EXECUTIVE SUMMARY

The purpose of this study is to evaluate the potential traffic impacts of the Carleton Acres Specific Plan project, a 507-acre mixed-use land development located in the northern area of the City of Visalia, California. The study methodology is consistent with the *Procedures for Traffic Impact Analysis (TIA), City of Visalia*, updated March 2021, and the *City of Visalia VMT Thresholds and Implementation* Guidelines, adopted March 15, 2021.

Project Description

The project site has historically been used for agricultural purposes and is generally bounded by Avenue 320 on the north, Riggin Avenue on the south, Akers Street on the east and Shirk Street on the west. The project would be built in phases and, upon completion, would include single-family and multi-family residential homes, neighborhood commercial and commercial mixed-use development, an elementary school, and park, trail and recreational facilities.

Traffic Impact Analyses

The project is expected to generate more than 1,500 peak hour trips. Therefore, a Category V traffic impact analysis is required. The minimum study area for a Category V analysis includes all signalized intersections and major unsignalized intersections within three miles of the project. The scope of the study was developed in association with staff at the City of Visalia, County of Tulare and Caltrans, and includes 82 intersections (48 existing and 34 future).

The traffic impact analyses performed for this study include intersection level of service, traffic signal warrant, queue length and vehicle miles traveled. In addition, a limited roadway capacity analysis was conducted for Riggin Avenue from Shirk Street to Akers Street. Analysis results are summarized below.

- All study intersections are expected to operate with minimal delay (at or above LOS D) during peak hours through the year 2046, both with and without project traffic, or can be mitigated to operate an acceptable level of service, except for the intersections listed below.

    - Rd 67/Betty Dr (#31)
    - Dinuba Blvd/Riggin Ave (#45)
    - Akers St/Ferguson Ave (#48)

- Demaree St/Goshen Ave (#54)
- Demaree St/Mineral King Ave (#60)

- Eight-hour vehicular volume signal warrant criteria were met for the following intersections. All are either City or State unsignalized intersections.

  - Clancy St/Riggin Ave (#37)
  - Shirk St/Riggin Ave (#38)
  - Denton St/Riggin Ave (#39)
  - Roeben St/Riggen Ave (#40)
  - N/S Roadway/Riggin Ave (#41)
  - Linwood St/Riggen Ave (43)
  - Shirk St/Ferguson Ave (#46)
  - Roeben St/Ferguson Ave (#47)
  - Linwood St/Ferguson Ave (#49)
  - Shirk St/State Route 198 WB Ramps (#58)
  - Shirk St/State Route 198 EB Ramps (#61)

- All seven County unsignalized intersections (listed below) meet peak hour signal warrant conditions. One County intersection also satisfies accident warrant criteria: Shirk St/Ave 320 (#8).

  - Shirk St/Ave 328 (#2)
  - Demaree St/Ave 328 (#3)
  - Rd 112/Ave 328 (#4)
  - Shirt St/Ave 320 (#8)
  - Akers St/Ave 320 (#12)
  - Demaree St/Ave 320 (#13)
  - Rd 72/Riggin Ave (#33)

- Project traffic would necessitate adding turn lane storage for the following intersections.

  - Shirk St/Riggin Ave (#38)
  - Akers St/Riggin Ave (#42)
  - Demaree St/Riggin Ave (#44)
  - Dinuba Blvd/Riggin Ave (#45)

- Demaree St/Ferguson Ave (#50)
- Shirk St/Goshen Ave (#52)
- Akers St/Goshen Ave (#53)
- Shirk St/Hurley Ave (#56)

- Project VMT is less than the significance threshold. Therefore, the project is not expected to result in a significant transportation impact under CEQA and no mitigation is required.

- The addition of Phase I project traffic in the year 2023, the majority of which is generated by the commercial anchor at the northeast corner of Shirk Street/Riggin Avenue (#38), would necessitate widening Riggin Avenue from two lanes (1 eastbound, 1 westbound) to four lanes (2 eastbound, 2 westbound) between Shirk Street and Akers Street.

Mitigation

Intersection improvements needed by the years 2023, 2028, 2033, 2038, 2043 and 2046 to maintain or improve the operational level of service of the street system in the vicinity of the project are presented in Table 1a.

Table 1a
Intersection Improvements

#	Intersection	2023	2028	2033	2038	2043	2046	Total by 2046

Roadway improvements for Riggin Avenue between Shirk Street and Akers Street are shown in Table 1b. These improvements would be needed with the addition of Phase I project traffic in the year 2023, the majority of which would be generated by the commercial anchor at the northeast corner of Shirk Street/Riggin Avenue (#38).

Table 1b
Roadway Improvements

Roadway Segment	2023
Riggin Ave: Shirk St to Akers St	Two-Lane Widening

INTRODUCTION

The purpose of this study is to evaluate the potential traffic impacts of the Carleton Acres Specific Plan project, a 507-acre mixed-use land development located in the northern area of the City of Visalia, California. The project site is generally bounded by Avenue 320 on the north, Riggin Avenue on the south, Akers Street on the east and Shirk Street on the west. It would include residential, commercial, educational and recreational land uses. A vicinity map, location map and conceptual use plan are presented in Figures 1 through 3, respectively.

The study methodology is consistent with the *Procedures for Traffic Impact Analysis (TIA), City of Visalia*, updated March 2021 (TIA Procedures), and the *City of Visalia VMT Thresholds and Implementation* Guidelines, adopted March 15, 2021 (VMT Guidelines).

Project Site and Description

The project site has historically been used for agricultural purposes and lies in an area of mixed land uses. Agricultural areas lie to the north, residential neighborhoods exist to the south and east, and industrial developments are located to the southwest. Ridgeview Middle School is located on the west side of Akers Street, approximately 0.25 miles north of Riggin Avenue.

The project would be built in phases and, upon completion, would include single-family and multi-family residential homes, neighborhood commercial and commercial mixed-use development, an elementary school, and park, trail and recreational facilities. Specific project land uses are presented below.

Low Density (Single-Family) Residential	1,462 units
Medium Density (Multi-Family) Residential	758 units
High Density (Multi-Family) Residential	912 units
Neighborhood Commercial/Commercial Mixed-Use	207,023 SF GFA (35.1 acres)
Elementary School	750 students (13.0 acres)

As shown in Figure 3, primary north-south access to the project site would be provided by way of Roeben Street from Riggin Avenue and Avenue 320. Primary east-west access would be provided via Shannon Parkway from Shirk Street and Akers Street. Secondary east-west access would be provided at Pratt Road and Sedona Avenue. A map indicating project site access is presented in Figure 4.

Study Area

The project is expected to generate more than 1,500 peak hour trips. Therefore, in accordance with TIA Procedures, a Category V traffic impact analysis is required. The minimum study area for a Category V analysis includes all signalized intersections and major unsignalized intersections within three miles of the project. The scope of the study was developed in association with staff at the City of Visalia, County of Tulare and Caltrans, and includes the 82 intersections (48 existing and 34 future) listed below. Study intersection location, number and jurisdiction are shown in Figures 5a and 5b.

Analysis Time Periods and Scenarios

Traffic impact analyses conducted for this study include intersection level of service, traffic signal warrant, queue length and vehicle miles traveled. Corresponding analysis time periods are presented in Table 2. Peak hours were determined based on a review of count data obtained for this study.

Table 2
Analysis Time Periods

Traffic Impact Analysis	Daily	Peak Hour Adjacent Street Traffic		
		Weekday		Saturday[3]
		AM[1]	PM[2]	
Intersection Level of Service		X	X	X
Traffic Signal Warrant		X	X	
Queue Length		X	X	X
Vehicle Miles Traveled	X			

[1] Between 7:30 and 8:30 AM
[2] Between 4:00 and 5:00 PM
[3] Between 10:30 and 11:30 AM

In accordance with Category V requirements, analyses involving intersection level of service, traffic signal warrant and queue length were performed for each of the scenarios listed below. Project phasing is shown in Figure 6 (see Appendix A for roadway improvements per phase).

- 2022 Traffic (Existing)
- 2023 Traffic
- 2023 Traffic + Project Traffic (Phase I)
- 2023 Traffic + Project Traffic (Phase I) + Mitigation
- 2028 Traffic
- 2028 Traffic + Project Traffic (Phases I and II)
- 2028 Traffic + Project Traffic (Phases I and II) + Mitigation
- 2033 Traffic
- 2033 Traffic + Project Traffic (Phases I, II and 50 percent buildout of III)
- 2033 Traffic + Project Traffic (Phases I, II and 50 percent buildout of III) + Mitigation
- 2038 Traffic
- 2038 Traffic + Project Traffic (Phases I, II and III)

- 2038 Traffic + Project Traffic (Phases I, II and III) + Mitigation
- 2043 Traffic
- 2043 Traffic + Project Traffic (Phases I, II and III)
- 2043 Traffic + Project Traffic (Phases I, II and III) + Mitigation
- 2046 Traffic (TCAG model horizon year)
- 2046 Traffic (TCAG model horizon year) + Project Traffic (Phases I, II and III)
- 2046 Traffic (TCAG model horizon year) + Project Traffic (Phases I, II and III) + Mitigation

These traffic impact analysis scenarios were developed based on the following assumptions:

- Opening year (full build) for Phase I would occur in 2023. Timing of roadway improvements will depend on market conditions and may extend into the 5-year planning horizon for Phase I.
- The 5-year planning horizon for Phase I and opening year (full build) for Phase II would occur in 2028.
- The 10-year planning horizon for Phase I, 5-year planning horizon for Phase II, and 50 percent buildout of Phase III would occur in 2033.
- The 10-year planning horizon for Phase II and opening year (full build) for Phase III would occur in 2038.
- The 20-year planning horizon for Phase I and 5-year planning horizon for Phase III would occur in 2043.

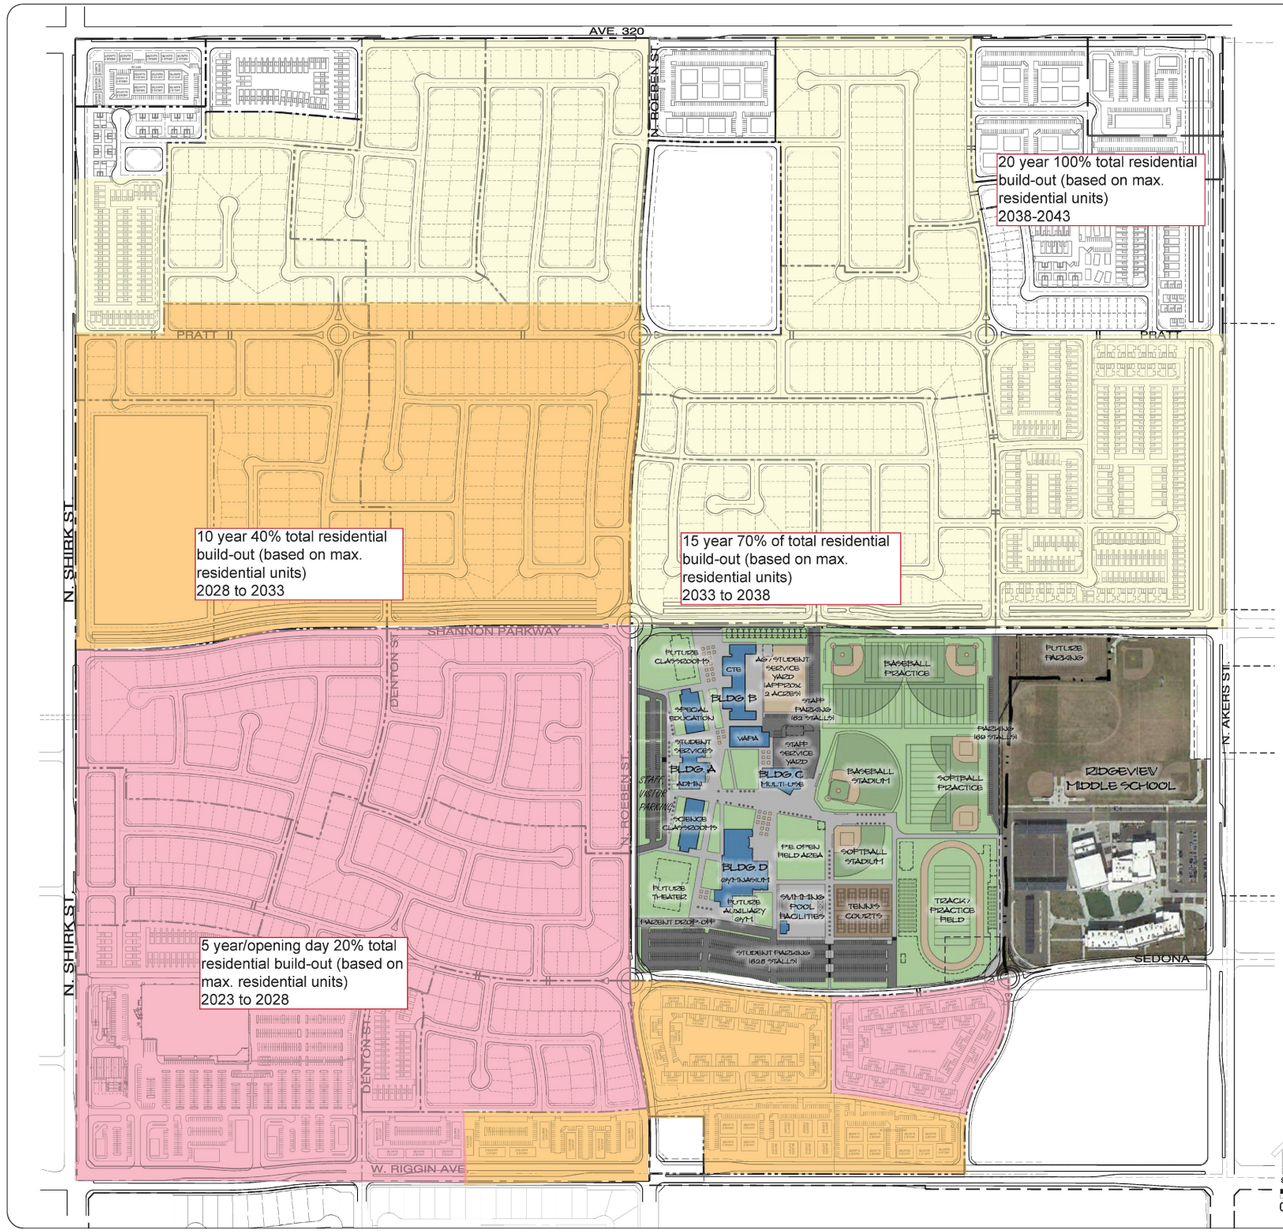
PROJECT PHASING MAP
FIGURE 6



Depending on market conditions the single-family residential may progress into traffic Phase 3 without the medium or high density being completed in traffic Phase 1 & 2.

Traffic phasing differs from land use phasing. Traffic phasing is based on 5, 10, 15, 20 year build out of development.

The master plan phasing is based on the land use designation. Phase 1 south of Shannon Parkway based on the City designation of Tier 1 & 2. Phase 2 north of Shannon Parkway City designation Tier 3.

Although Carleton Acres is located in Tier 1,2,3 the development will fall under LU-P-22.

A1.1 CONCEPTUAL SITE PLAN

PROJECT TRIP GENERATION AND DESIGN HOUR VOLUMES

Project trip generation and design hour volumes for Phase I, Phases I and II, Phases I, II and III (50 percent buildout), and Phases I, II, and III, are shown in Tables 3a, 3b, 3c and 3d, respectively. It was determined that weekday peak hours occur between 7:30 and 8:30 AM, and between 4:00 and 5:00 PM. The peak hour for Saturday was found to occur between 10:30 AM and 11:30 AM.

With the exception of the Costco land use, daily and peak hour volumes were estimated using the Institute of Transportation Engineers (ITE) *Trip Generation Manual*, 11th Edition (2021). Trip rates, equations and peak hour directional splits for ITE Land Use Codes 210, 220, 520 and 821 were used to estimate project trips for adjacent street traffic based on information provided by the project applicant. A pass-by rate of 15 percent was applied to the ITE 821 (retail) land use to account for project trips that are made as intermediate stops between trip origin and primary destination. Pass-by trips are drawn from traffic passing the site, and therefore, do not add trips to the adjacent street system.

Trip rates, directional splits and pass-by reduction for the Costco land use were obtained from the Kittelson & Associates trip generation memorandum, dated June 23, 2022 (see Appendix B for the memorandum). The building size was provided by the project applicant.

TRIP DISTRIBUTION AND ASSIGNMENT

Project trip distribution and assignment were developed based on site location, travel patterns anticipated for each of the proposed land uses, and a select zone analysis performed by the Tulare County Association of Governments (TCAG). Separate distributions and assignments were prepared for each project land use type and then combined for analysis purposes.

Internal Trips

Mixed-use projects typically generate trips that neither enter nor leave the project site, and therefore, have no impact on adjacent street traffic. Results of the select zone analysis were used to estimate an internal trip capture rate of 3.0 percent.

The assignment of project peak hour trips to intersections within the project boundary is shown in Figures 9, 11, 13, 15, 17, 19, 21, 23, 25, 27, 29 and 31.

External Trips

The distribution of project peak hour trips outside of the project boundary is shown in Table 4 and represents the movement of traffic accessing the project site by direction. Directional trip distribution percentages for roadway segments in the study area are presented in Figure 7.

External project peak hour trips were assigned to the study intersections as shown in Figures 8, 10, 12, 14, 16, 18, 20, 22, 24, 26, 28 and 30.

Table 4
Project Trip Distribution

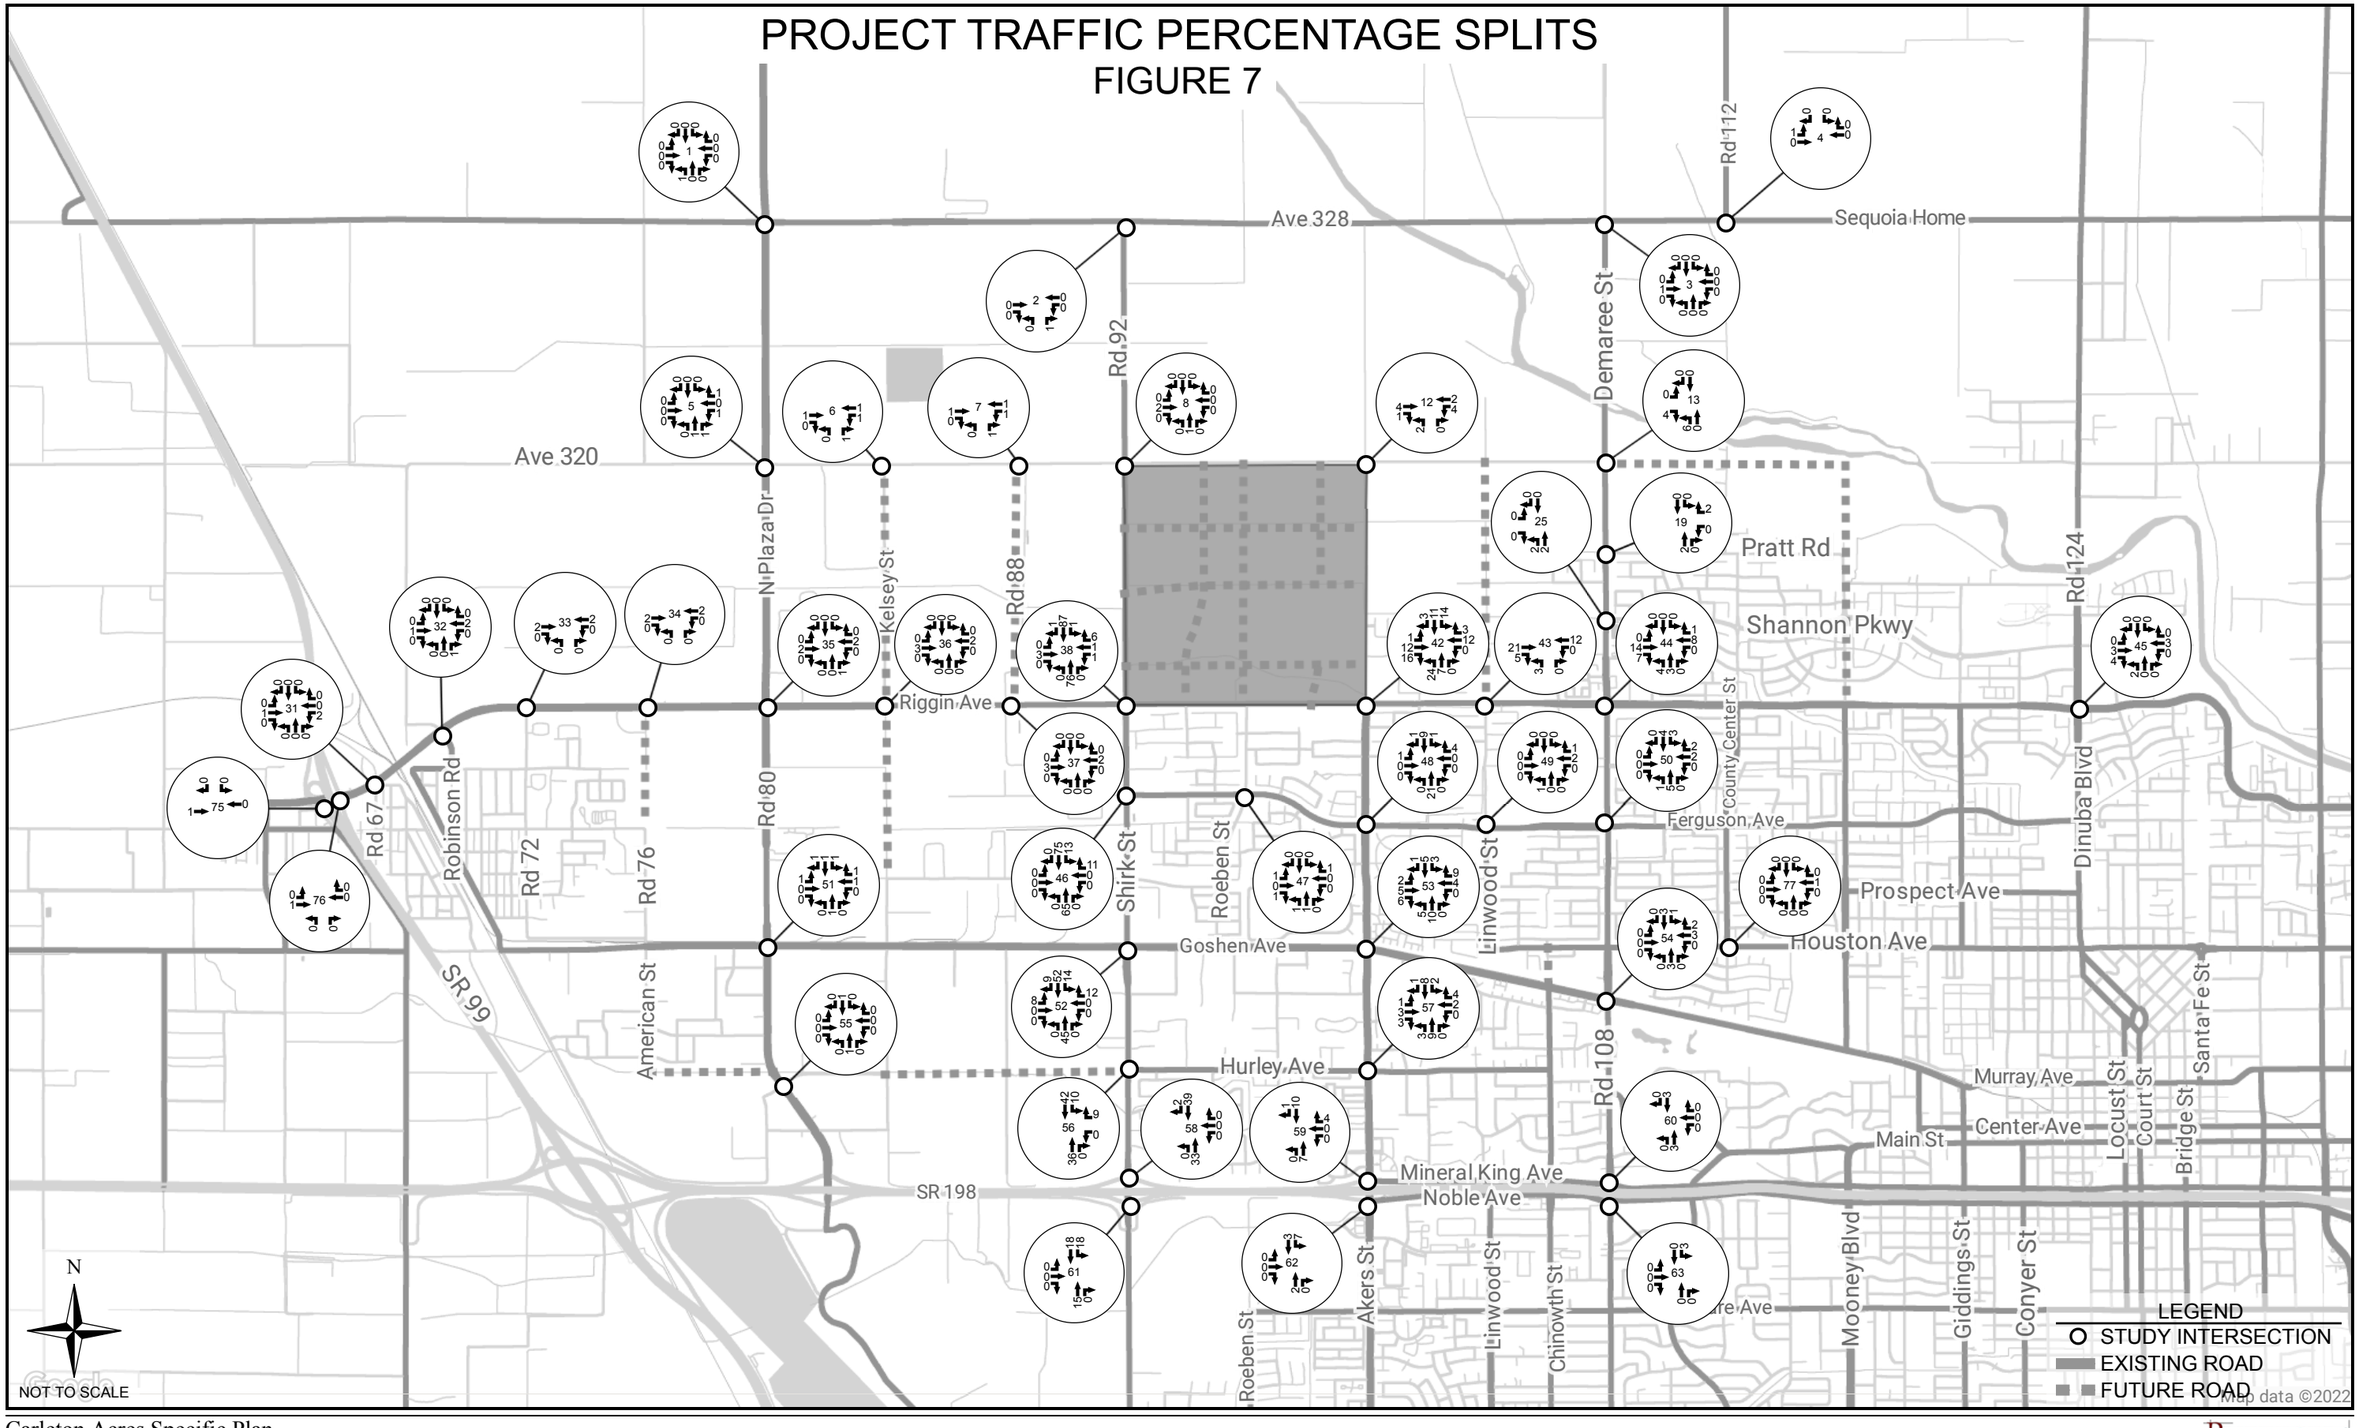
PROJECT TRAFFIC PERCENTAGE SPLITS
FIGURE 7



TRAFFIC VOLUMES

Existing

Weekday peak hour turning movement counts were obtained for the existing study intersections in May 2021, June 2021 and July 2022 (see Appendix C for count data and lane geometrics). These counts were adjusted (+15 percent) to account for traffic volume reductions on public roadways in response to the coronavirus pandemic. The adjustment was developed based on a review of historical (pre-pandemic) count data obtained from multiple sources (see Appendix C for COVID-19 adjustment). The resultant existing (2022) weekday peak hour volumes are shown in Figures 32 and 33.

Saturday peak hour turning movement counts were obtained in September 2022 (see Appendix C for count data and lane geometrics). It was determined that the application of a pre-pandemic adjustment factor is not needed since the count data collected is recent and traffic volumes on public roadways have steadily increased since the State of California lifted most COVID-19 restrictions in June 2021. Existing (2022) Saturday peak hour volumes are shown in Figures 34.

Future

Average annual growth rates ranging between 0.5 and 10.7 percent were applied to the 2022 peak hour volumes to estimate future peak hour volumes for the years 2023, 2028, 2033, 2038 and 2043. These growth rates were estimated based on a review of regional travel demand model data from TCAG.

Peak hour volumes for pending developments were added to peak hour projections beginning in the year 2028 (see Appendix D for trip generation tables). These volumes were estimated based on information provided by the City of Visalia regarding land use, size and location of each pending development (see Appendix D for map and list of developments).

In addition, peak hour volumes for a planned industrial park (northwest corner of Shirk Street and Riggin Avenue) were added to cumulative peak hour volumes (growth rate projections plus pending development traffic) beginning in the year 2028 (see Appendix D for trip generation tables). Similarly, peak hour volumes for a future high school (southeast corner of Roeben Street and Shannon Parkway) were added to cumulative peak hour volumes beginning in the year 2033 (see Appendix D for trip generation tables).

Peak hour volumes for the years 2023, 2028, 2033, 2038 and 2043, both with and without project traffic, are shown in Figures 35 through 79. The same for the year 2046 (TCAG horizon year) is shown in Figures 80 through 88. The 2046 volumes include peak hour traffic for pending and planned development.

INTERSECTION ANALYSIS

A capacity analysis of the study intersections was conducted using Synchro software from Trafficware (see Appendix E for Synchro output). This software utilizes the capacity analysis methodology in the Transportation Research Board's *Highway Capacity Manual 2010* (HCM 2010). All roundabouts were analyzed as single-lane intersections and all "+Project" scenarios include two westbound lanes on Riggin Avenue between Shirk Street and Denton Street. In addition, project intersections located along an adjacent arterial were analyzed with a right-turn deceleration lane since all such intersections meet one or more of the City of Visalia's deceleration lane criteria.

Level of service (LOS) criteria for unsignalized and signalized intersections, as defined in HCM 2010, are presented in the tables below.

Level of Service Criteria
Unsignalized Intersections

Level of Service	Average Control Delay (sec/veh)	Expected Delay to Minor Street Traffic
A	≤ 10	Little or no delay
B	> 10 and ≤ 15	Short delays
C	> 15 and ≤ 25	Average delays
D	> 25 and ≤ 35	Long delays
E	> 35 and ≤ 50	Very long delays
F	> 50	Extreme delays

Level of Service Criteria
Signalized Intersections

Level of Service	Average Control Delay (sec/veh)	Volume-to-Capacity Ratio
A	≤ 10	< 0.60
B	> 10 and ≤ 20	0.61 - 0.70
C	> 20 and ≤ 35	0.71 - 0.80
D	> 35 and ≤ 55	0.81 - 0.90
E	> 55 and ≤ 80	0.91 - 1.00
F	> 80	> 1.00

Peak hour level of service for the study intersections is presented in Tables 5a, 5b and 5c. The City of Visalia and County of Tulare have an operational level of service goal of LOS D or better. Intersection delay (seconds) is shown within parentheses for all intersections operating below LOS D.

Table 5a

See “MITIGATION” section for intersection improvements
All roundabouts were analyzed as single-lane intersections

[1]Analyzed as a full access intersection (WB future traffic movements based on traffic volumes at similar intersections)
[2]All “+Project” scenarios include 2 WB lanes on Riggin Ave between Shirk St and Denton St
[3]Intersection is either fully built out to City standards or mitigation needed is infeasible (see “MITIGATION” section for details)

See “MITIGATION” section for intersection improvements
All roundabouts were analyzed as single-lane intersections

[1]Analyzed as a full access intersection (WB future traffic movements based on traffic volumes at similar intersections)
[2]All “+Project” scenarios include 2 WB lanes on Riggin Ave between Shirk St and Denton St
[3]Intersection is either fully built out to City standards or mitigation needed is infeasible (see “MITIGATION” section for details)

See “MITIGATION” section for intersection improvements
All roundabouts were analyzed as single-lane intersections

[1]Analyzed as a full access intersection (WB future traffic movements based on traffic volumes at similar intersections)
[2]All “+Project” scenarios include 2 WB lanes on Riggin Ave between Shirk St and Denton St
[3]Intersection is either fully built out to City standards or mitigation needed is infeasible (see “MITIGATION” section for details)

TRAFFIC SIGNAL WARRANT ANALYSIS

A traffic signal warrant analysis was conducted in accordance with the guidelines contained in the 2014 *California Manual on Uniform Traffic Control Devices* (2014 CA MUTCD). As per the TIA Procedures, eight-hour vehicular volume signal warrant conditions were applied to all existing unsignalized arterial/arterial, arterial/collector and collector/collector intersections within the study area. The signal warrant analysis also included the project intersection of Shirk Street/Sedona Avenue (#26) using traffic volume estimates based on movements at adjacent intersections.

Eight-hour signal warrant analysis results are presented in Table 6a (see Appendix F for Synchro output).

In addition, a peak hour signal warrant analysis was conducted for the seven existing unsignalized County intersections within the study area. Analysis results are shown in Tables 6b and 6c. It is noted too that accident warrant criteria are satisfied for one County intersection: Shirk St/Avenue 320 (Intersection #8).

It is important to note that a signal warrant defines the minimum condition under which signalization of an intersection might be warranted. Meeting one or more warrants does not suggest traffic signals are required, but rather, that other traffic factors and conditions be considered in order to determine whether signals are truly justified.

It is also noted that signal warrants do not necessarily correlate with level of service. An intersection may satisfy a signal warrant condition and operate at or above an acceptable level of service, or operate below an acceptable level of service and not meet signal warrant criteria.

QUEUE LENGTH ANALYSIS

Existing and future peak hour volumes, both with and without project traffic, were used to analyze queue lengths for all turn lanes under stop or signal control within the study area. The queue length analysis was conducted in accordance with the City's TIA Procedures. The analysis results are shown in Tables 7a, 7b and 7c. Storage lengths and queue lengths (CAP) are reported in feet. Peak hour volumes (VOL) are reported as number of vehicles.

Table 7a

INTERSECTION IMPROVEMENTS

Descriptions of intersection improvements needed to maintain or improve the operational level of service of the street system in the vicinity of the project are presented below.

Intersection #3: Demaree St (Rd 108) & Ave 328 . . . (unsignalized, County)

- Mitigation is recommended with the addition of project traffic in the year 2033 and consists of adding a northbound right-turn lane.
- Further mitigation is recommended in the year 2043 and consists of adding a westbound left-turn lane.
- Mitigation improvements will maintain an acceptable level of service through the year 2046, both with and without the addition of project traffic.
- Peak hour signal warrants were met in all traffic analysis scenarios.

Intersection #4: Rd 112 & Ave 328 . . . (unsignalized, County)

- Mitigation is recommended in the year 2038 and consists of adding a southbound right-turn lane.
- Mitigation improvements will maintain an acceptable level of service through the year 2046, both with and without the addition of project traffic.
- Peak hour signal warrants were met in all traffic analysis scenarios beginning in the year 2023 (with project traffic).

Intersection #12: Akers St (Rd 100) & Kibler Ave (Ave 320) . . . (unsignalized, County)

- Mitigation is recommended with the addition of project traffic in the year 2038.
- Improvements consist of providing all-way stop control.
- Mitigation will maintain an acceptable level of service through the year 2046, both with and without the addition of project traffic.
- Peak hour signal warrants were met in all traffic analysis scenarios beginning in the year 2033 (with project traffic).

Intersection #13: Demaree St (Rd 108) & Kibler Ave (Ave 320) . . . (unsignalized, County)

- Mitigation is recommended with the addition of project traffic in the year 2038.
- Improvements consist of providing all-way stop control.
- Mitigation will maintain an acceptable level of service through the year 2046, both with and without the addition of project traffic.
- Peak hour signal warrants were met in all traffic analysis scenarios beginning in the year 2028 (with project traffic).

Intersection #25: Demaree St (Rd 108) & Shannon Pkwy . . . (unsignalized, City)

- Mitigation is recommended with the addition of project traffic in the year 2046.
- Improvements consist of providing all-way stop control.
- Eight-hour signal warrant criteria were not met in any of the traffic analysis scenarios.

Intersection #31: Rd 67 & Betty Dr . . . (signalized, County)

- Mitigation is recommended in the year 2038.
- Improvements consist of adding an eastbound right-turn lane.
- Full mitigation would require the addition of an eastbound through lane which, in turn, would require widening the bridge structure to the east. Therefore, full mitigation is not feasible.

Intersection #32: Robinson Rd & Betty Dr . . . (signalized, County)

- Mitigation is recommended in the year 2043.
- Improvements consist of adding an eastbound right-turn lane.
- Mitigation will maintain an acceptable level of service through the year 2046, both with and without the addition of project traffic.

Intersection #33: Rd 72 & Riggin Ave . . . (unsignalized, County)

- Mitigation is recommended in the year 2033.
- Improvements include (1) changing the shared northbound left-turn and right-turn lane to a northbound left-turn lane and (2) adding a northbound right-turn lane.
- Mitigation improvements will maintain an acceptable level of service through the year 2046, both with and without the addition of project traffic.

- Peak hour signal warrants were met in all traffic analysis scenarios.

Intersection #37: Rd 88 & Riggin Ave . . . (unsignalized, City)

- Mitigation is recommended with the addition of project traffic in the year 2028.
- Improvements consist of adding signals. Eight-hour signal warrant criteria were met in all traffic analysis scenarios beginning in the year 2033.
- Mitigation will maintain an acceptable level of service through the year 2046, both with and without the addition of project traffic.

Intersection #38: Shirk St (Rd 92) & Riggin Ave . . . (unsignalized, City)

- Mitigation is recommended in the year 2023 and consists of adding signals. Eight-hour signal warrant criteria were met in all traffic analysis scenarios beginning in the year 2023.
- Further mitigation is recommended in the year 2043 and consists of adding an eastbound through lane.
- Mitigation improvements will maintain an acceptable level of service through the year 2046, both with and without the addition of project traffic.

Intersection #39: Denton St & Riggin Ave . . . (unsignalized, City)

- Mitigation is recommended with the addition of project traffic in the year 2028.
- Improvements consist of adding signals. Eight-hour signal warrant criteria were met in all traffic analysis scenarios beginning in the year 2023.
- Mitigation will maintain an acceptable level of service through the year 2046, both with and without the addition of project traffic.

Intersection #40: Roeben St & Riggin Ave . . . (unsignalized, City)

- Mitigation is recommended with the addition of project traffic in the year 2028 and consists of adding signals. With the exception of the year 2028, eight-hour signal warrant criteria were met in all traffic analysis scenarios beginning in the year 2023 (with project traffic).
- Further mitigation is recommended in the year 2043 and consists of (1) adding an eastbound through lane and (2) adding a westbound through lane.
- Mitigation improvements will maintain an acceptable level of service through the year 2046, both with and without the addition of project traffic.

Intersection #42: Akers St (Rd 100) & Riggin Ave . . . (signalized, City)

- Mitigation is recommended with the addition of project traffic in the year 2028 and consists of (1) adding an eastbound through lane and (2) adding a westbound through lane.
- Further mitigation is recommended in the year 2038 and consists of changing the eastbound right-turn lane to a shared eastbound through and right-turn lane.
- Mitigation improvements will maintain an acceptable level of service through the year 2046, both with and without the addition of project traffic.

Intersection #43: Linwood St & Riggin Ave . . . (unsignalized, City)

- Mitigation is recommended with the addition of project traffic in the year 2023 and consists of adding signals. With the exception of the year 2028, eight-hour signal warrant criteria were met in all traffic analysis scenarios beginning in the year 2023 (with project traffic).
- Further mitigation is recommended in the year 2033 and consists of (1) adding an eastbound through lane and (2) adding a westbound through lane.
- Mitigation improvements will maintain an acceptable level of service through the year 2046, both with and without the addition of project traffic.

Intersection #44: Demaree St (Rd 108) & Riggin Ave . . . (signalized, City)

- Mitigation is recommended in the year 2033.
- Improvements include (1) adding an eastbound left-turn lane, (2) changing the eastbound right-turn to a shared eastbound through and right-turn lane, and (3) changing the westbound right-turn lane to a shared westbound through and right-turn lane.
- Mitigation improvements will maintain an acceptable level of service through the year 2046, both with and without the addition of project traffic.

Intersection #45: Dinuba Blvd (Rd 124) & Riggin Ave . . . (signalized, City)

- Intersection begins to operate below an acceptable level of service in the year 2043.
- Intersection is fully expanded to the City standard. Mitigation is not feasible.

Intersection #46: Shirk St (92) & Ferguson Ave . . . (unsignalized, City)

- Mitigation is recommended with the addition of project traffic in the year 2023.
- Improvements consist of adding signals. With the exception of the year 2028, eight-hour signal warrant criteria were met in all traffic analysis scenarios beginning in the year 2023 (with project traffic).
- Mitigation will maintain an acceptable level of service through the year 2046, both with and without the addition of project traffic.

Intersection #47: Roeben St & Ferguson Ave . . . (unsignalized, City)

- Mitigation is recommended with the addition of project traffic in the year 2028.
- Improvements consist of adding signals. With the exception of the year 2028, eight-hour signal warrant criteria were met in all traffic analysis scenarios beginning in the year 2023 (with project traffic).
- Mitigation will maintain an acceptable level of service through the year 2046, both with and without the addition of project traffic.

Intersection #48: Akers St (Rd 100) & Ferguson Ave . . . (signalized, City)

- Mitigation is recommended in the year 2023.
- Improvements include (1) changing the northbound right-turn to a shared northbound through and right-turn lane, (2) changing the southbound right-turn lane to a shared southbound through and right-turn lane, (3) adding a shared eastbound through and right-turn lane, and (4) adding a shared westbound through and right-turn lane.
- Mitigation improvements will maintain an acceptable level of service through the year 2038. Intersection is fully expanded to the City standard. Further mitigation beyond 2038 is not feasible.

Intersection #49: Linwood St & Ferguson Ave . . . (unsignalized, City)

- Mitigation is recommended with the addition of project traffic in the year 2043.
- Improvements consist of adding signals. Eight-hour signal warrant criteria were met in all traffic analysis scenarios beginning in the year 2038.
- Mitigation will maintain an acceptable level of service through the year 2046, both with and without the addition of project traffic.

Intersection #52: Shirk St (Rd 92) & Goshen Ave . . . (signalized, City)

- Mitigation is recommended in the year 2023.
- Improvements consist of adding a southbound through lane.
- Mitigation will maintain an acceptable level of service through the year 2046, both with and without the addition of project traffic.

Intersection #54: Demaree St (Rd 108) & Goshen Ave . . . (signalized, City)

- Mitigation is recommended in the year 2028.
- Improvements consist of changing the northbound right-turn lane to a shared northbound through and right-turn lane.
- Mitigation improvements will maintain an acceptable level of service through the year 2043. Intersection is fully expanded to the City standard. Further mitigation beyond 2043 is not feasible.

Intersection #56: Shirk St (Rd 92) & Hurley Ave . . . (signalized, City)

- Mitigation is recommended in the year 2033.
- Improvements consist of (1) adding a northbound through lane and (2) adding a southbound through lane.
- Mitigation will maintain an acceptable level of service through the year 2046, both with and without the addition of project traffic.

Intersection #58: Shirk St (Rd 92) & SR 198 Westbound Ramps . . . (unsignalized, State)

- Mitigation is recommended in the year 2023 and consists of adding signals. Eight-hour signal warrant criteria were met in all traffic analysis scenarios.
- Further mitigation is recommended in the year 2043 and consists of (1) adding a northbound through lane and (2) adding a southbound through lane.
- Mitigation improvements will maintain an acceptable level of service through the year 2046, both with and without the addition of project traffic.

Intersection #60: Demaree St (Rd 108) & Mineral King Ave . . . (signalized, City)

- Intersection begins to operate below an acceptable level of service in the year 2043.
- Intersection is fully expanded to the City standard. Mitigation is infeasible.

Intersection #61: Shirk St (Rd 92) & SR 198 Eastbound Ramps . . . (unsignalized, State)

- Mitigation is recommended with the addition of project traffic in the year 2023 and consists of adding signals. Eight-hour signal warrant criteria were met in all traffic analysis scenarios.
- Further mitigation is recommended in the year 2043 and consists of adding a southbound left-turn lane.
- Mitigation improvements will maintain an acceptable level of service through the year 2046, both with and without the addition of project traffic.

ROADWAY ANALYSIS AND IMPROVEMENTS

A capacity analysis was conducted to determine whether the addition of Phase I project traffic, the majority of which would be generated by the commercial anchor at the northeast corner of Shirk Street/Riggin Avenue (#38), would necessitate improving Riggin Avenue between Shirk Street and Akers Street. The analysis utilized Table 4, "Generalized Peak Hour Two-Way Volumes for Florida's Urbanized Areas," in the State of Florida Department of Transportation's *2020 Quality/Level of Service Handbook,* dated June 2020 (see Appendix G for the table).

Analysis results are presented in Tables 8a, 8b and 8c. The City has an operational level of service goal of LOS D or better.

Table 8a

Table 8c
Roadway Level of Service
Saturday Peak Hour

Street	2022 Two-Way LOS		2023 Two-Way LOS		2023+Project Two-Way LOS		2023+Project(Mit) Two-Way LOS		2028 Two-Way LOS		2028+Project Two-Way LOS		2028+Project(Mit) Two-Way LOS	
	VOL	LOS	VOL	LOS	VOL	LOS	VOL	LOS	VOL	LOS	VOL	LOS	VOL	LOS
Riggin Ave: Shirk St to Denton Ave	917	C	939	C	1549	E	1549	C	1058	C	1696	E	1696	C
Riggin Ave: Denton Ave to Roeben St	938	C	973	C	1583	E	1583	C	1156	C	1959	E	1959	C
Riggin Ave: Roeben St to Akers St	1027	C	1065	C	1817	E	1817	C	1282	C	2101	E	2101	C

The analysis indicates that the addition of project traffic in the year 2023 (full build of Phase I) would necessitate widening Riggin Avenue from two lanes (1 eastbound, 1 westbound) to four lanes (2 eastbound, 2 westbound) between Shirk Street and Akers Street.

VMT ANALYSIS

An analysis of project VMT (vehicle miles traveled) was conducted in accordance with the *City of Visalia VMT Thresholds and Implementation Guidelines*, adopted March 15, 2021 (VMT Guidelines). The analysis involved comparing an estimate of VMT attributable to the project to a baseline VMT and assessing whether project VMT would result in a significant transportation impact under the California Environmental Quality Act (CEQA).

Project Screening

Land use developments meeting one or more of the screening criteria contained in the VMT Guidelines are presumed to create a less than significant transportation impact and no further VMT analysis is required. These criteria relate to project size, location, proximity to transit, and trip-making potential. The project does not meet any of the screening criteria. Therefore, a detailed VMT analysis is required.

Detailed Analysis

According to the VMT Guidelines, a mixed-use land development may be analyzed in its entirety or based on the project's predominant land use type. The former approach was taken for the purposes of this study. The City has established a significance threshold of 84 percent of the existing (2022) regional (Tulare County) VMT per service population (population + employment) for mixed-use projects analyzed in their entirety. Projects exceeding the threshold would be expected to result in a significant transportation impact and mitigation would be required.

The detailed analysis was conducted using the TCAG Model in accordance with the VMT Guidelines. The model runs for the analysis were developed and generated by TCAG staff and account for internal trip capture, as described in the "TRIP DISTRIBUTION AND ASSIGNMENT" section of this report (see Appendix H for model output). The VMT analysis results are presented in Table 9.

Table 9
VMT Analysis

	VMT per Service Population			
Base Year	Region[1] Tulare Co	Threshold[2] Visalia	Project[1]	Significant Impact
2022	28.2	23.7	18.5	NO

[1] Source: TCAG Model
[2] Significance threshold equivalent to 84 percent of existing regional VMT per *City of Visalia VMT Thresholds and Implementation Guidelines* , adopted March 15, 2021

Since the project's VMT per service population (18.5) is less than the significance threshold (23.7), the project is not expected to result in a significant transportation impact under CEQA, and therefore, no mitigation is required.

County VMT Thresholds

Because most of the project site currently lies in the unincorporated area of Tulare County, a comparison was also made between project VMT and County VMT thresholds, as defined in the *County of Tulare, SB 743 Guidelines*, dated June 8, 2020 (SB 743 Guidelines). In accordance with the SB 743 Guidelines, each project land use was considered separately.

Comparisons of project VMT and County VMT thresholds for the residential and retail portions of the project are presented in Tables 10a and 10b, respectively. The project elementary school is not included in the comparison because it is a "local-serving" public facility. According to the SB 743 guidelines, "government facilities intended to typically serve the local public," like public schools, are presumed to have a less than significant impact on VMT, and therefore, are not required to undergo a VMT analysis.

Table 10a
County VMT Comparison
Residential

Project Land Use	Metric	Project[1]	Threshold[2]
Residential	VMT per Capita	7.7	14.15

[1] Source: TCAG Model
[2] Source: Table 3-1, *County of Tulare, SB 743 Guidelines* , dated June 8, 2020 (TAZ 2702)

For the residential portion of the project, as per the SB 743 Guidelines, a comparison was made between project VMT/capita and the average VMT/capita for the County traffic analysis zone (TAZ) within which the project is located (2702). The project VMT/capita (7.7) was obtained from the TCAG Model and accounts for internal trip capture. The corresponding threshold VMT/capital (14.15) was obtained from Table 3-1, "Vehicle Miles Traveled Analysis for Tulare County Traffic Analysis Zones," of the SB 743 Guidelines (see Appendix I for table and TAZ map).

Table 10b
County VMT Comparison
Regional Retail

Project Land Use	Metric	Regional VMT NO Project[1]	Regional VMT WITH Project[1]
Retail	Total VMT	13,717,517	13,894,989

[1] Source: TCAG Model

For the retail portion of the project, as per the SB 743 Guidelines, a comparison was made between total regional VMT with and without the project. The VMT reported pertains to the Tulare County region and accounts for internal trip capture.

COLLISION HISTORY

Collisions at intersections within the study area for calendar years 2019, 2020 and 2021 are summarized in Table 11. The crash data contained in the table was obtained from the Statewide Integrated Traffic Records System (SWITERS) and includes collisions that occurred within 60 feet of a study intersection.

The maximum number of collisions at a study intersection in any single year was four at the intersection of Demaree Street/Mineral King Avenue (#60) in the year 2019. All other intersections had an annual frequency of less than or equal to three collisions. A review of annual traffic volumes indicates that crash occurrences at study intersections are not related to deficient roadway geometrics given the relatively low collision frequencies.

Table 11
Intersection Crash Summary

#	Intersection	Collision Date	Crash Type	Violation Category	No. Killed	No. Injured	Weather Conditions
8	Rd 92 & Avenue 320	7/22/2021	Broadside	Automobile ROW	0	1	Clear
8	Rd 92 & Avenue 320	2/9/2021	Broadside	Automobile ROW	0	2	Clear

CIRCULATION

Project Site Access

The project site is bounded by four arterial roadway segments: Avenue 320 on the north, Riggin Avenue on the south, Akers Street on the east, and Shirk Street on the west. A total of eight street intersections located along these arterial segments (listed below) were analyzed as full access.

#10 Roeben St & Ave 320
#18 Akers St & Pratt Rd
#20 Shirk St & Shannon Pkwy
#24 Akers St & Shannon Pkwy
#26 Shirk St & Sedona Ave
#30 Akers St & Sedona Ave (existing unsignalized intersection)
#39 Denton St & Riggin Ave
#40 Roeben St & Riggin Ave

Four of the eight intersections (listed below) are expected to operate within acceptable levels of service during peak hours without signalization through the year 2046, both with and without project traffic. It is recommended that these intersections operate as full access.

#10 Roeben St & Ave 320
#20 Shirk St & Shannon Pkwy
#24 Akers St & Shannon Pkwy
#30 Akers St & Sedona Ave

Of the four remaining intersections, two (listed below) are expected to operate within acceptable levels of service during peak hours through the year 2046, both with and without project traffic. In addition, the intersection of Shirk Street/Sedona Avenue did not meet signal warrant criteria for any of the study traffic analysis scenarios. Therefore, it is recommended that these intersections operate as three-quarters access.

#18 Akers St & Pratt Rd
#26 Shirk St & Sedona Ave

The final two intersections (listed below) were shown to drop below the City's operational level of service goal in the year 2028 and meet signal warrant criteria in the year 2023. With signalization, both intersections are expected to operate within acceptable levels of service during peak hours through the year 2046, both with and without project traffic. It is noted that the intersection of Denton Street/Riggin Avenue (#39) does not comply with the City standard for spacing of full median openings on arterial roadways, but full access is recommended to provide for optimum traffic flow and circulation.

#39 Denton St & Riggin Ave
#40 Roeben St & Riggin Ave

As shown on the Site Access Map (Figure 4), the intersection of Shirk Street/N Commercial Drive (#79) is located approximately 414 feet south of the intersection of Shirk Street/Sedona Avenue (#26). The queue length analysis included storage lengths of 86 feet for the northbound left-turn pocket at Intersection #26 and 100 feet for the southbound left-turn pocket for Intersection #79, leaving a transition between the two left-turn pockets which satisfies the City standard of 120 feet for arterial roadways. The analysis results, as shown in Tables 7a, 7b and 7c, indicate sufficient storage length would be available during peak hours for both left-turn movements through the year 2046. Therefore, no conflict or interference between the two left-turn pockets is anticipated.

The study has taken into account the future industrial development at the northwest corner of Shirk Street and Riggin Avenue. Connections to Shirk Street from the east at Sedona Avenue and Shannon Parkway will align with drive approaches for the industrial development on the west.

Driveway Access

Except as noted below, it was assumed for the purposes of this study that full access would be provided at school site driveways. All school driveways are expected to operate at an acceptable level of service during peak hours through the year 2046 without mitigation.

#68	Roeben St & North HS Staff/Visitor Driveway	Right-In/Right-Out
#69	Roeben St & HS Parent Drop-Off Driveway	Right-In/Right-Out and Left-In
#70	Roeben St & South HS Staff/Visitor Driveway	Right-In/Right-Out
#71	West HS Student Driveway & Sedona Ave	Right-In/Right-Out

Except as noted below, it was assumed for the purposes of this study that only right-in/right-out turning movements would be permitted at commercial driveways. All commercial driveways within the study area are expected to operate at an acceptable level of service during peak hours through the year 2046 without mitigation.

#79	Shirk St & North Commercial Driveway	Right-In/Right-Out and Left-In

On-Site

Final site plans have yet to be approved for the school sites and commercial developments. It is anticipated that on-site circulation would provide for the safe movement of passenger vehicles, delivery trucks, emergency vehicles and, for the school sites, school buses. All sites would also include ADA pathways.

Site plan review is underway for the Costco retail development. It is anticipated that the final site plan will closely reflect the current site plan. An analysis of on-site vehicle queueing at the Costco fuel station and car wash was conducted by Kittelson & Associates (see Appendix J for the queuing characteristics memorandum, dated October 3, 2022).

TRANSIT, PEDESTRIAN AND BICYCLE FACILITIES

The project includes sidewalks, bike lanes and bike trails. Bike trails will be Class 1 with planting strips to separate sidewalks and bike trails from the adjacent roadway. The bike paths and trails conform to the *City of Visalia Active Transportation Plan*, dated March 2017, (ATP) and include an upgraded portion of Roeben Street between Riggin Avenue and Pratt Road to a Class 1 path. Project bike trails are shown in Figure 89.

Within the project vicinity, Class 2 bike lanes exist on Ferguson Avenue east of Shirk Street. Class 2 bike lanes are also provided on Roeben Street south of Ferguson Avenue. The ATP includes a northerly extension of the Roeben Street bike lanes to Riggin Avenue.

Visalia Transit has a fixed bus route (Route 7) that utilizes the intersection of Akers Street and Riggin Avenue. Two bus stops are located at this intersection.

TRAFFIC CALMING MEASURES

The project traffic calming measures shown in Figure 90 were developed in coordination with the City of Visalia and include roundabout intersections and speed tables. A review of these measures was conducted based on guidelines established by the Federal Highway Administration (FHA) and the Institute of Transportation Engineers (ITE). A summary is presented below.

- The project roundabouts are all single-lane intersections with a center island. Consistent with FHA and ITE guidelines, bicycle facilities are separated from the circulatory roadway. All project roundabouts are expected to operate within acceptable levels of service during peak hours through the year 2046, both with and without project traffic.

- The project includes speed tables placed at mid-block locations and at intersections. Consistent with FHA and ITE guidelines, all are designed to be traversed at a speed between 25 and 45 miles per hour and successive speed tables are spaced approximately 200 to 500 feet apart.

APPENDIX A

Project Phasing Roadway Improvements

Phase I 20% residential buildout

Phase	Name of Street	Type of Improvements	ROW Buildout
Costco/Commercial parcels	Riggin from Shirk to Denton	7' sidewalk, 5' planting strip, 6' bike lane, 4' buffer, 12' travel lane (west), 12' travel lane (west), 18' median.	1/2--100% complete
Costco/Commercial parcels	Shirk from Riggin to Costco north property line	7' sidewalk, 5' planting strip, 6' bike lane, 4' buffer, 12' travel lane (north), 12 travel lane (north), 18' median, 12' travel lane (south)	2/3
Costco/Commercial parcels	Denton from Riggin to Costco north property line	5' sidewalk, 5' planting strip, 20' travel lane/parking (south), 12' travel lane/parking (north)	2/3
Medium density (5.5 ac.)	Shirk from Costco north property line to north property line of (5.5 ac.) medium density development	Block wall, 8' Lighting & Landscape District, 7' sidewalk, 5' planting strip, 6' bike lane, 4' buffer, 12' travel lane (north), 12 travel lane (north), 18' median, 12' travel lane (south)	2/3
Medium density (5.5 ac.)	Prescott from Phase 1F to Denton	5' sidewalk, 5' planting strip, 20' travel lane/parking (east), 12' travel lane/parking (west)	2/3
Phase 1A	Shirk from (5.5 ac.) medium density to Lipson	Block wall, 8' landscape, 7' sidewalk, 5' planting strip, 6' bike lane, 4' buffer, 12' travel lane (north), 12' travel lane (north), 18' median, 12' travel lane (south)	2/3
Phase 1B	Shirk from Lipson to Shannon	Block wall, 8' landscape, 7' sidewalk, 5' planting strip, 6' bike lane, 4' buffer, 12' travel lane (north), 12' travel lane (north), 18' median, 12' travel lane (south)	2/3
Phase 1B	Shannon from Shirk to Denton	Block wall, 9' landscape, 6' sidewalk, 10' planting strip, 5' bike lane, 5' buffer, 12' travel lane (east), 15' median, 12' travel lane (west)	2/3
Phase 1C	Shannon from Denton to Roeben	Block wall, 9' landscape, 6' sidewalk, 10' planting strip, 5' bike lane, 5' buffer, 12' travel lane (east), 15' median, 12' travel lane (west)	2/3
Phase 1C	Shannon & Roeben	Roundabout--landscape 4 corners, Roundabout with 1 travel lane around.	Full
Phase 1C	Roeben from Shannon to Lipson	Block wall, 5' planting strip, 6' sidewalk, 6' bike lane, 5' planting strip, 8' parking, 12' travel lane (south), 11' median, 12' travel lane (north)	2/3
Phase 1D	Roeben from Lipson to Sedona	Block wall, 5' planting strip, 6' sidewalk, 6' bike lane, 5' planting strip, 8' parking, 12' travel lane (south), 11' median, 12' travel lane (north)	2/3
Phase 1D	Roeben & Sedona	Roundabout--landscape 4 corners, Roundabout with 1 travel lane around.	Full
Phase 1D	Sedona & Denton	Roundabout--landscape 4 corners, Roundabout with 1 travel lane around.	Full
Phase 1F	Roeben from Sedona to Prescott	Block wall, 5' planting strip, 6' sidewalk, 6' bike lane, 5' planting strip, 8' parking, 12' travel lane (south), 11' median, 12' travel lane (north)	2/3
Phase 1F	Prescott from Roeben to portion of high density (9.7 ac.)	5' sidewalk, 5' planting strip, 20' travel lane/parking (west), 12' travel lane/parking (east)	2/3
Portion of high density (29.3 ac.) south of proposed high school	Sedona from existing roundabout to street east of Roeben	5' sidewalk, 5' planting strip, 20' travel lane/parking (east), 12' travel lane/parking (west) Median at roundabout.	2/3
Portion of high density (29.3 ac). south of proposed high school	From existing roundabout at Sedona to Prescott	5' sidewalk, 5' planting strip, 20' travel lane/parking (south), 12' travel lane/parking (north) Median at roundabout.	2/3
Portion of high density (9.7 ac.) east of commercial at Riggin & Denton (NEC)	Prescott from Phase 1F to Denton	5' sidewalk, 5' planting strip, 8' parking	1/3--100% complete
Portion of high density (9.7 ac.) east of commercial at Riggin & Denton (NEC)	Riggin from Denton to east property line of high density development	7' sidewalk, 5' planting strip, 6' bike lane, 4' buffer, 12' travel lane (west), 12' travel lane (west), 18' median.	1/2--100% complete

Phase 2 40% residential buildout

Phase	Name of Street	Type of Improvements	ROW Buildout
Phase 2A	Shirk from Shannon to Pratt	Block wall, 8' landscape, 7' sidewalk, 5' planting strip, 6' bike lane, 4' buffer, 12' travel lane (north), 12' travel lane (north), 18' median, 12' travel lane (south)	2/3
Phase 2A	Pratt from Shirk to proposed roundabout (east property line of Phase 2A)	5' sidewalk, 5' planting strip, 20' travel lane/parking (east), 20' travel lane/parking (west), 5' planting strip, 5' sidewalk. Roundabout with medians & landscape 4 corners.	Full
Phase 2A	Shannon from Shirk to Denton	Block wall, 6' landscape, 12' class 1 bike trail, 18' stormwater/ground water recharge swale, 12' police & Modoc access, existing 19' Modoc ditch, 10' ditch access & walking path, 6' sidewalk, 5' landscape strip, 8' parking	1/3--100% complete
Phase 2B	Pratt from roundabout (Phase 2A) to Roeben	5' sidewalk, 5' planting strip, 20' travel lane/parking (east), 20' travel lane/parking (west), 5' planting stip, 5' sidewalk	Full
Phase 2B	Pratt & Roeben	Roundabout--Landscape 4 corners, Roundabout with 1 travel lane around.	Full
Phase 2B	Roeben from Pratt to Shannon	Block wall, 9' landscape, 6' sidewalk, 5' planting strip, 5' bike lane, 8' parking, 12' travel lane (south), 11' median, 12' travel lane (north)	2/3
Phase 2B	Shannon from Denton to Roeben	Block wall, 6' landscape, 12' class 1 bike trail, 18' stormwater/ground water recharge swale, 12' police & Modoc access, existing 19' Modoc ditch, 10' ditch access & walking path, 6' sidewalk, 5' landscape strip, 8' parking	1/3--100% complete
Remainder of high density (9.7 ac.)	Riggin from portion of high density (9.7 ac.) east of Denton to Roeben	7' sidewalk, 5' planting strip, 6' bike lane, 4' buffer, 12' travel lane (west), 12' travel lane (west), 18' median.	1/2--100% complete
Remainder of high density (9.7 ac.)	Roeben from Prescott to Riggin	Block wall, 5' planting strip, 6' sidewalk, 6' bike lane, 5' planting strip, 8' parking, 12' travel lane (south), 11' median, 12' travel lane (north)	2/3
Remainder of high density (9.7 ac.)	Prescott from portion of high density (9.7 ac.) to Roeben	5' sidewalk, 5' planting strip, 8' parking	1/3--100% complete
Remainder of high density (29.3 ac.)	Sedona from portion of high density (29.3 ac.) development area to Roeben	5' sidewalk, 5' planting strip, 20' travel lane/parking (east), 12' travel lane/parking (west) Median at roundabout & extend to control access into proposed high school.	2/3
Remainder of high density (29.3 ac.)	Roeben from Sedona to Prescott	Block wall, 5' planting strip, 6' sidewalk, 6' bike lane, 5' planting strip, 8' parking, 12' travel lane (north)	1/3--100% complete
Remainder of high density (29.3 ac.)	Riggin from Roeben to portion of high density (29.3 ac.) adjacent to City parcel at NWC Akers & Riggin	7' sidewalk, 5' planting strip, 6' bike lane, 4' buffer, 12' travel lane (west), 12' travel lane (west), 18' median.	1/2--100% complete
Portion of high density (29.3 ac)	East side of high density (29.3 ac.) Prescott to Riggin	5' sidewalk, 5' planting strip, 20' travel lane/parking (south), 12' travel lane/parking (north)	2/3

Phase 3 70% residential buildout

Phase	Name of Street	Type of Improvements	ROW Buildout
Phase 2C	Roeben from street north of Phase 2C to Shannon	Block wall, 5' landscape, 6' sidewalk, 6' bike trail, 5' planting strip	1/3--100% complete
Phase 2C	Shannon from Roeben to east street of Phase 2C	Block wall, 6' landscape, 12' class 1 bike trail, 18' stormwater/ground water recharge swale, 12' police & Modoc access, existing 19' Modoc ditch, 10' ditch access & walking path, 6' sidewalk, 5' landscape strip, 8' parking, 12' travel lane (west), 15' median, 12' travel lane (east)	2/3
Phase 2D	Shannon from Phase 2C to east street of Phase 2D	Block wall, 6' landscape, 12' class 1 bike trail, 18' stormwater/ground water recharge swale, 12' police & Modoc access, existing 19' Modoc ditch, 10' ditch access & walking path, 6' sidewalk, 5' landscape strip, 8' parking, 12' travel lane (west), 15' median, 12' travel lane (east)	2/3
Phase 2D	Roeben from Phase 2E to Phase 2C	Block wall, 5' landscape, 6' sidewalk, 6' bike trail, 5' planting strip	1/3--100% complete
Phase 2E	Pratt from Roeben to east property line of elementary school	5' sidewalk, 5' planting strip, 20' travel lane/parking (east), 12' travel lane/parking (west)	2/3
Phase 2E	Pratt from east property line of elementary school to roundabout at medium density (32.6 ac.)	5' sidewalk, 5' planting strip, 20' travel lane/parking (east), 20' travel lane/parking (west), 5' planting strip, 5' sidewalk	Full
Portion of medium density (16.5 ac.) along Shirk	Shirk from Pratt to portion of medium density (16.5 ac.)	Block wall, 8' landscape, 7' sidewalk, 5' planting strip, 6' bike lane, 4' buffer, 12' travel lane (north), 12 travel lane (north), 18' median, 12' travel lane (south)	2/3
Phase 2G	Ave. 320 from west property line of Phase 2G to Phase 2H	Block wall, 8' landscape, 7' sidewalk, 5' planting strip, 6' bike lane, 4' buffer, 12' travel lane (east), 12 travel lane (east), 18' median, 12' travel lane (west)	2/3
Phase 2H	Ave. 320 from west property line of Phase 2H to Roeben	Block wall, 8' landscape, 7' sidewalk, 5' planting strip, 6' bike lane, 4' buffer, 12' travel lane (east), 12 travel lane (east), 18' median, 12' travel lane (west)	2/3
Phase 2H	Roeben from Ave. 320 to Pratt	Block wall, 6' landscape, 6' sidewalk, 5' planting strip, 5' bike lane, 12' travel lane (south), 11' median, 12' travel lane (north)	2/3
Phase 2I	Ave. 320 from east of high density (6.4 ac.) to east of Phase 2I development	strip, 6' bike lane, 4' buffer, 12' travel lane (easet), 12 travel lane (east), 18' median, 12' travel lane (west)	2/3
Phase 2I	Street east of Phase 2A from Ave. 320 to roundabout	5' sidewalk, 5' planting strip, 20' travel lane/parking (east), 12' travel lane/parking (west)	2/3
Medium density (32.6 ac.)	Akers from Pratt to Shannon	Block wall, 6' landscape, 12' class 1 bike trail, 18' stormwater/groundwater recharge swale, 12' police & Modoc access, 32' existing Modoc ditch, 10' ditch access & walking path, 5' planting strip, 6' bike lane, 4' buffer, 12' travel lane (south), 12 travel lane (south), 18' median, 12' travel lane (north)	2/3
Medium density (32.6 ac.)	Shannon from Akers to Phase 2D	Block wall, 6' landscape, 12' class 1 bike trail, 18' stormwater/ground water recharge swale, 12' police & Modoc access, existing 19' Modoc ditch, 10' ditch access & walking path, 6' sidewalk, 5' landscape strip, 8' parking, 12' travel lane (west), 15' median, 12' travel lane (east)	2/3
Medium density (32.6 ac.)	Pratt from Akers to roundabout at Phase 2E	5' sidewalk, 5' planting strip, 20' travel lane/parking (east), 12' travel lane/parking (west)	2/3

Phase 4 100% residential buildout

Phase	Name of Street	Type of Improvements	ROW Buildout

MEMORANDUM

June 23, 2022 Project #: 27808

To: Kim Katz, Costco Wholesale

From: Amy Lopez

RE: Visalia Costco Warehouse Retail Center – Trip Generation and Site Access

Kittelson & Associates, Inc. (Kittelson) has prepared this summary of the trip characteristics expected for the construction of a new Costco warehouse retail center to be located at the northeast quadrant of the N Shirk St/W Riggin Ave intersection in Visalia, CA and within the proposed Carleton Acres Specific Plan area (project). This memorandum forecasts the anticipated trip generation for the project.

Costco Wholesale is proposing to construct an approximately 160,523-square-foot Costco warehouse retail center, on-site circulation and landscaping improvements on the property located at located at the northeast quadrant of the N Shirk St/W Riggin Ave intersection in Visalia, CA.

TRIP GENERATION

Costco Trip Database

For more than 20 years, Kittelson has maintained a database of trip data and travel characteristics for Costco Wholesale. The database contains transportation information such as trip rates and trip type percentages for Costco locations throughout the United States as well as Canada and Mexico. The database is updated periodically when new Costco traffic counts or other such information become available to Kittelson. To best evaluate the anticipated transportation characteristics of the proposed warehouse in Visalia, Kittelson used the Costco trip database to develop a trip generation estimate as it provides use-specific data that most accurately represents the anticipated transportation characteristics of this unique development type.

The warehouse trip rates summarized herein rely on data collection conducted at Costco sites located across the western region of the United States. The trip studies were completed using industry standard engineering practices consistent with guidance within the Institute of Transportation Engineers (ITE) standard reference, *Trip Generation Manual*, 11th Edition. These cordon surveys were conducted between 2015 and 2021 and include 20 surveys of Costco warehouse retail centers in California, Arizona, Oregon, Utah, and Washington. The Costco buildings surveyed range in size between 121,771 square feet and 235,298 square feet, with an average size of 156,526 square feet. The existing Costco locations all included fuel stations, ranging from 20 to 32 fueling positions, and one location also includes a car wash.

Kittelson developed primary, pass-by, and diverted trip percentages based on member surveys taken at existing Costco warehouses. These trip types are described below.

- Pass-by Trips: existing trips on roadways adjacent to the site for which drivers turn into the Costco site and then, after shopping, continue to their ultimate destination
- Diverted Trips: existing trips on nearby roadways in which a driver decides to drive out of their way for a distance to shop at Costco and, when their shopping is concluded, continues their trip to the ultimate destination
- Primary Trips: an entirely new trip on the roadway system for the express purpose of driving to and from Costco

Table 1: Trip Characteristics for Costco Warehouse

	Weekday			Saturday	
	Daily	AM Peak Hour	PM Peak Hour	Daily	Midday Peak Hour
Trip Rate (per KSF*)	99.38	2.59	8.39	112.53	11.15
Ins		0.56	0.47		0.49
Outs		0.44	0.53		0.51
Pass-by Trips			20.4%		20.1%
Diverted Trips			28.3%		20.7%
Primary Trips			51.2%		59.1%

Source: Kittelson & Associates, Inc., 2022
* KSF = 1,000 square feet

Project Trip Generation Comparison

Kittelson estimated trip generation for the project for weekday daily and AM/PM peak hours, and for Saturday daily and midday peak hour using trip rates presented in Table 1. Pass-by and diverted rates for the weekday PM peak hour were used to estimate weekday daily pass-by and diverted trips. Likewise, Saturday midday peak hour rates for pass-by and diverted trips were used to develop Saturday daily pass-by and diverted trips. Table 2 presents the trip generation for the Visalia Costco warehouse retail center.

Table 2: Visalia Costco Warehouse Retail Center Trip Generation

			Weekday AM Peak			Weekday PM Peak				Saturday Midday Peak		
Land Use	Size (sq.ft.)	Weekday Daily	Total	In	Out	Total	In	Out	Saturday Daily	Total	In	Out
Total Site Trips	160,526	15,952	415	231	184	1,346	631	715	18,064	1,790	878	912
Pass-by Trips		3,261	85	47	38	275	129	146	3,633	360	177	182
Diverted Trips		4,517	118	64	52	381	179	202	3,733	370	181	188
Primary Trips		**8,174**	**212**	**120**	**94**	**690**	**323**	**367**	**10,698**	**1,060**	**520**	**540**

Source: Kittelson & Associates, Inc., 2022

As shown in Table 2, the project is estimated to generate 8,174 weekday daily primary trips. Of these, 212 are estimated to occur in the weekday AM peak hour (120 inbound / 94 outbound), and 690 are estimated to occur in the weekday PM peak hour (323 inbound / 367 outbound). The project is estimated to generate 10,698 Saturday daily primary trips. Of these, 1,060 are estimated to occur during the Saturday midday peak hour (520 inbound / 541 outbound).

SITE ACCESS

Figure 1 presents preliminary trip distribution percentages for the project based on:

- Existing local street network
- Streets planned as part of the Carleton Acres Specific Plan
- Location of the existing Costco warehouse on Cameron Ave in Visalia
- Home locations of existing Costco members in the greater Visalia area

Figure 2 presents the preferred site accesses for the project, which include:

- Full access on N Shirk St at the northwest corner of the site
- Right-in/right-out/left-in access on N Shirk St
- Two right-in/right-out accesses on W Riggin Ave
- Full access at the Denton St/W Riggin Ave intersection

Considering in combination the total trips expected to the site and the anticipated trip distribution, the accesses identified in Figure 2 are recommended to:

- Distribute Costco member traffic across multiple access points
- Provide site access options for all directions of travel for Costco members and other visitors to the adjacent commercial properties
