Appendix FEIR-B
Health Risk Assessment

APPENDIX B
Health Risk Assessment

1. Introduction

ESA has prepared a combined construction and operational health risk assessment (HRA) for the proposed Fourth and Central Project ("Project") that is generally located at 400 South Central Avenue and consists of three distinct sites (North, South, and West Sites – collectively referred to as the "Project Site") in the City of Los Angeles. The Project Site is comprised of the following areas: North Site (1.35 acres) located at the northeast corner of 4th Street and Central Avenue; South Site (5.98 acres) located south of 4th Street between Central Avenue and Alameda Street; and West Site (0.32 acres) located at the northwestern intersection of Gladys Avenue and Central Avenue.

The Project would demolish the existing surface parking and cold storage facility uses on the West and South Sites. The Project intends to adaptively reuse a portion of a six-story cold storage warehouse building located on the North Site, while demolishing the remaining attached single-story warehouse building on the North Site. However, because the currently operating North Site cold storage warehouse building has been "frozen" for over 100 years, a confirmation of its structural integrity cannot be made until the existing operations cease (when and if the Project is approved) and the North Site building is "unfrozen." Accordingly, to provide a worst-case, conservative assessment of potential environmental impacts, such as construction air emissions and haul trips, the Project is assumed to demolish the entire six-story cold storage warehouse building and attached single-story warehouse on the North Site. Whether a portion of the six-story cold storage warehouse building on the North Site is adaptively reused or not, the development programming on the North Site (and Project) would remain similar under either development scenario.

As discussed in the Project's Final EIR, the Project would include a mix of residential, office, and restaurant/retail uses within 10 distinct buildings over the Project Site totaling 2,318,534 square feet (sf), for a floor area ratio (FAR) of 7.13:1. The Project would include: 1,589 residential units, including affordable housing units; office uses; and restaurant/retail uses. The Project would include Los Angeles Municipal Code (LAMC) required usable open space, as well as publicly-accessible open space, including paseos passing between Central Avenue and Alameda Street, plazas, and pocket parks within the North and South Sites. The proposed buildings would range in height from two to 30 stories, with a maximum height of 364 feet. The Project would provide 2,444 vehicle parking spaces within subterranean parking (up to four levels) and six levels of podium parking in Building 2 and four levels of podium parking in Building 9. The Project would also provide 163 short-term bicycle parking spaces and 629 long-term bicycle parking spaces.

Please refer to Chapter 3, *Revisions, Clarifications and Corrections to the Draft EIR*, of this Final EIR for additional information regarding the Project with design modifications.

Construction of the Project has the potential to generate temporary toxic air contaminant (TAC) emissions from the use of heavy-duty construction equipment, such as excavators and forklifts, and from haul trucks traveling to and from the Project Site. The South Coast Air Quality Management District (SCAQMD) does require HRAs under Rule 1401 - New Source Review of Toxic Air Contaminants, Rule 1401.1 - Requirements for New and Relocated Facilities Near Schools, and Rule 212 – Standards for Approving Permits and Issuing Public Notice, for new, modified, or relocated permitted sources.[1] However, the SCAQMD does not require mixed-use land use development projects to prepare quantitative construction HRAs and has no guidance on construction HRAs.[2]. Furthermore, as discussed in Section IV.A, *Air Quality*, of the Project's Draft EIR, the SCAQMD recommends that operational health risk assessments be conducted for projects involving substantial sources of operational TACs (e.g., truck stops and warehouse distribution facilities that generate more than 100 trucks per day or more than 40 trucks with operating transport refrigeration units)[3] and has provided guidance for analyzing mobile source diesel emissions in SCAQMD's Health Risk Assessment Guidance for Analyzing Cancer Risks from Mobile Source Diesel Idling Emissions for CEQA Air Quality Analysis.[4] However, the Project would not include any truck stop or warehouse distribution uses, and, as such, operations would generate only minor amounts of diesel emissions from mobile sources, such as delivery trucks and occasional maintenance. Although the SCAQMD does not require quantitative construction HRAs for mixed-use land use development projects and a quantitative operational HRA for the Project is not required for the reasons discussed above, the SCAQMD comment letter for the Project requested that the lead agency prepare a quantitative health risk assessment of the Project's construction and operational toxic air contaminant (TACs) emissions. (See Final EIR, Chapter 2 (Responses to Comments), Comment Letter No. AG 4B.) As such, a quantitative construction and operational HRA was prepared to provide a conservative (i.e., health protective) assessment of potential health risk impacts. In addition, as described above, relative to existing conditions, the Project would remove the existing cold storage facilities and the TACs emissions from the approximately 144 trucks and equipped transportation refrigeration units (TRUs) that currently visit the Project Site on a daily basis would no longer occur. Therefore, this construction and operational HRA considers the incremental change in health risk based on the removal of existing sources of TACs. The results of the quantitative construction and operational HRA show that health risk impacts from construction and operation of the Project would be below the applicable significance threshold of an incremental risk of 10 in one million for the maximum impacted off-site residential and worker receptors. As such, the results of this quantitative

construction and operational HRA provides further substantial evidence that supports the Project's Draft Environmental Impact Report (EIR) conclusion of a less than significant impact with mitigation incorporated with respect to TAC emissions. A summary of the construction and operational HRA analysis methodology, modeling inputs, and the results of the construction and operational HRA analysis are provided below.

2. Methodology

2.1 Emissions

2.1.1 Construction

Construction of the Project would result in TAC emissions in the form of exhaust diesel particulate matter (DPM) associated with the use of heavy-duty equipment and trucks. Construction DPM emissions were estimated by assuming a conservative estimate of construction activities (i.e., assuming all construction occurs at the earliest feasible date). As shown in the detailed modeling files in Appendix B of the Project's Draft EIR and Appendix C of the Project's Final EIR, the Project's construction emissions were modeled assuming a start year of 2025 and a duration of approximately 56 months. If construction would commence at a later date than was modeled, construction impacts would be less than those analyzed due to the use of a more energy-efficient and cleaner burning construction vehicle fleet mix, pursuant to State regulations that require vehicle fleet operators to phase-in less polluting heavy-duty equipment and trucks.

The Project's construction off-road equipment emissions were estimated using the California Emissions Estimator Model (CalEEMod) (Version 2022.1) software, an emissions inventory software program recommended by the SCAQMD. Construction equipment DPM emissions were assumed to be equal to PM10 exhaust emissions reported by CalEEMod, as DPM consists of PM10 and PM2.5. Documentation from the California Air Resources Board (CARB) indicates that DPM exhaust consists of 92 percent PM2.5 and 100 percent PM10 (PM2.5 is a subset of PM10).[5] Therefore, utilizing the PM10 exhaust emissions reported by CalEEMod is appropriate for analyzing potential health risk impacts from DPM. The construction equipment input values used in this analysis were adjusted to be Project-specific based on equipment types and the construction schedule based on information provided by the Project's architectural and engineering representatives. The CalEEMod modeling worksheets were provided in Appendix B of the Project's Draft EIR and Appendix C of the Project's Final EIR, and provide detailed information regarding the construction modeling input values, which include: the Project's construction schedule and list of construction activities; the number, type, horsepower rating, load factor and daily usage of the heavy-duty construction equipment used for each construction activity. In addition, to account for the average construction usage, for the construction equipment emissions, the average usage hours were provided by the Project's construction representative and average daily emissions of each construction phase were applied in the construction health risk calculations. Detailed calculations can be found in Appendix B-1 of this HRA. As discussed

[5] California Air Resources Board, Speciation Profiles Used in ARB Modeling, PMSIZE (Excel)-Particle size fraction data for source categories, PM Profile Number 425 (Diesel Vehicle Exhaust), https://www.arb.ca.gov/ei/speciate/speciate.htm. Accessed June 2024.

in the Draft EIR and revised in the Final EIR, the Project includes Project Design Features and Mitigation Measures related to construction equipment to reduce Project impacts (Refer to Section IV. A, *Air Quality*, of the Project's Draft EIR and Chapter 3, *Revisions, Clarifications and Corrections to the Draft EIR*, of this Final EIR for additional information regarding Project Design Features and Project Construction Mitigation Measures). Pursuant to Project Design Feature AQ-PDF-1, Project contractors will use electricity from power poles (where available) and/or solar-powered generators rather than temporary diesel or gasoline generators during construction. Mitigation Measure AQ-MM-1 requires off-road heavy-duty construction equipment rated at 25 horsepower or greater to utilize CARB and USEPA Tier 4 Final off-road emission standards or equivalent which would be a fully enforceable requirement by the City. Furthermore, AQ-MM-1, has been revised in the Final EIR to include feasible electric emission-free construction equipment. As stated therein, contractors shall ensure that all air compressors, cement and mortar mixers, concrete/industrial saws, plate compactors, rollers, signal boards, skid-steer loaders, sweepers/scrubbers and welders used during construction activities are electric powered. Additionally, contractors shall ensure one piece of the following types of equipment from each construction activity that uses them would be electric powered: tractor/loader/backhoes, forklifts, graders, pumps and rough terrain forklifts (refer to Chapter 3, *Revisions, Clarifications and Corrections to the Draft EIR*, of this Final EIR for additional information regarding the Project with design modifications and revised AQ-MM-1).[6]

The construction truck assumptions were discussed in Section IV. A, *Air Quality*, of the Project's Draft EIR and provided in Appendix B of the Project's Draft EIR, which includes detailed information regarding the construction truck modeling input values such as: the Project's construction schedule and list of construction activities and the quantities of haul trucks for debris and soil hauling, vendor truck trips for material delivery, and concrete trucks for concrete delivery. Concrete truck, vendor truck and haul truck trip estimates were provided by the Project's engineering representative. Emissions from construction trucks including haul trucks, vendor trucks, and concrete trucks were estimated outside of CalEEMod using EMFAC2021 emission factors for haul, vendor and concrete trucks because CalEEMod assumes that the number of heavy-duty trucks input into the model occurs across the entire length of the applicable construction phases. However, since the applicable construction phases would not have the same number of haul trucks, vendor trucks, and concrete trucks on-site every day within each particular phase, the emissions calculations performed outside of CalEEMod are able to account for the varying maximum numbers of daily haul truck and concrete truck trips within each of the demolition, site preparation, grading/excavation, foundations/concrete pour, and building construction phases. Construction truck DPM emissions were assumed to be equal to exhaust emissions calculated using PM10 exhaust emission factors from EMFAC2021, as well as daily truck trips provided by the Project Applicant (see Appendix B of the Project's Draft EIR for additional details). EMFAC2021 was used to assess running emissions from truck exhaust, as well as on-site idling emissions, which considers CARB's idling regulatory limit of five minutes (an idling duration of 15 minutes per truck is conservatively used in this analysis). The Project

[6] Note, consistent with SCAQMD's recommendation, the City has also revised Mitigation Measure AQ-MM-1 to commit to using Tier 5 construction equipment, when and where such equipment is commercially available. However, for the purposes of this analysis, as the commercial availability of Tier 5 equipment is currently unknown, no construction equipment was assumed to be Tier 5 in this analysis.

would export approximately 651,000 cubic yards (CY) of grading (cut), including 105,000 CY within the North Site, 534,000 CY in the South Site and 12,000 CY in the West Site. For the purposes of this quantitative construction and operational HRA, construction truck emissions were limited to those emissions that would occur within an approximately 0.50-mile radius of the Project Site boundaries, which is conservative as compared to general SCAQMD recommendations for HRAs when siting sources of TACs in relation to sensitive receptors that considers emissions within a 0.25-mile radius.[7] Furthermore, as discussed in the Draft EIR, the Project includes a Mitigation Measure related to construction trucks to reduce Project impacts (Refer to Section IV. A, *Air Quality*, of the Project's Draft EIR for additional information regarding Project Construction Mitigation Measures). Mitigation Measure AQ-MM-2 requires the contractor to use CNG-fueled concrete trucks, or trucks that achieve the same or lower NOx emissions as CNG-fueled concrete trucks and requires the contractor to use local concrete suppliers with concrete supplied by one or more facilities located within a driving distance of approximately 10 miles per one-way trip (approximately 20 miles per round trip) (see Section IV. A, *Air Quality*, of the Project's Draft EIR and Appendix B of the Project's Draft EIR for additional details).

2.1.2 Operations

Project operational activities would generate DPM from mobile sources, such as delivery trucks and occasional maintenance of emergency generators. As discussed in Chapter 3, *Revisions, Clarifications and Corrections to the Draft EIR*, of the Final EIR, the estimated total Project vehicle trips and VMT were provided for the Project uses in Appendix F of the Final EIR, where the estimated vehicle trips and VMT analysis are based on the City's VMT analysis procedures and Transportation Assessment Guidelines.[8] Project maintenance and delivery truck trips were assumed to be comprised of the following vehicle classes: light-duty trucks, light heavy-duty trucks, medium-duty vehicles, medium-heavy-duty trucks, and heavy heavy-duty trucks.[9] Therefore, the Air Basin fleet mix percentage of these delivery truck vehicle types was multiplied by the total daily Project trips in order to determine the total number of maintenance and delivery truck trips per truck type. The EMFAC2021 model was run in the emissions mode (also referred to as the "Burden" mode) and used to generate Air Basin-specific emission factors in units of lbs/per mile per delivery truck trip. Similar to construction truck emissions assumptions, operational truck DPM running exhaust emissions were assumed to be equal to PM10 running exhaust emissions calculated using emission factors from EMFAC2021 and the calculated maintenance and delivery daily truck trips (see Appendix C and Appendix F of the Project's Final EIR for additional details). For the purposes of this quantitative construction and operational HRA, operational maintenance and delivery truck emissions were limited to those emissions that would occur within an approximately 0.25-mile radius of the Project Site boundaries, which is

9 Note of the EMFAC light-duty truck category, only LDT2 i.e trucks between ETW 3,751 and 5,750 were considered.

consistent with general SCAQMD recommendations for HRAs when siting sources of TACs in relation to sensitive receptors.[10]

Project operational activities would also generate DPM from stationary sources, such as emergency generators. As discussed in Chapter 3, *Revisions, Clarifications and Corrections to the Draft EIR*, of this Final EIR, Project operational stationary sources would include six emergency generators with one emergency generator in Building 2 on the North Site with an estimated capacity rated at approximately 2,000 kilowatts (2,682 horsepower), two emergency generators shared between Buildings 3, 4 and 5 on the South Site with an estimated capacity rated at approximately 1,500 kilowatts (2,012 horsepower) each, two emergency generators shared between Buildings 6, 7, 8 and 9 on the South Site, one with an estimated capacity rated at approximately 2,000 kilowatts (2,682 horsepower) and one with an estimated capacity rated at approximately 2,500 kilowatts (3,353 horsepower), one emergency generator in Building 10 on the West Site with an estimated capacity rated at approximately 1,500 kilowatts (2,012 horsepower), which would provide emergency power primarily for lighting and other emergency building systems. The emergency generators would result in DPM emissions during maintenance and testing operations. Emergency generators are permitted by the SCAQMD and regulated under SCAQMD Rule 1470. Therefore, emission factors for PM10 were based on the SCAQMD regulatory limit per SCAQMD Rule 1470.[11] Similar to construction equipment emission assumptions above, utilizing the PM10 emissions from emergency generators is appropriate for analyzing potential health risk impacts from DPM. Maintenance and testing would not occur daily, but rather periodically, up to 50 hours per year, per Rule 1470.

2.1.3 Existing

As discussed above, the Project site contains existing cold storage facility uses. The existing cold storage facility would generate DPM emissions from warehousing delivery trucks and equipped TRUs used to provide refrigeration for cargo transported by trucks. As discussed in Section IV. A, *Air Quality*, of the Project's Draft EIR and provided in Appendix B of the Project's Draft EIR, the existing facility provided data on the delivery truck trips that would visit the existing facility and the proportion and types of delivery trucks (light heavy-duty trucks, medium-heavy-duty trucks, and heavy heavy-duty trucks) that would visit the existing cold storage facility uses.[12] Therefore, the EMFAC2021 model was run in the emissions mode (also referred to as the "Burden" mode) and used to generate Air Basin-specific emission factors in units of lbs/per mile per delivery truck type. Similar to construction and operational truck emissions assumptions, existing truck DPM running exhaust emissions were assumed to be equal to PM10 running exhaust emissions calculated using emission factors from EMFAC2021 and the daily delivery truck trips information provided by the existing facility. In addition, DPM emissions from TRUs used to provide refrigeration for cargo transported by trucks were based on ten hours of TRU operation

[10] South Coast Air Quality Management District, Air Quality Issues in School Site Selection, May 2007, http://www.aqmd.gov/docs/default-source/planning/air-quality-guidance/school_guidance.pdf. Accessed June 2024.

[11] SCAQMD, Adopted April 2004 and last amended October 2021. Requirements for Stationary Diesel-Fueled Internal Combustion and Other Compression Ignition Engines)

[12] EMFAC 2021 Volume I – User's Guide, Appendix 4 Vehicle Categories, 2021, https://ww2.arb.ca.gov/sites/default/files/2021-01/EMFAC202x_Users_Guide_01112021_final.pdf.

per truck per day and PM10 emission factors from the CARB OFFROAD model. However, on-site idling emissions from TRUs running while truck loading and unloading occur would be thirty minutes to four hours per trip but were conservatively modeled at 30 minutes of onsite TRU running per truck for purposes of the construction and operational HRA. Similar to construction equipment emissions assumptions above, utilizing the PM10 emissions from TRUs is appropriate for analyzing potential health risk impacts from DPM because documentation from the California Air Resources Board (CARB) indicates that DPM exhaust consists of 92 percent PM2.5 and 100 percent PM10 (PM2.5 is a subset of PM10) .[13]

The existing cold storage facility uses would also generate DPM from emergency generators. As discussed in Section IV. A, *Air Quality*, of the Project's Draft EIR and provided in Appendix B of the Project's Draft EIR, existing cold storage facility uses include two emergency generators with an estimated capacity rated at approximately 400 kilowatts (600 horsepower). The emergency generators would result in DPM emissions during maintenance and testing operations. Emergency generators are permitted by the SCAQMD and regulated under SCAQMD Rule 1470. Therefore, similar to Project emergency generators discussed above, the emission factor for PM10 was based on the SCAQMD regulatory limit per SCAQMD Rule 1470 for the existing emergency generators.[14] Similar to construction equipment emission assumptions above, utilizing the PM10 emissions from existing emergency generators is appropriate for analyzing potential health risk impacts from DPM. Maintenance and testing would not occur daily, but rather periodically, up to 50 hours per year per Rule 1470.

2.2 Exposure Scenarios

This construction and operational HRA considered exposure to emissions resulting from Project construction and Project operations, while considering the incremental change in health risk based on the removal of existing sources. Three exposure scenarios were considered:

(1) Unmitigated Construction + Interim Project Operations + Full Operations – Existing Operations (Scenario 1)

(2) Mitigated Construction + Interim Project Operations + Full Operations – Existing Operations (Scenario 2)

(3) Full Operations – Existing Operations (Scenario 3)

For each of these scenarios, the following receptor types were evaluated, where applicable: existing off-site residents and off-site workers. Receptor age range (infant, child, adult) assumptions are provided in more detail below. As a whole, they cover a range of exposure scenarios for people who may be affected by Project emissions to the greatest extent. Receptors, for which exposure scenarios are prepared, were selected to provide risks and hazards estimates for the maximally exposed individuals (MEI) and to demonstrate the range of risks and hazards in

[13] California Air Resources Board, Speciation Profiles Used in ARB Modeling, PMSIZE (Excel)-Particle size fraction data for source categories, PM Profile Number 425 (Diesel Vehicle Exhaust), https://www.arb.ca.gov/ei/speciate/speciate.htm. Accessed June 2024.

[14] SCAQMD, Adopted April 2004 and last amended October 2021. Requirements for Stationary Diesel-Fueled Internal Combustion and Other Compression Ignition Engines)

the vicinity of the Project Site. Exposure to Project construction and operational DPM emissions would occur through inhalation.

2.3 Sensitive Receptors

The Project Site is primarily surrounded by general commercial and manufacturing uses such as wholesale, warehouse, and food processing facilities, as well as air quality-sensitive land uses (i.e., multi-family residential) in the vicinity of the Project Site. The closest air quality-sensitive receptors to the Project Site include the multi-family residential uses along 4th Street to the east of the Project Site across South Alameda Street, approximately 250 feet east from the South Site, 430 feet east from the North Site, and 750 feet east from the West Site, the multi-family uses along 4th Street to the west of the Project Site across Stanford Ave, approximately 175 feet west from the North Site, 200 feet west from the South Site, and 210 feet north from the West Site, and the multi-family residential uses to the west of the Project Site at the northeast corner of 5th street and Stanford Avenue, approximately 120 feet west from the West Site, approximately 275 feet west from the South Site, and approximately 515 feet southwest of the North Site. In addition, off-site worker receptors within the Project area were also included in the quantitative health risk assessment. Therefore, conservatively, off-site sensitive residential receptors and worker receptors within a quarter mile of the Project Site were considered within this HRA. The Project's potential to result in construction and operational health risk impacts, while considering the incremental change in health risk based on the removal of existing sources were considered for off-site sensitive receptors with the maximum impacts for residential and worker receptors reported. All other air quality-sensitive uses are located at greater distances from the Project Site and would result in risks below those from potential sources of pollutants from the Project Site due to atmospheric dispersion effects.

2.4 Dispersion Model

In order to estimate the incremental difference in concentrations of DPM emissions from Project construction and operations at air quality-sensitive receptors relative to existing conditions, dispersion modeling was performed using the USEPA and SCAQMD-approved AMS/EPA Regulatory Model (AERMOD) consistent with SCAQMD dispersion modeling recommendations. Consistent with SCAQMD recommendations, AERMOD was run using the urban dispersion modeling parameter. Meteorological data from the SCAQMD's Central Los Angeles monitoring station within Source-Receptor Area (SRA) 1 was used to represent local weather conditions and prevailing winds data. The SCAQMD provides AERMOD-ready meteorological data files at this location for years 2010, 2011, 2014, 2015, and 2016. Terrain data from the U.S. Geological Survey was used to assign elevations to modeled emissions sources and modeled receptor locations. The emission sources were characterized as various source types within AERMOD. Area sources for the on-site heavy-duty construction equipment were placed throughout the entire Project Site boundary with area sources used to represent the construction haul truck routes within approximately 0.50-miles radius of the Project Site. Project operational sources included diesel traffic trips associated with the Project as well as emergency generators located throughout the Project Site. The two sources were modeled as volume sources along the roadways and as point sources, respectively. For existing operations, volume sources were used to

model delivery truck trips along the roadways, as well as at the loading dock locations to represent TRU idling. Existing facilities also contained two emergency generators which were modeled as point sources.

Cartesian grid receptor points were placed within AERMOD at sensitive residential receptor locations and worker receptors discussed above in consideration of the proximity of the sensitive receptors to the Project Site and their potential to result in maximum impacts for existing off-site residential and worker receptors. The receptors points were spaced 20 meters apart for the full modeling domain extending a quarter mile out from the Project Site. A more granular 10 meter by 10 meter grid was placed at sensitive receptor locations within 100 meters of the Project Site. The modeling parameters are as follows:

- On-site Construction Equipment: polygon area source dimensions covering the parcels on the Project Site, with;
    - Release height of 5 meters for construction equipment exhaust;
    - Initial vertical dimension of 1.4 meters;
- On-site Construction Truck Idling: polygon area source dimensions covering the parcels on the Project Site, with;
    - Release height of 2.55 meters for haul truck idling emissions;
    - Initial vertical dimension of 2.37 meters;
- Off-site Construction: line-area sources following the construction haul truck routes, within a half mile of the Project Site;
    - Release height of 2.55 meters for haul truck exhaust emissions;
    - Initial vertical dimension of 2.37 meters;
- On-site Operational Emergency Generator Sources: point sources at buildings with generators, located at ground-level and assuming a horizontal stack, with;
    - Release heights of 3.66 meters;
    - Gas Exit Temperatures of 739.8 degrees Kelvin;
    - Stack Diameters of 0.18 meters;
    - Gas Exit Velocities of 45.3 meters per second;
- Off-site Operational Diesel Fueled Mobile Sources: line-volume sources along the roadways within a quarter mile of the Project Site, with;
    - Release height of 2.55 meters;
    - Plume height of 5.1 meters;
    - Plume width of 18.0 meters;
- On-site Existing Emergency Generator Sources: point sources at buildings with generators, located on the roof and assuming a vertical stack, with;

  - Release heights of 3.66 meters + building height;
  - Gas Exit Temperatures of 739.8 degrees Kelvin;
  - Stack Diameters of 0.18 meters;
  - Gas Exit Velocities of 45.3 meters per second;
- On-site Existing Loading Docks – TRU Idling: line-volume sources at existing loading dock locations, with;
  - Release height of 3.0 meters;
  - Plume height of 3.0 meters;
  - Plume width of 3.0 meters;
- Off-site Existing Diesel Fueled Mobile Sources: line-volume sources along the roadways within a quarter mile of the Project Site, with;
  - Release height of 2.55 meters;
  - Plume height of 5.1 meters;
  - Plume width of 18.0 meters;
- No receptor flagpole height (ground-level receptors); and
- Meteorological station of Central Los Angeles for the years 2010, 2011 and 2014 through 2016.

2.5 Health Risk Calculations

As noted above, the SCAQMD does not require mixed-use land use development projects to prepare quantitative construction HRAs and has no guidance on construction HRAs.[15] Furthermore, as discussed above, the SCAQMD recommends that operational health risk assessments be conducted for substantial sources of operational TACs (e.g., truck stops and warehouse distribution facilities that generate more than 100 trucks per day or more than 40 trucks with operating transport refrigeration units). Because Project operations would not include any truck stop or warehouse distribution uses, a quantitative operational HRA was not prepared. Nevertheless, health risk calculations were used from available guidance based on SCAQMD risk assessment procedures normally used to evaluate health risk impacts from long-term operations for stationary source facility permit projects in which the SCAQMD is the lead agency. While the SCAQMD is not the lead agency for this Project, the SCAQMD risk assessment procedures provide a uniform approach for evaluating health risks. Health risk calculations were performed using the Office of Environmental Health Hazard Assessment (OEHHA) methodologies and exposure parameters, and the corresponding SCAQMD guidance documents:

[15] SCAQMD, Risk Assessment Procedures for Rules 1401, 1401.1 and 212, Appendix L, Version 8.1, 2017, September 2017, http://www.aqmd.gov/docs/default-source/permitting/rule-1401-risk-assessment/riskassessproc-v8-1.pdf?sfvrsn=12. Accessed June 2024.

- OEHHA 2015 Methodology and Exposure Parameters:
  - OEHHA 2015 Air Toxics Hot Spots Program Guidance Manual for Preparation of Health Risk Assessments (2015 Guidance Manual).[16]
  - SCAQMD, Risk Assessment Procedures for Rules 1401, 1401.1 and 212, Appendix L, Version 8.1, 2017 (2017 Risk Assessment Procedures).[17]

Cancer Risk

The health risk impacts using the OEHHA 2015 Guidance Manual and SCAQMD 2017 Risk Assessment Procedures are calculated as follows:

Equation 1: Risk = Dose × Cancer Potency Factor × ASF

where:

Equation 2: $Dose = C_{AIR} \times DBR \times A \times EF \times ED \times FAH \times 10^{-6} / AT$

where:

C_{AIR} = concentration in microgram per cubic meter (averaged over the exposure duration)
ASF = Age Sensitivity Factor (unitless)
DBR = breathing rate in liter per kilogram of body weight per day
A = inhalation absorption factor (1 for DPM)
EF = exposure frequency in days per year
ED = exposure duration in years
FAH = Fraction of Time at Home (unitless)
AT = averaging time period over which exposure is averaged in days (25,550 days for 70 years)

A summary of the exposure parameters used under this methodology are shown in **Table 1**, *Cancer Risk Exposure Parameters – OEHHA 2015 Guidance Manual and SCAQMD 2017 Risk Assessment Procedures*.

SOURCES: OEHHA 2015 Guidance Manual; SCAQMD 2017 Risk Assessment Procedures.

Non-Cancer Impacts

Potential non-cancer effects were evaluated using the hazard index approach. This evaluation is generally similar under both the OEHHA 2003 Guidance Manual and the 2015 Guidance Manual and associated SCAQMD risk assessment procedures. The hazard index is calculated by dividing the maximum modeled concentration of a TAC at the maximum impacted sensitive receptor by the Reference Exposure Level (REL). The REL is the concentration at or below which no adverse non-cancer health effects are known or expected to occur for that TAC. Therefore, a hazard index of less than 1.0 means that the maximum impacted sensitive receptor would be exposed to TAC concentrations at a level in which adverse non-cancer health effects would not be known or expected to occur. The chronic REL for DPM is 5 micrograms per cubic meter and the chronic hazard index target organ for DPM is the respiratory system.[18] Non-cancer health impacts for DPM are associated with chronic (annual) exposures. A hazard index equal to or greater than 1.0 represents a significant chronic health hazard.

3. Significance Thresholds

The SCAQMD has developed health risk and hazard significance thresholds for CEQA impact analyses. These thresholds are provided in **Table 2**, *Health Risk and Health Hazard Significance Thresholds*, below. Note that these thresholds have been developed for Project incremental impacts (Project emissions minus existing emissions). Project incremental impacts for comparison to the significance thresholds were determined by using the Project's incremental construction emissions and operational emissions to calculate the Project's health risk impacts, while removing existing health impacts. The Project's construction and operational TAC

[18] California Air Resources Board, "Consolidated Table of OEHHA/ARB Approved Risk Assessment Health Values" and "OEHHA/ARB Approved Chronic Reference Exposure Levels and Target Organs," Tables last updated October 6, 2023. https://ww2.arb.ca.gov/sites/default/files/classic/toxics/healthval/contable10062023.pdf . Accessed June 2024.

concentrations will be combined in determining the total health risk impacts at each sensitive receptor location.

TABLE 2
HEALTH RISK AND HEALTH HAZARD SIGNIFICANCE THRESHOLDS

Health Risk or Hazard	Project Incremental Significance Threshold
Cancer Risk (MEI Resident or MEI Worker)	Maximum Incremental Cancer Risk 10 in one million
Chronic Non-Cancer Hazards	Chronic Hazard Index ≥ 1

SOURCE: South Coast Air Quality Management District, South Coast Air Quality Significance Thresholds, April 2019.

4. Results

The results of the quantified construction and operational HRA, using the AERMOD dispersion model, provide an estimate of the potential risks and hazards to individuals from DPM. Health impacts from construction DPM emissions were calculated based on inhalation of Project construction DPM emissions over an approximately 56-month duration. Consistent with OEHHA guidelines, health risk impacts from Project operational DPM emissions were assessed over a 30-year exposure duration for residential receptors and a 25-year exposure duration for worker receptors. The estimated risks and hazards include lifetime excess cancer risk estimates and cumulative chronic hazard index estimates for the sensitive receptor locations.

As shown in **Table 3**, *Health Risk Assessment – Scenario 1 Results*, the results of the construction and operational HRA under Scenario 1 yield a maximum off-site residential cancer risk of 136.4 in one million and a maximum off-site worker risk of 15.6 in one million, based on the incremental increase from the unmitigated construction, Project interim operations and Project full operations cancer risk minus the existing operations cancer risk. Also shown in Table 3, the results of the construction and operational HRA under scenario 1 yield a maximum off-site residential chronic hazard risk of 0.5 and a maximum off-site worker risk of 1.6. Uses farther away from the Project Site would experience a risk less than that presented below from exposure under exposure scenario 1.

As shown in **Table 4**, *Health Risk Assessment – Scenario 2 Results*, the results of the construction and operational HRA under scenario 2 yield an incremental increase of 4.1 in one million at the off-site residential receptor and an incremental decrease in cancer risk at the maximum off-site worker receptor, based on the increment of the mitigated construction, Project interim operations and Project full operations cancer risk minus the existing operations cancer risk. Also shown in Table 4, the results of the construction and operational HRA under scenario 2 yield a maximum off-site residential chronic hazard risk of 0.06 and a maximum off-site worker risk of 0.20. Uses farther away from the Project Site would experience a risk less than that presented below from exposure under exposure scenario 2.

As shown in **Table 5**, *Health Risk Assessment – Scenario 3 Results*, the results of the construction and operational HRA under scenario 3 yield an incremental increase of 4.6 in one million for the off-site residential receptor and 0.15 in one million at the maximum off-site worker receptor,

based on the increment of Project full operations cancer risk minus the existing operations cancer risk. Also shown in Table 5, the results of the HRA under scenario 3 yield a maximum off-site residential chronic hazard risk of 0.001 and a maximum off-site worker risk of 0.0005. Uses farther away from the Project Site would experience a risk less than that presented below from exposure under exposure scenario 3.

TABLE 3
HEALTH RISK ASSESSMENT – SCENARIO 1 RESULTS

Receptor Type / Risk Scenario	Cancer Risk Per One Million	Chronic Non-Cancer Hazard Index

As shown in Table 3, above, the Project would emit carcinogenic or TACs that result in impacts that exceed the maximum individual cancer risk of 10 in one million or chronic health risk of 1.0 under Scenario 1. Therefore, mitigation measures AQ-MM-1 and AQ-MM-2 were incorporated. With construction mitigation applied, as shown in Table 4 and Table 5, above, the incremental increase from existing conditions to the Project under Scenario 2 and Scenario 3 would not produce carcinogenic or TACs that result in impacts that exceed the maximum individual cancer risk of 10 in one million or chronic health risk of 1.0.

As discussed above, Mitigation Measure AQ-MM-1, requires off-road heavy-duty construction equipment rated at 25 horsepower or greater utilize CARB and USEPA Tier 4 Final off-road emission standards or equivalent which would be a fully enforceable requirement by the City and has been revised in the Final EIR to include feasible electric emission-free construction equipment (refer to Chapter 3, *Revisions, Clarifications and Corrections to the Draft EIR*, of this Final EIR for additional information regarding the Project with design modifications and revised AQ-MM-1).[19] Additionally, Mitigation Measure AQ-MM-2 requires the contractor to use CNG-fueled concrete trucks, or trucks that achieve the same or lower NOx emissions as CNG-fueled concrete trucks and requires that contractor shall use local concrete suppliers with concrete supplied by one or more facilities located within a driving distance of approximately 10 miles per one-way trip (approximately 20 miles per round trip) (see Section IV. A, *Air Quality*, of the Project's Draft EIR and Appendix B of the Project's Draft EIR for additional details).

Existing conditions were conservatively estimated to not over credit the reduction produced from closure of existing facilities. However, under the SCAQMD's Warehouse Actions and Investments to Reduce Emissions (WAIRE) Program[20], it is estimated that the existing facilities would need to reduce heavy duty truck trips by 12.6% to 15.2% to be in compliance with the program by 2026. A reduction in existing heavy duty truck trips would reduce existing TAC impacts, which could reduce existing cancer risk by 1.05 to 1.57 per million at the residential MEI locations or by 0.16 to 0.36 per million at the worker MEI locations. Therefore, as shown in Table 4 and Table 5, if the incremental decrease of existing emissions were to be reduced as a result of compliance with the WAIRE program, the resulting Project incremental increase in cancer risk would still be below the cancer risk significance threshold of 10 in one million.

Thus, the results of this quantitative construction and operational HRA provides further substantial evidence that supports the Project's Draft Environmental Impact Report (EIR) determination of a less than significant impact with mitigation incorporated with respect to TAC emissions.

[19] Note, consistent with SCAQMD's recommendation, the City has also revised Mitigation Measure AQ-MM-1 to commit to using Tier 5 construction equipment, when and where such equipment is commercially available. However, for the purposes of this analysis, as the commercial availability of Tier 5 equipment is currently unknown, no construction equipment was assumed to be Tier 5 in this analysis.

3.28. Architectural Coating-1 (2027) - Mitigated

3.29. Architectural Coating-2 (2028) - Unmitigated

3.30. Architectural Coating-2 (2028) - Mitigated

3.31. Architectural Coating-2 (2029) - Unmitigated

3.32. Architectural Coating-2 (2029) - Mitigated

4. Operations Emissions Details

4.10. Soil Carbon Accumulation By Vegetation Type

4.10.1. Soil Carbon Accumulation By Vegetation Type - Unmitigated

4.10.2. Above and Belowground Carbon Accumulation by Land Use Type - Unmitigated

4.10.3. Avoided and Sequestered Emissions by Species - Unmitigated

4.10.4. Soil Carbon Accumulation By Vegetation Type - Mitigated

4.10.5. Above and Belowground Carbon Accumulation by Land Use Type - Mitigated

4.10.6. Avoided and Sequestered Emissions by Species - Mitigated

5. Activity Data

5.1. Construction Schedule

5.2. Off-Road Equipment

5.2.1. Unmitigated

5.2.2. Mitigated

5.3. Construction Vehicles

5.3.1. Unmitigated

5.3.2. Mitigated

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

5.5. Architectural Coatings

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

5.6.2. Construction Earthmoving Control Strategies

5.7. Construction Paving

5.8. Construction Electricity Consumption and Emissions Factors

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

5.18.1.2. Mitigated

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

5.18.1.2. Mitigated

5.18.2. Sequestration

5.18.2.1. Unmitigated

5.18.2.2. Mitigated

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

6.2. Initial Climate Risk Scores

6.3. Adjusted Climate Risk Scores

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

7.2. Healthy Places Index Scores

7.3. Overall Health & Equity Scores

7.4. Health & Equity Measures

7.5. Evaluation Scorecard

7.6. Health & Equity Custom Measures

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	FourthandCentral-NS-Con-Mit-A-
Construction Start Date	7/10/2025
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	Air Basin
Windspeed (m/s)	0.50
Precipitation (days)	16.8
Location	400 S Central Ave, Los Angeles, CA 90013, USA
County	Los Angeles-South Coast
City	Los Angeles
Air District	South Coast AQMD
Air Basin	South Coast
TAZ	4036
EDFZ	16
Electric Utility	Los Angeles Department of Water & Power
Gas Utility	Southern California Gas
App Version	2022.1.1.23

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Health Club	52.2	1000sqft	0.15	52,224	0.00	—	—	—

Apartments High Rise	449	Dwelling Unit	0.30	649,911	0.00	—	1,329	—
Regional Shopping Center	14.5	1000sqft	0.20	14,536	0.00	—	—	—
Quality Restaurant	7.27	1000sqft	0.10	7,269	0.00	—	—	—
High Turnover (Sit Down Restaurant)	7.27	1000sqft	0.10	7,269	0.00	—	—	—
Enclosed Parking with Elevator	737	Space	0.30	296,301	0.00	—	—	—
Other Non-Asphalt Surfaces	46.7	1000sqft	0.15	46,652	0.00	—	—	—
General Office Building	1.08	1000sqft	0.05	1,078	0.00	—	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Construction	C-1-A	Use Electric or Hybrid Powered Equipment
Construction	C-5	Use Advanced Engine Tiers

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

Other Non-Asphalt Surfaces	0.00	0%
General Office Building	0.00	0%

5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2025	0.00	690	0.05	0.01
2026	1,746	690	0.05	0.01
2027	873	690	0.05	0.01
2028	437	690	0.05	0.01
2029	437	690	0.05	0.01

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres

5.18.1.2. Mitigated

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

Biomass Cover Type	Initial Acres	Final Acres

5.18.1.2. Mitigated

Biomass Cover Type	Initial Acres	Final Acres

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

5.18.2.2. Mitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	9.52	annual days of extreme heat
Extreme Precipitation	6.15	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth

Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2

Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	51.9
AQ-PM	90.4
AQ-DPM	89.2
Drinking Water	92.5
Lead Risk Housing	8.30
Pesticides	0.00
Toxic Releases	81.3
Traffic	35.0

Effect Indicators	—
CleanUp Sites	70.8
Groundwater	61.9
Haz Waste Facilities/Generators	90.5
Impaired Water Bodies	66.7
Solid Waste	96.2
Sensitive Population	—
Asthma	87.2

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	96.0
Healthy Places Index Score for Project Location (b)	—
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	FourthandCentral-LS-Con-Mit-A-
Construction Start Date	1/6/2025
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	Air Basin
Windspeed (m/s)	0.50
Precipitation (days)	16.8
Location	Los Angeles, CA 90013, USA
County	Los Angeles-South Coast
City	Los Angeles
Air District	South Coast AQMD
Air Basin	South Coast
TAZ	4035
EDFZ	16
Electric Utility	Los Angeles Department of Water & Power
Gas Utility	Southern California Gas
App Version	2022.1.1.23

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
General Office Building	151	1000sqft	0.35	150,800	0.00	—	—	—

Hotel	68.0	Room	0.10	74,484	0.00	—	—	—
Apartments Mid Rise	191	Dwelling Unit	0.40	214,783	0.00	—	565	—
Apartments High Rise	312	Dwelling Unit	0.46	293,574	0.00	—	924	—
Regional Shopping Center	17.4	1000sqft	0.25	17,447	0.00	—	—	—
Quality Restaurant	11.8	1000sqft	0.20	11,812	0.00	—	—	—
High Turnover (Sit Down Restaurant)	11.8	1000sqft	0.20	11,812	0.00	—	—	—
Enclosed Parking with Elevator	987	Space	0.90	484,327	0.00	—	—	—
Other Asphalt Surfaces	15.0	1000sqft	0.35	15,000	0.00	—	—	—
Other Non-Asphalt Surfaces	90.4	1000sqft	0.15	90,440	0.00	—	—	—
Health Club	1.32	1000sqft	0.10	1,321	0.00	—	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Construction	C-1-A	Use Electric or Hybrid Powered Equipment
Construction	C-5	Use Advanced Engine Tiers

2. Emissions Summary

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

5.18.2.2. Mitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	9.52	annual days of extreme heat
Extreme Precipitation	6.15	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2

Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	53.7
AQ-PM	92.5
AQ-DPM	96.4
Drinking Water	92.5
Lead Risk Housing	19.0
Pesticides	21.6
Toxic Releases	80.7
Traffic	34.8
Effect Indicators	—
CleanUp Sites	85.8
Groundwater	81.1

Haz Waste Facilities/Generators	92.0
Impaired Water Bodies	66.7
Solid Waste	94.3
Sensitive Population	—
Asthma	83.6
Cardio-vascular	35.0
Low Birth Weights	99.8
Socioeconomic Factor Indicators	—
Education	58.5
Housing	65.6
Linguistic	97.8
Poverty	93.7
Unemployment	80.4

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	5.363788015
Employed	1.514179392
Median HI	0.461953035
Education	—
Bachelor's or higher	55.74233286
High school enrollment	100
Preschool enrollment	46.97805723
Transportation	—
Auto Access	0.538945207

Active commuting	94.5977159
Social	—
2-parent households	0.051328115
Voting	16.74579751
Neighborhood	—
Alcohol availability	4.516874118
Park access	48.95418966
Retail density	92.28795073
Supermarket access	94.25125112
Tree canopy	32.67034518
Housing	—
Homeownership	8.623123316
Housing habitability	0.551777236
Low-inc homeowner severe housing cost burden	63.26190171
Low-inc renter severe housing cost burden	54.83125882
Uncrowded housing	46.38778391
Health Outcomes	—
Insured adults	16.16835622
Arthritis	2.5
Asthma ER Admissions	23.3
High Blood Pressure	0.6
Cancer (excluding skin)	30.9
Asthma	43.1
Coronary Heart Disease	1.4
Chronic Obstructive Pulmonary Disease	2.6
Diagnosed Diabetes	0.3
Life Expectancy at Birth	30.9

Cognitively Disabled	0.5
Physically Disabled	0.5
Heart Attack ER Admissions	94.0
Mental Health Not Good	30.2
Chronic Kidney Disease	1.3
Obesity	26.8
Pedestrian Injuries	99.7
Physical Health Not Good	5.0
Stroke	0.8
Health Risk Behaviors	—
Binge Drinking	99.0
Current Smoker	21.4
No Leisure Time for Physical Activity	5.0
Climate Change Exposures	—
Wildfire Risk	0.0
SLR Inundation Area	0.0
Children	95.8
Elderly	5.1
English Speaking	4.0
Foreign-born	73.8
Outdoor Workers	98.2
Climate Change Adaptive Capacity	—
Impervious Surface Cover	0.6
Traffic Density	42.8
Traffic Access	87.4
Other Indices	—
Hardship	79.6

Other Decision Support	—
2016 Voting	1.3

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	98.0
Healthy Places Index Score for Project Location (b)	0.00
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Characteristics: Project Details	see construction assumptions
Land Use	see construction assumptions
Construction: Construction Phases	see construction assumptions
Construction: Off-Road Equipment	see construction assumptions
Construction: Trips and VMT	mobile emissions calculated outside of CalEEMod.

Construction: Architectural Coatings	see construction assumptions
Construction: Paving	see construction assumptions
Construction: Off-Road Equipment EF	see construction assumptions

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	FourthandCentral-US-Con-Mit-A-
Construction Start Date	1/6/2025
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	Air Basin
Windspeed (m/s)	0.50
Precipitation (days)	16.8
Location	400 S Central Ave, Los Angeles, CA 90013, USA
County	Los Angeles-South Coast
City	Los Angeles
Air District	South Coast AQMD
Air Basin	South Coast
TAZ	4036
EDFZ	16
Electric Utility	Los Angeles Department of Water & Power
Gas Utility	Southern California Gas
App Version	2022.1.1.23

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Apartments High Rise	425	Dwelling Unit	0.32	407,217	0.00	—	1,258	—

General Office Building	268	1000sqft	0.35	267,716	0.00	—	—	—
Regional Shopping Center	13.3	1000sqft	0.25	13,283	0.00	—	—	—
Quality Restaurant	15.3	1000sqft	0.15	15,345	0.00	—	—	—
High Turnover (Sit Down Restaurant)	15.3	1000sqft	0.15	15,345	0.00	—	—	—
Enclosed Parking with Elevator	726	Space	0.80	310,511	0.00	—	—	—
Other Asphalt Surfaces	15.0	1000sqft	0.35	15,000	0.00	—	—	—
Health Club	5.53	1000sqft	0.05	5,534	0.00	—	—	—
Other Non-Asphalt Surfaces	94.5	1000sqft	0.10	94,527	0.00	—	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Construction	C-1-A	Use Electric or Hybrid Powered Equipment
Construction	C-5	Use Advanced Engine Tiers

2. Emissions Summary

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

Control Strategies Applied	PM10 Reduction	PM2.5 Reduction
Water unpaved roads twice daily	55%	55%

5.5. Architectural Coatings

Phase Name	Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)

Architectural Coating-3	0.00	0.00	149,066	49,689	18,631
Architectural Coating-4	0.00	0.00	292,158	97,386	0.00
Architectural Coating-5	824,614	274,871	176,402	58,801	900

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

Phase Name	Material Imported (Cubic Yards)	Material Exported (Cubic Yards)	Acres Graded (acres)	Material Demolished (Ton of Debris)	Acres Paved (acres)
Demolition	0.00	0.00	0.00	3,656	—
Site Preparation	0.00	0.00	80.4	0.00	—
Grading	0.00	239,000	178	0.00	—
Paving	0.00	0.00	0.00	0.00	1.15

5.6.2. Construction Earthmoving Control Strategies

Control Strategies Applied	Frequency (per day)	PM10 Reduction	PM2.5 Reduction
Water Exposed Area	2	61%	61%
Water Demolished Area	2	36%	36%

5.7. Construction Paving

Land Use	Area Paved (acres)	% Asphalt
Apartments High Rise	—	0%
General Office Building	0.00	0%
Regional Shopping Center	0.00	0%
Quality Restaurant	0.00	0%
High Turnover (Sit Down Restaurant)	0.00	0%
Enclosed Parking with Elevator	0.80	100%

Other Asphalt Surfaces	0.35	100%
Health Club	0.00	0%
Other Non-Asphalt Surfaces	0.00	0%

5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2025	0.00	690	0.05	0.01
2026	0.00	690	0.05	0.01
2027	2,619	690	0.05	0.01
2028	1,746	690	0.05	0.01
2029	873	690	0.05	0.01

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres

5.18.1.2. Mitigated

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

Biomass Cover Type	Initial Acres	Final Acres

5.18.1.2. Mitigated

Biomass Cover Type	Initial Acres	Final Acres

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

5.18.2.2. Mitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	9.52	annual days of extreme heat
Extreme Precipitation	6.15	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A

Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	51.9
AQ-PM	90.4
AQ-DPM	89.2
Drinking Water	92.5
Lead Risk Housing	8.30
Pesticides	0.00
Toxic Releases	81.3
Traffic	35.0
Effect Indicators	—
CleanUp Sites	70.8
Groundwater	61.9
Haz Waste Facilities/Generators	90.5
Impaired Water Bodies	66.7
Solid Waste	96.2

Sensitive Population	—
Asthma	87.2
Cardio-vascular	13.1
Low Birth Weights	99.7
Socioeconomic Factor Indicators	—
Education	73.8
Housing	89.1
Linguistic	50.0
Poverty	100.0
Unemployment	100.0

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	—
Employed	—

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	96.0
Healthy Places Index Score for Project Location (b)	—
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

5.18.2.2. Mitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	9.52	annual days of extreme heat
Extreme Precipitation	6.15	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	51.9
AQ-PM	90.4
AQ-DPM	89.2
Drinking Water	92.5
Lead Risk Housing	8.30

Pesticides	0.00
Toxic Releases	81.3
Traffic	35.0
Effect Indicators	—
CleanUp Sites	70.8

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	96.0
Healthy Places Index Score for Project Location (b)	—
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

							Over?				NO			NO				NO	NO	

Notes:

1. California Air Resources Board, "Consolidated Table of OEHHA/ARB Approved Risk Assessment Health Values," "OEHHA/ARB Approved Chronic Reference Exposure Levels and Target Organs," "OEHHA/ARB Approved Acute Reference Exposure Levels and Target Organs," and "OEHHA/ARB Approved 8-Hour Reference Exposure Levels and Target Organs," https://ww2.arb.ca.gov/sites/default/files/classic/toxics/healthval/contable10062023.pdf. Tables last updated: October 6, 2023.

Source: ESA, 2024

Where:

$CONC_{WF}$	Pollutant Concentration ($\mu g/m^3$) multiplied by the weight fraction
CREL	Chronic Reference Exposure Level
HI	Hazard Index
MEI	Maximally Exposed Individual
WFrac	Weight fraction of speciated component

* Key to Toxicological Endpoints

ALIM	Alimentary Tract	EYE	Eye	NS	Nervous System
BN	Bone	HEM	Hematologic System	REPRO	Reproductive System
CVS	Cardiovascular System	IMMUN	Immune System	RESP	Respiratory System
DEV	Developmental System	KIDN	Kidney	SK	Skin
ENDC	Endocrine System

Risk Factors

	Abbreviation	UOM	3rd Trimester	0<2	2<16	16<30
Daily Breathing Rate (95th %'ile)	DBR	L/kg-day	361	1090	572	261
Fraction Of Time At Home [a]	FAH	unitless	1	1	1	0.73
Exposure Frequency	EF	days/year	0.96	0.96	0.96	0.96
Age Sensitivity Factor	ASF	unitless	10	10	3	1
Inhalation Absorption Factor	A	unitless	1	1	1	1
Conversion Factor	CF_1	m^3/L	0.001	0.001	0.001	0.001
Conversion Factor	CF_2	$\mu g/m^3$	0.001	0.001	0.001	0.001
Cancer Potency Factor (diesel exhaust)	CPF	$mg/kg\text{-}day^{-1}$	1.1	1.1	1.1	1.1
Averaging Time (for residential exposure)	AT	years	70.00	70.00	70.00	70.00

[a] assume school or daycare will have cancer risk of >1 per million

Intake Factor for Inhalation, IF ($m^3/kg\text{-}day$)

$$\frac{DBR \cdot FAH \cdot EF \cdot ED \cdot ASF \cdot A \cdot CF_1}{AT}$$

Risk Calculation Part 1, R1

$$IF \cdot CPF \cdot CF_2$$
