Re: Phase I Environmental Site Assessment
Mountain View Gateway
401 Ellis Street and 500 E. Middlefield Road
Mountain View, California
IVI Project No.: PC30404038-108

Dear Mr. Donoghue:

IVI Assessment Services, Inc. ("IVI") is pleased to submit this copy of our Phase I Environmental Site Assessment on the above-referenced property. This report outlines the findings of IVI's site reconnaissance, historical land use research, review of governmental records, interviews, and our Pre-Survey Questionnaire.

I declare that, to the best of my professional knowledge and belief, I meet the definition of *environmental professional* as defined in § 312.10 of 40 CFR 312 and I have the specific qualifications based on education, training, and experience to assess a *property* of the nature, history, and setting of the *subject property*. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Please contact the undersigned at **914.694.9600 (x-1933)** or by email at michael.kennedy@ivi-intl.com should you have any questions.

Sincerely,

IVI Assessment Services, Inc.

Michael Kennedy
Environmental Professional

1.0 EXECUTIVE SUMMARY

This report documents IVI's findings from our Phase I Environmental Site Assessment on Mountain View Gateway (the "Subject"), located at 401 Ellis Street and 500 East Middlefield Road, Mountain View, California. The property, which is situated in a suburban area characterized by corporate office park development, consists of two (2), 16-year old, office buildings located on a 10.85-acre parcel. Prior to the construction of the existing improvements in 1997, the Subject was occupied by two commercial office buildings from about the 1960s to 1990s, which was preceded by vacant undeveloped land.

The purpose of this Phase I Environmental Site Assessment was to assess existing site conditions and render an opinion as to the identified or potential presence of recognized environmental conditions in connection with the property within the scope and limitations of ASTM International's Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process E 1527-05 and the limitations identified herein. Exceptions to or deletions from the scope of work are described in Section 2.0.

This assessment has revealed no evidence of a recognized environmental condition in connection with the Subject except for the following:

Area Groundwater Contamination Condition

There are several NPL sites within one-mile of the Subject which have all reportedly contributed to a regional groundwater contamination (ie, TCE) plume that includes the area beneath the Subject, although plume maps reviewed by IVI suggest that that the Subject is located at the outskirts of the plume where the contaminant concentrations are at their lowest. A mixed ownership has been identified as the responsible party (RP), and the subject site or the adjoining properties do not appear to be contributors to the contamination, or agents of the RPs. As such, in accordance with the USEPA's Guidance Document (*Policy Toward Owners of Property Containing Contaminated Aquifers*), it is not suspected that the subject property owner would be liable under CERCLIS for remediation of contaminated groundwater originating at these NPL sites. Furthermore, the Subject and adjoining properties are connected to the municipal water supply system and do not use wells for potable water or irrigation. In addition, the subject was located just outside the vapor intrusion study (conducted in 2009) area since the groundwater contamination concentrations were low enough that vapor intrusion would not be a concern. IVI recommends continuing to allow investigation activities to be conducted on-site as required. Further, IVI recommends keeping abreast of the status of the investigation and remediation.

2.0 INTRODUCTION

2.1 General

IVI was retained by Equity Office ("Client" or "User") to prepare a Phase I Environmental Site Assessment, in conformance with ASTM International's Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process E 1527-05 on the Subject in accordance with our Agreement dated April 26, 2013.

2.2 Purpose and Scope

2.2.1 Purpose

The purpose of this report is to identify Recognized Environmental Conditions in connection with the property, using the methodology recommended by ASTM International in order for a user to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser defenses to CERCLA liability and/or to help understand potential environmental conditions that could materially impact the operation of the business associated with the Subject. Specifically, this methodology is referred to as *Standard Practice for Environmental Site Assessments: Phase l Environmental Site Assessment Process* Designation: E 1527-05.

The term Recognized Environmental Condition is defined by ASTM Standard E 1527-05 as "...the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include *de minimis* conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies."

2.2.2 Scope

In general, the scope of this assessment consisted of reviewing readily available information and environmental data relating to the property; interviewing readily available persons knowledgeable about the site; reviewing readily available maps, aerial photographs and records maintained by federal, state, and local regulatory agencies; and conducting a site visit.

Of importance, the client is advised that federal, state, and local laws may impose environmental assessment obligations beyond the scope of this practice. Client is also notified that there are likely to be other legal obligations with regard to hazardous substances or petroleum products discovered on the Subject that are not addressed in this practice and that may pose risks of civil and/or criminal sanctions for non-compliance.

The specific scope of this assignment included the following:

2.2.2.1 Performing a site reconnaissance to characterize on-site conditions and assess the site's location with respect to surrounding property uses and natural surface features. In addition, IVI conducted a reconnaissance of the surrounding roads and readily accessible adjacent properties to identify obvious potential environmental conditions on neighboring properties. Photographs taken as part of the site reconnaissance are provided in Appendix A.

The site visit was conducted on May 9, 2013, by John Geare representing IVI. The site was represented by Mr. Kelly, the Property Manager. It was sunny and the temperature was approximately 75° F at the time of our site survey. IVI conducted the site reconnaissance in a systematic manner focusing initially on the exterior, which was surveyed in a grid pattern. IVI also surveyed a representative sampling of the interior spaces in a systematic manner.

2.2.2.2 Interviewing persons familiar with the property to obtain information on present and previous on-site activities potentially resulting in the environmental degradation of the site or adjoining properties. A Pre-Survey Questionnaire to be filled out and returned to IVI by someone knowledgeable about the site was provided to Mr. Shawn Kelly. A blank copy of the Pre-Survey Questionnaire is provided in Appendix B.

The following table presents a summary of the individuals contacted or to whom requests for documentation were made as part of this assessment:

Name	Affiliation	Telephone No.
Staff	Mountain View Building Department	(650) 903-6313
Staff	Santa Clara County Environmental Health Department	(408) 918-3400

Name	Affiliation	Telephone No.
Staff	Pacific Gas & Electric (PG&E)	(800) 743-5000
Staff	Mountain View Fire Department	(650) 903-6365
Shawn Kelly	Subject Property	(408) 451-4450

2.2.2.3 If provided, reviewing of information such as previously prepared appraisals, building plans and specifications, and environmental reports.

2.2.2.4 Reviewing readily available historical documents, such as topographic maps, aerial photographs, city directories, Sanborn Fire Insurance Maps and atlases, to identify previous activities on and in the vicinity of the Subject. Copies of these documents are included in Appendix C.

2.2.2.5 Reviewing readily available environmental databases maintained by federal, state, and local agencies within the approximate minimum search distances as described within the Regulatory Review Section 6.0 of this report. A copy of the Computerized Environmental Report, provided by Environmental Data Resources, Inc. can be referenced in Appendix D.

2.2.2.6 Conducting a visual survey of readily accessible common areas to identify the presence of the most obvious and common types of suspect asbestos containing materials (ACM). The basis for "suspect" determination is taken from the materials listed in Appendix G of the United States Environmental Protection Agency (USEPA) publication Managing Asbestos in Place (also known as the Green Book). All building materials listed within Appendix G of the Green Book are considered to be suspect ACMs at the Subject. This screening is not intended to be used for demolition, abatement, renovation, or repair work.

THIS LIMITED SURVEY IS NOT TO BE CONSTRUED AS A COMPREHENSIVE ASBESTOS SURVEY, WHICH OFTEN ENTAILS DESTRUCTIVE TESTING OR THE SURVEY OF AREAS BEHIND WALLS, ABOVE CEILINGS, IN TENANT SPACES AND IN OTHER TYPICALLY INACCESSIBLE AREAS. MOREOVER, IVI DOES NOT WARRANT THAT ALL ACMs AT THE SUBJECT HAVE BEEN IDENTIFIED.

2.2.2.7 Reviewing published radon occurrence maps to determine whether the site is located in an area with a propensity for elevated radon concentrations.

2.2.2.8 An analysis of mold and/or mold issues was beyond the scope of this report.

2.2.2.9 Assessing the age of the Subject to determine whether it is predisposed to contain lead-based paint. During our walkthrough survey, IVI noted the condition of the paint observed. Note, a compliance audit for lead paint was not conducted.

2.2.2.10 Testing, if any, was designed solely to meet the requirements of the client's scope of work, not to meet any local, State or Federal regulations and shall not be utilized as such.

2.3 Data Gaps

According to § 3.3.20 of ASTM Standard E 1527-05 a data gap is a lack of or inability to obtain information required by the ASTM Standard despite good faith efforts to gather same. Data gaps may result from incompleteness in any of the activities required by the ASTM Standard. The following data gaps occurred in connection with this report:

Data Gap	Explanation	Significance of Gap
Site History	Site history not conducted in 5-year intervals (See § 5)	Low - not likely to alter Report's conclusions due to IVI's search of standard historical sources of information such as aerial photographs, historic topographic maps, reviews of previous investigations and interviews with knowledgeable individuals who were familiar with the property.
User Interview	AAI User Questionnaire not returned to IVI	Low - not likely to alter Report's conclusions since the same questions were asked during our site visit, and previous Phase I Environmental Site Assessments were conducted and reviewed.
Former Owner or Operator Interview	Unable to interview former site owner or operator due to inability to locate	Low - not likely to alter Report's conclusions
Governmental Records	FOIAs not returned (See § 8.6)	Unknown - However, if receipt of FOIAs alters the Report's conclusion, the client will be notified

Data Gap	Explanation	Significance of Gap
Current Owner or Operator Interview	Pre-survey Questionnaire not returned to IVI	Low - not likely to alter Report's conclusions since the same questions were asked during our site visit, and previous Phase I Environmental Site Assessments were conducted and reviewed.

Salient Assignment Information	
IVI Project No.:	PC30404038-108
Project Name:	Mountain View Gateway
Street Address:	401 Ellis Street and 500 E. Middlefield Road
City, State and Zip:	Mountain View, California 94043
Primary Use:	Offices
Year Built and Age of Improvements:	1997; 16 years-old
Site Area:	10.85 Acres
Building Size:	401: 101,725 SF 500: 136,694 SF **Total: 238,419 SF**
Number of Buildings:	Two

4.1 Property Location

The site is located at 401 Ellis Street and 500 E. Middlefield Road in Mountain View, Santa Clara County, California and is identified on local tax maps as Parcel No.160-58-016. Please refer to the Site Plan and maps provided within Appendix C.

4.2 Surrounding Land Use

The property is located in an urban setting characterized by Light industrial and commercial office development. The following is a tabulation of surrounding property usage:

Direction	Adjacent Properties	Surrounding Properties
North	A low-rise office building adjoins at 475 Ellis Street.	Additional corporate office park development
South	The Symantec office building is located across E. Middlefield Rd.	Additional corporate office park development
West	The Symantec office park is located across Ellis Street at 350 Ellis Street.	Additional corporate office park development, with a residential neighborhood located beyond.
East	The Cal-Train railroad easement adjoins on the east.	Corporate office/warehouse combination facilities are located beyond.

4.3 Physical Site Setting

4.3.1 Size and Shape of Parcel

The property is rectangular in shape and 10.85-acres in size.

4.3.2 Topography

The site is essentially level and at the same approximate topographic gradient as the surrounding properties. The topography of the area is best described as flat. According to the United States Geological Survey (USGS) *Mountain View, CA* 7.5 Minute Series topographic map, the Subject's topographic elevation is approximately 50' above mean sea level (msl).

4.3.3 Surface Waters and Wetlands

Surface Waters

There are no surface water bodies or streams on or adjacent to the Subject. The closest open surface water to the Subject is the San Francisco Bay, which is located approximately 1 mile to the north.

Wetlands

IVI reviewed the USGS *Mountain View, CA* 7.5 Minute Series Wetlands Map of the subject area dated May, 1980 prepared by the National Wetlands Inventory, US Department of the Interior, Fish and Wildlife Service. Based on this review, IVI did not identify any federally regulated wetlands on the subject property. Additionally, IVI did not observe vegetation characteristic of wetlands on the subject site.

4.3.4 Soils, Geology and Groundwater

Soils

According to the United States Soil Conservation Service, Santa Clara County branch, the soils at the site are classified as Campbell silty clay loam and Campbell silty clay. The Campbell series consists of somewhat poorly drained, moderately fine textured soils underlain by mottled, stratified mixed but mostly sedimentary alluvium. They formed on low level valley bottoms and alluvial plain positions, surrounding areas of poorly drained soils.

Geology

The Subject is located in the southern portion of the Santa Clara Valley, a northwest-southeast trending structural basin that is bound on the southwest by the San Andreas fault zone and the Santa Cruz Coastal Mountains, and on the northeast by the Calaveras fault, Hayward fault and the Diablo Range. During the Cenozoic Era, the region has endured complex tectonic evolution as the ancestral California margin underwent transition from a convergent to a transform plate margin. During this period, the earth's crust was broken into smaller sinking blocks that formed basins and embayments. These are interbedded with areas of uplift that formed highlands. No predominant geological surface features such as rock outcroppings were observed on the Subject.

Groundwater

Under natural, undisturbed conditions, shallow groundwater flow generally follows the topography of the land surface and on this basis, the topography suggests that groundwater flow across the site is in a northeasterly direction, towards the San Francisco Bay. However, localized conditions can alter flow directions and thus the expected flow may not coincide with actual groundwater flow in the subject area. Depth to groundwater is approximated to be at about 10-15' below ground surface (bgs).

4.4 Site Improvements

4.4.1 Utilities

The Subject is served with the following utilities:

Water:	City of Mountain View
Sanitary Sewer:	City of Mountain View
Storm Sewer:	City of Mountain View
Electric:	Pacific Gas & Electric (PG&E)
Natural Gas:	Pacific Gas and Electric

According to a representative of the Mountain View Public Utilities, the local water authority, the drinking water supplied to the Subject meets all federal and state water-quality standards.

The majority of stormwater runoff flows topographically to curbside storm drains and catch basins around the site, which discharge into the municipal stormwater management system.

4.4.2 Building Description

Construction of both buildings is more or less identical and the substructure consists of spread footings and concrete slab-on-grade (SOG) with a superstructure of moment resisting steel framing with composite elevated floor slabs and roof decking. The predominant façade system consists of pre-cast concrete spandrel panels with ribbon glass fenestration. Roofing at each building consists of a built-up roof (BUR) system complete with a mineralized cap sheet overlay. Central air conditioning is provided by unitary rooftop packaged air conditioning units, and heating is via hot water reheat at perimeter units provided from rooftop gas-fired boilers. Conditioned air is distributed to variable-air-volume (VAV) boxes, complete with hot water reheat coils at perimeter

units. Each building is centrally metered for electric and natural gas service. Electrical service to 401 Ellis is provided at 3,000 Amps, 408/277 Volts, while service to 501 Middlefield is provided at 4,000 Amps, 408/277 Volts. Both buildings are fully protected by wet pipe automatic fire sprinkler systems, with a pre-action system at a portion of 500 Middlefield. Addressable supervised fire alarms are present at each building. Vertical transportation is provided by two hydraulic passenger elevators at 401 Ellis and three at 500 Middlefield.

Interior finishes include floor coverings of carpeting, granite tile, hard wood, ceramic tile and resilient floor finishes. Walls are of painted and papered wallboard. Ceilings typically consist of a suspended system of acoustical ceiling tiles or painted wallboard.

4.5 Current Property Use

The subject property is developed with two corporate office buildings occupied by a single tenant. Based on the operations currently conducted at the Subject, significant quantities of hazardous waste are not generated. The current on-site activities are not suspected to have degraded the environmental quality of the subject site.

4.6 Environmental Permits

Based on our research, no environmental permits such as wastewater discharge, National Pollutant Discharge Elimination System (NPDES), air emissions, or petroleum bulk storage (PBS) tank registrations are required at the Subject.

4.7 Plans and Specifications

Neither building drawings nor specifications were provided for our review.

5.1 Historical Summary

Prior to the construction of the existing improvements in 1997, the Subject was occupied by two commercial office buildings from about the 1960s to 1990s, which was preceded by vacant undeveloped land. The current Subject buildings have always been occupied by office tenants similar to those currently on site. Review of the standard historical sources and interviews did not yield evidence that underground storage tanks or vessels used for the storage of hazardous materials or petroleum products were present on site.

5.2 Topographic Maps

IVI reviewed the USGS *Mountain View, CA* 7.5 Minute Series topographic map of the Subject area, which is based on aerial photography taken in 1963 and was last revised in 1981. The topographic map identifies the former office buildings on site in purple. This indicates that the buildings were constructed sometime between 1963 and 1981. No industrial facilities, landfills or wetlands were identified on or adjacent to the Subject.

5.3 Historical Maps

Sanborn Fire Insurance Maps (Sanborn Maps)

Sanborn Maps constitute a source of prior site uses of real property for many cities and towns in the United States. The maps were originally created to assist insurance underwriters in understanding the potential fire risk of structures requiring insurance; however, they are also useful in determining the previous uses of a property. Sanborn Maps often contain information relating to uses of individual structures, location of certain petroleum and chemical storage tanks, and the storage of other potentially toxic substances. Sanborn Maps begin their coverage in 1867 and continue through the 1990s.

IVI had a search of Sanborn Maps conducted. This search did not identify Sanborn Map coverage for the subject site. Searching an information source such as Sanborn Maps constitutes part of the due-diligence necessary for an Environmental Site Assessment. The lack of Sanborn Mapping suggests that there was no historical industrial activity on or in the immediate vicinity of the subject site.

5.4 Aerial Photographs

Aerial photographs frequently provide visual documentation of site conditions at the time of the photographs. Activities such as dumping or industrial use of a site can often be discerned through the examination of aerial photographs. IVI

reviewed historic aerial photographs provided by GeoSearch. The following is a synopsis of the aerial photographs reviewed:

Year	Subject Property	Adjacent and Surrounding Properties
1939	The Subject is part of a large cultivated field. However, the southern ¼ of the site is undeveloped land.	Cultivated fields adjoin the site to the north and west. Vacant undeveloped land adjoins to the east and south. Orchards also adjoin to the east. An unpaved roadway appears adjoining to the east. Farm homes are located beyond to the northwest and south.
1948	Similar to the previous aerial photograph reviewed	Similar to the previous aerial photograph reviewed
1956	Similar to the previous aerial photograph reviewed	Similar to the previous aerial photograph reviewed
1964	The Subject is improved with two apparent office building at the north and south portions of the site. The northern end of the Subject appears as cleared vacant land. The center of the site is used as a surface parking lot.	The current office building adjoins to the north. The existing railroad easement adjoins on the east. Office building development is located to the west and south. Ellis Street and E. Middlefield Road appear in their current configurations.
1968	Similar to the previous aerial photograph reviewed	The majority of the current office park development surrounds the Subject.
1980	Similar to the previous aerial photograph reviewed	Similar to the previous aerial photograph reviewed
1987	Similar to the previous aerial photograph reviewed	Similar to the previous aerial photograph reviewed
1991	Similar to the previous aerial photograph reviewed	All of the current office park development surrounds the Subject.
2004	The current improvements are on site. The buildings identified on the preceding photographs have been razed.	Similar to the previous aerial photograph reviewed

5.5 Chain-of-Ownership

A copy of the Subject's Chain-of-Title has not been provided to IVI for review.

5.6 Previous Reports

IVI reviewed a Phase I Environmental Site Assessment prepared by IVI for Deutsche Bank, CitiGroup and Bank of America in May 2006. The previous IVI report found no RECs in connection to the Subject other than the regional groundwater contamination issues discussed above.

5.7 Municipal Records

Tax Assessor Records

According to the tax assessor records reviewed, the Subject building was constructed in 1997 on a 10.85-acre parcel. The buildings are slab-on-grade structures which have all public utilities.

Building Department Records

IVI reviewed building permits and records for the Subject at the Mountain View Building Department. The subject buildings were originally constructed for use as office buildings.

The following relevant permits were reviewed:

Permit Number	Date	Purpose of Permit
2010-2008	9/10	Demolish interiors for TIs
2007-1164	5/07	Monument sign installation
2008-0396	3/08	Install gas line earthquake valve
NA	2004 - 2012	Miscellaneous TI permits

Fire Department Records

IVI requested Fire Department records for the Subject at the Mountain View Fire Department. No response has been received at this writing.

5.8 Internet Search

IVI conducted a cursory internet search for the Subject's name and address using the Google search engine on May 9, 2013.

No environmentally related information was identified on the first page of the Google search engine.

A copy of regulatory database information contained within a Computerized Environmental Report (CER) provided by Environmental Data Resources, Inc. (EDR) appears in Appendix D. The CER is a listing of sites identified on select federal and state standard source environmental databases within the approximate minimum search distance specified by ASTM Standard Practice for Environmental Site Assessments E 1527-05. IVI reviewed each environmental database to determine if certain sites identified in the CER are suspected to represent a material negative environmental impact to the Subject. The following table lists the number of sites by regulatory database within the prescribed minimum search distance appearing in the CER.

Databases Reviewed	Approximate Minimum Search Distance (AMSD)	Number of Sites Within AMSD
Federal National Priorities List (NPL) Site List	One-Mile	4
Federal Delisted NPL Site List	One-Half Mile	0
Federal Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS)	One-Half Mile	6
Federal CERCLIS No Further Remedial Action Planned (NFRAP) Sites	One-Half Mile	4
Federal Resource Conservation and Recovery Information System (RCRIS) Treatment, Storage, and Disposal (TSD) List	One-Half Mile	3
Federal RCRIS Generators List	On-Site and Adjoining Properties	0
Federal Corrective Action Tracking System (CORRACTS)	One-Mile	2
Federal Emergency Response Notification System (ERNS) List	On-Site	0
Federal Institutional/Engineering Control Registries	On-Site	0
California and Tribal Lists of NPL Equivalent Hazardous Waste Sites Identified for Investigation and/or Remediation	One-Mile	1
California and Tribal Lists of CERCLIS Equivalent Hazardous Waste Sites Identified for Investigation and/or Remediation	One-Half Mile	25
California and Tribal Landfills or Solid Waste Facilities List	One-Half Mile	0
California and Tribal Registered Underground Storage Tank (RUST) Facility List	On-Site and Adjoining Properties	0
California and Tribal Leaking UST/Spill List	One-Half Mile	28
California and Tribal Institutional/Engineering Control	On-Site	0

Databases Reviewed	Approximate Minimum Search Distance (AMSD)	Number of Sites Within AMSD
Registries		
California and Tribal Voluntary Cleanup Sites	One-Half Mile	1
California and Tribal Brownfields Sites	One-Half Mile	0

The CER identified 20 "Orphan Sites". "Orphan Sites" are those sites that could not be mapped or "geocoded" due to inadequate address information. Please refer to the CER for a list of these "Orphan Sites". IVI attempted to locate these sites via a review of street maps, vehicular reconnaissance and/or interviews with people familiar with the area. "Orphan Sites" that were identified in this manner were analyzed in their respective regulatory database below.

A description of the databases reviewed by IVI and an analysis of sites identified within the prescribed search area are presented below.

The Subject is listed in the HAZNET database as a result of the activities of a previous tenant, Middlefield/Ellis LLP. This listing is the result of asbestos-containing waste removal from the site. This listing should not pose a concern to the Subject.

6.1 Federal Databases

NPL

The NPL database is a listing of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA or “Superfund”). A site must be on the NPL to receive money from the Trust Fund for Remedial Action.

Analysis/Comment: The CER identified four (4) NPL sites within a one-mile radius of the Subject:

Property Name	Distance (Miles)	Direction	Presumed Hydrogeologic Relationship	Compliance Status
Moffett Naval Air Station / Moffett Field NAS	0.37	Northeast	Downgradient	Active. Also on CERCLIS, US ENG CONT, ROD, databases

The Moffett Federal Airfield (MFA) is located to the north across Route 101, and includes the following sites addressed in a record of decision (ROD): site 23- golf Course fill area 3; weapons storage bunkers; upland soils (ecological risk): and

station wide remedial Investigation (RI) human health risk assessment (HHRA) exposure area 4158. HHRA exposure area 4090 was also listed as a potential no action site in earlier versions of this ROD even though this area was included in the station-wide ecological assessment for wetland areas being addressed under a separate Action (site 27). Half of HHRA exposure area 4090 includes a section of the north patrol road ditch, the Northern channel and a berm that separates these two waterways. All three of these areas (the Ditch, channel and berm) are currently being evaluated as a part of the northern channel site 27 Investigation. Because there are potential risk issues associated with this site, HHRA exposure area 4090 is no longer identified as a No Action Site in this ROD. Instead, this site will be addressed under the ongoing site 27 investigation. This federal facility is on the NPL. MFA has been closed as an active military Facility under the brac program. Control of base operations was transferred to NASA on July 1, 1994. Remedy: the navy, with the concurrence of EPA and California regional water quality control board, San Francisco bay region, selected the no action alternative for the sites described in this decision Document based on the evaluation of results from historical records, field investigations, laboratory Analysis, and the human health and ecological risk assessments for these sites. In selecting no action for these sites, the navy has concluded that the alternative is protective of human health and the environment.

Property Name	Distance (Miles)	Direction	Presumed Hydrogeologic Relationship	Compliance Status
Fairchild 464 Ellis Street	0.36	Southeast	Crossgradient	Active. Also on CERCLIS , CORRACTS, RCRA-LQG, US ENG Controls, POD, FINDS and PRP databases

Fairchild camera was a manufacturer of semi-conductors at a plant surrounded by residential/industrial areas. Groundwater contaminated with solvents at this site is believed to have resulted from leaking underground tanks.

Property Name	Distance (Miles)	Direction	Presumed Hydrogeologic Relationship	Compliance Status
Raytheon Corp 350 Ellis Street	0.47	South	Upgradient	Active. Also on CERCLIS, RCRA-SQG, US ENG Controls, ROD, FINDS, MANIFEST and PRP databases

Raytheon manufactured semiconductor products at the above facility, which occupies 30 acres. Soil and groundwater beneath the site is contaminated with solvents from UST and/or acid neutralization sumps.

Property Name	Distance (Miles)	Direction	Presumed Hydrogeologic Relationship	Compliance Status
Intel Corp. 365 E. Middlefield	0.59	South	Upgradient	Active. Also on CERCLIS RCRA-SQG, US ENG Cont, ROD, FINDS, HAZNET and PRP databases

Intel corp. manufactured semiconductors at this plant in Mt. View, CA between 1968-81. The facility occupied 2 acres surrounded by residential areas, office buildings, and other semiconductor manufacturing plants. Groundwater at this site is contaminated with solvents.

The Subject area is in the vicinity of the aforementioned NPL sites, and groundwater in the region is reportedly impacted including beneath the Subject.

A mixed ownership has been identified as the responsible party (RP), and the subject site or the adjoining properties do not appear to be contributors to the contamination, or agents of the RPs. As such, in accordance with the USEPA's Guidance Document (*Policy Toward Owners of Property Containing Contaminated Aquifers*), it is not suspected that the subject property owner would be liable under CERCLIS for remediation of contaminated groundwater originating at these NPL sites. Furthermore, the Subject and adjoining properties are connected to the municipal water supply system and do not use wells for potable water or irrigation.

Delisted NPL Site List

The EPA may delete a final NPL site if it determines that no further response is required to protect human health or the environment. Under Section 300.425(e) of the National Contingency Plan (55 FR 8845, March 8, 1990). Sites that have been deleted from the NPL remain eligible for further Superfund-financed remedial action in the unlikely event that conditions in the future warrant such action. Partial deletions can also be conducted at NPL sites.

Analysis/Comment: The CER did not identify Delisted NPL sites within the AMSD.

CERCLIS

CERCLIS is the USEPA's system for tracking potential hazardous-waste sites within the Superfund program. A site's presence on CERCLIS does not imply a level of federal activity or progress at a site, nor does it indicate that hazardous conditions necessarily exist at the location. Within one year of being entered into CERCLIS, the USEPA performs a preliminary assessment of a site. Based upon the results of the preliminary assessment, the USEPA may conduct additional investigation, which could lead to a site being listed on the NPL.

Analysis/Comment: The CER identified six (6) CERCLA sites within the prescribed radius:

Property Name	Distance (Miles)	Direction	Presumed Hydrogeologic Relationship
Raytheon Corp 350 Ellis Street	0.47	Southwest	Upgradient
Fairchild 464 Ellis Street	0.1	Northwest	Crossgradient
NEC / 501 Ellis Street	0.17	North	Downgradient
Intel Corp. 365 E. Middlefield	0.59	Southwest	Upgradient
Moffett Naval Air Station Moffett Field NAS	0.37	North	Downgradient
GTE 100 Ferguson Drive	.497	South-southwest	Cross-gradient

Each of the above-tabulated sites are also listed on the NPL database, except for the GTE and NEC sites. Please refer to the preceding NPL section for further information pertaining to same. The GTE and NEC sites are located a sufficient distance and hydraulically crossgradient/downgradient from the Subject so as not to be reasonably suspected of having had a significant negative environmental impact of same.

CERCLIS No Further Remedial Action Planned (NFRAP) Sites

As of February 1995, CERCLIS sites designated "No Further Remedial Action Planned" (NFRAP) have been removed from the CERCLIS list. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to warrant Federal Superfund Action or NPL consideration.

Analysis/Comment: The CER identified the following CERCLA NFRAP sites within the AMSD:

Property Name/ Address	Distance (Mile)	Direction	Presumed Hydrogeologic Relationship	Regulatory Status
HP at 333 Logue Ave.	.193	South south east	Cross-gradient	NFRAP
Cooper Vision at 455 E Middlefield Road	.209	Southwest	Cross-gradient	NFRAP
SILTEC at 405 National Ave.	.272	North northwest	Down-gradient	NFRAP
AIR PRODs at465 N. Whisman Road	.386	West northwest	Cross-gradient	NFRAP

The above listed sites have been granted a No Further Remedial Action Planned (NFRAP) status by the USEPA. NFRAP sites may be sites where, following an initial investigation, no contamination was found, or the contamination was either abated or the contamination was not significant enough to warrant Federal Superfund Action or NPL consideration.

Notwithstanding, these sites are located a sufficient distance from the Subject so as not to be reasonably suspect of having impacted same. In addition, these sites are located hydraulically crossgradient/downgradient from the Subject and groundwater flow across this site is suspected to be away from the Subject. As such, IVI does not suspect these sites of having had a significant negative environmental impact on the Subject.

RCRIS Non-CORRACTS TSD

The RCRIS Non-CORRACTS TSD contains information pertaining to those facilities that treat, store, or dispose of hazardous waste. While these facilities represent some form of hazardous waste activity, they are most significant if determined to be out of compliance or to have violations.

Analysis/Comment: The CER identified the following RCRIS TSD facilities within the AMSD:

Property Name/ Address	Distance (Mile)	Direction	Presumed Hydrogeologic Relationship	Regulatory Status
GTE 100 Ferguson Drive	.497	South southwest	Crossgradient	Compliant/ Violations
Air Products 465 N Whisman Road	.386	West northwest	Cross-gradient	Compliant/ Violations

Property Name/ Address	Distance (Mile)	Direction	Presumed Hydrogeologic Relationship	Regulatory Status
Fairchild Semi 464 Ellis Street	.473	North northwest	Down-gradient	Compliant/ Violations

These sites are located a sufficient distance from the Subject so as not to be reasonably suspect of having impacted same. In addition, these sites are located hydraulically crossgradient/downgradient from the Subject and groundwater flow across this site is suspected to be away from the Subject. As such, IVI does not suspect these sites of having had a significant negative environmental impact on the Subject.

RCRIS Generators

IVI reviewed the list of sites, which have filed notification with the USEPA in accordance with RCRA requirements. These sites include generators of hazardous waste regulated under RCRA. Under RCRA, hazardous waste generators are classified by the quantity of hazardous waste generated in a calendar month into the following categories: Large Quantity Generator (LQG), greater than 1,000 kilograms (kg); Small Quantity Generator (SQG), 100 to 1,000 kg; and Conditionally-Exempt Small Quantity Generator (CESQG), less than 100 kg. RCRA Generators, while they represent some form of hazardous waste activity, are most significant if they are determined to have Class I Violations or to be non-compliant.

Analysis/Comment: The CER did not identify RCRA Generators within the AMSD.

Corrective Action Tracking System (CORRACTS)

CORRACTS is a list of facilities that are found to have had hazardous waste releases and require RCRA corrective action activity, which can range from site investigations to remediation.

Analysis/Comment: The CER identified the following CORRACTS sites within the AMSD: GTE and Fairchild. These sites are discussed above.

ERNS

The ERNS is a database of notifications of oil discharges and hazardous substance releases made to the Federal government. These notifications are used by "On-Scene Coordinators" to determine an emergency response and release prevention. When a call is made to the National Response Center or one of the 10 USEPA Regions, a report is created containing all of the release information that the caller provided. This report is transferred to an appropriate agency to evaluate the need

for a response and the records are electronically transferred to the ERNS database. As such, if a reported release of oil or a hazardous substance is deemed to require a response, it should also be listed in the appropriate federal or state environmental database such as CERCLIS, state equivalent CERCLIS, or state leaking underground storage tank or spills lists.

Analysis/Comment: The CER did not identify the Subject on the ERNS database.

Federal Institutional Control/Engineering Control Registries

These Federal registries contain listings of those sites which have either engineering and/or institutional controls in place. Engineering controls include various physical control devices such as fences, caps, building slabs, paved areas, liners and treatment methods to eliminate pathways for regulated substances to enter the environment or affect human health. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions (Activity and Use Limitations) are generally required as part of institutional controls.

Analysis/Comment: The CER did not identify the Subject on the Federal Institutional or Engineering Control registries, other than Moffett NAS, Intel, Rytheon and Fairchild Semiconductor. These sites are discussed above in the NPL section.

6.2 California Environmental Protection Agency (Cal/EPA) Databases

Envirostor, HIST Cal-Sites, Response and Tribal NPL Equivalent Hazardous Waste Sites (HWS)

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

One RESPONSE site is listed, the Apple facility at 985 Almanor Avenue, .924 miles east (cross-gradient) of the Subject. Due to distance and location, this site should not pose a concern to the Subject.

The Response database is a list of confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

California and Tribal CERCLIS Equivalent Hazardous Waste Sites (HWS)

Analysis/Comment: The CER identified 25 California and/or Tribal CERCLIS Equivalent Hazardous Waste sites within the AMSD. The two closest sites, the Raytheon site at 350 Ellis and the HP site at 333 Logue are discussed above. The remaining sites are located at least .209 miles distant and cross to down-gradient from the Subject. Due to location and distance, none of these sites should pose a concern to the Subject.

California and/or Tribal Solid Waste Facilities (SWF) List

The SWF list is an inventory of active, closed and inactive landfills and other sites that manage solid wastes.

Analysis/Comment: The CER did not identify SWF sites within the AMSD.

California and/or Tribal Registered Underground Storage Tanks (UST), HIST USTs and SWEEPS UST Facility Lists

The UST facility list is an inventory of registered liquid bulk storage tanks. The HIST UST database, aka the Hazardous Substance Storage Container Database, is a historical listing of UST sites. The SWEEPS UST database, aka the Statewide Environmental Evaluation and Planning System, is a list of USTs that was updated and maintained by a company contacted by the State Regional Water Quality Control Board in the early 1980's. This listing is no longer updated or maintained but has historical significance.

Inclusion of a site on these lists does not necessarily constitute environmental contamination, but instead merely indicates the presence of registered bulk storage tanks.

Analysis/Comment: The CER did identify sites within the AMSD, but none closer than .125 miles distant. These historic sites should not pose a concern to the Subject due to regulatory status and distance.

California and Tribal Leaking Underground Storage Tanks (LUST) List and Spills, Leaks, Investigations and Cleanups (SLIC) Records

The LUST list is an inventory of reported spills and leaks, both active and inactive maintained by the various California Regional Water Quality Control Boards. It includes stationary and non-stationary source spills reported to state and federal agencies, including remediated and contaminated leaking UST sites. SLIC records, which are maintained by the various Regional Water Quality Control Boards, document unauthorized discharges from spills and leaks from sources other than UST and other regulated sites.

Analysis/Comment: The CER identified 28 LUST/SLIC sites within the AMSD. All but two of these sites have been granted a "case closed" status or are inactive. The two, remaining sites, 690 East Middlefield and EM Lubricants at 875 Maude Avenue at located .252 miles cross to down gradient from the Subject. Due to regulatory status, distance and location, none of the listed sites pose a concern to the Subject.

California Deed Restriction Listing and Tribal Institutional Control/Engineering Control Registries

The DTSC SMBRP list includes sites remediated under the program's oversight that have active deed restrictions. The DTSC Hazardous Waste Management Program Facility Sites (HWMP) list includes current and former hazardous waste facilities with deed/Land Use Restrictions that have been recorded with the County. The type of land use restrictions includes deed notices, deed restrictions, or a land use restriction that binds current and future owners.

The Tribal Institutional Control/Engineering Control Registries contain listings of those sites which have either engineering and/or institutional controls in place. Engineering controls include various physical control devices such as fences, caps, building slabs, paved areas, liners and treatment methods to eliminate pathways for regulated substances to enter the environment or effect human health. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions (Activity and Use Limitations) are generally required as part of institutional controls.

Analysis/Comment: The CER did not identify the Subject on the SMBRP, HWMP or Tribal Institutional or Engineering Control registries.

California and Tribal Voluntary Cleanup Program (VCP) Sites

The California VCP properties list includes "low" threat level properties with either confirmed or unconfirmed releases and the project proponents have requested that the DTSC oversee the investigation and cleanup.

Analysis/Comment: The CER identified the following VCP site within the AMSD: The A-1 Rental site discussed above.

California and Tribal Brownfield Sites

A Brownfield site was defined in the 2002 Small Business Liability Relief and Brownfields Revitalization Act (Brownfields Law) as "real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant". In connection with the passage of the Brownfields Law, the Environmental Protection Agency grants awards to states and tribes for activities under Section 128 (a).

Analysis/Comment: The CER did not identify Brownfield sites within the AMSD.

6.3 EDR Proprietary Databases

EDR Manufactured Gas Plants

This database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to the 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of wastes. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

Analysis/Comment: The CER did not identify the Subject or any adjacent properties on the manufactured gas plant database.

EDR Historic Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service

station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc.

Analysis/Comment: The CER did not identify the Subject or any adjacent properties on the historical auto stations database.

EDR Historic Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc.

Analysis/Comment: The CER did not identify the Subject or any adjacent properties on the historical cleaners database.

7.1 Chemical Storage and Usage

With the exception of chemicals customarily used for routine building maintenance and cleaning, IVI did not observe any hazardous chemicals stored on-site. For the most part, the maintenance chemicals are stored in the maintenance closet and the maintenance closets. Of note, floor drains were not observed in the vicinity of the chemical storage areas. In addition, housekeeping was generally considered satisfactory. The chemicals, which are stored in their original containers, do not appear to represent an impact to the environmental quality of the site provided that they are used as intended, properly handled, and the regulations pertaining to their usage are followed.

7.2 Bulk Storage Tanks

Underground Storage Tanks (USTs)

No USTs were identified on the subject property and no common indicators of USTs such as vent pipes, fill ports, manways, pavement cuts, fuel gauges or dispensers were observed. In addition, according to Shawn Kelly, there are no USTs on-site. Furthermore, the Subject was not identified on the California list of registered UST facilities.

No underground storage tanks were reportedly removed, closed-in-place or abandoned at the site and no common indicators of closed tanks were observed.

Aboveground Storage Tanks (ASTs)

The Middlefield Building previously utilized a diesel-fired emergency generator located at the rear of the building that held approximately 150 gallons of diesel fuel within an integrated AST. The diesel storage at the generator is integrated within the actual equipment and is provided with secondary containment. No evidence of leakage or staining was observed on or around the tank. No significant environmental concerns were noted with respect to same. The diesel generator was not in service at the time of the IVI site visit.

No other ASTs were observed and IVI did not identify any equipment, which should require such tanks. Moreover, visual indicators of former site ASTs, such as tank cradles, secondary containment structures, tank pedestals, etc., were not observed. In addition, according to the site contact, there are no ASTs on-site.

7.3 Site Waste and Wastewater

Solid Waste

Non-hazardous solid waste is disposed of in dumpsters and is removed from the Subject on a regular basis by Recology. Potential sources of contamination, such as waste oil or automobile batteries, were not observed in the vicinity of the dumpsters.

Sanitary Sewage

Sanitary sewage disposal is provided by the municipality. IVI did not observe any sources of wastewater or liquid discharge into the sewer other than sanitary sewage.

Hazardous Waste

No hazardous waste was observed or reported to be generated on the Subject. Furthermore, IVI's review of the USEPA's database of sites regulated under RCRA did not identify the Subject as a generator of hazardous waste.

7.4 Stained Soil, Stained Pavement, or Stressed Vegetation

There was no evidence of significant soil staining, stained pavement, or stressed vegetation observed on-site.

7.5 Liquid Discharges

No visible evidence of liquid discharges, suspected to represent an environmental concern were observed during our survey.

7.6 Pools of Liquid

IVI did not observe significant standing surface water or pools containing liquids likely to be hazardous substances or petroleum products.

7.7 Pits, Ponds, or Lagoons

No pits, ponds or lagoons suspected of containing hazardous substances or petroleum products were identified on-site.

7.8 Wells

There are several groundwater monitoring wells on-site associated with the area groundwater contamination which are tested multiple times a year.

7.9 On-Site Fill

Based on our observations, other than typical engineered fill used in foundation construction, it does not appear that a significant amount of fill has been imported onto the Subject.

7.10 Drums and Containers for Storing Waste

With the exception of non-hazardous solid waste containers, IVI did not identify containers suspected of storing waste. With respect to the non-hazardous solid waste containers, no significant environmental concerns were noted.

7.11 Floor Drains and Sumps

IVI did not identify any floor drains or sumps that were stained, emitting foul odors, or connected to an on-site sewage disposal system, or located adjacent to chemical storage areas.

7.12 Odors

IVI did not identify strong, pungent, or noxious odors suspected to represent an environmental concern.

7.13 Air Emissions

IVI did not identify processes or equipment that emit noticeable vapors or fumes.

7.14 Polychlorinated Biphenyls (PCBs)

IVI observed two (2) utility-owned, pad-mounted electrical transformers on site. Based on their age (1997), it is unlikely that the transformers, which were labeled as Pacific gas & Electric (PG&E) units, contain PCBs. Of importance, the electrical transformers were observed to be in good condition.

Notwithstanding the foregoing, in accordance with Title 40—Protection of Environment, Chapter 1—Environmental Protection Agency, Subchapter R—Toxic Substance Control Act (TSCA), Part 761—Polychlorinated Biphenyls (PCBs), Manufacturing, Processing, Distribution in Commerce, and Use Prohibitions, the owner of the transformers, PG&E, is responsible for their maintenance and remediation in the event of a leak.

Elevators

There are five (5) hydraulic elevators located at the Subject. Since PCB-containing hydraulic fluid has not been manufactured since 1979; based on the age of the improvements (1997), PCB-contaminated hydraulic fluid is not likely to be found in the hydraulic elevator operating systems. No significant staining or pools of hydraulic fluid were observed in the elevator pits or around the hydraulic equipment.

7.15 Asbestos-Containing Material (ACM)

Based on the age of the buildings (1997 construction), it is unlikely that appreciable quantities of asbestos containing materials have been used in the construction of the existing improvements. However, it is noted that although unlikely due to the buildings' age, the non-friable organically bound (NOB) materials, such as wallboard assemblies, resilient floor finishes and built-up roofing components may contain asbestos. These non-friable materials are in good condition and the potential for fiber release is low.

7.16 Lead-in-Drinking Water

The Subject was constructed after the 1986 ban on lead containing solder used to sweat copper drinking water piping. As a result, it is unlikely that the site's plumbing system leaches lead in to the drinking water. Moreover, according to the local water utility, the water supplied to the Subject is within federal, state, and local water quality standards.

7.17 Radon

Based on statistical information maintained within the U.S. Department of the Interior and U.S. Geological Survey's *Geologic Radon Potential*, dated 1993, radon concentrations in Santa Clara County average 1.3 picocuries per liter (pCi/L), which is below the 4.0 pCi/L action level established by the USEPA.

Based solely on this data, it is unlikely that radon represents an environmental concern at this time.

7.18 Lead-Based Paint (LBP)

Since the Subject was constructed after the Consumer Product Safety Commission's 1978 ban on the sale of LBP to consumers and the use of LBP in residences, it is unlikely that LBP exists in locations and quantities suspected to represent an environmental concern.

8.1 Questionnaires

IVI sent a Pre-Survey Questionnaire and an AAI User Questionnaire to the site contact and the User, respectively. The purpose of these questionnaires was to disclose any previous or existing hazardous waste or toxic material conditions, which may not have been apparent at the time of our site reconnaissance and to satisfy the User interview all appropriate inquiry requirements.

As of this writing, neither the site contact nor the User has returned the completed questionnaires. However, the significance of this data gap is low since the same questions were asked during our site visit, and previous Phase I Environmental Site Assessments were conducted and reviewed.

8.2 User

8.2.1 Title Records

A copy of the Subject's Chain-of-Title has not been provided to IVI for review.

8.2.2 Environmental Clean Up Liens and Activity and Use Limitations (AULs)

The User has not returned the AAI User Questionnaire.

8.2.3 Specialized Knowledge

The User has not returned the AAI User Questionnaire.

8.2.4 Relationship of Purchase Price to Fair Market Value Due to Contamination in Connection with the Subject

The User has not returned the AAI User Questionnaire.

8.2.5 Common Knowledge or Reasonably Ascertainable Information

The User has not returned the AAI User Questionnaire.

8.2.6 Purpose for Conducting the Phase I Environmental Site Assessment

The User has not returned the AAI User Questionnaire.

8.2.7 Proceedings Involving the Property

The User has not returned the AAI User Questionnaire.

8.3 Key Site Manager

Mr. Shawn Kelly, the Equity Office Portfolio Manager, was our Key Site Manager. Any information provided by Mr. Kelly is discussed elsewhere in this report.

8.4 Occupants

The Subject is occupied by a single tenant. Interviews of the site occupant was not conducted.

8.5 Past Owners

IVI was unable to locate the site's former owner.

8.6 Local Regulatory Agency Interviews and/or File Reviews

Fire Department

IVI has sent a request to the Mountain View Fire Department for environmental information pertaining to the subject property. As of this writing, the Fire Department has not responded to our request. Should receipt of a response from the Fire Department change the conclusions of this report, the Client will be notified in writing by IVI.

Health Department

IVI has sent a request to the Santa Clara County Health Department for environmental information pertaining to the subject property. As of this writing, the Health Department has not responded to our request. Should receipt of a response from the Health Department change the conclusions of this report, the Client will be notified in writing by IVI.

Tax Assessor

According to the tax assessor records reviewed, the Subject was constructed in 1997 on a 10.85-acre parcel. The buildings are slab-on-grade structures which have all public utilities.

Building Department

IVI reviewed building permits and records for the Subject at the Mountain View Building Department. The subject buildings were originally constructed for use as office buildings.

The following relevant permits were reviewed:

Permit Number	Date	Purpose of Permit
2010-2008	9/10	Demolish interiors for TIs
2007-1164	5/07	Monument sign installation
2008-0396	3/08	Install gas line earthquake valve
NA	2004 - 2012	Miscellaneous TI permits

Department of Planning and Zoning

According to files for the Subject reviewed at the Mountain View Planning Department , the site is zoned Industrial Transit (ML)-T, and is in conformance with the designation.

VI has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Standard Practice E1527-05 of 401 Ellis Street and 500 East Middlefield Road, Mountain View, California. Any exceptions to, or deletions from, the standard practice are described within Section 2.0 of this report.

This assessment has revealed no evidence of a recognized environmental condition in connection with the Subject except for the following:

Area Groundwater Contamination Condition

There are several NPL sites within one-mile of the Subject which have all reportedly contributed to a regional groundwater contamination (ie, TCE) plume that includes the area beneath the Subject, although plume maps reviewed by IVI suggest that that the Subject is located at the outskirts of the plume where the contaminant concentrations are at their lowest. A mixed ownership has been identified as the responsible party (RP), and the subject site or the adjoining properties do not appear to be contributors to the contamination, or agents of the RPs. As such, in accordance with the USEPA's Guidance Document (*Policy Toward Owners of Property Containing Contaminated Aquifers*), it is not suspected that the subject property owner would be liable under CERCLIS for remediation of contaminated groundwater originating at these NPL sites. Furthermore, the Subject and adjoining properties are connected to the municipal water supply system and do not use wells for potable water or irrigation. In addition, the subject was located just outside the vapor intrusion study (conducted in 2009) area since the groundwater contamination concentrations were low enough that vapor intrusion would not be a concern. IVI recommends continuing to allow investigation activities to be conducted on-site as required. Further, IVI recommends keeping abreast of the status of the investigation and remediation.

10.1 This report has been prepared in compliance with the ASTM standard entitled "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process" E1527-05.

10.2 The observations described in this report were made under the conditions stated herein. The conclusions presented in the report were based solely upon the services described therein, and not on scientific tasks or procedures beyond the scope of described services within the constraints imposed by the client. The work described in this report was carried out in accordance with the Terms and Conditions of the contract.

10.3 In preparing this report, IVI has relied on certain information provided by federal, state, and local officials and other parties referenced therein, and on information contained in the files of governmental agencies, that were readily available to IVI at the time of this assessment. Although there may have been some degree of overlap in the information provided by these various sources, IVI did not attempt to independently verify the accuracy or completeness of all information reviewed or received during the course of this site assessment. Observations were made of the site and of the structures on the site as indicated in this report. Where access to portions of the site or to structures on the site was unavailable or limited, IVI renders no opinion as to the presence of direct or indirect evidence relating to petroleum substances, hazardous substances, or both, in that portion of the site and structure. In addition, IVI renders no opinion as to the presence of indirect evidence relating to hazardous material or oil, where direct observation of the ground surface, interior walls, floors, ceiling or a structure is obstructed by objects or materials, including snow, covering on or over these surfaces.

10.4 As part of this assessment, IVI submitted requests for information via the Freedom of Information Act (FOIA) to various governmental agencies. As of the preparation of this report these requests may not have been fulfilled. The conclusions of this report are subject to change upon receipt of a response from these FOIA requests.

10.5 IVI does not represent that the site referred to herein contains no petroleum or hazardous or toxic substances or other conditions beyond those observed by IVI during the site walkthrough.

10.6 IVI has produced this document under an agreement between IVI and Equity Office. All terms and conditions of that agreement are included within this document by reference. Any reliance upon this document, or upon IVI's performance of services in preparing this document, is conditioned upon the relying party's acceptance and acknowledgement of the limitations, qualifications, terms, conditions and indemnities set forth in that agreement, and property ownership/management disclosure limitations, if any. It is not to be relied upon by any party other than Equity Office nor used for any purpose other than that specifically stated in our Agreement or within this Report's Introduction section without IVI's advance and express written consent. The Phase I report is only valid if completed within 180 days of an acquisition or the transaction necessitating the report.

10.7 **TIME LIMITATION TO ENACT CLAIM AGAINST IVI** If in the opinion of the client, or any third party claiming reliance on IVI's report or services, that IVI was negligent or in breach of contract, such aforementioned parties shall have one year from the date of IVI's site visit to make a claim.

10.8 Unless specifically identified within Section 2, Chinese drywall, indoor air quality and any other non-ASTM scope issues as identified in ASTM E1527-05, Section 13.1.5, are excluded from the scope of this assessment.

IVI Project No. PC30404038

Dear Property Manager:

On behalf of Equity Office, IVI has been retained to conduct a Property Condition and Phase I Site Assessment of the above referenced property.

Attached are our Pre-Survey Questionnaire and Document & Information Checklist, which we are requesting that someone knowledgeable with the property complete and return by fax to our office. Your quick response to provide this information will facilitate both the commencement of our survey and the completion of our report. Furthermore, these documents, along with your responses, will appear as exhibits in our report.

As part of our assignment, we are to conduct representative observations of up to 10% of the tenant areas and all of the base building areas, please arrange to have such quantity readily available for supervised access at the time of our site visit.

If the building has a flat roof, access to the roof will also be required. Please arrange to have a ladder available if there is no stairway bulkhead or ship's ladder within the building.

Sincerely,

IVI ASSESSMENTSERVICES, INC.

Tony Lau

Pre-Survey Questionnaire

Please provide written responses to this questionnaire and upon completion fax it to IVI. For those questions, which are not applicable or if you do not know the answer, please respond with an "N/A" or "U/K", respectively. If you have any questions, please call IVI or ask the IVI Project Manager at the time of their site visit. If additional pages for response are necessary, please attach hereto and reference same to the appropriate question number. Upon completion, please return by fax to the above number. **This document along with your written responses will be included as exhibits within our reports.**

Ó IVI International, Inc

A. GENERAL

1. Property Owner/Occupant Information

_____
Owner's Name

_____
Owner's Address

_____
Occupant's Name

_____
Occupant's Address

2. Valuation Reduction

Was/is the purchase price of the Subject property significantly less than the purchase price of comparable properties due to environmental conditions? Yes o No o U/K o

If yes, please explain below.

B. PROPERTY DESCRIPTION

1. Land

a. Size of Parcel? _____ Acres

b. Shape of Parcel? o Rectangular o Irregular ¨ Other
Please provide a copy of site survey or site plans, if available.

c. Are there any surface waters or wetlands on the site? Yes o No o U/K o
If "Yes," please provide any information as to the size and location of these areas.

d. Has fill been imported onto the Subject? Yes o No o U/K o

e. Are there currently or has there previously been waste treatment or disposal pits, ponds, or lagoons on the site? Yes o No o U/K o

2. Product Mix _____ N/A

What is the tenant's name and size of their space? Use back of sheet if additional space is required.

Tenant Name	Area (SF)

Ó IVI International, Inc

3. Utilities

a. Providers

Who provides the following utilities to the Subject?

Utility	Provider
Water:	
Sanitary Sewer:	
Storm Drainage:	
Electric:	
Gas/Oil:	
Steam:	
Chilled Water:	

Are there any problems or tenant complaints regarding the site's drinking water? Yes o No o U/K o

To the best of your knowledge, are there any problems with the underground utilities at the Subject, such as leaks, periodic breaks, etc.? Yes o No o U/K o
If yes, please list the problem areas.

b. Septic Systems

Was or is there a septic system on the property? Yes o No o U/K o

If so, is the septic system currently in use? Yes o No o

If "Yes", any problems (explain below)? Yes o No o

What is the date of the last septic tank pumping/cleaning?

c. Stormwater Management and Floor Drains

Is there an underground stormwater retention or detention system? Yes o No o

If "Yes", please provide any information as to its capacity, location, construction and whether it functions as a sediment control basin.

Where is the site's stormwater discharged to? _____

Are there any floor drains on the site? Yes o No o U/K o
If so, where do they discharge to?

d. Wells

Is there a well on the site? Yes o No o U/K o

If so, what type of well is it?:

Drinking Water	o	Irrigation	o
Monitoring	o	Dry Well	o

Have contaminants in excess of governmental guidelines been identified in the water? Yes o No o

4. Parking

Ó IVI International, Inc

How many parking spaces are available to the site?

	At Grade	Garage	Carport	Off Site	Totals
Standard					
Handicap					
Totals					

5. Roofing System

To the best of your knowledge, is the roof's installer still in business? Yes o No o U/K o

Is the roofing system still under warranty? Yes o No o U/K o

If "Yes", how long is the warranty period and when did it start?_____.
Please provide a copy of the warranty.

6. Sprinklers

Is the building covered by a fire sprinkler system? Full o Partial o

If "Partial", list below what areas are not covered?

7. Elevators

Are the elevators, if any, fitted with a "Firemen's" return? Yes o No o U/K o

8. Building Conditions

To the best of your knowledge, does the building have any of the following conditions? If so, describe the type and location of the problem and if any repairs or replacements been made within the last three (3) years to alleviate same?

a. Roof leakage? Yes o No o

b. Exterior facade (including penetrations and windows) water/moisture infiltration problems? Yes o No o

c. Exterior Insulation Finish System ("EIFS) water/moisture infiltration? Yes o No o

d. Structural problems such as excessive floor framing deflection, sidewall or foundation cracks? Yes o No o

e. Cellar/Basement/Crawlspace water/moisture infiltration? Yes o No o

f. Heating capacity, distribution or equipment deficiencies? Yes o No o

g. Domestic hot water capacity, distribution or equipment deficiencies? Yes o No o

h. Air conditioning capacity, distribution or equipment deficiencies? Yes o No o

i. Water treatment system operation, chemical balancing deficiencies, or portions of process piping and equipment NOT protected with a treatment system? Yes o No o
Please explain any YES response:

j. Inadequate domestic water pressure, discolored potable water, or drain line problems? Yes o No o

k. Inadequate electrical capacity or distribution? Yes o No o
If "Yes", please state where:

Ó IVI International, Inc

l. Presence of phenolic roof insulation? Yes o No o U/K o

m. Aluminum branch or distribution wiring? Yes o No o U/K o

n. Polybutylene water supply piping? Yes o No o U/K o

o. Fire retardant treated plywood roof sheathing? Yes o No o U/K o

p. Omega or Star sprinkler heads? Yes o No o U/K o
If "Yes", have the Omega heads been replaced prior to January 1, 1999? Yes o No o U/K o

q. Central, Gem or Star sprinkler heads recalled in July 2001? Yes o No o U/K o

r. Galvanized iron or brass water supply piping? Yes o No o U/K o

s. Fire-rated suspended ceiling system? Yes o No o U/K o
If "Yes", where?

t. Chinese drywall? Yes o No o U/K o
If "Yes," please detail any remediation efforts below.

9. Building Repairs in Buyout Phase

Are you in receipt of, or have you solicited, any proposals to perform any repairs or replacement work to the building(s) or any of its components that will exceed an aggregate cost of $5,000? Yes o No o

If "Yes", please explain:

10. Work Orders

What are the 10 most common work orders related to the Subject?

11. Flooding

Has any portion of the site incurred flooding? Yes o No o

If "Yes", please explain and identify location.

Is any portion of the site located in a flood plain? Yes o No o

12. Capital Improvements

Have there been any additions made to the property? Yes o No o

If "Yes", please explain and identify location and the date of the improvements.

13. Tenant Responsibilities

Please identify the following components or systems where **tenants are solely responsible** for repair, servicing/maintenance, and replacement under the terms of their lease:

a.	Domestic Hot Water Heaters	o
b.	Rooftop Air Conditioning Units	o
c.	Air-cooled DX Condensers/Compressors	o
d.	Kitchen Equipment	o
e.	Ballroom/Meeting Room Furnishings	o

Ó IVI International, Inc

f. Other _____

14. Building System Replacement Status

Please fill-out the following schedule as to the replacement status of the stated components, equipment or systems, which are applicable to the Subject:

Item or System	Approximate Quantity Replaced To Date	Quantity or $ for Historical Replacements			Average Unit Cost For Replacement or Total Cost Incurred or Contract Amount
		2010	2010	2012	
Asphalt Pavement Sealant					$ /SY
Asphalt Pavement Overlay/Repairs					$ /SY
Roofing					$ /SF or $ /Bldg
Exterior Painting					$ /Bldg.
Deck/Balcony Re-construction					$ /Deck
Galvanized Iron or Brass Water Piping					
Through-wall A/C Units					$ /Each
A/C Compressors					$ /Each
A/C DX Condensers					
Rooftop Package Units (HVAC)					$ /Each
Heat Pump Units					$ /Each
Fan Coil Units (HVAC)					$ /Each
Package Terminal A/C (PTAC)					$ /Each
Chillers					$ /Each
Cooling Towers					$ /Each
Air Handling Units					$ /Each
Individual Unit Furnaces					$ /Each
Central Boiler					$ /Each
Oil/Gas Burner(s)					$ /Each
Indiv. Domestic Hot Water Heaters					$ /Each
Central Domestic Hot Water Heaters					$ /Each
Kitchen Equipment					$ /Each
Laundry Equipment					$ /Each
Swimming Pool Re-surfacing					$ /Pool $ /Each
Swimming Pool Pump Equipment					$ /Sys.
Swimming Pool Filtering Equipment					$ /Pool
Tennis Court Re-Surfacing & Markings					$ /Court

Please identify capital improvements that are typically performed by property management and not subcontracted such as: replacement of domestic hot water heaters, replacement of air conditioning compressors, etc.

C. AMERICANS WITH DISABILITIES ACT (ADA)

1. Have any ADA related improvements been made to the property? Yes o No o
If "Yes," please identify the improvements.

2. Are there any ADA Kits/Boxes used to meet ADA requirements? Yes o No o
If "Yes," how many?

Ó IVI International, Inc

D. REGULATORY

1. Has the property ever been subject to any environmental enforcement action by the federal , state or local government? Yes o No o U/K o
If so, please explain.

2. Do you have any knowledge of pending or contemplated environmental actions against the Subject or neighborhood properties Yes o No o U/K o
If so, please state the circumstances.

3. Has there been any citizen or tenant complaints regarding environmental or health matters in connection with the Subject? Yes o No o U/K o

If so, please explain.

4. Are you in receipt of any notices of code violations from the municipality's building department, zoning and/or planning department, fire department, or health department? Yes o No o

If "Yes", please disclose the nature of the violations, attach copies of the violations to this statement and explain what actions are being undertaken to comply.

5. Are you aware of notice from any government agency regarding potential condemnation or right-of-way widening? Yes o No o

If "Yes," please explain:

E. SITE HISTORY and PREVIOUS REPORTS

1. Were there any buildings or other improvements on the property prior to the existing improvements? Yes o No o U/K o
If so, what were they?

2. Is or has the property been used for industrial or agricultural purposes, or as a gasoline station, auto repair, dry cleaner, junkyard, or landfill? Yes o No o U/K o
If so, please describe.

3. Site Operations

To the best of your knowledge, do any of the following operations take place on the Subject or have ever taken place on the Subject:

Ÿ	Dry Cleaning:	Yes o	No o
Ÿ	Petroleum Storage/Sales:	Yes o	No o
Ÿ	Photo or X-Ray Finishing:	Yes o	No o
Ÿ	Electronic Equipment Assembly or Manufacturing:	Yes o	No o
Ÿ	Paint or Solvent Storage:	Yes o	No o
Ÿ	Chemical Manufacturing:	Yes o	No o
Ÿ	Automobile Storage, Repair, or Disposal:	Yes o	No o
Ÿ	Agriculture:	Yes o	No o

4. Previous Studies/Documentation

a. Environmental Reports

Ó IVI International, Inc

Do you have any knowledge of previously prepared Environmental Site Assessment Reports, asbestos surveys, lead-based paint studies or testing (soil, groundwater, tank tightness testing, lead-based paint testing, asbestos testing, indoor air quality, mold (bacteria and fungi testing), etc.) conducted on the site? If so, please either provide copies of the reports or list the title, date, preparer and recipient of such report(s) below:

o I have no knowledge of any environmental related studies or reports prepared on the Subject.

b. Title Reports and Engineering/Architectural Drawings

Are you in possession of a title report, site drawings, building drawings and specifications and/or a survey for the site? Yes o No o

If so, please provide copies of same.

Please provide all available environmental information from yours or your Client's records including, but not limited to, documentation in connection with any pending or threatened public or private proceedings or litigation with respect to environmental liability, environmental permits and permit applications, underground and aboveground tank registration and information (including removal and testing of such tanks), environmental reports, asbestos, lead-based paint or indoor air quality studies, spill information and compliance information and programs.

c. Property Condition Reports

To the best of your knowledge, has the building(s), or any portion thereof, been subject to a property condition survey during the last three (3) years to opine on the subject's physical condition? Yes o No o

If "Yes", please provide a copy.

F. SURROUNDING PROPERTIES

1. Has any adjoining properties been used for industrial purposes, or as a gasoline station, auto repair shop, junkyard, dry cleaner or landfill? If so, please explain. Yes o No o U/K o

2. Are you aware of any contamination conditions on adjoining or nearby properties? Yes o No o U/K o

3. Are you aware of any active or former waste treatment or disposal pits, ponds, or lagoons on adjacent or nearby sites? Yes o No o U/K o

G. ASBESTOS

1. Do you have knowledge of any materials or substances on the site that are known or suspected to contain asbestos? Yes o No o U/K o

If so, what materials and where are they located?

2. Has an inspection for asbestos ever been performed on the Subject? Yes o No o U/K o

3. Has asbestos been removed from the Subject? Yes o No o U/K o

4. Does the building have:

- Spray-on or troweled-on fireproofing, insulation or finishes? Yes o No o U/K o
- Insulation on piping, boilers, tanks, chillers, or other mechanical equipment? Yes o No o U/K o

Ó IVI International, Inc

- Transite used in cooling towers, exterior walls, ceilings fascia panels, etc.? Yes o No o U/K o
- Resilient floor tile? Yes o No o U/K o
- Suspended acoustical ceiling tiles? Yes o No o U/K o
- A built-up or rolled roofing system? Yes o No o U/K o

H. PCBs

1. Are there any on-site electrical transformers or electrical switchgear? Yes o No o U/K o
If so, do they contain PCBs? Yes o No o U/K o

Who owns the transformers and where are they located?

2. Did any on-site transformers formerly contain PCBs, but later had the dielectric fluid replaced? Yes o No o U/K o

3. Is there any hydraulic equipment such as elevators or automotive lifts on-site? Yes o No o U/K o

If so, who services the equipment?

Are you aware of any hydraulic fluid leaks in connection with the hydraulic equipment? Yes o No o U/K o

I. STORAGE TANKS

1. Are there any (active or inactive) Underground Storage Tanks ("UST") or Aboveground Storage Tanks ("AST") on the site? Yes o No o U/K o

If so, please fill out the following schedule:

Active or Inactive Tanks

Location of Tank	Size of Tank (Gallons)	AST or UST	Tank Contents	Age of Tank (Years)	Does the Tank Have Corrosion Protection? (Yes/No)	Does the Tank Have Leak Detection? (Yes/No)	Is the Tank In-Use? (Yes/No)

Have any of the tanks been tightness tested? Yes o No o U/K o

2. Do you have any knowledge of tanks that were either removed or closed in-place at the site? Yes o No o U/K o

If so, please fill out the following schedule:

Tanks Removed or Closed In-Place

Ó IVI International, Inc

Location of Former Tank	Size of Tank (Gallons)	AST or UST	Tank Contents	Tank Removal Company	Year Tank Was Removed

J. LEAD

1.	Are you aware of any lead-based paint ("LBP") applications on the site?	Yes o No o U/K o
2.	Has LBP testing been conducted?	Yes o No o U/K o
3.	Have there been any reported incidences of children with elevated blood lead levels residing at the site?	Yes o No o U/K o
4.	Are there any children younger than 7 years old residing at the site or frequenting the site on a daily basis?	Yes o No o U/K o
5.	Have any LBP abatements been conducted?	Yes o No o U/K o
6.	Has the water been tested for lead? If so, please provide a copy of the results	Yes o No o U/K o

Ó IVI International, Inc

K. HAZARDOUS MATERIALS

1. Are hazardous materials or chemicals stored or used on-site? Yes o No o U/K o

2. Are there any hazardous or medical waste or fluids generated or used that employ an outside service for their periodic supply and removal? Yes o No o U/K o

If so, please provide the name, address, & telephone number of the disposal company and the facility generating the waste.

L. INDOOR AIR QUALITY

1. Have strong mold odors and/or mold staining been observed on-site? Yes o No o U/K o

2. Have there been any employee or tenant reports of symptoms consistent with mold contamination or other indoor air quality concerns? Yes o No o U/K o

3. Are you aware of elevated radon gas concentrations on-site? Yes o No o U/K o

Ó IVI International, Inc

M. AAI USER QUESTIONNAIRE

In order to qualify for one of the Landowner Liability Protections (LLPs) offered by the Small Business Liability Relief and Brownfield's Revitalization Act of 2001 (the "Brownfield's Amendments"), the user must provide the following information (if available) to the environmental professional. Failure to provide this information could result in a determination that "all appropriate inquiry" is not complete.

1. Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law? Yes o No o U/K o

2. Are you aware of any Activity and Use Limitations (AULs), such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, slate or local law? Yes o No o U/K o

3. Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business? Yes o No o U/K o

4. Does/Did the purchase price paid for this property reasonably reflect the fair market value of the property? Yes o No o U/K o

If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property? Yes o No o U/K o

5. Are you aware of commonly known or reasonably ascertainable information about the properly that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example:

(a.) Do you know the past uses of the property? Yes o No o U/K o

(b.) Do you know of specific chemicals that are present or once were present at the property? Yes o No o U/K o

(c.) Do you know of spills or other chemical releases that have taken place at the property? Yes o No o U/K o

(d.) Do you know of any environmental cleanups that have taken place at the property? Yes o No o U/K o

6. Based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of contamination at the property? Yes o No o U/K o

Document Request List

The following documents are being requested to assist IVI with the preparation of our Property Condition Assessment. Please provide the available documents to the IVI Project Manager prior to or during the site visit.

Plans, Specs and Miscellaneous Documents:

- Geotechnical/Soils Report
- As-Built Plans and Specifications
- Architect's Certificate of Substantial Completion

Warranty Documents:

- Roof System
- Sidewall Systems
- Plaza/Terrace Systems
- Parking Garage/Deck Coating Systems

Municipal Department Documents:

- Certificate of Occupancy, Completion or Compliance
- Schedule of Building Code Violations
- Elevator, Boiler, Electrical, or other Inspection Certificate (s)
- Façade Inspection Report, such as: NYC's Local Law 11 Report and Form No. 1642D or Boston's Ordinance 9-9.12 Exterior Wall Certificate, if applicable

Promotional/Leasing Information:

- Copy of the Most Recent Appraisal
- Promotional Leasing Literature
- Tenant SFR Schedule
- Schedule of Floor Area Measurements: Gross, Usable and Rentable SF
- Location Map

Building Maintenance History:

- Tenant Complaint Log
- Names and Telephone Numbers of Service Firms:
  - Façade Repairs/Restoration
  - Roofing
  - Plumbing
  - Water Tower
  - Heating
  - Boiler Water Treatment
  - Air Conditioning
  - Cooling Tower
  - Electrical
  - Sprinkler/Standpipe System
  - Life/Safety Alarm System
  - Elevator
- HVAC System Operating Reports such as: Eddy Current, Oil Analysis and Vibration Analysis.
- Schedule of Capital Expenditures for Previous Five (5) Years.

Miscellaneous Studies:

- Roof Condition Survey
- Previously Prepared Replacement Reserve Studies
- ADA Survey & Compliance Report
- Sprinkler System/Standpipe Survey Prepared by Insurance Company

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 02/01/2013 has revealed that there are 4 NPL

sites within approximately 1 mile of the target property.

Federal CERCLIS list

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 02/04/2013 has revealed that there are 6 CERCLIS sites within approximately 0.5 miles of the target property.

Federal CERCLIS NFRAP site List

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 02/05/2013 has revealed that there are 4 CERC-NFRAP sites within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 02/12/2013 has revealed that there are 2 CORRACTS sites within approximately 1 mile of the target property.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 02/12/2013 has revealed that there are 3 RCRA-TSDF sites within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 02/12/2013 has revealed that there is 1

RCRA-LQG site within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 02/12/2013 has revealed that there are 11 RCRA-SQG sites within approximately 0.25 miles of the target property.

US INST CONTROL: A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

A review of the US INST CONTROL list, as provided by EDR, and dated 12/19/2012 has revealed that there are 3 US INST CONTROL sites within approximately 0.5 miles of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 03/13/2013 has revealed that there are 25 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the State Water Resources Control Board Leaking Underground Storage Tank Information System.

A review of the LUST list, as provided by EDR, and dated 03/18/2013 has revealed that there are 14 LUST sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

AST: The Aboveground Storage Tank database contains registered ASTs. The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the AST list, as provided by EDR, and dated 08/01/2009 has revealed that there are 2 AST

sites within approximately 0.25 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Hazardous waste / Contaminated Sites

HIST Cal-Sites: Formerly known as ASPIS, this database contains both known and potential hazardous substance sites. The source is the California Department of Toxic Substance Control. No longer updated by the state agency. It has been replaced by ENVIROSTOR.

A review of the HIST Cal-Sites list, as provided by EDR, and dated 08/08/2005 has revealed that there are 3 HIST Cal-Sites sites within approximately 1 mile of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 02/12/2013 has revealed that there are 3 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

CUPA Listings: A listing of sites included in the county?s Certified Unified Program Agency database. California?s Secretary for Environmental Protection established the unified hazardous materials and hazardous waste regulatory program as required by chapter 6.11 of the California Health and Safety Code. The Unified Program consolidates the administration, permits, inspections, and enforcement activities.

A review of the CUPA Listings list, as provided by EDR, has revealed that there are 11 CUPA Listings sites within approximately 0.25 miles of the target property.

Summary Details:

Conditions at proposal April 10, 1985): Moffett Naval Air Station covers 8,700 acres in Sunnyvale, Santa Clara County, California. In the past, various solvents and sludges were disposed on-site into ponds and landfills and onto the ground.As a result, soil and ground water on-site are contaminated. The major contaminants in ground water are volatile organic compounds. About 272,000 people depend on wells within 3 miles of the station as a source of drinking water. Moffett Naval Air Station is participating in the Installation Restoration Program IRP), established in 1978. Under this program, the Department of Defense seeks to identify, investigate, and clean up contamination from ha ardous materials. The Navy has completed Phase I records search) of the program and is beginning Phase II remedial investigation). Moffett Naval Air Station is in the South Bay Area of San Francisco. In October 1984, 19 non-Federal sites in the area were proposed for the NPL. Facilities at these sites have used a variety of toxic chemicals, primarily chlorinated organic solvents, which contaminate a common ground water basin. Although these sites are listed separately, EPA intends to apply an area-wide approach to the problem as well as take site-specific action as necessary. Status July 22, 1987): In May 1985, the California Regional Water Quality Control Board adopted Waste

MOFFETT NAVAL AIR STATION (Continued) **1000228683**

Discharge Requirements for Moffett Naval Air Station.The requirements outline specific tasks and compliance dates Moffett must follow to define the full extent of contamination in soils and ground water. In April 1986, the Navy released the final report for the verification step of Phase II.Moffett is revising the quality assurance project plan and sample plan for the characteri ation step of Phase II. Within the boundaries of this Federal facility, including this specific site, there are no areas subject to the Subtitle C corrective action authorities of the Resource Conservation and Recovery Act. Therefore, this Federal facility site is being placed on the Federal section of the NPL.

Site Description: Moffett Field was continuously operated by the U.S. military after it was commissioned in 1933 to support the West Coast Dirigibles of the lighter than air (LTA) program until 1994. In 1939, a permit was granted to Ames Aeronautical Laboratory to use part of the station. In 1942, the station was returned to Navy control and was named Naval Air Station Moffett Field. In late 1942, the heavier than air (HTA) program was initiated and began to take precedence over the LTA program. In 1945, the HTA program was moved and Moffett Field was used as a major overhaul and repair base. In 1949, the station became home to the Military Air Transport Service Squadron. By 1950, Moffett Field was the largest naval air transport base on the West Coast, and in 1953 it became home to all Navy fixed-wing land-based antisubmarine efforts. A weapons department was formed on the base in 1954, and in February 1966 the base activated its high speed refueling facilities. During the station reorganization in 1973, it became the headquarters of the Commander Patrol Wings, US Pacific Fleet. During the 1980s and early 1990s, the mission of Moffett Field was to support antisubmarine warfare training and patrol squadrons, and it became the largest P-3 Orion patrol aircraft base in the world with nearly 100 aircraft. No heavy manufacturing or major aircraft maintenance was conducted, but a significant amount of unit and intermediate level maintenance occurred. In April 1991, Moffett Field was designated for closure, and on July 1, 1994, control of the base was transferred to National Aeronautics and Space Administration (NASA). Wastes have been generated at Moffett Field through maintenance operations, fuel management, and fire training since the early 1930s. Chemicals of potential concern include waste oils and jet fuels; solvents and cleaners; washing compounds; and lesser amounts of gasoline, hydraulic fluids, asbestos, paints, pesticides, battery acid, and PCBs. Wastes were disposed of in unlined landfills, drained through drainage ditches and unpaved areas, and stored temporarily in unlined wastewater ponds. In addition, some underground storage tanks (USTs) and sumps were found to have leaked petroleum hydrocarbons and fuels, and lesser amounts of waste oils and solvents. Environmental studies were initiated at Moffett Field in 1984. The Navy began conducting these environmental restoration activities as part of the Department of Defense Installation Restoration Program (IRP). The Navy conducted an initial assessment study (IAS) in 1984 to gather data on the past use and disposal of hazardous materials at the base. Nineteen sites were identified as potential sources of wastes, including nine sites identified in the IAS and 10 sites added during subsequent investigations. Five additional sites were identified during field investigation in the early 1990s. The Environmental Protection Agency (EPA) proposed placing Moffett Field on the National Priorities List (NPL) in June 1986, and it was placed on the NPL in 1987. The Remedial Investigation and Feasibility Study (RI/FS) is coordinated through the August 1990 Federal Facility Agreement (FFA) with EPA and the State of California. The RI was implemented in two phases. The Phase I characterization was complete in August 1990. The Phase II investigations were initiated in 1990 to provide more detailed, site specific data. In October, 1992 EPA determined that the aquifers on the western side of Moffett Field were co-mingled with a regional volatile organic compound (VOC) plume emanating from the Middlefield-Ellis-Whisman (MEW) Superfund site south of Moffett Field. EPA determined that these aquifers were subject to the 1989 EPA Record of Decision (ROD) already written for the MEW site and would be remediated per the MEW ROD. Consequently, OU4 (West-side Aquifers) was deleted and OU5 (East-side

MOFFETT NAVAL AIR STATION (Continued) **1000228683**

aquifers) was modified to include all aquifers not part of the regional plume. In May 1989, the Navy developed a community relations plan (CRP). The OU5 RI report was released in August 1993. The OU5 FS report was released in August 1995 Moffett Field. The proposed plan for remediation of OU5 was released to the public in October, 1995. A public comment period was held from October 27, 1995 through November 30, 1995 with a public meeting on November 16, 1995. Moffett Field has been continuously operated by the U.S. military since it was commissioned in 1933. In 1945, Moffett Field was used as a major overhaul and repair base. In 1954, a weapons department was formed at the base, and then during the 1980s and early 1990s, the mission of Moffett Field was to support antisubmarine warfare training and patrol squadrons. No heavy manufacturing or major aircraft maintenance was conducted at Moffett Field, but a significant amount of unit- and intermediate-level maintenance occurred. In April 1991, Moffett Field was designated for closure as an active military base under the Department of Defense Base Realignment and Closure (BRAC) program. After closure, control of the base was transferred to the National Aeronautics and Space Administration (NASA), however, the Navy will continue with environmental restoration activities and remain responsible for remediating Navy contaminant sources. Wastes have been generated at Moffett Field through maintenance operations, fuel management, and fire training since the early 1930s. Chemicals of potential concern include waste oils and jet fuels; solvents and cleaners; washing compounds; and lesser amounts of gasoline, hydraulic fluids, asbestos, paints, pesticides, battery acid, and polychlorinated biphenyls (PCBs). Wastes were disposed of in unlined landfills, drained through drainage ditches and unpaved areas, and stored temporarily in unlined wastewater ponds. In addition, some underground storage tanks and sumps (many of them now removed) were found to have leaked petroleum hydrocarbons and fuels, and lesser amounts of waste oils and solvents. Environmental studies were initiated at Moffett Field in 1984 with an initial assessment of past use and disposal of hazardous materials. Nineteen sites were identified as potential waste sources. Remedial Investigation/Feasibility Study (RI/FS) work was coordinated through the August 1990 Federal Facility Agreement with EPA and the State. The Phase I RI characterization was completed in August 1990. The more detailed Phase II investigations identified the need to separate the site into six Operable Units (OUs). NAS Moffett Field is located in California, 35 miles south of San Francisco, 10 miles north of San Jose, and about 1 mile south of the southwestern edge of San Francisco Bay, in Santa Clara County, California. The facility encompasses 2,200 acres in Santa Clara County; the facility address is Moffett Field, California 94035. NAS Moffett Field is bounded by saltwater evaporation ponds to the north, Stevens Creek to the west, U.S. Highway 101 (Bayshore Freeway) to the south, and the Lockheed Martin Aerospace Center to the east. Several industrial facilities are located south of the Bayshore Freeway. In particular, a group of companies is located in a 0.5-square-mile area, bounded by U.S. Highway 101. Middlefield Road, Ellis Street, and Whisman Road (MEW). This area is known as the MEW Superfund study area and contains three Superfund sites. Moffett Field also borders the cities of Mountain View and Sunnyvale, California. The City of Sunnyvale is located south and east; the City of Mountain View borders Moffett Field on the south and west. The NASA Ames Research Center is located west and north of the runways. The U.S. military continuously operated NAS Moffett Fiefld as Naval Air NAS Sunnyvale from its date of commission in April 1933 until it was transferred to NASA on July 1, 1994. The Navy used the station as an air base until October 1935, when it was transferred to the Army Air Corps for use as a training base. During the Army's tenure, the National Advisory Committee for Aeronautics (NACA) established Ames Research Center in December 1939 on land adjacent to MFA. The base returned to Navy control and was renamed NAS Moffett Field in April 1942.

MOFFETT NAVAL AIR STATION (Continued) **1000228683**

By 1950, NAS Moffett Field was the largest naval air transport base on the West Coast and became the first all-weather air station. In 1958, NACA became NASA and Ames Research Center became the NASA Ames Research Center. Between 1973 and 1994, the mission of NAS Moffett Field involved support of antisubmarine warfare training and patrol squadrons. At one point, MFA was the largest P-3 base in the world, with nearly 100 P-3C Orion patrol aircraft. These aircraft were assigned to nine squadrons, supported by 5,500 military, 1,500 civilian, and 1,000 reservist personnel. No heavy manufacturing or major aircraft maintenance was conducted at NAS Moffett Field during the last mission; instead, mostly unit- and intermediate-level maintenance occurred. In April 1991, the station was designated for closure as an active military base under the U.S. Department of Defense (DoD) Base Realignment and Closure (BRAC) program. NASA assumed control of the base beginning in July 1994. Military housing units and associated facilities were transferred to Onizuka Air Force Base at the same time. Since the early 1980s, DoD has been identifying, evaluating, and controlling the spread of contaminants from historical hazardous waste sites as part of the Installation Restoration Program (IRP) at MFA. This work is coordinated through a Federal Facility Agreement with the U.S. Environmental Protection Agency (EPA) and the California Regional Water Quality Control Board, San Francisco Bay Region (RWQCB). The Navy is the lead agency for this work. The Navy and NASA signed a memorandum of understanding (MOU) on December 22, 1992, concerning environmental activities at the station. Under the MOU, the Navy will continue with environmental restoration and will remain responsible for remediating Navy contaminant sources. NASA is responsible for non-environmental operations and ongoing environmental compliance. NASA is planning to develop a world-class, shared-use educational and research and development campus at Moffett Field, California, in association with government entities, academia, industry, and nonprofit organizations. The NASA Ames Development Plan includes proposed development of four areas: -NASA Research Park: A 213-acre parcel located between Ames Research Center facilities, MFA, U.S. Highway 101, and the military housing area -Eastside/Airfield District: A 952-acre parcel that includes MFA and property located east of the airfield -Bay View District: A 95-acre parcel located north of the Ames Research Center facilities -Ames Research Center Facilities: A 240-acre parcel comprising the existing NASA Ames Research Center campus Surface water channels and ditches will be maintained for drainage purposes. Groundwater is not currently used at MFA. The only exception is water from a single well screened in the deep C aquifer (deeper than 155 feet below ground surface) used by NASA for fire fighting, composting, and agricultural purposes. This well is located in the northwestern corner of the Ames Research Center area. Public water is supplied to MFA from the Hetch Hetchy aqueduct owned by the City of San Francisco. Groundwater is unlikely to be used as a water supply source in the future because of poor ambient quality and low formation yield to a well. NASA's draft Programmatic Environmental Impact Statement does not consider development of groundwater as a future water supply source. EPA proposed MFA as a National Priorities List (NPL) site in June 1986, and MFA was included on the NPL in July 1987. Inclusion on the NPL initiated the Remedial Investigation (RI) and Feasibility Study (FS) process, as required by the CERCLA. The Navy began environmental studies at MFA in 1984. Twenty sites were originally identified as IRP sites at MFA. Investigations during the station-wide RI identified six additional, potentially contaminated sites. Only three sites were assigned numbers (Sites 21 through 23), and none of the additional sites was designated as an operable unit (OU). The six additional sites, which were investigated under the CERCLA program, are: Site 21, Site 22, Site 23, the Weapons Storage Bunkers, the former Industrial Wastewater Flux Ponds, and an ephemeral wetland located at an improperly abandoned agricultural well. Later, the Navy defined four additional

MOFFETT NAVAL AIR STATION (Continued) **1000228683**

sites (Sites 25 through 28), originally included as parts of other sites under previously established OUs. These sites include Site 25, the Eastern Diked Marsh and stormwater retention pond (included in OU6); Site 26, the east side aquifers (included in OU5); Site 27, the Northern Channel (included in OU6); and Site 28, the west side aquifers. All of the sites identified were investigated under the CERCLA program. The current OU definitions and study areas are: OU1: Soils and groundwater at Sites 1 and 2 landfills OU2-East: Soils at Sites 3, 4, 6, 7, 10 (runways), 11, and 13 OU2-West: Soils at Sites 8, 10 (Chase Park), 14-North, 16, 17, and 18 OU5: Aquifers on the eastern side of MFA that are not part of the regional plume or OU1 (Site 26) OU6: Wetland areas, Sites 25 and 27 Petroleum Sites: Sites 5, 9, 12, 14-South, 15, 19, 20, and 24 Additional Sites: Sites 21, 22, 23, Weapons Storage Bunkers, upland soil areas, Human Health Risk Assessment (HHRA) Exposure Area 4158, former Industrial Wastewater Flux Ponds, and the abandoned former agricultural well. Human health and ecological risk assessments were conducted as part of the station-wide RI. As agreed upon by the Navy, EPA, and RWQCB, six sites were recommended for No Action (formally referred to as No Further Action) in the 2001 Final Addendum to the Revised Final Station-wide Feasibility Study Report and have been addressed separately from the IR program. These sites are: Site 23, Golf Course Fill Area 3; Weapons Storage Bunkers; Former Industrial Wastewater Flux Ponds; Former Abandoned Agricultural Well; Upland Soils (areas that support upland plant communities); Station-wide Remedial Investigation HHRA Exposure Areas 3782, 3785, 3974, 4090, and 4158. The addendum to the report provides additional documentation to support the No Action recommendations for these sites. Two of the sites, Industrial Wastewater Flux Ponds and Former Abandoned Agricultural Well, were closed with concurrences from EPA or Santa Clara Valley Water District; therefore, they were not considered further in the CERCLA process. Three of the HHRA exposure areas, 3782, 3785, and 3974, are being addressed as part of other remedial actions or maintenance programs. The remaining No Action Sites (Site 23-Golf Course Fill Area 3, Weapons Storage Bunkers, Upland Soils, HHRA Exposure Area 4090, and HHRA Exposure Area 4158) were included in the Proposed Plan. The Proposed Plan was made available to the public during a formal comment period from December 15, 2001 through January 28, 2002. A public meeting was held on January 10, 2002 and a responsiveness summary was issued on May 28, 2002. As the proposed plan and earlier versions of the ROD suggest, HHRA Exposure Area 4090 was listed as a No Action Site even though this area was included in the station-wide ecological assessment for wetland areas being addressed under a separate action (Site 27). Because there are potential risk issues associated with this site, the HHRA Exposure Area 4090 is no longer identified as a No Action Site in this ROD. Instead, this site will be addressed under the ongoing Site 27 investigation. Site 23 Golf Course Fill Area: Site 23 is located on 2 acres, just south of the Northern Weapons Bunker area, in the western portion of the golf course. Golf Course Fill Area 3 is shown in aerial photographs taken in 1977 as one of several ponds on the golf course. Three of the ponds on the golf course were dry, and some debris was visible in the area of Golf Course Fill Area 3 in an aerial photograph taken in 1987. No information on the source of the material discarded in this area could be found. However, numerous small piles of soil, concrete, disaggregated asphalt, grass clippings, and mulch were identified during a site walk conducted in March 1994. In addition, some airplane parts, consisting of several pieces of aluminum (brought to Site 23 for disposal after a plane crashed at MFA), and some electronics equipment were found in the area. A magnetometer survey of this area was conducted in 1995. The results of the survey do not indicate that significant quantities of metallic materials were buried at the site. This evidence instead suggests that the area was never trenched and was used primarily for incidental disposal of excess soil and debris from the golf

MOFFETT NAVAL AIR STATION (Continued) **1000228683**

course. A No Further Action ROD was completed for Site 23 on August 19, 2002. Weapons Storage Bunkers: There are two groups of weapons storage bunkers: the Northern Weapons Storage Bunkers and the Southern Weapons Storage Bunkers. The weapons storage bunkers are located in two fenced areas in the northeastern portion of MFA, near the golf course. The Northern Weapons Storage Bunkers cover about 5 acres and include seven high-explosive magazines. The Southern Weapons Storage Bunkers cover about 10 acres and include nine high-explosive magazines. Each magazine consists of a heavy-gauge, corrugated steel arch that forms its roof and sides. The floors of the magazines are concrete, without drains. Each magazine is about 30 feet long, 20 feet wide, and 20 feet high. The magazines are covered with soil, forming long, earth-covered bunkers. Only one magazine in the Northern Weapons Storage Bunkers is still used and stores ammunition for the California Air National Guard. The Northern Weapons Storage Bunkers contained two diesel storage tanks. One of the tanks was removed in 1992, and the other tank was removed in 1994. No source for or evidence of contamination was identified in the Southern Weapons Storage Bunkers. A site inspection at the Northern Weapons Storage Bunkers in May 1994 found that the cement apron on the southern side was free of staining or significant cracking, and the buildings were released for unrestricted use. The high-explosive magazines at the Northern Weapons Storage Bunkers also were investigated for radioactive contamination; however, no radioactivity was found. An inventory revealed two diesel storage tanks in this area. Tank 22 was a 600-gallon underground storage tank that held diesel fuel and was removed in 1992; Tank 102, a 55-gallon aboveground storage tank that contained diesel fuel, was removed in April 1994. Tanks 22 and 102 are evaluated and closed separately from CERCLA sites under the policy and guidance of RWQCB. Closure of Tank 22 is documented in the Phase I petroleum sites closure report. Tank 102 is being investigated during the Phase III tank investigation. The Phase III investigation involves tanks that require further assessment for closure. This work may include document research, sampling, and geophysical surveys. The results of this work will be included in the Phase III petroleum sites closure report. No soil samples were collected at the Southern Weapons Storage Bunkers, because no source for, or evidence of, soil contamination was identified. Based on the Navy's stated historical use of the bunkers, the Southern Weapons Storage Bunkers were not tested for radioactive contamination before they were transferred to the California Air National Guard in 1994. There is no reason to suspect that these facilities were used for storage of radioactive materials. Groundwater in the area of the weapons storage bunkers is addressed separately as part of OU5. OU5 includes all aquifers that are not affected by the regional plume in groundwater. As part of the RI for OU5, data for groundwater samples from all wells on the eastern side of the base, including monitoring wells near the weapons storage bunkers, were evaluated and are addressed in the OU5 ROD. A No Further Action ROD was completed for the Weapons Storage Bunkers August 19, 2002. Upland Soils: Upland soils are areas of MFA that support upland plant communities and include virtually all areas at the airfield that are not covered by ditches, marshes, or wetlands. Human activity has been significant in these areas. Certain areas of upland soils, such as open grassy areas and the edges of golf courses and recreational fields, are actively managed as burrowing owl habitat, but the majority of upland soils areas are either paved, landscaped, or have been altered substantially by land use during the last 100 years. A No Further Action ROD was completed for the Upland Soils area on August 19, 2002. Area 4158: HHRA Exposure Area 4158 is located slightly south, but almost adjacent to IRP Site 11 - Engine Test Stand Area. A No Further Action ROD was completed for the Human Health Risk Assessment Area 4158 on August 19, 2002. OU 7 The Site 22 Landfill is located in the northeastern corner of MFA. The Site 22 Landfill covers approximately 9.4 acres and contains an

MOFFETT NAVAL AIR STATION (Continued) **1000228683**

estimated total refuse (waste) volume of 92,000 cubic yards. The site was used as an active landfill from 1950 through 1967. The refuse is believed to consist primarily of domestic waste, as confirmed through exploratory trenching. Results of environmental investigations indicate that in some places, the waste is located beneath the groundwater table, while in others, waste is located near the surface (above the groundwater table). The Site 22 Landfill now underlies holes 6 and 7 of a golf course, which is operated by the United States Air Force. The fairway and putting greens for these holes are located on top of the landfill. The rough for holes 6 and 7, which contains trees, is on the sloped part of the landfill. Soil borings and trenching indicate that most of the landfill is covered with approximately 1.5 feet of soil; however, soil thickness in a few areas is less than 1 foot. The Site 22 Landfill was characterized in the Final Station-wide RI Report and the Additional Sites Investigation Phase II Draft Final Report. Because operating records do not exist for the Site 22 Landfill, the history of the landfill was researched by studying aerial photographs and historical maps of the area and interviewing base personnel. This review indicated that the landfill was active from 1950 to 1967. Base personnel reported that Site 22 was used as a municipal landfill after the landfill at Site 2 was closed. Visual characterization of waste excavated at Site 2 confirmed that Site 2 contained primarily domestic waste; therefore, it was expected (and later confirmed) that the Site 22 Landfill also contained domestic waste. In 1973, the Site 22 Landfill was converted into holes 6 and 7 of the MFA golf course. In April 1998, an additional investigation was initiated to provide supplemental information about the Site 22 Landfill and its surrounding area. As part of this additional investigation, exploratory trenches were dug to further evaluate the vertical and horizontal extent of refuse within the landfill. The exploratory trenching uncovered municipal waste such as old tires, newspapers, vacuum tubes, and shampoo bottles. Based on the results of the trenching, the extent of the landfill was estimated to be approximately 9.4 acres, and the volume of refuse was estimated at approximately 92,000 cubic yards. The Air Force operates and maintains the golf course located in the northeast corner of the facility, which encompasses the Site 22 Landfill. The golf course has been maintained and operated for over 30 years, and there are no plans to change the land use of this area. It is therefore, likely that the Site 22 Landfill will remain part of the golf course. The selection and screening of remedial alternatives was thus conducted based on the premise that continued use as a golf course is the most likely future land use scenario, which has been confirmed with NASA personnel. A ROD addressing OU 7 was completed in June 2002. OU 8: Site 27 includes the Northern Channel, related ditches that drain into the Northern Channel, the berms along either side of the Northern Channel, and the debris pile near the Building 191 lift station. The Northern Channel is located near the northeastern boundary of the former NAS Moffett Field. Historically, the Northern Channel has received stormwater runoff from the former NAS Moffett Field and NASA Ames Research Center. Portions of the Northern Channel that are owned by Lockheed, Cargill Salt, and the Santa Clara Valley Water District extend eastward, approximately 5,500 feet beyond the boundary of the former NAS Moffett Field. The areas that make up Site 27 are summarized below: -Northern Channel and Berms: Nearly 2 miles long, the Northern Channel receives stormwater from the eastern portion of the former NAS Moffett Field. Water in the channel flows east, approximately 1 mile beyond the boundary of the former NAS Moffett Field into Lockheed Channel. The Northern Channel flows by gravity at this termination point through a pipe to the terminus of the Lockheed Channel, which runs parallel to the eastern end of the Northern Channel. The two channels are separated by a levee. Water from the terminus of Lockheed Channel is pumped into the Moffett Channel, which drains into Guadalupe Slough and eventually into San Francisco Bay. The Northern

MOFFETT NAVAL AIR STATION (Continued) **1000228683**

Channel provides brackish surface water habitat of moderate value to wildlife. The surface area of the channel is about 9 acres; its bottom substrate is sediment, and the banks are fill material. The width of the channel is 40 to 50 feet, but increases to 70 feet at the western end; the channel is about 10,000 feet long, and the bottom of the channel lies approximately 2.8 feet below mean sea level. The north levee is made of compacted hard clay and is approximately 5 feet high (above the water level in the channel), with flat surfaces and steep side slopes. The slopes of the bank are moderately eroded with loose surface material that supports a moderate amount of plants. The south levee is also made of compacted clays and supports a greater diversity of vegetation. Wildlife surveys have detected the presence of the western pond turtle, various plants, and a wide variety of shore birds and waterfowl in the area.
-Marriage Road Ditch: Located east of the runways, Marriage Road Ditch divides the golf course at the former NAS Moffett Field. The ditch extends about 2,300 feet, and the bottom of the ditch is 5 to 6 feet below mean sea level. Water flowing in Marriage Road Ditch is perennial and portions of the ditch are lined with concrete. Surface water from the east apron area and from the storm drains in and around Hangars 2 and 3 discharges into the ditch. Marriage Road Ditch receives additional runoff from the southern two-thirds of the runways and the golf course east and west of the ditch. Surface water from Marriage Road Ditch drains into North Patrol Road Ditch. During the rainy season, surface water from Marriage Road Ditch is occasionally pumped directly into the Northern Channel to prevent flooding during storms. The probable source of contamination in Marriage Road Ditch is historical surface water runoff from storm drains. These storm drains collected runoff from the paved and unpaved areas around Hangars 2 and 3 and conveyed it to Marriage Road Ditch. The ditch provides habitat for insects, worms, snails, and the western pond turtle. Several species of plants grow in and along the sides of the ditch. -Patrol Road Ditch: Patrol Road Ditch (also known as the East Patrol Road Ditch) is a surface drainage feature that runs 2,100 feet along the eastern boundary of the former NAS Moffett Field; the bottom of the ditch is about 5 to 6 feet below mean sea level. The ditch is part of the storm drain system at the former NAS Moffett Field. Its flow in the southern end is intermittent and depends on rainfall. The northern end of the ditch receives regular runoff from irrigation of the golf course and contains water year round. Surface water from Patrol Road Ditch flows into North Patrol Road Ditch through a culvert during periods of high water; water from the ditch is occasionally pumped directly to the Northern Channel during winter rainstorms. The probable source of contamination is surface water runoff into the storm drains that feed into Patrol Road Ditch. During the wet season, the northern end of the ditch provides open water and emergent vegetation. During the dry season, the southern end consists of habitat similar to upland areas. Several species of birds have been identified in Patrol Road Ditch. -North Patrol Road Ditch: This ditch runs 4,300 feet along the North Patrol Road, parallel to and south of the Northern Channel. The western portion of the ditch is lined with concrete, lies about 5 to 6 feet below mean sea level, and generally contains water year-round. The North Patrol Road Ditch carries surface water from east to west toward the Building 191 lift station. The North Patrol Road Ditch is an integral part of the storm drain system at Moffett. North Patrol Road Ditch receives stormwater from Marriage Road Ditch, Patrol Road Ditch, and the golf course. Surface water flow through the North Patrol Road Ditch is intermittent and depends on rainfall. The banks of the ditch are defined and are made of fill material and emergent vegetation but represent poor wetland habitat. Species observed here include ducks, doves, burrowing owls, and squirrels. -Debris Pile: The debris pile is located north of the Building 191 lift station at the western end of the Northern Channel, between the north bank of the channel and south bank of the U.S. Fish and Wildlife Service Diked

MOFFETT NAVAL AIR STATION (Continued) **1000228683**

Ponds. The pile consists of about 10,000 cubic yards of dredged sediment from the Northern Channel and construction debris from the 1950s to 1990s.
Ownership of the Northern Channel and related areas within Site 27 is divided among NASA, Lockheed, U.S. Fish and Wildlife Service, Santa Clara Valley Water District, Cargill Salt, and the City of Sunnyvale. NASA owns the southern berm along the northern boundary of the former NAS Moffett Field and a portion of the property where the debris pile is located. In addition, NASA owns the Marriage Road Ditch, the Patrol Road Ditch, and the North Patrol Ditch. Lockheed owns the southern berm along the northern boundary of its property and a small portion of the Northern Channel. Cargill Salt owns the remainder of the berm, the Northern Channel, and the remainder of the area where the debris pile is located. U.S. Fish and Wildlife Service purchased the saltwater evaporation ponds adjacent to Site 27 from Cargill Salt in 2003. The City of Sunnyvale owns ponds and a publicly owned treatment works located near the eastern end of the Northern Channel. In addition, Sunnyvale leases a portion of the berms for hiking and biking trails. In April 1991, the Base Realignment and Closure Commission voted to (1) decommission the former NAS Moffett Field, (2) transfer naval operations from the former NAS Moffett Field to other naval facilities, and (3) transfer most of the former NAS Moffett Field property to the NASA Ames Research Center. The areas south and west of Site 27 are part of the former NAS Moffett Field. Current tenants include the U.S. Army, the U.S. Air Force, and the California Air National Guard. Current uses include airfield operations, military facilities, and NASA research facilities. The former NAS Moffett Field has a fully functional federal airport and maintains facilities for military personnel and their families, including housing, commissary, clinic, service station, tennis courts, and a golf course. The tidal salt marsh and mud flats north and northeast of the former NAS Moffett Field were diked more than 50 years ago and were formerly used as commercial saltwater evaporation ponds. Cargill Salt, the former owner, sold the ponds to the U.S. Fish and Wildlife Service in 2003.
Stormwater drainage is expected to be the future use of the Northern Channel and associated ditches, as it has been for the last 50 years. Remedial alternatives were selected and screened based on the premise that continued use for stormwater drainage is the most likely future land use scenario. Existing beneficial uses of groundwater, including municipal and domestic, industrial process, and industrial and agricultural water supply, are listed in the Basin Plan. Concentrations of total dissolved solids in groundwater in the area of Site 27 do not meet criteria in U.S. Environmental Protection Agency classification guidelines for a potential source of drinking water. According to the Basin Plan, the beneficial uses for surface water near the site are freshwater/estuarine habitat and wildlife habitat. A Record of Decision (ROD) addressing Operable Unit 08 at the NAS Moffett Field site was completed in July 2005.

Scoring: 2

Summary Details:

Conditions at proposal October 15, 1984): Intel Corp. manufactured semiconductors at a plant in Mountain View, Santa Clara County, California, between 1968 and 1981. At that time, the facility occupied 2 acres and was surrounded by residential areas, office buildings, and other semiconductor-manufacturing plants. Monitoring wells on the site are contaminated with trichloroethylene, xylene, vinyl chloride, and 1,1- and trans-1,2-dichloroethylene, according to analyses conducted by a consultant to Intel. Contamination is believed to have resulted from leaking underground solvent tanks. About 270,000 people depend on wells within 3 miles of the site as a source of drinking water. Since early 1982, Intel hasbeen pumping ground water and treating it by carbon adsorption. The company

INTEL CORP. (MOUNTAIN VIEW PLANT) (Continued) **1000203455**

intends to implement additional cleanup activities, including the installation of a system to pump and treat contaminated ground water and excavation of soil beneath the underground storage tanks, which were previously removed. The company is working with the California Regional Water Quality Control Board CRWQCB) to determine the full extent of the contamination. This is one of 19 sites in the SouthBay Area of San Francisco. Facilities at these sites have used a variety of toxic chemicals, primarily chlorinated organic solvents, which contaminate a common ground water basin. Although these sites are listed separately, EPA intends to apply an area-wide approach to the problem as well as take specific action as necessary. Status June 10, 1986): Intel has removed approximately 4,600 cubic yards of contaminated soil and has installed four wells to pump and treat contaminated ground water. CRWQCB has issued Waste Discharge Requirements to the company. The requirements are the board s legal mechanism for regulating activities at facilities under its jurisdiction. On August 15, 1985, EPA issued a CERCLA Administrative Order on Consent to Intel Corp. s Mountain View Plant, as well as to Fairchild Camera s and Raytheon Corp. s Mountain View Plants. The order calls for the three companies to conduct a joint remedial investigation/feasibilitystudy of the area to determine the type and extent of contamination and identify alternatives for remedial action.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites,

INTEL CORP. (MOUNTAIN VIEW PLANT) (Continued) **1000203455**

including an inventory of sites, planned and actual site activities, and financial information.

Background Info:

to drinking water aquifers.
Raytheon entered into a consent agreement with EPA in August, 1985. Raytheon removed a leaking tank in December of 1987, installed surface drainage controls, and is operating a groundwater extraction system. The groundwater extraction system was installed in 1982, and involves treating the extracted water with either air or steam stripping. DHS reviews Raytheon's monthly reports on this system. Raytheon is also currently participating in an area-wide remedial investigation and feasibility study.
The Raytheon Corporation operates a semiconductor manufacturing plant at this 30-acre site. Chemicals used in the manufacturing process and wastes generated by this process are handled and stored onsite. The site is located adjacent to industrial, commercial and residential development. This site is part of the Middlefield, Ellis, Whisman (MEW) area.
Soil and groundwater beneath the site are contaminated with trichloroethylene (TCE), trichloroethane (TCA), dichloroethylene (DCE), and chloroform. Contamination is believed to have resulted from leaking underground chemical storage tanks and/or concrete acid neutralization sumps.
About 270,000 people live within a 3-mile radius of the site and depend on groundwater as a source of drinking water. Ground-

Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Hazardous Waste Summary:
Waste code: D000
Waste name: Not Defined

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Waste code: D004
Waste name: ARSENIC

Waste code: D006
Waste name: CADMIUM

Waste code: D007
Waste name: CHROMIUM

Waste code: D008

FAIRCHILD SEMICONDUCTOR OF CA (Continued) **1001226951**

Waste name: LEAD

Waste code: D009
Waste name: MERCURY

Waste code: D011
Waste name: SILVER

Waste code: D035
Waste name: METHYL ETHYL KETONE

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F005
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

CA BOND EXP. PLAN:

Reponsible Party:	NPL SITE CLEANUP WORKPLAN
Project Revenue Source Company:	Not reported
Project Revenue Source Addr:	Not reported
Project Revenue Source City,St,Zip:	Not reported
Project Revenue Source Desc:	The RP will fund the characterization and remedial action at the site. State Bond funds will be used for oversight of the RP's activities. The Department has budgeted $50,000 for direct costs related to the project and will seek to recover all actual costs from the responsible party.
Site Description:	The Raytheon Corporation operates a semiconductor manufacturing plant at this 30-acre site. Chemicals used in the manufacturing process and wastes generated by this process are handled and stored onsite. The site is located adjacent to industrial, commercial and residential development.
Hazardous Waste Desc:	Soil and ground water beneath the site are contaminated with trichloroethylene (TCE), trichloroethane (TCA), dichloroethylene (DCE), and chloroform. Contamination is believed to have resulted from leaking underground chemical storage tanks and/or concrete acid neutralization sumps.
Threat To Public Health & Env:	About 270,000 people live within a 3-mile radius of the site and depend on ground water as a source of drinking water. Ground water contamination at the site represents a significant threat to drinking water aquifers.
Site Activity Status:	Raytheon entered into a consent agreement with the EPA in August, 1985. Raytheon has removed the leaking tank, installed surface drainage controls and is operating a ground water extraction system. Raytheon is also currently participating in an area-wide remedial investigation and feasibility study.

Longitude:	-122.05327
Case Type:	Cleanup Program Site
Case Worker:	LG
Local Agency:	Not reported
RB Case Number:	43s1038
File Location:	Not reported
Potential Media Affected:	Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern:	* Solvents
Site History:	No Water Board oversight of cleanup at this site. This case is included in Geotracker because the site is covered by the Water Boards NPDES general permits for discharges from pump and treat systems to surface waters (one each for fuels- and VOC-impacted sites). This can happen for two reasons: (i) the site is overseen by another agency (e.g., USEPA or DTSC) and needs coverage under one of the NPDES general permits or (ii) construction dewatering in an area of groundwater contamination necessitates NPDES general permit coverage. Including this case in Geotracker helps staff to receive and review required NPDES reports.

Summary Details:

Conditions at proposal October 15, 1984): Raytheon Corp. manufactures semiconductor products at a plant in Mountain View, Santa Clara County, California. The facility occupies about 30 acres and is surrounded by industrial, business, and residential areas. Soil and ground water beneath the site are contaminated with trichloroethylene, 1,1,1-trichloroethane, and 1,1- and trans-1,2- dichloroethylene, according to analyses conducted by a consultant to Raytheon. Contaminationis believed to have resulted from a leaking underground chemical storage tank and/or concrete acid neutrali ation sumps. About 270,000 people depend on wells within 3 miles of the site as a source of drinking water. In late 1982, Raytheon conducted an investigation to determine if downgradient ground water contamination near the north property boundary resulted from a source on its property. Raytheon concluded that it was not possible to establish a specific source of contamination based on data obtained from its investigation. At present, Raytheon is working with the California Regional Water Quality Control Board CRWQCB) to determine the full extent of the problem.
This is one of 19 sites in the South BayArea of San Francisco. Facilities at these sites have used a variety of toxic chemicals, primarily chlorinated organic solvents, which contaminate a common ground water basin. Although these sites are listed separately, EPA intends to apply an area-wide approach to the problem as well as take specific action as necessary. Status June 10, 1986): In an attempt to determine the full extent of ground water contamination, Raytheon has installed three wells to pump and treat ground water to contain the contaminated plume. CRWQCB has issued Waste Discharge Requirements to the company. The requirements are the board s legal mechanism for regulating activities at facilities under its jurisdiction.
On August 15, 1985,EPA issued a CERCLA Administrative Order on Consent to Raytheon Corp. s Mountain View Plant, as well as to Fairchild Camera s and Intel Corp. s Mountain View Plants. The order calls for the three companies to conduct a joint remedial investigation/feasibility study of the area to determine the type and extent of contamination and identify alternatives for remedial action.

Environmental Interest/Information System

California Department of Toxic Substances Control EnviroStor System (DTSC-EnviroStor) is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

Global Id:	SL0608524074
Lead Agency:	SAN FRANCISCO BAY RWQCB (REGION 2)
Lead Agency Case Number:	Not reported
Latitude:	37.400312
Longitude:	-122.051358
Case Type:	Cleanup Program Site
Case Worker:	LG
Local Agency:	Not reported
RB Case Number:	43s1028
File Location:	Not reported
Potential Media Affected:	Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern:	* Solvents
Site History:	No Water Board oversight of cleanup at this site. This case is included in Geotracker because the site is covered by the Water Boards NPDES general permits for discharges from pump and treat systems to surface waters (one each for fuels- and VOC-impacted sites). This can happen for two reasons: (i) the site is overseen by another agency (e.g., USEPA or DTSC) and needs coverage under one of the NPDES general permits or (ii) construction dewatering in an area of groundwater contamination necessitates NPDES general permit coverage. Including this case in Geotracker helps staff to receive and review required NPDES reports.

Longitude:	-122.054269
Case Type:	Cleanup Program Site
Case Worker:	LG
Local Agency:	Not reported
RB Case Number:	43s1042
File Location:	Not reported
Potential Media Affected:	Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern:	* Solvents
Site History:	No Water Board oversight of cleanup at this site. This case is included in Geotracker because the site is covered by the Water Boards NPDES general permits for discharges from pump and treat systems to surface waters (one each for fuels- and VOC-impacted sites). This can happen for two reasons: (i) the site is overseen by another agency (e.g., USEPA or DTSC) and needs coverage under one of the NPDES general permits or (ii) construction dewatering in an area of groundwater contamination necessitates NPDES general permit coverage. Including this case in Geotracker helps staff to receive and review required NPDES reports.

Secondary Waste Type: Not reported
Design Flow: 0
Baseline Flow: 0
Reclamation: Not reported
POTW: Not reported
Treat To Water: Moderate Threat to Water Quality. A violation could have a major adverse impact on receiving biota, can cause aesthetic impairment to a significant human population, or render unusable a potential domestic or municipal water supply. Awsthetic impairment would include nuisance from a waste treatment facility.
Complexity: Category B - Any facility having a physical, chemical, or biological waste treatment system (except for septic systems with subsurface disposal), or any Class II or III disposal site, or facilities without treatment systems that are complex, such as marinas with petroleum products, solid wastes, and sewage pump out facilities.

Background Info:	Fairchild operates a semiconductor manufacturing plant at this 56-acre site. Chemicals used in the manufacturing processa and wastes generated as a result of this process have been handled & stored onsite. The site is adjacent to residential & industrial development. This site is part of the Middlefield-Ellis-Whisman (MEW) area. In 1982, soil and groundwater contamination were discovered. The sources of contamination were leaking underground storage tanks containing solvents. At that time, there were a total of 71 tanks & sumps used for the onsite storage of hazardous materials and wastes. The contaminants which have been detected in soil and groundwater include trichloroethylene (TCE), trichloroethane (TCA), dichloroethylene (DCE) and chloroform. Groundwater contamination represents a significant threat to aquifers used as a source of drinking water. About 270,000 people reside within a 3-mile radius of the site. One private well has been closed due to the encroachment of contaminants. To date, three contaminated private wells have been identified. The City of Mountain View operates a municipal well (No. 18) 1.2 miles from the site. Fairchild entered into a consent agreement with EPA to conduct RI/FS in August, 1985. As an initial stabilization action, six of the 71 tanks and sumps used to store hazardous materials and wastes were excavated and removed. A groundwater extraction system consisting of 25 extraction wells has been installed and is operating.

Environmental Interest/Information System

California Department of Toxic Substances Control EnviroStor System (DTSC-EnviroStor) is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities,

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A

CHEMOCENTRYX (Continued) **1007199396**

CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Hazardous Waste Summary:
- Waste code: D000
- Waste name: Not Defined

- Waste code: D001
- Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

- Waste code: D002
- Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

NAXCOR (Continued) **1005441330**

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Waste code: D011
Waste name: SILVER

Waste code: D018
Waste name: BENZENE

Waste code: D019
Waste name: CARBON TETRACHLORIDE

Waste code: D022
Waste name: CHLOROFORM

Waste code: F002
Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE LISTED IN F001, F004, OR F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F005
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F024
Waste name: PROCESS WASTES, INCLUDING BUT NOT LIMITED TO, DISTILLATION RESIDUES, HEAVY ENDS, TARS, AND REACTOR CLEAN-OUT WASTES, FROM THE PRODUCTION OF CERTAIN CHLORINATED ALIPHATIC HYDROCARBONS BY FREE RADICAL CATALYZED PROCESSES. THESE CHLORINATED ALIPHATIC HYDROCARBONS ARE THOSE HAVING CARBON CHAIN LENGTHS RANGING FROM ONE TO AND INCLUDING FIVE, WITH

NAXCOR (Continued) **1005441330**

VARYING AMOUNTS AND POSITIONS OF CHLORINE SUBSTITUTION. (THIS LISTING DOES NOT INCLUDE WASTEWATERS, WASTEWATER TREATMENT SLUDGES, SPENT CATALYSTS, AND WASTES LISTED IN SECTION 261.31 OR SECTION 261.32).

Waste code: F025
Waste name: CONDENSED LIGHT ENDS, SPENT FILTERS AND FILTER AIDS, AND SPENT DESICCANT WASTES FROM THE PRODUCTION OF CERTAIN CHLORINATED ALIPHATIC HYDROCARBONS, BY FREE RADICAL CATALYZED PROCESSES. THESE CHLORINATED ALIPHATIC HYDROCARBONS ARE THOSE HAVING CARBON CHAIN LENGTHS RANGING FROM ONE TO AND INCLUDING FIVE, WITH VARYING AMOUNTS AND POSITIONS OF CHLORINE SUBSTITUTION.

Waste code: K014
Waste name: BOTTOMS FROM THE ACETONITRILE PURIFICATION COLUMN IN THE PRODUCTION OF ACRYLONITRILE

Waste code: K020
Waste name: HEAVY ENDS FROM THE DISTILLATION OF VINYL CHLORIDE IN VINYL CHLORIDE MONOMER PRODUCTION.

Waste code: K042
Waste name: HEAVY ENDS OR DISTILLATION RESIDUES FROM THE DISTILLATION OF TETRACHLOROBENZENE IN THE PRODUCTION OF 2,4,5-T.

Waste code: K105
Waste name: SEPARATED AQUEOUS STREAM FROM THE REACTOR PRODUCT WASHING STEP IN THE PRODUCTION OF CHLOROBENZENES.

Violation Status: No violations found

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

690 EAST MIDDLEFIELD (Continued) **S104156118**

File Location: Regional Board
Potential Media Affected: Indoor Air, Other Groundwater (uses other than drinking water), Soil, Soil Vapor
Potential Contaminants of Concern: 1,1,1-Trichloroethane (TCA), Other Chlorinated Hydrocarbons, Tetrachloroethylene (PCE), Trichloroethylene (TCE)
Site History: 1. Site Location: The site is located at 690 East Middlefield Road in Mountain View. It has also been previously identified as being located at 333 Logue Avenue. The site is bounded by East Middlefield Road on the southwest, Logue Avenue on the west, Maude Avenue on the northeast, and Mountain ViewlAlviso Road (highway 237) on the southeast. Three buildings occupy the site and are currently used for software duplication and distribution, parts distribution, and administrative offices. Areas surrounding the building are paved. Adjacent properties are developed for commercial and light industrial use. Prior to the early 1960s, land use in the site vicinity was agricultural. 2. Site History: Hewlett Packard Company (HP) began construction of the buildings in 1966. Previous activities on the site included metal cleaning, polishing, coating and painting operations, and production and testing' of magnetic head assemblies. These activities required the use of chemical such as degreasers, paint thinners, acids, and detergents; and generated a variety of hazardous wastes. As a result of subsurface soil investigations by HP beginning in 1983, volatile organic compounds (VOCs) were detected at the site. 3. Named Dischargers: HP, as owner and operator of the site, is named as a discharger. Order No. 95-131

Agency Type: Private
SIC Code: 3674
SIC Code 2: Not reported
Primary Waste: Contaminated Ground Water
Primary Waste Type: Hazardous/Influent or Solid Wastes that contain toxic, corrosive, ignitable or reactive substances and must be managed according to applicable DOHS standards.
Secondary Waste: Not reported
Secondary Waste Type: Not reported

690 EAST MIDDLEFIELD (Continued) **S104156118**

Design Flow:	0
Baseline Flow:	0
Reclamation:	No reclamation requirements associated with this facility.
POTW:	The POTW Does not have an approved pretreatment program. Some POTWs may have local pretreatment programs that have not been approved by the regional board and/or EPA.
Treat To Water:	Moderate Threat to Water Quality. A violation could have a major adverse impact on receiving biota, can cause aesthetic impairment to a significant human population, or render unusable a potential domestic or municipal water supply. Awsthetic impairment would include nuisance from a waste treatment facility.
Complexity:	Category B - Any facility having a physical, chemical, or biological waste treatment system (except for septic systems with subsurface disposal), or any Class II or III disposal site, or facilities without treatment systems that are complex, such as marinas with petroleum products, solid wastes, and sewage pump out facilities.

Case Type:	Cleanup Program Site
Case Worker:	MBR
Local Agency:	Not reported
RB Case Number:	43S0289
File Location:	Regional Board
Potential Media Affected:	Not reported
Potential Contaminants of Concern:	1,1,1-Trichloroethane (TCA), Other Chlorinated Hydrocarbons, Other Solvent or Non-Petroleum Hydrocarbon, Tetrachloroethylene (PCE), Trichloroethylene (TCE)
Site History:	The E/M Lubricant facility was operated as a metal coating facility by E/M Corporation. As a dry lubricant application facility, activities included application of graphite or molybdenum coating to metal parts and degreasing. Improper storage and handling of degreasing materials impacted soil and groundwater. Adjacent sites with solvent releases are common.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:
Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN

META TECHNOLOGIES INC. (Continued) **1000404147**

OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D008
Waste name: LEAD

Waste code: D011
Waste name: SILVER

Waste code: F006
Waste name: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site History:	No Water Board oversight of cleanup at this site. This case is included in Geotracker because the site is covered by the Water Boards NPDES general permits for discharges from pump and treat systems to surface waters (one each for fuels- and VOC-impacted sites). This can happen for two reasons: (i) the site is overseen by another agency (e.g., USEPA or DTSC) and needs coverage under one of

MEW NPDES (Continued) **S109422704**

the NPDES general permits or (ii) construction dewatering in an area of groundwater contamination necessitates NPDES general permit coverage. Including this case in Geotracker helps staff to receive and review required NPDES reports.

CA BOND EXP. PLAN:

Reponsible Party:	NPL SITE CLEANUP WORKPLAN
Project Revenue Source Company:	Not reported
Project Revenue Source Addr:	Not reported
Project Revenue Source City,St,Zip:	Not reported
Project Revenue Source Desc:	The RP will fund the characterization and remedial action at the site. State Bond funds will be used for oversight of the RPs activities. DHS has budgeted $50,000 for direct costs related to the project and will seek to recover all actual costs fromthe responsible party.
Site Description:	Between 1968 and 1981, Intel Corporation operated a semiconductor manufacturing plant at the site. Chemicals used in the manufacturing process and wastes generated by this process were handled and stored onsite. The site is located adjacent to residential and commercial development.

INTEL CORPORATION - MOUNTAIN VIEW (Continued) **S100833411**

Hazardous Waste Desc: In 1981, soil and ground water contamination was discovered at the site. An investigation determined that the sources of contamination were leaking underground storage tanks containing solvents. The types of contaminants identified include trichloroethylene (TCE), xylene, Freon-113, trichloroethane (TCA), dichloroethylene (DCE) and vinyl chloride.

Threat To Public Health & Env: Approximately 270,000 people living within a 3-mile radius of the facility depend on ground water as a principal sources of drinking water. Three private wells have been contaminated. Five municipal wells belonging to the City of Mountain View and five City of Sunnyvale wells are located within a three-mile radius of the site. The City of Mountain View's well No. 18 is located 1.1 miles from the facility and is 2,600 feet away from a contaminated monitoring well.

Site Activity Status: Intel entered into a consent agreement with EPA in August, 1985. All five underground tanks and sumps at the site have been excavated along with 4,600 cubic yards of contaminated soil. Ground water monitoring and extraction wells have been installedfor plume characterization, monitoring and extraction. About 72,000 gallons of contaminated ground water is pumped daily and treated by carbon adsorption prior to discharge to Stevens Creek, Whisman Slough and the San Francisco Bay.

Background Info:	Between 1968, and 1981, Intel Corporation operated a semiconductor manufacturing plant at the site. Chemicals used in the manufacturing process and wastes generated by this process were handled and stored onsite. The site is located adjacent to residential and commercial development. This site is part of the Middlefield-Ellis-Whisman (MEW) study area. In 1981, soil and groundwater contamination was discovered at the site. An investigation determined that the sources of contamination were leaking underground storage tanks containing solvents. The types of contaminants identified include trichloroethylene (TCE), xylene, Freon-113, trichloroethane (TCA), dichloroethylene (DCE), and vinyl chloride. Approximately 270,000 people living within a 3-mile radius of the facility depend on groundwater as a principal source of drinking water. Three private wells have been contaminated. Five municipal wells belonging to the City of Mountain View and five City of Sunnyvale wells are located within a three-mile radius of the site. The City of Mountain View's well No. 18 is located 1.1 miles from the facility & is 2,600 feet away from a contaminated monitoring well. In August, 1985, Intel entered into a consent agreement with EPA to conduct a RI/FS. All five underground tanks and sumps at the site have been excavated along with 4,600 cubic yards of contaminated soil. Groundwater monitoring and extraction wells have been installed for plume characterization, monitoring and extraction. About 72,000 gallons of contaminated groundwater is pumped daily and treated by carbon adsorption prior to discharge to Stevens Creek, Whisman Slough and the San Francisco Bay.

Local Agency:	Not reported
RB Case Number:	43s1045
File Location:	Not reported
Potential Media Affected:	Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern:	* Solvents
Site History:	No Water Board oversight of cleanup at this site. This case is included in Geotracker because the site is covered by the Water Boards NPDES general permits for discharges from pump and treat systems to surface waters (one each for fuels- and VOC-impacted sites). This can happen for two reasons: (i) the site is overseen by another agency (e.g., USEPA or DTSC) and needs coverage under one of the NPDES general permits or (ii) construction dewatering in an area of groundwater contamination necessitates NPDES general permit coverage. Including this case in Geotracker helps staff to receive and review required NPDES reports.

LOC Case Number: 06S2W14P03f
File Location: Stored electronically as an E-file
Potential Media Affect: Soil, Under Investigation
Potential Contaminants of Concern: Total Petroleum Hydrocarbons (TPH)
Site History: Unknown UST encountered during grading of the site for redevelopment. UST had product in it, which was removed and the UST removed. Tank removal samples indicate that a release occured. Soil was excavated and removed from the site. NOTE: This site is located with the boundaries of the Middlefield-Ellis-Whisman (MEW) Superfund Site (EPA# CAD 982463812). There is a Site Management Plan that applies to all of MEW, which includes this site. Information on MEW can be found at EPA Region 9's website: http://yosemite.epa.gov/r9/sfund/r9sfdocw.nsf/ce6c60ee7382a473882571af007af70d/e4b75798264cff7988257007005e946e!OpenDocument

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

SIC Code 2:	Not reported
Primary Waste:	Miscellaneous (Includes wastes from dewatering, recreational lake overflow, swimming pool wastes, water ride wastewater, ground water seepage and other wastes of this type)
Primary Waste Type:	Nonhazardous Solid Wastes/Influent or Solid Wastes that contain nonhazardous putrescible and non putrescible solid, semisolid, and liquid wastes (E.G., garbage, trash, refuse, paper, demolition and construction wastes, manure, vegetable or animal solid and semisolid waste).
Secondary Waste:	Not reported
Secondary Waste Type:	Not reported
Design Flow:	0
Baseline Flow:	0
Reclamation:	No reclamation requirements associated with this facility.
POTW:	The facility is not a POTW.
Treat To Water:	Moderate Threat to Water Quality. A violation could have a major adverse impact on receiving biota, can cause aesthetic impairment to a significant human population, or render unusable a potential domestic or municipal water supply. Awsthetic impairment would include nuisance from a waste treatment facility.
Complexity:	Category B - Any facility having a physical, chemical, or biological waste treatment system (except for septic systems with subsurface disposal), or any Class II or III disposal site, or facilities without treatment systems that are complex, such as marinas with petroleum products, solid wastes, and sewage pump out facilities.

Summary Details:

Conditions at proposal October 15, 1984): Fairchild Semiconductor Corp. manufactures semiconductors in Mountain View, Santa Clara County, California. The facility occupies approximately 56 acres and is surrounded by residential and industrial areas. This site was originally proposed under the name Fairchild Camera Instrument Corp. Mountain View Plant). The company took the new name in 1986. Monitoring wells on the site are contaminated

FAIRCHILD SEMICONDUCTOR CORP. (MOUNTAIN VIEW PLANT) (Continued) **1000260555**

with trichloroethylene,1,1,1-trichloroethane, 1,1- and trans-1,2-dichloroethylene, according to analyses conducted by a consultant to Fairchild. Contamination is believed to have resulted from leaking underground tanks. About 270,000 people depend on wells within 3miles of the site for drinking water. Since early 1982, Fairchild has been investigating the site geology and hydrogeology and attempting to define the lateral and vertical extent of solvents underlying the site. Fairchild has installedtwo wells to pump and treat the contaminated ground water plume. The company is working with the California Regional Water Quality Control Board to further define the extent of contamination and outline various cleanup strategies. The plant received Interim Status under Subtitle C of the Resource Conservation and Recovery Act RCRA) when the company filed Part A of a permit application. This is one of 19 sites in the South Bay Area of San Francisco. Facilities at these sites have used a variety of toxic chemicals, primarily chlorinated organic solvents, which contaminate a common ground water basin. Although these sites are listed separately, EPA intends to apply an area-wide approach to the problem as well astake specific action as necessary. Status February 1986): Continuing to determine the extent of ground water contamination, Fairchild has installed more than 100 monitoring wells. On August 15, 1985, EPA issued an AdministrativeOrder on Consent under CERCLA Section 106 a) to Fairchild s Mountain View Plant, as well as to Intel Corp. s and Raytheon Corp. s Mountain View Plants. The order calls for the companies to conduct a joint remedial investigation/feasibility study of the area to determine the type and extent of contamination and identify alternatives for remedial action. Status June 1988): EPA is proposing to drop Fairchild Semiconductor Corp. s Mountain View Plant from the proposed NPL. Because the site is a treatment and storage facility, it is subject to the corrective action authorities of Subtitle C RCRA. Fairchild now has 25 wells in operation that pump and treat contaminated ground water; has installed three undergroundslurry walls to control migration of contaminated ground water. EPA has sealed two abandoned agricultural wells that were carrying contamination to the deeper aquifers. EPA may also pursue cleanup under RCRA authorities and will ensure that the cleanup protects public health and the environment. EPA can later repropose the site for the NPL if it determines that the owner or operator is unable or unwilling to clean up the site effectively. Status February 11, 1991): EPAis adding this site to the NPL because, although it is subject to RCRA Subtitle C, the transfer of primary responsibility from CERCLA to RCRA would delay and complicate the overall cleanup of the site. The RI was concluded in July 1988. Adraft FS and EPA s Proposed Plan were presented to the community for a 60-day public comment period in November 1988. EPA signed the Record of Decision ROD) identifying the selected remedy on June 9, 1989. On September 21, 1990, EPA issued an Explanation of Significant Differences clarifying the ROD. In May 1989, EPA sent Special Notice Letters calling for a remedial design/remedial action RD/RA) Consent Decree to Fairchild and 16 other parties potentially responsible for wastes associated with the site. Fairchild failed to conclude a settlement Consent Decree) with EPA. On November 29, 1990, EPA issued Fairchild and eight other parties a Unilateral Administrative Order for RD/RA.

Registry ID: 110000621319

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

FAIRCHILD SEMICONDUCTOR CORP. (MOUNTAIN VIEW PLANT) (Continued) **1000260555**

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Event date: 12/01/1997
Event: Igration of Contaminated Groundwater under Control, More information is needed to make a determination.

Event date: 12/01/1997
Event: Igration of Contaminated Groundwater under Control, More information is needed to make a determination.

Event date: 08/30/2006
Event: Igration of Contaminated Groundwater under Control, Yes, Migration of Contaminated Groundwater Under Control has been verified. Based on a review of information contained in the EI determination, it has been determined that migration of contaminated groundwater is under control at the facility. Specifically, this determination indicates that the migration of contaminated groundwater is under control, and that monitoring will be conducted to confirm that contaminated groundwater remains within the existing area of contaminated groundwater. This determination will be re-evaluated when the Agency becomes aware of significant changes at the facility.

Environmental Interest/Information System
The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

US EPA TRIS (Toxics Release Inventory System) contains information

SYLVANIA SYSTEMS GROUP GTE PRODUCTS (Continued) **1000880930**

from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Status Date: 01/01/1990
Global Id: SL0608501003
Lead Agency: SAN FRANCISCO BAY RWQCB (REGION 2)
Lead Agency Case Number: Not reported
Latitude: 37.388101
Longitude: -122.057616
Case Type: Cleanup Program Site
Case Worker: LG
Local Agency: Not reported
RB Case Number: 43s1029
File Location: Not reported
Potential Media Affected: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: * Solvents
Site History: No Water Board oversight of cleanup at this site. This case is included in Geotracker because the site is covered by the Water Boards NPDES general permits for discharges from pump and treat systems to surface waters (one each for fuels- and VOC-impacted sites). This can happen for two reasons: (i) the site is overseen by another agency (e.g., USEPA or DTSC) and needs coverage under one of the NPDES general permits or (ii) construction dewatering in an area of groundwater contamination necessitates NPDES general permit coverage. Including this case in Geotracker helps staff to receive and review required NPDES reports.

Secondary Waste:	Not reported
Secondary Waste Type:	Not reported
Design Flow:	0
Baseline Flow:	0
Reclamation:	No reclamation requirements associated with this facility.
POTW:	The POTW Does not have an approved pretreatment program. Some POTWs may have local pretreatment programs that have not been approved by the regional board and/or EPA.
Treat To Water:	Moderate Threat to Water Quality. A violation could have a major adverse impact on receiving biota, can cause aesthetic impairment to a significant human population, or render unusable a potential domestic or municipal water supply. Awsthetic impairment would include nuisance from a waste treatment facility.
Complexity:	Category B - Any facility having a physical, chemical, or biological waste treatment system (except for septic systems with subsurface disposal), or any Class II or III disposal site, or facilities without treatment systems that are complex, such as marinas with petroleum products, solid wastes, and sewage pump out facilities.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Site Screening
Completed Date:	11/19/1990
Comments:	Completed Site Screening. 19 soil samples have been randomly taken at a depth of approximately 1 foot. Samples were analyzed for organochlorine pesticides. 2 samples had slightly elevated DDD, DDE, and DDT (1.62 and 1.32 ppm). 1 sample had slightly elevated chlordane. Site Screening done recommends a Preliminary Endangerment Assessment (PEA). More samples are needed to characterize the vertical extent of contamination. Depending upon the pesticide-use history, soil samples need to be analyzed not only for chlorinated pesticides but also metals, organophospates, and carbamates.

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RB Case Number:	43S0529
File Location:	Regional Board
Potential Media Affected:	Other Groundwater (uses other than drinking water), Soil, Soil Vapor
Potential Contaminants of Concern:	Not reported
Site History:	California Microwave (CMI) operated a production facility at 985 Almanor until 1996. The company's headquarters were located at 990 Almanor. The production facility manufactured proprietary electronic equipment for telecommunication transmission and distribution, as well as defense applications. Chemical wastes included 1,1,1-trichloroethane (TCA), freon, methyl ethyl ketone, deoxidizer, waste oil and mixed oil, sodium hydroxide, allodyning solution, waste water, and solid wastes. Inspections conducted in the 1980's by the Department of Health Services, Toxic Substances Control Division (DHS, currently the Department of Toxic Substances Control, DTSC) found leaking drums, ponded water, stains on blacktop, and unlabelled drums were observed. Enforcement actions were taken by DHS, including requiring the construction of a bermed hazardous waste storage area. Soil and groundwater investigations were performed under the oversight of the San Francisco Bay Regional Water Quality Control Board (RWQCB). Soils containing VOCs greater than 0.5 parts per million (ppm) were excavated in June of 1995. Groundwater analyses indicated that TCE was migrating onto the former CMI facility from neighboring companies upgradient of the Site. RWQCB noted that the

APPLE (Continued) **1000252415**

PCE in groundwater appeared to originate from an on-site source. Following this report, RWQCB did not pursue further investigation at the Site for several reasons. Soil removal effectively removed the source of PCE to grounwater, and the Site is currently capped with buildings and asphalt. The concentrations of VOCs in the groundwater beneath the Site were also not high enough compared to levels of VOCs in the local groundwater plume to warrant further work at this time, and the PCE contamination was limited to shallow groundwater.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Hazardous Waste Summary:
Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Waste code: D004
Waste name: ARSENIC

Waste code: D007
Waste name: CHROMIUM

Waste code: D008
Waste name: LEAD

Waste code: D011

SIERRA PROTO EXPRESS (Continued) **1000368651**

Waste name: SILVER

Waste code: F006
Waste name: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Waste code: F007
Waste name: SPENT CYANIDE PLATING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D007
Waste name: CHROMIUM

Waste code: D008
Waste name: LEAD

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL

E G AND G PETICON (Continued) **1000232148**

ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Violation Status: No violations found

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 02/01/2013

Next Scheduled EDR Contact: 07/22/2013
Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 02/01/2013
Date Data Arrived at EDR: 03/01/2013

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 02/04/2013
Date Data Arrived at EDR: 03/01/2013

Data Release Frequency: Varies

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 02/12/2013
Date Data Arrived at EDR: 02/15/2013

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Local Lists of Hazardous waste / Contaminated Sites

US CDL: Clandestine Drug Labs
A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 11/14/2012
Date Data Arrived at EDR: 12/11/2012

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

HIST FTTS INSP: FIFRA/TSCA Tracking System Inspection & Enforcement Case Listing
A complete inspection and enforcement case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

SSTS: Section 7 Tracking Systems
Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

2020 COR ACTION: 2020 Corrective Action Program List
The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)
The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

EPA WATCH LIST: EPA WATCH LIST
EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR US Hist Cleaners: EDR Exclusive Historic Dry Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data
Source: Rextag Strategies Corp.
Telephone: (281) 769-2247
U.S. Electric Transmission and Power Plants Systems Digital GIS Data

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities
Source: Department of Social Services
Telephone: 916-657-4041

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

Project Manager:	John Geare, REA	**IVI Proj. No.:**	PC30404038 - 108

IVI has been retained to conduct a Phase I Environmental Site Assessment on the above referenced property.

In accordance with the Freedom of Information Act, IVI is requesting information with respect to the above referenced site. Specifically, IVI is requesting the following information:

- Does the Water Department provide potable water to the above referenced site? Yes **O** No **O**
- What is the source of the drinking water supply for the above referenced site?
  Surface water? Yes **O** No **O**
  or Groundwater? (If groundwater, please complete the Municipal Wells section below) Yes **O** No **O**
- Does the drinking water meet state and federal drinking water quality standards? If available, please forward a copy of the latest drinking water quality testing results including lead and copper results. Yes **O** No **O**
- Are there any lead pipes within the water distribution system? If so, what is being done to limit the lead concentration in the water supply? Yes **O** No **O**

Municipal Wells

- What is the depth and the name of the aquifer?
- If there are wells in close proximity to the Subject:
  a.) Can you provide IVI with the latest analytical results from the well(s)? Yes **O** No **O**
  b.) Is the Subject within a Zone of Contribution? Yes **O** No **O**
  c.) Is the Subject within a Wellhead Protection Zone? Yes **O** No **O**
- Are you aware of sources of groundwater contamination, which might impact these wells or the Subject? Yes **O** No **O**

Please let me know if there are any costs associated with processing this request prior to processing. Your response can either be faxed to **914.694.8549** or mailed to us at the location identified above. In addition, please indicate IVI's project number (60318995) on all correspondence. Thank you in advance for your assistance and cooperation.

In accordance with the Freedom of Information Act, IVI is requesting information with respect to the above referenced site. Specifically, IVI is requesting the following information:

- Are there any health problems in connection with the Subject or the surrounding area? Yes **O** No **O**

- Do any general environmental conditions, such as soil or groundwater contamination, exist on or adjacent to the above referenced property? If yes, please explain. Yes **O** No **O**

- Are there solid or hazardous waste landfills in the vicinity of the above named property? Yes **O** No **O**

- Is there any chemical storage on the property? If yes, what kind? Yes **O** No **O**

- Are there any drinking water wells on or adjacent to the above referenced property? If so, are they known to be contaminated? Yes **O** No **O**

Please let me know if there are any costs associated with processing this request prior to processing. Your response can either be faxed to **914.694.8549** or mailed to us at the location identified above. In addition, please indicate IVI's project number (60318995) on all correspondence. Thank you in advance for your assistance and cooperation.

CERTIFICATION

This environmental review of the property located at 405 Clyde Avenue in Mountain View, California was conducted by Iris Environmental on behalf of Google Inc. The review conducted by Iris Environmental meets or exceeds the requirements for a Phase I Environmental Site Assessment (ESA) specified in the ASTM International (ASTM) Standard E 1527-13, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.

Qualifications for the environmental professionals involved in this review, Robert Balas, Karen Smith and Daniela Hamann-Nazaroff of Iris Environmental, are included in Appendix A.

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental professional as defined in §312.10 of 40 CFR 312. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed all the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

LIMITATIONS

This report has been prepared exclusively for use by Google Inc., its successors and assignees and may not be relied upon by any other person or entity without the express written permission of Iris Environmental. The conclusions presented in this report represent Iris Environmental's professional judgment based on the information available to us during the course of this assignment and on conditions that existed at the time of the assessment. We have made no independent verification of the information provided to Iris Environmental. While Iris Environmental has no reason to doubt the accuracy of any of the information provided, this report is accurate and complete only to the extent that information provided to Iris Environmental was itself accurate and complete.

I. INTRODUCTION

Iris Environmental was retained by Google Inc. (the Client) to conduct a Phase I Environmental Site Assessment (ESA) of 405 Clyde Avenue in Mountain View, California (the Site). The purpose of the Phase I ESA was to identify Recognized Environmental Conditions (RECs), as defined in the ASTM International Standard E 1527-13, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (ASTM Standard).

This report presents the results of our investigation. It is based on the following:

A visit to the Site by Mr. Cory Hoeferlin of Iris Environmental on March 20, 2014. Mr. Hoeferlin walked both interior and exterior areas of the Site. Photographs taken during the visit to the Site are included in Appendix B.

A phone interview on March 26, 2014 with Mr. Reed Westphal, the Site owner's representative.

Observation of adjoining properties from the Site boundaries.

A review of previous reports provided by the client.

A search of regulatory agency databases for the Site, adjoining properties, and vicinity conducted by Environmental Data Resources (EDR) and reported to Iris Environmental on February 7, 2014. A copy of the EDR report is presented as Appendix C.

A review of the United States Geological Survey (USGS) 7.5-minute topographical map for Mountain View (dated 1997), historical topographic maps of the same quadrangle dated 1948, 1953, 1961 (photo-revised 1968, 1973, and 1981), and 1991; 15-minute topographical maps for Palo Alto (dated 1899, 1943, 1947, 1948, and 1961); and 30-minute topographical map for Santa Cruz from 1902. Copies of the topographic maps are provided in Appendix D.

A review of historical aerial photographs dated 1939, 1948, 1956, 1968, 1974, 1982, 1991, 1999, 2005, 2006, 2009, 2010, and 2012 provided by EDR. Copies of the aerial photographs are provided in Appendix D.

A review of the City Directory Abstract provided by EDR. A copy is included in Appendix D.

A review of documents pertaining to the Site on file at the Mountain View Fire Department (MVFD).

A review of the RWQCB's Geotracker and DTSC's Envirostor databases for online documents on file for the Site, adjoining properties, and vicinity.

Iris Environmental requested historical fire insurance maps of the Site and adjoining properties from EDR, which reported that fire insurance maps are not available (see Appendix D).

Iris Environmental requested documents from the Santa Clara County Department of Environmental Health, Department of Toxic Substances Control (DTSC), Bay Area Air Quality Management District (BAAQMD), Regional Water Quality Control Board San Francisco Region (RWQCB), Santa Clara County Water District (SCVWD), and the United States Environmental

Protection Agency (USEPA) which reported no documents for the Site or adjoining properties were available.

No environmental or drinking water samples were collected as part of Iris Environmental's Phase I ESA activities.

II. FINDINGS AND CONCLUSIONS

Iris Environmental has performed a Phase I Environmental Site Assessment (ESA) in conformance with the scope and limitations of ASTM Practice E 1527-13 of the property located at 405 Clyde Avenue in Mountain View, California. There were no exceptions to, or deletions from, this practice.

A. Recognized Environmental Conditions

ASTM Standard E 1527-13 defines a REC as (emphasis in original to indicate formally defined terms): "the presence or likely presence of any *hazardous substances* or *petroleum products* in, on, or at a *property*: (*1*) due to release to the environment; (*2*) under conditions indicative of a *release* to the *environment*; or (*3*) under conditions that pose a *material threat* of a future *release* to the *environment*. *De minimis conditions* are not *recognized environmental conditions.*"

In addition, ASTM Standard E 1527-13 defines a controlled recognized environmental condition (CREC; a type of REC) as (emphasis in original to indicate formally defined terms): "a *recognized environmental condition* resulting from a past *release* of *hazardous substances* or *petroleum products* that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with *hazardous substances* or *petroleum products* allowed to remain in place subject to the implementation of required controls (for example, *property* use restrictions, *activity and use limitations*, *institutional controls*, or *engineering controls*).[1] A condition considered by the *environmental professional* to be a *controlled recognized environmental condition* shall be listed in the findings section of the *Phase I Environmental Site Assessment report*, and as a *recognized environmental condition* in the conclusions section of the *Phase I Environmental Site Assessment report*."[2]

This Phase I ESA has identified the following RECs in connection with the Site:

- The Hewlett Packard (HP) trichloroethylene (TCE) groundwater plume is cross- to upgradient of the Site. The current plume delineation extends within 300 feet southwest (cross- to upgradient) of the Site.

[1] For example, a leaking underground storage tank that has been cleaned up to a commercial use standard, but does not meet unrestricted residential cleanup criteria, would be considered a controlled recognized environmental condition. The "control" is represented by the restriction that the property use remain commercial.
[2] A condition identified as a *controlled recognized environmental condition* does not imply that the *environmental professional* has evaluated or confirmed the adequacy, implementation, or continued effectiveness of the required control that has been, or is intended to be, implemented.

- The E/M Lubricants tetrachloroethylene (PCE) groundwater plume is crossgradient of the Site. The current plume delineation extends within 300 feet west (crossgradient) of the Site.
- One on-Site groundwater monitoring well (W37) has been monitored since 1987. TCE and PCE have not been detected aside from one anomalous TCE detection of 27 micrograms per liter (µg/L) in December 1987. 1,1,1-trichloroethane (1,1,1-TCA) and *cis*-1,2-dichloroethene (*cis*-1,2-DCE) were detected in this well in the most recent 2013 monitoring event. *Cis*-1,2-DCE was detected at a concentration (6.3 µg/L) above the Regional Water Quality Control Board (RWQCB) groundwater Environmental Screening Level (ESL) of 6.0 µg/L and the 1,1,1-TCA concentration is below the RWQCB ESL.
- PCE was detected above the commercial shallow soil gas ESL for PCE of 2,100 micrograms per cubic meter ($\mu g/m^3$) in soil vapor samples collected in 2012 from the crossgradient E/M Lubricants facility. The current delineation of this soil vapor plume extends within 150 feet west and crossgradient of the Site.
- The main concerns with VOCs in groundwater and soil vapor are the potential for chemical vapor intrusion to indoor air and the associated degradation of indoor air quality within current or future buildings and the management of impacted groundwater during any dewatering or excavation which may occur during construction.

B. Historical Recognized Environmental Conditions

ASTM Standard E 1527-13 defines a historical recognized environmental condition (HREC, which is not a REC) as: "a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). Before calling the past release a historical recognized environmental condition, the environmental professional must determine whether the past release is a recognized environmental condition at the time the Phase I Environmental Site Assessment is conducted (for example, if there has been a change in the regulatory criteria). If the EP considers the past release to be a recognized environmental condition at the time the Phase I ESA is conducted, the condition shall be included in the conclusions section of the report as a recognized environmental condition."

This Phase I ESA identified no HRECs in connection with the Site.

C. De Minimis Conditions

ASTM Standard E 1527-13 defines a de minimis condition as (emphasis in original to indicate formally defined terms): "a condition that generally does not present a threat to human health or the *environment* and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis conditions* are not *recognized environmental conditions* nor *controlled recognized environmental conditions*."

This Phase I ESA has revealed the following de minimis condition in connection with the Site:

- VOCs, including PCE, TCE, 1,1,1-TCA, and Freon 113, were detected in a 1987 soil vapor investigation conducted along Maude Avenue just upgradient of the Site. The detected concentrations were below commercial soil vapor ESLs.

In addition, the following asset management and potential areas of concern, which are not considered RECs, are noted:

- Based on aerial photographs reviewed, the Site has historically been developed with agricultural use between at least the 1939 to at least 1956. Although not documented at the Site, activities commonly associated with agriculture include the use and storage of hazardous materials and petroleum products (*e.g.*, agricultural chemicals). Information was not available as to the potential historical usage of pesticides, fertilizers or insecticides. Based on our experience, these residual concentrations, if present, are not typically at concentrations that would require cleanup by a regulatory agency or pose a significant human health risk to commercial or industrial site users. There is potential that the near surface soils contain residual agricultural chemicals that may affect disposal costs in the event redevelopment is planned.

III. DESCRIPTION OF THE SITE AND ITS OPERATIONS

A. Site Description

1. Physical Description and Setting

The Site is located at 405 Clyde Avenue in Mountain View, Santa Clara County, California, as shown on Figure 1. The Site covers an area of approximately 0.91 acres, and is identified as Assessor's Parcel Number (APN) 160-57-016. The Site consists of an approximately 14,256 square-foot single-story office and research and development building, surrounding parking and landscaped areas. Other features include one outdoor transformer operated and maintained by PG & E. The approximate layout of the Site at the time of Iris Environmental's Site visit is indicated in Figure 2.

The Site is currently owned by Balco Properties Ltd, LLC. The Site is located in a light industrial area, dominated by office and research and development buildings.

Pacific Gas & Electric (PG&E) provides electricity and natural gas to the Site. Water and sanitary sewer service is reportedly provided by the City of Mountain View.

2. General Site Conditions

At the time of Iris Environmental's Site visit, general housekeeping at the Site was good. No areas of oil or other staining of concrete, asphalt, or soils were noted at the Site. There was no visible evidence that significant spills or leaks had occurred. No evidence of stressed vegetation was noted at the Site during the Site visit.

The detection of noise and odors is dependent on the weather conditions and ongoing operations. At the time of the Site visit, Iris Environmental did not note strong odors or excessive noise at the Site.

3. Geological Setting

Based on a review of the 1997 USGS topographic map, ground elevation at the Site is approximately 55 to 60 feet above mean sea level. The majority of the Site is flat with a slight downward slope to the north.

The Site is situated on the western portion of the Santa Clara Valley within the Coast Ranges geomorphic province of California. The Santa Clara Valley is generally bounded by the Santa Cruz Mountains to the west, by the San Francisco Bay to the north, and by the Diablo Range to the east. The Site is located in the Confined Aquifer Zone of the interior portion of the Santa Clara Valley Basin. A Phase II investigation conducted at a nearby property (440 Clyde Avenue) in 2007 found that the upper ten feet of sediment at a the 440 Clyde Avenue property was primarily fine-grained silty clays and clayey silts (GeoTrans 2007).

4. Hydrogeological Setting

The nearest natural body of surface water is Stevens Creek located approximately 1.15 miles west of the Site. The San Francisco Bay is located 3.9 miles to the north of the Site.

Storm water collection drains were observed on the building and in the parking areas. Storm water at the Site reportedly drains to the storm water system at Clyde Avenue and Maude Avenue.

The EDR Report (EDR 2014a) indicates that the Site is not within a flood zone area.

Groundwater in the site vicinity can be broadly grouped into an upper zone and a lower zone. The lower zone generally occurs at depths greater than 150 feet and constitutes the principal pumping zone. Groundwater in the upper zone occurs at depths less than 100 feet and is considered a perched zone that is usually unsuitable for production well purposes due to the generally low yielding capabilities and/or impairment by natural water quality problems (i.e. salinity) (E_2Ca, 1990).

The regional groundwater flow in the shallow aquifer (upper zone) in the vicinity of the Site is in a northerly to north-by-northeasterly direction (E_2Cb, 1990). One groundwater monitoring well installed by HP during its investigations (W37) is located on-Site, as shown on Figure 3. Based on data from the on-Site well, groundwater is present on Site at approximately 10 feet below ground surface (bgs) (Stantec 2013).

B. Adjoining Properties Description

1. Physical Description

Surrounding land uses include:

- North – 411 Clyde Avenue an office building occupied Verano and Nanotune Technologies Inc.
- South – West Maude Avenue, beyond which is 891 West Maude Avenue occupied by Wong's International USA Inc.
- East – Highway 237 and associated off-ramps, and Sunnyvale Golf Course.
- West – The intersection of Clyde Avenue and West Maude Avenue, beyond which is 885-889 West Maude Avenue, which is occupied by Cobalt Power Systems.

Based on observations made from the Site and public right of ways, these properties appear to be in good condition with well maintained landscaped areas. Based on the current uses of the adjoining properties, and observations made at the time of the Site reconnaissance, Iris considers that adjoining property uses are not of potential concern. As further discussed in Section K below, historically, several electronic assembly and manufacturing companies were located in the Site vicinity and caused impacts to groundwater in the Site vicinity.

C. Site History

Iris Environmental reviewed historical aerial photographs, historical topographic maps, historical City Directories, and information made available by local regulatory agencies to develop an understanding of historical uses of the Site and surrounding areas. A request for historical fire insurance maps was submitted, but none were available for review (see Appendix D).

Key milestones in the history of the Site and adjacent properties are listed in Table 1 of this Phase I ESA report.

Based on a review of topographic maps and aerial photos, a small residential structure may have been located on or adjacent to the Site in the late 1800s. By 1939, no structures were located on the Site and the Site appears to be cultivated for agricultural use until at least 1956. By 1968, Clyde Avenue and Maude Avenue have been constructed, but the Site remained vacant. In 1973, the current on-Site building was constructed. The Site appears unchanged through today. The surrounding area appears largely undeveloped in the early 20th century. In the 1940s the surrounding area was used for agricultural purposes. In the early 1960s roads in the vicinity of the Site were constructed bringing with them increased development. Throughout the late 1960s through 1980s development increased in the Site vicinity replacing the agricultural land. By the 1990s the surrounding area was fully developed. No significant changes were noted between the 1990s and today.

D. Description of Operations

1. Current Operations

The 405 Clyde Avenue facility is currently vacant. It was most recently occupied by TRC, an engineering services, consulting, and construction management firm.

2. Past Operations

The on-Site building was constructed in 1972. According to a previous Limited Phase I ESA from 1994 for the Site, Perkin Elmer occupied the Site from 1972 to 1973, after which Acurex occupied the Site (Lowney Associates 1994). Historic city directory listings indicate that, by 1982, Acurex Corporation operated an Environmental Analytical Lab at the Site (EDR 2014b). The AEI Phase I report indicates that a map of Acurex facilities in the Site vicinity identified the Site as "Building 12: EED Analytical Chemistry Department/Corporate Facilities Department" (AEI 2008). Acurex reportedly operated at the Site until 1989 (AEI 2008), however hazardous waste listings for Acurex at 405 Clyde continue until 2000 when they disposed laboratory waste chemicals, organic solids, and solvent mixtures under manifest (EDR 2014a).

A previous Phase I indicates that, by 2001, the Site was occupied by Lowney Associates, an environmental consulting firm (AEI 2008). Lowney Associates may have operated at the Site prior to 2001 as hazardous waste manifests indicate that Lowney Associates generated photoprocessing and organic solid wastes at the Site in 1996 (EDR 2014a). Lowney Associates was acquired by TRC, the most recent Site tenant, in 2007. On-Site operations by TRC were mainly office activities and a soil analysis area. The city directories also indicate that Essex Environmental and Schoolcity Inc. were tenants at the Site in 2013 (EDR2014b). According to Mr. Westphal, the Site has been vacant since February 2013.

E. Polychlorinated Biphenyls (PCBs) and Asbestos

1. PCBs

Mr. Westphal was not aware of any PCB-containing equipment on-Site. One electrical transformer, which is operated and maintained by PG&E, was located on-Site. The transformer appeared in good condition. No staining or discoloration was noted.

2. Asbestos

No previous asbestos surveys were provided to Iris Environmental. Based on the date of construction of the current on-Site building (1972), it is possible that asbestos-containing materials are present in the building. Building materials were observed to be in good condition.

F. Hazardous Materials Use and Storage

1. Hazardous Materials Use

No hazardous materials were observed on-Site during Iris Environmental's Site reconnaissance other than janitorial supplies located in closets within the building.

Historical records indicate that previous tenants used and stored hazardous materials on-Site. Records on file at the Mountain View Fire Department include a 2012 hazardous material storage permit issued to TRC for storage of radioactive materials, including Americium 241 (solid) and Cesium 137 (solid), associated with nuclear density gauges for a total of 600

microcuries (µCi) of radioactive materials. The previous AEI Phase I report indicates that the radioactive materials were stored in a lead-lined storage closet within the soil analysis area of the building and were used off-Site by Lowney and TRC (AEI 2008). A note on the permit indicates that, as of October 2012, the nuclear density gauges were no longer being stored at the Site. The nuclear density gauges were not observed on-Site during the Site visit.

Acurex was listed as a RCRA small quantity generator in 1987 and on the HAZNET database in 2000 for laboratory waste chemicals, organic solids, and solvent mixtures. Lowney Associates is also listed on the HAZNET database in 1996 for disposal of photochemical and photoprocessing waste and organic solid wastes (EDR 2014a).

The AEI Phase I report states that records on file at the MVFD included a 1984 Storage Facility Permit Quantity Limit document dated December 21, 1984 which indicated that hazardous materials and petroleum products were used and stored on-Site in a warehouse and that the MVFD required secondary containment of all materials. A 1985 Fire Safety Inspection report indicated that violations regarding the improper labeling and record keeping of hazardous materials and paperwork regarding annual Hazardous Materials Business Plan filing were issued to the Site. MVFD inspections were conducted in 1988 and 1989 in preparation for the closure of the Acurex facility. By 1989, all hazardous materials had been removed from the Site (AEI 2008).

2. Underground Storage Tanks (USTs)

No indication of current or historic underground storage tanks (USTs) were observed while on-Site. No records of current or historical USTs was found during this assessment.

3. Aboveground Storage Tanks

No aboveground storage tanks (ASTs) were observed on-Site. No historical records indicate existence of any ASTs.

4. Drums and Small Containers

No drums or small containers were observed at the Site.

G. Nonhazardous and Hazardous Waste

1. Nonhazardous Waste

Nonhazardous waste is not currently generated at 405 Clyde. A fenced in dumpster area was located in the rear of the parking lot. The dumpster area appeared in good condition.

2. Hazardous Waste

No hazardous waste generation was observed at the Site. Historic records show Acurex is listed as a RCRA small quantity generator in 1987; no violations were found. Acurex is also listed on the HAZNET database in 2000 for disposal of laboratory waste chemicals, solvent mixtures, and

organic solids. Lowney Associates is also listed on the HAZNET database in 1996 for disposal of photochemical and photo-processing waste and organic solid waste.

H. Air Emissions

The Bay Area Air Quality Management District has no records regarding emissions at the Site. No air emission sources were observed on-Site.

I. Wastewater

1. Industrial and Sanitary Wastewater

Industrial wastewater is not currently generated on-Site. Sanitary wastewater is discharged into the municipal sewer system, which is maintained by the City of Mountain View.

2. Storm Water

Storm water collection drains were observed on the building and in the parking areas. Storm water at the Site reportedly drains to the storm water system on Clyde and Maude Avenues. No indications of potential storm water contamination sources were observed at the Site during the Site visit.

It is not known whether storm water quality has been impacted in the past. No documentation pertaining to storm water issues was contained within City or County files. Mr. Westphal was not aware of any spills, leaks or fires with the potential to impact storm water that had occurred at the Site in the past.

J. Previous Environmental Reports

The following is a list of key environmental documents which pertain to the subject Site provided by the Client. Information from these documents is included where relevant in the report.

AEI Consultants. 2008. *Phase I Environmental Site Assessment, 405 Clyde Avenue, Mountain View, California 94043*. February 12.

Lowney Associates. 1994. *Limited Phase I Environmental Site Assessment for 405 Clyde Avenue, Mountain View California*. January 7.

K. On-Site Soil, Soil Vapor, and Groundwater Contamination

Potential sources of on-Site soil, soil vapor and / or groundwater contamination at the Site include:

- Former Operations: Acurex Corporation occupied the Site between approximately 1982 and 2000. Little is known about Acurex Site operations or operations of other previous Site tenants.

- VOCs in On-Site Groundwater: VOCs have been detected in on-Site groundwater monitoring well W37.

Potential off-Site sources of groundwater and soil vapor contamination include:

- Hewlett Packard TCE groundwater plume: TCE is present in groundwater within 300 feet of the Site boundary. This plume is southwest and up- to crossgradient of the Site.
- E/M Lubricant PCE groundwater plume: PCE is present in groundwater within 300 feet of the Site boundary. This plume is west and crossgradient of the Site.
- The E/M Lubricants Soil Vapor Plume: PCE is present in soil vapor at the 875 Maude facility located 150 feet west and crossgradient of the Site.
- West Maude Soil Vapor Plume: VOCs were detected in soil vapor immediately south and upgradient of the Site in a 1987 soil vapor investigation.

Potential Sources of on-Site Contamination

Former Operations

Acurex Corporation occupied the Site between 1982 and 2000 and little is known about historical operations on-Site. City directory listings indicate that Acurex operated an Environmental Analytical Lab. Investigations conducted at properties in the Site vicinity indicate that hazardous materials including acids and metals were used by Acurex in on-Site operations (E2Cb 1990, Levine Fricke 1989). Acurex is also listed on the HAZNET database in 2000 for disposal of laboratory waste chemicals, solvent mixtures, and organic solids. There are no on-Site spills or releases documented with the RWQCB or DTSC. However, neighboring downgradient facilities (e.g. 433 Clyde and 485 and 495 Clyde) also historically occupied by Acurex Corporation have known soil and groundwater contamination due to solvent use at these properties.

VOCs in On-Site Groundwater

HP installed a groundwater monitoring well (W37) in the western portion of the Site as part of their investigations that began in the 1980s. The on-Site well has been monitored since investigations began in 1987. TCE and PCE have not been detected in this well since monitoring began in 1987 aside from one anomalous detection of 27 µg/L TCE in December 1987. Historically, low concentrations of 1,1,1-TCA have been detected in the on-Site well with a maximum detection of 2.7 µg/L in October 1999. *Cis*-1,2-DCE has also been detected in groundwater at concentrations ranging from 3.5 to 6.4 µg/L since 1999 when sampling for this compound began. 1,1,1-TCA and *cis*-1,2-DCE were detected in the on-Site well in the most recent groundwater sampling event conducted in April 2013 at concentrations of 0.64 µg/L and 6.3 µg/L, respectively. The detected 1,1,1-TCA concentration is below the RWQCB ESL for groundwater that is a current or potential drinking water resource of 62 µg/L. The detected cis-1,2-DCE slightly exceeds the ESL of 6.0 µg/L. (Stantec 2013). The source of the VOCs in the on-Site well has not been identified to date.

A 1989 Remedial Investigation Summary Report prepared for the HP facility identified 1,1,1-TCA use at the upgradient Martex Circuits facility at 885 West Maude Avenue. Concentrations of 1,1,1-TCA ranging from no detection to 2.7 µg/L have been detected in groundwater at this facility since the 1980s (Stantec 2013). As shown on Figure 3, this property is up- to crossgradient of the Site and may be a source of 1,1,1-TCA in groundwater in the Site vicinity.

Potential off-Site Sources of Groundwater and Soil Vapor Contamination

Hewlett Packard TCE Groundwater Plume

The Site is located cross- to downgradient from the source site for the Hewlett Packard TCE groundwater plume, located at 690 East Middlefield Road, as shown on Figure 3. An April 2013 groundwater monitoring investigation conducted at the former HP facility detected a maximum TCE concentration of 92 µg/L in groundwater within 450 feet west- southwest of the Site. Current delineation of the plume extends within 300 feet to the southwest and up- to crossgradient of the Site, as shown on Figure 3 (Stantec 2013). TCE was not detected in wells located between the HP property and the Site in the 2013 sampling event indicating that the TCE plume may be bounded on the northeastern side (closest to the Site) (Stantec 2013). TCE has not been detected in the on-Site well (W37) since monitoring began in November 1987 except for one anomalous detection in December 1987 (Stantec 2013).

Hewlett Packard submitted a Site Closure Request for the former HP facility at 690 East Middlefield Road to the RWQCB in July 2013. Closure of the HP facility had not been granted as of October 2013.

E/M Lubricants PCE Groundwater Plume

The Site is located crossgradient from the source site for the E/M Lubricants PCE groundwater plume, located at 875 Maude Avenue, as shown on Figure 3. April 2013 groundwater monitoring results from the E/M Lubricants facility detected a maximum PCE concentration of 29 µg/L in groundwater within 450 feet west of the Site. Current delineation of the plume extends within 300 feet to the west and crossgradient of the Site, as shown on Figure 3 (Stantec 2013). PCE was not detected in wells located between the E/M Lubricants property and the Site in the 2013 sampling event indicating that the PCE plume may be bounded on the eastern side (closest to the Site) (Stantec 2013). PCE has not been detected in the on-Site well (W37) since monitoring began in 1987 (Stantec 2013). The current E/M Lubricants site owner is currently attempting to obtain a no further action letter from the RWQCB.

E/M Lubricants Soil Vapor Plume

In 2012, a soil vapor investigation was conducted at the E/M Lubricants site (Stantec 2012). The soil vapor investigation was conducted to evaluate vapor intrusion issues resulting from the VOCs in groundwater associated with the HP/EM plume. The investigation found concentrations of PCE above the commercial shallow soil gas ESL for PCE of 2,100 µg/m^3 in all six subslab samples. As shown on Figure 3, the current delineation of this plume extends within 150 feet west and crossgradient of the Site. The main concerns with VOCs in soil vapor is the

potential for chemical vapor intrusion to indoor air and the associated degradation of indoor air quality within current or future buildings. Indoor air samples detected PCE above the commercial indoor air ESL for PCE of 2.1µg/m^3 (RWQCB 2013). While unlikely, the possibility that the elevated concentrations of PCE in soil vapor at 875 Maude could migrate on-Site exists.

Historical West Maude Soil Vapor Plume

A soil vapor investigation was previously conducted by HP in 1987 to characterize the lateral extent of VOC contamination in the subsurface. Soil-gas samples were collected at six feet below ground surface (bgs) from 252 locations at and downgradient from the HP facility. Seven samples were collected along Maude Avenue just south and upgradient of the Site, as shown on Figure 3. PCE was detected in soil vapor at concentrations ranging from 2 µg/m^3 to 200 µg/m^3, which are below the soil vapor ESL for PCE of 2,100 µg/m^3. Levine Fricke concluded that the PCE soil vapor detected in the Maude Avenue samples did not appear laterally connected to the main PCE soil vapor plumes identified at the E/M Lubricants facility at 875 Maude Avenue or the HP Building 31 facility, which had PCE in soil vapor at concentrations over 100,000 µg/m^3. The report made no conclusions as to the potential source of the PCE in soil vapor in the Maude Avenue samples (Levine Fricke 1987).

As previously discussed, 1,1,1-TCA was also detected at concentrations ranging from 4 to 100 µg/L in the seven soil vapor samples collected along Maude Avenue in the 1987 HP investigation. These concentrations are well below the commercial soil vapor ESL for 1,1,1-TCA of 2.2x10^7 µg/m^3. TCE and Freon 113 were also detected at maximum concentrations of 200 and 1,000 µg/m^3. The TCE concentration is below the commercial soil vapor ESL of 3,000 µg/m^3 and no ESL is available for Freon 113. The report made no conclusions as to the potential source of the VOCs in soil vapor in the Maude Avenue samples (Levine Fricke 1987). However, the 1989 Remedial Investigation Summary Report for the HP facility identified two upgradient facilities that used these chemicals in their operations: Litton Applied Technology at 1101 West Maude Avenue used Freon 113 and ethyl alcohol and Martex Circuits at 885 West Maude Avenue used 1,1,1-TCA (Levine Fricke 1989).

L. Records Review

1. EDR Report

Iris Environmental reviewed a report prepared by EDR that summarizes the results of a search of federal and state regulatory agency databases. The EDR report is included in Appendix C. The database search was conducted to evaluate whether the Site or any nearby properties are under investigation for potential environmental issues or have been identified as conducting operations that could potentially impact the environment. The EDR report includes searches of databases of sites with engineering controls and institutional controls. The findings of the EDR search are summarized below.

EDR conducted its search of environmental databases on February 7, 2014. Because the environmental databases themselves are sometimes not updated by the specific regulatory

agencies for periods of up to 1 year (depending on the database), the database search conducted herein will not necessarily list a facility or site for which an environmental investigation/listing has been initiated subsequent to the last update. The dates of database updates are provided in Appendix C.

EDR conducted searches of the following federal databases, and all search radii were selected in accordance with ASTM standards:

- USEPA National Priorities List (NPL) for Uncontrolled Hazardous Waste Sites – 1-mile radius;
- USEPA Delisted NPL – ½-mile radius;
- USEPA Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) and CERCLIS-No Further Remedial Action Planned (CERCLIS-NFRAP) – ½-mile radius;
- Corrective Action Site List (CORRACTS) of Resource Conservation and Recovery Act (RCRA) hazardous waste treatment, storage, and disposal (TSD) facilities subject to corrective action under RCRA – 1-mile radius;
- Resource Conservation and Recovery Act Information System (RCRIS) database of TSD facilities not subject to corrective action and hazardous waste generators – ½-mile radius (TSD) and property and adjoining properties (generators);
- Engineering Controls Sites List (US ENG CONTROLS) – property only;
- Sites with Institutional Controls (US INST CONTROL) – property only; and
- Emergency Response Notification System (ERNS) – property only.

EDR also conducted searches of the following State of California and tribal databases:

- RESPONSE database – 1-mile-radius;
- ENVIROSTOR database – 1-mile-radius;
- California Solid Waste Inventory System (SWIS) – ½-mile radius;
- Spills, Leaks, Investigation and Clean Up (SLIC) cost recovery listing – ½-mile radius;
- Leaking Underground Storage Tanks (LUST) Information System – ½-mile radius;
- Underground Storage Tank (UST) Registrations Database – property and adjoining properties;
- Site Mitigation and Brownfield Re-use Program Facility Sites with Deed Restrictions and Hazardous Waste Management Program Facility Sites with Deed / Land Use Restrictions (DEED) database – property only;
- Underground Storage Tanks on Indian Land (Indian UST) database – property and adjoining properties; and

- Leaking Underground Storage Tanks on Indian Land (Indian LUST) database – ½-mile radius.

Databases searched by EDR that record information on deed restrictions, engineering controls and institutional controls (DEED, US ENG CONTROL, US INST CONTROL) did not show any listings for the Site.

The Site address, 405 Clyde Avenue, is listed on the RCRA-SQG and HAZNET databases as follows:

Database	Owner or Tenant (Year)	Details
RCRA-SQG	Acurex Corp (1987)	Small quantity generator of hazardous waste. No violations reported.
HAZNET	Acurex Corp (2000)	Hazardous waste manifests for laboratory waste chemicals, solvent mixtures, and organic solids.
HAZNET	Lowny (sic) Associates (1996)	Hazardous waste manifests for photochemicals and photo processing waste and organic solids.

Adjacent property 411 Clyde Avenue is listed on the HAZNET and RCRA-SQG databases. No violations were found in association with these listings.

Several facilities in the vicinity of the Site were identified within the ASTM-specified search radii as summarized below:

NPL

Four facilities are listed within one mile of the Site.

Moffett Naval Air Station, Intel Corporation, Raytheon Company, and Fairchild Semiconductor Corporation are all part of the MEW Study Area. The primary chemicals of potential concern in the Study Area are TCE and its breakdown products cis-1,2-dichloroethene (cis-1,2-DCE), and vinyl chloride (VC). Due to the crossgradient location of the MEW plume with regards to the Site, it is unlikely to impact subsurface conditions at the Site.

CERCLIS

Three facilities are listed within 0.5 miles of the Site.

Three of the facilities, Intel Corporation, and Raytheon Company, are part of the MEW Study Area and are discussed above under NPL.

NEC, located at 501 Ellis Street 0.418 miles northwest of the Site, is also located within the MEW Study Area. As stated above, due to the crossgradient location of the MEW plume with regards to the Site, it is unlikely to impact subsurface conditions at the Site.

CERC-NFRAP

Two facilities are listed within 0.5 miles of the Site.

Hewlett Packard Mountain View is listed at 333 Logue Avenue, 0.187 miles west of the Site. The database listing states the HP facility was referred to the RWQCB. The Geotracker website lists the facility address at 690 East Middlefield Road, which is discussed in detail in the Hewlett Packard E/M Lubricant Plume in Section III.I.

Cooper Vision is listed at 455 E Middlefield Road, 0.422 miles west of the Site. The EDR report has little information regarding the CERCLIS-NFRAP listing: the discovery occurred in January 1987 and the preliminary assessment was completed in September 1987. The report states that the site does not qualify as a NPL based on the existing information. The facility is also listed as a handler (non-generator) of hazardous wastes. No violations have been reported and there is no other information available about the facility. Based on the available data, this facility is unlikely to impact subsurface conditions at the Site.

CORRACTS

Five facilities are listed within one mile of the Site.

Fairchild Semiconductor is discussed under NPL.

Sylvania Systems Group GTE Pro (as also referred to as GTE OSI) listed at 100 Ferguson Drive is located 0.558 miles west southwest of the Site. The facility is also listed under the RCRA SQG, Envirostor, SLIC, and UST databases. According to the EDR report, migration of TCE-contaminated groundwater and human exposures to contamination from this facility are under control. Therefore, this facility is unlikely to impact subsurface conditions at the Site.

Memotronics is listed at 1058 West Evelyn Avenue, 0.780 miles south of the Site. According to the most recent corrective action summary listed in the EDR report dated February 19, 2010, migration of contaminated groundwater is under control at the facility and monitoring will be conducted to confirm that contaminated groundwater remains within the existing area of contaminated groundwater. The corrective action summary also indicates that current human exposures are under control. Therefore, this facility is unlikely to impact subsurface conditions at the Site.

Zymos Corporation is listed at 477 North Mathilda Avenue, 0.976 miles east southeast of the Site. The facility is also listed on the RCRA TSDF, CERC-NFRAP, RCRA NonGen, CA SLIC and Envirostor databases. In 1987, this facility was assessed and assigned a low corrective action priority. According to Geotracker, the Site is open and inactive as of 2009. It is a Category 1 facility assigned to small commercial facilities where soil and groundwater contamination does not pose an immediate human threat and does not extend off-site onto neighboring properties. Based on this categorization and the distance to the Site, this facility is unlikely to impact subsurface conditions at the Site.

Xidex Corporation is listed at 305 Soquel Way, 0.979 mile southeast of the Site. The facility is also listed on the RCRA-TSDF, CERC-NFRAP, and RCRA NonGen databases. A release was reported at the facility in 1985 and stabilization measures were implemented beginning in 1987. As of December 2000, the database lists migration of contaminated groundwater at the facility under control.

RCRA GENERATOR

Two facilities are listed as a large quantity generator (LQG) within 0.25 miles of the Site.

Chemocentryx is listed at 850 Maude Avenue, 0.023 miles west northwest of the Site. As no violations have been reported, it is unlikely the facility has impacted subsurface conditions at the Site.

Meta Technologies Inc. listed at 885 Maude Avenue, is 0.087 miles south of the Site. The facility has received multiple notices of minor violations classified as: general, TSD-container use and management, system standards, and generators-general. The facility was considered a 'significant non-complier' in 2006, but in 2007 is listed as 'not a significant non-complier'. The EDR report does not provide additional details. It is unlikely that these violations will impact the subsurface conditions at the Site. The facility is also listed under the CA HIST UST, CA EMI, and CA Envirostor databases. No information regarding the former UST is available. The EMI listing is for emissions of organic hydrocarbon gases and reactive organic gases which amount to less than 0.02 per year. According to the Envirostor listing, the facility is also known as Martex Circuits Inc. and is an inactive tiered permit case. This facility is further discussed above in Section K.

Fourteen facilities are listed as small quantity generators (SQG) within 0.25 miles of the Site. None of the facilities have not received any violations, and therefore are unlikely to impact subsurface conditions at the Site.

CA RESPONSE

One facility is listed within one mile of the Site.

Apple, listed at 985 Almanor Avenue, is 0.638 miles east northeast and cross to down- gradient from the Site. The facility is also listed on Geotracker under California Microwave and is under RWQCB oversight. Soils containing VOCs greater than 0.5 ppm were excavated in June of 1995. Soil removal effectively removed the source of PCE to groundwater, and the facility is currently capped with buildings and asphalt. Due to the crossgradient location and distance from the Site, this facility is unlikely to impact subsurface conditions at the Site.

ENVIROSTOR

Thirty-two (and one duplicate) facilities are listed within one mile of the Site.

Five facilities, Meta Technologies Inc., Hewlett Packard, Apple, Sylvania Systems Group GTE Pro (aka GTE OSI), Zymos Corp, and AnaComp (aka Xidex), have been previously discussed in the above sections.

Six facilities, Raytheon Company, Fairchild Semiconductor, Intel Corporation, Spectrian Corp, Memory and High Speed Logic, and NEC, are all a party of the MEW study area which is discussed above under NPL. As stated above, due to the crossgradient and downgradient location of the MEW plume with regards to the Site, it is unlikely to impact subsurface conditions at the Site.

Four facilities, Air Prods & Chems Inc, Ferguson Business Park, Shea Homes, and A-1 Rents are listed as having received no further action status and therefore are unlikely to impact subsurface conditions at the Site.

Eight facilities, Acurex Corporation (433 Clyde), St. Microwave Corp., Siltec, Micrel/Litronix (also listed as 639 Pastorial SMI REM Site), TRU-SI, Ensign Gladys, Applied Technology (645 Almanor), and Micromask, are located down- to crossgradient from the Site and are unlikely to impact subsurface conditions at the Site.

Acurex Corporation listed at 433 Clyde Avenue is 0.047 miles north of the Site. The EDR report includes comments from a site screening completed in 1990 which states, “The contamination is isolated near the drum storage area of this 1.1 acre facility” (EDR 2013a). A Phase II investigation conducted in 1986 for 433 Clyde did not detect TCE in the three wells on the northern property line suggesting that the plume has not migrated offsite (Levine Fricke 1986). Based on this data, it is unlikely to impact subsurface conditions on-Site.

303 Ravendale is located 0.556 miles southwest of the Site. The facility is currently open and undergoing a site assessment: the RWQCB is working to define the extent of contamination of TCE in the groundwater. According to a 2007 monitoring report, the maximum detected of TCE on the property was 52 µg/L in groundwater. The groundwater flow direction is north (PES Environmental Inc. 2007). Due to the distance and the slight crossgradient location of Site relative to 303 Ravendale, it is unlikely to impact subsurface conditions at the Site.

Conductus Inc. listed at 969 W Maude Avenue, is 0.420 miles east southeast of the Site. According to Envirostor, the facility is a tiered permit facility with an inactive status. No other

information is available. The facility is also listed as a small and large quantity generator of hazardous wastes. According to the EDR report, no violations have been found. Based on this data and the crossgradient location relative to the Site, this facility is unlikely to impact subsurface conditions at the Site.

Power Spectra Inc. listed at 919 Hermosa Court is located 0.590 miles southwest of the Site. According to Envirostor, the facility is a tiered permit facility with an inactive status. Based on the regulatory status and the distance to the Site, this facility is unlikely to impact subsurface conditions at the Site.

EG and G Peticon listed at 345 Portrero Ave is 0.655 miles southeast of the Site. According to Envirostor, the facility is a tiered permit facility with an inactive status. The facility is also listed as a large quantity generator of hazardous wastes and having a historic underground storage tank. According to the EDR report, neither violations nor releases have been found. Based on the regulatory status and the distance to the Site, this facility is unlikely to impact subsurface conditions at the Site.

Sierra Photo Express Inc. is listed at 1108 West Evelyn Avenue is 0.747 miles south of the Site. According to Envirostor, the facility is a tiered permit facility with an inactive status. No other information is available. The facility is also listed under the RCRA-LQG, Hist LUST, CA EMI, and CA NPDES databases. Nonetheless, based the distance to the Site, this facility is unlikely to impact subsurface conditions at the Site.

Sunpreme Inc. is listed at 615 Palomar Ave, 0.642 miles east southeast of the Site. According to Envirostor, the facility is a tiered permit facility with an inactive status. Based on the regulatory status and the distance to the Site, this facility is unlikely to impact subsurface conditions at the Site.

Verbatim A Kodak Company is listed at 435 Indio Way, 0.989 miles southeast of the Site. The facility was first listed on Envirostor in 1990 for a release of halogenated and oxygenated solvents, particularly tetrahydrofuran. Groundwater treatment is ongoing and is overseen by the RWQCB. Due to the distance from Site, this facility is unlikely to impact subsurface conditions at the Site.

Sunpower Corporation is listed at 430 Indio Way, 0.993 miles southeast of the Site. According to Envirostor, the facility is a tiered permit facility with an inactive status. Based on the regulatory status and the distance to the Site, this facility is unlikely to impact subsurface conditions at the Site.

LUST

Five facilities (three duplicates) are listed within 0.5 miles of the Site.

All five of the facilities, including Peninsula Transmission Services, HI Tech ABC, Roseburg Forest Products, California Flower Shippers Inc., and Sunnyvale Golf Course, have all received regulatory closure and therefore are unlikely to impact subsurface conditions at the Site.

SLIC

Ten facilities (one duplicate) are listed within 0.5 miles of the Site.

Three facilities, NEC, Raytheon, and 487 E Middlefield Sobrato, are located within the MEW Study Area discussed above in the NPL listing.

Three facilities, 690 E Middlefield, Hewlett Packard, and E/M Lubricants, are associated with the Hewlett Packard E/M Lubricant plume as discussed above in Section III.I.

Two facilities, Acurex Corp (485 Clyde) and Samsung Research Center (625-685 Clyde Avenue), are located to the north and downgradient of the Site and are unlikely to impact subsurface conditions at the Site.

One facility, Peninsula Transmission Service, received case closure and is therefore unlikely to impact the subsurface conditions at the Site.

MALC, located at 1022-1034 Maude, is 0.210 miles east southeast of the Site. The facility had a leak detected in 1997 and is currently open with verification monitoring. In 2006, the facility was determined to be a Category 1 facility. A Category 1 LUST is characterized by soil or groundwater contamination that does not pose an immediate human health threat and does not extend off-Site onto neighboring properties. Therefore, this facility is unlikely to impact subsurface conditions at the Site.

Orphan Sites

Twenty-six "orphan" sites were identified in the EDR Report. None of the orphan sites listed in ATSM Standard databases appear to impact subsurface conditions at the Site. Sixteen are downgradient and eight are crossgradient relative to the Site. One facility is not within the ASTM Standard search radius of the Site. The final facility, whose location could not be identified, is listed under the HAZNET database for the disposal of contaminated soil in 2007 Due to the location, distance, and available information, these facilities are unlikely to impact subsurface conditions at the Site.

Summary

Iris Environmental considers that, with the exception of the facilities which contribute to the Hewlett Packard and E/M Plumes and the 885 Maude Avenue facility (discussed in Section K), none of the facilities identified by EDR have the potential to significantly impact subsurface conditions at the Site.

2. Environmental Liens and Activity and Use Limitations

Iris Environmental reviewed the report titled *The EDR Environmental Lien and AUL Search Report 405 Clyde Avenue, Mountain View CA 94043* prepared by EDR (EDR 2014b) for evidence of environmental liens and Activity and Use Limitations (AULs) at the Site. AULs are defined in the ASTM Standard as legal or physical restrictions or limitations on the use of, or

access to, a site or facility: (1) to reduce or eliminate potential exposure to hazardous substances or petroleum products in the soil or groundwater on the property, or (2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment.

No environmental liens or AULs were noted by EDR.

M. Interviews with Local Government Officials

Iris Environmental requested documents from the following agencies:

Agency	Date of Request	Files Reviewed
DTSC – Berkeley	2/7/2014	No records available.
DTSC – Sacramento	2/7/2014	No records available.
Santa Clara County Department of Environmental Health	2/7/2014	No records available.
BAAQMD	2/7/2014	No records available.
Mountain View Fire Department	2/7/2014	Files reviewed and referenced throughout the report.
RWQCB	2/7/2014	Still awaiting response. No records were noted in the online RWQCB database website Geotracker.
USEPA Region IX	2/7/2014	Still awaiting response.

N. Information Provided by the User

In compliance with ASTM E 1527-13, a user/client questionnaire was completed by Mr. Martin Suen of Google. The information provided in the questionnaire is summarized here and a copy of the questionnaire is provided in Appendix E.

Mr. Suen is not aware of any environmental cleanup liens against the Site and has no specialized knowledge of the Site. He is not aware of any land use restrictions at the Site. He is not aware of past uses of the Site.

O. Data Gaps

Standard ASTM E1527-13 defines a data gap as, "a lack of or inability to obtain information required by this practice despite *good faith* efforts by the *environmental professional* to gather the information" (emphasis in original to indicate formally defined terms). Significant data gaps are identified as those that affected our ability to identify RECs. No significant data gaps were identified during this ESA.

IV. DEVIATIONS FROM THE ASTM STANDARD

There were no deletions or deviations from ASTM Practice E 1527-13 in conducting this Phase I Environmental Site Assessment.

Tables

Table 1 – Summary of Historical Records

Date (1)	Source	Finding
1899	Topographic Map	Site and surrounding area is undeveloped. A small residential structure may be located on-Site. The road that today is Highway 237 is present southeast of the Site.
1902	Topographic Map	The small structure is not noted on-Site.
1939	Aerial Photo	Site is vacant and appears to be used for agricultural purposes. The Site is bounded to the southeast by a road (current Highway 237). Surrounding area is used for agriculture as well, with orchards to the southwest, open fields to the north and east.
1943	Topographical Map	Site and surrounding area appears undeveloped.
1947	Topographical Map	No significant changes from previous map.
1948	Topographical Map	Development of agricultural land especially to the south of the Site.
1948	Aerial Photograph	No significant change from previous photo.
1953	Topographic Map	Site remains unchanged. Agriculture increases in surrounding area. The area to the northeast is noted as a Naval Reservation
1956	Aerial Photograph	Site is vacant and appears to be used for agricultural purposes
1961	Topographic Map	Maude Avenue, which bounds the Site to the southwest, is present. Development, such as roads and buildings, is increasing in surrounding area and agriculture is decreasing.
1968	Aerial Photograph	The Site is vacant, but does not appear to be used for agriculture. Commercial development has largely replaced agricultural uses in the Site vicinity. Commercial buildings are located west and north of the Site. The Sunnyvale Golf Course has been developed to the northeast.
1968	Topographic Map	The Site is vacant. The surrounding area to the west along Maude and Clyde Avenues has been commercially developed. Little agriculture remains in the surrounding area. The Naval Reservation to the northeast is also noted as a Golf Course.
1973	Topographic Map	Current on-Site building is noted. Commercial development is noted at surrounding properties.
1974	Aerial Photograph	Current on-Site building appears on-Site. Commercial development is noted along Clyde and Maude Avenues.

Date (1)	Source	Finding
		Highway 237 to the southeast appears wider.
1981	Topographic Map	Site appears unchanged. Agricultural uses have been replaced with commercial development in the area surrounding the Site.
1982	Aerial Photograph	Site and surrounding areas appear unchanged.
1991	Topographic Map	Site and surrounding area is indicated as developed.
1991	Aerial Photograph	No significant changes from previous photo.
1997	Topographic Map	No significant changes from previous map.
1999	Aerial Photograph	No significant changes from previous photo.
2005	Aerial Photograph	No significant changes from previous photo.
2006	Aerial Photograph	No significant changes from previous photo.
2009	Aerial Photograph	No significant changes from previous photo.
2010	Aerial Photograph	No significant changes from previous photo.
2012	Aerial Photograph	No significant changes from previous photo.

Notes:

1) While historical records were not available for the property at 5 year intervals (the suggested frequency in the ASTM Standard), we do not consider this data gap to be significant to the identification of RECs at the Site, as sufficient information was available to develop an understanding of past property uses.

Conditions noted in the Project Summary Table are representative of the overall conditions of the property. There may be more detail on specific assessment components in the report text, therefore the Project Summary Table should not be used as a stand alone document. Costs depicted are for investigation/program development activities. Remediation costs, if required, will be identified as a result of the activities.

Footnotes:

(1) The review of the historical data available for the Project identified that that one 1,000-gallon gasoline UST and one 2,000-gallon diesel fuel UST were registered for the Project. A building permit dated February 26, 1987 was issued for the removal of two underground tanks. Information obtained from the Mountain View Fire Department indicates that a 1,000-gallon gasoline UST and a 2,000-gallon diesel UST were removed from the exterior north side of the Project building in April 1987. Review of a summary soil sampling report prepared by Safety Specialists dated April 28, 1987 revealed that two soil samples were obtained from beneath each of USTs during the removal. The soil samples collected from beneath the gasoline UST were analyzed for total petroleum hydrocarbons-gasoline (TPH-g) and benzene, toluene and xylenes (BTX), and the soil samples obtained from beneath the diesel UST were analyzed for total petroleum hydrocarbons-diesel (TPH-d) and BTX. The results of the soil sampling showed 4.5 ppm TPH-g, 2.3 ppm TPH-d and BTX were all below the laboratory detection limits, and below typical cleanup levels. Copies of relevant documents are provided in Appendix F. The Fire Department did not require any additional investigation related to the removal of the USTs. Based on the soil sampling summary report, the historical UST does not represent a recognized environmental condition, historical recognized environmental condition, or a controlled recognized environmental condition associated with the Project.

(2) Suspect friable and non-friable ACM in the form of roofing materials, vinyl floor tile, wallboard/joint compound, sheet vinyl flooring, ceiling tile, and various mastics identified as part of the assessment were not sampled. These materials are in good condition and can be maintained in place if an Operations and Maintenance (O&M) Program is developed and implemented. A properly designed O&M Program is sufficient to maintain the Project in accordance with current regulatory standards.

(3) EMG performed a limited visual assessment for the presence of mold, conditions conducive to mold, and evidence of moisture in readily accessible interior areas of the Project. Suspect mold and evidence of moisture were observed in the following areas:

Stained ceiling tiles in office area. The area affected by the suspect moisture was approximately 20 square feet in size.
Suspect mold on ceiling and walls in warehouse area. The area affected by the mold was approximately 1,000 square feet in size.

Additional information about the source of the moisture and any associated costs is included in EMG's Property Condition Assessment (PCA) report (EMG Project Number 116668.15R-001.047).

(4) Based on review of the regulatory database report, the Project is listed on the UST, SWEEPS UST and Historical UST databases. Refer to Historical Review Heading for further discussion of the historical issues related to these database listings. Based on this information, no further action or investigation is recommended regarding the regulatory review.

1 CERTIFICATION

EMG has completed a Phase I Environmental Site Assessment of the 420 Clyde Ave. (the "Project"), located at 420 Clyde Ave. in Mountain View, California 94043. The assessment was performed at the Client's request, using the methods and procedures consistent with good commercial and customary practice designed to conform with acceptable industry standards.

The assessment was performed at the Client's request using methods and procedures consistent with good commercial and customary practice conforming with ASTM E 1527-13, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process. Within this Phase I Environmental Site Assessment, EMG's reference to the Client follows the ASTM guide's definition of User, that is, the party that retains EMG for the preparation of a baseline ESA of the Project. A User may include, without limitation, a purchaser, potential tenant, owner, existing or potential mortgagee, lender, or property manager of the subject property.

The opinions EMG expresses in this report were formed utilizing the degree of skill and care ordinarily exercised by any prudent Environmental Professional in the same community under similar circumstances. EMG assumes no responsibility or liability for the accuracy of information contained within this report that has been obtained from the Client or the Client's representatives, from other interested parties, or from the public domain. The conclusions presented represent EMG's professional judgment based on information obtained during the course of this assignment.

Factual information regarding operations, conditions, and test data provided by the Client or the Client's representative has been assumed to be correct and complete. The conclusions presented within this report are based on the data provided, observations made, and conditions that existed specifically on the date of the assessment.

EMG certifies that EMG has no undisclosed interest in the subject property, that EMG's relationship with the Client is at arms-length, and that EMG's employment and compensation are not contingent upon the findings or estimated costs to remedy any noted environmental conditions.

EMG's ESA cannot wholly eliminate the uncertainty regarding the presence of recognized environmental conditions and environmental business risk. The report is limited in budget and scope. The nature of subsurface soil and ground water at the subject property cannot be confirmed, given the limited budget and scope of this ESA. The report is not and should not be considered a warranty or guarantee about the presence or absence of environmental contaminants which might affect the subject property. It should be understood that EMG's suggested remedy may be determined under time constraints or may be formed without the aid of engineering calculations, testing, exploratory probing, the removal of materials, or design. Furthermore, there may be other alternate or more appropriate schemes or methods to remedy the noted environmental conditions.

If you have any questions regarding this report, please contact the Senior Environmental Consultant listed on the Cover Page of this Report.

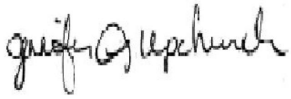
Reviewed By: 
Jennifer Upchurch
Senior Environmental Consultant

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in § 312.10 of 40 CFR 312.

I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Project. I have developed and performed the all appropriate inquiries in conformance with the standard and practices set forth in 40 CFR Part 312.



Jennifer Upchurch - Senior Environmental Consultant

1.1 RELIANCE

This report has been prepared for and is exclusively for the use and benefit of the Client identified on the cover page of this report. The purpose for which this report shall be used shall be limited to the use as stated in the contract between the client and EMG.

This report, or any of the information contained therein, is not for the use or benefit of, nor may it be relied upon by any other person or entity, for any purpose without the advance written consent of EMG. Any reuse or distribution without such consent shall be at the client's or recipient's sole risk, without liability to EMG.

2.0 EXECUTIVE SUMMARY

EMG performed a Phase I Environmental Site Assessment, that included on-site observations of the accessible areas of the 420 Clyde Ave. (the "Project"), on September 18, 2015. The Project is located at 420 Clyde Ave. in Mountain View, California 94043, and consists of approximately 1.01 acres.

The Project, originally constructed in 1968, is currently an office/warehouse/food packaging facility. Prior to the current use, the Project was naturally vegetated land. Properties in the general vicinity of the Project include commercial and light industrial land uses.

The following statements summarize the independent conclusions representing EMG's best professional judgment based on information and data available to us during the course of this assignment. Factual information regarding operations, conditions, and test data provided by the Client, owner, or their representatives, has been assumed to be correct and complete. Additionally, the conclusions presented are based on the conditions that existed at the time of the assessment.

The purpose of this report is to provide the Client an assessment concerning environmental conditions (limited to those issues identified in the report), as they existed at the Project. The assessment was conducted utilizing generally accepted Phase I industry standards, using American Society for Testing and Materials (ASTM) Standard Practice E 1527-13.

A recognized environmental condition is defined by ASTM E 1527-13 as *the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property 1) due to any release to the environment; 2) under conditions indicative of a release to the environment; or 3) under conditions that pose a material threat of a future release to the environment.*

A historical recognized environmental condition is defined by ASTM E 1527-13 as *a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted residential use criteria established by a regulatory authority, without subjecting the property to any required controls (e.g. property use restriction, AULS, institutional controls, or engineering controls), at the time the Phase I ESA is conducted (e.g., if there has been a change in the regulatory criteria). If the EP considers this past release to be a REC at the time the Phase I ESA is conducted, the condition shall be included in the conclusion section of the report as a REC.*

A controlled recognized environmental condition is defined by ASTM E 1527-13 as *a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).*

A business environmental risk is defined by ASTM E 1527-13 as *a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in this practice. Consideration of business environmental risk issues may involve addressing one or more non-scope considerations.*

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527-13 of 420 Clyde Ave. in Mountain View, Santa Clara County, California 94043. Any exceptions to, or deletions from, this practice are described in Section 3 of this report. This assessment has revealed no evidence of recognized environmental conditions (RECs), historical recognized environmental conditions (HRECs), controlled recognized environmental conditions (CRECs), or significant business environmental risks in connection with the Project, except for the following:

- **Business Environmental Risk -** Suspect asbestos-containing materials were observed. Refer to the **Asbestos-Containing Materials** heading in Section 2.1 for further discussion.

- Business Environmental Risk - Suspect mold and moisture was observed at the Project. Refer to the **Mold** heading in Section 2.1 for further discussion.

2.1 Findings and Conclusions

Historical Review

The review of the historical data available for the Project identified that that one 1,000-gallon gasoline UST and one 2,000-gallon diesel fuel UST were registered for the Project. A building permit dated February 26, 1987 was issued for the removal of two underground tanks. Information obtained from the Mountain View Fire Department indicates that a 1,000-gallon gasoline UST and a 2,000-gallon diesel UST were removed from the exterior north side of the Project building in April 1987. Review of a summary soil sampling report prepared by Safety Specialists dated April 28, 1987 revealed that two soil samples were obtained from beneath each of USTs during the removal. The soil samples collected from beneath the gasoline UST were analyzed for total petroleum hydrocarbons-gasoline (TPH-g) and benzene, toluene and xylenes (BTX), and the soil samples obtained from beneath the diesel UST were analyzed for total petroleum hydrocarbons-diesel (TPH-d) and BTX. The results of the soil sampling showed 4.5 ppm TPH-g, 2.3 ppm TPH-d and BTX were all below the laboratory detection limits, and below typical cleanup levels. Copies of relevant documents are provided in Appendix F. The Fire Department did not require any additional investigation related to the removal of the USTs. Based on the soil sampling summary report, the historical UST does not represent a recognized environmental condition, historical recognized environmental condition, or a controlled recognized environmental condition associated with the Project.

EMG contacted Environmental Data Resources (EDR) in an attempt to determine if there were any historical City Directories in the EDR Historic City Directory Collection. The information is pending and will be forwarded upon receipt.

Operational Activities

EMG observed no circumstances of environmental concern associated with the operational activities at the Project. No further action or investigation is recommended regarding operational activities at the Project.

Hazardous Materials / Petroleum Products

The Project is involved in the use of hazardous materials and petroleum products in the form of lubricant, forklift batteries, and janitorial/maintenance supplies. The identified materials appear to be properly stored. The materials observed do not appear to pose a hazard to the Project, provided they continue to be used as designed, are properly handled, and all regulations regarding their use are followed. No further action or investigation is recommended regarding the use of these materials.

Wastes

The Project generates non-hazardous solid and liquid wastes. These materials appear to be stored and disposed of properly. No further action or investigation is recommended regarding these materials.

EMG observed miscellaneous nuisance trash in the form of cardboard boxes, paper, and old food product drums at the Project. No evidence of hazardous materials or petroleum products was observed in the area of the miscellaneous nuisance trash. Further, this trash is not considered environmentally significant. EMG recommends the miscellaneous nuisance trash be properly removed and disposed. Otherwise, no further action or investigation is recommended regarding the nuisance trash.

Polychlorinated Biphenyls (PCBs)

No equipment with the potential to contain dielectric or hydraulic fluid was identified at the Project. No further action or investigation is recommended regarding PCBs at the Project.

Asbestos-Containing Materials (ACM)

Suspect friable and non-friable ACM in the form of roofing materials, vinyl floor tile, wallboard/joint compound, sheet vinyl flooring, ceiling tile, and various mastics identified as part of the assessment were not sampled. These materials are in good condition and can be maintained in place if an Operations and Maintenance (O&M) Program is developed and implemented. A properly designed O&M Program is sufficient to maintain the Project in accordance with current regulatory standards.

Radon Gas

Review of the USEPA's Radon Map indicated that the Project is located in Zone 2, areas with a predicted average indoor radon screening level between 2 and 4 pCi/L (picoCuries per liter of air). In addition, based on the type of construction, the presence of commercial HVAC systems, and the non-residential use of the Project, there is reduced potential for the build-up of radon gas at the Project. No further action or investigation is recommended with regard to radon gas levels at the Project.

Lead-Based Paint (LBP)

Considering the date of construction (1968), there is a potential that the paint at the Project is lead-based. However, the painted surfaces were observed to be in generally good condition, the Project is not a residential use, and there is no regulatory requirement to sample suspected lead-based painted surfaces at this time. Therefore, no samples were collected and no further action or investigation is recommended regarding suspected LBP at the Project.

Lead in Drinking Water

Based on information from the water utility company, the water at the Project is not expected to contain elevated levels of lead. No further action or investigation is recommended regarding lead in drinking water at the Project.

Storage Tanks / Pipelines

No evidence of storage tanks or pipelines (above or below ground) was identified. No further action or investigation is recommended regarding storage tanks or pipelines at the Project.

Surface Areas

No issues associated with surface areas were identified. No further action or investigation is recommended regarding surface areas at the Project.

Visual observation of the storm water system did not identify any abnormal accumulation of petroleum run-off or foreign material. No unusual blockages of the storm water control system were observed. No unusual ponding of storm waters was observed. No further action or investigation is recommended regarding storm water systems at the Project.

Mold

EMG performed a limited visual assessment for the presence of mold, conditions conducive to mold, and evidence of moisture in readily accessible interior areas of the Project. Suspect mold and evidence of moisture were observed in the following areas:

- Stained ceiling tiles in office area. The area affected by the suspect moisture was approximately 20 square feet in size.
- Suspect mold on ceiling and walls in warehouse area. The area affected by the mold was approximately 1,000 square feet in size.

Additional information about the source of the moisture and any associated costs is included in EMG's Property Condition Assessment (PCA) report (EMG Project Number 116668.15R-001.047).

Regulatory Review

Based on review of the regulatory database report, the Project is listed on the UST, SWEEPS UST and Historical UST databases. Refer to Historical Review Heading for further discussion of the historical issues related to these database listings. Based on this information, no further action or investigation is recommended regarding the regulatory review.

Based on review of the regulatory database report, none of the off-site facilities represent a recognized environmental condition associated with the Project. No further action or investigation is recommended regarding the off-site regulatory review.

Adjacent Properties

EMG identified no current adjacent property uses that represent a recognized environmental condition associated with the Project. No further action or investigation is recommended regarding the adjacent properties.

2.2 Recommendations

The development and implementation of an Asbestos O&M Program. Costs indicated are for O&M Program Document development only. Comprehensive survey costs, if required, will be identified as a result of O&M Program implementation.

- **Associated cost estimate:** $495

Prior to remediation by personnel specifically trained in the handling of hazardous materials, a mold assessment should be conducted by a health and safety professional with experience performing microbial investigations. Additional information about the source of the moisture and any associated costs is included in EMG's Property Condition Assessment (PCA) report (EMG Project Number 116668.15R-001.047).

- **Associated cost estimate:** $NA

3 SURVEY APPROACH/PURPOSE

EMG conducted a Phase I Environmental Site Assessment of the Project that consisted of a walk-through observation of the accessible areas and interviews with facility personnel and local agency representatives.

The user informed EMG that the reason for the assessment is for financing purposes.

On-site activities and/or interviews were conducted by Ms. Kimberly Belka, EMG Project Manager, with:
- Mr. Jay Lee, On-site Point of Contact (POC) and Part Owner

A Key Site Manager Questionnaire was completed by the Point of Contact. Information obtained from the Questionnaire has been used in the preparation of this report.

Areas accessed included:
- All of the tenant unit
- Representative portions of interior areas
- Representative portions of exterior areas (except the roof)
- The Project boundaries

Specific areas to which access was limited include the following:
- Commonly inaccessible areas, such as pipe chases, above ceilings, under floors, and behind walls
- The roof

Based upon visual observations, review of regulatory information, and discussions with the Point of Contact, the inability to access these areas is not considered a significant data gap.

Weather conditions at the time of the Project assessment were clear, with temperatures in the high 70s (F) and light winds.

EMG reviewed available federal, state, and local records in an effort to identify sites of known or suspected hazardous waste activity located at or near the Project that could have an adverse impact on the Project. In an attempt to determine whether historical uses of the Project and the surrounding area have had an environmental impact on the Project, EMG interviewed individuals knowledgeable about the Project and reviewed available pertinent records and documents. This assessment is based on the evaluation of the information gathered, laboratory analyses of samples collected (when required), and accessibility at the time of the assessment.

The purpose of this report is to provide the Client an assessment concerning environmental conditions (limited to those issues identified in the report), as they existed at the Project. The Scope of Work included an evaluation of:

- The Project history in an attempt to identify any possible ownership(s) and/or uses that would suggest an impact to the environmental integrity of the Project, as identified through review of reasonably ascertainable standard historical sources.

- The physical characteristics of the Project, as identified through review of reasonably ascertainable topographic data.

- Current Project conditions (as applicable), including compliance with appropriate regulations, as they pertain to the presence or absence of: facility storage tanks, drums, containers (above or below ground), etc., transformers and other electrical equipment which utilize fluid which may potentially contain PCBs, the use of hazardous materials/chemicals and petroleum products, and/or the generation, treatment, storage, or disposal of hazardous, regulated, or medical wastes.

- Indoor air quality concerns are generally excluded from the scope of ASTM E1527-13 and this assessment. However, the migration of vapors caused by a release of hazardous substances or petroleum products to the environment can represent a recognized environmental condition in certain conditions.

For the purposes of this assessment, the potential for migrating vapors to represent a recognized environmental condition was evaluated using a limited screening method based on technical guidance documents from the US EPA and ASTM E2600-10 Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions. In addition, screening tools created by regulatory agencies may be used to evaluate the significance of a release with respect to the vapor migration and/or vapor intrusion potential. EMG's vapor migration screening is not a human health risk assessment and is not intended to comply with regulatory requirements that might exist for the evaluation of vapor migration.

- An evaluation of information contained in programs such as the NPL, CERCLIS, SHWS, RCRIS, SWF, LUST, and other governmental information systems within specific search distances of the Project. This evaluation was performed to identify sites that would have the potential to impact the environmental integrity of the Project. The regulatory agency report provided is based on an evaluation of the data collected and compiled by a contracted data research company. The report is based on a radius search that focuses on both the Project and neighboring sites that might impact the Project. Neighboring sites listed in governmental environmental records are identified within a specific search distance. The search distance varies depending upon the particular government record being checked. The search is designed to meet the requirements of ASTM Standard Practice E 1527-13. The information provided is assumed to be correct and complete.

- Visual observation of the adjacent properties to identify high-risk neighbors and the potential for known or suspected contamination to migrate onto the Project.

In addition, at the Client's request, the assessment included a screening approach for the potential existence and/or identification of:

- The physical characteristics of the Project, as identified through review of reasonably ascertainable wetlands, soils, geology, and groundwater data.

- Mold, including the identification of visible mold growth, conditions conducive for mold growth, and evidence of moisture in accessible areas of the Project. In addition, EMG interviewed Project personnel regarding any known or suspected mold contamination, water intrusion, or mildew like odor problems. Sampling was not performed as a part of this assessment. EMG notes that this assessment does not constitute a comprehensive mold survey of the Project, and the conclusions made are based solely on observable conditions in readily accessible interior areas of the Project on the assessment date.

- Asbestos, including the identification of all suspect materials in accessible areas (interior and exterior). These materials are considered suspect, until tested and proven otherwise. Friable materials are those that can be easily crumbled or pulverized by hand pressure.

  This screening approach is not a comprehensive (i.e., AHERA-Style) asbestos survey, nor is it intended to fulfill the NESHAP requirements for demolition/renovation purposes, but it is intended to identify the potential for an asbestos hazard in accessible areas. This screening is not intended to be used for demolition, abatement, renovation, or repair work.

  The basis for "suspect" determination is taken from the materials listed in Appendix G of the United States Environmental Protection Agency (USEPA) publication *Managing Asbestos in Plac*e (the "Green Book"). Therefore, all materials listed in the Green Book that were installed prior to 1981 are considered suspect with the exception of resilient floor tile, asbestos-cement board (transite), and roofing felt, which are considered suspect, regardless of installation date (these materials continue to be manufactured and installed in the United States).

- Radon gas propensity, through the review of the USEPA's Map of Radon Zones for all properties.

- Lead-based paint for all properties constructed prior to 1978. The basis for this determination is taken from the Lead Paint Poisoning Act passed by the Congress of the United States that banned the use of lead paint starting January 1, 1978. Therefore, all paint applied prior to 1978 is considered suspect.

- Lead in water, based on information provided by the municipal water provider.

3.1 Data Gaps

Data gaps in information exist and are addressed in the appropriate sections of this report. However, because the data gaps were not determined to be material in identifying Recognized Environmental Conditions (RECs), they are not considered by ASTM standards to be *significant* and, therefore, are not individually addressed in this section.

4 USER PROVIDED INFORMATION

This Section documents whether the user reported to EMG information pursuant to the responsibilities described in Section 6 of the ASTM Standard E 1527-13.

EMG submitted a User Questionnaire to the user to assist the user and EMG in gathering information from the user that may be material to identifying RECs. A copy of the User Questionnaire is appended (Appendix D).

Litigation

Question: *Are you aware of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the property?*

Response: The user did not provide a response to this question. The lack of, or inability to obtain, this information represents a data gap. However, based on the findings of this report, the absence of this information is not considered a *significant* data gap.

Administrative Proceedings

Question: *Are you aware of any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on or from the property?*

Response: The user did not provide a response to this question. The lack of, or inability to obtain, this information represents a data gap. However, based on the findings of this report, the absence of this information is not considered a *significant* data gap.

Notices From Governmental Entities

Question: *Are you aware of any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products?*

Response: The user did not provide a response to this question. The lack of, or inability to obtain, this information represents a data gap. However, based on the findings of this report, the absence of this information is not considered a *significant* data gap.

Environmental Cleanup Liens

Question: *Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law?*

Response: The user did not provide a response to this question. The lack of, or inability to obtain, this information represents a data gap. However, based on the findings of this report, the absence of this information is not considered a *significant* data gap.

Activity and Use Limitations

Question: *Are you aware of any Activity and Use Limitations, such as engineering controls, land use restrictions or institutional controls, that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law?*

Response: The user did not provide a response to this question. The lack of, or inability to obtain, this information represents a data gap. However, based on the findings of this report, the absence of this information is not considered a *significant* data gap.

Specialized Knowledge

Question: *As the user of this ESA, do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or of an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?*

Response: The user did not provide a response to this question. The lack of, or inability to obtain, this information represents a data gap. However, based on the findings of this report, the absence of this information is not considered a *significant* data gap.

Relationship of Purchase Price

Question: *Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?*

Response: The user did not provide a response to this question. The lack of, or inability to obtain, this information represents a data gap. However, based on the findings of this report, the absence of this information is not considered a *significant* data gap.

Commonly Known Information

Question: *Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as user:*

- *Do you know the past uses of the property?*
- *Do you know of specific chemicals that are present, or once were present, at the property?*
- *Do you know of spills or other chemical releases that have taken place at the property?*
- *Do you know of any environmental cleanups that have taken place at the property?*

Response: The user did not provide a response to this question. The lack of, or inability to obtain, this information represents a data gap. However, based on the findings of this report, the absence of this information is not considered a *significant* data gap.

Obvious Indicators of Contamination

Question: *As the user of this ESA, based on your knowledge and experience related to the property, are there any obvious indicators that point to the presence or likely presence of contamination at the property?*

Response: The user did not provide a response to this question. The lack of, or inability to obtain, this information represents a data gap. However, based on the findings of this report, the absence of this information is not considered a *significant* data gap.

Environmental Lien and AUL Review

The user did not engage EMG to review title and judicial records for environmental liens or Activity and Use Limitations (AULs) recorded against the Project. Furthermore, these documents were not provided to EMG for review. The lack of or inability to obtain this information represents a data gap. However, based on the findings of this report, the absence of this information is not considered a *significant* data gap.

5 PROJECT LOCATION/DESCRIPTION

The Project is located at 420 Clyde Ave. in Mountain View, Santa Clara County, California 94043. The Project lands consist of approximately 1.01 acres.

5.1 Project Description

The Project is currently an office/warehouse/food packaging facility and contains one tenant.

The Project was constructed in 1968 in one phase. Project improvements consist of one structure, landscaping, and surface-level parking/drive areas.

The Project is serviced by public water and sanitary sewer systems. The Project is supplied with water from the City of Mountain View. According to the utility's water quality report, the drinking water supplied to the Project is within federal, state, and local drinking water quality standards.

Hot water is generated by natural gas-fired water heaters. The associated piping was observed to be uninsulated. The exhaust flues associated with the water heaters were observed to be uninsulated.

HVAC systems observed consisted of the following:

- Heat and air-conditioning are supplied to the Project from natural gas-fired rooftop packaged units. Conditioned air is distributed via thermostatically controlled, ducted supply and return systems.
- Heat is also supplied to the Project from warehouse heaters.

5.2 Miscellaneous Systems

- **Battery Charging Station** - The Project tenant contains a battery charging system for their forklifts. The presence of this equipment is not anticipated to impact the environmental integrity of the Project negatively.

5.3 Environmental Setting

5.3.1 Topography

Review of the Mountain View, California Topographic Quadrangle, published by the United States Geological Survey (USGS) and dated 1999, indicated the following:

- The Project has an average elevation of approximately 55 feet above mean sea level. Elevations do not vary significantly across the Project lands. The Project slopes gently in a north-northeasterly direction.
- Slope in the general area of the Project is to the north-northeast. The nearest surface water feature, Stevens Creek, is located approximately 1.2 miles west of the Project.

A copy of the topographic map is included in Appendix C.

5.3.2 Wetlands

Review of National Wetlands Inventory (NWI) data, provided by the United States Fish and Wildlife Service, indicated the following:

- No wetland areas are indicated at the Project or adjacent properties.

A copy of the wetland map is included in Appendix C.

5.3.3 Soils/Geology

Review of the Natural Resources Conservation Service (NRCS) Web Soil Survey data indicated the following:

- The Project is located in an area comprised of one soil type known as Hangerone. The Hangerone soil series is considered to be a poorly drained, clay textured soil with a depth of at least 89 inches.

- The Project is located within an urban land complex. The urban land complex indicates that 70 percent of the predominant soil type has been disturbed and covered with an impervious layer consisting of buildings, sidewalks, streets, and other structures. The undisturbed areas of the complex retain the original soil characteristics.

Review of the Geologic Map of California, published by the USGS and dated 1974, indicated the following:

- The Project is located within an area consisting of Cenozoic continental deposits.

5.3.4 Groundwater Hydrology

Review of the Water Resources Data Report for California, published by the California Department of Water Resources and dated 2014, indicated the following:

- The Project is located within the Santa Clara groundwater basin with estimated groundwater levels between 10 and 40 feet below ground surface (bgs).

Shallow groundwater flow is expected to follow the ground level slope of surface elevations. The direction of this flow at the Project is anticipated to be toward the north-northeast.

Estimated groundwater levels may vary due to seasonal fluctuations in precipitation, local usage demands, geology, underground structures, or dewatering operations.

5.3.5 Floodplain

Review of the Flood Insurance Rate Map (Community/Panel No. 06085C0045H), published by the Federal Emergency Management Agency (FEMA) and dated May 18, 2009, indicated the following:

- The Project is located in Zone X (shaded), defined as an area between the limits of the 100-year and 500-year flood.

6 HISTORICAL REVIEW

Review of information available from the Santa Clara County Assessor Office indicated that the Project is shown as Assessor Parcel Number 160-57-010.

A copy of the tax map is included in Appendix C.

6.1 Chain of Title

EMG reviewed readily available ownership records at the Santa Clara County Assessor Office.

Ownership information is listed in the table below:

Ownership Information	
Owner	**Year Purchased**
Jim & Gene Lee	2014

6.2 Prior Use Interviews

EMG met with Mr. Jay Lee, On-site Point of Contact (POC) and Part Owner, who was cooperative and provided information that appeared to be accurate, based upon our subsequent site observations. It is EMG's opinion that the POC was knowledgeable about the Project and about questions EMG posed during the interview process. According to the POC, the Project was developed in 1968 into the current use. The POC stated that prior to the current use, the Project was vacant land. The POC has been associated with the Project for approximately thirty years.

6.3 Local and/or State Government Agency Record Review/Interviews

The following information was identified at the City of Mountain View Building Department for current and identified historical Project addresses:

- Records dating back to at least the 1960s are maintained by this department.
- The review of available permits indicated that the present building at the Project was built in 1968. General building permits for the Project including permits for a boiler installation were on file.
- No permits for previous uses were found in the file for the Project address.
- Environmentally significant information identified included a permit dated 1987 for the removal of two underground tanks.

The following information was identified at the Mountain View Fire Department for current and identified historical Project addresses:

- Environmentally significant information identified included a summary of a soil investigation report prepared by Safety Specialists dated April 28, 1987. The summary report indicates that a 1,000-gallon gasoline UST and a 2,000-gallon diesel UST were removed from the exterior north side of the Project building in April 1987. Two soil samples were obtained from beneath each of USTs during the removal. The soil samples collected from beneath the gasoline UST were analyzed for total petroleum hydrocarbons-gasoline (TPH-g) and benzene, toluene and xylenes (BTX), and the soil samples obtained

from beneath the diesel UST were analyzed for total petroleum hydrocarbons-diesel (TPH-d) and BTX. The results of the soil sampling showed 4.5 ppm TPH-g, 2.3 ppm TPH-d and BTX were all below the laboratory detection limits, and below typical cleanup levels. The Fire Department did not require any additional investigation related to the removal of the USTs (see Appendix F).

The following information was identified at the City of Mountain View Planning Department website for current and identified historical Project addresses:

- Review of the available zoning records indicates that the Project is currently zoned ML for Limited Industrial use.

The following information was identified at the Santa Clara County Environmental Health Department:

- No information was identified for the Project.

6.4 Historical Maps

Historical Sanborn Maps:

Historical Sanborn maps are detailed scale drawings that show the location and use of buildings and structures that occupied a given area. EMG contacted Environmental Data Resources (EDR) in an attempt to determine if there were any historical Sanborn maps in the EDR Historic Map Collection. However, there was no historical Sanborn map coverage for the Project in the EDR Historical Sanborn Map Collection for the period covering the years 1867 to present. As a general rule, the absence of historical Sanborn maps for a given area tends to support evidence that the area was not significantly developed.

Historical Topographic Maps:

Historical topographic maps show the location of buildings and structures that occupied a given area, as well as other physical features. EMG reviewed historical topographic maps as available online from the USGS. EMG's historical topographic map search results are discussed below. It should be noted that many historic topographic maps do not include ground cover designations. Therefore, if site features are not shown on the Project and/or surrounding properties, these areas are generally described as undeveloped land.

Review of the 1897, 1899 and 1902 topographic maps indicated the following:

- **Project:** The scale of the map prevents the specific Project location from being identified; however, the general vicinity of the Project appears to be undeveloped land.
- **Off-site:** The surrounding areas appear to be generally undeveloped.

Review of the 1943, 1948, 1953, 1959, 1962 and 1966 topographic maps indicated the following:

- **Project:** The Project is shown as undeveloped land. Vehicular access is not available.
- **Off-site:** The area north of the Project is shown as undeveloped land. The area east of the Project is shown as undeveloped land. The area south of the Project is shown as undeveloped land. The area west of the Project is shown as undeveloped land.

The 1975 and 1981 topographic maps differ from the previous maps in that:

- **Project:** The Project is shown as developed with the current building. Vehicular access is available from the east.

- **Off-site:** The area east of the Project is shown as commercial development. The area south of the Project is shown as commercial development. The area west of the Project is shown as commercial development.

The 1991, 1995 and 1999 topographic maps differ from the previous maps in that:

- **Project:** The Project is shown as shaded to represent a high-density developed area, and the exact site improvements are not shown.

- **Off-site:** The area north of the Project is shown as shaded to represent a high-density developed area, and the exact improvements are not shown. The area east of the Project is shown as shaded to represent a high-density developed area, and the exact improvements are not shown. The area south of the Project is shown as shaded to represent a high-density developed area, and the exact improvements are not shown. The area west of the Project is shown as shaded to represent a high-density developed area, and the exact improvements are not shown.

Copies of representative topographic maps are included in Appendix C.

6.5 City Directories

City directories have tenant listings by address and are researched at approximately five-year intervals, as available. EMG attempted to review historical city directories at the City of Mountain View library. However, the history room was closed at the time of EMG's visit. In addition, EMG contacted Environmental Data Resources (EDR) in an attempt to determine if there were any historical City Directories in the EDR Historic City Directory Collection. The information is pending and will be forwarded upon receipt.

6.6 Aerial Photography

EMG contacted EDR in an attempt to determine if there were any historical aerial photographs available for the area of the Project. EMG's historical aerial search results are discussed below.

Review of the 1939, 1948, 1950 and 1956 aerial photographs indicated the following:

- **Project:** The Project is shown as naturally vegetated ground cover. Vehicular access is not available.

- **Off-site:** The area north of the Project is shown as undeveloped land. The area east of the Project is shown as undeveloped land. The area south of the Project is shown as undeveloped land. The area west of the Project is shown as undeveloped land.

The 1968 aerial photograph differs from the previous aerial photographs in that:

- **Project:** The Project is shown as developed with the current building. Vehicular access is available from the east.

- **Off-site:** The area east of the Project is shown as commercial development. The area south of the Project is shown as commercial development.

The 1974,1979 and 1982 aerial photographs differ from the previous aerial photograph in that:

- **Off-site:** The area west of the Project is shown as commercial development.

The 1991, 1998, 2005, 2006, 2009, 2010 and 2012 aerial photographs differ from the previous aerial photographs in that:

- **Off-site:** The area north of the Project is shown as commercial development.

Copies of representative historical aerial photographs are included in Appendix C.

6.7 Previous Investigations

EMG was not provided with any previously conducted environmental assessment reports for the Project.

6.8 Plans and Specifications

As-built/renovation-site plans, drawings, or specifications were not available for review at the Project or local agency offices visited for this assessment.

6.9 Historical Summary

EMG was not able to obtain standard historical sources that document the Project history in five year intervals. This data failure represents a data gap; however, this data gap is not considered a *significant* data gap, and therefore, it is not addressed in Section 3.1.

Based upon historical review, the previous Project use includes naturally vegetated ground cover prior to the development of the current Project improvements in 1968. Environmentally significant historical tenant activities are discussed below:

The review of the historical data available for the Project identified that that one 1,000-gallon gasoline UST and one 2,000-gallon diesel fuel UST were registered for the Project. A building permit dated February 26, 1987 was issued for the removal of two underground tanks. Information obtained from the Mountain View Fire Department indicates that a 1,000-gallon gasoline UST and a 2,000-gallon diesel UST were removed from the exterior north side of the Project building in April 1987. Review of a summary soil sampling report prepared by Safety Specialists dated April 28, 1987 revealed that two soil samples were obtained from beneath each of UST's during the removal. The soil samples collected from beneath the gasoline UST were analyzed for total petroleum hydrocarbons-gasoline (TPH-g) and benzene, toluene and xylenes (BTX), and the soil samples obtained from beneath the diesel UST were analyzed for total petroleum hydrocarbons-diesel (TPH-d) and BTX. The results of the soil sampling showed 4.5 ppm TPH-g, 2.3 ppm TPH-d and BTX were all below the laboratory detection limits, and below typical cleanup levels. Copies of relevant documents are provided in Appendix F. The Fire Department did not require any additional investigation related to the removal of the UST's. Based on the soil sampling summary report, the historical UST does not represent a recognized environmental condition, historical recognized environmental condition, or a controlled recognized environmental condition associated with the Project.

7 PROJECT RECONNAISSANCE

7.1 Operational Activities/Noteworthy Tenants

The Project is currently an office/warehouse/food packaging facility occupied by Four in One Company. No noteworthy tenants occupy the Project and no environmentally significant operations are conducted at the Project.

Considering the operations assessed at the Project, no environmental permits, registrations, or notifications appear to be required.

7.2 Hazardous Materials/Petroleum Products Storage and Handling

Visual observation for the use and/or storage of hazardous materials and petroleum products was performed. The following hazardous materials and petroleum products were identified:

- Routine janitorial and maintenance supplies are present in retail-sized containers and stored in designated areas. These materials are used for Project maintenance and upkeep.
- Lubricant is stored in five-gallon containers in the warehouse area. The lubricant is used for equipment maintenance.
- Forklift batteries are used by forklifts and stored in the warehouse area.

The hazardous materials and petroleum products discussed above were observed in designated storage areas and appeared to be properly stored.

No evidence of spills or staining was observed. In addition, the surfaces appeared intact, and no cracks were observed in the areas of product storage/usage.

7.3 Waste Generation, Treatment, Storage and Disposal

Visual observation for the generation, treatment, storage, and disposal of wastes was performed. The following wastes were identified:

- Municipal trash is stored in dumpsters and disposed of by a contracted waste hauler.
- Domestic sewage is disposed of to the municipal sanitary sewer system.

No evidence of spills or staining was observed in the area of waste generation or pre-disposal storage.

Review of information available at the Project indicated that the waste disposal operations appear to be appropriate.

No excessive odors or overflowing trash were noted in the vicinity of the dumpsters. No hazardous, regulated, or medical wastes were noted in the dumpsters.

EMG observed miscellaneous nuisance trash in the exterior storage yard at the Project in the form of cardboard boxes, paper, and old food product drums. No evidence of hazardous materials or petroleum products was observed in the area of the miscellaneous nuisance trash. Furthermore, this trash is considered a *de minimis* condition.

7.4 Polychlorinated Biphenyls (PCBs)

The Project is supplied with overhead secondary electrical service from off-site transformers.

7.5 Asbestos-Containing Materials (ACM)

As-built/renovation-site plans, drawings, or specifications were not available for review at the Project or local agency offices visited for this assessment.

Suspect friable ACM, in the form of ceiling tiles were identified. These materials were observed to be in fair to poor condition.

Suspect non-friable ACM, in the form of roofing materials, vinyl floor tile, wallboard/joint compound, sheet vinyl flooring, and various mastics were identified. These materials were observed to be in good to fair condition.

Based on the Scope of Work, no samples were collected.

7.6 Radon Gas

Review of the USEPA's Radon Map for Santa Clara County, California indicated that the Project is located in Zone 2, areas with a predicted average indoor radon screening level between 2 and 4 pCi/L (picoCuries per liter of air).

Based on the Scope of Work, radon sampling was not performed as a part of this assessment.

In addition, based on the type of construction, the presence of commercial HVAC systems, and the industrial use of the building, there is reduced potential for the build-up of radon gas in the building at the Project.

7.7 Lead-Based Paint (LBP)

Considering the date of construction (1968), there is a potential that the paint at the Project is lead-based. The painted surfaces were observed to be in generally good condition, with no chipping, peeling, or cracking paint observed. Furthermore, the Project is not a residential use and there is no regulatory requirement to sample suspected lead-based painted surfaces at this time. Therefore, no samples were collected.

7.8 Lead in Drinking Water

Based on review of the local water utility's most recent Water Quality Report, the water supplied to the Project is within federal, state, and local drinking water quality standards.

7.9 Facility Storage Tanks and Pipelines (above or below ground)

Visual observations for manways, vent pipes, fill connections, concrete pads, and saw cuts in paved areas did not identify any surface connections or disturbances that would indicate the potential for an underground storage

tank (UST) installation at the Project.

No aboveground storage tanks (ASTs) were observed at the Project.

The manways and surface caps observed at the Project were for site services (i.e., domestic water, storm water, and sanitary sewer system).

Review of currently installed mechanical equipment identified the use of alternate fuel sources (i.e., electric, natural gas), thereby eliminating the need for on-site fuel storage at the Project.

Historic tanks are discussed in and Section 9.1.

Visual observations did not identify surface markings indicating the existence of subsurface product pipelines at the Project.

7.10 Surface Areas

Observations during EMG's assessment identified that the Project lands are graded to provide slope and swale to direct storm water away from the on-site building. Surface water flows in a northerly direction.

Visual observation of the Project and adjacent properties did not identify evidence of distressed vegetation, staining, or surface migration of petroleum releases or hazardous materials onto or off the Project.

Visual observations did not identify evidence of on-site surface impoundment facilities, pits, dry wells, or dumping of apparent hazardous substances at the Project.

Visual observations did not identify surface water features, including lagoons, ponds, or other bodies of water at the Project.

Minor oil discharges were observed on the parking areas; however, the discharges are incidental in nature, and corrective action is neither practical nor warranted.

Storm water from the roof areas is directed to the ground surface drains via internal drains. Storm water from drive and parking surfaces is directed to surface drains via sheet flow. Storm water from vegetated surface areas generally infiltrates into the subsurface.

7.11 Mold

EMG performed a limited visual assessment for the presence of mold, conditions conducive to mold, and evidence of moisture in readily accessible interior areas of the Project. Suspect mold and evidence of moisture were observed in the following areas:

- Stained ceiling tiles in office area. The area affected by the suspect moisture was approximately 20 square feet in size.
- Suspect mold on ceiling and walls in warehouse area. The area affected by the mold was approximately 1,000 square feet in size.

This assessment does not constitute a comprehensive mold survey of the Project. In addition, this activity was not designed to discover all areas which may be affected by mold growth on the Project. Rather, it is intended to give the Client an indication if significant (based on observed areas) mold growth is present at the Project. Additional areas of mold not observed as part of this limited assessment, possibly in pipe chases, HVAC systems

and behind enclosed walls and ceilings, may be present at the Project. The reported observations and conclusions are based solely on interviews with Project personnel and on conditions as observed in readily accessible interior areas of the Project on the assessment date.

8 INTERVIEWS

8.1 Key Site Manager

A Key Site Manager Questionnaire was completed as a part of this assessment, which is included in Appendix D. The Questionnaire was completed by the Key Site Manager, Mr. Jay Lee. Information obtained from the Questionnaire has been used in the preparation of this report. The Key Site Manager is not aware of any pending, threatened, or past litigation or administrative proceedings relevant to hazardous substances or petroleum products, or notices from any governmental entity regarding possible violation of environmental laws, or possible liability related to hazardous substances or petroleum products.

8.2 Owner

EMG submitted an Owner Questionnaire to the user in an effort to identify the owner of the Project who could be interviewed to provide information regarding proceedings involving the Project. A completed Owner Questionnaire was not returned to EMG. The lack of, or inability to obtain, this information represents a data gap. However, based on the findings of this report, the absence of this information is not considered a *significant* data gap.

8.3 User

EMG submitted a User Questionnaire in an effort to obtain information regarding proceedings involving the Project. Refer to Section 4 for discussion of the User Questionnaire.

8.4 Occupants

EMG interviewed Mr. Jay Lee, the tenant representative, who was cooperative and provided information that appeared to be accurate, based upon our subsequent site observations. It is EMG's opinion that Mr. Lee was knowledgeable about the Project and about the questions EMG posed during the interview process. Mr. Lee indicated that he has been associated with the Project for approximately thirty years.

8.5 Past Owners, Operators, and Occupants

No past owners, operators, or occupants of the Project, who likely would have material information regarding the potential for contamination at the Project, were identified.

8.6 Owners or Occupants of Adjacent or Nearby Properties

The Project was not an abandoned property with evidence of unauthorized uses or uncontrolled access; therefore, interviews were not conducted with adjacent or nearby property owners or occupants.

8.7 Interviews with Others

The following individuals were interviewed as part of this assessment:

Name and Title	Organization	Phone Number
Mr. Jay Lee, Part Owner	420 Clyde Avenue	650.964.9650

9 REGULATORY DATABASE REVIEW

EMG obtained a regulatory database report from Environmental Data Resources, Inc. (EDR) in an effort to determine if the Project is a listed regulatory site and whether there are any mappable regulatory database sites. The regulatory database search was run in accordance with the Scope of Work for this assessment. EMG attempted to field-verify the locations of the EDR-identified regulatory sites, as well as confirm distances and locations relative to the Project using available mapping software. Therefore, the distances and/or directions noted in this section may not match the EDR Report. In addition, EMG reviewed the unmappable sites in the database report, cross-referencing addresses and site names. Unmappable sites are environmental risk sites that cannot be plotted with confidence, but can be located by zip code or city name. In general, a site cannot be geocoded because of inaccurate or missing location information in the record provided by the agency. A copy of the regulatory database report is included in Appendix H.

Based on review of the regulatory database report, and by cross-referencing name, address, and zip code, EMG concludes that the Project is a listed site. Details regarding any listings for the Project are discussed after the table below.

The search for sites listed on regulatory databases in the area surrounding the Project identified various sites within the specified search radii. Details regarding any adjacent and nearby off-site properties of environmental significance are discussed after the table below.

The following are some of the databases which were reviewed for this assessment. See the appended regulatory database report for a complete listing of databases reviewed for this assessment:

ASTM Standard Federal Databases

- **NPL -** The National Priority List (NPL) is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program.
- **Proposed NPL -** A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.
- **NPL LIENS -** Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability.
- **Delisted NPL -** In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.
- **CERCLIS -** The Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) contains sites that are either proposed to or on the National Priorities List (NPL) and sites that are in the screening and assessment phase for possible inclusion on the NPL.
- **CERCLIS-NFRAP -** CERCLIS No Further Remedial Action Planned (NFRAP) sites are sites that the EPA has determined that no further steps will be taken to list the sites on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.
- **CORRACTS -** Corrective Action Report (CORRACTS) identifies hazardous waste handlers with RCRA corrective action activity.
- **RCRA-TSDF -** Resource Conservation and Recovery Act (RCRA) - Transporters, Storage and Disposal (TSDF) database includes information on sites that generate, transport, store, treat and/or dispose of hazardous waste as defined by the RCRA.

- **RCRA-LQG -** The RCRA - Large Quantity Generators (LQG) database includes information on sites that generate, transport, store, treat and/or dispose of hazardous waste as defined by RCRA. Large quantity generators generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

- **RCRA-SQG -** The RCRA - Small Quantity Generators (SQG) database includes information on sites that generate, transport, store, treat and/or dispose of hazardous waste as defined by RCRA. Small quantity generators generate between 100 kg and 1,000 kg of hazardous waste per month.

- **RCRA-CESQG -** The RCRA - Conditionally Exempt Small Quantity Generators (CESQG) database includes information on sites that generate, transport, store, treat and/or dispose of hazardous waste as defined by RCRA. Conditionally exempt small quantity generators generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

- **US ENG CONTROLS -** A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

- **US INST CONTROL -** A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

- **ERNS -** The Emergency Response Notification System records and stores information on reported releases of oil and hazardous substances.

State Databases

- **SWF -** The Solid Waste Facilities (SWF) database contains an inventory of solid waste disposal facilities or landfills. These may be active or inactive facilities or open dumps.

- **LUST -** Leaking underground storage tank (LUST) records contain an inventory of reported leaking underground storage tank incidents. Not all states maintain these records, and the information stored varies by state.
- **UST -** Registered Underground Storage Tank (UST) facilities.

- **AST -** Registered Aboveground Storage Tank (AST) facilities.

- **State BROWNFIELDS -** This database contains information on Brownfield sites.

- **State Voluntary Cleanup Sites -** This database contains a listing of sites which are in the State voluntary cleanup program.

- **STATE ENG CONTROLS -** A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

- **STATE INST CONTROL -** A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

- **INDIAN UST -** The Indian UST database contains information about underground storage tanks on Indian land.

- **INDIAN LUST -** The Indian LUST database contains information about leaking underground storage tanks on Indian land.

- **INDIAN VCP-** The Indian VCP database contains information about voluntary cleanup priority sites on Indian land.

- **SHWS -** The State of California does not maintain a SHWS database; therefore, the search distance for the CERCLIS database was extended to cover the appropriate distance that the SHWS database would have been searched.

- **ENVIROSTOR** - The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

- **SLIC** - The California Spill, Leak, Investigation, and Cleanup (SLIC) database is maintained by the individual California Regional California Water Quality Control Boards (RWQCB) to track sites where releases have been reported outside of the Leaking Underground Storage Tank program. These sites typically include miscellaneous releases, not necessarily related to underground storage tanks.

- **RESPONSE** - State Response Sites are confirmed release sites where the DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

- **VCP** - The Voluntary Cleanup Program (VCP) database contains low threat level properties with either confirmed or unconfirmed releases, and where the project proponents have requested that the DTSC oversee investigation and/or cleanup activities and also have agreed to provide coverage for DTSC's costs.

- **HIST CAL-SITES** - The Calsites database contains potential or confirmed hazardous substance release properties. In 1996, California EPA reevaluated and significantly reduced the number of sites in the Calsites database. This database is no longer updated by the state agency. It has been replaced by ENVIROSTOR.

- **SWEEPS UST** - The Statewide Environmental Evaluation and Planning System (SWEEPS) underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained.

9.1 Project Regulatory Database Discussion

Regulatory database listings for the Project are discussed below.

Four in One Company, Inc.
420 Clyde Avenue
Database(s) Listed On: UST, SWEEPS UST, Historical UST
The UST and Historical UST databases indicate that one 1,000-gallon gasoline UST and one 2,000-gallon diesel fuel UST were registered for the Project. A building permit dated February 26, 1987 was issued for the removal of two underground tanks. Information obtained from the Mountain View Fire Department indicates that a 1,000-gallon gasoline UST and a 2,000-gallon diesel UST were removed from the Project in April 1987. Two soil samples were obtained from beneath each of USTs during the removal. The soil samples collected from beneath the gasoline UST were analyzed for total petroleum hydrocarbons-gasoline (TPH-g) and benzene, toluene and xylenes (BTX), and the soil samples obtained from beneath the diesel UST were analyzed for total petroleum hydrocarbons-diesel (TPH-d) and BTX. The results of the soil sampling showed 4.5 ppm TPH-g, 2.3 ppm TPH-d and BTX were all below the laboratory detection limits, and below typical cleanup levels. The Fire Department did not require any additional investigation related to the removal of the USTs. The UST database is a listing of facilities that are required to register their USTs for tracking purposes and are not necessarily sites with reported contamination incidents. Furthermore, the Project is not identified on any database that reports spills or releases, such as the LUST database. Based on this information, these listings for the Project do not represent a recognized environmental condition in connection with the Project.

9.2 Off-Site Regulatory Database Discussion

Adjacent and nearby off-site listed properties of environmental significance are discussed below.

Minimatics
433 Clyde Avenue

Distance: Adjacent
Direction: Northeast
Database(s) Listed On: CA CUPA
Based on review of the USGS Topographic Map, this site is located topographically down-gradient from the Project, and the estimated groundwater flow in the area of the site is to the north-northeast, which is away from the Project. The CA CUPA database indicates this site is registered as a hazardous waste generator. Furthermore, this site was not identified on any database that reports releases or spills, such as the LUST database. Based on the current regulatory status, lack of any reported releases, and estimated direction of groundwater flow, this site does not represent a recognized environmental condition associated with the Project.

The Cabinet Shop
425 Clyde Avenue
Distance: Adjacent
Direction: East
Database(s) Listed On: CA CUPA
Based on review of the USGS Topographic Map, this site is located topographically cross-gradient from the Project, and the estimated groundwater flow in the area of the site is to the north-northeast, which is away from the Project. The CA CUPA database indicates this site is registered as a hazardous waste generator. Furthermore, this site was not identified on any database that reports releases or spills, such as the LUST database. Based on the current regulatory status, lack of any reported releases, and estimated direction of groundwater flow, this site does not represent a recognized environmental condition associated with the Project.

Robert Saunders and Company
425 Clyde Avenue
Distance: Adjacent
Direction: East
Database(s) Listed On: UST, SWEEPS UST, Historical UST
Based on review of the USGS Topographic Map, this site is located topographically cross-gradient from the Project, and the estimated groundwater flow in the area of the site is to the north-northeast, which is away from the Project. The UST database indicates that two gasoline USTs were registered for this site which are both inactive. The UST database is a listing of facilities that are required to register their USTs for tracking purposes and are not necessarily sites with reported contamination incidents. Furthermore, this site is not identified on any database that reports spills or releases, such as the LUST database. Based on the current regulatory status, lack of any reported releases, and estimated direction of groundwater flow, this site does not represent a recognized environmental condition associated with the Project.

Applied Nanostructures
415 Clyde Avenue
Distance: Adjacent
Direction: East
Database(s) Listed On: CA CUPA
Based on review of the USGS Topographic Map, this site is located topographically cross-gradient from the Project, and the estimated groundwater flow in the area of the site is to the north-northeast, which is away from the Project. The CA CUPA database indicates this site is registered as a hazardous waste generator. Furthermore, this site was not identified on any database that reports releases or spills, such as the LUST database. Based on the current regulatory status, lack of any reported releases, and estimated direction of groundwater flow, this site does not represent a recognized environmental condition associated with the Project.

Greater Circuits Service
415 Clyde Avenue
Distance: Adjacent
Direction: East
Database(s) Listed On: RCRA-Generator, Historical UST
Based on review of the USGS Topographic Map, this site is located topographically cross-gradient from the Project, and the estimated groundwater flow in the area of the site is to the north-northeast, which is away from the Project. The RCRA-Generator database is a listing of facilities that are required to register for tracking purposes due to the amount of hazardous waste generated and are not necessarily sites with reported

contamination incidents. According to the RCRA-Generator database, the facility is a small quantity generator of hazardous wastes. The database indicates that there are no violations associated with the RCRA-Generator listing. The Historical UST database indicates that two waste USTs were registered for this site. Furthermore, this site is not identified on any database that reports spills or releases, such as the LUST database. Based on the current regulatory status, lack of any reported releases, and estimated direction of groundwater flow, this site does not represent a recognized environmental condition associated with the Project.

Chemocentryx
850 Maude Avenue
Distance: Adjacent
Direction: West
Database(s) Listed On: RCRA-Generator, CA CUPA, NY Manifest
Based on review of the USGS Topographic Map, this site is located topographically cross-gradient from the Project, and the estimated groundwater flow in the area of the site is to the north-northeast, which is away from the Project. The RCRA-Generator database is a listing of facilities that are required to register for tracking purposes due to the amount of hazardous waste generated and are not necessarily sites with reported contamination incidents. According to the RCRA-Generator database, the facility is a large quantity generator of hazardous wastes. The database indicates that there are violations associated with the RCRA-Generator listing, but the violations have all met compliance. The CA CUPA database indicates this site is registered as a hazardous waste generator. The MANIFEST database is a listing of facilities that have filed hazardous waste manifest documentation to the appropriate State regulatory agency. The MANIFEST database indicates that ethylene oxide was transported from the site in 1998, and ignitable wastes were transported from the site in 2001. This listing appears to cross reference the RCRA-LQG listing. Furthermore, this site is not identified on any database that reports spills or releases, such as the LUST database. Based on the current regulatory status, lack of any reported releases, and estimated direction of groundwater flow, this site does not represent a recognized environmental condition associated with the Project.

Arasor Corporation
411 Clyde Avenue
Distance: Adjacent
Direction: Southeast
Database(s) Listed On: RCRA-Generator, CA CUPA
Based on review of the USGS Topographic Map, this site is located topographically cross-gradient from the Project, and the estimated groundwater flow in the area of the site is to the north-northeast, which is away from the Project. The RCRA-Generator database is a listing of facilities that are required to register for tracking purposes due to the amount of hazardous waste generated and are not necessarily sites with reported contamination incidents. According to the RCRA-Generator database, the facility is a small quantity generator of hazardous wastes. The database indicates that there are no violations associated with the RCRA-Generator listing. The CA CUPA database indicates this site is registered as a hazardous waste generator. Furthermore, this site is not identified on any database that reports spills or releases, such as the LUST database. Based on the current regulatory status, lack of any reported releases, and estimated direction of groundwater flow, this site does not represent a recognized environmental condition associated with the Project.

Hotspur Technologies
880 Maude Avenue
Distance: Adjacent
Direction: South
Database(s) Listed On: CA CUPA
Based on review of the USGS Topographic Map, this site is located topographically up-gradient from the Project, and the estimated groundwater flow in the area of the site is to the north-northeast, which is towards the Project. The CA CUPA database indicates this site is registered as a hazardous waste generator. Furthermore, this site was not identified on any database that reports releases or spills, such as the LUST database. Based on the current regulatory status, lack of any reported releases, and estimated direction of groundwater flow, this site does not represent a recognized environmental condition associated with the Project.

E/M Lubricants
875 Maude Avenue

Distance: Approximately 300 feet (corrected)
Direction: Southwest
Database(s) Listed On: SLIC, Cortese, Hist Cortese
Based on review of the USGS Topographic Map, this site is located topographically up-gradient from the Project, and the estimated groundwater flow in the area of the site is to the north-northeast, which is towards the Project. The SLIC database indicates that this former metal coating facility has groundwater and soil contamination with a status of this site as "open-remediation" for as of 2002. Information obtained from the Water Resources Control Board (WRCB) website indicate that this site is currently undergoing onsite indoor air and sub-slab vapor monitoring in preparation for the installation of a vapor control system for the facility. Investigations, monitoring and remediation have been ongoing at this site since the later 1980s. Reports reviewed at the WRCB appear to indicate that some of the contamination at this site is from a former HP site located to the south of the E/M Lubricants site. Additionally, investigations at the site do not appear to indicate that onsite contamination has impacted off-site properties. Based on the current regulatory status and distance, this site does not represent a recognized environmental condition associated with the Project.

Meta Technologies
885 Maude Avenue
Distance: Approximately 340 feet (corrected)
Direction: South
Database(s) Listed On: ENVIROSTOR
Based on review of the USGS Topographic Map, this site is located topographically up-gradient from the Project, and the estimated groundwater flow in the area of the site is to the north-northeast, which is towards the Project. The ENVIROSTOR database indicates that this is an inactive site which need further evaluation. Based on the current regulatory status, lack of any reported releases, and distance, this site does not represent a recognized environmental condition associated with the Project.

Acurex Corporation
433 Clyde Avenue (485 Clyde Avenue)
Distance: Approximately 400 feet (corrected)
Direction: Northeast
Database(s) Listed On: ENVIROSTOR
Based on review of the USGS Topographic Map, this site is located topographically down-gradient from the Project, and the estimated groundwater flow in the area of the site is to the north-northeast, which is away from the Project. The ENVIROSTOR database indicates that investigations at this site have detected solvents in the groundwater and soils, but the contamination is isolated near a drum storage area. The status of this site is "referred to other agency" as of 1990. Information obtain from the California Water Resources Control Board website indicates that the actual address of this site is 485 Clyde Avenue and no cleanup activities exist for this site. Based on the current regulatory status, estimated direction of groundwater flow, and distance, this site does not represent a recognized environmental condition associated with the Project.

Moffett Field Naval Air Station (Closed)/Intel Corp. (Mountain View Plant)
Moffett Field NAS
Distance: Approximately 2,300 feet/1,245 feet
Direction: Northeast/West
Database(s) Listed On: NPL, CERCLIS, ROD, and DOD
Based on review of the USGS Topographic Map, this site is located topographically down-gradient from the Project, and the estimated groundwater flow in the area of the site is to the north, which is away from the Project. The plumes associated with these two sites are combined into the NEW study area. The National Priorities List (NPL) database indicates that the operations at this facility included work being done by the Department of Defense. The U.S. Navy operated an airbase at the site. Since the 1930s, activities at the site generated hazardous waste in the form of various solvents and sludges that were disposed on-site into ponds, landfills, and on the ground. As a result, soil and groundwater are contaminated with primarily VOCs including chlorinated compounds and toluene. The regulatory history indicates the initial discovery of the environmental concern occurred in 1984. The NPL database indicates this facility has a current status of "Final National Priorities List", as of 1987. A facility on the Final NPL List qualifies for federal funding and typically has significant remedial action requirements. The Department of Defense (DOD)database indicates the site is a closed military base. The CERCLIS database indicates the site was discovered in 1984 and was issued a high

priority site. The site was proposed to the NPL in April 1985. The site covers approximately 8,700 acres. This site is one of 19 sites in the South Bay Area. The sites are listed separately; however, the database indicates that the EPA planned to apply an area-wide approach. The soil and groundwater at this site were impacted with solvents and metals. There are several areas at this site that are undergoing remediation and monitoring activities. EMG reviewed a 2014 Annual Progress Report, which did not show migration of contaminants to the Project. Based on the estimated direction of groundwater flow and distance, this site does not represent a recognized environmental condition in connection with the Project.

The initial search distances employed for this assessment were defined by ASTM E 1527-13. However, due to the number of sites identified in the initial determination, only those sites determined by EMG to have the potential to have impacted the Project are discussed above. This determination was based on, but not limited to, such factors such as topographic gradient in relation to the Project, estimated groundwater flow direction at each site, distance between the listed site and the Project, and/or the type of site or materials involved. Based on these factors, the remaining off-site listed properties do not represent a recognized environmental condition associated with the Project.

10 ADJACENT PROPERTIES

The general vicinity of the Project consists of commercial land uses. The following adjacent properties were identified:

- The Project is bordered to the north by a vacant building (440 Clyde Avenue).
- The Project is bordered to the south by Teleflex (880 Maude Avenue).
- The Project is bordered to the east by Clyde Avenue. Farther east are an office/warehouse building (411 Clyde Avenue), a multi-tenant commercial building (415 Clyde Avenue), an office/warehouse building (425 Clyde Avenue) and Minimatics (433 Clyde Avenue).
- The Project is bordered to the west by Chemo Centryx (850 Maude Avenue).

The adjacent properties to the east, west and south were identified on the ENVIROSTOR, UST, Historical UST, RCRA-Generator and CA CUPA databases. More information regarding these sites is included in the Regulatory Review discussion (Section 9.2). Based on observations and available regulatory information, the adjacent property uses do not represent a recognized environmental condition associated with the Project.

Appendix A:

Photographic Documentation

1 : East side of building

2 : West side of building

3 : North side of building

4 : South side of building

5 : Office area

6 : Food packaging area

7 : Warehouse area

8 : Food packaging area

9 : Mezzanine storage area

KEY SITE MANAGER PRE-SURVEY QUESTIONNAIRE

Date: 09/14/2015
Name of person completing questionnaire: Mr. Jay Lee
Company Name: Four in One Company
Association with the property: Part owner
Length of association with property: 30 years
Phone Number: 650.964.9650
Fax Number:
Email Address:
Property Name/Address: 420 Clyde Ave., Mountain View, California 94043
EMG Project Number: 116668.15R-001.135

Directions: Please answer all questions to the best of your knowledge and in good faith. Mark the column corresponding to the appropriate response. Additional details necessary to explain any yes or unknown responses should be provided in the "Comments" column.
Note: U/NR indicates "Unknown" or "No Response", and "N/A" indicates not applicable.

QUESTION		RESPONSE			COMMENTS
		Y	N	U/NR	
1	Is the Project used for an industrial use?	X			
1B	Are any adjoining properties used for an industrial use?		X		
2a	To the best of your knowledge, has the Project been used for an industrial use in the past?	X			
2b	To the best of your knowledge, has any adjoining properties been used for an industrial use in the past?		X		
3a	Is the Project used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility?		X		
3b	Is any adjoining property used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility?		X		
4a	To the best of your knowledge, has the Project been used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility?		X		
4b	To the best of your knowledge, has any adjoining property been used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility?		X		
5a	Are there currently any automotive or industrial batteries, pesticides, paints, or other chemicals in individual containers of greater than five gallons in volume or fifty gallons in the aggregate, stored on or used at the Project?		X		
5b	To the best of your knowledge, have there been previously any automotive or industrial batteries, pesticides, paints, or other chemicals in individual containers of greater than five gallons in volume or fifty gallons in the aggregate, stored on or used at the Project?		X		
6a	Are there currently any industrial drums (typically 55 gallon) or sacks of chemicals located on the Project?	X			Food products
6b	To the best of your knowledge, have there been previously any industrial drums (typically 55 gallon) or sacks of chemicals located on the Project?		X		
7a	Are there currently any groundwater monitoring wells or other groundwater wells (i.e., potable drinking water wells) located on the Project?		X		

QUESTION		RESPONSE			COMMENTS
		Y	N	U/NR	
7b	To the best of your knowledge, have there been previously any groundwater monitoring wells or other groundwater wells (i.e., potable drinking water wells) located on the Project?		X		
8a	Has fill dirt been brought onto the Project which originated from a contaminated site?		X		
8b	Has fill dirt been brought onto the Project which is of an unknown origin?		X		
9a	Are there currently any pits, ponds or lagoons located on the Project in connection with waste treatment or waste disposal?		X		
9b	To the best of your knowledge, have there been previously any pits, ponds or lagoons located on the Project in connection with waste treatment or waste disposal?		X		
10a	Is there currently, any stained soil on the Project?		X		
10b	To the best of your knowledge, has there been previously any stained soil on the Project?		X		
11a	Are there currently any registered or unregistered storage tanks (above or underground) located on the Project?		X		
11b	To the best of your knowledge, have there been previously any registered or unregistered storage tanks (above or underground) located on the Project?	X			Two USTs removed in 1980s
12a	Are there currently any vent pipes, fill pipes or access ways indicating a fill pipe protruding from the ground on the Project or adjacent to any structure located on the Project?		X		
12b	To the best of your knowledge, have there been previously any vent pipes, fill pipes or access ways indicating a fill pipe protruding from the ground on the Project or adjacent to any structure located on the Project?		X		
13a	Are there currently any flooring, drains, or walls located at the Project that are stained by substances other than water or are emitting foul odors?		X		
13b	To the best of your knowledge, have there been previously any flooring, drains, or walls located at the Project that are stained by substances other than water or are emitting foul odors?		X		
14a	If the Project is served by a private well or non-public water system, have contaminants been identified in the well or system that exceed guidelines applicable to the water system?				Not Applicable.
14b	If the Project is served by a private well or non-public water system, has the well been designated as contaminated by any government environmental/health agency?				Not Applicable.
15a	Have you been informed of the past existence of hazardous substances or petroleum products with respect to the Project or any facility located on the Project?		X		
15b	Have you been informed of the current existence of hazardous substances or petroleum products with respect to the Project or any facility located on the Project?		X		
16a	Are there any environmental liens or governmental notification relating to past or current violations of environmental laws with respect to the Project or any facility located on the Project?		X		
16b	Have you been informed of the past existence of environmental violations with respect to the Project or any facility located on the Project?		X		
16c	Are you aware of any pending, threatened, or past litigation relevant to hazardous substances of petroleum products in, on or from the property?		X		

QUESTION		RESPONSE			COMMENTS
		Y	N	U/NR	
16d	Are you aware of any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on or from the property?		X		
16e	Are you aware of any notices from any governmental entity regarding any possible violation or environmental laws or possible liability relating to hazardous substances or petroleum products?		X		
17	Have there been any environmental site assessments of the Project that indicated the presence of hazardous substances or petroleum products on, or contamination of, the Project or recommended further assessment of the Project?		X		
18	Does the Project discharge waste water on or adjacent to the project, other than storm water, into a storm water sewer system?		X		
19	Does the Project discharge waste water on or adjacent to the project, other than storm water, or into a sanitary system?		X		
20	Have any hazardous substances or petroleum products, unidentified waste materials, tires, automotive or industrial batteries or any other waste materials been dumped above grade, buried and/or burned on the Project?		X		
21	Is there a transformer, capacitor or any hydraulic equipment for which there are any records indicating the presence of PCBs?		X		
22	Is there now or has there ever been any asbestos-containing materials (ACM), in any application, on the Project?		X		
23	Has there ever been any ACM testing conducted on the Project?		X

Summarized Historical Use:

USER QUESTIONNAIRE

EMG has been retained to conduct a Phase I Environmental Site Assessment (ESA) of the following property. The Phase I ESA will involve site observations, interviews, and a review of available documentation. To ensure the success of the assessment, and in accordance with the ASTM 05 Scope of Work for this assessment, which documents certain User responsibilities, we are submitting this questionnaire to help you meet those responsibilities. Please complete this questionnaire and return via email or by fax to 410-785-6220 (within one business day of receipt).

Date:
Name of person completing questionnaire: The user questionnaire was not returned
Company:
Length of association with property:
Phone Number:
Property Name/Address: 420 Clyde Ave., Mountain View, California 94043
EMG Project Number: 116668.15R-001.135

Directions: Please answer all questions to the best of your knowledge and in good faith. Mark the column corresponding to the appropriate response. Additional details necessary to explain any yes or unknown responses should be provided in the "Comments" column.
Note: U/NR indicates "Unknown" or "No Response", and "N/A" indicates not applicable.

QUESTION		RESPONSE			COMMENTS
		Y	N	U/NR	
1	Are you aware of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the property?				
2	Are you aware of any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on or from the property?				
3	Are you aware of any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products?				
4	Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law?				
5	Are you aware of any Activity and Use Limitations, such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law?				
6	As the user of this ESA do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?				
7	Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?				
8	Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as user				
8a	Do you know the past uses of the property?				
8b	Do you know of specific chemicals that are present or once were present at the property?				

QUESTION		RESPONSE			COMMENTS
		Y	N	U/NR	
8c	Do you know of spills or other chemical releases that have taken place at the property?				
8d	Do you know of any environmental cleanups that have taken place at the property?				
9	As the user of this ESA, based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of contamination at the property?				

OWNER QUESTIONNAIRE

EMG has been retained to conduct a Phase I Environmental Site Assessment (ESA) of the following property. The Phase I ESA will involve site observations, interviews, and a review of available documentation. To ensure the success of the assessment, and in accordance with the ASTM 05 Scope of Work for this assessment we are required to ask the following questions to the Owner or Owner representative. Please complete this questionnaire and return via email or by fax to 410-785-6220 (within one business day of receipt).

Contractor's License No. 460905

April 28, 1987

Mr. Dino Gonis
881 San Tomas Aquino Road
Campbell, CA 95008

Reference: Safety Specialists, Inc. Project No. 30104

Dear Mr. Gonis:

Safety Specialists, Inc. is pleased to submit this summary of soil investigation, located at 420 Clyde Street, Mountain View, California.

Soil samples from the excavated tanks area were collected by Safety Specialists, Inc.'s personnel on April 21, 1987. The purpose of this investigation was to evaluate the concentrations of total hydrocarbons in soil underneath the underground diesel and gasoline storage tanks (2000 gallon and 1000 gallon capacity respectively).

Two sets of soil samples from the excavated tanks area were collected. Soil samples G-1 and G-2 were collected from 2 feet depths, underneath the 1000 gallon capacity gasoline tank, while D-1 and D-2 soil samples were collected underneath the 2000 gallon capacity diesel tank.

Brass sleeves (1.92 inch internal diameter, 6 inch long) were used for collecting relatively undisturbed soil samples. Samples from appropriate depths were collected by manually pushing the brass sleeves into the soils.

Sampling tools (i.e. brass sleeves) prior to sample collection were thoroughly cleaned by washing in a trisodium phosphate (TSP) solution, followed by a rinse of distilled water. All brass sleeves used to collect soil samples were wrapped in aluminum foil, capped, labeled and immediately placed on Blue Ice, in order to minimize the escape of any volatiles present in the samples. Soil samples were subsequently sent to a State Certified laboratory in the same day of collection, accompanied by a Chain of Custody record.

Analysis performed on soil samples:

Soil samples G-1 and G-2 were individually analyzed according to EPA Test Method 8015, for total hydrocarbons (gasoline). Soil samples D1 and D2 were analyzed individually by EPA Test Method 8015 (diesel). EPA 8015 Test Method is a gas chromatographic method for nonhalogenated volatile organics.

Results

A hard copy of the analytical results as received from the laboratory is enclosed. The total hydrocarbon content in all samples (G-1, G-2, D-1 and D-2) were found to be below the detectable range of instrumentation which was indicated by a less than symbol in front of the quantitative value in the hard copy of the analytical results. Accordingly, this site is considered to be clean and need no further investigation.

If you have any questions or require any additional information, please do not hesitate to contact me.

Sincerely,

SAFETY SPECIALISTS, INC.

Youssef El-Shoubary

UNDERGROUND TANKS
OUT OF SERVICE AND REMOVAL PERMIT
(Revised February, 1987)

All underground tanks out of service for a period of one year shall be considered "abandoned" (not in use) and removed in accordance with Section 79.113, UFC and Section 24.11, MVMC.

Complete this application and submit all 7 pages for approval to the Fire Department. Photo copies and partial applications will not be accepted. Before tank removal, a Demolition Permit shall be obtained from Building Inspection located at City Hall, 444 Castro Street. All questions regarding the Demolition Permit and/or fees should be directed to Building Inspection at (415) 966-6313.

Tank Location Address: 420 Clyde ave

Tank Location Business Name: Envirotone Co. Inc.

Generator EPA ID Number: CAD 000828203

Property Owner Name/Representative: Jim H Lee

Address: Same as Tank location Phone No.: (415) 964-9650

Responsible Contractor: West Coast Tank Testing

Contractor Phone No.: (408) 379-3553 License No.: 505877

Applicant: Mark East Phone No.: 365-1937

Mailing Address: 881 South San Tomas Aquino Rd, Campbell 95008

PERMIT CONDITIONS/PROCEDURES

I. SAFEGUARD PROCEDURES

1. Tank(s) shall be emptied of all liquid product.

2. Vent line(s) shall be opened and maintained as such.

3. All other tank(s) opening(s) shall be secured against tampering.

4. Tank(s) with existing monitoring capability shall continue to be monitored for detecting leakage from the primary container per the same requirements for tanks in service.

5. The Hazardous Materials Management Plan (Form HM-3) shall be amended prior to having the tank(s) placed back into service.

6. Tank(s) without secondary containment shall be provided with a monitoring well(s) prior to being placed back into service. A permit from the Santa Clara Valley Water District (SCVWD) is required for construction of the monitoring well(s).

7. Tank(s) not in use for a period of one year shall be removed.

II. REMOVAL PROCEDURES

1. An inspection must be completed by the Fire Department before the tank(s) may be removed from the excavation. Appointments must be made 48 hours in advance. Call (415) 966-6378 to arrange for an inspection appointment. The Demolition Permit must be displayed at the job site.

2. Arrange for a State Certified laboratory to analyze the required soil sample(s) and for sampling by a qualified independent third party.

3. Tank(s) shall be emptied of all liquid product.

4. Render tank(s) inert with a minimum 15 pounds of dry ice per each 1,000 gallons of tank volume. Tank oxygen level must be reduced to less than 10 percent. Keep the dry ice sales receipts available at the tank site for the Inspector to review.

5. Cap all tank(s) opening(s) except for vent pipe(s) and allow a minimum 2 hours for oxygen displacement. Excavation and pipe removal may proceed during this period, but the tank(s) CANNOT be removed from the excavation.

PERMIT CONDITIONS/PROCEDURES, CONTINUED

6. Begin excavation to expose tank and pipelines for removal.

7. Remove all pipelines at the tank and cap or plug each tank opening immediately after the pipeline is disconnected. Leave a 1/8" to 3/8" pressure relief hole at the top of the tank for carbon dioxide venting.

8. After the 12-hour period for oxygen displacement has passed, call (415) 966-6378 for an inspection by the Fire Department.

9. Remove the tank(s) from the excavation and load on a vehicle(s). Position the tank(s) so the pressure relief hole is close to the top of the tank.

10. Check tank(s) for leaks or holes, and if present, seal immediately.

11. Properly transport the tank(s) outside of the City limits to the designated location:

    a. If tanks ARE NOT cleaned on-site, only a licensed Hazardous Waste hauler can transport them away from the site. Make sure the tank transporter has a Transporter EPA ID Number. The tank must be taken to a licensed Treatment, Storage, and Disposal (TSD) Facility.

    b. If tanks ARE cleaned on-site, the <u>cleaning effluent</u> can only be transported by a licensed Hazardous Waste Hauler. Make sure the effluent transporter has a Transporter EPA ID Number. The effluent must be taken to a licensed Treatment, Storage, and Disposal (TSD) Facility. In this case, the <u>tank</u> transporter need not be a Hazardous Waste hauler.

    c. In either case, the shipper (i.e. tank owner) must have a Generator EPA ID Number as well as a Hazardous Waste Manifest to ship the tank or effluent. A Generator EPA ID Number can be obtained by calling the Department of Health Services at (916) 324-1781.

12. Have the soil sample(s) taken and analyzed as required below.

13. Secure the area around the tank excavation site until soil analyses are complete. At that time, the FIRE DEPARTMENT will notify you as to whether the excavation may be back-filled or further soil removal will be required.

14. Have the monitoring well(s) destroyed as required. When an abandoned well is destroyed, a permit from SCVWD is required.

15. An additional $25 per inspection will be charged for each reinspection.

(The following sections are to be completed by the Fire Department)

III. SOIL SAMPLING PROCEDURES

1. A minimum of 4 representative soil samples shall be taken from the area beneath the tank(s). (~2 per tank). Additional samples: 1 per 20 feet of piping.

2. All soil sampling shall be completed by a qualified independent third party to include delivery of the samples to a State Certified laboratory. A chain of custody must be maintained throughout the sample transfer process.

3. Soil samples MAY NOT be composited by the laboratory and analyzed together.

4. Testing of samples shall employ EPA standard procedures in all appropriate cases.

5. Laboratory test analysis shall test for:

   X GC scan for Gasoline, including BTX

   _____ GC scan for Diesel

   _____ GC scan for Waste Oil, Gasoline, BTX

   _____ GC scan for Solvents: _____

   _____ pH, Heavy Metals: _____

   _____ _____

6. The applicant shall have a copy of ALL LABORATORY TEST RESULTS AND CHAIN OF CUSTODY RECORD mailed DIRECTLY to:

   Mountain View Fire Department
   Hazardous Materials Section
   1000 Villa Street
   Mountain View, CA 94041

   Underground tank removals cannot be completed UNTIL the Fire Department receives a hard copy of all laboratory test results and chain of custody record.

   IF CONTAMINATION IS FOUND, A CLEAN-UP PROPOSAL MUST BE SUBMITTED TO OUR OFFICE WITHIN 10 DAYS OF RECEIPT OF ANALYSIS.

7. Samples shall be taken only by the modified California sampler technique.

UNDERGROUND TANK REMOVAL AUTHORIZATION

When properly validated, this is an authorized permit subject to the conditions indicated above.

****This Permit Expires Sixty (60) Days From Date Of Authorization****

Authorized By — **Date 3/26/87

PROPOSAL

WEST COAST TANK TESTING
5745 Meridian Ave
San Jose CA 95118

No. 1
Date 2-16-87
Sheet No.

Proposal Submitted To:

Name Four-in-one Co., Inc.
Street 420 Clyde Ave
City Mountain View, CA 94043
State
Phone (415) 964-3660

Work To Be Performed At:

Street
City State
Date of Plans
Architect

We hereby propose to furnish the materials and perform the labor necessary for the completion of

1. Remove concrete over tanks
2. Vacuum tanker Remove one 2,000 gallon tank, Remove one two 1,000 gallon tank
3. Soil sampler and time and material
4. All dirt and debris to be pushed back into excavated hole unless ground is contaminated.
5. If ground is contaminated, dirt will be removed at $25 per cubic yard. There will be an extra charge depending upon the amount of contaminated soil removed for Trucking fees Excavation fees, soil sampler, engineer and backfill.
6. Replace all concrete disturbed by this project with concrete
7. All permits required by interested agencies
8. Excavation procedures are based on normal soil conditions. In the event of unstable soil underground structures, cables, conduit, debris, rock, or high water table are encountered the contractor shall not be held responsible. You will be notified of the problem and corrective measures can be done on a time and material basis until abnormal conditions are corrected.

All material is guaranteed to be as specified, and the above work to be performed in accordance with the drawings and specifications submitted for above work and completed in a substantial workmanlike manner for the sum of Dollars ($4,400.00).

with payments to be made as follows: $2,000.00 to be paid upon removal of concrete, $1,200 to be paid upon removal of tanks, $200 to be paid upon completion of the job. Contaminated soil and extra charges to be paid upon removal of the soil

Any alteration or deviation from above specifications involving extra costs, will be executed only upon written orders, and will become an extra charge over and above the estimate. All agreements contingent upon strikes, accidents or delays beyond our control. Owner to carry fire, tornado and other necessary insurance upon above work. Workmen's Compensation and Public Liability Insurance on above work to be taken out by

Respectfully submitted Mark David West

Per

Note—This proposal may be withdrawn by us if not accepted within 30 days.

ACCEPTANCE OF PROPOSAL

The above prices, specifications and conditions are satisfactory and are hereby accepted. You are authorized to do the work as specified. Payment will be made as outlined above

RE: MONITORING OF UNDERGROUND TANKS

Dear Mr. Lee:

In response to your phone call, I have attached the options you have for your monitoring your underground storage tanks. If you choose not to monitor the tanks, then they must be removed.

I have enclosed a listing of companies which provide various hazardous materials related services. If you want to use a monitoring device not yet approved by the City of Mountain View, you must provide us with information regarding the system and in what manner it is to be used (i.e. to meet the line monitoring for option 5).

If you choose to remove your tanks, an Underground Tank Removal Permit application form must be filled out, approved by us, then taken to the building department for a demolition permit.

Please let me know if you have any questions.

Sincerely,

Cindy Sundquist

UNDERGROUND TANK VIOLATIONS AT 420 CLYDE AVENUE--FOUR-IN-ONE COMPANY

Dear Mr. Lee:

The Mountain View Fire Department has informed this office that this location has underground tanks which are not being monitored at the present time, and no removal plans have been submitted. It has requested that this office file a criminal complaint against you for the following violations of the Mountain View Municipal Code:

Section 24.3 of the Municipal Code requires a hazardous material storage permit.

Section 24.10 requires monitoring of underground tanks.

The violation of these sections has specifically been made a criminal offense which could result in your arrest, conviction and imprisonment for up to six months in jail, along with a $500 fine. Additionally, you could be found guilty of a separate offense for each day that these violations have been committed or permitted. Further injunctive action could be filed to prohibit continued or further use of underground tanks. If this matter is not corrected by you on or before 15 days from the date of this letter, this office will file a criminal complaint against you. If you wish to avoid such harsh criminal penalties, please comply immediately.

I sincerely hope that legal action against you may be avoided. If improvements are not made to install the appropriate monitoring systems, the tanks will have to be emptied and removed in accordance with local regulations. A closure plan must be filed and approved by the Mountain View Fire Department, Hazardous Materials Section. If you have any questions concerning this

matter, please do not hesitate to call this office or the Mountain View Fire Department at (415) 966-6378 at your earliest convenience.

Very truly yours,

Peter D. Bulens
City Attorney

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 03/26/2015 has revealed that there are 4 NPL sites within approximately 1 mile of the target property.

Site	Address	Dist / Dir	Map ID	Page
MOFFETT NAVAL AIR ST	*MOFFETT FIELD NAS*	*1/4 - 1/2 (0.435 mi.) NNE*	*0*	*10*

FAIRCHILD SEMICONUCT	*313 FAIRCHILD DRIVE*	*1/2 - 1 (0.642 mi.) NW*	*S74*	*176*

Federal CERCLIS list

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 10/25/2013 has revealed that there are 4 CERCLIS sites within approximately 0.5 miles of the target property.

NEC	*501 ELLIS ST*	*1/4 - 1/2 (0.326 mi.) NW*	*51*	*135*

Federal CERCLIS NFRAP site List

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 10/25/2013 has revealed that there are

3 CERC-NFRAP sites within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 03/10/2015 has revealed that there are 3 CORRACTS sites within approximately 1 mile of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/10/2015 has revealed that there are 2 RCRA-LQG sites within approximately 0.125 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/10/2015 has revealed that there are 6 RCRA-SQG sites within approximately 0.125 miles of the target property.

State- and tribal - equivalent NPL

CA RESPONSE: Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

A review of the CA RESPONSE list, as provided by EDR, and dated 08/03/2015 has revealed that there is 1 CA RESPONSE site within approximately 1 mile of the target property.

State- and tribal - equivalent CERCLIS

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 08/03/2015 has revealed that there are 29 CA ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

CA LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the State Water Resources Control Board Leaking Underground Storage Tank Information System.

A review of the CA LUST list, as provided by EDR, and dated 06/15/2015 has revealed that there are 12 CA LUST sites within approximately 0.5 miles of the target property.

CA HIST LUST: A listing of open and closed leaking underground storage tanks. This listing is no longer updated by the county. Leaking underground storage tanks are now handled by the Department of Environmental Health.

A review of the CA HIST LUST list, as provided by EDR, and dated 03/29/2005 has revealed that there

are 8 CA HIST LUST sites within approximately 0.5 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Hazardous waste / Contaminated Sites

CA HIST Cal-Sites: Formerly known as ASPIS, this database contains both known and potential hazardous substance sites. The source is the California Department of Toxic Substance Control. No longer updated by the state agency. It has been replaced by ENVIROSTOR.

A review of the CA HIST Cal-Sites list, as provided by EDR, and dated 08/08/2005 has revealed that there are 3 CA HIST Cal-Sites sites within approximately 1 mile of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 2 EDR US Hist Auto Stat sites within approximately 0.25 miles of the target property.

Summary Details:

Conditions at proposal April 10, 1985): Moffett Naval Air Station covers 8,700 acres in Sunnyvale, Santa Clara County, California. In the past, various solvents and sludges were disposed on-site into ponds and landfills and onto the ground.As a result, soil and ground water on-site are contaminated. The major contaminants in ground water are volatile organic compounds. About 272,000 people depend on wells within 3 miles of the station as a source of drinking water. Moffett Naval Air Station is participating in the Installation Restoration Program IRP), established in 1978. Under this program, the Department of Defense seeks to identify, investigate, and clean up contamination from ha ardous materials. The Navy has completed Phase I records search) of the program and is beginning Phase II remedial investigation). Moffett Naval Air Station is in the South Bay Area of San Francisco. In October 1984, 19 non-Federal sites in the area were proposed for the NPL. Facilities at these sites have used a variety of toxic chemicals, primarily chlorinated organic solvents, which contaminate a common ground water basin. Although these sites are listed separately, EPA intends to apply an area-wide approach to the problem as well as take site-specific action as necessary. Status July 22, 1987): In May 1985, the California Regional Water Quality Control Board adopted Waste Discharge Requirements for Moffett Naval Air Station.The requirements outline specific tasks and compliance dates Moffett must follow to define the full extent of contamination in soils and ground water. In April 1986, the Navy released the final report for the verification step of Phase II.Moffett is revising the quality assurance project plan and sample plan for the characteri ation step of Phase II. Within the boundaries of this Federal facility, including this specific site, there are no areas subject to the Subtitle C corrective action authorities of the Resource Conservation and Recovery Act. Therefore, this Federal facility site is being placed on the Federal section of the NPL.

Site Description: Moffett Field was continuously operated by the U.S. military after it was commissioned in 1933 to support the West Coast Dirigibles of the lighter than air (LTA) program until 1994. In 1939, a permit was granted to Ames Aeronautical Laboratory to use part of the station. In 1942, the station was returned to Navy control and was named Naval Air Station Moffett Field. In late 1942, the heavier than air (HTA) program was initiated and began to take precedence over the LTA program. In 1945, the HTA program was moved and Moffett Field was used as a major overhaul and repair base. In 1949, the station became home to the Military Air Transport Service Squadron. By 1950, Moffett Field was the largest naval air transport base on the West Coast, and in 1953 it became home to all Navy fixed-wing land-based antisubmarine efforts. A weapons department was formed on the base in 1954, and in February 1966 the base activated its high speed refueling facilities. During the station reorganization in 1973, it became the headquarters of the Commander Patrol Wings, US Pacific Fleet. During the 1980s and early 1990s, the mission of Moffett Field was to support antisubmarine warfare training and patrol squadrons, and it became the largest P-3 Orion patrol aircraft base in the world with nearly 100 aircraft. No heavy manufacturing or major aircraft maintenance was conducted, but a significant amount of unit and intermediate

MOFFETT NAVAL AIR STATION (Continued) **1000228683**

level maintenance occurred. In April 1991, Moffett Field was designated for closure, and on July 1, 1994, control of the base was transferred to National Aeronautics and Space Administration (NASA). Wastes have been generated at Moffett Field through maintenance operations, fuel management, and fire training since the early 1930s. Chemicals of potential concern include waste oils and jet fuels; solvents and cleaners; washing compounds; and lesser amounts of gasoline, hydraulic fluids, asbestos, paints, pesticides, battery acid, and PCBs. Wastes were disposed of in unlined landfills, drained through drainage ditches and unpaved areas, and stored temporarily in unlined wastewater ponds. In addition, some underground storage tanks (USTs) and sumps were found to have leaked petroleum hydrocarbons and fuels, and lesser amounts of waste oils and solvents. Environmental studies were initiated at Moffett Field in 1984. The Navy began conducting these environmental restoration activities as part of the Department of Defense Installation Restoration Program (IRP). The Navy conducted an initial assessment study (IAS) in 1984 to gather data on the past use and disposal of hazardous materials at the base. Nineteen sites were identified as potential sources of wastes, including nine sites identified in the IAS and 10 sites added during subsequent investigations. Five additional sites were identified during field investigation in the early 1990s. The Environmental Protection Agency (EPA) proposed placing Moffett Field on the National Priorities List (NPL) in June 1986, and it was placed on the NPL in 1987. The Remedial Investigation and Feasibility Study (RI/FS) is coordinated through the August 1990 Federal Facility Agreement (FFA) with EPA and the State of California. The RI was implemented in two phases. The Phase I characterization was complete in August 1990. The Phase II investigations were initiated in 1990 to provide more detailed, site specific data. In October, 1992 EPA determined that the aquifers on the western side of Moffett Field were co-mingled with a regional volatile organic compound (VOC) plume emanating from the Middlefield-Ellis-Whisman (MEW) Superfund site south of Moffett Field. EPA determined that these aquifers were subject to the 1989 EPA Record of Decision (ROD) already written for the MEW site and would be remediated per the MEW ROD. Consequently, OU4 (West-side Aquifers) was deleted and OU5 (East-side aquifers) was modified to include all aquifers not part of the regional plume. In May 1989, the Navy developed a community relations plan (CRP). The OU5 RI report was released in August 1993. The OU5 FS report was released in August 1995 Moffett Field. The proposed plan for remediation of OU5 was released to the public in October, 1995. A public comment period was held from October 27, 1995 through November 30, 1995 with a public meeting on November 16, 1995. Moffett Field has been continuously operated by the U.S. military since it was commissioned in 1933. In 1945, Moffett Field was used as a major overhaul and repair base. In 1954, a weapons department was formed at the base, and then during the 1980s and early 1990s, the mission of Moffett Field was to support antisubmarine warfare training and patrol squadrons. No heavy manufacturing or major aircraft maintenance was conducted at Moffett Field, but a significant amount of unit- and intermediate-level maintenance occurred. In April 1991, Moffett Field was designated for closure as an active military base under the Department of Defense Base Realignment and Closure (BRAC) program. After closure, control of the base was transferred to the National Aeronautics and Space Administration (NASA), however, the Navy will continue with environmental restoration activities and remain responsible for remediating Navy contaminant sources. Wastes have been generated at Moffett Field through maintenance operations, fuel management, and fire training since the early 1930s. Chemicals of potential concern include waste oils and jet fuels; solvents and cleaners; washing compounds; and lesser amounts of gasoline, hydraulic fluids, asbestos, paints, pesticides, battery acid, and polychlorinated biphenyls (PCBs). Wastes were disposed of in unlined

MOFFETT NAVAL AIR STATION (Continued) **1000228683**

landfills, drained through drainage ditches and unpaved areas, and stored temporarily in unlined wastewater ponds. In addition, some underground storage tanks and sumps (many of them now removed) were found to have leaked petroleum hydrocarbons and fuels, and lesser amounts of waste oils and solvents. Environmental studies were initiated at Moffett Field in 1984 with an initial assessment of past use and disposal of hazardous materials. Nineteen sites were identified as potential waste sources. Remedial Investigation/Feasibility Study (RI/FS) work was coordinated through the August 1990 Federal Facility Agreement with EPA and the State. The Phase I RI characterization was completed in August 1990. The more detailed Phase II investigations identified the need to separate the site into six Operable Units (OUs). NAS Moffett Field is located in California, 35 miles south of San Francisco, 10 miles north of San Jose, and about 1 mile south of the southwestern edge of San Francisco Bay, in Santa Clara County, California. The facility encompasses 2,200 acres in Santa Clara County; the facility address is Moffett Field, California 94035. NAS Moffett Field is bounded by saltwater evaporation ponds to the north, Stevens Creek to the west, U.S. Highway 101 (Bayshore Freeway) to the south, and the Lockheed Martin Aerospace Center to the east. Several industrial facilities are located south of the Bayshore Freeway. In particular, a group of companies is located in a 0.5-square-mile area, bounded by U.S. Highway 101. Middlefield Road, Ellis Street, and Whisman Road (MEW). This area is known as the MEW Superfund study area and contains three Superfund sites. Moffett Field also borders the cities of Mountain View and Sunnyvale, California. The City of Sunnyvale is located south and east; the City of Mountain View borders Moffett Field on the south and west. The NASA Ames Research Center is located west and north of the runways. The U.S. military continuously operated NAS Moffett Fiefld as Naval Air NAS Sunnyvale from its date of commission in April 1933 until it was transferred to NASA on July 1, 1994. The Navy used the station as an air base until October 1935, when it was transferred to the Army Air Corps for use as a training base. During the Army's tenure, the National Advisory Committee for Aeronautics (NACA) established Ames Research Center in December 1939 on land adjacent to MFA. The base returned to Navy control and was renamed NAS Moffett Field in April 1942. By 1950, NAS Moffett Field was the largest naval air transport base on the West Coast and became the first all-weather air station. In 1958, NACA became NASA and Ames Research Center became the NASA Ames Research Center. Between 1973 and 1994, the mission of NAS Moffett Field involved support of antisubmarine warfare training and patrol squadrons. At one point, MFA was the largest P-3 base in the world, with nearly 100 P-3C Orion patrol aircraft. These aircraft were assigned to nine squadrons, supported by 5,500 military, 1,500 civilian, and 1,000 reservist personnel. No heavy manufacturing or major aircraft maintenance was conducted at NAS Moffett Field during the last mission; instead, mostly unit- and intermediate-level maintenance occurred. In April 1991, the station was designated for closure as an active military base under the U.S. Department of Defense (DoD) Base Realignment and Closure (BRAC) program. NASA assumed control of the base beginning in July 1994. Military housing units and associated facilities were transferred to Onizuka Air Force Base at the same time. Since the early 1980s, DoD has been identifying, evaluating, and controlling the spread of contaminants from historical hazardous waste sites as part of the Installation Restoration Program (IRP) at MFA. This work is coordinated through a Federal Facility Agreement with the U.S. Environmental Protection Agency (EPA) and the California Regional Water Quality Control Board, San Francisco Bay Region (RWQCB). The Navy is the lead agency for this work. The Navy and NASA signed a memorandum of understanding (MOU) on December 22, 1992, concerning environmental activities at the station. Under the MOU, the Navy will continue with environmental restoration and will remain responsible for remediating Navy contaminant sources. NASA is

MOFFETT NAVAL AIR STATION (Continued) **1000228683**

responsible for non-environmental operations and ongoing environmental compliance. NASA is planning to develop a world-class, shared-use educational and research and development campus at Moffett Field, California, in association with government entities, academia, industry, and nonprofit organizations. The NASA Ames Development Plan includes proposed development of four areas: -NASA Research Park: A 213-acre parcel located between Ames Research Center facilities, MFA, U.S. Highway 101, and the military housing area -Eastside/Airfield District: A 952-acre parcel that includes MFA and property located east of the airfield -Bay View District: A 95-acre parcel located north of the Ames Research Center facilities -Ames Research Center Facilities: A 240-acre parcel comprising the existing NASA Ames Research Center campus Surface water channels and ditches will be maintained for drainage purposes. Groundwater is not currently used at MFA. The only exception is water from a single well screened in the deep C aquifer (deeper than 155 feet below ground surface) used by NASA for fire fighting, composting, and agricultural purposes. This well is located in the northwestern corner of the Ames Research Center area. Public water is supplied to MFA from the Hetch Hetchy aqueduct owned by the City of San Francisco. Groundwater is unlikely to be used as a water supply source in the future because of poor ambient quality and low formation yield to a well. NASA's draft Programmatic Environmental Impact Statement does not consider development of groundwater as a future water supply source. EPA proposed MFA as a National Priorities List (NPL) site in June 1986, and MFA was included on the NPL in July 1987. Inclusion on the NPL initiated the Remedial Investigation (RI) and Feasibility Study (FS) process, as required by the CERCLA. The Navy began environmental studies at MFA in 1984. Twenty sites were originally identified as IRP sites at MFA. Investigations during the station-wide RI identified six additional, potentially contaminated sites. Only three sites were assigned numbers (Sites 21 through 23), and none of the additional sites was designated as an operable unit (OU). The six additional sites, which were investigated under the CERCLA program, are: Site 21, Site 22, Site 23, the Weapons Storage Bunkers, the former Industrial Wastewater Flux Ponds, and an ephemeral wetland located at an improperly abandoned agricultural well. Later, the Navy defined four additional sites (Sites 25 through 28), originally included as parts of other sites under previously established OUs. These sites include Site 25, the Eastern Diked Marsh and stormwater retention pond (included in OU6); Site 26, the east side aquifers (included in OU5); Site 27, the Northern Channel (included in OU6); and Site 28, the west side aquifers. All of the sites identified were investigated under the CERCLA program. The current OU definitions and study areas are: OU1: Soils and groundwater at Sites 1 and 2 landfills OU2-East: Soils at Sites 3, 4, 6, 7, 10 (runways), 11, and 13 OU2-West: Soils at Sites 8, 10 (Chase Park), 14-North, 16, 17, and 18 OU5: Aquifers on the eastern side of MFA that are not part of the regional plume or OU1 (Site 26) OU6: Wetland areas, Sites 25 and 27 Petroleum Sites: Sites 5, 9, 12, 14-South, 15, 19, 20, and 24 Additional Sites: Sites 21, 22, 23, Weapons Storage Bunkers, upland soil areas, Human Health Risk Assessment (HHRA) Exposure Area 4158, former Industrial Wastewater Flux Ponds, and the abandoned former agricultural well. Human health and ecological risk assessments were conducted as part of the station-wide RI. As agreed upon by the Navy, EPA, and RWQCB, six sites were recommended for No Action (formally referred to as No Further Action) in the 2001 Final Addendum to the Revised Final Station-wide Feasibility Study Report and have been addressed separately from the IR program. These sites are: Site 23, Golf Course Fill Area 3; Weapons Storage Bunkers; Former Industrial Wastewater Flux Ponds; Former Abandoned Agricultural Well; Upland Soils (areas that support upland plant communities); Station-wide Remedial Investigation HHRA Exposure Areas 3782, 3785, 3974, 4090, and 4158. The addendum to the report provides additional documentation to support the No Action

MOFFETT NAVAL AIR STATION (Continued) **1000228683**

recommendations for these sites. Two of the sites, Industrial Wastewater Flux Ponds and Former Abandoned Agricultural Well, were closed with concurrences from EPA or Santa Clara Valley Water District; therefore, they were not considered further in the CERCLA process. Three of the HHRA exposure areas, 3782, 3785, and 3974, are being addressed as part of other remedial actions or maintenance programs. The remaining No Action Sites (Site 23-Golf Course Fill Area 3, Weapons Storage Bunkers, Upland Soils, HHRA Exposure Area 4090, and HHRA Exposure Area 4158) were included in the Proposed Plan. The Proposed Plan was made available to the public during a formal comment period from December 15, 2001 through January 28, 2002. A public meeting was held on January 10, 2002 and a responsiveness summary was issued on May 28, 2002. As the proposed plan and earlier versions of the ROD suggest, HHRA Exposure Area 4090 was listed as a No Action Site even though this area was included in the station-wide ecological assessment for wetland areas being addressed under a separate action (Site 27). Because there are potential risk issues associated with this site, the HHRA Exposure Area 4090 is no longer identified as a No Action Site in this ROD. Instead, this site will be addressed under the ongoing Site 27 investigation. Site 23 Golf Course Fill Area: Site 23 is located on 2 acres, just south of the Northern Weapons Bunker area, in the western portion of the golf course. Golf Course Fill Area 3 is shown in aerial photographs taken in 1977 as one of several ponds on the golf course. Three of the ponds on the golf course were dry, and some debris was visible in the area of Golf Course Fill Area 3 in an aerial photograph taken in 1987. No information on the source of the material discarded in this area could be found. However, numerous small piles of soil, concrete, disaggregated asphalt, grass clippings, and mulch were identified during a site walk conducted in March 1994. In addition, some airplane parts, consisting of several pieces of aluminum (brought to Site 23 for disposal after a plane crashed at MFA), and some electronics equipment were found in the area. A magnetometer survey of this area was conducted in 1995. The results of the survey do not indicate that significant quantities of metallic materials were buried at the site. This evidence instead suggests that the area was never trenched and was used primarily for incidental disposal of excess soil and debris from the golf course. A No Further Action ROD was completed for Site 23 on August 19, 2002. Weapons Storage Bunkers: There are two groups of weapons storage bunkers: the Northern Weapons Storage Bunkers and the Southern Weapons Storage Bunkers. The weapons storage bunkers are located in two fenced areas in the northeastern portion of MFA, near the golf course. The Northern Weapons Storage Bunkers cover about 5 acres and include seven high-explosive magazines. The Southern Weapons Storage Bunkers cover about 10 acres and include nine high-explosive magazines. Each magazine consists of a heavy-gauge, corrugated steel arch that forms its roof and sides. The floors of the magazines are concrete, without drains. Each magazine is about 30 feet long, 20 feet wide, and 20 feet high. The magazines are covered with soil, forming long, earth-covered bunkers. Only one magazine in the Northern Weapons Storage Bunkers is still used and stores ammunition for the California Air National Guard. The Northern Weapons Storage Bunkers contained two diesel storage tanks. One of the tanks was removed in 1992, and the other tank was removed in 1994. No source for or evidence of contamination was identified in the Southern Weapons Storage Bunkers. A site inspection at the Northern Weapons Storage Bunkers in May 1994 found that the cement apron on the southern side was free of staining or significant cracking, and the buildings were released for unrestricted use. The high-explosive magazines at the Northern Weapons Storage Bunkers also were investigated for radioactive contamination; however, no radioactivity was found. An inventory revealed two diesel storage tanks in this area. Tank 22 was a 600-gallon underground storage tank that held diesel fuel and was removed in 1992; Tank 102, a 55-gallon aboveground storage tank

MOFFETT NAVAL AIR STATION (Continued) **1000228683**

that contained diesel fuel, was removed in April 1994. Tanks 22 and 102 are evaluated and closed separately from CERCLA sites under the policy and guidance of RWQCB. Closure of Tank 22 is documented in the Phase I petroleum sites closure report. Tank 102 is being investigated during the Phase III tank investigation. The Phase III investigation involves tanks that require further assessment for closure. This work may include document research, sampling, and geophysical surveys. The results of this work will be included in the Phase III petroleum sites closure report. No soil samples were collected at the Southern Weapons Storage Bunkers, because no source for, or evidence of, soil contamination was identified. Based on the Navy's stated historical use of the bunkers, the Southern Weapons Storage Bunkers were not tested for radioactive contamination before they were transferred to the California Air National Guard in 1994. There is no reason to suspect that these facilities were used for storage of radioactive materials. Groundwater in the area of the weapons storage bunkers is addressed separately as part of OU5. OU5 includes all aquifers that are not affected by the regional plume in groundwater. As part of the RI for OU5, data for groundwater samples from all wells on the eastern side of the base, including monitoring wells near the weapons storage bunkers, were evaluated and are addressed in the OU5 ROD. A No Further Action ROD was completed for the Weapons Storage Bunkers August 19, 2002. Upland Soils: Upland soils are areas of MFA that support upland plant communities and include virtually all areas at the airfield that are not covered by ditches, marshes, or wetlands. Human activity has been significant in these areas. Certain areas of upland soils, such as open grassy areas and the edges of golf courses and recreational fields, are actively managed as burrowing owl habitat, but the majority of upland soils areas are either paved, landscaped, or have been altered substantially by land use during the last 100 years. A No Further Action ROD was completed for the Upland Soils area on August 19, 2002. Area 4158: HHRA Exposure Area 4158 is located slightly south, but almost adjacent to IRP Site 11 - Engine Test Stand Area. A No Further Action ROD was completed for the Human Health Risk Assessment Area 4158 on August 19, 2002. OU04 The Middlefield/Ellis/Whisman (MEW) Study Area is located in Santa Clara County in the city of Mountain View, California. The site is divided into a Local Study Area (LSA) and a Regional Study Area (RSA). The LSA consists of three National Priority List (NPL) sites (Fairchild, Intel and Raytheon), as well as several non-Superfund sites. The LSA encompasses about 1/2 square mile of the RSA and contains primarily light industrial and commercial areas, with some residential areas west of Whisman Road. The RSA encompasses approximately 8 square miles and includes Moffett Naval Air Station (an NPL site) and National Aeronautics and Space Administration (NASA) Ames Research Center, along with light industrial, commercial, agricultural, park, golf course, undeveloped land, residential, motel and school land uses. Various owners or occupants in the area around the intersections of Middlefield Road, Ellis Street, Whisman Road, and the Bayshore Freeway (U.S. Highway 101), are or were involved in the manufacture of semiconductors, metal finishing operations, parts cleaning, aircraft maintenance, and other activities requiring the use of a variety of chemicals. Site investigations at several of these facilities have revealed the presence of toxic chemicals in the subsurface soils and groundwater. To investigate the extent of groundwater contamination emanating from the LSA, and soil contamination at their respective facilities, Fairchild, Intel, and Raytheon performed a Remedial Investigation and a Feasibility Study of potential remedial alternatives under the direction of EPA. There are no natural surface drainage features within the Local Study Area. The nearest significant natural surface drainage features of the Regional Study Area are Stevens Creek to the west and Calabazas Creek to the east. Calabazas Creek is located approximately four miles east of the MEW Study Area. Stevens Creek forms the western boundary of the Regional Study

MOFFETT NAVAL AIR STATION (Continued) **1000228683**

Area. Both discharge into the San Francisco Bay. Surface water runoff from most of the RSA and all of the LSA south of the Bayshore Freeway is intercepted by a storm drain system and is discharged into Stevens Creek. To the north of the Bayshore Freeway, most of the runoff from Moffett Field Naval Air Station is collected by a storm drain system that ultimately discharges to Guadalupe Slough of San Francisco Bay. Runoff from the northwestern portion of Moffett Field discharges into Stevens Creek. The Local and Regional Study Areas are underlain by a thick sequence of unconsolidated sediments deposited into a structural depression. The sediments are comprised of alluvial fan, estuarine, and bay mud deposits. Repeated variations in sea levels resulted in a complex sedimentary sequence characterized by irregular interbedding and interfingering of coarse and fine grained deposits. Groundwater aquifers at the site are subdivided into shallow and deep aquifer systems, separated by a laterally extensive regional aquitard. The shallow aquifer system comprises aquifers and aquitards to a depth of approximately 160 feet below the surface. Within the shallow system four primary hydrogeologic aquiferzones have been identified based upon the occurrence of aquifer material and a similar depth below the surface. The shallow aquifer system is comprised of the A-aquifer and the underlying B1-, B2- and B3- aquifers. The regional B-C aquitard separates the B3-aquifers from the C-aquifer and the deep aquifer system. Current groundwater flow in aquifer zones above the B-C aquitard is generally to the north, toward San Francisco Bay. During 1981 and 1982, preliminary investigations of facilities within the LSA indicated significant concentrations of contaminants in soil and groundwater. By 1984, the Fairchild, Intel and Raytheon sites, located within the LSA, were proposed for the NPL. By 1985, five companies within the LSA (Fairchild, Intel, Raytheon, NEC, and Siltec) initiated a joint investigation to document and characterize the distribution of chemicals emanating from their facilities. In April 1985, the California Regional Water Quality Control Board - San Francisco Bay Region (RWQCB) adopted Waste Discharge Requirements (WDRs) for each of the five companies. The primary cause of the subsurface contamination was from leaking storage tanks and lines, and poor waste management practices. On August 15, 1985, Fairchild, Intel, and Raytheon entered into a Consent Order with the EPA, the RWQCB, and the California Department of Health Services (DHS). Since signing of the Consent Order, the three companies have carried out an extensive Remedial Investigation and Feasibility Study (RI/FS) of chemicals emanating from the LSA and soil contamination at their respective facilities. Work has been performed under the supervision of EPA, the RWQCB, DHS, and the Santa Clara Valley Water District (SCVWD). Prior to and during the site investigation, the companies have been conducting interim cleanup activities at the site. These interim remedial actions include tank removals, soil removal and treatment, well sealing, construction of slurry walls, and hydraulic control and treatment of local groundwater. NEC and Siltec declined to enter into the Consent Order and were placed under RWQCB enforcement authority. The three companies followed an approved Quality Assurance and Quality Control (QA/QC) Plan and approved Sampling Plans. In addition, split samples were collected by EPA from selected wells and these results were compared with the companies' sampling results. EPA determined that the companies' data quality was adequate for the purpose of the RI/FS. The MEW Remedial Investigation Report was concluded in July, 1988. The draft Feasibility Study and EPA's Proposed Plan were presented to the community for review and public comment in November, 1988. In May 1989, Special Notice letters for the Remedial Design/Remedial Action (RD/RA) Consent Decree were sent out to the five (5) original companies and twelve (12) other Potentially Responsible Parties (PRPs). The Regional Water Quality Control Board - San Francisco Bay Region (RWQCB) was the lead agency until April 1985, when the Board referred the five companies to EPA for cleanup under Superfund. In May, 1985, EPA sent general notice letters, pursuant to Section 106 of

MOFFETT NAVAL AIR STATION (Continued) **1000228683**

CERCLA, to the five companies. NEC and Siltec chose not to participate in the RI/FS negotiations and were referred back to the RWQCB. In August 1985, Fairchild, Intel, and Raytheon signed an Administrative Order on Consent with EPA, to conduct an RI/FS of the MEW area. The RWQCB and California Department of Health Services were cosignees of the Consent Order. The Consent Order and Work Plan called for a comprehensive groundwater investigation of the MEW area and site specific (source) investigation at Fairchild, Intel, and Raytheon. The RWQCB issued Waste Discharge Requirements (WDRs) for NEC and Siltec which paralleled the Consent Order schedule and requirements. During the course of the RI/FS, EPA gathered new information and evaluated existing information concerning other Potentially Responsible Parties (PRPs). During December 1987 and January 1988, EPA issued twenty-four (24) RCRA 3007/CERCLA 104 information request letters to various other parties in the MEW area. In July 1988, EPA issued a RCRA 3013 Unilateral Order to GTE to begin an investigation of its property, to determine if the company had contributed to the MEW groundwater plume. After evaluating the 3007/104 response letters, EPA sent General Notice Letters to seventeen (17) PRPs in September 1988. An initial PRP meeting was sponsored by EPA in October 1988, to explain the Superfund process to the noticed PRPs. EPA issued seven (7) additional General Notice and/or information request letters in March 1989. EPA subsequently issued Special Notice Letters for conducting the selected remedies in May 1989. A Record of Decision addressing OU04 of the Moffett Naval Air Station was completed in June 1989. Cleanup actions are being taken at the Site under the 1989 Record of Decision (ROD) to restore groundwater to its potential beneficial use, which is designated as drinking water. Note that the groundwater at the Site is not currently being used for drinking water or other domestic purposes. The MEW Site is not located in an environmentally sensitive area. Based on EPA's updated understanding of the way chemicals can potentially migrate from the subsurface soil and groundwater to the indoor air, EPA requested the Potentially Responsible Parties (PRPs) for the Middlefield-Ellis-Whisman (MEW) groundwater contamination - the MEW Companies, U.S. Navy, and National Aeronautics and Space Administration (NASA) - to evaluate the potential vapor intrusion pathway into buildings overlying shallow trichloroethylene (TCE) groundwater contamination at the MEW Site. During 2003 through 2008, the MEW Companies, NASA, U.S. Navy, and EPA collected over 3,000 air samples from 47 commercial buildings and 20 residences within the Vapor Intrusion Study Area. The indoor air vapor intrusion investigation included the following types of samples: indoor air, outdoor ambient air, pathway air, crawlspace air, and sub-slab soil gas. Indoor air samples were collected in the breathing zone (approximately 3 to 5 feet above floor level) in occupied or potentially occupied areas. Pathway samples were collected in areas where potential conduits (such as penetrations through slab, drains, utility lines or vaults) into the building were observed that might provide a direct route for volatile organic compound (VOC) vapor migration into the building. Outdoor ambient air samples were collected immediately outside the building, including near the air ventilation system air intake, for comparison to indoor air to evaluate the potential contribution of VOCs from outdoor air to indoor air. Additionally, EPA outdoor reference and MEW/NASA background outdoor air samples were collected at distances of 0.25 to 1.5 miles away from the MEW Site to assess background levels of VOCs in the general area. The indoor air results were compared to (1) short-term health-based screening levels; (2) long-term health-based screening levels, and (3) outdoor ambient air. During the Supplemental Remedial Investigation, EPA used an interim long-term TCE indoor air screening level of 2.7 micrograms per cubic meter (ug/m3) for commercial buildings and 1 ug/m3 for residential buildings. Subsequent to the Supplemental Remedial Investigation, EPA established interim TCE indoor air action levels (now TCE indoor air cleanup levels) of 5 ug/m3 for commercial buildings and 1

MOFFETT NAVAL AIR STATION (Continued) **1000228683**

ug/m3 for residential buildings. EPA also assessed the vapor intrusion pathway using multiple lines of evidence. The types of information used include building surveys, chemical use, operations, historical facility and property information, site geology and hydrogeology, and subsurface and air sampling information and conditions (groundwater, soil gas, sub-slab soil gas, crawlspace, pathway samples), chemical ratios, and tracer compounds, to determine whether the indoor air concentrations were attributable to subsurface Site contamination and not other sources, such as consumer products or outdoor background air sources. The Supplemental Remedial Investigation results also support the following conclusions: Indoor air results indicate there are no immediate or short-term health concerns. All indoor air concentrations are below the screening criteria for acute and short-term health-based screening criteria (Agency for Toxic Substances Disease Registry [ATSDR] Minimal Risk Levels). Therefore, EPA's focus is whether trichloroethylene (TCE) and other Site chemicals of potential concern in indoor air pose an unacceptable risk of chronic health effects from long-term exposure (30 years for residential exposure and 25 years for non-residential exposure). TCE in indoor air was detected above EPA's interim long-term TCE indoor air screening level in 17 commercial buildings and three residences within the Vapor Intrusion Study Area. Where discrete mitigation measures (e.g., sealing conduits, enhanced mechanical ventilation, air purifiers, sub-slab vapor control systems) were implemented, indoor TCE concentrations were reduced to below the interim screening level. Increasing air exchange rates generally resulted in decreasing indoor air TCE concentrations. Vapor intrusion resulting in concentrations above interim long-term indoor air screening levels appears more likely in commercial buildings when ventilation systems are not providing sufficient air exchanges with outside air in all or part of a building. Buildings overlying elevated groundwater concentrations appear to have a greater likelihood of indoor air TCE concentrations exceeding the TCE screening level, but actual indoor air concentrations are also dependent on other building factors such as air ventilation system operations, building configuration, and preferential pathways into the building. The highest TCE indoor air concentrations were found in a building with a basement, where there was direct contact with groundwater (644 National Avenue in the MEW Area). Elevated concentrations were also found in a NASA building, where the ventilation system introduced air from beneath the raised floor into the building (N210 in the Moffett Field Area). A Record of Decision Amendment addressing vapor intrusion at Operable Unit 04 of Naval Air Station Moffett Field was completed in August 2010. OU 6 - Site 25: Moffett Field is located in Santa Clara County, 1 mile south of San Francisco Bay, California's largest estuary, in the Santa Clara Valley Basin. Tidal wetlands in the southern portion of San Francisco Bay provide habitat to support a wide variety of birds, fish, and invertebrates, including several threatened and endangered species. Historically, tidal salt marshes and mud flats covered extensive areas of the southern portion of the bay, including the northern portion of Moffett Field. Most of these wetlands, however, have been eliminated or greatly altered. Site 25 is approximately 230 acres in size and is located in the northern portion of Moffett Field, adjacent to the southern arm of the bay. Levees constructed in the late 19th and early 20th centuries for commercial salt production currently prevent bay water from reaching Site 25. Site 25 is comprised of the eastern diked marsh, including the stormwater settling basin, and the stormwater retention pond. The stormwater retention pond is divided into the western portion (owned by Midpeninsula Regional Open Space District) and the central and northeastern basins (both managed by the National Aeronautics and Space Administration [NASA]). The eastern diked marsh and all portions of the stormwater retention pond are hydraulically connected. Site 25 has been part of the stormwater management system at Moffett Field since

MOFFETT NAVAL AIR STATION (Continued) **1000228683**

1953. Stormwater previously flowed through the former Lindbergh Avenue ditch then discharged into the northeastern corner of the eastern diked marsh. The eastern diked marsh is a brackish marsh that is seasonally saturated, but rarely filled to capacity with standing water. Currently, stormwater in the western portion of Moffett Field is carried via underground conduits then drains to a settling basin at Site 25. Sediment suspended in the stormwater settles in the basin, where it is subsequently excavated. From the settling basin, the water flows overland northward through the eastern diked marsh to the stormwater retention pond. The eastern diked marsh is connected to the central basin of the stormwater retention pond by a culvert under North Perimeter Road. The central basin is, in turn, connected to the western and northeastern portions of the stormwater retention pond by breaches in the levees. The stormwater retention pond is seasonally flooded with 1 to 5 feet of standing water, but is mostly dry in the summer. A portion of the stormwater retention pond contains water year round because it receives treated groundwater from the West-Side Aquifers Treatment System. Stormwater from the western portion of Moffett Field previously flowed through the Lindbergh Avenue ditch and then discharged into the northeastern corner of the eastern diked marsh. This stormwater management system is no longer in use. In 1991, NASA redesigned the stormwater management system to carry stormwater in underground conduits to a settling basin; after the sediment settles, the water discharges to the eastern diked marsh. Previous investigations determined that most of the contaminated sediment is located near the former outfall of the Lindbergh Avenue ditch and near the settling basin discharge in the eastern diked marsh. Sources of contamination identified for Site 25 included: the runway landfill (Site 1 - remedy selected in the Record of Decision [ROD] dated August 1997); the engine test stand area (Site 11 - remedy selected in ROD dated December 1994); a sump and oil and water separator (Site 15 - petroleum site); Hangar 1 (Site 29 - currently under investigation by Navy); horizontal conduits, including stormwater discharge lines that may have carried chemically contaminated groundwater; historical use of pesticides; and various soil areas contaminated with polychlorinated biphenyls (PCBs) (referred to as upland source areas to be addressed separately, not as part of this ROD). The eastern diked marsh and the stormwater retention pond are currently part of NASA's stormwater management system. Both are covered with surface water only part of the year, except for a small portion of the stormwater retention pond that holds water year round because treated groundwater from the West-Side Aquifers Treatment System (WATS) is discharged to this portion of the pond. The eastern diked marsh currently provides seasonal wetland habitat for a variety of wildlife, including threatened and endangered species. The potential future reuse could be somewhat different than the current use. The Midpeninsula Regional Open Space District is interested in restoring its portion of Site 25 to tidal marsh. NASA favors a plan to create a managed pond with its portion of Site 25. Under a managed pond scenario, one portion of the site would be a tidal marsh (providing salt marsh habitat); the central and northeastern basins would function as stormwater retention ponds that would be managed to contain water throughout the year (open water habitat); and the eastern diked marsh would continue to provide seasonal wetland habitat. Regardless of the selected future use, Site 25 will be remediated such that it will be available for unlimited use and unrestricted exposure, including use as a tidal marsh and managed pond, when the remedy selected in this ROD has been completed. A ROD for Operable Unit 06 (Site 25) was completed in December 2009. OU 7 The Site 22 Landfill is located in the northeastern corner of MFA. The Site 22 Landfill covers approximately 9.4 acres and contains an estimated total refuse (waste) volume of 92,000 cubic yards. The site was used as an active landfill from 1950 through 1967. The refuse is believed to consist primarily of domestic waste, as confirmed through exploratory trenching. Results of

MOFFETT NAVAL AIR STATION (Continued) **1000228683**

environmental investigations indicate that in some places, the waste is located beneath the groundwater table, while in others, waste is located near the surface (above the groundwater table). The Site 22 Landfill now underlies holes 6 and 7 of a golf course, which is operated by the United States Air Force. The fairway and putting greens for these holes are located on top of the landfill. The rough for holes 6 and 7, which contains trees, is on the sloped part of the landfill. Soil borings and trenching indicate that most of the landfill is covered with approximately 1.5 feet of soil; however, soil thickness in a few areas is less than 1 foot. The Site 22 Landfill was characterized in the Final Station-wide RI Report and the Additional Sites Investigation Phase II Draft Final Report. Because operating records do not exist for the Site 22 Landfill, the history of the landfill was researched by studying aerial photographs and historical maps of the area and interviewing base personnel. This review indicated that the landfill was active from 1950 to 1967. Base personnel reported that Site 22 was used as a municipal landfill after the landfill at Site 2 was closed. Visual characterization of waste excavated at Site 2 confirmed that Site 2 contained primarily domestic waste; therefore, it was expected (and later confirmed) that the Site 22 Landfill also contained domestic waste. In 1973, the Site 22 Landfill was converted into holes 6 and 7 of the MFA golf course. In April 1998, an additional investigation was initiated to provide supplemental information about the Site 22 Landfill and its surrounding area. As part of this additional investigation, exploratory trenches were dug to further evaluate the vertical and horizontal extent of refuse within the landfill. The exploratory trenching uncovered municipal waste such as old tires, newspapers, vacuum tubes, and shampoo bottles. Based on the results of the trenching, the extent of the landfill was estimated to be approximately 9.4 acres, and the volume of refuse was estimated at approximately 92,000 cubic yards. The Air Force operates and maintains the golf course located in the northeast corner of the facility, which encompasses the Site 22 Landfill. The golf course has been maintained and operated for over 30 years, and there are no plans to change the land use of this area. It is therefore, likely that the Site 22 Landfill will remain part of the golf course. The selection and screening of remedial alternatives was thus conducted based on the premise that continued use as a golf course is the most likely future land use scenario, which has been confirmed with NASA personnel. A ROD addressing OU 7 was completed in June 2002. OU 8: Site 27 includes the Northern Channel, related ditches that drain into the Northern Channel, the berms along either side of the Northern Channel, and the debris pile near the Building 191 lift station. The Northern Channel is located near the northeastern boundary of the former NAS Moffett Field. Historically, the Northern Channel has received stormwater runoff from the former NAS Moffett Field and NASA Ames Research Center. Portions of the Northern Channel that are owned by Lockheed, Cargill Salt, and the Santa Clara Valley Water District extend eastward, approximately 5,500 feet beyond the boundary of the former NAS Moffett Field. The areas that make up Site 27 are summarized below: -Northern Channel and Berms: Nearly 2 miles long, the Northern Channel receives stormwater from the eastern portion of the former NAS Moffett Field. Water in the channel flows east, approximately 1 mile beyond the boundary of the former NAS Moffett Field into Lockheed Channel. The Northern Channel flows by gravity at this termination point through a pipe to the terminus of the Lockheed Channel, which runs parallel to the eastern end of the Northern Channel. The two channels are separated by a levee. Water from the terminus of Lockheed Channel is pumped into the Moffett Channel, which drains into Guadalupe Slough and eventually into San Francisco Bay. The Northern Channel provides brackish surface water habitat of moderate value to wildlife. The surface area of the channel is about 9 acres; its bottom substrate is sediment, and the banks are fill material. The width of the channel is 40 to 50

MOFFETT NAVAL AIR STATION (Continued) **1000228683**

feet, but increases to 70 feet at the western end; the channel is about 10,000 feet long, and the bottom of the channel lies approximately 2.8 feet below mean sea level. The north levee is made of compacted hard clay and is approximately 5 feet high (above the water level in the channel), with flat surfaces and steep side slopes. The slopes of the bank are moderately eroded with loose surface material that supports a moderate amount of plants. The south levee is also made of compacted clays and supports a greater diversity of vegetation. Wildlife surveys have detected the presence of the western pond turtle, various plants, and a wide variety of shore birds and waterfowl in the area.

-Marriage Road Ditch: Located east of the runways, Marriage Road Ditch divides the golf course at the former NAS Moffett Field. The ditch extends about 2,300 feet, and the bottom of the ditch is 5 to 6 feet below mean sea level. Water flowing in Marriage Road Ditch is perennial and portions of the ditch are lined with concrete. Surface water from the east apron area and from the storm drains in and around Hangars 2 and 3 discharges into the ditch. Marriage Road Ditch receives additional runoff from the southern two-thirds of the runways and the golf course east and west of the ditch. Surface water from Marriage Road Ditch drains into North Patrol Road Ditch. During the rainy season, surface water from Marriage Road Ditch is occasionally pumped directly into the Northern Channel to prevent flooding during storms. The probable source of contamination in Marriage Road Ditch is historical surface water runoff from storm drains. These storm drains collected runoff from the paved and unpaved areas around Hangars 2 and 3 and conveyed it to Marriage Road Ditch. The ditch provides habitat for insects, worms, snails, and the western pond turtle. Several species of plants grow in and along the sides of the ditch. -Patrol Road Ditch: Patrol Road Ditch (also known as the East Patrol Road Ditch) is a surface drainage feature that runs 2,100 feet along the eastern boundary of the former NAS Moffett Field; the bottom of the ditch is about 5 to 6 feet below mean sea level. The ditch is part of the storm drain system at the former NAS Moffett Field. Its flow in the southern end is intermittent and depends on rainfall. The northern end of the ditch receives regular runoff from irrigation of the golf course and contains water year round. Surface water from Patrol Road Ditch flows into North Patrol Road Ditch through a culvert during periods of high water; water from the ditch is occasionally pumped directly to the Northern Channel during winter rainstorms. The probable source of contamination is surface water runoff into the storm drains that feed into Patrol Road Ditch. During the wet season, the northern end of the ditch provides open water and emergent vegetation. During the dry season, the southern end consists of habitat similar to upland areas. Several species of birds have been identified in Patrol Road Ditch. -North Patrol Road Ditch: This ditch runs 4,300 feet along the North Patrol Road, parallel to and south of the Northern Channel. The western portion of the ditch is lined with concrete, lies about 5 to 6 feet below mean sea level, and generally contains water year-round. The North Patrol Road Ditch carries surface water from east to west toward the Building 191 lift station. The North Patrol Road Ditch is an integral part of the storm drain system at Moffett. North Patrol Road Ditch receives stormwater from Marriage Road Ditch, Patrol Road Ditch, and the golf course. Surface water flow through the North Patrol Road Ditch is intermittent and depends on rainfall. The banks of the ditch are defined and are made of fill material and emergent vegetation but represent poor wetland habitat. Species observed here include ducks, doves, burrowing owls, and squirrels. -Debris Pile: The debris pile is located north of the Building 191 lift station at the western end of the Northern Channel, between the north bank of the channel and south bank of the U.S. Fish and Wildlife Service Diked Ponds. The pile consists of about 10,000 cubic yards of dredged sediment from the Northern Channel and construction debris from the 1950s to 1990s.

Ownership of the Northern Channel and related areas within Site 27 is

MOFFETT NAVAL AIR STATION (Continued) **1000228683**

divided among NASA, Lockheed, U.S. Fish and Wildlife Service, Santa Clara Valley Water District, Cargill Salt, and the City of Sunnyvale. NASA owns the southern berm along the northern boundary of the former NAS Moffett Field and a portion of the property where the debris pile is located. In addition, NASA owns the Marriage Road Ditch, the Patrol Road Ditch, and the North Patrol Ditch. Lockheed owns the southern berm along the northern boundary of its property and a small portion of the Northern Channel. Cargill Salt owns the remainder of the berm, the Northern Channel, and the remainder of the area where the debris pile is located. U.S. Fish and Wildlife Service purchased the saltwater evaporation ponds adjacent to Site 27 from Cargill Salt in 2003. The City of Sunnyvale owns ponds and a publicly owned treatment works located near the eastern end of the Northern Channel. In addition, Sunnyvale leases a portion of the berms for hiking and biking trails. In April 1991, the Base Realignment and Closure Commission voted to (1) decommission the former NAS Moffett Field, (2) transfer naval operations from the former NAS Moffett Field to other naval facilities, and (3) transfer most of the former NAS Moffett Field property to the NASA Ames Research Center. The areas south and west of Site 27 are part of the former NAS Moffett Field. Current tenants include the U.S. Army, the U.S. Air Force, and the California Air National Guard. Current uses include airfield operations, military facilities, and NASA research facilities. The former NAS Moffett Field has a fully functional federal airport and maintains facilities for military personnel and their families, including housing, commissary, clinic, service station, tennis courts, and a golf course. The tidal salt marsh and mud flats north and northeast of the former NAS Moffett Field were diked more than 50 years ago and were formerly used as commercial saltwater evaporation ponds. Cargill Salt, the former owner, sold the ponds to the U.S. Fish and Wildlife Service in 2003. Stormwater drainage is expected to be the future use of the Northern Channel and associated ditches, as it has been for the last 50 years. Remedial alternatives were selected and screened based on the premise that continued use for stormwater drainage is the most likely future land use scenario. Existing beneficial uses of groundwater, including municipal and domestic, industrial process, and industrial and agricultural water supply, are listed in the Basin Plan. Concentrations of total dissolved solids in groundwater in the area of Site 27 do not meet criteria in U.S. Environmental Protection Agency classification guidelines for a potential source of drinking water. According to the Basin Plan, the beneficial uses for surface water near the site are freshwater/estuarine habitat and wildlife habitat. A Record of Decision (ROD) addressing Operable Unit 08 at the NAS Moffett Field site was completed in July 2005.

Summary Details:

Conditions at proposal October 15, 1984): Intel Corp. manufactured semiconductors at a plant in Mountain View, Santa Clara County, California, between 1968 and 1981. At that time, the facility occupied 2 acres and was surrounded by residential areas, office buildings, and other semiconductor-manufacturing plants. Monitoring wells on the site are contaminated with trichloroethylene, xylene, vinyl chloride, and 1,1- and

INTEL CORP. (MOUNTAIN VIEW PLANT) (Continued) **1000203455**

trans-1,2-dichloroethylene, according to analyses conducted by a consultant to Intel. Contamination is believed to have resulted from leaking underground solvent tanks. About 270,000 people depend on wells within 3 miles of the site as a source of drinking water. Since early 1982, Intel hasbeen pumping ground water and treating it by carbon adsorption. The company intends to implement additional cleanup activities, including the installation of a system to pump and treat contaminated ground water and excavation of soil beneath the underground storage tanks, which were previously removed. The company is working with the California Regional Water Quality Control Board CRWQCB) to determine the full extent of the contamination. This is one of 19 sites in the SouthBay Area of San Francisco. Facilities at these sites have used a variety of toxic chemicals, primarily chlorinated organic solvents, which contaminate a common ground water basin. Although these sites are listed separately, EPA intends to apply an area-wide approach to the problem as well as take specific action as necessary. Status June 10, 1986): Intel has removed approximately 4,600 cubic yards of contaminated soil and has installed four wells to pump and treat contaminated ground water. CRWQCB has issued Waste Discharge Requirements to the company. The requirements are the board s legal mechanism for regulating activities at facilities under its jurisdiction. On August 15, 1985, EPA issued a CERCLA Administrative Order on Consent to Intel Corp. s Mountain View Plant, as well as to Fairchild Camera s and Raytheon Corp. s Mountain View Plants. The order calls for the three companies to conduct a joint remedial investigation/feasibilitystudy of the area to determine the type and extent of contamination and identify alternatives for remedial action.

Site Description: The Middlefield/Ellis/Whisman (MEW) Study Area is located in Santa Clara County

INTEL CORP. (MOUNTAIN VIEW PLANT) (Continued) **1000203455**

in the city of Mountain View, California. The site is divided into a Local Study Area (LSA) and a Regional Study Area (RSA). The LSA consists of three National Priority List (NPL) sites (Fairchild, Intel and Raytheon), as well as several non-Superfund sites. The LSA encompasses about 1/2 square mile of the RSA and contains primarily light industrial and commercial areas, with some residential areas west of Whisman Road. The RSA encompasses approximately 8 square miles and includes Moffett Naval Air Station (an NPL site) and National Aeronautics and Space Administration (NASA) Ames Research Center, along with light industrial, commercial, agricultural, park, golf course, undeveloped land, residential, motel and school land uses. Various owners or occupants in the area around the intersections of Middlefield Road, Ellis Street, Whisman Road, and the Bayshore Freeway (U.S. Highway 101), are or were involved in the manufacture of semiconductors, metal finishing operations, parts cleaning, aircraft maintenance, and other activities requiring the use of a variety of chemicals. Site investigations at several of these facilities have revealed the presence of toxic chemicals in the subsurface soils and groundwater. To investigate the extent of groundwater contamination emanating from the LSA, and soil contamination at their respective facilities, Fairchild, Intel, and Raytheon performed a Remedial Investigation and a Feasibility Study of potential remedial alternatives under the direction of EPA. There are no natural surface drainage features within the Local Study Area. The nearest significant natural surface drainage features of the Regional Study Area are Stevens Creek to the west and Calabazas Creek to the east. Calabazas Creek is located approximately four miles east of the MEW Study Area. Stevens Creek forms the western boundary of the Regional Study Area. Both discharge into the San Francisco Bay. Surface water runoff from most of the RSA and all of the LSA south of the Bayshore Freeway is intercepted by a storm drain system and is discharged into Stevens Creek. To the north of the Bayshore Freeway, most of the runoff from Moffett Field Naval Air Station is collected by a storm drain system that ultimately discharges to Guadalupe Slough of San Francisco Bay. Runoff from the northwestern portion of Moffett Field discharges into Stevens Creek. The Local and Regional Study Areas are underlain by a thick sequence of unconsolidated sediments deposited into a structural depression. The sediments are comprised of alluvial fan, estuarine, and bay mud deposits. Repeated variations in sea levels resulted in a complex sedimentary sequence characterized by irregular interbedding and interfingering of coarse and fine grained deposits. Groundwater aquifers at the site are subdivided into shallow and deep aquifer systems, separated by a laterally extensive regional aquitard. The shallow aquifer system comprises aquifers and aquitards to a depth of approximately 160 feet below the surface. Within the shallow system four primary hydrogeologic aquiferzones have been identified based upon the occurrence of aquifer material and a similar depth below the surface. The shallow aquifer system is comprised of the A-aquifer and the underlying B1-, B2- and B3- aquifers. The regional B-C aquitard separates the B3-aquifers from the C-aquifer and the deep aquifer system. Current groundwater flow in aquifer zones above the B-C aquitard is generally to the north, toward San Francisco Bay. During 1981 and 1982, preliminary investigations of facilities within the LSA indicated significant concentrations of contaminants in soil and groundwater. By 1984, the Fairchild, Intel and Raytheon sites, located within the LSA, were proposed for the NPL. By 1985, five companies within the LSA (Fairchild, Intel, Raytheon, NEC, and Siltec) initiated a joint investigation to document and characterize the distribution of chemicals emanating from their facilities. In April 1985, the California Regional Water Quality Control Board - San Francisco Bay Region (RWQCB) adopted Waste Discharge Requirements (WDRs) for each of the five companies. The primary cause of the subsurface contamination was from leaking storage tanks and lines, and poor waste management practices. On August 15, 1985, Fairchild, Intel, and Raytheon

INTEL CORP. (MOUNTAIN VIEW PLANT) (Continued) **1000203455**

entered into a Consent Order with the EPA, the RWQCB, and the California Department of Health Services (DHS). Since signing of the Consent Order, the three companies have carried out an extensive Remedial Investigation and Feasibility Study (RI/FS) of chemicals emanating from the LSA and soil contamination at their respective facilities. Work has been performed under the supervision of EPA, the RWQCB, DHS, and the Santa Clara Valley Water District (SCVWD). Prior to and during the site investigation, the companies have been conducting interim cleanup activities at the site. These interim remedial actions include tank removals, soil removal and treatment, well sealing, construction of slurry walls, and hydraulic control and treatment of local groundwater. NEC and Siltec declined to enter into the Consent Order and were placed under RWQCB enforcement authority. The three companies followed an approved Quality Assurance and Quality Control (QA/QC) Plan and approved Sampling Plans. In addition, split samples were collected by EPA from selected wells and these results were compared with the companies' sampling results. EPA determined that the companies' data quality was adequate for the purpose of the RI/FS. The MEW Remedial Investigation Report was concluded in July, 1988. The draft Feasibility Study and EPA's Proposed Plan were presented to the community for review and public comment in November, 1988. In May 1989, Special Notice letters for the Remedial Design/Remedial Action (RD/RA) Consent Decree were sent out to the five (5) original companies and twelve (12) other Potentially Responsible Parties (PRPs). The Regional Water Quality Control Board - San Francisco Bay Region (RWQCB) was the lead agency until April 1985, when the Board referred the five companies to EPA for cleanup under Superfund. In May, 1985, EPA sent general notice letters, pursuant to Section 106 of CERCLA, to the five companies. NEC and Siltec chose not to participate in the RI/FS negotiations and were referred back to the RWQCB. In August 1985, Fairchild, Intel, and Raytheon signed an Administrative Order on Consent with EPA, to conduct an RI/FS of the MEW area. The RWQCB and California Department of Health Services were cosigners of the Consent Order. The Consent Order and Work Plan called for a comprehensive groundwater investigation of the MEW area and site specific (source) investigation at Fairchild, Intel, and Raytheon. The RWQCB issued Waste Discharge Requirements (WDRs) for NEC and Siltec which paralleled the Consent Order schedule and requirements. During the course of the RI/FS, EPA gathered new information and evaluated existing information concerning other Potentially Responsible Parties (PRPs). During December 1987 and January 1988, EPA issued twenty-four (24) RCRA 3007/CERCLA 104 information request letters to various other parties in the MEW area. In July 1988, EPA issued a RCRA 3013 Unilateral Order to GTE to begin an investigation of its property, to determine if the company had contributed to the MEW groundwater plume. After evaluating the 3007/104 response letters, EPA sent General Notice Letters to seventeen (17) PRPs in September 1988. An initial PRP meeting was sponsored by EPA in October 1988, to explain the Superfund process to the noticed PRPs. EPA issued seven (7) additional General Notice and/or information request letters in March 1989. EPA subsequently issued Special Notice Letters for conducting the selected remedies in May 1989. A Record of Decision addressing OU01 of the Intel Corp. Site was completed in June 1989. EPA is now changing the June 9, 1989 ROD by specifying final cleanup standards rather than just goals. EPA is making this change because it has determined that there is insufficient information at this time to invoke a waiver to ARARs. However, EPA continues to recognize that it is always possible that the chosen remedy will be demonstrated to be unattainable. Therefore, EPA recognizes that if data are generated that demonstrate that the selected remedy cannot be achieved, EPA may need to reconsider its decision embodied in the ROD. An Explanation of Significant Differences addressing Operable Unit 01 of the Intel Corporation Site was completed in September, 1990. An Explanation of Significant Differences

INTEL CORP. (MOUNTAIN VIEW PLANT) (Continued) **1000203455**

addressing Operable Unit 1 at the Intel Corp. (Mountain View Plant) site was completed in April 1996. Cleanup actions are being taken at the Site under the 1989 Record of Decision (ROD) to restore groundwater to its potential beneficial use, which is designated as drinking water. Note that the groundwater at the Site is not currently being used for drinking water or other domestic purposes. The MEW Site is not located in an environmentally sensitive area. Based on EPA's updated understanding of the way chemicals can potentially migrate from the subsurface soil and groundwater to the indoor air, EPA requested the Potentially Responsible Parties (PRPs) for the Middlefield-Ellis-Whisman (MEW) groundwater contamination - the MEW Companies, U.S. Navy, and National Aeronautics and Space Administration (NASA) - to evaluate the potential vapor intrusion pathway into buildings overlying shallow trichloroethylene (TCE) groundwater contamination at the MEW Site. During 2003 through 2008, the MEW Companies, NASA, U.S. Navy, and EPA collected over 3,000 air samples from 47 commercial buildings and 20 residences within the Vapor Intrusion Study Area. The indoor air vapor intrusion investigation included the following types of samples: indoor air, outdoor ambient air, pathway air, crawlspace air, and sub-slab soil gas. Indoor air samples were collected in the breathing zone (approximately 3 to 5 feet above floor level) in occupied or potentially occupied areas. Pathway samples were collected in areas where potential conduits (such as penetrations through slab, drains, utility lines or vaults) into the building were observed that might provide a direct route for volatile organic compound (VOC) vapor migration into the building. Outdoor ambient air samples were collected immediately outside the building, including near the air ventilation system air intake, for comparison to indoor air to evaluate the potential contribution of VOCs from outdoor air to indoor air. Additionally, EPA outdoor reference and MEW/NASA background outdoor air samples were collected at distances of 0.25 to 1.5 miles away from the MEW Site to assess background levels of VOCs in the general area. The indoor air results were compared to (1) short-term health-based screening levels; (2) long-term health-based screening levels, and (3) outdoor ambient air. During the Supplemental Remedial Investigation, EPA used an interim long-term TCE indoor air screening level of 2.7 micrograms per cubic meter (ug/m3) for commercial buildings and 1 ug/m3 for residential buildings. Subsequent to the Supplemental Remedial Investigation, EPA established interim TCE indoor air action levels (now TCE indoor air cleanup levels) of 5 ug/m3 for commercial buildings and 1 ug/m3 for residential buildings. EPA also assessed the vapor intrusion pathway using multiple lines of evidence. The types of information used include building surveys, chemical use, operations, historical facility and property information, site geology and hydrogeology, and subsurface and air sampling information and conditions (groundwater, soil gas, sub-slab soil gas, crawlspace, pathway samples), chemical ratios, and tracer compounds, to determine whether the indoor air concentrations were attributable to subsurface Site contamination and not other sources, such as consumer products or outdoor background air sources. The Supplemental Remedial Investigation results also support the following conclusions: Indoor air results indicate there are no immediate or short-term health concerns. All indoor air concentrations are below the screening criteria for acute and short-term health-based screening criteria (Agency for Toxic Substances Disease Registry [ATSDR] Minimal Risk Levels). Therefore, EPA's focus is whether trichloroethylene (TCE) and other Site chemicals of potential concern in indoor air pose an unacceptable risk of chronic health effects from long-term exposure (30 years for residential exposure and 25 years for non-residential exposure). TCE in indoor air was detected above EPA's interim long-term TCE indoor air screening level in 17 commercial buildings and three residences within the Vapor Intrusion Study Area. Where discrete mitigation measures (e.g., sealing conduits, enhanced mechanical ventilation, air purifiers, sub-slab vapor control systems) were

INTEL CORP. (MOUNTAIN VIEW PLANT) (Continued) **1000203455**

implemented, indoor TCE concentrations were reduced to below the interim screening level. Increasing air exchange rates generally resulted in decreasing indoor air TCE concentrations. Vapor intrusion resulting in concentrations above interim long-term indoor air screening levels appears more likely in commercial buildings when ventilation systems are not providing sufficient air exchanges with outside air in all or part of a building. Buildings overlying elevated groundwater concentrations appear to have a greater likelihood of indoor air TCE concentrations exceeding the TCE screening level, but actual indoor air concentrations are also dependent on other building factors such as air ventilation system operations, building configuration, and preferential pathways into the building. The highest TCE indoor air concentrations were found in a building with a basement, where there was direct contact with groundwater (644 National Avenue in the MEW Area). Elevated concentrations were also found in a NASA building, where the ventilation system introduced air from beneath the raised floor into the building (N210 in the Moffett Field Area). A Record of Decision Amendment addressing vapor intrusion at Operable Unit 01 of the Intel Corp. (Mountain View Plant) Site was completed in August 2010.

Biennial Reports:

Last Biennial Reporting Year: 2013

Annual Waste Handled:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE

CHEMOCENTRYX (Continued) **1007199396**

MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 35950

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 12000

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.
Amount (Lbs): 2150

Waste code: D022
Waste name: CHLOROFORM
Amount (Lbs): 18500

Waste code: F002
Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE LISTED IN F001, F004, OR F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Amount (Lbs): 18500

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Case Type:	Cleanup Program Site
Case Worker:	MBR
Local Agency:	Not reported
RB Case Number:	43S0289
File Location:	Regional Board
Potential Media Affected:	Not reported
Potential Contaminants of Concern:	1,1,1-Trichloroethane (TCA), Other Chlorinated Hydrocarbons, Other Solvent or Non-Petroleum Hydrocarbon, Tetrachloroethylene (PCE), Trichloroethylene (TCE)
Site History:	The E/M Lubricant facility was operated as a metal coating facility by E/M Corporation. As a dry lubricant application facility, activities included application of graphite or molybdenum coating to metal parts and degreasing. Improper storage and handling of degreasing materials impacted soil and groundwater. Adjacent sites with solvent releases are common.

Case Type: Cleanup Program Site
Case Worker: MBR
Local Agency: Not reported
RB Case Number: 43S1158
File Location: Not reported
Potential Media Affected: Indoor Air, Other Groundwater (uses other than drinking water), Soil Vapor
Potential Contaminants of Concern: Dichloroethane (DCA), Dichloroethene (DCE), Other Chlorinated Hydrocarbons, Tetrachloroethylene (PCE), Trichloroethylene (TCE), Vinyl chloride
Site History: Background On March 2, 1998, the Regional Water Board issued a letter concurring that the volatile organic compounds (VOCs) concentrations in groundwater detected at the Site were associated with the VOC plume originating from the upgradient Hewlett-Packard E/M Lubricants facilities. However, the letter requested a deed restriction be placed on the Site for the notification of the presence of onsite impacted soil and groundwater and for the prohibition the drilling of water production wells and use of the shallow groundwater without prior notification to the Regional Water Board. On July 8, 2013, the Regional Water Board issued a cost recovery agreement letter in response to the June 19, 2013, Request for Agency Oversight of a

CYPRESS BUSINESS PARK (Continued) **S113804588**

Brownfield Site, regarding the redevelopment at the Site and Water Board review the Site Management Plan (SMP). Site Management Plan Summary Regional Water Board approval of the SMP was required by the City of Mountain View as a condition for obtaining the demolition/building permit. The SMP describes appropriate safe construction practices and soil/groundwater management procedures for redevelopment construction, including contingency procedures The proposed redevelopment covered under the SMP entails construction of a two-building office campus, including two above-grade open-air parking structures. There will be minimal site grading, and the buildings will be at-grade (i.e., no subsurface occupied spaces or parking areas). Despite the expected low and declining VOC concentrations in groundwater, as a precaution the office buildings have vapor intrusion mitigation system to mitigate any potential vapor intrusion concerns from the underlying VOC groundwater plume. Specifically, the SMP proposes a vapor intrusion mitigation system using a sprayed-in-place vapor barrier, such as Liquid Boot, and a sub-slab passive venting installed beneath the vapor barrier. Proper installation of the vapor barrier and the venting system will be verified by PES Environmental, Inc. Additionally, the SMP proposes environmental monitoring and/or field screening of the following. Worker health and safety Installation of the geotechnical test piles Removal of the building foundation slab and parking lot Demolition of the existing subsurface utilities Installation of the subsurface utilities Grading activities Construction of the building and parking structure foundation Discovery of unexpected below grade features Reuse of graded soil Disposal of excess soil

Potential Contaminants of Concern:	1,1,1-Trichloroethane (TCA), Other Chlorinated Hydrocarbons, Tetrachloroethylene (PCE), Trichloroethylene (TCE)
Site History:	1. Site Location: The site is located at 690 East Middlefield Road in Mountain View. It has also been previously identified as being located at 333 Logue Avenue. The site is bounded by East Middlefield Road on the southwest, Logue Avenue on the west, Maude Avenue on the

HEWLETT PACKARD (Continued) **S104156118**

northeast, and Mountain ViewlAlviso Road (highway 237) on the southeast. Three buildings occupy the site and are currently used for software duplication and distribution, parts distribution, and administrative offices. Areas surrounding the building are paved. Adjacent properties are developed for commercial and light industrial use. Prior to the early 1960s, land use in the site vicinity was agricultural. 2. Site History: Hewlett Packard Company (HP) began construction of the buildings in 1966. Previous activities on the site included metal cleaning, polishing, coating and painting operations, and production and testing' of magnetic head assemblies. These activities required the use of chemical such as degreasers, paint thinners, acids, and detergents; and generated a variety of hazardous wastes. As a result of subsurface soil investigations by HP beginning in 1983, volatile organic compounds (VOCs) were detected at the site. 3. Named Dischargers: HP, as owner and operator of the site, is named as a discharger. Order No. 95-131

File Location:	Not reported
Potential Media Affected:	Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern:	* Solvents
Site History:	No Water Board oversight of cleanup at this site. This case is included in Geotracker because the site is covered by the Water Boards NPDES general permits for discharges from pump and treat systems to surface waters (one each for fuels- and VOC-impacted sites). This can happen for two reasons: (i) the site is overseen by another agency (e.g., USEPA or DTSC) and needs coverage under one of the NPDES general permits or (ii) construction dewatering in an area of groundwater contamination necessitates NPDES general permit coverage. Including this case in Geotracker helps staff to receive and review required NPDES reports.

Background Info:	to drinking water aquifers. Raytheon entered into a consent agreement with EPA in August, 1985. Raytheon removed a leaking tank in December of 1987, installed surface drainage controls, and is operating a groundwater extraction system. The groundwater extraction system was installed in 1982, and involves treating the extracted water with either air or steam stripping. DHS reviews Raytheon's monthly reports on this system. Raytheon is also currently participating in an area-wide remedial investigation and feasibility study. The Raytheon Corporation operates a semiconductor manufacturing plant at this 30-acre site. Chemicals used in the manufacturing process and wastes generated by this process are handled and stored onsite. The site is located adjacent to industrial, commercial and residential development. This site is part of the Middlefield, Ellis, Whisman (MEW) area. Soil and groundwater beneath the site are contaminated with trichloroethylene (TCE), trichloroethane (TCA), dichloroethylene (DCE), and chloroform. Contamination is believed to have resulted from leaking underground chemical storage tanks and/or concrete acid neutralization sumps. About 270,000 people live within a 3-mile radius of the site and depend on groundwater as a source of drinking water. Groundwater contamination at the site represents a significant threat

CA BOND EXP. PLAN:

Reponsible Party:	NPL SITE CLEANUP WORKPLAN
Project Revenue Source Company:	Not reported
Project Revenue Source Addr:	Not reported
Project Revenue Source City,St,Zip:	Not reported
Project Revenue Source Desc:	The RP will fund the characterization and remedial action at the site. State Bond funds will be used for oversight of the RP's activities. The Department has budgeted $50,000 for direct costs related to the project and will seek to recover all actual costs from the responsible party.
Site Description:	The Raytheon Corporation operates a semiconductor manufacturing plant at this 30-acre site. Chemicals used in the manufacturing process and wastes generated by this process are handled and stored onsite. The site is located adjacent to industrial, commercial and residential development.
Hazardous Waste Desc:	Soil and ground water beneath the site are contaminated with trichloroethylene (TCE), trichloroethane (TCA), dichloroethylene (DCE), and chloroform. Contamination is believed to have resulted from leaking underground chemical storage tanks and/or concrete acid neutralization sumps.
Threat To Public Health & Env:	About 270,000 people live within a 3-mile radius of the site and depend on ground water as a source of drinking water. Ground water contamination at the site represents a significant threat to drinking water aquifers.
Site Activity Status:	Raytheon entered into a consent agreement with the EPA in August, 1985. Raytheon has removed the leaking tank, installed surface drainage controls and is operating a ground water extraction system. Raytheon is also currently participating in an area-wide remedial investigation and feasibility study.

Summary Details:

Conditions at proposal October 15, 1984): Raytheon Corp. manufactures semiconductor products at a plant in Mountain View, Santa Clara County, California. The facility occupies about 30 acres and is surrounded by industrial, business, and residential areas. Soil and ground water beneath the site are contaminated with trichloroethylene, 1,1,1-trichloroethane, and 1,1- and trans-1,2- dichloroethylene, according to

RAYTHEON CORP. (Continued) **1000407768**

analyses conducted by a consultant to Raytheon. Contaminationis believed to have resulted from a leaking underground chemical storage tank and/or concrete acid neutrali ation sumps. About 270,000 people depend on wells within 3 miles of the site as a source of drinking water. In late 1982, Raytheon conducted an investigation to determine if downgradient ground water contamination near the north property boundary resulted from a source on its property. Raytheon concluded that it was not possible to establish a specific source of contamination based on data obtained from its investigation. At present, Raytheon is working with the California Regional Water Quality Control Board CRWQCB) to determine the full extent of the problem.
This is one of 19 sites in the South BayArea of San Francisco. Facilities at these sites have used a variety of toxic chemicals, primarily chlorinated organic solvents, which contaminate a common ground water basin. Although these sites are listed separately, EPA intends to apply an area-wide approach to the problem as well as take specific action as necessary. Status
June 10, 1986): In an attempt to determine the full extent of ground water contamination, Raytheon has installed three wells to pump and treat ground water to contain the contaminated plume. CRWQCB has issued Waste Discharge Requirements to the company. The requirements are the board s legal mechanism for regulating activities at facilities under its jurisdiction.
On August 15, 1985,EPA issued a CERCLA Administrative Order on Consent to Raytheon Corp. s Mountain View Plant, as well as to Fairchild Camera s and Intel Corp. s Mountain View Plants. The order calls for the three companies to conduct a joint remedial investigation/feasibility study of the area to determine the type and extent of contamination and identify alternatives for remedial action.

Site Description: The Middlefield/Ellis/Whisman (MEW) Study Area is located in Santa Clara County in the city of Mountain View, California. The site is divided into a Local Study Area (LSA) and a Regional Study Area (RSA). The LSA consists of three National Priority List (NPL) sites (Fairchild, Intel and Raytheon), as well as several non-Superfund sites. The LSA encompasses about 1/2 square mile of the RSA and contains primarily light industrial and commercial areas, with some residential areas west of Whisman Road. The RSA encompasses approximately 8 square miles and includes Moffett Naval Air Station (an NPL site) and National Aeronautics and Space Administration (NASA) Ames Research Center, along with light industrial, commercial, agricultural, park, golf course, undeveloped land, residential, motel and school land uses. Various owners or occupants in the area around the intersections of Middlefield Road, Ellis Street, Whisman Road, and the Bayshore Freeway (U.S. Highway 101), are or were involved in the manufacture of semiconductors, metal finishing operations, parts cleaning, aircraft maintenance, and other activities requiring the use of a variety of chemicals. Site investigations at several of these facilities have revealed the presence of toxic chemicals in the subsurface soils and groundwater. To investigate the extent of groundwater contamination emanating from the LSA, and soil contamination at their respective facilities, Fairchild, Intel, and Raytheon performed a Remedial Investigation and a Feasibility Study of potential remedial alternatives under the direction of EPA. There are no natural surface drainage features within the Local Study Area. The nearest significant natural surface drainage features of the Regional Study Area are Stevens Creek to the west and Calabazas Creek to the east. Calabazas Creek is located approximately four miles east of the MEW Study Area. Stevens Creek forms the western boundary of the Regional Study Area. Both discharge into the San Francisco Bay. Surface water runoff from most of the RSA and all of the LSA south of the Bayshore Freeway is intercepted by a storm drain system and is discharged into Stevens Creek. To the north of the Bayshore Freeway, most of the runoff from Moffett Field Naval Air Station is collected by a storm drain system that ultimately discharges to Guadalupe Slough of San Francisco Bay. Runoff from the northwestern portion of Moffett Field discharges into Stevens Creek. The Local and Regional Study Areas are underlain by a thick sequence of unconsolidated sediments deposited into a structural depression. The sediments are comprised of alluvial fan, estuarine, and bay mud deposits. Repeated variations in sea levels resulted in a complex sedimentary sequence characterized by irregular interbedding and interfingering of coarse and fine grained deposits. Groundwater aquifers at the site are subdivided into shallow and deep aquifer systems, separated by a laterally extensive regional aquitard. The shallow aquifer system comprises aquifers and aquitards to a depth of approximately 160 feet below the surface. Within the shallow system four primary hydrogeologic aquiferzones have been identified based upon the occurrence of aquifer material and a similar depth below the surface. The shallow aquifer system is comprised of the A-aquifer and the underlying B1-, B2- and B3- aquifers. The regional B-C aquitard separates the B3-aquifers from the C-aquifer and the deep aquifer system. Current groundwater flow in aquifer zones above the B-C aquitard is generally to the north, toward San Francisco

RAYTHEON CORP. (Continued) **1000407768**

Bay. During 1981 and 1982, preliminary investigations of facilities within the LSA indicated significant concentrations of contaminants in soil and groundwater. By 1984, the Fairchild, Intel and Raytheon sites, located within the LSA, were proposed for the NPL. By 1985, five companies within the LSA (Fairchild, Intel, Raytheon, NEC, and Siltec) initiated a joint investigation to document and characterize the distribution of chemicals emanating from their facilities. In April 1985, the California Regional Water Quality Control Board - San Francisco Bay Region (RWQCB) adopted Waste Discharge Requirements (WDRs) for each of the five companies. The primary cause of the subsurface contamination was from leaking storage tanks and lines, and poor waste management practices. On August 15, 1985, Fairchild, Intel, and Raytheon entered into a Consent Order with the EPA, the RWQCB, and the California Department of Health Services (DHS). Since signing of the Consent Order, the three companies have carried out an extensive Remedial Investigation and Feasibility Study (RI/FS) of chemicals emanating from the LSA and soil contamination at their respective facilities. Work has been performed under the supervision of EPA, the RWQCB, DHS, and the Santa Clara Valley Water District (SCVWD). Prior to and during the site investigation, the companies have been conducting interim cleanup activities at the site. These interim remedial actions include tank removals, soil removal and treatment, well sealing, construction of slurry walls, and hydraulic control and treatment of local groundwater. NEC and Siltec declined to enter into the Consent Order and were placed under RWQCB enforcement authority. The three companies followed an approved Quality Assurance and Quality Control (QA/QC) Plan and approved Sampling Plans. In addition, split samples were collected by EPA from selected wells and these results were compared with the companies' sampling results. EPA determined that the companies' data quality was adequate for the purpose of the RI/FS. The MEW Remedial Investigation Report was concluded in July, 1988. The draft Feasibility Study and EPA's Proposed Plan were presented to the community for review and public comment in November, 1988. In May 1989, Special Notice letters for the Remedial Design/Remedial Action (RD/RA) Consent Decree were sent out to the five (5) original companies and twelve (12) other Potentially Responsible Parties (PRPs). The Regional Water Quality Control Board - San Francisco Bay Region (RWQCB) was the lead agency until April 1985, when the Board referred the five companies to EPA for cleanup under Superfund. In May, 1985, EPA sent general notice letters, pursuant to Section 106 of CERCLA, to the five companies. NEC and Siltec chose not to participate in the RI/FS negotiations and were referred back to the RWQCB. In August 1985, Fairchild, Intel, and Raytheon signed an Administrative Order on Consent with EPA, to conduct an RI/FS of the MEW area. The RWQCB and California Department of Health Services were cosignees of the Consent Order. The Consent Order and Work Plan called for a comprehensive groundwater investigation of the MEW area and site specific (source) investigation at Fairchild, Intel, and Raytheon. The RWQCB issued Waste Discharge Requirements (WDRs) for NEC and Siltec which paralleled the Consent Order schedule and requirements. During the course of the RI/FS, EPA gathered new information and evaluated existing information concerning other Potentially Responsible Parties (PRPs). During December 1987 and January 1988, EPA issued twenty-four (24) RCRA 3007/CERCLA 104 information request letters to various other parties in the MEW area. In July 1988, EPA issued a RCRA 3013 Unilateral Order to GTE to begin an investigation of its property, to determine if the company had contributed to the MEW groundwater plume. After evaluating the 3007/104 response letters, EPA sent General Notice Letters to seventeen (17) PRPs in September 1988. An initial PRP meeting was sponsored by EPA in October 1988, to explain the Superfund process to the noticed PRPs. EPA issued seven (7) additional General Notice and/or information request letters in March 1989. EPA subsequently issued Special Notice Letters for conducting the selected remedies in May

RAYTHEON CORP. (Continued) **1000407768**

1989. A Record of Decision addressing OU01 of the Raytheon Corp. Site was completed in June 1989. An Explanation of Significant Differences addressing Operable Unit 01 of the Raytheon Corporation Site was completed in September, 1990. An Explanation of Significant Differences addressing Operable Unit 1 at the Raytheon Corp. (Mountain View Plant) site was completed in April 1996. OU01 ROD Amendment (2010): The Raytheon Company site is one of the sites comprising the Middlefield-Ellis-Whisman (MEW) study area. The MEW Area is a heavily populated, light-industrial, commercial, and residential area that currently hosts semiconductor, computer software, electronics businesses, and other commercial offices and light manufacturing facilities. The western boundary of the Vapor Intrusion Study Area is primarily residential. The Moffett Field Area is primarily used for military housing, air operations, storage, educational facilities, research and development, office, and retail space. NASA's redevelopment plans in the Moffett Field Area include demolition of all non-historic structures. Plans are underway to redevelop unimproved land at Moffett Field into sustainable research facilities including office, educational, recreational, and residential uses. Cleanup actions are being taken at the Site under the 1989 Record of Decision (ROD) to restore groundwater to its potential beneficial use, which is designated as drinking water. Note that the groundwater at the Site is not currently being used for drinking water or other domestic purposes. The MEW Site is not located in an environmentally sensitive area. Based on EPA's updated understanding of the way chemicals can potentially migrate from the subsurface soil and groundwater to the indoor air, EPA requested the Potentially Responsible Parties (PRPs) for the Middlefield-Ellis-Whisman (MEW) groundwater contamination - the MEW Companies, U.S. Navy, and National Aeronautics and Space Administration (NASA) - to evaluate the potential vapor intrusion pathway into buildings overlying shallow trichloroethylene (TCE) groundwater contamination at the MEW Site. During 2003 through 2008, the MEW Companies, NASA, U.S. Navy, and EPA collected over 3,000 air samples from 47 commercial buildings and 20 residences within the Vapor Intrusion Study Area. The indoor air vapor intrusion investigation included the following types of samples: indoor air, outdoor ambient air, pathway air, crawlspace air, and sub-slab soil gas. Indoor air samples were collected in the breathing zone (approximately 3 to 5 feet above floor level) in occupied or potentially occupied areas. Pathway samples were collected in areas where potential conduits (such as penetrations through slab, drains, utility lines or vaults) into the building were observed that might provide a direct route for volatile organic compound (VOC) vapor migration into the building. Outdoor ambient air samples were collected immediately outside the building, including near the air ventilation system air intake, for comparison to indoor air to evaluate the potential contribution of VOCs from outdoor air to indoor air. Additionally, EPA outdoor reference and MEW/NASA background outdoor air samples were collected at distances of 0.25 to 1.5 miles away from the MEW Site to assess background levels of VOCs in the general area. The indoor air results were compared to (1) short-term health-based screening levels; (2) long-term health-based screening levels, and (3) outdoor ambient air. During the Supplemental Remedial Investigation, EPA used an interim long-term TCE indoor air screening level of 2.7 micrograms per cubic meter (ug/m3) for commercial buildings and 1 ug/m3 for residential buildings. Subsequent to the Supplemental Remedial Investigation, EPA established interim TCE indoor air action levels (now TCE indoor air cleanup levels) of 5 ug/m3 for commercial buildings and 1 ug/m3 for residential buildings. EPA also assessed the vapor intrusion pathway using multiple lines of evidence. The types of information used include building surveys, chemical use, operations, historical facility and property information, site geology and hydrogeology, and subsurface and air sampling information and conditions (groundwater, soil gas, sub-slab soil gas, crawlspace, pathway samples), chemical ratios, and

RAYTHEON CORP. (Continued) **1000407768**

tracer compounds, to determine whether the indoor air concentrations were attributable to subsurface Site contamination and not other sources, such as consumer products or outdoor background air sources. The Supplemental Remedial Investigation results also support the following conclusions: Indoor air results indicate there are no immediate or short-term health concerns. All indoor air concentrations are below the screening criteria for acute and short-term health-based screening criteria (Agency for Toxic Substances Disease Registry [ATSDR] Minimal Risk Levels). Therefore, EPA's focus is whether trichloroethylene (TCE) and other Site chemicals of potential concern in indoor air pose an unacceptable risk of chronic health effects from long-term exposure (30 years for residential exposure and 25 years for non-residential exposure). TCE in indoor air was detected above EPA's interim long-term TCE indoor air screening level in 17 commercial buildings and three residences within the Vapor Intrusion Study Area. Where discrete mitigation measures (e.g., sealing conduits, enhanced mechanical ventilation, air purifiers, sub-slab vapor control systems) were implemented, indoor TCE concentrations were reduced to below the interim screening level. Increasing air exchange rates generally resulted in decreasing indoor air TCE concentrations. Vapor intrusion resulting in concentrations above interim long-term indoor air screening levels appears more likely in commercial buildings when ventilation systems are not providing sufficient air exchanges with outside air in all or part of a building. Buildings overlying elevated groundwater concentrations appear to have a greater likelihood of indoor air TCE concentrations exceeding the TCE screening level, but actual indoor air concentrations are also dependent on other building factors such as air ventilation system operations, building configuration, and preferential pathways into the building. The highest TCE indoor air concentrations were found in a building with a basement, where there was direct contact with groundwater (644 National Avenue in the MEW Area). Elevated concentrations were also found in a NASA building, where the ventilation system introduced air from beneath the raised floor into the building (N210 in the Moffett Field Area). A Record of Decision Amendment addressing vapor intrusion at Operable Unit 01 of the Raytheon Company Superfund Site was completed in August 2010.

RB Case Number:	43s1028
File Location:	Not reported
Potential Media Affected:	Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern:	* Solvents
Site History:	No Water Board oversight of cleanup at this site. This case is included in Geotracker because the site is covered by the Water Boards NPDES general permits for discharges from pump and treat systems to surface waters (one each for fuels- and VOC-impacted sites). This can happen for two reasons: (i) the site is overseen by another agency (e.g., USEPA or DTSC) and needs coverage under one of the NPDES general permits or (ii) construction dewatering in an area of groundwater contamination necessitates NPDES general permit coverage. Including this case in Geotracker helps staff to receive and review required NPDES reports.

This can happen for two reasons: (i) the site is overseen by another agency (e.g., USEPA or DTSC) and needs coverage under one of the NPDES general permits or (ii) construction dewatering in an area of groundwater contamination necessitates NPDES general permit coverage. Including this case in Geotracker helps staff to receive and review required NPDES reports.

CA BOND EXP. PLAN:
Reponsible Party: NPL SITE CLEANUP WORKPLAN
Project Revenue Source Company: Not reported
Project Revenue Source Addr: Not reported
Project Revenue Source City,St,Zip: Not reported
Project Revenue Source Desc: The RP will fund the characterization and remedial action at this site. State Bond funds will be used for oversight of the RP's activities. DHS has budgeted $25,000 for oversight activities. DHS will seek cost recovery for its direct costs includingstaff costs and overhead associated with the project.
Site Description: Fairchild operates a semiconductor manufacturing plant at this 56-acre site. Chemicals used in the manufacturing process and wastes generated as a result of this process have been handled and stored onsite. The site is adjacent to residential and industrial development.
Hazardous Waste Desc: In 1982, soil and ground water contamination were discovered. The sources of contamination were leaking underground storage tanks containing solvents. At that time, there were a total of 71 tanks and sumps used for the onsite storage of hazardous materials and wastes. The contaminants which have been detected in soil and ground water include trichloroethylene (TCE), trichloroethane (TCA), dichloroethylene (DCE) and chloroform.
Threat To Public Health & Env: Ground water contamination represents a significant threat to aquifers used as a source of drinking water. About 270,000 people reside within a 3-mile radius of the site. One private well has been closed due to the encroachment of contaminants. To date, three contaminated private wells have been identified. The City of Mountain View operates a municipal well (No. 18) 1.2 miles from the site.
Site Activity Status: Fairchild entered into a consent agreement with EPA in August, 1985. As an initial remedial measure, six of the 71 tanks and sumps used to store hazardous materials and wastes were excavated and removed. A ground water extraction system consisting of 25 extraction wells has been installed and is operating. Fairchild is also participating in an area-wide remedial investigation and feasibility study.

Background Info:	Fairchild operates a semiconductor manufacturing plant at this 56-acre site. Chemicals used in the manufacturing processa and wastes generated as a result of this process have been handled & stored onsite. The site is adjacent to residential & industrial development. This site is part of the Middlefield-Ellis-Whisman (MEW) area. In 1982, soil and groundwater contamination were discovered. The sources of contamination were leaking underground storage tanks containing solvents. At that time, there were a total of 71 tanks & sumps used for the onsite storage of hazardous materials and wastes. The contaminants which have been detected in soil and groundwater include trichloroethylene (TCE), trichloroethane (TCA), dichloroethylene (DCE) and chloroform. Groundwater contamination represents a significant threat to aquifers used as a source of drinking water. About 270,000 people reside within a 3-mile radius of the site. One private well has been closed due to the encroachment of contaminants. To date, three contaminated private wells have been identified. The City of Mountain View operates a municipal well (No. 18) 1.2 miles from the site. Fairchild entered into a consent agreement with EPA to conduct RI/FS in August, 1985. As an initial stabilization action, six of the 71 tanks and sumps used to store hazardous materials and wastes were excavated and removed. A groundwater extraction system consisting of 25 extraction wells has been installed and is operating.

Site History: No Water Board oversight of cleanup at this site. This case is included in Geotracker because the site is covered by the Water Boards NPDES general permits for discharges from pump and treat systems to surface waters (one each for fuels- and VOC-impacted sites). This can happen for two reasons: (i) the site is overseen by another agency (e.g., USEPA or DTSC) and needs coverage under one of the NPDES general permits or (ii) construction dewatering in an area of groundwater contamination necessitates NPDES general permit coverage. Including this case in Geotracker helps staff to receive and review required NPDES reports.

Completed Date:	10/22/2013
Comments:	Based on the Preliminary Endangerment Assessment Report, DTSC determined that no significant releases have occurred from the Site and issued a letter to the Site owner conveying that DTSC requires no further action at the Site. The Report identifies possible indoor air impacts from volatile organic compounds in groundwater that originated from off-Site sources as the only environmental concern. The Site is located within the the Middlefield-Ellis-Whisman Study Area, which encompasses an existing regional groundwater contamination plume. DTSC's letter noted that although DTSC requires

TECHNITRON, INC. (Continued) **S105025096**

no further action, actions may be required by the U.S. Environmental Protection, pursuant to its Record of Decision Amendment for the Vapor Intrusion Pathway, dated August 16, 2010, to address the potential vapor intrusion risk.

Background Info:	Between 1968, and 1981, Intel Corporation operated a semiconductor manufacturing plant at the site. Chemicals used in the manufacturing process and wastes generated by this process were handled and stored onsite. The site is located adjacent to residential and commercial development. This site is part of the Middlefield-Ellis-Whisman (MEW) study area. In 1981, soil and groundwater contamination was discovered at the site. An investigation determined that the sources of contamination were leaking underground storage tanks containing solvents. The types of contaminants identified include trichloroethylene (TCE), xylene, Freon-113, trichloroethane (TCA), dichloroethylene (DCE), and vinyl chloride. Approximately 270,000 people living within a 3-mile radius of the facility depend on groundwater as a principal source of drinking water. Three private wells have been contaminated. Five municipal wells belonging to the City of Mountain View and five City of Sunnyvale wells are located within a three-mile radius of the site. The City of Mountain View's well No. 18 is located 1.1 miles from the facility & is 2,600 feet away from a contaminated monitoring well.

INTEL CORPORATION (MOUNTAIN VIEW PLANT) (Continued) **S105628343**

In August, 1985, Intel entered into a consent agreement with EPA to conduct a RI/FS.
All five underground tanks and sumps at the site have been excavated along with 4,600 cubic yards of contaminated soil.
Groundwater monitoring and extraction wells have been installed for plume characterization, monitoring and extraction. About 72,000 gallons of contaminated groundwater is pumped daily and treated by carbon adsorption prior to discharge to Stevens Creek, Whisman Slough and the San Francisco Bay.

Completed Sub Area Name:	Not reported
Completed Document Type:	Site Screening
Completed Date:	11/19/1990
Comments:	Completed Site Screening. 19 soil samples have been randomly taken at a depth of approximately 1 foot. Samples were analyzed for organochlorine pesticides. 2 samples had slightly elevated DDD, DDE, and DDT (1.62 and 1.32 ppm). 1 sample had slightly elevated chlordane. Site Screening done recommends a Preliminary Endangerment Assessment (PEA). More samples are needed to characterize the vertical extent of contamination. Depending upon the pesticide-use history, soil samples need to be analyzed not only for chlorinated pesticides but also metals, organophospates, and carbamates.

Summary Details:

Conditions at proposal October 15, 1984): Fairchild Semiconductor Corp. manufactures semiconductors in Mountain View, Santa Clara County, California. The facility occupies approximately 56 acres and is surrounded by residential and industrial areas. This site was originally proposed under the name Fairchild Camera Instrument Corp. Mountain View Plant). The company took the new name in 1986. Monitoring wells on the site are contaminated with trichloroethylene,1,1,1-trichloroethane, 1,1- and trans-1,2-dichloroethylene, according to analyses conducted by a consultant to Fairchild. Contamination is believed to have resulted from leaking underground tanks. About 270,000 people depend on wells within 3miles of the site for drinking water. Since early 1982, Fairchild has been investigating the site geology and hydrogeology and attempting to define the lateral and vertical extent of solvents underlying the site. Fairchild has installedtwo wells to pump and treat the contaminated ground water plume. The company is working with the California Regional Water Quality Control Board to further define the extent of contamination and outline various cleanup strategies. The plant received Interim Status under Subtitle C of the Resource Conservation and Recovery Act RCRA) when the company filed Part A of a permit application. This is one of 19 sites in the South Bay Area of San Francisco. Facilities at these sites have used a variety of toxic chemicals, primarily chlorinated organic solvents, which contaminate a common ground water basin. Although these sites are listed separately, EPA intends to apply an area-wide approach to the problem as well astake specific action as necessary. Status February 1986): Continuing to determine the extent of ground water contamination, Fairchild has installed more than 100 monitoring wells. On August 15, 1985, EPA issued an AdministrativeOrder on Consent under CERCLA Section 106 a) to Fairchild s Mountain View Plant, as well as to Intel Corp. s and Raytheon Corp. s Mountain View Plants. The order calls for the companies to conduct a joint remedial investigation/feasibility study of the area to determine the type and extent

FAIRCHILD SEMICONUCTOR SYSTEM 3 (Continued) **1000260555**

of contamination and identify alternatives for remedial action. Status June 1988): EPA is proposing to drop Fairchild Semiconductor Corp. s Mountain View Plant from the proposed NPL. Because the site is a treatment and storage facility, it is subject to the corrective action authorities of Subtitle C RCRA. Fairchild now has 25 wells in operation that pump and treat contaminated ground water; has installed three undergroundslurry walls to control migration of contaminated ground water. EPA has sealed two abandoned agricultural wells that were carrying contamination to the deeper aquifers. EPA may also pursue cleanup under RCRA authorities and will ensure that the cleanup protects public health and the environment. EPA can later repropose the site for the NPL if it determines that the owner or operator is unable or unwilling to clean up the site effectively. Status February 11, 1991): EPAis adding this site to the NPL because, although it is subject to RCRA Subtitle C, the transfer of primary responsibility from CERCLA to RCRA would delay and complicate the overall cleanup of the site. The RI was concluded in July 1988. Adraft FS and EPA s Proposed Plan were presented to the community for a 60-day public comment period in November 1988. EPA signed the Record of Decision ROD) identifying the selected remedy on June 9, 1989. On September 21, 1990, EPA issued an Explanation of Significant Differences clarifying the ROD. In May 1989, EPA sent Special Notice Letters calling for a remedial design/remedial action RD/RA) Consent Decree to Fairchild and 16 other parties potentially responsible for wastes associated with the site. Fairchild failed to conclude a settlement Consent Decree) with EPA. On November 29, 1990, EPA issued Fairchild and eight other parties a Unilateral Administrative Order for RD/RA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 03/26/2015

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 03/26/2015

Data Release Frequency: Varies

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 10/25/2013

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 03/10/2015

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Local Lists of Hazardous waste / Contaminated Sites

US HIST CDL: National Clandestine Laboratory Register
A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 02/25/2015

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

SCRD DRYCLEANERS: State Coalition for Remediation of Drycleaners Listing

The State Coalition for Remediation of Drycleaners was established in 1998, with support from the U.S. EPA Office of Superfund Remediation and Technology Innovation. It is comprised of representatives of states with established drycleaner remediation programs. Currently the member states are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water board?s review found that more than one-third of the region?s active disposal pits are operating without permission.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR US Hist Cleaners: EDR Exclusive Historic Dry Cleaners
EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

JENNIFER L. UPCHURCH

Senior Environmental Consultant

Education

- Bachelor of Art, Marine Affairs/University of Miami, 1992

Project Experience

- ***Commercial and Residential Properties –*** Ms. Upchurch has been performing, writing, and reviewing Phase I environmental site assessments for various types of property for over 15 years, including completion of over 300 Phase I environmental site assessment reports. In addition, Ms. Upchurch has reviewed over 4,000 Phase I environmental site assessments prepared by others, including technical oversight for many of those Projects.
- ***Portfolio Management –*** Ms. Upchurch has managed over 60 Phase I environmental site assessment portfolios, including large scale portfolios, such as 200 bowling centers, 350 nursing centers, 128 bottled gas facilities, 67 manufactured home communities, 63 self storage facilities, 52 hotels, 36 multi-family properties, and 32 gas stations.
- ***University of Maryland Hagerstown Educational Center –*** Ms. Upchurch was responsible for conducting a full hazardous materials investigation on a vacant commercial structure in Hagerstown, Maryland. The investigation included a full asbestos inspection, lead-based paint inspection, survey for microbiological growth, and inventory of possible PCB-containing components and unused chemicals. Ms. Upchurch prepared the investigation report, conducted subsequent design surveys, and prepared abatement specifications for the Project. Additionally, Ms. Upchurch was responsible for review of abatement contractor submittals and oversight of the staff conducting abatement monitoring at the Project, and participated in the project status meetings.
- ***Way Station –*** Ms. Upchurch has conducted over 50 lead-based paint inspections for various clients participating in the Maryland Department of the Environment, Lead Risk Reduction Program. As a Maryland licensed Lead Risk Assessor, Ms. Upchurch was responsible for communicating to clients, the requirements of the Program and assessment options available, scheduling and conducting the lead-based paint inspections, and preparation of forms and documentation required by Maryland Department of the Environment.

CERTIFICATION

This environmental review of the property located at 433 Clyde Avenue in Mountain View, California was conducted by Iris Environmental on behalf of Google Inc. The review conducted by Iris Environmental meets or exceeds the requirements for a Phase I Environmental Site Assessment (ESA) specified in the ASTM International (ASTM) Standard E 1527-13, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.

Qualifications for the environmental professionals involved in this review, Robert Balas, Karen Smith and Daniela Hamann-Nazaroff of Iris Environmental, are included in Appendix A.

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental professional as defined in §312.10 of 40 CFR 312. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed all the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

LIMITATIONS

This report has been prepared exclusively for use by Google Inc., its successors and assignees and may not be relied upon by any other person or entity without the express written permission of Iris Environmental. The conclusions presented in this report represent Iris Environmental's professional judgment based on the information available to us during the course of this assignment and on conditions that existed at the time of the assessment. We have made no independent verification of the information provided to Iris Environmental. While Iris Environmental has no reason to doubt the accuracy of any of the information provided, this report is accurate and complete only to the extent that information provided to Iris Environmental was itself accurate and complete.

I. INTRODUCTION

Iris Environmental was retained by Google Inc. (Google) to conduct a Phase I Environmental Site Assessment (ESA) of 433 Clyde Avenue in Mountain View, California (Site). The purpose of the Phase I ESA was to identify Recognized Environmental Conditions (RECs), as defined in the ASTM International Standard E 1527-13, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (ASTM Standard).

This report presents the results of our investigation. It is based on the following:

A visit to the Site by Ms. Daniela Hamann-Nazaroff of Iris Environmental on August 20, 2014. Ms. Hamann-Nazaroff walked both interior and exterior areas of the Site. Photographs of the exterior taken during the visit to the Site are included in Appendix B. Interior photography was not permitted.

An on-Site interview with Mr. Siegfried Waaga, the General Manager of Rimnetics.

Observation of adjoining properties from the Site boundaries.

A review of previous reports provided by the Google.

A search of regulatory agency databases for the Site, adjoining properties, and vicinity conducted by Environmental Data Resources (EDR) and reported to Iris Environmental on August 13, 2014. A copy of the EDR report is presented as Appendix C.

A review of the United States Geological Survey (USGS) 7.5-minute topographical map for Mountain View (dated 1997), historical topographic maps of the same quadrangle dated 1953, 1961 (photo-revised 1968, 1973, and 1981), and 1991; 15-minute topographical maps for Palo Alto (dated 1899, 1943, 1947, 1948, and 1961); and 30-minute topographical map for Santa Cruz from 1902. Copies of the topographic maps are provided in Appendix D.

A review of historical aerial photographs dated 1939, 1948, 1956, 1968, 1979, 1980, 1991, 1998, 2005, 2006, 2009, 2010, and 2012 provided by EDR. Copies of the aerial photographs are provided in Appendix D.

A review of the City Directory Abstract provided by EDR. A copy is included in Appendix D.

A review of documents pertaining to the Site on file at the Mountain View Fire Department (MVFD), Department of Toxic Substances Control (DTSC), and Bay Area Air Quality Management District (BAAQMD).

A review of the Regional Water Quality Control Board San Francisco Region (RWQCB) Geotracker and DTSC Envirostor databases for online documents on file for the Site, adjoining properties, and vicinity.

Iris Environmental requested historical fire insurance maps of the Site and adjoining properties from EDR, which reported that fire insurance maps are not available (see Appendix D).

Iris Environmental requested documents from the RWQCB, Santa Clara County Water District (SCVWD), and the United States Environmental Protection Agency (USEPA) which reported no

files for the Site, and the Santa Clara County Department of Environmental Health (SCCDEH) and which indicated that a physical file was available in their San Jose office. The SCCDEH records have not been reviewed as of the date of this report.

No environmental or drinking water samples were collected as part of Iris Environmental's Phase I ESA activities.

II. FINDINGS AND CONCLUSIONS

Iris Environmental has performed a Phase I Environmental Site Assessment (ESA) in conformance with the scope and limitations of ASTM Practice E 1527-13 of the property located at 433 Clyde Avenue in Mountain View, California. There were no exceptions to, or deletions from, this practice.

A. Recognized Environmental Conditions

ASTM Standard E 1527-13 defines a REC as (emphasis in original to indicate formally defined terms): "the presence or likely presence of any *hazardous substances* or *petroleum products* in, on, or at a *property*: (*1*) due to release to the environment; (*2*) under conditions indicative of a *release* to the *environment*; or (*3*) under conditions that pose a *material threat* of a future *release* to the *environment*. *De minimis conditions* are not *recognized environmental conditions.*"

In addition, ASTM Standard E 1527-13 defines a controlled recognized environmental condition (CREC; a type of REC) as (emphasis in original to indicate formally defined terms): "a *recognized environmental condition* resulting from a past *release* of *hazardous substances* or *petroleum products* that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with *hazardous substances* or *petroleum products* allowed to remain in place subject to the implementation of required controls (for example, *property* use restrictions, *activity and use limitations*, *institutional controls*, or *engineering controls*).[1] A condition considered by the *environmental professional* to be a *controlled recognized environmental condition* shall be listed in the findings section of the *Phase I Environmental Site Assessment report*, and as a *recognized environmental condition* in the conclusions section of the *Phase I Environmental Site Assessment report*."[2]

This Phase I ESA has identified the following RECs in connection with the Site:

- From 1977 to 1986 the Site was leased to Acurex, which used the Site for pressurized air tank and fiberglass bottle manufacturing. Acurex stored drums of trichloroethylene (TCE) and other chemicals on the concrete pad adjacent to a machinery pit, which was

[1] For example, a leaking underground storage tank that has been cleaned up to a commercial use standard, but does not meet unrestricted residential cleanup criteria, would be considered a controlled recognized environmental condition. The "control" is represented by the restriction that the property use remain commercial.
[2] A condition identified as a *controlled recognized environmental condition* does not imply that the *environmental professional* has evaluated or confirmed the adequacy, implementation, or continued effectiveness of the required control that has been, or is intended to be, implemented.

also referred to as a sump, and in a drum storage area on the east side of the Site and Acurex acknowledged that TCE spills had occurred at the Site.

- Additional reference was found regarding a second pit in the southeast corner of the Site used by Acurex. No additional information about this pit or associated sampling or removal of the pit was found during this assessment.
- TCE was detected in soil on the eastern side of the Site in investigations conducted between 1985 and 1990. The machinery pit and approximately 500 cubic yards of soil was excavated in 1991. Confirmation sampling of the excavation at approximately eight feet below ground surface (bgs) did not detect TCE. No closure documentation from any overseeing agency was found during this assessment.
- A limited localized TCE groundwater plume is likely present on the eastern portion of the Site due to releases associated with the historic drum storage on the east side of the Site. Groundwater investigations conducted in the 1980s detected TCE at a maximum concentration of 140 micrograms per liter (µg/L), which is above the Maximum Contaminant Level (MCL) of 5 µ/L, but below the commercial ESL for groundwater for vapor intrusion concerns of 1,300 µg/L.
- TCE, chloroform, and TCA were detected in soil vapor in the northeast corner of the Site during a 1987 soil vapor investigation. The detected TCE and TCA concentrations are below their respective vapor intrusion Environmental Screening Levels (ESLs) for commercial buildings. The detected chloroform concentration is above the commercial ESL. Based on the 1987 data, the estimated soil vapor plume extends from the northeast corner of the on-Site building off-Site to the northeast.
- The Hewlett Packard (HP) TCE groundwater plume is crossgradient of the Site. The current plume delineation extends within 200 feet west (crossgradient) of the Site.
- The E/M Lubricants tetrachloroethylene (PCE) groundwater plume is crossgradient of the Site. The current plume delineation extends within 200 feet west (crossgradient) of the Site.
- The main concerns with VOCs in groundwater and soil vapor are the potential for chemical vapor intrusion to indoor air and the associated degradation of indoor air quality within current or future buildings and the management of impacted groundwater and soil during any dewatering or excavation which may occur during construction.

B. Historical Recognized Environmental Conditions

ASTM Standard E 1527-13 defines a historical recognized environmental condition (HREC, which is not a REC) as: “a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). Before calling the past release a historical recognized environmental condition, the environmental professional must determine whether the past release is a recognized environmental condition at

the time the Phase I Environmental Site Assessment is conducted (for example, if there has been a change in the regulatory criteria). If the EP considers the past release to be a recognized environmental condition at the time the Phase I ESA is conducted, the condition shall be included in the conclusions section of the report as a recognized environmental condition."

This Phase I ESA identified no HRECs in connection with the Site.

C. De Minimis Conditions

ASTM Standard E 1527-13 defines a de minimis condition as (emphasis in original to indicate formally defined terms): "a condition that generally does not present a threat to human health or the *environment* and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis conditions* are not *recognized environmental conditions* nor *controlled recognized environmental conditions*."

This Phase I ESA has not revealed de minimis condition in connection with the Site.

In addition, the following asset management and potential areas of concern, which are not considered RECs, are noted:

- Based on aerial photographs reviewed, the Site has historically been developed with agricultural use between at least the 1939 to 1963. Although not documented at the Site, activities commonly associated with agriculture include the use and storage of hazardous materials and petroleum products (*e.g.*, agricultural chemicals). Information was not available as to the potential historical usage of pesticides, fertilizers or insecticides. Based on our experience, these residual concentrations, if present, are not typically at concentrations that would require cleanup by a regulatory agency or pose a significant human health risk to commercial or industrial site users. There is potential that the near surface soils contain residual agricultural chemicals that may affect disposal costs in the event redevelopment is planned.
- The building was inspected for asbestos containing materials (ACM) in 1992. ACM was detected in the floor tile mastic, ceiling acoustic, and joint compound on sheetrock seams. No documentation of remediation or management was found during this review.
- As many as six groundwater monitoring wells have formerly been located on-Site. The Site contact was aware of 2 or 3 wells on-Site. Iris Environmental was able to observe one well in the northeast corner during the Site visit. A current ALTA survey was not provided for our review. No documentation of well destruction was found during this assessment. Should any wells be encountered during Site redevelopment activities, they should be property abandoned at that time.

III. DESCRIPTION OF THE SITE AND ITS OPERATIONS

A. Site Description

1. Physical Description and Setting

The Site is located at 433 Clyde Avenue in Mountain View, Santa Clara County, California, as shown on Figure 1. The Site covers an area of approximately 1.15 acres, and is identified as Assessor's Parcel Number (APN) 160-57-004. The Site consists of an approximately 18,042 square-foot single-story light manufacturing facility, surrounding parking and landscaped areas. Other features include exterior storage sheds, an exterior concrete pad with historic air compressors, multiple shipping containers with dry good storage (e.g. office furniture), and one outdoor transformer operated and maintained by PG & E. The approximate layout of the Site at the time of Iris Environmental's Site visit is indicated in Figure 2.

The Site is currently owned by Hathaway Family Partnership. The Site is located in a light industrial area, dominated by office, light industrial, and research and development buildings.

Pacific Gas & Electric (PG&E) provides electricity and natural gas to the Site. Water and sanitary sewer service is reportedly provided by the City of Mountain View.

2. General Site Conditions

At the time of Iris Environmental's Site visit, general housekeeping at the Site was good. No areas of oil or other staining of concrete, asphalt, or soils were noted at the Site. There was no visible evidence that significant spills or leaks had occurred, other than one small area of moisture that appeared to be water beneath some machining equipment located in the warehouse. No evidence of stressed vegetation was noted at the Site during the Site visit.

The detection of noise and odors is dependent on the weather conditions and ongoing operations. At the time of the Site visit, Iris Environmental noted strong paint-related odors in the indoor warehouse spaces of the Site due to on-going operations and limited ventilation. Iris Environmental did not note excessive noise at the Site.

3. Geological Setting

Based on a review of the 1997 USGS topographic map, ground elevation at the Site is approximately 50 to 55 feet above mean sea level. The majority of the Site is flat with a slight downward slope to the north.

The Site is situated on the western portion of the Santa Clara Valley within the Coast Ranges geomorphic province of California. The Santa Clara Valley is generally bounded by the Santa Cruz Mountains to the west, by the San Francisco Bay to the north, and by the Diablo Range to the east. The Site is located in the Confined Aquifer Zone of the interior portion of the Santa Clara Valley Basin. An investigation conducted at the Site in 1986 found that, in general, the subsurface consists of a thin cover of black silty clay to a depth of above 5 feet which is underlain by a sequence of clayey to sandy silts that are 15 to 20 feet thick. Between 25 and 30

feet is gravelly silty sand ranging from 2.5 to 9 feet: this sand appears to be the primary aquifer in the shallow sediments (Levine Fricke 1986).

4. Hydrogeological Setting

The nearest natural body of surface water is Stevens Creek located approximately 1.19 miles west of the Site. The San Francisco Bay is located 3.61 miles to the north of the Site.

Storm water collection drains were observed on the building and in the parking areas. Storm water at the Site reportedly drains to the storm water system at Clyde Avenue.

The EDR Report (EDR 2014a) indicates that the Site is not within a flood zone area.

Groundwater in the site vicinity can be broadly grouped into an upper zone and a lower zone. The lower zone generally occurs at depths greater than 150 feet. Groundwater in the upper zone occurs at depths less than 100 feet and is considered a perched zone that is usually unsuitable for production well purposes due to the generally low yielding capabilities and/or impairment by natural water quality problems (i.e. salinity) (E_2C, 1990).

As many as six groundwater monitoring wells (E-1, -2, and -3 and W-1, -2, and -3) have formerly been located on-Site, as shown on Figure 2. A 1992 ALTA survey reviewed by Iris Environmental showed four of the on-Site wells. A current ALTA survey was not provided for our review. According to the Site contact, either 2 or 3 wells remain present on-Site. Iris Environmental was able to observe one well in the northeast corner during the Site visit. The Site contact stated that another well was below the shipping container on the southeast corner of the Site. No documentation of well destruction was found during this assessment.

In 1986 Levine Fricke conducted a Phase II investigation to determine the groundwater flow direction. Two shallow groundwater monitoring wells (W-1 and W-2) and one intermediate groundwater monitoring well (W-3) were installed on-Site. A fourth well, W-4, was installed off-Site to the east, as shown on Figure 2. Based on data collected from these wells, Levine Fricke concluded that groundwater flowed north to northeast. Most recently, groundwater was encountered in off-Site wells W37, W39, and W41, which are located between 200 and 400 feet south to west of the Site and which are monitored annually by HP at approximately 8 to 11 feet below ground surface (bgs) in 2014 (Stantec 2014). Historic sampling of on-Site wells in the 1980s encountered groundwater at approximately 19 feet bgs (Wahler Associates 1992b).

B. Adjoining Properties Description

1. Physical Description

Surrounding land uses include:

- North – 441 Clyde Avenue an office building that appears vacant.

- South – 425 Clyde Avenue, an office building with no signage, which Google Maps identifies as occupied by Frontier Bites, a company that makes and sells energy bars.
- East – The Sunnyvale Golf Course.
- West – Clyde Avenue, beyond which is 440-450 Clyde Avenue, which is occupied by Google.

Based on observations made from the Site and public right of ways, these properties appear to be in good condition with well maintained landscaped areas. Based on the current uses of the adjoining properties, and observations made at the time of the Site reconnaissance, Iris considers that current uses of adjoining properties are not of potential concern. As further discussed in Section K below, historically, several electronic assembly and manufacturing companies were located in the Site vicinity and caused impacts to groundwater in the Site vicinity.

C. Site History

Iris Environmental reviewed historical aerial photographs, historical topographic maps, historical city directories, and information made available by the seller and local regulatory agencies to develop an understanding of historical uses of the Site and surrounding areas. A request for historical fire insurance maps was submitted, but none were available for review (see Appendix D).

Key milestones in the history of the Site and adjacent properties are listed in Table 1 of this Phase I ESA report.

From the earliest aerial photos from late 1930s to 1963, the Site appears to be used for agricultural purposes with no structures evident on-Site. In 1963 the Site was developed with the current on-Site building. The building has been used for light manufacturing since the 1960s. The Site appears unchanged on historical sources between the 1960s and today.

The surrounding area appears largely undeveloped in the early 20th century. In the 1940s the surrounding area was used for agricultural purposes. In the early 1960s roads in the vicinity of the Site were constructed bringing with them increased development. Throughout the late 1960s through 1980s development increased in the Site vicinity replacing the agricultural land. By the 1990s the surrounding area was fully developed. No significant changes were noted between the 1990s and today.

D. Description of Operations

1. Current Operations

The 433 Clyde Avenue facility is currently occupied by: Rimnetics Inc., a company which manufactures molded plastics; Minimatics Inc., a precision machining company which manufactures small machine metal parts; and Applied Polymers Inc., a polymer manufacturer. According to the Site contact and the General Manager at Rimnetics, Rimnetics has occupied the

facility for approximately 15 years. Based on historic documents, it appears that Minimatics has occupied the Site since 1988. It is unknown when Applied Polymers Inc. began occupying the Site but Applied Polymers Inc. is listed in the 2008 city directory.

2. Past Operations

The on-Site building was constructed in 1963. According to a 1986 Phase II Environmental Assessment prepared by Levine Fricke, P.S. Haliburt occupied the Site from 1963 to 1975 and used the facility for their cabinet making business. The Site was leased to Atari Games from 1975 to 1977: Atari used the Site for dry goods storage and warehousing. From 1977 to 1986 the Site was leased to Acurex, which used the Site for pressurized air tank and fiberglass bottle manufacturing. Acurex stored drums containing chemicals on the east side of the Site. This area was found to be in poor condition with evidence of chemical spillage in a 1986 inspection (Levine Fricke 1986). The Site was reportedly vacant for two years before Minimatics began occupying the Site in 1988 and has been on-Site since that time. In 2000, Rimnetics also began occupying the Site.

E. Polychlorinated Biphenyls (PCBs) and Asbestos

1. PCBs

Mr. Waaga was not aware of any PCB-containing equipment on-Site. One electrical transformer, which is operated and maintained by PG&E, was located on-Site. The transformer appeared rusty and weathered. No staining or discoloration was noted on the concrete.

Of note, a 1986 letter on file at the MVFD notes that there was “gunk” described as a rubbery, amber-colored solid on the pad around the PG&E transformer. While the origin of the “gunk” was unknown, Acurex speculated it appeared to be melted insulation from a transformer fire or overheating. Two samples were collected: one sample was collected from the “gunk” and underlying gravel in the center of the flow at the northeast corner of the transformer pad and a second sample was collected from a grease spot between the transformer and building. PCBs were not detected in either sample (Acurex 1986).

2. Asbestos

A 1992 Report on Building Inspection, Bulk Sampling & Analysis for Asbestos Containing Materials (ACM) was provided by Google (Al Clancy & Associates 1992). The report identified the following ACM: non-friable floor tile and mastic (2,825 square feet), friable ceiling acoustic in the front offices (1,251 square feet), and non-friable joint compound on sheetrock seams. No documentation of remediation or management of the identified ACM was found during this assessment. Given these results, an Asbestos Operation and Management program may be required for building occupants. If the building renovation or demolition is considered, proper removal and disposal of the ACM in accordance with state and local regulation is warranted. Building materials were observed to be in good condition.

F. Hazardous Materials Use and Storage

1. Hazardous Materials Use

Various hazardous materials are used in the manufacturing process at the Site associated with each industrial process as follows:

Minimatics

The main hazardous materials involved in the machining processes at Minimatics are hydraulic oils and lubricants. Vistac 68 way oil (a hydraulic oil) is used for the machine motors, and Kool Mist #77, a water soluble synthetic soap compound used as an industrial metal working lubricant, is used on almost all of Minimatics' machines except the microwave tube parts machines, which use Cleartex D oil as a lubricant. Minimatics' machines are maintained and cleaned on-Site with PineSol. Mr. Waaga stated that solvents are not currently used for machine cleaning. Stoddard Solvent (a mineral spirit) was also noted in Minimatics' portion of the building. All hazardous materials were observed to be stored with secondary containment. As mentioned previously, moisture was noted below one of the machines, but it did not appear oily.

Rimnetics

The main hazardous materials involved in the plastic molding process at Rimnetics are two liquid components which are stored in 55-gallon drums and mixed to make polyurethane. All drums were stored in secondary containment. Large amounts of paint were also used in Rimnetics' operations. Paint was stored in numerous five-gallon buckets inside a large flammable storage cabinet. Paint was applied on a large scale as spray in paint booths and on a small scale as spray at work benches in the warehouse.

Historical records indicate that previous tenants used and stored hazardous materials on-Site. The earliest tenant, P.S. Hurlbut Inc. (1963-1975) used lacquer, thinner, and adhesives in their manufacturing process on-Site. Records show that two of the adhesives used on-Site by P.S. Hurlbut Inc. contained TCA. Both of these adhesives were stored indoors in 55-gallon drums. MEK was also stored on-Site in 55-gallon drums.

Acurex's manufacturing operations involved the use of TCA, TCE, acetone, paints, thinners and other hazardous materials. The majority of the raw and waste product chemical materials were stored above ground in a fenced area on the east side of the building.

Minimatics historically used additional hazardous materials including a Freon 113 solvent bath for machine degreasing, and Freon 113 which was stored in 55-gallon drums, paint cans, thinners, aluminum oxide, waste and virgin oil, and waste and virgin mineral spirits.

2. Underground Storage Tanks (USTs)

No indication of current underground storage tanks (USTs) were observed while on-Site.

Historic records refer to two machine pits that are sometimes referred to as sumps. One machine pit was located near the northeast corner of the building, as shown on Figure 2. The term 'sump' has become vernacular reference used by the parties involved with this project when referring to the machinery pit. However, the pit reportedly was never used as a sump or tank, but was installed and used as a below grade pit which housed pumps, piping, and other equipment used to test the effectiveness of filter materials used to filter smokestacks (Acurex 1986). A record of a conversation between Acurex and Mr. Danziger of the Hazardous Materials Division of MVFD indicates that the Mr. Danziger stated, "Demolition of a machinery pit did not require either a permit or inspection by the Fire Department." Acurex indicates that Mr. Danziger's statement is consistent with Acurex's conversations with the Building Department (Acurex 1991).

When Minimatics began occupying the Site in 1988, the pit reportedly had accumulated rainwater. The liquid in the pit was sampled, and found to contain trichlorfluoromethane, acetone, methylene chloride, barium, copper, lead, nickel, and zinc at concentrations below human health screening levels for drinking water. Acurex reportedly discharged this liquid to the ground surface. As further discussed in Section K, the concrete pit was removed from the Site in 1991 (Wahler 1992a).

There is additional reference to a second pit in the southeast corner of the Site used as a burst pit to test samples of fiberglass-wrapped air bottles manufactured at the facility as part of a DOT quality control program (Acurex 1986). No additional information about this pit or associated sampling or removal of the pit was found during this assessment.

3. Aboveground Storage Tanks

No aboveground storage tanks (ASTs) were observed on-Site. A 1990 facility map of the Site shows an above ground ammonia storage tank located near the northeast corner of the building.

4. Drums and Small Containers

Drums and small containers of hazardous materials were noted on-Site. Fifty-five gallon drums were used to store the two polyurethane primary products, waste metal pieces, and hazardous waste. Smaller (~5 gallon) containers were used to store paint, lubricants, oils, and soaps. All drums and small containers were observed to be properly contained with secondary containment and/or in flammable cabinets.

G. Nonhazardous and Hazardous Waste

1. Nonhazardous Waste

Nonhazardous waste is currently generated during Minimatics' machining process. Minimatics generates metal wastes consisting of iron, brass, aluminum, copper, nickel, steel, and alloys such as cobar and cupronickel. These materials are collected and recycled off-Site by a third party on a regular basis.

2. Hazardous Waste

According to a MVFD Hazardous Waste Permit for 2014, 16,963 pounds of hazardous waste are generated annually at the Site. Mr. Waaga indicated that Rimnetics generates approximately 55 gallons of mop water per month which is classified as hazardous waste. The machining activities generate less than 50 gallons of waste oil per year, and less than 50 gallons of waste solvent per year. Historic records show Rimnetics listed on the HAZNET database between 1994 and 2001 for generation of unspecified solvent mixtures. Minimatics is listed on the HAZNET database between 1993 and 2012 for generation of waste oil, unspecified solvents, and unspecified aqueous solutions. Minimatics is listed on the CA CUPA database for generation of 5 to less than 25 tons of hazardous waste per year.

H. Air Emissions

BAAQMD records indicate that approved emissions from the Rimnetics operation as of November 2013 include particulates (0.02 lbs/day) and organics (8.14 lbs/day) from general sources, surface coaters, and organic solvents. Historic permit applications for spray booths, a vapor degreaser, and an increase in the cleaning solvent limit were also on file at the BAAQMD. Two historic violations were issued to Minimatics. Violation #A30746A for exceedance of precoat usage by 50% was issued and settled out of court in May 1998. Violation #A04644A for "EMI VOC content +0.5 pounds/gallon Reg. Limit 2.7" was issued in 2000 and settled out of court in July 2000. Neither of these violations suggest a release of VOCs to the soil or groundwater at the Site. VOC emission sources (e.g. spray paint in booths and at lab benches) were observed on-Site during the Site visit.

Minimatics is listed on the Emissions Inventory Database (EMI) database from 1990 to 2012 for generation of particulate matter, reactive organic gases, and organic hydrocarbons.

I. Wastewater

1. Industrial and Sanitary Wastewater

Industrial wastewater is currently generated on-Site. A 2014 wastewater discharge permit on file at the MVFD specifies that industrial wastewater shall not exceed 75 gallons per day (GPD) and that total discharge (industrial and domestic) shall not exceed 575 GPD. The wastewater is monitored for copper and nickel prior to discharge.

Historically, industrial wastewater has also been generated at the Site. According to an Environmental Audit by Wahler Associates completed in 1992, Minimatics historically had a permit to discharge waste to sewers (Wahler 1992). However, at the time of the report in 1992, Minimatics no longer had an on-Site elementary wastewater treatment system as the plant had cut back on manufacturing. At the time of the report, Minimatics had a discharge permit for biodegradable soap and water with less than 5 percent oils, cutting fluids, etc.

2. Storm Water

Storm water collection drains were observed on the building and in the parking areas. Storm water at the Site reportedly drains to the storm water system on Clyde Avenue. No indications of potential storm water contamination sources were observed at the Site during the Site visit.

It is not known whether storm water quality has been impacted in the past. No documentation pertaining to storm water issues was contained within City or County files. Mr. Waaga was not aware of any spills, leaks or fires with the potential to impact storm water that had occurred at the Site in the past.

J. Previous Environmental Reports

Numerous key environmental documents which pertain to the subject Site were provided by Google. These documents are listed in the references section below. Information from these documents is included where relevant in the report.

K. On-Site Soil, Soil Vapor, and Groundwater Contamination

Potential sources of on-Site soil, soil vapor and / or groundwater contamination at the Site include:

- Potential On-Site Release: Acurex Corporation occupied the Site between approximately 1977 and 1986. Acurex used and stored TCE and TCA in an exterior rear storage area. Groundwater, soil vapor, and soil impacts have been identified at the Site. Acurex Corporation at the Site address (433 Clyde) was identified as a 'discharger' by the RWQCB in a 1986 Tentative Order for Site Cleanup Requirements that was issued to Acurex (tenant) and P.S. Hurlbut Inc (owner).
- Former Operations: Minimatics has occupied the Site from 1988 to the present. Impacts to the subsurface from historic manufacturing practices and solvent use are possible.

Potential off-Site sources of groundwater and soil vapor contamination include:

- Hewlett Packard TCE groundwater plume: TCE is present in groundwater within 200 feet of the Site boundary. This plume is west and crossgradient of the Site.
- E/M Lubricant PCE groundwater plume: PCE is present in groundwater within 200 feet of the Site boundary. This plume is west and crossgradient of the Site.

Potential Sources of on-Site Contamination

<u>Potential On-Site Release</u>

Soil Investigations

From 1977 to 1986 the Site was leased to Acurex who used the facility for pressurized air tank manufacturing. Acurex stored chemicals, including solvents, in drums on the east side of the property. In a 1986 inspection, this area was observed to be in poor condition with evidence of

chemical spillage (Levine Fricke 1986). Various studies conducted by Emcon, HMMP, and Levine Fricke confirmed TCE and chloroform was present in the shallow soil on the east side of the building. TCE and chloroform were detected at maximum concentrations of 0.5 and 0.08 mg/kg, respectively (Emcon 1985). Levine Fricke concluded that the soil and groundwater data (discussed below) suggest that on-Site spillage in the former drum storage area on the east side of the Site may have caused the on-Site soil contamination (Levine Fricke 1986). A letter dated March 5, 1991 from Levy, Greenfield & Davidoff, attorneys representing Acurex, reports that Acurex, "acknowledged that drums of TCE were stored on the concrete pad adjacent to the sump" and that, "there was some spills of TCE" on the Site (Levy, Greenfield & Davidoff, 1991).

In 1991 the machinery pit (also referred to as a sump, as discussed above in Section III.F.2) near the northeast corner of the Site was removed along with soil along the eastern side of the on-Site building. Eight cubic yards of water saturated soils from the machinery pit was reportedly tested by Acurex. The sludge sample was found to contain trichlorofluoromethane (330 µg/L), acetone (25 µg/L), methylene chloride (31 µg/L), and several metals. Based on these results, which Acurex deemed "non-contaminated," the water saturated soil from the machinery pit was discharged to the ground surface. Because the water saturated soil was discharged to the ground surface during pit removal activities, which included excavation of approximately 500 cubic yards of soil, we assume that the water saturated soil was discharged to an area which was subsequently immediately excavated, as described below.

After the water saturated soil was removed from the pit, Wahler observed the pit and found no signs of contaminations or cracks. The concrete machine pit was removed along with asphalt that covered the proposed soil excavation area. Approximately 500 cubic yards of soil was excavated from the eastern side of the Site in an area approximately 20 feet by 60 feet by 8 feet deep, as shown on Figure 2 (Wahler Associates 1992b). Eight soil samples were collected by Wahler from the base and sides of the excavation and were analyzed for VOCs. VOCs were not detected with the exception of toluene, which was detected at a concentration of 0.13 mg/kg in one sample. The excavation was reportedly immediately backfilled with a gravelly silt and sand mixture.

Groundwater Investigations

As many as six groundwater monitoring wells (E-1, -2, and -3 and W-1, -2, and -3) have formerly been located on-Site, as shown on Figure 2. A 1992 ALTA survey reviewed by Iris Environmental showed four of the on-Site wells. According to the Site contact, either 2 or 3 wells remain present on-Site. Iris Environmental was able to observe one well in the northeast corner during the Site visit. The Site contact stated that another well was below the shipping container on the southeast corner of the Site.

In October 1985, one exploratory boring (EB-1) was drilled near the drum storage area and a grab groundwater sample taken. TCE was detected at a concentration of 270 µg/L and 1,1,1-TCA was detected at 23 µg/L (Emcon 1985). In December of 1985, Emcon was retained to help determine the origin of this contamination. Emcon installed a monitoring well (E-1) on the southern, upgradient side of the Site. TCE was detected at much lower concentrations (2.8 µg/L)

than in EB-1 suggesting the source of TCE was not migrating on-Site from an upgradient and off-Site source. In November 1985 Levine Fricke installed two additional wells: E-2 in the vicinity of the drum storage area, and E-3 near the northern, downgradient property line. All three wells (E-1 through E-3) were sampled three times between 1985 and 1986. TCE was consistently detected at a higher concentration at E-2 near the drum storage area than any other location. TCE was detected in the downgradient well E-3 only once in the first sampling event at a concentration of 1.6 µg/L. The data from the three sampling events is summarized in the table below:

Well	Date	TCE (µg/L)	TCA (µg/L)	PCE (µg/L)	Freon (µg/L)	IPA (µg/L)	MEK (µg/L)
E-1	11/8/85	2.8	4.0	ND	22.0	NA	NA
	3/25/86	4.3	ND	ND	NA	ND	ND
	3/28/86	5.6	ND	ND	NA	ND	ND
E-2	11/8/85	140	2.8	ND	ND	NA	NA
	3/25/86	51	ND	ND	NA	ND	ND
	3/28/86	78	ND	ND	NA	ND	ND
E-3	11/8/85	1.6	ND	1.7	ND	NA	NA
	3/25/86	ND	ND	ND	NA	ND	ND
	3/28/86	ND	ND	ND	NA	ND	ND

Notes
NA= Not Analyzed
ND=Not Detected
11/85 sampled by Emcon Associates
3/86 sampled by Levine Fricke

In 1986, the owner of the Site, P.S. Hurlbut, sent a letter to the RWQCB stating that P.S. Hurlbut does, "not intend to conduct remedial action at the site and a "No Action" alternative has been selected due to the limited size of the spill and lack of continuing source" (PSH 1986). The letter concluded that soil excavation and groundwater extraction did not seem warranted but that quarterly groundwater monitoring would be initiated to determine if the plume was migrating. The letter was seeking RWQCB approval for this alternative. Record of RWQCB approval was not found in this review.

Because TCE was not detected in monitoring well E-3 in 1986 and at a very low concentration in 1985, several previous reports have asserted that the extent of contamination is limited to a small on-Site area near well E-2. However, this interpretation was based on an assumed northerly groundwater flow. As mentioned above in Section III.A.4, there is some uncertainty as to whether groundwater flows north, northeast or northwest. Since the three on-Site monitoring wells on the eastern side of the Site are located almost along a straight line, the groundwater flow direction cannot be determined very precisely using data from these wells. Levine Fricke concluded that it is unclear whether the elevated TCE concentrations are limited to the Site or whether the groundwater flow gradient was more northeasterly and E-3 slightly outside the plume. Therefore, Levine Fricke concluded that the lateral extent of groundwater impacts could not be evaluated using existing data (Levine Fricke 1986).

In 1986 Levine Fricke conducted a Phase II investigation to determine the groundwater flow direction and further characterize the lateral and vertical extent of contamination on-Site. Two shallow groundwater monitoring wells (W-1 and W-2) and one intermediate groundwater monitoring well (W-3) were installed on-Site in September and October of 1986. A fourth well, W-4, was installed off-Site to the east, as shown on Figure 2. Based on data collected from these wells, Levine Fricke concluded that groundwater flowed north to northeast. Wells W-1 through W-4 were sampled on two days in November 1986. TCE was not detected in any well except for one detection in W-2 at a concentration of 4 µg/L. Chloroform, which had not previously been detected in the E-1 through E-3 wells, was detected at a maximum concentration of 1,600 µg/L in W-2 and a maximum of 8 µg/L in W-1. The chloroform concentration in W-2 is just below the current groundwater vapor intrusion ESL for commercial buildings of 1,700 µg/L. Based on these results, Levine Fricke concluded that the extent of TCE was laterally limited to the area immediately around E-2 and vertically limited to the shallowest water bearing zone (the upper 35 feet) and that additional investigation would be necessary to evaluate the lateral and vertical extent of chloroform.

Based on the results of these previous investigations, the RWQCB issued a Tentative Order for Site Cleanup Requirements to Acurex (tenant) and P.S. Hurlbut Inc (owner). Acurex Corporation was identified as a "discharger." The Tentative Order required an investigation with an evaluation and recommendations for remedial measures. A draft Soil Gas Investigation and On-Site Remedial Program Report prepared by Levine Fricke and dated May 15, 1987 concluded that, "An onsite interim remediation program is recommended that will consist of 2 pumping wells … and disposal of the pumped water to the sanitary sewer…Remediation of VOCs in onsite vadose soils is not now recommended due to the estimated low concentrations and amounts present" (Levine Fricke 1986).

A 1987 Work Order for Cleanup of VOCs in Shallow On-Site Groundwater at 433 Clyde recommended one extraction well be installed downgradient of well E-2 to initiate cleanup of the shallow groundwater area. An additional pump would be installed at well W2 to clean up the chloroform. Verbal permission from the City of Mountain View to discharge water from these extraction wells without treatment to the sanitary sewer was reportedly received. The work order reviewed by Iris Environmental was not signed by the owner, P.S. Hurlbut, and there is no evidence it was enacted (RWQCB 1987).

In an Earth Metrics Incorporated (EMI) 1990 Supplemental Environmental Site Assessment, EMI reported that no agencies were overseeing groundwater monitoring at the Site. The SCVWD reported that they had "no records indicating violation of the water permit by the tenant" at 433 Clyde. EMI states that the RWQCB was aware of the on-Site contamination but did not issue a citation for violation because, "The incident does not warrant it. The historic information on site spills is considered a very minor issue" (EMI 1990). Additionally EMI stated that all available literature on the TCE level in well E-2 traced the original source of the TCE to the earlier spill on the Site, and that the TCE contamination detected at the Site did not originate from an upgradient source.

No records of more recent groundwater sampling at the Site was found during this assessment.

Soil Vapor Investigation

A 1987 soil vapor investigation conducted on-Site found TCE, chloroform and TCA in soil vapor in the northeast corner of the Site at maximum concentrations of 2,000 µg/m^3, 20,000 µg/m^3, and 10,000 µg/m^3, respectively. The TCE and TCA detections are below the vapor intrusion ESL for commercial buildings of 3,000 and 22,000,000 µg/m^3, respectively and the detected chloroform concentration is above the commercial vapor intrusion ESL of 2,300 µg/m^3. Based on the 1987 delineation of the soil vapor contamination, as shown on Figure 2, the estimated soil vapor plume extends from the northeast corner of the on-Site building off-Site to the northeast (Levine Fricke 1987).

Potential off-Site Sources of Groundwater and Soil Vapor Contamination

Hewlett Packard TCE Groundwater Plume

The Site is located crossgradient from the source site for the Hewlett Packard TCE groundwater plume, located at 690 East Middlefield Road. An April 2014 groundwater monitoring investigation conducted at the former HP facility detected a maximum TCE concentration of 61 µg/L in groundwater within 800 feet west- southwest of the Site. Current delineation of the plume extends within 200 feet to the west and crossgradient of the Site, as shown on Figure 2 (Stantec 2014)

Hewlett Packard submitted a Site Closure Request for the former HP facility at 690 East Middlefield Road to the RWQCB in July 2013. Closure of the HP facility had not been granted as of September 2014.

E/M Lubricants PCE Groundwater Plume

The Site is located crossgradient from the source site for the E/M Lubricants PCE groundwater plume, located at 875 Maude Avenue, southwest of the Site. April 2014 groundwater monitoring results from the E/M Lubricants facility detected a maximum PCE concentration of 32 µg/L in groundwater within 250 feet west and crossgradient of the Site (Stantec 2014). The current E/M

Lubricants site owner is currently attempting to obtain a no further action letter from the RWQCB.

L. Records Review

1. EDR Report

Iris Environmental reviewed a report prepared by EDR that summarizes the results of a search of federal and state regulatory agency databases. The EDR report is included in Appendix C. The database search was conducted to evaluate whether the Site or any nearby properties are under investigation for potential environmental issues or have been identified as conducting operations that could potentially impact the environment. The EDR report includes searches of databases of sites with engineering controls and institutional controls. The findings of the EDR search are summarized below.

EDR conducted its search of environmental databases on August 13, 2014. Because the environmental databases themselves are sometimes not updated by the specific regulatory agencies for periods of up to 1 year (depending on the database), the database search conducted herein will not necessarily list a facility or site for which an environmental investigation/listing has been initiated subsequent to the last update. The dates of database updates are provided in Appendix C.

EDR conducted searches of the following federal databases, and all search radii were selected in accordance with ASTM standards:

- USEPA National Priorities List (NPL) for Uncontrolled Hazardous Waste Sites – 1-mile radius;
- USEPA Delisted NPL – ½-mile radius;
- USEPA Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) and CERCLIS-No Further Remedial Action Planned (CERCLIS-NFRAP) – ½-mile radius;
- Corrective Action Site List (CORRACTS) of Resource Conservation and Recovery Act (RCRA) hazardous waste treatment, storage, and disposal (TSD) facilities subject to corrective action under RCRA – 1-mile radius;
- Resource Conservation and Recovery Act Information System (RCRIS) database of TSD facilities not subject to corrective action and hazardous waste generators – ½-mile radius (TSD) and property and adjoining properties (generators);
- Engineering Controls Sites List (US ENG CONTROLS) – property only;
- Sites with Institutional Controls (US INST CONTROL) – property only; and
- Emergency Response Notification System (ERNS) – property only.

EDR also conducted searches of the following State of California and tribal databases:

- RESPONSE database – 1-mile-radius;

- ENVIROSTOR database – 1-mile-radius;
- California Solid Waste Inventory System (SWIS) – ½-mile radius;
- Spills, Leaks, Investigation and Clean Up (SLIC) cost recovery listing – ½-mile radius;
- Leaking Underground Storage Tanks (LUST) Information System – ½-mile radius;
- Underground Storage Tank (UST) Registrations Database – property and adjoining properties;
- Site Mitigation and Brownfield Re-use Program Facility Sites with Deed Restrictions and Hazardous Waste Management Program Facility Sites with Deed / Land Use Restrictions (DEED) database – property only;
- Underground Storage Tanks on Indian Land (Indian UST) database – property and adjoining properties; and
- Leaking Underground Storage Tanks on Indian Land (Indian LUST) database – ½-mile radius.

Databases searched by EDR that record information on deed restrictions, engineering controls and institutional controls (DEED, US ENG CONTROL, US INST CONTROL) did not show any listings for the Site.

The Site address, 433 Clyde Avenue, is listed on the HAZNET, ENVIROSTOR, CUPA, EMI, and FINDS databases as follows:

Database	Owner or Tenant (Year)	Details
HAZNET	Rimnetics Inc (1998-2001) Minimatics Inc (2012)	HAZNET database indicates that unspecified solvent mixtures and unspecified solvent mixture were disposed off-Site.
ENVIROSTOR	Acurex Corporation (1990)	As of January 1990, Site is listed as referred to another agency. See Section K for further discussion.
CUPA	Minimatics Inc (1990-2012)	CUPA database indicates that facility is a registered hazardous waste generator (5 to <25 tons/yr).
EMI	Minimatics Inc (1990-2012)	EMI database indicates that

		facility had submitted emissions data from 1990-2012 to the BAAQMD.
FINDS	Minimatics Inc (N/A)	The facility is listed in the National Emissions Inventory database.

Several facilities in the vicinity of the Site were identified within the ASTM-specified search radii as summarized below:

NPL

Four facilities are listed within one mile of the Site.

Moffett Naval Air Station, Intel Corporation, Raytheon Company, and Fairchild Semiconductor Corporation are all part of the MEW Study Area. The primary chemicals of potential concern in the Study Area are TCE and its breakdown products cis-1,2-dichloroethene (cis-1,2-DCE), and vinyl chloride (VC). Due to the crossgradient location of the MEW plume with regards to the Site, it is unlikely to impact subsurface conditions at the Site.

CERCLIS

Four facilities are listed within 0.5 miles of the Site.

Three of the facilities, Moffett Naval Air Station, Intel Corporation, and Raytheon Company, are part of the MEW Study Area and are discussed above under NPL.

NEC, located at 501 Ellis Street 0.630 miles northwest of the Site, is also located within the MEW Study Area. As stated above, due to the crossgradient location of the MEW plume with regards to the Site, it is unlikely to impact subsurface conditions at the Site.

CERC-NFRAP

Three facilities are listed within 0.5 miles of the Site.

Hewlett Packard Mountain View is listed at 333 Logue Avenue, 0.250 miles west southwest of the Site. The database listing states the HP facility was referred to the RWQCB. The Geotracker website lists the facility address at 690 East Middlefield Road, which is discussed in detail in the Hewlett Packard E/M Lubricant Plume in Section III.I.

Cooper Vision is listed at 455 E Middlefield Road, 0.460 miles west of the Site. Siltec is listed at 405 National Ave, 0.492 miles northwest of the Site. As both facilities are located crossgradient of the Site, these facilities are unlikely to impact subsurface conditions at the Site.

CORRACTS

Four facilities are listed within one mile of the Site.

Fairchild Semiconductor is discussed under NPL.

Sylvania Systems Group GTE Pro (as also referred to as GTE OSI) listed at 100 Ferguson Drive is located 0.846 miles west southwest of the Site. Circo Inc is listed at 940 Hamlin Ct, 0.980 miles east northeast of the Site. As both facilities are located cross- to downgradient of the Site, these facilities are unlikely to impact subsurface conditions at the Site.

Memotronics is listed at 1058 West Evelyn Avenue, 0.893 miles south of the Site. According to the most recent corrective action summary listed in the EDR report dated February 19, 2010, migration of contaminated groundwater is under control at the facility and monitoring will be conducted to confirm that contaminated groundwater remains within the existing area of contaminated groundwater. The corrective action summary also indicates that current human exposures are under control. Therefore, this facility is unlikely to impact subsurface conditions at the Site.

RCRA GENERATOR

Two facilities are listed as a large quantity generator (LQG) within 0.25 miles of the Site.

Chemocentryx is listed at 850 Maude Avenue, 0.100 miles southwest of the Site. As no violations have been reported, this facility is unlikely to impact subsurface conditions at the Site.

Meta Technologies Inc. listed at 885 Maude Avenue, is 0.107 miles west southwest of the Site. The facility has received multiple notices of minor violations classified as: general, TSD-container use and management, system standards, and generators-general. The facility was considered a 'significant non-complier' in 2006, but in 2007 is listed as 'not a significant non-complier'. The EDR report does not provide additional details. This facility is further discussed below in the Envirostor section.

Seventeen facilities are listed as small quantity generators (SQG) within 0.25 miles of the Site. None of the facilities have received any violations, and therefore are unlikely to impact subsurface conditions at the Site.

CA RESPONSE

One facility is listed within one mile of the Site.

Apple, listed at 985 Almanor Avenue, is 0.638 miles east of the Site. The facility is also listed on Geotracker under California Microwave and is under RWQCB oversight. Soils containing VOCs greater than 0.5 ppm were excavated in June of 1995. Soil removal effectively removed the source of PCE to groundwater, and the facility is currently capped with buildings and asphalt. Due to the crossgradient location and distance from the Site, this facility is unlikely to impact subsurface conditions at the Site.

ENVIROSTOR

Twenty-nine facilities are listed within one mile of the Site.

Four facilities, Hewlett Packard, Apple (formerly California Microwave), Circo Inc, and Sylvania Systems Group GTE Pro (aka GTE OSI), have been previously discussed in the above sections.

Four facilities, Raytheon Company, Fairchild Semiconductor, Intel Corporation, Spectrian Corp, and NEC, are all a part of the MEW Study Area which is discussed above in the NPL section. As stated above, due to the crossgradient and downgradient location of the MEW plume with regards to the Site, it is unlikely to impact subsurface conditions at the Site.

Four facilities, Technitron Inc, Air Prods & Chems Inc, Ferguson Business Park, and Shea Homes are listed as having received no further action status and therefore are unlikely to impact subsurface conditions at the Site.

Eight facilities, National Semiconductor, St. Microwave Corp., Siltec, Micrel/Litronix (also listed as 639 Pastorial SMI REM Site), Micrel Inc Wafer Fab Division, TRU-SI, Ensign Gladys, and St Jude Medical (645 Almanor) are located cross- to downgradient from the Site and are unlikely to impact subsurface conditions at the Site.

The nine remaining facilities are located generally upgradient of the Site and are discussed below.

Meta Technologies Inc. listed at 885 Maude Avenue, is 0.107 miles west southwest of the Site. The facility is listed as a tiered permit facility with an inactive status. Given the regulatory status, this facility is unlikely to impact subsurface conditions at the Site

Areva Solar Inc listed at 303 Ravendale is located 0.667 miles southwest of the Site. The facility is currently open and undergoing a site assessment: the RWQCB is working to define the extent of contamination of TCE in the groundwater. According to a 2007 monitoring report, the maximum detected of TCE on the property was 52 µg/L in groundwater. The groundwater flow direction is north (PES Environmental Inc. 2007). Due to the distance and the slight crossgradient location of Site relative to 303 Ravendale, it is unlikely to impact subsurface conditions at the Site.

Conductus Inc. listed at 969 W Maude Avenue, is 0.450 miles southeast of the Site. According to Envirostor, the facility is a tiered permit facility with an inactive status. No other information is available. The facility is also listed as a small and large quantity generator of hazardous wastes. According to the EDR report, no violations have been found. Based on this data and the crossgradient location relative to the Site, this facility is unlikely to impact subsurface conditions at the Site.

Power Spectra Inc. listed at 919 Hermosa Court is located 0.657 miles south southeast of the Site. According to Envirostor, the facility is a tiered permit facility with an inactive status.

Based on the regulatory status and the distance to the Site, this facility is unlikely to impact subsurface conditions at the Site.

EG and G Peticon listed at 345 Portrero Ave is 0.725 miles south southeast of the Site. According to Envirostor, the facility is a tiered permit facility with an inactive status. The facility is also listed as a large quantity generator of hazardous wastes and having a historic underground storage tank. According to the EDR report, neither violations nor releases have been found. Based on the regulatory status and the distance to the Site, this facility is unlikely to impact subsurface conditions at the Site.

Sierra Circuits Inc. is listed at 1108 West Evelyn Avenue is 0.864 miles southwest of the Site. According to Envirostor, the facility is a tiered permit facility with an inactive status. No other information is available. The facility is also listed under the RCRA-LQG, HIST LUST, CA EMI, and CA NPDES databases. Nonetheless, based the distance to the Site, this facility is unlikely to impact subsurface conditions at the Site.

AZ Electronic Materials is listed at 615 Palomar Ave, 0.644 miles east southeast of the Site. According to Envirostor, the facility is a tiered permit facility with an inactive status. Based on the regulatory status and the distance to the Site, this facility is unlikely to impact subsurface conditions at the Site.

Phototronics Inc is listed at 695 Vaqueros Ave, 0.800 miles east southeast of the Site. According to Envirostor, the facility is a tiered permit facility with an inactive status. Based on the regulatory status and the distance to the Site, this facility is unlikely to impact subsurface conditions at the Site.

LUST

Eight facilities (four duplicates) are listed within 0.5 miles of the Site.

The LUST database indicates that all the facilities except Peninsula Transmission Service have received regulatory closure. Based on a review of Geotracker, the Peninsula Transmission Service facility received regulatory closure in July 2008. Therefore these facilities are unlikely to impact subsurface conditions at the Site.

SLIC

Ten facilities (one duplicate) are listed within 0.5 miles of the Site.

The NEC and Raytheon Company facilities are located within the MEW Study Area discussed above in the NPL listing.

Three facilities, 690 E Middlefield, Hewlett Packard, and 875 Maude are associated with the Hewlett Packard E/M Lubricant plume as discussed above in Section K.

Four facilities, 485 Clyde Avenue, Samsung Research Center (625-685 Clyde Avenue), 478 E. Middlefield, and the MALC facility are located cross- to downgradient of the Site. Given their

location relative to the Site, these facilities are unlikely to impact subsurface conditions at the Site.

One facility, Peninsula Transmission Service, received case closure and is therefore unlikely to impact the subsurface conditions at the Site.

Orphan Sites

Twelve "orphan" sites were identified in the EDR Report. None of the orphan sites listed in ATSM Standard databases appear to be located in the immediate Site vicinity and are therefore unlikely to impact subsurface conditions at the Site.

Summary

Iris Environmental considers that, with the exception of the facilities which contribute to the Hewlett Packard and E/M Plumes (discussed in Section K), none of the facilities identified by EDR have the potential to significantly impact subsurface conditions at the Site.

2. Environmental Liens and Activity and Use Limitations

Iris Environmental reviewed the report titled *The EDR Environmental Lien and AUL Search Report 433 Clyde Avenue, Mountain View CA 94043* prepared by EDR (EDR 2014b) for evidence of environmental liens and Activity and Use Limitations (AULs) at the Site. AULs are defined in the ASTM Standard as legal or physical restrictions or limitations on the use of, or access to, a site or facility: (1) to reduce or eliminate potential exposure to hazardous substances or petroleum products in the soil or groundwater on the property, or (2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment.

No environmental liens or AULs were noted by EDR.

M. Interviews with Local Government Officials

Iris Environmental requested documents from the following agencies:

Agency	Date of Request	Files Reviewed
DTSC – Berkeley	8/13/2014	Files reviewed and referenced throughout the report.
DTSC – Sacramento	8/13/2014	No records available.
Santa Clara County Department of Environmental Health	8/13/2014	Files reviewed and referenced throughout the report.
BAAQMD	8/13/2014	Files reviewed and referenced throughout the report.
Mountain View Fire Department	8/13/2014	Files reviewed and referenced throughout the

		report.
RWQCB	8/13/2014	No records available.
USEPA Region IX	8/13/2014	No records available.

N. Information Provided by the User

In compliance with ASTM E 1527-13, a user/client questionnaire was completed by Mr. Martin Suen of Google. The information provided in the questionnaire is summarized here and a copy of the questionnaire is provided in Appendix F.

Mr. Suen is not aware of any environmental cleanup liens against the Site and has no specialized knowledge of the Site. He is not aware of any land use restrictions at the Site. He is not aware of past uses of the Site.

O. Data Gaps

Standard ASTM E1527-13 defines a data gap as, "a lack of or inability to obtain information required by this practice despite *good faith* efforts by the *environmental professional* to gather the information" (emphasis in original to indicate formally defined terms). Significant data gaps are identified as those that affected our ability to identify RECs. No significant data gaps were identified during this ESA.

IV. DEVIATIONS FROM THE ASTM STANDARD

There were no deletions or deviations from ASTM Practice E 1527-13 in conducting this Phase I Environmental Site Assessment.

Tables

Table 1 – Summary of Historical Records

Date (1)	Source	Finding
1899	Topographic Map	Site and surrounding area is undeveloped. A small residential structure may be located on-Site. The road that today is Highway 237 is present southeast of the Site.
1902	Topographic Map	Site and surrounding area appears undeveloped.
1939	Aerial Photo	Site is vacant and appears to be used for agricultural purposes. Surrounding area is used for agriculture as well, with orchards to the southwest, open fields to the north and east.
1943	Topographical Map	Site and surrounding area appears undeveloped.
1947	Topographical Map	No significant changes from previous map.
1948	Topographical Map	Development of agricultural land especially to the south of the Site.
1948	Aerial Photograph	No significant change from previous photo.
1953	Topographic Map	Site remains unchanged. Agriculture increases in surrounding area. The area to the northeast is noted as a Naval Reservation.
1956	Aerial Photograph	Site is vacant and appears to be used for agricultural purposes
1961	Topographic Map	Site remains unchanged. Development, such as roads and buildings, is increasing in surrounding area and agriculture is decreasing.
1968	Aerial Photograph	Site appears developed with current on-Site building. Commercial development increasing in surrounding areas. The Sunnyvale Golf Course has been developed to the northeast.
1968	Topographic Map	Site appears developed with current on-Site building. Little agriculture remains in the surrounding area. The Naval Reservation to the northeast is also noted as a Golf Course.
1973	Topographic Map	Current on-Site building is noted. Commercial development continues at surrounding properties.
1979	Aerial Photograph	No significant changes from previous photo.
1980	Aerial Photograph	No significant change to the Site from previous photo. The Golf Course to the northeast is under development.
1981	Topographic	Site appears unchanged. Agricultural uses have been replaced

Date (1)	Source	Finding
	Map	with commercial development in the area surrounding the Site.
1991	Aerial Photograph	No significant changes from previous photo.
1991	Topographic Map	Site and surrounding area is indicated as developed.
1997	Topographic Map	No significant changes from previous map.
1998	Aerial Photograph	No significant changes from previous photo.
2005	Aerial Photograph	No significant changes from previous photo.
2006	Aerial Photograph	No significant changes from previous photo.
2009	Aerial Photograph	No significant changes from previous photo.
2010	Aerial Photograph	No significant changes from previous photo.
2012	Aerial Photograph	No significant changes from previous photo.

Notes:

1) While historical records were not available for the property at 5 year intervals (the suggested frequency in the ASTM Standard), we do not consider this data gap to be significant to the identification of RECs at the Site, as sufficient information was available to develop an understanding of past property uses.

Qualifications of Environmental Professionals

ROBERT B. BALAS

EDUCATION

1993 M.Eng.S., Environmental Engineering, University of California at Berkeley

1982 A.B., Physics, Dartmouth College, Hanover, NH

EXPERIENCE

Robert Balas, Principal of the Air Sciences Group, is the Principal in charge of all environmental fate and transport modeling and all air monitoring programs. Mr. Balas has been with Iris Environmental for seven years, and has over 20 years of environmental consulting experience with a focus on indoor and outdoor air monitoring, subsurface modeling, emissions estimation, regulatory compliance, and emission control techniques. Mr. Balas has been instrumental in incorporating site-specific and engineering control elements into the existing fate and transport models, and has used his expertise in the vapor intrusion pathway to assist clients in identifying engineering modifications to impacted buildings as a means of mitigating potential indoor air exposures.

- Mr. Balas is currently assisting a large tenant located on a California Superfund site in Mountain View, California. The principal constituents of concern at the site are chlorinated solvents in the groundwater. Our support has involved ongoing indoor and outdoor air sampling to determine the exposure concentrations resulting from the constituents of concern. Based on the data collected during the indoor air sampling program, we have been working with the tenant to identify the likely fate and transport pathway or pathways responsible for any elevated exposure levels of concern through advanced modeling using the Johnson and Ettinger model. Based on this analysis we will determine what mitigation measures can or need to be taken to reduce exposure to potential chemicals of concern, and calculate any associated costs. Currently, we are following the status of USEPA Region IX's reevaluation of all chlorinated solvent sites, specifically related to the examination of the indoor air vapor transport pathway and the reevaluation of the carcinogenic potency of trichloroethylene (TCE).

- Mr. Balas is currently assisting a large tenant located on chlorinated solvent plume in Newport Beach, California. The principal constituents of concern at the site are chlorinated solvents in the groundwater. Our support has involved subsurface soil gas sampling coupled with an ongoing indoor air sampling to determine the exposure concentrations resulting from the constituents of concern. Based on the data collected during the sampling program, we have been working with Regional Water Quality Control Board (RWQCB) and the Department of Toxic Substances Control to identify building of concern and likely indoor air exposure pathways. Based on this analysis we developed a detailed mitigation approach to reduce exposure to potential chemicals of concern, and are currently implementing this approach with RWQCB oversight.

- Mr. Balas is currently assisting a large tenant located on a California Superfund site in Mountain View, California. The principal constituents of concern at the site are chlorinated

solvents in the groundwater. Our support has involved ongoing indoor and outdoor air sampling to determine the exposure concentrations resulting from the constituents of concern. Based on the data collected during the indoor air sampling program, we have been working with the tenant to identify the likely fate and transport pathway or pathways responsible for any elevated exposure levels of concern through advanced modeling using the Johnson and Ettinger model. Based on this analysis we will determine what mitigation measures can or need to be taken to reduce exposure to potential chemicals of concern, and calculate any associated costs. Currently, we are following the status of USEPA Region IX's reevaluation of all chlorinated solvent sites, specifically related to the examination of the indoor air vapor transport pathway and the reevaluation of the carcinogenic potency of trichloroethylene (TCE).

- Mr. Balas completed an air modeling human health risk assessment for a former petroleum storage and dispensing facility located near the Port of San Francisco, California. The site had undergone site closure as an industrial facility but now was being proposed for commercial and residential use. Elevated levels of petroleum-related compounds and methane present in the soil and groundwater posed a potential issue for both residential and commercial redevelopment. Furthermore, local community groups were concerned regarding the proximity of significant industrial ambient air pollution sources, including a local concrete batch plant. Iris Environmental was retained to complete a human health risk assessment to determine whether on-site residual levels of petroleum constituents and off-site sources of air toxics would adversely impact human health under the planned development activities. Mr. Balas used the methane-modified Johnson and Ettinger model to estimate impacts resulting from subsurface contamination and the SCREEN3 dispersion model to determine on-site impacts associated with off-site sources. By incorporating site-specific development plans for a basement garage below the residential portion of the development, and using the direction of prevailing wind to reduce the impact of some off-site sources, Mr. Balas was able to show that the planned redevelopment could go forward with *de minimus* risk. The risk assessment was approved by both the Redevelopment Agency and the Department of Public Health without any comments, and redevelopment of the industrial property is moving forward on schedule.

- Mr. Balas has performed CO hotspots and criteria pollutant analysis for residential developments in Fairfield, California. The Bay Area Air Quality Management District's screening-level analysis was employed to estimate CO concentrations in the vicinity of 15 roadway intersections, under three project scenarios. Results of the screening procedure indicated that the proposed project would not produce a significant impact at any of the 15 roadway intersections, and therefore no detailed CO dispersion analysis was necessary. The URBEMIS model was used to evaluate criteria pollutant emissions from the proposed development.

- Mr. Balas has developed human health risk assessment in support of an Environmental Impact Report required for a proposed redevelopment in San Francisco. The proposed development included the construction of a multi-use building occupied by retail space at street level and by residents on upper floors. The purpose of the risk assessment was to determine whether the residual chemicals at the Site could adversely impact human health during development and proposed future land use. As exposure to these chemicals could

potentially occur both during Site development and future land use, the health risks associated with the construction phase and future land use were both evaluated.

- Mr. Balas has provided Environmental Impact Report assistance for the Los Angeles Airport proposed expansion, including reviewing emissions estimation methods, air dispersion modeling, and plume rise calculations. This review included using USEPA approved methods outlined in *AP-42: Compilation of Air Pollutant Emission Factors* and the Gaussian plume dispersion model Industrial Source Complex Short Term 3 (ISCST3). Meteorological data was reviewed for appropriate application and proposed plume rise calculations for aircraft were modified to more accurately reflect jet motion on take-off and landing.

- Mr. Balas is managing the fate and transport modeling components of the Mission Bay Development project in San Francisco, California. He developed an innovative approach to estimate the impacts associated with dust emissions. This approach used on-site ambient air data combined with ISCST3 dispersion modeling to predict potential off-site impacts. He also modified the Johnson and Ettinger indoor air model to account for the enhanced flux of subsurface volatile organic compounds associated with elevated levels of methane. This modified model was then used to estimate potential exposure concentrations in a proposed building. A subsurface vapor mitigation measure was then proposed, and he demonstrated that the expected pressure drop below the building resulting from this measure would be sufficient to protect the occupants of the building. Both of these analyses were integral in getting the Regional Water Quality Control Board and the Department of Public Health to accept the proposed mitigation measure with no remediation required.

- Mr. Balas is currently assisting a large biotechnology research company increase the size of their campus through the development of additional park and commercial space. The principal constituent of concern at the site is naturally occurring asbestos (NOA). Our support has involved meeting the requirements of the California Air Resources Board *Asbestos Airborne Toxic Control Measure for Construction, Grading, Quarrying and Surface Mining Operations*, developing air monitoring plans to ensure no off-site impacts, and direct negotiations with the local air district. As a part of the development of air monitoring plans, efforts have included the development of the appropriate asbestos screening level based on potential Proposition 65 exposures and long-term human health exposures. Currently, we are following the status of USEPA Region IX's re-evaluation of asbestos exposure risk, specifically related to short-term exposures of NOA.

- Mr. Balas has assisted in the development of a residential property located in the Sierra foothills. The principal constituent of concern at the site is naturally occurring asbestos (NOA). Our support has involved development of a dust mitigation plan, direct negotiations with the local air district, and on-going air sampling to determine potential exposure concentrations resulting from the NOA. Efforts have included the development of the appropriate asbestos screening level based on potential Proposition 65 exposures and long-term human health exposures. Based on the data collected during the sampling program, we have been working with the air district to speed the entitlement process forward. Based on our analysis, we developed control measures for site development in conjunction with the air district.

- Mr. Balas has overseen the environmental issues associated with a large scale residential development in the Sierra foothills. He is directing an asbestos air sampling program as part of a comprehensive dust mitigation program during site development. During the course of the project, Mr. Balas worked with the local air pollution control officer to develop ambient air sampling protocols and cutting-edge dust control regulations.

- At the request of a national development firm and environmental counsel, Mr. Balas has overseen a number of mold remediation projects, including conducting investigations to successfully identify the source of water damage, directing remediation efforts to repair water damage, modeling to determine where hidden molds might be present, and air monitoring to ensure that remedial efforts were successful. Mr. Balas has recently completed post-remediation air monitoring in an condominium complex in Emeryville, California to show the successful removal of water damaged drywall. A moisture meter was used throughout the apartment to ensure that there were no areas with elevated levels of moisture that might result in future mold issues. A study of the apartment ventilation system was also conducted to ensure that it was operating properly and there were no possible sources of mold remaining.

- Mr. Balas has overseen the environmental issues associated with the Third Street light rail development in San Francisco. He reviewed an asbestos air sampling program developed by Dr. Wayne Berman as part of a comprehensive dust mitigation program during site development. During the course of the project, Mr. Balas worked with Dr. Berman to develop the appropriate asbestos cancer slope factor, including adjustments for variable fiber length.

- Mr. Balas completed an air modeling human health risk assessment for a former landfill located near Union City, California. The landfill had undergone closure but was being proposed for commercial use (a sporting complex). Elevated levels of metals, chlorinated compounds, and methane present in the soil and groundwater posed a potential issue for commercial redevelopment. Furthermore, the local community and City Council were concerned regarding the potential for the airborne dispersion of dust and gases during development activities and subsurface migration of gases after development was completed. Iris Environmental was retained to complete a human health risk assessment to determine whether on-site residual levels of landfill constituents would adversely impact human health under the planned development activities and planned post-development use. The SCREEN3 dispersion model was used to determine potential on- and off-site impacts associated with redevelopment of the landfill. Mr. Balas developed a methane-modified Johnson and Ettinger model to estimate impacts resulting from subsurface contamination migrating on- and off-site after the completion of development activities. The completed risk assessment showed that the planned development could go forward with de minimus risk assuming the inclusion of standard landfill mitigation measures. The completed risk assessment was reviewed by the City Council and their consultants, and no substantive changes were required.

- Mr. Balas has overseen and developed innovative air modeling approaches for a number of former manufactured gas plant sites, located in California. While elevated levels of carcinogenic polycyclic aromatic hydrocarbons (PAHs) typically drive the cleanup, isolated

pockets of volatile organic compounds (VOCs) left after the removal of PAHs, can sometimes cause a problem for proposed residential uses. In particular, use of the standard Johnson and Ettinger Model to analyze residential indoor air exposure will often result in extremely low cleanup goals. By decoupling the subsurface transport portion of the model from the indoor dispersion portion, Mr. Balas was able to incorporate the relevant processes of biodegradation and downward flux, to more accurately model the impacts associated with residual VOCs, and obtain a more realistic cleanup goal.

- Mr. Balas has provided leadership for the development an Environmental Management System (EMS) at an international manufacturing concern. He has reviewed the policies, procedures, programs, and organizational structure, both formal and informal, used to manage environmental affairs across all three key media (air, water, and waste). He focused on maintaining environmental compliance during changes in operations or regulatory requirements. He conducted a series of interviews and plant visits to assess the status of environmental practices and procedures. Based on these environmental audits, an Environmental Management System (EMS) was designed both to assist in improving environmental compliance and to help in meeting the challenges posed by Change. The EMS consists of four interconnecting environmental management tools that assist in achieving environmental compliance during both Change and daily operations. Component tools of the EMS include the following: environmental procedures for all environmental activities, including a detailed description of personnel responsibilities; databases for proper information management; training programs to ensure all personnel are familiar with proper environmental procedures; and an internal audit system to provide an ongoing self-assessment of progress towards environmental compliance.

- Mr. Balas has also improved the existing methods to determine an appropriate cleanup level associated with protection of groundwater for a shipyard in San Diego, California. To the standard default approach in the EPA-approved Soil Screening Guidance and the Central Valley RWQCB Designated Level Methodology; Mr. Balas added the impact of biodegradation on the downward flux of VOCs in soil to the groundwater table. The addition of this element allowed for a much more realistic estimate of potential impacts, and removed from consideration source areas that would have otherwise required remediation.

- Mr. Balas provided technical and project management leadership for a state-of-the-art hazardous waste treatment, storage, and disposal facility. He conducted a complete environmental regulatory permit audit, identifying areas of concern. He has provided strategic guidance on achieving complete regulatory compliance including guidance on meeting local air district, Title V, AB 2588, and Proposition 65 requirements. He completed all aspects of work needed to meet permit conditions including: air modeling work for the annual risk assessment; an ambient air monitoring program; calculation of criteria and toxic pollutant emissions due to volatilization, erosion, and vehicle traffic; and all required reports and recordkeeping requirements.

- Mr. Balas provided air modeling and subsurface fate and transport expertise for the redevelopment of the former Pacific Refinery in Hercules, California that is undergoing dismantling and redevelopment into a 220-acre residential community. He appeared as an expert witness before Bay Area Air Quality Management District Hearing Board to present

innovative approach to achieve variance from Regulation 8, Rule 40. The Board ultimately granted the variance.

- Mr. Balas directed the emissions estimation and air modeling work necessary to determine the off-site impacts from a refinery explosion. Meteorological data from six different weather stations were integrated to get a complete picture of the local wind patterns. Video footage was also used to pinpoint off-site impacts. Plume-rise algorithms were modified to account for the burning of hydrocarbon slops in the bottom of a holding tank.

- Mr. Balas provided senior technical and project management for multiple subsurface transport studies. Projects included characterization of subsurface flux of chlorinated solvents, heavy metals, and petroleum hydrocarbons into both commercial and residential indoor environments. He used both analytical and computer model approaches to estimate contaminant transport in groundwater to indoor air. He has prepared and presented technical strategies and findings before local, state, and federal agencies.

- Conducted numerous indoor and outdoor air modeling analysis for Proposition 65 analyses associated with emissions from a wide variety of industrial facilities and consumer products including glass bottling facilities, battery manufacturing plants, chromium plating facilities, electrical circuit board manufacturing plants, waste-to-energy plants, metal parts manufacturing plants, dry cleaning facilities, glues, and printer cartridges.

- Mr. Balas prepared the emissions inventory and dispersion modeling analysis to support a facility-wide permit application. He modeled multi-source dispersion of air emissions and estimated increases in ambient air concentration of specific pollutants to determine scope of potentially impacted area. The results of the dispersion modeling analysis were compared with health-based standards.

- Mr. Balas planned program flow for a regulatory environmental management system (EMS). Decisions on calculation methods, database access considerations, and logic flow were made. Based on the program flow, the complexity of the program, and the speed of execution, a programming platform was selected. The EMS integrated air emissions estimation, air dispersion modeling, exposure assessment, multipathway risk assessment, and compliance report generation. Dialog boxes were designed and implemented to facilitate user interface with the software.

- Mr. Balas used a groundwater flow and contaminant transport model to estimate groundwater impacts from a chlorinated organic compound spill. To accurately depict the downwards flow of chlorinated organic compounds, a source apportionment model was developed. A sensitivity analysis was used to determine the maximum off-site exposure concentration.

- Mr. Balas provided technical leadership on the development of a fate and transport model of contaminant flow in the Los Angeles storm water system, to determine the potential for exceedances of the MTBE odor threshold due to releases from petrochemical facilities. An analytical model was used to calculate the water velocity distribution in the storm drain

- Mr. Balas modeled a petroleum spill from soil to surface water and estimated the downward flux to groundwater. He calculated the extent of dispersion of these chemicals in

groundwater as they flowed into a nearby river and determined the potential health risk to residents due to exposure in nearby surface waters.

- Mr. Balas oversaw estimation of emissions from a styrene-butadiene rubber facility and estimation of off-site impacts using ISC3. He produced a report criticizing opposing experts' approach and presenting a correct approach.

- Mr. Balas estimated emissions from numerous petroleum refineries, selected appropriate meteorological data, and analyzed dispersion modeling results by comparing to air quality guidelines.

- Mr. Balas refined screening emissions modeling of fugitive volatile and semi-volatile organic chemicals from contaminated ground water and soil for health risk assessments and remediation plans.

- Mr. Balas conducted a water vapor dispersion modeling analysis for a paper mill to determine fog generation potential from the wastewater operations. He also considered complex wind and emission generation issues.

KAREN T. SMITH

EDUCATION

1992 B.A., Environmental Sciences, University of Virginia

EXPERIENCE

Ms. Smith is a Manager at Iris Environmental with over twelve years of experience in environmental consulting with emphasis on due diligence and human health risk assessment. She has conducted and managed numerous Phase I Environmental Site Assessments and compliance audits for properties throughout the U.S. and Canada. Ms. Smith has calculated cancer risks and noncancer hazard indices as well as risk-based cleanup levels for multi-pathway exposure to chemicals in various media at Superfund sites and other facilities. Ms. Smith has substantial experience conducting research in support of litigation and in database development and management. The following projects are representative of Ms. Smith's experience:

- Conducted Phase I Environmental Site Assessments and compliance audits for numerous commercial and industrial facilities located in the U.S. and Canada. Properties audited include: manufacturers of epoxy counter tops, plywood, plastic bottles, plastic cutlery, candles, paint brushes, windows, woven wire products, automobile parts, packaging machinery, and lightning surge protection equipment; marine repair facilities and terminals; a fuel supply company; medical facilities; hotels; a commercial/industrial facility with over 30 tenants; a commercial garbage collection company; self-storage facilities; shopping centers; a billboard company; and undeveloped lots and vacant buildings.

- Managed the updating of Phase I Environmental Site Assessments for 17 sites located throughout the U.S. Coordinated with the client, the target company, and staff from four offices; conducted assessments at six of the sites; and wrote and reviewed updated reports.

- Researched history and status of underground storage tanks at a 260-acre site. Reviewed documents and conducted searches at regulatory agencies. Prepared report documenting research and findings.

- Researched the historical uses, investigations, and remedial activities conducted at eighteen individual parcels located on a Superfund site. Histories were used in fact sheets prepared to provide information to employees of the current site tenant.

- Prepared storm water pollution prevention and monitoring plans for multiple facilities of a plastics manufacturer located in Northern and Southern California.

- Assisted a new owner of 25 gasoline stations with the transfer of ownership of underground storage tank, air, and other permits and hazardous materials business plans.

Contacted county agencies and air quality management districts to determine requirements for ownership transfers and prepared documents for submittal to the county agencies.

- Assisted in the preparation of a RCRA Part B Permit Application for a hazardous waste transfer facility in Southern California.

- Calculated cancer risks and noncancer hazard indices for populations exposed to chemicals present in the soil, sediment, surface water, and ground water at a Superfund site. Conducted a multi-pathway evaluation of risks including ingestion of fish and produce.

- Calculated site-specific cleanup levels protective of human health and the environment for six former underground storage tank sites. Evaluated multi-pathway exposure to petroleum products in soil, ground water, and surface water. Site-specific cleanup levels were used to develop risk management plans that were submitted to the San Francisco Regional Water Quality Control Board.

- Calculated site-specific cleanup levels protective of human health for a 245-acre site. Calculated cleanup levels using site-specific data and assumptions for exposure to petroleum products, VOCs, and SVOCs via inhalation.

- Calculated risk-based cleanup levels for VOCs in ground water and inorganics in soil at a former printed circuit board and electronics assembly facility.

- Conducted a Preliminary Endangerment Assessment including report production following DTSC guidelines for a former manufacturing facility. Exposure to a petroleum-based thinner via inhalation of soil vapors and direct contact with soil was evaluated.

- Conducted screening health risk assessments to determine risks associated with a natural petroleum seep near a residential development, and to determine risks associated with petroleum hydrocarbon-containing soil at a former warehouse/distribution center.

- Calculated acceptable soil cleanup levels for residential exposure to metals at a former circuit manufacturing site.

- Researched national and international standards and guidelines for methylmercury by conducting a literature search and contacting various national and international agencies.

- Researched state and federal regulatory requirements for chemical ingredients of several furniture protection/polish products. Summarized the status of chemicals under state and federal regulations including RCRA, EPCRA, the Clean Water Act, TSCA, and Proposition 65.

- Developed databases of existing soil and groundwater data for several sites, including one contaminated with petroleum products and one contaminated with a variety of organic and inorganic chemicals. Compared existing data to health-based soil clean-up levels and selected constituents of concern for further evaluations.

- Provided litigation support for a major utility company in southern California suing its insurance company for costs incurred for investigations, evaluations, and remedial activities at former manufactured gas sites. Reviewed historical documents to identify the materials used and activities that occurred at the sites that may have resulted in site contamination, evaluated current site investigation results, and determined the fate and transport of the site contaminants in surface and subsurface soils and groundwater.

- Investigated several incidents at a local municipal water supplier in which 1,2-dichloroethane was detected in finished water at concentrations above state and federal MCLs. Conducted literature searches, visited water treatment plants, interviewed plant managers and sample collectors. Prepared a report on investigation findings.

- Conducted an analysis of the potential hazards posed by No. 2 Fuel Oil contained in underground storage tanks.

DANIELA D. HAMANN-NAZAROFF

EDUCATION

2012 M.S., Environmental Engineering, Stanford University

2010 B.S., Environmental Science, UCLA

EXPERIENCE

Ms. Hamann-Nazaroff is a scientist at Iris Environmental. She has worked at Iris Environmental since 2013 after graduating from Stanford University. Her experience includes fate and transport modeling, vapor intrusion analysis, risk characterization, and air quality monitoring. The following projects are representative of Ms. Hamann-Nazaroff's experience:

- Ms. Hamann-Nazaroff has investigated the indoor air quality of numerous commercial spaces in the San Francisco Bay Area. She collected indoor air and ambient air samples at these facilities and examined the results in order to determine whether vapor intrusion was occurring at levels which could result in adverse health effects for the facilities occupants.

- Ms. Hamann-Nazaroff has performed screening level human health risk evaluations. She has performed subsurface fate and transport modeling to evaluate whether vapor intrusion from the subsurface into the overlying buildings was occurring at significant levels with respect to the long-term health of building occupants at both industrial and commercial facilities.

- Ms. Hamann-Nazaroff has developed an Indoor Air Sampling and Analysis Plan (SAP) for commercial buildings in the San Francisco Bay Area. She calculated risk-based screening levels at the facility and analyzed previous indoor air, groundwater, and soil vapor investigations to develop the SAP with the ultimate goal of delineating the extent of vapor intrusion impacts.

- Ms. Hamann-Nazaroff monitored dust levels on construction sites in San Francisco Bay Area and oversaw best management practices to reduce dust generation. Monitoring was conducted to prevent impact to off-site populations.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

EXECUTIVE SUMMARY

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 10/25/2013 has revealed that there are 4 NPL sites within approximately 1 mile of the target property.

Site	Address	Dist / Dir	Map ID	Page

Federal CERCLIS list

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 10/25/2013 has revealed that there are 4 CERCLIS sites within approximately 0.5 miles of the target property.

Federal CERCLIS NFRAP site List

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 10/25/2013 has revealed that there are 3 CERC-NFRAP sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 03/11/2014 has revealed that there are 4 CORRACTS sites within approximately 1 mile of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/11/2014 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/11/2014 has revealed that there are 17 RCRA-SQG sites within approximately 0.25 miles of the target property.

US INST CONTROL: A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

A review of the US INST CONTROL list, as provided by EDR, and dated 03/19/2014 has revealed that there are 3 US INST CONTROL sites within approximately 0.5 miles of the target property.

CALIFORNIA MICROWAVE	*985 ALMANOR AVE*	*1/2 - 1 (0.583 mi.) E*	*77*	*264*

State- and tribal - equivalent CERCLIS

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 06/05/2014 has revealed that there are 29 CA ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

CA LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the State Water Resources Control Board Leaking Underground Storage Tank Information System.

A review of the CA LUST list, as provided by EDR, and dated 06/16/2014 has revealed that there are 12 CA LUST sites within approximately 0.5 miles of the target property.

CA HIST LUST: A listing of open and closed leaking underground storage tanks. This listing is no longer updated by the county. Leaking underground storage tanks are now handled by the Department of Environmental Health.

A review of the CA HIST LUST list, as provided by EDR, and dated 03/29/2005 has revealed that there

are 8 CA HIST LUST sites within approximately 0.5 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Hazardous waste / Contaminated Sites

CA HIST Cal-Sites: Formerly known as ASPIS, this database contains both known and potential hazardous substance sites. The source is the California Department of Toxic Substance Control. No longer updated by the state agency. It has been replaced by ENVIROSTOR.

A review of the CA HIST Cal-Sites list, as provided by EDR, and dated 08/08/2005 has revealed that there are 3 CA HIST Cal-Sites sites within approximately 1 mile of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or

dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/11/2014 has revealed that there are 3 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 2 EDR US Hist Auto Stat sites within approximately 0.25 miles of the target property.

Alias Type: Envirostor ID Number

Completed Info:
Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 01/23/1990
Comments: SAMPLE RESULTS SOIL: TRICHLOROETHYLENE (TCE) 50-500 PPB XYLENE 160 PPB. GROUNDWATER: TRICHLORO- ETHANE (TCA) 4.0 UG/L, TCE 1.6-140 UG/L, TRICHLOROFLUROMETHAN (FREON) 22 UG/L, CHLOROFORM 6.2 UG/L. SITE SCREENING DONE GROUNDWATER AND SOIL CONTAMINATION HAS BEEN DOCUMENTED AT THIS SITE. THREE MONITORING WELLS AND SIX SOIL BORINGS HAVE BEEN PLACED. THE CONTAMINATION IS ISOLATED NEAR THE DRUM STORAGE AREA OF THIS 1.1 ACRE FACILITY. RECOMMEND MEDIUM PRIORITY PRELIMINARY ENDANGERMENT ASSESSMENT.

Summary Details:

Conditions at proposal April 10, 1985): Moffett Naval Air Station covers 8,700 acres in Sunnyvale, Santa Clara County, California. In the past, various solvents and sludges were disposed on-site into ponds and landfills and onto the ground.As a result, soil and ground water on-site are contaminated. The major contaminants in ground water are volatile organic compounds. About 272,000 people depend on wells within 3 miles of the station as a source of drinking water. Moffett Naval Air Station is participating in the Installation Restoration Program IRP), established in 1978. Under this program, the Department of Defense seeks to identify, investigate, and clean up contamination from ha ardous materials. The Navy has completed Phase I records search) of the program and is beginning Phase II remedial investigation). Moffett Naval Air Station is in the South Bay Area of San Francisco. In October 1984, 19 non-Federal sites in the area were proposed for the NPL. Facilities at these sites have used a variety of toxic chemicals, primarily chlorinated organic solvents, which contaminate a common ground water basin. Although these sites are listed separately, EPA intends to apply an area-wide approach to the problem as well as take site-specific action as necessary. Status July 22, 1987): In May 1985, the California Regional Water Quality Control Board adopted Waste Discharge Requirements for Moffett Naval Air Station.The requirements outline specific tasks and compliance dates Moffett must follow to define the full extent of contamination in soils and ground water. In April 1986, the Navy released the final report for the verification step of Phase II.Moffett is revising the quality assurance project plan and sample plan for the characteri ation step of Phase II. Within the boundaries of this Federal facility, including this specific site, there are no areas subject to the Subtitle C corrective action authorities of the Resource Conservation and Recovery Act. Therefore, this Federal facility site is being placed on the Federal section of the NPL.

Site Description: Moffett Field was continuously operated by the U.S. military after it was commissioned in 1933 to support the West Coast Dirigibles of the lighter than air (LTA) program until 1994. In 1939, a permit was granted to Ames Aeronautical Laboratory to use part of the station. In 1942, the station was returned to Navy control and was named Naval Air Station Moffett Field. In late 1942, the heavier than air (HTA) program was initiated and began to take precedence over the LTA program. In 1945, the HTA program was moved and Moffett Field was used as a major overhaul and repair base. In 1949, the station became home to the Military Air Transport Service Squadron. By 1950, Moffett Field was the largest naval air transport base on the West Coast, and in 1953 it became home to all Navy fixed-wing land-based antisubmarine efforts. A weapons department was formed on the base in 1954, and in February 1966 the base activated its high speed refueling facilities. During the station reorganization in 1973, it became the headquarters of the Commander Patrol Wings, US Pacific Fleet. During the 1980s and early 1990s, the mission of Moffett Field was to support antisubmarine warfare training and patrol squadrons, and it became the largest P-3 Orion patrol aircraft base in the world with nearly 100 aircraft. No heavy manufacturing or major aircraft maintenance was conducted, but a significant amount of unit and intermediate level maintenance occurred. In April 1991, Moffett Field was designated for closure, and on July 1, 1994, control of the base was transferred to National Aeronautics and Space Administration (NASA). Wastes have been generated at Moffett Field through maintenance operations, fuel management, and fire training since the early 1930s. Chemicals of potential concern include waste oils and jet fuels; solvents and cleaners; washing compounds; and lesser amounts of gasoline, hydraulic fluids, asbestos, paints, pesticides, battery acid, and PCBs. Wastes were disposed of in unlined landfills, drained through drainage ditches and unpaved areas, and stored temporarily in unlined wastewater ponds. In addition, some underground storage tanks (USTs) and sumps were found to have leaked petroleum hydrocarbons and fuels, and lesser amounts of waste oils and solvents. Environmental studies were initiated at Moffett Field in 1984. The Navy began conducting these environmental restoration activities as part of the Department of Defense Installation Restoration Program (IRP). The Navy conducted an initial assessment study (IAS) in 1984 to gather data on the past use and disposal of hazardous materials at the base. Nineteen sites were identified as potential sources of wastes, including nine

MOFFETT NAVAL AIR STATION (Continued) **1000228683**

sites identified in the IAS and 10 sites added during subsequent investigations. Five additional sites were identified during field investigation in the early 1990s. The Environmental Protection Agency (EPA) proposed placing Moffett Field on the National Priorities List (NPL) in June 1986, and it was placed on the NPL in 1987. The Remedial Investigation and Feasibility Study (RI/FS) is coordinated through the August 1990 Federal Facility Agreement (FFA) with EPA and the State of California. The RI was implemented in two phases. The Phase I characterization was complete in August 1990. The Phase II investigations were initiated in 1990 to provide more detailed, site specific data. In October, 1992 EPA determined that the aquifers on the western side of Moffett Field were co-mingled with a regional volatile organic compound (VOC) plume emanating from the Middlefield-Ellis-Whisman (MEW) Superfund site south of Moffett Field. EPA determined that these aquifers were subject to the 1989 EPA Record of Decision (ROD) already written for the MEW site and would be remediated per the MEW ROD. Consequently, OU4 (West-side Aquifers) was deleted and OU5 (East-side aquifers) was modified to include all aquifers not part of the regional plume. In May 1989, the Navy developed a community relations plan (CRP). The OU5 RI report was released in August 1993. The OU5 FS report was released in August 1995 Moffett Field. The proposed plan for remediation of OU5 was released to the public in October, 1995. A public comment period was held from October 27, 1995 through November 30, 1995 with a public meeting on November 16, 1995. Moffett Field has been continuously operated by the U.S. military since it was commissioned in 1933. In 1945, Moffett Field was used as a major overhaul and repair base. In 1954, a weapons department was formed at the base, and then during the 1980s and early 1990s, the mission of Moffett Field was to support antisubmarine warfare training and patrol squadrons. No heavy manufacturing or major aircraft maintenance was conducted at Moffett Field, but a significant amount of unit- and intermediate-level maintenance occurred. In April 1991, Moffett Field was designated for closure as an active military base under the Department of Defense Base Realignment and Closure (BRAC) program. After closure, control of the base was transferred to the National Aeronautics and Space Administration (NASA), however, the Navy will continue with environmental restoration activities and remain responsible for remediating Navy contaminant sources. Wastes have been generated at Moffett Field through maintenance operations, fuel management, and fire training since the early 1930s. Chemicals of potential concern include waste oils and jet fuels; solvents and cleaners; washing compounds; and lesser amounts of gasoline, hydraulic fluids, asbestos, paints, pesticides, battery acid, and polychlorinated biphenyls (PCBs). Wastes were disposed of in unlined landfills, drained through drainage ditches and unpaved areas, and stored temporarily in unlined wastewater ponds. In addition, some underground storage tanks and sumps (many of them now removed) were found to have leaked petroleum hydrocarbons and fuels, and lesser amounts of waste oils and solvents. Environmental studies were initiated at Moffett Field in 1984 with an initial assessment of past use and disposal of hazardous materials. Nineteen sites were identified as potential waste sources. Remedial Investigation/Feasibility Study (RI/FS) work was coordinated through the August 1990 Federal Facility Agreement with EPA and the State. The Phase I RI characterization was completed in August 1990. The more detailed Phase II investigations identified the need to separate the site into six Operable Units (OUs). NAS Moffett Field is located in California, 35 miles south of San Francisco, 10 miles north of San Jose, and about 1 mile south of the southwestern edge of San Francisco Bay, in Santa Clara County, California. The facility encompasses 2,200 acres in Santa Clara County; the facility address is Moffett Field, California 94035. NAS Moffett Field is bounded by saltwater evaporation ponds to the north, Stevens Creek to the west, U.S. Highway 101

MOFFETT NAVAL AIR STATION (Continued) **1000228683**

(Bayshore Freeway) to the south, and the Lockheed Martin Aerospace Center to the east. Several industrial facilities are located south of the Bayshore Freeway. In particular, a group of companies is located in a 0.5-square-mile area, bounded by U.S. Highway 101. Middlefield Road, Ellis Street, and Whisman Road (MEW). This area is known as the MEW Superfund study area and contains three Superfund sites. Moffett Field also borders the cities of Mountain View and Sunnyvale, California. The City of Sunnyvale is located south and east; the City of Mountain View borders Moffett Field on the south and west. The NASA Ames Research Center is located west and north of the runways. The U.S. military continuously operated NAS Moffett Fiefld as Naval Air NAS Sunnyvale from its date of commission in April 1933 until it was transferred to NASA on July 1, 1994. The Navy used the station as an air base until October 1935, when it was transferred to the Army Air Corps for use as a training base. During the Army's tenure, the National Advisory Committee for Aeronautics (NACA) established Ames Research Center in December 1939 on land adjacent to MFA. The base returned to Navy control and was renamed NAS Moffett Field in April 1942. By 1950, NAS Moffett Field was the largest naval air transport base on the West Coast and became the first all-weather air station. In 1958, NACA became NASA and Ames Research Center became the NASA Ames Research Center. Between 1973 and 1994, the mission of NAS Moffett Field involved support of antisubmarine warfare training and patrol squadrons. At one point, MFA was the largest P-3 base in the world, with nearly 100 P-3C Orion patrol aircraft. These aircraft were assigned to nine squadrons, supported by 5,500 military, 1,500 civilian, and 1,000 reservist personnel. No heavy manufacturing or major aircraft maintenance was conducted at NAS Moffett Field during the last mission; instead, mostly unit- and intermediate-level maintenance occurred. In April 1991, the station was designated for closure as an active military base under the U.S. Department of Defense (DoD) Base Realignment and Closure (BRAC) program. NASA assumed control of the base beginning in July 1994. Military housing units and associated facilities were transferred to Onizuka Air Force Base at the same time. Since the early 1980s, DoD has been identifying, evaluating, and controlling the spread of contaminants from historical hazardous waste sites as part of the Installation Restoration Program (IRP) at MFA. This work is coordinated through a Federal Facility Agreement with the U.S. Environmental Protection Agency (EPA) and the California Regional Water Quality Control Board, San Francisco Bay Region (RWQCB). The Navy is the lead agency for this work. The Navy and NASA signed a memorandum of understanding (MOU) on December 22, 1992, concerning environmental activities at the station. Under the MOU, the Navy will continue with environmental restoration and will remain responsible for remediating Navy contaminant sources. NASA is responsible for non-environmental operations and ongoing environmental compliance. NASA is planning to develop a world-class, shared-use educational and research and development campus at Moffett Field, California, in association with government entities, academia, industry, and nonprofit organizations. The NASA Ames Development Plan includes proposed development of four areas: -NASA Research Park: A 213-acre parcel located between Ames Research Center facilities, MFA, U.S. Highway 101, and the military housing area -Eastside/Airfield District: A 952-acre parcel that includes MFA and property located east of the airfield -Bay View District: A 95-acre parcel located north of the Ames Research Center facilities -Ames Research Center Facilities: A 240-acre parcel comprising the existing NASA Ames Research Center campus Surface water channels and ditches will be maintained for drainage purposes. Groundwater is not currently used at MFA. The only exception is water from a single well screened in the deep C aquifer (deeper than 155 feet below ground surface) used by NASA for fire fighting, composting, and agricultural purposes. This well is located in the northwestern corner of the Ames Research Center area. Public water is supplied to MFA from the Hetch Hetchy aqueduct

MOFFETT NAVAL AIR STATION (Continued) **1000228683**

owned by the City of San Francisco. Groundwater is unlikely to be used as a water supply source in the future because of poor ambient quality and low formation yield to a well. NASA's draft Programmatic Environmental Impact Statement does not consider development of groundwater as a future water supply source. EPA proposed MFA as a National Priorities List (NPL) site in June 1986, and MFA was included on the NPL in July 1987. Inclusion on the NPL initiated the Remedial Investigation (RI) and Feasibility Study (FS) process, as required by the CERCLA. The Navy began environmental studies at MFA in 1984. Twenty sites were originally identified as IRP sites at MFA. Investigations during the station-wide RI identified six additional, potentially contaminated sites. Only three sites were assigned numbers (Sites 21 through 23), and none of the additional sites was designated as an operable unit (OU). The six additional sites, which were investigated under the CERCLA program, are: Site 21, Site 22, Site 23, the Weapons Storage Bunkers, the former Industrial Wastewater Flux Ponds, and an ephemeral wetland located at an improperly abandoned agricultural well. Later, the Navy defined four additional sites (Sites 25 through 28), originally included as parts of other sites under previously established OUs. These sites include Site 25, the Eastern Diked Marsh and stormwater retention pond (included in OU6); Site 26, the east side aquifers (included in OU5); Site 27, the Northern Channel (included in OU6); and Site 28, the west side aquifers. All of the sites identified were investigated under the CERCLA program. The current OU definitions and study areas are: OU1: Soils and groundwater at Sites 1 and 2 landfills OU2-East: Soils at Sites 3, 4, 6, 7, 10 (runways), 11, and 13 OU2-West: Soils at Sites 8, 10 (Chase Park), 14-North, 16, 17, and 18 OU5: Aquifers on the eastern side of MFA that are not part of the regional plume or OU1 (Site 26) OU6: Wetland areas, Sites 25 and 27 Petroleum Sites: Sites 5, 9, 12, 14-South, 15, 19, 20, and 24 Additional Sites: Sites 21, 22, 23, Weapons Storage Bunkers, upland soil areas, Human Health Risk Assessment (HHRA) Exposure Area 4158, former Industrial Wastewater Flux Ponds, and the abandoned former agricultural well. Human health and ecological risk assessments were conducted as part of the station-wide RI. As agreed upon by the Navy, EPA, and RWQCB, six sites were recommended for No Action (formally referred to as No Further Action) in the 2001 Final Addendum to the Revised Final Station-wide Feasibility Study Report and have been addressed separately from the IR program. These sites are: Site 23, Golf Course Fill Area 3; Weapons Storage Bunkers; Former Industrial Wastewater Flux Ponds; Former Abandoned Agricultural Well; Upland Soils (areas that support upland plant communities); Station-wide Remedial Investigation HHRA Exposure Areas 3782, 3785, 3974, 4090, and 4158. The addendum to the report provides additional documentation to support the No Action recommendations for these sites. Two of the sites, Industrial Wastewater Flux Ponds and Former Abandoned Agricultural Well, were closed with concurrences from EPA or Santa Clara Valley Water District; therefore, they were not considered further in the CERCLA process. Three of the HHRA exposure areas, 3782, 3785, and 3974, are being addressed as part of other remedial actions or maintenance programs. The remaining No Action Sites (Site 23-Golf Course Fill Area 3, Weapons Storage Bunkers, Upland Soils, HHRA Exposure Area 4090, and HHRA Exposure Area 4158) were included in the Proposed Plan. The Proposed Plan was made available to the public during a formal comment period from December 15, 2001 through January 28, 2002. A public meeting was held on January 10, 2002 and a responsiveness summary was issued on May 28, 2002. As the proposed plan and earlier versions of the ROD suggest, HHRA Exposure Area 4090 was listed as a No Action Site even though this area was included in the station-wide ecological assessment for wetland areas being addressed under a separate action (Site 27). Because there are potential risk issues associated with this site, the HHRA Exposure Area 4090 is no longer identified as a No Action Site in this ROD. Instead, this site will be addressed under the ongoing

MOFFETT NAVAL AIR STATION (Continued) **1000228683**

Site 27 investigation. Site 23 Golf Course Fill Area: Site 23 is located on 2 acres, just south of the Northern Weapons Bunker area, in the western portion of the golf course. Golf Course Fill Area 3 is shown in aerial photographs taken in 1977 as one of several ponds on the golf course. Three of the ponds on the golf course were dry, and some debris was visible in the area of Golf Course Fill Area 3 in an aerial photograph taken in 1987. No information on the source of the material discarded in this area could be found. However, numerous small piles of soil, concrete, disaggregated asphalt, grass clippings, and mulch were identified during a site walk conducted in March 1994. In addition, some airplane parts, consisting of several pieces of aluminum (brought to Site 23 for disposal after a plane crashed at MFA), and some electronics equipment were found in the area. A magnetometer survey of this area was conducted in 1995. The results of the survey do not indicate that significant quantities of metallic materials were buried at the site. This evidence instead suggests that the area was never trenched and was used primarily for incidental disposal of excess soil and debris from the golf course. A No Further Action ROD was completed for Site 23 on August 19, 2002. Weapons Storage Bunkers: There are two groups of weapons storage bunkers: the Northern Weapons Storage Bunkers and the Southern Weapons Storage Bunkers. The weapons storage bunkers are located in two fenced areas in the northeastern portion of MFA, near the golf course. The Northern Weapons Storage Bunkers cover about 5 acres and include seven high-explosive magazines. The Southern Weapons Storage Bunkers cover about 10 acres and include nine high-explosive magazines. Each magazine consists of a heavy-gauge, corrugated steel arch that forms its roof and sides. The floors of the magazines are concrete, without drains. Each magazine is about 30 feet long, 20 feet wide, and 20 feet high. The magazines are covered with soil, forming long, earth-covered bunkers. Only one magazine in the Northern Weapons Storage Bunkers is still used and stores ammunition for the California Air National Guard. The Northern Weapons Storage Bunkers contained two diesel storage tanks. One of the tanks was removed in 1992, and the other tank was removed in 1994. No source for or evidence of contamination was identified in the Southern Weapons Storage Bunkers. A site inspection at the Northern Weapons Storage Bunkers in May 1994 found that the cement apron on the southern side was free of staining or significant cracking, and the buildings were released for unrestricted use. The high-explosive magazines at the Northern Weapons Storage Bunkers also were investigated for radioactive contamination; however, no radioactivity was found. An inventory revealed two diesel storage tanks in this area. Tank 22 was a 600-gallon underground storage tank that held diesel fuel and was removed in 1992; Tank 102, a 55-gallon aboveground storage tank that contained diesel fuel, was removed in April 1994. Tanks 22 and 102 are evaluated and closed separately from CERCLA sites under the policy and guidance of RWQCB. Closure of Tank 22 is documented in the Phase I petroleum sites closure report. Tank 102 is being investigated during the Phase III tank investigation. The Phase III investigation involves tanks that require further assessment for closure. This work may include document research, sampling, and geophysical surveys. The results of this work will be included in the Phase III petroleum sites closure report. No soil samples were collected at the Southern Weapons Storage Bunkers, because no source for, or evidence of, soil contamination was identified. Based on the Navy's stated historical use of the bunkers, the Southern Weapons Storage Bunkers were not tested for radioactive contamination before they were transferred to the California Air National Guard in 1994. There is no reason to suspect that these facilities were used for storage of radioactive materials. Groundwater in the area of the weapons storage bunkers is addressed separately as part of OU5. OU5 includes all aquifers that are not affected by the regional plume in groundwater. As part of the RI for OU5, data for groundwater samples from all wells on the eastern side

MOFFETT NAVAL AIR STATION (Continued) **1000228683**

of the base, including monitoring wells near the weapons storage bunkers, were evaluated and are addressed in the OU5 ROD. A No Further Action ROD was completed for the Weapons Storage Bunkers August 19, 2002. Upland Soils: Upland soils are areas of MFA that support upland plant communities and include virtually all areas at the airfield that are not covered by ditches, marshes, or wetlands. Human activity has been significant in these areas. Certain areas of upland soils, such as open grassy areas and the edges of golf courses and recreational fields, are actively managed as burrowing owl habitat, but the majority of upland soils areas are either paved, landscaped, or have been altered substantially by land use during the last 100 years. A No Further Action ROD was completed for the Upland Soils area on August 19, 2002. Area 4158: HHRA Exposure Area 4158 is located slightly south, but almost adjacent to IRP Site 11 - Engine Test Stand Area. A No Further Action ROD was completed for the Human Health Risk Assessment Area 4158 on August 19, 2002. OU04 The Middlefield/Ellis/Whisman (MEW) Study Area is located in Santa Clara County in the city of Mountain View, California. The site is divided into a Local Study Area (LSA) and a Regional Study Area (RSA). The LSA consists of three National Priority List (NPL) sites (Fairchild, Intel and Raytheon), as well as several non-Superfund sites. The LSA encompasses about 1/2 square mile of the RSA and contains primarily light industrial and commercial areas, with some residential areas west of Whisman Road. The RSA encompasses approximately 8 square miles and includes Moffett Naval Air Station (an NPL site) and National Aeronautics and Space Administration (NASA) Ames Research Center, along with light industrial, commercial, agricultural, park, golf course, undeveloped land, residential, motel and school land uses. Various owners or occupants in the area around the intersections of Middlefield Road, Ellis Street, Whisman Road, and the Bayshore Freeway (U.S. Highway 101), are or were involved in the manufacture of semiconductors, metal finishing operations, parts cleaning, aircraft maintenance, and other activities requiring the use of a variety of chemicals. Site investigations at several of these facilities have revealed the presence of toxic chemicals in the subsurface soils and groundwater. To investigate the extent of groundwater contamination emanating from the LSA, and soil contamination at their respective facilities, Fairchild, Intel, and Raytheon performed a Remedial Investigation and a Feasibility Study of potential remedial alternatives under the direction of EPA. There are no natural surface drainage features within the Local Study Area. The nearest significant natural surface drainage features of the Regional Study Area are Stevens Creek to the west and Calabazas Creek to the east. Calabazas Creek is located approximately four miles east of the MEW Study Area. Stevens Creek forms the western boundary of the Regional Study Area. Both discharge into the San Francisco Bay. Surface water runoff from most of the RSA and all of the LSA south of the Bayshore Freeway is intercepted by a storm drain system and is discharged into Stevens Creek. To the north of the Bayshore Freeway, most of the runoff from Moffett Field Naval Air Station is collected by a storm drain system that ultimately discharges to Guadalupe Slough of San Francisco Bay. Runoff from the northwestern portion of Moffett Field discharges into Stevens Creek. The Local and Regional Study Areas are underlain by a thick sequence of unconsolidated sediments deposited into a structural depression. The sediments are comprised of alluvial fan, estuarine, and bay mud deposits. Repeated variations in sea levels resulted in a complex sedimentary sequence characterized by irregular interbedding and interfingering of coarse and fine grained deposits. Groundwater aquifers at the site are subdivided into shallow and deep aquifer systems, separated by a laterally extensive regional aquitard. The shallow aquifer system comprises aquifers and aquitards to a depth of approximately 160 feet below the surface. Within the shallow system four primary hydrogeologic aquiferzones have been identified based upon the occurrence of aquifer material and a similar depth below the

MOFFETT NAVAL AIR STATION (Continued) **1000228683**

surface. The shallow aquifer system is comprised of the A-aquifer and the underlying B1-, B2- and B3- aquifers. The regional B-C aquitard separates the B3-aquifers from the C-aquifer and the deep aquifer system. Current groundwater flow in aquifer zones above the B-C aquitard is generally to the north, toward San Francisco Bay. During 1981 and 1982, preliminary investigations of facilities within the LSA indicated significant concentrations of contaminants in soil and groundwater. By 1984, the Fairchild, Intel and Raytheon sites, located within the LSA, were proposed for the NPL. By 1985, five companies within the LSA (Fairchild, Intel, Raytheon, NEC, and Siltec) initiated a joint investigation to document and characterize the distribution of chemicals emanating from their facilities. In April 1985, the California Regional Water Quality Control Board - San Francisco Bay Region (RWQCB) adopted Waste Discharge Requirements (WDRs) for each of the five companies. The primary cause of the subsurface contamination was from leaking storage tanks and lines, and poor waste management practices. On August 15, 1985, Fairchild, Intel, and Raytheon entered into a Consent Order with the EPA, the RWQCB, and the California Department of Health Services (DHS). Since signing of the Consent Order, the three companies have carried out an extensive Remedial Investigation and Feasibility Study (RI/FS) of chemicals emanating from the LSA and soil contamination at their respective facilities. Work has been performed under the supervision of EPA, the RWQCB, DHS, and the Santa Clara Valley Water District (SCVWD). Prior to and during the site investigation, the companies have been conducting interim cleanup activities at the site. These interim remedial actions include tank removals, soil removal and treatment, well sealing, construction of slurry walls, and hydraulic control and treatment of local groundwater. NEC and Siltec declined to enter into the Consent Order and were placed under RWQCB enforcement authority. The three companies followed an approved Quality Assurance and Quality Control (QA/QC) Plan and approved Sampling Plans. In addition, split samples were collected by EPA from selected wells and these results were compared with the companies' sampling results. EPA determined that the companies' data quality was adequate for the purpose of the RI/FS. The MEW Remedial Investigation Report was concluded in July, 1988. The draft Feasibility Study and EPA's Proposed Plan were presented to the community for review and public comment in November, 1988. In May 1989, Special Notice letters for the Remedial Design/Remedial Action (RD/RA) Consent Decree were sent out to the five (5) original companies and twelve (12) other Potentially Responsible Parties (PRPs). The Regional Water Quality Control Board - San Francisco Bay Region (RWQCB) was the lead agency until April 1985, when the Board referred the five companies to EPA for cleanup under Superfund. In May, 1985, EPA sent general notice letters, pursuant to Section 106 of CERCLA, to the five companies. NEC and Siltec chose not to participate in the RI/FS negotiations and were referred back to the RWQCB. In August 1985, Fairchild, Intel, and Raytheon signed an Administrative Order on Consent with EPA, to conduct an RI/FS of the MEW area. The RWQCB and California Department of Health Services were cosignees of the Consent Order. The Consent Order and Work Plan called for a comprehensive groundwater investigation of the MEW area and site specific (source) investigation at Fairchild, Intel, and Raytheon. The RWQCB issued Waste Discharge Requirements (WDRs) for NEC and Siltec which paralleled the Consent Order schedule and requirements. During the course of the RI/FS, EPA gathered new information and evaluated existing information concerning other Potentially Responsible Parties (PRPs). During December 1987 and January 1988, EPA issued twenty-four (24) RCRA 3007/CERCLA 104 information request letters to various other parties in the MEW area. In July 1988, EPA issued a RCRA 3013 Unilateral Order to GTE to begin an investigation of its property, to determine if the company had contributed to the MEW groundwater plume. After evaluating the 3007/104 response letters, EPA sent General Notice Letters to seventeen (17) PRPs in September 1988. An

MOFFETT NAVAL AIR STATION (Continued) **1000228683**

initial PRP meeting was sponsored by EPA in October 1988, to explain the Superfund process to the noticed PRPs. EPA issued seven (7) additional General Notice and/or information request letters in March 1989. EPA subsequently issued Special Notice Letters for conducting the selected remedies in May 1989. A Record of Decision addressing OU04 of the Moffett Naval Air Station was completed in June 1989. Cleanup actions are being taken at the Site under the 1989 Record of Decision (ROD) to restore groundwater to its potential beneficial use, which is designated as drinking water. Note that the groundwater at the Site is not currently being used for drinking water or other domestic purposes. The MEW Site is not located in an environmentally sensitive area. Based on EPA's updated understanding of the way chemicals can potentially migrate from the subsurface soil and groundwater to the indoor air, EPA requested the Potentially Responsible Parties (PRPs) for the Middlefield-Ellis-Whisman (MEW) groundwater contamination - the MEW Companies, U.S. Navy, and National Aeronautics and Space Administration (NASA) - to evaluate the potential vapor intrusion pathway into buildings overlying shallow trichloroethylene (TCE) groundwater contamination at the MEW Site. During 2003 through 2008, the MEW Companies, NASA, U.S. Navy, and EPA collected over 3,000 air samples from 47 commercial buildings and 20 residences within the Vapor Intrusion Study Area. The indoor air vapor intrusion investigation included the following types of samples: indoor air, outdoor ambient air, pathway air, crawlspace air, and sub-slab soil gas. Indoor air samples were collected in the breathing zone (approximately 3 to 5 feet above floor level) in occupied or potentially occupied areas. Pathway samples were collected in areas where potential conduits (such as penetrations through slab, drains, utility lines or vaults) into the building were observed that might provide a direct route for volatile organic compound (VOC) vapor migration into the building. Outdoor ambient air samples were collected immediately outside the building, including near the air ventilation system air intake, for comparison to indoor air to evaluate the potential contribution of VOCs from outdoor air to indoor air. Additionally, EPA outdoor reference and MEW/NASA background outdoor air samples were collected at distances of 0.25 to 1.5 miles away from the MEW Site to assess background levels of VOCs in the general area. The indoor air results were compared to (1) short-term health-based screening levels; (2) long-term health-based screening levels, and (3) outdoor ambient air. During the Supplemental Remedial Investigation, EPA used an interim long-term TCE indoor air screening level of 2.7 micrograms per cubic meter (ug/m3) for commercial buildings and 1 ug/m3 for residential buildings. Subsequent to the Supplemental Remedial Investigation, EPA established interim TCE indoor air action levels (now TCE indoor air cleanup levels) of 5 ug/m3 for commercial buildings and 1 ug/m3 for residential buildings. EPA also assessed the vapor intrusion pathway using multiple lines of evidence. The types of information used include building surveys, chemical use, operations, historical facility and property information, site geology and hydrogeology, and subsurface and air sampling information and conditions (groundwater, soil gas, sub-slab soil gas, crawlspace, pathway samples), chemical ratios, and tracer compounds, to determine whether the indoor air concentrations were attributable to subsurface Site contamination and not other sources, such as consumer products or outdoor background air sources. The Supplemental Remedial Investigation results also support the following conclusions: Indoor air results indicate there are no immediate or short-term health concerns. All indoor air concentrations are below the screening criteria for acute and short-term health-based screening criteria (Agency for Toxic Substances Disease Registry [ATSDR] Minimal Risk Levels). Therefore, EPA's focus is whether trichloroethylene (TCE) and other Site chemicals of potential concern in indoor air pose an unacceptable risk of chronic health effects from long-term exposure (30 years for residential exposure and 25 years for non-residential exposure). TCE in indoor air was

MOFFETT NAVAL AIR STATION (Continued) **1000228683**

detected above EPA's interim long-term TCE indoor air screening level in 17 commercial buildings and three residences within the Vapor Intrusion Study Area. Where discrete mitigation measures (e.g., sealing conduits, enhanced mechanical ventilation, air purifiers, sub-slab vapor control systems) were implemented, indoor TCE concentrations were reduced to below the interim screening level. Increasing air exchange rates generally resulted in decreasing indoor air TCE concentrations. Vapor intrusion resulting in concentrations above interim long-term indoor air screening levels appears more likely in commercial buildings when ventilation systems are not providing sufficient air exchanges with outside air in all or part of a building. Buildings overlying elevated groundwater concentrations appear to have a greater likelihood of indoor air TCE concentrations exceeding the TCE screening level, but actual indoor air concentrations are also dependent on other building factors such as air ventilation system operations, building configuration, and preferential pathways into the building. The highest TCE indoor air concentrations were found in a building with a basement, where there was direct contact with groundwater (644 National Avenue in the MEW Area). Elevated concentrations were also found in a NASA building, where the ventilation system introduced air from beneath the raised floor into the building (N210 in the Moffett Field Area). A Record of Decision Amendment addressing vapor intrusion at Operable Unit 04 of Naval Air Station Moffett Field was completed in August 2010. OU 6 - Site 25: Moffett Field is located in Santa Clara County, 1 mile south of San Francisco Bay, California's largest estuary, in the Santa Clara Valley Basin. Tidal wetlands in the southern portion of San Francisco Bay provide habitat to support a wide variety of birds, fish, and invertebrates, including several threatened and endangered species. Historically, tidal salt marshes and mud flats covered extensive areas of the southern portion of the bay, including the northern portion of Moffett Field. Most of these wetlands, however, have been eliminated or greatly altered. Site 25 is approximately 230 acres in size and is located in the northern portion of Moffett Field, adjacent to the southern arm of the bay. Levees constructed in the late 19th and early 20th centuries for commercial salt production currently prevent bay water from reaching Site 25. Site 25 is comprised of the eastern diked marsh, including the stormwater settling basin, and the stormwater retention pond. The stormwater retention pond is divided into the western portion (owned by Midpeninsula Regional Open Space District) and the central and northeastern basins (both managed by the National Aeronautics and Space Administration [NASA]). The eastern diked marsh and all portions of the stormwater retention pond are hydraulically connected. Site 25 has been part of the stormwater management system at Moffett Field since 1953. Stormwater previously flowed through the former Lindbergh Avenue ditch then discharged into the northeastern corner of the eastern diked marsh. The eastern diked marsh is a brackish marsh that is seasonally saturated, but rarely filled to capacity with standing water. Currently, stormwater in the western portion of Moffett Field is carried via underground conduits then drains to a settling basin at Site 25. Sediment suspended in the stormwater settles in the basin, where it is subsequently excavated. From the settling basin, the water flows overland northward through the eastern diked marsh to the stormwater retention pond. The eastern diked marsh is connected to the central basin of the stormwater retention pond by a culvert under North Perimeter Road. The central basin is, in turn, connected to the western and northeastern portions of the stormwater retention pond by breaches in the levees. The stormwater retention pond is seasonally flooded with 1 to 5 feet of standing water, but is mostly dry in the summer. A portion of the stormwater retention pond contains water year round because it receives treated groundwater from the West-Side Aquifers Treatment System. Stormwater from the western portion of Moffett Field previously flowed through the Lindbergh

MOFFETT NAVAL AIR STATION (Continued) **1000228683**

Avenue ditch and then discharged into the northeastern corner of the eastern diked marsh. This stormwater management system is no longer in use. In 1991, NASA redesigned the stormwater management system to carry stormwater in underground conduits to a settling basin; after the sediment settles, the water discharges to the eastern diked marsh. Previous investigations determined that most of the contaminated sediment is located near the former outfall of the Lindbergh Avenue ditch and near the settling basin discharge in the eastern diked marsh. Sources of contamination identified for Site 25 included: the runway landfill (Site 1 - remedy selected in the Record of Decision [ROD] dated August 1997); the engine test stand area (Site 11 - remedy selected in ROD dated December 1994); a sump and oil and water separator (Site 15 - petroleum site); Hangar 1 (Site 29 - currently under investigation by Navy); horizontal conduits, including stormwater discharge lines that may have carried chemically contaminated groundwater; historical use of pesticides; and various soil areas contaminated with polychlorinated biphenyls (PCBs) (referred to as upland source areas to be addressed separately, not as part of this ROD). The eastern diked marsh and the stormwater retention pond are currently part of NASA's stormwater management system. Both are covered with surface water only part of the year, except for a small portion of the stormwater retention pond that holds water year round because treated groundwater from the West-Side Aquifers Treatment System (WATS) is discharged to this portion of the pond. The eastern diked marsh currently provides seasonal wetland habitat for a variety of wildlife, including threatened and endangered species. The potential future reuse could be somewhat different than the current use. The Midpeninsula Regional Open Space District is interested in restoring its portion of Site 25 to tidal marsh. NASA favors a plan to create a managed pond with its portion of Site 25. Under a managed pond scenario, one portion of the site would be a tidal marsh (providing salt marsh habitat); the central and northeastern basins would function as stormwater retention ponds that would be managed to contain water throughout the year (open water habitat); and the eastern diked marsh would continue to provide seasonal wetland habitat. Regardless of the selected future use, Site 25 will be remediated such that it will be available for unlimited use and unrestricted exposure, including use as a tidal marsh and managed pond, when the remedy selected in this ROD has been completed. A ROD for Operable Unit 06 (Site 25) was completed in December 2009. OU 7 The Site 22 Landfill is located in the northeastern corner of MFA. The Site 22 Landfill covers approximately 9.4 acres and contains an estimated total refuse (waste) volume of 92,000 cubic yards. The site was used as an active landfill from 1950 through 1967. The refuse is believed to consist primarily of domestic waste, as confirmed through exploratory trenching. Results of environmental investigations indicate that in some places, the waste is located beneath the groundwater table, while in others, waste is located near the surface (above the groundwater table). The Site 22 Landfill now underlies holes 6 and 7 of a golf course, which is operated by the United States Air Force. The fairway and putting greens for these holes are located on top of the landfill. The rough for holes 6 and 7, which contains trees, is on the sloped part of the landfill. Soil borings and trenching indicate that most of the landfill is covered with approximately 1.5 feet of soil; however, soil thickness in a few areas is less than 1 foot. The Site 22 Landfill was characterized in the Final Station-wide RI Report and the Additional Sites Investigation Phase II Draft Final Report. Because operating records do not exist for the Site 22 Landfill, the history of the landfill was researched by studying aerial photographs and historical maps of the area and interviewing base personnel. This review indicated that the landfill was active from 1950 to 1967. Base personnel reported that Site 22 was used as a municipal landfill after the landfill at Site 2 was closed. Visual characterization of waste excavated at Site 2 confirmed that Site 2 contained primarily domestic waste;

MOFFETT NAVAL AIR STATION (Continued) **1000228683**

therefore, it was expected (and later confirmed) that the Site 22 Landfill also contained domestic waste. In 1973, the Site 22 Landfill was converted into holes 6 and 7 of the MFA golf course. In April 1998, an additional investigation was initiated to provide supplemental information about the Site 22 Landfill and its surrounding area. As part of this additional investigation, exploratory trenches were dug to further evaluate the vertical and horizontal extent of refuse within the landfill. The exploratory trenching uncovered municipal waste such as old tires, newspapers, vacuum tubes, and shampoo bottles. Based on the results of the trenching, the extent of the landfill was estimated to be approximately 9.4 acres, and the volume of refuse was estimated at approximately 92,000 cubic yards. The Air Force operates and maintains the golf course located in the northeast corner of the facility, which encompasses the Site 22 Landfill. The golf course has been maintained and operated for over 30 years, and there are no plans to change the land use of this area. It is therefore, likely that the Site 22 Landfill will remain part of the golf course. The selection and screening of remedial alternatives was thus conducted based on the premise that continued use as a golf course is the most likely future land use scenario, which has been confirmed with NASA personnel. A ROD addressing OU 7 was completed in June 2002. OU 8: Site 27 includes the Northern Channel, related ditches that drain into the Northern Channel, the berms along either side of the Northern Channel, and the debris pile near the Building 191 lift station. The Northern Channel is located near the northeastern boundary of the former NAS Moffett Field. Historically, the Northern Channel has received stormwater runoff from the former NAS Moffett Field and NASA Ames Research Center. Portions of the Northern Channel that are owned by Lockheed, Cargill Salt, and the Santa Clara Valley Water District extend eastward, approximately 5,500 feet beyond the boundary of the former NAS Moffett Field. The areas that make up Site 27 are summarized below: -Northern Channel and Berms: Nearly 2 miles long, the Northern Channel receives stormwater from the eastern portion of the former NAS Moffett Field. Water in the channel flows east, approximately 1 mile beyond the boundary of the former NAS Moffett Field into Lockheed Channel. The Northern Channel flows by gravity at this termination point through a pipe to the terminus of the Lockheed Channel, which runs parallel to the eastern end of the Northern Channel. The two channels are separated by a levee. Water from the terminus of Lockheed Channel is pumped into the Moffett Channel, which drains into Guadalupe Slough and eventually into San Francisco Bay. The Northern Channel provides brackish surface water habitat of moderate value to wildlife. The surface area of the channel is about 9 acres; its bottom substrate is sediment, and the banks are fill material. The width of the channel is 40 to 50 feet, but increases to 70 feet at the western end; the channel is about 10,000 feet long, and the bottom of the channel lies approximately 2.8 feet below mean sea level. The north levee is made of compacted hard clay and is approximately 5 feet high (above the water level in the channel), with flat surfaces and steep side slopes. The slopes of the bank are moderately eroded with loose surface material that supports a moderate amount of plants. The south levee is also made of compacted clays and supports a greater diversity of vegetation. Wildlife surveys have detected the presence of the western pond turtle, various plants, and a wide variety of shore birds and waterfowl in the area.
-Marriage Road Ditch: Located east of the runways, Marriage Road Ditch divides the golf course at the former NAS Moffett Field. The ditch extends about 2,300 feet, and the bottom of the ditch is 5 to 6 feet below mean sea level. Water flowing in Marriage Road Ditch is perennial and portions of the ditch are lined with concrete. Surface water from the east apron area and from the storm drains in and around Hangars 2 and 3 discharges into the ditch. Marriage Road Ditch receives additional runoff from the southern two-thirds of the runways and the golf course east and west of the ditch. Surface water from

MOFFETT NAVAL AIR STATION (Continued) **1000228683**

Marriage Road Ditch drains into North Patrol Road Ditch. During the rainy season, surface water from Marriage Road Ditch is occasionally pumped directly into the Northern Channel to prevent flooding during storms. The probable source of contamination in Marriage Road Ditch is historical surface water runoff from storm drains. These storm drains collected runoff from the paved and unpaved areas around Hangars 2 and 3 and conveyed it to Marriage Road Ditch. The ditch provides habitat for insects, worms, snails, and the western pond turtle. Several species of plants grow in and along the sides of the ditch. -Patrol Road Ditch: Patrol Road Ditch (also known as the East Patrol Road Ditch) is a surface drainage feature that runs 2,100 feet along the eastern boundary of the former NAS Moffett Field; the bottom of the ditch is about 5 to 6 feet below mean sea level. The ditch is part of the storm drain system at the former NAS Moffett Field. Its flow in the southern end is intermittent and depends on rainfall. The northern end of the ditch receives regular runoff from irrigation of the golf course and contains water year round. Surface water from Patrol Road Ditch flows into North Patrol Road Ditch through a culvert during periods of high water; water from the ditch is occasionally pumped directly to the Northern Channel during winter rainstorms. The probable source of contamination is surface water runoff into the storm drains that feed into Patrol Road Ditch. During the wet season, the northern end of the ditch provides open water and emergent vegetation. During the dry season, the southern end consists of habitat similar to upland areas. Several species of birds have been identified in Patrol Road Ditch. -North Patrol Road Ditch: This ditch runs 4,300 feet along the North Patrol Road, parallel to and south of the Northern Channel. The western portion of the ditch is lined with concrete, lies about 5 to 6 feet below mean sea level, and generally contains water year-round. The North Patrol Road Ditch carries surface water from east to west toward the Building 191 lift station. The North Patrol Road Ditch is an integral part of the storm drain system at Moffett. North Patrol Road Ditch receives stormwater from Marriage Road Ditch, Patrol Road Ditch, and the golf course. Surface water flow through the North Patrol Road Ditch is intermittent and depends on rainfall. The banks of the ditch are defined and are made of fill material and emergent vegetation but represent poor wetland habitat. Species observed here include ducks, doves, burrowing owls, and squirrels. -Debris Pile: The debris pile is located north of the Building 191 lift station at the western end of the Northern Channel, between the north bank of the channel and south bank of the U.S. Fish and Wildlife Service Diked Ponds. The pile consists of about 10,000 cubic yards of dredged sediment from the Northern Channel and construction debris from the 1950s to 1990s.

Ownership of the Northern Channel and related areas within Site 27 is divided among NASA, Lockheed, U.S. Fish and Wildlife Service, Santa Clara Valley Water District, Cargill Salt, and the City of Sunnyvale. NASA owns the southern berm along the northern boundary of the former NAS Moffett Field and a portion of the property where the debris pile is located. In addition, NASA owns the Marriage Road Ditch, the Patrol Road Ditch, and the North Patrol Ditch. Lockheed owns the southern berm along the northern boundary of its property and a small portion of the Northern Channel. Cargill Salt owns the remainder of the berm, the Northern Channel, and the remainder of the area where the debris pile is located. U.S. Fish and Wildlife Service purchased the saltwater evaporation ponds adjacent to Site 27 from Cargill Salt in 2003. The City of Sunnyvale owns ponds and a publicly owned treatment works located near the eastern end of the Northern Channel. In addition, Sunnyvale leases a portion of the berms for hiking and biking trails. In April 1991, the Base Realignment and Closure Commission voted to (1) decommission the former NAS Moffett Field, (2) transfer naval operations from the former NAS Moffett Field to other naval facilities, and (3) transfer most of the former NAS Moffett Field property to the NASA Ames Research Center. The areas south and west

MOFFETT NAVAL AIR STATION (Continued) **1000228683**

of Site 27 are part of the former NAS Moffett Field. Current tenants include the U.S. Army, the U.S. Air Force, and the California Air National Guard. Current uses include airfield operations, military facilities, and NASA research facilities. The former NAS Moffett Field has a fully functional federal airport and maintains facilities for military personnel and their families, including housing, commissary, clinic, service station, tennis courts, and a golf course. The tidal salt marsh and mud flats north and northeast of the former NAS Moffett Field were diked more than 50 years ago and were formerly used as commercial saltwater evaporation ponds. Cargill Salt, the former owner, sold the ponds to the U.S. Fish and Wildlife Service in 2003.
Stormwater drainage is expected to be the future use of the Northern Channel and associated ditches, as it has been for the last 50 years. Remedial alternatives were selected and screened based on the premise that continued use for stormwater drainage is the most likely future land use scenario. Existing beneficial uses of groundwater, including municipal and domestic, industrial process, and industrial and agricultural water supply, are listed in the Basin Plan. Concentrations of total dissolved solids in groundwater in the area of Site 27 do not meet criteria in U.S. Environmental Protection Agency classification guidelines for a potential source of drinking water. According to the Basin Plan, the beneficial uses for surface water near the site are freshwater/estuarine habitat and wildlife habitat. A Record of Decision (ROD) addressing Operable Unit 08 at the NAS Moffett Field site was completed in July 2005.

Summary Details:

Conditions at proposal October 15, 1984): Intel Corp. manufactured semiconductors at a plant in Mountain View, Santa Clara County, California, between 1968 and 1981. At that time, the facility occupied 2 acres and was surrounded by residential areas, office buildings, and other semiconductor-manufacturing plants. Monitoring wells on the site are contaminated with trichloroethylene, xylene, vinyl chloride, and 1,1- and

INTEL CORP. (MOUNTAIN VIEW PLANT) (Continued) **1000203455**

trans-1,2-dichloroethylene, according to analyses conducted by a consultant to Intel. Contamination is believed to have resulted from leaking underground solvent tanks. About 270,000 people depend on wells within 3 miles of the site as a source of drinking water. Since early 1982, Intel hasbeen pumping ground water and treating it by carbon adsorption. The company intends to implement additional cleanup activities, including the installation of a system to pump and treat contaminated ground water and excavation of soil beneath the underground storage tanks, which were previously removed. The company is working with the California Regional Water Quality Control Board CRWQCB) to determine the full extent of the contamination. This is one of 19 sites in the SouthBay Area of San Francisco. Facilities at these sites have used a variety of toxic chemicals, primarily chlorinated organic solvents, which contaminate a common ground water basin. Although these sites are listed separately, EPA intends to apply an area-wide approach to the problem as well as take specific action as necessary. Status June 10, 1986): Intel has removed approximately 4,600 cubic yards of contaminated soil and has installed four wells to pump and treat contaminated ground water. CRWQCB has issued Waste Discharge Requirements to the company. The requirements are the board s legal mechanism for regulating activities at facilities under its jurisdiction. On August 15, 1985, EPA issued a CERCLA Administrative Order on Consent to Intel Corp. s Mountain View Plant, as well as to Fairchild Camera s and Raytheon Corp. s Mountain View Plants. The order calls for the three companies to conduct a joint remedial investigation/feasibilitystudy of the area to determine the type and extent of contamination and identify alternatives for remedial action.

Site Description: The Middlefield/Ellis/Whisman (MEW) Study Area is located in Santa Clara County

INTEL CORP. (MOUNTAIN VIEW PLANT) (Continued) **1000203455**

in the city of Mountain View, California. The site is divided into a Local Study Area (LSA) and a Regional Study Area (RSA). The LSA consists of three National Priority List (NPL) sites (Fairchild, Intel and Raytheon), as well as several non-Superfund sites. The LSA encompasses about 1/2 square mile of the RSA and contains primarily light industrial and commercial areas, with some residential areas west of Whisman Road. The RSA encompasses approximately 8 square miles and includes Moffett Naval Air Station (an NPL site) and National Aeronautics and Space Administration (NASA) Ames Research Center, along with light industrial, commercial, agricultural, park, golf course, undeveloped land, residential, motel and school land uses. Various owners or occupants in the area around the intersections of Middlefield Road, Ellis Street, Whisman Road, and the Bayshore Freeway (U.S. Highway 101), are or were involved in the manufacture of semiconductors, metal finishing operations, parts cleaning, aircraft maintenance, and other activities requiring the use of a variety of chemicals. Site investigations at several of these facilities have revealed the presence of toxic chemicals in the subsurface soils and groundwater. To investigate the extent of groundwater contamination emanating from the LSA, and soil contamination at their respective facilities, Fairchild, Intel, and Raytheon performed a Remedial Investigation and a Feasibility Study of potential remedial alternatives under the direction of EPA. There are no natural surface drainage features within the Local Study Area. The nearest significant natural surface drainage features of the Regional Study Area are Stevens Creek to the west and Calabazas Creek to the east. Calabazas Creek is located approximately four miles east of the MEW Study Area. Stevens Creek forms the western boundary of the Regional Study Area. Both discharge into the San Francisco Bay. Surface water runoff from most of the RSA and all of the LSA south of the Bayshore Freeway is intercepted by a storm drain system and is discharged into Stevens Creek. To the north of the Bayshore Freeway, most of the runoff from Moffett Field Naval Air Station is collected by a storm drain system that ultimately discharges to Guadalupe Slough of San Francisco Bay. Runoff from the northwestern portion of Moffett Field discharges into Stevens Creek. The Local and Regional Study Areas are underlain by a thick sequence of unconsolidated sediments deposited into a structural depression. The sediments are comprised of alluvial fan, estuarine, and bay mud deposits. Repeated variations in sea levels resulted in a complex sedimentary sequence characterized by irregular interbedding and interfingering of coarse and fine grained deposits. Groundwater aquifers at the site are subdivided into shallow and deep aquifer systems, separated by a laterally extensive regional aquitard. The shallow aquifer system comprises aquifers and aquitards to a depth of approximately 160 feet below the surface. Within the shallow system four primary hydrogeologic aquiferzones have been identified based upon the occurrence of aquifer material and a similar depth below the surface. The shallow aquifer system is comprised of the A-aquifer and the underlying B1-, B2- and B3- aquifers. The regional B-C aquitard separates the B3-aquifers from the C-aquifer and the deep aquifer system. Current groundwater flow in aquifer zones above the B-C aquitard is generally to the north, toward San Francisco Bay. During 1981 and 1982, preliminary investigations of facilities within the LSA indicated significant concentrations of contaminants in soil and groundwater. By 1984, the Fairchild, Intel and Raytheon sites, located within the LSA, were proposed for the NPL. By 1985, five companies within the LSA (Fairchild, Intel, Raytheon, NEC, and Siltec) initiated a joint investigation to document and characterize the distribution of chemicals emanating from their facilities. In April 1985, the California Regional Water Quality Control Board - San Francisco Bay Region (RWQCB) adopted Waste Discharge Requirements (WDRs) for each of the five companies. The primary cause of the subsurface contamination was from leaking storage tanks and lines, and poor waste management practices. On August 15, 1985, Fairchild, Intel, and Raytheon

INTEL CORP. (MOUNTAIN VIEW PLANT) (Continued) **1000203455**

entered into a Consent Order with the EPA, the RWQCB, and the California Department of Health Services (DHS). Since signing of the Consent Order, the three companies have carried out an extensive Remedial Investigation and Feasibility Study (RI/FS) of chemicals emanating from the LSA and soil contamination at their respective facilities. Work has been performed under the supervision of EPA, the RWQCB, DHS, and the Santa Clara Valley Water District (SCVWD). Prior to and during the site investigation, the companies have been conducting interim cleanup activities at the site. These interim remedial actions include tank removals, soil removal and treatment, well sealing, construction of slurry walls, and hydraulic control and treatment of local groundwater. NEC and Siltec declined to enter into the Consent Order and were placed under RWQCB enforcement authority. The three companies followed an approved Quality Assurance and Quality Control (QA/QC) Plan and approved Sampling Plans. In addition, split samples were collected by EPA from selected wells and these results were compared with the companies' sampling results. EPA determined that the companies' data quality was adequate for the purpose of the RI/FS. The MEW Remedial Investigation Report was concluded in July, 1988. The draft Feasibility Study and EPA's Proposed Plan were presented to the community for review and public comment in November, 1988. In May 1989, Special Notice letters for the Remedial Design/Remedial Action (RD/RA) Consent Decree were sent out to the five (5) original companies and twelve (12) other Potentially Responsible Parties (PRPs). The Regional Water Quality Control Board - San Francisco Bay Region (RWQCB) was the lead agency until April 1985, when the Board referred the five companies to EPA for cleanup under Superfund. In May, 1985, EPA sent general notice letters, pursuant to Section 106 of CERCLA, to the five companies. NEC and Siltec chose not to participate in the RI/FS negotiations and were referred back to the RWQCB. In August 1985, Fairchild, Intel, and Raytheon signed an Administrative Order on Consent with EPA, to conduct an RI/FS of the MEW area. The RWQCB and California Department of Health Services were cosigners of the Consent Order. The Consent Order and Work Plan called for a comprehensive groundwater investigation of the MEW area and site specific (source) investigation at Fairchild, Intel, and Raytheon. The RWQCB issued Waste Discharge Requirements (WDRs) for NEC and Siltec which paralleled the Consent Order schedule and requirements. During the course of the RI/FS, EPA gathered new information and evaluated existing information concerning other Potentially Responsible Parties (PRPs). During December 1987 and January 1988, EPA issued twenty-four (24) RCRA 3007/CERCLA 104 information request letters to various other parties in the MEW area. In July 1988, EPA issued a RCRA 3013 Unilateral Order to GTE to begin an investigation of its property, to determine if the company had contributed to the MEW groundwater plume. After evaluating the 3007/104 response letters, EPA sent General Notice Letters to seventeen (17) PRPs in September 1988. An initial PRP meeting was sponsored by EPA in October 1988, to explain the Superfund process to the noticed PRPs. EPA issued seven (7) additional General Notice and/or information request letters in March 1989. EPA subsequently issued Special Notice Letters for conducting the selected remedies in May 1989. A Record of Decision addressing OU01 of the Intel Corp. Site was completed in June 1989. EPA is now changing the June 9, 1989 ROD by specifying final cleanup standards rather than just goals. EPA is making this change because it has determined that there is insufficient information at this time to invoke a waiver to ARARs. However, EPA continues to recognize that it is always possible that the chosen remedy will be demonstrated to be unattainable. Therefore, EPA recognizes that if data are generated that demonstrate that the selected remedy cannot be achieved, EPA may need to reconsider its decision embodied in the ROD. An Explanation of Significant Differences addressing Operable Unit 01 of the Intel Corporation Site was completed in September, 1990. An Explanation of Significant Differences

INTEL CORP. (MOUNTAIN VIEW PLANT) (Continued) **1000203455**

addressing Operable Unit 1 at the Intel Corp. (Mountain View Plant) site was completed in April 1996. Cleanup actions are being taken at the Site under the 1989 Record of Decision (ROD) to restore groundwater to its potential beneficial use, which is designated as drinking water. Note that the groundwater at the Site is not currently being used for drinking water or other domestic purposes. The MEW Site is not located in an environmentally sensitive area. Based on EPA's updated understanding of the way chemicals can potentially migrate from the subsurface soil and groundwater to the indoor air, EPA requested the Potentially Responsible Parties (PRPs) for the Middlefield-Ellis-Whisman (MEW) groundwater contamination - the MEW Companies, U.S. Navy, and National Aeronautics and Space Administration (NASA) - to evaluate the potential vapor intrusion pathway into buildings overlying shallow trichloroethylene (TCE) groundwater contamination at the MEW Site. During 2003 through 2008, the MEW Companies, NASA, U.S. Navy, and EPA collected over 3,000 air samples from 47 commercial buildings and 20 residences within the Vapor Intrusion Study Area. The indoor air vapor intrusion investigation included the following types of samples: indoor air, outdoor ambient air, pathway air, crawlspace air, and sub-slab soil gas. Indoor air samples were collected in the breathing zone (approximately 3 to 5 feet above floor level) in occupied or potentially occupied areas. Pathway samples were collected in areas where potential conduits (such as penetrations through slab, drains, utility lines or vaults) into the building were observed that might provide a direct route for volatile organic compound (VOC) vapor migration into the building. Outdoor ambient air samples were collected immediately outside the building, including near the air ventilation system air intake, for comparison to indoor air to evaluate the potential contribution of VOCs from outdoor air to indoor air. Additionally, EPA outdoor reference and MEW/NASA background outdoor air samples were collected at distances of 0.25 to 1.5 miles away from the MEW Site to assess background levels of VOCs in the general area. The indoor air results were compared to (1) short-term health-based screening levels; (2) long-term health-based screening levels, and (3) outdoor ambient air. During the Supplemental Remedial Investigation, EPA used an interim long-term TCE indoor air screening level of 2.7 micrograms per cubic meter (ug/m3) for commercial buildings and 1 ug/m3 for residential buildings. Subsequent to the Supplemental Remedial Investigation, EPA established interim TCE indoor air action levels (now TCE indoor air cleanup levels) of 5 ug/m3 for commercial buildings and 1 ug/m3 for residential buildings. EPA also assessed the vapor intrusion pathway using multiple lines of evidence. The types of information used include building surveys, chemical use, operations, historical facility and property information, site geology and hydrogeology, and subsurface and air sampling information and conditions (groundwater, soil gas, sub-slab soil gas, crawlspace, pathway samples), chemical ratios, and tracer compounds, to determine whether the indoor air concentrations were attributable to subsurface Site contamination and not other sources, such as consumer products or outdoor background air sources. The Supplemental Remedial Investigation results also support the following conclusions: Indoor air results indicate there are no immediate or short-term health concerns. All indoor air concentrations are below the screening criteria for acute and short-term health-based screening criteria (Agency for Toxic Substances Disease Registry [ATSDR] Minimal Risk Levels). Therefore, EPA's focus is whether trichloroethylene (TCE) and other Site chemicals of potential concern in indoor air pose an unacceptable risk of chronic health effects from long-term exposure (30 years for residential exposure and 25 years for non-residential exposure). TCE in indoor air was detected above EPA's interim long-term TCE indoor air screening level in 17 commercial buildings and three residences within the Vapor Intrusion Study Area. Where discrete mitigation measures (e.g., sealing conduits, enhanced mechanical ventilation, air purifiers, sub-slab vapor control systems) were

INTEL CORP. (MOUNTAIN VIEW PLANT) (Continued) **1000203455**

implemented, indoor TCE concentrations were reduced to below the interim screening level. Increasing air exchange rates generally resulted in decreasing indoor air TCE concentrations. Vapor intrusion resulting in concentrations above interim long-term indoor air screening levels appears more likely in commercial buildings when ventilation systems are not providing sufficient air exchanges with outside air in all or part of a building. Buildings overlying elevated groundwater concentrations appear to have a greater likelihood of indoor air TCE concentrations exceeding the TCE screening level, but actual indoor air concentrations are also dependent on other building factors such as air ventilation system operations, building configuration, and preferential pathways into the building. The highest TCE indoor air concentrations were found in a building with a basement, where there was direct contact with groundwater (644 National Avenue in the MEW Area). Elevated concentrations were also found in a NASA building, where the ventilation system introduced air from beneath the raised floor into the building (N210 in the Moffett Field Area). A Record of Decision Amendment addressing vapor intrusion at Operable Unit 01 of the Intel Corp. (Mountain View Plant) Site was completed in August 2010.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

Facility ID: 43-1905
Facility Status: Leak being confirmed
Date Closed: Not reported
Local Case #: 43-1905
How Discovered: Tank Closure
Leak Cause: Structure Failure
Leak Source: Tank
Date Confirmed: 9/22/1990
Date Prelim Site Assmnt Workplan Submitted: Not reported
Date Preliminary Site Assessment Began: Not reported
Date Pollution Characterization Began: Not reported
Date Remediation Plan Submitted: Not reported
Date Remedial Action Underway: Not reported
Date Post Remedial Action Monitoring Began: Not reported
