APPENDIX G

Generalized Peak Hour Two-Way Volumes

2020 Quality/Level of Service Handbook
State of Florida Department of Transportation (FDOT)

TABLE 4

Generalized **Peak Hour Two-Way** Volumes for Florida's Urbanized Areas[1]

January 2020

INTERRUPTED FLOW FACILITIES

STATE SIGNALIZED ARTERIALS

Class I (40 mph or higher posted speed limit)

Lanes	Median	B	C	D	E
2	Undivided	*	1,510	1,600	**
4	Divided	*	3,420	3,580	**
6	Divided	*	5,250	5,390	**
8	Divided	*	7,090	7,210	**

Class II (35 mph or slower posted speed limit)

Lanes	Median	B	C	D	E
2	Undivided	*	660	1,330	1,410
4	Divided	*	1,310	2,920	3,040
6	Divided	*	2,090	4,500	4,590
8	Divided	*	2,880	6,060	6,130

Non-State Signalized Roadway Adjustments

(Alter corresponding state volumes by the indicated percent.)

Non-State Signalized Roadways - 10%

Median & Turn Lane Adjustments

Lanes	Median	Exclusive Left Lanes	Exclusive Right Lanes	Adjustment Factors
2	Divided	Yes	No	+5%
2	Undivided	No	No	-20%
Multi	Undivided	Yes	No	-5%
Multi	Undivided	No	No	-25%
–	–	–	Yes	+ 5%

One-Way Facility Adjustment

Multiply the corresponding two-directional volumes in this table by 0.6

BICYCLE MODE[2]

(Multiply vehicle volumes shown below by number of directional roadway lanes to determine two-way maximum service volumes.)

Paved Shoulder/Bicycle Lane Coverage	B	C	D	E
0-49%	*	260	680	1,770
50-84%	190	600	1,770	>1,770
85-100%	830	1,700	>1,770	**

PEDESTRIAN MODE[2]

(Multiply vehicle volumes shown below by number of directional roadway lanes to determine two-way maximum service volumes.)

Sidewalk Coverage	B	C	D	E
0-49%	*	*	250	850
50-84%	*	150	780	1,420
85-100%	340	960	1,560	>1,770

BUS MODE (Scheduled Fixed Route)[3]

(Buses in peak hour in peak direction)

Sidewalk Coverage	B	C	D	E
0-84%	> 5	≥ 4	≥ 3	≥ 2
85-100%	> 4	≥ 3	≥ 2	≥ 1

UNINTERRUPTED FLOW FACILITIES

FREEWAYS

Core Urbanized

Lanes	B	C	D	E
4	4,050	5,640	6,800	7,420
6	5,960	8,310	10,220	11,150
8	7,840	10,960	13,620	14,850

Uninterrupted Flow Highway Adjustments

Lanes	Median	Exclusive left lanes	Adjustment factors
2	Divided	Yes	+5%
Multi	Undivided	Yes	-5%
Multi	Undivided	No	-25%

[1] Values shown are presented as peak hour directional volumes for levels of service and are for the automobile/truck modes unless specifically stated. This table does not constitute a standard and should be used only for general planning applications. The computer models from which this table is derived should be used for more specific planning applications. The table and deriving computer models should not be used for corridor or intersection design, where more refined techniques exist. Calculations are based on planning applications of the HCM and the Transit Capacity and Quality of Service Manual.

[2] Level of service for the bicycle and pedestrian modes in this table is based on number of vehicles, not number of bicyclists or pedestrians using the facility.

[3] Buses per hour shown are only for the peak hour in the single direction of the higher traffic flow.

* Cannot be achieved using table input value defaults.

** Not applicable for that level of service letter grade. For the automobile mode, volumes greater than level of service D become F because intersection capacities have been reached. For the bicycle mode, the level of service letter grade (including F) is not achievable because there is no maximum vehicle volume threshold using table input value defaults.

RE: Visalia Costco Gasoline – Queueing Memo

Kittelson & Associates, Inc. (Kittelson) has prepared this summary of the queueing characteristics expected for the fuel station and car wash at the Costco retail facility proposed at the northeast corner of W Riggin Avenue and N Shirk Street in Visalia, CA. This memorandum forecasts the anticipated on-site vehicle queuing at the fuel station and car wash.

Project Description

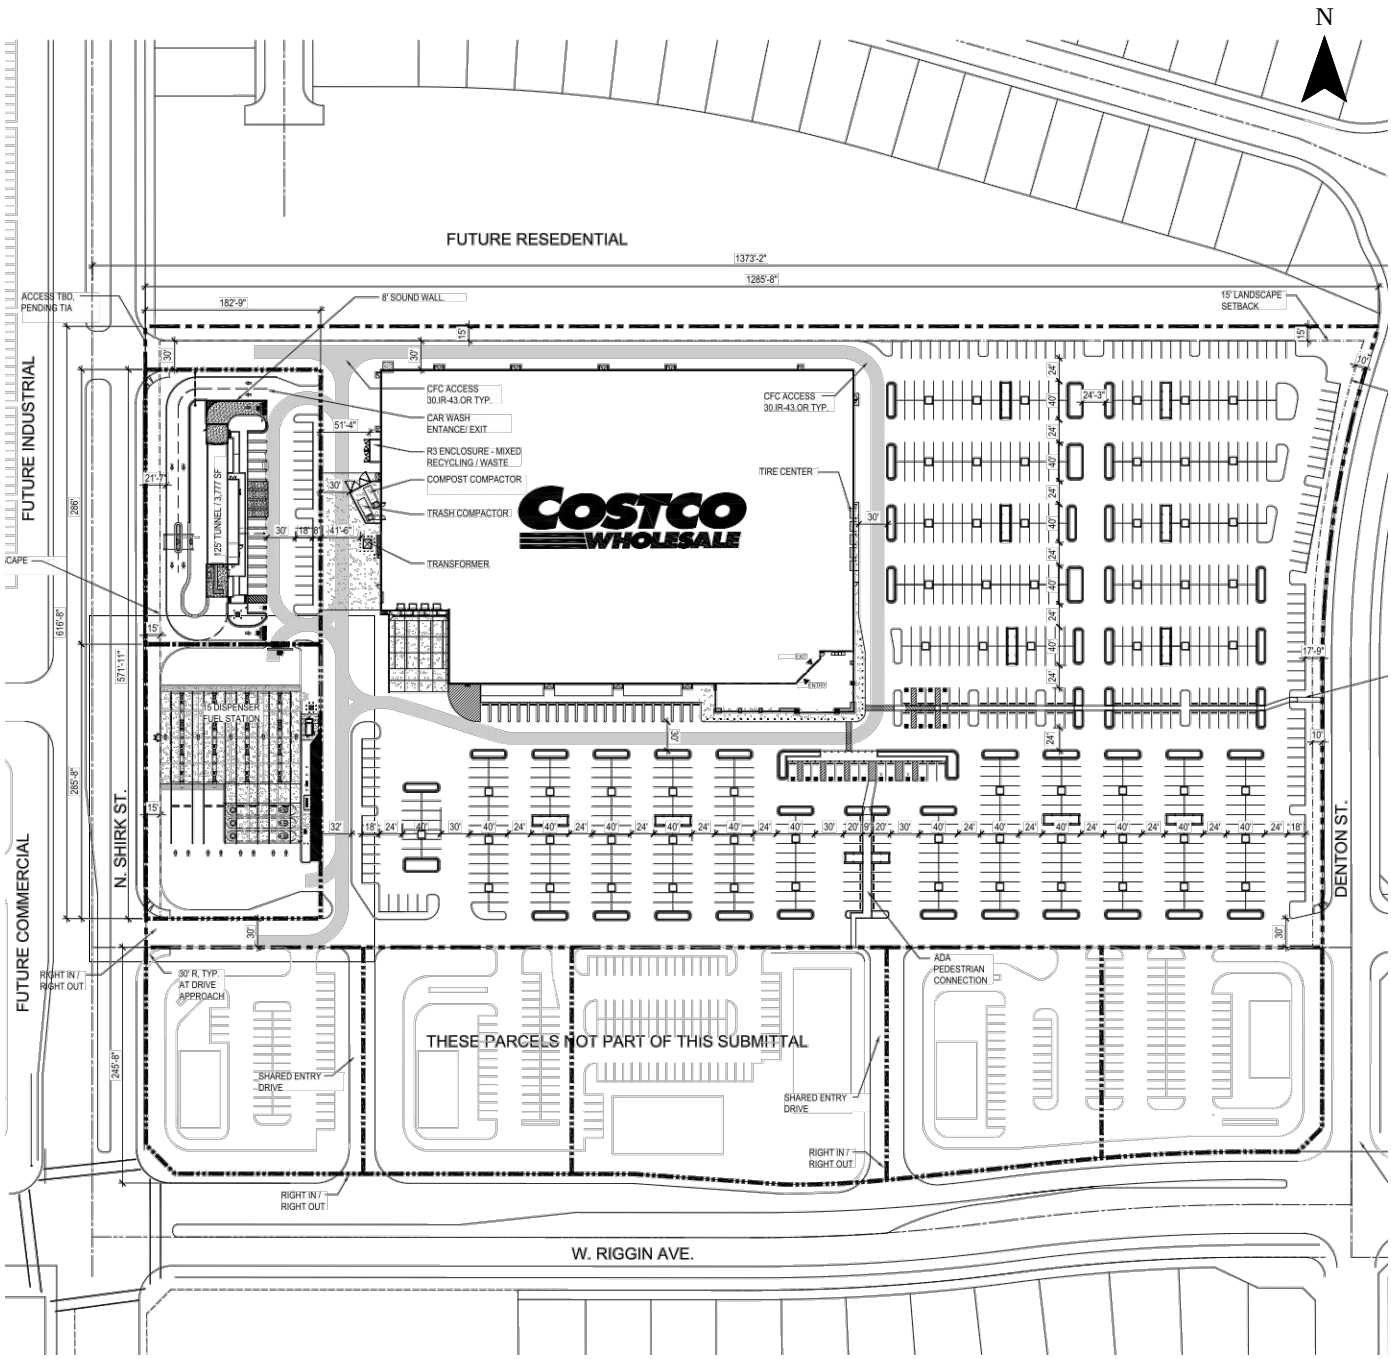
Costco Wholesale proposes to construct a Costco warehouse, fuel station, and car wash within a new shopping center to be developed at the northeast corner of W Riggin Avenue and N Shirk Street in Visalia, CA. The fuel station will consist of four islands (16 dispensers) with a total of 32 vehicle fueling positions. The car wash will include a 125-foot tunnel. Figure 1 presents the site plan for the fuel station and the car wash facility.

Costco Transportation Database

For more than 20 years, Kittelson has maintained a transportation database of traffic data and travel characteristics for Costco Wholesale, including warehouses, Business Centers, and fuel stations. The database contains transportation information such as trip rates, trip type percentages, and parking demand for Costco locations throughout the United States as well as Canada and Mexico. The database is updated periodically each time new Costco traffic counts or other information become available to Kittelson. To evaluate the anticipated transportation characteristics of the fuel station, Kittelson used the Costco database to develop the queueing estimate since it provides use-specific data that most accurately represents the anticipated traffic characteristics of the unique development type.

All Costco fuel stations function as ancillary uses to the main Costco warehouse/Business Center. The fuel stations are only available for members and require a Costco membership card to activate the pumps for dispensing gasoline. Payment can be made only by credit card, and unlike traditional gas/service station operations, there are no other automotive services (such as repairs) or other type of sales (such as food or sundries) associated with the fuel station. All Costco Gasoline facilities have a minimum of one attendant working at all times who is responsible for expediting members' use of the fuel pumps, directing entering vehicles to open pump locations, and managing on-site queues from the pumps.

The Costco transportation database contains a large quantity of data related to Costco Gasoline fuel stations. Trip generation rates, trip type information, and queueing information for over 35 Costco Gasoline facilities located throughout the U.S. are included. Costco has invested significant effort into developing this use-specific trip generation database for their warehouses and fuel stations because of the unique characteristics of Costco member travel that exist due to membership requirements and the nature of Costco sales. These unique elements apply to the trip generation for Costco warehouses, Costco Gasoline fuel stations, and the interaction of trips between the two.



Site Plan
New Costco Gas Station
Visalia, CA

H:\27\27808 - Visalia Costco\memo\Queue Memo\Figures\27808 Queuing.dwg Sep 28, 2022 - 7:38pm - mliu Layout Tab: Site Plan

Costco currently operates several car washes across the United States. Like the warehouses and fuel stations, Costco car washes are for members only and require a Costco membership card for use. The car wash is typically staffed by two attendants who are trained to manage the circulation of vehicles at the payment kiosk and vehicles entering/exiting the facility. Kittelson does not maintain car wash queue length data in the Costco traffic database since Costco car washes typically provide sufficient queue storage to meet the demand, and therefore queue length data collection has not been needed for Costco's site planning purposes.

Queueing Analysis

Anticipated Queuing at Gas Station

As shown in Figure 1, the site plan locates the fuel station to the southwest of the warehouse. Members would access the queue area by entering the site from within the shopping center, circulating through the site, and queuing behind the pumps in the queue storage area.

To forecast the anticipated maximum queue at the fuel station, Kittelson identified seven Costco fuel stations that have 30+ fueling positions in the following cities as comparable sites:

- Clovis, CA
- Temecula, CA
- Scottsdale, AZ
- South San Francisco (El Camino), CA
- South San Francisco (SFO Airport), CA
- Santee, CA
- Sunnyvale, CA

Queuing data were collected at each of the sites between 2020 and 2022 for weekday PM peak hour and Saturday midday peak hour. Observed peak hour queues are summarized in Table 1. Maximum queues represent the queue length recorded for the longest one-minute period during the peak hour.

Table 1: Maximum Peak Hour Queues at Existing Costco Fuel Stations

Locations (Facility Type)	Fueling Positions	Maximum Weekday P.M. Peak Hour Queue	Maximum Saturday Midday Peak Hour Queue
Clovis, CA	30	28	36
Temecula, CA	30	44	51
Scottsdale, AZ	32	10	19
South San Francisco (El Camino), CA	32	20	41
South San Francisco (SFO Airport), CA	32	11	25
Santee, CA	32	10	15
Sunnyvale, CA	30	24	33
Average		**21**	**31**

Source: Kittelson & Associates, Inc., 2022
Note: The queue refers to vehicles waiting in line behind the pumps; it does not include vehicles at fueling positions.

Taking the average of maximum queues at the seven representative sites shown in Table 1, the maximum queue for the Visalia Costco fuel station is anticipated to be 21 vehicles during the weekday PM peak hour and 31 vehicles during the Saturday midday peak hour.

The fuel station would provide approximately 105 feet of queue storage depth behind the first row of dispensers. Figure 2 and Figure 3 illustrate the projected maximum queues at the fuel station during the weekday PM peak hour and Saturday midday peak hours, respectively. As presented in the figures, the maximum queues would be contained within the queue storage area.

Anticipated Car Wash Activity

Data Source. To estimate the anticipated activity at the Visalia car wash, Kittelson obtained three months of transaction data (February 1, 2019 to April 30, 2019) from 11 locations where Costco currently operates a car wash facility. Costco provided to Kittelson proprietary car wash transaction data in 30-minute intervals for each location. The locations are:

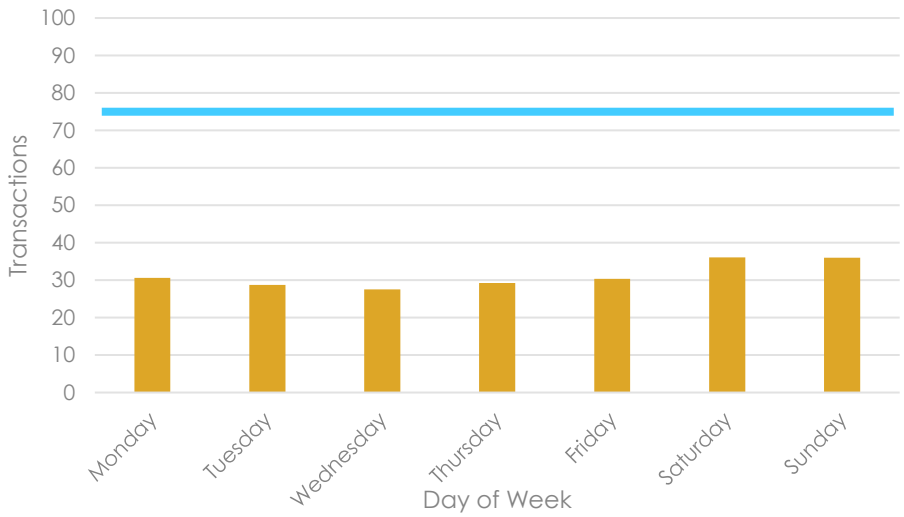
- Glendale, AZ
- Scottsdale, AZ
- Lancaster, CA
- Oxnard, CA
- Poway, CA
- San Juan Capistrano, CA
- Torrance, CA
- Victorville, CA
- Boise, ID
- Brentwood, TN
- Seattle, WA

Analysis Method. Kittelson computed the average number of transactions for each 30-minute period for each day of the week. This analysis determined the busiest 30-minute period of each day of the week.

The Visalia location is designed to incorporate a 125-foot tunnel, which can process up to 150 cars per hour, or 75 cars per half hour. The analysis assumes if the maximum average number of transactions per 30-minute interval remains below 75, any queue at the car wash would remain contained within the queue storage area on the site.

Exhibit 1 shows the maximum number of transactions during a 30-minute period for each day of the week. The cyan line represents the maximum processing power of the carwash tunnel: 75 vehicles per 30-minute interval.

Exhibit 1: Maximum Transactions during a 30-Minute Period by Day of Week



Source: Kittelson & Associates, Inc., 2022

As shown in the exhibit, the maximum average number of transactions during a 30-minute period on any day of the week is less than 40 transactions, or well below the 75 transactions per half-hour maximum for the 125-foot tunnel. The car wash facility proposed for the Visalia location is expected to serve the anticipated demand at the site.

Conclusion

As demonstrated through analysis of observed maximum queues at seven representative Costco fuel stations and anticipated activity at the car wash facility at 11 locations, maximum queues at the Visalia Costco fuel station will be contained within the queue storage area,

Maximum queues at the car wash are anticipated to remain contained within the on-site queue storage area. Given the maximum number of cars possible to process per half hour at the car wash facility exceeds even the busiest period of the busiest days by more than 30 transactions, it is unlikely the queue would extend through the site.

Should additional information be necessary to understand the anticipated transportation effects of the fuel station or car wash, please contact Amy Lopez at 510-433-8064 or alopez@kittelson.com.
