1. EXECUTIVE SUMMARY

Ramboll Americas Engineering Solutions, Inc. (Ramboll) presents this Hazards and Hazardous Materials Technical Report (HMTR) to S&R Partners, LLC ("S&R" or "Project Applicant") in support of the California Environmental Quality Act process (CEQA) and Environmental Impact Report (EIR) for the proposed Buena Vista Project located at 1251 North Spring Street and 1030 through 1380 North Broadway, Los Angeles, California ("site" or "Project" or "Buena Vista"). Ramboll's scope of work as part of this HMTR was to review and evaluate the Cardno ATC (Cardno) 2015 Phase I Environmental Site Assessment (ESA) report ("2015 Phase I ESA report"), perform appropriate follow-up tasks based on Cardno's findings, and update Cardno's recommendations as of the issuance of the HMTR.

The approximately 7.87-acre site would be separated into two parcels with Project implementation; the "South Parcel" which contains several structures associated with transportation operations and maintenance-related facilities, and the "North Parcel" which is generally used for construction staging, bus parking and other activities. In general, the South Parcel refers to portions of the site located south of the intersection of Bishops Road and North Broadway and the North Parcel is the portion of the site north of that intersection. The rest of the site is fenced and vacant with various advertisement billboards along North Broadway.

The site is being proposed for redevelopment with multiple structures above three levels of subterranean parking. The proposed Project is a mixed-use development of residential and commercial uses consisting of up to approximately 1,090,126 square feet (sf) of residential floor area (986 dwelling units [du], including 200 affordable du); 15,000 sf of neighborhood-serving retail uses; 23,800 sf of indoor and outdoor restaurant uses; and 116,610 sf of outdoor trellis and overhang areas.

In its 2015 Phase I ESA, Cardno identified various environmental conditions at the site, certain of which derived from previous and ongoing Phase II investigation work performed at and adjacent to the site by other consultants for Union Pacific Railroad (UPRR). Since then, as documented in this HMTR, Ramboll has followed up on Cardno's recommendations and performed geophysical surveys to identify buried structures including abandoned oil wells, one of which was successfully located. Ramboll also leak tested the abandoned oil well to assess current conditions and provide appropriate recommendations. Further, given the site's location within the "methane zone," Ramboll performed a methane survey at the site.

In September 2023, the Project Applicant, entered into a cost recovery oversight agreement with the Regional Water Quality Control Board – Los Angeles Region (LARWQCB) to ensure that site redevelopment will not pose a threat to the community and environment and remains in compliance with LARWQCB requirements. Following the oversight agreement, Ramboll, on behalf of the Project Applicant, submitted the Soil Management Plan (SMP) to the LARWQCB on October 16, 2023. Ramboll received comments on the SMP from the LARWQCB through email communication on February 14, 2024. Ramboll has addressed the LARWQCB's comments through Addendum 1 of the SMP (see Attachment J). The SMP is functionally equivalent to a Hazardous Materials Contingency Plan (HMCP).

Accordingly, the proposed redevelopment of the site can proceed as planned while UPRR proceeds with its closure campaign and considering and implementing the follow-up tasks and recommendations outlined below.

CARDNO Recommendation No. 1:

- **Historical Underground Storage Tanks (USTs) with unknown status**. "Due to the lack of documentation regarding the USTs potentially located in the southern most portion of the property, a geophysical survey is recommended. Based on the results of the geophysical survey, tank removal and/or a limited subsurface investigation may be warranted".

  Ramboll Assessment: Ramboll agrees with Cardno that a geophysical survey would be useful in evaluating the presence of former USTs in the subsurface. Ramboll was on-site in December 2017 and May 2018 to examine features that appeared to indicate the presence of potential USTs (see Attachment D). Four features that were visible in aerial photography, and which may have been indicative of potential USTs, were confirmed to be telecom utility access ports. No other evidence of USTs was observed at the time of the site visits, and Ramboll concluded that geophysical surveying in the southern area of the site to locate USTs would be ineffective until the removal of extensive metallic structures, including buried metal rail as part of the redevelopment process. Due to the presence of on-site obstructions/structures at the time, Ramboll could not complete its assessment, and recommended follow-up surveys after the site had been cleared. Ramboll recommends that a supplemental geophysical survey be conducted as part of redevelopment activities, after the existing site structures have been demolished. If USTs are identified during the geophysical survey, they will be removed under permit with the City of Los Angeles Fire Department (LAFD). Further, the site earthwork activities are recommended to be performed under a site-specific HMCP, which will outline procedures to address any previously unidentified USTs or other historical industrial impacts that may be discovered during earthwork activities as part of site redevelopment. This recommendation is addressed by HAZ-MM-2 (HMCP) and HAZ-MM-3 (Subsurface Geophysical Survey). This additional work is outlined in the SMP/HMCP that was submitted to the LARWQCB.

CARDNO Recommendation No. 2:

- **Existing On-Site Groundwater Monitoring Wells.** "Given that the 8.08-acre property (the site) is part of a larger Spills, Leaks, Investigation, and Cleanup (SLIC) site that is undergoing verification monitoring, the on-site monitoring well(s) will need to be maintained/accessible to facilitate the ongoing monitoring activities if/as required by the Regional Water Quality Control Board – Los Angeles Region (RWQCB). Note that a request for closure for the 8.08-acre site portion was submitted to the RWQCB by ARCADIS on September 25, 2013 as previously noted; however, pending receipt of any further information from the RWQCB, it does not appear that such closure has yet been granted to the property".

  Ramboll Assessment: Based on Ramboll's review, groundwater monitoring is being conducted by ARCADIS, on behalf of UPRR, across the Former Cornfield site for SLIC case No. 2047T1683, of which the site is a small 8-acre portion, along the northern margin of the investigation area. Groundwater monitoring wells (MW-2 and MW-18) associated with the Former Cornfield site are located on-site. The petroleum hydrocarbon groundwater impacts being tracked appear related to former USTs that were part of the gas station located on the site. Annual groundwater monitoring data has been submitted to the LARWQCB since 2005. The LARWQCB has not responded to ARCADIS' closure letter request dated September 25, 2013 and the status of this case has remained as 'Open-Verification since 7/8/2010. Prior to a site closure approval, the LARWQCB stated they required that additional wells surrounding BMW-4 and BMW-6 (both located off-site) be resampled in a letter dated June 28, 2013.

Based on Ramboll's recent review of the Geotracker website in September 2024, ARCADIS submitted its most recent groundwater monitoring report and request for No Further Action (NFA) on January 15, 2024. ARCADIS' report is based on sampling conducted in October 2023. Volatile Organic Compounds (VOCs) and Total Petroleum Hydrocarbons (TPH) concentrations still appear to be generally decreasing since reporting began in 2000. A NFA letter was requested based on the rationale that the contaminant source was removed via soil excavation and soil vapor extraction; VOCs and TPH concentrations continue to decrease; the footprint of the TPH plume has remained stable, and there is evidence that sustainable microbial degradation (natural attenuation) of petroleum hydrocarbons is at work. Also, site soils do not pose an unacceptable risk to users of the site. ARCADIS concluded that "*the data show a progressive decline of Benzene, Toluene, Ethylbenzene, Xylene (BTEX) concentrations since 2019. At well BMW-4, the 2023 benzene concentrations are the lowest concentrations since sampling began in 2000 [sic (2001)], and the biogeochemical data continue to show that natural attenuation is sustainable and ongoing. The 2023 groundwater data continue to support the closure request based on multiple lines of evidence set forth in the five annual groundwater monitoring (GWM) Reports submitted since 2018 GWM Reports*".

Groundwater monitoring Wells MW-2 and MW-18 are located on-site. If closure is not granted prior to the commencement of redevelopment activities, the developer should coordinate with the LARWQCB and UPRR to either maintain the existing monitoring wells or relocate the monitoring wells to a location agreeable to the LARWQCB.

Lastly, the LARWQCB issued a No Further Requirement (NFR/NFA)[1] for soil in 2006, as it relates to contamination for the former gas station on the North Parcel. Earthwork activities conducted as part of site redevelopment activities are recommended to be conducted under a HMCP. If residual contamination is identified as part of the earthwork activities, such contamination will be addressed under the HMCP.

This recommendation is addressed by HAZ-MM-2 (HMCP) and HAZ-MM-4 (Groundwater Monitoring Wells) and outlined in the SMP that was submitted to the LARWQCB.

CARDNO Recommendation No. 3:

- **Potential VOC Vapor Encroachment.** "Given the potential vapor encroachment condition identified on the property, soil vapor sampling and/or installation of a vapor barrier for any new structures built in the central portion of the property may be warranted".

  Ramboll Assessment: While Ramboll agrees that a potential vapor encroachment condition (VEC) from VOCs is present within a limited portion of the site, Ramboll notes that a VEC is not confirmation of a vapor intrusion concern. Ramboll also notes that there are currently no structures in this potential area of impact (on- or off-site). Further, based on Ramboll's current understanding of the developer's construction plans, which already require site-wide implementation of certain methane mitigation measures and given that the planned construction will include ventilated subterranean parking structures with high air exchange rates, the potential for VOC vapor intrusion from the documented groundwater impacts beneath a limited portion of the area is not expected to represent a material environmental concern to future occupants of the site. These measures will incorporate any additional applicable conditions set forth by the LARWQCB with respect to VOC vapor intrusion and will comply with any additional applicable requirements set forth by the LARWQCB as part of issuance

1- No Further Action (NFA) and No further Requirements (NFR) are generally interchangeable terms.

of its NFA for the Former Cornfield Site and the oversight agreement. This recommendation is addressed by HAZ-MM-5 (VOC Vapor Intrusion Design).

CARDNO Recommendation No. 4:

- **Abandoned Oil Wells.** "The City of Los Angeles Department of Building and Safety (LADBS) and DOGGR [now California Geologic Energy Management Division or CalGEM] should be contacted with regard to requirements, if any, relative to any potential redevelopment of the property in the vicinity of the former oil well. For example, re-abandonment of the oil well to current standards and/or a methane barrier may be required".

  Ramboll Assessment: Ramboll located and leak tested one of two abandoned oil wells purported to be on the northern parcel with the assistance of geophysical surveying in June and July 2019. The second well was not located at the time due to the presence of on-site metallic objects and structures. As part of a subsequent geophysical survey conducted on July 5, 2023 to locate the second abandoned oil well, four high quality anomalies were identified. The anomalies were excavated to a depth of at least 10 feet, but no wellhead was encountered. To further assess the location of the second abandoned oil well, aerial photographs from the years that the well was being drilled were analyzed and the well was found to be located approximately 76 feet southeast of the first located abandoned oil well. However, Ramboll assessed the accessibility of the well and concluded that, under current conditions, due to the steepness of the slope, where the well is believed to be, the well cannot be safely reached without a large-scale excavation operation. The second well will be excavated and leak tested at the time of site redevelopment, when the area of the wellhead can be accessed without undue safety concern.

  A review of redevelopment plans indicates that the Project Applicant intends to construct multiple structures above several levels of subterranean parking, consisting of residences, restaurants, and commercial space on the site. Structures are proposed on top of both the abandoned dry hole (API 0403716588) and the abandoned oil well (API 0403700510), located on the North Parcel, which will require modifications to the well casings. As alluded to in Cardno's Recommendation, CalGEM and the LADBS cooperate in the development process through the CalGEM Construction Site Well Review (CSWR) process to properly re-abandon the wells to current applicable standards. This recommendation is addressed by HAZ-MM-6 (Oil Well Re-Abandonment).

Other Recommendations:

- **Hazardous Building Materials Plan:** Based on the age of the existing aboveground structures at the site, Ramboll recommends that a hazardous building materials plan be developed and implemented to address the potential presence of hazardous materials such as asbestos containing materials, lead-based paint, polychlorinated biphenyls. This recommendation is being addressed by HAZ-MM-1 (Waste Characterization, Segregation, Disposal, and Reuse Plan).
- **Methane Zone:** The site is located in an area designated as the "methane zone" and is subject to Division 71 of Article 1, Chapter IX of the Los Angeles Municipal Code. Based on Ramboll's 2017 and 2018 methane investigation:
  - **South Parcel:** Buildings within the South Parcel shall incorporate a Level I Passive Design Level. The passive Level I Design Level requires a sub-slab venting system, an impervious membrane, utility trench dams, and conduit or cable seal fittings. The sub-slab venting system shall consist of perforated horizontal piping, a 2-inch gravel blanket thickness under the impervious

membrane, a 2-inch gravel thickness surrounding the perforated horizontal piping, and vent risers.

- **North Parcel:** In the vicinity of SV-14, the presence of elevated methane concentrations may trigger concern for potentially explosive methane accumulations in the current conditions on the site. Because the proposed Project would develop residential land uses on the site, this existing accumulation of methane may trigger, at a minimum, a CalGEM requirement to expose the nearby abandoned oil well, and to perform leak testing. If the abandoned oil well is determined to be the source of elevated methane, re-abandonment of the well is anticipated to be required, especially if the well must be recompleted to fit beneath the planned subterranean parking structure. If the abandoned oil well is determined to be the source of the methane and if properly re-abandoned, then it is possible that the methane concentrations may decrease, potentially lessening the mitigation design requirements discussed below. Since methane concentrations in the vicinity of SV-14 were as high as 4,000 parts per million by volume (ppmv), under Article 71, without the steps associated with the re-abandonment of the oil well and follow-up testing and confirmation, buildings in the vicinity of SV-14 would otherwise be required to achieve a Level III Design. As summarized in Table 71 of Attachment A, Level III Design requires both passive and active systems, trench dams, and conduit or cable seal fittings. The passive Level III Design requires a sub-slab venting system, an impervious membrane, utility trench dams, and conduit or cable seal fittings. The active venting system requires a gas detection system, mechanical ventilation, and an alarm system on the lowest occupied space, as well as a control panel.

Ramboll searched regulatory databases for significant changes since production of the Cardno Phase I ESA in 2015. Ramboll obtained and reviewed the Environmental Data Resources (EDR) Radius report for the site on December 1, 2023. Ramboll also reviewed the online Geotracker and Envirostor databases for significant additions to the case files. There were no substantive updated findings regarding the site on the databases mentioned above. Updated data on adjacent sites were found, however, Ramboll does not interpret any of these findings to have substantive environmental impacts to the site.

2. INTRODUCTION

Ramboll Americas Engineering Solutions, Inc. (Ramboll) presents this Hazards and Hazardous Materials Technical Report (HMTR) to S&R Partners, LLC ("S&R" or "Project Applicant") in support of the CEQA and EIR for the property located at 1251 North Spring Street and 1030 through 1380 North Broadway, Los Angeles, California ("site" or "Project" or "Buena Vista", see Figure 1). The site is being proposed for redevelopment with multiple structures above several levels of subterranean parking, consisting of residences, restaurants, and commercial space.

Ramboll's scope of work as part of this HMTR was to review and evaluate the Cardno ATC (Cardno) 2015 Phase I Environmental Site Assessment (ESA) report ("2015 Phase I ESA report" (see Attachment A)), perform appropriate follow-up tasks based on Cardno's findings, and update Cardno's recommendations as of the issuance of the HMTR.

3. SITE DESCRIPTION

The proposed Project is a mixed-use development of residential and commercial uses on the approximately 7.87-acre site (post-dedication), consisting of up to approximately 1,090,126 square feet (sf) of residential floor area (986 dwelling units [du], including 200 affordable du); 15,000 sf of neighborhood-serving retail uses; 23,800 sf of indoor and outdoor restaurant uses; and 116,610 sf of outdoor trellis and overhang areas. The Project involves subdivision of the site into the "South Parcel" and "North Parcel" master lots and airspace lots for residential and commercial purposes.

The South Parcel would include up to 631 du, 15,800 sf of restaurant, and 10,000 sf of retail, and three levels of parking garage situated below the street elevation of North Broadway. Built upon the parking garage would be a six-story podium that spans the development on the South Parcel, the 26-story Building 1, and the 22-story Building 2.

The North Parcel would include 355 du, 8,000 sf of restaurant, and 5,000 sf of retail space, and three levels of parking garage situated below the street elevation of North Broadway. The North Parcel would be developed with a two-story podium connecting two buildings, the North Building, a 15-story building, and the Courtyard Building, a six-story building. Additionally, the North Parcel would also include the Retail Block Building, a three-story building.

The Project would contain approximately 84,872 sf sf of common open space and 45,377 sf of publicly accessible open space. A landscaped central greenspace and public walkway would be developed in the central portion of the site to connect the South and North Parcels and provide a new pedestrian amenity. All existing on-site structures would be removed, including an auto repair building, trailer, vehicle wash bay, pavement, retaining walls, utilities, and fencing.

While the Los Angeles County Assessor (Assessor) identifies the site as Assessor's Parcel Number (APN) 5414-016-002, with the associated address of 1251 North Spring Street, there appear to be several historical addresses associated with the site, as discussed in the Background/Site History section of this HMTR. According to the Assessor's website, aerial photographs, and the Project Vesting Tentative Tract Map, the site, specifically the South Parcel, is currently improved with two buildings of varying sizes. Building 1, constructed in approximately 1960 is a one-story metal building that is approximately 12,800 square feet in size. Building 2, identified by the Assessor as constructed in 2009 is approximately 2,132 square feet in size and appears to be connected to a building on an adjacent parcel located at 960 North Broadway. However, based on historical sources reviewed, it appears that it was constructed in approximately 1954. Other structures located on the South Parcel include a metal storage container. The North Parcel is generally used for construction staging, bus parking and other activities.

The site is located in a commercial area, with various commercial occupants to the southwest, west, and northwest of the site, including two churches/temples, multi-family residential to the northwest across Broadway, movie filming operations in the former Capitol Milling Company property to the south of the site, and the Los Angeles State Historic Park to the southeast.

The site is located in an area designated as the "methane zone" and is subject to Division 71 of Article 1, Chapter IX of the Los Angeles Municipal Code.

4. BACKGROUND/SITE HISTORY

The site was part of a larger property identified as the Former Cornfield site (associated with 1245 North Spring Street). The Former Cornfield site is a 50-acre property located between North Broadway and North Spring Street, which was historically used as a cornfield prior to the Civil War and then as a railyard operated by Southern Pacific (or Union Pacific) Railroad from at least 1875 until approximately 1999. The 50-acre property is comprised of the site, a 10-acre Metro easement located directly southeast of the site, and a 32-acre parcel located to the southeast of the Metro easement (Figure 2). The State of California Department of Recreation and Parks acquired the 32-acre portion of the Former Cornfield site in 1999, with the intent to remediate contaminants and convert it to a State Park. The site is located at a higher elevation compared to the remainder of the Former Cornfield site.

Based on a review of the 2015 Phase I ESA report and included historical documentation, as well as publicly available records from the Assessor and the LADBS, a description of the site history is presented below.

4.1 North Parcel

The North Parcel was developed by at least 1894 with approximately 10 buildings including at least five dwellings and a "tenements" building (i.e., apartment building). Historical addresses associated with these buildings include 1355 ½, 1356, 1358, 1362, 1364, and 1364 ½ Buena Vista Street (currently Broadway). By 1906, the dwellings on the North Parcel were demolished and replaced with two new dwellings at 1324 (A and B flats) and 1326 Buena Vista; two aboveground oil tanks in the northernmost portion of the site, the larger one of which had a capacity of approximately 1,260,000 gallons; and an elevated foot bridge that spanned from Buena Vista Street to North Spring Street by spanning the site and crossing over the railroad tracks to the southeast of the site.

A gas station identified at 1322 North Broadway appears to have been constructed as early as 1922. Visible structures on the 1950 Sanborn map include the gas station in the southern portion of the North parcel, the smaller oil AST, along with a store at 1340 North Broadway (the bordering street had been renamed from Buena Vista to Broadway), and another small structure. Based on the Well Finder® online database operated by the California Department of Geologic Energy Management (CalGEM[2]), a dry hole, referred to as "Freight Depot 1" was abandoned on the North Parcel in December 1957.

By 1960, the North Parcel remained generally unchanged with a store, gas station, and oil tank. The City of Los Angeles Department of Building and Safety (LADBS) records indicate that the gas station was demolished in approximately 1961 and rebuilt in approximately 1963. By 1964, the store on the North Parcel had been removed, but the oil tank, gas station, and foot bridge remained. The CalGEM Well Finder® identifies a second oil and gas well on the North Parcel, referred to as the "So. Pacific Core Hole #1", which was abandoned on or about August 8, 1967.

The gas station was demolished in 1989 and the associated underground storage tanks (USTs) removed in 1990. Subsequent subsurface investigation and remedial activities occurred, including installation and sampling of groundwater monitoring wells across the Former Cornfield site and vapor extraction wells at the site. The North Parcel has been leased by a construction company as a construction staging yard since at least 2014.

[2] Formerly the California Division of Oil, Gas, and Geothermal Resources (DOGGR).

4.2 South Parcel

The South Parcel was developed at least as early as 1888 with rail spurs and a couple of buildings associated with the Southern Pacific Railroad roundhouse. Rail spurs from the Southern Pacific Railroad property occupied most of the South Parcel and served the adjacent Capitol Milling Company flour mill to the south of the site. In 1906, the northern portion of the South Parcel was developed with a presumed water well pumping station; an unused water purification plant with two 50,000-gallon aboveground water tanks, and a dwelling at the address of 1054 Buena Vista Street.[3] An additional water tank was located in the central portion of the South Parcel and three to four office buildings were located in the southern portion of the South Parcel.

By 1950, the water purification plant, aboveground water tanks, and well pumping station were removed. The northern portion of the South Parcel was redeveloped with a building located at 1040 through 1046 North Broadway and labeled "Whol Sea Food" (presumably a wholesale seafood distribution building), a restaurant at 1050 North Broadway, and two former railroad cars used as storage buildings at 1042 and 1066 North Broadway. The southern portion of the South Parcel had been developed with one to three buildings that appeared to be generally connected and included an auto repair garage, steel storage, an office, lumber storage, a railroad carpenter shop, a sign painting shop; all of which appeared to be associated with the 1251 Spring Street address. Based on CalGEM Well Finder®, an oil and gas well potentially located on the South Parcel, referred to as "T-2," was plugged and abandoned in late 1956. Ramboll's review of CalGEM records for the third well, T-2, formerly believed to be on the South Parcel, suggested the well was, in fact, farther to the north and off-site. As a result, Ramboll conducted a magnetometry survey on June 3, 2019 in the purported vicinity of this well and was unable to corroborate the position of any wellhead. Subsequently, CalGEM has presented updated location information for this well placing it off-site to the northwest of the South Parcel.

According to the 2015 Phase I ESA report, four USTs were installed in March 1957 in association with the auto repair garage. The specific locations of the former USTs are not known and may not have actually been on-site, as the building footprints appear to extend to the southeast beyond the Project Site boundary. By 1954, two additional storage buildings, one of which appears to correspond to the long rectangular building currently present on the South Parcel, were present at the southern end of the South Parcel. In addition, the current most western building on the South Parcel appears to be an extension to an adjacent building at 960 Broadway, formerly identified as Neon Sign Manufacturing and metal working, with painting operations located on the Project Site. In 1957, the long rectangular building was identified as a truck maintenance building and the smaller building to the north as a truck washing building. An additional small structure was present between the two buildings.

By 1960, the above-mentioned interconnected buildings had been removed with only the truck maintenance building remaining in the southern portion of the South Parcel. A small building for painting remained just outside the southeastern site boundary. On the northern portion of the South Parcel, the seafood building appeared as vacant, the store remained, and the two railcars had been replaced with a long rectangular building identified as truck maintenance. By 1964, the seafood building had been demolished. On the southern portion of the South Parcel, a new truck washing building was constructed to the northeast of the larger truck maintenance building. Based on the 2015 Phase I ESA report, these buildings were reportedly associated with the 10-acre Metro easement

[3] Buena Vista Street was renamed Broadway, date uncertain.

located to the southeast of the site and have reportedly been used for bus maintenance activities since the mid-1950s (prior to which were used for railroad car maintenance). Railroad spurs were present on the South Parcel between at least 1888 and 1970, but do not appear to be currently present. It is not known if the railroad spurs were excavated and removed or paved over.

4.3 Key Findings of 2015 Phase I ESA Report

At the time of Cardno's 2015 Phase I ESA report, the site appeared in its current configuration. Based on a visit to the site, review of the site history, review of an Environmental Database Report (EDR) database report, and review of agency records, including those available on the RWQCB's GeoTracker database and the Department of Toxic Substances Control's (DTSC's) EnviroStor databases, Cardo identified the following findings:

- North Parcel, Former Gas Station (1322 North Broadway) and Off-Site Former Cornfield Site: The former gas station Leaking Underground Storage Tank (LUST) case and the Former Cornfield Site (also referred to as the Union Pacific Railroad – Cornfield Yard at 1245 North Spring Street) SLIC case are both under the oversight of the California RWQCB. Both cases relate to past releases at the former gas station. There were four known USTs associated with the former gas station on the North Parcel; two 8,000-gallon, one 6,000-gallon, and one 1,000-gallon; all of which were removed in 1990 after demolition of the gas station in 1989. The gas station is also reported to have had a hydraulic lift, presumed to be an in-ground lift, dispensing equipment, and a small office building. At the time of the UST removals, the Regional Water Quality Control Board – Los Angeles Region (LARWQCB) opened a LUST case in 1990. Based on records on GeoTracker, the LARWQCB issued closure in 1997. However, subsequent Phase 2 investigations and remedial activities have been conducted at the site and adjoining properties (Former Cornfield site) to the southeast that indicate soil and groundwater have been impacted by total petroleum hydrocarbons as gasoline (TPH-g); benzene, toluene, ethylbenzene, and xylenes (BTEX); and methyl tert-butyl ether (MTBE) beneath limited portions of the off-site portion of the Former Cornfield site and attributed to the former gas station at the site. Hydrocarbon-impacted soil was encountered during construction activities on the adjacent Metro easement resulting in the removal of 300 cubic yards of impacted soil in 2001. Two soil vapor extraction (SVE) systems have been operated; 1) between March 2001 and June 2002 to remove a thin layer of free-phase gasoline within the capillary fringe near the escarpment between the site and adjacent Metro easement, and 2) between October 2003 and September 2005 to remediate gasoline releases from the former gas station, with reported removal of 365 pounds of volatile organic compounds (VOCs). Confirmation soil samples were collected in May 2005 with no detections of TPH-g, BTEX, or MTBE reported, and reportedly well below the United States Environmental Protection Agency's (USEPA's) residential Preliminary Remediation Goals (PRGs) for any detected compound. On June 6, 2006, the LARWQCB issued a No Further Requirement for Soils Only (NFA) letter for the former gas station, as part of the larger Former Cornfield site (see Attachment C).

  Based on the 2006 NFA letter, there were 20 groundwater monitoring wells installed at the Former Cornfield site, that encompasses the site. Groundwater flow was determined to be to the southwest. Maximum BTEX concentrations detected were 14,000 micrograms per liter (µg/L) of benzene, 31,000 µg/L of toluene, 3,000 µg/L of ethylbenzene, and 18,000 µg/L of xylenes. MTBE was also reported as high as 27 µg/L, along with low concentrations of various chlorinated solvents. Free product had not been reported since 2002. Due to the elevated BTEX concentrations in groundwater, the LARWQCB required additional assessment.

Cardno reviewed a 2014 groundwater monitoring report and determined that monitoring well BMW-11, located on the site in the area of the former gas station, was decommissioned in August 2006 and that vapor extraction well VEW-2 (one of four located on-site in the area of the former gas station) was last sampled in March 2003, with 340 µg/L of ethylbenzene reported as the only constituent that exceeded the California maximum contaminant level (MCL) of 300 µg/L. Monitoring well MW-2, located on the southern portion of the South Parcel was last sampled in August 2003 and no VOCs were reported. MW-18, located in the northern portion of the South Parcel, was last sampled in January 2007 and no VOCs or petroleum hydrocarbons (volatile or extractable) were reported. Cardno also indicated that a request for closure for the site, including the decommissioning of monitoring wells MW-2 and MW-18, was submitted on September 25, 2013 by ARCADIS, the consultant for the Former Cornfield site. ARCADIS indicated that data in MW-2 were non-detect or close to laboratory reporting limits (RLs) for volatile and extractable fuel hydrocarbons and at MW-18, VOCs and volatile and extractable fuel hydrocarbons were below laboratory reporting limits. While Cardno agreed with ARCADIS's assessment, the LARWQCB had not responded to the request for closure and the status of the cleanup program (or the SLIC case) remained as "open-verification monitoring." Given the open status, this matter was considered to represent a REC. In addition, based on the benzene groundwater contour maps in the vicinity of the site, Cardno identified a potential VEC[4]. According to Cardno's review of the groundwater plume maps, the isoconcentration contour for benzene at BMW-4 was depicted as bordering the site. Although BMW-4 was greater than 100 feet (the critical distance factor, as defined by ASTM E2600-15) from the site, the inferred benzene plume was within 100 feet of the site and therefore determined to represent a potential VEC.

Separately, the Former Cornfield site, particularly the 32-acre LA State Historic Park portion, is also part of the Voluntary Cleanup Program (VCP) under the oversight of the California Environmental Protection Agency's DTSC, with "active" status as of 2014. The construction of the LA State Historic Park began in 2014 with a Sampling and Analysis Plan (SAP) in place to delineate the vertical and lateral extent of arsenic and lead contamination in soil. Because this matter appeared to be limited to lead and arsenic in soil at the off-site portions of the Former Cornfield site, particularly the 32-acre LA State Historic Park area, located at a lower elevation than the site, this matter was not considered a REC.

- South Parcel, Former Railcar Repair Facility (1251 Spring Street): Based on the Los Angeles Fire Department (LAFD) records, a permit was issued to Southern Pacific Transportation Company in 1957 for the installation of four USTs ranging in size from 435 to 12,121-gallons. The four USTs all are reported to have contained gasoline. An additional permit was issued in 1975 for alterations to a vapor recovery system associated with the USTs. No documentation was provided regarding the location, or subsequent removal, of the USTs. The "L.A. Signal Shop" was listed on the Historical UST (HIST UST), California Facility Inventory Database (CA FID UST), and Statewide Environmental Evaluation and Planning System (SWEEPS UST) databases historically utilizing an 8,000-gallon gasoline UST. As the railcar operations appear to have been located on or adjacent to

[4] A VEC is defined by ASTM International's *Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transaction*s E2600-15, as the presence or likely presence of chemicals of concern (COC) vapors in the vadose zone of the target property caused by the release of vapors from contaminated soil and/or groundwater either on or near the target property, as identified by Tier 1 or 2 procedures in the ASTM E2600-15 Standard.

the southeast site boundary, these former USTs may have been located on or adjacent to the site. Monitoring Well MW-2, associated with the Former Cornfield site groundwater investigation, is located on the South Parcel in the relative location of the former USTs, but given the exact locations of the USTs is not known, could be potentially upgradient. Cardo considered this matter to be a REC due to the lack of information regarding the location and status of these USTs.

- Former Oil Wells: Although not considered a REC, Cardno also identified the presence of an abandoned oil well on the North Parcel as a notable finding that could affect redevelopment activities.

Based on the issues noted above, Cardno made the following recommendations.

1. *Due to the lack of documentation regarding the USTs potentially located in the southernmost portion of the property, a geophysical survey is recommended. Based on the results of the geophysical survey, tank removal and/or a limited subsurface investigation may be warranted.*
2. *Given that the 8.0-acre property is part of a larger SLIC site that is undergoing verification monitoring, the on-site monitoring well(s) will need to be maintained/accessible to facilitate the ongoing monitoring activities if/as required by the RWQCB. (Note that a request for closure for the 8.0-acre site portion was submitted to the RWQCB by ARCADIS on September 25, 2013 as previously noted; however, pending receipt of any further information from the RWQCB, it does not appear that such closure has yet been granted to the property.)*
3. *Given the potential vapor encroachment condition identified on the property, soil vapor sampling and/or installation of a vapor barrier for any new structures built in the central portion of the property may be warranted.*
4. *The LADBS and CalGEM should be contacted with regard to requirements, if any, relative to any potential redevelopment of the property in the vicinity of the former oil well. For example, re-abandonment of the oil well to current standards and/or a methane barrier may be required.*

The following sections present Ramboll's findings and recommendations with regard to its methane investigation, which was conducted between December 2017 and April 2018, and to address the four items presented in Cardno's 2015 Phase I ESA report.

5. RAMBOLL METHANE INVESTIGATION

In 2017 and 2018, Ramboll conducted a methane assessment at the site given that it is located in an area designated as the "methane zone" and is subject to Division 71 of Article 1, Chapter IX of the Los Angeles Municipal Code. Ramboll's methane assessment report (see Attachment B) is pending submittal to the LADBS. Field work was conducted on December 14, 2017 and May 14 and 17, 2018.

5.1 South Parcel

Based on analytical results of shallow, intermediate, and deep samples collected from SV-1 through SV-10, no methane was detected above laboratory RLs (Figure 3a). Accordingly, no further methane assessment is recommended for the South Parcel. However, since the site is located in the methane zone, Article 71 requires measures addressing methane depending on the concentration of methane detected during the testing performed per the LADBS Bulletin No. P/BC 2017-101 (reference no. LABC 7104.1). For concentrations of methane less than 100 ppmv and methane pressures less than 2-inches of water, as is the case for the South Parcel, buildings within the South Parcel shall require a Level I Passive Design Level. The passive Level I Design requires a sub-slab venting system, an impervious membrane, utility trench dams, and conduit or cable seal fittings. The sub-slab venting system shall consist of perforated horizontal piping, a 2-inch gravel blanket thickness under the impervious membrane, a 2-inch gravel thickness surrounding the perforated horizontal piping, and vent risers.

5.2 North Parcel

Two sample locations in the central and northern portions of the North Parcel, SV-14 and SV-19, yielded detections of methane above the laboratory RL. In December 2017, sample location SV-19 in the northern portion of the North Parcel produced a methane detection of 74 ppmv, although resampling in May 2018 yielded a result below laboratory RLs. In May 2018, sample location SV-14 in the central portion of the North Parcel produced methane concentrations ranging from 190 ppmv to 4,000 ppmv.

Methane can be attributed to various sources, including leaking natural gas lines, decomposing organic matter, and nearby activities related to oil drilling. Due to the proximity of a catalogued abandoned oil well (API: 0403716588) close to SV-14 (see Figure 2b), it is possible that the abandoned oil well is a source of the methane detections observed at SV-14.

In the vicinity of SV-14, the presence of elevated methane concentrations may trigger concern for potentially explosive methane accumulations in the current conditions on the site. Because the proposed Project would develop residential land uses on the property, this existing accumulation of methane may trigger, at a minimum, a CalGEM requirement to expose the nearby abandoned oil well, and to perform leak testing. If the abandoned oil well is determined to be the source of elevated methane, re-abandonment of the well is anticipated to be required, especially if the well must be recompleted to fit beneath the planned subterranean parking structure. If the abandoned oil well is determined to be the source of the methane and if properly re-abandoned, then it is possible that the methane concentrations may decrease, potentially lessening the mitigation design requirements discussed below. Since methane concentrations in the vicinity of SV-14 were as high as 4,000 ppmv, under Article 71, without the steps associated with the re-abandonment of the oil well and follow-up testing and confirmation, buildings in the vicinity of SV-14 would be otherwise required to achieve a Level III Design. As summarized in Table 71 of Attachment A, Level III Design requires both passive and active systems, trench dams, and conduit or cable seal fittings. The passive Level III Design

requires a sub-slab venting system, an impervious membrane, utility trench dams, and conduit or cable seal fittings. The active venting system requires a gas detection system, mechanical ventilation, and an alarm system on the lowest occupied space, as well as a control panel.

6. FOLLOW-UP TO CARDNO'S 2015 PHASE I ESA RECOMMENDATIONS

Ramboll performed a peer review of Cardno's 2015 Phase I ESA report. As part of this review, Ramboll evaluated Cardno's primary identified environmental findings and recommendations as presented in the 2015 Phase I ESA report. Ramboll also consulted relevant environmental databases such as GeoTracker and EnviroStor, in connection with past and ongoing environmental investigations at, and in the vicinity of the site, to corroborate and audit Cardno's findings.

Cardno's Recommendation No. 1 - Historical USTs with Unknown Status:

> *"Due to the lack of documentation regarding the USTs potentially located in the southernmost portion of the property, a geophysical survey is recommended. Based on the results of the geophysical survey, tank removal and/or limited subsurface investigation may be warranted."*

Ramboll: Cardno's recommendation was based on both the absence of documentation confirming the removal of four USTs permitted by the LAFD in 1957 and on the fact that Cardno was unable to access that portion of the South Parcel to look for evidence of the presence of USTs. According to LAFD records review conducted by Cardno, the South Parcel was formerly occupied by an Automotive & Work Equipment Shop (railcar repair). A permit dated March 21, 1957 was issued to Southern Pacific Transportation Company for the installation of four gasoline USTs ranging from 435-gallons to 12,121-gallons in size. Additional documentation regarding the location of these USTs, and/or their removal, was not found.

Ramboll was on-site in December 2017 and May 2018 to examine features that may indicate the presence of potential USTs (see Attachment D). Four features that were visible in aerial photography, and which may have been indicative of potential USTs, were confirmed to be telecom utility access ports. No other evidence of USTs was observed at the time of the site visits. However, due to the presence of on-site obstructions/structures at the time, Ramboll could not complete a thorough assessment.

Ramboll agrees with Cardno that a geophysical survey would be useful in evaluating the subsurface for former USTs. Ramboll recommends that the geophysical survey be conducted as part of redevelopment activities, after the existing site structures have been demolished. If USTs are identified during the geophysical survey, they will need to be removed under permit with the LAFD. Further, the site earthwork activities are recommended to be performed under a Hazardous Materials Contingency Plan (HMCP), which will include procedures to address any previously unidentified USTs or other historical industrial impacts that may be discovered during earthwork activities as part of site redevelopment.

Further, based on groundwater monitoring data from a monitoring well located in the approximate area of the assumed former USTs, it appears unlikely that there would have been significant VOC or petroleum hydrocarbon impacts to groundwater from these former potential USTs. In general, there have been no detections of VOCs in groundwater, with the exception of a low detection of acetone, a common laboratory contaminant, in 2003. Similarly, there were no detections of total volatile petroleum hydrocarbons (TVPH) or total extractable petroleum hydrocarbons (TEPH) as diesel or motor oil. Low concentrations (i.e., 0.14 to 0.50 milligrams per liter [mg/L]) of total petroleum hydrocarbons were reported when sampled between 2000 and 2002.

Cardno's Recommendation No. 2 - Existing On-Site Groundwater Monitoring Wells:

Given that the 8.0-acre property is part of a larger SLIC site that is undergoing verification monitoring, the on-site monitoring well(s) will need to be maintained/accessible to facilitate the ongoing monitoring activities if/as required by the RWQCB. (Note that a request for closure for the 8.0-acre site portion was submitted to the RWQCB by ARCADIS on September 25, 2013 as previously noted; however, pending receipt of any further information from the RWQCB, it does not appear that such closure has yet been granted to the property.)

Ramboll: Groundwater monitoring is being conducted across the Former Cornfield site for SLIC case No. 2047T1683, of which the site is a small 8-acre portion, along the northern margin of the investigation area. Two groundwater monitoring wells (MW-2 and MW-18) associated with the Former Cornfield site are located on-site. The petroleum hydrocarbon groundwater impacts being tracked appear related to former USTs that were part of the gas station located on the subject site. Annual groundwater monitoring data has been submitted to the LARWQCB since 2005. The LARWQCB has not responded to ARCADIS' closure letter request dated September 25, 2013 and the status of this case has remained as 'Open-Verification since 7/8/2010. Prior to a site closure approval, the LARWQCB stated they required that additional wells surrounding BMW-4 and BMW-6 (both located off-site) be resampled in a letter dated June 28, 2013.

On January 15, 2024, ARCADIS, on behalf of UPRR, submitted the most recent groundwater monitoring data in its "*2023 Annual Groundwater Monitoring Report and Request for No Further Action*" (see Attachment F). Per the report, and ARCADIS' rationale for NFA, current monitoring of downgradient (off-site) wells BMW-4 and BMW-6 confirmed the continued presence of BTEX. The benzene concentration of 1,640 µg/L in the groundwater sample collected from groundwater monitoring well BMW-4, however, demonstrates a significant decrease since sampling began in 2001. Benzene concentrations have ranged from 14,000 to 15,000 µg/L from 2003 to 2007. BTEX concentrations in groundwater monitoring well BMW-6, downgradient from groundwater monitoring well BMW-4, have shown a generally decreasing trend since August 2001, with no BTEX constituents detected in the 2023 sampling event.

A NFA letter was requested based on the rationale that the contaminant source was removed via soil excavation and soil vapor extraction; VOCs and TPH concentrations continue to decrease; the footprint of the TPH plume has remained stable, and there is evidence that sustainable microbial degradation (natural attenuation) of petroleum hydrocarbons is at work. ARCADIS concluded that "*the data show a progressive reduction of Benzene, Toluene, Ethylbenzene, Xylene (BTEX) concentrations since 2019. At well BMW-4, the 2023 benzene concentrations are the lowest concentrations recorded since sampling began in 2000, and the biogeochemical data continue to show that natural attenuation is sustainable and ongoing. The 2023 groundwater data continue to support the closure request based on multiple lines of evidence set forth in the five annual groundwater monitoring (GWM) Reports submitted since 2018 GWM Reports*". As mentioned above, based on the findings of the investigation, ARCADIS requested an NFA letter.

Although closure has not yet been issued with regard to groundwater at the Former Cornfield site, UPRR has been identified as the responsible party and is in the process of negotiating closure with the LARWQCB. UPRR is expected to maintain responsibility for appropriate decommissioning of the existing monitoring wells. Groundwater monitoring Wells MW-2 and MW-18 are located on-site. If closure is not granted prior to the commencement of redevelopment activities, the developer can coordinate with the LARWQCB and UPRR to either maintain the existing monitoring wells or relocate

the monitoring wells to a location agreeable to the LARWQCB. Ramboll notes that MW-2 was last sampled in August 2003 and MW-18 was last sampled in January 2007. Additionally, the Project Applicant has entered into a voluntary oversight agreement with the LARWQCB to ensure that site redevelopment is in compliance with LARWQCB requirements as it relates to protection of human health and the environment. Under the oversight agreement, the Project Applicant assumes financial responsibility for LARWQCB oversight as it relates to the site redevelopment efforts.

Lastly, the LARWQCB has issued an NFA for soil, as it relates to contamination for the former gas station on the North Parcel. According to the 2006 NFA for soils at the former gas station, at the time of the UST removals in 1990, soil samples collected from the base of the UST excavations (depths ranging from 7 to 16 feet below ground surface) indicated a maximum residual concentrations of TPH-g of 25,000 milligrams per kilogram (mg/kg), total petroleum hydrocarbons as diesel (TPH-d) of 2,000 mg/kg, benzene at 120 mg/kg, toluene at 710 mg/kg, ethylbenzene at 290 mg/kg, and xylenes at 1,400 mg/kg. After soil excavation of 300 cubic yards of contaminated soil in 2001 and soil vapor extraction occurred from 2001 to 2002, confirmation soil samples collected in 2005 indicated residual concentrations of TPH-g of less than laboratory RLs of 12 mg/kg for TPH-g, 79 mg/kg for TPH-d, and 0.24 mg/kg for BTEX, all below current thresholds for unrestricted use. As discussed above, earthwork activities conducted as part of site redevelopment activities are recommended to be conducted under a HMCP. If residual contamination is identified as part of the earthwork activities, such contamination will be addressed under the HMCP.

Cardno's Recommendation No. 3 - Potential VOC Vapor Encroachment:

> *Given the potential vapor encroachment condition identified on the property, soil vapor sampling and/or installation of a vapor barrier for any new structures built in the central portion of the property may be warranted.*

Ramboll: Based on the chemical isoconcentration maps depicted in the 2023 Annual Groundwater Monitoring Report for the Former Cornfield Site, the potential area of groundwater impact beneath the site is limited to the southern portion of the North Parcel (in the area of the former gas station). While Ramboll agrees that a potential VEC is present within a limited portion of the site, Ramboll notes that a potential VEC is not confirmation of a vapor intrusion concern. The recent groundwater monitoring report documented concentrations of benzene in Well BMW-4, near the site, at a concentration of 243 µg/L, above its California MCL of 1 µg/L. While the benzene isoconcentration map in the groundwater monitoring report infers that benzene concentrations in groundwater could be present beneath the site, historical groundwater monitoring data from the wells situated on the site upgradient of the benzene concentrations were either non-detect or below its California MCL. Ramboll also notes that there are currently no structures in this potential area of impact (on- or off-site). Further, based on Ramboll's current understanding of the developer's construction plans, which will require site-wide implementation of certain methane mitigation measures (see Section 5 above), and given that the planned construction will include ventilated subterranean parking structures with high air exchange rates, the potential for VOC vapor intrusion from the documented groundwater impacts beneath a limited portion of the area is not expected to represent a material environmental concern to future occupants of the site. The required methane vapor sub-slab venting system requirements will also need to incorporate design components for VOC vapor intrusion, including any conditions with respect to VOC vapor intrusion that the LARWQCB requires as part of issuance of its NFA for the Former Cornfield Site and the oversight agreement.

Cardno's Recommendation No. 4 - Abandoned Oil Wells:

> *The LADBS and DOGGR should be contacted with regard to requirements, if any, relative to any potential redevelopment of the property in the vicinity of the former oil well. For example, re-abandonment of the oil well to current standards and/or a methane barrier may be required*

Ramboll: Based on Ramboll's experience working with CalGEM and land developers, CalGEM has two general recommendations with regard to site redevelopment around abandoned oil wells: 1) leave adequate space around the wellheads, so that a drill rig can access the wellhead in the event that the well starts to leak and needs to be re-abandoned; and 2) re-abandon all wells to current abandonment standards (see Construction Site Well Review [CSWR] Program), CalGEM, revised December 14, 2007).

A review of development plans indicates that the Project Applicant intends to construct multiple mixed-use structures above three levels of parking garage. Structures are proposed on top of both the abandoned dry hole (API 0403716588) and the abandoned oil well (API 0403700510), located on the North Parcel (Figure 3b), which will require modifications to the well casings to accommodate the development.

As alluded to in Cardno's Recommendation, CalGEM and LADBS cooperate in the development process through the CalGEM CSWR process. When approached in the construction permitting process, LADBS will review the application and assign initial "clearances" to various City departments as needed. In the case of abandoned oil well management, LADBS will assign a branch of the LAFD to oversee disposition of the oil wells. They will do the actual review of the CalGEM oil well status letter and make recommendations. Once all the assigned departments issue their clearances, the City can issue the construction permit.

Construction Site Well Review Process

The CalGEM CSWR process has been developed to ensure the safe development of state lands where oil field activities such as drilling or oil and or gas production have taken place. The process results in a recommendations letter that is provided to the site owner/developer and the LADBS/LAFD, whose follow-on role is to acknowledge CalGEM's recommendations concerning all known wells at a given site, and make sure the site is developed with proper safeguards for future inhabitants of the site. The process includes locating of wells, exposure of the well heads for leak testing of oil field gases and liquids, surveying of the wells, and potential re-abandonment depending on well condition and planned development.

On behalf of the Project Applicant, Ramboll submitted an online CSWR application on May 10, 2019 to CalGEM, formerly "Well Review Program Application", which has been replaced with an online application process through the WellSTAR®[5] database management system. The application requires a complete development outline for the Project. Also required is the name of the developer's assigned contact with LADBS. CalGEM reviewed and approved the submitted application, assigned a case manager (Grace Brandt), and sought well records for all wells located on the site, including the abandonment logs, to determine if the wells in question were abandoned to current standards. CalGEM's review of well records pertinent to the site confirmed the likely presence at the site of "Freight Depot 1" and "Southern Pacific Core Hole 1". CalGEM records for a third well, T-2, formerly

[5] Construction Site Plan Review Program (ca.gov)https://www.conservation.ca.gov/dog/for operators/Pages/WellSTAR.aspx.

believed to be on the South Parcel, suggested the well was, in fact, farther to the north and off-site. The history and status of each well, based on Ramboll's scope of work thus far, are briefly summarized below.

Summary of Work Related to Abandoned Oil Wells

API 0403700510- Well name "Southern Pacific Core Hole 1" (North Parcel) - abandoned August 1967

- CalGEM communicated the presence of this well to Ramboll in July 2019 even though the well did not appear on the Well Finder® website at such time.
- On July 26, 2019 magnetometry revealed a strong circular anomaly.
- The anomaly was excavated via backhoe exposing the well casing at a depth of 5.5 feet below grade as described in the well abandonment record.
- On July 26, 2019, a representative of CalGEM was present and observed Ramboll staff conduct a methane leak test. Methane detections ranged up to 140 ppmv. A copy of Ramboll's leak test report for Southern Pacific Well #1 is included as Attachment G.
- The well was surveyed by a state-registered land surveyor and the surface excavation was backfilled on July 29, 2019.
- Using Ramboll's survey data, CalGEM entered the well into the Well Finder® database.

API 0403716588, or "Freight Depot 1" (North Parcel) - abandoned December 28, 1957

- Cardno reported the listing for this well on the CalGEM Well Finder® website; the well never produced oil or gas.
- A reconnaissance of the site showed no evidence of this well at ground surface.
- Ramboll conducted a limited magnetometry geophysical survey on June 3, 2019 to locate the well as part of the well review application process. The geophysical report, "Report of Geophysical Investigation, 1380 North Broadway, Los Angeles, California", dated June 18, 2019 is included as Attachment D.
- The geophysical survey presented several potential anomalies, a few of which were tested by careful potholing with a backhoe (July 2019) to expose the well for leak testing.
- Pre-potholing utility locating was conducted on July 26, 2019.
- The potholing was advanced to a depth of approximately 9 feet below grade but was unsuccessful. Well abandonment records indicate the well was plugged at 5.5 feet below grade. However, Ramboll observed what appeared to be another asphalt layer (possible former ground surface) at approximately 3 feet in depth. Therefore, the 9-foot excavation should have revealed the well, had it been at this location.
- A second limited magnetometry geophysical survey was conducted on the North Parcel on July 5, 2023 after the site was cleared to further investigate the location of the well. The geophysical report, "Report Brief-Geophysical Investigation, Abandoned Oil Well, Vacant Lot, 1380 N. Broadway, Los Angeles, California", dated July 18, 2023 is included as Attachment E.
- The second geophysical survey presented several potential anomalies, all of which were tested by careful potholing with a backhoe (July 2023) to locate the well.

- The second round of potholing occurred and anomalies were excavated to a depth of at least 10 feet below grade but was unsuccessful in locating the abandoned oil well.
- To further assess the location of the Freight Depot No. 1 well, aerial photographs from the years that the well was being drilled were located and analyzed. The photographs revealed the outline of the drill rig for Freight Depot No. 1.
- Ramboll evaluated the location of the well based on the aerial photographs and found Freight Depot No. 1 to be located approximately 76 feet southeast of the surveyed Southern Pacific Core Hole No. 1.
- Ramboll assessed the accessibility of the well and concluded that, under current conditions, due to the steepness of the slope, where the well is calculated to be located, the well cannot be safely reached without a large-scale excavation operation.
- Ramboll recommends locating, excavating, and leak-testing this well at the time of site redevelopment, when the area of the wellhead can be accessed without undue safety concern.

<u>API 0403716580, Well name "T-2"- Paul F. McKenzie (operator) - abandoned December 1956</u>

- Ramboll's review of CalGEM 's Well Finder® website for T-2, formerly believed to be on the South Parcel, suggested the well was, in fact, farther to the north and off-site.
- Ramboll conducted a magnetometry survey on June 3, 2019 in the purported vicinity of this well and was unable to corroborate the position of any wellhead.
- Subsequently, on July 18, 2019, CalGEM (representative Grace Brandt) presented updated location information for this well placing it off-site to the northwest of the South Parcel through Personal Communication with Ramboll.

It is Ramboll's professional opinion that the plans to construct residences, restaurants, and commercial space on top of the wells may trigger a recommendation to re-abandon from CalGEM, LAFD and LADBS, especially given that it will be necessary to cut the well casings down so that they will fit below the planned subterranean parking structure(s). Recent discussions with CalGEM indicate that cutting down the casing of an abandoned oil well will require a permit, which may trigger a re-abandonment requirement.

As mentioned above, at the end of the well review process, CalGEM will issue a letter (still pending) to the Project Applicant and LADBS, which requests that a copy of the letter be sent to the LAFD, listing the current status of the wells in question, whether the well(s) has/have been re-abandoned to current standards, and its recommendation/requirement for well disposition through the construction process. Coordination with the LADBS assigned Development Services Case Management (DSCM) plan check officer, also will be necessary to develop methane mitigation requirements once development plans have been finalized.

If dry hole API 0403716588 on the North Parcel of the site is located, leak tested, and determined to be the source of the methane, and is ultimately re-abandoned and sealed, then it is recommended that re-testing for methane (and related oil field gases) in accordance with the bulletin be performed.

7. DATABASE UPDATES SINCE 2015

Ramboll obtained and reviewed an EDR Radius report for the site on December 1, 2023 (see Attachment H). Ramboll also reviewed the online Geotracker and Envirostor databases for significant additions to the case files associated with the site and adjoining properties. The following bullets summarize Ramboll's findings:

- Information regarding the site include the following.
  - Zum SF, Inc. (1251 N Spring St Bldg 1): The site is listed on the UST database for the presence of a UST on the site with "Active" status. However, according to the database listing, the database was last run on January 1, 1900, which appears to be an error. The unknown USTs on the South Parcel are addressed through Cardno's Recommendation No. 1 – Historical USTs with Unknown Status and Ramboll's follow-up further discussed in Section 6.
  - Ginsburg Naftuhn (1322 N Broadway): The site is listed on the EDR Historical Auto Stations database. According to the database listing, the site was a gasoline and oil service station in 1929 and 1937. The site's previous use as a gas station was identified in the Cardno Phase I and has been discussed in Section 4.3.
  - Wu Texaco (1322 N Broadway): The site is listed on the Historical UST database. According to the database listing, the site was a gas station and one 10,000-gallon unleaded gasoline UST, one 6,000-gallon regular gasoline UST, and one 10,000-gallon premium gasoline UST was present on the site. The USTs were removed in 1990 after the demolition of the gas station and has been discussed in Section 4.3.
- Information regarding adjacent properties include the following.
  - Union Pacific Railroad – Cornfield Yard: Based on a review of the GeoTracker database, more recent (2015-2023) groundwater monitoring reports have been prepared. The 2019 to 2023 reports request closure (NFA) for the property. Additional details on this property and related to the site are documented elsewhere in this HMTR.
  - Cornfield Site (a.k.a. Los Angeles State Historic Park): Based on a review of the Envirostor database for this property, which is adjacent to the site, a 2017 letter from the DTSC approved partial completion of remediation of the southern portion of the property. The letter also states the Department of Parks and Recreation is requesting additional funding for work on the northern portion of the property.
  - Blossom Plaza (900 North Broadway): Based on a review of the Envirostor database, on April 4, 2015 a No Further Action letter from DTSC was issued to this property for unrestricted uses.

Based on Ramboll's review of the EDR database and Geotracker/Envirostor databases, there is no additional information at any of these properties that present a newly discovered adverse environmental condition at the site.

8. REGIONAL WATER QUALITY CONTROL BOARD OVERSIGHT

On January 24, 2023, the Project Applicant, Ramboll, Arcadis, and UPRR met with the LARWQCB to discuss the proposed site redevelopment given that an NFA has not yet been issued for the site. The purpose of the meeting was to present site redevelopment plans and discuss site closure and, if needed, additional work. The environmental considerations for site redevelopment discussed during the meeting are addressed by Ramboll's follow-up tasks to Cardno's Phase I recommendations in Section 6 and further discussed in Section 9.

As a follow-up to the LARWQCB meeting, the Project Applicant entered into a voluntary oversight agreement with the LARWQCB to provide oversight as it relates to the redevelopment efforts of the site and to ensure compliance with LARWQCB requirements as it relates to protection of human health and the environment (see Attachment I). Although the LARWQCB granted an NFA for soil in a letter dated June 6, 2006, plans for site redevelopment may require additional assessment and evaluation of residual soil impacts. The oversight agreement with the LARWQCB ensures that site redevelopment will not pose a threat to human health and environment and remains in compliance with LARWQCB requirements. The Project Applicant entered into a Cost Recovery Agreement and agreed to the Cost Reimbursement Account letter in September 2023. As a result of entering into a Cost Recovery Agreement, the Project Applicant has agreed to undertake the necessary tasks, as requested by the LARWQCB, and assumes responsibility for financial costs for LARWQCB oversight. Based on the oversight agreement letter, work that may be performed by the LARWQCB includes review of technical reports, request and review of additional technical reports, prepare comment letters on various reports and communicate findings, conduct site inspections, observe field activities, collect split samples, and meet with environmental consultants and responsible parties, conduct internal and external communication and respond to public inquiries, and implement public participation activities. The oversight agreement states that *"a soil management plan must be prepared and submitted for Regional Board review and approval before the demolition and site redevelopment activities"*. Ramboll, on behalf of the Project Applicant, submitted the SMP on October 16, 2023. Ramboll received comments on the SMP from the LARWQCB through email communication on February 14, 2024. Ramboll has addressed the LARWQCB's comments through Addendum 1 of the SMP (see Attachment J).

9. CONCLUSIONS & RECOMMENDATIONS

The site is being proposed for redevelopment with multiple structures above several levels of subterranean parking, consisting of residences, restaurants, and commercial space. In its 2015 Phase I ESA, Cardno identified certain environmental conditions at the site, certain of which derived from previous and ongoing Phase II investigation work performed at and adjacent to the site by other consultants for UPRR. Since then, as documented in this HMTR, Ramboll has followed up on Cardno's recommendations and performed geophysical surveys to identify buried structures including abandoned oil wells, one of which was successfully located. Ramboll leak tested the abandoned oil well to assess current conditions and provide appropriate recommendations. Further, given the site's location within the "methane zone," Ramboll performed a methane survey at the site. In September 2023, the Project Applicant, entered into a cost recovery oversight agreement with the LARWQCB to ensure that site redevelopment will not pose a threat to the community and environment and remains in compliance with LARWQCB requirements. Accordingly, the redevelopment of the site can proceed as planned while UPRR continues its closure campaign, and also while considering and implementing the follow-up tasks and recommendations as outlined in this HMTR and presented below:

HAZ-MM-1: Waste Characterization, Segregation, Disposal and Reuse Plan. Prior to issuance of demolition permits, a hazardous building materials survey shall be conducted on all aboveground structures on the Project Site. The survey shall include testing for asbestos, lead-based paint, polychlorinated biphenyls (PCBs), and universal wastes at all currently extant structures, subject to the determination of a qualified and licensed environmental contractor (State of California Licensed Contractor, with hazardous material, asbestos, and lead-based paint certifications). Following the results of the hazardous building materials survey and before demolition activities, a licensed contractor shall prepare a Waste Characterization, Segregation, Disposal, and Reuse Plan (Waste Characterization Plan), which shall provide the requirements, in accordance with applicable regulations, for the removal and off-site disposal of any identified hazardous materials. The Waste Characterization Plan shall include requirements for notifications to appropriate federal and state agencies (including, but not limited to USEPA for PCBs and South Coast Air Quality Management District [SCAQMD] for asbestos), and shall confirm when asbestos abatement would require air monitoring, in accordance with SCAQMD Rule 1403. All abatement work shall be done in accordance with federal, state, and local regulations, including those of the USEPA, Occupational Safety and Health Administration, California Occupational Safety and Health Administration, and SCAQMD.

HAZ-MM-2: Hazardous Materials Contingency Plan. Prior to commencement of any demolition or earthwork activities on the Project Site, the Applicant/Contractor shall prepare a Hazardous Materials Contingency Plan (HMCP) that addresses the potential for discoveries of hazardous releases in soil, soil vapor, and groundwater based on visual and olfactory observations and organic vapor monitor (OVM) readings during short-term construction activities in accordance with Cal OSHA and SCAQMD requirements. The HMCP shall include management protocols responsive to field observations and any subsurface geophysical survey findings at the Project Site (see Mitigation Measure HAZ-MM-3). The HMCP shall include, at a minimum, a Health and Safety Plan (HASP) that provides detailed directions on the training procedures of on-site workers for identification of contamination. All workers and employees that will be involved in earth-moving activities shall be trained to identify and properly manage potentially contaminated materials. The HMCP shall mandate that hazardous materials shall not be disposed of or released on the ground, in the underlying groundwater, or any surface water. The HMCP shall explain or otherwise identify the applicable local, state, and federal regulatory requirements and

mandatory procedures for the assessment, characterization, handling, storing, transporting, management, and disposal of hazardous constituents, materials, and wastes during construction activities and demonstrate how compliance with these requirements will be achieved.

A qualified environmental consulting firm with a minimum of 40-hour Hazardous Waste Operations and Emergency Response (HAZWOPER) Certification (with current 8-hour refresher), with adept knowledge of the HMCP, and with experience overseeing contaminated soil removal and disposal, shall be retained prior to commencement of any earthwork. The qualified environmental consultant must be present during all earthwork in areas of known or suspected contamination. Should contamination be identified in an area where contamination was not anticipated, the qualified environmental consultant shall be notified immediately and any recommendations made by the qualified environmental consultant during earthwork shall be checked by the Applicant/Contractor to ensure they are in accordance with the HMCP.

The HASP shall set forth safety requirements to be implemented during the decommissioning and removal of underground storage tanks (USTs) in accordance with all applicable regulations, including the Los Angeles Fire Department (LAFD) abandonment of UST requirements as outlined in Los Angeles Fire Code, Division 5 and 31; California Health and Safety Code Chapter 6.7; California Code of Regulations (CCR) Title 23, Division 3, Chapter 16; and CCR Title 8, Section 5156, 5157, 5158, as well as CCR Title 23, Division 3, Chapter 16, Underground Storage Tank Regulations, as required and under the jurisdiction of the Los Angeles Regional Water Quality Control Board (LARWQCB). All field personnel shall be required to implement the procedures presented in the HASP while conducting the field work.

LAFD mandates (pursuant to any additional permit conditions imposed as part of the UST abandonment permit process) shall be included in the HASP, including but not necessarily limited to: (1) the requirement for the Fire Inspector to witness the evaluation of a UST to confirm the atmosphere inside the tank is below the lower explosive limit; (2) the inspection of the tanks for signs of leakage; (3) the contracting of a licensed hazardous waste transporter for preparation of Uniform Hazardous Waste Manifest, which tracks the shipment of hazardous waste to a disposal facility, and transportation of the tank to a licensed hazardous waste disposal site; (4) completion of the conduct of soil samples surrounding the tank; and (5) the completion of an LAFD Division 5 Permit application package and Clean Certificate from an industrial hygienist. All LAFD mandates shall be included in the permit requirements once obtained.

Compliance with the HASP shall be incorporated into decommissioning and removal procedures included in the contractor's specifications. The removal of any USTs, if present, shall be completed to the satisfaction of the LAFD which will require but not necessarily be limited to periodic work breathing zone monitoring and monitoring for volatile organic compounds using a handheld organic vapor analyzer in the event impacted soils are encountered during excavation activities, as described in SCAQMD Rule 1166. The HMCP shall be implemented during all construction activities for the Project that require ground disturbance activities. Compliance with the HMCP shall be incorporated into the contractor's specifications and shall be completed to the satisfaction of LAFD and SCAQMD.

HAZ-MM-3: Subsurface Geophysical Survey. After completion of the demolition activities within the South Parcel, but prior to any grading, trenching or excavation of soils in the South Parcel, the Applicant/Contractor shall retain a State of California Licensed Contractor that specializes in subsurface geophysical surveys on hazardous material sites to conduct a subsurface survey of the area in proximity to groundwater monitoring well (MW-2) and surrounding areas that could be a

possible location for USTs. The subsurface survey shall investigate the site to determine the location of any subsurface structures, USTs, or other underground obstructions, if present. Methods may include ground-penetrating radar, magnetometer, or other appropriate technologies to investigate for the location of USTs, piping, and appurtenances. The results of the subsurface survey shall be included in a report, which shall include the results of site reconnaissance, interviews with applicable staff and/or property owners, and any subsurface structures identified. The HMCP required pursuant to Mitigation Measure HAZ-MM-2 shall incorporate the findings of the report, and any subsurface features that are identified shall be addressed in accordance with the protocols established as part of Mitigation Measure HAZ-MM-2.

HAZ-MM-4: Groundwater Monitoring Wells. Prior to the issuance of a grading permit for the South Parcel, the Applicant/Contractor shall coordinate with the Los Angeles Regional Water Quality Control Board (LARWQCB) and Union Pacific Railroad to receive confirmation of the status of the Request for Closure submitted to the LARWQCB in September 2013 (Union Pacific Railroad–Cornfield Yard, Cleanup Case No. SL2047T1683). If closure has not been approved and LARWQCB requires groundwater monitoring on the Project Site to be continued, then the Applicant/Contractor shall coordinate with the LARWQCB and Union Pacific Railroad to either maintain or remove and relocate the existing monitoring wells MW-2 and MW-18. If the monitoring wells are to be moved, the relocated wells must be accommodated within the Project Site boundaries, with adequate access for monitoring, as needed, to the satisfaction of the LARWQCB.

HAZ-MM-5: VOC Vapor Intrusion Design. Prior to issuance of a building permit, the South Parcel and North Parcel final plans shall incorporate methane vapor design features to address development within the Methane Zone. At a minimum, development within the South Parcel and the North Parcel shall incorporate Los Angeles Municipal Code (LAMC) Site Design Level I requirements.

After completion of Mitigation Measure HAZ-MM-6, which requires the cutting down of the existing "Freight Depot 1" well casing within the North Parcel to finished elevation, re-abandonment of the well to CalGEM specifications; resetting the casing; and re-testing for leaks, it shall be determined whether a Site Design Level I is appropriate for development on the North Parcel based on final methane readings, or whether a different level is required.

In addition, the methane mitigation features shall also incorporate any additional applicable conditions or requirements with respect to volatile organic compound (VOC) vapor intrusion set forth by the Los Angeles Regional Water Quality Control Board (LARWQCB) as part of issuance of its "No Further Action" determination for the Former Cornfield Site (Case ID SL2047T1683) and the oversight agreement.

HAZ-MM-6: Oil Well Re-abandonment. Subsequent to the issuance of a grading permit, the following shall be conducted as part of earthwork activities:

At the time of North Parcel development, the location of well "Freight Depot 1" shall be determined in accordance with the Construction Site Well Review (CSWR) Process. The Applicant shall coordinate with California Department of Geologic Energy Management (CalGEM) and the Los Angeles Fire Department (LAFD), which serves as the surrogate for the Los Angeles Department of Building and Safety (LADBS), to facilitate the well investigations and re-abandonment of the previously plugged/abandoned oil wells on the Project Site. A qualified environmental consultant shall re-attempt to locate and expose the well using a combination of geophysical investigations and pot-holing. Upon location of the well, methane leak testing for methane and fluids shall be conducted on the well, under

the supervision of CalGEM and LAFD. The location of the well shall be surveyed to the state plane coordinate system (NAD 83). If the well is determined to be leaking, and if CalGEM and LAFD require re-abandonment of the well, a qualified contractor shall proceed to re-abandonment planning, including applying for appropriate permits, in compliance with CalGEM requirements. The existing well casing shall be cut down to finished elevation; the well shall be re-abandoned to CalGEM specifications, and the well casing shall be reset in accordance with applicable regulatory standards. Management and disposal of wastes generated as part of the well re-abandonment process will be handled in accordance with federal and state requirements.

Upon completion of the re-abandonment, or well closure to the satisfaction of CalGEM, LAFD, and LADBS, the well Freight Depot 1 shall be re-tested for methane and fluid leaks. The results of the subsequent leak testing shall be used to inform whether Methane Site Design Level I, II or III is required. Upon completion of the well re-abandonment/closure, proof of approvals from LADBS, LADBS/LAFD and CalGEM shall be obtained.

For abandoned oil well Southern Pacific Corehole No. 1, which already has been located, surveyed, and leak-tested, if CalGEM, LAFD, and LADBS require re-abandonment of the well, a qualified contractor shall proceed to re-abandonment planning, including applying for appropriate permits, in compliance with CalGEM requirements. The existing well casing shall be cut down to finished elevation; the well shall be re-abandoned to CalGEM specifications; and the well casing shall be reset in accordance with applicable regulatory standards.

Upon completion of the re-abandonment, or well closure to the satisfaction of CalGEM, LAFD, and LADBS, the Well Southern Pacific Corehole No. 1 shall be re-tested for methane leaks. The results of the subsequent methane leak testing shall be used to inform whether Methane Design Level I, II or III is required. Upon completion of the well closure, proof of approvals from CalGEM, LAFD, and LADBS shall be obtained.

Disposal of the well casing and other disturbed materials produced by oil well re-abandonment activities will be conducted in accordance with the HMCP required pursuant to Mitigation Measure HAZ-MM-2. This includes but is not limited to hazardous materials and hazardous wastes handling by a licensed contractor and disposal in accordance with applicable regulatory requirements, such as SCAQMD Rule 1403: *Asbestos Emissions from Demolition/Renovation Activities*, and as specified in HAZ-MM-1.

Re-abandonment shall be conducted in accordance with current CalGEM specifications, as set forth in PRC Division 3, Chapter 4.1, Article 3, Section 1723, Los Angeles County Building Code 110.4, Los Angeles Municipal Code 91.7109.2, and Los Angeles Fire Code 57.5706.3 and 57.105.7.1.3.

Environmental Professional Statement:

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in § 312.10 part of 40 CFR 312. We have the specific qualifications based on education, training and experience to assess a property of the nature, history and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Dawn Merrill - Branch Manager

1.2 Findings and Conclusions Summary

Cardno ATC has performed a Phase I Environmental Site Assessment (ESA) of the property in conformance with the scope and limitations of ASTM Standard Practice E1527-13. Any exceptions to, or deletions from, this practice are described in Section 2.0 of this report. This assessment has revealed evidence of *recognized environmental conditions* in connection with the property, as noted in the following paragraphs along with a summary of current and historical property uses.

The property for purposes of this assessment is an 8.0-acre parcel currently addressed as 1251 North Spring Street, Los Angeles, California. Historical property addresses include 1322 and 1380 North Broadway. The 8.0-acre property is part of a larger site identified as the former Cornfield site. The former Cornfield site was a 50-acre site that was formerly operated by Southern Pacific Railroad, with five parcels being leased to various other commercial businesses through the years, including the subject property, which was at one time occupied by a Texaco gas station. The former Cornfield site included the 8.0-acre property, a 32-acre parcel, and a 10-acre Metropolitan Transportation Authority (MTA) easement. The 8.0-acre property is situated at a higher elevation compared to the remainder of the former Cornfield site. Along the eastern edge of the property, there is a long, steep slope (escarpment) that separates it from the offsite areas of the former Cornfield site.

Currently, the 8.0-acre property is mostly vacant. It appears that two buildings associated with the MTA easement are located on the southern most portion of the property. The MTA conducts maintenance on buses/trucks and utilizes multiple large storage containers. According to building permit records, the MTA easement consists of an 8,000 square-foot maintenance building (built circa 1956), a 1,600 square-foot "wash rack" building (built circa 1953), and a modular office building (built circa 2009). The northeastern most portion of the property is leased out to the Griffith Company (Griffith Lease). The Griffith Company operates in conjunction with the nearby bridge construction project. The Griffith Lease consists of three modular office buildings (estimated to be 800 square feet each), several storage containers, and the storage of various construction related materials. The rest of the property is vacant land with multiple advertisement billboards located in various locations along North Broadway. Cardno ATC did not have access to the MTA or Griffith Lease areas of the property.

Based on a review of various historical sources and regulatory reports, portions of the 8.0-acre property were occupied by a restaurant from circa 1950 to 1955, and from 1955 (or as early as 1922, per building department records) to 1989 a Texaco gas station operated on a small portion of the property (see Site Plan in Appendix C). A portion of the property was also used for parking, beginning in the early 1980s.

According to Los Angeles City Fire Department records, the southern most portion of the property (1251 North Spring Street) was occupied by an "Automotive & Work Equipment Shop." The 1957 Sanborn Map, shows a "Motor Car Repair" shop formerly located to the southeast of the current maintenance building. A permit was identified dated March 21, 1957 for the installation of four underground storage tanks (USTs) ranging from 435-gallons to 12,121-gallons in size. The tanks reportedly contained gasoline and were for private use. A subsequent permit dated March 4, 1975, was issued for alterations to a vapor recovery system. The owner identified on all the permits reviewed for this facility was the Southern Pacific Transportation Company. No further documentation regarding the location of these tanks or the removal was identified any the records reviewed. In addition, Cardno ATC did not have access to this portion of the property. It should be noted that there is reportedly a monitoring well located in the central portion of the southern most portion of the property. The monitoring well is identified as MW-2 and was installed as part of the remediation project associated with the larger former Cornfield site. Analytical data collected from August 2000 through August 2003 at MW-2 (located by the MTA easement) determined that concentrations for volatile organic compounds (VOCs) were non-detect or very close to reporting limits for Volatile and Extractable Fuel Hydrocarbons. However, the location of MW-2 in relation to the USTs is unknown, and it may be located upgradient. Therefore, due to the lack of information regarding the location and status of these USTs, the tanks are considered a *recognized environmental condition.*

Based on a letter prepared by the Regional Water Quality Control Board (RWQCB), dated June 6, 2006 and addressed to Union Pacific Railroad Company (UPRR), the property had four USTs (two 8,000-gallon USTs, one 6,000-gallon UST, and one 1,000-gallon UST), associated dispensing equipment, a hydraulic lift (presumably in-ground), and a small office building in the area of the former Texaco station along Broadway

in the central portion of the 8.0-acre property (see Site Plan in Appendix B). Reportedly, the gas station was demolished in 1989; USTs were removed in 1990. Although a leaking underground storage tank (LUST) case was opened for the property in 1990 at the time of tank closure, and the case was listed as closed by the RWQCB in 1997, it appears that additional assessment/remediation at the property was subsequently conducted, as described in the following paragraphs.

Soil samples were collected in 1990 during the tank removal activities; site investigations were conducted between 1999 and 2001, which indicated that soil and groundwater had been impacted by total petroleum hydrocarbons as gasoline (TPH-g), benzene, toluene, ethylbenzene, and xylenes (BTEX), and methyl tert-butyl ether (MTBE) beneath a limited portion of the offsite 32-acre parcel, which is downgradient of and attributable to the former onsite Texaco gas station. Hydrocarbon-impacted soil was encountered during construction activities in 2001 associated with the MTA easement, at the base of the aforementioned escarpment, next to a retaining wall below the former onsite Texaco station. According to the RWQCB, approximately 300 cubic yards of impacted soil in this area were excavated. Two soil vapor extraction systems (SVEs) operated onsite - the first from March 2001 to June 2002 to remediate a thin layer of of free-phase gasoline within the capillary fringe near the escarpment portion of the property, and the second from October 2003 through circa September 2005 to remediate soil impacted by gasoline releases from the upper 8.0-acre property. Confirmation soil samples taken in May 2005 were non-detect for TPH-g, BTEX, and MTBE; results for other compounds were well below the EPA's residential Preliminary Remediation Goals (PRGs) in place at the time. By June 2005, the SVE system had removed 365 pounds of VOCs, indicating that the soil cleanup goals were achieved.

There were reportedly 20 groundwater wells installed at the larger former Cornfield site containing the property since 2000. Groundwater flow direction was demonstrated to be to the southwest. A 2006 RWQCB letter included a No Further Requirements (NFR) determination for soils at the property; however, high BTEX concentrations remained in groundwater at that time and therefore groundwater assessment, sampling, monitoring and remediation were still required by the Board at that time.

Cardno ATC also reviewed an Annual Groundwater Monitoring Report, prepared by ARCADIS and dated January 23, 2014 (documenting groundwater monitoring activities that took place in 2013). According to the report, BMW-11 was decommissioned in August of 2006. VEW-2 was last sampled on March 19, 2003, and identified ethylbenzene with a concentration of 340 micrograms per liter (ug/L) as the only constituent that exceeded the maximum contaminant level (MCL) of 300 ug/L for ethylbenzene. MW-2 (located on the 8.0-acre subject property) was last sampled on August 5, 2003 and concentrations of constituents analyzed were non-detect above their laboratory reporting limits. MW-18 (also located on the 8.0-acre subject property) was last sampled on January 31, 2007 and concentrations of constituents analyzed were non-detect above their laboratory reporting limits. The above-mentioned wells on the property are associated with the SLIC case that is currently open and associated with the UPRR Cornfield Yard (also referred to as the former Cornfield site in regulatory documents) that was discussed further above. The wells themselves are not considered an environmental concern; however, they should be properly abandoned by the responsible party when they are no longer required.

In a letter dated September 25, 2013, ARCADIS requested closure of the 8.0-acre property and well destruction for MW-2 and MW-18, the two groundwater monitoring wells on the 8.0-acre property. ARCADIS indicated that the majority of the wells associated with the former Texaco station had been previously abandoned. According to ARCADIS, analytical data collected from August 2000 through August 2003 at MW-2 (located by the MTA easement) determined that concentrations for VOCs were non-detect or very close to reporting limits for Volatile and Extractable Fuel Hydrocarbons. At MW-18, groundwater data was collected from July 2002 to January 2007 and concentrations of VOCs and Volatile and Extractable Fuel Hydrocarbons were below laboratory reporting limits. Groundwater gauging data was collected at MW-18 from July 2002 through September 2012 to assist in groundwater elevation contours of the property/larger former Cornfield site. ARCADIS concluded that data collected at MW-18 and MW-2 is not necessary to further characterize impacts to groundwater. A review of groundwater contamination plume maps supports ARCADIS' conclusion. However, given that no response has been received from the RWQCB (per the online files available on GeoTracker) and the status of this cleanup program (aka SLIC case) remains as 'open-verification monitoring,' it is considered a *recognized environmental condition.* If the RWQCB issues regulatory closure to the 8.0-acre subject site in response to the ARCADIS request, this conclusion may change to either an *historical recognized environmental condition* or a *controlled recognized environmental*

condition (depending on whether there are any conditions placed on regulatory closure). As it stands now, the 2006 NFR for soils on the property requires that, if the property is sold to another party, the RWQCB must be notified of any change in facility operations (e.g., storage and handling of chemicals or processing/disposal of wastes) by the new owners.

Cardno ATC verified with the Department of Conservation's Division of Oil, Gas & Geothermal Resources (DOGGR) Well Finder website that an abandoned oil well in the northern portion of the property in the vicinity of the oil aboveground storage tanks (ASTs) observed on the Sanborn Maps dating back to 1906. The presence of an abandoned oil well onsite is not considered to represent a *recognized environmental condition* per se*;* however, it is a notable finding and may affect the proposed redevelopment of the property. The property is also located within a methane zone. The Los Angeles Department of Building and Safety (LADBS) and DOGGR should be contacted with regard to requirements, if any, relative to any potential redevelopment of the property in the vicinity of the former oil well. For example, re-abandonment of the oil well to current standards and/or a methane barrier may be required.

According to groundwater plume maps, the isoconcentration contour for benzene at BMW-4 is depicted as bordering the property. Although BMW-4 is over 100 feet (the critical distance factor) from the property, the inferred benzene plume is within the 100 feet of the property, which therefore represents a potential *vapor encroachment condition* (VEC).

It should be noted that the adjacent, 32-acre portion of the former Cornfield site is also listed as a voluntary cleanup site by the Department of Toxic Substances Control (DTSC). The status is listed as 'Active' as of November 17, 2014; however, reports posted online on the DTSC's EnviroStor database go back to 1989. The most recent document posted online is an approval letter from the DTSC, dated September 11, 2014 indicating that the DTSC "has completed its review of the Final Sampling and Analysis Plan (SAP) for the Los Angeles State Historic Park Site (Site) submitted by Group Delta on September 10, 2014. The SAP describes the field and analytical procedures that will be used to delineate the vertical and lateral extent of arsenic and lead contamination in soil at the Site." Based on the fact that the arsenic/lead impact is reported in *soil* at this adjacent site (which is at a lower topographic elevation relative to the subject property) and given that the DTSC is apparently working with the State of California (Department of Parks and Recreation) to address this issue, it is not considered to represent a *recognized environmental condition* to the subject property at this time and an extensive file review of the DTSC records for this adjacent site was not conducted as part of the scope of this ESA.

1.3 Significant Data Gap Summary

Data gaps may have been encountered during the performance of this Phase I ESA and are discussed within the section of the report where they were encountered. However, according to ASTM Standard Practice E1527-13, data gaps are only significant if "other information and/or professional experience raises reasonable concerns involving the data gap." The following table is a summary of significant data gaps identified in this report.

SIGNIFICANT DATA GAP SUMMARY	
Report Section	**Description**
3.5 Current Uses of Adjoining Properties	No significant data gaps identified.
4.2 Environmental Liens or Activity and Use Limitations (AULs)	No significant data gaps identified.
5.1 Standard Environmental Records	No significant data gaps identified.
5.2 Physical Setting Sources	No significant data gaps identified.
5.3 Historical Records Sources	No significant data gaps identified.
6.1 Methodology and Limiting Conditions	Cardno ATC encountered access restrictions to the northeastern most portion of the property, which is leased to the Griffth Company (Griffth Lease), and the Metropolitan Transportation Authority (MTA) easement and two buildings occupied by the MTA located at the southern most portion of the property. These limiting conditions are considered a significant data gap.
7.0 Subsurface Vapor Migration	No significant data gaps identified.
8.0 Interviews	A site escort was not available for Cardno ATC to interview.

1.4 Recommendations

Based on information collected from the Phase I ESA, Cardno ATC offers the following recommendation(s).

- Due to the lack of documentation regarding the USTs potentially located in the southern most portion of the property, a geophysical survey is recommended. Based on the results of the geophysical survey, tank removal and/or a limited subsurface investigation may be warranted.

- Given that the 8.0-acre property is part of a larger SLIC site that is undergoing verification monitoring, the onsite monitoring well(s) will need to be maintained/accessible to facilitate the ongoing monitoring activities if/as required by the RWQCB. (Note that a request for closure for the 8.0-acre property portion was submitted to the RWQCB by ARCADIS on September 25, 2013 as previously noted; however, pending receipt of any further information from the RWQCB, it does not appear that such closure has yet been granted to the property.)

- Given the potential *vapor encroachment condition* identified on the property, soil vapor sampling and/or installation of a vapor barrier for any new structures built in the central portion of the property may be warranted.

- The LADBS and DOGGR should be contacted with regard to requirements, if any, relative to any potential redevelopment of the property in the vicinity of the former oil well. For example, re-abandonment of the oil well to current standards and/or a methane barrier may be required.

2.0 INTRODUCTION

2.1 Purpose

The purpose of this Phase I ESA was to identify *recognized environmental conditions* in connection with the property at the time of the site reconnaissance. The scope of work for this Phase I ESA may also include certain potential environmental conditions beyond the scope of ASTM Standard Practice E1527-13 as listed below. This report documents the findings, opinions and conclusions of the Phase I ESA.

2.2 Scope

This Phase I ESA was conducted in general accordance with the ASTM Standard Practice E1527-13, consistent with a level of care and skill ordinarily practiced by the environmental consulting profession currently providing similar services under similar circumstances. Significant additions, deletions or exceptions to ASTM Standard Practice E1527-13 are noted below or in the corresponding sections of this report. The scope of this assessment included an evaluation of the following:

- Physical setting characteristics of the property through a review of referenced sources such as topographic maps and geologic, soils and hydrologic reports.

- Usage of the property, adjoining properties and surrounding area through a review of referenced historical sources such as land title records, fire insurance maps, city directories, aerial photographs, prior reports and interviews.

- Observations and interviews regarding current property usage and condition including: the use, treatment, storage, disposal or generation of hazardous substances, petroleum products, hazardous wastes, nonhazardous solid wastes and wastewater.

- Usage of adjoining and surrounding area properties and the likely impact of known or suspected releases of hazardous substances or petroleum products from those properties in, on, or at the property.

- Information in referenced environmental agency databases and local environmental records, within the specified approximate minimum search distance from the property.

- Potential for subsurface vapor migration in, on or at the property as described in Section 7.0.

The scope of the assessment also included consideration of the following potential environmental issues or conditions that are beyond the scope of ASTM Standard Practice E1527-13:

- The scope of work for the Mold Screening was intended to be consistent with ASTM E 2418-06: Standard Guide for Readily Observable Mold and Conditions Conducive to Mold in Commercial Buildings: Baseline Survey Process. The scope of work, including potential deviations from the Standard Guide, is described as follows. The interview was limited to at least one knowledgeable person from property management or engineering staff. The document review was limited to only those relevant documents made readily available to Cardno ATC in a timely manner. The physical observations were limited to certain Heating, Ventilation and Air Conditioning (HVAC) system areas and other readily accessible building areas likely to become subject to water damage, plumbing leaks, and flooding. Unless noted otherwise herein, Cardno ATC observed the HVAC equipment room(s) and accessible mechanical rooms and, in buildings with package units in the ceiling, at least one unit per floor. Also, unless noted otherwise, Cardno ATC observed accessible areas of the basement (or lowest level), the top floor, the roof (including any penthouse areas) and at least one mid-level floor (if applicable). For multi-story buildings, the total number of floors observed (inclusive of those already mentioned) was intended to be up to 10% of the total number of floors (if readily accessible). For hotel and multi-family buildings, Cardno ATC targeted the lowest and highest levels and roof as described above and up to 10% of units, including one per floor if readily accessible. The Mold Screening did not include destructive methods of observation. No sampling or laboratory analyses were conducted. The Mold Screening service as described herein was limited in scope and by the time and cost

considerations typically associated with performing a Phase I ESA. No method can guarantee that a hazard will be discovered if evidence of the hazard is not encountered within the performance of the Mold Screening as authorized and that opinions and conclusions must, out of necessity, be extrapolated from limited information and discrete, non-continuous data points. Unidentified mold or other microbial conditions may exist on the property.

- Visual observation of suspect asbestos-containing materials (ACM), consisting of providing an opinion on the condition of suspect ACM on the property based upon visual observation during the site reconnaissance. No sampling of suspect ACM was conducted.

- Radon document review, consisting of the review of published radon data with regard to the potential for elevated levels of radon gas in the surrounding area of the property. No radon sampling was conducted.

- Lead in drinking water data review, consisting of contacting the water supplier for information regarding whether or not the potable water provided to the property meets the drinking water standards for lead.

- Visual observation of suspect lead-based paint (LBP), consisting of providing an opinion on the potential for LBP based on the construction date of buildings on the property and visual observation of the condition of suspect LBP.

- Wetlands document review, consisting of a review of a current National Wetlands Inventory map of the surrounding area to note if the property is identified on the map as having a wetland.

- Flood plain document review, consisting of a review of a reasonably ascertainable flood plain map of the surrounding area to note if the property is identified on the map as being located within a flood plain.

2.3 Significant Assumptions

The assumptions in this report were not considered as having a significant impact on the determination of *recognized environmental conditions* associated with the property.

2.4 Limitations and Exceptions

Cardno ATC has prepared this Phase I ESA report using reasonable efforts to identify *recognized environmental conditions* associated with hazardous substances or petroleum products in, on, or at the property. Findings contained within this report are based on information collected from observations made on the day(s) of the site reconnaissance and from reasonably ascertainable information obtained from certain public agencies and other referenced sources.

The ASTM Standard Practice E 1527-13 recognizes inherent limitations for Phase I ESAs, including, but not limited to:

- *Uncertainty Not Eliminated:* a Phase I ESA cannot wholly eliminate uncertainty regarding the potential for *recognized environmental conditions* in connection with a property.

- *Not Exhaustive:* a Phase I ESA is not an exhaustive assessment of the environmental conditions on a property.

- *Past Uses of the Property:* a Phase I ESA does not require review of standard historical sources at less than five year intervals. Therefore, past uses of the property may not be discovered.

Users of this report may refer to ASTM Standard Practice E 1527-13 for further information regarding these and other limitations. This report is not definitive and should not be assumed to be a complete and/or specific definition of all conditions above or below grade. Current subsurface conditions may differ from the conditions determined by surface observations, interviews and reviews of historical sources. The most

reliable method of evaluating subsurface conditions is through intrusive techniques, which are beyond the scope of this report. Information in this report is not intended to be used as a construction document and should not be used for demolition, renovation, or other property construction purposes. Any use of this report by any party, beyond the scope and intent of the original parties, shall be at the sole risk and expense of such user.

Cardno ATC makes no representation or warranty that the past or current operations at the property are, or have been, in compliance with all applicable federal, state and local laws, regulations and codes. This report does not warrant against future operations or conditions, nor does it warrant against operations or conditions present of a type or at a location not investigated. Regardless of the findings stated in this report, Cardno ATC is not responsible for consequences or conditions arising from facts not fully disclosed to Cardno ATC during the assessment.

An independent data research company provided the government agency databases referenced in this report. Information on surrounding area properties was requested for approximate minimum search distances and is assumed to be correct and complete unless obviously contradicted by Cardno ATC's observations or other credible referenced sources reviewed during the assessment. Cardno ATC shall not be liable for the database firm's failure to make relevant files or documents properly available, to properly index files, or otherwise to fail to maintain to produce accurate or complete records.

Cardno ATC makes no warranty, guarantee or certification regarding the quality, accuracy or reliability of any prior report provided to Cardno ATC and discussed in this Phase I ESA report. Cardno ATC expressly disclaims any and all liability for any errors or omissions contained in any prior reports provided to Cardno ATC and discussed in this Phase I ESA report.

Cardno ATC used reasonable efforts to identify evidence of aboveground and underground storage tanks and ancillary equipment on the property during the assessment. "Reasonable efforts" were limited to observation of accessible areas, review of referenced public records and interviews. These reasonable efforts may not identify subsurface equipment or evidence hidden from view by things including, but not limited to, snow cover, paving, construction activities, stored materials and landscaping.

Any estimates of costs or quantities in this report are approximations for commercial real estate transaction due diligence purposes and are based on the findings, opinions and conclusions of this assessment which are limited by the scope of the assessment, schedule demands, cost constraints, accessibility limitations and other factors associated with performing the Phase I ESA. Subsequent determinations of costs or quantities may vary from the estimates in this report. The estimated costs or quantities in this report are not intended to be used for financial disclosure related to FASB Statement No. 143, FASB Interpretation No. 47, Sarbanes/Oxley Act or any United States Securities and Exchange Commission reporting obligations, and may not be used for such purposes in any form without the express written permission of Cardno ATC.

Cardno ATC is not a professional title insurance or land surveyor firm and makes no guarantee, express or implied, that any land title records acquired or reviewed in this report, or any physical descriptions or depictions of the property in this report, represent a comprehensive definition or precise delineation of property ownership or boundaries.

The Environmental Professional Statement in Section 1.1 of this report does not "certify" the findings contained in this report and is not a legal opinion of such *Environmental Professional*. The statement is meant to document Cardno ATC's opinion that an individual meeting the qualifications of an *Environmental Professional* was involved in the performance of the assessment and that the activities performed by, or under the supervision of, the *Environmental Professional* were performed in conformance with the standards and practices set forth in 40 CFR Part 312 per the methodology in ASTM Standard Practice E 1527-13 and the scope of work for this assessment.

Per ASTM Standard Practice E 1527-13, Section 6, User Responsibilities, the User of this assessment has specific obligations for performing tasks during this assessment that will help identify the possibility of *recognized environmental conditions* in connection with the property. Failure by the User to fully comply with the requirements may impact their ability to use this report to help qualify for *Landowner Liability Protections* (LLPs) under CERCLA. Cardno ATC makes no representations or warranties regarding a User's qualification for liability protection under any federal, state or local laws or regulations.

In accordance with the ASTM Standard Practice E 1527-13, this report is presumed to be valid for a six month period. If the report is older than six months, the following information must be updated in order for the report to be valid: (1) regulatory review, (2) site visit, (3) interviews, (4) specialized knowledge, and (5) environmental liens. Reports older than one year may not meet ASTM Standard Practice E 1527-13 and therefore, the report must be updated to reflect current conditions and property-specific information.

Other limitations and exceptions that are specific to the scope of this report may be found in corresponding sections.

2.5 Special Terms and Conditions (User Reliance)

This report is for the use and benefit of, and may be relied upon by, Lincoln Property Company, and any of its affiliates and their respective successors and assigns, in connection with a commercial real estate transaction involving the property. No third party is authorized to use this report for any purpose. Any use by or distribution of this report to third parties, without the express written consent of Cardno ATC, is at the sole risk and expense of such third party.

3.0 SITE DESCRIPTION

3.1 Location and Legal Description

The current property address is 1251 North Spring Street, Los Angeles, Los Angeles County, California 90012. Historical addresses associated with the property include 1322 and 1380 North Broadway. A Site Vicinity Map is located in Appendix A, a Site Plan is located in Appendix B and Site Photographs are provided in Appendix C. The Assessor's Parcel Number (APN) for the property is 5414-016-002. The property's legal description is included in the lien search report located in Appendix L.

3.2 Surrounding Area General Characteristics

The property is located within an area characterized by mixed residential, commercial, and industrial uses. Surface topography across the property and in the surrounding area is variable with a slope towards the southeast. Specific adjacent and abutting property uses are summarized in Section 3.5.

3.3 Current Use of the Property

The property is an approximately 8.0-acre fenced strip of land that is mostly vacant. Two buildings associated with the Los Angeles County Metropolitan Transportation Authority (MTA) easement are located on the southern most portion of the property. The MTA conducts maintenance on buses/trucks and utilizes multiple large storage containers. According to building permit records, the MTA easement consists of an 8,000 square-foot maintenance building (built circa 1956), a 1,600 square-foot "wash rack" building (built circa 1953), and a modular office building (built circa 2009). The northeastern most portion of the property is leased out to the Griffith Company (Griffith Lease). The Griffith Company operates in conjunction with the nearby bridge construction project. The Griffith Lease consists of three modular office buildings (estimated to be 800 square feet each), several storage containers, and the storage of various construction related materials. The rest of the property is vacant land with multiple advertisement billboards located in various locations along North Broadway. Cardno ATC did not have access to the MTA or Griffith Lease areas of the property.

3.4 Description of Property Improvements

The following table provides general descriptions of property improvements.

PROPERTY IMPROVEMENTS	
Size of Property (approximate)	8.0 acres
General Topography of Property	Variable with an overall slope to the southeast
Adjoining and/or Access/Egress Roads	North Broadway runs along the west, northwest, and northern perimeter of the property. Railroad tracks run along the east and southeast perimeter of the property.
Paved or Concrete Areas (including parking)	The MTA easement and Griffith Lease areas are concrete-paved and there are interspersed concrete-paved areas within the vacant portion of the property.
Unimproved Areas	Mostly along the central portion of the property
Landscaped Areas	None, aside from natural grass and weeds
Surface Water	None
Potable Water Source	Los Angeles Department of Water and Power (LADWP)
Sanitary Sewer Utility	Los Angeles County Sanitation District
Storm Sewer Utility	Los Angeles County Sanitation District
Electrical Utility	LADWP
Natural Gas Utility	Southern California Gas
Current Occupancy Status	50%
Unoccupied Buildings/Spaces/Structures	Central portion of the property is vacant
Number of Occupied Buildings	Approximately 5, including the modular office buildings
Building Name or General Building Description	MTA Maintenance
Number of Floors	One

Total Square Feet of Space (approximate)	7,000
Construction Completion Date (year)	MTA "wash rack" building: 1953 MTA maintenance building: circa 1956 MTA modular office: circa 2009 Griffith Company modular offices: unknown
Construction Type	Steel and wood frame
Interior Finishes Description	Unknown
Exterior Finishes Description	Steel and wood
Cooling System Type	Unknown
Heating System Type	Unknown
Emergency Power	Unknown

3.5 Current Uses of Adjoining Properties

Current uses of the adjoining properties were observed to be as described in the following table.

CURRENT USES OF ADJOINING PROPERTIES				
Direction From Property	**Address**	**Occupant(s) Name**	**Current Use**	**Potential Environmental Conditions**
South	1231 North Spring Street	Capitol Milling Company	Movie filming	Although this site is currently utilized for moving filming purposes, this site was a milling company that operated in this location for over 100 years, from the late 1800s until it closed in the early 1990s. See Section 5.1 for further details of database review.
Southwest	942 North Broadway	East West Bank	Commercial	None
Southwest	942 North Broadway	Various	Commercial	No dry cleaners or other tenants of obvious environmental concern were observed from the curbside inspection.
Southwest	950 North Broadway	Shiseido	Commercial	None
Southwest	960-984 North Broadway	Various	Commercial	No dry cleaners or other tenants of obvious environmental concern were observed from the curbside inspection.
West	Unknown	None	Parking structure	None
Northwest, beyond North Broadway	1011-1019 North Broadway	Various	Commercial	No dry cleaners or other tenants of obvious environmental concern were observed from the curbside inspection.
Northwest, beyond North Broadway	1029 North Broadway	None	Vacant building	None
Northwest, beyond North Broadway	1031 and 1037 North Broadway	Nolasco Studios	Commercial	None
Northwest, beyond North Broadway	1039 North Broadway	St. Peter's Italian Church	Institutional	None
Northwest, beyond North Broadway	1051 North Broadway	Casa Italiana	Institutional	None

4.0 USER PROVIDED INFORMATION

The following section summarizes information (if any) provided by Lincoln Property Company (User) with regard to the Phase I ESA. Documentation may be found in Appendix D or where referenced in this report.

4.1 Title Records

User provided no title records information.

4.2 Environmental Liens or Activity and Use Limitations (AULs)

The User provided no information regarding property environmental liens or activity and use limitations (AULs). Cardno ATC contracted Environmental Data Resources, Inc. (EDR) to perform an environmental lien search for the property. According to EDR, no environmental liens or AULs (such as engineering controls, land use restrictions or institutional controls) were identified for the property. A copy of the report is included in Appendix L. The review of the environmental lien and AUL search did not identify past uses indicating *recognized environmental conditions* in connection with the property.

4.3 Specialized Knowledge or Experience of the User

The User provided no specialized knowledge or experience regarding *recognized environmental conditions* associated with the property.

4.4 Significant Valuation Reduction for Environmental Issues

The User provided no information regarding a significant valuation reduction for environmental issues associated with the property.

4.5 Owner, Property Manager, and Occupant Information

The User provided no specific information identifying the property owner, manager or occupants.

4.6 Reason For Performing Phase I ESA

According to information provided by the User, this Phase I ESA will be used in connection with a commercial real estate transaction to identify *recognized environmental conditions* associated with the property.

4.7 Other User Provided Documents

The User provided no other documents as described in the ASTM Standard Practice E 1527-13.

5.0 RECORDS REVIEW

5.1 Standard Environmental Records

The regulatory agency database report discussed in this section, provided by EDR of Shelton, Connecticut, was reviewed for information regarding reported use or release of hazardous substances and petroleum products on or near the property. Unless otherwise noted, the information provided by the regulatory agency database report and other sources referenced in this report, were considered sufficient for *recognized environmental condition (REC)*, *controlled recognized environmental condition (CREC)*, *historical recognized environmental condition (HREC)* or *de minimis condition* determinations without conducting supplemental agency file reviews. Cardno ATC also reviewed the "unmappable" (also referred to as "orphan") listings within the database report, cross-referencing available address information and facility names. Unmappable sites are listings that could not be plotted with confidence, but are potentially in the general area of the property, based on the partial street address, city, or zip code. Any unmappable site that was identified by Cardno ATC as being within the approximate minimum search distance from the property, based on the site reconnaissance and/or cross-referencing to mapped listings, is included in the discussion within this section. The complete regulatory agency database report may be found in Appendix E.

5.1.1 Federal Database Findings

The property was identified on the following federal databases searched by EDR.

L.A. Signal Shop; Columbia Pictures
1251 North Spring Street, Los Angeles, California
Databases: NPDES, RCRA-NonGen, FINDS
Approximate Distance from the Property: N/A (Not Applicable, target property)
Assumed Groundwater Gradient: N/A
Regulatory Data Summary: The property, as L.A. Signal Shop, has a terminated NPDES, dated April 11, 2013. The property, as Columbia Pictures, is identified on the Resource Conservation and Recovery Act (RCRA) NonGen database as a site that does not presently generate hazardous waste as of October 29, 1998. No violations were listed for this site. The FINDS database references the RCRA listing. Columbia Pictures were presumably on the property to conduct the filming of the movie, Money Train in 1995; however, the exact start and end dates they were on the property is unknown.
Discussion: Based on the absence of reported violations and releases, and given that these businesses are no longer present, these database listings are not considered to present an environmental concern to the property.

Based on distance, topography, assumed groundwater gradient, current regulatory status, and/or the absence of reported releases, none of the offsite locations listed in the federal agency databases are considered to represent a likely past, present or material threat of release in, on, or at the property. Given the physical setting characteristics of the property and surrounding area, supplemental agency file reviews were not warranted to verify the database report information.

5.1.2 State and Tribal Database Findings

The property was identified on the following state or tribal databases searched by EDR.

L.A. Signal Shop; Southern Pacific Trans Co.; 1X Southern Pacific; Veolia Transportation Services Inc.; Columbia Pictures Money Train
1251 North Spring Street, Los Angeles, California
Databases: HAZNET, HIST UST, CA FID UST, SWEEPS UST, CHMIRS
Approximate Distance from the Property: N/A (Not Applicable, target property)
Assumed Groundwater Gradient: N/A
Regulatory Data Summary: The property, as L.A. Signal Shop, has historically utilized an 8,000-gallon gasoline UST and, as a result, appears on the CA FID UST and SWEEPS UST databases. L.A. Signal Shop is identified on the CHMIRS database, which indicated that a fuel truck spilled approximately 40 gallons of diesel for an unknown reason on June 14, 2001 and it was deemed contained. No other information was provided on the EDR database regarding this release.

The property is listed on the Facility and Manifest Data (HAZNET) database as a site that generates, or has generated, manifested waste as Columbia Pictures Money Train in 1995, Southern Pacific Trans Co. in 1996, 1X Southern Pacific in 1997, and Veolia Transportation Services Inc. from 2009 to 2013. The wastes generated as reported on the HAZNET database were other organic solids, other inorganic solid wastes, off-specification, aged or surplus organics, unspecified oil-containing wastes, contaminated soil from site clean-up, waste oil, and mixed oil.
Discussion: The HAZNET database does not track violators and the presence of a site on this database does not necessarily indicate that a problem exists at that facility. Based on the fact that the release identified in the CHMIRS database was deemed contained, it is not considered to represent an environmental concern. However, based on the absence of lack of information regarding the location and status of these USTs, they are considered to represent a *recognized environmental condition*.

Union Pacific/Railroad Co.; Ginsberg Naftulin; Wu Texaco
1322 North Spring Street, Los Angeles, California (historical property address)
Databases: HIST CORTESE, CA FID UST, SWEEPS UST, LUST, Hist Auto Station, HIST UST
Approximate Distance from the Property: N/A
Assumed Groundwater Gradient: N/A
Regulatory Data Summary: The property, as Union Pacific/Railroad Co., was identified on the CA FID UST and SWEEPS UST databases for former USTs. Union Pacific/Railroad Co. was also identified on the HIST CORTESE database as a site that appears on the LUST database. Union Pacific/Railroad Company is identified for a LUST case that received regulatory closure on December 22, 1997. The leak was first reported on November 6, 1990 with potential impacts to an aquifer used for drinking water with gasoline. The cause of the leak is unknown.

The property, as Ginsberg Naftulin, was identified on the historical auto station database from 1929 to at least 1937.

The property, as Wu Texaco, was identified as historically utilizing three gasoline USTs.

Based on a letter prepared by the Regional Water Quality Control Board (RWQCB), dated June 6, 2006 and addressed to Union Pacific Railroad Company (UPRR), the property had four underground storage tanks (USTs) (two 8,000-gallon USTs, one 6,000-gallon UST, and one 1,000-gallon UST), associated dispensing equipment, a hydraulic lift (presumably in-ground), and a small office building. Reportedly, the gas station was demolished in 1989; USTs were removed in 1990. Although a leaking underground storage tank (LUST) case was opened for the property in 1990 at the time of tank closure, and the case was listed as closed by the RWQCB in 1997, it appears that additional assessment/remediation at the property was subsequently conducted, as described in Section 5.1.3. A more in depth file review at the RWQCB is pending.
Discussion: Based on the files reviewed from the RWQCB GeoTracker database, this former gas station is considered a *recognized environmental condition* to the property until a no further action letter for groundwater is issued by the RWQCB.

The following offsite locations were identified on the state and tribal databases searched by EDR.

Union Pacific Railroad - Cornfield Yard; Cornfield Site; Vacant
1245 North Spring Street, Los Angeles, California
Databases: SLIC, NPDES, ENVIROSTOR, VCP, HIST CORTESE, LUST
Approximate Distance from the Property: Adajcent to the southeast
Assumed Groundwater Gradient: Down- to cross-gradient
Regulatory Data Summary: This site has an NPDES permit, dated April 25, 2014, related to onsite construction activities. This site is a former Union Pacific Railroad facility that has been converted for use by the Metro Rail Gold Line and as a park. This site is a open SLIC site undergoing verification monitoring as of July 8, 2010.

The underlying groundwater is impacted with benzene, toluene, ethylbenzene, and xylenes (BTEX) constituents, primarily benzene. Cardno ATC reviewed an Annual Groundwater Monitoring Report, dated January 23, 2014 and prepared by ARCADIS. According to the report, groundwater samples collected on September 11, 2013 indicated BTEX constituents concentrations, at monitoring well four (BMW-4), were

detected at 5,900 micrograms per liter (ug/L), 210 ug/L, 2,400 ug/L, and 760 ug/L, respectively. ARCADIS indicated that benzene was demonstrating an overall decreasing trend in well BMW-4, from 15,000 ug/L in 2003. The report indicated that benzene and 1,2-dichloroethane concentrations at a downgradient monitoring well (BMW-6) were identified with a low concentration of 5.0 ug/L and 0.44 ug/L, respectively. According to groundwater plume maps, impacts were isolated to the central portion of the site, in the vicinity of the BMW-4 and bordering the perimeter of the property. The plume is estimated to be within 100 feet south of the property.

It should be noted that the adjacent, 32-acre portion of the former Cornfield site is also listed as a voluntary cleanup site by the Department of Toxic Substances Control (DTSC). The status is listed as 'Active' as of November 17, 2014; however, reports posted online on the DTSC's EnviroStor database go back to 1989. The most recent document posted online is an approval letter from the DTSC, dated September 11, 2014 indicating that the DTSC "has completed its review of the Final Sampling and Analysis Plan (SAP) for the Los Angeles State Historic Park Site (Site) submitted by Group Delta on September 10, 2014. The SAP describes the field and analytical procedures that will be used to delineate the vertical and lateral extent of arsenic and lead contamination in soil at the Site." Based on the fact that the arsenic/lead impact is reported in *soil* at this adjacent site (which is at a lower topographic elevation relative to the subject property) and given that the DTSC is apparently working with the State of California (Department of Parks and Recreation) to address this issue, it is not considered to represent a *recognized environmental condition* to the subject property at this time and an extensive file review of the DTSC records for this adjacent site was not conducted as part of the scope of this ESA.
Discussion: Based on current impacts to groundwater, this site is considered to represent a *recognized environmental condition* to the property at this time.

Capitol Milling Company
1231 North Spring Street, Los Angeles, California
Databases: CA FID UST, SWEEPS UST
Approximate Distance from the Property: Adajcent to the south
Assumed Groundwater Gradient: Downgradient
Regulatory Data Summary: This site appears on the CA FUD UST and SWEEP UST databases with an inactive status.
Discussion: Based on the downgradient hydrological position relative to the property and the absence of reported associated releases, this site is not considered to represent an environmental concern to the property at this time.

Buena Vista Chlorination Station/Department of Water and Power
1561 North Broadway, Los Angeles, California
Databases: CA FID UST, SWEEPS UST
Approximate Distance from the Property: Adajcent to the north, beyond North Broadway
Assumed Groundwater Gradient: Upgradient
Regulatory Data Summary: This site appears on the SWEEP UST database with no other information.
Discussion: Based on the absence of reported releases, this site is not considered to represent an environmental concern to the property at this time.

Domenich Basso, Inc
1201 North Broadway, Los Angeles, California
Databases: LUST, CA FID UST, SWEEPS UST, HIST UST
Approximate Distance from the Property: Adajcent to the northwest, beyond North Broadway
Assumed Groundwater Gradient: Upgradient
Regulatory Data Summary: This site is identified for a LUST case that received regulatory closure on November 28, 2001. The leak impacted soil with gasoline and was first discovered on March 26, 1991 during tank repair operations. This site has historically utilized three USTs of varying capacities and appears on the CA FUD UST and SWEEP UST databases.
Discussion: Based on the medium impacted (soil) and the subsequent regulatory closure, this site is not considered to represent an environmental concern to the property at this time.

Welcome Auto Service
1001 North Broadway, Los Angeles, California

Databases: CA FID UST, SWEEPS UST, Hist Auto Station
Approximate Distance from the Property: 311 feet to the west, beyond North Broadway
Assumed Groundwater Gradient: Cross-gradient
Regulatory Data Summary: This site is identified as a historical automobile gasoline and oil service station from at least 1937 to 2008. This site appears on the CA FUD UST and SWEEP UST databases for UST usage.
Discussion: Based on the absence of reported violations or releases and the cross-gradient location relative to the property, this site is not considered to represent an environmental concern to the property.

Berger Harry
1251 1/2 North Broadway, Los Angeles, California
Databases: Hist Cleaners
Approximate Distance from the Property: Adajcent to the northwest, beyond North Broadway
Assumed Groundwater Gradient: Upgradient
Regulatory Data Summary: This site is identified as a historical cleaner in 1924.
Discussion: Based on the absence of reported violations or releases, this site is not considered to represent an environmental concern to the property.

Martelotti Louis
1291 1/2 North Broadway, Los Angeles, California
Databases: Hist Cleaners
Approximate Distance from the Property: Adajcent to the northwest, beyond North Broadway
Assumed Groundwater Gradient: Upgradient
Regulatory Data Summary: This site is identified as a historical cleaner in 1929.
Discussion: Based on the absence of reported violations or releases, this site is not considered to represent an environmental concern to the property.

Goldman Sol
1331 1/2 North Broadway, Los Angeles, California
Databases: Hist Cleaners
Approximate Distance from the Property: Adajcent to the northwest, beyond North Broadway
Assumed Groundwater Gradient: Upgradient
Regulatory Data Summary: This site is identified as a historical cleaner from at least 1933 to 1937.
Discussion: Based on the absence of reported violations or releases, this site is not considered to represent an environmental concern to the property.

Bauer J J
1403 North Broadway, Los Angeles, California
Databases: Hist Auto Station
Approximate Distance from the Property: Adajcent to the northwest, beyond North Broadway
Assumed Groundwater Gradient: Upgradient
Regulatory Data Summary: This site is identified as a historical auto repair shop from at least 1933 to 1942.
Discussion: Based on the absence of reported violations or releases, this site is not considered to represent an environmental concern to the property.

Mrs. Benson Stella
1357 North Broadway, Los Angeles, California
Databases: Hist Auto Station
Approximate Distance from the Property: Adajcent to the northwest, beyond North Broadway
Assumed Groundwater Gradient: Upgradient
Regulatory Data Summary: This site is identified as a historical automobile gasoline and oil service station from at least 1933 to 1942
Discussion: Based on the absence of reported violations or releases, this site is not considered to represent an environmental concern to the property.

Based on distance, topography, assumed groundwater gradient, current regulatory status, and/or the absence of reported releases, none of the other sites listed in the state or tribal agency databases are

considered to represent a likely past, present or material threat of release in, on, or at the property. Given the physical setting characteristics of the property and surrounding area, supplemental agency file reviews were not warranted to verify the database report information.

5.1.3 Local Environmental Record Sources

Los Angeles Fire Department (LAFD)

The LAFD is the leading UST authority in the City of Los Angeles. According to the LAFD records, the southern most portion of the property (1251 North Spring Street) was occupied by an "Automotive & Work Equipment Shop." The 1957 Sanborn Map, shows a "Motor Car Repair" shop formerly located to the southeast of the current maintenance building. A permit was identified dated March 21, 1957 for the installation of four underground storage tanks (USTs) ranging from 435-gallons to 12,121-gallons in size. The tanks reportedly contained gasoline and were for private use. A subsequent permit dated March 4, 1975, was issued for alterations to a vapor recovery system. The owner identified on all the permits reviewed for this facility was the Southern Pacific Transportation Company. No further documentation regarding the location of these tanks or the removal was identified any the records reviewed. In addition, Cardno ATC did not have access to this portion of the site. Therefore, due to the lack of information regarding the location and status of these USTs, the tanks are considered a *recognized environmental condition.*

In addition, Cardno ATC reviewed permits for the historical property address of 1322 North Broadway. A report entitled Underground Storage Tank Removals – Cornfield Southern Pacific Transportation Company, prepared by SP Environmental Systems, Inc (SPES) and dated May 11, 1990, was reviewed. The report documented the removal of two 8,000, one 6,000, and one 1,000-gallon gasoline USTs on February of 1990. The USTs were associated with the former Texaco station that was located on the property. Eleven soil samples were collected from beneath the former USTs and analyzed for total petroleum hydrocarbons (TPH) and benzene, toluene, ethylbenzene, and xylenes (BTEX). According to a summary of analytical results, BTEX concentrations ranged from non-detected to 1,400,000 parts per billion (ppb) and gasoline concentrations ranged from non-detected to 25,000,000 ppb.

Cardno ATC reviewed a Subsurface Investigation Report, prepared by SPES and dated August 15, 1990. According to the report, five borings were drilled in the vicinity of the former tanks on July 25 and 26, 1990. The borings encountered a perched water layer at approximately 34 feet below ground surface (bgs) and a second perched water layer was encountered at 40 feet bgs. Soil samples were analyzed for BTEX and total petroleum purgable hydrocarbons (TOP) concentrations. Analytical results indicated a max BTEX concentration of 4,300 milligram per kilogram (mg/kg) and a max TOP concentration of 7,100 mg/kg. The impacts were highest in the soils immediately beneath the former USTs and declined with depth in the boreholes, but increased again in the zone in which the perched groundwater was encountered. SPES concluded that impacts from gasoline appeared to be mostly localized to the tank areas and that there was no evidence of any release to usable groundwater in the area.

Cardno ATC reviewed a Site Investigation and Remediation System Design for The Cornfield Property Report, prepared by Hydrologic Consultants, Inc. (HCI) and dated September 1991. HCI conducted a detailed site investigation in April of 1991 and advanced five soil borings. They advanced soil boring (WB-1) past the "perched" groundwater to a depth of 160 feet bgs and allowed the water level in the well to stabilize. HCI determined that local water table beneath the property was 34 feet bgs. The remaining four soil borings were advanced to a depth of 35 feet bgs. After each soil boring was drilled and sampled to its total depth, the boreholes were abandoned by back filling to the surface with a commercial grout mixture (EnviroPlug).

HCI installed four groundwater monitoring wells and to assess impact to the shallow water table. Fuel hydrocarbons were detected in soil samples collected near the shallow water table (depth interval of 30-35 feet bgs) in several of the boreholes. Hydrocarbons were also detected in a sample collected from WB-1 at a depth of 155 feet bgs and no fuel hydrocarbons were detected in other soil samples collected below the shallow water table in WB-1. HCI indicated that chromatographic result for this sample was not typical of gasoline which could indicate that other hydrocarbons (e.g., methane) could have been detected. HCI identified acetone and 2-butanone (industrial solvents and not typically found in petroleum based fuels) in

the soil samples analyzed and has no explanation for their presence. BTEX constituents were detected in every borehole sampled. Samples collected from the groundwater monitoring wells indicated that groundwater beneath the property was impacted with fuel constituents in concentrations that exceeded regulatory standards. However, concentrations of fuel constituents in groundwater appeared to decline with increasing distance down gradient from the former UST locations and no free product was observed. According to HCI, fuel constituents were not observed in nearby monitoring wells installed in the southeast-adjacent rail yard. Due to the absence of observable impacts to down gradient monitoring wells, HCI hypothesized that fuel and BTEX constituents are rapidly reduced to levels below detection by natural attenuation processes, such as, dispersion, volatilization and biodegradation. To further support their hypothesis, carbon disulfide was detected at low concentrations in one of the monitoring well (MW-3) located down gradient of the former USTs. Carbon disulfide is a natural byproduct of anaerobic biodegradation of organic compounds, which suggests that degradation of fuel constituents is currently occurring in the subsurface beneath the property.

According to HCI, removal of fuel constituents from soils in the unsaturated zone should be sufficient to remediate groundwater beneath the property. HCI designed a remediation system for the property to remediate impacts to soil. The system consisted of four continuous-service vapor extraction wells (VE-1 to VE-4) and two limited-service vapor extraction wells (VE-5 and VE-6) connected with a manifold to a regenerative blower, a catalytic thermal oxidation reactor, and associated surface piping and hardware.

Cardno ATC reviewed a No Further Action letter, prepared by the Regional Water Quality Control Board (RWQCB) and dated December 22, 1997. The letter confirmed the completion of site investigations and remedial action for the former USTs at 1322 North Broadway and no further action related to the UST release was required at that time. Please note, however, that this 1997 closure letter pre-dates a 2006 closure letter for soils only for this same site that was issued by the RWQCB. The 2006 closure letter is discussed further below in the RWQCB section.

Los Angeles County Public Health Investigation (PHI)

PHI is the leading authority in hazardous material files in the County of Los Angeles. According to PHI, there are no files pertaining to the historical property addresses: 1322 and 1380 North Broadway. The following is a discussion of files reviewed at PHI pertaining to the current property address 1251 North Spring Street.

A Hazardous Materials Incident Report, dated August 9, 1990, indicated that an unknown amount of concentrated tamed iodine and a low foaming acid leaked onto the ground. It was also indicated that a notice of violation (NOV) was issued with samples taken. There were no other records at the LAFD regarding this incident.

According to a Report of Investigation, prepared by the LAFD and dated March 15, 1991, two tanker rail cars derailed on February 9, 1991. A Southern Pacific Transportation Company (SPTC) wrecking crew rerailed the first tanker rail car which contained a mildly caustic solution. The crew attempted to rerail the second tanker rail car, which contained approximately 20,000 gallons of aqueous acrylamide, and caused the tanker to leak an unknown liquid. A SPTC representative identified the liquid from the leak as a non-hazardous coolant that surrounds the inner acrylamide tank and the LAFD was notified of the incident. There were no records of follow-up investigations from the LAFD regarding this incident.

On July 1, 2011, Veolia Transportation Services (VTS) was identified as a hazardous waste generator of waste oil filters, waste oil, waste absorbent, and waste antifreeze. A notice to comply, dated August 1, 2011, required VTS to provide hazardous waste labels on all hazardous waste containers, provide a metal container to store contaminated oily wash towels, and to maintain a current Certified Unified Program Agency permit onsite.

Based on the information reviewed at the PHI, the NOVs and NTCs identified for the site property appear to be associated with the railroad itself and do not appear to present a recognized environmental concern to the property at this time.

California Environmental Protection Agency, Department of Toxic Substances Control (DTSC)

The 8.0-acre subject property is part of a larger site identified as the former Cornfield site. The former Cornfield site included the 8.0-acre subject property, a 32-acre parcel, and a 10-acre Metropolitan Transportation Authority (MTA) easement. The 8.0-acre property is situated at a higher elevation compared to the remainder of the former Cornfield site. Along the eastern edge of the property, there is a long, steep slope (escarpment) that separates it from the offsite areas of the former Cornfield site.

Cardno ATC searched the DTSC's online EnviroStor database for records regarding the subject property; the DTSC has no files pertaining to the subject property.

It should be noted that the adjacent, 32-acre portion of the former Cornfield site is listed as a voluntary cleanup site by the Department of Toxic Substances Control (DTSC). The status is listed as 'Active' as of November 17, 2014; however, reports posted online on the DTSC's EnviroStor database go back to 1989. The most recent document posted online is an approval letter from the DTSC, dated September 11, 2014 indicating that the DTSC "has completed its review of the Final Sampling and Analysis Plan (SAP) for the Los Angeles State Historic Park Site (Site) submitted by Group Delta on September 10, 2014. The SAP describes the field and analytical procedures that will be used to delineate the vertical and lateral extent of arsenic and lead contamination in soil at the Site." Based on the fact that the arsenic/lead impact is reported in *soil* at this adjacent site (which is at a lower topographic elevation relative to the subject property) and given that the DTSC is apparently working with the State of California (Department of Parks and Recreation) to address this issue, it is not considered to represent a *recognized environmental condition* to the subject property at this time and an extensive file review of the DTSC records for this adjacent site was not conducted as part of the scope of this ESA.

Regional Water Quality Control Board (RWQCB)

Cardno ATC searched the RWQCB's GeoTracker database for records regarding the property.

Based on a letter prepared by the RWQCB for the historical property address, 1322 North Broadway, dated June 6, 2006 and addressed to Union Pacific Railroad Company (UPRR), the property had four underground storage tanks (USTs) (two 8,000-gallon USTs, one 6,000-gallon UST, and one 1,000-gallon UST), associated dispensing equipment, a hydraulic lift (presumably in-ground), and a small office building. Reportedly, the gas station was demolished in 1989; USTs were removed in 1990. Although a leaking underground storage tank (LUST) case was opened for the property in 1990 at the time of tank closure, and the case was listed as closed by the RWQCB in 1997, it appears that additional assessment/remediation at the property was subsequently conducted, as described in the following paragraphs.

Soil samples were collected in 1990 during the tank removal activities; site investigations were conducted between 1999 and 2001, which indicated that soil and groundwater had been impacted by TPHg, BTEX, and methyl tert-butyl ether (MTBE) beneath a limited portion of the offsite 32-acre parcel, which is down gradient of and attributable to the former onsite Texaco gas station. Hydrocarbon-impacted soil was encountered during construction activities in 2001 associated with the MTA easement, at the base of the aforementioned escarpment, next to a retaining wall below the former onsite Texaco station. According to the RWQCB, approximately 300 cubic yards of impacted soil in this area were excavated. Two soil vapor extraction systems (SVEs) operated onsite - the first from March 2001 to June 2002 to remediate a thin layer of of free-phase gasoline within the capillary fringe near the escarpment portion of the property, and the second from October 2003 through circa September 2005 to remediate soil impacted by gasoline releases from the upper 8.0-acre property. Confirmation soil samples taken in May 2005 were non-detect for TPH-g, BTEX, and MTBE; results for other compounds were well below the EPA's residential Preliminary Remediation Goals (PRGs) in place at the time. By June 2005, the SVE system had removed 365 pounds of volatile organic compounds (VOCs), indicating that the soil cleanup goals were achieved.

There were reportedly 20 groundwater wells installed at the site (the larger site containing the property) since 2000. Groundwater flow direction was demonstrated to be to the southwest. This 2006 RWQCB letter included a No Further Requirements (NFR) determination for soils at the property; however, high BTEX concentrations remained in groundwater at that time and therefore groundwater assessment, sampling, monitoring and remediation were still required by the Board at that time.

Cardno ATC also reviewed an Annual Groundwater Monitoring Report of the 32-acre portion of the former Cornfield site (1245 North Spring Street), prepared by ARCADIS and dated January 23, 2014 (documenting groundwater monitoring activities that took place in 2013). According to the report, BMW-11 was decommissioned in August of 2006. VEW-2 was last sampled on March 19, 2003, and identified ethylbenzene with a concentration of 340 micrograms per liter (ug/L) as the only constituent that exceeded the maximum contaminant level (MCL) of 300 ug/L for ethylbenzene. MW-2 (located on the 8.0-acre subject property) was last sampled on August 5, 2003 and concentrations of constituents analyzed were non-detect above their laboratory reporting limits. MW-18 (also located on the 8.0-acre subject property) was last sampled on January 31, 2007 and concentrations of constituents analyzed were non-detect above their laboratory reporting limits. The above-mentioned wells on the property are associated with the SLIC case that is currently open and associated with the UPPR Cornfield Yard that was discussed further above. The wells themselves are not considered an environmental concern; however, they should be properly abandoned by the responsible party when they are no longer required.

In a letter dated September 25, 2013, ARCADIS requested closure of the 8.0-acre property and well destruction for MW-2 and MW-18, the two groundwater monitoring wells on the property. ARCADIS indicated that the majority of the wells associated with the former Texaco station had been previously abandoned. According to ARCADIS, analytical data collected from August 2000 through August 2003 at MW-2 (located by the MTA easement) determined that concentrations for VOCs were non-detect or very close to reporting limits for Volatile and Extractable Fuel Hydrocarbons. At MW-18, groundwater data was collected from July 2002 to January 2007 and concentrations of VOCs and Volatile and Extractable Fuel Hydrocarbons were below laboratory reporting limits. Groundwater gauging data was collected at MW-18 from July 2002 through September 2012 to assist in groundwater elevation contours of the property/larger former Cornfield site. ARCADIS concluded that data collected at MW-18 and MW-2 is not necessary to further characterize impacts to groundwater. A review of groundwater contamination plume maps supports ARCADIS' conclusion. However, given that no response has been received from the RWQCB (per the online files available on GeoTracker) and the status of this cleanup program (aka SLIC case) remains as 'open-verification monitoring,' it is considered a *recognized environmental condition.* If the RWQCB issues regulatory closure to the 8.0-acre subject site in response to the ARCADIS request, this conclusion may change to either an *historical recognized environmental condition* or a *controlled recognized environmental condition* (depending on whether there are any conditions placed on regulatory closure). As it stands now, the 2006 NFR for soils on the property requires that, if the property is sold to another party, the RWQCB must be notified of any change in facility operations (e.g., storage and handling of chemicals or processing/disposal of wastes) by the new owners.

In addition, Cardno ATC conducted a file review at the RWQCB pertaining to the historical address: 1322 North Broadway. The file included various Chain of Custody forms, soil bore logs, and duplicate reports from the LAFD.

A Groundwater Monitoring report, prepared by ATC Associates Inc. (ATC) and dated October 14, 1997 was included in the file. The purpose of the report was to further evaluate the extent of impact to groundwater beneath the former Texaco site and to determine whether additional remediation was required. Three groundwater samples were collected and analyzed for TPHg, BTEX, and MTBE. Analytical results indicated that TPH was not detected in any of the samples, benzene was detected from non-detect in wells MW1b and MW4 to 7.73 ug/L in well MW-3. MTBE concentrations were detected at 25 ug/L in well MW-1A, 15ug/L in well MW-2, and 53 ug/L in well MW-3. According to the report, benzene concentration of 7.73 ug/L exceeded the MCL of 1.0 ug/L for drinking water. At the time the report was written, a MCL had not been established for MTBE; which was established in the year 2000 at 13 ug/L. ATC concluded that the site should be considered a low risk site based on the removal of the USTs and the low contaminant concentrations present in groundwater and recommended the site for closure. The site had received closure; however, subsequent remediation was conducted as discussed above.

South Coast Air Quality Management District (SCAQMD)

Cardno ATC searched the SCAQMD's online database for records regarding the property. According to the SCAQMD's website, 'Texaco DLR, Yau Kwong Wu' and 'Texaco, Ted H. Chun' (1322 North Broadway) were identified with expired permits to operate a service station that stores and dispenses gasoline, dated August

8, 1984 and July 28, 1988, respectively. There were no listed notices of violations or notices to comply. The current property address, 1251 North Spring Street, was not identified on the SCAQMD's website.

The review of records on the SCAQMD's online database identified a former gas station on the property. Investigations associated with the former onsite gas station and the adjacent SLIC site (of which the property is a part) have been discussed in applicable sections of this report.

City of Los Angeles Zoning Information

Cardno ATC reviewed the Los Angeles City Zone Information Map Access System (ZIMAS) website for zoning information. According to the ZIMAS website, the property is zoned MR2-1 for Light Manufacturing. A copy of the zoning map is provided in Appendix L.

5.2 Physical Setting Sources

5.2.1 Topography

The property is located on the United States Geological Survey (USGS) 7.5-Minute Series Topographic Map, Los Angeles, California Quadrangle, dated 1994. Based on Cardno ATC's review of this topographic map, the property is located approximately 302 feet above mean sea level (MSL). The topography of the property is variable with a slope towards the southeast. A copy of the topographic map is included in Appendix A.

5.2.2 Geology

According to the EDR Radius Map Report, the stratigraphic units underlying the property are Cenozoic era, Quaternary system, and Quaternary series in a stratified sequence. EDR obtains its geologic age and stratigraphic unit information from P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale, USGS Digital Data Series DDS - 11 (1994).

5.2.3 Soils

Soil survey maps for the area of the property were not readily available for review; therefore, Cardno ATC reviewed information provided in the EDR database report. According to information contained in the EDR report, the soils at the property most likely belong to the Urban Land component. Urban Land consists of variable soil texture with a depth of greater than 10 inches to bedrock. It does not meet the classification requirements to be considered a hydric soil. It is characterized by surface textures such as sandy loam, gravelly sandy loam, silt loam, clay, find sand, gravelly sand, and fine sandy loam.

5.2.4 Hydrology

Cardno ATC reviewed an Annual Groundwater Monitoring and Sampling Report, prepared by ARCADIS and dated January 23, 2014, for the southeast-adjacent site (1245 North Spring Street). According to the report, regional groundwater at the site is anticipated to flow to the south-southwest and depth to groundwater was measured at 28.33 feet to 37.08 feet below ground surface (bgs). Therefore, properties located directly north-northeast of the property are of primary concern. The groundwater monitoring report contained data for wells located on the 8-acre subject property, which were not a part of the 2013 sampling event

Estimated groundwater levels and/or flow direction(s) may vary due to seasonal fluctuations in precipitation, local usage demands, geology, underground structures, or dewatering operations. The actual groundwater flow direction under the property can only be accurately determined by installing groundwater monitoring wells, which is beyond the scope of this project.

5.2.5 Other Physical Setting Sources

Flood Plain Map

According to information provided by the Federal Emergency Management Agency (FEMA) website, http://www.fema.gov; the property is located in Flood Zone X, which designates areas of 0.2% annual chance flood; areas of 1% annual chance flood with average depths of less than one foot or with drainage areas less than one square mile; and areas protected by levees from 1% annual chance flood, or areas outside of 500-year flood risk. The community/panel number for the Flood Insurance Rate Map for the property is 06037C1628F and the effective date is September 26, 2008. A copy of the flood plain map is included in Appendix L.

Wetlands Map

According to the United States Fish and Wildlife Service (USFWS) Wetlands Mapper website, http://nwi.fws.gov, no wetlands are present on, or adjacent to, the property. However, the Los Angeles River is located approximately 600 feet to the east of the property. A copy of the National Wetlands Inventory map is included in Appendix L.

5.3 Historical Records Sources

The table presented below summarizes the findings of the research pertaining to historical property and surrounding area uses.

Intervals (greater than five years) were encountered during the research of historical use information for the property and surrounding area. However, based on the review of reasonably ascertainable historical sources, these intervals did not have an impact on the *recognized environmental condition* determinations of this assessment and are not significant data gaps.

Based on a review of various historical sources and regulatory reports, the 8.0-acre property was occupied by a restaurant from circa 1950 to 1955, and from 1955 (or as early as 1922, per building department records) to 1989 a Texaco gas station operated on a small portion of the property (see Site Plan in Appendix C). A portion of the property was also used for parking, beginning in the early 1980s. Towards the southern portion of the property, railroad car maintenance began since at least the early 1900s to the early 1950s and bus maintenance began in the mid 1950s to the present. Oil aboveground storage tanks (ASTs) were present towards the northern portion of the property from the early 1900s to at least 1970. Cardno ATC verified with the Department of Conservation's Division of Oil, Gas & Geothermal Resources (DOGGR) Well Finder website that an abandoned oil well in the northern portion of the property in the vicinity of the oil ASTs observed on the Sanborn Maps dating back to 1906 (see Section 5.3.2). The presence of an abandoned oil well onsite is not considered to represent a *recognized environmental condition* per se*;* however, it is a notable finding and may affect the proposed redevelopment of the property. The property is also located within a methane zone.

Historical uses on surrounding parcels included metal working, automobile repair/service shops, welding, electro plating, gas stations, oil ASTs, underground storage tanks (USTs), and railroad car maintenance and painting; which poses potential environmental concerns based on the type of use.

HISTORICAL USE SUMMARY				
Period	**Property Historical Uses**	**Surrounding Area Historical Uses**	**Source(s)**	**Intervals/Comments**
Prior to 1940	Commercial and Industrial	Residential, Commercial, and Industrial	Aerial Photographs, Topographic Maps, Sanborn Maps, City Directories, and Building Permits	Data gap from 1907 to 1921. Historical industrial uses on the property and surrounding sites, including an onsite gas station built in 1922. No use change across gap.
1940 - 1960	Commercial and Industrial	Residential, Commercial, and Industrial	Aerial Photographs, Topographic Map, Sanborn Maps, City Directories, and Building Permits	Data gap from 1943 to 1947. Use change from rail road car maintenance to bus maintenance in the mid 1950s.
1961 - 1980	Commercial and Industrial	Residential, Commercial, and Industrial	Aerial Photographs, Topographic Maps, Sanborn Maps, City Directories, Building Permits, and Tax Files	No data gaps identified. Historical industrial uses on the property and surrounding sites. The onsite gas station was still present.
1981 - 2000	Commercial and Industrial	Residential, Commercial, and Industrial	Aerial Photographs, Topographic Maps, City Directories, and Tax Files	Historical industrial uses on the property and surrounding sites. The gas station was no longer present by the late 1980s/early 1990s.
2001 - present	Commercial and Industrial	Residential, Commercial, and Industrial	Aerial Photographs, City Directories, Building Permits, and Tax Files	No data gaps identified. Historical industrial uses on the property and surrounding sites.

5.3.1 Aerial Photographs

Cardno ATC reviewed available aerial photographs of the property and surrounding areas provided by EDR. Available aerial photographs ranged from 1923 to 2012. The following are descriptions and interpretations from the aerial photograph review.

AERIAL PHOTOGRAPH SUMMARY			
Year	**Scale**	**Property Comments**	**Surrounding Area Comments**
1923 1928	1"=500'	The property appears to be developed with commercial and industrial structures. The northeastern most portion of the property does not appear on these photographs.	The northwest-adjacent parcels, beyond North Broadway, are developed with what appear to be residential and commercial structures. Parts of the north-adjacent parcels do not appear in the photographs; the parts that do appear to be developed with residential structures. The southeast-adjacent parcel appears to be a train yard. The south and southwest-adjacent parcels appear to be developed with industrial buildings.
1938 1948 1952	1"=500'	The property appears to be developed with commercial and industrial structures. The northeastern most portion of the property does not appear on these photographs.	The northwest-adjacent parcels, beyond North Broadway, are developed with what appear to be residential and commercial structures. Parts of the north-adjacent parcels do not appear in the photographs; the parts that do appear to be developed with residential structures. The southeast-adjacent parcel appears to be a train yard. The south and southwest-adjacent parcels appear to be developed with industrial buildings.
1964 1977	1"=500'	The property appears to be developed with commercial and industrial structures. Several of the structures formerly located in the north-central portion of the property are no longer present and the area is vacant land. The northeastern most portion of the property does not appear on this photograph.	The northwest-adjacent parcels, beyond North Broadway, are developed with what appear to be residential and commercial structures. Parts of the north-adjacent parcels do not appear in the photographs; the parts that do appear to be developed with residential structures. The southeast-adjacent parcel appears to be a train yard. The south-adjacent parcels appear to be developed with an industrial building. The southwest-adjacent parcels appear to be developed with commercial and industrial structures.
1979	1"=500'	The central to northern portion of the property does not appear on this photograph. There are no other significant changes from the previous photographs.	The adjacent parcels east of the central portion of the property do not appear on this photograph. There are no other significant changes.

Year	Scale	Property Comments	Surrounding Area Comments
1983 1989 1994	1"=500'	The property appears to be developed with several commercial and industrial buildings. The northeastern most portion of the property does not appear on this photograph.	The northwest-adjacent parcels, beyond North Broadway, are developed with what appear to be residential and commercial structures. Parts of the north-adjacent parcels do not appear in the photographs; the parts that do appear to be developed with residential structures. The southeast-adjacent parcel appears to be a train yard. The south-adjacent parcels appear to be developed with an industrial building. The southwest-adjacent parcels appear to be developed with commercial structures.
2005	1"=500'	The property appears to be mostly vacant with industrial buildings located in the southern portion. The northeastern most portion of the property does not appear on this photograph.	The northwest-adjacent parcels, beyond North Broadway, are developed with what appear to be residential and commercial structures. Parts of the north-adjacent parcels do not appear in the photograph; the parts that do appear to be developed with residential structures. The southeast-adjacent parcel appears to be vacant. The south-adjacent parcels appear to be developed with an industrial building. The southwest-adjacent parcels appear to be developed with commercial structures.
2009	1"=500'	The property appears to be mostly vacant with industrial buildings located in the southern portion. The northeastern most portion of the property does not appear on this photograph.	The northwest-adjacent parcels, beyond North Broadway, are developed with what appear to be residential and commercial structures. Parts of the north-adjacent parcels do not appear in the photograph; the parts that do appear to be developed with residential structures. The southeast-adjacent parcel appears to be developed with a park and two large circular structures, which appears to be two large ASTs. The south-adjacent parcels appear to be developed with an industrial building. The southwest-adjacent parcels appear to be developed with commercial structures.

Year	Scale	Property Comments	Surrounding Area Comments
2010 2012	1"=500'	The property appears to be mostly vacant with industrial buildings located in the southern portion. The northeastern most portion of the property does not appear on this photograph.	The northwest-adjacent parcels, beyond North Broadway, are developed with what appear to be residential and commercial structures. Parts of the north-adjacent parcels do not appear in the photographs; the parts that do appear to be developed with residential structures. The southeast-adjacent parcel appears to be developed with a park; the circular structures from the previous photograph are no longer present. The south-adjacent parcels appear to be developed with an industrial building. The southwest-adjacent parcels appear to be developed with commercial structures.

The review of aerial photographs did not specifically identify the former gas station on the property (due to quality/scale/resolution of the photos); however, based on a review of other historical sources, it is known that the gas station was present onsite from 1922 until 1989. Investigations associated with the former onsite gas station and the adjacent SLIC site (of which the property is a part) have been discussed in applicable sections of this report. Copies of aerial photographs are included in Appendix F.

5.3.2 Fire Insurance Maps

A search for fire insurance maps for the property and surrounding area was conducted by EDR. The following are descriptions and interpretations from the fire insurance map reviews.

FIRE INSURANCE MAP SUMMARY		
Year	**Property Comments**	**Surrounding Area Comments**
1888 1890 1894	The property is developed with a storage building, dwelling, tenements, shops, and a chapel. Railroad tracks run through parts of the property.	Adjacent to the south is Capitol Milling co., flour milling business with petroleum USTs bordering the northern border of the site. Adjacent to the southwest is Baker Iron Works (includes a foundry and machine shop), dwellings, and a car painting shop. Adjacent to the northwest, beyond what is now North Broadway, are dwellings. Adjacent to the southeast is the Southern Pacific Railroad Depot and Hotel, a wood and coal shed, 'railroad' tank, sand house, oil & packaging room, offices, stock room, a car shop for painting and repair, Southern Pacific Railroad 'round house,' forge shop, machine shop, and a lumber house.
1906	The property is developed with a railroad car repair shop, a storage building, offices, shops, a water tank, a plant for purifying water with two 50,000-gallon water tanks, S.P.Co. Well Pumping Station, dwellings, flats, a 50,000-gallon oil AST, and a smaller AST of unknown capacity. Railroad tracks run through parts of the property.	Adjacent to the south is Capitol Milling co., flour milling business with petroleum USTs bordering the northern border of the site. Adjacent to the southwest is an oil AST, Distilled Ice & Cold Storage Co., an oil well supply storage, Baker Iron Works (includes a foundry, machine shop, and fuel UST), dwellings, and a car painting shop. Adjacent to the northwest, beyond what is now North Broadway, are dwellings. Adjacent to the southeast is Southern Pacific Offices & Freight House/Depot, a shed, an oil and lamp building, a vacant 'round house,' offices, and an ice house.

Year	Property Comments	Surrounding Area Comments
1950 1953	The property is developed with a railroad car repair shop, an auto repair building, lumber storage buildings, a steel storage building, Whole Sea Food restaurant, an unnamed restaurant, a gas station, and an oil AST. Railroad tracks run through parts of the property.	Adjacent to the south is Capitol Milling Co. Adjacent to the southwest is an automobile services and repair shop, Boiler & Heating Works, a welding shop, an electro plating shop, and stores. Adjacent to the northwest, beyond what is now North Broadway, are dwellings, stores, St. Peter's Italian Church, a gas station, a used automobile store, automobile service shop, offices, flats, and a cafe. Adjacent to the southeast is Southern Pacific Offices & Freight House/Depot.
1954 1957 1960	The property is developed with a truck maintenance building, a truck washing building, motor car repair building, railroad carpenter shop, storage buildings, stores, Whole Sea Food restaurant, gas station, and an oil AST. Railroad tracks run through parts of the property.	Adjacent to the south is Capitol Milling Co. Adjacent to the southwest is a Neon Sign Manufacturing & Metal Working (includes paint spray), Boiler & Heating Works, a welding shop, an electro plating shop, and stores. Adjacent to the northwest, beyond what is now North Broadway, are dwellings, stores, St. Peter's Italian Church, a gas station, a used automobile store, automobile service shop, offices, flats, and a cafe. Adjacent to the southeast is Southern Pacific Offices & Freight House/Depot.
1964	The property is developed with truck maintenance buildings, a truck washing building, a store, a gas station, and an oil AST. Railroad tracks run through parts of the property.	Adjacent to the south is Capitol Milling Co. Adjacent to the southwest is a Neon Sign Manufacturing & Metal Working (includes paint spray), Boiler & Heating Works, a welding shop, and stores. Adjacent to the northwest, beyond North Broadway, are dwellings, stores, St. Peter's Italian Church, a gas station, a used automobile store, automobile service shop, offices, flats, and a cafe. Adjacent to the southeast is Southern Pacific Offices & Freight House/Depot.

Year	Property Comments	Surrounding Area Comments
1965 1968 1970	The property is developed with truck maintenance buildings, a truck washing building, a store, a gas station, and an oil AST. Railroad tracks run through parts of the property.	Adjacent to the south is Capitol Milling Co. Adjacent to the southwest is a Neon Sign Manufacturing & Metal Working (includes paint spray). Adjacent to the northwest, beyond North Broadway, are dwellings, stores, St. Peter's Italian Church, a gas station, a used automobile store, automobile service shop, offices, flats, and a cafe. Adjacent to the southeast is Southern Pacific Offices & Freight House/Depot.

The review of fire insurance maps identified past uses of environmental significance on the property and surrounding sites. Past uses on the property include a former gas station, oil ASTs, water ASTs and a presumably associated well pumping station, railroad car maintenance shops, and former railroad tracks on the property. Cardno ATC verified with the Department of Conservation's Division of Oil, Gas & Geothermal Resources (DOGGR) Well Finder website that an oil well was not present in the vicinity of the former water pumping station; however, there is an abandoned oil well in the northern portion of the property in the vicinity of the oil ASTs observed on the Sanborn Maps dating back to 1906.

Based on the ongoing groundwater monitoring activities related to the former onsite gas station and the southeast-adjacent SLIC case, they are considered to represent *recognized environmental conditions* to the property. The presence of an abandoned oil well onsite is not considered to represent a *recognized environmental condition* per se*;* however, it is a notable finding and may affect the proposed redevelopment of the property. The property is also located within a methane zone. The LADBS and DOGGR should be contacted with regard to requirements, if any, relative to any potential redevelopment of the property in the vicinity of the former oil well. For example, re-abandonment of the oil well to current standards and/or a methane barrier may be required.

Documentation is included in Appendix G.

5.3.3 Property Tax Files

A search for tax files for the property was conducted at the Los Angeles County Assessor's office for historical ownership information pertaining to the property. The table below presents the results of the historical ownership information. The review of tax files did not identify past uses indicating *recognized environmental conditions* in, on, or at the property or surrounding area.

TAX RECORDS OWNERSHIP SUMMARY	
Owner	**Date**
Sou Pac Co	1967-2004
Riboli, Maddalena TR	2004-2005
S. R. Partners (Steve Riboli)	2005-Present

5.3.4 Recorded Land Title Records

The acquisition of recorded land title records was not required by the scope of work for the Phase I ESA.

5.3.5 Historical USGS Topographic Maps

Cardno ATC reviewed available historical USGS Topographic Quadrangles for information regarding past uses of the property. Topographic maps were reviewed for the years 1896 to 1994. Due to the scale and resolution of the maps, specific land uses cannot be determined for the 1896, 1900, and 1901 maps. The 1928 and 1953 maps do not depict any structures on the property. The north-adjacent parcel appears to be vacant, the northwest-adjacent parcels are depicted with structures along North Broadway, the southwest and south-adjacent parcels are depicted with a large structure, and the southeast-adjacent parcel is depicted with railroad tracks associated with a train yard. The 1966, 1972, 1981, and 1994 maps depict a large structure at the southern portion of the property and a small structure at the central portion of the property. The north-adjacent parcel appears to be vacant, the northwest-adjacent parcels are depicted with structures along North Broadway, the southwest and south-adjacent parcels are depicted with a pink shading indicative of a developed urban area, and the southeast-adjacent parcel is depicted with railroad tracks associated with a train yard.

The review of historical USGS Topographic Quadrangles identified a train yard to the southeast of the property which has contributed to groundwater contamination in the area. Based on the open southeast-adjacent SLIC case and the ongoing-verification monitoring required in the area, the review of USGS Topographic Quadrangles did identified past uses that represent *recognized environmental conditions* at the property or surrounding area. Copies of topographic maps are included in Appendix G.

5.3.6 City Directories

Research regarding the availability of historical city directories was conducted by EDR for the years 1920 to 2013; however, directory listings begin with the year 1924. The following are descriptions and interpretations from the historical city directory review.

CITY DIRECTORY SUMMARY		
Year	**Property Comments**	**Surrounding Area Comments**
1924	No listings	North Broadway: 1201-Multi-tenant North Spring Street: No listings
1929	No listings	North Broadway: 1201-Basso Domenich Inc. North Spring Street: No listings
1933	No listings	North Broadway: 1201-Basso Domenich Inc. North Spring Street: No listings
1937	No listings	North Broadway: 1201-Basso Domenich Inc. North Spring Street: No listings
1942	Orosco Augustin Petra formn SP Co.	North Broadway: 1201-Basso Domenich Inc. North Spring Street: No listings
1951	No listings	North Broadway: Spring Street: 1231-Capitol Milling Company North Spring Street: No listings
1958	No listings	North Broadway: 960-Advanced Neon & Plastic Sign Co.; 1201-Basso Domenich Inc. North Spring Street: No listings
1962	No listings	North Broadway: 960-Advanced Neon & Plastic Sign Co.; 1201-Basso Domenich Inc. North Spring Street: No listings

Year	Property Comments	Surrounding Area Comments
1967	No listings	North Broadway: 960-Advanced Neon & Plastic Sign Co.; 1201-Basso Domenich Inc. North Spring Street: No listings
1971	No listings	North Broadway: 1201-Basso Domenich Inc. North Spring Street: No listings
1976	No listings	North Broadway: 960-Golden Dragon; 970-Multi-tenant; 1051-St. Peter Italian Catholic Church; 1201-Basso Domenich Inc. North Spring Street: 1231-Capitol Milling Company

The review of city directories did not identify past uses indicating *recognized environmental conditions* in, on, or at the property or surrounding areas. Documentation is included in Appendix G.

5.3.7 Building Department Records

Cardno ATC reviewed records of historical building permits at the City of Los Angeles Department of Building and Safety. Historical addresses were identified as 1322 and 1380 North Broadway. Notable permits observed, by address, included:

1251 North Spring Street

1953, June 12 - Permit to construct a new 1,600 square-foot building for a 'wash rack'
1954, November 17 - Certificate of occupancy of a one-story, type IV, repair garage for Southern Pacific Railroad Company
1956, October 29 - Permit to construct a new 8,000 square-foot building
2008, December 17 - Permit to construct a new trash and propane enclosure
2009, February 27 - Permit to construct two footing pads for a propane tank
2009, March 10 - Change of use from rail car maintenance to bus maintenance
2009, March 25 - Permit to construct a new modular office building
2009, April 27 - A request for a temporary Certificate of Occupancy for Veolia Transportation

1322 North Broadway

1922, November 14 - Permit to construct a new frame automobile filling station
1963, March 10 - Permit to construct a new building
1963, November 26 - Certificate of Occupancy of a one-story, type IV, garage building
1963, December 3 - Certificate of Occupancy of a one-story, type IV, office and locker building

1380 North Broadway

2013, May 19 - Electrical permit for 200 amp 'cts'

The review of building permits identified a gas station (1322 North Broadway) since at least 1922 to 1963 when a new gas station or repair station was constructed. Investigations associated with the former onsite gas station and the adjacent SLIC site (of which the property is a part) have been discussed in applicable sections of this report.

5.3.8 Zoning/Land Use Records

Cardno ATC reviewed the Los Angeles City Zone Information Map Access System (ZIMAS) website for zoning information. According to the ZIMAS website, the property is zoned MR2-1 for Light Manufacturing. Historical zoning information was not available. However, based on a review of other historical sources, the property and surrounding area have been used for commercial/industrial purposes since at least the late 1800s and was presumably zoned as such. A copy of the zoning map is provided in Appendix L.

5.3.9 Prior Reports

No prior reports were made available for the property.

5.3.10 Other Historical Sources

No other historical sources were reviewed.

6.0 SITE RECONNAISSANCE

The following is a summary of visual and/or physical observations of the property on the day of the site visit. Photographs can be found in Appendix C.

6.1 Methodology and Limiting Conditions

Mr. Davis Tang, Staff Scientist with Cardno ATC conducted the site reconnaissance on January 26, 2015 and was unaccompanied. Weather at the time of site reconnaissance was sunny and warm. Weather was not a limiting factor. The site reconnaissance consisted of visual and/or physical observations of: the property and improvements; adjoining sites as viewed from the property; and, the surrounding area based on visual observations made during the trip to and from the property. Unimproved portions of the property (if any) were observed along the perimeter and in a general grid pattern in safely accessible areas, if accessible and possible.

Building exteriors (if any) were observed along the perimeter from the ground, unless described otherwise. Building interiors (if any) were observed as they were made safely accessible, unless described otherwise. The client gave permission for Cardno ATC to be on the property in the vacant areas. The entire property was fenced, but Cardno ATC was able to safely gain access through openings in the fencing. Cardno ATC did not have permission or access to the two buildings occupied by the Metropolitan Transportation Authority (MTA) located on the southern most portion of the property. Additionally, Cardno ATC did not have permission or access to the northeastern most portion of the property which is leased out to the Griffith Company (Griffith Lease).

6.2 Hazardous Substance Use, Storage, and Disposal

Cardno ATC did not observe the use, storage or disposal of hazardous substances, including hazardous wastes, on the portions of the property that were accessible to Cardno ATC.

6.3 Underground Storage Tanks

Cardno ATC did not observe evidence of underground storage tanks on the portions of the property that were accessible to Cardno ATC.

6.4 Aboveground Storage Tanks

Cardno ATC did not observe evidence of aboveground storage tanks on the portions of the property that were accessible to Cardno ATC.

6.5 Other Petroleum Products

Cardno ATC did not observe the use, storage or disposal of other petroleum products on the portions of the property that were accessible to Cardno ATC.

6.6 Polychlorinated Biphenyls (PCBs)

Cardno ATC did not observe evidence of the use, storage or disposal of PCB-containing equipment on the portions of the property that were accessible to Cardno ATC.

6.7 Unidentified Substance Containers

Cardno ATC did not observe the presence of unidentified substance containers on the portions of the property that were accessible to Cardno ATC.

6.8 Nonhazardous Solid Waste

Cardno ATC observed evidence of various debris and trash littered in various locations of the property. The debris and trash is not considered an environmental concern at this time.

6.9 Wastewater

Cardno ATC did not observe evidence of wastewater generated, treated or discharged (including sanitary sewage) on the portions of the property that were accessible to Cardno ATC.

6.10 Waste Pits, Ponds and Lagoons

Cardno ATC did not observe evidence of waste pits, ponds or lagoons on the portions of the property that were accessible to Cardno ATC.

6.11 Drains and Sumps

Cardno ATC did not observe evidence of drains or sumps on the portions of the property that were accessible to Cardno ATC.

6.12 Septic Systems

Cardno ATC did not observe evidence of a septic system on the portions of the property that were accessible to Cardno ATC.

6.13 Stormwater Management System

Stormwater discharged to the paved areas travels to the nearest storm drain along the streets and to unimproved portions of the property where it percolates into the soil. Cardno ATC did not observe any evidence of stained soil or pavement and stressed vegetation within and around the property.

6.14 Wells

Cardno ATC observed a monitoring well (MW-18) on the property, located directly across from St. Peter's Italian Catholic Church (1039 North Broadway). According to GeoTracker, a vapor extraction well (VEW-2) and a monitoring well (BMW-11) are also on the property, located in the vicinity of the former onsite gas station (1322 North Broadway). Cardno ATC did not observe evidence of these two wells in the vicinity of the former gas station. GeoTracker depicts a monitoring well (MW-2) bordering the MTA easement to the south. Cardno ATC did not have access to the MTA easement to observe this well.

Cardno ATC reviewed an Annual Groundwater Monitoring Report, prepared by ARCADIS and dated January 23, 2014. According to the report, BMW-11 was decommissioned in August of 2006. VEW-2 was last sampled on March 19, 2003, which identified ethylbenzene with a concentration of 340 ug/L, as the only constituent that exceeded the MCL of 300 ug/L for ethylbenzene. MW-2 was last sampled on August 5, 2003 and indicated concentrations of constituents analyzed were non-detect above their laboratory reporting limits. MW-18 was last sampled on January 31, 2007 and indicated concentrations of constituents analyzed were non-detect above their laboratory reporting limits. The above mentioned wells are associated with the former onsite gas station (1322 North Broadway) and the southeast-adjacent SLIC case that is undergoing verification monitoring; refer to Section 5.1.2 for further details. The wells in of themselves are not considered an environmental concern; however, they should be properly abandoned by the responsible party when they are no longer required.

Cardno ATC verified with the Department of Conservation's Division of Oil, Gas & Geothermal Resources (DOGGR) Well Finder website that an abandoned oil well in the northern portion of the property in the vicinity of the oil aboveground storage tanks (ASTs) observed on the Sanborn Maps dating back to 1906. The presence of an abandoned oil well onsite is not considered to represent a *recognized environmental condition* per se; however, it is a notable finding and may affect the proposed redevelopment of the property. The property is also located within a methane zone. The Los Angeles Department of Building and Safety

(LADBS) and DOGGR should be contacted with regard to requirements, if any, relative to any potential redevelopment of the property in the vicinity of the former oil well. For example, re-abandonment of the oil well to current standards and/or a methane barrier may be required.

7.0 SUBSURFACE VAPOR MIGRATION

Cardno ATC conducted a limited screening for potential vapor encroachment conditions (VECs) that may affect the property. The VEC screening focused on the current and historical usage of the property and also utilized the aforementioned regulatory agency database report provided by EDR and an EDR Vapor Encroachment Screen (VES) Report to evaluate identified Chemicals of Concern (COCs), including petroleum hydrocarbons. To identify the area of concern (AOC) for contaminated sites with non-petroleum hydrocarbon COCs, Cardno ATC utilized the approximate minimum search distance defined by ASTM E 2600-10 of 1,760 feet (1/3 mile) from the property boundary for COC-contaminated sites. For sites contaminated with petroleum hydrocarbon COCs, Cardno ATC utilized the AOC approximate minimum search distance of 528 feet (1/10 mile). The AOC was adjusted accordingly based on review of physical setting characteristics, known release information, property and land features, groundwater flow direction, and soil type, et al.

ASTM's Vapor Encroachment guidance indicates that when groundwater flow direction can be estimated or determined, the cross-gradient or downgradient radius distances can be significantly reduced. The EDR VES report calculates the reduced AOC distances when considering groundwater flow direction by utilizing the following default distances, which were determined using the Buonicore Methodology: (non-petroleum hydrocarbon COCs) 1,760 feet in the upgradient direction; 365 feet in the cross-gradient direction; and 100 feet in the downgradient direction and (petroleum hydrocarbon COCs) 528 feet in the upgradient direction; 165 feet in the cross-gradient direction if Light, Non-Aqueous Phase Liquid, (LNAPL i.e. floating product) is suspected; 95 feet in the cross-gradient direction if no LNAPL is suspected; 100 feet in the downgradient direction (LNAPL suspected); and 30 feet in the downgradient position (LNAPL not suspected).

The screening was further refined by evaluating the Critical Distance (CD) factor. The CD is the upper distance a vapor may migrate through soil in the vadose zone assuming the path of least resistance is directly from the closest boundary of the contaminated media (i.e. groundwater or soil) to the nearest Property boundary. For non-petroleum hydrocarbon COCs, the CD is 100 feet. For LNAPL petroleum hydrocarbon COCs, the CD is also 100 feet. For dissolved petroleum hydrocarbon COCs, the CD is 30 feet.

Cardno ATC reviewed potential sources of COCs from the facilities reported on the EDR database report and VES report.

According to groundwater plume maps, the isoconcentration contour for benzene at BMW-4 is depicted as bordering the property. Although BMW-4 is over 100 feet (the critical distance factor) from the property, the inferred benzene plume is within the 100 feet of the property, which therefore represents a potential *vapor encroachment condition* (VEC).

The EDR Vapor Encroachment Screen Report is provided in Appendix L.

8.0 INTERVIEWS

A site escort was not available for Cardno ATC to interview. Contact information for the current property owner/occupants was not provided to Cardno ATC so those individuals were not interviewed. Governmental employees that were contacted solely for the purpose of retrieving public information pertaining to the property and who would not be expected to have first-hand knowledge of *recognized environmental conditions* at the property are not individually listed here.

9.0 OTHER ENVIRONMENTAL CONDITIONS

9.1 Asbestos-Containing Material (ACM)

Based on the scope of work for this ESA, sampling and analyses for ACM was not conducted. All suspect ACM should be properly assessed prior to disturbance from construction or maintenance activities. Cardno ATC was not able to observe building conditions at the Griffith Lease or the MTA easement.

9.2 Radon

Radon is a naturally occurring colorless, odorless gas that is a by-product of the decay of radioactive materials potentially present in bedrock and soil. The Environment Protection Agency guidance action level for annual residential exposure to radon is 4.0 picoCuries per liter of air (pCi/L). The guidance action level is not a regulatory requirement for private owners of commercial real estate, but is commonly used for comparison purposes to suggest whether further action at a building may be prudent.

Cardno ATC's review of published radon data indicates that the property is located in EPA Zone 2, which is an area of moderate propensity with regard to the potential for elevated levels of radon gas. According to statistical data provided by EDR, an EPA survey of 63 sites in Los Angeles County, 2% of sites exceeded radon concentrations of 4.0 pCi/L. Additionally, a state survey of eight sites located within the same zip code as the property identified no sites that exceeded radon concentrations of 4.0 pCi/L. No further radon investigation is recommended at this time.

9.3 Lead in Drinking Water

Lead in drinking water sampling was not completed during the course of this ESA. According to information obtained from the City of Los Angeles 2013 Drinking Water Quality Report that the municipally supplied water meets or exceeds all drinking water standards, including those for lead. A copy of the this report is included in Appendix L.

9.4 Lead-Based Paint (LBP)

Cardno ATC was not able to observe building conditions at the Griffith Lease or the MTA easement areas.

9.5 Mold Screening

Cardno ATC was not able to observe building conditions at the Griffith Lease or the MTA easement areas.

9.6 Additional User Requested Services

No additional User requested services were included in the scope of work for this ESA.

11.0 TERMINOLOGY

The following provides definitions and descriptions of certain key terms that may be used in this report. Italics indicate terms that are defined by ASTM Standard Practice E 1527-13. The Standard Practice should be referenced for further detail (such as the precise wording), related definitions or additional explanation regarding the meaning of these or other terms.

recognized environmental condition(s) (REC) - the presence or likely presence of any *hazardous substances* or *petroleum products* in, on, or at a *property*: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a *material threat* of a future release to the environment.

material threat - a physically observable or obvious threat which is reasonably likely to lead to a release that, in the opinion of the environmental professional (EP), is threatening and might result in impact to public health or the environment. An example might include an aboveground storage tank system that contains a hazardous substance and which shows evidence of damage such that it may cause or contribute to tank integrity failure with a release of contents to the environment.

de minimis condition - is a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of the appropriate governmental agencies. An example might include a release of *hazardous substances* or *petroleum products* that could reasonably and foreseeably result in a concentration exceeding the applicable regulatory agency risk-based residential standards or substantial damage to natural resources. The risk of that exposure or damage would represent a threat to human health or the environment. If an enforcement action would be less likely than not, then the condition is considered to be generally not likely the subject of an enforcement action. A condition determined to be *de minimis* is not a *REC* or *controlled recognized environmental condition (CREC).*

historical recognized environmental condition (HREC) - a past release of any *hazardous substances* or *petroleum products* that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). Before calling the past release a *HREC*, the environmental professional (EP) must determine whether the past release is a *REC* at the time the assessment is conducted (for example, if there has been a change in the regulatory criteria). If the EP considers the past release to be a *REC* at the time the Phase I ESA is conducted, the condition will be reported in Section 1.2 the Findings and Conclusions Summary table as a *REC*.

controlled recognized environmental condition (CREC) - a *recognized environmental condition* resulting from a past release of *hazardous substances* or *petroleum products* that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with *hazardous substances* or *petroleum products* allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitation, institutional controls, or engineering controls). Per E1527-13, a *CREC* will be reported in the Section 1.2 Findings and Conclusions Summary table as a *CREC* and a *REC*.

migrate/migration - refers to the movement of *hazardous substances* or *petroleum products* in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS list

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 10/25/2013 has revealed that there is 1 CERCLIS site within approximately 0.5 miles of the target property.

VAN DER HORST CORPORATION OF A	***496 BAUCHET STREET***	***SE 1/4 - 1/2 (0.482 mi.)***	***AL167***	***382***

Federal CERCLIS NFRAP site List

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 10/25/2013 has revealed that there are 6 CERC-NFRAP sites within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 06/10/2014 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 06/10/2014 has revealed that there is 1 RCRA-TSDF site within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/10/2014 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
LACMTA DIVISION 21	1800 BAKER STREET	NE 0 - 1/8 (0.067 mi.)	22	31

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/10/2014 has revealed that there are

17 RCRA-SQG sites within approximately 0.25 miles of the target property.

RESPONSE: Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

A review of the RESPONSE list, as provided by EDR, and dated 11/03/2014 has revealed that there are 4 RESPONSE sites within approximately 1 mile of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where

environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 11/03/2014 has revealed that there are 39 ENVIROSTOR sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, and dated 09/17/2014 has revealed that there are 5 UST sites within approximately 0.25 miles of the target property.

State and tribal voluntary cleanup sites

VCP: Contains low threat level properties with either confirmed or unconfirmed releases and the project proponents have request that DTSC oversee investigation and/or cleanup activities and have agreed to provide coverage for DTSC's costs.

A review of the VCP list, as provided by EDR, and dated 11/03/2014 has revealed that there are 7 VCP sites within approximately 0.5 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: The EPA's listing of Brownfields properties from the Cleanups in My Community program, which provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

A review of the US BROWNFIELDS list, as provided by EDR, and dated 09/22/2014 has revealed that there are 3 US BROWNFIELDS sites within approximately 0.5 miles of the target property.

Local Land Records

DEED: The use of recorded land use restrictions is one of the methods the DTSC uses to protect the public from unsafe exposures to hazardous substances and wastes .

A review of the DEED list, as provided by EDR, and dated 12/08/2014 has revealed that there are 5 DEED sites within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/10/2014 has revealed that there is 1 RCRA NonGen / NLR site within approximately 0.25 miles of the target property.

DRYCLEANERS: A list of drycleaner related facilities that have EPA ID numbers. These are facilities with certain SIC codes: power laundries, family and commercial; garment pressing and cleaners' agents; linen supply; coin-operated laundries and cleaning; drycleaning plants except rugs; carpet and upholster cleaning; industrial launderers; laundry and garment services.

A review of the DRYCLEANERS list, as provided by EDR, and dated 06/28/2014 has revealed that there is 1 DRYCLEANERS site within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 6 EDR MGP sites within approximately 1 mile of the target property.

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 18 EDR US Hist Auto Stat sites within approximately 0.25 miles of the target property.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site History:	Parcel PA-018 is located at the intersection of North Spring Street and College Street in the City of Los Angeles, and across the street from the Metro Chinatown Station. The Site was previously owned by Union Pacific Railroad Company and at present is owned by the Los Angeles to Pasadena Metro Blue Line Construction Authority (Authority). The Site is about 6 acres and is surrounded by industrial and commercial use land. Historically the Site has been used for a wood and coal yard, an oil warehouse, dwellings, and for small businesses. Since 1905 it was used as a rail freight yard, but it has been vacant since about 1970. Buildings at the Site were demolished in the late 1980s. A gasoline tank was removed in April 1987 with no evidence of leakage. Reports from 1989 indicate that the Site was used for the storage of tanks and shipping containers. Several water-bearing zones underlie the Site, but there are no production wells within one mile of the property. The shallow semi-perched zone is about 30 ft below ground surface, and the groundwater flow direction is in a south-southwest direction. Groundwater in the southwestern portion of the Site has been impacted by heavy-end hydrocarbons (diesel-range and total recoverable petroleum hydrocarbons). Based on regional groundwater flow and documented historic service station operations at neighboring off-site properties, the groundwater contamination appears to be from off-site sources. The Site is planned for development of a four-story building, with commercial, retail business on the lower level, and housing on the other three floors. There are no planned underground

CA BOND EXP. PLAN:
Reponsible Party: DETAILED SITE EXPENDITURE PLAN
Project Revenue Source Company: Not reported
Project Revenue Source Addr: Not reported
Project Revenue Source City,St,Zip: Not reported
Project Revenue Source Desc: The responsible parties have been found to be in noncompliance with an order issued by the Department. Therefore, it will be necessary to utilize Bond funds to remediate this site. DHS will undertake appropriate cost recovery actions. This has not been identified as a NPL site, nor does it appear, to be a likely NPL candidate in the future. Therefore, it appears unlikely that federal funds are a viable source of revenue for this site.
Site Description: Bortz Oil was a petroleum products blending and packaging facility. The packaging warehouse was destroyed by fire in 1984. During reconstruction, pervasive subsurface contamination was detected. The site now operates only as a warehouse for storage of chemical products.
Hazardous Waste Desc: Subsurface exploration has revealed that the soil and ground water are contaminated with acetone, toluene, xylene, benzene, methyl ethyl ketone (MEK), methylene chloride and 1,2-dichloroethane (DCE).
Threat To Public Health & Env: Major routes of concern for human and animal exposure are soils, surface water and ground water. The Los Angeles River Channel is 100 feet from the site. Contamination of the soil and ground water was documented in January, 1986. The shallow and deeper aquifers are believed to be hydraulically connected. Soil gas vapors could pose an explosive threat; no threat has been identified to date.
Site Activity Status: A remedial action order was issued April 13, 1987 directing the RPs to mitigate the site. A remedial investigation work plan was submitted and approved with modifications by DHS. Implementation of the remedial investigation commenced August 10, 1987. Routine monitoring of the ground water monitoring wells and vapor collection system is being conducted. The responsible parties were found in non-compliance with the order on April 28, 1988. Completion of the RI/FS is projected for January, 1990.

Background Info:

The Bortz Oil Company (BOC) was a petroleum products blending and packaging facility. The site produced various petroleum products (i.e. kerosene, paint, acetone, methyl ethyl ketone (MEK),lacquer thinners, and denatured alcohol). High levels of hydrocarbons and chlorinated solvents have been identified in the soil, while 1,1-dichloroethane (DCE), vinyl chloride, petroleum hydrocarbons, and benzene have been detected in the groundwater.

On August 9, 1984, a fire broke out in one of the metal and concrete warehouse facilities on the North Spring Street property. Undetermined amounts of chemicals were consumed by the fire and spilled on the ground, which has since percolated into the soil. The Department's inspection in December 1985, and January 1986, revealed that there were numerous uncontrolled chemical spills, leaking valves and drums, and illegal disposal of chemicals at the site.

Since the groundwater is not being used as a drinking water source, the potential impact of the contaminated groundwater is not an immediate concern. The groundwater investigation will be conducted after the Spring Street property is sold. Direct contact with the contaminated soil, inhalation, and dermal absorption are the potential routes of exposure.

On April 14, 1987, the Department issued a Remedial Action Order (RAO) to BOC to develop and implement the Remedial Investigation/Feasibility Study (RI/FS), Remedial Action Plan (RAP) and remediation. On July 6, 1988, the RAO was modified to include additional property (1726 N. Naud Street) owned by (BOC). Although remedial activities have been slowed due to the death of the owner in March 1990 the Department approved the Focused Feasibility Study Report for the Naud Street property. The Probate Court has determined that BOC's assets will be used towards the remediation of the Naud Street Property. On October 23, 1992, the Dept. negotiated a Consent Order with the Executor of the BOC estate.

In August 1996, DTSC completed a removal action on the North Spring Street property. Bortz removed above-ground tanks and

Date form received by agency: 05/08/2000
Site name: K M OFFICE SERVICES
Classification: Small Quantity Generator

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Violation Status: No violations found

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Completed Document Type: Voluntary Cleanup Agreement
Completed Date: 05/16/1995
Comments: DTSC entered into a Voluntary Cleanup Agreement with Witco Corporation to complete a Preliminary Endangerment Assessment (PEA) for the Witco Corporation site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 10/24/1995
Comments: DTSC completed its review of the PEA Report for the Witco Corporation, Allied Kelite Division Site. Based on the information provided, DTSC determined that the residual contamination observed in the Site's soil does not pose a threat to human health via the inhalation and ingestion routes of exposure. Accordingly, DTSC concurs with the "No Further Action" recommendation for the soil with respect to the aforementioned routes of exposure. DTSC has determined that the groundwater beneath the Site has been impacted by Site operations and possibly other regional sources. The groundwater beneath the Site is not a potable source of drinking water and does not pose an imminent and substantial endangerment. However, the groundwater should be investigated. DTSC reserves the right to require additional work in the future should the Site's conditions differ from those described in the PEA

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code:	D001
Waste name:	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code:	D002
Waste name:	A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code:	D006
Waste name:	CADMIUM

Waste code:	D008
Waste name:	LEAD

Classification: Small Quantity Generator

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Violation Status: No violations found

FINDS:

Registry ID: 110001153162

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Corrective Action Summary:
Event date: 04/22/1993
Event: RFA Completed

Event date: 04/22/1993
Event: CA049PA

Event date: 07/12/1993
Event: CA Prioritization, Facility or area was assigned a medium corrective action priority.

Event date: 07/12/1993
Event: Stabilization Measures Evaluation,This facility is amenable to stabilization activity based on the status of corrective action work at the facility, technical factors, the degree of risk, timing considerations and administrative considerations.

Event date: 09/12/2012
Event: RFI Report Received

Event date: 09/27/2012
Event: Igration of Contaminated Groundwater under Control, Yes, Migration of Contaminated Groundwater Under Control has been verified. Based on a review of information contained in the EI determination, it has been determined that migration of contaminated groundwater is under control at the facility. Specifically, this determination indicates that the migration of contaminated groundwater is under control, and that monitoring will be conducted to confirm that contaminated groundwater

MAIN STREET CENTER (Continued) **1000102032**

remains within the existing area of contaminated groundwater. This determination will be re-evaluated when the Agency becomes aware of significant changes at the facility.

Event date: 09/27/2012
Event: Current Human Exposures under Control, Yes, Current Human Exposures Under Control has been verified. Based on a review of information contained in the EI determination, current human exposures are expected to be under control at the facility under current and reasonably expected conditions. This determination will be re-evaluated when the Agency/State becomes aware of significant changes at the facility.

Event date: 02/22/2013
Event: RFI Approved

Event date: 04/23/2013
Event: RFI Workplan Received

Event date: 05/13/2013
Event: RFI Workplan Modification Requested By Agency

Event date: 05/13/2013
Event: RFI Workplan Notice Of Deficiency Issued

Event date: 09/05/2013
Event: RFI Workplan Approved

Event date: 01/30/2014
Event: RFI Supplemental Implementation Begun

MAIN STREET OIL DEPOT (Continued) **S101297113**

Completed Date: 05/02/1995
Comments: The Department completed review of the PEA report. Based on the information provided in the PEA, the site does not constitute an immediate threat that would require an expedited response action. However, DTSC recommends furthe action, in that the current asphalt must be maintained and a deed restriction notification be placed on the site. DTSC considers the PEA complete.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 10/28/1993
Comments: The Department received a notice of intent to initiate a PEA dated September 27, 1993. Manufactured Gas Plant (MGP) was operated at the site from approximately 1906 to 1919??? The MGP operations ceased at the site on 1919? when the Southern California Gas Company acquired the MGP properties. In 1922 Los Angeles City Water and Power acquired the property and dismantled the gas plant. The hazardous wastes found at the former MGP sites includes PAHs, Cyanides, TPHs, BTEX, Sulphides/sulfates, and Metals. Due to the evidence of hazardous wastes in the other MGP sites, the Department recommends a PEA. The Department completed review of the sampling plan. RP is investigating the site.

Alternate Address:	1300 CARDINAL STREET
Alternate City,St,Zip:	LOS ANGELES, CA 90012
Background Info:	This site south of Cardinal Street previously operated as a refinery from 1900 - 1924 by the Southern Refining Company and Amalgamated Oil Company. Not reported Historical documents indicated refining equipment and above ground storage tanks (AGST). Dark oily materials were discovered during construction activities in the playground area. Areas were covered to prevent contact with potential contaminants. DTSC entered into a Voluntary Cleanup Program Agreement with the RP for oversight of a Preliminary Endangerment Assessment. Not reported AREA NORTH OF CARDINAL STREET This Site is divided into two areas, the area South of Cardinal Street is designated by the letter "S" following the commitment description, and the DTSC LEAD ACTIVITIES area North of Cardial Street is designated by the letter "N" following each description.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 03/16/1994
Comments: The Department received a referral dated March 8, 1994 from the County of Los Angeles, Fire Department. The site was previously a battery recycler whose owner, Victor Pena, was under investigation by LA County and the LA City Attorney's Office for the illegal discharge of hazardous waste onto the subject property. The waste materials were being discharged into an unlined pit in the rear of the property and the driveway. The RP was subsequently convicted of illegal discharge of hazardous waste, sentenced and ordered to remediate the site. The "Subsurface Investigation Report" indicates that the maximum concentration of lead in the soil is 30,000 mg/kg and minimum pH is 0.48. RP has not been compiled with the County's directives. Therefore, the site was referred to the Department. Due to the evidence of onsite contamination, the Department recommends a PEA. The RP will be notified of this recommendation.

Completed Date: 03/16/1994
Comments: The Department received a referral dated March 8, 1994 from the County of Los Angeles, Fire Department. The site was previously a battery recycler whose owner, Victor Pena, was under investigation by LA County and the LA City Attorney's Office for the illegal discharge of hazardous waste onto the subject property. The waste materials were being discharged into an unlined pit in the rear of the property and the driveway. The RP was subsequently convicted of illegal discharge of hazardous waste, sentenced and ordered to remediate the site. The "Subsurface Investigation Report" indicates that the maximum concentration of lead in the soil is 30,000 mg/kg and minimum pH is 0.48. RP has not been compiled with the County's directives. Therefore, the site was referred to the Department. Due to the evidence of onsite contamination, the Department recommends a PEA. The RP will be notified of this recommendation.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

File Location: Regional Board
Potential Media Affected: Aquifer used for drinking water supply, Soil, Soil Vapor
Potential Contaminants of Concern: * Solvents, Acetone, Arsenic, Chromium, Heating Oil / Fuel Oil
Site History: The Site is a vacant building complex owned by Lamar Plaza LLC, which purchased the property from Smiland Land Company (SLC) on October 31, 2007. The property is approximately 3.4 acres in size and was a former paint manufacturing facility. Smiland Paint Company (SPC), predecessor to SLC, occupied and operated the paint manufacturing facility from approximately 1986 to 2004. SPC stopped its paint manufacturing operations in 2004 and leased the facility to Moreware Paint Company (MPC). MPC operated the facility until November 2007. After MPC discontinued its operations, the machinery, ASTs, raw materials, etc have been removed from the property. Similar operations were conducted at the Site by North American Paint Company and Valspar Corporation from approximately 1937 to 1985. The Site was occupied by residences and horse stables prior to 1937. Site investigations were initiated at the Site in 1985 in conjunction with the abandonment-in-place of two 7,500-gallon solvent/thinner underground storage tanks (USTs). Expanded site assessments were conducted onsite and offsite in 1999, 2007, 2008 and 2009. The subsurface investigations detected low level volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and heavy metals at varying background concentrations in soil and groundwater. Total petroleum hydrocarbons (TPH) were detected in soil samples collected near the water table. Free product was also encountered floating on the water table in the onsite and offsite soil borings. The results of the site assessments indicate that the residual VOC contaminants in soil are localized, limited in mass and extent and are below the SSLs established by the Regional Board in the Interim Site Assessment & Cleanup Guidebook, May 1996. All other potential contaminants, such as SVOCs and heavy metals, are below the United States Environmental Protection Agency (U.S. EPA) Region IX Regional Soil Screening Levels (SSLs) for the protection of human health and groundwater or at background concentrations. The TPH contamination in the soil is mostly confined to a smear zone approximately between 15 feet and 20 feet bgs and is likely resulted from the free product floating on the water table. The free product appears to be the result of a natural condition, rather than attributed to onsite releases. Based on the results of the site investigations, the Regional Board determined no further requirements (NFR) are needed with respect to soil and groundwater beneath the Site. The case has been closed.

Site History:	The Site is a triangular-shaped, 0.5-acre industrial property near downtown Los Angeles and is occupied by two major railroad lines (Figures 1 and 2). The Site is generally vacant and includes numerous railroad tracks, a rail switching box, aboveground and underground utility lines and small intermittently occupied building, the Mission Tower, which contains decommissioned rail traffic control and switching equipment. The Site is located within a mixed industrial/residential area and bordered by a low-income federal

BNSF - MISSION TOWER SITE (Continued) **S104549284**

housing project to the northwest, the Los Angeles City Jail to the southwest, the Los Angeles River to the east and an east-west trending major railroad line to the south. Access to the Site is restricted by high-security fencing. Surrounding properties were initially developed in the latter part of the nineteenth century, and portions of the existing railroad right-of-way were present by the early 1900s. The two major railways (Pasadena Branch and Union Pacific Line) were present by the late nineteenth century. During the late nineteenth and early twentieth centuries, crude oil was extracted from multiple small oilfields nearby and processed at the former Southern Refining Company located immediately northwest of the Site. Historical aerial photos and Sanborn maps indicate that the refinery contained four aboveground storage tanks (ASTs) for storing crude oil. The refinery was apparently dismantled by 1921 and the ASTs were removed sometime between 1921 and 1928. The Site has been used as a railroad junction for over 100 years and is currently maintained as such for use by three major passenger and freight lines. It has some of the heaviest rail traffic in Southern California, with approximately 135 passenger and two freight trains daily. The property will most likely continue to be used as a railroad junction well into the foreseeable future. Between 1990 and 2003, eight phases of site investigation were conducted. During this time, a total of 32 soil borings and six groundwater monitoring wells were installed onsite and offsite (Figure 3). Soil samples were collected generally at 5- or 10-foot intervals to a maximum depth of 45 feet bgs. The soil consists mainly of sand with relatively minor silt and gravel, and is impacted with heavy petroleum hydrocarbons primarily at depths between 5 and 35 feet bgs. Results of fuel fingerprinting analyses indicated that residual hydrocarbons in shallow soil (≤15 feet bgs) were similar to asphalt or tar, whereas those in deeper soils (>15 feet) were more typical of Bunker C or crude oil. Maximum total extractable petroleum hydrocarbons (TEPH) of 16,000 milligrams per kilogram (mg/kg) were initially detected in soil from the central portion of the Site. Subsequent sampling at this location showed TEPH levels of 5,800 mg/kg. Simulated hydrocarbon distribution (carbon-chain) analyses indicated that 7% of the hydrocarbons were within the gasoline-range of C6-C12, 10% were within the diesel-range of C13-C22, and 83% were within the extended-range of C23-C40. The highest concentrations in soil were detected between 20 and 35 feet bgs within MW-4 and along portions of the western and southern railways. Eight volatile organic compounds (VOCs) and six polynuclear aromatic hydrocarbons (PAHs) were detected in soil from 0.0078 to 5.5 mg/kg. The highest VOCs were detected in soil between 25 and 35 feet bgs in MW-4 and along the southern railway track. The detected VOCs and PAHs were consistent with heavy-end hydrocarbons. Of the seventeen metals analyzed, twelve were detected, five of which were above background levels. Groundwater monitoring was conducted during six events between August 1999 and February 2003. During this time, both depth to groundwater (~ 35 feet bgs) and flow direction (south, southwest) have been relatively consistent. Groundwater has been impacted with diesel-range petroleum hydrocarbons from 0.19 to 14 milligrams per liter (mg/L), but no measurable free product has been observed. Six VOCs were detected in groundwater, including three petroleum-related VOCs (methyl-tertiary butyl ether (MTBE), isopropylbenzene and t-butylbenzene) and three chlorinated VOCs (cVOCs) (1,1-dichloroethane, trichloroethylene, and cis-1,2-dichloroethene (cis-1,2-DCE). Most of the detected VOCs were

BNSF - MISSION TOWER SITE (Continued) **S104549284**

at low concentrations and generally below their respective maximum contaminant levels (MCLs). However, cis-1,2-DCE and MTBE were detected up to 17 micrograms per liter (a%g/L) and 160 a%g/L, respectively. Although some cVOCs were detected in groundwater, no cVOCs were detected in the soil. Of the seventeen metals analyzed, eight metals were detected in filtered groundwater samples and four of those (antimony, cobalt, silver, and zinc) were detected at higher concentrations in downgradient wells. No PAHs were detected in any of the groundwater samples. No remediation has been conducted at the Site due to the technical infeasibility of cleaning up the residual heavy, relatively immobile, non-volatile petroleum hydrocarbons and access limitations within such a highly active railroad yard. Soil excavation would require shutting down a major railroad hub and dismantling or undermining portions of the railroad tracks. Surfactant chemicals could be applied that might mobilize the heavy hydrocarbons and allow for their extraction from the soil. However, such methods could also spread the contamination offsite and into groundwater and create more of a problem. Based on the past, present and likely future use of this site, an industrial/commercial land use restriction is considered the best option at this time to limit exposure to site-related chemicals of concern (COCs). Environmental Resources Management (ERM) conducted a human health risk assessment (HHRA) in 2003. Their risk evaluation was based primarily on two major exposure scenarios: risks to onsite industrial workers and onsite construction workers. The differences in these two exposure scenarios are based on the duration and degree of exposure to the COCs in soil. A third exposure scenario involves the use of shallow groundwater for residential supply. However, the shallow groundwater is of poor quality (high total dissolved solids, naturally petroleum deposits) and residential use at the Site is precluded due to its current and future use as a railroad junction and an intended deed restriction that will be recorded as part of the site closure. ERM considered exposure routes based on ingestion, dermal contact and inhalation (including VOCs, fugitive dust, etc.) and considered exposure to all site-related organic constituents in soil and groundwater as well as metals that exceeded regulatory screening levels. Based on these data, ERM calculated incremental lifetime carcinogenic risks (ILCR) of 4x10-6 (industrial worker) and 1x10-7 (construction worker), and respective non-cancer hazard indices (HI) of 1.0 and 0.4. The HHRA was reviewed by a toxicologist with the California Office of Environmental Health Hazard Assessment (OEHHA) in 2005. OEHHAs comments were based on data collection, sampling analyses, and risk assessment assumptions. ERM provided detailed technical responses to OEHHAs comments for OEHHA and Regional Board responses that are documented in multiple response to comments sessions and best summarized in ERMs September 5, 2007 Response to Comments Concerning Human Health Risk Assessment (report). Regional Board staff reviewed the report and met with representatives from ERM and URS on November 17, 2011 to discuss the prior multiple comments and responses between OEHHA and ERM. Following this meeting, Regional Board staff determined that all but a few of OEHHAs comments had been addressed. The few outstanding comments were subsequently addressed by URS and ERM in follow-up emails to Regional Board staff. The revised risk estimates included contributions from VOCs in soil vapor and groundwater that could potentially affectindoor air quality in the Mission Tower Building. Revised HHRA calculations by ERM in January 2012 yielded cumulative risks/hazard indices of 5x10-6/1.3

BNSF - MISSION TOWER SITE (Continued) **S104549284**

for industrial workers and 5x10-7/0.8 for construction workers, These values are within the USEPA acceptable risk range of 10-6 to 10-4, with hazard indices <1. Furthermore, these risk/hazard values are below the target incremental lifetime cancer risk (ILCR) and hazard index (HI) values of 10-5 and 1.0, respectively, for commercial/industrial use. The slight exceedance of the hazard index of 1.3 for industrial workers above the commercial/industrial target value of 1.0 is negligible considering that hazard indices are generally expressed as one significant figure only according to the USEPAs 1989 Risk Assessment Guidance for Superfund, Volume 1 Human Health Evaluation Manual (Part A), Interim Final. In summary, the calculated risk/hazard values from residual soil, soil vapor and groundwater contamination at the Site will not result in significant risks to human health or groundwater based on the anticipated future commercial/industrial use and minimal human occupancy of the Site.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Comments: The Department received a Notice of Intent to Commence Action Under RCRA and CERCLA dated June 22, 1993. On July 30, 1993, the Department mailed the Information Request to all PRPs. The information received from the PRPs indicates that in 1945 the Empire Chemical Co. moved to the subject location. The current owner is Jerry Elkind. The company was involved in the sale of janitorial products and insecticides. It did some packing in the permises as part of their operation. One 5000-gallon UST was installed in 1947-1950 to store kerosene. Soil around the area of of the UST is contaminated with TPH and the groundwater is also suspected to be contaminated. The Department's contact with the Los Angeles City Fire Department, UG Tank Plan Check indicates that they are the lead agency. Therefore, the Department's involvement is unnecessary.

Background Info:	The Naval and Marine Corps Reserve Center, Los Angeles (NMCRC-LA) consists of approximately 6 acres of land, approximately 1 mile northeast of downtown Los Angeles. This site is a closed reserve

US MARINE CORPS RESERVE CENTER (Continued) **S101584386**

center where Naval or Marine Corps activities are no longer cond
ucted. NMCRC-LA was constructed from 1938 to 1940 by the Works
Progress Administration and was commissioned in 1940 to provide a
dministrative, training, and logistics support to reserve units.
The facility has one Installation Restoration site, identified
as Site 1, the former Service Station and Vehicle Lube Rack. The
former service Station was built in 1943 and was used for fuelin
g vehicles on site. The aboveground portion of the station has be
en removed. Adjacent to the former Service Station, the Vehicle L
ube Rack was used for vehicle maintenance and drained directly to
a waste of oil underground storage tank(UST). Between 1987 to 19
89, hazardous substances (including used oil, solvents, hydraulic
, fluid, and other new and used vehicle maintenance products) wer
e stored in 55-gallon drums on the Vehicl Lube Rack. In Novembe
r 1994, the waste oil UST was removed in 1994 under supervision o
f the Los Angeles Fire Department. Soil with detected levels of
total recoverable petroleum hydrocarbons was excavated and dispos
ed off site. In 1995, an Environmental Baseline Study (EBS) was
conducted. The EBS identified the Vehicle Lube Rack and the form
er Service Station gasoline UST as areas requiring further invest
igation. In 1996, a subsurface soil investigation conducted for
Site 1 indicated the presence of gasoline-range hydrocarbons, be
nzene, toluene, ethylbenzene, total xylenes, and 1,2-dichloroetha
ne.

Potential Media Affect: Aquifer used for drinking water supply, Soil
EDR Link ID: T0603714859
Potential Contaminants of Concern: Benzene, Gasoline
Site History: The Installation Restoration (IR) Site 1 at Naval and Marine Corps Reserve Center - Los Angeles (NMCRC-LA) consists of a former service station and vehicle lube rack area. The site located on approximately six acres of land, about 1 mile northeast of downtown Los Angeles, and is currently used by the City of Los Angeles Fire Department for training purpose. The former gasoline UST and the presence of several

NAVAL-MARINE CORPS RESRVE (Continued) **S102815066**

drums of unknown waste at the lube rack are potential historical sources of contamination at the site. Contaminated subsurface soils and groundwater below the area of concern are potential current sources of contamination. Type of contaminants identified in soil and groundwater consisted primarily of petroleum hydrocarbons in gasoline and diesel ranges. Analytical results from site investigations identified subsurface soils in the 15 to 25 feet below ground surface (bgs) depths as the soil strata of greatest contamination. Depth to water is approximately 30 feet bgs. The risk to human health from exposure to soil and groundwater is below the level of concern. Currently there is no drinking water wells on the property or within 1-mile radius in the area. The nearest well is located about 3 miles north of the site, which is upgradient to the source area. As of April 2007, groundwater data collected from the site show steady decrease trends and the plume has contained on site. Of the volatile organic compounds detected in groundwater, only 1,2-dichloroethane exceeded the screening level of 0.5 micrograms per liter (ug/l). Benzene concentration has decreased close to its cleanup goal of 1 ug/l.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Amendment - Order/Agreement
Completed Date: 01/04/1999
Comments: Transition to Chapter 6.5 - Amendment to the existing Consent Order, No. 96/97-064 signed by the RP.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Voluntary Cleanup Agreement
Completed Date: 07/07/1997
Comments: DTSC and The Gas Company signed a Consent Order calling for the preparation of a Removal Action Workplan and the implementation of a remedial action at the site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Voluntary Cleanup Agreement
Completed Date: 08/16/1994
Comments: A Remedial Action Consent Order is executed by the Depart- ment. The Order provides for the completion of a Remedial Investigation/Feasibility Study to determine the extent of removal/remedial action necessary to allow planned highway construction.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 02/01/2007
Comments: VOC & PAH contaminated soil removed. Residual contamination to be addressed in overall groundwater investigation proposed for the entire 52-acre site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan
Completed Date: 06/16/1998
Comments: On June 16, 1998, DTSC approved the RAW for removal of contaminated soil at the site. Approximately 9000 cubic yards of contaminated soil will be removed. Soil contamination includes PAHs, VOCs and Metals.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation / Feasibility Study
Completed Date: 03/27/1997
Comments: RI/FS for soil only. Groundwater to be evaluated as part of the Towne Gas Study. Interim measures include, capping and removal of contaminated soil from top two feet.

Completed Date:	04/07/2004
Comments:	The Voluntary Cleanup Agreement was signed by representatives from the Los Angeles Department of Water and Power and the Department of Toxic Substances Control. The purpose of the Agreement is for the Proponent to conduct a Preliminary Endangerment Assessment of the soil under the oversight of DTSC.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Site Screening
Completed Date:	09/14/1995
Comments:	The Department received a Non-Emergency Hazardous Substance Release Report dated July 8, 1994. The report indicates that the property was contaminated at the time of purchase in March 1990. Leaking undergound storage tanks have been removed by the previous owner. Some of the contaminated soils have been removed from the site. Soils contaminated with lead are still exist at the site. Due to evidence of a release, DTSC recommended a PEA, and notified the RP thereof.

Manufactured Gas Plants:

The former Aliso Street Manufactured Gas Plant covered approximately 52 acres in downtown Los Angeles. The site is being investigated as 5 sectors and an overall groundwater unit. The "B" sector consists of 14 acres south of the Cesar Chavez Avenue,west of Keller Street, east of Lyon Street and north of Ramirez Street. Contaminants suspected include petroleum hydrocarbons, volatile organic compounds, cyanide, polycyclic aromatic hydrocarbons and heavy metals. See also Sites 19490235, 19490240,19490241, 19490242, 19490243, and 19490248. Sector D Former MGP Aliso Street Site History Sector D of the Aliso Street Towne Gas facility covers approximately 11 acres and was the sector historically used for lampblack pits, processing, and storage.An area of the sector was converted to 1,3-Butadiene production in the 1940s. The Metropolitan Transportation Authority (MTA) owns and currently uses the property for offices, storage, and maintenance of buses.

Manufactured Gas Plants:

The former Aliso Street manufactured Gas Plant covered approximately 52 acres in downtown Los Angeles. The site is being investigated as 5 sectors and an overall groundwater unit. The "C" sector consists of 16.4 acres south of the Hollywood (101) Freeeway, bisected by Center Street and bounded by Commercial, Ducommun and Jackson Streets. Sector C is further subdivided into Blocks G, K, L, N, O, Q, and R. Contaminants suspected include petroleum hydrocarbons, volatile organic compounds, cyanide,polycyclic aromatic hydrocarbons and heavy metals

Registry ID: 110002638682

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 09/29/2014
Date Data Arrived at EDR: 10/08/2014
Date Made Active in Reports: 11/17/2014
Number of Days to Update: 40

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 09/29/2014
Date Data Arrived at EDR: 10/08/2014
Date Made Active in Reports: 11/17/2014

Telephone: N/A
Last EDR Contact: 01/08/2015
Next Scheduled EDR Contact: 04/20/2015
Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991
Date Data Arrived at EDR: 02/02/1994
Date Made Active in Reports: 03/30/1994

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 09/29/2014
Date Data Arrived at EDR: 10/08/2014
Date Made Active in Reports: 11/17/2014
Number of Days to Update: 40

Telephone: N/A
Last EDR Contact: 01/08/2015
Next Scheduled EDR Contact: 04/20/2015
Data Release Frequency: Quarterly

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 10/25/2013
Date Data Arrived at EDR: 11/11/2013

Data Release Frequency: Varies

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 06/10/2014

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Date of Government Version: 09/22/2014

Local Lists of Hazardous waste / Contaminated Sites

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 07/25/2014

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Data Release Frequency: No Update Planned

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

Most Recent Revision:	1994

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

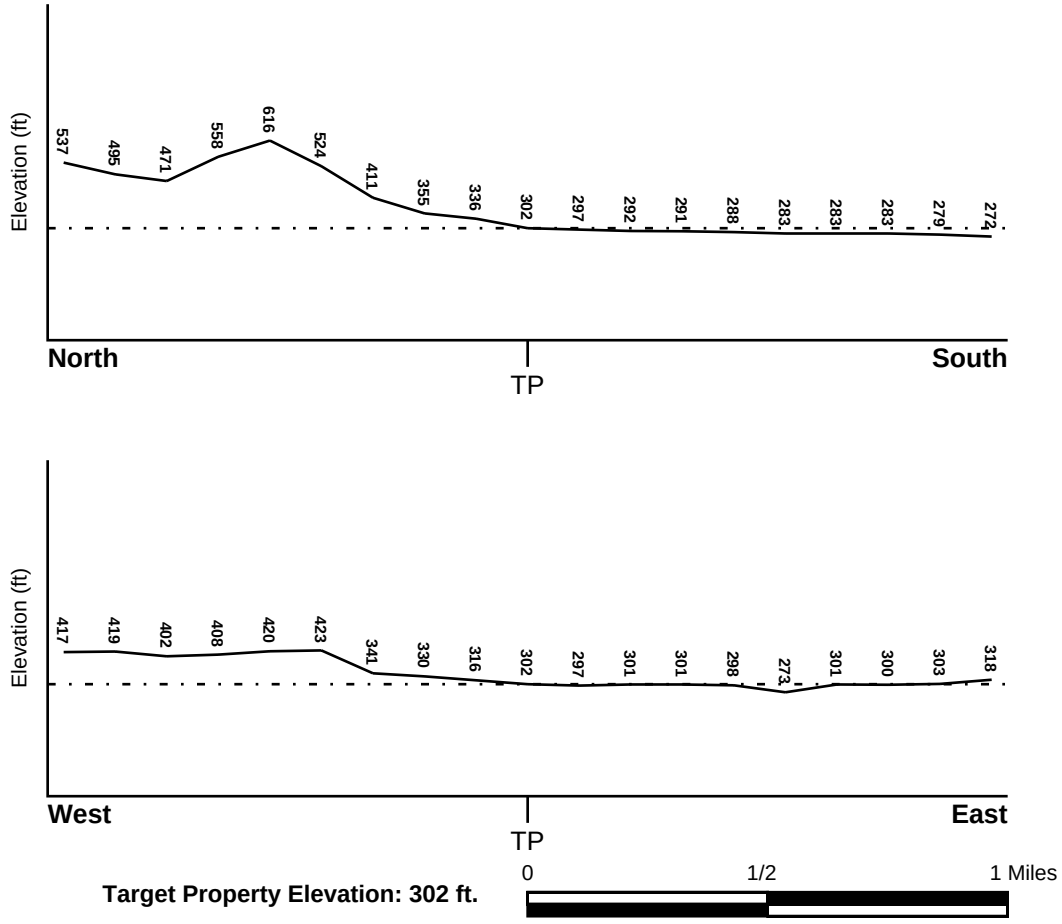
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
LOS ANGELES, CA	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 06037C - FEMA DFIRM Flood data

Additional Panels in search area: Not Reported

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
LOS ANGELES	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/2 - 1 Mile SSE
Site Name:	Van Der Horst Corporation Of America
Site EPA ID Number:	CAD020159166
Surficial Aquifer Flow Dir.:	VARIABLE. A FLOW TO THE S AND SE HAS BEEN IDENTIFIED DURING FORMER INVESTIGATIONS. MORE RECENT INVESTIGATIONS IDENTIFIED A FLOW TO THE E.
Measured Depth to Water:	28 feet to 38 feet.
Hydraulic Connection:	Aquifer interconnections exist within 2 miles of the site.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information based on site-specific subsurface investigations is documented in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Quaternary
Code:	Q *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures:
sandy loam
gravelly - sandy loam
silt loam
clay
fine sand
gravelly - sand
sand
fine sandy loam

Surficial Soil Types:
sandy loam
gravelly - sandy loam
silt loam
clay
fine sand
gravelly - sand
sand
fine sandy loam

Shallow Soil Types:
fine sandy loam
gravelly - loam
sandy clay
sandy clay loam
clay
silty clay
sand

Deeper Soil Types:
gravelly - sandy loam
sandy loam
very gravelly - sandy loam
stratified
very fine sandy loam
weathered bedrock
sand
gravelly - fine sandy loam
silty clay loam
clay loam

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

RADON

State Database: CA Radon
Source: Department of Health Services
Telephone: 916-324-2208
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

California Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines, prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

EDR Historical Topographic Map Report

Environmental Data Resources, Inc.s (EDR) Historical Topographic Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topographic Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the early 1900s.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2013. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 332 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

EDR Inquiry # 4190893.3

Contact: Davis Tang

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Cardno ATC #52 were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Cardno ATC #52 were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Summary of Experience

Mr. Tang has been active in the environmental consulting field as a staff scientist with Cardno ATC's Los Angeles, California office since 2013. Mr. Tang is responsible for the completion of Phase 1 Environmental Site Assessments (ESAs), Transaction Screen Procedures (TSPs) data interpretation, and report preparation under the oversight of an Environmental Professional (EP). Tasks include, but are not limited to, site reconnaissance, public record searches, aerial photograph reviews, and personal interviews.

Significant Projects

> Environmental Site Assessments / Various Clients / Southern California. Conducted numerous Phase I ESAs for confidential clients throughout Southern California. Target sites include vacant properties, commercial/retail, multi-family housing, and former service station facilities. Project duties included providing site assessments of commercial properties

> Environmental Site Assessments / Multiple Financial Clients / Southern California. Provided site assessment services for a several institutions including Union Bank, Comerica Bank, and Prudential Mortgage among others.

> Environmental Site Assessments / Real Estate Investment Firms / Southern California. Provided site assessments to prominent clients including Citivest, Principal Real Esate, Walton Street Capital, and Rockbridge Capital among others.

> Environmental Site Assessment / Government Agencies / Southern California. Provided site assessments of government properties and residential properties obtained through eminent domain. Clients include the Los Angeles Department of Public Works and the Los Angeles Metropolitan Transportation Authority.

> Environmental Site Audits / AvalonBay Communities Corporation / Southern California. Conducted environmental site audits of AvalonBay apartment complexes.

> Student Assistant / Santa Ana Regional Water Quality Control Board / Riverside, CA - Duties included assisting Board supervisor and other staff members with regard to on-going projects involving water quality regulations on agricultural sites, accompanying Senior Geologist on regular field visits to sites in violation with regard to regulations, and utilizing various software (ArcGIS Map and GeoStiff).

Summary of Experience

Ms. Merrill has more than 16 years of experience as an environmental consultant. As Branch Manager of the Los Angeles, California area branch, Ms. Merrill is responsible for managing staff, overseeing administrative functions and overseeing business development and proposal preparation. She is also responsible for managing and providing senior review of Phase I Environmental Site Assessments (ESAs), and coordinating and managing portfolios of projects, which are often conducted by multiple Cardno ATC branches. In addition, Ms. Merrill serves as Client Manager for several of Cardno ATC's national clients.

Ms. Merrill has also performed numerous ESAs throughout Southern California. Her duties included on-site visual inspections, public record searches, aerial photograph reviews, personal interviews, and preparation of technical reports.

Significant Projects

> Environmental Site Assessment / Client Manager / Real Estate Investment / Various Locations in U.S. Coordinated over 300 projects for this national real estate investment client. Included a weekly report of ongoing projects, facilitating all correspondence with the client and providing a senior level review of all ESA reports.

> Environmental Site Assessments / Senior Reviewer & Client Manager / Real Estate Investment / Various Locations in U.S. As part of a nationwide team, managed approximately 150 of the 450 total Phase I ESAs conducted at existing grocery stores. The ESAs were completed in only six weeks. Services were provided prior to a large (and successful) real estate transaction.

> Environmental Site Assessments / Project Manager / Real Estate Investment / Various Locations, California. Completed 31 Phase I ESAs in support of a real estate transaction for a portfolio of existing grocery stores. Phase I ESAs showed no environmental issues and transaction was successfully completed.

> Environmental Site Inspections / Senior Reviewer & Project Manager / Commercial Bank / Various Locations, California. Determined environmental risks associated with properties to assist client with property transaction and refinancing loans. Performed several site inspections and prior use reports according to client's standards for commercial properties. Continues to manage and review Phase I ESAs and related reports prepared for this client.

> Environmental Site Inspections / Senior Reviewer & Coordinator / Retail / Various Locations, California. Completed Phase I ESAs for a large portfolio of department stores in only four weeks. Managed and reviewed the assessments in support of a real estate transaction that was successfully completed.

- Environmental Site Inspections / Senior Reviewer & Project Manager / Real Estate Management / Various Locations, California. Managed and reviewed Phase I ESAs required for the client to achieve refinancing for a large portfolio of trucking rental facilities. While several properties required Phase II surveys, the information provided allowed financing to be secured.
- Environmental & Natural Resource Assessments / Site Assessor / Telecommunications / Various Locations, California. Performed more than 20 modified Phase I ESAs, NEPA checklists and historical reports required for construction of cell phone towers. Services were provided in support of client's telecommunication service expansion and antenna placement.
- Environmental Site Assessment / Site Assessor / School District / South Pasadena, CA. Performed Phase I ESA of residential property, as due diligence for a pending real estate transaction. Residential properties were to be demolished to make room for school expansion.

Training

- OSHA 40-Hour Hazardous Waste Operations Training (29 CFR 1910.120), 2000
- 16-Hour Microbial Investigations, Assessments, and Remediation in the Indoor Environment Training Course
- First Aid/CPR Training

Certificates

- Certificate of Achievement, 16-Hour Microbial Investigations, Assessments and Remediation conducted by Cardno ATC, 2006

Certified Environmental Manager (Nevada, EM-1905)

Asbestos Consultant (Nevada, IM0994)

Affiliations
NAIOP
AEG
EBI

Summary of Experience

Mr. Stuart is responsible for environmental operations, business development, technical oversight on all environmental projects as well as the coordination and allocation of resources and personnel. He recruits, trains, and supervises a professional staff of geologists, hydrogeologists, environmental engineers, environmental scientists, environmental assessors and industrial hygienists. Responsibilities include preparing and editing technical reports, proposals, cost estimates, scopes of work and work plans. He develops innovative, technically sound and cost-effective investigative and remedial strategies for complex environmental problems. Operations include environmental site assessments, underground storage tank management, hazardous waste management and soil, groundwater, surface water, asbestos and hazardous materials investigation and remediation. He is also a liaison between clients, contractors, attorneys, and regulatory agencies.

Significant Projects

> Environmental / Utility / Henderson, Nevada. Certified Environmental Manager and project QA for a soil and groundwater investigation at a former transformer maintenance facility. Prepared an NDEP approved work plan for a total of 145 soil borings and five groundwater monitoring wells for the collection of over 600 TPH and PCB samples. A total of approximately 300 concrete samples was also collected for characterization purposes. The results of the investigation were utilized to prepare an NDEP approved corrective action plan for greater than 15,000 cubic yards of PCB and TPH impacted soil, TCE impacted groundwater, and the investigation of a suspected drum burial site. The negotiation efforts with NDEP allowed the client to save over $500,000.

> Environmental / Petroleum / Nevada, Colorado, Arizona, and New Mexico. Performed soil and groundwater site characterization and remedial action of over 50 retail gasoline stations. Performed limited design and routine maintenance of remediation and corrective action systems including ozone generating, air sparging, soil/vapor extraction, risk-based closures (RBCA), fate transport modeling, dual phase extraction, liquid and vapor phase carbon filtration, catalytic oxidation, bioremediation and oxidation. Conducted quarterly groundwater monitoring and sampling, provided regulatory correspondence, and prepared the quarterly monitoring and remediation reports.

> Due Diligence / Financial and Real Estate / Nevada, Colorado, California, Arizona, and New Mexico. Prepared and reviewed documentation for over 800 Phase I and Phase II Environmental Site Assessments for due diligence prior to property transactions or refinancing. Included oversight and performance of field reconnaissance, historical property review, report preparation, sampling and analysis plan, regulatory negotiations, and client education.

- Environmental / Telecommunications / Nevada, Colorado, Arizona, and New Mexico. Prepared Phase I and NEPA documentation for proposed cellular communications towers. Included performance of field reconnaissance, historical property review, preparation NEPA/FCC compliance documents and letters for submittal to SHPO, THPO, local native American tribes, and USFWS.
- Due Diligence / Municipality / Henderson, Nevada. Prepared a Phase II Environmental Site Assessment, performd of field reconnaissance and inspected over 30 acres of land with historic industrial and gravel pit operations that included use of production wells and injection wells. The Phase II work included the preparation of a site specific work plan, an EPA approved sampling and analysis plan, collection of soil and groundwater samples, and preparation of written summary reports, including documentation to support our analysis, conclusions, and recommendations.
- Building Sciences / Municipality / Las Vegas, Clark County, Nevada. Performed project Quality Assurance (QA) for asbestos abatement oversight during renovation of the “A” and “B” Concourses located at the McCarran International Airport. Duties included oversight of project staff, regulatory negotiations, client interaction, and Authorized Representative for Bechtel.
- Building Sciences / Gaming / Las Vegas, Clark County, Nevada. Provided project management and report preparation, performed asbestos survey, abatement specification development, air monitoring and sampling, and contractor oversight for a hotel/casino renovation and demolition as part of a $9 Billion project located on the Las Vegas Strip. In addition, assisted developer with recycling, salvaged, and reuse of demolished materials and brownfields documentation for LEED credit documentation.

Dale M. Allison

Current Position
Director, National Client Management

Profession
National Client Management

Years' Experience
24

Joined Cardno
June 1998

Education
Business / Global Business Management, BS – Axia College, University of Phoenix

Marketing & Applied Mgmt– Oakland College, Farmington Hills, Michigan

LAN and Multi-user Administration – Software Link, Norcross, Georgia

Data Processing in Business – SWOVEC, Farmington Hills, Michigan

Summary of Experience

Ms. Allison has over 20 years of professional experience in applied business development and marketing, contracts and environmental and construction program management and personnel administration. This experience has included environmental, engineering and construction consulting services, contract administration/project coordination for general contracting, personnel development/program support for automobile manufacturing, contract administration for computer chip manufacturing, and account administration for food brokerage. She has previously built a multi-million dollar market base, and has a working knowledge of numerous state petroleum-funded reimbursement programs for environmental remediation projects.

Additionally, Ms. Allison has extensive knowledge with various Microsoft related programs. She has provided employee computer related training, System Administration, programmed and developed/designed websites. Her computer languages/platforms experience has included COBOL, FORTRAN, RPG II-IV, SPF/PC, JCL, DOC, Assembler for System 370, Microsoft, Novell LAN and both IBM mainframe and PC/Multi-User systems. Her experience is presented below.

Significant Projects

- **Director, National Client Management.** Currently serves as a Director, National Client Management. Responsible for over 100 National Corporate Accounts and the mentoring of approximately 15 National Project Managers. Account responsibilities entail client interaction, proposal submittals, project oversight and negotiations on behalf of client related entities. Responsibilities also include the below National Account Manager outlined scope.
- **National Accounts Management.** Served as a National Accounts Manager responsible for all aspects of an environmental company's key national accounts. Program Director of numerous ESA, PCA, Geotechnical, CMT, ALTA/ACSM oversight, ACM, Mold and Phase 2 Securitization Portfolios (up to 500 properties per Portfolio) since 1995. The Securitized Portfolios involved all aspects of final review and approval of all related reports, communication and management interaction with Lenders (Originators and Servicers), associated Attorneys, Borrowers, Realtors and the ATC Team Management and field personnel. Implementation, Administration and maintenance of Team Websites associated with Securitized Portfolio and Client Programs. Additionally served as a Program Director of over 750 Underground Storage Tank locations involving removal, reporting, remediation and State Funded Programs. Interacted with State Agencies, Client and State Funded Programs associated with the UST and AST removal(s). Participated in short – and – long range strategic planning for marketing and operational programs, researched and evaluated the market and competitive changes, and identified opportunities to build added value into company services. Interfaced with client and with regulatory agencies relating to State and Federal Violations. Marketed full environmental services, including Phase I and Phase II site assessments, Building Sciences/Industrial Hygiene (ACM, LBP and Mold Abatement Projects), Clean Air Act services and Brownfield sites, etc. Proposed and managed new site development ranging from ALTA/ASCM Surveys,

Geotechnical, Construction Material and Testing (CMT), ESA, Phase 2, Demolition and Renovation ACM and LBP Reporting and Construction Management. Utilized company's engineering resources to design and direct programs that supported client issues and needs.

> **Business Development / System Administration.** Served as Manager of Business Development / System Administrator for an excavation / remediation company in Livonia, Michigan. Involved concurrent responsibilities for both functions, as well as similar key roles. Directed the research and evaluation of potential remediation and cleanup sites. Developed and presented bids for underground storage tank / aboveground storage tank (UST/AST) installation and removal. Provided environmental sales services for the company's environmental subsidiary. Also installed, upgraded, and maintained corporate server, independent systems and their multi-user LAN systems. Provided training and operational support to staff. Developed graphics, spreadsheets, and general programming.

> **Project Coordination / Contract Administration.** Served as Project Coordinator / Contract Administrator for a nationwide general contractor and land development firm. Provided scheduling and budgeting projects of up to $35 million projects, and directed data procession operations. Developed forecasts and project summaries, coordinated activities of up to 52 subcontractors, handled walkthroughs and punch-list updates, submitted draws to finance companies (up to $2 million/month), and generated early completion bonuses. Also trained employees on computer operations, developed graphics and presentations; handled accounting functions and all upgrades, installations, diagnostics, and repairs to corporate server.

> **Human Resources.** Served as a Human Resources Assistant / Graphics Specialist assigned dually to Personnel and Product Assurance Engineering Department for a Big Three automaker in Detroit, Michigan. Handled a diverse range of functions and worked with highly confidential materials. Oversaw HAZMAT and other related training for 400 in-house employees, and developed computer graphics (engine, validation, and controls laboratory). Also, involved editing materials for the Merit System, and developed position summaries.

> **Marketing.** Served as temporary Marketing Manager for a marketing company in Southfield, Michigan. Handled incentive program trips between client and dealers.

> **Contract Administration.** Served as a Contract Administrator for a Major Computer Chip Processing Manufacturer. Developed forecasts, and managed parts and systems inventories for their Product Service Division. Responsible for district operations in absence of manager. Designed contract forms that were implemented nationwide.

> **Account Administration.** Served as Executive Account Administrator for a food broker in Farmington Hills, Michigan. Managed existing account base, and opened up new accounts.

- UXO Awareness Certified (unexploded ordinances)
- Notary Public (Tarrant County, TX)
- 40-Hour OSHA Health & Safety Certification (29 CFR 1910.120)
- CPR and First Aid – American Lung Association
- Bureau of Underground Storage Tank Regulations (BUSTR-Ohio)
- LAN and Multi-user (Software Link) Administration Certification

- 2-Year Data Processing in Business Certification
- Environmental Bankers Association
- Dallas Bankers Association
- National Groundwater Association

RE: 1322, 1380 N. BROADWAY, LOS ANGELES, CA 90012

I, the undersigned, being the Custodian or the Keeper of Records, certify that a thorough search for the records you requested was carried out under my direction and control.

This search revealed no records.

It should be understood that this does not mean that the records you requested do not exist. It is possible that such records may be misfiled; exist under another spelling, another name, or under another classification. However, with the information furnished to our office, and to the best of our knowledge, no records were located.

If you have any questions regarding your request, please contact our office at (323) 890-7806.

Sincerely,

Christian Sten, Deputy Health Officer
Public Health Investigation

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of the ASTM Standard Practice for Assessment of Vapor Encroachment into Structures on Property Involved in Real Estate Transactions (E 2600-10).

Search Radius: 0.333 Mile.

No Aquiflow sites reported.

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name:	URBAN LAND
Soil Surface Texture:	variable
Hydrologic Group:	Not reported
Soil Drainage Class:	Not reported
Hydric Status:	Hydric Status: Soil does not meet the requirements for a hydric soil.
Corrosion Potential - Uncoated Steel:	Not Reported
Depth to Bedrock Min:	> 10 inches
Depth to Bedrock Max:	> 10 inches

Soil Layer Information

	Boundary			Classification			
Layer	**Upper**	**Lower**	**Soil Texture Class**	**AASHTO Group**	**Unified Soil**	**Permeability Rate (in/hr)**	**Soil Reaction (pH)**
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

EXECUTIVE SUMMARY

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures:
sandy loam
gravelly - sandy loam
silt loam
clay
fine sand
gravelly - sand
sand
fine sandy loam

Surficial Soil Types:
sandy loam
gravelly - sandy loam
silt loam
clay
fine sand
gravelly - sand
sand
fine sandy loam

Shallow Soil Types:
fine sandy loam
gravelly - loam
sandy clay
sandy clay loam
clay
silty clay
sand

Deeper Soil Types:
gravelly - sandy loam
sandy loam
very gravelly - sandy loam
stratified
very fine sandy loam
weathered bedrock
sand
gravelly - fine sandy loam
silty clay loam
clay loam

EXECUTIVE SUMMARY

SEARCH RESULTS

Unmappable (orphan) sites are not considered in the foregoing analysis.

RECORD SOURCES AND CURRENCY

To maintain currency of the following databases, EDR contacts the appropriate agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

PRP: Potentially Responsible Parties
Standard Environmental Record Source: Other Standard Environmental Records
Search Distance: Property

A listing of verified Potentially Responsible Parties

Date of Government Version: 10/25/2013
Number of Days to Update: 3
Last EDR Contact :12/29/2015

Source: EPA
Telephone: 202-564-6023

RMP: Risk Management Plans
Standard Environmental Record Source: Other Standard Environmental Records
Search Distance: Property

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

Date of Government Version: 08/01/2014
Number of Days to Update: 86
Last EDR Contact :01/26/2015

DEED: Deed Restriction Listing

Standard Environmental Record Source: Other Standard Environmental Records

Search Distance: 0.333 Mile

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

ENVIROSTOR: EnviroStor Database

Standard Environmental Record Source: State and tribal - equivalent CERCLIS
Search Distance: 0.333 Mile

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

HAZNET: Facility and Manifest Data

Standard Environmental Record Source: Other Standard Environmental Records
Search Distance: Property

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

2020 COR ACTION: 2020 Corrective Action Program List

Standard Environmental Record Source: Other Standard Environmental Records

Search Distance: 0.25 Mile

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

Source: EPA
Telephone: 703-412-9810

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Standard Environmental Record Source: Other Standard Environmental Records

Search Distance: 0.333 Mile

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

EPA WATCH LIST: EPA WATCH LIST

Standard Environmental Record Source: Other Standard Environmental Records

Search Distance: Property

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

FINDS: Facility Index System/Facility Registry System

Standard Environmental Record Source: Other Standard Environmental Records

Search Distance: Property

Facility Index System. FINDS contains both facility information and 'pointers' to other sources that contain more detail. EDR includes the following FINDS databases in this report: PCS (Permit Compliance System), AIRS (Aerometric Information Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-DOCKET (Criminal Docket System used to track criminal enforcement actions for all environmental statutes), FFIS (Federal Facilities Information System), STATE (State Environmental Laws and Statutes), and PADS (PCB Activity Data System).

Telephone: 202-528-4285

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

Standard Environmental Record Source: Other Standard Environmental Records

Search Distance: Property

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

US BROWNFIELDS: A Listing of Brownfields Sites

Standard Environmental Record Source: Other Standard Environmental Records

Search Distance: 0.333 Mile

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

EDR MGP: EDR Proprietary Manufactured Gas Plants

Standard Environmental Record Source: Former manufactured Gas Plants

Search Distance: 0.333 Mile

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5' minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW® Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW® Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services. The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

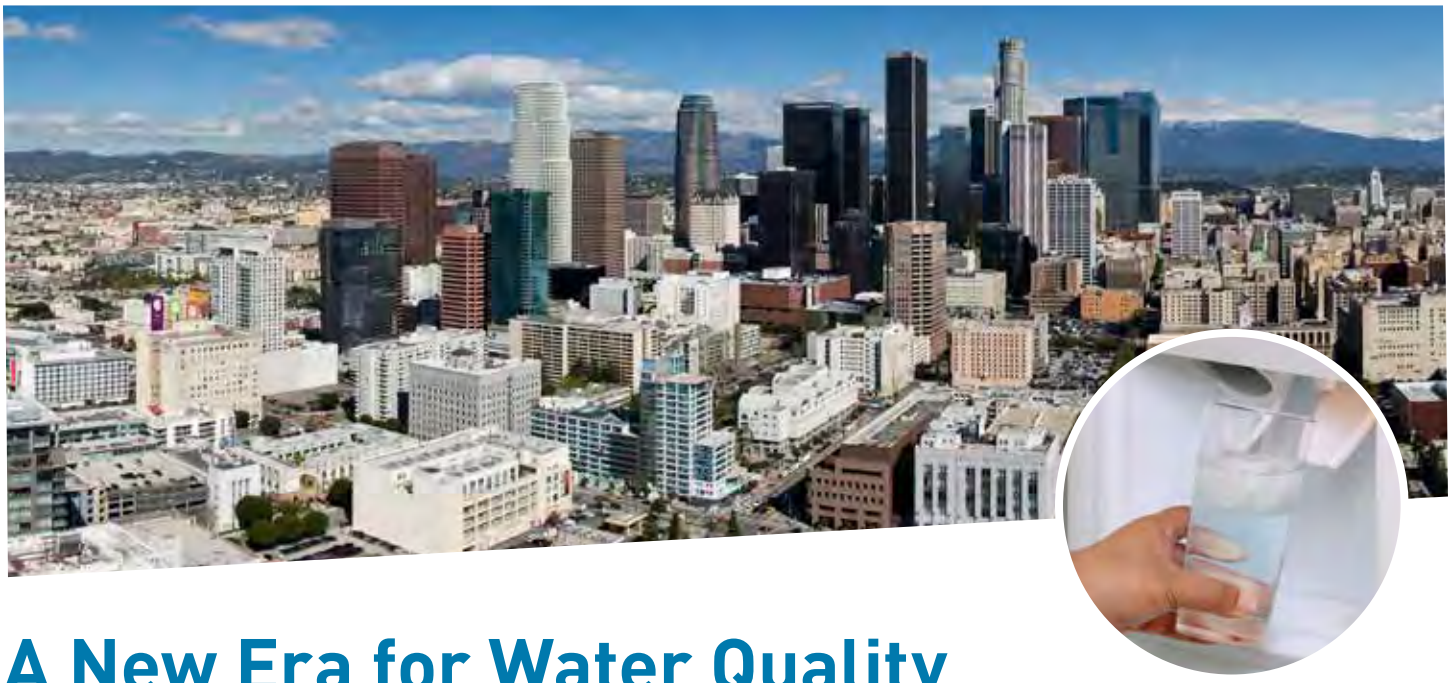
Los Angeles Department of Water & Power

L.A.'s Drinking Water Quality Report

for the period of Jan 1 - Dec 31, 2013



A New Era for Water Quality in Los Angeles

For over a century, LADWP has carefully maintained its world-class water system that transports, treats and delivers hundreds of millions of gallons of the highest quality water at the lowest possible cost to the City of Los Angeles.

In 2013, we supplied 4 million customers with 200 billion gallons of treated water that met or surpassed all drinking water standards. These standards are set by the U.S. Environmental Protection Agency (EPA) and the State of California Department of Public Health (State Health) Drinking Water Program.

To achieve such high quality water, hundreds of employees spend countless hours protecting our water sources, managing state-of-the-art water treatment processes, maintaining and operating our facilities, and vigilantly monitoring and testing the water we serve.

To protect the quality of the water delivered to your home, in 2013, we collected over 25,000 water samples across the city, and performed more than 240,000 water quality tests—not just for compliance, but also for research and operational improvements. We tested for more than 200 contaminants and constituents, including both regulated contaminants, such as arsenic, chromium, lead, and disinfection by-products, as well as constituents of interest such as sodium and hardness. Every day, LADWP employees work diligently to ensure that you receive the high-quality, low cost drinking water you've come to expect.

In this time of increasing regulations and mandates, we continue to explore innovative new treatments and are making progress on several large water quality improvement projects in order to keep water quality at its highest. One such project, the Dr. Pankaj Parekh Ultraviolet Disinfection Facility, was recently commissioned and is now adding an advanced level of protection to your drinking water. This facility is the largest ultraviolet (UV) water treatment facility in the West. Another project that will improve water reliability and quality is the construction of the Headworks Reservoir in the Griffith Park area, which is nearly half completed. This complex will consist of two underground reservoirs with a combined capacity of 110 million gallons. With its ongoing investments in innovative new water quality treatments and projects, LADWP is moving into a new era of ensuring high-quality water and a state-of-the-art water system for future generations.

General Information 14

Tribute to Dr. Pankaj Parekh

On January 29, 2014, LADWP and the people of Los Angeles lost an important advocate for water quality with the passing of Dr. Pankaj Parekh, former LADWP Director of Water Quality, who succumbed to injuries sustained in a motorcycle accident. Dr. Pankaj Parekh directly touched all our lives through his concern and passion for providing safe drinking water for all. He was a respected authority on water quality and a nationally recognized leader, known for his strong advocacy of public health. His early years working in villages in Africa made him realize that ensuring clean safe drinking water is of primary importance to protecting the public's health. He took this as his personal mission in life, and he will be remembered for his tireless efforts to carry out that mission for the residents of Los Angeles. Dr. Parekh strongly advocated the need for the Ultra-Violet Disinfection facility at the Los Angeles Aqueduct Filtration Plant to further purify drinking water. The newly completed facility was dedicated in his memory on May 29, 2014.

Water Quality News & Updates

Chloramine Disinfection Expanded City-wide

Improving water quality is a continuous process. In our ongoing effort to reduce the level of disinfection byproducts while ensuring microbial safety of the drinking water, LADWP has gradually expanded the use of monochloramine (chloramine) to provide the necessary protection to the water as it travels through miles of pipe to reach your tap. While both chlorine and chloramine are effective killers of bacteria and other microorganisms, chloramine lasts longer, forms fewer byproducts and does not have a chlorinous odor. The city of Los Angeles has joined cities across southern California, over 14 million people that currently receive chloraminated water from the Metropolitan Water District of Southern California. LADWP's use of chloramine also makes it possible during an emergency to exchange water with neighboring cities such as Santa Monica, Culver City, Long Beach and Inglewood.

Customers in the Harbor, Eastern Los Angeles and the Sunland-Tujunga areas of the city have received chloraminated water for several years to their complete satisfaction. Customers in the Pacific Palisades and Brentwood communities began receiving chloraminated water in late 2012. The remainder of Western Los Angeles area saw improvements by June 2013. Finally, the Valley and central/eastern areas received chloraminated water at their tap May in 2014.

Since chlorine and chloramine are different chemicals, adjustments to certain types of special water uses need to be made. Operators of kidney dialysis machines already monitor their equipment more frequently for both "free" and "total" chlorine, as recommended by the Southern California Renal Disease Council.

If you maintain a fish pond, tank, or aquarium, you must provide adequate treatment to remove both chlorine and chloramine, as both disinfectants are toxic to fish. For more information, please visit www.ladwp.com/waterquality or call 1-800-DIAL-DWP.

Disinfection Byproducts Regulations

The latest requirement for disinfection byproducts in drinking water is the Stage 2 Disinfectants and Disinfection Byproducts Rule (Stage 2) [http://water.epa.gov/lawsregs/rulesregs/sdwa/stage2/index.cfm] effective on April 1, 2012. Stage 2 does not change the allowable levels of disinfection byproducts in tap water. Instead, Stage 2 requires more stringent monitoring and compliance. This includes monitoring at critical points in the distribution system and the requirement to meet target maximum contaminant levels at each individual location on a running annual average. There are 17 locations monitored in the LADWP system under the Stage 2 regulation. By comparison, the Stage 1 regulation monitored and tracked a city-wide average. This new requirement will ensure uniform compliance throughout the city. Our strategy to achieve compliance with Stage 2 is to expand the use of the disinfectant known as chloramine, which forms fewer byproducts. The total capital investment for chloramine conversion and compliance with the Stage 2 rule was approximately $250 million. In an effort to protect the financial interests of its ratepayers, LADWP secured zero- and low-interest loans from the Safe Drinking Water State Revolving Loan Fund for nearly all of these capital projects. We will begin to comply with Stage 2 in April 2014 and post the results quarterly on our website at www.ladwpcom/waterquality under "Fact Sheets and Brochures".

Safeguarding Our Surface Water

The Surface Water Treatment Rule (SWTR), administered by State Health, is a drinking water regulation that safeguards reservoir supplies from microbiological contamination that may occur when rain runoff from nearby hillsides and slopes enters the water. In Los Angeles, SWTR applied to four open water reservoirs – Lower Stone Canyon, Encino, and Upper and Lower Hollywood. LADWP successfully met the compliance deadlines and treatment requirements for all four open reservoirs that were subject to SWTR. Upper and Lower Hollywood Reservoirs were successfully removed in July 2001 and replaced with two 30 million gallon buried tanks. New facilities to serve treated water from Encino Reservoir were completed in January 2006 and from Lower Stone Canyon Reservoir in September 2008. The latest update to the SWTR is the Long Term 2 Enhanced Surface Water Treatment Rule (LT2). This rule requires that LADWP cover or remove from service the remaining six uncovered distribution reservoirs, or

New USEPA Regulation

A new drinking water regulation that further reduces the allowable level of disinfection byproducts took effect April 2012. To comply with the Stage 2 Disinfection Byproducts regulation, LADWP needed additional time to complete construction of critical facilities before a complete change to chloramine could happen. The LADWP received a time extension from the California Department of Public Health (State Health) that allowed us to complete the necessary construction projects while remaining in compliance. While most of the distribution system meets the new compliance requirements, there are some areas that may not on a consistent basis without the use of chloramine. To obtain the extension, LADWP demonstrated to State Health that compliance with the new requirement is achievable within 2 additional years and that further public health protection from waterborne diseases caused by microorganisms such as Cryptosporidium and viruses will be provided. For more information on the new disinfection byproducts regulation, please turn to page 4 of this report.

provide additional treatment to meet the latest microbial standards by April 1, 2009. Otherwise LADWP must be in compliance with a state-approved schedule to meet these requirements. The six reservoirs are Los Angeles, Upper Stone Canyon, Santa Ynez, Ivanhoe, Silver Lake, and Elysian Reservoirs.

On April 1, 2008, LADWP notified State Health that it is fully committed to complying with the new regulations and requested an extension of the April 1, 2009 deadline. LADWP submitted an interim operations plan, a schedule for the required reservoir improvements, and executed a Compliance Agreement with State Health on March 31, 2009. LADWP is working diligently to bring all reservoirs into compliance as quickly as possible, but no later than the dates specified in the Compliance Agreement.

- Santa Ynez Reservoir was removed from service in November 2010 for the installation of a floating cover, and was placed back into service as a covered reservoir in May 2011.

- Silver Lake Reservoir was officially removed from service on December 31, 2013.

- Ivanhoe Reservoir will be removed from service in November 2014. Headworks Reservoirs will replace the storage capacity lost when Ivanhoe Reservoir is removed. Headworks Reservoir East is currently under construction and expected to meet the November 2014 compliance date. Design of Headworks Reservoir West is 30 percent complete. It will provide additional system reliability when completed in 2017.

- The Final Environmental Impact Report (EIR) for Elysian Reservoir Water Quality Improvement Project was completed in September 2011. The EIR was approved by the Board of Water and Power Commissioners for the installation of a floating cover on April 3, 2012. The design of the cover is 60 percent complete. Elysian Reservoir will be removed from service for the installation of the cover by the compliance date August3, 2015.

- The Final EIR for Upper Stone Canyon Reservoir Water Quality Improvement Project was completed in January 2012. Shading of the reservoir using shade balls was completed in early 2013. Upper Stone Canyon Reservoir EIR was approved by the Board of Water and Power Commissioners for the installation of a floating cover on February 7, 2012. The scope of work for the floating cover project was completed on August 31, 2013. Upper Stone Canyon Reservoir must be removed from service by January 2, 2017.

- LADWP has decided to build an ultra-violet treatment facility to disinfect water leaving the Los Angeles Reservoir. In addition, shading of Los Angeles Reservoir has begun with the deployment of shade balls starting in the summer of 2013 and completing in December 2014. A total of 70 million balls will prevent the formation of bromate by blocking sunlight.

The total cost to modify the six reservoirs is close to $1.2 billion. Again, LADWP has protected the financial interests of its ratepayers, by securing zero- and low-interest loans from the Safe Drinking Water State Revolving Loan Fund for these capital projects.

In compliance with the LT2 Agreement, LADWP routinely monitors its open reservoirs for microbial pathogens including *Cryptosporidium* and *Giardia*. None were detected in 2013. Even so, we are required to provide a standard statement from State Health regarding the need to protect our water from *Cryptosporidium*.

"*Cryptosporidium* is a microbial pathogen found in surface water throughout the U.S. Although filtration removes *Cryptosporidium*, the most commonly used filtration methods cannot guarantee 100 percent removal. Our monitoring indicates the presence of these organisms in our source water and finished water. Current test methods do not allow us to determine if the organisms are dead or if they are capable of causing disease. Ingestion of *Cryptosporidium* may cause cryptosporidiosis, an abdominal infection. Symptoms of infection include nausea, diarrhea, and abdominal cramps. Most healthy individuals can overcome the disease within a few weeks. However, immunocompromised persons are at greater risk of developing life threatening illness. We encourage immunocompromised individuals to consult their doctor regarding appropriate precautions to take to avoid infection. *Cryptosporidium* must be ingested to cause disease, and it may be spread through means other than drinking water."

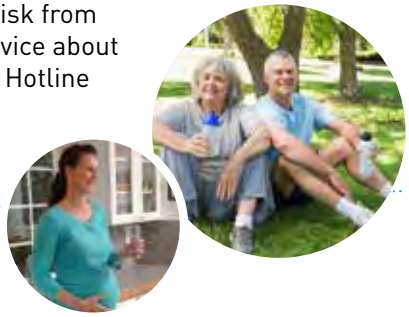
A Better Understanding of Radon

Radon is a naturally occurring radioactive gas that is not a significant issue in most of California. In 2013, very low levels of radon were detected in some of our ground water supplies (see Table III on page 16). There is no established drinking water standard or monitoring requirement for radon. In general, radon entering a home through tap water is a very small contributor to radon in indoor air. Although the radon levels were well below what the EPA is currently considering for a standard, the EPA has asked us to share the following general information with you to help you better understand radon.

"Radon is a radioactive gas that you can't see, taste, or smell. It is found throughout the U.S. Radon can move up through the ground and into a home through cracks and holes in the foundation. Radon can build up to high levels in all types of homes. Radon can also get into indoor air when released from tap water from showering, washing dishes, and other household activities. Compared to

Special Needs Population Precautions

There are certain health conditions for which additional instruction on environmental exposures including drinking water would be advisable. Customers with weakened immune systems, who may have undergone chemotherapy treatment, received organ transplants, suffer from HIV/AIDS or other immune system disorders, or some elderly and infants can be particularly at risk from infection. Customers concerned about these types of health challenges should seek advice about drinking water from their health care providers. Contact the EPA's Safe Drinking Water Hotline at (800) 426-4791, or visit www.epa.gov for free guidelines on how to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants.



radon entering the home through soil, radon entering the home through tap water is a very small source of radon in indoor air. Radon is a known human carcinogen. Breathing air containing radon can lead to lung cancer. Drinking water containing radon may also cause increased risk of stomach cancer. If you are concerned about radon in your home, test the air in your home. Testing is inexpensive and easy. Fix your home if the level of radon in your air is 4 picoCuries per liter of air (pCi/L) or higher. There are simple ways to fix a radon problem that aren't too costly. For additional information, call your State radon program or call EPA's Radon Hotline (800-SOS-RADON)."

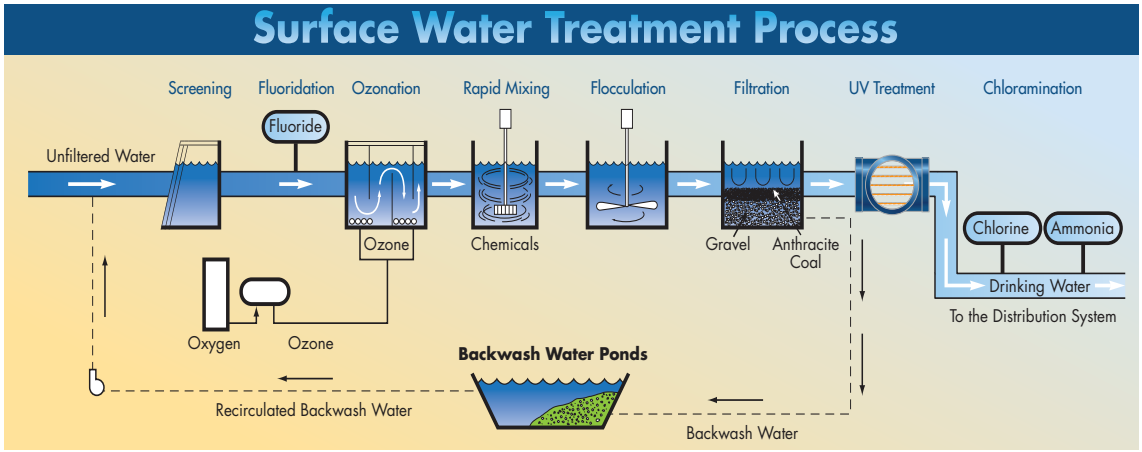
Drinking Water Source Assessment and Protection Program Update

In July 2002, LADWP completed an assessment of water sources in the Owens Valley and Mono Basin watersheds that supplement the Los Angeles Aqueduct supply. These sources are most vulnerable to geothermal activities that release naturally occurring arsenic into creeks that feed the Owens River. Other activities that may impact water quality in these watersheds are livestock grazing, wildlife, and unauthorized public use of storage reservoirs. The impact to water quality from these activities is deemed to be minimal. An updated sanitary survey was completed in 2010. Regular monitoring for *Cryptosporidium* and *Giardia* indicates that their presence is infrequent and at very low levels.

Assessment for groundwater sources in San Fernando and Sylmar Basins were completed in December 2002. Assessment for groundwater sources in the Central Basin was completed and submitted to State Health in March 2003. Located in highly urbanized areas, these wells are most vulnerable to the following activities associated with contaminants found in the well water: dry cleaning, chemical processing and storage, fertilizer and pesticide storage, metal finishing, and septic systems. A more recent assessment of the San Fernando Basin was completed in 2013. LADWP closely manages the use of this local water supply through treatment, and blending with water from other sources to ensure compliance with drinking water standards. A copy of the assessments can be obtained by contactingTom Dailor of LADWP Water Quality Regulatory Affairs at (213) 367-0921.

In December 2002, MWD completed a source water assessment of its Colorado River and State Water Project supplies. Colorado River supplies are considered to be most vulnerable to recreation, urban and storm water runoff, increasing urbanization in the watershed and wastewater. State Water Project supplies are considered to be most vulnerable to urban and storm water runoff, wildlife, agriculture, recreation and wastewater. MWD updated its sanitary survey of the Colorado River in 2010 and the Department of Water Resources (DWR) updated the State Water Project sanitary survey in 2011. A copy of the assessment can be obtained by contacting MWD at (213) 217-6850.

Water Treatment Process



Surface Water Treatment

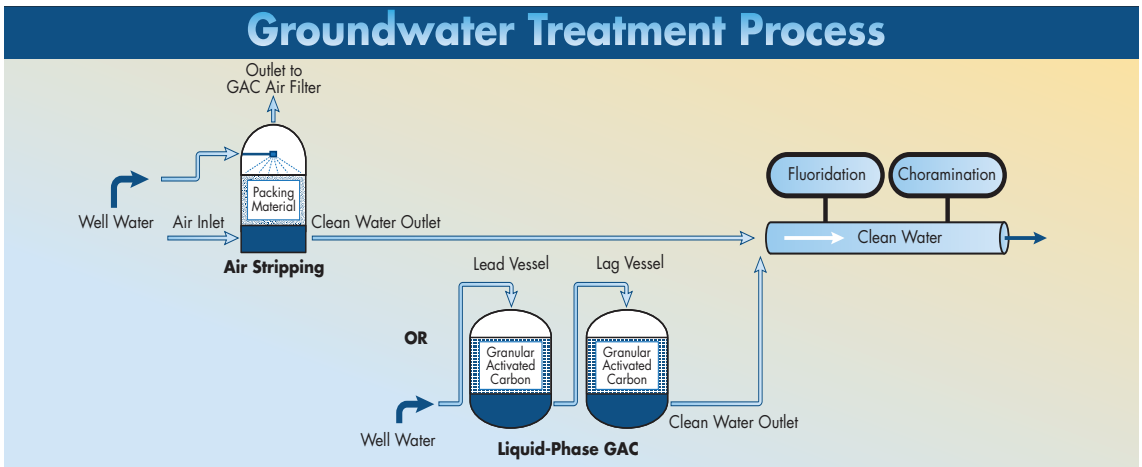
LADWP water comes from four different water sources—three are from surface water sources like lakes and rivers, and the other is groundwater from local wells and springs. The taste and appearance of surface water can vary seasonally and groundwater generally contains more minerals. All these factors make for different tasting water. Despite these variations, LADWP water meets all drinking water standards for health and aesthetics.

All water coming from the Los Angeles Aqueducts, the California Aqueduct (a.k.a. State Water Project), and the Colorado River Aqueduct is filtered and treated to ensure a safe drinking water supply. At the Los Angeles Aqueduct Filtration Plant, water is treated as follows:

Water flows into the filtration plant by gravity and travels through screens to remove environmental debris such as twigs and dead leaves. Ozone, a super-charged oxygen molecule and a powerful disinfecting agent is injected into the water to destroy bacteria and other impurities that affect taste, odor and color. Treatment chemicals are quickly dispersed into the water to make fine particles called floc. A six-foot-deep filter (crushed coal over gravel) removes the floc and previously added chemicals. In 2014, UV disinfection was added to the treatment process. Chlorine and ammonia are added during the final step ensures lasting disinfection and protects the water as it travels through the City's distribution system to your tap. Fluoride is optimized to promote oral health by strengthening tooth enamel.

Groundwater Treatment

They City's vast groundwater supply in the San Fernando and Central Basins are generally clean, but there are areas where water quality is not optimal or has contamination. We pump from the clean parts of the basins and disinfect this groundwater with chlorine as a safeguard against microorganisms. In



December, 2009, the Federal Ground Water Rule went into effect. This regulation requires all U.S. water agencies to disinfect groundwater sources, a standard practice that we have had for decades. Because of man-made contaminants found in the San Fernando Valley groundwater wells, we continuously monitor and ensure that the well water meets water quality standards and results are far below the maximum contaminant levels permitted by Federal and State regulations. To recover the use of all water in the San Fernando Basin and expand our local water supplies, we are designing a comprehensive approach to remove groundwater contaminants. Our goal is to have this treatment system in operation by 2022.

Improving Water Quality at Home

One of the benefits of switching from chlorine to chloramine drinking water disinfection is improved taste and odor, while still keeping the water safe. However, sometimes situations occur which may affect the taste and/or smell of the water from your tap.

If you ever notice an unusual taste or odor in your water, here is some useful information to determine the source of the problem. In general, there are three places a taste or odor can originate.

The Water Supply

On occasion, the water supply may have a taste or odor problem. If the water supply is the source of the taste or odor, all the water fixtures in your home will be affected. If you think the supply may be the problem, here's a simple test you can try:

- Get a clean drinking glass and go to your front hose faucet, or whichever faucet is closest to your water meter. This faucet is usually near the main shut-off valve to the property and in line with the water meter. Please note: In some areas, it may be at the back of the property.
- Run the water at that faucet at full volume, for a full two minutes (collect the water for some other use). After the two minutes, turn the water off and take off the hose, if one is attached.
- Immediately, fill the clean glass with water from that faucet; then smell/taste the water.

If the taste or odor is present in this sample, it may be coming from the water supply. If this is the case, just call us at 1-800-DIAL-DWP (1-800-342-5397). If the taste or odor is not present in this sample, the problem is most likely plumbing related.

Household Plumbing

Household plumbing can rust and sometimes organic matter will accumulate in the pipes, affecting the taste or odor of the water. If you tried the water supply test above and think your plumbing might be the cause of a taste or odor, we recommend that you flush your plumbing. You can find easy instructions at www.ladwp.com/waterquality, under Improving Water Quality at Home.

The Environment

Sometimes a perceived taste or odor is "environmental" because it's not related to water at all. The most common example is what we call "drain odor." Over time, organic matter such as soap, hair, or food waste can accumulate on the walls of the drain. Bacteria can grow on these organic deposits. As the bacteria multiply, they produce gases which can smell unpleasant. These gases accumulate in the drain until you turn on the water. Running water displaces these gases into the air around the drain. It's natural to assume the odor is coming from the water, because you only smell it when the water is running. To confirm the odor isn't in the water try this simple test:

- Fill a clean glass with water from the fixture where you notice the odor, after running the water for a minute.
- Take the glass of water completely out of the room.
- Smell the water in the glass again.

If the odor is not present in the sample, then the odor is probably drain related. Drain odors are best eliminated by disinfecting the drain. You can find easy instructions at www.ladwp.com/waterquality, under Improving Water Quality at Home, along with other useful information to improve your water quality at home.

2013 Drinking Water Quality Monitoring Results

Tables I-IV list the results of water tests performed by LADWP and MWD from January to December 2013. LADWP tests for over 200 contaminants. These tables include only contaminants with values that are detected.

How to Read the Tables

The constituents/contaminants found in the water served in your area are listed as follows:

- For **San Fernando Valley Area** – water test results are under the Los Angeles Aqueduct Filtration Plant, the Northern Combined Wells, and MWD Jensen Filtration Plant columns
- For **Western Los Angeles Area** – water test results are under the Los Angeles Aqueduct Filtration Plant column
- For **Central Los Angeles Area** – water test results are under the Los Angeles Aqueduct Filtration Plant and the Southern Combined Wells columns
- For **Harbor/Eastern Los Angeles Area** – water test results are under the MWD Jensen, Weymouth, and Diemer Filtration Plants columns

Some constituents/contaminants are reported on a citywide basis as required by the California Department of Public Health.

The unregulated contaminants reported on an area-wide basis are included for additional information on the water served in your area.

Abbreviations and Footnotes

mg/L = milligrams per liter (equivalent to ppm)
µg/L = micrograms per liter (equivalent to ppb)
ng/L = nanograms per liter (equivalent to ppt)
pCi/L = picoCuries per liter
% = percentage
µS/cm = microSiemens per centimeter
NTU = nephelometric turbidity units
TON = threshold odor number
CFU = colony-forming unit
ACU = apparent color unit
< = less than the limit for reporting purposes
NA = not applicable
NR = not reported
NT = not tested
HRAA = highest running annual average

(a) Values reflect Highest Running Annual Average (HRAA). HRAA is the highest of all Running Annual Averages (RAAs). RAA is a calculated average of all the samples collected within a twelve month period, which may include test data from the previous calendar year. HRAA may be higher than the range, which is based on the test data in the reported calendar year.

(b) Bromate is tested in water treated with ozone. Bromate has also been found in water treated with chlorine in some LADWP reservoirs that have elevated bromide levels and are exposed to sunlight. The Metropolitan Water District of Southern California (MWD) only tests for bromate at the Jensen Filtration Plant, which utilizes ozonation.

(c) Radiological monitoring is performed in cycles of varying frequencies. Monitoring for Gross Alpha Particle Activity, Radium-226 and Radium-228 was conducted in 2009 and 2011. Monitoring for Gross Beta Particle Activity testing was conducted in 2013. Monitoring for Radon, Strontium-90, and Tritium was conducted in 2011 and 2013 at Los Angeles Aqueduct Filtration Plant, Northern Combined Wells blend points, and Southern Combined Wells blend points. MWD conducted all radiological monitoring in 2011 for samples collected at the Weymouth, Diemer, and Jensen Treatment Plants.

(d) Turbidity is a measure of the cloudiness of the water and is a good indicator of water quality and filtration performance. High turbidity can hinder the effectiveness of disinfectants.

The Primary Drinking Water Standard for turbidity at the water filtration plants is less than or equal to 0.3 NTU in at least 95% of the measurements taken in any month and shall not exceed 1.0 NTU at any time. The reporting requirement for treatment plant turbidity is to report the highest single measurement in the calendar year as well as the lowest monthly percentage of measurements that are less than or equal to 0.3 NTU.

(e) At-the-tap monitoring of lead and copper is conducted every three years as required by the Federal Lead and Copper Rule. A system is out of compliance if the Regulatory Action Level is exceeded in the 90th percentile of all samples at the customers' tap. The most recent monitoring was conducted in 2012. Although the City's treated water has little or no detectable lead, studies were conducted and corrosion control was implemented in the Western Los Angeles area in 2010. Corrosion control will be expanded to all other area of the City by 2020.

(f) Values reflect testing at entry to the distribution system.

(g) Health-based Reference Concentration recommended by US EPA

Terms Used In The Tables

Compliance: A drinking water standard based on the health risk (primary standards) and aesthetic (secondary standards) exposure of a contaminant to consumers. For example, bacteria and nitrate have strict limits that must be met at all times due to the acute effects they can cause. Other standards, like small amounts of disinfection by-products and man-made chemicals, have standards that are based on a lifetime of exposure because the risk to consumers is very low. Compliance with most standards is based on an average of samples collected within a year. This allows for some fluctuation above and below the numerical standard, while still protecting public health.

Federal Minimum Reporting Level (MRL): MRL is the lowest analyte concentration which demonstrates known quantitative quality. MRLs are set by U.S. Environmental Protection Agency (USEPA).

Maximum Contaminant Level Goal (MCLG): MCLG is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set by the U.S. Environmental Protection Agency (USEPA).

Maximum Residual Disinfectant Level (MRDL): MRDL is the highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG): MRDLG is the level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants. MRDLGs are set by the USEPA.

Notification Level (NL): NL is the health-based advisory level established by CDPH for chemicals in drinking water that lack MCLs.

Primary Drinking Water Standard (PDWS): MCLs and MRDLs for contaminants that affect health along with their monitoring and reporting requirements, and water treatment requirements.

Public Health Goal (PHG): PHG is the level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California Environmental Protection Agency, Office of Environmental Health Hazard Assessment (OEHHA).

Regulatory Action Level (AL): AL is the concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow. ALs are set by the USEPA.

Secondary Maximum Contaminate Level (SMCL): SMCL is the highest level a constituent allowed in drinking water that may affect the taste, odor or appearance.

State Maximum Contaminant Level (MCL): MCL is the highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the Public Health Goals (PHGs) or Maximum Contaminant Level Goals (MCLGs) as is economically and technologically feasible. For certain contaminants, compliance with the MCL is based on the average of all samples collected throughout the year.

Treatment Technique (TT): TT is a required process intended to reduce the level of a contaminant in drinking water. For example, the filtration process is a treatment technique used to reduce turbidity (the cloudiness in water) and microbial contaminants from surface water. High turbidities may be indicative of poor or inadequate filtration.

Calendar Year 2013 Water Quality Monitoring Results

The Third USEPA Unregulated Contaminant Monitoring Rule (UCMR3) Constituents / Contaminants Detected In Treated Water

Unregulated Contaminant Monitoring Rule

The Unregulated Contaminant Monitoring Rule (UCMR) is a special program developed by the USEPA that requires public water systems to survey up to 30 selected contaminants of emerging concern (CECs) once every five year. LADWP began the 3rd UCMR monitoring in April 2013 and will finish in March 2014. The test results thus far indicated that most of the contaminants were not detected at the very low detection levels required by USEPA for UCMR. Of the contaminants that were detected (see Table V), chlorate and strontium were in significant, but expected concentrations.

General Information

This annual Drinking Water Quality Report (also known as a Consumer Confidence Report) is required by the California Department of Public Health and is prepared in accordance with their guidelines. The report is available both online at www.ladwp.com/waterqualityreport or you can call 1-800-DIAL-DWP to request a copy to be mailed to you. LADWP, the largest municipal utility in the nation, was established more than 100 years ago to provide a reliable and safe water and electric supply to the City's 4 million residents and businesses.

LADWP is governed by a five-member Board of Water and Power Commissioners, appointed by the Mayor and confirmed by the City Council. The Board meets regularly on the first and third Tuesdays of each month at 1:30 p.m. Meetings are held at:

Los Angeles Department of Water and Power
111 North Hope Street, Room 1555H
Los Angeles, CA 90012-2694

The meeting agenda is available to the public on the Thursday prior to the week of the meeting. You can access the Board agenda at www.ladwp.com or by calling (213) 367-1351.

For general information about LADWP, call 1-800-DIAL DWP (1-800-342-5397) or visit www.ladwp.com.

For questions regarding this report, please contact Mr. Enrique Uribe at (213) 367-3986, Enrique.Uribe@ladwp.com or call the water quality hotline at (213) 367-3182.

NO FURTHER REQUIREMENT FOR SOILS ONLY: FORMER TEXACO GASOLINE STATION PARCEL – CORNFIELD PROPERTY, 1322 NORTH BROADWAY, LOS ANGELES, CALIFORNIA (SLIC ID. 2047T00; SLIC NO. 891)

Dear: Mr. Levy

The Los Angeles Regional Water Quality Control Board (Regional Board) staff have received the document entitled *Soil Vapor Extraction Update, dated February 9, 2006* (Report), submitted on behalf of the Union Pacific Railroad Company (UPRR) by Environmental Resources Management-West, Inc. (ERM) to support your no further action request for soils at the former Texaco Station site (Site) located historically at 1322 North Broadway in Los Angeles. Regional Board staff has reviewed the Report and other related information regarding the subject site, including the *Annual Groundwater Monitoring Report, dated January 2006* (Groundwater Report).

BACKGROUND

The former Cornfield site is a 50-acre property (Property) located between North Broadway and North Spring Street in an industrial area east of downtown Los Angeles, as shown in Figure 1 (enclosed). Historically, the Southern Pacific Railroad solely operated the Property, and five parcels were leased to various commercial businesses over time, including the former Texaco station site. The Property is currently divided into three parcels: 1) a 32-acre Parcel which includes most of the flat portion; 2) the 10-acre Metropolitan Transit Authority (MTA) easement which transverses the Property along the northwest side of the 32-acre Parcel; and 3) an 8-acre Parcel that includes the former Texaco station, and the escarpment and flat area at the south end of the Property (Figure 1).

The 8-arce Parcel was occupied by a restaurant from around 1950 to 1955. From 1955 to 1989, the former Texaco gasoline station occupied a portion (0.2 acres between North Broadway and the edge of a steep escarpment or bluff) of the current 8-acre Parcel. A portion of the Site was also leased for parking starting around 1983. The Site had four underground gasoline tanks (USTs) including the associated dispensing hardware, a hydraulic lift, and a small office building. The USTs consisted of two at 8,000 gallons each, one at 6,000 gallons, and one at 1,000 gallons. The retail gasoline station was reportedly demolished in 1989, and the USTs were removed in 1990.

SOIL INVESTIGATION AND REMEDIATION

During the tank removal in 1990, soil samples collected from the base of the UST excavation pits (between 7 and 16 feet below surface grade [ft bgs]) indicated a maximum concentration of total petroleum hydrocarbons as gasoline (TPH-g) at 25,000 milligrams per kilogram (mg/kg), and a maximum concentration of TPH as diesel at 2,000 mg/kg. Benzene, toluene, ethylbenzene and xylenes (BTEX) constituents were detected at maximum concentrations of 120 mg/kg for benzene, 710 mg/kg for toluene, 290 mg/kg for ethylbenzene, and 1,400 mg/kg for xylenes.

Site investigations between 1999 and 2001 indicate that soil and groundwater were impacted by TPH-g, BTEX, and methyl-tert-butyl-ether (MTBE) beneath a limited portion of the 32-acre parcel down-gradient of and attributable to the former Texaco station site. In June 2001, during construction activities along the MTA easement, hydrocarbon-impacted soil was encountered at the base of the escarpment, next to the retaining wall below the former Texaco station location. Approximately 300 cubic yards of impacted soil in this area were excavated.

From March 2001 to June 2002, a soil vapor extraction (SVE) system was operated to remediate a thin (0.2 feet or less) layer of free-phase gasoline within the capillary fringe near the escarpment of the Site. Another SVE system was installed in 2003 to remediate soil impacted by gasoline releases from USTs at the former Texaco service station on the current upper 8-acre Parcel. The SVE system began operation in October 2003. Confirmation soil boring samples were collected in May of 2005. Soil samples from these borings were non-detect for TPH-g, BTEX, and MTBE, and were well below the USEPA's residential Preliminary Remediation Goals (PRGs) for any detected compound. As of June of 2005, the SVE system had removed 365 pounds of volatile organic compounds (VOCs). Rebound testing was conducted from July through September 2005, and indicated that the SVE system had achieved the soil cleanup goals.

GROUNDWATER INVESTIGATION

Since 2000, twenty groundwater wells have been installed at the Site, and six have been decommissioned. Depth to groundwater ranges from 30 to 35 feet below ground surface (bgs). Historical groundwater elevations across the Site have indicated a flow direction generally to the southwest. The hydraulic gradient is approximately 0.009 feet per foot and 0.001 feet per foot, respectively in the northeastern and southwestern portions of the Site. The nearest municipal groundwater well is located 4 miles to the southwest.

Based upon the Groundwater Report, maximum BTEX concentrations in groundwater are 14,000 micrograms per Liter (ug/L), 31,000 ug/L, 3,000 ug/L, and 18,000 ug/L, respectively. MTBE was detected up to 27 ug/L; tetrachloroethylene (PCE) less than one ug/L; trichloroethylene (TCE) up to 3.7 ug/L; 1,2-dichloroethane (1,2-DCA) up to 120 ug/L; and cis-1,2-dichloroethene (cis-1,2-DCE) up to 2.8 ug/L. Free product has not been detected since June 2002. Due to the high BTEX concentrations present in groundwater, sampling and monitoring are still required, along with the possibility of groundwater remediation.

CONCLUSION

Based upon the soil and groundwater data, and other information in our case file, Regional Board staff concludes that the SVE system achieved the cleanup targets for soils, and very low concentrations of TPH remain in soil. These low concentrations do not appear to pose a significant threat to human health and groundwater quality. However, high BTEX constituents concentrations remain groundwater. Therefore, groundwater assessment, sampling, monitoring and remediation are still required by this Regional Board.

The "No Further Requirements" (NFR) determination for soils at this site is made at this time based upon the most current information/data contained in the subject file. The NFR applies only to the known chemicals of concern which have been tested during the site assessment, monitoring, and mitigation phases, and with the provision that the information provided to Regional Board staff is accurate and representative of site conditions. If new contamination is encountered during future site construction or redevelopment activities, you are required to provide verbal notification to this Regional Board immediately and submit a follow-up written report within 72 hours. In addition, appropriate health and safety measures must be fully implemented if conditions change.

In addition, the jurisdiction requirements of other agencies, such as the United States Environmental Protection Agency (USEPA), and Cal EPA-Department of Toxic Substances Control (DTSC), are not affected by this Regional Board's decision regarding the Site. Such agencies may choose to make their own determination concerning the Site.

Please notify this Regional Board of any change in operations, regarding storage and handling of chemicals, or the processing and disposal of wastes. If this property is sold to another party, we must be informed by the new owners of any change in facility operations, such as storage and handling of chemicals, or the processing and disposal of wastes.

If you have any questions, please contact Dr. Arthur G. Heath at (213) 576-6725.

Sincerely,

Jonathan S. Bishop
Executive Officer

Dear Mr. Bishop:

ARCADIS U.S., Inc. is pleased to present this letter and the attached *Well Destruction Work Plan – MW-2 and MW-18 Located at the 8-acre Parcel* (Work Plan), on behalf of the Union Pacific Railroad (UPRR) and Riboli Family Wine Estates, as part of our request to the Los Angeles Regional Water Quality Control Board (LARWQCB) to grant No Further Action (NFA) status for the 8-acre parcel portion of the Former Cornfield Yard (site; Figures 1 and 2). The site consists of three separate sub-parcels: the northernmost 8-acre parcel (includes the Former Texaco Gasoline station), 32-acre parcel, and the 10-acre Metropolitan Transit Authority (MTA) Easement. The 8-acre parcel will be undergoing development by the Riboli Family Wine Estates, therefore, a NFA of the 8-acre parcel is being requested. The 32-acre parcel and 10-acre MTA Easement areas are under the oversight of UPPR for ongoing monitoring of groundwater impacts and are not part of the NFA request at this time. An NFA for soils[1] was previously granted by the LARWQCB for the Former Texaco Gasoline Station property as part of the 8-acre parcel, and the majority of the wells associated with the Former Texaco Gasoline Station were previously abandoned.

[1] RWQCB, 2006. "No Further Requirement for Soils Only: Former Texaco Gasoline Station Parcel – Cornfield Property, 1322 North Broadway, Los Angeles, California (SLIC ID. 2047T00; SLIC NO. 891)". June 6.

There are two remaining groundwater monitoring wells (MW-2 and MW-18) on the 8-acre parcel and only MW-18 is currently accessible. A geophysical survey will be required to attempt to locate the metal well box for MW-2 before well destruction can commence. At MW-2, groundwater gauging and analytical data were collected from August 2000 through August 2003 and concentrations of samples analyzed were generally not detected above laboratory reporting limits for Volatile Organic Compounds (VOCs) or very close to reporting limits for Volatile and Extractable Fuel Hydrocarbons[2] (refer to the attached Table 1 in the Work Plan). At MW-18, groundwater analytical data were collected from July 2002 to January 2007 and concentrations of VOCs and Volatile and Extractable Fuel Hydrocarbons were below laboratory reporting limits. Groundwater gauging data continued to be collected at MW-18 from July 2002 through September 2012[2] to incorporate into groundwater elevation contours of the site. The groundwater gauging data collected at MW-18 are not necessary to further characterize the remaining parcels[3]. As indicated in attached Figure 3 of the Work Plan, MW-19 serves as a downgradient monitoring point and MW-2 is not needed.

It is for the aforementioned reasons that ARCADIS is requesting a NFA for the 8-acre portion of the site in support of property development by the Riboli Family Wine Estates. For details on destruction of MW-2 and MW-18 refer to the attached Work Plan. This request is supported by the current property owner, the Riboli Family Wine Estates, and the party responsible for the environmental cleanup, UPRR.

Dear Mr. Bishop,

ARCADIS U.S., Inc. (ARCADIS) has prepared this *Well Destruction Work Plan – MW-2 and MW-18 Located at the 8-acre Parcel* (Work Plan) on behalf of the Union Pacific Railroad Company (UPRR) and the Riboli Family Wine Estates. The 8-acre parcel is a part of the Former Cornfield Yard in Los Angeles, California (site; Figure 1). This Work Plan has been prepared in support of property development, and as such existing wells MW-2 and MW-18 will need to be destroyed. In 2006, a No Further Action (NFA) for soils was granted by the Los Angeles Regional Water Quality Control Board (LARWQCB) for the Former Texaco Gasoline station property located on the 8-acre parcel[1]. All wells associated with the Former Texaco Gasoline Station were previously abandoned as part of the NFA activities. ARCADIS recommends a complete NFA for the 8-acre parcel in support of development by the property owners, Riboli Family Wine Estates, for the following reasons:

- No site constituents of concern (COCs) have been detected above laboratory reporting limits in MW-2 and MW-18 since the two groundwater monitoring wells were incorporated into the site groundwater monitoring well program in 2000 and 2002, respectively. The locations of the monitoring wells are shown on Figure 2 and groundwater analytical results for all wells in the groundwater monitoring program are summarized in Table 1.

- Groundwater gauging data were collected at MW-18 from July 2002 through September 2012[2] and incorporated into groundwater elevation contours for the site. The groundwater gauging data collected at MW-18 are not necessary to further

[1] RWQCB, 2006. No Further Requirement for Soils Only: Former Texaco Gasoline Station Parcel – Cornfield Property, 1322 North Broadway, Los Angeles, California (SLIC ID. 2047T00; SLIC NO. 891). June 6.

characterize the remaining parcels[2]. As indicated in attached Figure 3, MW-19 serves as a downgradient monitoring point and MW-2 is not needed.

ARCADIS proposes destruction of groundwater monitoring wells MW-2 and MW-18 following the procedures outlined in this Work Plan.

Pre-Mobilization Activities

Pre-field activities associated with the proposed well destructions will include permitting, subsurface utility clearance, and a health and safety plan (HASP) amendment.

Permits

Well destruction permits will be obtained by ARCADIS from the Los Angeles County Department of Environmental Health (LACDEH) prior to field activities.

Subsurface Utility Clearance

Prior to intrusive field work, well locations will be surveyed and cleared by a qualified subsurface utility locating contractor to identify possible subsurface obstructions and utilities. Underground Services Alert will also be notified of the proposed work at least 48 hours prior to beginning work.

Health and Safety Plan

The existing site-specific HASP will be reviewed and amended, if necessary, to protect workers and the community during the planned well destruction activities. The HASP amendment will be prepared by ARCADIS' designated Health and Safety Officer, and, in accordance with Occupational Safety and Health Administration (OSHA) standard "Hazardous Waste Operations and Emergency Response" guidelines (29 Code of Federal Regulations 1910.120), will include at minimum:

- A description of work to be performed, site controls, and the schedule for site safety meetings.

- The current environmental conditions with respect to the identified COCs, including site hazard identification and mitigation measures.

---

[2] ARCADIS, 2009. *Addendum to the Summary of Site Conditions and Request for Closure Report. Former Cornfield Yard, 1245 North Spring Street, Los Angeles, California, SLIC Site SL2047T1683*. November 25.

- The appropriate levels of personal protective equipment and monitoring requirements.
- Personnel training and medical surveillance requirement.
- An emergency response plan including a map indicating the most efficient route to the nearest hospital.

Well Destruction Activities

A geophysical survey will be required to attempt to locate the metal well box for MW-2 before well destruction can commence.

Wells will be abandoned in accordance with LACDEH procedures by a C57-licensed drilling contractor under ARCADIS oversight. Prior to abandoning each well, the water level and total depth of each well will be measured and recorded on daily field logs.

Each well will be pressure grouted using a tremie pipe from the bottom of each well to approximately 5 feet below ground surface (bgs). After pressure grouting is complete, each well will be destroyed by over drilling the original borehole to total depth using a hollow stem auger drill rig. It is anticipated that MW-2 is damaged and/or filled with sediment. Once found, MW-2 will not be pressure grouted, but instead it will be over drilled. All outer well box/surface completions will be removed and boreholes will be backfilled from 1 to 5 feet bgs with a combination of neat cement and hydrated bentonite chips. The top 1 foot of the borehole will then be completed to grade with material matching existing surface conditions.

Well Destruction Derived Waste

Well destruction derived wastes, such as well material cuttings and decontamination rinse water, generated during drilling operations will be temporarily stored onsite in Department of Transportation approved soil bins and/or 55- gallon drums pending characterization, transport, and disposal. Any removed well PVC material will be separated from the cuttings, if possible, and placed in municipal trash. Soil drums will be removed within 90 days, and waste disposal will be conducted in accordance with applicable regulations.

Well Destruction Report

A report will be prepared and submitted to the LARWQCB documenting the results of these activities. The report will include at a minimum the following:

- A summary of site conditions and background information.

- A scaled site plan illustrating the destroyed well locations and other relevant site features.

- A description of well destruction activities.

Schedule

ARCADIS is prepared to initiate field work upon the approval of this Work Plan by the LARWQCB and the issuance of necessary permits.

Please contact Kristen Stevens at 562-496-3010 if you have any questions or concerns regarding this work plan.

Sincerely,
