation is present on the Project area as a result of the historic and modern agricultural disturbances, but this region would have once been a wet, lush valley that supported a variety of plant and animal resources. Surrounding land uses are also agricultural and rural land.

## CULTURAL AND HISTORICAL SETTING

### Ethnography

The proposed Project area is located within the ancestral territory of the Gabrieleño/Tongva. Although Alfred Kroeber recorded the territories of southern California tribes in 1925, the ancient territorial borders remain inexact for two reasons: first, territorial boundaries were flexible and, secondly, indigenous borders and land use were not recorded until after European settlements displaced many Native American communities. Although firm and defining borders cannot be known, archaeological, ethnographic, and historic evidence exists to support the prehistoric use by the Gabrieleño/Tongva in the Chino Valley.

The Gabrieleño/Tongva have a rich and diverse material culture, traditionally including shell set in asphaltum, carvings, painting, baskets, an extensive steatite industry, and a wide range of stone, shell, and bone materials. At the time of European colonization, they inhabited numerous permanent villages in fertile lowlands along waterways in sheltered areas along the coast, each of which held a population in the low hundreds. Smaller villages were also located at varying distances from these permanent villages, all of which were highly connected via economic, religious, and social ties (Bean and Smith 1978). Villages contained circular and domed homes made of tule mats, fern, or carrizo, as well as small, circular earth-covered sweathouses (Bean and Smith 1978; Kroeber 1925). Their hunting and gathering subsistence strategy included land and offshore efforts that resulted in the take of both small and large land animals, sea mammals, river and ocean fish, and a variety of plant resources. The population sometimes migrated between villages on a temporary basis throughout the year, returning to their permanent villages for ceremony or when resources needed to be replenished (Hudson and Blackburn 1982).

Records show that the long history of European colonization and harmful displacement of Native Americans initially began in 1542 as a result of Juan Rodríguez Cabrillo visiting the area during exploration. Following many subsequent Spanish visits to the region, the colonization of the indigenous population continued in 1769 around the same time as the establishment of Missions San Gabriel in 1771 and San

Fernando in 1797. Due in part to the introduction of new diseases, as well as the harsh conditions of mission life, the indigenous population quickly dwindled and cultural practices were lost. Following the secularization of the missions, most surviving Gabrieleño/Tongva became wage laborers on the ranchos of Mexican California and were later nearly completely wiped out as a result of a smallpox outbreak in the 1860s. The combination of removal, murder, disease, forced labor, and poor diet contributed to the harmful diaspora of the Gabrieleño/Tongva from established villages to scattered areas of the Los Angeles Basin for survival (Bean and Smith 1978). This history of displacement within their own ancestral lands has led to difficulty in attaining federal recognition. However, the 20th century found a revitalization of the Gabrieleño/Tongva people and culture, and though the communities remain unrecognized by the Federal government, they remain a very active people in their ancestral lands today.

**Prehistory**

Cultural theoretic frameworks for southern California archaeology are frequently debated and refined by archaeologists. The early chronologic models proposed by Wallace (1955, 1978) and Warren (1968) continue to be incorporated into current cultural studies with revisions. Archaeologists have developed the cultural frameworks in southern California by generally relying on relative dating methods using diagnostic artifacts, as opposed to absolute dating, due to a general lack of chronometric data available in the regional archaeological record. The framework proposed by Wallace introduced the Early Period, Millingstone Period, Intermediate Period, and Late Prehistoric Period, which generally follows the geologic time scale of Early, Middle and Late Holocene.

<u>Early Holocene (10,000-7500 calibrated years Before Present (cal BP)</u>

A gradual warming of the environment occurred during the Early Holocene. Researchers have proposed that groups from the Early Holocene were highly mobile and traveled across wide ranges. Cultural resources were portable or expedient to accommodate mobility. Archaeologists have recorded artifacts associated with hunting and plant processing at early Holocene sites, such as projectile points, bifaces, and groundstone tools.

<u>Middle Holocene (7500-3500 cal BP)</u>

The Millingstone Period during the Middle Holocene is characterized by new artifact types. The warming of the environment resulted in adaptations to changing environments and associated plant and animal resources. Temporary and seasonal camps were utilized during the Middle Holocene. Tools were intentionally cached, which indicate an intent to return to specific sites over time. Diagnostic artifacts have been recorded at Middle Holocene sites, such as Pinto and Silver Lake projectile points.

<u>Late Holocene (3500 cal BP through Historic Contact)</u>

Archaeological sites from the Late Holocene contain increasingly diverse artifact assemblages. Increased population is evident and multiple family groups likely coexisted within the communities. Proximity to water was an important factor for the seasonal and permanent settlements. Late Prehistoric archaeological sites contained diverse artifact assemblages, including projectile points, ceramics, pendants, incised stones, and shell beads. An increase in hunting efficiency occurred during the Late Prehistoric Period and Protohistoric Period, which is evident by the bow and arrow technology. An

abundance of mortars and pestles have been recorded at village sites and further indicate a transition towards sedentary habitation.

**History**

The Spanish first arrived at San Bernardino County in 1772 with the expedition of Pedro Fages. In 1774, Juan Bautista de Anza reached the San Bernardino Valley due to his commission to set up quarters at the Mission San Gabriel (Beck and Haase 1974). At this time, an estimated thousands of Native Americans, including the Gabrieleño/Tongva, were either taken to the Mission, removed to work as forced agricultural labor at the estancia in Redlands that served as outpost for the Mission, fled the region, or were killed (Beattie 1923). The Mission San Gabriel and its outposts resulted in a large pastoral empire that extended across the San Bernardino Valley. Cattle ranching became a major local industry during the Mission period.

In 1821, Mexico overthrew Spanish rule, and the Missions began to decline. By 1833, the Mexican government passed the Secularization Act and the Missions, reorganized as parish churches, lost their vast land holdings, and released the indigenous people that remained. Following this, land throughout present-day California was organized into Mexican land grants, and these large pastoral estates continued conducting cattle ranching during the Mexican or Rancho Period (Bacich 2017). One of the largest land grants in the area was the 22,000-acre Rancho Santa Ana del Chino, which encompassed the current Project area. In 1841, the Spanish governor Alvarado granted Rancho Santa Ana del Chino to his uncle, Antonio Maria Lugo. After receiving half of the ownership from Lugo, Isaac Williams built the Chino Ranch into an empire. The Treaty of Guadalupe Hidalgo in 1848 ended the Mexican-American War and the Mexican Rancho Period, triggering what is commonly referred to as the American Period (Del Castillo 1992).

California achieved statehood in the U.S. in 1850, which was quickly followed by the establishment of the County of San Bernardino in 1853. The arrival of the Southern Pacific Railroad to the San Bernardino Valley stimulated further development and settlement. The citrus industry continued to fuel the local economy and contributed to the regional land boom. The local area of Ontario began as a township founded in 1881 by two brothers George and William Chaffey. The local landowners and developers named the township after their hometown of Ontario, Canada. The Chaffey brothers purchased 6,000 acres of land with water rights in present-day Ontario to start the township. Part of the land included space for the Chaffey Agricultural College. The planned Ontario township was declared a “Model Colony” by an Act of Congress. The water rights, agricultural college, and access to transportation encouraged farmers to settle there (Brunzell 2023; City of Ontario 2024; Galvin and Associates 2024). Euclid Avenue was established as a main boulevard in the colony. Dairies were established in the local area in the 1890s after dairy cows came to the California market as a part of the Gold Rush (Brunzell 2023; City of Ontario 2024; Galvin and Associates 2024).

The City of Ontario was incorporated in 1891, during which time citrus crops were the staple of the successful agricultural community, with the local dairy industry only just beginning. The Steel and Green Dairy, which was comprised of adobe buildings at the location of the Battle of Chino, is considered to be

the first dairy developed in the area. Large, available tracts of land prime for agricultural uses in the area were a draw for dairy farmers from Los Angeles County, though citrus remained the dominate industry through the 1940s. Dairies remained smaller family-owned businesses during this period, and the 1920s saw an influx of Dutch immigrants establishing dairies in the areas. Despite the smaller sizes of the operations, the industry boomed alongside surrounding population growth, and dairies began switching from free grazing to dry-lot dairying and mechanized milking in order to optimize milk production and improve efficiency (Brunzell 2023; City of Ontario 2024; Galvin and Associates 2004).

After World War I, many dairies were plagued by tuberculosis in dairy cows, leading to new requirements around pasteurization. Around the same time, some of the industry in Ontario transitioned to aviation when aviation enthusiasts Waldo Waterman and Archie Mitchell established Latimer Field. Eventually, the fliers were moved east to Ontario World Airport, which operated as a training facility for pilots during World War II. During this time, the population across the Los Angeles basin began to grow into a large urban area, pushing dairy farms further into the Chino Valley. By 1949, dairies in the local area provided for over 33% of the dairy production within the County. In the 1950s, the City experienced the same post-World War II population and related housing boom that was so common across the region, and many farming families firmly settled in the area so that by the late 1950s/early 1960s, the Chino Valley was home to the most technologically advanced dairies in the entire country (Brunzell 2023; City of Ontario 2024; Galvin and Associates 2004).

During the post-World War II era, an increased popularity in utilizing Herringbone milk parlors that raised cows on platforms for milking became popular as a way of providing safer working conditions and controlling costs of labor. Prior to this in the 1920s through 1940s, milk parlors were more often constructed in an Art Deco style (1920s-1930s) followed by the Streamline Moderne style (1930s-1940). While the Art Deco milk parlors were more decorative with chevrons and zig-zags and maintained geometric and angular edges, the Streamline Moderne style milk parlors were more utilitarian and designed as two-part buildings with a large area for milking with a connected cooling area that would have maintained a smooth symmetrical style with a flat roof, stucco cladding, and glass block windows. The popularity of the glass block windows in milk parlors peaked in the 1950s, though continued to be constructed in the 1960s (Brunzell 2023; City of Ontario 2024; Galvin and Associates 2004).

In 1967, the County of San Bernardino designated 14,000 acres of Chino Valley agricultural land as an agricultural preserve and, by 1980, the local area had evolved into a world-class dairy center (City of Ontario 2024; Galvin and Associates 2004). However, the land was annexed into Ontario, Chino, and Chino Hills during the 1990s due to rising dairy operation costs and housing demands. The City of Ontario then began referring to their annexed 8,200 acres of the former San Bernardino Agricultural Preserve as the New Model Colony (NMC), which was named after the original Model Colony of Ontario established by the Chaffey brothers. The NMC is also modernly known as Ontario Ranch (City of Ontario 2024; Galvin and Associates 2004).

Ontario’s diverse history of irrigation, agriculture, viticulture, dairy, aeronautics, and World War II production transitioned the City to the next stage of expansive growth, which was focused primarily on

service industries and warehouses in the second half of the 20th century. The City's modern economic base is primarily focused on industrial and manufacturing operations and transportation (freeway, rail, and airport). Today, the City is approximately 32,000 acres in size and continues to be a booming and thriving community (City of Ontario 2024; Galvin and Associates 2004).

## METHODS

All efforts made for the completion of this report were completed pursuant to requirements set forth in the California Environmental Quality Act (CEQA). This study is intended to identify whether cultural resources are located within the Project area, whether any cultural resources are potentially significant pursuant to the above-referenced regulations and standards, and to develop specific recommendations that will address potential impacts to existing or potential resources. Tasks completed include:

- A Sacred Lands Files (SLF) search through the Native American Heritage Commission (NAHC) and a cultural records search through the South Central Coastal Information Center (SCCIC),
- A review of local, state, and national registers and inventories,
- A review of the City's 2004 Historic Context and 2025 draft Historic Context,
- Outreach to the California Office of Historic Preservation (OHP), the City, and GPA Consulting (formerly Galvin & Associates),
- A review of historical and topographic maps and other available literature,
- A pedestrian survey of the Project area,
- Recordation and evaluation of identified cultural resources, and
- Development of recommendations and/or mitigation measures for cultural resources identified or potentially unrecorded within the Project area.

## RESEARCH

### Sacred Lands File Search

The NAHC conducted a search of SLFs for the Project area and vicinity at the request of Kimley-Horn. The NAHC responded on June 10, 2024 and indicated that the results are positive for documented sacred lands in or near the Project area. The results are included in **Appendix A** of this report. The NAHC also provided a list of Native American Tribes who should be contacted for further information. The City of Ontario is responsible for conducting the applicable Assembly Bill (AB) 52 and Senate Bill (SB) 18 Tribal consultation with the Native American Tribes. The results of any Tribal consultation conducted by the City, and any information about Tribal Cultural Resources provided during consultation, will be outlined in the environmental documents prepared for the proposed Project.

### Cultural Resource Records Search

Kimley-Horn cultural resources management staff conducted a cultural resource records search at the SCCIC for the Project area plus a 0.5-mile buffer (record search area) on June 10, 2024 (**Figure 3**). No cultural resources were identified within the Project area during the records search at SCCIC, though two (2) cultural resources were identified within the 0.5-mile buffer: two (2) Southern California Edison transmission lines originally constructed during the historic period. According to the SCCIC's records, four (4) previous cultural studies have occurred in the Project area. However, the studies incorporated large-

scale linear surveys for proposed utility projects and covered very little of the Project area. The results of the records search are outlined in **Table 1** and **Table 2** below, as well as in **Appendix B** of this report.

**Table 1: Previously Recorded Cultural Resources in the Record Search Area**

| Resource | Resource Name | Age | Type | Approximate Location |
|---|---|---|---|---|
| P-36-025440 | Chino-Mira Loma No. 1 Transmission Line | Historic | Structure | 0.35 miles northwest of Project area |
| P-36-026051 | Hayfield-Chino 220kV Transmission Line | Historic | Structure | 0.05 miles north of Project area |

**Table 2: Previous Cultural Studies Identified in the Record Search Area**

| Report | Year | Author | Title |
|---|---|---|---|
| SB-01499 | 1985 | Foster, John M. and Roberta S. Greenwood | Cultural Resources Overview: California Portion, Proposed Pacific Texas Pipeline Project |
| SB-03012* | 1995 | Owen, Shelley Marie | Cultural Resources Survey and Impact Assessment for The Cajon/EPTC Pipeline Project Located in Portions of Los Angeles, San Bernardino, And Orange Counties, CA |
| SB-06095 | 2009 | Applied Earthworks | Confidential Cultural Resources Specialist Report for The Tehachapi Renewal Transmission Project |
| SB-07956* | 2007 | Doolittle, Christopher J. | Archaeological Survey Report for Southern California Edison's G.O. 131-D Assessment of The Chino A-Bank System and System Split Project San Bernadino County, CA |
| SB-07968* | 2011 | Holm, Lisa and John Holson | Supplemental Archaeological Survey Report: Tehachapi Renewable Transmission Project Segment 8 East (Phases 2 And 3) And West (Phase 4), Los Angeles/San Bernardino Counties, CA |
| SB-07977* | 2010 | Panich, Lee, Tsim D. Schneider, and John Holson | Supplemental Archaeological Survey Report: Tehachapi Renewable Transmission Project Segment 8 East (Phases 2 And 3), San Bernardino County, CA |

**Intersects Project Area*

**Local, State, and National Registers and Inventories**

Staff conducted a review of the National Register of Historic Places (NRHP), California Register of Historical Resources (CRHR), National Historic Landmarks list (NHL), and the Built Environment Resource Directory (BERD). The BERD listed five (5) built environment resources located within the Project area:

- 7587 Edison Avenue
- 7721 Edison Avenue
- 7914 Edison Avenue
- 8185 Edison Avenue
- 14213 Bon View Avenue

Figure 3: Record Search Area Map

Each resource was assigned a California Historical Resource Status Code of 7R, which indicates they were identified during a reconnaissance level survey but not evaluated for significance. Many additional buildings located in the Project vicinity, but outside of the Project area, were also listed in the BERD, specifically along Edison Avenue, Bon View Avenue, and Grove Avenue.

**2004 Historic Context Review**

In 2024, Kimley-Horn staff reviewed the Historic Context for the City of Ontario dairy industry prepared by Galvin and Associates in 2004. The historic context examined the New Model Colony (NMC) across 711 individual parcels and 8,200 acres, an area now known as Ontario Ranch. The current Project area is entirely located within the Ontario Ranch community. The NMC historic context identified three (3) distinct periods in local and regional dairy farming: 1) Free Grazing, 2) Dry Lot to Mechanization, and 3) Intense High Technology. Most of the dairy properties in their study area encompassed, at the minimum, a single-family residence and a milking parlor (barn). The authors also identified six (6) architectural styles or influences within their study area:

1. Victorian (1870-1915) and Italianate (1890-1935) influences
2. Craftsman Bungalow style (1905-1930)
3. Art Deco/Art Moderne style (1920-1940)
4. Minimal traditional style (1930-1960)
5. Ranch style (1935-1990)
6. Utilitarian buildings (no specific date)

Using this data, Galvin and Associates (2004) defined nine (9) historic contexts for the NMC study area:

1. Pre-1930: Rural Residential or Free-Grazing Dairy Properties
2. 1920-1940: Art Deco or Streamline Moderne Milk Parlors
3. 1930-1949: Dry Lot Dairying with Mechanization
4. Post-1950: Scientific, Large Capacity Dairies
5. No date specified: Dairy Support Industries or Other Commercial Properties
6. No date specified: Ranch Style Houses
7. No date specified: Craftsman Style Houses
8. No date specified: Buildings with Portuguese Design Influence, and
9. No date specified: Buildings with Dutch Design Influences

Galvin and Associates' 2004 study identified 15 properties within the current Project area. The 15 properties consist of the following addresses, also identified in **Table 3** below:

- 14213 Bon View Avenue
- 14283 Bon View Avenue
- 7587 Edison Avenue
- 7691 Edison Avenue
- 7721 Edison Avenue
- 7891 Edison Avenue
- 7914 Edison Avenue
- 8061 Edison Avenue
- 8185 Edison Avenue
- 8292 Edison Avenue
- 8311 Edison Avenue
- 8381 Edison Avenue
- 8485 Edison Avenue
- 14049 Grove Avenue
- 14117 Grove Avenue

The 2004 study indicated each property was recorded, though no site records were located at the SCCIC during the record search. As such, Kimley-Horn contacted the City on Ontario, OHP, and GPA Consulting (formerly Galvin and Associates) to request copies of any existing documentation of the 15 cultural resources. GPA Consulting indicated that the records were digitized in the City's internal California Historical Resources Inventory Database (CHRID) and that they did not have copies of the records. OHP was able to identify and provide DPR forms for four (4) resources, and the City of Ontario was able to provide one (1) additional site record. The City of Ontario also directed Kimley-Horn to the City's digital database, CHRID, to see if any additional information could be obtained for the sites. The platform is no longer managed and, therefore, the majority of the data is no longer retrievable. However, nine (9) of the addresses were located within CHRID and their records did provide data related to the original Assessor Parcel Numbers (APNs) that were recorded as a part of each site. As such, Kimley-Horn staff were able to re-create the majority of the original site boundaries to facilitate early stages of research for this study. More detail related to data available for each resource is located in **Table 3** below, excluding information related to the SCCIC, as the record search did not produce any relevant site data.

| **Color Key for Table 3 (below)** |
|---|
| No records were located |
| A record was located, but is missing key details, such as site information, site boundary data, etc. |
| A record was located and maintains sufficient site information, site boundary data, etc. |

**Table 3: Results of Record Searches and Record Outreach for Each Property**

| Address | CHRID | City of Ontario | OHP |

| 14049 Grove Ave | Data Located | No Data Located | No Data Located |
| 14117 Grove Ave | Data Located | Data Located | No Data Located |

As a result of outreach to the City, it was noted that an update to the 2004 historic context, which would include recordation and evaluation of all historic-era structures in the NMC area, was in development by

Urbana Preservation & Planning, LLC (Urbana) and that site records for the Project area would be available for utilization in this report. As such, Kimley-Horn conducted a review of the updated 2025 historic context as a part of this study, the results of which are noted below. Additionally, site information compiled as a result of both Kimley-Horn and Urbana surveys is included later in this report, and copies of all site records prepared by Urbana can be found in **Appendix C**.

**2025 Draft Historic Context Review**

Kimley-Horn staff reviewed the draft Historic Context for the City of Ontario dairy industry prepared by Urbana in 2025. This historic context served as an update to the 2004 study described above and examined the same 8,200-acre area that makes up the NMC, now known as Ontario Ranch. During review of the 2004 study for a nearby project in 2023, BCR Consulting identified issues with data availability within the historic context and argued that actual construction of Streamline Moderne Milking Parlors did not take place within the Art Deco era (1920-1940). Instead, their study resulted in the recordation and evaluation of this building type with an associated period of significance of 1940-1965 (Brunzell 2023). During the efforts made for the 2025 historic context update, Urbana recognized a similar error in the 2004 study, though differently from BCR Consulting, concluded that both the Art Deco and Streamline Moderne styles were utilized from the 1920s through the 1960s. Additionally, Urbana's investigations identified inaccuracies with the year-built data utilized in the 2004 report, noting that many properties were developed later than what was recorded. As such, the 2025 study not only provides an updated historical narrative for the regional dairy industry but also includes necessary corrections to the prior context.

The 2025 study identified six (6) distinct themes and associated time periods in local and regional dairy farming: 1) Early Dairy Farms in Ontario, 1900s-1929, 2) Depression-Era and Wartime Dairies, 1930s-1945, 3) Postwar, Large-Capacity Dairies, 1945-1980, 4) Consolidation of Dairy Operations, 1980s-1998, 5) Important Persons, Families, and Ethnic Groups, and 6) Historic Architectural Styles, 1880s-1980s. Though significant people and ethnic groups were noted in the 2004 study, the 2025 study provides a much more detailed summary with an emphasis on Mexican, Portuguese, Basque, and Dutch immigrants. Additionally, the 2025 study includes an updated overview of significant architectural styles, categories, and influences for Ontario Ranch:

- Utilitarian, Vernacular Agricultural Architecture (1880s-1930s)
- Folk Victorian (1880s-1915)
- Craftsman (1900s-1930s)
- Art Deco (1920-1960s)
- Streamline Moderne Style (1930-1960s)
- Minimal Traditional Style (1930-1960)
- Ranch Style (1950-1980)
    - Dutch Influences
    - Portuguese Influences

In addition to updates to the historical context, the 2025 study included a large-scale survey of the Ontario Ranch area. The survey effort included recordation and evaluations of historic-era resources using the

updated historic context, significant themes, and architectural styles. As a result of the survey, Urbana identified 14 properties within the current Project area. The information in **Table 4** below includes the addresses for each of these properties, as well as details regarding their relationship to the 15 properties recorded in 2004.

| **Table 4: Properties Identified in 2025 Historic Context and Their Relationship to 2004 Properties** | |
|---|---|
| **Addresses/Name** | **Relationship to 2004 Properties** |
| 13839-13905 Bon View Ave | Not previously recorded within Project area; consists of 3 APNs, though the 1 APN within the Project area does not contain structures |
| 7587-7697 Edison Ave | Includes 2 previously recorded properties (7587 and 7691 Edison Ave) that were recorded separately; now combined |
| 14213-14297, 14333-14353, 14450, and 14451 Bon View Ave | Includes 2 previously recorded properties (14213 and 14283 Bon View Ave) that were recorded separately; now combined |
| 7914 Edison Ave | Previously recorded with the same address |
| 7595 Schaefer Ave and 13752 Bon View Ave | Not previously recorded within Project area; consists of 7 APNs, though the 2 APNs within the Project area do not contain structures |
| 13715-13751 Grove Ave, 13817-13819 Grove Ave, 8270-8292 Edison Ave | Includes 1 previously recorded property (8292 Edison Ave) in the Project area; 8270 Edison Ave was not previously recorded in the Project area; remainder of the properties are not located in the Project area |
| 8040 Schaefer Ave and 14050 Grove Ave | Not previously recorded within the Project area, though resides entirely within the Project area and contains historic structures |
| 8061 Edison Ave | Previously recorded with the same address |
| 7721-7891 Edison Ave | Includes 2 previously recorded properties (7721 and 7891 Edison Ave) that were recorded separately; now combined |
| 8185 Edison Ave | Includes 2 previously recorded properties (8185 Edison Ave and 14117 Grove Ave) that were recorded separately; now combined |
| 8311 Edison Ave | Previously recorded with the same address |
| 8335-8381 Edison Ave | Previously recorded as separate properties; now combined; consists of 4 APNs, though only 2 APNs that make up 8381 Edison Ave are within the Project area; 8335 Edison Ave was not previously recorded in the Project area |
| 8485 Edison Ave and 14350 Walker Ave | Previously recorded only as 8485 Edison Ave; now combined with 14350 Walker Ave, which was not previously recorded |
| 14049 Grove Ave | Previously recorded with the same address |

As indicated in the above table, Urbana's study made numerous changes to the site boundary delineation of the previously recorded properties, including separating resources, combining resources, and adding new APNs to resources, though all of the previously recorded properties in the current Project area were included in the updated inventory. The resource names and site boundaries reported within the 2025 Urbana study are henceforth utilized within this report for consistency.

It is important to note that while 13839-13905 Bon View Avenue and 7595 Schaefer Avenue/13752 Bon View Avenue both overlap with the Project area, the portions of the properties within the Project area consist of vacant land and there are no recorded historic-era features (i.e., buildings or structures) from these properties within the Project area. Therefore, there is no potential to impact these properties as potential historical resources, as defined under CEQA, and these properties will not be reported as cultural resources within the current Project area for the purposes of this study. As such, Kimley-Horn identified 12 cultural resources with historic structures in the Project area via the review of Urbana's 2025 study.

**Archival and Historical Research**

Kimley-Horn conducted a review of historic maps and imagery to determine the land use history across the Project area, as shown in **Figures 4-9** below (Historic Aerials 2024).

Figure 4: Historic Aerial Image of Project Area (1938)

Figure 5: Historic Aerial Image of Project Area (1946)

Figure 6: Historic Aerial Image of Project Area (1959)

Figure 7: Historic Aerial Image of Project Area (1966)

Figure 8: Historic Aerial Image of Project Area (1980)

Figure 9: Historic Aerial Image of Project Area (2020)

**Cultural Field Survey**

On June 13, July 3, July 10, and July 16, 2024, a pedestrian survey was conducted for the Project area by Kimley-Horn cultural resources management staff utilizing intensive-level and reconnaissance methods (**Figure 10**). All surface exposures were carefully inspected for the presence of cultural resources. Digital photographs were taken at various points in the Project area. Reconnaissance methods were incorporated when access was impeded by active dairy operations or landowner permissions. Survey was limited to the public right-of-way at parcels where access was not granted.

The Project area remains an active dairy and agricultural area. As such, ground visibility ranged widely during the pedestrian survey but averaged 80%. While visibility was excellent in the agricultural pastures,

the Project area also contained many paved areas that affected surface soil visibility. It was also noted that the portions of the Project area with visible soil have been heavily disturbed due to over a century of dairy and agricultural activities. Additionally, while most of the parcels were in use for active dairy operations, some parcels had been modernly developed.

Staff observed multiple building types during the survey, including single-family residences, milk parlors, ancillary buildings (garages, storage sheds), and ancillary dairy farm structures (pole barns, shade structures, troughs, holding tanks). Numerous architectural styles or influences were identified in the Project area during the survey, such as Craftsman, Ranch, Midcentury Modern, Minimal Traditional, Vernacular, Streamline Moderne, and Art Deco. Staff noted that many of the milk parlors and adjacent residences corresponded in their architectural styles. All historic-era structures were photographed and notes were taken for later use in the report. No prehistoric archaeological resources were observed during the survey.

Figure 10: Project Area Overview

Urbana surveyed the entire Ontario Ranch area between October 2024 and April 2025 for the City's updated historic context, with a focus on dairy farms and properties developed and utilized through the 1980s. Their survey observed the Project area in similar condition as the Kimley-Horn surveys.

**Resource Summary**

As noted previously, many of the previously recorded resources within the Project area had either missing or incomplete site records when Kimley-Horn initiated this study in 2024. As such, Kimley-Horn prepared new site descriptions as a result of record search and survey efforts for use in this report. Additionally, Kimley-Horn prepared preliminary evaluations of each resource, though these were conducted utilizing the 2004 historic context. However, upon receiving copies of the updated 2025 historic context and new site records prepared by Urbana from the City, Kimley-Horn made extensive updates within this report to

ensure consistency with the resource names/addresses, boundaries, site descriptions, and evaluations reflected in Urbana's documents.

As a result of this study, a total of 12 cultural resources were identified within the Project area. A list of each resource, including the address and associated APNs for each resource, is included below in **Table 5** below. Additionally, the exact location of all 12 resources, plus the two (2) resources that were excluded from the study due to lack of historic structures in the Project area, can be viewed on **Figure 11** on page 37 of this report.

| **Table 5: List of Properties (Addresses and APNs) Identified within the Project Area** | |
|---|---|
| **Addresses/Name** | **APNs** |
| 7587-7697 Edison Ave | 105337101, 105337102, and 105353101 |
| 14213-14297, 14333-14353, 14450, and 14451 Bon View Ave | 105335101, 105335102, 105354101, 105354102, 105357101, and 105357102 |
| 7914 Edison Ave | 105317101, 105332102, 105332103, and 105317106 |
| 13715-13751 Grove Ave, 13817-13819 Grove Ave, 8270-8292 Edison Ave | 021631105, 021631104, 021631103, 021631108, and 021631109 |
| 8040 Schaefer Ave and 14050 Grove Ave | 105332101 |
| 8061 Edison Ave | 105333101, 105333102, 105333103, 105333104, 105334101, and 105334102 |
| 7721-7891 Edison Ave | 105336101, 105336102, and 105336103 |
| 8185 Edison Ave | 021632103 |
| 8311 Edison Ave | 021632108 |
| 8335-8381 Edison Ave | 021632201, 021632202, 021632203, and 021632204 |
| 8485 Edison Ave and 14350 Walker Ave | 021632205 and 021632210 |
| 14049 Grove Ave | 021631101 and 021631102 |

**RESOURCE DESCRIPTIONS AND EVALUATIONS**

The 12 cultural resources identified within the Project area are briefly described below, along with conclusion made as to their eligibility for listing in the California Register of Historical Resources (CRHR) and designation as a City of Ontario Historic Landmark. Much of the below narrative was retrieved directly from the respective site record prepared by Urbana located in **Appendix C**, though each record contains additional detailed information for each resource.

*7587-7697 Edison Ave*

This property includes three (3) parcels that total 46.58 acres located south of Edison Avenue between Sultana and Bon View Avenues. It includes a Craftsman Bungalow style dwelling and detached garage, a

Ranch style milk parlor, a Ranch style dwelling, several ancillary structures/features associated with dairy operations (silos, troughs, feeding gates, sheds, pole structures, etc.), and a paved driveway. The property dates to pre-1935 with later developments between 1959 and 1966 and was historically associated with dairy operations and retains that association today. Historical aerials indicate the built environment has remained the same since that time period.

The pre-1935 Craftsman house has an asymmetrical façade with a one-and-a-half-story irregular floor plan. The exterior is clad in tan stucco with red trim on the windows and doors. The high-pitched, side-gabled roof is covered in composition shingles and includes a wide eave overhang, open eaves, decorative wood brackets below the gable end, and exposed rafter ends. A stucco chimney rises from the front roof slope. The fenestration consists of wood-framed, one-over-one, double-hung and fixed windows with red-painted lintels and sills. The main (north) elevation features a full-width front porch beneath the main roofline, supported by tapered wood/concrete beams, as well as a gabled dormer centered on the roof slope. At the rear (south) elevation, a two-story addition was added to the southwest corner in the late 1970s, which has a gabled roof, aluminum sliding sash windows, and a tan stucco façade. It is easily distinguishable from the original structure but is compatible with the dwelling's historic character and did not result in the removal of original character-defining features. East of the dwelling is a detached one-car garage with a rectangular floorplan, tan stucco facade, and gabled roof.

The Ranch style dwelling at 7587 Edison Avenue and the associated Ranch style milk parlor were constructed between 1959 and 1966. The milk parlor features a horizontal floor plan with two milking parlor wing sections separated by a breezeway. The front section exhibits Ranch style characteristics, including a hip-and-gable roof with wood shake shingles, stucco walls, metal fixed and casement windows, and a stone veneer. The breezeway has metal doors on both the east and west elevations. South of the breezeway, the milking parlor sections have low sloped gable roofs oriented along an east-west axis. Ventilation is provided by horizontal louvered metal shutters on the north and south elevations, positioned between concrete walls. Additional features include a metal door at the main (north) entryway, a circular driveway, and a bulk tank in front with two silos are located at the rear. The dwelling has an asymmetrical façade and a one-story horizontal, rambling floorplan atop a concrete foundation. The exterior is clad in tan painted stucco with a stone veneer on the main (north) elevation. The moderately pitched hip-and-gable roof is topped with composition shingles and has a moderate eave overhang, boxed eaves, a cupola above the breezeway, and a stone chimney on the rear roof slope. The fenestration consists of a mix of aluminum fixed and sliding sash windows and vinyl units. The primary elevation features a recessed entryway below the main roofline with two double half-lite wood doors, a small concrete stoop, a stone planter, and box bay windows accented by red horizontal wood siding. A wide, open breezeway on the east elevation connects the three-car garage to the dwelling.

- The entire property is eligible under CRHR and City of Ontario criteria 1/a for its significant association with the "Postwar, Large-Capacity Dairies, 1945–1980" theme.
- The pre-1935 Craftsman Bungalow is individually eligible under CRHR and City of Ontario criteria 3/d within the "Craftsman Bungalow Style, 1900s–1930s" context with a period of significance of 1920s-1930s.

- The Ranch style dwelling is individually eligible under CRHR and City of Ontario criteria 3/d within the "Ranch Style, 1950–1970s" context with a period of significance of 1959-1966.
- The Ranch style milk parlor is not individually significant, though remains a contributor to the overall significance of the property as a Postwar Large Capacity Dairy complex.

*14213-14297, 14333-14353, 14450, and 14451 Bon View Ave*

This property includes six (6) parcels that total 56.47 acres located east of Bon View Avenue between Euclid and Eucalyptus Avenues. It includes two (2) Ranch style milk parlors, two (2) Minimal Traditional residences, two (2) Craftsman Bungalow residences, two (2) Ranch style dwellings, and multiple geometrically spaced ancillary storage structures located to the rear of the buildings. The property dates to pre-1935 with later improvements between the 1950s and 1990s, and was historically associated with dairy operations and retains that association today. Historical aerials indicate the built environment has remained the same since that time period.

Both Craftsman Bungalows were constructed before 1935. One (1) bungalow located at 14213 Bon View Avenue is a one-and-a-half-story dwelling that has a compact rectilinear floorplan and an asymmetrical façade. The exterior is clad in tan stucco with brown trim on the windows. The high-pitched, cross-gabled roof is topped with composition shingles and features a moderate eave overhang, support brackets below the gable, open eaves with exposed rafter ends, and a shed dormer on the main (west) elevation. The fenestration consists primarily of aluminum sliding sash windows and wood panel doors. The main elevation includes a full-length porch supported by two (2) metal columns, a small stoop, and four (4) concrete square columns approximately four (4) feet in height. The rear (east) elevation features an early addition that was added between 1938 and 1946 and features a stucco façade, gabled roof topped with composition shingles, open eaves with exposed rafter ends, and aluminum windows. It likely originally featured wood-framed, double-hung windows as well as columns composed of a different material, which were removed or altered. The other bungalow at 14343 Bon View Avenue features a rectangular footprint and an asymmetrical façade with a tan stucco exterior. The high-pitched, side-gabled roof is topped with composition shingles and includes a minimal eave overhang, boxed eaves, and two (2) gabled dormers on the north and south elevations. The fenestration primarily consists of aluminum sliding sash windows. An addition was constructed at the east elevation between 1959 and 1966. The dwelling exhibits minimal decorative detailing throughout. A few feet north of the dwelling is a one-car garage, which features a front-gabled roof and a metal overhead door.

A Ranch style milk parlor and two (2) Minimal Traditional residences at 14213-14297 Bon View Avenue were constructed between 1959 and 1966. The milk parlor is a one-story structure that has been substantially altered and now consists of three (3) sections: the front milk house with an addition to the south elevation, the original rear milking parlor to the east of the milk house, now modified as a storage shed, and a new milking parlor section extending from the milk house addition. The milk house and milking parlor are separated by a breezeway which features a metal sliding barn door with a handle on the south elevation. Additional elements include metal doors at the front, a dairy association sign below the gable, and a circular driveway in front of the milk parlor. Both associated Minimal Traditional residences feature asymmetrical façades and rectilinear floorplans atop concrete foundations. The 14283 Bon View Avenue

dwelling has a tan stucco exterior, a hipped roof topped with composition shingles, moderate eave overhang, and boxed eaves. The main entryway is recessed, with a partial porch that includes a small stoop and decorative iron railing and columns. Fenestration consists of aluminum sliding sash windows and paneled doors. The 14297 Bon View Avenue dwelling features a tan stucco façade, a side-gabled roof with composition shingles, and an attached narrow garage with an overhead metal door. The main elevation includes a half-width porch supported by decorative metal columns and railing, a small stoop, aluminum sliding sash windows, and paneled doors.

The Ranch style dwellings were both constructed between 1968 and 1975. The dwelling at 14353 Bon View Avenue features an asymmetrical, horizontal, rambling floorplan atop a concrete foundation. The exterior is clad in tan-painted stucco with brown window trim. The low-pitched hipped roof is topped with terracotta tiles and features a minimal eave overhang with boxed eaves. The fenestration is mostly obscured from the public right-of-way but appears to consist of fixed multi-lite or single pane picture windows. A detached one-car garage is situated south of the dwelling, featuring a tan stucco façade, a hipped roof with terracotta tiles, and a metal overhead door. The dwelling at 14451 Bon View Avenue has an asymmetrical façade and an irregular floorplan atop a concrete foundation. The exterior is clad in tan painted stucco with a brick veneer and a planter on the main (west) elevation. The low-pitched hipped roof is topped with composition shingles, featuring a moderate eave overhang, boxed eaves, and a stone chimney on the rear roof slope. The main elevation showcases a recessed entryway beneath the roofline, with two (2) decorative wood-paneled doors and box bays accented by horizontal wood siding. The fenestration throughout consists primarily of vinyl sliding sash windows.

The Ranch style milk parlor at 14450 Bon View Avenue was constructed between 1968 and 1975. It is a one-story milk parlor with a front milk house and rear milking parlor separated by a breezeway. The milk house features modest Ranch style elements, including a hip-and-gable roof with wood shake shingles, a stucco façade with stone accents along the corners of the main (west) elevation, and metal casement windows on the north elevation. The fenestration throughout has since been boarded up. East of the breezeway, the building is divided into a milking area and a wider holding area. The milking area features louvered horizontal shutters on the north and south elevations, set atop concrete walls. The holding area, which extends outward beyond the milking area, is partially open and supported by concrete walls and metal poles. Both sections have gabled roofs oriented along an east-west axis. Additional features include two (2) glass industrial doors at the front, a circular driveway in front of the milk parlor, and a dairy association sign.

- Though associated with several themes and contexts identified within the 2025 historic context, the property as a whole, as well as the individual buildings, do not possess documented significance in relation to the themes and contexts.
- Though the property retains integrity of location, setting, feeling, and association, several buildings have been subjected to extensive alteration and, therefore, the property does not retain integrity of design, materials, or workmanship.
- The property is not eligible under any criteria for the CRHR or City of Ontario.

*7914 Edison Ave*

This property includes four (4) parcels that total 18.79 acres located north of Edison Avenue between Bon View and Grove Avenues. It includes two (2) Ranch style dwellings and a Streamline Moderne milk parlor. One (1) Ranch style residence and the milk parlor were constructed between 1952 and 1959, while the second residence was added between 1966 and 1980. It was historically associated with dairy operations and retains that association today. Historical aerials indicate the built environment has remained the same since that time period.

The older Ranch style residence has an asymmetrical façade and an irregular floorplan atop a concrete foundation. The exterior is clad in tan painted stucco with brick and wood shiplap veneer on the main elevation. The low-pitched hipped roof is topped with composition shingles, has a moderate eave overhang, boxed eaves, and a brick chimney along the roof slope at the rear (north) elevation. The fenestration consists of metal casement windows and sliding sash windows. The main elevation features a partial-width porch beneath a shed roof supported by decorative metal beams, a small stoop, and additional decorative metal details. To the west side of the dwelling is a one-car garage installed by the 1980s with a brown paneled overhead door. The Streamline Moderne milk parlor is directly west of the residence, though retains only the front milk house section. The rear milking parlor section was demolished by April 2022.

The second Ranch style residence has an asymmetrical façade and a mostly rectilinear floorplan atop a concrete foundation. The exterior is clad in tan painted stucco with a partial brick veneer on the main (south) elevation. The low-pitched hipped roof features a moderate eave overhang and boxed eaves. The fenestration primarily consists of vinyl sliding sash windows, which replaced the original aluminum units in 2022. The main (south) elevation features a recessed main entryway with decorative double wood-paneled doors, a small stoop, a decorative metal beam beneath the roofline and entryway, and an attached garage on the west side with an overhead door.

- Though associated with several themes and contexts identified within the 2025 historic context, the property as a whole, as well as the individual buildings, do not possess documented significance in relation to the themes and contexts.
- While the Streamline Moderne milk parlor may have once been a distinctive example of this architectural type, the building has been subjected to extensive alteration/demolition and, therefore, no longer retains integrity of design, materials, workmanship, feeling, or association.
- The property is not eligible under any criteria for the CRHR or City of Ontario.

*13715-13751 Grove Ave, 13817-13819 Grove Ave, 8270-8292 Edison Ave*

This property includes five (5) parcels that total 46.80 acres located east of Grove Avenue between Schaefer and Edison Avenues. It includes two (2) Ranch style dwellings and two (2) associated milk parlors with Dutch style characteristics, as well as two (2) Minimal Traditional style dwellings. The older Minimal Traditional style residences were constructed between 1948 and 1952, while the Ranch Style structures were constructed between 1959 and 1966. It was historically associated with dairy operations and retains

that association today. Historical aerials indicate the built environment has remained the same since that time period.

The first Ranch-style residence features an asymmetrical façade with a one-story horizontal, rambling floorplan atop a concrete foundation. The exterior is clad in yellow painted stucco with horizontal wood siding on a portion of the main (west) elevation, accented by white trim around the windows and doors. The low-pitched cross-gabled roof is covered with composition shingles and features a moderate eave overhang, open eaves with exposed rafter tails, and decorative scalloped barge board at the gable ends. The fenestration visible from the public right-of-way consists of wood single-hung windows and a wood half-lite diamond patterned door. The main (west) elevation exhibits Northern European or Dutch influences, such as the diamond-patterned door, scalloped barge board, wood spindle porch supports, and a square cupola. The attached two-car garage is connected to the residence by a breezeway on the south elevation. Additional features include a stone planter and concrete steps at the main entryway.

A milk parlor is located south of the residence. The building has a horizontal floor plan and is divided into two sections: the front milk house and a rear milking parlor, separated by an open breezeway. The front section reflects Ranch style characteristics, featuring a front-gabled roof with wood shake shingles, yellow painted stucco walls, and metal casement and fixed windows. An open breezeway separates this front section from the rear portion of the building. South of the breezeway, the milking parlor has a gable roof oriented along a north-south axis, topped with corrugated sheet metal. Ventilation is provided by horizontal louvered metal shutters on the east and west elevations, positioned above concrete walls and along the gable ridge. Additional features include a circular driveway, metal doors at the main entryway, and a stone planter. The main (west) elevation of the front section also displays Northern European or Dutch influences, such as diamond-patterned fixed windows and a gabled shed roof above the main entryway supported by curved knee brackets.

The second Ranch-style residence also features an asymmetrical façade with a one-story horizontal, rambling floorplan atop a concrete foundation. The exterior is clad in beige painted stucco with tan horizontal wood siding on a portion of the main (west) elevation, accented by white trim around the windows and doors. The low-pitched cross-gabled roof is covered with composition shingles and features a moderate eave overhang, boxed eaves, horizontal wood siding below the gable, and decorative scalloped barge board at the gable ends. The fenestration visible from the public right-of-way consists of wood single hung windows, some with decorative shutters, and a wood half-lite diamond patterned door. The main (west) elevation exhibits Northern European or Dutch influences, such as the diamond-patterned half-lite door and windows, scalloped barge board, box bay accented with wood-siding, and a square cupola. The attached three-car garage is connected to the residence by a breezeway on the south elevation. Additional features include a stone planter, a stone chimney on the rear elevation, and concrete steps at the main entryway.

The second milk parlor is located south of the second residence. The building is divided into two sections: the front milk house and a rear milking parlor, separated by an open breezeway. The front section reflects Ranch style characteristics, featuring a hip-and-gable roof with wood shake shingles, beige painted stucco

walls, and metal casement and fixed windows. A breezeway, located between the two sections on the north and south elevations, is partially hidden from the public right-of-way. East of the breezeway, the milking parlor features a gable roof oriented along an east-west axis, topped with corrugated sheet metal. Ventilation is provided by horizontal louvered metal shutters on the east and west elevations, positioned above concrete walls and along the gable ridge. Additional features include a circular driveway, metal doors at the main entryway, and a stone planter. The main (west) elevation of the front section also displays Northern European or Dutch influences, such as diamond-patterned windows, decorative wood spindles below the roofline, and scalloped barge board at the gable end.

The two Minimal Traditional style dwellings feature asymmetrical compact floor plans with minimal decorative details. The first dwelling has a square floor plan with a hipped roof topped with composition shingles. The exterior is stucco painted white. All the windows and doors have since been boarded up with plywood. The second dwelling features a rectilinear floor plan and a white stucco exterior with red trim around the windows and doors. The hipped roof is also topped with composition shingles and includes a moderate eave overhang. Fenestration consists of a combination of aluminum single-hung windows and wood double-hung windows, along with a flush wood entry door. Both dwellings are modest in appearance and do not exhibit distinctive characteristics of the Minimal Traditional style.

The Ranch style structures exemplify Northern European/Dutch stylistic influences and contain low-pitched roofs, stucco cladding, decorative scalloped barge board, diamond-patterned doors and windows, cupolas, and stone planters in-vogue in the postwar period. These structures are located in the northern portion of the property and are outside of the Project area. The two (2) Minimal Traditional residences are the only structures located in the Project area, and are modest, utilitarian examples of the style that lack distinctive detailing or architectural character.

- The Ranch style structures are eligible under CRHR and City of Ontario criteria 3/d for its significant association with the “Ranch Style, 1950-1970s” theme.
- The Minimal Traditional dwellings are not individually eligible nor contributors to any broader eligibility of the property.

*8040 Schaefer Ave and 14050 Grove Ave*

This property includes one (1) parcel that totals 8.62 acres located at the northwest corner of Grove and Edison Avenues. It includes a Minimal Traditional residence, as well as two (2) Ranch style dwellings and milk parlor. The Minimal Traditional residence was constructed prior to 1935, followed by the milk parlor between 1948 and 1946, and the Ranch Style residences between 1966 and 1968. It was historically associated with dairy operations and retains that association today. Historical aerials indicate the built environment has remained the same since that time period.

The Minimal Traditional residence has an asymmetrical façade and a rectilinear floorplan. The exterior is clad in tan-painted stucco. The low-pitched gabled roof is topped with composition shingles and has a moderate eave overhang. The primary (south) elevation includes a recessed entryway beneath the

roofline, a small stoop, and a shed roof over a bay window accented with a brick veneer. The fenestration consists of aluminum windows.

The milk parlor is situated between the two (2) Ranch style residences and consists of a front milk house and the rear milking parlor separated by a breezeway. The milk house has some Ranch-style elements, including a cross-gable roof with wood shake shingles and a stucco façade. It features a gable roof oriented along an east-west axis that is clad in corrugated sheet metal. Ventilation is provided by horizontal louvered metal shutters on the north and south elevations, positioned above concrete walls, along with a vent system along the gable ridge. There is no curved driveway in front of the milk parlor.

The Ranch-style dwelling south of the milk parlor has an asymmetrical façade and an irregular floorplan atop a concrete foundation. Its exterior is clad in tan painted stucco. The moderately pitched hipped roof is topped with composition shingles and features minimal eave overhang and boxed eaves. The recessed main entryway includes a red paneled door, and box bay windows are visible on the primary (east) elevation. The Ranch-style dwelling north of the milk parlor has an asymmetrical façade and an irregular floorplan atop a concrete foundation. The dwelling has a similar appearance to the first residence and features a stucco façade, a bay window, hipped roof topped with composition shingles, and a recessed main entryway.

- Though associated with several themes and contexts identified within the 2025 historic context, the property as a whole, as well as the individual buildings, do not possess documented significance in relation to the themes and contexts.
- Though the property retains integrity of location, setting, feeling, design, materials, and workmanship, it lacks integrity of association.
- The property is not eligible under any criteria for the CRHR or City of Ontario.

*8061 Edison Ave*

This property includes six (6) parcels that total 36.18 acres located south of Edison Avenue between Bon View and Grove Avenues. It includes a Ranch style dwelling, a Ranch Style milk parlor, and ancillary structures. The residence was constructed between 1938 and 1946 along with a milk parlor, though that parlor was demolished and replaced with the current milk parlor between 1966 and 1968. It was historically associated with dairy operations and retains that association today. Historical aerials indicate the built environment has remained the same since that time period.

The Ranch style residence is a one-story residence with an asymmetrical façade and a horizontal, rambling floorplan atop a concrete foundation. The exterior is clad in tan painted stucco with brown trim on the windows and doors. The moderately pitched hipped roof is topped with composition shingles and has a moderate eave overhang, and boxed eaves. The fenestration consists of vinyl multi-lite sliding sash and single-hung windows and wood paneled doors. The main elevation has a bay window and a stone planter. An attached one-car garage is located on the west elevation and features a white paneled overhead door. The milk parlor just west of the dwelling contains a front milk house and rear milking parlor separated by a breezeway. The milk house is modest in design, incorporating Ranch-style elements such as a hip-and-

gable roof with composition shingles, a moderate eave overhang with boxed eaves, and a stucco façade. The fenestration consists of metal multi-lite fixed windows, metal casement windows, and industrial metal glass door. South of the breezeway, the milking parlor features a gable roof oriented along a north-south axis, topped with corrugated sheet metal. Additional features include a circular driveway in front of the milk parlor.

- Though associated with several themes and contexts identified within the 2025 historic context, the property as a whole, as well as the individual buildings, do not possess documented significance in relation to the themes and contexts.
- The property is not eligible under any criteria for the CRHR or City of Ontario.

*7721-7891 Edison Ave*

This property includes three (3) parcels that total 18.16 acres located south of Edison Avenue between Bon View and Grove Avenues. It includes a Ranch Style residence, a Craftsman Bungalow residence, an Art Deco milk parlor, and ancillary structures. The residence was constructed before 1935 along with three other structures that are no longer present on the property. The milk parlor was added between 1935 and 1946, followed by the Ranch Style residence between 1959 and 1966. It was historically associated with dairy operations and retains that association today. Historical aerials indicate the built environment has been modified via additional construction in the 1990s, as well as the destruction of the rear section of the milk parlor in 2017.

The Ranch style residence at 7891 Edison Avenue is a one-story dwelling with an asymmetrical façade and an irregular floorplan atop a concrete foundation. Its exterior is clad in yellow board-and-batten siding, with a partial stone veneer on the main (north) elevation. The low-pitched cross-gabled roof, covered with composition shingles, has a moderate eave overhang, boxed eaves, and a chimney on the rear roof slope. The fenestration consists of vinyl sliding sash windows. The main elevation includes a recessed entryway with a single paneled door, a concrete stoop, a stone planter, and an attached one-car garage with a paneled overhead door. It is smaller example of its type in the area and exhibits modest characteristics of the style.

The Craftsman Bungalow residence is a one-and-a-half story dwelling with a symmetrical façade and a mostly square floor plan. The exterior is clad in tan-painted stucco with blue trim on the windows and doors. The high-pitched, side-gabled roof is topped with composition shingles and has a wide eave overhang with wood brackets beneath the gable. The fenestration visible from the public right-of-way consists of vinyl single-hung windows and fixed wood windows. The main (north) elevation includes a centered gabled dormer with four vinyl single-hung windows, an enclosed full-width porch, a centered main entryway with a wood-paneled door and metal security door, and concrete steps. The milk parlor is located south of the bungalow, though only the front milk house section remains. It retains some Art Deco characteristics, including smooth stucco walls, a flat roof, a symmetrical boxy form, and glass block windows.

- Though associated with several themes and contexts identified within the 2025 historic context, the property as a whole, as well as the individual buildings, do not possess documented significance in relation to the themes and contexts.
- The property is not eligible under any criteria for the CRHR or City of Ontario.

*8185 Edison Ave*

This property includes one (1) parcel that totals 18.56 acres located at the southeast corner of Edison and Grove Avenues. It includes a Ranch style dwelling with Northern European/Dutch influences, a Minimal Traditional residence, and a Streamline Moderne milk parlor constructed between 1952 and 1959. It was historically associated with dairy operations and retains that association today. Historical aerials indicate the built environment has remained the same since that time period.

The Minimal Traditional dwelling has an asymmetrical façade and a rectilinear floorplan atop a concrete foundation. The exterior is clad in tan-painted stucco with green trim on the windows and roof fascia. The low-pitched hipped roof is finished with composition shingles and features a minimal eave overhang with boxed eaves. Fenestration visible from the public right-of-way consists of aluminum sliding sash windows. The main (west) elevation includes a recessed main entryway with a concrete stoop, metal security gate, and a wide stone chimney. The detached garage, located directly north of the dwelling, features two (2) paneled overhead doors, a tan stucco façade, and a hipped roof.

The Ranch style dwelling that exhibits Northern European or Dutch influences has an asymmetrical façade and a one-story horizontal floorplan atop a concrete foundation. The exterior is clad in horizontal wood siding painted yellow, with green trim on the windows and doors. The low-pitched cross-gabled roof is covered with composition shingles and includes a moderate eave overhang with open eaves and exposed rafter ends. A chimney is located on the rear (south) elevation. Fenestration consists of wood-framed diamond-patterned windows, some with green decorative shutters. The main (north) elevation features diamond-patterned windows, box bays with decorative wood support brackets, a stone planter, and an extended roof girder. A garage is attached to the main dwelling by a wide open breezeway on the west elevation.

The Streamline Moderne milk parlor contains a front milk house and rear milking parlor separated by a breezeway. The front section reflects Streamline Moderne characteristics, with smooth stucco walls, a flat roof, curvilinear corners, a central vertical projection, and curved glass block windows. The west elevation contains metal multi-lite casement windows, though the windows on the east elevation are boarded up. The breezeway features a metal barn-style sliding door on both the east and west elevations. South of the breezeway, the milking parlor has a gable roof oriented along a north-south axis clad in corrugated sheet metal. Ventilation is provided by horizontal metal shutters on the east and west elevations, positioned above concrete walls, along with a vent system along the gable ridge. Additional features include a circular driveway in front of the milk parlor and two (2) metal doors.

- The Ranch Style dwelling and Streamline Moderne milk parlor are eligible under CRHR and City of Ontario criteria 3/d within the "Ranch Style, 1950–1970s" and "Streamline Modern style, 1930s-1960s" contexts with a period of significance of 1952-1959.
- The City's Historic Preservation Subcommittee determined the property (identified as 14117 Grove Ave) met local landmark designation and Tier II criterion in November 2014.
- The Minimal Traditional dwelling is not individually eligible nor a contributor to any broader eligibility of the property.

*8311 Edison Ave*

This property includes one (1) parcel that totals 18.77 acres located south of Edison Avenue and Ontario Ranch Road between Grove and Walker Avenues. It includes a Ranch style dwelling and milk parlor constructed between 1968 and 1975. It was historically associated with dairy operations and retains that association today. Historical aerials indicate the built environment has been altered via the addition of ancillary structures in the 1990s.

The Ranch style residence has an asymmetrical façade and an irregular horizontal floorplan atop a concrete foundation. The low-pitched cross-gabled roof has a moderate eave overhang with boxed eaves and is topped with terracotta tiles, which likely replaced the original composition or wood shingles at an unidentified date. The exterior is clad in tan-painted stucco. Additional features include a recessed main entryway accessed via concrete steps, two (2) brown paneled doors, metal sliding sash windows, a stone planter, and decorative blue shutters on some of the windows. An attached three-car garage addition was appended to the east elevation and features a roofline that does not match the original structure, resulting in an uneven and visually uneven roofline. To the east of the dwelling is the milk parlor, which contains a front milk house, rear milking parlor separated by a breezeway, and holding area. The milk house shares a similar design with the main dwelling, incorporating Ranch style elements such as a hip and gable roof topped with terracotta tiles, a moderate eave overhang with boxed eaves, and a stucco façade. Its fenestration consists of metal casement windows. South of the milk house, the milking parlor features a gable roof oriented along a north-south axis, topped with corrugated sheet metal. Ventilation elements include metal horizontal louvered shutters set atop concrete walls, along with a vent system along the gable ridge. Further south, the holding area is partially open and enclosed by concrete walls. Additional features include metal doors at the main entryway, bulk tanks, and a circular driveway in front of the milk parlor.

- Though associated with several themes and contexts identified within the 2025 historic context, the property as a whole, as well as the individual buildings, do not possess documented significance in relation to the themes and contexts.
- The property is not eligible under any criteria for the CRHR or City of Ontario.

*8335-8381 Edison Ave*

This property includes four (4) parcels that total 37.42 acres located south of Edison Avenue between Grove and Walker Avenues. It includes a Craftsman Bungalow style residence, a Ranch style milk parlor, and ancillary structures. The Craftsman was constructed prior to 1935, while the milk parlor was added

between 1959 and 1966. It was historically associated with dairy operations and retains that association today. Historical aerials indicate the built environment has remained the same since that time period.

The Craftsman Bungalow style residence has an asymmetrical façade and an irregular floorplan. The exterior is clad in clapboard siding painted brown with dark brown trim on the windows and doors. The moderately pitched hipped roof is topped with composition shingles and has a moderate eave overhang, boxed eaves, and a dormer on the main (north) elevation. The fenestration visible from the public right-of-way consists of wood-framed fixed and double-hung windows, along with some vinyl sliding sash and single-hung windows. The main elevation features a partial-width porch beneath a hipped roof extension, supported by tapered brick columns, concrete steps, and a brick pony wall. Despite the removal of some original windows and roofing, the dwelling maintains a strong representation of the Craftsman Bungalow style through its massing, roof form, and characteristic design features.

The Ranch style milk parlor has a front milk house, rear milking parlor separated by a breezeway, and an open holding area. The milk house incorporates some Ranch style elements such as a hip-and-gable roof, a moderate eave overhang with boxed eaves, and a stucco façade with wood-siding below the gable end. Its fenestration consists of metal multi-lite windows and vinyl windows. South of the milk house, the milking parlor features a flat roof oriented along a north-south axis. Ventilation elements include metal vertical louvered shutters set between concrete walls. Further south, the holding area is open and enclosed behind concrete walls. Additional features include industrial glass doors at the main entryway and a circular driveway in front of the milk parlor.

- The Craftsman Bungalow is eligible under CRHR and City of Ontario criteria 3/d within the "Craftsman Bungalow Style, 1900s–1930s" context with a period of significance of pre-1935.
- The Ranch style milk parlor is not individually eligible nor a contributor to any broader eligibility of the property.

*8485 Edison Ave and 14350 Walker Ave*

This property includes two (2) parcels that total 36.95 acres located on the southwest corner of Ontario Ranch Road and Walker Avenue. It includes two (2) Ranch style dwellings and milk parlor. One (1) Ranch style residence and the milk parlor were constructed between 1959 and 1966, while the second residence was added between 1966 and 1968. It was historically associated with dairy operations and retains that association today. Historical aerials indicate the built environment has remained the same since that time period.

The older Ranch style residence is a one-story structure with an asymmetrical façade and a horizontal, rambling floorplan atop a concrete foundation. Its exterior is clad in tan-painted stucco with a stone veneer along the lower span of the main (north) elevation. The low-pitched hip-and-gable roof is topped with composition shingles and features a moderate eave overhang, boxed eaves, a stone chimney on the rear roof slope, and a cupola. Below the gable end is white horizontal wood siding and a scalloped fascia board. The fenestration consists of vinyl sliding sash units that replaced the original wood-framed windows, some of which featured a diamond pattern. One (1) of the original window openings to the left

of the main entryway was substantially altered and replaced with a smaller window unit. The main elevation includes a stone planter, box bays accented by white horizontal wood siding, a decorative wood spindle column, and a recessed main entryway. On the west elevation, a partially open breezeway connects the dwelling to a two-car garage with white paneled overhead doors. To the west is the Ranch style milk parlor, which has a front milk house and rear milking parlor separated by a breezeway. The milk house incorporates Ranch style elements such as a hip-and-gable roof, a moderate eave overhang with boxed eaves, and a stucco façade. Its fenestration consists of metal multi-lite fixed and casement windows. The breezeway, located between the two (2) sections on the east and west elevations, features two (2) metal barn-style sliding doors. South of the milk house, the milking parlor features a gabled roof oriented along a north-south axis and steel beams. Ventilation elements include metal vertical louvered shutters set on top concrete walls. Additional features include two (2) metal doors at the main entryway and a circular driveway in front of the milk parlor.

The second Ranch style residence has an asymmetrical façade and an irregular floorplan atop a concrete foundation. The exterior is clad in stucco with a stone veneer on the main (east) elevation. The moderately-pitched hipped roof is topped with composition shingles and has a moderate eave overhang, boxed eaves, and a stone chimney on the rear roof slope. The fenestration consists of aluminum windows. An enclosed breezeway is located on the north elevation and connects the dwelling to a two-car garage.

- Though associated with several themes and contexts identified within the 2025 historic context, the property as a whole, as well as the individual buildings, do not possess documented significance in relation to the themes and contexts.
- The property is not eligible under any criteria for the CRHR or City of Ontario.

*14049 Grove Ave*

This property includes two (2) parcels that total 9.04 acres located on the northeast corner of Grove Avenue and Ontario Ranch Road. It includes a Ranch style dwelling with a garage, milk parlor, and ancillary structures constructed between 1959 and 1966. It was historically associated with dairy operations and retains that association today. Historical aerials indicate the built environment has remained the same since that time period.

The Ranch style residence has rectilinear, two-story floorplan with a flat roof and a moderate eave overhang. The exterior is clad in white stucco and includes vinyl sliding sash windows. The main entryway is sheltered by a portico supported by decorative wood spindle columns. Additional features include an attached one-car garage with a paneled overhead door and a deck enclosed by a decorative metal railing above the garage.

A utilitarian milk parlor is located east of the residence and has a front milk house and side milking parlor separated by a breezeway. The milk house features a concrete façade with a bubbled textured section, industrial glass doors, large, fixed windows, and a flat roof. The breezeway, located between the two (2) sections on the east and west elevations, is enclosed by metal barn-style sliding doors. North of the milk house, the milking parlor has a flat roof oriented along a north-south axis. Ventilation elements include

metal vertical louvered shutters set between concrete walls. Additional features include a curved driveway in front of the milk parlor.

- Though associated with several themes and contexts identified within the 2025 historic context, the property as a whole, as well as the individual buildings, do not possess documented significance in relation to the themes and contexts.
- Though the property retains integrity of location, setting, feeling, design, materials, and workmanship, it lacks integrity of association.
- The property is not eligible under any criteria for the CRHR or City of Ontario.

**FINDINGS**

A total of 12 cultural resources were identified in the Project area during the efforts conducted for this study. The resources consist entirely of historic-period dairy farms with associated milk parlors, residential buildings, and/or ancillary structures. As a result of evaluations of potential eligibility for listing in the CRHR and/or designation as City of Ontario Historic Landmark, a total of four (4) resources were identified as eligible for listing or listed:

1. 7587-7697 Edison Ave – eligible for listing, significant historic structures in the Project area
2. 8185 Edison Ave (previously identified as 14117 Grove Ave) – previously determined by the City's Historic Preservation Subcommittee as meeting local landmark designation and Tier II criterion; also meets criteria for listing in the CRHR and is a historical resource under CEQA
3. 8335-8381 Edison Ave – eligible for listing, significant historic structures in the Project area
4. 13715-13751 Grove Avenue, 13817-13819 Grove Avenue, 8270-8292 Edison Avenue – eligible for listing, but no significant historic structures in the Project area

As 13715-13751 Grove Avenue, 13817-13819 Grove Avenue, 8270-8292 Edison Avenue does not contain any buildings or structures within the Project area that are considered eligible/contributors to the eligibility of the site, there is no potential to impact the resource. As such, for the purposes of this study, only three (3) resources (7587-7697 Edison Ave, 8185 Edison Ave, and 8335-8381 Edison Ave) will be considered historical resources identified within the Project area. An overview of the evaluation results is included in **Table 6** and **Figure 11** below, with eligible sites that require further consideration highlighted.

| Table 6: Summary of Resource Evaluations | |
|---|---|
| **Addresses/Name** | **Evaluation Summary** |
| 7587-7697 Edison Ave | The property as a whole is eligible under CRHR criterion 1 and local designation a. Individually, the Craftsman Bungalow and Ranch style residences are each eligible under CRHR criterion 3 and local designation d. The Ranch style milk parlor is not individually eligible but remains a contributor to the eligibility of the whole property. |
| 14213-14297, 14333-14353, 14450, and 14451 Bon View Ave | The property is not eligible under any criteria for the CRHR or City of Ontario. |
| 7914 Edison Ave | The property is not eligible under any criteria for the CRHR or City of Ontario. |
| 13715-13751 Grove Ave, 13817-13819 Grove Ave, 8270-8292 Edison Ave | Only the Ranch Style properties that are outside of the Project area are eligible under CRHR criterion 3 and local designation d. The Minimal Traditional residences within the Project area are not eligible under any criteria for the CRHR or City of Ontario. |
| 8040 Schaefer Ave and 14050 Grove Ave | The property is not eligible under any criteria for the CRHR or City of Ontario. |
| 8061 Edison Ave | The property is not eligible under any criteria for the CRHR or City of Ontario. |
| 7721-7891 Edison Ave | The property is not eligible under any criteria for the CRHR or City of Ontario. |
| 8185 Edison Ave | The Ranch Style residence and Streamline Moderne milk parlor are each eligible under CRHR criterion 3 and local designation d. The Minimal Traditional dwelling is not eligible. The City's Historic Preservation Subcommittee determined the property (identified as 14117 Grove Ave) met local landmark designation and Tier II criteria in November 2014. |
| 8311 Edison Ave | The property is not eligible under any criteria for the CRHR or City of Ontario. |
| 8335-8381 Edison Ave | The Craftsman Bungalow style residence is eligible under CRHR criterion 3 and local designation d. The Ranch style milk parlor is not eligible. |
| 8485 Edison Ave and 14350 Walker Ave | The property is not eligible under any criteria for the CRHR or City of Ontario. |
| 14049 Grove Ave | The property is not eligible under any criteria for the CRHR or City of Ontario. |

Figure 11: Cultural Resources Map

**Historic Resources Tiering**

As a result of eligibility evaluations, three (3) of the identified resources (7587-7697 Edison Ave, 8185 Edison Ave, and 8335-8381 Edison Ave) are recommended eligible for listing the CRHR and designation as a City of Ontario Historic Landmark, and are considered historical resources under CEQA with the potential to be impacted by the Project. One (1) of these properties, 8185 Edison Ave (previously identified as 14117 Grove Ave) was determined by the City's Historic Preservation Subcommittee to meet local landmark designation and Tier II criteria in November 2014. However, the remaining two (2) properties (7587-7697 Edison Ave and 8335-8381 Edison Ave) have not yet been subject to this review. As such, while the City's Historic Preservation Committee (or a specified subcommittee) maintains authority to make tiering determinations for resources, this report includes a brief discussion related to potential tiers for each of the two (2) remaining resources to provide preliminary insights into potential mitigation fee requirements for each resource and to later support the City's review:

- 7587-7697 Edison Ave – Under the criteria for Local Historic Landmarks, the property seems to meet tiering criteria 1 and 2 under the Architecture/Form section and criteria 4, 5, and 6 under the History section. It is also recommended eligible for listing in the California Register. As such, it is likely that this resource meets criteria within the tiering system as a Tier II property.
- 8335-8381 Edison Ave – Under the criteria for Local Historic Landmarks, the property seems to meet tiering criterion 1 under the Architecture/Form section. It is also recommended eligible for listing in the California Register. As such, it is likely that this resource meets criteria within the tiering system as a Tier II property.

Upon closer review of the Tiering system, it appears that Tiers II and III share a minimum threshold, in that any eligible historic property could be considered a Tier II or III resource. However, given the resources noted above meet additional criteria beyond just the fact that they are eligible resources, and given a property (8185 Edison Ave, formerly identified as 14117 Grove Ave) within the same area was already provided a Tier II determination, it is likely that each of the above-noted properties will be determined Tier II resources as opposed to Tier III.

**RECOMMENDATIONS**

Mitigation is recommended to reduce impacts to the three (3) eligible resources. Such mitigation often includes educational components, such as the requisite Historic American Building Survey (HABS), a documentary, and comparative studies, as well as physical preservation efforts, such as investigating relocation feasibility. For these resources, a HABS level 3 is recommended. However, both a documentary of the Ontario Ranch area and a comparative study of the area with other dairy farming areas in California were recently prepared as a result of mitigation adopted in the City for a nearby project. As such, those actions are not recommended to be included in mitigation for the current Project. Additionally, while it is common to include the preparation of a relocation feasibility study as a mitigation measure, a study for the properties has already been completed (**Appendix D**). The study concluded the following with respect to the three (3) eligible resources:

1. The milk parlor at 7587-7697 Edison Ave can be feasibly relocated in part. Relocation is limited to the front portion of the building, and it may require repairs. It is not feasible to relocate the back portion of the building without disassembling the structure.
2. The milk parlor at 8185 Edison Ave can be feasibly relocated in part. Relocation is limited to the front portion of the building. It is not feasible to relocate the back portion of the building.
3. The Craftsman Bungalow at 8335-8381 Edison Ave can be feasibly relocated in its entirety, excluding crawl space framings and foundations.

As such, it is recommended to include some level of mitigation related to relocating one or more of the structures/portions of structures that have been identified as feasible for relocation. While a series of mitigation measures will support the reduction of impacts to these resources, it is anticipated that mitigation will not reduce impacts to the resources to a less than significant level due to the unique circumstances related to the significance of each resource and the resource type. Measures for consideration are included below as **MM CUL-1** through **MM CUL-6**.

In addition to the identified historical resources, the Project area has a high sensitivity for historic archaeological resources that could be inadvertently discovered and/or impacted during Project implementation. Conversely, the sensitivity for buried prehistoric archaeological resources within the Project area is relatively low as a result of prior extensive disturbance across the Project area. However, the archaeological sensitivity for prehistoric resources in this area may have once been moderate to high due to the Holocene-age sediments underlying the Project area. As such, it is recommended that mitigation measures that outline the process for inadvertent discoveries be incorporated for the proposed Project. Measures for consideration are included below as **MM CUL-7** through **MM CUL-9**. With these mitigation measures in place, impacts to archaeological resources as a result of the proposed Project would be reduced to less than significant.

**MM CUL-1:** The applicant shall obtain a building permit prior to any demolition, relocation, or construction.

**MM CUL-2:** Prior to issuance of a building permit for demolition of any historical resources, at the same time or separately, a HABS (level 3) documentation, including but not limited to as built drawing, historical narrative, and Historic American Building Survey (HABS) photographs of the three (3) historical resources subject properties, shall be submitted to the Planning Department for review, approval, and subsequent release to the Ovitt Family Community Library, Model Colony History Room. Digital files and 2 printed copies are required (one archival and one non-archival).

**MM CUL-3:** Prior to issuance of a demolition building permit, a relocation plan for at least one (1) property identified as feasible for relocation shall be submitted to the City. The plan shall include location options identified by the City, as well as a relocation schedule and any protective measures to ensure minimal impact to the resource during relocation efforts. Every effort shall be made to facilitate the relocation. The buildings shall be offered at no cost for those who can

relocate off-site. Advertisements notifying the public of the opportunity to relocate the building shall be placed for a minimum of 30 days: on-site with temporary signage, in at least three local publications (newspapers, magazines, local organization newsletters), and on local bulletin boards.

**MM CUL-4:** A mitigation fee pursuant to Section 7.01.030 of the Ontario Development Code shall be paid to the Planning Department prior to issuance of building permit for demolition of any of the identified historical resources for which relocation was determined by the City to be infeasible. Mitigation fee is equal to 30% of the price per square foot construction cost as established in the most current International Code Council Building Valuation Data. The fee amount will be provided by the Planning Department at the time of payment. Funds will be deposited into the City's Historic Preservation Trust Fund.

**MM CUL-5:** Prior to issuance of a building permit for demolition of any of the three (3) historical resources, a determination shall be made by the Planning Department whether items within or on the historic properties should be salvaged. The applicant shall be responsible for the removal, relocation, and donation of such items selected for salvaging. An inventory of salvaged items shall be provided by the applicant to the Planning Department prior to the issuance of building permit.

**MM CUL-6:** Should 8185 Edison Ave be subject to demolition, and prior to issuance of a building permit for demolition of the resource, which is listed in the City's Historic Resources Inventory, the applicant shall apply for a Certificate of Appropriateness and approval of a Demolition approval by the Historic Preservation Subcommittee prior to demolition pursuant to the Ontario Development Code, Section 4.02.050. A Certificate of Appropriateness shall not be issued for the demolition of the resource, either in whole or in part, until such time that a demolition permit application and a replacement structure has been approved by the City, and appropriate permits have been issued for its construction.

**MM CUL-7:** Prior to the issuance of any grading permits for the Project area, a Cultural Awareness Training Program shall be provided to all construction managers and construction personnel prior to commencing any ground disturbance work within the Project area. The training shall be prepared and conducted by a Qualified Archaeologist to the satisfaction of the City Planning Department. The training may be discontinued when ground disturbance is completed. Construction personnel shall not be permitted to operate equipment within the construction area unless they have attended the training. A copy of the training transcript and/or training video, as well as a list of the names of all personnel who attended the training and copies of the signed acknowledgment forms shall be submitted to the City Planning Department for their review and approval.

**MM CUL-8:** Should any cultural resources be discovered during Project implementation, the City Planning Department and a Qualified Archaeologist shall be notified to assess the nature and significance of the find. Should any cultural resources be deemed significant, the Qualified

Archaeologist shall draft a treatment plan for review and approval by the City Planning Department. Tribes listed on the City's contact list for the Project shall be notified of any significance discovery that is Native American in origin and be given the opportunity to comment on the treatment plan prior to implementation. All final site records, reports, etc. associated with the discovery, evaluation, and treatment of cultural resources discovered during Project implementation shall be submitted to the South-Central Coastal Information Center (SCCIC).

**MM CUL-9:** If human remains are encountered during the undertaking, California State Health and Safety Code Section 7050.5 states that excavation shall stop and no further disturbance shall occur within 100 feet of the discovery until the County Coroner has made a determination of origin and disposition of the remains pursuant to Public Resources Code Section 5097.98. The County Coroner must be notified of the find immediately. If the remains are determined to be prehistoric, the Coroner will notify the Native American Heritage Commission (NAHC), who will determine and notify a Most Likely Descendant (MLD). With the permission of the landowner or his/her authorized representative, the MLD may inspect the site of the discovery within 48 hours of notification. If the NAHC is unable to identify an MLD, the MLD fails to make a recommendation, or the landowner or his/her authorized representative rejects the recommendation, the human remains and associated items will be interred on the property with appropriate dignity in a location that will not be subject to future disturbance.

**Re: Ontario Center Park SP Project, San Bernardino County**

To whom it may concern:

A record search of the Native American Heritage Commission (NAHC) Sacred Lands File (SLF) was completed for the information submitted for the above referenced project. The results were positive. Please contact the tribes on the attached list for information. Please note that tribes do not always record their sacred sites in the SLF, nor are they required to do so. A SLF search is not a substitute for consultation with tribes that are traditionally and culturally affiliated with a project's geographic area. Other sources of cultural resources should also be contacted for information regarding known and recorded sites, such as the appropriate regional California Historical Research Information System (CHRIS) archaeological Information Center for the presence of recorded archaeological sites.

Attached is a list of Native American tribes who may also have knowledge of cultural resources in the project area. This list should provide a starting place in locating areas of potential adverse impact within the proposed project area. Please contact all of those listed; if they cannot supply information, they may recommend others with specific knowledge. By contacting all those listed, your organization will be better able to respond to claims of failure to consult with the appropriate tribe. If a response has not been received within two weeks of notification, the Commission requests that you follow-up with a telephone call or email to ensure that the project information has been received.

If you receive notification of change of addresses and phone numbers from tribes, please notify the NAHC. With your assistance, we can assure that our lists contain current information.

If you have any questions or need additional information, please contact me at my email address: murphy.donahue@nahc.ca.gov

Sincerely,

Murphy Donahue

***P3a. Description:** The evaluated property consists of four parcels (APN: 105318101, 105318102, 105331101, and 105331102), historically addressed as 13839-13905 Bon View Avenue. The surrounding area is characterized by open space and agricultural land with historical ties to dairy operations. Encompassing 37.38 acres, the property is located northeast corner of Bon View and Edison Avenues. The property includes a one-story Neo-eclectic residence (13839 Bon View Ave), a Ranch style milk parlor (13905 Bon View Avenue), and several ancillary pole structures. Landscaping and hardscaping are minimal consisting of concrete driveways, and some scattered trees and shrubbery. The property continues to function as a dairy farm. **For a more detailed property description, please refer to the Continuation Sheet.**

**B3. Original Use:** Dairy Farm **B4. Present Use:** Dairy Farm
***B5. Architectural Style:** Ranch Style

***B6. Construction History:** This property consists of four parcels under common ownership. No historic-era building permits were found on file for the property at the City of Ontario. Year-built data and property characteristics were obtained from the San Bernardino County Assessor's Property Management Information System and supplemented by aerial imagery from 1935, 1938, 1939, 1946, 1948, 1952, 1959, 1966, and subsequent years. Aerial imagery indicates that the property was initially developed between 1968 and 1975 with the construction of a Ranch style milk parlor and Neo-eclectic single-family residence. Subsequent aerial imagery suggests that the configuration of the remaining buildings has remained unchanged. **See Continuation Sheet for ownership/occupancy information.**

## Primary Record Information Continued:

**P3a. Continued from Page 1:**
Constructed between 1966 and 1975, the 13839-13905 Bon View Avenue property is located on parcel 105318101 and consist of a one-and-a-half story residence constructed in the Neo-eclectic style and a Ranch style milk parlor. The dwelling has an asymmetrical façade and an irregular floorplan atop a concrete foundation. The dwelling features a brick and stucco exterior, brick chimney, a high-pitched cross-gabled roof topped with composition shingles, vinyl multi-lite windows, and arched decorative false columns around the windows on the main (west) elevation. The building is mostly obscured from the public right-of-way.

South of the residence is the Ranch style milk parlor, constructed between 1966 and 1975. The structure is divided into two sections: the front milk house and the rear milking parlor, separated by a breezeway. The milk house is modest in design, incorporating Ranch style elements such as a front gable roof, tan stucco façade, a carport on the main elevation supported by brick columns, aluminum sliding sash windows, and a partial brick veneer on the lower span of the building. The breezeway, located between the two sections on the north and south elevations, is obscured from the public right-of-way. East of the breezeway, the milking parlor features a gable roof oriented along an east-west axis. Ventilation features include louvered vertical shutters on the north and west elevations. Additional features include large metal doors with small openings at the bottom of the main north entryway and a circular driveway in front of the milk parlor.

View east of 13839-13905 Bon View Avenue SFR (IMG_8685; October 21, 2024).

## Building, Structure, Object Information Continued:

**B6. Construction History Continued from Page 2:**

**Ownership/Occupancy**
In 1983, the property was owned by Bernard Te Velde and known as Bon View Farms.

**B10. Statement of Significance from Page 2:**
For lack of significant association with the theme, the subject property has not been found eligible under NRHP / CRHR / City of Ontario Criterion A / 1 / a as the property has not in and of itself been directly associated with significant events or patterns of events in dairy farming in local, regional, state, or national history, nor does it exemplify or reflect special elements of the City's history; not eligible under NRHP / CRHR / City of Ontario Criterion B / 2 / b. as it has not been identified as having an association with an important person, family, or ethnic group significant in the local dairy farming industry; not eligible under NRHP / CRHR / City of Ontario Criterion C / 3 / c-f as none of the buildings at the property, nor the property as a whole, embodies the distinctive characteristics of a type, period, or method of construction and has not been identified as being the work of a master or an important and creative individual; not eligible under City of Ontario Criterion g and h as the property does not in and of itself offer a unique location, a singular physical characteristic, or an established and familiar visual feature within the city of Ontario or the Ontario New Model Colony / Ontario Ranch community, nor is it in and of itself one of the few remaining examples in the City, region, state or nation, possessing distinguishing characteristics of an architectural or historical type or specimen; and not eligible under NRHP / CRHR / City of Ontario Criterion D / 4 / as further study of the 13839-13905 Bon View Avenue would not appear to yield information which could be considered important in local, regional, state, or national history.

Although the 13839-13905 Bon View Avenue property has been found not significant and ineligible and is no longer active, it maintains integrity of location, setting, design, materials, workmanship, feeling, and association as an active and in-use dairy farming property.

**B2. Common Name:** 7587-7697 Edison Avenue
**B3. Original Use:** Dairy Farm **B4. Present Use:** Dairy Farm
***B5. Architectural Style:** Ranch Style/Craftsman Bungalow Style

***B6. Construction History:** This property consists of three parcels under common ownership. No historic-era building permits were located in the City of Ontario's records for the site. Construction dates and building characteristics were therefore established using data from the San Bernardino County Assessor's Property Management Information System and reviewed in conjunction with aerial imagery from 1935, 1938, 1939, 1946, 1948, 1952, 1959, 1966, and later years. Aerial imagery indicates that the 7587–7697 Edison Avenue property was first developed prior to 1935 with the construction of a Craftsman Bungalow style dwelling. At the time, a large portion of the parcel appears to have been used as farmland, likely for dairy-related purposes. Between 1959 and 1966, a Ranch style dwelling and a Ranch style milk parlor were added to the property. Subsequent aerials suggest that the overall configuration of the built environment has remained largely unchanged since that period. **See Continuation Sheet for ownership/occupancy information.**

***B7. Moved?** ☒ **No** ☐ **Yes** ☐ **Unknown** **Date:** N/A **Original Location:** N/A
***B8. Related Features:** None Identified **B9a.** Architect: Not Identified **b.** Builder: Not Identified
***B10. Significance: Theme:** Postwar, Large-Capacity Dairies, 1945-1980; Craftsman Bungalow Style, 1900s-1930s, Ranch Style, 1950–1970s **Area:** San Bernardino County **Period of Significance:** Pre-1935-1966
**Property Type:** Postwar, Large-Capacity Dairy/Craftsman Bungalow Style/Ranch Style
**Applicable Criteria:** NRHP/CRHR/Local A and C/1 and 3/a and d

The 7587–7697 Edison Avenue property was initially developed prior to 1935 with the existing Craftsman Bungalow. Between 1959 and 1966, the existing Ranch style milk parlor and Ranch style dwelling were constructed reflecting an expansion of operations. The property and its environs was designated as part of the San Bernardino County Agricultural Preserve in 1967 and later annexed into the City of Ontario in 1999 as part of the New Model Colony, which encompassed portions of the former agricultural preserve. The 7587-7697 Edison Avenue property is eligible as a whole for listing under NRHP, CRHR, and City of Ontario criteria A/1/a for its significant association with the theme Postwar, Large-Capacity Dairies, 1945–1980. Additionally, the two dwellings are also individually significant and eligible. The pre-1935 Craftsman Bungalow is individually eligible under criteria C/3/d within the context Craftsman Bungalow Style, 1900s–1930s, with a period of significance of ca. 1920s to the 1930s (pending identification of original construction date). The Ranch style dwelling is individually eligible under the context Ranch Style, 1950–1970s, with a period of significance of ca. 1959 to 1966 representing its original construction campaign. The ca. 1959-1966 Ranch style milk parlor is not individually significant, however, it remains a significant contributing element of the property as a significant Postwar Large Capacity Dairy complex. **See Continuation Sheet for significance and integrity conclusions.**

## Primary Record Information Continued:

**P3a. Continued from Page 1:**

Improved prior to 1935 with later developments between 1959 and 1966, the property includes a Craftsman Bungalow style dwelling and detached garage, a Ranch style milk parlor, a Ranch style dwelling, and several ancillary structures/features associated with dairy operations (silos, troughs, feeding gates, sheds, pole structures, etc.).

Towards the northeast corner of parcel 105337101 is the Craftsman Bungalow dwelling, listed as 7697 Edison Avenue. Constructed before 1935, the house faces Edison Avenue and features an asymmetrical façade with a one-and-a-half-story irregular floor plan. The exterior is clad in tan stucco with red trim on the windows and doors. The high-pitched, side-gabled roof is covered in composition shingles and includes a wide eave overhang, open eaves, decorative wood brackets below the gable end, and exposed rafter ends. A stucco chimney rises from the front roof slope. The fenestration consists of wood-framed, one-over-one, double-hung and fixed windows with red-painted lintels and sills. The main (north) elevation features a full-width front porch beneath the main roofline, supported by tapered wood/concrete beams, as well as a gabled dormer centered on the roof slope.

At the rear (south) elevation, a two-story addition was appended to the southwest corner between 1975 and 1979. This addition has a gabled roof, aluminum sliding sash windows, and a tan stucco façade. It is largely obscured from the public right-of-way and remains subordinate, secondary, and easily distinguishable from the original structure. The addition is compatible with the dwelling's historic character, in accordance with the Secretary of the Interior's Standards for the Treatment of Historic Properties. It did not result in the removal of original character-defining features. East of the dwelling is a detached one-car garage with a rectangular floorplan, tan stucco facade, and gabled roof.

Centered on the north side of the parcel, fronting Edison Avenue, is the Ranch style milk parlor. Constructed between 1959 and 1966, the building features a horizontal floor plan with two milking parlor wing sections, extending from the front milk house section, separated by a breezeway. The front section exhibits Ranch style characteristics, including a hip-and-gable roof with wood shake shingles, stucco walls, metal fixed and casement windows, and a stone veneer. The breezeway, located between the front and rear wing sections, has metal doors on both the east and west elevations. South of the breezeway, the milking parlor sections have low sloped gable roofs oriented along an east-west axis. Ventilation is provided by horizontal louvered metal shutters on the north and south elevations, positioned between concrete walls. Additional features include a metal door at the main (north) entryway, a circular driveway, and a bulk tank in front. Two silos are located at the rear.

West of the milk parlor is the Ranch style dwelling, listed as 7587 Edison Avenue. Constructed between 1959 and 1966, the dwelling has an asymmetrical façade and a one-story horizontal, rambling floorplan atop a concrete foundation. The exterior is clad in tan painted stucco with a stone veneer on the main (north) elevation. The moderately pitched hip-and-gable roof is topped with composition shingles and has a moderate eave overhang, boxed eaves, a cupola above the breezeway, and a stone chimney on the rear roof slope. The fenestration consists of a mix of aluminum fixed and sliding sash windows and vinyl units. The primary elevation features a recessed entryway below the main roofline with two double half-lite wood doors, a small concrete stoop, a stone planter, and box bay windows accented by red horizontal wood siding. A wide, open breezeway on the east elevation connects the three-car garage to the dwelling.

Ancillary pole structures, storage sheds, feeding gates and other features are located throughout the property.

## Building, Structure, Object Information Continued:

**B6. Construction History Continued from Page 2:**
Over the years, the residences have undergone minor alterations. A two-story addition was appended to the rear (southwest corner) of the Craftsman Bungalow between 1975 and 1979. The addition features a gabled roof, aluminum sliding sash windows, and a tan stucco exterior. It remains subordinate to the original structure, is largely obscured from public view, and is easily distinguishable from the original section. The addition is compatible with the dwelling's historic character and complies with the Secretary of the Interior's Standards for the Treatment of Historic Properties, as it did not result in the removal of original character-defining features. East of the dwelling is a detached one-car garage with a rectangular floorplan, gabled roof, and tan stucco façade.

Some original windows on the main elevation of the Ranch style dwelling have been replaced with vinyl units set within the original openings. Despite these alterations, the dwelling retains most of the seven aspects of integrity and continues to convey its original Ranch style design. It remains one of the better-preserved and more representative examples of the Ranch architectural style in the area.

**Ownership/Occupancy**

**7587 Edison Ave**
Between the mid-1920s and 1931, the property was owned by Paul Brockmeier. Born in 1894 in Freeport, Illinois, Brockmeier was a salesman, dairyman, and farmer who operated a business known as Brockmeier Brothers. In 1925, the Brockmeier Brothers won the highest yielding dairy cow award in the San Bernardino County Testing Association competition held at Chaffey High School. In January 1929, the Daily Report noted that oat and alfalfa hay were for sale at the property. In 1931, the property was sold to an unidentified buyer.

Between 1955 and 1959, Mr. and Mrs. Albert Alluis Jr. acquired and resided at the property. Born in 1908, Mr. Alluis was the son of a French immigrant who arrived in the United States in the early 1900s and worked as a dairyman in Arcadia, California. On the property, he cultivated potatoes.

In 1976, the property was owned by Ernest De Groot and his son, Chuck De Groot, and operated as Twin Palms Dairy. Born in 1910, Ernest De Groot was a native of Norman County, Minnesota, and the son of Dutch immigrants who arrived in the United States in the late 1800s. In the 1930s, his family relocated to Downey, California, in the Los Angeles Basin, where they worked in the dairy industry. By the mid-to-late 1960s, De Groot moved to the Chino Valley/Ontario region, where he later acquired the property.

In 1986, the property was part of a public dairy open house hosted by the Dairy Committee. According to the Chino Champion, the dairy housed nearly 600 cows and grew approximately one-quarter of its own feed on farmland elsewhere in the Chino Valley. Between 1970 and 1977, the De Groot cows ranked among the top-producing dairy cows in the region.

Ernest De Groot passed away in 2003 at the age of 92, and the property remained under the De Groot family trust. By 2008, it was listed as the Paul Huizenga Dairy, still under the De Groot family's ownership.

**7697 Edison Ave**
Between 1959 and 1962, the Craftsman Bungalow style dwelling was occupied by Mr. and Mrs. Homer Gibson. In 1965, the dwelling was occupied Mr. and Mrs. Pirie Grant. Between 1977 and 1982, Mr. and Mrs. Charles De Groot occupied the dwelling.

# Local dairies show how they do it

By Matthew Erlich, Staff Writer

Hundreds of Chino area residents got a taste of the dairy life, literally drinking down its pleasures when the Twin Palms and Costa View dairies hosted open houses June 7. The event was geared to kick off June as Dairy Month.

Highlight of the event was the milk drinking competition which saw children and adults race to finish small cartons and bottles of milk.

At the Twin Palms Dairy, 7587 Edison Ave, people on hand saw Jim Staal hoof trim cows. Mr Staal was demonstrating something he knows well, trimming between 8,000-10,000 head per year.

Mr Staal uses a custom-built truck that lifts cows and holds them in place for the trimming.

The dairy is owned by Mr and Mrs Ernest De Groot, Mr and Mrs Charles De Groot, and Mr and Mrs Paul Huizenga. The family operation milks 590 cows, and calves are raised on the site.

Ernest De Groot went broke once trying to start a dairy. His second effort in 1944 was more successful. He moved to Chino from Artesia in 1964.

At the Costa View Dairy, 14451 Bon View Ave, participants saw a calf with a fifth leg and glimpsed the computerized feeding process at the dairy.

Mr Costa has operated his dairy at Bon View Ave since 1970.

The milk drinking contest at the Twin Palms Dairy was hosted by Larry Bentley. Winners were:

**3-4 year olds;** Nicole Kleiman, Brian Hooper, Michelle Toledo, all of Chino.

**5-7 year olds;** Jennifer Galinbo of Ontario, Justin White, and Kenny Beattie, both of Chino.

**8-10 year olds;** Vincent Edwards-Ramirez of Ontario, Ernest De Groot and Luke Huizenga, both of Chino.

**11-14 year olds;** Shannon Mason, Nancy Garza and Jason Valencich, all of Chino.

**Adults;** Dennis Parker of Chino Hills, Dorita Valencich of Chino, and Mike Miller of the Chino Hills.

**HASTE MAKES WASTE — This young man is too busy to cry over spilt milk as he tries to get started during the milk drinking competition. Besides the milk they drank, winners received ribbons for their performance.**

Staff photo by Matthew Erlich

**ADULT WINNER — Dennis Parker, 34, of the Chino Hills (center) was the winner of the milk drinking contest for adults who were adorned with a bib and had to drink milk from a nipple. Miss Vitality Kim Stueve (left) and the 1986 Southern California Dairy Princess Sherrie Hoekstra (right) also were on hand for the event and led some dairy tours.**

Staff photo by Matthew Erlich

**THE CONVERSATION — Miss Chino Jane Carroll (right) talks with Mrs Ernest De Groot during the Dairy Open House. The chamber sponsored event was considered a success.**

## Building, Structure, Object Information Continued:

**B10. Statement of Significance from Page 2:**
The 7587-7697 Edison Avenue property is recommended significant and eligible as an excellent example of a postwar dairy under the historic context theme for Postwar, Large-Capacity Dairies, 1945–1980. It retains multiple contributing features and clearly conveys its historical association with large scale, industrial dairy production that emerged in the region in the postwar era. Contributing features include a Craftsman Bungalow constructed prior to 1935, a Ranch Style residence built between 1959 and 1966, a Ranch Style Milk Parlor with a circular drive, and a range of ancillary structures including but not limited to silos, stalls, pole barns, a detached garage, feeding gates, water features, and bulk tanks. Under the historic context for Postwar, Large-Capacity Dairies, eligible properties must retain integrity of location, design, setting, materials, workmanship, feeling, and association, and demonstrate a direct and significant association with the dairy industry during the postwar period. This property as a whole meets the eligibility criteria for NRHP Criterion A / CRHR Criterion 1 / City of Ontario Criterion a, as it clearly conveys its historical association with large scale dairy operations that emerged in the region in the postwar.

Individually, the Craftsman Bungalow, built before 1935, is also recommended eligible under NRHP Criterion C / CRHR Criterion 3 / City of Ontario Criterion d. It retains its original shape, scale, and design features such as exposed rafter tails, wood siding, and overhanging eaves. Although a two-story rear addition was built between 1975 and 1979, it is set back, secondary in scale, and does not compromise the building's architectural character. The house continues to convey the key qualities of the Craftsman Bungalow style.

The Ranch style residence, constructed between 1959 and 1966, is also recommended individually eligible under NRHP Criterion C / CRHR Criterion 3 / City of Ontario Criterion d, under the context of Ranch Style, 1950–1970s. The dwelling features a horizontal rambling floorplan, low-pitched roof, wide eaves, cupola, and an integrated attached garage via an open breezeway. Although some windows have been replaced with vinyl units within the original openings, the overall design, materials, and feeling remain intact. The dwelling retains the necessary aspects of integrity and clearly represents a postwar Ranch style residence in Ontario.

While the milk parlor was considered for individual eligibility, the building reflects the standard Ranch style form and layout associated with large-capacity dairy operations. The milk parlor does not exhibit distinctive design features or architectural detailing that would elevate it to individual significance. Its configuration, materials, and construction are typical of postwar dairy facilities and do not reflect a uniquely representative or distinguishing example of the style or type. Accordingly, the building is not recommended for individual eligibility.

***P3a. Description:** The evaluated property consists of six parcels (APN: 105335101, 105335102, 105354101, 105354102, 105357101, and 105357102), historically addressed as 14213-14297, 14333-14353, 14450, and 14451 Bon View Avenue. The surrounding area is characterized by open space and agricultural land with historical ties to dairy operations. Covering 56.47 acres, the property is situated east of Bon View Avenue, between Euclid and Eucalyptus Avenues. The property includes two Ranch style milk parlors, two Minimal Traditional residences, two Craftsman Bungalow residences, two Ranch style dwellings, and multiple geometrically spaced ancillary storage structures located to the rear of the buildings. Water retention ponds are located to the rear portion of the parcels. Landscaping and hardscaping are minimal, consisting of paved driveways and scattered trees and shrubs. Today, the parcels continue to operate as dairy farms. **For a more detailed property description, please refer to the Continuation Sheet.**

**B2. Common Name:** 14213-14297, 14333-14353, 14450, 14451 Bon View Avenue
**B3. Original Use:** Dairy Farm **B4. Present Use:** Dairy Farm
***B5. Architectural Style:** Ranch Style/Minimal Traditional Style/Craftsman Bungalow Style

***B6. Construction History:** This property consists of six parcels under common ownership. No historic-era building permits were found on file for the property at the City of Ontario. Year-built data and property characteristics were obtained from the San Bernardino County Assessor's Property Management Information System, supplemented by aerial imagery from 1935, 1938, 1939, 1946, 1948, 1952, 1959, 1966, and subsequent years. Aerial imagery indicates that the parcels at 14213-14297 Bon View Avenue and 14333-14353 Bon View Avenue were first improved with the construction of Craftsman Bungalow-style dwellings. Between 1959 and 1966, a Ranch style milk parlor and two Minimal Traditional-style residences were constructed at 14213-14297 Bon View Avenue. Between 1968 and 1975, a Ranch style dwelling was added at 14333-14353 Bon View Avenue.

During the same period (1968–1975), a Ranch style milk parlor and a Ranch style dwelling were constructed at 14450 and 14451 Bon View Avenue. Over the years, the milk parlor at 14213-14297 Bon View Avenue underwent substantial alterations between 1966 and the 1990s. Additionally, the Craftsman Bungalow dwelling features an early rear addition, appended between 1938 and 1946, and both Craftsman Bungalow dwellings have since lost their original windows. Subsequent aerial imagery suggests that the configuration of the remaining buildings has remained unchanged. **See Continuation Sheet for ownership/occupancy information.**

***B8. Related Features:** None Identified **B9a.** Architect: Not Identified **b.** Builder: Not Identified
***B10. Significance: Theme:** Early Dairy Farms in Ontario, 1900s-1929; Depression-Era and Wartime Dairies, 1930s-1945; Postwar, Large-Capacity Dairies, 1945-1980; Historic Architectural Styles, 1880s-1980s **Area:** San Bernardino County
**Period of Significance:** N/A **Property Type:** N/A
**Applicable Criteria:** NRHP/CRHR/ Local ineligible

The property at 14213-14297, 14333-14353, 14450, 14451 Bon View Avenue was initially developed prior to 1935, with subsequent improvements/alterations made between the 1950s and 1990s. In 1999, the area was annexed into the City of Ontario as part of the New Model Colony, which was formed from a portion of the former Chino Agricultural Preserve. The property is associated with the historical contexts of Early Dairy Farms in Ontario, 1900s-1929; Depression-Era and Wartime Dairies, 1930s-1945; Postwar, Large-Capacity Dairies, 1945-1980; Historic Architectural Styles, 1880s-1980s; however, the property does not possess documented significance in relation to the themes. **See Continuation Sheet for significance and integrity conclusions.**

## Primary Record Information Continued:

**P3a. Continued from Page 1:**
The 14213, 14333, 14450, and 14451 Bon View Avenue property spans multiple parcels fronting Bon View Avenue. Below is a description of each parcel and the buildings/structures located on them.

**14213-14297 Bon View Avenue (APN:105335101 and 105335102), pre-1935, 1959-1966**
Improved prior to 1935 with later developments between 1959 and 1966, the 14213-14297 Bon View Avenue property includes a Craftsman Bungalow style dwelling with a detached garage (14213 Bon View Ave), a Ranch style milk parlor (14239 Bon View Ave), two Minimal Traditional style residences (14283-14297 Bon View Ave), and several geometrically spaced pole structures to the rear.

To the far northwest corner of the parcel is a Craftsman Bungalow-style residence listed as 14213 Bon View Avenue. Constructed prior to 1935, the one-and-a-half-story dwelling has a compact rectilinear floorplan and an asymmetrical façade. The exterior is clad in tan-painted stucco with brown trim on the windows. The high-pitched, cross-gabled roof is topped with composition shingles and features a moderate eave overhang, support brackets below the gable, open eaves with exposed rafter ends, and a shed dormer on the main (west) elevation. The fenestration consists primarily of aluminum sliding sash windows and wood panel doors. The main elevation includes a full-length porch supported by two metal columns, a small stoop, and four concrete square columns approximately four feet in height. The rear (east) elevation features an early addition that was appended between 1938 and 1946. The addition features a stucco façade, gabled roof topped with composition shingles, open eaves with exposed rafter ends, and aluminum windows. The dwelling likely originally featured wood-framed, double-hung windows, as well as columns composed of a different material, which were removed or altered at an unidentified date.

A few feet east of the dwelling is one-car detached garage constructed between 1959 and 1966. The garage has a square floorplan, a gable roof, tan stucco façade, and a white overhead door.

Directly south of the Craftsman Bungalow dwelling is a Ranch style milk parlor listed as 14239 Bon View Avenue. Constructed between 1959 and 1966, the one-story structure has been substantially altered and now consists of three sections: the front milk house with an addition to the south elevation, the original rear milking parlor to the east of the milk house, now modified as a storage shed, and a new milking parlor section extending from the milk house addition. The milk house and milking parlor are separated by a breezeway, which features a metal sliding barn door with a handle on the south elevation. East of the breezeway, the building is divided into a milking area and a wider holding area. The milking area features louvered horizontal shutters on the south elevation, set atop concrete walls, while the north elevation is obscured by the original rear section. The rear section has a gabled roof oriented along an east-west axis. Additional elements include metal doors at the front, a dairy association sign below the gable, and a circular driveway in front of the milk parlor.

South of the milk house are two modest Minimal Traditional residences and a detached garage, historically addressed as 14283-14297 Bon View Avenue. Constructed between 1959 and 1966, the 14283 Bon View Avenue dwelling is situated north of the 14297 Bon View Avenue dwelling, with the detached garage positioned between them. Both residences feature asymmetrical façades and rectilinear floorplans atop concrete foundations. The 14283 Bon View Avenue dwelling has a tan stucco exterior, a hipped roof topped with composition shingles, moderate eave overhang, and boxed eaves. The main entryway is recessed, with a partial porch that includes a small stoop and decorative iron railing and columns. Fenestration consists of aluminum sliding sash windows and paneled doors. The 14297 Bon View Avenue dwelling features a tan stucco façade, a side-gabled roof with composition shingles, and an attached narrow garage with an overhead metal door. The main elevation includes a half-width porch supported by decorative metal columns and railing, a small stoop, aluminum sliding sash windows, and paneled doors.

The detached garage shares a similar appearance with the dwellings, featuring a tan stucco façade, a front-gabled roof, and a metal overhead door. East of the milk parlor and dwellings, several geometrically spaced pole structures are present, along with metal silos and ancillary storage buildings.

The 14213, 14333, 14450, and 14451 Bon View Avenue property spans multiple parcels fronting Bon View Avenue. Below is a description of each parcel and the buildings/structures located on them.

14213-14297 Bon View Avenue (APN:105335101 and 105335102), pre-1935, 1959-1966
Improved prior to 1935 with later developments between 1959 and 1966, the 14213-14297 Bon View Avenue property includes a Craftsman Bungalow style dwelling with a detached garage (14213 Bon View Ave), a Ranch style milk parlor (14239 Bon View Ave), two Minimal Traditional style residences (14283-14297 Bon View Ave), and several geometrically spaced pole structures to the rear.

To the far northwest corner of the parcel is a Craftsman Bungalow-style residence listed as 14213 Bon View Avenue. Constructed prior to 1935, the one-and-a-half-story dwelling has a compact rectilinear floorplan and an asymmetrical façade. The exterior is clad in tan-painted stucco with brown trim on the windows. The high-pitched, cross-gabled roof is topped with composition shingles and features a moderate eave overhang, support brackets below the gable, open eaves with exposed rafter ends, and a shed dormer on the main (west) elevation. The fenestration consists primarily of aluminum sliding sash windows and wood panel doors. The main elevation includes a full-length porch supported by two metal columns, a small stoop, and four concrete square columns approximately four feet in height. The rear (east) elevation features an early addition that was appended between 1938 and 1946. The addition features a stucco façade, gabled roof topped with composition shingles, open eaves with exposed rafter ends, and aluminum windows. The dwelling likely originally featured wood-framed, double-hung windows, as well as columns composed of a different material, which were removed or altered at an unidentified date.

A few feet east of the dwelling is one-car detached garage constructed between 1959 and 1966. The garage has a square floorplan, a gable roof, tan stucco façade, and a white overhead door.

Directly south of the Craftsman Bungalow dwelling is a Ranch style milk parlor listed as 14239 Bon View Avenue. Constructed between 1959 and 1966, the one-story structure has been substantially altered and now consists of three sections: the front milk house with an addition to the south elevation, the original rear milking parlor to the east of the milk house, now modified as a storage shed, and a new milking parlor section extending from the milk house addition. The milk house and milking parlor are separated by a breezeway, which features a metal sliding barn door with a handle on the south elevation. East of the breezeway, the building is divided into a milking area and a wider holding area. The milking area features louvered horizontal shutters on the south elevation, set atop concrete walls, while the north elevation is obscured by the original rear section. The rear section has a gabled roof oriented along an east-west axis. Additional elements include metal doors at the front, a dairy association sign below the gable, and a circular driveway in front of the milk parlor.

South of the milk house are two modest Minimal Traditional residences and a detached garage, historically addressed as 14283-14297 Bon View Avenue. Constructed between 1959 and 1966, the 14283 Bon View Avenue dwelling is situated north of the 14297 Bon View Avenue dwelling, with the detached garage positioned between them. Both residences feature asymmetrical façades and rectilinear floorplans atop concrete foundations. The 14283 Bon View Avenue dwelling has a tan stucco exterior, a hipped roof topped with composition shingles, moderate eave overhang, and boxed eaves. The main entryway is recessed, with a partial porch that includes a small stoop and decorative iron railing and columns. Fenestration consists of aluminum sliding sash windows and paneled doors. The 14297 Bon View Avenue dwelling features a tan stucco façade, a side-gabled roof with composition shingles, and an attached narrow garage with an overhead metal door. The main elevation includes a half-width porch supported by decorative metal columns and railing, a small stoop, aluminum sliding sash windows, and paneled doors.

The detached garage shares a similar appearance with the dwellings, featuring a tan stucco façade, a front-gabled roof, and a metal overhead door. East of the milk parlor and dwellings, several geometrically spaced pole structures are present, along with metal silos and ancillary storage buildings.

## Primary Record Information Continued:

**14333-14353 Bon View Avenue (APN:105354102), pre-1935, 1968-1975**
Improved prior to 1935, with later developments between 1968 and 1975, the property includes a Craftsman Bungalow-style dwelling at 14353 Bon View Avenue, a Ranch style dwelling at 14343 Bon View Avenue, a detached garage, and four ancillary pole structures situated to the rear.

To the far southwest corner of the parcel is a Craftsman Bungalow-style dwelling, historically addressed as 14343 Bon View Avenue. Constructed prior to 1935, the dwelling features a rectangular footprint and an asymmetrical façade. The exterior is clad in tan-painted stucco. The high-pitched, side-gabled roof is topped with composition shingles and includes a minimal eave overhang, boxed eaves, and two gabled dormers on the north and south elevations. The fenestration primarily consists of aluminum sliding sash windows. An addition, constructed between 1959 and 1966, extends from the east elevation. The dwelling exhibits minimal decorative detailing throughout.

A few feet north of the dwelling is a one-car garage, which features a front-gabled roof and a metal overhead door.

To the far northwest corner of the parcel is the Ranch style dwelling at 14353 Bon View Avenue. Constructed between 1968 and 1975, the dwelling features an asymmetrical, horizontal, rambling floorplan atop a concrete foundation. The exterior is clad in tan-painted stucco with brown window trim. The low-pitched hipped roof is topped with terracotta tiles and features a minimal eave overhang with boxed eaves. The fenestration is mostly obscured from the public right-of-way but appears to consist of fixed multi-lite or single-pane picture windows. A detached one-car garage is situated south of the dwelling, featuring a tan stucco façade, a hipped roof with terracotta tiles, and a metal overhead door. Additional features include a stone planter and a circular driveway in front of the residence.

East of the dwellings, four pole structures are present.

**14450 Bon View Avenue (APN:105354101),1968-1975**
Improved between 1968 and 1975, the parcel includes a Ranch style milk parlor and several ancillary structures associated with dairy operations. The one-story milk parlor consists of two sections: the front milk house and the rear milking parlor, separated by a breezeway. The milk house features modest Ranch style elements, including a hip-and-gable roof with wood shake shingles, a stucco façade with stone accents along the corners of the main (west) elevation, and metal casement windows on the north elevation. The fenestration throughout has since been boarded up. The breezeway, located between the two sections on the north and south elevations, is obscured from the public right-of-way.
East of the breezeway, the building is divided into a milking area and a wider holding area. The milking area features louvered horizontal shutters on the north and south elevations, set atop concrete walls. The holding area, which extends outward beyond the milking area, is partially open and supported by concrete walls and metal poles. Both sections have gabled roofs oriented along an east-west axis. Additional features include two glass industrial doors at the front, a circular driveway in front of the milk parlor, and a dairy association sign.

Several geometrically spaced pole structures are located around the milk parlor, along with metal silos and ancillary storage buildings.

**14451 Bon View Avenue (APN:105357101 and 105357102),1968-1975**
Improved between 1968 and 1975, the 14451 Bon View Avenue property includes a Ranch style dwelling with an attached garage and several geometrically spaced pole structures to the rear. The dwelling is located on parcel 105357101, while parcel 105357102 to the south remains mostly undeveloped. The dwelling has an asymmetrical façade and an irregular floorplan atop a concrete foundation. The exterior is clad in tan painted stucco with a brick veneer and a planter on the main (west) elevation. The low-pitched hipped roof is topped with composition shingles, featuring a moderate eave overhang, boxed eaves, and a stone chimney on the rear roof slope.
The main elevation showcases a recessed entryway beneath the roofline, with two decorative wood-paneled doors and box bays accented by horizontal wood siding. The fenestration throughout consists primarily of vinyl sliding sash windows. At the far northern end is a one-car attached garage with a white paneled overhead door.

**B6. Construction History Continued from Page 2:**

**Ownership/Occupancy**

**14213 Bon View Ave**
In 1957, the 14213 Bon View Avenue property was advertised for rent by local newspapers as a 19 acre ranch with water and soil good for sweet potatoes. In 1962, Frank Bernard lived at the property. In 1970, Mr. and Mrs. Dennis M. Coelho lived at the property. In 1973, Mr. and Mrs. Elcidio Rocha lived at the property. In 1982, the dwelling was part of a dairy known as the Jose Rocha Dairy. In 1987, the property appears to have been under the ownership of the Rocha and Coelho family. In 1989, the dwelling was part of the Costa View Farms No. 3 Dairy.

**14297 Bon View Ave**
In 1969, the milk parlor was listed as part of the Rocha family dairy.

**14283 Bon View Ave**
No Results.

**14297 Bon View Ave**
Between the 1960s and 1970s, the dwelling is listed as part of the Rocha Dairy.

## Building, Structure, Object Information Continued:

**14333 Bon View Ave**
Between 1957-1963, the dwelling was occupied by Gene Souza family. In 1966, the property was occupied by Manuel Costa Cordoza Sr., of the Azores. In 1971, Mr. and Mrs. Antonio R. Cota occupied the dwelling.

**14343-14353 Bon View Ave**
No Results.

**14451 Bon View Ave**
No Results.

**14450 Bon View Ave**
Between 1970-1980s, the dwelling was occupied by the Dimas Costa family and part of the Costa Dairy farm. In 1978, the Costa dairy was part of a tour sponsored by the Chamber of Commerce Dairy Committee. In 1981, the dairy farm was known as the Costa View Farms. In 1989, the dwelling was part of the Costa View Farms No.1. In 2003, the dwelling was part of the H & R Dairy owned by Dorothy Miersma family trust.

**B10. Statement of Significance from Page 2:**
For lack of significant association with the themes, the subject property has not been found eligible under NRHP / CRHR / City of Ontario Criterion A / 1 / a as the property has not in and of itself been directly associated with significant events or patterns of events in dairy farming in local, regional, state, or national history, nor does it exemplify or reflect special elements of the City's history; not eligible under NRHP / CRHR / City of Ontario Criterion B / 2 / b. as it has not been identified as having an association with an important person, family, or ethnic group significant in the local dairy farming industry; not eligible under NRHP / CRHR / City of Ontario Criterion C / 3 / c-f as none of the buildings at the property, nor the property as a whole, embodies the distinctive characteristics of a type, period, or method of construction and has not been identified as being the work of a master or an important and creative individual; not eligible under City of Ontario Criterion g and h as the property does not in and of itself offer a unique location, a singular physical characteristic, or an established and familiar visual feature within the city of Ontario or the Ontario New Model Colony / Ontario Ranch community, nor is it in and of itself one of the few remaining examples in the City, region, state or nation, possessing distinguishing characteristics of an architectural or historical type or specimen; and not eligible under NRHP / CRHR / City of Ontario Criterion D / 4 / as further study of the 14213-14297, 14333-14353 , 14450, 14451 Bon View Avenue would not appear to yield information which could be considered important in local, regional, state, or national history.

Although the 14213-14297, 14333-14353 , 14450, 14451 Bon View Avenue property has been found not significant and ineligible, while it maintains integrity of location, setting, feeling, and association as an active and in-use dairy farming property, some of the buildings have lost integrity of design, materials, and workmanship due to modifications.

***P3a. Description:** The evaluated property consists of four parcels (APN: 105317101, 105332102, 105332103, and 105317106), historically addressed as 7914 Edison Avenue. Located in an area characterized by open space and agricultural land with historical ties to dairy operations, the property spans 18.79 acres. It is situated north of Edison Avenue, between Bon View and Grove Avenues. The property includes two Ranch style single-family residences and a Streamline Modern milk parlor. The property is mostly obscured from the public right-of-way and enclosed by a chain-link fence with privacy fabric. The buildings are located on parcel 105332102, while the remaining parcels are undeveloped. Originally the property was owned by Earl Abram Musser, son of Charles Sumner Musser, founder of the Shady Grove Dairy. Dairy operations have ceased at the property. **For a more detailed property description, please refer to the Continuation Sheet.**

**B2. Common Name:** 7914 Edison Avenue
**B3. Original Use:** Dairy Farm **B4. Present Use:** Single-Family Residence
***B5. Architectural Style:** Ranch Style/Streamline Moderne Style

***B6. Construction History:** This property consists of four parcels under common ownership. No historic-era building permits were found in the City of Ontario's records. Year-built data and property characteristics were obtained from the San Bernardino County Assessor's Property Management Information System and supplemented by aerial imagery from 1935, 1938, 1939, 1946, 1948, 1952, 1959, 1966, and subsequent years. Aerial imagery indicates that initial development occurred between 1952 and 1959 with the construction of the existing Ranch style residence and Streamline Moderne milk parlor. Between 1966 and 1980, a second Ranch style residence was added. Aside from the addition of an attached garage to the first dwelling, aerial imagery suggests that the configuration of the existing buildings has remained largely unchanged. **See Continuation Sheet for ownership/occupancy information.**

**Applicable Criteria:** NRHP/CRHR/ Local ineligible

The property at 7914 Edison Avenue was initially developed between 1952 and 1959. In 1999, the area was annexed into the City of Ontario as part of the New Model Colony, which was formed from a portion of the former San Bernardino County Agricultural Preserve. The property is associated with the historical contexts of Postwar, Large-Capacity Dairies, 1945-1980 and Historic Architectural Styles, 1880s-1980s, but it does not possess documented significance in relation to the themes. **See Continuation Sheet for significance and integrity conclusions.**

## Primary Record Information Continued:

**P3a. Continued from Page 1:**

Improved between 1952 and 1959 with later developments between 1966 and 1980, the 7914 Edison Avenue property includes two Ranch style residences and a Streamline Moderne milk parlor. The property is obscured behind a fence. Based on Google Street View images and aerial imagery, the dwelling features an asymmetrical façade and an irregular floorplan atop a concrete foundation. The exterior is clad in tan painted stucco with brick and wood shiplap veneer on the main elevation. The low-pitched hipped roof is topped with composition shingles, has a moderate eave overhang, boxed eaves, and a brick chimney along the roof slope at the rear (north) elevation. The fenestration consists of metal casement windows and sliding sash windows. The main elevation features a partial-width porch beneath a shed roof supported by decorative metal beams, a small stoop, and additional decorative metal details. To the west side of the dwelling is a one-car garage addition, installed by the 1980s, with a brown paneled overhead door.

Directly west of the residence is the Streamline Moderne milk parlor. Constructed between 1952 and 1959, the structure retains only the front milk house section, as the rear milking parlor section was demolished by April 2022. The milk house exhibits distinctive Streamline Moderne characteristics, including smooth stucco walls, a flat roof, curvilinear corners, a central vertical projection, and glass block windows, some of which are diamond-shaped. Originally, the milk house featured a white painted stucco exterior, but by 2022, it had been repainted tan. The original metal casement windows on the west and east elevations were replaced with incompatible vinyl single-hung windows. While the milk parlor may have been eligible as a distinctive example of the Streamline Moderne style, it no longer retains sufficient integrity to convey its significance.

To the far southwest corner of the parcel is the second Ranch style residence, constructed between 1966 and 1980. The residence has an asymmetrical façade and a mostly rectilinear floorplan atop a concrete foundation. The exterior is clad in tan painted stucco with a partial brick veneer on the main (south) elevation. The low-pitched hipped roof features a moderate eave overhang and boxed eaves. The fenestration primarily consists of vinyl sliding sash windows, which were installed in 2022, replacing the original aluminum units. The main (south) elevation features a recessed main entryway with decorative double wood-paneled doors, a small stoop, a decorative metal beam beneath the roofline and entryway, and an attached garage on the west side with an overhead door.

## Building, Structure, Object Information Continued:

**B6. Construction History Continued from Page 2:**

**Ownership/Occupancy**

During the 1970s, Henry Donkers and his wife lived at the subject property.

## Building, Structure, Object Information Continued:

**B10. Statement of Significance from Page 2:**
For lack of significant association with the themes, the subject property has not been found eligible under NRHP / CRHR / City of Ontario Criterion A / 1 / a as the property has not in and of itself been directly associated with significant events or patterns of events in dairy farming in local, regional, state, or national history, nor does it exemplify or reflect special elements of the City's history; not eligible under NRHP / CRHR / City of Ontario Criterion B / 2 / b. as it has not been identified as having an association with an important person, family, or ethnic group significant in the local dairy farming industry; not eligible under NRHP / CRHR / City of Ontario Criterion C / 3 / c-f as none of the buildings at the property, nor the property as a whole, embodies the distinctive characteristics of a type, period, or method of construction and has not been identified as being the work of a master or an important and creative individual; not eligible under City of Ontario Criterion g and h as the property does not in and of itself offer a unique location, a singular physical characteristic, or an established and familiar visual feature within the city of Ontario or the Ontario New Model Colony / Ontario Ranch community, nor is it in and of itself one of the few remaining examples in the City, region, state or nation, possessing distinguishing characteristics of an architectural or historical type or specimen; and not eligible under NRHP / CRHR / City of Ontario Criterion D / 4 / as further study of the 7914 Edison Avenue would not appear to yield information which could be considered important in local, regional, state, or national history.

The 7914 Edison Avenue property has been found not significant and ineligible. While the milk parlor may have once been eligible as a distinctive example of the Streamline Moderne style and retains integrity of location and setting, it no longer possesses sufficient integrity of design, materials, workmanship, feeling, or association as an active dairy farming property or a site historically connected to dairy operations.

***P3a. Description:** The evaluated property consists of five parcels (APN: 021631103, 021631104, 021631105, 021631108, and 021631109), historically addressed as 13715-13751 Grove Avenue, 13817-13819 Grove Avenue, and 8270-8292 Edison Avenue. Covering 46.80 acres, the property is located on the east side of Grove Avenue and extends between Schaefer and Edison Avenues. The surrounding area remains largely open space and agricultural land, historically associated with dairy farming. The property includes a Ranch style dwelling and milk parlor with Dutch style characteristics located at 13715–13751 Grove Avenue on parcel 021631105, as well as a second Ranch style dwelling and milk parlor with Dutch style characteristics at 13817–13819 Grove Avenue on parcel 021631104, with some ancillary structures. It also includes two Minimal Traditional style dwellings at 8270–8292 Edison Avenue on parcel 021631109. Water retention ponds are present on parcels 021631103 and 021631109. Although historically associated with dairy operations, the property no longer functions as an active dairy. **For a more detailed property description, please refer to the Continuation Sheet.**

**B1. Historic Name:** Hofstra Dairy
**B2. Common Name:** 13715-13751 Grove Avenue, 13817-13819 Grove Avenue, 8270-8292 Edison Avenue
**B3. Original Use:** Dairy Farm **B4. Present Use:** Single-Family Property
***B5. Architectural Style:** Ranch Style

***B6. Construction History:** This property consists of five parcels under a single ownership. No historic-era building permits were found in the City of Ontario's records. Year-built data and property characteristics were obtained from the San Bernardino County Assessor's Property Management Information System and supplemented by aerial imagery from 1935, 1938, 1939, 1946, 1948, 1952, 1959, 1966, and subsequent years. Aerial imagery indicates that initial development occurred between 1948 and 1952, with the construction of two Minimal Traditional residences listed as 8270-8292 Edison Avenue. Between 1959 and 1966, a Ranch style residence and milk parlor was constructed on 13715-13751 Grove Avenue and a Ranch style residence and milk parlor on 13817-13819 Grove Avenue. Several ancillary structures/features were constructed to the rear of the buildings. By the 2018, most of these supporting structures/features had been demolished. Subsequent aerial imagery suggests that the configuration of the existing buildings has remained relatively unchanged. **See Continuation Sheet for ownership/occupancy information.**

***B7. Moved?** ☒ **No** ☐ **Yes** ☐ **Unknown** **Date:** N/A **Original Location:** N/A

**B9a.** Architect: Not Identified **b.** Builder: Not Identified
***B10. Significance: Theme:** Ranch Style, 1950-1970s **Area:** San Bernardino County
**Period of Significance:** 1959-1966 **Property Type:** Ranch Style
**Applicable Criteria:** NRHP/CRHR/Local C/3/d

The 13715-13751 Grove Avenue, 13817-13819 Grove Avenue, 8270-8292 Edison Avenue property was improved between 1948 and 1952 with additional developments between 1959 and 1966. In 1967 the area was established as part of the San Bernardino County Agricultural Preserve. In 1999, the area was annexed as part of the New Model Colony, formed from a portion of the former agricultural preserve. The property was evaluated under multiple themes, including the Postwar, Large-Capacity Dairies, 1945-1980; Ranch Style, 1950-1970s; and the Minimal Traditional Style, 1930s-1960s.However, the only Ranch style milk parlor and residences are significant under NRHP / NRHP / CRHR / City of Ontario C/3/d under the context of the Ranch style, with a period of significance of 1959 through 1966, representing original construction of the buildings**. See Continuation Sheet for significance and integrity conclusions.**

## Primary Record Information Continued:

**P3a. Continued from Page 1:**

Improved between 1948 and 1952, with later developments occurring between 1959 and 1966, the property includes two Ranch style milk parlors with associated residences, two Minimal Traditional style dwellings, and several ancillary structures historically associated with dairy operations, including some ancillary structures associated with former dairy operations. The majority of the ancillary structures and features have been demolished. A description of each parcel and its associated buildings is provided below.

**13715-13751 Grove Avenue (APN: 021631105), 1959-1966**

Located on the northeast corner of Grove and Schaefer Avenues, 13715–13751 Grove Avenue includes a Ranch style residence and milk parlor situated on parcel 021631105. The dwelling is located in the northwest corner of the parcel and features an asymmetrical façade with a one-story horizontal, rambling floorplan atop a concrete foundation. The exterior is clad in yellow painted stucco with horizontal wood siding on a portion of the main (west) elevation, accented by white trim around the windows and doors. The low-pitched cross-gabled roof is covered with composition shingles and features a moderate eave overhang, open eaves with exposed rafter tails, and decorative scalloped barge board at the gable ends. The fenestration visible from the public right-of-way consists of wood single-hung windows and a wood half-lite diamond patterned door. The main (west) elevation exhibits Northern European or Dutch influences, such as the diamond-patterned door, scalloped barge board, wood spindle porch supports, and a square cupola. The attached two-car garage is connected to the residence by a breezeway on the south elevation. Additional features include a stone planter and concrete steps at the main entryway.

South of the residence is the Ranch style milk parlor. The building has a horizontal floorplan and is divided into two sections: the front milk house and a rear milking parlor, separated by an open breezeway. The front section reflects Ranch style characteristics, featuring a front-gabled roof with wood shake shingles, yellow painted stucco walls, and metal casement and fixed windows. An open breezeway separates this front section from the rear portion of the building. South of the breezeway, the milking parlor has a gable roof oriented along a north-south axis, topped with corrugated sheet metal. Ventilation is provided by horizontal louvered metal shutters on the east and west elevations, positioned above concrete walls and along the gable ridge. Additional features include a circular driveway, metal doors at the main entryway, and a stone planter. The main (west) elevation of the front section also displays Northern European or Dutch influences, such as diamond-patterned fixed windows and a gabled shed roof above the main entryway supported by curved knee brackets.

The dwelling and milk parlor are strong examples of Ranch style architecture with Northern European or Dutch influences, having undergone minimal alterations. While the property is associated with the postwar, large-capacity dairy theme, several key ancillary structures and features related to former dairy operations are no longer extant. As a result, the property no longer represents a strong example of a postwar, large-capacity dairy. However, the buildings appear individually eligible under the Ranch style theme.

**13817-13819 Grove Avenue (APN: 021631104), 1959-1966**

Located east of Grove Avenue, 13817-13819 Grove Avenue includes a Ranch style residence and milk parlor situated on parcel 021631104. The dwelling is located in the northwest corner of the parcel and features an asymmetrical façade with a one-story horizontal, rambling floorplan atop a concrete foundation. The exterior is clad in beige painted stucco with tan horizontal wood siding on a portion of the main (west) elevation, accented by white trim around the windows and doors. The low-pitched cross-gabled roof is covered with composition shingles and features a moderate eave overhang, boxed eaves, horizontal wood siding below the gable, and decorative scalloped barge board at the gable ends. The fenestration visible from the public right-of-way consists of wood single-hung windows, some with decorative shutters, and a wood half-lite diamond patterned door. The main (west) elevation exhibits Northern European or Dutch influences, such as the diamond-patterned half-lite door and windows, scalloped barge board, box bay accented with wood-siding, and a square cupola. The attached three-car garage is connected to the residence by a breezeway on the south elevation. Additional features include a stone planter, a stone chimney on the rear elevation, and concrete steps at the main entryway.

South of the residence is the Ranch style milk parlor. The building is divided into two sections: the front milk house and a rear milking parlor, separated by an open breezeway. The front section reflects Ranch style characteristics, featuring a hip-and-gable roof with wood shake shingles, beige painted stucco walls, and metal casement and fixed windows. A breezeway, located between the two sections on the north and south elevations, is partially hidden from the public right-of-way. East of the breezeway, the

## Primary Record Information Continued:

milking parlor features a gable roof oriented along an east-west axis, topped with corrugated sheet metal. Ventilation is provided by horizontal louvered metal shutters on the east and west elevations, positioned above concrete walls and along the gable ridge. Additional features include a circular driveway, metal doors at the main entryway, and a stone planter. The main (west) elevation of the front section also displays Northern European or Dutch influences, such as diamond-patterned windows, decorative wood spindles below the roofline, and scalloped barge board at the gable end.

The dwelling and milk parlor are good examples of the Ranch style with Northern European or Dutch influences and minimal alterations. The However, several of the ancillary structures and features associated with former dairy operations are no longer extant. As a result, the property does not represent a strong example of a postwar, scientific, large-capacity dairy.

**8270-8292 Edison Avenue (APN: 021631109), 1948-1952**

Located north of Edison Avenue, 8270-8292 Edison Avenue includes two Minimal Traditional style dwellings situated on parcel 021631109. Both dwellings were constructed between 1948 and 1952 and features an asymmetrical compact floorplan with minimal decorative details. The 8270 Edison Avenue dwelling is located west of 8292 Edison Avenue. The dwelling has a square floorplan with a hipped roof topped with composition shingles. The exterior is stucco painted white. All the windows and doors have since been boarded up with plywood.

The 8292 Edison Avenue dwelling features a rectilinear floorplan and a white stucco exterior with red trim around the windows and doors. The hipped roof is also topped with composition shingles and includes a moderate eave overhang. Fenestration consists of a combination of aluminum single-hung windows and wood double-hung windows, along with a flush wood entry door. Both dwellings are modest in appearance and do not exhibit distinctive characteristics of the Minimal Traditional style.

## Building, Structure, Object Information Continued:

**B6. Construction History Continued from Page 2:**

**Ownership/Occupancy**
**13715-13751 Grove Avenue (APN: 021631105), 1959-1966**
Between the 1960s and 2021, the property was under the Dick Hofstra family's ownership.

**13817-13819 Grove Avenue (APN: 021631104), 1959-1966**
Between the 1960s and 2021, the property was under the Dick Hofstra family's ownership.

**8270-8292 Edison Avenue (APN: 021631109), 1948-1952**
Between the 1960s and 2021, the property was under the Dick Hofstra family's ownership.

## Building, Structure, Object Information Continued:

**B10. Statement of Significance from Page 2:**
The two Ranch style residences and associated milk parlors, constructed between 1959 and 1966, are individually significant under NRHP, CRHR, and City of Ontario Criterion C/3/d as strong examples of the Ranch style with Northern European or Dutch stylistic influences. Their low-pitched roofs, stucco cladding, decorative scalloped barge board, diamond-patterned doors and windows, cupolas, and stone planters reflect design characteristics in-vogue in the postwar period. The buildings remain largely intact and retain integrity of location, design, materials, workmanship, and feeling. Accordingly, the property is eligible under NRHP, CRHR, and City of Ontario Local Register under C/3/d under the Ranch Style theme.

The property as a whole may have been eligible under NRHP, CRHR, and City of Ontario Criterion A/1/a for its association with the Postwar, Large-Capacity Dairies theme; however, it no longer retains sufficient integrity to convey its significance. As originally developed, the property embodied the postwar dairy type, with two milk parlors, multiple residences, and expansive acreage under single ownership. By 2018, most of the ancillary structures and features historically associated with the dairy, including corrals, barns, silos, pole structures, and feeding areas, had been removed. As a result, the property no longer retains the integrity necessary to convey significance under this theme.

Individually, the two Minimal Traditional style dwellings constructed between 1948 and 1952 are not eligible. They are modest, utilitarian examples of the style that lack distinctive detailing or architectural character and therefore do not rise to the threshold of individual significance.

Under the established context, an eligible property must retain integrity of location, setting, materials, design, feeling, workmanship, and association aspects of integrity to convey significance. The Ranch style milk parlors and residences retains necessary integrity to convey significance including location, setting, feeling, design, materials, workmanship, and association. Accordingly, the property is eligible under NRHP / CRHR / City of Ontario Criterion C/3/d, as it embodies the distinctive characteristics of the Ranch style, qualifying as a historical resource under Section 15064.5 of the CEQA Guidelines.

***P3a. Description:** The evaluated property consists of seven parcels (APN: 105311104, 105312101, 105312102, 105319101, 105319102, 105330101, and 105330102), historically addressed as 7595 Schaefer Avenue and 13752 Bon View Avenue. Encompassing 61.21 acres, the property is located west of Bon View Avenue, extending between Schaefer and Edison Avenues. The surrounding area remains predominantly open space and agricultural land, historically associated with dairy farming. The property includes a Ranch style residence on parcel 105311104, a Ranch style residence and milk parlor on parcel 105312101, several geometrically spaced ancillary pole structures and sheds, and water retention ponds on parcels 105319101, 105330101, and 105330102. Landscaping and hardscaping features are minimal and consist of paved driveways and some organized trees around the dwellings. The property continues to function as a dairy farm today. **For a more detailed property description, please refer to the Continuation Sheet.**

## Primary Record Information Continued:

**P3a. Continued from Page 1:**
Improved between 1952 and 1959, the property includes two Ranch style dwellings, a Ranch style milk parlor, several ancillary structures, and water retention ponds. Below is a description of the buildings/structures and parcels.

**7595 Schaefer Avenue, 1952-1959 (APN: 105311104)**
Located on the northern end of parcel 105311104, the Ranch style dwelling at 7595 Schaefer Avenue faces Schaefer Avenue. The residence features an asymmetrical façade and a horizontal, irregular floor plan atop a concrete foundation. Its exterior is clad in yellow painted stucco. The low-pitched cross-gabled roof is covered with composition shingles and includes a moderate eave overhang with open eaves and exposed rafter ends. Fenestration consists of vinyl fixed and sliding sash windows. The main elevation features a combination of stucco and horizontal wood siding, along with a recessed main entryway situated beneath an extended roof girder, supported by a carved wood spindle. An attached garage is located on the west elevation and is clad in both stucco and board-and-batten siding.

**13752 Bon View Avenue, 1952-1959 (APN: 105312101, 105312102)**
Situated on the northwest side of parcels 105312101 and 105312102, the Ranch style milk parlor and residence at 13752 Bon View Avenue face Bon View Avenue. Constructed between 1952 and 1959, the milk parlor has a horizontal layout with two wings and consists of three sections: the front milk house, the rear milking parlor, and two holding areas at the wings. The front section incorporates Ranch style elements, including a cross-gable roof topped with wood shake shingles, a moderate eave overhang, wood siding with decorative brackets below the gable end, a stone planter, diamond-patterned casement windows, and a stucco façade. To the rear of the front section, the milking parlor and holding areas feature a gabled roof oriented along a north-south axis, with concrete walls. Additional features include industrial glass doors, silos, and a circular driveway in front of the milk parlor.

North of the milk parlor, a small rectilinear structure features a gabled roof clad in corrugated sheet metal, concrete walls, and horizontal louvered shutters set between the concrete walls.

South of the milk parlor is a Ranch style residence designed with similar architectural elements. The dwelling features an asymmetrical façade and a horizontal, rambling floorplan atop a concrete foundation. Its exterior is clad in yellow painted stucco. The low-pitched cross-gabled roof is topped with tiles and includes a moderate eave overhang, open eaves, a stone chimney on the rear roof slope, and exposed rafter ends. The main elevation showcases horizontal wood siding along the lower span of the building, a partial stone veneer, and aluminum diamond-patterned casement and fixed windows of various sizes. Additional features include a box bay accented with wood siding, a recessed entryway beneath an extended roof girder supported by a decorative wood spindle, and a wood half-lite door with a diamond pattern. An attached garage is located on the north elevation, featuring board-and-batten siding, diamond-patterned casement windows with wood shutters, and a cupola on the roof ridge.

## Building, Structure, Object Information Continued:

**B6. Construction History Continued from Page 2:**

**Ownership/Occupancy**
**7595 Schaefer Ave and 13752 Bon View Avenue (APN: 105311104, 105312101, 105312102)**
In the 1950s and 1960s, the dairy was owned by Albert J. Shaw Dairy and listed as the Driftwood Dairy Farm. By 1971, ownership had transferred to Mr. and Mrs. Pete Vander Poel, and the property was renamed the Vander Poel Bros Dairy. By 1980, it became known as the Nederend Dairy under the ownership of Hans Nederend.

The remaining parcels appear to have been acquired under the Nederend family's ownership.

## Building, Structure, Object Information Continued:

**B10. Statement of Significance from Page 2:**
For lack of significant association with the themes, the subject property has not been found eligible under NRHP / CRHR / City of Ontario Criterion A / 1 / a as the property has not in and of itself been directly associated with significant events or patterns of events in dairy farming in local, regional, state, or national history, nor does it exemplify or reflect special elements of the City's history; not eligible under NRHP / CRHR / City of Ontario Criterion B / 2 / b as it has not been identified as having an association with an important person, family, or ethnic group significant in the local dairy farming industry; not eligible under NRHP / CRHR / City of Ontario Criterion C / 3 / c-f as none of the buildings at the property, nor the property as a whole, embodies the distinctive characteristics of a type, period, or method of construction and has not been identified as being the work of a master or an important and creative individual; not eligible under City of Ontario Criterion g and h as the property does not in and of itself offer a unique location, a singular physical characteristic, or an established and familiar visual feature within the city of Ontario or the Ontario New Model Colony / Ontario Ranch community, nor is it in and of itself one of the few remaining examples in the City, region, state or nation, possessing distinguishing characteristics of an architectural or historical type or specimen; and not eligible under NRHP / CRHR / City of Ontario Criterion D / 4 / as further study of the 7595 Schaefer Avenue, 13752 Bon View Avenue would not appear to yield information which could be considered important in local, regional, state, or national history.

Although the 7595 Schaefer Avenue, 13752 Bon View Avenue property has been found not significant and ineligible, it maintains integrity of location, setting, design, materials, workmanship, feeling, and association as an active and in-use dairy farming property.

**B1. Historic Name:** Silas Koopal Dairy
**B2. Common Name:** 8040 Schaefer Avenue, 14050 Grove Avenue
**B3. Original Use:** Dairy Farm **B4. Present Use:** Goat Farm
***B5. Architectural Style:** Ranch Style/Minimal Traditional Style

***B6. Construction History:** This property consists of one parcel (APN: 105332101). No historic-era building permits were found on file with the City of Ontario. Year-built data and property characteristics were obtained from the San Bernardino County Assessor's Property Management Information System, supplemented by aerial imagery from 1946, 1948, 1952, 1959, 1968, and subsequent years. Available aerial imagery indicates that 8040 Schaefer Avenue and 14050 Grove Avenue were initially developed prior to 1935 with the construction of the existing Minimal Traditional residence at 8040 Schaefer Avenue, followed by a milk parlor between 1938 and 1946. Between 1966 and 1968, the existing Ranch-style residences were constructed on the property. Subsequent aerial imagery suggests that the overall configuration of the existing buildings has remained unchanged.

**Period of Significance:** N/A **Property Type:** N/A
**Applicable Criteria:** NRHP/CRHR/ Local ineligible

The property at 8040 Schaefer Avenue, 14050 Grove Avenue was originally developed prior to 1935, followed by later developments between 1938 and 1946 and 1966 and 1968. In 1999, the area was annexed into the City of Ontario as part of the New Model Colony, which was formed from a portion of the former San Bernardino County Agricultural Preserve. The property is associated with the historical contexts of Depression-Era and Wartime Dairies, 1930s-1945; Postwar, Large-Capacity Dairies, 1945-1980; Historic Architectural Styles, 1880s-1980s, but it does not possess documented significance in relation to the themes.

## Primary Record Information Continued:

**P3a. Continued from Page 1:**
Improved prior to 1935, with later developments between 1938 and 1946 and 1966 and 1968, the property includes a Minimal Traditional dwelling (8040 Schaefer Avenue), two Ranch style dwelling and a Ranch style milk parlor (14050 Grove Avenue), and several ancillary structures. Below is a description of the buildings/structures and parcels.

**8040 Schaefer Avenue, pre-1935**
Constructed prior to 1935, the dwelling at 8040 Schaefer Avenue is a modest Minimal Traditional residence facing Schaefer Avenue. It features an asymmetrical façade and a rectilinear floorplan. The exterior is clad in tan-painted stucco. The low-pitched gabled roof is topped with composition shingles and has a moderate eave overhang. The primary (south) elevation includes a recessed entryway beneath the roofline, a small stoop, and a shed roof over a bay window accented with a brick veneer. The fenestration visible from the public right-of-way consists of aluminum windows.

A detached garage is situated east of the dwelling toward the rear of the property. Several shed structures are also present nearby, associated with the property's current goat operations.

**14050 Grove Avenue, 1938-1946, 1966-1968**
The Ranch-style milk parlor and two residences at 14050 Grove Avenue front Grove Avenue and are partially obscured by dense tree cover. Constructed between 1938 and 1946, the milk parlor is centered between the two dwellings. The milk parlor consists of two sections: the front milk house and the rear milking parlor, separated by a breezeway. The milk house has a modest design with some Ranch-style elements, including a cross-gable roof with wood shake shingles and a stucco façade. The fenestration and breezeway are not visible from the public right-of-way. West of the front section, the milking parlor features a gable roof oriented along an east-west axis, clad in corrugated sheet metal. Ventilation is provided by horizontal louvered metal shutters on the north and south elevations, positioned above concrete walls, along with a vent system along the gable ridge. There is no curved driveway in front of the milk parlor.

South of the milk parlor is a Ranch-style dwelling, which is largely obscured from view. Constructed between 1966 and 1968, the dwelling has an asymmetrical façade and an irregular floorplan atop a concrete foundation. Its exterior is clad in tan painted stucco. The moderately pitched hipped roof is topped with composition shingles and features minimal eave overhang and boxed eaves. The recessed main entryway includes a red paneled door, and box bay windows are visible on the primary (east) elevation. A detached garage is located north of the dwelling.

North of the milk parlor is the second Ranch style dwelling. Constructed between 1966 and 1968, dwelling has an asymmetrical façade and an irregular floorplan atop a concrete foundation. The dwelling has a similar appearance to the first residence and features a stucco façade, a bay window, hipped roof topped with composition shingles, and a recessed main entryway.

To the rear of the buildings are some pole structures associated with former dairy operations.

## Building, Structure, Object Information Continued:

**B10. Statement of Significance from Page 2:**
For lack of significant association with the themes, the subject property has not been found eligible under NRHP / CRHR / City of Ontario Criterion A / 1 / a as the property has not in and of itself been directly associated with significant events or patterns of events in dairy farming in local, regional, state, or national history, nor does it exemplify or reflect special elements of the City's history; not eligible under NRHP / CRHR / City of Ontario Criterion B / 2 / b as it has not been identified as having an association with an important person, family, or ethnic group significant in the local dairy farming industry; not eligible under NRHP / CRHR / City of Ontario Criterion C / 3 / c-f as none of the buildings at the property, nor the property as a whole, embodies the distinctive characteristics of a type, period, or method of construction and has not been identified as being the work of a master or an important and creative individual; not eligible under City of Ontario Criterion g and h as the property does not in and of itself offer a unique location, a singular physical characteristic, or an established and familiar visual feature within the city of Ontario or the Ontario New Model Colony / Ontario Ranch community, nor is it in and of itself one of the few remaining examples in the City, region, state or nation, possessing distinguishing characteristics of an architectural or historical type or specimen; and not eligible under NRHP / CRHR / City of Ontario Criterion D / 4 / as further study of the 8040 Schaefer Avenue, 14050 Grove Avenue would not appear to yield information which could be considered important in local, regional, state, or national history.

Although the 8040 Schaefer Avenue, 14050 Grove Avenue has been found not significant and ineligible for historical designation, it generally retains all aspects of integrity in location, setting, design, materials, workmanship, and feeling. However, the property lacks integrity of association, as it no longer functions as a property associated with the dairy industry.

## Primary Record Information Continued:

**P3a. Continued from Page 1:**
Constructed between 1966 and 1968, the Ranch style milk parlor and residence are located towards the north end of the parcel fronting Edison Avenue. The dwelling is a one-story residence with an asymmetrical façade and a horizontal, rambling floorplan atop a concrete foundation. The exterior is clad in tan painted stucco with brown trim on the windows and doors. The moderately pitched hipped roof is topped with composition shingles and has a moderate eave overhang, and boxed eaves. The fenestration visible from the public right-of-way consists of vinyl multi-lite sliding sash and single-hung windows and wood paneled doors. The main elevation has a bay window and a stone planter. An attached one-car garage is located on the west elevation and features a white paneled overhead door.

West of the dwelling is the Ranch style milk parlor. The structure is divided into two sections: the front milk house and the rear milking parlor, separated by a breezeway. The milk house is modest in design, incorporating Ranch-style elements such as a hip-and-gable roof with composition shingles, a moderate eave overhang with boxed eaves, and a stucco façade. The fenestration consists of metal multi-lite fixed windows and metal casement windows, and industrial metal glass door. The breezeway, situated between the two sections on the east and west elevations, is obscured from the public right-of-way. South of the breezeway, the milking parlor features a gable roof oriented along a north-south axis, topped with corrugated sheet metal. Ventilation is provided by horizontal louvered metal shutters on the east and west elevations, positioned above concrete walls, along with a vent system along the gable ridge. Additional features include a circular driveway in front of the milk parlor.

To the rear of the buildings are several geometrically spaced ancillary pole structures and storage sheds associated with dairy operations.

View south of 8061 Edison Ave Ranch style SFR (IMG_8737; October 21, 2024).

## Building, Structure, Object Information Continued:

**B6. Construction History Continued from Page 2:**

**Ownership/Occupancy**
In the 1960s and 1970s, the property was owned by Mr. and Mrs. Jack Tuls and operated as Jack Tuls & Sons Dairy. By 1979, it was acquired by the Jorritsma family and listed as Jorritsma & Company.

**B10. Statement of Significance from Page 2:**
For lack of significant association with the themes, the subject property has not been found eligible under NRHP / CRHR / City of Ontario Criterion A / 1 / a as the property has not in and of itself been directly associated with significant events or patterns of events in dairy farming in local, regional, state, or national history, nor does it exemplify or reflect special elements of the City's history; not eligible under NRHP / CRHR / City of Ontario Criterion B / 2 / b as it has not been identified as having an association with an important person, family, or ethnic group significant in the local dairy farming industry; not eligible under NRHP / CRHR / City of Ontario Criterion C / 3 / c-f as none of the buildings at the property, nor the property as a whole, embodies the distinctive characteristics of a type, period, or method of construction and has not been identified as being the work of a master or an important and creative individual; not eligible under City of Ontario Criterion g and h as the property does not in and of itself offer a unique location, a singular physical characteristic, or an established and familiar visual feature within the city of Ontario or the Ontario New Model Colony / Ontario Ranch community, nor is it in and of itself one of the few remaining examples in the City, region, state or nation, possessing distinguishing characteristics of an architectural or historical type or specimen; and not eligible under NRHP / CRHR / City of Ontario Criterion D / 4 / as further study of the 78061 Edison Avenue would not appear to yield information which could be considered important in local, regional, state, or national history.

Although the 8061 Edison Avenue property has been found not significant and ineligible, it maintains integrity of location, setting, design, materials, workmanship, feeling, and association as an active and in-use dairy farming property.

**Area:** San Bernardino County **Period of Significance:** N/A **Property Type:** N/A
**Applicable Criteria:** NRHP/CRHR/ Local ineligible

The 7721-7891 Edison Avenue property was initially improved prior to 1935, with later developments between 1938 and 1946 and 1959 and 1966. In 1999, the area was annexed into the City as part of the New Model Colony, formed from a portion of the former San Bernardino County Agricultural Preserve. The 7721-7891 Edison Avenue property is significant under NRHP / NRHP / CRHR / City of Ontario C/3/c-f under the context of Early Dairy Farms in Ontario, 1900s-1929; Depression-Era and Wartime Dairies, 1930s-1945; Postwar, Large-Capacity Dairies, 1940-1970s; Art Deco Style, 1920-1960s, with a period of significance of pre-1935 through 1966, representing original construction through completion of the final residential building.

Under the established context, an eligible property must retain most aspects of integrity to convey significance. This property does not retain the necessary integrity to convey significance. It has been altered and the Art Deco style milk parlor is missing key features associated with the property type. Accordingly, the property is not eligible under NRHP / CRHR / City of Ontario Criterion C/3/c-f and does not qualify as an historical resource pursuant to Section 15064.5 of the CEQA Guidelines.

## Primary Record Information Continued:

**P3a. Continued from Page 1:**
The property includes a Craftsman Bungalow style residence, Art Deco style milk parlor, Ranch style residences, manufactured trailer offices, and ancillary structures/features associated with dairy operations. Below is a description of the buildings and parcels.

**7721 Edison Avenue (APN: 105336101), pre-1935, 1935-1946**
Constructed prior to 1935, with later developments between 1935 and 1946, the parcel includes a Craftsman Bungalow style dwelling, an Art Deco style milk parlor, ancillary structures and features associated with former dairy operations, and manufactured trailer offices. The parcel is partially enclosed behind a concrete masonry unit wall.

The Craftsman Bungalow style residence is located at the northwest corner of the parcel, fronting Edison Avenue. This one-and-a-half story dwelling features a symmetrical façade and a mostly square floor plan. The exterior is clad in tan-painted stucco with blue trim on the windows and doors. The high-pitched, side-gabled roof is topped with composition shingles and has a wide eave overhang with wood brackets beneath the gable. The fenestration visible from the public right-of-way consists of vinyl single-hung windows and fixed wood windows. The main (north) elevation includes a centered gabled dormer with four vinyl single-hung windows, an enclosed full-width porch, a centered main entryway with a wood-paneled door and metal security door, and concrete steps.

Directly south of the dwelling stands the Art Deco-style milk parlor, constructed between 1935 and 1946. Only the front milk house section remains, as the rear milking parlor was demolished in 2017. This remaining section retains some Art Deco characteristics, including smooth stucco walls, a flat roof, a symmetrical boxy form, and glass block windows.

East of the dwelling are two storage sheds with gabled roofs. To the rear of the milk parlor are two manufactured office trailers installed after 2017.

Prior to 2017, the parcel contained several pole structures, large metal silos, cattle feeding gates, and corrals located behind the dwelling. While the property may have once exemplified a Depression-era and Wartime dairy operation, it no longer retains sufficient integrity to convey its historical significance.

**7891 Edison Avenue (APN: 105336103), 1959-1966**
Constructed between 1959 and 1966, the Ranch style residence at 7891 Edison Avenue faces Edison Avenue. The one-story dwelling features an asymmetrical façade and an irregular floorplan atop a concrete foundation. Its exterior is clad in yellow board-and-batten siding, with a partial stone veneer on the main (north) elevation. The low-pitched cross-gabled roof, covered with composition shingles, has a moderate eave overhang, boxed eaves, and a chimney on the rear roof slope.

The fenestration visible from the public right-of-way consists of vinyl sliding sash windows. The main elevation includes a recessed entryway with a single paneled door, a concrete stoop, a stone planter, and an attached one-car garage with a paneled overhead door. Compared to other Ranch style residences in the area, the dwelling is smaller in size and exhibits modest characteristics of the style.

**B6. Construction History Continued from Page 2:**

**Ownership/Occupancy**
**7721 Edison Ave (APN: 105336101)**
In the 1920s, the property was originally owned by Thomas H. Settles, a farmer from Virginia. He retained ownership until 1925, when he relocated to Upland. From the early 1950s to 2017, the property was owned by the Bootsma family, who had moved to the area from Artesia in the Los Angeles Basin during the 1940s.

The family patriarch, Jim Bootsma, immigrated to the United States from Holland and was a member of the California Milk Producers Council. Together with his wife, Tryntje, he had six sons Garret, Symon, Jim Jr., Will, Ike, and John Bootsma and three daughters, Agnes, Nell, and Vicky. In 1979, Jim Bootsma passed away at the age of 76, and the property was passed on to his immediate family.

**7891 Edison Ave (APN: 105336103)**
In 1967, Mr. and Mrs. Symon Bootsma lived at the subject residence.

CHINO CHAMPION
DAIRY FESTIVAL EDITION

Thursday, June 4, 1959
Section 3, page 15

# As the Seed is Planted . .

Both Bootsma boys are vocational agriculture students at Chino high school. Paul Wade, agricultural instructor at the school instructs boys here in the agriculture room, located in the shop building at the high school. —Champion photo

Symon Bootsma works with his milking heifer, part of his Future Farmer project work and a start toward a herd of his own. Boys such as Symon learn not only proper livestock husbandry in vocational agriculture, but are furthered in a science the principles of which they learn by doing on their home ranches. —Champion photo

Milk is one of the world's oldest known foods.

What's a good farm? A good farm boy. And good farm boys are what the Future Farmers are attempting to mould.

Sometimes — in fact most of the time—the FFA leaders have only to direct, for the boy comes to his high school vocational agriculture teachers with a background in farming well moulded by the last remaining industry which is family based in this specialized world of ours.

Such a family is the Bootsma family, 7721 Edison avenue. The 11 member Bootsma family, with Patriarch Jim at their head, run a dairy there, shipping to Arden Creamery.

The family milks some 100 plus head of cows, raise all their own replacements.

This year two of the Bootsma boys, Jim and Symon were in the upper grades at Chino high school. Another, Wilbur, just entered the Chino high school.

The Bootsma boys walked off with their share of the awards at the FFA banquet Thursday night too. The boys raise beef show animals, favoring Angus, and raise milk cows and calves as well.

Symon graduates this year while Jim, Jr., takes over as president of the local FFA chapter next year.

Active in the FFA, the boys rise at 2:30 a.m., to milk before going off to school. Then they leave early again to get home for milking chores.

This year, Jim was vice president and Symon, treasurer of the local chapter. Symon earned 391 points in his work this year, earning his third letter.

Jim not only earned his third letter, but was awarded his state farmer degree and won third in the 20-30 project awards.

The Bootsma's live in a pleasant two-story home on their dairy. Mr. and Mrs. Bootsma, who moved into the valley some 18 years ago from Artesia to found their dairy, were both born in Holland.

Mr. Bootsma presides over a large family, a family which well fills the dinner table even though the two oldest girls have married and moved to homes of their own.

In addition to Mr. and Mrs. Bootsma there are Mrs. Agnes Jacobs, Mrs. Nellie Johnson; Garret Bootsma, 19, a graduate of Chino high school who now works for his father on the dairy; Symon Bootsma, 18, who will graduate and join his father in the dairy; Jim, Jr., 16, and a senior at high school next year; Wilbur, 14; Ike, 12; John, 9; and Vicky, 6.

What do the boys get out of FFA work? They get an eye for beef and dairy cattle. They learn to work with and lead others in the farming community; they learn much about this industry which takes real business sense to operate; and they learn how to use the latest scientific information pouring out of experiment stations and universities to help the farmer make a better living.

Jim Bootsma with his prize Angus bull which he has shown in a number of fairs, and will show at the Junior Fair here this weekend. In the Future Farmers, boys like Jim learn not only scientific farming but leadership as well. Jim is president of the local chapter next year. —Champion photo

***P3a. Description:** The evaluated property consists of a single parcel (APN: 021632103) addressed as 8185 Edison Avenue. Covering 18.56 acres, the property is located at the southeast corner of Edison and Grove Avenues. The property and its environs is historically associated with dairy farming and remains largely open space and agricultural land. The property includes a Ranch style dwelling that exhibits Northern European or Dutch influences, a Minimal Traditional style dwelling, a Streamline Moderne style milk parlor, and several ancillary structures and features associated with dairy operations. A water retention pond is located in the southeast corner of the parcel. Landscaping and hardscaping features include trees and shrubs near the buildings and paved driveways. The property continues to function as an active dairy farm.

The property was previously recorded, and the Ranch style dwelling and Streamline Moderne milk parlor were determined eligible in 2014, but not formally designated. **For a more detailed property description, please refer to the Continuation Sheet.**

***B10. Significance: Theme:** Streamline Moderne, 1930s-1960s; Ranch Style, 1950-1970s **Area:** San Bernardino County
**Period of Significance:** 1952-1959 **Property Type:** Streamline Moderne Style/Ranch Style
**Applicable Criteria:** NRHP/CRHR/Local C/3/d

The 8185 Edison Avenue property was improved between 1952 and 1959 with the construction of a Ranch style residence, Minimal Traditional style residence, and Streamline Moderne style milk parlor. In 1967 the area was established as part of the San Bernardino County Agricultural Preserve. In 1999, the area was annexed as part of the New Model Colony, formed from a portion of the former agricultural preserve. The 8185 Edison Avenue property is associated with multiple themes, including Postwar, Large-Capacity Dairies, 1945-1980; Ranch Style, 1950-1970s; Streamline Moderne style, 1930s-1960s; Minimal Traditional style, 1930-1950s; and Consolidation of Dairy Operations, 1980s-1998. However, only the Ranch style dwelling and Streamline Moderne style milk parlor are considered significant under NRHP, CRHR, and City of Ontario criteria C/3/d within the context of Ranch Style, 1950-1970s; Streamline Moderne style, 1930s-1960s, with a period of significance of 1952-1959, representing the dwelling and milk parlor's original construction. **See Continuation Sheet for significance and integrity conclusions.**

## Primary Record Information Continued:

**P3a. Continued from Page 1:**
Constructed between 1952 and 1959, the property includes a Ranch style dwelling, a Minimal Traditional style dwelling, a Streamline Moderne milk parlor, and several ancillary structures and features associated with dairy operations. Located on the northeast corner of the parcel is a Ranch style dwelling that exhibits Northern European or Dutch influences. The dwelling features an asymmetrical façade and a one-story horizontal floorplan atop a concrete foundation. The exterior is clad in horizontal wood siding painted yellow, with green trim on the windows and doors. The low-pitched cross-gabled roof is covered with composition shingles and includes a moderate eave overhang with open eaves and exposed rafter ends. A chimney is located on the rear (south) elevation. Fenestration consists of wood-framed diamond-patterned windows, some with green decorative shutters. The main (north) elevation features diamond-patterned windows, box bays with decorative wood support brackets, a stone planter, and an extended roof girder. A garage is attached to the main dwelling by a wide open breezeway on the west elevation.

West of the Ranch style dwelling is a Streamline Moderne milk parlor. The building is divided into two sections: the front milk house and the rear milking parlor, separated by a breezeway. The front section reflects Streamline Moderne characteristics, with smooth stucco walls, a flat roof, curvilinear corners, a central vertical projection, and curved glass block windows. The west elevation contains metal multi-lite casement windows. The windows on the east elevation are boarded up. The breezeway, located between the two sections, features a metal barn-style sliding door on both the east and west elevations. South of the breezeway, the milking parlor has a gable roof oriented along a north-south axis, clad in corrugated sheet metal. Ventilation is provided by horizontal metal shutters on the east and west elevations, positioned above concrete walls, along with a vent system along the gable ridge. Additional features include a circular driveway in front of the milk parlor and two metal doors.

Located on the northwest corner of the parcel is a Minimal Traditional dwelling with a detached garage. The dwelling has an asymmetrical façade and a rectilinear floorplan atop a concrete foundation. The exterior is clad in tan-painted stucco with green trim on the windows and roof fascia. The low-pitched hipped roof is finished with composition shingles and features a minimal eave overhang with boxed eaves. Fenestration visible from the public right-of-way consists of aluminum sliding sash windows. The main (west) elevation includes a recessed main entryway with a concrete stoop, metal security gate, and a wide stone chimney. The detached garage, located directly north of the dwelling, features two paneled overhead doors, a tan stucco façade, and a hipped roof.

Several ancillary pole structures, sheds, and features are located throughout the property.

The property features a good example of a postwar Streamline Moderne milk parlor and a Ranch style dwelling that incorporates Northern European or Dutch architectural influences. The milk parlor exhibits Streamline Moderne elements that are evident in the smooth stucco surfaces, rounded corners, glass block windows, and horizontal emphasis that give the building a sleek, aerodynamic appearance typical of the style. A circular driveway situated in front of the milk parlor not only enhances the property's functionality but also reflects the era's emphasis on automobile accessibility and streamlined movement through the site. The dwelling's Ranch style influence is seen in the low horizontal massing, asymmetrical layout, and integration of indoor and outdoor spaces. Northern European or Dutch architectural touches include diamond-patterned windows, decorative shutters, and extended roof girders, lending additional character and ornamentation to the design.

## Primary Record Information Continued:

View southeast of 8185 Edison Ave Ranch style SFR (IMG_8759; October 21, 2024).

**B10. Statement of Significance from Page 2:**
The 8185 Edison Avenue property was developed between 1952 and 1959 and includes a Ranch style dwelling, a Streamline Moderne milk parlor, a Minimal Traditional dwelling, and several later-added ancillary structures. The Ranch style residence and milk parlor date to the postwar era and reflect two distinct architectural styles tied to Ontario's postwar dairy development.

The property was evaluated under the Postwar, Large-Capacity Dairy, 1945-1980 context, however, is not recommended eligible under that theme as the majority of ancillary structures, such as pole barns, feeding gates, and other operational infrastructure, do not appear in aerial imagery until after 1987, placing them outside the defined period of significance. The absence of these character-defining features needed to demonstrate large-capacity operations indicate that the 8185 Edison Avenue property is not significant or eligible as a Postwar, Large-Capacity Dairy operation.

While several ancillary structures, including pole barns and feeding gates within the property, appear to date to the 1980s-1995 period, placing them within the Consolidation of Dairy Operations, 1980s-1998 thematic timeframe, there is no evidence that the property represents a true consolidation of multiple dairy operations. Accordingly, the 8185 Edison Avenue property is not eligible under the theme of Consolidation of Dairy Operations, 1980s-1998. The property does not contain multiple milk parlors or residences from different operations or periods of operation, nor does it exhibit the spatial layout or landscape features, such as retention ponds or geometrically organized infrastructure, associated with a merged or large-scale consolidated dairy.

The property as a whole is not significant or eligible under NRHP/CRHR/Local criteria. The extant improvements appear to reflect continued use or isolated upgrades rather than a large capacity dairy operation or a broader consolidation effort typical of the late twentieth-century shift in dairy operations across Ontario and the Chino Valley.

**Building, Structure, Object Information Continued:**

Individually, the Ranch style dwelling is recommended eligible under NRHP Criterion C / CRHR Criterion 3 / City of Ontario Criterion d, within the context of Ranch Style, 1950–1970s. The residence exhibits key features of the style, including its one-story, low horizontal massing, an asymmetrical layout, horizontal wood siding, and an attached garage connected by an open breezeway. Additionally, Northern European or Dutch architectural influences are evident in diamond-patterned windows, decorative shutters, and extended roof girders, which lend ornamentation and character to the building. The dwelling retains the necessary aspects of integrity and is a representative example of a Ranch style home in the New Model Colony / Ontario Ranch area. The Ranch style dwelling is not individually eligible under any other NRHP/CRHR/Local criteria.

The Streamline Moderne milk parlor, also constructed between 1952 and 1959, is recommended individually eligible under NRHP Criterion C / CRHR Criterion 3 / City of Ontario Criterion d, as a good example reflecting the Streamline Moderne aesthetic. It features smooth stucco walls, a central bay that projects beyond the front wall plane with rounded corners, and large glass block windows. The structure's front milk house and rear milking parlor are separated by a central breezeway. A character-defining circular driveway in installed in front of the milk parlor representing an key operational feature used for deliveries and for large trucks to load milk from the milk house. The milk parlor building retains the necessary aspects of integrity and is a representative example of a postwar milk parlor designed in the Streamline Moderne style in the New Model Colony / Ontario Ranch area. The milk parlor building is not individually eligible under any other NRHP/CRHR/Local criteria.

The Minimal Traditional residence was also evaluated for individual eligibility and although the dwelling retains integrity, it lacks the distinctive features necessary to be considered a strong or representative example of the style within the survey area. Beyond its architectural appearance, no information was identified to support a positive eligibility finding for the house relative to an individual association with significant events, important persons, or information potential. Accordingly, the Minimal Traditional style home is individually ineligible under all NRHP/CRHR/Local criteria.

Under the established historic context, eligibility requires retention of integrity of location, setting, materials, design, feeling, workmanship, and association. Both the Ranch style dwelling and Streamline Moderne milk parlor meet these integrity requirements and embody the distinctive characteristics of their respective types and periods of construction. As such, both buildings qualify as an historical resource under Section 15064.5 of the CEQA Guidelines.

***B10. Significance: Theme:** Postwar, Large-Capacity Dairies, 1945-1980; Historic Architectural Styles, 1880s-1980s
**Area:** San Bernardino County
**Period of Significance:** N/A **Property Type:** N/A
**Applicable Criteria:** NRHP/CRHR/ Local ineligible

The 8311 Edison Avenue property was developed between 1968 and 1975. In 1999, the area was annexed into the City of Ontario as part of the New Model Colony, which was formed from a portion of the former San Bernardino County Agricultural Preserve. The property is associated with the historical contexts of Postwar, Large-Capacity Dairies, 1945–1980; Consolidation of Dairy Operations, 1980s–1998; and Historic Architectural Styles, 1880s–1980s, but it does not possess documented significance in relation to any of these themes. The Ranch style residence and herringbone-style milk parlor are modest examples of their architectural styles and property types, and while ancillary structures are present, they were constructed after the period of significance for the postwar dairy context. Additionally, there is no evidence that the property functioned as part of a consolidated dairy operation during the 1980s–1998 period. **See Continuation Sheet for significance and integrity conclusions.**

## Primary Record Information Continued:

**P3a. Continued from Page 1:**
The dwelling is located west of the milk parlor and has a modest appearance. It features an asymmetrical facade and an irregular horizontal floorplan atop a concrete foundation. The low-pitched cross-gabled roof has a moderate eave overhang with boxed eaves and is topped with terracotta tiles, which likely replaced the original composition or wood shingles at an unidentified date. The exterior is clad in tan-painted stucco. Additional features include a recessed main entryway accessed via concrete steps, two brown paneled doors, metal sliding sash windows, a stone planter, and decorative blue shutters on some of the windows. An attached three-car garage addition was appended to the east elevation and features a roofline that does not match the original structure, resulting in an uneven and visually uneven roofline.

Directly east of the dwelling is the Ranch style milk parlor, which is divided into three sections: the front milk house, the rear milking parlor separated by a breezeway, and a holding area. The milk house shares a similar design with the main dwelling, incorporating Ranch style elements such as a hip and gable roof topped with terracotta tiles, a moderate eave overhang with boxed eaves, and a stucco façade. Its fenestration consists of metal casement windows. The breezeway, located between the two sections on the north and south elevations, is obscured from the public right of way. South of the milk house, the milking parlor features a gable roof oriented along a north-south axis, topped with corrugated sheet metal. Ventilation elements include metal horizontal louvered shutters set atop concrete walls, along with a vent system along the gable ridge. Further south, the holding area is partially open and enclosed by concrete walls. Additional features include metal doors at the main entryway, bulk tanks, and a circular driveway in front of the milk parlor.

East of the milk parlor is the manufactured home. The building features a low-pitched side-gabled roof topped with composition shingles, wood siding painted tan, aluminum sliding sash and single-hung windows, and a shed roof extension.

Within proximity to the buildings are several features and structures associated with dairy operations, including silos, pole structures, feeding gates, corrals, and storage sheds. Water retention ponds are located at the rear of the property. These ancillary features were installed by the late 1990s.

## Building, Structure, Object Information Continued:

**B6. Construction History Continued from Page 2:**

**Ownership/Occupancy**
The property was originally owned by Martin De Hoog and was listed as the De Hoog Dairy. By 1977, it was recorded as the Double "D" Dairy. The property remained under the ownership of the De Hoog family until 2022.

**B10. Statement of Significance from Page 2:**
Comparative study of other Postwar Scientific Large-Capacity Dairies in the survey area reveals that the 8311 Edison Avenue property is a more modest example of the property type. The property contains a single Ranch style residence and a Ranch herringbone-style milk parlor. While these components are associated with the Postwar, Large-Capacity Dairy (1945–1980) theme, the property does not appear to be a significant example. Although ancillary structures such as pole barns and feeding infrastructure are present, aerial imagery and field observations indicate that these features were added in the late 1990s, after the defined period of significance for the postwar large capacity theme. Accordingly, the property does not contain the necessary character-defining features needed to demonstrate a postwar scientific large-capacity dairy operation and is therefore ineligible under this theme.

The property also does not meet the thresholds for significance under the Consolidated Dairy Operations (1980s–1998) theme. Although some extant features, such as pole barns and feeding infrastructure, date to this period, there is no evidence that the property functioned as a consolidated operation formed through the merging of multiple dairy facilities. It lacks multiple milk parlors or residences associated with separate earlier operations, key indicators of consolidation. Instead, the improvements appear to reflect continued individual use or isolated upgrades, rather than consolidation efforts.

Additionally, neither the Ranch style residence nor the Ranch style milk parlor is considered a distinctive example of its type. Both buildings are individually ineligible. The residence appears to have been altered early in its history by the addition of a three-car garage, resulting in a modest and irregular layout that lacks defining Ranch style features such as a breezeway or cupola. Similarly, while the milk parlor includes Ranch style elements such as steel casement windows, and a stucco facade, it does not rise to the level of an exemplary or distinctive Ranch style design.

The property as a whole is not significant or eligible under any NRHP/CRHR/Local criteria. It is not eligible under NRHP / CRHR / City of Ontario Criterion A / 1 / a due to lack of a significant association with local, regional, state, or national patterns of dairy farming. It is not eligible under Criterion B / 2 / b as it lacks association with any person, family, or group important in Ontario's dairy history. It does not appear to meet Criterion C / 3 / c–f, as the residence and milk parlor do not embody distinctive characteristics of a type, period, or method of construction and are not the work of a master. The property is also not eligible under City of Ontario Criteria g or h, nor under Criterion D / 4, as it is not likely to yield important historical information.

Although the property has been found not significant and ineligible, it retains integrity of location, setting, design, materials, workmanship, feeling, and association as an active dairy property.

***B5. Architectural Style:** Ranch Style/Craftsman Bungalow Style

***B6. Construction History:** This property consists of four parcels under single ownership (APN: 021632201, 021632202, 021632203, 021632204). No historic-era building permits were found on file with the City of Ontario. Year-built data and property characteristics were obtained from the San Bernardino County Assessor's Property Management Information System, supplemented by aerial imagery from 1935, 1938, 1946, 1948, 1952, 1959, 1968, and subsequent years. Available aerial imagery indicates that 8335 Edison Avenue was initially developed prior to 1935 with the construction of a two-story Craftsman Bungalow style residence and several ancillary structures, which are no longer extant. By 1959, a detached garage had been added to the property. Between 1959 and 1966, a Ranch style milk parlor was constructed. Subsequent aerial imagery suggests that the overall configuration of the existing buildings has remained unchanged. **See Continuation Sheet for ownership/occupancy information.**

***B7. Moved?** ☒ **No** ☐ **Yes** ☐ **Unknown** **Date:** N/A **Original Location:** N/A
***B8. Related Features:** None Identified
**B9a.** Architect: Not Identified **b.** Builder: Not Identified
***B10. Significance: Theme:** Craftsman Bungalow Style, 1900s-1930s **Area:** San Bernardino County
**Period of Significance:** Pre-1935 **Property Type:** Craftsman Bungalow Style
**Applicable Criteria:** NRHP/CRHR/Local C/3/d

The 8335 Edison Avenue property was improved prior to 1935 with the construction of a Craftsman Bungalow residence, with additional developments occurring between 1959 and 1966. In 1967 the area was established as part of the San Bernardino County Agricultural Preserve. In 1999, the area was annexed as part of the New Model Colony, formed from a portion of the former agricultural preserve. The 8335 Edison Avenue property is associated with multiple themes, including Depression-Era and Wartime Dairies, 1930s-1945; Craftsman Bungalow Style, 1900s-1930s; Postwar, Large-Capacity Dairies, 1945-1980; Ranch Style, 1950-1970s. However, only the Craftsman Bungalow style dwelling is considered significant under NRHP, CRHR, and City of Ontario criteria C/3/d within the context of Craftsman Bungalow Style, 1900s-1930s, with a period of significance of pre-1935, representing the dwelling's original construction. **See Continuation Sheet for significance and integrity conclusions.**

## Primary Record Information Continued:

**P3a. Continued from Page 1:**
Improved prior to 1935 with later developments between 1959 and 1966, the property includes a Craftsman Bungalow style dwelling, a Ranch style milk parlor, several ancillary structures and water retention ponds.

The Craftsman Bungalow style residence is located towards the northeast corner of parcel 021632204. The dwelling is two-story and has an asymmetrical façade and an irregular floorplan. The exterior is clad in clapboard siding painted brown with dark brown trim on the windows and doors. The moderately pitched hipped roof is topped with composition shingles and has a moderate eave overhang, boxed eaves, and a dormer on the main (north) elevation. The fenestration visible from the public right-of-way consists of wood-framed fixed and double-hung windows, along with some vinyl sliding sash and single-hung windows. The main elevation features a partial-width porch beneath a hipped roof extension, supported by tapered brick columns, concrete steps, and a brick pony wall.

The dwelling retains key characteristics of the Craftsman Bungalow style, including its use of natural materials such as wood clapboard siding and brick. The dormer, exposed rafter tails, wood-cased windows, and decorative porch elements, such as brick tapered columns and pony wall, further exemplify the style's emphasis on handcrafted architectural details and a connection to nature. Despite the removal of some original windows and roofing, the dwelling maintains a strong representation of the Craftsman Bungalow style through its massing, roof form, and characteristic design features.

South of the dwelling is a detached three-car garage constructed ca. 1959. The garage was designed in a similar fashion to the residence with wood-siding painted brown, hip-and-gable roof with composition shingles, three wood paneled overhead doors, and a small cupola on the top of the roof ridge.

West of the dwelling is the Ranch style milk parlor, which is divided into three sections: the front milk house, the rear milking parlor separated by a breezeway, and an open holding area. Constructed between 1959 and 1966, the milk house incorporates some Ranch style elements such as a hip-and-gable roof, a moderate eave overhang with boxed eaves, and a stucco façade with wood-siding below the gable end. Its fenestration consists of metal multi-lite windows and vinyl windows. The breezeway, located between the two sections on the north and south elevations, is obscured from the public right of way. South of the milk house, the milking parlor features a flat roof oriented along a north-south axis. Ventilation elements include metal vertical louvered shutters set between concrete walls. Further south, the holding area is open and enclosed behind concrete walls. Additional features include industrial glass doors at the main entryway and a circular driveway in front of the milk parlor.

Within proximity to the buildings are several features and structures associated with dairy operations, including silos, pole structures, feeding gates, corrals, and storage sheds. Water retention ponds are located at the rear of the property.

## Primary Record Information Continued:

View south of 8335 Edison Ave Ranch style milk parlor (IMG_8835; October 21, 2024).

## Building, Structure, Object Information Continued:

**B6. Construction History Continued from Page 2:**

**Ownership/Occupancy**
In the 1950s, the property was owned by John T. Veenstra. By 1981, ownership transferred to Martin De Hoog. The property remained under the De Hoog family's ownership until 2022 and was initially known as the De Hoog Dairy before being renamed Three D Dairy.

## Building, Structure, Object Information Continued:

**B10. Statement of Significance from Page 2:**
The 8335 Edison Avenue property is an excellent example of a Craftsman Bungalow style residence, retaining key characteristics of the Craftsman Bungalow style, including the use of natural materials such as wood clapboard siding and brick. The dormer, wood-cased windows, and decorative porch elements, such as brick tapered columns and pony wall, further exemplify the style's emphasis on handcrafted architectural details and a connection to nature. Despite the removal of some original windows and roofing, the dwelling maintains a strong representation of the Craftsman Bungalow style through its massing and characteristic design features.

The property also includes a Ranch style milk parlor and a detached garage. Although minimally altered, the milk parlor is not a representative example of the Ranch style within the survey area. The detached garage, constructed circa 1959, well after the original dwelling, does not contribute to the historic character of the property and is not considered a contributing resource.

Under the established context, an eligible property must retain integrity of location, setting, materials, design, feeling, workmanship, and association aspects of integrity to convey significance. Despite minor modifications, the dwelling retains necessary integrity to convey significance including location, setting, feeling, design, materials, workmanship, and association. Accordingly, the property is eligible under NRHP / CRHR / City of Ontario Criterion C/3/d, as it embodies the distinctive characteristics of its type, period, and method of construction, qualifying as a historical resource under Section 15064.5 of the CEQA Guidelines.

## Primary Record Information Continued:

**P3a. Continued from Page 1:**
Improved between 1959 and 1966, with later developments between 1966 and 1968, the property includes two Ranch style dwellings, a Ranch style milk parlor, several ancillary structures/features and water retention ponds.

Fronting Ontario Ranch Road is one of the Ranch style dwellings and the Ranch style milk parlor, listed as 8485 Edison Avenue. Constructed between 1959 and 1966, the dwelling is a one-story structure with an asymmetrical façade and a horizontal, rambling floorplan atop a concrete foundation. Its exterior is clad in tan-painted stucco with a stone veneer along the lower span of the main (north) elevation. The low-pitched hip-and-gable roof is topped with composition shingles and features a moderate eave overhang, boxed eaves, a stone chimney on the rear roof slope, and a cupola. Below the gable end, is white horizontal wood siding and a scalloped fascia board. The fenestration consists of vinyl sliding sash units, which replaced the original wood-framed windows, some of which featured a diamond pattern. One of the original window openings to the left of the main entryway was substantially altered and replaced with a smaller window unit. The main elevation includes a stone planter, box bays accented by white horizontal wood siding, a decorative wood spindle column, and a recessed main entryway. On the west elevation, a partially open breezeway connects the dwelling to a two-car garage with white paneled overhead doors.

West of the dwelling is the Ranch style milk parlor, which is divided into two sections: the front milk house section and the rear milking parlor separated by a breezeway. The milk house incorporates Ranch style elements such as a hip-and-gable roof, a moderate eave overhang with boxed eaves, and a stucco façade. Its fenestration consists of metal multi-lite fixed and casement windows. The breezeway, located between the two sections on the east and west elevations, features two metal barn-style sliding doors. South of the milk house, the milking parlor features a gabled roof oriented along a north-south axis and steel beams. Ventilation elements include metal vertical louvered shutters set on top concrete walls. Additional features include two metal doors at the main entryway and a circular driveway in front of the milk parlor.

To the rear portion of the parcel fronting Walker Avenue is the second Ranch style residence, listed as 14350 Walker Avenue. Constructed between 1966 and 1968, the dwelling has an asymmetrical façade and an irregular floorplan atop a concrete foundation. The exterior is clad in stucco painted tan and has a stone veneer on the main (east) elevation. The moderately-pitched hipped roof is topped with composition shingles and has a moderate eave overhang, boxed eaves, and a stone chimney on the rear roof slope. The fenestration visible from the public right-of-way consists of aluminum windows. An enclosed breezeway is located on the north elevation and connects the dwelling to a two-car garage.

## Primary Record Information Continued:

View south of 14350 Walker Ave Ranch style SFR (IMG_8830; October 21, 2024).

## Building, Structure, Object Information Continued:

**B6. Construction History Continued from Page 2:**

**Ownership/Occupancy**
The property was owned by the Edward Swager family between the 1960s and 2022.

## Building, Structure, Object Information Continued:

**B10. Statement of Significance from Page 2:**
For lack of significant association with the themes, the subject property has not been found eligible under NRHP / CRHR / City of Ontario Criterion A / 1 / a as the property has not in and of itself been directly associated with significant events or patterns of events in dairy farming in local, regional, state, or national history, nor does it exemplify or reflect special elements of the City's history; not eligible under NRHP / CRHR / City of Ontario Criterion B / 2 / b as it has not been identified as having an association with an important person, family, or ethnic group significant in the local dairy farming industry; not eligible under NRHP / CRHR / City of Ontario Criterion C / 3 / c-f as none of the buildings at the property, nor the property as a whole, embodies the distinctive characteristics of a type, period, or method of construction and has not been identified as being the work of a master or an important and creative individual; not eligible under City of Ontario Criterion g and h as the property does not in and of itself offer a unique location, a singular physical characteristic, or an established and familiar visual feature within the city of Ontario or the Ontario New Model Colony / Ontario Ranch community, nor is it in and of itself one of the few remaining examples in the City, region, state or nation, possessing distinguishing characteristics of an architectural or historical type or specimen; and not eligible under NRHP / CRHR / City of Ontario Criterion D / 4 / as further study of the 8485 Edison and 14350 Walker Avenue would not appear to yield information which could be considered important in local, regional, state, or national history.

Although the 8485 Edison and 14350 Walker Avenue property has been found not significant and ineligible, it maintains integrity of location, setting, design, materials, workmanship, feeling, and association as an active and in-use dairy farming property.

***P3a. Description:** The evaluated property consists of two parcels (APN: 021631101 and 021631102), historically addressed as 14049 Grove Avenue. Covering 9.04 acres, the property is located on the northeast corner of Grove Avenue and Ontario Ranch Road. The surrounding area remains largely open space and agricultural land, historically associated with dairy farming. The property includes a two-story Ranch style residence with an attached garage, a utilitarian milk parlor, and some ancillary pole structures and two water retention ponds. Some ancillary pole structures are located to the rear of the buildings. The dwelling and milk parlor are located on parcel 021631102. Landscaping and hardscaping features consist of a paved driveway and walkway, and some organized trees and plantings around the buildings. The property is enclosed behind a metal fence. Today, the property no longer functions as an active dairy and is listed as Agromin, a local soil company. **For a more detailed property description, please refer to the Continuation Sheet.**

**B1. Historic Name:** Jacob Bosma Dairy
**B2. Common Name:** 14049 Grove Avenue
**B3. Original Use:** Dairy Farm **B4. Present Use:** Single-Family
***B5. Architectural Style:** Utilitarian Style/Minimal Traditional Style

***B6. Construction History:** This property consists of two parcels under single ownership (APN: 021631101 and 021631102). No historic-era building permits were found on file with the City of Ontario. Year-built data and property characteristics were obtained from the San Bernardino County Assessor's Property Management Information System, supplemented by aerial imagery from 1935, 1938, 1946, 1948, 1952, 1959, 1968, and subsequent years. Available aerial imagery indicates that 14049 Grove Avenue was initially developed between 1959 and 1966, with the construction of a Ranch style single-family residence and utilitarian milk parlor. Subsequent aerial imagery suggests that the overall configuration of the existing buildings has remained unchanged. **See Continuation Sheet for ownership/occupancy information.**

***B7. Moved?** ☒ **No** ☐ **Yes** ☐ **Unknown** **Date:** N/A **Original Location:** N/A

**Area:** San Bernardino County
**Period of Significance:** N/A **Property Type:** N/A
**Applicable Criteria:** NRHP/CRHR/ Local ineligible

The property at 14049 Grove Avenue was originally developed between 1959 and 1966. In 1999, the area was annexed into the City of Ontario as part of the New Model Colony, which was formed from a portion of the former San Bernardino County Agricultural Preserve. The property is associated with the historical contexts of Postwar, Large-Capacity Dairies, 1945-1980 and Historic Architectural Styles, 1880s-1980s, but it does not possess documented significance in relation to the themes. **See Continuation Sheet for significance and integrity conclusions.**

## Primary Record Information Continued:

**P3a. Continued from Page 1:**
Improved between 1959 and 1966, the property includes a Ranch style single-family residence and a milk parlor. The dwelling features a rectilinear, two-story floorplan with a flat roof and a moderate eave overhang. The exterior is clad in white stucco and includes vinyl sliding sash windows. The main entryway is sheltered by a portico supported by decorative wood spindle columns. Additional features include an attached one-car garage with a paneled overhead door and a deck enclosed by a decorative metal railing above the garage.

East of the dwelling is a utilitarian milk parlor, which is divided into two sections: the front milk house and the side milking parlor, separated by a breezeway. The milk house features a concrete façade with a bubbled textured section, industrial glass doors, large, fixed windows, and a flat roof. The breezeway, located between the two sections on the east and west elevations, is enclosed by metal barn-style sliding doors. North of the milk house, the milking parlor has a flat roof oriented along a north-south axis. Ventilation elements include metal vertical louvered shutters set between concrete walls. Additional features include a curved driveway in front of the milk parlor.

View east of 14049 Grove Avenue SFR (IMG_8743; October 21, 2024).

**Primary Record Information Continued:**

View northeast of 14049 Grove Avenue milk parlor (IMG_8746; October 21, 2024).

## Primary Record Information Continued:

View north of 14049 Grove Avenue SFR (IMG_8747; October 21, 2024)

## Building, Structure, Object Information Continued:

**B6. Construction History Continued from Page 2:**

**Ownership/Occupancy**
The property was originally owned by Jacob J. Bosma since the 1960s and remained in the Bosma family's ownership until 2021.

## Building, Structure, Object Information Continued:

**B10. Statement of Significance from Page 2:**
For lack of significant association with the themes, the subject property has not been found eligible under NRHP / CRHR / City of Ontario Criterion A / 1 / a as the property has not in and of itself been directly associated with significant events or patterns of events in dairy farming in local, regional, state, or national history, nor does it exemplify or reflect special elements of the City's history; not eligible under NRHP / CRHR / City of Ontario Criterion B / 2 / b as it has not been identified as having an association with an important person, family, or ethnic group significant in the local dairy farming industry; not eligible under NRHP / CRHR / City of Ontario Criterion C / 3 / c-f as none of the buildings at the property, nor the property as a whole, embodies the distinctive characteristics of a type, period, or method of construction and has not been identified as being the work of a master or an important and creative individual; not eligible under City of Ontario Criterion g and h as the property does not in and of itself offer a unique location, a singular physical characteristic, or an established and familiar visual feature within the city of Ontario or the Ontario New Model Colony / Ontario Ranch community, nor is it in and of itself one of the few remaining examples in the City, region, state or nation, possessing distinguishing characteristics of an architectural or historical type or specimen; and not eligible under NRHP / CRHR / City of Ontario Criterion D / 4 / as further study of the 14049 Grove Avenue would not appear to yield information which could be considered important in local, regional, state, or national history.

Although the 14049 Grove Avenue has been found not significant and ineligible for historical designation, it generally retains all aspects of integrity in location, setting, design, materials, workmanship, and feeling. However, the property lacks integrity of association, as it no longer functions as a property associated with the dairy industry.

## Relocation Feasibility Study

August 20, 2025

Jason Lee
V.P. RCCD Inc.
jasonl@rccdinc.com

Reference: **RELOCATION OF FIVE STRUCTURES – FEASIBILITY STUDY**
**7587 EDISON AVE, 8311 EDISON AVE, 8381 EDISON AVE, 8485 EDISON AVE, AND 14117 GROVE AVE**
**ONTARIO, CALIFORNIA**
**[S.F. PROJECT #25198]**

Dear Jason:

We have completed our feasibility study for the relocation of four historic milking barns and a historic house located at 7587 Edison Avenue, 8311 Edison Avenue, 8485 Edison Avenue, 14117 Grove Avenue, and 8381 Edison Avenue in Ontario, CA, respectively. Our findings are based on visual observations made while on all five sites on August 8, 2025. Cole Cisakowski of RCCD accompanied Gabriela Pascualy of Structural Focus on the site visit. No existing building drawings or backgrounds were provided for our use, and no exploratory demolition or materials investigation was performed as part of the site visit.

**Building Descriptions**

*7587 Edison Avenue*

The milking barn at 7587 Edison is separated into a smaller wood framed front portion and a larger concrete back portion. The front portion is an enclosed space that is approximately 40 feet wide by 24 feet deep and has a large tank in front of it, along with a tank, washrooms, and storage rooms inside the building. The wood framed stud walls appear to be supported on concrete stem walls which are a few feet tall. There are several window openings and large door openings. The roof is wood framed.

The back portion of the building is much larger at approximately 200 feet wide by approximately 30 feet deep. It consists of concrete roof slabs supported by a central line of built-up steel beams & columns and concrete walls (potentially tilt-up) on the long sides of the building. The roof slabs consist of two spans which overlap & are vertically offset in the center of the building, allowing airflow. The walls contain many window and door openings with five of the window openings infilled with concrete at the northeast corner. The west side of the building is open while the east side has a solid wall. Animal stalls and equipment for milking operations fill this portion of the building.

Foundations for the building were not visible but are presumed to be concrete strip footings below the walls and concrete spread footings below the columns.

*8311 Edison Avenue*

The milking barn at 8311 Edison is separated into a smaller wood framed front portion and a larger metal and wood framed back portion. The front portion is an enclosed space that is approximately 30 feet wide by 15 feet deep with a tank on the exterior of the west side of the building that appears to penetrate the exterior wall. The inside contains washrooms and storage rooms. The wood framed stud walls appear to be supported on concrete stem walls which are a few feet tall. There are several window openings and large door openings. The roof is wood framed with clay tile roofing.

The back portion of the building extends more than three times the depth of the front portion but decreases in width before it expands back to the width of the front portion. The roof consists of corrugated metal sheets

over wood framing, supported by posts only along the exterior in the middle, narrower area and supported by steel posts along the exterior and center in the end, wider area. There are partial height concrete walls along the long sides. Animal stalls and equipment for milking operations fill this portion of the building.

Foundations for the building were not visible but are presumed to be concrete strip footings below the walls and concrete spread footings below the columns.

*8381 Edison Avenue*

The building at 8381 Edison is a craftsman-style single family home. The 2-story house has a covered porch and detached 3-car garage. Interior access to the house was not provided, so our observations are based on what could be seen while walking around the perimeter of the building. The home is likely constructed of wood floor and wall framing, supported by exterior bearing walls and interior posts in the crawl space. Foundations for the bearing walls were not visible but are presumed to be concrete strip footings. In the crawl space, small concrete pad footings were visible below the posts. The garage is also wood framed with what is likely a concrete slab on grade.

*8485 Edison Avenue*

The milking barn at 8485 Edison is separated into a smaller wood framed front portion and a larger metal framed back portion. The front portion is an enclosed space that is approximately 25 feet wide by 15 feet deep and contains storage tanks, washrooms, and storage rooms. Wood framed stud walls are supported on concrete stem walls and there are several window and door openings in the walls. The roof is wood framed.

The back portion of the building is much larger with the same width but extends more than three times the depth of the front portion. The roof consists of corrugated metal sheets supported by metal joists framing into metal frames. There are six total steel beam and column frames with individual concrete pad footings visible below each of the columns. Each frame consists of two exterior columns with a beam spanning between them. There are partial height concrete walls along the long sides of the back portion with metal slats above them spanning vertically to the underside of the roof. Animal stalls and equipment for milking operations fill this portion of the building.

Most foundations are not visible but are presumed to be concrete strip footings below the stem walls (not visible) and concrete spread footings below the columns (visible).

*14117 Grove Avenue*

The building at 14117 Grove is separated into a smaller front portion and a larger back portion. The front portion is an enclosed space that is approximately 35 feet wide by 15 feet deep and contains storage tanks for the milk product, washrooms, and storage rooms. Wood framed stud walls are supported on concrete (or possibly concrete block) stem walls. There are several glass block infill windows in the wood stud walls. The ceiling and roof are wood framed.

The back portion is much larger with the same width but extends more than three times the depth of the front portion. The back portion of the building has a corrugated metal roof supported by wood carpenter trusses spanning to wood beams, supported by steel pipe posts along the exterior of the building. It is an open structure with partial height walls along the sides (likely concrete). Animal stalls and equipment for milking operations fill this portion of the building.

Foundations for the buildings are not visible but are presumed to be concrete spread footings below the stem walls and pipe posts.

**Site Visit Observations**

*7587 Edison Avenue*

The front portion of the milking barn at 7587 Edison appears to have water and weather damage leading to sagging of some of the wood framing. Specifically, the stucco on the underside of the overhang at the southwest corner of the front portion appears to have sagged downward exposing the wood roof joists. The ceiling near the doorway to the back portion has also sagged significantly, presumably from damaged wood framing above.

The back portion is in relatively good condition. During the site visit a crack was observed in the concrete header above the doorway between the front and back portions of the building.

*8311 Edison Avenue*

The front portion of the milking barn at 8311 Edison is in relatively good condition. Some edge members are missing at the north corners of the building, exposing roof members in the area. The visible members show signs of deterioration, but it is presumed that the deterioration is due to exposure to the elements and is limited to the exposed areas.

The back portion also shows some signs of deterioration, likely due to the age of the building and exposure to the elements.

*8381 Edison Avenue*

The house at 8381 Edison was observed from the exterior only. It appears to be in good condition and is currently inhabited.

*8485 Edison Avenue*

The milking barn at 8485 Edison is functioning as a working parlor – both the front and back portions are in relatively good condition.

*14117 Grove Avenue*

The milking barn at 14117 Grove is no longer functioning as a working parlor as of recently and was only observed from the exterior. The front portion appears to be in relatively good condition. The wood trusses in the back portion are deteriorated and in poor condition, with evidence of some previous repairs. In the event that the back portion becomes occupiable again, the roof framing should be shored and repaired.

**Conclusions**

It is our opinion that it is feasible to relocate the front portion of all four milking barns, located at 7587 Edison Ave, 8311 Edison Ave, 8485 Edison Ave, and 14117 Grove Ave; the back portion of the milking barns located at 8311 Edison Ave and 8485 Edison Ave; and the house located at 8381 Edison Ave. The wood framed walls in the front portions of all four milking barns could be detached and lifted off the stem walls. New foundations and stem walls would need to be constructed at the receiver site to support the relocated wood portions. The back portions of the milking barns previously listed could be lifted at the lines of steel/wood posts for relocation of the posts and roofs. The perimeter stem walls and animal stalls would need to be rebuilt at the receiver site. The house could be detached and lifted off the crawl space. New perimeter crawl space walls, interior crawl space posts, and all associated foundations would need to be constructed at the receiver site to support the relocated house.

The back portions of the milking barns located at 7587 Edison Ave and 14117 Grove Ave are not feasible to relocate in their current conditions. The nature of the concrete construction at 7587 Edison Ave makes the structure extremely challenging to relocate without causing damage. However, the structure may be relocated if it is first disassembled and then reassembled at the receiver site.

**Summary**

**7587 Edison Ave** – It **is** feasible to relocate the **front** portion of the building, but it **is not** feasible to relocate the **back** portion of the building without first disassembling the structure. Some repairs to the front portion may be required at the discretion of the relocation specialist.

**8311 Edison Ave** – It **is** feasible to relocate the building in its entirety (with the exception of the stem walls in the front and back portions, the animal stalls in the back, and the foundations).

**8381 Edison Ave** – It **is** feasible to relocate the building in its entirety (with the exception of the crawl space framing and foundations).

**8485 Edison Ave** – It **is** feasible to relocate the building in its entirety (with the exception of the stem walls in the front and back portions, the animal stalls in the back, and the foundations).

**14117 Grove Ave** – It **is** feasible to relocate the **front** portion of the building, but it **is not** feasible to relocate the **back** portion of the building in its current state.

Thank you very much for the opportunity to work with you on this challenging and interesting project. If you have any questions, please feel free to contact us at your convenience.

Sincerely,
STRUCTURAL FOCUS

Russell Kehl, S.E.
Principal, President

Gabriela Pascualy, P.E.
Senior Structural Designer

Subject: **PRELIMINARY GEOTECHNICAL INVESTIGATION AND ORGANIC SOIL/MANURE EVALUATION REPORT**
**Sares Regis North**
Southwest Corner of Edison Avenue and Walker Avenue
City of Ontario, San Bernardino County, California
Converse Project No. 24-81-184-01

Dear Mr. Lee:

Converse Consultants (Converse) is pleased to submit this Preliminary Geotechnical Investigation and Organic Soil/Manure Evaluation Report to assist with the proposed Sares Regis North medium density residential and mixed-use development located at the southwest corner of Edison Avenue and Walker Avenue, in the City of Ontario, San Bernardino County, California. This report was prepared in accordance with our proposals dated May 21, 2024 and your Professional Services Agreement, dated May 21, 2024.

Based upon our field investigation, laboratory data, and analyses, the project site is considered feasible from a geotechnical standpoint, provided the recommendations presented in this report are incorporated into the design and development of the project.

We appreciate the opportunity to be of service to Ontario Ranch Ventures I & II, LP (ORV I & II). Should you have any questions, please do not hesitate to contact us at 909-474-2847.

# 1.0 INTRODUCTION

This preliminary geotechnical investigation and organic soil/manure evaluation prepared by Converse for the approximately 185-acre rectangular shaped Sares Regis NORTH site is located at the southwest corner of Edison Avenue and Walker Avenue, in the City of Ontario, San Bernardino County, California. The approximate location of the proposed project is shown in Figure No. 1, *Approximate Site Location Map.*

The purpose of this investigation was to evaluate the current nature and engineering properties of the subsurface soils and groundwater conditions and to provide geotechnical recommendations for the proposed residential development.

This report was prepared for the project described herein and is intended for use solely by Ontario Ranch Ventures I & II, LP (ORV I & II), RCCD, Inc. and their authorized agents. This report may be made available to the prospective bidders for bidding purposes. However, the bidders are responsible for their own interpretation of the site conditions between and beyond the boring locations, based on factual data contained in this report. This report may not contain sufficient information for use by others and/or other purposes.

# 2.0 SITE DESCRIPTION AND BACKGROUND

The approximately 185-acre rectangular site, consisting of several active dairies and agricultural fields, is located at the southeast corner of Ontario Ranch Road and Walker Avenue, in the City of Ontario, San Bernardino County, California. The property is bounded to the north by Edison Avenue, to the east by Walker Avenue, to the west by future Campus Avenue, and to the south by dairies and agricultural land.

The site gently slopes from the northeast to southwest. Elevations range from approximately 696 feet above mean sea level (msl) in the northwest corner of the site to approximately 677 feet above msl in the southwest portion of the site. The present site conditions are depicted in Photographs Nos. 1 through 5.

Project: Sares Regis North

Location: Southwest Corner of Edison Avenue and Walker Avenue
City of Ontario, San Bernardino County, California

For: RCCD, Inc.

# Approximate Site Location Map

*Photograph No. 5: Current site conditions at stockpile in eastern cow pens, facing southeast.*

# 3.0 PROJECT DESCRIPTION

Based on conversations with Mr. Jason Lee of RCCD, Inc. the property will be developed for medium density residential, mixed use, and open space. No development or grading plans are available at this time. The structures will likely be one to two-story tilt up buildings founded on shallow footings with slab-on-grade with concrete wall, steel and possible block wall construction. Associated with the development will likely be above and below ground utilities, access roads, and interior streets.

# 4.0 PREVIOUS SITE INVESTIGATIONS

The 2 referenced previous geotechnical feasibility studies of the subject site, which were provided, were performed by Southern California Geotechnical (SoCalGeo) in 2022, with the pertinent data incorporated into this report.

# 5.0 SCOPE OF WORK

The scope of Converse's investigation is described in the following sections.

## *5.1 Project Set-up*

The project set-up consisted of the following tasks.

- Reviewed existing plans, geotechnical reports provided, and data relevant to the project.

- Conducted a site reconnaissance to mark the exploration locations and to verify drill rig/backhoe access to the proposed locations were available.
- Notified Underground Service Alert (USA) at least 48 hours prior to conducting field work to clear the exploration locations of any conflict with existing underground utilities.
- Engaged a drill rig company to conduct exploratory borings and a backhoe company to excavate exploratory test pits.

### *5.2 Subsurface Exploration*

Ten exploratory borings (BH-01 through BH-10) were drilled using a truck-mounted GT-16 drill rig equipped with 8-inch diameter hollow-stem augers to investigate the subsurface conditions on May 24, 2024 and May 29, 2024. The borings were drilled to depths ranging from 16.5 feet to 51.5 feet below the existing ground surface (bgs).

Thirteen exploratory test pits (TP-01 through TP-13) were excavated using a backhoe equipped with 24-inch-wide bucket to investigate the subsurface conditions on June 11 and 12, 2024. The test pits were excavated between 4.1 feet and 7.6 feet bgs.

The approximate locations of the current exploratory borings and test pits are shown on Figures No. 2a through 2e, *Approximate Boring, Test Pit, and Overexcavation Location Maps*. A detailed discussion of subsurface exploration is presented in Appendix A, *Field Exploration*.

### *5.3 Laboratory Testing*

Representative samples of the site soils were tested in the laboratory to aid in soil classification, and to evaluate relevant engineering properties. These tests included the following.

- *In-situ* moisture contents and dry densities (ASTM D2216-19 and D2937-17)
- Organic Content (ASTM D2974-20e1, Methods A and C)
- Expansion Index (ASTM D4829-21)
- R-value (California Test 301)
- Soils Corrosivity (CTM 643, 422, 417, 532)
- Collapse (ASTM D4546-21)
- Grain size analysis (ASTM D6913/D6913M-17)
- Maximum dry density and optimum-moisture content (ASTM D1557-12R21)
- Direct shear (ASTM D3080/D3080M-21)
- Consolidation (ASTM D2435/D2435M-11R20)

For *in-situ* moisture and dry density data, see the logs of boring in Appendix A, *Field Exploration*. For a description of the laboratory test methods and test results, see Appendix B, *Laboratory Testing Program*.

### *5.4 Analysis and Report Preparation*

Data obtained from the field exploration and laboratory testing program was assembled and evaluated. Geotechnical analyses of the compiled data were performed, followed by the preparation of this report to present our findings, conclusions, and recommendations for the project.

## 6.0 SITE CONDITIONS

A general description of the subsurface conditions, various materials and groundwater conditions encountered at the site during our field exploration is discussed below.

### *6.1 Subsurface Profile*

Based on our field exploration and laboratory test results, the subsurface soil at the project site consisted primarily of manure, organic artificial fill soil, topsoil and alluvium.

The various subsurface profiles and description of the earth material soils encountered are discussed below.

Manure/Highly Organic Soil: Due to the site being active dairy farms the site is partially covered by generally approximately 0.4 feet to 2.3 foot and locally, within random stockpiles, as much as approximately 3.0 feet to 20.0 feet of manure or highly organic soils. The stockpiles of these materials are located in the eastern portion of the site. This manure and highly organic soils will need to be removed from the site prior to any grading in areas of proposed development. The approximate locations and depth of this material is shown on Figures No. 2a through 2e, *Approximate Boring, Test Pit and Overexcavation Location Maps*.

Artificial Fill Soil: Due to the current dairy and agricultural use the surface of the majority of the project site is generally partially covered by up to approximately 1.0 feet to 9.0 feet of undocumented artificial fill, which is in some areas is partially organic. The partially organic artificial fill is approximately 1.0 feet to 3.6 feet thick. This material was encountered within some of the exploratory excavations and was generally comprised of sandy gravel, silty sand, clayey sand, sandy silt, silt and sandy clay, which was fine to coarse-grained, with trace to few scattered gravel up to 2.0-inches maximum dimension, some localized debris and concrete, some roots and rootlets, locally layered, loose to dense/soft to very stiff, moist and various shades of brown, gray, black, red and orange. The partially organic artificial fill areas were slightly to moderately organic with traces of manure. The approximate locations and depths of the partially organic fill material is shown on Figures No. 2a through 2e, *Approximate Boring, Test Pit and Overexcavation Locations Maps*.

Topsoil: Topsoil was encountered at the surface within some of the exploratory excavations ranging in thickness from approximately 3.0 feet to 4.0 feet bgs. This material was generally comprised of sand and silty sand, which was fine to medium-grained, medium dense to dense, moist and various shades of brown and gray.

Alluvium: Holocene alluvium was encountered below the artificial fill and topsoil in all of the of the exploratory excavations at depths ranging from approximately 1.0 foot to 9.0 feet bgs. Where observed, this material was generally comprised of sand, silty sand, clayey sand, sandy silt, clayey silt and sandy clay, which was fine to coarse-grained, with trace gravel to 1-inch maximum dimension, slightly to very desiccated, some oxidation staining, trace caliche, some pinhole porosity, some scattered carbon, locally micaceous, medium dense to very dense/medium stiff to very stiff, moist and various shades of brown, tan, orange, red, yellow, green and gray. Portions of the upper 0.5 foot to 3.0 feet are weathered and low in density.

For a detailed description of the subsurface materials encountered in the exploratory borings and test pits, see the logs, Drawing Nos. A-2 through A-24, in Appendix A, *Field Exploration.*

### *6.2 Groundwater*

Groundwater was not encountered during our field investigation explored to 51.5 feet.

For comparison, regional groundwater data of available near-by water well information was conducted using the generalized coordinates of 33.9977 N and 117.6193 W were used for the following comparisons.

The GeoTracker database (SWRCB, 2024) was reviewed to evaluate the current and historical groundwater elevation data within a 1.0-mile radius of the project site. A noted active well, named City of Chino Well Number 16/Well #CA3610012_019_019. No groundwater level data was identified in the given well information.

The National Water Information System (USGS, 2024) was reviewed for current and historical groundwater data from sites within an approximately 1.0-mile radius of the project site and no wells with groundwater data were identified.

The California Department of Water Resources database (DWR, 2024) was reviewed for historical groundwater data from sites within a 1.0-mile radius of the project site. One site was identified within a 1.0-mile radius of the project site that contained groundwater elevation data. Details of that record are listed below.

- Well Name CHINO-1208672 (Station 340045N1176407W001), located northwest of the project site, reported groundwater at depths ranging from 137.01 to 145.74 feet bgs between 2011 and 2021.

Based on the available data and the findings of our investigation, the historical high groundwater level and the current groundwater level is estimated to be deeper than approximately 137.0 feet bgs. Groundwater is not expected to be encountered during construction of the proposed project. It should be noted that the groundwater level could vary depending upon the seasonal precipitation and possible groundwater pumping activity in each site vicinity. Perched water layers at depth may be present locally, particularly following high precipitation and irrigation events.

### *6.3 Expansive Soils*

Expansive soils are characterized by their ability to undergo significant volume changes (shrink or swell) due to variations in moisture content. Changes in soil moisture content can result from precipitation, landscape irrigation, utility leakage, roof drainage, perched groundwater, drought, or other factors and may result in unacceptable settlement or heave of structures or concrete slabs supported on grade. Depending on the extent and location below finish subgrade, expansive soils can have a detrimental effect on structures.

Based on the 2 laboratory tests conducted during this investigation and a previous geotechnical feasibility study by SoCalGeo, the expansion index of the upper 4.0 feet to 5.0 feet of the general site soils was 0 to 12, corresponding to a very low potential.

### *6.4 Collapse Potential*

Soil deposits subjected to collapse/hydro-consolidation generally exist in regions of moisture deficiency. Collapsible soils are generally defined as soils that have potential to suddenly decrease in volume upon increase in moisture content even without an increase in external loads. Moreover, some soils may have a different degree of collapse/hydro-consolidation based on the amount of proposed fill or structure loads. Soils susceptible to collapse/ hydro-consolidation include wind-blown silt, weakly cemented sand, and silt where the cementing agent is soluble (e.g., soluble gypsum, halite), alluvial or colluvial deposits within semi-arid to arid climate, and certain weathered bedrock above the groundwater table.

Granular soils may have a potential to collapse upon wetting in arid climate regions. Collapse/hydro-consolidation may occur when the soluble cements (carbonates) in the soil matrix dissolve, causing the soil to densify from its loose/low density configuration from deposition.

The degree of collapse of a soil can be defined by the collapse potential value, which is expressed as a percentage of collapse of the total sample using the Collapse Potential Test (ASTM D4546-21). According to the ASTM guideline, the severity of collapse potential is commonly evaluated by the following Table No. 1, *Collapse Potential Values*.

**Table No. 1, Collapse Potential Values**

| Collapse Potential Value (%) | Severity of Problem |
|---|---|
| 0 | None |
| 0.1 to 2 | Slight |
| 2.1 to 6.0 | Moderate |
| 6.0 to 10.0 | Moderately Severe |
| >10 | Severe |

Two collapse tests were conducted for this project. Based on the laboratory test result a collapse potential value of 1.6 percent at a depth of 2.0 feet bgs in boring BH-02 was measured. A collapse potential value of 0.2 percent at a depth of 3.0 feet bgs in boring BH-06 was measured. Three consolidation tests were also conducted for this project. No collapse potential value at a depth of 3.0 feet bgs in boring BH-03 was measured. A collapse potential value of 0.2 percent at a depth of 6.0 feet bgs in boring BH-06 was measured. A collapse potential value of 0.1 percent at a depth of 4.0 feet bgs in boring BH-07 was measured. These indicate only a none to slight problem at the site. Collapse potential distress is typically considered a concern when a measured collapse potential value is over 2% (LA County, 2013).

### *6.5 Excavatability*

The subsurface materials of the project are expected to be excavatable by conventional heavy-duty earth moving and trenching equipment.

The phrase “conventional heavy-duty excavation equipment” is intended to include commonly used equipment such as excavators, scrapers, and trenching machines. It does not include hydraulic hammers (“breakers”), jackhammers, blasting, or other specialized equipment and techniques used to excavate hard earth materials. Selection of an appropriate excavation equipment models should be done by an experienced earthwork contractor.

### *6.6 Subsurface Variations*

Based on results of the subsurface exploration and our experience, some variations in the continuity and nature of subsurface soil conditions within the project site should be anticipated. Because of the uncertainties involved in the nature and depositional characteristics of the earth material, care should be exercised in interpolating or extrapolating subsurface conditions between or beyond the boring locations.

### *6.7 Caving*

Caving was not encountered in any of the exploratory borings or test pits. Localized caving may occur in excavations that extend into granular soils that are encountered on-site.

## 7.0 ENGINEERING GEOLOGY

The regional and local geology within the proposed project area is discussed below.

### *7.1 Regional Geology*

The project site is located within the northern Peninsular Ranges Geomorphic Province of Southern California. The Peninsular Ranges Geomorphic Province consists of a series of northwest-trending mountain ranges and valleys bounded on the north by the San Bernardino and San Gabriel Mountains, on the west by the Los Angeles Basin, and on the south by the Pacific Ocean.

The province is a seismically active region characterized by a series of northwest-trending strike-slip faults. The most prominent of the nearby fault zones include the San Jacinto, Cucamonga, and San Andreas Fault Zones, all of which have been known to be active during Quaternary time.

Topography within the province is generally characterized by broad alluvial valleys separated by linear mountain ranges. This northwest-trending linear fabric is created by the regional faulting within the granitic basement rock of the Southern California Batholith. Broad, linear, alluvial valleys have been formed by erosion of these principally granitic mountain ranges.

The project site is located within the Chino Basin between the Chino Hills to the southwest and San Gabriel Basin to the north. The Elsinore Fault Zone is located approximately four miles south of the project site. This fault is a north to northwest trending reverse fault that dips steeply towards the southwest. The Chino-Central Avenue Fault acts as a groundwater barrier along the western margin of the Chino Basin.

### *7.2 Local Geology*

The project site is primarily underlain by Young alluvial-fan deposits, (Middle Holocene), consisting of slightly to moderately consolidated silt, sand, and coarse-grained sand with some gravel, cobbles and boulders, having slightly to moderately dissected surfaces.

## 8.0 FAULTING AND SEISMICITY

The location of the site with respect to active faults and associated seismicity is discussed below.

### *8.1 Faulting*

The project site is situated in a seismically active region. As is the case for most areas of Southern California, ground-shaking resulting from earthquakes associated with nearby and more distant faults may occur at the project site. During the life of the project, seismic activity associated with active faults can be expected to generate moderate to strong ground shaking at the site. Review of recent seismological and geophysical publications indicates that the seismic hazard for the project is high.

The project site is not located within a currently mapped State of California or San Bernadino County Earthquake Fault Zone for surface fault rupture.

Table No. 2, *Summary of Regional Faults,* summarizes selected data of known faults capable of seismic activity within 100 kilometers of the project site (coordinate 33.9977 Nand 117.6193 W). The data presented below was calculated using the National Seismic Hazard Maps Database and other published geologic data.

**Table No. 2, Summary of Regional Faults**

| Fault Name and Section | Closest Distance (km) | Slip Sense | Length (km) | Slip Rate (mm/year) | Maximum Magnitude |
|---|---|---|---|---|---|
| Chino, alt 2 | 8.40 | strike slip | 29 | 1 | 6.80 |

### *8.2 Seismic Design Parameters*

Seismic parameters based on the 2022 California Building Code (CBSC, 2022) and ASCE 7-16 are provided in the following table. These parameters were determined using the coordinate (33.9977N and 117.6193W) and the Seismic Design Maps ATC online tool.

**Table No. 3, CBC Seismic Design Parameters**

| Seismic Parameters | |
|---|---|
| Site Coordinates | 333.9977N and 117.6193W |
| Site Class | D* |
| Risk Category | II |
| Mapped Short period (0.2-sec) Spectral Response Acceleration, $S_s$ | 1.629g |
| Mapped 1-second Spectral Response Acceleration, $S_1$ | 0.585g |
| Site Coefficient (from Table 11.4-1), $F_a$ | 1.000 |
| Site Coefficient (from Table 11.4-2), $F_v$ | 1.700 |
| MCE 0.2-sec period Spectral Response Acceleration, $S_{MS}$ | 1.629g |
| MCE 1-second period Spectral Response Acceleration, $SM_1$ | 1.000g |
| Design Spectral Response Acceleration for short period $S_{DS}$ | 1.086g |
| Design Spectral Response Acceleration for 1-second period, $S_{D1}$ | 0.700g |
| Site Modified Maximum Peak Ground Acceleration, $PGA_M$ | 0.745g |

** Stiff Soil Classification*

### *8.3 Secondary Effects of Seismic Activity*

In general, secondary effects of seismic activity include surface fault rupture, soil liquefaction, landslides, lateral spreading, and settlement due to seismic shaking, tsunamis, seiches, and earthquake-induced flooding. The site-specific potential for each of these seismic hazards is discussed in the following sections.

***Surface Fault Rupture:*** No portion of the project site is located within a currently designated State of California or San Bernadino County Earthquake Fault Zone (CGS, 2007 and San Bernadino County, 2010). The potential for surface rupture resulting from the movement of nearby or distant faults is not known with certainty but is considered very low.

***Liquefaction:*** Liquefaction is defined as the phenomenon in which a cohesionless soil mass within the upper 50 feet of the ground surface suffers a substantial reduction in its shear strength, due to the improvement of excess pore pressures. During earthquakes,

excess pore pressures in saturated soil deposits may develop as a result of induced cyclic shear stresses, resulting in liquefaction.

Soil liquefaction generally occurs in submerged granular soils and non-plastic silts during or after strong ground shaking. There are several general requirements for liquefaction to occur and they are as follows.

- Soils must be submerged.
- Soils must be loose to medium-dense.
- Ground motion must be intense.
- Duration of shaking must be sufficient for the soils to lose shear resistance.

Based on review of hazard maps, the site is not located within a State of California or San Bernadino County designated zone of liquefaction susceptibility (CGS, 2007; San Bernadino County, 2010). Based on a site-specific settlement analysis presented in Appendix C, *Liquefaction and Settlement Analysis*, and groundwater being deeper than approximately 137 feet bgs we estimate that liquefaction induced settlement of the site is negligible.

***Seismic Settlement***: Dynamic dry settlement may occur in loose, granular, unsaturated soils during a large seismic event. Our analysis of the potential dynamic settlement is presented in Appendix C, Liquefaction and Settlement Analysis. Based on our analysis, we anticipate the site has the potential for up to 1.15 inches of seismically induced settlement. The dynamic differential settlement resulting from dynamic loads is anticipated to be equal to one-half of the total dry seismic settlement over a lateral distance of 40 feet.

***Landslides:*** Seismically induced landslides and slope failures are common occurrences during or soon after large earthquakes. Due to the flat nature of the project site, the potential for seismically induced landslides affecting the pump station is considered to be negligible.

***Lateral Spreading:*** Seismically induced lateral spreading involves primarily lateral movement of earth materials over underlying materials which are liquefied due to ground shaking. It differs from slope failure in that complete ground failure involving large movement does not occur due to the relatively smaller gradient of the initial ground surface. Lateral spreading is demonstrated by near-vertical cracks with predominantly horizontal movement of the soil mass involved. Generally due to the negligible risk for liquefaction and flat nature of project site, the risk of lateral spreading is considered very low.

***Tsunamis:*** Tsunamis are large waves generated in open bodies of water by fault displacement or major ground movement. Due to the inland location of the project site, tsunamis are not considered to be a risk.

***Seiches:*** Seiches are large waves generated in enclosed bodies of water in response to ground shaking. There are no enclosed bodies of water near the project site, therefore, seiching is not considered to be a risk during construction.

***Earthquake-Induced Flooding***: Dams or other water-retaining structures may fail as a result of large earthquakes. The project site is not located within a designated dam inundation area (DSOD, 2024).

# 9.0 LABORATORY TEST RESULTS

Laboratory testing was performed to determine the physical and chemical characteristics and engineering properties of the subsurface soils. Current physical test results are included in Appendix A, *Field Exploration* and Appendix B, *Laboratory Testing Program*. Discussions of the various test results are presented below.

## *9.1 Physical Testing*

- *In-situ* Moisture and Dry Density: *In-situ* dry densities and moisture contents of the site soils were determined in accordance with ASTM Standard D2216-19 and D2937-17. The dry densities of the soils in borings BH-01 to BH-10 ranged from 82 to 139 pounds per cubic foot (pcf) with moisture contents of 3 to 33 percent. The dry density of the manure and highly organic soils in boring BH-01 was 64 pounds per cubic foot (pcf) with a moisture content of 67 percent. Results are presented on the Log of Borings and Test Pits in Appendix A, *Field Exploration.*
- Organic Content: Eight organic content tests were performed during the current geotechnical investigation, in accordance with ASTM Standard D2974-20e1 on representative bulk soil samples. The amount of organic material present in the organic artificial fill soils ranged from 2.1 percent to 12.2 percent and in the undisturbed natural soils ranged from 1.1 percent to 1.9 percent.
- Expansion Index: Two representative bulk soil samples were tested during the current geotechnical investigation of the general site soils to evaluate the expansion potential in accordance with ASTM Standard D4829-21. The test results indicated in both samples returned an expansion index of 0, corresponding to very low expansion potential.
- R-Value: Two representative bulk samples were tested in accordance with Caltrans Test Method 301. The result of the R-value test was 59 and 64.
- Collapse Potential: Two representative samples were tested to determine the collapse potential in accordance with the ASTM Standard D4596. The test results of 0.2 and 1.6 percent correspond to a slight collapse potential.
- Grain Size Analysis: Three representative samples were tested to determine the relative grain size distribution in accordance with the ASTM Standard D6913/D6913M-17. Test results are graphically presented in Drawing No. B-1, *Grain Size Distribution Results.* Based on the test results, soils are typically silty sand.

- Maximum Dry Density and Optimum Moisture Content: Two typical moisture-density relationships of representative soil samples were tested, in accordance with ASTM Standard D1557-12R21, with the results presented in Drawing No. B-2, *Moisture-Density Relationship Results*, in Appendix B, *Laboratory Testing Program.* The laboratory maximum dry densities were 117.5 and 118.6 pounds per cubic feet (pcf), with optimum moisture contents of 11.1 and 12.7 percent, respectively.
- Direct Shear: Three direct shear tests were performed in accordance with ASTM Standard D3080/D3080M-23. The results of the direct shear tests are presented in Drawing Nos. B-3 through B-5, *Direct Shear Test Results* in Appendix B, *Laboratory Testing Program*.
- Consolidation Test: Three consolidation tests were performed on relatively undisturbed samples of the site soil, in accordance with ASTM Standard D2435/D2435-11R20. The test results also indicated a collapse potential of 0.0 and 0.3 percent, which corresponds to a none to slight collapse potential. The test results are shown on Drawing No. B-6 through B-8, *Consolidation Test Results,* in Appendix B, *Laboratory Testing Program.*

### *9.2 Chemical Testing - Corrosivity Evaluation*

One representative soil sample was tested during the current geotechnical investigation within site to determine minimum electrical resistivity, pH, and chemical content, including soluble sulfate and chloride concentrations. The purpose of these tests was to determine the corrosion potential of site soils when placed in contact with common pipe materials. The current test was performed by Keegan Labs, LLC (Pomona, CA) in accordance with California Test Methods 643, 422, and 417. The current and previous test results are presented in Appendix B, *Laboratory Testing Program and* are summarized in below*.*

- The pH measurement of the sample tested ranged was 6.7.
- The sulfate contents of the sample tested was 90 ppm (0.0090 percent by weight).
- The chloride concentration of the sample tested was 25 ppm.
- The minimum electrical resistivity when saturated was 4,620 ohm-cm.

## 10.0 EARTHWORK AND SITE GRADING RECOMMENDATIONS

Earthwork for the project will include grading, trench excavation, pipe subgrade preparation, pipeline bedding placement and trench backfill, as well as roadway pavement construction. Recommendations for earthwork are presented in the following subsections. General Earthwork Specifications are presented in Appendix D*, Earthwork Specifications.*

### *10.1 General*

This section contains our general recommendations regarding earthwork for the proposed medium density residential and mixed use Sares Regis North development in the City of Ontario, San Bernardino County, California.

These recommendations are based on the results of our field exploration and laboratory testing as well as our experience with similar projects, and data evaluation as presented in the preceding sections. These recommendations may require modification by the geotechnical consultant based on observation of the actual field conditions during remedial grading.

Prior to the start of construction, all underground existing utilities and appurtenances should be located at the project site. Such utilities should either be protected in-place or removed and replaced during construction as required by the project specifications. All excavations should be conducted in such a manner as not to cause loss of bearing and/or lateral support of existing structures or utilities.

All existing structures, debris, deleterious material and surficial soils containing roots and perishable materials should be stripped and removed from the project site. Deleterious material, including manure, significant organics, highly organic disturbed fill soils, concrete, and debris generated during excavation, should not be placed as fill.

It should be the responsibility of the contractor to maintain safe working conditions during all phases of construction.

### *10.2 Private Sewage System Abandonment*

From a geotechnical standpoint, any seepage pits, other private sewage systems, and/or other subsurface structures that may be encountered should be located, mapped on the grading plans, removed and/or properly abandoned. Abandonment and/or removal of septic systems that may exist should be in accordance with local codes and recommendations by Converse. Seepage pits, if abandoned in-place, should be pumped clean, backfilled with gravel or clean sand jetted into place, and then capped with a minimum of 2 feet of a 2-sack or greater slurry or concrete for a minimum distance of 2 feet outside the edge of the seepage pit. The top of the slurry or concrete cap should be at a minimum 10 feet below the proposed grade.

### *10.3 Overexcavation*

The site is generally underlain by approximately 1.5 feet to 5.0 feet of potentially compressible soils (artificial fill, topsoil and the upper low-density portions of the alluvium), and locally as much as 7.0 feet to 9.0 feet, which may be prone to future settlement under the surcharge of foundation, improvements and/or fill loads. Therefore, these materials should be over-excavated to competent alluvium, within all areas of proposed structures and other improvements, and replaced with compacted fill soils. Within the entire level

portions of the building pad areas, over-excavations should also extend at least 5.0 feet below proposed pad grade, or at least 3.0 feet below the lowest proposed footings, within the proposed building areas, whichever is deeper. Within any proposed wall footings areas over-excavation should also be a minimum of 5.0 feet below proposed pad grade or 2.0 feet below the proposed wall footings areas, whichever is deeper. All over-excavations should extend at least 5.0 feet or equal to the depth of over-excavation, whichever is greater, outside the entire level portions of the building pad area.

The final bottom surfaces of all excavations should be observed and approved by the project geotechnical consultant prior to placing any fill or structures. However, localized, deeper over-excavation could be encountered, based on findings observations and field testing by the geotechnical consultant during grading of the final bottom surfaces of all excavations, prior to any scarification.

The estimated locations and approximate depths of over-excavation of unsuitable, compressible soil materials are indicated on Figures No. 2a through 2e, *Approximate Boring, Test Pit and Overexcavation Location Maps*.

If isolated pockets of very soft, loose, eroded, or pumping soil are encountered, the unstable soil should be excavated as needed to expose undisturbed, firm, and unyielding soils.

The contractor should determine the best manner to conduct the excavations, such that there are no losses of bearing and/or lateral support to the existing structures or utilities (if any).

Areas to receive fill and/or other surface improvements should be scarified to a minimum depth of 6 inches, brought to a near-optimum moisture condition, and recompacted to at least 90 percent relative compaction (based on ASTM Test Method D1557-12R21).

### *10.4 Cut and Shallow Fill Under Building Pad Areas*

Fill building pads with shallow cut and fill areas should be capped with a minimum of 5.0 feet of engineered structural fill, so that all footings for structures and walls are founded into engineered fill with a minimum of 3.0 feet of fill below footings for proposed structures and 2.0 feet below footings for proposed walls. Over-excavation should extend to the entire level portions of the building pad area with proposed structures or walls, to the depth of fill.

### *10.5 Cut/Fill Transition and Fill Differentials*

To mitigate distress to structures related to the potential adverse effects of excessive differential settlement, cut/fill transitions should be eliminated from all level portions of the building pad areas. This should be accomplished by overexcavating the entire "cut" portion of the building pad area by at least 5.0 feet below proposed grade and replacing the excavated materials as properly compacted fill, so that all footings for structures and walls are founded into engineered fill with a minimum of 3.0 feet of fill below footings for proposed structures and 2.0 feet below footings for proposed walls. Recommended depths of over-excavation are provided in the following table.

**Table No. 4, Overexcavation Depth for Cut/Fill Transitions**

| Depth of Fill ("Fill" Portion) | Depth of Overexcavation ("Cut" Portion) |
|---|---|
| Up to 5.0 feet | 5.0 feet |
| Greater than 5.0 feet | One-third the maximum thickness of fill placed on the "fill" portion (15 feet maximum) |

### *10.6 Engineered Fill*

No fill should be placed until excavations and/or natural ground preparation have been observed by the geotechnical consultant. The native soils encountered within the project sites are generally considered suitable for re-use as compacted fill. Excavated soils should be processed, including removal of roots and debris, removal of oversized particles, mixing, and moisture conditioning, before placing as compacted fill. On-sites soils used as fill should meet the following criteria.

- No particles larger than 8 inches in largest dimension.
- Rocks larger than 4 inches should not be placed within the upper 12 inches of subgrade soils.
- Free of all significant organic matter, debris, or other deleterious material.
- Expansion index of 20 or less.
- Sand Equivalent greater than 15 (greater than 30 for pipe bedding).
- Contain less than 30 percent by weight retained in 3/4-inch sieve.
- Contain less than 45 percent fines (passing #200 sieve).

Based on field investigation and laboratory testing results, on-sites soils may be suitable as fill materials.

Imported materials, if required, should meet the above criteria prior to being used as compacted fill. Any imported fills should be tested and approved by geotechnical representative at least 72 hours prior to delivery to the site.

### *10.7 Organic Content*

Based on the current and previous laboratory test results of the approximately the upper 1.0 foot to 3.7 feet of the partially organic fill soils on portions of the site has about 2.1 percent to 10.3 percent of organic content. This would be an average organic content of about 5.3 percent, for an average depth of approximately 2.0 feet, in the subject areas. Laboratory testing also indicated that generally the undisturbed natural soils below these depths (alluvium) had natural organic contents of about 1.1 percent to 2.4 percent. This would be an average organic content of about 1.9 percent. Therefore, these partially organic should be blended with undisturbed natural soils or removed from the site.

Fill materials should contain no more than 2 percent overall organics. The partially organic soils can be blended with the on-site natural soils at a ratio of at least 3 to 1 (natural soils/clean imported soils to partially organic soils) and placed as compacted fill, provided they are completely mixed during fill placement. The type of equipment and method of placement; blending and mixing of the partially organic materials with onsite natural soils or clean imported soils to be utilized by the grading contractor, should be reviewed and accepted by the geotechnical consultant prior to implementation. A possible method of placement that could be considered would be to place the partially organic materials at an angle to the pattern of the placement of the onsite natural soils or clean imported soils. The testing frequency for verifying the percent organic content should be established by the geotechnical consultant prior to fill placement once the method of blending, placement, and mixing of the partially organic materials with onsite natural soils or clean imported soils. The estimated locations and approximate depths of partially organic to be removed from the site or blended are also indicated on Figures No. 2a through 2e, *Approximate Boring, Test Pit and Overexcavation Location Maps*.

### *10.8 Compacted Fill Placement*

All surfaces to receive structural fills should be scarified to a depth of 12 inches. The soil should be moisture conditioned to within ±3 percent of optimum moisture content for coarse soils and 0 to 2 percent above optimum moisture content for fine soils. The scarified soils should be recompacted to at least 90 percent of the laboratory maximum dry density.

Fill soils should be thoroughly mixed, and moisture conditioned to within ±3 percent of optimum moisture content for coarse soils and 0 to 2 percent above optimum moisture content for fine soils. Fill soils should be evenly spread in horizontal lifts not exceeding 8 inches in uncompacted thickness.

Fill soils should be thoroughly mixed, and moisture conditioned to at least 0 to 2 percent above optimum moisture content. Fill soils should be evenly spread in horizontal lifts not exceeding 8 inches in uncompacted thickness.
All fill placed at the site should be compacted to at least 90 percent of the laboratory maximum dry density as determined by ASTM Standard D1557-12R21 test method unless a higher compaction is specified herein. The upper 12 inches of subgrade soils

underneath pavements intended to support vehicle loads should be scarified, moisture conditioned, and compacted to at least 95 percent of the laboratory maximum dry density.

Fill materials should not be placed, spread or compacted during unfavorable weather conditions. When site grading is interrupted by heavy rain, filling operations should not resume until the geotechnical consultant approves the moisture and density conditions of the previously placed fill.

Observations and field tests should be performed by the project soils consultant to confirm that the required degree of compaction has been obtained. Where compaction is less than specified, additional compactive effort should be made with adjustment of the moisture content as necessary, until the specified compaction is obtained.

Additional expansion index and corrosion testing should be completed after all fill has been placed and compacted at the site in order to confirm the soil properties and revise the foundation design parameters if necessary.

### *10.9 Backfill Recommendations Behind Walls*

Compaction of backfill adjacent to retaining walls, which may be proposed, can produce excessive lateral pressures. Improper types and locations of compaction equipment and/or compaction techniques may damage the walls. The use of heavy compaction equipment should not be permitted within a horizontal distance of 5 feet from the wall. Backfill behind any structural walls within the recommended 5-foot zone should be compacted using lightweight construction equipment such as handheld compactors to avoid overstressing the walls.

### *10.10 Shrinkage and Subsidence*

The volume of excavated and recompacted soils will decrease as a result of grading. The shrinkage would depend on, among other factors, the depth of cut and/or fill, and the grading method and equipment utilized. Based on our exploration as well as previous experience in the other projects in close vicinity of this site, for the preliminary estimation, shrinkage factors for various units of earth material at the site may be taken as presented below.

- The shrinkage factor (defined as a percentage of soil volume reduction when moisture conditioned and compacted to the average of 92 percent relative compaction) for the upper 15 feet of soils is estimated to range from approximately 1 to 24 percent. An average value of 3 percent to 8 percent may be used for preliminary earthwork planning.
- Subsidence (defined as the settlement of native materials from the equipment load applied during grading and proposed fill loads) would depend on the construction methods including type of equipment utilized. Ground subsidence is estimated to be approximately 0.20 foot to 0.25 foot.

Although these values are only approximate, they represent our best estimates of the factors to be used to calculate lost volume that may occur during grading. If more accurate shrinkage and subsidence factors are needed, it is recommended that field-testing using the actual equipment and grading techniques be conducted.

### *10.11 Site Drainage*

Adequate positive drainage should be provided away from the structures and excavation areas to prevent ponding and to reduce percolation of water into the foundation soils. A desirable drainage gradient is 1 percent for paved areas and 2 percent for landscaped areas. Surface drainage should be directed to suitable non-erosive devices.

### *10.12 Utility Trench Backfill*

The following sections present earthwork recommendations for utility trench backfill, including subgrade preparation and trench zone backfill.

Open cuts adjacent to existing roadways or structures are not recommended within a 1:1 (horizontal: vertical) plane extending down and away from the roadway or structure perimeter (if any).

Soils from the trench excavation should not be stockpiled more than 6 feet in height or within a horizontal distance from the trench edge equal to the depth of the trench. Soils should not be stockpiled behind the shoring, if any, within a horizontal distance equal to the depth of the trench, unless the shoring has been designed for such loads.

#### 10.12.1 Pipeline Subgrade Preparation

The final subgrade surface should be level, firm, uniform, and free of loose materials and properly graded to provide uniform bearing and support to the entire section of the pipe placed on bedding material. Protruding oversize particles larger than 2 inches in dimension, if any, should be removed from the trench bottom and replaced with compacted on-site materials.

Any loose, soft and/or unsuitable materials encountered at the pipe subgrade should be removed and replaced with an adequate bedding material. During the digging of depressions for proper sealing of the pipe joints, the pipe should rest on a prepared bottom as near its full length as is practicable.

### 10.12.2 Pipe Bedding

Bedding is defined as the material supporting and surrounding the pipe to 1 foot above the pipe. Recommendations for pipe bedding are provided below.

To provide uniform and firm support for the pipe, compacted granular materials such as clean sand, gravel or ¾-inch crushed aggregate, or crushed rock may be used as pipe bedding material. Typically, soils with sand equivalent value of 30 or more are used as pipe bedding material. The pipe designer should determine if the soils are suitable as pipe bedding material.

The type and thickness of the granular bedding placed underneath and around the pipe, if any, should be selected by the pipe designer. The load on the rigid pipes and deflection of flexible pipes and, hence, the pipe design, depends on the type and the amount of bedding placed underneath and around the pipe.

Bedding materials should be vibrated in-place to achieve compaction. Care should be taken to densify the bedding material below the spring line of the pipe. Prior to placing the pipe bedding material, the pipe subgrade should be uniform and properly graded to provide uniform bearing and support to the entire section of the pipe placed on bedding material. During the digging of depressions for proper sealing of the pipe joints, the pipe should rest on a prepared bottom as near its full length as is practicable.

Based on the design groundwater depth, migration of fines from the surrounding native and/or fill soils may not be considered in selecting the gradation of any imported bedding material.

### 10.12.3 Trench Zone Backfill

The trench zone is defined as the portion of the trench above the pipe bedding extending up to the final grade level of the trench surface. Excavated sites soil free of oversize particles and deleterious matter may be used to backfill the trench zone. Detailed trench backfill recommendations are provided below.

- Trench excavations to receive backfill should be free of trash, debris or other unsatisfactory materials at the time of backfill placement.
- Trench zone backfill should be compacted to at least 90 percent of the laboratory maximum dry density as per ASTM D1557-12R21 test method. At least the upper 1 foot of trench backfill underlying pavement should be compacted to at least 95

percent of the laboratory maximum dry density as per ASTM D1557-12R21 test method.

- Particles larger than 1 inch should not be placed within 12 inches of the pavement subgrade. No more than 30 percent of the backfill volume should be larger than ¾-inch in the largest dimension. Gravel should be well mixed with finer soil. Rocks larger than 3 inches in the largest dimension should not be placed as trench backfill.
- Trench backfill should be compacted by mechanical methods, such as sheepsfoot, vibrating or pneumatic rollers or mechanical tampers to achieve the density specified herein. The backfill materials should be brought to within ± 3 percent of optimum moisture content for coarse-grained soil, and between optimum and 2 percent above optimum for fine-grained soil, then placed in horizontal layers. The thickness of uncompacted layers should not exceed 8 inches. Each layer should be evenly spread, moistened or dried as necessary, and then tamped or rolled until the specified density has been achieved.
- The contractor should select the equipment and processes to be used to achieve the specified density without damage to adjacent ground, structures, utilities and completed work.
- It should be the responsibility of the contractor to maintain safe working conditions during all phases of construction.
- The field density of the compacted soil should be measured by the ASTM D1556 (Sand Cone) or ASTM D6938 (Nuclear Gauge) or equivalent.
- Trench backfill should not be placed, spread or rolled during unfavorable weather conditions. When the work is interrupted by heavy rain, fill operations should not resume until field tests by the project's geotechnical consultant indicate that the moisture content and density of the fill are in compliance with project specifications.

# 11.0 DESIGN RECOMMENDATIONS

Design recommendations for the structures are provided in the following section.

## *11.1 General Evaluation*

The various design recommendations provided in this section are based on the laboratory testing as well as the assumption that in preparing the site, the earthwork recommendations provided in this report will be implemented.

### *11.2 Preliminary Shallow Foundation Design Parameters*

The proposed one- and two-story concrete tilt up buildings and possible retaining walls may be supported on continuous or isolated spread footings founded completely within competent compacted fill. The design of the shallow foundations should be based on the recommended parameters presented in the table below.

**Table No. 5, Recommended Foundation Parameters**

| Parameter | 1-Story Value | 2-Story Value |
|---|---|---|
| Minimum continuous width (interior and exterior) | 12 inches | 15 inches |
| Minimum continuous or isolated footing depth of embedment below lowest adjacent grade (interior and exterior) | 15 inches | 18 inches |
| Allowable net bearing capacity | 3,000 psf | 3,300 psf |

The isolated interior and exterior footings should be at least 24 inches wide. The footing dimensions and reinforcement should be based on structural design. The allowable bearing capacity can be increased by 500 pounds per square foot (psf) with each foot of additional embedment and 100 psf with each foot of additional width up to a maximum of 4,000 psf.

The net allowable bearing values indicated above are for the dead loads and frequently applied live loads and are obtained by applying a factor of safety of 3.0 to the net ultimate bearing capacity. If normal code requirements are applied for design, the above vertical bearing value may be increased by 33 percent for short duration loadings, which will include loadings induced by wind or seismic forces.

### *11.3 Lateral Earth Pressures and Resistance to Lateral Loads*

In the following subsections, the lateral earth pressures and resistance to lateral loads are estimated by using on-site native soils strength parameters obtained from laboratory testing.

#### 11.3.1 Active Earth Pressures

The active earth pressure behind any buried walls or foundation depends primarily on the allowable wall movement, type of backfill materials, backfill slopes, wall or foundation inclination, surcharges, and any hydrostatic pressures. The lateral earth pressures for the project site are presented in the following table.

**Table No. 6, Active and At-Rest Earth Pressures**

| Loading Conditions | Lateral Earth Pressure[1] (psf) | Lateral Earth Pressure[2] (psf) |
|---|---|---|
| | Level backfill | 2:1 backfill |
| Active earth conditions (wall is free to deflect at least 0.001 radian) | 40 | 65 |
| At-rest (wall is restrained) | 60 | 110 |

These pressures assume no surcharge and no hydrostatic pressure. If water pressure is allowed to build up behind the structure, the active pressures should be reduced by 50 percent and added to a full hydrostatic pressure to compute the design pressures against the structure.

### 11.3.2 Passive Earth Pressure

Resistance to lateral loads can be assumed to be provided by a combination of friction acting at the base of foundations and by passive earth pressure. A coefficient of friction of 0.35 between formed concrete and soil may be used with the dead load forces. An allowable passive earth pressure of 240 psf per foot of depth may be used for the sides of footings poured against recompacted soils. A factor of safety of 1.5 was applied in calculating passive earth pressure. The maximum value of the passive earth pressure should be limited to 2,400 psf for compacted fill.

Vertical and lateral bearing values indicated above are for the total dead loads and frequently applied live loads. If normal code requirements are applied for design, the above vertical bearing and lateral resistance values may be increased by 33 percent for short duration loading, which will include the effect of wind or seismic forces.

Due to the low overburden stress of the soil at shallow depth, the upper 1 foot of passive resistance should be neglected unless the soil is confined by pavement or slab.

## *11.4 Retaining Walls Drainage*

The recommended lateral earth pressure values do not include lateral pressures due to hydrostatic forces. Therefore, wall backfill should be free draining and provisions should be made to collect and dispose of excess water that may accumulate behind earth retaining structures. Behind wall drainage may be provided by free-draining gravel surrounded by synthetic filter fabric or by prefabricated, synthetic drain panels or weep holes. In either case, drainage should be collected by perforated pipes and directed to a sump, storm drain, or other suitable location for disposal. We recommend drain rock should consist of durable stone having 100 percent passing the 1-inch sieve and less than 5 percent passing the No. 4 sieve. Synthetic filter fabric should have an equivalent opening size (EOS), U.S. Standard Sieve, of between 40 and 70, a minimum flow rate of

110 gallons per minute per square foot of fabric, and a minimum puncture strength of 110 pounds.

### *11.5 Slabs-on-Grade*

Slabs-on-grade should be supported on properly compacted fill. Compacted fill used to support slabs-on-grade should be placed and compacted in accordance with Section 10.8 *Compacted Fill Placement*.

Slabs should be designed and constructed as promulgated by the American Concrete Institute (ACI) and the Portland Cement Association (PCA). Care should be taken during concrete placement to avoid slab curling. Prior to the slab pour, all utility trenches should be properly backfilled and compacted.

Concrete floors should be underlain with a moisture-vapor retarder consisting of a 10-mil thick vapor barrier. Laps within the membrane should be sealed and overlapped at least 6 inches. Two inches or more of clean sand should be placed above and below the membrane. These recommendations must be confirmed (and/or modified) by the foundation engineer with our concurrence, based upon the performance expectations of the foundation. It is the responsibility of the contractor to ensure that the moisture/vapor barrier systems are placed in accordance with the project plans and specifications, and that the moisture/vapor retarder materials are free of tears and punctures prior to concrete placement. Additional moisture reduction and/or prevention measures may be needed, depending on the performance requirements of future interior floor coverings.

In hot weather, the contractor should take appropriate curing precautions after placement of concrete to minimize cracking or curling of the slabs. The potential for slab cracking may be lessened by the addition of fiber mesh to the concrete and/or control of the water/cement ratio (maximum 0.45).

Concrete should be cured by protecting it against loss of moisture and rapid temperature change for at least 7 days after placement. Moist curing, waterproof paper, white polyethylene sheeting, white liquid membrane compound, or a combination thereof may be used after finishing operations have been completed. The edges of concrete slabs exposed after removal of forms should be immediately protected to provide continuous curing.

### *11.6 Expansion Potential*

Based on the results of the current and previous expansion testing of representative site soils, the general on-site soils have an expansion index of 0 to 12 for an expansion potential of **Very Low.**

The expansion indices of the final finish-grade soils will vary from the results obtained during our current and previous investigations. The expansion potential of the finish-grade soils should be tested at the completion of grading.

### 11.6.1 Very Low Expansion Potential

The following are additional recommendations where foundation soils exhibit **Very Low** expansion potential (E.I. of 0 to 20) as classified in accordance with 2022 CBC.

Slabs-on-grade should have a minimum thickness of 5 inches for support of nominal live loads and reinforced with No. 3 bars spaced 24 inches or less on-centers, both ways. Slab reinforcement should be supported on concrete chairs so that the desired placement is properly placed by the design engineer. Structural design elements of slabs-on-grade, including but not limited to thickness, reinforcement, joint spacing of more heavily loaded slabs will be dependent upon the anticipated loading conditions and the modulus of subgrade reaction (200 kcf) of the supporting materials and should be designed by a structural engineer.

Subgrade for slabs-on-grade should be firm and uniform. All loose or disturbed soils including under-slab utility trench backfill should be recompacted. Prior to placing concrete, the subgrade soils below all floor slabs should be pre-watered to achieve a moisture content that is equal to 100% of the optimum moisture content of the subgrade soils. The moisture content should penetrate to a minimum depth of 12 inches. This should promote uniform curing of the concrete and minimize the development of shrinkage cracks.

## *11.7 Settlement*

The total settlement of shallow footings, designed as recommended above, from static structural loads and short-term settlement of properly compacted fill is anticipated to be 0.35 inch or less. The static differential settlement can be taken as equal to one-half of the static total settlement over a lateral distance of 40 feet.

Our analysis of the potential dynamic settlement is presented in Appendix C, *Liquefaction and Settlement Analysis*. Based on our analysis, we anticipate the reservoir site has the potential for up to 1.15 inches of dry seismic settlement and negligible liquefaction induced settlement. The differential dry seismic settlement resulting from dynamic loads is anticipated to be equal to one-half of the total dry seismic settlement over a lateral distance of 40 feet. The structural engineer should consider this in the design.

## *11.8 Pipe Design for Underground Utilities*

The structural design of pipes requires proper evaluation of all possible loads acting on pipes. The stresses and strains induced on buried pipes depend on many factors, including the type of soil, density, bearing pressure, angle of internal friction, coefficient

of passive earth pressure, and coefficient of friction at the interface between the backfill and native soils. The recommended values of the various soil parameters for the pipe design are provided in Table No. 7, *Soil Parameters for Pipe Design*.

Where pipes are connecting to rigid structures near, or at its lower levels, and then are subjected to significant loads as the backfill is placed to finish grade, we recommend that provisions be incorporated in the design to provide support of these pipes where they exit the structure. Consideration can be given to flexible connections, concrete slurry support beneath the pipes where they exit the structures, overlaying and supporting the pipes with a few inches of compressible material, (i.e., Styrofoam, or other materials), or other techniques. Automatic shutoffs should be installed to limit the potential leakage from seismic event related damage.

**Table No. 7, Soil Parameters for Pipe Design**

| Soil Parameters | Parameters |
|---|---|
| Total unit weight of compacted backfill (assuming 92% average relative compaction), $\gamma$ | 123 pcf |
| Angle of internal friction of soils, $\phi$ | 29º |
| Soil cohesion, c | 136 psf |
| Coefficient of friction between concrete and native soils, fs | 0.35 |
| Coefficient of friction between pipe and native soils, fs | 0.25 for metal or HDPE pipe<br>0.30 for CML&C pipe |
| Bearing pressure against Compacted Fill or Natural Soils | 3,000 psf |
| Coefficient of passive earth pressure, Kp | 1.86 |
| Coefficient of active earth pressure, Ka | 0.54 |
| Modulus of Soil Reaction, E’ | 1,500 psi |

### *11.9 Soil Corrosivity*

The results of current and previous chemical testing of representative site soils with respect to common construction materials such as concrete and steel are presented in Appendix B, *Laboratory Testing Program*, and a general discussion are presented below.

The sulfate contents of the sampled soils correspond to American Concrete Institute (ACI) exposure category S0 for these sulfate concentrations (ACI 318-19, Table 19.3.1.1). No concrete type restrictions are specified for exposure category S0 (ACI 318-19, Table 19.3.2.1). A minimum compressive strength of 2,500 psi is recommended.

We anticipate that concrete will be exposed to moisture from precipitation and irrigation. Based on the project location and the results of chloride testing of the soils, we do not anticipate that concrete structures will be exposed to external sources of chlorides, such

as deicing chemicals, salt, brackish water, or seawater. ACI specifies exposure category C1 where concrete is exposed to moisture, but not to external sources of chlorides (ACI 318-19, Table 19.3.1.1). ACI provides concrete design recommendations in ACI 318-19, Table 19.3.2.1, including a compressive strength of at least 2,500 psi and a maximum chloride content of 0.3 percent.

The measured values of the minimum electrical resistivities of the samples when saturated were between 1,360 and 4,620 Ohm-cm. This indicates that the soils tested are moderately corrosive to corrosive to ferrous metals in contact with the soils (Keegan, 2024). Converse does not practice in the area of corrosion consulting. If needed, a qualified corrosion consultant should provide appropriate corrosion mitigation measures for any ferrous metals in contact with the site and site soils.

According to Keegan Labs LLC, 2024, the following tables provide general guidelines of soil corrosion based on electrical resistivity, sulfates, chlorides and pH.

**Table No. 8a, Correlation Between Resistivity and Corrosion**

| Electrical Resistivity of Soil | |
|---|---|
| **Soil Resistivity (ohm-cm) per Caltrans CT 643** | **Corrosivity Category** |
| Greater than 10,000 | Mildly Corrosive |
| 2,001 to 10,000 | Moderately Corrosive |
| 1,001 to 2,000 | Corrosive |
| 0 to 1,000 | Severe Corrosive |

**Table No. 8b, Correlation Between Sulfates and Corrosion**

| Sulfate in Soil per ACI 318 | |
|---|---|
| **Sulfate Level (mg/kg)** | **Classification** |
| Less than 1,000 (<0.1%) | Negligible |
| 1,000 to 2,000 (0.1 to 0.2%) | Moderate |
| 2,000 to 20,000 (0.2 to 2.0%) | Severe |
| Over 20,000 (>2.0%) | Very Severe |

**Table No. 8c, Correlation Between Chlorides and Corrosion**

| Chloride in Soil per ACI 318 | |
|---|---|
| **Concentration (mg/kg)** | **Classification** |
| ND to 100 | Negligible |
| 100 to 350 | Little Added Concern |
| 350 to 500 | Potential Concern |
| Over 500 | Definite Concern |

**Table No. 8d, Correlation Between pH and Corrosion**

| pH | |
|---|---|
| **pH Range** | **Description** |
| <3.5 | Ultra Acidic |
| 3.5 to 4.4 | Extremely Acidic |
| 4.5 to 5.0 | Very Strongly Acidic |
| 5.1 to 5.5 | Strongly Acidic* |
| 5.6 to 6.0 | Moderately Acidic |
| 6.1 to 6.5 | Slightly Acidic |
| 6.6 to 7.3 | Neutral |
| 7.4 to 7.8 | Slightly Alkaline |
| 7.9 to 8.4 | Moderately Alkaline |
| 8.5 to 9.0 | Strongly Alkaline |
| >9.0 | Very Strongly Alkaline |

*This range and below should have total acidity testing performed to evaluate corrosivity.

### *11.10 Asphalt Concrete Pavement*

Two soil samples were tested by Converse to determine the R-value of the subgrade soils. Based on laboratory testing, the R-values were 59 and 64. For pavement design, we have utilized a maximum design R-value of 50, and City of Ontario designated design Traffic Indices (TIs) ranging from 5.0 to 10.0.

Based on the above information, asphalt concrete and aggregate base thickness results are presented using the Caltrans Highway Design Manual (Caltrans, 2020), Chapter 630 with a safety factor of 0.2 for asphalt concrete/aggregate base section and 0.1 for full depth asphalt concrete section. Preliminary asphalt concrete pavement sections are presented in the following table below. The city of Ontario minimum asphalt pavement and aggregate base thickness requirements were also considered in the pavement designs.

**Table No. 9, Recommended Preliminary Pavement Sections**

| R-value | Traffic Index (TI) | Pavement Section | | |
|---|---|---|---|---|
| | | Option 1 | | Option 2 |
| | | Asphalt Concrete (inches) | Aggregate Base (inches) | Full AC Section (inches) |
| 50 | 5.0 (alleys) | 4.0 | 6.0 | 4.5 |
| | 5.5 (interior street) | 4.0 | 6.0 | 5.0 |
| | 8.0 (exterior street) | 6.0 | 8.0 | 8.0 |
| | 10.0 (exterior street) | 7.0 | 8.0 | 10.0 |

At or near the completion of grading, subsurface samples should be tested to evaluate the actual subgrade R-value for final pavement design.

Prior to placement of aggregate base, at least the upper 12 inches of finish grade should be scarified, moisture-conditioned if necessary, and recompacted to at least 95 percent of the laboratory maximum dry density as defined by ASTM Standard D1557-12R21 test method. Base materials should conform with Section 200-2.2,"*Crushed Aggregate Base*," of the current Standard Specifications for Public Works Construction (SSPWC; Public Works Standards, 2021) and should be placed in accordance with Section 301.2 of the SSPWC.

Asphaltic concrete materials should conform to Section 203 of the SSPWC and should be placed in accordance with Section 302-5 of the SSPWC.

### *11.11 Concrete Flatwork*

Except as modified herein, concrete walks, driveways, access ramps, curb and gutters should be constructed in accordance with Section 303-5, *Concrete Curbs, Walks, Gutters, Cross-Gutters, Alley Intersections, Access Ramps, and Driveways*, of the Standard Specifications for Public Works Construction (Public Works Standards, 2018).

The subgrade soils under the above-mentioned improvements should consist of compacted fill placed as described in section 9.8 of this report. Prior to placement of concrete, the upper 12 inches of finish grade should be moisture conditioned to within 3 percent of optimum moisture content for coarse-grained soils and 0 and 2 percent above optimum for fine-grained soils.

The thickness of driveways for passenger vehicles should be at least 4 inches, or as required by the civil or structural engineer. Transverse control joints for driveways should be spaced not more than 10 feet apart. Driveways wider than 12 feet should be provided with a longitudinal control joint.

Concrete walks subjected to pedestrian and bicycle loading should be at least 4 inches thick, or as required by the civil or structural engineer. Transverse joints should be spaced 15 feet or less and should be cut to a depth of one-fourth the slab thickness.

Positive drainage should be provided away from all driveways and sidewalks to prevent seepage of surface and/or subsurface water into the concrete base and/or subgrade.

# 12.0 CONSTRUCTION RECOMMENDATIONS

Temporary sloped excavation recommendations are presented in the following sections.

## *12.1 General*

Prior to the start of construction, all existing underground utilities (if any) should be located at the project site. Such utilities should either be protected in-place or removed and replaced during construction as required by the project specifications.

Vertical braced excavations can be considered for the foundations. Sloped excavations may not be feasible in locations adjacent to existing utilities, pavement, or structure (if any). Recommendations pertaining to temporary excavations are presented in this section.

Excavations near existing structures may require vertical side wall excavation. Where the side of the excavation is a vertical cut, it should be adequately supported by temporary shoring to protect workers and any adjacent structures.

All applicable requirements of the California Construction and General Industry Safety Orders, the Occupational Safety and Health Act, and the Construction Safety Act should be met. The soils exposed in cuts should be observed during excavation by the geotechnical consultant and the competent person designated by the contractor. If potentially unstable soil conditions are encountered, modifications of slope ratios for temporary cuts may be required.

## *12.2 Temporary Sloped Excavations*

Temporary open-cut trenches may be constructed with side slopes as recommended in the following table. Temporary cuts encountering soft and wet fine-grained soils; dry loose, cohesionless soils or loose fill from trench backfill may have to be constructed at a flatter gradient than presented below.

**Table No. 10, Slope Ratios for Temporary Excavations**

| Soil Type | OSHA Soil Type | Depth of Cut (feet) | Recommended Maximum Slope (Horizontal:Vertical)[1] |
|---|---|---|---|
| Silty Sand (SM) | C | 0-10 | 1.5:1 |

[1] Slope ratio assumed to be uniform from top to toe of slope.

For shallow excavations up to 4 feet bgs can vertical. For steeper temporary construction slopes or deeper excavations, or unstable soil encountered during the excavation, shoring or trench shields should be provided by the contractor to protect the workers in the excavation. Design recommendations for temporary shoring are provided in the following section.

Surfaces exposed in slope excavations should be kept moist but not saturated to retard raveling and sloughing during construction. Adequate provisions should be made to protect the slopes from erosion during periods of rainfall. Surcharge loads, including construction materials, should not be placed within 5 feet of the unsupported slope edge. Stockpiled soils with a height higher than 6 feet will require greater distance from trench edges.

## 13.0 GEOTECHNICAL SERVICES DURING CONSTRUCTION

The project geotechnical consultant should review plans and specifications as the project design progresses. Such review is necessary to identify design elements, assumptions, or new conditions which require revisions or additions to our geotechnical recommendations.

The project geotechnical consultant should be present to observe conditions during construction. Geotechnical observation and testing should be performed as needed to verify compliance with project specifications. Additional geotechnical recommendations may be required based on subsurface conditions encountered during construction.

## 14.0 CLOSURE

This report is prepared for the project described herein and is intended for use solely by Ontario Ranch Ventures I & II, LP (ORV I & II), RCCD, Inc. and their authorized agents, to assist in the development of the proposed project. Our findings and recommendations were obtained in accordance with generally accepted professional principles practiced in geotechnical engineering. We make no other warranty, either expressed or implied.

Converse Consultants is not responsible or liable for any claims or damages associated with interpretation of available information provided to others. Site exploration identifies actual soil conditions only at those points where samples are taken, when they are taken. Data derived through sampling and laboratory testing is extrapolated by Converse employees who render an opinion about the overall soil conditions. Actual conditions in

areas not sampled may differ. In the event that changes to the project occur, or additional, relevant information about the project is brought to our attention, the recommendations contained in this report may not be valid unless these changes and additional relevant information are reviewed, and the recommendations of this report are modified or verified in writing. In addition, the recommendations can only be finalized by observing actual subsurface conditions revealed during construction. Converse cannot be held responsible for misinterpretation or changes to our recommendations made by others during construction.

As the project evolves, a continued consultation and construction monitoring by a qualified geotechnical consultant should be considered an extension of geotechnical investigation services performed to date. The geotechnical consultant should review plans and specifications to verify that the recommendations presented herein have been appropriately interpreted, and that the design assumptions used in this report are valid. Where significant design changes occur, Converse may be required to augment or modify the recommendations presented herein. Subsurface conditions may differ in some locations from those encountered in the explorations, and may require additional analyses and, possibly, modified recommendations.

Design recommendations given in this report are based on the assumption that the recommendations contained in this report are implemented. Additional consultation may be prudent to interpret Converse's findings for contractors, or to possibly refine these recommendations based upon the review of the actual site conditions encountered during construction. If the scope of the project changes, if project completion is to be delayed, or if the report is to be used for another purpose, this office should be consulted.

# Appendix A

## Field Exploration

# APPENDIX A

# FIELD EXPLORATION

Our field investigation included a site reconnaissance and a subsurface exploration program consisting of drilling exploratory borings and excavating test pits. During the site reconnaissance, the surface conditions were noted, and the test pit and boring locations were marked in the field using the referenced topographic maps and from approximate distances from local streets as a guide and should be considered accurate only to the degree implied by the method used to locate them. Description of the field investigation method is presented below.

***Exploratory Borings***

Ten exploratory borings (BH-01 through BH-10) were drilled on May 24, 2024 and May 29, 2024, within the project site to investigate the subsurface conditions. The borings were drilled to depths ranging from 16.5 to 51.5 feet (bgs).

The borings were advanced using a truck-mounted drill rig equipped with 8-inch diameter hollow-stem augers for soils sampling. Encountered materials were continuously logged by a Converse geologist and classified in the field by visual classification in accordance with the Unified Soil Classification System. Where appropriate, the field descriptions and classifications have been modified to reflect laboratory test results.

Relatively undisturbed samples were obtained using California Modified Samplers (2.4 inches inside diameter and 3.0 inches outside diameter) lined with thin sample rings. The steel ring sampler was driven into the bottom of the borehole with successive drops of a 140-pound driving weight falling 30 inches. Blow counts at each sample interval are presented on the boring logs. Samples were retained in brass rings (2.4 inches inside diameter and 1.0 inch in height) and carefully sealed in waterproof plastic containers for shipment to the Converse laboratory. Representative bulk samples were collected from selected depths and placed in large plastic bags for delivery to our laboratory.

Standard Penetration Testing (SPT) were also performed in borings (BH-02, BH-05. BH-06, BH-08 and BH-10) in accordance with the ASTM Standard D1586 using a standard (1.4 inches inside diameter and 2.0 inches outside diameter) split-barrel sampler. The mechanically driven hammer for the SPT sampler was 140 pounds, falling 30 inches for each blow. The recorded blow counts for every 6 inches for a total of 1.5 feet of sampler penetration are shown on the Logs of Borings.

Following completion of logging and sampling, borings BH-01 through BH-10 were backfilled with excavated soil cuttings and compacted by pushing down with the auger using the weight of the drill rig. If construction is delayed the ground surface at the boring locations may settle over time. We recommend the owner monitor the boring locations

and backfill any depressions that occur or provide protection around the boring locations to prevent trip and fall injuries from occurring.

***Test Pits***

Thirteen exploratory test pits (TP-01 through TP-13) were excavated using a backhoe equipped with 24-inch-wide bucket to investigate the subsurface conditions on June 11 and 12, 2024. The test pits were excavated between 4.1 feet and 7.6 feet below the existing ground surface (bgs).

During exploration, encountered materials were continuously logged by a Converse geologist and classified in the field by visual classification in accordance with the Unified Soil Classification System. Where appropriate, the field descriptions and classifications have been modified to reflect laboratory test results.

Relatively undisturbed samples were obtained from the test pits using California Modified Samplers (2.4 inches inside diameter and 3.0 inches outside diameter) lined with thin sample rings. The steel ring sampler was driven at selected level benches in the test pit using manual hand-operated equipment with successive drops of a 35-pound driving weight falling 30 inches. Samples were retained in brass rings (2.4 inches inside diameter and 1.0 inch in height) and carefully sealed in waterproof plastic containers for shipment to the Converse laboratory. In-situ dry densities and moisture contents of the site soils were also determined in the test pits with a nuclear gauge in accordance with ASTM Standard D6938. Representative bulk samples were collected from selected depths and placed in plastic bags for delivery to our laboratory.

Test pits were backfilled in lifts with excavated soil, tamped, and then wheel rolled at the surface using the bucket under the weight of the backhoe. If construction is delayed the ground surface at the test pit locations may settle over time. We recommend the owner monitor the test pit locations and backfill any depressions that occur or provide protection around the test pit locations to prevent trip and fall injuries from occurring.

For a key to soil symbols and terminology used in the test pit and boring logs, refer to Drawing Nos. A-1a and A-1b, *Unified Soil Classification and Key to Boring Log and Test Pit Symbols*. For logs of Borings and Test Pits, see Drawings No. A-2 through A-24, *Logs of Borings and Test Pits*.

## CONSISTENCY OF COHESIVE SOILS

| Descriptor | Unconfined Compressive Strength (tsf) | SPT Blow Counts | Pocket Penetrometer (tsf) | CA Sampler | Torvane (tsf) | Field Approximation |
|---|---|---|---|---|---|---|
| Very Soft | <0.25 | < 2 | <0.25 | <3 | <0.12 | Easily penetrated several inches by fist |
| Soft | 0.25 - 0.50 | 2 - 4 | 0.25 - 0.50 | 3 - 6 | 0.12 - 0.25 | Easily penetrated several inches by thumb |
| Medium Stiff | 0.50 - 1.0 | 5 - 8 | 0.50 - 1.0 | 7 - 12 | 0.25 - 0.50 | Can be penetrated several inches by thumb with moderate effort |
| Stiff | 1.0 - 2.0 | 9 - 15 | 1.0 - 2.0 | 13 - 25 | 0.50 - 1.0 | Readily indented by thumb but penetrated only with great effort |
| Very Stiff | 2.0 - 4.0 | 16 - 30 | 2.0 - 4.0 | 26 - 50 | 1.0 - 2.0 | Readily indented by thumbnail |
| Hard | >4.0 | >30 | >4.0 | >50 | >2.0 | Indented by thumbnail with difficulty |

## APPARENT DENSITY OF COHESIONLESS SOILS

| Descriptor | SPT $N_{60}$- Value (blows / foot) | CA Sampler |
|---|---|---|
| Very Loose | <4 | <5 |
| Loose | 4- 10 | 5 - 12 |
| Medium Dense | 11 - 30 | 13 - 35 |
| Dense | 31 - 50 | 36 - 60 |
| Very Dense | >50 | >60 |

## MOISTURE

| Descriptor | Criteria |
|---|---|
| Dry | Absence of moisture, dusty, dry to the touch |
| Moist | Damp but no visible water |
| Wet | Visible free water, usually soil is below water table |

## PERCENT OF PROPORTION OF SOILS

| Descriptor | Criteria |
|---|---|
| Trace (fine)/ Scattered (coarse) | Particles are present but estimated to be less than 5% |
| Few | 5 to 10% |
| Little | 15 to 25% |
| Some | 30 to 45% |
| Mostly | 50 to 100% |

## SOIL PARTICLE SIZE

| Descriptor | | Size |
|---|---|---|
| Boulder | | > 12 inches |
| Cobble | | 3 to 12 inches |
| Gravel | Coarse | 3/4 inch to 3 inches |
| | Fine | No. 4 Sieve to 3/4 inch |
| Sand | Coarse | No. 10 Sieve to No. 4 Sieve |
| | Medium | No. 40 Sieve to No. 10 Sieve |
| | Fine | No. 200 Sieve to No. No. 40 Sieve |
| Silt and Clay | | Passing No. 200 Sieve |

## PLASTICITY OF FINE-GRAINED SOILS

| Descriptor | Criteria |
|---|---|
| Nonplastic | A 1/8-inch thread cannot be rolled at any water content. |
| Low | The thread can barely be rolled, and the lump cannot be formed when drier than the plastic limit. |
| Medium | The thread is easy to roll, and not much time is required to reach the plastic limit; it cannot be rerolled after reaching the plastic limit. The lump crumbles when drier than the plastic limit. |
| High | It takes considerable time rolling and kneading to reach the plastic limit. The thread can be rerolled several times after reaching the plastic limit. The lump can be formed without crumbling when drier than the plastic limit. |

## CEMENTATION/ Induration

| Descriptor | Criteria |
|---|---|
| Weak | Crumbles or breaks with handling or little finger pressure. |
| Moderate | Crumbles or breaks with considerable finger pressure. |
| Strong | Will not crumble or break with finger pressure. |

**NOTE:** This legend sheet provides descriptions and associated criteria for required soil description components only. Refer to Caltrans Soil and Rock Logging, Classification, and Presentation Manual (2010), Section 2, for tables of additional soil description components and discussion of soil description and identification.

Project No. 24-81-184-01

Drawing No. A-16

# Log of Test Pit No. TP-06

Date Drilled: 6/12/2024 Logged by: Elizabeth Hernandez Checked By: Robert L Gregorek II

Equipment: 24" WIDE BACKHOE BUCKET Driving Weight and Drop: N/A

Ground Surface Elevation (ft): 687 Depth to Water (ft, bgs): NOT ENCOUNTERED

| Depth (ft) | Graphic Log | SUMMARY OF SUBSURFACE CONDITIONS<br>This log is part of the report prepared by Converse for this project and should be read together with the report. This summary applies only at the location of the test pit and at the time of excavation. Subsurface conditions may differ at other locations and may change at this location with the passage of time. The data presented is a simplification of actual conditions encountered. | SAMPLES DRIVE | SAMPLES BULK | BLOWS | MOISTURE (%) | DRY UNIT WT. (pcf) | OTHER |
|---|---|---|---|---|---|---|---|---|
| | | **MANURE:** 0.5 feet thick. | | | | | | |
| | | **ARTIFICIAL FILL**<br>**SILTY SAND (SM):** fine to coarse-grained, some gravel up to 0.5 inches maximum dimension, dense, moist, brown. | | | | | | |
| 5 | | **ALLUVIUM**<br>**SILTY SAND (SM):** fine to coarse-grained, medium dense, moist, yellow brown.<br>-@3.0': dense, light brown. | | | | | | |
| | | End of Test Pit at 4.8 feet.<br>No groundwater encountered.<br>Test pit backfilled in lifts with backhoe and compacted using a sheep's foot roller on 6/12/24. | | | | | | |
