Appendix INT-1

Initial Study

COUNTY OF SACRAMENTO
PLANNING AND ENVIRONMENTAL REVIEW DIVISION

INITIAL STUDY

1.1 PROJECT INFORMATION

CONTROL NUMBER: PLNP2011-00095
NAME: JACKSON TOWNSHIP SPECIFIC PLAN
LOCATION: The Plan Area is located on 1,391 acres in central Sacramento County, approximately 2 miles south and 1.5 miles west of the City of Rancho Cordova. The Plan Area is primarily located within the Vineyard community, but the portion north of Kiefer Boulevard is located within the Cordova community.
ASSESSOR'S PARCEL NUMBERS: 067-0050-002, -004, -005, -019, -020, -021, -022, -028, -029, -045, -047, -051, -058, 067-0060-007, -008, -010, -011, -012, -013, -014, -016, 067-0070-002, 067-0080-004, -023, -028, -031, -032, -033, -034, -040, -042, -045, -048, -049, -050, -051, -057, and -061.
OWNER: There are 24 different landowners within the Plan Area, the largest of which is the Applicant, Tsakopoulos Investments, which owns 862 acres (62%) of land within the Plan Area.
APPLICANT: Tsakopoulos Investments, represented by Angelo G. Tsakopoulos.

1.2 PROJECT DESCRIPTION

The proposed Project includes a land use plan that would provide for a range of different uses, including Low Density Residential, Medium Density Residential, High Density Residential, General Commercial, Community Commercial, Mixed Use, Office, schools, a fire station, parks, a wetland preserve, a greenbelt/drainage corridor, landscaping, detention, agriculture, and associated roadways.
Overall, the Project includes 6,143 residential units of varying densities, including 100 units within a mixed use area, as well as nearly two million square feet of commercial, retail, and non-residential mixed use space.
The Project is designed to promote non-vehicular travel, including biking, walking, and use of transit. The land plan includes two "hubs" with higher densities and more mixes of uses, including a Town Center located along Jackson Road and a smaller Village Center located at the intersection of Excelsior Road and Kiefer Boulevard. The Village Center would serve the proposed Project, future development in the West Jackson Highway Master Plan Area to the west, and the existing Independence at Mather subdivision, which is currently isolated from services. Most of the homes developed within the Plan Area would be located within 1.4 miles of parks, schools, transit lines, and either the Town Center or Village Center.
The applicant is also proposing three other alternatives that are generally similar to the proposed Project, with slight variations. For the most part, the alternatives are similar, but Alternative 1A includes more Office space, Alternative 1B changes the configuration of the land uses in the Village Center, and Alternative 1C is a combination of the two.
See the Project Description and Alternatives chapters in the EIR for detailed descriptions of the proposed Project and all of the Alternatives.

1.3 ENVIRONMENTAL SETTING

The Plan Area is currently designated as Extensive Industrial, General Agriculture 20 (minimum parcel sizes of 20 acres), and a small area of Urban Reserve on the Sacramento General Plan Land Use Diagram and zoned Light Industrial (M-1), Agricultural 80 (AG-80), and Interim Agricultural Reserve (IR).

The Plan Area is largely undeveloped. Current land uses on the properties within the Plan Area are predominantly for grazing, small ranches, and agricultural-residential homes. A portion of the Plan Area includes the Sacramento Raceway, which hosts regular stock car and drag racing events several times a month throughout the year.

To the west of the Plan area, land uses are characterized by agricultural uses, mining activities, and commercial sales of landscaping materials. Lands to the east are generally similar to the Plan Area, with grazing and agricultural-residential uses predominating. The property to the east also includes the Sacramento Rendering Company plant, a facility that accepts animal tissue, processes it, and then distributes the byproduct for use in the manufacture of other goods. Land to the north is dominated by the presence of Mather Airport and appurtenant facilities, and includes the Independence at Mather residential subdivision and a wetland and nature preserve. Mather Golf Course is located further to the northeast. Properties to the south of the Plan Area on the opposite side of Jackson Highway are generally in agricultural or agricultural-residential use or are within a wetland preserve.

Most of the Plan Area site is grassland with interspersed wetlands; portions of the site have historically been disturbed by agricultural activities. The southwestern portion of the Plan Area is within the headwaters of Elder Creek, and a small bend in Morrison Creek runs through the northeastern corner of the Plan Area.

1.4 ENVIRONMENTAL EFFECTS

Appendix G of the California Environmental Quality Act (CEQA) provides guidance for assessing the significance of potential environmental impacts. Based on this guidance, Sacramento County has developed an Initial Study Checklist. The Checklist identifies a range of potential significant effects by topical area.

Due to the size and scope of the Project, it is known that an Environmental Impact Report (EIR) will be required. This Initial Study Checklist has been used to scope the EIR, by focusing out minor issues that do not warrant the more in-depth and detailed explanation that will be found in the EIR. Therefore, when an impact has been determined to be a more complicated issue that needs to be analyzed in more detail, the Checklist identifies that impact as a potentially significant impact and refers the reader to the EIR with little additional information. In addition, although some impacts are identified as less than significant in the Checklist, the impact may refer the reader to the EIR if the topic may be controversial or require more explanation than would be appropriate in the Checklist. Detailed topical discussions are not included in this Checklist. The reader should refer to the technical sections of the EIR for additional analysis.

1.5 INITIAL STUDY CHECKLIST

Appendix G of the California Environmental Quality Act (CEQA) provides guidance for assessing the significance of potential environmental impacts. Based on this guidance, Sacramento County has developed the following Initial Study Checklist. The Checklist identifies a range of potential significant effects by topical area. The words "significant" and "significance" used throughout the following checklist are related to impacts as defined by the California Environmental Quality Act as follows:

1 Potentially Significant indicates there is substantial evidence that an effect MAY be significant. If there are one or more "Potentially Significant" entries an Environmental Impact Report (EIR) is required. Further research of a potentially significant impact may reveal that the impact is actually less than significant or less than significant with mitigation.

2 Less than Significant with Mitigation applies where an impact could be significant but specific mitigation has been identified that reduces the impact to a less than significant level.

3 Less than Significant or No Impact indicates that either a project will have an impact but the impact is considered minor or that a project does not impact the particular resource.

	Potentially Significant	Less Than Significant with Mitigation	Less Than Significant or No Impact	Comments
1. **LAND USE** - Would the project:				
a. Conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including but not limited to a general plan, specific plan or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect?	X			A full evaluation of the Project's consistency with other land use plans, policies, or regulations intended to avoid or mitigate environmental effects will be included in the EIR.
b. Physically disrupt or divide an established community?			X	The Project would result in the development of a new community in an area that is currently undeveloped, but is located near other planned development areas. As such, it will not create physical barriers that substantially limit movement within or through the community. Therefore, there would be no impact, and this will not be further analyzed in the EIR.
2. **POPULATION/HOUSING -** Would the project:				
a. Induce substantial unplanned population growth in an area either directly (e.g., by proposing new homes and businesses) or indirectly (e.g., through extension of infrastructure)?	X			The Project proposes the establishment of a new major development area that is not currently located within the Urban Policy Area (UPA), but is located within the Urban Services Boundary (USB). One of the entitlement requests is an amendment of the UPA to allow for the expansion of the UPA area. Expansion of the UPA and approval of the proposed Project would directly induce substantial population growth. This impact will be addressed in the EIR.
b. Displace substantial amounts of existing housing, necessitating the construction of replacement housing elsewhere?			X	The project will result in the removal of a few existing agricultural residential dwellings, but includes the creation of 6,143 total dwellings, resulting in a net increase in housing stock. This is a less-than-significant impact, and will not be further addressed in the EIR.
3. **AGRICULTURAL RESOURCES** - Would the project:				

	Potentially Significant	Less Than Significant with Mitigation	Less Than Significant or No Impact	Comments
a. Convert Prime Farmland, Unique Farmland, Farmland of Statewide Importance or areas containing prime soils to uses not conducive to agricultural production?	X			The Plan Area contains some Prime Farmland (as noted on the current Sacramento County Important Farmland Map published by the California Department of Conservation), and implementation of the Project would convert it to non-agricultural uses. The Plan Area also contains Farmland of Local Importance and land designated for Grazing by the California Department of Conservation. This impact will be analyzed in the EIR.
b. Conflict with any existing Williamson Act contract?	X			There are Williamson Act contracts in effect for portions of the Plan Area, but each contract is in Nonrenewal status. This impact will be analyzed in the EIR.
c. Introduce incompatible uses in the vicinity of existing agricultural uses?	X			The Project is located on property that is currently in agricultural production and in the vicinity of other properties in agricultural production. This impact will be analyzed in the EIR.
4. **AESTHETICS -** Would the project:				
a. Substantially alter existing viewsheds such as scenic highways, corridors or vistas?	X			The project does not occur in the vicinity of any designated scenic highways, corridors, or vistas, but it is visible from many major roadways. Furthermore, the Project would substantially change the visual character of the Plan Area from undeveloped agricultural land to an urbanized suburban community. This impact will be analyzed in the EIR.
b. Substantially degrade the existing visual character or quality of the site and its surroundings?	X			Approval of the Project would allow for a new major development project in an area that is currently undeveloped and agricultural in nature. This would result in a substantial change in the visual character of the site and its surroundings. This impact will be addressed in the EIR.
c. Create a new source of substantial light, glare, or shadow that would result in safety hazards or adversely affect day or nighttime views in the area?	X			The project will result in news sources of light and glare as the Plan Area would be developed with 6,143 new homes and nearly 2 million square feet of new businesses. This could potentially result in an effect on day and nighttime views of the area. This impact will be analyzed in the EIR.

	Potentially Significant	Less Than Significant with Mitigation	Less Than Significant or No Impact	Comments
5. **AIRPORTS -** Would the project:				
a. Result in a safety hazard for people residing or working in the vicinity of an airport/airstrip?	X			The project is located within the overflight zone of Mather Airport. This impact is analyzed in the EIR.
b. Expose people residing or working in the project area to aircraft noise levels in excess of applicable standards?	X			The project is located in the vicinity of Mather Airport and may be located within one of its noise contours. This impact will be analyzed in the EIR.
c. Result in a substantial adverse effect upon the safe and efficient use of navigable airspace by aircraft?	X			The project is located in the vicinity of Mather Airport. This impact will be analyzed in the EIR.
d. Result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks?			X	The project does not involve or affect air traffic movement. There would be no impact, and this is not addressed further in the EIR.
6. **PUBLIC SERVICES -** Would the project:				
a. Have an adequate water supply for full buildout of the project?	X			The Project will result in the development of a new urban community that would require connection to water services. This may require new additional water supplies. This impact will be analyzed in the EIR.
b. Have adequate wastewater treatment and disposal facilities for full buildout of the project?	X			The Project will result in the development of a new urban community that would require connections to wastewater treatment and disposal services. This impact will be analyzed in the EIR.
c. Be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs?	X			The Kiefer Landfill has capacity to accommodate solid waste until the year 2030. However, the buildout and continued operation of the proposed Project will extend beyond 2030. This impact will be analyzed in the EIR.
d. Result in substantial adverse physical impacts associated with the construction of new water supply or wastewater treatment and disposal facilities or expansion of existing facilities?	X			The Project will result in the development of a new urban community that would require connection to a public water supply. This may require the construction of new or expanded infrastructure for water supply delivery or wastewater treatment and/or disposal. This impact will be analyzed in the EIR.

	Potentially Significant	Less Than Significant with Mitigation	Less Than Significant or No Impact	Comments
e. Result in substantial adverse physical impacts associated with the provision of storm water drainage facilities?	X			The Project would result in the development of a new urban community in an area that is currently undeveloped. This will result in the need for new storm water drainage facilities. This impact will be analyzed in the EIR.
f. Result in substantial adverse physical impacts associated with the provision of electric or natural gas service?	X			The Project will result in the development of a new urban community in a currently undeveloped location, which will require electric and natural gas service and development of the associated delivery infrastructure. This impact will be analyzed in the EIR.
g. Result in substantial adverse physical impacts associated with the provision of emergency services?	X			The Project would result in the development of a new urban community that would incrementally increase the demand for emergency services within the Plan Area. The Project includes the development of new fire station that would assist in providing emergency services to the Plan Area and surrounding areas. Development of the fire station is considered as part of the analysis of the potential physical impacts on the environment. However, additional facilities could possibly be required, the construction of which could have an adverse effect on the physical environment. This impact will be analyzed in the EIR.
h. Result in substantial adverse physical impacts associated with the provision of public school services?	X			The Project includes the development of three elementary schools and one middle school/high school campus. These schools would serve students generated by directly by the Project and surrounding areas. The EIR will analyze whether additional school facilities are necessary. The EIR also analyzes the physical environmental impacts associated with development of each of the proposed school sites.
i. Result in substantial adverse physical impacts associated with the provision of park and recreation services?	X			The Project will result in increased demand for park and recreation services, but it will provide for the development of 73.3 acres of developed parkland, as well as wetland preserve, greenbelt corridors, and landscaping. The EIR will analyze whether the developed parkland acreage is sufficient to meet requirements. The EIR considers the physical impacts associated within the development of the onsite parks in its analysis.
7. **TRANSPORTATION/TRAFFIC** - Would the project:				

	Potentially Significant	Less Than Significant with Mitigation	Less Than Significant or No Impact	Comments
a. Result in a substantial increase in vehicle trips that would exceed, either individually or cumulatively, a level of service standard established by the County?	X			A Traffic Impact Study is being prepared for the Project. Due to the scale of development, there will be a substantial increase in the number of vehicle trips to and from the Plan Area. This impact will be analyzed in the EIR.
b. Result in a substantial adverse impact to access and/or circulation?			X	The Project will be required to comply with applicable access and circulation requirements of the County Improvement Standards and the Uniform Fire Code. Upon compliance, impacts are less than significant. Nonetheless, this impact will be fully analyzed in the EIR.
c. Result in a substantial adverse impact to public safety on area roadways?			X	The Project will be required to comply with applicable access and circulation requirements of the County Improvement Standards and the Uniform Fire Code. Upon compliance, impacts are less than significant. This impact will be further addressed in the EIR.
d. Conflict with adopted policies, plans, or programs supporting alternative transportation (e.g., bus turnouts, bicycle racks)?			X	The Project includes infrastructure and plans to provide for the support of alternative transportation, including bicycles and public transit. This impact will be analyzed in the EIR.
8. **AIR QUALITY** - Would the project:				
a. Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in non-attainment under an applicable federal or state ambient air quality standard?	X			The Project would result in the development of a new 1,391-acre urban community, which exceeds the Sacramento Metropolitan Air Quality Management District's screening thresholds for criteria pollutants. Therefore, a full analysis and air quality modeling will be completed as part of the EIR to determine the Project's potential impact.
b. Expose sensitive receptors to pollutant concentrations in excess of standards?	X			The Project includes the development of four schools, thousands of residences that could be sensitive receptors. Furthermore, other projects in the area would contain similar uses. This impact will be analyzed in the EIR.
c. Create objectionable odors affecting a substantial number of people?	X			The Project does not include the development of uses that would generate objectionable odors. However, the Plan Area is located approximately 1.5 miles west the Sacramento Rendering Company, which has been the source of complaints of detectable odors. This impact will be analyzed in the EIR.

	Potentially Significant	Less Than Significant with Mitigation	Less Than Significant or No Impact	Comments
9. **NOISE -** Would the project:				
a. Result in exposure of persons to, or generation of, noise levels in excess of standards established by the local general plan, noise ordinance or applicable standards of other agencies?	X			A portion of the Plan Area contains the Sacramento Raceway, which currently generates substantial noise. Although the raceway is part of the Plan Area, it is not owned by the applicant, so operations could continue preliminary phases of construction on properties that are owned by the applicant. This impact will be addressed in the EIR.
b. Result in a substantial temporary increase in ambient noise levels in the project vicinity?			X	Project construction will result in a temporary increase in ambient noise levels in the Project vicinity. This impact is less than significant due to the temporary nature of the these activities, limits on the duration of noise, and evening and nighttime restrictions imposed by the County Noise Ordinance (Chapter 6.68 of the County Code). Nonetheless, this impact will be analyzed in the EIR.
10. **HYDROLOGY AND WATER QUALITY** - Would the project:				
a. Substantially deplete groundwater supplies or substantially interfere with groundwater recharge?	X			The Project will be served by the Sacramento County Water Agency Zone 40, which is served by groundwater sources. Therefore, the Project will incrementally add to groundwater consumption. This impact will be analyzed in the EIR. Although the Project would result in the development of 1,391 acres that are currently largely undeveloped, the Plan Area is not located in an area of significant recharge capability. Groundwater recharge is not further addressed in the EIR.
b. Substantially alter the existing drainage pattern of the project area and/or increase the rate or amount of surface runoff in a manner that would result in flooding on- or off-site?			X	The Project would alter the site's current drainage patterns by channelizing existing drainages and add urban development that could result in additional surface runoff if stormwater infrastructure is not designed and built properly. Compliance with applicable requirements of the Sacramento County Floodplain Management Ordinance, Sacramento County Water Agency Code, and Sacramento County Improvement Standards will ensure that impacts are less than significant. Nonetheless, this impact will be analyzed in the EIR.

	Potentially Significant	Less Than Significant with Mitigation	Less Than Significant or No Impact	Comments
c. Develop within a 100-year floodplain as mapped on a federal Flood Insurance Rate Map or within a local flood hazard area?	X			Portions of the Plan Area are within the 100-year floodplain. This impact will be analyzed in the EIR.
d. Place structures that would impede or redirect flood flows within a 100-year floodplain?	X			See response 10c. This impact will be analyzed in the EIR.
e. Expose people or structures to a substantial risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam?	X			See response 10c. This impact will be analyzed in the EIR.
f. Create or contribute runoff that would exceed the capacity of existing or planned stormwater drainage systems?			X	See response 10b. Adequate on- and/or off-site drainage improvements will be required pursuant to the Sacramento County Floodplain Management Ordinance and Improvement Standards. Nonetheless, this impact will be analyzed in the EIR.
g. Create substantial sources of polluted runoff or otherwise substantially degrade ground or surface water quality?			X	Compliance with the Stormwater Ordinance and Land Grading and Erosion Control Ordinance (Chapters 15.12 and 14.44 of the County Code respectively) will ensure that the Project will not create substantial sources of polluted runoff or otherwise substantially degrade ground or surface water quality. This impact will be less than significant and will not be further addressed in the EIR.
11. **GEOLOGY AND SOILS** - Would the project:				
a. Expose people or structures to substantial risk of loss, injury or death involving rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault?			X	Sacramento County is not within an Alquist-Priolo Earthquake Fault Zone. Although there are no known active earthquake faults in the project area, the site could be subject to some ground shaking from regional faults. The Uniform Building Code contains applicable construction regulations for earthquake safety that will ensure less than significant impacts. This impact will not be further addressed in the EIR.

	Potentially Significant	Less Than Significant with Mitigation	Less Than Significant or No Impact	Comments
b. Result in substantial soil erosion, siltation or loss of topsoil?			X	Compliance with the County's Land Grading and Erosion Control Ordinance will reduce the amount of construction site erosion and minimize water quality degradation by providing stabilization and protection of disturbed areas, and by controlling the runoff of sediment and other pollutants during the course of construction. This will be addressed in more detail in the EIR.
c. Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, soil expansion, liquefaction or collapse?			X	Pursuant to Title 16 of the Sacramento County Code and the Uniform Building Code, a soils report will be required prior to building construction. If the soils report indicates than soils may be unstable for building construction then site-specific measures (e.g., special engineering design or soil replacement) must be incorporated to ensure that soil conditions will be satisfactory for the proposed construction. Although this would ensure that the impact would be less than significant with compliance with the Sacramento County Code and Uniform Building Code, this impact will be addressed in more detail in the EIR.
d. Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available?			X	The Project will be required to connect to the public sewer system. There will be no impact. This will not be further addressed in the EIR.
e. Result in a substantial loss of an important mineral resource?			X	The project is not located within an Aggregate Resource Area as identified by the Sacramento County General Plan Land Use Diagram, nor are any important mineral resources known to be located within the Plan Area. There are areas identified as mineral resource areas directly northwest of the Plan Area, but not within the Plan Area itself. However, due to its proximity to mining activities, the EIR will address this impact in more detail.
f. Directly or indirectly destroy a unique paleontological resource or site?			X	No known paleontological resources (e.g. fossil remains) or sites occur at the project location. There would be no impact. This will not be further addressed in the EIR.
12. **BIOLOGICAL RESOURCES** - Would the project:				

	Potentially Significant	Less Than Significant with Mitigation	Less Than Significant or No Impact	Comments
a. Have a substantial adverse effect on any special status species, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, or threaten to eliminate a plant or animal community?	X			The project site may contain suitable habitat for some special status species. This impact will be analyzed in the EIR.
b. Have a substantial adverse effect on riparian habitat or other sensitive natural communities?	X			The project site may contain riparian habitat or other sensitive natural communities. This impact will be analyzed in the EIR.
c. Have a substantial adverse effect on streams, wetlands, or other surface waters that are protected by federal, state, or local regulations and policies?	X			There are wetlands located within the Plan Area. The Project includes a large wetland preserve area to preserve some of the wetlands, but the Project would still result in a loss of wetlands in other portions of the Plan Area. This impact will be analyzed in the EIR.
d. Have a substantial adverse effect on the movement of any native resident or migratory fish or wildlife species?	X			Resident and/or migratory wildlife may be displaced by project construction, and the development of a new urban community in a currently undeveloped location could permanently displace migratory wildlife species. This impact will be analyzed in the EIR.
e. Adversely affect or result in the removal of native or landmark trees?	X			Native and/or landmark trees may occur within the Plan Area, and if so, are likely to be affected by construction. This impact will be analyzed in the EIR.
f. Conflict with any local policies or ordinances protecting biological resources?			X	The project is consistent with local policies/ordinances protecting biological resources. This impact will be analyzed in the EIR.
g. Conflict with the provisions of an adopted Habitat Conservation Plan or other approved local, regional, state or federal plan for the conservation of habitat?	X			The County is in the process of preparing the South Sacramento County Habitat Conservation Plan, and the Project's wetland preservation area is part of that plan's preservation strategy. It is also worth noting that portions of the Plan Area are located within an area known as the Mather core area, which has been identified by the US Fish and Wildlife Services as a priority recovery area for several species that rely on vernal pool habitat. This impact will be analyzed in the EIR.

	Potentially Significant	Less Than Significant with Mitigation	Less Than Significant or No Impact	Comments
13. **CULTURAL RESOURCES -** Would the project:				
a. Cause a substantial adverse change in the significance of a historical resource?		X		A cultural resources study has been completed for the Project. This impact will be analyzed in the EIR.
b. Have a substantial adverse effect on an archaeological resource?		X		No archaeological resources are known to occur within the Plan Area. The Northern California Information Center was contacted as part of a 2008 archaeological inventory study prepared for the properties owned by the applicant. The record search indicated that there were no recorded archaeological resources located within or adjacent to those properties. Some resources have been recorded on other properties nearby. Standard mitigation would ensure that impacts would be less than significant if any previously unknown archaeological resources are discovered during ground-disturbing activities within the Plan Area. This impact will be further addressed in the EIR.
c. Disturb any human remains, including those interred outside of formal cemeteries?		X		No known human remains are known to exist within the Plan Area. Nonetheless, mitigation has been recommended to ensure appropriate treatment should remains be uncovered during project implementation. This will be addressed in the EIR.
d. Would the project cause a substantial adverse change in the significance of a tribal cultural resource as defined in Public Resources Code 21074?	X			The Native American Heritage Commission has indicated that there are no known Sacred Land listings within the Plan Area. Several cultural resources studies have been prepared, and Native American tribes were contacted in 2007 and again in 2013 to notify them of the proposed Project. A response was received in 2007 from the Ione Band of Miwok Indians and others were received in 2013 from the United Auburn Indian Community and the Shingle Springs Racheria. None of the responses indicated that known tribal resources were located within the Plan Area, but they indicated that there could be resources. All of the letters requested additional information and to be kept up to date on the project. This impact will be addressed in the EIR.

	Potentially Significant	Less Than Significant with Mitigation	Less Than Significant or No Impact	Comments
14. **HAZARDS AND HAZARDOUS MATERIALS** - Would the project:				
a. Create a substantial hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?			X	The Project would not involve the transport, use, or disposal of major quantities of hazardous materials, but smaller quantities could potentially be used during construction and operation of the Project. It is possible that a portion of the Plan Area could be developed with medical offices, which may use and store small quantities of hazardous materials. Transport, use, storage, and disposal of these materials are highly regulated, so adverse effects are unlikely, and this would be a less-than-significant impact. Nonetheless, this impact will be analyzed in the EIR.
b. Expose the public or the environment to a substantial hazard through reasonably foreseeable upset conditions involving the release of hazardous materials?	X			The Project does not include the development of any uses that would create a substantial hazard to the public. However, the presence of the Sacramento Raceway could create some hazardous conditions for surrounding development if it continues operating, particularly since it the property has a history of violations concerning hazardous materials and hazardous conditions. This impact will be analyzed in the EIR.
c. Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances or waste within one-quarter mile of an existing or proposed school?	X			The Project includes the development of four schools. This impact will be analyzed in the EIR.
d. Be located on a site that is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5, resulting in a substantial hazard to the public or the environment?			X	The project is not located on a known hazardous materials site, so this impact would be less than significant. Nonetheless, this will be addressed in the EIR.

	Potentially Significant	Less Than Significant with Mitigation	Less Than Significant or No Impact	Comments
e. Impair implementation of or physically interfere with an adopted emergency response or emergency evacuation plan?			X	The project would not interfere with any known emergency response or evacuation plan, so this impact would be less than significant. However, commenters on the Notice of Preparation expressed concerns that emergency responders would have difficulty differentiating between the Plan Area and the City of Jackson, due to similar names, and therefore not be able to locate people in need of emergency services. Therefore, this impact will be addressed in the EIR.
15. GREENHOUSE GAS EMISSIONS – Would the project:				
a. Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	X			The Project has been designed to minimize greenhouse gas emissions to assist the County in meeting its greenhouse gas emission reduction goals. However, due to the large scale of the project, this impact will be fully analyzed in the EIR.

1.6 SUPPLEMENTAL INFORMATION

LAND USE CONSISTENCY	Current Land Use Designation	Consistent	Not Consistent	Comments
General Plan	Extensive Industrial, General Agriculture (20 AC)		X	The Project requests entitlements to amend the General Plan designations for the Plan Area.
Community Plan	AG-80, IR, M-1		X	The Project requests entitlements to amend the Community Plan designations for the Plan Area.
Land Use Zone	M-1, AG-80, IR		X	The Project requests entitlements to amend the zoning for the Plan Area.

NOTICE OF PREPARATION

AUGUST 5, 2013

TO: ALL INTERESTED PARTIES

SUBJECT: NOTICE OF PREPARATION OF A DRAFT ENVIRONMENTAL IMPACT REPORT FOR JACKSON TOWNSHIP SPECIFIC PLAN

Sacramento County will be the CEQA Lead Agency for preparation of an Environmental Impact Report (EIR) for a project known as JACKSON TOWNSHIP. This Notice of Preparation has been sent to responsible and trustee agencies and involved federal agencies pursuant to Section 15082 of the CEQA Guidelines. Agencies should comment on the scope and content of the environmental information that is germane to the agencies' statutory responsibilities in connection with the proposed project. Due to the time limits mandated by State law, your response must be sent at the earliest possible date, but not later than 30 days after receipt of this notice.

The project description, location, and the probable environmental effects are contained in the attached materials and may also be viewed online by going to the PER homepage (www.per.saccounty.net) and searching for environmental documents. The direct link to the document search page is: http://www.per.saccounty.net/EnvironmentalDocuments/Pages/SearchDocuments.aspx.

Please send your Agency's response to this Notice to:

Catherine Hack, Environmental Coordinator
Department of Community Development
Planning and Environmental Review Division
827 7th Street, Room 220, Sacramento, CA 95814
or via e-mail at: DERA@saccounty.net.

Your response should include the name of a contact person in your agency.

Agencies with specific questions about the project should contact Lauren Hocker, Environmental Review Project Manager, at (916) 874-7914 for further information.

Tsakopoulos Investments, Angelo G. Tsakopoulos

PROJECT DESCRIPTION AND LOCATION:

The proposed Plan Area, approximately 1,391 acres, is located in southeastern Sacramento County, lying south of the Mather Specific Plan Area, east of Excelsior Road, north of Jackson Highway and west of Eagles Nest Road in the Vineyard Community (Plate NOP-1 and Plate NOP-2). The Plan Area is currently designated on the Sacramento General Plan with land use designations of Extensive Industrial and General Agricultural. The property has current zoning of Light Industrial (M-1), Industrial Reserve (IR) and Permanent Agriculture (AG-80). There are 24 different landowners within the Plan Area. The largest landowner–Excelsior Estates LLC, represented by Angelo G. Tsakopoulos as the applicant–owns and/or controls approximately 862 acres (approximately 62 % of the total) within the Plan Area boundaries.

The proposed Project includes a range of different uses, including low density (6.0 units/acre), medium density (13 units/acre), and high density (25 units/acre) residential; general and community commercial; office; and mixed use. The proposal also includes three elementary schools, a middle school/high school, a public-quasi public site for a fire station, and parks. Land along the northern and eastern sides of the Project are shown as Wetland Preserve. These designated lands match the adjacent land use proposal to the east, known as NewBridge, and reflect the current status of the proposed preserve boundaries being negotiated as part of the anticipated South Sacramento Habitat Conservation Plan (SSHCP). The anticipated SSCHP preserve boundaries are planned to continue southward, extending beyond Jackson Road, but the exact location of this preserve has not yet been determined. For this reason, the Project includes an area designated Agriculture in the southeastern corner of the site; there is an equivalent area to the east within the NewBridge project. It is anticipated that the area needed for the preserve will be smaller than the total area shown as Agriculture, but rather than prematurely designate some areas for urban uses and some as Wetland Preserve, the entire corner is reserved as Agriculture, which maintains the current use of the land. Although the land use plan reflects the existing AG use, the technical studies will assume the potential for 6 units per gross acre, to ensure that overall infrastructure planning of the planning areas is coherent should some portion eventually be proposed for development, once the preserve is identified.

The proposed Project includes 6,143 residential units spread somewhat evenly between low density (35% of units), medium density (29% of units), and high density (35%) of units, with an additional 100 units (2% of units) within the mixed use designation areas. The analyses will assume that the units in the mixed use area are high density. In addition to the residential units, the Project includes 1,996,100 square feet of non-residential uses. There are also three alternative versions of the Project which the applicant has provided; these are project alternatives, not CEQA Alternatives. A table which summarizes the proposed land uses and an exhibit showing the land plan area provided at the end of the NOP (Table NOP-1 and Plate NOP-4).

Plate NOP-1: Regional Location Map

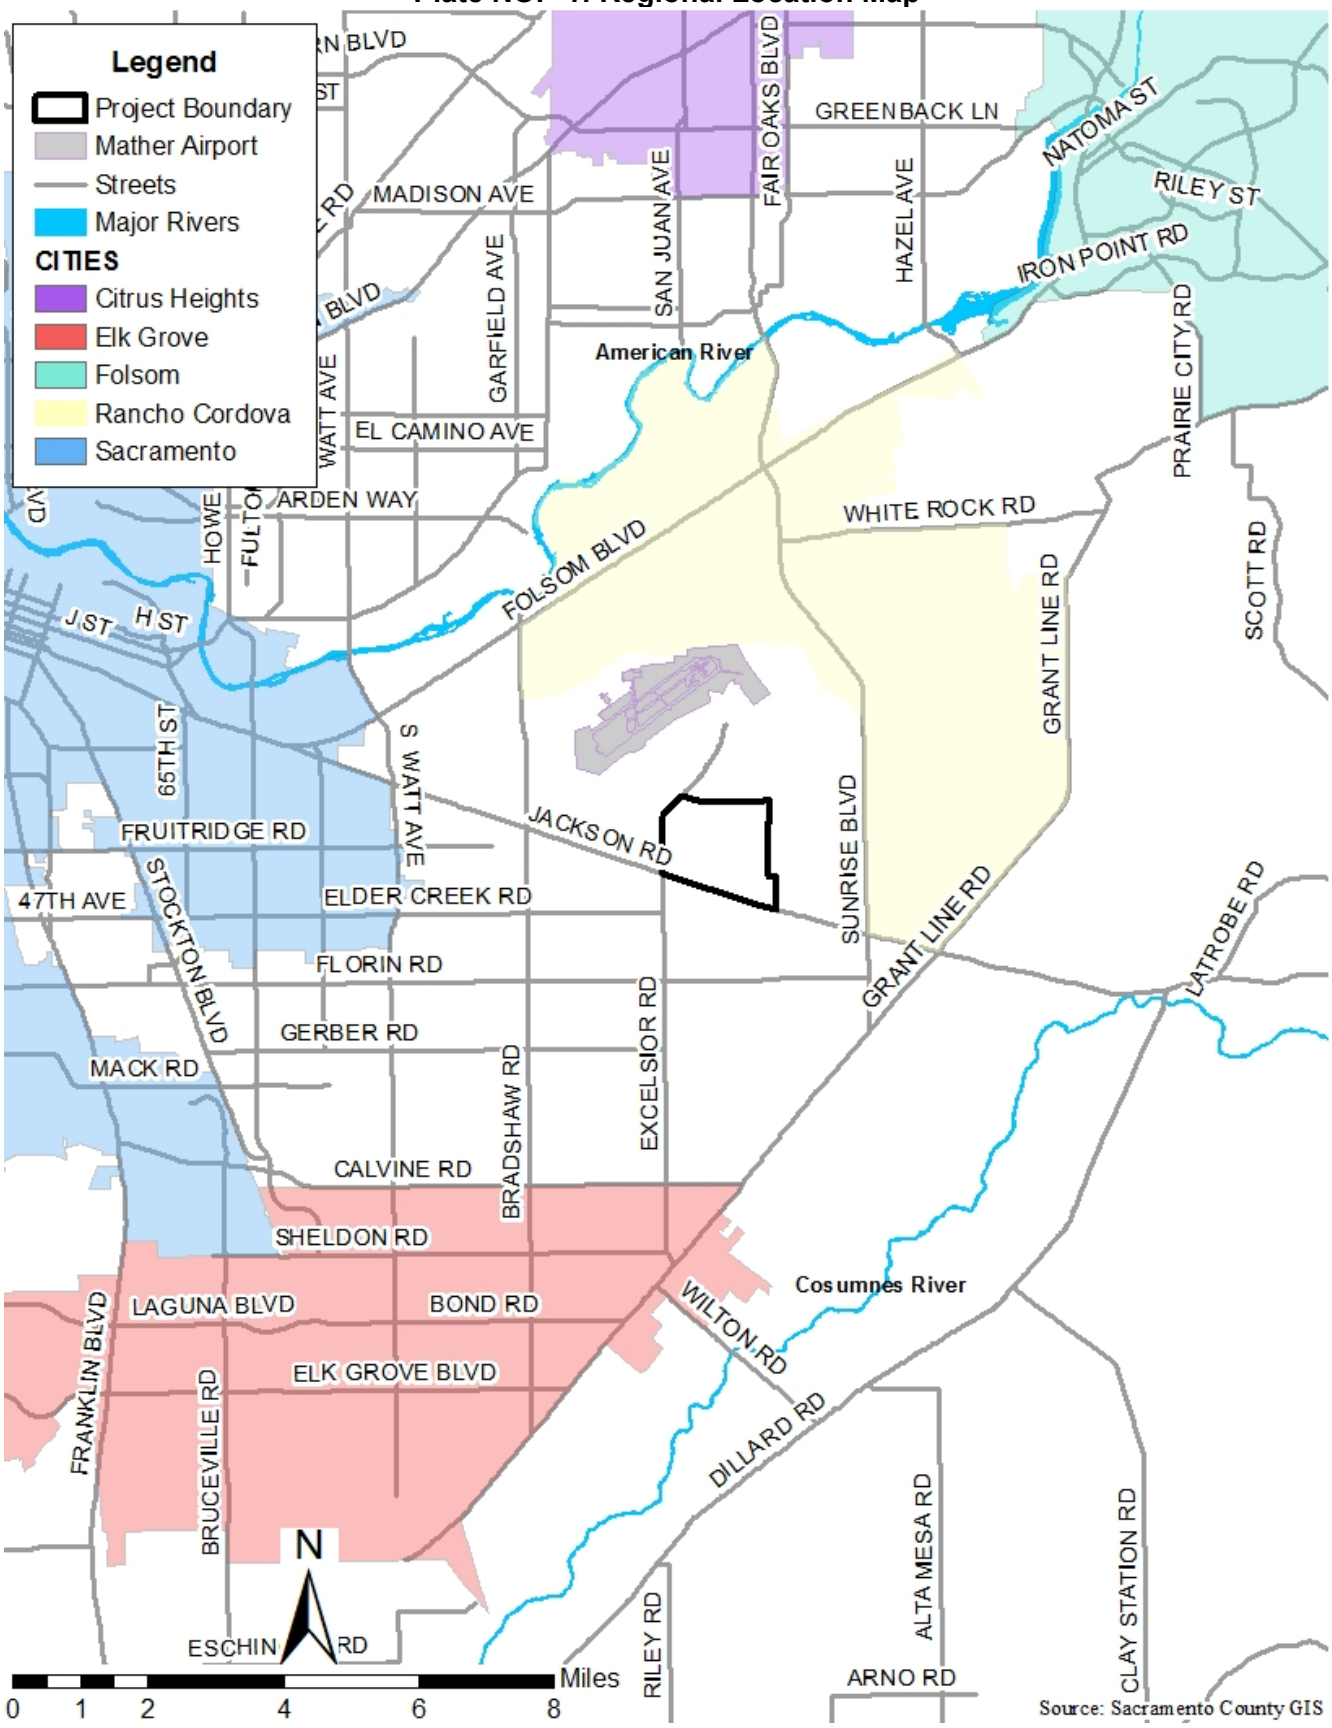

Plate NOP-2: Project Location Map

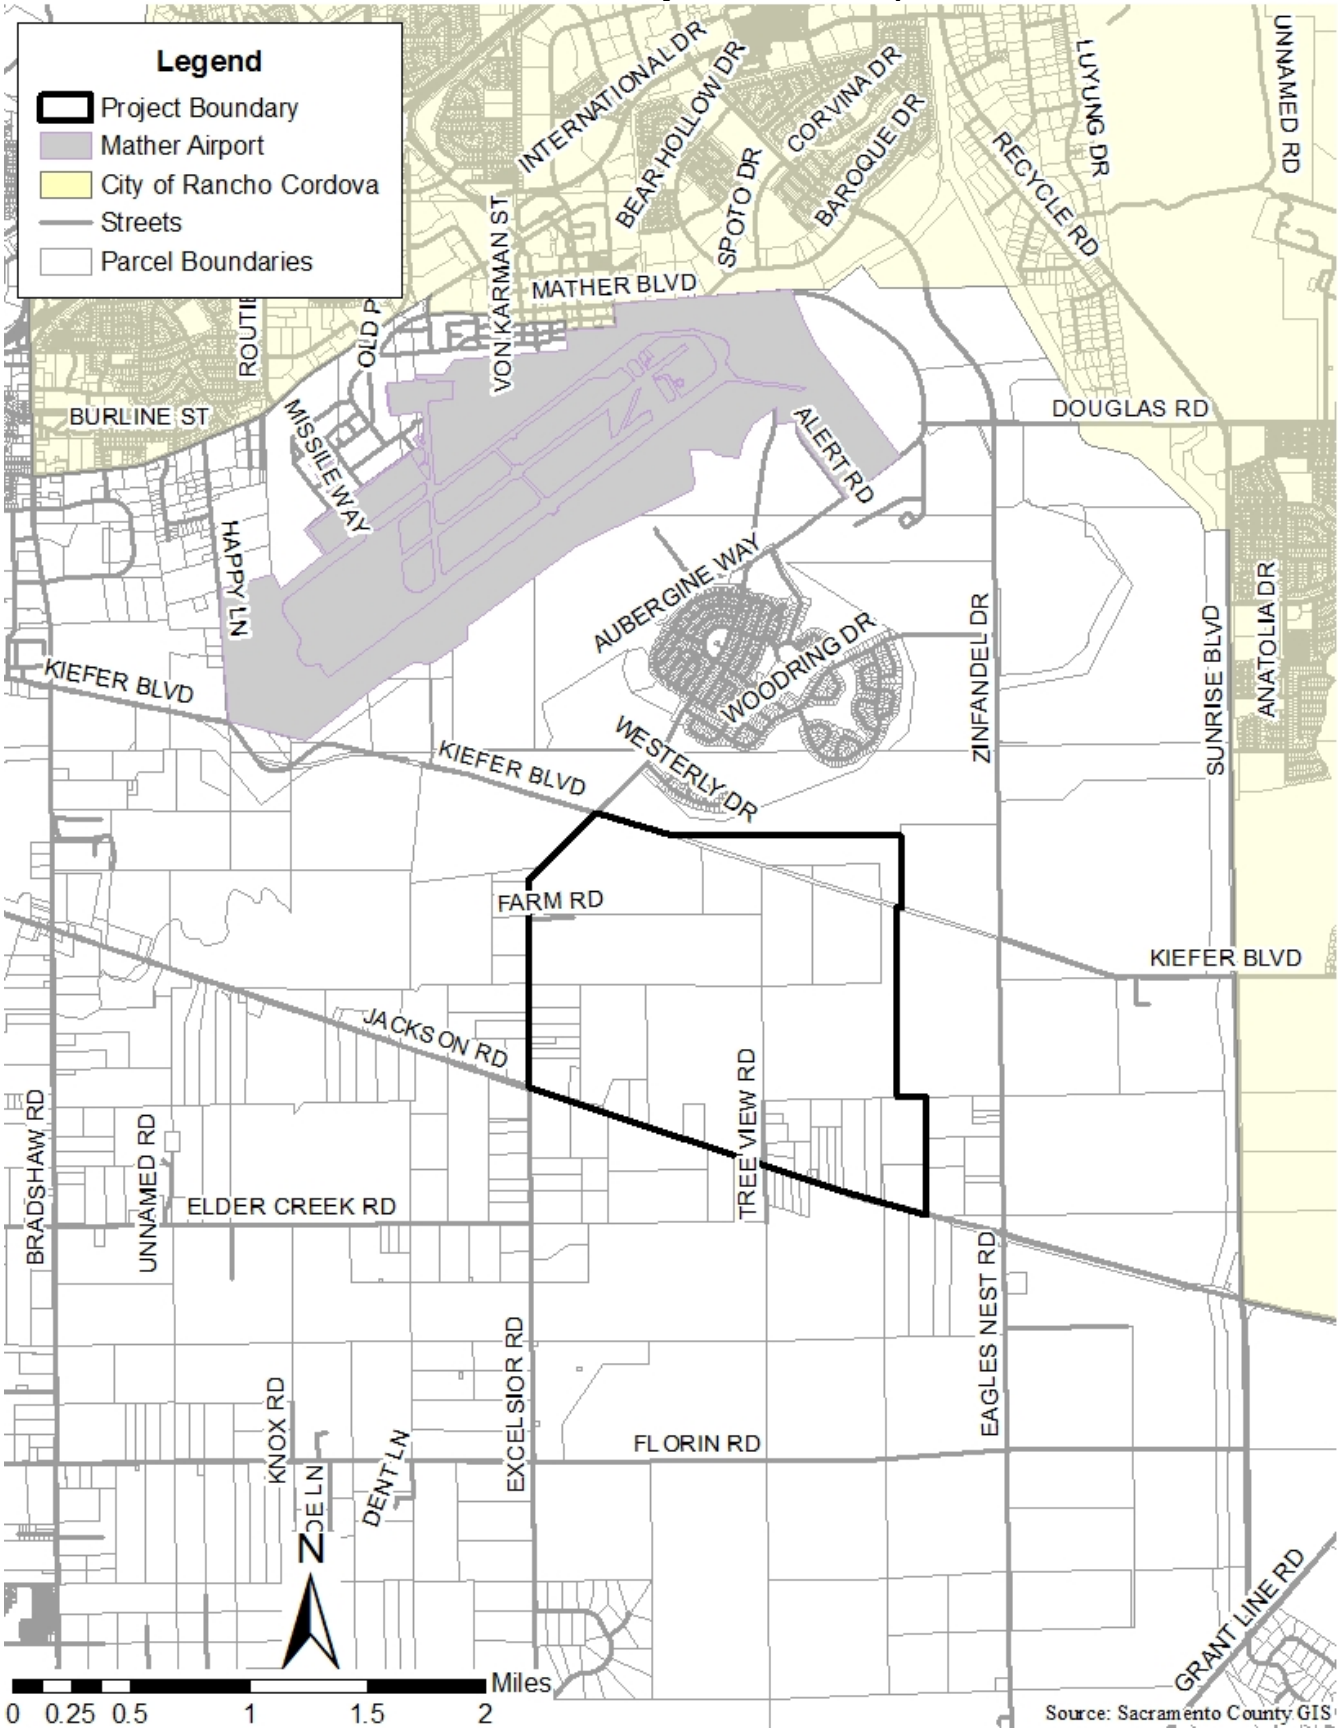


Most homes within the Plan Area will be within a quarter-mile of an open space area: either a park, linear parkway, or natural open space. Likewise, most homes will be within a half-mile of the retail/employment land uses. According to the application materials, a key feature of the Plan Area is a large, centrally-located greenway/drainage corridor with a trail on one side that will provide easy, non-vehicular linkages from one end of the community to the other. An interconnected street system, connecting trails and paths with potential for future transit connections, is provided throughout the Plan Area. Street layouts were designed in coordination with County Department of Transportation and Planning and Environmental Review staff. The Circulation Plan and Bikeway Master Plan diagram are included with the other project exhibits at the end of this NOP (Plate NOP-5 and Plate NOP-6).

The Plan Area is within the Elk Grove Unified School District and the Cordova Recreation and Park District. The Project includes three sites designated as elementary school sites (approximately 10 acres each) and one site designated as a joint middle school/high school (approximately 70 acres). The elementary schools are co-located with neighborhood parks to invite joint use. A total of eight neighborhood parks and one Community Park are included in the proposed Project.

Alternative 1 involves a 40.1 acre Office (O) use designated along Tree View Lane, in the place of the 22.3 acre MD and the 16.9 acres HD sites. **Alternative 2** involves the three parcels in the northwest corner of the site designated MD, HD and CC. The CC and MD parcels switch locations and the acreages of all three parcels change slightly. **Alternative 3** is essentially a combination of Alternatives 1 and 2. Alternative 3 involves the addition of the 40.1 acre Office parcel as described in Alternative 1 as well as the switch in location of the CC and MD sites as described in Alternative 2. Land Use Summary tables and exhibits for these alternatives are provided at the end of the NOP (Table NOP-2, Table NOP-3, Table NOP-4, Plate NOP-7, Plate NOP-8, and Plate NOP-9).

In order to approve the Project (or project alternatives) which are described above, the following entitlements must be approved by the Sacramento County Board of Supervisors:

1. A **General Plan Amendment** to move the Urban Policy Area (UPA) boundary south to include approximately 1,391 acres encompassing the Jackson Township Specific Plan (Plate NOP-10).
2. A **General Plan Amendment** to amend the Land Use Diagram designations within the Jackson Township Specific Plan from General Agriculture (568 +- acres) and Extensive Industrial (823 +-acres) to Low Density Residential, Medium Density Residential, Commercial and Office, Mixed Use, Recreation, Natural Preserve, and Public/Quasi Public (Plate NOP-11).
3. A **General Plan Amendment** to amend the General Plan, including the Land Use Diagram, to include a Mixed Use Land Use Designation.
4. A **General Plan Amendment** to amend the Transportation Diagram to reflect proposed roadway alignments (Plate NOP-12).
5. A **General Plan Amendment** to amend the Bicycle Master Plan to add on- and off-street bikeways (Plate NOP-6).
6. A **Community Plan Amendment** to amend the Vineyard Community Area Plan to change the Community Plan designation of the parcels located within the Jackson Township Specific Plan area (1,391+-acres) from Permanent Agriculture (AG-80) (772.5 acres), Light Industrial (596.5 acres) and Industrial Reserve (IR) (22 acres) to Jackson Township Specific Plan Area (1,391+-acres) (Plate NOP-13).
7. **Adoption of the Jackson Township Specific Plan** for the approximately 1,391 acre Jackson Township Specific Plan area, including a Specific Plan land use diagram, Design Guidelines and Development Standards.

8. A **Zoning Ordinance Amendment** to establish a Special Planning Area (SPA) Ordinance for a 838+-acre portion of the Jackson Township Specific Plan area and a **Rezone** to amend the Zoning Designations for a 838+- acre portion (owned by the applicant) of the Jackson Township Specific Plan Area from AG-80 (489+-acres), M-1(+-327acres) and IR (22 +-acres) to Jackson Township Special Planning Area (SPA) (Plate NOP-14).
9. A **Large Lot Tentative Subdivision Map** for the lands owned by Tsakopoulos Family Trust, consisting of 12 existing parcels of approximately 838 acres, to be divided into 44 parcels for the purpose of creating legal parcels corresponding to land use blocks within the Jackson Township Specific Plan.
10. **Adoption of an Affordable Housing Plan** for the Jackson Township Specific Plan.
11. **Adoption of a Development Agreement** for the Jackson Township Specific Plan by and between the County of Sacramento and the Tsakopoulos Family Trust for the 838 acres owned by the Tsakopoulos Family Trust.
12. **Adoption of a Public Facilities Financing Plan** for the Jackson Township Specific Plan that includes a Capital Improvement Program and Financing Plan.
13. **Adoption of a Water Supply Master Plan Amendment** to amend the existing Zone 40 Water Supply Master Plan to include provision of water service to the Jackson Township Specific Plan Area. This action requires Sacramento County Water Agency Board of Directors approval.
14. **Approval of a Water Supply Assessment** for the Jackson Township Specific Plan required by the California Water Code to link land use and water supply planning activities. This action requires Sacramento County Water Agency Board of Directors approval.

In addition to the above listed entitlements, separate annexation requests to LAFCo will include:

- A Sphere of Influence Amendment (SOIA) and concurrent Annexation to County Service Area (CSA) 10 or creation of a new CSA. Note: a separate subsequent action may be required by the Sacramento County Board of Supervisors to establish a Benefit Zone, to implement funding and service provision.
- Annexation to Sacramento Regional County Sanitation District (SRCSD).
- Annexation to Sacramento Area Sewer District (SASD).

It should be noted that this application request does not include rezone of the properties not owned by the applicant, and that any subsequent rezones would be the subject of future applications and CEQA review.

PROJECT OBJECTIVES:

The following summarizes the project objectives that guided the planning of the Jackson Township Specific Plan:

1. Develop an economically viable mixed use project in close proximity to the urban core.
2. Develop a marketable project which minimizes greenhouse gas emissions.
3. Develop an economically-stable community where property values are retained over time.
4. Develop a project containing a variety of housing types so as to create a demographically mixed community.
5. Develop a project which allows for easy access to green space, schools, and a town center containing various retail, dining, and other commercial services.
6. Develop a project which provides employment opportunities for workers of all income levels.

7. Develop a project which promotes a jobs-housing balance in the Jackson Highway/Mather area.
8. Develop a project which allows residents to engage in short, non-vehicle commutes.
9. Develop a project which utilizes proven design practices which result in the creation of strong communities that remain economically stable over time.
10. Develop a project which contains a circulation system that promotes walking, biking, and the use of public transit.
11. Develop a project which contains a comprehensively planned infrastructure system.
12. Develop a project which ensures funding for the on-going maintenance needs of parks, open space facilities, public services and other infrastructure.
13. Develop a project which preserves, to the extent feasible, the area's most important and valuable biological resources with a wetlands preserve.
14. Develop a project which contains adequate school facilities for community residents and assists in meeting the school facility needs of surrounding projects.
15. Develop a project which includes a community park and a variety of neighborhood parks sufficient to meet park district requirements.

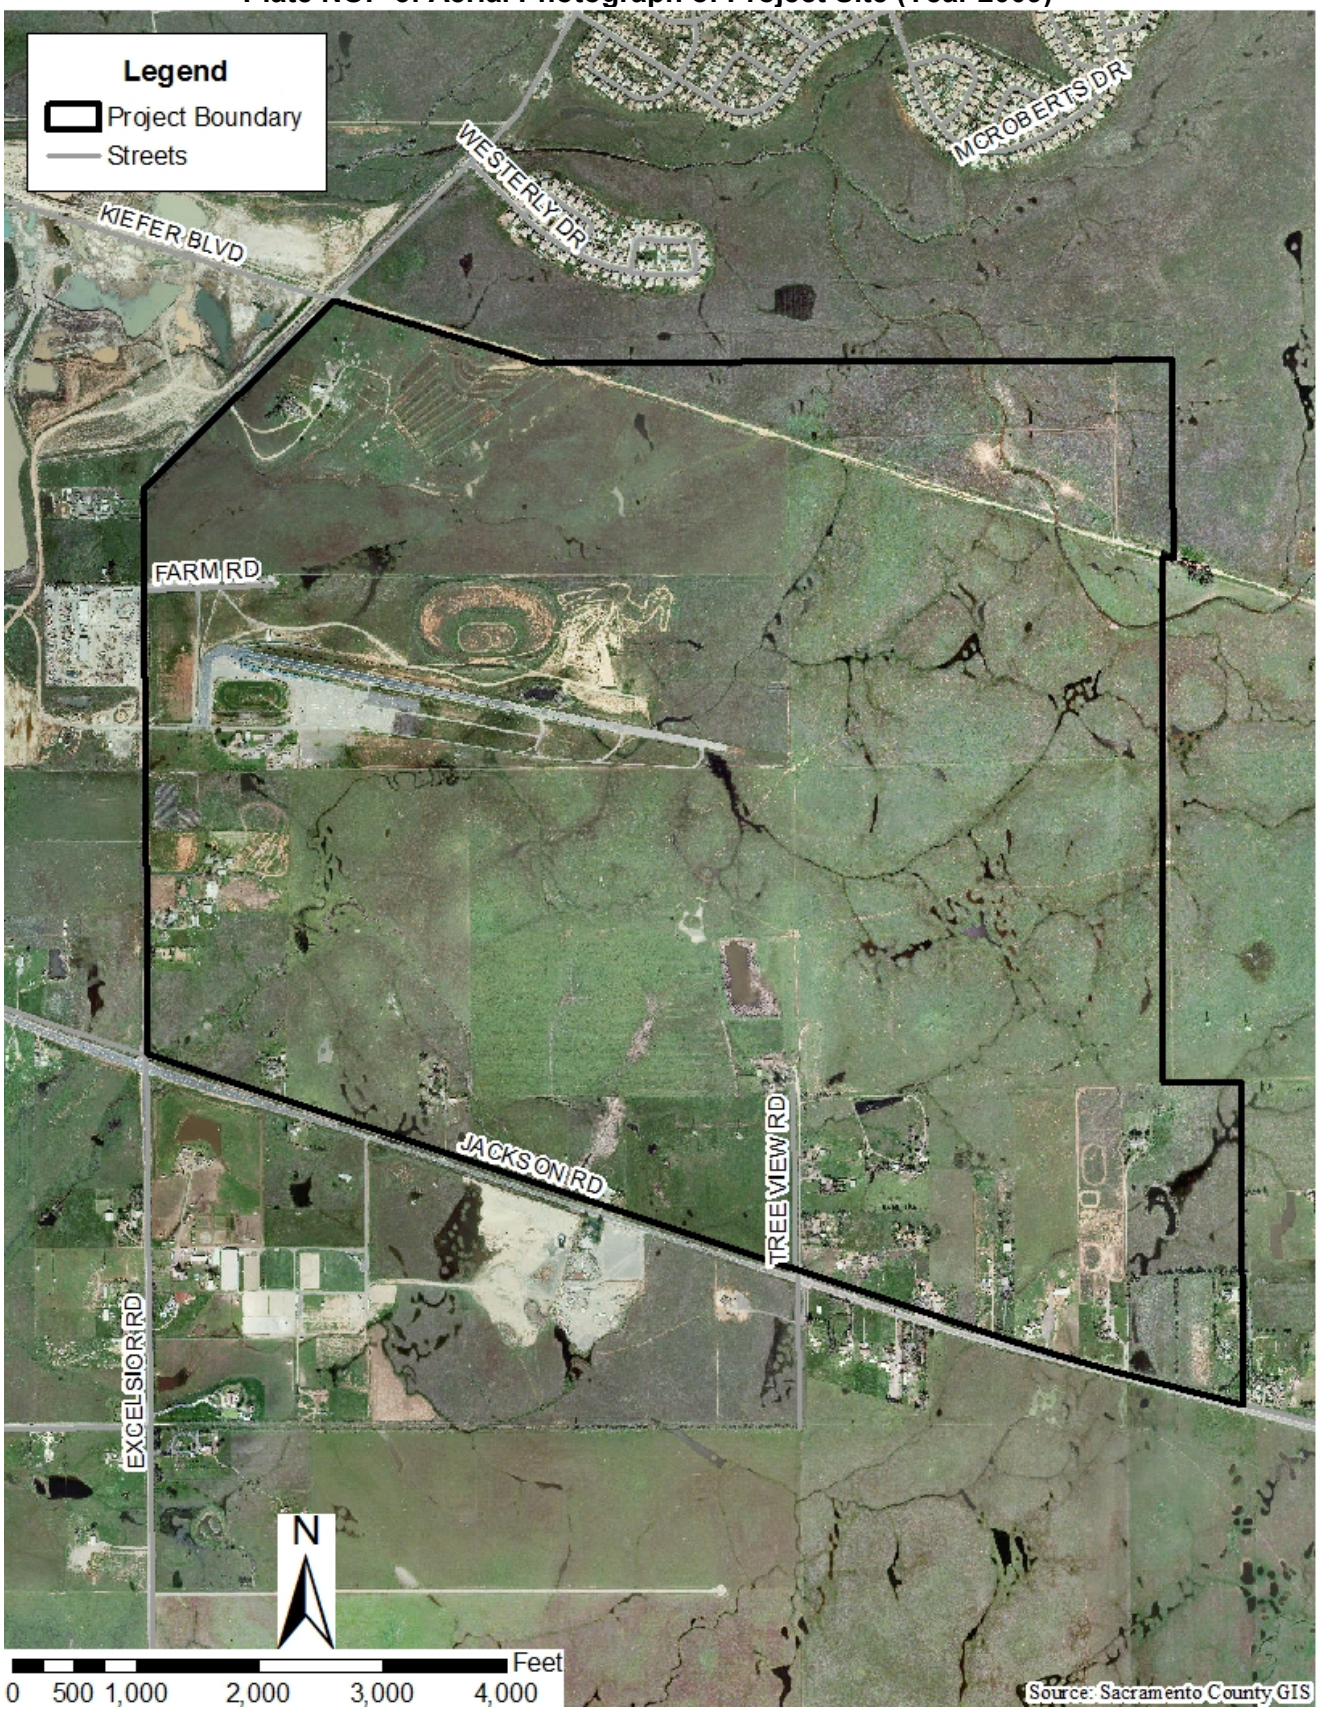
ENVIRONMENTAL/LAND USE SETTING:

An aerial photograph of the site, taken in the year 2009, has been provided for context (Plate NOP-3). The current land uses on the properties within the Plan Area are predominantly grazing, small ranches, and agricultural residential homes. A portion of this site also includes the Sacramento Raceway, which hosts racing events on Wednesday nights, twice per month on Friday night, Saturday nights, and drag races on Saturday and Sunday. To the west of the Project, land uses are characterized by agricultural uses, mining, and commercial sales of landscaping materials. Lands to the east are generally similar to the Project site, with grazing and agricultural-residential uses predominating. The property to the east also includes the Sacramento Rendering Company plant, which is a facility that accepts animal tissue, processes it, and then distributes the byproduct for use in the manufacture of other goods. Land to the north is dominated by the presence of Mather Airport and appurtenant facilities, but also includes residential areas (Independence at Mather), nature preserve, and golf course property. Properties to the south of the Project, across Jackson Road, are generally in agricultural or agricultural-residential use or are designated as wetland preserve.

There are roadways extending along the southern and western sides of the Project boundary: Jackson Road on the southern boundary and Excelsior Road along the western boundary. There is no road along the eastern Project boundary, though Eagles Nest Road is only a few hundred feet to the east. There is also no road on the northern property boundary, but the Sacramento County General Plan Transportation Diagram shows that Kiefer Road will be extended through the site (there is currently an unmaintained dirt road along the alignment on County-owned right-of-way). Jackson Road is a state highway (State Route 16), though the California Department of Transportation is considering the possibility of relinquishing part of the facility to local control (as found in the *Transportation Corridor Concept Report: State Route 16*, dated June 26, 2012 and published by Caltrans). Where it is adjacent to the site, the roadway is a two-lane facility without a center left-turn lane, though it is four lanes on either side of the intersection of Jackson Road and Excelsior Road. Excelsior Road is also a two-lane facility with more lanes on either side of the intersection with Jackson Road.

Most of the Project site is grassland with interspersed wetlands and wetland swales; portions of the site have historically been disturbed by agricultural activities. The southwestern Project area is within the headwaters of Elder Creek, and a small bend in Morrison Creek extends slightly into the northeastern corner of the Project site.

Plate NOP-3: Aerial Photograph of Project Site (Year 2009)



PROBABLE ENVIRONMENTAL EFFECTS/EIR FOCUS:

The analyses in the EIR will describe existing conditions, describe the legal and regulatory framework relevant to the proposed Project, describe standards of significance to be used in analysis, and describe analysis methodologies. A review of the project and of the environmental resources in the study area has resulted in the identification of the following potential areas of environmental effect:

Aesthetics
Proposed new development areas will be analyzed for their effects on the views from surrounding properties and roadways.

Agricultural Resources
Areas of active agricultural use, designated agricultural lands, prime farmland soils, and Williamson Act contract land will be identified and analyzed within and adjacent to the project area.

Air Quality
Project-related emissions analyzed may include toxic air contaminants, ozone precursors, and particulates. The analysis will include discussions of emissions resulting from construction activities and emissions resulting from operational activities of the completed project. Where possible, emissions will be quantified using the California Emissions Estimator Model (CalEEMod) and/or other appropriate models.

Biological Resources
The Project will be analyzed to identify areas where proposed changes may impact biological resources in the area. The analyses will discuss impacts to general wildlife populations and habitats, but will focus on special-status species and particularly sensitive habitats, including wetlands.

Climate Change
Project-related greenhouse gas emissions will be quantified and analyzed for the cumulative impacts to climate change. The probable impacts to the project as a result of climate change will also be examined.

Cultural/Historical Resources
The changes and new proposed uses will be analyzed for compatibility with cultural and historical resources.

Geology, Soils, and Mineral Resources
Underlying soil types and suitability will be examined in areas where urban uses are proposed. Erosion potential will also be considered.

Hazards and Hazardous Materials
Hazardous materials sites, if any, will be identified in the vicinity of proposed new development areas. Data sources may include Envirostor and Geotracker. Project compatibility with any existing hazardous materials sites will be examined.

Land Use
The project proposal will be examined to determine consistency with land use policies/ordinances/plans that have been adopted in order to avoid environmental effects. The project impact relative to the planned and existing land use environment will also be disclosed.

Noise
Existing and proposed uses with the potential to generate significant noise will be analyzed, which will include modeling of noise generated by transportation sources. This will include an analysis of the existing Sacramento Raceway and Mather Airport.

Public Services
The proposal will be analyzed for its compatibility with public services and to determine what may be required to extend service to the project. Services analyzed may include but are not limited to: schools (Elk Grove Unified School District), park services (Cordova Recreation and Park District), libraries, fire protection (Sacramento Metropolitan Fire District), and police protection (Sacramento County Sheriff's Department).

Public Utilities
The proposal will be analyzed for its compatibility with public utilities and to determine what may be required to extend service to the project. Utilities analyzed may include but are not limited to: water supply (Sacramento County Water Agency Zone 40), sewer service (annexation to Sacramento Area Sewer District and Sacramento Regional County Sanitation District), and energy services (Pacific Gas and Electric and Sacramento Municipal Utility District).

Transportation
A Traffic Impact Study will be prepared to examine the effects of proposed project development and facilities on area roadways.

Hydrology and Water Quality
Areas of flooding potential will be identified and drainage patterns will be examined within the watersheds affected by the project. The project will be analyzed for impacts to the existing hydrologic environment and vice versa. Agencies involved with flood control issues will be consulted. These may include, but are not limited to: the California State Department of Water Resources, the State Reclamation Board, the Sacramento Area Flood Control Agency (SAFCA), and the Sacramento County Department of Water Resources. The potential impacts of the project on water quality will also be examined, which includes construction-related impacts (e.g. erosion of exposed soil) and operational impacts (e.g. use of pesticides and fertilizers).

The above descriptions are not exhaustive, and other sections and discussions may be included if further research indicates that the inclusion is warranted. As the analyses progress and the extent of impacts to the above categories is determined, appropriate CEQA Alternatives will be included for analysis. Pursuant to the CEQA Guidelines Section 15206, this is a project of "statewide, regional or areawide significance" and scoping meetings are required. The scoping meetings have not been scheduled at this time. When available, a Public Notice of the date, time, and location of the scoping meeting(s) on the project will be provided.

INTENDED USES OF THE EIR:

The Sacramento County Planning Commission and the Board of Supervisors will use the information contained in the EIR to evaluate the proposed project and render a decision to approve or deny the requested entitlements. Responsible agencies, such as the California Department of Fish and Game, the United States Fish and Wildlife Service, the United States Army Corps of Engineers, the Central Valley Regional Water Quality Control Board, and LAFCo may also use the EIR for planning/permitting purposes that include, but are not limited to, the following:

- Federal Clean Water Act Section 404 Permit (U.S. Army Corps of Engineers)
- Federal Endangered Species Act Section 7 Consultation (U.S. Fish and Wildlife Service)
- Section 401 Water Quality Certification (Regional Water Quality Control Board – Central Valley Region)
- California Endangered Species Act Incidental Take Permit (California Department of Fish and Wildlife)
- Section 402 National Pollutant Discharge Elimination System Permit (Regional Water Quality Control Board – Central Valley Region)
- Annexations (LAFCo)

	Acres		***Density Range (DU/acre)***	***D.U.'s***	***% of D.U.'s***
TOTAL	***1,391.0***		***10.4[6]***	***5,695***	***100%***

NOTES: DU → dwelling unit, F.A.R. → Floor-Area Ratio (i.e. a F.A.R. of 0.25 means that for every one acre of land in the category–like General Commercial–0.25 acres will be used for a structure)

1. Dwelling units are not permitted in these designations.
2. Population calculation is 5,695 d.u x 2.64 people per household =**15,035 total population**
3. Park requirement calculation (not including AG zoning): LD/MD 3661 d.u. x .0146=53.5 acres and HD/MU 2031 d.u. x .0122=24.8 acres, for a total of **78.3 acres.**
4. Park credit calculations: 78.3 acres of Community/Neighborhood Parks + 12.0 ac.(25% credit for 48.2 acres of greenbelts along drainageways and wetland preserve)= **90.3 acres**
5. 100 dwelling units are assigned to the 8.2 acre MU parcel only, 0 units assigned to the 11.4 acre parcel.
6. Double net density calculation: 5,695 d.u./548 acres (539.8 ac.+8.2 ac. of MU)= **10.4 du/ac.** Note: this does not include the 109.3 acres of AG or the 10% net residential acreage exclusion allowed per Policy LU 120 CB-1.
7. A minimum 34.8% of a Master Plan's units must be accommodated on multi-family zoned land, this includes HD and MU parcel allocations of 2,031 d.u. = 35.7%.

Subject: Draft Environmental Impact Report for Jackson Township Specific Plan; Request for County Agenda Notices

Dear Ms. Moss:

On behalf of the Amador County Transportation Commission (ACTC), we greatly appreciate receiving the recent Notice of Preparation concerning a Draft Environmental Impact Report for Jackson Township Specific Plan. The ACTC will submit comments pursuant to the NOP.

As you may know, the ACTC represents the Amador Region which is seriously concerned regarding current or future plans for State Route 16/Jackson Highway - a vital transportation corridor connecting our regions. Given this concern, ACTC requests to be provided advance notice of any proposed land use action, transportation project, or environmental documentation that may affect the State Route 16/Jackson Highway Corridor with an adequate opportunity to provide input and participate in the planning process. Specifically, ACTC requests to receive notices of agendas for all meetings of the County Planning Commission and the County Board of Supervisors. If email notification is available, please send such notices to "charles@actc-amador.org". Your attention to this matter is greatly appreciated. If you have any questions, please don't hesitate to contact me (charles@actc-amador.org - 209/267-2282).

Sincerely,

Charles F. Field
Executive Director

SUBJECT: Notice of EIR Scoping Meeting - Jackson Township Specific Plan

Thank you for providing the Amador County Transportation Commission (ACTC) with an opportunity to comment on the "Notice of EIR Scoping Meeting Jackson Township Specific Plan". As you may know, the ACTC has been representing Amador County and cities and surrounding counties and communities with respect to the long term maintenance of interregional travel on the State Route 16 corridor in Sacramento County. ACTC was unable to send a representative to the EIR scoping meeting but is happy to see that per the notice provided, attendance is not necessary "in order to provide comments on what is addressed in the EIR". The following are ACTC's comments concerning contents of the EIR pertaining to evaluation of impacts and proposed mitigation measures for State Route 16 which is affected by the proposed Jackson Township Specific Plan. Addressing these concerns in the EIR will be greatly appreciated. We will look forward to seeing a copy of the draft and another opportunity to comment when it is available.

1. The Notice of Preparation states that there are no roads on the north or eastern boundaries of the development. SR-16 is stated as the main road to the south and Excelsior will be the main road on the western boundary. Since Excelsior has no direct connection to highway 50 and is a functionally insufficient road to handle this volume of traffic, the majority of Sacramento commuting traffic is anticipated to use SR-16. Given that SR-16 is a state owned facility, a more detailed operational methodology consistent with Caltrans Guide for the Preparation of Traffic Impact Studies (Caltrans, December 2002) is warranted for this facility. Per Section V. of the Caltrans TIS guidelines – this would entail analyzing study area segments and intersections of SR-16 with the applicable methods listed below. The County guidelines would still be applicable to all non-state owned roadways analyzed as part of the EIR.

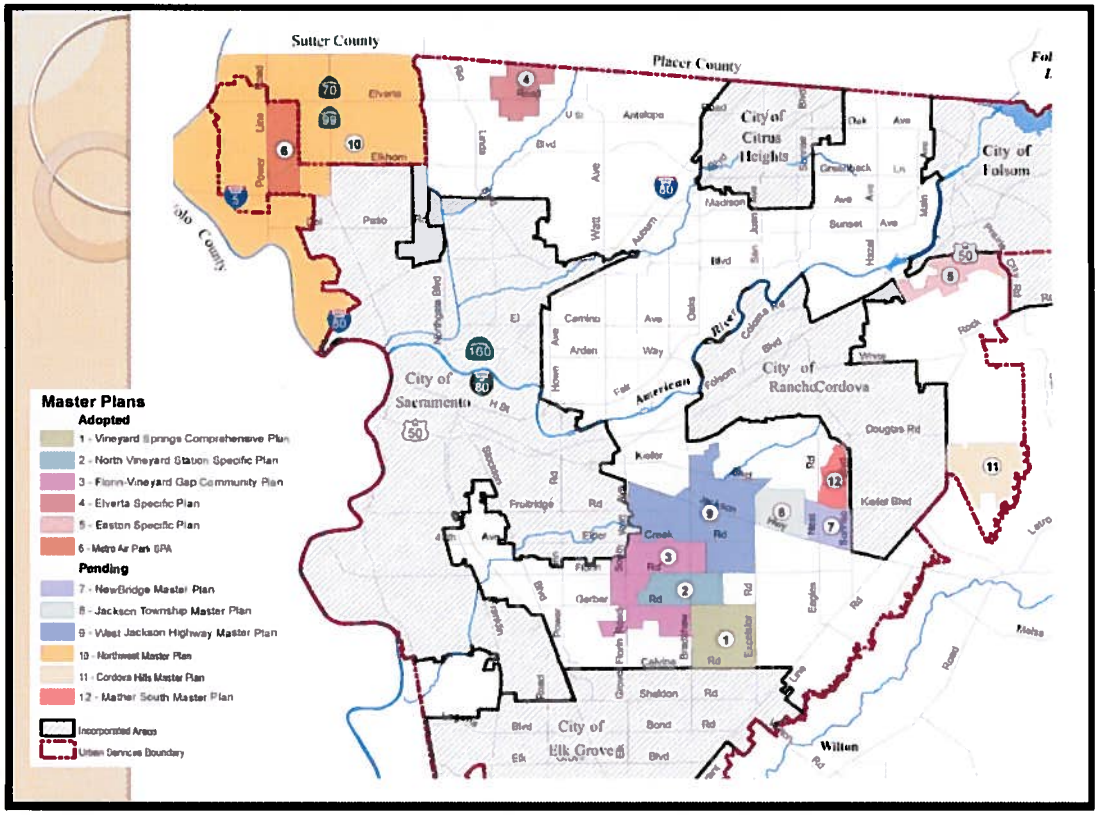
D.	Multi-Lane Highways – HCM*, operational analysis	
E.	Two-lane Highways – HCM*, operational analysis	
F.	Signalized Intersections8 – HCM*, Highway Capacity Software**, operational analysis, TRAFFIXTM**, Synchro**, see footnote 8	
G.	Unsignalized Intersections – HCM*, operational analysis, Caltrans Traffic Manual for warrants if a signal is being considered	signal
H.	Transit – HCM*, operational analysis	
I.	Pedestrians – HCM*	
J.	Bicycles – HCM*	
K.	Caltrans Criteria/Warrants – Caltrans Traffic Manual (stop signs, traffic signals, freeway lighting, conventional highway lighting, school crossings)	
L.	Channelization – Caltrans guidelines for Reconstruction of Intersections, August 1985, Ichiro Fukutome	

*The most current edition of the Highway Capacity Manual, Transportation Research Board, National Research Council, should be used.

8 The procedures in the Highway Capacity Manual "do not explicitly address operations of closely spaced signalized intersections. Under such conditions, several unique characteristics must be considered, including spill-back potential from the downstream intersection to the upstream intersection, effects of downstream queues on upstream saturation flow rate, and unusual platoon dispersion or compression between intersections. An example of such closely spaced operations is signalized ramp terminals at urban interchanges. Queue interactions between closely spaced intersections may seriously distort the procedures in" the HCM.

2. To ensure that cumulative conditions are accurately reflected, the CEQA traffic analysis must include and document all Existing Plus Pending and Approved Projects (EPAP) within or affecting the study area. The County's EPAP listing is shown below. External through trips from counties to the east (e.g., Amador County) must also be reflected and documented as it pertains to SR-16.



3. All segment and intersection LOS worksheets must be documented in a technical appendix for public review. For intersections, the worksheets must include intersection pedestrian cycles and timing parameter values assumed for SR-16.

4. The traffic analysis must document the estimated 95th percentile queues on SR-16 relative to available storage. If present, queue spillback conditions must be identified and characterized as impacts as appropriate (safety impact). To address operations of closely spaced signalized intersections – simulation analysis is recommended.

5. Assumed future/cumulative AM and PM peak hour heavy-duty vehicle percentages used as inputs for segment and intersection analyses must be documented and supported.

6. It is noted that Caltrans is considering the possibility of relinquishing a segment of SR 16 in the vicinity of this project per their Transportation Concept Report. Given that this process has not been formalized, the CEQA document must consider the possibility that the SR-16 relinquishment will not occur. The SACOG MTP, County of Sacramento General Plan, City of Sacramento General Plan and the City of Rancho Cordova each define the future design and functional classification of SR-16 through the study area differently. Recently the foothill communities of Amador have voiced the desire for the future design of SR-16 to be retained as

a limited access expressway through the study area (with or without relinquishment). To adequately address the traffic impacts of the Jackson Township Specific Plan, each land use based alternative identified in the NOP should be analyzed relative to three SR-16 design alternatives: 1) existing geometrics given that no funding has been programmed for SR-16 improvements (i.e., can not assume future development will cover the full cost of improving SR-16); 2) full access 6-lane local arterial with ½ mile intersection spacing with 35 mph speed limit; and, 3) 4/5 lane limited access expressway with one mile intersection spacing. ACTC is in the midst of analysis and discussions with Sacramento County Department of Transportation concerning a potential fourth alternative that may be a compromise between alternative 2 and 3 as listed. This alternative may warrant consideration as well.

7. On page 7 transit is mentioned, but not how it will connect to the Sacramento Regional Transit System.
    - We request that the traffic analysis component of the CEQA document investigate the connectivity between this development and the Sacramento Regional Transit System.

8. On page 17 transit is shown as a post 2030 facility.
    - Please show and explain how this transit facility will be incorporated into this development plan and how it will connect to Sacramento Regional Transit.

9. Page 5 of the DRAFT Jackson Township Specific Plan states that "The site is surrounded and fed by significant transportation options...Jackson Highway, Excelsior Road, and Kiefer Boulevard."
        - Excelsior Road travels through a newly constructed residential development with a 2-lane alignment with driveways that back out onto the road and has a posted speed limit of 25 mph with several speed bumps. From there it meanders around what used to be Mather Air Force Base in a circuitous route to Highway 50. This is not a significant transportation option.
        - Kiefer Boulevard is currently a dirt road behind this development project and is currently listed as a post 2030 project with no foreseeable funding. This too is not a significant transportation option.
    - We request that the Traffic Analysis performed for this development rely only on realistically fundable and useable routes, the only one of which available is SR 16.

Re: Notice of Preparation of a Draft Environmental Impact Report for Jackson Township Specific Plan

Dear Ms. Hack,

Thank you for the opportunity to comment on the Notice of Preparation for Jackson Township Specific Plan Draft Environmental Impact Report (DEIR). The main concern for Amador Council of Tourism, with regard to this proposed project, is the name – Jackson Township.

The City of Jackson was incorporated in 1905, however, for approximately 55 years prior to incorporation this general area, and the town site specifically, was referred to as "Jackson." Additionally, Highway 16 was created and named the "Jackson Highway" because, since 1919, the road has been a thoroughfare between the Sacramento area and the County seat of Amador County: the City of Jackson. Use of the name "Jackson Township" for a new project on the Jackson Highway which leads to the historic City of Jackson is confusing at best, and has the potential to impact the economic vitality of the City of Jackson.

The City of Jackson, together with the County of Amador, relies on tourism for a large part of its economy, and the Jackson Highway is the northwest portal to the City of Jackson. Tourists from great distances including Sacramento, San Francisco, and points beyond, utilize the Jackson Highway to access the City of Jackson and Amador County. A development named "Jackson Township" that includes commercial uses and which is located on the Jackson Highway, en route to the City of Jackson, could be confusing to tourists destined for the City of Jackson. For this reason, the economic impact of this project on the City of Jackson should be addressed in the Jackson Township Specific Plan DEIR.

To avoid these potential impacts to the City of Jackson, we are requesting that the County of Sacramento require a name change for the proposed specific plan. A name that is not similar to any existing nearby or surrounding jurisdiction would alleviate any confusion and allow the new development to create its own identity.

Sincerely,

Wayne Garibaldi
President, Amador Council of Tourism

Re: Preparation of a Draft Environmental Impact Report for Jackson Township Specific Plan

Dear Ms. Hack,

We are formally requesting that the County of Sacramento require a name change for the proposed Jackson Township Specific Plan and allow the new development to create its own identity.

Our concern – the proposed project name: Jackson Township. We are not looking for a naming dispute….no TROUBLES like the conflict in Ireland. Our historic city of Jackson was born in the gold rush and has kept lively for over 150 years. Gold seekers passed through our city while traveling to Sacramento on what is now the Jackson Highway (northwest portal to the city of Jackson).

Amador was organized as a new county in 1854, Jackson became the new county's county seat. In 1905, Jackson incorporated as a city. The history of Jackson is in Amador County. To have a city of Jackson and a Jackson Township next door will cause nothing but confusion for emergency services, commercial uses, and tourism.

The Amador County Chamber of Commerce and Visitors Bureau has been dedicated to furthering the best interests of our business owners, residents, and visitors for more than 80 years. Tourism has historically been a leading industry to Amador County. The economic impact of this project on the city of Jackson should also be addressed in the Jackson Township Plan.

Should you have any questions, please contact our City Planner, Susan Peters, at (209) 223-1646.

Sincerely,

Tom Blackman
President

Ms. Cathy Hack
Sacramento County
827 Seventh Street, Room 220
Sacramento, California 95814

Subject: Jackson Township Specific Plan
SCH Number: 2013082017
Document Type: Notice of Preparation

Dear Ms. Hack:

Staff of the Central Valley Flood Protection Board (Board) has reviewed the subject document and provides the following comments:

The proposed project is located adjacent to or within the Elder Creek which is under the jurisdiction of the Central Valley Flood Protection Board. The Board is required to enforce standards for the construction, maintenance, and protection of adopted flood control plans that will protect public lands from floods. The jurisdiction of the Board includes the Central Valley, including all tributaries and distributaries of the Sacramento River, the San Joaquin River, and designated floodways (Title 23 California Code of Regulations (CCR), Section 2).

A Board permit is required prior to starting the work within the Board's jurisdiction for the following:

- The placement, construction, reconstruction, removal, or abandonment of any landscaping, culvert, bridge, conduit, fence, projection, fill, embankment, building, structure, obstruction, encroachment, excavation, the planting, or removal of vegetation, and any repair or maintenance that involves cutting into the levee (CCR Section 6);

- Existing structures that predate permitting, or where it is necessary to establish the conditions normally imposed by permitting. The circumstances include those where responsibility for the encroachment has not been clearly established or ownership and use have been revised (CCR Section 6);

- Vegetation plantings will require the submission of detailed design drawings; identification of vegetation type; plant and tree names (i.e. common name and scientific name); total number of each type of plant and tree; planting spacing and irrigation method that will be utilized within the project area; a complete vegetative management plan for maintenance to prevent the interference with flood control, levee maintenance, inspection, and flood fight procedures (CCR Section 131).

Vegetation requirements in accordance with Title 23, Section 131 (c) states "Vegetation must not interfere with the integrity of the adopted plan of flood control, or interfere with maintenance, inspection, and flood fight procedures."

The accumulation and establishment of woody vegetation that is not managed has a negative impact on channel capacity and increases the potential for levee over-topping. When a channel develops vegetation that then becomes habitat for wildlife, maintenance to initial baseline conditions becomes more difficult as the removal of vegetative growth is subject to federal and State agency requirements for on-site mitigation within the floodway. The project should include mitigation measures to avoid decreasing floodway channel capacity.

Hydraulic Impacts - Hydraulic impacts due to encroachments could impede flood flows, reroute flood flows, and/or increase sediment accumulation. The project should include mitigation measures for channel and levee improvements and maintenance to prevent and/or reduce hydraulic impacts. Off-site mitigation outside of the State Plan of Flood Control should be used when mitigating for vegetation removed within the project location.

The permit application and Title 23 CCR can be found on the Central Valley Flood Protection Board's website at http://www.cvfpb.ca.gov/. Contact your local, federal and State agencies, as other permits may apply.

The Board's jurisdiction, including all tributaries and distributaries of the Sacramento River and the San Joaquin River, and designated floodways can be viewed on the Central Valley Flood Protection Board's website at http://gis.bam.water.ca.gov/bam/.

If you have any questions, please contact me by phone at (916) 574-0651, or via e-mail at jherota@water.ca.gov.

Re: Notice of Preparation of a Draft Environmental Impact Report for Jackson Township Specific Plan

Dear Ms. Hack,

Thank you for the opportunity to comment on the Notice of Preparation for Jackson Township Specific Plan Draft Environmental Impact Report (DEIR). The main concern for the City of Jackson with regard to this proposed project is the name – Jackson Township.

The City of Jackson was incorporated in 1905, however, for approximately 55 years prior to incorporation this general area, and the town site specifically, was referred to as "Jackson." Additionally, Highway 16 was created and named the "Jackson Highway" because since 1919 the road has been a thoroughfare between the Sacramento area and the County seat of Amador County: the City of Jackson. Use of the name "Jackson Township" for a new project on the Jackson Highway which leads to the historic City of Jackson is confusing at best and has the potential to impact emergency services for both locations as well as the economic vitality of the City of Jackson.

With the proliferation of cell phones utilized for emergency services calls, identification of incident location is imperative for adequate response times. The close geographical relationship between the historic City of Jackson and the proposed project will inevitably lead to confusion amongst dispatch operators should the name "Jackson Township" be retained for the project. It is for this very reason that streets within a community or region are given unique names, and why incorporated cities may not be named alike. This issue must be addressed in the emergency services analysis in the DEIR.

The City of Jackson, together with the County of Amador, relies on tourism for a large part of its economy, and the Jackson Highway is the northwest portal to the City of Jackson. Tourists from great distances including Sacramento, San Francisco, and points beyond, utilize the Jackson Highway to access the City of Jackson and Amador County. A development named

Mayor: Patrick Crew • Vice Mayor: Connie Gonsalves • Councilmembers: Wayne Garibaldi • Marilyn Lewis • Keith Sweet
City Manager: Michael Daly • City Attorney: Andrew J. Morris

"Jackson Township" that includes commercial uses and which is located on the Jackson Highway - en route to the City of Jackson - could be confusing to tourists destined for the City of Jackson. For this reason, the economic impact of this project on the City of Jackson should also be addressed in the Jackson Township Specific Plan DEIR.

To avoid these potential impacts the City of Jackson, we are requesting that the County of Sacramento require a name change for the proposed specific plan. A name that is not similar to any existing nearby or surrounding jurisdiction would alleviate any confusion and allow the new development to create its own identity.

Your cooperation with regards to this issue is greatly appreciated. Should you have any questions, please do not hesitate to contact our City Planner, Susan Peters, at (209) 223-1646.

Sincerely,

Patrick Crew
Mayor

Re: Comments on the Notice of Preparation of a Draft Environmental Impact Report for Jackson Township Specific Plan (PLNP2011-00095)

Dear Ms. Hack,

The Environmental Council of Sacramento (ECOS) appreciates the opportunity to comment on the above referenced Notice of Preparation. While this entire Jackson Corridor was supposedly master planned, we have concerns regarding the comprehensiveness of the master planning approach and therefore the environmental document must address these concerns.

Land Use

From the information provided with the Notice of Preparation, ECOS is questioning the need for three land use alternatives. Upon cursory review, there appears to be little difference among these alternatives. The environmental document should give a detailed description of why these three alternatives were selected and why other perhaps preferable alternatives, at least from a transit perspective, were not included.

ECOS believes that the commercial and office space provided is far more than is reasonably likely to occur. Assumptions that are overly optimistic about employment generating land uses will skew the transportation analysis and green house gas/ozone emission numbers to look much lower than will likely occur with buildout. Are the commercial/industrial lands dictated by noise contours? This cannot be determined from the information provided.

ECOS also feels strongly that the cumulative acreages/square footage being proposed for the Jackson Corridor, perhaps also including Cordova Hills, ought to be examined by economic consultants for their relationship to reasonable economic forecasts. This isn't in the scope of the DEIR necessarily, but should be an important part of the Jackson Corridor master planning effort.

Sacramento Raceway is not controlled by the project proponents, yet land uses are shown to replace the Raceway. It is likely, due to noise constraints that little development can occur on any of these properties while Sacramento Raceway is in operation. The DEIR must look at the matter of development phasing regarding the Raceway, the potential impact of residential development around the Raceway and any potential problems with soil contamination on the Raceway site.

How is this project being integrated with the remainder of the Jackson Corridor projects from a land use and transportation perspective? This is a critical consideration, and it does not appear that it has been given much consideration to date in the master planning process.

A holding capacity analysis should also be conducted to determine how the proposed additional land uses impact the General Plan holding capacity for residential uses and industrial/commercial uses. With all the development proposed in the Jackson Corridor, how is this impacting the General Plan assumptions?

Air Quality

The environmental document must analyze the impact of this proposal on the Metropolitan Transportation Plan - Sustainable Communities Strategy (SCS) and on the State Implementation Plan (SIP). Neither the SCS nor the SIP envisioned the degree of development that is currently proposed in the Jackson Corridor, including this project. These developments could jeopardize compliance with green house gas reduction requirements as well as ozone attainment.

To provide adequate disclosure and ensure compliance with CEQA, the climate change analysis should be conducted in the following manner:

1. Greenhouse Gas (GHG) Emission Inventory
    a. Compile GHG emission inventories for each of the project alternatives consistent with the Local Governments for Sustainability (ICLEI) Clean Air and Climate Protection (CACP) software and following the Intergovernmental Panel on Climate Change (IPCC) and ICLEI protocols.
    b. Include contributions from vehicle use, energy generation, waste disposal (including wastewater treatment, solid waste disposal, and composting of vegetative waste), and water supply impacts occurring at offsite facilities - including commercial, institutional, and transportation - serving the Specific Plan site and its projected build-out population and full range of possible uses or mix of uses.
    c. Detail the methodologies and calculations used in inventory compilation sufficient to provide transparency, allow for replicability, and provide substantial evidence supporting the assumptions, analysis, and conclusions in the inventories.
2. Significance of GHG Emissions
    a. Identify the GHG emission significance threshold under CEQA for the Specific Plan and discuss the basis and implications of this significance threshold in comparison with those adopted by other jurisdictions in the region or recommended by state, regional, county, and non-governmental agencies for use in Sacramento County.
    b. Identify the GHG emission reduction targets for light duty vehicles contained in the approved Sustainable Communities Strategy for the SACOG region, compare to the corresponding per-capita GHG emission rates estimated for the Specific Plan land uses and activities under each of the three alternatives, and analyze the impacts of Specific Plan alternatives on regional attainment of the adopted targets.

3. Analysis of Energy Use
    a. Analyze potential energy use (including transportation-related energy), sources of energy supply, and way to reduce energy demand, including through the use of efficient, low emission transportation alternatives for each of the three project alternatives.

4. Consistency with Sacramento County Climate Action Plan
    a. Identify all measures and strategies contained in the Sacramento County Climate Action Plan (CAP), both mandatory and voluntary, that are applicable to land uses and activities proposed in the Specific Plan.
    b. Analyze and report any technological or environmental constraints limiting implementation of any applicable CAP measures or strategies identified above.
5. Mitigation Measures
    a. Identify and analyze mitigation measures capable of reducing GHG emissions from Specific Plan land uses and activities to less-than-significant levels under CEQA.
    b. Identify and analyze alternative transportation measures capable of reducing per-capita light duty vehicle GHG emissions to the target levels in horizon years contained in the approved Sustainable Communities Strategy for the SACOG region.
    c. Provide substantial evidence that proposed mitigation measures will be capable of being accomplished in a successful manner within a reasonable of time, taking into account economic, and environmental, legal, social, and technological factors.
    d. Provide substantial evidence or details of full enforcement mechanisms demonstrating that proposed mitigation measures will be real and verifiable. Include specific and mandatory performance standards to ensure that proposed mitigation measures, as implemented, will be effective.
    e. Identify monitoring and reporting requirements for proposed mitigation measures that are sufficient to satisfy CEQA requirements.

Water

The increase in demand for water associated with the proposed General Plan changes need to be thoroughly analyzed. What water demand assumptions associated with this area were included in the General Plan Update EIR? What is the cumulative impact of this project, along with other approved or pending projects within the Urban Services Boundary on total water demand, and does that cumulative demand exceed surface water and safe yield supplies as per the Water Forum agreement?

These above questions should also be answered in consideration of the potential expansion of Zone 40 service to the Elk Grove SOI Expansion area outside of the Urban Services Boundary.

Habitat Preservation

This is an area of the county rich in habitat values, particularly vernal pools, and impacts analysis will need to be done for all vernal pool plants and invertebrate.

As well, impacts analysis will need to be done for: Swainson's hawk, tri-colored blackbird, ferruginous hawk, white tailed kite, loggerhead shrike, northern harrier, greater sandhill crane, American badger, western red bat, pallid bat, western pond turtle, California tiger salamander, and possibly giant garter snake.

This project may be required to do compensatory mitigation. The environmental impacts of this mitigation must be addressed. What the mitigation will be, the location of the mitigation, or alternative locations, and the premitigation conditions of these sites must be discussed in the DEIR. Doing the mitigation is an integral part of the project and a discussion concerning the impacts of that mitigation is critical to the completeness of the environmental document.

Transportation and Circulation

1. Pedestrian and bicycle travel to and from nearby places:

The EIR should analyze the quality and safety of pedestrian travel to nearby places, including the following.

Transit stops and stations
Proposed offices
Proposed mixed use/retail
Safe pedestrian and bicycle crossings on Jackson Highway, Keifer Blvd and Excelsior Road
Safe auto dropoff and pickup for parents and students at the proposed middle/high school campus
Safe walking to and from the proposed middle/high school campus
Safe access for bicycle riders to and from the proposed middle/high school campus
Safe auto dropoff and pickup for parents and students at the proposed elementary school campus
Safe walking to and from the proposed middle/high school campus
Safe access for bicycle riders to and from the proposed elementary school campus
A strong grid network with block lengths that reduce speed and encourage walkability and bikeability

2. Pedestrian and vehicular traffic analysis:

The analysis of pedestrian and vehicular traffic is important to evaluating the pedestrian environment. We recommend using a pedestrian level of service analysis that includes factors such as:

vehicle speed and volume
crossing distance
number of lanes
pedestrian crossing time and delay
distance between crossings
pedestrian signals
traffic signals
parking

landscaping and trees
bike lanes
vehicle turning volumes

3. Pedestrian mobility for all:

The analysis of pedestrian mobility should take into account the abilities of various types of pedestrians, including younger, older, physically disabled, and sight impaired, as well as able bodied.

4. Public Transportation:

The EIR should consider the strong need for adequate transit connections to jobs and services outside the plan area, and the consequent need for safe access to transit stops and stations for pedestrians and bicyclists

The master planning effort does not appear to have adequately incorporated transit service. Providing transit service along Jackson Highway is by no means considered adequate. The entire Jackson Corridor area, including this project, must incorporate substantial transit service. Without adequate transit service, the air quality and climate change benefits that could be achieved due to the area's nearness to other jobs and housing will be lost.

We encourage the project proponents to work with other project proponents in the Jackson Corridor area, as well as with the County and Regional Transit, to develop a comprehensive transit plan. The provision of transit service that will provide the necessary air quality and climate change mitigation benefits will require the establishment of a Transit Services District. County Service Area 10 can be utilized as an example of how this has been accomplished in the past.

This environmental document, as well as other environmental documents in the Jackson Corridor, must include an analysis of transit service and its impact on air quality and climate change.

Conclusion

The above comments are provided given ECOS's desire to see this development become a viable part of the Jackson Corridor new development area. We believe that these issues must be addressed in the Draft Environmental Impact Report and adequate mitigation proposed to address these issues.

If we can provide further clarification, do not hesitate to contact us.

Sincerely,

Ron Maertz

Jackson Township Specific Plan— Notice of Preparation (NOP)

Dear Ms. Hack:

Thank you for including the California Department of Transportation (Caltrans) in the environmental review process for the Jackson Township Specific Plan. The proposed Specific Plan Area, approximately 1391 acres, is located in southeastern Sacramento County, lying south of Mather Specific Plan Area, east of Excelsior Road, north of State Route (SR) 16 (Jackson Highway) and west of Eagles Nest Road in the Vineyard Community. The land use plan is estimated to result in approximately 6,300 dwelling units and approximately 1.9 million square feet of employment and commercial services land uses. The Plan also includes schools, parks, and open space preserves. The following comments are based on the NOP.

Traffic Impact Study

The Jackson Township development will generate additional traffic that is expected to impact SR 16 and US Highway (US) 50. Caltrans appreciates the County giving us the opportunity to provide comments on the scope of the Jackson Corridor Joint Traffic Impact Study (TIS) that includes the Jackson Township Specific Plan development and other developments in its vicinity. We would appreciate continued involvement as the joint traffic study progresses. Whether or not the joint traffic study effort continues, Caltrans recommends that a TIS analyze the direct and cumulative traffic impacts to the State Highway System generated by the Jackson Township development. We recommend using the Department's *Guide for the Preparation of Traffic Impact Studies* (*TIS Guide*) for determining which scenarios and methodologies to use in the analysis. The appropriate level of study is determined by the particulars of a project, the prevailing highway conditions, and the forecasted traffic. The *TIS Guide* is available at the following website address:
http://dot.ca.gov/hq/tpp/offices/ocp/igr_ceqa_files/tisguide.pdf

We would appreciate the opportunity to review and comment on the scope of the TIS before the study begins.

Relinquishment

Caltrans has entered into discussions with the City of Sacramento, County of Sacramento, and City of Rancho Cordova to relinquish SR 16 between the US 50 interchange and Grant Line Road. Should the relinquishment occur, Caltrans will have no approval role on any modifications to Jackson Highway within the segment relinquished to the County.

However, should relinquishment not occur, or occur after construction of the Jackson Township development begins, Caltrans cannot approve any design changes that would not comply with the design standards set forth by the Caltrans Highway Design Manual, and we cannot approve facility modifications that are incompatible with the SR 16 Transportation Corridor Concept Report. Furthermore, since relinquishment will not occur for quite some time and is contingent on the approval of California Legislature and California Transportation Commission, the environmental review process for the Jackson Township Specific Plan should assume the Jackson Highway continues to function as part of the State Highway System.

If you have any questions regarding these comments or require additional information, please contact Angela Shepard, Intergovernmental Review Coordinator, at (916) 274-0566 or by email at: angela.shepard@dot.ca.gov

Sincerely,

Eric Fredericks, Chief
Office of Transportation Planning – South

NOTICE OF PREPARATION

AUGUST 5, 2013

TO: ALL INTERESTED PARTIES

SUBJECT: NOTICE OF PREPARATION OF A DRAFT ENVIRONMENTAL IMPACT REPORT FOR JACKSON TOWNSHIP SPECIFIC PLAN

Sacramento County will be the CEQA Lead Agency for preparation of an Environmental Impact Report (EIR) for a project known as JACKSON TOWNSHIP. This Notice of Preparation has been sent to responsible and trustee agencies and involved federal agencies pursuant to Section 15082 of the CEQA Guidelines. Agencies should comment on the scope and content of the environmental information that is germane to the agencies' statutory responsibilities in connection with the proposed project. Due to the time limits mandated by State law, your response must be sent at the earliest possible date, but not later than 30 days after receipt of this notice.

The project description, location, and the probable environmental effects are contained in the attached materials and may also be viewed online by going to the PER homepage (www.per.saccounty.net) and searching for environmental documents. The direct link to the document search page is: http://www.per.saccounty.net/EnvironmentalDocuments/Pages/SearchDocuments.aspx.

Please send your Agency's response to this Notice to:

Catherine Hack, Environmental Coordinator
Department of Community Development
Planning and Environmental Review Division
827 7th Street, Room 220, Sacramento, CA 95814
or via e-mail at: DERA@saccounty.net.

Your response should include the name of a contact person in your agency.

Agencies with specific questions about the project should contact Lauren Hocker, Environmental Review Project Manager, at (916) 874-7914 for further information.

PLNP2011-00095 JACKSON TOWNSHIP SPECIFIC PLAN

PROJECT TITLE:

JACKSON TOWNSHIP SPECIFIC PLAN

CONTROL NUMBER:

PLNP2011-00095

OWNER:

Various (see list attached to NOP)

APPLICANT/PROJECT PROPONENT:

Tsakopoulos Investments, Angelo G. Tsakopoulos

PROJECT DESCRIPTION AND LOCATION:

The proposed Plan Area, approximately 1,391 acres, is located in southeastern Sacramento County, lying south of the Mather Specific Plan Area, east of Excelsior Road, north of Jackson Highway and west of Eagles Nest Road in the Vineyard Community (Plate NOP-1 and Plate NOP-2). The Plan Area is currently designated on the Sacramento General Plan with land use designations of Extensive Industrial and General Agricultural. The property has current zoning of Light Industrial (M-1), Industrial Reserve (IR) and Permanent Agriculture (AG-80). There are 24 different landowners within the Plan Area. The largest landowner–Excelsior Estates LLC, represented by Angelo G. Tsakopoulos as the applicant–owns and/or controls approximately 862 acres (approximately 62 % of the total) within the Plan Area boundaries.

The proposed Project includes a range of different uses, including low density (6.0 units/acre), medium density (13 units/acre), and high density (25 units/acre) residential; general and community commercial; office; and mixed use. The proposal also includes three elementary schools, a middle school/high school, a public-quasi public site for a fire station, and parks. Land along the northern and eastern sides of the Project are shown as Wetland Preserve. These designated lands match the adjacent land use proposal to the east, known as NewBridge, and reflect the current status of the proposed preserve boundaries being negotiated as part of the anticipated South Sacramento Habitat Conservation Plan (SSHCP). The anticipated SSCHP preserve boundaries are planned to continue southward, extending beyond Jackson Road, but the exact location of this preserve has not yet been determined. For this reason, the Project includes an area designated Agriculture in the southeastern corner of the site; there is an equivalent area to the east within the NewBridge project. It is anticipated that the area needed for the preserve will be smaller than the total area shown as Agriculture, but rather than prematurely designate some areas for urban uses and some as Wetland Preserve, the entire corner is reserved as Agriculture, which maintains the current use of the land. Although the land use plan reflects the existing AG use, the technical studies will assume the potential for 6 units per gross acre, to ensure that overall infrastructure planning of the planning areas is coherent should some portion eventually be proposed for development, once the preserve is identified.

The proposed Project includes 6,143 residential units spread somewhat evenly between low density (35% of units), medium density (29% of units), and high density (35%) of units, with an additional 100 units (2% of units) within the mixed use designation areas. The analyses will assume that the units in the mixed use area are high density. In addition to the residential units, the Project includes 1,996,100 square feet of non-residential uses. There are also three alternative versions of the Project which the applicant has provided; these are project alternatives, not CEQA Alternatives. A table which summarizes the proposed land uses and an exhibit showing the land plan area provided at the end of the NOP (Table NOP-1 and Plate NOP-4).

Plate NOP-1: Regional Location Map

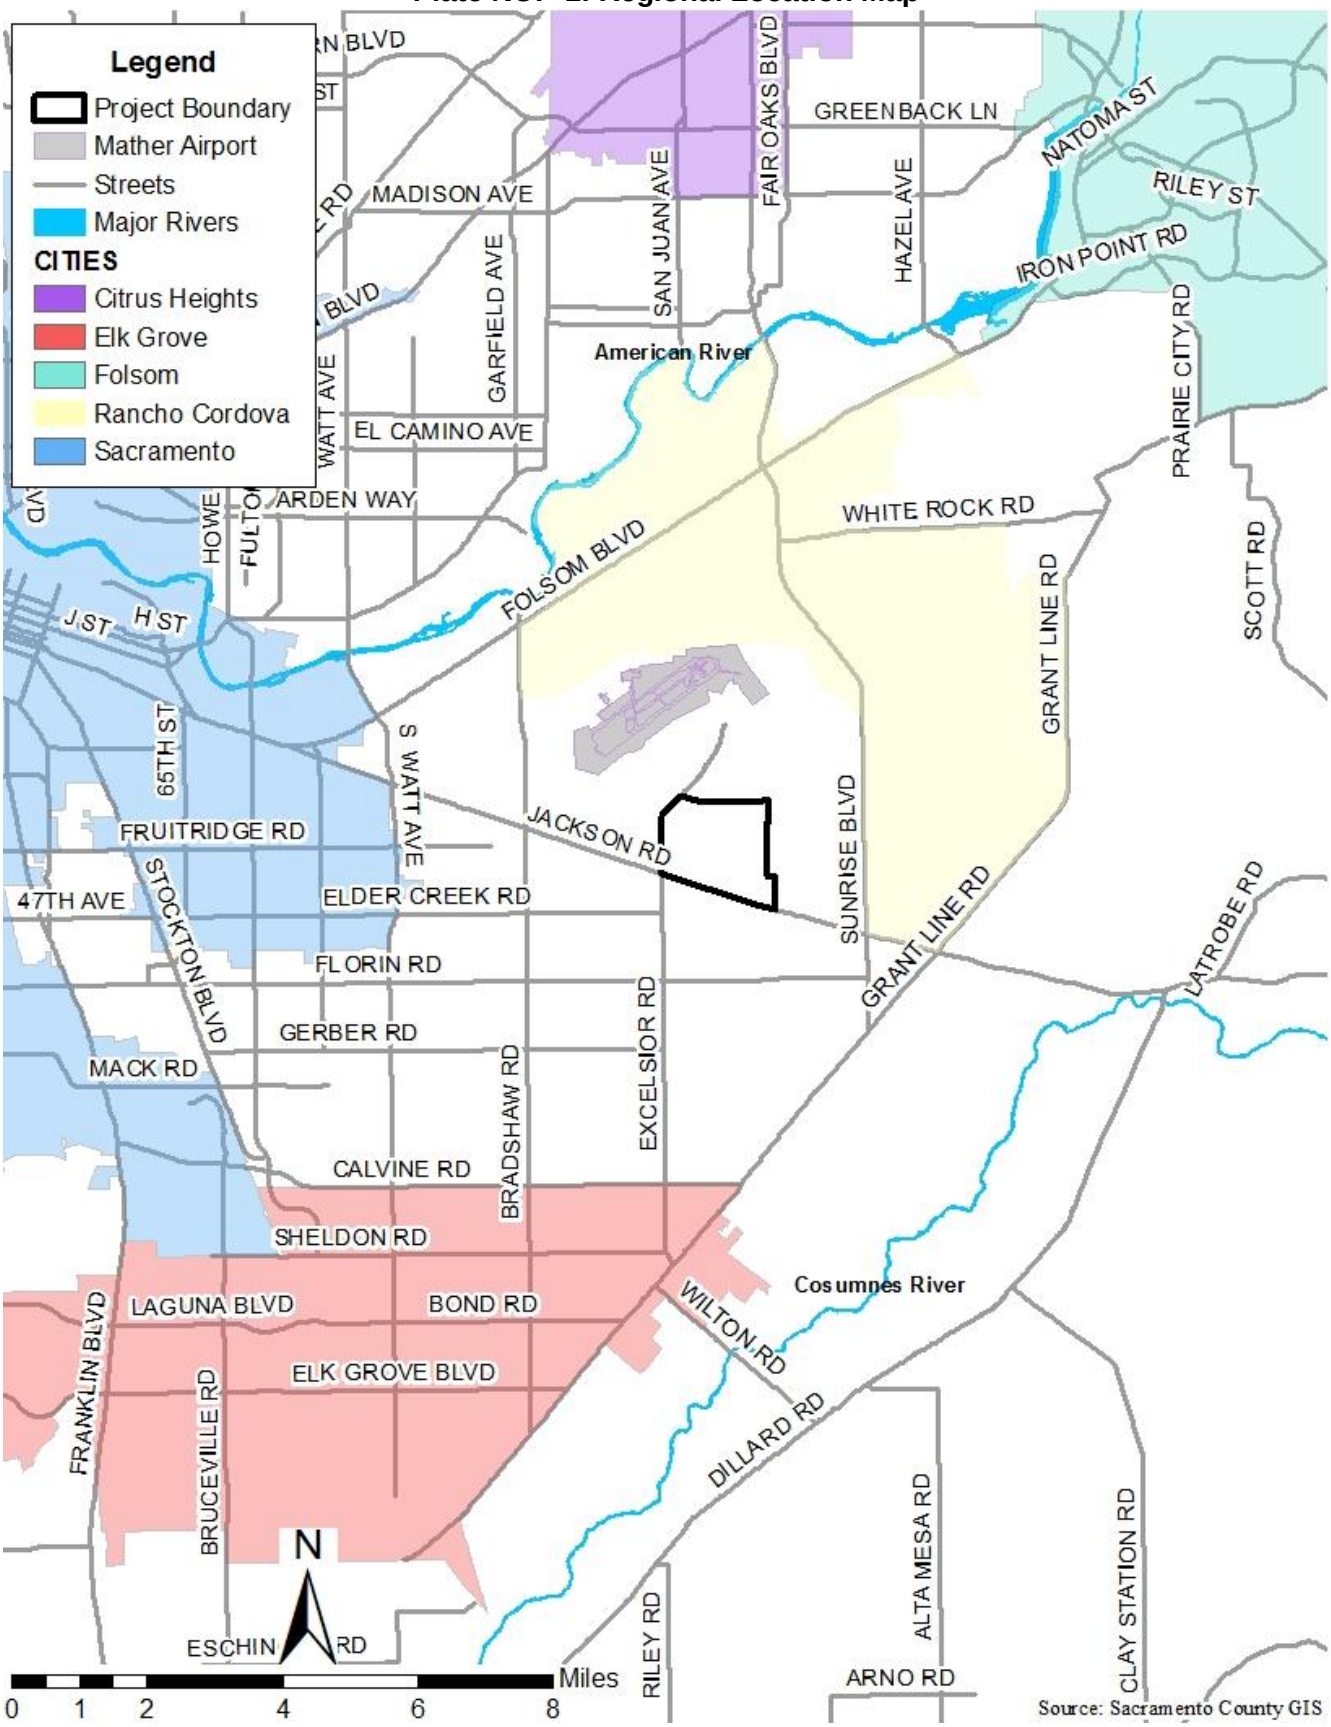

Plate NOP-2: Project Location Map

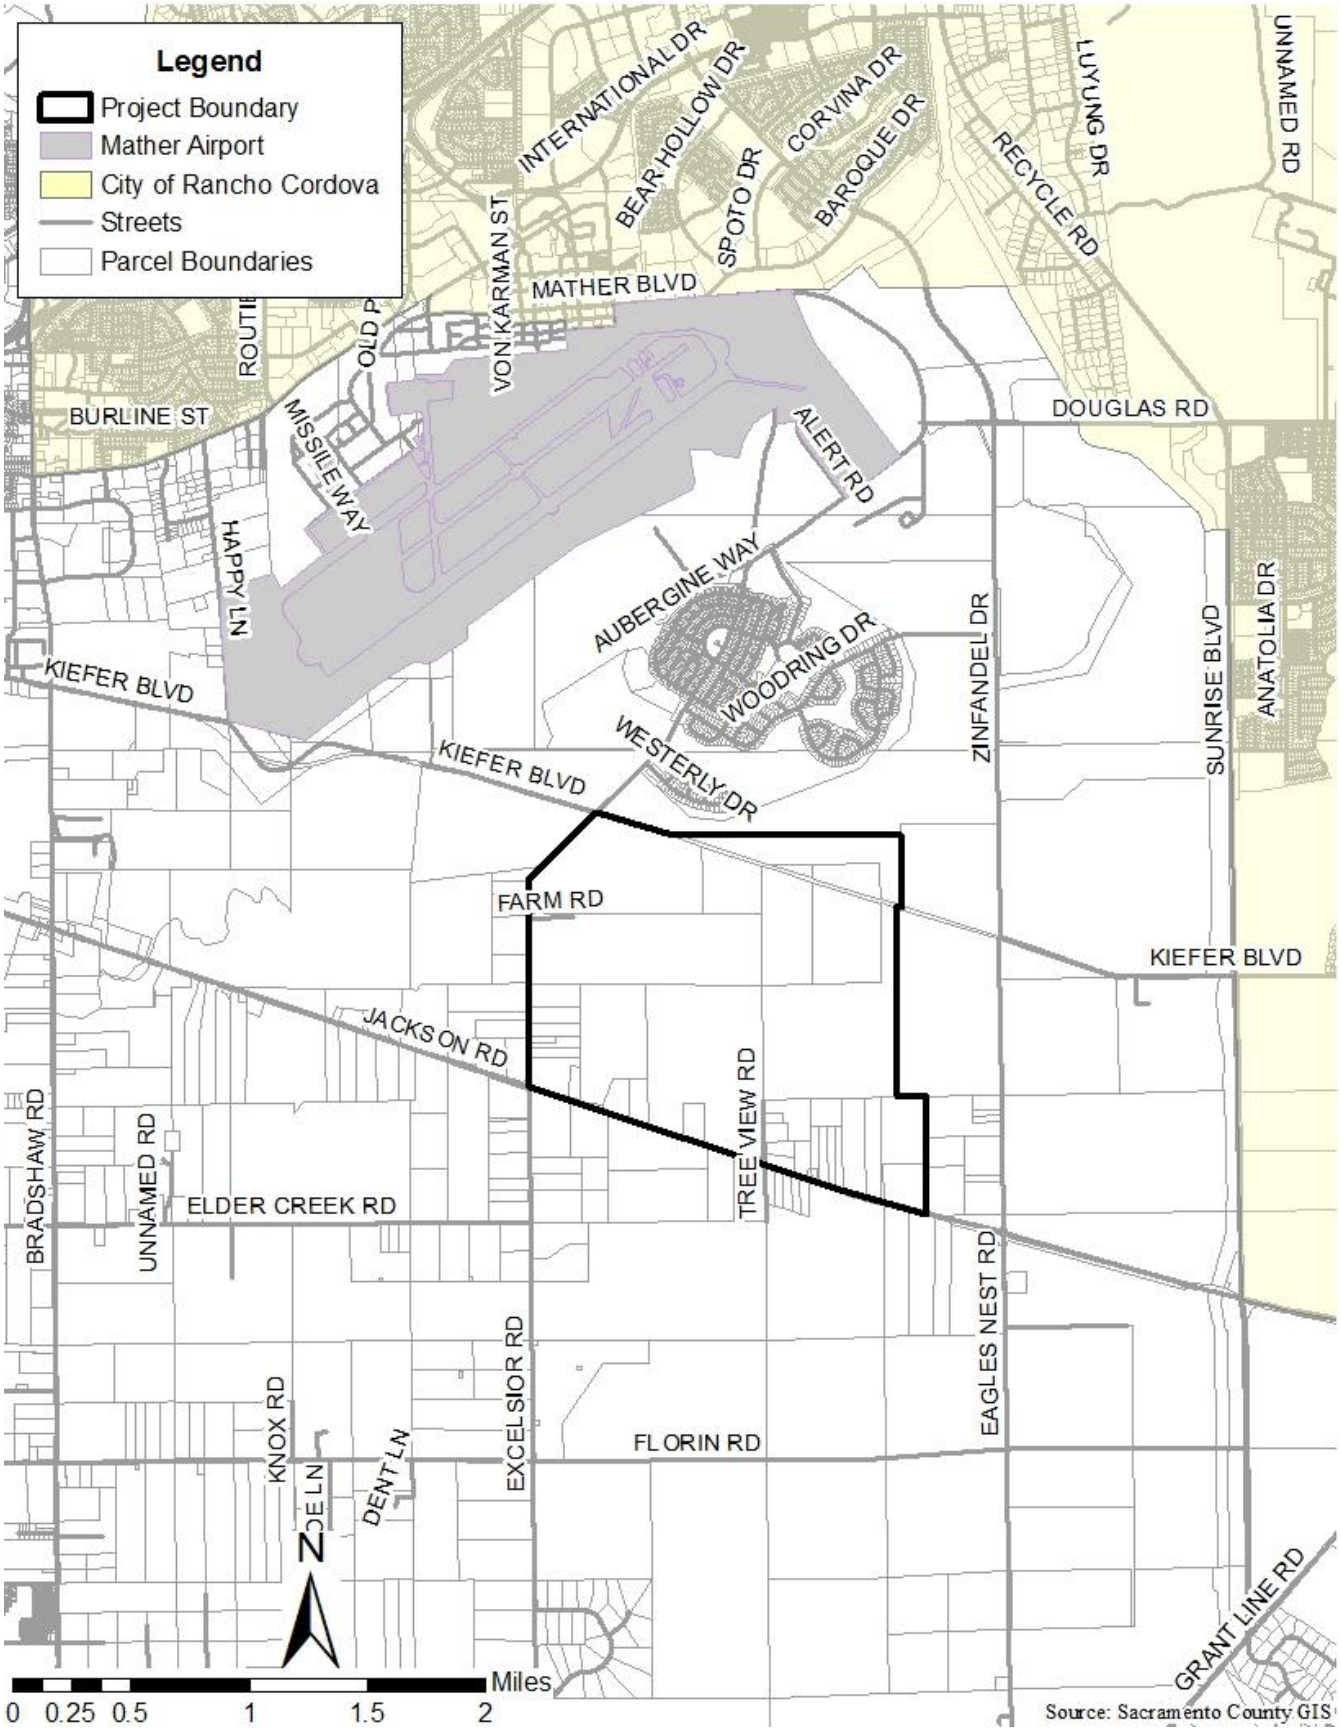


Most homes within the Plan Area will be within a quarter-mile of an open space area: either a park, linear parkway, or natural open space. Likewise, most homes will be within a half-mile of the retail/employment land uses. According to the application materials, a key feature of the Plan Area is a large, centrally-located greenway/drainage corridor with a trail on one side that will provide easy, non-vehicular linkages from one end of the community to the other. An interconnected street system, connecting trails and paths with potential for future transit connections, is provided throughout the Plan Area. Street layouts were designed in coordination with County Department of Transportation and Planning and Environmental Review staff. The Circulation Plan and Bikeway Master Plan diagram are included with the other project exhibits at the end of this NOP (Plate NOP-5 and Plate NOP-6).

The Plan Area is within the Elk Grove Unified School District and the Cordova Recreation and Park District. The Project includes three sites designated as elementary school sites (approximately 10 acres each) and one site designated as a joint middle school/high school (approximately 70 acres). The elementary schools are co-located with neighborhood parks to invite joint use. A total of eight neighborhood parks and one Community Park are included in the proposed Project.

Alternative 1 involves a 40.1 acre Office (O) use designated along Tree View Lane, in the place of the 22.3 acre MD and the 16.9 acres HD sites. **Alternative 2** involves the three parcels in the northwest corner of the site designated MD, HD and CC. The CC and MD parcels switch locations and the acreages of all three parcels change slightly. **Alternative 3** is essentially a combination of Alternatives 1 and 2. Alternative 3 involves the addition of the 40.1 acre Office parcel as described in Alternative 1 as well as the switch in location of the CC and MD sites as described in Alternative 2. Land Use Summary tables and exhibits for these alternatives are provided at the end of the NOP (Table NOP-2, Table NOP-3, Table NOP-4, Plate NOP-7, Plate NOP-8, and Plate NOP-9).

In order to approve the Project (or project alternatives) which are described above, the following entitlements must be approved by the Sacramento County Board of Supervisors:

1. A **General Plan Amendment** to move the Urban Policy Area (UPA) boundary south to include approximately 1,391 acres encompassing the Jackson Township Specific Plan (Plate NOP-10).
2. A **General Plan Amendment** to amend the Land Use Diagram designations within the Jackson Township Specific Plan from General Agriculture (568 +- acres) and Extensive Industrial (823 +-acres) to Low Density Residential, Medium Density Residential, Commercial and Office, Mixed Use, Recreation, Natural Preserve, and Public/Quasi Public (Plate NOP-11).
3. A **General Plan Amendment** to amend the General Plan, including the Land Use Diagram, to include a Mixed Use Land Use Designation.
4. A **General Plan Amendment** to amend the Transportation Diagram to reflect proposed roadway alignments (Plate NOP-12).
5. A **General Plan Amendment** to amend the Bicycle Master Plan to add on- and off-street bikeways (Plate NOP-6).
6. A **Community Plan Amendment** to amend the Vineyard Community Area Plan to change the Community Plan designation of the parcels located within the Jackson Township Specific Plan area (1,391+-acres) from Permanent Agriculture (AG-80) (772.5 acres), Light Industrial (596.5 acres) and Industrial Reserve (IR) (22 acres) to Jackson Township Specific Plan Area (1,391+-acres) (Plate NOP-13).
7. **Adoption of the Jackson Township Specific Plan** for the approximately 1,391 acre Jackson Township Specific Plan area, including a Specific Plan land use diagram, Design Guidelines and Development Standards.

8. A **Zoning Ordinance Amendment** to establish a Special Planning Area (SPA) Ordinance for a 838+-acre portion of the Jackson Township Specific Plan area and a **Rezone** to amend the Zoning Designations for a 838+- acre portion (owned by the applicant) of the Jackson Township Specific Plan Area from AG-80 (489+-acres), M-1(+-327acres) and IR (22 +-acres) to Jackson Township Special Planning Area (SPA) (Plate NOP-14).
9. A **Large Lot Tentative Subdivision Map** for the lands owned by Tsakopoulos Family Trust, consisting of 12 existing parcels of approximately 838 acres, to be divided into 44 parcels for the purpose of creating legal parcels corresponding to land use blocks within the Jackson Township Specific Plan.
10. **Adoption of an Affordable Housing Plan** for the Jackson Township Specific Plan.
11. **Adoption of a Development Agreement** for the Jackson Township Specific Plan by and between the County of Sacramento and the Tsakopoulos Family Trust for the 838 acres owned by the Tsakopoulos Family Trust.
12. **Adoption of a Public Facilities Financing Plan** for the Jackson Township Specific Plan that includes a Capital Improvement Program and Financing Plan.
13. **Adoption of a Water Supply Master Plan Amendment** to amend the existing Zone 40 Water Supply Master Plan to include provision of water service to the Jackson Township Specific Plan Area. This action requires Sacramento County Water Agency Board of Directors approval.
14. **Approval of a Water Supply Assessment** for the Jackson Township Specific Plan required by the California Water Code to link land use and water supply planning activities. This action requires Sacramento County Water Agency Board of Directors approval.

In addition to the above listed entitlements, separate annexation requests to LAFCo will include:

- A Sphere of Influence Amendment (SOIA) and concurrent Annexation to County Service Area (CSA) 10 or creation of a new CSA. Note: a separate subsequent action may be required by the Sacramento County Board of Supervisors to establish a Benefit Zone, to implement funding and service provision.
- Annexation to Sacramento Regional County Sanitation District (SRCSD).
- Annexation to Sacramento Area Sewer District (SASD).

It should be noted that this application request does not include rezone of the properties not owned by the applicant, and that any subsequent rezones would be the subject of future applications and CEQA review.

PROJECT OBJECTIVES:

The following summarizes the project objectives that guided the planning of the Jackson Township Specific Plan:

1. Develop an economically viable mixed use project in close proximity to the urban core.
2. Develop a marketable project which minimizes greenhouse gas emissions.
3. Develop an economically-stable community where property values are retained over time.
4. Develop a project containing a variety of housing types so as to create a demographically mixed community.
5. Develop a project which allows for easy access to green space, schools, and a town center containing various retail, dining, and other commercial services.
6. Develop a project which provides employment opportunities for workers of all income levels.

7. Develop a project which promotes a jobs-housing balance in the Jackson Highway/Mather area.
8. Develop a project which allows residents to engage in short, non-vehicle commutes.
9. Develop a project which utilizes proven design practices which result in the creation of strong communities that remain economically stable over time.
10. Develop a project which contains a circulation system that promotes walking, biking, and the use of public transit.
11. Develop a project which contains a comprehensively planned infrastructure system.
12. Develop a project which ensures funding for the on-going maintenance needs of parks, open space facilities, public services and other infrastructure.
13. Develop a project which preserves, to the extent feasible, the area's most important and valuable biological resources with a wetlands preserve.
14. Develop a project which contains adequate school facilities for community residents and assists in meeting the school facility needs of surrounding projects.
15. Develop a project which includes a community park and a variety of neighborhood parks sufficient to meet park district requirements.

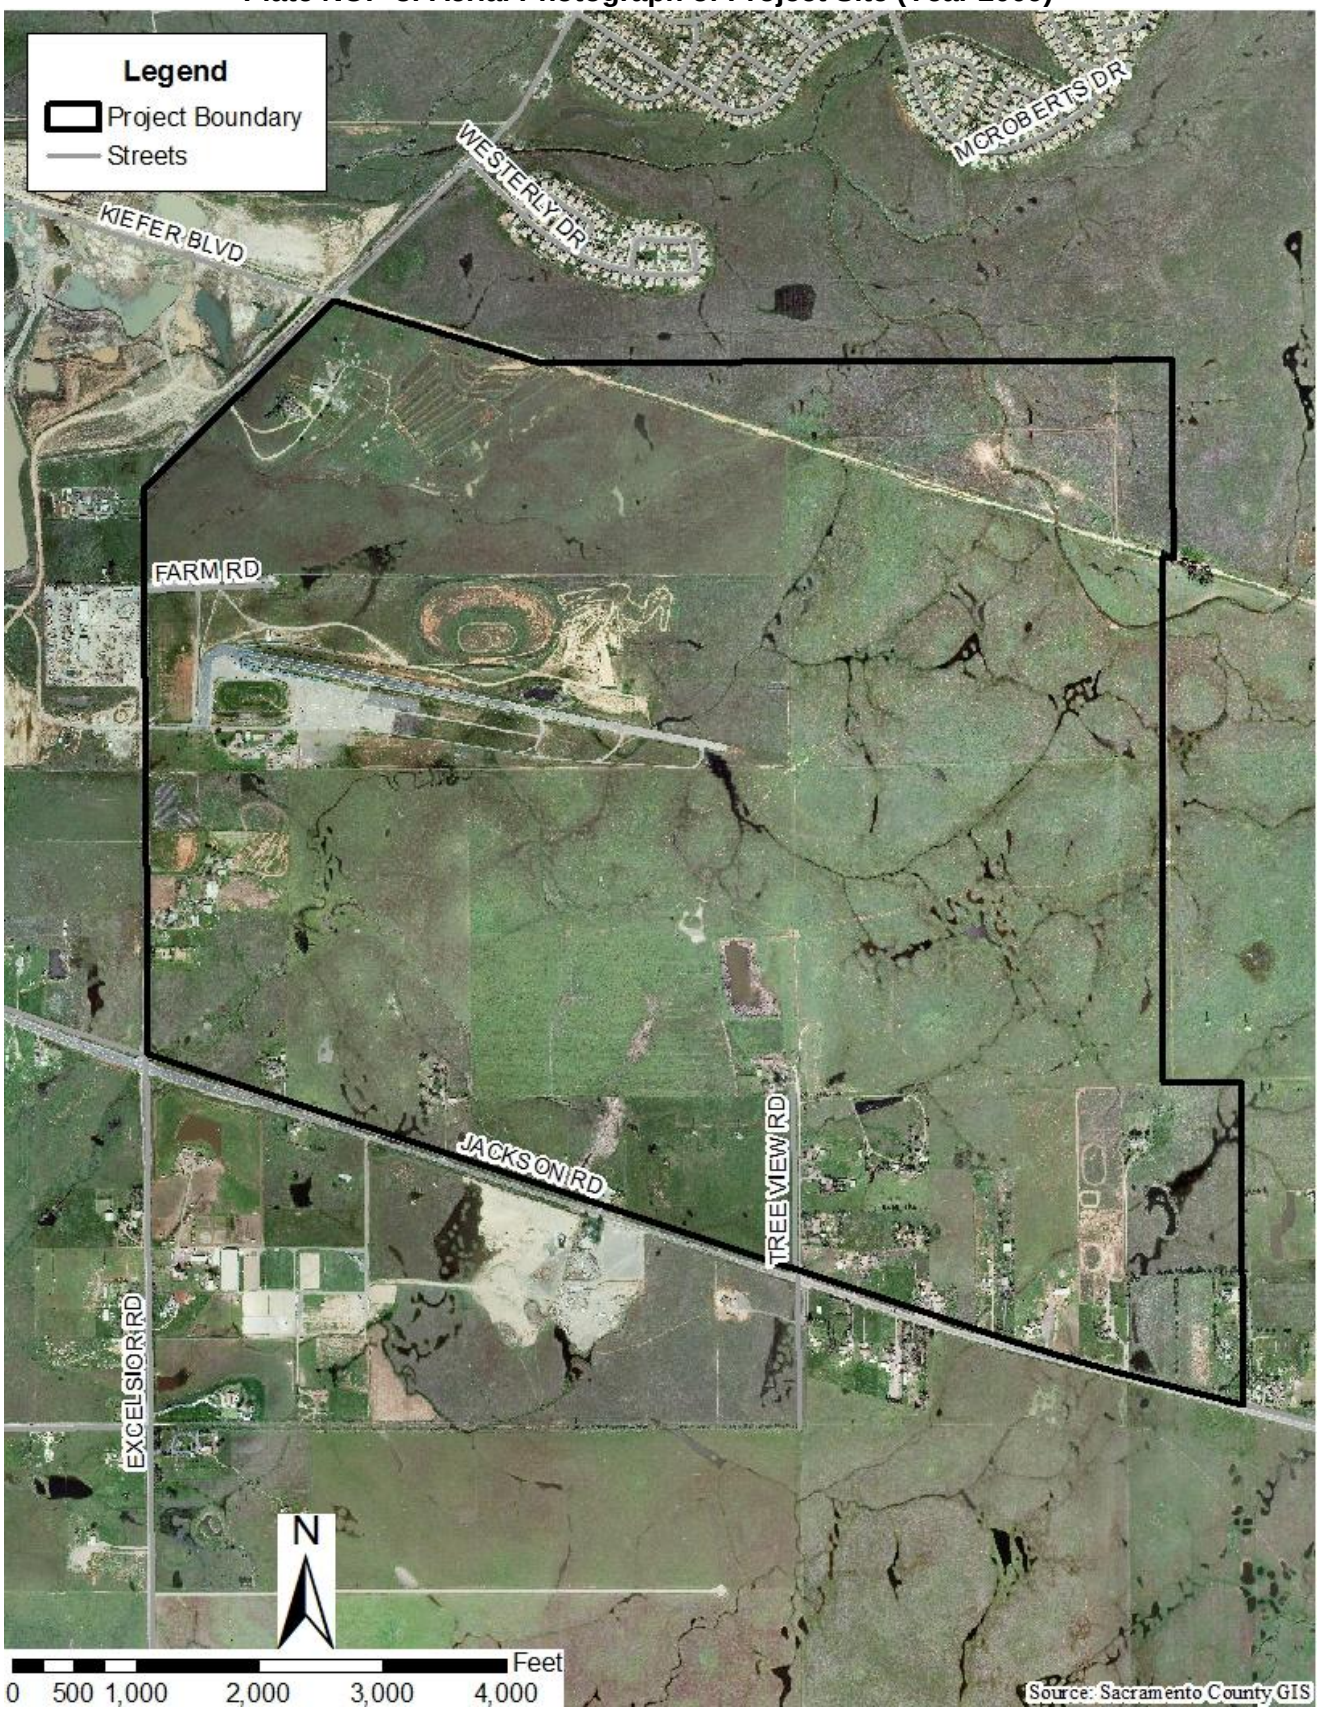
ENVIRONMENTAL/LAND USE SETTING:

An aerial photograph of the site, taken in the year 2009, has been provided for context (Plate NOP-3). The current land uses on the properties within the Plan Area are predominantly grazing, small ranches, and agricultural residential homes. A portion of this site also includes the Sacramento Raceway, which hosts racing events on Wednesday nights, twice per month on Friday night, Saturday nights, and drag races on Saturday and Sunday. To the west of the Project, land uses are characterized by agricultural uses, mining, and commercial sales of landscaping materials. Lands to the east are generally similar to the Project site, with grazing and agricultural-residential uses predominating. The property to the east also includes the Sacramento Rendering Company plant, which is a facility that accepts animal tissue, processes it, and then distributes the byproduct for use in the manufacture of other goods. Land to the north is dominated by the presence of Mather Airport and appurtenant facilities, but also includes residential areas (Independence at Mather), nature preserve, and golf course property. Properties to the south of the Project, across Jackson Road, are generally in agricultural or agricultural-residential use or are designated as wetland preserve.

There are roadways extending along the southern and western sides of the Project boundary: Jackson Road on the southern boundary and Excelsior Road along the western boundary. There is no road along the eastern Project boundary, though Eagles Nest Road is only a few hundred feet to the east. There is also no road on the northern property boundary, but the Sacramento County General Plan Transportation Diagram shows that Kiefer Road will be extended through the site (there is currently an unmaintained dirt road along the alignment on County-owned right-of-way). Jackson Road is a state highway (State Route 16), though the California Department of Transportation is considering the possibility of relinquishing part of the facility to local control (as found in the *Transportation Corridor Concept Report: State Route 16*, dated June 26, 2012 and published by Caltrans). Where it is adjacent to the site, the roadway is a two-lane facility without a center left-turn lane, though it is four lanes on either side of the intersection of Jackson Road and Excelsior Road. Excelsior Road is also a two-lane facility with more lanes on either side of the intersection with Jackson Road.

Most of the Project site is grassland with interspersed wetlands and wetland swales; portions of the site have historically been disturbed by agricultural activities. The southwestern Project area is within the headwaters of Elder Creek, and a small bend in Morrison Creek extends slightly into the northeastern corner of the Project site.

Plate NOP-3: Aerial Photograph of Project Site (Year 2009)



PROBABLE ENVIRONMENTAL EFFECTS/EIR FOCUS:

The analyses in the EIR will describe existing conditions, describe the legal and regulatory framework relevant to the proposed Project, describe standards of significance to be used in analysis, and describe analysis methodologies. A review of the project and of the environmental resources in the study area has resulted in the identification of the following potential areas of environmental effect:

Aesthetics
Proposed new development areas will be analyzed for their effects on the views from surrounding properties and roadways.

Agricultural Resources
Areas of active agricultural use, designated agricultural lands, prime farmland soils, and Williamson Act contract land will be identified and analyzed within and adjacent to the project area.

Air Quality
Project-related emissions analyzed may include toxic air contaminants, ozone precursors, and particulates. The analysis will include discussions of emissions resulting from construction activities and emissions resulting from operational activities of the completed project. Where possible, emissions will be quantified using the California Emissions Estimator Model (CalEEMod) and/or other appropriate models.

Biological Resources
The Project will be analyzed to identify areas where proposed changes may impact biological resources in the area. The analyses will discuss impacts to general wildlife populations and habitats, but will focus on special-status species and particularly sensitive habitats, including wetlands.

Climate Change
Project-related greenhouse gas emissions will be quantified and analyzed for the cumulative impacts to climate change. The probable impacts to the project as a result of climate change will also be examined.

Cultural/Historical Resources
The changes and new proposed uses will be analyzed for compatibility with cultural and historical resources.

Geology, Soils, and Mineral Resources
Underlying soil types and suitability will be examined in areas where urban uses are proposed. Erosion potential will also be considered.

Hazards and Hazardous Materials
Hazardous materials sites, if any, will be identified in the vicinity of proposed new development areas. Data sources may include Envirostor and Geotracker. Project compatibility with any existing hazardous materials sites will be examined.

Land Use
The project proposal will be examined to determine consistency with land use policies/ordinances/plans that have been adopted in order to avoid environmental effects. The project impact relative to the planned and existing land use environment will also be disclosed.

Noise
Existing and proposed uses with the potential to generate significant noise will be analyzed, which will include modeling of noise generated by transportation sources. This will include an analysis of the existing Sacramento Raceway and Mather Airport.

Public Services
The proposal will be analyzed for its compatibility with public services and to determine what may be required to extend service to the project. Services analyzed may include but are not limited to: schools (Elk Grove Unified School District), park services (Cordova Recreation and Park District), libraries, fire protection (Sacramento Metropolitan Fire District), and police protection (Sacramento County Sheriff's Department).

Public Utilities
The proposal will be analyzed for its compatibility with public utilities and to determine what may be required to extend service to the project. Utilities analyzed may include but are not limited to: water supply (Sacramento County Water Agency Zone 40), sewer service (annexation to Sacramento Area Sewer District and Sacramento Regional County Sanitation District), and energy services (Pacific Gas and Electric and Sacramento Municipal Utility District).

Transportation
A Traffic Impact Study will be prepared to examine the effects of proposed project development and facilities on area roadways.

Hydrology and Water Quality
Areas of flooding potential will be identified and drainage patterns will be examined within the watersheds affected by the project. The project will be analyzed for impacts to the existing hydrologic environment and vice versa. Agencies involved with flood control issues will be consulted. These may include, but are not limited to: the California State Department of Water Resources, the State Reclamation Board, the Sacramento Area Flood Control Agency (SAFCA), and the Sacramento County Department of Water Resources. The potential impacts of the project on water quality will also be examined, which includes construction-related impacts (e.g. erosion of exposed soil) and operational impacts (e.g. use of pesticides and fertilizers).

The above descriptions are not exhaustive, and other sections and discussions may be included if further research indicates that the inclusion is warranted. As the analyses progress and the extent of impacts to the above categories is determined, appropriate CEQA Alternatives will be included for analysis. Pursuant to the CEQA Guidelines Section 15206, this is a project of "statewide, regional or areawide significance" and scoping meetings are required. The scoping meetings have not been scheduled at this time. When available, a Public Notice of the date, time, and location of the scoping meeting(s) on the project will be provided.

INTENDED USES OF THE EIR:

The Sacramento County Planning Commission and the Board of Supervisors will use the information contained in the EIR to evaluate the proposed project and render a decision to approve or deny the requested entitlements. Responsible agencies, such as the California Department of Fish and Game, the United States Fish and Wildlife Service, the United States Army Corps of Engineers, the Central Valley Regional Water Quality Control Board, and LAFCo may also use the EIR for planning/permitting purposes that include, but are not limited to, the following:

- Federal Clean Water Act Section 404 Permit (U.S. Army Corps of Engineers)
- Federal Endangered Species Act Section 7 Consultation (U.S. Fish and Wildlife Service)
- Section 401 Water Quality Certification (Regional Water Quality Control Board – Central Valley Region)
- California Endangered Species Act Incidental Take Permit (California Department of Fish and Wildlife)
- Section 402 National Pollutant Discharge Elimination System Permit (Regional Water Quality Control Board – Central Valley Region)
- Annexations (LAFCo)

Plate NOP-4: Proposed Land Use Plan

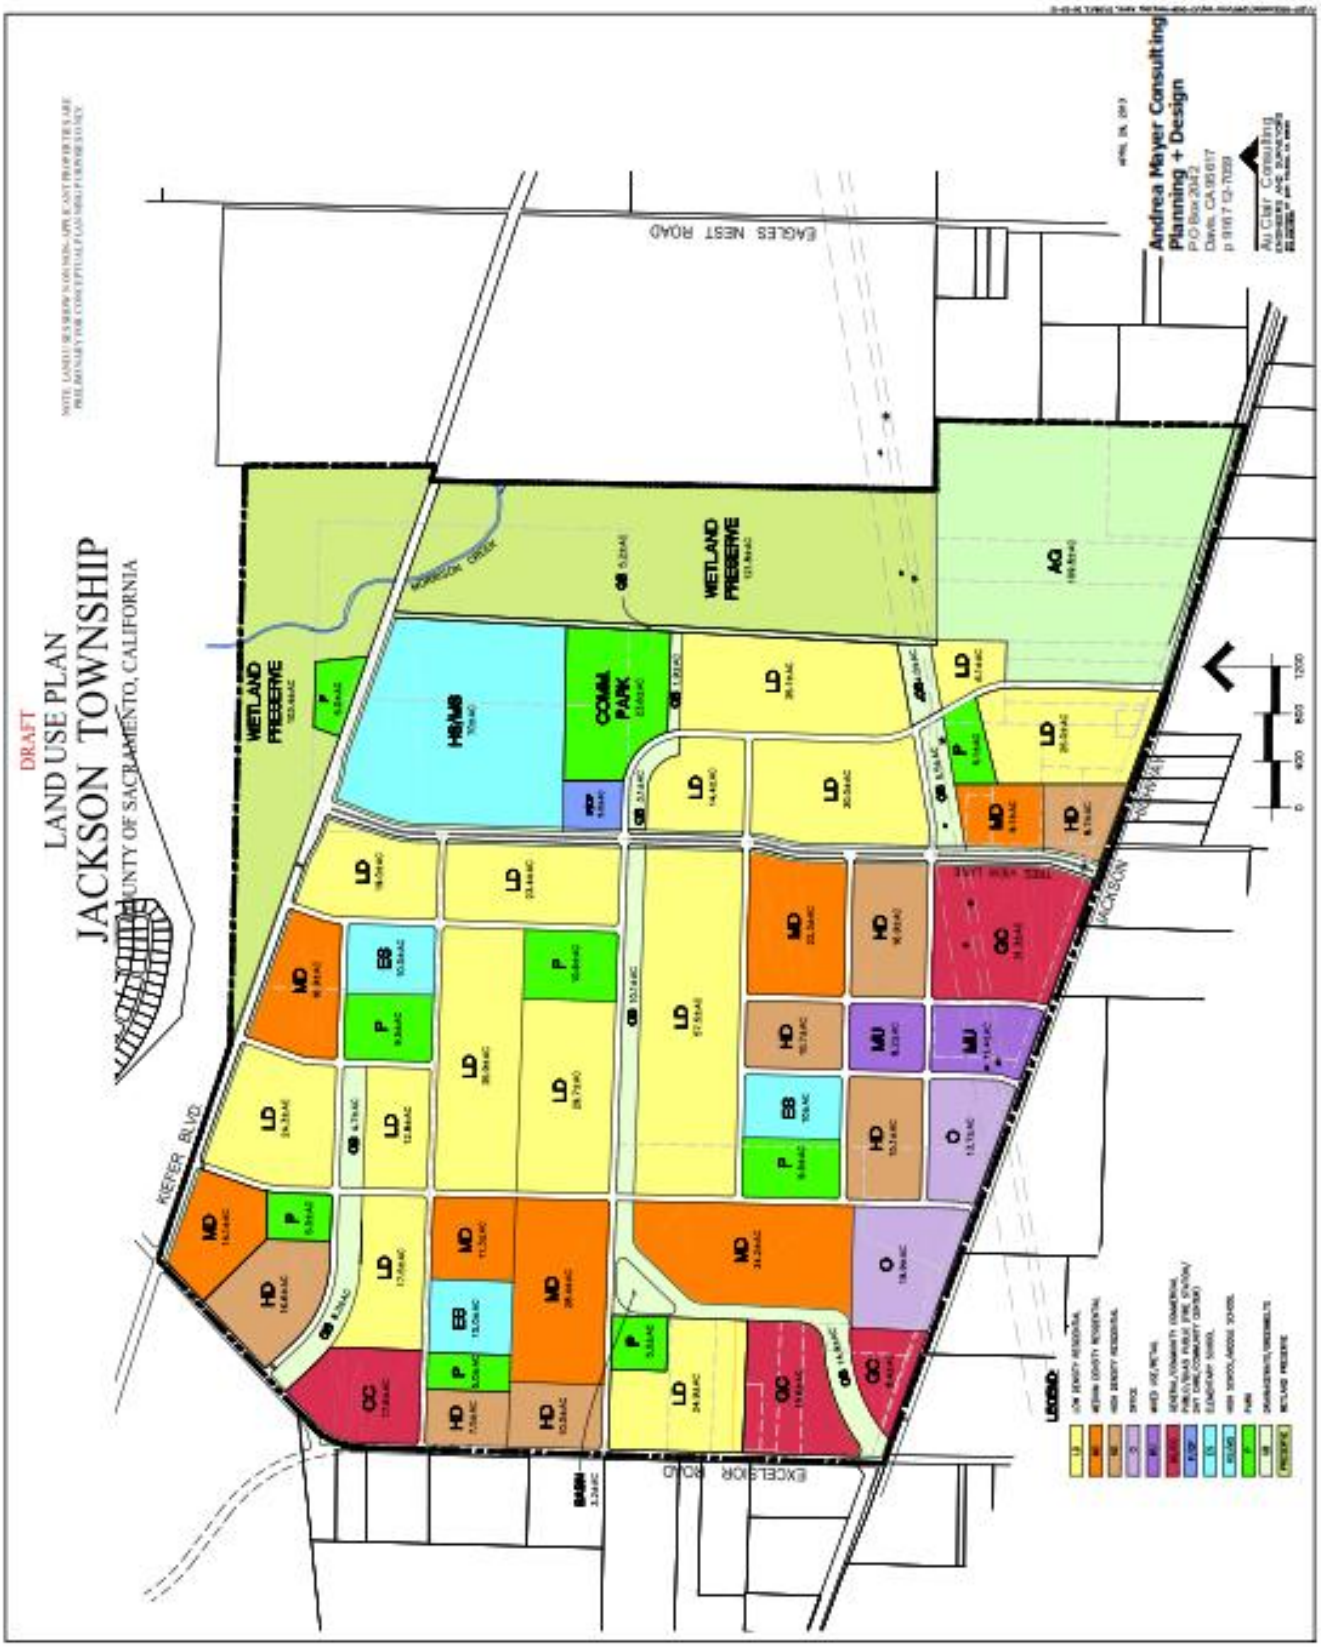


Table NOP-1: Land Use Summary

Residential Designations	***Acres***	***Average Density***	***Density Range (DU/acre)***	***D.U.'s***	***% of D.U.'s***
LD-Low Density Residential	355.7	6.0	1.0–10.9	2134	34.7%
MD-Medium Density Residential	136.3	13.0	11.0–19.9	1772	28.9%
HD-High Density Residential	85.5	25.0	20.0–30.0	2137	34.8%[7]
Subtotal	**577.5**	**--**	**--**	**6,043**	**98.4%**
Commercial + Office Zones	***Acres***	***F.A.R.***	***Square Footage***	***D.U.'s***	***% of D.U.'s***
GC-General Commercial	59.3	0.25	645,700	n/a[1]	--
CC-Community Commercial	17.6	0.25	191,600	n/a[1]	--
MU-Mixed Use	19.6	0.50	427,000	100[5]	1.6%[7]
O-Office	33.6	0.50	731,800	n/a[1]	--
Subtotal	**130.1**	**--**	**1,996,100**	**100**	**1.6%**
Public/Quasi Public Zones	***Acres***				
PQP-Fire Station/Community Center	5.0				
PQP-High School/Middle School	70.0				
PQP-Elementary School	30.0				
Subtotal	**105.0**				
Park + Open Space Zones	***Acres***				
CP-Community Park	23.6[3]				
P-Neighborhood Park	54.7[3]				
OS-Wetland Preserve	225.2				
OS-Greenbelt/Drainage Corridor	57.7				
OS-Landscape Corridor	14.5				
OS-Detention Basin	3.2				
Subtotal	**378.9**				
AG-Agriculture	109.3				
RW-Primary Roadways	90.2				
	Acres		***Density Range (DU/acre)***	***D.U.'s***	***% of D.U.'s***
TOTAL	***1,391.0***		***10.5[6]***	***6,143***	***100%***

NOTES: DU → dwelling unit, F.A.R. → Floor-Area Ratio (i.e. a F.A.R. of 0.25 means that for every one acre of land in the category–like General Commercial–0.25 acres will be used for a structure)

1. Dwelling units are not permitted in these designations.
2. Population calculation is 6,143 d.u x 2.64 people per household=**16,217 people**
3. Park requirement calculation (not including AG land): LD/MD 3906 d.u. x 0.0146=57.0 acres and HD/MU 2237 d.u. x 0.0122=27.3 acres, for a total acreage of **84.3**.
4. Park credit calculations: 78.3 acres of Community/Neighborhood Parks + 12.0 acres (25% credit for 48.2 acres of greenbelts along drainageways and wetland preserve) for a total of **90.3 acres**.
5. 100 dwelling units are assigned to the 8.2-acre MU parcel only, and zero units assigned to the 11.4-acre parcel.
6. Double-net density calculation: 6,143 d.u./585.7 acres (577.5 acres+8.2 acres of MU)= **10.5 du/acre**. This does not include the 109.3 acres of AG or the 10% net residential acreage exclusion allowed per Policy LU-120 CB-1.
7. A minimum 34.8% of a Master Plan's units must be accommodated on multi-family zoned land. This includes HD and MU parcel allocations, for a total of 2,237 d.u. = 36.4%.

Plate NOP-5: Circulation Plan

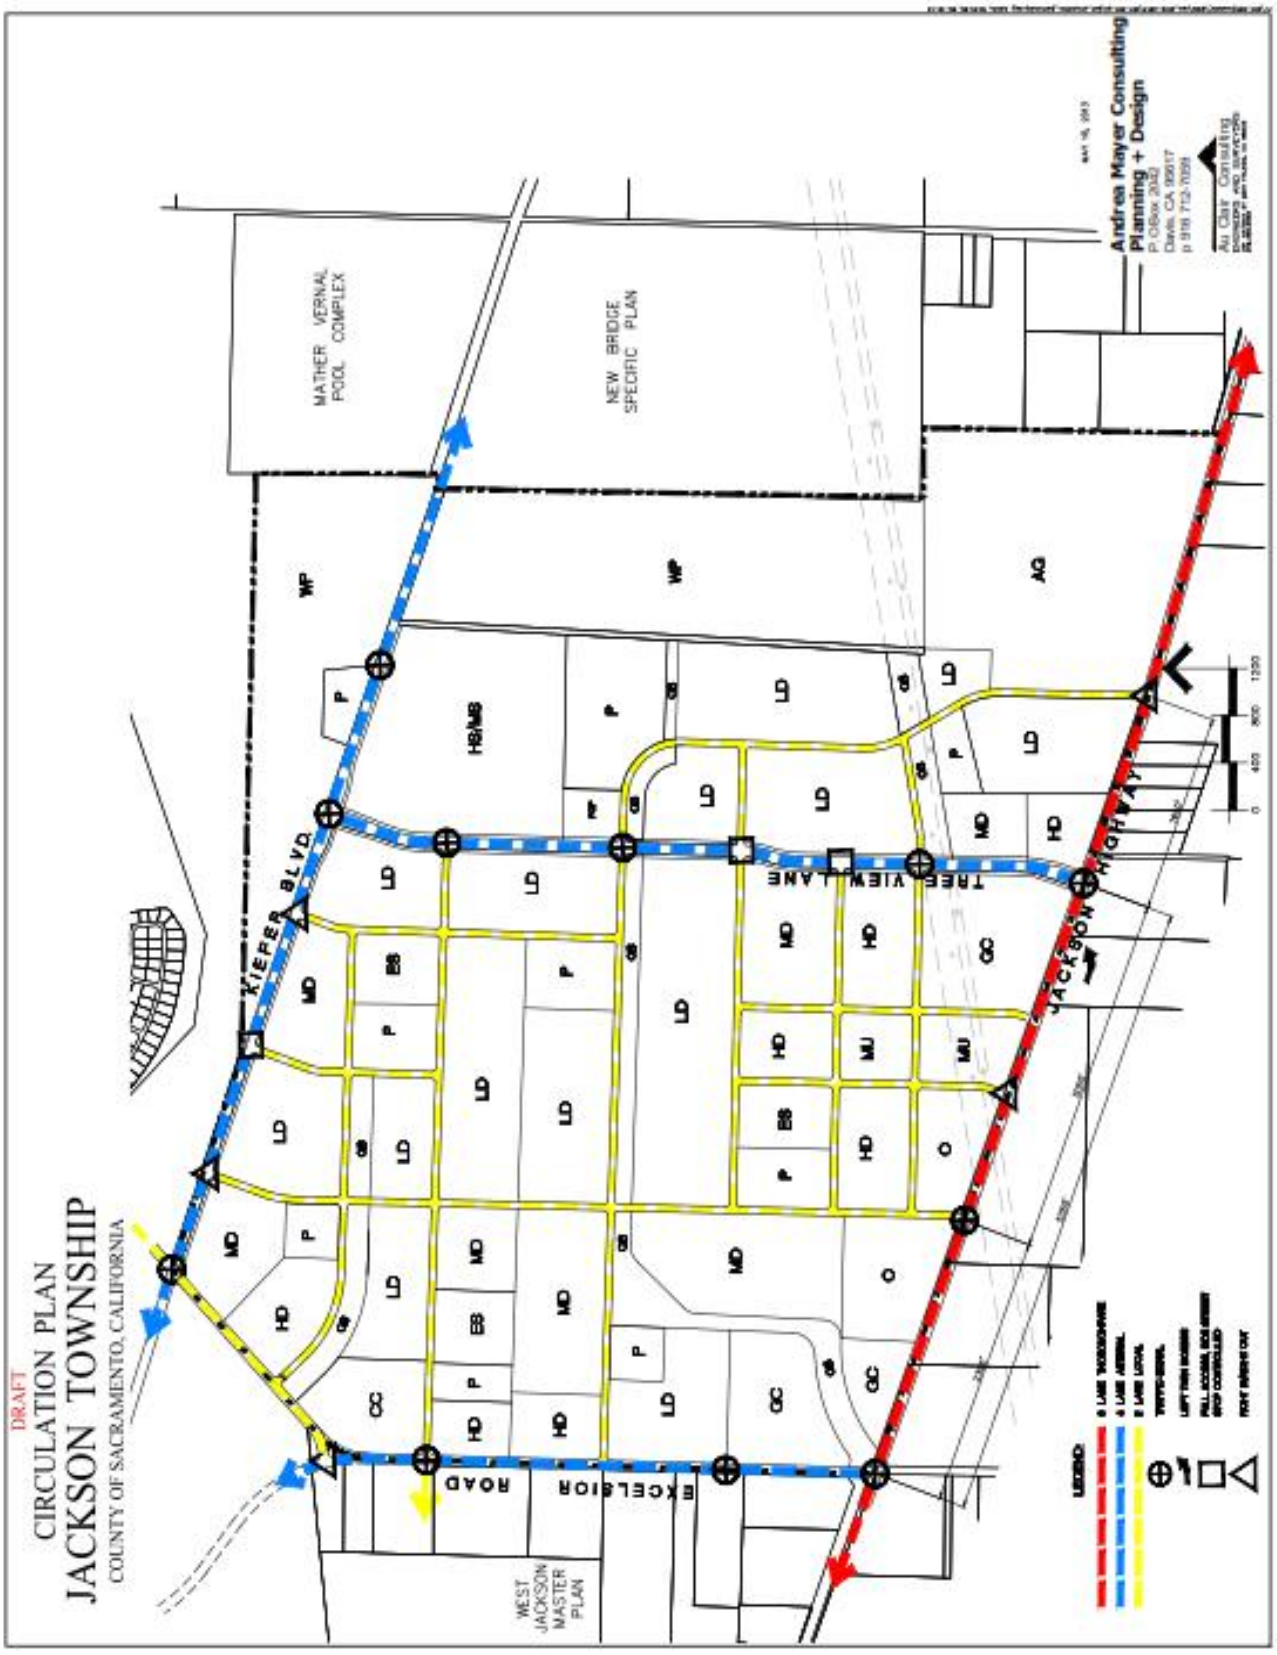

Plate NOP-6: Bikeway Master Plan

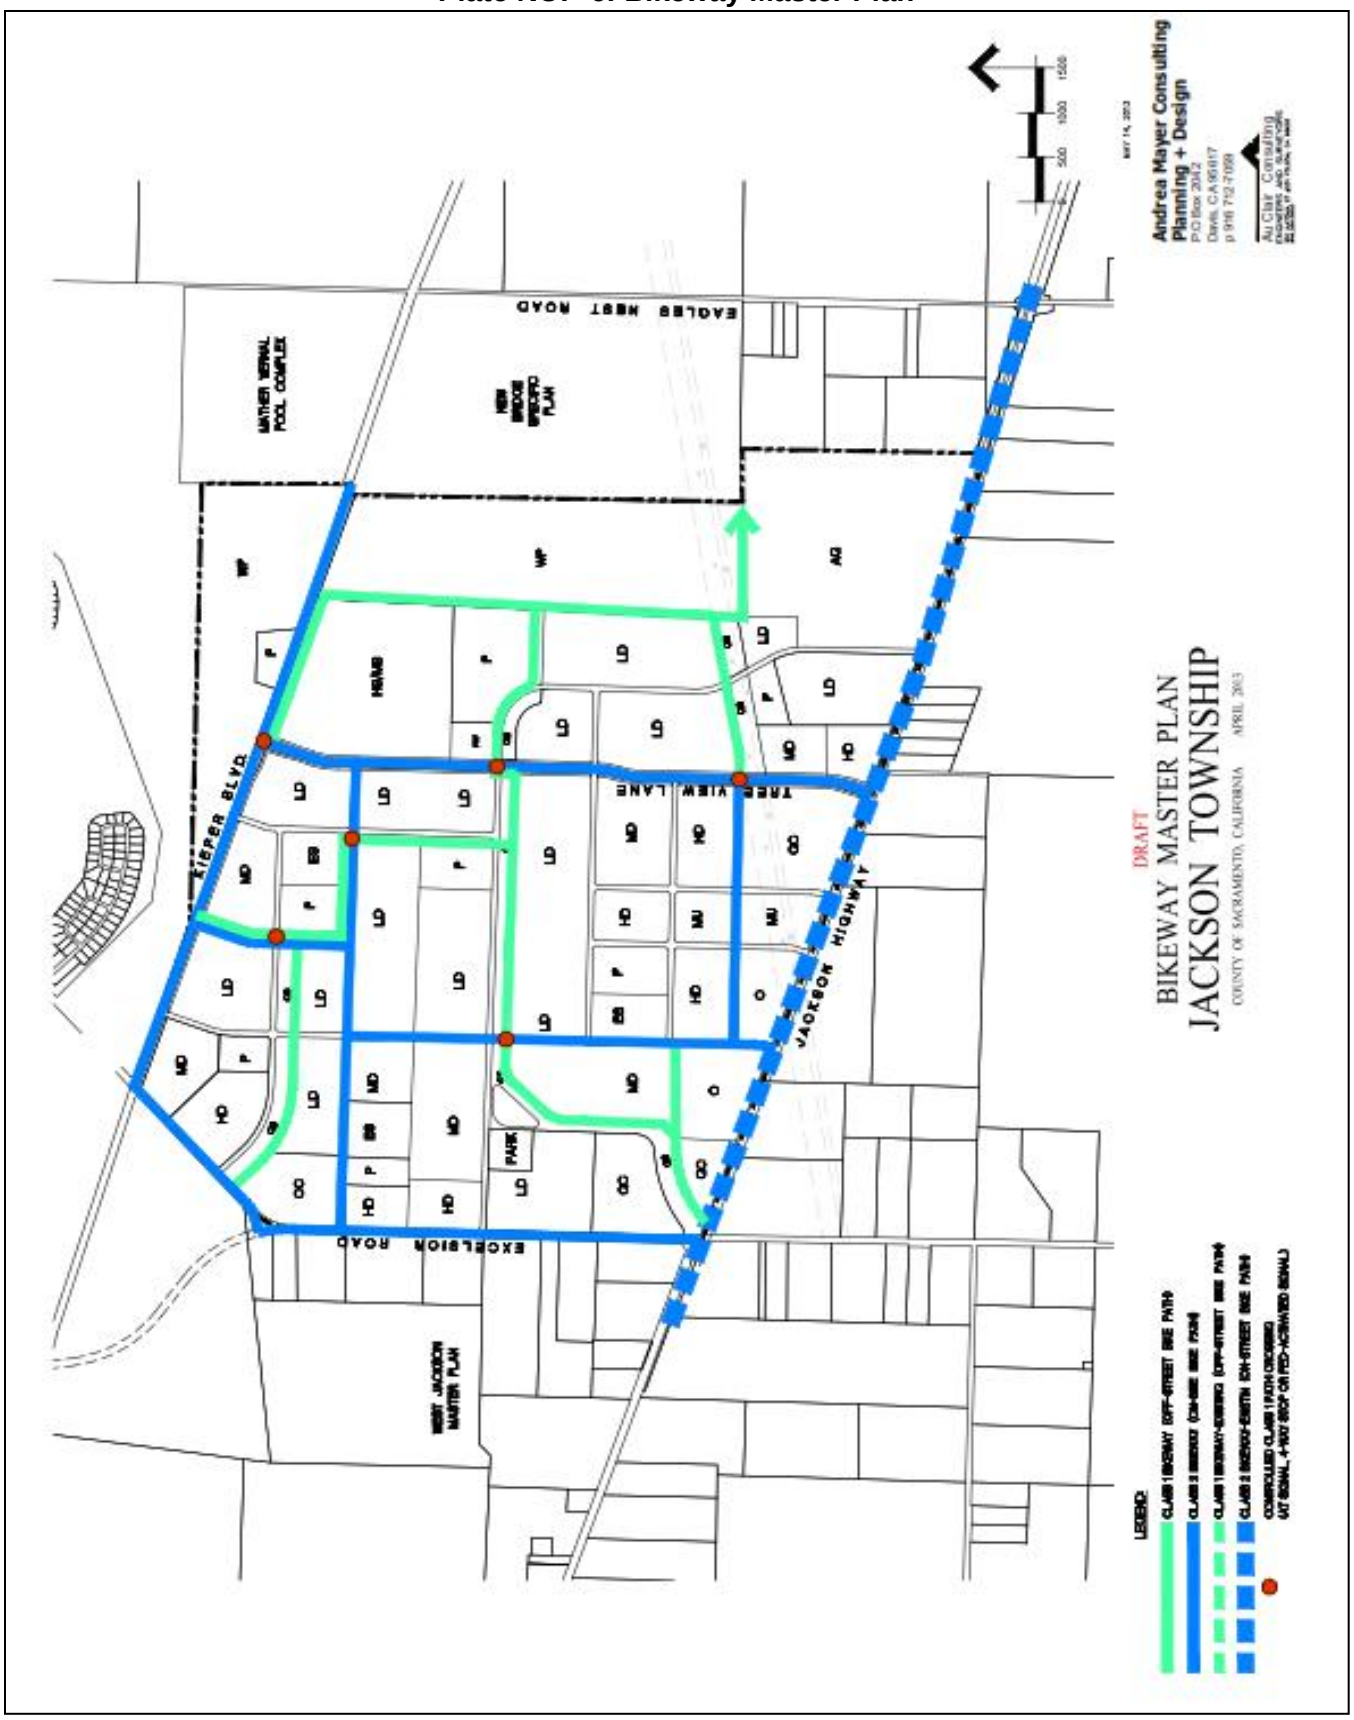

Plate NOP-7: Alternative 1 Land Use Plan

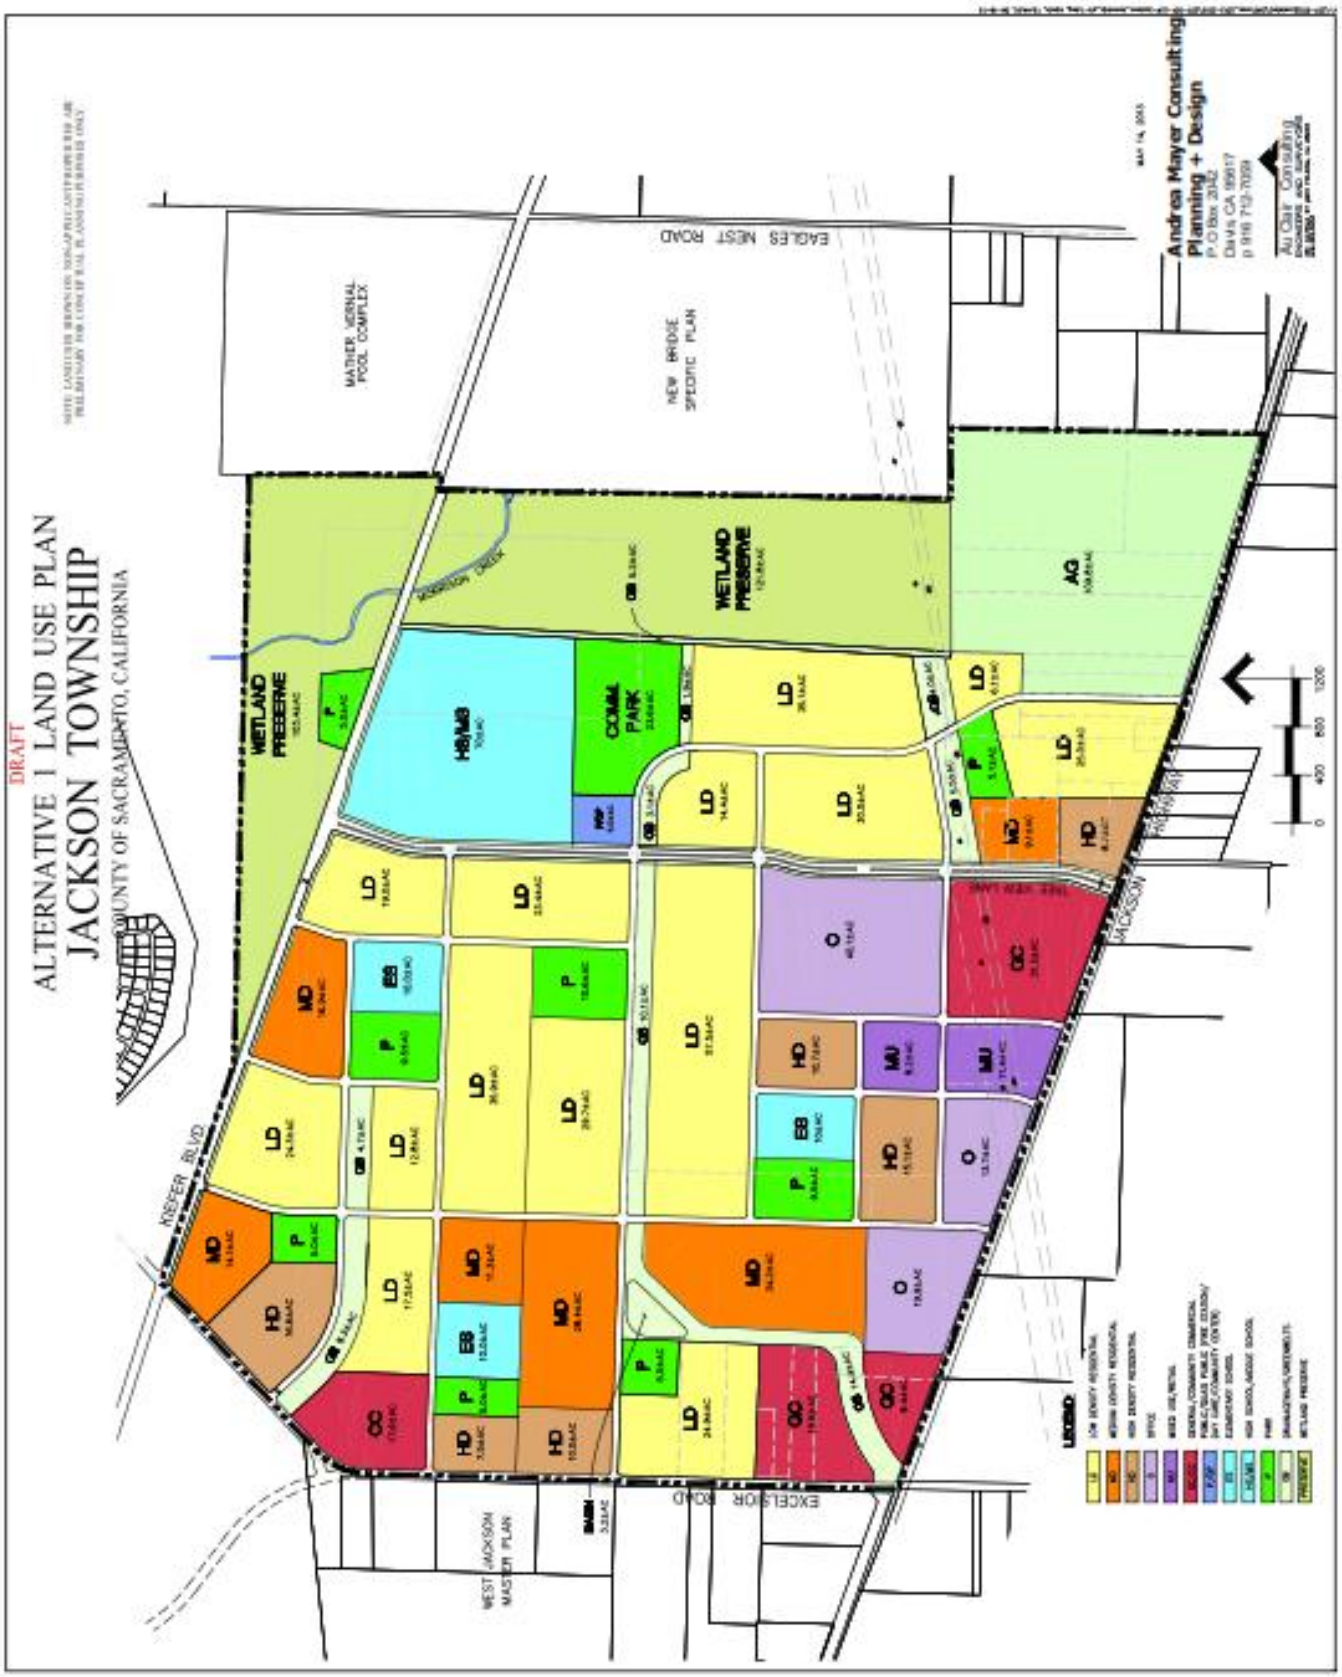

Table NOP-2: Alternative 1 Land Use Summary

Residential Designations	***Acres***	***Average Density***	***Density Range (DU/acre)***	***D.U.'s***	***% of D.U.'s***
LD- Low Density Residential	355.7	6.0	1.0-10.9	2134	37.4%
MD-Medium Density Residential	114.0	13.0	11.0-19.9	1482	26.0%
HD- High Density Residential	68.6	29.0	20.0-30.0	1989	34.9%[7]

Subject: Notice of Preparation (NOP) for Environmental Impact Report (EIR) for Jackson Township Specific Plan (PLNP2011-00095)

Dear Ms. Hack:

Thank you for the opportunity to comment on the subject NOP. We appreciate that a number of the project's objectives state or imply that safe, comfortable, and convenient bicycling for everyday transportation is important to the project's design, such as #2 (minimize greenhouse gas emissions), #5 (easy access to the project's various land uses), #6 (employment opportunities for workers of all income levels, many of whom may rely on bicycles for transport to work), # 8 (allow residents to engage in short, non-vehicle commutes), and # 10 (a circulation system that promotes walking, biking, and the use of public transit).

For the EIR analysis, the proposed project will have a significant adverse impact on bicycling if it fails to adequately provide for access by bicycle. A failure to provide adequate access for bicyclists will occur if the project does not:

- Provide bikeways throughout the project area and connections to surrounding areas that are safe, comfortable, and convenient for bicyclists of all ages and abilities to use for both transportation and recreation, and
- Provide bicycle parking that is secure and convenient for bicyclists both on short-term visits (e.g. shopping, errands) and long-term visits (e.g. for jobs or school) to destinations within the project.

Because the proposed project area is approximately 1.5 miles square, all portions of it are within easy riding range for most bicyclists. Traffic stress induced by high speed and high volume vehicle traffic is the primary impediment to large numbers of people being willing to use bicycling for everyday transportation (Mekuria et al. 2012; Geller n.d.). Women in particular are likely to be very susceptible to traffic stress because of concerns about personal safety and traffic risks, explaining the current large and increasing gender differences in bicycling participation (Garrard et al. 2012).

Therefore, it is critical that the project provides a continuous bikeway network that consists of low-traffic-stress routes throughout the project area. Low-traffic-stress bikeways are those 1)

on streets with low volumes (< 5,000 vehicles per day) and low speeds (<30 mph) of traffic or 2) on higher speed, higher volume streets if an exclusive zone for bicycles is provided that is at least 6 ft wide and is not compromised by parked cars, or 3) on higher speed, higher volume streets if a physically separated bicycle facility is provided (Mekuria et al. 2012). Low-stress bikeways also must include crossings of high-speed, high-volume arterials and thoroughfares that are comfortable for all bike riders (e.g. crossings equipped with median refuges, long-signal timing, special bicycle signals, painted bicycle lanes to alert vehicles of bicycle presence).

We request that the EIR's Traffic Impact Study report in detail how the project's proposed circulation plan provides a low-stress bikeway network both within the project area and connecting to bikeways on surrounding project areas (especially west across Excelsior Road to the West Jackson Master Plan area). Plate NOP-5: Circulation Plan shows that the project proposes only 2-lane streets within the project area except for 2 north-south 4-lane arterials. Plate NOP-6: Bikeway Master Plan shows that the project proposes to provide "controlled" crossings for Class 1 bike paths at one of the arterials and at many of the 2-lane local streets. Therefore, we are optimistic that such a low-stress network can be provided.

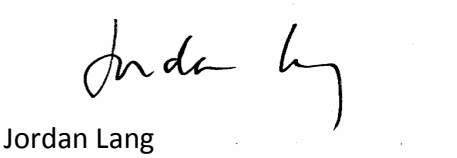
To demonstrate that an adequate bikeway network will be provided by the project, the EIR analysis should estimate the bicycle mode share and the vehicle miles traveled that are expected for the project.

We request that the EIR also address the extent to which the project's Design Guidelines and Development Standards ensure that adequate bicycle parking will be provided at key destinations (e.g. stores, schools, public institutions, places of employment, etc.) throughout the project area. Please refer to the Association of Pedestrian and Bicycle Professionals (APBP) Bicycle Parking Guidelines at http://www.apbp.org/default.asp?page=Publications for standards for adequate bicycle parking, both short-term and long-term.

SABA works to ensure that bicycling is safe, convenient, and desirable for everyday transportation. Bicycling is the healthiest, cleanest, cheapest, quietest, most energy efficient, and least congesting form of transportation.

Thank you for considering our comments.

Sincerely,



Jordan Lang
Project Analyst

Subject: **Notice of Preparation of a Draft Environmental Impact Report for the Jackson Township Specific Plan**

County Control Number: **PLNP2011-00095**

SMAQMD Number: **SAC201101396**

Dear Ms. Hack,

Thank you for submitting the Jackson Township Specific Plan Notice of Preparation to the Sacramento Metropolitan Air Quality Management District (SMAQMD) for review. Our comments follow.

We recommend that the County analyze operational emissions and prepare an operational air quality mitigation plan prior to the release of the FEIR. Please note that because the Jackson Township Specific Plan boundaries are outside of the Urban Policy Area, its potential emissions may not have been considered in the most recent Metropolitan Transportation Plan (MTP) or, consequently, our State Implementation Plan. If this is the case, we recommend a 35% reduction instead of the usual 15% reduction, a request which consistent with other projects not in the MTP, such as Cordova Hills. Construction emissions should also be analyzed and any mitigation included in the EIR and MMRP. For more information regarding operational air quality mitigation plans, please visit the Mitigation section of our website.

The EIR should discuss and analyze connectivity within the Jackson Township Specific Plan and to adjacent properties such as the Newbridge Master Plan, the Mather Specific Plan, the West

Sacramento Metropolitan Air Quality Management District

916/874-4800 ▪ 916/874-4899 fax
www.airquality.org

Jackson Highway Master Plan, and regional connections such as the Folsom South Canal. All modes should be considered, including pedestrian and bicycle.

Please note that a major update to the California Emissions Estimator Model (CalEEMod) was released on July 26, 2013, and additional updates are imminent. We encourage the County to use the most recent model from http://www.caleemod.com/ when conducting relevant air quality analyses.

All projects are subject to SMAQMD's rules and regulations at the time of construction. Attached is a list of rules that may apply to this project. For the complete list, please refer to our website at http://www.airquality.org/rules/index.shtml.

We look forward to reviewing the draft environmental impact report. Please do not hesitate to contact me at 916.874.4800 if you have any questions regarding this letter.

Sincerely,

RDuBose

SMAQMD Rules & Regulations Statement (revised 3/12)

*The following statement is recommended as standard condition of approval or construction document language for **all** development projects within the Sacramento Metropolitan Air Quality Management District (SMAQMD):* All projects are subject to SMAQMD rules in effect at the time of construction. A complete listing of current rules is available at www.airquality.org or by calling 916.874.4800. Specific rules that may relate to construction activities or building design may include, but are not limited to:

Rule 201: General Permit Requirements. Any project that includes the use of equipment capable of releasing emissions to the atmosphere may require permit(s) from SMAQMD prior to equipment operation. The applicant, developer, or operator of a project that includes an emergency generator, boiler, or heater should contact the SMAQMD early to determine if a permit is required, and to begin the permit application process. Portable construction equipment (e.g. generators, compressors, pile drivers, lighting equipment, etc.) with an internal combustion engine over 50 horsepower are required to have a SMAQMD permit or a California Air Resources Board portable equipment registration. Other general types of uses that require a permit include, but are not limited to dry cleaners, gasoline stations, spray booths, and operations that generate airborne particulate emissions.

Rule 403: Fugitive Dust. The developer or contractor is required to control dust emissions from earth moving activities, storage or any other construction activity to prevent airborne dust from leaving the project site.

Rule 414: Water Heaters, Boilers and Process Heaters Rated Less Than 1,000,000 BTU PER Hour. The developer or contractor is required to install water heaters (including residence water heaters), boilers or process heaters that comply with the emission limits specified in the rule.

Rule 417: Wood Burning Appliances. This rule prohibits the installation of any new, permanently installed, indoor or outdoor, uncontrolled fireplaces in new or existing developments.

Rule 442: Architectural Coatings. The developer or contractor is required to use coatings that comply with the volatile organic compound content limits specified in the rule.

Rule 460: Adhesives and Sealants. The developer or contractor is required to use adhesives and sealants that comply with the volatile organic compound content limits specified in the rule.

Rule 902: Asbestos. The developer or contractor is required to notify SMAQMD of any regulated renovation or demolition activity. Rule 902 contains specific requirements for surveying, notification, removal, and disposal of asbestos containing material.

Naturally Occurring Asbestos: The developer or contractor is required to notify SMAQMD of earth moving projects, greater than 1 acre in size in areas “Moderately Likely to Contain Asbestos” within eastern Sacramento County. Asbestos Airborne Toxic Control Measures, Section 93105 & 93106 contain specific requirements for surveying, notification, and handling soil that contains naturally occurring asbestos.

SMUD™

September 6th, 2013

Ms. Catherine Hack
Department of Community Development
Planning and Environmental Review Division
827 7th Street, Room 220
Sacramento, CA 95814

SUBJECT: COMMENTS ON THE NOTICE OF PREPARATION OF A DRAFT ENVIRONMENTAL IMPACT REPORT FOR JACKSON TOWNSHIP SPECIFIC PLAN (Control Number PLNP2011-00095)

Dear Ms. Hack,

Thank you for the opportunity to comment on the Notice of Preparation (NOP) of a Draft Environmental Impact Report (DEIR) for the Jackson Township Specific Plan. The Sacramento Municipal Utility District (SMUD) is the primary electricity provider for Sacramento County, the proposed project location. SMUD's vision is to empower our customers with solutions and options that increase energy efficiency, protect the environment, reduce climate change impacts, and lower the cost to serve our region. As a Responsible Agency, SMUD's goal is to ensure that the construction and operation of the proposed Jackson Township Specific Plan limits the potential for significant environmental effects on SMUD facilities, employees, and customers.

SMUD's active participation in the California Environmental Quality Act (CEQA) process ensures that our community power requirements are integrated into the planning and environmental review process. Our CEQA involvement is consistent with SMUD's strategic directives and core values, which call for us to ensure a safe environment for its employees and customers (Policy SD-6) and to promote environmental leadership through community engagement, improved pollution prevention, energy efficiency and conservation, and conservation (Policy SD-7).

It is our desire that the Jackson Township Specific Plan acknowledge any project impacts related to the following:

- Overhead and or underground transmission and or distribution line easements
- Electrical load needs/requirements
- Energy Efficiency
- Utility line routing
- Utility infrastructure expansion
- Climate Change

Printed on Recycled Paper

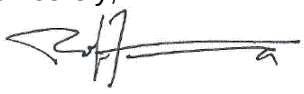
In addition, SMUD had the opportunity to provide comments on the Sacramento County Master Data Needs Letter and preliminary Jackson Township Specific Plan; please see the attached copy of our letter that identifies areas of interest for SMUD's evaluation of Jackson Township's electricity demands. Based on SMUD's review of the NOP and our understanding of the proposed project we feel that any issues pertaining to our current infrastructure and any need for future infrastructure have been considered at an appropriate level at this time. However, the projected load for the area has increased from the estimated 44 MW to 50 MW with the addition of square footage to the project area. Given this increase, there are no changes to the referenced electrical facilities. It is SMUD's expectation that the environmental impacts of any new onsite and/or offsite infrastructure required for development of the Jackson Township Specific Plan will be analyzed in the EIR.

SMUD would like to be kept apprised of the planning, development, and completion of this project. Should any changes stated in this NOP occur, SMUD is interested in communicating with the project proponents for future planning purposes. Please ensure that the information included in this response is conveyed to the project planners and any project proponents.

Future CEQA documents should be sent to the attention of the Environmental Management Department at the following address:

Sacramento Municipal Utility District
Attention: Rob Ferrera
Environmental Management
6201 S Street, MS B203
Sacramento, CA 95817

Environmental leadership is a core value of SMUD and we look forward to collaborating with you on this project. Again, we appreciate the opportunity to comment on this NOP. If you have any questions regarding this letter, please feel free to contact me at (916) 732-6676.
Sincerely,



Rob Ferrera

Mr. David Defanti, Senior Planner
Sacramento County
Department of Community Development
Planning and Environmental Review
827 7th Street, Room 230
Sacramento, CA 95814

Re: Sacramento County Master Plan Data Needs Letter and Jackson Township Specific Plan

Dear Mr. Defanti:

Thank you for the opportunity to comment on the preliminary Jackson Township Specific Plan and to participate on the Master Plan/Specific Plan Technical Advisory Committee (TAC) for Jackson Township and the other Specific Plan Areas. The Sacramento Municipal Utility District (SMUD) currently serves as the primary electricity provider for Sacramento County.

This letter is sent in response to Sacramento County Planning's request for initial feedback from SMUD in advance of the issuance of a Notice of Preparation for the Jackson Township Specific Plan California Environmental Quality Act (CEQA) process. The first part of this letter outlines an initial list of specific data SMUD needs to begin evaluating the projected electricity needs of the Jackson Township development.

Recognizing that Jackson Township is one of several new growth areas being developed in approximately the same area within roughly the same timeframe, the second part of our letter outlines an initial list of the cumulative data SMUD needs to begin evaluating the projected electricity needs of Jackson Township and its future surrounding communities.

The nature of planning for the expansion of an electric system to serve the number and diversity of future electric customers projected makes the cumulative data extremely important. It is the projection of future build out that will allow SMUD to meet our customers' energy needs, as well as the type and location of above ground infrastructure including transmission lines, substations, transformers, switches, distribution lines (which can be undergrounded), and other electric facilities.

SMUD HQ | 6201 S Street | P.O. Box 15830 | Sacramento, CA 95852-0830 | 1.888.742.7683 | smud.org

Printed on Recycled Paper

1) **Jackson Township Specific Plan:** SMUD has reviewed the Proposed Jackson Township Specific Plan and land use information derived from the applicant-submitted Project Description document available on the Sacramento County website. While SMUD is providing these initial comments, energy facility requirements and proposed locations of these facilities may be refined based on changes to the land use plan and information currently available. The cumulative analysis of projects within the Jackson Highway Area (area bound by Douglas Road on the north, Sunrise Boulevard on the east, Calvine Road to the south and an area west of South Watt Avenue/Florin Road), may provide additional insight to additional requirements and future comments. SMUD is requesting the following information to better analyze the electricity needs of the plan area:

   - A general phasing plan including an anticipated project construction start date, number of units/non-residential square footage per phase, and anticipated date(s) of completion or each phase.
   - Information regarding the developers' desire to incorporate on-site energy generation in the plan area. If so, who are the end users of this energy?
   - Whether there are any brownfield areas on-site?
   - Encourage the developer to work with SMUD early in the development process to identify opportunities to participate in SMUD programs. Additional information that would be helpful in determining the appropriate program use includes:
     i. A more detailed explanation of building type for non-residential development including commercial, industrial, office and public/quasi-public uses.
     ii. Work with the developer to understand the proposed orientation of buildings as tentative maps are processed.
     iii. Whether there are any energy efficiency measures (e.g., SMART homes, SMART appliances, energy efficient lighting, rooftop solar, etc.) and/or Net Zero proposals incorporated into the plan.

   SMUD has identified the existing SMUD facilities within the Jackson Township Specific Plan Area:

   - Four 230 kV lines in the common corridor that runs through the proposed south-easterly portion of the Jackson Township development area. Two of the lines are owned by SMUD and two are owned by PG&E. The SMUD lines are the Cordova-Hedge 230 kV line and the Cordova – Pocket 230 kV line. Please provide a drawing that overlays the transmission lines and easements with the proposed plan.

   Based on the land use information provided, the estimated demand for the Jackson Township Specific Plan Project is approximately 44 MW. Below is a list

of the proposed sub-transmission and distribution substation electrical requirements.

- SMUD has not identified any new transmission facilities (230 kV) necessary to maintain reliability or serve load in our 10-year planning horizon for this geographic area. With that said, SMUD Grid Planning continues to evaluate transmission options that may be required for proposed development through the 2022 planning period and beyond as well as transmission required to access and deliver renewable energy resources.
- A new distribution substation in the vicinity of Jackson Highway and the proposed Tree View Lane. New electrical substations generally require a ½-acre to ¾-acre parcel. Location of this site may be refined depending on environmental data provided for this site location. The Parcel on which the substation is to be located will be dedicated to SMUD.
- Installation of new sub-transmission (69 kV) electrical lines along Kiefer Boulevard.
- Installation of new sub-transmission (69 kV) electrical lines along Jackson Highway.
- Installation of new sub-transmission (69 kV) electrical lines along Excelsior Road.
- Additional new sub-transmission (69 kV) electrical lines may be required depending upon where the new electrical substation is sited.

In addition, the following requirements would apply:

- Certain uses are not permitted or compatible with the safety, operation, maintenance and construction of our transmission lines facilities. No structures/buildings or residential uses are allowed within the easement including covered parking, swimming pools, gazebos, wells and man-made reservoirs, lands or similar bodies of water. Any open space/park uses and facilities proposed within the transmission line easement will need to be discussed with SMUD.
- Tree, landscaping, light standards and equipment shall not exceed 15 feet in height within the easement area.
- SMUD's transmission easement should be designated on subdivision/parcel maps as "RESTRICTED USE AREA-NO BUILDING."
- All cut, fill and grading within SMUD's transmission easement must be conducted in a manner so that minimum horizontal and vertical clearances are maintained in accordance with California Public Utilities Commission General Order No. 95. Any violations shall be corrected at the owner's expense.

- Vehicular access to the transmission easement shall be provided at all times.
- All sub-transmission electrical lines will be routed overhead in an easement outside the rights-of-way of on-site project streets. Typically, for the sub-transmission 69 kV lines, a twenty-five (25) foot public utility easement for overhead and underground facilities and appurtenances adjacent to all public street rights of ways will be required at time of subdivision/parcel map for all existing and new transmission lines.
- The owners/developers must disclose to future/potential owners the existing and proposed 69 kV lines, 230 kV lines and substations.

Additional data is required to conduct the cumulative analyses. The Jackson Township Specific Plan comments may need to be updated during the environmental review process once the cumulative analysis has been conducted.

2) **Data Needs for Cumulative Impacts:** The following information is required to determine the sequencing of transmission/distribution development and to evaluate the cumulative impacts of the Specific Plans/Master Plans on electrical utility provisions and operations. This information will not only be required for the proposed Specific Plans/Master plans including NewBridge, West Jackson Highway, and Mather South; but is also being required for approved Master Plans including Vineyard Springs Comprehensive Plan, North Vineyard Station Specific Plan, Florin-Vineyard Gap Community Plan, Easton Specific Plan, and Cordova Hills Master Plan.

   - A description of the land use mix including number of units for residential development or building square footage for non-residential uses, number of acres per land use type, density.
   - A general phasing plan including a anticipated project construction start date, number of units/non-residential square footage per phase, and projected date of completion. While we fully expect these numbers to be preliminary, this data will assist us in determining where facilities should be placed and what we need to plan for them in the foreseeable future.
   - Land use diagrams showing proposed land use locations and proposed utility locations.
   - A clear project description for each Master Plan/Specific Plan proposal.
   - A description of any proposed large customers.
   - Any previously prepared environment constraints studies or technical studies.
   - A list of and description of any previous CEQA or National Environmental Policy Act (NEPA) certifications.
   - Information regarding proposed undergrounding.
   - Any energy efficiency measures and Net Zero proposals.

We appreciate the opportunity to comment on the preliminary plan and look forward to collaborating with the plan team on future work product. All correspondence for the Jackson Township Specific Plan should be addressed to the individuals listed below:

9/4/2013 VIA EMAIL

Catherine Hack, Environmental Coordinator
Department of Community Development
Planning and Environmental Review Division
827 7th Street, Room 220, Sacramento, CA 95814

RE: Notice of Preparation of a Draft Environmental Impact Report for Jackson Township Specific Plan (Control Number PLNP2011-00095)

Dear Ms. Hack:

Thank you for the opportunity to comment on the Jackson Township Specific Plan NOP. We hope the following comments will encourage the County of Sacramento to evaluate the potential impacts to public health that may be caused by the proposed development, which includes 6,143 residential units, 1,996,100 square feet of commercial and office uses, 105 acres for fire station/community center and elementary, middle, and high schools, 379 acres for parks and open space, and 200 acres for agriculture and primary roadways.

The Notice of Preparation for the Jackson Township Specific Plan indicates that "a Traffic Impact Study will be performed to examine the effects of proposed project development and facilities on area roadways." However, more than just area roadways may be affected by the proposed project. Distances between home, work, school and shopping that are too great for walking or bicycling often force people to drive and a transportation network that serves primarily car trips with wider and faster roads and/or fewer crossing opportunities increases the rates and severity of collisions for pedestrians and bicyclists. Further, transportation systems and land-use patterns can have a harmful impact on health. People in communities built to facilitate automobile travel, and where there are few, inconvenient or unsafe options for walking and biking, are at greater risk for inadequate physical activity, obesity and chronic diseases. In Sacramento County, only 37% of adults achieve the U.S. Centers for Disease Control and Prevention recommended minimum for physical activity.

For members of the public and their elected representatives to make informed conclusions and decisions regarding new development, the full impacts to the health and safety of people must be evaluated. The State of California, in CCR 15126.2 Consideration and Discussion of Significant Environmental Effects, provides that short-term and long-term effects of the project are to be considered by environmental impact reports and "*the discussion should include . . . health and safety problems caused by the physical changes*". Public Resource Code §21083 states that the Office of Planning and Research shall develop guidelines for implementation, including criteria for determining if

909 12th Street, Suite #203 • Sacramento, CA 95814 • 916-446-9255 • fax 916-443-9255
www.walksacramento.org

a project may have a significant effect on the environment. One of the conditions under which such a determination of significance would be made is if "*the environmental effects of a project will cause substantial adverse effects on human beings, either directly or indirectly.*"

WALKSacramento asks that the environmental impact report for the Jackson Township Specific Plan consider the health and safety impacts to people resulting from the proposed community design, land uses, transportation facilities and circulation network. The analysis could include vehicle miles travelled, vehicle collisions, walking mode share, pedestrian hazards and safety, and opportunities to walk to school, shopping, work, transit, recreation and socializing. Alternatives and mitigations for impacts to health and safety should also be identified.

Sincerely,

Chris Holm
Project Analyst

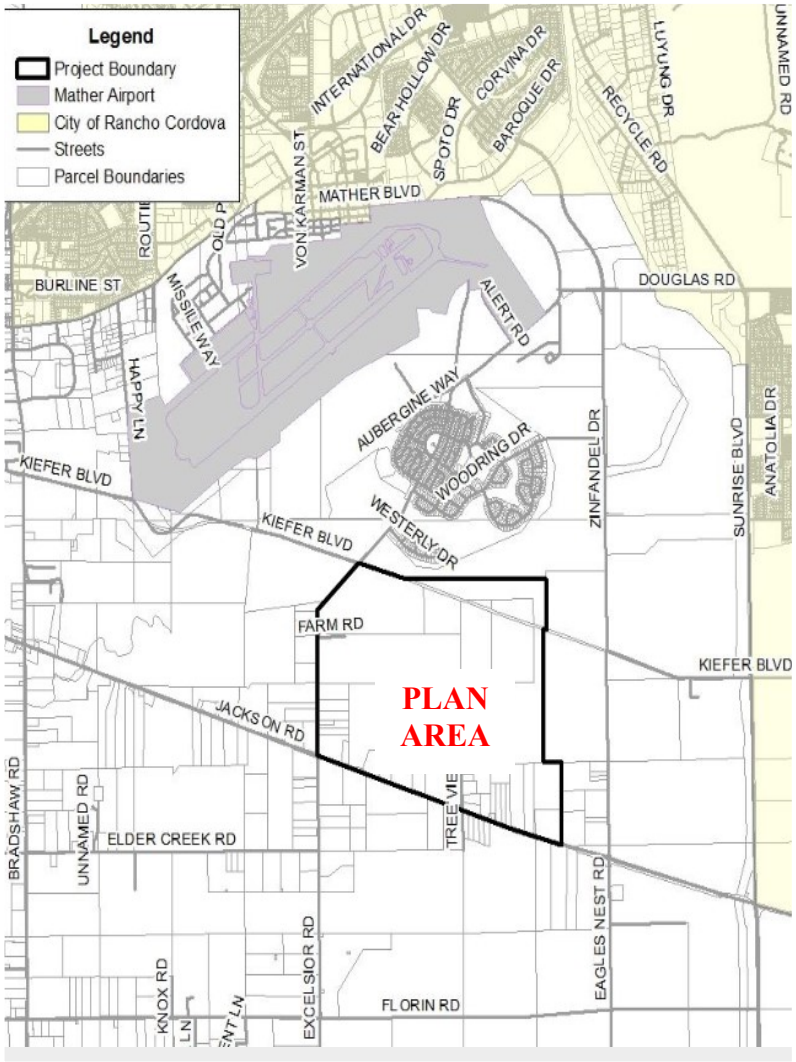
EXECUTIVE SUMMARY

The Jackson Township Specific Plan (JTSP) directs the formation of the approximately 1400 acre master planned community located within the Jackson Highway area, near the "geographic center" of the County. The Plan Area is located east of Excelsior Road, west of Eagles Nest Road, south of the Mather Airport and north of Jackson Road.

The JTSP represents the opportunity to implement the collective vision of the General Plan, the SACOG Blueprint and the applicant to create a sustainable, healthy and successful community in the Jackson Highway corridor. The overarching vision is of a vibrant and self-sustaining community that incorporates environmentally sustainable practices, distinct and walkable neighborhoods featuring complementary land uses and the integration of open space as the foundation of the community.

The Jackson Township Specific Plan Area (Plan Area) is a self-sustaining, mixed-use community including a broad spectrum of residential uses, employment, retail and supporting uses, recreational, open space and public uses. The projected yields, at full build out, would provide up to approximately 5,700 dwelling units and 5,200 jobs.

Specific plans provide an opportunity to creatively implement the intent of the General Plan and serve as a refinement of General Plan policies. The JTSP is the primary land use, policy and regulatory document used to guide development of the Plan Area. The Specific Plan establishes a development framework for land use, community design and character, infrastructure improvements and a subsequent project approval structure for



EXECUTIVE SUMMARY

orderly development within the approximately 1,400 acre Plan Area. The Specific Plan document is organized as follows:

- **Chapter 1-Introduction**: summarizes the purpose, background, organization and authority of this document.
- **Chapter 2-Plan Area Context**: describes the location, natural setting, and land use conditions on and adjacent to the Plan Area.
- **Chapter 3-Community Vision and Land Use**: identifies the vision and organizing principles that guide the physical form and development patterns of the Plan Area, depicts the overall land use plan and land use districts that constitute the Plan Area.
- **Chapter 4-Circulation and Mobility**: describes the network to accommodate the movement of vehicles, pedestrians and bicyclists.
- **Chapter 5-Public Utilities:** describes plan-wide water, wastewater, storm drainage, electric, natural gas, and communications.
- **Chapter 6-Public Services:** identifies plan-wide public services including parks, schools, libraries, law enforcement, fire and solid waste.
- **Chapter 7-Resources & Sustainability:** identifies the environmental conditions and sensitive resources found in the Plan Area and describes the project's sustainability features.
- **Chapter 8-Implementation**: describes phasing, implementation procedures and strategies for financing and maintenance of public facilities and services.
- **Chapter 9-Administration:** outlines the Specific Plan process and its relationship to the subsequent entitlement processes, describes the administrative procedures to implement and amend, interpret and enforce the Specific Plan.

- **Appendices:** Appendices provide supporting analysis and technical detail for many aspects of the Specific Plan, including:
  - Appendix A-Development Standards
  - Appendix B-Design Guidelines
  - Appendix C-Potable Water System Study
  - Appendix D-Wastewater Master Plan
  - Appendix E-Master Drainage Study
  - Appendix F Infrastructure Master Plan
  - Appendix G-Public Facilities Financing Plan (PFFP)
  - Appendix H-Urban Services Plan (USP)
  - Appendix J-Planning Area Detail

- **Related Documents**

Related documents include, but are not limited to:

  - Environmental Impact Report
  - Sacramento County General Plan
  - Sacramento County Zoning Code
  - Sacramento County Improvement Standards
  - Development Agreements

CHAPTER ONE: INTRODUCTION

1.1 OVERVIEW

The Jackson Township Specific Plan (JTSP) directs the formation of the 1400 acre master planned community located within the Jackson Highway area. The overarching vision is of a vibrant and self-sustaining community that incorporates environmentally sustainable practices, distinct and walkable neighborhoods featuring complementary land uses and the integration of open space as the foundation of the community.

The Jackson Township Specific Plan proposes a self-sustaining, mixed-use community including a broad spectrum of residential uses, employment, retail and supporting uses, recreational, open space and public uses. The projected yields, at full build out, would provide up to approximately 5,700 dwelling units and 5,200 jobs. The Jackson Township community will be an integrated community where residents can live, work, shop, educate, recreate and gather as a community.

Emphasis has been placed on creating a vibrant, comprehensively planned, sustainable community: one that generates a sense of place for residents and visitors. The amenities and natural resources will provide residents with an identifiable location that they can call "home" for generations to come.

1.2 PROJECT BACKGROUND AND HISTORY

The Plan Area is approximately 1,391 acres in size and is located east of Excelsior Road, west of Eagles Nest Road, south of the Mather Airport and north of Jackson Road, as shown on Exhibit 1.1. The Plan Area is outside of the Urban Policy Area (UPA); however the north boundary of the Plan Area is directly adjacent to the UPA boundary. The Plan Area is comprised of approximately 40 parcels, ranging in size from less than 1 acre to 214 acres. The primary land uses are grazing, agricultural residential development and the Sacramento Raceway. The Plan Area is comprised of one "participating" landowner and numerous "non-participating" landowners.

Exhibit 1.1: Project Location

1.3 KEY FEATURES AND PROJECT OBJECTIVES

The JTSP represents the opportunity to implement the collective vision of the General Plan, the SACOG Blueprint and the applicants to create a sustainable, healthy and successful community in the Jackson Highway corridor. Sustainability is measured in terms of providing infrastructure and a built environment that are coordinated to conserve resources and use renewable resources. Healthy is measured in the quality of life and the array of community services that are provided. Success will be measured by the test of time, as Jackson Township grows and emerges over the next 20 to 30 years, and then matures as a place that is vibrant, stable and a desirable place to live and work.

1.3.1 Project Objectives

The following summarizes the project objectives that guided the planning of Jackson Township Specific Plan:

- Establish an approximately 1,400+ acre mixed-use community which incorporates feasible, smart growth principles to lower greenhouse gas emissions and provides protection of valuable environmental resources, resulting in:
  a) an economically stable, sustainable community with a broad range of compatible land uses that provide a balance of jobs and housing, including residential, commercial, office, mixed-use, recreation and public/quasi-public uses;
  b) financially viable homes and businesses which provide a high level of energy efficiency and an attractive, well maintained community;

c) a Land Use Plan which is consistent with General Plan Policy LU-120 and the SACOG Blueprint smart growth principles.

- Establish a land use and circulation system that promotes a variety of non-vehicular modes within a community environment that is safe, accessible and convenient for all modes of travel.
- Promote a diversity of housing opportunities responsive to regional needs and market conditions including single-family dwellings, apartments, townhouses and live-work units that serve a broad range of family incomes.
- Provide a comprehensively planned infrastructure system to serve the entire Plan Area and ensure funding for the on-going maintenance needs of the parks, open space facilities, public services and infrastructure.

1.4 PURPOSE AND LEGAL AUTHORITY OF THE SPECIFIC PLAN

Specific plans provide an opportunity to creatively implement the intent of the General Plan and serve as a refinement of General Plan policies. The JTSP is the primary land use, policy and regulatory document used to guide development of the Plan Area. The specific plan establishes a development framework for land use, community design and character, infrastructure improvements and a subsequent project approval structure for orderly development within the approximately 1,400 acre Plan Area.

Preparation of a specific plan is authorized by Section 65450 et seq. of the Government Code. Government Code Section 65451 mandates that a specific plan include a text and a diagram or diagrams which specify all of the following in detail:

1) The distribution, location, and extent of the uses of land, including open space, within the area covered by the plan.

(2) The proposed distribution, location, and extent and intensity of major components of public and private transportation, sewage, water, drainage, solid waste disposal, energy, and other essential facilities proposed to be located within the area covered by the plan and needed to support the land uses described in the plan.

(3) Standards and criteria by which development will proceed, and standards for the conservation, development, and utilization of natural resources, where applicable.

(4) A program of implementation measures including regulations, programs, public works projects and financing measures necessary to carry out paragraphs (1), (2), and (3).

The specific plan must also contain a statement of relationship of the specific plan to the General Plan. Consistency with the General Plan is required by state law. Furthermore, no zoning, tentative maps, parcel maps, or public works projects can be approved, adopted, or undertaken unless they are consistent with the adopted specific plan. The JTSP was prepared pursuant to State Law and is compatible with the applicable policies and programs of the General Plan.

1.5 RELATIONSHIP TO COUNTY PLANS & REGULATIONS

1.5.1 Sacramento County General Plan

The California Government Code requires that Specific Plans be consistent with the local jurisdiction's adopted General Plan. The General Plan is a statement of the community's land use values and is the underlying basis for its vision and direction. An analysis of the consistency of the JTSP with applicable General Plan policies and actions is provided in the EIR.

1.5.2 County Zoning Code

The JTSP includes Development Standards(Appendix A) and Design Guidelines (Appendix B), which are adopted into the Jackson Township Special Planning Area Ordinance (Sacramento County Zoning Code Title V, Chapter 8, Article__) These regulations shall govern development, improvements and construction within the Plan Area.

1.5.3 Sacramento County Improvement Standards

The Sacramento County Improvement Standards establish basic standards and detail sheets for construction of public infrastructure. These standards and specifications apply to all construction within the Plan Area, unless otherwise addressed herein. To the extent that a component or regulation of the Specific Plan differs from a requirement of the Standards, the Specific Plan will take precedence. Where the Specific Plan is silent, the Standards will be used for purposes of interpretation, and/or directly applied as appropriate.

1.6 SPECIFIC PLAN RELATED DOCUMENTS

1.6.1 Environmental Impact Report

Sacramento County is the lead agency in the preparation and certification of an Environmental Impact Report (EIR), pursuant to the California Environmental Quality Act (CEQA). The EIR for the JTSP (Control Number: PLNP 2011-00095, State Clearinghouse Number 201308201) examines the environmental impacts of the proposed plan and identify potential changes in the environment that would result from implementation of the plan. CEQA Guidelines Section 15183 provides that projects consistent with development density, zoning, community planning, and the general plan for which an EIR was certified do not trigger a new environmental review unless there are new impacts that have not already been properly addressed. Section 65457(a) of the California Government Code and CEQA Guidelines Section 15182(a) provide that no EIR or negative declaration is required for any residential project undertaken in conformity with an adopted Specific Plan for which an EIR has been certified.

The EIR for the Jackson Township Specific Plan is intended to qualify subsequent projects within the Plan Area for these exemptions, assuming those projects are consistent with the adopted Specific Plan, and fulfill all applicable Zoning conditions and CEQA mitigation measures.

1.6.2 Development Agreements

Subject to the provisions of the Specific Plan, the property owners and the County may execute Development Agreements in accordance with Section 6.2.2 of the County Zoning Code.

1.6.3 Development Standards

Concurrent with the approval of this Specific Plan, Development Standards were adopted by Sacramento County. The Jackson Township Development Standards (DS) act as the zoning regulations for the Plan Area. The Development Standards set forth the permitted uses, development standards and other regulations for the Plan Area. When conflicts occur between the provisions in the County Zoning Ordinance or the County Improvement Standards and the DS, the provisions of the JTDS shall apply. Where the DS do not address a specific provision, the County Zoning Ordinance and/or Improvement Standards shall govern development in the Plan Area.

1.6.4 Design Guidelines

Concurrent with the approval of this Specific Plan, Design Guidelines for the JTSP were approved by Sacramento County. The JTSP Design Guidelines (Appendix B) provide specific direction for the development of all land uses to ensure quality and consistent design treatment.

1.7 PROPOSED ENTITLEMENTS

Implementation of the Specific Plan requires approval of the following entitlements by the Sacramento County Board of Supervisors:

- A General Plan Amendment to move the Urban Policy Area (UPA) boundary south to include the Jackson Township Specific Plan.
- A General Plan Amendment to amend the Land Use Diagram designations, to amend the Transportation Diagram and the Bicycle Master Plan.
- A Community Plan Amendment to amend the Vineyard and Cordova Community Plans.
- Adoption of the Jackson Township Specific Plan including a Specific Plan land use diagram, Design Guidelines and Development Standards.
- Adoption of a Public Facilities Financing Plan for the Jackson Township Specific Plan that describes a Capital Improvement Program and funding and financing strategy for planned improvements.
- Adoption of an Urban Services Plan for the Jackson Township Specific Plan that describes the cost to provide annual public services and the funding sources identified to cover projected costs.
- Adoption of a Water Supply Master Plan Amendment to amend the existing Zone 40 Water Supply Master Plan.
- A Zoning Ordinance Amendment to establish the Jackson Township Special Planning Area (SPA) for the first phase will occur subsequent to the approval of the entitlements listed above.

In addition to the above listed entitlements, separate annexation requests to LAFCo include:

- Sphere of Influence Amendment (SOIA) and concurrent Annexation to County Service Area (CSA) 10 or creation of a new CSA.
- Annexation to Sacramento Regional County Sanitation District (SRCSD).
- Annexation to Sacramento Area Sewer District (SASD).

Future applications will be subject to the policies, improvement standards, development standards and design guidelines included in this specific plan. Future approvals may include, but are not limited to, the following:

- Large Lot Tentative Maps
- Tentative Subdivision Maps
- Lot Line Adjustments
- Site Plan Review
- Use Permits
- Variances
- Project Development Agreements
- Encroachment Permits
- Subdivision Improvement Agreements
- Zoning Ordinance Amendments to establish subsequent SPA's

CHAPTER TWO: PLAN AREA SETTING

2.1 REGIONAL CONTEXT

The Plan Area, approximately 1,391 acres in size, is located in the "geographic center" of Sacramento County, lying south of the Mather Specific Plan Area, east of Excelsior Road, north of Jackson Highway and west of Eagles Nest Road, primarily within the Vineyard Community. The portion of the Plan Area north of Kiefer Boulevard is within the Cordova Community. Exhibit 2.1 depicts the Plan Area location within the regional context.

2.1.1 2.1.1 Pre-Specific Plan Land Use Designations

The General Plan designates the Plan Area as Extensive Industrial and General Agriculture 20 acres. The Community Plan and zoning designations are Light Industrial (M-1), Industrial Reserve (IR) and Permanent Agriculture (AG-80).

2.2 PLAN HISTORY AND SETTING

2.2.1 Site History

The Plan Area lies along the boundary between the historical Brighton and Lee townships. Brighton Township was originally established by the court of sessions in 1851. Lee Township was formed in 1856 by the Sacramento County Board of Supervisors. Lee Township was carved out of what was originally San Joaquin and Cosumnes townships.

One of the earliest Europeans to cross the vicinity of the Plan Area was William Daylor, who was employed by John Sutter. In 1848, Daylor partnered with William Grimshaw and opened a store and Indian trading post at Daylor's ranch on the Cosumnes near present day Sloughhouse. The trading post was on the Jackson Road, a wagon road from Sutter's Fort to the Southern Mines. Built on this historic

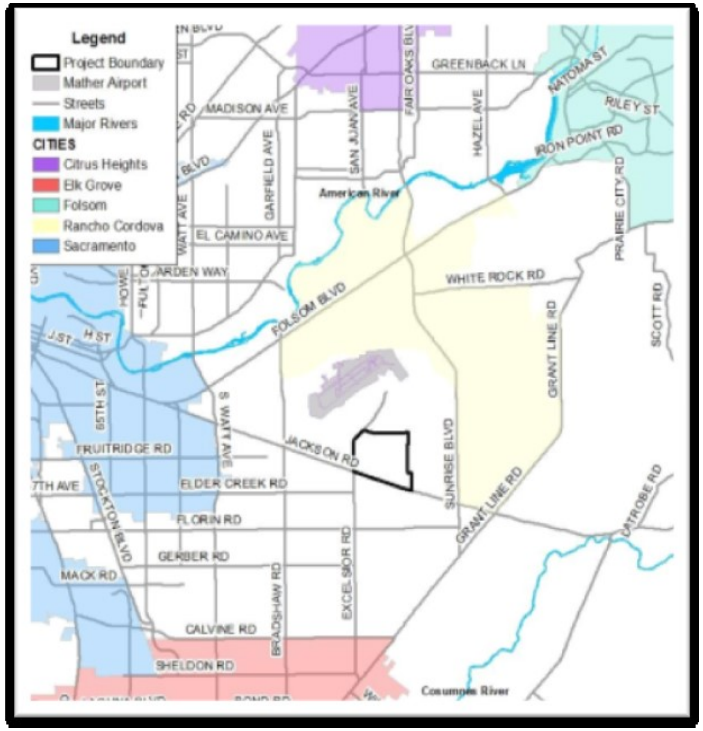


Exhibit 2.1 Regional Location

route, Jackson Highway (State Route 16) today constitutes the south boundary of the Jackson Township Specific Plan Area.

Essentially all the early settlers of this area were involved in dry farmed grain production and/or cattle or sheep ranching. By 1910, the Natomas Company of California owned most of the Plan Area. In the mid-1950s, an easement for a massive electrical transmission line was acquired across a portion of the Plan Area. During the same era, the Plan Area was still sparsely inhabited, comprised of approximately 7 dwellings and a ranch complex including a small reservoir.

By 1967, the Carmichael quadrangle map depicts a total of 13 buildings and a drag racing complex developed in the central portion of the Plan Area, known as the Sacramento Raceway. During this same period, approximately 16 residential dwellings were constructed within the Plan Area, primarily along Jackson Highway and Excelsior Road.

2.2.2 Setting

The Plan Area is comprised of 24 different landowners. Excelsior Estates, LLC is the participating landowner, represented by Angelo G. Tsakopoulos as the applicant. The applicant owns and/or controls approximately 883 acres (approx. 64 % of the total) within the Plan Area boundaries. In addition to the applicant properties, the pre-Specific Plan land uses within the Plan Area include grazing, small ranches, agricultural residential homes and the Sacramento Raceway. Exhibit 2.2 depicts an aerial photograph of the undeveloped Plan Area and adjacent lands.

2.2.3 Adjacent Uses

Adjacent land uses to the Specific Plan Area include the following:

West: The site is bound to the west by Excelsior Road, and the area is characterized by an assortment of industrial and agricultural uses, including mining and decorative stone and rock sales. This area is within the West Jackson Highway Master Plan Area.

North: The Mather Field Special Planning Area is located north of the Plan Area boundary and includes Independence at Mather, a nature preserve, the Mather Commerce Center and Mather Regional Park, which includes the Mather Golf Course. Additional land uses north of the Mather Special Planning Area include the Stone Creek residential community.

East: Existing land uses along the eastern Plan Area boundary include agricultural and industrial lands, including, grazing, agricultural residential uses and the Sacramento Rendering Plant. This area is also generally within the NewBridge Specific Plan Area. The NewBridge Specific Plan includes a proposed wetland preserve area located west of Eagles Nest Road, adjacent to the proposed wetland preserve within the JTSP. Together, the two adjacent wetland preserves will create a natural corridor consistent with the goals of the proposed South Sacramento

South: Existing land uses to the south of the Plan Area are primarily small ranches, agriculture and wetland preserve.

2.3 PROJECT BACKGROUND

The formal initiation of the Jackson Township Specific Plan occurred in June 2013; however, the applicant began the pre-planning and visioning process in early 2004. The applicant's vision is to diverge from the norm of development in the prior decades and to create a self-sustaining, mixed use "complete" community with a range of residential densities and a compact form.

CHAPTER 2: PLAN AREA SETTING AND CONTEXT

The SAGOG Blueprint, adopted in 2005, acknowledged the Jackson Highway Corridor as an appropriate and logical area to urbanize. The County 2030 General Plan, adopted in 2011, contemplated new growth areas to occur via expansion of the Urban Policy Area (UPA), including the Jackson Highway area. General Plan policies, namely LU-119 and 120, provided a clear process and guidance, based on smart growth principles, for the master plans/specific plans to be prepared for new communities.

The land use process for the JTSP evolved over numerous years. The framework provided by the Blueprint, the General Plan, AB 32 and SB 375 helped inform and discern the planning process along the way. Outreach and collaboration with community groups, stakeholders, landowners, community members and area residents resulted in refinement of the Preferred Land Use Plan. In addition to the Preferred Land Use Plan, a number of land use alternatives were studied as part of the EIR to analyze different variations to the Land Use Plan. The Alternatives are described in full detail in the EIR.

2.4 CONSTRAINTS & OPPORTUNITIES

Natural resources, drainage, noise and utility easements were the primary Plan Area conditions that were considered in the site analysis and the design of the land plan. Such conditions influence both opportunities and constraints to the future development of the Plan Area.

CHAPTER 2: PLAN AREA SETTING AND CONTEXT

2.4.1 Natural Resources

The land uses within the Plan Area and surrounding lands include rangeland, rural residential and cropland. Habitat types occurring within the Plan Area include annual grassland, irrigated pasture and ditch, northern hardpan vernal pool, seasonal wetland, marsh, irrigation pond, and ephemeral drainages. Known or potential biological constraints within the Plan Area include sensitive habitats associated with Morrison Creek, vernal pools, marshes, other potential waters of the U.S.; potential habitat for special-status vernal pool and other plant and animal species; potential foraging and nesting habitat for Swainson's hawk, a state-listed species, and other special-status birds species; and protected trees. See Chapter 7.2 for a complete description of the Plan Area natural resources.

2.4.2 Drainage

The Plan Area lies on the Sacramento Plains between the American River on the north, the Sacramento River on the west and the Cosumnes River on the south and east. The natural drainage system of the Plan Area transports water in a west southwesterly direction to a series of lakes on the east side of the Sacramento River. The drainage system is known as the Morrison Creek Stream Group Basin. The Morrison Creek drainage system lies largely outside the west boundary of the Specific Plan. However, a small tributary drainage takes up the northwest corner of the Plan area. A second drainage, Elder Creek, drains the central portion of the Specific Plan area northeast to southwest. The 1967 U.S.G.S. Carmichael Quadrangle illustrates ponds, reservoirs and wetlands associated with the Elder Creek drainage system.

View looking east along north property line

2.4.3 Noise

Existing sources of potential noise in the Plan Area vicinity at the time of Specific Plan preparation include Mather Airport, industrial land uses to the west and Jackson Highway, bordering the Plan Area on the south. The Sacramento Raceway, which is part of the Plan Area, operates as Sacramento Raceway Motorsports Park. The facilities include drag racing, stock car and motocross tracks, grandstands, concessions and maintenance facilities.

2.4.4 Easements

Two parallel high voltage electrical transmission lines cross the Plan Area. One of the lines is a SMUD transmission line and the second is a Pacific Gas and Electric Company (PG&E) transmission line. An easement for a water line and right-of-way for the unconstructed portion of Keifer Boulevard are existing along the north boundary.

3: Community Vision /Land Use Plan

3.1 Overview

The following chapter describes the vision for the Plan Area and the land use goals used to implement the project vision. This chapter also describes the development framework for the community and provides detail of the Land Use Plan and Land Use Designations. A description of each land use type is provided, including density and intensity ranges pursuant to each zoning category.

Illustrative View of Town Center Streetscape

3.2 Vision and Principles

The vision for the JTSP responds directly to an overarching theme in the General Plan- grow efficiently. The General Plan Land Use Element begins with this goal: *An orderly pattern of land use that concentrates urban development, enhances community character and identity through the creation and maintenance of neighborhoods, is functionally linked with transit, promotes public health and protects the County's natural, environmental and agricultural resources.* Several strategies are included, one which applies directly to the Plan Area; *Strategy III: Growth Management and Design*. This strategy illustrates the General Plan's intention to create land use patterns that minimize the impacts of new and existing development and maintain or improve the quality, character and identity of neighborhood and community areas. The JTSP land use plan responds to the objective described for New Growth Areas: *New communities that feature a mix of housing, jobs and retail development configured in a compact and transit supportive manner, that incorporate mixed use development (both vertical and horizontal), and that protect environmental resources and preserve open space.*

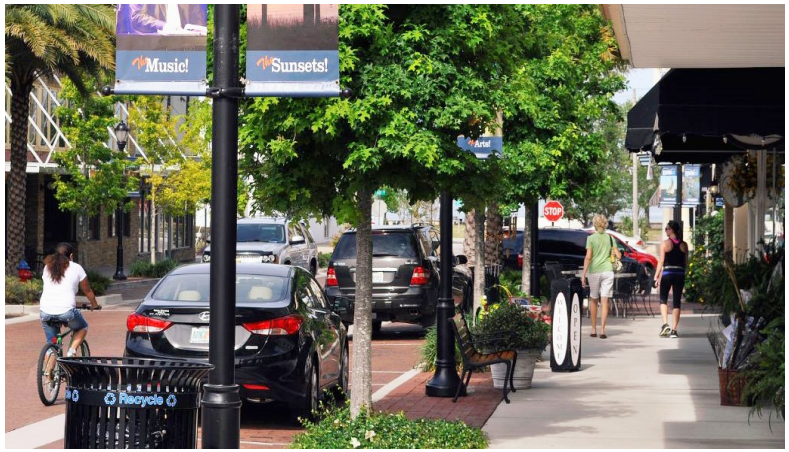
The vision for the Plan Area embraces the framework provided by the General Plan by providing a balanced mix of land uses, their appropriate placement within the Plan Area and an infrastructure network that accommodates regional transportation facilities while providing integrated opportunities for pedestrian and alternative travel modes. The community will be enhanced with a strong sense of place intended to foster social cohesion, one that promotes non-vehicular modes of travel, encourages education and recreation, minimizes energy use and maximizes sustainability.

CHAPTER 3-COMMUNITY VISION/LAND USE PLAN

The JTSP incorporates the following organizing principles into the overall vision:

Principle 1: Design a Distinct Community with a Compact Form

The Land Use Plan is designed to use the land efficiently, by providing a moderately dense mix of land uses in a compact pattern. The Town Center includes both vertical and horizontal mixed uses in an urban setting, with a "Main Street" as a central element, the Village Center and surrounding residential uses have medium to high densities, while the interior neighborhoods have a more conventional form. The land uses are organized in a modified grid pattern to encourage more walking, biking and use of alternative vehicles and to shorten auto trips. Efficiency is achieved through placement of the primary employment uses in close proximity to higher density residential uses and Jackson Road.



Principle 2: Encourage Mixed Use Development

The land plan designates a cohesive mix of complementary land uses to create active, vital neighborhoods, providing an integration of residential uses with appropriately scaled commercial uses in close proximity to each other. The zoning in the Mixed Use (MU) site allows both vertical and horizontal integration of residential and commercial land uses.

Principle 3: Provide Transportation Choices and Transit-Oriented Design

Jackson Township provides a comprehensive roadway and trail system that will maximize the potential for people to walk, ride bicycles or carpool. Streets have been designed in a walkable grid pattern, enhanced by street trees and amenities. These elements, in combination with the greenbelt system within the Plan Area, will result in a pedestrian and bicycle friendly environment that will promote non-vehicular use as a primary choice, becoming a way of life for residents.

The JTSP Mobility Plan designates a transit route, which loops through the Plan Area, and a Transit Center/stop in the Town Center on "Main Street". The anticipated loop transit pattern will provide bus service within one quarter mile of 90% of residents.

Principle 4: Provide Diverse Housing Choices

The JTSP provides a wide variety of places where people can live, including apartments, condominiums, townhouses, live-work units, attached and detached single-family homes. The range of neighborhood types and lot sizes include large rural lots, executive estate size lots, traditional lots and compact lots in a variety of styles. This creates many housing opportunities for families, singles, seniors and people with special needs while providing community identity and diversity.

Principle 5: Emphasize Quality Design

The JTSP emphasizes quality site planning and architectural design as important factors in creating a strong sense of community and sense of place. The design details of the development, such as the relationship of the buildings to the street, setbacks, placement of garages, sidewalks, landscaping, the aesthetics of building design and the design of the public rights-of-way, are factors that influence the attractiveness of living in a compact development and facilitate the ease of walking and biking to work or neighborhood services. Comprehensive Design Guidelines, provided in Appendix B, will ensure that the character and quality of each development fulfills the project vision through the build out of the Plan Area.

Principle 6: Maximize Natural Resource Conservation

The Land Use Plan includes a large open space preserve in the eastern portion of the Plan Area, preserving existing high quality biological habitat which are adjacent to existing preserves in conjunction with the SSHCP. The comprehensive greenbelt and trail system borders and links the preserve area to the rest of the Plan Area, serving as an integral, unifying element of the community. In addition to conserving resources and protecting species, the conservation of natural resources improves overall quality of life by providing places for outdoor enjoyment.

Principle 7: Incorporate Sustainable, Energy Efficient Design

The JTSP incorporates sustainability concepts and practices in the approach to land use, circulation, public utilities, public services and environmental resources. The sustainability elements of energy efficiency, water conservation and water quality build upon the foundation of using land efficiently due to the "smart growth" land use plan. Chapter 7 provides details of the JTSP measures and programs, which will result in a sustainable, eco-aware community which grows responsibly while enhancing and respecting the local, State and global efforts to reduce the impacts of climate change.

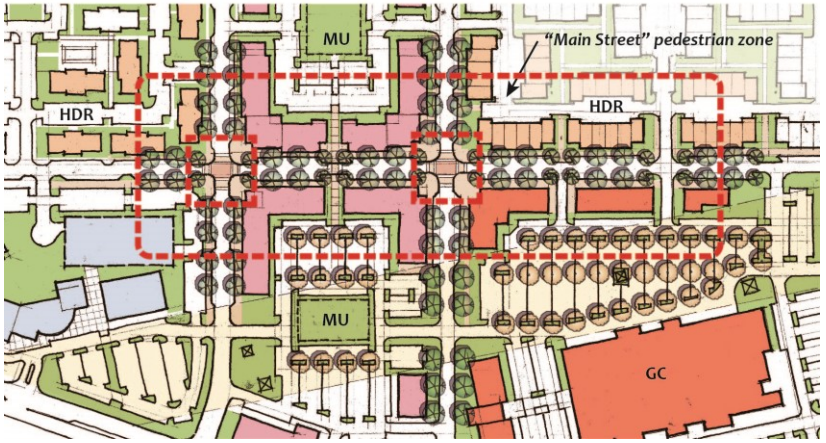
3.3 Community Framework

The development framework of the Plan Area was guided by several key elements that achieve the community's desired physical form, as depicted in Exhibit 3.1, Community Framework. As described in Chapter 2.4, the significant physical elements that influenced the form of the Land Plan are the vernal pool complex on the east and the Morrison and Elder Creek drainages. Other contributing factors are the existing major roadways, primarily Jackson Highway. The key elements that inspired the community design framework are the Town Center, Village Center, Community Gathering Areas and Connected Neighborhoods.

3.3.1 Town Center

The Town Center is strategically located along Jackson Highway between Excelsior Road and Grenville Drive. This gridded 9 block area, approximately 125 acres in size, will provide vibrant commercial, office and mixed use with adjacent medium and high density residential uses to serve at a sub-regional, community and neighborhood level. These

higher intensity uses will help support transit use along the Jackson Highway corridor. The core of the Town Center is the "Main Street", which has a pedestrian enhanced zone. Main Street and the adjacent streets will be lined with multi-story mixed-use retail, office and residential uses. Tree-lined streets provide a comfortable environment for working, shopping, walking and gathering. Both public and private plazas, including a transit stop, are indicated in the MU sites to enhance the Town Center as a hub of community activity with a focus on transit and non-vehicular modes of transportation.



Conceptual Illustration of Main Street Pedestrian Zone

CHAPTER 3-COMMUNITY VISION/LAND USE PLAN

Framework Elements:

Town Center

- Compact, gridded 9 block area with vibrant mix of uses
- Close proximity to transit corridor
- Hub of civic, employment & shopping services within short walking distances
- High intensity housing in node with lower densities radiating outwards

Village Center

- Neighborhood activity/gathering place
- Retail services within ½ mile walking distance of most residences

Community Gathering Areas and Open Space

- Significant community gathering and destination places within a network of trails and greenways
- Joint High School/Middle School and Community Park located to serve as gathering place and hub of neighborhood interaction.
- The wetland preserve provides passive open space and serves as a "green" edge for the east edge of the Plan Area.

Connected Neighborhoods

- 5 minute walk (1/4 mile) from most homes to a school/ park site or open space
- 10 minutes (½ mile) from most homes to the retail/employment nodes
- Tree-lined streets, convenient trails and safe street crossings

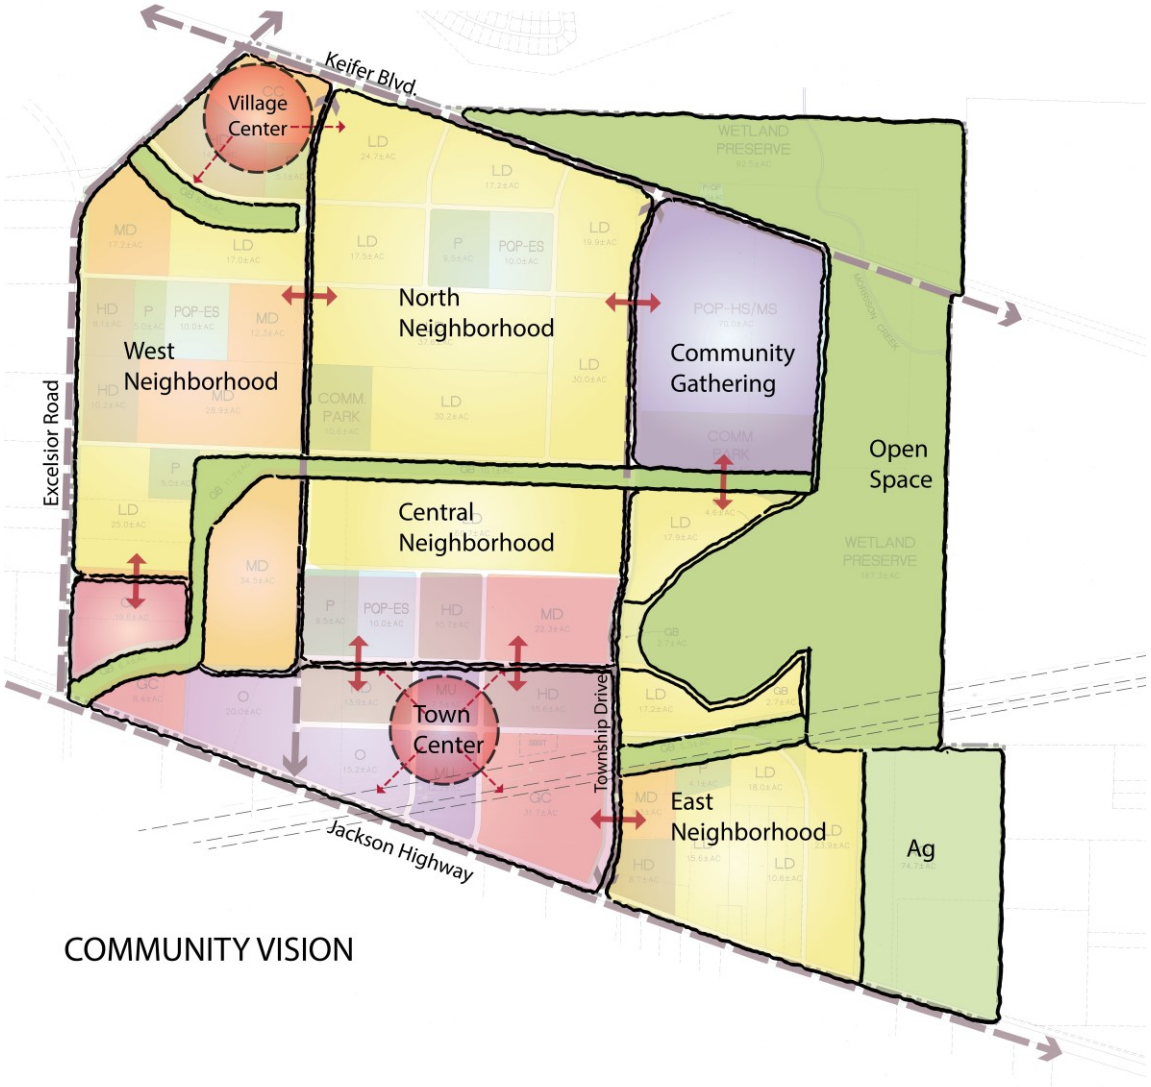


Exhibit 3.1: Community Framework

3.3.2 Village Center

The Village Center commercial site is situated along Excelsior Road at the new intersection with Douglas Road. This smaller hub will provide local commercial and retail uses for the northern and western residential neighborhoods, as well as the existing residents at Independence at Mather.

Example of Village Center Uses

3.3.3 Community Gathering and Open Space Network

A key part of the vision for the Plan Area is that the community is enhanced with a strong sense of place, intended to foster social cohesion, one that promotes non-vehicular modes of travel, encourages education and recreation. The land plan locates significant community gathering and destination places within a network of trails and greenways. The Community Parks, and the expansive joint High School/ Middle School site are ideally located to provide hubs of neighborhood interaction and use. The open space and trail network will facilitate ease of non-vehicular modes to travel from home, work or transit to these community assets.

3.3.4 Connected Neighborhoods

The neighborhoods of Jackson Township are designed to provide a mix of housing types which are integrated and interconnected. The neighborhoods are oriented to have a school, park or open space as a central focus of the neighborhood. The majority of homes will be within a 5 minute walk (1/4 mile) to a school, park or greenbelt trail. In addition, most of the homes are a 10 minute walk (½ mile) to either the Town Center, Village Center or Community Park complex. Tree lined streets, convenient access to trails and safe street crossings will promote a neighborhood identity of connectedness and interaction. Exhibit 3.2 illustrates the walkability of the community.

CHAPTER 3-COMMUNITY VISION/LAND USE PLAN

Exhibit 3.2: Community Walkability

3.4 Land Use Goals and Policies

This section discusses the goals and policies that guide the vision and arrangement of Specific Plan land uses. Goals and policies pertaining to Circulation, Public Utilities, Public Services, Resources and Implementation are found in those Chapters. Goals are general statements about the desired outcomes of the Specific Plan. Policies are implementable actions to meet the intended goals.

The General Plan Land Use Element provided detailed guidance for the Specific Plan. A complete list and consistency analysis of applicable General Plan goals and policies is provided in Appendix A. The following JTSP land use goals are used to implement the project vision and to guide the form and character of the emerging community.

General Land Use Goals and Policies

Goal 3.1: Foster a distinctive community with a strong sense of place

- ***Policy 3.1.1:*** *Locate a town center and civic hub in a central location to serve as gathering places for the community and attractive destinations accessible via greenways, trails and transit.*
- ***Policy 3.1.2****: Locate the schools and parks as focal points and gathering places within each neighborhood.*
- ***Policy 3.1.3****: Design neighborhoods so that most dwelling units are within one-quarter mile of an open space area such as a park, school, greenway or other open space.*

Goal 3.2: Provide a diverse mix of land uses

- *Policy 3.2.1: Structure the development standards to allow opportunities for the integration of residential uses into the local commercial and office zones as a permitted use to provide a close link between work and home.*
- ***Policy 3.2.2:*** *Allocate land uses to result in an approximate 1 to 1 ratio of housing to job-generating uses to encourage close home-work linkages to reduce automobile dependence.*

Housing Goals and Policies

Goal 3.3: Provide a range of housing choices and opportunities within easy walking distance of transit, employment, shopping and recreation

- ***Policy 3.3.1****: Assign a range of housing types (i.e., apartments, townhouses, lofts, single family detached homes) within the residential land use categories assigned on the Land Use Plan and within the density ranges shown on Table 3.2.*
- ***Policy 3.3.2****: Allocate a balanced mix of residential land use types across the Plan Area in the full range of permitted densities, from 0.2 du/acre to 40 du/acre. Strive for an overall target of 10 du/ac.*

Goal 3.4: Provide affordable housing opportunities within the Town Center and within ¼ mile of the Transit Center, transit stops, schools, parks and shopping.

- ***Policy 3.4.1****: An adequate number of HDR sites shall be made available to meet the obligation of the affordable housing ordinance. Sites shall meet or exceed the criteria of the ordinance for suitability as affordable housing.*

Employment Goals and Policies

Goal 3.5: Provide a variety of employment opportunities, which can provide both jobs and services for Plan Area residents, ranging from retail, public service, corporate and medical office jobs.

Policy 3.5.1: *The permitted uses in the GC, CC, MU and O designations shall be broad to encourage and allow a full range of uses to serve the Plan Area with employment.*

Policy 3.5.2: *Locate a regional serving commercial center on Jackson Road on the GC site in the Town Center. Locate a community/neighborhood scale center on Excelsior Road. Provide convenient access to these sites from the adjacent streets and provide pedestrian and bicycle connections from the adjacent neighborhoods.*

Sustainability Goals and Policies

Goal 3.6: Encourage sustainable building and landscape designs and standards.

- ***Policy 3.6.1:*** *Create Design Standards to promote the inclusion of measures related to the conservation of energy, water, soil, building materials and other non-renewable resources.*
- ***Policy 3.6.2:*** *Include recharging stations, preferred parking and other incentives for alternative energy vehicles in all non-residential zones.*

Recreation and Open Space Goals and Policies

Goal 3.7: Provide a connected, accessible open space network to enhance existing natural resources.

- ***Policy 3.7.1:*** *Establish a network of open space and recreation amenities including a community park, neighborhood parks, linear parkways, and pedestrian and bike connections throughout the Plan Area.*
- ***Policy 3.7.2:*** *Create a comprehensive system of multi-purpose drainageways, utilizing green infrastructure to mimic the natural hydrologic processes. These greenways will provide an interconnected system of both natural and created open spaces, becoming signature elements of the Plan Area.*
- ***Policy 3.5.3:*** *Set aside the eastern area of Plan Area as a wetland preserve, consistent with the SSHCP. Enhance the public enjoyment of this passive open space by providing adjacent trails, viewing areas and interpretive signage, where feasible.*

Goal 3.8: Incorporate buffers and/or compatible land uses to preserve and protect sensitive land uses and existing assets.

- ***Policy 3.8.1:*** *Designate appropriately sized buffers between proposed developed areas and the open space preserves, natural open space and other sensitive resources, consistent with the SSHCP and/or Federal permits.*
- ***Policy 3.8.2:*** *Require buffers for adjacent agricultural land uses designated for interim protection using techniques including, but not limited to; linear parkways, open space, fencing, tree windrows and berms. Provide agricultural disclosure for new residential uses adjacent to active agricultural uses.*

3.5 Land Use Plan

The Land Use Plan is the culmination of a comprehensive collaboration between County staff, the applicant's team and landowners; a process which identified physical constraints, examined adjacent land uses and analyzed General Plan policies and influences on the land use planning process. The Land Use Plan emerged from the strong framework provided in the 2030 General Plan, specifically from the Land Use Element.

The Land Use Plan, shown on Exhibit 3.3, illustrates the arrangement of land uses, transportation networks and open spaces that will comprise the JTSP community. Table 3.2 provides a detailed summary of the land use zones, acres and dwelling uses allocated on the Land Use Plan and evaluated in the EIR analysis.

3.5.1 Relationship between Zoning and General Plan

A summary of the JTSP land use categories is presented in Table 3.2. The table also lists the County General Plan land use designations that are consistent with the categories of the JTSP. It is important to understand the difference between General Plan land use designations and zoning districts. The General Plan land use designations define each designation in broad terms, while the zoning districts and accompanying regulations contain detailed development standards.

Rezoning of the Plan Area to the Jackson Township Special Planning Area (SPA) will occur in phases as areas are ready for development, as shown on Exhibit 8.1. The initial phase to be rezoned subsequent to the Specific Plan approval is a portion of Area 1A/1B, which is owned by the participating landowner and Applicant Excelsior Estates LLC. The remaining portion of the Applicant owned property and properties not owned by the applicant, herein referred to as non-participating property, will be the subject of future entitlement applications for rezoning consistent with the adopted Land Use Plan, adoption of an SPA and other approvals required for development to commence.

The provisions in the SPA, the Specific Plan and the Development Standards, Appendix A, constitute Zoning.

Table 3.1: Land Use Categories/GP Designation Consistency

SYM	JTSP CategoryDescription	Consistent General Plan Land Use Designation
Residential Zones		
LD	Low Density Residential	Low Density Residential
MD	Medium Density Residential	Medium Density Residential
HD	High Density Residential	Medium Density Residential
Commercial, Office and Mixed Use Zones		
GC	General Commercial	Commercial and Offices
CC	Community Commercial	Commercial and Offices
MU	Mixed Use	Commercial and Offices
O	Office	Commercial and Offices
Public/Open Space Zones		
PQP	Public and Quasi-Public	Public and Quasi-Public
P	Park	Recreation
OS	Open Space	Recreation
WP	Wetland Preserve	Natural Preserve
AG	Agriculture	General Agriculture

CHAPTER 3-COMMUNITY VISION/LAND USE PLAN

Table 3.2 Land Use Summary

Residential Designations	*Acres*	*Ave. Density*	*Density Range*	*D.U.'s*	*% of D.U.'s*	*Projected Jobs*
LD- Low Density Residential	382.6	6.0	1.0-8.9	2295	40.3%	
MD-Medium Density Residential	124.5	10.0	9.0-15.9	1245	21.9%	
HD- High Density Residential	82.0	25.0	16.0-30.0	2050	36.0%[4]	
Subtotal	**589.1**			**5,590**	**98.2%**	
Commercial + Office Designations		***f.a.r.***	***Approx. s.f.***			
GC-General Commercial	59.7	0.25	650,100	n/a[1]		1,300
CC-Community Commercial	16.2	0.25	176,400	n/a[1]		353
MU-Mixed Use	19.7	0.50	429,000	100[2]	1.8%[7]	858
O- Office	35.2	0.50	766,600	n/a[1]		2,737
Subtotal	**130.8**		**2,022,100**	**100**	**1.8%**	**5,248[4]**
Public/Quasi Public Designations						
PQP-Tank Site	1.0					0
PQP-High School/Middle School	70.0					274
PQP-Elementary School	30.0					198
Subtotal	**101.0**					**472[5]**
Park + Open Space Designation s						
P- Community Park	40.6					
P- Neighborhood Park	38.2					
OS- Wetland Preserve	259.8					
OS- Greenbelt/Drainage Corridor	55.6					
OS- Landscape Corridor	14.5					
Subtotal	**408.7**					
AG-Agriculture	74.7					
RW- Primary Roadways	86.7					
TOTAL	**1,391.0**		**10.6[3]**	**5,690 units**	**100%**	**5,248 jobs**

Table 3.2 Footnotes

1. Dwelling units are not permitted in these designations.
2. 100 dwelling units are assigned to the 7.5 acre MU parcel only, 0 units assigned to the 12.2 acre MU parcel.

3. Double net density calculation: Residential acreage 589.1 +7.5 MU=596.6-59.6 (10% net residential exclusion per Policy 120 CB-1) = **537 acres 5690 du /537=10.6 du/ac.**

4. Job generation is based on 1 employee per 500 s.f in GC, CC, MU and employee per 280 s.f in office.

5. Job generation in PQP-Schools is based on data provided by Elk Grove Unified School District.

CHAPTER 3-COMMUNITY VISION/LAND USE PLAN

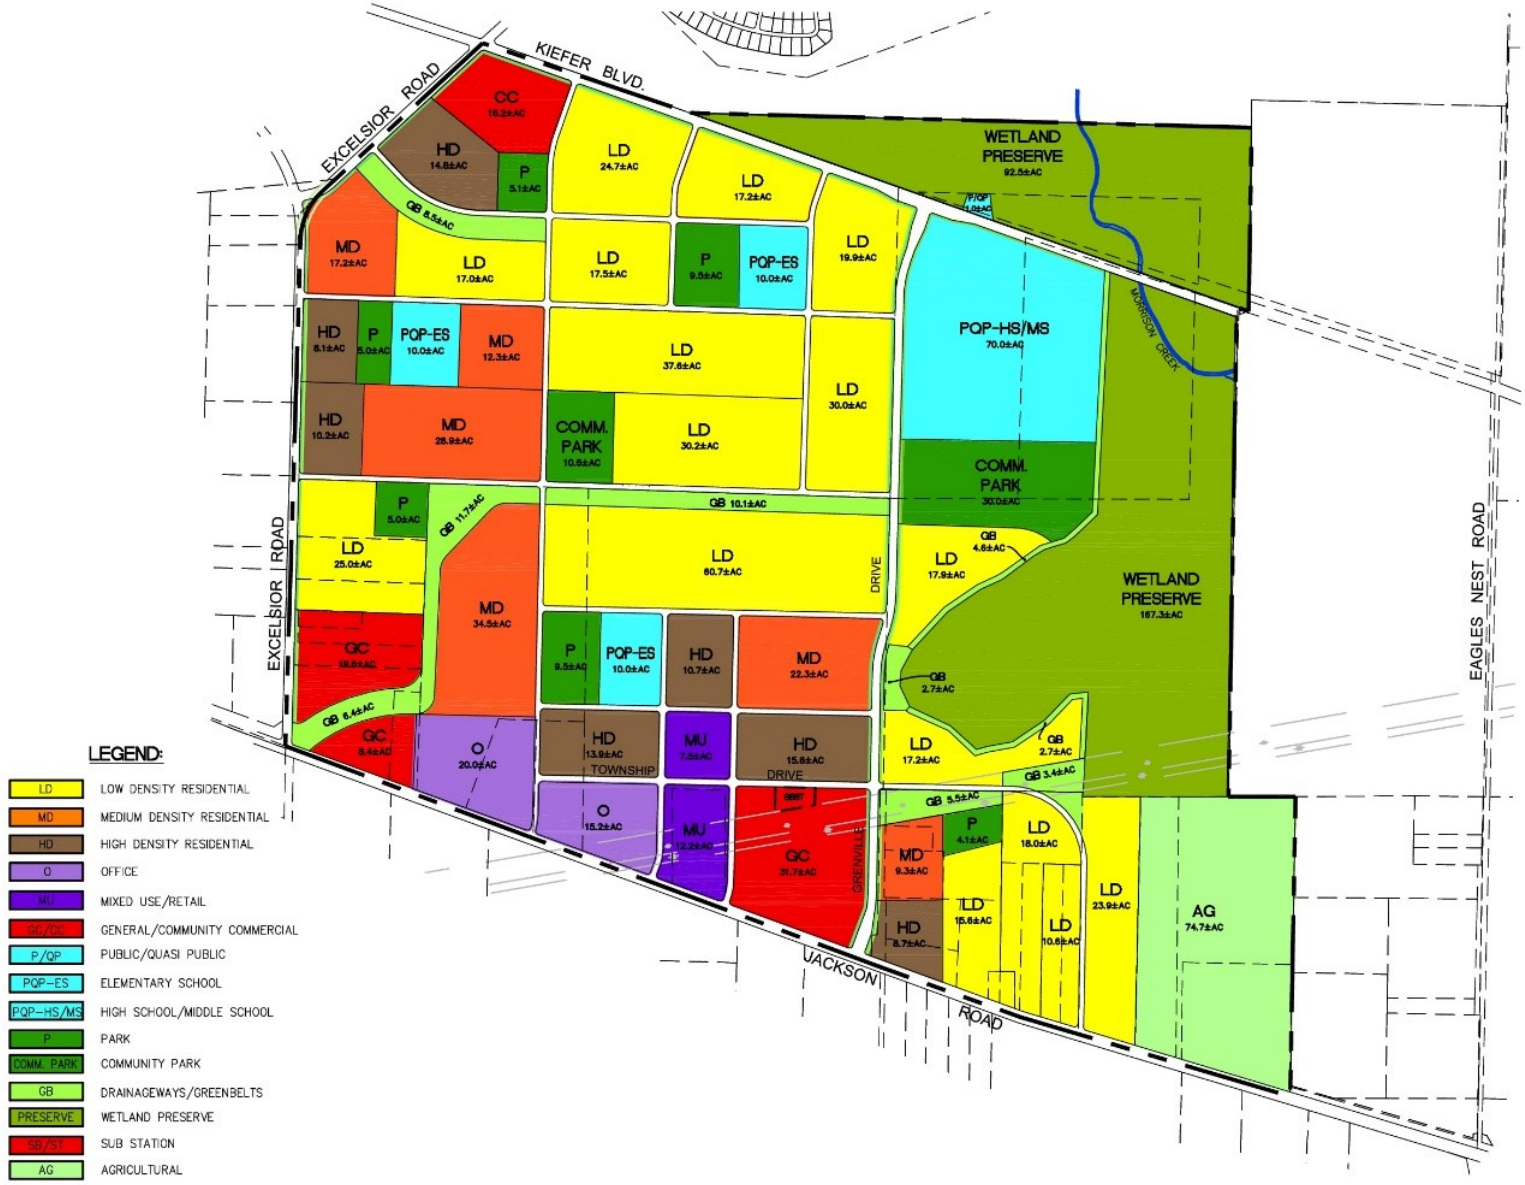

Exhibit 3.3: Land Use Plan

3.6 Residential Land Uses

3.6.1 Low Density Residential (LD)

The LD land use category provides for single family detached homes on standard suburban size lots, however, attached homes are also allowed. Alternative lot configurations such as alley, cluster or halfplex lots may also occur. The density range is 1.0 to 8.9 dwelling units per gross acre (du/ac) and the projected average density is 6.0 du/ac.

Low Density Residential Example

3.6.2 Medium Density Residential (MD)

The MD land use category accommodates a variety of housing types. This density allows for single family detached housing, as well as detached and attached housing types. MD housing types may include, but are not limited to lot configurations such as standard, halfplex, cluster, alley, courtyard, greencourt, zero-lot line, brownstones, townhomes, or condominiums. The density range is 9.0 to 15.9 dwelling units per gross acre (du/ac) and the projected average density is 10.0 du/ac.

Medium Density Residential Example

3.6.3 High Density Residential (HD)

The HD land use category anticipates a variety of attached and multi-family housing types. The HD sites are strategically located in the Town Center and near the Village Center to promote alternative transportation through the proximity to jobs, goods, services and transportation hubs. The HD sites will provide both rental and for-sale housing opportunities such as but not limited to apartments, brownstones, townhomes or condominiums. HDR sites may be identified to provide affordable housing units in conformance with the Affordable Housing Ordinance Title 22.35. The density range is 16.0 to 30.0 dwelling units per gross acre (du/ac) and the projected average density is 25 du/ac.

High Density Residential Example

3.6.4 Affordable Housing

Affordable Housing obligations are a component of new development projects, as outlined in Title 22 of the Code, Chapter 22.35. The ordinance outlines a variety of options with which to satisfy the obligation. The JTSP will meet its affordable housing obligation by paying the Affordability Fee on all newly constructed market rate units at the time building permits are paid. The County establishes the fee and adjusts it annually.

The ordinance requires at least 50% of the funds collected from large development projects (750 dwelling units or larger) is to be used by the housing agency to construct the affordable units within the development. The ordinance describes the characteristics of the land to be considered as appropriate for the construction for affordable housing. These characteristics include a minimum size of 4 acres, minimum density of 20 units per acre, be free of environmental constraints and be within ¼ mile of at least 3 existing or planned amenities, such as schools, parks, transit, grocery store or public library. The 7 HD sites in the Plan Area all meet the criteria to serve as sites to accommodate affordable housing.

3.7 COMMERCIAL AND OFFICE USES

3.7.1 General Commercial (GC)

The GC land use category is designated for larger, visible sites within the Town Center and along Jackson Highway. The three GC commercial sites are targeted to serve the immediate region and the Jackson Township community, including shopping centers, larger format retailers and a range of freestanding uses such as banks, restaurants, entertainment, offices and public uses. The target floor area ratio (f.a.r.) is 0.25.

Example of General Commercial Uses

3.7.2 Community Commercial (CC)

The Community Commercial (CC) site serves as the Village Center for the Plan Area and neighboring communities. The 17 acre site is strategically located on Excelsior Road so that it serves as a close destination for the North and West neighborhoods, as well as for the Independence at Mather community to the north. The CC zone provides the opportunity for both community and local oriented uses, including retail and services such as a grocery store, restaurants, professional and personal services. The target f.a.r. is 0.35.

Example of Community Commercial Use

Example of Mixed Use in the Town Center

3.7.3 Mixed Use (MU)

The two Mixed Use (MU) sites form the geographic and cultural hub of the Town Center, serving as a gateway to the community. Anticipated uses include retail commercial, services, civic and quasi-public uses in a compact, urban style setting. The northern MU site permits integrated residential uses, in both vertical (different uses stacked above one another) and horizontal (different uses on a single parcel) mixed use opportunities. The southern MU site has the constraint of overhead powerline easements which prohibits residential uses. However, this MU site is envisioned to provide an urban style plaza in the center, which enriches its function as a centerpiece of the Town Center. The target floor area ratio (f.a.r.) for the non-residential uses is 0.50.

3.7.4 Office (O)

The three office sites are located on Jackson Highway within the Town Center. Uses anticipated within this zone generally include professional offices, research/development campuses, medical offices and clinics; hospitals, law firms; accountant offices; insurance, real estate, and financial; governmental offices; social services; and non-profit organizations. Retail commercial activities that complement or are accessory to the primary uses of the zone are also appropriate. The target f.a.r. is 0.50.

Example of Office Use

3.8 PARKS, OPEN SPACE, PUBLIC AND AGRICULTURE

3.8.1 Parks

Parks provide locations in the Plan Area for recreation and community gathering. Two community parks and six neighborhood parks are distributed throughout the Plan Area. This category is intended to provide locations for parks and other related compatible public services/uses. The proposed parks meet the parkland requirements of the Cordova Recreation and Park District. Both active and passive recreational activities are permitted.

Example of Park Playground

3.8.2 Open Space

This category is to provide for open space uses, including greenbelts. The larger greenbelts are multi use corridors, combining drainage, detention basins, water quality basins, local and regional trails and nodes. The greenbelts form the overall pedestrian and bikeway trail network and provide passive recreation opportunities. Greenbelts may also provide space for compatible recreation amenities such as benches and gathering areas for the adjacent community.

Example of Greenbelt Trail

3.8.3 Wetland Preserve (WP)

The 260 acre wetland preserve abuts the east and north boundaries of the Plan Area. The function of the WP is to preserve and protect existing natural resources, while also providing visual open space for the Plan Area. Uses within and access into the WP areas are restricted pursuant to the SSHCP and/or the United States Army Corps of Engineers (USACE).

3.8.4 Public/ Quasi –Public (P/QP)

This category is to provide for the establishment of public and quasi-public uses, such as fire and police facilities, utilities, local government offices/facilities, public schools, community centers, places of worship and other similar uses. The intent of this zone is to identify appropriate locations for these uses without impacting, disrupting, or otherwise removing other lands for residential or other uses. The land use plan identifies one (1) site for a joint high school/middle school, three (3) sites for public elementary schools and one (1) site for a potential water supply tank. P/QP uses are permitted uses in most zones, allowing public agencies the flexibility of siting, as determined at the time services are needed.

3.8.5 Agriculture

The Agriculture category is applied to approximately 75 acres located in the southeast quadrant of the Plan Area, comprised of 6 large agricultural-residential properties. The Development Standards describe the allowed uses and Section 9.2.4 describes the subsequent entitlement process for the properties within the AG zone.

CHAPTER 4: CIRCULATION & MOBILITY

4.1 OVERVIEW

This chapter provides a discussion of the existing and proposed circulation system for the Plan Area. The circulation system includes a hierarchy of roadways and non-motorized transportation options. The mobility plan includes bicycles, pedestrians and transit. Emphasis is placed on ensuring connectivity between uses and on creating a safe and efficient circulation system that allows for multiple transportation options. The circulation system is designed to link with the existing local and regional transportation systems.

The land uses are sited to provide close proximity between housing, open space, recreation, schools, entertainment, shopping, and services. These community elements are incorporated as part of an extensive interconnected mobility system of multi-use trails, paths, shaded sidewalks and transit facilities. These elements will result in a pedestrian and bicycle friendly environment that will promote non-vehicular use as a primary choice becoming a way of life for residents.

4.2 TRANSPORTATION AND CIRCULATION GOALS AND POLICIES

The land use design, roadway system, and mobility network were influenced by the numerous General Plan goals and policies related to smart growth principles. The following are goals and policies directly related to circulation aspects:

Goal 4.1: Create and maintain a balanced and connected multi-modal transportation system that provides choices for the efficient and safe movement of people, good and services.

> ***Policy 4.1.1:*** *Implement the roadway system as shown in Exhibit 4.1 and the street sections, Exhibit 4.2.*
>
> ***Policy 4.1.2:*** *Implement the mobility system as shown in Exhibit 4.5, which illustrates the non-vehicular system of multi-use trails, on-street bike lanes and transit facilities.*

Goal 4.2: Coordinate with transit service providers to identify improvements and facilities for local and regional routes.

> ***Policy 4.2.1:*** *Transit facilities shall be provided in locations determined by and in coordination with the transit provider and may include a transit center/stop, shelters, signage and other amenities as appropriate to the location.*

Goal 4.3: Establish a transportation management plan to guide transportation alternatives in the Plan Area and provide for the creation, funding and administration of a transportation management association (TMA) or join an existing TMA.

> ***Policy 4.3.1:*** *The TMA or transportation coordinator will prepare and distribute materials to residents, employers and public services related to transportation options available in the Plan Area, such as bus routes, timetable, carpools, "bike-to-school pools", etc.*
>
> ***Policy 4.3.2:*** *The TMA or transportation coordinator will provide information about telecommuting and may offer training and support to businesses that elect to implement telecommuting programs.*

***Policy 4.3.3**: The TMA will coordinate with the school district to make information available to residents regarding safe routes to school for elementary school children.*

***Policy 4.3.4**: The TMA will coordinate with the County Parks Department to explore the provision of a bicycle repair station in close proximity to the regional bike trail.*

Goal 4.4: Provide facilities and incentives which encourage public transit use, vehicle sharing and carpooling.

***Policy 4.4.1**: Fund a transit program to provide each Plan Area household with access to transit facilities, consistent with General Plan Policy LU-120.*

***Policy 4.4.2:** Locate at least one joint use park and ride lot, operated as a non-State-owned facility on a parcel occupied by retail, office or a related use in close proximity to Jackson Road and the transit center.*

***Policy 4.4.3**: The TMA will explore establishment of a vehicle sharing program.*

Goal 4.5: Provide a complete trail and pathway system which provides off-street connectivity within the Plan Area for both cyclists and pedestrians, designed to minimize barriers and reduce potential travel disruptions.

***Policy 4.5.1**: Construct the local and regional Class I trails and Class II bike lanes as shown on the Mobility Plan, Exhibit 4.3, in complete segments as adjacent development and roadway construction progresses. Avoid dead-end or isolated trail segments by providing interim segments if necessary.*

Goal 4.6: Provide a safe, pedestrian friendly system to promote walking as a mode of transportation.

***Policy 4.6.1**: Design and construct a network of sidewalks and paths throughout the Plan Area. All street sections shall accommodate pedestrians with either attached or landscape-separated sidewalks.*

***Policy 4.6.2**: Install pedestrian safety and visibility features such as bulbouts, raised crosswalks, high visibility striping and pedestrian refuge islands in medians where space allows.*

4.3 ROADWAY SYSTEM

Primary vehicle access to and from the Plan Area will be from a network of primary streets, including the existing roads which border the Plan Area; Jackson Road, Excelsior Road and Kiefer Boulevard. Planned roadways internal to the Plan Area consist of Grenville Drive (formerly Treeview Lane), which has both four lane and two lane segments, and the remainder of new roads are two lane streets on a grid pattern.

Exhibit 4.1 depicts the locations of roadway types within the Plan Area. Jackson Road consists of five lanes, Kiefer Boulevard is four lanes and the primary segment of Excelsior Road is three lanes. Additional lane and frontage improvements will be completed by others for Jackson and Excelsior Roads due to their location on Plan Area boundaries. The north and south segments of Grenville Drive are four lanes and the interior segment is two lanes with a center median. The segment of Excelsior Road beyond the intersection with Douglas Road is two lanes. The remainder of the internal collector and local residential streets consist of two lanes. Roadways in the Town Center feature diagonal and parallel parking, wide sidewalks

and slower traffic speeds, which enhance the bicycle and pedestrian travel in the Town Center.

4.3.1. Typical Cross-Sections

Thirteen different street cross-sections are proposed within the Plan Area to accommodate a wide range of roadways ranging from a five-lane thoroughfare to residential collector streets. Street sections A through M are labeled alphabetically and are shown in Exhibit 4.2. These cross-sections are referenced for specific roadways on Exhibit 4.1. Table 4-1 compares each cross-section type including the number of lanes, ROW, presence of medians, bicycle lanes and pedestrian facilities. The locations of these street sections will be identified at the tentative tract map level for individual projects. The following describes some of the key attributes of the roadway cross-sections:

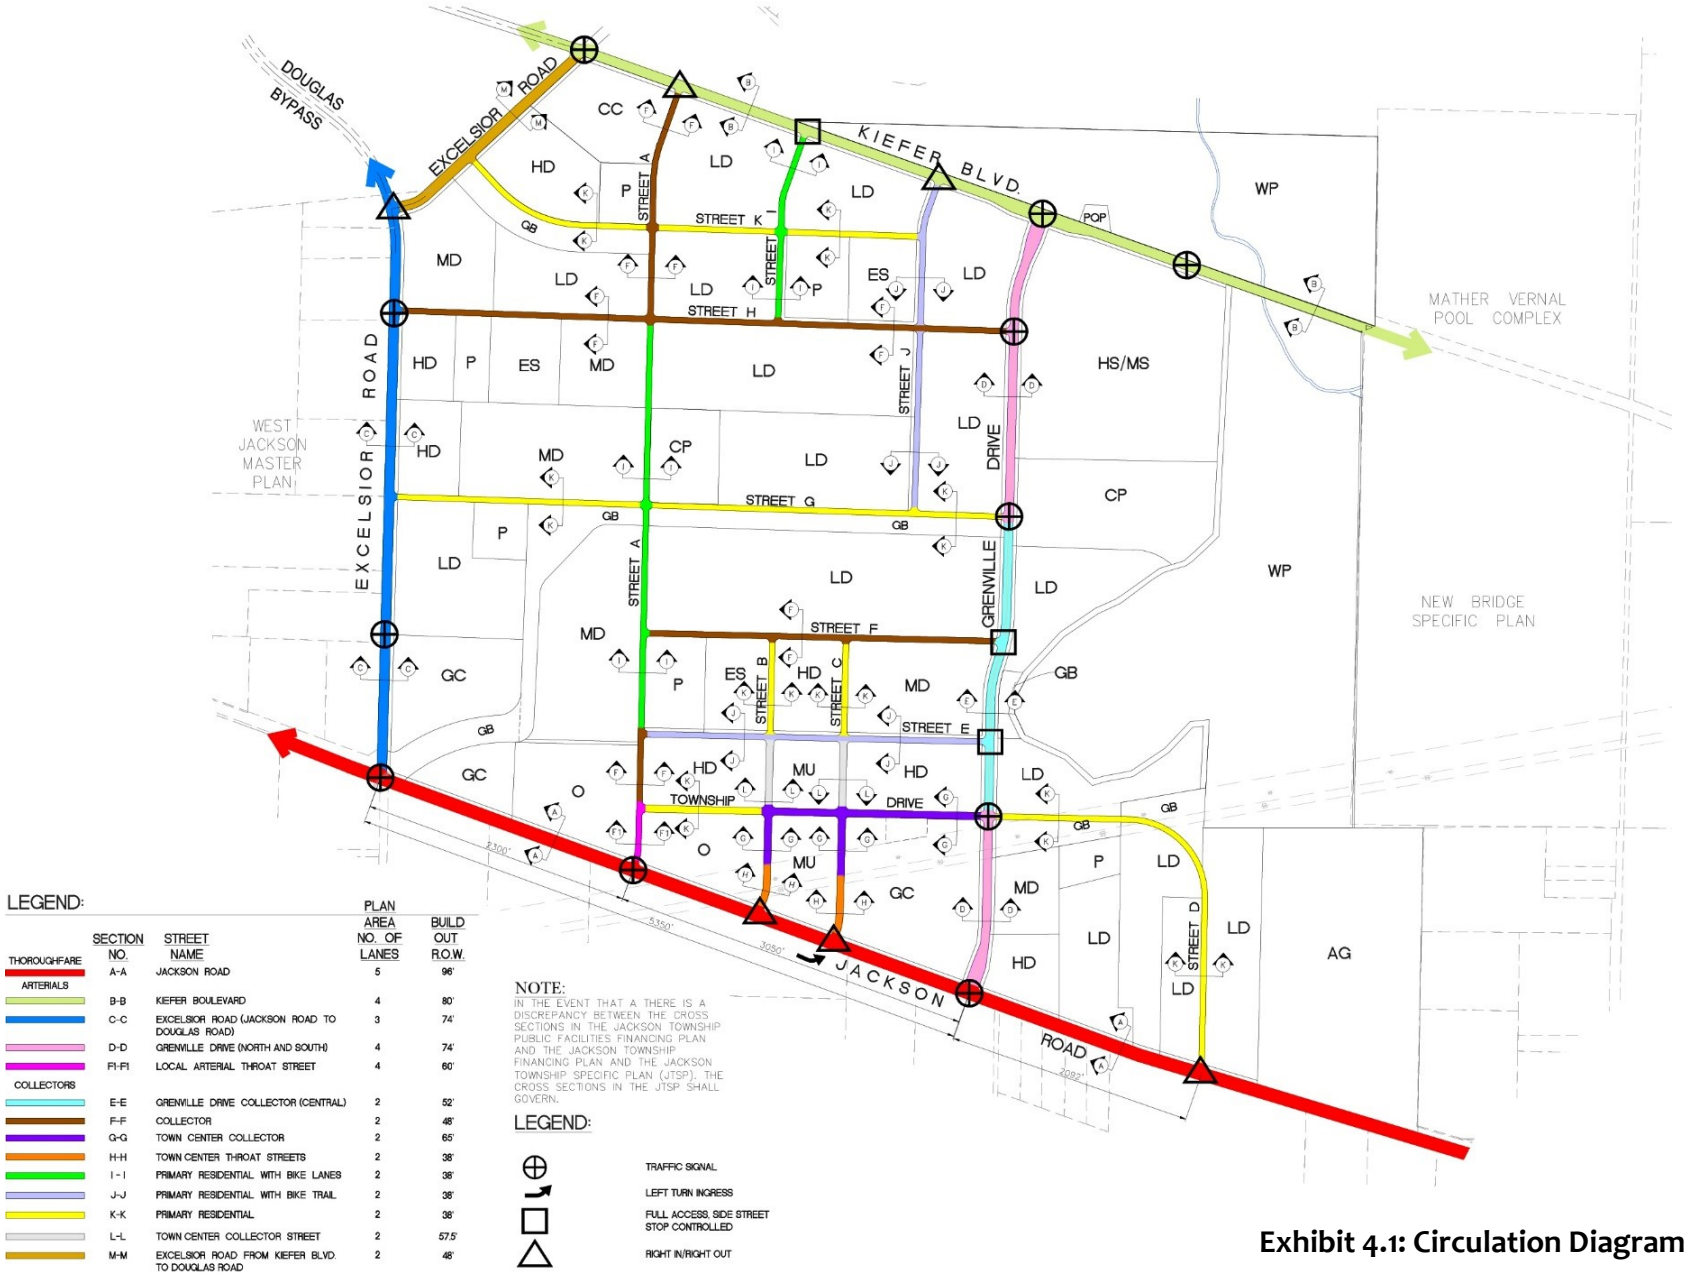
- Lane widths – On thoroughfare and arterial streets (Sections A through D), the lane closest to the landscaped median is 12-feet, while the other lanes are 11-feet. These widths, which are consistent with County design standards, reduce operations and maintenance costs, and decrease pedestrian crossing distances at signalized intersections. Two-lane collector in the Town Center (G) and the 2 lane segment of Grenville Road (E) have 12 foot lanes. The lane widths on all other two-lane collector streets are 11 feet.
- Medians – A 12-foot landscaped median is provided in sections A through E. The landscaped median provides aesthetic landscaping opportunities, safety benefits, and left-turn ingress at select locations.
- Complete Streets – Roadways within the Plan Area are designed to serve multiple modes of transportation. This includes sidewalks or Class I trails on all streets and Class II bicycle lanes on all four-lane and six-lane roads and the majority of the collector streets (Sections A, B, D, E, and J) as shown on the Mobility Plan Exhibit 4.3

4.3.2 Intersections

Intersections within the Plan Area may be controlled by traffic signals, roundabouts or stop signs, depending on the roadway type, location and traffic volumes. Major streets are designed to provide adequate spacing between signalized intersections. This includes planned intersections along Jackson Road, Kiefer Boulevard and Excelsior Road, which comply with the spacing requirements for these major roadways. The Plan Area roads and intersections comply with the level of service per General Plan Policy CI-9: *"Plan and design the roadway system in a manner that meets Level of Service (LOS) D on rural roadways and LOS E on urban roadways, unless it is infeasible to implement project alternatives or mitigation measure that would achieve LOS D on rural roadways or LOS E on urban roadways."*

4.3.2.1 Roundabouts

Roundabouts may be considered at intersections of two-lane streets where traffic conditions create favorable conditions for their implementation, in consultation with County Department of Transportation (DOT). Roundabouts provide safer and more efficient operations than traffic signals or stop signs at the intersection of two-lane roadways. By yielding at the entry rather than stopping, vehicle delay is typically reduced, which corresponds to a decrease in fuel consumption, air pollution and greenhouse gases.



LEGEND:

THOROUGHFARE	SECTION NO.	STREET NAME	PLAN AREA NO. OF LANES	BUILD OUT R.O.W.

FOOTNOTES: 1. Sections A-A, C-C and M-M occur on Plan Area boundaries. The cross sections shown and number of lanes demonstrate the Plan Area obligation. Future frontage improvements for Sections A-A, C-C and M-M will be completed by others. See Appendix at the end of this document for cross sections showing ultimate improvements for these sections.

4.4 MOBILITY SYSTEM

The Mobility Plan, Exhibit 4.3, displays the mobility network, which consists of a transit loop within the Plan Area and designated corridors for bicycles and pedestrians. This system compliments the street network where vehicles, bicycles and pedestrians mix. This multimodal network is an important component for connectivity and promoting non-vehicular travel within and outside of the Plan Area. The mobility network is designed to allow intuitive and efficient movement throughout the Plan Area and includes sidewalks, off street Class I bike trails, on-street Class II lanes, Class III routes and a transit center/stop. Neighborhood electric vehicles (NEVs) are permitted to use the general purpose lanes on two-lane streets with posted speed limits of 35 miles per hour (mph) or less.

4.4.1 Bikeway System

The bikeway system is illustrated in Exhibit 4.3, Mobility Plan. The bikeway system includes Class I trails, Class II lanes and Class III routes. The JTSP promotes frequent connections between the Class I system and adjacent uses. Where a street is adjacent to open space, a park or a walkway, the Class I bike path (separated from the street) may replace the standard sidewalk. Where a cul-de-sac or loop street, multi-family or non-residential project is adjacent to the Class I path, a paved connection will be provided. The Class I system within a greenbelt may meander to minimize environmental impacts and create visual interest. Barriers (e.g., bollards, rail fence, post and cable, posts, etc.) will be provided along bike paths within greenbelt areas. Class II bike lanes are designated on-street bike routes, five feet wide, delineated with signage and striping. Class III routes are not identified on the Mobility Plan but shall be determined in conjunction with the individual tentative maps.

4.4.1.1 Class I Facilities

Numerous Class I trails are provided throughout the Plan Area. Regional Class I trails are 12' in width and local Class I trails are 10' in width. The Class I trails are predominantly located within the greenbelts traversing the Plan Area and along Jackson Road. Excelsior Road, south side of Kiefer Boulevard and Grenville Drive. The signature trails that are designed to provide significant connectivity are located within three primary greenbelts, which are identified as the North, Central and East Greenbelts. A detailed description of these mobility features is provided in Section 6.2.4.2, titled Multi-functional Greenbelts and are shown on Exhibit 6.1 in the Public Services Chapter. These Class I trails are located within the greenbelts and have minimal street crossings, elevating the safety and ease of use. These trails are envisioned to provide convenient opportunities for pedestrians and cyclists to use alternative modes to reach frequent destinations within the Plan Area, such as to schools, parks, shopping and transit. The Regional Trail within the Central Greenbelt is anticipated to connect with the planned West Jackson Master Plan Area to the west and the NewBridge Specific Plan Area to the east. In addition, the paths provide emergency and maintenance vehicle access to open space areas.

Example of Class I Regional Trail

Exhibit 4.3: Mobility Master Plan

4.4.1.2 Class II Bicycle Lanes

Class II bicycle lanes are provided on expected bicycle commute corridors on the primary periphery roadways of Jackson Road, Excelsior Road and Kiefer Boulevard, which border the Plan Area. Internal to the Plan Area, several collector streets have Class II bicycle lanes to provide ample routes for users to reach destinations, such as shopping, schools and parks. The Class II lanes also provide users with opportunities to use the on-street lane to reach the Class I off-street trails.

4.4.1.3 Class III Bicycles Routes

Class III (shared use of general purpose lane) facilities may also be provided on local streets. Class III routes will be designated with pavement markings as shown in the photo. Class III routes are not identified on the Mobility Plan but shall be determined in conjunction with the individual tentative maps.

4.4.2 Pedestrian System

A primary objective of the JTSP is the provision of a pedestrian-friendly, walkable community. The JTSP is designed with a basic grid roadway network intended to provide superior access for all modes and balance vehicle traffic across multiple streets. Pedestrians also have full access to Class I bikeways described in Section 4.4.1. Specific pedestrian treatments shall be determined in conjunction with the subsequent tentative maps.

4.5 TRANSIT SYSTEM

Raised Crosswalk example

Transit service for the Plan Area will likely be operated by Sacramento Regional Transit (RT). No transit service was provided to the Plan Area or vicinity prior to the Specific Plan. The General Plan Circulation Map and the RT Transit Master Plan identify Jackson Road as a Bus Rapid Transit (BRT)/Hi-Bus route.

Coordination and consultation with RT and County Department of Transportation (DOT) staff occurred during the Specific Plan process to identify potential routes and transit facilities to serve the Plan Area, in conjunction with the other Master Plan projects in the Jackson Corridor. The Mobility Master Plan, Exhibit 4.3, identifies a potential RT transit route through the Plan Area and a Transit Center/stop in the Town Center. The proposed transit route will provide bus stops within one quarter mile of approximately 90% of residents. The Transit Center, as shown on Exhibit 4.3, is located just north of Jackson Road within the southern MU site. This location is surrounded by commercial, office, mixed use and high density residential zoning, enhancing its potential for strong ridership. The funding sources for transit will be funded by the Project through fees and assessments, as discussed in Section 9.2.3.

CHAPTER FIVE: PUBLIC UTILITIES

5.1 OVERVIEW

This chapter provides an overview of the public utilities required to serve the Plan Area. The intent of this chapter is to describe the timely implementation of public utilities to maintain the specified levels of service for the Plan Area. This chapter describes the backbone infrastructure for water, wastewater, drainage and dry utilities necessary to serve the Plan Area. As the Plan Area develops, the utility systems are subject to refinements and modifications. The goals and policies for each public utility are provided in the corresponding subsection. The providers of the public utilities are shown in Table 5.1.

Table 5.1: Utility Providers

Utility	Provider/ Authority
Water	Sacramento County Water Agency (SCWA)
Wastewater	Sacramento Area Sewer District (SASD)
Drainage/ Flood Control	Sacramento County Department of Water Resources (DWR)
Electric Service	Sacramento Municipal Utility District (SMUD)
Natural Gas	Pacific Gas & Electric (PG & E)
Communications	AT&T/Comcast
Cable/Broadband	Comcast

5.2 WATER SUPPLY AND DISTRIBUTION

Water Supply Goals and Policies

Goal 5.1: Coordinate with the Sacramento County Water Agency and other appropriate water purveyors to ensure the adequate provision of water supply to the Plan Area.

> ***Policy 5.1.1:*** *Sufficient water resources shall be identified and the necessary transmission and storage facilities shall be constructed to provide potable water to meet the Plan Area needs.*

5.2.1. Existing Water Supply and Distribution

The Plan Area is within the Zone 40 North Service Area (NSA) of the Sacramento County Water Agency (SCWA). Existing water facilities in the vicinity of the Plan Area include the Vineyard Surface Water Treatment Plant (SWTP), the Excelsior Well Field, and the Anatolia Terminal Storage and Pumping Facilities (Anatolia Facilities). A transmission line connects these facilities, a portion of which exists within the Plan Area. These existing facilities are depicted in Exhibit 5.1, Existing Water Facilities.

5.2.2 Potable Water Supply and Distribution

SCWA prepared a Water Supply Master Plan (WSMP) Amendment for the Plan Area, dated February 2016. The WSMP Amendment addresses the sufficiency of water supply for the Plan Area and updated information contained within the Zone 40 WSMP, February 2005. The 2005 WSMP was developed for the entire Zone 40/NSA to outline a flexible program of water management alternatives that could be implemented as the availability and feasibility of water supply sources changed.

CHAPTER 5: PUBLIC UTILITIES

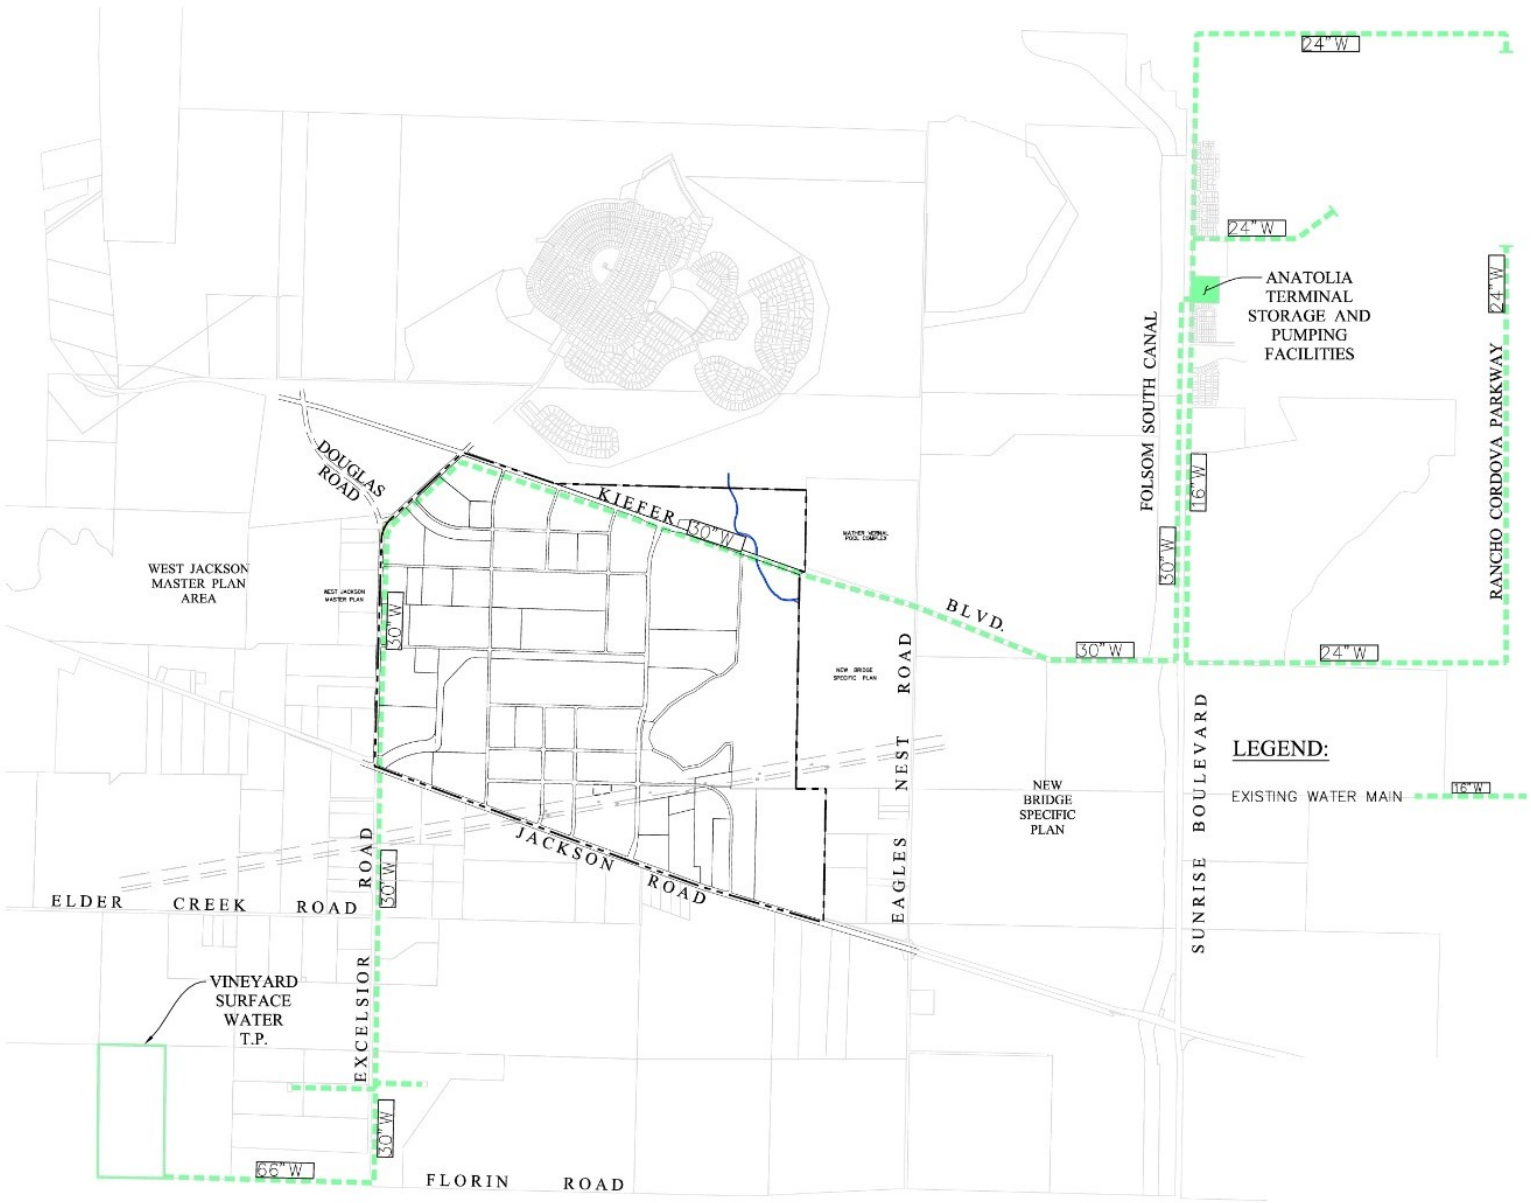

Exhibit 5.1: Existing Water Facilities

Significant changes such as water supply variations, General Plan Amendments, annexations, incorporation or new major programs are addressed through formal updates or amendments to the WSMP. The 2016 WSMP Amendment presents an evaluation of the water demands, water supplies, water system facilities and costs specifically for the Plan Area.

SCWA provides the primary water supply to the NSA from various sources, including the Vineyard SWTP, ground water wells, treatment facilities located in the Mather area and the Anatolia Facilities. SCWA also has an emergency water connection with Cal American (CAL AM) Water District. The Anatolia Facilities are the initial source of water supply for the Plan Area. Two transmission mains will be extended to the Plan Area from the Anatolia Facilities. One main will be extended along Jackson Road and a second main will be extended along Kiefer Blvd. These facilities are shown in Figure 5.2, Proposed Off-site Water System.

The Jackson Township Potable Water System Study, August 2017, was prepared by Stantec Consulting to provide detailed analysis of the water distribution system and to verify the base information in the WSMP Amendment prepared by SCWA. Various hydraulic models were prepared to calculate the maximum day (4.24 MGD), peak hour (8.48 MGD) and fire flow (4000 gpm for 4 hours) demands of the Plan Area. The average annual use is 2,374 acre feet. The modeling of the water demands of the Plan Area verify that the proposed facilities extending to the Plan Area from the Anatolia Facility have the necessary capacity to serve the Plan Area at buildout. The Potable Water System Study is provided in Appendix C.

A second series of modeling was done of the NSA WSMP backbone infrastructure, with all the future transmission mains and reservoirs identified to meet the water demands of the entire service area at buildout. Exhibit 5.3, NSA Buildout System, shows the additional facilities to be installed with the development of the NSA. The modeling confirmed that when all the infrastructure is in place, the Plan Area will maintain adequate flows comparable to the initial modeling with water supplied from the Anatolia Facility.

5.3 On-Site Potable Water Distribution System

A new municipal water distribution network will be constructed in the Plan Area, as shown on Exhibit 5.4, Proposed On-site Potable Water Distribution System. Peaking factors, fire flow requirements and a normal pressure range (typically 35 to 65 psi) were considered in planning and designing the distribution pipe network as required by the County's Standard Specifications. New 12 inch "backbone" water lines will form the basis of a grid extending through the Plan Area as the backbone roads are constructed. Within neighborhoods, local distribution lines will be a minimum of 8-inch diameter. Looping of water mains is required as needed to meet the minimum standards of the SCWA and Sacramento Metro Fire District.

Individual final map applications will include additional analysis of the water system to confirm that SCWA and Fire District minimum flows and pressures under peak demands are maintained. All subsequent development applications will be reviewed to ensure consistency with the WSMP Amendment in accordance with the County Standards, Fire Codes and State Laws and the water conservation provisions of the Plan Area.

CHAPTER 5: PUBLIC UTILITIES

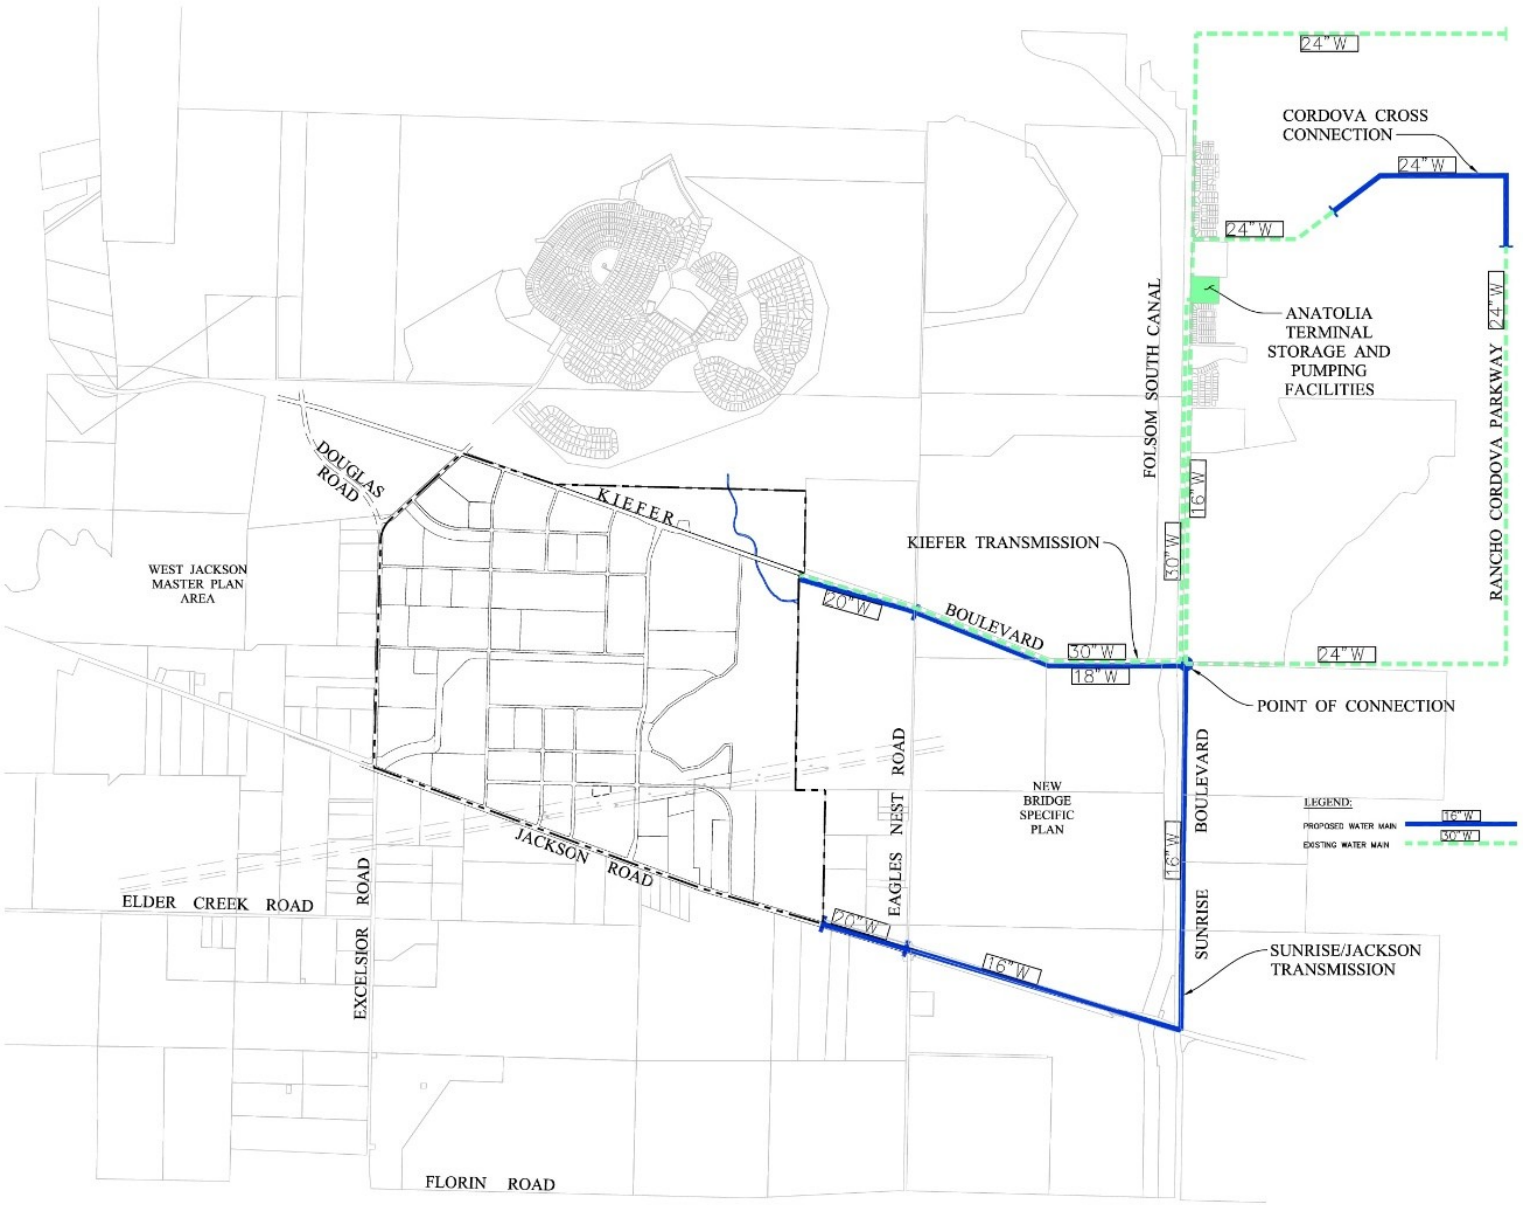

Exhibit 5.2: Proposed Off-site Water Supply

CHAPTER 5: PUBLIC UTILITIES

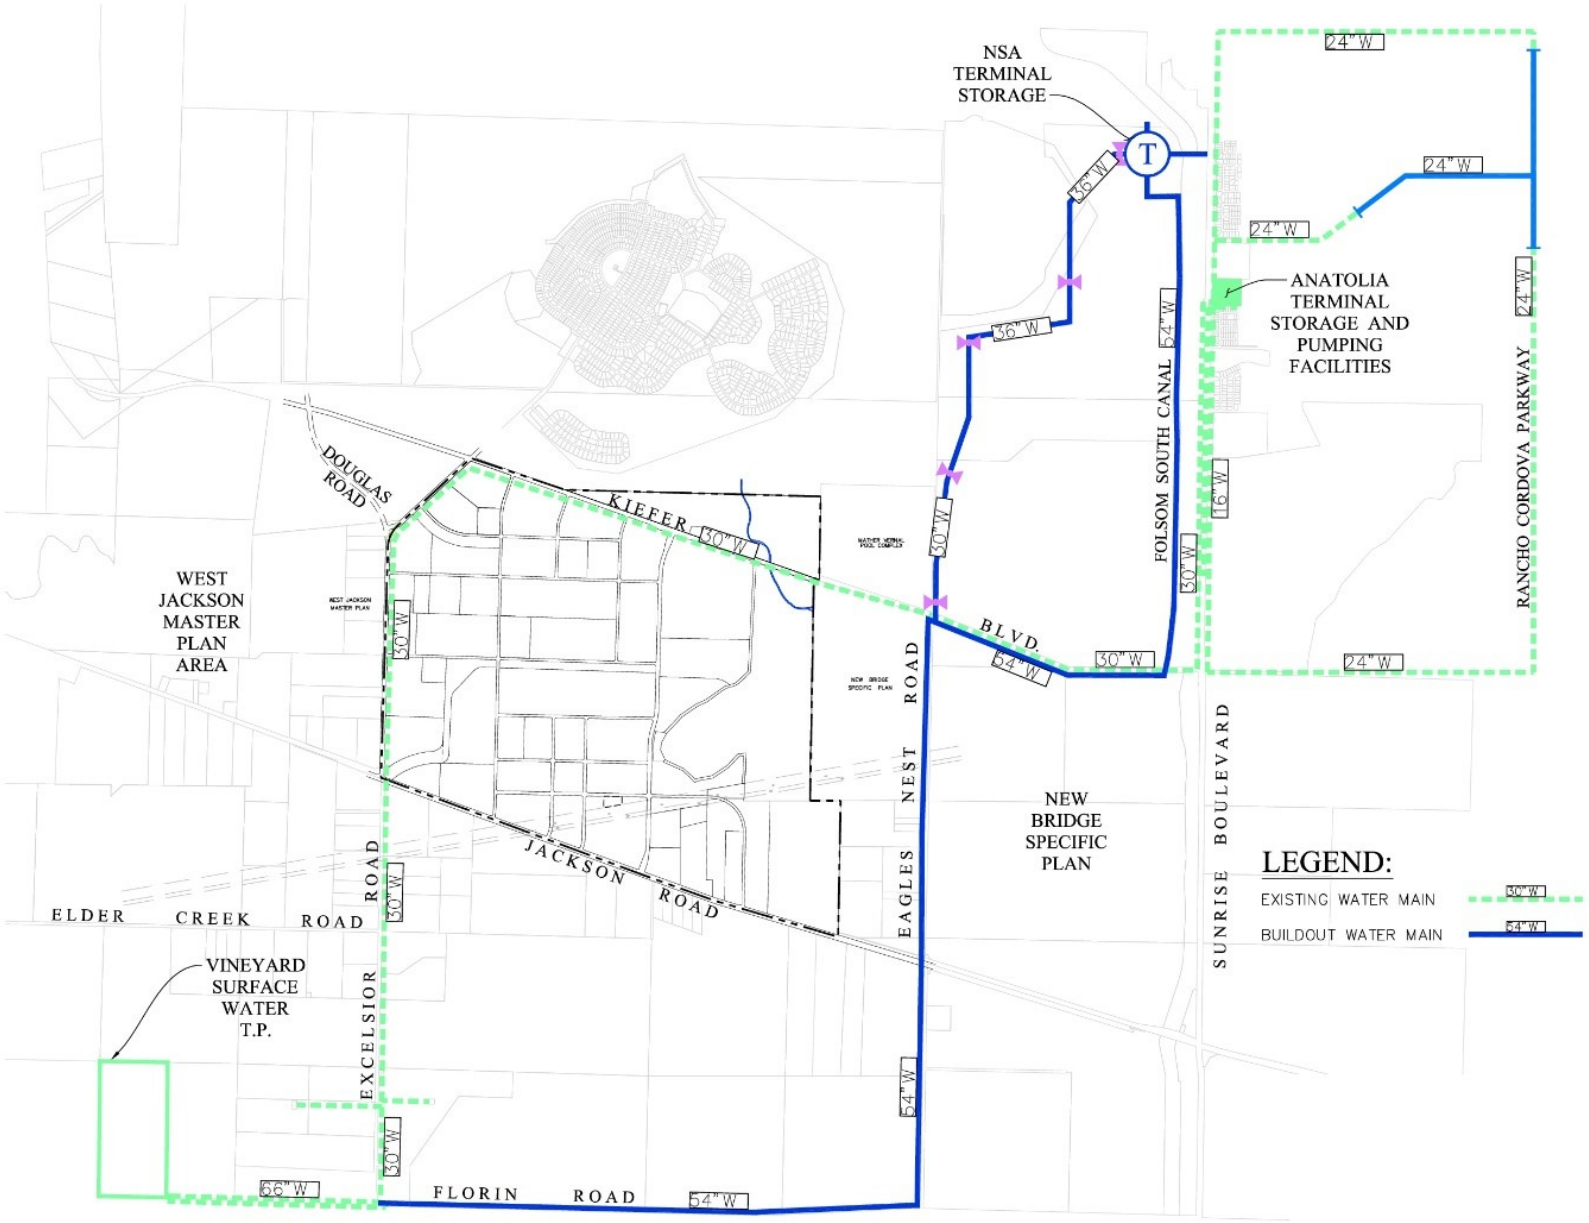

Exhibit 5.3: NSA Buildout Water System

CHAPTER 5: PUBLIC UTILITIES

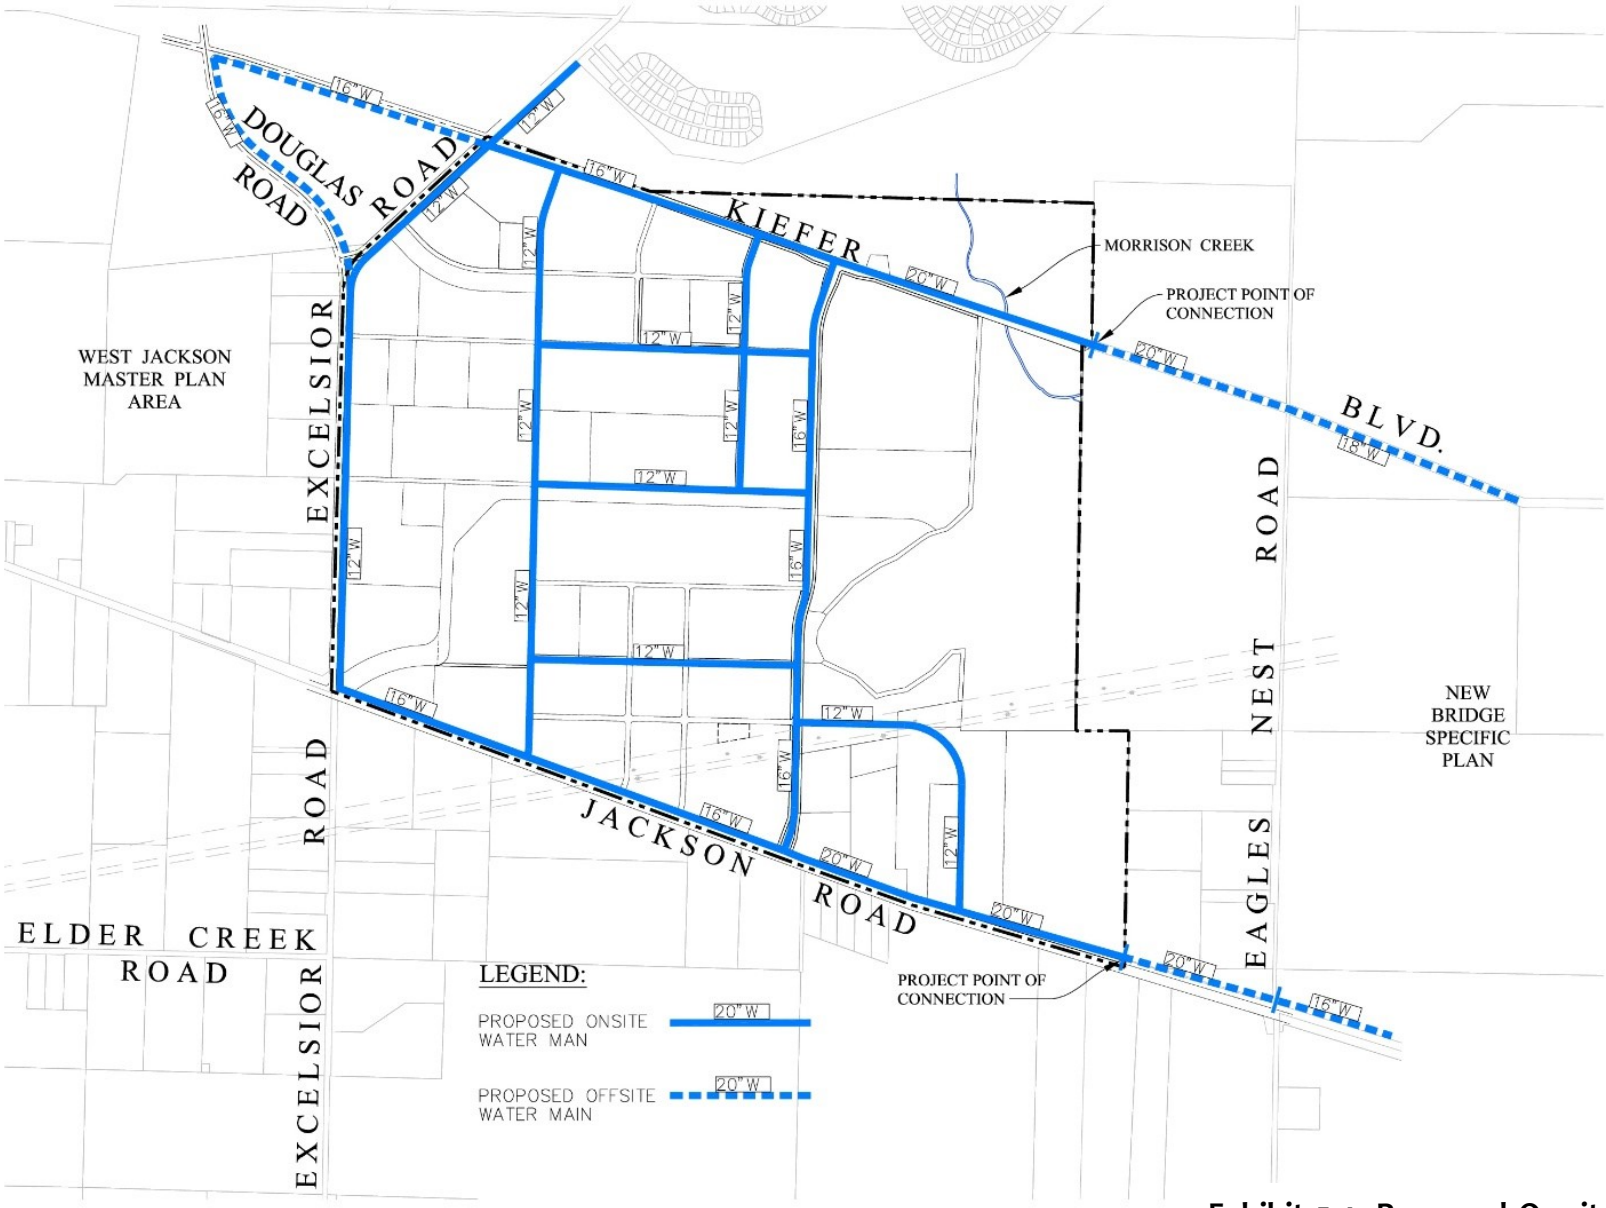

Exhibit 5.4: Proposed On-site Potable Water Distribution System

5.2.3 Water Supply Assessment

The California Water Code requires coordination between land use lead agencies and public water suppliers to ensure that prudent water supply planning has been conducted and that planned water supplies are available to meet both existing and planned future project demands. California Water Code Sections 10910-10915 require land use lead agencies to identify the public water system that may supply water for a proposed development project and to request from said public water system a water supply assessment (WSA) for the project. The WSA documents that the public water system has sufficient supplies to meet the water demands associated with the Plan Area, in addition to meeting the existing and planned future water demands projected through 2040. The Plan Area WSA is an appendix to the EIR.

5.3 WASTEWATER SYSTEM

Wastewater Goals and Policies

Goal 5.2: Design the wastewater system consistent with the Sacramento Area Sewer District's (SASD's) long-term infrastructure master plan as identified for the Plan Area.

> ***Policy 5.2.1****: Adequate wastewater infrastructure shall be installed to meet the needs of the Plan Area.*
>
> ***Policy 5.2.2:*** *The Plan Area shall be annexed into the SASD service area.*

5.3.1 Wastewater Overview

No wastewater collection or treatment facilities were existing in the general vicinity of the Plan Area prior to the Specific Plan. The designated sewer trunk interceptor to serve the Plan Area is the Bradshaw Interceptor, located at the intersection of Jackson Road and Bradshaw Road, approximately 2 miles to the west of the Plan Area. It is estimated that the Plan Area will generate an average daily wastewater flow of approximately 5.96 million gallons per day (MGD) at build out, as shown in Appendix D, Wastewater Master Plan.

5.3.2 Planned Off-Site Wastewater System

In order to serve the Plan Area, an offsite sewer trunkline must be extended from the Bradshaw Interceptor to the intersection of Jackson Road and Excelsior Road, in the southwest corner of the Plan Area. The wastewater trunkline is shown on Exhibit 5.5, Off-site Wastewater System.

5.3.3 Planned Onsite Wastewater Collection System

The proposed layout of the on-site wastewater collection system is shown in Exhibit 5.6, Proposed Wastewater System. A larger version of this exhibit is provided in Appendix D, Wastewater Master Plan.

The majority of the Plan Area will be served by an onsite gravity collection system, excepting a 237 acre potion at the northwest corner, which requires a sewer pump station. A force main will be extended from the pump station south along Excelsior Road for approximately 2,600 lineal feet to a discharge manhole in Excelsior Road, where it enters the gravity system and continues to the trunkline at the intersection of Jackson Road.

5.4 DRAINAGE AND FLOOD CONTROL

This section identifies the existing drainage conditions for the runoff from the Plan Area, provides runoff impacts from the proposed development, provides storm water quality treatment and provides for mitigation of the hydrologic impacts from within the Plan Area. Moreover, the proposed drainage infrastructure elements which occur within the greenbelts have been creatively planned to provide aesthetic benefits and

CHAPTER 5: PUBLIC UTILITIES

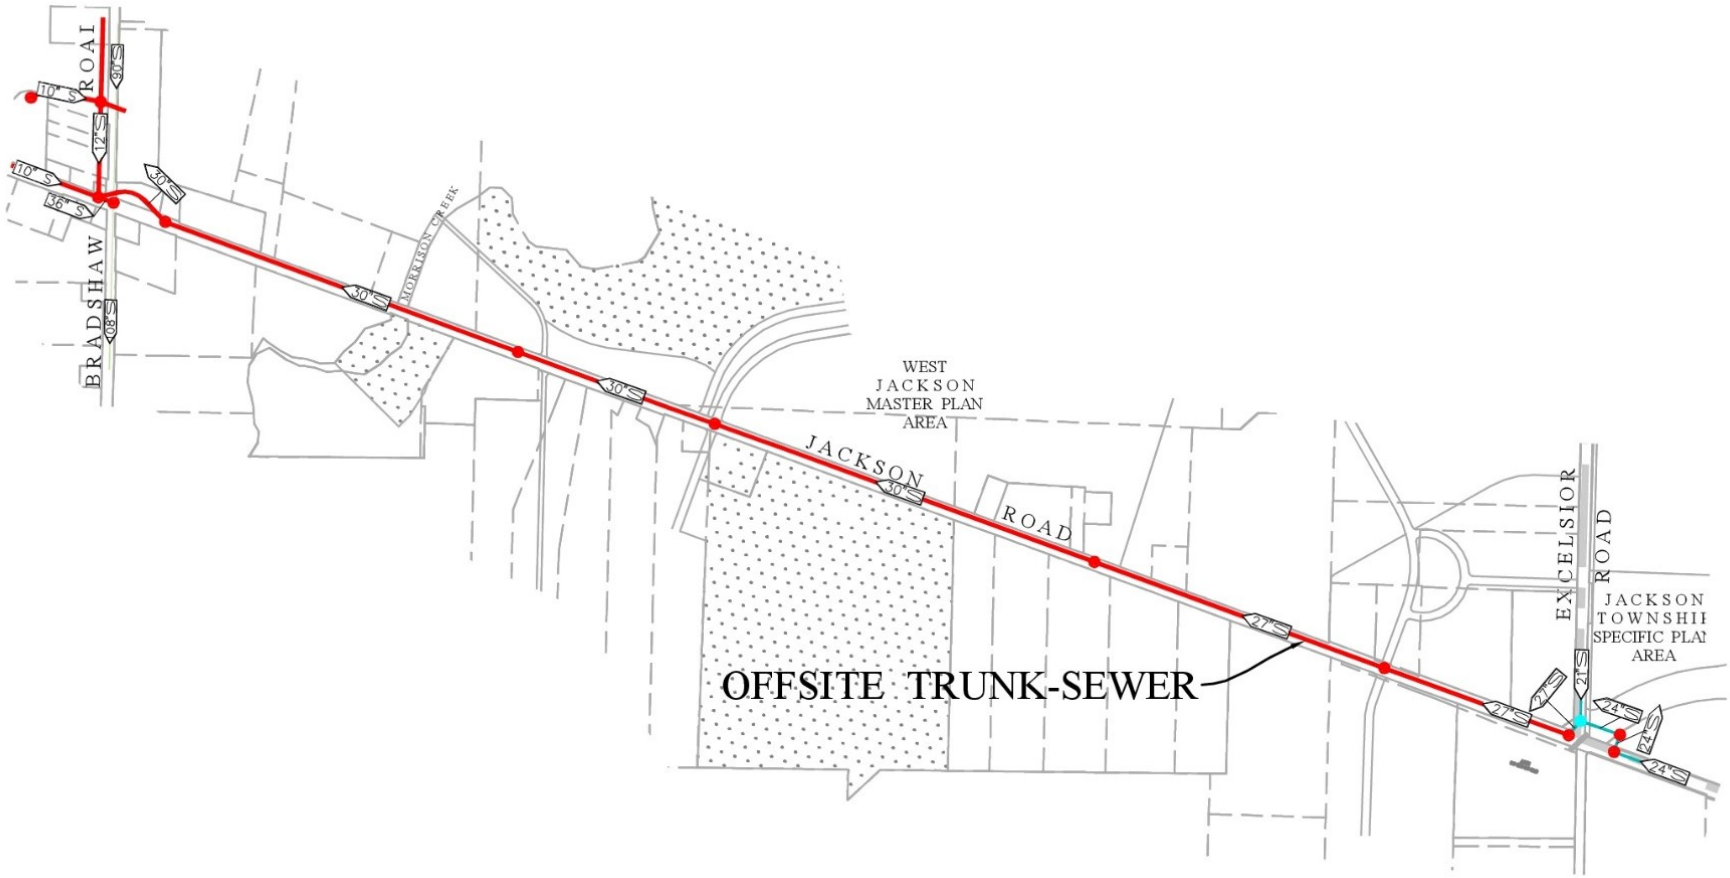

Exhibit 5.5: Off-Site Wastewater Trunkline

CHAPTER 5: PUBLIC UTILITIES

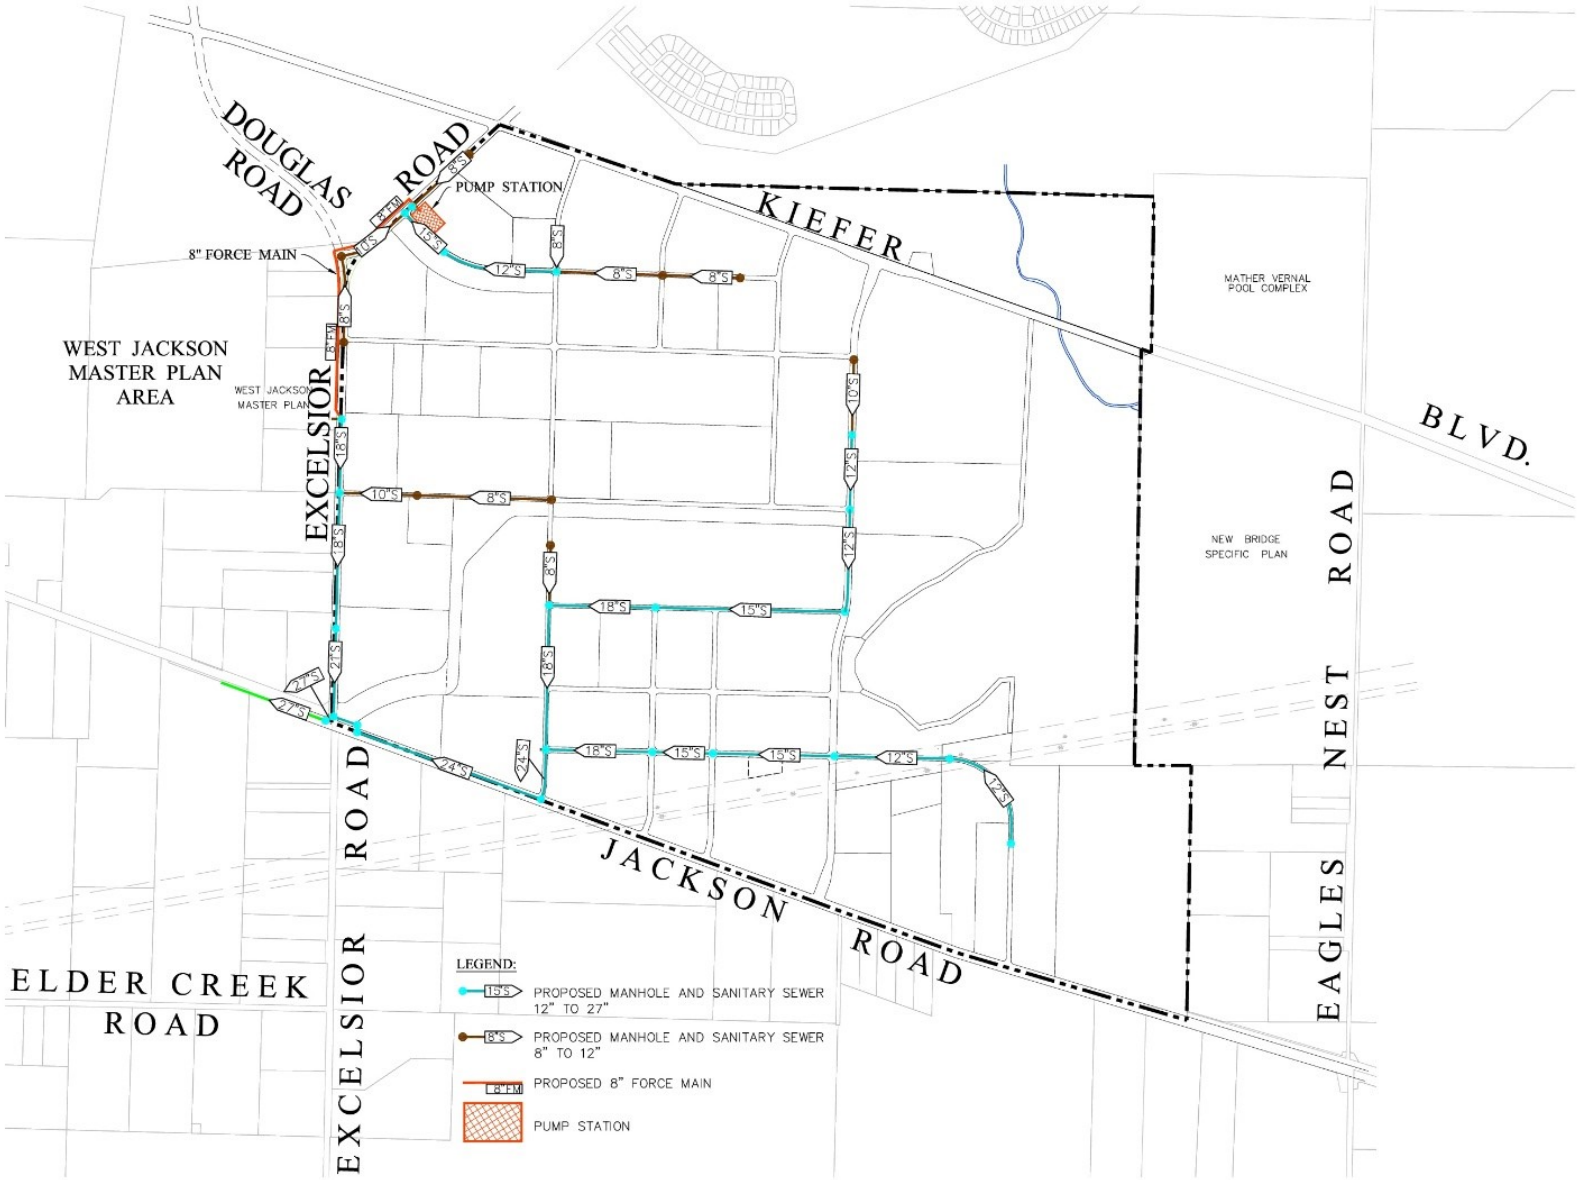

Exhibit 5.6: Proposed On-site Wastewater System

integrate elements of sustainability though the integration of open space, pedestrian and bikeway corridors as part of the multi-purpose drainage corridors, adding long term value to the community.

Drainage Goals and Policies

Goal 5.3: Design and implement the drainage system to provide adequate facilities that ensure safe stormwater conveyance, detention and water quality treatment which provide community benefit.

> ***Policy 5.3.1:*** *Construct the storm water conveyance system, detention/water quality basins as multi-purpose facilities to provide recreation opportunities in conjunction with drainage functions.*

Goal 5.4: Incorporate low impact design (LID) features as design elements for storm water improvements within the land plan.

> ***Policy 5.4.1:*** *Construct integrated LID facilities, where feasible, such as local surface infiltration, street tree plantings, reduction of directly connected impervious surfaces, vegetated buffers and swales and increased surface drainage flow paths.*

5.4.1 Drainage Shed Description

The Plan Area is tributary to two watersheds. The two drainage tributaries are the Elder Creek Watershed and the Morrison Creek Watershed, as shown in Exhibit 5.7, Plan Area Watersheds.

Morrison Creek enters and exits the north east corner of the Plan Area. The Morrison Creek watershed is located in the northwest quadrant of the Plan Area, however it does not flow directly into Morrison Creek. This watershed flows west to a low lying pond created from surface aggregate mining on properties to the west of Excelsior Road.

The majority of the Plan Area falls within the Elder Creek watershed, draining in a northeast to southwest direction. The primary discharge is through a double box culvert located at the intersection of Jackson Road and Excelsior Road.

5.4.2 Planned Drainage Improvements

The planned drainage system improvements includes the storm water pipe collection network and constructed drainageways, which provide flood control and water quality treatment. Exhibit 5.8, On-site Drainage Collection System, illustrates the preliminary drainage system to convey the storm water runoff generated within Plan Area.

5.4.2.1 Drainageways

Two constructed drainageways are provided within the greenbelts to convey the flows from the watersheds to the existing points of discharge. Generally, these drainageways are designed as wide, integrated drainage corridors, with meandering low flow swales to provide conveyance of small storm events, water quality and detention basins to provide treatment and peak flow attenuation. At-grade, flat benches are provided on both sides of the channelized drainageway, with a Class I trail along one side, which also provides access to the drainage facilities for maintenance. The drainage corridors were analyzed for the 10, 100 and 200-year level of protection in accordance with the County Department of Water Resources and the Regional Water Quality Control Board standards.

CHAPTER 5: PUBLIC UTILITIES

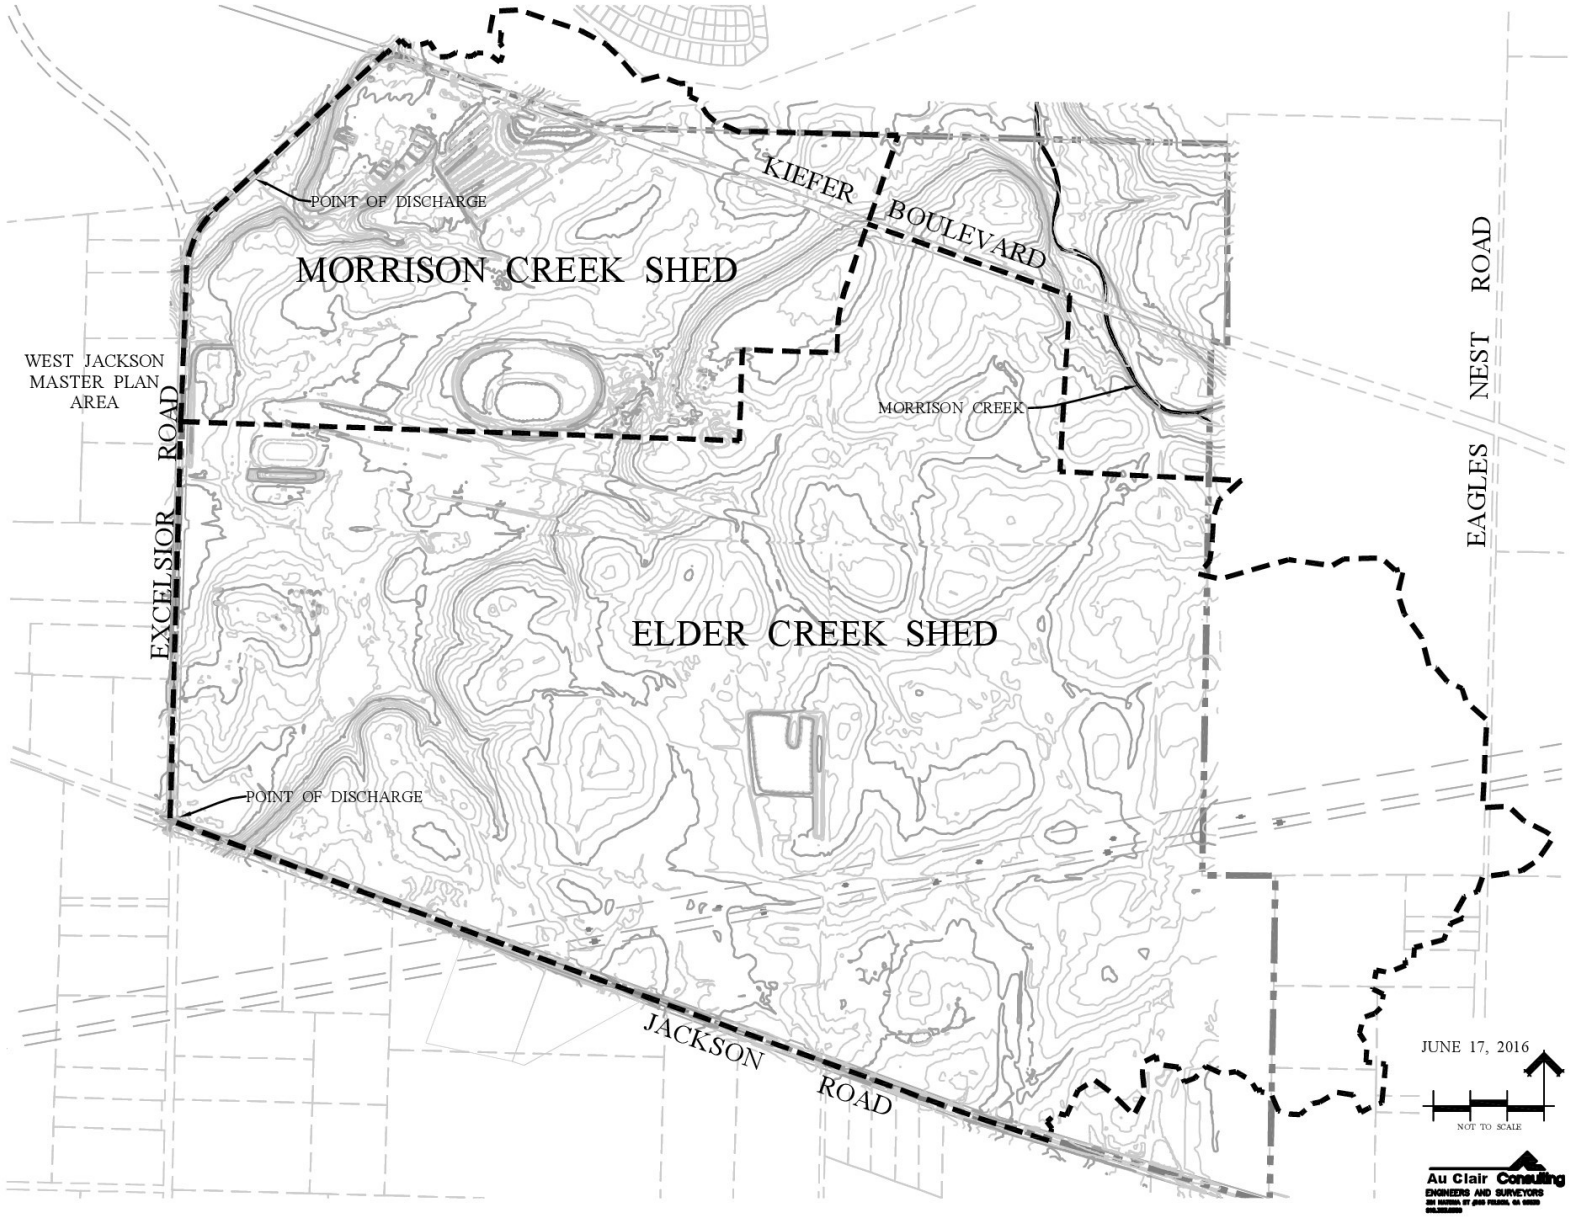

Exhibit 5.7: Plan Area Watersheds

CHAPTER 5: PUBLIC UTILITIES

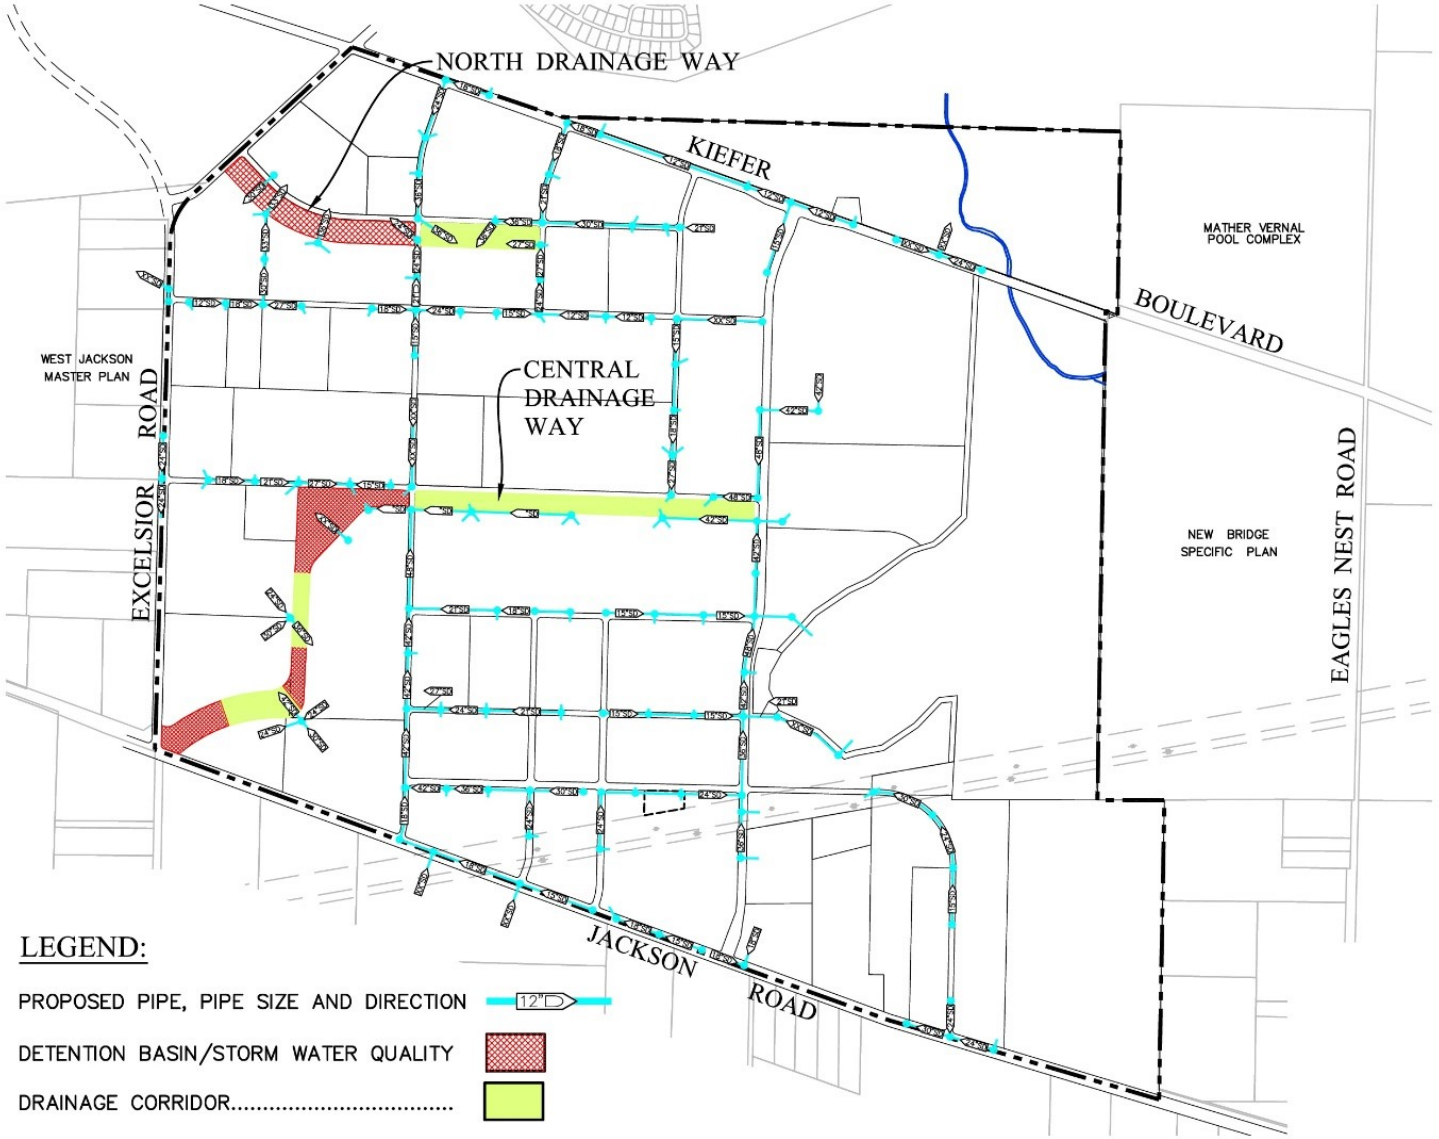

Exhibit 5.8: On-site Drainage Collection System

The North Drainage Way (Morrison Creek tributary) extends through the northwest quadrant of the Plan Area to the discharge point at Excelsior Road. A small tributary shed area north of Kiefer Boulevard will be piped to the North Drainage Way.

The Central Drainage Way (Elder Creek tributary) accepts the majority of drainage collection for the Plan Area, as shown on Exhibit 5.7. The flows enter the Plan Area from the east and the drainageway extends the length of the Plan Area, with the discharge point located at the intersection of Excelsior and Jackson Roads. The Central Drainage Way varies in width, getting progressively larger in size as it extends from east to west. An illustrative cross section of the North and Central Drainage Ways are shown in Exhibit 5.9.

5.4.2.2 Detention Basins

Detention basins are located within the North and Central drainageways, with one within the North Drainage and three in the Central Drainage. The Central Drainage basins may be constructed as part of the initial phase of development or may be sequenced, as needed, as development progresses. The Master Drainage Study, Appendix E, includes the analysis and calculations for the alternative development scenarios.

5.4.3 Storm Water Quality/ Treatment / Water Conservation

DWR requires new development to implement storm water quality treatment and mitigation measures. A variety of systems and facilities are integrated into the overall storm water management plan, which will provide storm water quality treatment. The drainage study includes a variety of treatment measures to be implemented within each development area. The onsite design of the local drainage facilities will include storm water quality features in the site design of each sub area. The detailed design for the majority of these facilities will be completed as a part of the tentative map process and included in the civil engineering improvement plans, since the facility design is dependent on the layout of each development area.

Detailed hydrologic/hydraulic models, as required by Sacramento County Department of Water Resources (DWR), were used to generate preliminary design flows and for the sizing of the onsite detention facilities. Refer to Appendix E, Master Drainage Study, for technical information on the modeling and sizing of the backbone drainage system.

5.4.3.1 Open Space Drainage Corridors

The primary drainage conveyance through the Plan Area watershed will be in naturalized drainage corridors, with many corridors having pedestrian and bikeway facilities adjacent to the drainageway. Exhibit 5.9, Illustrative Drainageway Corridors, provides a conceptual cross section of the drainageways. The hydraulic characteristics are a key design factor, providing forms and characteristics of natural stream geometry. Recreating these landforms with the drainageway geometry increases long-term stability and opportunity for successful establishment of riverine habitat. These drainageways will function to convey the normal, as well as the 100-year and 200 year storm events, in a stabilized corridor.

5.4.3.2 Low Impact Development (LID)

The DWR policies and adopted design standards incorporate the use of Low Impact Design (LID) measures at a local level and

CHAPTER 5: PUBLIC UTILITIES

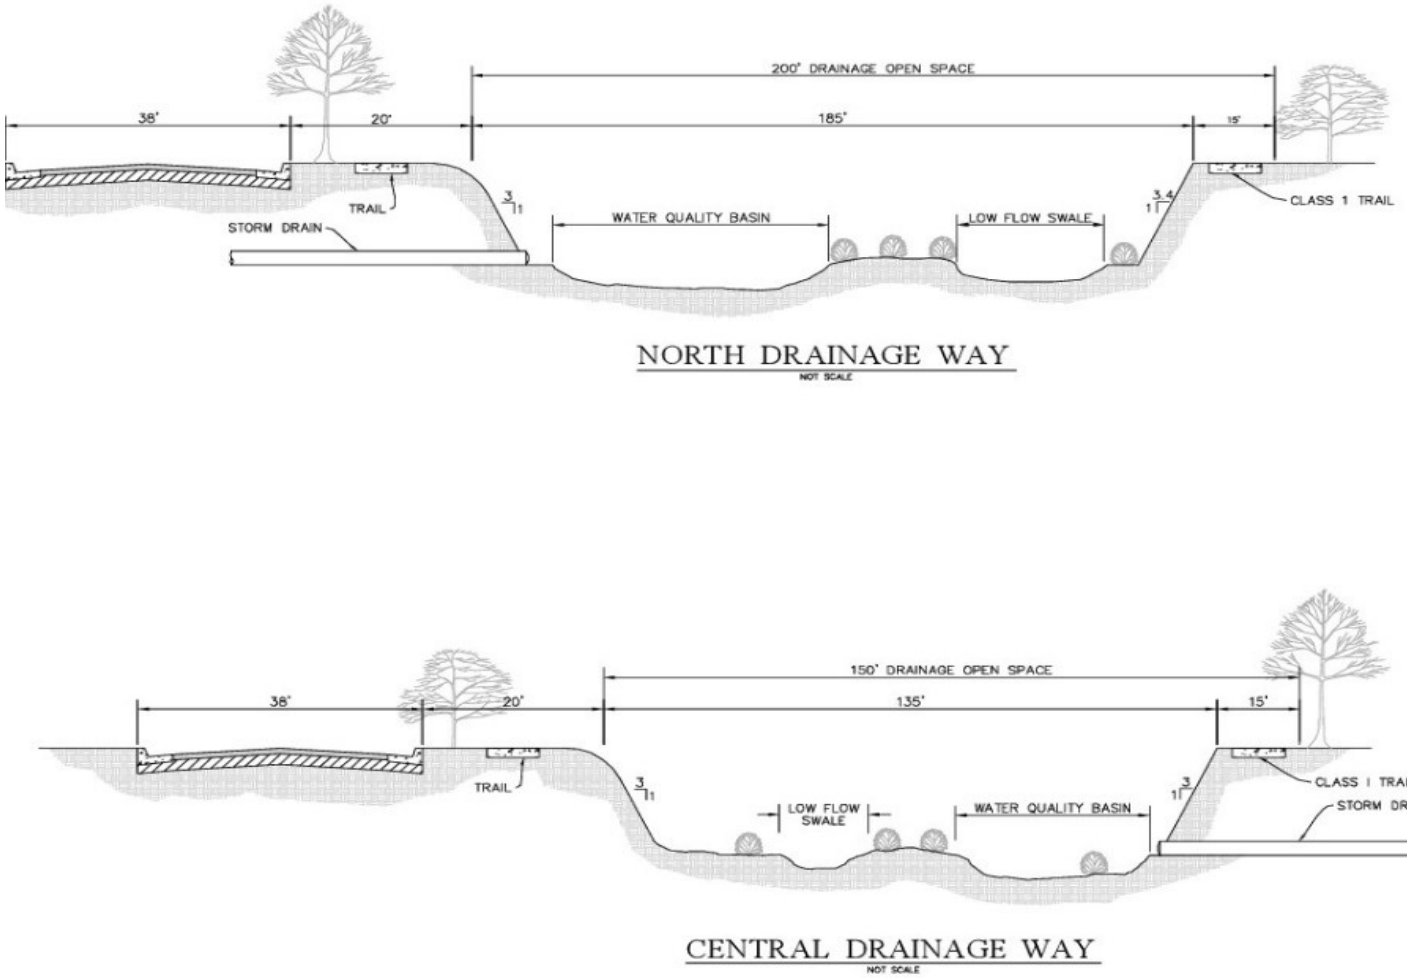

Exhibit 5.9: Illustrative Cross Sections of North and Central Drainage Ways

requires that new development provide onsite mitigation. The available LID techniques will be evaluated and implemented as part of the final onsite design process, based on hydrologic suitability and physical constraints (i.e. infiltration).

5.5 DRY UTILITIES

Dry utilities include electricity, natural gas and communication facilities.

Dry Utility Goals and Policies

Goal 5.5: Ensure that adequate dry utilities are in place to serve the Plan Area.

> ***Policy 5.5.1****: Project proponents shall coordinate with local service purveyors to ensure the provision of services in conjunction with project phasing.*

5.5.1 Existing Electrical Facilities

The Plan Area is within the service area of Sacramento Municipal Utility District (SMUD). A SMUD/ PG&E transmission corridor traverses the southern portion of the Plan Area and contains two SMUD transmission circuits (the Cordova - Hedge 230 kV & the Cordova - Pocket 230 kV lines) and two PG&E transmission circuits. Additionally, SMUD has 12 kV distribution facilities running along Jackson Highway and Excelsior Road which will likely be relocated, converted to underground and/or removed as the Plan Area develops.

5.5.2 Proposed Electrical Facilities

Peak electric demand at buildout is estimated at 44 megavolt amperes (MVA). Planned electric backbone facilities include a new substation at the northwest corner of the General Commercial site located at Jackson Road and Grenville Drive, just north of and adjacent to the SMUD/PG&E transmission corridor. Overhead 69 kV sub-transmission facilities will extend to and from the substation, in addition to running along Jackson Highway, Excelsior Road and Kiefer Boulevard. The new 69 kV facilities require a 20' non-exclusive easement, which can also include the joint trench facilities (underground electric, natural gas, telephone and cable television/broadband). Should the developer make the decision to underground the 69 kV, SMUD will request a total of 37.5' exclusive easement. Underground electric main line facilities will extend from the new substation to the individual parcels in conjunction with roadway improvements. The substation and 69 KV alignments are shown in Exhibit 5.10, Electric Facilities.

SMUD is planning to construct a bulk substation near the Plan Area, which will serve new growth in the vicinity, including the Plan Area.

5.5.3 Existing Natural Gas Facilities

The Plan Area is within the service area of Pacific Gas & Electric Company (PG&E) for natural gas. An existing 6" steel main line traverses the northern portion of the Plan Area within the Kiefer Boulevard right of way.

5.5.4 Proposed Gas Facilities

PG&E will supply natural gas service upon request and in accordance with the tariffs on file with the California Public Utilities Commission (CPUC). Service will be extended from the existing gas main to individual parcels in conjunction with roadway improvements. Joint trenches will be placed in franchise or in public utility easements (PUE's) parallel and

adjacent to the road rights of way. PUEs along both sides of public roadways will typically be a minimum of 12.5' wide for the local streets and 18' wide for the larger collectors, arterials and thoroughfare roads. In some cases, the PUE's may be narrower with provision for transformer cubicles where needed to serve power in the local development area. These modified setbacks will be coordinated with the utility companies.

5.5.5 Existing Telephone /Communications Facilities

Both AT&T and Comcast serve the Plan Area. Together these two providers will offer dial tone, video and internet within the Plan Area. AT&T has fiber optic and copper overhead facilities on Jackson Highway and copper facilities on Excelsior Road (joint poles with SMUD). Comcast's closest existing facilities are at Sunrise Boulevard and Jackson Highway, to the east of the Plan Area.

5.7.2 Proposed Facilities

Underground phone and cable/broadband facilities will be extended to individual parcels in conjunction with roadway improvements. Joint trenches will be placed in franchise or in PUE's parallel and adjacent to the road rights of way. PUE's along both sides of public roadways will typically be a minimum of 12.5' wide for the local streets and 18' wide for the larger collectors, arterials and thoroughfare roads. AT&T can serve the Plan Area from existing facilities. Comcast anticipates extending facilities northwest along Jackson Highway to serve the Plan Area.

CHAPTER 5: PUBLIC UTILITIES

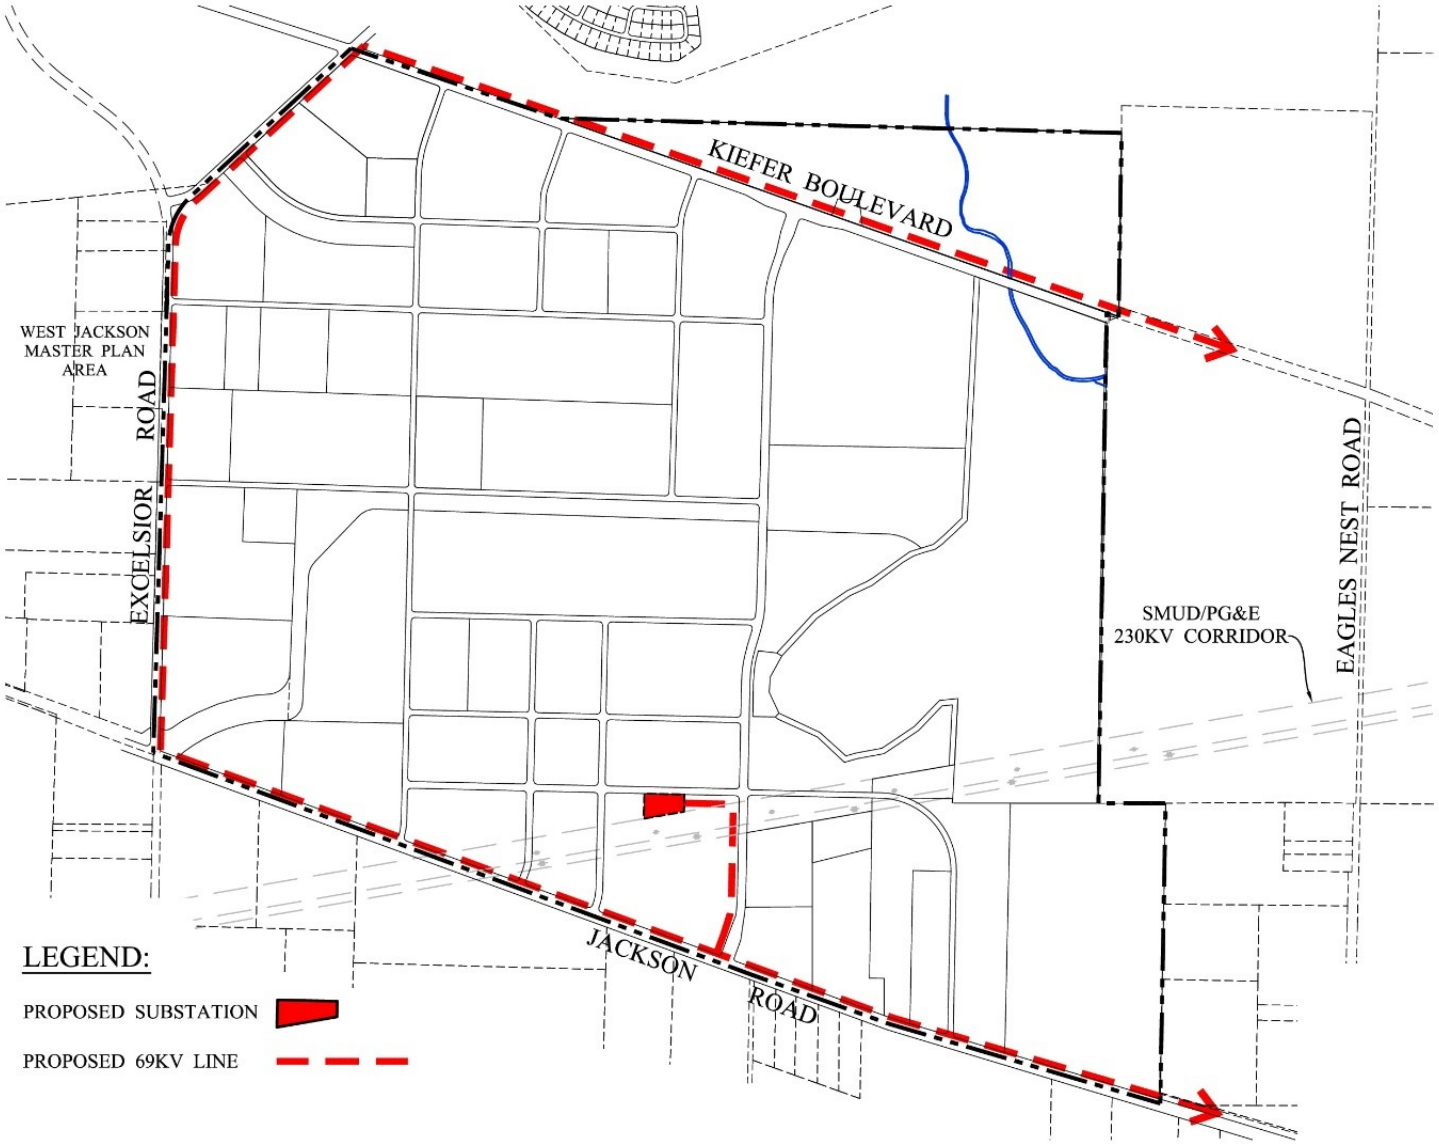

Exhibit 5.8: Electric Facilities

CHAPTER 6: PUBLIC SERVICES

6.1 OVERVIEW

This chapter describes the services necessary to meet the needs of Plan Area. The coordinated delivery of public services is essential to ensure a complete community, one that provides recreational, educational, public safety and library services for the residents. Goals and policies for each public service are addressed in the corresponding subsection. Phasing and financing obligations relating to public services are outlined in the Specific Plan development agreements and in Chapter 8, Implementation, of the Specific Plan. Table 6-1 summarizes the public service providers to the Plan Area. Most public service demands are based upon a per capita or population factor. Table 6.2 shows the projected population for the Plan Area, which is used in determining the demand for the public services addressed in this chapter.

6.2 PARKS, RECREATION AND OPEN SPACE

The parks and open space system in the Plan Area is a key feature required in order to meet the health, wellness and support of community values envisioned for the Plan Area. The intent of this section is to ensure sufficient and timely improvement of the parks and open space system, which is an integral part of the community framework. Park services for the Plan Area are provided by the Cordova Recreation and Parks District (CRPD).

Table 6.1: Service Providers

Service	Provider/Authority
Parks and Recreation	Cordova Recreation & Parks District (CRPD)
Trail Maintenance	Sacramento County Parks Department
School District	Elk Grove Unified School District
Library	Sacramento County Library
Law Enforcement and Protection	Sacramento County Sheriff's Department
Fire Protection	Sacramento Metropolitan Fire District
Solid Waste	Sacramento County Department of Waste Management and Recycling

Table 6.2: Population Projection

Zoning Category	D.U.	PPH	Total Population
LDR	2,295	3.10	7,114
MDR	1,245	2.80	3,486
HDR and MU	2,150	2.20	4,730
TOTAL	**5,690**		**15,330**

Parks, Recreation and Open Space Goals and Policies

Goal 6.1: Provide a coordinated parks and open space system to support a full range of passive and active recreation opportunities to serve as unifying elements of the community.

> ***Policy 6.1.1:*** *Design the park sites in conjunction with CRPD to ensure a balanced set of facilities that meets the needs of the Plan Area residents.*
>
> ***Policy 6.1.2:*** *Locate parks within approximately ¼ mile walking distance of residents.*
>
> ***Policy 6.1.3****: Design parks to function as both recreation and social gathering spaces for the community.*

Goal 6.2: Provide adequate park sites in size and location to meet CRPD and Title 22 land dedication requirement and 2010 Parks Master Plan.

> ***Policy 6.2.1:*** *Prepare a JTSP Parks Master Plan to identify the park sizes, location and types and a preliminary list of facilities and amenities to comply with the 2010 Master Plan.*

Goal 6.3: Designate open space land use to provide protection of Plan Area floodplains, habitat and other sensitive resources, where feasible.

> ***Policy 6.3.1:*** *Designate open space land uses, including greenbelts and wetland preserves, to provide passive recreation opportunities, resource protection, wildlife habitat, corridors for pedestrian and bicycle trails, storm water conveyance and water quality treatment.*

6.2.1 Proposed Parks and Open Space System

Table 6.3 provides the calculations of the acreage needed to meet the minimum acreage requirement, using the park demand factors pursuant to Title 22.40.045.The park system includes active community and neighborhood park sites and greenbelts, as depicted in the Public Facilities Exhibit 6.1. The system is comprised of two community parks, six neighborhood parks, numerous greenbelts and open spaces.

Table 6.3: Parkland Calculations

Zoning Category	**D.U.**	**Factor**	**Acres Reqd.**
Single family: LDR/MDR	3,540	0.0142	50.3
Multi family: HDR/MU	2,150	0.0119	25.6
TOTAL REQUIRED	**5,690**		**75.9 acres**
Parkland Provided			
Facility Type	**#**	**% Credit**	**Acres Credit**
Community Park	2	100%	40.6
Neighborhood Parks	6	100%	38.2
TOTAL PROVIDED			**78.8 acres**
DIFFERENCE			**+2.99 acres**

1. Actual yields of residential units will be tracked as part of the Specific Plan Implementation process. Adjustments to park acreage, if needed to satisfy obligations, will be identified at the time of Tentative Subdivision maps.

CHAPTER 6-PUBLIC SERVICES

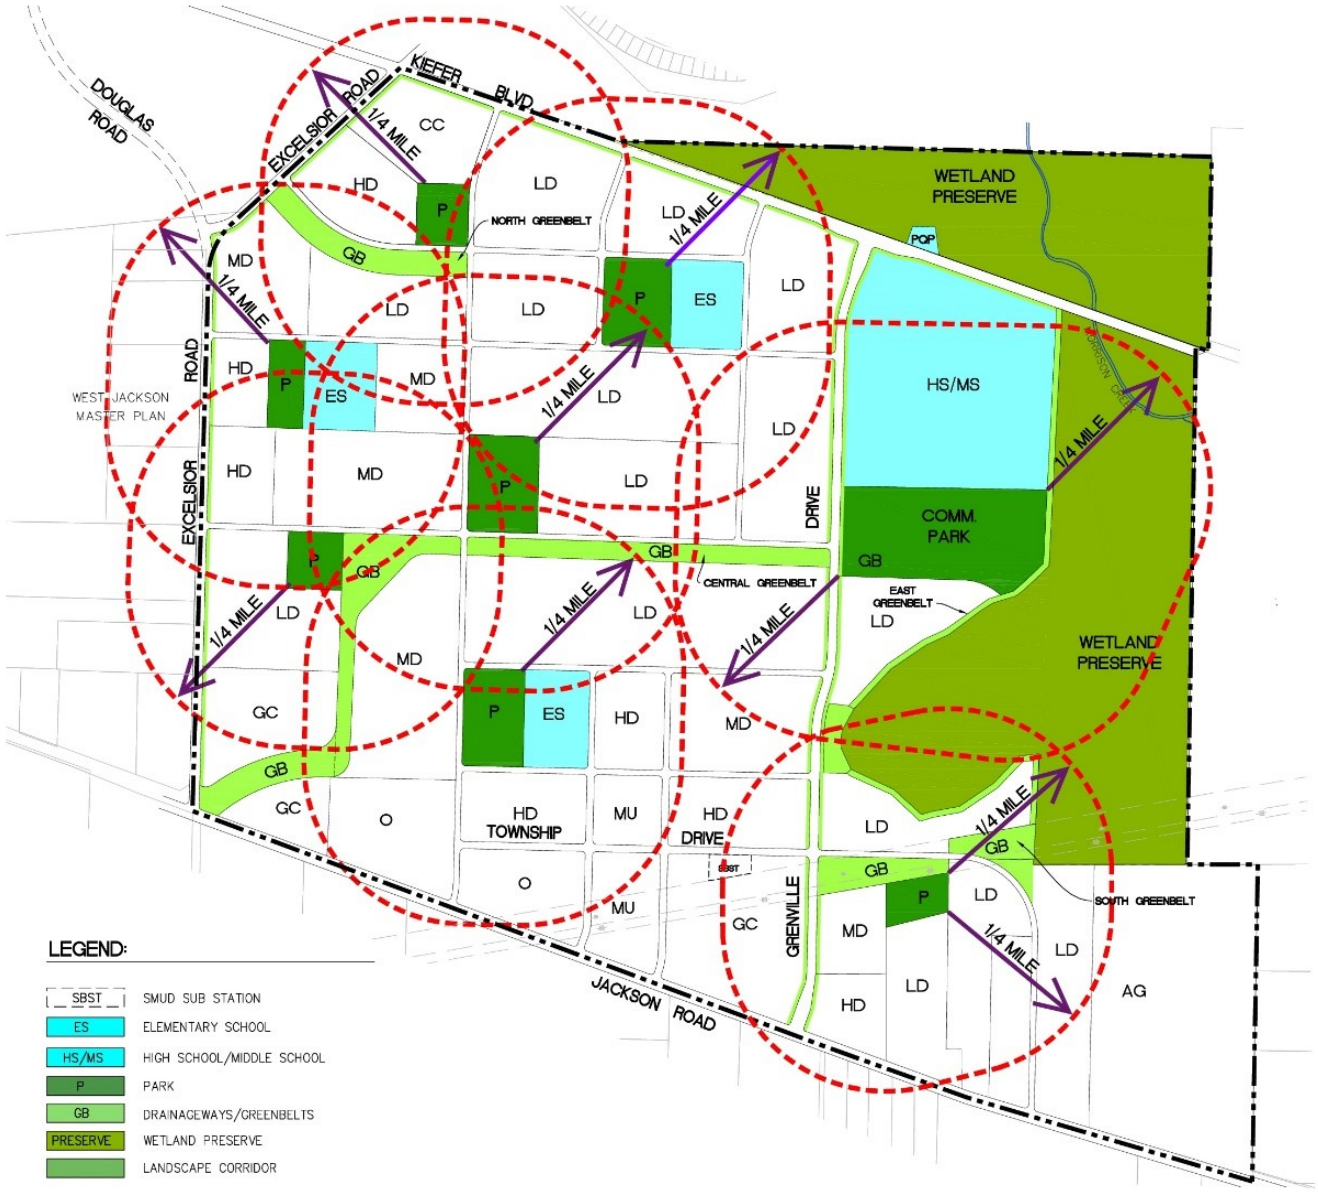

Exhibit 6.1: Public Facilities

The placement and sizing of parks is reflective of community need, CRPD policy, proximity to users, ability to promote joint-use activities and existence of natural resources. Parks are generally located within neighborhoods to create a local focal point, are adjacent to or connected with open space areas to create the desired interconnectivity within the community. Construction of park and recreation facilities shall be performed in accordance with the Development Agreement and consultation with the CRPD. All parks depicted on the Public Facilities Exhibit 6.1 will be owned and maintained by the CRPD.

6.2.2 Community Parks

Two Community Park sites are provided. The larger of the two Community Parks (Park A) is approximately 30 acres, located in the eastern quadrant of the Plan Area, directly adjacent to the joint High School/Middle School site and the wetland preserve. The placement of Community Park A is intended to create a prominent community gathering area of complementary public uses, which is easily accessible for the entire Plan Area. The Community Park A is envisioned to provide for large active facilities, such as lighted softball, baseball and soccer fields, basketball courts, parking, restrooms, large covered picnic area and playgrounds, water playground, and an off-leash dog area. This park is strategically located adjacent to the primary Central Greenbelt and the East Greenbelt along the wetland preserve, making a convenient biking, walking or running circuit and a good location for amenities such as a trailhead and nature/wildlife interpretive facilities.

The second Community Park (Park B) is approximately 10.6 acres in size and is located near the center of the Plan Area. The facilities in this park may include soccer fields, basketball courts, large covered picnic area, restrooms, playground and parking.

Depiction of possible Community Park amenities

6.2.3 Neighborhood Parks

The 6 neighborhood parks are planned to provide a balance between passive and active recreation uses as well as creating a sense of place for the Plan Area. All of the neighborhood parks will be easily accessible to the surrounding neighborhood through the use of the greenbelt trails, bikeways, sidewalks or residential streets. A range of recreation elements are planned for the 4 smaller neighborhood parks (approximately 5 acres each), including play areas for children, multi-purpose turf areas for youth sports and practice fields, half- basketball courts, picnic areas and covered spaces for small groups of people to gather. Three of the neighborhood parks are located adjacent to the elementary schools to provide joint-use facilities and to reinforce them as focal points for the neighborhoods. Two of these joint located parks are larger in size (9.5 acres) and may accommodate soccer and baseball fields, a restroom and parking lot in addition to the type of facilities in the smaller neighborhood parks.

Example of a neighborhood park play area and shelter

6.2.4 Open Space

The Open Space Element of the General Plan identifies four components that serve as the basis for the County-wide open space vision: greenbelts/parkways, floodplain protection, habitat protection and agriculture protection. The JTSP land plan incorporates these open space principles by designating approximately 290 acres of open space. Open space within the Plan Area is organized into three categories: wetland preserve, multi-functional greenbelts, and landscape corridors. All open space and park lands contribute to the overall open space requirement. Open space allows for multi-use functions including passive recreation opportunities, wildlife habitat, corridors for pedestrian and bicycle trails, storm water conveyance and water quality treatment. The entire open space system for the Plan Area will enhance by the cultural, community and recreational opportunities within the JTSP.

6.2.4.1 Wetland Preserve

The land plan has been designed to preserve two (2) large open space areas in the eastern quadrant of the Plan Area. The wetland preserve parcels, totaling approximately 260 acres, allow for the preservation of wetlands and other waters, while also providing visual open space for the adjacent community. The wetland preserves are situated to protect the areas with the greatest concentration of the highest quality wetlands and to ensure consistency with the Draft South Sacramento Habitat Conservation Plan (SSHCP). If the SSHCP is not in place at the time of Specific Plan adoption, approval of an individual 404 permit and Section 7 consultation by the USACE is required. These open space areas will preserve the resources in a natural condition and setting, with all operations, management and monitoring performed consistent with the SSHCP or the USACE, as applicable. Sections 7.2 and 7.3 provides detail on the open space and preservation strategies.

6.2.4.2 Multi-functional Greenbelts

The proposed greenbelts are multi-functional facilities that provide trails, passive recreation and drainage conveyance within linear corridors, with drainage ways being a primary function in two of the four designated greenbelts. The objective is to create multifunctional facilities for stormwater conveyance and water quality treatment in a naturalized corridor which provide trails, landscaping, passive and active amenities in the upland portions.

Four primary greenbelts are depicted on the Public Services Exhibit 6.1. The largest greenbelt is the Central Greenbelt, which provides the majority of the drainage conveyance for the Plan

Area and traverses nearly the width of the Plan Area east to west. This greenbelt/drainage corridor has a length of approximately 1.5miles and the widths vary from 100 to 200 feet. The North Greenbelt is also a multi-purpose greenbelt, providing drainage conveyance from a neighborhood park west to Excelsior Road, approximately 0.5 mile in length and 200 feet wide. The North Greenbelt is aligned to continue to the west to link with the planned West Jackson Plan Area. The East Greenbelt is adjacent to the wetland preserve south of Kiefer Road. This greenbelt serves as a transition and buffer between the habitat area and the adjacent land uses, including simple features such as a Class I trail, post and cable fencing and minimal landscaping. The South Greenbelt is located under a large powerline corridor in the southeast quadrant of the Plan Area. This greenbelt provides a linkage from the Town Center to the East Greenbelt, which leads to the Community Park and High School/Middle School. The South Greenbelt trail is

designated to continue beyond the Plan Area boundary to the east, to link to the planned NewBridge Plan Area.

The greenbelts include a pedestrian and/or bicycle circulation trail system that connects the open space network, parks, schools, commercial and employment areas to the residential neighborhoods, as depicted on the Mobility Exhibit 4.3. Examples of active recreation envisioned to be accommodated within the upland portion of the greenbelts are disc golf, par-course and water stations. The portion of the greenbelts that directly abut a park site are granted park credit by CRPD. Table 6.3 details the park credit calculations.

The Class 1 trails within the greenbelts are designed to function as maintenance/service access where appropriate. Sacramento County Parks Department will maintain trails within the greenbelts. Trail alignments shall meander to create a natural appearance. Pedestrian/bicycle trail nodes will be integrated at important/appropriate locations. Additional greenbelts and linear parkways will be used to extend the trail/pathway system into individual neighborhoods and non-residential developments. They may also be used as access into and as connections between greenbelts. Additional trail corridors, greenbelts and linear parkways will be designated at the neighborhood level.

6.2.4.3 Landscape Corridors

Landscape corridors are separate parcels that parallel larger roadways which act to buffer adjacent land uses and enhance the Plan Area aesthetics. Landscape corridors are designated along primary street corridors to provide pedestrian friendly streets with large, shaded walkways that are accessible to residents, encouraging use of non-vehicular modes of transportation. The JTSP Design Guidelines provide detail on the desired form, function and plant palette for the landscape corridors within the Plan Area.

6.3 SCHOOLS

The Plan Area is located in the Elk Grove Unified School District (EGUSD). The Elk Grove Unified School District's boundaries cover 320 square miles, stretching almost from the Sacramento River to the foothills of Amador County. The JTSP land plan provides school sites to serve the students living within the Plan Area as well as students from surrounding neighborhoods. The demand for school facilities, sizing, locations and generation rates have been based on information provided by the EGUSD and State of California criteria. Table 6.4 summarizes the anticipated number of students and number of sites necessary for each school within the Plan Area, based on student generation factors provided by the District.

School Goals and Policies

Goal 6.4: Coordinate with EGUSD for the provision of adequate school facilities, based on the phasing and buildout of the JTSP.

Policy 6.4.1: *Design the land plan to ensure school sites meet the EGUSD sizing and spacing requirements.*

Policy 6.4.2: *Locate a joint High School/Middle School site within the Plan Area to accommodate students generated from the northern portion of the EGUSD territory, including the Plan Area students.*

Policy 6.4.3*: Locate the elementary school sites adjacent to or near neighborhood parks sites to allow shared use and to serve as neighborhood amenities.*

Three sites are designated for elementary schools of approximately 12 acres each. One site, approximately 80 acres in size, is designated for a joint high school, grades 9-12, and middle school, grades 7-8. The school locations are depicted on Exhibit 6.1, Public Facilities.

Table 6.4: Student Yields and School Site Requirements		
Single-Family (LD, MD)		3,540
Multifamily (HD and MU)		2,150
Total Residential Units		**5,590**
Student Generation		
Elementary (K-6) Students	***Yield Rate***	
Students from Single-Family	0.402	1,423
Students from Multifamily [2]	0.252	543
Subtotal K-6		**1,966**
Site Needs: Elementary School capacity-850 students per school. 1,966 student yield /850=2.3 K-6 sites needed, 3 K-6 sites are provided		
Middle School (7-8) Students	***Yield Rate***	
Students from Single-Family	0.107	377
Students from Multifamily [2]	0.060	128
Subtotal 7-8		**505**
Site Needs: Middle School 7-8 capacity-1,200 students per school. 505 student yield/1,200=0.4 Middle school site needed, 1 is provided		
High School (9-12) Students	***Yield Rate***	
Students from Single-Family	0.195	691
Students from Multifamily [2]	0.101	218
Subtotal 9-12		**909**
Site Needs: High School capacity-2,200 students. 909 student yield/2,200=0.4 High School site needed, 1 is provided.		
Total Students		**3,380**

The elementary school sites are co-located with neighborhood park sites to encourage shared use of the facilities. In addition, the school sites are centrally located to serve as a focal point and gathering area for the neighborhood and each school is situated approximately ½ mile walking distance from most of the residences. The middle school and high school will serve students from outside the Plan Area, influencing the location selected for optimum access for all residents. School sites can serve as a community resource for neighborhood meetings and functions and provide a safe and secure educational atmosphere. The sites are also linked on the greenway system to maximize the non-vehicular modes of travel to these frequented locations, as depicted on the Mobility Exhibit 4.3.

6.4 LIBRARY SERVICES

Library Goals and Policies

Goal 6.5: Facilitate the provision of adequate library services for Plan Area residents.

> ***Policy 6.5.1:*** *Satisfy the increased demand for library services through the assessment of the County Public Facilities Fee on Plan Area residents.*

The Sacramento Public Library system operates library facilities that serve the unincorporated County as well as the Cities of Sacramento, Citrus Heights, Elk Grove, Galt and Rancho Cordova. The Central Library, located in downtown Sacramento at 828 I Street, functions as the main Library. A total of 27 facilities were in operation at the time of Specific Plan preparation and the closest library to the Plan Area was the Rancho Cordova Branch, located at 9845 Folsom Boulevard, approximately 8 miles from the Plan Area.

The Sacramento Public Library Authority prepared a Facility Master Plan for the 2007-2025 time frame. Based on the master plan, a library site is not needed in the Plan Area. New library facilities planned in surrounding areas will accommodate the Plan area residents. The increased demand of library services for the Plan Area is satisfied via the assessment of the County Public Facilities Fee, a portion of which contributes to the provision of additional library services.

6.5 Law Enforcement

Law Enforcement Goals and Policies

Goal 6.6: Enhance community safety by increasing crime prevention awareness.

> ***Policy 6.6.1:*** *The Design Guidelines shall incorporate crime prevention through environmental design (CPTED) principles, including natural surveillance, opportunity for "eyes on the street", lighting and access control through building and landscape design.*

The Sacramento County Sheriff's Department provides law enforcement for the Plan Area. The department's main office and jail are located in downtown Sacramento. Eight substations are located throughout the County, with the closest substation to the Plan Area at 2897 Kilgore Road in Rancho Cordova, approximately 7 miles north. The Department anticipates that service to the Plan Area will be accommodated from existing stations or new substations in the vicinity, therefore a station is not required to be located within the Plan Area. The increased demand for law enforcement services associated with the Plan Area is satisfied via the assessment of the County Public Facilities Fee, a portion of which contributes to the provision of additional law enforcement services.

6.6 Fire Protection

Fire Protection Goals and Policies

Goal 6.7: Provide for adequate fire protection resources to serve the Plan Area.

> ***Policy 6.7.1:*** *Identify a fire station site in conjunction with Sac Metro to serve the Plan Area with the appropriate level of fire protection and emergency response times.*

Sacramento Metropolitan Fire District (Sac Metro) provides fire protection and emergency medical services to all areas of unincorporated Sacramento County, as well as multiple contract cities. At the time of Specific Plan preparation, a total of 42 stations were in operation. In 2015, Sac Metro completed a Department Growth Analysis study. The study provided an update to the District's needs for fire stations, apparatus and crews to account for expected growth proposals being processed by the Sacramento County Department of Community Development and the City of Rancho Cordova Planning Department. The study identified the need for one "superstation" to serve both the Plan Area and surrounding areas. The station would include a fire truck, fire engine, wildland fire rig, a battalion chief and a medic. Sac Metro economic development staff identified the MU site adjacent to Jackson Road as an optimal location for a fire station Public facility uses such as a fire station are permitted uses in all commercial and office zones within the Plan Area. A final location will be determined in conjunction with Sac Metro representatives at the time of the first Tentative Map.

6.7 SOLID WASTE

Solid Waste Goals and Policies

Goal 6.8: Provide for an enhanced program to increase recycling in the Plan Area.

> ***Policy 6.8.1:*** *The Plan Area CSA will prepare and implement a community based program in cooperation with County Waste Management to elevate the recycling and re-use effort.*

Sacramento County Department of Waste Management and Recycling provides solid waste and recycling services for the single family uses within the Plan Area. The Waste Management and Recycling Department operates the Kiefer Landfill and the North Area Recovery Station. Services for residential homes include weekly garbage collection, bi-weekly collection of mixed recyclables, bi-weekly collection of green waste, monthly street sweeping and one annual appointment-based bulky waste collection.

Solid waste and recycling services for multi-family apartments (5 units or more), commercial and business solid waste services are performed on a contract basis with franchised haulers that are permitted to provide services in Sacramento County.

Projected solid waste generation from Plan Area can be accommodated within the approved and permitted landfill expansion capacity. Fees will be collected from residential accounts to cover collection costs and disposal methods.

CHAPTER 7: RESOURCES MANAGEMENT AND SUSTAINABILITY

7.1 OVERVIEW

This chapter identifies the environmental conditions and sensitive resources found in the Plan Area and describes the project's sustainability features. The JTSP implements sustainable practices through compliance with established policies, actions, design requirements and implementation strategies as presented in various chapters in the Specific Plan. This chapter addresses wetland resources, vegetation and wildlife, cultural resources, air quality and sustainability features of water quality, water conservation and energy efficiency.

The existing environmental conditions in the Plan Area were taken into account during the development of the land use plan, as described in Chapter 2, Plan Area Setting. The land use plan is designed to protect sensitive resources, where feasible, to minimize the impacts of development on the existing and natural communities in the Plan Area and to utilize these features in the overall sustainability program.

7.2 WETLAND RESOURCES

Wetlands (including both depressional "wetland features" as well as other waters of the U.S./State), are an important environmental component that shaped the planning, character, and function of the Plan Area. The Plan Area contained a wide variety of uses, including cattle grazing, cropland, rural residential dwellings and the Sacramento Raceway. Refer to

Section 2.2.2 for a complete description of the pre-Specific Plan conditions on the site. Wetland features occurring within the Plan Area were identified in the pre-development condition. The primary types of wetlands typical to Plan Area are generally described below. The Environmental Impact Report (EIR) and supporting studies should be referenced for more detail.

7.2.1 Wetland Resources Goals and Policies

Goal 7.1: Identify and preserve the best quality wetlands and species habitat to avoid and minimize impacts to protected resources.

> ***Policy 7.1.1:*** *Set aside the eastern portion of the Plan Area as a wetland preserve (Preserve), consistent with the* South Sacramento Habitat Conservation Plan *(SSHCP). Enhance the public enjoyment of passive open space by providing adjacent trails, viewing areas and interpretive signage, where feasible.*

Policy 7.1.2: Include specific avoidance and mitigation measures in the Development Standards for all land uses which abut the Preserve, including but not limited to buffers, special setbacks and lot orientation.

7.2.1 Vernal Pools

The vernal pools within the Plan Area can be best characterized as Northern Hardpan Vernal Pools. Northern hardpan vernal pools are seasonally flooded depressions found on soils with an impermeable hardpan layer. The impermeable layer allows the pools to retain water much longer than the surrounding uplands; nonetheless, the pools are shallow enough to dry up each season. Vernal pools are scattered throughout the Plan Area, with the highest density of pools occurring in the east – central portion. Some vernal pools on site are inter-connected by riverine seasonal wetlands. This typically occurs where one pool overflows into another relatively regularly.

Vernal pools typically support a predominance of native plants. Plant species observed within the vernal pools throughout the site are typical of species which are adapted to seasonally inundated conditions. Plant species observed within the vernal pool habitat on site include manna grass, coyote thistle, spikerush, hedge-hyssop, white-headed navarretia, annual hairgrass, woolly marbles and popcorn flower. Vernal pools play a valuable role in the food chain for a wide array of animals, including birds of prey, migratory waterfowl, shorebirds, frogs, toads, salamanders and pollinating insects. They are also home for listed vernal pool crustaceans, including tadpole shrimp and fairy shrimp.

7.2.3 Seasonal Wetlands/Seasonal Wetland Swales

Seasonal wetland habitat is typically associated with shallow drainages and swales (riverine features) or depressions, that inundate long enough to support hydric soils and hydrophytic vegetation, but do not inundate sufficiently to support vernal pool species. Riverine seasonal wetlands are characterized by the seasonal flow of water induced by the onset of heavy rains. A depressional seasonal wetland is characterized by shallow land depressions that remain saturated for extended periods. Dominant plant species observed within the seasonal wetland habitat include quaking grass, Mediterranean barley, Italian ryegrass, annual beard grass, annual hairgrass, toad rush, and curly dock.

7.2.4 Marsh

Both perennial and seasonal marsh habitat occur within the Plan Area. Aside from perennial marshes remaining inundated or saturated throughout the year, both support perennial herbaceous plant species that tolerate high soil moisture and seasonal to permanent soil saturation or inundation. For both aquatic habitat types, inundation/saturation persists well into the warm season.

Plant species observed within the marsh habitat on site include broad-leaved cattail, narrow-leaved cattail, bulrush, water primrose, pennyroyal, nutsedge, creeping spikerush and four angled spikerush. In addition, wildlife species observed within the marsh habitat include: black phoebe, Brewer's blackbird, red-winged blackbird, ring-necked pheasant, and song sparrow.

Marshes provide shelter and foraging habitat for several species of wildlife on the site including resident and migratory bird species, amphibians, reptiles, aquatic invertebrates, and foraging

mammals. Wildlife expected to occur in the marsh habitat include egret, heron, waterfowl, bullfrog, pacific tree frog, opossum and raccoon.

7.2.5 Irrigated Pasture, Ditch, Drainages and Farm Ponds

Due to the historical farming use of the Plan Area, a variety of habitats occur throughout the Plan Area. Irrigated pasture habitat is found mainly in the south-central portion of the Plan Area. Irrigated pasture vegetation is typically a mix of warm-season plants dependent on summer irrigation. The abundance of the vegetation can vary, according to season and livestock stocking levels, from a few inches to a foot or more. Irrigation ditches and drainages occur on site in association with the pastures.

A number of farm ponds and other impoundments are found in the Plan Area, primarily associated with rural residences. The largest pond is located in the central portion of the Plan Area, near the end of existing Tree View Lane. This pond serves as the irrigation water supply for irrigated pastures located in the south-central portion of the site. The pond is located at a relatively high elevation and appears to have been excavated solely for the purpose of irrigation supply. The other ponds were constructed by excavation, damming a drainage swale, or some combination of the two. Water supply is assumed to be derived from runoff, although groundwater pumping could also play a role in filling these ponds.

7.3 WETLAND PRESERVATION AND COMPENSATION PROGRAM

A primary goal of the JTSP is to preserve the highest quality wetland and species habitat present within the Plan Area while also meeting the County's General Plan objectives regarding smart growth and reduction of GHG emissions. To this end, the applicant engaged in early consultation with the Federal, State and local resource agencies about the proposed Project. These agencies included the U.S. Army Corps of Engineers (USACE), the U.S. Fish & Wildlife Service (USFWS), and the Central Valley Regional Water Quality Control Board, as well as the County of Sacramento. Much of this coordination was accomplished through discussions with the County and the resource agencies regarding the (SSHCP), under development in 2017.

The SSHCP is a regional approach for addressing impacts to, and mitigation for, species protected under the Federal and State Endangered Species Acts (ESA). It identifies urban development projects, such as the JTSP, within an Urban Development Area (UDA) and defines measures to avoid, minimize and mitigate impacts to protected species that will be affected by such development. The Plan also consolidates mitigation in areas of high habitat value, primarily located outside the UDA, thereby enhancing the long-term viability of species populations and habitat. The overall goal of the SSHCP is to implement this regional conservation strategy which will provide private and public projects with streamlined and more predictable permitting processes, should it be finalized and implemented prior to or concurrently with the development of the Plan Area. Alternatively, applicants may choose to opt out of the SSHCP process and instead address impacts to endangered species through a Section 7 consultation as part of an individual Clean Water Act Section 404 permitting process.

The Plan Area contains vernal pools and wetlands, which serve as habitat for vernal pool crustacean species protected under the Federal ESA. The Land Plan sets aside approximately 214 acres of open space which is dedicated as a Wetland Preserve

(Preserve) in the eastern portion of the Plan Area. The resulting Preserve will protect, in perpetuity, the highest quality resources within the Plan Area. Consistent with the conservation strategy in the SSHCP, the Preserve will be contiguous with a wetland preserve located on the Mather Field property to the north as well as a large, proposed preserve located on the neighboring NewBridge Specific Plan to the east.

The SSHCP further requires that projects include a variety of measures to minimize the impact of development on sensitive resources, such as vernal pools. Examples of resource avoidance and minimization measures incorporated into the design of the Plan Area include the following:

- Inclusion of a minimum 50-foot wide setback between development and the Preserve
- Controlling public access to the Preserve through permanent fencing along the boundaries
- Educational signage provided in key areas of Preserve
- Control of invasive species and management of non-native vegetation within the setback area and Preserve
- Minimization of road and trail crossings of wetlands and other waters within the Preserve
- Compliance with State and local stormwater regulations

During the Specific Plan preparation process, several development alternatives were explored to avoid impacts to the wetlands and other aquatic resources located within the Plan Area. However, because these resources are not confined to specific areas but are rather broadly distributed throughout the Plan Area, the participating landowner determined it was not feasible to avoid all resources and design the project to be consistent with County land use policies. Tsakopoulos Family Trust (TFT), the owner of a portion of the Plan Area, has applied for a permit from the USACE pursuant to Section 404 of the Clean Water Act to allow impacts to some of these wetlands and waters. This permit will include requirements to mitigate for the loss of any wetlands or waters within the TFT subject site, thereby ensuring no net loss of these resources due to development of the Specific Plan land uses. The applicant expects to mitigate for the wetland impacts on the TFT property through a combination of on-site wetland restoration within the Preserve and the payment of in-lieu fees through the SSHCP.

7.3.1 Resource Preservation Measures

The applicant intends to dedicate the Preserve to the SSHCP implementing entity, the South Sacramento Conservation Agency (SSCA). The SSCA will implement measures identified in the SSHCP to ensure the long-term viability of the protected and restored vernal pool and wetland resources within the Preserve. These measures include both routine management activities as well as adaptive management practices. Detailed avoidance and minimization measures which apply to all lands abutting the Preserve are included in the Development Standards and Regulations, Appendix A.

Routine management activities may include such common open space management activities as controlling public access to sensitive areas, fencing along Preserve boundaries, educational signage in key areas of the preserve and trash removal. Because the Preserve will protect vernal pool habitat, other management activities could include invasive species control, thatch management activities, and hydrology studies. Adaptive

management may include pilot programs and research. Pursuant to the SSHCP, the Preserve will be routinely monitored to ensure habitat health and functionality. At the time of Preserve dedication, the applicant will pay a fee to help fund these long-term maintenance and monitoring activities in perpetuity.

7.4 VEGETATION AND WILDLIFE RESOURCES

7.4.1 Annual Grasslands

The biological community covering the majority of the Plan Area is annual grassland. Central Valley annual grassland communities are composed largely of non-native annual grasses and forbs. The dominant plant species observed in the annual grassland consists of soft brome, wild oat, medusa head, long-beaked filaree, hawkbit, mouse-tail grass, Spanish clover, tarplant, Fitch's tarweed, barley and Italian ryegrass. Annual grassland typically supports breeding, foraging, and shelter habitat for several species of wildlife including raptors and migratory birds.

7.4.2 Native and Non-native Trees

Historically the Plan Area supported few or no trees, due to the presence of hardpan soils and the absence of summer water. Growth of trees within the Plan Area was promoted by the development of irrigation facilities, the establishment of rural residential uses, and tree planting. While the pre-development condition of the Plan Area was mostly treeless, considerable areas of non-native tree species existed on site, mostly associated with rural residential parcels. The dominant tree species found within the Plan Area is eucalyptus, in addition to other typical landscape and ornamental species, such as mulberry and palm.

7.4.1 Vegetation and Wildlife Goals

Goal 7.2: Support the preservation of grasslands and native trees, where feasible, to provide habitat and foraging for wildlife.

> ***Policy 7.2.1:*** *Preserve grassland habitat as part of the on-site Preserve.*
>
> ***Policy 7.2.2****: The development standards shall include measures to actively manage grassland to ensure long-term habitat through the operation and maintenance plans.*
>
> ***Policy 7.2.3****: Preserve native trees where feasible and remove non-native trees that are potential fire hazards and high voc-emitting species, such as eucalyptus.*

7.5 AIR QUALITY

The Plan is within the Sacramento Metropolitan Air Quality Management District (SMAQMD), which is a special district created by state law to enforce local, state and federal air pollution regulations. The Specific Plan incorporates strategies to address projected air emissions associated with construction and build out of the development to help reduce and mitigate These elements, in combination with the significant natural open space areas within the Plan Area, will result in a pedestrian and bicycle friendly environment that will promote non-vehicular use as a primary choice becoming a way of life for residents. In addition, the Plan Area employment and commercial land uses include the designation of carpool/ vanpool/rideshare spaces, both proven strategies to reduce potential air emissions.

7.5.1 Air Quality Goals and Policies

Goal 7.3: Reduce and mitigate potential impacts to air quality associated with the construction and buildout of the Plan Area.

Policy 7.3.1: The Design Guidelines shall provide specific strategies to reduce air quality impacts at the building level, such as use of photo-voltaic systems and low emitting products for furnaces and air conditioners for residential and commercial uses. Coordinated tree plantings and building orientation may also be used to reduce anticipated heating and cooling needs.

Policy 7.3.2: Use native and drought-resistant species to reduce the demand for irrigation and gas powered landscape maintenance equipment. Maximize selection of low-VOC emitting species and long-lived and evergreen species for maximum emissions removal.

Policy 7.3.3: Monitor dust and exhaust emissions during construction. Prior to the issuance of grading permits, a Construction Emission/Dust Control Plan will be submitted to the SMAQMD for review and approval. All construction activities will be required by contract specification to implement all measures from the approved Construction Emission/Dust Control Plan as applicable.

An Air Quality Mitigation Plan is in place for the JTSP. All development projects are required to follow the measures during construction and post-construction.

7.6 CULTURAL RESOURCES

The 883-acre portion of the Plan Area owned by Excelsior Estates, LLC has been subject to numerous cultural resource surveys pursuant to Section 106 of the National Historic Preservation Act (NHPA), as required for the Section 404 permit associated with that property, as well as for CEQA. In 2008, the applicants property was subjected to an intensive pedestrian survey by archaeologists Sean Michael Jensen and Robert McCann. A second pedestrian survey was performed in 2013 by archaeologists Ric Windmiller and Steven Laumann. These two surveys identified a total of six historic-era resources located within the applicant-owned portion of the site. In 2015, ECORP Consulting completed a targeted cultural resource evaluation and testing program of these six resources. This evaluation compared the resources against the eligibility criteria for inclusion on the National Register of Historic Places (NRHP) and the California Register of Historic Resources (CRHR). ECORP concluded that none of the resources were eligible for listing on either the NRHP or the CRHR. The remaining portion of the Plan Area (i.e., the non-participating properties) will be subject to an on-the-ground cultural resource survey and an associated records search prior to the issuance of entitlements to develop those properties.

7.7 SUSTAINABILITY

The JTSP incorporates sustainability concepts and practices in the approach to land use, circulation, public utilities, public services and environmental resources. The sustainability elements of energy efficiency, water conservation and water quality build upon the foundation of the "smart growth" land use plan. The addition of the following goals and policies will result in a sustainable, eco-aware community which grows responsibly while enhancing and respecting the local, County-wide, State and global efforts to reduce the impacts of climate change.

CHAPTER 7: RESOURCES AND SUSTAINABILITY

General Sustainability Goals and Policies

Goal 7.4: Promote the Plan Area as an eco-aware community by supporting community engagement, education and activities as part of the Jackson Township Community Association.

> ***Policy 7.4.1:*** *The Community Association shall sponsor activities such as electronic waste collection drives, "free-cycle" fairs, water conservation challenges, energy saving day party and other collaborative events to highlight awareness.*
>
> ***Policy 7.4.2:*** *The Community Association shall create and manage a community website for residents, business owners, workers and students to share and obtain information such as community activities, carpools, bike-pools, ride-sharing and transit schedules in coordination with the TMA and/or transportation coordinator.*

Energy Efficiency Goals and Policies

The JTSP incorporates energy efficiency measures and promotes renewable energy resources, which will reduce dependence on non-renewable energy and energy-related greenhouse gas (GHG) emissions. Specifically, GHG emissions will be reduced by lowering energy demand, improving water and energy efficiency, and increasing the amount of electricity and heat generated from renewable energy sources.

Goal 7.5: Encourage the incorporation of alternative energy technology and innovative, cost-effective construction techniques to improve the efficiency of buildings, site design and landscaping.

> ***Policy 7.5.1:*** *All new buildings constructed in the Plan Area will feature smart energy meters, solar hot water heaters, Energy Star appliances and be "solar- ready".*
>
> ***Policy 7.5.2:*** *Any codes, covenants and restrictions (CC&R's) shall permit the installation of facilities to collect, store or utilize solar energy on buildings.*
>
> ***Policy 7.5.3:*** *Shopping centers, office complexes, parks and public places will have preferentially located parking spaces and charging stations for electric vehicles.*

NEV Charging Station

Goal 7.6: Promote environmentally responsible and efficient outdoor lighting.

> ***Policy 7.6.1:*** *All lighting applications shall be subject to the 2016 Building Efficiency Standards Section 140.7 and use fixtures approved by the International Dark Sky Association.*

Bio Swale example

Water conservation and quality is an important element of sustainability for the Plan Area. The Public Services Chapter describes specific design techniques for water quality, which include water quality basins, storm water retention/detention basins, bio-swales and other low impact design (LID) techniques. Section 5.4.3 provides more information on water quality management treatment methods. Refer to Chapter 4 of the Design Guidelines, Appendix B, for details on water conservation and best management practices.

Water Quality and Conservation Goals and Policies

Goal 7.6: Promote water conservation at all levels within the Plan Area, such as in publicly maintained facilities, private homes and businesses.

> ***Policy 7.6.1:*** *All buildings and landscaping shall be designed to conserve water in compliance with the water agency's methods, including use of advanced plumbing fixtures, high efficiency irrigation systems, low water use plant palette, water use monitoring systems and rain water harvesting systems.*

Goal 7.7: Protect surface and groundwater quality throughout the Plan Area, in accordance with the State Water Resources Control Board National Pollutant Discharge Elimination System (NPDES) Phase II requirements.

> ***Policy 7.7.1:*** *Employ Best Management Practices (BMP) and other techniques to treat and protect surface and groundwater quality. Incorporate bio-filtration of surface runoff within the multi-functional open space system and within landscaped areas.*

CHAPTER EIGHT: IMPLEMENTATION

8.1 OVERVIEW

California Government Code Section 65451 requires that Specific Plans include programs of implementation strategies related to regulatory changes, programs, financing strategies and public works projects needed to carry out the proposed land use, infrastructure and development standards outlined in the Specific Plan.

This chapter provides a summary of the methods by which the Specific Plan will be implemented and provides discussion on the sequencing and financing programs that demonstrate compliance with County General Plan policies and the vision, goals and policies of the Specific Plan.

The Specific Plan is anticipated to be built-out over a 15 to 25 year period. The goal of this chapter is to describe how infrastructure and public facilities will be constructed and how public services will be delivered in a timely manner.

8.2 IMPLEMENTATION AND SEQUENCING

Implementation Goals and Policies

Goal 8.1: Provide clear implementation strategies and actions to ensure development in the Plan Area occurs in an efficient and orderly manner.

Policy 8.1.1: Provide an Infrastructure Master Plan which identifies the infrastructure that must be constructed in sequences to match the development as it progresses.

Policy 8.1.2: Provide a Phasing/Sequencing Plan to direct development in logical increments and infrastructure extensions, yet provide flexibility for individual development areas to progress independently, where feasible.

Policy 8.1.3: Identify sequencing policies and/or timing, if required, to ensure that backbone infrastructure and public facility improvements in each Area will support the associated development in compliance with County policies and standards.

8.2.1 Implementation Approach

The current and proposed public utility providers for community infrastructure, both pre- and post-Specific Plan, are identified in Chapter 5, Public Services. The public services and service levels required for the build-out of the community are discussed in Chapter 6. Given the diversity and number of public entities that serve the Plan Area, coordination is essential to successful implementation.

A Fiscal Impact Analysis, an Infrastructure Master Plan, a Public Facilities Financing Plan and an Urban Services Plan were prepared to comply with General Plan Policy LU-120, sub-policies PC-6 and PC-7. These plans and programs demonstrate that the infrastructure needs and the associated costs are reasonably balanced throughout each development phase and that the provision of services, as well as the operations and maintenance costs, are cost-neutral to the County's General Fund and existing ratepayers.

The Infrastructure Master Plan, Appendix F, describes how the infrastructure will be constructed in sequences to match the development as it progresses. The Public Facilities Financing Plan (PFFP), Appendix G, describes the methods by which the

infrastructure identified in Appendix F will be financed and funded. The Urban Services Plan (USP), Appendix H, addresses the manner in which the public services delivery will be managed and funded.

8.2.2 Sequencing by Area Plans

The Specific Plan provides for a comprehensively planned infrastructure system with coordinated sequencing and construction of facilities. In general, the development sequencing plan has been structured to ensure that the backbone infrastructure and public facility improvements in each Area can support associated development in compliance with County policies and standards, and that the development in each Area of the Specific Plan can reasonably support the costs of the required improvements.

The geographic boundaries of each Area are reflected on the Sequencing Exhibit 8.1. Appendix J, Planning Area Detail, provides maps and statistical summaries of each Planning Area. The Sequencing Exhibit breaks the Plan Area into 4 Areas, Area 1A/B, Area 2, Area 3 and Area 4. The non-phased areas include the wetland preserve and Ag parcels, for which no development is proposed. These areas were selected based on infrastructure service, logical development areas and property ownership in the Plan Area. Area 1A /1B was identified as the first logical area to begin development. This sequencing facilitates the completion of major backbone infrastructure improvements, provides internal access from both Jackson Road and Kiefer Boulevard and provides early access to the High School/ Middle School site. Table 8.1 provides the Land Use Summary by Area.

8.2.3 Sequencing Approach

Development for Areas 2, 3 and 4 may move forward independently and in any order after Area 1A/B commences development, provided that parcels can meet the public services requirements and the sequencing policies outlined in the Infrastructure Master Plan, described in Section 8.2.4.Areas may also proceed with development of smaller sub-Areas. The Area boundaries are conceptual and may be adjusted as development progresses, pursuant to the process outlined in Section 9.4, Specific Plan Amendments and Minor Revisions.

8.2.4 Infrastructure Master Plan

An Infrastructure Master Plan (IMP), Appendix F, is an important element of project implementation. The IMP identifies the infrastructure requirements for each Area of development, including on-site and off-site facilities necessary for each Area to proceed. Identified improvements for each Area includes roadways, wastewater, water, storm drainage and dry utilities.

The IMP itemizes each facility which must be constructed to support each Area, along with any over sizing of infrastructure which may be required for adjacent Areas which are served by the same facilities. The infrastructure required to initiate development of Area 1A/B is a significant portion of the overall Plan Area backbone facilities, approximately 80%, while the proportional land of Area 1A/B is approximately 45% of the 4 Areas. In broad terms, the following percentages of the overall backbone infrastructure facilities are installed in order to facilitate initial development:

- Off-site water infrastructure- 100%
- On-site water infrastructure- 50%
- Off-site wastewater infrastructure-100%
- On-site wastewater infrastructure-65%
- On-site drainage improvements- 65%
- Off-site major roadways (Kiefer Blvd)-100%
- On-site major roadways frontage improvements- 70%

This approach provides the ability for the Plan Area to develop in logical increments and infrastructure extensions, yet provides flexibility for individual development areas to progress independently, where feasible. The development of Area 1A/B requires the installation of significant off-site and internal infrastructure which serves the entire Plan Area. The costs for these backbone facilities in Area 1A/B are out of balance with the other Areas, requiring Developer funding of the difference of which the Area 1 A/B development can support.

8.3 FINANCING AND MAINTENANCE OF PUBLIC FACILITIES

The construction of public facility improvements to serve the Plan Area will be funded by a variety of mechanisms. Financing methods may include, but are not limited to, the mechanisms outlined in this section and shown in Table 8.2. Specific financing requirements, improvement obligations, fees, reimbursements, land and easement dedications and conveyances, maintenance, and other financing and improvement related obligations are detailed in the JTSP development agreement, USP, PFFP and any reimbursement agreements.

8.3.1 County Impact Fees

Sacramento County has a number of fee programs for capital improvement projects designed to serve the Plan Area. These include the Transportation Development Fee administered by the County Department of Transportation and various impact fees administered by the Sacramento Area Sewer District (SASD), Sacramento County Department of Water Resources (DWR), the Sacramento Regional County Sanitation District (SRCSD) and the Sacramento County Water Agency (SCWA). To the extent that Jackson Township is served by these agencies, all new development will pay the appropriate fee(s).

8.3.2 School Impact Fees

The Elk Grove Unified School District (EGUSD) has established fees, in accordance with Section 17620 of the California Education Code, to be used to construct school facilities. Pursuant to Section 65995 of the California Government Code, these school impact fees will be collected by the County at the issuance of a building permit, and are forwarded to the school district, as required by law.

8.3.3 Other Agency Fees

In addition to County and School District fee programs, a number of other public agencies and Special Districts serving the Plan Area have established fees that may have capital improvement projects designed to serve Jackson Township. These may include the Sacramento Metropolitan Fire District (SMFD), Sacramento County Library System, Cordova Recreation and Parks District (CRPD) and Sacramento Transportation Authority (STA).

8.3.4 Special Financing District/Specific Plan Fee

The Applicant/master developer and/or subsequent builders expects to construct and/or finance major backbone infrastructure and public facilities, meaning facilities that are sized to serve the entire Plan Area. As described in Section 8.2.4, some facilities are required to be constructed up-front but are sized to serve subsequent Areas. In some cases, the facility is included within the capital improvement program for an existing fee program, and the cost to construct the facility would be repaid to the developer/builder through fee credits and/or reimbursements. In other cases, a portion or all of the costs for a facility may be outside of existing fee programs. A Special Financing District is created to proportionately allocate the cost of backbone infrastructure and public facilities not currently included in public fee programs. The Special Financing District would be managed by the County to ensure that all development within the Specific Plan pays its proportionate share of costs and that initial developers/builders are repaid for any oversizing.

The Special Financing District could include a Specific Plan Fee, a Community Facilities District, and/or other funding mechanisms deemed appropriate. The purpose of the Specific Plan Fee is to reimburse the participating landowner (Excelsior Estates, LLC) and the County for costs associated with the preparation, adoption and administration of this Specific Plan and other costs incurred pursuant to CEQA. Properties owned by non-participating landowners will be required to annex into the CFD and/or other overlapping special districts (including any zones of benefit), which have been established to fund services or improvements that benefit the property. Non-participating landowners will also be required to consent to any applicable provisions of the Specific Plan, which may involve the execution of a Development Agreement.

8.3.5 Fee Credits within Specific Plan Area

To the extent authorized by the utility providers' respective ordinances, where the Applicant/master developer and/or subsequent builders have advance funded major backbone infrastructure and/or public facilities, such as but not limited to sewer and water, subsequent builders may be required to purchase credits at the corresponding fee levels for such infrastructure or facilities from the developer/builder that advanced such funding when such credits are available.

8.3.6 Community Facilities Districts

Another funding and/or financing mechanism that may be utilized to help fund the construction and/or acquisition of backbone infrastructure and facilities within the Plan Area are Community Facilities Districts (CFDs). The 1982 Mello-Roos Community Facilities Act enables cities and other entities to establish a CFD to fund various facilities and services. The proceeds of the Mello-Roos special tax can be used for direct funding of facility construction, acquisition and/or to pay off bonds.

Several existing CFDs are applicable to the Plan Area; EGUSD CFD No. 1 and Police Services CFD No. 2005-1. The EGUSD CFD funds future elementary and secondary schools and additions to existing schools. The Police Services CFD provides supplemental funding for sheriff services.

CHAPTER 8: IMPLEMENTATION

One or more CFDs for Services can also be established for maintenance of certain facilities that provide special benefit to the Plan Area. Such facilities may include landscape corridors, medians, open space, bike paths/trails, detention/retention facilities and parks. The CFD for Services may be used to fund governmental services that benefit residents of the Plan Area, including law enforcement and fire services, to the extent that service levels exceed current levels.

8.3.7 Landscape and Lighting Assessment District

A Landscape and Lighting Assessment District (LLD) is a similar financing mechanism to a CFD for services. This mechanism may be established and, through annual assessments to property owners, would create a fund to maintain public facilities within the Plan Area. These facilities could include landscape corridors, medians, open space areas, parks, linear parkways, pedestrian/bike trails, storm water facilities and street lights.

8.3.8 County Services Area (CSA)

County Service Law (Government Code 2521.1 et seq.) provides a means to deliver and fund expanded services in unincorporated areas. A CSA can provide expanded services for police protection, fire protection, park and recreation facilities, library, water, etc. These expanded services can be funded through ad valorem taxes (based on assessed value), special taxes, assessments, and/or standby charges. Sacramento County CSA 1 provides funds for the maintenance and operation of street and safety lights, via a service charge. The JTSP is expected to annex into CSA 1.

8.3.9 Measure M School Bond

The EGUSD Measure M General Obligation bonds was passed by voters in 2016. Measure M provides proceeds to be used for construction, reconstruction, rehabilitation, or replacement of school facilities, including the furnishing and equipping of school facilities, or the acquisition or lease of real property for school facilities. The Measure M general obligation tax is an ad-valorem tax based on the assessed value of the property being taxed. The JTSP is expected to participate in Measure M.

8.3.10 Developer Financing

Direct developer/merchant builder financing may be used to contribute towards backbone improvements and facilities, shortfall financing and in-tract subdivision improvements. Table 8.2 identifies some possible options for funding and/or financing mechanisms for Plan Area improvements and facilities.

CHAPTER 8: IMPLEMENTATION

Table 8.2: Funding/Financing Mechanisms		
Improvement	**Facility Funding Options**	**Maintenance Funding Options**
Roads	Fees, Special Financing District	Property Tax
Transit	Fees	Property Assesmt, Farebox Revenue
Trails/Paths	Fees, Special Financing District	TBD
Fire	Fees	Property Tax
Schools	Fees, CFD, Ad Valorem taxes	District Sources

Open Space	Special Financing District	CSA Service Charge, SFD
Public Protection	General Fund	Existing CFD

CHAPTER NINE: ADMINISTRATION

9.1 OVERVIEW

This chapter of the Jackson Township Specific Plan (JTSP) outlines the Specific Plan process and its relationship to the subsequent entitlement processes that are necessary to allow construction of individual projects. This chapter also describes the administrative procedures that will occur to implement, amend, interpret and enforce the Specific Plan.

9.2 SPECIFIC PLAN PROCESS AND SUBSEQUENT ENTITLEMENTS

This section describes the project entitlements and the relationship between the concurrent approvals which occurred with the adoption of the JTSP and the subsequent entitlement process to occur after Specific Plan adoption.

9.2.1 Specific Plan and Concurrent Approvals/Actions

Approval of the JTSP included the following entitlements and related actions:

- **General Plan Amendments**
  The General Plan was amended for items specific to the Plan Area, including amending the Urban Policy Area (UPA) boundary, amending the Land Use Diagram designations and amending the Transportation Diagram and the Bicycle Master Plan accordingly.

- **Community Plan Amendments**
  The Vineyard Community Plan and the Cordova Community Plan were amended to include the Jackson Township Specific Plan designations.

- **Specific Plan (JTSP)**
  The Sacramento County Board of Supervisors (the Board) adopted the Jackson Township Specific Plan and Appendices A-J by ordinance.

- **Development Agreement** for the Jackson Township Specific Plan by and between the County of Sacramento and the participating landowner.

- **Public Facilities Financing Plan** for the Jackson Township Specific Plan that describes a Capital Improvement Program and a funding and financing strategy for planned improvements.

- **Urban Services Plan** for the Jackson Township Specific Plan that describes the cost to provide annual public services and the funding sources identified to cover projected costs.

- **Water Supply Master Plan Amendment** to amend the existing Zone 40 Water Supply Master Plan to include provision of water service to the Jackson Township Specific Plan Area. This action requires Sacramento County Water Agency Board of Directors approval.

- **Water Supply Assessment** for the Jackson Township Specific Plan required by the California Water Code to

link land use and water supply planning activities. This action requires Sacramento County Water Agency Board of Directors approval.

- **Final Environmental Impact Report (FEIR)**
  The Sacramento County Board of Supervisors certified the FEIR addressing the Jackson Township Specific Plan and other related entitlements. The FEIR includes the Draft EIR and all appendices.

9.2.2 Subsequent Plan Approvals

Additional actions or approvals must occur following the adoption of the Specific Plan, and prior to the development of the first Phase. Rezoning will occur in phases as portions of the Plan Area become ready for development. One or more special districts (or financing districts) must be created or expanded to provide public services within the Plan Area, which may require action by County Local Agency Formation Commission (LAFCO). Several plans and programs must be reviewed and accepted by the County for each Phase of development and prior to the recordation of the first large lot final map or the approval of the first tentative subdivision map or development permit for any development application within the Plan Area:

- **Rezoning**
  The Specific Plan and the Development Standards (Appendix A) constitute the zoning for the Plan Area. Prior to the start of each phase/area of development, the subject property must be rezoned to "Jackson Township SPA" and affected landowners must consent to the Zoning by accepting the conditions, policies and requirements of the Specific Plan and any Mitigation Measures. This requires non-participating landowners to participate in financing policies of the Specific Plan, including the requirement to pay the Specific Plan Fee, as described in Section 9.2.4.
- **Large Lot Tentative Subdivision Map**
  A large lot tentative subdivision map for a portion of the Plan Area will be processed concurrently with the Rezoning in order to create legal parcels which conform to the parcel configurations defined by the Land Use Plan.
- Sphere of Influence Amendment (SOIA) and concurrent Annexation to County Service Area (CSA) 10 or creation of a new CSA. Note: a separate subsequent action may be required by the Sacramento County Board of Supervisors to establish a Benefit Zone, to implement funding and service provision.
- Annexation to Sacramento Regional County Sanitation District (SRCSD).
- Annexation to Sacramento Area Sewer District (SASD).
- Formation of new funding and/or financing mechanisms (CFDs, assessments, specific plan fees, etc.).

9.2.3 Administration of New Funding Mechanisms

The County and other Special Agencies may need to implement a series of new funding and/or financing mechanisms to implement the Specific Plan. Implementation would include formation of one or more financing districts, such as community facilities districts, assessment districts, and or development impact fee programs. It could also include issuance of bonds to provide upfront funding for capital project investments.

Each of these formation processes should include, to the extent necessary, identification of rules and procedures regarding required nexus studies, credit and reimbursement policies, exemptions and/or offsets, administration and accounting procedures, and other items as required by California State Law, depending on the nature of the district and/or mechanism.

9.2.4 Subsequent Entitlements

Individual development projects within the JTSP are subject to review and approval of subsequent permits by Sacramento County. Subsequent entitlements include subdivision or parcel maps, Rezoning, Site Plan Reviews, Use Permits, Lot Line Adjustments or Lot Mergers, building and grading permits, etc. Once the plans and programs described in Section 9.2.1 are completed, individual developers may submit and process applications for subsequent entitlements.

Application and processing requirements shall be in accordance with the Sacramento Zoning Code and Sacramento County Code Title 22 (Land Development) and other regulations, as otherwise modified by this Specific Plan. Any application for a subsequent entitlement shall be subject to the Planning Application Fee Schedule, Plan Area Fees, Specific Plan Fee and any other fees in effect at the time of the application submission.

All subsequent development projects, public improvements and other activities shall be consistent with this Specific Plan, Development Standards and Regulations, Design Guidelines, the Specific Plan Development Agreements, and all applicable County policies, requirements and standards.

9.3 ENVIRONMENTAL REVIEW

An Environmental Impact Report (EIR) was prepared and was certified by the Board of Supervisors concurrently with the approval of the Specific Plan. Section 65457(a) of the California Government Code and Section 15182(a) of the California Environmental Quality Act provides that no EIR or negative declaration is required for any residential project undertaken in conformity with an adopted Specific Plan for which an EIR has been certified. The EIR certified for this project has been written to qualify all residential projects for this exemption, assuming they are consistent with the adopted Specific Plan and fulfill all conditions and CEQA mitigation measures. Non-residential land uses may be able to rely on the EIR, pursuant to Section 15183 of the CEQA Guidelines, assuming the proposed projects are found consistent with the Specific Plan and fulfill all conditions and CEQA mitigation measures.

9.4 SPECIFIC PLAN AMENDMENTS AND MINOR REVISIONS

During the long-term build out of the Plan Area, amendments to the adopted Specific Plan may be necessary because of changing circumstances. Additionally, because of unforeseen circumstances, some design guidelines or development standards may not be feasible on a particular parcel. In these situations, the procedures listed below will be followed to amend the adopted Specific Plan.

9.4.1 Scope of Amendment

Any proposed changes to the Specific Plan can include but are not limited to changing land use designations, design criteria, development standards or policies. Changes proposed to this

adopted Specific Plan shall be categorized by the Planning Director as either an amendment or a minor revision. Amendments require Planning Commission and Board of Supervisors approval. Minor revisions may be reviewed and acted upon by the Planning Director without Planning Commission or Board of Supervisors review, unless appealed. A request to change the Specific Plan shall be accompanied by an application filing fee, a detailed justification statement which explains why an amendment or minor revision is warranted, and demonstrates compliance with General Plan Policies LU-119 and 120 and provides any exhibits deemed necessary by the Planning Director. All requirements of CEQA will be applicable.

9.4.2 Specific Plan Amendments

An amendment is required when one of the following criteria is met:

- A new type of land use not specifically discussed in this Specific Plan is introduced.
- Significant changes to the distribution of land uses beyond that allowed by Section 9.5, Density Transfers, or other changes affecting land use are proposed which may substantially affect the Specific Plan or which results in non-compliance with General Plan Policies LU-119 and/or 120.
- Changes to design guidelines and/or development standards, which, if adopted, would substantially change the physical character of the Plan Area as envisioned by the Specific Plan as determined by the Planning Director.
- Changes to the approved Phasing Plan are proposed which significantly increases or alters the area boundaries or units allocated by the proposed phasing schedule.
- Any change that would trigger the preparation of any form of negative declaration or environmental impact report.

9.4.3 Minor Revisions

A minor revision to the Specific Plan may be processed if determined by the Planning Director to be in substantial conformance with all of the applicable criteria:

- The Planning Director determines that the modification does not have a significant impact on the character of the Plan.
- The proposed adjustments to the development standards or design guidelines are offset by the merits of the design and do not significantly change the anticipated physical characteristics of the development.
- The proposed changes to the alignment of streets, which if adopted, would not substantially alter the land use or circulation concepts set forth in this Specific Plan.
- Adverse environmental impacts are not significantly increased, as defined by the CEQA guidelines, as a result of the proposed minor revision.
- The proposed change to the approved Phasing Plan boundaries will not result in increase of more than 10% in the total number of units proposed for a particular phase.
- The request is in compliance with Section 9.5, Density Transfer Provisions and with General Plan Policies LU-119 and 120.

9.5 Density Transfer provisions

Dwelling units have been allocated to all residentially zoned parcels (LD, MD and HD) and the MU parcel. Each parcel has been allocated a certain number dwelling units, based on the average density per the parcel zoning. The Land Use Plan, Exhibit 3-2, in conjunction with Land Use Detail by Parcel/Node Table J-2, found in Appendix J, Planning Area Detail, provides a detailed summary of the land use, zoning and unit allocation on a parcel-by-parcel basis.

It is the intent of the Specific Plan to permit limited flexibility in transferring units between certain parcels in response to market demand, subdivision design, permanent open space preservation or other considerations. Pursuant to the transfer process detailed below, allocated dwelling units may be transferred between any LD, MD and HD parcel and from the MU parcel.

9.5.1 Density Transfer Process

Density transfers, if consistent with the following criteria, are consistent with the Specific Plan and the JTSP EIR and do not require an amendment to the Specific Plan or the General Plan. Requests for transfers which exceed the following criteria require a Specific Plan Amendment (SPA), as described in Section 9.4.2.

- A density transfer may involve two parcels or more, provided that the transferring and receiving parcels are within the Plan Area and the total maximum number of approved units for the entire Plan Area is not increased.

- The cumulative increase or decrease in units resulting from the density transfer does not change by more than twenty percent (20%) the number of pre-transfer units allocated to any one parcel as established by Parcel Summary Table J-2 found in Appendix J.

- The increase or decrease of units does not impact the overall Plan Area's compliance with General Plan Policies LU-119 and 120.

- The transfer of units from any parcel is reflected in the subsequent entitlements for that parcel (i.e.; tentative subdivision map or site plan review).

- The transfers will not have a materially adverse impact on planned infrastructure, roadways, schools, other public facilities or Plan Area fee programs and assessment districts.

- To request a density transfer, the owner or owners of both the transferring and receiving parcels shall submit a Density Transfer application to the Office of Planning and Environmental Review, identifying the impacted parcels, designating the number of units being transferred and providing other documentation as required by the Planning Director (Director) to determine compliance with the above criteria. The applicant shall also provide a revised Table J-1 and J-2, reflecting the adjusted unit counts and densities. The revised table will be the official record used for tracking unit allocations to each large lot residential parcel.

- If, in the opinion of the Director, such a density transfer satisfies the above criteria, it is consistent with the intent of this Specific Plan and EIR and will not require an amendment to the Specific Plan. If the Director determines that the density transfer *is* not consistent with the criteria, the transfer shall require an amendment to the Specific Plan. The applicant may appeal such a determination to the Planning Commission.

CHAPTER 9: ADMINISTRATION

9.6 INTERPRETATIONS

In the event that the requirements and guidelines of the Specific Plan may appear to provide alternative guidance or differ from other adopted County policies, interpretations may be necessary. These would typically arise regarding specific issues and situations in the land use development process. Interpretations may be needed when the County is considering a discretionary development application, such as a subdivision map, or a ministerial application, such as a building permit. Whenever the Planning Director determines that the meaning or applicability of any of the requirements of this Specific Plan is ambiguous, misleading, or unclear, the Director may issue an official interpretation or refer the question to the Planning Commission for a determination. The Planning Department shall keep records of the official determinations on file for future reference and to ensure consistency of interpretations over time.

9.7 SEVERABILITY

If any regulation, condition, program or portion of the Specific Plan is held invalid by a California or Federal Court of competent jurisdiction, such portions shall be deemed separate, distinct, and independent provisions, and the invalidity of such provisions shall not affect the validity of the remaining provisions thereof.

Ultimate Street Sections A-A, C-C and M-M

Chapter 4 of the Specific Plan provides cross sections for the proposed Plan Area roadways. The cross sections shown and number of lanes demonstrate the Plan Area obligations. Jackson Road (Section A-A), Excelsior Road (Section C-C) and Excelsior Road between Kiefer and Douglas Road (Section M-M) occur on the Plan Area boundaries. The completion of the ultimate frontage improvements for Sections A-A, C-C and M-M will be done by others. The ultimate street sections for these three roads are provided herein for reference.

ULTIMATE N.T.S.

Alternative Street Section F

Street section F is a local collector which has a wide variation of fronting land uses. The primary configuration of Section F is shown on page 4-8. This street is a 2 lane roadway with Class II bike lanes and on-street parking. However, an alternative striping may be considered in certain areas. If conditions warrant and with DOT approval, the striping may be revised to delete the on-street parking and add a 2-way center turn lane instead. See Section F Alternative below.

CHAPTER 1: GENERAL PROVISIONS

1.1 PURPOSE AND INTENT

This document, Jackson Township Development Standards (DS), define the development regulations for the Applicant owned portion of the overall Jackson Township Specific Plan Area, shown in Exhibit 1.1. The DS is used in concert with the Jackson Township Specific Plan (JTSP), which is the primary land use and policy document guiding long term development of the Plan Area.

The DS outlines the permitted uses, the development standards and regulations for all development within the Plan Area, initially applicable to a portion of the Applicant's property which is included in the first SPA, as shown on Exhibit 1.2. The intent is to provide a clear and concise set of regulations that builders, developers, property owners and County staff can rely on to implement development within the Plan Area in an efficient manner. Specifically, the DS contains the following chapters:

Chapter 1, General Provisions, describes the purpose and intent and the overall administrative applications.

Chapter 2, Land Use Designations, describes the categories of land uses found within the Plan Area.

Chapter 3, Use Regulations, sets forth the uses and use standards allowed in each of the land use designations.

Chapter 4, Development Standards, contains the standards that apply to all development within each land use designation.

Chapter 5, Administration, describes the review and enforcement of the DS and the administration of the various applications for development as required by Sacramento County.

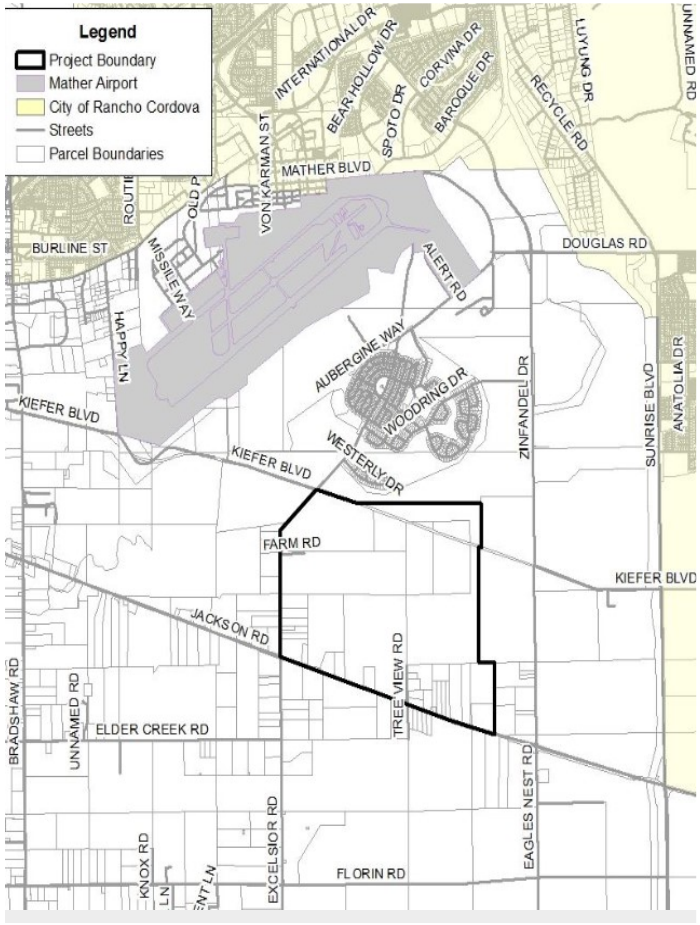

Exhibit 1.1 Plan Area Location

These standards and regulations are adopted to implement the Jackson Township Specific Plan, the applicable policies of the General Plan and is specifically intended to:

- Promote a balanced mix of land uses that are consistent with the Specific Plan;
- Ensure greater public safety, promote health and healthy communities, convenience, and accessibility through the physical design of the built environment and location of land use activities;
- Encourage sustainable and efficient use of land in the Plan Area;
- Enhance the character and quality of residential neighborhoods;
- Promote a balanced supply of commercial, institutional, and transportation land uses that is compatible with adjacent land uses and has good access to multi-modal transportation networks;
- Ensure the protection, preservation and provision of adequate open space for light, air, fire, safety and recreation.

1.2 APPLICABILITY AND JURISDICTION

Rezoning of the Plan Area to the Jackson Township Special Planning Area (SPA) will occur in phases as areas are ready for development, as shown on Exhibit 1.2. The initial phase to be rezoned subsequent to the Specific Plan approval is a portion of Area 1A/1B, which is owned by the participating landowner and Applicant Excelsior Estates LLC. The remaining portions of the Applicant owned property and properties not owned by the applicant, herein referred to as non-participating property, will be the subject of future entitlement applications for rezoning consistent with the adopted Land Use Plan, adoption of an SPA and other approvals required for development to commence.

Pursuant to County Zoning Ordinance Chapter 1.7.3, the SPA zoning of the Plan Area allows the uses and standards to be defined by the Development Standards and Regulations contained herein, as incorporated into the SPA, which was adopted by Ordinance_____.

It is the County's intent that all future entitlement applications will include rezoning consistent with the adopted Land Use Plan, amendment(s) to the JTSPA to include the additional properties and the adoption of these Development Standards.

1.2.1 Applicability

These standards and regulations apply to all land, buildings, structures, and uses thereof located within the JTSPA, as shown on Exhibit 1.2. The standards and regulations contained in the DS supersede the County of Sacramento Zoning Code (the Code) except where the Code is specifically referenced, wherein that section of Code shall be applicable as referenced. For clarity, the portions of the DS which defer to the Code are noted in BOLD.

When conflicts occur between the provisions in the DS and Code or the County Improvement Standards, the provisions of the DS shall apply. Where the DS does not address a specific provision, the Code and/or Improvement Standards requirements shall govern development in the Plan Area. Notwithstanding any other provision of the DS or the Code, any land use, activity or establishment that contravenes either state or federal law, or both, is prohibited.

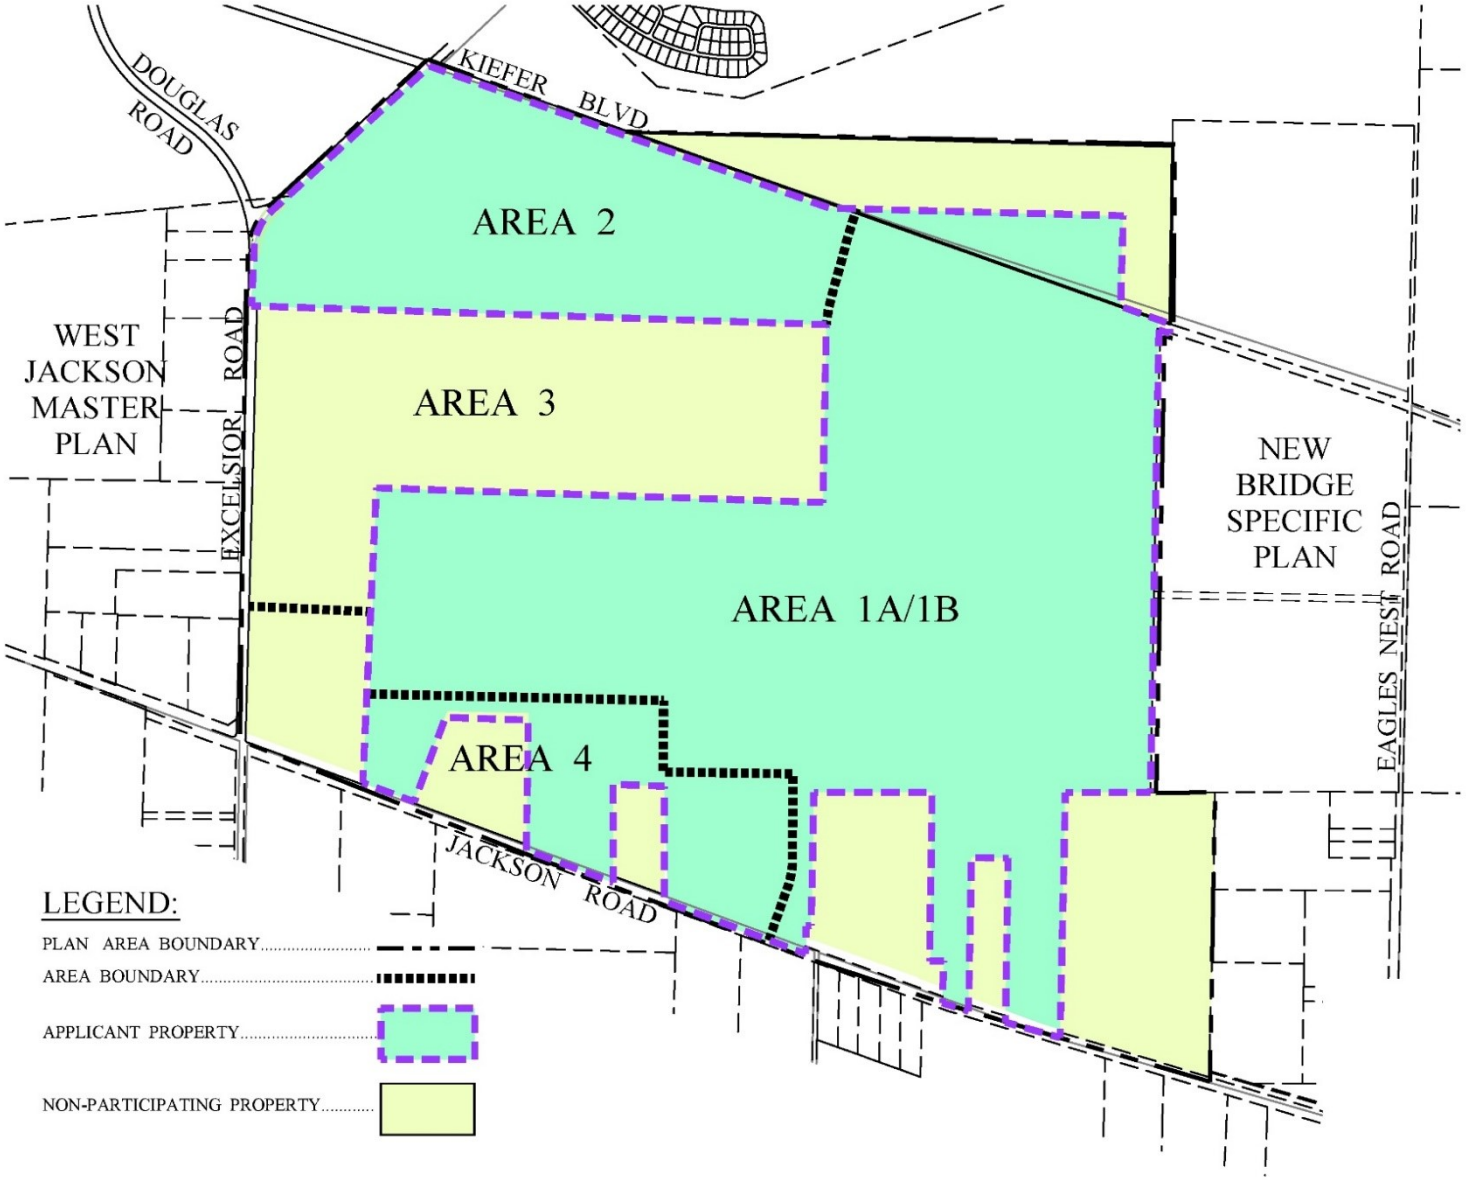

Exhibit 1.2: Area Boundaries

1.3 Delegation of Assigned Authority

Whenever a provision of the DS authorizes the Planning Director, another head of a department, or another officer of the County to perform an act or duty, that provision shall be construed as authorizing the department head or officer to delegate that responsibility to others. Whenever a provision appears requiring a public hearing body to perform an act or duty, if that body is lapsed or otherwise unable to act in a timely manner as determined by the Board of Supervisors, then that provision shall be construed as authorizing the Board of Supervisors to delegate that responsibility to another public hearing body.

1.4 Relationship to Other Plans

1.4.1 Relationship to Other Public Laws, Ordinances, Regulations and Permits

The DS are intended to complement other county, municipal, state, and federal regulations that affect land use. The DSR is not intended to revoke or repeal any other public law, ordinance, regulation, or permit. However, where conditions, standards, or requirements imposed by any provision of the DS are either more restrictive or less restrictive than comparable standards imposed by any other public law, ordinance, or regulation, the provisions that are more restrictive or that impose higher standards or requirements shall govern, as determined by the Planning Director.

1.4.2 Relationship to General Plan

It is the intent of the DS to implement the planning policies adopted by the Board of Supervisors for the County, as reflected in the Sacramento County General Plan.

1.4.3 Relationship to Private Agreements

The DS is not intended to revoke or repeal any easement, covenant, or other private agreement. However, where the regulations of the DS are more restrictive or impose higher standards or requirements than such easement, covenant, or other private agreement, then the requirements of the DS shall govern. Nothing in the DS shall modify or repeal any private covenant or deed restriction, but such covenant or restriction shall not excuse any failure to comply with the DS. In no case shall the County be obligated to enforce the provisions of any easements, covenants, or agreements between private parties.

1.4.4 Consistency with State and Federal Law

Notwithstanding any other provision of the DS, any land use, activity or establishment that contravenes either state or federal law, or both, is prohibited.

1.5 Severability

If any court invalidates any provision of the DS, then such judgment shall not affect the validity and continued enforcement of any other provision of this Code.

If any court invalidates the application of any provision of the DS, then such judgment shall not affect the application of that provision to any other building, structure, or use not specifically included in that judgment.

CHAPTER 2: LAND USE DESIGNATIONS

2.1. Purpose

To carry out the purpose and provisions of the DS, the Plan Area is divided into land use designations. This chapter contains general information such as statements of purpose and expectations for each land use type. The precise use regulations for each land use designation are found in Chapter 3. The Development Standards are found in Chapter 4.

The Land Use Plan, Exhibit 2.1, depicts the land uses assigned to all portions of the SPA. Thirteen (13) land use classifications are broken down into four sub-categories; Residential, Commercial, Public/Quasi-Public, Parks and Open Space. The land use plan identifies approximately 110 acres of AG (Agriculture) to reflect existing uses, however a future master planning effort will be required. Therefore, AG uses are not addressed in these development standards. A summary of the land use designations is presented in Table 2.1.

2.1.2 Applicability

No building, structure, vehicle, sign, or area shall be used, altered, moved, enlarged, or stored in any zoning district except as specifically allowed in underlying zoning district and by the regulations of any applicable combining district.

2.1.3 Prohibition

No property in any zoning district shall be used in any manner so as to create problems contrary to public health, safety, or general welfare or so as to constitute a public nuisance.

Table 2.1: Land Use Designations

SYM	Residential Uses	Density Range
LD	Low Density Residential	1.0-10.9
MD	Medium Density Residential	11.0-19.9
HD	High Density Residential	20.0-30.0
	Commercial + Office Uses	**Floor Area Ratio (far)**
GC	General Commercial	0.25
CC	Community Commercial	0.25
MU	Mixed Use	0.50
O	Office	0.50
	Public/Quasi Public Uses	
P/QP	Public-Quasi Public	
P/QP	High School/Middle School	
P/QP	Elementary School	
	Parks, Open Space	
P	Park	
OS	Greenbelt/Drainage Corridor	
WP	Wetland Preserve	

2.2 Residential Land Uses

The residential land use designations include low density, medium density and high density residential categories.

2.1.1 Low Density Residential (LD)

The LD land use designation provides for single family detached homes on standard suburban size lots. Alternative lot configurations such as alley, cluster or halfplex lots may also occur. The density range is 1.0 to 10.9 dwelling units per gross acre (du/ac) and the projected average density is 6.0 du/ac.

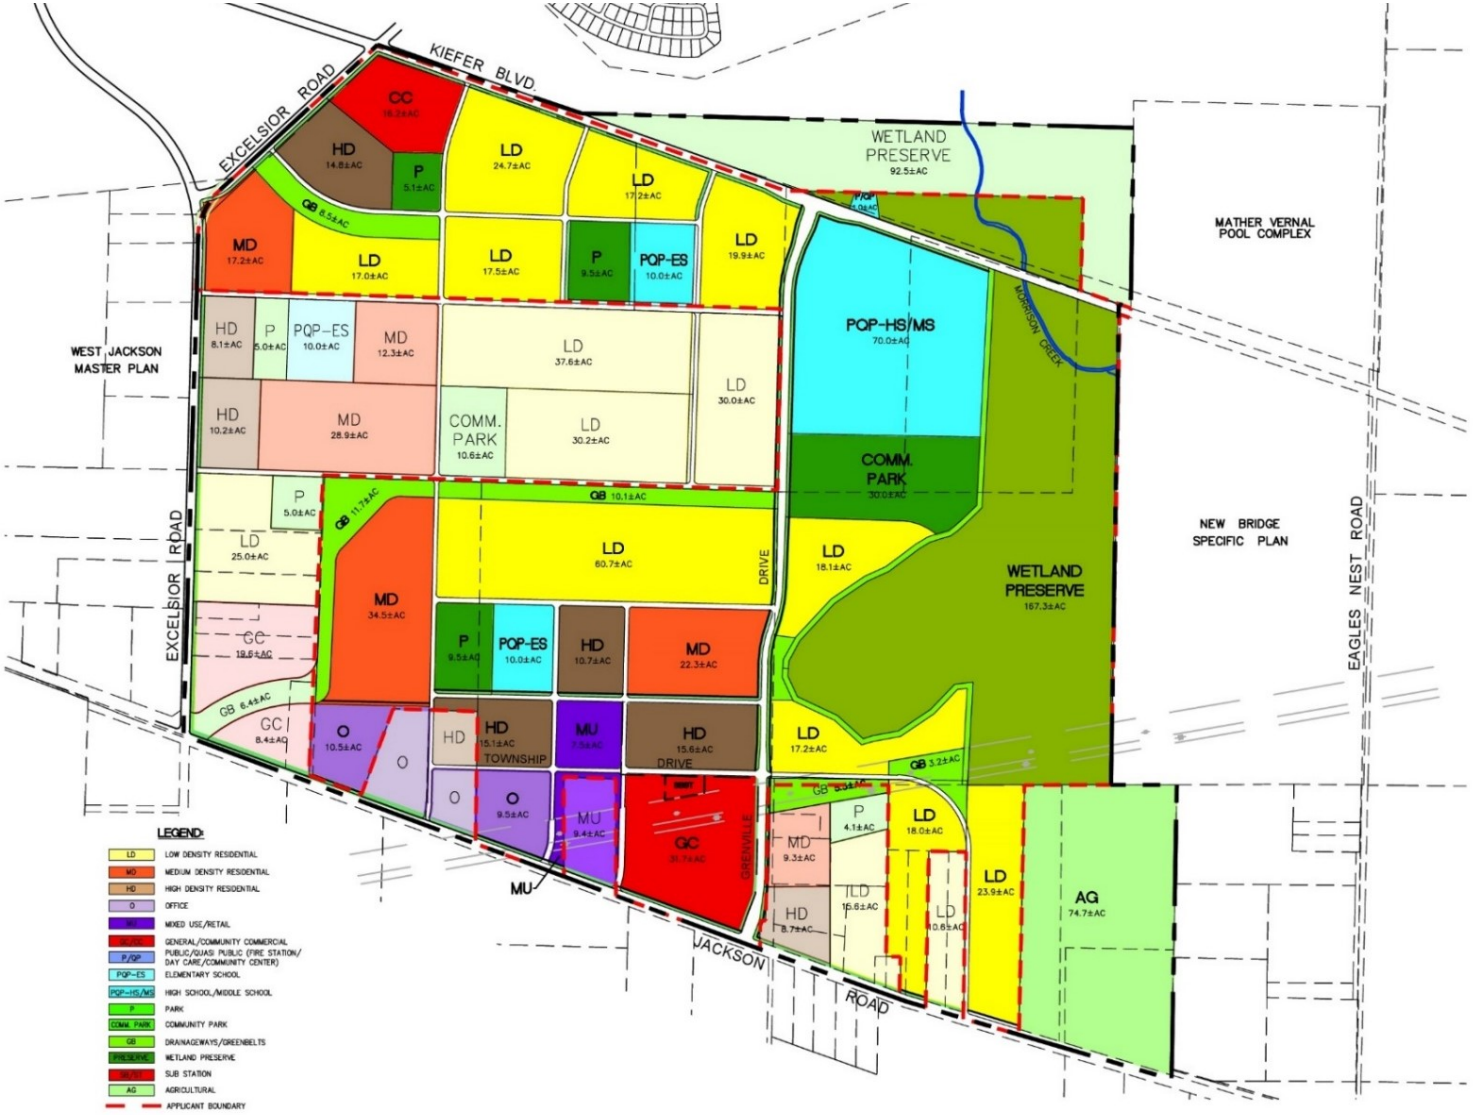

Exhibit 2.1: SPA Land Use Exhibit

2.1.2 Medium Density Residential (MD)

The MD land use designation accommodates a variety of housing types. This density allows for single family detached housing, as well as detached and attached housing types. MD housing types may include, but are not limited to, lot configurations such as standard, halfplex, cluster, alley, courtyard, zero-lot line, townhomes or condominiums. The density range is 11.0 to 19.9 du/ac and the projected average density is 13.0 du/ac.

2.1.3 High Density Residential (HD)

The HD land use designation anticipates a variety of attached housing types, providing rental and for-sale housing opportunities such as, but not limited to, apartments, brownstones, townhomes or condominiums. The density range is 20.0 to 30.0 du/ac and the projected average density is 25 du/ac.

2.2 Commercial and Office Uses

The commercial and office uses include General Commercial, Community Commercial, Mixed Use and Office.

2.2.1 General Commercial (GC)

GC sites are targeted to serve the immediate region and the Plan Area community with uses such as shopping centers, larger format retailers and a range of freestanding uses such as banks, restaurants, entertainment and offices. The target floor area ratio (f.a.r.) is 0.25.

2.2.2 Community Commercial (CC)

The CC land use designation provides the opportunity for both community and local oriented uses, including retail and services such as a grocery store, restaurants, professional and personal services. The target f.a.r. is 0.35.

2.2.3 Mixed Use (MU)

The MU land use designation provides the opportunity for development of a compatible mix of uses in the Town Center. Anticipated uses include retail commercial, offices, civic and quasi-public uses in a compact, urban style setting. Residential uses in MU will meet the requirements for HD. The target floor area ratio (f.a.r.) for the non-residential uses is 0.50.

2.2.4 Office (O)

Uses anticipated within Office generally include professional offices, research/development campuses, medical offices and clinics; hospitals, law firms; accountant offices; insurance, real estate, and financial; governmental offices; social services; and non-profit organizations. Retail commercial activities that are accessory to the primary uses of the zone are also appropriate. The target f.a.r. is 0.50.

2.3 Public/Quasi-Public Uses (PQP)

The P/QP category provides for the establishment of public and quasi-public uses, such as fire and police facilities, utilities, local government offices/facilities, public schools, community centers and other similar uses. The intent of this land use is to identify appropriate locations for these uses without impacting,

disrupting, or otherwise removing other lands for residential or other uses.

2.4 Parks, and Open Space

The Parks and Open Space category includes parks, open space of various types and a wetland preserve.

2.3.1 Parks (P)

Parks provide locations in the Plan Area for recreation and community gathering. This zone is intended to provide locations for parks and other related compatible public services/uses. Both active and passive recreational activities are permitted.

2.4.2 Open Space (OS)

The open space designation is to provide for open space uses, including the greenbelts and detention basins. The larger greenbelts are multi use corridors, combining drainage, water quality basins, trails and nodes. The greenbelts form the overall pedestrian and bikeway trail network and provide passive recreation opportunities.

2.4.3 Wetland Preserve (WP)

The wetland preserve designation is to preserve and protect existing natural resources, while also providing visual open space for the Plan Area. The wetland preserve abuts the east and north boundaries of the Plan Area. Uses within and access into the Preserve are restricted pursuant to the South Sacramento Habitat Conservation Plan (SSHCP) and the U.S. Army Corps of Engineers (USACE).

CHAPTER 3: USE REGULATIONS

3.1 Purpose

This chapter describes the land uses allowed within the Plan Area and the applicable use regulations. Section 3.2 contains tables that list the allowed uses, accessory uses and temporary uses in all land use designations, along with the approval process required for each use.

3.2 Permitted Uses

Use regulations are addressed in three tables: Tables 3.2 Allowed Uses, 3.3 Accessory Uses, and 3.4 Temporary Uses. The land uses and activities in the tables are classified into general use categories, use subcategories, and specific use types based on common functional, product, or physical characteristics such as the type and amount of activity, the type of customers or residents, how goods or services are sold or delivered and site conditions. Certain uses may be listed in one category when they may reasonably have been listed in one or more other categories.

3.2.1 Table Legend

The table lists the individual land use designations along the top of the table and into 3 subsections of Residential, Commercial/Employment and Public/Parks/Open Space. The far right column is the Use Standard. The use standards provide more specific detail for certain situations or are too lengthy to provide in a footnote. Users should refer to the referenced section of the document for more information. The use standards shall be in addition to, and not in lieu of, other development standards contained within this document.

"P" in a cell indicates that the use is a "Permitted Primary Use" and is allowed by right, subject to complying with the regulations of the respective zoning district in which the use is located, including Design Review, as provided by Section 6.3.2 of the County Zoning Code.

"UPM" indicates that the decision authority for the Minor Use Permit shall be the Planning Director.

"UPZ" indicates a Conditional Use that is allowed, if reviewed and approved by the Zoning Administrator.

"UPP" indicates a Conditional Use that is allowed, if reviewed and approved by the Planning Commission.

"UPB" indicates a Conditional Use that is allowed, if reviewed and approved by the Board of Supervisors.

Conditional Uses are subject to all other applicable regulations of the DS, including the use-specific standards in this Chapter and the requirements of Chapter 4, "Development Standards." A "UPZ", "UPP" or "UPB" designation in a given district does not constitute an authorization or an assurance that such use will be permitted. Rather, each Conditional Use Permit application shall be evaluated as to its probable effect on adjacent properties and surrounding areas, among other factors, and may be approved or denied based on appropriate findings.

"A" in a cell indicates that in the respective zoning district the use is allowed by right as an accessory use, without special conditions other than those imposed upon other accessory uses by right in the zoning district.

"TUZ" in a cell indicates that in the respective zoning district the use is allowed only if reviewed and approved in accordance with the procedures of Section 3.3 "Temporary Use Permit".

3.2.2 Use for Other Purposes

Approval of a use listed in Table 3.2, 3.3, and 3.4, and compliance with the applicable use-specific standards for that use, does not prohibit additional uses as long as those additional uses are specifically allowed in Table 3.2, 3.3 and 3.4 and approved under the appropriate process.

3.2.3 Uses Not Provided for in the Tables

If a use is not listed in Table 3.2, 3.3, or 3.4, included in a use definition, or shown as a permitted or conditionally permitted use in any JTSPA zoning district, the compatible County Zoning District as provided in the Code, may be utilized by County staff to determine allowance of the intended use. Table 3.1 identifies the JTSP land use categories and the compatible County Zoning designation. If the intended use is still not determined to be addressed in the Code, then the Planning Director may make a determination that either:

1. The use is substantially similar in characteristics, intensity, and compatibility to a use or uses within the zoning district, applicable to the property; or

2. The use would be appropriate in the zoning district, applicable to the property as a permitted or conditional use.

Table 3.1 Compatible Zoning Categories

	JTSP Land Use Designation	Compatible County Zone
SYM	**Residential Uses**	
LD	Low Density Residential	RD-1 through RD-7
MD	Medium Density Residential	RD-7, RD-10, RD-15
HD	High Density Residential	RD-20 through RD-40
	Commercial + Office Uses	
GC	General Commercial	GC, CMC
CC	Community Commercial	LC, NMC
MU	Mixed Use	CMC
O	Office	BP
	Public/Quasi Public Uses	
P/QP	Public-Quasi Public	BP
P/QP	High School/Middle School	BP
P/QP	Elementary School	BP
	Parks, Open Space	
P	Park	O
OS	Greenbelt/Drainage Corridor	O
WP	Wetland Preserve	O

In those cases where the Planning Director makes a determination that the use meets either of the above, the use shall conform to all the regulations, conditions of approval, and use standards applicable to the similar described use(s). If the use would be appropriate in the zoning district as a conditional use, a Conditional Use Permit shall be heard by the designated hearing body for the similar use.

3.3 Use Standards

The use standards of this Chapter apply to the named use in every land use designation where the use is allowed per Table 3.2, unless otherwise specified in the use standard or as specified in a Conditional Use Permit approval. The use standards shall be in addition to, and not in lieu of, all other generally applicable development standards in the DS.

Where the provisions of the use standards or requirements conflict with other provisions of this DS, the more restrictive standards or requirements shall apply.

The use standards are not intended to replace or otherwise limit in any manner other County regulations or to preclude the imposition of reasonable use permit conditions, as authorized in the DS. Chapter 7 of the Code shall be utilized to clarify interpretation of common wording and language issues that may occur in the DS.

3.3.1 Family Day Care Home

Family day care homes shall be regulated in accordance with the **Zoning Code, Section 3.5.1.F.**

3.3.2 Residential Care Homes

Residential care homes shall be regulated in accordance with the **Zoning Code, Section 3.5.1.I.**

3.3.3 Government and Local Agency Uses and Buildings

1. State and Federal Government Uses and Facilities

a. A government use or building owned by a state or federal government entity and located on federal or state owned property shall be permitted by right in any district.

b. A federal or state government use within a privately-owned building, facility, or premises shall be permitted in any zoning district and shall be regulated as set forth the DS for the proposed use to the extent permitted by law.

2. Government Uses and Facilities Other than Federal and State

a. A government use or building owned by a government entity other than state or federal government within a privately-owned building, facility, or premises shall be permitted in any land use designation and shall be regulated as set forth in DS for the proposed use to the extent permitted by law.

b. If not permitted by paragraph 2.a. above, a government use or building owned by and located on property owned by a government entity other than state or federal government may be allowed by Conditional Use Permit in any use designation.

3.3.4 Public Utilities

Public utilities within the Plan Area shall be regulated in accordance with the Zoning Code, Section 3.6.6.A and B.3.3.5.

3.3.5 Solar Energy and Wind Turbines

Solar energy facilities within the Plan Area shall be regulated in accordance with the **Zoning Code, Section 3.6.6.C.** Wind turbine facilities shall be regulated in accordance with the **Zoning Code Section 3.6.6.D.**

3.3.6 Wireless Communication Facilities

Wireless communication facilities shall be regulated in accordance with the **Zoning Code, Section 3.6.7.**

3.3.7 Commercial Use Standards

1. General Standards for All Uses in Commercial Zoning Districts

a. Conduct of Business on Lot

The entire business operation shall be conducted within a completely enclosed building or completely fenced within the buildable area of the lot. The sale, lease, and rental of merchandise which is specifically allowed in this zoning district may be displayed in the required yard areas provided no merchandise, in combination with display platforms, shall exceed six (6) feet in height when displayed within 25 feet of a street right-of-way and no merchandise shall exceed 10 feet in height when displayed within 50 feet of a street right-of-way. Such merchandise shall not project over required landscaped areas.

2. Commercial Service Uses

A. Kennel, Cattery, Animal Boarding and Training

A kennel, cattery, or animal boarding and training use shall comply with the following minimum standards:

a. Every lot or parcel used for a kennel shall have a net lot area of not less than one acre, except in commercial and mixed-use zoning districts.

b. Small animal training shall be permitted by right in the agricultural zoning districts, on the condition that the owner of each animal shall be present during such training.

c. Cattery facilities, fully operated indoors, shall be permitted by right in the commercial zoning districts.

3. Eating/Drinking Uses

a. Restaurant, Carry-out/Drive-through/Sit-down

For drive-through windows, a Conditional Use Permit from the Zoning Administrator is required when the design standards for drive-through windows are not met, or if the drive-through window and/or order station with amplified sound is located within 300 feet of a residential zoning district (RD-1 through RD-40), or if the drive-through window or order station without amplified sound is located within 75 feet of a residential zoning district (LD, MD, HD). If the building size is 100 square feet, or less, then a Minor Use Permit by the Planning Director is required.

4. On Sale of Alcoholic Beverages.

1. A Minor Use Permit shall be required for any new restaurant or similar establishment that serves beer, wine and/or distilled spirits in conjunction with the business, and requires or obtains a special license #23, #41, #47, or #75 from the Department of Alcoholic Beverage Control (ABC).

2. A Minor Use Permit shall be required for any existing restaurant or similar establishment that serves beer, wine and/or distilled spirits in conjunction with the business, and requires or obtains a special license #41, #47, or #75 from ABC in the event of any of the following:

a. The type of ABC license for the address of the establishment is changed.

b. The ABC license is transferred to a different address.

c. The use itself is expanded in any way, including, but not limited to those operational standards such as hours of operation or restrictions on amplified music that are applied by ABC.

3. Uses such as places of worship, social centers, art galleries, fraternal halls or private clubs that sell or serve beer, wine and/or distilled spirits only to members and their guests or at special events are permitted to serve alcoholic beverages by right and not subject to the restrictions in Section 3.7.3.B.

5. Entertainment/Recreation Uses

A. Recreation Facility, Indoor

An indoor recreation facility with capacity exceeding 300 persons or a theater with four or more screens shall be subject to a Conditional Use Permit by the Zoning Administrator. Indoor shooting ranges shall require a conditional Use Permit by the Zoning Administrator. In the MU, GC and CC zoning districts, the use shall be permitted, regardless of size or location, subject to a finding that the use is incidental to the business center and intended to serve its employees and customers; otherwise, the use is subject to a Conditional Use Permit by the Zoning Administrator.

6. Lodging Uses

A. Bed and Breakfast Inn

Permitted subject to issuance of a Conditional Use Permit by the Zoning Administrator. The use permit may authorize limited ancillary social gatherings such as conferences, weddings, fundraisers, and other similar events attended by any non-lodger, subject to any conditions imposed including, but not limited to, restrictions on the frequency and timing of events and the maximum number of persons per event. Except as expressly authorized in the use permit, such activities are prohibited.

7. Office Uses, General

A. Medical, Dental, or Optical Laboratory

Permitted in the listed zoning districts, if in compliance with the following standards.

1. Outdoor storage of materials shall be prohibited unless fully enclosed in a structure or screened from public view with landscaping.

2. The use shall not create adverse levels of noise or vibration beyond ambient levels in the surrounding neighborhood. The applicant shall be required to take all measures necessary to reduce noise levels to ambient levels and to demonstrate there shall be no vibration affecting properties beyond the limits of the lot.

3. The location, arrangement, size, and intensity of operations and design of the use shall be compatible with the neighborhood in which it is location and shall safeguard surrounding properties from glare, unsightly view, odors, or other undesirable characteristics, as determined by the Planning Director.

8. Neighborhood Convenience Store, Food Market (Up to 6,000 square feet)

1. In commercial and mixed-use zoning districts, the use is permitted if located 500 feet or more from a residential zoning district, and 1,000 feet or more from the property line of any public or private school (kindergarten through twelfth grade). If located less than 500 feet from a residential zoning district, or less than 1,000 feet from the property line of any public or private school (kindergarten through twelfth grade), the hours of operation shall be limited to between 6:00 a.m. and 11:00 p.m., unless a Conditional Use Permit is approved by the Board of Supervisors for extended hours. The distance shall be measured from the entrance of the commercial structure to the zone district boundary or the school property line.

2. The use shall comply with all of the following standards:

a. The use shall be consistent with all applicable development requirements of Chapter 4, "Development Standards."

b. Signs shall be posted prohibiting consumption of alcoholic beverages in the business or in the parking areas.

c. All illegal activities observed on or around the business shall be promptly reported to authorities.

d. Business policies shall be posted on the interior in a conspicuous place.

e. At least two toilet facilities shall be available to the public at all times.

f. Signs shall be posted prohibiting loitering in parking areas.

g. Bicycle security racks shall be provided.

3. The use shall comply with all of the following additional standards, unless the Sheriff's Department waives the standard in writing:

a. Project lighting levels shall be 1.5 foot-candles of minimum maintained illumination per square foot of parking surface during business hours and 0.25 foot-candles of minimum maintained illumination per square foot of surface on any walkway, alcove, passageway, etc., from one-half (½) hour before dusk to one-half (½) hour after dawn.

b. All light fixtures shall be vandal resistant.

c. Management shall be responsible for the removal of litter from adjacent property and streets that results from this project (with adjacent property owner consent).

d. Store windows shall be left unobstructed to all viewing of the interior of the business by patrolling police. Design to allow for window surveillance by employees of all outside areas from the employees primary work positions.

e. Building security to resist crime attempts by both hardware and electronic systems:

(i) Raised cashier stations to give an advantage of height against would-be criminals.
(ii) Display counter height that is low enough that the cashier has visibility throughout the store and mirrors that allow monitoring of any corners or hidden areas.
(iii) Buzzers on doors of the coldbox, so that the clerks will know when someone has removed merchandise from the refrigerator areas.
(iv) Cashier station that is visible from the parking area, with no blocking of windows or doors (such as with posters or signs) and counters that are clean of excess displays that impair the visibility.
(v) Two-way mirrors on inside doors to storage, utility, and office areas that create uncertainty as to how many people are actually in the store so as to deter criminals.
(vi) Timed drop safe adjacent to cashier so that no more than $30.00 is available and premised posted that no more than $30.00 is available.
(vii) Height tape installed next to exit.
(viii) A prominently-displayed video camera for identifying robbers or shoplifters.

9. Vehicle-related Uses

A. New and Used Auto Sales

The sale, lease, and rental of merchandise, which is specifically allowed, may be displayed in the required yard areas, provided no merchandise, in combination with display platforms, shall exceed six (6) feet in height when displayed within 25 feet of a street right-of-way and no merchandise shall exceed 10 feet in height when displayed within 50 feet of a street right-of-way. Such merchandise shall not project over required landscaped areas.

B. Automobile Service Station

The following requirements apply to all automobile service stations.

a. Location

Appropriate sites for an automobile service station shall consider locations that will most likely reduce the danger from fire and explosion, to provide for the free flow of traffic to reduce the danger of traffic accidents arising from ingress to and egress from automobile service station sites.

b. Public Street Frontage

The minimum public street frontage shall be 135 feet on each public street for all new primary service stations.

c. Setback Requirements

Setback requirements for the main building on an automobile service station site shall be the same as those required for other structures located in the same zoning district in which the automobile service station is located.

d. Pump Islands

Service station pump islands may be placed in required yards provided they are at least 15 feet from the street right-of-way.

e. Landscaping

Landscaped areas shall be established and maintained on all automobile service station sites. The landscaped area shall comprise a minimum of 20 percent of the lot area. Not less than 70 percent of the landscaped area as required in this Section shall be covered with live landscaping such as lawn, ground cover, trees, or shrubs, and not more than 30 percent shall be covered with hard surfaces such as gravel, landscaping rock, concrete, artificial materials, or other impervious materials.

f. On-site Lighting

Lighting shall be designed, controlled, and maintained so that no source of light is visible from off the property; lighting does not unreasonably disturb occupants of adjacent properties; and does not interfere with traffic. There shall be no flashing, moving, or animated lights on automobile service station sites.

g. Architecture

The design of every structure including signs on an automobile service station site shall consistent with the JT Design Guidelines and Countywide Design Guidelines.

h. Refuse Areas

Any refuse area on an automobile service station site shall be fenced or screened from the view of any pedestrian or vehicle traffic. The design of such fences and screens shall be compatible with the design of the main building. All discarded parts and materials shall be deposited into a completely enclosed container concealed from adjacent properties.

j. Fences and Walls

Where an existing or a proposed automobile service station site abuts property that is zoned or used residentially, there shall be a solid masonry wall of at least six (6) feet in height along the property line between the automobile service station site and the abutting property, except that within the first 25 feet from the street right-of-way line the fence or wall shall not exceed 2.5 feet in height.

k. Structure Height

Structures located within the buildable area of the lot shall be subject to height limits of the zoning district classification of the site. Canopies constructed over pump islands that are located outside the buildable area of the lot shall not exceed the design clearance height plus the allowable roof structure height as described in Sections 3.3.7.9.B.k.

(i) The design clearance height is the vertical distance between the finish grade and a height equal to the vehicle height for which unencumbered clearance will be provided by the design of the service station. The maximum allowable design clearance height is 16 feet, however lower design clearance heights are permitted at the option of the owner.

(ii) The allowable roof structure height shall not extend higher than two and one-half (2½) feet above the design clearance height. For purposes of this Section, the allowable roof height is the vertical distance above the design clearance height measured to the highest point of the coping of a flat roof or to the highest part of a mansard roof on to the average height of the highest gable of a pitched or hipped roof.

(iii) Deviations from the design clearance height or allowable roof structure height may be permitted in conjunction with a Conditional Use Permit hearing if the final approving body finds that the overall architectural character of the service station is aesthetically enhanced by such deviation and total service station design is aesthetically compatible and complementary of the surrounding structures.

l. Automobile Service Stations Within or Adjacent to Shopping Centers

The site design and architectural style of an automobile service station located within a shopping center shall be consistent where possible with the site design and architectural style of the shopping center. Internal circulation of traffic within a shopping center shall be designed so as not to create traffic hazards between an automobile service station and other parts of the shopping center.

C. Parking Lot or Garage

1. In residential zoning districts, a parking lot shall be allowed as a primary use only when the parking lot is intended to serve as off-street parking for a business on an adjacent parcel.

2. In commercial and mixed use zoning districts, ground level and underground facilities are permitted by right. Multi-story parking structures are permitted subject to approval of a Conditional Use Permit by the appropriate authority.

10. Convenience Recycling Facilities

Convenience Recycling Facilities are permitted in the GC and CC zoning districts, subject to the Locational, Operational and Design Standards in Section 3.3.7.10.a.

Facilities are permitted if located more than 500 feet from a residential zone or property lines to the nearest solid building wall when all operations (including materials storage) is conducted completely indoors or measured from property line to property line when self-contained movable bins are used for outdoor storage.

a. Locational Standards

(i) The facility shall be operated only in a convenience zone as defined under the California Beverage Container Recycling and Litter Reduction Act (Public Resources Code Section 14500 et seq.).

(ii) The facility shall be located within a shopping center, which may consist of multiple parcels with a minimum size of five acres. The Convenience Recycling Facility must be located on a site under the same management as the shopping center.

(iii) The facility shall not be located on a property where there is a service station or liquor store, or convenience store that is not part of and integral to a shopping center over five acres.

(iv)There shall be a half mile distance between convenience recycle centers.

(v) The facility shall be located at least 100 feet from a property zoned or occupied for residential use. The distance is measured from the front door of the Convenience Recycling Facility to the nearest property zoned or occupied for residential use.

b. Operational Standards:

(i) Written proof of legal access to on-site restroom facilities for employees and customers shall be provided and posted in a visible location on the interior of the recycling facility.

(ii) Materials at a convenience recycling facility may be processed on site and all crushing of materials and weighing of the material shall occur within the kiosk.

iii. No bags or trash blowing on the premises shall be permitted. Repeat violations may result in additional operational restrictions for the subject property and or revocation of permit.

iv. The facility shall provide spill buckets and insure the employees and customers use them to prevent excessive waste. If material is spilled on the pavement, it must be cleaned up immediately. The waste within the spill buckets must be disposed of in a sewage disposal area and shall not be deposited in the storm drain. The facility will be cited for excessive buildup of spilled materials on the pavement.

v. Hours of operation: Operating hours shall not exceed 8:00 a.m. to 6:00 p.m. for the kiosk. The hours of operation for the reverse vending operation shall be from 7:00 a.m. to 7:00 p.m. Collection and transportation of receptacles may occur from 7:00 a.m. to 8:00 p.m.

vi. The operator cannot serve customers transporting materials using any of the following: shopping carts, flat beds with wheels, wagons, or make shift carts with wheels. Only customers arriving on a bicycle without a trailer, with two wheel carts, in a motor vehicle (truck/car) or walking on site and hand carrying recyclable materials will be served. If shopping carts are abandoned on the property, the operator shall pay for a daily cart retrieval service and remove them from the property as soon as possible.

vii. The use of a roll up door is permitted but the size of the door shall be limited to 100 square feet of open door area.

viii. The facility shall be clearly marked to identify the name and telephone number of the facility operator and the hours of operation and shall display a notice stating that no material shall be left outside the collection receptacles.

ix. No outside storage of materials shall be permitted. Overflow bags of material left outside are prohibited.

x. Convenience Recycling Facilities shall be located within a fully enclosed structure or kiosk that meets the Community Design Guidelines and shall not be located within a cargo container, unless the cargo container is ancillary to the structure or kiosk.

b. Design Standards for Permanent, Enclosed Buildings:

i. Convenience Recycling Facility structures shall meet the Community Design Guidelines and be reviewed by the Design Review Administrator.

ii. Design Review is required for new facilities in order to accomplish the following objectives: a) the orientation of the proposed facility shall minimize visual and acoustical impacts to surrounding properties; b) the architectural design, signage and color of the facility shall not intentionally detract from the existing commercial use or community service facility on the site. Improvements may be required to ensure compatibility, including but not limited to landscaping, screening, and parking lot improvements.

iii. The facility shall provide best management practices for review by the Office of Planning and Environmental Review. This shall include a brief description of the business including the following: number of employees on site, amount of material accepted on a weekly and monthly basis, square footage of facility, materials accepted, how material is stored and collected and how the facility is cleaned.

c. Design Standards for Kiosks:

i. The minimum size of any freestanding kiosk structure shall be 400 square feet. It may have no more than two other temporary components that attach to it, for temporary storage. The kiosk will be manned by one or two individuals to serve the customers.

ii. The facility, shall occupy no more than six (6) parking spaces not including spaces that will be periodically needed for removal of materials or exchange of the collection receptacles. No parking spaces required for the primary host use may be occupied by the facility.

iii. The facility shall be located within the buildable portion of the property and not be located in any required setback, and shall not obstruct pedestrian or vehicular circulation.

iv. Outdoor customer staging areas are only permitted with the issuance of a Minor Use Permit by the Zoning

Administrator. The number of sorting bins and barrels shall be determined by the minor use permit. The outdoor staging area shall not exceed 100 square feet in size within a controlled designated area. Unused barrels shall be stored indoors at all times. The facility shall be clearly marked with signage indicating the staging areas where the customers line up to drop off the materials. The facility shall not impair the landscaping required for any host use.

vi. No parking spaces are required for customers. One space shall be provided for the facility attendant, if needed, as determined by the Design Review Administrator.

vii. Design Review is required for new facilities in order to accomplish the following objectives: a) the orientation of the proposed facility shall minimize visual and acoustical impacts to surrounding properties; b) the architectural design, signage and color of the facility shall not intentionally detract from the existing commercial use or community service facility on the site. No standalone cargo containers are permitted. Any proposed kiosk must be compatible with the shopping center. Improvements may be required to ensure compatibility, including but not limited to landscaping, screening, and parking lot improvements. The landscaping may consist of landscape planters in portable containers. The free-standing structure used for recycling must be architecturally compatible with the shopping center.

viii. Signage must be painted on the building and cannot be on the roof.

ix. The facility shall not be located in the rear of a shopping center between commercial buildings and adjacent residential zones, and shall be visible from the street.

x. The facility shall provide best management practices for review by the Office of Planning and Environmental Review. This shall include a brief description of the business including the following: number of employees on site, amount of material accepted on a weekly and monthly basis, square footage of facility, materials accepted, how material is stored and collected and how the facility is cleaned as part of the Design Review application.

3.3.8. Specifically Prohibited Uses

A. Cannabis

No commercial or industrial cannabis growing, processing and/or sales is permitted within the Plan Area.

3.3.9 Use-Specific Standards for Accessory Uses

The specific standards of this Section shall apply in addition to the general standards of Section 3.3. In the event of conflict, the more restrictive standard in the opinion of the Planning Director shall apply.

1. Coin-Operated Dispenser or Amusement

Coin operated dispensers are permitted by-right as an ancillary use and shall occupy no more than 25 percent of the gross floor area of structure(s) committed to the primary use.

2. Dish Antenna

A dish antenna less than three (3) feet in diameter that receives signals only is not subject to this Section. A dish antenna greater than three (3) feet in diameter or that sends signals shall comply with the standards of this Section.

a. In a Commercial or Office Zoning District

(i) A dish antenna is permitted to send or receive signals to or from satellites if the power output of the associated transceiver does not exceed two (2) watts of power and the dish is six (6) feet in diameter or less. The signal intensity must be maintained below applicable ANSI standards.

(ii) Dish antenna(s) may be installed on the roof of a commercial or industrial structure provided that the antenna is enclosed on all sides by a solid screening structure that is installed to the maximum attainable height of the dish and is composed of materials that are similar in style and color to the predominant composition of the building. Both the antenna and the screening structure are subject to all applicable building code requirements including building structure and wind load integrity.

(iii) Dish antenna(s) installed directly on the ground shall be located within the buildable portion of the lot with respect to applicable building setback requirements. The maximum attainable height of the dish shall not exceed the diameter of the dish plus three (3) feet.

b. In Any Other Zoning District

(i) The dish antenna is permitted to receive signals only.

(ii) Only one dish antenna is permitted on each lot.

(iii) The distribution of signals to more than one dwelling unit is permitted, provided the distribution is limited to the same parcel or same project as the antenna site.

(iv) The location of the antenna on the lot shall meet all accessory structure requirements applicable to zoning district.

(v) The dish antenna shall be installed directly on the ground. The maximum attainable height of the dish shall not exceed the diameter of the dish plus three (3) feet.

c. Exceptions

In any situation where the standards of Section 3.9.2.B do not allow reasonable access to customarily received satellite signals, a Conditional Use Permit shall be considered by the Planning Commission with the objective of ascertaining the most aesthetically acceptable alternative siting solution. In no case may the final decision result in denial of reasonable access to satellite signals.

(i) The decision on the use permit application must provide for a reasonable quality of signal reception, taking into consideration the particular circumstances of the property and its surroundings.

(ii) The decision on the use permit application may take into consideration all the alternative site locations and reception solutions on the property and the use permit may be conditional for the purpose of reducing the visual impact of the dish antenna as seen from adjacent properties or for the purpose of reducing the potential of safety or health accident. Such conditions may include, but are not limited to: partitions, screening, landscaping, mountings, fencing, height of antenna, and site location within the parcel.

(iii) To assure that a property is not denied reasonable access to the satellite signals, because the filing fee of a Conditional Use Permit may be excessive in light of the purchase and installation cost of the equipment, a Conditional Use Permit for a home video satellite antenna shall be one-half the normal fee for a Conditional Use Permit.

(iv) To assure that property is not denied reasonable access to satellite signals by the imposition of conditions that are unreasonably out of proportion in light of the purchase and installation cost of the equipment, the Commission shall give consideration to the costs incurred toward satisfying the conditions as they relate to the cost of the system.

3. Dwelling, Residential Accessory

Residential accessory units within the Plan Area shall be regulated in accordance with the **Zoning Code, Section 3.9.3.D**

4. Home Occupation

Home occupations within the Plan Area shall be regulated in accordance with the **Zoning Code, Section 3.9.3.F.**

5. Outdoor Display, Storage and Comfort Features

1. Accessory comfort features and customer conveniences, not used for advertising, including but not limited to tables, benches, litter receptacles, bicycle racks, and mailboxes may be permitted in the yard areas. This provision does not include amusement machines, telephone booths, sales booths and playground equipment.

2. In any zoning district, no equipment, material, goods, furniture, or appliances may be stored or displayed outside an enclosed building or outside of a solid screen fenced area and be visible from a public street, unless that equipment, material, good, furniture, or appliance is normally used out of doors. No equipment or goods may be displayed within required yard areas unless located within the buildable portion of the lot. Display of new goods is allowed with a setback of 25 feet upon issuance of a minor use permit.

6. Garage Sales

Garage sales are permitted on any parcel where the sale operator resides, not to exceed three sales per calendar year and two consecutive days for each sale. Signs shall not exceed a total of 12 square feet. All signs and merchandise must be displayed within the property boundaries.

7. Bus Shelter

Bus shelters, whether owned and maintained by a public agency or other person, shall be a permitted use in any zoning district and shall comply with the standards in Section 3.3.9.7.1-4.

1. Shelters shall be installed at a location approved by the Sacramento Regional Transit District or other transit providers to provide temporary shelter for persons waiting to utilize the transit district's transportation facilities.

2. The shelters shall be constructed of aluminum frames and panels with Alcoa bronze duranodic finish or equal. The roofs shall be of bubble type construction, and the wall panels shall be of transparent materials, either tempered glass or plastic. Security lights may be installed. Shelters of other designs and constructed of other materials may be constructed provided the design and materials are first approved by the Design Review Administrator.

3. The size of such shelters shall be approximately six (6) feet in width, 10.5 feet in length, and eight (8) feet in height; however, shelters may be sized in multiples of the length and width dimensions but may not exceed the eight (8) foot height dimension.

4. Advertising signs are subject to the provisions of Section 4.13.4.H, "Mass Transit Shelter Signs."

8. Storage of Flammable and Combustible Liquids

The storage of flammable and combustible liquids is limited to volumes as established by the local Fire Districts. Storage of flammable liquids in the fuel tank of a motor vehicle, motorboat, mobile power plant, or mobile heating plant, and the storage or use of paints, oils, varnishes, or similar flammable mixtures when such liquids are stored for maintenance, painting, or similar purposes is excluded from this requirement. Additional permitting may be required by the Environmental Management Department.

9. Storage of Unregistered or Inoperable Private Vehicles

Storage of not more than two unregistered or inoperable vehicles may be allowed outside a fully enclosed building on a parcel of land located in any residential zoning district, and shall comply with the following standards:

1. The parcel size is 10,000 square feet, or larger, for the first vehicle and that 5,000 additional square feet is provided for the second vehicle.
2. Vehicles are the legal property of persons who reside in the on-site dwelling, as evidenced by a certificate of ownership issued by the Department of Motor Vehicles.
3. Vehicles shall not be stored in the front yard or side street yard.
4. Vehicles shall be stored behind a six (6) foot high solid wood fence and not be visible from any public street.

5. For purposes of this Section, "unregistered vehicles" includes any vehicle that is considered non-operational pursuant to a current certificate of non-operation issued by the Department of Motor Vehicles of the State of California.

10. Residential Swimming Pool and Spa Equipment

An accessory swimming pool or spa shall comply with the standards in Section 3.3.9.10, items 1-2.

1. Swimming pool and spa equipment may encroach into a front or side street yard not to exceed five (5) feet providing said equipment is within a solid fenced yard or enclosure.
2. Swimming pools and spas shall not be located:
    a. Within a recorded setback except rear yards of through lots unless otherwise prohibited by recorded subdivision map.
    b. Within a public utility easement.
    c. Within a public easement.
    d. Within the required front or side street yards.
    e. Within three (3) feet of side or rear property lines except that the Chief Building Inspection Division may approve setbacks less than three (3) feet from side or rear property lines as provided for in the Swimming Pool Code, County Code Section 16.36. For the purpose of this Section, setback shall be from the right-of-way line or property line to the water line.
    f. The provisions herein shall not alter the regulations of a special planning area.

11. Cargo Containers

1. In commercial and office zoning districts, cargo containers shall comply with the following standards:
    a. Cargo containers shall be located in the buildable portion of the lot.
    b. Cargo containers shall not occupy required parking areas or required landscaping areas.
    c. In commercial zones, cargo containers shall not be visible from public view.
2. In all zoning districts where cargo containers are permitted, cargo containers shall be painted a solid neutral color, or a color(s) that match the adjacent structures. Acceptable neutral colors include, but are not limited to: beige, taupe, and browns. Colors shall be maintained for the life of the container.
3. Cargo containers shall not display signage and shall be kept free of graffiti.
4. Cargo containers used on school or park sites located in residential zones must be screened from public view and located at least 25 feet from a property used for residential purposes. Cargo containers on school or park sites in must be painted in a neutral color and kept graffiti-free.

12. Loading Dock

Permitted provided it is setback at least 75 feet from the boundary of an adjacent residential property, unless a reduced setback is allowed upon approval of a Special Development Permit by the Zoning Administrator. Also, limited hours for loading and unloading may apply.

13. Dwelling, Caretaker

Permanent living quarters (does not include the temporary use of a mobile home) for a caretaker or night watchman shall be accessory to a permitted primary use, and permitted in any commercial, mixed-use or industrial zoning district, subject to the standards items 1-4 below.. A Minor Use Permit for a caretaker shall be required in the GC and O zoning districts.

1. The caretaker living quarters shall be located within the principle building.
2. The caretaker living quarters shall be occupied by the owners or an employee of the business.
3. A minimum of one parking space shall be provided for the caretaker living quarters, in addition to parking spaces required for the primary use.
4. The caretaker living quarters shall have no more than two bedrooms, and shall provide no more than 650 square feet of habitable living area.

14. Dwelling, Live-Work Units.

Any live-work units shall be accessory to a permitted primary use, and shall comply with the following standards. Exceptions to any of the standards in items 1-2 below shall be permitted by a Minor Use Permit.

1. All living space within the live-work unit shall be contiguous with, and an integral part of the working space of the primary use. Access to individual units shall be from common access areas, corridors, or hallways.
2. The live-work unit shall be occupied by the owner or an employee of the business, and shall not be rented separately from the working space.

15. Prohibited Accessory Uses

A. Minor Repair and Maintenance of Personal Vehicles

It shall be unlawful for any person to engage in or permit others to engage in minor vehicle repair or maintenance in any residential zoning district under any of the following circumstances:

1. Using tools not normally found in a residence;
2. Conducted on vehicles registered to persons not currently residing on the lot or parcel; and
3. Conducted outside a fully enclosed garage and resulting in any vehicle being inoperable for a period in excess of 24 hours.

3.3.10 Use Standards for Temporary Uses

The DS allows for the establishment of certain temporary uses for limited duration, provided that such uses comply with the general and specific standards of this Section.

1. General Requirements for all Temporary Uses and Structures

All temporary uses or structures shall meet the following general requirements, unless otherwise specified in the DS:

a. The temporary use or structure shall not be detrimental to property or improvements in the surrounding area or to the public health, safety, or general welfare.

b. The temporary use shall comply with all applicable general and specific regulations of Section 3.3.10, unless otherwise expressly stated.
c. Permanent alterations to the site are prohibited.
d. All temporary signs associated with the temporary use or structure shall be properly permitted and removed when the activity ends or permit expires, whichever occurs first.
e. The temporary use or structure shall not violate any applicable conditions of approval that apply to a principal use on the site.
f. The temporary use regulations of this Section do not exempt the applicant or operator from any other required permits, such as Environmental Management Department permits.
g. If the property is undeveloped, it shall contain sufficient land area to allow the temporary use or structure to occur, as well as any parking and traffic circulation as required that may be associated with the temporary use, without disturbing sensitive or protected resources, including required buffers, 100-year floodplains, river protection setbacks, and required landscaping. At the conclusion of the temporary use or at expiration of the permit, whichever occurs first, all disturbed areas of the site shall be restored or improved to the condition that existed prior to the use.
h. If the property is developed, the temporary use shall be located in an area that is not actively used by an existing approved principal use, and that would support the proposed temporary use without encroaching or creating a negative impact on existing buffers, open space, landscaping, traffic movements, pedestrian circulation, or parking space availability.
i. Tents and other temporary structures shall be located so as not to interfere with the normal operations of any permanent use located on the property, shall be anchored, and meet the requirements of the Building Official, including fire rating.
j. Off-street parking shall be adequate to accommodate the proposed temporary use.
k. Applications for temporary structures to be located in the 100-year floodplain shall be required to submit a plan to the Building Department for the removal of such structure(s) in the event of notification by the Sacramento County Department of Water Resources. The plan shall include the following information:
1. The name, address, and phone number of the individual responsible for the removal of the temporary structures and the property owner;

2. The time frame prior to the event at which a structure will be removed; and

3. A plan to remove the temporary use earlier than the scheduled removal date, if required.

l. The Zoning Administrator may approve a temporary use permit to allow the use of property in any zone for a period not to exceed 10 days within a given year for an exposition, concert, carnival, vaccination clinic, amusement ride, sale of old clothes and second hand

merchandise, or other similar activity, unless specifically allowed as a promotional display per 3.3.10.2.B. Temporary use permits are not required when these uses are conducted within mall areas or in a completely enclosed building. The temporary use, if located in a zone other than a commercial or industrial zone, shall be under the supervision of a public agency or an organization, school or place of worship that qualifies for an exempt fee license pursuant to the business license ordinance. The permit shall be issued annually, and shall list all dates for the temporary event and uses permitted during the year.

2. Additional Standards for Specific Temporary Uses

A. Community Stands

Community stands are permitted as a temporary use, subject to the issuance of a Temporary Use Permit by the Zoning Administrator and complying with following standards:

1. Community stands shall be operated by nonprofit organizations.
2. In the LD, MD and HD zoning districts, community stands shall be supervised by a public agency or nonprofit organization.
3. Community stands shall obtain a license from the State of California Department of Food and Agriculture (CDFA) and a permit from the EMD before operating. There shall be no annual limit to the number of occurrences and the temporary use permits shall be valid for up to three (3) years.
4. Products sold shall be limited to shell eggs and crops that are locally grown; nonpotentially hazardous prepackaged food products from an approved source that were locally grown or produced; nonpotentially hazardous prepackaged food products, including bottled water and soft drinks, from an approved source that have not been locally grown or produced; and agricultural and food preparation related items.
5. Non-potentially hazardous prepackaged food products, including bottled water and soft drinks, from an approved source that have not been locally grown or produced shall be limited to a 50-square-foot storage and sales area.
6. Agricultural and food preparation related items shall be limited to 25 percent of the total storage and sales area of the farm stand.
7. No activities related to the sale of products from Community Stands shall take place on public right-of-way.
8. No part of this use, including merchandise or parking area, shall be located within the triangular clear visibility area defined in this Code.
9. Hours of operation, stand size (up to a maximum of 1,500 square feet of indoor sales area and 3,000 square feet of total enclosed area), setbacks, signs and parking requirements shall be regulated by the temporary use permit for the Community Stand.

B. Promotional Displays and Sales

Promotional displays and activities including, but not limited to, amusement rides, street dances, concerts, live entertainment, and promotional out of door "parking lot" sales may be conducted in the commercial and industrial zoning districts for the purpose of promoting a use regularly and lawfully in operation on the premises. The activities shall be conducted only within the buildable portion of the lot or parcel and subject to first obtaining approval of a Temporary Use Permit by the Zoning Administrator. Temporary signs are permitted only with the approval of the Zoning Administrator. Time limits of use shall not exceed 30 days within a given year. Promotional displays and sales are permitted for 30 consecutive days within the first 90 days of the grand opening of a business and may be permitted for an additional period of up to 30 days within a given calendar year, annually. Beyond the grand opening display period, temporary signs may have their display time split up into as many as 10 three-day periods, or may join the time allotments as the business sees fit and described in detail in the application for a Temporary Use Permit. Businesses that violate the provisions of this Code may have the Temporary Use Permit denied by the Zoning Administrator. Temporary signs, in conjunction with promotional display and sales are further regulated by Section 4.13.7.

C. Seasonal Display and Sales

Seasonal display and sale of items such as flowers, pumpkin, plants, and Christmas trees may be sold as a temporary use in the CC, GC and MU zoning districts subject to obtaining a business license. Seasonal items may be sold as a temporary use in zoning districts other than commercial or industrial, upon securing approval of a Temporary Use Permit by the Zoning Administrator and obtaining a general business license. The Zoning Administrator shall specify the period of sale, and the period permitted to clear the lot of all seasonal items and other evidence of the temporary use. Temporary signs are permitted, subject to provisions of Section 4.13, "Sign Regulations" for commercial and office zoning districts and subject to approval by the Planning Director in all other zoning districts. The sale of seasonal items or plants in connection with and on the same premises as a supermarket, hardware, home maintenance or repair store, or other established business, if a temporary structure and electrical wiring are not employed in connection with such sales is exempt from the regulations and requirements for a Temporary Use Permit.

D. Temporary Concessions

Temporary concessions shall comply with the standard of this Section. Temporary concessions are allowed only in specified commercial and industrial zoning districts subject to the conditional approval of a Temporary Use Permit by the Zoning Administrator. The permit shall include any conditions appropriate to assure compliance of the requirements of this Section, shall include time limits as to when the Temporary Use Permit is valid and may include additional conditions and requirements that are found appropriate to assure the use will not be detrimental to health, safety, peace, morals, comfort, or general welfare of persons residing or working in the neighborhood:

1. Every temporary concession shall be a temporary day-to-day use and all equipment, including any stand, cart, table, or vehicle, shall be removed at the end of each sales day.

2. Every operator of a temporary concession shall have notarized written permission (on a form provided by the County) from the property owner or lessee of property on which the concession is located, a copy of which shall be filed with the operator's application. The operator shall also have a copy of the permission statement required by these provisions at the concession location for inspection upon request by any person authorized to enforce the provisions of this Section.

3. No activities relating to the operation of a temporary concession, including customer parking, shall occur on public property. All parking areas shall be maintained or surfaced so as to be dust-free.

4. All stands, carts, vehicles, and displays of merchandise shall be set back not less than 25 feet from the right-of-way line of any public street, provided, however, that a table, stand, or cart of 16 square feet in size may be located at not less than 12.5 feet setback from a County right-of-way line.

5. No concession stand, cart, vehicle, merchandise, or parking area shall be located within the triangular clear visibility area defined in this Code.

6. No additional signs beyond the signs otherwise permitted in the zoning district in which the temporary concession is located shall be permitted, except temporary signs flat against the table, cart, stand, or vehicle that shall not exceed two (2) square feet per each lineal foot of such equipment parallel to the street where the setback is 25 feet or more from the right-of-way line. Where the table, stand, or cart is set back less than 25 feet, the area of the signs shall not exceed a total of six (6) square feet, and shall be placed flat against such equipment.

7. Only one temporary concession vendor at a time may conduct business on any parcel of property.

8. At least one trash receptacle shall be provided on site.

9. Every operator of a temporary concession stand shall have legal access to restroom facilities within 1,000 feet of the concession. (May be public restroom assigned permitted access to private restrooms, or a self-contained recreational vehicle.)

10. Sale of produce is permitted only in accordance with state food and agricultural regulations, in Title 3 of the California Code of Regulations; as such, sale must take place at a producer's "roadside stand", or authorized by a "Direct Marketing Certificate" or "Produce Dealer's License".

11. The area used for sales or display of merchandise by the temporary concession shall be limited to 200 square feet. Such area shall be identified on the use permit and the use permit shall be valid only for the area so identified.

12. Notwithstanding provisions elsewhere in this Code or the Sacramento County Code, the following uses are

exempt from the regulations and requirements for a Temporary Use Permit:

a. The sale from stands of fireworks preceding and in connection with the celebration of the Fourth of July;

b. Temporary concessions attendant to certain permitted retail uses: stands, carts, vehicles, and displays of merchandise are permitted within the pedestrian circulation areas of shopping centers, malls, and large retail buildings with over 60,000 square feet of gross floor area; and

(i) The temporary concessions shall be located within the buildable portion of the lot, and when located outside, no more than 25 feet from the entrance.

(ii) The use shall be subordinate and incidental to the primary use and have access to the restrooms.

c. Sales of products by nonprofit organizations within the buildable area of a commercial lot.

14. Temporary Concessions for the Preparation and Sale of Food for Immediate Consumption

The Planning Commission may consider a Temporary Use Permit for a temporary concession for the sale of food intended for immediate consumption. This provision is intended to be applied only in unusual situations where a convenience to customers can be demonstrated because of the locational factors or temporary circumstances and where a permanent facility or a mobile vendor service would be infeasible or inappropriate. The development standards for such concessions are those of Sections 3.10.3.E.1 through 3.10.3.E.11, with the additional requirement that appropriate licensing must be secured from the Environmental Management Department.

E. Temporary Construction Buildings

Temporary buildings for commerce or industry incidental to residential development, and temporary structures and trailers for the housing of tools, equipment, building assembly operations, and supervisory offices in connection with major construction projects may be authorized in any zoning district by the Chief Building Inspector.

F. Temporary Sales/Construction Offices

A temporary office established to handle sales or construction of lots and homes may be authorized by the Zoning Administrator in any zoning district by Temporary Use Permit. Parking shall be provided in accordance with Section 5.9, "Off-Street Parking." Conditions of approval may regulate hours of operation, landscaping, or other aspects deemed necessary by the Zoning Administrator. Temporary signs may be permitted subject to approval by the Zoning Administrator.

1. Use of Mobile Home at Construction Sites

A commercial coach, mobile home, or other licensed vehicle used for the temporary housing of tools, equipment, or building assembly operations in connection with major construction projects or for providing public utility services during an emergency shall be permitted in any zoning district, with authorization by the Chief Building Inspector.

2. Use of Commercial Coaches as Temporary Offices

a. A commercial coach may be used for a temporary office where such use is authorized in Table 3.2-B, "Allowed Uses in the Mixed Use, Commercial, and Industrial Zoning Districts," and provided that a permit is secured from the Chief Building Inspector.

b. A commercial coach may be used for a temporary office in any other zoning district, where such use is incidental to a use other than a residential use permitted in said zoning district, provided that a Temporary Use Permit is first obtained from the Zoning Administrator and further provided that a permit is obtained from the Chief Building Inspector.

3. Use of Commercial Coach for Temporary Classrooms

Commercial coaches may be used as temporary classrooms for private schools in any zoning district where private schools are permitted, provided that a Temporary Use Permit is obtained from the Zoning Administrator and further provided that a permit is obtained from the Chief Building Inspector.

CHAPTER 4: Development Standards

4.1 Overview

The development standards contained in this chapter seek to promote coordinated, sound development, effective use of land, and high quality site planning that considers the unique character and context of the Jackson Township community. These development standards implement the goals and policies of the JTSP and the 2030 General Plan. These standards also seek to encourage innovation in development, to provide a quality community that meet anticipated demands for housing, services and employment while allowing a variety of approaches to design that establishes a sense of place in a healthy, safe and sustainable manner.

4.2 Format and Use of Development Standards

Development standards set the specific requirements for each project or design solution. They define the dimensional requirements that apply to structures built within each of the land use designations, including required lot sizes, lot coverage; setbacks; building and structure heights; and other requirements related to the building envelope, location, and configuration of buildings and structures which are unique to the Plan Area.

The development standards contained herein set the basic, quantitative requirements for development that support the goals and policies of the JTSP. These standards shall be used in conjunction with the JTSP Design Guidelines for expectations on the qualitative design criteria that will be used to evaluate development projects during the Design Review process. Development examples illustrate typical or possible building types and designs that are encouraged, but are not intended to encompass all possible solutions that may be allowed within the Plan Area.

Development standards in this Chapter are structured by topic areas and ensure projects within each of the Plan Area land use zoning districts are compatible and sensitive to the context of the existing community. To understand the complete application of all development and design requirements, the user of this code should review the development standards Section for the applicable land use zoning district of the project, including Section 4.12 "Off-Street Parking" and Section 4.13, "Sign Standards." Additional standards apply to certain uses and in special zoning districts, as specified in Chapters 3, "Use Standards". Chapter 7 of the County Code, "Definitions" should be consulted for the terms used in this chapter.

The standards are organized as follows:

4.3: Development Standards for LD and MD Detached
4.4: Development Standards for MD and HD Attached
4.5: Development Standards for GC, CC, MU O and PQP
4.6: Wetland Preserve Interface Standards
4.7: General Setback Standards for All Districts
4.8 General Height Standards
4.9 Density Bonuses
4.10: Landscape Standards
4.11: Wall and Fence Standards
4.12: Off Street Parking Standards
4.13: Signage Standards
4.14: Prohibited Activities

4.3 Development Standards for LD and MD Detached

The residential development standards in this section apply to all detached residential homes and halfplexes within the LD and MD land use designations. These standards apply to new construction, retrofitting, and remodeling of existing construction within the Plan Area. The development standards in this section are to be used in close concert with the Design Guidelines to achieve high quality projects that fit within the community. All detached residential projects shall be subject to the development standards, summarized in Table 4.1, and Design Review. Refer to the Countywide Design Guidelines Chapter 2, for the applicable Design Review process.

Where exact dimensions for setbacks, heights, and other standards are too difficult to meet due to site restrictions, alternative and creative solutions that meet the intent and purpose of this document may be approved by the County through the Design Review process, for those projects subject to Design Review.

The development standards for all detached residential products are summarized in Table 4.1 and corresponding Exhibits 4.1 through 4.6. For the creation of new lots, the lot area and width requirements regulate minimum lot size and configuration for each zoning district and are not necessarily as optimum project design standards. Refer to the Design Guidelines for ways to provide compatibility, access and connectivity with surrounding neighborhoods.

4.4.1 Lighting for Subdivision Developments

Site and street lighting shall comply with Section 5, "Street Light Design" of the *Sacramento County Improvement Standards* and the following standards:

1. Lighting fixtures shall provide pedestrian safety and be adequately spaced and scaled without interference from landscaping, and directed away from adjacent areas to minimize light pollution caused by glare or spillage into neighboring properties.

2. Nighttime pollution of the sky is discouraged by following illumination levels required for safety per Illuminating Engineering Society of North America (IESNA).

4.4.2. Landscaping.

Landscaping shall be provided in conformance with Section 4.10, Landscaping Standards.

4.4.3 Walls and Fences

Walls and fences shall be located and constructed in conformance with Section 4.11, Wall and Fence Standards.

4.4.4 Parking

Parking shall be provided in conformance with Section 4.12 Parking Regulations.

4.4.5. Signage for Subdivision Developments

Signs shall be integrated and designed at a quality consistent with the design of the project and shall comply with Section 4.13, Sign Regulations.

4.4.6 Number of Kitchens

Any single-family dwelling shall have no more than one kitchen. For purposes of this Section, a kitchen is an area within a dwelling that has noncommercial appliances to cook food. Exceptions to this requirement may be granted by the Planning Director (no fee) for dwellings of developmentally disabled persons. Outdoor kitchens are exempt.

Table 4.1: Detached Residential Standards

	LD STANDARD Exhibit 4.1	LD ALLEY Exhibit 4.2	LD/MD DUPLEX Exhibit 4.3	MD STANDARD/ZLL Exhibit 4.4	MD CLUSTER Exhibit 4.5	MD ALLEY Exhibit 4.6

Refer to Section 4-12. “Off-Street Parking;” Table 4-6, “Parking Requirements for Residential Uses.”						

Footnotes for Table 4.1:

1. Density bonuses or increases may be allowed for the provision of affordable housing, project amenities, proximity to transit, and/or other special project considerations, as noted in Code Section 5.2.3.
2. Unless otherwise noted, lot area standards are based on net acreage calculations.
3. Cornices, sills, eaves, canopies, awnings, window bays, and similar features may encroach into any required yard area a distance not to exceed 24 inches. Accessory structures must maintain a minimum three (3) foot setback from property lines for any portion of the structure.
4. The setback for all residential structures in each category shall be the minimum distances measured from the street right-of-way. Front setbacks shall be measured from front property line if street dedication is required for future right-of-way. Setbacks shall allow enough room for utilities, if greater than those outlined.
5. The main building may project into the required rear yard provided that an equal area is provided as a yard or court within the buildable portion of the lot.
6. As part of Design Review for single-family subdivisions, front yard setbacks may be varied up to 25 percent.
7. Refer to Section 4.7 for detailed height and setback requirements.

Exhibit 4.1: LD Standard Setbacks

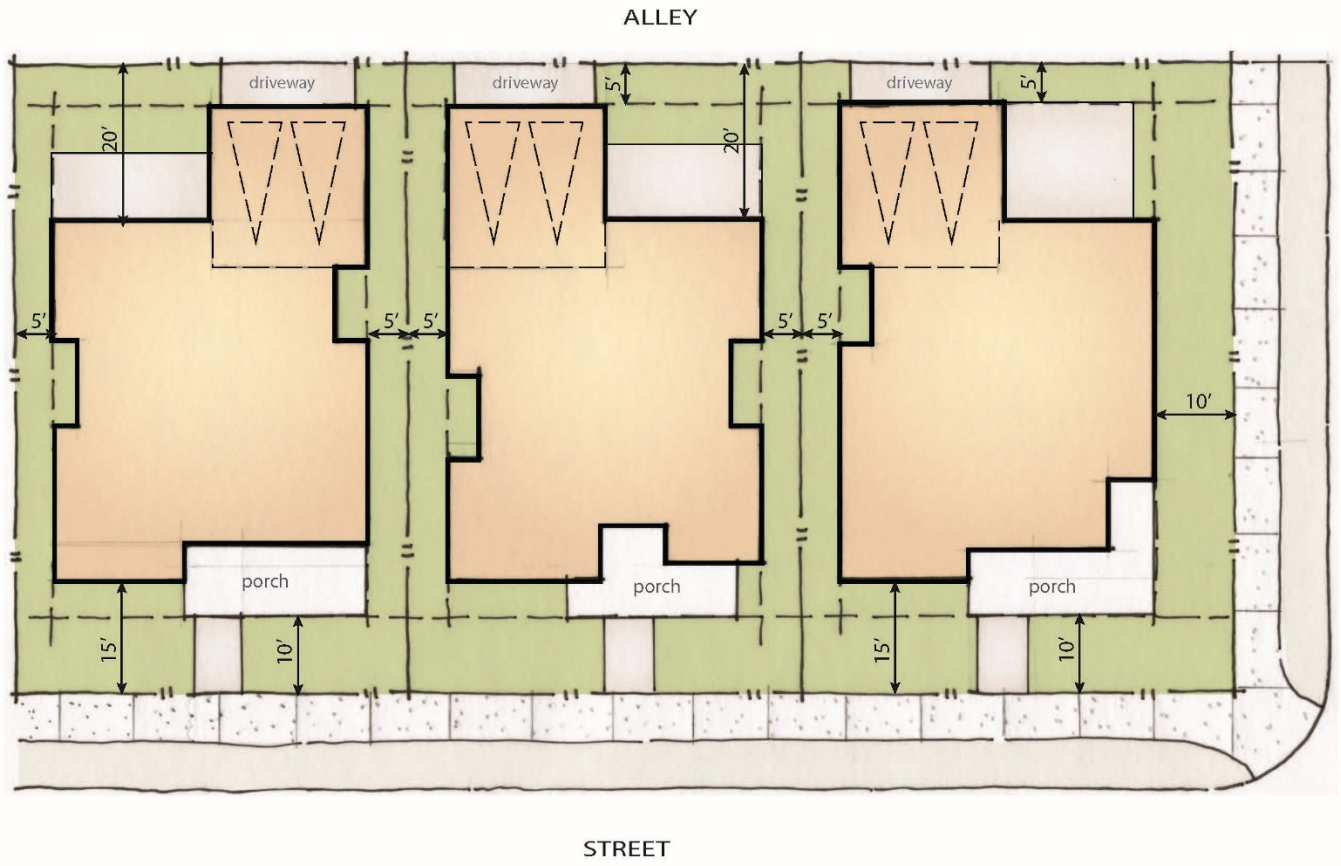

Exhibit 4.2: LD Alley Setbacks

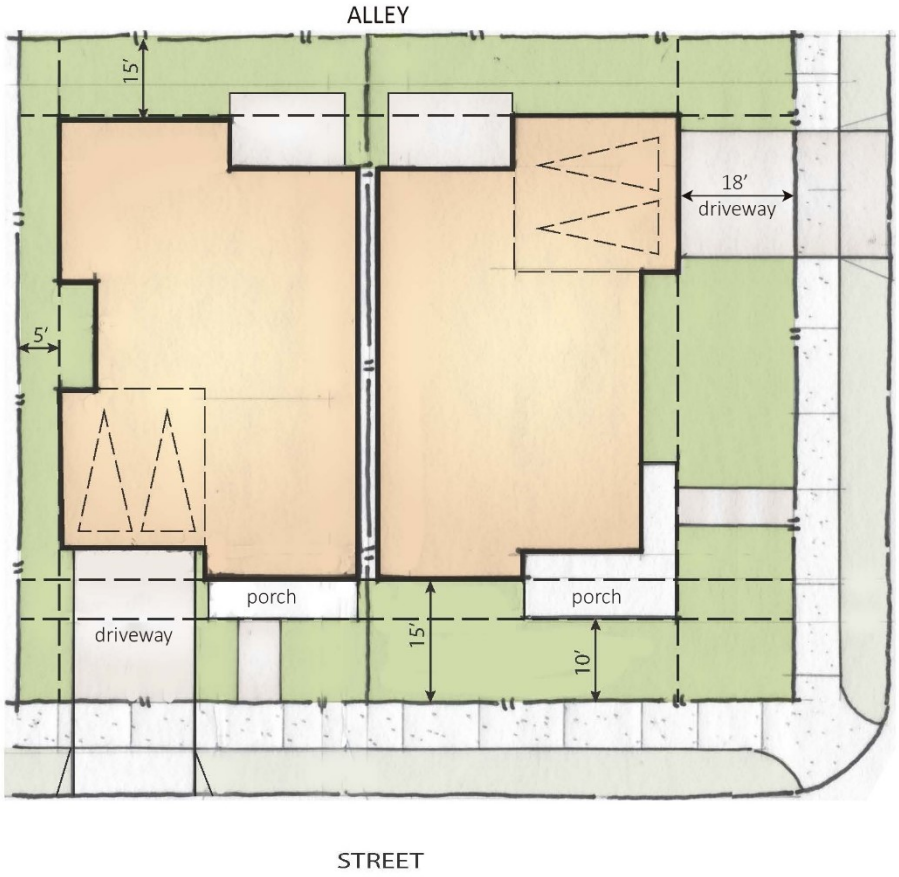

Exhibit 4.3: LD and MD Halfplex Setbacks

Exhibit 4.4: MD Standard/Zero Lot Line Setbacks

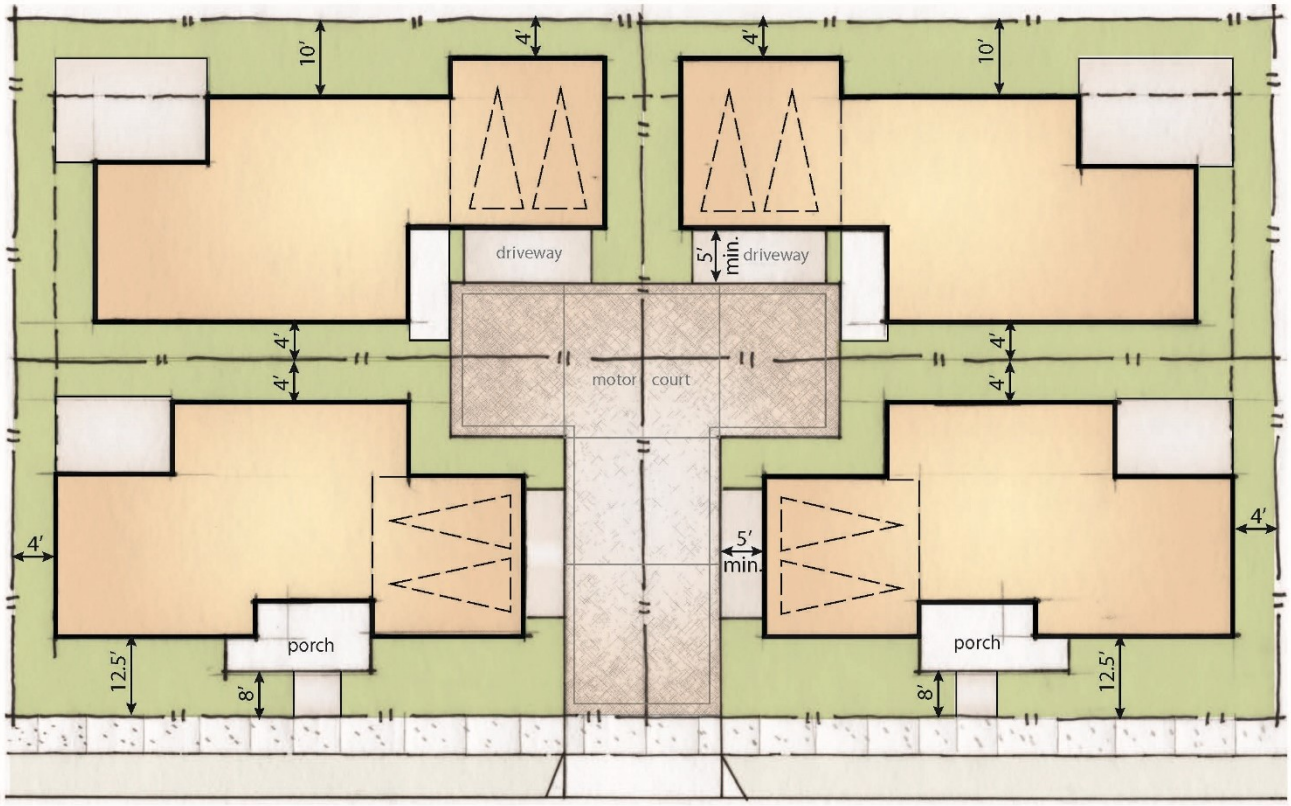

Exhibit 4.5: MD Cluster Setbacks

Exhibit 4.6: MD Alley Setbacks

4.5 Standards for MD and HD Attached

The development standards in this Section apply to all attached residential projects in the MD and HD land use designations. The development standards in this section are to be used in close concert with the Design Guidelines to achieve high quality projects that fit within the community. All attached residential projects shall be subject to the development standards summarized in Table 4.2.

Where exact dimensions for setbacks, heights, and other standards are too difficult to meet due to site restrictions, alternative and creative solutions that meet the intent and purpose of the standards and guidelines are met.

4.5.1 Multifamily Development Noise Standards

For projects that include the construction of residential units within 25 feet of an arterial or thoroughfare right-of-way (as identified by the roadway classifications in the General Plan), project applicants shall submit an acoustical analysis demonstrating façade construction will be such that interior noise levels will not exceed 45 d under future (cumulative case) traffic conditions.

4.5.2 Landscaping

Landscaping shall be provided in conformance with Section 4.10, Landscaping Standards.

4.5.3 Walls and Fences

Walls and fences shall be located and constructed in conformance with Section 4.11, Wall and Fence Standards.

4.5.4 Parking

Parking shall be provided in conformance with Section 4.12 Parking Regulations.

4.5.5 Signage

Signs shall be integrated and designed at a quality consistent with the design of the project and shall comply with Section 4.13, Sign Regulations.

4.5.6 Driveway Dimensions

1. Street design and width shall be confirmed with the Fire Department and DOT.
2. For driveway access with 10 or fewer units, a T-shaped turnaround shall be allowed. A dimension of 20 feet by 80 feet will accommodate most vehicles.

3. Dead end driveways shall be less than 150 feet long, and have appropriate turnarounds as needed.

4. Circular cul-de-sacs shall be designed with a radius of 40 feet or less to the greatest extent possible.

5. The minimum widths for internal streets or driveways, per Fire Department Standards, shall be according to items a.-d below.

a. For uncurbed driveways with no parallel parking when a fire lane is not necessary: 16 feet.

b. For curbed internal streets with no parallel parking: 19 feet.

c. For curbed internal street with parallel parking on one side: 28 feet.

d. For curbed internal street with parallel parking on both sides: 36 feet.

4.5.7 Lighting for Multifamily Housing

Site and street lighting shall comply with Section 5, "Street Light Design" of the Sacramento County Improvement Standards and the following standards.

1. Lighting fixtures shall provide for pedestrian safety and be adequately spaced and scaled without interference from landscaping, and directed away from adjacent areas to minimize light pollution caused by glare or stray light into neighboring properties.

2. Illumination shall be 0.25 foot-candles at grade level for surface areas of alcoves, walkways, and yards other than required for exits.

3. Illumination shall be one (1) foot-candle at floor level for open parking areas and carports.

4. All lights shall be placed on a timer or photo electronic cell capable of turning the lights on and off one-half (½) hour prior to dawn and one-half (½) hour past dusk.

4.5.8 Trash and Recycling Enclosures

a. All trash and recycling containers and enclosures shall be located within an enclosed masonry area with a surrounding wall at least six (6) feet high and no taller than eight (8) feet in height, with an appropriate solid gate; and shall be located a minimum of 25 feet from any residentially zoned property, and property used for residential purposes.

4.5.9 Maintenance

All development standards shall be continuously met for every project. Buildings and premises, including paint/siding, roofs, windows, fences, parking lots, and landscaping shall be kept in good repair. Premises shall be kept free of junk, debris, and abandoned vehicles.

Table 4.2: Attached Residential Standards			
	MD Townhouse[2] Exhibit 5.7	HD Townhouse[2] Exhibit 5.8	HD Condo/ Apartments[2] Exhibit 5.9
Density range[1]	11.0-19.9 du/ac	20.0-30.0 du/ac	20.0-30.0 du/ac
Minimum net lot area in s.f.	2,500	n/a	n/a
MINIMUM SETBACKS FROM PROPERTY LINE[3]			
Living area from public street	12.5'	12.5'	25.0'
Porch at front	8.0'	8.0'	8.0'
Living area from alley/private drive	12.5'	12.5'	12.5'
Garage/carports at alley/rear	n/a	5'	5'
Separation between buildings	12'	20'	20'
Side at corner	12.5	12.5'	12.5
Rear	15'	15'	15'
Rear abutting LDR or AG	20'	20'	25'
MAXIMUM BUILDING HEIGHTS[5]			
Main building	40'	50'	50'
Front or rear porch	16'	16'	16'
Detached garage/carport	16'	16'	16'
OPEN SPACE REQUIREMENTS[4]			
Min. Open Space/Landscaping	20%	20%	30%
Common Outdoor Amenities	Required for projects with 10 units or more		
Min. Private Open Space/Unit	50 s.f.	40 s.f.	40 s.f.

Table 4.2 Footnotes:

1. See Code Section 5.2.3 for density bonuses or intensity increases. Density bonuses are automatic when State Density Bonus or County Housing Incentive Programs (HIP) are used. A Special Development Permit is required for density bonus projects not using the above criteria as noted in Code Section 6.4.6.G.
2. Other creative housing types may be permitted with variations in these development standards upon review and approval in the Design Review process.
3. Setback requirements, encroachments, and internal street widths are subject to review by local service providers and may be restricted based on the County Access Drive Standards or other guidelines used for multifamily residential developments to ensure adequate spacing is available for all necessary utilities.
4. Common open space and outdoor amenities include common patios, common greens, community gardens, pools, pedestrian walkways, tot-lots and recreation areas. It does not include areas used for vehicular access and parking. Public parks and open space within a project may be counted up to one-half (½) of the common open space requirement.

5. Refer to Section 4.7 for detailed setback and height requirements.

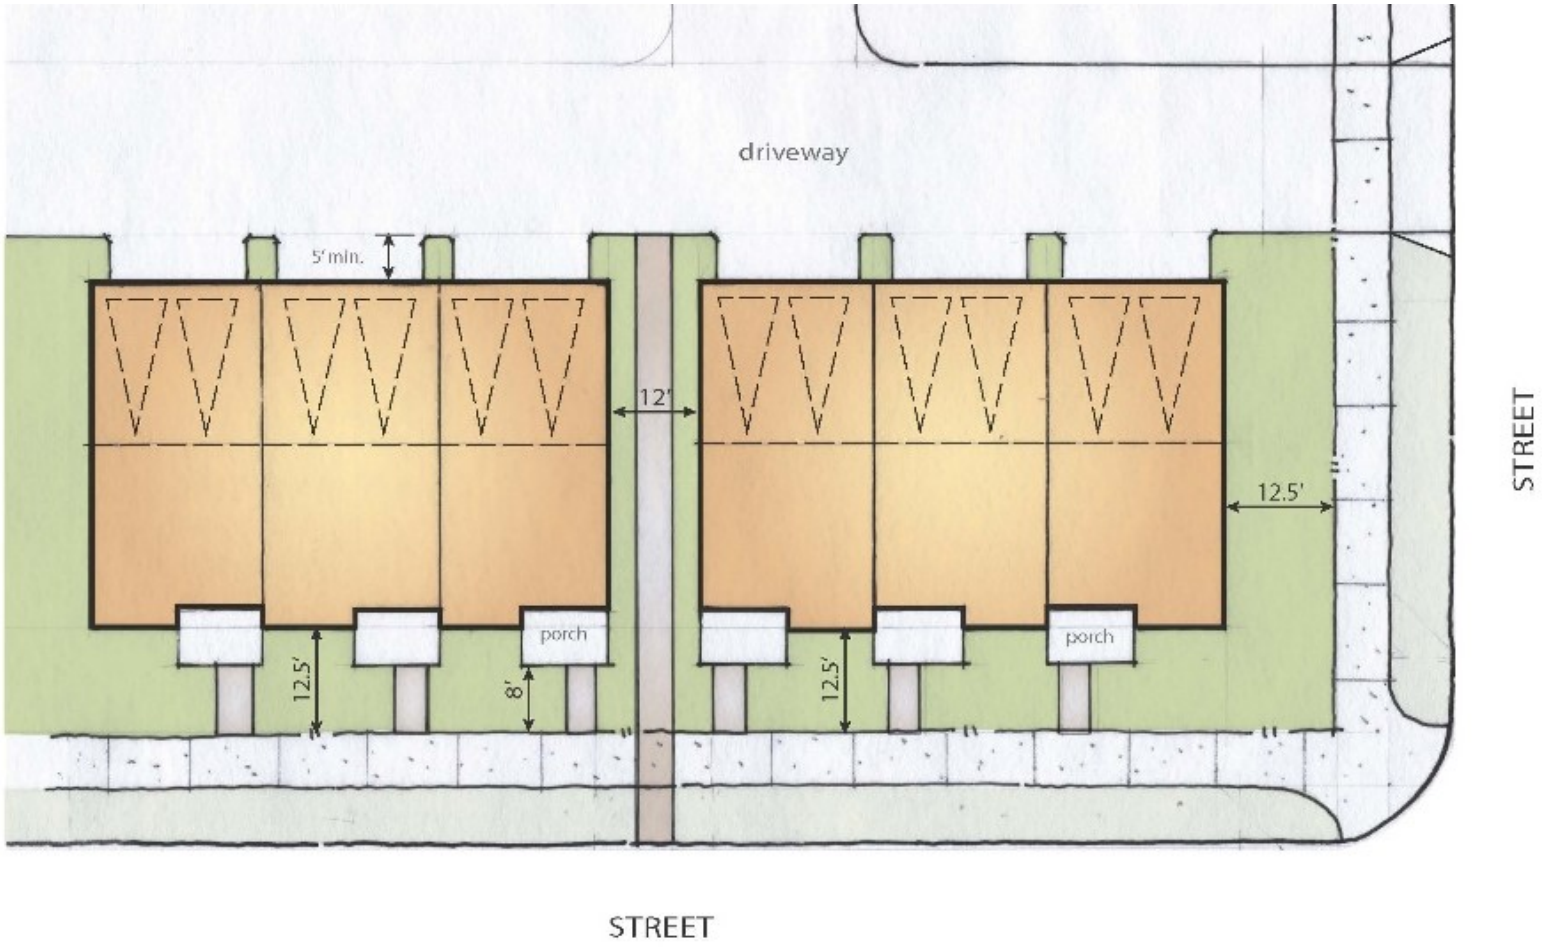

Exhibit 4.7: MD Townhouse Setbacks

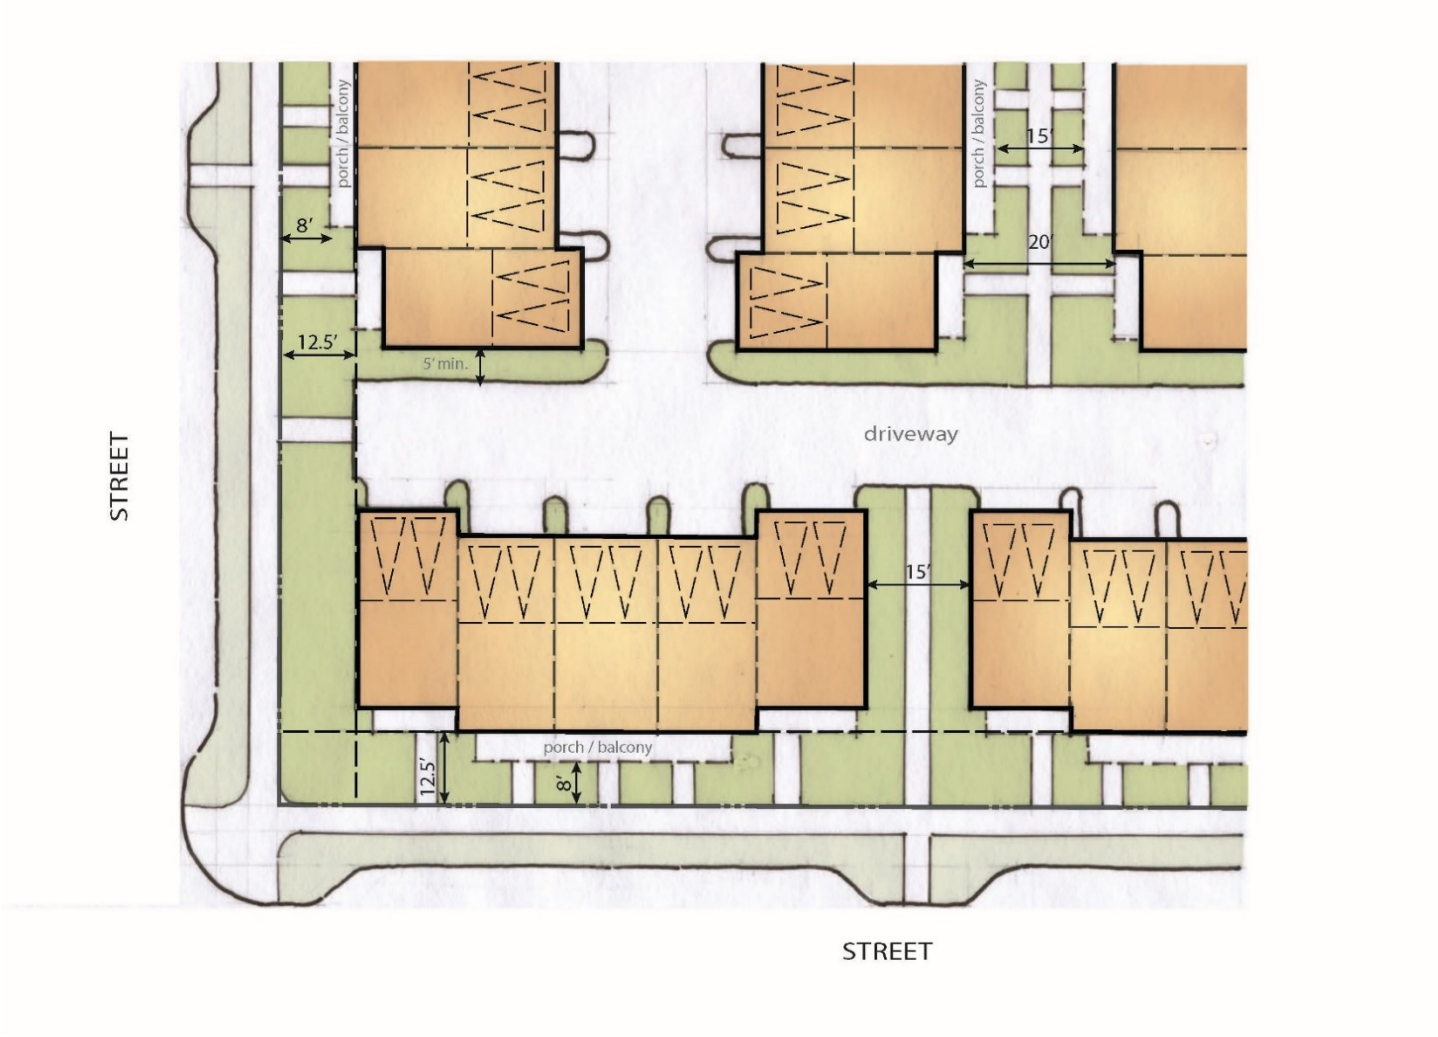

Exhibit 4.8: HD Townhouse Setbacks

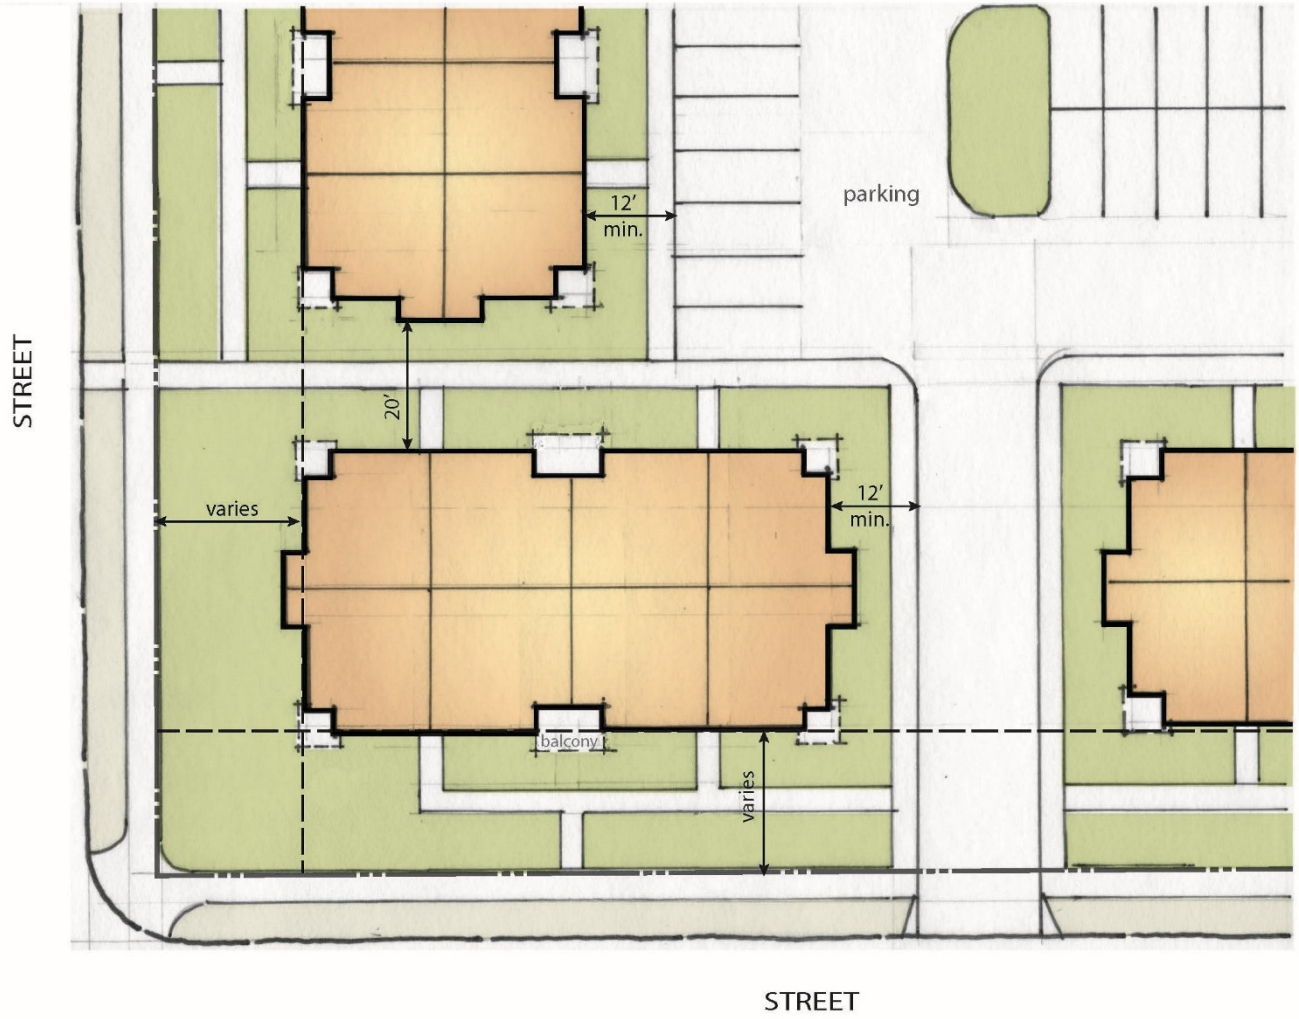

Exhibit 4.9: HD Apartment/Condo Setbacks

4.6 Mixed Use, Commercial, Office, and Public Quasi Public Standards (GG, CC, MU, O and PQP)

The commercial development standards in this section apply to all projects in the MU, GC, CC, O and PQP land use designations. The development standards in this section are to be used in close concert with the Design Guidelines to achieve high quality projects that fit within the community. All commercial projects shall be subject to the development standards applicable to commercial land use designations, summarized in Table 4.3, the applicable section references from the Code and Design Review. Alternatives to these standards may be approved as part of the Design Review process if the intent and purpose of the standards and guidelines are met.

4.6.1 Landscaping

Landscaping shall be provided in conformance with Section 4.10, Landscaping Standards.

4.6.2 Walls and Fences

Walls and fences shall be located and constructed in conformance with Section 4.11, Wall and Fence Standards.

4.6.3 Parking

Parking shall be provided in conformance with Section 4.12 Parking Regulations.

4.6.4 Signage

Signs shall be integrated and designed at a quality consistent with the design of the project and shall comply with Section 4.13, Sign Regulations.

4.6.5 Services and Utilities

1. Trash and Recycling Enclosures

a. All trash and recycling containers and enclosures shall be located within an enclosed masonry area with a surrounding wall at least six (6) feet high and no taller than eight (8) feet in height, with an appropriate solid gate.

b. Trash and recycling enclosure areas shall be designed to the County's latest stormwater quality source control design standards.

c. There shall be adequate area provided for recycling containers and enclosures. Recycling enclosures shall be located for functional use by occupants and by the disposal and hauling companies, providing collection services. The appropriate authority can allow flexibility on the requirements in subsections a-b to facilitate the siting and provision of adequate space allocation for recycling collection and storage areas.

2. Compliance with Noise Ordinance (County Code Section 6.68)

All commercial activities, including truck loading, operation of machinery, and human activity areas, located within proximity of a residential or agricultural residential zone shall comply with the County Noise Ordinance. If complaints are received and non-compliance verified by the Environmental Management Department, then the Planning Director may require the property owner to submit an acoustical study prepared by a qualified acoustical engineer. Said study shall provide

recommended physical and operational measures to bring the property into compliance. The Planning Director may require compliance with such measures as a condition of the business license as provided for in County Code Section 4.06.090. This requirement shall be applicable to existing and new commercial uses.

3. Shopping Carts

All businesses shall comply with Chapter 9.76 of the Sacramento County Code relating to Unauthorized Use of Shopping Carts.

4.6.6 Circulation, Access, and Pedestrian Facilities

1. Circulation

Incorporate attractive and well-marked pedestrian networks that provide connectivity and safe travel from the public rights of way and through parking areas. Design shall reflect the need for safely mixing and separating modes (i.e. trucks, autos, transit, pedestrians and bicyclists), while enhancing the pedestrian linkages to other buildings, transit and parking areas.

2. Access

Provide cross-access between projects to the extent practicable to support mixed use development, active design and walkability, while maintaining security and visibility.

4.6.8 Maintenance.

All development standards shall be continuously met for every project. Buildings and premises, including paint/siding, roofs, windows, fences, parking lots, and landscaping shall be kept in good repair. Premises shall be kept free of junk, debris, and abandoned vehicles.

4.6.9 Illustration of Standards and Setbacks

Exhibits 4.10 through 4.14 are provided to help illustrate the standards and setbacks contained within Table 4.3. The exhibits should be considered guidance only in execution of the development standards for each individual site.

Table 4.3: Mixed Use, Commercial, Office and PQP Standards					
	Mixed Use (MU)	General Commercial (GC)	Community Commercial (CC)	O (Office)	Public Quasi Public (PQP)
Average Lot Coverage Floor area Ratio (FAR)	50%	25%	25%	50%	50%
Maximum Structure Height	50'	50'	50'	50'	50'
Feature Structure Height (non-occupied)	55'	Up to 60 ft. for tower structure	55'	N/A	N/A
Setbacks	See Exhibit 4.11	See Exhibit 4.12, 4.13	See Exhibit 4.14	See Exhibit 4.15	See Exhibit 4.15
Front	0'	50'/30/20'0' [1]	30/20' [1]	25'	25'
Side (non-residential)	0'	0'	0'	0'	0'
Rear (abutting LD or MD)	N/A	25/100'[2]	25'[2]	25/100'[2]	25'
Projections[3]					
Roof overhangs, eaves	3' into setback	3' into setback	3' into setback	N/A	N/A
Canopies, awnings	6'into setback, 10 ft. clear height	6' into setback, 10 ft. clear height	6' into setback, 10 ft. clear height	N/A	N/A
Balconies	6' into setback, 12' height to bottom	6' into setback, 12' height to bottom	N/A	N/A	N/A
Off-street Parking	Parking requirements are per Section 4.12 AND Table 4.9 "Parking for Commercial Uses."				
Loading, Trash, Recycling					
Setback for Trash and Recycling Enclosures	31' from Public Street, 15' from edge of Private street, 25' from LD,MD, HD				
Setback for Loading Docks	75' from LD,MD,HD				
Loading, Delivery, Service	Internal only, no street loading	Screened, away from pedestrian zones	Screened, away from pedestrian zones	Provide delivery/drop off	Screened, away from pedestrian zones

Footnotes:

1. Setback is 50 feet along Jackson Highway and varies on all other street frontages- see Exhibits 5.
2. Setback is 25 feet for single story structures / 100 feet for multi-story structures

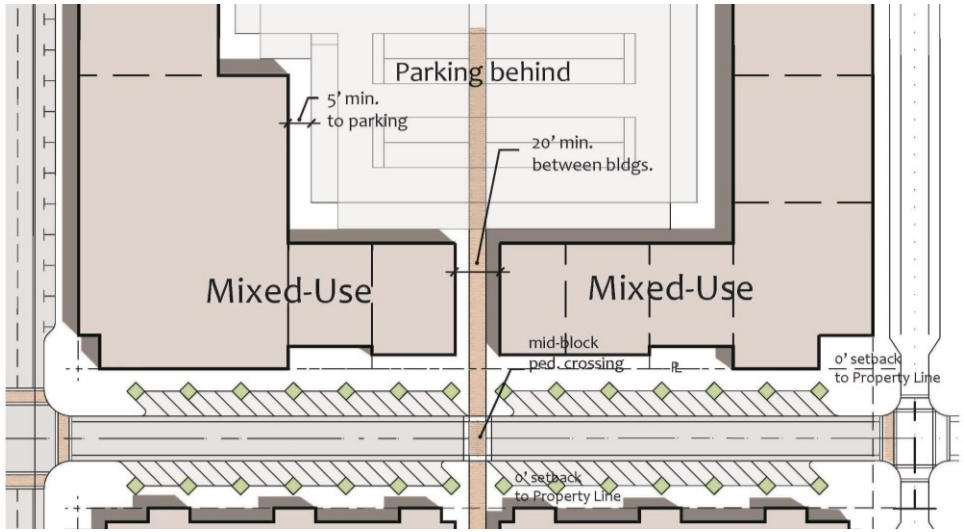

Exhibit 4.11: Illustration of MU Setbacks and Standards

4.6.2.1 Mixed Use (MU)

. The lot frontage on Township Drive is intended as an active pedestrian zone with zero (0') setback and buildings placed at the back of a 16 foot pedestrian walkway.

The northern MU site, MU1, is allocated with high density residential units. The high density uses are integrated into the MU site, following the MU standards in Table 4.3. The southern site, MU2, is partially encumbered by powerlines, therefore making residential uses infeasible.

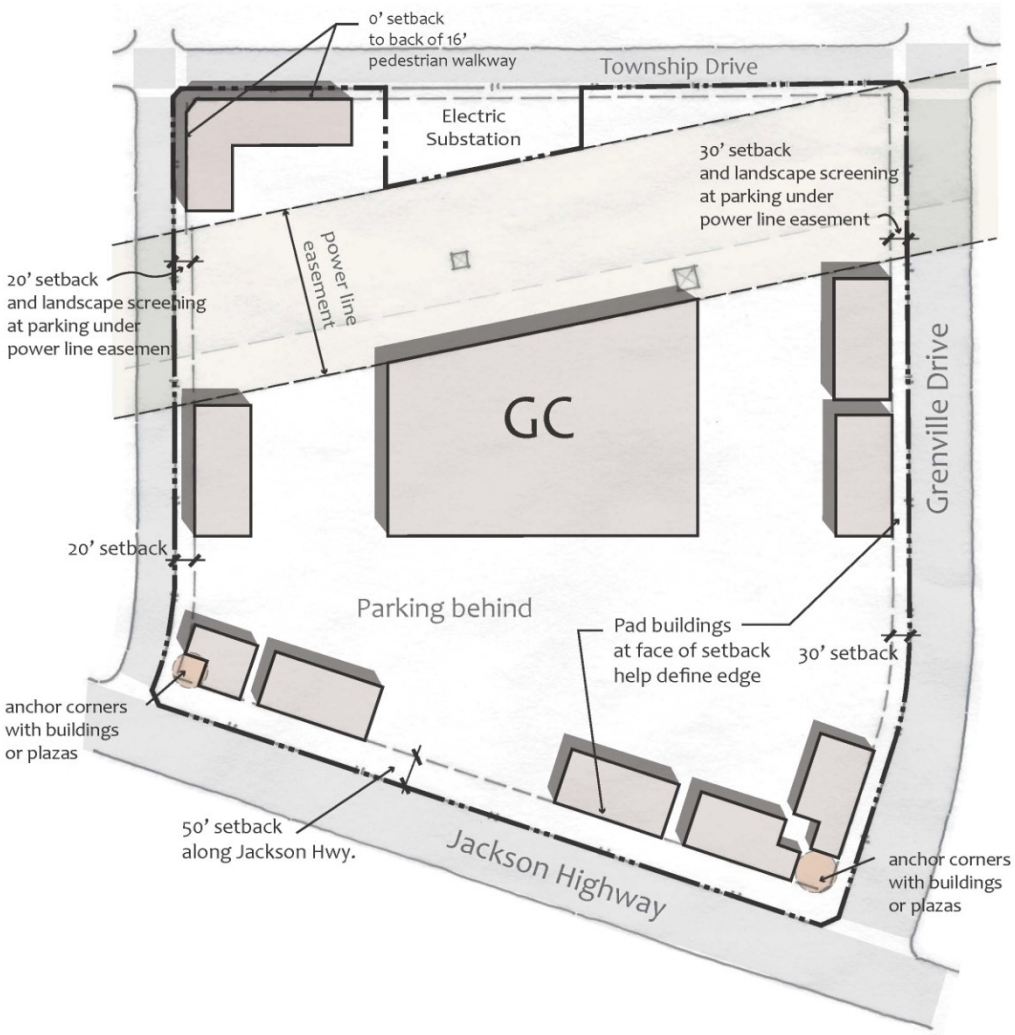

Exhibit 4.12: Illustration of Setbacks for GC Site

4.6.2.2 GC Site

This site, located at the northwest corner of Jackson Highway and Grenville Drive, acts as a gateway to Jackson Township. The back half of the site is divided by a 275 foot power line easement, which may function as parking for large format retail, park-n-ride, or other compatible uses.

Development of the GC site along Township Drive on the north is restricted due to the power line easement and the location of an Electrical Substation. The northwest corner of GC site has reduced setbacks to allow this portion be developed similar to the adjacent MU block with zero (0') setback and buildings placed at the back of a 16 foot pedestrian walkway.

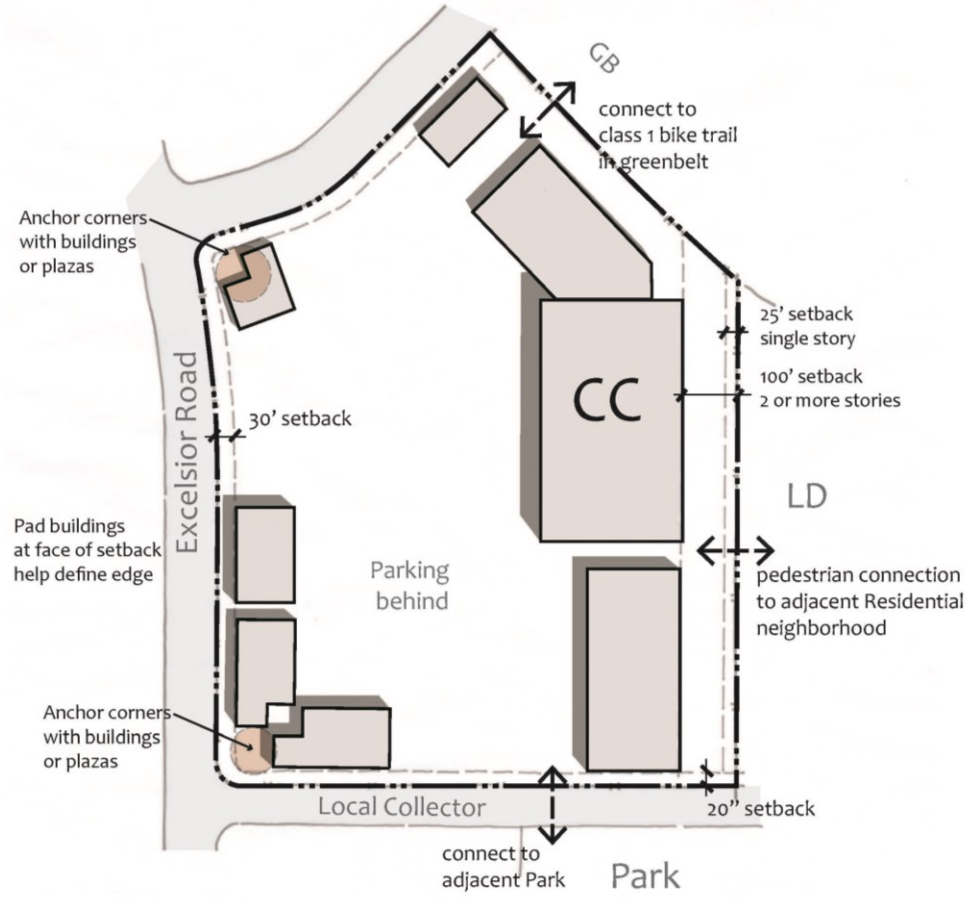

Exhibit 4.13: Illustration of Setbacks for CC

4.6.2.4 Community Commercial (CC)

The CC site is located at the corner of Excelsior Road with the intersection of new Douglas Road.

Setbacks along Excelsior Road are 30 feet while setbacks from the local collector are 20 feet. The north side is adjacent to a greenbelt/drainage corridor with a class 1 bike trail. LD designated property abuts the CC site on the east, therefore setbacks shall be 25 feet for single story structures or 100 feet for two or more stories to provide appropriate building separation.

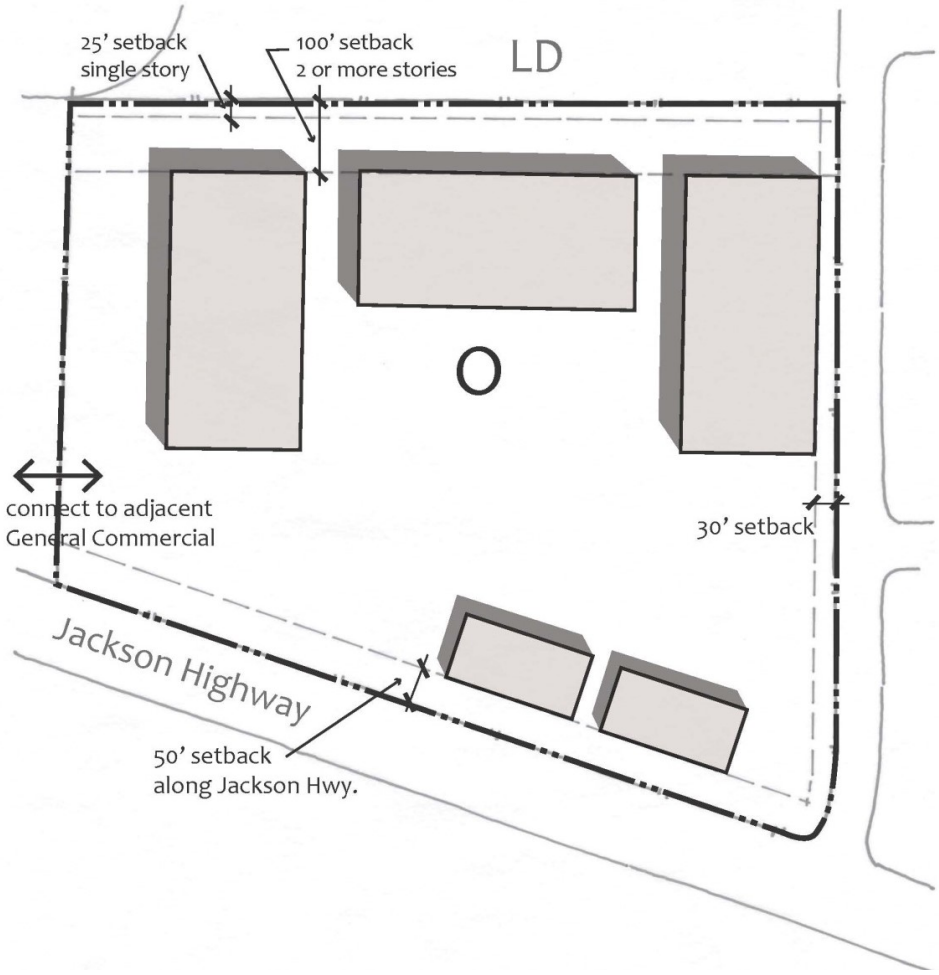

Exhibit 4.14: Illustration of O and PQP Setbacks

4.6.2.5 Office (O) and Public Quasi Public (PQP)

The setback standards for both O and PQP sites are depicted in Exhibit 4.14. PQP uses are similar in scale and density to Office uses.

The two O sites are located on Jackson Road. The western O site, depicted in Exhibit 5.15, abuts MD designated property on the north, therefore setbacks shall be 25 feet for single story structures or 100 feet for two or more stories to provide appropriate building separation.

4.7: Setback and Height Standards for All Zoning Districts

A. Measuring Setbacks

Street right-of-way dimensions and width are described in the adopted County Improvement Standards.

Where there is no street right-of-way, access easement, or future street right-of-way, as identified through an official control or private road, a setback is measured from the property line. The descriptions and accompanying diagrams in Figures 4-1 through 4-8 define the front, side, and rear yard areas and the methods for measuring setbacks.

1. Front Yard Setback. The front yard setback is the depth, measured perpendicularly from the nearest point of the front lot line, at the back of the sidewalk, to the nearest part of the main building. Where a PUPF is required, setbacks shall be measured from the back of the curb to the main building.

2. Front Yard Setback on a Curved Street. For lots fronting on a curved streets or the curved portion of a cul-de-sac street, the setback is measured along a chord from the center point along an arc coincidental with the edge of the street right-of-way to the nearest part of the main building (Figure 4-6). Where a PUPF is required, setbacks shall be measured from the back of the curb.

3. Side Yard Setback. The side yard setback is the depth, measured perpendicularly, from the nearest point of the side lot line to the nearest part of the closest building.

4. Corner Street Side Yard Setback. The corner street setback is the depth, measured horizontally, from the nearest part of the closest building to the nearest point of the side lot line at the back of the sidewalk. Where a PUPF is required, setbacks shall be measured from the main building to the street right-of-way line, at the back of curb.

5. Rear Yard Setback. The rear yard setback is the depth, measured perpendicularly from the nearest point of the rear lot line to the nearest part of the main building. For irregularly shaped lots, the rear lot line is defined as the point where the width of the lot is a minimum of 10 feet (as shown in Figure 4-7).

B. Use of Setback Areas

Except as otherwise permitted in the DS, every part of a required setback shall be open from its lowest point to the sky (refer to Section 4.7.C for a description of allowed encroachments into setbacks). For nonresidential development, all setback areas visible from public streets and areas shall be landscaped, as required in Section 4.10.B.

C. Allowed Encroachments into Setbacks

Refer to the Development Standards tables, found under the applicable land use district in this chapter for allowed encroachments into setback areas. Where not otherwise provided in the Zoning Code, the following setback encroachment standards shall apply.

1. Cornices, sills, eaves, canopies, awnings, and similar features may encroach into any required yard area a distance not to exceed 24 inches.

2. Window bays, having a minimum of 50 percent glass, may encroach 24 inches into a required yard area when the finished floor of the window bay is at least 15inches above the finished floor of the room. The roof overhang above the window bay may not encroach 24 inches into the yard area.

3. Accessory structures must maintain a minimum three (3) foot setback from property lines for any portion of the structure, including the encroachment described by this Section, except for small accessory structures or sheds as noted in Table 4.8.

4. Fire escapes, outdoor stairways, balconies, and mechanical equipment shall not encroach more than 36 inches into a yard or court. Ordinary projections of chimneys and flues may be permitted by the Chief Building Official where the same are so placed as not to obstruct the light and ventilation.

5. Except as otherwise restricted in these standards, bus shelters may be located within the front or side yard setback of any lot.

6. Lot Area or Setback Reduction for Dedications.

Where a lot area or a lot width, depth, or setback has been reduced for an existing legally created lot by not more than 15 percent as a result of acquisition or dedication for an existing or future highway, road, drain, or other public purpose, as a result of a dedication pursuant to a result of a Rezoning, Variance, or Conditional Use Permit, the lot area or yard so reduced may be included in determining compliance with lot area or yard requirements in the same manner as if the acquisition or dedication has not taken place.

E. Accessibility Accommodations-Federal Fair Housing Amendments Act of 1988 and the California Fair Employment and Housing Act

1. During the building permit review process, staff may approve reduced setbacks for structures relating to disability access (as defined by the Federal Fair Housing Amendments Act of 1988 and the California Fair Employment and Housing Act), such as ramps or handrails, as follows:

a. Accessibility structures must be clearly labeled as such on building plans.

b. Staff may deny or approve modified reduced setbacks if it is determined that the structures can accommodate accessibility needs within or closer to standard requirements.

c. In no case shall reduced setbacks result in structures contrary to the public health, safety, or welfare, or be injurious to the property or improvements of adjacent properties.

d. In no case shall accessibility related structures encroach onto public utility, road, or other recorded easements.

2. Applicants are not required to provide documentation of disability nor are they required to remove the accessibility structures should an immediate need no longer be present.

F. Building Attachments

When the subordinate building is connected to the primary dwelling by a continuous roof structure as specified herein, it shall be considered as a portion of the primary dwelling.

1. The continuous roof structure shall consist of a design that is compatible to the primary dwelling as it relates to slope of roof, roof covering and overall appearance. The area spanned by this roof area shall be equal in width to minimum 30 percent of the adjacent accessory building wall, with length not exceeding three times its width.

2. The connecting structure may be open or enclosed. If enclosed, it may have a connecting door to the accessory building, but not necessarily to the main building.

3. When the subordinate "building" is connected to the main building by a roof structure without walls for the purpose of a pedestrian walkway except as specified herein, it shall be considered as a separate building used for non-habitable purposes.

G. Building Height Standards and Exceptions

Building heights shall be defined in accordance with Zoning Code Section 7.3, Definitions and Acronyms. In addition to the height regulations in Tables 4.1, 4.2 and 4.3, some uses may be eligible for height exceptions pursuant to the **Zoning Code Section 5.2.2.** The maximum height of any building shall comply with the Mather Airport Comprehensive Land Use Plan (CLUP). The height provision for buildings or structures shall be interpreted so that both the limitation as to the number of stories and the limitation of the height in feet apply.

4.8 Density Bonuses and Intensity Increases

Density bonus and intensity increases within the Plan Area shall be in accordance with the **Zoning Code, Section 5.2.3.4.9.**

4.9 Preserve Interface Standards

The Land Plan sets aside approximately 260 acres of open space which is dedicated as a Wetland Preserve (Preserve), as shown on Exhibit 4.1. The Preserve is owned and managed by the South Sacramento Habitat Conservation Plan (SSHCP) implementing entity (IE). The IE is responsible for managing the Preserve and monitoring the Preserve Setback areas. The IE will implement measures identified in the SSHCP to ensure the long-term viability of the protected and restored vernal pool and wetland resources within the Preserve. This section of the DS incorporates avoidance and minimization measures from the SSHCP, which are implemented to further minimize impacts to protected species and resources. These measures include standards that are applicable to the designated Preserve Setback Areas, section 4.5.1 and for the Abutting Setback Areas, section 4.5.2. Refer to Exhibit 4.15 which identifies the Preserve

Setback Area, Abutting Setback Area and Exception Area. These standards are subject to modification as the SSHCP is implemented. Additional measures which are applicable at the time of construction are provided in the mitigation and monitoring program (MMP) as a part of the EIR.

4.9.1 Standards for Preserve Setback Areas

The following standards apply to the Preserve Setback areas as shown on Exhibit 4.15.

1. Project construction activities adjacent to the Preserve must establish a minimum 50-foot-wide setback outward from the boundary of any existing preserve or planned SSHCP preserve (hereinafter "Preserve Setback"). This minimum 50-foot-wide Preserve Setback will function as a transition area between urban development and the Preserve, and must be managed to maintain the natural community of vegetation.
2. Certain types of recreational trails or facilities (e.g., benches, trash receptacles, shade structures, fencing) that can be constructed with minimum ground-disturbance and in compliance with EDGE-7 may be allowed within the Preserve Setback, as specified in Section 5.2.5 of the SSHCP, "Covered Activities in UDA Preserve Setbacks". Preserve Setback design must locate trails on the side nearest Project development, away from the Preserve boundary. Trails may be permeable or semi-permeable hiking trails or paved community trails. The maximum trail width will be 16 feet total, including 2-foot shoulders. Post and cable fencing, split rail, or other open fencing will be installed adjacent to recreation trails to keep pedestrians on the trail. (EDGE-3a)

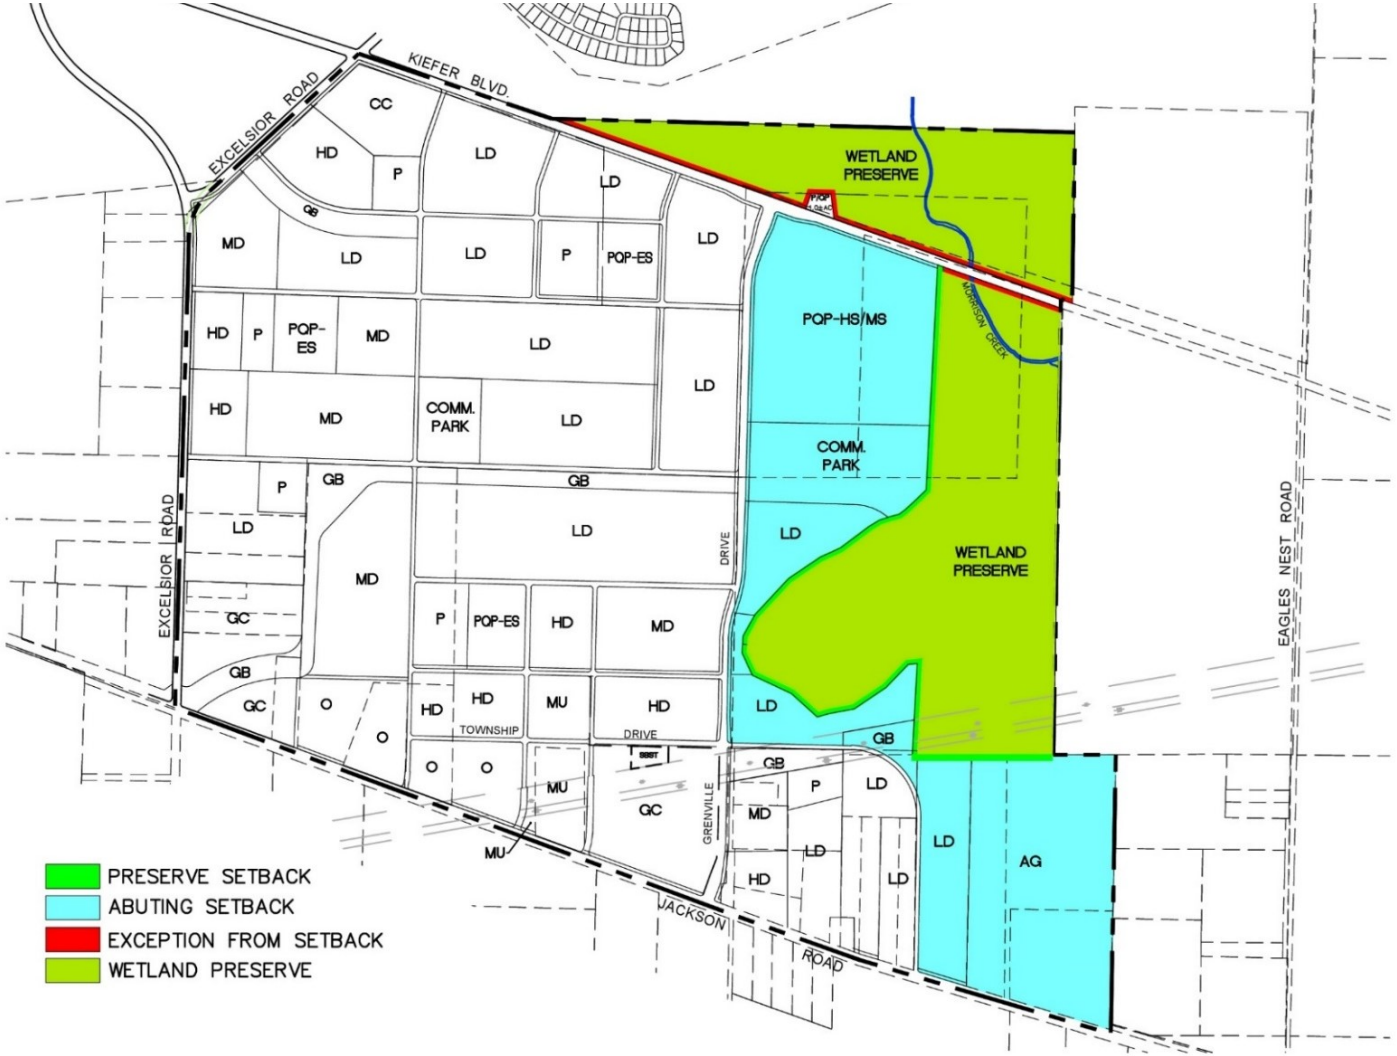

Exhibit 4.15: Preserve Setback Area

3. If approved by the SSHCP Implementing Entity and the Cordova Recreation and Park District, the Preserve Setback trail may also be used as a firebreak. In instances where a trail cannot act as a firebreak, the firebreak should be located between the trail and the Preserve boundary (see SSHCP Section 5.2.7). Firebreaks allowed inside the Preserve Setback must be created by methods that will avoid disturbance to the soil's restrictive layer, such as frequent mowing, minor scraping of surface vegetation or shallow tilling. Firebreak width within Preserve Setback shall be the minimum width needed to comply with applicable local codes. (EDGE-3b)
4. To prevent potential impacts from irrigation water or from accumulation of leaf litter onto the grasslands or vernal pools of the Preserve, the planting of any shade trees or landscaping vegetation is limited to the area of the Preserve Setback located between the recreation trail and the adjacent urban development (i.e. away from the Preserve). (EDGE-3c)
5. The Design Guidelines, Appendix B, provide a plant list for the landscaping within the Preserve Setback Area. The landscaping shall not include invasive plant species listed on the California Invasive Plant Council (Cal-IPC) California Invasive Plant Inventory Database, or listed on the Cal-IPC California Invasive Plant Watch List (see http://www.cal-ipc.org/paf/). Any shade trees planted along Preserve Setback trails shall be native species that are found in California grasslands and that can survive in the vernal pool-grassland border without long-term irrigation or fertilization (e.g., valley oak, black oak, blue oak, oracle oak). In general, no more than 30% of any 1,000-foot segment of a Preserve Setback trail shall have canopy cover from tree plantings (to be consistent with maximum tree densities generally naturally found within native California grasslands or savanna).
6. Drip irrigation will be allowed for a maximum of five years to establish shade trees or landscape vegetation between the recreation trail and the adjacent Project development. The SSHCP Implementing Entity has the discretion to allow irrigation to continue past five years if extenuating circumstances necessitate it (e.g. during a drought) and the continuance of irrigation does not affect the Preserve. Any irrigation systems located within Preserve Setback shall be inspected quarterly to determine if such systems are affecting soils or vegetation away from the intended plantings. Irrigation system repairs shall be completed immediately if it is determined that the irrigation system is affecting vegetation or soil moisture away from intended tree planting.
7. If annual monitoring of the adjacent Preserve detects adverse indirect effects of the Preserve Setback planted vegetation (e.g., leaf litter accumulation, irrigation runoff, plant encroachment), then the SSHCP

Implementing Entity shall identify appropriate adaptive management of the Preserve Setback tree or landscape plantings, in accordance with the terms and conditions of the Preserve's conservation easement.

8. If trails are established in the Preserve Setback, the trail must be sloped to direct rainwater leaving the trail surface into adjacent low-velocity bio-retention swales or cells, to keep rainwater runoff and trail contaminants from entering the Preserve. Low-velocity bio-retention swales or cells are typically small linear features that will be placed on one or both sides of trail. Trails and their adjacent bio-retention swales or cells must be located on the side of the Preserve Setback nearest development. (EDGE-5)
9. Activities that have the potential to cut into, disrupt, or remove the soil's restrictive layer (hardpan or duripan) shall be avoided within the Preserve Setback, in order to protect the soil perched aquifer and the micro-watersheds supporting existing vernal pool hydrology. However, in certain circumstances, the SSHCP covered activities may result in punctures or other minor disruption of the soil hardpan or duripan, if approved by the SSHCP Implementing Entity and the SSHCP Technical Advisory Committee according to the process described in Chapter 9 of the SSHCP.

4.9.2 Standards for Land Uses Abutting Preserve Setback Areas

The following standards apply to the Abutting Setback Land Use areas, as shown on Exhibit 4.15.

1. The Land Use Plan was designed to locate compatible land uses in areas immediately adjacent to the Preserve Setback, which includes the High School /Middle School, Community Park, Low Density Residential (LD), Greenbelt, Agriculture and Preserve Setback. Compatible uses are generally described as open space such as parks, ball fields, detention basins, and agriculture and low density residential neighborhoods. In the case of the High School/Middle School and Community Park, measures shall be taken to locate less intensive activities closer to the boundary with the Preserve Setback and locate more intensive activity (e.g., buildings, classrooms and driveways) away from the Preserve.
2. The compatible land use will provide minimize potential indirect effects of adjacent urban development upon the Preserve. The soil surfaces in a compatible land use area may be re-contoured, provided that the soil restrictive layer remains undamaged and most of the soil-profile above the restrictive layer remains intact, to the maximum extent possible.

3. To the maximum extent practicable, the subdivision layout for the adjacent LD neighborhood will be designed to minimize lot configurations which back on to the Preserve Setback. The subdivision layout for the adjacent LD neighborhoods shall strive to provide approximately five (5) total access points along the entire Preserve Setback boundary to provide access to the trails as well as a visual connection to the Preserve. (EDGE-2)
4. The roads, sidewalks, and other impermeable surfaces adjacent to the Preserve will be designed to slope away from the Preserve. Stormwater flows will be directed away from the Preserve and the Preserve Setback area, and directed into the Project's stormwater control facilities inside the development area. (EDGE-4)
5. To the maximum extent practicable, outdoor lighting will be designed to minimize light pollution into the Preserve, except where necessary for public safety or security. Minimization measures may include light fixture placement (e.g., as low to the ground as possible), lamp designs (e.g., shielding, low glare, or no lighting), directing light away from preserves, or other means to avoid or minimize light pollution. (EDGE-8)
6. The owner/applicant of Abutting Setback properties, as shown in Exhibit 4.15, will coordinate with the IE during the development design process to identify vehicular access points and facilities for delivery and pickup of grazing animals (livestock), such that these activities will not significantly alter the Preserve's habitat and are consistent with protection of the livestock, protection of adjacent public property, and include adequate public safety. (EDGE-9)

4.10 Landscape Standards

A. Purpose

Landscape standards in this Section apply to all new development, buildings, or structures that may be erected or enlarged, and/or the maintenance of existing landscaping for all land use zoning districts in the Plan Area, unless otherwise noted in this Section. Landscape standards are provided to:

1. Ensure the use of native and/or drought tolerant landscaping which is appropriate to the climate and conditions in Sacramento County, provide shade, screen loading and services facilities, help frame views and edges, and provide natural transitions that enhance the quality, walkability, safety and aesthetics of the surrounding built environment;
2. Ensure the healthy establishment and appropriate long term care and maintenance of all existing and new landscaping provided for all types of development;
3. Promote sustainable landscaping practices that lower urban heat island temperatures, improve air quality, conserve water and energy, restore, and enhance

environmentally sensitive areas; and emphasize the use of river friendly landscaping practices and stormwater best management practices.

4. Set provisions for the removal and replacement of unhealthy trees and/or hazardous conditions and proper pruning of trees to remove hazardous obstructions; and
5. Protect the function of trees for shading, carbon and particulate capture, water quality, energy conservation, and aesthetics while ensuring adequate clearance and visibility for safety, lighting of merchant signage, and balancing other needs and functions of the property.

B. General Requirements for all Land Use Districts Except Residential Zones (See Section 4.10.C for Residential Districts)

1. General Requirements

a. Unless otherwise indicated, the minimum container sizes for trees shall be 24- inch box for 35 percent of the trees, and the remainder shall be 15-gallon.

The minimum container sizes for shrubs shall be five (5) gallon for 70 percent of the shrubs, and the remainder shall be one (1) gallon. The minimum container sizes for groundcovers shall be one (1) gallon. The required percentages may be considered for adjustment as part of the Design Review process.

b. Unless otherwise indicated, tree plantings for all projects shall include 40 percent evergreen species. The required percentage may be considered for adjustment as part of the Design Review process.

c. Varied tree and plant species shall be used throughout the site. No one species shall comprise more than 75 percent of trees, shrubs, or groundcovers proposed for the site.

d. All landscape and streetscape improvements must meet the County's Improvement Standards, unless otherwise approved by an adopted streetscape plan, corridor plan, or other special area zoning code; and shall be consistent with the current edition of the County's Design Guidelines and the following standards.

e. Use of irrigation may be waived in the event of mandatory water conservation measures by the water purveyor for the community in which the property is located. Trees and shrubs shall be watered in a manner to keep them alive.

2. Landscaping of Setback and Frontage Areas. All areas between the edge of the street right-of-way and the building or parking lot, and visible from the public street, except for driveways and screen areas, shall be landscaped. See Section 4.10.F for parking lot landscaping requirements.

a. Frontage Landscaping Adjacent to Parking Lots and Driveways

(i) A planter at least 25 feet wide in the O zone and eight (8) feet wider all other zones, excluding curbing, shall be

provided between the edge of parking areas and: 1) sidewalks, where sidewalks are detached from curb and gutter, and 2) street right-of-way where sidewalks are attached. In addition, where the right-of-way is located behind a public sidewalk or curb, any area within the street right-of-way shall be developed as a planter or landscaped area in conjunction with the required eight (8) foot area in this subsection. The planter shall be designed to comply with parking lot shading and street tree requirements in this Chapter.

(ii) Within this planter, trees approved by the Planning Director shall be planted no further than 30 feet on center and at least four (4) feet but not further than 10 feet from the back of the sidewalk. The planter shall also include shrubs, ground covers, and other natural growth, or stormwater quality features and drainage treatments. Nothing in this Section shall preclude the installation of additional landscaping and the planting of additional trees so long as it is consistent with the visibility regulations for the County.

(iii) Bus shelters may be located within this planter if approved by the Director of the Department of Transportation or his or her designee and the regional transit agency, but shall not be placed so as to reduce the number of trees which are otherwise required by this Section.

b. Frontage Landscaping Adjacent to Buildings. Within the area between the right-of-way and buildings, trees approved by the Planning Director shall be planted no further than 30 feet on center and at least four (4) feet but not further than 10 feet from the back of the sidewalk. The planter shall also include shrubs, ground covers, and other natural growth, or stormwater quality features and drainage treatments. Nothing in this Section shall preclude the installation of additional landscaping and the planting of additional trees so long as it is consistent with the visibility regulations for the County.

c. Landscaped Parkways. When required by the County's Improvement Standards, a six (6) to eight (8) foot landscaped parkway shall be provided between the curb (i.e., edge of the street right-of-way) and detached sidewalk.

(i) Landscape parkways may include earth berms, hedges, fences, or walls, in combination with trees and plantings, and may be used for stormwater purposes.

(ii) Alternative landscaping methods and landscape parkway requirements may be considered as part of the Design Review process.

(iii) Street Trees. Approved trees for planting in County right-of-way and public easements shall be subject to the County's Improvement Standards. Trees not listed in the Improvement Standards, may be planted with the approval of the Office of Planning and Environmental

Review of tree selections that can provide the greatest benefits (i.e., benefits to shading, health, air quality, water and energy conservation) is recommended. The planting of street trees applies tone construction or major reconstruction.

d. Clustering and Alternative Design. Alternative design approaches, such as clustering of trees, may also be approved during Design Review.

e. Pedestrian Walks and Connections. Required landscape areas should include pedestrian walks and well-marked paths of travel and connections, steps, and similar hard surface areas, provided that such hard surface areas do not cover more than 25 percent of the required landscape areas. Barrier free, four (4) foot wide paved walk may be provided through the required planter at street and driveway intersections to provide unencumbered access for the disabled from the sidewalk to the parking lot.

Such walk shall be located so as to facilitate the most direct movement of persons using sidewalk curb ramps, if such are provided.

3. Landscape Screening Adjacent to Residential Parcels. For all uses except single-family uses, a minimum seven (7) foot wide continuous landscaped planter area shall be provided adjacent to the interior property lines of all adjoining parcels zoned for residential purposes. Landscaping shall consist of screen trees approved by the Office of Planning and Environmental Review, spaced 30 feet on center, in combination with other plant materials to provide a dense visual screen.

Trees shall be planted a minimum of five (5) feet and no further than 10 feet from the required fencing. Fencing requirements for specific uses can be found in Section 4.11.

4. Landscape Screening. Shrubs and other natural growth, combined with berms and other landscape features, at least three (3) feet in height, shall be designed to enhance, soften, and visually screen loading and parking areas, trash enclosures, mechanical equipment, walls, and other unsightly uses visible to public right-of way, except near street and driveway intersections where landscaping shall not exceed 2.5 feet in height in accordance with the visibility regulations of the Sacramento County Improvement Standards. Consideration shall be given to public safety as part of the design and maintenance of these areas. A five (5) foot landscape planter shall be installed around the perimeter of trash enclosures.

5. Landscape Maintenance. All landscaped areas shall be mowed, trimmed, and/or maintained as often as necessary to prevent overgrowth and blight. No junk, debris, or other similar materials may be stored in the landscaped areas. Refer to Section4.10.G for additional standards on landscape care and maintenance.

6. Stormwater Quality Landscaping.

a. On-site storm water quality landscaping, approved in setback areas or public right-of-way or integrated into the project may count toward required landscaping.

b. Pervious pavement and permeable pavers may be a substitute for impermeable hard surfaces but may not substitute for required landscaped planting areas. Ornamental or landscape rock and gravel areas, artificial turf, or areas covered with other artificial materials may be combined with landscape areas, provided that they are approved through the design review process.

7. Disabled Access. The design of landscaping shall provide for the access needs, safety, and comfort of the disabled in conformance with the standards of the Americans with Disabilities Act (ADA).

8. Tree Preservation. Existing mature and native trees and shrubs shall be preserved and incorporated within the project site design to the extent feasible. Removal of protected trees shall be consistent with the County General Plan, the County Tree Ordinance, Section 4.10.H of the DS, and applicable project-specific CEQA mitigation measures.

9. Sustainable Design. Landscaping for projects shall be designed to integrate principles of sustainability to the greatest extent feasible. This includes principles of water conservation, the use of trees for energy conservation and to improve air quality, and the use of storm water control features for treatment and run-off reduction, with an emphasis on the use of drought-tolerant and/or native plants.

Landscaping plans shall cohesively incorporate the following requirements and guidelines:

a. The County of Sacramento Water Efficient Landscape Ordinance.

b. The JTSP and the County Wide Design Guidelines.

c. The Sacramento Stormwater Quality Partnerships River-Friendly Landscape Guidelines - Sustainable Practices for the Landscape Professional.

d. The Stormwater Quality Design Manual for the Sacramento and South Placer Regions.

f. The integration of these practices shall not compromise requirements for landscaping as established by the County Zoning Code and the Water Efficient Landscape Ordinance.

10. Irrigation

a. All landscaped areas shall be provided with a permanent or temporary irrigation system, demonstrated on site plans, to ensure the establishment and ongoing maintenance of landscaping. Alternative and innovative methods of irrigation such as use of cisterns for rainwater harvesting and other techniques that recycle water on- site, is encouraged when feasible.

b. Drip irrigation systems are recommended for water conservation and run-off reduction for more efficient means of watering trees, shrubs, groundcovers, perennials, and ornamental grasses than a conventional spray system. However, if proper maintenance of drip irrigation systems cannot be provided, a conventional spray or bubbler system is preferred.

c. Turf and groundcover areas are more effectively irrigated with efficient, low angle spray heads. Head-to-head spray coverage is recommended. Avoid overspray onto sidewalks and adjacent properties.

d. All trees, shrub and groundcover areas, and lawn areas shall be irrigated separately to allow individual control of the irrigation needs for these plant types. Tree irrigation systems shall include bubblers, drip, or similar application, located within a watering basin for each tree.

11. Design Review. Landscape Plans shall be required and reviewed as part of the Design Review process. For existing buildings and uses, additional landscaping may be required in order to meet the intent of these requirements.

C. Requirements for Residential Zoning Districts

The following landscape requirements address required front and side-street yard areas that apply to all new single-family and duplex units for lots sizes of 10,000 square feet or less.

1. Trees for Single-family Housing. The developer/home builder of new single family homes shall plant a minimum of one (1) tree in the front yard of each newly constructed single-family home. For lots of 7,500 square feet or more that meet or exceed the minimum street frontage requirements measured at the public rights-of way line, a minimum of two trees shall be planted in the front yard.

2. Reduction of Street Trees for Single-family Housing. One (1) street tree in planted landscape areas between the curb and sidewalk, in the front yard of the lot may count toward the minimum street tree requirements for single-family or multifamily housing.

3. Required Yard Area Hardscape Restrictions. The maximum amount of paving and hardscape is regulated by Table 4.2.

4. Landscape and Maintenance Requirements. The remaining unpaved or uncovered portion of the required setback area shall be landscaped, irrigated, and maintained. The landscaping may consist of a combination of grass, annuals, perennials, groundcover, shrubs, trees, edible gardens, and any other recognized landscape material as approved by the Planning Director. Landscape design elements such as rocks, planters, and mulch may be used, provided that living vegetation is the primary groundcover. Use of irrigation may be waived in the event of mandatory water conservation measures by the water purveyor for the community in which the property is located.

5. Irrigation. An automatic irrigation system shall be installed in the front yard of new construction to provide consistent coverage of all planted areas. A home on a corner lot shall have an automatic irrigation system that covers the yard fronting both streets. Automatic controllers with rain shut-off valves or microclimate sensing capabilities provide greater water conservation.

6. Vehicle Parking Requirements. Vehicles, including, but not limited to, automobiles, boats, campers, trailers and other recreational vehicles must be parked on a surfaced area in conformance to the DS (See Section 4.12 for parking standards) and may not be parked within the required landscaped area.

7. Landscape Alternatives. In the case of a circular driveway that may exceed the maximum hardscape restriction for the yard area, off-setting landscaping may be provided in the area between the required yard area and the dwelling. Other options for landscaping the required yard areas, including the use of additional hardscape materials, artificial turf, or other landscape elements may be approved through the Design Review process.

8. Multifamily Residential. Multifamily residential open space and landscaping requirements can be found in Table 4.4.

9. Landscaping Adjacent to Soundwalls.

a. Earthmounds. When the sound and visual attenuation requires a wall exceeding six (6) feet above the grade of the adjacent roadway, earthmounds or terraced landscaping shall be used such that no more than six (6) feet of the wall is visible from the roadway. The mounds shall not exceed a 3:1 slope. The mounds may support the wall or be placed against the wall on the street side. Drainage shall be contained.

b. Landscaping. All setback areas shall be landscaped with groundcover, shrubs, vines, mounds and trees such that at least 50 percent of the wall shall be screened from the adjacent public street within five (5) years. Trees shall be placed so as to cover the 50 percent of the total landscaped area with shade canopy within 15 years of planting. Thirty percent of the trees shall be evergreen.

c. Maintenance. An automatic sprinkler system shall be installed and maintenance program shall be established to provide ongoing maintenance of the wall and landscaped area. The proposed maintenance program shall be submitted with the application and may consist of one, or a combination, of the following:

1. A homeowners association agreement;
2. An assessment district, Lighting and Landscape Act District, or similar district;
3. Other viable alternative presented in public hearing and found acceptable to the appropriate authority. The proposed maintenance program shall be submitted with the application.

F. Parking Lot Landscaping

1. General Landscaping in Parking Lots

a. No Planter shall be less than five (5) feet wide or have an area less than 40 square feet, excluding curbing. Smaller planter sizes may be considered through the Design Review process.

b. Each Planter shall include an irrigation system.

c. Not more than 25 percent of the parking landscaped area may be covered with hard surfaces such as gravel, landscaping rock, concrete, or other impervious materials. Pervious pavement and permeable pavers may be considered a substitute for impermeable hard surface areas described in Section 4.10.C 7.

d. All landscaping shall be within planters bound by a curb at least six (6) inches high. Curbs separating stormwater management landscaping or other landscaped area intended to filter runoff, from parking areas, shall provide curb cuts to allow stormwater run-off to pass through them.

2. Interior Parking Lot Landscaping. The standards for interior landscaping are applicable to all zoning districts where there are more than five (5) parking spaces on the entire site, except for existing parking lots where compliance with interior landscaping standards would result in the loss of existing required parking spaces.

a. Landscaping shall be dispersed throughout the parking area.

b. The layout of interior landscaped areas shall meet the criteria described in subsections i-iv and illustrated in Exhibit 4.15.

(i) Interior landscaping is arranged in landscape strips at least five (5) feet wide between rows of parking stalls, exclusive of landscaped bumper overhang areas and curbing. Stormwater management planters provided in landscaping strips shall be at least eight (8) feet wide to count toward required parking area landscaping and may include bumper overhang areas.

(ii) Interior landscaping is arranged in areas at the ends of rows of parking or within islands between parking spaces with rows of parking. Landscaped areas at the end of aisles shall be a minimum of eight (8) feet in width, excluding curbing, and shall not obstruct the driver's vision of vehicle and pedestrian cross traffic. Landscape islands or tree wells shall be located no more than eight (8) parking spaces apart, unless an interior landscape strip between the adjacent rows of stalls, wide enough to accommodate large shade trees, is provided.

(iii) Interior landscaping may be combined with perimeter landscaped areas as long as the interior landscape areas extend at least five (5) feet into the parking area from the perimeter landscaping.

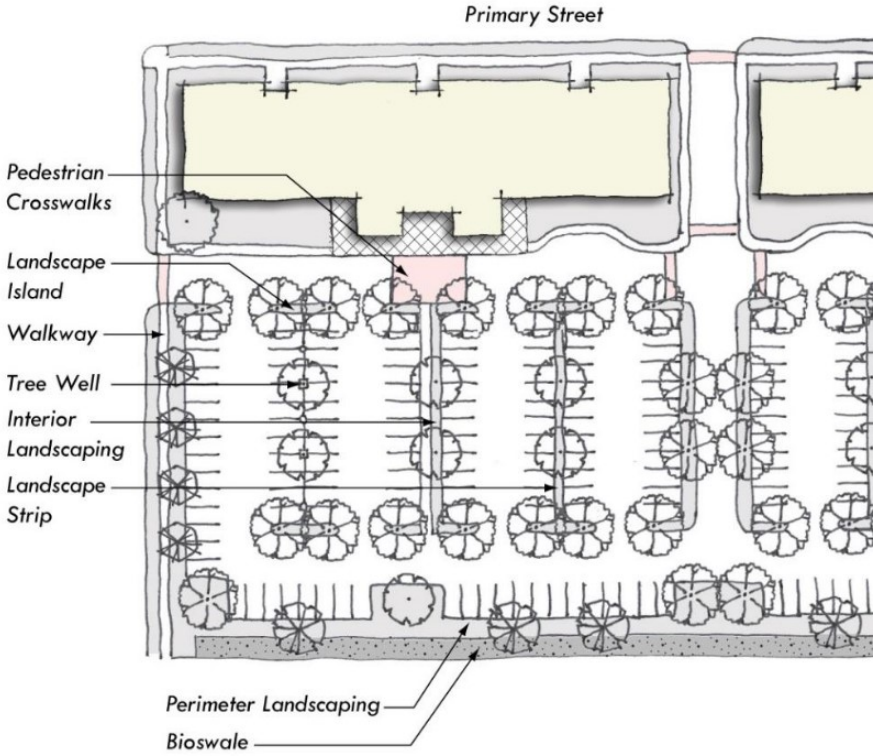

Exhibit 4.16: Parking Lot Landscaping

(iv) Individual tree planting spaces, where an individual tree is planted in space surrounded by pavement and tree well planters shall have minimum planting area of 40 square feet, excluding curbing. Shade trees having larger canopies that provide urban heat island reduction benefits may require larger planter areas.

3. Parking Lot Shading. Parking lot landscaping, including perimeter and interior landscaping requirements, shall include shade trees approved by the Planning Director, placed so as to cover a percentage of the total parking area with tree canopies within 15 years of securing a building permit, per Table 4.4.

Table 4.4 Parking Lot Landscaping Requirements

Parking Spaces Required[1]	Minimum % of Total Parking
5-24	30%
25-29	40%
50+	50%

[1] The percentage of area required to be shaded shall be based on the number of above ground and uncovered parking spaces provided.

a. Tree selection, planting approach, and irrigation shall be designed to provide for the rapid growth and sustained health of shade trees and shall comply with the County's water efficient landscape ordinance. Small ornamental trees are appropriate for accent planting but shall not be used to meet shading requirements.

b. Minor exceptions to parking lot shading standards may be permitted through the Design Review process for parking layouts incorporating stormwater quality features, or alternative shading mechanisms.

4. Additional Standards for Large Parking Areas.

a. Solutions that minimize the visual impact of residential and commercial driveways shall be used whenever possible, including shared driveways, alley access, or other design approaches that minimize the number and width of driveways and curb cuts.

b. Surface parking shall be divided into smaller, landscaped lots or courts with well-defined and safe pedestrian connections from the public street to the buildings, landscaping, shade trees, and lighting as needed. Refer to Parking Lot and Driveways Sections of the County-Wide Design Guidelines for additional information.

(i) Parking rows in single or double set configurations shall be limited in length to no more than 270 feet (or approximately 30 adjacent parking spaces).

c. Reduction of parking stall sizes shall be allowed to be reduced by two (2) feet, provided the bumper overhang area is incorporated into adjacent sidewalk or landscape areas.

G. Landscape Care and Maintenance for Commercial. Multi-family and Institutional Developments

This Section addresses the appropriate long-term care and maintenance of all landscaping provided for commercial, multifamily and institutional developments. It is also intended to set provisions for the removal and replacement of unhealthy trees and or hazardous conditions and provide adequate clearance and visibility of merchant signage, when the aesthetics of the tree and shading requirements will not be reduced.

1. Care and Maintenance

a. All landscaping and irrigation, required to be installed as part of development project, shall be maintained for the life span of the project and in such a manner so as to not create hiding places or hinder visibility.

b. All plant materials (trees, shrubs, and groundcovers) shall be maintained free from physical damage or injury arising from vehicle encroachment, lack of water, weather events, chemical damage, insects and other pests, and diseases. Plant materials showing such damage shall be replaced with the same or similar species. Planting areas shall be kept free from weeds, debris, and undesirable materials which may be detrimental to safety, drainage, or appearance.

c. It is the responsibility of the property owners to seek professional advice and spray and treat trees, shrubs, and groundcover for diseases which can be successfully controlled

if such untreated diseases are capable of destroying an infected tree or other trees within a project.

d. Property owners may refer to the integrated pest management strategies in the Sacramento Stormwater Quality Partnership's River-friendly Landscape Guidelines and can cooperate with the University of California Agricultural Extension Service and the County Agricultural Commission on methods and procedures by which infestations can be reduced or retarded.

2. Tree Pruning

a. Prior to pruning any tree within a landscaped area previously required to be installed as part of a development approval, a County Tree Pruning Permit shall be approved by the Planning Director or his or her designee, and the County Tree Coordinator. Tree Pruning shall be performed by a California Landscape Contractor (C-27 or C-61). The licensed contractor shall also be certified by the International Society of Arboriculture as a Certified Tree Trimmer or Certified Arborist or other qualified tree expert. The Planning Director or his or her designee shall require the following information upon submitting the Tree Pruning Permit request:

(i) A site plan indicating the type of tree, size, and location of the trees Tobe pruned;

(ii) Reasons for pruning;

(iii) Evidence that the pruning shall be performed by a certified arborist, certified tree trimmer, or other qualified tree expert;

(iv) Number of trees to be pruned.

b. Tree pruning is limited to:

(i) Removal of dead wood and diseased, crowded, and weakly attached trunks and branches which create a hazard to private property and citizens;

(ii) Providing adequate clearance and visibility for safe use of parking stalls, travel ways, and walkways for the passage of persons and vehicles;

(iii) Removing visibility obstructions to traffic signs;

(iv) Providing adequate visibility for security patrols;

(v) Repair of split trees and limbs in order to save the tree and its appearance;

(vi) Removing or pruning roots of trees which are causing damage to public or private property such as curbs, gutters, sidewalk, drainage lines, and parking lot surfaces; and

(vii) Providing visibility for merchant signage and parking lot lighting only when the aesthetics of the tree and the parking lot shading requirements will not be reduced.

H. Removal and Replacement of Landscaping

1. All plant material removed from a project in which the Planning Director has approved the landscape plan shall be replaced with the following replacement sizes: shrubs (5-gallon size), groundcover (flats). Replacement of trees shall be as specified in Section 4.10.I.

2. Tree removal shall be limited to trees which are in poor health, structurally distressed, or unsafe and shall be in compliance with the regulations and procedures for tree preservation and protection in Title 19 of the Sacramento County Code. The removal of a tree shall be the final recourse upon determining that it is infeasible to save the tree by any other method (e.g., pruning, treatment of diseases, fertilizing). Prior to the removal of any tree, a Tree Removal Permit shall be approved by the Planning Director and the County Tree Coordinator or his/her designee.

3. The following information shall be required:

a. A statement of the health and condition of the trees to be removed by a Certified Arborist or licensed Landscape Architect;

b. Reasons for removal; and

c. Landscape Plan indicating size, quantity, species, and location of the trees to be removed and replaced.

4. Failure to obtain an approved tree removal permit prior to removing a tree shall require the owner of the project to replace the removed tree as stated in the Replanting Requirements in Section 4.10.I.

I. Replanting Requirements and Replacement Fee

1. Replacement trees shall be required for trees removed with or without a Tree Removal Permit, as set forth in Table 4.5.

2. Trees removed with a Tree Removal Permit shall be replaced by 24-inch box specimen trees. A 15-gallon size tree may be used as a replacement tree with an additional replacement fee. The replacement fee is based on the difference of the wholesale value between a 24-inch box and a 15-gallon tree as set forth in a fee schedule approved by the Board of Supervisors. The replacement fee may be waived by the Planning Director if the loss of the tree resulted from causes completely out of the control of the property owner.

3. Trees removed without a Tree Removal Permit or severely and improperly trimmed with or without a Tree Pruning Permit shall be replaced and a replacement fee may be required. The replacement tree is based according to the size of the tree removed or damaged as indicated in Table 4.5.

Table 4.5 Size of Replacement Trees	
Size of Damaged/ Removed tree	Size of Replacement Tree
2 inches	24 inch box
4 inches	36 inch box
6 inches or greater	48 inch box

4. A 15-gallon size tree may be used as a replacement with an additional replacement fee, as set forth in a fee schedule approved by the Board of Supervisors. Replacement fees shall be deposited into a Parking Lot Shade Tree Violation account. Fees shall be used for tree planting/tree care on public property and for public education on tree planting and care, as determined byte Board of Supervisors.

5. Mitigation Monitoring and Reporting Program (MMRP). Prior to accepting an application for tree removal or pruning, the County Tree Coordinator, or his or her designee shall determine if there is an active MMRP that affects the proposal. If there is an active MMRP an application will not be required and the applicant is Tobe referred to the Sacramento County Division of Planning and Environmental Review.

4.11 Development Standards for Walls and Fences

All proposed walls and fences shall comply with the requirements of this section.

A. General Standards

1. All Fences Adjacent to Drives and Street Intersections. When fences, walls, and/or landscape screening are adjacent to street intersections and points of ingress and egress the visibility requirements of the Sacramento County Improvement Standards shall be adhered to. Application of CPTED strategies shall be considered in the design of these features.

2. Perimeter Fences for Swimming Pools. Perimeter fences shall be required around private pools, not otherwise restricted from unauthorized access from the public, subject to the construction requirements contained in the California Building Code Section 3109.4.3.

3. Masonry Walls. A graffiti-resistant aesthetic surface treatment, appropriate to the location, shall be required. Long spans of masonry walls or fences shall provide breaks for pedestrian connections at least every 300 feet. Application opted strategies shall be considered in the design of these features.

4. Vacant Property. A Temporary Use Permit is required from the Zoning Administrator for security fencing, including chain link, which may be erected on all property lines and to the edge of the sidewalk. The vacant property shall be maintained in a weed and litter free condition.

5. Permitted Materials. A fence may be constructed of permanent material, such as wood, chain link, stone, rock, concrete block, masonry brick, brick, decorative wrought iron or other material approved by the Planning Director.

6. Prohibited Materials. Fencing materials prohibited include, but are not limited to, the following. This Section shall only apply to fences located in the front yard, street side yard, and fences abutting any alley or other public right-of-way.

a. Cast-off, secondhand, or other items not originally intended to be used for constructing or maintaining a fence.

b. Plywood less than five-eighths inches thick, plywood not of a grade approved the Planning Director, particle board, paper, and visqueen plastic, plastic tarp, cloth, or similar material.

7. Maintenance. All fences shall be properly maintained so as not to create a hazard, public nuisance, or blight.

8. Exceptions. Fences deviating from the standards in this Section are permitted with Special Development Permit from the Zoning Administrator. Fence standards may be modified by a condition of approval by the appropriate authority as part of a separate entitlement.

B. Residential Fences. Applicable to LD and MD zones.

1. Front Yards. Fences in the front yard shall be limited to:

a. Solid walls or fences as defined in Chapter 7 of the Code not exceeding three (3) feet,

b. Fences constructed of chain link or similar woven wire materials, not exceeding four (4) feet, or

c. Open fencing not exceeding seven (7) feet. Fences exceeding these heights up to seven (7) feet may be allowed with the issuance of a UPM.

Fence height for fences within five (5) feet of a public right-of-way or right-of-way with PUPF shall be measured from the grade of the right-of-way or right of-way with PUPF. Beyond five (5) feet, fence height shall be measured from highest elevation of the ground on either side of the fence.

2. Side Street Yards. Fences shall not exceed seven (7) feet in height. Retaining wall and fence combinations that exceed seven (7) feet in height may be permitted with the issuance of a Minor Use Permit. Fence height for fences within five (5) feet of a public right-of-way or right-of-way with PUPF shall be measured from the grade of the right-of-way or right-of-way with PUPF. Beyond five (5) feet, fence height shall be measured from highest elevation of the ground on either side of the fence.

3. Interior Yards. Fences shall not exceed seven (7) feet and may be located on a retaining wall not to exceed four (4) feet in height. Fence height for interior property lines shall be measured from the highest elevation at the interior property line or at the finished grade of the rear or side yard setback, whichever is higher.

4. Corner Lot Exceptions to yard locations. Regardless of which street frontage of the lot determines where the front lot line is, as defined in the Zoning Code Chapter 7, Section 3, for purposes

of measuring fence height, the frontage with the primary entrance to the main dwelling shall be considered the front yard and the other frontage(s) shall be considered the side street yard(s). In the case of a corner lot with a duplex, or two or more dwellings, where primary entrances face both frontages, both frontages shall be considered the front yard. Where a home demonstrates multiple established primary entrances on both frontages, both frontages shall be considered the front yard.

C. Multi-Family and Institutional Use Fences

1. Front and Side Street Yards.

a. Multi Family Uses. Only open ornamental security fences may be located directly outside and adjacent to the back of the sidewalk. All other fences along a public right-of-way in the multifamily zoning district shall be subject to the requirements for sound walls in Section 4.11.E.

b. Institutional Uses. Fences are not permitted, except that open ornamental fences such as wrought iron are permitted on the property line along a public right-of-way. Any fence located along a public right-of-way shall be placed behind sidewalks and required landscaping.

2. Adjacent to Residential Zoning Districts. Either a solid wood fence or masonry wall of at least six (6) feet in height shall be provided along the interior property lines when located adjacent to residential districts, except where pedestrian connections are needed.

D. Commercial Fences

1. Front and Side Street Yards. Fences are not permitted, except that open ornamental fences such as wrought iron are permitted on the property line along public right-of-way. Any fence located along a public right-of-way shall be placed behind sidewalks and required landscaping.

2. Adjacent to Residential Zones. A masonry wall of at least six (6) feet in height shall be provided along the interior property lines for all industrial, commercial, and mixed-use projects when located adjacent to residential zoning districts, except where pedestrian connections are needed.

3. No fencing requirements for interior yards for commercial and industrial uses not located adjacent to Residential Zones.

5. Screen Fences

a. Outdoor storage of materials and equipment shall be located within the buildable portion of the lot, and screened from view with solid wood fencing, masonry wall, or chain-link fencing with slats. Screen fencing shall also be located within the buildable portion of the lot, unless otherwise noted in this Code.

b. Outdoor storage areas, abutting a public street frontage, shall be screened with a six (6) foot high fence, constructed of wood, brick, rock, or other masonry material and designed to shield stored materials from public view.

Outdoor storage yards along a scenic corridor shall not be permitted, unless conditional Use Permit is issued by the appropriate authority.

E. Sound Walls Adjacent to Streets

1. Whenever sound walls are required by a condition of approval to mitigate sound impacts adjacent to street, the following standards shall apply. These standards shall not preclude the use of other innovative methods of project design, utilizing greater setbacks, building design, mounding, terracing, or single-story structures.

Application of CPTED strategies shall be considered in the design of these features.

a. Setbacks. Walls shall be located behind the sidewalk and required landscaping, unless otherwise approved, and have an average setback of 19feet from the ultimate public street right-of-way, but can vary in setback to minimum of 13 feet.

b. Height. Maximum height of a wall shall not exceed six (6) feet above the finished grade at the base of the wall on the roadway side, in Section 4.10.9.a. unless otherwise approved through a use permit, as described in this Section.

c. Type of Wall. Walls shall be constructed of graffiti resistant solid brick or masonry material that requires minimum maintenance and provides the required sound and visual attenuation. An aesthetic surface treatment appropriate to the location shall be required.

d. Landscaping. Provide landscaping and maintenance per Section 4.10.9.

F. Non-Conforming Fences

1. Continuation and Maintenance. A non-conforming fence may be continued, and may be maintained, except as provided in subsection 2-5.

2. Maintenance or Repair of Existing Nonconforming Fence. Maintenance or repair, including structural repairs, may be made to any non-conforming fence or portions thereof if the repairs do not result in a different condition of conformity, or if the repairs bring the fence into compliance with this Section.

3. Reconstruction of Damaged Nonconforming Fences. A property owner may reconstruct a non-conforming fence damaged by fire or other calamity if the constructed fence is in conformity with this Section.

4. Removal of Worn Nonconforming Fence. If because of normal wear and tear anon-conforming fence is no longer fully upright or is no longer serviceable, the property owner either shall remove it or shall replace it with a new fence in conformity with this chapter.

5. Non-conforming Commercial Fences Adjacent to Residential Zones. Existing wood fences and chain link fences with slats

shall be maintained with metal posts, minimal gaps, no broken boards and no sections that lean. Nonconforming fencing shall be the responsibility of the commercial property owner where the fence is located and activities on the premises shall comply with the County's Noise Ordinance.

4.12 Parking Regulations

4.12.1. Purpose

The purpose of these regulations is to require off-street parking and loading spaces for all land uses in the Plan Area, sufficient in number to accommodate all vehicles which will be congregated at a given location at any given point in time by drivers and passengers who use or occupy the facility. Specifically, the off-street parking standards are provided to:

1. Ensure off-street parking and loading facilities adequately serve a majority of the traffic generated by development or land uses on site over time;
2. Maintain efficient use of land by avoiding excessive amounts of parking;
3. Provide adequate off-street parking, circulation, and access to support the viability of businesses and preserve surrounding neighborhood property values;
4. Allow parking alternatives, including shared parking and reductions to off-street parking requirements for sites in close proximity to transit, providing good connectivity to the surrounding area and bicycle and pedestrian facilities, and/or other transportation demand management measures, as appropriate; and
5. Ensure off-street parking and loading facilities are designed in a manner that promotes the general welfare of the community, protects public safety, and minimizes adverse impacts to adjacent land uses.

4.12.2 Applicability

The standards of this Chapter shall be applied to new construction, establishment, change, or expansion of any land use or building in the County, including increases in floor area, seating capacity, dwelling units, occupants, employees, and other units of measurement used to generate the vehicular requirements in this Chapter. Operations associated with a land use shall not commence, nor a building occupied, unless off-street parking and loading facilities conform to the requirements of this Chapter. Exceptions to the standards in this Chapter are permitted when a deviation has been granted through a Conditional Use Permit or Special Development Permit, in accordance with the provisions and references in Chapter 5.

4.12.3 General Provisions

Accessible off-street parking areas shall be provided and maintained as set forth in this Chapter. The parking access area shall provide parking and maneuvering room for motor vehicles and for pedestrian safety and walkability based on the anticipated occupancy of a given building, structure, or area of

land or water. In addition, every use shall provide at least the minimum number of vehicular off-street parking spaces required by Section 4.12.9; motorcycle parking spaces required by Section 4.12.14; and bicycle parking spaces required by Section 4.12.15 in accordance with the following methods.

1. Parking requirements for uses not specifically listed in the tables will be determined by the Planning Director, based on comparable uses in the table or through a parking analysis of similar facilities in the region.
2. Where there is a combination of principal uses in any one facility, the sum of the parking requirements of these uses shall be provided unless otherwise indicated or a reduction of parking is permitted.
3. Calculations
    a. Rounding. If the calculation of parking needs results in the requirement for a fraction of a parking space, such a parking space need not be provided unless the fraction exceeds 50 percent.
    b. Gross Floor Area. Where the standards for parking set forth in this Chapter are based upon gross floor area, gross floor area shall be defined by the area within the surrounding exterior walls of a building (or portion thereof) including shared bathroom spaces, storage areas, and circulation areas, but exclusive of courts, vent shafts, and parking areas.
    c. Seating Capacity. Where the standards for parking set forth in this Chapter are based upon seating capacity, the capacity shall be determined by reference to the building occupancy permitted or actual seating capacity of an area based upon the number of seats or one (1) seat per 18 inches of bench or pew length and one (1) seat per 24 inches of booth length for dining, but in no case shall seating be less than determined, as required by the Uniform Building Code, Section 3301. For other areas where seats are not fixed, the seating capacity shall be determined as indicated by the Uniform Building Code.

4.12.4 Building Permit for New Construction

Plans submitted for a building permit to construct a building which has parking areas shall include the design of the required parking area, drawn to scale. Such plans shall include all parking spaces and maneuvering areas, curb cuts, landscaping and other improvements. The building permit shall not be issued until such parking plans have been approved by the Planning Director or his or her designee, and no final completion inspection approved until the parking spaces and required landscaping are installed. No business license shall be approved until final completion inspection is obtained, except that a business license may be issued providing a cash bond is posted by the property owner to assure completion.

4.12.5 Change of Occupancy or Use

For a change of occupancy where the parking demand is increased and where no new construction requiring a building permit is anticipated, but a new business license is required, the Planning Director or his or her designee shall review the parking requirements of the proposed use. No new business license shall be issued until the Director or designee has approved the parking plan. Two copies of such plan drawn to scale shall be submitted for approval. The plan shall show the whole property in question and shall show the means of ingress and egress, location of the building, parking spaces, and landscaping, pedestrian paths of travel, pedestrian access and connections from the public street through parking lot to building entry, barrier curbs, irrigation system, lights and any other proposed facilities. If the plan conforms to the intent and provisions of this Section, the Director or designee shall approve both copies, keeping one copy on file and returning the other copy to the Tax Collector for issuance of any business license.

4.12.6 Nonconforming Use of Existing Facilities

Any building or use for which parking facilities become substandard by the adoption of this section shall be considered a nonconforming use. Such nonconforming use may continue, but no enlargement or expansion shall be made in such use or building, unless the required number of parking spaces or parking area as designated by this regulation are provided. Any change of occupancy or use in an existing building or lot which requires more parking spaces shall provide the additional parking areas required in this section.

4.12.7 Parking of Inoperable or Unregistered Vehicles

1. It shall be unlawful for any person to park or store, or permit others to park or store, any automotive vehicle or any trailer without current registration from the Department of Motor Vehicles or in an inoperable condition on any lot in a residential zoning district.
2. An automotive vehicle or a trailer without current registration from the Department of Motor Vehicles in an inoperable condition may be parked or stored in a fully enclosed building.

4.12.8 Change of Parking Requirements

When parking requirements as set forth in this Chapter are amended, such amendment shall not invalidate a previously approved development plan, Conditional Use Permit, or building permit.

4.12.9 Vehicle Parking Requirements

Parking requirements shall be applied uniformly in accordance with the general provisions, based on land uses, regardless of the zoning district in which a land use is to be located; unless otherwise specified in these standards. On-street parking may count toward satisfying off-street parking requirements for commercial service and retail uses and visitor parking at a 1:1

ratio. Motorcycle and bicycle parking spaces shall also be required and provided in accordance with Sections 4.12.14-15.

1. Vehicle parking requirements for Single family residential uses in the LD and MD zones are provided in Table 4.6.
2. Vehicle parking requirements for attached housing uses in MD, HD and MU zones are provided in Table 4.7.

Table 4.6: Single Family Residential and Group Living Parking Requirements in LD and MD Zones

Unit Type	Minimum parking required
1. Dwelling, Duplex or Halfplex	Two spaces per dwelling unit, 9' wide x 19' long within the buildable lot area or property driveway of the front yard
2.Dwelling, single family	
3. Family Day Care Home, Foster Home	Standard is the same as 1 and 2 above, plus one additional space for every 10 or more persons receiving care in the home
4. Residential Care Home	Standard is the same as 1 and 2, plus 1.5 additional space for every 6 or more persons receiving care in the home

Table 4.7: Attached Housing Parking Requirements in MD, HD or MU Zones

Unit Type	Minimum stalls required
Studio	1
1 bedroom	1.5
2-3 bedroom	2.0
4 plus bedrooms	2.0
Visitor	0.5

1) One (1) parking space per unit shall be covered (carport or garage). Exceptions may be approved for affordable housing projects as part of the Design Review.
2) Condominiums, townhouses, or similarly owned units where certain parking spaces are deeded, granted by easement, or otherwise permanent assigned spaces shall be located to be visible from a window(s) of the unit to which it is assigned, whenever possible, unless such spaces are contained within a garage. The location and regulation of unassigned spaces shall be placed under the control of the project homeowners' association.
3) Permanent, assigned, covered or uncovered spaces must be standard spaces, a minimum of nine (9) foot wide by 19-foot long. For projects with assigned spaces for each unit, up to 50 percent of the unassigned spaces may be compact spaces, and for projects with no assigned spaces, up to 30 percent of the spaces may be compact spaces. Unassigned standard and compact spaces shall be evenly distributed throughout the project.
4) Visitor parking may be satisfied with on-street parking spaces on the property or on adjacent street frontages, at a 1:1 ratio. Visitor parking

need not be in addition to required parking, where one or none of the parking spaces are not assigned. For townhomes and other attached housing, street parking and private driveways may be counted toward visitor parking.

5) The American with Disabilities Act (ADA) requirements and standards shall be met.
6) Parking and paving directly touching against residential buildings shall be avoided. Paved surface parking areas shall be separated from the primary residential building by a minimum four (4) foot wide walkway and/or a minimum seven (7) foot wide landscape strip.
7) Tuck under and subterranean parking may be permitted for projects in the HD and MU zones.
8) Off-site parking is allowed in HD and MU zones up to 25% of required spaces, pursuant to Section 4.12.9E.

C. Vehicle parking requirements for Public, Civic and Institutional Uses are provide in Table 4.8.

Table 4.8 Public/Service and Institutional Uses Parking Requirements

Use Type	Minimum parking requirements
Place of worship or other Religious Institution	One space per four fixed seats within the main assemble room or one space per 50 square feet of the seating area used for assembly
Social Club, Fraternal Hall/Lodge	Ten spaces per 1,000 square feet of seating area used for assembly
Business, Trade, or Vocational School	One space per three persons (using maximum building occupancy)
College, University	One space for every three employees, plus one space for every three students
School, K-12, Public or Private	Elementary and Junior High Schools: one space per employee, plus one space for every 10 seats in the Auditorium or multi-purpose room whichever is greater, plus loading space for two buses. High Schools: one space per employee, plus one space for every five students
Public Park and Ancillary Uses	None required for sites up to 5 acres in size. Sites above 5 acres provide one space per 20,000 s.f of useable park area
Convalescent Hospitals, Congregate Care Facilities	One space for every three beds licensed by the County or State, plus one space for every three employees

Table 4.8 (Continued)	
Adult Day Health Center/Child Day Care Center	One space per employee, plus one parking space for every eight children enrolled or adults
Hospital	Two parking spaces for each bed licensed by the State, plus one space for every three employees; outpatient facilities shall provide additional parking as required for a medical office
Utility, Major or Minor	One space for every two employees on the premises at any one time including overlaps in shifts
Other Institutional Use Not Specified Above	One space for every three occupants based upon the maximum occupant load of the institution at any one time, as determined by the UBC

D. Vehicle parking requirements for Commercial and Office uses are provided in Table 4.9.

Table 4.9 Commercial/Office Parking Requirements	
Use Type	**Minimum stalls required based on gross floor area (s.f.) or # of employees/occupants**
Commercial Services	
Veterinarian, Animal Hospital	1 space/250 s.f.
Banks, Savings and Loans, and Credit Unions	1 space/300 s.f.
Physical Fitness Centers, Health Studios and Similar Uses	1 space/200 s.f.
Beauty/ Barber Shop and Similar Uses	1 space/250 s.f.
Eating and Drinking Uses	
Bar, Restaurant (Sit down, carry out and drive thru)	1 space/3 seats, based on the capacity of fixed and movable seating, as determined under the UBC. Outdoor seating which is less than 25 percent of indoor seating is exempt. Any additional outdoor seating beyond 25% shall provide 1 space/1.5 seats.
Entertainment/Recreation	
General Recreation Facility/Indoor	1 space/3 occupants who would use the premises at any one time based on the maximum occupant load, as determined by the UBC.
Dance Halls, Ballrooms, Skating	1 space/ 100 square feet of dance or skating floor area. Incidental areas in restaurants, bars and other recreational uses shall provide parking according to the specified area standard above.
Batting Cages, Driving Ranges	1½ spaces for each station
Motion or Live Theater	One space per three seats
Other Recreation Uses not listed	One space for every three occupants who would use the premises at any one time based on the maximum occupant load, as determined by the UBC.

Table 4.9 (Continued)	
Lodging	
Bed and Breakfast Inn	One space per guest room and two spaces for the resident owner or manager
Hotel or Motel	One space per sleep room, suite, or housekeeping unit. For other principal uses on the premises such as restaurants, bars and meeting rooms, refer to applicable standards for such uses. For secondary or other accessory uses, 70 percent of the requirement specified for the use is applicable.
Use Type	**Minimum stalls required**
Office Uses	
Office Use, General	1 space/300 square feet of gross floor area[1,2,3]
Medical and Dental Offices	1 spaces/250 square feet of gross floor area[3]
Retail Uses	
Retail Furniture, Major Appliance & Floor Covering Sales	1 space/ 1,000 square feet of gross floor area plus 1 parking space for each employee[3]
General Retail Activities[1]	1 space/300 square feet of gross floor area
Building Material Sales	1 space/300 square feet of gross floor area in the main retail building, plus parking required in the uncovered sales area per requirement
Uncovered Sales Areas (auto, boat or trailer sales; lumber or building material yards; plant nurseries; or other similar uses	1 customer space/1000 square feet of uncovered sales area, up to a maximum of 20 customer spaces, plus one parking space for each employee
Other Commercial Uses not specified	One space for every two occupants based on maximum load, as determined by the UBC

Table 4.9 Footnotes

1) Interior hallways used for access to office suites are not counted in the floor area
2) Medical and dental offices and complexes exceeding 10 percent of the gross floor area of the office complex shall comply with the medical/dental parking requirements
3) For services located in a commercial or mixed-use center, parking equal to the number of spaces required for each use, unless mutual parking agreements allow a shared parking reduction.
4) Applies to stand-alone uses, shopping centers and mixed-use retail developments that utilize a common parking area through mutual parking agreements
5) Up to 10 percent of the required number of spaces may be contractually committed to be used for park-and ride purposes without affecting the total parking requirement of the center.

E. General Requirements for Shared and Off-site Parking

The following guidelines are intended to serve as criteria for evaluating proposals for shared parking. Shared Parking is parking that can be used to serve two or more individual land uses without conflict or encroachment. Off-site parking, where allowed in parking tables, may be provided on parcels within 300-feet of site to meet minimum parking requirements.

1. Site Plan: All requests for shared parking must be accompanied by a site plan which includes sufficient information to identify the type and intensity of the uses which are proposing to share parking.

2. Ownership: When first approved, the shared parking facility must be under common ownership or under the control of a single site plan through lease arrangements. All requirements and conditions imposed upon the shared parking facility shall be listed on the site plan and shall be binding upon all subsequent purchasers.

3. Time of submittal: All requests for shared parking must be submitted in writing at the same time as an application for site plan review.

4. Shared parking arrangements may be approved by the Planning Director if the above criteria is met.

4.12.11 Vehicle Parking Size, Location, and Configuration

Every use shall provide the required off-street parking spaces in accordance with the dimensional and location requirements in this Section.

A. Off-Street Parking Space and Driveway Sizes

1. Table 4.10 provides the parking dimensions that regulate the dimensions and drive aisle requirements for various angles of parking and one-way and two-way aisles, except for residential garages. Vertical clearance of all enclosed parking spaces shall be a minimum of seven (7) feet.

2. Special Provision for 90 Degree Single loaded Parking Aisles. Parking lot aisles which serve as access to parking spaces on one (1) side only may be reduced to a width of 20 feet provided either a landscaped planter or pedestrian sidewalk at least five (5) feet in width is installed adjacent to said aisle.

3. Residential Garages and Accessory Dwellings. Parking within enclosed garages, carports or outdoor spaces shall be required as provided in Table 4.11.

4. Shared Driveways. Shared driveway access with adjacent lots is encouraged, subject to compliance with the following requirements; the driveway is directly adjacent to a shared property line; an easement for the use of the driveway is obtained; and the driveway width is adequate to serve the additional number of vehicles to be served.

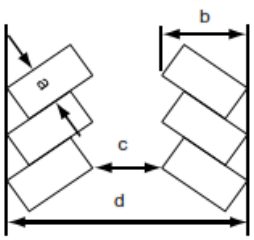
Table 4.10 Parking Dimensions

Angle	Stall Width a	Stall to Curb b	Aisle c	Two Rows+ Aisle d
90°	9'-0"	19'-0"	25'-0"**	63'-0"
	9'-6"	19'-0"	24'-8"**	62'-6"
	10'-0"	19'-0"	24'-0"**	62'-0"
60°	9'-0"	21'-0"	20'-0"**	62'-0"
	9'-0"	21'-0"	19'-0"*	61'-0"
	9'-6"	21'-3"	18'-6"*	61'-0"
	10'-0"	21'-6"	18'-0"*	61'-0"
45°	9'-0"	19'-10"	20'-0"**	59'-8"
	9'-0"	19'-10"	16'-4"*	56'-0"
	9'-6"	20'-2"	15'-2"*	55'-6"
	10'-0"	20'-6"	14'-0"*	55'-0"

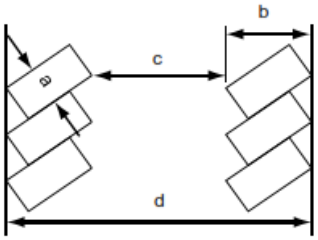
**Two-way aisle

* One-way aisle

Key Diagram:



One-Way Aisle



Two-Way Aisle

Table 4.10 (continued) Parallel Parking Dimensions			
9'-0"	20'-0"	12'-0"	30'-0"

Key Diagram:

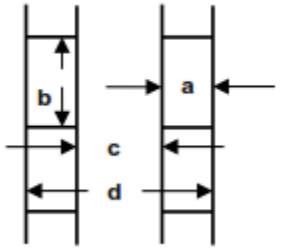


Table 4.11 Garage Parking

Unit Type	Garage Space Type	Minimum Dimension Requirements	Additional Regulations
Single-family or Multifamily	Attached or Detached Two Car	20' x 20' (400 sf) minimum interior, 19' driveway	Constructed of the same materials as the principal dwelling
Single-family	Attached or Detached	20' depth; 640 sf minimum	Third space may be tandem
Multifamily Rental	Single Unit-Assigned Parking	9' x 19'	Space shall be covered and assigned
Multifamily Ownership	Single Enclosed Garage	12' x 20'; 10' driveway	Automatic garage door required

5. Compact Car Spaces. Up to 50 percent of the required number of parking spaces may be sized for compact cars. Compact car parking spaces shall be at least eight (8) feet in width and 16 feet in length, and shall be clearly marked, "COMPACT". Compact parking spaces shall be distributed throughout the parking lot. Where an entire section of the parking lot is restricted to compact car parking with an angle of 90 degrees, the aisle width may be reduced from the standard 25 feet to 23 feet; such compact sections, if used, should be located so as to minimize the distance from the section to the appropriate building or activity.

6. Parking Spaces for the Disabled. Parking spaces shall be provided for the disabled in accordance with the Uniform Building Code and American with Disabilities Act and subject to approval by the Chief Building Inspector. Designated spaces are to be incorporated into the overall parking requirement for the project.

7. Employee Parking. Parking spaces for all commercial business and industrial uses designated for employees, where employee parking is required, shall be identified by the employer as "employee parking."

8. Electric Vehicle Parking. Parking spaces providing electric vehicle charging stations shall be designed to comply with the California Building Standards Code and other federal and state regulations. Electric vehicle charging station may qualify for parking reductions, as addressed in Section 4.12.13. Parking spaces designated for electric vehicle charging stations shall be counted toward meeting the minimum parking requirement.

B. Vehicular Maneuvering Area, Access, and Circulation

All parking areas shall be designed so that the parking spaces have suitable maneuvering space and access to and from a public street or alley.

1. Access to Parking Areas. Access to parking areas and curb cuts for driveways shall be approved by the Sacramento County Engineering Division to insure an efficient and safe traffic flow into the parking areas and along the public streets.

2. Where two way access driveways are used, the design shall include either a) planter with lawn or other low groundcover separating the entrance and exit lanes, including small signs denoting "enter only" and "exit only" appropriately placed, when approved by the Engineering Division; or b) painted line separating entrance and exit lanes, with stenciled enter/exit markings appropriately painted on the pavement. Provide well-marked pedestrian paths of travel to entry/exit points and at potential conflict points.

3. Back out Parking. Parking areas for commercial, industrial, and multiple family residential uses, not including duplexes and single-family residences, shall be designed so that vehicles are not permitted to back out of the parking area onto a public street, enter and exit a facility or lot without reentering a public right-of-way, or make other hazardous turning movements.

4.Dead-end Aisles. Dead-end aisles are discouraged. When used, 90-degree angle stalls are required.

C. Vehicle Parking Location

Off-street parking shall be located in a parking area or building, as follows:

1. Residential Development. All off-street parking for residential uses such as a single-family detached dwelling, duplex or halfplex, shall be located on the same parcel as the development they are intended to serve, but shall not be located within a required corner setback area, except as otherwise provided in this Chapter.

a. No more than 40 percent of the land area between the front lot line and the front wall of the primary dwelling that is furthest from the front lot line (Exhibit 4-17, Example 1), or the area leading directly to a carport or enclosed garage (Exhibit 4-17, Example 2), whichever is greater, may be paved or used for vehicle parking. Use of permeable paving is encouraged for vehicular areas on lots that exceed 15,000 square feet. On lots of 15,000 square feet or less, impervious surfacing is required for vehicle parking. A Minor Use Permit may be issued for alternatives to these requirements.

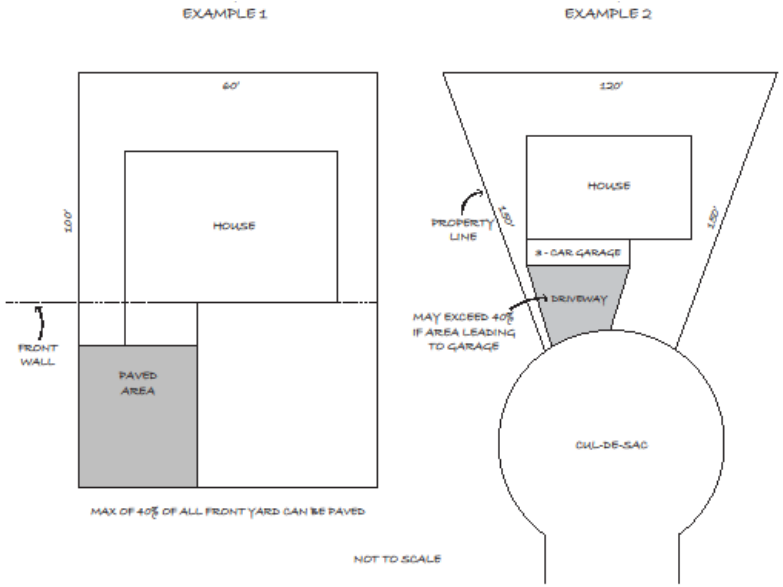

Exhibit 4.17: Off-street Vehicle Parking Location

2. Multifamily Residential or Mixed-Use Development. At least one (1) space for each residential unit shall be located on-site; other required parking spaces may be located off-site, subject to standards for off-site parking in Section 4.12.9E and the following standards.

a. Residential parking garages shall be located adjacent and behind the building elevation.

b. Surface parking for commercial uses shall be located to the side or behind buildings, when feasible, and is

discouraged at street corners, and in the front setback, but may be permitted subject to approval by the County at the time of Design Review.

3. Non-residential Development. Parking required to serve non-residential uses may be located on the same or different site as the uses served, subject to complying with the standards for off-site parking in Section 4.12.9E. The owners of adjoining buildings or lots may provide parking space in common if the total parking space provided is equal to the sum of the individual parking needs or a shared parking reduction is granted.

a. Surface parking areas may be permitted in the front, side, or rear setback areas, but discouraged at street corners and shall be subject to approval by the County at the time of Design Review. All parking areas shall be screened from public view.

4. Places of Public Assembly. The parking for places of public assembly requiring more than 50 parking spaces may be located on the premises, within 600 feet of the premises, or a combination of both.

D. Vehicle Parking Configuration

1. Tandem Parking. The minimum dimension for two parking spaces in tandem shall be nine (9) feet in width by 34 feet in length. Tandem parking shall be permitted for multifamily housing, the residential components of mixed-use projects, day care homes, and non-residential uses, subject to the following conditions.

a. For day-care homes and non-residential uses, a full-time parking attendant shall be on duty at all times when the parking facility is available for use.

b. For multifamily housing and the residential components of mixed-use projects; tandem spaces are required to be assigned for the same dwelling unit. Up to 10 percent of the total off-street parking spaces provided may be tandem parking.

2. Tuck Under Parking. Tuck under parking, defined as parking below the unit and accessible from outside the unit, shall be permitted when parking access is restricted to an alley, the rear 40 percent of the site, or designed such that parking areas shall not to be visible from the street or from an adjacent property.

3. Parking Structures. Parking structures, buildings or structures use for motor vehicle parking, shall be permitted, subject to the following standards.

a. Parking structures shall not exceed the height of the main structure on the same property, if applicable, unless approved during Design Review.

b. In addition to the standards herein, parking structures shall be subject to applicable regulations, including setback requirements, of the base zoning district.

c. All setback areas not occupied by the parking structure shall be fully and permanently landscaped and lit for security.

d. Parking structures, with at grade parking shall be screened by the architecture of the building and/or landscaping at the street level, or other standard establish during Design Review, unless the parking structure contains ground floor commercial uses adjoining the street.

4. Valet Parking. Valet parking may be authorized through a special development permit as a mean of satisfying applicable off-street parking requirements, subject to satisfying the criteria for off-site parking in Section 4.12.9E.

E. Parking Restrictions

No motor vehicle or equipment used for, or designed primarily for, commercial, industrial or agricultural purposes with a manufacturer's gross vehicle weight rating of 10,000 pounds or more, and no trailer used for, or designed primarily for, commercial, industrial or agricultural purposes, shall be parked or stored on any residential zoned property except when loading, unloading, or rendering service. The parking of commercial vehicles is prohibited in required yards of any commercial/office zone/PQP zone as identified in Table 4.3.

F. Truck Loading and Unloading Areas

All retail and wholesale stores, warehouses, supply houses, buildings devoted to manufacturing trade, hotels, hospitals or other buildings where large amounts of goods are received or shipped shall provide loading and unloading space adequate to handle the volume and frequency of truck traffic to the building or shopping center. The minimum number of spaces shall be determined in accordance with the estimated volume of truck traffic and loading requirements. Each required loading space shall be not less than 10 feet wide, 35 feet long, and 14 feet high, exclusive of driveways.

4.12.12 Improvement Requirements for Parking and Loading Areas

A. Drainage and Stormwater Quality Facilities

Drainage facilities shall be provided in all parking areas adequate to handle the drainage requirements of the subject property in accordance with the County Improvement Standards, to alleviate the creation of flooding and drainage problems for the subject property or any surrounding properties. Stormwater quality control facilities in parking areas must satisfy the County's stormwater management requirements and shall be designed in accordance with the current edition of the Stormwater Quality Design Manual for the Sacramento and South Placer Region.

1. All surface water runoff shall be conveyed into a public right-of-way or storm drain, directed into planting areas, and/or a

stormwater quality source control or treatment facility, as addressed in the standards that follow.

a. Drainage Systems shall be provided in accordance with Section 9 of the County's Improvement Standards.

b. Runoff shall be treated per the requirements of the latest National Pollutant Discharge Elimination System (NPDES) permit prior to entering the public right of-way or storm drain, and shall comply with the source control measures in the Stormwater Quality Design Manual for:

(i) Loading and unloading areas: to minimize the chance of spills and leaks of pollutants that may include toxic compounds, oils and greases, nutrients, suspended solids, fluid from delivery vehicles, and other contaminants, into the storm drain system;

(ii) Wash areas in parking lot for vehicles and equipment: to minimize the chance of wash water that may contain oils and greases, metals, suspended solids, soluble organics, food waste, and/or detergents, from entering the storm drain (iii) Waste and recycling storage areas in parking areas: to keep rain, run-off, and other site water from leaching pollutants into the storm drain system.

B. Surfacing Requirements

1. Surfacing shall be provided for all parking and loading areas, aisles, and driveways, in accordance with specifications of the Sacramento County Engineering Division to eliminate dust and maintain a passable surface, strong enough to bear vehicle loads at all times. Alternative paving materials, such as pervious or porous pavements and light-colored or high-albedo surfaces are encouraged, per the requirements of the Stormwater Quality Design Manual and must be approved by the Planning Director and/or Engineering Division. The Engineering Division may specify an appropriate surface where a paved surface is not required.

2. Parking areas using porous pavements, excluding single-family dwellings or duplexes, shall be identified on parking area plans and provide documentation that the paving surface has been designed to support anticipated vehicle weights and traffic volumes that may result in maintenance issues such as surface cracking, crumbling, and erosion.

3. At a minimum, vehicle storage areas must consist of a gravel surface.

C. Marking of Parking Spaces

Parking spaces shall be marked or maintained on the pavement in a visible manner; and when required, aisles, loading zones, pedestrian walks, crossings, fire lanes, and any other directional markings or signs shall be installed as permitted or required by the Sacramento County Engineering Division to ensure the proper utilization of space, adequate traffic flow, and general safety.

D. Bumper Curbs, Wheel Stops

To ensure the proper maintenance and utilization of these facilities, parking areas shall be designed so that a parked vehicle does not overhang required sidewalks, planters or landscaped areas. A permanent curb, bumper, wheel stop, or similar device shall be installed which shall be adequate to protect the required sidewalks, planters, and landscaped areas from vehicular overhang and to protect any structure from vehicular damage. If such protection is provided by means of a method designed to stop the wheel, rather than the bumper of the vehicle, the stopping edge shall be placed no closer than two (2) feet from the edges of the required sidewalks, planter or landscaped areas and from any building. The Sacramento County Engineering Division may require other barrier curbs or wheel stops as deemed necessary to protect areas within or adjacent to the parking area from vehicular encroachment.

The innermost two (2) feet of each parking space (between the curb and any planter or sidewalk or bumper or wheel stop) may remain unpaved, and may be planted with low ground cover, and added to any required or proposed landscaping to allow for bumper overhang and reduce impervious surfaces. This additional planting area is considered to be part of the parking space and may not count toward satisfying any landscaping requirement.

F. Additional Standards for Multifamily Residential and Mixed-Use Developments

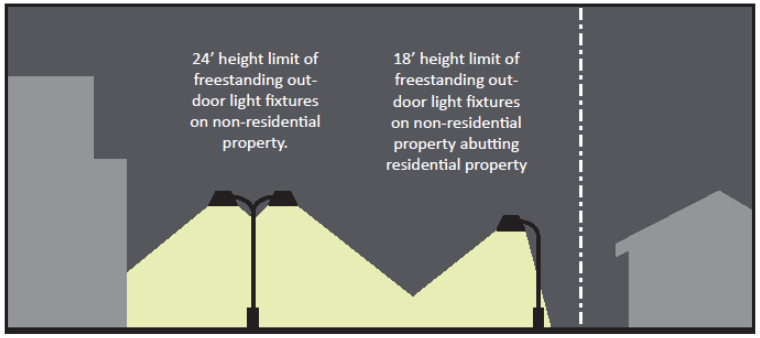

Exhibit 4.18: Shielding Provisions for Outdoor Lighting

Parking improvements in multifamily residential and residential portions of mixed-use developments shall comply with the following standards:

1. The design and materials used for covered parking structures shall be compatible with the design of the main structure on the property.

2. Metal carports with decking for roofs shall be prohibited. Metal posts painted to match the color scheme of the project may be acceptable, but shall not intrude in the minimum required designated area for the parking space. Trees, lattice/trellis structures, and/or decorative masonry walls shall be incorporated as part of carports to minimize visual impact.

3. Rows of parking stalls, either open or covered, shall be broken up by a tree planting approximately every seven spaces.

4. Units and parking/driveway areas shall have a minimum five (5) foot landscaped separation, but in general are encouraged to be located as far apart as possible.

G. Parking Area Screening

1. Parking lots and loading areas shall be screened from major public streets and adjacent residential uses with plants, trees, low walls, fences, berms, or grade changes that are a minimum of 30 inches tall. On that portion of any parking area located between the building line and the street where such a fence would interfere with visibility, the fence shall conform to the visibility requirements of the County's Improvement Standards.

2. A six (6) foot high wall and landscaping shall be provided adjacent to properties zoned for residential uses. The height of the fence shall be measured from the paved surface of the parking lot and may be modified with approval of a special development plan, where the appropriate authority finds that due to a significant difference in elevation between parcels, different screening requirements are necessary.

H. Parking Area Lighting

1. Lighting shall be constructed with full shielding and/or recessed to reduce light trespass to adjoining properties, as illustrated in Exhibit 4.18. Each fixture shall be directed downward and away from adjoining properties and public right-of-way, so that no light fixture directly illuminates an area outside of the site, and the light source is not visible from residential properties. New light fixtures, serving uncovered parking lots shall be full cut-off fixtures as defined by the Illuminating Engineering Society of North America. New light fixtures, installed for parking area canopies or similar structures, shall be recessed or flush-mounted, using flat lenses.

2. The minimum lighting level shall be one (1) foot-candle of maintained illumination on the parking surface during the hours of use between one-half (½) hour before dusk and one-half (½) hour after dawn.

3. Light poles shall be located so as not to interfere with motor vehicle door opening, vehicular movements, or pedestrian travel paths; be away from trees that may obstruct the lighting; and placed in perimeter planters and landscape islands between rows of parking. Light poles are discouraged within end row planters, planting islands parallel to parking spaces, tree wells, and in the required clear path of pedestrian walkways.

I. Alternative Energy Systems

Alternative energy systems (solar and wind), including provision of solar panels on parking lot shade-structures or carports and solar lighting fixtures or parking meters are permitted as an accessory use in all non-residential, multifamily residential, and mixed-use parking areas, subject to Design Review approval.

J. Trash and Recyclable Receptacles. One (1) trash and one (1) recyclable receptacle shall be provided in parking areas with 40

vehicular parking spaces or more. An additional set of receptacles shall be required for 100 vehicular parking spaces or more.

4.12.13 Parking Reductions

Reductions to required parking shall follow the standards and processes set forth in the **Zoning Code, Section 5.9.5.**

4.12.14 Motorcycle Parking Requirements

As defined in the DS, motorcycle parking includes parking for all two-wheeled motorized vehicles, including scooters, mopeds, and similar vehicles.

A. Motorcycle Parking Requirements. Parking areas with 40 or more automobile parking spaces must provide motorcycle parking according to the following standards.

1. One (1) motorcycle space must be provided for each 40 automobile parking spaces. For each one (1) required motorcycle space provided, the number of required vehicle spaces is reduced by one (1).

2. Motorcycle parking spaces shall be a minimum dimension of four (4) feet by seven (7) feet, with up to four (4) motorcycle spaces permitted for each vehicular space.

4.12.15 Bicycle Parking Requirements

A. Bicycle Parking Facility Classifications. Bicycle parking facilities and terms used in this Section are defined as follows:

1. Class I Bicycle Facility. Includes the following: a) an enclosed box with a lockable storage compartment, or bicycle locker, accessible only to the bicycle owner/operator; or b) a locked room in a structure designated for storing and securing bicycles.

2. Class II Bicycle Facility. A stationary bicycle rack designed to secure the frame and both wheels of the bicycle, where the bicyclist supplies only the locking device.

3. Class III Bicycle Facility. A stationary bicycle rack, typically with a cement slab and vertical metal bar, where the bicyclist supplies a padlock and chain or cable to secure the bicycle to the stationary object.

4. Short-Term Parking. Easily accessible bicycle spaces provided for the convenience of shoppers, customers, and other visitors, visiting for a short duration of less than two (2) hours. Short-term bicycle parking should be in proximity to the main entrance of a building, within 100 feet and visible to pedestrian and bicyclists; or located in a common bicycle parking facility along a pedestrian access route.

5. Long Term Parking. Bicycle parking in a secure and weather-protected place to serve employees, students, residents, commuters, and others who generally stay on the site for several hours. Long-term parking does not have to be provided onsite, but should be within a reasonable distance, no greater than 400 feet from the site, to encourage bicycle use. Bicycle parking must be provided in racks or lockers.

Table 4.12 Bicycle Parking Facility Requirements [1]

Use	Bicycle Spaces		Bicycle Facility Class	
	Long Term	Short-Term	Long Term	Short Term
Dinner restaurants, cocktail lounges	One bicycle space for every 50 vehicle spaces required or two spaces, whichever is greater	One bicycle space for every 30 vehicle spaces required or two spaces, whichever is greater	Class I lockers, or Class II racks in an enclosed lockable area	Class II or Class III racks
All commercial, mixed-use, and service uses not otherwise listed	One bicycle space for every 30 vehicle spaces required or two spaces, whichever is greater	One bicycle space for every 30 vehicle spaces required or two spaces, whichever is greater	Class I lockers, or Class II racks in an enclosed lockable area	Class II or Class III racks
Industrial	One bicycle space for every 50 vehicle spaces required or two spaces	None required	Class I lockers, or Class II racks in an enclosed lockable area	N/A
Office and institutional uses within commercial and industrial zoning districts	One bicycle space for every 30 vehicle spaces required or two spaces, whichever is greater	One bicycle space for every 60 vehicle spaces required or two spaces, whichever is greater	Class I lockers, or Class II racks in an enclosed lockable area	Class II or Class III racks
Institutional uses in other zoning districts	Bicycle parking shall be determined at the time of issuance of a Conditional Use Permit.			
Multiple Family	For multifamily housing, a minimum of one (1) bicycle parking space per unit shall be provided on-site, with guest bicycle parking spaces provided at one (1) space per 10 units on-site.	Class I lockers or Class II racks shall be located close to and with direct access to multifamily buildings entries. Bicycle parking for guests shall be clustered in common areas for easy convenience.		

[1] Where the application of the above table results in the requirement for a fraction of a bicycle parking space, such a space need not be provided unless the fraction exceeds fifty (50) percent.

B. Minimum Bicycle Parking Requirements

Bicycle parking spaces shall be provided in compliance with the minimum requirements in Table 4.12 and the standards in Section 4.12.15.C.

C. Design Standards

Bicycle parking facilities shall be installed in a manner which allows adequate spacing for access to the bicycle and the locking device when the facilities are occupied. Each bicycle parking space shall be at least two (2) feet wide by six (6) feet long, with a five (5) foot maneuvering space behind the bicycle. The facilities shall be located on a hard, dust free surface, preferably asphalt or concrete slab and/or may also be mounted on a flat wall surface, with appropriate maneuvering space behind the bicycle.

4.13 Permits and entitlements for signs

4.13.1 Sign Permit Required

A sign permit shall be required for all permanent signs (building attached or freestanding) prior to erection, relocation, alteration, or replacement of a sign, unless otherwise exempted by this chapter. The process for application, review, and decision regarding a sign permit shall be as established in Section 4.13.1.A. A sign permit shall not be required for general maintenance of existing signs or the replacement of the sign face (including message) when the area of the sign is not being changed and a building permit is not required (e.g., the replacement of a sign face on a can sign). A sign permit is also not required for the establishment of temporary and special event signs; however, such signs shall be consistent with the development standards and time duration limits established in this Section 4.13.7.

A. Uniform Sign Program Required

In order to provide for the integration of project signage and ensure compatibility with the architecture of related buildings, a uniform sign program (either major or minor) shall be required as part of Design Review for all new multi-tenant shopping centers, office parks, and other multi-tenant, mixed-use, or otherwise integrated developments of three (3) or more separate tenants/uses that share buildings, public spaces, landscape, and/or parking facilities. There are two (2) types of uniform sign programs: major and minor. Both programs provide a process for the County's review of and decisions related to requests for signs for multi-tenant projects. The intent of the uniform sign programs is to allow for the integration of a project's signs with the design of the structures involved to achieve a unified architectural statement and to approve common sign regulations for multi-tenant projects. This section also describes the allowed deviations and the standards for approval of a major uniform sign program.

The differences between the programs are as follows:

1. Minor Uniform Sign Program. A minor uniform sign program does not allow for deviations from the signage standards in this title.

2. Major Uniform Sign Program. The intent of the major uniform sign program is to:

a. Provide a process for the application of sign regulations in ways that will allow creatively designed

signs that make a positive visual contribution to the overall image of the County, while mitigating the impacts of large or unusually designed signs; and

b. Allow for the installation of signs larger, taller, and/or more numerous than otherwise permitted by this title.

4.13.2 Exempt signs

The signs listed in this section are not subject to the sign permit requirement, but still must satisfy all other applicable permit requirements (e.g., building, electrical, plumbing, grading, encroachment, etc.). Any exception to the limitations for exempt signs listed herein shall require a Special Development Permit pursuant to Section 4.13.1.C. However, consideration of the request shall not evaluate the message or graphic design of a sign.

A. Exempt Signs without Limitations

The following signs are exempt from a sign permit:

1. All devices which are excluded from the definition of a "sign"
2. Official or legal notice required by a court or government agency (government/civic signs)
3. Signs erected and maintained in compliance with a government function or required by a law, ordinance, or government regulation, including signs erected by a public utility (government/civic signs)
4. Signs on licensed commercial vehicles, including trailers, which are not used for the display of off-site commercial messages, or general advertising; provided, that the vehicles/trailers shall not be used as parked or stationary outdoor display signs.
5. Change of copy that does not alter the size, location, or illumination of a sign

B. Exempt Signs with Limitations

The following signs are exempt from a sign permit; provided, that they meet the size, height, duration, and/or maximum number limitations listed:

1. Construction signs not to exceed one sign per street frontage and a maximum of twenty (20 ft2) square feet in area or a maximum of thirty-two (32 ft2) square feet if combined with a future tenant sign. Construction signs may not be illuminated. Such signs shall be removed at the earliest time following final building inspection approval, issuance of a valid certificate of occupancy, or the opening for business to the public.
2. Directional signs, signs whose function is guiding traffic, parking, and loading on private property, with no advertising. Sign area shall not exceed twenty-four (24 ft2) square feet in residential districts and thirty-six (36 ft2) square feet in nonresidential districts. The maximum height for freestanding directional signs shall be six (6' 0") feet unless the Director allows additional height upon a written finding that the visibility would be impaired without the additional height. The area and number of directional signs do not count towards the total allowed as described in Table 4.14.
3. Pedestrian signs that are solely oriented to the pedestrian user which identify or list the names and locations of tenants at a multi-tenant site.
4. Flags, provided they meet the standards listed in Table 4.13.

Table 4.13 Standards for Flags

Site	Maximum Number of Poles	Maximum Height	Maximum Number	Maximum Area of All Flags	Image Types	Illumination	Minimum Setback from ROW[1]
Commercial, office, and industrial zones	2	Tallest building	Not limited	24 sf.	Commercial and noncommercial	3, 4	5 ft.
Residential	1	20 ft.	Not limited	15 sf.	Noncommercial	4	10 ft.
Residential subdivision entryway[6]	1	30 ft.	Not limited	40 sf.	Noncommercial	4	10 ft.
Agricultural residential and agricultural zones	1	25 ft.	Not limited	24 sf.	Noncommercial	4	10 ft.
All other properties	2	20 ft.	Not limited	15 sf.	Noncommercial	4	10 ft.

Footnotes:

1. No flag may be placed within the clear-vision triangle.
2. The pole may be a maximum of twenty-five (25' 0") feet tall when all on-site buildings are less than twenty-five (25' 0") feet tall.
3. Illumination of commercial flags not allowed.
4. Noncommercial flags may be illuminated only in times of officially declared or commemorated emergency, mourning, or memorial.
5. Pole must be set back from right-of-way a distance equal to that of the pole height. Minimum setback is ten (10' 0") feet.
6. "Residential subdivision entryway" means any common area maintained by a private entity (such as a homeowners association) on private property when such entryway is located adjacent to a four (4) lane public road or wider.

5. Future tenant signs identifying or announcing the future use of a project while under construction. One sign shall be allowed per street frontage and the sign shall be removed upon occupancy of the site. In an integrated development, one sign per establishment is allowed. The maximum size of the sign shall be thirty-two (32 ft2) square feet and the maximum height shall be six (6' 0") feet. Future tenant signs may not be illuminated.

6. Gas pricing signs, as required by State law, which identify the brand, types, octane rating, etc., provided the signs do not exceed three (3 ft2) square feet.

7. Garage, Yard, Estate, and Other Home-Based Sales Signs. Signs advertising the one (1) day sale of items from a garage, yard, estate, or other home-based sale.

9. Name plates, as described below. Name plates may only be lit by either an indirect light (e.g., porch light) source, low-wattage spotlight without glare to the adjoining property, or internal light source with opaque (nontransparent) background.

a. Residential, Individual Unit. Occupant name, street number, and street name signs not exceeding two square feet in area per single-family or multifamily unit;

b. Residential, Multifamily Site. Building number, building name, the units located in the building, and other directional signs not exceeding fifteen (15 ft2) square feet in area;

c. Nonresidential. Signs for commercial, office, and industrial uses not exceeding two square feet, with copy limited to business identification, hours of operation, address, and emergency information;

10. Noncommercial signs as defined in the DS, consistent with the following requirements and not located within or over a public right-of-way or over the roofline of any building, and outside of any clear-vision triangle:

a. Signs shall measure no more than six (6 ft2) square feet.

b. During the time period beginning ninety (90) calendar days before a special, general, or primary election and ending twenty-one (21) calendar days after such election, the total allowed sign area for noncommercial signs may be increased by an additional forty-two (42 ft2) square feet in area (for a total of forty-eight (48 ft2) square feet).

11. Public Notice. Any public notice or warning required by a Federal, State, or local law or regulation.

12. Real Estate Signs. Real estate signs are allowed on private property set back five (5' 0") feet from the public right-of-way and out of any required clear-vision triangle, with the following limitations:

a. For residential property, one sign with a maximum sign area of six (6 ft2) square feet (each side). Additionally, a maximum of three (3) attached rider signs are permitted on each real estate sign identifying. On weekends and holidays, signs needed to direct traffic from major collector and arterial streets to the subject

property. One (1) sign may be placed for each change in direction to a maximum of five (5) signs, each with a maximum sign area of six (6 ft2) square feet.

b. For commercial property, one (1) on-site sign per street frontage with a maximum sign area of thirty-two (32 ft2) square feet for parcels with less than one (1) acre and forty-eight (48 ft2) square feet for parcels larger than one (1) acre with an eight (8' 0") foot height limit.

c. Removal. All real estate signs must be removed not later than the close of the transaction proposed by the sign.

13. Window Signage. Temporary window signage, provided that is consistent with the regulations in Table 4.15 (Temporary Sign Standards); for the purposes of this section, temporary window signage shall mean signage painted on or affixed to windows for a period of less than three (3) months. Permanent window signage, provided it does not exceed the overall sign area permitted for the facade, and is consistent with the regulations in Table 4.14 (Signs Permitted by Type and Development Characteristics); for the purposes of this section, permanent window signage shall mean signage not including directory and hours of operation which is painted on or affixed to windows for a period exceeding three (3) months.

4.13.3 Prohibited signs

The signs listed in this section are inconsistent with the purposes and standards of this chapter as described below and as such are prohibited in all zoning districts, unless specifically authorized by another provision of this chapter.

1. Abandoned signs;

2. Animated, moving, flashing, blinking (intermittent light), fluctuating, reflecting, revolving, or other similar signs;

3. Inflated signs, balloons, and figures, but not including "party jumps" or other inflatable party devices intended for short-term use;

4. Pole signs (not including ground-mounted freestanding signs, commonly called "monuments" or signs constructed with poles as the substructure; provided, that the poles are covered with architectural cladding or coverings);

5. Electronic readerboard signs other than time/temperature signs, except pursuant to a Planning Commission Conditional Use Permit as provided for to Section 4.13.4.E;

6. Roof signs erected and constructed on and/or over the roofline of a building and supported by the roof structure;

7. Signs affixed to trees or utility poles;

8. Signs emitting audible sounds, smoke, fumes, odors, or visible matter. Only menu/order board signs may emit sounds, but only as part of their primary function;

9. Signs erected in a manner that a portion of its surface or supports will interfere with the use of fire escapes, standpipes, or emergency exits from a structure or site;

10. Signs which imitate or resemble official traffic warning devices or signs, that by color, location, content, or lighting may confuse or disorient vehicular or pedestrian traffic, excluding

on-site direction signs as specified in Section 4.13.2, Exempt signs;

11. Vehicle signs where the primary purpose of the vehicle is general advertising. This does not apply to signs maintained on vehicles when such advertising is incidental to the primary purpose for which the vehicle is being used (e.g., delivery service).

4.13.4 Standards for Special Category Signs

A. Awning and Canopy Signs

Awning and canopy signs may be permitted only as an integral part of the awning or canopy to which they are attached or applied, as follows:

1. Location. Signs may be placed only on awnings that are located on first- and second-story building frontages, including those fronting a parking lot or pedestrian way.
2. Maximum Area and Height. Sign area shall comply with the requirements established by Table 4.14 and Section, General development, maintenance, and removal. Sign area shall be calculated so as to only include the copy area. Copy area shall occupy a maximum of seventy-five (75%) percent of the awning face. No structural elements of an awning or canopy shall be located less than eight (8' 0") feet above the finished grade.
3. Illumination. Awnings shall not be illuminated from under the awning (back-lit) so that the awning appears internally illuminated. Lighting directed downwards that does not illuminate the awning is allowed.
4. Required Maintenance. Awning and canopy signs shall be regularly cleaned and kept free of dust and visible defects.
5. The style of the awning/canopy shall complement the architectural style of the building to which it is attached. Awnings shall have a simple horizontal valance if located over rectangular or square window/door openings. Domed or barrel shaped awnings shall be allowed for buildings with arched window/door openings.

B. Blade/Bracket Signs.

1. Location. Blade or bracket signs shall be placed only on ground floor facade, except for businesses located above the ground level with direct exterior pedestrian access.
2. Maximum Area, Height, and Projection. The maximum sign area shall be four (4 ft2) square feet. The lowest point of a blade or bracket sign shall be a minimum eight (8' 0") feet above grade. The sign may project a maximum of five (5' 0") feet from the building.
3. Sign Structure. Sign supports and brackets shall be compatible with the design and scale of the sign.
4. Encroachment. Any blade or bracket sign which encroaches into the public right-of-way, or above it, or into County-owned property, is subject to an encroachment permit.

C. Menu/Order Board Sign.

1. Location. Menu/order board signs shall not face onto the public right-of-way.

2. Illumination. Menu/order board signs shall only be illuminated by internal light source with opaque (nontransparent) background.

3. A maximum of two (2) menu/order board signs shall be permitted for each drive-in or drive-through business; provided, that each sign not exceed a maximum of forty (40 ft2) square feet in sign area and that each sign be limited in height to eight (8' 0") feet. The area and number of menu/order board signs do not count towards the total allowed sign area as described in Table 4.14.

D. Freestanding Signs (Monument and Pylon).

1. Location. A freestanding sign may be located only along a site frontage adjoining a public street and not within the clear-vision triangle. It shall be set back a minimum of ten (10' 0") feet from the right-of-way. See Section 4.13.5, General development, maintenance, and removal.

2. Maximum Area and Height. The sign shall comply with the height and area requirements established in Table 4.14.

3. Design. The mass/scale of a freestanding sign shall be consistent with the overall design of the building. The design and placement of the sign shall not interfere with the required clear-vision triangle.

4. Landscape Requirements. Landscaping shall be provided at the base of the supporting structure equal to twice (2) the area of one (1) face of the sign. For example, twenty (20 ft2) square feet of sign area requires forty (40 ft2) square feet of landscaped area.

5. Construction. Freestanding signs may be constructed with poles as a substructure; provided, that the poles are covered with architectural cladding or coverings so they appear as a solid structure.

6. Materials and design for freestanding signs shall be complementary to the materials and design of the buildings for the related development. For example, if the facade of the building is made of brick or brick veneer, a complementary freestanding sign would also include brick.

7. A business may be advertised on a directory pole sign that is located on a nonadjacent parcel when the project utilizes common facilities, such as driveways and parking areas.

E. Readerboard Signs

On-site electronic reader/video boards or digital signs are permitted subject to obtaining a Conditional Use Permit from the Planning Commission, and provided that the message shall be for on-site advertising or for public information messages. A time interval of four (4) seconds minimum for changing copy or display shall be adhered to, consistent with and pursuant to standards adopted by the State of California, Department of

Transportation. If the electronic reader/video board or digital sign portion of any permitted sign for on-site advertising or for public information messages is 50 percent or less than the total sign area, the sign is permitted and a Conditional Use Permit shall not be required. If any on-site digital display exceeds 200 square feet, the sign must be located at least 500 feet from a residential zone and at least 2,500 feet from another onsite or off-site digital sign.

F. Time and/or Temperature Signs

A time and/or temperature sign does not count towards the otherwise applicable limits as to number and size, provided:

1. Maximum Area and Height. The sign shall have a maximum area of ten (10 ft2) square feet and shall comply with the height requirements established by Table 4.14.
2. Design. The sign shall be designed in a manner that is architecturally compatible with other signs and with the structure on which it is placed.

G. Billboard Signs

Billboard signs, including digital and static billboards may be located in any commercial or office zoning district located within 1,000 feet of Jackson Highway, subject to the standards in Sections 4.13.4.G.1-11, and subject to securing a Conditional Use Permit from the Board of Supervisors, after a recommendation from the Planning Commission.

1. Area

The total area of any off-site sign shall not exceed 720 square feet, nor shall the sign exceed the length of 50 feet.

2. Location

Except for digital billboards, each off-site sign shall be located not less than 300 feet from any other off-site sign; nor closer than 75 feet from any on-site freestanding sign. No off-site sign shall be located within 300 feet of a parcel located within any Agricultural or Residential zone; nor shall any such off-site sign be located more than 1,000 feet from a parcel lawfully used for commercial or industrial purposes.

Each off-site sign shall be so located that the part of the sign closest to the street right-of-way shall be not less than 50 feet from the right-of-way. An off-site sign may be permitted with a setback the same as the building on the parcel with a minimum setback of 25 feet (If PUPF easement: 31 feet). See Section 4.13.4.D for separation requirements for digital sign requirements.

3. Height

The maximum height for off-site signs shall be 50 feet.

4. Measurement

The following methods shall be used to measure the spacing of off-site signs regulated by this Section:

a. When measuring the separation of signs or uses along a public street, the location of each sign shall be projected at right angles to the center line of the street

and distance measured along the street center line between the two points projected thereto.

b. When measuring distance between signs located on parcels located at intersecting streets, the sign location is to be projected at right angles to the street center line and the distance is measured on the center line of the two streets between the two projected points. Only one (1) off-site sign shall be permitted per corner parcel.

c. Any measurement from a sign to another land use zone shall be by straight line measurements from the closest point of the sign to the zoning boundary.

5. Aesthetics

a. The sign will not require removal or substantial trimming of existing vegetation or landscaping.

b. The sign will not obstruct or obscure on-site signs on the same or adjacent properties.

6. Traffic Safety

a. The sign will not be a visibility hazard to traffic on adjacent streets or parking areas.

b. The sign will not reduce parking availability as required by Section 4.11.

c. The sign will not interfere with on-site vehicular circulation.

7. Compatibility

The sign will not have substantial detrimental effects on views from and light striking adjacent or surrounding properties.

8. Digital Billboards

The following additional development standards shall apply to all digital billboard signs:

a. Digital billboard signs may be located in any commercial, office or mixed-use zoning district, subject to a Conditional Use Permit, or an amendment to an existing Conditional Use Permit in the case of the conversion of a static billboard sign, from the Board of Supervisors, after a recommendation from the Planning Commission.

b. Illumination. Digital billboards may be internally or externally lit; the light cast through reflection or glare onto surrounding objects, or illuminance, is measured in foot-candles. Signs shall not be illuminated at more than 0.3 foot-candles above ambient light, as measured using a foot candle meter at a distance of 250 feet from the sign face. Each display must have a light sensing device that will adjust the illuminance of the sign as ambient light conditions change.

c. Luminance. Through LED technology, digital billboards directly emit light, or luminance, the intensity of which is measured in nits. Luminance levels shall not exceed 7,500 nits during daylight hours and 300 nits at night. Each display must have a light sensing device that will adjust the luminance of the sign from dawn to dusk.

d. Location. No digital billboard shall be located within 2,500 feet of any other digital billboard or on-site digital sign with over 200 square feet of digital display. Digital

billboards shall be located at least 500 feet from a parcel located within any Residential zone.

e. Operational Limitations. Digital displays shall contain static messages only, and shall not have movement, or the appearance or optical illusion of movement during the static display period, of any part of the sign structure, design, or pictorial segment of the sign, including the movement or appearance of movement. Each static message shall not include flashing lighting or the varying of light intensity.

f. Minimum Display Time. Each message or display on the sign must remain fixed for a minimum of eight (8) seconds, and the maximum time allowed for transitions between message displays shall be one (1) second.

g. Future Technologies. The technology currently being deployed for digital billboards is LED (light emitting diode), but there may be alternate, preferred and superior technology available in the future. Any other technology that operates under the maximum brightness stated herein and does not result in a physical change in the appearance of the sign may be approved administratively by the Planning Director.

h. Community Messaging. The County shall be provided with access to a portion of the total available display time to allow for messages of community interest. This access shall also include other appropriate agencies for the purpose of displaying public safety messages such as Amber Alerts and other emergency management information.

9. Guidelines for Off-site Signs

The following guidelines are not mandatory, but should be considered by the hearing bodies during public hearings on any application for a Conditional Use Permit.

a. All off-site signs should be freestanding and should be built with a single supporting post, if at all possible, and should be located on no more than two (2) supporting posts.

b. Double paneled signs should not have an interior angle between the face of the panels greater than 20 degrees.

10. Development Agreement

The County and applicant shall enter into a Development Agreement in conjunction with the issuance of a Conditional Use Permit for a billboard sign.

11. Removal of Existing Billboards

For any billboard sign, the applicant must propose, as part of the application for a Conditional Use Permit, the removal of a sum total of at least four (4) square feet of legally existing billboard display surface, excluding the billboard support structure and frame, for each square foot of display surface proposed. The computation of display surface for an existing back-to-back billboard sign shall be limited to one (1) display surface, and must result in the removal of the entire advertising display,

including the support structure itself. The billboard signs proposed for removal may be located along any arterial, thoroughfare, highway or freeway within the unincorporated County jurisdiction. At least 50 percent of removed signage shall be from the same community or within one mile of the new billboard sign. Alternatively, if 100 percent of the removed signage is within the same community or within one (1) mile of the new billboard sign, then the ratio of removed signage may be reduced to three (3) square feet of existing billboard display. In addition, at least 25 percent of removed signage shall be from a site located within a Special Sign Corridor.

H. Mass Transit Shelter Signs. A sign shall be permitted upon a mass transit shelter in any zoning district, provided:

1. There is no more than one (1) single-faced or two-faced sign upon or within any mass transit shelter.
2. Each face of such sign does not exceed 30 square feet in area, for each basic size of a mass transit shelter, or multiple thereof.
3. The brightness of the light source shall not exceed the lighting criteria as set forth in Sections 21466 and 21466.5 of the Vehicle Code of the State of California or five (5) foot-candles, whichever is less. Certification of the light source shall be provided from a licensed Professional Engineer prior to the issuance of any building permits.
4. Such sign does not project above the top of, nor exceed, the width of the bus shelter.

I. Gateway Signs

A gateway sign may be located along any thoroughfare or highway at a key entrance to a major retail commercial or office district to advertise the businesses or products available within the district, subject to a Conditional Use Permit by the Board of Supervisors and the following provisions:

1. Gateway signs may be located on- or off-site and within or adjacent to the right-of-way in any commercial, industrial or mixed-use zoning district along a thoroughfare, or key entrance to a major retail commercial or office district.
2. Gateway signs may be either a monument or pylon sign, and shall advertise the businesses or products available at the major retail commercial or office district for which the sign is intended, and must include a logo and identification, through text, architecture or iconic signage, for that district.
3. The maximum height allowed shall be 30 feet, and the maximum allowed area for all signage on each gateway sign shall be 400 square feet.
4. In addition to other signs as may be permitted by this Code, there shall be no more than one (1) gateway sign per major retail commercial or office district.

4.13.5 General development, maintenance, and removal

This section describes the standards applied to the development, maintenance, and removal of signs.

A. Illumination Standards. The artificial illumination of signs, either from an internal or external source, shall be designed to minimize negative impacts on surrounding rights-of-way and properties. The following standards shall apply to all illuminated signs:

1. External light sources shall be directed and shielded to limit direct illumination of an object other than the sign;
2. The light from an illuminated sign shall not be of an intensity or brightness that will create glare or other negative impact on residential properties in direct line of sight to the sign;
3. Unless otherwise permitted by another provision of this chapter, signs shall not have blinking, flashing, or fluttering lights, or other illumination devices that have a changing light intensity, brightness, or color;
4. Colored lights shall not be used at a location or in a manner so as to be confused or constructed as traffic control devices;
5. Reflective-type bulbs and incandescent lamps that exceed fifteen (15) watts shall not be used on the exterior surface of signs so that the face of the bulb or lamp is exposed to a public right-of-way or adjacent property; and
6. Light sources shall utilize energy-efficient fixtures to the greatest extent possible.

B. Sign Removal or Replacement

When a sign is removed or replaced, all brackets, poles, and other structural elements that support the sign shall also be removed. Affected building surfaces shall be restored to match the adjacent portion of the structure. This provision does not apply to routine maintenance.

C. Sign Setback

Except as provided herein, setback for signs shall be measured from the future right-of-way to the closest edge of the sign. For streets which are improved to a width less than the future right-of way, setback for signs may be measured from the existing improvements meeting current County standards, provided that a relocation agreement shall be recorded at the owner's expense which guarantees that the property owner agrees to relocate the sign at his/her own expense to the required setback from the right-of way at such time that the County widens (or causes to be widened) the street to the future right-of-way. For parcels where improvements are not complete to meet present County standards, setback shall be measured from that point which would abut County standard improvements if they were installed. For parcels that do not have existing improvements and where other parcels within the same block have improvements, the setback may be measured from a projection of existing street improvements within the same block. In no case shall a sign be located within the dedicated right-of-way.

D. Protruding Signs

All signs projecting over walks, halls, corridors, passageways or aisles shall be installed in compliance with the Handicapped Access Regulations, California Code of Regulations, Title 24, State Building Code, Part 2, Section 2-1721, and "Protruding Objects."

H. Location of Building Signs

Building signs may be located along any public frontage, which includes that area of a building that faces directly onto a public right-of-way, an internal circulation path of the site, or a parking lot. In no case shall signs face directly onto residential property. A building may have multiple public frontages, as shown in Exhibit 4.19. Orientation of signs such that they face directly onto residential property is to be avoided, and allowed only when there is no practical alternative, and the visibility of the sign from the residence is minimized.

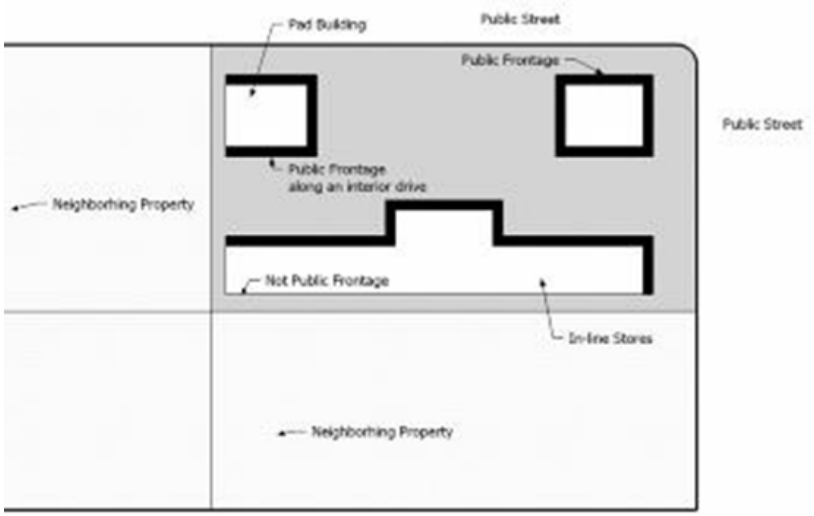

Exhibit 4.19: Allowed Locations for Building Signs

4.13.6 Permitted signs by type and development characteristics

Signs permitted within the JTSPA are regulated by sign and corresponding development type and/or zoning district. The standards for their development are described in Table 4.14. Zoning clearance (administrative plan check) is required to determine compliance with applicable provisions of this chapter. Only those signs that may be permitted are listed. The goal of these standards is to regulate permanent signs that have a commercial message so that they comply with the purpose of this chapter. Noncommercial signs and signs that are exempt

from these standards are described in Section 4.13.2, Exempt signs. Temporary signs are listed in Section 4.13.7 Temporary and special event signs. The following general standards apply to permanent signs regulated in this section:

A. Sign Types

1. Building signs are those signs that are permanently attached to a building (e.g., wall signs, blade/bracket signs, etc.) See Exhibit 4.20.

2. Freestanding signs are those that have their own unique foundation or are otherwise not attached to a building. See Exhibit 4.20.

B. Maximum Sign Area

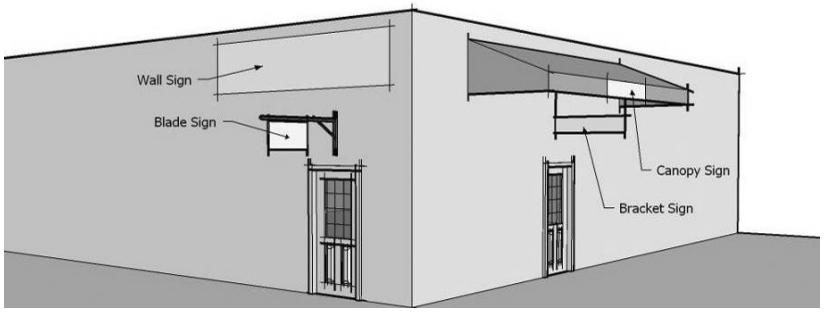
The total allowed sign area is identified in Table 4.14 with the following requirements.

1. The total allowed sign area may be distributed among the maximum number of signs permitted for each sign type.

2. Allowable sign area is either a set square footage per business or is based on a ratio of sign area to primary building frontage. It is calculated as described in Section 4.13.5.4, General development, maintenance, and removal. Where a ratio is described, it applies up to the listed maximum sign area.

C. Public frontage is that area of the building that faces onto a public right-of-way, an internal circulation aisle, or a parking lot. In no case shall signs face directly onto residential property.

D. Illumination standards refer to whether or not the sign may be illuminated and how. Signs may be illuminated through an "indirect or background" light source (an indirect light source is a low-wattage spotlight glare to the adjoining property, or internal light source with opaque, nontransparent background), or by any method that minimizes glare onto adjoining residential property.



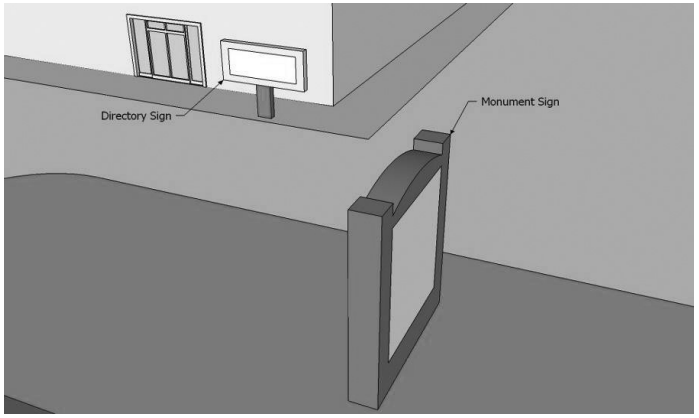


Exhibit 4.20: Sign Types

Table 4.14: Maximum Sign Area

Sign Type	Maximum Number Permitted	Maximum Area	Maximum Height	Minimum Setback from ROW	Illumination Standards	Other Standards (See Notes)
Residential Dwellings/Uses						
1. Building signs[1]	1/home	2 sf.	Roofline	–	No illumination	2
Single-Family Subdivisions						
1. Freestanding signs: entry monument	1/project entrance[3]	24 sf. each[3]	6 ft.	10 ft.	Indirect or background	
Multifamily Dwellings and Complexes						
1. Building signs	1/complex	6 sf.	Roofline	–	No illumination	4
2. Freestanding signs	1/vehicle entrance	25 sf. each	6 ft.	10 ft.	Indirect or background	4
Agricultural Uses						
1. Building signs	1/ establishment	20 sf. each	6 ft.	–	No illumination	
2. Freestanding signs	1/ establishment	20 sf. each	8 ft.	10 ft.	No illumination	

Table 4.14: Maximum Sign Area (Continued)

Sign Type	Maximum Number Permitted	Maximum Area	Maximum Height	Minimum Setback from ROW	Illumination Standards	Other Standards (See Notes)
Permitted Nonresidential Uses in Agricultural and Residential Zoning Districts						
1. Building signs	1/ establishment	20 sf.	Roofline	–	No illumination	2
2. Freestanding signs	1/ establishment	20 sf.	10 ft.	10 ft.	No illumination	
Commercial Zoning Districts						
1. Building signs: pad buildings and in-line stores > 50k sf.	1/public frontage[6]	2.5:1 with max 250 sf. total for all signs[7]	Roofline	–	5	2
2. Building signs: in- line stores < 50k sf.	1/public frontage[6]	2:1 with max 200 sf. total for all signs	Roofline	–	5	2
3. Freestanding signs: individual establishments	1/project entrance	50 sf.	10 ft.	10 ft.	Indirect or background	
4. Freestanding signs: integrated development	1/project entrance	150 sf./sign	20 ft.	10 ft.	Indirect or background	

Table 4.14: Maximum Sign Area (Continued)						
Sign Type	**Maximum Number Permitted**	**Maximum Area**	**Maximum Height**	**Minimum Setback from ROW**	**Illumination Standards**	**Other Standards (See Notes)**
Office and Industrial Zoning Districts						
1. Building signs	1/public frontage[6]	1:1 with max 150 sf.	Roofline	–	5	
2. Freestanding signs, standalone project	1/ establishment	25 sf.	10 ft.	10 ft.	5	
3. Freestanding signs, integrated development	1/project entrance	50 sf./sign	10 ft.	10 ft.	5	
Permitted Uses in the Open Space Zoning District						
1. Building signs	1/ establishment	20 sf.	6 ft.	–	No illumination	
2. Freestanding signs	1/ establishment	16 sf.	10 ft.	10 ft.	5	

Table 4.14 Footnotes:

1. Excludes name plates as described in Section 4.13.2.B.9
2. Must be attached to the front of main building.
3. Sign area may be distributed on up to two (2) signs at any one (1) intersection with combined square footage not to exceed total.
4. Excludes on-site directional signs or name plates.
5. Minimize glare onto residential property.
6. Additional signs for each public frontage are allowed as long as the cumulative sign area does not exceed the maximum square footage allowed, as identified in Table 4.14.

4.13.7 Temporary and Special Event Signs

This section describes standards for temporary signs, special event signs, and signs for subdivisions.

A. Temporary Signs. Temporary commercial signs for grand openings, special product, sale, or event advertising are allowed with the development standards described below.

1. Time Duration. Each establishment may display a maximum of two (2) weeks temporary promotional signs per calendar quarter or season, not to exceed a total of eight (8) weeks per calendar year. Temporary advertising periods may be combined, but may never be longer than four (4) consecutive weeks (thirty (30) consecutive days) at any one (1) time.

2. Illumination. No temporary signs may be illuminated.

3. Table 4.15 and 4.16 describe temporary signs development standards with regards to maximum number, area, height, and setback from the public right-of-way. In no case may a temporary sign be placed within a required clear-vision triangle.

B. Special Event Signs. Signs not otherwise permitted in this chapter (e.g., beacons, pennants, freestanding banners, inflatable signs), are not regulated by this chapter, but instead by public assembly, parades, and street closures provisions not adopted as part of this title.

C. Subdivision Signs. Temporary and limited-term subdivision signs for both on-site identification and off-site directional signs are allowed in accordance with the following standards. Single-family subdivision sign provisions shall apply to integrated developments only and not to any single residential lot.

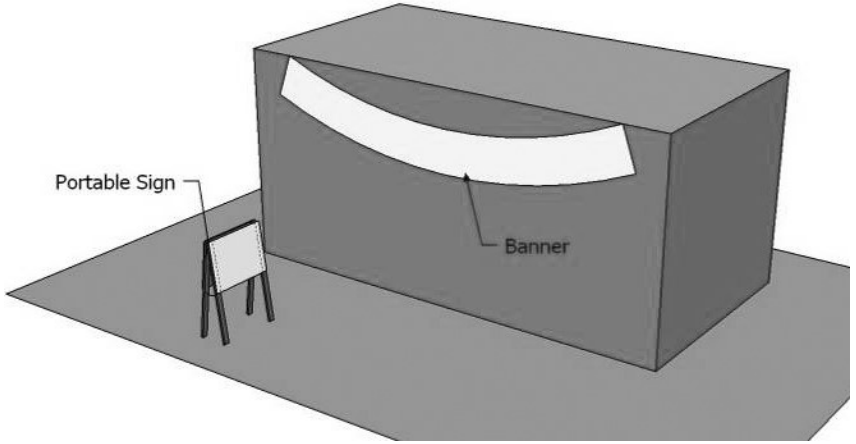

Exhibit 4.21: Temporary Sign Types

Table 4.15 Temporary Sign Standards for Non-residential Uses				
Use Type	**Maximum Temporary Number Permitted**	**Maximum Area**	**Maximum Height**	**Minimum Setback from ROW**
Commercial uses, building signs	1/establishment	36 sf. each	Roofline	–
Commercial uses, freestanding signs	1/establishment	6 sf.	5 ft.	10 ft.
Auto dealerships	3/establishment	36 sf. each	10 ft.	10 ft.
Office and industrial uses	3/establishment	10 sf. each	10 ft.	10 ft.
Permitted uses in the open space zoning district	1/establishment	10 sf.	8 ft.	10 ft.
Noncommercial and public/quasi-public uses	2/use	5 sf. total	5 ft.	10 ft.
Temporary window signs	N/A	25% of total window area	N/A	N/A

1. On-Site Signs. On-site directional/identification signs shall be permitted in accordance with the provisions listed in Table 4.16

2. Off-Site Signs. Off-site directional signs may be posted on private land only, through either co-located directory kiosks or weekend directional signs (for a limited period) as described below:

b. Weekend Directional Signs. For the interim period of five (5) months from the effective date of this section, subdivisions may display temporary weekend directional signage in accordance with Table 4.16 and the standards below.

i. Weekend directional signs are prohibited on publicly owned land.

ii. Weekend directional signs may not be erected before noon on Friday and must be removed no later than noon the following Monday. In the event that Friday is a nationally recognized holiday, the weekend directional signs may be erected on Thursday after noon. In the event that Monday is a nationally recognized holiday, the weekend directional signs may remain in place until Tuesday by noon.

3. Standards Applicable to All Subdivision Signs.

a. Sign Removal. Signs are to be permanently removed when the last home in the subdivision is sold or the sign permit expires, whichever occurs first.

4.13.8 Signs on residential uses

A. Signs with Two (2) Faces. Only one (1) side of a two (2) faced sign shall be counted in the calculation of sign area.

B. Noncommercial Message Signs. During the time period beginning sixty (60) days before a special, general or primary election, and ending seven (7) days after such election, the total allowed sign area may be increased by an additional five (5 ft2) square feet over the maximum sign area listed in Table 4.17.

C. Illumination of signs is prohibited.

Table 4.16: Temporary Subdivision Signs Standards

Sign Type	Maximum Temporary Number Permitted	Maximum Area	Maximum Height	Minimum Setback from ROW	Illumination Standards	Other Standards (See Notes)
1. On-site (freestanding)	1/project entrance, max. 6	32 sf. each	10 ft.	5 ft.	No Illumination	
2. Off-site joint use kiosk (freestanding)	1/major intersection[1]	100 sf per sign face on kiosk	18 ft.	10 ft.	No Illumination	[2]
3. Individual project nameplate (on joint use kiosk)	8/kiosk face; 6 nameplates/ project throughout City	12.5 sf. each	n/a	n/a	No Illumination	[3]
4. Off-site weekend directional signs[4]	25/project 5/block	4 sf. each	4 ft.	5 ft.	No Illumination	

1. A major intersection is defined as the intersection of two (2) or more arterial or collector roads.

2. Only one (1) off-site freestanding kiosk sign is permitted at each major intersection.

3. Must be co-located with other projects on directional kiosks.

Table 4.17: Signs on Residential Uses				
Sign Type	**Maximum Number**	**Maximum Total Area, All Signs[1]**	**Maximum Height**	**Minimum Setback from ROW**
Single-Family Residential Districts and Uses				
A-frame signs	1	8 sf.	4 ft.[2]	5 ft.[3]
All others	Not limited	5 sf.	Roofline of dwelling	5 ft.[3]
Multifamily Residential Districts and Uses[4]				
All sign types[5]	Not limited	5 sf.	Roofline of dwelling	5 ft.[3]

Footnotes:

1. Maximum sign area does not include flags or signs indicating the address and/or residents or home occupation.

2. Maximum width is thirty (30") inches.

3. May not be located within any required clear-vision triangle.

4. Includes multifamily residential units and mobile home parks, but not including units in transient occupancy facilities (hotels, motels, etc.). Standards listed are per dwelling unit.

5. Freestanding yard signs or signs on fences require the consent of the landowner.

4.14 Prohibited Activities

A. Storage and Accumulation of Junk, Garbage, and Rubbish.

It shall be unlawful for any person to store or keep, or permit others to store or keep, junk, garbage, and/or rubbish including, but not limited to, scrap metals or other scrap materials, on any lot or parcel, or any portion thereof, in any zone.

B. Minor Repair and Maintenance of Personal Vehicles.

It shall be unlawful for any person to engage in or permit others to engage in minor vehicle repair or maintenance in any residential zoning district under any of the circumstances described in Section 3.3.9.15.

1. Using tools not normally found in a residence;

2. Conducted on vehicles registered to persons not currently residing on the lot or parcel; and

3. Conducted outside a fully enclosed garage and resulting in any vehicle being inoperable for a period in excess of 24 hours.

C. Cannabis

1. No commercial or industrial cannabis growing, processing and/or sales is permitted within the Plan Area.

Chapter 5: Administration

5.1 General Provisions

5.1.1 Purpose and Overview

This Chapter describes the review and enforcement of the regulations of the DS and the administration processes for development within the Plan Area.

The DS does not establish separate processes for the administration of the development of the Plan Area, rather it follows the processes set forth in Chapter 6 of the Sacramento County Zoning Code (the Code). The Zoning Code User Guide is a recommended companion document for Plan Area applicants to familiarize themselves with the development application and review process.

5.1.2 Definitions and Acronyms

Chapter 7 of the Code shall be utilized to clarify interpretation of common wording and language issues that may occur in the DS.

5.1.3 Advisory, Decision and Appeal Bodies

Section 6.1.2 of the Code provides general information about the decision bodies and the decision-making responsibilities of those regularly involved in the application process, including the Planning Director, the Community Planning Advisory Councils (CPAC), Project Review Committee (PRC), Subdivision Review Committee (SRC), County Planning Commission(PC) and the Board of Supervisors(BOS).

5.1.4 Appeals

Any person dissatisfied with the act or determination of the Appeal body may appeal such act or determination as provided in Section 6.1.3 of the Code.

5.1.5 Fees

Application and petition fees shall be paid in accordance with Section 6.1.4 of the Code.

5.1.6 Life of Permits

Any entitlement, permit or approval issued pursuant to provisions of the DS shall be valid for the time period set forth in Section 6.1.5 of the Code.

5.2 Zoning/SPA Amendment

The process of amending the DS shall follow the procedures for amending an SPA zoning district per Section 6.2 of the Code, "Zoning Amendments."

5.3 Development Plan or Design Review

When a Development Plan Review or Design Review is required by provisions of the Code or by the action of the Board of Supervisors, Planning Commission, Zoning Administrator, Planning Director, or Board of Zoning Appeals, the procedures in this Section 6.3 of the Code shall apply.

5.4 Special Permits

When a Special Development Permit, Conditional Use Permit or Minor Use Permit is required by the provisions of the DS or the Code, the procedures in Section 6.4 of the Code shall apply.

5.6 Other Applications

When other applications, such as a Variance, Certificate of Non-Conforming Use, Interpretation, Density Bonuses for Affordable Housing and Childcare Facilities, Housing Incentive Program, Temporary Permits and Vacation Rental Permits are required by the provisions of the DS or the Code, the procedures in Section 6.5 of the Code shall apply.

5.7 Enforcement

The DS shall be enforced by the Director of the Office of Planning and Environmental Review or his or her successor, pursuant to the process in Section 6.6 of the Code.

Appendix AQ-1

Air Quality Mitigation Plan and Greenhouse Gas Reduction Plan

SACRAMENTO METROPOLITAN
AIR QUALITY
MANAGEMENT DISTRICT

August 30, 2022

Todd Smith
Planning Director
Sacramento County Department of Planning and Environmental Review
827 7th Street, Room 225
Sacramento, CA 95814

Subject: Verification of Technical Adequacy for the August 24, 2022 Jackson Township Air Quality Mitigation Plan and August 25, 2022 Jackson Township Greenhouse Gas Reduction Plan (PLNP2011-00095) (SAC201101396)

Dear Todd Smith:

The Sacramento Metropolitan Air Quality Management District (Sac Metro Air District) has reviewed the August 24, 2022 Air Quality Mitigation Plan (AQMP, Attachment 1)[1] and the August 25, 2022 Greenhouse Gas Reduction Plan (GHGRP, Attachment 2)[2] for the Jackson Township Specific Plan and verifies their technical adequacy for purposes of the California Environmental Quality Act (CEQA). This verification supersedes the verifications of the June 2019 AQMP and January 2021 GHGRP.

Please ensure the emission reduction features described in these plans are implemented via mitigation measures, conditions of approval, finance plans, or other enforceable mechanism.

Please let me know if you have questions. I can be reached at 279-207-1127 or rdubose@airquality.org.

Sincerely,

RDuBose

Rachel DuBose
Air Quality Planner / Analyst
CEQA and Land Use

cc: Paul Philley, CEQA and Land Use Program Supervisor, Sac Metro Air District

Enclosures: Attachment 1 AQMP, Attachment 2 GHGRP. (Appendices excluded.)

REVISION 3 - UPDATED AIR QUALITY MITIGATION PLAN FOR THE PROPOSED JACKSON TOWNSHIP SPECIFIC PLAN

1 EXECUTIVE SUMMARY

1.1 INTRODUCTION AND METHODOLOGY

Tsakopoulos Investments (the Applicant) is proposing the Jackson Township Specific Plan (Jackson Township) encompassing approximately 1,391 acres of land located in southeastern Sacramento County, east of Excelsior Road, north of Jackson Highway, and west of Eagles Nest Road. The proposed project is located approximately 10 miles southeast of the Sacramento central business district. The Jackson Township project is a mixed-use development that includes a mix of different housing types and commercial and retail land uses. The Proposed Project (formerly referred to as the California Environmental Quality Act, CEQA, Alternative 2) is evaluated in this report.

The Sacramento Metropolitan Air Quality Management District (SMAQMD) recommends that projects that emit more than 65 pounds per day (lb/day) of nitrogen oxides (NO_x) or reactive organic gases (ROG) and that are outside of the State Implementation Plan (SIP) reduce emissions by 35 percent from business as usual (BAU). The reductions are achieved through a series of mitigation measures and documented in an Air Quality Mitigation Plan (AQMP).

In August 2015, an AQMP and a Greenhouse Gas Reduction Plan (GHGRP) were prepared for the Jackson Township Specific Plan. The 2015 AQMP/GHGRP was based on then-current emission models and Guidance and was for the Jackson Township project-alone alternatives. Since that time, there have been new models, data, and Guidance published, and the Sacramento County Planning Division (PER) wishes to also evaluate the CEQA cumulative project scenarios. Project-alone scenarios, referred to herein as Project-Related vehicle miles traveled (VMT), assume that Jackson Township is the only project developed in the area. Cumulative scenarios (Cumulative VMT) are based on the assumption that there will be other projects developed in the area, and thus the VMT associated with Jackson Township is less because drivers can make combined trips (e.g., stopping by a supermarket on the way home from work). The proposed land uses for the Jackson Township Project-Related scenario are the same as for the Cumulative scenario; only the VMT is different.

© 2022 Kleinfelder

KLEINFELDER 707 17th Street, Suite 3000, Denver, CO 80202 p | 303.237.6601 f | 303.237.6602

In February 2019, an update to the August 2015 AQMP/GHGRP based on the then current (as of January 2019) models, data, and Guidance was submitted to PER and the SMAQMD. In March 2019, the SMAQMD requested that the Applicant submit a revision to the February 2019 AQMP/GHGRP to refine some of the mitigation calculations, and Revision 1 was submitted April 16, 2019. In May 2019, SMAQMD requested additional changes to clarify some of the mitigation measures, and Revision 2 to the AQMP/GHGRP was submitted.

Since May 2019 there have been a number of additional changes to the traffic and emission models and significance thresholds, and updated Guidance has been published by the California Air Pollution Control Officers Association (CAPCOA) and SMAQMD. Thus, in April through June 2022, this revised AQMP was prepared. The AQMP and GHGRP were separated into two separate documents, and this revised AQMP is termed Revision 3.

This Revision 3 to the AQMP addresses the following:

- Updated SMAQMD Guidance for AQMP and GHGRPs (Version 4.3)[1].
- Updated CAPCOA mitigation measures (CAPCOA 2022 Handbook)[2].
- New California Emissions Estimator Model (CalEEMod) version (Version 2020.4.0).
- Only the Proposed Project (Alternative 2) now requires evaluation.
- Updated 2022 Traffic Study completed by PER with more current Project-Related and Cumulative VMT than examined in 2019.
- Change in Operational Year to 2040 (from 2035) and start of construction to 2025 (from 2020).
- Additional transportation related VMT reductions that were not analyzed as part of the updated Traffic Study.
- Additional non-transportation mitigation commitments made in the previous AQMPs and GHGRPs and in Revision 4 to the GHGRP.

Kleinfelder, Inc. (Kleinfelder) prepared this AQMP and GHGRP consistent with SMAQMD Guidance and PER direction. PER staff reviewed the calculations, methodology, and document.

KLEINFELDER 707 17th Street, Suite 3000, Denver, CO 80202 p | 303.237.6601 f | 303.237.6602

To estimate emissions of NO_x, ROG, and particulate matter (PM), Kleinfelder used the current (as of April 2022) version of CalEEMod (Version 2020.4.0). The CalEEMod model uses details regarding specific land uses (e.g., strip mall) and various additional parameters (e.g., vehicle trip frequency and length associated with a land use and emission factors for vehicles) to calculate peak daily (pounds per day, lb/day) and annual emissions (tons per year, tpy). AQMP Guidance Version 4.3 focuses on NO_x and ROG emissions from annual transportation (annual mobile-only) and PM emissions from all sectors.

Kleinfelder ran the CalEEMod with detailed land uses for Alternative 2, including parking lot areas, as provided by the Applicant. The detailed land uses entered into CalEEMod are shown in Appendix A and discussed in Section 2. One of the key inputs in CalEEMod is the amount of traffic (VMT) associated with a project. The CalEEMod model contains default VMT values calculated from local district provided information and/or California statewide averages based on typical projects, (the default parameters are termed business as usual, BAU).

For Jackson Township, in early 2022, PER had a comprehensive Traffic Study completed that calculated the amount of traffic associated with the Jackson Township and other Jackson Highway projects and included induced VMT that is the result of additional vehicle travel associated with improved roads in the proposed Jackson Township area, but the VMT is not caused by the project itself. The Traffic Study analyzed effects of Jackson Township and the other projects on a regional Project-Related and on a regional Cumulative basis, starting with the existing conditions and then adding Jackson Township and the other projects. The Traffic Study also accounted for most of the large number of design features incorporated into Jackson Township that greatly reduces the amount of VMT. These measures include, but are not limited to, the location, density/mix of land uses, internal proximity, multi-modal efficiency, and transit supportive measures. Accordingly, in order to estimate emissions for the Jackson Township project as designed and planned, Kleinfelder used the Jackson Township incremental VMT calculated by the PER Traffic Study in the CalEEMod runs. Kleinfelder adjusted the default annual VMT calculated by CalEEMod such that the annual VMT matched the Traffic Study. This results in emissions estimates for the Jackson Township project considering most of the design features that reduce VMT. The incremental VMT associated with the project is shown in Appendix B and the emission calculations methodology and results are discussed in Section 3.

Kleinfelder calculated annual, summer peak daily, and winter peak daily operational emissions. The results are shown in Section 3 and the CalEEMod output reports are in Appendix C. BAU annual, summer peak daily, and winter peak daily operational emissions were also calculated and are shown in

KLEINFELDER 707 17th Street, Suite 3000, Denver, CO 80202 p | 303.237.6601 f | 303.237.6602

Appendix D. The BAU emissions are discussed in Sections 3, 4, and 5. Construction emissions were calculated and discussed in Section 6 with the CalEEMod reports shown in Appendix E.

The BAU scenario uses the same land use detail as the planned and designed project but uses typical VMT instead of the greatly reduced VMT associated with the project. Table 1-1 shows the default CalEEMod VMT compared to the VMT associated with Alternative 2. The Project-Related VMT is 43 percent less than BAU and the Cumulative VMT is 61 percent less than BAU. (Dividing the difference between the default VMT and project VMT by the default VMT value calculates the percent reduction.)

Table 1-1: CalEEMod Default VMT Compared to Project VMT

Scenario	CalEEMod BAU Annual VMT (miles/yr)	Traffic Study VMT (miles/yr)	Percent Reduction of Traffic Study VMT Compared to BAU
Alternative 2 Project-Related VMT	211,550,554	120,083,520	- 43.2%
Alternative 2 Cumulative VMT	211,550,554	81,557,862	- 61.4%

Note that the Traffic Study and CalEEMod modeled adjusted VMT shown in the CalEEMod runs do not match exactly, as discussed in Section 3. The above Project-Related and Cumulative VMT values are the values from the Traffic Study.

1.2 OPERATIONAL ROG AND NO_X MOBILE EMISSIONS

For the AQMP, the annual ROG and NO_x mobile-only emissions for the Jackson Township project as designed and planned were compared to the annual mobile-only emissions that would occur under the BAU scenario. Table 1-2 shows the BAU mobile-only emissions and the Alternative 2 emissions under the Project-Related and Cumulative VMT scenarios in terms of annual tons per year. The table shows that the percent reductions for ROG for both the Project-Related and Cumulative VMT are more than the SMAQMD 35 percent reduction target even if only accounting for the mitigation accounted for in the Traffic Study.

© 2022 Kleinfelder www.kleinfelder.com
KLEINFELDER 707 17th Street, Suite 3000, Denver, CO 80202 p | 303.237.6601 f | 303.237.6602

Table 1-2: Comparison of BAU and Jackson Township Alternative 2 ROG and NO_x Annual Mobile-Only Emissions for BAU, Project-Related and Cumulative VMT Prior to Additional Mitigation

VMT Scenario	Mobile-Only ROG	Mobile-Only NO_x
BAU Alternative 2 Annual Mobile-Only Emissions	32.6 tpy	34.9 tpy
Project-Related VMT Alternative 2 Annual Mobile-Only Emissions	20.3 tpy	21.1 tpy
Project-Related Mobile Percent Reduction from BAU	**- 37.7 %**	**- 39.5 %**
Cumulative VMT Alternative 2 Annual Mobile-Only Emissions	15.3 tpy	15.3 tpy
Cumulative Mobile Percent Reduction from BAU	**- 53.1 %**	**- 56.2 %**

Table 1-3 compares the Alternative 2 Project-Related VMT scenario and emissions to the Cumulative VMT scenario. The Cumulative VMT scenario mobile-only emissions are from about 25 to 28 percent less than the Project-Related VMT scenario mobile-only emissions.

Table 1-3: Comparison of Cumulative VMT to Project-Related VMT Mobile-Only Annual Emissions for Alternative 2 Prior to Additional Mitigation (VMT from Traffic Study)

VMT Scenario	VMT (miles/yr)	ROG Emissions (tpy)	NO_x Emissions (tpy)
Project-Related VMT Scenario for Alternative 2	120,083,520	20.3	21.1
Cumulative VMT Scenario for Alternative 2	81,557,862	15.3	15.3
Difference between Project-Related and Cumulative Scenarios	- 38,525,658	- 5.0	- 5.8
Percent Reduction Cumulative from Project-Related	**- 32.1%**	**- 24.6%**	**- 27.5%**

The reduction in vehicle travel and emissions of ROG and NO_x are accomplished through a large number of Jackson Township project design features proposed by the Applicant. The features that reduce emissions include, but are not limited to, those listed immediately below. Where applicable, the related current (as of April 2022) CAPCOA[3] greenhouse gas mitigation measures (T-xx), the SMAQMD[4] land use

[3] CAPCOA, 2021. Op cit.

[4] SMAQMD, 2021, Op cit.

© 2022 Kleinfelder www.kleinfelder.com
KLEINFELDER 707 17th Street, Suite 3000, Denver, CO 80202 p | 303.237.6601 f | 303.237.6602

emission reduction measures (LUT-xx), and the Sacramento County Revised Final Draft Community Wide Climate Action Plan (CAP)[5] measures (GHG-xx) are noted. However, the CAPCOA, SMAQMD, and Sacramento County emission reduction percentages for the noted measures were not used, rather the Traffic Study VMT was used to calculate emissions. Note that the Traffic Study is SMAQMD pre-requisite measure TS – Traffic Study. The figures and exhibits in Appendix H further illustrate some of the measures noted below.

LOCATION (T-1, T-2, GHG-22):

- Project is located in a suburban center within approximately 10 miles of the Sacramento downtown central business district and less than 5 miles from other existing high-density commercial/job center areas (LUT-2 and LUT-3).
- Project is located adjacent to other planned developments such that single-use trips are minimized, i.e., there are more pass-by and diverted trips (LUT-3 and LUT-4).

DENSITY/MIX (T-1, T-2, T-3, T-4, GHG-22):

- Project provides a compact mix of land uses in close proximity to each other with a highly connected street and trail network (LUT-3).
- Project design is for high and medium density housing for over half of the total project dwelling units (LUT-1).
- Housing density is better than 9.5 dwelling units per acre (LUT-1).
- Project includes below market rate housing (LUT-6).
- Approximately 15 percent of the total commercial square footage is dedicated to a mixed-use facility that combines residences and commercial/retail uses (LUT-3).

INTERNAL PROXIMITY (T-31-A, GHG-15, GHG-22):

- Most residential units are within 1,320 feet (one-quarter mile) of a neighborhood park, open space, school, and/or bicycle/pedestrian trail (LUT-3).
- Most residential units are less than one-half mile from shopping and services (LUT-4).

[5] Sacramento County, 2022. *Revised Final Draft Community Wide Climate Action Plan, February 2022.* Available at https://planning.saccounty.net/PlansandProjectsIn-Progress/Pages/CAP.aspx. Accessed April 2022.

© 2022 Kleinfelder www.kleinfelder.com
KLEINFELDER 707 17th Street, Suite 3000, Denver, CO 80202 p | 303.237.6601 f | 303.237.6602

- Project design includes locating at least four schools within the project boundaries such that most students can walk to a local school (LUT-3 and LUT-4).
- Project design includes at least eight parks within the project boundaries such that residents can walk/bike to enjoy the parks (LUT -3 and LUT-4).

MULTI-MODAL EFFICIENCY (T-10, T-17, T-18, T-29, T-25, T-26, T-32, T-37, T-47, GHG-14, GHG-17):

- Project design is based on a network of streets in a grid pattern (LUT-8).
- Project design includes access to high frequency bus service that connects to the Watt/Manlove light rail station (LUT-5).
- Bus routes are signalized in order to avoid traffic delays (T-27).
- Project design promotes a multi-modal system that makes public transit, walking, and bicycling viable and attractive travel choices for residents and employees. Features include:
    - Adequate bike parking at non-residential locations, including the transit center and park and ride locations (T-34, T-47).
    - Showers/lockers and other end of trip facilities at non-residential buildings (T-10).
    - Long-term bike parking facilities (T-34, T-47).
- Project includes an extensive pedestrian path and trail system that is convenient and accessible from homes, school, parks, employment, and shopping (LUT-8).
- Pedestrian and bike paths minimize any barriers to pedestrian/bicycle use (e.g., fences, berms and other impediments are eliminated where possible) (LUT-8, T-18, T-20).

TRANSIT SUPPORTIVE (T-3, T-5, T-6, T-9, T-25, T-27, T-28, T-32, T-38; GHG-14, GHG-22):

- Project includes an on-site transit center and park and ride facilities along the designated transit route of Jackson Highway (LUT-5, T-3).
- Project subsidizes bus rapid transit lanes on Jackson Highway (T-27).
- Project funding and design will result in bus headways of 15 minutes or better (T-26).
- Project includes joining a Transportation Management Association (TMA) funded through assessments. Although the project will include a TMA, no VMT reduction from the TMA has been calculated or included in the Traffic Study.
- Project includes assessments for regional transportation improvements (T-27).

© 2022 Kleinfelder

KLEINFELDER 707 17th Street, Suite 3000, Denver, CO 80202 p | 303.237.6601 f | 303.237.6602

1.3 ADDITIONAL QUANTIFIED EMISSION REDUCTIONS NOT INCLUDED IN THE TRAFFIC STUDY

Even though the measures listed above that are included in the Traffic Study more than achieve the AQMP emission reduction targets, there are additional transportation related mitigation measures that are incorporated into the project design and operation and for which emission reductions have been quantified. These measures are discussed in Section 4.2 and include the following (where applicable the CAPCOA mitigation measure has been cited, T-xx):

- For Residents:
  - Mandatory Community-Wide TMA participation that was not included in the Traffic Study (M-3[6]).
  - Electric bike share and scooter share (T-22-B, T-22-C).
  - Additional sidewalks within the Project (T-18).
- For Employees:
  - Mandatory Community-Wide TMA participation that was not included in the Traffic Study (M-3).
  - Carpooling/rideshare (T-8).

Furthermore, the Applicant has committed to the following quantified non-transportation related measures that will reduce ROG and NO_x emissions:

- Installation of a total of 805 non-residential electric vehicle (EV) charging stations at parking lots within the Project serving 1,610 parking spaces.
- Pre-wiring an additional 57 percent of multi-family housing for EV chargers. The Project is required by Sacramento County GHG reduction measures to pre-wire all of single-family housing and 20 percent of multi-family housing. The 57 percent of multi-family housing pre-wiring is in addition to that required, so there will be a total of 77 percent of multi-family housing pre-wired. The magnitude of emission reductions associated with this non-transportation related mitigation is discussed in Section 4.3.

[6] Measure M-3 is a Miscellaneous measure that is a mandatory TMA program for residents and employees that is paid annually as an assessment on both residential and non-residential properties. It is most analogous to T-6, which is normally a project/site-scale measure and allows up to 26% reduction; however, for Jackson Township it is applied community-wide, includes carpooling and rideshare, and totals 12.3% reduction. See Section 4.2.

© 2022 Kleinfelder www.kleinfelder.com
KLEINFELDER 707 17th Street, Suite 3000, Denver, CO 80202 p | 303.237.6601 f | 303.237.6602

Note that the 2022 version of California Green Building Code (CCR Title 24), effective January 1, 2023, also requires EV chargers for non-residential and multi-family housing. Should Title 24 mandate more EV chargers than committed to herein, the number of EV chargers will be increased to meet the Title 24 requirements.

All of the Jackson Township mitigation measures will be documented and made compulsory through the approved Final Environmental Impact Report (FEIR) under CEQA and the financing plan. Appendix H provides land use and other exhibits supporting the planned mitigation measures.

In addition, with full build out of Jackson Township, the existing Sacramento Raceway will cease operations. Thus, the existing emissions at the Raceway will be eliminated as discussed in Section 4.4.

Table 1-4a summarizes the quantified emission reduction measures and resulting percent reduction from BAU for Alternative 2 mobile-only annual emissions of ROG and NO_x for the Project-Related VMT scenario and Table 1-4b summarizes the reduction for the Cumulative VMT scenario.

Table 1-4A: Quantified Mobile-Only Emission Reductions
Compared to BAU for Alternative 2 Project-Related VMT Scenario

Index	VMT Scenario	Mobile-Only ROG	Mobile-Only NO_x
1	BAU Alternative 2 Annual Mobile-Only Emissions (from Table 3-3)	32.6 tpy	34.9 tpy
2	Project-Related VMT Alternative 2 Annual Mobile-Only Emissions based on the Traffic Study (from Table 3-3)	20.3 tpy	21.1 tpy
3	Emission Reduction for Project-Related VMT (Row 2 minus Row 1)	- 12.3 tpy	- 13.8 tpy
4	**Project-Related Mobile Percent Reduction from BAU based Only on the Traffic Study (Row 3 / Row 1)**	**- 37.7 %**	**- 39.5 %**
5	Additional Emission Reductions from Transportation-Related Measures for Project-Related VMT Alternative 2 (from Table 4-5)	- 1.6 tpy	- 1.7 tpy
6	Emission Reductions from Committed Non-Transportation Related Mitigation for Project-Related VMT Alternative 2 (from Table 4-7)	- 0.5 tpy	- 2.9 tpy
7	Elimination of Sacramento Raceway (Section 4.4)	- 0.9 tpy	- 2.6 tpy
8	Total Emission Reductions for the Project-Related VMT Scenario (Rows 3 + 5 + 6 + 7)	- 15.3 tpy	- 21.0 tpy
9	**Total Percent Reduction for Project-Related VMT Scenario (Row 8 / Row 1)**	**- 46.9 %**	**- 60.2 %**

© 2022 Kleinfelder

Table 1-4B: Quantified Mobile-Only Emission Reductions
Compared to BAU for Alternative 2 Cumulative VMT Scenario

Index	VMT Scenario	Mobile-Only ROG	Mobile-Only NO_x
1	BAU Alternative 2 Annual Mobile-Only Emissions (from Table 3-3)	32.6 tpy	34.9 tpy
2	Cumulative VMT Alternative 2 Annual Mobile-Only Emissions based on the Traffic Study (from Table 3-3)	15.3 tpy	15.3 tpy
3	Emission Reduction for Cumulative VMT (Row 2 minus Row 1)	- 17.3 tpy	- 19.6 tpy
4	**Cumulative Mobile Percent Reduction from BAU based Only on the Traffic Study (Row 3 / Row 1)**	**- 53.1 %**	**- 56.2 %**
5	Additional Emission Reductions from Transportation-Related Measures for Cumulative VMT Alternative 2 (from Table 4-5)	- 1.2 tpy	- 1.3 tpy
6	Emission Reductions from Committed Non-Transportation Related Mitigation for Cumulative VMT Alternative 2 (from Table 4-7)	- 0.4 tpy	- 2.3 tpy
7	Elimination of Sacramento Raceway (Section 4.4)	- 0.9 tpy	- 2.6 tpy
8	Total Emission Reductions for the Cumulative VMT Scenario (Rows 3 + 5 + 6 + 7)	- 19.8 tpy	- 25.8 tpy
9	**Total Percent Reduction for Cumulative VMT Scenario (Row 8 / Row 1)**	**- 60.7 %**	**- 73.9 %**

Note that the NO_x and ROG emissions shown in Tables 1-4A and 1-4B are mobile-only emissions and reductions. Because natural gas infrastructure will be eliminated from the Jackson Township, there are other NO_x and ROG emissions from residential hot water heaters and commercial boilers that will also be eliminated. Those emission reductions are not shown in the Tables, so the total reduction from all sources is greater than shown.

1.4 OPERATIONAL PM EMISSIONS

Because there are no sources of operational PM emissions that are not also sources of NO_x, ROG, and GHG, the design features that greatly reduce NO_x and ROG will also greatly reduce potential PM emissions as discussed in Section 6. PM emissions under the Project-Related and Cumulative VMT scenarios compared to BAU are shown in Table 1-5 in units of tons per year (tpy).

© 2022 Kleinfelder www.kleinfelder.com
KLEINFELDER 707 17th Street, Suite 3000, Denver, CO 80202 p | 303.237.6601 f | 303.237.6602

Table 1-5: Comparison of BAU and Jackson Township PM Annual Emissions for Alternative 2 BAU, Project-Related VMT and Cumulative VMT Scenarios

VMT Scenario	Fugitive PM_{10} (tpy)	Exhaust PM_{10} (tpy)	Total PM_{10} (tpy)	Fugitive $PM_{2.5}$ (tpy)	Exhaust $PM_{2.5}$ (tpy)	Total $PM_{2.5}$ (tpy)
BAU Original Project Annual Emissions	78.2	1.1	79.4	20.9	1.1	22.0
Project-Related VMT Annual Emissions	44.6	1.0	45.6	11.9	1.0	12.9
Percent Reduction for Project-Related VMT from BAU	**- 43.0%**	**- 9.1%**	**- 42.6%**	**- 43.1%**	**- 9.1%**	**- 41.4%**
Cumulative VMT Annual Emissions	30.2	1.0	31.1	8.1	1.0	9.0
Percent Reduction for Cumulative VMT from BAU	**- 61.4%**	**- 9.1%**	**- 60.8%**	**- 61.2%**	**- 9.1%**	**- 59.1%**

Note that the total PM may not exactly equal the sum of fugitive plus exhaust emissions due to round off differences.

There are no thresholds for PM reductions, but the design features built into the proposed project result in a reduction of total PM emissions ranging from 41 to 61 percent. The significant reduction in emissions of NO_x, ROG, and PM emissions for the planned and designed project compared to BAU is the result of the large number of design features incorporated into the project that greatly reduce the VMT. These design features are discussed in Section 4 and include locating the project close to the Sacramento central business district, incorporating a high density of mixed-use buildings, designing the project in a gridded street pattern with schools and parks located within the development, and incorporating multi-modal transportation systems. The multi-modal transportation systems include extensive bike and pedestrian paths, on-site transit center and park and ride facilities, bus rapid transit subsidies, and assessments for regional transportation improvements, among other features as detailed in Section 4.

1.5 CONSTRUCTION EMISSIONS

Although not part of the AQMP, SMAQMD recommends that construction emissions of ROG, NO_x, and PM emissions be quantified with CalEEMod if possible. To estimate construction emissions, CalEEMod was first run with default parameters and then the default parameters were adjusted as necessary to meet planned project constraints. The methodology is discussed in Section 6 and the results are shown in Table 1-6. The values shown in the table are the maximum annual and daily emissions during the 15-year construction period. The values come from construction CalEEMod runs shown in Appendix E. The emissions are compared to the current (as of April 2022) SMAQMD significance thresholds and all of the emissions are less than thresholds.

© 2022 Kleinfelder

Table 1-6: Maximum Construction Emissions for Alternative 2

Alternative	ROG (lb/day)	NO_x (lb/day)	Total PM_{10} (lb/day)	Total PM_{10} (tpy)	Total $PM_{2.5}$ (lb/day)	Total $PM_{2.5}$ (tpy)
Alternative 2 Emissions	57.3 (Summer)	68.5 (Winter)	45.4 (Winter)	5.7 (2027)	12.9 (Winter)	1.6 (2027)
SMAQMD Significance Thresholds	None	85	80	14.6	82	15
Exceed Threshold?	**N/A**	**No**	**No**	**No**	**No**	**No**

1.6 SUMMARY

In summary, incorporation of the planned and designed VMT reduction features of the Jackson Township greatly mitigates potential emissions of NO_x, ROG, and PM. The emission reductions are much greater than the SMAQMD 35 percent reduction target for NO_x and ROG. Table 1-7 summarizes the various reduction targets and how Alternative 2 meets those targets.

Table 1-7: Summary of Jackson Township Emissions Compared to Reduction Requirements and Thresholds

Scenario	Meets SMAQMD ROG 35% Reduction?	Meets SMAQMD NO_x 35% Reduction?	Below SMAQMD Construction Significance Criteria?	Achieves Meaningful PM Emission Reductions?
Alternative 2 Project-Related VMT Emissions Based on Traffic Study	Yes	Yes	Yes	Yes
Alternative 2 Project-Related VMT when Additional Quantified Mitigation is Credited	Yes	Yes	Yes	Yes
Alternative 2 Cumulative VMT Emissions Based on Traffic Study	Yes	Yes	Yes	Yes
Alternative 2 Cumulative VMT when Additional Quantified Mitigation is Credited	Yes	Yes	Yes	Yes

In addition to all of the design features that reduce VMT and the additional mitigation, there are more emission reductions associated with other design and mitigation measures that have not been quantified but will also occur. For example, the following features, among others, will occur but the benefits of those features have not been quantified. It is recognized that some of the following measures only indirectly reduce ROG and NO_x, as they are primarily GHG reduction measures.

- An over-statement of VMT because the VMT per resident and per employee values do not account for the mutually beneficial interaction of the Jackson Township Specific Plan with other

© 2022 Kleinfelder www.kleinfelder.com
KLEINFELDER 707 17th Street, Suite 3000, Denver, CO 80202 p | 303.237.6601 f | 303.237.6602

existing and/or approved land uses that result in reduced VMT. For example, Jackson Township schools and retail will serve not only Jackson Township residences but existing residences in the area, thus reducing the distance traveled by existing persons.

- An over-statement of employee VMT because the VMT per employee does not account for the current shift to work-from-home and remote working/learning that is occurring.
- Low flow bathroom fixtures, kitchen fixtures, showers, and toilets in all residential units and commercial buildings.
- Reduced square footage of residential turf due to the increased housing density.
- Water efficient irrigation systems and water efficient landscaping for the non-residential areas.
- Some of the existing homes located within the Jackson Township Specific Plan will be replaced with more modern and energy efficient homes.

And most significantly, all of the mobile-source emission estimates are over-stated and the benefit of EV charging stations under-stated because they do not account for the much larger electric vehicle penetration and other changes in transportation that will have to occur if California is to reach the 2050 GHG reduction goals. For example, the new (April 1, 2022) Federal passenger car and light duty truck fleet wide average fuel economy standard of approximately 49 miles per gallon (mpg) for new vehicles by calendar year 2026 has not been accounted for. Thus, prior to full development of Jackson Township in 2040 there will be greater ROG and NOx emission reductions and much lower total emissions than stated herein.

KLEINFELDER 707 17th Street, Suite 3000, Denver, CO 80202 p | 303.237.6601 f | 303.237.6602

2 PROPOSED JACKSON TOWNSHIP SPECIFIC PLAN

The proposed Jackson Township Specific Plan consists of approximately 1,391 acres located in southeastern Sacramento County. This AQMP focuses only on CEQA Alternative 2. Table 2-1 presents the summary land uses proposed by the Applicant by major category. The proposed land uses are shown in Appendix H.

Table 2-1: Alternative 2 Summary Land Use

Land Use Index	Residential Designations	Acres	Ave. Density	Dwelling Units
1	LD-Low Density Residential	382.6	6.0	2,295
2	MD-Medium Density Residential	124.5	10.0	1,245
3	HD-High Density Residential	82.0	25.0	2,050
	Subtotal	**589.1**		**5,590**
	Commercial + Office Zones		**Approx. Bldg. Square Footage**	
4	GC-General Commercial	59.7	650,100	
5	CC-Community Commercial	16.2	176,400	
6	MU-Mixed Use	19.7	429,000	100
7	O-Office	35.2	766,600	
	Subtotal	**130.8**	**2,022,100**	**100**
	Public/Quasi Public Zones			
8	PQP-Tank Site	1.0		
9	PQP-High School/Middle School	70.0		
10	PQP-Elementary School	30.0		
	Subtotal	**101.0**		
	Park + Open Space Zones			
11	CP-Community Park	40.6		
12	P-Neighborhood Park	38.2		
13	OS-Wetland Preserve	259.8		
14	OS-Greenbelt/Drainage Corridor	55.6		
15	OS-Landscape Corridor	14.5		
	Subtotal	**408.7**		
16	AG-Agriculture	74.7		
17	RW-Primary Roadways	86.7		
	TOTAL	**1,391**		**5,690**

© 2022 Kleinfelder www.kleinfelder.com
KLEINFELDER 707 17th Street, Suite 3000, Denver, CO 80202 p | 303.237.6601 f | 303.237.6602

The summary land uses are as planned as of December 1, 2014. The Land Use Index in Table 2-1 is used to reference the subcategory land uses in the following detailed land use descriptions. The land use data in Table 2-1 does not provide all of the detail necessary to estimate operational emissions. Appendix A provides the additional detail developed by Kleinfelder and the Applicant and is summarized in Table 2-2. The detail in Table 2-2 is based on the anticipated and typical land uses for a development like the Jackson Township. Detailed land use for the schools was derived from information provided by the Elk Grove Unified School District for average building sizes and parking lots. The gasoline pump numbers are based on the CalEEMod User Guide Appendix D that uses 7.1 pumps per 1,000 square feet (sf). The detailed land use information is used for the emission calculations discussed in Section 3.

As shown in Table 2-2 and Appendix A, one of the detailed land use categories inputs to the CalEEMod model is parking lot area. The parking lot area was planned by the Applicant through experience with other typical projects, usually as a fraction of the total acreage for the land use category.

Table 2-2: Detail Land Use for Emission Calculations for Alternative 2

Index	Residential Designations	Acres	Detailed Land Use for Emission Estimates
1	LD-Low Density Residential	382.6	Single Family Housing, 2,295 dwelling units
2	MD-Medium Density Residential	124.5	Single Family Housing, 1,245 dwelling units
3	HD-High Density Residential	82.0	Mid-Rise Apartments, 2,050 dwelling units
	Subtotal	**589.1**	
	Commercial + Office Zones		**Approx. Bldg. Square Footage**

Table 2-2 (cont.): Detail Land Use for Emission Calculations for Alternative 2

Index	Public/Quasi Public Zones	Acres	Detailed Land Use for Emission Estimates
8	PQP-Tank Site	1.0	1 acre allotted for possible water storage tank 90 feet diameter by 24 feet high.
9	PQP-High School/Middle School	70.0	250,000 sf building; 609,800 sf parking lot
10	PQP-Elementary School	30.0	225,000 sf buildings (3 schools); 136,800 sf parking lot
	Subtotal	**101.0**	
	Park + Open Space Zones		
11	CP-Community Park	40.6	Community Park and Neighborhood Park acreage used for Operational emissions. Remaining land uses do not cause operational emissions.
12	P-Neighborhood Park	38.2	
13	OS-Wetland Preserve	259.8	
14	OS-Greenbelt/Drainage Corridor	55.6	
15	OS-Landscape Corridor	14.5	
	Subtotal	**408.7**	
16	AG-Agriculture	74.7	
17	RW-Primary Roadways	86.7	
	TOTAL	**1,391**	

The data in Table 2-2 and Appendix A were entered into CalEEMod to calculate the emissions. The CalEEMod reports show where the data were used, but there is one land use subcategory that requires additional explanation: the possible water storage tank. Although a water use study has not been completed for the Project, it is possible that an approximately 1-million-gallon water storage tank may need to be located within the Project. This tank would be located at the PQP-Tank Site (Land use category 8) on a 1-acre parcel. The tank would be approximately 90 feet in diameter and 24 feet high. To account for painting the tank, the surface area of the tank was calculated (13,148 square feet for the sides and top). CalEEMod assumes that all coatings have a volatile organic compound (VOC) content of 150 grams per liter (g/l). However, rust preventative coatings are allowed to contain up 400 g/l per SMAQMD Rule 440. Also, it is possible that the tank would need two coats of paint. Accordingly, Kleinfelder entered the tank into CalEEMod as a "User Defined" industrial land use with a 1-acre lot size and 70,123 square feet (13,148 square feet x 2 coatings x 400 g/l divided by 150 g/l).

3 OPERATIONAL EMISSION ESTIMATING METHODOLOGY AND RESULTS

3.1 OPERATIONAL ROG, NO_X, AND PM EMISSIONS ESTIMATING METHODOLOGY

Kleinfelder calculated operational emission estimates for Alternative 2 with the CalEEMod emissions model, Version 2020.4.0. CalEEMod calculates emissions of criteria pollutants and GHG based on detailed land use metrics (e.g., acreage, dwelling units, square feet, number of fueling pumps) and vehicle emissions associated with each land use. The detailed land uses shown in Appendix A were used to estimate emissions. CalEEMod Version 2020.4.0 is based on EMFAC 2017 and 2019 Title 24 Energy Standards that were promulgated in March 2018 and became effective January 1, 2020.

Except for the CO_2 intensity for electrical generation, the mobile source emissions category, the number of fireplaces and hearths, and the additional mitigation calculations as explained below, CalEEMod default input factors were used to calculate emissions. CalEEMod was run for a full build-out year of 2040 and start of construction 2025.

For electrical generation greenhouse gas (CO_2, CH_4, N_2O) intensity, zero was entered. This is because the Sacramento Municipal Utility District (SMUD) has committed to 100 percent renewable energy by 2030.

CalEEMod includes emissions from mobile sources, and uses typical trip frequencies, trip types, trip lengths (depending on the specific land use subcategory), and standard California emission factors (EMFAC 2017 in the CalEEMod 2020.4.0 version) to calculate mobile source emissions. However, as discussed in Section 4, Alternative 2 incorporates a number of features that significantly reduce the VMT of the mobile sources. Accordingly, to estimate emissions for Alternative 2, Kleinfelder adjusted the trip frequency in CalEEMod such that the annual VMT matched the annual VMT forecast by the Traffic Study prepared for PER for the Project-Related VMT and Cumulative VMT scenarios. The vehicle travel mileage forecast by the Traffic Study is shown in Appendix B and includes changes in traffic patterns as the result of the Project. Trip lengths were not changed in CalEEMod because the CAPCOA 2022 Handbook for mitigation measures states that none of the included measures (which are the measures used to reduce VMT) reduce trip lengths[7].

© 2022 Kleinfelder

KLEINFELDER 707 17th Street, Suite 3000, Denver, CO 80202 p | 303.237.6601 f | 303.237.6602

The Traffic Study VMT data provided by PER forecasts peak daily VMT that will occur in calendar year 2040 as the result of the Project, both as a stand-alone project (project-related) and cumulative with other projects in the area. The Traffic Study data included the induced VMT potentially caused by road improvements in the area, but not caused by the Jackson Township project itself. The VMT used in CalEEMod is the incremental increase in VMT forecast by the Traffic Study. The peak daily VMT forecast for calendar year 2040 is as follows (see Appendix B):

- Alternative 2 Project-Related VMT: 375,261 miles per day.
- Alternative 2 Cumulative VMT: 254,868 miles per day.

Kleinfelder converted the peak daily VMT to annual VMT by multiplying the peak daily calendar year 2040 VMT by 320 days per year. The 320 value is approximately 52 weeks per year, 6 days per week. The assumption is that the peak daily VMT occurs on each of 5 days and about one-half of the peak daily VMT occurs on Saturday and Sunday. Accordingly, the calendar year 2040 annual incremental VMT is as shown in Appendix C and repeated here:

- Alternative 2 Project-Related VMT: 120,083,520 miles per year.
- Alternative 2 Cumulative VMT: 81,557,862 miles per year.

As discussed in Section 4, the default CalEEMod parameters yields emission estimates and VMT based on BAU. Appendix D shows the annual VMT for BAU, which is 211,550,554 miles per year. If one compares the business-as-usual VMT to the VMT forecast by the Traffic Study, the Traffic Study VMT for Alternative 2 is about 43 (Project-Related VMT) to 61 (Cumulative VMT) percent less than BAU (see Table 1-1).

The CalEEMod BAU default trip frequency is based on each individual land use and the Institute of Traffic Engineers Trip Generation handbook. There are separate frequencies for weekdays, Saturday, and Sunday. The CalEEMod default trip type and trip length are from information provided by the air district or California statewide averages. The CalEEMod model calculates the mileage per trip type by considering whether the trip was a primary trip, diverted trip, or pass-by trip. An example pass-by trip is a person stopping to shop on their way home from work. A diverted trip example is a person going home from work but traveling a short additional distance to shop. CalEEMod assumes that a pass-by trip is 0.1 miles, and a diverted trip will be 25 percent of the primary trip length.

In order to match the Alternative 2 VMT in CalEEMod to the VMT forecast by the Traffic Study, Kleinfelder adjusted the default trip frequencies as described below. The default CalEEMod pass-by and

© 2022 Kleinfelder www.kleinfelder.com
KLEINFELDER 707 17th Street, Suite 3000, Denver, CO 80202 p | 303.237.6601 f | 303.237.6602

diverted trip frequencies were not changed, and the emission factors were not changed. Tables 3-1 and 3-2 show the default trip frequencies and the adjusted trip frequencies for Alternative 2. For most of the land uses, the trip frequencies were reduced by about 50 to 60 percent. However, trip frequencies for land uses not likely to be greatly affected by design and mitigation in the Proposed Project were not changed. The un-changed land use trip frequencies were for the discount club, fast food restaurants, gasoline stations, hardware/paint store, home improvement store, hospital, and pharmacy. Note that the trip frequencies are in terms of the land use metric (which varies among different land uses) in CalEEMod and the frequency numbers in Tables 3-1 and 3-2 cannot be compared across land uses.

The CalEEMod trip frequency reductions from BAU made to match the VMT calculated by the Traffic Study resulted in the following annual VMT used in CalEEMod:

- Alternative 2 Project-related VMT: 120,642,549 miles per year.
- Alternative 2 Cumulative VMT: 81,606,212 miles per year.

Note that the modeled adjusted CalEEMod annual VMT is slightly greater (less than 0.5 percent) than the Traffic Study VMT. It was not reasonably feasible to adjust the CalEEMod trip lengths to exactly

© 2022 Kleinfelder www.kleinfelder.com
KLEINFELDER 707 17th Street, Suite 3000, Denver, CO 80202 p | 303.237.6601 f | 303.237.6602

match the Traffic Study VMT, and thus the slight over-estimate in VMT was used for the emission calculations.

3.2 OPERATIONAL ROG AND NO_X EMISSION RESULTS

The detailed land use subcategories of Appendix A and the traffic data of Appendix B were used to estimate annual ROG and NO_x emissions with the CalEEMod emissions model. The CalEEMod reports are shown in Appendices C and D and the results for total and mobile-only annual NO_x and ROG emissions are summarized in Table 3-3 (in terms of tons per year, tpy). Although this AQMP focuses on annual emissions, maximum daily total (mobile plus non-mobile) ROG and NO_x emissions for the Project-Related and Cumulative VMT scenarios are shown in Table 3-4 as a point of information, not as part of the AQMP.

Table 3-3: Total and Mobile-Only Annual BAU and Jackson Township Emissions of ROG and NO_x

VMT Scenario	Annual Total ROG	Annual Total NO_x	Annual Mobile-Only ROG	Annual Mobile-Only NO_x
BAU Alternative 2 Annual Mobile-Only Emissions	84.8 tpy	41.9 tpy	32.6 tpy	34.9 tpy
Project-Related VMT Alternative 2 Annual Mobile-Only Emissions	72.6 tpy	28.1 tpy	20.3 tpy	21.1 tpy
Cumulative VMT Alternative 2 Annual Mobile-Only Emissions	67.5 tpy	22.3 tpy	15.3 tpy	15.3 tpy

Table 3-4: Maximum Total Daily Emissions of ROG and NO_x Under BAU Project-Related, and Cumulative VMT Scenarios

VMT Scenario	Maximum Total Daily Summer ROG (lb/day)	Maximum Total Daily Winter ROG (lb/day)	Maximum Total Daily Summer NO_x (lb/day)	Maximum Total Daily Winter NO_x (lb/day)
BAU Alternative 2 Daily Total Emissions	559.4	482.5	242.3	274.0
Project-Related VMT Alternative 2 Daily Total Emissions	462.9	411.2	164.4	183.7
Cumulative VMT Alternative 2 Daily Total Emissions	424.7	382.7	132.8	147.1

3.3 OPERATIONAL PM EMISSION RESULTS

Appendices C and D contain the CalEEMod reports that show the total operational PM emissions. The results are summarized in Table 3-5.

Table 3-5: Total Operational PM Annual Emissions

VMT Scenario	Fugitive PM_{10} (tpy)	Exhaust PM_{10} (tpy)	Total PM_{10} (tpy)	Fugitive $PM_{2.5}$ (tpy)	Exhaust $PM_{2.5}$ (tpy)	Total $PM_{2.5}$ (tpy)
BAU Original Project Annual Emissions	78.2	1.1	79.4	20.9	1.1	22.0
Project-Related VMT Annual Emissions	44.6	1.0	45.6	11.9	1.0	12.9
Cumulative VMT Annual Emissions	30.2	1.0	31.1	8.1	1.0	9.0

Note that the total may not exactly equal the sum of fugitive plus exhaust emissions due to round off differences.

© 2022 Kleinfelder www.kleinfelder.com

4 AIR QUALITY MITIGATION PLAN

This Section describes the calculations for the total ROG and NOx emission reductions that will be achieved by the proposed Jackson Township Specific Plan. There are four categories of emission reductions discussed below:

- Transportation-related reductions based on the Traffic Study.
- Additional emission reductions related to transportation that were not included in the Traffic Study.
- Reductions from changes in land use (elimination of the Sacramento Raceway).
- Non-quantified emission reductions.

4.1 OPERATIONAL ROG AND NO_X EMISSIONS BASED ON THE TRAFFIC STUDY

SMAQMD Guidance recommends that a project that emits more than 65 lb/day of NO_x or ROG reduce emissions by least 35 percent from BAU if the project is not part of the SIP (which is the case for the Jackson Township Specific Plan). Version 4.3 of the Guidance specifies that the percent reduction is applied to annual mobile-only emissions.

To evaluate the Jackson Township Specific Plan, the annual mobile-only emissions as planned (based on the Traffic Study) were compared to emissions that would occur with a typical development with the same detailed land uses as proposed. Emissions that would occur with a typical development instead of the mitigation measures designed into the planned project are termed BAU emissions. To calculate the BAU emissions, the detailed land uses were entered into CalEEMod, and the emissions model run with the CalEEMod default vehicle trip frequency and mileage that that are typical of projects in Sacramento County. The BAU emissions reports are shown in Appendix D. Emissions calculated by CalEEMod for BAU were then compared to emissions from the project as proposed based on the Traffic Study. The results for mobile-only annual emissions are shown in Table 4-1 for the BAU, Project-Related VMT, and Cumulative VMT Traffic Study scenarios.

© 2022 Kleinfelder

Table 4-1: Comparison of BAU and Jackson Township ROG and NO_x Annual Mobile-Only Emissions Based on the Traffic Study for Alternative 2

VMT Scenario	ROG	NO_x
BAU Alternative 2 Annual Mobile-Only Emissions	32.6 tpy	34.9 tpy
Project-Related VMT Alternative 2 Annual Mobile-Only Emissions based on the Traffic Study	20.3 tpy	21.1 tpy
Project-Related Mobile Percent Reduction from BAU	**- 37.7 %**	**- 39.5 %**
Cumulative VMT Alternative 2 Annual Mobile-Only Emissions based on the Traffic Study	15.3 tpy	15.3 tpy
Cumulative Mobile Percent Reduction from BAU	**- 53.1 %**	**- 56.2 %**

As shown in Table 4-1, under the Project-Related VMT scenario Alternative 2 achieves approximately 38 to 40 percent reduction of ROG and NO_x from business-as-usual mobile-only annual emissions. Under the Cumulative VMT scenario, Alternative 2 achieves about a 53 to 56 percent reduction in ROG and NO_x. Percent reduction was calculated per SMAQMD Guidance as follows:

Percent Reduction = [(BAU emissions – Mitigated Emissions) / BAU Emissions] x 100

The difference between BAU emissions and the proposed project emissions is related to the difference in vehicle travel. The VMT projected in the Traffic Study under the Project-Related scenario for Alternative 2 as proposed is about 43 percent less than the VMT calculated by CalEEMod for BAU; and under the Cumulative VMT scenario the VMT projected for Alternative 2 as proposed is about 61 percent less than the VMT calculated by CalEEMod for BAU. The reduction in vehicle travel and emissions of NO_x and ROG are accomplished through a large number of Jackson Township project design features proposed by the Applicant. The features that reduce emissions include, but are not limited to, those listed immediately below. Where applicable, the related CAPCOA[8] greenhouse gas mitigation measures (T-xx), the SMAQMD[9] land use emission reduction measures (LUT-xx), and the Sacramento County Revised Final Draft Community Wide Climate Action Plan (CAP)[10] measures (GHG-xx) are noted. However, the CAPCOA, SMAQMD, and Sacramento County emission reduction percentages for the noted measures were not used, rather the Traffic Study VMT was used to calculate emissions. Note that

KLEINFELDER 707 17th Street, Suite 3000, Denver, CO 80202 p | 303.237.6601 f | 303.237.6602

the Traffic Study is SMAQMD pre-requisite measure TS – Traffic Study. Appendix H includes a land use diagram and exhibits supporting the VMT reduction measures incorporated into the Traffic Study. The FEIR contains additional supporting exhibits.

LOCATION (T-1, T-2, GHG-22):

- Project is located in a suburban center within approximately 10 miles of the Sacramento downtown central business district and less than 5 miles from other existing high-density commercial/job center areas (LUT-2 and LUT-3).
- Project is located adjacent to other planned developments such that single-use trips are minimized, i.e., there are more pass-by and diverted trips (LUT-3 and LUT-4).

DENSITY/MIX (T-1, T-2, T-3, T-4, GHG-22):

- Project provides a compact mix of land uses in close proximity to each other with a highly connected street and trail network (LUT-3).
- Project design is for high and medium density housing for over half of the total project dwelling units (LUT-1).
- Housing density is better than 9.5 dwelling units per acre (LUT-1).
- Project includes below market rate housing (LUT-6).
- Approximately 15 percent of the total commercial square footage is dedicated to a mixed-use facility that combines residences and commercial/retail uses (LUT-3).

INTERNAL PROXIMITY (T-31-A, GHG-15, GHG-22):

- Most residential units are within 1,320 feet (one-quarter mile) of a neighborhood park, open space, school, and/or bicycle/pedestrian trail (LUT-3).
- Most residential units are less than one-half mile from shopping and services (LUT-4).
- Project design includes locating at least four schools within the project boundaries such that most students can walk to a local school (LUT-3 and LUT-4).
- Project design includes at least eight parks within the project boundaries such that residents can walk/bike to enjoy the parks (LUT -3 and LUT-4).

© 2022 Kleinfelder

MULTI- MODAL EFFICIENCY (T-10, T-17, T-18, T-29, T-25, T-26, T-32, T-37, T-47, GHG-14, GHG-17):

- Project design is based on a network of streets in a grid pattern (LUT-8).
- Project design includes access to high frequency bus service that connects to the Watt/Manlove light rail station (LUT-5).
- Bus routes are signalized in order to avoid traffic delays (T-27).
- Project design promotes a multi-modal system that makes public transit, walking, and bicycling viable and attractive travel choices for residents and employees. Features include:
    - Adequate bike parking at non-residential locations, including the transit center and park and ride locations (T-34, T-47).
    - Showers/lockers and other end of trip facilities at non-residential buildings (T-10).
    - Long-term bike parking facilities (T-34, T-47).
- Project includes an extensive pedestrian path and trail system that is convenient and accessible from homes, school, parks, employment, and shopping (LUT-8).
- Pedestrian and bike paths minimize any barriers to pedestrian/bicycle use, (e.g., fences, berms and other impediments are eliminated where possible) (LUT-8, T-18, T-20).

TRANSIT SUPPORTIVE (T-3, T-5, T-6, T-9, T-25, T-27, T-28, T-32, T-38; GHG-14, GHG-22):

- Project includes an on-site transit center and park and ride facilities along the designated transit route of Jackson Highway (LUT-5, T-3).
- Project subsidizes bus rapid transit lanes on Jackson Highway (T-27).
- Project funding and design will result in bus headways of 15 minutes or better (T-26).
- Project includes joining a TMA funded through assessments. Although the project will include a TMA, no VMT reduction from the TMA has been calculated or included in the Traffic Study.
- Project includes assessments for regional transportation improvements (T-27).

4.2 ADDITIONAL QUANTIFIED TRANSPORTATION MITIGATION

In addition to all of the mitigation measures incorporated into the Traffic Study, there are additional transportation mitigation measures that are part of the proposed Jackson Township Alternative 2 project. The benefit of these additional measures was documented in a memorandum prepared by Kimley-Horn dated August 4, 2022 (the K-H Memo) and shown in Appendix F.

© 2022 Kleinfelder

KLEINFELDER 707 17th Street, Suite 3000, Denver, CO 80202 p | 303.237.6601 f | 303.237.6602

The additional measures quantified in the K-H Memo and the percentage reduction in VMT are shown in Table 4-2. The measures are separated by those that benefit residential-related transportation (VMT per capita) and those that benefit employee-related transportation (VMT per employee). Where applicable, the CAPCOA mitigation measure (T-xx) is also noted in the Table. The K-H Memo in Appendix F describes each mitigation measure in detail.

CAPCOA Measure T-6, Mandatory Trip Reduction Program, is normally applied as a Project/Site-scale measure and thus is not combinable with the Plan/Community-scale measures T-18 and T-22. However, in the case of the Jackson Township, measure M-3 has been created that is allowed at the Plan/Community scale level and consists of a community-wide mandatory trip reduction program that will be required of all residents and employers within Jackson Township. Under this program, both residential and non-residential property will be subject to an annual County Service Area (CSA) fee that will be used for the TMA services and programs. Rideshare and carpool programs will be part of the M-3 measure. As measure M-3 is considered a Plan/ Community measure it can be combined with T-18 and T-22.

CAPCOA establishes emission reduction caps on measures for which CAPCOA establishes a percent reduction (i.e., the T-xx measures) calculation. The cap for measures T-5 through T-13 is 45 percent and the cap for measures T-18 through 22-C is 10 percent. As shown in Table 4-2, the caps are not exceeded.

Table 4-2: Additional Transportation Mitigation Included in the Alternative 2 Project

Measure	VMT per Capita % Reduction	VMT per Employee % Reduction
Mandatory Community-Wide TMA Participation (M-3)	- 2.08 %	- 12.3 %
Electric Bike share (T-22-B)	- 0.05 %	NA
Electric Scooter Share (T-22-C)	- 0.06 %	NA

Total Percent Reduction*	**- 3.0 %**	**- 12.3 %**
Total Percent Reduction for Combined Measures T-8 through 22-C	- 1.1 %	NA

* Reported total reduction may not sum to table entries due to roundoff differences.

The percentage benefit on total VMT (and thus emissions) of the measures shown in Table 4-2 is not simply the sum of residential (VMT per capita) and employee (VMT per employee) percentages because

© 2022 Kleinfelder www.kleinfelder.com
KLEINFELDER 707 17th Street, Suite 3000, Denver, CO 80202 p | 303.237.6601 f | 303.237.6602

some of the measures that reduce residential VMT also reduce employee VMT. Thus, in order to calculate the benefit of these measures on total VMT forecast by the Traffic Study, the VMT reduction (in terms of VMT, not percentage) was calculated for residents and employees separately and then added together. The calculations are shown in Tables 4-3 and 4-4. The percent VMT reduction shown in Tables 4-3 and 4-4 translates directly into a similar percent reduction in ROG and NO_x emissions as shown in Table 4-5.

Table 4-3: Calculation of VMT Benefit from Additional Transportation Mitigation for Alternative 2 Project-Related VMT

Index	Measure	Residents	Employees
1	Daily VMT per capita/employee (from K-H Memo Table 1)	17.46	16.48
2	Number of Residents/Employees (from K-H Memo Page 3)	15,893	7,130
3	Residential and Employee VMT (Row 1 x Row 2)	277,492	117,502
4	Annual VMT (Row 3 x 320 days/year)	88,797,440	37,600,768

4.3 ADDITIONAL QUANTIFIED NON-TRANSPORTATION RELATED EMISSION REDUCTIONS

The previous AQMP and GHGRP Revision 2 prepared in May 2019 included the following non-transportation mitigation measures for which emission reductions were quantified:

- High efficacy public outdoor lighting (GHGRP).
- Energy efficient appliances (GHGRP).
- Energy efficient boilers (AQMP and GHGRP).
- Residential electric hot water heaters (AQMP and GHGRP).
- Non-residential electric vehicle charging stations (AQMP and GHGRP).
- Residential electric vehicle charging stations (AQMP and GHGRP).

© 2022 Kleinfelder www.kleinfelder.com
KLEINFELDER 707 17th Street, Suite 3000, Denver, CO 80202 p | 303.237.6601 f | 303.237.6602

However, since May 2019, SMAQMD and Sacramento County adopted Best Management Practices (BMPs) to reduce GHG emissions. BMP1 eliminated natural gas infrastructure for new projects and BMP2 requires all projects to meet CalGreen Tier 2 standards except EV-capable spaces shall be EV-ready. The newly adopted BMPs were the impetus for Revision 3 to the GHGRP (prepared in January 2021). Furthermore, after May 2019 SMUD committed to 100 percent renewable energy by 2030.

Although the BMPs are not optional, credit for ROG and NO_x emission reductions that would occur under the BMPs are creditable because applicants can choose not to implement the BMPs and achieve emission reductions equivalent to the BMPs through other measures. However, because SMUD committed to 100 percent renewable energy, additional ROG and NOx emission reductions from electricity generation cannot be taken. This eliminates credits taken in the previous AQMP from high efficacy public outdoor lighting and electric appliances. There will be non-mobile emission reductions from elimination of natural gas infrastructure, which would eliminate emissions from natural gas-fueled appliances, boilers, and residential hot water heaters. Credit for these reductions is not shown herein and would result in greater total NO_x and ROG reductions.

Credit is shown for non-residential and residential EV charging stations. Revision 3 to the GHGRP committed to installing a total of 690 non-residential EV charging stations and to pre-wiring a total of 77 percent of multi-family housing for EV charging. (BMP2 requires only 20 percent of multi-family housing be pre-wired). As part of Revision 4 to the GHGRP, the Applicant has committed to installing another 115 non-residential EV charging stations for a total of 805 stations serving 1,610 parking spaces. ROG and NO_x emission reductions resulting from this additional mitigation are calculated as described below and shown in Appendix G.

4.3.1 Non-residential Electric Vehicle Charging Stations

A total of 805 non-residential EV charging stations will be installed at Jackson Township parking spaces at commercial, retail, office, and school parking lots. Each electric vehicle charging station has two connections, so, as incorporated in Appendix G, a total of 1,610 parking spaces will be served by the 805 EV charging stations.

For the emission reduction calculation, it was assumed that each EV connection would be used an average of 4 hours per day at a charging rate of 6 kWh per hour. The 4-hour per day value is based on the average observed actual session length (one vehicle in a session) of 4 hours and 19 minutes for the period April 21, 2009 through June 23, 2022 at EV charging stations located at the Applicant's current properties. The 4 hours per EV charging station is a conservatively low value because it is likely that the

© 2022 Kleinfelder www.kleinfelder.com
KLEINFELDER 707 17th Street, Suite 3000, Denver, CO 80202 p | 303.237.6601 f | 303.237.6602

stations will be used by more than one vehicle per day (so total charging at the station will be multiples of 4 hours). Nevertheless, it was assumed that charging would occur at the stations only 4 hours per day. The VMT from the amount of electrical energy charged would offset an equivalent VMT of gasoline-fueled driving. EMFAC 2021 includes electric efficiency of EVs (see Appendix G) and was used in the emission calculations. Only light duty autos and light and medium duty trucks were included in the calculations assuming that only those vehicle types would use the non-residential charging stations in the Jackson Township parking lots. The non-residential EV charging stations offset about 43.3 million miles of gasoline-fueled travel. EMFAC 2021 was used to determine emission factors (grams per mile) for calendar year 2040 from those same gasoline-fueled vehicle types (see Appendix G).

4.3.2 Residential Electric Vehicle Charging Stations.

All residential low density and medium density single-family dwelling units (3,540 dwelling units for Alternative 2) and 20 percent of high density multi-family dwelling units (20 percent of 2,150 dwelling units) must be pre-wired for EV charging per BMP2. However, the Applicant has committed to pre-wiring an additional 57 percent of multi-family dwelling units (for a total of 77%) and credit can be taken for the entire 77% of multi-family and all of the single-family housing pre-wiring . As noted below, by 2040, most of the homeowners will take advantage of the pre-wiring and install charging stations for EVs. The following discussion and Appendix G show the calculations for the emission reductions that would result from the pre-wiring.

It is difficult to predict actual EV use 18 years into the future (calendar year 2040), because consumers choose their vehicle types based on a myriad of factors, some of which are legislatively and regulatorily driven, some are market driven, and some are individual choice. The major regulatory driver is the commitment that by calendar year 2035, one hundred percent of all new light duty vehicles (light duty autos and light duty trucks) sold in California must be zero emission vehicles (ZEV); either EV, plug-in hybrid EV (PHEV), or fuel cell electric vehicles (FCEV). In April 2022 CARB published a proposed Advanced Clean Cars II (ACC II) regulation that will require ZEVs for at least 35 percent of new light duty vehicle sales in 2026 and increasing by about 8 percentage points per year until 2035 where 100 percent of light duty vehicle sales must be ZEV[11]. The proposed regulations allow manufacturers to meet their ZEV requirement with up to 20 percent PHEVs. There is no cap on FCEVs, but CARB forecasts FCEV to be a small percentage of the ZEV fleet, with only 0.2% of ZEVs being FCEVs in 2021[12]. Accordingly, it was

[11] CARB, 2021. Advanced Clean Cars II Regulations Initial Statement of Reasons, April 12, 2022. Page 9, ES-Figure 1.

[12] Ibid. Page 19, Figure 2.

© 2022 Kleinfelder

KLEINFELDER 707 17th Street, Suite 3000, Denver, CO 80202 p | 303.237.6601 f | 303.237.6602

assumed that in 2040, 100 percent of new light duty vehicle sales would be EV or PHEV. For purposes of ACC II, CARB defines light duty vehicles as automobiles and light duty trucks with a gross vehicle weight rating of 8,500 pounds or less[13], which is equivalent to the LDA, LDT1, and LDT2 vehicle categories in EMFAC 2021 (categories based on EMFAC 2007).

To estimate the number of homes that would actually have an EV and charge it at home, the EMFAC 2021 forecast vehicle type and model year population distribution for Sacramento County in 2040 was used along with the percent ZEV requirements from the proposed ACC II. EMFAC 2021 does not account for ACC II because it includes only regulations that are in place when the model was developed. Table 4-6 shows the EMFAC 2021 forecast of the number of light duty vehicles in 2040. To estimate the number of EVs, a percent EV assumption by model year was made as follows:

- Model years 1966 to 2012: zero percent EV is assumed. EMFAC does show some EV for those model years, but the quantity is in the 0.01 percent range, thus zero was assumed.
- Model years 2013 to 2020: EMFAC percent EV is used, which is based on actual California sales data.
- Model years 2021 to 2025: 12 percent EV sales are assumed, which is the same assumption EMFAC 2021 uses for all model years after 2020.
- Model years 2026 to 2034: the percent EVs is based on the ACC II ZEV requirements, which is 35 percent in 2026 increasing by 8 percent each year.
- Model years 2035 to 2040: 100 percent EV is assumed based on the ACC II ZEV requirements.

ACC II allows up to 20 percent PHEV to provide manufacturers flexibility, but notes that the PHEV share of the market has declined in recent years[14], PHEVs will likely be more expensive than EVs and that manufacturers are not planning to use the 20 percent PHEV allowance[15]. Furthermore, ACC II requires PHEVs to have 4 to 5 times greater EV-only mileage range than current EVs[16]. ACC II also requires more convenient EV charging capability than current PHEV models[17]. All of these features encourage PHEV drivers to charge their vehicle batteries rather than relying on the auxiliary engine. So, it was assumed that if a person purchased a PHEV, they would, in fact, use their home charger (especially as it will already be pre-wired).

2017	10,888	3.7%	400	2040	39,774	100%	39,774
2018	12,282	5.3%	648			**Total**	**599,255**

Table 4-6 shows an estimated number of 599,255 EVs in 2040 in Sacramento County out of a total 934,801 light duty vehicles forecast by EMFAC, or 64.1 percent EV. It was assumed that each of single-family and multi-family home will have a light duty vehicle, and therefore, that 64.1 percent of the homes will have an EV or PHEV and will use a home charger by 2040.

The above analysis assumes that the model year distribution in 2040 does not change from that forecast by EMFAC 2021. It is possible that Sacramento County drivers will more rapidly embrace ZEV technology and replace their conventional-fueled cars more frequently than required by the ACC II regulations. But it is also possible that after 2035 drivers hold on to their conventional fueled vehicles longer because they do not want ZEVs. Considering that by 2035 consumers will have no choice but to purchase a ZEV, that all Jackson Township single-family and 77 percent of multi-family homes will be pre-wired for EV

© 2022 Kleinfelder

KLEINFELDER 707 17th Street, Suite 3000, Denver, CO 80202 p | 303.237.6601 f | 303.237.6602

charging, and that by 2040 EV charging will likely become simply a matter of plugging in a 110-volt or 220-volt cord;[18] it is reasonable to assume that residents of Jackson Township will embrace ZEVs at a higher frequency than required and the percentage of ZEVs will be greater than the 64.1 percent calculated.

The 64.1 percent value is also an underestimate because there are electrically powered medium duty trucks that will also be owned and charged at home by Jackson Township residents, but the above ACC II calculations only accounted for light duty autos and light duty trucks. But to be conservative, it was assumed that if a resident owned an electric medium duty truck, they would not purchase an EV light duty auto or light duty truck.

In light of the above, it is reasonable that residents of Jackson Township will embrace ZEVs at a much higher frequency than required and the percentage of ZEVs will be greater than the 64.1 percent calculated. Accordingly, a reasonably conservative assumption of 75 percent residential ZEVs was made

Appendix G-1 shows the calculations for the emission reductions that would result from the pre-wiring and the 75 percent actual EV assumption. To calculate the emission reduction, an average light duty VMT per Jackson Township household was first calculated from the Project-Related VMT and from the Cumulative VMT scenarios and the EMFAC forecasted VMT for Sacramento County that 77.1 percent of total VMT is produced in 2040 by light duty autos and trucks. Then 75 percent of the light duty vehicle VMT associated with the pre-wired households for which credit can be taken was calculated (i.e., 75 percent of all single-family housing plus 75 percent of 77 percent of the 2,150 multi-family dwelling units times the average light duty VMT per household) to represent the amount of electric VMT that would offset conventionally fueled VMT. The amount of emission reductions was calculated using EMFAC 2021 emission factors for only gasoline and diesel-fueled light duty automobiles and light and medium duty trucks.

Table 4-7 summarizes the magnitude of the emission reductions achieved through the 805 non-residential EV charging stations and the single-family and multi-family pre-wiring.

[18] Ibid.

© 2022 Kleinfelder www.kleinfelder.com
KLEINFELDER 707 17th Street, Suite 3000, Denver, CO 80202 p | 303.237.6601 f | 303.237.6602

Table 4-7: Emission Reductions from Non-Residential and Residential EV Charging Stations

	ROG	NO_x
805 Non-residential EV Charging Stations (Applies to both Project-Related and Cumulative VMT Scenarios)	- 0.20 tpy	- 1.17 tpy
77% Pre-wiring for EV Chargers for Project-Related VMT	- 0.29 tpy	- 1.71 tpy
Total for Project-Related or Cumulative VMT	**- 0.49 tpy**	**- 2.88 tpy**
77% Pre-wiring for EV Chargers for Cumulative VMT	- 0.20 tpy	- 1.16 tpy
Total for Cumulative VMT	**- 0.40 tpy**	**- 2.33 tpy**

Note that the 2022 version of California Green Building Code (CCR Title 24), effective January 1, 2023, also requires EV chargers for non-residential and multi-family housing. Should Title 24 mandate more EV chargers than committed to herein, the number of EV chargers will be increased to meet the Title 24 requirements. If this occurs, the emission reductions will be greater than shown in Table 4-7.

4.4 EMISSION REDUCTIONS ASSOCIATED WITH THE SACRAMENTO RACEWAY

The Jackson Township Specific Plan includes land owned and operated by the Sacramento Raceway. If Jackson Township is completely developed, the Sacramento Raceway will cease operations and emissions associated with the Raceway will be eliminated. In April 2021, a study was conducted to assess the potential health effects of Raceway operations[19]. This study estimated the ROG and NO_x emissions from the Raceway, including spectators, race vehicle transport, and racing vehicle emissions. The study found annual ROG emissions of 1,888 pounds per year (lb/yr) or 0.94 tpy and annual NO_x emissions of 5,236 lb/yr or 2.62 tpy associated with Raceway operations.

4.5 ADDITIONAL NON-QUANTIFIED MITIGATION

The project includes a number of additional features that also reduce potential emissions, but the benefit of those measures is not incorporated into the emission estimates and calculated reductions. Among the additional measures proposed by the Applicant are the following. It is recognized that some of the following measures only indirectly reduce ROG and NO_x, as they are primarily GHG reduction measures.

[19] Kleinfelder, 2021. *Air Quality Health Effects Assessment of the Sacramento Raceway, April 19, 2021.*

© 2022 Kleinfelder www.kleinfelder.com
KLEINFELDER 707 17th Street, Suite 3000, Denver, CO 80202 p | 303.237.6601 f | 303.237.6602

- An over-statement of VMT because the VMT per resident and per employee values do not account for the mutually beneficial interaction of the Jackson Township Specific Plan with other existing and/or approved land uses that result in reduced VMT. For example, Jackson Township schools and retail will serve not only Jackson Township residences but existing residences in the area, thus reducing the distance traveled by existing persons.
- An over-statement of employee VMT because the VMT per employee does not account for the current shift to work-from-home and remote working/learning that is occurring.
- Low flow bathroom fixtures, kitchen fixtures, showers, and toilets in all residential units and commercial buildings.
- Reduced square footage of residential turf due to the increased housing density.
- Water efficient irrigation systems and water efficient landscaping for the non-residential areas.
- Some of the existing homes located within the Jackson Township Specific Plan will be replaced with more modern and energy efficient homes.

And most significantly, all of the mobile-source emission estimates are over-stated and the benefit of EV charging stations under-stated because they do not account for the much larger electric vehicle penetration and other changes in transportation that will have to occur if California is to reach the 2050 GHG reduction goals. For example, the new (April 1, 2022) Federal passenger car and light duty truck fleet wide average fuel economy standard of approximately 49 miles per gallon (mpg) for new vehicles by calendar year 2026 has not been accounted for. Thus, prior to full development of Jackson Township in 2040 there will be greater ROG and NO_x emission reductions and much lower total emissions than stated herein.

© 2022 Kleinfelder www.kleinfelder.com
KLEINFELDER 707 17th Street, Suite 3000, Denver, CO 80202 p | 303.237.6601 f | 303.237.6602

5 PARTICULATE MATTER REDUCTIONS

The mitigation measures that reduce NO_x and ROG emissions also greatly reduce operational particulate matter (PM) emissions because for the Jackson Township Specific Plan, NO_x, ROG, and PM emissions are all associated with the same sources.

Operational annual PM emissions associated with BAU were estimated with the CalEEMod emissions model and compared to PM emissions for Alternative 2 for the Project-Related and Cumulative VMT scenarios. The CalEEMod reports are shown in Appendix C for the proposed project and Appendix D for BAU. The results are shown in Table 5-1 for fugitive and exhaust PM_{10} and $PM_{2.5}$. PM_{10} is particulate matter with a mean aerodynamic diameter of 10 microns or less and $PM_{2.5}$ is particulate matter with a mean aerodynamic diameter of 2.5 microns or less. Fugitive PM emissions are primarily due to re-suspension of road dust by vehicle traffic. Exhaust PM emissions are associated with combustion of fossil fuels in both mobile and non-mobile equipment.

Table 5-1: Comparison of BAU and Jackson Township PM Annual Emissions for Alternative 2

VMT Scenario	Fugitive PM_{10} (tpy)	Exhaust PM_{10} (tpy)	Total PM_{10} (tpy)	Fugitive $PM_{2.5}$ (tpy)	Exhaust $PM_{2.5}$ (tpy)	Total $PM_{2.5}$ (tpy)
BAU Original Project Annual Emissions	78.2	1.1	79.4	20.9	1.1	22.0
Project-Related VMT Annual Emissions	44.6	1.0	45.6	11.9	1.0	12.9
Percent Reduction for Project-Related VMT from BAU	**- 43.0%**	**- 9.1%**	**- 42.6%**	**- 43.1%**	**- 9.1%**	**- 41.4%**
Cumulative VMT Annual Emissions	30.2	1.0	31.1	8.1	1.0	9.0
Percent Reduction for Cumulative VMT from BAU	**- 61.4%**	**- 9.1%**	**- 60.8%**	**- 61.2%**	**- 9.1%**	**- 59.1%**

Note that the total PM may not exactly equal the sum of fugitive plus exhaust emissions due to round off differences.

There are no thresholds for PM reductions, but the mitigation built into the proposed project results in a reduction of total PM emissions ranging from 41 to 61 percent from BAU. The reduction is due to reduced vehicle travel that result from the mitigation measures designed into the Project. The VMT projected in the Traffic Study for Alternative 2 as proposed is about 43 to 61 percent less than the VMT calculated by CalEEMod for BAU. The reduction in vehicle travel and emissions of PM are the same measures that result in large reductions of NO_x and ROG emissions. The features that reduce emissions

© 2022 Kleinfelder

include, but are not limited to, those listed immediately below. Where applicable, the related CAPCOA[20] greenhouse gas mitigation measures (T-xx), the SMAQMD[21] land use emission reduction measures (LUT-xx), and the Sacramento County Revised Final Draft Community Wide Climate Action Plan (CAP)[22] measures (GHG-xx) are noted. However, the CAPCOA, SMAQMD, and Sacramento County emission reduction percentages for the noted measures were not used, rather the Traffic Study VMT was used to calculate emissions.

LOCATION (T-1, T-2, GHG-22):

- Project is located in a suburban center within approximately 10 miles of the Sacramento downtown central business district and less than 5 miles from other existing high-density commercial/job center areas (LUT-2 and LUT-3).
- Project is located adjacent to other planned developments such that single-use trips are minimized, i.e., there are more pass-by and diverted trips (LUT-3 and LUT-4).

DENSITY/MIX (T-1, T-2, T-3, T-4, GHG-22):

- Project provides a compact mix of land uses in close proximity to each other with a highly connected street and trail network (LUT-3).
- Project design is for high and medium density housing for over half of the total project dwelling units (LUT-1).
- Housing density is better than 9.5 dwelling units per acre (LUT-1).
- Project includes below market rate housing (LUT-6).
- Approximately 15 percent of the total commercial square footage is dedicated to a mixed-use facility that combines residences and commercial/retail uses (LUT-3).

INTERNAL PROXIMITY (T-31-A, GHG-15, GHG-22):

- Most residential units are within 1,320 feet (one-quarter mile) of a neighborhood park, open space, school, and/or bicycle/pedestrian trail (LUT-3).
- Most residential units are less than one-half mile from shopping and services (LUT-4).

[20] CAPCOA, 2021. Op cit.

[21] SMAQMD, 2021, Op cit.

[22] Sacramento County, 2022. Op. cit.

© 2022 Kleinfelder www.kleinfelder.com
KLEINFELDER 707 17th Street, Suite 3000, Denver, CO 80202 p | 303.237.6601 f | 303.237.6602

- Project design includes locating at least four schools within the project boundaries such that most students can walk to a local school (LUT-3 and LUT-4).
- Project design includes at least eight parks within the project boundaries such that residents can walk/bike to enjoy the parks (LUT -3 and LUT-4).

MULTI- MODAL EFFICIENCY (T-10, T-17, T-18, T-29, T-25, T-26, T-32, T-37, T-47, GHG-14, GHG-17):

- Project design is based on a network of streets in a grid pattern (LUT-8).
- Project design includes access to high frequency bus service that connects to the Watt/Manlove light rail station (LUT-5).
- Bus routes are signalized in order to avoid traffic delays (T-27).
- Project design promotes a multi-modal system that makes public transit, walking, and bicycling viable and attractive travel choices for residents and employees. Features include:
    - Adequate bike parking at non-residential locations, including the transit center and park and ride locations (T-34, T-47).
    - Showers/lockers and other end of trip facilities at non-residential buildings (T-10).
    - Long-term bike parking facilities (T-34, T-47).
- Project includes an extensive pedestrian path and trail system that is convenient and accessible from homes, school, parks, employment, and shopping (LUT-8).
- Pedestrian and bike paths minimize any barriers to pedestrian/bicycle use (e.g., fences, berms and other impediments are eliminated where possible) (LUT-8, T-18, T-20).

TRANSIT SUPPORTIVE (T-3, T-5, T-6, T-9, T-25, T-27, T-28, T-32, T-38; GHG-14, GHG-22):

- Project includes an on-site transit center and park and ride facilities along the designated transit route of Jackson Highway (LUT-5, T-3).
- Project subsidizes bus rapid transit lanes on Jackson Highway (T-27).
- Project funding and design will result in bus headways of 15 minutes or better (T-26).
- Project includes joining a Transportation Management Association (TMA) funded through assessments. Although the project will include a TMA, no VMT reduction from the TMA has been calculated or included in the Traffic Study.
- Project includes assessments for regional transportation improvements (T-27).

Elimination of the Sacramento Raceway will also reduce PM_{10} emissions by 3745 lb/yr (1.9 tpy) and $PM_{2.5}$ emissions by 977 lb/yr (0.5 tpy).

© 2022 Kleinfelder

6 CONSTRUCTION EMISSIONS

Although not part of an AQMP, the SMAQMD requests that construction emissions of ROG, NO_x, and PM be estimated where possible. To estimate construction emissions CalEEMod was run for Alternative 2 with default parameters. The default parameters were then adjusted as needed to match project constraints.

For the CalEEMod emission model, construction was assumed to start on January 1, 2025 and be complete by December 31, 2039. When CalEEMod was run with default parameters, the model estimated total construction duration of 18,765 days. That is obviously an over-estimate. The planned construction duration is 3900 days (260 days per year times 15 years), or 21 percent of the default. Accordingly, the individual CalEEMod default construction phase durations were adjusted by a factor of approximately 0.21 and such that the total construction duration (not including architectural coating) equaled 3900 days. Architectural coating was assumed to occur during the entire construction period. The resulting adjusted construction durations are shown in Table 6-1.

Table 6-1: Default and Adjusted Construction Duration for Alternative 2

Construction Phase	Default Duration (days)	Adjusted Duration (days)	Rationale for Adjustment
Demolition	900	0	There is essentially no demolition required at the proposed location
Site Preparation	540	125	Applied factor of 0.23 to reflect the ratio of planned versus default total construction duration
Site Grading	1,395	322	
Building Construction	13,950	3,224	
Paving	990	229	
Architectural Coating	990	3,224	Assumed architectural coating could occur over approximately the same duration as building construction

The CalEEMod default construction worker and vendor trip frequencies were also adjusted to match the proposed project as shown in Table 6-2. The trip lengths were not adjusted.

© 2022 Kleinfelder

KLEINFELDER 707 17th Street, Suite 3000, Denver, CO 80202 p | 303.237.6601 f | 303.237.6602

Table 6-2: Default and Adjusted Worker and Vendor Construction Trips for Alternative 2

Construction Phase	Default Trips per Day		Adjusted Trips per Day		Rationale for Adjustment
	Worker	Vendor	Worker	Vendor	
Demolition	15	0	0	0	There is essentially no demolition required at the proposed location
Site Preparation	18	0	18	0	No change
Site Grading	20	0	20	0	No change
Building Construction	6,636	2,167	4,193	1,018	Trip frequencies are a function of the number of dwelling units and square feet of building. CalEEMod trip frequency functions and planned dwelling units/square footage were used to calculate project-specific trip frequencies
Paving	15	0	15	0	No change
Architectural Coating	1,327	0	839	0	Per CalEEMod, assumed architectural coating trips are 20% of Building Construction

Finally, the acreage of site preparation and grading were changed from the default to reflect the project-specific acreage of land that would be prepared and graded. It was assumed that all of the project area would be prepared and graded except for the parks, open space, and agricultural area: 907.6 acres prepared and graded for Alternative 2. In the absence of a detailed construction plan, the remainder of the construction parameters in CalEEMod were left at their default settings.

Table 6-3 lists the CalEEMod default numbers of equipment and hours of usage for each construction phase. The data in Table 6-3 were provided to a design engineer/construction manager for reasonableness evaluation. He concluded that the default parameters were conservative over-estimates of the duration and/or numbers and usage of construction equipment. Specifically, he concluded the following[23]:

- There is essentially no Demolition, consistent with Table 6-2.
- Multiple teams will likely be working on Site Preparation simultaneously, and thus on average the modeled 7 pieces of equipment operating a total of 8 hours per day, are sufficient to complete the site preparation in the modeled 0.5 years shown in Table 6-2.
- The modeled equipment list for Grading is typical and sufficient to complete grading in the modeled time period (1.2 years). More equipment could possibly be used to shorten the time

[23] *Personal Communication to Kleinfelder, Mr. Steve AuClair, PE, April 13, 2019.*

© 2022 Kleinfelder www.kleinfelder.com

period to less than 1.2 years; but given the limited amount of grading equipment in the Sacramento area, the modeled duration, equipment numbers and usage are reasonable.

- The default equipment usage rates for Building Construction equipment are an over-estimate. For example, a crane would not normally be used continuously for 7 hours per day; it would be used to load materials for a brief period and then left idle for the rest of the day. Thus, the emissions for Building Construction are likely over-stated.
- The amount of Paving equipment and use duration shown in Table 6-2 is a large over-estimate.
- Architectural Coating is an on-going activity during Building Construction as there are coating applications other than the finish coats on building surfaces; thus, assuming a duration equivalent to the Building Construction duration is reasonable.

Table 6-3: CalEEMod Default Construction Equipment and Hours of Usage

Construction Phase	Equipment List	Number of Pieces of Equipment	Usage Hours Per Day	Total Construction Days (Years)*
Demolition				
There is essentially no demolition needed				
Site Preparation				
	Rubber Tired Dozers	3	8	125 (0.5 yrs)
	Tractors/Loaders/Backhoes	4	8	125 (0.5 yrs)
Grading				
	Excavators	2	8	322 (1.2 yrs)
	Graders	1	8	322 (1.2 yrs)
	Rubber Tired Dozers	1	8	322 (1.2 yrs)
	Scrapers	2	8	322 (1.2 yrs)
	Tractors/Loaders/Backhoes	2	8	322 (1.2 yrs)
Building Construction				
	Cranes	1	7	3,224 (12.4 yrs)
	Forklifts	3	8	3,224 (12.4 yrs)
	Generator Sets	1	8	3,224 (12.4 yrs)
	Tractors/Loaders/Backhoes	3	7	3,224 (12.4 yrs)
	Welders	1	8	3,224 (12.4 yrs)
Paving				
	Pavers	2	8	229 (0.9 yrs)

Table 6-4 below presents the construction emissions compared to the current (as of April 2022) SMAQMD significance thresholds[24]. The Alternative 2 values in Table 6-4, along with their corresponding season or year of the maxima, were taken from the CalEEMod reports in Appendix E and depict the maximum annual and maximum daily emissions during the construction period. All of the emissions are less than the significance thresholds, except for daily NO_x that has no threshold.

Table 6-4: Maximum Daily Construction Emissions Compared to Significance Thresholds

	ROG (lb/day)	NO_x (lb/day)	Total PM_{10} (lb/day)	Total PM_{10} (tpy)	Total $PM_{2.5}$ (lb/day)	Total $PM_{2.5}$ (tpy)
Alternative 2 Emissions	57.3 (Summer)	68.5 (Winter)	45.4 (Winter)	5.7 (2027)	12.9 (Winter)	1.6 (2027)
SMAQMD Significance Thresholds	None	85	80	14.6	82	15
Exceed Threshold?	**N/A**	**No**	**No**	**No**	**No**	**No**

REVISION 4 - UPDATED GREENHOUSE GAS REDUCTION PLAN FOR THE PROPOSED JACKSON TOWNSHIP SPECIFIC PLAN

1 EXECUTIVE SUMMARY

1.1 INTRODUCTION

Tsakopoulos Investments (the Applicant) is proposing the Jackson Township Specific Plan (Jackson Township) encompassing approximately 1,391 acres of land located in southeastern Sacramento County, east of Excelsior Road, north of Jackson Highway, and west of Eagles Nest Road. The proposed project is located approximately ten miles southeast of the Sacramento central business district. The Jackson Township project is a mixed-use development that includes a mix of different housing types and commercial and retail land uses. The Proposed Project (formerly referred to as the California Environmental Quality Act, CEQA, Alternative 2) is evaluated in this report.

In August 2015, an Air Quality Mitigation Plan (AQMP) and a Greenhouse Gas Reduction Plan (GHGRP) were prepared for the Jackson Township Specific Plan. The 2015 AQMP/GHGRP was based on then-current emission models and Guidance and was for the Jackson Township project-alone scenarios. Since that time, there have been new models, data, and Guidance published, and the Sacramento County Planning Division (PER) wishes to also evaluate the CEQA cumulative scenarios. Project-alone scenarios, referred to herein as Project-Related vehicle miles traveled (VMT), assume that Jackson Township is the only project developed in the area. Cumulative scenarios (Cumulative VMT) are based on the assumption that there will be other projects developed in the area, and thus the VMT associated with Jackson Township is less because drivers can make combined trips (e.g., stopping by a supermarket on the way home from work). The proposed land uses for the Jackson Township Project-Related scenario are the same as for the Cumulative scenario; only the VMT is different.

In February 2019 an update to the August 2015 AQMP/GHGRP that was based on the then current (as of January 2019) models, data, and Guidance was submitted to PER and the Sacramento Metropolitan Air Quality Management District (SMAQMD). In March 2019, the SMAQMD requested that the Applicant submit a revision to the February 2019 AQMP/GHGRP to refine some of the mitigation calculations, and Revision 1 was submitted April 16, 2019. In May 2019, SMAQMD requested some additional changes to further clarify some of the mitigation measures, and Revision 2 to the AQMP/GHGRP was submitted. Then on November 25, 2020, Revision 3 to the GHGRP (alone, not the AQMP) was prepared and

© 2022 Kleinfelder www.kleinfelder.com
KLEINFELDER 707 17th Street, Suite 3000, Denver, CO 80202 p | 303.237.6601 f | 303.237.6602

submitted in response to comments made on the Draft Environmental Impact Report and newly adopted GHG thresholds and standards. In January 2021, GHGRP Revision 3a was prepared to address the GHG significance thresholds published by the SMAQMD[1] and adopted by the County of Sacramento on December 16, 2020. Revision 3a incorporated comments made by the SMAQMD and PER on the Revision 3 GHGRP.

The December 2020 SMAQMD GHG thresholds (which are still in effect as of April 2022) require that the Jackson Township Specific Plan Alternative 2 meet both Tier 1 and Tier 2 Best Management Practices (BMPs). Those BMPs are addressed below in Section 1.2. The third BMP was promulgated considering implementation of Senate Bill 743 (SB 743) requirements by the local jurisdiction, the County in this case. SB 743 states that transportation impacts under CEQA may no longer be measured with automobile delay and level of service (LOS) after July 1, 2020. SB 743 is designed to encourage reduction of GHG emissions from transportation, and since the third BMP published by SMAQMD is aimed at meeting SB 743, the thresholds established by the third BMP for the project will be referred to as the SB 743 'target level.'

Since January 2021 there have been a number of additional changes to the traffic and emission models, and updated Guidance has been published by the California Air Pollution Control Officers Association (CAPCOA) and SMAQMD. Thus, in April through June 2022, revised AQMP and GHGRP documents were prepared. The plans were separated into two individual documents, and this revised GHGRP is termed Revision 4.

This Revision 4 to the GHGRP addresses the following:

- Updated SMAQMD Guidance for AQMP and GHGRPs (Version 4.3)[2].
- Updated CAPCOA mitigation measures (CAPCOA 2021 Handbook)[3].
- New California Emissions Estimator Model (CalEEMod) version (Version 2020.4.0).
- Only the Proposed Project (Alternative 2) now requires evaluation.

© 2022 Kleinfelder www.kleinfelder.com
KLEINFELDER 707 17th Street, Suite 3000, Denver, CO 80202 p | 303.237.6601 f | 303.237.6602

- Updated 2022 Traffic Study completed by PER with more current Project-Related and Cumulative VMT than examined in 2019.
- Change in Operational Year to 2040 (from 2035) and start of construction to 2025 (from 2020).
- Additional transportation related VMT reductions that were not analyzed as part of the updated Traffic Study.
- Additional non-transportation mitigation commitments made in the previous GHGRPs.
- Additional mitigation beyond that included in previous GHGRPs.

Kleinfelder, Inc. (Kleinfelder) prepared this GHGRP consistent with SMAQMD Guidance and PER direction. PER staff reviewed the calculations, methodology, and document.

For the GHGRP, the SB 743 requirement that new development VMT per resident and per employee are less than 85 percent of regional values was used. The VMT per resident and per employee are the metrics that must be used to determine significance under CEQA. If the SB 743 metrics cannot be met, then additional offsetting GHG emission reductions must be implemented to achieve an equivalent reduction to the SB 743 target level. This GHGRP demonstrates that the Jackson Township Specific Plan GHG emissions are less than significant. In addition, the GHGRP provides an assessment of total (mobile plus non-mobile) GHG emissions as a point of information and shows that with the planned mitigation, net GHG emissions are less than zero (a net positive benefit for GHG emissions).

VMT per resident and per employee were calculated as part of the 2022 Traffic Study prepared for PER. Mobile GHG emissions were calculated with VMT data provided in the Traffic Study and emission factors (gram per mile, g/mile) obtained from the current (as of April 2022) EMFAC 2021 (Version 1.0.1) emissions model. Non-mobile and construction GHG emissions were calculated from the current (as of April 2022) version of CalEEMod (Version 2020.4.0). The CalEEMod model uses details regarding specific land uses (e.g., strip mall) and various additional parameters (e.g., vehicle trip frequency and length associated with a land use and emission factors for vehicles) to calculate annual GHG emissions (metric tons per year, MT/yr).

For Jackson Township, in early 2022, PER had a comprehensive Traffic Study completed that calculated the amount of traffic associated with both Jackson Township and other Jackson Highway projects and included induced VMT that is the result of additional vehicle travel that is the result of improved roads in the proposed Jackson Township area, but the VMT is not caused by the project itself. The Traffic Study analyzed effects of Jackson Township and the other projects on a regional Project-Related and a regional Cumulative basis, starting with the existing conditions and then adding Jackson Township and the other

© 2022 Kleinfelder

KLEINFELDER 707 17th Street, Suite 3000, Denver, CO 80202 p | 303.237.6601 f | 303.237.6602

projects. The Traffic Study also accounted for most of the large number of design features incorporated into Jackson Township that greatly reduce the amount of VMT. These features include, but are not limited to, the location, density/mix of land uses, internal proximity, multi-modal efficiency, and transit supportive measures. Although the Traffic Study accounted for most of the VMT mitigations included in the Project, it did not account for all. The added benefit of these study-omitted measures is evaluated after the Traffic Study and are discussed in Section 2.2.

For non-mobile and construction GHG emissions, Kleinfelder ran CalEEMod with detailed land uses for Alternative 2, including parking lot areas, as provided by the Applicant. The detailed land uses entered into CalEEMod are discussed in Section 3. VMT was not used in the CalEEMod runs because mobile GHG emissions are calculated from the Traffic Study and EMFAC 2021 emission factors.

1.2 SB 743 TRANSPORTATION TARGET LEVEL

The SMAQMD GHG rules for large projects such as the Jackson Township Specific Plan require implementation of three BMPs:

- BMP 1 specifies that projects shall be designed and built without natural gas infrastructure.
- BMP 2 specifies that projects shall meet current CalGreen Voluntary Tier 2 standards, except that all electric vehicle (EV) capable (EV Capable) spaces shall instead be EV Ready. EV Capable means that the parking space will be installed with a raceway and electrical panel capable of supporting an EV charging station. EV Ready means that in addition to the raceway and panel, dedicated branch circuits, circuit breakers, and other electrical components will be installed to support future installation of charging stations but does not include installation of the charger itself. Current CalGreen Voluntary Tier 2 standards require 100 percent of single family and 20 percent of multi-family housing to be pre-wired to EV Ready.
- BMP 3 specifies that a project shall comply with the local jurisdiction's SB 743 requirements if they have been adopted. Sacramento County adopted SB 743 requirements on October 6, 2020. The Sacramento County program requires VMT per capita for a proposed project achieve a 15 percent reduction in regional VMT per resident and VMT per employee and that there shall be no net increase in retail VMT. The County program provides that if the VMT reduction standard cannot be met the County can find a significant and unavoidable impact and override such impact.

The SMAQMD Guidance allows project proponents to demonstrate equivalent GHG emission reductions if the BMPs cannot be met, and if a Jackson Township entity requires natural gas access in the future, equivalent emission reductions will be needed to meet the BMP 3 requirement. The BMPs are not optional, but because applicants can use other measures to achieve emission reductions equivalent to the BMPs, all of the emission reductions are creditable.

On August 4, 2022, Kimley-Horn (K-H) prepared a memorandum for PER that evaluated Jackson Township Alternative 2 with respect to the SB 743 BMP 3 target level. The K-H memo also described the amount of VMT reduction that was not accounted for in the Traffic Study and that would occur from the additional mitigation planned for Jackson Township. The K-H memo is shown in Appendix A.

Table 1-1 shows the per capita VMT values for Jackson Township Alternative 2 when only the Traffic Study VMT is considered and when the additional transportation-related mitigation evaluated by K-H is included. Table 1-2 shows the additional transportation-related mitigation evaluated by K-H. Both Project-Related VMT and Cumulative VMT were evaluated. (The VMT mitigation shown in Table 1-2 is included in the results of Table 1-1.)

Table 1-1: Regional VMT Per Resident and Per Employee
When Additional Transportation Mitigation is Included

Land Use	VMT Per Resident	VMT Per Employee
Regional VMT No Project	20.20	16.04
Significance Target Level (15% below regional average)	*17.17*	*13.64*
Jackson Township Project-Related VMT based on Traffic Study	17.46	16.48
Additional Mitigation Reduction in VMT (Table 1-2, - 3.0% and -12.3%)	- 0.52	- 2.03
Jackson Township Project-Related VMT After Additional Transportation Mitigation	**16.94**	**14.45**
Below Significance Target Level?	Yes	No
Regional VMT Super Cumulative No Project	18.40	13.31
Significance Target Level (15% below regional average)	*15.64*	*11.31*
Jackson Township Cumulative VMT based on Traffic Study	13.97	12.68
Additional Mitigation Reduction in VMT (Table 1-2, - 3.0% and -12.3%)	- 0.42	- 1.56
Jackson Township Project-Related VMT After Additional Transportation Mitigation	**13.55**	**11.12**
Below Significance Target Level?	Yes	Yes

Table 1-2: Additional Transportation Mitigation Included in the Alternative 2 Project

Measure	VMT per Resident % Reduction	VMT per Employee % Reduction
Mandatory Community-Wide TMA* Participation (M-3)	- 2.08 %	- 12.3%
Electric Bike Share (T-22-B)	- 0.05 %	NA
Electric Scooter Share (T-22-C)	- 0.06 %	NA
Adding Sidewalks (T-18)	- 1.0 %	NA
Total Percent Reduction**	**- 3.0 %**	**- 12.3 %**

* Transportation Management Association

** Reported total reduction may not sum to table entries due to roundoff differences.

With the additional transportation mitigation, the Jackson Township VMT per resident for both the Project-Related VMT and Cumulative VMT scenarios and VMT per employee for the Cumulative scenario are less than the significance target levels. However, the VMT per employee for the Project-Related scenario is greater than the significance target level, so additional mitigation of GHG will be implemented to meet that level as described in Section 2.3. The amount of required equivalent emission reductions is shown in Table 2-4 and amounts to 391 metric tons per year (MT/yr) GHG emissions[4]. Tables 1-4 and 5-6 shows that the proposed Jackson Township project includes more than 40,000 MT/yr of GHG emission reductions, thus, the SB 743 VMT per employee target level is easily met.

Note that the two VMT metrics (residential and employee) calculated by K-H are evaluated independently. Some of the same VMT is counted in both metrics, so if one adds the K-H memo residential VMT to the employee VMT, the total is greater than when the project VMT is evaluated as a whole single entity. For example, some of the Jackson Township residents work at businesses within Jackson Township, but that VMT is counted twice: once for the residential metric and once for the employee metric. There are other duplications in the VMT analysis between the two metrics, so they are evaluated separately. Furthermore, the VMT used in the two metrics do not account for mutually beneficial land uses that result in less VMT. The issues with the VMT are an inherent feature of the current VMT modeling and future modeling may be able to refine those limitations. This GHGRP is based on the only currently available VMT modeling and thus provides a conservative overestimate of the mitigation needed.

[4] Note that unless otherwise stated GHG emissions are in terms of carbon dioxide equivalent emissions (CO_2e).

KLEINFELDER 707 17th Street, Suite 3000, Denver, CO 80202 p | 303.237.6601 f | 303.237.6602

With respect to the no net increase in retail VMT requirement of BMP 3, PER distinguishes between local serving and regional serving retail. Local serving retail can be screened out of the VMT analysis and PER concluded that the Jackson Township meets the no net increase in retail VMT requirement.

1.3 CONSTRUCTION EMISSIONS

GHG emissions from construction activities are not generally considered a meaningful GHG impact because they are typically a one-time activity over a relatively short period of time compared to the operational life of a project, and because projects do not typically create "new" construction equipment or emissions (i.e., the construction equipment will be used somewhere else even if the proposed project is not constructed). However, as construction of the Jackson Township will occur over about a 15-year period, the associated GHG emissions are also assessed herein. The total construction emissions for the 15-year period estimated with the CalEEMod model were amortized over the life of the project assuming a 50-year lifetime[5] and added to the operational emissions, for a total of 65 years. Sixty-five years was used because there are operational emissions during the construction period. Section 4 discusses construction GHG emissions.

1.4 OPERATIONAL GHG EMISSIONS

Non-mobile operational GHG emissions were calculated from the CalEEMod emissions model for operational year 2040 and are discussed in Section 3.1. GHG emissions from mobile sources were calculated using EMFAC 2021 emission factors for calendar year 2040 (all model years, all vehicle types, and all fuel types) and the total Project VMT (for both the Project-Related and the Cumulative scenarios) as discussed in Section 3.2.

Table 1-3 shows the calculated mobile and non-mobile GHG emissions for Jackson Township when only the Traffic Study and no additional mitigation is considered. Table 1-3 shows GHG emissions calculated by CalEEMod for business as usual (BAU), which are the emissions that a typical project in Sacramento County would have when no mitigation is included. With only the Traffic Study mitigation, total emissions from the Jackson Township are from 41 to 66 percent less than BAU.

[5] *According to the NewBridge Specific Plan Greenhouse Gas Reduction Plan dated July 10, 2020, Footnote 15 on Page 23; 50 years is the most commonly used duration for building life-cycle analyses and is used by the European Union for building life spans for modern buildings.*

KLEINFELDER 707 17th Street, Suite 3000, Denver, CO 80202 p | 303.237.6601 f | 303.237.6602

Table 1-3: Total and Mobile-Only Annual BAU and Jackson Township GHG Emissions

VMT Scenario	Annual Non-Mobile GHG (MT/yr)	Annual Mobile GHG (MT/yr)	Total Operational GHG (MT/yr)
BAU Alternative 2 Annual Mobile-Only Emissions	12,890	63,703	76,593
Project-Related VMT Alternative 2 Annual Emissions	12,890	32,497	45,387
Percent Reduction from BAU for Project-Related VMT	**--**	**- 49.0 %**	**- 40.7 %**
Cumulative VMT Alternative 2 Annual Emissions	12,890	21,381	34,271
Percent Reduction from BAU for Cumulative VMT	**--**	**- 66.4 %**	**- 55.3 %**

The large reduction from BAU in vehicle travel and emissions of GHG are accomplished through a large number of Jackson Township project design features proposed by the Applicant. The features that reduce emissions include, but are not limited to, those listed immediately below. Where applicable, the related current (as of April 2022) CAPCOA[6] 2021 Handbook greenhouse gas mitigation measures (T-xx), the SMAQMD[7] land use emission reduction measures (LUT-xx), and the Sacramento County Revised Final Draft Community Wide Climate Action Plan (CAP)[8] measures (GHG-xx) are noted. However, the CAPCOA, SMAQMD, and Sacramento County emission reduction percentages for the noted measures were not used, rather the Traffic Study VMT was used to calculate emissions. Note that the Traffic Study is SMAQMD pre-requisite measure TS – Traffic Study. The figures and exhibits in Appendix L further illustrate some of the measures noted below.

LOCATION (T-1, T-2, GHG-22):

- Project is located in a suburban center within approximately ten miles of the Sacramento downtown central business district and less than five miles from other existing high-density commercial/job center areas (LUT-2 and LUT-3).
- Project is located adjacent to other planned developments such that single-use trips are minimized, i.e., there are more pass-by and diverted trips (LUT-3 and LUT-4).

[6] CAPCOA, 2021. Op cit.

KLEINFELDER 707 17th Street, Suite 3000, Denver, CO 80202 p | 303.237.6601 f | 303.237.6602

DENSITY/MIX (T-1, T-2, T-3, T-4, GHG-22):

- Project provides a compact mix of land uses in close proximity to each other with a highly connected street and trail network (LUT-3).
- Project design is for high and medium density housing for over half of the total project dwelling units (LUT-1).
- Housing density is better than 9.5 dwelling units per acre (LUT-1).
- Project includes below market rate housing (LUT-6).
- Approximately 15 percent of the total commercial square footage is dedicated to a mixed-use facility that combines residences and commercial/retail uses (LUT-3).

INTERNAL PROXIMITY (T-31-A, GHG-15, GHG-22):

- Most residential units are within 1,320 feet (one-quarter mile) of a neighborhood park, open space, school, and/or bicycle/pedestrian trail (LUT-3).
- Most residential units are less than one-half mile from shopping and services (LUT-4).
- Project design includes locating at least four schools within the project boundaries such that most students can walk to a local school (LUT-3 and LUT-4).
- Project design includes at least eight parks within the project boundaries such that residents can walk/bike to enjoy the parks (LUT -3 and LUT-4).

MULTI- MODAL EFFICIENCY (T-10, T-17, T-18, T-29, T-25, T-26, T-32, T-37, T-47, GHG-14, GHG-17):

- Project design is based on a network of streets in a grid pattern (LUT-8).
- Project design includes access to high frequency bus service that connects to the Watt/Manlove light rail station (LUT-5).
- Bus routes are signalized in order to avoid traffic delays (T-27).
- Project design promotes a multi-modal system that makes public transit, walking, and bicycling viable and attractive travel choices for residents and employees. Features include:
    - Adequate bike parking at non-residential locations, including the transit center and park and ride locations (T-34, T-47).
    - Showers/lockers and other end of trip facilities at non-residential buildings (T-10).
    - Long-term bike parking facilities (T-34, T-47).

© 2022 Kleinfelder

- Project includes an extensive pedestrian path and trail system that is convenient and accessible from homes, school, parks, employment, and shopping (LUT-8).
- Pedestrian and bike paths minimize any barriers to pedestrian/bicycle use (e.g., fences, berms and other impediments are eliminated where possible) (LUT-8, T-18, T-20).

TRANSIT SUPPORTIVE (T-3, T-5, T-6, T-9, T-25, T-27, T-28, T-32, T-38; GHG-14, GHG-22):

- Project includes an on-site transit center and park and ride facilities along the designated transit route of Jackson Highway (LUT-5, T-3).
- Project subsidizes bus rapid transit lanes on Jackson Highway (T-27).
- Project funding and design will result in bus headways of 15 minutes or better (T-26).
- Project includes joining a Transportation Management Association (TMA) funded through assessments. Although the project will include a TMA, no VMT reduction from the TMA has been calculated or included in the Traffic Study.
- Project includes assessments for regional transportation improvements (T-27).

1.5 ADDITIONAL MITIGATION

Additional VMT mitigation analyzed by Kimley-Horn beyond that incorporated into the Traffic Study include the following features noted in Table 1-2. Where applicable, the CAPCOA 2021 Handbook mitigation measure number (T-xx) is noted:

- Mandatory Community-Wide Transportation Management Association Participation (M-3[9]),
- Electric Bike Share (T-22-B),
- Electric Scooter Share (T-22-C),
- Adding Sidewalks (T-18), and
- Carpooling/Rideshare (T-8).

Additional non-transportation mitigation or GHG reductions not directly related to reducing VMT are discussed in Section 5.2 and include the following:

[9] Measure M-3 is a Miscellaneous measure that is a mandatory TMA program for residents and employees that is paid annually as an assessment on both residential and non-residential properties. It is most analogous to T-6, which is normally a project/site-scale measure and allows up to 26% reduction; however, for Jackson Township it is applied community-wide, includes carpooling and rideshare, and totals 12.3% reduction. See Section 2.2.

© 2022 Kleinfelder www.kleinfelder.com
KLEINFELDER 707 17th Street, Suite 3000, Denver, CO 80202 p | 303.237.6601 f | 303.237.6602

- Elimination of all natural gas emissions because natural gas infrastructure is prohibited under BMP-2.
- Preservation of 1,368.9 acres of vegetated land.
- Elimination of cattle grazing that currently occurs on portions of the property.
- Planting of over 20,000 new trees as part of the Project.
- All electric landscaping equipment.
- All landfills capture landfill gas for energy recovery.
- Installation of 805 non-residential electric vehicle (EV) charging stations serving 1,610 parking spaces.
- Pre-wiring all single-family housing (3,540 units) and 77 percent of high-density multi-family housing (77 percent of 2,150 units) for EV chargers. (Note that the 2022 version of California Green Building Code (CCR Title 24), effective January 1, 2023, also requires EV chargers for non-residential and multi-family housing. Should Title 24 mandate more EV chargers than committed to herein, the number of EV chargers will be increased to meet Title 24 requirements.)
- Redevelopment of the Sacramento Raceway which will cease operations with the full build out of the Jackson Township.
- Electrification of construction equipment where feasible and improved fuel efficiency for equipment, thus reducing construction GHG emissions by more than 67 percent.

All of the Jackson Township mitigation measures will be documented and made compulsory through the approved Final Environmental Impact Report (FEIR) under CEQA and the financing plan. Appendix L provides land use and other exhibits supporting the planned mitigation measures.

Although there are a large number of mitigation measures to reduce GHG emissions, there are two activities associated with the Project that will increase emissions (described in Section 5.2):

- Elimination of about 180 existing trees that cannot be preserved, and
- Redevelopment of 1,316.3 acres of existing grassland.

To calculate total GHG emissions associated with the Project, all of the above features have been assessed, and the results are shown in Table 1-4.

Table 1-4: Net Annual GHG Emissions for Alternative 2 GHG Emissions

Description	Project-Related VMT Scenario Annual GHG Emissions (MT/yr)	Cumulative VMT Scenario Annual GHG Emissions (MT/yr)
Annual Non-Mobile Operational Emissions from CalEEMod (Table 2-3)	12,890	12,890
Amortized Annual Construction Emissions (Section 4)	1,129	1,129
Annual Mobile Emissions from Traffic Study (Table 3-2)	32,497	21,381
Total Annual Operational Non-Mobile plus Construction plus Mobile Emissions	*46,516*	*35,400*
Penalty for Removal of Grassland (Section 5.3.1)	322	322
Penalty for Removal of Trees (Section 5.3.2)	7	7
Total Equivalent Project Emissions (including penalties)	**46,845**	**35,729**
Reduced VMT (Table 5-3)	- 1,885	- 1,240
Eliminate Natural Gas Emissions (Section 5.2.1)	- 7,431	- 7,431
Reduction from Jackson Township Vegetation Preserve (Section 5.2.2)	- 2,905	- 2,905
Reduction from Elimination of Cattle (Section 5.2.3)	- 168	- 168
Reduction from Jackson Township Trees (Section 5.2.4)	- 730	- 730
Reduction from Electric Landscaping Equipment (Section 5.2.5)	- 98	- 98
Reduction from Landfill Gas Energy Recovery (Section 5.2.6)	- 1,183	- 1,183
Reduction from 805 Non-residential EV Charging Stations (Section 5.2.7)	- 12,250	- 12,250
Reduction from Residential Housing EV Charging (Section 5.2.8)	- 17,898	- 12,156
Redevelop Sacramento Raceway (Section 5.2.9)	- 1,610	- 1,610
Reduction from Electrified Construction Equipment (Section 5.2.10)	- 756	- 756
Total GHG Reductions	*- 46,914*	*- 40,527*
Net GHG After Reductions	**- 69**	**- 4,798**

1.6 NON-QUANTIFIED MITIGATION

The preceding deals only with quantified GHG emission reductions. There are numerous other project design features that also result in reduced GHG emissions, but the benefit of those features has not been quantified. Some of those features are:

- An over-statement of VMT because the VMT per resident and per employee values do not account for the mutually beneficial interaction of the Jackson Township Specific Plan with other

© 2022 Kleinfelder www.kleinfelder.com
KLEINFELDER 707 17th Street, Suite 3000, Denver, CO 80202 p | 303.237.6601 f | 303.237.6602

existing and/or approved land uses that result in reduced VMT. For example, Jackson Township schools and retail will serve not only Jackson Township residences but existing residences in the area, thus reducing the distance traveled by existing persons.

- An over-statement of employee VMT because the VMT per employee does not account for the current shift to work-from-home and remote working/learning that is occurring.
- Participation in the Sacramento County affordable housing program. Providing affordable (below market rate) housing allows residents to live closer to job or schools, reducing commute distances and emissions.
- Low flow bathroom fixtures, kitchen fixtures, showers, and toilets in all residential units and commercial buildings.
- Reduced square footage of residential turf due to the increased housing density.
- Water efficient irrigation systems and water efficient landscaping for the non-residential areas.
- Some of the existing homes located within the Jackson Township Specific Plan will be replaced with more modern and energy efficient homes and existing sources of natural gas combustion will be removed.
- Increased landfill gas capture efficiency to more than 90 percent. Many existing landfills in California capture well in excess of 90 percent, and by 2040 that should be standard for all landfills.
- More efficient water treatment digester gas capture and energy recovery.
- Additional electric construction equipment that will be developed and implemented by 2040.
- Increased fuel efficiency of non-electric construction equipment that will occur before 2040.
- There may be additional GHG reduction measures that could be implemented as the result of the Final Draft Sacramento County Climate Action Plan but have not been accounted for herein.

And most significantly, all of the mobile-source emission estimates are over-stated and the benefit of EV charging stations under-stated because they do not account for more electric vehicle penetration than assumed, and other changes in transportation that will have to occur if California is to reach the 2050 GHG reduction goals. For example, the new (April 1, 2022) Federal passenger car and light duty truck fleet wide average fuel economy standard of approximately 49 miles per gallon (mpg) for new vehicles by calendar year 2026 has not been accounted for. Thus, prior to full development of Jackson Township in 2040, there will be greater GHG emission reductions and even lower GHG emissions than stated herein.

KLEINFELDER 707 17th Street, Suite 3000, Denver, CO 80202 p | 303.237.6601 f | 303.237.6602

2 SB 743 SIGNIFICANCE TARGET LEVELS BASED ON THE TRAFFIC STUDY

In response to SB 743, SMAQMD and Sacramento County PER established VMT per resident and VMT per employee metrics of significance that replaced previously used emissions metrics. This and the following sections discuss how the proposed Jackson Township VMT more than meets the adopted metrics in response to SB 743. The significance metrics are that the Project VMT per resident and VMT per employee must both be 15 percent less than regional values.

2.1 VMT PER RESIDENT AND EMPLOYEE BASED ON THE TRAFFIC STUDY

The Traffic Study prepared for PER provided data that were used to calculate the regional and Project VMT per resident and per employee. The results of the Traffic Study-based calculations were summarized in the K-H Memo included in Appendix A and are shown in Table 2-1. The VMT data from the Traffic Study include induced VMT that is the result of improved roads but not part of the project itself.

Table 2-1: Regional VMT Per Resident and Per Employee Based on Traffic Study

Land Use	VMT Per Resident	VMT Per Employee
Regional VMT No Project	20.20	16.04
Significance Target Level (15% below regional average)	*17.17*	*13.64*
Jackson Township **Project-Related VMT based on Traffic Study**	**17.46**	**16.48**
Regional VMT Super Cumulative No Project	18.40	13.31
Significance Target Level (15% below regional average)	*15.64*	*11.31*
Jackson Township **Cumulative VMT based on Traffic Study**	**13.97**	**12.68**

Table 2-1 shows that the Project-Related scenario VMT per resident, the Project-Related scenario VMT per employee, and the Cumulative scenario VMT per employee exceed the significance target levels; but

© 2022 Kleinfelder www.kleinfelder.com
KLEINFELDER 707 17th Street, Suite 3000, Denver, CO 80202 p | 303.237.6601 f | 303.237.6602

the Cumulative scenario VMT per resident does not. However, the Traffic Study does not include all of the Project's mitigation as discussed below.

2.2 VMT PER RESIDENT AND EMPLOYEE WHEN ADDITIONAL TRANSPORTATION MITIGATION IS CREDITED

Kimley-Horn analyzed the Traffic Study prepared for PER and identified additional transportation related mitigation that is included in the Jackson Township design and operations but not accounted for in the Traffic Study. The results of the analysis are reported in the K-H Memo (Appendix A) and are repeated in Table 2-2. Table 2-2 also shows, where applicable, the CAPCOA 2021 Handbook mitigation measure number (T-xx). The K-H Memo in Appendix A describes each mitigation measure in detail.

Table 2-2: Additional Transportation Mitigation Included in the Alternative 2 Project

Measure	VMT per Resident % Reduction	VMT per Employee % Reduction
Mandatory Community-Wide TMA Participation (M-3)	- 2.08 %	- 12.3%
Electric Bike Share (T-22-B)	- 0.05 %	NA
Electric Scooter Share (T-22-C)	- 0.06 %	NA
Adding Sidewalks (T-18)	- 1.0 %	NA
Total Percent Reduction*	**- 3.0 %**	**- 12.3 %**
Total Percent Reduction for Combined Measures T-18 through 22-C	- 1.1 %	NA

* Reported total reduction may not sum to table entries due to roundoff differences.

CAPCOA Measure T-6, Mandatory Trip Reduction Program, is normally applied as a Project/Site-scale measure and thus is not combinable with the Plan/Community-scale measures T-18 and T-22. However, in the case of the Jackson Township measure M-3 has been created that is allowed at the Plan/Community-scale level and consists of a community-wide mandatory trip reduction program that will be required of all residents and employers within Jackson Township. Under this program, both residential and non-residential property will be subject to an annual assessment through a County Service Area (CSA) fee that will be used for the TMA services and programs. Rideshare and carpool programs will be part of the M-3 measure. As measure M-3 is considered a Plan/Community scale measure it can be combined with T-18 and T-22.

© 2022 Kleinfelder www.kleinfelder.com
KLEINFELDER 707 17th Street, Suite 3000, Denver, CO 80202 p | 303.237.6601 f | 303.237.6602

CAPCOA establishes emission reduction caps on measures for which CAPCOA establishes a percent reduction (i.e., the T-xx measures) calculation. The cap for measures T-18 through 22-C is 10 percent. As shown in Table 2-2, the cap is not exceeded.

The total percent reductions shown in Table 2-2 can be applied directly to the VMT per resident and per employee metrics and the results are shown in Table 2-3.

Table 2-3: Regional VMT Per Resident and Per Employee
When Additional Transportation Mitigation is Included

Land Use	VMT Per Resident	VMT Per Employee
Regional VMT No Project	20.20	16.04
Significance Target Level (15% below regional average)	*17.17*	*13.64*
Jackson Township Project-Related VMT based on Traffic Study	17.46	16.48
Additional Mitigation Reduction in VMT (- 3.0% and -12.3%)	- 0.52	- 2.03
Jackson Township Project-Related VMT After Additional Transportation Mitigation	**16.94**	**14.45**
Less than Significance Target Levels	**Yes**	No
Regional VMT Super Cumulative No Project	18.40	13.31
Significance Target Level (15% below regional average)	*15.64*	*11.31*
Jackson Township Cumulative VMT based on Traffic Study	13.97	12.68
Additional Mitigation Reduction in VMT (- 3.0% and -12.3%)	- 0.42	- 1.56
Jackson Township Cumulative VMT After Additional Transportation Mitigation	**13.55**	**11.12**
Less than Significance Target Levels	**Yes**	**Yes**

With the additional transportation mitigation, the Jackson Township VMT per resident for both the Project-Related VMT and Cumulative VMT scenarios and VMT per employee for the Cumulative VMT scenario are less than the significance target levels. However, the VMT per employee for the Project-Related VMT scenario is greater than the significance target level, so additional mitigation will be implemented as described in Section 2.3 to meet the target level.

© 2022 Kleinfelder

2.3 ADDITIONAL GHG MITIGATION NEEDED TO ACHIEVE THE VMT PER EMPLOYEE SIGNIFICANCE TARGET

The difference between the Project-Related 14.45 VMT per employee value and the significance target level of 13.64 can be converted into equivalent GHG emissions as shown in Table 2-4.

Table 2-4: Equivalent GHG Emissions for the Project-Related VMT per Employee

Index		VMT Per Employee
1	Project-Related VMT per Employee (from Table 2-3)	14.45
2	Significance Target Level VMT per Employee (from Table 2-3: 15% below regional average)	13.64
3	Difference in VMT per Employee	0.81
4	Number of Employees (Note 1)	7,130
5	Excess Daily VMT (miles/day) (Line 3 x Line 4)	5,775
6	Excess Annual VMT (miles/year) (Line 5 x 240, Note 2)	1,386,000
7	GHG Emission Factor (grams/mile) (from Appendix AJ-3, light, and medium duty vehicles)	282.1
8	Excess GHG Emissions (MT/yr) (Line 6 x Line 7 converted to MT)	391

Note 1: Reported by Kimley-Horn, personal communication April 15, 2022.
Note 2: 240 days per year was used because the metric is employee travel, and employees were assumed to work 5 days per week, 52 weeks per year, less 2 weeks of vacation, and 10 holidays.

The excess emissions of 391 MT/yr shown in Table 2-4 must be offset in accordance with County and SMAQMD requirements in order to meet SB 743. As shown in Section 3, the 391 MT/yr excess emissions will be much more than offset through the additional committed mitigation discussed in Section 5.

3 PROPOSED JACKSON TOWNSHIP OPERATIONAL GHG EMISSIONS

VMT per resident and per employee metrics do not indicate the magnitude of GHG emissions; thus, this and following sections discuss GHG emissions for informational purposes and to show that the planned mitigation more than achieves the emission reductions needed to meet the Project-Related VMT per employee target level shown in Section 2.3.

GHG operational emissions are calculated using two different sources, one for non-mobile emissions (CalEEMod) and one for mobile emissions (EMFAC 2021). Sacramento County does not use CalEEMod for transportation related GHG emissions because it cannot adequately capture the trip redistribution of a project, as it does not consider regional travel dynamics. Accordingly, it is the County's practice to calculate emissions directly from the VMT data in the traffic study using the most recent California EMFAC model, which (as of April 2022) is EMFAC 2021. Therefore, transportation-related GHG emissions were calculated with EMFAC 2021 for both the Project-Related and the Cumulative VMT scenarios.

3.1 OPERATIONAL GHG NON-MOBILE EMISSIONS ESTIMATING METHODOLOGY

Kleinfelder calculated operational non-mobile emission estimates for Alternative 2 with the CalEEMod emissions model, Version 2020.4.0. CalEEMod calculates emissions for criteria pollutants and GHG based on detailed land use parameters (e.g., acreage, dwelling units, square feet, number of fueling pumps) and vehicle emissions associated with each land use. The detailed land uses shown in Appendix B were used to estimate emissions. CalEEMod Version 2020.4.0 is based on EMFAC 2017 and the 2019 Title 24 Energy Standards that were promulgated in March 2018 and became effective January 1, 2020.

Except for the CO_2 intensity for electrical generation, the mobile source emissions category, the number of fireplaces and hearths, and the additional mitigation calculations as explained below, CalEEMod default input factors were used to calculate emissions. CalEEMod was run for a full build-out year of 2040 and start of construction in 2025. Three CalEEMod scenarios were run: business as usual (BAU), Project-Related VMT, and Cumulative VMT.

For all three CalEEMod scenarios, electrical generation greenhouse gas intensity was entered as zero. This is because the Sacramento Municipal Utility District (SMUD) has committed to 100 percent renewable energy by 2030.

© 2022 Kleinfelder

KLEINFELDER 707 17th Street, Suite 3000, Denver, CO 80202 p | 303.237.6601 f | 303.237.6602

CalEEMod includes emissions from mobile sources, but these were not used, rather the Traffic Study VMT and EMFAC emissions were used.

Appendix D contains the CalEEMod runs for BAU, Project-Related and Cumulative VMT. Appendix D shows the annual VMT for BAU, which is 211,550,554 miles per year. If one compares the business-as-usual VMT to the VMT forecast by the Traffic Study (Appendix C), the Traffic Study VMT for Alternative 2 is about 43 (Project-Related VMT) to 61 (Cumulative VMT) percent less than BAU (the annual VMT shown in Appendix C are also reported in Section 3.2).

Table 3-1 shows the non-mobile GHG emissions estimated with CalEEMod when electrical energy generation GHGs are zero (taken from the reports in Appendix D). These emissions include GHG from natural gas combustion, digester gas emissions from wastewater treatment, landfill gas emissions from solid waste disposal, and GHG emissions from landscaping equipment. Because the non-mobile GHG emissions are only related to land uses, there is no difference between BAU, Project-Related VMT, and Cumulative VMT scenario GHG emissions.

Table 3-1: Non-Mobile Jackson Township GHG Emissions

VMT Scenario	Annual GHG
BAU Alternative 2 Annual Non-Mobile Emissions	12,890* MT/yr
Project-Related VMT Alternative 2 Annual Non-Mobile Emissions	12,890* MT/yr
Cumulative VMT Alternative 2 Annual Non-Mobile Emissions	12,890* MT/yr

* Non-mobile emissions equal total emissions minus mobile, e.g., for BAU 70,714 – 57,824 = 12,890 MT/yr shown in Appendix D-1.

3.2 OPERATIONAL MOBILE GHG EMISSIONS

The PER Traffic Study VMT data forecasts peak daily VMT (including induced VMT) that will occur in calendar year 2040 as the result of Project, both as a stand-alone project (project-related) and cumulative. The peak daily incremental VMT forecast for calendar year 2040 is as follows (see Appendix C):

- Alternative 2 Project-Related VMT: 375,261 miles per day.
- Alternative 2 Cumulative VMT: 254,868 miles per day.

© 2022 Kleinfelder www.kleinfelder.com
KLEINFELDER 707 17th Street, Suite 3000, Denver, CO 80202 p | 303.237.6601 f | 303.237.6602

Kleinfelder converted the peak daily VMT to annual VMT by multiplying the peak daily calendar year 2040 VMT by 320 days per year. The 320 value is approximately 52 weeks per year, 6 days per week. The assumption is that the peak daily VMT occurs on each of 5 days and about one-half of the peak daily VMT occurs on Saturday and Sunday. Accordingly, the calendar year 2040 annual incremental VMT is:

- Alternative 2 Project-Related VMT: 120,083,520 miles per year.
- Alternative 2 Cumulative VMT: 81,557,862 miles per year.

The Traffic Study VMT and EMFAC 2021 emission factors shown in Appendix E were used to calculate GHG emissions for the Project-Related and Cumulative VMT scenarios presented in Appendix F. For these calculations EMFAC 2021 emission factors for calendar year 2040 were used for all models and vehicle types with emission factors stratified by speed bin. All fuel types were used, including the amount of EV penetration included in EMFAC 2021, to calculate GHG emissions. The results are shown in Table 3-2.

Table 3-2: Mobile-Only Jackson Township **GHG Emissions**

VMT Scenario	Annual GHG
BAU Alternative 2 Annual Mobile-Only Emissions	63,703 MT/yr
Project-Related VMT Alternative 2 Annual Mobile-Only Emissions	32,497 MT/yr
Cumulative VMT Alternative 2 Annual Mobile-Only Emissions	21,381 MT/yr

3.3 TOTAL ALTERNATIVE 2 OPERATIONAL GHG EMISSIONS

Total operational (mobile plus non-mobile) GHG emissions for Alternative 2 are shown in Table 3-3. The individual mobile and non-mobile emission values come from Tables 3-1 and 3-2 above.

Table 3-3: Total and Mobile-Only Annual BAU and Jackson Township **GHG Emissions**

VMT Scenario	Annual Non-Mobile GHG (MT/yr)	Annual Mobile GHG (MT/yr)	Total Operational GHG (MT/yr)
BAU Alternative 2 Annual Mobile-Only Emissions	12,890	63,703	76,593
Project-Related VMT Alternative 2 Annual Emissions	12,890	32,497	45,387
Percent Reduction from BAU for Project-Related VMT	--	**- 49.0 %**	**- 40.7 %**
Cumulative VMT Alternative 2 Annual Emissions	12,890	21,381	34,271
Percent Reduction from BAU for Cumulative VMT	--	**- 66.4 %**	**- 55.3 %**

© 2022 Kleinfelder www.kleinfelder.com
KLEINFELDER 707 17th Street, Suite 3000, Denver, CO 80202 p | 303.237.6601 f | 303.237.6602

Table 3-3 shows the very large reduction in GHG emissions from BAU that are accomplished through only those mitigation measures included in the Traffic Study. The reduction in vehicle travel and emissions of GHG are accomplished through a large number of Jackson Township project design features proposed by the Applicant. The features that reduce emissions include, but are not limited to, those listed immediately below. Where applicable, the related current (as of April 2022) CAPCOA[10] 2021 Handbook greenhouse gas mitigation measures (T-xx), the SMAQMD[11] land use emission reduction measures
(LUT-xx), and the Sacramento County Revised Final Draft Community Wide Climate Action Plan (CAP)[12] measures (GHG-xx) are noted. However, the CAPCOA, SMAQMD, and Sacramento County emission reduction percentages for the noted measures were not used, rather the Traffic Study VMT was used to calculate emissions. Note that the Traffic Study is SMAQMD pre-requisite measure TS – Traffic Study. The figures and exhibits in Appendix L further illustrate some of the measures noted below.

LOCATION (T-1, T-2, GHG-22):

- Project is located in a suburban center within approximately ten miles of the Sacramento downtown central business district and less than five miles from other existing high-density commercial/job center areas (LUT-2 and LUT-3).
- Project is located adjacent to other planned developments such that single-use trips are minimized, i.e., there are more pass-by and diverted trips (LUT-3 and LUT-4).

DENSITY/MIX (T-1, T-2, T-3, T-4, GHG-22):

- Project provides a compact mix of land uses in close proximity to each other with a highly connected street and trail network (LUT-3).
- Project design is for high and medium density housing for over half of the total project dwelling units (LUT-1).
- Housing density is better than 9.5 dwelling units per acre (LUT-1).
- Project includes below market rate housing (LUT-6).

© 2022 Kleinfelder www.kleinfelder.com
KLEINFELDER 707 17th Street, Suite 3000, Denver, CO 80202 p | 303.237.6601 f | 303.237.6602

- Approximately 15 percent of the total commercial square footage is dedicated to a mixed-use facility that combines residences and commercial/retail uses (LUT-3).

INTERNAL PROXIMITY (T-31-A, GHG-15, GHG-22):

- Most residential units are within 1,320 feet (one-quarter mile) of a neighborhood park, open space, school, and/or bicycle/pedestrian trail (LUT-3).
- Most residential units are less than one-half mile from shopping and services (LUT-4).
- Project design includes locating at least four schools within the project boundaries such that most students can walk to a local school (LUT-3 and LUT-4).
- Project design includes at least eight parks within the project boundaries such that residents can walk/bike to enjoy the parks (LUT -3 and LUT-4).

MULTI- MODAL EFFICIENCY (T-10, T-17, T-18, T-29, T-25, T-26, T-32, T-37, T-47, GHG-14, GHG-17):

- Project design is based on a network of streets in a grid pattern (LUT-8).
- Project design includes access to high frequency bus service that connects to the Watt/Manlove light rail station (LUT-5).
- Bus routes are signalized in order to avoid traffic delays (T-27).
- Project design promotes a multi-modal system that makes public transit, walking, and bicycling viable and attractive travel choices for residents and employees. Features include:
    - Adequate bike parking at non-residential locations, including the transit center and park and ride locations (T-34, T-47).
    - Showers/lockers and other end of trip facilities at non-residential buildings (T-10).
    - Long-term bike parking facilities (T-34, T-47).
- Project includes an extensive pedestrian path and trail system that is convenient and accessible from homes, school, parks, employment, and shopping (LUT-8).
- Pedestrian and bike paths minimize any barriers to pedestrian/bicycle use (e.g., fences, berms and other impediments are eliminated where possible) (LUT-8, T-18, T-20).

KLEINFELDER 707 17th Street, Suite 3000, Denver, CO 80202 p | 303.237.6601 f | 303.237.6602

TRANSIT SUPPORTIVE (T-3, T-5, T-6, T-9, T-25, T-27, T-28, T-32, T-38; GHG-14, GHG-22):

- Project includes an on-site transit center and park and ride facilities along the designated transit route of Jackson Highway (LUT-5, T-3).
- Project subsidizes bus rapid transit lanes on Jackson Highway (T-27).
- Project funding and design will result in bus headways of 15 minutes or better (T-26).
- Project includes joining a TMA funded through assessments. Although the project will include a TMA, no VMT reduction from the TMA has been calculated or included in the Traffic Study.
- Project includes assessments for regional transportation improvements (T-27).

As discussed in Section 5, there are additional mitigation measures beyond those in the Traffic Study that need to be accounted for.

4 CONSTRUCTION GHG EMISSIONS

GHG emissions from construction activities are not generally considered a meaningful GHG impact because they are typically a one-time activity over a relatively short period of time compared to the operational life of a project, and because projects do not typically create "new" construction equipment or emissions (i.e., the construction equipment will be used somewhere else even if the proposed project is not constructed). However, construction of the Jackson Township will occur over an approximately 15-year period, thus construction emissions were added to the operational emissions.

Appendix G shows the CalEEMod emission estimates for construction of the Jackson Township Alternative 2. For the CalEEMod emission model, construction was assumed to start on January 1, 2025 and be complete by December 31, 2039. When CalEEMod was run with default parameters, the model estimated total construction duration of 18,765 days. That is obviously an over-estimate. The planned construction duration is 3900 days (260 days per year times 15 years), or 21 percent of the default. Accordingly, the individual CalEEMod default construction phase durations were adjusted by a factor of approximately 0.21 and such that the total construction duration (not including architectural coating) equaled 3900 days. Architectural coating was assumed to occur during the entire construction period. The resulting adjusted construction durations are shown in Table 4-1.

Table 4-1: Default and Adjusted Construction Duration for Alternative 2

Construction Phase	Default Duration (days)	Adjusted Duration (days)	Rationale for Adjustment
Demolition	900	0	There is essentially no demolition required at the proposed location
Site Preparation	540	125	Applied factor of 0.23 to reflect the ratio of planned versus default total construction duration
Site Grading	1,395	322	
Building Construction	13,950	3,224	
Paving	990	229	
Architectural Coating	990	3,224	Assumed architectural coating could occur over approximately the same duration as building construction

The CalEEMod default construction worker and vendor trip frequencies were also adjusted to match the proposed project as shown in Table 4-2. The trip lengths were not adjusted.

© 2022 Kleinfelder

KLEINFELDER 707 17th Street, Suite 3000, Denver, CO 80202 p | 303.237.6601 f | 303.237.6602

Table 4-2: Default and Adjusted Worker and Vendor Construction Trips for Alternative 2

Construction Phase	Default Trips per Day		Adjusted Trips per Day		Rationale for Adjustment
	Worker	Vendor	Worker	Vendor	
Demolition	15	0	0	0	There is essentially no demolition required at the proposed location
Site Preparation	18	0	18	0	No change
Site Grading	20	0	20	0	No change
Building Construction	6,636	2,167	4,193	1,018	Trip frequencies are a function of the number of dwelling units and square feet of building. CalEEMod trip frequency functions and planned dwelling units/square footage were used to calculate project-specific trip frequencies
Paving	15	0	15	0	No change
Architectural Coating	1,327	0	839	0	Per CalEEMod, assumed architectural coating trips are 20% of Building Construction

Finally, the acreage of site preparation and grading were changed from the default to reflect the project-specific acreage of land that would be prepared and graded. It was assumed that all of the project area would be prepared and graded except for the parks, open space, and agricultural area; so, 907.6 acres are prepared and graded for Alternative 2. In the absence of a detailed construction plan, the remainder of the construction parameters in CalEEMod were left at their default settings.

Table 4-3 lists the CalEEMod default numbers of equipment and hours of usage for each construction phase. The data in Table 4-3 were provided to a design engineer/construction manager for reasonableness evaluation. He concluded that the default parameters were conservative over-estimates of the duration and/or numbers and usage of construction equipment. Specifically, he concluded the following[13]:

- There is essentially no Demolition, consistent with Table 4-2.
- Multiple teams will likely be working on Site Preparation simultaneously, and thus on average the modeled seven pieces of equipment operating a total of eight hours per day, are sufficient to complete the site preparation in the modeled 0.5 years shown in Table 4-2.
- The modeled equipment list for Grading is typical and sufficient to complete grading in the modeled time period (1.2 years). More equipment could possibly be used to shorten the time

[13] *Personal Communication to Kleinfelder, Mr. Steve AuClair, PE, April 13, 2019.*

© 2022 Kleinfelder www.kleinfelder.com
KLEINFELDER 707 17th Street, Suite 3000, Denver, CO 80202 p | 303.237.6601 f | 303.237.6602

period to less than 1.2 years; but given the limited amount of grading equipment in the Sacramento area, the modeled duration, equipment numbers and usage are reasonable.

- The default equipment usage rates for Building Construction equipment are an over-estimate. For example, a crane would not normally be used continuously for seven hours per day; it would be used to load materials for a short period and then left idle for the rest of the day. Thus, the emissions for Building Construction are likely over-stated.
- The amount of Paving equipment and use duration shown in Table 4-2 is a large over-estimate.
- Architectural Coating is an on-going activity during Building Construction as there are coating applications other than the finish coats on building surfaces; thus, assuming a duration equivalent to the Building Construction duration is reasonable.

Table 4-3: CalEEMod Default Construction Equipment and Hours of Usage

Construction Phase	Equipment List	Number of Pieces of Equipment	Usage Hours Per Day	Total Construction Days (Years)*
Demolition				
There is essentially no demolition needed				
Site Preparation				
	Rubber Tired Dozers	3	8	125 (0.5 yrs)
	Tractors/Loaders/Backhoes	4	8	125 (0.5 yrs)
Grading				
	Excavators	2	8	322 (1.2 yrs)
	Graders	1	8	322 (1.2 yrs)
	Rubber Tired Dozers	1	8	322 (1.2 yrs)
	Scrapers	2	8	322 (1.2 yrs)
	Tractors/Loaders/Backhoes	2	8	322 (1.2 yrs)
Building Construction				
	Cranes	1	7	3,224 (12.4 yrs)
	Forklifts	3	8	3,224 (12.4 yrs)
	Generator Sets	1	8	3,224 (12.4 yrs)
	Tractors/Loaders/Backhoes	3	7	3,224 (12.4 yrs)
	Welders	1	8	3,224 (12.4 yrs)
Paving				
	Pavers	2	8	229 (0.9 yrs)
	Paving Equipment	2	8	229 (0.9 yrs)
	Rollers	2	8	229 (0.9 yrs)
Architectural Coating				
	Compressors	1	6	3,224 (12.4 yrs)

* From Table 4-1 and assuming 260 construction days per year.

© 2022 Kleinfelder

The CalEEMod reports for construction are shown in Appendix G and summarized in Table 4-4.

Table 4-4: Construction GHG Emissions for the Jackson Township Alternative 2

Construction Year	GHG Emissions (MT/yr)	Construction Year	GHG Emissions (MT/yr)
2025	596	2033	5,699
2026	2,334	2034	5,638
2027	6,251	2035	5,607
2028	6,015	2036	5,628
2029	6,017	2037	5,607
2030	5,956	2038	5,607
2031	5,867	2039	693
2032	5,812	**Total 2025 to 2039**	**73,417**

*Note that the individual years may not sum exactly due to roundoff differences.

The construction emissions were amortized over 65 years, which includes the anticipated 50-year life of Jackson Township facilities plus the 15-year construction period. Sixty-five years was used because there are operational emissions during the construction period as most of the residential and some of the commercial buildings will be completed before the end of the 15-year construction period). So, the annual GHG emissions are 1,129 metric tons per year (MT/yr).

5 PROPOSED JACKSON TOWNSHIP ADDITIONAL MITIGATION AND GHG EMISSION REDUCTIONS

Mitigation measures that reduce GHG emissions beyond those accounted for in the Traffic Study include transportation-related and non-transportation related measures.

5.1 ADDITIONAL QUANTIFIED TRANSPORTATION-RELATED GHG EMISSION REDUCTIONS

In addition to all of the mitigation measures incorporated into the Traffic Study, the additional transportation mitigation measures that are part of the Proposed Project that were analyzed by Kimley-Horn (Appendix A) also reduce GHG emissions.

The additional measures quantified in the K-H Memo and the percentage reduction in VMT are shown in Table 2-2. The measures are separated by those that benefit residential-related transportation (VMT per resident) and those that benefit employee-related transportation (VMT per Employee).

The percentage benefit on total VMT (and thus total emissions) of the measures shown in Table 2-2 is not simply the sum of residential (VMT per resident) and employee (VMT per employee) percentages because some of the measures that reduce residential VMT also reduce employee VMT. Thus, in order to calculate the benefit of these measures on total VMT forecast by the Traffic Study, the VMT reduction (in terms of VMT, not percentage) was calculated for residents and employees separately and then added together. The calculations are shown in Tables 5-1 and 5-2. The percent VMT reduction shown in the last row of Tables 5-1 and 5-2 translate directly into a similar percent reduction in GHG emissions as shown in Table 5-3.

Table 5-3: GHG Reductions from Additional Transportation-Related Mitigation

VMT Scenario	GHG
Project-Related VMT GHG Emissions from Traffic Study (from Table 3-3)	32,497 MT/yr
Project-Related VMT Reduction from Additional Transportation-Related Mitigation	- 5.8 %
Project-Related GHG Emissions Reduction from Additional Transportation Mitigation	- 1,885 MT/yr
Project-Related GHG Emissions after Additional Transportation-Related Mitigation	30,612 MT/yr
Cumulative VMT GHG Emissions from Traffic Study (from Table 3-3)	21,381 MT/yr
Cumulative VMT Reduction from Additional Transportation-Related Mitigation	- 5.8 %
Cumulative GHG Emissions Reduction from Additional Transportation Mitigation	- 1,240 MT/yr
Project-Related GHG Emissions after Additional Transportation-Related Mitigation	20,141 MT/yr

5.2 ADDITIONAL NON-TRANSPORTATION MITIGATION

There are a number of non-transportation mitigation measures designed into the Jackson Township Project that reduce GHG emissions and can be credited. These measures, such as elimination of GHG from natural gas combustion, and their benefit are described in the following subsections.

© 2022 Kleinfelder www.kleinfelder.com
KLEINFELDER 707 17th Street, Suite 3000, Denver, CO 80202 p | 303.237.6601 f | 303.237.6602

5.2.1 Elimination of GHG from Electrical Energy Generation and Natural Gas Combustion

The previous GHGRP prepared in May 2019 included the following non-transportation mitigation measures for which emission reductions were quantified:

- High efficacy public outdoor lighting (GHGRP),
- Energy efficient appliances (GHGRP),
- Energy efficient boilers (AQMP and GHGRP),
- Residential electric hot water heaters (AQMP and GHGRP),
- Non-residential electric vehicle charging stations (AQMP and GHGRP), and
- Residential electric vehicle charging stations (AQMP and GHGRP).

However, since May 2019, SMAQMD and Sacramento County adopted BMPs to reduce GHG emissions. BMP 1 eliminated natural gas infrastructure for new projects, and BMP 2 requires all projects to meet CalGreen Tier 2 standards except EV-capable spaces shall be EV-ready. The newly adopted BMPs were the impetus for Revision 3a to the GHGRP (prepared in January 2021). Furthermore, after May 2019 SMUD committed to 100 percent renewable energy by 2030.

The CalEEMod emission estimates shown in Appendix D already accounted for the fact that SMUD committed to 100 percent renewables because zero GHG intensity was entered into the model and thus there is no additional credit for high efficacy public lighting and energy efficient appliances. However, although BMP-1 eliminates natural gas infrastructure , the CalEEMod model still contains GHG emissions from combustion of natural gas. The amount of GHG emissions from natural gas combustion was 7,527 MT/yr for both the Project-Related and the Cumulative VMT scenarios as shown in Appendix D-2 and D-3. All of these emissions are eliminated and thus there is no additional credit for energy efficient boilers or residential electric hot water heaters.

Emission reductions associated with the EV charging stations are discussed in Sections 5.2.7 and 5.2.8.

5.2.2 Vegetative Preserve

Jackson Township has committed to preserving a total of 1,131.2 acres of vegetative land. In addition, there will be another 88.8 acres of landscaped area associated with the buildings and another 148.9 acres of land vegetated in the parks and the greenbelt and landscape corridors. Table 5-4 shows the source and acreage of vegetated land associated with Jackson Township. Although there will be landscaping associated with residential housing, to be conservative, no credit is taken for that private

KLEINFELDER 707 17th Street, Suite 3000, Denver, CO 80202 p | 303.237.6601 f | 303.237.6602

landscaping. There is also no credit taken for agricultural land because that portion of Jackson Township will remain unchanged. The landscaped area associated with the buildings is the difference between the square footage of buildings plus parking lots (as shown in Appendix B) and the lot size.

Table 5-4: Alternative 2 Vegetated Area

Description	AGT Lands Only (acres)	Non-participant Jackson Township Lands (acres)	Total for Jackson Township (acres)
Vegetative Preserves			
On-site Acreage Preserved (Appendix B, Item 13)	191.3	68.5	259.8
Werre (offsite) Acreage Preserved	129.0	--	129.0
Additional Preserve Acreage to be Purchased by SSCA with Fees Paid from Development	372.1	370.3	742.4
Subtotal Acres Preserved	**692.4**	**438.8**	**1,131.2**
Community and Neighborhood Parks (Appendix B, Items 11 and 12)	--	--	78.8
Greenbelt Corridor (Appendix B, Item 14)	--	--	55.6
Landscape Corridor (Appendix B, Item 15)	--	--	14.5
Subtotal Parks and Corridors	--	--	**148.9**
Commercial and Office Landscaping (Appendix B, Items 4 – 7)[14]	--	--	16.8
School Landscaping (Appendix B, Items 9 and 10)[15]	--	--	72.0
Subtotal Landscaping Associated with Buildings	--	--	**88.8**
Total Vegetated Area			**1,368.9**

The amount of GHG reduced per acre of vegetation is per the CAPCOA 2021 Handbook mitigation measure N-1. This measure calculates the amount of sequestration as a function of vegetative sequestration plus sequestration that occurs when soil is converted to crop land, grazing land, or forest land. None of those soil conversions will occur at Jackson Township; thus, only the vegetative sequestration factor is considered. The amount of vegetative sequestration in measure N-1 is the area (hectares, ha) multiplied by carbon accumulation (MT C per ha per yr) multiplied by the molecular

[14] Landscape area = 130.8 acres – (2,022,100 total sf building + 1,561,700 sf General Commercial parking + 423,400 sf Community Commercial parking + 343,200 sf Mixed Use parking + 613,300 sf Office parking) = 16.8 acres.

[15] Landscape area = 100 acres – (250,000 sf high school + 609,800 sf parking + 225,000 sf elementary schools + 136,800 sf parking) = 72.0 acres.

© 2022 Kleinfelder www.kleinfelder.com
KLEINFELDER 707 17th Street, Suite 3000, Denver, CO 80202 p | 303.237.6601 f | 303.237.6602

weight of
CO_2 to C (44/12).

Table N-1.1 from the CAPCOA 2021 Handbook lists 0.33 MT C/ha-yr sequestration for grassland, 1.87 MT C/ha-yr for broadleaf forest, and 2.10 MT C/yr for shrubland. The Jackson vegetative preserve will be a mix of grassland, broadleaf trees, and shrubland. Thus, an average carbon sequestration value of 1.43 MT C/ha-yr was used. Therefore, the amount of CO_2 sequestered by 1,368.9 acres is:

1,368.9 acres x 0.4047 ha/acre x 1.43 MT C/ha-yr x 44/12 = 2,905 MT CO_2/yr.

Note that the CAPCOA 2010 Handbook listed a CO_2 sequestration value of 4.31 MT CO_2 per acre, which for 1,368.9 acres would be 5,900 MT/yr. The amount of sequestration calculated by the 2021 Handbook appears to be low but will nevertheless be used herein.

5.2.3 Elimination of Existing Cattle Grazing

There are approximately 125 head of cattle that graze on the Jackson Township property from November through May and 85 head from June to October, for an average of approximately 105 per year. When Jackson Township is developed, those cattle will be removed. The Intergovernmental Panel on Climate Change (IPCC) publishes emission factors for various GHG-producing activities. The IPCC 2019 Refinement[16] of emission factors provided emission factors for cattle in Chapters 10 and 11.

There are three sources of GHG associated with cattle: methane (CH_4) belched from cattle due to enteric fermentation, CH_4 from manure, and nitrous oxide (N_2O) from manure. Chapter 10 of the Refinement presented a CH_4 emission factor from enteric fermentation of 64 kilograms (kg) per head per year (head-yr). Chapter 10 and 11 also discuss GHG emissions from manure, but on an individual cow basis, the amount of GHG from manure is less than about 2 percent of the GHG from enteric fermentation. Thus, the 64 kg CH_4 per year emission factor was used. The global warming potential (GWP) of CH_4 is 25, so the emission factor in terms of carbon dioxide equivalent (CO_2e) is 25 x 64 kg/head-year = 1.6 MT CO_2e/head-yr, and the total reduction for 105 head is 168 MT/yr.

5.2.4 CO_2 Sequestration from Planting Trees

Jackson Township is required to plant a minimum number of trees per the Design Standards and County ordinances. The number of additional trees was estimated as follows:

- One tree is required per each single-family lot. There will be 3,540 lots for low density (LD) and medium density (MD) single family housing, equating to 3,540 trees.
- It was assumed that on average each single-family homeowner would plant at least one tree in their back yard, so that amounts to an additional 3,540 trees.
- For multi-family housing, (82 acres), the stormwater model for the development assumed a minimum of 10 trees per acre, or 820 trees.
- For commercial land uses (total of 130.8 acres), the stormwater model assumed a minimum of 10 trees per acre, or 1,308 trees.
- For the community and school sites (101.0 acres), the stormwater model assumed a minimum of 10 trees per acre, or 1,010 trees.
- The preliminary park design plans indicate approximately 7 trees per acre for the interior of the parks (78.8 acres), or a minimum of 552 trees.
- The Design Standards require a minimum of one tree per 30 linear feet per side or median of street within Jackson Township. There are three major categories of streets for calculating the minimum number of trees (the street lengths are shown in Appendix H):
    - Grenville: 5,956 feet in length, minimum of 3 trees per 30 feet, or 596 trees, accounting for trees in the median plus each side of Greenville.
    - Excelsior, Jackson, and Keifer: total of 19,615 linear feet, with a minimum of 2 trees per 30 feet (one in the median and on one side), or 1,308 trees.
    - Other interior two-lane streets: total of 35,335 linear feet, with a minimum of 2 trees per 30 feet (one on each side), or 2,356 trees.
- There are three main drainage corridors/greenbelts with the following planned trees:
    - Central Drainage (Elder Creek), 6,500 linear feet with a minimum of 1 tree per 7 linear feet (accounting for trees on both sides), or 929 trees.
    - Western Drainage (Morrison Creek), 1,850 linear feet with a minimum of 1 tree per 7 linear feet, or 264 trees.

© 2022 Kleinfelder

KLEINFELDER 707 17th Street, Suite 3000, Denver, CO 80202 p | 303.237.6601 f | 303.237.6602

- Greenbelts total 8,500 linear feet with a minimum of 1 tree per 15 linear feet (a minimum of 1 tree every 30 feet on both sides of the greenbelt), or 567 trees.

The above totals to a minimum of 16,790 trees. An approximately 20 percent increase to the minimum number of trees was added to account for the fact that there will be more trees actually planted than the minimum required (e.g., some people will plant several trees in their back yard rather than just one, parking lots may use trees instead of canopies to achieve the 50 percent shade requirement, the stormwater model assumes the smallest number of trees in order to ensure adequate drainage capacity, etc.). Thus, a total of 20,000 trees was assumed.

The CAPCOA 2021 Handbook measure N-2 discussed the amount of CO_2 that can be sequestered by trees. The method in measure N-2 is quite complex, involving parameters for tree species, tree trunk diameter, amount of sun the tree receives, where the tree is planted with respect to buildings, tree mortality, among other variables. Measure N-2 suggests using an "iTree" web-based tool to calculate CO_2 sequestration per tree. However, that tool (available at https://planting.itreetools.org/) requires several parameters that are not yet known for the Jackson Township project (e.g., the number of each species of tree and the amount of sun each tree is exposed to).

The CAPCOA 2010 Handbook provided a CO_2 sequestration rate of an average 0.0312 MT/yr per tree for evergreen trees and 0.0418 MT/yr per tree for deciduous, or an average of 0.0365 MT/yr per tree, assuming 50 percent evergreen[17]. To evaluate the 0.0365 MT/yr per tree value for consistency with the CAPCOA 2021 Handbook, the "iTree" tool sequestration rates for Japanese Maple, Mayten, and three types of Cedar trees with a 10-inch diameter trunk were compared to the 2010 Handbook average value. (Even though the "iTree" tool lists about 200 species for Sacramento County, only a few of the species recommended by the County in its suggested landscape tree list are included in the "iTree" tool). The "iTree" tool Japanese Maple sequestration rate ranged from 0.0246 to 0.0308 MT/yr per tree (depending on if the tree were planted in shade or full sun), the Mayten from 0.0752 to 0.1857 MT/yr per tree, and the three Cedars from 0.0668 to 0.2073 MT/yr per tree. It appears that the 2010 Handbook average value is less than the value for typical Sacramento tree species listed in the "iTree" tool; therefore, the 2010 Handbook average value of 0.0365 MT/yr per tree was used as a conservatively low value and for 20,000 trees, CO_2 sequestration will be at least 730 MT/yr.

[17] The stormwater plan was based on 50 percent of the trees being evergreen and 50 percent deciduous.

KLEINFELDER 707 17th Street, Suite 3000, Denver, CO 80202 p | 303.237.6601 f | 303.237.6602

5.2.5 Reduction from Electric Landscaping Equipment

CalEEMod assumes that most landscaping equipment will be fossil-fuel powered. However, by 2040 it can be reasonably expected that all landscaping equipment will be electrically powered due to availability of electrically powered equipment of various horsepower ratings, including, as discussed below, construction equipment. Thus, the CalEEMod landscaping GHG emissions shown in Appendix D are eliminated. CalEEMod calculated 98 MT/yr from landscaping equipment.

5.2.6 Reduction from Landfill Gas Energy Recovery

CalEEMod estimates the amount of CO_2 and CH_4 emissions generated from landfill gas that is not captured and not used for energy recovery (e.g., generating electricity). CalEEMod assumes that 94 percent of landfills recover the landfill gas. However, it can be reasonably assumed that by 2040 all landfills will recover landfill gas. To calculate the emission reduction that would be achieved if 100 percent of landfills recover the gas, CalEEMod was run with 100 percent of landfills recovering landfill gas and compared to the 94-percent assumption. The 100 percent of landfills capturing landfill gas for energy recovery CalEEMod report is shown in Appendix I. GHG emissions from solid waste with 94 percent of landfills recovering (Appendix D) were 5,158 MT/yr. GHG emissions from solid waste with 100 percent of landfills recovering energy (Appendix I) were 4,770 MT/yr.

The CalEEMod emission GHG emission estimates for landfills recovering energy are over estimated because CalEEMod assumes that only 75 percent of landfill gas is captured (the rest of the CO_2 and CH_4 is emitted to the atmosphere). Landfill gas recovery systems can capture a much higher percentage, at least 60 to 90 percent according to USEPA[18]. This is especially the case for California, which has had landfill gas capture system requirements in place for decades. So, the CalEEMod GHG emissions were reduced by the ratio of 0.75 to 0.90, equals 3,975 MT/yr. The difference between BAU 5,158 MT/yr and 3,975 MT/yr can be credited, or 1,183 MT/yr.

5.2.7 Reduction from 805 Non-Residential EV Charging Stations

The January 2021 Revision 3a of the GHGRP committed to installing a total of 690 non-residential EV charging stations at Jackson Township parking spaces at commercial, retail, office, and school parking lots. Each electric vehicle charging station has 2 connections; so, a total of 1,380 parking spaces would be served by the 690 EV charging stations. In order to achieve net zero GHG emissions, the Applicant is

[18] See for example, https://www.epa.gov/lmop/benefits-landfill-gas-energy-projects.

© 2022 Kleinfelder www.kleinfelder.com

now committing to install an additional 115 non-residential EV charging stations, for a total of 805 stations serving 1,610 parking spaces.

For the emission reduction calculation shown in Appendix J-1, it was assumed that each EV connection would be used an average of 4 hours per day at a charging rate of 6 kWh per hour. The 4-hour per day value is based on the average observed actual session length (one vehicle in a session) of 4 hours and 19 minutes for the period April 21, 2009 through June 23, 2022 at EV charging stations located at the Applicant's current properties. The 4 hours per EV charging station is a conservatively low value because it is likely that the stations will be used by more than one vehicle per day (so total charging at the station will be multiples of 4 hours). Nevertheless, it was assumed that charging would occur at the stations only 4 hours per day.

The VMT from the amount of electrical energy charged would offset an equivalent VMT of gasoline-fueled driving. The EMFAC 2021 electric efficiency of EVs (see Appendix J-2) value of 32.5 kilowatt hours per 100 miles was used in the emission calculations. Only light duty autos and light and medium duty trucks were included in the calculations on the assumption that only those vehicle types would use the non-residential charging stations in the Jackson Township parking lots. The non-residential EV charging stations offset approximately 43.3 million miles of gasoline-fueled travel. EMFAC 2021 (version 1.0.1) was used to determine emission factors (grams per mile) for calendar year 2040 from those same gasoline-fueled vehicle types (see Appendix J-3). The emission reduction associated with non-residential charging stations shown in Appendix J-1 is 11,527 MT/yr.

5.2.8 Reduction from Residential Pre-Wiring for EV Chargers

All single-family housing and 20 percent of multi-family housing must be pre-wired for EV chargers (not actual chargers, just the pre-wiring) per BMP 2. However, Jackson Township has committed to pre-wiring an additional 57 percent of multi-family housing, for a total of 77 percent. By 2040, most of the homeowners will take advantage of the pre-wiring and install charging stations for EVs.

It is difficult to predict actual EV use 18 years into the future (calendar year 2040), because consumers choose their vehicle types based on a myriad of factors, some of which are legislatively and regulatorily driven, some are market driven, and some are individual choice. The major regulatory driver is the commitment that by calendar year 2035, one hundred percent of all new light duty vehicles (light duty autos and light duty trucks) sold in California must be zero emission vehicles (ZEV); either EV, plug-in hybrid EV (PHEV), or fuel cell electric vehicles (FCEV). In April 2022 CARB published a proposed Advanced Clean Cars II (ACC II) regulation that will require ZEVs for at least 35 percent of new light duty vehicle

© 2022 Kleinfelder www.kleinfelder.com
KLEINFELDER 707 17th Street, Suite 3000, Denver, CO 80202 p | 303.237.6601 f | 303.237.6602

sales in 2026 and increasing by about 8 percentage points per year until 2035 where 100 percent of light duty vehicle sales must be ZEV[19]. The proposed regulations allow manufacturers to meet their ZEV requirement with up to 20 percent PHEVs. There is no cap on FCEVs, but CARB forecasts FCEVs to be a small percentage of the ZEV fleet, with only 0.2% of ZEVs being FCEVs in 2021[20]. Accordingly, it was assumed that in 2040, 100 percent of new light duty vehicle sales would be EV or PHEV. For purposes of ACC II, CARB defines light duty vehicles as automobiles and light duty trucks with a gross vehicle weight rating of 8,500 pounds or less[21], which is equivalent to the LDA, LDT1, and LDT2 vehicle categories in EMFAC 2021 (categories based on EMFAC 2007).

For an initial estimate of the number of homes that would actually have an EV and charge it at home, the EMFAC 2021 forecast vehicle type and model year population distribution for Sacramento County in 2040 was used along with the percent ZEV requirements from the proposed ACC II. EMFAC 2021 does not account for ACC II because it includes only regulations that are in place when the model was developed. Table 5-5 shows the EMFAC 2021 forecast of the number of light duty vehicles in 2040. To estimate the number of EVs, a percent EV assumption by model year was made as follows:

- Model years 1966 to 2012: zero percent EV is assumed. EMFAC does show some EV for those model years, but the quantity is in the 0.01 percent range, thus zero was assumed.
- Model years 2013 to 2020: EMFAC percent EV is used, which is based on actual California sales data.
- Model years 2021 to 2025: 12 percent EV sales are assumed, which is the same assumption EMFAC 2021 uses for all model years after 2020[22].
- Model years 2026 to 2034: the percent EVs is based on the ACC II ZEV requirements, which is 35 percent in 2026 increasing by 8 percent each year.
- Model years 2035 to 2040: 100 percent EV is assumed based on the ACC II ZEV requirements.

ACC II allows up to 20 percent PHEV to provide manufacturers flexibility, but notes that the PHEV share of the market has declined in recent years[23], PHEVs will likely be more expensive than EVs and that

KLEINFELDER 707 17th Street, Suite 3000, Denver, CO 80202 p | 303.237.6601 f | 303.237.6602

manufacturers are not planning to use the 20 percent PHEV allowance[24]. Furthermore, ACC II requires PHEVs to have 4 to 5 times greater EV-only mileage range than current EVs[25]. ACC II also requires more convenient EV charging capability than current PHEV models[26]. All of these features encourage PHEV drivers to charge their vehicle batteries rather than relying on the auxiliary engine. So, it was assumed that if a person purchased a PHEV, they would, in fact, use their home charger (especially as it will already be pre-wired).

Table 5-5: Light Duty Vehicle Counts by Model Year in Sacramento County

Forecast by EMFAC for Calendar Year 2040

Model Year	Number of Light Duty Vehicles	% EV Sales	Number of EVs	Model Year	Number of Light Duty Vehicles	% EV Sales	Number of EVs

© 2022 Kleinfelder www.kleinfelder.com

Table 5-5 shows an estimated number of 599,255 EVs in 2040 in Sacramento County out of a total 934,801 light duty vehicles forecast by EMFAC, or 64.1 percent EV. It was assumed that each of single-family and multi-family homes will have a light duty vehicle. Thus, at least 64.1 percent of the homes will have an EV or PHEV and will use a home charger by 2040. The 64.1 percent value is an underestimate because there are electrically powered medium duty trucks that will also be owned and charged at home by Jackson Township residents, but the above ACC II calculations only accounted for light duty autos and light duty trucks.

However, the above analysis assumes that the model year distribution in 2040 does not change from that forecast by EMFAC 2021. It is likely that by 2040 the number of Jackson Township residents owning an EV will be much greater than the 64.1% value estimated by EMFAC 2021 for a number of reasons:

- After 2035, drivers will not have a choice but to purchase an EV if they want a new vehicle.
- Jackson Township residents will already have a pre-wired home so that installing a charger is simple and relatively inexpensive.
- By 2040, EV charging will likely simply become a matter of plugging in a 110-volt or 220-volt cord provided with the vehicle.[27]
- Jackson Township homes will be equipped with solar power, eliminating the cost of charging during the day; and by 2040 home battery storage will be prevalent allowing for "solar" charging even at night.
- Because California is a dominant market, vehicle manufacturers are likely to offer many more EV models and options than currently available and will not want to maintain dual manufacturing lines (internal combustion engines and EVs). Furthermore, other states will also likely adopt comparable requirements for EVs as required by the California ACC II. Therefore, there will be limited options for drivers to purchase non-EV vehicles.
- Vehicle repair shops are already switching to EV capabilities and by 2040 it will be even more difficult to find internal combustion engine repair and service opportunities.

In light of the above, it is reasonable that residents of Jackson Township will embrace ZEVs at a much higher frequency than required and the percentage of ZEVs will be greater than the 64.1 percent calculated. Accordingly, a reasonably conservative assumption of 75 percent residential ZEVs was made.

[27] Ibid.

KLEINFELDER 707 17th Street, Suite 3000, Denver, CO 80202 p | 303.237.6601 f | 303.237.6602

Appendix J-1 shows the calculations for the emission reductions that would result from the pre-wiring and the 75 percent actual EV assumption. To calculate the emission reduction, an average light duty VMT per Jackson Township household was first calculated from the Project-Related VMT and from the Cumulative VMT scenarios and the EMFAC forecasted VMT for Sacramento County that 77.1 percent of total VMT is produced in 2040 by light duty autos and trucks. Then 75 percent of the light duty vehicle VMT associated with the pre-wired households was calculated (i.e., 75 percent of the single-family housing units plus 75 percent of 77 percent of the 2,150 multi-family dwelling units times the average light duty VMT per household) to represent the amount of electric VMT that would offset conventionally fueled VMT. The amount of emission reductions was calculated using EMFAC 2021 emission factors for only gasoline and diesel-fueled light duty automobiles and light and medium duty trucks. The emission reductions associated with dwelling unit charging stations shown in Appendix J-1 are 17,898 MT/yr for the Project-Related VMT scenario and 12,156 MT/yr for the Cumulative VMT scenario.

Note that the 2022 version of California Green Building Code (CCR Title 24), effective January 1, 2023, also requires EV chargers for non-residential and multi-family housing. Should Title 24 mandate more EV chargers than committed to herein, the number of EV chargers will be increased to meet Title 24 requirements. If this occurs, the emission reductions will be greater than shown in Appendix J-1.

5.2.9 Emission Reductions Associated with the Sacramento Raceway

The Jackson Township Specific Plan includes land owned and operated by the Sacramento Raceway. If Jackson Township is completely developed, the Sacramento Raceway will cease operations. In April 2021 a study was conducted to assess the potential health effects of Raceway operations[28]. This study estimated the GHG emissions from the Raceway, including spectators, race vehicle transport, and racing vehicle emissions. The study estimated annual GHG emissions of 1,610 MT/yr.

5.2.10 Reduction for Electrified Construction Equipment

Electrification of construction equipment has not progressed as rapidly as passenger vehicles. However, both Caterpillar and Volvo are currently (in 2022) selling fully electric backhoes and dozers and are producing other heavier equipment with electric drive motors that, according to Caterpillar, result in 35 percent less fuel use[29].

[28] Kleinfelder, 2021. Letter to Mr. Angelo Tsakopoulos dated *April 19, 2021.*

[29] See for example, https://www.equipmentworld.com/equipment/article/14970340/caterpillars-d6-xe-electric-drive-dozer-explained. Accessed April 2022.

© 2022 Kleinfelder www.kleinfelder.com
KLEINFELDER 707 17th Street, Suite 3000, Denver, CO 80202 p | 303.237.6601 f | 303.237.6602

Appendix K shows the type and numbers of equipment, usage, horsepower, and load factor assumed by the CalEEMod model to estimate the construction emissions. The CalEEMod model does not account for any electrification of construction equipment. Thus, the CalEEMod assumptions were adjusted as shown in Appendix K to account for fully electric small dozers and backhoes and 35 percent better fuel economy from heavier equipment. Overall, construction emissions would be reduced by about 67 percent if currently available electrified construction equipment were used. The actual reduction by 2040 would likely be greater than 67 percent because by then there would be more electrified construction equipment available than there was in 2021. Thus, the emission reduction associated with electrified construction equipment is at least 756 MT/yr (0.67 x 1,129 MT/yr, refer to Section 4 herein).

5.3 POTENTIAL DISBENEFITS OF JACKSON TOWNSHIP

If Jackson Township is fully developed, the existing grassland and some of the existing trees on the site would have to be removed. The effect of this disbenefit is calculated as follows.

5.3.1 Redevelopment of Existing Grassland

The entire Jackson Township Specific Plan covers 1,391.0 acres of land. However, 74.7 of those acres are agricultural land that will remain agricultural. The remaining 1,316.3 acres of grassland could be removed and replaced with buildings, landscaping, roads, etc. as discussed above. The existing grassland sequesters CO_2. The existing grassland could be categorized as more like a desert grassland than a typical grassland (which, per IPCC definition includes pastures, woody vegetation, herbs, and brushes). Unfortunately, no CO_2 sequestration factors for desert grassland could be found, thus it was assumed that desert grassland sequestered one-half the amount of the traditional grassland value discussed in Section 5.2.2, i.e., one-half of 0.33 MT C/ha/yr. Thus, it was assumed that 1,316.3 acres of desert grassland sequestered 322 MT/yr of GHG:

1,316.3 acres x 0.4047 ha/acre x 0.33 MT C/ha-yr x 44/12 x 0.5 = 322 MT CO_2/yr

Note that as discussed above, cattle currently graze on the site. The cattle will be removed, but this is a benefit as discussed in Section 5.2.3.

© 2022 Kleinfelder www.kleinfelder.com
KLEINFELDER 707 17th Street, Suite 3000, Denver, CO 80202 p | 303.237.6601 f | 303.237.6602

5.3.2 Removal of Trees

There are only a few trees on-site, as most of the property is desert grassland without shrubs or trees. A Google Earth view of the site was examined and an approximate count of trees shown in Google Earth calculated. Over the entire 1,391.0 acres, there appear to be about 280 trees; however, about 100 of those trees are on agricultural land that will not be affected by the Project. The amount of GHG sequestered by the 180 existing trees that could be removed if the Project is fully developed was calculated as 7 MT/yr using the average CO_2 sequestration value of 0.0365 MT/yr per tree discussed in Section 5.2.4 (180 trees x 0.0365 MT/yr per tree = 7 MT/yr).

5.4 SUMMARY OF THE BENEFIT OF ADDITIONAL MITIGATION

Table 5-6 summarizes the benefits and disbenefits of the measures and shows the net GHG emissions after accounting for all of the quantified mitigation. The corresponding Section of this GHGRP that discusses each line item in Table 5-6 is also noted.

Table 5-6: Net Annual GHG Emissions for Alternative 2 GHG Emissions

Description	Project-Related VMT Scenario Annual GHG Emissions (MT/yr)	Cumulative VMT Scenario Annual GHG Emissions (MT/yr)
Annual Non-Mobile Operational Emissions from CalEEMod (Table 2-3)	12,890	12,890
Amortized Annual Construction Emissions (Section 4)	1,129	1,129
Annual Mobile Emissions from Traffic Study (Table 3-2)	32,497	21,381
Total Annual Operational Non-Mobile plus Construction plus Mobile Emissions	*46,516*	*35,400*
Penalty for Removal of Grassland (Section 5.3.1)	322	322
Penalty for Removal of Trees (Section 5.3.2)	7	7
Total Equivalent Project Emissions (including penalties)	**46,845**	**35,729**
Reduced VMT (Table 5-3)	- 1,885	- 1,240
Eliminate Natural Gas Emissions (Section 5.2.1)	- 7,431	- 7,431
Reduction from Jackson Township Vegetation Preserve (Section 5.2.2)	- 2,905	- 2,905
Reduction from Elimination of Cattle (Section 5.2.3)	- 168	- 168
Reduction from Jackson Township Trees (Section 5.2.4)	- 730	- 730

Table 5-6 (cont): Net Annual GHG Emissions for Alternative 2 GHG Emissions

Reduction from Electric Landscaping Equipment (Section 5.2.5)	- 98	- 98
Reduction from Landfill Gas Energy Recovery (Section 5.2.6)	- 1,183	- 1,183
Reduction from 805 Non-residential EV Charging Stations (Section 5.2.7)	- 12,250	- 12,250
Reduction from Residential Housing EV Charging (Section 5.2.8)	- 17,898	- 12,156
Redevelop Sacramento Raceway (Section 5.2.9)	- 1,610	- 1,610
Reduction from Electrified Construction Equipment (Section 5.2.10)	- 756	- 756
Total GHG Reductions	*- 46,914*	*- 40,527*
Net GHG After Reductions	**- 69**	**- 4,798**

5.5 NON-QUANTIFIED MITIGATION

The preceding sections of the GHGRP deal only with quantified VMT and associated emission reductions. There are numerous other project design features that would also result in reduced GHG emissions, but the benefit of those features has not been quantified. Some of said features are:

- An over-statement of VMT because the VMT per resident and per employee values do not account for the mutually beneficial interaction of the Jackson Township Specific Plan with other existing and/or approved land uses that result in reduced VMT. For example, Jackson Township schools and retail will serve not only Jackson Township residences but existing residences in the area, thus reducing the distance traveled by existing persons.
- An over-statement of employee VMT because the VMT per employee does not account for the current shift to work-from-home and remote working/learning that is occurring.
- Participation in the Sacramento County affordable housing program. Providing affordable (below market rate) housing allows residents to live closer to job or schools, reducing commute distances and emissions.
- Low flow bathroom fixtures, kitchen fixtures, showers, and toilets in all residential units and commercial buildings.
- Reduced square footage of residential turf due to the increased housing density.
- Water efficient irrigation systems and water efficient landscaping for the non-residential areas.
- Some of the existing homes located within the Jackson Township Specific Plan will be replaced with more modern and energy efficient homes and existing sources of natural gas combustion will be removed.

© 2022 Kleinfelder www.kleinfelder.com
KLEINFELDER 707 17th Street, Suite 3000, Denver, CO 80202 p | 303.237.6601 f | 303.237.6602

- Increased landfill gas capture efficiency to more than 90 percent. Many existing landfills in California capture well in excess of 90 percent and by 2040 that should be standard for all landfills.
- More efficient water treatment digester gas capture and energy recovery.
- Additional electric construction equipment that will be developed and implemented by 2040.
- Increased fuel efficiency of non-electric construction equipment that will occur before 2040.
- There may be additional GHG reduction measures that could be implemented as the result of the Final Draft Sacramento County Climate Action Plan but have not been accounted for herein.

And most significantly, all of the mobile-source emission estimates are over-stated and the benefit of EV charging stations under-stated because they do not account for more electric vehicle penetration than assumed and other changes in transportation that will have to occur if California is to reach the 2050 GHG reduction goals. For example, the new (April 1, 2022) Federal passenger car and light duty truck fleet wide average fuel economy standard of approximately 49 miles per gallon (mpg) for new vehicles by calendar year 2026 has not been accounted for. Thus, prior to full development of Jackson Township in 2040 there will be greater GHG emission reductions and even lower GHG emissions than stated herein.

SUBJECT: Analysis of Potential Health Effects Related to the Air Quality Effects of the Jackson Township Specific Plan

Dear Mr. Wiley:

Tsakopoulos Investments is proposing the Jackson Township Specific Plan (Jackson Township) encompassing approximately 1,391 acres of land located in southeastern Sacramento County, east of Excelsior Road, north of Jackson Highway, and west of Eagles Nest Road. The Jackson Township project is a mixed-use development that includes a mix of different housing types and commercial and retail land uses. One of the project alternatives (the Proposed Project) is evaluated in this report: the California Environmental Quality Act (CEQA) Alternative 2. There are two scenarios for Alternative 2: one with Project-Related vehicle miles traveled (VMT) and one with Cumulative VMT, as explained further below.

In October 2020, the Sacramento Metropolitan Air Quality Management District (SMAQMD or District) published final Guidance[1] for applicants to use in addressing an issue raised by the California Supreme Court in the case of *Sierra Club v. County of Fresno* (2018) 6 Cal. 5th 502 regarding the proposed Friant Ranch Project, where the Court determined that a CEQA air quality analysis must "make a reasonable effort to substantively connect the Project's air quality effects to the likely health consequences." The SMAQMD October 2020 Final Guidance is the most current (as of August 2022) guidance and is the best currently available methodology to estimate potential health effects.

This letter report implements the SMAQMD October 2020 Final Guidance for the proposed Jackson Township Specific Plan.

[1] *Guidance to Address the Friant Ranch Ruling for CEQA Projects in the Sac Metro Air District*, Final October 2020. Available at www.airquality.org/Businesses/CEQA-Land-Use-Planning/SMAQMDFriantRanchFinalOct2020.pdf. Accessed August 22, 2022.

1.0 SUMMARY

The District's October 2020 Final Guidance is based on extensive air quality and health effects modeling that yields an estimate of incremental health effects as the result of a proposed project's emissions of criteria air pollutants: oxides of nitrogen (NO_x), volatile organic compounds (VOCs, also termed reactive organic gases, ROG), particulate matter (PM_{10} and $PM_{2.5}$), carbon monoxide (CO), and oxides of sulfur (SO_x). The health effect modeling is based on a photochemical grid model (PGM) that accounts for reactions in the atmosphere of NO_x and ROG (and to a much lesser extent, CO) to create ozone and conversion in the atmosphere of NO_x and SO_x into $PM_{2.5}$. The PGM model calculates concentrations of ozone and $PM_{2.5}$, and the concentrations are then input into the United States Environmental Protection Agency (USEPA) BenMAP health effects model. The BenMAP model relates ozone and $PM_{2.5}$ concentrations to incremental health effects: mortality (all causes), hospital admissions (respiratory, asthma, cardiovascular), emergency room visits (asthma), and acute myocardial infarction (non-fatal) for $PM_{2.5}$, and mortality, emergency room visits (respiratory) and hospital admissions (respiratory) for ozone. The BenMAP model accounts for PM_{10} health effects by using $PM_{2.5}$ as a surrogate. Thus, all of the criteria pollutant emissions are accounted for in the District's Final Guidance methodology. The BenMAP model is used by the USEPA in evaluating health effects and establishing the National Ambient Air Quality Standards (NAAQS) that are set to protect the public health and safety[2].

The District Final Guidance includes screening tools that use proposed project emissions of NO_x, ROG, and $PM_{2.5}$ to estimate potential health effects in relation to those emissions. Although only three of the criteria pollutant emissions are entered into the screening tool, the tool accounts for the remaining criteria pollutant emissions through surrogates. Two screening tools are published: Minor Projects and Strategic Area Projects. Strategic Area Projects have emissions from two to eight times greater than the maximum Thresholds of Significance (TOS) from the five air districts in the Sacramento region, while Minor Projects have emissions less than the TOS. The TOS were adopted by the SMAQMD as a single set of thresholds triggering additional analyses. Any relatively large project will exceed the TOS and require additional analyses such as conducted herein.

Potential emissions from the proposed Jackson Township Project were estimated in Revision 3 to the Air Quality Mitigation Plan (AQMP)[3] completed in August 2022 and Revision 4 to the Greenhouse Gas Reduction Plan (GHGRP) also completed in August 2022[4]. The Updated AQMP evaluated the Proposed Project or Alternative 2 associated vehicle travel [Business as Usual (BAU), Project-Related VMT, or Cumulative VMT], additional mitigation for NO_x and ROG to achieve SMAQMD emission reduction targets for Alternative 2, and additional mitigation for greenhouse gases (GHG) that also result in reductions of NO_x and ROG. The Updated GHGRP included emission reduction measures aimed at meeting SB 743 targets for Alternative 2 plus additional mitigation that resulted in "net zero" GHG emissions, i.e., emission reductions more than offset potential GHG emissions from Jackson Township.

---

[2] *PGM models and the BenMAP health effects model are the most sophisticated models currently available for conducting air quality effect studies. PGM models are specified by the USEPA for regional modeling of ozone (40 CFR Part 51 Appendix W) and are used throughout the US to develop State Implementation Plans to bring areas into attainment and assess effects of emitting sources. The BenMAP model has been used since 2003. The BenMAP and PGM models are routinely updated to incorporate state of the science and are currently in use by the USEPA.*

[3] *Revision 3 – Updated Air Quality Mitigation Plan for the Jackson Township Specific Plan, August 24, 2022* .

[4] *Revision 4 – Updated Greenhouse Gas Reduction Plan for the Proposed Jackson Township Specific Plan, August 25, 2022.*

© 2022 Kleinfelder

BAU VMT is a default VMT based solely on land uses and does not incorporate any of the project design elements that reduce VMT. Project-Related VMT is the amount of vehicle travel expected for the Jackson Township as if it were the only project in the region but including all of the VMT mitigation in the project design. Cumulative VMT is the amount of travel expected for the Jackson Township accounting for other projects in the region and including all of the VMT mitigation in the project design. BAU VMT for Jackson Township is greater than Project-Related VMT and Project-Related VMT for Jackson Township is greater than Cumulative VMT.

Based on the magnitude of the Jackson Township operational emissions, the Jackson Township project would qualify to use the Strategic Area Project Health Effects Tool discussed in the Final Guidance. Construction emissions associated with the Jackson Township project were also calculated and reported[5] but are much less than the operational emissions. Also, maximum operational emissions do not occur at the same time as maximum construction emissions. Thus, only operational emissions are evaluated herein. Emissions were calculated using the California Emissions Estimator Model (CalEEMod) emissions model based on anticipated land uses, VMT, and mitigation.

The Final Guidance screening tools use emission estimates in terms of pounds per day (lbs/day). The AQMP reported emissions for Jackson Township in terms of annual [tons per year (tpy)], summer peak daily (lb/day), and winter peak daily (lb/day). Winter peak daily NO_x emissions are slightly larger than summer peak daily, while summer peak daily ROG emissions are slightly larger than winter. Changes in $PM_{2.5}$ peak daily emissions summer to winter are de minimis. As explained below, peak winter NO_x and $PM_{2.5}$ and peak summer ROG emissions were combined into a single assessment in order to calculate maximum possible health effects, even though peak winter and peak summer emissions cannot both occur at the same time. Furthermore, peak daily emissions were used, even though the average daily emissions are much less. Accordingly, the potential health effects are over-stated.

Peak daily emissions of NO_x, ROG, and $PM_{2.5}$ for the emission scenarios evaluated herein are shown in Table 1-1. The emissions shown represent the Jackson Township project at full build out after mitigation, estimated to occur by 2040. The source of the emission values shown in Table 1-1 are discussed in Section 3 below.

Table 1-1: Jackson Township Peak Daily Emissions After Mitigation[a]

Scenario	Alternative	NO_x (lb/day)	ROG (lb/day)	$PM_{2.5}$ (lb/day)
1	Alternative 2, Project-Related VMT, with Additional Mitigation	90.9	427.7	75.6
2	Alternative 2, Cumulative VMT, with Additional Mitigation	60.0	393.3	51.4

[a] Peak daily emissions are the winter peak daily for NO_x and $PM_{2.5}$ and the summer peak daily for ROG.

Jackson Township emissions from Table 1-1 were input into the Final Guidance screening tool for Strategic Area Project II, "Rancho Cordova," to estimate the incremental health effects. The results are shown in Table 1-2. The method for arriving at the values shown in Table 1-2 are discussed in Section 4 below.

[5] *AQMP Appendix E.*

© 2022 Kleinfelder

Table 1-2: Summary of Jackson Township Potential Incremental Annual Health Incidences

Scenario	Alternative	Total Number of Annual Health Incidences	Percent of Background Incidences
1	Alternative 2, Project-Related VMT, with Additional Mitigation	9.25	0.0050%
2	Alternative 2, Cumulative VMT, with Additional Mitigation	9.23	0.0050%

Table 1-2 shows that there is not much difference in potential health effects between the Project-Related VMT and Cumulative VMT. The relatively small number of health effects is due to the extensive mitigation built into the project design that reduces the amount of vehicle travel, reduces emissions from vehicles (enhancing electric vehicle penetration), and reduces emissions through a variety of other mitigation measures such as a mandatory Transportation Management Association for both employers and residents and non-residential and residential electric vehicle charging stations as discussed in the AQMP[6] and GHGRP[7].

In addition to conservatism that is inherent in any screening tool, the potential health effects are over-stated for Alternative 2 because peak daily emissions were used instead of average daily emissions, peak winter and peak summer emissions have been comingled, the CalEEMod model itself includes conservative over-estimates of emissions, some of the health incidences may be double counted, and, as explained in the AQMP and GHGRP, not all of the mitigation measures designed into the proposed Jackson Township project have been accounted for in the emission reductions.[8]

2.0 TECHNICAL BASIS FOR THE GUIDANCE METHODOLOGY

The SMAQMD Final Guidance and screening tools are based on sophisticated air quality and health effects models. PGM modeling was conducted with the USEPA-approved Comprehensive Air Quality Model with Extensions (CAMx) model and health effects modeling was conducted with the USEPA BenMAP model. Both of these models are used extensively by federal, state, and local regulatory agencies as well as applicants to assess proposed projects' potential air quality and health effects and are the currently most sophisticated models available for this type of assessment. CAMx and BenMAP are used throughout the US to assess the benefits of reducing emissions in a region. BenMAP has been in use by the USEPA since 2003, and CAMx has been in use since 1997. Both models are routinely updated to the state of the science.

In order to create the screening tools, the District retained a consultant (Ramboll) to perform the modeling. Ramboll modeled two sets of projects: Minor Projects and Strategic Area Projects. Minor projects are those with emissions less than the TOS, and Strategic Area Projects are those with emissions from two to eight times the TOS. Forty-one example minor projects were modeled at locations throughout Sacramento and surrounding counties and six example Strategic Area Projects were modeled. The center of one of the hypothetical modeled Strategic Area Projects (Source II) is located only about six kilometers (km) north of the center of the proposed Jackson Township project.

[6] *AQMP Pages 31 to 36.*

[7] *GHGRP Pages 36 to 41.*

[8] *AQMP Pages 36-37.*

© 2022 Kleinfelder

The PGM modeling was conducted with a four km grid, so Source II adequately represents potential health effects from Jackson Township and is essentially within one grid cell as suggested by the Final Guidance for representative Strategic Area Projects.

After Ramboll modeled the hypothetical projects with PGM to calculate ozone and $PM_{2.5}$ concentrations, the concentrations were input to the BenMAP model to calculate potential health effects. Although ozone and $PM_{2.5}$ concentrations and associated health effects are not necessarily linear with respect to emissions, within a relatively small range of emissions linearity can be used. That is why the Final Guidance based emissions for the Strategic Area Projects from two to eight times the TOS. Linearity allows one to take the PGM and BenMAP results for the hypothetical projects and scale those results by emissions for an actual proposed project[9].

3.0 EMISSIONS FOR THE JACKSON TOWNSHIP PROJECT

The SMAQMD Final Guidance screening tool for Strategic Area Projects was used to assess the potential health effects of the Jackson Township project. Two emission scenarios were assessed and the potential health effects as calculated by the Final Guidance screening tool for Strategic Area Projects are reported in Attachments 1 and 2. Table 3-1 shows emissions for Alternative 2 prior to additional mitigation. The emissions in Table 3-1 came from the AQMP as noted and were estimated with CalEEMod as described in the AQMP and noted below the Table.

Table 3-1: Alternative 2 Peak Daily Emissions Prior to Additional Mitigation

Scenario	Alternative		NO_x (lb/day)	ROG (lb/day)	$PM_{2.5}$ (lb/day)
1	Alternative 2 Project-Related VMT, prior to Additional Mitigation	Summer	164.4	462.9	84.0
		Winter	183.7	411.2	84.0
2	Alternative 2 Cumulative VMT, prior to Additional Mitigation	Summer	132.8	424.7	60.1
		Winter	147.1	382.7	60.1

Source, AQMP:
Alternative 2 Project-Related VMT, Appendix C-2, Page 7, Summer
Alternative 2 Project-Related VMT, Appendix C-3, Page 7, Winter
Alternative 2 Cumulative VMT, Appendix C-5, Page 7, Summer
Alternative 2 Cumulative VMT, Appendix C-6, Page 7, Winter

As shown in Table 3-1, summer emissions of NO_x are less than winter, but winter emissions of ROG are less than summer. In order to yield a maximum possible estimate of health effects, the peak winter and peak summer daily emissions were comingled, i.e., peak daily winter NO_x and $PM_{2.5}$ were used along with peak daily summer ROG even though this combination could not occur. Nevertheless, because models are used to estimate emissions, pollutant concentrations, and potential health effects; the analysis uses this most conservative hypothetical worst-case approach.

[9] *See Final Guidance Appendix C, Page C-4.*

© 2022 Kleinfelder

Note that the emissions shown in Table 3-1 are peak daily emissions, not an average over the year. For example, Table 3-2 shows the annual emissions (in terms of tons per year) and the annual average daily emissions (calculated by taking the annual emissions and dividing by 365). The peak daily NO_x and $PM_{2.5}$ emissions shown in Table 3-1 are on the order of 20 percent greater than the annual average daily emissions shown in Table 3-2; while ROG peak daily emissions are a few percent greater than average daily.

Table 3-2: Alternative 2 Average Daily Emissions Prior to Additional Mitigation

Scenario	Alternative		NO_x	ROG	$PM_{2.5}$
1	Alternative 2 Project-Related VMT, prior to Additional Mitigation	Annual (tpy)	28.1	72.6	12.9
		Average Daily (lb/day)	154.0	397.8	70.7
2	Alternative 2 Cumulative VMT, prior to Additional Mitigation	Annual (tpy)	22.3	67.5	9.0
		Average Daily (lb/day)	122.2	369.9	49.3

Source, AQMP:
Annual Alternative 2 Project-Related VMT, Appendix C-1, Page 8.
Annual Alternative 2 Cumulative VMT, Appendix C-4, Page 8.
Average Daily emissions are annual divided by 365 days per year.

Emissions for the two scenarios evaluated herein, Alternative 2 with Project-Related VMT and Alternative 2 with Cumulative VMT, are reported in the AQMP without and with additional mitigation. The additional mitigation in the AQMP is mitigation not included in the initial project design but has been committed to by the Jackson Township Applicant. The magnitude of the emission reductions in the AQMP and GHGRP are in terms of tons per year. Accordingly, in order to obtain peak daily emissions after additional mitigation was applied, a three-step process was completed.

The first step to calculate peak daily emissions including the additional mitigation was to obtain from the AQMP the peak daily emissions for Alternative 2 when Project-Related and Cumulative VMT were accounted for with CalEEMod. These values are the maximum peak summer or winter daily emissions (in terms of pounds per day) as shown in Table 3-1 and repeated in the first row of Tables 3-3 and 3-4.

The second step was to calculate the annual percent reduction in ROG and NO_x (in terms of tpy) that were not accounted for in the CalEEMod emissions model but were included in the AQMP and GHGRP. These reductions are shown in Tables 3-3 and 3-4.

The third step was to apply the annual percent reduction to the peak daily emissions. The calculations and the source of the emission values for Alternative 2 Project-Related VMT are shown in Table 3-3 and Alternative 2 Cumulative VMT in Table 3-4.

4.0 RESULTS OF THE HEALTH EFFECTS SCREENING CALCULATIONS FOR THE JACKSON TOWNSHIP PROJECT

The peak daily emissions after mitigation shown in Tables 3-3 and 3-4 were entered into the Final Guidance screening tool for Strategic Area Projects to estimate the potential health effects related to the emissions. The screening tool output is shown in Attachments 1 and 2 and summarized in Table 4-1. The screening tool reports the projected number of health incidences per year in model year 2035[10] in terms of both the number of incidences and in terms of the percent increase above background in both the four km modeling domain and in the 5-Air-District region. The four km modeling domain is most of northern California as shown in the Final Guidance Appendix B, Figure B-2. The 5-Air-District region includes the air districts of Sacramento Metropolitan, Yolo-Solano, Placer County, El Dorado County, and Feather River as shown in the Final Guidance Figure 3, Page 13. The 5-Air-District Region has an

[10] The SMAQMD Screening Tool uses calendar year 2035 for the baseline. Maximum Jackson Township emissions will not occur until 2040 (anticipated full buildout). To be conservative, 2040 emissions were used coupled with the 2035 baseline. The SMAQMD Screening Tool does not offer a 2040 baseline option.

© 2022 Kleinfelder www.kleinfelder.com

estimated 2035 population of 3,271,451 persons per Footnote 3 of the Guidance screening tool. Tables 4-1 and 4-2 show the results for the 5-Air-District Region.

Table 4-1: Potential Annual Incremental Health Incidences for the Jackson Township Alternative 2

Ozone Health Endpoint	**Age Range**	**Incidences (mean)**	**Incidences (mean)**
Respiratory			
Hospital Admissions, All Respiratory	65 - 99	0.14	0.14
Emergency Room Visits, Asthma	0 - 17	0.57	0.56
Emergency Room Visits, Asthma	18 - 99	0.99	0.98
Mortality			
Mortality, Non-Accidental	0 - 99	0.094	0.093
TOTAL INCIDENCES	0 - 99	**9.25**	**9.23**

Note: Total incidences are not reported in the screening tool, but the Total incidences shown in the table are the sum of the screening tool incidences for both health endpoints. The Total Incidences comes from adding the screening tool values and may not match exactly the sum of values shown in the table due to round-off differences.

The total number of incidences shown in Table 4-1 was calculated by summing the values from the screening tool results (Attachments 1 and 2) for all health endpoints. The total number of incidences are over-stated because there may be double counting. For example, an individual admitted for $PM_{2.5}$ may be the same individual admitted for ozone.

The total background number of health incidences in the 5-Air-District Region shown in the screening tool and Table 4-2 is 184,505 incidences out of the projected 2035 population of about 3.3 million

© 2022 Kleinfelder

persons. This helps put the roughly nine additional incidences associated with the Jackson Township shown in Table 4-1 in perspective. The background number of health incidences and the incremental percentage increase are shown in Table 4-2.

Table 4-2: Annual Background Number of Health Incidences and Percent Above Background for the Jackson Township

Scenario		Background	1	2
Description		Annual Number of Background Health Incidences Projected for 2035	Alternative 2 Project Related VMT after Additional Mitigation	Alternative 2 Cumulative VMT after Additional Mitigation
$PM_{2.5}$ Health Endpoint	Age Range		% Increase above Background	% Increase above Background
Respiratory				
Emergency Room Visits, Asthma	0 - 99	18,419	0.0092%	0.0092%
Hospital Admissions, Asthma	0 - 64	1,846	0.0060%	0.0060%
Hospital Admissions, All Respiratory	65 - 99	19,644	0.0033%	0.0033%
Cardiovascular

Acute Myocardial Infarction, Nonfatal	45 - 54	741	0.0045%	0.0045%
Acute Myocardial Infarction, Nonfatal	55 - 64	1,239	0.0043%	0.0043%
Acute Myocardial Infarction, Nonfatal	65 - 99	5,052	0.0048%	0.0048%
Mortality				
Mortality, All Causes	30 - 99	44,766	0.0096%	0.0096%
Ozone Health Endpoint	**Age Range**		**% Increase above Background**	**% Increase above Background**
Respiratory				
Hospital Admissions, All Respiratory	65 - 99	19,644	0.0007%	0.0007%
Emergency Room Visits, Asthma	0 - 17	5,859	0.0097%	0.0096%
Emergency Room Visits, Asthma	18 - 99	12,560	0.0079%	0.0078%
Mortality				
Mortality, Non-Accidental	0 - 99	30,386	0.0003%	0.0003%
TOTAL INCIDENCES	0 - 99	**184,505**	**0.0050%**	**0.0050%**

Note: Total incidences are not reported in the screening tool, but the Total Incidences shown in the table are the sum of the screening tool incidences for both health endpoints. Total percent increase is not the sum of the individual percentages because the background for each effect is different. The number of background incidences was calculated from the screening tool and differs slightly for each scenario due to round off differences. Sum of the values in the table may not match exactly the sum calculated from the screening tool because of round off differences.

© 2022 Kleinfelder

5.0 ADDITIONAL CONTEXT FOR THE RESULTS

The approximately nine incremental health incidences calculated by the screening model includes about four deaths (projected for 2035) out of approximately 21,000 deaths per year from all causes for the period 2018-2020 in the 5-Air-District region.[11] For the projected health incidences in 2035, the data in Tables 4-1 and 4-2 can be used to establish additional context. For example, Table 4-1 shows a possible 1.7 additional emergency room visits for asthma due to Project-related $PM_{2.5}$ out of an estimated background value of 18,419 visits shown in Table 4-2.

The number of projected health incidences is a conservative upper bound estimate because (a) it is based on continuous exposure to the maximum daily average pollutant concentrations; (b) the emission rates used in the assessment were a combination of maximum summer and winter daily rates, which could not occur; (c) health incidences were counted separately for $PM_{2.5}$ and ozone, when a person could experience both so there is potential for double counting; and (d) other conservative assumptions and methods used in the CalEEMod, PGM, and BenMAP models. On the other hand, the health incidences were calculated only for those health effects that have been researched sufficiently to be quantifiable.[12] There could be additional non-quantifiable health effects, for example changes in metabolism, weight gain, diabetes, or nervous system issues, among others.

The health incidence models and screening tools used in the Guidance represent regional average values for the 5-Air-District region. Within the region it is possible that there are subgroups of the population that could experience higher health incidences than average and other subgroups that could experience lower than average incidences. For example, vulnerable populations (populations defined by age, race/ethnicity, levels of education and income, and linguistic isolation) have been linked to increased health effects from air pollution. It has also been reported that increased ozone and $PM_{2.5}$ concentrations lead to a greater risk of death for racial minorities and people with low income.[13] This is especially the case for populations located close to freeways and major roadways.

According to Section 22 of the Recirculated Draft Environmental Impact Report (DEIR) for the Jackson Township Specific Plan[14], the Jackson Township project area (Census Tract 90.05) total population is slightly lower and the portion of households that primarily speak a language other than English is slightly higher than the County overall, but the race, culture, and income of the occupants of the area is comparable to the average demographics of the remainder of the County.

---

[11] The California Department of Public Health annually publishes County Health Status Profiles (https://www.cdph.ca.gov/Programs/CHSI/Pages/County-Health-Status-Profiles.aspx). The 2022 Profile showed an average number of deaths per County for the period 2018-2020. The county average annual death numbers were 12,414.3 for Sacramento County; 3,394.0 for Placer County; 1,668.0 for El Dorado County; 1,391.0 for Yolo County; 884.7 for Sutter County; and 653.0 for Yuba County; or a total of 20,405.0 for those 6 counties. The 5-Air District region includes a portion of Solano County, and the average total deaths for Solano County were 3,585.0. Assuming about one-fourth of the deaths in Solano County were in the 5-Air District region, that would add another about 896 deaths; for a total in the 5-Air District region of 21,301 average deaths per year.

Other than vehicle traffic associated with the Project, Jackson Township does not contain sources of primary $PM_{2.5}$ emissions. Thus, the ozone and $PM_{2.5}$ concentrations and health effects modeled are a regional issue, not a local Jackson Township issue. Potential health effects are related to respiratory issues, and one indicator of respiratory issues is asthma. Sacramento County hosts a web site that shows various health (as well as other) data trends.[15] According to the web site, 18.72 percent of the population in the County had asthma in 2020. This compares to 23.5 percent in 2017, 16.1 percent in 2020 for California overall, and 14.2 percent in 2020 for the United States as a whole. Prior to 2018, the data showed a gradual increase in the percent of persons with asthma in Sacramento County, from about 17 percent in 2009 to 23.5 percent in 2017.

Although the percentage of persons with asthma in Sacramento County is greater than California as a whole, the County is in general a healthy environment as reported by the Healthy Places Index published by the Public Health Alliance of Southern California.[16] The Healthy Places Index (HPI) for Sacramento County in 2022 is 60.7, indicating that the County is healthier than 61 percent of other California Counties. Jackson Township is located in a census tract that has an HPI of 49.6, less healthy than the County in general. The HPI is based on an assessment of economic, education, transportation, social, neighborhood, healthcare access, housing, and environment criteria. The environment criterion includes clean water and air criteria. Although Jackson Township will cause emissions and thus slightly impact clean air, all of the other criteria would be improved by the presence of Jackson Township. For example, the Project will provide employment opportunities, improve multi-modal transportation options, improve access the healthcare and other neighborhood services, and provide affordable housing opportunities for all income levels,

The proposed Jackson Township includes numerous features designed to reduce potential health effects from air pollution. For example, the Project reduces VMT by more than 43 to 61 percent from a typical (business as usual) project.[17] Reducing VMT encourages physical activity, which reduces obesity, diabetes, high blood pressure, heart disease, and other chronic conditions associated with a sedentary lifestyle[18]. The benefit of reduced VMT through increased physical activity is not accounted for in the health effects models. The reduction in Jackson Township VMT is accomplished through the following measures:

- Location in a suburban center within approximately ten miles of the Sacramento downtown central business district, less than five miles from other existing high-density commercial/job center areas, and adjacent to other planned developments such that single-use trips are minimized, i.e., there are more pass-by and diverted trips.
- A compact mix of land uses in close proximity to each other with a highly connected street and trail network and the streets are designed in a grid pattern.
- High and medium density housing for over half of the total project dwelling units with a housing density better than 9.5 dwelling units per acre.

- Below market rate housing to help provide affordable housing for all income levels.
- Approximately 15 percent of the total commercial square footage is dedicated to a mixed-use facility that combines residences and commercial/retail uses.
- Most residential units are within 1,320 feet (one-quarter mile) of a neighborhood park, open space, school, and/or bicycle/pedestrian trail.
- Most residential units are less than one-half mile from shopping and services.
- At least four schools located within the project boundaries such that most students can walk to a local school.
- At least eight parks located within the project boundaries such that residents can walk/bike to enjoy the parks.
- Access to high frequency bus service that connects to the Watt/Manlove light rail station.
- Signalized bus routes in order to avoid traffic delays.
- Multi-modal system that makes public transit, walking, and bicycling viable and attractive travel choices for residents and employees with:
    - Adequate bike parking at non-residential locations, including the transit center and park and ride locations;
    - Showers/lockers and other end of trip facilities at non-residential buildings; and
    - Long-term bike parking facilities.
- An extensive pedestrian path and trail system that is convenient and accessible from homes, schools, parks, employment, and shopping.
- Pedestrian and bike paths minimize barriers to pedestrian/bicycle use, e.g., fences, berms and other impediments are eliminated where possible.
- An on-site transit center and park and ride facilities along the designated transit route of Jackson Highway.
- Subsidized bus rapid transit lanes on Jackson Highway.
- Funding and design that will result in bus headways of 15 minutes or better.
- A mandatory Transportation Management Association (TMA) for employers and residents funded through assessments and assessments for regional transportation improvements.

6.0 CONCLUSION

Potential health effects related to the proposed Jackson Township possibly caused by emissions from the proposed project result in about nine additional health incidences per year (e.g., hospital admissions, emergency room visits) compared to a background number of incidences in the 5-Air-District Region of about 185,000 incidences per year, or an increase of about 0.005 percent. The nine incremental incidences per year projected for 2035 are from a modeled population of about 3.3 million persons.

The potential health effect incidences were calculated from a screening tool developed by the SMAQMD to attempt to substantively connect the Project's air quality effects to the likely health consequences. In addition to conservatism that is inherent in any screening tool, the potential health effects are over-stated because peak daily emissions were used instead of average daily emissions, peak daily winter was combined with peak daily summer even though that cannot occur, the CalEEMod model itself includes conservative over-estimates of emissions, some of the health incidences may be double counted, the health benefits from increased physical activity resulting from reduced VMT have also not been accounted for, and, as explained in the AQMP and GHGRP, not all of the mitigation measures designed into the proposed Jackson Township project have been accounted for in the emission estimates[19].

1. Affected age ranges are shown. Other age ranges are available, but the endpoints and age ranges shown here are the ones used by the USEPA in their health assessments. The age ranges are consistent with the epidemiological study that is the basis of the health function.
2. Health effects are shown in terms of incidences of each health endpoint and how it compares to the base (2035 base year health effect incidences, or "background health incidence") values. Health effects are shown for the Reduced Sacramento 4-km Modeling Domain and the 5-Air-District Region.
3. The percent of background health incidence uses the mean incidence. The background health incidence is an estimate of the average number of people that are affected by the health endpoint in a given population over a given period of time. In this case, the background incidence rates cover the 5-Air-District Region (estimated 2035 population of 3,271,451 persons). Health incidence rates and other health data are typically collected by the government as well as the World Health Organization. The background incidence rates used here are obtained from BenMAP.

4. The total number of health incidences across the 5-Air-District Region is calculated based on the modeling data. The information is presented to assist in providing overall health context.

5. The technical specifications and map for the Reduced Sacramento 4-km Modeling Domain are included in Appendix A, Table A-1 and Appendix B, Figure B-2 of the *Guidance to Address the Friant Ranch Ruling for CEQA Projects in the Sac Metro Air District.*

1 EXECUTIVE SUMMARY

1.1 INTRODUCTION

Tsakopoulos Investments is proposing the Jackson Township Specific Plan (Jackson Township) encompassing approximately 1,391 acres of land located in southeastern Sacramento County, east of Excelsior Road, north of Jackson Highway, and west of Eagles Nest Road. The proposed project could include housing, parks, and schools built near the existing Sacramento Raceway (Raceway) operation if the Raceway continues operations at its current location. This study assesses the potential air quality-related health effects from Raceway operations on the future housing, parks, and schools that could be located on property owned by Tsakopoulos Investments.

Raceway operations include Drag Racing and Motocross. Some of the Drag Racing events are National Hot Rod Association (NHRA) sanctioned, but it appears that none of the Motocross events are nationally sanctioned. For this assessment, the calendar of events available from the Raceway web site[1] in 2019 were used. Calendar year 2019 was used because 2020 activities were affected by the corona virus shutdowns. There were approximately 133 drag racing events scheduled in 2019, including 9 NHRA, 74 non-NHRA, and 50 test and tune and private rental drag racing events plus 9 Motocross events. A plan view of the Raceway is shown in Appendix A.

Although approximately 133 Drag Racing and 9 Motocross events were scheduled, not all of the scheduled events may have actually occurred. For example, some events could be rained out, some of the sanctioned events could be re-located, and for some of the local events there may be no or only a few participants. Thus, this analysis is a conservative over-estimate of potential effects.

Raceway operations are related to seven sets of emissions as follows:

- Spectators traveling to and from the Raceway
- Trailered race vehicles traveling to and from the Raceway

[1] *www.sacramentoraceway.com. Accessed September, 27, 2020.*

© 2021 Kleinfelder

- Non-trailered (street legal) race vehicles traveling to and from the Raceway for racing
- Spectators traveling on-site at the Raceway for parking
- Trailered race vehicles traveling on-site at the Raceway
- Street legal race vehicles traveling on-site at the Raceway
- Race vehicles (drag racers, street legal, motorcycle) racing on-site

In the absence of detailed on-site observations, reasonable assumptions based on aerial photos and other publicly available data (such as racing web sites) were made regarding the amount of vehicle travel associated with the Raceway events. The assumptions were used to estimate the number of vehicles and vehicle miles traveled (VMT) both off and on-site. Total VMT was then coupled with standard California vehicle-specific emission factors (grams per mile) from the EMFAC 2017 database for tailpipe emissions and the USEPA *Compilation of Air Pollutant Emissions Factors* (AP-42) for fugitive emissions from paved and unpaved roads.

Emission estimates were made for nitrogen oxides (NO_x), reactive organic gases (ROG), particulate matter less than 2.5 microns in diameter ($PM_{2.5}$), particulate matter less than 10 microns in diameter (PM_{10}), total organic gases (TOG), the major speciated organic gases associated with vehicle emissions (acetaldehyde, benzene, 1,3-butadiene, ethylbenzene, formaldehyde, naphthalene), and diesel particulate matter (DPM). NO_x, ROG, $PM_{2.5}$, and PM_{10} are termed criteria pollutants. The emission estimates were then coupled with two different health effects evaluation methods, one for vehicle travel to/from the Raceway and one for vehicle travel on-site. Section 2 presents the emission estimating methodology and emission estimates.

Potential health effects of vehicle travel to/from the Raceway were assessed using the Sacramento Metropolitan Air Quality Management District (SMAQMD) Guidance for associating emissions of NO_x, ROG, and $PM_{2.5}$ with regional health effects[2]. Potential effects from on-site operations (local effects) were assessed using an ambient air quality effect dispersion model (AERMOD), California and National Ambient Air Quality Standards (CAAQS and NAAQS) which are designed to protect the public health and welfare with an adequate margin of safety, and the

1.2 POTENTIAL EMISSIONS AND HEALTH EFFECTS

1.2.1 Potential Emissions

Table 1-1 shows the total annual and maximum daily and hourly emissions from the Raceway operations and the source of the emissions. The data in Table 1-1 come from the emission estimates presented in Section 2.2. The number of vehicles and amount of racing operations for NHRA drag racing events are much greater than for non-NHRA or Test and Tune events, thus the maximum daily and hourly emissions for drag racing shown in Table 1-1 are for NHRA events. Motocross events have lower emissions than Drag Racing, but because the Motocross tracks are nearer to the property boundary than Drag Racing, Motocross events have to be assessed as well as Drag Racing. On an annual basis both Drag Racing and Motocross can occur, but Drag Racing and Motocross do not occur on the same day. No speciated organic gases are shown in Table 1-1 because the speciation factors (percentage of TOG) are the same for all sources, and the speciation can be applied after the dispersion modeling assessment (discussed in Section 4.1.3).

Table 1-1

Summary of Raceway Emissions

Parameter	NO_x	ROG	$PM_{2.5}$ Total	PM_{10} Total	TOG	DPM
Annual (lb/year)	5235.96	1888.18	976.88	3744.66	1112.88	2.69
Daily NHRA (lb/day)	180.70	40.98	42.43	162.41	18.51	0.085
Hourly NHRA (lb/hour)	1.56	1.76	0.02	0.05	1.91	0
Annual Motocross (lb/year)	108.06	58.13	18.81	53.01	59.55	0.11
Daily Motocross (lb/day)	71.85	11.06	4.82	14.58	6.62	0.012
Hourly Motocross (lb/hour)	0.76	1.76	0.0013	0.0013	2.14	0

1.2.2 Potential Regional Health Effects

The SMAQMD "Friant Ranch" regional health effects screening methodology was used to assess potential health effects of spectators and race vehicles traveling to and from the Raceway. The Friant Ranch screening methodology uses emissions of NO_x, ROG, and $PM_{2.5}$ and photochemical modeling to assess the potential health effects of ozone and fine particulate ($PM_{2.5}$) created through regional-scale photochemical transformation of NO_x and ROG into ozone and particulate. The methodology is discussed further in Section 3, and the results are reported in terms of incremental increases in hospitalizations and mortality.

As shown in Table 3-1, Raceway operations could result in an increase in mortality from all causes of about 9 additional incidences or 0.005 percent above background for the 5-air district region used in the SMAQMD methodology. The health incidences are mainly due to $PM_{2.5}$ emissions.

1.2.3 Potential Local Health Effects from Criteria Pollutants

The potential for local health effects from criteria pollutants emitted during Raceway operations was assessed by comparing modeled off-site concentrations of the criteria pollutants to CAAQS and NAAQS. The assessment uses a dispersion model (AERMOD) and receptor locations to calculate ambient concentrations. AERMOD is a USEPA- and California-approved dispersion model that used SMAQMD-provided meteorological data from the Sacramento Executive (SacEx) Airport. Section 4.1 discusses the assessment methodology. The purpose of this assessment is to evaluate the potential for health effects in actual exposed persons off-site. If housing were built near to the Raceway, the center of the nearest home would be about 60 meters away from the property boundary. Thus, for this assessment model receptors were placed on a 20-meter spacing with the first row of receptors placed about 60 meters from the property boundary.

Table 1-2 shows the modeled maximum concentrations of the criteria pollutants along with an estimate of the regional background. The total effect values in Table 1-2 are an overestimate because it was assumed that the regional background does not include any emissions from Raceway operations, which is not the case. None of the criteria pollutant effects cause an exceedance of the CAAQS/NAAQS.

© 2021 Kleinfelder

Table 1-2

Modeled Criteria Pollutant Concentrations Compared to Standards

Raceway Operation	Pollutant	Averaging Time	Modeled Concentration (ug/m^3)	Background (ug/m^3)	Total (ug/m^3)	CAAQS/ NAAQS/ SIL (ug/m^3)	Exceed Standards?
DR	NO_2	1-hour	75	73	148	188	No
MX	NO_2	1-hour	104	73	177	188	No
DR MX	NO_2	Annual	0.14	11.3	11.4	57	No
DR	$PM_{2.5}$	24-hour	0.5	NA	0.5	1.2	No
MX	$PM_{2.5}$	24-hour	1.0	NA	1.0	1.2	No
DR MX	$PM_{2.5}$	Annual	0.007	NA	0.007	0.2	No
DR	PM_{10}	24-hour	1.43	NA	1.43	5	No
MX	PM_{10}	24-hour	1.12	NA	1.12	5	No
DR MX	PM_{10}	Annual	0.018	NA	0.018	1	No

DR = Drag Racing, MX = Motocross, DR MX = both Drag Racing and Motocross for annual averages.
PM concentrations are not added to background because the background is greater than the CAAQS/NAAQS, so the modeled concentrations are compared to the SIL. The SIL is the level below which the modeled concentrations are not considered to cause or contribute to an AAQS exceedance.

1.2.4 Potential Local Health Effects from Speciated Organics and DPM

The potential health effects of the speciated organic compounds were assessed by calculating an incremental potential cancer risk and a health hazard index (HHI). Incremental cancer risk is expressed in terms of the number of excess cancer incidences per one million persons exposed. A cancer risk of 10 in one million is used as a threshold for unacceptable risk, e.g., the Proposition 65 cancer risk threshold is 10 in one million. Health hazard indices are used to assess potential non-cancer health effects of individual compounds. An HHI greater than 1.0 means that the modeled ambient concentration is greater than a concentration that could cause a direct health effect, such as headaches. An HHI of less than 1.0 indicates that there is not a potential for direct health effects.

Table 1-3 shows the modeled excess cancer risk results and HHI for possible nearby future residents when the effects from all of the speciated compounds and DPM are added together. The primary contributor to the local speciated organic and DPM health effects is DPM. None of the results exceed the acceptable health thresholds. As discussed in Section 4.1.6, the potential health effects for possible future schools are less than about 2 percent of the values shown in Table 1-3.

© 2021 Kleinfelder

Table 1-3

Summary of Speciated Organic Potential Health Effects

Potential Health Effect	Potential Effect	Threshold	Exceed Thresholds?
Cancer Risk	1.97 in 1 million	10 in 1 million	No
Acute 1-Hour HHI	0.11	1.0	No
Acute 8-Hour HHI	0.16	1.0	No
Chronic HHI	0.0011	1.0	No

See Sections 4.2 and 4.3 for discussion of Thresholds.

1.3 SUMMARY

Raceway operations can result in emissions of criteria pollutants, speciated organic gases, and DPM. The emissions are associated with vehicle travel to and from the Raceway as well as travel on-site. Several assumptions regarding vehicle travel and emission factors for operations on-site were made in order to assess the potential for adverse health effects from Raceway operations both regionally and locally near the Raceway.

Regional and local health effects appear to not be adverse when compared to regional background incidences of pollution-related health effects; vehicle travel to and from the Raceway could cause an increase of 0.005% above background health incidences. Local potential health effects from criteria pollutants can be assessed by comparing modeled ambient concentrations of Raceway-related emissions to National and California ambient air quality standards and Significant Impact Levels. The modeled off-site concentrations were less than the standards.

Adverse health effects from speciated organic gases can be evaluated by comparing potential cancer and non-cancer health effects to established thresholds for cancer risk and non-cancer effects. The modeled organic gases and DPM concentrations were much less than the relevant thresholds.

The fact that potential health effects are less than accepted thresholds does not mean that the Raceway may not be a nuisance to nearby housing, parks, or schools. For example, there will be increased traffic on nearby roads during NHRA-sanctioned events and burnout can result in short bursts of visible smoke. It is also recognized that more specific information regarding Raceway operations and emissions from race vehicles could yield a different result; but the analysis herein is based on reasonable assumptions and methodology in the absence of additional data.

2 EMISSION ESTIMATES

2.1 EMISSION ESTIMATING METHODOLOGY

The following data and assumptions were used to estimate emissions associated with the Sacramento Raceway. It is recognized that the following methodology contains a number of assumptions, simplifications, and approximations, but they are deemed necessary given the absence of actual counting and detailed observations for a year. The methodology and assumptions are discussed in the following subsections.

2.1.1 Number of Events

The Sacramento Raceway website includes a published calendar of events for 2019 (www.sacramentoraceway.com, accessed September 27, 2020). There are numerous different kinds of events, but for purposes of this assessment they were grouped into the categories bulleted below. Each day of activity at the Raceway was categorizes as an “event”; e.g., if a NHRA event was scheduled for a Friday, Saturday, and Sunday, that was counted as 3 events. The categories and approximate number of events in 2019 were as follows:

- NHRA events. This includes all of the events noted as “NHRA”. There were 9 such events in 2019.
- Test and Tune events. This includes all events listed as Test and Tune plus all events listed as Private Rental. There were approximately 41 Test and Tune events and 9 Private Rental for a total of 50 events.
- Non-NHRA events. This includes all events (except Motocross and Chassis Certification) not listed as NHRA, Test and Tune, or Private Rental. There was a total of 74 such events in 2019. Some of the non-NHRA events were specialty events with specialty vehicles (e.g., Nite of Fire) but the numbers of those events and specialty vehicles were relatively small, thus all the Non-NHRA events were categorized and treated the same. It was assumed that there would be no racing during Chassis Certification and vehicle travel for that event would be de minimis.

© 2021 Kleinfelder

- Motocross events. There were 9 Motocross events in 2019. The number of motocross events and emissions from motocross at the Raceway are relatively very small compared to the number of drag race vents. Motocross events are discussed in Section 2.1.7 below.

It appeared from the Raceway website and other web sites (e.g., NHRA schedules) that the NHRA events were scheduled for about 10 hours (e.g., from 8:00 AM to 6:00 PM) while the Test and Tune events were scheduled for 4 hours (e.g., 5:00 PM to 9:00 PM). In addition, some of the non-NHRA events also appear to be scheduled for 4 hours per event, but most appeared to be scheduled for 10 hours. (The Sacramento Raceway web site did not list scheduled times for all events.) Thus, it was assumed that NHRA events operated 10 hours per event-day, Test and Tune 4 hours per event-day, and non-NHRA 8 hours per event-day. The 8-hour assumption for non-NHRA events is calculated from approximately two-thirds of the non-NHRA events at 10 hours and one-third at 4 hours. The fraction of 10-hour and 4-hour events is an assumption, recognizing that not all non-NHRA events are scheduled for a full day.

It was further assumed that racing occurred during all but one of the scheduled hours, i.e., there might be a total of an hour lost each day due to breaks between racing classes, vehicle breakdowns, equipment failures, or other problems that prevent racing; so racing occurs for 9 hours per day for NHRA events, 3 hours for Test and Tune events, and 7 hours for non-NHRA events. It was also assumed that each drag race could occur within a 3-minute time frame, so that there were approximately 20 races per hour of racing, 2 cars per race or 40 vehicles per hour. Actual cycle times would typically be less than 3 minutes as race vehicles can travel one quarter-mile in less than 10 seconds, but in order to not over-estimate the number of races and vehicles, 3 minutes was assumed. Accordingly, the following number of races and vehicles were used in the emission calculations:

- Race Vehicles per Hour:
    - NHRA: 20 races per hour, 2 vehicles per race; or 40 vehicles per hour.
    - Test and Tune: 20 races per hour, 2 vehicles per race; or 40 vehicles per hour.
    - Non-NHRA: 20 races per hour, 2 vehicles per race; or 40 vehicles per hour.
- Race Vehicles per Day:
    - NHRA: 40 vehicles per hour, 9 hours per day: 360 race vehicles per day.
    - Test and Tune: 40 vehicles per hour, 3 hours per day: 120 race vehicles per day.
    - Non-NHRA: 40 vehicles per hour, 7 hours per day: 280 race vehicles per day.
- Race Vehicles per Year:

© 2021 Kleinfelder

- NHRA: 9 hours racing per event-day, 40 vehicles per hour of racing: 360 race vehicles per event-day, 9 event days: 3,240 vehicles per year.
- Test and Tune: 3 hours racing per event-day, 40 vehicles per hour of racing: 120 race vehicles per event-day, 50 event days: 6,000 vehicles per year.
- Non-NHRA: 7 hours racing per event-day, 40 vehicles per hour of racing: 280 race vehicles per event-day, 74 event days: 20,720 vehicles per year.
- Total: 29,960 vehicles per year.

2.1.2 Spectator Vehicles

In 2020, the Raceway announced that due to Covid-19 restrictions, the Raceway would be limited to 50% capacity and only the first 2,000 spectators could attend. Thus, it was assumed that the Raceway capacity was 4,000 spectators. It was further assumed that NHRA events were sold out (4,000 spectators), non-NHRA events were sold to an average of 30 percent capacity (1,200 spectators), and Test and Tune had 100 spectators. The 30 percent and 100 spectator values are estimates based on photos that have been published on social media, but the actual numbers could be much different. It was further assumed that all of the spectator vehicles arrived and departed in a 2-hour period for NHRA events and 1 hour for all other events. Therefore, the following number of spectator vehicles were used in the emission calculations:

- Spectator Vehicles per Hour:
  - NHRA: 4,000 spectators, 2 spectators per vehicle, arrive over a 2-hour period; or 1,000 vehicles per hour.
  - Test and Tune: 100 spectators, 2 spectators per vehicle, arrive over a 1-hour period; or 50 vehicles per hour.
  - Non-NHRA: 1,200 spectators, 2 spectators per vehicle, arrive over a 1-hour period; or 600 vehicles per hour.
- Spectator Vehicles per Day:
  - NHRA: 4,000 spectators, 2 spectators per vehicle, 2,000 vehicles per day.
  - Test and Tune: 100 spectators, 2 spectators per vehicle, 50 vehicles per day.
  - Non-NHRA: 1,200 spectators, 2 spectators per vehicle, 600 vehicles per day.
- Spectator Vehicles per Year:
  - NHRA: 4,000 spectators, 2 spectators per vehicle times 9 events; 18,000 vehicles per year.

© 2021 Kleinfelder

- Test and Tune: 100 spectators, 2 spectators per vehicle times 50 events; 2,500 vehicles per year.
- Non-NHRA: 1,200 spectators, 2 spectators per vehicle times 74 events; 44,400 vehicles per year.
- Total: 64,900 vehicles per year.

2.1.3 Trailered Race Vehicles (Tow Vehicles)

Many of the race vehicles cannot be driven on streets and are trailered to and from the Raceway. The following number of trailer tow vehicles were assumed for the emission calculations:

- Tow Vehicles per Hour:
  - NHRA: 360 race vehicles per day, one-half of the vehicles only race once, so 180 individual vehicles per event-day. Of the 9 event-days, 1 was a 3-day event, 1 was a 2-day event, and 4 were 1-day events, for a weighted average of 1 day per event. Thus, it was assumed that 180 tow vehicles arrive for each event and all arrive in one hour: 180 tow vehicles per hour.
  - Test and Tune: 120 race vehicles per day, one-half of the vehicles only race once, so 60 individual vehicles per event-day, assume about one-fourth of vehicles are towed and arrive in one hour: 15 tow vehicles per hour. The one-fourth value is assumed because most of the Test and Tune vehicles are street legal.
  - Non-NHRA: 280 race vehicles per day, one-half of the vehicles only race once, so 140 individual vehicles per event-day, assume one-fourth of vehicles are towed and arrive in one hour: 35 tow vehicles per hour. The one-fourth value is assumed because most of the non-NHRA vehicles are street legal.
- Tow Vehicles per Day:
  - NHRA: 360 race vehicles per day, one-half of the vehicles only race once, so 180 individual vehicles per event-day. Of the 9 event-days, 1 was a 3-day event, 1 was a 2-day event, and 4 were 1-day events, for a weighted average of 1 day per event. Thus, it was assumed that 180 tow vehicles arrive for each event and all are towed: 180 tow vehicles per day.
  - Test and Tune: 120 race vehicles per day, one-half of the vehicles only race once, so 60 individual vehicles per event-day, one-fourth of vehicles are towed: 15 tow vehicles per day.

© 2021 Kleinfelder

- Non-NHRA: 280 race vehicles per day, one-half of the vehicles only race once, so 140 individual vehicles per event-day, one-fourth of vehicles are towed: 35 tow vehicles per day.

- Tow Vehicles per Year:
  - NHRA: 180 vehicles per event day for 9 event days per year: 1,620 tow vehicles per year.
  - Test and Tune: 15 towed vehicles per event day for 50 event-days per year: 750 tow vehicles per year.
  - Non-NHRA: 35 towed vehicles per event day for 74 events per year: 2,590 tow vehicles per year.
  - Total: 4,960 tow vehicles per year.

2.1.4 Non-Trailered (Street Legal) Race Vehicles

Race vehicles that are not trailered to the Raceway will drive to the Raceway. The number of street legal race vehicles driven to the Raceway are as follows:

- Race Vehicles Driven to Raceway per Hour:
  - NHRA: Zero, all NHRA vehicles are trailered to the race.
  - Test and Tune: 120 race vehicles per day, one-half of the vehicles only race once, so 60 individual vehicles per event-day, three-fourths of vehicles are driven and arrive in one hour: 45 driven race vehicles per hour.
  - Non-NHRA: 280 race vehicles per day, one-half of the vehicles only race once, so 140 individual vehicles per event-day, three-fourth of vehicles are towed and arrive in one hour: 105 driven race vehicles per hour.
- Race Vehicles Driven to Raceway per Day:
  - NHRA: Zero, all NHRA vehicles are trailered to the race.
  - Test and Tune: 120 race vehicles per day, one-half of the vehicles only race once, so 60 individual vehicles per event-day, three-fourths of vehicles are driven: 45 driven race vehicles per day.
  - Non-NHRA: 280 race vehicles per day, one-half of the vehicles only race once, so 140 individual vehicles per event-day, three-fourth of vehicles are driven: 105 driven race vehicles per day.
- Race Vehicles Driven to Raceway per Year:
  - NHRA: Zero, all NHRA vehicles are trailered to the race.

© 2021 Kleinfelder

- Test and Tune: 45 race vehicles driven per event day for 50 event-days per year: 2,250 driven race vehicles per year.
- Non-NHRA: 105 driven race vehicles per event day for 74 events per year: 7,770 driven race vehicles per year.
- Total: 10,020 driven race vehicles per year.

2.1.5 Race Vehicle Mileage

Appendix A shows the layout of the Raceway (taken from Google Earth). The drag strip is approximately 0.75 miles long in total, with 0.25 miles for racing and 0.5 miles for slowdown. There are off-ramps in the slow down area that allow race vehicles to return to race car parking at 0.5, 0.63, and 0.75 miles from the starting line. The spectator parking area is approximately 0.0 to 0.25 miles from the entrance and the race car parking area is about 0.2 to 0.5 miles from the entrance. The following mileage per vehicle values were used in the emission calculations:

- Race Vehicles Racing On-Site:
  - NHRA Racing: 0.25 mile race, 0.5 mile roll-out; or 0.75 miles per race.
  - NHRA Staging and Return to parking: 0.1 mile to staging and 0.75 miles return to parking; 0.85 miles per race.
  - Test and Tune Racing: 0.25 mile race, 0.25 mile roll-out; or 0.50 miles per race.
  - Test and Tune Staging and Return to parking: 0.1 mile to staging and 0.50 miles return to parking; 0.60 miles per race.
  - Non-NHRA Racing: 0.25 mile race, 0.25 mile roll-out; or 0.50 miles per race.
  - Non-NHRA Staging and Return to parking: 0.1 mile to staging and 0.50 miles return to parking; 0.60 miles per race.
- Spectator Vehicles On-Site:
  - A total of 0.5 miles per vehicle on-site for all events.
  - Tow Vehicles On-Site (for trailered race vehicles): A total of 1.0 miles per vehicle on-site for all events. For a total of 3,880 miles per year.
  - Non-Trailered Race Vehicles Arriving and Departing On-Site: A total of 1.0 miles per vehicle on-site for all events. For a total of 10,020 miles per year.

To estimate the travel distance for race spectators and tow vehicles to and from the Raceway, it was assumed that NHRA events will draw spectators and race vehicles from as far as the Bay Area (about 110 miles one way to San Francisco), non-NHRA events would draw from a shorter

© 2021 Kleinfelder

distance (as far as 60 miles one way), and Test and Tune events would draw from mainly local racers and spectators (as far as 30 miles one way). Thus, the following mileage assumptions were used:

- Spectator Vehicles to/from Raceway:
  - NHRA events: 55 miles per vehicle one-way; 110 miles per vehicle.
  - Test and Tune events: 15 miles per vehicle one-way; 30 miles per vehicle.
  - Non-NHRA events: 30 miles per vehicle one-way; 60 miles per vehicle.
  - Total Mileage: 18,000 * 110 + 2,500 * 30 + 44,400 * 60 = 4,719,000 miles per year.
- Tow Vehicles to/from Raceway:
  - NHRA events: 55 miles per vehicle one-way; 110 miles per vehicle.
  - Test and Tune events: 15 miles per vehicle one-way; 30 miles per vehicle.
  - Non-NHRA events: 30 miles per vehicle one-way; 60 miles per vehicle.
  - Total Mileage: 540 * 110 + 750 * 30 + 2,590 * 60 = 237,300 miles per year.
- Race Vehicles Driven to/from Raceway:
  - NHRA events: Zero, all NHRA race vehicles are trailered.
  - Test and Tune events: 15 miles per vehicle one-way; 30 miles per vehicle.
  - Non-NHRA events: 30 miles per vehicle one-way; 60 miles per vehicle.
  - Total Mileage: 0 * 110 + 2,250 * 30 + 7,770 * 60 = 533,700 miles per year.

Tables 2-1 and 2-2 summarize the assumptions used for the effect assessment.

2.1.6 Emission Factors

Several sources of information were consulted to develop emission factors (grams per mile) for emissions from race, spectator, and tow vehicles.

Although several sources were consulted for engine emissions, none of them are as complete or rigorous as the California- and USEPA-approved EMFAC 2017 emission factor database[4] for motor vehicles. The database was accessed for emissions in calendar year 2021 for the various vehicle categories and speeds as noted below. Appendix B shows the EMFAC 2017 emission factors. EMFAC emission factors vary by speed, and the following on-site speed assumptions were used:

- Spectator Vehicles On-Site: Average speed of 5 miles per hour (mph). The 5 mph value accounts for the fact that there will be a large amount of stop and go, idling, and slow speed travel while parking and leaving the Raceway.
- Tow Vehicles On-Site: Average speed of 15 mph. It was assumed that tow vehicles would arrive and depart on-site during hours when spectators are not present, and thus higher speeds could occur for vehicles on-site.
- Non-Trailered Race Vehicles Arriving and Departing On-Site: Average speed of 15 mph. It was assumed that non-trailered race vehicles would arrive and depart on-site during hours when spectators are not present, and thus higher speeds could occur for vehicles on-site.

USEPA AP-42, Chapter 13.2.1 (dated 01/11) Equation 1 was used to calculate fugitive $PM_{2.5}$ emissions from travel on paved roads to and from the Raceway. A silt loading (sL) of 0.1 grams per square meter and an average vehicle weight (W) of 2.4 tons was used, consistent with the parameters used in the California Emissions Estimator Model[5] (CalEEMod, version 201.3.2) that is used to calculate emissions from land use projects. The emission factor for paved road $PM_{2.5}$ emissions is 0.0751 grams per mile (g/mi) calculated as follows for $PM_{2.5}$ (particle size multiplier k = 0.25 g/VMT):

[4] *www.arb.ca.gov/emfac. Accessed March 13, 2021. Note that a newer version of EMFAC was released in January 2021 (EMFAC 2021), but it has not yet been approved by USEPA. Thus, EMFAC 2107 was used.*

[5] *www.caleemod.com*

© 2021 Kleinfelder

E (g/mile) = k * (sL)0.91 *(W)1.02 = 0.0751 g/mile

AP-42 provides for a precipitation correction factor that reduces the emissions based on the fact that there will be no particulate emissions during rain. However, Raceway operations are canceled if there is rain, so the precipitation correction factor was not applied to the above equation.

The same emission factor was also used for spectator vehicles, tow vehicles, and race vehicles traveling on-site, and race vehicles racing on the paved drag strip. Although this is probably a slight underestimate for drag racing on the paved drag strip (because of increased tire wear), the number of miles racing is small compared to all the other mileage to/from and on-site at the Raceway. Spectator vehicles enter the Raceway on a paved road and travel to parking on pavement. Although the spectator vehicle parking area is unpaved, spectator vehicle speeds while parking will be very small and thus fugitive dust from parking vehicles is assumed de minimis. Furthermore, as discussed in Section 2.1.7, the USEPA emission factors for unpaved roads do not apply to low speeds.

Race cars use specialty fuels, including nitromethane mixed with methanol, pure methanol, methanol mixed with gasoline, pure ethanol, ethanol mixed with gasoline, as well as leaded and unleaded gasoline, among other possibilities. (Although leaded fuels can be used for racing, it was assumed that lead emissions would be de minimis and are not estimated herein.) Emission factors for specialty fuels from race vehicles were not generally available, thus EMFAC 2017 weighted average (weighted by Sacramento County VMT) vehicle exhaust values were used as follows:

- NHRA, Test and Tune, and Non-NHRA Race Vehicles: EMFAC 2017 for MDV (medium duty vehicles) for model year 1977 and 50 mph, gasoline fuel. MDV was chosen because this vehicle category had the largest emission factors and race vehicles typically have higher horsepower than traditional passenger cars. Model year 1977 was chosen as it is the oldest year in the EMFAC 2017 database and race vehicles are typically not tuned and controlled like modern vehicles. An average speed of 50 mph was chosen assuming the race vehicles reach a top speed of 100 mph. NHRA dragsters can clearly reach speeds much greater than 100 mph and even some “club cars” can exceed 100 mph; but, to be conservative, an average speed of 50 mph was chosen. Tire wear particulate emissions from burnout were not included in this assessment even though burnout is visible. However, the vast majority of the particulate from burnout will of a size be much larger

© 2021 Kleinfelder www.kleinfelder.com

than PM_{10} and $PM_{2.5}$ (that is why tire wear emissions are visible during burnout). Furthermore, burnout is of less duration than a race.

- Spectator Vehicles to/from the Raceway: EMFAC 2017 for calendar year 2021, all speeds, all model years, and all fuels aggregated. However, emission factors were aggregated only for light duty autos, light duty trucks, light heavy-duty trucks, medium duty trucks (e.g., Ram 1500, Ram 2500, RAM 3500), motorcycles, and motor homes. None of the other heavy heavy-duty trucks (e.g., 18-wheelers) or bus emission factors were included in the spectator vehicle emissions.
- Tow Vehicles to/from the Raceway: EMFAC 2017 for calendar year 2021, all speeds, all model years, but diesel fueled vehicles only and only for a medium duty truck (e.g., Ram 2500).
- Non-Trailered Race Vehicles Driven to/from the Raceway: EMFAC 2017 for MDV, calendar year 2021, all speeds, 1977 through 1999 model years, gasoline fuel. The 1977 through 1999 model years were chosen for the emission factors because street-legal race vehicles tend to not be as tuned and controlled as modern vehicles.

The SMAQMD Mobile Source Protocol[6] stated that the speciated organic compounds of interest from motor vehicles are acetaldehyde, benzene, 1,3-butadiene, ethylbenzene, formaldehyde, naphthalene, and DPM. Emission factors for the individual speciated organic toxic compounds were calculated from a Total Organic Gases (TOG) speciation profile used in the Bay Area Air Quality Management District publication, *Recommended Methods for Screening and Modeling Local Risks and Hazards*, dated May 2011, Table 14. The TOG emission factor came from EMFAC 2017 and the speciation is based on the percentage of TOG as follows.

- Acetaldehyde: 0.28%
- Benzene: 2.47%
- 1,3-Butadiene: 0.55%
- Ethylbenzene: 1.05%
- Formaldehyde: 1.58%
- Naphthalene: 0.05%

[6] *Mobile Sources Air Toxics Protocol Guidance Document, September 2020*. Sacramento Metropolitan Air Quality Management District. Available at www.airquality.org/Residents/CEQA-Land-Use-Planning/Mobile-Sources-Air-Toxics-Protocol.

© 2021 Kleinfelder

DPM emission factors are from EMFAC 2017 for diesel-fueled vehicle $PM_{2.5}$ exhaust emissions, assuming that all DPM is less than 2.5 microns in mean aerodynamic diameter.

PM_{10} tailpipe emissions were assumed equal to $PM_{2.5}$ emissions because tailpipe emissions are almost entirely $PM_{2.5}$ or smaller. The USEPA unpaved road emission factor is the same for both PM_{10} and $PM_{2.5}$. The USEPA paved road emission factor for PM_{10} is 4 times greater than the $PM_{2.5}$ factor because the “k factor” changes from 0.25 to 1.0 for PM_{10}.

Table 2-3 summarizes the emission factors used in the assessment.

Motorcycle Race Vehicles	1.149	2.660	0.00198	0	0.00198	0	3.238	0
Motorcycle Tow Vehicles at Raceway	2.0461	0.323	0.0415	13.828	0.0415	13.828	0.368	0.0415

NA = Not Assessed. Although spectator, tow, and street-legal vehicles do emit toxic organic compounds while driving on streets, the potential health effects of those emissions on residences, businesses, schools, etc. near public streets is not assessed herein.

Race Vehicles include NHRA, Non-NHRA, Test & Tune, and Motocross. Assumed that none of the race vehicles are diesel-fueled, so DPM emissions for race vehicles are zero.

Tow vehicles for Drag Racing are on paved roads, but tow vehicles for Motocross are on unpaved roads, thus fugitive $PM_{2.5}$ emission factor is different.

© 2021 Kleinfelder www.kleinfelder.com

2.1.7 Motocross Events and Emission Factors

As indicated, there were approximately 9 Motocross events in 2019. The emissions associated with Motocross are relatively small compared to drag racing. Motocross events are scheduled in the afternoon, and thus it was assumed that the events last 4 hours. Each 'moto' is 30 minutes long plus two laps and there are 2 motos per race.

A study of motocross event racing speeds[7] indicate that the motorbikes travel at speeds ranging from 14 to 48 mph, with jump speeds of about 30 mph. It was assumed that the average speed for the race is, therefore, 30 mph. This means that each moto is about 15 miles long (30 mph x 0.5 hrs per moto) and each race about 30 miles long (2 motos per race). Each race will take at least an hour (30 minutes per moto, 2 motos per race, and setup time in between). Thus, it was assumed that there were 3 races per day.

It was assumed that each moto had an average of 10 motorcycles racing per moto, or 20 per hour, 60 per day, and 540 per year. The starting area of the motocross track is about 80 feet wide, which could accommodate a maximum of about 20 motorcycles, thus, an average of 10 motorcycles per moto was used.

Racing vehicle mileage is 300 vehicle miles per hour (10 motorcycles x 30 miles per race), 900 vehicle miles per day (3 races per day), and 8,100 miles per year (9 events per year).

The following additional assumptions were made:

- All race motorcycles were towed to the site.
- There are 10 motorcycles per moto, and the same motorcycles race in both motos per standard racing procedure.
- Each race (set of 2 motos) has a different set of motorcycles, so there are 30 different motorcycles arriving for each event.
- All tow vehicles arrive in one hour, but most tow vehicles bring 2 motorcycles or approximately 15 tow vehicles per hour, 15 per day, and 135 per year.

Motocross events at the Raceway do not draw many spectators, so it was assumed that each event drew 200 spectators, 2 spectators per vehicle, or 100 spectator vehicles. It was assumed that all spectators arrive in 1 hour, so 100 spectator vehicles per hour, 100 per day, and 900 per

[7] *www.dirtrider.com/speed-supercross. Accessed March 22, 2021.*

© 2021 Kleinfelder

year. These motocross events do not appear to be nationally sanctioned, so it was assumed that spectators and tow vehicles travel only 30 miles one way to the Raceway, or 54,000 vehicle miles per year (30 mi one-way x 2 round trip x 900 vehicles per year) for spectators and 8,100 vehicle miles per year (30 mi one-way x 2 round trip x 135 vehicles per year) for tow vehicles.

Tailpipe emission factors for racing motorcycles were derived from EMFAC 2107 for all model years, calendar year 2021, motorcycles, gasoline fuel. The same organic speciation used for race vehicles was used for motorcycles.

$PM_{2.5}$ and PM_{10} fugitive emissions from motocross racing were assumed de minimis because the track is heavily watered prior to each moto, the size of particles (essentially small clumps of mud) is very large compared to $PM_{2.5}$ and PM_{10}, and the large particles will settle out of the atmosphere.

The Motocross area is not paved, so the emission factor for tow vehicles on-site at the Raceway during Motocross events was calculated per USEPA AP-42, Chapter 13.2.2 (dated 11/06) Equation 1b for $PM_{2.5}$ emissions from travel on unpaved roads at the Raceway. The calculations used constants for public roads in Table 13.2.2-2 along with an average speed on-site (S) of 15 mph for tow vehicles, a surface soil moisture content (M) of 6.5% (average of values shown in Table 13.2.2-3), and from Table 13.2.2-1 a surface material silt content (s) of 4.8% for sand and gravel processing. The calculation is as follows for 15 mph and $PM_{2.5}$ (constant k = 0.18 lb/mi). No correction for brake or tire wear was applied because the EMFAC 2017 emission factors were only for exhaust.

$$E = k * (s/12)1.0 * (S/30)0.5 / (M/0.5)0.2 = 0.0305 \text{ lb/mi} \times 453.6 \text{ g/ lb} = 13.828 \text{ g/mi}$$

As is the case for Drag Racing, it was assumed that fugitive dust emissions from spectator vehicles on unpaved areas will be de minimis because of the amount of stop and go and low speeds and the USEPA emission factors do not apply to speeds less than 10 mph[8].

The Motocross area is farther from the Raceway entry than the drag racing area. Thus, spectators and tow vehicles each travel a total of about 1.5 miles on-site (0.75 mile each way).

[8] *AP-42, Chapter 13.2.2, Table 13.2.2-3.*

2.2 EMISSION ESTIMATES

The assumptions regarding operations and the emission factors discussed in Section 2.1 were combined to estimate annual, maximum daily, and maximum hourly emissions. The results are shown in Appendix C and summarized in Table 2-4. Maximum daily and hourly emissions occur during NHRA events because of the much greater number of vehicles associated with NHRA events compared to non-NHRA, Test and Tune, and Private Rental events. Note that Motocross and Drag Racing events do not occur on the same day and spectators do not arrive at the same time as race vehicles, tow vehicles for trailered race vehicles, and racing, so daily and hourly emissions from all source categories are not summed.

Table 2-4

Summary of Raceway Emissions

Parameter	NO_x	ROG	$PM_{2.5}$ Total	PM_{10} Total	TOG	DPM
Annual (lb/year)	5235.96	1888.18	976.88	3744.66	1112.88	2.69
Daily NHRA (lb/day)	180.70	40.98	42.43	162.41	18.51	0.085
Hourly NHRA (lb/hour)	1.56	1.76	0.02	0.05	1.91	0
Annual Motocross (lb/year)	108.06	58.13	18.81	53.01	59.55	0.11
Daily Motocross (lb/day)	71.85	11.06	4.82	14.58	6.62	0.012
Hourly Motocross (lb/hour)	0.76	1.76	0.0013	0.0013	2.14	0

© 2021 Kleinfelder

3 POTENTIAL REGIONAL HEALTH EFFECTS

Regional health effects arise from the sum total of NO_x, ROG, and $PM_{2.5}$ emissions from vehicles traveling to and from the raceway plus emissions on-site. The SMAQMD methodology for assessing regional health effects is based on the maximum daily emission rate. Table 2-4 shows the maximum daily emission rates for NHRA events, which are 180.70 pounds per day (lb/day) NOx, 40.98 lb/day ROG, and 42.43 lb/day $PM_{2.5}$. It is recognized that NHRA events do not occur every day, but the regional potential health effects are related to daily ozone and $PM_{2.5}$ concentrations.

These calculated emission rates are then entered into the SMAQMD screening tool for strategic area projects, using the tool's setting location for Rancho Cordova (which is approximately 4 miles north of the Raceway). The results are shown in Appendix D and summarized in Table 3-1 and 3-2.

The total number of incidences shown in Table 3-1 was calculated by summing the values from the screening tool results (Appendix D) for all health endpoints. The total number of incidences are over-stated because there may be double counting. For example, an individual admitted to the hospital for $PM_{2.5}$ may be the same individual admitted for ozone.

The total background number of health incidences in the 5-Air-District Region provided by the screening tool and shown in Table 3-2 is 184,505 incidences out of the 5-Air-District region's projected 2035 population of about 3.3 million persons. This helps put the roughly 9 additional incidences associated with the Raceway shown in Table 4-1 in perspective. The background number of health incidences and the incremental percentage increase are shown in Table 3-2.

© 2021 Kleinfelder

Table 3-1

Potential Annual Incremental Health Incidences from Maximum Daily (Drag Racing) Raceway Operations

Description		Alternative 2 Project Related VMT after Additional Mitigation
$PM_{2.5}$ Health Endpoint	**Age Range**	**Annual Incidences (mean)**
Respiratory		
Emergency Room Visits, Asthma	0 - 99	1.7
Hospital Admissions, Asthma	0 - 64	0.11
Hospital Admissions, All Respiratory	65 - 99	0.65
Cardiovascular		
Hospital Admissions, All Cardiovascular (less Myocardial Infarctions)	65 - 99	0.37
Acute Myocardial Infarction, Nonfatal	18 - 24	0.00014
Acute Myocardial Infarction, Nonfatal	25 - 44	0.013
Acute Myocardial Infarction, Nonfatal	45 - 54	0.033
Acute Myocardial Infarction, Nonfatal	55 - 64	0.053
Acute Myocardial Infarction, Nonfatal	65 - 99	0.24
Mortality		
Mortality, All Causes	30 - 99	4.3
Ozone Health Endpoint	**Age Range**	**Incidences (mean)**
Respiratory		
Hospital Admissions, All Respiratory	65 - 99	0.14
Emergency Room Visits, Asthma	0 - 17	0.55
Emergency Room Visits, Asthma	18 - 99	0.96
Mortality		
Mortality, Non-Accidental	0 - 99	0.092
TOTAL INCIDENCES	0 - 99	**9.21**

Note: Total incidences are not reported in the screening tool, but the Total incidences shown in the table are the sum of the screening tool incidences for both health endpoints. The Total Incidences comes from adding the screening tool values and may not match exactly the sum of values shown in the table due to round-off differences.

Emergency Room Visits, Asthma	18 - 99	12,560	0.0077%
Mortality			
Mortality, Non-Accidental	0 - 99	30,386	0.00030%
TOTAL INCIDENCES	0 - 99	**184,505**	**0.0050%**

Note: Total incidences are not reported in the screening tool, but the Total Incidences shown in the table are the sum of the screening tool incidences for both health endpoints. Total percent increase is not the sum of the individual percentages because the background for each effect is different. The number of background incidences was calculated from the screening tool and differs slightly for each scenario due to round off differences. Sum of the values in the table may not match exactly the sum calculated from the screening tool because of round off differences.

4 POTENTIAL LOCAL HEALTH EFFECTS

4.1 ASSESSMENT METHODOLOGY

4.1.1 Dispersion Model Setup

The current (as of March 29, 2021) version of AERMOD (version 19191) as implemented by BEEST (Version 12.04) with regulatory defaults was used for the dispersion calculations. AERMOD is a USEPA- and California-approved dispersion model that uses meteorological data to calculate the dispersion of emitted constituents and resultant concentrations at receptors.

SMAQMD-provided meteorological data from SacEx (the nearest source of meteorological data) were evaluated for meteorological calendar years 2014 through 2018. Calendar year 2018 data were incomplete and could not be used. A test model was run for each year, 2014, 2015, 2016, and 2017. Calendar year 2014 consistently produced the highest concentrations, and therefore was used for this assessment.

Five polygonal area sources were established for the following on-site activities:

- Spectator travel and parking on-site for Drag Races (Drag Race Spectators)
- Tow vehicle for trailered race vehicles and street legal race vehicle travel on-site, drag racing staging and return to parking, and drag racing (Drag Racing)
- Spectator and tow vehicle for trailered motorcycles travel and parking on-site for Motocross races (Motocross Spectators)
- Motocross races on the short track (MX1)
- Motocross races on the long track (MX2)

Appendix E shows the source configurations. The Motocross area includes two tracks, one about 0.4 miles long and one about 0.8 miles long. Emissions were calculated based on the speed of the motorcycles and the duration of motos, not the length of the track. However, it appears from aerial photos that the short Motocross track is used extensively and the long track is not. Therefore, the Motocross race vehicle emissions were apportioned between the two tracks in a 90/10 ratio for short versus long track.

© 2021 Kleinfelder www.kleinfelder.com

The health effects analysis requires calculations for 1-hour, 8-hour, 24-hour, and annual averaging periods. The annual, maximum daily, and maximum hourly emissions must be treated differently depending on the averaging time of interest.

Race activities do not occur continuously and Drag Racing and Motocross racing do not occur on the same days. Motocross races were generally scheduled from 5 to 9 pm (4 hours) on Fridays, while Drag Races were generally scheduled on Wednesdays from 5 to 9 pm (4 hours) and Saturday and Sundays from 8 am to 6 pm (10 hours). AERMOD allows the user to enter hourly scalars for emissions (i.e., turn on or turn off the model for specific hours of the day and week). If the model is turned on for a specific hour of the week, it must be turned on for all weeks of the year. The model inputs for time turned on and emissions were as follows:

For annual average concentrations:

- Drag Racing: Turn on the model 4 hours on Wednesday, 10 hours on Saturday and Sunday, 52 weeks per year, or a total of 1248 hours per year and divide the annual emissions by 1248.
- Motocross Racing: Turn on the model 4 hours on Friday, 52 weeks per year, for a total of 208 hours per year and divide the annual emission by 208.

Emissions entered in the model (in terms of grams per second) have to be calculated consistent with the hours that the model is turned on and the averaging time of interest. Accordingly, the emissions shown in Appendix C were divided by the following hours for dispersion modeling:

- Annual average: Annual emissions divided by 1248 hours per year for Drag Racing and 208 hours per year for Motocross
- 24-hour average: Maximum daily emissions divided by 10 hours per day for Drag Racing and 4 hours per day for Motocross
- 8-hour average: Maximum daily emissions divided by 10 hours per day for Drag Racing and 4 hours per day for Motocross
- 1-hour average: Maximum hourly emissions, no divisor except to convert pounds per hour to grams per second

It was assumed that all emissions were ground level (zero release height) and had an initial vertical plume dimension (sigma-z) of zero. A non-zero sigma-z accounts for initial turbulence created by vehicle motion, which can be important when the receptors are close to the source.

© 2021 Kleinfelder

However, for simplicity, the zero sigma-z assumption was used even though it results in an over-estimate of concentrations.

The terrain near the Raceway is all approximately the same elevation, thus flat terrain was assumed in the AERMOD model.

Receptors were placed at 20-meter spacing, starting 60 meters from the Raceway property out to 80 meters from the Raceway property. As shown in Appendix E, receptors were placed only on property owned by Tsakopoulos Investments. Because all of the releases were ground level and the terrain near the property is flat, the maximum effect will always be at the closest receptor and there is no reason to place receptors further out from the property. The 60-meter distance was chosen to reflect the fact that there would likely be a road between the Raceway and development property and houses would not likely face the Raceway, so the center of the nearest house would be about 60 meters away from the Raceway boundary.

Emissions of NOx are a mix of nitrogen oxide (NO) and nitrogen dioxide (NO_2). NO does not pose a health effect, however, given enough time, NO can be converted to NO_2 in the atmosphere through interactions with ozone. There are various schemes within AERMOD to account for the NO to NO_2 conversion. The most conservative (over-estimate) method is the Ambient Ratio Method 2 (ARM2). ARM2 assumes a ratio of NO_2 to NO_x concentrations based on nationally-monitored data obtained by the USEPA. The ratio varies from 0.5 to 0.9, depending on the NOx concentration. For this assessment, ARM2 was used, however, it results in an overestimate of ambient NO_2 concentrations because (1) ARM2 is a conservative method and (2) there is not enough time to convert meaningful amounts of NO to NO_2 when the receptor is only 60 meters (at most 30 to 60 seconds of travel time) away from the source.

4.1.2 Background Concentrations of Criteria Pollutants

In order to compare criteria pollutant concentrations to the CAAQS/NAAQS, modeled ambient Raceway-related concentrations must be added to an existing background concentration.

Background concentrations were obtained from the California Air Resources Board (CARB) iADAM web site[9] for Sacramento County for calendar years 2017 through 2019. There are no monitoring stations at the Raceway. The nearest monitoring stations with NO_2, $PM_{2.5}$, and PM_{10}

[9] *www.arb.ca.gov/adam*

© 2021 Kleinfelder

data are shown in Table 4-1. Not all stations collect the same data. The closest station to the Raceway with available data was used for the background value. The Sloughhouse station is located in an area similar to the Raceway, but the other stations are located in areas of dense housing and commercial establishments, so the background concentration for those stations is over stated.

Table 4-1

Background Ambient Air Quality Data

	2017	2018	2019	Three Year Average	CAAQS or NAAQS (Note 1)
Sloughhouse … located about 4.8 miles southeast of the Raceway					
NO_2 1-hour	36 ppb	41 ppb	40 ppb	39 ppb = **73 ug/m^3**	188 ug/ m^3
NO_2 Annual	6 ppb	6 ppb	6 ppb	6 ppb = **11.3 ug/ m^3**	57 ug/ m^3
$PM_{2.5}$ 24-hour	34 ug/m^3	37 ug/ m^3	37 ug/ m^3	**36 ug/ m^3**	35 ug/ m^3
Sacramento Del Paso Manor … located about 7.9 miles northwest of the Raceway					
$PM_{2.5}$ Annual	No Data	12 ug/ m^3	12 ug/ m^3	**12 ug/ m^3**	12 ug/ m^3
Sacramento Branch Center Road #2 … located about 3.0 miles northwest of the Raceway					
PM_{10} 24-hour	21 ug/ m^3	27 ug/ m^3	27 ug/ m^3	**25 ug/ m^3**	50 ug/ m^3
PM_{10} Annual	81 ug/ m^3	212 ug/ m^3	55 ug/ m^3	**68 ug/ m^3** (Note 2)	20 ug/ m^3

Note 1: The most stringent of CAAQS or NAAQS is reported.
Note 2: Average is only for 2017 and 2019. The very high value for 2018 was the result of nearby forest fires and is not representative.

Note that the background concentrations of $PM_{2.5}$ and PM_{10} are equal to or exceed the CAAQS/NAAQS. This is consistent with the fact that the Sacramento Air Basin is designated as nonattainment for the 24-hour $PM_{2.5}$ NAAQS and for the 24-hour and annual PM_{10} CAAQS.

4.1.3 Model Setup for Speciated Organics and DPM

The speciation factors shown in Section 2.1.6 for the speciated organics (i.e., percentage of TOG) are the same for all sources; thus, there was one set of dispersion model runs for TOG and the organic speciation was applied to the modeled TOG concentration (instead of speciating prior to modeling. Potential health effects for organic gases can occur for acute 1-hour exposures, acute 8-hour exposures, and chronic (annual) exposures, so the TOG modeling set included the 3 applicable averaging times. Unlike the organics, DPM emission factors are different based on source type and a separate DPM dispersion model run is necessary for each. Potential DPM

© 2021 Kleinfelder www.kleinfelder.com

health effects are associated only with chronic exposures and only annual average model runs are required.

Non-criteria pollutant potential health effects are assessed using the California OEHHA risk assessment methodology[10] for cancer and non-cancer health effects.

4.1.4 Potential Cancer Risk Methodology

The cancer risk methodology is to calculate the 30-year exposure[11] (intake factor) of an individual to a specific compound coupled with both the cancer potency factor and the maximum modeled concentration (Point of Maximum Impact, PMI) of that compound. For purposes of this assessment, the inhalation route of exposure was evaluated. Other potential routes of exposure (e.g., gardens, soil, etc.) are much less than the inhalation route and are negligible for the compounds of interest.

The calculations are as follows:

Inhalation intake Factor:

IF = DBR * FAH * EF * ED * CF / AT

Where:

IF = Intake Factor (m^3/kg-day)

DBR = Daily Breathing Rate (L/kg-day)

FAH = Fraction of Time at Home (unitless)

EF = Exposure Frequency, 350 days per year

ED = Exposure Duration, 30 years

AT = Averaging Time, 365 days

[10] *Ibid.*

[11] *Note that 30-year exposure is a default methodology for assessing potential cancer risks. It does not mean that the Raceway will actually be operating at 2019 levels for 30 years.*

© 2021 Kleinfelder www.kleinfelder.com

CF = Conversion Factor, 0.001 m^3/L.

Then the potential cancer risk is calculated as follows:

Cancer Risk (inhalation) = C * CF * IF * CPF * ASF

Where:

C = Ambient Concentration of Compound of Interest (ug/m^3)

CF = Conversion Factor, 0.001 mg/ug

CPF = Cancer Potency Factor (mg chemical/kg body weight-day)$^{-1}$

ASF = Age Sensitivity Factor (unitless).

The OEHHA Guidance specifies the various factors to be used in the above formulae as shown in Table 4-2. The daily breathing rates used for the risk calculation are based on the 95th percentile for all ages from the OEHHA Guidance.

Table 4-2

Parameters Used for Potential Risk Calculation

Parameter	Period of Exposure	Value	Units
Daily Breathing Rate (DBR)	3rd Trimester	361	L/kg-day
Daily Breathing Rate (DBR)	Age 0 to <2 years	1090	L/kg-day
Daily Breathing Rate (DBR)	Age 2 to <16 years	745	L/kg-day
Daily Breathing Rate (DBR)	Age 16 to <30 years	335	L/kg-day
Fraction of Time at Home (FAH)	3rd Trimester to <16 years	1.0	Unitless
Fraction of Time at Home (FAH)	Age 16 to <30 years	0.73	Unitless
Age Sensitivity Factor (ASF)	3rd Trimester to <16 years	10	Unitless
Age Sensitivity Factor (ASF)	Age 2 to <16 years	3	Unitless
Age Sensitivity Factor (ASF)	Age 16 to <30 years	1	Unitless

The cancer potency factors (CPF) are also specified by OEHHA:

- Acetaldehyde: 0.01 (mg/kg-day)$^{-1}$
- Benzene: 0.1 (mg/kg-day)$^{-1}$

© 2021 Kleinfelder www.kleinfelder.com

- 1,3-Butadiene: 0.6 $(mg/kg\text{-}day)^{-1}$
- Ethylbenzene: 0.0087 $(mg/kg\text{-}day)^{-1}$
- Formaldehyde: 0.021 $(mg/kg\text{-}day)^{-1}$
- Naphthalene: 0.12 $(mg/kg\text{-}day)^{-1}$
- DPM: 1.1 $(mg/kg\text{-}day)^{-1}$

4.1.5 Potential Non-Cancer Risk Methodology

Non-cancer health effects are evaluated by comparing the modeled PMI ambient concentration to health effects thresholds, termed reference exposure levels (REL). There are RELs for different averaging times and compounds. The RELs for the compounds of interest in this assessment as specified by OEHHA are shown in Table 4-3.

Table 4-3

Reference Exposure Levels

Compound	Averaging Time	REL (ug/m^3)
Acetaldehyde	1-hour Acute	470
Acetaldehyde	8-hour Acute	300
Acetaldehyde	Chronic	140
Benzene	1-hour Acute	1300
Benzene	Chronic	60
1,3-Butadiene	1-hour Acute	660
1,3-Butadiene	8-hour Acute	9
1,3-Butadiene	Chronic	2
Ethylbenzene	Chronic	2000
Formaldehyde	1-hour Acute	55
Formaldehyde	8-hour Acute	9
Formaldehyde	Chronic	9
Naphthalene	Chronic	9
DPM	Chronic	5

© 2021 Kleinfelder

4.1.6 Potential Cancer and Non-Cancer Risk Methodology for Schools

The health effects methodology described above accounts for potential school health effects because of the following:

- As Table 4-2 shows, there are factors (Age Sensitivity Factors and Daily Breathing Rates) that account for the age of school students.
- The Cancer Potency Factors and RELs are established taking into account the most sensitive individuals, adults or children.
- Specifically related to Raceway operations, nearly all of the Raceway events are scheduled on evenings and weekends when there is no school and thus no exposure to school students, teachers, or workers.
    - There are a few NHRA events that include Friday qualification or testing races, but the number of those Friday events (and resultant exposure) is small. There were less than 6 events in 2019 that could have occurred on Friday during school hours, so the exposure to school students, teachers, and workers is less than about 2 percent of the exposure for residents. Six out of the 142 events (133 Drag Racing plus 9 Motocross) equals 4.2 percent. But several of the Friday events do not start until 2:00 PM, so the exposure is less than about one-half of 4.2 percent. Accordingly, potential school health effects are less than 2 percent of the effects calculated for residents.
- The modeled concentrations at the sites where schools may be located are less than the PMI maximum impact concentrations used to assess the potential health effects on residents, so exposure at schools will be even less.

4.1.7 Potential Cancer and Non-Cancer Risk Methodology for Parks

The potential cancer risk for visitors to local parks that could be built near the Raceway is negligible because cancer risks assume 30-year continuous exposure (more than 250,000 hours) and the exposure to park visitors will be much less than 250,000 hours.

The potential for non-cancer effects is assessed by evaluating both the 1-hour and 8-hour modeled maximum concentrations to the REL, as is done for possible residents. There is no difference for a 1-hour or 8-hour exposure to a park visitor or a resident.

© 2021 Kleinfelder www.kleinfelder.com

4.2 POTENTIAL LOCAL HEALTH EFFECTS OF CRITERIA POLLUTANTS

Appendices F-1 through F-9 provide the AERMOD model output for the criteria pollutant and averaging time scenarios modeled. The modeled concentrations for the criteria pollutants are shown in Table 4-4 compared to the CAAQS/NAAQS or Significant Effect Level (SIL). As the Sacramento Air Basin is already non-attainment for $PM_{2.5}$ and PM_{10}, instead of comparing the potential effects to the AAQS for those pollutants, the effects are compared to the SILs. If the modeled concentrations are less than the SIL, then the concentrations do not cause or contribute to the exceedances and thus do not pose an unacceptable health effect. None of the modeled effects exceed the AAQS or SIL. As noted, Drag Racing and Motocross do not occur on the same day, so the modeled concentrations are reported separately for 1-hour and 24-hour averages.

Table 4-4

Modeled Criteria Pollutant Concentrations Compared to Standards

Raceway Operation	Pollutant	Averaging Time	Modeled Concentration (ug/m^3)	Background (ug/m^3)	Total (ug/m^3)	CAAQS/ NAAQS/ SIL (ug/m^3)	Exceed Standards?
DR	NO_2	1-hour	75	73	148	188	No
MX	NO_2	1-hour	104	73	177	188	No
DR MX	NO_2	Annual	0.14	11.3	11.4	57	No
DR	$PM_{2.5}$	24-hour	0.5	NA	0.5	1.2	No
MX	$PM_{2.5}$	24-hour	1.0	NA	1.0	1.2	No
DR MX	$PM_{2.5}$	Annual	0.007	NA	0.007	0.2	No
DR	PM_{10}	24-hour	1.43	NA	1.43	5	No
MX	PM_{10}	24-hour	1.12	NA	1.12	5	No
DR MX	PM_{10}	Annual	0.018	NA	0.018	1	No

DR = Drag Racing, MX = Motocross, DR MX = both Drag Racing and Motocross for annual averages.
$PM_{2.5}$ and PM_{10} concentrations are not added to background because the background is greater than the CAAQS/NAAQS, so the modeled concentrations are compared to the SIL. The SIL is the level below which the modeled concentrations are not considered to cause or contribute to an AAQS exceedance.

4.3 POTENTIAL CANCER RISK FROM SPECIATED ORGANIC COMPOUNDS

4.3.1 Potential Cancer Risk

Appendices F-14 and F-15 provide the annual average model output for TOG and DPM. As noted in Section 4.1.3, the uniformity of organics speciation across the sources allows for modeling only total TOG concentrations followed by speciation, whereas DPM concentrations necessitated

© 2021 Kleinfelder www.kleinfelder.com

separate modeling for different sources. Only annual average TOG and DPM concentrations are modeled for potential cancer risk because cancer is related to only chronic exposure.

The potential cancer risk calculations are shown in Appendix G. The total 30-year potential cancer risk from all of the speciated organics plus DPM is 1.97 in one million, which is much less than the threshold of 10 in one million used to assess adverse health effects.

4.3.2 Potential Non-Cancer Risk

Appendices F-10 to F-13 provide the 1-hour, 8-hour, and annual average model output for TOG. Non-cancer health risks could occur for acute and chronic exposures, thus different averaging times are modeled. The potential non-cancer health risk calculations and resultant HHI are shown in Appendix G . All of the effects for all of the speciated compounds and DPM were added together to yield a maximum HHI for the respective exposure periods; however, not all of the compounds affect the same toxic end point, so the reported HHIs are overestimates. For the 1-hour and 8-hour acute exposures, the modeled TOG concentration from Motocross daily operations was greater than from Drag Racing. This is because even though Drag Racing emissions are greater than Motocross, the presence of Motocross operations near the northern property boundary cause greater off-site concentrations. Thus, the acute HHI is calculated for Motocross operations. For chronic exposures, both Drag Racing and Motocross operations could occur within one year, so the modeled concentrations include both operations.

The total HHIs shown in Appendix G are much less than 1.0, so modeled Raceway operations do not pose adverse non-cancer health effects.

4.3.3 Summary of Potential Health Effects from Speciated Organics

The results shown in Appendix G are summarized in Table 4-5. None of the health effects are greater than thresholds.

© 2021 Kleinfelder www.kleinfelder.com

Table 4-5

Summary of Speciated Organic Potential Health Effects

Potential Health Effect	Potential Effect	Threshold	Exceed Standards?
Cancer Risk	1.97 in 1 million	10 in 1 million	No
Acute 1-Hour HHI	0.11	1.0	No
Acute 8-Hour HHI	0.16	1.0	No
Chronic HHI	0.0011	1.0	No

5 LIMITATIONS

This analysis was limited by the amount of specific information available regarding Raceway operations, emissions from race vehicles, and future operations at the Raceway, if any. As stated, numerous assumptions had to be made.

This work was performed in a manner consistent with that level of care and skill ordinarily exercised by other members of Kleinfelder's profession practicing in the same locality, under similar conditions and at the date the services are provided. Our conclusions, opinions and recommendations are based on a limited number of observations and data. It is possible that conditions could vary between or beyond the data evaluated. Kleinfelder makes no guarantee or warranty, express or implied, regarding the services, communication (oral or written), report, opinion, or instrument of service provided.
