Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Site Name:	HEANG CHHUN HENG
Violation Date:	09-03-2015
Citation:	22 CCR 12 66262.12 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.12
Violation Description:	Failure to obtain and/or maintain an Active EPA ID.
Violation Notes:	Returned to compliance on 03/22/2016. OBSERVATION: This facility s EPA

HEANG CHHUN HENG (Continued) **S123536749**

ID number is inactive. A hazardous waste generator shall not treat, store, dispose of, transport or offer for transportation, hazardous waste without an EPA ID number. CORRECTIVE ACTION: Immediately contact DTSC and reactivate your EPA ID number and submit evidence to the cupa by 30 days from now.

Violation Division: Los Angeles County Fire Department
Violation Program: HW
Violation Source: CERS,

Site ID: 122044
Site Name: HEANG CHHUN HENG
Violation Date: 09-03-2015
Citation: 22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)
Violation Description: Failure to maintain uniform hazardous waste manifest, consolidated manifest, or bills of lading copies for three years.
Violation Notes: Returned to compliance on 09/26/2016. OBSERVATION: Copies of hazardous waste disposal records for 2012-2015 were not found on site. Hazardous waste generators shall retain copies of all manifests signed off by the disposal facility and all receipts used in a consolidated manifesting procedure on site for three years and have them readily available for review. CORRECTIVE ACTION: Immediately locate a copy of all manifests and receipts for the last three years, maintain them on site, and submit copies to the CUPA within 30 days from the inspection date. Provide a recycling receipt for review.
Violation Division: Los Angeles County Fire Department
Violation Program: HW
Violation Source: CERS,

Site ID: 122044
Site Name: HEANG CHHUN HENG
Violation Date: 09-03-2015
Citation: HSC 6.5 25143.9 - California Health and Safety Code, Chapter 6.5, Section(s) 25143.9
Violation Description: Failure to meet the following requirements of excluded recyclable materials: 1) Used or reused as an ingredient in an industrial process to make a product if the material is not being reclaimed, 2) Used or reused as a safe and effective substitute for commercial products if the material is not being reclaimed, 3) Returned to the original process from which the material was generated, without first being reclaimed, if the material is returned as a substitute for raw material feedstock, and the process uses raw materials as principal feedstocks, 4) The material is recycled and used at the same facility at which the material was generated, or by the same corporate entity, 5) The material is recycled within the applicable generator accumulation time, 6) The material is managed in accordance with all applicable requirements for generators of hazardous wastes, 7) If the material is held in a container or tank, the container or tank is labeled, marked, and placarded in accordance with the department’s hazardous waste labeling, marking, and placarding requirements which are applicable to generators, except that the container or tank shall be labeled or marked clearly with the words "Excluded Recyclable Material" instead of the words "Hazardous Waste," 8) If the material is used oil, the containers, aboveground tanks, and fill pipes used to transfer oil into underground storage tanks shall also be labeled and clearly marked with the words "Used Oil", 9) The owner or operator of the business location where the material is located has a business

HEANG CHHUN HENG (Continued) **S123536749**

plan that meets the following minimal requirements: emergency response plans and procedures, which specifically address the material or that meets the emergency response and contingency requirements which are applicable to generators of hazardous waste, and 10) The material shall be stored and handled in accordance with all local ordinances and codes.

Violation Notes: Returned to compliance on 09/26/2016. OBSERVATION: Generator failed to meet one of the following requirements of excluded recyclable materials: 1) Used or reused as an ingredient in an industrial process to make a product if the material is not being reclaimed, 2) Used or reused as a safe and effective substitute for commercial products if the material is not being reclaimed, 3) Returned to the original process from which the material was generated, without first being reclaimed, if the material is returned as a substitute for raw material feedstock, and the process uses raw materials as principal feedstocks, 4) The material is recycled and used at the same facility at which the material was generated, or by the same corporate entity, 5) The material is recycled within the applicable generator accumulation time, 6) The material is managed in accordance with all applicable requirements for generators of hazardous wastes, 7) If the material is held in a container or tank, the container or tank is labeled, [Truncated]

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Citation: 22 CCR 12 66262.40(c) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(c)
Violation Description: Failure to determine if the waste generated is a hazardous waste and to maintain analysis results for three years.
Violation Notes: Returned to compliance on 10/22/2015. OBSERVATION: The sludge collected in a 5 gallon pail under the drain in the jewelry repair area. The sludge is heated to recover precious metals. Any person who generates a waste shall determine if the waste is a hazardous waste. CORRECTIVE ACTION: Immediately remove sludge waste from the trash, stop disposal as non-hazardous waste, or recycling the sludge, make a hazardous waste determination for the sludge collected in the 5 gal pail to include but not limited to CAM 17 metals, and manage it according the Title 22 hazardous waste regulations. Submit a statement and supporting documentation explaining how this waste was managed within 30 days from the inspection date.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

CERS ID: 10254643
CERS Description: Chemical Storage Facilities

Violations:
Site ID: 95863
Site Name: Mission School Transportation Inc.
Violation Date: 07-23-2019
Citation: HSC 6.7 25284, 25286 - California Health and Safety Code, Chapter 6.7, Section(s) 25284, 25286
Violation Description: Failure to submit a complete and accurate application for a permit to operate a UST, or for renewal of the permit.
Violation Notes: Returned to compliance on 08/23/2019. OBSERVATION: Owner/Operator did not submit and/or maintain a complete and/or accurate UST Operating Permit Application. Under financial responsibility Insurance is listed, but under the listed documents in the financial responsibility section State Fund is being used by the facility. CORRECTIVE ACTION: Correct the financial responsibility in operating permit application. OBSERVATION: UST facility UST tank information is not current in CERS. Any change of information must be updated in CERS within 30 days of the change. CORRECTIVE ACTION: See Inspector's email attachments to immediately update the required information in CERS and submit for review by the CUPA. **********SECOND NOTICE**********

Violation Description:	Failure to operate the UST system to prevent unauthorized releases including leaks, spills, and/or overfills.
Violation Notes:	Returned to compliance on 07/23/2019. OBSERVATION: Owner/Operator failed to meet one or more of the requirements applicable to overfill prevention equipment. Facility did not test overfill protection before the October 13th 2018 deadline. CORRECTIVE ACTION: Overfill protection was tested on 1/22/2019 by Daniel Salas with Tank-Tek. Tests results showed that the flapper was set above 95%. Facility must pull a permit to install a flapper valve that is set at 95% or lower. Facility must also measure the % of where the ball floats are set at. If the ball floats are set below the flapper they shall be removed so they don't interfere with the operation of the flapper valve. If the ball floats are set higher than the flapper valve then the facility may leave it in place or remove it at their discretion.

ATLANTIC EXPRESS OF L A INC (Continued) **S113093180**

Violation Description:	Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.
Violation Notes:	Returned to compliance on 10/31/2019. OBSERVATION: Owner/Operator failed to meet one or more of the requirements applicable to overfill prevention equipment. Facility did not test overfill protection before the October 13th 2018 deadline. CORRECTIVE ACTION: Overfill protection was tested on 1/22/2019 by Daniel Salas with Tank-Tek. Tests results showed that the flapper was set above 95%. Facility must pull a permit to install a flapper valve that is set at 95% or lower. Facility must also measure the % of where the ball floats are set at. If the ball floats are set below the flapper they shall be removed so they don't interfere with the operation of the flapper valve. If the ball floats are set higher than the flapper valve then the facility may leave it in place or remove it at their discretion. **********SECOND NOTICE**********

Violation Description: For designated operator (DO) monthly inspections conducted before October 1, 2018, failure to comply with one or more of the following requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been trained in accordance with 23 CCR 2715(c). For designated operator (DO) 30 day inspections conducted on and after October 1, 2018, failure to conduct the designated UST operator visual inspection at least once every 30 days.
Violation Notes: Returned to compliance on 08/23/2019. OBSERVATION: Facility did not comply with one or more of the following DO monthly inspection requirements: No CERS Id on 10/2018-4/2019. Overfill was not noted late in Section III and X on 12/12/2018 DO report. No alarm log/work order attached to individual DO reports for alarms on 1/5/2019 & 11/29/2018. No response to compliance issue in Section III by tank owner/operator in Section V on 1/9/2019 DO report. No signature or name of tank owner/operator in Section VI for 12/2018-3/2019 DO reports. CORRECTIVE ACTION: Add CERS Id 10254643 to DO reports. Have DO note late overfill testing in Section III & X and also select NO for Section VII, also have tank owner/operator write a response in Section V. Attach a copy of an alarm log/work order to each individual DO reports which alarms were responded to. Ensure tank owner/operator fills out Section V and not the DO in response to compliance issues in Section III. Also ensure the tank owner/operator puts their name and signature [Truncated]

Citation:	22 CCR 15 66265.192(h) - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.192(h)
Violation Description:	Failure to obtain and maintain a written assessment reviewed and certified by an independent, qualified, professional engineer stating the new hazardous waste tank system has sufficient structural integrity, is acceptable for the transferring, storing and treating of hazardous waste, and that the tanks and containment system including the foundation, structural support, seams, connections, and pressure controls (if applicable) are suitably designed and that the tank system has sufficient structural strength, compatibility with the waste(s) to be transferred, stored or treated, and corrosion

ATLANTIC EXPRESS OF L A INC (Continued) **S113093180**

protection so that it will not collapse, rupture, or fail. This assessment shall be obtained prior to placing the tank system in service, and shall be kept on file at the facility. The tank assessment shall be good for five years. This assessment shall also include, at a minimum, the following information: (1) Design standard(s) according to which the tank(s) and ancillary equipment are or will be constructed; (2) Hazardous characteristics of the waste(s) to be handled; (3) For new tank systems or components in which the external shell of a metal tank or any external metal component of the tank system is or will be in contact with the soil or with water, a determination by a corrosion expert of: (A) Factors affecting the potential for corrosion, including but not limited to: 1. Soil moisture content; 2. Soil pH; 3. Soil sulfides level; 4. Soil resistivity; 5. Structure to soil potential; 6. Influence of nearby underground metal structures (e.g., piping); 7. Stray electric current; and 8. Existing corrosion-protection measures (e.g., coating, cathodic protection), and (B) The type and degree of external corrosion protection that are needed to ensure the integrity of the tank system during the use of the tank system or component, consisting of one or more of the following: 1. Corrosion-resistant materials of construction such as special alloys or fiberglass-reinforced plastic; 2. Corrosion-resistant coating (such as epoxy or fi

Violation Notes: Returned to compliance on 10/21/2016. OBSERVATION: Owner/Operator does not have a tank assessment for the 500 gallon aboveground waste oil tank. The owner or operator of a hazardous waste tank shall obtain a written assessment reviewed and certified by an independent, qualified, professional engineer, registered in California attesting that the system has sufficient structural integrity, is acceptable for the transferring, storing, and treating of hazardous waste, and that the tanks and containment system are suitably designed. CORRECTIVE ACTION: Immediately have an assessment prepared for the 500 gallon waste oil AST. Submit a schedule showing when this will be accomplished to the department by 12-4-2015.

Citation:	23 CCR 16 2716(e) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2716(e)
Violation Description:	For designated operator (DO) monthly inspections conducted before October 1, 2018, failure to comply with one or more of the following requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been trained in accordance with 23 CCR 2715(c). For designated operator (DO) 30 day inspections conducted on and after October 1, 2018, failure to conduct the designated UST operator visual inspection at least once every 30 days.
Violation Notes:	Returned to compliance on 07/23/2019. OBSERVATION: Facility did not comply with one or more of the following DO monthly inspection requirements: No CERS Id on 10/2018-4/2019. Overfill was not noted late in Section III and X on 12/12/2018 DO report. No alarm log/work order attached to individual DO reports for alarms on 1/5/2019 & 11/29/2018. No response to compliance issue in Section III by tank owner/operator in Section V on 1/9/2019 DO report. No signature or name of tank owner/operator in Section VI for 12/2018-3/2019 DO reports. CORRECTIVE ACTION: Add CERS Id 10254643 to DO reports. Have DO note late overfill testing in Section III & X and also select NO for Section VII, also have tank owner/operator write a response in Section V. Attach a copy of an alarm log/work order to each individual DO reports which alarms were responded to. Ensure tank owner/operator fills out Section V and not the DO in response to compliance issues in Section III. Also ensure the tank owner/operator puts their name and signature [Truncated]

Violation Date:	12-20-2018
Citation:	23 CCR 16 2716(e) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2716(e)
Violation Description:	For designated operator (DO) monthly inspections conducted before October 1, 2018, failure to comply with one or more of the following requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been trained in accordance with 23 CCR 2715(c). For designated operator (DO) 30 day inspections conducted on and after October 1, 2018, failure to conduct the designated UST operator visual inspection at least once every 30 days.
Violation Notes:	Returned to compliance on 01/31/2019. OBSERVATION: The designated operator failed to check and note the correct test dates for the secondary containment testing on the 2/2018-10/2018 designated operator monthly inspection reports. Incorrect date for those DO reports 12/11/2014.Correct date 1/30/2018. During the monthly inspection, the designated operator shall check that all required testing and maintenance for the UST system have been completed and document the dates they were done. CORRECTIVE ACTION: Ensure that designated operators performing monthly inspections at this facility are including all of the required information on the reports. 11/2018 and 12/2018 DO reports reflect current secondary containment testing date. Ensure past DO reports from 2/2018-10/2018 note the correct testing date.

Violation Date:	01-31-2019
Citation:	23 CCR 16 2641(h) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2641(h)
Violation Description:	Failure to have an approved UST Response Plan.
Violation Notes:	Returned to compliance on 11/16/2020. OBSERVATION: Facility does not have an approved Response Plan. CORRECTIVE ACTION: Maintain an approved Response Plan. Facility is an unmanned radio tower. Facility had fuel alarm in L2 (fill sump) & L3 (piping sump) from 3/2018 - 9/2018. DO noted on DO report that GSD (Tank Operator) was notified and alarm was not responded to by the Tank operator. Facility must establish a means of the tank operator getting notified so that alarms will be responded to promptly. **********SECOND NOTICE**********

Site ID: 19673
Site Name: CITY OF LA - ELYSIAN PARK RADIO SIT
Violation Date: 12-20-2018
Citation: 23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)
Violation Description: Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.
Violation Notes: Returned to compliance on 12/20/2018. OBSERVATION: Owner/Operator failed to meet one or more of the requirements applicable to overfill prevention equipment. Facility did not test overfill protection before the October 13th 2018 deadline. CORRECTED ON SITE: Overfill protection was tested on site today 12/20/2018 during monitor cert by Erik Blankenbiller with Clean Fuels.

Environmental Interest/Information System:
THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Solid Waste Assessment Test Program:	Not reported
Threat to Water Quality:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit a business plan when

UNIVERSAL WASTE SYSTEMS, INC. (Continued) **S118206552**

storing/handling a hazardous material at or above reportable quantities.
Violation Notes: OBSERVATION: The business failed to complete and electronically submit initially, annually, or triennially, a business plan when handling hazardous materials at or above the reportable threshold quantities. CORRECTIVE ACTION: Complete and electronically submit a business plan.
Violation Division: Los Angeles City Fire Department
Violation Program: HMRRP
Violation Source: CERS,

Site ID: 71223
Site Name: Universal Waste Systems, Inc.
Violation Date: 08-14-2022
Citation: HSC 6.95 25508(a)(3) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(3)
Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes: Review, update and resubmit the Hazardous Materials Inventory into CERS to include all hazardous material stored in a capacity equal to or greater than 55 gallons of liquid, 200 cubic feet of compressed gas or 500 pounds in weight of a solid. During the inspection a total of 18 materials were observed in quantities at or above reportable thresholds. Please correct the following; 1) ADD: Gasoline - 5,000 gallon Above Ground Storage Tank. - Email information on this tank, It should be shown in your CERS as an APSA but it is not listed. 2) UPDATE: Waste Coolant from 55 gallons to 165 Gallons.

Name: DEPICT INC.
Address: 1460 NAUD ST
City,State,Zip: LOS ANGELES, CA 90012
Site ID: 111050
CERS ID: 10463455
CERS Description: Chemical Storage Facilities

Violations:
Site ID: 111050
Site Name: Depict Inc.
Violation Date: 03-09-2021
Citation: HSC 6.11 25404(e)(4) - California Health and Safety Code, Chapter 6.11, Section(s) 25404(e)(4)
Violation Description: Failure to report program data electronically.
Violation Notes: Returned to compliance on 03/09/2021. OBSERVATION: Owner/Operator failed to submit the hazardous waste notification electronically to CERS. CORRECTIVE ACTION: Owner/Operator shall submit a hazardous waste notification per HSC 25158 by submitting the Facility Information (Business Activity and Business Owner/Operator identification sections) electronically to CERS. CORRECTED ON-SITE
Violation Division: Los Angeles County Fire Department
Violation Program: HW
Violation Source: CERS,

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 02-04-2022
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Consent to enter, inspect and take photographs was given by: Ryan Brimer The Business Activities, Owner/Operator Identification, Hazardous Materials Inventory, Site Map, Emergency Response/Contingency Plan and Employee Training Plan sections were reviewed in CERS and field verified. Review and correct any violations indicated previously in this report, on or before the COMPLY BY date associated with each violation. NOTE: The LAMC, Sections (L.A.M.C. SECTION 57.105.1.4; 57.120.3; 57.121.2 and 57.121.2.1.) requires businesses that store, use or handle hazardous materials in the City of Los Angeles to obtain a Consolidated Permit from the Los Angeles Fire Department CUPA **** Annual submission of a Hazardous Materials Business Plan into California Environmental Reporting System (CERS) is required between January 1 and March 1 of every year. Per L.A.M.C. 57.121.3.5, failure to submit the required hazardous material business plan (HMBP) information annually into CERS [Truncated]

Environmental Interest/Information System:
The Toxic Release Inventory System (TRIS) is a publicly available EPA database reported annually by certain covered industry groups, as well as federal facilities. It contains information about more than 650 toxic chemicals that are being used, manufactured, treated, transported, or released into the environment, and includes information about waste management and pollution prevention activities.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the

LAUSD CASTELAR ELEM SCHOOL (Continued) **1000378475**

Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Primary Waste Type: Inert/Influent or Solid Wastes that do not contain soluble pollutants or organic wastes and have little adverse impact on water quality. Such wastes could cause turbidity and siltation. Uncontaminated soils, rubble and concrete are examples of this category.
Primary Waste: STORMS
Waste Type2: Not reported
Waste2: Stormwater Runoff
Primary Waste Type: Inert/Influent or Solid Wastes that do not contain soluble pollutants or organic wastes and have little adverse impact on water quality. Such wastes could cause turbidity and siltation. Uncontaminated soils, rubble and concrete are examples of this category.
Secondary Waste: Not reported
Secondary Waste Type: Not reported
Design Flow: 0
Baseline Flow: 0
Reclamation: No reclamation requirements associated with this facility.
POTW: The facility is not a POTW.
Treat To Water: Minor Threat to Water Quality. A violation of a regional board order

MAIN STREET STORAGE UNITS LLC (Continued) **S106102604**

should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 12-14-2022
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Consent to enter, inspect and take photographs was given by: Ted Clark The Business Activities, Owner/Operator Identification, Hazardous Materials Inventory, Site Map, Emergency Response/Contingency Plan and Employee Training Plan sections were reviewed in CERS and field verified. Review and correct any violations indicated previously in this report, on or before the COMPLY BY date associated with each violation. NOTE: The LAMC, Sections (L.A.M.C. SECTION 57.105.1.4; 57.120.3; 57.121.2 and 57.121.2.1.) requires businesses that store, use or handle hazardous materials in the City of Los Angeles to obtain a Consolidated Permit from the Los Angeles Fire Department CUPA **** Annual submission of a Hazardous Materials Business Plan into California Environmental Reporting System (CERS) is required between January 1 and March 1 of every year. Per L.A.M.C. 57.121.3.5, failure to submit the required hazardous material business plan (HMBP) information annually into CERS [Truncated]

Environmental Interest/Information System:
The National Compliance Database (NCDB) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA).
THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES
The Toxic Release Inventory System (TRIS) is a publicly available EPA database reported annually by certain covered industry groups, as well as federal facilities. It contains information about more than 650 toxic chemicals that are being used, manufactured, treated, transported, or released into the environment, and includes information about waste management and pollution prevention activities.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).
The National Pollutant Discharge Elimination System (NPDES) module of the Integrated Compliance Information System (ICIS). Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the

FANSTEEL CA DROP FORGE (Continued) **1000388388**

Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Waste2:	Not reported
Primary Waste Type:	Not reported
Secondary Waste:	Not reported
Secondary Waste Type:	Not reported
Design Flow:	0
Baseline Flow:	0
Reclamation:	No reclamation requirements associated with this facility.
POTW:	The facility is not a POTW.
Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Citation: 22 CCR 15 66265.16 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.16
Violation Description: Failure to provide employees with hazardous waste training within the first six months after the date of their employment or assignment to a facility, or to a new position at a facility and annually thereafter. Training records on current personnel shall be kept until closure of the facility and for former employees the record shall be kept for at least three years from the date the employee last worked at the facility.
Violation Notes: Returned to compliance on 10/19/2017. OBSERVATION: VIOLATIONS OBSERVED DURING THIS INSPECTION SHOWED THAT EMPLOYEES LACK OF HAZARDOUS WASTE HANDLING KNOWLEDGE. The Owner/Operator failed to properly train personnel who handle hazardous waste. All employees shall be trained within six months of assignment and take part in an annual review of the initial training received. At a minimum, the training program shall be designed to ensure that facility personnel are able to respond effectively to emergencies by familiarizing them with emergency procedures, emergency equipment, and emergency systems, including where applicable: 1) procedures for using, inspecting, repairing, and replacing facility emergency and monitoring equipment; 2) key parameters for automatic waste feed cut-off systems; 3) communications or alarm systems; 4) response to fires or explosions; 5) response to ground-water contamination incidents; and 6) shutdown of operations. The owner or operator shall maintain the following documents and [Truncated]

Eval Notes: Complaint came from a Robert Galbraith to the state water board (e-mail) . It was forwarded to me by Eloy Luna , Robert states there are underground tanks that were filled with cement about 20 years ago on site . I reviewed cers and found that Robert Galbraith used to work at 1033 E Alhambra as a safety / environmental person . Inspector Hamilton was at this location last year and nothing was mentioned about the underground tanks by Robert Galbraith . I spoke to robert over the phone and he states he could not say anything till now . He states the diesel tanks were filled with cement (not sure if a permit was used). no information was found on cers, attached to envision about the tanks over 100 pages Michael richlak Plant manager states no underground tanks on site, spoke to several employees about tanks 25 years ago and they stated no tanks , Spoke to frize corporation Joe mc carthy he states no tanks on site (626) 369-6088, (contractor) This

Completed Info:
Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 06/30/1993
Comments: The Department received a complaint dated December 29, 1992 relates to alleged unlawful disposal or releases of hazard- ous wastes and hazardous substances, including PCE, TCE, 1,1,1-TCA and toluene at the site and neighboring property. Due to the evidience of on-site contamination, the Dept recommends a PEA.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: * Discovery
Completed Date: 10/22/1982
Comments: Known as the I T E Circuit Breaker Company, Inc: facility identified from L.A. Chamber of Commerce Directory 1963-1964. Electrical Distribution Equipment. On 05/31/1983, a facility drive-by was conducted. Now Truflex Rubber. Office in front; no waste visible from rear.

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA

TRUFLEX RUBBER (Continued) **1000229617**

Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Toxic Release Inventory System (TRIS) is a publicly available EPA database reported annually by certain covered industry groups, as well as federal facilities. It contains information about more than 650 toxic chemicals that are being used, manufactured, treated, transported, or released into the environment, and includes information about waste management and pollution prevention activities.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Name: BILL'S AUTOMOTIVE
Address: 1796 N SPRING ST
City,State,Zip: LOS ANGELES, CA 90031
Site ID: 98878
CERS ID: 10253197
CERS Description: Chemical Storage Facilities

Violations:

Site ID: 98878
Site Name: BILL'S AUTOMOTIVE
Violation Date: 02-07-2023
Citation: HSC 6.95 25508(a)(3) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(3)
Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes: Returned to compliance on 03/15/2023. Review, update and resubmit the Hazardous Materials Inventory into CERS to include all hazardous material stored in a capacity equal to or greater than 55 gallons of liquid, 200 cubic feet of compressed gas or 500 pounds in weight of a solid. During the inspection a total of 7 materials were observed in quantities at or above reportable thresholds. Please correct the following; 1) ADD: Waste Oil Filters - 110 gallons 2) ADD: Compressed Gas NOS - 220 cuft 3) ADD: Oxygen Gas - 440 cuft 4) ADD: Acetylene Gas - 435 cuft

Completed Info:
Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 10/24/1995
Comments: DTSC completed its review of the PEA Report for the Witco Corporation, Allied Kelite Division Site. Based on the information provided, DTSC determined that the residual contamination observed in the Site's soil does not pose a threat to human health via the inhalation and ingestion routes of exposure. Accordingly, DTSC concurs with the

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Standard Voluntary Agreement
Completed Date: 05/16/1995
Comments: DTSC entered into a Voluntary Cleanup Agreement with Witco Corporation to complete a Preliminary Endangerment Assessment (PEA) for the Witco Corporation site.

Facility Project Subtype:	Not reported
RWQCB Region:	LOS ANGELES RWQCB (REGION 4)
Site History:	In December 2018, the Regional Board received correspondence from Sentinel Environmental (Sentinel) on behalf of the property owner, requesting voluntary oversight from the Regional Board for the Site. Sentinel enclosed the Phase II ESA presenting the findings of their July 2017 investigation. The assessment found evidence of lead impacted soil that will likely require excavation and disposal as a hazardous waste, especially if the Site is to be redeveloped for residential use. Additionally, proper abandonment of R. Earl Well No. 1 according to DOGGR standards is recommended prior to redevelopment of the Site. To facilitate this, a Remedial Action Plan (RAP), well abandonment plan, and Soil Management Plan (SMP) will be submitted to the Regional Board for review and comment. Following the removal of impacted soils in accordance with the approved RAP and proper abandonment of oil well R. Earl Well No. 1, Sentinel will request a No Further Action letter once the Regional Board has determined that soil, soil vapor, and (potentially) groundwater impacts have been satisfactorily addressed at the Site.

Waste Description:	The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl

MAIN STREET CENTER (Continued) **1000102032**

Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F005
Waste Description: The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: P098
Waste Description: Potassium Cyanide (Or) Potassium Cyanide K(Cn)

Waste Code: U188
Waste Description: Phenol

Quarterly Update: Active facility - RCRA units undergoing Closure: A hazardous waste facility permit, issued to LADWP on August 10, 1983, allowed the facility to store up to 60 55-gallon drums of hazardous waste. The site was first acquired by LADWP in 1915 which was used as the service maintenance for several LADWP s operations. Prior to the acquisition, the site was for residential use with exception of the northeastern portion of the facility which was occupied by a former manufactured gas company. LADWP did not renew the permit and requested the closure of the hazardous waste storage unit. Closure plan was implemented and investigation detected up to 2,900 ppb of PCB and 1,740 ppb of arsenic in the concrete chip and core samples, 1,320 mg/kg of TEPH, 114 ug/kg of PCE, 70.8 ug/kg of DCE, and 20,000 ug/Kg of PCB in the soil. Several metals (As, Ba, Cd, Co, Pb, Ni, Se, TI, V, Hg) exceeding the clean up criteria were also detected. Small amount of VOCs was also detected in soil gas samples. Based on the soil sample results, it is likely the hazardous waste storage unit cannot meet the clean closure criteria. LADWP is currently preparing a closure certification report for the hazardous waste storage unit.

Violation Description:	Failure to have at least one facility employee present during operating hours that has been trained in the proper operation and maintenance of the UST system by a designated operator (DO).
Violation Notes:	Returned to compliance on 12/29/2021. T5-7 OBSERVATION: Owner/Operator failed to do one or more of the following: Have at least one employee present during operating hours that has been trained in the proper operation and maintenance of the UST system by a designated operator (DO). 2021 training was completed by Ricardo Litvinoff who is not listed on the Designated Operator list uploaded to CERS. Training list was also completed on the old State form. CORRECTIVE ACTION: Ensure

LA CITY, DWP (Continued) **S101583196**

that employees receive initial and annual training in the proper operation and maintenance of the UST system and that at least one employee is present during operating hours that has been trained in the proper operation and maintenance of the UST system by a designated operator (DO). Update DO list to include Ricardo Litvinoff if properly certified by the ICC if not redo the training which is completed by an ICC properly certified DO and who is also on the DO list uploaded to CERS. Complete training on new State form.

Citation: 22 CCR 15 66265.193 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.193

Violation Description: Failure of the LQG and/or TP generator, on all new and existing hazardous waste tank systems and ancillary equipment, to meet the following secondary containment requirements: 1) Designed, installed, and operated to prevent any migration of wastes or accumulated liquid out of the system to the soil, ground water, or surface water at any time during the use of the tank system; and 2) Capable of detecting and collecting releases and accumulated liquids until the collected material is removed. 3) Constructed of or lined with materials that are compatible with the waste(s) to be placed in the tank system and shall have sufficient strength and thickness to prevent failure due to pressure gradients (including static head and external hydrological forces), physical contact with the waste to which they are exposed, climatic conditions, the stress of installation, and the stress of daily operation (including stresses from nearby vehicular traffic); 4) Placed on a foundation or base capable of providing support to the secondary containment system and resistance to pressure gradients above and below the system and capable of preventing failure due to settlement, compression, or uplift; 5) Provided with a leak detection system that is designed and operated so that it will detect the failure of either the primary and secondary containment structure or any release of hazardous waste or accumulated liquid in the secondary containment system within 24 hours, or at the earliest practicable time if the existing detection technology or site conditions will not allow detection of a release within 24 hours; 6) Sloped or otherwise designed or operated to drain and remove liquids resulting from leaks, spills, or precipitation. Spilled or leaked waste and accumulated precipitation shall be removed from the secondary containment system within 24 hours, or in as timely a manner as is possible to prevent harm to human health or the environment, if removal of the released waste or accumulated precipitation cannot be accomplished within 24

Violation Notes: Returned to compliance on 01/29/2015. OBSERVATION: Secondary containment was not provided for the 3000 gallon waste oil and 2700 gallon waste antifreeze hazardous waste tank systems. In order to prevent the release of hazardous waste or hazardous constituents to the environment, secondary containment shall be provided for tank systems. Secondary containment shall be designed, installed, and operated to prevent any migration of wastes or accumulated liquid out of the system to the soil, ground water, or surface water at any time during the use of the tank system, and capable of detecting and collecting releases and accidental accumulated liquids until the

LA CITY, DWP (Continued) **S101583196**

collected material is removed. CORRECTIVE ACTION: Immediately provide secondary containment which meets the requirements of Title 22 for the 3000 gallon waste oil and 2700 gallon waste antifreeze hazardous waste tank systems.

Violation Date: 12-02-2020
Citation: 23 CCR 16 2716(e) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2716(e)
Violation Description: For designated operator (DO) monthly inspections conducted before October 1, 2018, failure to comply with one or more of the following requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been trained in accordance with 23 CCR 2715(c). For designated operator (DO) 30 day inspections conducted on and after October 1, 2018, failure to conduct the designated UST operator visual inspection at least once every 30 days.
Violation Notes: Returned to compliance on 01/28/2021. OBSERVATION: Facility did not comply with one or more of the following DO inspection requirements: T1-4 DO noted wrong SB989 date on DO reports going back many months. DO listed 12/4/2018. DO did not include a date on the alarm print outs. CORRECTIVE ACTION: Have DO correct SB989 date to 12/4/2017 on any DO report that is incorrect in the past. Ensure DO is including date on alarm print outs attached to DO reports going forward. Submit copy of compliant DO inspection record. OBSERVATION: Facility did not comply with one or more of the following DO inspection requirements: T5-7 DO noted incorrect ICC DO expiration date of 1/25/23 & 1/25/21. Tank owner/operator did not review and sign the 4/23/2020 DO report within 48 hours of the DO inspection. CORRECTIVE ACTION: Have DO correct ICC expiration date to 11/24/2022 on applicable DO reports and previous expiration date on all previous DO reports (would be a 2020 expiration date). Ensure tank owner/operator is reviewing and [Truncated]

Citation: 23 CCR 16 2641(h) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2641(h)
Violation Description: Failure to have an approved UST Monitoring Plan.
Violation Notes: Returned to compliance on 01/29/2019. OBSERVATION: Owner/Operator did not maintain a current monitoring plan. Under tank use and contents for T3 it states "DIESEL" for tank contents. CORRECTIVE ACTION: Under tank use and contents it should state "REGULAR UNLEADED". Facility shall notify this inspector directly by email when all required corrections have been completed per Title 23, 2712 (f). OBSERVATION: Owner/Operator did not maintain a current monitoring plan. Under riser secondary containment listed for all 4 tanks it states "NONE". CORRECTIVE ACTION: Under riser secondary containment listed for all 4 tanks it should state "FIBERGLASS". Facility shall notify this inspector directly by email when all required corrections have been completed per Title 23, 2712 (f). OBSERVATION: Owner/Operator did not maintain a current monitoring plan. Under overfill protection listed for T4 it states "YES" for ball floats, flapper, and audible/visual. CORRECTIVE ACTION: Under overfill protection listed for T4 it state [Truncated]

Violation Description:	Failure to maintain secondarily contained piping to allow liquid to flow into the sump in the event of a leak (i.e., failure to remove test boot).
Violation Notes:	Returned to compliance on 12/19/2022. T5-7 OBSERVATION: Owner/Operator did not maintain piping secondary to drain into a sump in the event of a leak. The facility's T7 piping sump had vent secondary pipe in which the test boot was not pulled back or the Schrader valve was not at the 12 o'clock position. CORRECTED ON-SITE: Piping secondary must be maintained to allow liquid to flow into the sump in the event of a leak. The tech Ruben Becerra moved the Schrader valve to the 12 o'clock position on-site during the monitor cert testing.

Citation: 23 CCR 16 2716(e) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2716(e)
Violation Description: For designated operator (DO) monthly inspections conducted before October 1, 2018, failure to comply with one or more of the following requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been trained in accordance with 23 CCR 2715(c). For designated operator (DO) 30 day inspections conducted on and after October 1, 2018, failure to conduct the designated UST operator visual inspection at least once every 30 days.
Violation Notes: Returned to compliance on 08/20/2019. OBSERVATION: Facility did not comply with one or more of the following DO monthly inspection requirements: Tank owner/operator failed to review Section III and comment in Section V when there were compliance issues in Section III on 1/29/2019, 12/27/2018, & 10/20/2018 DO inspection reports. Tank owner/operator failed to print, sign, & date in Section VI on 6/2019-10/2018 DO inspection reports. DO marked N/A for Overfill in Section X on 11/27/2018. CORRECTIVE ACTION: Ensure tank owner/operator reviews Section III on every report and if there are compliance issues, ensure to note appropriate follow responses in Section V on DO reports listed and on future DO inspection reports . Ensure tank owner/operator prints, signs, & dates in Section VI on listed DO reports and continues within 48 hours of DO inspection in the future. Have DO correct Section X for Overfill noting YES and the date of 7/19/2018. Submit copy of compliant DO inspection record.

Violation Date: 12-04-2019
Citation: HSC 6.7 25284.2 - California Health and Safety Code, Chapter 6.7, Section(s) 25284.2
Violation Description: "Failure to meet one or more of the following requirements: Install or maintain a liquid-tight spill container. Have a minimum capacity of five gallons. Have a functional drain valve or other method for the removal of liquid from the spill container. Be resistant to galvanic corrosion. Perform a tightness test at installation, every 12 months thereafter, or within 30 days after a repair to the spill container. Tested using applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Tested by a certified UST service technician. Maintain records of spill containment testing for 36 months. "
Violation Notes: Returned to compliance on 12/04/2019. OBSERVATION: Owner/Operator failed to meet the following spill container requirements: did not perform tightness test every 12 months. Spill bucket for remote fill for T5-7 was last tested on 7/19/2018 and was 4 months late. CORRECTED ON SITE: Remote fill spill bucket was tested on site today during monitoring system certification by Octavio Gutierrez with ECS Inc. Maintain all testing records for 36 months.

	Chapter 16, Section(s) 2712(b)(1)(G)
Violation Description:	Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.
Violation Notes:	Returned to compliance on 01/25/2019. OBSERVATION: Owner/Operator failed to meet one or more of the requirements applicable to overfill prevention equipment. Facility did not test overfill protection before the October 13th 2018 deadline. Overfill protection was tested on site today 12/4/2018 during monitor cert by Octavio Gutierrez with ECS. However tester Octavio Gutierrez was unable to open to determine if facility has ball floats or not. CORRECTIVE ACTION: In order to comply with new federal regulations facility must determine whether it has ball floats or not. Have a certified technician check to see if facility has ball floats. If YES than the technician must either measure the ball floats to ensure that they are not set at a lower percentage than the flappers or remove them. If the technician measures and the ball floats are set higher than the flapper than no further action is needed If they are set lower than the flappers they must be removed in order to not interfere with the flapper function. Completed Document Type: Standard Voluntary Agreement
Completed Date: 05/04/2001
Comments: Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Workplan
Completed Date: 11/27/2004
Comments: DTSC recommended to revise the Sampling Plan and prepare Quality Assurance Plan.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 03/11/2015
Comments: This former MGP project was a very small portion of the bigger LADWP RCRA site. The Gas Co. completed investigation and sent a letter. VCA was terminated in 2008. DTSC staff are working on the LADWP RCRA site. Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 05/02/1995
Comments: The Department completed review of the PEA report. Based on the information provided in the PEA, the site does not constitute an immediate threat that would require an expedited response action. However, DTSC recommends furthe action, in that the current asphalt must be maintained and a deed restriction notification be placed on the site. DTSC considers the PEA complete.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 10/28/1993
Comments: The Department received a notice of intent to initiate a PEA dated September 27, 1993. Manufactured Gas Plant (MGP) was operated at the site from approximately 1906 to 1919??? The MGP operations ceased at the site on 1919? when the Southern California Gas Company acquired the MGP properties. In 1922 Los Angeles City Water and Power acquired the property and dismantled the gas plant. The hazardous wastes found at the former MGP sites includes PAHs, Cyanides, TPHs, BTEX, Sulphides/sulfates, and Metals. Due to the evidence of hazardous wastes in the other MGP sites, the Department recommends a PEA. The Department completed review of the sampling plan. RP is investigating the site.

Completed Info:

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Standard Voluntary Agreement
Completed Date:	05/04/2001
Comments:	Not reported

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Site Characterization Workplan
Completed Date:	11/27/2004
Comments:	DTSC recommended to revise the Sampling Plan and prepare Quality Assurance Plan.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Other Report
Completed Date:	03/11/2015
Comments:	This former MGP project was a very small portion of the bigger LADWP RCRA site. The Gas Co. completed investigation and sent a letter. VCA was terminated in 2008. DTSC staff are working on the LADWP RCRA site. Not reported

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Preliminary Endangerment Assessment Report
Completed Date:	05/02/1995
Comments:	The Department completed review of the PEA report. Based on the information provided in the PEA, the site does not constitute an immediate threat that would require an expedited response action. However, DTSC recommends furthe action, in that the current asphalt must be maintained and a deed restriction notification be placed on the site. DTSC considers the PEA complete.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Site Screening

MAIN STREET OIL DEPOT (Continued) **S101297113**

Completed Date: 10/28/1993
Comments: The Department received a notice of intent to initiate a PEA dated September 27, 1993. Manufactured Gas Plant (MGP) was operated at the site from approximately 1906 to 1919??? The MGP operations ceased at the site on 1919? when the Southern California Gas Company acquired the MGP properties. In 1922 Los Angeles City Water and Power acquired the property and dismantled the gas plant. The hazardous wastes found at the former MGP sites includes PAHs, Cyanides, TPHs, BTEX, Sulphides/sulfates, and Metals. Due to the evidence of hazardous wastes in the other MGP sites, the Department recommends a PEA. The Department completed review of the sampling plan. RP is investigating the site.

Alternate Address:	1300 CARDINAL STREET
Alternate City,St,Zip:	LOS ANGELES, CA 90012
Background Info:	This site south of Cardinal Street previously operated as a refinery from 1900 - 1924 by the Southern Refining Company and Amalgamated Oil Company. Not reported Historical documents indicated refining equipment and above ground storage tanks (AGST). Dark oily materials were discovered during construction activities in the playground area. Areas were covered to prevent contact with potential contaminants. DTSC entered into a Voluntary Cleanup Program Agreement with the RP for oversight of a Preliminary Endangerment Assessment. Not reported AREA NORTH OF CARDINAL STREET This Site is divided into two areas, the area South of Cardinal Street is designated by the letter "S" following the commitment description, and the DTSC LEAD ACTIVITIES area North of Cardial Street is designated by the letter "N" following each description.

US BROWNFIELDS:

Name:	LOS ANGELES ALBION RIVERSIDE PARK PROJECT
Address:	1739 ALBION STREET
Recipient name:	California Department of Toxic Substances Control
Grant type:	BCRLF
Region:	9
Property Number:	Not reported
Parcel size:	6.3
Latitude:	34.069801
Longitude:	-118.223724
HCM Label:	Address Matching-House Number
Map Scale:	Not reported
Point of Reference:	Entrance Point of a Facility or Station
Highlights:	Demolition of the buildings and improvements of an industrial facility, remediation and abatement of all hazardous materials and soils onsite, and the import and export of clean and contaminated soils to leave in a healthy, clean, graded level. The city had enough bulky, massive tanks, structures, walls, and high levels of contaminated soils. The City cleaned and remediated the soil. 6.35 have been successfully remediated. Former Use: Bureau of Engineering has remediated this site with significant improvements which will help the nearby homes, and community, as well as the L.A. River.

Name:	LOS ANGELES ALBION RIVERSIDE PARK PROJECT
Address:	1739 ALBION STREET
Recipient name:	California Department of Toxic Substances Control
Grant type:	BCRLF
Region:	9
Property Number:	Not reported
Parcel size:	6.3
Latitude:	34.069801
Longitude:	-118.223724
HCM Label:	Address Matching-House Number
Map Scale:	Not reported
Point of Reference:	Entrance Point of a Facility or Station
Highlights:	Demolition of the buildings and improvements of an industrial facility, remediation and abatement of all hazardous materials and soils onsite, and the import and export of clean and contaminated soils to leave in a healthy, clean, graded level. The city had enough bulky, massive tanks, structures, walls, and high levels of contaminated soils. The City cleaned and remediated the soil. 6.35 have been successfully remediated. Former Use: Bureau of Engineering has remediated this site with significant improvements which will help the nearby homes, and community, as well as the L.A. River.
Datum:	North American Datum of 1983

Completed Date: 03/16/1994
Comments: The Department received a referral dated March 8, 1994 from the County of Los Angeles, Fire Department. The site was previously a battery recycler whose owner, Victor Pena, was under investigation by LA County and the LA City Attorney's Office for the illegal discharge of hazardous waste onto the subject property. The waste materials were being discharged into an unlined pit in the rear of the property and the driveway. The RP was subsequently convicted of illegal discharge of hazardous waste, sentenced and ordered to remediate the site. The

Background Info:	The Naval and Marine Corps Reserve Center, Los Angeles (NMCRC-LA) consists of approximately 6 acres of land, approximately 1 mile northeast of downtown Los Angeles. This site is a closed reserve center where Naval or Marine Corps activities are no longer cond ucted. NMCRC-LA was constructed from 1938 to 1940 by the Works Progress Administration and was commissioned in 1940 to provide a dministrative, training, and logistics support to reserve units. The facility has one Installation Restoration site, identified as Site 1, the former Service Station and Vehicle Lube Rack. The former service Station was built in 1943 and was used for fuelin g vehicles on site. The aboveground portion of the station has be en removed. Adjacent to the former Service Station, the Vehicle L ube Rack was used for vehicle maintenance and drained directly to a waste of oil underground storage tank(UST). Between 1987 to 19 89, hazardous substances (including used oil, solvents, hydraulic , fluid, and other new and used vehicle maintenance products) wer e stored in 55-gallon drums on the Vehicl Lube Rack. In Novembe r 1994, the waste oil UST was removed in 1994 under supervision o f the Los Angeles Fire Department. Soil with detected levels of total recoverable petroleum hydrocarbons was excavated and dispos ed off site. In 1995, an Environmental Baseline Study (EBS) was conducted. The EBS identified the Vehicle Lube Rack and the form er Service Station gasoline UST as areas requiring further invest igation. In 1996, a subsurface soil investigation conducted for Site 1 indicated the presence of gasoline-range hydrocarbons, be nzene, toluene, ethylbenzene, total xylenes, and 1,2-dichloroetha

US BROWNFIELDS:

Name:	LA - FORMER LINCOLN HEIGHTS JAIL
Address:	401 NORTH AVE 19
Recipient name:	State of California High-Speed Rail Authority
Grant type:	Assessment
Region:	9
Property Number:	5447-005-900
Parcel size:	4.8
Latitude:	34.0770204
Longitude:	-118.2246462
HCM Label:	Not reported
Map Scale:	Not reported
Point of Reference:	Not reported
Highlights:	The structure in the central portion of the Site is a 5-story 229,120-square-foot building (formerly Lincoln Heights Jail) that is currently unoccupied. There is ample evidence of vandalism and illegal use of the building. Numerous windows are broken, and pigeons and other birds nest in the building. Bird droppings are present in almost all areas of the building and, based on reports by City of LA Department of General Services Employees, one stairwell and an elevator shaft contain accumulated pigeon droppings. Accumulated droppings are known to be a health hazard due to the potential for diseases like cryptococcosis, histoplasmosis, and psittacosis. Pipe wrap that likely contains friable asbestos is strewn throughout the building, especially in the basement. Flaked, chipped, and cracked paint that likely contains lead and/or PCBs is present on all floors. The structures on the southern portion of the Site are two single-story buildings approximately 7,300 and 11,800 square feet in size that have been occupied for the last 20 years by the Los Angeles Department of Transportation (LADOT). Both buildings are well-maintained and appear to be in good condition. Southern Pacific railroad tracks abut the western portion of the Site, running from north to south. The Site is mainly concrete- and asphalt-paved and has minimal landscaping along North Avenue 19. Former Use: The former Lincoln Heights Jail building is currently vacant but was used as storage and office space by various companies since closure of the former jail in 1965. It is unclear when that occupancy ceased; however, it does not appear to have been legally occupied for at least 10 years. Both single-story buildings on the southern portion of the Site have been occupied by LADOT for the last 20 years. LADOT currently uses the buildings for storage and office space.

Property Description:	The former Lincoln Heights Jail building is currently vacant but was used as storage and office space by various companies since closure of the former jail in 1965. It is unclear when that occupancy ceased; however, it does not appear to have been legally occupied for at least 10 years. Both single-story buildings on the southern portion of the Site have been occupied by LADOT for the last 20 years. LADOT currently uses the buildings for storage and office space.

Longitude:	-118.2246462
HCM Label:	Not reported
Map Scale:	Not reported
Point of Reference:	Not reported
Highlights:	The structure in the central portion of the Site is a 5-story 229,120-square-foot building (formerly Lincoln Heights Jail) that is currently unoccupied. There is ample evidence of vandalism and illegal use of the building. Numerous windows are broken, and pigeons and other birds nest in the building. Bird droppings are present in almost all areas of the building and, based on reports by City of LA Department of General Services Employees, one stairwell and an elevator shaft contain accumulated pigeon droppings. Accumulated droppings are known to be a health hazard due to the potential for diseases like cryptococcosis, histoplasmosis, and psittacosis. Pipe wrap that likely contains friable asbestos is strewn throughout the building, especially in the basement. Flaked, chipped, and cracked paint that likely contains lead and/or PCBs is present on all floors. The structures on the southern portion of the Site are two single-story buildings approximately 7,300 and 11,800 square feet in size that have been occupied for the last 20 years by the Los Angeles Department of Transportation (LADOT). Both buildings are well-maintained and appear to be in good condition. Southern Pacific railroad tracks abut the western portion of the Site, running from north to south. The Site is mainly concrete- and asphalt-paved and has minimal landscaping along North Avenue 19. Former Use: The former Lincoln Heights Jail building is currently vacant but was used as storage and office space by various companies since closure of the former jail in 1965. It is unclear when that occupancy ceased; however, it does not appear to have been legally occupied for at least 10 years. Both single-story buildings on the southern portion of the Site have been occupied by LADOT for the last 20 years. LADOT currently uses the buildings for storage and office space.

RWQCB Region:	LOS ANGELES RWQCB (REGION 4)
Site History:	The Site is a triangular-shaped, 0.5-acre industrial property near downtown Los Angeles and is occupied by two major railroad lines (Figures 1 and 2). The Site is generally vacant and includes numerous railroad tracks, a rail switching box, aboveground and underground utility lines and small intermittently occupied building, the Mission Tower , which contains decommissioned rail traffic control and switching equipment. The Site is located within a mixed industrial/residential area and bordered by a low-income federal housing project to the northwest, the Los Angeles City Jail to the southwest, the Los Angeles River to the east and an east-west trending major railroad line to the south. Access to the Site is restricted by high-security fencing. Surrounding properties were initially developed in the latter part of the nineteenth century, and portions of the existing railroad right-of-way were present by the early 1900s. The two major railways (Pasadena Branch and Union Pacific Line) were present by the late nineteenth century. During the late nineteenth and early twentieth centuries, crude oil was extracted from multiple small oilfields nearby and processed at the former Southern Refining Company located immediately northwest of the Site. Historical aerial photos and Sanborn maps indicate that the refinery contained four aboveground storage tanks (ASTs) for storing crude oil. The refinery was apparently dismantled by 1921 and the ASTs were removed sometime between 1921 and 1928. The Site has been used as a railroad junction for over 100 years and is currently

BNSF - MISSION TOWER SITE (Continued) **S104549284**

maintained as such for use by three major passenger and freight lines. It has some of the heaviest rail traffic in Southern California, with approximately 135 passenger and two freight trains daily. The property will most likely continue to be used as a railroad junction well into the foreseeable future. Between 1990 and 2003, eight phases of site investigation were conducted. During this time, a total of 32 soil borings and six groundwater monitoring wells were installed onsite and offsite (Figure 3). Soil samples were collected generally at 5- or 10-foot intervals to a maximum depth of 45 feet bgs. The soil consists mainly of sand with relatively minor silt and gravel, and is impacted with heavy petroleum hydrocarbons primarily at depths between 5 and 35 feet bgs. Results of fuel fingerprinting analyses indicated that residual hydrocarbons in shallow soil (≤15 feet bgs) were similar to asphalt or tar, whereas those in deeper soils (>15 feet) were more typical of Bunker C or crude oil. Maximum total extractable petroleum hydrocarbons (TEPH) of 16,000 milligrams per kilogram (mg/kg) were initially detected in soil from the central portion of the Site. Subsequent sampling at this location showed TEPH levels of 5,800 mg/kg. Simulated hydrocarbon distribution (carbon-chain) analyses indicated that 7% of the hydrocarbons were within the gasoline-range of C6-C12, 10% were within the diesel-range of C13-C22, and 83% were within the extended-range of C23-C40. The highest concentrations in soil were detected between 20 and 35 feet bgs within MW-4 and along portions of the western and southern railways. Eight volatile organic compounds (VOCs) and six polynuclear aromatic hydrocarbons (PAHs) were detected in soil from 0.0078 to 5.5 mg/kg. The highest VOCs were detected in soil between 25 and 35 feet bgs in MW-4 and along the southern railway track. The detected VOCs and PAHs were consistent with heavy-end hydrocarbons. Of the seventeen metals analyzed, twelve were detected, five of which were above background levels. Groundwater monitoring was conducted during six events between August 1999 and February 2003. During this time, both depth to groundwater (~ 35 feet bgs) and flow direction (south, southwest) have been relatively consistent. Groundwater has been impacted with diesel-range petroleum hydrocarbons from 0.19 to 14 milligrams per liter (mg/L), but no measurable free product has been observed. Six VOCs were detected in groundwater, including three petroleum-related VOCs (methyl-tertiary butyl ether (MTBE), isopropylbenzene and t-butylbenzene) and three chlorinated VOCs (cVOCs) (1,1-dichloroethane, trichloroethylene, and cis-1,2-dichloroethene (cis-1,2-DCE). Most of the detected VOCs were at low concentrations and generally below their respective maximum contaminant levels (MCLs). However, cis-1,2-DCE and MTBE were detected up to 17 micrograms per liter (g/L) and 160 g/L, respectively. Although some cVOCs were detected in groundwater, no cVOCs were detected in the soil. Of the seventeen metals analyzed, eight metals were detected in filtered groundwater samples and four of those (antimony, cobalt, silver, and zinc) were detected at higher concentrations in downgradient wells. No PAHs were detected in any of the groundwater samples. No remediation has been conducted at the Site due to the technical infeasibility of cleaning up the residual heavy, relatively immobile, non-volatile petroleum hydrocarbons and access limitations within such a highly active railroad yard. Soil excavation would require shutting down a major railroad hub and dismantling or undermining portions of the railroad tracks. Surfactant chemicals could be applied that might mobilize the heavy hydrocarbons and allow for their extraction from the soil. However,

BNSF - MISSION TOWER SITE (Continued) **S104549284**

such methods could also spread the contamination offsite and into groundwater and create more of a problem. Based on the past, present and likely future use of this site, an industrial/commercial land use restriction is considered the best option at this time to limit exposure to site-related chemicals of concern (COCs). Environmental Resources Management (ERM) conducted a human health risk assessment (HHRA) in 2003. Their risk evaluation was based primarily on two major exposure scenarios: risks to onsite industrial workers and onsite construction workers. The differences in these two exposure scenarios are based on the duration and degree of exposure to the COCs in soil. A third exposure scenario involves the use of shallow groundwater for residential supply. However, the shallow groundwater is of poor quality (high total dissolved solids, naturally petroleum deposits) and residential use at the Site is precluded due to its current and future use as a railroad junction and an intended deed restriction that will be recorded as part of the site closure. ERM considered exposure routes based on ingestion, dermal contact and inhalation (including VOCs, fugitive dust, etc.) and considered exposure to all site-related organic constituents in soil and groundwater as well as metals that exceeded regulatory screening levels. Based on these data, ERM calculated incremental lifetime carcinogenic risks (ILCR) of 4x10-6 (industrial worker) and 1x10-7 (construction worker), and respective non-cancer hazard indices (HI) of 1.0 and 0.4. The HHRA was reviewed by a toxicologist with the California Office of Environmental Health Hazard Assessment (OEHHA) in 2005. OEHHA s comments were based on data collection, sampling analyses, and risk assessment assumptions. ERM provided detailed technical responses to OEHHA s comments for OEHHA and Regional Board responses that are documented in multiple response to comments sessions and best summarized in ERM s September 5, 2007 Response to Comments Concerning Human Health Risk Assessment (report). Regional Board staff reviewed the report and met with representatives from ERM and URS on November 17, 2011 to discuss the prior multiple comments and responses between OEHHA and ERM. Following this meeting, Regional Board staff determined that all but a few of OEHHA s comment s had been addressed. The few outstanding comments were subsequently addressed by URS and ERM in follow-up emails to Regional Board staff. The revised risk estimates included contributions from VOCs in soil vapor and groundwater that could potentially affectindoor air quality in the Mission Tower Building. Revised HHRA calculations by ERM in January 2012 yielded cumulative risks/hazard indices of 5x10-6/1.3 for industrial workers and 5x10-7/0.8 for construction workers, These values are within the USEPA acceptable risk range of 10-6 to 10-4, with hazard indices <1. Furthermore, these risk/hazard values are below the target incremental lifetime cancer risk (ILCR) and hazard index (HI) values of 10-5 and 1.0, respectively, for commercial/industrial use. The slight exceedance of the hazard index of 1.3 for industrial workers above the commercial/industrial target value of 1.0 is negligible considering that hazard indices are generally expressed as one significant figure only according to the USEPA s 1989 Risk Assessment Guidance for Superfund, Volume 1 Human Health Evaluation Manual (Part A), Interim Final. In summary, the calculated risk/hazard values from residual soil, soil vapor and groundwater contamination at the Site will not result in significant risks to human health or groundwater based on the anticipated future commercial/industrial use and minimal human occupancy of the Site.

RWQCB Region:	LOS ANGELES RWQCB (REGION 4)
Site History:	The Site is a vacant building complex owned by Lamar Plaza LLC, which purchased the property from Smiland Land Company (SLC) on October 31, 2007. The property is approximately 3.4 acres in size and was a former paint manufacturing facility. Smiland Paint Company (SPC), predecessor to SLC, occupied and operated the paint manufacturing facility from approximately 1986 to 2004. SPC stopped its paint manufacturing operations in 2004 and leased the facility to Moreware Paint Company (MPC). MPC operated the facility until November 2007. After MPC discontinued its operations, the machinery, ASTs, raw materials, etc have been removed from the property. Similar operations were conducted at the Site by North American Paint Company and Valspar Corporation from approximately 1937 to 1985. The Site was occupied by residences and horse stables prior to 1937. Site investigations were initiated at the Site in 1985 in conjunction with the abandonment-in-place of two 7,500-gallon solvent/thinner underground storage tanks (USTs). Expanded site assessments were conducted onsite and offsite in 1999, 2007, 2008 and 2009. The subsurface investigations detected low level volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and heavy metals at varying background concentrations in soil and groundwater. Total petroleum hydrocarbons (TPH) were detected in soil samples collected near the water table. Free product was also encountered floating on the water table in the onsite and offsite soil borings. The results of the site assessments indicate that the residual VOC contaminants in soil are localized, limited in mass and extent and are below the SSLs established by the Regional Board in the Interim Site Assessment & Cleanup Guidebook, May 1996. All other potential contaminants, such as SVOCs and heavy metals, are below the United States Environmental Protection Agency (U.S. EPA) Region IX Regional Soil Screening Levels (SSLs) for the protection of human health and groundwater or at background concentrations. The TPH contamination in the soil is mostly confined to a smear zone approximately between 15 feet and 20 feet bgs and is likely resulted from the free product floating on the water table. The free product appears to be the result of a natural condition, rather than attributed to onsite releases. Based on the results of the site investigations, the Regional Board determined no further requirements (NFR) are needed with respect to soil and groundwater beneath the Site. The case has been closed.

Violation Description: Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or

METRO DIVISION 30 (Continued) **S118228226**

triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.

Violation Notes: Returned to compliance on 04/10/2019. OBSERVATION: Owner/Operator failed to meet one or more of the requirements applicable to overfill prevention equipment. Facility did not test overfill protection before the October 2018 deadline. CORRECTED ON SITE: Overfill protection was tested today on 4/10/2019 by Javier Soto. Ensure next testing is completed by 10/1/2021 in order to not be considered late.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

EDR MGP:
Sector E of the Aliso Street Towne Gas facility covers approximately nine acres and has been used for numerous industrial purposes including refined oil storage, 1,3-Butadiene storage, manufactured gas plant (MGP) feedstock storage, mannequin manufaccturing, and hard chrome plating. The sector is currently used for parking, a refueling station, and offices. Part of the former Aliso Street manufactured gas plant (MGP) and butadiene

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 04/15/1994
Comments: The Department received a Notice of Intent to Commence Action Under RCRA and CERCLA dated June 22, 1993. On July 30, 1993, the Department mailed the Information Request to all PRPs. The information received from the PRPs indicates that in 1945 the Empire Chemical Co. moved to the subject location. The current owner is Jerry Elkind. The company was involved in the sale of janitorial products and insecticides. It did some packing in the permises as part of their operation. One 5000-gallon UST was installed in 1947-1950 to store kerosene. Soil around the area of of the UST is contaminated with TPH and the groundwater is also suspected to be contaminated. The Department's contact with the Los Angeles City Fire Department, UG Tank Plan Check indicates that they are the lead agency. Therefore, the Department's involvement is unnecessary.

EDR MGP:

The former Aliso Street manufactured Gas Plant covered approximately 52 acres in downtown Los Angeles. The site is being investigated as 5 sectors and an overall groundwater unit. The "C" sector consists of 16.4 acres south of the Hollywood (101) Freeeway, bisected by Center Street and bounded by Commercial, Ducommun and Jackson Streets. Sector C is further subdivided into Blocks G, K, L, N, O, Q, and R. Contaminants suspected include petroleum hydrocarbons, volatile organic compounds, cyanide,polycyclic aromatic hydrocarbons and heavy metals

EDR MGP:

The former Aliso Street Manufactured Gas Plant covered approximately 52 acres in downtown Los Angeles. The site is being investigated as 5 sectors and an overall groundwater unit. The "B" sector consists of 14 acres south of the Cesar Chavez Avenue,west of Keller Street, east of Lyon Street and north of Ramirez Street. Contaminants suspected include petroleum hydrocarbons, volatile organic compounds, cyanide, polycyclic aromatic hydrocarbons and heavy metals. See also Sites 19490235, 19490240,19490241, 19490242, 19490243, and 19490248. Sector D Former MGP Aliso Street Site History Sector D of the Aliso Street Towne Gas facility covers approximately 11 acres and was the sector historically used for lampblack pits, processing, and storage.An area of the sector was converted to 1,3-Butadiene production in the 1940s. The Metropolitan Transportation Authority (MTA) owns and currently uses the property for offices, storage, and maintenance of buses.

Completed Info:

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 06/07/2000
Comments: Soil contamination exists onsite. Contaminants include PAHs and VOCs. A Remedial Investigation/Feasibility Study recommended.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 08/29/2005
Comments: DTSC approved surface soil sampling at the Former Aliso Sector B site. Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 03/16/2007
Comments: DTSC approved RI report.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Workplan
Completed Date: 09/05/2018
Comments: Gas Co. submitted this WP and the consultant informed that DTSC does not need to review because they got the access to the site for a very limited time and going for sampling. Later, DTSC received RI Report and RAW for the Ramirez Street investigation and remediation. Activities have been created for the Ramirez Street Investigation/Remediation separately.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Standard Voluntary Agreement
Completed Date: 10/25/1999
Comments: DTSC entered into a Voluntary Cleanup Agreement with Southern California Gas Company to conduct a Preliminary Endangerment Assessment for the Site.

Completed Date: 09/14/1995
Comments: The Department received a Non-Emergency Hazardous Substance Release Report dated July 8, 1994. The report indicates that the property was contaminated at the time of purchase in March 1990. Leaking undergound storage tanks have been removed by the previous owner. Some of the contaminated soils have been removed from the site. Soils contaminated with lead are still exist at the site. Due to evidence of a release, DTSC recommended a PEA, and notified the RP thereof.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 06/30/2004
Comments: Contaminated soil was excavated in accordance with the approved RAW. As contamination remains in deeper soils, DTSC requires a deed restriction. Also, groundwater monitoring should continue on schedule. Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan
Completed Date: 02/04/2004
Comments: Public Comment Period was from December 16, 2002 to January 17, 2003. No response from public, Removal Action Work Plan was finalized on February 4, 2003.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 06/29/2001
Comments: RI report for Macy Street Site accepted on 06/29/01 closing the RI phase. DTSC expects RAW by 8/31. Origianlly an RI/FS was planned for the Site. However, since no feasibility study was needed an RI (PEAe commitment) was done instead. DTSC has approved the RI Report. Removal Action Plan due on 8/15/01.

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 01-10-2020
Violations Found: No
Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: Staff discussed the inspection findings with Mr. Esposito. Mr. Esposito contacted site personnel to order new gravel bags while Staff was onsite. Staff observed a street sweeper by the entrance to where minor sediment track-out was observed and requested that Mr. Esposito send a photograph to show that it is swept. On January 17, 2020, Mr.

BANK OF AMERICA (Continued) **S101617131**

Esposito sent a photograph to Staff showing that the SWPPP was onsite and notified Staff that the stormwater representative would address the remaining issues. On February 4, 2020, Staff followed up to inquire about the remaining action items.

Completed Info:
Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan
Completed Date: 09/10/2003
Comments: Block L - The Special initial Study described the proposed polycyclic aromatic hydrocarbon (PAH) and volatile organic hydrocarbon (VOC) contaminated soil remediation activity and its insignificant impact upon the environment.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 07/26/2004
Comments: Block L - Polycyclic aromatic hydrocarbon (PAH) and volatile organic hydrocarbon (VOC) contaminated soil was excavated and thermally treated offsite. Site has been backfilled with clean soil. Subsurface contamination did not extend laterally to offsite areas. Contamination was found, as expected, at the ground water table, and will be addressed in a later, regional effort. As the soil was remediated to industrial cleanup goals, a deed restriction will limit use of the site, preventing residential or other sensitive uses on this parcel.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 02/27/2003
Comments: Block L - PEA-E investigated the former manufactured gas plant and petroleum transfer site. VOCs, SVOCs, PAHs and hydrocarbons were found to impact the site. A Renivak Action Work Plan will address

SO CAL GAS/ALISO SECTOR C, BLOCK L (Continued) **S118756528**

clean up of this contamination. PEA-E completion was delayed due to further Site Characterization activities and delays in receiving the Human Human Health Risk Assessment reports associated with the PEA-E.

Completed Info:

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Removal Action Workplan
Completed Date:	09/10/2003
Comments:	Block L - The Special initial Study described the proposed polycyclic aromatic hydrocarbon (PAH) and volatile organic hydrocarbon (VOC) contaminated soil remediation activity and its insignificant impact upon the environment.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Removal Action Completion Report
Completed Date:	07/26/2004
Comments:	Block L - Polycyclic aromatic hydrocarbon (PAH) and volatile organic hydrocarbon (VOC) contaminated soil was excavated and thermally treated offsite. Site has been backfilled with clean soil. Subsurface contamination did not extend laterally to offsite areas. Contamination was found, as expected, at the ground water table, and will be addressed in a later, regional effort. As the soil was remediated to industrial cleanup goals, a deed restriction will limit use of the site, preventing residential or other sensitive uses on this parcel.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Preliminary Endangerment Assessment Report
Completed Date:	02/27/2003
Comments:	Block L - PEA-E investigated the former manufactured gas plant and petroleum transfer site. VOCs, SVOCs, PAHs and hydrocarbons were found to impact the site. A Renivak Action Work Plan will address clean up of this contamination. PEA-E completion was delayed due to further Site Characterization activities and delays in receiving the Human Human Health Risk Assessment reports associated with the PEA-E.

EDR MGP:

The former Aliso Street manufactured Gas Plant covered approximately 52 acres in downtown Los Angeles. The site is being investigated as 5 sectors and an overall groundwater unit. The "C" sector consists of 16.4 acres south of the Hollywood (101) Freeeway, bisected by Center Street and bounded by Commercial, Ducommun and Jackson Streets. Sector C is further subdivided into Blocks G, K, L, N, O, Q, and R. Contaminants suspected include petroleum hydrocarbons, volatile organic compounds, cyanide,polycyclic aromatic hydrocarbons and heavy metals

Environmental Interest/Information System:
The Integrated Compliance Information System (ICIS) provides a database that, when complete, will contain integrated enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and it at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Completed Date: 01/23/2007
Comments: Proposed work was performed without opportunity for DTSC review of document. No determination was made regarding the submitted work plan. Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 12/11/2008
Comments: Annual Inspection Report accepted.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Report
Completed Date: 09/27/2016
Comments: Document was reviewed as background information for the purposes of continued oversight of longterm stewardship responsibilities. Draft comments were issued on the document. Investigation Report includes a geotechnical investigation conducted without DTSC oversight. MTA looking to change the land-use of the property and construct a 3-story building. Further investigation is necessary in order to define the nature and extent of residual contamination and evaluate additional remedial alternatives. MTA was informed of the FA determination in face-to-face meetings.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 12/11/2008
Comments: Annual Inspection Report accepted.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Report
Completed Date: 09/27/2016
Comments: Document was reviewed as background information for the purposes of continued oversight of longterm stewardship responsibilities. Draft comments were issued on the document. Investigation Report includes a geotechnical investigation conducted without DTSC oversight. MTA looking to change the land-use of the property and construct a 3-story building. Further investigation is necessary in order to define the nature and extent of residual contamination and evaluate additional remedial alternatives. MTA was informed of the FA determination in face-to-face meetings.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 09/19/2023

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS ATSDR: PFAS Contamination Site Location Listing

PFAS contamination site locations from the Department of Health & Human Services, Center for Disease Control & Prevention. ATSDR is involved at a number of PFAS-related sites, either directly or through assisting state and federal partners. As of now, most sites are related to drinking water contamination connected with PFAS production facilities or fire training areas where aqueous film-forming firefighting foam (AFFF) was regularly used.

PFAS WQP: Ambient Environmental Sampling for PFAS

The Water Quality Portal (WQP) is a part of a modernized repository storing ambient sampling data for all environmental media and tissue samples. A wide range of federal, state, tribal and local governments, academic and non-governmental organizations and individuals submit project details and sampling results to this public repository. The information is commonly used for research and assessments of environmental quality.

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

CHROME PLATING: Chrome Plating Facilities Listing
This listing represents chrome plating facilities the California State Water Resources Control Board staff identified as possibly being a source of Per- and polyfluoroalkyl substance (PFAS) contamination. Sites and locations were identified by staff with the Division of Water Quality in the California State Water Board. Data was collected from the CA Air Resources Board 2013 and 2018 - Cr VI emission survey, CA Emission Inventory, CA HAZ Waste discharge database and by reviewing storm water permits. Former chrome plating sites are also included that are open site investigation or remediation cases with the Regional Water Quality Control Boards and the Department of Toxic Substances Control.

Next Scheduled EDR Contact: 01/15/2024
Data Release Frequency: Varies

HAZNET: Facility and Manifest Data
Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region’s active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing
In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

ATTACHMENT I
SITE CLEANUP PROGRAM OVERSIGHT COST REIMBURSEMENT ACCOUNT LETTER (AUGUST 3, 2023)

August 3, 2023

Mark Workman
Senior Vice President
Lincoln Property Company
915 Wilshire Boulevard, Suite 2050
Los Angeles, CA 90017

Via E-mail Only

SUBJECT: SITE CLEANUP PROGRAM OVERSIGHT COST REIMBURSEMENT ACCOUNT

SITE: UNION PACIFIC RAILROAD COMPANY - FORMER CORNFIELD YARD 1245 NORTH SPRING STREET, LOS ANGELES, CALIFORNIA (SITE CLEANUP PROGRAM NO. 0891 AND SITE ID NO. 2047T00)

Dear Mr. Workman:

The California Regional Water Quality Control Board (Regional Board), Los Angeles Region, is the public agency with primary responsibility for the protection of ground and surface water quality for all beneficial uses within major portions of Los Angeles and Ventura Counties, including the referenced site (Site).

On January 24, 2023, Regional Board staff had a meeting with you and your consultant, Ramboll, to discuss your plan for redeveloping the approximately 8.08-acre portion of the Site, located north of the Metro L (Gold) Line tracks. At the meeting, you indicated that all existing structures on the Site would be removed for the planned mixed-use development of residential and commercial uses. Regional staff communicated to you that a soil management plan must be prepared and submitted for Regional Board review and approval before the demolition and site re-development activities.

The Regional Board has evidence that indicates that there is or has been a discharge of waste from the Site referenced above. Historical investigation activities have indicated that the soil and groundwater were impacted with petroleum hydrocarbons and aromatic volatile organic compounds (VOCs) such as benzene, toluene, ethylbenzene and xylenes (BTEX). The Regional Board granted a no further action for soil in a letter dated June 6, 2006; however, plans for site redevelopment may require additional assessment and evaluation of residual soil impacts. Although the redevelopment being proposed is located on the 8-acre parcel, it is still part of a larger site in which groundwater is still being assessed and evaluated on an annual basis. Benzene and ethylbenzene concentrations were recently detected at maximum concentrations of 1,640 and 1,300 milligrams per liter (mg/L), respectively. The releases of chemicals

from the former operations at the Site have degraded the groundwater quality and beneficial uses of the State's waters.

Section 13304 of the California Water Code (Porter Cologne Act) allows the Regional Board to recover reasonable expenses from a responsible party or parties for overseeing the investigation and cleanup of unregulated discharges adversely affecting the State's waters. In compliance with Section 13365 of the California Water Code, this letter is being sent to provide you the following information regarding costs for regulatory oversight work.

I. Estimate of Work to be Performed

The Regional Board staff estimates that during the Regional Board's 2023/2024 fiscal year (July 1, 2023 to June 30, 2024), regulatory oversight work may include, but is not limited to, the following tasks to be performed at the site:

1. Review technical reports related to residual sources of waste, waste pathways, and delineation of the extent of residual waste;

2. Request and review additional assessment workplans and reports, remedial action plans, progress and monitoring reports, and other technical reports as necessary;

3. Prepare comment letters on various reports and communicate findings to responsible parties;

4. Conduct site inspections, observe field activities, collect split samples, and meet with environmental consultants and responsible parties;

5. Conduct internal and external communication (i.e. meetings, memos) and respond to public inquiries about or related to the site investigation and remediation;

6. Provide environmental documentation to address the California Environmental Quality Act, where required, regarding the site cleanup; and

7. Implement public participation activities which may include producing baseline community assessments, factsheets and work notices, developing a circulation/mailing list of interested, affected and potentially affected parties, creating a Public Participation Plan, conducting public meetings, and providing written responses to public comments.

II. Statement of Expected Outcome

The expected outcome of work that will be performed during fiscal year **2023/2024** includes:

- Prepare and issue directive orders regarding the site;

- Provide written comments on technical reports;
- Verify the adequacy of technical reports; and
- Prepare correspondence to public inquiries about the site investigations and cleanups as needed.

III. Billing Rate

Attached are the Site Cleanup Program, Billing Cost Explanation (Attachment 1) for employees expected to perform the work and the Reimbursement Process for Regulatory Oversight (Attachment 2). The names and classifications of employees that work on and charge time to this site will be listed on the invoices. The average billing rate is about **$215.00** per hour.

If you have any questions regarding billing, please contact the Division of Financial Assistance (DFA) at the Site Cleanup Program (SCP) Message Line: (916) 341-5643 or via email: DFASCP@waterboards.ca.gov.

IV. Estimation of Expected Charges

A. Regional Board staff expects to charge about 70 hours for work related to this site during fiscal year 2023/2024. Based on the average billing rate of $215.00 per hour, the estimated billing charge by the Regional Board staff for this site during this fiscal year is about $15,050, which does not include possible contract charges stated in B (below). **Please note that this is neither a commitment nor a contract for regulatory oversight. It is only an estimate of the work, which may be performed.**

B. To better evaluate the potential health risk, including soil vapor intrusion into indoor air, from the detected or residual waste posed to the current/future occupants of the site and the immediate site vicinity, the Regional Board has established a contract with the State Office of Environmental Health Hazard Assessment (OEHHA), to have their toxicologists review the submitted health risk assessment work plans and reports. OEHHA will review, evaluate if appropriate, and provide comments on risk assessment work plans and reports. When requested, OEHHA toxicologists will provide the Regional Board consultation services on issues concerning human health and/or environmental risks.

   Under the Cost Recovery Program, the responsible party is required to reimburse the Regional Board for the costs incurred by OEHHA. Charges by OEHHA staff will be included in our invoices under the contract charges category. All quarterly invoices generated for this project will be sent to your billing contact by the Site Cleanup Program, State Water Resources Control Board.

C. This letter, and any payment of charges as described in this letter is not intended to alter, limit, or revoke the Regional Board's "no further action" letter, dated June 6, 2006, as referenced above. The property owner has requested at this time only

a review of the draft *Soil Management Plan* and the draft *initial study report* referenced in Mr. Joseph Carrasco's email, dated February 7, 2023, to Mr. Mark Workman of Lincoln Properties Company, which relate to a potential development and change in the use of the 8.08-acre site referenced above that, if pursued, might require further remediation. However, Regional Board staff may review and evaluate historical technical reports and information for the Site, which will assist in the review of the *Soil Management Plan*. The property owner is under no obligation to proceed with such development and change in use. Accordingly, the property owner can discontinue the billing and payment arrangements described in this letter at any time (subject to payment for work already performed) by giving us written notice of such discontinuation; and the electronic submittals and other required submission of information by the property owner described in this letter will relate only to the proposed project and may similarly be discontinued. In light of the limited scope of the requested review at this time of this potential project, the billings for this matter as described in this letter shall not exceed the $15,050 estimate in Section IV (A) by more than 50% (in other words, they shall not exceed a total of $22,575) without prior written notification to the property owner and the property owner's written request to proceed with further work on the matter.

V. Landowner Notification and Participation Requirements

Pursuant to Division 7 of the Porter Cologne Water Quality Control Act under section 13307.1, the Regional Board is required to notify all current fee title holders for the subject site prior to considering corrective action or granting case closure. Therefore, you are required to provide the name, mailing address and telephone number for all record fee title holders for the site together with a copy of county record of current ownership, available from the County Recorder's Office, or complete the attached Certification Declaration Form (Attachment 3) and submit it to our office.

Please sign and return the enclosed landowner's information (Attachment 3) and "Acknowledgment of Receipt of Cost Reimbursement Account Letter" (Attachment 4) to Mr. Joseph Carrasco (case manager) of the Regional Board by **September 16, 2023,** via email.

VI. Other Requirements

1. **Change of Ownership:** You must notify the Executive Officer in writing at least 30 days in advance of any proposed transfer of this cost reimbursement account's responsibility to a new owner, with a specific date for the transfer. In addition, you shall notify the succeeding owner of the existence of this cost reimbursement account by letter, a copy of which shall be forwarded to the Regional Board.

2. **Public Participation:** With increased public interest in our programs and the public knowledge of threat to human health and the environment, the Regional Board has increased efforts to get the public more involved in our decision-making process. The Regional Board provides information and opportunities for public

participation consistent with State law (including California Health and Safety Code section 25356.1 and California Water Code sections 13307.5 and 13307.6). If the owner elects to proceed with the project, you may be required to prepare and implement public participation activities including, but not limited to producing baseline community assessments, factsheets and work notices, developing a circulation/mailing list of interested, affected and potentially affected parties, creating a Public Participation Plan, and facilitating public meetings. Regional Board staff will provide you with additional guidance as appropriate.

3. **Electronic Submittals:** In September 2004, the State Water Resources Control Board adopted regulations (Chapter 30, Division 3 of Title 23 & Division 3 of Title 27, California Code of Regulation) requiring the electronic submittal of information (ESI) for all site cleanup programs, starting January 1, 2005. Currently, all of the information on electronic submittals and GeoTracker contacts can be found at https://www.waterboards.ca.gov/ust/electronic_submittal/.

To comply with the above referenced regulation, you are required to upload all technical reports, documents, and well data to GeoTracker by the due dates specified in the Regional Board letters and orders issued to you or for the site. With respect to the optional and limited scope of this review, that will require copies only of the draft Soil Management Plan and draft initial study report described in item IV C above. However, we may request that you submit hard copies of selected documents and data to the Regional Board in addition to electronic submittal of information to GeoTracker.

If you have any questions, please contact Mr. Joseph Carrasco at (213) 576-6731 or joseph.carrasco@waterboards.ca.gov or Mr. Bizuayehu Ayele at (213) 576-6623 or bizuayehu.ayele@waterboards.ca.gov.

Sincerely,

Hugh Marley

STATE WATER RESOURCES CONTROL BOARD
SITE CLEANUP PROGRAM (SCP)
BILLING COST EXPLANATION
Fiscal Year 2023-2024

Employee Salary and Benefit by Classification [1]	Salary/Benefits Range	
AEO - Assistant Executive Officer CEA	$ 13,563	$ 28,008
ADMOFFII - Admin Officer II	$ 8,550	$ 10,623
AGPA - Associate Governmental Program Analyst	$ 7,902	$ 10,191
AFCNSL - Staff Counsel (Attorney)	$ 10,244	$ 15,518
SFCNSLIII - Staff Counsel III (Attorney)	$ 14,643	$ 18,786
SFCNSLIV - Staff Counsel IV (Attorney)	$ 16,177	$ 20,770
BSA - Business Serv Asst	$ 4,482	$ 7,063
EG - Engineering Geologist	$ 8,585	$ 16,164
EPMI - Environmental Program Manager I	$ 16,609	$ 20,648
EPMII - Environmental Program Manager II	$ 19,276	$ 21,898
ES - Environmental Scientist	$ 5,936	$ 11,351
EOI - Exec Officer I	$ 22,167	$ 25,182
EOII - Exec Officer II	$ 22,709	$ 25,794
OA - Office Assistant	$ 4,124	$ 5,767
OT - Office Technician	$ 4,825	$ 6,220
PWRCE - Principal Water Resources Control Engineer	$ 20,198	$ 22,942
PPS - Public Participation Specialist	$ 7,902	$ 9,892
SEA - Sanitary Engineering Associate	$ 8,908	$ 11,152
SET - Sanitary Engineering Technician	$ 6,137	$ 8,815
SEG - Senior Engineering Geologist	$ 15,136	$ 18,944
SRES - Senior Environmental Scientist	$ 14,364	$ 17,857
SRES - Senior Environmental Scientist (Spec)	$ 10,506	$ 13,069
SWRCE - Senior Water Resources Control Engineer	$ 15,136	$ 18,944
SSA - Staff Services Analyst	$ 5,061	$ 8,472
SUEG - Supervising Engineering Geologist	$ 16,625	$ 20,810
SUWRCE - Supervising Water Resources Control Engineer	$ 16,625	$ 20,810
WRCE - Water Resources Control Engineer	$ 8,585	$ 16,082
Intermittent Employees:		
SA - Scientific Aid	$16.07/hour	$19.07/hour

Note: The State is currently in negotiations with the unions so the upper limits of these ranges may be subject to change.

Operating Expenses and Equipment [2] (both State and Regional Board offices)
Indirect Costs (Overhead + Admin = cost of doing business)

		140%
Billing Example for One Month Salary		
WRCE - Water Resources Control Engineer		
Total Direct Labor Charges [3] (per month):	$	16,082
Contract Charges (if applicable):	$	-
Direct Labor Overhead:	$	12,062
State Board Program Admin and Overhead:	$	2,414
Regional Board Program Admin and Overhead:	$	8,041
Total Cost (per month):	$	38,600
Divided by 176 hours per month equals per hour:	$	219

(Due to the various classifications that expend SCP resources an average of **$215.00** per hour can be used for projection purposes.)

[1] The name and classification of employees performing oversight work will be listed on invoices you receive.
[2] The examples are estimates based on recent billings. Actual charges may be higher or lower.
[3] Total Direct Labor Charges = Salary and Benefits

REIMBURSEMENT PROCESS FOR REGULATORY OVERSIGHT

We have identified your facility or property as requiring regulatory cleanup oversight. Pursuant to the Porter-Cologne Water Quality Control Act, reasonable costs for such oversight can be recovered by the Regional Water Quality Control Board (RWQCB) from the responsible party. The purpose of the enclosure is to explain the oversight billing process structure.

INTRODUCTION

The Porter-Cologne Water Quality Control Act authorizes the State Water Resources Control Board (SWRCB) to set up Cost Recovery Programs. The Budget Act of 1993 authorized the SWRCB to establish a Cost Recovery Program for Site Cleanup Program (SCP). The program is set up so that reasonable expenses incurred by the SWRCB and RWQCBs in overseeing cleanup of illegal discharges, contaminated properties, and other unregulated releases adversely impacting the State's waters can be reimbursed by the responsible party. Reasonable expenses will be billed to responsible parties and collected by the Fee Coordinator at the SWRCB in the Division of Financial Assistance (DFA).

THE BILLING SYSTEM

Each cost recovery account has a unique Site ID number assigned to it. Whenever any oversight work is done, the hours are entered into the SCP Cost Recovery/daily logs database. The cost of the staff hours is calculated by the State Accounting System based on the employee's salary and benefit rate and the SWRCB overhead rate.

SWRCB and RWQCB Administrative charges for work such as accounting, billing preparation, general program meetings and program specific training cannot be charged directly to an account. This work will be charged to Administrative accounting codes one per Region. The Accounting Office totals these administrative charges for the billing period and distributes them back to all of the accounts based on the number of hours charged to each account during that billing period. These charges show as State Board Program Administrative Charges and Regional Board Program Administrative Charges on the Invoice.

The current billing period charges will include associated labor costs, risk assessment contract charges, overhead charges, SWRCB/DFA Administrative charges, and RWQCB Administrative charges. The overhead charges are based on the number of labor hours charged to the account. The overhead charges consist of rent, utilities, travel, supplies, training, and accounting services. Most of these charges are paid in arrears. The Accounting Office keeps track of these charges and distributes them back monthly to only those accounts having Labor hours charged to them for the period being billed. No site will be billed for overhead during a billing period unless Labor hours have been posted to the RWQCB employee's daily logs residing in the SCP Cost Recovery database.

Invoices are issued quarterly, one quarter in arrears. If a balance is owed, a check is to be remitted to the SWRCB with the invoice remittance stub within 30 days after receipt of the invoice. The Fee Coordinator inputs a record of all checks received directly or by the Accounting Office on a daily basis.

Copies of the invoices are sent to the appropriate RWQCBs so that they are aware of the oversight work invoiced. Questions regarding the work performed should be directed toward your RWQCB case worker.

DISPUTE RESOLUTION

If a dispute regarding oversight charges cannot be resolved with the RWQCB, Section 13320 of the California Water Code provides a process whereby persons may petition the SWRCB for review of RWQCB decisions. Regulations implementing Water Code Section 13320 are found in Title 23 of the California Code of Regulations, Section 2050.

DAILY LOGS

A detailed description (daily log) of the actual work being done at each specific site is kept by each employee in the Regional Water Board who works on the cleanup oversight at the property. This information is provided on the quarterly invoice using standardized work activity codes to describe the work performed. *Upon request, a more detailed description of the work performed is available from the RWQCB staff.*

REMOVAL FROM THE BILLING SYSTEM

After the cleanup is complete, the RWQCB will submit a closure form to the SWRCB to close the account. If a balance is due, the Fee Coordinator will send a final billing for the balance owed. The responsible party should then submit a check to the SWRCB to close the account.

AGREEMENT

No cleanup oversight will be performed unless the responsible party of the property has agreed in writing to reimburse the State for appropriate cleanup oversight costs and submitted to the RP. You may wish to consult an attorney in this matter. As soon as the letter is received, the account will be added to the active Site Cleanup program Cost Recovery billing list and oversight work will begin.

If you have any questions regarding billing, please contact the Division of Financial Assistance (DFA) at the Site Cleanup Program (SCP) Message Line: (916) 341-5643 or via email: DFA-SCP@waterboards.ca.gov.

"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations." (See attached page for who shall sign the Certification Declaration).

_____ _____

Printed Name of Person Signing Official Title

_____ _____

Signature Date Signed

The certification declaration form must be signed as follows:

1. For a corporation - by a responsible corporate officer, which means; (i) by a president, secretary, treasurer, or vice president of the corporation in charge of a principal business function, or any other person who performs similar policy of decision making functions for the corporation, or (ii) the manager of one or more manufacturing, production, or operating facilities employing more than 250 persons or having gross annual sales or expenditures exceeding $25 million, if authority to sign documents has been assigned or delegated to the manager in accordance with corporate procedures.

2. For a partnership or sole proprietorship – by a general partner or the proprietor respectively.

3. For a municipality, state, federal, or public agency - by either a principal executive officer or ranking elected official. A principal executive officer of a federal agency includes (i) the chief executive officer of the agency or (ii) a senior executive officer having responsibility for the overall operations or a principal geographic unit.

ACKNOWLEDGEMENT OF RECEIPT OF
OVERSIGHT COST REIMBURSEMENT ACCOUNT LETTER

I, _____, acting within the authority vested in me as an authorized representative of _____ _____, a corporation, acknowledge that I have received and read a copy of the attached *REIMBURSEMENT PROCESS FOR REGULATORY OVERSIGHT* and the cover letter dated **August 6, 2023,** concerning cost reimbursement for Regional Board staff costs involved with oversight of cleanup and abatement efforts at the cleanup site located in Los Angeles County**.** The site address is **1251 North Spring Street, Los Angeles, CA 90012 (8.08-acre portion)**

I understand the reimbursement process and billing procedures as explained in the letter. Our company is willing to participate in the cost recovery program and pay all subsequent billings in accordance with the terms in your letter and its attachments, *and to the extent required by law*. I also understand that signing this form does not constitute any admission of liability, but rather only an intent to pay for costs associated with oversight, *as set forth above, and to the extent required by law*. Billings for payment of oversight costs should be mailed to the following individual and address:

1. INTRODUCTION

Ramboll Americas Engineering Solutions, Inc. (Ramboll) has prepared this updated Soil Management Plan (SMP) on behalf of S&R Partners, LLC ("S&R" or client), for submittal to the Los Angeles Regional Water Quality Control Board (LARWQCB) to manage potential residual contamination and to provide monitoring and decision-making guidance during earthwork activities for the proposed Buena Vista Project located at 1030-1380 North Broadway and 1251 North Spring Street in Los Angeles, California (Site, see Figure 1) (Assessor's Parcel Number [APN] 5414-016-002). The Project is being conducted under LARWQCB oversight pursuant to the signed oversight agreement with Lincoln Property Company, on behalf of S&R. Prospective earthwork activities include all soil movement, such as trenching, excavation, rough grading, and backfilling under proposed future grading plans. The updated SMP supersedes the prior SMP submitted to the LARWQCB on October 16, 2023.

By way of background, a draft Environmental Impact Report (DEIR) is being prepared for submittal to the Los Angeles City Planning (City) for the Buena Vista Project[1] and the supporting technical analyses includes a Hazards and Hazardous Materials Technical Report, which has determined the need for certain mitigation related to subsurface contamination.

As set forth in the Hazards and Hazardous Materials Technical Report, mitigation measure HAZ-MM-2, requires that all earthwork activities on-site be performed under a Hazardous Materials Contingency Plan (HMCP). This SMP is functionally equivalent to an HMCP and, as such, 1) addresses the potential for hazardous releases in soil, soil vapor, and groundwater during short-term construction activities, and 2) provides guidance for reducing impacts associated with the transport, use and/or disposal of hazardous materials. Upon approval by the LARWQCB, the SMP will be provided to the City of Los Angeles Planning Department (LA City Planning) to satisfy this proposed mitigation measure of the DEIR.

1.1 Planned Redevelopment of the Site

Redevelopment plans for the Site include demolition of all existing Site buildings and structures, and the construction of mixed-use residential and commercial buildings and public open space. During demolition and disposal activities, hazardous materials and hazardous wastes would be handled by a licensed contractor and disposed of in accordance with applicable regulatory requirements, such as South Coast Air Quality Management District (SCAQMD) Rule 1403: *Asbestos Emissions from Demolition/Renovation Activities*, and as specified in HAZ-MM-1.

Earthwork is anticipated to include excavation along the escarpment adjacent to the MTA easement to at least 30 feet below current grade to allow for the construction of multi-level subterranean parking. A variety of commercial enterprises will be constructed on the floors above the parking structure, with several floors of residential units. In addition to the existing methane vapor design requirements that the Project will incorporate, volatile organic compound (VOC) vapor intrusion within the newly constructed buildings will be mitigated as directed by the LARWQCB, in accordance with HAZ-MM-5, *Vapor Intrusion Design*. The level (or levels) of methane mitigation that will be implemented at the Site is/are being evaluated with the LADBS (see Section 2.3.5). Figure 2 depicts the proposed new Site configuration.

[1] https://planning.lacity.org/development-services/eir/buena-vista-project

1.2 Purpose and Concept of Soil Management Plan

The purpose of this SMP is to provide established protocols for implementing appropriate contingency actions to address potential risks that could be encountered during future earthwork activities associated with subsurface issues, such as the presence of previously unidentified subsurface structures[2], visually or odor-impacted soil, and/or dust. In addition, this SMP includes guidance on handling potential residual subsurface impacts.

Throughout the SMP, the following terms are used to distinguish between the types of environmental conditions that may be encountered during earthwork. For purposes of this document, the term "VOC-Contaminated Soil" is defined by South Coast Air Quality Management District (SCAQMD) Rule 1166 as "*a soil which registers a concentration of 50 parts per million by volume (ppmv) or greater of Volatile Organic Compounds (VOCs) as measured before suppression materials have been applied, and at a distance of no more than three inches from the surface of the excavated soil with an organic vapor analyzer calibrated with hexane*." The term "Non-VOC-Impacted Soil" describes soil that is below the SCAQMD Rule 1166 50 parts per million by volume (ppmv) threshold but has constituents other than VOCs that exceed applicable screening levels. The term "Potentially-Impacted Soil" describes soil that appears to be contaminated based on visual or olfactory evidence.

1.3 Project Team

The roles and key responsibilities and duties of the various members of the project team are defined below. All team members are responsible for reviewing and understanding the SMP.

- Project Owner Representative: S&R. This firm is ultimately responsible for the permitting, planning, engineering, demolition, and grading associated with the Project, to which all project team members are subordinate.
- Environmental Consultant: Ramboll. This firm is responsible for evaluating the environmental issues that may be encountered at Site, including interfacing with and notification to the client and appropriate agencies, as needed.
- General Contractor: To be determined. This firm is responsible as the general environmental subcontractor working with all subcontractors.
- Grading Contractor: To be determined. This firm is responsible for executing the final approved grading plans and implementing the SMP. The Project Owner or General Contractor will engage the Grading Contractor.

[2] Treatment of potential or known subsurface structures relevant to cultural or tribal cultural resources is separately addressed in Environmental Impact Report.

2. SITE DESCRIPTION AND BACKGROUND

2.1 Site Description

The approximately 8-acre Site is bounded by North Broadway Street and various commercial buildings to the north and west and by Metro railway tracks and the Los Angeles State Historic Park to the south and east, as depicted in Figure 2. The Project involves the subdivision of the Project Site into the "South Parcel" and "North Parcel." In general, the South Parcel refers to the Site located south of the intersection of Bishops Road and North Broadway, and the North Parcel refers to the portion of the Site north of that same intersection. The "South Parcel" includes various structures associated with transportation operations and maintenance-related facilities. The "North Parcel" includes trees, billboards, and a large graded unpaved area used as a storage yard for construction equipment and vehicle storage.

2.2 Site Background and Operations

According to historic documentation reviewed by Ramboll, the North and South Parcels are part of a larger property identified as the Former Cornfield Property, associated with the address 1245 North Spring Street. The Former Cornfield Property is a 50-acre property located between North Broadway and North Spring Street, which was historically used as a cornfield prior to the Civil War and then as a railyard operated by Southern Pacific (later Union Pacific) Railroad from at least 1875 until approximately 1999. The 50-acre Former Cornfield Property is comprised of the North and South Parcels, a 10-acre MTA easement located directly southeast of the parcels, and a 32-acre parcel located to the southeast of the MTA easement (see Figure 2).

The North Parcel was developed with dwellings and residential buildings by at least 1894. Historically, two aboveground oil storage tanks and one gas station with associated underground storage tanks (USTs) were present on the North Parcel throughout the 1900s. The gas station, latterly operated by Texaco, was ultimately demolished in 1989 and the USTs were removed in 1990. The northern portion of the North Parcel has been leased by a construction company as a construction staging yard since at least 2014.

The South Parcel was developed by at least 1888 with rail spurs and buildings associated with the Southern Pacific Railroad roadhouse and shops located to the southeast of the parcel. In 1906, the northern portion of the South Parcel was developed with a well pumping station, an unused water purification plant with two 50,000-gallon aboveground water tanks, a dwelling, an additional water tank in the central portion of the South Parcel, and three to four office buildings. By 1950, the water purification plant, aboveground tanks, and well pumping station were removed. From 1950 through 1970, a wholesale seafood distribution building, a restaurant, railroad cars used as storage buildings, an auto repair garage, steel storage, an office, lumber storage, a railroad carpenter shop, a sign painting shop, a neon sign manufacturer, a truck maintenance building, and a truck washing building associated with MTA railroad car maintenance were located on the South Parcel. According to a Phase I ESA report prepared for the Site in 2015 (Cardno ATC, 2015), there were four USTs installed in March 1957 in association with a motor car repair shop. The specific locations of the former USTs are not known and may not have been located within Site boundaries, as the repair shop buildings appear to have been located on the southeast parcel boundary. Since the mid-1950's, railroad car maintenance and bus maintenance activities were conducted on the South Parcel, most recently by Metro. Metro has since vacated the Site. Railroad spurs

were present on the South Parcel between at least 1888 and 1970, but do not appear to be currently present.

2.3 Previous Phase II Site Investigations and Remediation

The Site is part of the larger Spills, Leaks, Investigation, and Cleanup (SLIC) program at the Former Cornfield Property that is currently undergoing verification monitoring under the oversight of the LARWQCB[3]. Union Pacific Railroad Company (UPRR) is the responsible party for the Former Cornfield Property and has performed all Phase II investigation and follow-up remediation work to date. This section presents a summary of previous Phase II investigation (e.g. soil, soil vapor, and groundwater) and remediation conducted at the Site. Previous Phase II investigation and remediation reports are summarized in Appendix A and are found in the public domain at the website shown in the footnote below.

2.3.1 Lithology

The stratigraphic units underlying the property are Cenozoic era, Quaternary system, and Quaternary series in a stratified sequence. According to information contained in the EDR report, the soils at the property most likely belong to the Urban Land component. Urban Land consists of variable soil texture with a depth of greater than 10 inches to bedrock. IT is characterized by surface textures such as sandy loam, gravelly sandy loam, silt loam, clay, fine sand, gravelly sand, and fine sandy loam (Cardno, 2015).

2.3.2 Soil Excavation and Soil Vapor Extraction

Soil samples were collected in 1990 during the tank removal activities on the North Parcel and investigations were conducted on the North Parcel between 1999 and 2001. Phase II investigation results indicated that soils beneath limited portions of the off-site Former Cornfield Property had been impacted by total petroleum hydrocarbons as gasoline (TPH-g), benzene, toluene, ethylbenzene, and xylenes (BTEX), and methyl tert-butyl ether (MTBE) which can be attributed to the former gas station on the North Parcel. In 2001, during construction activities along the MTA easement, approximately 300 cubic yards of hydrocarbon-impacted soil were excavated (see Figure 3).

A soil vapor extraction (SVE) system was operated from March 2001 to June 2002 to remediate a thin (0.2 feet or less) layer of free-phase gasoline within the capillary fringe near the escarpment between the Site and adjacent MTA easement. Another SVE system began operation in October 2003 to remediate soil impacted by gasoline releases from the USTs at the former Texaco service station on the North Parcel. Confirmation soil samples were collected in May 2005 and were non-detect for TPH-g, BTEX, and MTBE, and were well below the United States Environmental Protection Agency's (USEPA's) residential Preliminary Remediation Goals (PRGs) for any detected compound. As of June 2005, the SVE system had removed 365 pounds of VOCs. Rebound testing was conducted from July through September 2005 and indicated that the SVE system had achieved the soil cleanup goals. On June 6, 2006, the LARWQCB issued a "*No Further Requirement for Soils Only*" (NFR) determination for soils for the former gas station, as part of the larger Former Cornfield Property, stating the "*low soil concentrations do not appear to pose a significant threat to human health and groundwater quality*" (LARWQCB, 2006).

[3] SLIC Case No. 2047T1683- https://geotracker.waterboards.ca.gov/profile_report.asp?global_id=SL2047T1683

2.3.3 Former Cornfield Property Groundwater Monitoring

From 2000 to 2006, three groundwater monitoring wells (MW-2, MW-18, and BMW-11) were installed on the Site as part of a larger groundwater investigation at the Former Cornfield Property. Based on Phase II groundwater investigations during this time, maximum concentrations of BTEX of all Former Cornfield Property wells were 16,000 micrograms per liter (µg/L) of benzene, 35,000 µg/L of toluene, 3,600 µg/L of ethylbenzene, and 21,200 µg/L of xylenes (Arcadis, 2010). MTBE was also reported as high as 27 µg/L, along with low concentrations of various chlorinated solvents. Free product has not been reported since 2002. Due to the elevated BTEX concentrations in groundwater, the LARWQCB required additional assessment (LARWQCB, 2010).

According to a groundwater monitoring report prepared for the Former Cornfield Property (Arcadis, 2015), well BMW-11, located on the North Parcel in the area of the former gas station, was decommissioned in August 2006. Monitoring wells MW-2 and MW-18 remain on the Site; MW-2 is located on the boundary between the South Parcel and the Metro easement, and MW-18 is located on the northern portion of the South Parcel. Monitoring well MW-2 was last sampled in August 2003, with no VOCs or TPH detected above laboratory reporting limits (RLs). Monitoring well MW-18 was last sampled in January 2007, with no VOCs or TPH detected above laboratory RLs.

In 2009, UPRR requested closure from the LARWQCB for the larger Former Cornfield Property stating that decreasing trends were observed in a majority of wells for the primary constituents analyzed. The LARWQCB did not approve the request for closure, noting that well BMW-4 reported a benzene concentration of 7,400 µg/L during the September 2009 groundwater monitoring event and additional groundwater monitoring is required.

Annual groundwater monitoring continued from 2010 to 2023. The most recent groundwater monitoring report prepared for groundwater sampling conducted in 2023 concluded that BTEX impacts around monitoring well BMW-4 are limited in extent and the benzene concentration of 243 µg/L reported in well BMW-4 demonstrates a significant decrease from previous concentrations (Arcadis, 2024). While the benzene isoconcentration map in the groundwater monitoring report infers that benzene concentrations in groundwater could be present beneath the Site, historical groundwater monitoring data from the wells situated on the Site upgradient of the benzene concentrations were either non-detect or below its California Maximum Contaminant Level of 1 µg/L. Site closure for the larger Former Cornfield Property, which includes the Site, has been requested from 2019 to 2023, with reports stating that the source of contamination has been remediated, the current and future Site use is acceptable and Site conditions do not pose a risk. The reports further state the groundwater plume has remained stable, dissolved BTEX concentrations continue to decrease, natural attenuation is occurring, and additional remediation is impractical due to the location of the MTA rail line and subsurface utilities.

2.3.4 On-Site Monitoring Well Abandonment

Two groundwater monitoring wells, MW-2 and MW-18, associated with the Former Cornfield Property groundwater monitoring program, are currently located on the Site. As part of Site redevelopment and prior to the start of earthwork activities, the two wells may be maintained, relocated, removed, or abandoned as described in HAZ-MM-4. Ramboll and the Site owner continue to monitor efforts by UPRR to obtain closure from the LARWQCB for the Site (Union Pacific Railroad – Cornfield Yard, Cleanup Case No. SL2047T1683). If closure continues to be delayed, and the LARWQCB requires groundwater monitoring on the Site to

continue, then Ramboll and the Site owner will coordinate with the LARWQCB and UPRR to either maintain or relocate and remove monitoring wells MW-2 and MW-18.

2.3.5 Methane Investigation

Ramboll conducted a methane assessment at the Site in December 2017 and May 2018 given that it is located in an area designated as the "methane zone" and is subject to Division 71 of Article 1, Chapter IX of the Los Angeles Municipal Code (see Figure 4A; Ramboll, 2021). Accordingly, the Project will comply with methane mitigation measures in accordance with HAZ-MM-5.

Methane was not reported above laboratory RLs in any shallow, intermediate, or deep soil vapor sample collected from the South Parcel (see Figure 4B; locations SV-1 through SV-10). Accordingly, no further methane assessment is recommended for the South Parcel.

Two soil vapor sample locations in the central and northern portions of the North Parcel, SV-14 and SV-19 (see Figure 4C), detected methane above the laboratory RLs. At SV-14 in the deeper 30-foot probe, methane was detected at concentrations of up to 4,000 ppmv. At SV-19, methane was detected at a concentration of 74 ppmv. Methane can be attributed to various sources, including leaking natural gas lines, decomposing organic matter, and nearby activities related to oil drilling. The proximity of a catalogued abandoned oil well, American Petroleum Institute (API) number 0403716588, close to SV-14, may be a source of the methane reported at SV-14.

Based on the levels of methane detected and the location of the North and South Parcels in the methane zone, methane mitigation measures for future buildings will be determined and performed per Article 71 and per the Los Angeles Department of Building and Safety (LADBS) Bulletin No. P/BC 2014-101 (reference no. LABC 7104.1) and as described in HAZ-MM-5. Due to elevated concentrations of methane reported in the vicinity of an abandoned oil well, the California Geologic and Energy Management Division (CalGEM) will be engaged to determine to the appropriate course of action, as described in Section 2.3.6.

2.3.6 Abandoned Oil Wells

Two abandoned wells, one oil well and one dry well, are purported to be on the North Parcel. One abandoned oil well was thought to be located on the South Parcel and was later confirmed by CalGEM to be located off-site to the north. A geophysical survey was conducted by Spectrum Geophysics, under Ramboll's oversight, on June 3, 2019, on the North and South Parcels in an attempt to detect the abandoned oil wells (Spectrum Geophysics, 2019). Investigation on the North Parcel was incomplete due to obstructions by tenant vehicles and areas of the parcel that were inaccessible. Investigation on the South Parcel was also impeded by vegetation and irregular terrain. The geophysical survey identified five anomalies on the North Parcel and one anomaly on the South Parcel that could be associated with a steel cased well or other buried ferrous object. Note that the anomaly on the South Parcel is likely not an abandoned oil well given CalGEM's updated off-site well location mentioned above.

Based on the geophysical survey, one well, "Southern Pacific Corehole No. 1," on the North Parcel was successfully located and leak tested by Ramboll on July 26, 2019 with CalGEM in attendance. The second purported well, "Freight Depot No. 1," on the North Parcel could not be located due apparently to magnetic interference from heavy equipment stored at the Site. A second geophysical survey was conducted on July 5, 2023 and identified four high quality anomalies. The anomalies were excavated to a depth of at least 10 feet, but no wellhead was

encountered. To further assess the location of the Freight Depot No. 1 well, aerial photographs from the years that the well was being drilled were analyzed and the photographs revealed the outline of the drill rig mast for Freight Depot No. 1. Ramboll's evaluation showed Freight Depot No. 1 to be located approximately 76 feet southeast of the surveyed Southern Pacific Core Hole No. 1. Ramboll assessed the accessibility of the well and concluded that, under current conditions, due to the steepness of the slope, where the well is believed to be, the well cannot be safely reached without a large-scale excavation operation. The second well will be excavated and leak tested at the time of site development, when the area of the wellhead can be accessed without undue safety concern.

In accordance with HAZ-MM-6, prior to the issuance of a grading permit and earthwork activities, CalGEM will be consulted to ensure that plugged oil wells on the Site are properly abandoned in accordance with Chapter 4 of Title 14, Division 2 of the California Code of Regulations. Oil well abandonment will be conducted as summarized in HAZ-MM-6. A project representative must file a notice with CalGEM and is required to notify the City of Los Angeles Fire Department (LAFD) under Section 91.7109.2 of the Los Angeles Municipal Code, as the LAFD is assigned to evaluate oil wells encountered during development.

The SMP takes into account that the two abandoned oil wells on the Site (North Parcel) will be re-abandoned to the satisfaction of CalGEM and LADBS, in accordance with HAZ-MM-6. To that end, development plans at the time of writing will require the oil well casings to be cut down to at least 30 feet below current approximate grade to fit beneath the subterranean garage structure, triggering formal well re-abandonment, the specifics of which shall be determined by a state-licensed petroleum engineer. Well re-abandonment will occur prior to the start of earthwork activities on the North Parcel.

3. SOIL MANAGEMENT DURING EARTHWORK

Based on previous Site investigation activities, the primary areas of impacted soil at the Site have been identified. Soil impacts have been removed through excavation and SVE. Low concentrations of residual VOCs may be present in soil and additional areas of impacted soil may be encountered, although considered unlikely. Accordingly, as part of earthwork activities at the Site, the Grading Contractor will follow this SMP guidance in the event impacted soil is encountered that is subject to SCAQMD Rule 1166 monitoring/mitigation requirements (VOC-Contaminated Soil), and/or is visibly stained, discolored, oily, or has a noticeable solvent-like or hydrocarbon odor (Non-VOC-Impacted Soil) and confirmed by subsequent sampling to have contaminant concentrations exceeding the applicable soil screening standards as summarized in Sections 3.5.4 and 3.10. Based on the results of soil sampling, area(s) of the Site may be subject to SCAQMD Rule 1466 requirements, as described in Section 3.5.3. Based on existing sampling results, Rule 1466 is not expected to be applicable.

This section outlines the steps to be taken during all earthwork activities (e.g., trenching, excavation, rough grading, and backfilling) under the grading plan. As a reference, these steps are presented in the *Flowchart for Handling of Soils during Earthwork* included as Figure 5. The required sections of the SMP are outlined below.

3.1 Site-Specific Health and Safety

Contractors and consultants working at the Site will each prepare their own Site-specific Health and Safety Plan (HASP) covering physical, chemical and/or biological hazards that could be encountered during construction activities at the Site. All HASPs should be maintained at the Site and should be available for review at any time. All contractor employees whose activities disturb surface soils shall conduct those activities in accordance with the contractor's HASP. Each contractor's HASP shall require that all workers receive the appropriate level of health and safety training prior to start of construction activities; participate in a daily briefing on safety prior to the start of each day; and use the appropriate personal protective equipment (PPE). In addition to standard health and safety discussions, on-site workers shall be periodically briefed on pertinent elements of the SMP and environmental matters contained in Ramboll's HASP, included as Appendix B.

The contractor HASPs shall require that all workers at the Site must follow the applicable California Department of Health and Safety Administration (Cal/OSHA) regulations for construction safety in Sections 1500 through 1938 of California Code of Regulations (CCR) Title 8 (8 CCR 1500-1938). Contractor employees involved in "cleanup operations" or "hazardous substance removal work" (if warranted) as defined in Cal/OSHA standards for HAZWOPER, 8 CCR §5192 shall ensure that personnel conducting such activities have had training and are subject to medical surveillance, in accordance with Cal/OSHA requirements (HAZWOPER-trained personnel). Soil that is identified as impacted shall be handled only by HAZWOPER-trained personnel.

The contractor HASPs shall require that during earthwork activities in areas suspected of being impacted, soil will be monitored using an organic vapor monitor (OVM) or photoionization detector (PID), such as a MiniRAE 3000 or equivalent calibrated to hexane, which is capable of monitoring total VOCs from 0.1 ppmv to 15,000 ppmv. During earthwork in areas near the two abandoned oil wells, methane will be monitored with a handheld

Landtec GEM 5000+, RKI Eagle, or similar. Action levels and responses for VOCs and methane are presented in the HASP.

3.2 Pre-Excavation Soil Characterization

Prior to the beginning of excavation, the General Contractor and/or Grading Contractor shall coordinate with potential disposal sites regarding the disposal of impacted soil excavated as part of the redevelopment. The Environmental Consultant will provide the required existing soil data to the potential soil disposal sites and collect additional soil samples as needed to satisfy their respective disposal profiling requirements.

3.3 Pre-Excavation Geophysical Survey

After the removal of existing buildings on-site and prior to the start of earthwork activities, a supplemental geophysical survey will be performed to evaluate the potential presence of USTs on-site as defined in HAZ-MM-3 in areas that cannot be currently accessed. The geophysical survey will be performed in the area around monitoring well MW-2 and in surrounding areas that could be possible locations for USTs. A report of findings will be submitted to LARWQCB and LADBS prior to the start of excavation. If UST(s) are identified, they would be permitted and removed as described in Section 3.7 of this SMP, under LAFD oversight and in accordance with Title 23, Chapter 16 of the CCR.

3.4 Grading and Mitigation Measures

Since the on-site soil may be potentially contaminated, fugitive dust generated during on-site grading/excavation activities will be controlled by the Grading Contractor in order to minimize both potential on-site and prevent off-site impacts to human health and the environment. Measures that will be used to mitigate potential impacts to human health and the environment during on-site grading/excavation are described in this section. Such activities are identified as: (1) dust control for dust generation associated with grading, excavation and loading activities, transportation of equipment over on-site soil, and wind (see Section 3.4.1), and; (2) storm water runoff control (see Section 3.4.2).

3.4.1 Dust Control

Generation of dust during earthwork operations will be managed by the Grading Contractor in accordance with SCAQMD Rules 403 and 1466 (if applicable). It is particularly important to minimize exposure of on-site grading workers to dust that is unlikely to, but could contain chemicals, and minimize dust from migrating off-site. Dust can be generated via various actions, including but not limited to, grading/excavation, vehicle traffic, ambient wind traversing soil stockpiles and exposed Site surfaces, and vehicle loading. Contractor exposure to dust generated from Potentially-Impacted Soil and transportation of impacted dust and nuisance dust off-site shall be controlled to ensure that dust does not leave the boundaries of the Project Site, in compliance with Rule 403. Measures shall include, but may not be limited to, the following:

- Misting or spraying water on surface soils while performing earthwork activities and loading transportation vehicles;
- Limiting vehicle speeds on the Site to 5 mile per hour or less;
- Cleaning up any track-outs at the end of each workday;

- Minimizing drop heights during vehicle loading; and
- Covering exposed soil stockpiles generated as a result of excavating visibly contaminated soils with visqueen, plastic sheeting, or tarpaulins.

Additional information regarding controlling visible dust emissions and required best available control technologies are provided in SCAQMD Rule 403 (Appendix C) and SCAQMD Rule 1466 (Appendix D). All contractors whose actions may result in disturbance of surface soils are responsible for complying with the requirements of Rules 403 and 1466 (if deemed applicable).

3.4.2 Storm Water Runoff Control

The Grading Contractor is responsible for obtaining a storm water permit for grading activities pursuant to the requirements of the State Water Resources Control Board (SWRCB) General Construction Activity Storm Water Permit. In addition, the Grading Contractor is responsible for preparing and implementing a Storm Water Pollution Prevention Plan (SWPPP). Procedures for managing surface water runoff at the Site are not included in this SMP but shall comply with relevant Los Angeles Municipal Code.

3.5 Soil Management Protocols

During earthwork activities, environmental monitoring (by sight and smell) will be performed to initially recognize areas of potential soil impacts that may not have been found during the previous subsurface soil investigations performed at the Site.

Heavy equipment operators will be briefed to alert them to the possibility of encountering contaminated soils below ground surface and to train them to recognize visual and olfactory indicators of contaminated soil that may be encountered in the course of their work. All excavated soil from the Site is anticipated to be disposed of off-site, and no reuse is expected to occur. Prior to off-site disposal, soil sampling will be performed for chemically profiling to evaluate proper disposal locations. Excavation under the grading plan will proceed to the base of the planned excavation, and the excavated soil will be managed as described. Soil Management Protocols are graphically depicted in Figure 5.

See Section 3.5.4 for additional discussion of procedures if potential soil impacts are observed.

3.5.1 Site-Specific Rule 1166 Permit Acquisition and Implementation

Earthwork operations shall comply with SCAQMD Rule 1166 requirements (Appendix E) and be coordinated between the Project Owner Representative, General Contractor, and Environmental Consultant. A site-specific Rule 1166 plan will be obtained from the SCAQMD for the Project due to the location of two schools (Cathedral High School and Castelar Elementary School) within 1,000 feet of the site. Sustained OVM/PID readings of 50 ppmv or higher at three inches above the exposed soil surface indicate VOC-Contaminated soil has been encountered. The Environmental Consultant and/or a designated representative will be on-site during earthwork activities to comply with Rule 1166.

3.5.2 Engineering Controls to Limit Vapor Emissions

If VOC-contaminated soils are detected, mitigation measures and notifications will be implemented per Rule 1166. Protocols for worker safety while working with soil containing VOCs, including air monitoring, action levels, and PPE requirements, will be provided in the Grading Contractor's HASP. Vapor suppression, such as covering stockpiles and the use of

water and surfactant sprays, will be performed when the monitored VOC concentration exceeds the prescribed action level. Stockpiles of soil designated and logged as triggering Rule 1166 shall be removed from the Site within 30 days. Note that soils exhibiting OVM/PID readings of 1,000 ppmv or greater shall be direct loaded or containerized on and under plastic sheeting or in covered roll-off bins until they can be loaded at the earliest opportunity for disposal at an approved treatment and disposal facility. OVM/PID readings shall be recorded on Rule 1166 forms that track both excavated volumes and OVM/PID readings.

3.5.3 Engineering Controls to Limit Fugitive Dust Emissions Containing Toxic Air Contaminants

The excavation of soil with the potential for release of toxic air contaminants must comply with SCAQMD Rule 1466 requirements to minimize the amount of off-site fugitive dust emissions containing toxic air contaminants (see Appendix D). It is currently unknown if Rule 1466 chemicals are present at the Site. Based on the results of the pre-excavation soil characterization summarized in Section 3.2, the Environmental Consultant will assess the applicability of SCAQMD Rule 1466. In addition, SCAQMD Rule 1466 applies only if the amount of excavated soil that contains toxic air contaminants as defined by SCAQMD Rule 1466 exceeds 50 cubic yards, and if the amount of soil to be excavated is less than 500 cubic yards, several exemptions from Rule 1466 apply. Rule 1466 requirements must be followed for dust suppression, monitoring, notification, signage, and record keeping as described in Appendix D.

3.5.4 Visibly Contaminated Soil and Soil with Noticeable Odor

As outlined in the *Flowchart for Handling Soils During Earthwork* (Figure 5), if Potentially-Impacted Soil is identified, the Grading Contractor (or other contractor conducting earthwork activities) will stop work in the area immediately so as not to disturb further the Potentially-Impacted Soil and will notify the Environmental Consultant and Project Owner Representative (contact information is found in Section 3.12) immediately. Following inspection and sampling of the soil, the Environmental Consultant will make a determination as to whether excavation and/or grading operations can commence in the area where the impacts have been identified. The Environmental Consultant will further classify the soil as follows:

- **Non-VOC-Impacted Soil –** i.e., soil that is visually and olfactorily impacted but does not produce sustained OVM/PID readings greater than 50 ppmv at three inches from the soil surface, and which may contain VOCs and/or other contaminants. Non-VOC-Impacted Soil with contaminants below Low-Threat Underground Storage Tank Case Closure Policy (LTCP)[4] criteria or other applicable criteria (see Section 3.10), will be allowed to be reused on-site. Non-VOC-Impacted Soil that exceeds specified criteria will be transported off-site for disposal.
- **VOC-Contaminated Soil (Rule 1166 Soil) –** i.e., soil that produces sustained PID readings greater than 50 ppmv at three inches from the soil surface during active excavation, will need to be segregated, stockpiled, and disposed off-site; general soil profiles can be set up for direct disposal as needed.

[4] *Low-Threat Underground Storage Tank Case Closure Policy*. California State Water Resources Control Board. August 17, 2012.

- **Non-Impacted Soil –** i.e., soil that displays characteristics of native soil, with no obvious odor or discoloration – such soil will be allowed to be reused on-site (see Section 3.10).

Subsequently, if the target excavation depth has not been reached, earthwork will continue to the base of the planned excavation. Impacted soil not disturbed by construction activities will be left in-place.

3.6 Groundwater Management

Groundwater beneath the Site could be encountered as shallow as approximately 20 feet below ground surface (bgs) based on depth to groundwater information from on-site wells. The planned mass grading and excavation depth is approximately 42 to 47 feet; however deeper excavation may be needed for compaction of soil, installation of vapor mitigation systems, and other deeper features. As such, construction dewatering may be required for certain areas of the Site, which may include installation of groundwater extraction wells or trench drains.

Dewatering, treatment, and disposal of groundwater encountered during construction activities would be conducted in accordance with the LARWQCB's Waste Discharge Requirements for Discharges of Groundwater from Construction and Project Dewatering to Surface Waters in Coastal Watersheds of Los Angeles and Ventura Counties, pursuant to adopted Order No. R4-2018-0125 or subsequent updates of the order. Discharge of water generated during large-scale construction activities to surface waters would be performed under a National Pollutant Discharge Elimination System (NPDES) permit. The General Contractor would be responsible for obtaining and complying with the NPDES permit.

3.7 Management of Subsurface Features

USTs will be managed pursuant to HSC, Division 20, Chapter 6.7, and CCR Title 23, Division 3, Chapter 16 and Chapter 18, regulated by the State of California. If a previously unknown UST or other subsurface feature[5] (e.g. railroad spur) is encountered during earthwork activities, the Grading Contractor will notify the Environmental Consultant and Project Owner Representative immediately. Oversight of the statewide UST program is assigned to the SWRCB which has delegated authority to the LARWQCB and, on the local level, to the LAFD. Any such USTs/features (and associated piping) encountered during earthwork activities will be removed as appropriate, including obtaining a permit from LAFD if applicable. Implementation of the UST removal could include collecting and analyzing an appropriate number of soil samples beneath the UST and/or piping under LAFD oversight and submittal of a UST closure report to LAFD. If a release affecting groundwater is documented, the project file would be transferred to the LARWQCB for oversight.

3.8 Soil Sampling and Evaluation

Soil sampling, if warranted upon the identification of Potentially-Impacted Soil, shall be performed by Environmental Consultant personnel only. If soil samples are collected, the analyses to be performed will be selected in a manner consistent with those USEPA methods utilized to detect the chemicals of potential concern (COPCs) that may be present in the area from which the samples were collected. This is best evaluated by physical observation (e.g., soil color, odor, OVM/PID monitoring) and by the results of previous soil analytical data. A

[5] Treatment of potential or known subsurface structures relevant to cultural or tribal cultural resources is separately addressed in Environmental Impact Report

generalized approach based on physical observation of suspected contamination is presented below.

- In general, soil that appears dark or oil-stained or has a gasoline, diesel or other oil odor (affected by petroleum hydrocarbons) will be sampled and analyzed for full range TPH by modified USEPA Method 8015M.
- If evidence of VOCs is detected with the OVM/PID, or if there is a sweet or sharp solvent odor, soil samples will be collected and analyzed for VOCs by USEPA Method 5035/8260B.
- Soil that appears discolored in a manner typical of suspected metal impacts (e.g., greenish, red, blue, yellow, gray, silvery) will be analyzed for the CCR Title 22 Metals using USEPA Method 6010/7000 series.

Other analyses for polychlorinated biphenyls (PCBs) and/or semi-volatile organic compounds (SVOCs) will be considered, as appropriate.

If characterization of the Potentially-Impacted Soil confirms that the soil concentrations are consistent with previously collected data, then the soil will be hauled off-site under an existing profile. If the characterization confirms that chemical concentrations in the Potentially-Impacted Soil are not consistent with previously collected data, then the soil will be profiled and hauled to an appropriate facility licensed to accept the waste.

3.9 Selection of and Transportation to Disposal Location

The disposal facilities that will receive soil hauled from the Site have not yet been determined. Existing and pre-excavation soil data will be provided to potential disposal facilities for review and approval prior to the start of on-site earthwork and redevelopment activities. Potential disposal locations include the following:

- Clean fill construction-site or other similar locations for clean soil from the Site (i.e. non-detect for all compounds).
- Inert disposal facilities for Non-Impacted Soil that meets the specific criteria for a particular facility.
- Class III landfills that accept Non-VOC-Impacted Soil.
- Other disposal facilities permitted to accept VOC-Contaminated Soil and Non-VOC-Impacted Soil.
- Soil that is not clean (i.e., soil that is not non-detect) will not be exported for beneficial re-use or disposal at a residential, school, playground, agricultural or similar high public risk use area.

Any project-related hazardous materials and hazardous wastes must be transported to and/or from the Site in compliance with any applicable State and federal requirements, including the U.S. Department of Transportation regulations listed in the Code of Federal Regulations (Title 49, Hazardous Materials Transportation Act); California Department of Transportation (Caltrans) standards; California Occupational Safety and Health Administration (CalOSHA) standards; and Resource Conservation and Recovery Act (RCRA; Code of Federal Regulations, Title 40, Part 263), including the management of non-hazardous solid wastes and underground tanks USTs storing petroleum and other hazardous substances.

Soil will be disposed of off-site subject to the following conditions:

- Soils will be profiled for transport and disposal as daily fill or for possible off-site treatment.
- Waste manifests will be generated to track each waste shipment.
- Quantities of soils shall be documented as part of SMP reporting.

3.10 Soil Reuse and Import Fill

Excavated soil originating from the Site generally will be disposed of off-site and is not expected to be reused. Prior to off-site disposal, soils may be chemically profiled to evaluate proper disposal locations. Additionally, import fill generally is not anticipated on-site as subterranean parking structures will be constructed to fill the former soil volume.

In the event soil may be imported following the initial excavation of the Site to be used as backfill, the Environmental Consultant will review all available information concerning the source of any soil to be imported to the Site and, if necessary, design and implement a sampling program which meets the criteria outlined in the California Department of Toxic Substances Control (DTSC) guidance for clean imported fill material (see Appendix F) prior to accepting any imported soil. Soil analyses will be compared to current regulatory screening criteria appropriate for residential land use in accord with DTSC Screening Levels (SLs) and/or USEPA Regional Screening Levels (RSLs).

3.11 Future SMP Modifications

As any future redevelopment progresses, this SMP may require updates or modifications to accommodate changes in Site conditions or redevelopment plans, or to address localized issues that may arise during construction activities. Such requests for modification will be included in an SMP amendment, and (as warranted) submitted to LARWQCB for review and approval.

3.12 Contact Information

The following people are to be contacted in the event that VOC-Contaminated Soil, Potentially-Impacted Soil, or previously unknown subsurface features are encountered, as described on Figure 5, *Flowchart for Handling of Soils During Earthwork*.

Table 1. Project Personnel Contact Information

Role	Name	Office Phone	Mobile Phone
LACFD Fire Marshall	TBA	TBA	TBA
Ramboll Project Principal	Eddie Arslanian	(213) 943-6326	(818) 281-9263
Ramboll Project Manager	Alex Marr	(213) 943-6305	(949) 293-6603
Project Owner Representative	Mark Workman	(213) 538-0900	(614) 205-6941

4. COMPLETION REPORT

At the conclusion of earthwork activities, a Completion Report will be prepared by the Environmental Consultant. The report will document field monitoring activities and visual observations made during earthwork activities, as well as soil sampling locations/results, if any. In addition, if Potentially-Impacted Soil is encountered, the report will include a description of the location(s) of such soil, actions taken to further characterize and mitigate impacts, disposition of any excavated and impacted soil remaining in-place, and waste manifests for impacted soil disposed off-site.

Furthermore, the Completion Report will include a description of encountered subsurface structures, if applicable, and steps taken to remove and close such encountered structures. The report will include maps depicting soil sampling locations, as well as locations of residual impacted soil and/or subsurface structures left in-place during construction. The Completion Report will be submitted to the LARWQCB within 60 days from the completion of earthwork activities at the Site.

5. LIMITATIONS

This report has been prepared for the exclusive use of S&R Partners, LLC and aside from environmental regulatory agencies, may not be relied upon by any other person or entity without Ramboll's prior express written permission. This report has been prepared in conformance with generally accepted standards of practice in the fields of environmental sciences and engineering at the time the services were rendered. Ramboll makes no other warranty or representation, either express or implied, with respect to its services.

The report findings are based in part on information/data provided by our client and/or other third parties and conditions identified as a result of Ramboll's investigations as of the date of the report. Ramboll has not attempted to verify information/data provided to it by our client or other third parties, except as explicitly noted in our report, and makes no express representations to the accuracy of such information/data by the inclusion of it in our report.

RAMBOLL

PROJECT: 1690005894 | DATED: 9/23/2024 | DESIGNER: CWILLIAMSFREIER

Notes:

VOC: volatile organic compound

OVA: organic vapor analyzer

ppmv: parts per million by volume

1 Earthwork includes all soil movement activities (e.g. trenching, excavation, rough grading, backfilling) under grading plan.

2 Non-VOC-Impacted Soil is any soil that is not categorized as Inert Soil and is also not categorized as VOC-Impacted Soil.

3 Non-Impacted Soil is soil that contains non-detect to very low levels of contaminants, and with all Site chemicals of concern below the allowable disposal criteria for local soil recycling facilities. All disposal criteria will be confirmed prior to disposal.

4 Potentially-Impacted Soil identified based on visual, olfactory, OVA evidence according to the practices described in South Coast Air Quality Monitoring District (SCAQMD) Rule 1166.

5 VOC-Contaminated Soil as defined by the SCAQMD Rule 1166 is a soil which registers a concentration of 50 ppmv or greater of VOCs as measured before suppression materials have been applied and at a distance of no more than three inches from the surface of the excavated soil with an OVA calibrated with hexane.

1. Remember to speak SLOWLY and CLEARLY. Do NOT hang up first: let the dispatcher conclude the call.
2. Provide the following information:
    a. Location: 1380 North Broadway, Los Angeles, California
    b. Your name and phone number
3. Describe nature of Incident:
    a. Emergency Medical Incident
        - How many victims
        - Type of incident - physical injury, etc.
        - Assessment of victims' condition if known (whether victim is conscious/unconscious, breathing/not breathing, pulse/no pulse, nature of injuries, first aid measures used, etc.)
        - Where incident occurred
    b. Fire:
        - Location of Fire
    c. Hazardous Materials Incident:
        - This is a hazardous materials incident requiring dispatch of HAZMAT unit
        - Type of incident (fire, explosion, spill, etc.)
        - Type of material (specific chemicals or general description)
        - Whether there is also a Medical Emergency
4. Give your location at the Site

    Note: Security, Site Supervisor or designee must meet the emergency personnel at the staging area to brief them on the situation.

ROUTE DESCRIPTION AND MAP TO HOSPITAL

Hospital Information:

Hospital Name: *Good Samaritan Hospital*

Hospital Address: *1225 Wilshire Blvd. Los Angeles CA*

Hospital Phone Number: *213-977-2420*

Directions to Area Hospital:

- Head southwest on N Broadway toward Savoy St
- Turn right onto Bishops Rd
- Turn Right onto Stadium Way
- Turn left onto the CA-110 S ramp
- Merge onto CA-110
- Use the right lane to take the Interstate 110 S exit toward 6th St/Wilshire Blvd/4th St/3rd St
- Keep right to continue on Exit 23C, follow signs for 3rd St/2nd St
- Use the left 2 lanes to turn left onto S Beaudry Ave
- Turn right onto W 6th St- Emergency Entrance is off W. 6th Street past Lucas Ave.
- End: Good Samaritan Hospital 1225 Wilshire Blvd, Los Angeles, CA 90017

HEALTH & SAFETY PLAN REVIEW AND APPROVAL:

By signing below, it is acknowledged that this HASP identifies the activities that are anticipated to be performed in the field. In addition, this HASP identifies the personal protective and monitoring equipment that may be necessary to be on site and be available for use. It is also understood that the provisions of this HASP will be updated if there is a change of a task and/or the addition of tasks and will be approved by the individuals listed below or their designee.

This form MUST be signed prior to starting the on-site work. In addition, a copy of this form should be returned to the office Health and Safety Coordinator prior to leaving for the field. After completion of the project, the original signed HASP must be retained in the project file

Author's Initials: AM Typist's Initials: AM

1. INTRODUCTION

This HASP was prepared to inform all Ramboll personnel of known or reasonably anticipated potential hazards and safety concerns at this Site. All personnel participating in field activities must be trained in the general and specific hazards unique to the job they are performing and, if applicable, meet recommended medical examination and/or training requirements. All Ramboll employees shall follow the guidelines, rules, and procedures contained in this site-specific HASP. Ramboll personnel shall contact the Project Manager (PM) if unexpected conditions are encountered at the site, including but not limited to new processes; changes in operation, products, services; additional or changes in the chemicals of concern; and/or unsafe conditions are encountered which were not previously addressed in this HASP.

For purposes of this HASP, subcontractors refer to those retained directly or indirectly by Ramboll, and contractors refer to all other entities working on site. Each contractor, subcontractor, and visitor shall be expected to review and understand the hazards, risks, and control methods (including emergency procedures) as outlined in this HASP and sign off on the HASP. This can be accomplished either during the project planning stage or during the first safety briefing on site. However, contractors and subcontractors will be required to prepare their own HASP to address site safety and work hazards associated with their proposed site activities prior to mobilization to the site. In addition, each subcontractor will be required to provide Ramboll with their site-specific HASP and communicate the types of hazards and control methods associated with their activities to Ramboll during the first safety briefing on site and as conditions change. Relevant Contractor information regarding the identification of hazards and appropriate control strategies for the hazards for their particular job tasks should also be presented and a site-specific HASP should be available for review by all parties. Each contractor or subcontractor must assume direct responsibility for its own employees' health and safety.

Copies of the HASPs will be kept on site for review and reference during all site activities. Upon completion of the project, the finalized and signed copy of the HASP will be placed in the project file.

When retaining and working with subcontractors, the following minimum requirements shall be met:

- A properly executed Contractor/Subcontractor Terms and Conditions (T&C) agreement with Ramboll in place prior to commencing work on-site;
- Insurance policies and limits are acceptable to Ramboll and all applicable Insurance Certificates are properly executed (i.e., Ramboll being named as additionally insured under such policies, including Professional and Pollution Liability, if applicable. This will also include adding Ramboll's CLIENT as being named as an insured party under the same policies);
- The roles and responsibilities of the subcontractor have been established, including the naming of the Health and Safety point of contact (these should be clearly indicated in the applicable subcontractor HASP);
- Submission of illness and injury logs indicating a favorable total incident rate (i.e., for the previous calendar year: the total incident rate is calculated by the total number of

cases X 200,000 divided by the total hours worked by all employees of the subcontractor). This should be equal to or less than the industry average (i.e., for remediation services listed under the North American Industry Classification System (NAICS) 5629 the total incident rate must be equal or below 3.8); and

- A favorable Experience Modification Rate (EMR) (i.e., a rate equal to or less than 1.0) or an explanation of why your company does not qualify for an EMR from the Contractors insurance company.

1.1 Site Description

The current property comprises addresses 1030 through 1380 (even numbers) North Broadway Street, and 1251 North Spring Street, Los Angeles, California 90012 (Figures 2a and 2b). The approximately 8-acre Site is bounded by North Broadway Street and various commercial buildings to the north and west and by Metro railway tracks and the Los Angeles State Historic Park to the south and east. The property is located within an area characterized by mixed residential, commercial, and industrial uses. Surface topography across the property and in the surrounding area is variable with a slope towards the southeast. The Project involves the subdivision of the Project Site into the "South Parcel" and "North Parcel." In general, the South Parcel refers to the Site located south of the intersection of Bishops Road and North Broadway, and the North Parcel refers to the portion of the Site north of that same intersection. The "South Parcel" includes various structures associated with previous Metro operations and maintenance-related facilities; however, they are currently vacant and no longer under operations, as Metro no longer leases the South Parcel. The "North Parcel" includes trees, billboards, and a large graded unpaved area used as a storage yard for construction equipment and vehicle storage.

1.2 Site History

According to historic documentation reviewed by Ramboll, the North and South Parcels are part of a larger property identified as the Former Cornfield Property, associated with the address 1245 North Spring Street. The Former Cornfield Property is a 50-acre property located between North Broadway and North Spring Street, which was historically used as a cornfield prior to the Civil War and then as a railyard operated by Southern Pacific (later Union Pacific) Railroad from at least 1875 until approximately 1999.

The North Parcel was developed with dwellings and residential buildings by at least 1894. Historically, two aboveground oil storage tanks and one gas station with associated underground storage tanks (USTs) were present on the North Parcel throughout the 1900s. The gas station, latterly operated by Texaco, was ultimately demolished in 1989 and the USTs were removed in 1990. The northern portion of the North Parcel has been leased by a construction company as a construction staging yard since at least 2014.

The South Parcel was developed by at least 1888 with rail spurs and buildings associated with the Southern Pacific Railroad roadhouse and shops located to the southeast of the parcel. In 1906, the northern portion of the South Parcel was developed with a well pumping station, an unused water purification plant with two 50,000-gallon aboveground water tanks, a dwelling, an additional water tank in the central portion of the South Parcel, and three to four office buildings. By 1950, the water purification plant, aboveground tanks, and well pumping station were removed. From 1950 through 1970, a wholesale seafood distribution building, a restaurant, railroad cars used as storage buildings, an auto repair garage, steel storage, an office, lumber storage, a railroad carpenter shop, a sign painting shop, a neon

sign manufacturer, a truck maintenance building, and a truck washing building associated with MTA railroad car maintenance were located on the South Parcel. Four USTs were installed in March 1957 in association with a motor car repair shop. The specific locations of the former USTs are not known and may not have been located within Site boundaries, as the repair shop buildings appear to have been located on the southeast parcel boundary. Since the mid-1950's, railroad car maintenance and bus maintenance activities were conducted on the South Parcel, most recently by Metro. Metro has since vacated the site. Railroad spurs were present on the South Parcel between at least 1888 and 1970, but do not appear to be currently present.

The property is located in an area designated as the "methane zone" and is subject to Division 71 of Article 1, Chapter IX of the Los Angeles Municipal Code. This division sets forth the minimum requirements of the City of Los Angeles for control of methane intrusion emanating from geologic formations. Division 71 requires that testing be performed in accordance with the "bulletin" to determine the minimum methane mitigation requirements

1.3 Historical Documents

A methane survey was conducted by Ramboll in May 2018 on the southern and northern parcels of the site and findings are summarized below. Sample locations are presented in Figures 2a and 2b.

Southern Parcel

Based on analytical results of shallow, intermediate and deep samples collected from SV-1 through SV-10, no methane concentrations above the analytical reporting limit (RL) were detected. Accordingly, no further methane assessment is recommended for the South Parcel. However, since the property is located in the methane zone, Article 71 requires methane mitigation depending on the concentration of methane detected during the testing performed per the bulletin.

North Parcel

Two sample locations in the central and northern portions of the North Parcel, SV-14 and SV-19, yielded detections of methane above the laboratory RL. The SV-19 location produced a methane detection of 74 parts per million per volume (ppmv) during the December 14, 2017 sample event, which could not be repeated during subsequent sampling. Methane detections at SV-14, however, were replicated during the May 14, and May 17, 2018 sampling events with concentrations ranging from 190 to 4,000 ppmv in the 20- to 30-foot depth range.

Methane can be attributed to various sources, including leaking gas lines, decomposing organics, and nearby activities related to oil drilling. The proximity of a catalogued abandoned oil well (API:03716588) close to SV-14 (see Figure 2b), may be a source of the methane detections observed at SV-14.

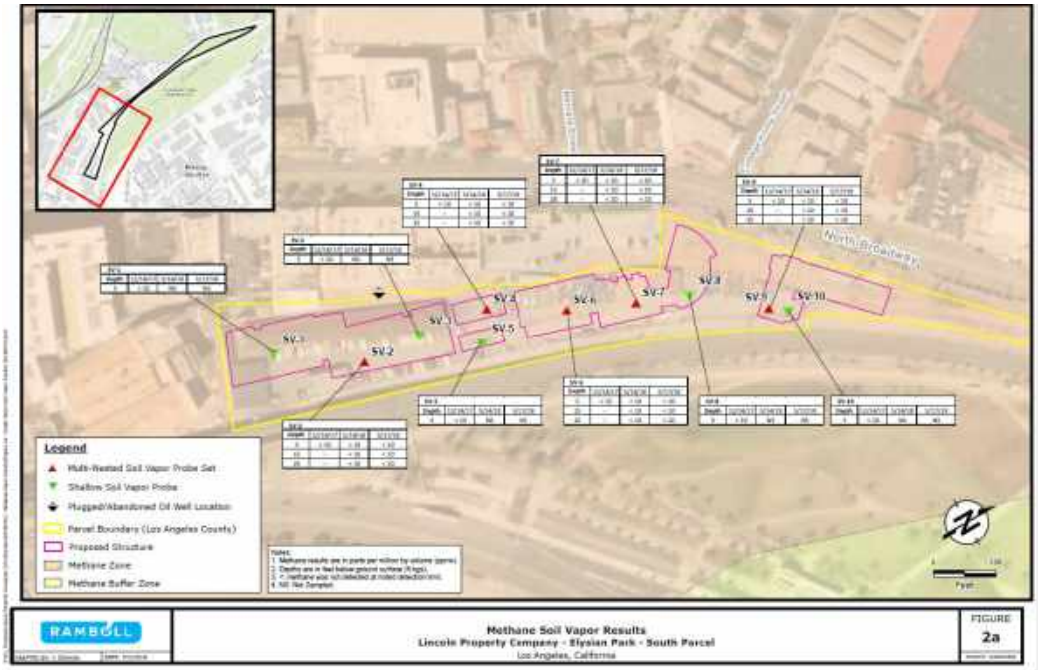
In the vicinity of SV-14, the presence of methane in excess of 500 ppmv may trigger concern for potentially explosive methane accumulations, especially in the vicinity of planned residential development, and likely will trigger, at a minimum, a California Department of Geologic Energy Management (CalGEM)[1] requirement to expose the nearby abandoned oil well, and to perform leak testing. If the abandoned oil well is determined to be the source of

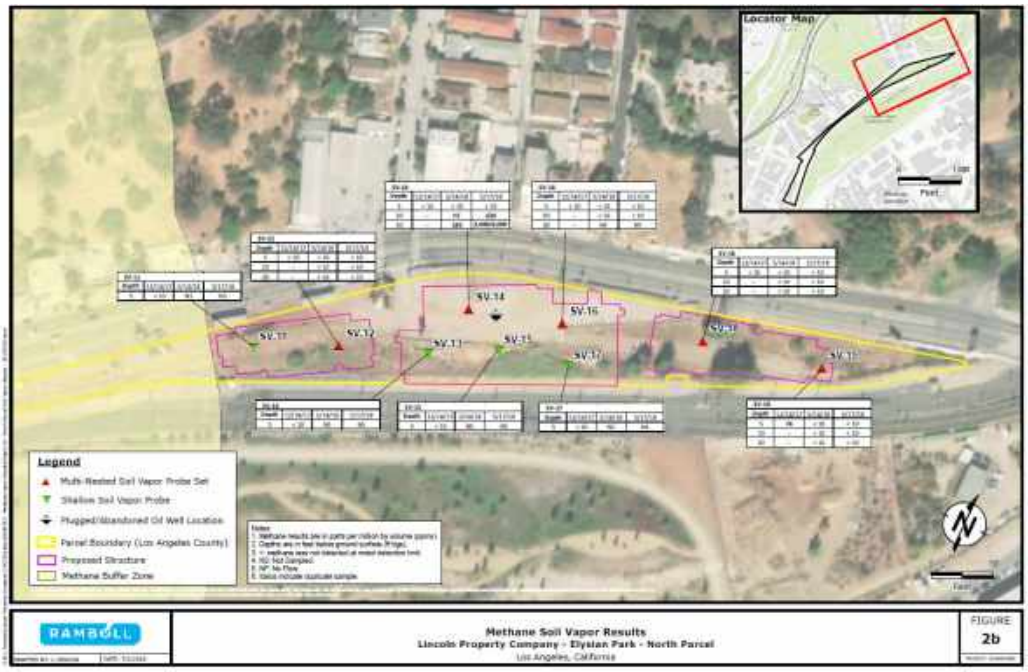
[1] Formerly- Department of Oil and Gas and Geothermal Resources (DOGGR)

methane, this likely will involve re-abandonment of the well, especially if the well must be recompleted to fit beneath the planned subterranean parking structure. As discussed above, since the property is located in the methane zone, Article 71 requires methane mitigation depending on the concentration of methane detected during the testing performed per the bulletin. Since methane concentrations in the vicinity of SV-14 were as high as 4,000 ppmv, under Article 71, buildings in the vicinity of SV-14 would be required to achieve a Level III design.

Ramboll will be contacting CalGEM to address the abandoned oil wells that potentially are present at the site according to CalGEM records. If the abandoned well on the North Parcel of the site is determined to be the source of the methane, and is ultimately re-abandoned and sealed, then it is recommended that re-testing in accordance with the bulletin be performed.

Figure 2: Phase II Sample Location Maps





1.4 Scope and Applicability

Ramboll has been retained to conduct and/or manage soil management activities at the Site per the Soil Management Plan (SMP). This HASP addresses activities currently being conducted at the Site. Addendums will be added to this HASP to address activities at the Site as they develop in the future.

Ramboll views the implementation of a site-specific HASP as a critical management tool necessary to the safety, health, and well-being of Site personnel and the community. Site operations will be performed in such a manner as to minimize the possibility of serious injury or accidents to site personnel, fire, explosion, or any unplanned or sudden release of contaminants into the environment that could adversely affect local receptors. This HASP is intended to be in compliance with all applicable state, federal and local regulations and is consistent with Ramboll's commitment to the health and safety of its personnel, contractors on the site, and the surrounding community.

The HASP identifies potential hazards associated with the activities being conducted during field activities at the Site, establishes the minimum procedural and equipment requirements to protect on-site personnel from potential hazards, and requires that on-site activities are conducted in a manner consistent with both accepted professional practice and applicable regulations. It also describes measures to minimize accidents and injuries that may occur during normal daily activities or during adverse conditions.

The HASP is based upon the currently available information regarding the Site. Operating conditions could potentially change as the work progresses, requiring some modification of the HASP. Any permanent modifications to the HASP, including changes necessary to correct any potential health and safety issues at the Site will be made only with permission by those individuals listed in Section 1 of this HASP. Approved changes will be added to the HASP as Addendums.

Applicability of this HASP extends to all personnel and visitors to the Site. However, Ramboll's subcontractors are ultimately responsible for the health and safety of their personnel and representatives, and are required to furnish their own HASP. All personnel and visitors entering on-site active fieldwork areas are responsible for reading and complying with the HASP, and must sign an agreement to comply with the requirements of the HASP.

1.5 Specific Work Activities

The following work activities or tasks are anticipated during the implementation of the SMP:

- Task 1 – Geophysical Survey to Locate Abandoned Oil Wells
- Task 2 – Pot Holing/Excavation to Uncover Abandoned Oil Wells
- Task 3 – Perform Leak Tests of Abandoned Oil Wells
- Task 4 – Survey Location of Abandoned Oil Wells
- Task 5 – Excavation and Grading Oversight
- Task 6 – Well Re-Abandonment (by other consultant)

Each of these tasks is further described as follows:

Task 1 – Geophysical Survey to Locate Abandoned Oil Wells

Ramboll will oversee a geophysical survey that will conduct magnetic surveys around two abandoned oil well locations as depicted on the CalGEM well location map. The survey will be centered on each wellhead as determined by GPS equipment. The geophysical survey, if successful, will produce an anomaly that correlates with the location of the well. Dig Alert will be contacted to mark out public utilities at least two days before start of work. The geophysical surveying shall include utility clearance methods in the vicinity of the suspected well-head.

Task 2 – Pot Holing/Excavation to Uncover Abandoned Oil Wells

If the geophysical survey is inconclusive, it may be necessary to pot-hole using a backhoe. Permission for excavation to expose the wellheads will be first obtained from CalGEM, the well owner(s) (if available), and a CalGEM representative may be onsite to observe the excavations. A construction subcontractor will be engaged to carefully pot-hole soil in the vicinity of the geophysical target(s) using a backhoe or equivalent machinery. In order to minimize disturbance to the wellheads, hand clearing may be advised. Assuming the wellheads can be found and exposed, the excavations will be secured with security fencing pending leak testing. Ramboll will observe the intrusive activities and will not enter the excavation area. We anticipate encountering the top of the well heads at approximately 5 feet below ground surface (bgs).

Task 3 - Perform Leak Test of Abandoned Oil Wells

If exposed, the well head will be made accessible, and precautions will be taken to enter the excavation area if needed (but not expected) by shoring and/or creating a ramp area to allow for safe entry and exit to the well head location. Leak-testing will be accomplished by having a licensed welder cut the metal well plate off the top of the excavated well casing, and a registered geologist or engineer systematically will use a methane detector over the cement plug, recording any detections in a log. A CalGEM representative, who should be on site observing this process, will evaluate the methane readings, if any are detected, and determine whether the well is leaking. As a point of comparison, 500 parts per million by

volume (ppmv) is the current leak threshold. If the well is found to be leaking, well re-abandonment may be required by CalGEM.

Task 4 – Survey Location of Abandoned Oil Wells

The exposed wellheads shall be formally surveyed according to the California State Plane system, and the results of the surveys shall be forwarded to the client and CalGEM as part of the well review process. The surveyor is not expected to enter the excavation area, however, if needed precautions will be taken to enter the excavation area by shoring and/or creating a ramp area to allow for easy entry and exit to the well head location.

Task 5 – Excavation and Grading Oversight

Once approvals have been obtained from the City of Los Angeles Building and Safety Department (LADBS) to proceed, and all permits have been obtained from relevant agencies for development, Ramboll will interphase with the Client, General Contractor and the Excavation and Grading Contractor to implement the SMP. This will include complying with South Coast Air Quality Management District (SCAQMD) Rules 403, 1166, and 1466 to monitor and mitigate volatile/vapor and particulate/dust emissions. Also, measures will be taken to prepare for potential stormwater management requirements per the Site Stormwater Pollution Prevention Plan (SWPPP) as approved by the Los Angeles Regional Water Quality Control Board (LARWQCB).

Once administrative measures and protocols have been established, which may include running a dust monitoring network, Ramboll staff will be present at the Site to observe and generally document the movement of soil noting soil characteristics indicative of potential contamination. Ramboll staff will carry a photo-ionization detector (PID) calibrated to hexane per the Rule 1166 permit, and a four-gas meter suitable for the detection of oil-field gases such as methane, hydrogen sulphide and sulfur dioxide.

Ramboll staff will be responsible for directing the excavation contractor to segregate and stockpile potentially contaminated soil, and to conduct profile sampling of the stockpiles to determine whether they are suitable for unconditional re-use or whether they require disposal at a landfill. If any soil triggers Rule 1166 by producing sustained PID readings over 50 parts per million by volume (ppmv) as measured from 3 inches from an active excavation surface, such soils shall be stockpiled on and under plastic and labeled as Rule 1166 soil. SCAQM shall be notified per the permit and the soil shall be removed from the Site within 30 days. Ramboll also will be vigilant for the discovery of buried features such as pipelines and underground storage tanks. These shall be managed appropriately, including making agency notifications, after assessment.

As the soil is excavated from the site and the abandoned oil wells are increasingly exposed, arrangements will be made with CalGEM to conduct well re-abandonment. This will be conducted by another consultant, a petroleum engineering firm, still to-be-determined.

After, and perhaps during, well re-abandonment, Ramboll will return to its role as excavation oversight until such time as it is generally agreed that no additional potential environmental hazard conditions are anticipated. Ramboll will prepare a summary of stockpile sampling and any other sampling conducted during SMP implementation.

1.6 Applicable Standards

The methods and procedures prescribed in this HASP are intended to conform to established professional practices and applicable federal, state, and local occupational safety and health

protection standards based on information that is currently available. Regulations serving as the technical compliance basis for this document may include but are not limited to the following:

- U.S. Department of Labor, *Occupational Safety and Health Standards for Construction* (29 CFR 1926).
  - *Hazardous Waste Operations and Emergency Response* (29 CFR 1926.65)
  - *Hearing Protection* (29 CFR 1926.101 and 29 CFR 1926.52)
  - *Eye and Face Protection* (29 CFR 1926.102)
  - *Respiratory Protection* (29 CFR 1926.103)
  - *Working Over or Near Water* (29 CFR 1926.106)
  - *Material Handling Equipment* (29 CFR 1926.602)
- U.S. Department of Labor, *OSHA Standards for General Industry* (29 CFR 1910).
  - *Hazardous Waste Operations and Emergency Response* (29 CFR 1910.120)
  - *PPE General Requirements* (29 CFR 1910.132)
  - *Eye and Face Protection* (29 CFR 1910.133)
  - *Respiratory Protection* (29 CFR 1910.134)
  - *Head Protection* (29 CFR 1910.135)
  - *Foot Protection* (29 CFR 1910.136)
  - *Hand Protection* (29 CFR 1910.138)
  - *Medical Services and First Aid* (29 CFR 1910.151)
  - *Portable Fire Extinguishers* (29 CFR 1910.157)
  - *Hazard Communication Standard* (29 CFR 1910.1200)
  - *Control of Hazardous Energy (LOTO)* (29 CFR 1910.147)
- U.S. Department of Labor, *Recording and Reporting Occupational Injuries and Illnesses*, (29 CFR 1904).

The following technical documents may have been utilized as references in the preparation of this HASP. However, the citation of these technical documents does not imply compliance with all aspects of these documents. The purpose of these citations is to aid in the interpretation of conflicting issues that may arise during the performance of Site activities. The following technical documents may include but are not limited to:

- National Institute for Occupational Safety & Health (NIOSH)/OSHA/United States Coast Guard (USCG)/ United States Environmental Protection Agency (USEPA), Occupational Safety and Health Guidance Manual for Hazardous Waste Site Activities, (October, 1985).
- U.S. Department of Health and Human Services (DHHS), NIOSH Sampling and Analytical Methods, DHHS (NIOSH) Publication 84-100.
- American National Standards Institute (ANSI), Emergency Eyewash and Shower Equipment, Z358.1 (1981).

- ANSI, Protective Footwear, Z41.1 (1983).
- ANSI, Practice for Occupational and Educational Eye and Face Protection, Z87.1 (1979).
- ANSI, Protective Headgear for Industrial Workers - Requirements, Z89.1 (1986).

2. IDENTIFICATION OF KEY PERSONNEL

An efficient on-site operation requires that all key personnel be identified and that their roles and responsibilities be clearly defined. Below is a discussion of the management structure for this project.

2.1 Project Organization

Ramboll serves as the Project Coordinator for the Site. Ramboll is responsible for overseeing activities conducted by Ramboll personnel and Ramboll's subcontractors at the Site. Ramboll also is responsible for oversight of compliance with this HASP in the field by Ramboll personnel. Ramboll subcontractors may plan, manage, and carry out activities at the Site, including environmental investigation and remediation tasks, and will provide their own health and safety officers and HASP. As part of Ramboll's role as Site Coordinator, Ramboll will ensure that all subcontractors and Site workers are aware of the Ramboll HASP and its requirements.

2.2 Ramboll Personnel

Assigned functions of key Ramboll project team members and subcontractors are described in Tables 2 and 3, respectively, located at the end of this section. The applicable responsibilities for these individuals are as follows:

2.2.1 Principal in Charge/Project Manager

Responsibilities include overall coordination of site activities. The Principal in Charge (PIC) and the Project Manager (PM) have overall accountability and responsibility for the safety of operations and the health and safety of all personnel and for monitoring the work effort, schedule, costs, communication, and will ensure that the activities of all Site personnel comply with the approved work plans and will recommend or provide disciplinary action, as appropriate, if non-compliances occur.

These individuals will also provide the focal point for communications between the regulatory authorities; state and local community, on-site contractors, and project staff. This liaison activity will provide a clear line of communication between all parties to minimize the chance for misconceptions concerning any aspect of the project.

Any and all recommended revisions or changes in the HASP will be reviewed by the PIC, PM and Project Health and Safety Coordinator prior to final approval by the Corporate Health and Safety Director.

2.2.2 Corporate Health and Safety Director

The Ramboll Corporate Health and Safety Director (CHSD) will oversee all issues related to health and safety and will have final approval authority for any revisions or changes.

2.2.3 Project Health and Safety Coordinator

The Project Health and Safety Coordinator (HSC), along with the Corporate Health and Safety Director are resources for the development of the site-specific hazard assessments and control mechanisms. Any changes/modifications/additions that may need to occur to the HASP, the Project Health and Safety Coordinator and/or the Corporate Health and Safety Director will be consulted. The Corporate Health and Safety Director will make all final decisions regarding questions on the hazard assessment and/or the control mechanisms.

Any and all recommended revisions or changes in the HASP will be reviewed by the PIC, PM and Project Health and Safety Coordinator prior to final approval by the Corporate Health and Safety Director.

2.2.4 Designated Site Supervisor

The Ramboll Designated Site Supervisor is responsible for overseeing day-to-day Site activities performed by Ramboll and its subcontractors. The principal responsibility of the designated Ramboll Site Supervisor will be to coordinate and document all on-site work necessary to fulfill approved work plans. The Ramboll Site Supervisor and Project Health and Safety Coordinator and/or Officer may be the same individual.

The Ramboll Site Supervisor reports to the PIC and Corporate Health and Safety Director. The Site Supervisor is responsible for ensuring compliance with all aspects of the HASP which include, but are not limited to, safe work practices, site access controls, work safety zones, proper personal protective equipment (PPE), review planned Site activities, implement safety procedures necessary to complete work safely, perform daily safety briefings, assist in on-site emergencies, and act as technical liaison to regulatory agency personnel. The Site Supervisor will report all Site-related injuries to the PIC/PM and the Project Health and Safety Coordinator and/or Corporate Health and Safety Director and to any other necessary authorities. The Site Supervisor will ensure that all Site personnel understand their respective emergency response duties. In the instance of any emergency or non-emergency incidents concerning Site personnel, the Site Supervisor will be contacted and will be responsible for communicating any information regarding Site safety conditions to rescue or emergency personnel. The Site Supervisor will ensure that all activities at the Site comply with the approved HASP.

Any person working on-site has the authority to **stop work** if any operation threatens the health and safety of on-site workers or the surrounding community. In the event that such a situation occurs, the Site Supervisor shall be notified immediately. Ramboll's Site Supervisor will update the Ramboll PIC/PM/MP and on all project-related health and safety issues as they arise.

The Site Supervisor will be certified in first aid and cardiopulmonary resuscitation (CPR) by the American Red Cross, or equivalent. The Site Supervisor will also be HAZWOPER trained for site work in accordance with applicable regulations and participate in a medical surveillance program.

In the event of an emergency, the Ramboll Site Supervisor will also function as the Site Emergency Response Coordinator and will implement, and coordinate emergency response procedures described in this HASP.

2.2.5 Other Personnel

All other Ramboll personnel will be certified in first aid and cardiopulmonary resuscitation (CPR) by the American Red Cross, or equivalent and will also be HAZWOPER trained for site work in accordance with applicable regulations and participate in a medical surveillance program.

Ramboll's subcontractors, if needed, shall prepare their own company HASP which shall specifically govern the work performed by its employees. The contractor's HASP shall be in conformance with Ramboll's HASP.

All Subcontractors will also provide a Health and Safety Site Coordinator (HSSC) who will assist Ramboll's Site Supervisor. The subcontractor HSSC will ensure that their personnel have received appropriate health and safety training and are participating in a medical surveillance program.

3. HAZARD EVALUATION

The Project Hazard Analysis below identifies the hazards anticipated to be encountered by the project team based on the tasks presented in Section 2.5.

Table 4: Project Hazard Analysis

Chemical Hazards Present: ☐ None	☐ Flammable/combustible ☐ Compressed gas ☒ Explosive ☐ Organic peroxide ☐ Oxidizer ☐ Water reactive ☐ Unstable reactive ☒ Dust/Fumes/Particulates	☐ Corrosive ☒ Toxic ☐ Highly Toxic ☐ Irritant ☐ Sensitizer ☐ Carcinogen ☐ Mutagen ☐ Other:
Physical Hazards Present: ☐ None	☐ Heat ☐ Cold ☒ Walking/working surfaces ☒ Visible Dust ☒ Traffic/Vehicles ☒ Noise ☐ Other:	☐ Ionizing radiation ☐ Non-ionizing radiation ☐ Electricity ☐ Severe Weather ☐ Poor lighting ☒ Overhead Hazards
Environmental/Mechanical Hazards Present: ☐ None	☒ Heavy machinery/ Drill Rigs ☒ Trenching/excavation ☐ Docks-marine operations ☐ Docks-loading ☒ Drilling ☐ Forklifts ☐ Operations on Water ☒ Elevated heights (includes fall protection) ☒ Overhead/Underground utilities ☐ Confined spaces ☒ Power tools	☒ Cranes/Hoists/Rigging ☐ Ladders ☐ Scaffolding ☐ Manlifts ☐ Gas cylinders ☒ Roadway work ☒ Railroad work ☐ Energized equipment (LO/TO) ☐ Pressurized equipment (LO/TO) ☒ Drums and containers ☐ Others:
Biological Hazards Present: ☐ None	☐ Animal/human fluids or blood ☐ Animal/human tissue(s) ☒ Poisonous/irritating plants ☐ Other:	☒ Contaminated needles ☐ Live bacterial cultures ☒ Insects/rodents/snakes ☐ Other:
Ergonomics Hazards Present: ☐ None	☒ Repetitive motion ☒ Awkward position ☐ Heavy Lifting ☐ Frequent Lifting	☐ Limited movement ☐ Forceful exertions ☒ Vibration ☐ Other:
Personal Safety/Security: ☒ None	☐ Personal safety ☐ Security issue ☐ Project site in isolated area ☐ Employees working alone ☒ Wild/Feral Animals	☐ Employees working early/late ☒ Potentially dangerous wildlife ☐ Guard or stray dogs in area ☐ No/limited cell phone service ☐ Other:

3.1 Specific Chemicals of Concern

The chemicals listed in the table below includes the identification of chemical contaminants known and/or suspected of being present on-site, the affected media, known concentrations (if applicable), the Permissible Exposure Limit (PEL) or Threshold Limit Value (TLV), and the Action Level (i.e., 50% of the PEL/TLV). This information will be inserted into Table 5 below. In addition, Appendix A contains specific hazardous property information for commonly encountered chemicals although a Material Safety Data Sheet (MSDS) (or equivalent) will also be included in Appendix A.

Table 5: Chemicals of Concern

Chemical	Environmental Media [1]	Highest Measured Concentration	PEL/TLV [2]
Methane	Soil Gas	4,000 ppmv	Not published
Hydrogen Sulfide	Soil Gas	NA	10 ppm

Notes:

[1] Codes for environmental media: **SL**=Sludge; **GW**=Ground Water; **SW**=Surface Water; **LW**=Liquid Waste; **SO**=Soil; **A**=Air; **SV**=Soil Vapor; **OTH**= Other (Specify)

[2] PEL: Permissible Exposure Limit / TLV: Threshold Limit Value, use appropriate PEL which would be country or state specific or if one is not available may be from a recognized source.

mg/m^3: milligrams per cubic meter
mg/L: milligrams per liter
mg/kg: milligrams per kilograms
ppmv: Parts per million (by volume)
µg/m^3: micrograms per cubic meter
µg/L: micrograms per liter
%: Minimum percent allowed for personal entry into a space

[3] PEL /TLV of most conservative chemical within chemical group noted

4. HAZARD CONTROLS

In order to conduct a Task in the safest possible manner, the hazard(s) associated with a Task need to be identified so that appropriate hazard control(s) can be implemented and used by personnel conducting these Task(s). This process is called a "Job Hazard Analysis (JHA) or "Job Safety Analysis" (JSA). To aid in the JHA/JSA process, the associated Task(s) (as outlined in Section 1.3) are correlated against the anticipated hazards. A "Relative Hazard/Risk Rating" is also provided in order to identify which hazards pose the greatest risk to personnel but more importantly, what hazard controls should be implemented.

Table 6: Summary of Hazards

Task Number(s)	Hazards	Relative Hazard /Risk Rating*	Hazard Controls Appendix and/or HASP Section
Tasks 2-5	Chemical	NA☐ Low☐ Medium☒ High☐	B1
Tasks 1-5	Physical	NA☐ Low☐ Medium☒ High☐	B2
Tasks 1-5	Mechanical	NA☐ Low☐ Medium☒ High☐	B3
Tasks 1-5	Traffic/Equipment	NA☐ Low☐ Medium☒ High☐	B4
Task 2, 5	Electrical Hazards	NA☒ Low☐ Medium☐ High☐	B5/B18
Tasks 2-3, 5	Fire/Explosion	NA☐ Low☐ Medium☐ High☒	B6
Tasks 1-5	Noise (acoustical)	NA☐ Low☐ Medium☒ High☐	B7
	Ventilation / Oxygen Deficiency	NA☒ Low☐ Medium☐ High☐	B8

	Spills	NA☒Low☐ Medium☐ High☐	Section 8

Note:

A single hazard may be listed under several Tasks. In this case, use the highest Severity ranking of the tasks evaluated as the overall ranking.

***Relative Hazard/Risk Rating**

When evaluating a Task against a specific hazard, the evaluator should:

1. **Determine how frequently you will be conducting the Task and generally be exposed to the Hazard while on-site;**
2. **Determine the duration (i.e., the amount of time) you will spent conducting the Task; and**
3. **Determine the Severity that the Task/Hazard may cause using Table 5. When assessing the severity, assume the hypothetical injury was a result of the task being conducted improperly and that PPE was not being worn:**
   - **Minimal Severity** would require first aid and/or the property/equipment damage is limited to minor wear and tear, scratches, dents (still functional);
   - **Moderate Severity** requires professional medical attention and/or the property/equipment damage necessitates repair but not replacement; and
   - **High Severity** requires immediate medical attention/life threatening and/or the property/equipment damage is significant and requires replacement.

Table 7: * Hazard/Risk Matrix Decision Table

The Hazard…	Has No Severity	Has Minimal Severity	Has Moderate Severity	Has High Severity
Is Not Present (i.e., 0% of your on-site time does not expose you to this Hazard)	NA	NA	NA	NA
Is Rarely Present (i.e., <25% of your on-site time exposes you to this Hazard)	NA	LOW	LOW	MED
Is Sometimes Present (i.e., 25% - <50% of your time exposes you to this Hazard)	NA	LOW	MED	HIGH
Is Frequently to Constantly Present (i.e., 50% to 100% of your time exposes you to this Hazard)	NA	MED	HIGH	HIGH

*Relative Risk Rating Scale takes into account the frequency of the hazard and the severity of injury the hazard can cause to employees without regard to PPE usage. In general,

- Minimal Severity requires first aid;
- Moderate Severity requires professional medical attention; and
- High Severity requires immediate medical attention/life threatening.

4.1 General Site Safety

All activities will be conducted in a manner that minimizes hazards and employee exposures to such hazards. The following are some general safety rules that must be followed while on site:

- All personnel who perform on site operations with the potential for exposure to hazardous substances are required to meet personnel training requirements and medical surveillance criteria, which are described in this site health and safety plan.
- All hazardous substances and contaminated soils, liquids, and other residues shall be handled, transported, labeled, and disposed of in accordance with accepted material handling procedures.
- Personnel will wear personal protective equipment as required.
- All work on site, will be planned and supervised by the appropriate personnel to prevent injuries.
- All injuries and accidents will be reported.
- Supervisors will ensure that their employees observe and obey all safety rules and regulations required for the safe conduct of work.
- Alcoholic beverages and illegal drugs will not be allowed on-site. Possession of either will be grounds for disciplinary actions.
- No employee will be assigned to a task without first having been instructed on proper methods of carrying out the task.

- All posted safety signs will be obeyed.
- Space around on-site emergency and fire-fighting equipment will be kept clear.
- All trash and discarded materials will be staged in an orderly fashion and regularly removed from the Site.
- Approval to perform work operations alone must be preapproved by the Site PM/PIC and a communication plan must be established.
- Smoking, eating, drinking, and chewing gum or tobacco will not be permitted within the work zones and will follow applicable decontamination procedures prior to eating, drinking, and/or smoking.
- Personnel should keep track of weather conditions and wind direction to the extent they could affect potential exposure.
- Personnel should be alert to any abnormal behavior on the part of other workers that might indicate distress, disorientation, or other ill effects.
- Personnel should never ignore symptoms that could indicate potential exposure to chemical contaminants. These should be immediately reported to their supervisor or the Site Health and Safety Officer.
- Visible indicators of potentially immediate danger to life and health (IDLH) conditions include:
    1. Large containers and tanks that must be entered.
    2. Enclosed spaces such as buildings or trenches that must be entered.
    3. Potentially explosive or flammable situations (indicated by bulging drums, effervescence, gas generation, or instrument readings).
    4. Extremely hazardous materials (such as cyanide, phosgene, or radiation sources).
    5. Visible vapor clouds.
    6. Areas where biological indicators such as dead animals or vegetation are located.

4.2 Specific SSC Requirements

The hazards posed by the presence of underground and overhead services are significant. Where there is a requirement for ground penetrating activity, the work shall be thoroughly vetted prior to commencing subsurface work. No intrusive work is to be conducted until the hazards associated with the possible presence of underground and overhead services have been properly identified, and safe locations for intrusion marked and agreed upon. This applies to any intrusive site work (i.e., any work which will involve the disturbance or penetration of the ground or manmade surface by mechanical or manual means, INCLUDING: trial pit excavations, borehole excavations (shell and auger, rotary, hydraulic, percussive), gas spiking, manual excavations, hand digging, intrusion into vertical, indoor, or below ground surfaces, and/or any other on-site activity where disturbance of the ground surface is required).

If conducting intrusive activities, the following tasks must be completed **and documented** prior to initiating ground disturbance activities (each is summarized below):

4.2.1 Historical Site Information Review

Obtain the most recent as-built drawings and/or site plans (including underground storage tank (UST), product and vent lines), as available. Consider requesting any other site plot plans, surveys, photographs, and information that might be instructive from the client or other sources. Site information reviewed shall be specified in Table 8 SSC Actions (below).

4.2.2 Plot Plan

Develop a plot plan the accurately reflects all available information and site conditions as accurately as possible, including the number of facilities/pipelines or utilities, locations and alignments. The plot plan shall be updated as SSC activities commence to properly capture site-conditions or visual indicators. Intrusive activities shall not proceed without an updated plot plan or drawing.

4.2.3 Pre-Marking Ground Disturbance Locations

Whenever feasible, ground disturbance locations and/or areas shall be pre-marked using white stakes, white paint or white flags (or black in cases where snow is on the ground) prior to the public and/or private utility mark-outs. Pre-marking provides the line locators with visual boundaries as guidance in clearing locations and placing marks.

4.2.4 Line Location Services

In areas where public and private resources are available, **Ramboll will contact both public and private utility locate services for any project that involves intrusive activities.** In order to give line operators sufficient time to respond to a request to locate, a minimum of 72 business hours is required prior to the planned start of work. In the event that the driller/excavator retains these services, Ramboll will conduct a follow-up to confirm utility locate information.

Meet directly with the private locator and provide them with location plans, if possible. If an on-site meeting with the private locator is not possible, you MUST contact the private locator so that they understand the scope of the proposed subsurface work and the extent of their activities.

4.2.5 Site Walkover-Visual Indicators

The Designated Person MUST conduct site walk-over and complete the SSC Field Checklist (Appendix C) for all projects that involve ground disturbance. The site walk-over and visual inspection is most effective when completed during locating activities, but, at a minimum, must be completed PRIOR to ground disturbance. The main intent of the SSC Field Checklist is to identify above ground indicators which may identify the potential existence of subsurface issue. It will also be used to confirm that common utilities have been accounted for, located and verified. Any potential underground utilities should be marked on a site plot plan and the site walkover should be documented utilizing Ramboll's Subsurface Clearance Field Checklist.

4.2.6 Utility Mark-out

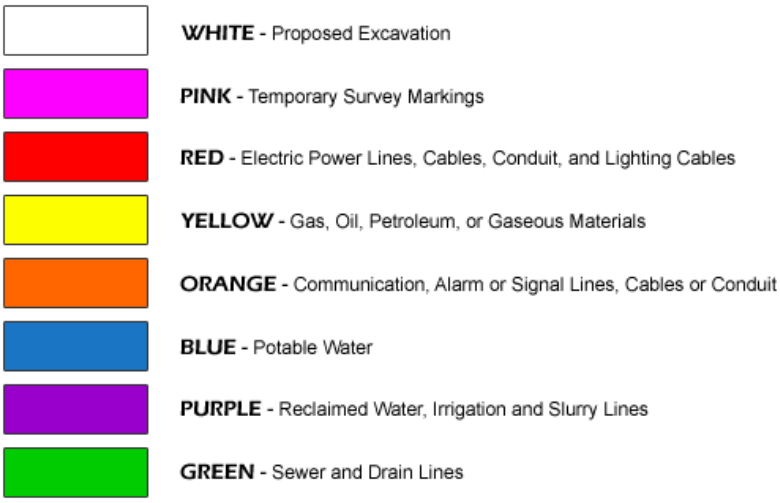
All known pipelines and utilities, as noted on the plot plan, pipeline map or drawing, that pass within the search zone must be located, identified and marked to indicate location and alignment.

A qualified and competent line locator shall conduct line-locating practices utilizing available pipeline maps or plot plans for all areas within the search zone. Direct connection (clamping

on) to all possible nearby underground services should be undertaken whenever possible to increase the success rate/reliability in locating. **The specific ground penetration location must be cleared to the edge of the critical zone** (5 feet or 1.5m area surrounding intrusive locations/areas in every direction) using a search and sweep method to verify maximum detection capabilities.

If anticipated services are not identified or located, drilling or ground disturbance will not occur until the service is visually identified.

Commonly used utility mark out colors and identifiers are listed below:



Upon completion of their work (whether you are on-site or not), the private locator MUST contact you to present their results. In addition to providing you with an overall summary of their work, they must also inform you of any unique circumstance(s) which limited their ability in locating the potential presence of underground utilities (e.g., the existence of overhead electrical lines); if they encountered any abnormalities (e.g., concrete surfaces with reinforced rebar); and/or any other condition which may have diminished the validity of their results and efforts.

Where doubt exists over the location of a service, request a site visit from the appropriate utility provider or abandon locations in the immediate area and contact the PM and/or PIC.

4.2.7 Clearance of Ground Disturbance Locations & Critical Zones

After anticipated utilities have been located and marked, use the available information along with regulatory requirements and project objectives to select final ground disturbance locations.

Each specific ground penetration location must be cleared to the edge of the critical zone (5 feet or 1.5m area surrounding intrusive locations/areas in every direction) using a search and sweep method to verify maximum detection capabilities. Ensure that all detected services and those featured on location plans are outside of the critical zone of EACH location where intrusive work will occur, using a sweep and search method.

The critical zone takes into account minimum tolerance distances from facility lines (which vary by location) and uncertainties introduced by on-site conditions, human factors, and equipment. **No intrusive activities shall take place within a critical zone with which utilities or visual indicators intersect**. When known utilities intersect ground disturbance critical zones, boring and/or excavation location criteria should be reevaluated by the Designated Person and PM, and if possible, moved to a pre-cleared alternate location.

In the event that work is required to be conducted in a critical zone containing a marked utility or visual indicator, approval MUST be obtained from the PIC, PM and H&S Director prior to ground penetrating activities.

4.2.8 Overhead Lines

Ensure that any ground penetrating activities are located a minimum of 28 feet (9m) horizontally from any overhead electric cable supported wooden poles, or 50 feet (15m) horizontally in the case of those supported on metal poles/towers. Where this cannot be achieved, contact relevant electricity provider for guidance as well as the PIC/PM and Director H&S.

4.3 SSC Summary

If the tasks presented in this HASP involve ground penetrating work, Table 8 and the specific procedures outlined in section 4 are applicable and must be followed. Table 8 summarizes the steps required to be completed, including justification of any exceptions. This table must be completed in its entirety prior to conducting subsurface work. If certain requirements are not applicable, describe reason for exemption.

Table 8: Subsurface Clearance (SSC) Actions

Subsurface Clearance (SSC) Pre-Project Planning Checklist Document the steps that must be followed and justify any exceptions. This checklist MUST be completed in its entirety.				
SSC Requirements	**Yes**	**No**	**NA**	**Comments**
1. Prequalification of Contractor for capability of ground disturbance work performed (See Section 4)	☒	☐	☐	To be added (TBA)
2. "Designated Person" for SSC work assigned (must be on-site)	☒	☐	☐	TBA
3. Historical Site Information Review	☒	☐	☐	TBA
4. Development of site-specific plot plan	☒	☐	☐	TBA
5. Ground penetrating location marked prior to locate(s) and alternate locations chosen	☒	☐	☐	TBA
6. Service notifications provided to clear/locate **public** utilities	☒	☐	☐	TBA
7. **Private** locate contracted for on-site utilities	☒	☐	☐	TBA

Table 8: Subsurface Clearance (SSC) Actions

Subsurface Clearance (SSC) Pre-Project Planning Checklist Document the steps that must be followed and justify any exceptions. This checklist MUST be completed in its entirety.				
SSC Requirements	**Yes**	**No**	**NA**	**Comments**
8. Designated Person present during private locating	☒	☐	☐	TBA
9. Underground utilities identified prior to commencement of intrusive activities as reasonably feasible	☒	☐	☐	TBA
10. Site walkover conducted to assess utility locations, visual indicators and complete SSC Field Checklist	☒	☐	☐	TBA
11. Ground penetration locations(s)/area(s) and Critical Zones (i.e., the 5ft or 1.5m distance surrounding intrusive activities in every direction) cleared	☒	☐	☐	TBA

5. PERSONNEL TRAINING REQUIREMENTS

All personnel performing on-site operations with the potential for exposure to hazardous substances or health hazards will meet the personnel training requirements in accordance with applicable regulations. The training policies and procedures will ensure that personnel can recognize hazards, understand emergency response procedures, and have the knowledge necessary to enable them to perform their assigned jobs in a manner that ensures employee and public safety. Completion of appropriate health and safety training, as described below, and participation of medical surveillance will be required to gain access to on-site areas other than the Support Zone. Documentation of training includes initial 40-hour health and safety training, 8 hours of annual refresher training, 8 hours of supervisor training, supervised field experience, first aid training, and CPR certification.

5.1 Initial Training

A. Basic Health and Safety Training

A minimum of 24 hours of initial health and safety training off-site is required to obtain on-site access to areas other than the Support Zone. All personnel engaged in or supervising activities in the Exclusion Zone (EZ) or Contamination Reduction Zone (CRZ) will have a minimum of 40 hours of initial health and safety training off-site, meeting the in accordance with applicable regulations.

B. Supervised Field Experience

All personnel with 24 hours of initial health and safety training are also required to have a minimum of 1 day of field experience under the direct supervision of an experienced supervisor. Personnel with 40 hours of initial health and safety training are required to have a minimum of 3 days of field experience under the direct supervision of an experienced supervisor.

C. Supervisor Training

All on-site managers and supervisors directly responsible for, or who supervise personnel engaged in invasive site activities will have received the initial 40-hour health and safety training and at least 8 additional hours of specialized off-site training consistent with in accordance with applicable regulations. This specialized training will include topics such as, but not limited to, regulatory compliance, management of on-site health and safety hazards and recognition of special personnel training needs.

D. Health and Safety Officer Training

Health and safety officers will be trained to a level required by their job function and responsibility. This will include training in implementation of HASPs and compliance with applicable health and safety requirements.

E. First Aid and CPR Training

Ramboll personnel will maintain first aid and CPR training as certified by the American Heart Association (or equivalent) to render first aid and CPR.

5.2 Refresher Training

All personnel who have received 40 hours of initial health and safety training will receive 8 hours of refresher training annually, as specified in accordance with applicable regulations. Topics to be covered in this training program will include those specified in the initial 40-hour

health and safety training and/or those specified in the supervisory training course, as well as a critique of incidents that could serve as training examples.

Project-specific refresher training will be provided when the project scope is changed and/or when the hazards change.

A. Site Safety Briefings

Site safety briefings will be conducted prior to the start of each work day or work shift to discuss health and safety issues, changes in work procedures, exposure incidents and other relevant information. Prior to each change in operations, the meetings will address PPE use and maintenance, physical safety hazards from machinery, protection from chemical hazards, decontamination procedures, protection from heat/cold stress and specific safety requirements associated with the new operations. During safety meetings, on-site personnel qualified to perform first aid and CPR will be identified. All changes in the HASP will be reviewed during the morning safety briefing. A record of the meeting will be written daily and signed by all participants and included in section 13.0 of this HASP.

B. Visitor's Briefing

Visitors will not be permitted to enter areas other than the Support Zone unless documentation of training, as described above, is presented to the Ramboll site supervisor. All visitors will be provided with applicable site-specific information including but not limited to hazard recognition, personnel hygiene and Site safety rules, use of PPE, and emergency response procedures. Visitors requesting on-site access to areas other than the Support Zone will be required to review and sign off on the HASP to ensure understanding and compliance with the provisions in the HASP. All personnel, contractors, and site visitors will receive information contained in this HASP and any site-specific hazard awareness prior to entry into the site, as applicable. The training will ensure that personnel can recognize hazards, understand emergency response procedures, and have the knowledge necessary to enable them to perform their assigned jobs in a manner that ensures employee and public safety. All personnel will be required to sign an attendance sheet (see section 13.0 in this HASP) verifying that they received and participated in a training briefing. Individuals refusing to sign the sheet will not be allowed to work on the Site.

Compliance with Hazard Communication Standard is required for work at this Site. Material Safety Data Sheets (MSDSs) are part of Appendix A. Personnel shall receive training for the identification of hazards associated with the materials in use and the safe use of these materials, as applicable. Any hazardous chemical products brought to the Site (other than standard fuels) for use during field activities must be reviewed by the Site Supervisor. Contractors are responsible for having their own hazard communication program. Contractors will supply MSDS to the Site Supervisor for all products to be used on-site.

In addition, any employee who is or is expected to be directly involved with intrusive sampling of contaminated environmental media or other sampling activities that could reasonably lead to chemical exposure is subject to appropriate training and standards, including but not limited to 40-hour HAZWOPER (and 8-hour refresher training), respiratory protection, first aid, and CPR training. This would include any employee that visits exclusion zones of hazardous waste sites or remediation sites.

5.3 Hazard Communication

The following procedures related to hazard communication are applicable to this site. All employees will be briefed on this program.

5.3.1 Container Labeling

All containers received on site will be inspected to ensure the following: (1) All containers will be clearly labeled as to the contents; (2) the appropriate hazard warnings will be noted; and (3) the name and address of the manufacturer will be listed.

All drums or bins to be shipped off the site will have a label affixed with the following information: (1) the identity of the waste generator, (2) the boring, well, or excavation identification and sample depth, (3) the waste matrix (e.g. soil, water, product), and (4) the date of waste generation.

5.3.2 Employee Training & Information

Prior to starting work, each employee will attend a health and safety orientation and will receive information and training on the following:

1. An overview of the requirements contained in the Hazard Communication Standard;
2. Hazardous chemicals present in their workplace operations;
3. Location and availability of a written hazard communication program;
4. How to read labels and review MSDSs to obtain appropriate hazard information;
5. Locations of MSDS files and the hazardous chemical inventory;
6. Physical and health effects of the hazardous chemicals;
7. Methods and observation techniques used to determine the presence or release of hazardous chemicals;
8. How to lessen or prevent exposure to these hazardous chemicals through usage of control/work practices and personal protective equipment; and
9. Emergency procedures to follow if they are exposed to these chemicals.

Ramboll employee(s) will inform its subcontractor(s) the hazardous chemicals brought on-site by Ramboll; and likewise, subcontractors shall inform Ramboll employees the same.

5.4 Disciplinary Actions

In the event that personnel do not follow the H&S safety rules and/or are conducting operations that are hazardous to themselves or their fellow workers, disciplinary actions will be implemented in accordance with Ramboll's policies.

5.5 Incident Reporting

Each contractor is responsible for maintaining injury and illness records in accordance with applicable regulations and supplying Ramboll with applicable records in a timely fashion upon request. With respect to incidents, the following types of EHS incidents are to be reported:

- All employee injuries and illnesses that include first aid, doctor/hospital visits which may or may not involve restricted work and/or lost time;
- Environmental incidents and exposures, such as spills or other unplanned releases to the environment or nonconformance to operating procedures;

- All evacuations (false or real);
- Any Property damage;
- Near miss incidents which could have resulted in an injury, an accident, environmental impact or significant loss of facilities;
- Public/third party liability - Incidents that involve injury, illness or property damage due to the actions of any non-Ramboll employee arising out of, or in connection with the Firm's contracted scope of work, operations, products, or premises.

As a rule of thumb, all of the incidents types outlined above MUST be communicated by the Ramboll Site Supervisor to either the PIC/PM and the Corporate Health and Safety Director and/or Project Health and Safety Coordinator immediately following the incident, either in person or via phone, e-mail, or text messaging. The contacted person will then ensure that the other core project members are informed either in person or via phone, e-mail, or text messaging, regardless of time of day. As soon as possible after the incident but no later than 72 hours after the event, the first page of the Incident Investigation Report form will be completed by the Site Supervisor or his/her designee and sent the core project members (i.e., the PIC/PM, Corporate Health and Safety Director, Project Health and Safety Coordinator), for preliminary root cause analysis. The root cause analysis will not be deemed complete until input from all individuals involved in the incident, applicable witnesses, and input from the core team has been obtained. Similarly, the implementation of any corrective/preventive actions will NOT be implemented until input from the Corporate Health and Safety Director (and others as necessary) has been obtained.

6. MEDICAL SURVEILLANCE AND RECORDKEEPING

The goals of the medical surveillance program are to monitor the health of potentially exposed personnel through the use of medical examinations and diagnostic laboratory testing, to provide medical care for occupational injury or illness, to keep accurate records for future reference and to ensure the selection of personnel physically able to safely perform the work assigned. The medical surveillance program supports and monitors the effectiveness of the primary health and safety goal of controlling worker exposure to hazardous substances. Medical examinations will be performed by or under the supervision of a licensed physician, preferably one knowledgeable in occupational medicine.

In general, all employees who may be exposed to hazardous substances above the permissible limits; who wear a respirator; or who are injured, become ill, or develop signs or symptoms due to possible overexposure to hazardous substances from hazardous waste operations must be medically monitored. Ramboll's requirement is for all employees to be subject to Medical Surveillance Program as well as any employee who may wear a respirator, regardless of the during of use.

Each employee enrolled in the Medical Surveillance Program will be subject to periodic medical exams, the frequency of which will vary depending on the extent and duration of exposure, the type of chemicals involved, and the individual employee's medical profile. These personnel will receive a medical examination at least once per calendar year.

Documentation of current participation in a medical surveillance program and fitness for duty, including ability to wear respiratory protective equipment, will be necessary for all personnel who work on-site in areas other than the Support Zone. However, all specific medical information and examination results obtained in the course of administration of the medical surveillance program will be maintained by the examining physician as confidential.

6.1 Baseline Medical Examinations

The baseline medical examination serves two major purposes: (1) it determines the individual's fitness for duty, including the ability to work while wearing a respirator; and (2) it provides baseline data for comparison with future medical data. The baseline medical examination will include, at a minimum, the following:

1. Complete occupational and medical history;
2. Physical examination;
3. Blood count and chemistry profile;
4. Urinalysis with microscopic review;
5. Chest x-ray;
6. Pulmonary function tests;
7. Resting electrocardiogram (EKG); and
8. Cardiac stress test (at physician's discretion).

Certification of fitness for duty and ability to wear personal protective equipment must be provided to gain access to on-site areas other than the Support Zone. However, all specific

medical information obtained in the course of administration of the medical surveillance program will be maintained as confidential.

6.2 Periodic Medical Examinations

Each individual enrolled in the medical surveillance program will be subject to periodic medical surveillance examinations. In general, personnel involved in field activities with a frequency of greater than 30 days per year will receive medical examinations at least annually. Periodic medical examinations should include the parameters included in the baseline examination, with the exception of the chest x-ray and EKG, which are repeated after the baseline examination at the physician's discretion and with agreement of the individual.

6.3 Special Medical Examinations

Special medical examinations or consultations will be arranged for personnel exposed in an emergency situation to hazardous substances at concentrations above the PELs without adequate protection. This will be done as soon as possible after the overexposure has been determined by the Site Supervisor, in consultation with the Corporate Health and Safety Director.

Special medical examinations shall also be arranged upon notification by the individual that he/she has developed signs or symptoms indicating a possible overexposure to hazardous substances, or if the examining physician determines that a more frequent medical examination is necessary.

6.4 Special Circumstances

Any individual who is on a medication that may interfere with the ability to perform his/her job function, or who may require special medical attention, must notify the Site Supervisor of these circumstances prior to commencing work at the Site.

6.5 Health and Safety Records

Health and safety records for on-site Ramboll personnel including but not limited to training, medical clearances, fit testing, and any monitoring will be kept on file by the Corporate Health and Safety Director and on-site by the Site Supervisor, as applicable. Sub-contractor and contractor health and safety records shall be maintained by the applicable sub-contractor and/or contractor and provided to the Site Supervisor. Ramboll Personnel Training and Medical Records are maintained at Ramboll, 333 West Wacker Drive, Chicago, Illinois. RECORDS WILL BE MAINTAINED ON-SITE AS NECESSARY.

7. PERSONAL PROTECTIVE EQUIPMENT

This section of the Site Health and Safety Plan is a reference of selection for different levels of PPE. The protective equipment will be selected based on the contaminant type(s), concentration(s) in air (if any), standing liquid (if any), or other applicable matrix, and the known route(s) of entry into the human body. In situations where the type of materials, their concentrations, or exposure potentials are unknown, a decision based on professional judgment regarding the assignment of personal protective equipment will be made by the HSC.

7.1 Selection of PPE

The selected PPE should be able to resist degradation, penetration, and permeation by the contaminants present at the Site. In selecting the appropriate protective material, the following should be considered: chemical resistance; tear and puncture resistance; flexibility; thermal stress; cleanability; and durability.

PPE will be selected, used and maintained in accordance with applicable regulations.

Levels of PPE

The four levels of PPE are Levels A, B, C, and D, with Level A providing the highest available level of respiratory, skin, and eye protection. A summary of the basic PPE ensemble for Levels A, B, C, and D is provided below. PPE selection for operations at the Site will be tailored to address specific task conditions.

Level A

Level A PPE provides the maximum degree of respiratory, skin, and eye protection. A Level A PPE ensemble should include:

- Full-face piece self-contained breathing apparatus (SCBA) or full-face piece supplied air respirator with escape SCBA;
- Fully encapsulating, chemical-resistant suit, safety boots and inner gloves; and
- Hard hat (if overhead or bump hazards exist).

Level B

Level B PPE provides the maximum level of respiratory protection. Since chemical-resistant clothing is not considered gas, vapor, or particulate tight, Level B PPE does not provide the maximum skin protection. However, a good quality, hooded, chemical-resistant one-piece garment with taped wrists and ankles provides a reasonable degree of protection against splashes of liquids and lower concentrations of chemicals in ambient air. It is the minimum level recommended for confined space entries and initial Site entries until the hazards have been further identified. Level B PPE should be used when **any** one of the following criteria is met:

- The type and atmospheric concentration of substances have been identified and require a high level of respiratory protection but less skin protection -- this includes atmospheres with IDLH concentrations of specific substances that do not represent a severe skin hazard or atmospheres that do not meet the criteria for use of air-purifying respirators;
- Atmosphere contains less than 19.5% oxygen; or

- Presence of incompletely identified vapors or gases is indicated by air monitoring instruments but vapors and gases are not suspected of containing high levels of chemicals harmful to skin or capable of being absorbed through the intact skin.

Level C

Level C PPE provides the same level of skin protection as Level B PPE, but a lower level of respiratory protection. Air-purifying respirators can be used only if the substance has adequate warning properties; the individual passes a qualitative fit-test for the mask; an appropriate cartridge/canister is used, and its service limit concentration is not exceeded; and Site operations are not likely to generate unknown compounds or excessive concentrations of already identified substances. Level C PPE can be used when **all** of the following conditions are met:

- Oxygen concentrations are not less than 19.5%;
- Atmospheric contaminants, liquid splashes, or other direct contact will not adversely affect any exposed skin;
- Types of air contaminants have been identified, concentrations measured, and a cartridge or canister is available that can remove the contaminant;
- Atmospheric contaminant concentrations do not exceed IDLH levels; and
- Job functions do not require self-contained breathing apparatus (SCBAs).

Modified Level D

Modified Level D PPE provides minimal skin protection (i.e., hand/glove protection along with standard work clothes with optional coveralls) and no respiratory protection. Modified Level D PPE can be used when the following conditions are met:

- Atmosphere contains no known hazard;
- Oxygen concentrations are not less than 19.5%;
- Work functions include minimal contact with contaminated soil, water, groundwater and precludes splashes, immersion, or the potential for unexpected inhalation of or contact with hazardous levels of any chemicals.

Level D

Level D PPE provides no skin protection other than standard work clothes and no respiratory protection. Work functions are limited non-hazardous environments and preclude contact with media that may be potentially contaminated at hazardous levels for any type of chemical.

7.2 Respirator Fit Test

A respirator fit test will be conducted on all Site personnel who will perform work operations in areas other than the Support Zone. Prior to the initiation of any fit testing, personnel must be certified as medically able to wear a respirator. The respirator fit test is conducted to ensure proper face piece-to-face seal. A secure fit is important with positive-pressure equipment and is essential to the safe functioning of negative-pressure equipment, such as most air-purifying respirators. Personnel will receive instruction on proper wear and maintenance of the respirator.

Qualitative fit tests will be conducted annually in accordance with the ANSI Practices for Respiratory Protection, Z88.2-1989. In addition, a negative and positive fit check will be performed each time an employee dons the air-purifying respirator (APR). Documentation of annual respirator fit tests will be kept in the Support Zone.

7.2.1 Negative and Positive Fit Check

The negative and positive pressure fit check will be performed each time an employee dons the APR. The negative pressure fit check involves closing off the inlet openings to the APR cartridges by covering with the palms of the hands. If an inward leakage of air is detected, the APR should be checked for material defects and refitted or replaced with another APR.

The positive pressure fit check is performed by placing the palm of hand over the exhalation valve and gently exhaling for 10 seconds to create positive pressure inside the facepiece. If an outward air leak is detected, the APR should be readjusted. If after readjustment leakage still occurs, another APR should be used.

7.3 PPE Inspection Checklist and Maintenance

PPE inspections will be conducted upon receipt of PPE from the factory or distributor; when it is issued to workers; after use or training; and prior to maintenance. Periodic inspections of stored equipment will be conducted routinely, whenever a question arises concerning the appropriateness of the selected equipment, or when problems with similar equipment arise. At a minimum, PPE inspection should include the following:

A. Clothing

Before use:

1. Determine that the clothing material is correct for the specified task.
2. Visually inspect for:
   - Imperfect seams
   - On-uniform coatings
   - Tears
   - Malfunctioning Closures
3. Hold up to light and check for pinholes
4. Flex product:
   - Observe for cracks
   - Observe for other signs of shelf deterioration
5. If the product has been used previously, inspect inside and out for signs of chemical breakthrough or deterioration, such as:
   - Discoloration
   - Swelling
   - Stiffness

6. During the work task, periodically inspect for:
   - Evidence of chemical attack such as discoloration, swelling, stiffening, and softening. Keep in mind that chemical permeation can occur without any visible effects.
   - Closure failure
   - Tears
   - Punctures
   - Seam discontinuities

B. Gloves

Before use, pressurize glove to check for pinholes. Either blow into glove, then roll gauntlet towards fingers or inflate glove and hold under water. In either case, no air should escape.

C. Respirators

SCBA/supplied air/air-purifying:

1. Inspect SCBA/supplied air/air-purifying respirators before and after each use, at least monthly when in storage and during cleaning. Air-purifying respirators should be inspected before each use to be sure they have been adequately cleaned.
2. Check all connections for tightness, inspect air lines prior to each use for cracks, kinks, cuts, frays, and weak areas.
3. Check for proper setting and operation of regulators and valves (according to manufacturer's recommendations) and check operation of alarms.
4. Check material conditions for:
   - Signs of pliability
   - Signs of deterioration
   - Signs of distortion
5. Check face shields and lenses for:
   - Cracks
   - Crazing
   - Fogginess
6. Examine cartridges or canisters to ensure that:
   - They are the proper type for the intended use,
   - The expiration date has not passed, and
   - They have not been opened or used previously.

7.4 Task Specific PPE

This section of the Project Health and Safety Plan is used for the selection of the appropriate PPE. The protective equipment will be selected based on the contaminant type(s), concentration(s) in air (if any), standing liquid (if any), or other applicable matrix (e.g., soil, sludge, sediment, etc.) and the known route(s) of entry into the human body. Table 9

presents the general level of protection to be used for each task that is anticipated to be conducted on this Project.

Table 10 identifies the specific PPE items that are required or recommended to be used on this project. This includes identifying the specific type of hand and body protection (as applicable) for the chemicals that may be encounter while conducting the tasks outlined in this HASP.

Table 9: Task Specific PPE

Task Description	Level of Protection				
	A	B	C	Mod D	D
Task 1 – Geophysical Survey to Locate Abandoned Oil Wells	☐	☐	☐	☐	☒
Task 2 – Pot Holing/Excavation to Uncover Abandoned Oil Wells	☐	☐	☐	☐	☒
Task 3 – Perform Leak Test of Abandoned Oil Wells	☐	☐	☐	☒	☐
Task 4 – Survey Location of Abandoned Oil Wells	☐	☐	☐	☐	☒
Task 5 - Excavation and Grading Oversight	☐	☐	☐	☐	☒

Key:

Level D: Long sleeve shirt*; long pants*; hard hat; eye protection; hearing protection; and safety shoes.

Level D Modified: Level D protection plus protective coveralls, as required; and appropriate hand protection.

Level C: Level D (Modified) protection plus negative pressure respiratory protection with appropriate cartridges; chemical protective coveralls in lieu of general coveralls; use of inner and outer sets of hand protection.

Level B: Level C protection plus Pressure-demand supplied air respirator with escape bottle in lieu of negative pressure respirator; chemical resistant coveralls with hood; chemical resistant boots.

Level A: Level B protection plus fully encapsulating (gas tight) chemically resistant suit.

***Clothing made of natural fibers shall be worn when a shock or arc flash hazard exists.

8. AIR MONITORING/SAMPLING PROCEDURES

Air samples may be collected during the project to identify and quantify airborne contaminants in order to delineate areas where PPE may be needed; determine the level of PPE necessary; document on-site employees' exposures; assess the potential health effects of exposure; determine the need to implement engineering controls or evacuate the work zone or Site; and determine the need for specific medical monitoring. Some commonly used devices include the following:

Combustible Gas Indicator (CGI) – Examples include O2/LEL meter. A CGI measures the concentration of a combustible gas or vapor. Its accuracy is, in part, dependent upon on the difference between the calibrations and sampling temperatures; oxygen-deficient atmospheres also affect accuracy; filament can be damaged by silicones, halides, and tetraethyl lead; and the sensitivity is a function of the difference in the chemical and physical properties between the calibration gas and the unknown.

Flame Ionization Detector (FID) – Examples include Organic Vapor Analyzers (OVA). Depending on mode, it may detect many organic gases and vapors. A FID will not detect inorganic gases and vapors; has reduced reliability in high humidity conditions; and should not be used when temperatures are below 40F (4.4C).

Ultraviolet (UV) Photo Ionization Detector (PID) – Examples include HNU. Detects a number of organic and some inorganic gases and vapors. A PID does not detect methane; does not detect a compound if the probe used has a lower energy than the compound’s ionization potential; does not readily ionize fully chlorinated materials; high humidity affect readings; low humidity affects operation; response is sensitive to dust or moisture on the lamp; and responses will fluctuate when gases are mixed.

Infrared Spectrophotometer (IR) – Examples include Miran. Measures concentrations of many gases and vapors in the air but designed to quantify one- or two- component mixtures. Not approved for use in hazardous conditions; must make repeated passes to achieve reliable results; and somewhat bulky/heavy.

Direct-Read Colorimetric Tubes – Examples include Drager. The compound reacts with the indicator chemical in the tube, producing a stain whose length is proportional to the compounds’ concentration. Results are affected by temperature, pressure, and humidity; many similar compounds interfere with results.

Personal Air Monitoring – Quantitative air sampling for nuisance dust, metals, organic and inorganic compounds. Samples are collected using personal air sampling pumps and the appropriate sampling media. All personnel samples will be collected in the employees breathing zone over the duration of the work shift. The specific methods to be utilized for the collection of personal air samples will require the involvement of a Certified Industrial Hygienist (CIH) if this type of sampling will be conducted.

8.1 Using Monitoring Devices

Conducting an applicable task may necessitate using one or more monitoring devices as listed in Table 11, particularly if gases, vapors, explosion hazards and/or oxygen deficient atmosphere can occur or are expected. If a monitoring device will be utilized, the corresponding device letter should be placed in the column labeled “Monitoring Instrument

Required" in Table 11. In addition, you MUST record the following information in the field log book if you are going to use a monitoring device:

1. Instrument name and serial number
2. Date of calibration
3. Frequency/duration of monitoring
4. The monitoring results
5. And the actions taken based on the results, even if "no actions are required to be taken"

Table 11: Monitoring Devices Available			
A	**PID (10.6 eV)**	**F**	Colorimetric Indicator Tubes
B	PID (11.7 eV)	**G**	Dust Monitoring
C	FID	**H**	Summa Canister
D	OVA	**I**	Heat Stress Monitor
E	CGI/LEL	**J**	Radiation Detector
		K	**Gas Multimeter**

With respect to Table 12, also insert the task and the applicable Action Level in the appropriate box using 50% of the most restrictive (lowest) PEL or TLV as the Trigger. For example, if the most restrictive PEL for a particular VOC is 50 ppm, use 25 ppm as the "Trigger" value.

Table 12: Required Monitoring				
Required Monitoring **If monitoring is necessary to identify that a risk is at or above tolerable limits and/or is used in controlling a risk on site, document the task and the maximum allowable exposure or trigger, and the monitoring instrument required to be used.**	**Constituent**	**Task(s)**	**Trigger (action level)**	**Monitoring instrument required**
	Oxygen		19.5% to 23.5%	
	Carbon Monoxide		25 ppm	
	H_2S		5 ppm	4-Gas Meter (K)
	C_2S			
	VOCs: Total	2, 3, 5	0.5 ppm	PID (A)
	Methane (CH_4)	2, 3, 5	0.5% or 5000 ppm	4 Gas Meter (K) And Sensit HXG-3P
	Semi-VOCs:			
	Metals			
	Dusts	TBD

	Others:			

8.2 Action Level Guidance

In general, this HASP must address site-specific chemicals as noted in Tables 13 and 14. However, there are chemicals commonly encountered in the workplace that may not be a chemical targeted for sampling but nonetheless will have adverse health effects. These chemicals are listed in Table 13 below.

Table 13: Action Levels for Commonly Encountered Compounds	
Compound	**Action Level**
VOC (as Benzene)	0.5 ppm MAXIMUM
CH_4	0.5% MAXIMUM or 5000 ppm
CO_2	0.25% OR 2500 ppm MAXIMUM
CO	25 ppm MAXIMUM
H_2S	5 ppm MAXIMUM
O_2	19% MINIMUM – 23.5% MAXIMUM

8.2.1 Volatile Organic Compounds

An action level for each chemical or group of chemicals should be based on 50% of the most restrictive (lowest) PEL or TLV. If a sustained (i.e., 1-minute sampling period) total volatile organic compound (VOC) reading within the breathing zone as determined by a photo ionization detector (PID) is above the action level, site personnel shall attempt to mitigate

the situation through the use of engineering controls (i.e., move upwind, increase air circulation) as indicated in Table 14. If the action level still cannot be met, personnel shall leave the area and contact the PM and HSC for further instructions.

Table 14: Volatile Organic Compound

Instrument	Calibration Gas Standard	Frequency/ Duration of Air Monitoring	Action Level[(1)] Above Background (Breathing Zone)	Action
Photo ionization detector (PID) calibrated daily	100 ppm isobutylene	Every 5-10 minutes, take a 1-minute reading.	> 5 ppm above background level	Introduce engineering controls (i.e., blower fans) (Level D) Evaluate controls (see below)
After Introduction of Engineering Controls				
PID calibrated daily	100 ppm isobutylene	Every 5-10 minutes, take a 1-minute reading.	< 5 ppm	Continue work (Level D)
			5-50 ppm above background level	Don respirator (Level C); Contact HSC to evaluate
			> 50 ppm above background level	Discontinue work (Level C)

Note:

[(1)] Action Levels for "Known contaminants" should be based upon each contaminant's Permissible Exposure Limit (PEL) or Threshold Limit Value (TLV).

8.2.2 Combustible Gas Indicator (CGI)/Oxygen Meter

Table 15: Combustible Gas Indicator (CGI)/Oxygen Meter

Meter Response	Action/Respiratory Protection
CGI response <10% LEL	Continue normal operations with regular, periodic monitoring
CGI response > 10% LEL	Discontinue operations; evacuate personnel and prohibit entry; allow to vent until readings are <10%.
Oxygen level <19.5% or >23.5%	Retreat from work area; consult with PM and HSC about upgrading to Level B respiratory protection, adding mechanical ventilation, or possible changes in work practices.

8.2.3 Odors

If strong odors are encountered or if personnel develop headaches, dizziness or other potential exposure symptoms, the personnel shall leave the work area to a well-ventilated area and contact the PM and HSC for further instructions.

8.2.4 Dusts

The permissible exposure levels for total and respirable dusts are 15 and 5 mg/m^3, respectively. In general, at these concentrations you will not be able to read the face of a wristwatch (with your arm extended) when the total dust concentration reaches 15 mg/m^3. Particles of dust in the respirable size range cannot be seen without the aid of a microscope but in aggregate, may be perceived as a haze. More importantly and with few exceptions, when dust is noticeable in the air, more respirable particles will exist than larger particles.

Typically, controlling dusty investigative activities through the use of a water sprayer will control potential exposures. However, in the event that dusty conditions exist that are not related to investigative/remedial activities (dry, uncovered soils with high winds), personnel shall leave the area and contact the PM and HSC for further instructions.

Nonetheless, to determine the likelihood of exposure from dusts, a theoretical "Total Dust" concentration in mg/m^3 can be calculated to estimate the total dust concentration in which the concentration of the contaminant in the soil could equal and/or exceed its' established exposure limit (EL). This equation is as follows:

Total Dust (mg/m^3) = (10^6 mg/kg) (**EL** mg/m^3) / (Conc. of contaminant in soil mg /kg) (**SF**)

Where:

EL = Exposure Limit of the contaminant of concern (e.g., its PEL or TLV in mg/m^3); and

SF = Safety Factor, a number between one and ten. Used to account for the degree of confidence in the characterization data (a ten would represent a poor degree of confidence, for example only one soil sample was collected / analyzed to characterize the site).

The **SF** is based upon the following assumptions: 1) the concentration of the contaminant in the airborne dust is the same as its' concentration in the sample matrix; 2) the soil data depicts a representative "worst-case" scenario; 3) the monitoring instrument used, accurately measures the ambient concentration of particulate matter in the air; and 4) a single contaminant of concern is present.

As an example, assume that lead (with an EL of 0.05 mg/m^3) is the contaminant of concern and a soil concentration of 25,000 mg/kg has been identified. Depending on the SF used, the theoretical total dust concentration will range between 2 to 0.2 mg/m^3. This means that when the in-situ particulate monitoring device is registering a concentration within 2 to 0.2 mg/m^3 range, there is a high probability that this dust contains enough lead to equal and/or exceed the EL. Hence, the level of PPE used would be increased until engineering controls are determined to be effective as documented by personal monitoring.

9. CONFINED SPACE ENTRY

Ramboll's health and safety policy prohibits unauthorized entry into confined spaces. If entry into a confined space is required, prior to entering a confined space, Ramboll employees (or its subcontractor's employees) will need additional training. Without Confined Space training, entry into confined spaces is prohibited. In addition, entry authorization will only be given after Ramboll management has reviewed the nature of the confined space, the hazards present, and the measures needed to ensure safety. Under these circumstances, Ramboll will work with the host facility/client to determine training requirements, sampling requirements, written program requirements, and equipment needed to safely enter the confined space.

It is not anticipated that confined space entry will be required for this project and/or the tasks listed in this HASP. If confined space entry is required, this HASP will be modified accordingly, and all applicable regulations will be adhered to.

10. SPILL RESPONSE

If warranted, before any spill clean-up work is initiated at the site, applicable local, state, and/or Federal Emergency Response Authorities will be identified and contacted by either the Client Contact and/or a designated Ramboll employee.

10.1 Reporting and Initial Personnel Safety

Upon discovery of a hazardous substance spill, personnel are to:

- Immediately summon help by notifying the Project Manager and the Client Contact;
- Take action to ensure the safety of nearby personnel;
- Proceed to a safe location;
- If anyone is seriously injured, immediately contact emergency medical services; and
- Keep unauthorized personnel out of the area.

10.2 Initial Spill Reaction

Factors that limit the employee's response at the site of a spill are:

- Level of training,
- Personal safety,
- Available personal protective equipment (PPE), and
- Knowledge of the substance.

Employees should limit their actions to shutting off equipment or pumps and closing valves, if possible, feasible and safe to do so.

10.3 Spill Response Evaluation

The identity and hazards of the spilled material should be determined before decisions regarding spill containment and control are made. The Client contact and Project Manager should evaluate the hazards regarding the spill and decide whether project employees or external response organizations should conduct the cleanup.

The Project Manager must contact the Principal in Charge and Corporate Health and Safety Director to discuss the spill incident for further input on deciding how the cleanup can be conducted, including:

- Levels of PPE and safety procedures,
- Safety and work zones,
- All steps of the response activities,
- Most effective procedures or methods for cleanup,
- Means of containment,
- Leak of spill control, and
- Decontamination procedures (including Emergency decontamination).

11. DECONTAMINATION

11.1 Sampling and Construction Equipment Decontamination

Decontamination involves the orderly controlled removal of contaminants. All undedicated sampling equipment and sampling meters (if applicable) will be cleaned prior to and between each use. All on-site equipment will be decontaminated and allowed to air dry before leaving the site. Decontamination maybe accomplished using an approved cleaner, water, and steam. Subcontractors will be responsible for decontamination of their own equipment used during field operations, as well as disposal of the decontamination fluids. Decontamination fluids and soil cuttings will be temporarily stored in sealed and labeled 55-gallon drums, staged at a safe location which is mutually acceptable to Ramboll and the host facility, pending offsite disposal. The decontamination methods will be as follows:

11.2 Personnel Decontamination

All site personnel should minimize contact with contaminants. At a minimum, the gross removal of contaminants from PPE shall occur in a designated area. All disposable PPE will be disposed of in approved 55-gallon drums (including respirator cartridges). Non-disposal PPE must be decontaminated, particularly safety boots. Any PPE that cannot be decontaminated should be disposed of along with the waste generated from field operations. The drums will be sealed and labeled appropriately, stored at a single secure location on the site, and be disposed of appropriately off-site. Personnel should wash their hands and face prior to departing from the site and prior to eating, drinking, smoking and/or applying cosmetics. The decontamination methods will be as follows:

Modified Level D Personnel Decontamination

Where activities are performed in modified Level D PPE personnel will perform decontamination using the following guidelines:

- Place tools, instruments, samples and trash at an appropriate location. The equipment drop area should be clean and dry and at a minimum, plastic bags should be available for trash. Waste PPE will not be placed in the same containers as general trash.
- Inspect equipment, samples, and if applicable, tools for signs of residual amounts of contamination or excessive soil buildup. If present, soils and contamination must be completely cleaned off of equipment, samples, and tools prior to removal from the decontamination areas.
- Personnel will visually check themselves for signs of excessive soils and possible contamination. If observed, soils and contamination will be completely removed before further decontamination is performed.
- Remove outer work gloves and place in an appropriate container specified for waste PPE.
- Remove outer Tyvek coveralls if used and place them in an appropriate container specified for waste PPE.
- Remove inner protective gloves and place them in an appropriate container specified for waste PPE.
- Remove inner protective gloves and place them in an appropriate container specified for waste PPE.

- Wash hands using soap and water (separate from other decontamination cleaners/solutions).

Level C Personnel Decontamination

Personnel involved in activities that require the use of Level C PPE will observe the following decontamination guidelines:

- Place tools, instruments, samples and trash at an appropriate location. There areas should be clean and dry, and at a minimum contain plastic bags for trash. Waste PPE will not be placed in the same containers as general trash.
- Inspection equipment, samples and if applicable, tools for signs of residual amounts of contamination or excessive soil buildup. If present, soils and contamination must be completely cleaned off of equipment, samples and tools prior removal from the decontamination areas. Personnel will visually check themselves for signs of excessive soils and possible contamination. If observed, soils and contamination will be completely removed before further decontamination is performed.
- Untape wrists and ankles.
- Remove outer work gloves and place them in an appropriate container specified for waste PPE.
- Remove outer Tyvek coveralls and place them in an appropriate container specified for waste PPE.
- Wipe off and remove respirator mask (also goggles if worn).
- Remove inner protective gloves and place them in an appropriate container specified for waste PPE.
- Wash hands using soap and water (separate from other decontamination cleaners/solutions).

During emergencies, the need to quickly respond to an accident or injury must be weighed against the risk to the injured party from chemical exposure. It may be that the time lost decontaminating an individual may cause greater harm to the individual than from the potential for chemical exposure, particularly if the injury is life-threatening. In these instances, a non-injured person needs to inform responding emergency personnel of the potential for chemical contamination on the victim, specifically mentioning the type and expected concentrations.

11.3 Investigation-Derived Material Disposal

Investigation-derived materials will also be handled appropriately and will be temporarily stored in sealed and labeled 55-gallon drums, staged at a safe location which is mutually acceptable to Ramboll and the host facility, pending offsite disposal. The storage methods will be as follows:

1. Drill cuttings/well water: On-site in properly labeled drums/bins.
2. Decontamination solutions: On-site in properly labeled drums/bins.

12. EMERGENCY RESPONSE PLAN (ERP)

The ERP describes contingencies and emergency response procedures. The ERP defines the responsibilities of key personnel in planning, prevention, and response to emergency situations, and identifies agency contacts and medical care procedures. The ERP addresses measures to prevent and respond to emergency situations, such as fire or explosion; spill or release of hazardous material; personnel injury or illness; or other adverse events. General Emergency guidelines are as follows:

12.1 Stop Work Authority

All Ramboll employees have the authority and obligation to stop any task or operation where concerns and/or questions regarding the control of HSE risk exist, are not clearly established, or are not understood. Management is responsible for creating a culture where Stop Work Authority is exercised freely and without fear of retribution or intimidation.

When an unsafe condition is identified, a Stop Work intervention will be initiated and treated as a "near miss". As such, an incident report will be completed in accordance with Standard Practice Instruction 19 entitled "Incident Reporting" so that the unsafe condition can be documented, reviewed, and corrective actions and preventative measures be implemented as applicable.

These actions will be coordinated by the Site Supervisor, with support from the PM/PIC/MP and the HSC, and all affected personnel will be notified of the Stop Work issue. No work will resume until all Stop Work issues and concerns have been adequately addressed. Most issues can be resolved in a timely manner at the job site, but occasionally additional investigation and corrective actions may be required. Work may resume when it is safe to do so.

12.2 Personnel Involved in Emergency Response

Key personnel involved in Site emergency response include the PM, Site Supervisor, the Ramboll PIC and contractor PMs. Clear lines of authority have been established for implementing emergency response procedures and for ensuring safety compliance. All emergencies and personal injuries will be immediately reported to Site Supervisor. The Site Supervisor will immediately report the incident to the PIC/PM and Corporate Health and Safety Director.

12.3 Emergency Response Telephone Roster

The Emergency Response Telephone Roster consists of persons and organizations both on- and off-site who would be involved in the ERP. This roster, provided as Table 1A, will be kept in Ramboll site vehicle, a list of on-site personnel who are trained in first aid and CPR will also be kept in the file. All Site personnel will be familiar with the Emergency Response Telephone Roster and will understand the proper chain of command. A listing of on- and off-site emergency contacts and key personnel and their alternates will be posted in the Site office.

12.4 Emergency Communications

The external communication system between on-site and off-site emergency response personnel is necessary to report and coordinate emergency response. Personnel cell phone will be the primary means of external communication and will be used to notify off-site emergency response agencies and to request assistance.

12.5 Emergency Medical Care and Treatment

Every injury and exposure will be reported according to the procedures outlined in section 6.7 of this HASP, regardless of whether the incident appears to be serious or not, or whether any adverse health effects or symptoms are apparent after the exposure. Universal precautions to BBP shall be observed while administering first aid.

12.6 Life-Threatening Emergency Response

Incidents are possible that would result in emergencies beyond the on-site emergency response capabilities. Such incidents might include:

- Life-threatening injuries or injuries/exposures requiring medical treatment; and
- Fires progressing beyond incipient stage.

12.7 Evacuation Routes and Procedures

During site operations and in the event of an evacuation, a safe location (Rally point) will be identified. As part of the Site orientation, all on-site personnel will be informed of the evacuation plan and Rally points. For purposes of a safe and efficient means of vehicular egress, all vehicles will be backed into their designated parking location.

If evacuation is necessary, personnel will determine wind direction. Whenever possible, evacuation should be in the direction perpendicular to the wind direction without passing through the plume or smoke cloud and/or spilled material, if applicable. Personnel will report to their designated Rally point. In the event that a workers' evacuation to their primary rally point is hindered by emergency conditions, workers shall evacuate to the secondary Rally Point. If the on-site PM is not involved in emergency response activities, he/she will assist in accounting for all Site personnel, otherwise their designated back-up will account for all personnel and will report this information to the Site Supervisor.

12.8 Training

All Site personnel will review the information in this HASP on the emergency response procedures, and the location and use of on-site emergency equipment, and will have received emergency response training. During the Site orientation and/or Site safety briefings, Site personnel will be trained in emergency response procedures, on-site communication systems and evacuation routes, as stated in this HASP. Visitors will be briefed on hazard recognition, safe work practices and basic emergency procedures by the Site Supervisor.

12.9 First Aid Procedures

If an employee is injured, general first aid will be administered. If safety concerns or hazardous conditions are still present (e.g., incipient fire, falling debris), the individual shall be moved to avoid further injury or risk. In the event that an employee is injured in a contaminated area, general first aid will be administered and then the employee will be moved to the support zone for decontamination (if applicable), additional first aid, and preparation for transportation, giving due consideration to which risk will be greater; the spread of contamination or the health/safety of the individual.

First aid kits will be maintained on site at each project location. The type of first aid kit to be maintained will be for minor emergencies, such as cuts and skin abrasions. Where applicable, first aid supplies will be stored in a waterproof container. The Site Supervisor or designated person will ensure that adequate first aid supplies (listed below) are maintained.

Minimum List of First Aid Supplies	
(1) First Aid Guide*	(6) Burn treatment applications
(1) Absorbent Compress >4”x8”	(4) 3”x3” Sterile gauze pads
(16) 1”x3” Adhesive bandages	(2) Pair medical exam gloves
(1) Adhesive tape 2.5yard roll	(1) Triangular bandage >40”x40”x56”
(10) Antiseptic treatment applications	(6) Antibiotic ointment applications
* Please see Appendix D First Aid Guidance, print, and store with ANSI approved First Aid kit on-site.	

Recommended List of First Aid Supplies	
Analgesic (oral, non-drowsy)	Eye covering >1/4” thick
Bandage compress >2”x2”	Eye/face wash
Breathing barrier, single use	Roller bandage >2”x4yards
Cold pack >4”x5”	Hand sanitizer

The contents of the first aid kits shall be checked before being sent out to each job and at least weekly on each job to ensure that expended items are replaced. Where the eyes or body of any employee may be exposed to injurious corrosive materials, suitable facilities for quick drenching or flushing of the eyes and body shall be available for use.

12.10 Uncovering an Underground Service (Intact)

In the event of any damage or dislocation of any underground facility/pipeline or utility in connection with ground disturbance activity, work activities shall cease in the area of the damaged facility. The Designated Person shall immediately call the applicable emergency phone number. Then, the affected utility and One Call service shall be notified, if applicable. The One Call service may be able to assist with contact numbers for notifying member companies in the event of any damage. NO ONE should attempt to repair, clamp or constrict the damaged utility.

ALWAYS ASSUME THAT ANY UNDERGROUND PIPE OR SUBSURFACE LINE IS LIVE!

- Stop Work; remove tools if safe to do so.
- Clear all persons from the scene.
- Call the emergency number.
- Contact the One Call/utility member for guidance, if applicable.
- Contact the PM and/or PIC so they can contact the Client, MP, Director of H&S and HSC.

12.11 Striking an Underground Electrical/Telecom Cable

- Stop work.
- Evacuate Ramboll employees from the immediate area to a safe distance as site conditions warrant, giving consideration to employees which may not be able to

immediately evacuate (e.g., operator seats in excavators are normally electrically isolated, whereas other parts of the excavator may be energized).

- Call the emergency number.
- In the event of injuries provide first aid and summon medical assistance.
- Contact the One Call/utility member for guidance, if applicable.
- Contact the PM and/or PIC so they can contact the Client, MP, Director of H&S and HSC.
- Do not allow anyone to enter the area until the electricity/utility provider has made the cable safe.

12.12 Striking a Pressurized Gas Pipeline

- Stop work, leave tools in-place but shut off any running equipment, including engines.
- Evacuate the immediate area to a safe distance as site conditions warrant.
- Ensure there are no sources of ignition in the area.
- Call the emergency number.
- Contact the pipeline owner and/or One Call, if applicable.
- Contact the PM and/or PIC so they can contact the Client, MP, Director of H&S and HSC.
- Do not re-enter the immediate area until safe to do so.

12.13 Striking a Pressurized Water Main

- Stop work, remove tools and confine jetting water if safe, necessary and appropriate to do so.
- Evacuate immediate area.
- Ensure that water flowing away is not creating potential hazards (e.g., electrical shorting, flooding, contaminant migration etc.) and where possible warn those likely to be affected.
- Call the emergency number.
- Contact the water utility and/or One Call, if applicable.
- Contact the PM and/or PIC so they can contact the Client, MP, Director of H&S and HSC.
- Do not re-enter the immediate area until safe to do so.

12.14 Follow-up Procedures

If a site employee is injured on site and immediate medical treatment beyond first aid is needed, the designated site supervisor is instructed to call 911 and/or the designated emergency phone number and then report the incident.

Any SSC work that results in an injury, illness, incident, near miss or unsafe act or condition MUST be verbally communicated by the affected employee or a Ramboll employee witnessing the incident to either the local HSC, PM, or PIC immediately following the incident. Notification to the regional HR representative and the Director of HR and the Directors of H&S MUST also be made for incidents involving any employee injury and/or illness that

happened while on company time including first aid, and doctor/hospital visits which may or may not involve restricted work and/or lost time.

As soon as possible after the incident but no later than 72 hours after the event, Page One of the Incident Reporting Form in SPI 19 Incident Reporting is to be completed by the employee and a witness that was involved in the incident and/or observed the incident.

Post-incident investigations and root cause analysis will be conducted by the Director of H & S to discover the exact circumstances and cause of the incident. Amendments to the HASP will be approved and implemented by the Project Health and Safety Coordinator and the Director of H & S, as needed. All Site personnel will be informed of any revisions to the site-specific HASP and the resolution of any outstanding safety concerns prior to returning to their Site functions. The necessary steps to ensure that operations can safely resume include:

- Ensure that all emergency equipment (fire extinguisher, communication system, first aid kits and first aid station) is in functional order;
- Clear all incident-caused debris from the Site, if safe to do so; and
- Inspect area and equipment.

NOTE: Specific emergency contact information is contained in the first and last pages of this HASP. Applicable directions to the nearest medical facility are contained in the last page to this HASP. In the event that an emergency situation occurs*, SECURE the safety of yourself and those working under your direction and then contact appropriate site and Ramboll representatives that are referenced in Table 1A of this HASP.*

13. HEALTH & SAFETY PLAN FIELD TEAM SIGNATURES

Sign off sheet attesting that the HASP has been made available and reviewed by the individual prior to entry into the site.

Project Personnel List & Safety Plan Distribution Record

Ramboll Employees

All project staff must sign indicating they have read and understand the Site Health and Safety Plan. A copy of this Site Health and Safety Plan must be made available for their review and readily available at the job site.

Employee Name/ Job Title	Date Distributed	Signature

Contractors, Subcontractors

A copy of this safety plan shall be provided to contractors and subcontractors who may be affected by activities covered under the scope of this Site Health and Safety Plan for their information only, although the contractors and subcontractors remain responsible for the safety of their own employees. All contractors and subcontractors must comply with applicable country, state and local government rules and regulations.

Firm Name	Contact Person	Date Distributed

Health and Safety Meeting

All personnel participating in the project must receive initial Health and Safety Orientation. Thereafter, a brief tailgate safety meeting is required as deemed necessary by the Site Health and Safety Officer (or at least once every 10 working days).

Date	Topics	Name of Attendee	Employee Firm Name	Initials

Visitor

It is Ramboll's policy that visitors must furnish their own personal protective equipment. All visitors are required to sign the visitor log and comply with Health and Safety Plan requirements. If the visitor represents a regulatory agency concerned with site health and safety issues, the Site Health and Safety Officer shall also immediately notify HSC.

Name of Visitor	Firm Name	Date of Visit	Signature

14. SAFETY MEETING CHECKLIST

The Site Supervisor should consider discussing the following topics with all field personnel conducting work as part of this HASP, as applicable.

Date and Time of Meeting:

Conducted By:

CHECK TOPIC(S) DISCUSSED:

HASP Content	**HASP Content**
☐ Chemicals of Concern	☐ Personnel On-Site (Introductions)
☐ Tasks to be Performed	☐ Responsibilities
☐ Location of Tasks	☐ Monitoring equipment
☐ Hazards/Risks of Tasks	☐ Other _____
☐ Site Limitations (e.g., cell phone use)	☐ Other _____
First Aid	**Industrial Sanitation and Hygiene**
☐ Facilities	☐ Drinking water
☐ Reporting and Records	☐ Restrooms/Porta toilets
☐ Treatment of _____	☐ Personal Cleanliness
Personal Protective Equipment	**Housekeeping**
☐ Glasses, Goggles, and Shields	☐ Waste Containers
☐ Hard Hats	☐ Waste Materials
☐ Respirators	☐ Other _____
☐ Gloves	
☐ Other _____	
Emergency Procedures	**Fire Prevention**
☐ Communications	☐ Extinguisher Locations
☐ Primary Rally Point:	☐ Designated Smoking Areas
☐ Secondary Rally Point:	☐ Hot Work
☐ Headcount	☐ Flammable Liquids Present
☐ Hospital Location/Route	☐ Explosives Present
☐ PPE/Decon	☐ Other _____
☐ Other _____	
Special Tools / Equipment	**Vehicles/Heavy Equipment**
☐ Chain saws / Chop saws	☐ Transportation of Employees
☐ Other _____	☐ Operation and Inspection
☐ Other _____	☐ Preventative Maintenance
	☐ Other _____

Discussion

SITE-SPECIFIC SUBSTANCES

(Add hazardous property information on any substances that are of concern at the site but are not listed above.)

Methane- LEL 5.0% UEL 15% Flash Point -187°C (-306°F) There are no specific exposure limits for Methane. Methane is a simple asphyxiant (SA). Oxygen levels should be maintained above 19.5%.

Hydrogen Sulfide - The explosive range of hydrogen sulfide in air is 4.5 to 45.5 percent. This range is much higher than the PEL. PEL: 20 ppm CEILING, 50 ppm 10-minute MAXIMUM PEAK. LEL: 4.0% (10% LEL, 4,000 ppm). IDLH: 300 ppm

EXPLANATIONS AND FOOTNOTES:

[a] Water solubility is expressed in different terms in different references. Many references use the term "insoluble" for materials that will not readily mix with water, such as gasoline. However, most of these materials are water soluble at the part per million or part per billion level. Gasoline, for example, is insoluble in the gross sense, and will be found as a discrete layer on top of the ground water. But certain gasoline constituents, such as benzene, toluene, and xylene, will also be found in solution in the ground water at the part per million or part per billion levels.

[b] Solubility of metals depends on the compound in which they are present.

[c] Several chlorinated hydrocarbons exhibit no flash point in a conventional sense, but will burn in the presence of high energy ignition source or will form explosive mixtures at temperatures above 200 °F.

[d] Expressed as mm Hg under standard conditions.

[e] Explosive concentrations of airborne dust can occur in confined areas.

[f] Cal/OSHA Time-weighted Average (TWA) Permissible Exposure Limits (PELs) except where noted in g. The substances designated by "Skin" in the PEL column may be absorbed into the bloodstream through the skin, the mucous membranes and/or the eye, and contribute to the overall exposure. "C" notation indicates the number given is a ceiling value.

[g] TLV-TWA adopted by the American Conference of Governmental Industrial Hygienists (ACGIH). Currently, there is no Cal/OSHA PEL.

[h] The substances with a "Ca" notation in the IDLH column are considered to be potential occupational carcinogens by NIOSH.

[i] Odor thresholds values extracted from "*ODOR THRESHOLDS for Chemicals with established Occupational Health Standards*", American Industrial Hygiene Association, 1997.
(d) Odor detection threshold: Lowest concentration at which a stimulus is being detected.
(r) Odor recognition threshold: Lowest concentration at which a definite odor character is detected.

[j] Values extracted from the U.S. Environmental Protection Agency Technology Transfer Network, Air Toxics website. URL: www.epa.gov/ttn/atw/, 2006

[k] Value extracted from "*HESIS Guide to Solvent Safety*" California Department of Health Services, 2004. URL: http://www.dhs.ca.gov/ohb/HESIS/solv_cht.htm

[l] Value extracted from "*Chemical Summary For Methyl-Tert-Butyl Ether",* U.S. Environmental Protection Agency, Office Of Pollution Prevention and Toxics, August 1994. URL: http://www.epa.gov/chemfact/s_mtbe.txt

APPENDIX B
CONTROL MECHANISMS

The following Control Methods should be implemented for Hazards that were identified as part of the Tasks that will be conducted as part of this Project.

B1–Chemical–Ramboll employees shall familiarize themselves with the appropriate health and safety responses for exposure to known on-site chemicals prior to beginning work at the site. site-specific chemicals are not limited to known chemicals of concern present in environmental media. During the preparation of the site-specific HASP, Ramboll employees shall also consider historical chemical use resulting in potential chemicals of concern, as well as any current chemical use (e.g., drums, cylinders, containers) or chemicals brought on-site to complete project work (e.g., laboratory chemicals, sample preservatives). Employees shall include relevant Safety Data Sheets in the site-specific HASP and review Attachment A Hazardous Material Properties prior to work involving hazardous materials.

Ramboll employees, contractors, subcontractors, and visitors shall wear appropriate personal protective equipment (PPE) while performing site activities based on the expected COCs and additional site hazards. At a minimum, equipment shall include safety glasses, steel-toed boots, and hard hats (when overhead work is being performed or when overhead hazards exist). Additional PPE requirements, addressing the site-specific hazards and chemicals of concern, will be outlined in the site-specific Health and Safety Plan (HASP).

Air monitoring may be performed to ensure on-site exposure levels are maintained below regulatory requirements. Air monitoring equipment, monitoring plan and controls shall be specified in the site-specific HASP.

Containers of unknown origin and/or unknown contents should not be opened by Ramboll employees without approval from the Corporate Director of Health, Safety & Security (HSS). For projects in which containers are present with unknown contents, consult the site/facility representative for additional information and, if appropriate, consider retaining a qualified waste management company for testing and identification.

For additional information, refer to Standard Practice Instruction 6–Hazard Communication. Consult with your local Health, Safety & Security Coordinator (HSSC) for any personal air monitoring requirements.

B2–Dust/Particulates/Fumes–Working near operating equipment (e.g., drilling rigs, heavy machinery, excavating equipment, power tools) poses unique safety situations including generation of dusts, particulate and fumes.

When the surface is disturbed soil, dust, and other particulates (e.g., concrete dust) can be released to the air. Severe weather conditions can also generate or contribute to hazardous dust and particulate conditions. This presents a hazard to the breathing zone of Ramboll employees, subcontractors, facility employees, and other bystanders. It can also present an off-site hazard if transport of the generated dust and/or particulates off the subject property is possible. The level of risk associated with dust and particulate exposure is generally tied to the level of contamination in the soil, however, soil to dust/particulate transfer is not easily predictable and typically requires on-site real time monitoring to establish baseline exposure values.

Depending upon the work to be done by Ramboll employees, a preliminary site field survey may need to be performed prior to involvement in drilling and/or heavy equipment operations. In the pre-planning stage, the site geology, ground cover, and scope of work (i.e., methods of investigation) should be discussed with the PM, PO, and any subcontractors. If operating equipment will be utilized, and dust/particulate generation is a potential hazard, subcontractors should be directed (in the

subcontract) to be prepared to control this hazard with water spray, or other method (e.g., tenting). The site-specific HASP should include clear directives to monitor breathing the zone and/or site perimeter conditions using approved monitoring devices including, but not limited to personal air monitoring (PAM), dust meters, or perimeter monitoring with data logging equipment.

For additional information, refer to B18–Heavy Machinery, SPI 11–Trenching and Excavation Awareness, and SPI 37–Rigging and Material Lifting. Consult with your local HSSC for any additional requirements.

Both fuel operated equipment and volatile chemicals can present a fume hazard to Ramboll employees. Typically, when work is conducted outside, staff can anticipate that standard scopes of work and typically encountered constituents of concern will not present a fume hazard when best practices such as standing up wind are established and followed. However, there are scenarios in which Ramboll employees must be prepared to implement additional controls to address hazardous fumes. Certain work circumstances, specifically interior work conducted with gasoline-powered motors warrants evaluation for proper ventilation and monitoring to ensure sufficient oxygen and to avoid the buildup of harmful fumes (e.g., carbon monoxide, specific constituents of concern).

Prior to start of work, the scope of work and site-specific factors must be discussed with the PM, PO, and/or local HSSC to ensure that the site-specific HASP includes appropriate controls to address the potential site-specific hazards. Regardless of the site-specific constituents of concern, oxygen must be maintained at a percentage ranging between 19.5 percent and 23.5 percent of the total ambient air. Ramboll employees shall monitor the work area for oxygen deficiency hazards using monitoring devices that have been appropriately calibrated and are recommended for this specific use, as applicable. If direct air monitoring readings suggest an oxygen deficiency and/or the build-up of harmful substances, attempt to employ a passive corrective action such as moving the position of Ramboll employees upwind of the hazardous area or equipment exhaust. If warranted, additional corrective engineering controls may include moving or removing the equipment, venting exhaust to the exterior of the building (typically if interior work is to be conducted, contractors need to be notified in advance that venting will be required), increasing work zone ventilation by opening overhead doors, utilizing fans or the facility ventilation system and/or upgrading PPE. If engineering controls do not adequately address the hazard, leave the area and contact the PM, PO, and/or HSSC. Work will not continue until the hazardous fumes are properly addressed and safe work conditions are verified.

The presence of petroleum and solvent contaminated material presents a potential fire hazard. Smoking and use of open flame will be prohibited and the use of non-sparking tools and equipment will be required, if conditions warrant. Where the potential of fire exists, Ramboll will provide portable fire extinguishers and employees must be trained on proper use. All fire extinguishers shall be maintained as follows:

Fully charged and in operable condition.

Clean and free of defects.

Readily accessible at all times.

Be visually inspected each month and undergo a maintenance check each year.

Fire prevention and protection measures include elimination of ignition sources, where feasible, identification of combustion sources and atmospheres (e.g., Lower Explosive Limit [LEL] will be monitored), and early detection and rapid response to fire/explosion situations. In addition to standard operating procedures, the following safe work practices will be implemented:

Site activities will comply with National Electric Code and explosion proof criteria.

Smoking will not be permitted (or only in designated areas, if such areas are available). On sites where subcontractors are under the direction of Ramboll and fire/explosion hazards will be present, the subcontract shall state that smoking will not be permitted on-site and the Ramboll site supervisor shall enforce this requirement.

Appropriate air monitoring will be conducted, when necessary.

Welding, open flame or spark-producing operations will not be allowed on-site.

Solvents with a flash point of less than or equal to 100 degrees Fahrenheit will not be used for cleaning purposes.

Fire extinguishers shall be kept in all work vehicles.

All fires and visible smoke that are detected at the site will be dealt with immediately by the individual recognizing the fire and/or smoke. In the event of visible smoke, fire or explosion, the following emergency response procedures will be implemented:

Immediately cease operations.

In all emergency fire situations, contact emergency services.

For small fires, employees may attempt to extinguish the fire, if safe to do so and they have been trained. One fire extinguisher ONLY may be used to fight the fire. After one fire extinguisher is depleted, employees must evacuate the area. For larger fires, perform immediate site evacuation.

For more information, please refer to SPI 3–Emergency Action Plan. Consult with your local HSSC for any additional requirements.

B3–Job Zone Control–Implementation of Ramboll scopes of work require that field employees have a clear and organized plan prior to the start of work to control the chemical hazards of the job, ensure all contaminated materials (environmental media and otherwise) are contained and employees, PPE, and/or equipment are appropriately decontaminated. Job zone control will vary depending on the level contamination and complexity of the project and site and may include but not limited to:

A site map.

Site preparation for project activities (e.g., making roads, establishing traffic patterns).

Establish work zones (i.e., Exclusion Zone, Contamination Reduction Zone, and Support Zone).

Use of the buddy system.

Decontamination procedures.

Site security (e.g., fences, locks, hired security).

Communication plan.

Safe work practices (e.g., good hygiene, avoid contact with contaminated media).

If the site investigation/remediation is being done at hazardous waste site, the PPE requirements will be forwarded as noted in the site-specific health and safety plan. Kneeling, lying in, or sitting on contaminated ground or materials must be avoided or a protective barrier must be used. Avoid or minimize handling of contaminated materials. Clean water will be kept available for decontamination, washing, and dust control. When water is required for decontamination, the necessity of containerizing and properly handling this water must also be evaluated. Consideration must also be given to

decontamination of equipment such as drilling rigs, augers, and heavy equipment used for excavation/trenching. Subcontractors may need to include items such as decontamination pads and wash water containerization in the cost estimation stage; advance planning for job zone control is imperative.

The job zone control plan must be clearly outlined in the site-specific HASP and discussed in advance of start of work with all Ramboll project employees, associated subcontractors, and site contacts, as appropriate. Consult with your local HSSC for any additional requirements.

B4–Heat–Heat stress can be a significant hazard, especially for workers wearing protective clothing. Depending on the ambient conditions and the work being performed, heat stress can occur very rapidly, within as little as 15 minutes. Site employees will be instructed in the identification of a heat stress victim, the first-aid treatment procedures for the victim and in the prevention of heat stress incidents.

Workers will be encouraged to immediately report any heat-related problems that they experience or observe in fellow workers. Any worker exhibiting signs of heat stress and exhaustion should be made to rest in a cool location and drink plenty of water. Emergency help by a medical professional is required immediately for anyone exhibiting symptoms of heat stroke, such as red, dry skin, confusion, delirium, or unconsciousness. Heat stroke is a life-threatening condition that must be treated immediately by competent medical authority.

The following American Conference of Governmental and Industrial Hygienists (ACGIH) screening criteria table shows heat stress exposure in degrees Celsius for an 8-hour work day, 5 days per week with conventional breaks will be used in determining safe exposure for acclimatized (adapted to site-specific environmental conditions) and unacclimatized (not adapted to site-specific environmental conditions) employees. Please note that at elevated temperatures, the ability to safely complete heavy or very heavy work is very limited and frequent rest breaks are required. The project schedule and budget should account for additional staff and/or a longer timeline to completion.

Allocation of Work in a Work/Rest Cycle	Acclimatized				Action Limit (Unacclimatized)			
	Light	Moderate	Heavy	Very Heavy	Light	Moderate	Heavy	Very Heavy
75-100%	31.0 (87.8F)	28.0 (82.4F)	--	--	28.0 (82.4F)	25.0 (77F)	--	--
50-75%	31.0 (87.8F)	29.0 (84.2F)	27.5 (81.5)	--	28.5 (83.3F)	26.0 (78.8F)	24.0 75.2F)	--
25-50%	32.0 (89.6F)	30.0 (86F)	29.0 (84.2F)	28.0 (82.4F)	29.5 (85.1F)	27.0 (80.6F)	25.5 (77.9)	24.5 (76.1F)
0-25%	32.5 (90.5F)	31.5 (88.7F)	30.5 (86.9F)	30.0 (86F)	30.0 (86F)	29.0 (84.2F)	28.0 (82.4F)	27.0 (80.6F)

Heat Stress Prevention

Whenever possible, or within the control of Ramboll, engineering controls should be utilized to protect workers from heat related hazards. For example, isolation from the heat source, ventilation such as open windows, fans or other methods of creating air flow and heat shielding such as awnings or umbrellas.

Appropriate work practices can also lessen the chances of heat related hazards as follows:

Water intake should be about equal to the amount of sweat produced (i.e., drinking 5-7 ounces of water every 15-20 minutes). Electrolyte fluids may also be necessary.

Whenever possible, gradual exposure to heat (i.e., acclimatization) is preferred to allow the body's internal temperature to actuate to the working conditions.

Whenever possible, adjust the work schedule to reduce risk of heat stress. For example, postpone nonessential or heavier work to the cooler part of the day and perform work in the shade if portable.

Rotate employees to reduce the amount of time spent working in direct sun and heat. Work at sites where heat stress is a significant hazard should not be completed by Ramboll employees working alone.

Increase the number and/or duration of rest breaks, and whenever possible, rest break areas should be in a cool area as close to the work area as is feasible.

Wear appropriate PPE when necessary, such as thermally conditioned clothing, self-contained air conditioning in a backpack and plastic jackets/vests with pockets that can be filled with dry ice or ice. However, based on the type of work being done, where work is being performed or other required PPE, these options may be prohibited or make the use of this PPE impossible or impractical.

For more information, please refer to SPI 30–Heat Stress. For additional information on Heat Stress first aid, refer to Appendix D First Aid Guidance. Consult with your local HSSC for any additional requirements.

B5–Cold-The four environmental conditions that cause cold-related stress are low temperatures, high/cool winds (wind chill), dampness, and cold water. One, or any combination of these factors, can cause cold-related hazards. Cold stress, including frostbite and hypothermia, can result in severe health effects.

A dangerous situation of rapid heat loss may arise for any individual exposed to high winds and cold temperatures. Major risk factors for cold-related stresses include:

Wearing inadequate or wet clothing thus increasing the effects of cold on the body.

Taking certain drugs or medications such as alcohol, nicotine, caffeine and medication thus inhibiting the body's response to the cold and/or impairing judgment.

Having a cold or certain disease, such as diabetes, heart, vascular and thyroid problems, and thereby increasing susceptibility to the winter elements.

Lower body-fat composition or other physiological differences. Statistics show that men experience far greater death rates due to cold exposure than women, potentially attributable to participation in risk-taking activities, lower body-fat composition and/or other physiological differences.

Becoming exhausted or immobilized, especially due to injury or entrapment, thus speeding up the effects of cold weather.

Advanced age. The elderly are more vulnerable to the effects of harsh winter weather.

The following table provides the resulting equivalent chill temperature to exposed skin because of increasing wind speeds at decreasing actual temperatures. Ramboll employees shall be aware of predicted weather conditions before beginning site work and stay apprised of changes.

TABLE 2. Cooling Power or Wind on Exposed Flesh Expressed as Equivalent Temperature (under calm conditions)*

Estimated Wind Speed (in mph)	Actual Temperature Reading (°F)											
	50	40	30	20	10	0	−10	−20	−30	−40	−50	−60
	Equivalent Chill Temperature (°F)											
calm	50	40	30	20	10	0	−10	−20	−30	−40	−50	−60
5	48	37	27	16	6	−5	−15	−26	−36	−47	−57	−68
10	40	28	16	4	−9	−24	−33	−46	−58	−70	−83	−95
15	36	22	9	−5	−18	−32	−45	−58	−72	−85	−99	−112
20	32	18	4	−10	−25	−39	−53	−67	−82	−96	−110	−121
25	30	16	0	−15	−29	−44	−59	−74	−88	−104	−118	−133
30	28	13	−2	−18	−33	−48	−63	−79	−94	−109	−125	−140
35	27	11	−4	−20	−35	−51	−67	−82	−98	−113	−129	−145
40	26	10	−6	−21	−37	−53	−69	−85	−100	−116	−132	−148
(Wind speeds greater than 40 mph have little additional effect.)	LITTLE DANGER In < hr with dry skin. Maximum danger of false sense of security				INCREASING DANGER Danger from freezing of exposed flesh within one minute.				GREAT DANGER Flesh may freeze within 30 seconds.			
	Trenchfoot and immersion foot may occur at any point on this chart.											

*Developed by U.S. Army Research Institute of Environmental Medicine, Natick, MA.

Equivalent chilll temperature requiring dry clothing to maintain core body tempearture above 36°C (96.8°F) per cold stress TLV

For more information, please refer to SPI 29–Cold Stress. For additional information on Cold Stress first aid refer to Appendix D First Aid Guidance. Consult with your local HSSC for any additional requirements.

B6–Severe Weather–Monitor the potential for severe weather in the days following the project. Severe weather conditions include but are not limited to high winds, electrical storms, and heavy rain, the highest hazard being lightning. When lightning is spotted, site employees should seek shelter immediately, and use the following steps to avoid injury:

Note the flash-boom ratio: count the time from the flash to the bang—for each 5 seconds between, the lightning is 1 mile away (activate lightning safety plan at count of 30 or 6 miles (9.6 kilometers) away) and don't resume activities for 30 minutes—it's called the **30-30 rule**).

If the storm is more than 6 miles (9.6 kilometers) away (greater than 30 seconds between lightning and thunder), the site supervisor should monitor the storm and be prepared to cease work if the storm becomes closer than the safe distance of 6 miles (9.6 kilometers). Since storms can travel at varying speeds, and the amount of time it takes to cease, and secure operations will also vary, prudent judgment should be exercised when storms are in the vicinity and/or developing (e.g., darkening skies, increasing wind speeds, etc.).

Regardless of travel distance to the storm, based on the flash-boom ratio, workers should not stay in exposed areas (on a roof, in an aerial lift, on a steel truss, on an ungrounded steel structure, in a golf cart, un-sided building, etc.) after lightning has been witnessed. All employees must move to a safe, preferably interior, location.

Workers should wait 30 minutes from the last sight of lightning or sound of thunder before returning to work.

Those required to travel from one building to another during the 30-minute wait time should do so only by enclosed vehicle.

Once the 30-minute wait time has elapsed and no additional lightning or thunder has been seen or heard, individuals may resume normal work.

Here are some guidelines in preventing this electrifying hazard:

Always monitor weather conditions, especially when going outdoors. Be prepared to shut down the job if thunderstorms are forecast.

Keep an eye on the weather throughout the day. Stay tuned to the radio for updates on the weather.

If lightning threatens, seek shelter indoors.

If a storm is up and you are caught outdoors, seek the appropriate shelter. Here are examples of safe shelter sites:

- substantial buildings
- low ground — seek cover in clumps of bushes
- fully enclosed metal vehicles with the windows rolled up
- trees of uniform height

The following are unsafe areas to seek shelter in:

- electric/power poles
- electrical equipment
- heavy and road machinery
- solitary trees
- high ground and caves
- water
- open fields
- all outdoor metal objects, like gates and fences
- high mast light poles
- metal bleachers

If you feel your hair standing on end, and/or hear "crackling noises", you are in lightning's electric field and it is close.

If lightning is extremely close to you and you are caught outside without shelter, immediately remove baseball cap and other metal objects and place them away from you. Put your feet together, duck your head, and crouch down low in baseball catcher's stance with hands on knees.

Be cautious in following a thunderstorm as the lightning may not be over.

If a co-worker gets struck by lightning, administer first aid immediately. Remember that it is safe to touch them as they do not carry an electric charge. Seek medical assistance immediately.

For more information about severe weather systems not described herein, please refer to SPI 3-Emergency Action Plan. Consult with your local HSSC for any additional requirements.

B7–Safe Walking Surfaces and Work Areas–Hazards from floor and wall openings, careless movements, protruding objects, debris, spills, placement of materials on paths or foot traffic areas, present a problem with regards to slips, trips, falls and injury. When possible, prior to site work, evaluate site ground conditions and identify areas where an increased risk of slips, trip or falls may exist. If conditions warrant, consider distinguishing a safe work path or establishing road/walk ways on longer term projects.

Ramboll employees shall minimize the risk of slips, trips and falls by establishing general good housekeeping in work areas at all times including, but not limited to keeping the work area clear of excess equipment and cleaning up wet surfaces as soon as possible. In addition, the floor of every workroom shall be maintained in a clean and, as much as possible, a dry condition. Employees should avoid walking on wet and/or cluttered surfaces and be conscious of the fact the wet surfaces could be slippery and have the potential to cause injury. Spilled materials should be cleaned up immediately.

Employees should always stay alert and, if tired or distracted, take this into account when working at the site. To minimize the possibility of injury:

Wear sturdy, steel-toed work boots with good tread.

Do not run.

Slide feet when walking on slick/wet surfaces.

Do not walk up or down steep embankments/hills, if possible. If not possible, walk at an angle when going up/down embankments/hills.

Do not carry items that block your vision.

Use handrails/grips when available and maintain 3-point contact whenever possible.

Do not jump down from equipment. Look down before you step down.

Report any floor openings that are not clearly marked and/or guarded.

Keep paths and work areas clear of tools, equipment, boxes, cords, etc. Tape or secure cords, wires, etc. to minimize trip/fall hazard.

If a protruding object cannot be moved, make sure the object can be easily seen or guard/pad the object, if possible.

Use ancillary lighting, such as flashlights and headband lights, when necessary.

Sufficient lighting should always be provided in all areas. Employees should notify the responsible person of conditions where there is an absence of sufficient natural and/or permanent artificial light.

Emergency exit doors will always be kept free of obstacles. Any employee finding an emergency door blocked should immediately report the condition and correct it if possible. Exit lights and signs will also be maintained in proper condition at all times and immediately reported if deficient.

For more information about physical hazards, please refer to SPI 26–Slips, Trips and Falls. Consult with your local HSSC for any additional requirements.

B8–Noise–Hearing protection will be worn by all employees working within the vicinity of equipment where noise is sufficient to interfere with general conversation at a normal speaking volume, when noise levels exceed 85 A-weighted decibels (dBA), and/or when the manufacturers' requirements indicate that hearing protection is mandatory. Personal hearing protection, such as earplugs or

earmuffs, may be used to reduce the amount of noise exposure while the above control measures are being evaluated or if such controls fail to reduce the exposure levels to below the PELs.

HPDs (hearing protective devices) may be used to reduce the amount of noise exposure while control measures are being evaluated or if controls fail to reduce the exposure levels to below 85 dBA. The use of HPDs is mandatory for Ramboll employees whose 8-hour TWA noise exposure exceeds 85 dBA. Other employees may also voluntarily wear HPDs, as long as their use does not interfere with the safe performance of on the job duties.

HPDs can prevent significant hearing loss, but only if they are used properly and the correct device is chosen. This can be difficult when employees work in a different environment for each project. When evaluating the need for hearing protection, consider the sources of noise that will be present on the project, your proximity to those sources, and the duration of your exposure. If the exact source(s) of noise are known, you can consult the manufacturer (or internet) for an accurate dBA. Conversely, example sound levels can be researched on the internet for common types of machinery and ALWAYS use conservative professional judgment.

Each type of HPD has a noise reduction rating (NRR), found on its packaging, which is the measure, in dB, of how well a hearing protector reduces noise. The higher the number, the greater the noise reduction.

Ramboll uses the following method to assess the hearing protector's adequacy:

Obtain the employee's noise exposure A-weighted TWA, when possible, or use an estimate

Subtract 7 dB from the NRR, and subtract the remainder from the A-weighted TWA to obtain the estimated A-weighted TWA under the ear protector

For example, if an earplug has an NRR of 26 and the 8-hour TWA is 100 dBA, the exposure would be 100-(26-7) = 81 dBA. Thus, this type of earplug, if worn properly, should provide adequate protection

Also, when dual protectors are used, the combined NRR provides approximately 5 dB more protection than the higher rated of the two products. For example, using ear plugs (NRR of 29 dB) with ear muffs (NRR 27 dB) would provide an NRR of 34 dB

(Earplugs NNR 29) + 5 = 34 dB (the combined NRR)

There are three types of HPDs:

1. Ear plugs, the most popular HPD, which are inserted into the ear canal to provide a tight seal against the canal walls to keep out excess noise

Ear bands, which rest outside the ear canal and provide a seal to keep out excess noise

Ear muffs, which enclose the entire ear inside rigid cups and the inside of the muff cup is lined with acoustic foam

Multiple types of earplugs and ear muffs should be provided to employees and the appropriate pair selected to control the noise hazards they may experience in the field.

Hearing protection should be worn when working within 25 feet of operating heavy equipment (drilling rigs, earth working equipment, etc.) as working around this type of equipment can result in exposure to hazardous levels of noise (levels greater than 90 dBA).

For more information about acoustical hazards, please refer to SPI 8–Occupational Noise Exposure. Consult with your local HSSC for any additional requirements.

B9–Unexploded Ordinances–Some sites (e.g., mines, firing ranges, former military-owned/operated sites, ordinance manufacturing facilities, etc.) may have old explosives, blasting caps, or other types of unexploded ordinances stored on site (e.g., in mines, in structures surrounding the mine or buried on site). Individuals must take immediate action in the event of finding and/or suspecting that explosives may be present. These actions include, but are not limited to, not touching or disturbing suspected explosives or making loud noises in their immediate vicinity. Slowly retreat from the area and immediately report to the PO/PM, local HSSC and Corporate HSS Director so that ordinance experts can be contacted.

B10–Closed/Abandoned Mines–Project work conducted on former mining sites presents a higher level of risk to Ramboll employees. The underground mine and associated buildings and equipment may not have been maintained over the years. The structural soundness of the mine, buildings and equipment may be compromised and could collapse. Mining sites are often in remote and dangerous areas. Mining operations are often specifically controlled by an administration or group designated by the country-specific location of the site (i.e., Mine Safety and Health Administration in the US) and have specific health and safety regulations they are accountable to meet. Additional training is typically required before Ramboll employees are permitted to work at a mine site.

Employees are to avoid all contact with mines, mine structures, and building supports without prior HS authorization. Employees are not to venture into mines or perform work in any areas should they appear structurally unstable. These conditions are to be immediately reported to the PC, Project HSSC, and Corporate HSS Director.

B11–Operational Facility –Working in an operational facility requires that Ramboll establish a safe work perimeter and cordon work area to the extent that it is possible and appropriate. Creating this safe work area will protect Ramboll employees and its subcontractors from traffic and hazards created in the operating environment and, in turn, protect facility employees or other observers, pedestrians, vehicles, adjacent property owners, etc. from hazards created by Ramboll activities. Prior to start of work, Ramboll employees shall discuss this safe work area with the operational facility representative(s) in coordination with any Ramboll subcontractors. Consideration for potential hazards including forklift traffic, pedestrian traffic, overhead and/or underground hazards, dust and/or fume generation, at a minimum, shall be discussed. If traffic control is required beyond cones, signage, and temporary fencing, etc., and the facility cannot provide in-house traffic control, Ramboll shall consider contracting with a traffic control contractor and/or conducting work during off-hours.

Working in an operational facility requires that Ramboll establish a safe work perimeter and cordon work area to the extent that it is possible and appropriate. Creating this safe work area will protect Ramboll employees and its subcontractors from traffic and hazards created in the operating environment and, in turn, protect facility employees or other bystanders from hazards created by Ramboll activities. Prior to start of work, Ramboll employees shall discuss this safe work area with the operational facility representative(s) in coordination with any Ramboll subcontractors. Considerations including forklift traffic, pedestrian traffic, overhead and/or underground hazards, dust and/or fume generation, at a minimum, shall be discussed. Consider the use of cones, signage, and temporary fencing, etc. If conditions warrant, and the facility cannot provide in-house traffic control, Ramboll shall consider contracting with a traffic control contractor. Depending on the operations conducted by the facility, and the investigation required by Ramboll, it may be necessary to consider modifying work

hours to early morning, overnight, weekend, or some other time where facility operations can be modified.

For additional information, refer to B18–Heavy Machinery, SPI 11–Trenching and Excavation Awareness, SPI 27 Subsurface and Overhead Clearance, SPI 33–Tool and Equipment Safety and SPI 37–Rigging and Material Lifting. Consult with your local HSSC for any additional requirements.

B12–Radiation–The two broad categories of radiation–non-ionizing and ionizing–are distinguished by the frequency, low and high, respectively. Non-ionizing radiation is commonly encountered, is low frequency and is typically benign (e.g., radio waves, microwaves, infrared radiation). Non-ionizing radiation also encompasses lasers and the visible light spectrum. In general, neither hazard evaluation nor controls are typically needed when conducting work where non-ionizing radiation is present. However, in a commercial/industrial occupational setting, non-ionizing radiation can present significant hazards without proper controls. Each work site presents unique hazards and as such should be evaluated for any necessary controls. At a minimum, PPE shall include appropriate eye and skin protection.

Ionizing radiation includes the higher frequency radiation classes including ultraviolet, x-ray, and gamma rays. Chronic or acute exposure to ionizing radiation can cause injury under certain circumstances and hazard evaluation is required. While there is no level of ionizing radiation that is considered "safe", health professionals generally agree on limiting a person's exposure beyond background radiation to about 100 millirem (mrem) per year from all sources. Exceptions are occupational, medical or accidental exposures. Medical X-rays generally deliver less than 10 mrem.

Work on projects involving ionizing radiation exposure requires approval from the HS department, additional radiation training and the development or participation in an exposure monitoring program. Contact the HS Director for additional information.

B13–Confined Spaces–With the exception of Ramboll's wastewater treatment operations, Ramboll does not have confined spaces on its premises. However, sites that are visited by Ramboll or its subcontractors could possibly have confined spaces and, as such, must obtain, and review confined-space information from the host facility.

In general, Ramboll employees are not permitted to enter a confined space or perform work in a confined space that would create a hazard and make it a permit-required confined space. If Ramboll employees are asked by a client to enter a confined space, Ramboll management must be informed, and be contacted for prior authorization.

To be a "confined space", **all** the following must be met:

The space is large enough, and configured such that a person can bodily enter, and perform assigned work,

The space has limited or restricted means for entry or exit, and

The space is not designed for continuous occupancy.

Permit-required confined spaces. To be a "permit-required confined space", the space must first meet all the definitions given above, and present one or more of the following conditions:

Contains or has a potential to contain a hazardous atmosphere,

Contains a material that could engulf an entrant (person entering the space),

Is configured such that an entrant could be trapped or asphyxiated by inwardly converging walls or floors, or

Contains any other recognized serious safety or health hazard.

Ramboll's health and safety policy prohibits unauthorized entry of site and facility employees into confined spaces.

Prior to entering a confined space, Ramboll employees (or its subcontractor's employees) need additional training. Without Confined Space training, entry into confined spaces is prohibited. In addition, entry authorization will only be given after Ramboll management has reviewed the nature of the confined space, the hazards present, and the measures needed to ensure safety. Under these circumstances, Ramboll will work with the host facility to determine training requirements, sampling requirements, written program requirements, and equipment needed to safely enter the confined space. Ramboll shall develop a standardized training format to meet the requirement for a safe confined space entry, as applicable.

Ramboll employees should prevent unknowing entry into confined spaces through heightened awareness when assessing new or unfamiliar facilities and job tasks. Some common structures employees may encounter in the field that *may* trigger confined space entry requirements include crawl spaces, ditches, trenches/excavations, underground equipment rooms or vaults and other industrial equipment spaces. Early identification of potential confined space issues allows the project team and the HS department to assess the hazards and implement the appropriate controls prior to the start of work activities. If you are unsure if a space at your worksite triggers confined space requirements, contact your PM, HSSC and the HS department for addition assistance.

For more information, please refer to SPI 10–Confined Space Awareness. Consult with your local HSSC for any additional requirements.

B14–Live Electrical Equipment–Electricity may pose a hazard to site workers due to the need to supply power to operate a newly installed system (e.g., remediation system) or the ongoing operations at the job site (e.g., electrically powered pumps/sampling devices, electrically generated lighting)). If wiring or other electrical work is needed to complete a Ramboll project scope of work, a qualified, licensed electrician must perform it.

In advance of starting work, it is important to understand the environment where work will be performed to ensure that work can be conducted safely. Depending on the environment, electrical equipment may need to be labeled as inherently safe and/or grounded in a specific manner. Consult with facility employees for any site-specific directives.

General electrical safety requirements include:

All electrical wiring and equipment must be a type listed by Underwriters Laboratories (UL), Factory Mutual Engineering Corporation (FM), or other recognized testing or listing agency.

All portable generators or other portable internal combustion type devices used on site will be grounded. All grounds will be validated twice daily with a multimeter to confirm a resistance of less than ten ohms.

All installations must comply with the National Electrical Safety Code (NESC), the National Electrical Code (NEC), or United States Coast Guard regulations.

Portable and semi-portable tools and equipment must be grounded by a multiconductor cord having an identified grounding conductor and a multi-contact polarized plug-in receptacle.

Tools protected by an approved system of double insulation, or its equivalent, need not be grounded. Double-insulated tools must be distinctly marked and listed by UL or FM.

Live parts of wiring or equipment must be guarded to prevent persons or objects from touching them.

Electric wire or flexible cord passing through work areas must be covered or elevated to protect it from damage by foot traffic, vehicles, sharp corners, projections, or pinching.

All circuits must be protected from overload.

Temporary power lines, switchboxes, receptacle boxes, metal cabinets, and enclosures around equipment must be marked to indicate the maximum operating voltage.

Plugs and receptacles must be kept out of water unless constructed for submersion.

All extension cord outlets must be equipped with ground-fault-circuit interrupters (GFCIs), if possible.

Attachment plugs, or other connectors must be equipped with a cord grip and be constructed to endure rough treatment.

Extension cords or cables must be inspected prior to each use and replaced if worn or damaged.

Cords and cables must not be fastened with staples, hung from nails or suspended by bare wire.

Flexible cords must be used only in continuous lengths without splice, except for molded or vulcanized splices made by a qualified electrician.

If a live electrical hazard presents the potential for fire, Ramboll will provide portable fire extinguishers and employees shall be trained on proper use. All fire extinguishers shall be maintained as follows:

Fully charged and in operable condition.

Clean and free of defects.

Readily accessible at all times.

Be visually inspected each month and undergo a maintenance check each year.

Fire prevention and protection measures include elimination of ignition sources, where feasible, identification of combustion sources and atmospheres, and early detection and rapid response to fire/explosion situations. In addition to standard operating procedures, the following safe work practices will be implemented:

Site activities will comply with National Electric Code and explosion proof criteria.

Smoking will not be permitted (or only in designated areas, if available). On sites where subcontractors are under the direction of Ramboll and fire/explosion hazards will be present, the subcontract shall state that smoking will not be permitted on-site and the Ramboll site supervisor shall enforce this requirement.

Appropriate air monitoring will be conducted, when necessary.

Welding, open flame or spark-producing operations will not be allowed on-site.

Solvents with a flash point of less than or equal to 100 degrees Fahrenheit will not be used for cleaning purposes.

Fire extinguishers shall be kept in all work vehicles

All fires and visible smoke that are detected at the site will be dealt with immediately by the individual recognizing the fire and/or smoke. In the event of visible smoke, fire or explosion, the following emergency response procedures will be implemented:

Immediately cease operations.

In all emergency fire situations, contact emergency services.

For small fires, employees may attempt to extinguish the fire, if safe to do so and they have been trained. One fire extinguisher ONLY may be used to fight the fire. After one fire extinguisher is depleted, employees must evacuate the area. For larger fires, perform immediate site evacuation.

For more information, please refer to SPI 3–Emergency Action Plan and SPI 9–Electrical Safety. Consult with your local HSSC for any additional requirements.

B15–Overhead Hazards-Work near operating equipment (e.g., drill rigs, heavy machinery, excavating equipment, etc.), near structural features such as scaffolding, cranes/rigging, low overhead clearance, and in unstable environments with falling debris presents overhead safety hazards. Ramboll employees shall evaluate the presence of overhead hazards prior to the start of work and ensure that appropriate controls are put in place to protect site employees including, but not limited to PPE (i.e., hard hats). As circumstances may change after work begins, Ramboll employees should be aware that site controls to address overhead hazards may need to change as well.

When conducting work around a scaffold, controls are required in addition to wearing hardhats. Employees shall be provided with additional protection from falling hand tools, debris, and other small objects through the installation of toe boards, screens, or guardrail systems, or through the erection of debris nets, catch platforms, or canopy structures that contain or deflect the falling objects. When the falling objects are too large, heavy or massive to be contained or deflected by any of the above-listed measures, the employer shall place such potential falling objects away from the edge of the surface from which they could fall and shall secure those materials as necessary to prevent their falling.

When Ramboll is conducting work at an operational site and/or with the assistance of a subcontractor, these precautions and safety mechanisms must be discussed and established prior to the start of work and documented in the site-specific HASP.

B16–Work Near Railroads-In the event that work activities are required adjacent (within 25 feet) to a railroad track, the rail company must be contacted prior to the start of work and access provided. Access may require additional discussion, planning, fees and employees. The health and safety procedures must be coordinated with the rail company.

If work activities are planned near a rail line (greater than 25 feet), the following procedures will be implemented:

The hazards of working near railroad lines will be included in job briefings prior to commencing work and when the activity changes.

Mounting, dismounting, or crossing over moving locomotives or cars is prohibited.

Employees will be alert for the movement of cars, locomotives, or equipment at any time, in either direction, on any track and will remain at least 25 feet (8 meters) from the end of standing cars, equipment, or locomotives, except when proper protection is provided (e.g., a flagman is present or the track is taken out of service by the proper authority, prior to starting any work on or about the tracks).

Employees will not take refuge under any car, equipment, or locomotive.

Please refer to SPI 33–Tool and Equipment Safety for additional information. Consult with your local HSSC for any additional requirements.

B17–Traffic Management–If Ramboll employees are required to conduct work within an active public roadway, the appropriate entity–local, state, federal–responsible for the roadway must be contacted. Specialized permits may be required in addition to retention of specialized traffic management contractors. Various degrees of barrier protection may be required based on site-specific traffic conditions.

In addition to and in the absence of local traffic management requirements, Ramboll employees will take the appropriate steps to protect the worksite from interference with traffic/pedestrians and vice versa. The following measures for safe coexistence of traffic and employees shall be considered:

Alternative walkways where possible;

Use of an air horn to alert drivers or other workers;

Maintain good housekeeping and clean the areas as work is completes;

Use the buddy system while performing work;

Use a spotter for backing, tight maneuvers and equipment/tank/bin drop-offs;

Use traffic control devices, field vehicles and barricades;

Park all vehicles (with wheels in a safe direction away from fieldwork) to block traffic with a flashing yellow light. Also, park so that access to the vehicle is away from oncoming traffic while working;

When parking a vehicle and equipment, utilize a 'first move forward' driving practice;

Work in an upright position, facing traffic when possible;

Make eye contact with vehicle drivers so that they can recognize your presence;

Minimize work time in traffic through scheduling, and;

Establish a 'stop work' hand signal.

If controls have been reviewed and upgraded but the situation with speeding vehicles is still unsatisfactory, request additional assistance from the local Police department.

Please refer to SPI 33–Tool and Equipment Safety for additional information. Consult with your local HSSC for any additional requirements.

B18-Heavy Machinery/Drilling Rigs–Working near operating equipment (e.g., drill rigs, heavy machinery, excavating equipment, power tools, pumps, etc.) poses unique safety situations such as high-pressure hazards from hoses and pipes, overhead hazards, and material releases. Also, other hazards may be present such as falls from elevation, electrical contact and improper machine guarding. Ramboll employees shall only operate equipment they are trained to operate and that is equipped with appropriate protection devices. For equipment operated by subcontractors, Ramboll employees shall familiarize themselves with the equipment being utilized, and shall, at a minimum, know how to stop or turn off the equipment in the event of an emergency. Ramboll employees do not operate drilling or other heavy equipment, however, it is every employee's responsibility to recognize safe, appropriate use and be familiar with all potential and/or existing hazards related to the use of operating equipment. In the event of unsafe work practices by facility employees, subcontractors,

and/or other Ramboll employees, all Ramboll employees have stop work authority for any unsafe operations.

Certain scopes of work conducted during Ramboll projects, require the use of heavy equipment (e.g., excavators, loaders, cranes, etc.) that must be subcontracted with a qualified subcontractor. Ramboll employees should, under no circumstances, operate or ride on heavy equipment. Site employees will don high visibility vests and maintain a safe distance of at least 20 feet (6.1 meters) from all heavy equipment in operation. If the equipment has a mast or an arm characteristic of a drill rig, crane, or excavator, a safe distance is approximately one and a half times the height of the equipment. If activities warrant closer proximities to operating equipment employees will discuss this need and safe procedures for approach with the equipment operator in advance of the start of work. Prior to approach, personal shall make eye contact with the operator and ensure that the equipment is powered down, or at a minimum, in a resting position. A second Ramboll employee will stand watch to keep him/her out of the path of equipment while performing the required activity. Further, employees shall keep a minimum distance of 3 feet from an open drill hole, excavation, mud pit, or any other opening. Ramboll employees will not place tools, meters, etc. in a position that could create a fall, trip or slip hazard. As much as is possible, employees will work with the appropriate site employees to ensure the area near the operating equipment is clean, orderly and free of slip, trip and fall hazards. The following procedures should be followed when heavy equipment is in use:

Use common sense. Do no assume that the equipment operator is keeping track of your whereabouts. Never walk directly behind, or to the side of, heavy equipment without advance discussion and agreed upon procedures, the operator's knowledge, eye contact and acknowledgement.

All heavy equipment must be shut down during refueling.

Maintain visual contact of moving equipment at all times.

Establish hand signal communication prior to the start of work in circumstances when verbal communication is difficult. This mode of communication should be discussed at the start of each work day during the health and safety tailgate meeting.

All heavy equipment shall have backup alarms of some type.

Use chains, hoist, straps, and any other equipment to safely aid in moving heavy materials.

Be sure that no underground or overhead power lines, sewer lines, gas lines, or telephone lines, will present a hazard in the work area. Specifically note overhead hazards in the area where equipment will need to mobilize across the site from the site entrance to the work area.

Restrict all non-essential people from of the work area. If observation by non-essential third parties (e.g., the client, facility personnel, stakeholders) is necessary, determine a safe zone outside the active work area and cordon the area in some manner.

Prohibit loose-fitting clothing or loose long hair around moving machinery.

Instruct equipment operators to report any abnormalities such as equipment failures, unusual odors, etc.

Store tools in clean, secure areas so that they will not be damaged, lost or stolen.

When an equipment operator must negotiate in tight quarters, request that the subcontractor provide a second person to ensure adequate clearance. Ramboll employees shall not provide specific direction as to how to operate equipment–it is the responsibility of the subcontractor.

All heavy equipment must be properly leveled and supported prior to use.

When heavy equipment is utilized inside a building, precautions must be taken to ensure that there is appropriate ventilation and exhaust is vented to the outside.

Heavy equipment and trucks will be operated in specific site control zones and marked traffic lanes.

Materials, tools, or other objects will not be thrown, tossed or dropped. Always hand off or lower items as needed.

Employee Restrictions and Responsibilities

Under no circumstances will a Ramboll employee operate a heavy machinery, a portion thereof, or any other piece of contractor or facility equipment.

In addition, Ramboll employees will not:

Direct equipment operator to a work location, provide specific guidance to subcontractor with respect to the operation of the equipment, assist in the movement of equipment or participate in the movement or breaking down of any portion of the equipment.

Climb on the equipment.

Watch a subcontractor arc-weld.

Smoke while at the work site.

Refuel an engine while it is still running or hot, siphon gasoline or park near equipment exhaust.

Wear loose fitting clothing or PPE near operating equipment.

B19-Trenching/Excavation–An excavation is any manmade cut, cavity, trench, or depression in the ground surface, formed by earth removal. A trench is narrow excavation (in relation to its length) made below the surface of the ground. The following safe operating guidelines apply to open trenches or excavations exceeding four (4) feet (1.3 meters) in depth **or** of any depth if unstable soil conditions exist.

Excavations and trenches present a heightened risk on Ramboll projects. In addition to the heavy equipment hazards discussed in control B18, trenches and excavation create hazards associated with confined spaces, dangerous gas build up, unstable soil conditions, water retention, etc. For these reasons, excavation and trenching work shall only be performed by competent contractors training in the health and safety requirement associated with this type of work, in accordance with corporate standards and local/region regulations. When excavation/trenching work in managed by Ramboll employees under a direct subcontractor, additional health and safety planning should be performed in conjunction with the subcontractor to ensure all HS requirements are satisfied.

Regardless of the management of the excavation or trenching work, Ramboll employees working on projects where this type of work is being performed shall have an awareness level of training on the topic and ensure best practices are followed, including but not limited to:

Excavated materials will be stored and retained at least 2 feet (0.6 meters) from the edge of the excavation. This procedure must be observed even when excavation/trench entry will not occur. The location for staging soil shall be determined by Ramboll employees, the subcontractor, and facility personnel, if applicable, in advance of the start of work.

Trees, boulders, and other surface encumbrances that create a hazard will be removed or made safe before the start of work.

Special precautions will be taken in sloping or shoring the sides of excavations adjacent to a previously backfilled excavation.

Except in hard rock, excavations below the level of the base of the footing of any foundation or retaining wall will not be permitted, unless the wall is underpinned and all other precautions have been taken to ensure the stability of the adjacent walls. Please consult directly with the project PM, PO, local HSSC, and the Corporate Director of HSS when planned excavations potentially threaten the integrity of any structures.

Excavations will be inspected at least daily, or more often as conditions warrant, by a **competent person** (i.e., the subcontractor in coordinator with the Ramboll site supervisor) to ensure that changes in temperature, precipitation, shallow groundwater, overburden, nearby building weight, vibrations, or nearby equipment operation has not caused weakening of sides, faces and flows. Without proper training in confined space entry, Ramboll employees shall not enter any excavation greater than four (4) feet (1.3 meters) in depth (or less if soil is deemed unstable by a competent person). If a Ramboll employee is properly trained in confined space entry and has project-specific approval from the Corporate Director of HSS prior to entry, the atmosphere of the excavation must be tested to ensure that an oxygen deficient or hazardous atmosphere does not exist. If, at any time, the concentration of any airborne contaminant exceeds one-half its permissible exposure limit (PEL), or other applicable occupational exposure limit (OEL), the airborne oxygen concentration is less than 19.5 percent, or explosivity exceeds ten percent of the lower explosive limit (LEL), employees shall not be permitted to enter the excavation. Engineering controls or other hazard controls (i.e., upgraded PPE) shall be instituted to eliminate or control the hazard.

Field employees shall not enter any excavation, greater than 4 feet in depth, without specific direction, for any reason. If employees fall into the excavation and require rescue, properly trained emergency personnel shall be contacted for support.

Ramboll employees shall not operate trenching or excavation equipment. However, prior to start of work, the subcontractors shall direct Ramboll staff to the emergency stop for all equipment.

Ramboll employees directing subcontractors conducting trenching/excavation activities shall request, at the subcontracting stage, if possible, the following safe work practices:

When mobile equipment is used or allowed adjacent to excavations, stop logs, or barricades will be installed. The grade will always be away from the excavation. Construction of such features shall be the responsibility of the subcontractor.

A means of egress (ladder, ramps, stairways, etc.) shall be accessible at any location inside the excavation without requiring more than 25 feet (8.3 meters) of lateral travel distance.

Dust conditions during excavation will be kept to a minimum. Wetting agents shall be used when appropriate.

Diversion ditches, dikes, or other suitable means will be used to prevent water from entering an excavation and for drainage of the excavation. Construction of such features shall be the responsibility of the subcontractor.

All excavations will be marked and protected at all times to ensure site employees, visitors, or unauthorized employees do not enter without permission or fall into the trench.

Employees will work in pairs when working around an excavation of 2 feet (0.6 meters) or more.

In the event of unsafe work practices by facility personnel, subcontractors, and/or other Ramboll employees, all Ramboll employees have stop work authority for any unsafe operations. For more information, please refer to SPI 11–Trenching and Excavation Awareness. Consult with your local HSSC for any additional requirements.

B20-Vehicle Use–Work areas and site conditions must be considered when designating and selecting a vehicle for use (i.e., rental or company-owned). The vehicle shall be maintained in safe working order as required by the manufacturer. This would include a routine preventive maintenance schedule for servicing and checking of safety-related equipment. Special consideration should be taken when weather conditions reduce the safety and visibility while driving. Appropriate measures should be taken while driving during inclement weather including snow, icy and/or wet conditions; high winds; hail, heavy rains; debris or other impairments to safe driving caused by natural weather.

Special-use vehicles (e.g., All-Terrain Vehicles (ATV), snowmobiles, etc.) are vehicles with a light engine or electric motor, other than construction equipment, and are not intended and/or allowed for highway use. These vehicles may not have seat belts and **do not** meet substantial roll over protection standards (ROPS).

When operating vehicles, the following general practices will be followed:

All vehicles will be operated in accordance with the manufacturer's requirements and specifications.

Drivers should use prudent judgment and proceed cautiously when driving on non-paved roads. If using a rental car, ensure that the rental agreement allows driving on non-paved roads.

Drivers will adhere to all site, local and state traffic laws including, but not limited to use of a hands-free device when speaking on a mobile phone. TEXTING WHILE DRIVING ANY VEHICLE IS STRICTLY PROHIBITED.

Operators of special-use vehicles shall be trained by a competent person–senior Ramboll employees or otherwise. At a minimum, the training will be hands-on, and the operator shall demonstrate basic skills prior to the conclusion of the training exercise. All individuals are required meet all training aspects before vehicle operation. This training shall be documented with the local HSSC prior to the start of work.

Vehicles shall always remain on flat surfaces and shall not be operated on slopes steeper than a 30 percent grade;

Daily inspections of vehicles for safety and maintenance will be required (i.e., fluid leaks/levels, tire pressure, tire surfaces, lights, fuel levels, brakes, etc.).

Speed limits shall be maintained relative to legal requirements, safe operating speeds for the vehicle and in compliance with any facility-specific directives.

Make sure the engine is turned OFF before dismounting the vehicle.

Avoid driving over any extreme obstacles (i.e. wood/logs, fences, boulders, etc.).

Operation is limited to the daylight hours, if possible.

Do not carry passengers.

Slow down before coming to a stop.

Shut engine down prior to refueling.

Each driver will have a valid driver’s license.

For more information, please refer to SPI 40–Driving Safety. Consult with your local HSSC for any additional requirements.

B21-Water On/Near Water–Certain scopes of work conducted during Ramboll projects, require work on, over, or near water. All employees and visitors must wear a United States Coast Guard (USCG) approved personal floatation device (PFD), or location-specific equivalent, when near water (i.e., within 4 feet/1.22 meter), over water, wading in water or on any vessel, where the danger of drowning exists. This PFD must be properly secured to the wearer, free of all defects including rips, tears, stress, and fading, and be kept clean and free of excessive dirt and oil. Several factors are relevant to determining whether a danger of drowning exists. These include the type of water body (i.e., a pool, a river, and a canal), depth, presence, or absence of a current, height above the water surface, the use of fall protection when working above a water body, and other site-specific/work-specific factors. Prior to the start of work, the contemplated scope of work shall be discussed with the PM, PO, and local HSSC to determine appropriate controls.

Depending on the factors present, there are some circumstances where a drowning hazard could exist where workers are near or over water that is relatively shallow (i.e., less than 2 feet/0.6 meters) in depth. For example, where workers are not using fall protection and are 10 feet above a river, a worker may fall and be knocked unconscious. Without the use of a life jacket or buoyant work vest, a worker in such a scenario could drown.

A life ring equipped with 90 feet of solid braid polycarbonate line, or equivalent must be close to the working area and accessible for use. This includes activities on board all vessels.

USCG boating safety guidelines or equivalent should be adhered to when operating a boat during sampling activities. Boats must be equipped with the required running lights for night-time and/or, country-specific poor visibility conditions. Boats must be equipped with an anchor and alternate means of locomotion (e.g., extra motor, floatable oars).

All water work shall be performed by at least a two-person team. Both people shall be equipped with the proper safety gear and capable of readily summoning emergency rescue if needed. Ramboll employees are prohibited from working in or near water by themselves.

At least one lifesaving rescue vessel (e.g., a skiff) shall be immediately available at locations where employees are working over, in, on or adjacent to water where the danger of drowning exists. The need to have a rescue vessel "immediately available" for use is dependent upon a number of factors, including but not limited to:

The number of work locations operating;

The distance to each of those locations;

Water temperature;

Currents, and;

Other hazards such as, but not limited to, rapids, dams, and water intakes.

In general, if the water is so shallow that rescuers could simply run into the water body without endangering themselves and/or others or the work was being conducted very close to shore (e.g., the length of the skiff from shore would be greater than the working distance from shore and/or the skiff would foul on the bottom anyway), a skiff would not be required.

All work aboard a vessel shall be performed by at least a two-person team. If work is performed at times when water temperatures are less than 38 F (3-4 C), it is recommended, but not mandatory,

that sampling employees wear float coats. The vessel should be operated only by designated, experienced staff.

For additional information, please refer to SPI 31–Water Safety. Consult with your local HSSC for any additional requirements.

B22–Working from Heights (Less than 4 feet [1.2m])–Fall protection is not required for work conducted at heights less than 4 feet above ground level. However, when the potential for work at varying heights exists, or the potential that implementation of the scope of work may increase the height at which work is being conducted (e.g., excavation/trenching), hazards associated with work at heights should be considered. Further, a mechanism for monitoring and documenting the potential changing conditions and a contingency plan for controlling potential hazards should be included in the site-specific HASP.

In the event that unanticipated conditions resulting in work at heights greater than 4 feet (1.2 m) are encountered during implementation of the scope of work, site work should be stopped immediately and the Ramboll site supervisor shall contact the project PM, PO, and/or local HSSC.

Work up to four feet (1.2 meters) in height presents an increased risk of slips, trips, and falls and an increased severity of injury. Working off the back of a pick up or sport utility vehicle is a common low height situation encountered in the field. When ascending and descending a truck bed, dock or other raised structure implement best work practices like two-person teams and safe, deliberate movements.

For additional information, please refer to SPI 10–Fall Protection and SPI 26-Scaffolding. Consult with your local HSSC for any additional requirements.

B23–Working from Heights (Greater than 4 feet (1.2m)) increased risk is presented when Ramboll employees work from heights greater than 4 feet (1.2m) and an increased awareness and frequent assessment of changing work conditions is expected. Work from height greater than six feet (1.8m) requires additional fall protection requirements, potentially fall prevention devices and PPE, and additional HS training. Since the height of the work required for many projects may vary (e.g., work near and around excavations), Ramboll employees must evaluate the need to fall protection controls when work is conducted at heights greater than 4 feet (1.2m).

The best fall protection control is to eliminate the hazard using engineering controls or modification of the scope of work. However, at times hazards are identified during project work or develop because of changing site conditions. If dangerous or unexpected work conditions are identified, site work should be stopped immediately and the Ramboll site supervisor shall contact the project PM, PO, and/or local HSSC and the appropriate controls shall be implemented before work begins again.

In general, due to the tasks included in the scope of work, the hazards associated with working at heights can be anticipated in advance and depending on the objectives of the work, cannot be avoided. Hazard controls shall be documented in the site-specific HASP. At a minimum, the HASP shall include the hazards and risks associated with working at heights and control methods and will detail the required steps for protecting employees from fall hazards. Fall protection includes but is not limited to personal fall arrest systems consisting of a full body harness, a lifeline, and an attachment point. HS department notification and additional training is required for job tasks that involve fall protection equipment (i.e., body harness and lifeline, etc.).

Ramboll will provide training to ensure that the purpose, function, and proper use of fall protection is understood by employees and that the knowledge and skills required for the safe application, and usage is acquired by employees. Training will be conducted prior to job assignment and will include, as

a minimum the types of fall protection equipment appropriate for use; recognition of applicable fall hazards associated with the work location and the work to be completed; and load determination and balancing requirements. All other employees whose work operations are or may be in an area where fall protection devices may be utilized, will be instructed to an awareness level concerning hazards associated with fall protection operations.

For additional information, please refer to SPI 10–Fall Protection and SPI 26-Scaffolding. Consult with your local HSSC for any additional requirements.

B24–Overhead/Underground Utilities–Various forms of underground and overhead utility lines, pipes (carrying water, wastewater, gas, electricity, and/or communication lines), or other hazards may be encountered during work activities. Every effort shall be made to locate and mark underground utilities, pipes, and other hazards prior to the start of intrusive work. Intrusive work includes any work activity where the work surface is penetrated. At a minimum, Ramboll will conduct a historical site review to develop a plot plan with the most up to date utility information, contact the appropriate One Call service (where available), contract a private utility locating service (where available [REQUIRED IN THE US]), and clear the critical zone around any intrusive location to 5 feet (1.3 meters) in every direction. The measures described herein are required for interior work as well, including, but not limited to sub-slab soil gas probe installation. It is imperative, prior to any utility locating activities conducted by Ramboll employees and/or a subcontractor, that the geology, surface covering (e.g., asphalt, concrete), and other potential interfering factors such as reinforced flooring, the presence of metal in the subsurface are identified and understood. This information must be transmitted to the private locating service in advance of start of work and preferably during the contracting phase so that appropriate locating equipment is selected.

As line voltage increases, your safe working distance will also increase. If overhead lines are present, call the utility company and find out what voltage is on the lines, so the safe working distance can be calculated, or stay at least 28 feet (9m) from cables supported on wooden poles, and 50 feet (15m) from cables supported on metal poles. Work involving machinery with high extensions (drill rigs, backhoes, etc.) will remain at least 10 feet (3.3 meters) from overhead power lines or further depending on the voltage of the line.

Should any operations cause equipment to come into contact with utility lines, the appropriate authority will be notified immediately and an Incident Report consistent with SPI 19–Incident Reporting will be completed. Work will be suspended until the appropriate actions for the situation can be taken.

Please reference Section 6 of the site-specific HASP and SPI 27–Subsurface and Overhead Clearance for additional information. Consult with your local HSSC for any additional requirements.

B25–Electrically Powered Equipment and Tools–Many Ramboll scopes of work require that Ramboll employees and/or its subcontractors utilize electrically powered equipment and tools. To use this equipment safely, ensure that all electrical equipment is properly grounded prior to use. Avoid standing in water when operating electrical equipment. Ground fault outlets or adapters shall be used for any electrical equipment, if possible. Apparatus, tools, equipment, and machinery will not be repaired while in operation; lockout/tagout (LOTO) procedures will be implemented when necessary (See B28–LOTO).

Tools can be hazardous when improperly used since these types of tools utilize energy in the form of electricity, liquid fuel, hydraulics, pneumatics, and/or powder-actuated. The following precautions will be taken by employees to prevent injury:

Power tools will always be operated within their design limitations, and only by employees who have been appropriately trained in the use, operation, and proper handling of such tools.

Guards are not to be removed or rendered inoperative.

Eye protection, gloves, and steel-toed safety footwear are required during operation. Refer to the equipment manuals for guidance and include this information in the site-specific HASP.

Store tools in an appropriate dry location when not in use.

Work only in well illuminated locations.

If power tools will be used to penetrate a ground, parking, floor surface or other surface, Ramboll employees must first evaluate the presence of underground utilities or obstructions.

Tools will not be carried by the cord or hose and cords or hoses will not be yanked to disconnect from the power receptacle.

Cords and hoses will be kept away from heat, oils and sharp edges or any other source that could result in damage.

Tools will be disconnected when not in use, before servicing and when changing accessories such as blades, bits and cutters.

Observers will always be kept at a safe distance from the work area.

Tools will be maintained in a clean manner, and properly maintained in accordance with the manufacturer's guidelines. Pre-use inspection of hand and portable power tools should occur.

Ensure that the work area is kept clean to maintain proper footing and good balance.

Ensure that proper apparel is worn. Loose clothing, ties, or jewelry can become caught in moving parts.

Tools that are damaged will be removed from service immediately and tagged "Do Not Use" until proper repair or disposal.

Please refer to SPI 9–Electrical Safety, SPI 33–Tool and Equipment Safety, and SPI 34–Equipment Grounding. Consult with your local HSSC for any additional requirements.

B26–Cutting Devices and Tools-Cutting devices are a type of hand tool that may frequently be encountered on Ramboll projects. The devices range from household scissors to box cutters and other sharp, exposed blades used to cut materials. Cutting devices should only be used by Ramboll employees when it is an inherent part of their job task, like cutting open packing tape on a box that has been shipped to you for your project. For further example, cutting soil sample liners is a job task generally appointed to our drilling subcontractors and should not be performed by Ramboll employees. If the use of a cutting device is required for a certain task, the safest device available that meets the needs of the job should be used. Safety cutting devices, like the "Klever Kutter" should be the first choice, when they are appropriate for the job. This device is designed to naturally shield the blade from the user. Some other guidance to consider:

Always cut away from the body.

Evaluate the need for work gloves or cut-resistant gloves during the planning stages of the project. Different types of gloves provide varying levels of protection that should be considered during the risk assessment. The materials used to make the gloves and the tensile strength of the weave determine exactly how much pressure can be applied before the fabric fails and cuts through.

Usually the more protective gloves have less dexterity (or ease of movement) for the user, increasing other hazards in the process. A risk assessment should consider all these factors when evaluating PPE.

Please refer to SPI 33 –Tool and Equipment Safety for further information. Consult with your local HSSC for any additional requirements.

B27–Lifting Operations-Ramboll will ensure that all potential hazards regarding rigging and material lifting in our job sites are properly evaluated; however, Ramboll does not intend to provide employees with the knowledge/skill/ training to erect and/or dismantle rigging and/or material lifting equipment. The site-specific HASP should include provide documentation of the factors involved when rigging and material equipment is used by our direct subcontractors. In general, all scaffolds, rigging, and material lifting equipment must be erected and dismantled by a qualified and competent 3rd party contractor.

For lifting operations, even those conducted by a contractor, Ramboll employees shall be aware of proper procedures and observe the following precautions:

Store materials and equipment in designated areas to avoid creating additional hazards (e.g., block exits and/or unstable storage). Properly demarcate areas where materials and/or equipment may be placed, loaded or unloaded by adequate guarding and posting.

Safely arrange materials and equipment to prevent tipping, falling, collapsing, rolling (i.e., properly stack, secure and/or stabilize items by interlocking, strapping or securing by an effective method to protect persons and property from potential injury and/or damage).

Ensure that storage areas are kept free from accumulation of materials that constitute hazards from tripping, fire, explosion, or pest harborage. Vegetation control must be exercised when necessary.

Manual lifting and handling of material must be done by methods that ensure the safety of both the employee, the material, and the structure. Tag lines may be used to stabilize loads unless their use creates an unsafe condition.

Employees are prohibited from walking and/or working under loads that are about to be lifted and/or are suspended.

Wear required employee protective equipment as applicable, including, but not limited to a hard hat to protect against overhead hazards. See B15–Overhead Hazards for additional control information.

Please refer to SPI 37–Rigging and Material Lifting for further information. Consult with your local HSSC for any additional requirements.

B28–Lock Out/Tag Out (LOTO)-LOTO applies to the control of energy during servicing and/or maintenance of machines and equipment. In general, Ramboll employees will not be authorized to perform LOTO job tasks unless additional training has been provided and employees are considered competent in that task. Where applicable, Ramboll will establish a program and utilize procedures for affixing appropriate LOTO devices to energy isolating devices, and to otherwise disable machines or equipment to prevent unexpected energization, start-up or release of stored energy to prevent injury to employees. Any LOTO procedure will be clearly identified and will be incorporated into the site-specific HASP. Ramboll will ensure that all equipment and machinery meeting the criteria for LOTO that are part of the work activities are evaluated, and that information and training programs, and LOTO procedures are implemented.

LOTO requirements do not apply to minor tool changes and adjustments, and other minor servicing activities, which take place during normal production operations if they are routine, repetitive, and

integral to the use of the equipment for production. This exception is appropriate provided that the work is performed using alternative measures which provide effective protection in accordance with the site-specific HASP and equipment manual recommended procedures.

Please refer to SPI 20–Control of Hazardous Energy Sources (Lockout/Tagout) for further information. Consult with your local HSSC for any additional requirements.

B29 –Material Handling/Ergonomics–Lifting, carrying and lowering objects represent a potential physical hazard to Ramboll employees. Therefore, it is every employee's responsibility to realistically evaluate the object to determine if the weight and size exceeds the employee's ability to lift, lower or carry it. To eliminate or minimize the risk of lifting hazards, utilize proper techniques, such as keeping the back straight and legs bent. Objects should always be lifted, lowered and carried as close to the body as possible. If the equipment cannot be lifted in this manner, it is too heavy to lift alone. Call other employee or use a mechanical device for aid in lifting. Mechanical aids, like hand trucks and carts, or the buddy system should be used to move heavy objects, objects with poor handgrips, or large bulky objects. Some other things to consider:

Evaluate the object for the presence of any physical hazards such as pinch points, sharp or jagged edges, burrs or rough and slippery surfaces.

The route in which the object will be moved should be free from obstructions, which could cause difficulty in moving the object.

Asses other hazards such as stairs before you move the object and consider smaller loads with multiple trips as a safe alternative

If an object is stored at a level higher than five feet, or on the floor, an appropriate mechanical device may be necessary to move the object.

Recognized lifting hazards should be designed out of the work process whenever possible.

Seek help when handling loads that are too bulky to grasp or lift, when employees cannot see around or over a load, or when they cannot safely handle a load for any other reason.

Consider the use of PPE, such as gloves and forearm protection, when appropriate.

Proper lifting and lowering techniques should be followed even if the object or material to be lifted is of lighter weight. Keep the objects as close to the body as possible and:

Establish a firm footing with feet at approximately shoulder width and one foot slightly ahead of the other. This posture will aid in keeping good balance and will establish a stable lifting base.

Always bend at the knees, not at the waist when lifting or lowering an object.

Obtain a good secure grip on the object.

When beginning to lift, tighten your stomach muscles and use your legs to lift the object, as leg muscles are generally stronger than back muscles.

Lift slowly and smoothly.

If you need to turn as you lift, **do not twist** at the waist, but instead pivot with the feet. When lowering the object, reverse the procedure.

When possible, conduct lifting activities over a period with adequate rest breaks. If material handling must take place over a short period of time, use mechanical means and/or the buddy system.

When it is necessary to move heavy and/or bulky objects, a non-powered hand truck should be used whenever possible. Some things to consider are:

Keep the center of gravity of the load as low as possible, and place heavy objects below lighter ones.

Place loads where the weight of the load will be carried by the axle, not the handles, and where it will not slip, shift of fall during movement.

Load only to height to allow a clear view ahead. Only walk backwards with a hand truck in specific instances such as when going up an incline.

When going down an incline the hand truck should be in front of the operator and when going up an incline, it should be downhill from the operator.

Move the hand truck at a safe speed.

Please refer to SPI 44–Occupational Ergonomics for additional information. Consult with your local HSSC for any additional requirements.

B30–SIMOPS (Simultaneous Operations)-SIMOPS are one or more activities or work taking place at the same time, with the potential to affect one another. The operations must be occurring within significant proximity to each other that they create new or additional hazards. The Designated Site Supervisor will be responsible for determining when SIMOPS are present on a Ramboll work site and coordinating safe work for all activities.

SIMOPS shall be identified on the site-specific HASP/RA and appropriate mitigation/hazard controls shall be identified and implemented to eliminate or minimize risks through the hierarchy of controls:

Eliminating SIMOPS via scheduling or permitting;

Substituting work processes with less hazardous processes;

Separating SIMOPS by distance, barricade, signage, isolation or engineering controls; and/or

Implementing other controls such as training, communication, PPE and Stop Work authority.

Planning, scheduling, communication, and cooperation are essential for safe and effective SIMOPS on Ramboll work sites and should be documented in the site-specific HASP/RA. A communication plan should be established between each work group to include coordination meetings prior to projects where multiple operations are scheduled and the appropriate response if an unexpected event occurs.

B31–Bloodborne Pathogens–In general, Ramboll must determine which employee(s) have a potential occupational exposure to bloodborne pathogens and establish an exposure control plan. Ramboll currently does not have employees that have a continuous potential for occupational exposures to bloodborne pathogens; however, during the implementation of Ramboll scopes of work, there is potential for injury and the potential for employees to respond and all employees approved to conduct field work are required to complete first aid or country-equivalent training. Procedures in which a potential for occupational exposure may occur without regard to the use of PPE include, but are not limited to, basic first aid treatment and Cardio Pulmonary Resuscitation (CPR).

The best method for ensuring the health of the employees at risk is to understand and follow the concept of Universal Precautions. This concept refers to the assumption that all blood and bodily fluids are contaminated with pathogens. Universal Precautions shall be observed by all Ramboll employees. Universal precautions shall be observed to prevent contact with blood or other potentially infectious materials. When differentiation between body fluid types is difficult or impossible, all body fluids shall be considered potentially infectious materials.

Engineering and work practice controls shall be used to eliminate or minimize employee exposure. Where occupational exposure remains after institution of these controls, PPE shall also be used. Hand washing is a primary work practice control. If this is not available or feasible, then alternative methods, such as antiseptic hand cleaners, in conjunction with clean cloths or paper towels, or antiseptic towels will be provided. When these alternative methods are used, employees shall wash their hands (or other affected areas) with soap and running water as soon as feasible thereafter. Ramboll will provide hand washing facilities or alternative methods which will be readily accessible to employees. Additional considerations include the following:

Eating, drinking, smoking, etc. are prohibited in first-aid and restroom areas where there is reasonable likelihood of occupational exposure.

Employees should don appropriate personal protective equipment prior to performing any first aid to ensure that they will not contact blood. Each office will maintain the appropriate personal protective equipment with the first aid supplies. This equipment should include impervious gloves and mouth shields. Gloves worn should be compatible with cleaning and disinfection solutions used.

In any circumstance where there is a potential exposure to bloodborne pathogens by a Ramboll employee or its subcontractors, an Incident Report must be filed in a timely manner in accordance with SPI 19–Incident Reporting.

Please refer to SPI 4–Medical and First Aid Program and SPI 20–Bloodborne Pathogens for additional information. Consult with your local HSSC for any additional requirements.

B32 –Plants and Animals–Care will be taken by all site workers to avoid poisonous plants, animals, and/or stinging or biting insects such as ticks, mosquitos, spiders, bees, wasps, hornets, and yellow jackets. Workers allergic to any plant, animal exposure, or insect sting or bite should notify the local HSSC and all site employees (including facility and subcontractor personnel) prior to start of work. If stung, bitten, or otherwise exposed to an allergen, the affected person shall utilize emergency medicine, if prescribed by their doctor, and seek emergency support when appropriate.

The first step in controlling the risks presented by certain plants and animals is thorough field preparations, including but not limited to the following:

Research local species that are present or active in your area

Identify important information to aid in identification and plan for appropriate control mechanisms

Document hazards in your field-specific project plan (i.e. HASP, HSP or RA) and communicate with field employees

Follow the hierarchy of controls to reduce risks, which we will discuss later in this lesson

Identify first aid treatments and emergency protocols

Animals and insects that pose a threat to human safety vary greatly by region and local environment. Furthermore, the level of threat they pose varies greatly by species and situation. Some animals only pose nuisance threats while others can be life threatening. Of those animals that can be harmful to humans, few will outright attack unless they feel threatened or are protecting their young. Therefore, it is very important to evaluate each situation where animals can be encountered individually to assess the risk.

The hazards posed by poisonous plants are different because plants are stationary. Once properly identified, harmful species can typically be removed or cordoned off, so employees do not encounter

them. But be cautious! If poisonous plants are identified in one area of the site, it's likely they may be in others as well.

Before you travel to a site to perform field work, perform your due diligence by identifying the plants and animals that may pose a threat in that area. This information can be conducted through internet research but be sure to consider only reputable sources and cross-reference important information. Field guides from various sources, including Peterson and Oxford, provide valuable information on a wide variety of plant and animal hazards. Some guides are specific to a certain geographical location. These guides are a great resource for local staff; share them when possible! Finally, many local regional agencies supply information on dangerous plants and animals in their area.

Even though you may be familiar with the plants and animals in your area, you might not be as familiar with things in another region of your country, another country, or even another continent! So, when traveling to different areas for your projects it is prudent to consult with:

Site contact (client, maintenance staff, etc.)

Ramboll employees who have previously been on-site

Ramboll employees who are local to the region

Local and regional wildlife agencies

Reputable field guides

Document important species-specific information to the site HASP/HSP/RA or other site-specific plan. Keeping track of this information will help everyone on the project to identify and control plant and animal hazards. It will also be useful as a quick guide in the event of a field encounter. Further, this information should be used during daily HS meetings to keep employees aware and informed of site risks. Consider providing the following:

Names of species

Photographs of the animals/plants discussed

Indicators of animal/plant presence

Measures of what to do if animals/plants are encountered

Controls and safe work practices, which will be discussed next

First aid measures

Please refer to SPI 28–Plants and Animals for additional information. For species-specific information and first aid procedures, including information on tick removal and first aid, refer to Appendix D First Aid Guidance. If first aid is required for any encounter with a poisonous plant, insect, or animal, an incident report, consistent with SPI 19–Incident Reporting, must be completed. Consult with your local HSSC for any additional requirements.

B33–Job Safety–If it is deemed that a work site is in an area where Ramboll employees and/or the job site may be at risk from potential criminal acts, wild animals, etc. the risks will be evaluated, and implementation of site-specific preventative measures will be taken to minimize the risk. Consideration shall also be given to security for equipment left on-site. For example, if Ramboll installed a remediation system on an isolated client site, it is prudent, at a minimum, to plan for site and equipment security with fencing and locking devices on any valves.

Informational resources such as the client, local law enforcement officials, Park or Wildlife Service, and Animal Control could be utilized to assess the risk and to ensure the safest possible work environment. For example, local law enforcement can be made present or make frequent patrols in the area while work is being done, outside security can be hired, and work can occur only during certain times of the day. It is also possible that after initial risk evaluation, the PM, PO, local HSSC and/or the Corporate Director of HSS may determine that work may not proceed at all.

B34–Personal Safety–If it is deemed that a work site is in an area where an employee's personal safety may be at risk from working in an isolated area, working early/late, or in areas of limited cell phone service, the risks will be evaluated, and implementation of site-specific preventative measures will be taken to minimize the risk. Informational resources such as the client and local law enforcement officials, could be utilized to assess the risk and to ensure the safest possible work environment. For example, when working early/late, or in areas of limited cell phone service, local law enforcement can be made present or make frequent patrols in the area while work is being done or check in with on-site client representatives may be arranged. It is also possible that after initial risk evaluation, the PM, PO, local HSSC and/or the Corporate Director of HSS may determine that work may not proceed at all. Some general guidelines are provided here, but each situation is different, and actions must be taken based on the specifics of each.

In areas of risk, employees will communicate via cell phones or 2-way radios and will check-in at predetermined times throughout each workday. The communication schedule and the responsible parties shall be clearly documented in the site-specific HASP. See SPI 42 Working Alone for additional information.

B35-Working Alone–Further personal safety risk evaluation is warranted when working alone. Ramboll considers employees to be working alone when they cannot be seen or heard by another worker, and/or where assistance is not readily available in the event of an injury, illness or emergency. Whenever possible, employees will not work alone in isolated areas or under extreme conditions. If conducting high risk activities, such as confined space entry, electrical system work or work involving the use of respirators, work may not be performed alone. If the isolated area work involves hiking/walking into areas that are unmarked, or if there is potential to become directionally disoriented (e.g., no trails, unmarked trails, forested or highly vegetated areas), employees will be trained on the use of a compass and trail/topography maps. If necessary, Ramboll employees will complete wilderness safety training. The employee will work with the Park/Wildlife service in advance to determine what emergency planning is necessary to prepare to complete the proposed scope of work including scenarios such as unexpected weather, animal attack, and search/rescue.

Communicating through cell phones or 2-Way Radios will be utilized whenever possible. Employees will check-in at predetermined times throughout each workday and if the risk rating increases, employees will check-in more frequently. If employees do not call in to the PM, or designated representative, the employee will be contacted. If contacting the employee is unsuccessful, the appropriate authorities will be notified. In addition, the planned start and estimated finish times for each work day will be communicated by the site supervisor to the PM, or designated representative, and employees will check in at the beginning and end of the work day. If employees will be moving from isolated area to isolated area, there will be established beginning and ending locations, planned start and estimated finish times, and planned routes that will be followed throughout the day. Employees will not deviate from this schedule without first contacting the appropriate employees. It may also be necessary to notify the client, law enforcement, or Park/Wildlife officials of these schedules.

The communication schedule and the responsible parties shall be clearly documented in the site-specific HASP.

Please refer to SPI 42–Working Alone for additional information. Consult with your local HSSC for any additional requirements.

B36–Seasonal Hunting and Dangerous Wildlife–When planning to complete a scope of work in an isolated and/or wooded area, seasonal hunting hazards should be considered. Contact the client, local law enforcement, and/or Park/Wildlife officials to evaluate this risk. During recreational hunting seasons, field employees will wear appropriate clothing, such as fluorescent orange high visibility vests, to enhance visibility to potential hunters and not blend in with the landscape. Field employees should also use whistles, air horns and/or other means to make their presence known to hunters and wildlife alike. The schedule of the hunting season, if applicable, will be included as an addendum to the site-specific HASP to inform employees of the type of game (e.g., deer, pheasant, duck, etc.) that is being hunted and the type of weapon being used (e.g., bow & arrow, shot gun, single shot rifle, etc.). Be aware that even if "No Trespassing" and/or "No Hunting Allowed" signs are posted, trespassers and/or hunting may still be on-going in the work area. At no point should field employees or contractors confront trespassers.

Local authorities should be contacted about any hunting season that may be in session, and if it is possible that hunters may be present in the area in which Ramboll employees will be working. If so, employees will wear brightly colored hardhats/hats and reflective vests, will not work before dawn. Work will end 30 minutes before dusk.

If you see wild animals while driving, stay in your vehicle. Never get out for a photo or a closer look. Keep windows up and do not try to keep the animal from crossing a road with your vehicle. If you see a wild animal while on foot, never approach the animal. If the animal has not seen you, go back the way you came. Do NOT turn your back and run which could evoke their natural predator instinct. Instead, keep facing the animal and back away at a steady pace. If you are near a car or building, get inside. In addition, in areas of higher risk (i.e., contacted officials have indicated that wild animals are a nuisance), employees may want to consider carrying "pepper spray".

If, while on the project site, and despite any precautions set forth, if an employee feels that their personal safety is at risk, they shall cease work, leave the work area and immediately report their concerns to the project PM, PO and local HSSC so that appropriate steps can be taken.

Please refer to SPI 28–Plants and Animals for additional information. Consult with your local HSSC for any additional requirements.

APPENDIX C
SUBSURFACE CLEARANCE FIELD CHECKLIST

SUBSURFACE CLEARANCE (SSC) FIELD CHECK LIST

(Use this form to document & identify field elements of SSC. Retain the completed form with the project file)

Site Name/Project No.: _____ Designated Person: _____

Walkover Date: _____ PIC/PM: _____

Intrusive Locations Surveyed: _____

(RAMBOLL MANAGED SUBSURFACE CLEARANCE ACTIVITIES)	Yes	No	N/A	Comments
1. The potential for unexploded ordnance (UXO) has been assessed and a UXO survey performed, if applicable.	☐	☐	☐	
2. Public utility markings are present for all utility companies notified. List the companies with public utilities present on-site and cross check with expected utilities and on-site indicators:	☐	☐	☐	
Natural gas/oil/petroleum lines and associated tanks:	☐	☐	☐	
Electric:	☐	☐	☐	
Potable water pipes, hydrants:	☐	☐	☐	
Sewers (storm/process water/sanitary) and/or Manways/Grates/Culverts:	☐	☐	☐	
Public lighting (street and traffic):	☐	☐	☐	
Telephone and Data Lines:	☐	☐	☐	
Other underground utilities:	☐	☐	☐	
3. Private utilities marked and scope discussed with/provided to locator	☐	☐	☐	Subcontractor Name: Contact #:
Alternate intrusive locations chosen in case of refusal or presence of utilities/indicators in Critical Zone	☐	☐	☐	
Describe nonconformity or unexpected conditions found by locator	☐	☐	☐	
4. Site Walkover performed to confirm utility markouts and assess the presence of Visual Indicators. If visual indicators are present, note location in comments/Plot Plan:	☐	☐	☐	
Indication of underground storage tank/piping and dispense islands	☐	☐	☐	
Non-native soils, surface depressions, new/dead vegetation	☐	☐	☐	
Saw cuts, patched surfaces, warning tape or other surficial indicators of below ground work	☐	☐	☐	
Pumps, pump galleries, piping manifolds and/or racks, process equipment, compressors, etc.	☐	☐	☐	
On or below-grade transformers	☐	☐	☐	
Fuel oil lines, tanks, fill ports, observation wells, vent stacks, hydraulic lift systems	☐	☐	☐	
Adjacent/supplemental buildings with no apparent utility feeds (electricity, water, gas)	☐	☐	☐	
Other:	☐	☐	☐	
5. Plot Plan updated to reflect most accurate site SSC information. Describe any on-site additions/changes	☐	☐	☐	
6. Ground Disturbance location(s) and Critical Zones (5ft/1.5m distance in every horizontal direction surrounding disturbance locations) cleared of utilities and visual indicators	☐	☐	☐	Contact PIC/PM and H&S Director if utilities pass through the Critical Zone of a planned ground disturbance location
A mark has been placed on each intrusive location and radial marks extending to the edge of the Critical Zone	☐	☐	☐	
Intrusive locations and Critical Zones cleared of utilities using sweep and search method or other applicable SSC investigative methods.	☐	☐	☐	
Once evaluated and cleared of utilities, intrusive locations cannot be moved and a Critical Zone must be maintained around the locations	☐	☐	☐	
Alternative intrusive locations used due to obstructions within Critical Zone. Describe abandoned and alternative locations	☐	☐	☐	
7. Pre-start H&S meeting conducted and SSC risk/hazards discussed	☐	☐	☐	
Locate results and intrusive locations/Critical Zones understood by all parties involved	☐	☐	☐

FIELD PREPARATIONS

The first step in controlling the risks presented by certain plants and animals is thorough field preparations, including but not limited to the following:

Research local species that are present or active in your area

Identify important information to aid in identification and plan for appropriate control mechanisms

Document hazards in your field-specific project plan (i.e. HASP, HSP or RA) and communicate with field employees

Follow the hierarchy of controls to reduce risks, which we'll discuss later in this lesson

Identify first aid treatments and emergency protocols

Animals and insects that pose a threat to human safety vary greatly by region and local environment. Furthermore, the level of threat they pose varies greatly by species and situation. Some animals only pose nuisance threats while others can be life threatening. Of those animals that can be harmful to humans, few will outright attack unless they feel threatened or are protecting their young. Therefore, it is very important to evaluate each situation where animals can be encountered individually to assess the risk.

INSECT BITES AND STINGS

Care will be taken by all site workers to avoid stinging or biting insects such as ticks, spiders, bees, wasps, hornets, and yellow jackets. Workers allergic to any insect sting or bite should seek medical attention if stung or bitten and may need to carry emergency medicine prescribed by their doctor.

Care should always be taken to avoid these insects and increased vigilance is necessary during high infestation seasons, when opening protective casings of monitoring wells, and when walking through areas of heavy vegetation or areas known to be infested.

To minimize the chance of bites/stings:

Wear appropriate PPE such as light-colored clothing so you can see insects, long pants tucked into boots, long sleeves, when possible, a hat, and gloves if you are cutting brush or need to handle or move vegetation.

Check your body and clothing for insects, shower after work and wash/dry clothes at as high a temperature as possible.

Do not swat at insects and do not eat in areas where there are insects.

Avoid sweet smelling personal hygiene products and, unless contraindicated by the work being performed (e.g., sampling, data collection), wear EPA approved repellants such as those containing DEET.

Spider Bites

Spider bites generally cause only localized reactions such as swelling, pain, and redness. However, bites from a Black Widow or Brown Recluse, or if you are allergic to spiders, can cause symptoms that are more serious.

Black Widow Spider

Brown Recluse Spider

1.2.1 First Aid for Spider and Scorpion Bites and Stings

Clean the bite area with soap and water and place a cold pack over the bite area to reduce swelling.

Monitor for allergic reactions. If the victim has more than minor pain or if nausea, vomiting, difficulty breathing, or swallowing occurs: medical attention should be sought immediately. CALL 911.

Ticks

Ticks are common in tropic & temperate regions across the world. They prefer moist areas with dense vegetation/long grass, but they can survive in many places including urban parks and gardens.

Ticks are small and easily overlooked. They vary in size, depending on the species, stage of development, gender, and whether the tick has recently fed. Ticks do not fly or jump but patiently wait for a mammal to pass by and then climb on. They are most active between spring and autumn.

Ticks feed off the blood of mammals, birds, amphibians, and reptiles. However, they are more likely to feed off mammals as they mature from nymphs into adulthood and as adults. Ticks find their hosts by detecting animals´ breath and body odors, body heat, moisture, and vibrations. Some species can even recognize a shadow.

They wait in a position call "questing," resting on the tips of grasses and shrubs. When the host brushes by the tick, it will climb aboard. Some ticks will attach quickly, and others will wander, looking for places like the ear, or other areas where the skin is thinner.

The main hazard associated with ticks is the transmission of disease. The ability of a tick to transmit disease, however, depends on a number of factors:

The type of tick (only certain species carry transmittable diseases)

The region of the world the tick inhabits

The duration of time it is attached to a host

In most cases, tick bites are unlikely to result in a tick-borne illness, especially when removed soon after the bite. For example, the Lyme disease research foundation estimates that only about 2% of all tick bites result in Lyme disease. In addition, in most cases, a tick must be attached for at least 24 hours before disease can be transmitted.

To determine the risk of a tick-borne disease, it is important to research the risk prior to starting field activities. Research should include species of tick(s) local to jobsite and diseases the tick species can carry. Some common tick-borne diseases include:

Bacteria: Lyme disease & Rocky Mountain spotted fever

Viruses: Heartland virus & tick-borne encephalitis virus (TBEV)

Parasites: Babesiosis

Once you are knowledgeable about the hazards and risks presented by ticks at your site you should take as much of the following preventative measures as needed:

Identify potential tick habitats and avoid them when possible

Treat clothes and/or yourself with bug repellent prior to going to the site (check in with PM prior to use)

Tuck and/or tape pants and long sleeves

Wear light colors or Tyvek suits

Clear vegetation if possible

Perform tick checks periodically throughout the day

Perform a thorough tick check at the end of the day.

It is important to conduct regular tick checks throughout the day and at the end of a work shift, since risk of disease transmission is directly related to the length of time a tick is attached. You may not know you have been bitten as ticks can secrete small amounts of saliva with anesthetic properties. Ticks prefer warm, moist places and may look like a freckle or dirt. Nymphs will be harder to spot!

1.2.2 First Aid for Tick Bites

If you are bitten by a tick -

Remove tick as soon as possible using tweezers or a tick removing tool

Grasp the tick as close to skin as possible to grab the head and slowly pull upwards with even pressure. Do not twist or jerk the tick, as mouthparts left behind can cause a local infection

If you are unable to remove the mouthpart, leave it alone and let the skin heal. DO NOT attempt to remove the tick with heat or "painting" the tick with nail polish or petroleum jelly. You should remove the tick as quickly as possible, do not wait for it to detach.

Wash the bite area (soap and water or rubbing alcohol) and apply antiseptic. Monitor the bits spot for several weeks.

Some regions have tools specific to the removal of ticks. Ask your local HSSC if they can get you one.

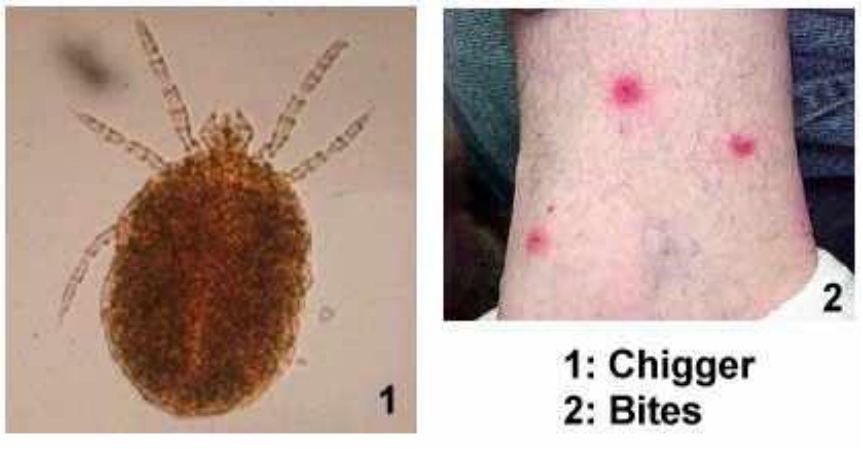
After you remove a tick, monitor the bite area and yourself for several weeks. If you begin to feel unwell (common symptoms of tick-related illnesses are fever/chills, aches and pains, like the flu) or start to develop a red bulls-eye like rash around the bite area, see a doctor immediately.

If you seek or need medical attention, employees are encouraged, when possible, to go to occupational clinics familiar with the hazards and risks that our type of work incurs, as opposed to going to a generic doc-in-the-box or an Emergency Room. In the US, Ramboll's third party medical surveillance partner WorkCare provides an Incident Intervention service that includes a 24 hour help

line and information/access to hundreds of clinics around the US. Employees are encouraged to contact WorkCare with their questions/concerns.

Chiggers

Chiggers are tiny, s-legged wingless organisms that grow up to become a type of mite. They are found in tall grass and weeds and their bites cause severe itching.



1.2.3 First Aid for Chiggers

Reduce discomfort and prevent infection

The affected area should be kept clean by washing with soap and water

A topical hydrocortisone cream, antihistamine, or local anesthetic may be of value in reducing the itching

The wounds should not be scratched, if possible

If signs of infection occur, consult your physician

Bees and Wasps

Bees and wasps belong to the phylum Arthropod family, and they are crucially important to the pollination of plants, specifically flowers, fruits, and vegetables. A sting from a bee or wasp will cause itching, irritation, redness and/or swelling at the sting site.

A small percentage of people are allergic to stings and a sting can be fatal, caused by a disruption to breathing and circulatory systems called anaphylactic shock. If the sting is followed by severe symptoms, seek medical attention immediately. Allergic people should never be alone for outdoor activities since help may be needed for prompt emergency treatment. Allergic people should have an

identification bracelet as well as carry something like an "EpiPen" for immediate treatment for anaphylactic shock.

1.2.4 First Aid for Bee Stings

Remove the stinger as quickly as possible-venom continues to enter the skin from the stinger for 45 to 60 seconds following a sting–using a flat dull object, like a credit card. Slid the flat object in the opposite direction of the stinger to remove it from the skin.

Wash the wound using soap and water

Apply ice for swelling and pain

A topical hydrocortisone cream, antihistamine, or local anesthetic may be of value in reducing the itching

If the sting occurs on the neck or mouth, seek medical attention immediately, swelling in these areas may cause suffocation

Fire Ants

Fire ants are a variety of stinging ants with over 280 species worldwide. Typically, a colony produces large mounds in open areas, and feeds mostly on young plants, seeds, and insects. They nest in the soil, often near moist areas such as river banks and pond edges. Unlike other ants which bite and then spray acid on the wound, fire ants bite only to get a grip and then sting, injecting toxic alkaloid venom. This results in a painful stinging sensation, like what a fire burn feels like.

1.2.5 First Aid for Fire Ant Bites

Move rapidly away from the nest

Quickly remove or kill ants on skin and clothing to prevent further stings

Wash the area gently with soap and water to rid the skin of any venom.

Place cool cloth or ice cloth on sites for 15 minutes, and to relieve pain, dab the area with calamine lotion, a topical (cortisone) or oral antihistamine (e.g., Benadryl) to help with swelling

Do not scratch the blister because this can lead to infection

Allergic response is rare, but symptoms are difficulty breathing, light headedness, and weakness. Immediate medical attention is required.

SNAKES

Snakes serve as an important role as predators in the ecosystem and help maintain populations of rodents and other prey.

First Aid for Venomous Snake Bites

Wash and immobilize the injured area, keeping it lower than the heart if possible

Seek medical attention immediately

DO NOT apply ice, cut the wound, or apply a tourniquet

Do not cut or suck the bite

Remain calm and try not to move the bitten body part

Remove jewelry or other items that may be affected by rapid swelling of affected body parts

Try to identify the type of snake: note color, size, patterns, and markings

The bite will be painful and have two distinct puncture wounds

If venom is injected there will be burning and swelling

ONLY FOR CORAL SNAKE BITES: apply a mild wrapping on the bite wound

Water Moccasin
(aka cotton mouth)

Rattlesnake

Coral Snake

Copperhead

POISONOUS PLANTS

Poisonous Plants – Plants poison on contact, through ingestion, or by absorption or inhalation. They cause painful skin irritations upon contact and can cause internal poisoning when eaten.

First Aid for Poisonous Plants

Wash exposed areas with cold running water as soon as you can

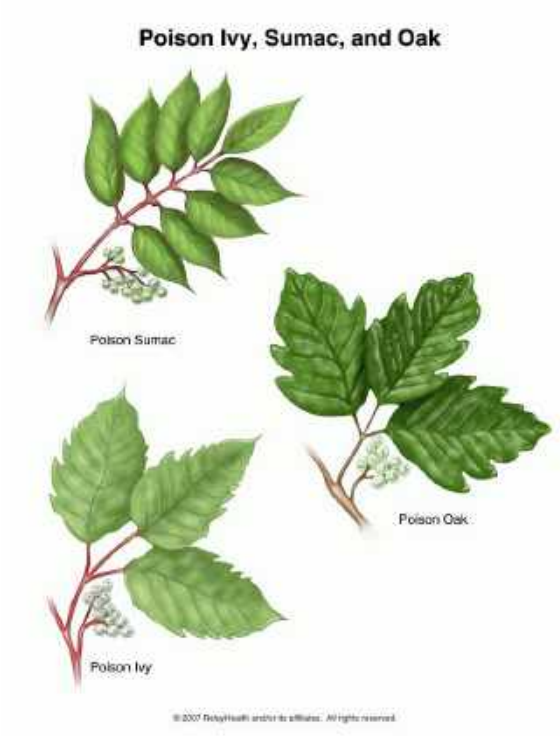
When possible, wash your clothing

Relieve itching by taking cool showers and applying topical anti-itch medications or hydrocortisone

The rash is often arranged in streaks or lines where you brushed against the plant

In a few days, the blisters become crusted and take 10 days or longer to heal

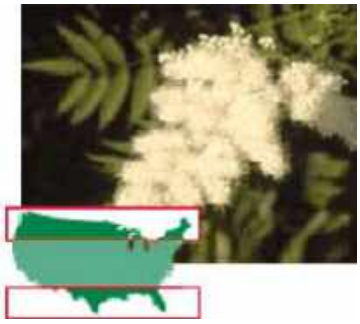
If the reaction is severe or worsens, seek medical attention



POISON IVY

POISON SUMAC

POISON OAK



GIANT HOGWEED

HEAT STRESS

Heat stress can be a significant hazard, especially for workers wearing protective clothing.

Depending on the ambient conditions and the work being performed, heat stress can occur very rapidly, within as little as 15 minutes. Site employees will be instructed in the identification of a heat stress victim, the first-aid treatment procedures for the victim and in the prevention of heat stress incidents.

Workers will be encouraged to immediately report any heat-related problems that they experience or observe in fellow workers. Any worker exhibiting signs of heat stress and exhaustion should be made to rest in a cool location and drink plenty of water. Emergency help by a medical professional is required immediately for anyone exhibiting symptoms of heat stroke, such as red, dry skin, confusion, delirium, or unconsciousness. Heat stroke is a life-threatening condition that must be treated by competent medical authority.

ACGIH screening criteria for heat stress exposure in degrees Celsius for an 8-hour work day 5 days per week with conventional breaks will be used in determining safe exposure for acclimatized and unacclimatized employees.

Allocation of Work in a Work/Rest Cycle	Acclimatized				Action Limit (Unacclimatized)			
	Light	Moderate	Heavy	Very Heavy	Light	Moderate	Heavy	Very Heavy
75-100%	31.0 (87.8F)	28.0 (82.4F)	--	--	28.0 (82.4F)	25.0 (77F)	--	--
50-75%	31.0 (87.8F)	29.0 (84.2F)	27.5 (81.5)	--	28.5 (83.3F)	26.0 (78.8F)	24.0 (75.2F)	--
25-50%	32.0 (89.6F)	30.0 (86F)	29.0 (84.2F)	28.0 (82.4F)	29.5 (85.1F)	27.0 (80.6F)	25.5 (77.9)	24.5 (76.1F)
0-25%	32.5 (90.5F)	31.5 (88.7F)	30.5 (86.9F)	30.0 (86F)	30.0 (86F)	29.0 (84.2F)	28.0 (82.4F)	27.0 (80.6F)

Heat Stress Prevention

Whenever possible or within the control of Ramboll, engineering controls should be utilized to protect workers from heat related hazards (e.g., heat shielding such as using awnings or umbrellas). Appropriate work practices can also lessen the chances of heat related hazards. Some of these include:

Water and/or electrolyte fluids should be about equal to the amount of sweat produced (i.e., drinking 5-7 ounces (150 -200 mL) of water every 15-20 minutes). Ideally, fluids should be at room temperature to allow for quicker absorption. Consider keeping water at room temperature and electrolyte fluids chilled. Do NOT chill both.

Whenever possible, gradual exposure to heat is preferred to allow the body’s internal temperature to actuate to the working conditions.

Whenever possible, adjust the work schedule to reduce risk of heat stress. For example, postpone nonessential or heavier work to the cooler part of the day and perform work in the shade if portable.

Rotate employees to reduce the amount of time spent working in direct sun and heat.

Increase the number and/or duration of rest breaks, and whenever possible, rest break areas should be in a cool area and as close to the work area as is feasible.

Wear appropriate PPE when necessary, such as thermally conditioned clothing, self-contained air conditioning in a backpack, and plastic jackets/vests with pockets that can be filled with dry ice or ice. However, based on the type of work being done, where work is being performed, or other required PPE, these options may be prohibited or make the use of this PPE impossible or impractical.

Heat Related Illnesses

1.2.6 Heat Stress

This is the mildest heat-related illness, but prompt action may prevent it from turning into a more severe heat-related illness. Symptoms include irritability, lethargy, significant sweating, headache, or nausea. The following guidance can be used in the identification and treatment of heat related illness.

1.2.7 Heat Stress First Aid

Take victim to a protected (e.g., shaded, cool) area, remove any excess protective clothing, and provide cool fluids.

If an air-conditioned spot is available, this is an ideal break location.

Once the victim shows improvement, he/she may resume working, however the work pace and practices (e.g., does fluid intake need to be increased) should be moderated to prevent recurrence of the symptoms.

1.2.8 Heat Exhaustion

Usually begins with muscular weakness, dizziness, nausea, and a staggering gait. Symptoms include pale, clammy skin, and profuse sweating, vomiting, and the bowels may move involuntarily. The pulse is weak and fast, breathing is shallow. Fainting can occur.

1.2.9 Heat Exhaustion First Aid

Immediately remove the victim from the work area to a shady or cool area with good air circulation (avoid drafts or sudden chilling – you do not want the victim to shiver).

Call a physician or emergency service or transport the victim to medical care.

Remove all protective outerwear.

If the victim is conscious, it may be helpful to give him/her sips of water.

1.2.10 Heat Stroke

Heat stroke is a severe medical condition requiring first aid and emergency treatment by a medical professional as death can occur without appropriate care. Heat Stroke represents the collapse of the body's cooling mechanisms. As a result, body temperatures often rise to between 105° – 110° F (40.5° – 43.3° C). As the victim progresses toward heat stroke symptoms include hot and usually dry, red and spotted skin, headache, dizziness, nausea, mental confusion, delirium, possible convulsions and loss of consciousness.

1.2.11 Heat Stroke First Aid

Immediately remove the victim from the work area to a shady or cool area with good air circulation (avoid drafts or sudden chilling – you do not want the victim to shiver).

Summon emergency medical help to provide on-site treatment and transportation to a medical facility.

Remove all protective outerwear and loosen personal clothing.

Apply cool wet towels, ice bags, etc. to the head, armpits, and thighs. Sponge off the bare skin with cool water or even place the victim in a tub of cool water.

1.2.12 Skin Hazards

Sunburn and prickly heat are both symptoms of skin irritation/damage produced through exposure to sunlight and operating in hot work environments.

Protect exposed skin with an appropriate sunscreen. A sunscreen with a sun protection factor (SPF) of 15 or greater is required for work in the sun with reapplication at breaks and lunch.

Heat rash, also known as prickly heat, can be prevented by the application of a hydrophobic, water repellent barrier cream such as Kerodex 71.

COLD STRESS

The four environmental conditions that cause cold-related stress are low temperatures, high/cool winds (wind chill), dampness, and cold water. One or any combination of these factors can cause cold-related hazards. Cold stress, including frostbite and hypothermia, can result in severe health effects.

A dangerous situation of rapid heat loss may arise for any individual exposed to high winds and cold temperatures. Major risk factors for cold-related stresses include:

Wearing inadequate or wet clothing increases the effects of cold on the body.

Taking certain drugs or medications such as alcohol, nicotine, caffeine, and medication that inhibits the body's response to the cold or impairs judgment.

Having a cold or certain disease, such as diabetes, heart, vascular, and thyroid problems, may make a person more susceptible to the winter elements.

Being male increases a person's risk to cold-related stresses. Men experience far greater death rates due to cold exposure than women, perhaps due to inherent risk-taking activities, body-fat composition, or other physiological differences.

Becoming exhausted or immobilized, especially due to injury or entrapment, may speed up the effects of cold weather.

Aging -- the elderly are more vulnerable to the effects of harsh winter weather.

TABLE 2. Cooling Power or Wind on Exposed Flesh Expressed as Equivalent Temperature (under calm conditions)*

Estimated Wind Speed (in mph)	Actual Temperature Reading (°F)											
	50	40	30	20	10	0	−10	−20	−30	−40	−50	−60
	Equivalent Chill Temperature (°F)											
calm	50	40	30	20	10	0	−10	−20	−30	−40	−50	−60
5	48	37	27	16	6	−5	−15	−26	−36	−47	−57	−68
10	40	28	16	4	−9	−24	−33	−46	−58	−70	−83	−95
15	36	22	9	−5	−18	−32	−45	−58	−72	−85	−99	−112
20	32	18	4	−10	−25	−39	−53	−67	−82	−96	−110	−121
25	30	16	0	−15	−29	−44	−59	−74	−88	−104	−118	−133
30	28	13	−2	−18	−33	−48	−63	−79	−94	−109	−125	−140
35	27	11	−4	−20	−35	−51	−67	−82	−98	−113	−129	−145
40	26	10	−6	−21	−37	−53	−69	−85	−100	−116	−132	−148
(Wind speeds greater than 40 mph have little additional effect.)	LITTLE DANGER In < hr with dry skin. Maximum danger of false sense of security				INCREASING DANGER Danger from freezing of exposed flesh within one minute.				GREAT DANGER Flesh may freeze within 30 seconds.			
	Trenchfoot and immersion foot may occur at any point on this chart.											

*Developed by U.S. Army Research Institute of Environmental Medicine, Natick, MA.

Equivalent chilll temperature requiring dry clothing to maintain core body tempearture above 36°C (96.8°F) per cold stress TLV

Cold Stress Prevention

Engineering controls should be utilized whenever possible to protect workers from cold related hazards. For example, on-site heat sources, heated shelters, work areas shielded from drafty or windy

conditions, and the use of thermal insulating material on equipment handles. Effects arising from cold exposure will be minimized by the following control measures:

Employees will be trained to recognize cold stress symptoms.

Field activities will be curtailed or halted if the equivalent chill temperature is below 20 F (7C).

As much as possible, work that exposes employees to the cold will be done during the warmest hours of the day.

Inactivity in cold conditions will be kept to a minimum.

Frequent short breaks in warm, dry shelters will be taken.

Vehicles will be equipped with supplies in case the vehicle becomes inoperable (e.g., blanket, dry clothing, water, food, a shovel, etc.

TABLE 3. Threshold Limit Values Work/Warm-up Schedule for Four-Hour Shift*

Air Temperature—Sunny Sky		No Noticeable Wind		5 mph Wind		10 mph Wind		15 mph Wind		20 mph Wind	
°C (approx.)	°F (approx.)	Max. Work Period	No. of Breaks	Max. Work Period	No. of Breaks	Max. Work Period	No. of Breaks	Max. Work Period	No. of Breaks	Max. Work Period	No. of Breaks
–26° to –28°	–15° to –19°	(Norm. Breaks)	1	(Norm. Breaks)		75 min	2	55 min	3	40 min	4
–29° to –31°	–20° to –24°	(Norm. Breaks)	1	75 min	2	55 min	3	40 min	4	30 min	5
–32° to –34°	–25° to –29°	75 min	2	55 min	3	40 min	4	30 min	5	Non-emergency work should cease	
–35° to –37°	–30° to –34°	55 min	3	40 min	4	30 min	5	Non-emergency work should cease			
–38° to –39°	–35° to –39°	40 min	4	30 min	5	Non-emergency work should cease					
–40° to –42°	–40° to –44°	30 min	5	Non-emergency work should cease							
–43° & below	–45° & below	Non-emergency work should cease									

Notes for Table 3

1. Schedule applies to moderate to heavy work activity with warm-up breaks of ten (10) minutes in a warm location. For Light-to-Moderate Work (limited physical movement): apply the schedule one step lower. For example, at –35°C (–30°F) with no noticeable wind (Step 4), a worker at a job with little physical movement should have a maximum work period of 40 minutes with 4 breaks in a 4-hour period (Step 5).
2. The following is suggested as a guide for estimating wind velocity if accurate information is not available: 5 mph: light flag moves; 10 mph: light flag fully extended; 15 mph: raises newspaper sheet; 20 mph: blowing and drifting snow.
3. If only the wind chill cooling rate is available, a rough rule of thumb for applying it rather than the temperature and wind velocity factors given above would be: 1) special warm-up breaks should be initiated at a wind chill cooling rate of about 1750 W/m^2; 2) all non-emergency work should have ceased at or before a wind chill of 2250 W/m^2. In general the warm-up schedule provided above slightly under-compensates for the wind at the warmer temperatures, assuming acclimatization and clothing appropriate for winter work. On the other hand, the chart slightly over-compensates for the actual temperatures in the colder ranges, since windy conditions rarely prevail at extremely low temperatures.
4. TLVs apply only for workers in dry clothing.

*Adapted from Occupational Health & Safety Division, Saskatchewan Department of Labour.

Cold-Related Illness

1.2.13 Hypothermia

Hypothermia occurs when the body temperature falls to a level where normal muscular and cerebral functions are impaired. Although it usually occurs in freezing air and water temperatures, it can occur in any climate if a person's internal body temperature falls below normal. Symptoms should not be ignored, and a supervisor should be notified as soon as hypothermia is suspected.

Initially, symptoms may include shivering, an inability to do complex motor functions, sluggishness and mild confusion as the body temperature drops to around 95 F. As the body temperature falls, speech may become slurred, and behavior may be irrational, simple motor functions may be difficult to do and a state of "dazed consciousness" may exist. In severe state (below 90 F or 32 C), heart rate, blood flow, and breathing will slow. Unconsciousness and full heart failure can occur.

1.2.14 Hypothermia First Aid

On Land

Call for emergency, and then help move the victim (unless other injuries prohibit their being moved) to a warm, dry area and replace wet clothing with warm, dry clothing or a blanket. Move the person carefully because movement can increase the irritability of the heart.

If the person is conscious and lucid, warm liquids can be provided, but never alcohol or caffeinated drinks. If possible, have them to move their arms and legs to create muscle heat.

If the person is unconscious or unable to assist, place warm bottles/packs in the person's arm pits, groin, neck and head areas.

Do not rub the person's body or place them in warm water.

In Water

Call for emergency help and get the victim out of the water. Move them carefully because movement can increase the irritability of the heart.

If it is you in the water, do not swim unless a floating object or person can be reached quickly as swimming uses the body's heat and reduces survival time by about 50%.

If you are in the water, conserve body heat by folding arms across the chest, keeping thighs together, bending knees and crossing ankles, if another person is in the water with you, huddle together.

If you are in the water, do not remove clothing-button, buckle, zip, and tighten collars, cuffs, shoes, and hoods as the water trapped next to the body provides a layer of insulation that may slow the loss of heat.

1.2.15 Frostbite

Frostbite occurs when the skin literally freezes, and deep frostbite can affect deeper tissues such as tendons and muscles. Frostbite usually occurs when temperatures drop below 30 F (1C), but wind chill effects can cause frostbite at above-freezing temperatures. The ears, fingers, toes, cheeks, and nose are the most commonly affected body parts. Initially, symptoms include an uncomfortable sensation of coldness. Tingling, stinging or an aching feeling of the exposed area is followed by numbness. Frostbitten areas appear white and cold to the touch and with deeper frostbite, the area becomes numb, painless, and hard, and can turn black.

1.2.16 Frostbite First Aid

Seek medical attention as soon as possible and treat any existing hypothermia first.

Warm liquid can be provided, but not alcohol or caffeinated drinks such as tea and coffee.

Do not rub the affected areas, but cover them with dry, sterile gauze or soft, clean bandages.

Do not try rewarming the affected area if you have not been specifically trained to do so and/or if there is a chance the affected area will get cold again

SMALL CHEMICAL SPILLS

Chemical hazards present in environmental samples or in the environment being sampled are NOT the only "chemicals of concern". Toxic chemicals may also be brought onto a site as part of the sampling event in the form of sample preservatives. In general, sample preservation is required for most water samples. Two practices exist for adding a preservative: 1) addition of the preservative to the samples in the field; and 2) addition of the preservative to the sampling containers prior to sending the samplers into the field. In either case, EXTREME caution MUST be exercised when adding a preservative to a sample vial or using vials which already contain a preservative since these preservatives will vary in concentration and type. Some examples of the type of preservatives which may be encountered include sodium thiosulfate to remove chlorine; hydrochloric acid or ammonium chloride to stabilize pH and reduce biological activity; or sodium bisulfate.

Chemical First Aid (Body)

In the event that you suspect that you have been exposed to a chemical, whether or not you were wearing PPE, you should:

Remove yourself or the victim from the accident area.

Remove any contaminated clothing.

Wash the injured area to dilute or remove the substance, using large volumes of water.

Wash for at least 20 minutes, taking care not to allow runoff to contact unaffected parts of your body.

Gently brush away any solid materials, again avoiding unaffected body surfaces.

Especially wash away any chemical in your eye. Sometimes the best way to get large amounts of water to your eye is to step into the shower.

Chemical First Aid (Eye)

For all chemical injuries to the eye, the first thing you should do is immediately irrigate the eye copiously. Ideally, specific eye irrigating solutions should be used for this, but if none are available regular tap water will do just fine.

Begin washing your eye before taking any other action and continue for at least 10 minutes. The longer a chemical is in your eye, the more damage will occur. Diluting the substance and washing away any particles that may have been in the chemical are extremely important.

Ideally, in a work setting, you would be placed in an emergency eyewash or shower station and your eye washed with sterile isotonic saline solution. If sterile saline is not available, use cold tap water.

All acid or alkali eye burns require immediate treatment and evaluation by a doctor. You should be taken immediately to the closest emergency department. If you suspect a serious injury may have occurred or are otherwise not able to make the trip to the emergency room quickly, then you should call an ambulance to shorten transport time. Take the Safety Data Sheet (SDS) on the chemical you were exposed to with you to the hospital.

Any time you experience pain, tearing, redness, irritation, or vision loss, go to a hospital's emergency department for immediate evaluation, even if you believe the chemical is only a mild irritant.

Table 1B: Emergency Services Instructions

For Emergency Medical Incidents, Emergency Fire Response, or Hazardous Materials Incidents

Emergency Telephone Numbers:

- Hospital: (213) 977-2420
- Police: (323) 846-6547
- Fire Department: (213) 485-6203
- Site Security/Client: Robert Kane (213) 538-0900

1. Remember to speak SLOWLY and CLEARLY. Do NOT hang up first: let the dispatcher conclude the call.
2. Provide the following information:
   a. Location: 1380 North Broadway, Los Angeles, California
   b. Your name and phone number
3. Describe nature of Incident:
   a. Emergency Medical Incident

      How many victims

      Type of incident - physical injury, etc.

      Assessment of victims' condition if known (whether victim is conscious/unconscious, breathing/not breathing, pulse/no pulse, nature of injuries, first aid measures used, etc.)

      Where incident occurred

   b. Fire:

      Location of Fire

   c. Hazardous Materials Incident:

      This is a hazardous materials incident requiring dispatch of HAZMAT unit

      Type of incident (fire, explosion, spill, etc.)

      Type of material (specific chemicals or general description)

      Whether there is also a Medical Emergency
4. Give your location at the Site

Note: Security, Site Supervisor or designee must meet the emergency personnel at the staging area to brief them on the situation.

ROUTE DESCRIPTION AND MAP TO HOSPITAL

Route to Hospital:

Hospital Information:

Hospital Name: *Good Samaritan Hospital*

Hospital Address: *1225 Wilshire Blvd. Los Angeles CA*

Hospital Phone Number: *213-977-2420*

Directions to Area Hospital:

- Head southwest on N Broadway toward Savoy St
- Turn right onto Bishops Rd
- Turn Right onto Stadium Way
- Turn left onto the CA-110 S ramp
- Merge onto CA-110
- Use the right lane to take the Interstate 110 S exit toward 6th St/Wilshire Blvd/4th St/3rd St
- Keep right to continue on Exit 23C, follow signs for 3rd St/2nd St
- Use the left 2 lanes to turn left onto S Beaudry Ave
- Turn right onto W 6th St- Emergency Entrance is off W. 6th Street past Lucas Ave.
- End: Good Samaritan Hospital 1225 Wilshire Blvd, Los Angeles, CA 90017

APPENDIX C
SCAQMD RULE 403

Title V - SIP Approved Rules
SIP-Approved Rules That Are Not The Most Current SCAQMD Rules
This information is intended for use by any facility applying for a Title V permit or in possession of a Title V permit that contains references to two different version of the same SCAQMD rule. http://www.aqmd.gov/titlev/siprules.html

(Adopted May 7, 1976)(Amended November 6, 1992)
(Amended July 9, 1993)(Amended February 14, 1997)
(Amended December 11, 1998)

RULE 403. FUGITIVE DUST

(a) Purpose

The purpose of this rule is to reduce the amount of particulate matter entrained in the ambient air as a result of anthropogenic (man-made) fugitive dust sources by requiring actions to prevent, reduce or mitigate fugitive dust emissions.

(b) Applicability

The provisions of this rule shall apply to any activity or man-made condition capable of generating fugitive dust.

(c) Definitions

(1) ACTIVE OPERATIONS shall mean any activity capable of generating fugitive dust, including, but not limited to, earth-moving activities, construction/demolition activities, or heavy- and light-duty vehicular movement.

(2) ANEMOMETERS are devices used to measure wind speed and direction in accordance with the performance standards, and maintenance and calibration criteria as contained in the most recent Rule 403 Implementation Handbook, now or hereafter adopted by the Governing Board.

(3) BEST AVAILABLE CONTROL MEASURES represent fugitive dust control actions which are required to be implemented within the boundaries of the South Coast Air Basin. A detailed listing of best available control measures for each fugitive dust source type shall be as contained in the most recent Rule 403 Implementation Handbook, now or hereafter adopted by the Governing Board.

(4) BULK MATERIAL is sand, gravel, soil, aggregate material less than two inches in length or diameter, and other organic or inorganic particulate matter.

(5) CHEMICAL STABILIZERS mean any non-toxic chemical dust suppressant which must not be used if prohibited for use by the Regional Water Quality Control Boards, the California Air Resources Board, the U.S. Environmental Protection Agency (U.S. EPA), or any applicable law,

rule or regulation; and should meet any specifications, criteria, or tests required by any federal, state, or local water agency. Unless otherwise indicated, the use of a non-toxic chemical stabilizer shall be of sufficient concentration and application frequency to maintain a stabilized surface.

(6) CONSTRUCTION/DEMOLITION ACTIVITIES are any on-site mechanical activities preparatory to or related to the building, alteration, rehabilitation, demolition or improvement of property, including, but not limited to the following activities; grading, excavation, loading, crushing, cutting, planing, shaping or ground breaking.

(7) CONTINGENCY NOTIFICATION means that the U.S. EPA has determined and notified the District in writing that PM_{10} contingency requirements must be implemented based on a finding that: (1) PM_{10} and PM_{10} precursor emissions reductions were less than required at any three-year milestone reporting interval, or (2) the region failed to attain the PM_{10} standards within the time frames allotted under the Federal Clean Air Act, or (3) if as part of an Attainment/Maintenance Plan, the region is no longer in attainment of the PM_{10} standards.

(8) CONTRACTOR means any person who has a contractual arrangement to conduct an active operation for another person.

(9) DISTURBED SURFACE AREA means a portion of the earth's surface which has been physically moved, uncovered, destabilized, or otherwise modified from its undisturbed natural soil condition, thereby increasing the potential for emission of fugitive dust. This definition excludes those areas which have:

(A) been restored to a natural state, such that the vegetative ground cover and soil characteristics are similar to adjacent or nearby natural conditions;

(B) been paved or otherwise covered by a permanent structure; or

(C) sustained a vegetative ground cover over at least 95 percent of an area for a period of at least 6 months.

(10) DUST SUPPRESSANTS are water, hygroscopic materials, or non-toxic chemical stabilizers used as a treatment material to reduce fugitive dust emissions.

(11) EARTH-MOVING ACTIVITIES shall include, but not be limited to, grading, earth cutting and filling operations, loading or unloading of dirt

or bulk materials, adding to or removing from open storage piles of bulk materials, landfill operations, or soil mulching.

(12) FUGITIVE DUST means any solid particulate matter that becomes airborne, other than that emitted from an exhaust stack, directly or indirectly as a result of the activities of man.

(13) INACTIVE DISTURBED SURFACE AREA means any disturbed surface area upon which active operations have not occurred or are not expected to occur for a period of ten consecutive days.

(14) LARGE OPERATIONS means any active operations on property which contains in excess of 100 acres of disturbed surface area; or any earth-moving operation which exceeds a daily earth-moving or throughput volume of 7,700 cubic meters (10,000 cubic yards) three times during the most recent 365-day period.

(15) MEDIUM OPERATIONS means any active operations on property which contains between 50 and 100 acres of disturbed surface area; or any earth-moving operation with a daily earth-moving or throughput volume of between 3,850 cubic meters (5,000 cubic yards) and 7,700 cubic meters (10,000 cubic yards) three times during the most recent 365-day period.

(16) NON-ROUTINE means any non-periodic active operation which occurs no more than three times per year, lasts less than 30 cumulative days per year, and is scheduled less than 30 days in advance.

(17) OPEN STORAGE PILE is any accumulation of bulk material with 5 percent or greater silt content which is not fully enclosed, covered or chemically stabilized, and which attains a height of three feet or more and a total surface area of 150 or more square feet. Silt content level is assumed to be 5 percent or greater unless a person can show, by sampling and analysis in accordance with ASTM Method C-136 or other equivalent method approved in writing by the Executive Officer, the California Air Resources Board, and the U. S. EPA, that the silt content is less than 5 percent. The results of ASTM Method C-136 or equivalent method are valid for 60 days from the date the sample was taken.

(18) PARTICULATE MATTER means any material, except uncombined water, which exists in a finely divided form as a liquid or solid at standard conditions.

(19) PAVED ROAD means an improved street, highway, alley, public way, or easement that is covered by typical roadway materials excluding access

roadways that connect a facility with a public paved roadway and are not open to through traffic. Public paved roads are those open to public access and that are owned by any federal, state, county, municipal or any other governmental or quasi-governmental agencies. Private paved roads are any paved roads not defined as public.

(20) PM_{10} is particulate matter with an aerodynamic diameter smaller than or equal to 10 microns as measured by the applicable State and Federal reference test methods.

(21) PROPERTY LINE means the boundaries of an area in which either a person causing the emission or a person allowing the emission has the legal use or possession of the property. Where such property is divided into one or more sub-tenancies, the property line(s) shall refer to the boundaries dividing the areas of all sub-tenancies.

(22) REASONABLY AVAILABLE CONTROL MEASURES are appropriate techniques and procedures used to prevent or reduce the emission and airborne transport of fugitive dust, outside the boundaries of the South Coast Air Basin. These include, but are not limited to, application of dust suppressants, use of coverings or enclosures, paving, enshrouding, planting, reduction of vehicle speeds, and other measures as specified by the Executive Officer. A detailed listing of reasonably available control measures for each fugitive dust source type shall be as contained in the most recent Rule 403 Implementation Handbook, now or hereafter adopted by the Governing Board.

(23) SILT means any aggregate material with a particle size less than 74 micrometers in diameter which passes through a No. 200 Sieve.

(24) SIMULTANEOUS SAMPLING means the operation of two PM_{10} samplers in such a manner that one sampler is started within five minutes of the other, and each sampler is operated for a consecutive period which must be not less than 290 minutes and not more than 310 minutes.

(25) SOUTH COAST AIR BASIN means the non-desert portions of Los Angeles, Riverside, and San Bernardino counties and all of Orange County as defined in California Code of Regulations, Title 17, Section 60104. The area is bounded on the west by the Pacific Ocean, on the north and east by the San Gabriel, San Bernardino, and San Jacinto Mountains, and on the south by the San Diego county line.

(26) STABILIZED SURFACE means:

(A) any disturbed surface area or open storage pile which is resistant to wind-driven fugitive dust;

(B) any unpaved road surface in which any fugitive dust plume emanating from vehicular traffic does not exceed 20 percent opacity.

(27) UNPAVED ROADS are any unsealed or unpaved roads, equipment paths, or travel ways that are not covered by one of the following: concrete, asphaltic concrete, recycled asphalt, asphalt or other materials with equivalent performance as determined by the Executive Officer, the California Air Resources Board, and the U.S. EPA. Public unpaved roads are any unpaved roadway owned by Federal, State, county, municipal or other governmental or quasi-governmental agencies. Private unpaved roads are all other unpaved roadways not defined as public.

(28) VISIBLE ROADWAY DUST means any sand, soil, dirt, or other solid particulate matter which is visible upon paved road surfaces and which can be removed by a vacuum sweeper or a broom sweeper under normal operating conditions.

(29) WIND-DRIVEN FUGITIVE DUST means visible emissions from any disturbed surface area which is generated by wind action alone.

(30) WIND GUST is the maximum instantaneous wind speed as measured by an anemometer.

(d) Requirements

(1) A person shall not cause or allow the emissions of fugitive dust from any active operation, open storage pile, or disturbed surface area such that the presence of such dust remains visible in the atmosphere beyond the property line of the emission source.

(2) A person conducting active operations within the boundaries of the South Coast Air Basin shall utilize one or more of the applicable best available control measures to minimize fugitive dust emissions from each fugitive dust source type which is part of the active operation.

(3) A person conducting active operations outside the boundaries of the South Coast Air Basin may utilize reasonably available control measures in lieu of best available control measures to minimize fugitive dust emissions from each fugitive dust source type which is part of the active operation.

(4) A person shall not cause or allow PM_{10} levels to exceed 50 micrograms per cubic meter when determined, by simultaneous sampling, as the difference between upwind and downwind samples collected on high-volume particulate matter samplers or other U.S. EPA-approved equivalent method for PM_{10} monitoring. If sampling is conducted, samplers shall be:

(A) Operated, maintained, and calibrated in accordance with 40 Code of Federal Regulations (CFR), Part 50, Appendix J, or appropriate U.S. EPA-published documents for U.S. EPA-approved equivalent method(s) for PM_{10}.

(B) Reasonably placed upwind and downwind of key activity areas and as close to the property line as feasible, such that other sources of fugitive dust between the sampler and the property line are minimized.

(5) Any person in the South Coast Air Basin shall:

(A) prevent or remove within one hour the track-out of bulk material onto public paved roadways as a result of their operations; or

(B) take at least one of the actions listed in Table 3 and:

(i) prevent the track-out of bulk material onto public paved roadways as a result of their operations and remove such material at anytime track-out extends for a cumulative distance of greater than 50 feet on to any paved public road during active operations; and

(ii) remove all visible roadway dust tracked-out upon public paved roadways as a result of active operations at the conclusion of each work day when active operations cease.

(e) Contingency Requirements

When a contingency notification has occurred, the requirements of this subdivision shall become effective in the county subject to the notification 60 days after the first publication date in newspapers of general circulation in that county. Such publication shall specify that a contingency notification has occurred, and that any person who conducts or authorizes the conducting of a medium operation shall be required to comply with the provisions of subdivision (f), in addition to the requirements of subdivision (d).

(f) Special Requirements for Large Operations, and Medium Operations Under a Contingency Notification

(1) Any person who conducts or authorizes the conducting of either a large operation which is subject to the requirements of this rule, or a medium operation under a contingency notification as set forth in subdivision (e), shall either:

(A) take the actions specified in Tables 1 and 2 for each applicable source of fugitive dust within the property lines and shall:

(i) notify the Executive Officer not more than 7 days after qualifying as a large operation or as a medium operation under a contingency notification;

(ii) include, as part of the notification, the items specified in subparagraphs (f)(3)(A) and (f) (3)(B);

(iii) maintain daily records to document the specific actions taken;

(iv) maintain such records for a period of not less than 6 months; and

(v) make such records available to the Executive Officer upon request; or

(B) obtain an approved fugitive dust emissions control plan (plan).

(2) Any person subject to paragraph (f)(1) who elects to obtain an approved fugitive dust emission control plan must submit the plan to the Executive Officer no later than 30 days after the activity becomes a large operation.

(3) Any plan prepared pursuant to subparagraph (f)(1)(B) shall include:

(A) The name(s), address(es), and phone number(s) of the person(s) responsible for the preparation, submittal, and implementation of the plan;

(B) A description of the operation(s), including a map depicting the location of the site;

(C) A listing of all sources of fugitive dust emissions within the property lines;

(D) A description of the required control measures as applied to each of the sources identified in subparagraph (f)(3)(C). The description must be sufficiently detailed to demonstrate that the applicable best available control measures or reasonably available

control measures will be utilized and/or installed during all periods of active operations.

(4) In the event that there are special technical (e.g., non-economic) circumstances, including safety, which prevent the use of at least one of the required control measure for any of the sources identified in subparagraph (f)(3)(C), a justification statement must be provided in lieu of the description required in subparagraph (f)(3)(D). The justification statement must explain the reason(s) why the required control measures cannot be implemented.

(5) Within 30 calendar days of the receipt of a plan submitted pursuant to subparagraph (f)(1)(B), the Executive Officer will either approve, conditionally approve, or disapprove the plan , in writing. For a plan to be approved or conditionally approved, three conditions must be satisfied:

(A) All sources of fugitive dust emissions must be identified (e.g., earth-moving, storage piles, vehicular traffic on unpaved roads, etc.).

(B) For each source identified, at least one of the required control measures must be implemented, or an acceptable justification statement pursuant to paragraph (f)(4) must be provided; and

(C) If, after implementation of the required control measures, visible dust emissions are crossing the property line(s), then high wind measures (e.g., increased watering) must be specified for immediate implementation.

(6) Conditional approval will be made if conditions are met, but the stated measures do not satisfactorily conform to the guidance contained in the applicable Rule 403 Implementation Handbook. If a plan is conditionally approved, the conditions necessary to modify the plan will be provided in writing to the person(s) identified in subparagraph (f)(3)(A). Such modifications must be incorporated into the plan within 30 days of the receipt of the notice of conditional approval, or the plan shall be disapproved. A letter to the Executive Officer stating that such modifications will be incorporated into the plan shall be deemed sufficient to result in approval of the plan.

(7) If a plan is disapproved by the Executive Officer:

(A) The reasons for disapproval shall be given to the applicant in writing.

(B) Within 7 days of the receipt of a notice of a disapproved plan, the applicant shall comply with the actions specified in Tables 1 and 2 for each applicable source of fugitive dust within the property lines.

(C) The applicant may resubmit a plan at any time after receiving a disapproval notification, but will not be relieved of complying with subparagraph (f)(7)(B) until such time as the plan has been approved.

(8) Failure to comply with any of the provisions in an approved or conditionally approved plan shall be a violation of subdivision (f).

(9) Any approved plan shall be valid for a period of one year from the date of approval or conditional approval of the plan. Plans must be resubmitted annually, at least 60 days prior to the expiration date, or the plan shall become disapproved as of the expiration date. If all fugitive dust sources and corresponding control measures or special circumstances remain identical to those identified in the previously approved plan, the resubmittal may contain a simple statement of no-change. Otherwise, a resubmittal must contain all the items specified in subparagraphs (f)(3)(A through D).

(10) Any person subject to the requirements of paragraph (f)(1) who no longer exceeds, and does not expect to exceed for a period of at least one year, the criteria for a large operation or a medium operation under a contingency notification may request a reclassification as a non-large operation not subject to subparagraph (f). To obtain this reclassification, a person must submit a request in writing to the Executive Officer specifying the conditions which have taken place to reduce the disturbed surface area and/or the earth-moving or throughput conditions to levels below the criteria for large operations. A person must further indicate that the criteria for large operations are not expected to be exceeded during the subsequent 12-month period. The Executive Officer shall either approve or disapprove the reclassification within 60 days from receipt of the reclassification request. The Executive Officer will disapprove the request if the indicated changes can not be verified to be below the criteria for large operations or a medium operation under a contingency notification. If approved, the person shall be relieved of all requirements under subdivision (f). Any person so reclassified would again be subject to the

requirements of subdivision (f) if at any time subsequent to the reclassification the criteria for large operations or a medium operation under a contingency notification are met.

(11) A person responsible for more than one operation subject to subparagraph (f) at non-contiguous sites may submit one plan covering multiple sites provided that:

(A) the contents of the plan apply similarly to all sites; and

(B) specific information is provided for each site, including, map of site location, address, description of operations, and a listing of all sources of fugitive dust emissions within the property lines.

(g) Compliance Schedule

All the newly amended provisions of this rule shall become effective upon adoption of this Rule Amendment. Pursuant to subdivision (f), any fugitive dust emission control plan which has been approved or conditionally approved prior to the date of adoption of these amendments shall remain in effect and the plan approval date and annual resubmittal date shall remain unchanged. If any changes to such plans are necessary as a result of these amendments, such changes shall not be required until the annual resubmittal date, pursuant to paragraph (f)(9).

(h) Exemptions

(1) The provisions of this rule shall not apply to:

(A) Agricultural operations outside the boundaries of the South Coast Air Basin, agricultural operations directly related to the raising of fowls or animals, and agricultural operations conducted within the boundaries of the South Coast Air Basin provided that the combined disturbed surface area within one continuous property line and not separated by a paved public road is 10 acres or less.

(B) Agricultural operations within the South Coast Air Basin, until June 30, 1999, whose combined disturbed surface area includes more than 10 acres. All provisions of this Rule shall become applicable to agricultural operations exceeding 10 acres beginning July 1, 1999, excluding those listed in (h)(1)(A), unless the person responsible for such operations voluntarily implements the conservation practices contained in the most recent Rule 403

Agricultural Handbook, now or hereafter adopted by the Governing Board. The person responsible for such operations must complete and maintain the self-monitoring form documenting sufficient conservation practices, as described in the Rule 403 Agricultural Handbook, and must make it available to the Executive Officer upon request.

(C) Any disturbed surface area less than one-half (1/2) acre on property zoned for residential uses.

(D) Active operations conducted during emergency life-threatening situations, or in conjunction with any officially declared disaster or state of emergency.

(E) Active operations conducted by essential service utilities to provide electricity, natural gas, telephone, water and sewer during periods of service outages and emergency disruptions.

(F) Any contractor subsequent to the time the contract ends, provided that such contractor implemented the required control measures during the contractual period.

(G) Any grading contractor, for a phase of active operations, subsequent to the contractual completion of that phase of earth-moving activities, provided that the required control measures have been implemented during the entire phase of earth-moving activities, through and including five days after the final grading inspection.

(H) Weed abatement operations ordered by a county agricultural commissioner or any state, county, or municipal fire department, provided that:

(i) mowing, cutting or other similar process is used which maintains weed stubble at least three inches above the soil; or

(ii) any discing or similar operation which cuts into and disturbs the soil is used and meets the following conditions:

[a] A determination is made by the issuing agency of the weed abatement order that, due to fire hazard conditions, rocks, or other physical obstructions, it is not practical to meet the conditions specified in clause (h)(1)(H)(i); and

[b] Such determination is made in writing and provided to the person conducting the weed abatement operation prior to beginning such activity; and

[c] Such written determination is provided to the Executive Officer upon request from the person conducting the weed abatement operation.

(Note: The provisions of clause (h)(1)(H)(ii) do not exempt the owner of any property from controlling fugitive dust emissions emanating from disturbed surface areas which have been created as a result of the weed abatement actions.)

(I) sandblasting operations.

(2) The provisions of paragraphs (d)(1) and (d)(4) shall not apply:

(A) When wind gusts exceed 25 miles per hour, provided that:

(i) The required control measures for high wind conditions are implemented for each applicable fugitive dust source type, as specified in Table 1, and;

(ii) Records are maintained in accordance with clauses (f)(1)(A)(iii), (f)(1)(A)(iv) and (f)(1)(A)(v); and

(iii) In the event there are technical (e.g., non-economic) reasons, including safety, why any of the required control measures in Table 1 cannot be implemented for one or more fugitive dust source categories, a person submits a "High Wind Fugitive Dust Control Plan" (HW-Plan). The HW-Plan must further provide an alternative measure of fugitive dust control, if technically feasible. Such plan will be subject to the same approval conditions as specified in subparagraphs (f)(5) and (f)(6).

(B) To unpaved roads, provided such roads:

(i) are used solely for the maintenance of wind-generating equipment; or

(ii) are unpaved public alleys as defined in Rule 1186; or

(iii) meet all of the following criteria:

(a) are less than 50 feet in width at all points along the road;

(b) are within 25 feet of the property line; and

(c) have a traffic volume less than 20 vehicle-trips per day.

(C) To any active operation, open storage pile, or disturbed surface area for which necessary fugitive dust preventive or mitigative actions are in conflict with the federal Endangered Species Act.

(D) To non-routine or emergency maintenance of flood control channels and water spreading basins.

(3) The provisions of paragraphs (d)(1), (d)(2), and (d)(4) shall not apply to:

(A) Blasting operations which have been permitted by the California Division of Industrial Safety; and

(B) Motion picture, television, and video production activities when dust emissions are required for visual effects. In order to obtain this exemption, the Executive Officer must receive notification in writing at least 72 hours in advance of any such activity and no nuisance results from such activity.

(4) The provisions of paragraph (d)(4) shall not apply if the dust control actions, as specified in Table 2, are implemented on a routine basis for each applicable fugitive dust source type. To qualify for this exemption, a person must:

(A) maintain records to document the dates of active operations, all applicable fugitive dust source types, and the actions taken consistent with Table 2;

(B) retain such records for a period of at least six months; and

(C) make such records available to the Executive Officer upon request.

(5) The provisions of paragraph (d)(5) shall not apply to earth coverings of public paved roadways where such coverings are approved by a local government agency for the protection of the roadway, and where such coverings are used as roadway crossings for haul vehicles.

(6) The provisions of subdivision (f) shall not apply to:

(A) officially-designated public parks and recreational areas, including national parks, national monuments, national forests, state parks, state recreational areas, and county regional parks;

(B) any construction and/or earth-moving activity in which the completion date is expected to be less than 60 days after the beginning date. To qualify for this exemption, a person must:

(i) notify the Executive Officer not more than 7 days after qualifying as a large operation or a medium operation under a contingency notification;

(ii) include, as part of the notification, the items specified in subparagraphs (f)(3)(A) and (f)(3)(B); and

(iii) take the actions specified in Tables 1 and 2 at such time as the construction and/or earth-moving activities extend more than 60 days after qualifying as a large operation or a medium operation under a contingency notification.

(C) any large operation or a medium operation under a contingency notification which is required to submit a dust control plan to any city or county government which has adopted a District-approved dust control ordinance. To qualify for this exemption, a person must submit a copy of the city- or county-approved dust control plan to the Executive Officer within 30 days of the effective date of this rule or within 30 days of receiving approval from the city or county government, whichever is later.

(D) any large operation or a medium operation under a contingency notification subject to Rule 1158, which has an approved dust control plan pursuant to Rule 1158, provided that all sources of fugitive dust are included in the Rule 1158 plan.

(i) Fees

(1) Any person subject to a plan submittal pursuant to subparagraph (f)(1)(B) or clause (h)(2)(A)(iii) or subparagraph (h)(1)(B) shall be assessed applicable filing and evaluation fees pursuant to Rule 306. Any person who simultaneously submits a plan pursuant to subparagraph (f)(1)(B) and clause (h)(2)(A)(iii) shall, for the purpose of this rule, be deemed to submit one plan.

(2) The submittal of an annual statement of no-change, pursuant to paragraph (f)(9), shall not be considered as an annual review, and therefore shall not be subject to annual review fees, pursuant to Rule 306.

(3) The owner/operator of any facility for which the Executive Officer conducts upwind/downwind monitoring for PM_{10} pursuant to paragraph (d)(4) shall be assessed applicable Ambient Air Analysis Fees pursuant to Rule 304.1. Applicable fees shall be waived for any facility which is

exempted from paragraph (d)(4) or meets the requirements of paragraph (d)(4).

TABLE 1

BEST [REASONABLY]* AVAILABLE CONTROL MEASURES FOR HIGH WIND CONDITIONS

FUGITIVE DUST SOURCE CATEGORY	CONTROL MEASURES
Earth-moving	(1A) Cease all active operations; OR (2A) Apply water to soil not more than 15 minutes prior to moving such soil.
Disturbed surface areas	(0B) On the last day of active operations prior to a weekend, holiday, or any other period when active operations will not occur for not more than four consecutive days: apply water with a mixture of chemical stabilizer diluted to not less than 1/20 of the concentration required to maintain a stabilized surface for a period of six months; OR (1B) Apply chemical stabilizers prior to wind event; OR (2B) Apply water to all unstabilized disturbed areas 3 times per day. If there is any evidence of wind driven fugitive dust, watering frequency is increased to a minimum of four times per day; OR (3B) Take the actions specified in Table 2, Item (3c); OR (4B) Utilize any combination of control actions (1B), (2B), and (3B) such that, in total, these actions apply to all disturbed surface areas.
Unpaved roads	(1C) Apply chemical stabilizers prior to wind event; OR (2C) Apply water twice [once] per hour during active operation; OR (3C) Stop all vehicular traffic.
Open storage piles	(1D) Apply water twice [once] per hour; OR (2D) Install temporary coverings.
Paved road track-out	(1E) Cover all haul vehicles; OR (2E) Comply with the vehicle freeboard requirements of Section 23114 of the California Vehicle Code for both public and private roads.
All Categories	(1F) Any other control measures approved by the Executive Officer and the U.S. EPA as equivalent to the methods specified in Table 1 may be used.

* Measures in [brackets] are reasonably available control measures and only apply to sources not within the South Coast Air Basin.

TABLE 2
DUST CONTROL ACTIONS FOR EXEMPTION FROM PARAGRAPH (d)(3)*

FUGITIVE DUST SOURCE CATEGORY		**CONTROL ACTIONS**
Earth-moving (except construction cutting and filling areas, and mining operations)	(1a)	Maintain soil moisture content at a minimum of 12 percent, as determined by ASTM method D-2216, or other equivalent method approved by the Executive Officer, the California Air Resources Board, and the U.S. EPA. Two soil moisture evaluations must be conducted during the first three hours of active operations during a calendar day, and two such evaluations each subsequent four-hour period of active operations; OR
	(1a-1)	For any earth-moving which is more than 100 feet from all property lines, conduct watering as necessary to prevent visible dust emissions from exceeding 100 feet in length in any direction.
Earth-moving: Construction fill areas:	(1b)	Maintain soil moisture content at a minimum of 12 percent, as determined by ASTM method D-2216, or other equivalent method approved by the Executive Officer, the California Air Resources Board, and the U.S. EPA. For areas which have an optimum moisture content for compaction of less than 12 percent, as determined by ASTM Method 1557 or other equivalent method approved by the Executive Officer and the California Air Resources Board and the U.S. EPA, complete the compaction process as expeditiously as possible after achieving at least 70 percent of the optimum soil moisture content. Two soil moisture evaluations must be conducted during the first three hours of active operations during a calendar day, and two such evaluations during each subsequent four-hour period of active operations.

* Measures in [brackets] are reasonably available control measures and only apply to sources not within the South Coast Air Basin.

TABLE 2 (Continued) *

FUGITIVE DUST SOURCE CATEGORY	CONTROL ACTIONS	
Earth-moving: Construction cut areas and mining operations:	(1c)	Conduct watering as necessary to prevent visible emissions from extending more than 100 feet beyond the active cut or mining area unless the area is inaccessible to watering vehicles due to slope conditions or other safety factors.
Disturbed surface areas (except completed grading areas)	(2a/b)	Apply dust suppression in sufficient quantity and frequency to maintain a stabilized surface. Any areas which cannot be stabilized, as evidenced by wind driven fugitive dust must have an application of water at least twice per day to at least 80 [70] percent of the unstabilized area.
Disturbed surface areas: Completed grading areas	(2c)	Apply chemical stabilizers within five working days of grading completion; OR
	(2d)	Take actions (3a) or (3c) specified for inactive disturbed surface areas.
Inactive disturbed surface areas	(3a)	Apply water to at least 80 [70] percent of all inactive disturbed surface areas on a daily basis when there is evidence of wind driven fugitive dust, excluding any areas which are inaccessible to watering vehicles due to excessive slope or other safety conditions; OR
	(3b)	Apply dust suppressants in sufficient quantity and frequency to maintain a stabilized surface; OR
	(3c)	Establish a vegetative ground cover within 21 [30] days after active operations have ceased. Ground cover must be of sufficient density to expose less than 30 percent of unstabilized ground within 90 days of planting, and at all times thereafter; OR
	(3d)	Utilize any combination of control actions (3a), (3b), and (3c) such that, in total, these actions apply to all inactive disturbed surface areas.

* Measures in [brackets] are reasonably available control measures and only apply to sources not within the South Coast Air Basin.

TABLE 2 (Continued) *

FUGITIVE DUST SOURCE CATEGORY	**CONTROL ACTIONS**	
Unpaved Roads	(4a)	Water all roads used for any vehicular traffic at least once per every two hours of active operations [3 times per normal 8 hour work day]; OR
	(4b)	Water all roads used for any vehicular traffic once daily and restrict vehicle speeds to 15 miles per hour; OR
	(4c)	Apply a chemical stabilizer to all unpaved road surfaces in sufficient quantity and frequency to maintain a stabilized surface.
Open storage piles	(5a)	Apply chemical stabilizers; OR
	(5b)	Apply water to at least 80 [70] percent of the surface area of all open storage piles on a daily basis when there is evidence of wind driven fugitive dust; OR
	(5c)	Install temporary coverings; OR
	(5d)	Install a three-sided enclosure with walls with no more than 50 percent porosity which extend, at a minimum, to the top of the pile.
All Categories	(6a)	Any other control measures approved by the Executive Officer and the U.S. EPA as equivalent to the methods specified in Table 2 may be used.

* Measures in [brackets] are reasonably available control measures and only apply to sources not within the South Coast Air Basin.

TABLE 3
TRACK-OUT CONTROL OPTIONS
PARAGRAPH (d)(5)(B)

CONTROL OPTIONS

(1)	Pave or apply chemical stabilization at sufficient concentration and frequency to maintain a stabilized surface starting from the point of intersection with the public paved surface, and extending for a centerline distance of at least 100 feet and a width of at least 20 feet.
(2)	Pave from the point of intersection with the public paved road surface, and extending for a centerline distance of at least 25 feet and a width of at least 20 feet, and install a track-out control device immediately adjacent to the paved surface such that exiting vehicles do not travel on any unpaved road surface after passing through the track-out control device.
(3)	Any other control measures approved by the Executive Officer and the U.S. EPA as equivalent to the methods specified in Table 3 may be used.

APPENDIX D
SCAQMD RULE 1466

(Adopted July 7, 2017)(Amended December 1, 2017)(Amended June 4, 2021)

RULE 1466. CONTROL OF PARTICULATE EMISSIONS FROM SOILS WITH TOXIC AIR CONTAMINANTS

(a) Purpose

The purpose of this rule is to minimize the amount of off-site fugitive dust emissions containing toxic air contaminants by reducing particulate emissions in the ambient air as a result of earth-moving activities, including, dredging, excavating, grading, earth-cutting and filling, loading, unloading, handling, mechanized land clearing, treating, stockpiling, transferring, and removing of soil that contains applicable toxic air contaminants, from sites that meet the applicability requirements of subdivision (b).

(b) Applicability

(1) This rule shall apply to any owner or operator conducting earth-moving activities of soil with applicable toxic air contaminant(s) as defined in paragraph (c)(16) that have been identified as contaminant(s) of concern at a site that has been designated and notified by:

(A) The U.S. Environmental Protection Agency (U.S. EPA) as a Superfund National Priorities List site;

(B) The California Department of Toxic Substances Control (DTSC) as a Brownfield or Cleanup Program site;

(C) The State Water Resources Control Board (State Water Board) or Regional Water Quality Control Board (Regional Water Board) as a Site Cleanup Program site;

(D) A county, local, or state regulatory agency as a Hazardous Material Release site, as defined in California Health and Safety Code Section 25260; or

(E) The Executive Officer pursuant to subdivision (i).

(2) This rule shall not apply to:

(A) Earth-moving activities of soil with applicable toxic air contaminant(s) of less than 50 cubic yards; or

(B) Removal of soil for sampling purposes.

(c) Definitions

(1) ADEQUATELY WET means the condition of being sufficiently mixed or penetrated with water to prevent the release of particulates or visible emissions. The process by which an adequately wet condition is achieved is by using a dispenser

or water hose with a nozzle that permits the use of a fine, low-pressure spray or mist.

(c) (2) ADJACENT ATHLETIC AREA means any outdoor athletic field or park where youth organized sports occur that is in physical contact or separated solely by a public roadway or other public right-of-way to a SCHOOL.

(3) ADJOINING means in physical contact with or separated solely by a public roadway or other public right-of-way.

(4) CHEMICAL STABILIZERS means any non-toxic chemicals that are used to bind soil together to control FUGITIVE DUST emissions.

(5) DISTURBED SURFACE AREA means a portion of the earth's surface which has been physically moved, uncovered, destabilized, or otherwise modified from its undisturbed natural soil condition, thereby increasing the potential for FUGITIVE DUST. This definition excludes those areas which have:

(A) Been restored to a natural state, such that the vegetative ground cover and soil characteristics are similar to adjacent or nearby natural conditions;

(B) Been paved or otherwise covered by a permanent structure; or

(C) Sustained a vegetative ground cover of at least 70 percent of the native cover for a particular area for at least 30 days.

(6) DUST SUPPRESSANTS means water or hygroscopic materials, other than CHEMICAL STABILIZERS, that are used as a treatment material to reduce FUGITIVE DUST emissions.

(7) EARTH-MOVING ACTIVITIES means, for the purpose of this rule, any activity on a site that meets the applicability requirements of subdivision (b) where SOIL WITH APPLICABLE TOXIC AIR CONTAMINANT(S) is being moved or uncovered, including: dredging, excavating, grading, earth-cutting and filling operations, loading, unloading, handling, mechanized land clearing, treating, transferring, removing, and adding to or removing from STOCKPILES, and vehicular movement of equipment associated with these activities. EARTH-MOVING ACTIVITIES do not include vehicular movement from: delivery vehicles, passenger vehicles transporting personnel to and from the site, vehicles used for administrative purposes, vehicles transporting personnel for the purposes of soil sampling and conducting ambient PM_{10} monitoring requirements, watering trucks, and equipment used exclusively on a portion(s) of the site where there is no SOIL WITH APPLICABLE TOXIC AIR CONTAMINANT(S).

(c) (8) FUGITIVE DUST means, for the purpose of this rule, any solid particulate matter that is in contact with ambient air and has the potential to become airborne, other than solid particulate matter that is emitted from an exhaust stack.

(9) JOINT USE AGREEMENT PROPERTY means a shared public facility in which a formal agreement exists between a SCHOOL and another government entity setting forth the terms and conditions for shared use.

(10) OWNER OR OPERATOR means any firm, business establishment, association, partnership, corporation or individual, whether acting as principal, agent, employee, contractor, or other capacity.

(11) PAVED ROAD means a public or private improved street, highway, alley, public way, or easement that is covered by typical roadway materials, but excludes access roadways that connect a facility with a public paved roadway and are not open to through traffic. Public paved roads are those open to public access and that are owned by any federal, state, county, municipal, or any other governmental or quasi-governmental agencies. Private paved roads are any PAVED ROADS not defined as public.

(12) PROPERTY LINE means the boundary of an area where a person has the legal use or possession of the property. Where such property is divided into one or more sub-tenancies, the property line(s) shall refer to the boundaries dividing the areas of all sub-tenancies.

(13) SCHOOL means any public or private education center, including juvenile detention facilities with classrooms, used for the education of more than 12 children at the education center in kindergarten through grade 12. A SCHOOL also includes an Early Learning and Developmental Program by the U.S. Department of Education or any state or local early learning and development programs such as preschools, Early Head Starts, Head Start, First Five, and Child Development Centers. A SCHOOL does not include any private education center in which education is primarily conducted in private homes. A SCHOOL includes any building or structure, playground, athletic field, or other area of school property.

(14) SLAG means, for the purpose of this rule, the by-product material that is separated from metals during smelting or refining of ore.

(15) SOIL means dirt, sand, gravel, clay, SLAG, and aggregate material less than two inches in length or diameter, and other organic or inorganic particulate matter.

(16) SOIL WITH APPLICABLE TOXIC AIR CONTAMINANT(S) means, for the purpose of this rule, SOIL that has been identified by the U.S. EPA, the DTSC, the

State Water Board, the Regional Water Board, or a county, local, or state regulatory agency, to contain one or more of the applicable toxic air contaminants listed in Table I that exceed action levels as specified by the designating agency, or soil that has been identified by the Executive Officer to contain one or more of the toxic air contaminants listed in Rule 1401 – New Source Review of Toxic Air Contaminants (Table I) or Hazardous Air Pollutants Identified as Toxic Air Contaminants as listed in California Code of Regulations Section 93001, excluding volatile organic compounds regulated under Rule 1166 – Volatile Organic Compound Emissions from Decontamination of Soil.

(c) (17) STABILIZED SURFACE means any previously DISTURBED SURFACE AREA or STOCKPILE, which through the application of CHEMICAL STABILIZERS or DUST SUPPRESSANTS, shows visual or other evidence of surface crusting and is resistant to WIND-DRIVEN FUGITIVE DUST, and is demonstrated to be stabilized. Stabilization can be demonstrated by one or more of the applicable test methods contained in the most current version of the South Coast AQMD *Rule 403 Fugitive Dust Implementation Handbook* or in Volumes I and II of South Coast AQMD's *Dust Control in the Coachella Valley*.

(18) STOCKPILE means any accumulation of SOIL, which is not fully enclosed and which attains a height of three feet or more and a total surface area of 150 square feet or more.

(19) TRACK-OUT means, for the purpose of this rule, any SOIL that adheres to and agglomerates on the exterior surface of motor vehicles, haul trucks, and equipment (including tires) that has been released onto a PAVED ROAD and that can be removed by a vacuum sweeper under normal operating conditions.

(20) WIND-DRIVEN FUGITIVE DUST means visible emissions from any DISTURBED SURFACE AREA, which is generated by wind action alone.

(d) Monitoring Requirements

(1) When on-site earth-moving activities occur, the owner or operator shall conduct continuous direct-reading near real-time ambient monitoring of PM_{10} concentrations pursuant to paragraph (d)(3).

(2) If the PM_{10} concentration exceeds 25 micrograms per cubic meter, as measured pursuant to paragraph (d)(3) and as determined pursuant to paragraph (d)(9), the owner or operator shall cease on-site earth-moving activities, apply dust suppressant to fugitive dust sources, or implement other dust control measures as

necessary until the PM_{10} concentration is equal to or less than 25 micrograms per cubic meter averaged over 30 minutes.

(d) (3) The owner or operator conducting on-site earth-moving activities shall install PM_{10} monitors and conduct ambient PM_{10} monitoring:

(A) In accordance with a U.S. EPA-approved equivalent method for PM_{10} monitoring or using a Rule 1466 Approved PM_{10} Monitor;

(B) Using a minimum of two monitors, placing each monitor as close to the property line as feasible, where:

(i) One or more monitors is in the seasonal prevailing wind direction upwind of the area(s) of on-site earth-moving activity, indicative of background PM_{10} levels, and not generally influenced by fugitive dust sources from the site; and

(ii) One or more monitors is in the seasonal prevailing wind direction downwind of the area(s) of on-site earth-moving activity;

(C) Using PM_{10} monitors that are identical in: make and model, settings, and configuration; and

(D) Using ambient PM_{10} monitors that are operated, maintained, and calibrated in accordance with appropriate U.S. EPA-published documents for U.S. EPA-approved equivalent methods for PM_{10} and manufacturer's instructions.

(4) On and before December 31, 2021, the owner or operator shall collect ambient PM_{10} data with a data acquisition system (DAS) that is capable of logging direct-reading near real-time data providing the date, time, and PM_{10} concentration in micrograms per cubic meter every 10 minutes or less.

(5) On and after January 1, 2022, the owner or operator shall collect ambient PM_{10} data with a DAS that is capable of logging direct-reading near real-time data providing the date and time, calibrated to Pacific Standard Time (PST), and PM_{10} concentration in micrograms per cubic meter every 1 minute or less.

(6) On and after January 1, 2022, the owner or operator shall operate PM_{10} monitors with the heated sampler inlet on.

(7) On and after January 1, 2022, prior to conducting any on-site earth-moving activities, and weekly thereafter, the owner operator shall conduct intra-instrument precision tests with the PM_{10} monitors in accordance with *Appendix 2 – Procedures to Demonstrate Intra-Instrument Precision*, or make available documentation and supporting data certifying that such intra-instrument precision tests were run by an

equipment rental company or other third party, that demonstrate an intra-instrument precision of:

(d) (7) (A) No more than 25 percent as calculated pursuant to Step 7a in *Appendix 2* when ambient PM_{10} concentrations are equal to or greater than 15 micrograms per cubic meter; or

(B) No more than 5 micrograms per cubic meter as calculated pursuant to Step 7b in *Appendix 2* when ambient PM_{10} concentrations are less than 15 micrograms per cubic meter.

(8) On and after January 1, 2022, each day prior to conducting on-site earth-moving activities, the owner or operator shall conduct a passing zero check on each PM_{10} monitor in accordance with:

(A) Steps 4 and 5 of *Appendix 2* that demonstrates an average PM_{10} concentration of 0 ± 3 micrograms per cubic meter; or

(B) Manufacturer's instructions if a monitor is operated using an auto-zero check procedure that directs filtered particle-free air into the measurement chamber.

(9) The owner or operator shall calculate the PM_{10} concentration as a 120-minute rolling average, where:

(A) The initial average starts at the commencement of on-site earth-moving activities and ends 120 minutes after the commencement of on-site earth-moving activities;

(B) On and before December 31, 2021, the averages subsequent to the initial average specified in subparagraph (d)(9)(A) are to be calculated every 10 minutes and cover the previous 120-minute period;

(C) On and after January 1, 2022, the averages subsequent to the initial average specified in subparagraph (d)(9)(A) are to be calculated every 1 minute and cover the previous 120-minute period;

(D) The PM_{10} concentration is calculated by subtracting the results of the upwind monitor(s) from the downwind monitor(s) for the same averaging period;

(i) If the wind direction is in the seasonal prevailing wind direction, then the monitor(s) described pursuant to clause (d)(3)(B)(i) shall be designated as the upwind monitor(s) and the monitor(s) described pursuant to clause (d)(3)(B)(ii) shall be designated as the downwind monitor(s); and

(d) (9) (D) (ii) If there is greater than a ± 90 degree change in wind direction from the seasonal prevailing wind direction, then the monitor(s) described pursuant to clause (d)(3)(B)(i) shall be designated as the downwind monitor(s) and the monitor(s) described pursuant to clause (d)(3)(B)(ii) shall be designated as the upwind monitor(s);

(E) If there is more than one upwind monitor, the upwind result is the average concentration of all upwind monitors for the same rolling averaging period;

(F) If there is more than one downwind monitor, the downwind result is the maximum concentration of any of the downwind monitors for the same rolling averaging period;

(G) On and before December 31, 2021, when on-site earth-moving activities resume after ceasing pursuant to paragraph (d)(2), the average shall start when on-site earth-moving activities resume and shall end 120 minutes after on-site earth-moving activities resume, and the subsequent averages are to be calculated every 10 minutes and shall cover the previous 120-minute period; and

(H) On and after January 1, 2022, when on-site earth-moving activities resume after ceasing pursuant to paragraph (d)(2), the average shall start when on-site earth-moving activities resume and shall end 120 minutes after on-site earth-moving activities resume, and the subsequent averages are to be calculated every one minute and shall cover the previous 120-minute period.

(10) An owner or operator that elects to move the monitors accordingly when there is a change in wind direction in place of meeting the requirements specified in clauses (d)(3)(B)(i), (d)(3)(B)(ii), (d)(9)(D)(i), and (d)(9)(D)(ii), shall:

(A) Place a minimum of one upwind monitor in the upwind direction of the area(s) of on-site earth-moving activity, indicative of background PM_{10} levels, and not generally influenced by fugitive dust sources from the site;

(B) Place a minimum of one downwind monitor in the downwind direction of the area(s) of on-site earth-moving activity; and

(C) Move the monitor(s) in subparagraph (d)(10)(A) to the new upwind location and the monitor(s) in subparagraph (d)(10)(B) to the new downwind location when there is a change in wind direction.

(11) In the event that a DAS fails to log ambient PM_{10} data pursuant to paragraph (d)(5) or that the data management system integrated with the PM_{10} monitor(s) and

DAS(s) fails to calculate PM_{10} concentrations pursuant to subparagraph (d)(9)(C) due to a technical issue beyond the reasonable control of an owner or operator, including, but not limited to, internet connection disruptions and computer malfunctions, the owner or operator shall:

(d) (11) (A) Restore the DAS or data management system to working condition as soon as practicable and no later than the start of the next working day; and

(B) Manually record the PM_{10} concentration from the monitor(s) associated with the non-operational DAS once every 10 minutes or less and calculate the PM_{10} concentration pursuant to the averages specified in subparagraph (d)(9)(B) until the DAS is restored or calculate the PM_{10} concentration pursuant to the averages specified in subparagraph (d)(9)(B) until the data management system is restored.

(12) When conducting ambient PM_{10} monitoring as required in paragraph (d)(1), the owner or operator shall monitor wind direction and speed using a minimum of one stationary anemometer or wind sensor that:

(A) Is sited over open, level terrain within the project site with minimal obstructions to the wind flow at a minimum height of eight feet above grade;

(B) Meets the performance criteria of:

(i) Wind direction accuracy of ± 7 degrees and resolution of 1 degree; and

(ii) Wind speed accuracy of 2 miles per hour (mph) or ± 5 percent of the observed wind speed, whichever is greater, and resolution of 1 mph;

(C) Has a National Institute of Standards and Technology (NIST) Traceability certification;

(D) Is equipped with a data logger that records wind direction and speed data once every 1 minute or less and archives the recorded wind direction and speed data, including the date and time, calibrated to PST; and

(E) Is operated, calibrated, and maintained in accordance with manufacturer's specifications, but no less frequent than once every 6 months of cumulative operation.

(13) The Executive Officer may approve a PM_{10} monitor to be added as a Rule 1466 Approved PM_{10} Monitor if the PM_{10} monitor meets the specifications listed in *Appendix 1 – Rule 1466 Approved PM_{10} Monitors*. The request for a PM_{10} monitor to be added as a Rule 1466 Approved PM_{10} Monitor shall:

(A) Be submitted to Rule1466ApprovedMonitors@aqmd.gov;

(d) (13) (B) Include a description of the PM_{10} monitor, any accessories, and all monitor specifications; and

(C) Include documentation demonstrating compliance with each specification listed in *Appendix 1*.

(e) Requirements to Minimize Fugitive Dust Emissions

(1) On and before December 31, 2021, an owner or operator shall not conduct on-site earth-moving activities unless the area is surrounded with fencing that is a minimum of 6 feet tall and at least as tall as the height of the tallest stockpile, with a windscreen that has a porosity of 50 ± 5 percent. A section of the perimeter surrounding an on-site earth-moving activity area may be excluded from this requirement if that section:

(A) Has a solid physical barrier, such as a solid wall or other solid feature that minimizes air flow, that is a minimum of 6 feet tall but at least 6 inches taller than the height of the tallest stockpile; or

(B) Does not have on-site earth-moving activity occurring within 300 feet from the perimeter of that section.

(2) On and after January 1, 2022, an owner or operator shall not conduct on-site earth-moving activities unless the area is surrounded with fencing that is a minimum of 6 feet tall but at least 6 inches taller than the height of the tallest stockpile, with a windscreen that has a porosity of 50 ± 5 percent or a mesh windscreen that has a shade value or opacity of 85 ± 5 percent. A section of the perimeter surrounding an on-site earth-moving activity area may be excluded from this requirement if that section meets the conditions as specified in subparagraph (e)(1)(A) or (e)(1)(B).

(3) An owner or operator conducting on-site earth-moving activities shall:

(A) Adequately wet to the depth of earth-moving activity and allow time for penetration; and

(B) Adequately wet at frequencies to prevent the generation of visible dust plumes.

(4) An owner or operator that is moving vehicles on, within, or off a site shall:

(A) Post signs at all entrances of the site to designate the speed limit as 15 mph;

(B) Stabilize the surface of all vehicular traffic and parking areas by applying gravel, paving, chemical stabilizers pursuant to paragraph (e)(13), or dust suppressant;

(C) Not allow any track-out outside of the property line that is 25 feet or more in cumulative length. Remove any track-out at a minimum frequency of

once each day using a vacuum equipped with a filter(s) rated by the manufacturer to achieve a 99.97 percent control efficiency for 0.3 micron particles;

(e) (4) (D) Clean the soil from the exterior of trucks, trailers, and tires prior to the truck leaving the site, without the use of forced air; and

(E) Utilize at least one of the following measures at each vehicle egress from the site to a public road:

(i) Install a pad consisting of washed gravel (minimum-size: 1 inch), maintained in a clean condition, to a depth of at least 6 inches and extending at least 30 feet wide and at least 50 feet long;

(ii) Pave the surface extending at least 100 feet from the property line and at least 30 feet wide;

(iii) Utilize a wheel shaker/wheel spreading device consisting of raised dividers (rails, pipes, or grates) at least 24 feet long and 30 feet wide; or

(iv) Install and utilize a wheel washing system to remove soil from tires and vehicle undercarriages.

(5) An owner or operator conducting on-site earth-moving activities shall ensure that stockpiles with any soil with applicable toxic air contaminant(s) be:

(A) Segregated from non-contaminated stockpiles;

(B) Labelled with "South Coast AQMD Rule 1466 – Control of Particulate Emissions from Soils with Toxic Air Contaminant(s) Applicable Soil";

(C) Maintained to avoid steep sides or faces that exceed the angle of repose;

(D) No more than 400 cubic yards of soil;

(E) Maintained to minimize fugitive dust emissions containing toxic air contaminants by applying chemical stabilizers pursuant to paragraph (e)(13), applying dust suppressant, or completely covering pursuant to paragraph (e)(14); and

(F) Either chemically stabilized pursuant to paragraph (e)(13) and/or completely covered pursuant to paragraph (e)(14) at all times when earth-moving activities and ambient PM_{10} monitoring are not occurring.

(6) An owner or operator conducting truck and trailer loading activities of soil containing applicable toxic air contaminant(s) shall:

(A) Apply dust suppressant to material prior to loading;

(B) Empty the loader bucket slowly so that no visible dust plumes are generated;

(e) (6) (C) Minimize the drop height from the loader bucket;

(D) Maintain at least 6 inches of space between the soil and the top of the truck bed and trailer while transporting within a site; and

(E) Completely cover the truck bed and trailer prior to leaving the site.

(7) An owner or operator conducting truck and trailer unloading activities of soil containing applicable toxic air contaminant(s) shall:

(A) Apply dust suppressant to material prior to unloading; and

(B) Empty the trailer slowly so that no visible dust plumes are generated.

(8) The owner or operator shall immediately remove any spilled soil.

(9) The owner or operator shall cease on-site earth-moving activities if the wind speed is greater than 15 mph averaged over a 15-minute period or the instantaneous wind speed exceeds 25 mph.

(10) During on-site earth-moving activities, the owner or operator shall have an on-site dust control supervisor that:

(A) Is employed by or contracted with the owner or operator;

(B) Is located on the site during working hours;

(C) Is in a position to expeditiously employ sufficient dust control measures to ensure compliance with all rule requirements;

(D) Has completed the South Coast AQMD Fugitive Dust Control Class and has been issued a valid Certificate of Completion for the class; and

(E) Has the following credentials, if asbestos is an applicable toxic air contaminant:

(i) Successfully completed the Asbestos Abatement Contractor/Supervisor course pursuant to the Asbestos Hazard Emergency Response Act (AHERA), and obtained and maintained accreditation as an AHERA Asbestos Abatement Contractor/Supervisor; and

(ii) Trained on the provisions of 40 CFR Part 61.145, 61.146, 61.147 and 61.152 (Asbestos NESHAP provisions) and Part 763, and has the means to comply with these provisions.

(11) An owner or operator shall apply a chemical stabilizer pursuant to paragraph (e)(13) and/or use a cover pursuant to paragraph (e)(14) on potential sources of fugitive dust when earth-moving activities are not occurring in the specific location(s) containing the potential source(s) of fugitive dust.

(e) (12) An owner or operator shall inspect daily, including days when no on-site earth-moving activities are occurring, labeled stockpiles pursuant to subparagraph (e)(5)(B) and stabilized or covered stockpiles pursuant to (e)(5)(F).

(A) For a stabilized stockpile, such inspections shall include a demonstration of stabilization by one or more of the applicable test methods contained in the most current version of the South Coast AQMD *Rule 403 Fugitive Dust Implementation Handbook* or Volumes I and II of South Coast AQMD's *Dust Control in the Coachella Valley*.

(B) For a covered stockpile, such inspections shall include a visual inspection of all seams and plastic cover surfaces to ensure that no portion of the soil is exposed to the atmosphere.

(13) When utilizing a chemical stabilizer, an owner or operator shall:

(A) Ensure the chemical stabilizer meets any specifications, criteria, or tests required by any federal, state, or local agency or any applicable law, rule, or regulation; and

(B) Unless otherwise indicated, use a sufficient concentration of the chemical stabilizer and an application frequency sufficient to maintain a stabilized surface and no less than what is specified by the manufacturer for the period of inactivity.

(14) When using a cover for stockpiles, an owner or operator shall ensure the cover:

(A) Is at least 10 mil thick plastic sheeting that overlaps a minimum of 24 inches; and

(B) Is anchored and secured so that no portion of the soil is exposed to the atmosphere.

(15) An owner or operator that is conducting earth-moving activities of soil with applicable toxic air contaminant(s) at a school, joint use agreement property, adjacent athletic area, or at a site that is adjoining a school, joint use agreement property, or adjacent athletic area shall:

(A) Only conduct earth-moving activities at a school or at a site that is adjoining a school outside of the hours between 7:30 a.m. and 4:30 p.m. on days when the school is in session;

(B) Not conduct earth-moving activities at a school, joint use agreement property, adjacent athletic area, or at a site that is adjoining a school, joint use agreement property, or adjacent athletic area if there is a school sponsored activity or youth organized sports taking place at that site;

(e) (15) (C) Handle excavated soils with applicable toxic air contaminant(s) by:

(i) Immediately placing soil in a leak-tight container whereby any contained solids or liquids are prevented from escaping or spilling out;

(ii) Directly loading soil in truck beds, trailers, and bins for transport, applying chemical stabilizer pursuant to paragraph (e)(13) or dust suppressant, and completely covering prior to transporting; or

(iii) Stockpiling pursuant to paragraph (e)(5), in a fenced area that is not accessible to the general public, and locked when not in use; and

(D) Within five days of its excavation, remove all soil with applicable toxic air contaminant(s) from the site.

(f) Notification Requirements

(1) The owner or operator shall electronically submit an initial notification to the Executive Officer, using a format approved by the Executive Officer, of the intent to conduct any on-site earth-moving activities.

(A) Initial notifications shall be submitted:

(i) At least 72 hours but no more than 30 days prior to conducting any earth-moving activities on any site meeting the applicability requirements of subdivision (b); or

(ii) As soon as the information becomes available but no later than 48 hours after the information becomes available that on-site earth-moving activities of soil with applicable toxic air contaminant(s) exceed 50 cubic yards.

(B) Initial notifications shall include the following requirements:

(i) Name, address, telephone number, and e-mail address of the owner or operator;

(ii) Name, telephone number, and e-mail address of the on-site dust control supervisor;

(iii) Project name and, if applicable, the project identification number from the designating agency;

(iv) Project location (address and/or coordinates);

(v) Identify whether the site is a school, joint use agreement property, adjacent athletic area, or is adjoining a school, joint use agreement property, or adjacent athletic area;

(f) (1) (B) (vi) A map indicating the specific location(s) of each on-site earth-moving activity and the concentrations of the applicable toxic air contaminant(s) and location of PM_{10} monitors;

(vii) A description of the on-site earth-moving activities, estimated volume of soil with applicable toxic air contaminant(s), and a schedule that includes the anticipated start and completion dates of on-site earth-moving activities;

(viii) Current and/or previous type of operation(s) and use(s) at the site;

(ix) Applicable exemption(s); and

(x) Whether the notice being provided is a revised notification.

(2) Notification Updates

Initial notifications pursuant to paragraph (f)(1) shall be updated when any of the following conditions arise:

(A) Earlier Start Date

A change in the start date of on-site earth-moving activities to an earlier date shall be reported to the South Coast AQMD no later than 72 hours before any on-site earth-moving activities begin.

(B) Later Start Date

A delay in the start date of on-site earth-moving activities shall be reported to the South Coast AQMD as soon as the information becomes available, but no later than the original start date.

(C) Change in Exemption Status

Any change(s) in exemption status pursuant to subdivision (k) shall be reported to the South Coast AQMD as soon as the information becomes available, but no later than 48 hours after the information becomes available.

(D) Completion Date

The completion date of on-site earth-moving activities shall be reported to the South Coast AQMD no later than 48 hours after on-site earth-moving activities are completed.

(3) Within 72 hours of an exceedance of the PM_{10} emission limit specified in paragraph (d)(2), the owner or operator shall electronically submit a notification to the Executive Officer, using a format approved by the Executive Officer, of the exceedance and shall include the following information:

(f) (3) (A) Name, address, telephone number, and e-mail address of the owner or operator;

(B) Name, telephone number, and e-mail address of the on-site dust control supervisor;

(C) Project name and, if applicable, the project identification number from the designating agency;

(D) Project location (address and/or coordinates);

(E) PM_{10} monitoring results and wind direction and speed results pursuant to subdivision (d), including location of monitors, result, date and time of exceedance(s), 12 hours before first exceedance, and 12 hours after last exceedance;

(F) On-site earth-moving activities occurring at the date and time of exceedance(s); and

(G) Dust control measure(s) taken to mitigate fugitive dust.

(g) Signage Requirements

When conducting on-site earth-moving activities, the owner or operator shall install and maintain project signage.

(1) Unless otherwise approved in writing by the Executive Officer, signage shall:

(A) Be installed at all entrances and at intervals of 1,000 feet or less along the property line or perimeter of the site, with a minimum of one sign along each side;

(B) Be located between 6 and 8 feet above grade from the bottom of the sign;

(C) Display lettering at least 4 inches tall with text contrasting with the sign background; and

(D) Display the following information:

(i) Local or toll-free phone number for the site contact or pre-recorded notification center that is accessible 24 hours a day; and

(ii) Warning statement:

"THIS SITE CONTAINS SOILS THAT CONTAIN THE FOLLOWING CHEMICALS: [LIST APPLICABLE TOXIC AIR CONTAMINANT(S)]
TO REPORT ANY DUST LEAVING THE SITE PLEASE CALL [FACILITY CONTACT AND PHONE NUMBER] OR THE SOUTH COAST AIR QUALITY MANAGEMENT DISTRICT AT 1-800-CUT-SMOG".

(g) (2) If signage pursuant to paragraph (g)(1) exceeds 48 inches by 96 inches, the owner or operator or designating agency shall include the warning statement referenced in clause (g)(1)(D)(ii), displaying lettering at least 4 inches tall with text contrasting with the sign background, but may use 2.5 inch tall lettering to list applicable toxic air contaminant(s). All other signage requirements set forth in paragraph (g)(1) shall remain the same. If signage continues to exceed 48 inches by 96 inches with these parameters, the owner or operator or designating agency may use alternative signage as set forth in paragraph (g)(3).

(3) The owner or operator or designating agency may use alternative signage approved by the Executive Officer pursuant to subdivision (j). Notwithstanding subdivision (j), the request shall include a visual representation of the alternative sign, including proposed lettering height, and locations and, at a minimum, the alternative signage shall:

(A) Display text contrasting with the sign background; and

(B) Display the following warning statement:

"THIS SITE CONTAINS SOILS THAT CONTAIN THE FOLLOWING CHEMICALS: [LIST APPLICABLE TOXIC AIR CONTAMINANT(S)] TO REPORT ANY DUST LEAVING THE SITE PLEASE CALL THE SOUTH COAST AIR QUALITY MANAGEMENT DISTRICT AT 1-800-CUT-SMOG".

(4) The owner or operator may be excluded from installing and maintaining project signage pursuant to subparagraph (g)(1)(A) at any entrance(s) or interval(s) along the property line or perimeter of the site that is not visible and not accessible to the public unless the site is a school, joint use agreement property, or adjacent athletic area or the site is adjoining a school, joint use agreement property, or adjacent athletic area.

(h) Recordkeeping Requirements

The owner or operator shall maintain records for a period of not less than 3 years and shall make such records available to the Executive Officer upon request. At a minimum, records shall be maintained daily and shall include:

(1) Inspections of all stabilized or covered stockpiles containing soils with applicable toxic air contaminant(s) and all re-stabilization, cover repair, and label maintenance activities, including dates and times the specific activities were conducted;

(2) Results of wind and PM_{10} monitoring, including: ambient PM_{10} data; rolling average PM_{10} concentrations and calculations; wind direction and speed

corresponding to the rolling average PM_{10} concentrations; movement of monitoring instruments corresponding to wind direction changes; instrument make and model; settings; proof of valid calibration in accordance with manufacturer's recommended schedule; configuration; calibration, correction, and correlation factors; maintenance; operator training; daily instrument performance check records and manual zero or auto-check results; weekly zero calibration records and intra-instrument precision test data and calculation results; and all instrument logs for all monitoring instruments;

(h) (3) All instrument maintenance activities, including: zero calibration, cleaning, filter replacement, and performance checks, including dates and times of the specific procedures;

(4) Documentation of all DAS and data management system failures, including date and time of the failure, date and time of the correction, the technical issue(s) causing the failure, and activities performed to restore the failed DAS or data management system to working condition;

(5) On-site earth-moving activities conducted and the corresponding volume of soil with applicable toxic air contaminant(s);

(6) Names and business addresses of the transporting and receiving facilities, and a copy of the shipping manifest;

(7) Complaints called in, including the name of complainant and contact information, date and time, on-site earth-moving activities occurring at the date and time, complaint, and action taken to mitigate the source of the complaint; and

(8) A copy of all submitted notifications for the project.

(i) Executive Officer Designated Sites

(1) The Executive Officer may designate a site if the Executive Officer has evidence that the site contains soil with applicable toxic air contaminant(s) as defined in paragraph (c)(16), after consultation with U.S. EPA, DTSC, the State Water Resources Control Board, the Regional Water Quality Control Board, and/or local, county, or state regulatory agencies, and consideration of the following:

(A) Site history, including current and/or previous type(s) of operation(s) and use(s) at the site and regulatory history;

(B) Concentration(s) of applicable toxic air contaminant(s) in the soil;

(C) Background concentration(s) of applicable toxic air contaminant(s);

(D) Volume of soil with applicable toxic air contaminant(s);

(i) (1) (E) Distance to a residence, park, school, joint use agreement property, adjacent athletic area, or a site adjoining a school, joint use agreement property, or adjacent athletic area;

(F) Meteorological data;

(G) Health risk information or other data provided by the owner or operator, if available; and

(H) Ambient monitoring data and other applicable data, if available.

(2) Prior to making a determination, the Executive Officer will notify the owner or operator in writing that the site may be subject to this rule.

(A) In the event the owner or operator exercises this opportunity to demonstrate that this rule does not apply, the owner or operator shall submit information to the Executive Officer within 14 days of the notification substantiating why the site should be excluded from this rule.

(B) Upon final determination, the Executive Officer will notify the owner or operator in writing if the site is subject to this rule.

(3) During the determination period, the owner or operator shall comply with the provisions of this rule or cease all on-site earth-moving activities until a determination is made.

(j) Alternative Provisions

(1) If requesting an alternative provision pursuant to paragraph (g)(3), the owner or operator or designating agency shall submit the request in writing at least 30 days prior to conducting any earth-moving activities and include all information to the Executive Officer to substantiate its position.

(2) The Executive Officer may request additional information from the owner or operator or designating agency.

(3) The owner or operator or designating agency shall submit all requested information within 14 days of the request for additional information.

(4) The Executive Officer will review the request for an alternative provision and will approve or reject the data and notify the owner or operator or designating agency in writing. Approved alternative provisions may not be used retroactively.

(5) Alternative provisions that were approved and notified in writing by the Executive Officer before June 4, 2021 shall be deemed compliant with the requirements of the applicable provisions of the rule, shall remain in effect only for the period of time and for the specific project for which they were granted, and shall not be renewed or extended.

(k) Exemptions

(1) The owner or operator may be exempt from one or more provisions of this rule provided there is written confirmation that the designating agency under subparagraphs (b)(1)(A) through (b)(1)(D) has consulted with the Executive Officer and has determined that the provision(s) are not needed based on information specified in subparagraphs (i)(1)(A) through (i)(1)(H).

(2) On-site earth-moving activities performed within an enclosed system vented to South Coast AQMD permitted air pollution control equipment shall be exempt from all requirements except: subparagraphs (e)(4)(C) through (e)(4)(E), subparagraphs (e)(6)(D) and (e)(6)(E), and subdivisions (f), (g), and (h).

(3) Linear trenching for natural gas, power, sewer, and water projects on roadways with soil with applicable toxic air contaminant(s), directly loaded into a truck bed, trailer, or bin for transport, shall be exempt from all requirements except: paragraphs (e)(3) through (e)(9), paragraphs (e)(13) and (e)(15), and subdivisions (f), (h), and (i).

(4) On-site earth-moving activities consisting only of excavation activities of soil with applicable toxic air contaminant(s) of less than 500 cubic yards, directly loaded into a truck bed, trailer, or bin for transport, shall be exempt from all requirements except: paragraphs (e)(3) through (e)(9), paragraphs (e)(13) and (e)(15), and subdivisions (f), (h), and (i).

(5) On-site earth-moving activities conducted during emergency life-threatening situations, or in conjunction with any officially declared disaster or state of emergency as declared by an authorized health officer, agricultural commissioner, fire protection officer, or other authorized agency officer shall be exempt from all requirements. The Executive Officer shall be notified electronically no later than 48 hours following such on-site earth-moving activities. Written notification shall include written emergency declaration from the authorized officer.

(6) On-site earth-moving activities conducted by essential service utilities to provide electricity, natural gas, telephone, water, or sewer during periods of service outages and emergency disruptions shall be exempt from all requirements. The Executive Officer shall be notified electronically no later than 48 hours following such on-site earth-moving activities.

Table I – Applicable Toxic Air Contaminants

CAS Number	Substance
7440-38-2	**arsenic and arsenic compounds (inorganic)**
	including, but not limited to:
	arsenic compounds (inorganic)
7784-42-1	arsine
1332-21-4	Asbestos
7440-43-9	cadmium and cadmium compounds
57-74-9	chlordane
	dibenzo-p-dioxins (chlorinated)
1746-01-6	tetrachlorodibenzo-p-dioxin, 2,3,7,8-
40321-76-4	pentachlorodibenzo-p-dioxin, 1,2,3,7,8-
39227-28-6	hexachlorodibenzo-p-dioxin, 1,2,3,4,7,8-
57653-85-7	hexachlorodibenzo-p-dioxin, 1,2,3,6,7,8-
19408-74-3	hexachlorodibenzo-p-dioxin, 1,2,3,7,8,9-
35822-46-9	heptachlorodibenzo-p-dioxin, 1,2,3,4,6,7,8-
3268-87-9	octachlorodibenzo-p-dioxin, 1,2,3,4,6,7,8,9-
41903-57-5	total tetrachlorodibenzo-p-dioxin
36088-22-9	total pentachlorodibenzo-p-dioxin
34465-46-8	total hexachlorodibenzo-p-dioxin
37871-00-4	total heptachlorodibenzo-p-dioxin
72-54-8	dichlorodiphenyldichloroethane
72-55-9	dichlorodiphenyldichloroethylene
50-29-3	dichlorodiphenyltrichloroethane

Appendix 1 – Rule 1466 Approved PM_{10} Monitors

The Executive Officer may approve PM_{10} monitors that meet the following physical and performance requirements.

1. Physical Requirements
   - 1.1. PM_{10} monitors shall be continuous direct-reading near-real time monitors and shall monitor particulate matter less than 10 microns.
   - 1.2. PM_{10} monitors shall be equipped with:
     - 1.2.a. Omni-directional heated sampler inlet;
     - 1.2.b. Sample pump with active flow control mechanism;
     - 1.2.c. Enclosure;
     - 1.2.d. Data logger capable of logging each data point with average concentration, time, date, and data point number; and
     - 1.2.e. Conductive tubing that minimizes particle loss for any external tubing used to carry sampled air prior to measurement.

2. Performance Requirements
   - 2.1 PM_{10} monitors shall have the following minimum performance standards:
     - 2.1.a. Range: 0 - 10,000 $\mu g/m^3$;
     - 2.1.b. Accuracy, determined through factory testing against a U.S. EPA Federal Reference Method or Federal Equivalent Method, for a minimum of 30 measurements each averaged over 24 hours, to show:
       - 2.1.b.i. ± 5% of reading ± precision; or
       - 2.1.b.ii. Coefficient of determination (R^2) of ≥ 0.95 through simple linear regression;
     - 2.1.c. Resolution: 1.0 $\mu g/m^3$;
     - 2.1.d. Flow control accuracy of ± 5% of factory setpoint; and
     - 2.1.e. Measurement Cycle: User selectable (30 minute and 2 hour).
   - 2.2 Monitors that have a valid *Monitoring Certification Scheme* certification meeting the latest version of the *Monitoring Certification Scheme* (*MCERTS): Performance Standard for Indicative Ambient Particulate Monitors* may be exempt from meeting the performance requirements listed above, but shall meet all stated physical requirements.

3. Quality Assurance/Quality Control Requirements

In order to ensure the validity of the PM_{10} measurements performed, there shall be appropriate Quality Assurance/Quality Control (QA/QC). It is the responsibility of the owner or operator to adequately supplement QA/QC Plans to include the following critical features: instrument calibration, instrument maintenance, operator training, and daily instrument performance checks.

Appendix 2 – Procedures to Demonstrate Intra-Instrument Precision

An owner or operator shall perform the following procedures to demonstrate the intra-instrument precision of all PM_{10} monitors as required in paragraph (d)(7).

1. Ensure monitors are identical in make and model, settings, and configuration.
2. Ensure monitor inlets are at the same height and located within 4 meters of each other but no less than 1 meter apart for the duration of the test.
3. Power on the monitors and turn on the heated sampler inlet. Allow the monitors to warm-up per manufacturer's recommendations or when readings have stabilized.
4. For each monitor, conduct a zero calibration in accordance with manufacturer's instructions, then conduct a manual zero check by removing any sampling inlet and installing a filter, rated by the manufacturer to achieve a 99.97 percent control efficiency for 0.3 micron particles, on the inlet of the monitor for a minimum of 10 minutes. If the monitors are operated using an auto-zero check procedure that directs filtered particle-free air into the measurement chamber, conduct the zero check in accordance with manufacturer's instructions.
5. Log the PM_{10} concentration reading every minute, and calculate and record the average of the readings of the manual zero check. The average of the manual zero check readings shall be 0 ± 3 micrograms per cubic meter before proceeding to Step 6. If conducting an auto-zero check, the monitor shall pass the zero check in accordance with manufacturer's instructions before proceeding to Step 6. If any monitors fail either the manual zero check or the auto-zero check, the owner or operator shall conduct a zero calibration in accordance with manufacturer's instructions and/or correct any issue(s) causing the failure, followed by conducting a passing zero check on the PM_{10} monitor(s) in accordance with Steps 4 and 5.
6. Remove the filter and install the monitor inlet as required. After waiting 10 minutes, operate the monitors simultaneously and log the PM_{10} concentration reading every minute for a minimum of 60 minutes.

7. Calculate the intra-instrument precision using either of the following equations:
   a. Intra-instrument precision in relative standard deviation or correlation of variation (%) when ambient PM_{10} concentrations are greater than or equal to 15 micrograms per cubic meter:

$$P = \frac{S_t}{C_t} \, x \, 100\%$$

where,

P = Intra-instrument precision in percent (%);

S_t = Standard deviation of the averaged PM_{10} concentration readings from all tested monitors over the time t of testing duration, to be calculated as:

$$S_t = \sqrt{\frac{\sum(x_i - \bar{x})^2}{(n-1)}}$$

where,

x_i = Mean of the PM_{10} concentration readings for a tested monitor over time t of testing duration,

$\bar{x}$ = Mean of the averaged PM_{10} concentration readings from all tested monitors over the time t of testing duration, and

n = Number of tested monitors; and

C_t = Mean of the averaged PM_{10} concentration readings from all tested monitors over the time t of testing duration; or

   b. Intra-instrument precision in absolute value (micrograms per cubic meter) when ambient PM_{10} concentrations are less than 15 micrograms per cubic meter:

$$P = S_t$$

where,

P = Intra-instrument precision in micrograms per cubic meter, and

S_t = Standard deviation of the averaged PM_{10} concentration readings from all tested monitors over the time t of testing duration.

8. Record the results of the calculations.

APPENDIX E
SCAQMD RULE 1166

(Adopted August 5, 1988)(Amended July 14, 1995)(Amended May 11, 2001)

RULE 1166. VOLATILE ORGANIC COMPOUND EMISSIONS FROM DECONTAMINATION OF SOIL

(a) Applicability

This rule sets requirements to control the emission of Volatile Organic Compounds (VOC) from excavating, grading, handling and treating VOC-contaminated soil as a result of leakage from storage or transfer operations, accidental spillage, or other deposition.

(b) Definitions

(1) EXCAVATION is the process of digging out and removing materials, including any material necessary to that process such as the digging out and removal of asphalt or concrete necessary to expose, dig out and remove known VOC contaminated soil.

(2) GRADING is the process of leveling off to produce a smooth surface including the removal of any material necessary to that process such as asphalt and concrete necessary to expose known VOC contaminated soil.

(3) SOIL DECONTAMINATION MEASURE is any process approved by the Executive Officer to remediate, destroy, remove, or encapsulate VOC and VOC-contaminated soil.

(4) UNDERGROUND STORAGE TANK means any one or combination of tanks, including pipes connected thereto, which is used for the storage of organic liquid which is more than 50% beneath the surface of the ground.

(5) VOC CONTAMINATED SOIL is a soil which registers a concentration of 50 ppm or greater of Volatile Organic Compounds as measured before suppression materials have been applied and at a distance of no more than three inches from the surface of the excavated soil with an organic vapor analyzer calibrated with hexane.

(6) VOC CONTAMINATED SOIL MITIGATION PLAN is a plan to minimize VOC emissions to the atmosphere during excavation and any subsequent handling of VOC-contaminated soil.

(7) VOLATILE ORGANIC COMPOUND (VOC) is any volatile compound of carbon, excluding methane, carbon monoxide, carbon dioxide, carbonic acid, metallic carbides or carbonates, ammonium carbonate, and exempt compounds. Exempt compounds are defined in Rule 102—Definition Of Terms.

(8) VOLATILE ORGANIC MATERIALS include gasoline, diesel, crude oil, lubricant, waste oil, adhesive, paint, stain, solvent, resin, monomer, and/or any other material containing VOC.

(c) Requirements

(1) A person excavating an underground storage tank and/or transfer piping storing or previously storing VOC materials, or excavating or grading soil containing VOC materials shall:

(A) Apply for, obtain and operate pursuant to a mitigation plan approved by the Executive Officer prior to commencement of excavation or handling. The mitigation plan general requirement and application requirements are found in Attachment A to this rule. A copy of the approved plan must be on site during the entire excavation period.

(B) Notify the Executive Officer at least 24 hours prior to excavation using a form approved by the Executive Officer which is fully completed.

If the excavation does not commence on start date, renotification is required.

An alternative notification procedure may be authorized for multiple excavations within a single facility, with prior written approval from the Executive Officer.

(C) Monitor for VOC contamination pursuant to subdivision (e), at least once every 15 minutes commencing at the beginning of excavation or grading and record all VOC concentration readings in a format approved by the Executive Officer; and

(D) When VOC-contaminated soil is detected during excavation or grading:

(i) Implement the approved mitigation plan (Attachment A).

(ii) Notify the Executive Officer within 24 hours of detection of VOC-contaminated soil.

(iii) Monitor and record VOC concentration readings as prescribed in the plan. Monitoring records must be kept available on site.

(iv) Keep calibration records for all monitoring instruments available on site.

(2) A person handling VOC-contaminated soil at or from an excavation or grading site shall:

(A) Segregate VOC-contaminated stockpiles from non-VOC contaminated stockpiles such that mixing of the stockpiles does not take place.

(B) Spray VOC-contaminated soil stockpiles with water and/or approved vapor suppressant and cover them with plastic sheeting for all periods of inactivity lasting more than one hour.

(C) Conduct a daily visual inspection of all covered VOC contaminated soil stockpiles to ensure the integrity of the plastic covered surfaces. A daily inspection record must be maintained on site.

(D) Comply with the provisions in subparagraph (c) (1)(A) and clause (c)(1)(D)(i).

(E) Maintain a record of the identification and business addresses of the generator, transporter and storage/treatment facilities. Such record shall be signed by each party at the time custody is transferred.

(F) Treat or remove contaminated soil from an excavation or grading site within 30 days from the time of excavation.

(3) If the VOC concentration in the excavated soil is measured at greater than 1000 ppm, spray the soil with water or vapor suppressant and:

(A) As soon as possible, but not more than 15 minutes, place the soil in sealed containers, or

(B) As soon as possible, but not more than 15 minutes, load into trucks, moisten with additional water, cover and transport off site, or

(C) Implement other alternative storage methods approved in writing by the Executive Officer.

(4) A person treating VOC-contaminated soil shall:

(A) Obtain a permit to construct and operate treatment equipment, as applicable, from the Executive Officer, and

(B) Implement VOC-contaminated soil decontamination measures, as approved by the Executive Officer in writing, which result in Best Available Control Technology applied during all segments, and which include, but are not limited to, at least one of the following:

(i) Installation and operation of an underground VOC collection system and a disposal system prior to excavation.

(ii) Collection and disposal of the VOC from the excavated soil on-site using equipment approved by the Executive Officer.

(iii) Any equivalent VOC-contaminated soil control measure previously approved in writing by the Executive Officer.

(5) A person shall not engage in or allow any on-site or off-site spreading, grading or screening of VOC-contaminated soil, which results in uncontrolled evaporation of VOC to the atmosphere.

(6) Loading trucks for contaminated soil must meet the following:

(A) The truck and trailer shall be adequately tarped prior to leaving the site; no excavated materials shall extend above the sides or rear of the truck or trailer to prevent soil spillage during transport, and

(B) The exterior of the truck, trailer and tires shall be cleaned off prior to the truck leaving the site.

(d) Exemptions

(1) The provisions of this rule shall not apply to the following:

(A) Excavation, handling, and treating of less than one (1) cubic yard of contaminated soil.

(B) Removal of soil for sampling purposes.

(C) Accidental spillage of five (5) gallons or less of VOC containing material.

(2) The provisions of paragraphs (c)(1) and (c)(2) shall not apply to soil excavation or handling as a result of an emergency as declared by an authorized health officer, agricultural commissioner, fire protection officer, or other authorized agency officer. Whenever possible, the Executive Officer shall be notified by telephone prior to commencing such excavation. The Executive Officer shall be notified in writing no later than 48 hours following such excavation. Written notification shall include written emergency declaration from the authorized officer.

(e) Test Methods

(1) A person shall measure excavated soils for volatile organic compounds to determine contamination by:

(A) Using an organic vapor analyzer calibrated with hexane, complying with 40 CFR Part 60 Appendix A, EPA Reference Method 21 Section 3 or any equivalent method with prior approval in writing by the Executive Officer. If other calibrating gases are used, then the measured readings shall be correlated to and expressed as hexane.

(B) Placing the probe inlet at a distance of no more than three inches from the surface of the excavated soil and while slowly moving the probe across the soil surface, observe the instrument readout. If an increased meter reading is observed, continue to sample the excavated soil until the maximum meter reading is obtained. Leave the probe inlet at this maximum reading location for approximately double the instrument response time. If the maximum observed meter reading is greater than the 50 ppm standard in the regulation, record and report the results.

(2) The presence of VOC in stored or spillage materials shall be determined by SCAQMD Method 313 [Determination of Presence of Volatile Organic Compounds (VOC) in Headspace] and/or Method 304 (Determination of Volatile Organic Compounds in Various Materials) contained in the SCAQMD "Laboratory Methods of Analysis for Enforcement Samples" manual.

(f) Enforcement

(1) Violation of any provision of this rule or the violation of the approved mitigation plan shall be grounds for the Executive Officer to amend or revoke the mitigation plan, in addition to penalties provided by the Health & Safety Code.

(2) If the owner or operator is served with a Notice of Violation for creating a public nuisance, the owner or operator shall suspend operation until the public nuisance is mitigated to the satisfaction of the Executive Officer.

ATTACHMENT A
GENERAL MITIGATION PLANS REQUIREMENTS

VOC Contaminated Soil Mitigation Plans shall be written to minimize VOC emissions to the atmosphere during excavation, grading, handling and treatment of VOC contaminated soil. VOC Contaminated Soil Mitigation Plans shall consist of three types: Various Locations, Site Specific and Facility Treatment.

(1) General Requirements

(A) A plan is not transferable.

(B) A person responsible for the excavation, grading or handling of VOC contaminated soil must be completely familiar with the plan and must adhere to the plan requirement. The Executive Officer may require that the plan be signed by the owner and/or operator.

(C) A plan may be amended upon renewal.

(D) Permission to excavate, grade or handle VOC contaminated soil may be withdrawn by the District upon a finding by the Executive Officer that the excavation, grading or handling of the VOC contaminated soil is causing a public nuisance or violating other AQMD rules or regulations.

(2) Various Location Plans:

(A) Shall be limited to the excavation of 2000 cubic yards or less of VOC contaminated soil in any consecutive 12 month period at the same site.

(B) Shall not be used in conjunction with any other various location plan at the same site within a consecutive 12-month period.

(C) Shall expire after one year from issuance unless renewed.

(D) Shall not be issued for nor used for operations that involve grading, soil treatment or remediation, or landfills.

(3) Site Specific Plans:

(A) Shall be for excavation of greater than 2000 cubic yards of VOC contaminated soil.

(B) Shall be issued for specific excavation or grading locations for a period not to exceed two years.

(C) Shall not be renewable.

(4) Facility Treatment Plans:

(A) Shall be issued for a treatment facility at a permanent location.

(B) Shall expire after one year from issuance unless renewed.

(5) Applications for Site Specific Plans shall contain as a minimum:

(A) Reasons for excavation or grading.

(B) Cause of VOC soil contamination and history of the site.

(C) Description of tanks or piping associated with the soil contamination.

(D) An estimate of the amount of contaminated soil.

(E) The operating schedule for excavation and removal.

(F) Description of how the excavation or grading will be conducted.

(G) Description of mitigation measures for dust, odors and VOC.

(H) Details of disposal of VOC contaminated soil, including the ultimate receptor.

(I) Description of monitoring equipment and techniques.

(J) A map showing the facility layout, property line, and surrounding area up to 2500 feet away, and including any schools, residential areas or other sensitive receptors such as hospitals or locations where children or elderly people live or work.

(K) Designation of a person who can conduct a site inspection with the Executive Officer prior to issuance of the plan.

(6) Applications for Facility Treatment Plans shall at a minimum:

(A) Include a list of all AQMD permits to construct or operate which have been issued for that treatment and control equipment.

(B) Provide for the implementation of VOC-contaminated soil decontamination measures, as approved by the Executive Officer in writing, which result in Best Available Control Technology during all operations.

(C) Provide a map showing the facility layout including the location of all proposed VOC and non-VOC contaminated soil stockpiles.

(D) Specify the total amount of VOC contaminated soil proposed to be stockpiled on site.

(E) Provide for VOC contaminated soil stockpiles to be kept moist with water or suppressant and be covered to prevent fugitive emissions.

(F) Provide for VOC contaminated soil stockpiles to be segregated from non-VOC contaminated soil stockpiles.

(G) Provide for maintenance of records for stockpiles according to the source name, address and dates of reception.

(H) Provide for records of the generator, transporter and storage/treatment facilities and indicate their identification and business addresses. Such records shall be signed by each party at the time custody is transferred.

(I) Provide a map showing the facility layout, property line, and surrounding area up to 2500 feet away, and including any schools, residential area or other sensitive receptors such as hospitals, or locations where children or elderly people live or work.

(J) Designation of a person who can conduct a site inspection with the Executive Officer prior to issuance of the plan.

(K) Specify the operating schedule and maximum amount of VOC-contaminated soil proposed to be remediated on a daily basis.

(7) In approving a plan, the Executive Officer require reasonable conditions deemed necessary to ensure the operations comply with the plan and AQMD rules. The conditions may include, but shall not be limited to, procedures for ensuring responsibility for the implementation of the plan, accessibility to the site for AQMD staff, notification of actions required by the plan, identification of emission receptors, monitoring and testing, suppression and covering of stockpiles, prevention of public nuisance from VOC or dust emissions, prevention of fugitive emissions of VOC contaminated soil, loading of truck trailers, and disposal and treatment.

(8) In approving a plan, the Executive Officer may require any records deemed necessary to be maintained by the operator to demonstrate compliance with the plan. Such records shall be retained for at least 2 years and be made available to the Executive officer upon request.

APPENDIX F
DTSC'S INFORMATION ADVISORY ON CLEAN IMPORTED FILL MATERIAL

APPENDIX D
DTSC INFORMATION ADVISORY, CLEAN IMPORTED FILL MATERIAL

Information Advisory
Clean Imported Fill Material

October 2001

DEPARTMENT OF TOXIC SUBSTANCES CONTROL

It is DTSC's mission to restore, protect and enhance the environment, to ensure public health, environmental quality and economic vitality, by regulating hazardous waste, conducting and overseeing cleanups, and developing and promoting pollution prevention.

State of California

California Environmental Protection Agency

Executive Summary

This fact sheet has been prepared to ensure that inappropriate fill material is not introduced onto sensitive land use properties under the oversight of the DTSC or applicable regulatory authorities. Sensitive land use properties include those that contain facilities such as hospitals, homes, day care centers, and schools. This document only focuses on human health concerns and ecological issues are not addressed. It identifies those types of land use activities that may be appropriate when determining whether a site may be used as a fill material source area. It also provides guidelines for the appropriate types of analyses that should be performed relative to the former land use, and for the number of samples that should be collected and analyzed based on the estimated volume of fill material that will need to be used. The information provided in this fact sheet is not regulatory in nature, rather is to be used as a guide, and in most situations the final decision as to the acceptability of fill material for a sensitive land use property is made on a case-by-case basis by the appropriate regulatory agency.

Introduction

The use of imported fill material has recently come under scrutiny because of the instances where contaminated soil has been brought onto an otherwise clean site. However, there are currently no established standards in the statutes or regulations that address environmental requirements for imported fill material. Therefore, the California Environmental Protection Agency, Department of Toxic Substances Control (DTSC) has prepared this fact sheet to identify procedures that can be used to minimize the possibility of introducing contaminated soil onto a site that requires imported fill material. Such sites include those that are undergoing site remediation, corrective action, and closure activities overseen by DTSC or the appropriate regulatory agency. These procedures may also apply to construction projects that will result in sensitive land uses. The intent of this fact sheet is to protect people who live on or otherwise use a sensitive land use property. By using this fact sheet as a guide, the reader will minimize the chance of introducing fill material that may result in potential risk to human health or the environment at some future time.

The energy challenge facing California is real. Every Californian needs to take immediate action to reduce energy consumption. For a list of simple ways you can reduce demand and cut your energy costs, see our website at www.dtsc.ca.gov.

Overview

Both natural and manmade fill materials are used for a variety of purposes. Fill material properties are commonly controlled to meet the necessary site specific engineering specifications. Because most sites requiring fill material are located in or near urban areas, the fill materials are often obtained from construction projects that generate an excess of soil, and from demolition debris (asphalt, broken concrete, etc.). However, materials from those types of sites may or may not be appropriate, depending on the proposed use of the fill, and the quality of the assessment and/or mitigation measures, if necessary. Therefore, unless material from construction projects can be demonstrated to be free of contamination and/or appropriate for the proposed use, the use of that material as fill should be avoided.

Selecting Fill Material

In general, the fill source area should be located in nonindustrial areas, and not from sites undergoing an environmental cleanup. Nonindustrial sites include those that were previously undeveloped, or used solely for residential or agricultural purposes. If the source is from an agricultural area, care should be taken to insure that the fill does not include former agricultural waste process byproducts such as manure or other decomposed organic material. Undesirable sources of fill material include industrial and/or commercial sites where hazardous ma-

Potential Contaminants Based on the Fill Source Area

Fill Source:	Target Compounds
Land near to an existing freeway	Lead (EPA methods 6010B or 7471A), PAHs (EPA method 8310)
Land near a mining area or rock quarry	Heavy Metals (EPA methods 6010B and 7471A), asbestos (polarized light microscopy), pH
Agricultural land	Pesticides (Organochlorine Pesticides: EPA method 8081A or 8080A; Organophosphorus Pesticides: EPA method 8141A; Chlorinated Herbicides: EPA method 8151A), heavy metals (EPA methods 6010B and 7471A)
Residential/acceptable commercial land	VOCs (EPA method 8021 or 8260B, as appropriate and combined with collection by EPA Method 5035), semi-VOCs (EPA method 8270C), TPH (modified EPA method 8015), PCBs (EPA method 8082 or 8080A), heavy metals including lead (EPA methods 6010B and 7471A), asbestos (OSHA Method ID-191)

**The recommended analyses should be performed in accordance with USEPA SW-846 methods (1996). Other possible analyses include Hexavalent Chromium: EPA method 7199*

Recommended Fill Material Sampling Schedule

Area of Individual Borrow Area	Sampling Requirements
2 acres or less	Minimum of 4 samples
2 to 4 acres	Minimum of 1 sample every 1/2 acre
4 to 10 acres	Minimum of 8 samples
Greater than 10 acres	Minimum of 8 locations with 4 subsamples per location
Volume of Borrow Area Stockpile	**Samples per Volume**
Up to 1,000 cubic yards	1 sample per 250 cubic yards
1,000 to 5,000 cubic yards	4 samples for first 1000 cubic yards +1 sample per each additional 500 cubic yards
Greater than 5,000 cubic yards	12 samples for first 5,000 cubic yards + 1 sample per each additional 1,000 cubic yards

terials were used, handled or stored as part of the business operations, or unpaved parking areas where petroleum hydrocarbons could have been spilled or leaked into the soil. Undesirable commercial sites include former gasoline service stations, retail strip malls that contained dry cleaners or photographic processing facilities, paint stores, auto repair and/or painting facilities. Undesirable industrial facilities include metal processing shops, manufacturing facilities, aerospace facilities, oil refineries, waste treatment plants, etc. Alternatives to using fill from construction sites include the use of fill material obtained from a commercial supplier of fill material or from soil pits in rural or suburban areas. However, care should be taken to ensure that those materials are also uncontaminated.

Documentation and Analysis

In order to minimize the potential of introducing contaminated fill material onto a site, it is necessary to verify through documentation that the fill source is appropriate and/or to have the fill material analyzed for potential contaminants based on the location and history of the source area. Fill documentation should include detailed information on the previous use of the land from where the fill is taken, whether an environmental site assessment was performed and its findings, and the results of any testing performed. It is recommended that any such documentation should be signed by an appropriately licensed (CA-registered) individual. If such documentation is not available or is inadequate, samples of the fill material should be chemically analyzed. Analysis of the fill material should be based on the source of the fill and knowledge of the prior land use.

Detectable amounts of compounds of concern within the fill material should be evaluated for risk in accordance with the DTSC Preliminary Endangerment Assessment (PEA) Guidance Manual. If

metal analyses are performed, only those metals (CAM 17 / Title 22) to which risk levels have been assigned need to be evaluated. At present, the DTSC is working to establish California Screening Levels (CSL) to determine whether some compounds of concern pose a risk. Until such time as these CSL values are established, DTSC recommends that the DTSC PEA Guidance Manual or an equivalent process be referenced. This guidance may include the Regional Water Quality Control Board's (RWQCB) guidelines for reuse of non-hazardous petroleum hydrocarbon contaminated soil as applied to Total Petroleum Hydrocarbons (TPH) only. The RWQCB guidelines should not be used for volatile organic compounds (VOCs) or semi-volatile organic compounds (SVOCS). In addition, a standard laboratory data package, including a summary of the QA/QC (Quality Assurance/Quality Control) sample results should also accompany all analytical reports.

When possible, representative samples should be collected at the borrow area while the potential fill material is still in place, and analyzed prior to removal from the borrow area. In addition to performing the appropriate analyses of the fill material, an appropriate number of samples should also be determined based on the approximate volume or area of soil to be used as fill material. The table above can be used as a guide to determine the number of samples needed to adequately characterize the fill material when sampled at the borrow site.

Alternative Sampling

A Phase I or PEA may be conducted prior to sampling to determine whether the borrow area may have been impacted by previous activities on the property. After the property has been evaluated, any sampling that may be required can be determined during a meeting with DTSC or appropriate regulatory agency. However, if it is not possible to analyze the fill material at the borrow area or determine that it is appropriate for use via a Phase I or PEA, it is recommended that one (1) sample per truckload be collected and analyzed for all compounds of concern to ensure that the imported soil is uncontaminated and acceptable. (See chart on Potential Contaminants Based on the Fill Source Area for appropriate analyses). This sampling frequency may be modified upon consultation with the DTSC or appropriate regulatory agency if all of the fill material is derived from a common borrow area. However, fill material that is not characterized at the borrow area will need to be stockpiled either on or off-site until the analyses have been completed. In addition, should contaminants exceeding acceptance criteria be identified in the stockpiled fill material, that material will be deemed unacceptable and new fill material will need to be obtained, sampled and analyzed. Therefore, the DTSC recommends that all sampling and analyses should be completed prior to delivery to the site to ensure the soil is free of contamination, and to eliminate unnecessary transportation charges for unacceptable fill material.

Composite sampling for fill material characterization may or may not be appropriate, depending on quality and homogeneity of source/borrow area, and compounds of concern. Compositing samples for volatile and semivolatile constituents is not acceptable. Composite sampling for heavy metals, pesticides, herbicides or PAH's from unanalyzed stockpiled soil is also unacceptable, unless it is stockpiled at the borrow area and originates from the same source area. In addition, if samples are composited, they should be from the same soil layer, and not from different soil layers.

When very large volumes of fill material are anticipated, or when larger areas are being considered as borrow areas, the DTSC recommends that a Phase I or PEA be conducted on the area to ensure that the borrow area has not been impacted by previous activities on the property. After the property has been evaluated, any sampling that may be required can be determined during a meeting with the DTSC.

For further information, call Richard Coffman, Ph.D., R.G., at (818) 551-2175.

APPENDIX G
ADDENDUM 1 - RESPONSE TO COMMENTS TABLE

Addendum 1 - Response to Comments

LARWQCB Comment	Ramboll Response
1. For soil reuse or export, you can choose from the following: a. If soil reuse is planned for the Site, all disturbed soil must be stockpiled and sampled. Results should be compared with proposed screening levels for determination for reuse or off-site disposal. b. If stockpiling of excavated soil will impact or hinder your schedule, then a soil assessment should be completed across the Site where redevelopment is taking place and up to the maximum depth that you are planning to disturb the soil. This can be completed in a grid pattern and proposed in a workplan. c. If you just plan to export the disturbed soil off-site, then no assessment or stockpiling is required.	Ramboll has confirmed that no soil reuse is planned for the Site (option C). Edited language in Section 3.5 and Section 3.10 to reflect this.
2. The following is stated in the SMP: "*In addition to the existing methane vapor design requirements that the Project will incorporate, volatile organic compound (VOC) vapor intrusion within the newly constructed buildings will be mitigated as directed by the LARWQCB, in accordance with MM-HAZ-5, Vapor Intrusion Design*." a. At this time, no Vapor Intrusion Design has been submitted. b. Prior to submitting the Design, you may also choose to install and collect soil vapor samples once the Site has been graded prior to construction. Evaluation of the data may determine that no Vapor Intrusion Design is required. c. You can also decide to be conservative and submit the Vapor Intrusion Design workplan instead.	Noted.
3. For soil reuse, no screening levels were proposed. Please propose screening levels for soil reuse which are protective of human health and groundwater quality.	As no soil will be reused, no screening levels are required. Edited language in Section 3.5 and Section 3.10 to reflect this. No further response warranted.
4. For imported fill, we require the same thing. Please propose screening levels for imported fill which are protective of human health and groundwater quality.	As no imported fill will be used, no screening levels are required. Edited language in Section 3.10 to reflect this. No further response warranted.
5. Include these items in an addendum to the original SMP and resubmit to GeoTracker.	Ramboll has included this Addendum 1 – Response to Comments table to respond to LARWQCB's comments.
