Inspection Date: 06/11/2013

Summary of Violations & Notice to Comply

VC	Class	Violation	Corrective Actions Taken
G300	II	**ACCUMULATION TIME** Facility accumulated hazardous waste on-site for longer than the allowed time limit. --- ***THE WASTE OIL IN THE UST HAS BEEN THERE FOR AN UNDETERMINED AMOUNT OF TIME.*** --- Make arrangements for the immediate removal of the waste. Submit to HMCD a copy of the manifest(s) or consolidated manifest receipt(s) demonstrating that the waste has been removed. Ensure that hazardous wastes are not accumulated on-site for longer than 90 days. [CCR 66262.34(a)]	Provided receipt of pickup on 5/6/2013 by RCA Oil Recovery to Evergreen Oil Co.
G320	M	**TRAINING** Personnel are not adequately trained on managing hazardous waste. --- ***THERE WAS NO EVIDENCE THAT HAZARDOUS WASTE TRAINING HAS BEEN CONDUCTED OR THAT ANY PERSONNEL ON SITE HAVE BEEN TRAINED.*** --- Provide a program of instruction that: 1) is directed by a person trained in hazardous waste management procedures; 2) teaches waste management procedures relevant to the position of each employee; and 3) ensures facility personnel are able to respond effectively to emergencies. Provide this training within 6 months of hire, and annually thereafter. [CCR 66265.16]	
G321	M	**RECORDS: HAZARDOUS WASTE TRAINING** Hazardous waste training records are incomplete or are not being kept as required. --- ***THERE ARE NO RECORDS AVAILABLE CONFIRMING TRAINING HAS BEEN CONDUCTED OR PROVIDED.*** --- Maintain training records that include: 1) the name and job title of each person in a position that has hazardous waste management responsibility; 2) a written job description that includes the duties, skills, education, or other qualifications required for each position described above; 3) a description of the type and amount of introductory and continuing training that will be given for each position; and 4) documentation that this training was completed by facility personnel. Keep current employee training records until facility closure. Keep records on former employee for at least 3 years from the date the employee last worked at the facility. [CCR 66265.16(e)]	
G343	M	**TANK INSPECTIONS** Facility could not demonstrate that hazardous waste tanks are being inspected daily as required. ***---NO HAZARDOUS WASTE STORAGE TANK INSPECTION RECORD WAS AVAILABLE ON SITE FOR REVIEW OR WAS IN EVIDENCE TO EXIST. THE SPILL BUSKET AND LACK OF THE DROP TUBE CAP SHOW THIS CONDITION HAS EXISTED FOR LONGER THAN A DAY.*** --- Perform and document hazardous waste tank inspections daily. Inspections must cover: 1) overfill/spill control equipment; 2) aboveground portions of the tank system; 3) data gathered from monitoring and leak detection equipment; 4) construction materials and the area immediately surrounding the tank system; and 5) the level of waste in the tank, for uncovered tanks. [CCR 66265.195]

SITE INSPECTION;

DRAFT

OFFICIAL NOTICE OF INSPECTION

Facility ID: Not Specified
Facility Name: SAN JOSE SMOG CHECK
Site Address: 147 E SANTA CLARA ST, SAN JOSE, CA
Inspection Date: 06/11/2013

Summary of Violations & Notice to Comply

THE 15 GALLON SPILL BUCKET ON THE WASTE OIL UST WAS OBSERVED WITH THE CAP ON THE DROP TUBE NOT IN PLACE, WASTE OIL FILLING THE BUCKET TO THE TOP OF THE DROP TUBE, AND THE SPILL BUCKET DRAIN IS NOT WORKING. ALSO, THERE IS NO HAZARDOUS WASTE LABEL WITH THE GENERATOR IDENTIFICATION AND ACUMULATION START DATE. SEE VIOLATIONS LIST.

THE USED OIL FILTER DRUM WAS OBSERVED WITHOUT THE LID SECURE. NO ADDITIONS WERE BEING MADE TO THE DRUM AT THAT TIME, SEE VIOLATION.

THE RAGS THAT ARE USED IN THIS AUTO SERVICE SHOP ARE TYPICALLY TAKEN TO BE WASED AT AN UNPERMITTED LAUNDRY OR DISPOSED OF AS REGULAR TRASH AS DESCRIBED BY MARIO MATEOS. NO RAGS WERE OBSEERVED IN THE TRASH AT THE TIME OF INSPECTION. A PERMITTED LAUNDRY SERVICE MUST BE USED TO CLEAN TEXTILE RAGS THAT ARE USED WHILE SERVICING AUTOMOBILES. SEE VIOLATION.

THE OIL COLLECTION CONTAINER USED TO COLLECT USED OIL FROM THE CRANK CASE OF CARS WAS OBSERVED TO BE PARTIALLY FILLED WITH USED OIL BUT DID NOT HAVE A HAZARDOUS WASTE LABEL OR OTHER IDENTIFICATION. THIS SHALL HAVE A COMPLETE HAZARDOUS WASTE LABEL WITH THE ACCUMULATION START DATE IDENTIFIED AS "EMPTY DAILY". THIS SHALL BE EMPTIED DAILY INTO THE USED OIL STORAGE. SEE VIOLATIONS.

A 5 GALLON GAS CAN WAS OBSERVED WITHOUT A LID WHILE CONTAINING A SMALL QUANTITY OF FUEL. THIS SHALL HAVE A TIGHT FITTING LID. THE FIRE DEPARTMENT MAY REQUIRE THIS TO BE INSIDE A FLAMMABLE CABINET OR REMOVED FROM SERVICE. CONTACT THE FIRE DEPARTMENT FOR THIS ITEM.

Immediately correct any violation designated as a Class I or Class II violation Correct all other violations no later than 07/11/2013, unless otherwise noted by the inspector.

Using the space provided, write a brief description of the actions taken by the facility to correct each violation. Attach additional pages if more space is needed. Within 5 days of achieving compliance or within 35 days of the inspection date, whichever comes first, sign the certification statement below and return a copy of this report to HMCD. Time granted for correction of violations does not preclude any enforcement action by HMCD or other agencies. This facility may be subject to reinspection at any time. [Authority: HSC 25185(c), 25187.8, 25404.1.2(c)]

Summary of Violations & Notice to Comply

VC	Class	Violation	Corrective Actions Taken
G111	M	**EMERGENCY RESPONSE EQUIPMENT [3030032]** Facility does not have adequate emergency response equipment. ***No fire extinguishers were observed in the shop at the time of inspection on 7/9/18.*** Provide the following emergency equipment, unless none of the hazards posed by the wastes handled at the facility could require such equipment: 1) an internal communications or alarm system capable of providing emergency instruction to facility personnel; 2) a device immediately available at the scene of operations, such as a telephone or a hand-held two-way radio, capable of summoning external emergency assistance; 3) portable fire extinguishers and fire control equipment; 4) spill control equipment; 5) decontamination equipment; and 6) water at adequate volume and pressure to supply hoses, foam producing equipment, automatic sprinklers, or water spray systems with which the facility is equipped. [CCR 66265.32, CFR 265.32]	
G114	M	**EMERGENCY AISLE SPACE [3030036]** Facility failed to maintain sufficient aisle space to permit the unobstructed movement of personnel and equipment to all areas of facility operation in case of an emergency. ***Facility does not have adequate aisle space to access the compressed gases.*** Maintain aisle space to all areas of facility operation. [CCR 66265.35, CFR 265.35]	
G200	II	**ACCUMULATION TIME: SQG [3030010]** Facility accumulated hazardous waste on-site for longer than the time allowed for a small quantity generator of hazardous waste. ***Facility employees stated that used oil is picked up once year. Facility may hold used oil in a container or tank for up to 180 days. Schedule a disposal of this waste and forward a copy of the receipt to HMCD (or forward a receipt to show that used oil has not accumulated for greater than 180 days).*** Make arrangements for the immediate removal of the waste. Submit to HMCD a copy of the manifest(s) or consolidated manifest receipt(s) demonstrating that the waste has been removed. Ensure that hazardous wastes are not held on-site for longer than 180 days when transported up to 200 miles, or 270 days when transported over 200 miles. [HSC 25123.3(h)(1), CCR 66262.34(d)]	
G211	M	**EMERGENCY INFORMATION POSTED: SQG [3010022]** Facility failed to post emergency response information next to the telephone, as required. ***Emergency Information was not posted at the time of inspection on 7/9/18. A template posting was provided at this time.*** Post the following information: 1) the name and phone number of all emergency coordinators; 2) the location of fire extinguishers, spill control materials, and any fire alarms; and 3) the phone number for the fire department. A sample poster (UN-051) is available at www.unidocs.org. [CFR 262.34(d)(5)(ii)]	

DRAFT

OFFICIAL NOTICE OF INSPECTION

Facility ID: FA0273306 **Inspection Date:** 07/11/2018
Facility Name: SAN JOSE SMOG CHECK
Site Address: 147 E SANTA CLARA ST B, SAN JOSE, CA 95113

Summary of Violations & Notice to Comply

VC	Class	Violation	Corrective Actions Taken
G220	M	**TRAINING: SQG [3020001]** Personnel are not adequately trained on managing hazardous waste. ***The nature and number of violations observed indicate that hazardous waste training has not been effective. Information regarding free hazardous waste training classes was provided via email.*** Provide training to ensure that all personnel are thoroughly familiar with proper waste handling and emergency response procedures relevant to their responsibilities during normal facility operations and emergencies. [CFR 262.34(d)(5)(iii)]	
G403	II	**MANAGEMENT OF CONTAMINATED CONTAINERS [3030058]** Facility improperly treated, managed, or disposed of a hazardous materials container that was not empty because it still contained a pourable or scrapeable quantity of hazardous material that upon disposal meets the definition of a hazardous waste. ***Observed 1 x 1 quart container of oil in the trash can that still contained free-flowing liquid. Containers must be emptied of all pourable materials before disposal in the trash.*** Thoroughly empty hazardous material/waste containers prior to treating, managing, or disposing of them, when allowed under empty container management standards. Containers 5 gallons or less in size may generally be placed in the trash once emptied. If a container cannot be emptied, manage it per standard hazardous waste requirements. [CCR 66261.7(b)]	
G410	II	**MANAGEMENT OF USED OIL/FUEL FILTERS [3030004]** Used oil/fuel filters were not drained of free-flowing liquids and/or sent for metal recycling in accordance with filter requirements, nor were they managed as hazardous waste. ***Observed 1 x 55 gallon drum of oil filters containing the following: paper and metal-cased used oil filters, free-flowing liquid used oil, and oily rags. REMOVE FREE LIQUID, PAPER FILTERS, AND RAGS. PLACE RAGS AND PAPER FILTERS IN A CLOSED AND LABELED HAZARDOUS WASTE CONTAINER.*** ***Observed paper and metal filters in the "drained used oil and fuel filters" container. Per section 66266.130, only metal-cased filters are exempt from regulation as a hazardous waste under the scrap metal provision found in federal law. All paper filters must be disposed as hazardous waste and may be sent off with other oil contaminated solids (absorbents and saturated rags).*** Drain the filters of free-flowing oil and fuel, and send them for metal recycling. Otherwise, begin managing the filters per standard hazardous waste requirements. [CCR 66266.130, HSC 25250.22]

Summary of Violations & Notice to Comply

VC	Class	Violation	Corrective Actions Taken
G411	II	**ACCUMULATION TIME: USED OIL/FUEL FILTERS [3030004]** Facility held drained used oil/fuel filters on-site for longer than the allowed time limit. ***Facility stated that they have not disposed of used oil filters within the last year. Schedule a disposal for this waste and forward a copy of the disposal receipt to HMCD for review.*** Make arrangements for the immediate removal of the filters. Submit to HMCD a copy of the bill of lading demonstrating that the filters were removed. Ensure that drained used oil/fuel filters are not held on-site for longer than one year when storing less than a ton of filters, or 180 days when storing a ton or more of filters. [Note: 1 ton = 2,000 lbs. = approx. 8 drums uncrushed filters or 4 drums crushed filters.] [CCR 66266.130(c)(4), HSC 25250.22]	
G412	M	**CONTAINER MARKING: USED OIL/FUEL FILTERS [3030004]** Facility failed to properly mark a container of drained used oil/fuel filters. ***Observed 1 x55 gallon drum of used oil filters with no markings and 1 x 55 gallon drum of used oil filters with no accumulation start date in the outdoor storage cage.*** Mark the initial date of accumulation on the container. If the container holds any gasoline filters, mark it with the words "DRAINED USED OIL AND GASOLINE FILTERS". Otherwise mark the container with the words "DRAINED USED OIL FILTERS". [CCR 66266.130(c)(3), HSC 25250.22]	
G431	M	**MANAGEMENT OF CONTAMINATED RAGS [3030054]** Facility managed hazardous waste as exempt "reusable soiled textile materials" (i.e., contaminated rags), but did not meet requirements for exemption. ***Observed 1 oily rag co-mingled with used oil filters. Employee stated that oily rags are thrown in the trash. Facility does not have a contract with a commercial laundry service.*** ***CEASE DISPOSAL OF OILY RAGS IN THE TRASH.*** ***Oily rags may be commercially laundered by a facility with a permit to do so, or they may be managed as hazardous waste (may be co-mingled with paper filters and used absorbent).*** Begin managing the waste as hazardous waste, or meet all of the following: 1) the rags must be sent to an authorized commercial laundry facility, and 2) the rags must not: a) be regulated under RCRA; b) be used to clean up or control a reportable spill or release; c) be contaminated with any hazardous waste added after the original use of the rags; and d) release any free liquids. [HSC 25144.6]	

Comments: Inspection commenced on 7/9/18 with Hazardous Materials Specialist 1, Michelle Santos, and Owner Valentin Vasquez. Inspection concluded on 7/11/18 with review of hazardous waste manifests.
San Jose Smog Check does primarily smog checks and some oil changes.
Inspection included a walk-through of single bay service area, outdoor used oil storage tank, outdoor waste storage cage and surrounding dumpsters, and review of the following documentation:
-3 years of hazardous waste manifests
-Battery core exchange receipts
-County small business disposal receipts

The following hazardous waste streams were observed:
-Used Oil: 1 x 200 gallon underground tank outside shop
-Used Coolant: 1 x 1 gallon container inside shop
-Used Oil Filters: 2 x 55 gallon drums in outdoor storage shed

DRAFT

OFFICIAL NOTICE OF INSPECTION

Facility ID: FA0273306 **Inspection Date:** 07/11/2018
Facility Name: SAN JOSE SMOG CHECK
Site Address: 147 E SANTA CLARA ST B, SAN JOSE, CA 95113

Summary of Violations & Notice to Comply

-Oily Rags: in the outdoor storage shed
-Oily Absorbent: in a garbage bag in the shop
-Batteries: approx. 15 in the shop, exchanged with Interstate Battery and Fast Undercar
-Miscellaneous Aerosol Cans: in the shop
Facility has adequate spill control.

The following violations were corrected on-site at the time of the inspection:
G020 MARKING OF HAZARDOUS WASTE- Observed 1 gallon container of used coolant in the shop that did not have a hazardous waste label. Label was filled out by employee at the time of inspection.

Notes:
1. Facility does not have a container for used absorbent. In the future, facility must accumulate oily solids in a designated hazardous waste container.
2. Facility employee stated that waste coolant is rarely generated on-site and only one gallon container was observed during the inspection. Facility was advised that their permit only covers generation of used oil and wastes contaminated with used oil. The price of the current permit for used oil only generation is $239 and the price for a full hazardous waste generator's permit is $500. Facility may either notify the County that they require the full hazardous waste generator's permit or cease activities that generate waste coolant.

UNRESOLVED ISSUES:
Facility states that UST is 200 gallons, but CERS submittal from Chevron (tank owner) states that the tank is 1000 gallons. Obtain information from tank owner on the actual capacity of the tank and respond with more information.

Program: PR0413230 - HAZARDOUS MATERIALS BUSINESS PLAN - BP01
Inspection Type: ROUTINE INSPECTION

VC	Class	Violation	Corrective Actions Taken
B115	**M**	**HMBP ANNUAL CERTIFICATION [1010008]** Facility operator failed to annually review the the facility's Hazardous Materials Business Plan (HMBP) and electronically certify that it is complete and accurate. ***Facility last submitted their Hazardous Materials Business Plan (HMBP) on FrontCounter on 2/16/17 using OW0187408.*** Within 30 days, review and electronically resubmit a complete HMBP through either the Santa Clara County CUPA electronic reporting portal (http://FrontCounter.sccgov.org) or the California Environmental Reporting System (http://cers.calepa.ca.gov). Be sure to submit all of the elements that comprise a complete HMBP (i.e., Facility Information, Hazardous Materials Inventory, and Emergency Response and Training Plans). See www.sccgov.org/sites/hazmat/programs/Pages/ereporting.aspx for more details on electronic reporting. Ensure that future certifications are submitted no more than 12 months from your last complete HMBP submittal date.[HSC 6.95 25508(a)(1), 25508.2]	
B125	**M**	**HMBP FACILITY PROPERTY OWNER NOTIFICATION [1010012]** Operator of a facility located on leased or rented real property failed to notify the property owner in writing that the facility is subject to and in compliance with Hazardous Materials Business Plan (HMBP) requirements. ***Facility has not provided written notification to the property owner of their compliance with Hazardous Materials Business Plan. A template letter was provided via email.*** Comply with all other HMBP violations noted in this inspection report and then provide written notification of compliance to your property owner. Submit a copy of the notification to HMCD and keep a copy for your records. A sample notification letter (Form UN-053) is available at www.EHinfo.org/hazmat. [HSC 6.95 25505.1]

Summary of Violations & Notice to Comply

VC	Class	Violation	Corrective Actions Taken
B130	II	**HMBP EMERGENCY RESPONSE TRAINING DOCUMENTATION [1020002]** Facility operator failed to provide initial and annual training to all employees in emergency response and safety procedures or failed to document and maintain training records for a minimum of three years. ***Annual Emergency Response Training is currently not being documented. A template training log was provided at the time of inspection.*** Provide initial training for new employees and annual refresher training for all employees. The training shall cover emergency and safety procedures in the event of a release or threatened release of a hazardous material, as described in the facility's Hazardous Materials Business Plan. Training must be documented electronically or by hard copy. Make training records available for inspection by HMCD for a minimum of three years. [HSC 6.95 25505(a)(4)]	

Comments: On-site with Michelle Santos of HMCD. A walk-through of the facility was conducted with Owner, Valentin Vasquez.

The following hazardous material was observed at HMBP State-reportable threshold:
- 1 x 200 gal used oil underground tank

The following was also observed below HMBP State-reportable thresholds:

Outdoor Storage Shed
- 2 x 55 gal drums of used oil filters
- 2 x 55 gal drums, empty, belonging to the gas station

Shop:
- 1 x 280 cubic ft cylinder Ar/ CO2
- 1 x approx. 336 cubic ft cylinder N2
- <55 gal per type of new oil in quarts

DRAFT

Immediately correct any violation designated as a Class I or Class II violation. Correct all other violations no later than 08/10/2018, unless otherwise noted by the inspector.

Using the space provided, write a brief description of the actions taken by the facility to correct each violation. Attach additional pages if more space is needed. Within 5 days of achieving compliance or within 35 days of the inspection date, whichever comes first, sign the certification statement below and return a copy of this report to HMCD. Time granted for correction of violations does not preclude any enforcement action by HMCD or other agencies. This facility may be subject to reinspection at any time. [Authority: HSC 25185(c), 25187.8, 25404.1.2(c)]

Inspected By: EE0010436 - ROBIN WARD

Certification of Compliance

I certify under penalty of perjury that this facility has complied with directives specified in this Notice to Comply.

Signature of Owner/Operator **Date**

Printed Name of Owner/Operator **Title**

OFFICIAL NOTICE OF INSPECTION - SUPPLEMENTAL INFORMATION

This Official Notice of Inspection (NOI) documents the results of an inspection by HMCD, including a list of alleged violations, evidence in support of the alleged violations, corrective actions that must be taken by the facility, and general observations.

What am I supposed to do upon receiving a NOI?

- Correct the violations within 30 days of the inspection date, unless otherwise noted.
- In the "Corrective Actions Taken" column, write a brief description of the actions taken by the facility to correct each violation. Attach additional pages if more space is needed.
- Certify that the facility has returned to compliance by signing and dating the certification statement at the end of the report.
- Make a photocopy of the NOI and any attachments for your records.
- Within 5 days of achieving compliance or 35 days of the inspection date, whichever comes first, return the original copy of the report and any attachments to HMCD at 1555 Berger Drive, Suite 300, San Jose, CA 95112-2716 or via e-mail to the inspector noted on the "Inspected By" line of the report.

What if there are violations that cannot be corrected within 30 days?

For each violation that cannot be corrected within 30 days, submit a written Compliance Plan describing the corrective actions you propose to take and the date by which the actions will be completed. State law grants up to 30 days to correct minor violations without penalty. Minor violations that are uncorrected after 30 days, and class I and II violations may be subject to enforcement action. To lessen the possibility of enforcement action, correct all violations as soon as possible.

What if I disagree with a violation on the NOI?

If you disagree with any violation listed in this NOI, you must submit a written Notice of Disagreement to HMCD within 30 days of the inspection date. Address such notices to the attention of the inspector who cited the violation. In your Notice of Disagreement, explain in detail why you believe the alleged violation was incorrectly cited.

What about photographs or samples taken during the inspection?

A co-located sample will be given to you upon request if adequate sample volume is available. Photographs and sample analytical results will not generally be available until after the inspection has been concluded. A copy of photographs and/or analytical results will be provided to you upon written request. Photographs and sample analytical results may be withheld in the event of a criminal investigation or other ongoing investigation.

Key to Acronyms and Regulatory Terms

XX CCR	California Code of Regulations, Title XX
XX CFR	Code of Federal Regulations, Title XX
Class	Violation classification: I = Class I violation, II = Class II violation, M = Minor violation, C = Corrected minor violation [HSC §25110.8.5, HSC §25117.6, CCR §66260.10]
CERS	California Environmental Reporting System (cers.calepa.ca.gov)
DTSC	California Department of Toxic Substances Control
EPA	U.S. Environmental Protection Agency
HMCD	County of Santa Clara, Department of Environmental Health, Hazardous Materials Compliance Division
HSC	California Health and Safety Code
RCRA	Resource Conservation and Recovery Act
SCCO	Santa Clara County Ordinance Code
TSDF	Hazardous waste treatment, storage or disposal facility
UST	Underground storage tank
VC	HMCD violation code

Warning:

- It is a violation of State law to make a false statement that a facility has returned to compliance [HSC §25404.1.2(c)(2)].
- Making a false statement regarding a hazardous waste violation is punishable by a fine of not less than $2,000 or more than $50,000 and/or imprisonment in the county jail for up to one year [HSC §25191(b)].
- Making a false statement regarding an underground storage tank violation is punishable by a fine of not less than $500 or more than $5,000 [HSC §§25299(a)(8), 25299(b)(7)].
- HMCD has the right to require the submittal of reasonable and necessary documentation in support of any claim of compliance made by your facility [HSC §25187.8(i), 25289(b)].

DRAFT

The Department of Toxics Substances Control (DTSC) takes every precaution to ensure the accuracy of data in the Hazardous Waste Tracking System (HWTS). However, because of the large number of manifests handled, inaccuracies in the submitted data, limitations of the manifest system and the technical limitations of the database, DTSC cannot guarantee that the data accurately reflect what was actually transported or produced.

2	ATF Oil	Single wall metal	160 Gallon		
3	Gear oil	Single wall metal	160 Gallon		
4	Used oil	Double Wall metal	220 Gallon		
5					

Important Note:

- This permit application or approved permit will expire after 180 days of inactivity.
- Plans submitted with this application must be approved by the Fire Department before work can begin.
- A final inspection approving the project must be conducted before the system may be placed into service, or considered closed.
- Call the Hazardous Materials Division at least 48 hours in advance to schedule an inspection.

I declare under penalty of perjury under the laws of the State of California that the foregoing is true and correct and that, to the best of my knowledge, the license(s) listed above are those required for the work to be performed and are in full force and effect, or if exempt, that the exemptions meet the requirements of the Contractor's State license Law as contained in the business and Professions Code, Division 3, Chapter 9. If there is any change, which would materially affect the above information or plans submitted, I will notify the Bureau of Fire Prevention.

OWNER/TENANT First Presbyterian Church OCCUPANCY A-3 DATE April 26, 1997

POST THIS CARD IN A CONSPICUOUS PLACE AT THE JOB SITE

All approved plans and inspection records must be available for every inspection. An inspection fee may be assessed for each inspection or reinspection when such portion of work for which an inspection is scheduled is not complete, when the corrections called for are not made, when inspection records or plans are not available, or if there is failure to provide access. Provide at least five working day's notice to schedule an inspection. A fee will be charged for cancellation of scheduled inspections with less than 24 hours notice.

Separate inspections must be scheduled by the contractor for fire protection, fire alarm, hazardous materials systems and for a Fire Department final inspection. The fire protection, fire alarm, and hazardous materials system inspections must be signed off before a Fire Department final inspection can be scheduled. The Fire Department final inspection must be signed off before the Building Department final inspection is done.

AEI Consultants

ASTM E 1527-13 USER QUESTIONNAIRE

To qualify for the protection offered under the EPA All Appropriate Inquiry (AAI) Standard, the User (entities seeking to use the ASTM E1527-13 Practice to complete an environmental site assessment of the property; i.e. Lenders and/or Borrowers) must provide the following information (if available) to the environmental professional. Failure to provide this information could result in a determination that AAI is not complete. This information should be the collective knowledge of the entities relying on the Phase I. **Please note that you are not being asked to evaluate the property, but rather to provide your knowledge of information on the property.**

Site Name/Address: See attached exhibit

Property Owner (Name/Title/Company): UC Chevron Owner LLC

Phone/Email: pring@urbancatalyst.com

Key Site Personnel (Name/Title/Company): Evin Wieser

Phone/Email: 408-204-2381

Past Owner (Name/Title/Company)

Phone/Email:

1. Environmental cleanup liens that are filed or recorded against the property (40 CFR 312.25).

Did a search of recorded land title records (or judicial records where appropriate, see NOTE 1 below) identify any environmental liens filed or recorded against the property under federal, tribal, state or local law?

NOTE 1: In certain jurisdictions, federal, tribal, state, or local statutes, or regulations specify that environmental liens and AULs be filed in judicial records rather than in land title records. In such cases judicial records must be searched for environmental liens and AULs.

☐ Yes ▣ No If yes, please include an explanation in the space provided below:

2. Activity and land use limitations that are in place on the property or that have been filed or recorded against the property (40 CFR 312.26(a)(1)(v) and vi).

Did a search of recorded land title records (or judicial records where appropriate, see NOTE 1 above) identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law?

Engineering Controls are defined as physical modifications to a site or facility to reduce or eliminate the potential for exposure to hazardous substances or petroleum products in the soil or ground water on the property). Institutional Controls are defined as a legal or administrative restriction on the use of, or access to, a site or facility to 1) reduce or eliminate the potential for exposure to hazardous substances or petroleum products in the soil or ground water on the property, or 2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment.

☐ Yes ▣ No If yes, please include an explanation in the space provided below:

3. Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28).

Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

☐ Yes ▣ No If yes, please include an explanation in the space provided below:

DRAFT

4. Relationship of the purchase price to the fair market value of the property if it were not contaminated (40 CFR 312.29).

Does the purchase price being paid for this property reasonably reflect the fair market value of the property?

▣ Yes ☐ No

If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?

☐ Yes ▣ No

Comments:

5. Commonly known or reasonably ascertainable information about the property (40 CFR 312.30).

Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example:

a. Do you know the past uses of the property?
   ☐ Yes ▣ No

b. Do you know of specific chemicals that are present or once were present at the property?
   ☐ Yes ▣ No

c. Do you know of spills or other chemical releases that have taken place at the property?
   ☐ Yes ▣ No

d. Do you know of any environmental cleanups that have taken place at the property?
   ☐ Yes ▣ No

If yes for questions above, please include an explanation in the space provided below:

6. The degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).

Based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of releases at the property?

☐ Yes ▣ No If yes, please include an explanation in the space provided below:

Type of Services	**Phase I Environmental Site Assessment and Preliminary Phase II Soil Vapor and Groundwater Quality Evaluation**
Location	**147 East Santa Clara Street San Jose, California**

SECTION 1: INTRODUCTION

This report presents the results of the Phase I Environmental Site Assessment (ESA) and Preliminary Phase II Soil Vapor and Groundwater Quality Evaluation performed at 147 East Santa Clara Street in San Jose, California (Site) as shown on Figures 1 and 2. This work was performed for Bayview Development Group, Inc. and Urban Catalyst Manager LLC in accordance with our March 27, 2019 Agreement (Agreement).

1.1 PURPOSE

The scope of work presented in the Agreement was prepared in general accordance with ASTM E 1527-13 titled, "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process" (ASTM Standard). The ASTM Standard is in general compliance with the Environmental Protection Agency (EPA) rule titled, "Standards and Practices for All Appropriate Inquiries; Final Rule" (AAI Rule). The purpose of this Phase I ESA is to strive to identify, to the extent feasible pursuant to the scope of work presented in the Agreement, Recognized Environmental Conditions at the property.

As defined by ASTM E 1527-13, the term Recognized Environmental Condition means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not Recognized Environmental Conditions.

Cornerstone Earth Group, Inc. (Cornerstone) understands that Bayview Development Group, Inc. intends to purchase the Site for redevelopment with a 15- to 20-story office or student housing tower with up to two levels of below grade parking. We performed this Phase I ESA to support Bayview Development Group, Inc. in evaluation of Recognized Environmental Conditions at the Site. This Phase I ESA is intended to reduce, but not eliminate, uncertainty regarding the potential for Recognized Environmental Conditions at the Site. `

1.2 SCOPE OF WORK

As presented in our Agreement, the scope of work performed for this Phase I ESA included the following:

- A reconnaissance of the Site to note readily observable indications of significant hazardous materials releases to structures, soil or groundwater.

- Drive-by observation of adjoining properties to note readily apparent hazardous materials activities that have or could significantly impact the Site.
- Acquisition and review of a regulatory agency database report of public records for the general area of the Site to evaluate potential impacts to the Site from reported contamination incidents at nearby facilities.
- Review of readily available information on file at selected governmental agencies to help evaluate past and current Site use and hazardous materials management practices.
- Review of readily available maps and aerial photographs to help evaluate past and current Site uses.
- Interviews with persons reportedly knowledgeable of existing and prior Site uses.
- Preparation of a written report summarizing our findings and recommendations.

The limitations for the Phase I ESA are presented in Section 10; the terms and conditions of our Agreement are presented in Appendix A.

1.3 ASSUMPTIONS

In preparing this Phase I ESA, Cornerstone assumed that all information received from interviewed parties is true and accurate. In addition, we assumed that all records obtained by other parties, such as regulatory agency databases, maps, related documents and environmental reports prepared by others are accurate and complete. We also assumed that the boundaries of the Site, based on information provided by Bayview Development Group, Inc., are as shown on Figure 2. We have not independently verified the accuracy or completeness of any data received.

1.4 ENVIRONMENTAL PROFESSIONAL

This Phase I ESA was performed by Stason I. Foster, P.E. and Peter M. Langtry, P.G., C.E.G., Environmental Professionals who meet the qualification requirements described in ASTM E 1527-13 and 40 CFR 312 § 312.10 based on professional licensing, education, training and experience to assess a property of the nature, history and setting of the Site.

SECTION 2: SITE DESCRIPTION

This section describes the Site as of the date of this Phase I ESA. The location of the Site is shown on Figures 1 and 2. Tables 1 through 3 summarize general characteristics of the Site and adjoining properties. The Site is described in more detail in Section 7, based on our on-Site observations.

2.1 LOCATION AND OWNERSHIP

Table 1 describes the physical location, and ownership of the property, based on information provided by Bayview Development Group, Inc.

DRAFT

Table 1. Location and Ownership

Assessor's Parcel No. (APN)	467-20-079
Reported Address/Location	147 East Santa Clara Street, San Jose, California
Owner	George F. Saunders Enterprises Inc.
Approximate Lot Size	0.7 acres

In addition to the current address listed in Table 1, multiple historical addresses for the Site were identified during our review of historical Sanborn fire insurance maps. These include 117, 121, 125, 127, 129, 141, 143, 145 and 149 East Santa Clara Street, and 15 and 21 North 4th Street. These historical addresses also were researched during this Phase I ESA.

2.2 CURRENT/PROPOSED USE OF THE PROPERTY

The current and proposed uses of the property are summarized in Table 2.

Table 2. Current and Proposed Uses

Current Use	Chevron gasoline station
Proposed Use	Office or student housing tower with below grade parking

2.3 SITE SETTING AND ADJOINING PROPERTY USE

Land use in the general Site vicinity appears to be primarily commercial. Based on our Site vicinity reconnaissance, adjoining Site uses are summarized below in Table 3.

Table 3. Adjoining Property Uses

Northeast	New building under construction (across North 4th Street).
Northwest	Parking lot and senior apartment complex (Town Park Towers), and a church.
Southeast	Restaurants and retail space with second floor residences (across East Santa Clara Street).
Southwest	Copy shop, tailoring, Starbucks and a fitness gym.

SECTION 3: USER PROVIDED INFORMATION

The ASTM standard defines the User as the party seeking to use a Phase I ESA to evaluate the presence of Recognized Environmental Conditions associated with a property. For the purpose of this Phase I ESA, the Users are Bayview Development Group, Inc. and Urban Catalyst Manager LLC. The "All Appropriate Inquiries" Final Rule (40 CFR Part 312) requires specific tasks be performed by or on behalf of the party seeking to qualify for Landowner Liability Protection under CERCLA (*i.e.*, the User).

Per the ASTM standard, if the User has information that is material to Recognized Environmental Conditions, such information should be provided to the Environmental Professional. This information includes: 1) specialized knowledge or experience of the User, 2) commonly known or reasonably ascertainable information within the local community, and 3) knowledge that the purchase price of the Site is lower than the fair market value due to contamination. A search of title records for environmental liens and activity and use limitations also is required.

DRAFT

3.1 CHAIN OF TITLE

A chain-of-title was not provided for our review.

3.2 ENVIRONMENTAL LIENS OR ACTIVITY AND USE LIMITATIONS

An environmental lien is a financial instrument that may be used to recover past environmental cleanup costs. Activity and use limitations (AULs) include other environmental encumbrances, such as institutional and engineering controls. Institutional controls (ICs) are legal or regulatory restrictions on a property's use, while engineering controls (ECs) are physical mechanisms that restrict property access or use.

The regulatory agency database report described in Section 4.1 did not identify the Site as being in 1) US EPA databases that list properties subject to land use restrictions (*i.e.*, engineering and institutional controls) or Federal Superfund Liens or 2) lists maintained by the California Department of Toxic Substances Control (DTSC) of properties that are subject to AULs or environmental liens where the DTSC is a lien holder.

A Preliminary Title Report by Chicago Title Company (dated November 27, 2018) was provided for our review. No environmental liens were listed in the title report.

A conditional use permit was granted by the City of San Jose in 1983 allowing the conversion of an existing service station to self-service. An easement was granted in 2004 to Chevron U.S.A. allowing the installation of groundwater monitoring wells and remediation system equipment at the Site.

3.3 SPECIALIZED KNOWLEDGE AND/OR COMMONLY KNOWN OR REASONABLY ASCERTAINABLE INFORMATION

Based on information provided by our discussions with Bayview Development Group, Inc., we understand that Bayview Development Group, Inc. does not have specialized knowledge or experience, commonly known or reasonably ascertainable information regarding the Site, or other information that is material to Recognized Environmental Conditions.

SECTION 4: RECORDS REVIEW

4.1 STANDARD ENVIRONMENTAL RECORD SOURCES

Cornerstone conducted a review of federal, state and local regulatory agency databases provided by Environmental Data Resources (EDR) to evaluate the likelihood of contamination incidents at and near the Site. The database sources and the search distances are in general accordance with the requirements of ASTM E 1527-13. A list of the database sources reviewed, a description of the sources, and a radius map showing the location of reported facilities relative to the project Site are attached in Appendix B.

The purpose of the records review was to obtain reasonably available information to help identify Recognized Environmental Conditions. Accuracy and completeness of record information varies among information sources, including government sources. Record information is often inaccurate or incomplete. The Environmental Professional is not obligated to identify mistakes or insufficiencies or review every possible record that might exist with the

Site. The customary practice is to review information from standard sources that is reasonably available within reasonable time and cost constraints.

4.1.1 On-Site Database Listings

The existing Chevron gasoline station was identified at the Site as a closed case on the Leaking Underground Storage Tank (LUST) database. Chevron (or affiliated entities) also were listed as a Resource Conservation and Recovery Act (RCRA) small quantity generator of hazardous waste, as a facility with underground storage tanks, and on other databases that appear consistent with operation of a gasoline station at the Site.

Chevron and George F. Saunders Enterprises also were listed on the HAZNET database, which contains data extracted from the copies of hazardous waste manifests received each year by the DTSC. Wastes that were disposed from the Site were categorized as waste oil and mixed oil, tank bottom waste, and aqueous solutions with organic residues.

On EDR's database of historical gasoline stations, Sasaki Brothers Phillips 66 was listed at the Site in 1971, Standard Stations Inc. was listed in 1975, and George F. Saunders Enterprises was listed between 1977 and 1980.

4.1.2 Nearby Spill Incidents

Based on the information presented in the agency database report, no off-Site spill incidents were reported that appear likely to significantly impact soil, soil vapor or groundwater beneath the Site. The potential for impact was based on our interpretation of the types of incidents, the locations of the reported incidents in relation to the Site and the assumed groundwater flow direction.

4.1.3 Further Review of Database Listings

To obtain additional information regarding the on-Site LUST case, a cursory review of readily available documents obtained from the state Geotracker (http://geotracker.waterboards.ca.gov) database was performed. Geotracker is a database and geographic information system (GIS) that provides online access to environmental data. It tracks regulatory data about leaking underground storage tank (LUST), Department of Defense, Site Cleanup Program and Landfill sites. A brief summary of the spill incident is presented below.

4.1.3.1 On-Site LUST Case

Based on available case closure documentation (attached in Appendix F) pertaining to the Chevron spill incident, in December 1983, a leak in a gasoline product line was discovered near a fuel dispenser island. In January 1984, several groundwater monitoring wells were installed and free product was identified on the groundwater table. In June 1984, a leak was detected in a dispenser filter, and in November 1984, a hole was discovered in a UST containing regular gasoline. In May 1985, Chevron replaced four old steel USTs with three fiberglass gasoline USTs and one fiberglass waste oil UST.

Numerous subsequent studies have been completed to characterize the extent of impact. A groundwater extraction and treatment system was operated between 1992 and 1996, which reportedly resulted in a reduction of contaminant concentrations. Subsequent remedial

DRAFT

measures included the operation of a groundwater and soil vapor extraction system between 2004 and 2006.

In addition to advancing borings and installing wells on-Site, prior characterization activities have included the advancement of multiple soil borings and the installation of groundwater monitoring wells on off-Site parcels to the northwest. The reported distributions of TPHg and benzene in groundwater, based on the most recent groundwater monitoring event (September 2009), are depicted on Figures 3A and 3B. As shown, impacted groundwater that appears to have originated from the Chevron property extends below the northwesterly adjacent property. Petroleum hydrocarbons also have been detected in on-Site soil, mainly in soil that is near or in contact with impacted groundwater at depths between approximately 15 and 20 feet. Details regarding the historical sampling activities and laboratory results are contained in the prior reports attached in Appendix F.

On May 21, 2010, the DEH issued a closure letter indicating that that no further action related to the petroleum release(s) is required. In an associated case closure summary, the DEH described the residual remaining contamination at the Site and stipulated the following Site management requirements:

> *Please note the following conditions still remain at the site: residual contamination remains in soil of 2,200 parts per million (ppm) Total Petroleum Hydrocarbons as Gasoline (TPHg), 2,900 ppm Total Oil and Grease (TOG), 1 ppm Benzene, 0.65 ppm Toluene, 43 ppm Ethylbenzene, 195 ppm Xylenes, 0.014 ppm Methyl tert-Butyl Ether (MtBE), and 0.97 ppm Acetone; and in groundwater of 5,200 parts per billion (ppb) TPHg, 1,000 ppb TPH as Diesel (TPHd), 100 ppb Benzene, 3.4 ppb Toluene, 200 ppb Ethyl benzene, 14 ppb Xylenes, 56 ppb MtBE, 6,600 ppb Tert Butyl Alcohol (TBA), 61 ppb Acetone, 2 ppb Vinyl Chloride (VC), and 61 ppb 1,2-Dichloroethane (DCA).*
>
> *Residual contamination both in soil and groundwater remains at the site that could pose an unacceptable risk under certain site development activities such as site grading, excavation or the installation of water wells. Therefore, the impact of the disturbance of any residual contamination or the installation of water well(s) in the vicinity of the residual contamination shall be assessed and appropriate action taken so that there is no significant impact to human health, safety or the environment. This could necessitate additional sampling, health risk assessment and mitigation measures. DEH and the appropriate planning and building department shall be notified prior to any changes in land use, grading activities, excavation, and installation of water wells. This notification shall include a statement that residual contamination exists on the property and list all mitigation actions, if any, necessary to ensure compliance with this site management requirement.*

4.2 ADDITIONAL ENVIRONMENTAL RECORD SOURCES

The following additional sources of readily ascertainable public information for the Site also were reviewed during this Phase I ESA.

4.2.1 City and County Agency File Review

Cornerstone requested available files pertaining to the Site at the following public agencies: the San Jose Building Department (BD), San Jose Fire Department (FD), and the Santa Clara County Department of Environmental Health (DEH).

Building Department files contained various plans, permits and inspection reports that indicate that the Site has been occupied by a gasoline station since at least the late 1960s. A 1969 Site plan shows the Site to have been occupied mainly by one- and two-story commercial buildings. The eastern corner of the Site (at the intersection of North 4th and East Santa Clara Streets) is shown to have been occupied by a Gulf gasoline station; a single fuel dispenser island is depicted near the eastern corner of the Site (see Figure 2).

The Site appears to have been redeveloped in 1969 as a Standard Oil Company station. The Standard Oil Company station layout appears similar to the existing conditions, except that three vehicle service bays were present within the on-Site building, instead of the one existing bay. Below ground hydraulic lifts are shown to have been located within each of the service bays. A four-compartment sand and grease trap is shown to have additionally been located in the northernmost service bay. Since at least the early 1980s, the facility has operated as Chevron gasoline station. In approximately 2012, the existing building was remodeled and the two southernmost service bays were converted for use as part of the convenience store and cashier area.

Fire Department and DEH files included numerous permits, inspection reports, hazardous materials business plans, fuel system testing and certification documents and other correspondence. Chemical inventories list the storage of gasoline and diesel[1] (in three 10,000 gallon USTs), waste oil (in one 1,000 gallon UST), and other automotive related products (lubricants, antifreeze, batteries, etc.). In addition to waste oil, used oil filters, waste antifreeze and waste batteries are noted to have been generated. The existing USTs are double-walled fiberglass tanks installed in 1985 (replacing four older USTs); upgrades to piping, dispensers and other ancillary equipment have subsequently been completed.

Information reviewed pertaining to historical Site addresses is summarized in Table 4.

Table 4. File Review Information

Agency Name	Date	Occupant	Remarks
145 East Santa Clara Street			
BD	1936	Garden City Chevrolet	Permits for occupancy as a public garage.
149 East Santa Clara Street			
BD	1951	Bob Coyle Chevrolet	Building permit for alterations and an addition. Use listed as auto repair.
BD	1952	Bob Coyle Chevrolet	Building permit for alterations. Use listed as auto repair and sales.
117 East Santa Clara Street			
BD	1947	Auto repair and sales	Building permit for alterations.
BD	1967	Gasoline station	Electrical permit.

[1] The 10,000 gallon diesel UST formerly contained gasoline.

SECTION 5: PHYSICAL SETTING

We reviewed readily available geologic and hydrogeologic information to evaluate the likelihood that chemicals of concern released on a nearby property could pose a significant threat to the Site and/or its intended use.

5.1 RECENT USGS TOPOGRAPHIC MAP

A 1980 USGS 7.5-minute topographic map was reviewed to evaluate the physical setting of the Site. The Site's elevation is approximately 85 to 90 feet above mean sea level; topography in the vicinity of the Site slopes downward gently to the north towards the San Francisco Bay.

5.2 HYDROGEOLOGY

Based on information reviewed pertaining to prior on-Site studies, lithology is reportedly characterized predominantly by low permeability silts and clays from approximately 5 to 20 feet below ground surface (bgs), with higher permeability fine to medium-grained sand with interbedded clays and silt layers from approximately 20 to 32 feet bgs. During a 1990 subsurface investigation, a perched water-bearing zone was observed from 15 to 20 feet bgs within a lens of silty sand and sandy gravel above the lower permeability silts and clays. The sandy, more permeable lenses reportedly have likely resulted in perched continuous and discontinuous groundwater bearing zones. Since 1989, depths to groundwater reportedly have ranged from approximately 9.4 feet bgs to 27 feet bgs, with an average depth of approximately 15 feet. A northwesterly groundwater flow direction has typically been measured.

During the subsurface exploration performed in April 2019 by Cornerstone (see Section 9), shallow groundwater was encountered at depths of approximately 11 to 19 feet bgs.

SECTION 6: HISTORICAL USE INFORMATION

The objective of the review of historical use information is to develop a history of the previous uses of the Site and surrounding area in order to help identify the likelihood of past uses having led to Recognized Environmental Conditions at the property. The ASTM standard requires the identification of all obvious uses of the property from the present back to the property's first developed use, or back to 1940, whichever is earlier, using reasonably ascertainable standard historical sources.

6.1 HISTORICAL SUMMARY OF SITE

The historical sources reviewed are summarized below. The results of our review of these sources are summarized in Table 5.

- **Historical Aerial Photographs:** We reviewed aerial photographs dated between 1939 and 2012 obtained from EDR of Shelton, Connecticut; copies of aerial photographs reviewed are presented in Appendix C.
- **Historical Topographic Maps:** We reviewed USGS 15-minute and 7.5-minute historical topographic maps dated 1899, 1953, 1961, 1968, 1973 and 1980; copies of historical topographic maps reviewed are presented in Appendix C.

DRAFT

- **Historical Fire Insurance Maps:** We reviewed Sanborn fire insurance maps dated 1884, 1891, 1915, 1950, 1969 and 1984 obtained from EDR; copies of Sanborn maps are presented in Appendix C.

Table 5. Summary of Historical Source Information for Site

Date	Source	Comment
1884	Sanborn map	The Site is shown to be developed with warehouses occupied by Moody's Flour & Grist Mill. A carriage house, stables and structures used for hay and wood storage also are depicted.
1891 and 1915	Sanborn map	By 1891, the on-Site warehouses are shown to be occupied by the Central Milling Company flour mill. Associated features include two boilers, a steam pump, an engine, scales, sheds and stables. The Mt. Hamilton Livery is shown on-Site fronting East Santa Clara Street. Structures on the eastern corner of the Site include a grocery store, a shoemaker, and carpenter and harness shops. By 1915, Sperry Flour Company is shown to occupy the on-Site warehouses and the livery is shown to have been replaced by a wood yard. Structures on the eastern corner of the Site include a cleaning and dying business, a carpenter, a store, an office and a few other unidentified structures.
1950 and 1969	Sanborn map	By 1950, warehouse structures are shown to remain on the northwest portion of the Site and the southeast portion of the Site is shown to be developed with a structure used for auto sales and service. A gasoline UST is depicted below East Santa Clara Street near the southern corner of the Site. The 1969 map depicts similar development, but occupants/uses are not identified.
1984	Sanborn map	The existing gasoline station building and fuel dispenser islands are depicted on-Site.
1939 to 1968	Aerial photograph	On-site development appears similar to that depicted on the 1950 Sanborn map.
1974 to 2012	Aerial photograph	The existing gasoline station building and fuel dispenser islands are shown on-Site.
1899 to 1980	Topographic maps	The Site is shown within the urban developed area of San Jose. Specific Site details are not depicted.

6.1.2 City Directory Review

To obtain additional information regarding past tenants, business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through 2014. A summary of the city directory listings is presented in Table 6; the acquired city directory report is presented in Appendix D.

DRAFT

Table 6. City Directory Listings

Date	Occupant(s)
117 East Santa Clara Street	
1930	Garden City Durant Company
1935	Jack Sonflieth Autos
1940	Garden City Chevrolet auto service
1945 and 1950	Garden City Chevrolet
1955 and 1960	Bob Coyle Chevrolet
147 East Santa Clara Street	
1975	Standard Stations Inc.
2000	George Saunders Chevron
2006	Chevron and auto glass business
149 East Santa Clara Street	
1930 and 1945	McMullen Garage
21 North 4th Street	
1935	Garden City Mission

SECTION 7: SITE RECONNAISSANCE

We performed a Site reconnaissance to evaluate current Site conditions and to attempt to identify Site Recognized Environmental Conditions. The results of the reconnaissance are discussed below. Additional Site observations are summarized in Table 7. Photographs of the Site are presented in Section 7.2.1.

7.1 METHODOLOGY AND LIMITING CONDITIONS

To observe current Site conditions (readily observable environmental conditions indicative of a significant release of hazardous materials), Cornerstone staff Stason I. Foster, P.E. visited the Site on May 8, 2019. The Site reconnaissance was conducted by walking representative areas of the Site, including the interior of the on-Site structure, the periphery of the structure and the Site periphery. Cornerstone staff only observed those areas that were reasonably accessible, safe, and did not require movement of equipment, materials or other objects. Physical obstructions that limited our ability to view the ground surface at the Site included the existing building and associated paved parking areas and vehicle drives (typical of developed properties).

7.2 OBSERVATIONS

At the time of our visit, the Site was developed with a Chevron gasoline service station consisting of a service station building with one auto repair bay, three USTs containing gasoline and diesel, one waste oil UST and canopy covered dispenser islands.

Hazardous materials observed within the service bay consisted predominantly of motor oil and other lubricants that were stored in 1-quart containers on shelving. No evidence of significant spills was readily apparent. Two 55-gallon drums containing used oil filters, and two empty drums, were observed on a fenced concrete pad on the western corner of the Site.

Two concrete vaults covered by wood boards were observed on the southwest side of the Site. These features (see Photograph 5) appeared to be possible former ventilation shafts and were observed to lead to the basement of the southwesterly adjacent building. Two steel pipes,

DRAFT

approximately 3 inches in diameter, were observed at the southern corner of the Site (possibly on the adjacent parcel). These pipes appeared similar to fill pipes commonly associated with USTs (see Photograph 6).

Electricity and/or natural gas fuel sources appeared to be used for building heating/cooling purposes. Potable water appeared to be supplied by the local water service provider. The building presumably is connected to the publicly owned sanitary sewer system; no on-Site septic systems were obvious. On-Site storm water catch basins appeared to discharge via below ground piping to the City's storm water drainage system.

Table 7. Summary of Readily Observable Site Features

General Observation	Comments
Aboveground Storage Tanks	Not Observed
Agricultural Wells	Not Observed
Air Emission Control Systems	Not Observed
Boilers	Not Observed
Burning Areas	Not Observed
Chemical Mixing Areas	Not Observed
Chemical Storage Areas	Observed as described above
Clean Rooms	Not Observed
Drainage Ditches	Not Observed
Elevators	Not Observed
Emergency Generators	Not Observed
Equipment Maintenance Areas	Not Observed
Fill Placement	Not Observed
Groundwater Monitoring Wells	Not Observed
High Power Transmission Lines	Not Observed
Hoods and Ducting	Not Observed
Hydraulic Lifts	Not Observed
Incinerator	Not Observed
Petroleum Pipelines	Not Observed (product lines from the USTs to the fuel dispensers are present)
Petroleum Wells	Not Observed
Ponds or Streams	Not Observed
Railroad Lines	Not Observed
Row Crops or Orchards	Not Observed
Stockpiles of Soil or Debris	Not Observed
Sumps or Clarifiers	Not Observed
Transformers	Not Observed
Underground Storage Tanks	Observed as described above
Vehicle Maintenance Areas	Observed as described above
Vehicle Wash Areas	Not Observed
Wastewater Neutralization Systems	Not Observed

The comment "Not Observed" does not warrant that these features are not present on-Site; it only indicates that these features were not readily observed during the Site visit.

DRAFT

7.2.1 Site Photographs

Photograph 1. View of the on-Site building looking west.

Photograph 2. View of the auto service bay.

Photograph 3. Interior of the auto service bay.

Photograph 4. Gasoline and diesel USTs.

Photograph 5. Concrete vault (apparent ventilation shaft) on southwest side of the Site.

Photograph 6. Possible UST fill pipes at southern corner of the Site.

DRAFT

SECTION 8: ENVIRONMENTAL QUESTIONNAIRE AND INTERVIEWS

8.1 ENVIRONMENTAL QUESTIONNAIRE / OWNER INTERVIEW

To help obtain information on current and historical Site use and use/storage of hazardous materials on-Site, we provided an environmental questionnaire to the Site owner. The completed questionnaire is attached in Appendix E. The information provided on the questionnaire appears generally consistent with our on-Site observations and information obtained from other data sources.

8.2 INTERVIEWS WITH PREVIOUS OWNERS AND OCCUPANTS

Contact information for previous Site owners and occupants was not provided to us. Therefore, interviews with previous Site owners and occupants could not be performed.

SECTION 9: PRELIMINARY PHASE II SOIL VAPOR AND GROUNDWATER QUALITY EVALUATION

9.1 PURPOSE

As previously discussed, the site is occupied by an operating Chevron gas station. Three gasoline USTs and one waste oil UST were removed in 1985 and replaced with three 10,000-gallon gasoline USTs. The original fuel system leaked, resulting in impacts to soil and groundwater from gasoline and aromatic volatile organic compounds (VOCs). County Health issued case closure for the prior release in 2010. The purpose of this work was to evaluate current groundwater and soil vapor quality beneath the Site.

9.2 PRE-FIELD ACTIVITIES

Prior to performing field work, Cornerstone notified the regional utility notification center – Underground Service Alert (USA) 48 hours in advance, so that public and private utilities could be identified and marked at the ground surface. To reduce the risk of damaging unidentified underground utilities during drilling, Cornerstone also contracted with a private utility locator to "clear" the borings.

9.3 SUBSURFACE INVESTIGATION

Subsurface investigation activities were performed on April 25 through 26, 2019, using hydraulic drilling equipment. Cornerstone oversaw the advancement of eight exploratory borings using a direct push drilling rig equipped with a dual wall sampler. Four exploratory borings (GW-1 through GW-4) were advanced to depths of up to approximately 20 feet for groundwater grab sample collection. Soil vapor samples were collected from temporary soil vapor probes (SV-1 through SV-4) installed to depths of approximately 5 feet. Exploratory boring logs are presented in Appendix G.

9.3.1 Subsurface Materials

The subsurface materials observed in the exploratory borings generally consisted of sandy lean clay with subangular gravel in the upper 5 feet, below approximately 6 inches of aggregate base material. Brick fragments were observed in the fill in boring GW-3. Silty clay with sand was

DRAFT

observed in all borings below 5 feet up to depths of approximately 20 feet. Soil with an olive-gray discoloration and petroleum odor was observed in borings GW-1, GW-3, and GW-4 between approximately 13 and 17 feet.

Our field geologist monitored organic vapors at discrete intervals using a MiniRAE 3000 Organic Vapor Meter (OVM). The soil was screened by drilling a small diameter hole in the acetate extending approximately ½ inch in the soil core. The OVM probe tip was then inserted into the created void space to record an OVM reading. Organic vapors were measured in the borings from 0.00 part per million by volume (ppm_v) to 1.2 ppm_v. The OVM readings are included on the boring logs in Appendix G.

9.4 GROUNDWATER SAMPLE COLLECTION AND LABORATORY ANALYSES

On April 25 through 26, 2019 groundwater grab samples were collected from 4 exploratory borings (GW-1 through GW-4) to evaluate ground water quality. The borings were advanced to a depth of approximately 20 feet. Ground water was encountered at depths of approximately 13 to 19 feet below existing grade. At each location, a section of slotted polyvinyl chloride (PVC) slotted pipe was lowered into the boring to facilitate sample collection. Ground water grab samples were collected from each boring using a peristaltic pump and "clean" polyethylene tubing. New tubing was used at each sample location to eliminate the potential for cross contamination of samples.

Groundwater grab samples were collected in appropriate containers and labeled with the sample ID, project number, and date and time of collection. Samples were placed in an ice-chilled cooler and transported to a state-certified laboratory with chain of custody documentation. The four groundwater grab samples collected were analyzed for TPHg and VOCs, including fuel oxygenates (EPA Test Method 8260B). Laboratory analytical reports are presented in Appendix H.

9.4.1 Groundwater Analytical Results

The groundwater analytical results were compared to drinking water maximum contaminant levels (MCLs) established by the State Water Resources Control Board (Water Board, 2019) and Tier 1 groundwater ESLs. The sample locations from these events are provided in Figure 2, and results are included in Table 1. A summary of these results is included below:

- TPHg was detected in sample GW-3 at a concentration of 250 microgram per liter (µg/L, or parts per billion [ppb]), which exceeds the groundwater Tier 1 ESL of 100 µg/L.
- 1,2-DCA was detected in sample GW-3 at a concentration of 0.86 µg/L, which exceeds the groundwater MCL of 0.5 µg/L.
- Chlorobenzene was detected in sample GW-3 at a concentration below its Tier 1 ESL of 25 µg/L.
- Methyl tert-butyl ether and Ethyl t-butyl ether were detected in sample GW-2 at concentrations below their respective screening levels.
- Laboratory analysis did not detect any other VOCs above their respective laboratory reporting limits.

DRAFT

9.5 SOIL VAPOR QUALITY EVALUATION

On April 25 through 26, 2019, Cornerstone installed four temporary soil vapor probes (SV-1, SV-2, SV-3 and SV-4) adjacent to the four groundwater boring locations. The temporary soil vapor probes were installed following in general accordance with the July 2015 document entitled "Advisory – Active Soil Gas Investigations", prepared by the Department of Toxic Substances and Control and the California Regional Water Quality Control Board, Los Angeles Region

9.5.1 Temporary Soil Vapor Probe Installation and Sample Collection

The four temporary soil vapor probes were installed to depths of approximately 5 feet at each location. Each probe was completed with stainless steel expendable tip and screen affixed to stainless steel tubing. The vapor sampling locations were constructed by first placing approximately 2 inches of coarse aquarium-type sand into the bottom of the borehole using a tremie pipe. The stainless-steel tip and tubing was then lowered into the borehole via a tremie pipe. Additional sand was placed in the borehole via tremie to create an approximately 1-foot sand pack interval around the vapor tip. Approximately 1 foot of granular bentonite (Benseal™) was placed on top of the sand pack via the tremie pipe. Hydrated bentonite was placed via tremie pipe on top of the dry granular bentonite to the surface. The stainless-steel tubing was labeled with depth of placement and capped utilizing a vapor-tight Swagelok valve set in the "off" position.

Vapor sampling was performed at least 2 hours after completing well construction activities. The tubing emanating from the vapor points was affixed to a sample shut-off valve in the "off" position during the time needed to reach equilibrium (at least 24 hours). A 167 milliliters-per-minute flow regulator inclusive of particulate filter was fitted to the shut-off valve and the other end to a "T" fitting. One end of the "T" was connected to the sampling summa canister. The other end of the "T" was affixed to a digital vacuum gauge and a 1-liter summa canister utilized for purging.

A minimum 10-minute vacuum tightness test was performed on the manifold and connections by opening and closing the 1-liter purge canister valve and applying and monitoring a vacuum on the vacuum gauge. The sample shut-off valve on the downhole side of the sampling manifold remained in the "off" position. When the gauge vacuum was maintained for at least 10 minutes without any noticeable decrease (less than approximately 0.1 inches of mercury (Hg) for properly connected fittings), purging began. The downhole shut off valve was opened and three purge volumes of vapor were removed using the 1-liter summa for purging. The volume of vapor removed was verified by the calculated pressure drop summa canister. The purge volume was calculated based on the length and inner diameter of the sampling probe and the connected sampling tubing and equipment.

Isopropyl alcohol was utilized as a leak detection compound during sampling by applying 5 drops to cotton gauze and placed the moistened gauze near the borehole. Sampling began by opening the summa canister valve. Immediately upon opening the sampling valve, a shroud was placed over and enclose the atmosphere of the borehole and entire sampling train including all connections.

Sampling continued until the vacuum gauge indicated approximately 5 inches of Hg remaining. A datalogging photoionization detector (PID) was utilized during sampling to monitor the

atmosphere inside the shroud through a bulk-head fitting. The logged data (at minimum thirty [30] second intervals) was corrected to parts per million by volume isopropyl alcohol concentrations and utilized to evaluate the integrity of the sampling train.

To confirm the isopropyl alcohol atmosphere, one confirmation Tedlar bag sample was collected from the shroud atmosphere through the sampling port of the PID. All field data, including equilibrium time, purge volume calculations and leak check measurements are recorded and presented in the final report.

9.5.2 Soil Vapor Laboratory Analyses

Four soil vapor samples were collected and submitted under a chain of custody to state certified analytical laboratory. The samples were analyzed for TPHg (EPA Test Method TO-15), five oxygenates and BTEX (EPA Test Method TO-3M and TO-14A). In addition, one air sample collected from the shroud atmosphere was analyzed for isopropyl alcohol. Laboratory analytical reports are presented in Appendix H.

9.5.3 Soil Vapor Analytical Summary

- TPH as gasoline was detected at concentrations ranging from 1,600 micrograms per cubic meter (µg/m^3) to 3,300 µg/m^3. The residential Tier 1 ESL is 3,300 µg/m^3.
- Benzene was detected at concentrations ranging from 6.7 µg/m^3 to 10 µg/m^3. All four samples exceeded the Tier 1 ESL of 3.2 µg/m^3.
- Toluene was detected at concentrations ranging from 14 µg/m^3 to 30 µg/m^3. All four samples were below the Tier 1 ESL of 10,000 µg/m^3.
- Ethyl benzene was detected at concentrations ranging from 8.7 µg/m^3 in SV-2 to 10 µg/m^3 in SV-1, which is below the Tier 1 ESL 37 µg/m^3.
- m,p-xylene and o-xylene were detected at concentrations below their respective Tier 1 ESL of 3,500 µg/m^3.

SECTION 10: FINDINGS, OPINIONS AND CONCLUSIONS (WITH RECOMMENDATIONS)

Cornerstone performed this Phase I ESA in general accordance with ASTM E1527-13 to support Bayview Development Group, Inc. in evaluation of Recognized Environmental Conditions. Our findings, opinions and conclusions are summarized below.

10.1 HISTORICAL SITE USAGE

Based on the information obtained during this study, the Site was developed by 1884 with commercial buildings occupied by a flour and grist mill. A carriage house, stables and structures used for hay and wood storage also were present. By 1891, the Mt. Hamilton Livery was additionally located on-Site fronting East Santa Clara Street and structures on the eastern corner of the Site included a grocery store, a shoemaker, and carpenter and harness shops. By 1915, the livery was replaced by a wood yard, and structures on the eastern corner of the Site included a cleaning and dying business, a carpenter, a store, an office and a few other unidentified structures.

DRAFT

By the 1930s, a structure occupied by a Chevrolet dealership and used for auto sales and service was constructed on the southeast portion of the Site. In 1969, the eastern corner of the Site (at the intersection of North 4th and East Santa Clara Streets) was occupied by a Gulf gasoline station; this station may have been present since the 1930s (McMullen Garage was listed as an occupant in city directories from 1930 and 1945).

The Gulf gasoline station and other prior on-Site structures were removed in 1969 to facilitate construction of the existing gasoline station, which initially operated as a Standard Oil Company station; it has operated as a Chevron station since at least the early 1980s.

10.2 CHEMICAL STORAGE AND USE

The cleaning and dying business shown at the eastern corner of the Site on the 1915 Sanborn map presumably used hazardous materials for cleaning and/or dying operations. Automotive related hazardous materials presumably were used on-Site during vehicle service activities at the former Chevrolet dealership. Details regarding operations at the cleaning/dying business and Chevrolet dealership were not identified within the data sources researched during this study.

The prior Gulf gasoline station had a fuel dispenser island at the eastern corner of the Site and three fill pipes were depicted nearby on a 1969 Site plan, suggesting that gasoline was stored in USTs. No information documenting the removal of these USTs was identified during this study.

Additionally, a gasoline UST was shown on 1950 and 1969 Sanborn maps below East Santa Clara Street near the southern corner of the Site. Two pipes that are typical of UST fill pipes also were observed during our Site visit at the southern corner of the Site.

We recommend that a geophysical survey be conducted at the Site to evaluate if USTs may remain near the former Gulf station or below East Santa Clara Street at the UST location depicted on historical Sanborn maps. The purpose of the pipes observed at the southern corner of the Site also should be evaluated.

The existing Chevron station operates three USTs containing gasoline and diesel, and one UST containing waste oil. These existing double-walled fiberglass USTS were installed in 1985, replacing four old steel USTs. Other automotive related products (lubricants, antifreeze, batteries, etc.) also have been used and stored at the Chevron facility. Prior to redevelopment of the Site, the existing USTs, dispensers and associated piping should be removed. This work should be coordinated with the San Jose Fire Department and DEH; the collection of soil samples below these features will be required to evaluate if leaks have occurred. For a higher degree of confidence, we would recommend removal of the USTs and fuel system prior to purchasing the property.

10.3 ON-SITE LUST CASE

As summarized in Section 4.1.3, gasoline leaks from the Chevron facility were discovered in 1983 and 1984. During subsequent studies, free product was identified on the groundwater and impacted groundwater was identified to have migrated onto the northwesterly adjacent property. Remedial activities were subsequently conducted.

DRAFT

On May 21, 2010, the DEH issued a closure letter indicating that that no further action related to the petroleum release(s) is required. In an associated case closure summary, the DEH described the residual remaining contamination at the Site and stipulated the following Site management requirements:

> *Please note the following conditions still remain at the site: residual contamination remains in soil of 2,200 parts per million (ppm) Total Petroleum Hydrocarbons as Gasoline (TPHg), 2,900 ppm Total Oil and Grease (TOG), 1 ppm Benzene, 0.65 ppm Toluene, 43 ppm Ethylbenzene, 195 ppm Xylenes, 0.014 ppm Methyl tert-Butyl Ether (MtBE), and 0.97 ppm Acetone; and in groundwater of 5,200 parts per billion (ppb) TPHg, 1,000 ppb TPH as Diesel (TPHd), 100 ppb Benzene, 3.4 ppb Toluene, 200 ppb Ethyl benzene, 14 ppb Xylenes, 56 ppb MtBE, 6,600 ppb Tert Butyl Alcohol (TBA), 61 ppb Acetone, 2 ppb Vinyl Chloride (VC), and 61 ppb 1,2-Dichloroethane (DCA).*
>
> *Residual contamination both in soil and groundwater remains at the site that could pose an unacceptable risk under certain site development activities such as site grading, excavation or the installation of water wells. Therefore, the impact of the disturbance of any residual contamination or the installation of water well(s) in the vicinity of the residual contamination shall be assessed and appropriate action taken so that there is no significant impact to human health, safety or the environment. This could necessitate additional sampling, health risk assessment and mitigation measures. DEH and the appropriate planning and building department shall be notified prior to any changes in land use, grading activities, excavation, and installation of water wells. This notification shall include a statement that residual contamination exists on the property and list all mitigation actions, if any, necessary to ensure compliance with this site management requirement.*

We recommend that compliance with the above Site management requirements be maintained. We recommend discussing the prior case closure, planned land-use change and recent soil vapor and groundwater analytical results with DEH staff, including whether the DEH has any concerns with the previous detection of petroleum hydrocarbons in groundwater beneath the property adjacent to the northwest.

10.4 GROUNDWATER AND SOIL VAPOR QUALITY EVALUATION

Laboratory analyses of groundwater grab samples GW-2 and GW-3, located downgradient of the fuel system with respect to the reported groundwater flow direction, did not detect gasoline constituents at concentrations that appear to indicate a release since the previous case closure.

Laboratory analysis of groundwater grab sample GW-1, located in the southeast corner of the site in the area of the fuel pumps shown on a 1969 plan for the former Gulf station, did not detect TPH gasoline or VOCs. In addition, laboratory analysis of groundwater grab sample GW-4, located in the southwest corner of the Site and down-gradient of the off-Site apparent gas tank shown on 1950 and 1969 Sanborn maps, also did not detect TPH gasoline or VOCs.

Laboratory analyses of soil vapor detected benzene in all four soil vapor samples at concentrations exceeding the Tier 1 ESL (10 µg/m^3 maximum detected; Tier 1 ESL = 3.2 µg/m^3). Benzene was not detected in the co-located shallow groundwater grab samples. The benzene detected may be associated with fuel vapors from vehicle fueling activities. Note that soil vapor samples were not collected in close proximity to the current operating fuel system. There could be pockets of petroleum affected soil in the fuel system area that could present a

vapor intrusion concern for structures located over or near the soil. However, removal of the fuel system/USTs and excavation of soil for the subsurface parking will likely significantly remove petroleum affected soil, if present.

10.5 FACILITY CLOSURE

As part of the facility closure process for occupants that use and/or store hazardous materials, the San Jose Fire Department and DEH typically require that a closure plan be submitted by the occupant that describes required closure activities, such as removal of remaining hazardous materials, cleaning of hazardous material handling equipment, decontamination of building surfaces, and waste disposal practices, among others. We recommend that facility closure be coordinated with the Fire Department and DEH to ensure that required closure activities are completed prior to redevelopment of the Site.

10.6 HYDRAULIC LIFTS AND OIL-WATER SEPARATOR

The existing on-Site building previously contained three vehicle service bays. Below ground hydraulic lifts were located within each of the service bays. A four compartment "sand and grease trap" (often referred to as an oil-water separator) additionally was located in the northernmost service bay. In approximately 2012, the existing building was remodeled and the two southernmost service bays were converted for use as part of the convenience store and cashier area. The hydraulic lifts and oil-water separator were not apparent during our Site visit.

When the building is demolished, we recommend that an Environmental Professional be present to document that the lifts and oil-water separator have been removed and to observe underlying soil for evidence of potential impacts; if observed, soil samples should be collected for laboratory analyses.

10.7 SITE MANAGEMENT PLAN

We recommend preparing a Site Management Plan (SMP) and Health and Safety Plan (HSP) for the proposed demolition and redevelopment activities. The purpose of these documents will be to establish appropriate management practices for handling impacted soil, soil vapor and groundwater or other materials that may potentially be encountered during construction activities. Protocols for profiling of soil planned for off-Site disposal also should be established.

10.8 POTENTIAL ENVIRONMENTAL CONCERNS WITHIN THE SITE VICINITY

Based on the information obtained during this study, no hazardous material spill incidents have been reported in the Site vicinity that would be likely to significantly impact the Site. However, as is typical to many commercial areas, several facilities in the vicinity were reported as hazardous materials users. If leaks or spills occur at these facilities, contamination could impact the Site, depending upon the location of the property, the magnitude of the release, and the effectiveness of cleanup efforts.

10.9 ENVIRONMENTAL ATTORNEY

Due to known Recognized Environmental Conditions at the Site, we recommend consulting with an environmental attorney regarding liabilities associated with acquiring the Site.

DRAFT

10.10 ENVIRONMENTAL INSURANCE

Consideration should be given to acquiring environmental insurance to help protect against the liabilities associated with the known Recognized Environmental Conditions at the Site.

10.11 ASBESTOS CONTAINING BUILDING MATERIALS (ACBMS)

Due to the age of the on-Site structures, building materials may contain asbestos. Because demolition of the structures is planned, an asbestos survey is required by local authorities and/or National Emissions Standards for Hazardous Air Pollutants (NESHAP) guidelines. NESHAP guidelines require the removal of potentially friable ACBMs prior to building demolition or renovation that may disturb the ACBM.

10.12 LEAD-BASED PAINT

The Consumer Product Safety Commission banned the use of lead as an additive in paint in 1978. Based on the age of the structures, lead-based paint may be present. If demolition is planned, the removal of lead-based paint isn't required if it is bonded to the building materials. However, if the lead-based paint is flaking, peeling, or blistering, it should be removed prior to demolition. In either case, applicable OSHA regulations must be followed; these include requirements for worker training, air monitoring and dust control, among others. Any debris or soil containing lead must be disposed appropriately.

10.13 DATA GAPS

ASTM Standard Designation E 1527-13 requires the Environmental Professional to comment on significant data gaps that affect our ability to identify Recognized Environmental Conditions. A data gap is a lack of or inability to obtain information required by ASTM Standard Designation E 1527-13 despite good faith efforts by the Environmental Professional to gather such information. A data gap by itself is not inherently significant; it only becomes significant if it raises reasonable concerns. The following data gaps were identified:

- Contact information for the former occupants and owners of the Site was not provided to us. Thus, former occupants and owners were not interviewed during this study. The general environmental setting of the Site appears to have been established based on the information reviewed from other data sources. We do not consider this data gap to be significant.

10.14 DATA FAILURES

As described by ASTM Standard Designation E 1527-13, a data failure occurs when all of the standard historical sources that are reasonably ascertainable and likely to be useful have been reviewed and yet the historical research objectives have not been met. Data failures are not uncommon when attempting to identify the use of a Site at five year intervals back to the first use or to 1940 (whichever is earlier). ASTM Standard Designation E 1527-13 requires the Environmental Professional to comment on the significance of data failures and whether the data failure affects our ability to identify Recognized Environmental Conditions. A data failure by itself is not inherently significant; it only becomes significant if it raises reasonable concerns. The following data failures were identified:

DRAFT

- The ASTM standard requires the identification of all obvious uses of the Site from the present back to the Site's first developed use, or back to 1940, whichever is earlier, using reasonably ascertainable standard historical sources. The earliest record obtained during this study was a Sanborn map from 1884 that shows the Site to have already been developed with a flour and grist mill. Although earlier records were not available, the Site's first developed use was likely similar to that shown on the 1884 Sanborn map. Thus, this data failure is not considered to be significant.

10.15 RECOGNIZED ENVIRONMENTAL CONDITIONS

Cornerstone has performed a Phase I ESA in general conformance with the scope and limitations of ASTM E 1527-13 of 147 East Santa Clara Street, San Jose, California. This assessment identified the following Recognized Environmental Conditions[2].

- USTs are suspected to have been present at the former on-Site Gulf gasoline station, as well as below East Santa Clara Street adjacent to the Site. Three below ground hydraulic lifts and an oil-water separator also were present within the existing service station building. No information documenting the removal of these USTs, the lifts or the oil-water separator was identified during this study. There is a potential that these features may have impacted the Site.

- Based on the long developed history of the Site, there is a potential that impacted soil, soil vapor and/or groundwater resulting from former businesses (*e.g.*, the cleaning/dying business, former Gulf gasoline station, former automobile dealership, etc.) could be present on-Site at locations not identified during the prior studies. If impacted materials are encountered, mitigation measures and/or proper disposal may be required.

- The Site consists of an operating Chevron gasoline station. Gasoline, diesel and waste oil are stored in USTs. USTs and associated piping are common contaminant sources and have a potential to impact the Site.

This assessment identified the following Controlled Recognized Environmental Conditions[3]:

- A LUST case at the Site was closed by the DEH in 2010. Residual contaminant concentrations were reported to remain in soil and groundwater at the Site. Site management requirements were stipulated by the DEH that must be fulfilled prior to any changes in land use, grading activities, excavation, or installation of water wells.

SECTION 11: LIMITATIONS

Cornerstone performed this Phase I ESA to support Bayview Development Group, Inc. in evaluation of Recognized Environmental Conditions associated with the Site. Bayview

[2] The presence or likely presence of hazardous substances or petroleum products on the Site: 1) due to any release to the environment; 2) under conditions indicative of a release to the environment; or 3) under conditions that pose a material threat of a future release to the environment.

[3] A Recognized Environmental Condition that has been addressed to the satisfaction of the applicable regulatory agency with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls or restrictions.

Development Group, Inc. and Urban Catalyst Manager LLC understand that no Phase I ESA can wholly eliminate uncertainty regarding the potential for Recognized Environmental Conditions to be present at the Site. This Phase I ESA is intended to reduce, but not eliminate, uncertainty regarding the potential for Recognized Environmental Conditions. Bayview Development Group, Inc. and Urban Catalyst Manager LLC understand that the extent of information obtained is based on the reasonable limits of time and budgetary constraints.

Findings, opinions, conclusions and recommendations presented in this report are based on readily available information, conditions readily observed at the time of the Site visit, and/or information readily identified by the interviews and/or the records review process. Phase I ESAs are inherently limited because findings are developed based on information obtained from a non-intrusive Site evaluation. Cornerstone does not accept liability for deficiencies, errors, or misstatements that have resulted from inaccuracies in the publicly available information or from interviews of persons knowledgeable of Site use. In addition, publicly available information and field observations often cannot affirm the presence of Recognized Environmental Conditions; there is a possibility that such conditions exist. If a greater degree of confidence is desired, soil, groundwater, soil vapor and/or air samples should be collected by Cornerstone and analyzed by a state-certified laboratory to establish a more reliable assessment of environmental conditions.

Cornerstone acquired an environmental database of selected publicly available information for the general area of the Site. Cornerstone cannot verify the accuracy or completeness of the database report, nor is Cornerstone obligated to identify mistakes or insufficiencies in the information provided (ASTM E 1527-13, Section 8.1.3). Due to inadequate address information, the environmental database may have mapped several facilities inaccurately or could not map the facilities. Releases from these facilities, if nearby, could impact the Site.

Bayview Development Group, Inc. may have provided Cornerstone environmental documents prepared by others. Bayview Development Group, Inc. understands that Cornerstone reviewed and relied on the information presented in these reports and cannot be responsible for their accuracy.

This report, an instrument of professional service, was prepared for the sole use of Bayview Development Group, Inc. and Urban Catalyst Manager LLC and may not be reproduced or distributed without written authorization from Cornerstone. It is valid for 180 days. An electronic transmission of this report may also have been issued. While Cornerstone has taken precautions to produce a complete and secure electronic transmission, please check the electronic transmission against the hard copy version for conformity.

Cornerstone makes no warranty, expressed or implied, except that our services have been performed in accordance with the environmental principles generally accepted at this time and location.

Mr. Dave Pitman
14628 Horseshoe Drive
Saratoga, CA 95070

Dear Messrs. Harden and Pitman:

Subject: Underground Storage Tank Case Closure--Loomis Armored, Inc., 128 East Saint John Street, San Jose, CA; Case No. 12-072

This letter confirms the completion of site investigation and remedial action for the underground storage tank(s) formerly located at the above-described location. Enclosed is the Case Closure Summary for the referenced site for your records.

Based upon the available information, including the current land use, and with the provision that the information provided to this agency was accurate and representative of site conditions, no further action related to the underground storage tank release is required.

This notice is issued pursuant to a regulation contained in Title 23, California Code of Regulations, Division 3, Chapter 16, Section 2721(e).

Please contact Ms. Christine Tulloch at the Santa Clara Valley Water District's Camden Office, (408) 927-0710, extension 2636, if you have any questions in this matter.

Sincerely,

Description of Interim Remediation Activities: Overexcavation was performed after tank removal in 1990 and again in 1995. Verification soil sampling indicates low to moderate levels of residual petroleum hydrocarbons in soil. However, the majority of the petroleum hydrocarbon pollution in soil was removed.

Air sparging without vapor recovery was also performed. However, system effectiveness data was not provided.

*The last sample collected in October 1996 contained 1.4 parts per billion Benzene.

DRAFT

IV. CLOSURE

Does completed corrective action protect existing beneficial uses per the Regional Board Basin Plan? Yes		
Does completed corrective action protect potential beneficial uses per the Regional Board Basin Plan? Yes		
Does corrective action protect public health for current land use? Santa Clara Valley Water District staff does not make specific determinations concerning public health risk. However, it does not appear that the release would present a risk to human health under current condition. Moderate levels of Benzene were detected in soil. However, it appears that the residual pollution is located within the saturated zone and, therefore, significant volatization would not be expected. If subsurface work is to be performed in the area of residual pollution, the responsible party should prepare a Health and Safety Plan before proceeding.		
Site Management Requirements: See above.		
Should corrective action be reviewed if land use changes? No		
Monitoring Wells Decommissioned: No	Number Decommissioned: 0	Number Retained: 4
List Enforcement Actions Taken: None		
List Enforcement Actions Rescinded: None		

V. ADDITIONAL COMMENTS, DATA, ETC.

Conclusion: Overexcavation was effective in removing the majority of the mass of pollution in soil. Pollution concentrations in groundwater indicates a declining trend and localized dissolved petroleum hydrocarbons. Therefore, beneficial uses of groundwater are not threatened.

VI. LOCAL AGENCY REPRESENTATIVE DATA

Prepared by: Christine A. Tulloch	Title: Water Quality Specialist
Signature: [signature]	Date: 11/18/96
Approved by: James S. Crowley, P.E.	Title: Associate Civil Engineer
Signature: [signature]	Date: 11/18/96

This closure approval is based upon the available information and with the provision that the information provided to this agency was accurate and representative of site conditions.

VII. REGIONAL BOARD NOTIFICATION

Regional Board Staff Name: John West	Title: E.S. III
RB Response: Concur, based solely upon information contained in this case closure summary.	Date Submitted to RB: 11-20-96
Signature: [signature]	Date: 11-20-96

Site History

12/83, a leak in the gasoline product line was discovered near the southwestern edge of the fuel dispenser island and a corroded section of pipe was replaced to stop the leak. 1/84, 6 groundwater monitoring wells were installed and commenced weekly monitoring for free product (FP). 2/84, one inch of FP measured in well MW-5 and also present in monitoring wells located near the USTs. 6/84, a pinhole sized leak was detected and repaired in the dispenser filter located at the southeastern edge of the fuel dispenser island. 2 additional monitoring wells were installed 10/84. 11/84 a hole was discovered near the northwest corner of a UST containing regular gasoline. The gasoline was pumped out of the UST, and the UST was removed from service until it was replaced in 1985. 5/85, USTs and piping were replaced. Product conveyance piping was also replaced with cathodic-protected conveyance piping. 11/89, advanced 6 soil borings, installed 2 wells, and determining the hydraulic conductivity and transmissivity after performing slug tests. Three areas containing soil and/or groundwater contamination were identified in the investigation: UST complex; waste oil UST and steam-cleaning area; and dispsenser islands in the southeast portion of the Site. 3/90, wells MW-6 and MW-8 located near the waste oil UST and steam-cleaning area were destroyed. Both wells had contained measurable amounts of FP and it was suspected that oily residue from the steam cleaning process was collecting in them and providing an additional source of groundwater contamination. Well MW-11 was installed as a replacement. Jan-Aug 1990, 5 soil borings advanced onsite; 19 borings and 1 monitoring well were advanced off-site. 4 extraction wells were also installed onsite along the northern border of the property. 4/90, conducted hydraulic testing and a soil vapor extraction (SVE) pilot study. The results of the SVE pilot study indicated that a full-scale SVE system could be used to remediate hydrocarbons in the unsaturated soils beneath the Site. 12/91, 4 off-site monitoring wells were installed. Groundwater extraction and treatment (GWET) system operated 2/92-6/96 and removed approximately 1,765,354 gal. of water and removed approximately 17 pounds of petroleum hydrocarbons. 5/00, 11 soil borings and 2 piezometers were advanced. 2002, a risk-based corrective action (RBCA) assessment was conducted to determine if the petroleum hydrocarbons in the soil and groundwater on and off-site presented a risk to human health. The RBCA indicated that all soil concentrations were below risk-based screening levels (RBSLs) assigned by the Regional Water Quality Control Board for the specified receptors (commercial workers, construction workers on and residents). Residents were included as on-site receptors based on the proximity of the Site to the senior apartment complex and the potential for the dissolved hydrocarbon plume to migrate beneath the building. The only exposure pathway of concern identified in the RBCA assessment was inhalation of benzene vapors in indoor air. The theoretical excess cancer risks and hazard quotients (for non carcinogens) were less than the respective Cal-EPA limits of one in a million. 1/04 a 2-phase extraction and treatment (TPET) system began operating and ran through 11/06. 9/08, 9 soil borings were advanced to collect confirmation soil samples.

Subject: Fuel Leak Site Case Closure Chevron Station No. 9-4259, 147 East Santa Clara Street, San Jose, CA; Case No. 03-014, SCVWDID No. 07S1E08L01f

Dear Mr. Robb:

This letter transmits the enclosed underground storage tank (UST) case closure letter for the subject case in accordance with Chapter 6.75 (Section 25296.10 [g]). The State Water Resources Control Board adopted this letter on February 20, 1997. As of March 1, 1997, all Local Oversight Programs (LOP) in the State are required to use this case closure letter for UST leak sites. The Santa Clara Valley Water District began transferring the LOP and all cases to the County of Santa Clara Department of Environmental Health on July 1, 2004. The County of Santa Clara is responsible for the issuance of the attached closure letter. The case closure summary is also enclosed. These documents confirm the completion of the investigation and cleanup of the reported release at the subject site. The subject fuel leak case is closed.

Please note the following conditions still remain at the site: residual contamination remains in soil of 2,200 parts per million (ppm) Total Petroleum Hydrocarbons as Gasoline (TPHg), 2,900 ppm Total Oil and Grease (TOG), 1 ppm Benzene, 0.65 ppm Toluene, 43 ppm Ethylbenzene, 195 ppm Xylenes, 0.014 ppm Methyl tert-Butyl Ether (MtBE), and 0.97 ppm Acetone; and in groundwater of 5,200 parts per billion (ppb) TPHg, 1,000 ppb TPH as Diesel (TPHd), 100 ppb Benzene, 3.4 ppb Toluene, 200 ppb Ethylbenzene, 14 ppb Xylenes, 56 ppb MtBE, 6,600 ppb Tert Butyl Alcohol (TBA), 61 ppb Acetone, 2 ppb Vinyl Chloride (VC), and 61 ppb 1,2-Dichloroethane (DCA).

Residual contamination in soil and groundwater remains at the site that could pose an unacceptable risk under certain site development activities such as site grading, excavation, or the installation of water wells. The County and the appropriate planning and building department shall be notified prior to any changes in land use, grading activities, excavation, and installation of water wells. This notification shall include a statement that residual contamination exists on the property and list all mitigation actions, if any, necessary to ensure compliance with this site management requirement. The levels of residual contamination and any associated site risk are expected to reduce with time.

Subject: Fuel Leak Site Case Closure Chevron Station No. 9-4259, 147 East Santa Clara Street, San Jose, CA; Case No. 03-014, SCVWDID No. 07S1E08L01f

Dear Mr. Robb:

This letter confirms the completion of a site investigation and remedial action for the underground storage tank(s) formerly located at the above-described location. Thank you for your cooperation throughout this investigation. Your willingness and promptness in responding to our inquiries concerning the former underground storage tank(s) are greatly appreciated.

Based on information in the above-referenced file and with the provision that the information provided to this agency was accurate and representative of site conditions, this agency finds that the site investigation and corrective action carried out at your underground storage tank(s) site is in compliance with the requirements of subdivisions (a) and (b) of Section 25296.10 of the Health and Safety Code and with corrective action regulations adopted pursuant to Section 25299.3 of the Health and Safety Code and that no further action related to the petroleum release(s) at the site is required.

This notice is issued pursuant to subdivision (g) of Section 25296.10 of the Health and Safety Code.

Please contact our office if you have any questions regardingthis matter.

Sincerely,

Phil Smith
Acting Director

Piping			Replaced	6/94

III. RELEASE AND SITE CHARACTERIZATION INFORMATION

Cause and Type of Release: piping leak; gauge stick hole in UST		
Site characterization complete? Yes	Date Approved by Oversight Agency: 11/6/09	
Monitoring wells installed? Yes	Number: 24	Proper screened interval? Yes
Highest GW Depth Below Ground Surface: 30.16'	Lowest Depth: 9.44'	Flow Direction: Northwest
Most Sensitive Current Use: Potential Drinking Water		

Summary of Production Wells in Vicinity: There are no active water supply wells located within a ¼-mile radius of the site. There is an inactive water supply well (07S01E08M001) located approximately 1,052 feet southwest of the site. It is reported that this well has been inactive for years and the regulating agency will be requesting that the well be closed. There are also numerous environmental monitoring wells located throughout a ¼-mile radius of the site, but not in the downgradient direction.	
Are drinking water wells affected? No	Aquifer Name: Santa Clara Valley Basin

DRAFT

Is surface water affected? No	Nearest SW Name: Guadalupe River ~3,394' southwest
Off-site Beneficial Use Impacts (Addresses/Locations):	None.
Reports on file? Yes	Where are reports filed? County of Santa Clara, Dept. of Environmental Health

TREATMENT AND DISPOSAL OF AFFECTED MATERIAL

Material	Amount (Include Units)	Action (Treatment or Disposal w/Destination)	Date
Tank	4 of unknown volume and construction	Not Reported; Assumed Disposed	5/85

Description of Interim Remediation Activities: free product removal, groundwater extraction, and two-phase extraction.

NA – Not Analyzed

Notes:

1. Soil sample collected from 20 feet below the ground surface (ft bgs) in boring B18 on 9/9/08; this sample was collected in the saturated zone and may represent concentrations contributable to groundwater concentrations. The next highest concentration of 1,900 ppm TPHg was reported for the soil samples collected from 10-15 feet and composited in well EW2 on 5/9/90. The next highest concentration of 170 ppm Xylenes was reported for the soil sample collected at 15 ft bgs in well EW1 on 3/15/90.
2. All samples analyzed for these constituents were not reported to have concentrations present above the laboratory reporting limits.
3. Soil samples collected from 10-15 ft bgs and composited in well EW4 on 5/10/90.
4. Soil sample collected from 16 ft bgs in boring OS1 on 1/9/90.
5. Soil sample collected from 20 ft bgs in confirmation soil boring B21 on 9/10/08.
6. Soil sample collected from 15 ft bgs in boring SB11 on 3/16/90. Confirmation soil samples were not collected in this area and analyzed for TOG.
7. Soil sample T2 collected from 3 ft bgs following piping removal on 6/1/94. This result appears to be anomalous. All other soil samples analyzed for Lead were reported to contain between 9.9-64 ppm.
8. Soil sample collected from 11.5 ft bgs in boring B5 on 5/30/00. MtBE analysis by EPA Method No. 8020. Soil samples collected prior to 2008 were not analyzed for other fuel oxygenates.
9. Soil sample collected from 15 ft bgs in confirmation soil boring B12 on 9/9/08.
10. Soil sample collected from 20 ft bgs in confirmation soil boring B19 on 9/9/08.

DRAFT

11. Soil sample collected from 20 ft bgs in confirmation soil boring B12 on 9/9/08.
12. Groundwater sample collected from well MW4 on 7/16/91.
13. Groundwater sample collected from well MW11 on 7/15/91. This is the last sampling event that included TPHd analysis.
14. Groundwater sample collected from well MW7 on 4/29/93
15. Groundwater sample collected from well MW4 on 6/6/00.
16. Acetone concentration in groundwater sample collected from well MW11 on 6/4/07.
17. Vinyl Chloride (VC; 780 ppb) and 1,2-Dichloroethane (DCA; 250ppb) concentration in groundwater sample collected from well MW11 on 4/11/90.
18. Groundwater sample collected from well MW5 on 10/7/97.
19. Groundwater sample collected from well MW4 on 4/27/90.
20. Groundwater sample collected from well MW5 on 10/9/96.
21. Groundwater sample collected from well MW3 on 9/29/09; last groundwater monitoring event.
22. Groundwater sample collected from well PZ1 on 10/7/09; the last groundwater monitoring event for this well.
23. Groundwater sample collected from well MW11 on 9/28/09; last groundwater monitoring event.
24. Groundwater sample collected from well MW10 on 9/28/09; last groundwater monitoring event.
25. All groundwater samples collected on 10/16/90 and analyzed for TOG were not reported to have concentrations present above the laboratory reporting limit.

IV. CLOSURE

Does completed corrective action protect existing beneficial uses per the Regional Board Basin Plan? Yes		
Does completed corrective action protect potential beneficial uses per the Regional Board Basin Plan? Yes		
Does corrective action protect public health for current land use? Environmental Health Department staff does not make specific determinations concerning public health risk. However, it does not appear that the release would present a risk to human health.		
Site Management Requirements: The site is an active retail gasoline station. Residual contamination both in soil and groundwater remains at the site that could pose an unacceptable risk under certain site development activities such as site grading, excavation, or the installation of water wells. Therefore, the impact of the disturbance of any residual contamination or the installation of water well(s) in the vicinity of the residual contamination shall be assessed and appropriate action taken so that there is no significant impact to human health, safety, or the environment. This could necessitate additional sampling, health risk assessment, and mitigation measures. DEH and the appropriate planning and building department shall be notified prior to any changes in land use, grading activities, excavation, and installation of water wells. This notification shall include a statement that residual contamination exists on the property and list all mitigation actions, if any, necessary to ensure compliance with this site management requirement. The levels of residual contamination and any associated site risk are expected to reduce with time.		
Should corrective action be reviewed if land use changes? Yes; See Site Management Requirements		
Number of Wells Commissioned: 24	Number of Wells Decommissioned: 2	Number of Wells Retained: 22*
List Enforcement Actions Taken: None.		
List Enforcement Actions Rescinded: None.		

* All wells to be properly destroyed prior to issuance of the closure letter and documents.

V. ADDITIONAL COMMENTS, DATA, ETC.

Site History:

1983 – In December, approximately 148 gallons of gasoline was lost due to a piping leak. The piping line was replaced.

1984 – In January, 6 monitoring wells (1 through 6) were installed onsite to 20 feet below the ground surface (ft bgs). Free product (FP) was found in well 5 and product bailing commenced. It is not

reported that soil samples were collected during this investigation.

In November, a gauge stick hole was discovered in a gasoline underground storage tank (UST). It was estimated that approximately 657 gallons of product had been lost. The UST was emptied and taken out of service prior to removal.

Reports of FP removal or groundwater monitoring conducted between 1984 and 1989 were not found in the file. Total volume of FP removed is not known.

Based on information in other reports, wells MW7 and MW8 were installed in October; however, no report of well installation was found in the file.

1985 – It is reported that all USTs (fuel and waste oil) were replaced at this time; however, no report of UST removal was found in the file.

1989 – In May, groundwater samples were collected from 5 of the 8 wells onsite; wells 3 and 5 were found to be dry and well 6 had FP. Maximum concentrations were reported of 110,000 parts per billion (ppb) Total Petroleum Hydrocarbons as Gasoline (TPHg), 61,000 ppb TPH as Oil (TPHo), 4,200 ppb Benzene, 6,000 ppb Toluene, 2,000 ppb Ethylbenzene, 11,000 ppb Xylenes.

In November, 4 soil borings (SB1 through SB4) and 2 monitoring wells (SB9/MW9 and SB10/MW10) were advanced onsite. The borings were advanced to 31.5 ft bgs and the wells were advanced to 40 ft bgs, but completed at 31.5 and 40 ft bgs. 11 soil samples were collected and reported to contain maximum concentrations of 1,300 ppm TPHg, 1,300 ppm Total Oil and Grease (TOG), 6.1 ppm Benzene, 41.5 ppm Toluene, 102 ppm Ethylbenzene, and 9.2 ppm Xylenes. The highest concentrations were reported for the sample collected from boring SB3 at 15 ft bgs, which was located near well 5. The maximum TOG concentration was reported for the sample collected from MW10 at 15 ft bgs.

Well MW10 was located downgradient of the waste oil UST and well MW6, which was reported to contain FP in a May 1989 report. Due to it's proximity to the waste oil UST, the groundwater was analyzed for chlorinated hydrocarbons and was reported to contain 190 ppb Vinyl Chloride, 6.5 ppb 1,1-Dichloroethene, 5 ppb 1,1,2-Trichloroethane, 5.5 ppb Chlorobenzene, and 23 ppb 1,2-Dichloroethene.

In this report it states: "The first-encountered saturated zone beneath the site occurs at a depth of 15 to 20 feet below ground level ("BGSL") within clays, silts, and silty sands (see Figure 4 and Appendix A). This unit was found in every boring and is assumed to be continuous. An underlying sandy gravel logged at a depth of between 36 and 40 feet BGL in SB-10 was not fully saturated. This suggests that the first encountered saturated soil is perched."

1990 – It is reported that in March, wells 6 and 8 were destroyed, but a report of well destruction was not found in the file.

Between March and May, 24 soil borings (WP1 through WP5, WPS1 through WPS4 and OS1 through OS15) and 5 wells (11 and EW1 through EW4) were advanced on and offsite. Boring OS15 was completed as well MW12 to 40 ft bgs; well 11 was completed to 33 ft bgs and the extraction wells were completed to 33-40 ft bgs. 40 soil samples were collected and reported to have maximum concentrations of 1,900 ppm TPHg, 2,900 ppm TOG, 1,900 ppm Benzene, 160 ppm Toluene, 61 ppm Ethylbenzene, and 290 ppm Xylenes.

Grab groundwater samples were collected from the OS, WPS and WP borings, including the boring for MW12. The grab groundwater samples were reported to contain maximum concentrations of 32,000 ppb TPHg, 5,500 ppb Benzene, 13,000 ppb Toluene, 3,500 ppb Ethylbenzene, and 14,000 ppb Xylenes. The highest concentrations were reported for OS1 and OS6 located offsite in the parking lot north of the site.

DRAFT

1991 – In August, 4 groundwater monitoring wells (MW13 through MW16) were installed offsite north of the site to approximately 35 ft bgs. Soil samples were not collected due to the close proximity to the previous investigation. The new wells were sampled and reported to have maximum concentrations in well MW15 of 5,300 ppb TPHg, 640 ppb Benzene, 300 ppb Toluene, 150 ppb Ethylbenzene, and 410 ppb Xylenes. The new wells were incorporated into the groundwater monitoring program.

1992 – In January, a groundwater extraction system was started onsite. Groundwater remediation operation reports were not found in the file. The system was reported to have operated through June 26, 1996. It is reported in a later report that the system extracted 1,765,354 gallons of groundwater and 17 pounds of hydrocarbons.

1994 – In June, the product lines were replaced. 8 soil samples (T1 through T8) were collected from 3 ft bgs and were reported to have low to non-detectable concentrations of the Constituents of Concern (COCs). Approximately 150 cubic yards of soil were removed from the site during this investigation.

2000 – In May, 11 soil borings (B1 through B11) and 2 piezometers (PZ1 and PZ2) were advanced on and offsite. The soil borings were advanced to depths of 17-32 ft bgs and the piezometers were completed to 20 and 32 ft, respectively. 27 soil samples were collected and reported to contain low to non-detectable concentrations of COCs. The samples were analyzed for Methyl tert-Butyl Ether (MtBE) and there was only one detection of 0.586 ppm in the sample collected at 11.5 ft bgs in B5.

26 depth discrete grab groundwater samples were collected from the borings and reported to have maximum concentrations of 34,500 ppb TPHg, 8,550 ppb Benzene, 257 ppb Toluene, 908 ppb Ethylbenzene, 2,650 ppb Xylenes, 2,460 ppb MtBE, and 1,430 ppb Ethyl tert-Butyl Ether (EtBE). The highest concentrations were reported for samples collected from borings B2 and B4 located near the dispsensers.

2002 – In January, a Risk Based Corrective Action (RBCA) Assessment was completed. According to the report, the groundwater extraction system was successful in reducing chemical concentrations in groundwater and therefore, historical data obtained before June 1996 (system shut down) were not considered in the RBCA. The RBCA concluded that the results indicated that: "(1) adverse noncancer health effects are not anticipated for any receptor, either on- or offsite, under the conservative exposure conditions evaluated in this RBCA Assessment; and (2) unacceptable excess lifetime cancer risks are not anticipated for any receptor under the conservative exposure conditions evaluated."

In June, a two-phase extraction (TPE) test was conducted using wells EW1 and EW4 for 4 days. Approximately 48.4 pounds of TPHg and 0.7 pounds of Benzene were removed by soil vapor extraction and 0.1 pounds of petroleum hydrocarbons by groundwater extraction. It was concluded that TPE was a feasible remedial method.

2004 – In January, a TPE treatment (TPET) system was started onsite. The system operated through November 2006 and extracted 1,223,140 gallons of groundwater. The vapor extraction portion of the system removed approximately 5,373 pounds of TPHg, 23 pounds Benzene, and 4 pounds MtBE.

2008 – In September, 9 confirmation soil borings were advanced on and offsite. 27 soil samples were collected and reported to have maximum concentrations of 2,200 ppm TPHg, 0.98 ppm Benzene, 0.54 ppm Toluene, 43 ppm Ethylbenzene, 195 ppm Xylenes and 0.96 ppm Acetone. With the exception of the Acetone detection, the maximum concentrations were reported for the soil sample collected from boring B18 at 20 ft bgs located in the apartment parking lot. It should be noted that this sample was collected from the saturated zone.

DRAFT

2009 – In September, the final groundwater monitoring event was conducted and reported maximum concentrations of 5,200 ppm TPHg, 100 ppb Benzene, 3.4 ppb Toluene, 200 ppb Ethylbenzene, 14 ppb Xylenes, 56 ppb MtBE, 6,600 ppb TBA, 33 ppb EtBE, 0.6 ppb Di-isopropyl Ether (DiPE), 2 ppb Vinyl Chloride, 2 ppb DCA, 59 ppb Chlorobenzene, 4 ppb 1,2-Dichlorobenzene, and 61 ppb Acetone.

Considerations and/or Variances:
The site is an active retail gasoline service station. Based on records, two releases occurred at the site an released approximately 800 gallons of gasoline to the subsurface. Free Product (FP) was present on the groundwater. FP removal activities occurred between 1984 and 1989, but the volume of FP removed was not documented.

The USTs were removed from the site. Piping was removed later and approximately 150 cubic yards of soil were removed at that time. Groundwater extraction (1992-1996) and two-phase extraction (2004-2006) were utilized onsite for remediation. Approximately 2,988,494 gallons of groundwater were extracted from the ground. Approximately 17 pounds of petroleum hydrocarbons were removed from the groundwater and 5,421 pounds of petroleum hydrocarbons, 24 pounds of Benzene and 4 pounds of MtBE were removed through vapor extraction.

In 2002, a Risk Based Corrective Action (RBCA) Assessment was completed (prior to completion of remediation activities onsite). The RBCA concluded that the results indicated that: "(1) adverse noncancer health effects are not anticipated for any receptor, either on- or offsite, under the conservative exposure conditions evaluated in this RBCA Assessment; and (2) unacceptable excess lifetime cancer risks are not anticipated for any receptor under the conservative exposure conditions evaluated."

Concentrations in groundwater have been reduced from the presence of FP to 5,200 ppb TPHg, 1,000 ppb TPHd, 100 ppb Benzene, 3.4 ppb Toluene, 200 ppb Ethylbenzene, 14 ppb Xylenes, 56 ppb MtBE, 6,600 ppb TBA, 61 ppb Acetone, 2 ppb Vinyl Chloride, and 61 ppb DCA. The residual concentration of TBA was reported for well MW3 which is located onsite. There is a trend in this well of decreasing MtBE and increasing TBA. When MtBE breakdowns, TBA is formed and therefore the concentration increases.

Residual contamination remains in soil of 2,200 ppm TPHg, 1 ppm Benzene, 0.65 ppm Toluene, 43 ppm Ethylbenzene, 195 ppm Xylenes, 0.014 ppm MtBE, 0.97 ppm Acetone, 2,900 ppm TOG, and 64 ppm Lead. The TPHg concentration was reported in a soil sample collected from the saturated zone in 2008. It is like that the concentrations of TPHg remaining in unsaturated soils at the site are lower. No confirmation soil samples were collected and analyzed for TOG and it is likely that the concentrations present today are lower. The maximum Lead concentration of 190 ppm reported appears to be anomalous. All other soil samples analyzed for Lead were reported to contain between 9.9-64 ppm.

Residual contamination in soil and groundwater will continue to degrade by natural processes.

There is one inactive water supply well located in the up to cross gradient direction from the site. Based on the location of this well, it is unlikely that the release from this will impact this well.

Site Management Requirements have been established for this site.

Conclusion:
The Department of Environmental Health believes that the residual soil and groundwater contamination at the site does not pose a continuing, significant threat to groundwater resources, human health, or the environment. Regional Water Quality Control Board objectives have not been compromised. The investigation was performed in accordance with state and local guidelines. The Department of Environmental Health recommends that this site be closed.

Soil chemistry values presented in parts per million (ppm)
NA = Not Analyzed
ND = Less than method detection limit
ft-BGL = Feet below ground level
* BTEX analyzed using EPA method 8020, with detection limits of 0.005, 0.005, 0.005, and 0.015 ppm, respectively.
** BTEX analyzed using EPA method 8020, with detection limits 0.25 ppm.
Borings SB-1 through SB-4, 9 and 10 sampled in November 1989. See Chempro Report, December 1989.

All results presented in micrograms per liter or ug/L.
TPHg = Total petroleum hydrocarbons as gasoline
MTBE = Methyl tertiary butyl ether
TBA = Tertiary butyl alchohol
DIPE = Di-isopropyl ether
ETBE = Ethyl tertiary butyl ether
TBA = Tertiary butyl alcohol

1,2-DCA = 1,2 - Dichloroethane
EDB = Ethylene dibromide
ND = Not detected above specified laboratory reporting limit
NA = Not Analyzed

Table 2
Groundwater Monitoring Data and Analytical Results
Chevron Service Station #9-4259
147 East Santa Clara Street
San Jose, California

EXPLANATIONS:

Groundwater monitoring data and laboratory analytical results prior to June 5, 2000, were compiled from reports prepared by Blaine Tech Services, Inc.
Groundwater monitoring data and laboratory analytical results from June 5, 2000 to March 6, 2009 were provided by Gettler-Ryan, Inc.
Current groundwater monitoring data was provided by Blaine Tech Services, Inc and current laboratory analytical results were provided by Lancaster Laboratories.

TOC = Top of Casing
(ft.) = Feet
GWE = Ground Water Elevation
(msl) = Mean sea level
DTW = Depth to Water
TPH = Total Petroleum Hydrocarbons
DRO = Diesel Range Organics
GRO = Gasoline Range Organics
B = Benzene
T = Toluene
E = Ethylbenzene
X = Xylenes
MTBE = Methyl Tertiary Butyl Ether
TOG = Total Oil and Grease
(µg/L) = Micrograms per liter
-- = Not Measured/Not Analyzed
(D) = Duplicate
QA = Quality Assurance/Trip Blank
NP = No Purge
PER = Peristaltic Pump

* TOC elevations were surveyed on July 17, 2008 by MID Coast Engineering. Vertical datum is NGVD29 from GPS Observations. TOC surveyed on June 14, 2000, by Mid Coast Engineers. The benchmark is City of San Jose RM#126-E, USC&GS I-19=96, set in concrete 121.6 feet north of Santa Clara Street center line and 29.5 feet west of Fourth Street center line, (Elevation = 77.97, NGVD 29 (msl).

1 Broken case.
2 Sample was analyzed past the EPA recommended holding time.
3 Laboratory report indicates gasoline C6-C12.
4 MTBE by EPA Method 8260.
5 BTEX values are reported off a one point calibration due to coalition of the Internal Standard.
6 Laboratory report indicates gasoline C6-C12 + unidentified hydrocarbons >C10.
7 Laboratory report indicates that this sample was originally analyzed within holding time. Re-analysis for confirmation or dilution was performed past the recommended holding time.
8 Laboratory report indicates unidentified hydrocarbons C6-C12.
9 Laboratory report indicates the analysis was performed from a previously opened vial and the results are, therefore, estimated.
10 Due to the installation of an extraction system the TOC has been altered; unable to calculate the GWE.
11 Connected to remediation system.
12 No Purge; Grab sample taken.
13 Unable to purge, due to insufficient water.
14 Stinger in well.
15 Laboratory reports indicates that due to the presence of an interferent near its retention time, the normal reporting limit was not attained for ethylbenzene. The presence or concentration of this compound cannot be determined due to the presence of this interferent.
16 Laboratory report indicates Surrogate recoveries are outside of QC limits for the GC/MS volatile fraction. The analysis was repeated several times and the surrogate recoveries were within QC limits but were unable to be reported due to other QC issues. The re-analysis results confirmed the reported results for the target compounds.
17 Laboratory reports indicates due to excessive foaming of the sample, normal reporting limits were not attained.
18 Laboratory reports indicates reporting limits for GC/MS volatile compounds were raised due to sample foaming.
19 Laboratory reports indicates due to the presence of an interferent near its retention time, the normal reporting limit was not attained for total xylenes. The presence or concentration of this compound cannot be determined due to the presence of this interferent.
20 BTEX by EPA Method 8260.
21 Laboratory reports indicates due to the presence of an interferent near its retention time, the normal reporting limit was not attained for benzene. The presence or concentration of this compound cannot be determined due to the presence of this interferent.

Groundwater Analytical Results - Oxygenate and Other Volatile Organic Compounds

Chevron Service Station #9-4259
147 East Santa Clara Street
San Jose, California

EXPLANATIONS:

Groundwater monitoring data and laboratory analytical results prior to June 5, 2000, were compiled from reports prepared by Blaine Tech Services, Inc.
Groundwater monitoring data and laboratory analytical results from June 5, 2000 to March 6, 2009 were provided by Gettler-Ryan, Inc.
Current groundwater monitoring data was provided by Blaine Tech Services, Inc and current laboratory analytical results were provided by Lancaster Laboratories.

TBA = t-Butyl alcohol
MTBE = Methyl Tertiary Butyl Ether
DIPE = di-Isopropyl ether
ETBE = Ethyl t-butyl ether
TAME = t-Amyl methyl ether
EDB = Ethylene Dibromide/1,2-Dibromoethane
1,2-DCB = 1,2-Dichlorobenzene
1,2-DCA = 1,2-Dichloroethane
1,1-DCE = 1,1-Dichloroethene
1,2-DCE = 1,2-Dichloroethene
trans-1,2-DCE = trans-1,2-Dichloroethene
1,1,2-TCA = 1,1,2-Trichloroethane
TCE = Trichloroethene
(ppb) = Parts per billion
(µg/L) = Micrograms per liter
-- = Not Analyzed

1 Laboratory report indicates Benzene was detected at 2,540 ppb, Isopropylbenzene at 104 ppb, n-Propylbenzene at 205 ppb and Total Xylenes at 36.1 ppb.
2 Laboratory report indicates Benzene was detected at 3,170 ppb, Ethylbenzene at 567 ppb, Isopropylbenzene at 90.1 ppb, Naphthalene at 110 ppb, n-Propylbenzene at 162 ppb, Toluene at 73.9 ppb, 1,2,4-Trimethylbenzene at 386 ppb, 1,3,5-Trimethylbenzene at 42.3 ppb and Total Xylenes at 877 ppb.
3 Laboratory report indicates Benzene was detected at 436 ppb, sec-Butylbenzene at 10.6 ppb, Ethylbenzene at 27.1 ppb, Isopropylbenzene at 11.5 ppb, n-Propylbenzene at 16.9 ppb, and Toluene at 8.16 ppb.
4 Laboratory report indicates Benzene was detected at 3,530 ppb, Ethylbenzene at 239 ppb, Isopropylbenzene at 56.9 ppb, n-Propylbenzene at 107 ppb and Toluene at 111 ppb.
5 Laboratory report indicates Tert-butylbenzene was detected at 4.39 ppb and Isopropylbenzene at 0.502 ppb.
6 Laboratory report indicates Benzene was detected at 2,000 ppb, Ethylbenzene at 737 ppb, Isopropylbenzene at 99.6 ppb, n-Propylbenzene at 195 ppb, 1,2,4-Trimethylbenzene at 480 ppb, and Total Xylenes at 27.4 ppb.
7 Laboratory report indicates Benzene was detected at 2,120 ppb, Ethylbenzene at 69.1 ppb, Isopropylbenzene at 91.7 ppb, Naphthalene at 77.3 ppb, n-Propylbenzene at 201 ppb, and Total Xylenes at 38.3 ppb.
8 Laboratory report indicates Benzene was detected at 4,580 ppb, Isopropylbenzene at 69.3 ppb and n-Propylbenzene at 122 ppb.
9 Laboratory report indicates Benzene was detected at 1,680 ppb, Isopropylbenzene at 28.6 ppb and n-Propylbenzene at 56.4 ppb.
10 Laboratory report indicates Benzene was detected at 157 ppb, sec-Butylbenzene at 7.49 ppb, Ethylbenzene at 13.8 ppb, Isopropylbenzene at 11.2 ppb, n-Propylbenzene at 11.9 ppb, Toluene at 2.78 ppb, and Total Xylenes at 2.91 ppb.
11 Laboratory report indicates Benzene was detected at 1,800 ppb, Toluene at 72 ppb, Ethylbenzene at 160 ppb, Total Xylenes at 64 ppb, Isopropylbenzene at 39 ppb, n-Propylbenzene at 85 ppb, 1,3,5-Trimethylbenzene at 33 ppb, tert-Butylbenzene at 6 ppb, sec-Butylbenzene at 19 ppb, p-Isopropyltoluene at 7 ppb, 1,4-Dichlorobenzene at 8 ppb, n-Butylbenzene at 13 ppb, and Naphthalene at 27 ppb.
12 Laboratory report indicates cis-1,2-Dichloroethene was detected at 13 ppb, Benzene at 140 ppb, Toluene at 4 ppb, Ethylbenzene at 14 ppb, Total Xylenes were at 5 ppb, Isopropylbenzene at 16 ppb, n-Propylbenzene at 32 ppb, 1,3,5-Trimethylbenzene at 4 ppb, tert-Butylbenzene at 2 ppb, sec-Butylbenzene at 12 ppb, 1,4-Dichlorobenzene at 3 ppb, n-Butylbenzene at 8 ppb, and Naphthalene at 6 ppb.
13 Laboratory report indicates Benzene was detected at 1,800 ppb, Toluene at 62 ppb, Ethylbenzene at 130 ppb, Total Xylenes at 45 ppb, Isopropylbenzene at 41 ppb, n-Propylbenzene at 88 ppb, 1,3,5-Trimethylbenzene at 4 ppb, tert-Butylbenzene at 8 ppb, sec-Butylbenzene at 22 ppb, p-Isopropyltoluene at 7 ppb, 1,4-Dichlorobenzene at 8 ppb, n-Butylbenzene at 15 ppb, and Naphthalene at 37 ppb.
14 Laboratory report indicates Benzene was detected at 1,600 ppb, Toluene at 62 ppb, Ethylbenzene at 150 ppb, Total Xylenes at 54 ppb, Isopropylbenzene at 45 ppb, n-Propylbenzene at 94 ppb, 1,3,5-Trimethylbenzene at 37 ppb, tert-Butylbenzene at 6 ppb, sec-Butylbenzene at 21 ppb, p-Isopropyltoluene at 12 ppb, 1,4-Dichlorobenzene at 8 ppb, n-Butylbenzene at 15 ppb, and Naphthalene at 48 ppb.

DRAFT

Table 3

Groundwater Analytical Results - Oxygenate and Other Volatile Organic Compounds

Chevron Service Station #9-4259

147 East Santa Clara Street

San Jose, California

EXPLANATIONS (CONT):

[15] Laboratory report indicates cis-1,2-Dichloroethene was detected at 10 ppb, Benzene at 110 ppb, Toluene at 3 ppb, Ethylbenzene at 7 ppb, Total Xylenes were at 3.8 ppb, Isopropylbenzene at 16 ppb, n-Propylbenzene at 29 ppb, 1,3,5-Trimethylbenzene at 3 ppb, tert-Butylbenzene at 1 ppb, sec-Butylbenzene at 10 ppb, 1,4-Dichlorobenzene at 3 ppb, n-Butylbenzene at 4 ppb, 1,2-Dichlorobenzene at 10 ppb and Naphthalene at 5 ppb.

[16] Laboratory report indicates cis-1,2-Dichloroethene was detected at 9 ppb, Benzene at 88 ppb, Toluene at 0.6 ppb, Isopropylbenzene at 2 ppb, n-Propylbenzene at 2 ppb, tert-Butylbenzene at 2 ppb, sec-Butylbenzene at 2 ppb and 1,4-Dichlorobenzene at 3 ppb.

[17] Laboratory report indicates Benzene was detected at 1,600 ppb, Toluene at 64 ppb, Ethylbenzene at 130 ppb, m+p Xylene at 30 ppb, o-Xylene at 24 ppb, Isopropylbenzene at 42 ppb, n-Propylbenzene at 94 ppb, 1,3,5-Trimethylbenzene at 6 ppb, tert-Butylbenzene at 6 ppb, sec-Butylbenzene at 22 ppb, p-Isopropyltoluene at 13 ppb, 1,4 Dichlorobenzene at 8 ppb, n-Butylbenzene at 16 ppb and Naphthalene at 58 ppb.

[18] Laboratory report indicates cis-1,2-Dichloroethene was detected at 9 ppb, Benzene at 100 ppb, Toluene at 3 ppb, Ethylbenzene at 5 ppb, m+p Xylene at 0.8 ppb, o-Xylene at 3 ppb, Isopropylbenzene at 15 ppb, n-Propylbenzene at 31 ppb, tert-Butylbenzene at 1 ppb, sec-Butylbenzene at 11 ppb, 1,4 Dichlorobenzene at 3 ppb, n-Butylbenzene at 5 ppb, and Naphthalene at 4 ppb.

[19] Laboratory report indicates Benzene was detected at 1,400 ppb, Toluene at 63 ppb, Ethylbenzene at 78 ppb, m+p Xylene at 24 ppb, o-Xylene at 19 ppb, Isopropylbenzene at 42 ppb, n-Propylbenzene at 98 ppb, 1,3,5-Trimethylbenzene at 4 ppb, tert-Butylbenzene at 7 ppb, sec-Butylbenzene at 24 ppb, p-Isopropyltoluene at 7 ppb, 1,4-Dichlorobenzene at 8 ppb, n-Butylbenzene at 19 ppb, 1,2-Dichlorobenzene at 5 ppb and Naphthalene at 55 ppb.

[20] Laboratory report indicates cis-1,2-Dichloroethene was detected at 11 ppb, Benzene at 43 ppb, Toluene at 1 ppb, Chlorobenzene at 240 ppb, Ethylbenzene at 2 ppb, Isopropylbenzene at 6 ppb, n-Propylbenzene at 11 ppb, sec-Butylbenzene at 5 ppb, 1,4-Dichlorobenzene at 2 ppb and n-Butylbenzene at 2 ppb.

[21] Laboratory report indicates cis-1,2-Dichloroethene was detected at 7 ppb, Benzene at 85 ppb, Toluene at 2 ppb, Ethylbenzene at 3 ppb, m+p Xylene at 1 ppb, o-Xylene at 0.6 ppb, Isopropylbenzene at 2 ppb, n-Propylbenzene at 2 ppb, tert-Butylbenzene at 3 ppb, sec-Butylbenzene at 2 ppb and 1,4-Dichlorobenzene at 3 ppb.

[22] Laboratory report indicates Benzene at 790 ppb, Toluene at 16 ppb, Ethylbenzene at 8 ppb, sec- Butylbenzene at 16 ppb, m+p Xylene at 7 ppb, o-Xylene at 4 ppb, Isopropylbenzene at 20 ppb, n-Propylbenzene at 35 ppb, 1,3,5-Trimethylbenzene at 6 ppb, tert-Butylbenzene at 7 ppb, 1,4-Dichlorobenzene at 6 ppb, n-Butylbenzene at 10 ppb and Naphthalene at 6 ppb.

[23] Laboratory report indicates cis-1,2-Dichloroethene at 6 ppb, Benzene at 31 ppb, Toluene at 0.7 ppb, Ethylbenzene at 0.8 ppb, Isopropylbenzene at 3 ppb, n-Propylbenzene at 2 ppb, sec-Butylbenzene at 3 ppb and 2-Butanone at 6 ppb.

[24] Laboratory report indicates cis-1,2-Dichloroethene at 11 ppb, Benzene at 59 ppb, Toluene at 1 ppb, 1,1,2-Trichloroethane at 5 ppb, Ethylbenzene at 3 ppb, m+p-Xylene at 1 ppb, o-Xylene at 0.6 ppb, 1,2,3-Trichloropropane at 1 ppb and 2-Butanone at 47 ppb.

[25] Laboratory report indicates cis-1,2-Dichloroethene at 6 ppb, Benzene at 41 ppb, Toluene at 1 ppb, Ethylbenzene at 0.8 ppb, m+p-Xylene at 0.5 ppb, Isopropylbenzene at 3 ppb, sec-Butylbenzene at 2 ppb, 1,4-Dichlorobenzene at 2 ppb and 2-Butanone at 64 ppb.

[26] Laboratory report indicates cis-1,2-Dichloroethene at 10 ppb and Benzene at 13 ppb.

[27] Laboratory report indicates cis-1,2-Dichloroethene at 3 ppb, Ethylbenzene at 3 ppb, m+p-Xylene at 1 ppb, o-Xylene at 0.9 ppb, tert-Butylbenzene at 1 ppb and 1,4-Dichlorobenzene at 1 ppb.

[28] Laboratory report indicates Benzene at 33 ppb, Toluene at 2 ppb, Ethylbenzene at 2 ppb, m+p-Xylene at 0.8 ppb, o-Xylene at 0.8 ppb, Isopropylbenzene at 4 ppb, n-Propylbenzene at 6 ppb, 1,4-Dichlorobenzene at 1 ppb, Naphthalene at 4 ppb, 2-Butanone at 570 ppb and sec-Butylbenzene at 2 ppb.

DRAFT

Table 3

Groundwater Analytical Results - Oxygenate and Other Volatile Organic Compounds

Chevron Service Station #9-4259
147 East Santa Clara Street
San Jose, California

EXPLANATIONS (CONT):

29 Laboratory report indicates cis-1,2-Dichloroethene at 3ppb, Benzene at 50 ppb, Toluene at 4 ppb, Ethylbenzene at 8 ppb, m+p-Xylene at 4 ppb, o-Xylene at 2 ppb, n-Propylbenzene at 2 ppb, 1,3,5-Trimethylbenzene at 2 ppb, tert-Butylbenzene at 2 ppb, 1,4-Dichlorobenzene at 2 ppb, 2-Butanone at 31 ppb, and 4-Methyl-2-pentanone at 27 ppb.

30 Laboratory report indicates cis-1,2-Dichloroethene at 3 ppb, Benzene at 2 ppb, o-Xylene at 0.7 ppb, 1,4-Dichlorobenzene at 1 ppb and 2-Butanone at 5 ppb.

31 Laboratory report indicates cis-1,2-Dichloroethene at 5 ppb and Benzene at 0.8 ppb.

32 Laboratory report indicates cis-1,2-Dichloroethene at 2 ppb and Benzene at 0.5 ppb.

33 Laboratory report indicates cis-1,2-Dichloroethene at 5 ppb and Benzene at 1 ppb.

34 Laboratory report indicates cis-1,2-Dichloroethene at 15 ppb, and Benzene at 26 ppb, Toluene at 1 ppb, Eythylbenzene at 9 ppb, m+p-Xylene at 4 ppb, o-Xylene at 3 ppb, Isopropylbenzene at 3 ppb, n-Propylbenzene at 4 ppb, 1,3,5-Trimethylbenzene at 3 ppb, tert-Butylbenzene at 3 ppb, 1,2,4-Trimethylbenzene at 1 ppb, sec-Butylbenzene at 3 ppb, p-Isopropyltoluene at 1 ppb, 1,4-Dichlorobenzene at 1 ppb, n-Butylbenzene at 1 ppb, 2-Butanone at 17 ppb and 4-Methyl-2-pentanone at 62 ppb.

35 Laboratory report indicates cis-1,2-Dichloroethene at 9 ppb, Benzene at 2 ppb and 2-Butanone at 11 ppb.

36 Laboratory report indicates cis-1,2-Dichloroethene at 7 ppb and Benzene at 3 ppb.

37 Laboratory report indicates cis-1,2-Dichloroethene at 12 ppb, Benzene at 11 ppb, Toluene at 0.8 ppb, Eythylbenzene at 1 ppb and 1,4-Dichlorobenzene at 1 ppb.

38 Laboratory report indicates cis-1,2-Dichloroethene at 15 ppb and Benzene at 1 ppb.

39 Laboratory report indicates cis-1,2-Dichloroethene at 11 ppb, Benzene at 5 ppb and Toluene at 0.6 ppb.

40 Laboratory report indicates cis-1,2-Dichloroethene at 11 ppb and Benzene at 1 ppb.

41 Laboratory report indicates cis-1,2-Dichloroethene at 9 ppb and Benzene at 2 ppb.

42 Laboratory report indicates cis-1,2-Dichloroethene at 11 ppb and Benzene at 4 ppb.

43 Laboratory report indicates cis-1,2-Dichloroethene at 10 ppb and Benzene at 2 ppb.

44 Laboratory report indicates cis-1,2-Dichloroethene at 1 ppb and Benzene at 0.8 ppb and 4-Methyl-2-pentanone at 3 ppb.

45 Laboratory report indicates cis-1,2-Dichloroethene at 6 ppb and Benzene at 1 ppb.

46 Laboratory report indicates cis-1,2-Dichloroethene at 7 ppb and Benzene at 5 ppb.

47 Laboratory report indicates cis-1,2-Dichloroethene at 2 ppb and Benzene at 1 ppb.

48 Laboratory report indicates cis-1,2-Dichloroethene at 3 ppb and Benzene at 3 ppb.

49 Laboratory report indicates cis-1,2-Dichloroethene was detected at 4 ppb.

50 Laboratory report indicates cis-1,2-Dichloroethene at 7 ppb, Benzene at 5 ppb.

51 Laboratory report indicates cis-1,2-Dichloroethene at 9 ppb, Benzene at 1 ppb, Toluene at 2 ppb, Ethylbenzene at 0.6 ppb, m+p-Xylene at 2 ppb, o-Xylene at 1 ppb, and 1,2,4-Trimethylbenzene at 2 ppb.

52 Laboratory report indicates cis-1,2-Dichloroethene at 5 ppb, Benzene at 3 ppb, Toluene at 1 ppb, m+p-Xylene at 2 ppb, o-Xylene at 0.7 ppb, 1,2,4-Trimethylbenzene at 1 ppb and 2-Butanone at 9 ppb.

53 Laboratory report indicates cis-1,2-Dichloroethene at 4 ppb, Benzene at 1 ppb, Toluene at 0.7 ppb and m+p-Xylene at 0.9 ppb.

San Jose, California

EXPLANATIONS (CONT):

54 Laboratory report indicates cis-1,2-Dichloroethene at 1 ppb, Benzene at 10 ppb, Chlorobenzene at 12 ppb, m+p-Xylene at 0.6 ppb and 2-Butanone at 4 ppb.

55 Laboratory report indicates cis-1,2-Dichloroethene at 4 ppb and Benzene at 0.7 ppb.

56 Laboratory report indicates cis-1,2-Dichloroethene at 6 ppb and Benzene at 0.6 ppb.

57 Laboratory report indicates cis-1,2-Dichloroethene at 5 ppb, Benzene at 6 ppb and Toluene at 0.7 ppb.

58 Laboratory report indicates cis-1,2-Dichloroethene at 6 ppb and Benzene at 3 ppb.

59 Laboratory report indicates cis-1,2-Dichloroethene was detected at 3ppb and Benzene at 0.9 ppb.

60 Laboratory report indicates cis-1,2-Dichloroethene was detected at 6 ppb, Benzene at 5 ppb and toluene at 0.5 ppb.

61 Laboratory report indicates cis-1,2-Dichloroethene was detected at 4 ppb, Benzene at 0.6 ppb and toluene at 0.5 ppb.

62 Laboratory report indicates cis-1,2-Dichloroethene was detected at 3 ppb and Benzene at 4 ppb.

63 Laboratory report indicates cis-1,2-Dichloroethene was detected at 2 ppb.

64 Laboratory report indicates Surrogate recoveries are outside of QC limits for the GC/MS volatile fraction. The analysis was repeated several times and the surrogate recoveries were within QC limits but were unable to be reported due to other QC issues. The re-analysis results confirmed the reported results for the target compounds.

65 Laboratory report indicates cis-1,2-Dichloroethane was detected at 1µg/L and Toluene at 0.7 µg/L.

66 Laboratory report indicates cis-1,2-Dichloroethene was detected at 1µg/L, Benzene at 10 µg/L and Toluene at 0.5 µg/L.

67 Laboratory report indicates cis-1,2-Dichloroethene was detected at 1µg/L.

68 Laboratory reports indicates reporting limits for GC/MS volatile compounds were raised due to sample foaming.

69 Laboratory report indicates cis-1,2-Dichloroethene was detected at 5 µg/L and Benzene at 0.6 µg/L.

70 Laboratory report indicates cis-1,2-Dichloroethene was detected at 3 µg/L and Benzene at 2 µg/L.

71 Laboratory report indicates cis-1,2-Dichloroethene was detected at 2 µg/L.

72 Laboratory report indicates cis-1,2-Dichloroethene was detected at 3 µg/L and Benzene at 3 µg/L.

NOTE: All other Full Scan Volatile Organic Compounds (VOCs) were less than the reporting limit, unless noted above.

RE: **Well Destruction Report**
Chevron-branded Service Station 9-4259
147 East Santa Clara Street
San Jose, California

DRAFT

Dear Ms. Lee:

On behalf of Chevron Environmental Management Company (Chevron), Stantec Consulting Corporation (Stantec) is pleased to submit this letter report for the destruction of twenty (20) groundwater monitoring wells, extraction wells, and piezometers (wells) associated with Chevron-branded service station 9-4259 located at 147 East Santa Clara Street, San Jose, California (the Site; shown on ***Figure 1***). In a letter dated December 9, 2009 (included in ***Attachment A***), the County of Santa Clara Department of Environmental Health (CSCDEH) issued a letter indicating closure concurrence with the Regional Water Quality Control Board (RWQCB) and requested that all wells be destroyed prior to case closure. The CSCDEH letter referenced 22 wells associated with the Site; however, Stantec verified with the Santa Clara Valley Water District (SCVWD) that only 20 active wells still remained associated with the Site. It was confirmed that monitoring wells MW-6 and MW-8 were previously removed in March 1990.

WELL DESTRUCTION ACTIVITIES

Stantec obtained well destruction permits for the 20 on-site and off-site wells from the SCVWD (included in ***Attachment B***). The locations of the wells are shown on ***Figure 2***.

Prior to well destruction activities, Stantec prepared a Site-specific health and safety plan, which was available on Site for use by Stantec field personnel. Well destruction activities were conducted by WDC Exploration & Wells (WDC), a C-57 California State-licensed drilling company located in Richmond, California. To verify the wells were unobstructed, WDC measured the total depth of each well prior to well destruction activities. Stantec supervised all field activities under the direction of a California-professional geologist. Mr. Todd Bridgen of the SCVWD witnessed the destructions of the Site wells.

Based upon well construction details, Mr. Todd Bridgen authorized the following during the week of March 15, 2010:

- On March 15, 2010, WDC destroyed on-site wells MW-2 and MW-4 by over-drilling method, removing excess well materials, and filling the entire length of the borehole using neat cement (Portland cement plus bentonite powder);
- On March 16, 2010, WDC destroyed on-site wells MW-1, MW-3, MW-5, MW-7, MW-9, MW-10, MW-11, EW-1, EW-2, EW-3, and EW-4 by pressure grouting the entire length of the screen and blank casing to ground surface; and
- On March 17, 2010, WDC destroyed off-site wells MW-12, MW-13, MW-14, MW-15, MW-16, PZ-1, and PZ-2 by pressure grouting the entire length of the screen and blank casing to ground surface.

Following the completion of well destruction activities, Stantec submitted Department of Water Resources (DWR) Well Completion Reports (Form 188) for each of the 20 destroyed wells to the DWR and SCVWD. Well Completion Reports (Form 188) and Well Destruction Completion Notices (Form 218) are included in ***Attachment C***.

Former on-site extraction well vaults were removed March 29 and 30, 2010, cavities were backfilled, and asphalt surfaces were restored.

If you have any question or wish to discuss this report in more detail, please contact Stantec Project Manager Travis Flora at (408) 356-6124 or travis.flora@stantec.com.

Sincerely,
Stantec Consulting Corporation

Subject: Fuel Leak Investigation: Chevron Station No. 9-4259, 147 East Santa Clara Street, San Jose, CA; Case No. 03-014, SCVWDID No. 07S1E08L01f

Dear Mr. Robb:

We have received case closure concurrence from the Regional Water Quality Control Board for your case. Our records indicate that there are currently 22 groundwater monitoring wells on and offsite associated with the investigation of the release at your site. Please destroy all wells in accordance with the Santa Clara Valley Water Districts' Well Ordinance. Please submit a letter report to our office following well destruction activities. Once the wells have been properly closed, the case closure letter and documents will be issued.

If you have any questions, please feel free to contact me at (408) 918-1977.

WELL DESTRUCTION APPLICATION

Please describe in detail, the proposed destruction method (Any well destruction in which the well casing is left in place and in which the well has a filter pack outside the casing, must be destroyed using approved neat cement grout):

Well will be destroyed by filling the casing wih neat portland cement with tremy pipe. Once the casing is filled pressure will be applies the to casing to fill the filter pack outside the casing. All wells will be destroyed in accordance to Santa Clara Valley Water District inspector instructions.

SIGNATURES

I understand and agree that all work associated with this permit is required to be done in accordance with Santa Clara Valley Water District (District) Well Ordinance 90-1, the District Well Standards, and conditions of this permit (see page 4). I certify that the information given in this permit is correct to the best of my knowledge and that the signature below, whether original, electronic, or photocopied, is authorized and valid, and is affixed with the intent to be enforceable. I also certify that a right of entry/encroachment agreement has been formalized between the well owner and property owner, if parties differ.

DISTRICT USE ONLY

The District has approved the following destruction methods for the well described in this permit:

☒ Pressure Grout Method (as outlined in Standards)
NOTE: Neat cement is the only sealing material approved for pressure grouting.

OR

☒ Drill out well to a total depth of 40 feet, with a minimum bore of 12 Inches.

☐ Clean out well casing to a total depth of _____ feet and back fill with approved sealing material (if total depth is unknown, driller must determine total depth during clean out of well). NOTE: Neat cement is the only sealing material approved for back filling gravel packed wells.

☐ Well casing must be perforated at the following depths prior to backfilling: _____

☐ Other: Screened to 32'- must sound to ~32' to qualify for pressure grouting.

Permit Approved by:	Date:
B. Cr	2-11-10

WELL DESTRUCTION APPLICATION

GENERAL CONDITIONS

A. **District** (telephone 408-265-2607, ext. 2660) **must be notified a minimum of one working day before the placement of the well destruction sealing materials**. An authorized District representative must be on site to witness the destruction activities. This requirement may be waived by an authorized District representative. If the District waives the inspection requirement, the District may request the permittee(s) to furnish certification under penalty of perjury that the well was destroyed in accordance with the District Well Standards and with the permit conditions.

B. This permit is valid only for the purpose specified herein. Well destruction methods authorized under this permit may not be changed except by written approval of an authorized District representative, and only if the District believes that such a change will result in equal or superior compliance with the District and State Well Standards (e.g., if the District representative believes that site conditions warrant such a change).

C. This permit is only valid for the Assessor's Parcel No. indicated on it.

D. This permit may be voided if it contains incorrect information. If the permit is voided after work has begun, the well or boring that is being destroyed under this permit may be required to be reconstructed in accordance with District and State Well Standards.

E. If any work associated with this permit will take place on District property/easement, an encroachment or construction permit must be granted by the District's Community Projects Review Unit (telephone 408-265-2607, ext. 2350, 2217, or 2253).

F. Within 30 days of the completion of the well destruction activities, the driller or consultant identified on this permit shall fully complete State of California DWR Form 188 and submit the original to the District's Wells and Water Production Unit.

G. The permittee(s) shall assume entire responsibility for all activities and uses under this permit and shall indemnify, defend, and hold the District, its officers, agents, and employees free and harmless from any and all expense, cost, and liability in connection with or resulting from, the granting of or exercise of this permit including, but not limited to, property damage, personal injury, and wrongful death.

H. Permittees are required to be in full compliance with Cal/OSHA California Labor Code Section 6300.

I. A current C-57 Water Well Drilling Contractor's License is required for the destruction of all wells.

J. Permittee, permittee's contractors, consultants, or agents shall be responsible to assure that all materials generated during drilling, well destruction, well development, pump testing, or other activities associated with this permit will be safely handled, properly managed, and disposed of according to all applicable federal, state, and local statutes regulating such. In no case shall these materials/waters be allowed to enter, or potentially enter, on- or off-site storm sewers, dry wells, or waterways. Such materials/waters shall not be allowed to move off the property where the work is being completed.

K. The driller and consultants (if applicable) shall have an active copy of their Worker's Compensation Insurance on file with the District.

L. This permit shall expire if not exercised within 180 calendar days of its approval unless an extension of the permit expiration date is granted by an authorized District representative.

M. If the well approved to be destroyed under this permit is a monitoring well, associated with an investigation/cleanup overseen by a regulatory agency, the proposed well destruction must be approved by the person with regulatory authority over the investigation/cleanup.

N. This permit must be kept on site during all activities associated with it and shall immediately be presented to an authorized District representative upon request.

Please allow 10 working days to process this application.

DRAFT

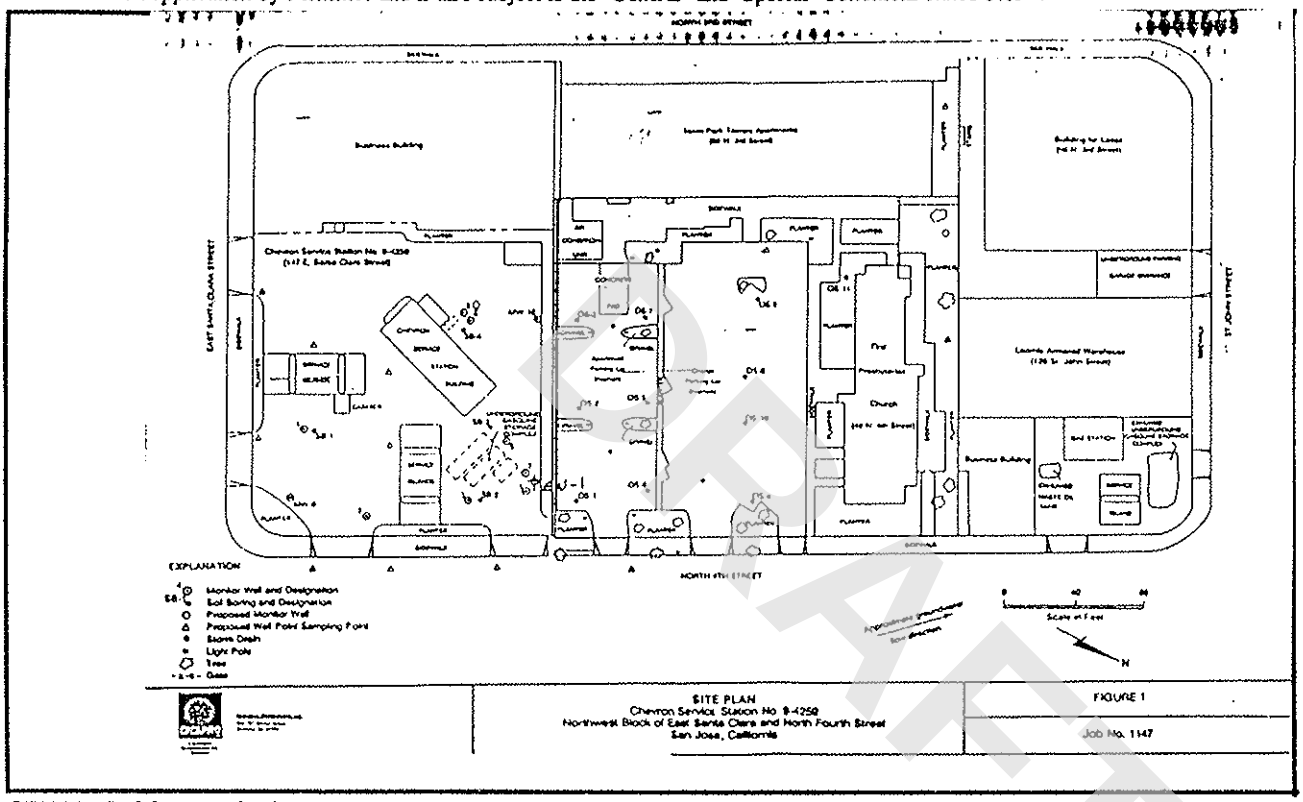
DISTRICT WELL PERMIT NO.: 90W0575 WELL CONSTRUCTION APPLICATION

Based on information on the application and attachment(s) hereto (if any) and subject to approval noted below, permission is hereby granted to construct (drill) the described well. Permission to start may be withheld until a field check verifies all statements made on application by Permittee and is also subject to the "General" and "Special" Conditions stated below.



DRAFT

GENERAL CONDITIONS

A. S.C.V.W.D. Well Inspection Department (Telephone 408-265-2600, ext. 380) must be notified a minimum of one working day prior to starting work.
Construction under this Permit is subject to any instructions by District representative relative to the "Standards for the Construction of Wells in Santa Clara County". A District Inspector must be on site to witness all annular sanitary seals.

B. Permit may be voided before work begins if field check reveals any misrepresentation under "well location" or "Topographic Features" on application.

C. This Permit is valid only for the purpose specified herein. No change in construction procedure as prescribed in District Standards and in Special Conditions below will be allowed except upon written permission of the District.

D. Permittee shall assume entire responsibility for all activities and uses under this Permit and shall indemnify, defend and save the District, its officers, agents and employees free and harmless from any and all expense, cost or liability in connection with or resulting from the exercise of this Permit including, but not limited to, property damage, personal injury and wrongful death.

E. Compliance with "CAL/OSHA", California Labor Code Section 6300 (and following) is required.

F. Water quality and production from all wells to be used for public water supply must be approved by the County Environmental Health Services.

G. Permit will be automatically canceled if not exercised or if extension is not requested by Permittee within 90 calendar days.

H. Driller is to complete State DWR Form 188 and mail original to Santa Clara Valley Water District within 7 days of completion of well construction.

I. For the construction of all types of wells, a Permittee must be a licensed C-57 water well drilling contractor.

J. Dry holes shall be backfilled within one week of drilling. Backfilling shall be done in accordance with District Standards.

K. Each well requires a separate Well Construction Application and Permit.

L. Permittee shall seal all abandoned wells on the property.

WELL DESTRUCTION APPLICATION

Please describe in detail, the proposed destruction method (Any well destruction in which the well casing is left in place and in which the well has a filter pack outside the casing, must be destroyed using approved neat cement grout):

Well will be destroyed by filling the casing wih neat portland cement with tremy pipe. Once the casing is filled pressure will be applies the to casing to fill the filter pack outside the casing. All wells will be destroyed in accordance to Santa Clara Valley Water District inspector instructions.

SIGNATURES

I understand and agree that all work associated with this permit is required to be done in accordance with Santa Clara Valley Water District (District) Well Ordinance 90-1, the District Well Standards, and conditions of this permit (see page 4). I certify that the information given in this permit is correct to the best of my knowledge and that the signature below, whether original, electronic, or photocopied, is authorized and valid, and is affixed with the intent to be enforceable. I also certify that a right of entry/encroachment agreement has been formalized between the well owner and property owner, if parties differ.

Signature of Well Owner/Agent:	Print Name: SUCHEON SUNG	Date: 2/3/2010
Signature of Property Owner/Agent:	Print Name: SUCHEON SUNG	Date: 2/3/2010
Signature of Driller/Agent:	Print Name: SUCHEON SUNG	Date: 2/3/2010
Signature of Consultant/Agent (if any):	Print Name: SUCHEON SUNG	Date: 2/3/2010

DISTRICT USE ONLY

The District has approved the following destruction methods for the well described in this permit:

☒ Pressure Grout Method (as outlined in Standards)
NOTE: Neat cement is the only sealing material approved for pressure grouting.

☒ Drill out well to a total depth of 34.5 feet, with a minimum bore of 12 inches.

☐ Clean out well casing to a total depth of _____ feet and back fill with approved sealing material (if total depth is unknown, driller must determine total depth during clean out of well). NOTE: Neat cement is the only sealing material approved for back filling gravel packed wells.

☐ Well casing must be perforated at the following depths prior to backfilling: _____

☐ Other: _____

Permit Approved by: B. Cerna			Date: 2-11-10
District Permit No.: 10D0019	Date Issued: 2/11/10	Expiration Date: 8/11/10	Driller's Log No.: E0103961

Please allow 10 working days to process this application.

(408) 265-2600

WELL DESTRUCTION APPLICATION

GENERAL CONDITIONS

A. **District** (telephone 408-265-2607, ext. 2660) **must be notified a minimum of one working day before the placement of the well destruction sealing materials**. An authorized District representative must be on site to witness the destruction activities. This requirement may be waived by an authorized District representative. If the District waives the inspection requirement, the District may request the permittee(s) to furnish certification under penalty of perjury that the well was destroyed in accordance with the District Well Standards and with the permit conditions.

B. This permit is valid only for the purpose specified herein. Well destruction methods authorized under this permit may not be changed except by written approval of an authorized District representative, and only if the District believes that such a change will result in equal or superior compliance with the District and State Well Standards (e.g., if the District representative believes that site conditions warrant such a change).

C. This permit is only valid for the Assessor's Parcel No. indicated on it.

D. This permit may be voided if it contains incorrect information. If the permit is voided after work has begun, the well or boring that is being destroyed under this permit may be required to be reconstructed in accordance with District and State Well Standards.

E. If any work associated with this permit will take place on District property/easement, an encroachment or construction permit must be granted by the District's Community Projects Review Unit (telephone 408-265-2607, ext. 2350, 2217, or 2253).

F. Within 30 days of the completion of the well destruction activities, the driller or consultant identified on this permit shall fully complete State of California DWR Form 188 and submit the original to the District's Wells and Water Production Unit.

G. The permittee(s) shall assume entire responsibility for all activities and uses under this permit and shall indemnify, defend, and hold the District, its officers, agents, and employees free and harmless from any and all expense, cost, and liability in connection with or resulting from, the granting of or exercise of this permit including, but not limited to, property damage, personal injury, and wrongful death.

H. Permittees are required to be in full compliance with Cal/OSHA California Labor Code Section 6300.

I. A current C-57 Water Well Drilling Contractor's License is required for the destruction of all wells.

J. Permittee, permittee's contractors, consultants, or agents shall be responsible to assure that all materials generated during drilling, well destruction, well development, pump testing, or other activities associated with this permit will be safely handled, properly managed, and disposed of according to all applicable federal, state, and local statutes regulating such. In no case shall these materials/waters be allowed to enter, or potentially enter, on- or off-site storm sewers, dry wells, or waterways. Such materials/waters shall not be allowed to move off the property where the work is being completed.

K. The driller and consultants (if applicable) shall have an active copy of their Worker's Compensation Insurance on file with the District.

L. This permit shall expire if not exercised within 180 calendar days of its approval unless an extension of the permit expiration date is granted by an authorized District representative.

M. If the well approved to be destroyed under this permit is a monitoring well, associated with an investigation/cleanup overseen by a regulatory agency, the proposed well destruction must be approved by the person with regulatory authority over the investigation/cleanup.

N. This permit must be kept on site during all activities associated with it and shall immediately be presented to an authorized District representative upon request.

Please allow 10 working days to process this application.

DRAFT

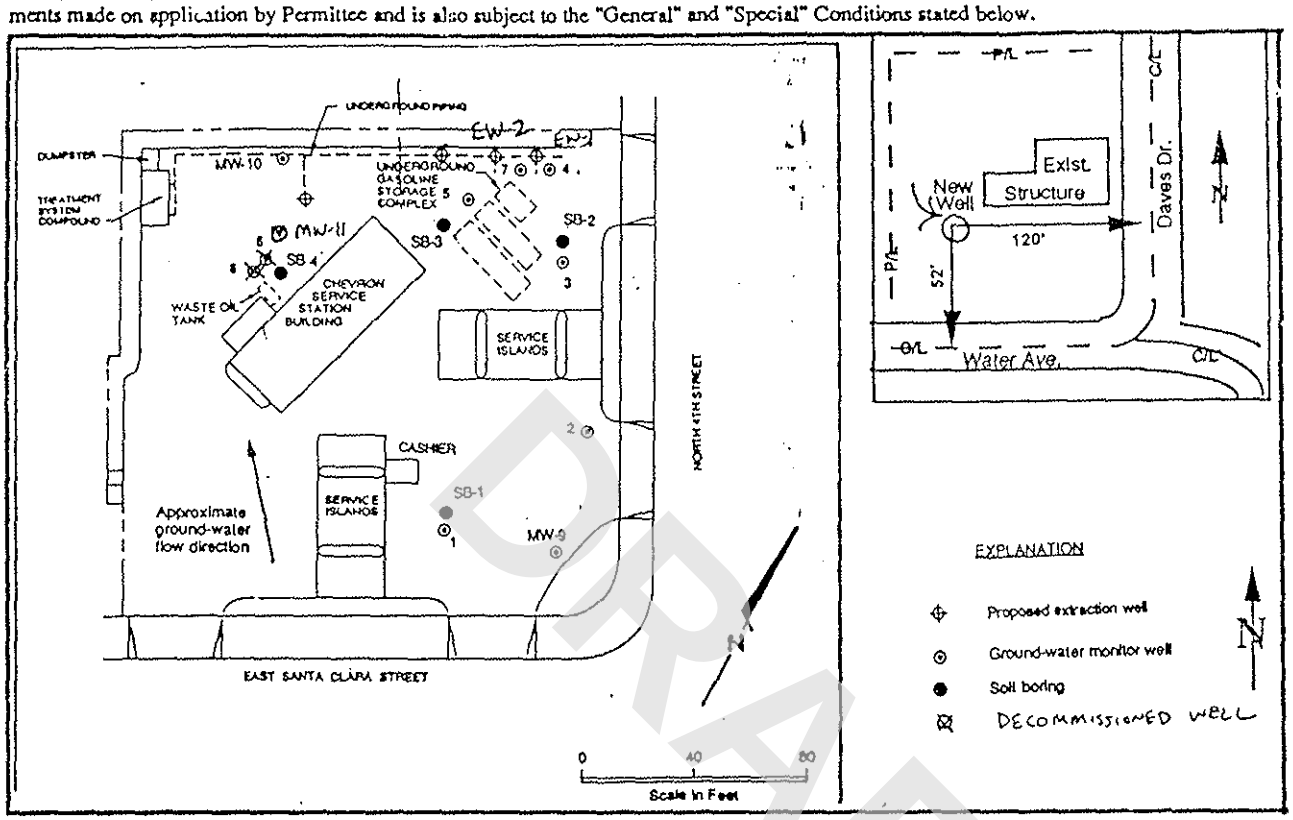
DISTRICT WELL PERMIT NO.: 90W0922 WELL CONSTRUCTION APPLICATION

Based on information on the application and attachment(s) hereto (if any) and subject to approval noted below, permission is hereby granted to construct (drill) the described well. Permission to start may be withheld until a field check verifies all statements made on application by Permittee and is also subject to the "General" and "Special" Conditions stated below.



DRAFT

GENERAL CONDITIONS

A. S.C.V.W.D. Well Inspection Department (Telephone 408-265-2600, ext. 380) must be notified a minimum of one working day prior to starting work.
Construction under this Permit is subject to any instructions by District representative relative to the "Standards for the Construction of Wells in Santa Clara County". A District Inspector must be on site to witness all annular sanitary seals.

B. Permit may be voided before work begins if field check reveals any misrepresentation under "well location" or "Topographic Features" on application.

C. This Permit is valid only for the purpose specified herein. No change in construction procedure as prescribed in District Standards and in Special Conditions below will be allowed except upon written permission of the District.

D. Permittee shall assume entire responsibility for all activities and uses under this Permit and shall indemnify, defend and save the District, its officers, agents and employees free and harmless from any and all expense, cost or liability in connection with or resulting from the exercise of this Permit including, but not limited to, property damage, personal injury and wrongful death.

E. Compliance with "CAL/OSHA", California Labor Code Section 6300 (and following) is required.

F. Water quality and production from all wells to be used for public water supply must be approved by the County Environmental Health Services.

G. Permit will be automatically canceled if not exercised or if extension is not requested by Permittee within 90 calendar days.

H. Driller is to complete State DWR Form 188 and mail original to Santa Clara Valley Water District within 7 days of completion of well construction.

I. For the construction of all types of wells, a Permittee must be a licensed C-57 water well drilling contractor.

J. Dry holes shall be backfilled within one week of drilling. Backfilling shall be done in accordance with District Standards.

K. Each well requires a separate Well Construction Application and Permit.

L. Permittee shall seal all abandoned wells on the property.

BORING TERMINATED AT 34.5 FEET.	
				40				

REMARKS
Boring drilled using 12-inch diameter hollow-stem augers. Soil samples were collected using a 2-inch diameter modified-California split-spoon sampler. A four-inch diameter groundwater extraction well was installed.

WELL DESTRUCTION APPLICATION

Please describe in detail, the proposed destruction method (Any well destruction in which the well casing is left in place and in which the well has a filter pack outside the casing, must be destroyed using approved neat cement grout):

Well will be destroyed by filling the casing wih neat portland cement with tremy pipe. Once the casing is filled pressure will be applies the to casing to fill the filter pack outside the casing. All wells will be destroyed in accordance to Santa Clara Valley Water District inspector instructions.

SIGNATURES

I understand and agree that all work associated with this permit is required to be done in accordance with Santa Clara Valley Water District (District) Well Ordinance 90-1, the District Well Standards, and conditions of this permit (see page 4). I certify that the information given in this permit is correct to the best of my knowledge and that the signature below, whether original, electronic, or photocopied, is authorized and valid, and is affixed with the intent to be enforceable. I also certify that a right of entry/encroachment agreement has been formalized between the well owner and property owner, if parties differ.

Signature of Well Owner/Agent:	Print Name: SUCHEON SUNG	Date: 2/3/2010
Signature of Property Owner/Agent:	Print Name: SUCHEON SUNG	Date: 2/3/2010
Signature of Driller/Agent:	Print Name: SUCHEON SUNG	Date: 2/3/2010
Signature of Consultant/Agent (if any):	Print Name: SUCHEON SUNG	Date: 2/3/2010

DISTRICT USE ONLY

The District has approved the following destruction methods for the well described in this permit:

☑ Pressure Grout Method (as outlined in Standards)
NOTE: Neat cement is the only sealing material approved for pressure grouting.

OR

☒ Drill out well to a total depth of 33 feet, with a minimum bore of 12 Inches.

☐ Clean out well casing to a total depth of _____ feet and back fill with approved sealing material (if total depth is unknown, driller must determine total depth during clean out of well). NOTE: Neat cement is the only sealing material approved for back filling gravel packed wells.

☐ Well casing must be perforated at the following depths prior to backfilling: _____

☐ Other: _____

Permit Approved by: B. Cerna			Date: 2-11-10
District Permit No.: 1ODC0111	Date Issued: 2/11/10	Expiration Date: 8/11/10	Driller's Log No.: E0105356

Please allow 10 working days to process this application.

DRAFT

Santa Clara Valley Water District

(408) 265-2600

WELL DESTRUCTION APPLICATION

GENERAL CONDITIONS

A. **District** (telephone 408-265-2607, ext. 2660) **must be notified a minimum of one working day before the placement of the well destruction sealing materials**. An authorized District representative must be on site to witness the destruction activities. This requirement may be waived by an authorized District representative. If the District waives the inspection requirement, the District may request the permittee(s) to furnish certification under penalty of perjury that the well was destroyed in accordance with the District Well Standards and with the permit conditions.

B. This permit is valid only for the purpose specified herein. Well destruction methods authorized under this permit may not be changed except by written approval of an authorized District representative, and only if the District believes that such a change will result in equal or superior compliance with the District and State Well Standards (e.g., if the District representative believes that site conditions warrant such a change).

C. This permit is only valid for the Assessor's Parcel No. indicated on it.

D. This permit may be voided if it contains incorrect information. If the permit is voided after work has begun, the well or boring that is being destroyed under this permit may be required to be reconstructed in accordance with District and State Well Standards.

E. If any work associated with this permit will take place on District property/easement, an encroachment or construction permit must be granted by the District's Community Projects Review Unit (telephone 408-265-2607, ext. 2350, 2217, or 2253).

F. Within 30 days of the completion of the well destruction activities, the driller or consultant identified on this permit shall fully complete State of California DWR Form 188 and submit the original to the District's Wells and Water Production Unit.

G. The permittee(s) shall assume entire responsibility for all activities and uses under this permit and shall indemnify, defend, and hold the District, its officers, agents, and employees free and harmless from any and all expense, cost, and liability in connection with or resulting from, the granting of or exercise of this permit including, but not limited to, property damage, personal injury, and wrongful death.

H. Permittees are required to be in full compliance with Cal/OSHA California Labor Code Section 6300.

I. A current C-57 Water Well Drilling Contractor's License is required for the destruction of all wells.

J. Permittee, permittee's contractors, consultants, or agents shall be responsible to assure that all materials generated during drilling, well destruction, well development, pump testing, or other activities associated with this permit will be safely handled, properly managed, and disposed of according to all applicable federal, state, and local statutes regulating such. In no case shall these materials/waters be allowed to enter, or potentially enter, on- or off-site storm sewers, dry wells, or waterways. Such materials/waters shall not be allowed to move off the property where the work is being completed.

K. The driller and consultants (if applicable) shall have an active copy of their Worker's Compensation Insurance on file with the District.

L. This permit shall expire if not exercised within 180 calendar days of its approval unless an extension of the permit expiration date is granted by an authorized District representative.

M. If the well approved to be destroyed under this permit is a monitoring well, associated with an investigation/cleanup overseen by a regulatory agency, the proposed well destruction must be approved by the person with regulatory authority over the investigation/cleanup.

N. This permit must be kept on site during all activities associated with it and shall immediately be presented to an authorized District representative upon request.

Please allow 10 working days to process this application.

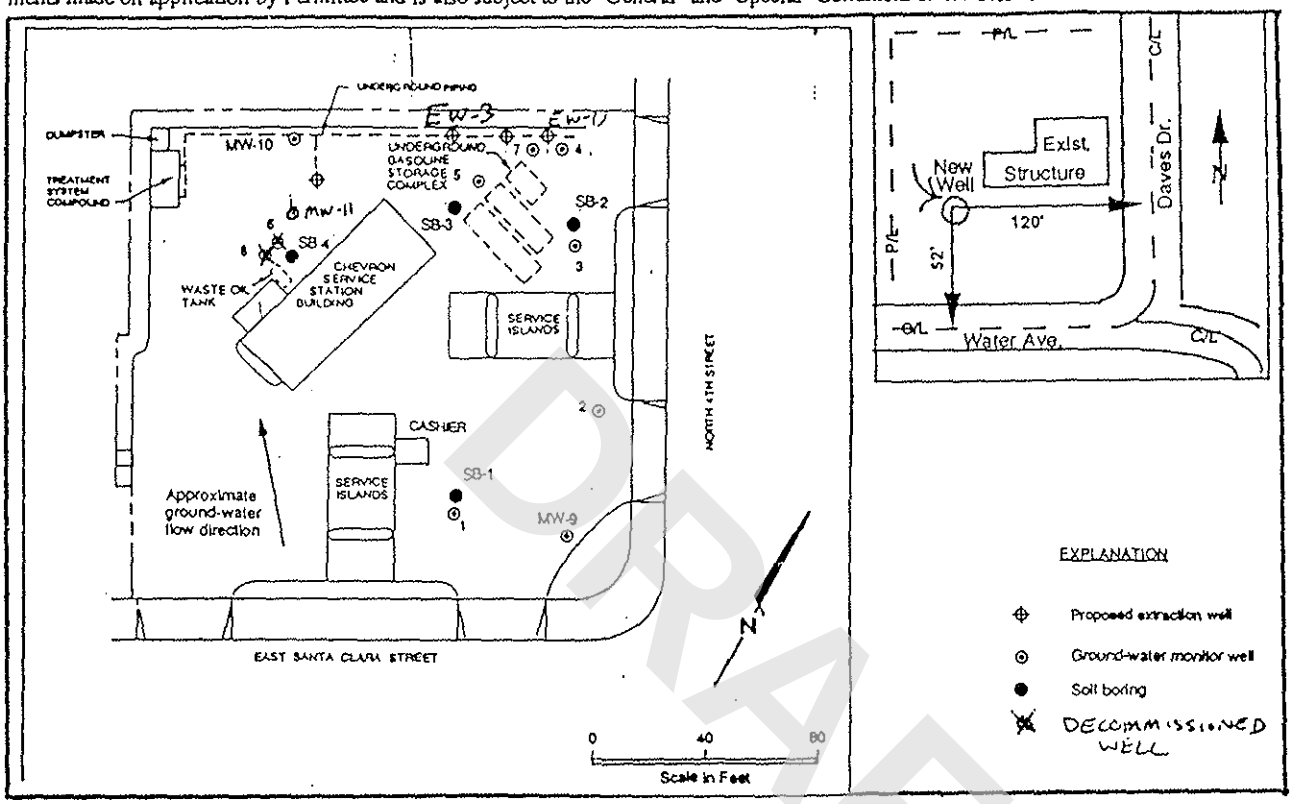
DISTRICT WELL PERMIT NO.: 90WC923 WELL CONSTRUCTION APPLICATION

Based on information on the application and attachment(s) hereto (if any) and subject to approval noted below, permission is hereby granted to construct (drill) the described well. Permission to start may be withheld until a field check verifies all statements made on application by Permittee and is also subject to the "General" and "Special" Conditions stated below.



DRAFT

GENERAL CONDITIONS

A. S.C.V.W.D. Well Inspection Department (Telephone 408-265-2600, ext. 380) must be notified a minimum of one working day prior to starting work.
Construction under this Permit is subject to any instructions by District representative relative to the "Standards for the Construction of Wells in Santa Clara County". A District Inspector must be on site to witness all annular sanitary seals.

B. Permit may be voided before work begins if field check reveals any misrepresentation under "well location" or "Topographic Features" on application.

C. This Permit is valid only for the purpose specified herein. No change in construction procedure as prescribed in District Standards and in Special Conditions below will be allowed except upon written permission of the District.

D. Permittee shall assume entire responsibility for all activities and uses under this Permit and shall indemnify, defend and save the District, its officers, agents and employees free and harmless from any and all expense, cost or liability in connection with or resulting from the exercise of this Permit including, but not limited to, property damage, personal injury and wrongful death.

E. Compliance with "CAL/OSHA", California Labor Code Section 6300 (and following) is required.

F. Water quality and production from all wells to be used for public water supply must be approved by the County Environmental Health Services.

G. Permit will be automatically canceled if not exercised or if extension is not requested by Permittee within 90 calendar days.

H. Driller is to complete State DWR Form 188 and mail original to Santa Clara Valley Water District within 7 days of completion of well construction.

I. For the construction of all types of wells, a Permittee must be a licensed C-57 water well drilling contractor.

J. Dry holes shall be backfilled within one week of drilling. Backfilling shall be done in accordance with District Standards.

K. Each well requires a separate Well Construction Application and Permit.

L. Permittee shall seal all abandoned wells on the property.

San Jose, CA 95118-3686
(408) 265-2600

WELL DESTRUCTION APPLICATION

GENERAL CONDITIONS

A. **District** (telephone 408-265-2607, ext. 2660) **must be notified a minimum of one working day before the placement of the well destruction sealing materials**. An authorized District representative must be on site to witness the destruction activities. This requirement may be waived by an authorized District representative. If the District waives the inspection requirement, the District may request the permittee(s) to furnish certification under penalty of perjury that the well was destroyed in accordance with the District Well Standards and with the permit conditions.

B. This permit is valid only for the purpose specified herein. Well destruction methods authorized under this permit may not be changed except by written approval of an authorized District representative, and only if the District believes that such a change will result in equal or superior compliance with the District and State Well Standards (e.g., if the District representative believes that site conditions warrant such a change).

C. This permit is only valid for the Assessor's Parcel No. indicated on it.

D. This permit may be voided if it contains incorrect information. If the permit is voided after work has begun, the well or boring that is being destroyed under this permit may be required to be reconstructed in accordance with District and State Well Standards.

E. If any work associated with this permit will take place on District property/easement, an encroachment or construction permit must be granted by the District's Community Projects Review Unit (telephone 408-265-2607, ext. 2350, 2217, or 2253).

F. Within 30 days of the completion of the well destruction activities, the driller or consultant identified on this permit shall fully complete State of California DWR Form 188 and submit the original to the District's Wells and Water Production Unit.

G. The permittee(s) shall assume entire responsibility for all activities and uses under this permit and shall indemnify, defend, and hold the District, its officers, agents, and employees free and harmless from any and all expense, cost, and liability in connection with or resulting from, the granting of or exercise of this permit including, but not limited to, property damage, personal injury, and wrongful death.

H. Permittees are required to be in full compliance with Cal/OSHA California Labor Code Section 6300.

I. A current C-57 Water Well Drilling Contractor's License is required for the destruction of all wells.

J. Permittee, permittee's contractors, consultants, or agents shall be responsible to assure that all materials generated during drilling, well destruction, well development, pump testing, or other activities associated with this permit will be safely handled, properly managed, and disposed of according to all applicable federal, state, and local statutes regulating such. In no case shall these materials/waters be allowed to enter, or potentially enter, on- or off-site storm sewers, dry wells, or waterways. Such materials/waters shall not be allowed to move off the property where the work is being completed.

K. The driller and consultants (if applicable) shall have an active copy of their Worker's Compensation Insurance on file with the District.

L. This permit shall expire if not exercised within 180 calendar days of its approval unless an extension of the permit expiration date is granted by an authorized District representative.

M. If the well approved to be destroyed under this permit is a monitoring well, associated with an investigation/cleanup overseen by a regulatory agency, the proposed well destruction must be approved by the person with regulatory authority over the investigation/cleanup.

N. This permit must be kept on site during all activities associated with it and shall immediately be presented to an authorized District representative upon request.

Please allow 10 working days to process this application.

WELL DESTRUCTION APPLICATION

Please describe in detail, the proposed destruction method (Any well destruction in which the well casing is left in place and in which the well has a filter pack outside the casing, must be destroyed using approved neat cement grout):

Well will be destroyed by filling the casing wih neat portland cement with tremy pipe. Once the casing is filled pressure will be applies the to casing to fill the filter pack outside the casing. All wells will be destroyed in accordance to Santa Clara Valley Water District inspector instructions.

SIGNATURES

I understand and agree that all work associated with this permit is required to be done in accordance with Santa Clara Valley Water District (District) Well Ordinance 90-1, the District Well Standards, and conditions of this permit (see page 4). I certify that the information given in this permit is correct to the best of my knowledge and that the signature below, whether original, electronic, or photocopied, is authorized and valid, and is affixed with the intent to be enforceable. I also certify that a right of entry/encroachment agreement has been formalized between the well owner and property owner, if parties differ.

	SUCHEON SUNG	2/3/2010

DISTRICT USE ONLY

The District has approved the following destruction methods for the well described in this permit:

☒ Pressure Grout Method (as outlined in Standards)
NOTE: Neat cement is the only sealing material approved for pressure grouting.

OR

☒ Drill out well to a total depth of 33 feet, with a minimum bore of 12 Inches.

☐ Clean out well casing to a total depth of _____ feet and back fill with approved sealing material (if total depth is unknown, driller must determine total depth during clean out of well). NOTE: Neat cement is the only sealing material approved for back filling gravel packed wells.

☐ Well casing must be perforated at the following depths prior to backfilling: _____

☐ Other: _____

DRAFT

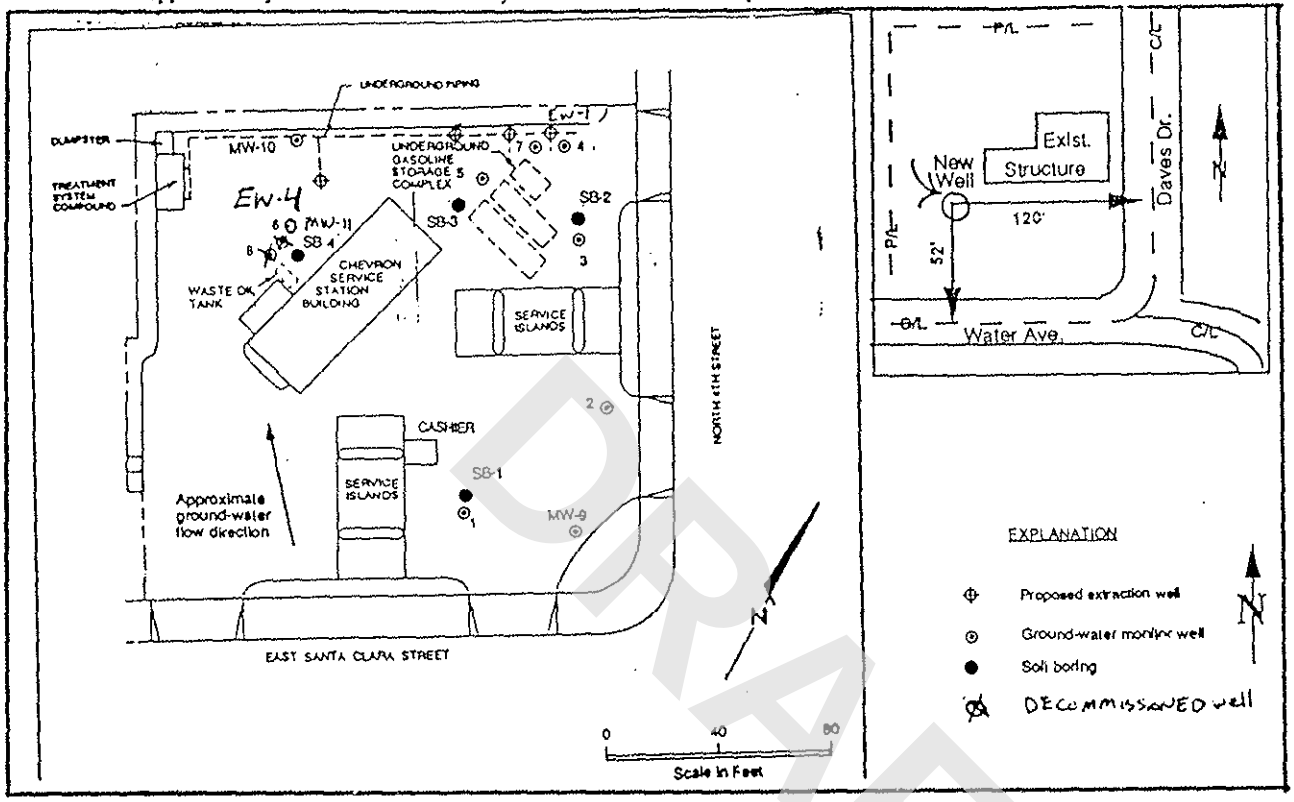
DISTRICT WELL PERMIT NO.: 90WM24 WELL CONSTRUCTION APPLICATION

Based on information on the application and attachment(s) hereto (if any) and subject to approval noted below, permission is hereby granted to construct (drill) the described well. Permission to start may be withheld until a field check verifies all statements made on application by Permittee and is also subject to the "General" and "Special" Conditions stated below.



DRAFT

GENERAL CONDITIONS

A. S.C.V.W.D. Well Inspection Department (Telephone 408-265-2600, ext. 380) must be notified a minimum of one working day prior to starting work.
Construction under this Permit is subject to any instructions by District representative relative to the "Standards for the Construction of Wells in Santa Clara County". A District Inspector must be on site to witness all annular sanitary seals.

B. Permit may be voided before work begins if field check reveals any misrepresentation under "well location" or "Topographic Features" on application.

C. This Permit is valid only for the purpose specified herein. No change in construction procedure as prescribed in District Standards and in Special Conditions below will be allowed except upon written permission of the District.

D. Permittee shall assume entire responsibility for all activities and uses under this Permit and shall indemnify, defend and save the District, its officers, agents and employees free and harmless from any and all expense, cost or liability in connection with or resulting from the exercise of this Permit including, but not limited to, property damage, personal injury and wrongful death.

E. Compliance with "CAL/OSHA", California Labor Code Section 6300 (and following) is required.

F. Water quality and production from all wells to be used for public water supply must be approved by the County Environmental Health Services.

G. Permit will be automatically canceled if not exercised or if extension is not requested by Permittee within 90 calendar days.

H. Driller is to complete State DWR Form 188 and mail original to Santa Clara Valley Water District within 7 days of completion of well construction.

I. For the construction of all types of wells, a Permittee must be a licensed C-57 water well drilling contractor.

J. Dry holes shall be backfilled within one week of drilling. Backfilling shall be done in accordance with District Standards.

K. Each well requires a separate Well Construction Application and Permit.

L. Permittee shall seal all abandoned wells on the property.

WELL DESTRUCTION APPLICATION

Please describe in detail, the proposed destruction method (Any well destruction in which the well casing is left in place and in which the well has a filter pack outside the casing, must be destroyed using approved neat cement grout):

Well will be destroyed by filling the casing wih neat portland cement with tremy pipe. Once the casing is filled pressure will be applies the to casing to fill the filter pack outside the casing. All wells will be destroyed in accordance to Santa Clara Valley Water District inspector instructions.

SIGNATURES

I understand and agree that all work associated with this permit is required to be done in accordance with Santa Clara Valley Water District (District) Well Ordinance 90-1, the District Well Standards, and conditions of this permit (see page 4). I certify that the information given in this permit is correct to the best of my knowledge and that the signature below, whether original, electronic, or photocopied, is authorized and valid, and is affixed with the intent to be enforceable. I also certify that a right of entry/encroachment agreement has been formalized between the well owner and property owner, if parties differ.

Signature of Driller/Agent:	Suchtow Sung	2/3/2010
Signature of Consultant/Agent (if any):	Suchtow Sung	2/3/2010

DISTRICT USE ONLY

The District has approved the following destruction methods for the well described in this permit:

☐ Pressure Grout Method (as outlined in Standards)
NOTE: Neat cement is the only sealing material approved for pressure grouting.

☒ Drill out well to a total depth of 21 feet, with a minimum bore of 6 Inches.

☐ Clean out well casing to a total depth of _____ feet and back fill with approved sealing material (if total depth is unknown, driller must determine total depth during clean out of well). NOTE: Neat cement is the only sealing material approved for back filling gravel packed wells.

☐ Well casing must be perforated at the following depths prior to backfilling: _____

☐ Other: 2.5' seal
less than 2' annulgr space

WELL DESTRUCTION APPLICATION

GENERAL CONDITIONS

A. **District** (telephone 408-265-2607, ext. 2660) **must be notified a minimum of one working day before the placement of the well destruction sealing materials**. An authorized District representative must be on site to witness the destruction activities. This requirement may be waived by an authorized District representative. If the District waives the inspection requirement, the District may request the permittee(s) to furnish certification under penalty of perjury that the well was destroyed in accordance with the District Well Standards and with the permit conditions.

B. This permit is valid only for the purpose specified herein. Well destruction methods authorized under this permit may not be changed except by written approval of an authorized District representative, and only if the District believes that such a change will result in equal or superior compliance with the District and State Well Standards (e.g., if the District representative believes that site conditions warrant such a change).

C. This permit is only valid for the Assessor's Parcel No. indicated on it.

D. This permit may be voided if it contains incorrect information. If the permit is voided after work has begun, the well or boring that is being destroyed under this permit may be required to be reconstructed in accordance with District and State Well Standards.

E. If any work associated with this permit will take place on District property/easement, an encroachment or construction permit must be granted by the District's Community Projects Review Unit (telephone 408-265-2607, ext. 2350, 2217, or 2253).

F. Within 30 days of the completion of the well destruction activities, the driller or consultant identified on this permit shall fully complete State of California DWR Form 188 and submit the original to the District's Wells and Water Production Unit.

G. The permittee(s) shall assume entire responsibility for all activities and uses under this permit and shall indemnify, defend, and hold the District, its officers, agents, and employees free and harmless from any and all expense, cost, and liability in connection with or resulting from, the granting of or exercise of this permit including, but not limited to, property damage, personal injury, and wrongful death.

H. Permittees are required to be in full compliance with Cal/OSHA California Labor Code Section 6300.

I. A current C-57 Water Well Drilling Contractor's License is required for the destruction of all wells.

J. Permittee, permittee's contractors, consultants, or agents shall be responsible to assure that all materials generated during drilling, well destruction, well development, pump testing, or other activities associated with this permit will be safely handled, properly managed, and disposed of according to all applicable federal, state, and local statutes regulating such. In no case shall these materials/waters be allowed to enter, or potentially enter, on- or off-site storm sewers, dry wells, or waterways. Such materials/waters shall not be allowed to move off the property where the work is being completed.

K. The driller and consultants (if applicable) shall have an active copy of their Worker's Compensation Insurance on file with the District.

L. This permit shall expire if not exercised within 180 calendar days of its approval unless an extension of the permit expiration date is granted by an authorized District representative.

M. If the well approved to be destroyed under this permit is a monitoring well, associated with an investigation/cleanup overseen by a regulatory agency, the proposed well destruction must be approved by the person with regulatory authority over the investigation/cleanup.

N. This permit must be kept on site during all activities associated with it and shall immediately be presented to an authorized District representative upon request.

Please allow 10 working days to process this application.

WELL DESTRUCTION APPLICATION

Please describe in detail, the proposed destruction method (Any well destruction in which the well casing is left in place and in which the well has a filter pack outside the casing, must be destroyed using approved neat cement grout):

Well will be destroyed by filling the casing wih neat portland cement with tremy pipe. Once the casing is filled pressure will be applies the to casing to fill the filter pack outside the casing. All wells will be destroyed in accordance to Santa Clara Valley Water District inspector instructions.

SIGNATURES

I understand and agree that all work associated with this permit is required to be done in accordance with Santa Clara Valley Water District (District) Well Ordinance 90-1, the District Well Standards, and conditions of this permit (see page 4). I certify that the information given in this permit is correct to the best of my knowledge and that the signature below, whether original, electronic, or photocopied, is authorized and valid, and is affixed with the intent to be enforceable. I also certify that a right of entry/encroachment agreement has been formalized between the well owner and property owner, if parties differ.

Signature of Well Owner/Agent:	Print Name: Sucheon Sung	Date: 2/3/2010
Signature of Property Owner/Agent:	Print Name: Sucheon Sung	Date: 2/3/2010
Signature of Driller/Agent:	Print Name: Sucheon Sung	Date: 2/3/2010
Signature of Consultant/Agent (if any):	Print Name: Sucheon Sung	Date: 2/3/2010

DISTRICT USE ONLY

The District has approved the following destruction methods for the well described in this permit:

☐ Pressure Grout Method (as outlined in Standards)
NOTE: Neat cement is the only sealing material approved for pressure grouting.

☒ Drill out well to a total depth of 21 feet, with a minimum bore of 6 Inches.

☐ Clean out well casing to a total depth of _____ feet and back fill with approved sealing material (if total depth is unknown, driller must determine total depth during clean out of well). NOTE: Neat cement is the only sealing material approved for back filling gravel packed wells.

☐ Well casing must be perforated at the following depths prior to backfilling: _____

☐ Other: 2.5' seal
less than 2' annular space

Permit Approved by: B. Cam	Date: 2-11-10

WELL DESTRUCTION APPLICATION

GENERAL CONDITIONS

A. **District** (telephone 408-265-2607, ext. 2660) **must be notified a minimum of one working day before the placement of the well destruction sealing materials**. An authorized District representative must be on site to witness the destruction activities. This requirement may be waived by an authorized District representative. If the District waives the inspection requirement, the District may request the permittee(s) to furnish certification under penalty of perjury that the well was destroyed in accordance with the District Well Standards and with the permit conditions.

B. This permit is valid only for the purpose specified herein. Well destruction methods authorized under this permit may not be changed except by written approval of an authorized District representative, and only if the District believes that such a change will result in equal or superior compliance with the District and State Well Standards (e.g., if the District representative believes that site conditions warrant such a change).

C. This permit is only valid for the Assessor's Parcel No. indicated on it.

D. This permit may be voided if it contains incorrect information. If the permit is voided after work has begun, the well or boring that is being destroyed under this permit may be required to be reconstructed in accordance with District and State Well Standards.

E. If any work associated with this permit will take place on District property/easement, an encroachment or construction permit must be granted by the District's Community Projects Review Unit (telephone 408-265-2607, ext. 2350, 2217, or 2253).

F. Within 30 days of the completion of the well destruction activities, the driller or consultant identified on this permit shall fully complete State of California DWR Form 188 and submit the original to the District's Wells and Water Production Unit.

G. The permittee(s) shall assume entire responsibility for all activities and uses under this permit and shall indemnify, defend, and hold the District, its officers, agents, and employees free and harmless from any and all expense, cost, and liability in connection with or resulting from, the granting of or exercise of this permit including, but not limited to, property damage, personal injury, and wrongful death.

H. Permittees are required to be in full compliance with Cal/OSHA California Labor Code Section 6300.

I. A current C-57 Water Well Drilling Contractor's License is required for the destruction of all wells.

J. Permittee, permittee's contractors, consultants, or agents shall be responsible to assure that all materials generated during drilling, well destruction, well development, pump testing, or other activities associated with this permit will be safely handled, properly managed, and disposed of according to all applicable federal, state, and local statutes regulating such. In no case shall these materials/waters be allowed to enter, or potentially enter, on- or off-site storm sewers, dry wells, or waterways. Such materials/waters shall not be allowed to move off the property where the work is being completed.

K. The driller and consultants (if applicable) shall have an active copy of their Worker's Compensation Insurance on file with the District.

L. This permit shall expire if not exercised within 180 calendar days of its approval unless an extension of the permit expiration date is granted by an authorized District representative.

M. If the well approved to be destroyed under this permit is a monitoring well, associated with an investigation/cleanup overseen by a regulatory agency, the proposed well destruction must be approved by the person with regulatory authority over the investigation/cleanup.

N. This permit must be kept on site during all activities associated with it and shall immediately be presented to an authorized District representative upon request.

Please allow 10 working days to process this application.

DISTRICT USE ONLY

The District has approved the following destruction methods for the well described in this permit:

☐ Pressure Grout Method (as outlined in Standards)
NOTE: Neat cement is the only sealing material approved for pressure grouting.

☒ Drill out well to a total depth of 21 feet, with a minimum bore of 6 Inches.

☐ Clean out well casing to a total depth of _____ feet and back fill with approved sealing material (if total depth is unknown, driller must determine total depth during clean out of well). NOTE: Neat cement is the only sealing material approved for back filling gravel packed wells.

☐ Well casing must be perforated at the following depths prior to backfilling: _____

☐ Other: 2.5 Seal
less than 2" Annular Space.

WELL DESTRUCTION APPLICATION

GENERAL CONDITIONS

A. **District** (telephone 408-265-2607, ext. 2660) **must be notified a minimum of one working day before the placement of the well destruction sealing materials.** An authorized District representative must be on site to witness the destruction activities. This requirement may be waived by an authorized District representative. If the District waives the inspection requirement, the District may request the permittee(s) to furnish certification under penalty of perjury that the well was destroyed in accordance with the District Well Standards and with the permit conditions.

B. This permit is valid only for the purpose specified herein. Well destruction methods authorized under this permit may not be changed except by written approval of an authorized District representative, and only if the District believes that such a change will result in equal or superior compliance with the District and State Well Standards (e.g., if the District representative believes that site conditions warrant such a change).

C. This permit is only valid for the Assessor's Parcel No. indicated on it.

D. This permit may be voided if it contains incorrect information. If the permit is voided after work has begun, the well or boring that is being destroyed under this permit may be required to be reconstructed in accordance with District and State Well Standards.

E. If any work associated with this permit will take place on District property/easement, an encroachment or construction permit must be granted by the District's Community Projects Review Unit (telephone 408-265-2607, ext. 2350, 2217, or 2253).

F. Within 30 days of the completion of the well destruction activities, the driller or consultant identified on this permit shall fully complete State of California DWR Form 188 and submit the original to the District's Wells and Water Production Unit.

G. The permittee(s) shall assume entire responsibility for all activities and uses under this permit and shall indemnify, defend, and hold the District, its officers, agents, and employees free and harmless from any and all expense, cost, and liability in connection with or resulting from, the granting of or exercise of this permit including, but not limited to, property damage, personal injury, and wrongful death.

H. Permittees are required to be in full compliance with Cal/OSHA California Labor Code Section 6300.

I. A current C-57 Water Well Drilling Contractor's License is required for the destruction of all wells.

J. Permittee, permittee's contractors, consultants, or agents shall be responsible to assure that all materials generated during drilling, well destruction, well development, pump testing, or other activities associated with this permit will be safely handled, properly managed, and disposed of according to all applicable federal, state, and local statutes regulating such. In no case shall these materials/waters be allowed to enter, or potentially enter, on- or off-site storm sewers, dry wells, or waterways. Such materials/waters shall not be allowed to move off the property where the work is being completed.

K. The driller and consultants (if applicable) shall have an active copy of their Worker's Compensation Insurance on file with the District.

L. This permit shall expire if not exercised within 180 calendar days of its approval unless an extension of the permit expiration date is granted by an authorized District representative.

M. If the well approved to be destroyed under this permit is a monitoring well, associated with an investigation/cleanup overseen by a regulatory agency, the proposed well destruction must be approved by the person with regulatory authority over the investigation/cleanup.

N. This permit must be kept on site during all activities associated with it and shall immediately be presented to an authorized District representative upon request.

Please allow 10 working days to process this application.

WELL DESTRUCTION APPLICATION

Please describe in detail, the proposed destruction method (Any well destruction in which the well casing is left in place and in which the well has a filter pack outside the casing, must be destroyed using approved neat cement grout):

Well will be destroyed by filling the casing wih neat portland cement with tremy pipe. Once the casing is filled pressure will be applies the to casing to fill the filter pack outside the casing. All wells will be destroyed in accordance to Santa Clara Valley Water District inspector instructions.

SIGNATURES

I understand and agree that all work associated with this permit is required to be done in accordance with Santa Clara Valley Water District (District) Well Ordinance 90-1, the District Well Standards, and conditions of this permit (see page 4). I certify that the information given in this permit is correct to the best of my knowledge and that the signature below, whether original, electronic, or photocopied, is authorized and valid, and is affixed with the intent to be enforceable. I also certify that a right of entry/encroachment agreement has been formalized between the well owner and property owner, if parties differ.

Signature of Well Owner/Agent:	Print Name: Suchen Sung	Date: 2/3/2010
Signature of Property Owner/Agent:	Print Name: Suchen Sung	Date: 2/3/2010
Signature of Driller/Agent:	Print Name: Suchen Sung	Date: 2/3/2010
Signature of Consultant/Agent (if any):	Print Name: Suchen Sung	Date: 2/3/2010

DISTRICT USE ONLY

The District has approved the following destruction methods for the well described in this permit:

☐ Pressure Grout Method (as outlined in Standards)
NOTE: Neat cement is the only sealing material approved for pressure grouting.

☒ Drill out well to a total depth of 21 feet, with a minimum bore of 6 Inches.

☐ Clean out well casing to a total depth of _____ feet and back fill with approved sealing material (if total depth is unknown, driller must determine total depth during clean out of well). NOTE: Neat cement is the only sealing material approved for back filling gravel packed wells.

☐ Well casing must be perforated at the following depths prior to backfilling: _____

☐ Other: 2.5' seal
less than 2" annular space

Permit Approved by: B. Cannon	Date: 2-11-10

WELL DESTRUCTION APPLICATION

GENERAL CONDITIONS

A. **District** (telephone 408-265-2607, ext. 2660) **must be notified a minimum of one working day before the placement of the well destruction sealing materials**. An authorized District representative must be on site to witness the destruction activities. This requirement may be waived by an authorized District representative. If the District waives the inspection requirement, the District may request the permittee(s) to furnish certification under penalty of perjury that the well was destroyed in accordance with the District Well Standards and with the permit conditions.

B. This permit is valid only for the purpose specified herein. Well destruction methods authorized under this permit may not be changed except by written approval of an authorized District representative, and only if the District believes that such a change will result in equal or superior compliance with the District and State Well Standards (e.g., if the District representative believes that site conditions warrant such a change).

C. This permit is only valid for the Assessor's Parcel No. indicated on it.

D. This permit may be voided if it contains incorrect information. If the permit is voided after work has begun, the well or boring that is being destroyed under this permit may be required to be reconstructed in accordance with District and State Well Standards.

E. If any work associated with this permit will take place on District property/easement, an encroachment or construction permit must be granted by the District's Community Projects Review Unit (telephone 408-265-2607, ext. 2350, 2217, or 2253).

F. Within 30 days of the completion of the well destruction activities, the driller or consultant identified on this permit shall fully complete State of California DWR Form 188 and submit the original to the District's Wells and Water Production Unit.

G. The permittee(s) shall assume entire responsibility for all activities and uses under this permit and shall indemnify, defend, and hold the District, its officers, agents, and employees free and harmless from any and all expense, cost, and liability in connection with or resulting from, the granting of or exercise of this permit including, but not limited to, property damage, personal injury, and wrongful death.

H. Permittees are required to be in full compliance with Cal/OSHA California Labor Code Section 6300.

I. A current C-57 Water Well Drilling Contractor's License is required for the destruction of all wells.

J. Permittee, permittee's contractors, consultants, or agents shall be responsible to assure that all materials generated during drilling, well destruction, well development, pump testing, or other activities associated with this permit will be safely handled, properly managed, and disposed of according to all applicable federal, state, and local statutes regulating such. In no case shall these materials/waters be allowed to enter, or potentially enter, on- or off-site storm sewers, dry wells, or waterways. Such materials/waters shall not be allowed to move off the property where the work is being completed.

K. The driller and consultants (if applicable) shall have an active copy of their Worker's Compensation Insurance on file with the District.

L. This permit shall expire if not exercised within 180 calendar days of its approval unless an extension of the permit expiration date is granted by an authorized District representative.

M. If the well approved to be destroyed under this permit is a monitoring well, associated with an investigation/cleanup overseen by a regulatory agency, the proposed well destruction must be approved by the person with regulatory authority over the investigation/cleanup.

N. This permit must be kept on site during all activities associated with it and shall immediately be presented to an authorized District representative upon request.

Please allow 10 working days to process this application.

☐ Well on District property/easement (See General Condition E.)

Well Description:

☒ Vertical Well ☐ Dewatering Well ☐ Elevator Shaft ☐ Multiple Casing ☐ Horizontal Wall ☐ Pit Well

Well Type (check all that apply):

☐ Water Producing (supply or extraction)	☐ Contamination Cleanup	☐ Agricultural	☐ Domestic	☐ Municipal & Industrial
☐ Vapor Extraction	☒ Monitoring	☐ Inclinometer	☒ Groundwater	☐ Vadose
☐ Piezometer	☐ Interface	☐ Suction Lysimeter	☐ Seismic	☐ Injection/Infiltration
☐ Contamination Cleanup	☐ Reclaimed Water	☐ Air Sparging	☐ Cathodic Protection	

ADDITIONAL QUESTIONS FOR WATER PRODUCING WELLS

Does the well have:			
1.	Outer conductor casing?	☐ Yes	☒ No
2.	Annular cement seal outside of casing at surface?	☒ Yes	☐ No
3.	A S.C.V.W.D. water meter attached?	☐ Yes	☒ No

Type of Original Drilling Method:

☐ Rotary ☐ Cable-Tool ☐ Hand-Dug Pit Well ☒ Hollow Stem Auger ☐ Other: _____

IMPORTANT: A minimum 24-hour notice must be given to Santa Clara Valley Water District prior to installing the annular seal. Call (408) 265-2607, ext. 2660. For weekends, holidays, or after-hours, call (408) 265-2607, ext. 2120. Please allow 10 working days to process permit application.

WELL DESTRUCTION APPLICATION

FC 198 (10-03-07)

Please describe in detail, the proposed destruction method (Any well destruction in which the well casing is left in place and in which the well has a filter pack outside the casing, must be destroyed using approved neat cement grout):

Well will be destroyed by filling the casing wih neat portland cement with tremy pipe. Once the casing is filled pressure will be applies the to casing to fill the filter pack outside the casing. All wells will be destroyed in accordance to Santa Clara Valley Water District inspector instructions.

SIGNATURES

I understand and agree that all work associated with this permit is required to be done in accordance with Santa Clara Valley Water District (District) Well Ordinance 90-1, the District Well Standards, and conditions of this permit (see page 4). I certify that the information given in this permit is correct to the best of my knowledge and that the signature below, whether original, electronic, or photocopied, is authorized and valid, and is affixed with the intent to be enforceable. I also certify that a right of entry/encroachment agreement has been formalized between the well owner and property owner, if parties differ.

Signature of Well Owner/Agent:	Print Name: Sukem Sung	Date: 2/3/2010
Signature of Property Owner/Agent:	Print Name: Sukkeow Sung	Date: 2/3/2010
Signature of Driller/Agent:	Print Name: Sukkeow Sung	Date: 2/3/2010
Signature of Consultant/Agent (if any):	Print Name: Sukkeow Sung	Date: 2/3/2010

DISTRICT USE ONLY

The District has approved the following destruction methods for the well described in this permit:

☐ Pressure Grout Method (as outlined in Standards)
NOTE: Neat cement is the only sealing material approved for pressure grouting.

☒ Drill out well to a total depth of 21 feet, with a minimum bore of 6 Inches.

☐ Clean out well casing to a total depth of _____ feet and back fill with approved sealing material (if total depth is unknown, driller must determine total depth during clean out of well). NOTE: Neat cement is the only sealing material approved for back filling gravel packed wells.

☐ Well casing must be perforated at the following depths prior to backfilling: _____

☐ Other: 2.5 seal
less than 2" annular space

Permit Approved by: B. Cannon	Date: 2-11-10

District Permit No.:	Date Issued:	Expiration Date:	Driller's Log No.:
1ODO0108	2/11/10	8/11/10	E0103960

Please allow 10 working days to process this application.

WELL DESTRUCTION APPLICATION

GENERAL CONDITIONS

A. **District** (telephone 408-265-2607, ext. 2660) **must be notified a minimum of one working day before the placement of the well destruction sealing materials**. An authorized District representative must be on site to witness the destruction activities. This requirement may be waived by an authorized District representative. If the District waives the inspection requirement, the District may request the permittee(s) to furnish certification under penalty of perjury that the well was destroyed in accordance with the District Well Standards and with the permit conditions.

B. This permit is valid only for the purpose specified herein. Well destruction methods authorized under this permit may not be changed except by written approval of an authorized District representative, and only if the District believes that such a change will result in equal or superior compliance with the District and State Well Standards (e.g., if the District representative believes that site conditions warrant such a change).

C. This permit is only valid for the Assessor's Parcel No. indicated on it.

D. This permit may be voided if it contains incorrect information. If the permit is voided after work has begun, the well or boring that is being destroyed under this permit may be required to be reconstructed in accordance with District and State Well Standards.

E. If any work associated with this permit will take place on District property/easement, an encroachment or construction permit must be granted by the District's Community Projects Review Unit (telephone 408-265-2607, ext. 2350, 2217, or 2253).

F. Within 30 days of the completion of the well destruction activities, the driller or consultant identified on this permit shall fully complete State of California DWR Form 188 and submit the original to the District's Wells and Water Production Unit.

G. The permittee(s) shall assume entire responsibility for all activities and uses under this permit and shall indemnify, defend, and hold the District, its officers, agents, and employees free and harmless from any and all expense, cost, and liability in connection with or resulting from, the granting of or exercise of this permit including, but not limited to, property damage, personal injury, and wrongful death.

H. Permittees are required to be in full compliance with Cal/OSHA California Labor Code Section 6300.

I. A current C-57 Water Well Drilling Contractor's License is required for the destruction of all wells.

J. Permittee, permittee's contractors, consultants, or agents shall be responsible to assure that all materials generated during drilling, well destruction, well development, pump testing, or other activities associated with this permit will be safely handled, properly managed, and disposed of according to all applicable federal, state, and local statutes regulating such. In no case shall these materials/waters be allowed to enter, or potentially enter, on- or off-site storm sewers, dry wells, or waterways. Such materials/waters shall not be allowed to move off the property where the work is being completed.

K. The driller and consultants (if applicable) shall have an active copy of their Worker's Compensation Insurance on file with the District.

L. This permit shall expire if not exercised within 180 calendar days of its approval unless an extension of the permit expiration date is granted by an authorized District representative.

M. If the well approved to be destroyed under this permit is a monitoring well, associated with an investigation/cleanup overseen by a regulatory agency, the proposed well destruction must be approved by the person with regulatory authority over the investigation/cleanup.

N. This permit must be kept on site during all activities associated with it and shall immediately be presented to an authorized District representative upon request.

Please allow 10 working days to process this application.

WELL DESTRUCTION APPLICATION

Please describe in detail, the proposed destruction method (Any well destruction in which the well casing is left in place and in which the well has a filter pack outside the casing, must be destroyed using approved neat cement grout):

Well will be destroyed by filling the casing wih neat portland cement with tremy pipe. Once the casing is filled pressure will be applies the to casing to fill the filter pack outside the casing. All wells will be destroyed in accordance to Santa Clara Valley Water District inspector instructions.

SIGNATURES

I understand and agree that all work associated with this permit is required to be done in accordance with Santa Clara Valley Water District (District) Well Ordinance 90-1, the District Well Standards, and conditions of this permit (see page 4). I certify that the information given in this permit is correct to the best of my knowledge and that the signature below, whether original, electronic, or photocopied, is authorized and valid, and is affixed with the intent to be enforceable. I also certify that a right of entry/encroachment agreement has been formalized between the well owner and property owner, if parties differ.

Signature of Well Owner/Agent:	Print Name: Suchhor Sung	Date: 2/3/2010
Signature of Property Owner/Agent:	Print Name: Suchhor Sung	Date: 2/3/2010
Signature of Driller/Agent:	Print Name: Suchhor Sung	Date: 2/3/2010
Signature of Consultant/Agent (if any):	Print Name: Suchhor Sung	Date: 2/3/2010

DRAFT

DISTRICT USE ONLY

The District has approved the following destruction methods for the well described in this permit:

☒ Pressure Grout Method (as outlined in Standards)
NOTE: Neat cement is the only sealing material approved for pressure grouting.

OR

☒ Drill out well to a total depth of 36.5 feet, with a minimum bore of 8 Inches.

☐ Clean out well casing to a total depth of _____ feet and back fill with approved sealing material (if total depth is unknown, driller must determine total depth during clean out of well). NOTE: Neat cement is the only sealing material approved for back filling gravel packed wells.

☐ Well casing must be perforated at the following depths prior to backfilling: _____

☐ Other: _____

(408) 265-2600

WELL DESTRUCTION APPLICATION

GENERAL CONDITIONS

A. **District** (telephone 408-265-2607, ext. 2660) **must be notified a minimum of one working day before the placement of the well destruction sealing materials.** An authorized District representative must be on site to witness the destruction activities. This requirement may be waived by an authorized District representative. If the District waives the inspection requirement, the District may request the permittee(s) to furnish certification under penalty of perjury that the well was destroyed in accordance with the District Well Standards and with the permit conditions.

B. This permit is valid only for the purpose specified herein. Well destruction methods authorized under this permit may not be changed except by written approval of an authorized District representative, and only if the District believes that such a change will result in equal or superior compliance with the District and State Well Standards (e.g., if the District representative believes that site conditions warrant such a change).

C. This permit is only valid for the Assessor's Parcel No. indicated on it.

D. This permit may be voided if it contains incorrect information. If the permit is voided after work has begun, the well or boring that is being destroyed under this permit may be required to be reconstructed in accordance with District and State Well Standards.

E. If any work associated with this permit will take place on District property/easement, an encroachment or construction permit must be granted by the District's Community Projects Review Unit (telephone 408-265-2607, ext. 2350, 2217, or 2253).

F. Within 30 days of the completion of the well destruction activities, the driller or consultant identified on this permit shall fully complete State of California DWR Form 188 and submit the original to the District's Wells and Water Production Unit.

G. The permittee(s) shall assume entire responsibility for all activities and uses under this permit and shall indemnify, defend, and hold the District, its officers, agents, and employees free and harmless from any and all expense, cost, and liability in connection with or resulting from, the granting of or exercise of this permit including, but not limited to, property damage, personal injury, and wrongful death.

H. Permittees are required to be in full compliance with Cal/OSHA California Labor Code Section 6300.

I. A current C-57 Water Well Drilling Contractor's License is required for the destruction of all wells.

J. Permittee, permittee's contractors, consultants, or agents shall be responsible to assure that all materials generated during drilling, well destruction, well development, pump testing, or other activities associated with this permit will be safely handled, properly managed, and disposed of according to all applicable federal, state, and local statutes regulating such. In no case shall these materials/waters be allowed to enter, or potentially enter, on- or off-site storm sewers, dry wells, or waterways. Such materials/waters shall not be allowed to move off the property where the work is being completed.

K. The driller and consultants (if applicable) shall have an active copy of their Worker's Compensation Insurance on file with the District.

L. This permit shall expire if not exercised within 180 calendar days of its approval unless an extension of the permit expiration date is granted by an authorized District representative.

M. If the well approved to be destroyed under this permit is a monitoring well, associated with an investigation/cleanup overseen by a regulatory agency, the proposed well destruction must be approved by the person with regulatory authority over the investigation/cleanup.

N. This permit must be kept on site during all activities associated with it and shall immediately be presented to an authorized District representative upon request.

Please allow 10 working days to process this application.

DRAFT

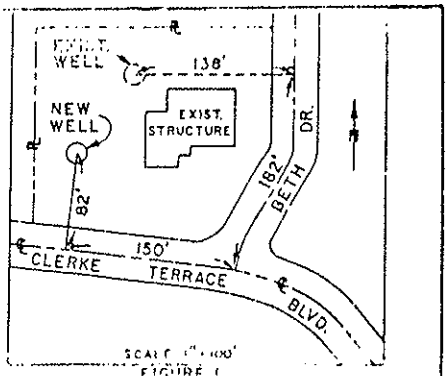
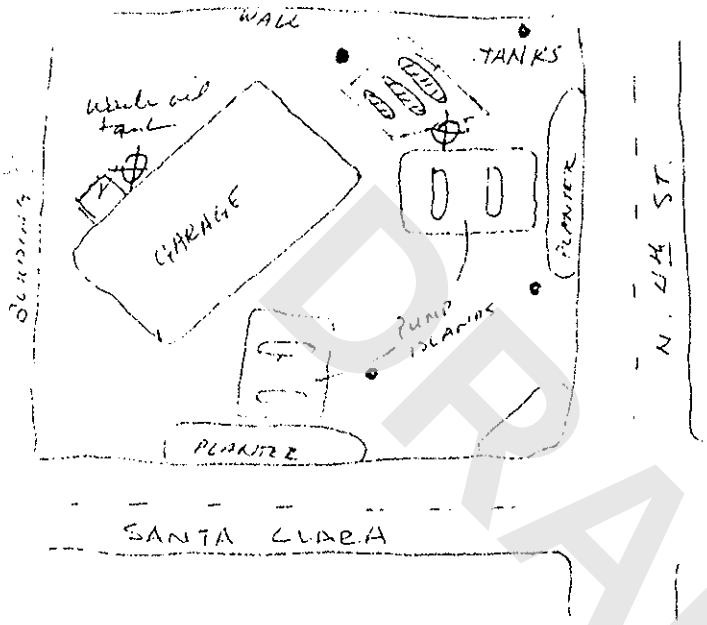
 DISTRICT WELL PERMIT NO.: 84WD800 WELL CONSTRUCTION APPLICATION

Based on information on the application and attachment(s) hereto (if any) and subject to approval noted below, permission is hereby granted to construct (drill) the described well. Permission to start may be withheld until a field check verifies all statements made on application by Permittee and is also subject to the "General" and "Special" Conditions stated below.

WELL LOCATION (Draw Accurately)
(Recommend using Assessor's map)

1. Sketch well location to scale, show dimension to nearest foot.
2. Show a minimum of two dimensions at right angles. Dimensions shall be from the centerline of the closest named streets, roads or highways.





• EXISTING WELLS

Scale: 1" _____

GENERAL CONDITIONS:

A. Construction under this Permit is subject to any instructions by District representative relative to the "Standards for the Construction of Wells in Santa Clara County".

B. Permit may be voided before work begins if field check reveals any misrepresentation under "well location" or "Topographic Features" on application.

C. This Permit is valid only for the purpose specified herein. No change in construction procedure as prescribed on attached Standards and in Special Conditions below will be allowed except upon written permission of the District.

D. Permittee shall assume entire responsibility for all activities and uses under this Permit and shall indemnify, defend and save the District, its officers, agents and employees free and harmless from any and all expense, cost or liability in connection with or resulting from the exercise of this Permit including, but not limited to property damage, personal injury and wrongful death.

E. Compliance with "CAL/OSHA", California Labor Code Section 6300 (and following) is required.

F. Water quality and production from all wells to be used for public water supply must be approved by the County Environmental Health Services.

G. Permit will be automatically cancelled if not exercised or if extension is not requested by Permittee within 90 calendar days of above date.

H. Driller is to complete State DWR Form 188 and mail original to Santa Clara Valley Water District within 7 days of completion of well construction.

I. For the construction of water producing wells, a Permittee must be a licensed water well drilling contractor unless the work is to be done by the landowner or employees of the landowner. (See Business & Professions Code § 7026.3, 7028).

J. For monitoring wells refer SCVWD Groundwater Monitoring Guideline Dec. 1983, p. 17, for licensing requirements. Dry holes shall be backfilled within one week of drilling. Backfilling shall be done in accordance with District Standards.

K. Each well requires a separate Well Construction Application and permit.

SPECIAL CONDITIONS:

☐ Well on District property/easement (See General Condition E.)

Well Description:

☒ Vertical Well ☐ Dewatering Well ☐ Elevator Shaft ☐ Multiple Casing ☐ Horizontal Wall ☐ Pit Well

Well Type (check all that apply):

☐ Water Producing (supply or extraction)	☐ Contamination Cleanup	☐ Agricultural	☐ Domestic	☐ Municipal & Industrial
☐ Vapor Extraction	☒ Monitoring	☐ Inclinometer	☒ Groundwater	☐ Vadose
☐ Piezometer	☐ Interface	☐ Suction Lysimeter	☐ Seismic	☐ Injection/Infiltration
☐ Contamination Cleanup	☐ Reclaimed Water	☐ Air Sparging	☐ Cathodic Protection	

ADDITIONAL QUESTIONS FOR WATER PRODUCING WELLS

Does the well have:			
1.	Outer conductor casing?	☐ Yes	☒ No
2.	Annular cement seal outside of casing at surface?	☒ Yes	☐ No
3.	A S.C.V.W.D. water meter attached?	☐ Yes	☒ No

Type of Original Drilling Method:

☐ Rotary ☐ Cable-Tool ☐ Hand-Dug Pit Well ☒ Hollow Stem Auger ☐ Other: _____

IMPORTANT: A minimum 24-hour notice must be given to Santa Clara Valley Water District prior to installing the annular seal. Call (408) 265-2607, ext. 2660. For weekends, holidays, or after-hours, call (408) 265-2607, ext. 2120. Please allow 10 working days to process permit application.

WELL DESTRUCTION APPLICATION

Please describe in detail, the proposed destruction method (Any well destruction in which the well casing is left in place and in which the well has a filter pack outside the casing, must be destroyed using approved neat cement grout):

Well will be destroyed by filling the casing wih neat portland cement with tremy pipe. Once the casing is filled pressure will be applies the to casing to fill the filter pack outside the casing. All wells will be destroyed in accordance to Santa Clara Valley Water District inspector instructions.

SIGNATURES

I understand and agree that all work associated with this permit is required to be done in accordance with Santa Clara Valley Water District (District) Well Ordinance 90-1, the District Well Standards, and conditions of this permit (see page 4). I certify that the information given in this permit is correct to the best of my knowledge and that the signature below, whether original, electronic, or photocopied, is authorized and valid, and is affixed with the intent to be enforceable. I also certify that a right of entry/encroachment agreement has been formalized between the well owner and property owner, if parties differ.

Signature of Well Owner/Agent:	Print Name: Sucheon Sung	Date: 2/3/2010
Signature of Property Owner/Agent:	Print Name: Sucheon Sung	Date: 2/3/2010
Signature of Driller/Agent:	Print Name: Sucheon Sung	Date: 2/3/2010
Signature of Consultant/Agent (if any):	Print Name: Sucheon Sung	Date: 2/3/2010

DISTRICT USE ONLY

The District has approved the following destruction methods for the well described in this permit:

☒ Pressure Grout Method (as outlined in Standards)
NOTE: Neat cement is the only sealing material approved for pressure grouting.

OR

☒ Drill out well to a total depth of 41.5 feet, with a minimum bore of 8 Inches.

☐ Clean out well casing to a total depth of _____ feet and back fill with approved sealing material (if total depth is unknown, driller must determine total depth during clean out of well). NOTE: Neat cement is the only sealing material approved for back filling gravel packed wells.

☐ Well casing must be perforated at the following depths prior to backfilling: _____

☐ Other: _____

Permit Approved by: B. Cam			Date: 2-11-10
District Permit No.: 10D00113	Date Issued: 2/11/10	Expiration Date: 8/11/10	Driller's Log No.: E0105358

Please allow 10 working days to process this application.

WELL DESTRUCTION APPLICATION

GENERAL CONDITIONS

A. **District** (telephone 408-265-2607, ext. 2660) **must be notified a minimum of one working day before the placement of the well destruction sealing materials.** An authorized District representative must be on site to witness the destruction activities. This requirement may be waived by an authorized District representative. If the District waives the inspection requirement, the District may request the permittee(s) to furnish certification under penalty of perjury that the well was destroyed in accordance with the District Well Standards and with the permit conditions.

B. This permit is valid only for the purpose specified herein. Well destruction methods authorized under this permit may not be changed except by written approval of an authorized District representative, and only if the District believes that such a change will result in equal or superior compliance with the District and State Well Standards (e.g., if the District representative believes that site conditions warrant such a change).

C. This permit is only valid for the Assessor's Parcel No. indicated on it.

D. This permit may be voided if it contains incorrect information. If the permit is voided after work has begun, the well or boring that is being destroyed under this permit may be required to be reconstructed in accordance with District and State Well Standards.

E. If any work associated with this permit will take place on District property/easement, an encroachment or construction permit must be granted by the District's Community Projects Review Unit (telephone 408-265-2607, ext. 2350, 2217, or 2253).

F. Within 30 days of the completion of the well destruction activities, the driller or consultant identified on this permit shall fully complete State of California DWR Form 188 and submit the original to the District's Wells and Water Production Unit.

G. The permittee(s) shall assume entire responsibility for all activities and uses under this permit and shall indemnify, defend, and hold the District, its officers, agents, and employees free and harmless from any and all expense, cost, and liability in connection with or resulting from, the granting of or exercise of this permit including, but not limited to, property damage, personal injury, and wrongful death.

H. Permittees are required to be in full compliance with Cal/OSHA California Labor Code Section 6300.

I. A current C-57 Water Well Drilling Contractor's License is required for the destruction of all wells.

J. Permittee, permittee's contractors, consultants, or agents shall be responsible to assure that all materials generated during drilling, well destruction, well development, pump testing, or other activities associated with this permit will be safely handled, properly managed, and disposed of according to all applicable federal, state, and local statutes regulating such. In no case shall these materials/waters be allowed to enter, or potentially enter, on- or off-site storm sewers, dry wells, or waterways. Such materials/waters shall not be allowed to move off the property where the work is being completed.

K. The driller and consultants (if applicable) shall have an active copy of their Worker's Compensation Insurance on file with the District.

L. This permit shall expire if not exercised within 180 calendar days of its approval unless an extension of the permit expiration date is granted by an authorized District representative.

M. If the well approved to be destroyed under this permit is a monitoring well, associated with an investigation/cleanup overseen by a regulatory agency, the proposed well destruction must be approved by the person with regulatory authority over the investigation/cleanup.

N. This permit must be kept on site during all activities associated with it and shall immediately be presented to an authorized District representative upon request.

Please allow 10 working days to process this application.

WELL DESTRUCTION APPLICATION

Please describe in detail, the proposed destruction method (Any well destruction in which the well casing is left in place and in which the well has a filter pack outside the casing, must be destroyed using approved neat cement grout):

Well will be destroyed by filling the casing wih neat portland cement with tremy pipe. Once the casing is filled pressure will be applies the to casing to fill the filter pack outside the casing. All wells will be destroyed in accordance to Santa Clara Valley Water District inspector instructions.

SIGNATURES

I understand and agree that all work associated with this permit is required to be done in accordance with Santa Clara Valley Water District (District) Well Ordinance 90-1, the District Well Standards, and conditions of this permit (see page 4). I certify that the information given in this permit is correct to the best of my knowledge and that the signature below, whether original, electronic, or photocopied, is authorized and valid, and is affixed with the intent to be enforceable. I also certify that a right of entry/encroachment agreement has been formalized between the well owner and property owner, if parties differ.

Signature of Well Owner/Agent:	Print Name: Sucheon Sung	Date: 2/3/2010
Signature of Property Owner/Agent:	Print Name: Sucheon Sung	Date: 2/3/2010
Signature of Driller/Agent:	Print Name: Sucheon Sung	Date: 2/3/2010
Signature of Consultant/Agent (if any):	Print Name: Sucheon Sung	Date: 2/3/2010

DISTRICT USE ONLY

The District has approved the following destruction methods for the well described in this permit:

☒ Pressure Grout Method (as outlined in Standards)
OR NOTE: Neat cement is the only sealing material approved for pressure grouting.

☒ Drill out well to a total depth of 32 feet, with a minimum bore of 8 inches.

☐ Clean out well casing to a total depth of _____ feet and back fill with approved sealing material (if total depth is unknown, driller must determine total depth during clean out of well). NOTE: Neat cement is the only sealing material approved for back filling gravel packed wells.

☐ Well casing must be perforated at the following depths prior to backfilling: _____

☐ Other: Casing to 31.5'

Permit Approved by: [signature]	Date: 2-11-10

WELL DESTRUCTION APPLICATION

GENERAL CONDITIONS

A. **District** (telephone 408-265-2607, ext. 2660) **must be notified a minimum of one working day before the placement of the well destruction sealing materials**. An authorized District representative must be on site to witness the destruction activities. This requirement may be waived by an authorized District representative. If the District waives the inspection requirement, the District may request the permittee(s) to furnish certification under penalty of perjury that the well was destroyed in accordance with the District Well Standards and with the permit conditions.

B. This permit is valid only for the purpose specified herein. Well destruction methods authorized under this permit may not be changed except by written approval of an authorized District representative, and only if the District believes that such a change will result in equal or superior compliance with the District and State Well Standards (e.g., if the District representative believes that site conditions warrant such a change).

C. This permit is only valid for the Assessor's Parcel No. indicated on it.

D. This permit may be voided if it contains incorrect information. If the permit is voided after work has begun, the well or boring that is being destroyed under this permit may be required to be reconstructed in accordance with District and State Well Standards.

E. If any work associated with this permit will take place on District property/easement, an encroachment or construction permit must be granted by the District's Community Projects Review Unit (telephone 408-265-2607, ext. 2350, 2217, or 2253).

F. Within 30 days of the completion of the well destruction activities, the driller or consultant identified on this permit shall fully complete State of California DWR Form 188 and submit the original to the District's Wells and Water Production Unit.

G. The permittee(s) shall assume entire responsibility for all activities and uses under this permit and shall indemnify, defend, and hold the District, its officers, agents, and employees free and harmless from any and all expense, cost, and liability in connection with or resulting from, the granting of or exercise of this permit including, but not limited to, property damage, personal injury, and wrongful death.

H. Permittees are required to be in full compliance with Cal/OSHA California Labor Code Section 6300.

I. A current C-57 Water Well Drilling Contractor's License is required for the destruction of all wells.

J. Permittee, permittee's contractors, consultants, or agents shall be responsible to assure that all materials generated during drilling, well destruction, well development, pump testing, or other activities associated with this permit will be safely handled, properly managed, and disposed of according to all applicable federal, state, and local statutes regulating such. In no case shall these materials/waters be allowed to enter, or potentially enter, on- or off-site storm sewers, dry wells, or waterways. Such materials/waters shall not be allowed to move off the property where the work is being completed.

K. The driller and consultants (if applicable) shall have an active copy of their Worker's Compensation Insurance on file with the District.

L. This permit shall expire if not exercised within 180 calendar days of its approval unless an extension of the permit expiration date is granted by an authorized District representative.

M. If the well approved to be destroyed under this permit is a monitoring well, associated with an investigation/cleanup overseen by a regulatory agency, the proposed well destruction must be approved by the person with regulatory authority over the investigation/cleanup.

N. This permit must be kept on site during all activities associated with it and shall immediately be presented to an authorized District representative upon request.

Please allow 10 working days to process this application.

WELL DESTRUCTION APPLICATION

FC 198 (10-03-07)

Please describe in detail, the proposed destruction method (Any well destruction in which the well casing is left in place and in which the well has a filter pack outside the casing, must be destroyed using approved neat cement grout):

Well will be destroyed by filling the casing wih neat portland cement with tremy pipe. Once the casing is filled pressure will be applies the to casing to fill the filter pack outside the casing. All wells will be destroyed in accordance to Santa Clara Valley Water District inspector instructions.

SIGNATURES

I understand and agree that all work associated with this permit is required to be done in accordance with Santa Clara Valley Water District (District) Well Ordinance 90-1, the District Well Standards, and conditions of this permit (see page 4). I certify that the information given in this permit is correct to the best of my knowledge and that the signature below, whether original, electronic, or photocopied, is authorized and valid, and is affixed with the intent to be enforceable. I also certify that a right of entry/encroachment agreement has been formalized between the well owner and property owner, if parties differ.

Signature of Well Owner/Agent:	Print Name: Suchen Sung	Date: 2/3/2010
Signature of Property Owner/Agent:	Print Name: Suchen Sung	Date: 2/3/2010
Signature of Driller/Agent:	Print Name: Suchen Sung	Date: 2/3/2010
Signature of Consultant/Agent (if any):	Print Name: Suchen Sung	Date: 2/3/2010

DISTRICT USE ONLY

The District has approved the following destruction methods for the well described in this permit:

☒ Pressure Grout Method (as outlined in Standards)
OR NOTE: Neat cement is the only sealing material approved for pressure grouting.

☒ Drill out well to a total depth of 35 feet, with a minimum bore of 6 Inches.

☐ Clean out well casing to a total depth of _____ feet and back fill with approved sealing material (if total depth is unknown, driller must determine total depth during clean out of well). NOTE: Neat cement is the only sealing material approved for back filling gravel packed wells.

☐ Well casing must be perforated at the following depths prior to backfilling: _____

☐ Other: _____

Permit Approved by: B. [signature] Date: 2-11-10

District Permit No.:	Date Issued:	Expiration Date:	Driller's Log No.:

(408) 265-2600

WELL DESTRUCTION APPLICATION

GENERAL CONDITIONS

A. **District** (telephone 408-265-2607, ext. 2660) **must be notified a minimum of one working day before the placement of the well destruction sealing materials.** An authorized District representative must be on site to witness the destruction activities. This requirement may be waived by an authorized District representative. If the District waives the inspection requirement, the District may request the permittee(s) to furnish certification under penalty of perjury that the well was destroyed in accordance with the District Well Standards and with the permit conditions.

B. This permit is valid only for the purpose specified herein. Well destruction methods authorized under this permit may not be changed except by written approval of an authorized District representative, and only if the District believes that such a change will result in equal or superior compliance with the District and State Well Standards (e.g., if the District representative believes that site conditions warrant such a change).

C. This permit is only valid for the Assessor's Parcel No. indicated on it.

D. This permit may be voided if it contains incorrect information. If the permit is voided after work has begun, the well or boring that is being destroyed under this permit may be required to be reconstructed in accordance with District and State Well Standards.

E. If any work associated with this permit will take place on District property/easement, an encroachment or construction permit must be granted by the District's Community Projects Review Unit (telephone 408-265-2607, ext. 2350, 2217, or 2253).

F. Within 30 days of the completion of the well destruction activities, the driller or consultant identified on this permit shall fully complete State of California DWR Form 188 and submit the original to the District's Wells and Water Production Unit.

G. The permittee(s) shall assume entire responsibility for all activities and uses under this permit and shall indemnify, defend, and hold the District, its officers, agents, and employees free and harmless from any and all expense, cost, and liability in connection with or resulting from, the granting of or exercise of this permit including, but not limited to, property damage, personal injury, and wrongful death.

H. Permittees are required to be in full compliance with Cal/OSHA California Labor Code Section 6300.

I. A current C-57 Water Well Drilling Contractor's License is required for the destruction of all wells.

J. Permittee, permittee's contractors, consultants, or agents shall be responsible to assure that all materials generated during drilling, well destruction, well development, pump testing, or other activities associated with this permit will be safely handled, properly managed, and disposed of according to all applicable federal, state, and local statutes regulating such. In no case shall these materials/waters be allowed to enter, or potentially enter, on- or off-site storm sewers, dry wells, or waterways. Such materials/waters shall not be allowed to move off the property where the work is being completed.

K. The driller and consultants (if applicable) shall have an active copy of their Worker's Compensation Insurance on file with the District.

L. This permit shall expire if not exercised within 180 calendar days of its approval unless an extension of the permit expiration date is granted by an authorized District representative.

M. If the well approved to be destroyed under this permit is a monitoring well, associated with an investigation/cleanup overseen by a regulatory agency, the proposed well destruction must be approved by the person with regulatory authority over the investigation/cleanup.

N. This permit must be kept on site during all activities associated with it and shall immediately be presented to an authorized District representative upon request.

Please allow 10 working days to process this application.

☐ Well on District property/easement (See General Condition E.)

Well Description:

☒ Vertical Well ☐ Dewatering Well ☐ Elevator Shaft ☐ Multiple Casing ☐ Horizontal Wall ☐ Pit Well

Well Type (check all that apply):

☐ Water Producing (supply or extraction)	☐ Contamination Cleanup	☐ Agricultural	☐ Domestic	☐ Municipal & Industrial
☐ Vapor Extraction	☒ Monitoring	☐ Inclinometer	☒ Groundwater	☐ Vadose
☐ Piezometer	☐ Interface	☐ Suction Lysimeter	☐ Seismic	☐ Injection/Infiltration
☐ Contamination Cleanup	☐ Reclaimed Water	☐ Air Sparging	☐ Cathodic Protection	

ADDITIONAL QUESTIONS FOR WATER PRODUCING WELLS

Does the well have:			
1.	Outer conductor casing?	☐ Yes	☒ No
2.	Annular cement seal outside of casing at surface?	☒ Yes	☐ No
3.	A S.C.V.W.D. water meter attached?	☐ Yes	☒ No

Type of Original Drilling Method:

☐ Rotary ☐ Cable-Tool ☐ Hand-Dug Pit Well ☒ Hollow Stem Auger ☐ Other: _____

IMPORTANT: A minimum 24-hour notice must be given to Santa Clara Valley Water District prior to installing the annular seal. Call (408) 265-2607, ext. 2660. For weekends, holidays, or after-hours, call (408) 265-2607, ext. 2120. Please allow 10 working days to process permit application.

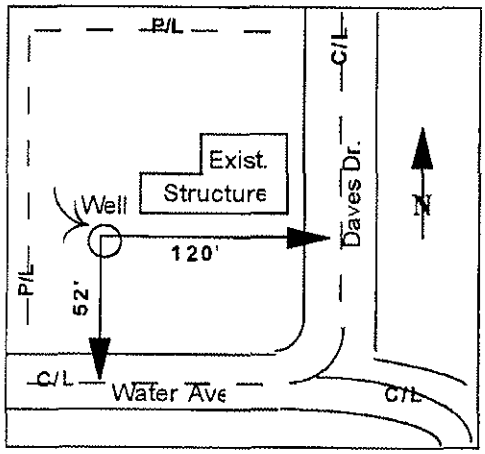
WELL DESTRUCTION APPLICATION

SITE PLAN

Well Location
(Draw accurately; recommend using assessor's map):

1. Sketch well location to scale; show dimensions to nearest foot.
2. Show a minimum of two dimensions at right angles. Dimensions shall be from the centerline of the closest named streets, roads, or highways.

EXAMPLE:



Sketch well location as described above:

See attached Site Plan.

WELL DESTRUCTION APPLICATION

Please describe in detail, the proposed destruction method (Any well destruction in which the well casing is left in place and in which the well has a filter pack outside the casing, must be destroyed using approved neat cement grout):

Well will be destroyed by filling the casing wih neat portland cement with tremy pipe. Once the casing is filled pressure will be applies the to casing to fill the filter pack outside the casing. All wells will be destroyed in accordance to Santa Clara Valley Water District inspector instructions.

SIGNATURES

I understand and agree that all work associated with this permit is required to be done in accordance with Santa Clara Valley Water District (District) Well Ordinance 90-1, the District Well Standards, and conditions of this permit (see page 4). I certify that the information given in this permit is correct to the best of my knowledge and that the signature below, whether original, electronic, or photocopied, is authorized and valid, and is affixed with the intent to be enforceable. I also certify that a right of entry/encroachment agreement has been formalized between the well owner and property owner, if parties differ.

Signature of Well Owner/Agent:	Print Name: SUCHEON SUNG	Date: 2/3/2010
Signature of Property Owner/Agent:	Print Name: SUCHEON SUNG	Date: 2/3/2010
Signature of Driller/Agent:	Print Name: SUCHEON SUNG	Date: 2/3/2010
Signature of Consultant/Agent (if any):	Print Name: SUCHEON SUNG	Date: 2/3/2010

DISTRICT USE ONLY

The District has approved the following destruction methods for the well described in this permit:

☒ Pressure Grout Method (as outlined in Standards)
NOTE: Neat cement is the only sealing material approved for pressure grouting.

OR

☒ Drill out well to a total depth of 35 feet, with a minimum bore of 10 Inches.

☐ Clean out well casing to a total depth of _____ feet and back fill with approved sealing material (if total depth is unknown, driller must determine total depth during clean out of well). NOTE: Neat cement is the only sealing material approved for back filling gravel packed wells.

☐ Well casing must be perforated at the following depths prior to backfilling: _____

☐ Other: _____

Permit Approved by: B. Cannon			Date: 2-11-10
District Permit No.: 10D00118	Date Issued: 2/11/10	Expiration Date: 8/11/10	Driller's Log No.: E0105363

Please allow 10 working days to process this application

(408) 265-2600

WELL DESTRUCTION APPLICATION

GENERAL CONDITIONS

A. **District** (telephone 408-265-2607, ext. 2660) **must be notified a minimum of one working day before the placement of the well destruction sealing materials.** An authorized District representative must be on site to witness the destruction activities. This requirement may be waived by an authorized District representative. If the District waives the inspection requirement, the District may request the permittee(s) to furnish certification under penalty of perjury that the well was destroyed in accordance with the District Well Standards and with the permit conditions.

B. This permit is valid only for the purpose specified herein. Well destruction methods authorized under this permit may not be changed except by written approval of an authorized District representative, and only if the District believes that such a change will result in equal or superior compliance with the District and State Well Standards (e.g., if the District representative believes that site conditions warrant such a change).

C. This permit is only valid for the Assessor's Parcel No. indicated on it.

D. This permit may be voided if it contains incorrect information. If the permit is voided after work has begun, the well or boring that is being destroyed under this permit may be required to be reconstructed in accordance with District and State Well Standards.

E. If any work associated with this permit will take place on District property/easement, an encroachment or construction permit must be granted by the District's Community Projects Review Unit (telephone 408-265-2607, ext. 2350, 2217, or 2253).

F. Within 30 days of the completion of the well destruction activities, the driller or consultant identified on this permit shall fully complete State of California DWR Form 188 and submit the original to the District's Wells and Water Production Unit.

G. The permittee(s) shall assume entire responsibility for all activities and uses under this permit and shall indemnify, defend, and hold the District, its officers, agents, and employees free and harmless from any and all expense, cost, and liability in connection with or resulting from, the granting of or exercise of this permit including, but not limited to, property damage, personal injury, and wrongful death.

H. Permittees are required to be in full compliance with Cal/OSHA California Labor Code Section 6300.

I. A current C-57 Water Well Drilling Contractor's License is required for the destruction of all wells.

J. Permittee, permittee's contractors, consultants, or agents shall be responsible to assure that all materials generated during drilling, well destruction, well development, pump testing, or other activities associated with this permit will be safely handled, properly managed, and disposed of according to all applicable federal, state, and local statutes regulating such. In no case shall these materials/waters be allowed to enter, or potentially enter, on- or off-site storm sewers, dry wells, or waterways. Such materials/waters shall not be allowed to move off the property where the work is being completed.

K. The driller and consultants (if applicable) shall have an active copy of their Worker's Compensation Insurance on file with the District.

L. This permit shall expire if not exercised within 180 calendar days of its approval unless an extension of the permit expiration date is granted by an authorized District representative.

M. If the well approved to be destroyed under this permit is a monitoring well, associated with an investigation/cleanup overseen by a regulatory agency, the proposed well destruction must be approved by the person with regulatory authority over the investigation/cleanup.

N. This permit must be kept on site during all activities associated with it and shall immediately be presented to an authorized District representative upon request.

Please allow 10 working days to process this application.

WELL DESTRUCTION APPLICATION

FC 198 (10-03-07)

Please describe in detail, the proposed destruction method (Any well destruction in which the well casing is left in place and in which the well has a filter pack outside the casing, must be destroyed using approved neat cement grout):

Well will be destroyed by filling the casing wih neat portland cement with tremy pipe. Once the casing is filled pressure will be applies the to casing to fill the filter pack outside the casing. All wells will be destroyed in accordance to Santa Clara Valley Water District inspector instructions.

SIGNATURES

I understand and agree that all work associated with this permit is required to be done in accordance with Santa Clara Valley Water District (District) Well Ordinance 90-1, the District Well Standards, and conditions of this permit (see page 4). I certify that the information given in this permit is correct to the best of my knowledge and that the signature below, whether original, electronic, or photocopied, is authorized and valid, and is affixed with the intent to be enforceable. I also certify that a right of entry/encroachment agreement has been formalized between the well owner and property owner, if parties differ.

Signature of Well Owner/Agent:	Print Name: SUCHEON SUNG	Date: 2/3/2010
Signature of Property Owner/Agent:	Print Name: SUCHEON SUNG	Date: 2/3/2010
Signature of Driller/Agent:	Print Name: SUCHEON SUNG	Date: 2/3/2010
Signature of Consultant/Agent (if any):	Print Name: SUCHEON SUNG	Date: 2/3/2010

DISTRICT USE ONLY

The District has approved the following destruction methods for the well described in this permit:

☒ Pressure Grout Method (as outlined in Standards)
NOTE: Neat cement is the only sealing material approved for pressure grouting.

OR

☒ Drill out well to a total depth of 35 feet, with a minimum bore of 10 Inches.

☐ Clean out well casing to a total depth of _____ feet and back fill with approved sealing material (if total depth is unknown, driller must determine total depth during clean out of well). NOTE: Neat cement is the only sealing material approved for back filling gravel packed wells.

☐ Well casing must be perforated at the following depths prior to backfilling: _____

☐ Other: _____

Permit Approved by: B. Cam	Date: 2-11-10

District Permit No.:	Date Issued:	Expiration Date:	Driller's Log No.:

WELL DESTRUCTION APPLICATION

GENERAL CONDITIONS

A. **District** (telephone 408-265-2607, ext. 2660) **must be notified a minimum of one working day before the placement of the well destruction sealing materials.** An authorized District representative must be on site to witness the destruction activities. This requirement may be waived by an authorized District representative. If the District waives the inspection requirement, the District may request the permittee(s) to furnish certification under penalty of perjury that the well was destroyed in accordance with the District Well Standards and with the permit conditions.

B. This permit is valid only for the purpose specified herein. Well destruction methods authorized under this permit may not be changed except by written approval of an authorized District representative, and only if the District believes that such a change will result in equal or superior compliance with the District and State Well Standards (e.g., if the District representative believes that site conditions warrant such a change).

C. This permit is only valid for the Assessor's Parcel No. indicated on it.

D. This permit may be voided if it contains incorrect information. If the permit is voided after work has begun, the well or boring that is being destroyed under this permit may be required to be reconstructed in accordance with District and State Well Standards.

E. If any work associated with this permit will take place on District property/easement, an encroachment or construction permit must be granted by the District's Community Projects Review Unit (telephone 408-265-2607, ext. 2350, 2217, or 2253).

F. Within 30 days of the completion of the well destruction activities, the driller or consultant identified on this permit shall fully complete State of California DWR Form 188 and submit the original to the District's Wells and Water Production Unit.

G. The permittee(s) shall assume entire responsibility for all activities and uses under this permit and shall indemnify, defend, and hold the District, its officers, agents, and employees free and harmless from any and all expense, cost, and liability in connection with or resulting from, the granting of or exercise of this permit including, but not limited to, property damage, personal injury, and wrongful death.

H. Permittees are required to be in full compliance with Cal/OSHA California Labor Code Section 6300.

I. A current C-57 Water Well Drilling Contractor's License is required for the destruction of all wells.

J. Permittee, permittee's contractors, consultants, or agents shall be responsible to assure that all materials generated during drilling, well destruction, well development, pump testing, or other activities associated with this permit will be safely handled, properly managed, and disposed of according to all applicable federal, state, and local statutes regulating such. In no case shall these materials/waters be allowed to enter, or potentially enter, on- or off-site storm sewers, dry wells, or waterways. Such materials/waters shall not be allowed to move off the property where the work is being completed.

K. The driller and consultants (if applicable) shall have an active copy of their Worker's Compensation Insurance on file with the District.

L. This permit shall expire if not exercised within 180 calendar days of its approval unless an extension of the permit expiration date is granted by an authorized District representative.

M. If the well approved to be destroyed under this permit is a monitoring well, associated with an investigation/cleanup overseen by a regulatory agency, the proposed well destruction must be approved by the person with regulatory authority over the investigation/cleanup.

N. This permit must be kept on site during all activities associated with it and shall immediately be presented to an authorized District representative upon request.

Please allow 10 working days to process this application.

San Jose, CA 95118-3686
(408) 265-2600

WELL DESTRUCTION APPLICATION

GENERAL CONDITIONS

A. **District** (telephone 408-265-2607, ext. 2660) **must be notified a minimum of one working day before the placement of the well destruction sealing materials**. An authorized District representative must be on site to witness the destruction activities. This requirement may be waived by an authorized District representative. If the District waives the inspection requirement, the District may request the permittee(s) to furnish certification under penalty of perjury that the well was destroyed in accordance with the District Well Standards and with the permit conditions.

B. This permit is valid only for the purpose specified herein. Well destruction methods authorized under this permit may not be changed except by written approval of an authorized District representative, and only if the District believes that such a change will result in equal or superior compliance with the District and State Well Standards (e.g., if the District representative believes that site conditions warrant such a change).

C. This permit is only valid for the Assessor's Parcel No. indicated on it.

D. This permit may be voided if it contains incorrect information. If the permit is voided after work has begun, the well or boring that is being destroyed under this permit may be required to be reconstructed in accordance with District and State Well Standards.

E. If any work associated with this permit will take place on District property/easement, an encroachment or construction permit must be granted by the District's Community Projects Review Unit (telephone 408-265-2607, ext. 2350, 2217, or 2253).

F. Within 30 days of the completion of the well destruction activities, the driller or consultant identified on this permit shall fully complete State of California DWR Form 188 and submit the original to the District's Wells and Water Production Unit.

G. The permittee(s) shall assume entire responsibility for all activities and uses under this permit and shall indemnify, defend, and hold the District, its officers, agents, and employees free and harmless from any and all expense, cost, and liability in connection with or resulting from, the granting of or exercise of this permit including, but not limited to, property damage, personal injury, and wrongful death.

H. Permittees are required to be in full compliance with Cal/OSHA California Labor Code Section 6300.

I. A current C-57 Water Well Drilling Contractor's License is required for the destruction of all wells.

J. Permittee, permittee's contractors, consultants, or agents shall be responsible to assure that all materials generated during drilling, well destruction, well development, pump testing, or other activities associated with this permit will be safely handled, properly managed, and disposed of according to all applicable federal, state, and local statutes regulating such. In no case shall these materials/waters be allowed to enter, or potentially enter, on- or off-site storm sewers, dry wells, or waterways. Such materials/waters shall not be allowed to move off the property where the work is being completed.

K. The driller and consultants (if applicable) shall have an active copy of their Worker's Compensation Insurance on file with the District.

L. This permit shall expire if not exercised within 180 calendar days of its approval unless an extension of the permit expiration date is granted by an authorized District representative.

M. If the well approved to be destroyed under this permit is a monitoring well, associated with an investigation/cleanup overseen by a regulatory agency, the proposed well destruction must be approved by the person with regulatory authority over the investigation/cleanup.

N. This permit must be kept on site during all activities associated with it and shall immediately be presented to an authorized District representative upon request.

Please allow 10 working days to process this application.

WELL DESTRUCTION APPLICATION

Please describe in detail, the proposed destruction method (Any well destruction in which the well casing is left in place and in which the well has a filter pack outside the casing, must be destroyed using approved neat cement grout):

Well will be destroyed by filling the casing wih neat portland cement with tremy pipe. Once the casing is filled pressure will be applies the to casing to fill the filter pack outside the casing. All wells will be destroyed in accordance to Santa Clara Valley Water District inspector instructions.

SIGNATURES

I understand and agree that all work associated with this permit is required to be done in accordance with Santa Clara Valley Water District (District) Well Ordinance 90-1, the District Well Standards, and conditions of this permit (see page 4). I certify that the information given in this permit is correct to the best of my knowledge and that the signature below, whether original, electronic, or photocopied, is authorized and valid, and is affixed with the intent to be enforceable. I also certify that a right of entry/encroachment agreement has been formalized between the well owner and property owner, if parties differ.

Signature of Well Owner/Agent:	Print Name: SUCHEON SUNG	Date: 2/3/2010
Signature of Property Owner/Agent:	Print Name: SUCHEON SUNG	Date: 2/3/2010
Signature of Driller/Agent:	Print Name: SUCHEON SUNG	Date: 2/3/2010
Signature of Consultant/Agent (if any):	Print Name: SUCHEON SUNG	Date: 2/3/2010

DISTRICT USE ONLY

The District has approved the following destruction methods for the well described in this permit:

☒ Pressure Grout Method (as outlined in Standards)
OR NOTE: Neat cement is the only sealing material approved for pressure grouting.

☒ Drill out well to a total depth of 35 feet, with a minimum bore of 8 Inches.

☐ Clean out well casing to a total depth of _____ feet and back fill with approved sealing material (if total depth is unknown, driller must determine total depth during clean out of well). NOTE: Neat cement is the only sealing material approved for back filling gravel packed wells.

☐ Well casing must be perforated at the following depths prior to backfilling: _____

☐ Other: _____

Permit Approved by: B. Cameron			Date: 2-11-10
District Permit No.: 10D00121	Date Issued: 2/11/10	Expiration Date: 8/11/10	Driller's Log No.: E0105367

Please allow 10 working days to process this application.

WELL DESTRUCTION APPLICATION

GENERAL CONDITIONS

A. **District** (telephone 408-265-2607, ext. 2660) **must be notified a minimum of one working day before the placement of the well destruction sealing materials.** An authorized District representative must be on site to witness the destruction activities. This requirement may be waived by an authorized District representative. If the District waives the inspection requirement, the District may request the permittee(s) to furnish certification under penalty of perjury that the well was destroyed in accordance with the District Well Standards and with the permit conditions.

B. This permit is valid only for the purpose specified herein. Well destruction methods authorized under this permit may not be changed except by written approval of an authorized District representative, and only if the District believes that such a change will result in equal or superior compliance with the District and State Well Standards (e.g., if the District representative believes that site conditions warrant such a change).

C. This permit is only valid for the Assessor's Parcel No. indicated on it.

D. This permit may be voided if it contains incorrect information. If the permit is voided after work has begun, the well or boring that is being destroyed under this permit may be required to be reconstructed in accordance with District and State Well Standards.

E. If any work associated with this permit will take place on District property/easement, an encroachment or construction permit must be granted by the District's Community Projects Review Unit (telephone 408-265-2607, ext. 2350, 2217, or 2253).

F. Within 30 days of the completion of the well destruction activities, the driller or consultant identified on this permit shall fully complete State of California DWR Form 188 and submit the original to the District's Wells and Water Production Unit.

G. The permittee(s) shall assume entire responsibility for all activities and uses under this permit and shall indemnify, defend, and hold the District, its officers, agents, and employees free and harmless from any and all expense, cost, and liability in connection with or resulting from, the granting of or exercise of this permit including, but not limited to, property damage, personal injury, and wrongful death.

H. Permittees are required to be in full compliance with Cal/OSHA California Labor Code Section 6300.

I. A current C-57 Water Well Drilling Contractor's License is required for the destruction of all wells.

J. Permittee, permittee's contractors, consultants, or agents shall be responsible to assure that all materials generated during drilling, well destruction, well development, pump testing, or other activities associated with this permit will be safely handled, properly managed, and disposed of according to all applicable federal, state, and local statutes regulating such. In no case shall these materials/waters be allowed to enter, or potentially enter, on- or off-site storm sewers, dry wells, or waterways. Such materials/waters shall not be allowed to move off the property where the work is being completed.

K. The driller and consultants (if applicable) shall have an active copy of their Worker's Compensation Insurance on file with the District.

L. This permit shall expire if not exercised within 180 calendar days of its approval unless an extension of the permit expiration date is granted by an authorized District representative.

M. If the well approved to be destroyed under this permit is a monitoring well, associated with an investigation/cleanup overseen by a regulatory agency, the proposed well destruction must be approved by the person with regulatory authority over the investigation/cleanup.

N. This permit must be kept on site during all activities associated with it and shall immediately be presented to an authorized District representative upon request.

Please allow 10 working days to process this application.

☐ Well on District property/easement (See General Condition E.)

Well Description:

☒ Vertical Well ☐ Dewatering Well ☐ Elevator Shaft ☐ Multiple Casing ☐ Horizontal Wall ☐ Pit Well

Well Type (check all that apply):

☐ Water Producing (supply or extraction)	☐ Contamination Cleanup	☐ Agricultural	☐ Domestic	☐ Municipal & Industrial
☐ Vapor Extraction	☒ Monitoring	☐ Inclinometer	☒ Groundwater	☐ Vadose
☒ Piezometer	☐ Interface	☐ Suction Lysimeter	☐ Seismic	☐ Injection/Infiltration
☐ Contamination Cleanup	☐ Reclaimed Water	☐ Air Sparging	☐ Cathodic Protection	

ADDITIONAL QUESTIONS FOR WATER PRODUCING WELLS

Does the well have:			
1.	Outer conductor casing?	☐ Yes	☒ No
2.	Annular cement seal outside of casing at surface?	☒ Yes	☐ No
3.	A S.C.V.W.D. water meter attached?	☐ Yes	☒ No

Type of Original Drilling Method:

☐ Rotary ☐ Cable-Tool ☐ Hand-Dug Pit Well ☒ Hollow Stem Auger ☐ Other: _____

IMPORTANT: A minimum 24-hour notice must be given to Santa Clara Valley Water District prior to installing the annular seal. Call (408) 265-2607, ext. 2660. For weekends, holidays, or after-hours, call (408) 265-2607, ext. 2120. Please allow 10 working days to process permit application.

WELL DESTRUCTION APPLICATION

FC 198 (10-03-07)

Please describe in detail, the proposed destruction method (Any well destruction in which the well casing is left in place and in which the well has a filter pack outside the casing, must be destroyed using approved neat cement grout):

Well will be destroyed by filling the casing wih neat portland cement with tremy pipe. Once the casing is filled pressure will be applies the to casing to fill the filter pack outside the casing. All wells will be destroyed in accordance to Santa Clara Valley Water District inspector instructions.

SIGNATURES

I understand and agree that all work associated with this permit is required to be done in accordance with Santa Clara Valley Water District (District) Well Ordinance 90-1, the District Well Standards, and conditions of this permit (see page 4). I certify that the information given in this permit is correct to the best of my knowledge and that the signature below, whether original, electronic, or photocopied, is authorized and valid, and is affixed with the intent to be enforceable. I also certify that a right of entry/encroachment agreement has been formalized between the well owner and property owner, if parties differ.

Signature	Print Name	Date
Signature of Well Owner/Agent:	Suchtow Sung	2/3/2010
Signature of Property Owner/Agent:	Suchtow Sung	2/3/2010
Signature of Driller/Agent:	Suchtow Sung	2/3/2010
Signature of Consultant/Agent (if any):	Suchtow Sung	2/3/2010

DISTRICT USE ONLY

The District has approved the following destruction methods for the well described in this permit:

☒ Pressure Grout Method (as outlined in Standards)
NOTE: Neat cement is the only sealing material approved for pressure grouting.

OR

☒ Drill out well to a total depth of 20 feet, with a minimum bore of 5 Inches.

☐ Clean out well casing to a total depth of _____ feet and back fill with approved sealing material (if total depth is unknown, driller must determine total depth during clean out of well). NOTE: Neat cement is the only sealing material approved for back filling gravel packed wells.

☐ Well casing must be perforated at the following depths prior to backfilling: _____

☐ Other: _____

Permit Approved by:	Date:
B. Cam	2-11-10

District Permit No.:	Date Issued:	Expiration Date:	Driller's Log No.:

WELL DESTRUCTION APPLICATION

GENERAL CONDITIONS

A. **District** (telephone 408-265-2607, ext. 2660) **must be notified a minimum of one working day before the placement of the well destruction sealing materials.** An authorized District representative must be on site to witness the destruction activities. This requirement may be waived by an authorized District representative. If the District waives the inspection requirement, the District may request the permittee(s) to furnish certification under penalty of perjury that the well was destroyed in accordance with the District Well Standards and with the permit conditions.

B. This permit is valid only for the purpose specified herein. Well destruction methods authorized under this permit may not be changed except by written approval of an authorized District representative, and only if the District believes that such a change will result in equal or superior compliance with the District and State Well Standards (e.g., if the District representative believes that site conditions warrant such a change).

C. This permit is only valid for the Assessor's Parcel No. indicated on it.

D. This permit may be voided if it contains incorrect information. If the permit is voided after work has begun, the well or boring that is being destroyed under this permit may be required to be reconstructed in accordance with District and State Well Standards.

E. If any work associated with this permit will take place on District property/easement, an encroachment or construction permit must be granted by the District's Community Projects Review Unit (telephone 408-265-2607, ext. 2350, 2217, or 2253).

F. Within 30 days of the completion of the well destruction activities, the driller or consultant identified on this permit shall fully complete State of California DWR Form 188 and submit the original to the District's Wells and Water Production Unit.

G. The permittee(s) shall assume entire responsibility for all activities and uses under this permit and shall indemnify, defend, and hold the District, its officers, agents, and employees free and harmless from any and all expense, cost, and liability in connection with or resulting from, the granting of or exercise of this permit including, but not limited to, property damage, personal injury, and wrongful death.

H. Permittees are required to be in full compliance with Cal/OSHA California Labor Code Section 6300.

I. A current C-57 Water Well Drilling Contractor's License is required for the destruction of all wells.

J. Permittee, permittee's contractors, consultants, or agents shall be responsible to assure that all materials generated during drilling, well destruction, well development, pump testing, or other activities associated with this permit will be safely handled, properly managed, and disposed of according to all applicable federal, state, and local statutes regulating such. In no case shall these materials/waters be allowed to enter, or potentially enter, on- or off-site storm sewers, dry wells, or waterways. Such materials/waters shall not be allowed to move off the property where the work is being completed.

K. The driller and consultants (if applicable) shall have an active copy of their Worker's Compensation Insurance on file with the District.

L. This permit shall expire if not exercised within 180 calendar days of its approval unless an extension of the permit expiration date is granted by an authorized District representative.

M. If the well approved to be destroyed under this permit is a monitoring well, associated with an investigation/cleanup overseen by a regulatory agency, the proposed well destruction must be approved by the person with regulatory authority over the investigation/cleanup.

N. This permit must be kept on site during all activities associated with it and shall immediately be presented to an authorized District representative upon request.

Please allow 10 working days to process this application.

☐ Well on District property/easement (See General Condition E.)

Well Description:

☒ Vertical Well ☐ Dewatering Well ☐ Elevator Shaft ☐ Multiple Casing ☐ Horizontal Wall ☐ Pit Well

Well Type (check all that apply):

☐ Water Producing (supply or extraction)	☐ Contamination Cleanup	☐ Agricultural	☐ Domestic	☐ Municipal & Industrial
☐ Vapor Extraction	☒ Monitoring	☐ Inclinometer	☒ Groundwater	☐ Vadose
☒ Piezometer	☐ Interface	☐ Suction Lysimeter	☐ Seismic	☐ Injection/Infiltration
☐ Contamination Cleanup	☐ Reclaimed Water	☐ Air Sparging	☐ Cathodic Protection	

ADDITIONAL QUESTIONS FOR WATER PRODUCING WELLS

Does the well have:			
1.	Outer conductor casing?	☐ Yes	☒ No
2.	Annular cement seal outside of casing at surface?	☒ Yes	☐ No
3.	A S.C.V.W.D. water meter attached?	☐ Yes	☒ No

Type of Original Drilling Method:

☐ Rotary ☐ Cable-Tool ☐ Hand-Dug Pit Well ☒ Hollow Stem Auger ☐ Other: _____

IMPORTANT: A minimum 24-hour notice must be given to Santa Clara Valley Water District prior to installing the annular seal. Call (408) 265-2607, ext. 2660. For weekends, holidays, or after-hours, call (408) 265-2607, ext. 2120. Please allow 10 working days to process permit application.

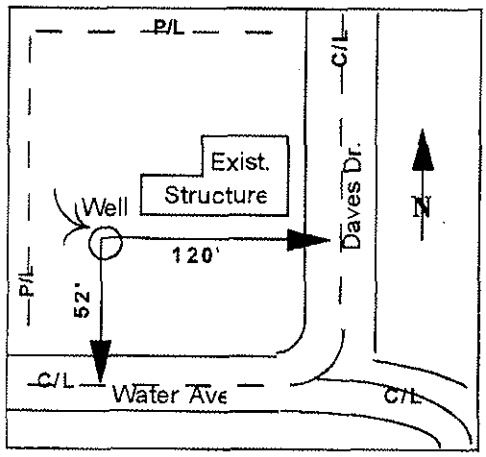
WELL DESTRUCTION APPLICATION

SITE PLAN

Well Location
(Draw accurately; recommend using assessor's map):

1. Sketch well location to scale; show dimensions to nearest foot.
2. Show a minimum of two dimensions at right angles. Dimensions shall be from the centerline of the closest named streets, roads, or highways.

EXAMPLE:



Sketch well location as described above:

See attached Site Plan.

WELL DESTRUCTION APPLICATION

Please describe in detail, the proposed destruction method (Any well destruction in which the well casing is left in place and in which the well has a filter pack outside the casing, must be destroyed using approved neat cement grout):

Well will be destroyed by filling the casing wih neat portland cement with tremy pipe. Once the casing is filled pressure will be applies the to casing to fill the filter pack outside the casing. All wells will be destroyed in accordance to Santa Clara Valley Water District inspector instructions.

SIGNATURES

I understand and agree that all work associated with this permit is required to be done in accordance with Santa Clara Valley Water District (District) Well Ordinance 90-1, the District Well Standards, and conditions of this permit (see page 4). I certify that the information given in this permit is correct to the best of my knowledge and that the signature below, whether original, electronic, or photocopied, is authorized and valid, and is affixed with the intent to be enforceable. I also certify that a right of entry/encroachment agreement has been formalized between the well owner and property owner, if parties differ.

Signature	Print Name	Date
Signature of Well Owner/Agent:	Print Name: Sucheon Sung	Date: 2/3/2010
Signature of Property Owner/Agent:	Print Name: Sucheon Sung	Date: 2/3/2010
Signature of Driller/Agent:	Print Name: Sucheon Sung	Date: 2/3/2010
Signature of Consultant/Agent (if any):	Print Name: Sucheon Sung	Date: 2/3/2010

DISTRICT USE ONLY

The District has approved the following destruction methods for the well described in this permit:

☒ Pressure Grout Method (as outlined in Standards)
NOTE: Neat cement is the only sealing material approved for pressure grouting.

OR

☒ Drill out well to a total depth of 32 feet, with a minimum bore of 5 Inches.

☐ Clean out well casing to a total depth of _____ feet and back fill with approved sealing material (if total depth is unknown, driller must determine total depth during clean out of well). NOTE: Neat cement is the only sealing material approved for back filling gravel packed wells.

☐ Well casing must be perforated at the following depths prior to backfilling: _____

☐ Other: _____

Permit Approved by:	Date:
	2-11-10

District Permit No.:	Date Issued:	Expiration Date:	Driller's Log No.:

WELL DESTRUCTION APPLICATION

GENERAL CONDITIONS

A. **District** (telephone 408-265-2607, ext. 2660) **must be notified a minimum of one working day before the placement of the well destruction sealing materials**. An authorized District representative must be on site to witness the destruction activities. This requirement may be waived by an authorized District representative. If the District waives the inspection requirement, the District may request the permittee(s) to furnish certification under penalty of perjury that the well was destroyed in accordance with the District Well Standards and with the permit conditions.

B. This permit is valid only for the purpose specified herein. Well destruction methods authorized under this permit may not be changed except by written approval of an authorized District representative, and only if the District believes that such a change will result in equal or superior compliance with the District and State Well Standards (e.g., if the District representative believes that site conditions warrant such a change).

C. This permit is only valid for the Assessor's Parcel No. indicated on it.

D. This permit may be voided if it contains incorrect information. If the permit is voided after work has begun, the well or boring that is being destroyed under this permit may be required to be reconstructed in accordance with District and State Well Standards.

E. If any work associated with this permit will take place on District property/easement, an encroachment or construction permit must be granted by the District's Community Projects Review Unit (telephone 408-265-2607, ext. 2350, 2217, or 2253).

F. Within 30 days of the completion of the well destruction activities, the driller or consultant identified on this permit shall fully complete State of California DWR Form 188 and submit the original to the District's Wells and Water Production Unit.

G. The permittee(s) shall assume entire responsibility for all activities and uses under this permit and shall indemnify, defend, and hold the District, its officers, agents, and employees free and harmless from any and all expense, cost, and liability in connection with or resulting from, the granting of or exercise of this permit including, but not limited to, property damage, personal injury, and wrongful death.

H. Permittees are required to be in full compliance with Cal/OSHA California Labor Code Section 6300.

I. A current C-57 Water Well Drilling Contractor's License is required for the destruction of all wells.

J. Permittee, permittee's contractors, consultants, or agents shall be responsible to assure that all materials generated during drilling, well destruction, well development, pump testing, or other activities associated with this permit will be safely handled, properly managed, and disposed of according to all applicable federal, state, and local statutes regulating such. In no case shall these materials/waters be allowed to enter, or potentially enter, on- or off-site storm sewers, dry wells, or waterways. Such materials/waters shall not be allowed to move off the property where the work is being completed.

K. The driller and consultants (if applicable) shall have an active copy of their Worker's Compensation Insurance on file with the District.

L. This permit shall expire if not exercised within 180 calendar days of its approval unless an extension of the permit expiration date is granted by an authorized District representative.

M. If the well approved to be destroyed under this permit is a monitoring well, associated with an investigation/cleanup overseen by a regulatory agency, the proposed well destruction must be approved by the person with regulatory authority over the investigation/cleanup.

N. This permit must be kept on site during all activities associated with it and shall immediately be presented to an authorized District representative upon request.

Please allow 10 working days to process this application.

Dear Ms. Lee:

Attached for your review is the *Third Quarter 2009 Semi-Annual Groundwater Monitoring Report* for Chevron-branded service station 9-4259, located at 147 East Santa Clara Street, San Jose, California. This report was prepared by Stantec Consulting Corporation (Stantec), upon whose assistance and advice I have relied. I declare under penalty of perjury that the information and/or recommendations contained in the attached report are true and correct, to the best of my knowledge.

If you should have any further questions, please do not hesitate to contact me or the Stantec project manager, Travis Flora, at (408) 356-6124 or travis.flora@stantec.com.

Sincerely,

Ian Robb
Project Manager

RE: Third Quarter 2009 Semi-Annual Groundwater Monitoring Report
Chevron-branded Service Station 9-4259
147 East Santa Clara Street
San Jose, California

DRAFT

Dear Ms. Lee:

On behalf of Chevron Environmental Management Company (Chevron), Stantec Consulting Corporation (Stantec) is pleased to submit the *Third Quarter 2009 Semi-Annual Groundwater Monitoring Report* for Chevron-branded service station 9-4259, located at 147 East Santa Clara Street in San Jose, California (the Site - shown in ***Figure 1***). This letter report is presented in three sections: Site Background, Third Quarter 2009 Groundwater Monitoring and Sampling Program, and Conclusions and Recommendations.

SITE BACKGROUND

The Site is an active service station located on the northwestern corner at the intersection of East Santa Clara Street and North 4th Street in San Jose, California. Land use in the Site vicinity is mixed commercial and residential. The entire Site is paved, and current Site features include a service station building with auto repair bays, three fuel underground storage tanks (USTs), one waste oil UST, product and vent piping, and dispenser islands.

The Site is located at an elevation of approximately 78 feet above mean sea level. Based upon detailed boring logs from various Site investigation activities, lithology is characterized predominantly by low permeability silts and clays from approximately 5 to 20 feet below ground surface (bgs), with higher permeability fine to medium-grained sand with interbedded clays and silt layers from approximately 20 to 32 feet bgs. During a 1990 subsurface investigation, a perched water-bearing zone was observed from 15 to 20 feet bgs within a lens of silty sand and sandy gravel above the lower permeability silts and clays.

In May 1985, Chevron replaced the Site's steel USTs with three fiberglass gasoline USTs and one fiberglass waste oil UST. Product conveyance piping was also replaced

with cathodic-protected conveyance piping. According to Chevron's leak/spill incident status report, no significant petroleum hydrocarbons were observed during upgrade activities.

Groundwater monitoring has been performed at the Site since 1989. Historically, the direction of groundwater flow has been towards the northwest.

A groundwater extraction and treatment (GWET) system operated at the Site from February 1992 to June 1996 using extraction wells EW-1 though EW-4. After 4.5 years of operation, the GWET system extracted approximately 1,765,354 gallons of groundwater and removed approximately 17 pounds of petroleum hydrocarbons.

After receiving approval of a corrective action plan, a two-phase extraction and treatment (TPET) system began operating in January 2004 under National Pollutant Discharge Elimination System (NPDES) and Bay Area Air Quality Management District (BAAQMD) permits. Soil vapor and groundwater were extracted from eight wells (EW-1, EW-2, EW-3, EW-4, MW-4, MW-5, MW-7, and MW-11) by a high vacuum pump. The TPET system treated groundwater via three 2,000-pound liquid-phase granular activated carbon adsorption vessels. Soil vapor was treated with an electrically heated catalytic oxidizer.

As of October 12, 2006, the TPET system had extracted approximately 1,223,140 gallons of groundwater and removed approximately 2.28 pounds of dissolved-phase total petroleum hydrocarbons as diesel range organics (TPH-DRO), 2.66 pounds of dissolved-phase total petroleum hydrocarbons as gasoline range organics (TPH-GRO), and 0.18 pounds of dissolved-phase benzene. The TPET system recovered groundwater at a rate of approximately 0.48 gallons per minute.

On November 8, 2006, the TPET system was shut down due to measured concentrations in the effluent stream which did not meet destruction efficiency requirements of the BAAQMD permit. The TPET system remained shut down due to low influent concentrations and the TPET system's reduced ability to capture hydrocarbons. Per the *Remediation System Shutdown and Rebound Testing Workplan* (approved by the County of Santa Clara Department of Environmental Health [CSCDEH] on January 19, 2007), the TPET system remained shutdown for a period of up to one year to evaluate potential rebound in groundwater concentrations.

As documented in the *Remediation System Rebound Testing Report*, dated January 30, 2008, it was concluded that no significant rebound occurred following the TPET system shutdown that would warrant a restart of active remediation system operations. Groundwater monitoring at the property boundary and down-gradient of the Site indicated that off-site migration after ceasing active remediation efforts did not occur during the one-year rebound evaluation period; therefore, it was recommended that the TPET system remain shutdown. The CSCDEH concurred with the recommendation that the TPET system be permanently shut down in a letter dated April 11, 2008, and recommended that confirmation soil sampling be conducted to assess the effectiveness of remedial efforts.

From September 8 through September 10, 2008, Stantec conducted confirmation soil sampling at the Site and adjacent properties to evaluate whether remediation activities

effectively reduced concentrations below regulatory levels. As described in the *Confirmation Soil Sampling* report, dated October 6, 2008, it appears that the soil source area at the Site has been addressed by active remediation and is no longer contributing to the petroleum hydrocarbon plume. The *Attachment I - Notice of Termination* form for the TPET system's NPDES permit was submitted to the California Regional Water Quality Control Board (RWQCB) – San Francisco Bay Region on December 10, 2008. The demolition of the former TPET system was completed April 14, 2009.

When reviewing well construction depths in Second Quarter 2009, it was determined that piezometers PZ-1 and PZ-2 were inadvertently mislabeled in the field; therefore, historical monitoring and sampling data collected from these piezometers did not correspond with the correct location or total depth of the piezometers. All data and references to these piezometers were corrected prior to submittal of the *Second Quarter 2009 Quarterly Groundwater Monitoring Report* and are now accurately reflected in all data tables.

On September 9, 2009, the CSCDEH issued notice for a 30-day public comment period in preparation for possible case closure. The public comment period ended October 26, 2009.

THIRD QUARTER 2009 GROUNDWATER MONITORING AND SAMPLING PROGRAM

Blaine Tech Services, Inc. (Blaine Tech) performed the Third Quarter 2009 groundwater monitoring and sampling event on September 28, 2009. Blaine Tech's Standard Operating Procedures are included as ***Attachment A***. Blaine Tech gauged depth-to-groundwater in all 20 Site wells (monitoring wells, extraction wells, and piezometers) prior to the collection of groundwater samples for laboratory analysis. Sixteen Site wells (MW-3, MW-4, MW-5, MW-7, MW-10, MW-11, MW-12, MW-13, MW-14, MW-15, EW-1, EW-2, EW-3, EW-4, PZ-1, and PZ-2) were sampled this quarter. Wells MW-1, MW-2, MW-9, and MW-16 were gauged for depth-to-groundwater only as they are scheduled to be sampled annually (during First Quarter groundwater monitoring and sampling events).

In a letter dated June 5, 2009, the CSCDEH reduced the required groundwater monitoring and sampling frequency at the Site in accordance with State Water Resources Control Board Resolution No. 2009-0042. In addition, references to piezometers PZ-1 and PZ-2 were corrected. As a result, the following changes to the groundwater monitoring and sampling program were made:

- Decrease the sampling frequency for wells MW-3, MW-11, MW-12, MW-13, MW-14, MW-15, and PZ-1 to semi-annual (during First and Third Quarters);
- Shift semi-annual sampling schedule for wells MW-4, MW-5, MW-7, MW-10, EW-1, EW-2, EW-3, and EW-4 to First and Third Quarters; and
- Shift annual sampling schedule for wells MW-1, MW-2, MW-9, MW-16, and PZ-2 to First Quarter.

During the Third Quarter 2009 groundwater monitoring and sampling event, a groundwater sample was inadvertently collected from piezometer PZ-2 instead of piezometer PZ-1, due to remnant field labels from the original misidentification of the piezometers. On October 7, 2009, Blaine Tech returned to the Site to collect a

DRAFT

groundwater sample from piezometer PZ-1. This sample was collected during Fourth Quarter 2009, but only nine days following the initial Third Quarter 2009 groundwater monitoring and sampling event; therefore, seasonal variations will not likely affect the sample. The analytical data for both piezometers is included in this report. The piezometer field labels have since been corrected.

Groundwater Elevation and Gradient

Well construction details and an assessment of whether groundwater samples were collected when groundwater elevations were observed within the well screen intervals are presented in ***Table 1***. Current and historical groundwater elevation data are presented in ***Table 2***. A groundwater elevation contour map (based on Third Quarter 2009 data) is shown on ***Figure 2***. The direction of groundwater flow beneath the Site at the time of sampling was towards the northwest at an approximate hydraulic gradient of 0.004 to 0.02 feet per foot (ft/ft). This is consistent with the historical direction of groundwater flow, as shown by the Rose Diagram on ***Figure 3***.

Schedule of Laboratory Analysis

All groundwater samples were analyzed for the presence of TPH-GRO using United States Environmental Protection Agency (US EPA) Method 8015B modified (SW-846); benzene, toluene, ethylbenzene, and total xylenes (BTEX compounds) using US EPA Method 8021B (SW-846); and methyl *tertiary*-butyl ether (MtBE) using US EPA Method 8260B (SW-846). With the exception of wells MW-2, MW-7, and MW-9, groundwater samples were also analyzed for di-isopropyl ether (DIPE), ethyl *tertiary*-butyl ether (EtBE), *tertiary*-amyl methyl ether (TAME), *tertiary*-butyl alcohol (TBA), and ethanol using US EPA Method 8260B (SW-846). The groundwater samples from piezometers PZ-1 and PZ-2 were also analyzed for 1,2-dichloroethane (1,2-DCA) and 1,2-dibromoethane (EDB) by US EPA Method 8260B (SW-846). Groundwater samples from wells MW-10 and MW-11, located down-gradient of the waste oil UST, were also analyzed for the full scan of volatile organic compounds (VOCs) by US EPA Method 8260B (SW-846). Well EW-4 was also scheduled to be analyzed for the full scan of VOCs by US EPA Method 8260B (SW-846); however, this analysis was not conducted.

Groundwater Analytical Results

During the Third Quarter 2009 groundwater monitoring and sampling event, Blaine Tech collected groundwater samples from 16 Site wells. Current and historical groundwater analytical results are presented in ***Table 2*** and ***Table 3***. Historical monitored natural attenuation (MNA) parameters are presented in ***Table 4***, including field measurements of dissolved oxygen (DO) levels and oxidation-reduction potential (ORP) measured using an in-line flow-through cell.

A figure showing the latest analytical data plotted on a Site map is included as ***Figure 4***. A TPH-GRO isoconcentration map is shown on ***Figure 5***. A benzene isoconcentration map is shown on ***Figure 6***. A MtBE isoconcentration map is shown on ***Figure 7***.

Certified laboratory analysis reports and chain-of-custody documents are presented as ***Attachment B***. Blaine Tech's field data sheets are presented as ***Attachment C***. Hydrographs based on current and historical groundwater elevations and analytical

DRAFT

results are included in ***Attachment D***. A summary of Third Quarter 2009 groundwater analytical results follows:

- **TPH-GRO** was detected in seven Site wells this quarter, at concentrations ranging from 55 micrograms per liter (µg/L; well MW-15) to 5,200 µg/L (piezometer PZ-1). Concentrations are within historical limits for each respective well with the exception of well MW-15, which is a historical low, and piezometer PZ-1, which is a historical high.

- **Benzene** was detected in four Site wells this quarter, at concentrations ranging from 3.4 µg/L (well MW-11) to 100 µg/L (piezometer PZ-1), which are within historical limits for each respective well.

- **Toluene** was detected in two Site wells this quarter, at concentrations of 0.6 µg/L (well MW-12) and 3.4 µg/L (piezometer PZ-1). Concentrations are within historical limits for each respective well with the exception of piezometer PZ-1, which is a historical high.

- **Ethylbenzene** was detected in two Site wells this quarter, at concentrations of 0.6 µg/L (well MW-14) and 200 µg/L (piezometer PZ-1), which are within historical limits for each respective well.

- **Total Xylenes** were detected in one Site well this quarter, at a concentration of 14 µg/L (piezometer PZ-1), which is within historical limits for this well.

- **MtBE** was detected in 15 Site wells this quarter, at concentrations ranging from 0.7 µg/L (well MW-15) to 56 µg/L (well MW-3). Concentrations are within historical limits for each respective well with the exception of well MW-4 (0.9 µg/L), which is a historical low.

- **TBA** was detected in three Site wells this quarter, at concentrations of 5 µg/L (piezometer PZ-2), 11 µg/L (well MW-11), and 6,600 µg/L (well MW-3). Concentrations are within historical limits for each respective well with the exception of well MW-3 and piezometer PZ-2, which are historical highs.

- **EtBE** was detected in six Site wells this quarter, at concentrations ranging from 1 µg/L (piezometer PZ-2) to 33 µg/L (well MW-3), which are within historical limits for each respective well.

- **TAME** was not detected above the laboratory reporting limit (LRL; 0.5 µg/L) in any Site well sampled this quarter.

- **DIPE** was detected in one Site well this quarter, at a concentration of 0.5 µg/L (well MW-11), which is within historical limits for this well.

- **Ethanol** was not detected above the LRL (50 µg/L) in any Site well sampled this quarter.

DRAFT

- **1,2-DCA** was not detected above the LRL (0.5 µg/L) in piezometers PZ-1 and PZ-2.

- **EDB** was not detected above the LRL (0.5 µg/L) in piezometers PZ-1 and PZ-2.

A summary of the Third Quarter 2009 detections reported above LRLs from the full scan analyses by US EPA Method 8260B performed on wells MW-10 and MW-11 follows:

- **Vinyl chloride** was detected in well MW-11 this quarter, at a concentration of 2 µg/L, which is within historical limits for this well.

- ***trans*-1,2-Dichloroethene** was detected in well MW-11 this quarter, at a concentration of 3 µg/L, which is within historical limits for this well.

- **1,2-DCA** was detected in wells MW-10 and MW-11 this quarter, at concentrations of 5 µg/L and 2 µg/L, respectively, which are within historical limits for each well.

- **Chlorobenzene** was detected in wells MW-10 and MW-11 this quarter, at concentrations of 10 µg/L and 59 µg/L, respectively, which are within historical limits for each well.

- **1,2-Dichlorobenzene** was detected in wells MW-10 and MW-11 this quarter, at concentrations of 3 µg/L and 4 µg/L, which are within historical limits for each well.

- **Acetone** was detected in well MW-11 this quarter, at a concentration of 61 µg/L, which is within historical limits for this well.

- ***cis*-1,2-Dichloroethene** was detected in well MW-11 this quarter, at a concentration of 3 µg/L, which is within historical limits for this well.

DRAFT

CONCLUSIONS AND RECOMMENDATIONS

Concentrations of TPH-GRO, benzene, ethylbenzene, MtBE, TBA, and select chlorinated VOCs exceed the California RWQCB – San Francisco Bay Region Environmental Screening Levels (ESLs) as follows:

- TPH-GRO concentrations exceed the ESL of 100 µg/L in wells MW-3, MW-11, MW-12, and MW-14, and piezometer PZ-1;
- Benzene concentrations exceed the ESL of 1 µg/L in wells MW-11, MW-14, and MW-15, and piezometer PZ-1;
- The ethylbenzene concentration exceeds the ESL of 30 µg/L in piezometer PZ-1;
- MtBE concentrations exceed the ESL of 5 µg/L in wells MW-3, MW-5, MW-13, EW-2, and EW-3, and piezometers PZ-1 and PZ-2;
- The TBA concentration exceeds the ESL of 12 µg/L in well MW-3;
- 1,2-DCA concentrations exceed the ESL of 0.5 µg/L in wells MW-10 and MW-11;
- The chlorobenzene concentration exceeds the ESL of 25 µg/L in well MW-11; and
- The vinyl chloride concentration exceeds the ESL of 0.5 µg/L in well MW-11.

Current and historical groundwater quality data and the MNA evaluation detailed in the *Fourth Quarter 2007 Quarterly Groundwater Monitoring Report* indicate that the dissolved-phase petroleum hydrocarbon plume is generally stable and that conditions including available electron acceptors are favorable for intrinsic biodegradation. It appears that oxygen and nitrate have been nearly consumed as electron acceptors, and the current dominant biodegradation processes within the petroleum hydrocarbon plume are most likely sulfate and ferric iron reduction.

In addition, the hydrographs suggest that the plume is generally stable or decreasing in its lateral extent and overall concentrations of TPH-GRO, benzene, and MtBE; however, a TPH-GRO concentration (340 µg/L) above the ESL of 100 µg/L was observed during Third Quarter 2009 in the furthest down-gradient well (MW-12). In addition, there was a detection of MtBE (4 µg/L) in MW-12 above the LRL; although, the concentration is below the ESL (5 µg/L). Concentrations of benzene, ethylbenzene, and total xylenes in well MW-12 were below LRLs during the Third Quarter 2009 groundwater monitoring and sampling event.

On October 28, 2009, the CSCDEH issued letter stating that no further action is required at the Site, while the case file was being reviewed for possible closure. Based on this notice, groundwater monitoring and sampling will be discontinued, pending case closure.

If you have any questions regarding the contents of this report, please contact the Stantec project manager, Travis Flora, at (408) 356-6124 or travis.flora@stantec.com.

Table 2

Groundwater Monitoring Data and Analytical Results

Chevron Service Station #9-4259
147 East Santa Clara Street
San Jose, California

EXPLANATIONS:

Groundwater monitoring data and laboratory analytical results prior to June 5, 2000, were compiled from reports prepared by Blaine Tech Services, Inc.
Groundwater monitoring data and laboratory analytical results from June 5, 2000 to March 6, 2009 were provided by Gettler-Ryan, Inc.
Current groundwater monitoring data was provided by Blaine Tech Services, Inc and current laboratory analytical results were provided by Lancaster Laboratories.

TOC = Top of Casing
(ft.) = Feet
GWE = Ground Water Elevation
(msl) = Mean sea level
DTW = Depth to Water
TPH = Total Petroleum Hydrocarbons
DRO = Diesel Range Organics
GRO = Gasoline Range Organics
B = Benzene
T = Toluene
E = Ethylbenzene
X = Xylenes
MTBE = Methyl Tertiary Butyl Ether
TOG = Total Oil and Grease
(µg/L) = Micrograms per liter
-- = Not Measured/Not Analyzed
(D) = Duplicate
QA = Quality Assurance/Trip Blank
NP = No Purge
PER = Peristaltic Pump

* TOC elevations were surveyed on July 17, 2008 by MID Coast Engineering. Vertical datum is NGVD29 from GPS Observations. TOC surveyed on June 14, 2000, by Mid Coast Engineers. The benchmark is City of San Jose RM#126-E, USC&GS I-19=96, set in concrete 121.6 feet north of Santa Clara Street center line and 29.5 feet west of Fourth Street center line. (Elevation = 77.97, NGVD 29 (msl).

1 Broken case.
2 Sample was analyzed past the EPA recommended holding time.
3 Laboratory report indicates gasoline C6-C12.
4 MTBE by EPA Method 8260.
5 BTEX values are reported off a one point calibration due to coalition of the Internal Standard.
6 Laboratory report indicates gasoline C6-C12 + unidentified hydrocarbons >C10.
7 Laboratory report indicates that this sample was originally analyzed within holding time. Re-analysis for confirmation or dilution was performed past the recommended holding time.
8 Laboratory report indicates unidentified hydrocarbons C6-C12.
9 Laboratory report indicates the analysis was performed from a previously opened vial and the results are, therefore, estimated.
10 Due to the installation of an extraction system the TOC has been altered; unable to calculate the GWE.
11 Connected to remediation system.
12 No Purge; Grab sample taken.
13 Unable to purge, due to insufficient water.
14 Stinger in well.
15 Laboratory reports indicates that due to the presence of an interferent near its retention time, the normal reporting limit was not attained for ethylbenzene. The presence or concentration of this compound cannot be determined due to the presence of this interferent.
16 Laboratory report indicates Surrogate recoveries are outside of QC limits for the GC/MS volatile fraction. The analysis was repeated several times and the surrogate recoveries were within QC limits but were unable to be reported due to other QC issues. The re-analysis results confirmed the reported results for the target compounds.
17 Laboratory reports indicates due to excessive foaming of the sample, normal reporting limits were not attained.
18 Laboratory reports indicates reporting limits for GC/MS volatile compounds were raised due to sample foaming.
19 Laboratory reports indicates due to the presence of an interferent near its retention time, the normal reporting limit was not attained for total xylenes. The presence or concentration of this compound cannot be determined due to the presence of this interferent.
20 BTEX by EPA Method 8260.
21 Laboratory reports indicates due to the presence of an interferent near its retention time, the normal reporting limit was not attained for benzene. The presence or concentration of this compound cannot be determined due to the presence of this interferent.

Table 3

Groundwater Analytical Results - Oxygenate and Other Volatile Organic Compounds

Chevron Service Station #9-4259
147 East Santa Clara Street
San Jose, California

EXPLANATIONS:

Groundwater monitoring data and laboratory analytical results prior to June 5, 2000, were compiled from reports prepared by Blaine Tech Services, Inc.
Groundwater monitoring data and laboratory analytical results from June 5, 2000 to March 6, 2009 were provided by Gettler-Ryan, Inc.
Current groundwater monitoring data was provided by Blaine Tech Services, Inc and current laboratory analytical results were provided by Lancaster Laboratories.

TBA = t-Butyl alcohol
MTBE = Methyl Tertiary Butyl Ether
DIPE = di-Isopropyl ether
ETBE = Ethyl t-butyl ether
TAME = t-Amyl methyl ether
EDB = Ethylene Dibromide/1,2-Dibromoethane
1,2-DCB = 1,2-Dichlorobenzene
1,2-DCA = 1,2-Dichloroethane
1,1-DCE = 1,1-Dichloroethene
1,2-DCE = 1,2-Dichloroethene
trans-1,2-DCE = trans-1,2-Dichloroethene
1,1,2-TCA = 1,1,2-Trichloroethane
TCE = Trichloroethene
(ppb) = Parts per billion
(µg/L) **=** Micrograms per liter
-- = Not Analyzed

1 Laboratory report indicates Benzene was detected at 2,540 ppb, Isopropylbenzene at 104 ppb, n-Propylbenzene at 205 ppb and Total Xylenes at 36.1 ppb.
2 Laboratory report indicates Benzene was detected at 3,170 ppb, Ethylbenzene at 567 ppb, Isopropylbenzene at 90.1 ppb, Naphthalene at 110 ppb, n-Propylbenzene at 162 ppb, Toluene at 73.9 ppb, 1,2,4-Trimethylbenzene at 386 ppb, 1,3,5-Trimethylbenzene at 42.3 ppb and Total Xylenes at 877 ppb.
3 Laboratory report indicates Benzene was detected at 436 ppb, sec-Butylbenzene at 10.6 ppb, Ethylbenzene at 27.1 ppb, Isopropylbenzene at 11.5 ppb, n-Propylbenzene at 16.9 ppb, and Toluene at 8.16 ppb.
4 Laboratory report indicates Benzene was detected at 3,530 ppb, Ethylbenzene at 239 ppb, Isopropylbenzene at 56.9 ppb, n-Propylbenzene at 107 ppb and Toluene at 111 ppb.
5 Laboratory report indicates Tert-butylbenzene was detected at 4.39 ppb and Isopropylbenzene at 0.502 ppb.
6 Laboratory report indicates Benzene was detected at 2,000 ppb, Ethylbenzene at 737 ppb, Isopropylbenzene at 99.6 ppb, n-Propylbenzene at 195 ppb, 1,2,4-Trimethylbenzene at 480 ppb, and Total Xylenes at 27.4 ppb.
7 Laboratory report indicates Benzene was detected at 2,120 ppb, Ethylbenzene at 69.1 ppb, Isopropylbenzene at 91.7 ppb, Naphthalene at 77.3 ppb, n-Propylbenzene at 201 ppb, and Total Xylenes at 38.3 ppb.
8 Laboratory report indicates Benzene was detected at 4,580 ppb, Isopropylbenzene at 69.3 ppb and n-Propylbenzene at 122 ppb.
9 Laboratory report indicates Benzene was detected at 1,680 ppb, Isopropylbenzene at 28.6 ppb and n-Propylbenzene at 56.4 ppb.
10 Laboratory report indicates Benzene was detected at 157 ppb, sec-Butylbenzene at 7.49 ppb, Ethylbenzene at 13.8 ppb, Isopropylbenzene at 11.2 ppb, n-Propylbenzene at 11.9 ppb, Toluene at 2.78 ppb, and Total Xylenes at 2.91 ppb.
11 Laboratory report indicates Benzene was detected at 1,800 ppb, Toluene at 72 ppb, Ethylbenzene at 160 ppb, Total Xylenes at 64 ppb, Isopropylbenzene at 39 ppb, n-Propylbenzene at 85 ppb, 1,3,5-Trimethylbenzene at 33 ppb, tert-Butylbenzene at 6 ppb, sec-Butylbenzene at 19 ppb, p-Isopropyltoluene at 7 ppb, 1,4-Dichlorobenzene at 8 ppb, n-Butylbenzene at 13 ppb, and Naphthalene at 27 ppb.
12 Laboratory report indicates cis-1,2-Dichloroethene was detected at 13 ppb, Benzene at 140 ppb, Toluene at 4 ppb, Ethylbenzene at 14 ppb, Total Xylenes were at 5 ppb, Isopropylbenzene at 16 ppb, n-Propylbenzene at 32 ppb, 1,3,5-Trimethylbenzene at 4 ppb, tert-Butylbenzene at 2 ppb, sec-Butylbenzene at 12 ppb, 1,4-Dichlorobenzene at 3 ppb, n-Butylbenzene at 8 ppb, and Naphthalene at 6 ppb.
13 Laboratory report indicates Benzene was detected at 1,800 ppb, Toluene at 62 ppb, Ethylbenzene at 130 ppb, Total Xylenes at 45 ppb, Isopropylbenzene at 41 ppb, n-Propylbenzene at 88 ppb, 1,3,5-Trimethylbenzene at 4 ppb, tert-Butylbenzene at 8 ppb, sec-Butylbenzene at 22 ppb, p-Isopropyltoluene at 7 ppb, 1,4-Dichlorobenzene at 8 ppb, n-Butylbenzene at 15 ppb, and Naphthalene at 37 ppb.
14 Laboratory report indicates Benzene was detected at 1,600 ppb, Toluene at 62 ppb, Ethylbenzene at 150 ppb, Total Xylenes at 54 ppb, Isopropylbenzene at 45 ppb, n-Propylbenzene at 94 ppb, 1,3,5-Trimethylbenzene at 37 ppb, tert-Butylbenzene at 6 ppb, sec-Butylbenzene at 21 ppb, p-Isopropyltoluene at 12 ppb, 1,4-Dichlorobenzene at 8 ppb, n-Butylbenzene at 15 ppb, and Naphthalene at 48 ppb.

DRAFT

Table 3

Groundwater Analytical Results - Oxygenate and Other Volatile Organic Compounds

Chevron Service Station #9-4259
147 East Santa Clara Street
San Jose, California

EXPLANATIONS (CONT):

15 Laboratory report indicates cis-1,2-Dichloroethene was detected at 10 ppb, Benzene at 110 ppb, Toluene at 3 ppb, Ethylbenzene at 7 ppb, Total Xylenes were at 3.8 ppb, Isopropylbenzene at 16 ppb, n-Propylbenzene at 29 ppb, 1,3,5-Trimethylbenzene at 3 ppb, tert-Butylbenzene at 1 ppb, sec-Butylbenzene at 10 ppb, 1,4-Dichlorobenzene at 3 ppb, n-Butylbenzene at 4 ppb, 1,2-Dichlorobenzene at 10 ppb and Naphthalene at 5 ppb.

16 Laboratory report indicates cis-1,2-Dichloroethene was detected at 9 ppb, Benzene at 88 ppb, Toluene at 0.6 ppb, Isopropylbenzene at 2 ppb, n-Propylbenzene at 2 ppb, tert-Butylbenzene at 2 ppb, sec-Butylbenzene at 2 ppb and 1,4-Dichlorobenzene at 3 ppb.

17 Laboratory report indicates Benzene was detected at 1,600 ppb, Toluene at 64 ppb, Ethylbenzene at 130 ppb, m+p Xylene at 30 ppb, o-Xylene at 24 ppb, Isopropylbenzene at 42 ppb, n-Propylbenzene at 94 ppb, 1,3,5-Trimethylbenzene at 6 ppb, tert-Butylbenzene at 6 ppb, sec-Butylbenzene at 22 ppb, p-Isopropyltoluene at 13 ppb, 1,4 Dichlorobenzene at 8 ppb, n-Butylbenzene at 16 ppb and Naphthalene at 58 ppb.

18 Laboratory report indicates cis-1,2-Dichloroethene was detected at 9 ppb, Benzene at 100 ppb, Toluene at 3 ppb, Ethylbenzene at 5 ppb, m+p Xylene at 0.8 ppb, o-Xylene at 3 ppb, Isopropylbenzene at 15 ppb, n-Propylbenzene at 31 ppb, tert-Butylbenzene at 1 ppb, sec-Butylbenzene at 11 ppb, 1,4 Dichlorobenzene at 3 ppb, n-Butylbenzene at 5 ppb, and Naphthalene at 4 ppb.

19 Laboratory report indicates Benzene was detected at 1,400 ppb, Toluene at 63 ppb, Ethylbenzene at 78 ppb, m+p Xylene at 24 ppb, o-Xylene at 19 ppb, Isopropylbenzene at 42 ppb, n-Propylbenzene at 98 ppb, 1,3,5-Trimethylbenzene at 4 ppb, tert-Butylbenzene at 7 ppb, sec-Butylbenzene at 24 ppb, p-Isopropyltoluene at 7 ppb, 1,4-Dichlorobenzene at 8 ppb, n-Butylbenzene at 19 ppb, 1,2-Dichlorobenzene at 5 ppb and Naphthalene at 55 ppb.

20 Laboratory report indicates cis-1,2-Dichloroethene was detected at 11 ppb, Benzene at 43 ppb, Toluene at 1 ppb, Chlorobenzene at 240 ppb, Ethylbenzene at 2 ppb, Isopropylbenzene at 6 ppb, n-Propylbenzene at 11 ppb, sec-Butylbenzene at 5 ppb, 1,4-Dichlorobenzene at 2 ppb and n-Butylbenzene at 2 ppb.

21 Laboratory report indicates cis-1,2-Dichloroethene was detected at 7 ppb, Benzene at 85 ppb, Toluene at 2 ppb, Ethylbenzene at 3 ppb, m+p Xylene at 1 ppb, o-Xylene at 0.6 ppb, Isopropylbenzene at 2 ppb, n-Propylbenzene at 2 ppb, tert-Butylbenzene at 3 ppb, sec-Butylbenzene at 2 ppb and 1,4-Dichlorobenzene at 3 ppb.

22 Laboratory report indicates Benzene at 790 ppb, Toluene at 16 ppb, Ethylbenzene at 8 ppb, sec- Butylbenzene at 16 ppb, m+p Xylene at 7 ppb, o-Xylene at 4 ppb, Isopropylbenzene at 20 ppb, n-Propylbenzene at 35 ppb, 1,3,5-Trimethylbenzene at 6 ppb, tert-Butylbenzene at 7 ppb, 1,4-Dichlorobenzene at 6 ppb, n-Butylbenzene at 10 ppb and Naphthalene at 6 ppb.

23 Laboratory report indicates cis-1,2-Dichloroethene at 6 ppb, Benzene at 31 ppb, Toluene at 0.7 ppb, Ethylbenzene at 0.8 ppb, Isopropylbenzene at 3 ppb, n-Propylbenzene at 2 ppb, sec-Butylbenzene at 3 ppb and 2-Butanone at 6 ppb.

24 Laboratory report indicates cis-1,2-Dichloroethene at 11 ppb, Benzene at 59 ppb, Toluene at 1 ppb, 1,1,2-Trichloroethane at 5 ppb, Ethylbenzene at 3 ppb, m+p-Xylene at 1 ppb, o-Xylene at 0.6 ppb, 1,2,3-Trichloropropane at 1 ppb and 2-Butanone at 47 ppb.

25 Laboratory report indicates cis-1,2-Dichloroethene at 6 ppb, Benzene at 41 ppb, Toluene at 1 ppb, Ethylbenzene at 0.8 ppb, m+p-Xylene at 0.5 ppb, Isopropylbenzene at 3 ppb, sec-Butylbenzene at 2 ppb, 1,4-Dichlorobenzene at 2 ppb and 2-Butanone at 64 ppb.

26 Laboratory report indicates cis-1,2-Dichloroethene at 10 ppb and Benzene at 13 ppb.

27 Laboratory report indicates cis-1,2-Dichloroethene at 3 ppb, Ethylbenzene at 3 ppb, m+p-Xylene at 1 ppb, o-Xylene at 0.9 ppb, tert-Butylbenzene at 1 ppb and 1,4-Dichlorobenzene at 1 ppb.

28 Laboratory report indicates Benzene at 33 ppb, Toluene at 2 ppb, Ethylbenzene at 2 ppb, m+p-Xylene at 0.8 ppb, o-Xylene at 0.8 ppb, Isopropylbenzene at 4 ppb, n-Propylbenzene at 6 ppb, 1,4-Dichlorobenzene at 1 ppb, Naphthalene at 4 ppb, 2-Butanone at 570 ppb and sec-Butylbenzene at 2 ppb.

DRAFT

Table 3

Groundwater Analytical Results - Oxygenate and Other Volatile Organic Compounds

Chevron Service Station #9-4259
147 East Santa Clara Street
San Jose, California

EXPLANATIONS (CONT):

29 Laboratory report indicates cis-1,2-Dichloroethene at 3ppb, Benzene at 50 ppb, Toluene at 4 ppb, Ethylbenzene at 8 ppb, m+p-Xylene at 4 ppb, o-Xylene at 2 ppb, n-Propylbenzene at 2 ppb, 1,3,5-Trimethylbenzene at 2 ppb, tert-Butylbenzene at 2 ppb, 1,4-Dichlorobenzene at 2 ppb, 2-Butanone at 31 ppb, and 4-Methyl-2-pentanone at 27 ppb.

30 Laboratory report indicates cis-1,2-Dichloroethene at 3 ppb, Benzene at 2 ppb, o-Xylene at 0.7 ppb, 1,4-Dichlorobenzene at 1 ppb and 2-Butanone at 5 ppb.

31 Laboratory report indicates cis-1,2-Dichloroethene at 5 ppb and Benzene at 0.8 ppb.

32 Laboratory report indicates cis-1,2-Dichloroethene at 2 ppb and Benzene at 0.5 ppb.

33 Laboratory report indicates cis-1,2-Dichloroethene at 5 ppb and Benzene at 1 ppb.

34 Laboratory report indicates cis-1,2-Dichloroethene at 15 ppb, and Benzene at 26 ppb, Toluene at 1 ppb, Eythylbenzene at 9 ppb, m+p-Xylene at 4 ppb, o-Xylene at 3 ppb, Isopropylbenzene at 3 ppb, n-Propylbenzene at 4 ppb, 1,3,5-Trimethylbenzene at 3 ppb, tert-Butylbenzene at 3 ppb, 1,2,4-Trimethylbenzene at 1 ppb, sec-Butylbenzene at 3 ppb, p-Isopropyltoluene at 1 ppb, 1,4-Dichlorobenzene at 1 ppb, n-Butylbenzene at 1 ppb, 2-Butanone at 17 ppb and 4-Methyl-2-pentanone at 62 ppb.

35 Laboratory report indicates cis-1,2-Dichloroethene at 9 ppb, Benzene at 2 ppb and 2-Butanone at 11 ppb.

36 Laboratory report indicates cis-1,2-Dichloroethene at 7 ppb and Benzene at 3 ppb.

37 Laboratory report indicates cis-1,2-Dichloroethene at 12 ppb, Benzene at 11 ppb, Toluene at 0.8 ppb, Eythylbenzene at 1 ppb and 1,4-Dichlorobenzene at 1 ppb.

38 Laboratory report indicates cis-1,2-Dichloroethene at 15 ppb and Benzene at 1 ppb.

39 Laboratory report indicates cis-1,2-Dichloroethene at 11 ppb, Benzene at 5 ppb and Toluene at 0.6 ppb.

40 Laboratory report indicates cis-1,2-Dichloroethene at 11 ppb and Benzene at 1 ppb.

41 Laboratory report indicates cis-1,2-Dichloroethene at 9 ppb and Benzene at 2 ppb.

42 Laboratory report indicates cis-1,2-Dichloroethene at 11 ppb and Benzene at 4 ppb.

43 Laboratory report indicates cis-1,2-Dichloroethene at 10 ppb and Benzene at 2 ppb.

44 Laboratory report indicates cis-1,2-Dichloroethene at 1 ppb and Benzene at 0.8 ppb and 4-Methyl-2-pentanone at 3 ppb.

45 Laboratory report indicates cis-1,2-Dichloroethene at 6 ppb and Benzene at 1 ppb.

46 Laboratory report indicates cis-1,2-Dichloroethene at 7 ppb and Benzene at 5 ppb.

47 Laboratory report indicates cis-1,2-Dichloroethene at 2 ppb and Benzene at 1 ppb.

48 Laboratory report indicates cis-1,2-Dichloroethene at 3 ppb and Benzene at 3 ppb.

49 Laboratory report indicates cis-1,2-Dichloroethene was detected at 4 ppb.

50 Laboratory report indicates cis-1,2-Dichloroethene at 7 ppb, Benzene at 5 ppb.

51 Laboratory report indicates cis-1,2-Dichloroethene at 9 ppb, Benzene at 1 ppb, Toluene at 2 ppb, Ethylbenzene at 0.6 ppb, m+p-Xylene at 2 ppb, o-Xylene at 1 ppb, and 1,2,4-Trimethylbenzene at 2 ppb.

52 Laboratory report indicates cis-1,2-Dichloroethene at 5 ppb, Benzene at 3 ppb, Toluene at 1 ppb, m+p-Xylene at 2 ppb, o-Xylene at 0.7 ppb, 1,2,4-Trimethylbenzene at 1 ppb and 2-Butanone at 9 ppb.

53 Laboratory report indicates cis-1,2-Dichloroethene at 4 ppb, Benzene at 1 ppb, Toluene at 0.7 ppb and m+p-Xylene at 0.9 ppb.

DRAFT

Table 3

Groundwater Analytical Results - Oxygenate and Other Volatile Organic Compounds

Chevron Service Station #9-4259
147 East Santa Clara Street
San Jose, California

EXPLANATIONS (CONT):

54 Laboratory report indicates cis-1,2-Dichloroethene at 1 ppb, Benzene at 10 ppb, Chlorobenzene at 12 ppb, m+p-Xylene at 0.6 ppb and 2-Butanone at 4 ppb.
55 Laboratory report indicates cis-1,2-Dichloroethene at 4 ppb and Benzene at 0.7 ppb.
56 Laboratory report indicates cis-1,2-Dichloroethene at 6 ppb and Benzene at 0.6 ppb.
57 Laboratory report indicates cis-1,2-Dichloroethene at 5 ppb, Benzene at 6 ppb and Toluene at 0.7 ppb.
58 Laboratory report indicates cis-1,2-Dichloroethene at 6 ppb and Benzene at 3 ppb.
59 Laboratory report indicates cis-1,2-Dichloroethene was detected at 3ppb and Benzene at 0.9 ppb.
60 Laboratory report indicates cis-1,2-Dichloroethene was detected at 6 ppb, Benzene at 5 ppb and toluene at 0.5 ppb.
61 Laboratory report indicates cis-1,2-Dichloroethene was detected at 4 ppb, Benzene at 0.6 ppb and toluene at 0.5 ppb.
62 Laboratory report indicates cis-1,2-Dichloroethene was detected at 3 ppb and Benzene at 4 ppb.
63 Laboratory report indicates cis-1,2-Dichloroethene was detected at 2 ppb.
64 Laboratory report indicates Surrogate recoveries are outside of QC limits for the GC/MS volatile fraction. The analysis was repeated several times and the surrogate recoveries were within QC limits but were unable to be reported due to other QC issues. The re-analysis results confirmed the reported results for the target compounds.
65 Laboratory report indicates cis-1,2-Dichloroethane was detected at 1µg/L and Toluene at 0.7 µg/L.
66 Laboratory report indicates cis-1,2-Dichloroethene was detected at 1µg/L, Benzene at 10 µg/L and Toluene at 0.5 µg/L.
67 Laboratory report indicates cis-1,2-Dichloroethene was detected at 1µg/L.
68 Laboratory reports indicates reporting limits for GC/MS volatile compounds were raised due to sample foaming.
69 Laboratory report indicates cis-1,2-Dichloroethene was detected at 5 µg/L and Benzene at 0.6 µg/L.
70 Laboratory report indicates cis-1,2-Dichloroethene was detected at 3 µg/L and Benzene at 2 µg/L.
71 Laboratory report indicates cis-1,2-Dichloroethene was detected at 2 µg/L.
72 Laboratory report indicates cis-1,2-Dichloroethene was detected at 3 µg/L and Benzene at 3 µg/L.

NOTE: All other Full Scan Volatile Organic Compounds (VOCs) were less than the reporting limit, unless noted above.

Blaine Tech Services, Inc. Standard Operating Procedures

DRAFT

BLAINE TECH SERVICES, INC.
METHODS AND PROCEDURES
FOR THE ROUTINE MONITORING OF
GROUNDWATER WELLS AT CHEVRON SITES

Blaine Tech Services, Inc. performs environmental sampling and documentation as an independent third party. We specialize in groundwater monitoring assignments and intentionally limit the scope of our services to those centered on the generation of objective information.

To avoid conflicts of interest, Blaine Tech Services, Inc. personnel do not evaluate or interpret the information we collect. As a state licensed contractor (C-57 well drilling –water – 746684) performing strictly technical services, we do not make any professional recommendations and perform no consulting of any kind.

DRAFT

SAMPLING PROCEDURES OVERVIEW

SAFETY

All groundwater monitoring assignments performed for Chevron comply with Chevron's safety guidelines, 29 CFR 1910.120 and SB-198 Injury and Illness Prevention Program (IIPP). All Field Technicians receive the full 40-hour 29CFR 1910.120 OSHA SARA HAZWOPER course, medical clearance and on-the-job training prior to commencing any work on any Chevron site.

INSPECTION AND GAUGING

Wells are inspected prior to evacuation and sampling. The condition of the wellhead is checked and noted according to a wellhead inspection checklist.

Standard measurements include the depth to water (DTW) and the total well depth (TD) obtained with industry standard electronic water level indicators that are graduated in increments of hundredths of a foot.

The water in each well is inspected for the presence of immiscibles. When free product is suspected, its presence is confirmed using an electronic interface probe (e.g. GeoTech). No samples are collected from a well containing over two-hundredths of a foot (0.02') of product.

EVACUATION

Depth to water measurements are collected by our personnel prior to purging and minimum purge volumes are calculated anew for each well based on the height of the water column and the diameter of the well. Expected purge volumes are never less than three case volumes and are set at no less than four case volumes in some jurisdictions.

Well purging devices are selected on the basis of the well diameter and the total volume to be

evacuated. In most cases the well will be purged using an electric submersible pump (i.e. Grundfos) suspended near (but not touching) the bottom of the well.

PARAMETER STABILIZATION

Well purging completion standards include minimum purge volumes, but additionally require stabilization of specific groundwater parameters prior to sample collection. Typical groundwater parameters used to measure stability are electrical conductivity, pH, and temperature. Instrument readings are obtained at regular intervals during the evacuation process (no less than once per case volume).

Stabilization standards for routine quarterly monitoring of fuel sites include the following: Temperature is considered to have stabilized when successive readings do not fluctuate more than +/- 1 degree Celsius. Electrical conductivity is considered stable when successive readings are within 10%. pH is considered to be stable when successive readings remain constant or vary no more than 0.2 of a pH unit.

DEWATERED WELLS

Normal evacuation removes no less than three case volumes of water from the well. However, less water may be removed in cases where the well dewaters and does not immediately recharge.

MEASURING RECHARGE

Upon completion of well purging, a depth to water measurement is collected and notated to ensure that the well has recharged to within 80% of its static, pre-purge level prior to sampling.

Wells that do not immediately show 80% recharge or dewatered wells will be allowed approximately 2 hours to recharge prior to sampling or will be sampled at site departure. All wells requiring off-site traffic control in the public right-of-way, the 80% recharge rule may be disregarded in the interests of Health and Safety. The sample may be collected as soon as there is sufficient water. The water level at time of sampling will be noted.

PURGEWATER CONTAINMENT

All non-hazardous purgewater evacuated from each groundwater monitoring well is captured and contained in on-board storage tanks on the Sampling Vehicle and/or special water hauling trailers. Effluent from the decontamination of reusable apparatus (sounders, electric pumps and hoses etc.), consisting of groundwater combined with deionized water and non-phosphate soap, is also captured and pumped into effluent tanks.

Non-hazardous purgewater is transported under standard Bill of Lading documentation to a Blaine Tech Services, Inc. facility before being transported to a Chevron approved disposal facility.

DRAFT

SAMPLE COLLECTION DEVICES

All samples are collected using disposable bailers.

SAMPLE CONTAINERS

Sample material is decanted directly from the sampling bailer into sample containers provided by the laboratory that will analyze the samples. The transfer of sample material from the bailer to the sample container conforms to specifications contained in the USEPA T.E.G.D. The type of sample container, material of construction, method of closure and filling requirements are specific to the intended analysis. Chemicals needed to preserve the sample material are commonly placed inside the sample containers by the laboratory or glassware vendor prior to delivery of the bottle to our personnel. The laboratory sets the number of replicate containers.

TRIP BLANKS

Trip Blanks, if requested, are taken to the site and kept inside the sample cooler for the duration of the event. They are turned over to the laboratory for analysis with the samples from that site.

DUPLICATES

Duplicates, if requested, may be collected at a site. The Duplicate sample is collected, typically from the well containing the most measurable contaminants. The Duplicate sample is labeled the same as the original.

SAMPLE STORAGE

All sample containers are promptly placed in food grade ice chests for storage in the field and transport (direct or via our facility) to the designated analytical laboratory. These ice chests contain quantities of restaurant grade ice as a refrigerant material. The samples are maintained in either an ice chest or a refrigerator until relinquished into the custody of the laboratory or laboratory courier.

DOCUMENTATION CONVENTIONS

A label must be affixed to all sample containers. In most cases these labels are generated by our office personnel and are partially preprinted. Labels can also be hand written by our field personnel. The site is identified with the store number and site address, as is the particular groundwater well from which the sample is drawn (e.g. MW-1, MW-2, S-1 etc.). The time and date of sample collection along with the initials of the person who collects the sample are handwritten onto the label.

Chain of Custody records are created using client specific preprinted forms following USEPA specifications.

DRAFT

Bill of Lading records are contemporaneous records created in the field at the site where the non-hazardous purgewater is generated. Field Technicians use preprinted Bill of Lading forms.

DECONTAMINATION

All equipment is brought to the site in clean and serviceable condition and is cleaned after use in each well and before subsequent use in any other well. Equipment is decontaminated before leaving the site.

The primary decontamination device is a commercial steam cleaner. The steam cleaner is de-tuned to function as a hot pressure washer that is then operated with high quality deionized water that is produced at our facility and stored onboard our sampling vehicle. Cleaning is facilitated by the use of proprietary fixtures and devices included in the patented workstation (U.S. Patent 5,535,775) that is incorporated in each sampling vehicle. The steam cleaner is used to decon reels, pumps and bailers.

Any sensitive equipment or parts (i.e. Dissolved Oxygen sensor membrane, water level indicator, etc.) that cannot be washed using the high pressure water, will be sprayed with a non-phosphate soap and deionized water solution and rinsed with deionized water.

DISSOLVED OXYGEN READINGS

Dissolved Oxygen readings are taken pre- and/or post-purge using YSI meters (e.g. YSI Model 550) or HACH field test kits.

The YSI meters are able to collect accurate in-situ readings. The probe allows downhole measurements to be taken from wells with diameters as small as two inches. The probe and reel is decontaminated between wells as described above. The meter is calibrated between wells as per the instructions in the operating manual. The probe is lowered into the water column and the reading is allowed to stabilize prior to collection.

OXYIDATON REDUCTION POTENTIAL READINGS

All readings are obtained with either Corning or Myron-L meters (e.g. Corning ORP-65 or a Myron-L Ultrameter GP). The meter is cleaned between wells as described above. The meter is calibrated at the start of each day according to the instruction manual.

FERROUS IRON MEASUREMENTS

All field measurements are collected at time of sampling with a HACH test kit.

Preservation requirements were not met. The vial submitted for volatile analysis did not have a pH < 2 at the time of analysis. Due to the volatile nature of the analytes, it is not appropriate for the laboratory to adjust the pH at the time of sample receipt. The pH of this sample was pH = 6.

05879	Ethylbenzene	100-41-4	N.D.	0.5	1
05879	Toluene	108-88-3	N.D.	0.5	1
05879	Total Xylenes	1330-20-7	N.D.	1.5	1

Preservation requirements were not met. The vial submitted for volatile analysis did not have a pH < 2 at the time of analysis. Due to the volatile nature of the analytes, it is not appropriate for the laboratory to adjust the pH at the time of sample receipt. The pH of this sample was pH = 7.

General Sample Comments

State of California Lab Certification No. 2501

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

Due to the presence of an interferent near its retention time, the normal reporting limit was not attained for ethylbenzene. The presence or concentration of this compound cannot be determined due to the presence of this interferent.

General Sample Comments

State of California Lab Certification No. 2501

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

Quality Control Summary

Client Name: ChevronTexaco Group Number: 1164116
Reported: 10/10/09 at 07:43 AM

Matrix QC may not be reported if site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

Lancaster Laboratories
Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

N.D.	none detected	**BMQL**	Below Minimum Quantitation Level
TNTC	Too Numerous To Count	**MPN**	Most Probable Number
IU	International Units	**CP Units**	cobalt-chloroplatinate units
umhos/cm	micromhos/cm	**NTU**	nephelometric turbidity units
C	degrees Celsius	**F**	degrees Fahrenheit
Cal	(diet) calories	**lb.**	pound(s)
meq	milliequivalents	**kg**	kilogram(s)
g	gram(s)	**mg**	milligram(s)
ug	microgram(s)	**l**	liter(s)
ml	milliliter(s)	**ul**	microliter(s)
m3	cubic meter(s)	**fib >5 um/ml**	fibers greater than 5 microns in length per ml

< less than – The number following the sign is the limit of quantitation, the smallest amount of analyte which can be reliably determined using this specific test.

> greater than

ppm parts per million – One ppm is equivalent to one milligram per kilogram (mg/kg), or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter of gas per liter of gas.

ppb parts per billion

Dry weight basis Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture.

U.S. EPA data qualifiers:

Organic Qualifiers

A	TIC is a possible aldol-condensation product
B	Analyte was also detected in the blank
C	Pesticide result confirmed by GC/MS
D	Compound quatitated on a diluted sample
E	Concentration exceeds the calibration range of the instrument
J	Estimated value
N	Presumptive evidence of a compound (TICs only)
P	Concentration difference between primary and confirmation columns >25%
U	Compound was not detected
X,Y,Z	Defined in case narrative

Inorganic Qualifiers

B	Value is <CRDL, but ≥IDL
E	Estimated due to interference
M	Duplicate injection precision not met
N	Spike amount not within control limits
S	Method of standard additions (MSA) used for calculation
U	Compound was not detected
W	Post digestion spike out of control limits
*****	Duplicate analysis not within control limits
+	Correlation coefficient for MSA <0.995

Analytical test results for methods listed on the laboratories' accreditation scope meet all requirements of NELAC unless otherwise noted under the individual analysis.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. This report shall not be reproduced except in full, without the written approval of the laboratory.

WARRANTY AND LIMITS OF LIABILITY – In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL LANCASTER LABORATORIES BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF LANCASTER LABORATORIES AND (B) WHETHER LANCASTER LABORATORIES HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Lancaster Laboratories which includes any conditions that vary from the Standard Terms and Conditions of Lancaster Laboratories and we hereby object to any conflicting terms contained in any acceptance or order submitted by client.

Project #: 090928-DRI	Station #: 9-4259
Sampler: DRI SO	Date: 9-28-09
Weather: sunny	Ambient Air Temperature: 75°
Well I.D.: MW-4	Well Diameter: 2 (3) 4 6 8 ____
Total Well Depth: 18.90	Depth to Water: 14.75
Depth to Free Product:	Thickness of Free Product (feet):
Referenced to: (PVC) Grade	D.O. Meter (if req'd): YSI HACH
DTW with 80% Recharge [(Height of Water Column x 0.20) + DTW]: 15.58	

Purge Method:

Bailer
~~Disposable Bailer~~
Positive Air Displacement
Electric Submersible
Waterra
Peristaltic
Extraction Pump
Other_____

Sampling Method: Bailer

Disposable Bailer
Extraction Port
Dedicated Tubing
Other: _____

1.5 (Gals.) X 3 = 4.5 Gals.
1 Case Volume | Specified Volumes | Calculated Volume

Date: January 30, 2007
File No. 43S0472 (dib)

Redevelopment Agency of the City of San Jose
50 West San Fernando St., Suite 1100
San Jose, CA 95113
Attn: Ms. Mary Jo McCully
(marjo.mccully@sanjoseca.gov)

SUBJECT: No Further Action for the Former Century Center Parking Lot Site, San Jose, Santa Clara County

Dear Ms. McCully:

This letter confirms the completion of site investigation and remedial action for the pollutant releases at the subject site. We have reviewed the December 15, 2006 submittal, Offsite Groundwater Environmental Investigation Report, 2nd and Santa Clara Site, San Jose", submitted by your consultant URS. The report describes the result of work carried out in accordance with an approved work plan for an offsite groundwater investigation. Based on the available information including the results of the offsite groundwater investigation, we will not require any further action for the subject site.

This site, formerly known as the Century Center Parking Lot is undergoing redevelopment into a mixed use multi-story development with underground parking. Contaminated soil and groundwater at the site have been remediated as part of the site preparation work. In a July 22, 2005, letter the Water Board concurred that remedial activities had been completed and no further action for the site itself was required, however additional investigation of potential offsite migration of contaminated groundwater was necessary. The purpose of the offsite groundwater investigation was to determine if groundwater contamination extends offsite. Three grab groundwater samples were collected at selected locations. Two of the samples contained TPH-g and several related petroleum compounds at low levels. TPH-g was found at 161 and 264 ug/l, exceeding the Water Board's Environmental Screening Level (ESL) of 100 ug/l for "potable" water (considered a source of drinking water) but below the ESL of 500 ug/l for "non potable" water (not considered a source of drinking water). No other VOCs were found. Shallow groundwater in downtown San Jose is neither currently used nor likely to be used as a drinking water source in the foreseeable future. The level of contamination remaining is unlikely to have any impact on the deep regional aquifer used as a municipal supply for the Santa Clara Valley.

DRAFT

Based upon the available information, including the current land use, and with the provision that the information provided to this agency was accurate and representative of site conditions, no further action related to the pollutant releases at the subject site is required.

If you have any questions, please contact .David Barr of my staff at (510) 622-2313 [e-mail dbarr@waterboards.ca.gov].

Sincerely,

for

Stephen Hill

Comments (Depth of Remediation, etc.): Soil and groundwater concentrations are the highest results from the 1995 and 2003 investigations, and quarterly groundwater monitoring results. Groundwater results are from monitoring wells and grab samples. As part of site development, soil was excavated to about 25 feet below grade and about 21.8 million gallons of groundwater were extracted. Soil borings for characterization were advanced up to 30 feet below ground surface. The "after soil concentrations" are the highest levels from these borings at 25 ft or

DRAFT

greater. Most samples at this depth were non-detect. Groundwater "after" levels are based on the dewatering system monitoring. Note that offsite groundwater samples taken post remediation had low levels of TPH-gasoline as discussed in VI. Additional Comments, below.

DRAFT

VI. ADDITIONAL COMMENTS, DATA, ETC.

This site has had a variety of commercial and industrial uses over the years, most recently as a parking lot known as Century Center Parking Lot. Soil sampling performed in 1995 showed that soil at part of the site was contaminated with petroleum hydrocarbons. Contaminated soil was excavated to 1000 mg/kg total TPH. Two open ended tank sections were found and were determined to be a source of petroleum contamination. Four groundwater monitoring wells were installed and a groundwater monitoring program begun. The San Jose Redevelopment Agency began redevelopment of the site into a mixed used multi-story development with underground parking, street level retail, and residential units above in 2003. The redevelopment agency performed additional soil and groundwater investigations to characterize soil on the whole site for disposal and to develop a remedial action plan for the site. Significant contamination found in soil and/or groundwater at the site included, TPH-gasoline, TPH-diesel, oil and grease, Stoddard solvent (a petroleum based compound), metals (primarily lead), PCE, TCE and DCE. PCE, TCE, and DCE were found in very low levels in soil and DCE was found in groundwater in one area of the site. TPH compounds and Stoddard solvent were the main contaminants in soil and groundwater. These compounds migrated down through soil and spread out laterally when reaching groundwater. The Water Board approved a June 3, 2003 report from the redevelopment agency containing a remedial action plan for dealing with contamination at the site during site development. Site development activities have included excavation of soil down to about 25 feet below ground surface, and extraction and treatment of about 21,874,000 gallons of groundwater. Groundwater depth at the site has ranged from about 15 to 20 feet below ground surface (bgs). Contaminated soil and groundwater at the site have been remediated as part of the site preparation work. In a July 22, 2005 letter the Water Board concurred that remedial activities had been completed and no further action for the site itself was required, however additional investigation of potential offsite migration of contaminated groundwater was necessary. The purpose of the offsite groundwater investigation was to determine if groundwater contamination extends offsite. Three grab groundwater samples were collected at selected locations. Two of the samples contained TPH-g and several related petroleum compounds at low levels. TPH-g was found at 161 and 264 ug/l, exceeding the Water Board's Environmental Screening Level (ESL) of 100 ug/l for water considered a source of drinking water, but below the ESL of 500 ug/l for water not considered a source of drinking water. No other VOCs were found. Shallow groundwater in downtown San Jose is neither currently used nor likely to be used as a drinking water source. The level of contamination remaining is unlikely to have any impact on the deep regional aquifer used as a municipal supply for the Santa Clara Valley.

DRAFT

Dear Mr. McMahon:

Langan Engineering and Environmental Services (Langan) is pleased to submit this *Site Completion Report* for the SJSC Towers development located at 40 North 4th Street, 21-39 North 5th Street, and 155-193 East Santa Clara Street (Site) located in San Jose, California. The report documents the soil and groundwater mitigation activities performed at the Site during initial construction activities. The mitigation measures were outlined in the Soil and Groundwater Management Plan (SGMP) prepared by Langan dated 10 October 2017. Santa Clara County Department of Environmental Health (SCCDEH) approved the SGMP in a letter dated 2 November 2017. As documented in the enclosed report, the mitigation measures presented in the SGMP for proper handling and off-Site disposal of soils excavated in connection with Site development activities have been implemented.

If you have any questions or need any information clarified, please call Mr. Peter J. Cusack at (408) 283-3600.

Sincerely yours,
Langan Engineering and Environmental Services Inc.

SITE COMPLETION REPORT
SJSC Towers
40 North 4th Street, 21-39 North 5th Street, and 155-193 East Santa Clara Street
San Jose, California

1.0 INTRODUCTION

Langan Engineering and Environmental Services (Langan) has prepared this Site Completion Report for the SJSC Towers development located at 40 North 4th Street, 21-39 North 5th Street, and 155-193 East Santa Clara Street ("Site") located in San Jose, California (Figure 1). This Completion Report presents the soil and groundwater management activities performed at the Site during initial construction activities.

This Site Completion documents soil excavation and off-Site disposal activities that were completed during construction-related excavation activities. Excavation activities included excavating and disposing of fill material at off-Site locations, in accordance with our Soil and Groundwater Management Plan (SGMP) dated 10 October 2017 and approved by Santa Clara County Department of Environmental Health (SCCDEH) on 2 November 2017. This Site Completion Reports also documents the proper removal of six previously unknown former underground storage tanks (USTs), in compliance with the SGMP, the City of San Jose Fire Department (SJFD), and Santa Clara County Department of Environmental Health - Hazardous Materials Compliance Division (SCCDEH-HMCD).

The development included demolition and removal of one single-story structure and adjacent asphalt parking lot and constructing an eight-story residential building of wood-framed-construction, over a concrete podium level containing parking, common space, and retail above three levels of below ground parking. Construction included an excavation to a depth of 35 to 40 feet below the existing ground surface (bgs) for the below ground parking and off-Site disposal of all the excavated soil generated during Site development.

2.0 BACKGROUND AND PREVIOUS ENVIRONMENTAL INVESTIGATIONS

Langan has reviewed the following environmental reports prepared for the Site:

- Kleinfelder Inc. (Kleinfelder), Phase I Environmental Assessment Report, 39 North 5th Street, San Jose, California dated 14 June 2000;

DRAFT

- SCS Engineers (SCS), Preliminary Phase II Environmental Assessment Report, 39 North 5th Street, San Jose, California dated 21 May 2001; and

- Langan Treadwell Rollo (Langan), Phase I Environmental Site Assessment (ESA), SJSC Towers, 40 North 4th Street, 21 – 39 North 5th Street, and 155 – 193 East Santa Clara Street, San Jose, California dated 10 February 2016; and,

- Langan Engineering and Environmental Services, Inc. (Langan), Revised Work Plan for Environmental Investigation, SJSC Towers, 40 North 4th Street, 21 – 39 North 5th Street, and 155 – 193 East Santa Clara Street, San Jose, California dated 10 August 2017; and,

- Langan Engineering and Environmental Services, Inc. (Langan), Soil and Groundwater Management Plan (SGMP) SJSC Towers, 40 North 4th Street, 21 – 39 North 5th Street, and 155 – 193 East Santa Clara Street, San Jose, California dated 10 October 2017.

The previous environmental reports and general Site history are summarized below:

According to the previous Phase I Environmental Site Assessments (ESAs), the Site was used historically as a church, blacksmith, residential homes, coal storage, a junkyard, livery boarding, plating works, electric printing, a tin shop, a scrap metal yard, a dry cleaners, two fueling stations, and a car wash. It was anticipated that underground storage tanks (USTs) would have been present on-Site for the fueling stations; however, no information was available in either Phase I ESAs that identified if any USTs were removed or were located on-Site. A Preliminary Phase II ESA Report was completed by SCS Engineers in 2000 and in 2001 in order to evaluate the potential presence of any USTs on-Site and to assess the soil, groundwater, and soil vapor conditions in specific areas of concern around the former fueling stations and dry cleaners that were located on the Site. A geophysical survey of the Site was completed in 2000, prior to the subsurface investigation, but no evidence of any remaining USTs were identified. Soil vapor, soil, and groundwater samples were collected at the area that were historically occupied by a fueling station at 155-159 East Santa Clara Street, and the areas historically occupied by a dry cleaners, a fueling station, and a greasing area, located at 189-193 East Santa Clara Street.

The analytical results of the soil, groundwater, and soil vapor sampling completed at the 155-159 East Santa Clara Street property detected concentrations of total petroleum hydrocarbons (TPH) as gasoline (TPHg) up to 150 milligrams per kilogram (mg/kg) in the soil samples, concentrations of volatile organic compounds (VOCs) including benzene, ethylbenzene, toluene, and xylenes (BTEX) up to 8.78 micrograms per liter (µg/L) and concentrations of TPHg up to 2,000 µg/L in groundwater samples, and concentrations of benzene up to 160 µg/L in the soil vapor samples.

DRAFT

These contaminants were detected at concentrations which exceeded the 2013 Water Regional Water Quality Control Board (RWQCB) Tier 1 Environmental Screening Levels (ESLs)

The soil and groundwater sampling completed at the 189-193 East Santa Clara Street property detected elevated concentrations of naphthalene and TPHg in soil samples, and TPHg and benzene concentrations in the groundwater samples. These contaminants were detected at concentrations exceeding 2013 RWQCB Tier 1 ESLs.

The 2016 Phase I ESA completed by Langan identified two recognized environmental conditions (RECs) on-Site directly related to the two properties that had soil, soil vapor and groundwater samples analyzed in 2001. The Phase I ESA identified the two RECs as follows:

- The Site's land-use history revealed that the Site was occupied by two fueling stations: located at 155 – 159 East Santa Clara Street and 189 – 193 East Santa Clara Street. Based on historical records, the 155 – 159 East Santa Clara Street property fueling station occupied the Site from at least 1939 to at least 1970, while the 189 – 193 East Santa Clara Street fueling station occupied the Site from at least 1935 to at least 1970. No information was located regarding whether associated USTs were removed from these two properties and if a release had occurred. Reportedly, a geophysical survey was conducted at the 155 - 159 East Santa Clara Street property in 2001 and no indications of USTs were identified.

- Soil and groundwater sampling was performed at these two addresses in 2000 and 2001 by SCS Engineers (SCS). Based on the cumulative results, SCS concluded that impacted soil and groundwater beneath these addresses did not pose an environmental risk to its current use as an open air public parking lot. However, impacted soil and groundwater may be encountered during future excavation at the Site. Impacted soil and groundwater will most likely require special handling and disposal. If the Site is to be redeveloped, a SGMP should be prepared prior to redevelopment activities to provide a framework for appropriately addressing impacted soil and groundwater and any unexpected conditions/features that could be encountered during excavation and construction activities.

Based on the previous Phase I ESAs, and the soil vapor, soil, and groundwater sampling completed at the Site in 2000 and 2001, it was anticipated that petroleum hydrocarbon contamination was present beneath the Site. Based on the results of the 2016 Phase I ESA, we recommended a subsurface investigation that included the collection and analyses of soil, soil vapor, and groundwater. Based on discussions with SCCDEH in our meeting on 9 August 2017, we prepared a Revised Work Plan to include additional sampling and chemical testing in which was requested.

DRAFT

In accordance with our Revised Work Plan dated 10 August 2017, we obtained soil samples from a total of 12 environmental borings, grab groundwater samples from four of the 12 exploratory borings, and five soil vapor sampling points drilled within the footprint of the three-level basement. On 14, 15, and 16 August 2017, a total of 12 exploratory soil borings (SB-1 through SB-12) were drilled to depths between approximately 20 feet bgs and 40 feet bgs across the Site. Five soil vapor sampling points were installed around the perimeter of the Site to a depth of five feet bgs. All environmental drilling and soil vapor point installation was conducted by Gregg Drilling and Testing (Gregg) of Martinez, California. The exploratory boring locations are shown on Figure 2. Based on the depth of the proposed excavation and in an effort to adequately characterize the soil to be off-hauled during construction, soil samples were collected at the following approximate depths: 1.5, 3.0, 5.0, 7.5, 10.0, 15.0, 20.0, 25.0, 30.0, 35.0, and 40.0 feet bgs (where applicable). Groundwater was collected from four of the boring locations via disposable bailers and temporary 2-inch diameter PVC wells.

Based on the analytical results from our subsurface investigation, the soil sample analytical results from our subsurface investigations were compared to California TTLC and STLC hazardous waste criteria Federal TCLP hazardous waste criteria. Two soil samples exceeded the State of California Class I hazardous waste criteria for soluble lead. The areas of material containing soluble lead concentrations exceeding the State of California hazardous waste criteria are shown on Figure 4. The areas of material exceeding the State of California waste criteria are located near borings SB-4 at depth of 1.5 foot bgs and SB-7 at a depth of 1.5 feet bgs.

Residual concentrations of petroleum hydrocarbons as TPHg, TPHd, and TPHmo were detected in the soil samples collected from exploratory borings SB-2, SB-3, SB-5, SB-8, and SB-9 and the material in these areas and possible additional areas will likely be disposed of as Class II non-hazardous waste. Based in the analytical results, the remaining material would likely be excavated and disposed of as unrestricted waste.

The groundwater analytical results from our subsurface investigation were compared to 2013 Tier 1 ESLs, and residential ESLs for shallow groundwater. No concentrations of VOCs, SVOCs, PCBs, or metals exceeded any ESLs. However, TPHg and TPHd were presents in concentrations above Tier 1 ESLs. TPHg was detected in samples SB-8-GW and SB-12-GW at concentrations of 840 µg/L and 1,600 µg/L, which are above the Tier 1 ESL of 100 µg/L. TPHd was detected in all four samples at concentrations ranging from 440 µg/L to 5,300 µg/L; which are all above the Tier 1 ESL of 100 µg/L.

DRAFT

Concentrations of TPHg and TPHd were also detected in the groundwater samples collected at samples SB-3, SB-8, and SB-10, and SB-12. Based on the analytical results, an on-Site dewatering system, including a sedimentation tank, and carbon treatment units, was installed at the Site to facilitate groundwater dewatering in accordance with RWCQB requirements.

The soil gas analytical results from our subsurface investigation were compared to the Residential Soil Gas ESLs. Chloroform, benzene, toluene, and trichlorofluoromethane were detected above laboratory reporting limits in at least one sample, at concentrations below the Residential Soil Gas ESL. No other VOCs were detected above laboratory limits.

3.0 SOIL EXCAVATION AND GRADING

The general contractor for the Site was Suffolk Construction Company (Suffolk) of San Francisco, California. Ferma Corporation of Mountain View, California was the excavation subcontractor assisting in the excavation and disposal activities during mass excavation. The construction activities involving soil handling and excavation began in January 2018 and were essentially completed in March 2019.

4.0 SOIL DISPOSAL

Lead and petroleum hydrocarbon contaminated material was removed from the Site and properly disposed at licensed landfills. As noted above, soil was excavated to a depth of 35 to 40 feet bgs as part of the Site development activities. All impacted soil was excavated and disposed off-Site. Figure 3 illustrates the areas of State of California Class I non-RCRA hazardous waste and Figures 4 through Figure 7 illustrates the approximate areas of Class II non-hazardous material that were removed during construction related excavation activities. Langan observed the removal of all hazardous and non-hazardous material to confirm that the material was properly handled in accordance with the SGMP dated 10 October 2017 and disposed of at the appropriate regulated landfill facility.

The excavation activities involving soil handling began in January 2018 and these activities included performing soil excavation, transportation, and off-Site disposal. A photograph log of excavation activities is located in Appendix A.

- Approximately 1,387.71 tons of State of California Class I Non-RCRA hazardous material was removed, transported, and disposed under hazardous waste manifest procedures

DRAFT

to Buttonwillow Landfill Facility, operated by Clean Harbors, at 2500 West Lokern Road, Buttonwillow California on 26 January 2018, 26 February 2018, and 7 June 2018.

- Approximately 17,528.36 tons of Class II non-hazardous material was removed, transported, and disposed under manifest procedures to Kirby Canyon landfill, located at 910 Coyote Creek Golf Drive in Morgan Hill, California between 23 February 2018 and 31 May 2018,

- The remaining excavated materials, approximately 193,500 cubic yards of unrestrictive material was transported and disposed at receiving facilities in Tracy Hollister, SRDC, San Jose, and Newby Island Landfill in Milpitas, California between 6 February 2018 and 5 March 2019. Each of the receiving facilities were provided the analytical results of the soil sampling performed at the Site.

This information included a review of hazardous and non-hazardous waste manifests, the bills of lading, and a summary of the amount of material excavated and removed from the Site. Copies of State of California Class I non-RCRA hazardous waste manifests are also provided in Appendix B; summary tables of the quantity of non-hazardous soil removed and transported off-Site and manifests are included in Appendix C; a summary table of the quantity of unrestricted soil removed and transported off-Site are included in Appendix D.

5.0 UNDERGROUND STORAGE TANK (UST) REMOVAL

During excavation of the Site for redevelopment, six previously unknown USTs were discovered in February and April 2017. The USTs were all removed under approval and oversight by SJFD and SCCDEH - HMCD.

UST #1 Removal

On 5 February 2018, during excavation of the Site for redevelopment, an UST was discovered at a depth of approximately five to six feet bgs. The UST consisted of single-walled steel and measured approximately four feet in length and two feet in diameter. The UST contained approximately eight-inches of liquid within the UST. The UST was undisturbed until all proper UST removal permits could be obtained from the SJFD and SCCDEH-HMCD. Copies of the UST removal permits, work plan, and field reports from the SJFD and SCCDEH-HMCD is located in Appendix E. A photograph log of UST removal activities is located in Appendix F.

DRAFT

On 12 February 2018, Christine B Madsen of Langan collected one liquid sample from the contents of the UST liquid to profile the liquid for disposal purposes. The sample was analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and TPHg, diesel (TPHd), and motor oil (TPHmo). Based on the analytical results, which indicated that the liquid was an oily water, the liquid was disposed of as non-hazardous waste.

On 29 March 2018, Golden Gate Tank Removal (GGTR) of San Francisco, California, a licensed tank removal company, arrived to the Site to remove the contents of the UST and the UST. The liquid within the tank was removed and the UST was cleaned for disposal. Approximately 50-gallons of initial product and rinsate were removed. The vacuum truck transferred the liquid into a 120-gallon capacity plastic tank for non-RCRA hazardous waste disposal to Crosby & Overton in Long Beach California.

On 10 April 2018, GGTR mobilized to the Site in order to remove the UST for disposal as hazardous waste. Mr. Andrew Dyer of the SCCDEH-HMCD and Mr. Jagdev Mavi of the SJFD, were present on-Site to oversee the removal of the UST. GGTR added approximately 60 pounds of dry ice into the openings in the UST in order to achieve low LEL and oxygen readings prior to removing the UST.

On 10 April 2018, Big Sky Environmental Solutions transported the UST to US Ecology located in Beatty Nevada, as a State of California non-RCRA hazardous waste, based on approval of both the SJFD and SCCDEH-HMCD. A copy of the UST disposal manifest is located in Appendix H.

Two soil samples were collected from beneath the former UST location at a depth of approximately seven feet bgs and were observed by the County. The samples were then stored in a cooler on ice for pickup by the analytical laboratory later that day. The soil from below the UST was then loaded into the Class II non-hazardous material stockpile for removal form the Site. The soil was screened with a PID to delineate the bottom depth of excavation. Following soil sample collection and opening of one side of the UST, the SJD and SCCDEH HMCD left the Site.

<u>UST #2 through UST #6 Removals</u>

On 23 April 2018, during excavation of the Site for redevelopment, five additional USTs were discovered at a depth of approximately five to six feet bgs and adjacent to the location of where the first UST (UST # 1) was removed. The USTs were constructed of single-walled and were observed as:

DRAFT

- UST #2 was approximately four feet in length by two feet in diameter and was mostly full of liquid;
- UST #3 was approximately four feet in length by 2.5 feet in diameter, although this tank was significantly damaged, but was empty;
- UST #4 was approximately five feet in length by 2.5 feet in diameter and was mostly full of liquid;
- UST #5 was approximately 11 feet in length by four feet in diameter, and contained approximately two feet of liquid; and,
- UST #6 was approximately 11 feet in length by four feet in diameter and contained approximately two feet of liquid.

The UST were left in place undisturbed until UST removal permits could be obtained from the SJFD and SCCDEH-HMCD. Copies of the UST removal permits, work plan, and field reports from the Fire Department and County are located in Appendix E. A photograph log of UST removal activities are located in Appendix F.

On 25 April 2018, Christine B Madsen of Langan collected three liquid samples from the contents of the UST liquids to profile the liquids for disposal purposes. The samples were analyzed for TPHg, TPHd, and TPHmo and polychlorinated biphenyls (PCBs). Based on the analytical results, which indicated that the liquid was an oily water, the liquid was disposed of as non-hazardous waste.

On 12 May 2018, Golden Gate Tank GGTR arrived to the Site to remove the contents of the USTs. Approximately 852 gallons of liquid was removed from the three USTs that contained liquid and rinsate. The liquid was transported to the Bakersfield Transfer Inc. located in Bakersfield California for disposal.

On 31 May 2018, GGTR mobilized to the Site to remove the USTs for disposal as a hazardous waste. Mr. Ray Maiden of SCCDEH HMCD and Mr. Jamie Hernandez of SJFD were present to observe and oversee the removal of the USTs. LEL readings were recorded from each of the USTs and are presented below:

- UST #2 measured 0% LEL;

DRAFT

- UST #3 was almost entirely exposed due to damage, therefore no LEL was recorded;
- UST #4 measured 0% LEL;
- UST #5 measured 0% LEL; and,
- UST #6 measured 2% LEL.

All LEL measurements allowed for safe movement of the USTs. All six USTs were removed and placed onto a truck for off-Site disposal as non-RCRA hazardous waste. Each UST had the LEL recorded again while on the truck, and all readings were the same as the previous measurements collected prior to the UST removal.

On 31 May 2018, Big Sky Environmental Solutions of Albany, California transported the USTs to Chemical Waste Management landfill located in Kettleman Hills, California as a State of California Non-RCRA hazardous waste. A copy of the UST disposal manifests are located in Appendix H.

Five soil samples were collected beneath each of the former UST locations and were overseen by SCCDEH-HMCD and SJFD. The soil from beneath the USTs was removed and placed into the Class II non-hazardous material stockpile for removal from the Site. The soil was screened with a PID to delineate the bottom depth of excavation beneath the USTs.

Soil Sampling Analytical Results and Disposal

As per the permitting requirements during UST removals, two soil samples were collected directly beneath UST #1 after removal on 10 April 2018, and five soil samples were collected directly beneath each additional tank, UST #2 through UST #6, on 31 May 2019. The soil samples were analyzed for TPHg, TPHd, TPHmo, VOCs, and total lead per the UST Removal Permit Requirements.

TPHg was detected at concentrations between 380 mg/kg to 24,000 mg/kg. TPHd was detected at concentrations between 22 mg/kg to 17,000 mg/kg. TPHmo was detected at concentrations above reporting limits in five out of seven soil samples at concentrations between 19 mg/kg to 120 mg/kg. Twelve VOCs were detected in the seven soil samples as detailed:

- N-butyl benzene was detected above laboratory reporting limits in six out of seven soil samples at concentrations ranging between 0.53 mg/kg to 11 mg/kg;

DRAFT

- Sec-butyl benzene was detected above laboratory reporting limits in six out of seven soil samples at concentrations ranging between 0.35 mg/kg to 11 mg/kg;
- Ethylbenzene was detected above laboratory reporting limits in three out of seven soil samples at concentrations ranging between 0.74 mg/kg to 2.7 mg/kg;
- Isopropyl was detected above laboratory reporting limits in five out of seven soil samples at concentrations ranging between 0.10 mg/kg to 4.2 mg/kg;
- 4-Isopropyl toluene was detected above laboratory reporting limits in five out of seven soil samples at concentrations ranging between 0.27 mg/kg to 8.0 mg/kg;
- Methylene chloride was detected above laboratory reporting limits in one out of seven soil samples at a concentration of 0.069 mg/kg;
- Naphthalene was detected above laboratory reporting limits in three out of seven soil samples at concentrations ranging between 0.052 mg/kg to 2.3 mg/kg;
- N-Propyl benzene was detected above laboratory reporting limits in six out of seven soil samples at concentrations ranging between 0.28 mg/kg to 10 mg/kg;
- 1,2,4-Trimethylbenzene was detected above laboratory reporting limits in six out of seven soil samples at concentrations ranging between 0.70 mg/kg to 17 mg/kg;
- 1,3,5-Trimethylbenzene was detected above laboratory reporting limits in five out of seven soil samples at concentrations ranging between 0.21 mg/kg to 5.2 mg/kg; and,
- Xylenes was detected above laboratory reporting limits in three out of seven soil samples at concentrations ranging between 0.16 mg/kg to 4.6 mg/kg.

Total lead was detected in all seven soil samples at concentrations ranging from 8.8 mg/kg to 77 mg/kg. Lead was detected at concentrations above 50 mg/kg but below 1,000 mg/kg, in one soil sample, Tank 1-S, and was analyzed for STLC lead to determine soluble lead levels. STLC lead was detected at a concentration of 20 milligrams per liter (mg/L), which exceeded the State of California hazardous waste criteria of 5.0 mg/L and was subsequently analyzed for TCLP Federal hazardous waste criteria. The TCLP lead concentration was detected at a concentration of 0.37 mg/L, which is below the federal hazardous waste criteria of 5 mg/L.

DRAFT

Based on the elevated TPH concentrations in the soil beneath the USTs, and the State of California non-RCRA hazardous concentration of soluble lead in sample Tank 1-S, the soil around the USTs and directly beneath them to a depth of approximately 12 feet bgs was excavated and disposed of as non-RCRA hazardous waste, as shown on Figure 2. Approximately ten feet of soil directly beneath the lead contaminated soil was excavated and removed as Class II non-hazardous material based on elevated TPH concentrations.

Following the excavation of the soil beneath the USTs, two post excavation confirmation soil samples were collected at the base of the excavation at depths of 22 feet bgs (PE-Tank-22) and 23 feet bgs (PE-Tank-23). These two samples were analyzed for TPHg, TPHd, TPHmo, BTEX, and leaking underground fuel tank (LUFT) five metals. TPHg was detected at a concentration of 1.6 mg/kg. No other concentrations of TPHg, TPHd, TPHmo, or BTEX were detected above laboratory reporting limits. Total lead was detected at concentrations of 7.1 mg/kg and 9.8 mg/kg, which were well below the 50 mg/kg criteria, therefore no soluble testing was required.

Based on the low concentrations of the post-excavation sampling results, all soil with elevated concentrations of TPH and lead beneath the former USTs were moved from the Site and disposed of in accordance with the SGMP.

6.0 DEWATERING SUMMARY

WSP USA Inc. (WSP) on behalf of SJSC Properties, LLC, was contracted to obtain the necessary dewatering permits, install and operate the dewatering system at the Site during excavation and dewatering activities. A Notice of Intent (NOI) to discharge and accompanying Engineering Certification Report (ECR) were submitted to the San Francisco Regional Water Quality Control Board (Water Board) on 23 October 2017. The Water Board determined that the proposed discharge was eligible for coverage under the VOC and Fuel General Permit, and issued an Authorization to Discharge on 14 December 2017. The Site was granted a National Pollutant Discharge Elimination System (NPDES) Permit No. CA912002, that would operate in accordance with the General Waste Discharge Requirements for: Discharge or Reused of Extracted and Treated Groundwater Resulting from the Cleanup of Groundwater Polluted by Volatile Organic Compounds (VOCs), Fuel Leaks, and other related wastes.

The dewatering system consists of a series of filtration vessels, in order to comply with the permitting requirements for the dewatering operation. The groundwater is pumped from dewatering wells installed around the perimeter of the Site, into a 10,000-gallon settling tank to a 10,000-gallon batch tank. The water is then pumped through a sand filtration system, which

DRAFT

were periodically backwashed in accordance with maintenance operations. Water exiting the sand filtration units flowed into another 10,000-batch tank for flow equalization, then flow into a granular activated carbon (GAC) treatment, consisting of three lead 3,000-pound oragnaoclay (OC)/GAC mixed media vessels. The GAC treatment is the last system prior to discharge through a flow meter into the storm system. The maximum flow rate at discharge was reportedly 300 gallons per minutes (gpm). The discharge flowed to an existing storm drain located on North 5th Street.

A NOI Amendment was submitted to the Water Board on 26 September 2018, in response to a significant increase in the volume of groundwater entering the excavation. During excavation activities, the groundwater flow rate significantly increased and was more than the capacity of the filtration system was designed for. It was determined that this groundwater was emanating from a deeper aquifer. Samples determined that no treatment with activated carbon was required for the discharge of this groundwater. The NOI Amendment therefore addresses an increase in the discharge flow rate, the removal of the dewatering treatment system, and modification to the monitoring requirements for the discharge. This Amendment was authorized on 1 October 2018.

In accordance with the permitting requirements, quarterly reports were submitted to the Water Board. Also, if a groundwater sampling event trigger an alert based on an exceedance, trigger action studies were subsequently completed for those contaminant of concerns, but no exceedances reflected on-going issues, or needed suspensions of system operation.

In December 2018, based on the excavation status, the dewatering filtration system no longer needed was require to be operable in accordance with permitting requirements. Monthly sampling and continuous flow meter monitoring in still ongoing, as the dewatering operation is continuing on-Site during vertical building construction. As of the most recent quarterly report (14 February 209 for the fourth quarter of 2018), a total of 150,893,892 gallons of groundwater has been discharged from the Site.

7.0 CONCLUSIONS

The measures presented in the SGMP for proper handling and disposal of contaminated soil excavated and disposed off-Site as part of Site development activities were implemented by the Client and its contractors and subcontractors during Site excavation activities. The appended documentation and oversight provided by Langan as described in this report confirm that the previously identified petroleum hydrocarbon and lead impacted soil were appropriately handled

DRAFT

and properly disposed of off-Site. Investigation results from across the Site indicate that all such impacted material has been properly excavated and disposed off-Site. As a result of these activities, no further mitigation activities are necessary with respect to the environmental conditions at the Site. No further assessment is recommended, therefore, Site closure is recommended and a no further action letter is respectfully requested.

8.0 LIMITATIONS

Descriptions of specific field activities and historical events are based on our observations, and on information provided by others. The opinions and information presented in this report apply to Site conditions and the information available at the time the work was performed and do not apply to changes of which we are not aware or have not had the opportunity to evaluate.

APPENDIX A

EXCAVATION PHOTOGRAPH LOG

Photograph 1 – Start of excavation in delineated non-RCRA Class I hazardous material facing east dated 16 January 2018.

Photograph 2 – Excavated non-RCRA Class I hazardous material loaded directly into trucks for off-Site disposal, facing east dated 29 January 2018.

DRAFT

Photograph 3 – Completed excavation of non-RCRA Class I hazardous material from the area near former borings SB-16, SB-4 and SB-17, facing west dated 29 January 2018.

Photograph 4 – Completed excavation of non-RCRA Class I hazardous material from the area near former borings SB-16, SB-4 and SB-17, facing southwest dated 29 January 2018.

DRAFT

Photograph 5 – Excavation and trucking of unrestricted material near northern perimeter of Site, and trucking of excavated Class II stockpiled material from middle of the Site, facing northeast, dated 6 February 2018.

Photograph 6 – – Excavation and trucking of unrestricted material near northern perimeter of Site, facing southwest dated 9 February 2018.

DRAFT

Photograph 7 – Excavation of unrestricted material near southern perimeter of the Site, facing east, dated 14 April 2018.

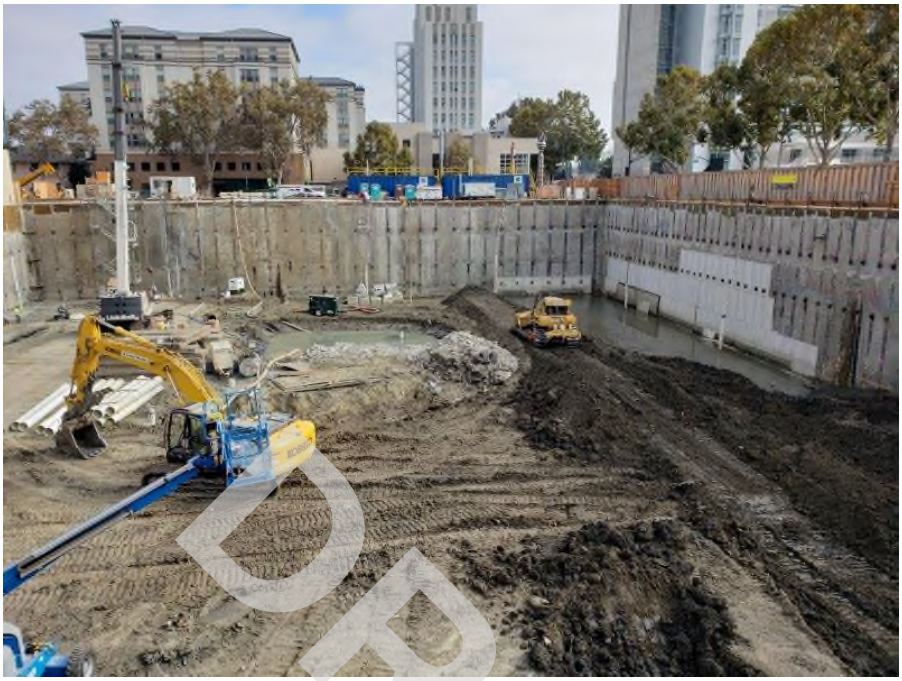
Photograph 8 – Excavation of Site around the discovered tank area. This area was left undisturbed until 31 May 2018 when all tanks were removed and the material was excavated and trucked appropriately, facing northwest, dated 30 April 2018.

DRAFT

Photograph 9 – Excavation of Site around the discovered tank area. This area was left undisturbed until 31 May 2018 when all tanks were removed and the material was excavated and trucked appropriately, facing northwest, dated 24 May 2018.

Photograph 10 – Excavation of unrestricted and Class II material, facing north, dated 27 July 2018.

DRAFT



Photograph 11 – Continued excavation of unrestricted material at the Site, facing southeast, dated 25 October 2018.

Photograph 12 – Continued excavation of unrestricted material at the Site, facing southeast, dated 14 December 2018.

DRAFT

Photograph 13 – Continued excavation of unrestricted material at the Site, and start of installation of foundation, facing southeast, dated 8 February 2019.

Photograph 14 – Completed excavation and foundation installation, facing west, dated 28 March 2019.

CHS-10014 REVISED (5/16)

January 12, 1998

Mr. Charles Leone
250 Dana Avenue
San Jose, CA 95126

Dear Mr. Leone:

Subject: Fuel Leak Site Case Closure—Downtown Auto Express, 154 East Santa Clara Street, San Jose, CA; Case No. 14-379

This letter transmits the enclosed underground storage tank (UST) case closure letter in accordance with Chapter 6.75 (Article 4, Section 25299.37[h]). The State Water Resources Control Board adopted this letter on February 20, 1997. As of March 1, 1997, the Santa Clara Valley Water District is required to use this case closure letter for all UST leak sites. We are also transmitting to you the enclosed case closure summary. These documents confirm the completion of the investigation and cleanup of the reported release at the subject site. The subject fuel leak case is closed.

SITE INVESTIGATION AND CLEANUP SUMMARY

Please be advised that the following conditions exist at the site:

- Residual soil contamination exists at this site at concentrations of approximately 1,000 parts per million (ppm) Total Petroleum Hydrocarbons as Gasoline and 40 ppm Benzene at depths of approximately 12 to 15 feet below ground surface. Residual groundwater contamination above the maximum contaminant levels for Benzene also exists at the site. Appropriate precautions for human health and safety shall be incorporated into a site safety plan should excavation or subsurface activities be undertaken at the site in the future. We recommend that a residual risk management plan be prepared to address site management concerns if significant development of the site occurs or if zoning changes.

If you have any questions, please call Ms. Adele Shepherd at the Camden Office, (408) 927-0710, extension 2639. Thank you.

Sincerely,

DRAFT

January 12, 1998

Mr. Charles Leone
250 Dana Avenue
San Jose, CA 95126

Dear Mr. Leone:

Subject: Fuel Leak Site Case Closure—Downtown Auto Express, 154 East Santa Clara Street, San Jose, CA; Case No. 14-379

This letter confirms the completion of a site investigation and remedial action for the underground storage tank(s) formerly located at the above-described location. Thank you for your cooperation throughout this investigation. Your willingness and promptness in responding to our inquiries concerning the former underground storage tank(s) are greatly appreciated.

Based on information in the above-referenced file and with the provision that the information provided to this agency was accurate and representative of site conditions, no further action related to the underground tank release is required.

This notice is issued pursuant to a regulation contained in Section 2721(e) of Title 23 of the California Code of Regulations.

Please contact our office if you have any questions regarding this matter.

Sincerely,

ORIGINAL SIGNED BY

James S. Crowley, P.E.
Special Programs Engineer

6	100	Waste oil	Removed	02/12/87
Piping			Assumed with tank	—

III. RELEASE AND SITE CHARACTERIZATION INFORMATION

Cause and Type of Release: Up to 1,115 parts per million (ppm) Total Petroleum Hydrocarbons as Gasoline (TPHG) and up to 39 ppm Benzene in soils beneath tanks.		
Site characterization complete? Yes	Date Approved By Oversight Agency: 09/18/97	
Monitoring wells installed? Yes	Number: 1	Proper screened interval? Yes
Highest GW Depth Below Ground Surface: 13.5 feet	Lowest Depth: 13.5 feet	Flow Direction: Northwest*
Most Sensitive Current Use: Potential drinking water supply		

*Groundwater flow direction information taken from a fuel leak investigation at 147 East Santa Clara Street on July 2, 1997.

DRAFT

Summary of Production Wells in Vicinity: No active production wells exist within ¼ mile of the subject site. There is one inactive well located approximately 1,200 feet southwest and cross-gradient of the subject site. It is unlikely that this well is being impacted by contamination from the site.	
Are drinking water wells affected? No	Aquifer Name: Santa Clara Valley Basin
Is surface water affected? No	Nearest SW Name: Guadalupe River approximately 4,000 feet to the west
Off-Site Beneficial Use Impacts (Addresses/Locations): None	
Reports on file? Yes	Where are reports filed? Santa Clara Valley Water District

*Detection limit for this sample is 10,000 parts per billion (ppb).

Description of Interim Remediation Activities: Analytical results following tank removal indicated residual contaminant concentrations listed above in soils at depths of 12 to 15 feet below ground surface (bgs). Approximately 16 cubic yards of contaminated soil were excavated from underneath the underground storage tanks and disposed off site. No further remediation was performed at the site.

On March 23, 1987, a monitoring well was installed at the subject site. The monitoring well, GX-94, was centered in the area of highest hydrocarbon concentration detected during tank removal and soil excavation activities. This well has been sampled two times, at the time of installation and prior to closure. Groundwater contaminant concentrations have reduced to levels below regulatory concern.

DRAFT

IV. CLOSURE

Does completed corrective action protect existing beneficial uses per the Regional Board Basin Plan? Yes		
Does completed corrective action protect potential beneficial uses per the Regional Board Basin Plan? Yes		
Does corrective action protect public health for current land use? Santa Clara Valley Water District staff does not make specific determinations concerning public health risk. However, it does not appear that the release would present a risk to human health.		
Site Management Requirements: Residual soil contamination exists at this site at concentrations of approximately 1,000 ppm TPHG and 40 ppm Benzene at depths of approximately 12 to 15 feet bgs. Residual groundwater contamination above the maximum contaminant levels for Benzene also exists at the site. Appropriate precautions for human health and safety shall be incorporated into a site safety plan should excavation or subsurface activities be undertaken at the site in the future. We recommend that a residual risk management plan be prepared to address site management concerns if significant development of the site occurs or if zoning changes.		
Should corrective action be reviewed if land use changes? Yes, additional investigation and/or cleanup should be considered, based on information available for the site and proposed land use changes.		
Monitoring Wells Decommissioned: No	Number Decommissioned: 0	Number Retained: 1
List Enforcement Actions Taken: None		
List Enforcement Actions Rescinded: None		

V. ADDITIONAL COMMENTS, DATA, ETC.

Conclusions: Analytical results from the September 1997 groundwater sampling event indicate contaminant concentration below regulatory concern but above maximum contaminant levels for Benzene at 81 ppb. Land use at this site is commercial. Santa Clara Valley Water District staff recommends this case for closure because residual soil and groundwater contamination at this site does not appear to currently pose a threat to public health, safety, or the environment, Regional Water Quality Control Board objectives have not been compromised, and it is expected that residual petroleum hydrocarbon contamination in soil and groundwater will continue to attenuate.

Soil Sampling Report - Underground Storage Tanks

Name of Business: Downtown Auto Express

Site address: 154 E. Santa Clara St., San Jose, CA

Type of work performed: Soil samples taken for laboratory testing during removal of underground storage tanks.

Date sampled: 2/12/87

Number of tanks removed: 6 (One 10,000 gal. gasoline tank was reported to have been removed on 2/11/87); 5 other tanks were observed to be removed on 2/12/87.

Tank - capacity (approx.), contents, type:

A: 100 gal. waste oil, steel
B: 1,000 gal. gasoline, steel
C: 2,000 gal. waste oil (formerly gasoline), steel
D: 1,000 gal. gasoline, steel
E: 10,000 gal. gasoline, steel

Soil samples:

Sample #	Depth(ft)	Location description (See Site Map)
TP100A	4.5	Native soil below and adjacent to the north end of tank A.
TP100B-1	12.0	Native soil below end opposite fill end of tank B.
TP100B-2	12.0	Native soil below fill end of tank B.
TP100C-1	12.0	Native soil below fill end of tank C.
TP100C-2	12.0	Native soil below end opposite fill end of tank C.
TP100D-1	12.0	Native soil below end opposite fill end of tank D.
TP100D-2	12.0	Native soil below fill end of tank D.

DRAFT

TP100E-1	15.0	Native soil below fill end of tank E.
TP100E-2	15.0	Native soil below end oppsite fill end of tank E.

Condition of tanks:

A: Corroded and with many holes. Was reported to have collapsed and fallen apart during removal.

B: Rusted all over, with 2 - 1 1/4 inch holes observed in bottom of fill end.

C: Good condition - no holes or corrosion observed.

D: Rusted all over, with 1 - 1 inch hole observed in bottom of fill end.

E: Good condition - no holes observed.

Description of soil taken for samples from excavation pit:

A: Brown clayey silt.

B, C, D: All samples were gray clay.

E: Brown and gray mottled clay.

Laboratory results: (lab report attached)

Sample Number	Tested for:	Test results (ppm)
TP100A	Total extractable hydrocarbons (waste oil)	<10 *
TP100B-1	Total volatile hydrocarbons (gasoline)	237.60
	Benzene	2.72
	Toluene	1.25

Dear Chris Hygelund and Ms. Poon:

Subject: Fuel Leak Site Case Closure—Bank of Trade Building, 100 East Santa Clara Street, San Jose, CA; Case No. 12-026

This letter transmits the enclosed underground storage tank (UST) case closure letter in accordance with Chapter 6.75 (Article 4, Section 25299.37[h]). The State Water Resources Control Board adopted this letter on February 20, 1997. As of March 1, 1997, the Santa Clara Valley Water District is required to use this case closure letter for all UST leak sites. We are also transmitting to you the enclosed case closure summary. These documents confirm the completion of the investigation and cleanup of the reported release at the subject site. The subject fuel leak case is closed.

SITE INVESTIGATION AND CLEANUP SUMMARY

Please be advised that the following conditions exist at the site:

- Residual concentrations of petroleum hydrocarbons are present in soil at the subject site. However, concentrations appear to be below levels of regulatory concern.

If you have any questions, please call Dr. Cindy Kao at (408) 265-2607, extension 2639. Thank you.

Sincerely,

Dear Chris Hygelund and Ms. Poon:

Subject: Fuel Leak Site Case Closure—Bank of Trade Building, 100 East Santa Clara Street, San Jose, CA; Case No. 12-026

This letter confirms the completion of a site investigation and remedial action for the underground storage tank(s) formerly located at the above-described location. Thank you for your cooperation throughout this investigation. Your willingness and promptness in responding to our inquiries concerning the former underground storage tank(s) are greatly appreciated.

Based on information in the above-referenced file and with the provision that the information provided to this agency was accurate and representative of site conditions, this agency finds that the site investigation and corrective action carried out at your underground storage tank(s) site is in compliance with the requirements of subdivisions (a) and (b) of Section 25299.37 of the Health and Safety Code and with corrective action regulations adopted pursuant to Section 25299.77 of the Health and Safety Code and that no further action related to the petroleum release(s) at the site is required.

This notice is issued pursuant to subdivision (h) of Section 25299.37 of the Health and Safety Code.

Please contact our office if you have any questions regarding this matter.

Sincerely,

Highest GW Depth Below Ground Surface: 11.8′	Lowest Depth: 14.8′	Flow Direction: Unknown
Most Sensitive Current Use: Potential drinking water		

DRAFT

Summary of Production Wells in Vicinity: A well search indicates that no active water producing wells exist within ¼-mile radius of the subject property (100 East Santa Clara Street). Five abandoned or inactive production wells are located within ¼ mile of the subject property, as summarized below.

Well No.	Distance From Site	Status	Notes
07S01E08L001	On site, 40 feet from tanks	Abandoned	Paved over
07S01E08M002	1,000 feet northwest	Abandoned	Paved over
07S01E08P006	1,160 feet south-southwest	Abandoned	Built over
07S01E08M001	900 feet southwest	Inactive	—
07S01E08K001	831 feet east	Abandoned	Paved over

Available information indicates that one of the abandoned production wells (07S01E08L001) is located on the subject property. In the summer of 2000, the responsible party and Santa Clara Valley Water District staff searched for the location of the well at the subject property. The anticipated location was paved over, but an indentation in the asphalt suggested that the well may be present approximately 40 feet from the former tank location. Santa Clara Valley Water District staff has requested that this well be destroyed.

Because (1) groundwater samples collected from the on-site monitoring well indicated minimal impact to groundwater resources and (2) the viscous nature of fuel oil inhibits extensive subsurface migration, the abandoned wells in the vicinity of the subject property do not appear to be preferential pathways for contamination at the site.

Are drinking water wells affected? —	Aquifer Name: Santa Clara Valley Water Basin
Is surface water affected? No	Nearest SW Name: Guadalupe River, 3,200 feet southwest
Off-Site Beneficial Use Impacts (Addresses/Locations): None	
Reports on file? Yes	Where are reports filed? Santa Clara Valley Water District

IV. CLOSURE

Does completed corrective action protect existing beneficial uses per the Regional Board Basin Plan? Yes		
Does completed corrective action protect potential beneficial uses per the Regional Board Basin Plan? Yes		
Does corrective action protect public health for current land use? Santa Clara Valley Water District staff does not make specific determinations concerning public health risk. However, it does not appear that the release would present a risk to human health.		
Site Management Requirements: None		
Should corrective action be reviewed if land use changes? Yes		
Monitoring Wells Decommissioned: No	Number Decommissioned: 0	Number Retained: 1
List Enforcement Actions Taken: None		
List Enforcement Actions Rescinded: None		

V. ADDITIONAL COMMENTS, DATA, ETC.

Considerations and/or Variances:

On February 13, 1989, a 1,200-gallon fuel oil underground storage tank was removed from a subsurface vault beneath the sidewalk adjacent to Third Street. The vault was concrete-walled but did not contain a concrete floor. A large portion of the tank bottom was missing, and liquid and semisolid sludge drained from numerous holes in the tank bottom into the excavation. Samples collected from native soil beneath the bottom of the tank contained up to 470 mg/kg of fuel oil. A subsequent report stated that up to 10,000 mg/kg of fuel oil had been detected, although available data tables and lab sheets do not show this concentration. In March 1989, soil was excavated to 12 feet below the tank bottom and disposed at Kettleman Hills landfill. In October 1992, the excavation was reopened to remove additional contaminated soil to 16 feet below the existing grade. Groundwater and ⅛ inch of floating product entered the open excavation the next day. The excavated soil (20 cubic yards) was later incinerated. Six soil samples were collected from the boundaries of the final excavation and analyzed for Total Petroleum Hydrocarbons as Diesel (TPHD), Benzene, Toluene, Ethylbenzene, and Xylenes (BTEX). A composite sample collected from the stockpiled soil was analyzed for VOCs, polychlorinated biphenyls, and metals. Only diesel fuel (up to 1,800 mg/kg) and low levels of metals were detected. The excavation was backfilled with clean fill.

In April 1993, one soil boring was drilled within 10 feet of the former waste oil tank location and a groundwater monitoring well was installed within the boring. The boring log for the well indicated that the site is underlain by a clayey fill to 5 feet, followed by sand to 15 feet, and then clay to 25 feet (bottom of boring). Groundwater was sampled and analyzed from the well four times between April of 1993 and April of 1994. Samples were analyzed for TPHD and BTEX. No compounds were detected in any of the groundwater samples analyzed (detection limits: TPHD = 50 ug/L, BTEX = 0.5 ug/L). Depth to water varied from approximately 12 to 15 feet during this sampling period.

The Santa Clara Valley Water District records were reviewed and an abandoned municipal/industrial well was discovered on the property in 1999. During a site visit by Santa Clara Valley Water District personnel and responsible party consultants in 2000, the abandoned well location was estimated to be approximately 40 feet from the former tank location.

Conclusions:

The potential source has been removed and groundwater samples did not contain detectable concentrations of chemicals. Given that the residual fuel oil in soil and groundwater appears to be poorly mobile, contamination originating from the former fuel oil tank is not likely to reach the abandoned well located approximately 40 feet away. Santa Clara Valley Water District staff has concluded that a continuing threat to groundwater, human health, and the environment from residual petroleum hydrocarbons does not exist at this site and that Regional Water Quality Control Board objectives have not been compromised. Santa Clara Valley Water District staff recommends closure for this fuel leak case.

FIGURE 1

Once the stabilization of the readings were noted the sample was collected from the well. Purge water was stored at the site in 55-gallon drums. The **Chain-of-Custody** and the **Laboratory Analysis Results** can be found in **Appendix C.**

A new disposable bailer was used to obtain the groundwater sample which was placed in (2) 40ml voa clear glass bottles and (2) 1-liter amber glass jars leaving no headspace, the containers were labeled, logged on the Chain-of-Custody and immediately placed on ice for shipment to Geochem Environmental Labs Inc.(a State Certified Testing Lab) in San Jose, California, under a Legal Chain-of-Custody

Geochem tested the groundwater samples using EPA methods 5030-8015, and 602 for TPH Diesel and BTEX.

GROUNDWATER CONTOUR MAP AND GRADIENT

Since only one groundwater monitoring well is present at the site, a triangulation of groundwater surface is not possible. Regional depth to groundwater data indicate a northerly flow direction, under a relatively flat gradient in the immediate vicinity.

DRAFT

LABORATORY FINDINGS

The analytical results of the groundwater samples revealed the following **(see Table 2)**;

Table 2. Groundwater Chemical Data for MW-1

Date sampled	04-28-93	09-15-93	12-22-93	04-12-94			Detection Limit
TPH Diesel	**N.D.**	**N.D.**	**N.D.**	**N.D.**			**50ppb**
Benzene	**N.D.**	**N.D.**	**N.D.**	**N.D.**			**0.5ppb**
Toluene	**N.D.**	**N.D.**	**N.D.**	**N.D.**			**0.5ppb**
Ethylbenzene	**N.D.**	**N.D.**	**N.D.**	**N.D.**			**0.5ppb**
Xylene	**N.D.**	**N.D.**	**N.D.**	**N.D.**			**0.5ppb**
Date received	**04-28-93**	**09-15-93**	**12-23-93**	**04-12-94**			
Date analyzed	**04-30-93**	**09-17-93**	**12-30-93**	**04-12-94**			

ND = None Detected
ppb = Parts per billion

The laboratory analysis report is presented in **Appendix C.**

DISCUSSION

The laboratory finding of **none detected** indicates a continued trend of non-involvement of the groundwater by the formerly contaminated soil above the groundwater interface. Since this report represents the fourth consecutive quarter of non-detect sampling, we recommend this site be considered for Site Closure and no further sampling be required.

INTRODUCTION

This report covers the 4th Quarterly Groundwater Monitoring Well Sampling for the 100 East Santa Clara Street site in San Jose, California **(see Figure 1 Location Map in Appendix A).**

Gen-Tech Environmental Inc. (GTE) was retained to remove impacted soil discovered during the removal of an underground storage tank, and to install and provide quarterly sampling of one groundwater monitoring well on this site. GTE remediated the impacted soil and also performed the first quarterly sampling of the monitoring well. These reports are on file with the SCVWD.

Due to change in the ownership of GTE, Light, Air, and Space Construction (LA&S) has been retained to perform the second, third, and fourth quarterly sampling of the groundwater monitoring well at this site.

One groundwater monitoring well (MW-1) currently exists on this site.

FIELD AND LABORATORY METHODS

The well was opened and a depth-to-water measurement was obtained using a Slope Indicator Meter. Monthly depth-to- water measurements from April 28, 1993 through April 12, 1994 are presented in Table 1 below.

Table 1. Monitoring Well MW-1 Depth-to-Water Measurements

Well #	Date	Well Depth (ft)	Depth to Water (ft)	Top of Casing (MSL)	Water Level (MSL)	Floating Product
MW-1	04-28-93	24.00	11.81	N/A	N/A	none
MW-1	05-28-93	24.00	12.41	N/A	N/A	none
MW-1	06-28-93	24.00	13.06	N/A	N/A	none
MW-1	07-28-93	24.00	13.60	N/A	N/A	none
MW-1	08-28-93	24.00	14.20	N/A	N/A	none
MW-1	09-15-93	24.00	14.80	N/A	N/A	none
MW-1	10-15-93	24.00	14.03	N/A	N/A	none
MW-1	11-15-93	24.00	13.38	N/A	N/A	none
MW-1	12-22-93	24.00	12.62	N/A	N/A	none
MW-1	01-14-94	24.00	12.47	N/A	N/A	none
MW-1	02-18-94	24.00	12.31	N/A	N/A	none
MW-1	03-11-94	24.00	12.19	N/A	N/A	none
MW-1	04-12-94	24.00	12.08	N/A	N/A	none

N/A - Not Available

The sampler proceeded to purge (4) well volumes (a calculation was done for each well following sounding measurements) of groundwater from the well using a disposable bailer. The well was then allowed to re-charge. Between each well volume, conductivity, ph, and water temperature readings were obtained and noted on the **Groundwater Sampling Information Sheet**, see **Appendix B**.

San Mateo, California 94402

Subject: Fuel Leak Site Case Closure Cornerstone Property, 100 N. Fourth Street, San Jose; Case No. 14-753, SCVWDID No. 07S1E08F05f

Dear Mr. Langlais:

This letter transmits the enclosed underground storage tank (UST) case closure letter for the subject case in accordance with Chapter 6.75 (Section 25296.10 [g]). The State Water Resources Control Board adopted this letter on February 20, 1997. As of March 1, 1997, all Local Oversight Programs (LOP) in the State are required to use this case closure letter for UST leak sites. The Santa Clara Valley Water District began transferring the LOP and all cases to the County of Santa Clara Department of Environmental Health on July 1, 2004. The County of Santa Clara is responsible for the issuance of the attached closure letter. The case closure summary is also enclosed. These documents confirm the completion of the investigation and cleanup of the reported release at the subject site. The subject fuel leak case is closed.

Please note the following conditions still remain at the site:

Soil contains 56 parts per million (ppm) Total Petroleum Hydrocarbons as Gasoline (TPHg) and 19 ppm TPH as Diesel (TPHd). Shallow groundwater contains 1,700 parts per billion (ppb) TPHg, 31 ppb Benzene, 2.5 ppb Toluene, 8.3 ppb Ethylbenzene, 2.7 ppb Total Xylenes, and 1.1 ppb 1,2-Dichloroethane.

Residual contamination in soil and groundwater remains at the site that could pose an unacceptable risk under certain site development activities such as site grading, excavation, or the installation of water wells. The County and the appropriate planning and building department shall be notified prior to any changes in land use, grading activities, excavation, and installation of water wells. This notification shall include a statement that residual contamination exists on the property and list all mitigation actions, if any, necessary to ensure compliance with this site management requirement. The levels of residual contamination and any associated site risk are expected to reduce with time.

DRAFT

Board of Supervisors: Donald F. Gage, Blanca Alvarado, Pete McHugh, James T. Beall, Jr., Liz Kniss
County Executive: Peter Kutras, Jr.

If you have any questions regarding the enclosed case closure form, please call Ms. Lani Lee of the Local Oversight Program at (408) 918-1977. Thank you.

Sincerely,

Nicole Pullman

Subject: Fuel Leak Site Case Closure Cornerstone Property, 100 N. Fourth Street, San Jose; Case No. 14-753, SCVWDID No. 07S1E08F05f

Dear Mr. Langlais:

This letter confirms the completion of a site investigation and remedial action for the underground storage tank(s) formerly located at the above-described location. Thank you for your cooperation throughout this investigation. Your willingness and promptness in responding to our inquiries concerning the former underground storage tank(s) are greatly appreciated.

Based on information in the above-referenced file and with the provision that the information provided to this agency was accurate and representative of site conditions, this agency finds that the site investigation and corrective action carried out at your underground storage tank(s) site is in compliance with the requirements of subdivisions (a) and (b) of Section 25296.10 of the Health and Safety Code and with corrective action regulations adopted pursuant to Section 25299.3 of the Health and Safety Code and that no further action related to the petroleum release(s) at the site is required.

This notice is issued pursuant to subdivision (g) of Section 25296.10 of the Health and Safety Code.

Please contact our office if you have any questions regarding this matter.

Sincerely,

Nicole Pullman

Site Facility Name: Cornerstone Property		
Site Facility Address: 100 N. Fourth Street, San Jose, CA		
RB LUSTIS Case No: --	Local Case No: 07S1E08F05f	LOP Case No.: 14-753
URF Filing Date: NA	SWEEPS No.: --	APN: 467-20-019
Responsible Parties	Address	Phone Number
Cornerstone Properties c/o Robert Langlais	1720 S. Amphlett Blvd., Suite 110 San Mateo, CA 94402	650-286-4306

Tank I.D. No.	Size in Gallons	Contents	Closed In Place/Removed?	Date
1	Unknown	Unkown	Removed	Early 1980's*
Piping			Removed	Early 1980's*

* UST removal permits and reports were not located. The site was formerly a gasoline station and is currently a parking lot. A geophysical study did not find USTs at the site.

III. RELEASE AND SITE CHARACTERIZATION INFORMATION

Cause and Type of Release: Unknown		
Site characterization complete? Yes	Date Approved by Oversight Agency: 2/23/06	
Monitoring wells installed? Yes	Number: 1	Proper screened interval? Yes
Highest GW Depth Below Ground Surface: 12.55 ft	Lowest Depth: 25 ft*	Flow Direction: Northwest**
Most Sensitive Current Use: Potential Drinking Water		

* Groundwater was measured to be at 12.55 ft below the ground surface (ft bgs) following completion of the temporary monitoring well. After purging the well from 6 pm on 2/2 until 10 am on 2/3, groundwater was measured to be at 25 ft bgs.

** Flow direction based on data collected at LUST case 07S1E08L01f.

Summary of Production Wells in Vicinity: There is one abandoned well (07S01E08M002) located within ¼-mile radius of this site. It is located approximately 1,104 feet west-southwest of the site, and is not considered a likely receptor due to distance, minor levels of residual contamination and groundwater flow direction (northwest).

There is an environmental monitoring well (07S01E08F001) located approximately 247 feet north-northwest (downgradient) of the site. This well is completed to approximately 30 ft bgs. This well is also not considered a likely receptor due to distance and minor levels of residual contamination.

Description of Interim Remediation Activities: Approximately 440 gallons of groundwater was purged from the temporary well prior to closure of the well.

NA – Not Analyzed

1. Sample B-3-18 collected from boring B-3 at 18 ft bgs on 8/11/00. Laboratory note for sample – unknown hydrocarbon in targeted range.
2. Sample collected from B-5 at 5-5.5 ft bgs on 2/2/06. Laboratory note for sample – motor oil detected in sample.
3. Sample B-1-15 collected from boring B-1 at 15 ft bgs on 8/11/00.
4. All soil samples collected from borings B-1 through B-3 on 8/11/00.
5. Sample collected from B-5 at 15-15.5 feet below the ground surface (ft bgs) on 2/2/06.
6. All soil samples collected from boring B-5 on 2/2/06.
7. Grab groundwater sample B1-AQ collected from boring B-1 on 8/11/00.
8. Sample "Grab Groundwater" collected at the capillary zone in boring B-5 on 2/2/06 prior to construction of the temporary monitoring well.
9. Sample Groundwater (1015) collected from temporary well B-5 on 2/3/06. The well had been pumped overnight and a total of 440 gallons of groundwater had been removed. DTW 25 ft bgs
10. Sample Groundwater (1220) collected from temporary well B-5 on 2/3/06 after purging approximately 440 gallons of groundwater. This sample was collected after the well was allowed to recharge. DTW 20 ft bgs

IV. CLOSURE

Does completed corrective action protect existing beneficial uses per the Regional Board Basin Plan? Yes
Does completed corrective action protect potential beneficial uses per the Regional Board Basin Plan? Yes

DRAFT

Does corrective action protect public health for current land use? Environmental Health Department staff does not make specific determinations concerning public health risk. However, it does not appear that the release would present a risk to human health.
Site Management Requirements: Residual contamination both in soil and groundwater remains at the site that could pose an unacceptable risk under certain site development activities such as site grading, excavation, or the installation of water wells. Therefore, the impact of the disturbance of any residual contamination or the installation of a water well in the vicinity of the residual contamination shall be assessed and appropriate action taken so that there is no significant impact to human health, safety, or the environment. This could necessitate additional sampling, health risk assessment, and mitigation measures. The DEH and the appropriate planning and building department shall be notified prior to any changes in land use, grading activities, excavation, and installation of water wells. This notification shall include a statement that residual contamination exists on the property and list all mitigation actions, if any, necessary to ensure compliance with this site management requirement. The levels of residual contamination and any associated site risk are expected to reduce with time.
Should corrective action be reviewed if land use changes? Yes, See Site Management Requirements

Number of Wells Commissioned: 1	Number of Wells Decommissioned: 1	Number of Wells Retained: 0
List Enforcement Actions Taken: None		
List Enforcement Actions Rescinded: None		

V. ADDITIONAL COMMENTS, DATA, ETC.

Considerations and/or Variances: The site is currently a parking lot. It is believed that the USTs were removed from the site in the early 1980's, but records of the UST removal were not found at the San Jose Fire Department. According to Sanborn Fire Insurance Maps, a gasoline service station may have been located on the site as early as 1950.

2000 – In August, 4 borings (B-1 through B-4) were drilled at the site to depths between 16 and 20 ft bgs. Soil samples collected from boring B-1 through B-3 were analyzed for Total Petroleum Hydrocarbons as Gasoline (TPHg), Benzene, Toluene, Ethylbenzene, Total Xylenes, and Methyl tert-Butyl Ether (MtBE). The highest concentrations detected in the soil were 66 parts per million (ppm) TPHg, 0.014 ppm Benzene, 0.031 ppm Toluene, 0.057 ppm Ethylbenzene, 0.032 ppm Total Xylenes. MtBE was not reported above the laboratory reporting limit.

Grab groundwater samples were collected from borings B-1, B-2 and B-4. No groundwater was encountered in boring B-3, which was advanced to 20 ft bgs. The maximum concentrations were reported for the sample collected from boring B-1 (adjacent to the former pump island) of 2,200 parts per billion (ppb) TPHg, 10 ppb Benzene, 2.4 ppb Ethylbenzene, and 7.8 ppb Total Xylenes. 140 ppb of Total Petroleum Hydrocarbons as Diesel (TPHd) were reported in the sample collected from B-4 and the laboratory noted that motor oil was detected in the sample. Toluene and MtBE were not reported in any of the samples above the laboratory reporting limit.

2005 – In October, a passive soil gas survey was conducted at the site using Gore-Sorber samplers. Low concentrations of TPH was reported from 2.46 to 81.88 micrograms per sorber; and Benzene, Toluene, Ethylbenzene, Total Xylenes (BTEX) was reported from Non Detect to 1.51 micrograms per sorber. The highest concentrations were near the center of the property and the assumed location of the former USTs.

In December, the results of the 2000 investigation and the soil gas survey were submitted to DEH.

2006 – In February, a temporary monitoring well (B-5) was installed in the downgradient direction from the pump island and boring B-1. Soil samples were collected every 5 feet to the total depth of the boring at 25 ft bgs. Only TPHg and TPHd were reported in the soil samples at a maximum of 56 ppm TPHg at 15 ft bgs and 19 ppm TPHd at 5 ft bgs.

DRAFT

Four groundwater samples were collected from the boring/temporary well. The initial sample was collected from the boring at a depth of approximately 20 ft bgs from within the auger annulus prior to installation of the casing and was reported to have 630 ppb of TPHg, 270 ppb TPHd, 11 ppb Benzene, 1 ppb Toluene, 0.71 ppb Ethylbenzene, and 1.1 ppb Total Xylenes. MtBE, Ethylene Dibromide (EDB), and 1,2-Dichloroethane (1,2-DCA) were not reported above the laboratory reporting limit.

Approximately 80 gallons of groundwater were purged after the temporary well was installed, and the well was allowed to recharge. Sample Groundwater (1635) was collected after the well had recharged to approximately 15 ft bgs. This sample was reported to have 920 ppb TPHg, 24 ppb Benzene, 1.8 ppb Toluene, 4.3 ppb Ethylbenzene, 2.1 ppb Total Xylenes, and 0.83 ppb 1,2-DCA. TPHd, MtBE, and EDB were not reported above the laboratory reporting limit.

The well was pumped overnight. A total of 440 gallons of groundwater were removed from the well. It was noted that the recharge rate of the well was slow. Sample Groundwater (1015) was collected after purging was completed and groundwater was at 25 ft bgs. This sample was reported to have 1,100 ppb TPHg, 34 ppb Benzene, 5.7 ppb Toluene, 14 ppb Ethylbenzene, 15 ppb Total Xylenes, 11 ppb MtBE, and 1.1 ppb 1,2-DCA. TPHd and EDB were not reported above the laboratory reporting limit.

The well was allowed to recharge to a depth of 20 ft bgs prior to collection of sample Groundwater (1220), which was reported to have 1,700 ppb TPHg, 31 ppb Benzene, 2.5 ppb Toluene, 8.3 ppb Ethylbenzene, 2.7 ppb Total Xylenes, and 1.1 ppb 1,2-DCA. TPHd, MtBE, and EDB were not reported above the laboratory reporting limit. The temporary well was destroyed.

A geophysical survey was conducted to determine if any USTs remained at the site. The survey did not find any USTs at the site.

Conclusion:

Residual contamination remains in the soil (56 ppm TPHg and 19 ppm TPHd) and shallow groundwater (1,700 ppb TPHg, 31 ppb Benzene, 2.5 ppb Toluene, 8.3 ppb Ethylbenzene, 2.7 ppb Total Xylenes, and 1.1 ppb 1,2-DCA) at the site. The shallow soils at the site are characterized as clays and the groundwater recharge rate was slow. It is believed that the USTs were removed from the site in the early 1980s, therefore, any release at the site has been naturally attenuating over the last 25 years and will continue to do so. There are no sensitive receptors within a ¼-mile radius of the site. Site Management Requirements have been set for this site.

County of Santa Clara Environmental Health Department staff has concluded that a continuing threat to groundwater, human health, or the environment from residual soil and groundwater contamination does not exist at this site and that Regional Water Quality Control Board objectives have not been compromised. The investigation was performed in accordance with state and local guidelines. Environmental Health Department recommends that this site be closed.

Thomas LaPoint, M.S. – Project Manager, Energy Services

MS – Environmental Management and Sustainability, St. Edward's University
BA – Liberal Arts and Engineering Studies, Environmental Studies Minor,
Cal Poly – San Luis Obispo
LEED Green Associate
Building Performance Institute – Multifamily Building Analyst

Mr. LaPoint is a project manager in the energy services and environmental due diligence industry. His experience includes four years in energy efficiency/sustainability project management and four years in the construction industry.

Project experience for Mr. LaPoint includes:

- 100+ Multifamily Building Energy Efficiency Audits
- High Performance Building Modeling
- More than 5 years' experience in multifamily assessments including numerous assignments for Freddie Mac, HUD, and Fannie Mae execution
- Energy Star Portfolio Manager Certifications
- Phase I Environmental Site Assessments
- Environmental Transaction Screens
- Environmental Transaction Analyses
- Regulatory Database Review
- Historical Records Review

Mr. LaPoint has worked in the energy services field since 2013 and in the environmental due diligence field since 2016.

DRAFT

Katie Hindt – Client Manager

B.A. – Environmental Studies, University of California, Santa Cruz

Registered Environmental Property Assessor (REPA) #528528

Ms. Hindt has over 10 years of experience in the environmental service industry and provides project management to ensure ASTM compliance and satisfaction of client requirements for Phase 1 Environmental Site Assessments, Environmental Transaction Screens, Environmental Transaction Analyses, Records Research with Risk Assessments, Regulatory Database Reviews and Historical Records Reviews. She has completed assessments on a variety of residential, agricultural, commercial and industrial sites. Ms. Hindt is familiar with all aspects of Due Diligence Property Assessments and the requirements of many reporting standards including, ASTM, AAI, HUD and client-specific formats.

Project experience for Ms. Hindt includes:

- Phase 1 Environmental Site Assessments (Phase 1 ESA)
- Environmental Transaction Screens (ETS)
- Environmental Transaction Analyses (ETA)
- Records Search with Risk Assessment (RSRA)
- Regulatory Database Reviews
- Historical Records Reviews
- Project Coordination and Setup

As a Client Manager, Ms. Hindt provides senior author services and client management. Additional responsibilities include managing projects and staff mentorship.

In addition, prior to joining the environmental service industry, Ms. Hindt spent four years studying a broad range of environmental disciplines including: National environmental law, policy and economics, restoration ecology, California environmental history and California freshwater policy/issues.
