Date form received by agency: 06/12/2001
Site name: LIGHTBIT CORP
Classification: Small Quantity Generator

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Violation Status: No violations found

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Potential Media Affected:	Not reported
Potential Contaminants of Concern:	1,1,1-Trichloroethane (TCA), Other Chlorinated Hydrocarbons, Other Solvent or Non-Petroleum Hydrocarbon, Tetrachloroethylene (PCE), Trichloroethylene (TCE)
Site History:	The E/M Lubricant facility was operated as a metal coating facility by E/M Corporation. As a dry lubricant application facility, activities included application of graphite or molybdenum coating to metal parts and degreasing. Improper storage and handling of degreasing materials impacted soil and groundwater. Adjacent sites with solvent releases are common.

Hazardous Waste Summary:
Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D008
Waste name: LEAD

Waste code: D011
Waste name: SILVER

Waste code: F006
Waste name: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Waste code: D022
Waste name: CHLOROFORM

CHEMOCENTRYX (Continued) **1007199396**

Waste code: F002
Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE LISTED IN F001, F004, OR F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: U103

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport,

LITTON APPLIED TECHNOLOGY (Continued) **1000417362**

and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Region:	STATE
Facility Status:	**Open - Remediation**
Status Date:	07/01/2002
Global Id:	SL18209589
Lead Agency:	SAN FRANCISCO BAY RWQCB (REGION 2)
Lead Agency Case Number:	Not reported
Latitude:	37.394473
Longitude:	-122.050525
Case Type:	Cleanup Program Site
Case Worker:	MBR
Local Agency:	Not reported
RB Case Number:	43S0048
File Location:	Regional Board
Potential Media Affected:	Indoor Air, Other Groundwater (uses other than drinking water), Soil, Soil Vapor
Potential Contaminants of Concern:	1,1,1-Trichloroethane (TCA), Other Chlorinated Hydrocarbons, Tetrachloroethylene (PCE), Trichloroethylene (TCE)
Site History:	1. Site Location: The site is located at 690 East Middlefield Road in Mountain View. It has also been previously identified as being located at 333 Logue Avenue. The site is bounded by East Middlefield Road on the southwest, Logue Avenue on the west, Maude Avenue on the northeast, and Mountain ViewlAlviso Road (highway 237) on the southeast. Three buildings occupy the site and are currently used for software duplication and distribution, parts distribution, and administrative offices. Areas surrounding the building are paved. Adjacent properties are developed for commercial and light industrial use. Prior to the early 1960s, land use in the site vicinity was agricultural. 2. Site History: Hewlett Packard Company (HP) began construction of the buildings in 1966. Previous activities on the site included metal cleaning, polishing, coating and painting operations, and production and testing' of magnetic head assemblies. These activities required the use of chemical such as degreasers, paint thinners, acids, and detergents; and generated a variety of hazardous wastes. As a result of subsurface soil investigations by HP beginning in 1983, volatile organic compounds (VOCs) were detected at the site. 3. Named Dischargers: HP, as owner and operator of the site, is named as a discharger. Order No. 95-131

690 EAST MIDDLEFIELD (Continued) **S104156118**

Facility ID:	San Francisco Bay 438133001
Facility Type:	Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping.
Facility Status:	Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
NPDES Number:	CAG912003 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board
Subregion:	2
Facility Telephone:	6508578805
Facility Contact:	Jonathan Bauer (HP)
Agency Name:	HEWLETT PACKARD COMPANY
Agency Address:	1501 PAGE MILL RD MS 5U-E
Agency City,St,Zip:	PALO ALTO 943041213
Agency Contact:	Jonathan Bauer
Agency Telephone:	6508578805
Agency Type:	Private
SIC Code:	3674
SIC Code 2:	Not reported
Primary Waste Type:	Hazardous/Influent or Solid Wastes that contain toxic, corrosive, ignitable or reactive substances and must be managed according to applicable DOHS standards.
Primary Waste:	CNWTRS
Waste Type2:	Not reported
Waste2:	Contaminated Ground Water
Primary Waste Type:	Hazardous/Influent or Solid Wastes that contain toxic, corrosive, ignitable or reactive substances and must be managed according to applicable DOHS standards.
Secondary Waste:	Not reported
Secondary Waste Type:	Not reported
Design Flow:	0
Baseline Flow:	0
Reclamation:	No reclamation requirements associated with this facility.
POTW:	The POTW Does not have an approved pretreatment program. Some POTWs may have local pretreatment programs that have not been approved by the regional board and/or EPA.
Treat To Water:	Moderate Threat to Water Quality. A violation could have a major adverse impact on receiving biota, can cause aesthetic impairment to a significant human population, or render unusable a potential domestic or municipal water supply. Awsthetic impairment would include nuisance from a waste treatment facility.
Complexity:	Category B - Any facility having a physical, chemical, or biological waste treatment system (except for septic systems with subsurface disposal), or any Class II or III disposal site, or facilities without treatment systems that are complex, such as marinas with petroleum products, solid wastes, and sewage pump out facilities.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Case Type:	Cleanup Program Site
Case Worker:	MBR
Local Agency:	Not reported
RB Case Number:	43S1158
File Location:	Not reported
Potential Media Affected:	Indoor Air, Other Groundwater (uses other than drinking water), Soil Vapor
Potential Contaminants of Concern:	Dichloroethane (DCA), Dichloroethene (DCE), Other Chlorinated Hydrocarbons, Tetrachloroethylene (PCE), Trichloroethylene (TCE), Vinyl chloride
Site History:	Background On March 2, 1998, the Regional Water Board issued a letter concurring that the volatile organic compounds (VOCs) concentrations in groundwater detected at the Site were associated with the VOC plume originating from the upgradient Hewlett-Packard E/M Lubricants facilities. However, the letter requested a deed restriction be placed on the Site for the notification of the presence of onsite impacted soil and groundwater and for the prohibition the drilling of water production wells and use of the shallow groundwater without prior notification to the Regional Water Board. On July 8, 2013, the Regional Water Board issued a cost recovery agreement letter in response to the June 19, 2013, Request for Agency Oversight of a Brownfield Site, regarding the redevelopment at the Site and Water Board review the Site Management Plan (SMP). Site Management Plan Summary Regional Water Board approval of the SMP was required by the City of Mountain View as a condition for obtaining the demolition/building permit. The SMP describes appropriate safe construction practices and soil/groundwater management procedures for redevelopment construction, including contingency procedures The proposed redevelopment covered under the SMP entails construction of a two-building office campus, including two above-grade open-air parking structures. There will be minimal site grading, and the buildings will be at-grade (i.e., no subsurface occupied spaces or parking areas). Despite the expected low and declining VOC concentrations in groundwater, as a precaution the office buildings have vapor intrusion mitigation system to mitigate any potential vapor intrusion concerns from the underlying VOC groundwater plume. Specifically, the SMP proposes a vapor intrusion mitigation system using a sprayed-in-place vapor barrier, such as Liquid Boot, and a sub-slab passive venting installed beneath the vapor barrier. Proper installation of the vapor barrier and the venting system will be verified by PES Environmental, Inc. Additionally, the SMP proposes environmental monitoring and/or field screening of the following. Worker health and safety Installation of the geotechnical test piles Removal of the building foundation slab and parking lot Demolition of the existing subsurface utilities Installation of the subsurface utilities Grading activities Construction of the building and parking structure foundation Discovery of unexpected below grade features Reuse of graded soil Disposal of excess soil

PHOENIX METALS (Continued) **1001231448**

Hazardous Waste Summary:

Waste code: D000
Waste name: Not Defined

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Violation Status: No violations found

Background Info:	to drinking water aquifers. Raytheon entered into a consent agreement with EPA in August, 1985. Raytheon removed a leaking tank in December of 1987, installed surface drainage controls, and is operating a groundwater extraction system. The groundwater extraction system was installed in 1982, and involves treating the extracted water with either air or steam stripping. DHS reviews Raytheon's monthly reports on this system. Raytheon is also currently participating in an area-wide remedial investigation and feasibility study. The Raytheon Corporation operates a semiconductor manufacturing plant at this 30-acre site. Chemicals used in the manufacturing process and wastes generated by this process are handled and stored onsite. The site is located adjacent to industrial, commercial and residential development. This site is part of the Middlefield, Ellis, Whisman (MEW) area. Soil and groundwater beneath the site are contaminated with trichloroethylene (TCE), trichloroethane (TCA), dichloroethylene (DCE), and chloroform. Contamination is believed to have resulted from leaking underground chemical storage tanks and/or concrete acid neutralization sumps. About 270,000 people live within a 3-mile radius of the site and depend on groundwater as a source of drinking water. Groundwater contamination at the site represents a significant threat

Summary Details:

Conditions at proposal October 15, 1984): Raytheon Corp. manufactures semiconductor products at a plant in Mountain View, Santa Clara County, California. The facility occupies about 30 acres and is surrounded by industrial, business, and residential areas. Soil and ground water beneath the site are contaminated with trichloroethylene, 1,1,1-trichloroethane, and 1,1- and trans-1,2- dichloroethylene, according to analyses conducted by a consultant to Raytheon. Contaminationis believed to have resulted from a leaking underground chemical storage tank and/or concrete acid neutrali ation sumps. About 270,000 people depend on wells within 3 miles of the site as a source of drinking water. In late 1982, Raytheon conducted an investigation to determine if downgradient ground water contamination near the north property boundary resulted from a source on its property. Raytheon concluded that it was not possible to establish a specific source of contamination based on data obtained from its investigation. At present, Raytheon is working with the California Regional Water Quality Control Board CRWQCB) to determine the full extent of the problem.
This is one of 19 sites in the South BayArea of San Francisco. Facilities at these sites have used a variety of toxic chemicals, primarily chlorinated organic solvents, which contaminate a common ground water basin. Although these sites are listed separately, EPA intends to apply an area-wide approach to the problem as well as take specific action as necessary. Status June 10, 1986): In an attempt to determine the full extent of ground water contamination, Raytheon has installed three wells to pump and treat ground water to contain the contaminated plume. CRWQCB has issued Waste Discharge Requirements to the company. The requirements are the board s legal mechanism for regulating activities at facilities under its jurisdiction.
On August 15, 1985,EPA issued a CERCLA Administrative Order on Consent to Raytheon Corp. s Mountain View Plant, as well as to Fairchild Camera s and Intel Corp. s Mountain View Plants. The order calls for the three companies to conduct a joint remedial investigation/feasibility study of the area to determine the type and extent of contamination and identify alternatives for remedial action.

Site Description: The Middlefield/Ellis/Whisman (MEW) Study Area is located in Santa Clara County in the city of Mountain View, California. The site is divided into a Local Study Area (LSA) and a Regional Study Area (RSA). The LSA consists of three National Priority List (NPL) sites (Fairchild, Intel and Raytheon), as well as several non-Superfund sites. The LSA encompasses about 1/2 square mile of the RSA and contains primarily light industrial and commercial areas, with some residential areas west of Whisman Road. The RSA encompasses approximately 8 square miles and includes Moffett Naval Air Station (an NPL site) and National Aeronautics and Space Administration (NASA) Ames Research Center, along with light industrial, commercial, agricultural, park, golf course, undeveloped land, residential, motel and school land uses. Various owners or occupants in the area around the intersections of Middlefield Road, Ellis Street, Whisman Road, and the Bayshore Freeway (U.S. Highway 101), are or were involved in the manufacture of semiconductors, metal finishing operations, parts cleaning, aircraft maintenance, and other activities requiring the use of a variety of chemicals. Site investigations at several of these facilities have revealed the presence of toxic chemicals in the subsurface soils and groundwater. To investigate the extent of groundwater contamination emanating from the LSA, and soil contamination at their respective facilities, Fairchild, Intel, and Raytheon performed a Remedial Investigation and a Feasibility Study of potential remedial alternatives under the direction of EPA. There are no natural surface drainage features within the Local Study Area. The nearest significant natural surface drainage features of the Regional Study Area are Stevens Creek to the west and Calabazas Creek to the east. Calabazas Creek is located approximately four miles east of the MEW Study Area. Stevens Creek forms the western boundary of the Regional Study Area. Both discharge into the

RAYTHEON CORP. (Continued) **1000407768**

San Francisco Bay. Surface water runoff from most of the RSA and all of the LSA south of the Bayshore Freeway is intercepted by a storm drain system and is discharged into Stevens Creek. To the north of the Bayshore Freeway, most of the runoff from Moffett Field Naval Air Station is collected by a storm drain system that ultimately discharges to Guadalupe Slough of San Francisco Bay. Runoff from the northwestern portion of Moffett Field discharges into Stevens Creek. The Local and Regional Study Areas are underlain by a thick sequence of unconsolidated sediments deposited into a structural depression. The sediments are comprised of alluvial fan, estuarine, and bay mud deposits. Repeated variations in sea levels resulted in a complex sedimentary sequence characterized by irregular interbedding and interfingering of coarse and fine grained deposits. Groundwater aquifers at the site are subdivided into shallow and deep aquifer systems, separated by a laterally extensive regional aquitard. The shallow aquifer system comprises aquifers and aquitards to a depth of approximately 160 feet below the surface. Within the shallow system four primary hydrogeologic aquiferzones have been identified based upon the occurrence of aquifer material and a similar depth below the surface. The shallow aquifer system is comprised of the A-aquifer and the underlying B1-, B2- and B3- aquifers. The regional B-C aquitard separates the B3-aquifers from the C-aquifer and the deep aquifer system. Current groundwater flow in aquifer zones above the B-C aquitard is generally to the north, toward San Francisco Bay. During 1981 and 1982, preliminary investigations of facilities within the LSA indicated significant concentrations of contaminants in soil and groundwater. By 1984, the Fairchild, Intel and Raytheon sites, located within the LSA, were proposed for the NPL. By 1985, five companies within the LSA (Fairchild, Intel, Raytheon, NEC, and Siltec) initiated a joint investigation to document and characterize the distribution of chemicals emanating from their facilities. In April 1985, the California Regional Water Quality Control Board - San Francisco Bay Region (RWQCB) adopted Waste Discharge Requirements (WDRs) for each of the five companies. The primary cause of the subsurface contamination was from leaking storage tanks and lines, and poor waste management practices. On August 15, 1985, Fairchild, Intel, and Raytheon entered into a Consent Order with the EPA, the RWQCB, and the California Department of Health Services (DHS). Since signing of the Consent Order, the three companies have carried out an extensive Remedial Investigation and Feasibility Study (RI/FS) of chemicals emanating from the LSA and soil contamination at their respective facilities. Work has been performed under the supervision of EPA, the RWQCB, DHS, and the Santa Clara Valley Water District (SCVWD). Prior to and during the site investigation, the companies have been conducting interim cleanup activities at the site. These interim remedial actions include tank removals, soil removal and treatment, well sealing, construction of slurry walls, and hydraulic control and treatment of local groundwater. NEC and Siltec declined to enter into the Consent Order and were placed under RWQCB enforcement authority. The three companies followed an approved Quality Assurance and Quality Control (QA/QC) Plan and approved Sampling Plans. In addition, split samples were collected by EPA from selected wells and these results were compared with the companies' sampling results. EPA determined that the companies' data quality was adequate for the purpose of the RI/FS. The MEW Remedial Investigation Report was concluded in July, 1988. The draft Feasibility Study and EPA's Proposed Plan were presented to the community for review and public comment in November, 1988. In May 1989, Special Notice letters for the Remedial Design/Remedial Action (RD/RA) Consent Decree were sent out to the five (5) original companies and twelve (12) other Potentially Responsible Parties (PRPs). The Regional Water Quality Control Board - San Francisco Bay Region (RWQCB) was the lead agency until April 1985, when the Board referred the five companies to EPA for cleanup under Superfund. In May, 1985, EPA sent general notice letters, pursuant to Section 106 of

RAYTHEON CORP. (Continued) **1000407768**

CERCLA, to the five companies. NEC and Siltec chose not to participate in the RI/FS negotiations and were referred back to the RWQCB. In August 1985, Fairchild, Intel, and Raytheon signed an Administrative Order on Consent with EPA, to conduct an RI/FS of the MEW area. The RWQCB and California Department of Health Services were cosignees of the Consent Order. The Consent Order and Work Plan called for a comprehensive groundwater investigation of the MEW area and site specific (source) investigation at Fairchild, Intel, and Raytheon. The RWQCB issued Waste Discharge Requirements (WDRs) for NEC and Siltec which paralleled the Consent Order schedule and requirements. During the course of the RI/FS, EPA gathered new information and evaluated existing information concerning other Potentially Responsible Parties (PRPs). During December 1987 and January 1988, EPA issued twenty-four (24) RCRA 3007/CERCLA 104 information request letters to various other parties in the MEW area. In July 1988, EPA issued a RCRA 3013 Unilateral Order to GTE to begin an investigation of its property, to determine if the company had contributed to the MEW groundwater plume. After evaluating the 3007/104 response letters, EPA sent General Notice Letters to seventeen (17) PRPs in September 1988. An initial PRP meeting was sponsored by EPA in October 1988, to explain the Superfund process to the noticed PRPs. EPA issued seven (7) additional General Notice and/or information request letters in March 1989. EPA subsequently issued Special Notice Letters for conducting the selected remedies in May 1989. A Record of Decision addressing OU01 of the Raytheon Corp. Site was completed in June 1989. An Explanation of Significant Differences addressing Operable Unit 01 of the Raytheon Corporation Site was completed in September, 1990. An Explanation of Significant Differences addressing Operable Unit 1 at the Raytheon Corp. (Mountain View Plant) site was completed in April 1996. OU01 ROD Amendment (2010): The Raytheon Company site is one of the sites comprising the Middlefield-Ellis-Whisman (MEW) study area. The MEW Area is a heavily populated, light-industrial, commercial, and residential area that currently hosts semiconductor, computer software, electronics businesses, and other commercial offices and light manufacturing facilities. The western boundary of the Vapor Intrusion Study Area is primarily residential. The Moffett Field Area is primarily used for military housing, air operations, storage, educational facilities, research and development, office, and retail space. NASA's redevelopment plans in the Moffett Field Area include demolition of all non-historic structures. Plans are underway to redevelop unimproved land at Moffett Field into sustainable research facilities including office, educational, recreational, and residential uses. Cleanup actions are being taken at the Site under the 1989 Record of Decision (ROD) to restore groundwater to its potential beneficial use, which is designated as drinking water. Note that the groundwater at the Site is not currently being used for drinking water or other domestic purposes. The MEW Site is not located in an environmentally sensitive area. Based on EPA's updated understanding of the way chemicals can potentially migrate from the subsurface soil and groundwater to the indoor air, EPA requested the Potentially Responsible Parties (PRPs) for the Middlefield-Ellis-Whisman (MEW) groundwater contamination - the MEW Companies, U.S. Navy, and National Aeronautics and Space Administration (NASA) - to evaluate the potential vapor intrusion pathway into buildings overlying shallow trichloroethylene (TCE) groundwater contamination at the MEW Site. During 2003 through 2008, the MEW Companies, NASA, U.S. Navy, and EPA collected over 3,000 air samples from 47 commercial buildings and 20 residences within the Vapor Intrusion Study Area. The indoor air vapor intrusion investigation included the following types of samples: indoor air, outdoor ambient air, pathway air, crawlspace air, and sub-slab soil gas. Indoor air samples were collected in the breathing zone (approximately 3 to 5 feet above floor level) in occupied or potentially occupied areas. Pathway samples were collected in areas where potential conduits (such as penetrations through slab, drains,

RAYTHEON CORP. (Continued) **1000407768**

utility lines or vaults) into the building were observed that might provide a direct route for volatile organic compound (VOC) vapor migration into the building. Outdoor ambient air samples were collected immediately outside the building, including near the air ventilation system air intake, for comparison to indoor air to evaluate the potential contribution of VOCs from outdoor air to indoor air. Additionally, EPA outdoor reference and MEW/NASA background outdoor air samples were collected at distances of 0.25 to 1.5 miles away from the MEW Site to assess background levels of VOCs in the general area. The indoor air results were compared to (1) short-term health-based screening levels; (2) long-term health-based screening levels, and (3) outdoor ambient air. During the Supplemental Remedial Investigation, EPA used an interim long-term TCE indoor air screening level of 2.7 micrograms per cubic meter (ug/m3) for commercial buildings and 1 ug/m3 for residential buildings. Subsequent to the Supplemental Remedial Investigation, EPA established interim TCE indoor air action levels (now TCE indoor air cleanup levels) of 5 ug/m3 for commercial buildings and 1 ug/m3 for residential buildings. EPA also assessed the vapor intrusion pathway using multiple lines of evidence. The types of information used include building surveys, chemical use, operations, historical facility and property information, site geology and hydrogeology, and subsurface and air sampling information and conditions (groundwater, soil gas, sub-slab soil gas, crawlspace, pathway samples), chemical ratios, and tracer compounds, to determine whether the indoor air concentrations were attributable to subsurface Site contamination and not other sources, such as consumer products or outdoor background air sources. The Supplemental Remedial Investigation results also support the following conclusions: Indoor air results indicate there are no immediate or short-term health concerns. All indoor air concentrations are below the screening criteria for acute and short-term health-based screening criteria (Agency for Toxic Substances Disease Registry [ATSDR] Minimal Risk Levels). Therefore, EPA's focus is whether trichloroethylene (TCE) and other Site chemicals of potential concern in indoor air pose an unacceptable risk of chronic health effects from long-term exposure (30 years for residential exposure and 25 years for non-residential exposure). TCE in indoor air was detected above EPA's interim long-term TCE indoor air screening level in 17 commercial buildings and three residences within the Vapor Intrusion Study Area. Where discrete mitigation measures (e.g., sealing conduits, enhanced mechanical ventilation, air purifiers, sub-slab vapor control systems) were implemented, indoor TCE concentrations were reduced to below the interim screening level. Increasing air exchange rates generally resulted in decreasing indoor air TCE concentrations. Vapor intrusion resulting in concentrations above interim long-term indoor air screening levels appears more likely in commercial buildings when ventilation systems are not providing sufficient air exchanges with outside air in all or part of a building. Buildings overlying elevated groundwater concentrations appear to have a greater likelihood of indoor air TCE concentrations exceeding the TCE screening level, but actual indoor air concentrations are also dependent on other building factors such as air ventilation system operations, building configuration, and preferential pathways into the building. The highest TCE indoor air concentrations were found in a building with a basement, where there was direct contact with groundwater (644 National Avenue in the MEW Area). Elevated concentrations were also found in a NASA building, where the ventilation system introduced air from beneath the raised floor into the building (N210 in the Moffett Field Area). A Record of Decision Amendment addressing vapor intrusion at Operable Unit 01 of the Raytheon Company Superfund Site was completed in August 2010.

RAYTHEON COMPANY SEMICONDUCTOR (Continued) **1000407767**

File Location: Not reported
Potential Media Affected: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: * Solvents
Site History: No Water Board oversight of cleanup at this site. This case is included in Geotracker because the site is covered by the Water Boards NPDES general permits for discharges from pump and treat systems to surface waters (one each for fuels- and VOC-impacted sites). This can happen for two reasons: (i) the site is overseen by another agency (e.g., USEPA or DTSC) and needs coverage under one of the NPDES general permits or (ii) construction dewatering in an area of groundwater contamination necessitates NPDES general permit coverage. Including this case in Geotracker helps staff to receive and review required NPDES reports.

0.351 mi.
1853 ft. **Site 4 of 4 in cluster O**

CA BOND EXP. PLAN:
Reponsible Party: NPL SITE CLEANUP WORKPLAN
Project Revenue Source Company: Not reported
Project Revenue Source Addr: Not reported
Project Revenue Source City,St,Zip: Not reported
Project Revenue Source Desc: The RP will fund the characterization and remedial action at the site. State Bond funds will be used for oversight of the RP's activities. The Department has budgeted $50,000 for direct costs related to the project and will seek to recover all actual costs from the responsible party.
Site Description: The Raytheon Corporation operates a semiconductor manufacturing plant at this 30-acre site. Chemicals used in the manufacturing process and wastes generated by this process are handled and stored onsite. The site is located adjacent to industrial, commercial and residential development.
Hazardous Waste Desc: Soil and ground water beneath the site are contaminated with trichloroethylene (TCE), trichloroethane (TCA), dichloroethylene (DCE), and chloroform. Contamination is believed to have resulted from leaking underground chemical storage tanks and/or concrete acid neutralization sumps.
Threat To Public Health & Env: About 270,000 people live within a 3-mile radius of the site and depend on ground water as a source of drinking water. Ground water contamination at the site represents a significant threat to drinking water aquifers.

RAYTHEON CORPORATION (Continued) **S105960437**

Site Activity Status: Raytheon entered into a consent agreement with the EPA in August, 1985. Raytheon has removed the leaking tank, installed surface drainage controls and is operating a ground water extraction system. Raytheon is also currently participating in an area-wide remedial investigation and feasibility study.

File Location:	Not reported
Potential Media Affected:	Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern:	* Solvents
Site History:	No Water Board oversight of cleanup at this site. This case is included in Geotracker because the site is covered by the Water Boards NPDES general permits for discharges from pump and treat systems to surface waters (one each for fuels- and VOC-impacted sites). This can happen for two reasons: (i) the site is overseen by another agency (e.g., USEPA or DTSC) and needs coverage under one of the NPDES general permits or (ii) construction dewatering in an area of groundwater contamination necessitates NPDES general permit coverage. Including this case in Geotracker helps staff to receive and review required NPDES reports.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CA BOND EXP. PLAN:

Reponsible Party:	NPL SITE CLEANUP WORKPLAN
Project Revenue Source Company:	Not reported
Project Revenue Source Addr:	Not reported
Project Revenue Source City,St,Zip:	Not reported
Project Revenue Source Desc:	The RP will fund the characterization and remedial action at this site. State Bond funds will be used for oversight of the RP's activities. DHS has budgeted $25,000 for oversight activities. DHS will seek cost recovery for its direct costs includingstaff costs and overhead associated with the project.
Site Description:	Fairchild operates a semiconductor manufacturing plant at this 56-acre site. Chemicals used in the manufacturing process and wastes generated as a result of this process have been handled and stored onsite. The site is adjacent to residential and industrial development.
Hazardous Waste Desc:	In 1982, soil and ground water contamination were discovered. The sources of contamination were leaking underground storage tanks containing solvents. At that time, there were a total of 71 tanks and sumps used for the onsite storage of hazardous materials and wastes. The contaminants which have been detected in soil and ground water include trichloroethylene (TCE), trichloroethane (TCA), dichloroethylene (DCE) and chloroform.
Threat To Public Health & Env:	Ground water contamination represents a significant threat to aquifers used as a source of drinking water. About 270,000 people reside within a 3-mile radius of the site. One private well has been closed due to the encroachment of contaminants. To date, three contaminated private wells have been identified. The City of Mountain View operates a municipal well (No. 18) 1.2 miles from the site.
Site Activity Status:	Fairchild entered into a consent agreement with EPA in August, 1985. As an initial remedial measure, six of the 71 tanks and sumps used to store hazardous materials and wastes were excavated and removed. A ground water extraction system consisting of 25 extraction wells has been installed and is operating. Fairchild is also participating in an area-wide remedial investigation and feasibility study.

Background Info:

Fairchild operates a semiconductor manufacturing plant at this 56-acre site. Chemicals used in the manufacturing processa and wastes generated as a result of this process have been handled & stored onsite. The site is adjacent to residential & industrial development. This site is part of the Middlefield-Ellis-Whisman (MEW) area.

In 1982, soil and groundwater contamination were discovered. The sources of contamination were leaking underground storage tanks containing solvents. At that time, there were a total of 71 tanks & sumps used for the onsite storage of hazardous materials and wastes. The contaminants which have been detected in soil and groundwater include trichloroethylene (TCE), trichloroethane (TCA), dichloroethylene (DCE) and chloroform. Groundwater contamination represents a significant threat to aquifers used as a source of drinking water. About 270,000 people reside within a 3-mile radius of the site. One private well has been closed due to the encroachment of contaminants. To date, three contaminated private wells have been identified. The City of Mountain View operates a municipal well (No. 18) 1.2 miles

FAIRCHILD SEMICONDUCTOR/MT. VIEW (Continued) **U001594292**

from the site.
Fairchild entered into a consent agreement with EPA to conduct RI/FS in August, 1985.
As an initial stabilization action, six of the 71 tanks and sumps used to store hazardous materials and wastes were excavated and removed. A groundwater extraction system consisting of 25 extraction wells has been installed and is operating.

Completed Document Type:	Preliminary Endangerment Assessment Report
Completed Date:	10/22/2013
Comments:	Based on the Preliminary Endangerment Assessment Report, DTSC determined that no significant releases have occurred from the Site and issued a letter to the Site owner conveying that DTSC requires no further action at the Site. The Report identifies possible indoor air impacts from volatile organic compounds in groundwater that originated from off-Site sources as the only environmental concern. The Site is located within the the Middlefield-Ellis-Whisman Study Area, which encompasses an existing regional groundwater contamination plume. DTSC's letter noted that although DTSC requires no further action, actions may be required by the U.S. Environmental Protection, pursuant to its Record of Decision Amendment for the Vapor Intrusion Pathway, dated August 16, 2010, to address the potential vapor intrusion risk.

Environmental Interest/Information System

California Department of Toxic Substances Control EnviroStor System (DTSC-EnviroStor) is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Potential Media Affected:	Other Groundwater (uses other than drinking water), Soil, Soil Vapor
Potential Contaminants of Concern:	Not reported
Site History:	California Microwave (CMI) operated a production facility at 985 Almanor until 1996. The company's headquarters were located at 990 Almanor. The production facility manufactured proprietary electronic equipment for telecommunication transmission and distribution, as well as defense applications. Chemical wastes included 1,1,1-trichloroethane (TCA), freon, methyl ethyl ketone, deoxidizer, waste oil and mixed oil, sodium hydroxide, allodyning solution, waste water, and solid wastes. Inspections conducted in the 1980's by the Department of Health Services, Toxic Substances Control Division (DHS, currently the Department of Toxic Substances Control, DTSC) found leaking drums, ponded water, stains on blacktop, and unlabelled drums were observed. Enforcement actions were taken by DHS, including requiring the construction of a bermed hazardous waste storage area. Soil and groundwater investigations were performed under the oversight of the San Francisco Bay Regional Water Quality Control Board (RWQCB). Soils containing VOCs greater than 0.5 parts per million (ppm) were excavated in June of 1995. Groundwater analyses indicated that TCE was migrating onto the former CMI facility from neighboring companies upgradient of the Site. RWQCB noted that the PCE in groundwater appeared to originate from an on-site source. Following this report, RWQCB did not pursue further investigation at the Site for several reasons. Soil removal effectively removed the source of PCE to grounwater, and the Site is currently capped with buildings and asphalt. The concentrations of VOCs in the groundwater beneath the Site were also not high enough compared to levels of VOCs in the local groundwater plume to warrant further work at this time, and the PCE contamination was limited to shallow groundwater.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Background Info:	Between 1968, and 1981, Intel Corporation operated a semiconductor manufacturing plant at the site. Chemicals used in the manufacturing process and wastes generated by this process were handled and stored onsite. The site is located adjacent to residential and commercial development. This site is part of the Middlefield-Ellis-Whisman (MEW) study area. In 1981, soil and groundwater contamination was discovered at the site. An investigation determined that the sources of conta-

INTEL CORPORATION (MOUNTAIN VIEW PLANT) (Continued) **S105628343**

mination were leaking underground storage tanks containing solvents. The types of contaminants identified include trichloroethylene (TCE), xylene, Freon-113, trichloroethane (TCA), dichloroethylene (DCE), and vinyl chloride.
Approximately 270,000 people living within a 3-mile radius of the facility depend on groundwater as a principal source of drinking water. Three private wells have been contaminated. Five municipal wells belonging to the City of Mountain View and five City of Sunnyvale wells are located within a three-mile radius of the site. The City of Mountain View's well No. 18 is located 1.1 miles from the facility & is 2,600 feet away from a contaminated monitoring well.
In August, 1985, Intel entered into a consent agreement with EPA to conduct a RI/FS.
All five underground tanks and sumps at the site have been excavated along with 4,600 cubic yards of contaminated soil.
Groundwater monitoring and extraction wells have been installed for plume characterization, monitoring and extraction. About 72,000 gallons of contaminated groundwater is pumped daily and treated by carbon adsorption prior to discharge to Stevens Creek, Whisman Slough and the San Francisco Bay.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

FERGUSON BUSINESS PARK (Continued) **S100183040**

Completed Sub Area Name:	Not reported
Completed Document Type:	Preliminary Endangerment Assessment Report
Completed Date:	06/28/1991
Comments:	Not reported
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Site Screening
Completed Date:	11/19/1990
Comments:	Completed Site Screening. 19 soil samples have been randomly taken at a depth of approximately 1 foot. Samples were analyzed for organochlorine pesticides. 2 samples had slightly elevated DDD, DDE, and DDT (1.62 and 1.32 ppm). 1 sample had slightly elevated chlordane. Site Screening done recommends a Preliminary Endangerment Assessment (PEA). More samples are needed to characterize the vertical extent of contamination. Depending upon the pesticide-use history, soil samples need to be analyzed not only for chlorinated pesticides but also metals, organophospates, and carbamates.

Summary Details:

Conditions at proposal October 15, 1984): Fairchild Semiconductor Corp. manufactures semiconductors in Mountain View, Santa Clara County, California. The facility occupies approximately 56 acres and is surrounded by residential and industrial areas. This site was originally proposed under the name Fairchild Camera Instrument Corp. Mountain View Plant). The company took the new name in 1986. Monitoring wells on the site are contaminated with trichloroethylene,1,1,1-trichloroethane, 1,1- and trans-1,2-dichloroethylene, according to analyses conducted by a consultant to Fairchild. Contamination is believed to have resulted from leaking underground tanks. About 270,000 people depend on wells within 3miles of the site for drinking water. Since early 1982, Fairchild has been investigating the site geology and hydrogeology and attempting to define the lateral and vertical extent of solvents underlying the site. Fairchild has installedtwo wells to pump and treat the contaminated ground water plume. The company is working with the California Regional Water Quality Control Board to further define the extent of contamination and outline various cleanup strategies. The plant received Interim Status under Subtitle C of the Resource Conservation and Recovery Act RCRA) when the company filed Part A of a permit application. This is one of 19 sites in the South Bay Area of San Francisco. Facilities at these sites have used a variety of toxic chemicals, primarily chlorinated organic solvents, which contaminate a common ground water basin. Although these sites are listed separately, EPA intends to apply an area-wide approach to the problem as well astake specific action as necessary. Status February 1986): Continuing to determine the extent of ground water contamination, Fairchild has installed more than 100 monitoring wells. On August 15, 1985, EPA issued an AdministrativeOrder on Consent under CERCLA Section 106 a) to Fairchild s Mountain View Plant, as well as to Intel Corp. s and Raytheon Corp. s Mountain View Plants. The order calls for the companies to conduct a joint remedial investigation/feasibility study of the area to determine the type and extent of contamination and identify alternatives for remedial action. Status June 1988): EPA is proposing to drop Fairchild Semiconductor Corp. s Mountain

FAIRCHILD SEMICONDUCTOR CORP. (MOUNTAIN VIEW PLANT) (Continued) **1000260555**

View Plant from the proposed NPL. Because the site is a treatment and storage facility, it is subject to the corrective action authorities of Subtitle C RCRA. Fairchild now has 25 wells in operation that pump and treat contaminated ground water; has installed three undergroundslurry walls to control migration of contaminated ground water. EPA has sealed two abandoned agricultural wells that were carrying contamination to the deeper aquifers. EPA may also pursue cleanup under RCRA authorities and will ensure that the cleanup protects public health and the environment. EPA can later repropose the site for the NPL if it determines that the owner or operator is unable or unwilling to clean up the site effectively.
Status February 11, 1991): EPAis adding this site to the NPL because, although it is subject to RCRA Subtitle C, the transfer of primary responsibility from CERCLA to RCRA would delay and complicate the overall cleanup of the site. The RI was concluded in July 1988. Adraft FS and EPA s Proposed Plan were presented to the community for a 60-day public comment period in November 1988. EPA signed the Record of Decision ROD) identifying the selected remedy on June 9, 1989. On September 21, 1990, EPA issued an Explanation of Significant Differences clarifying the ROD. In May 1989, EPA sent Special Notice Letters calling for a remedial design/remedial action RD/RA) Consent Decree to Fairchild and 16 other parties potentially responsible for wastes associated with the site.
Fairchild failed to conclude a settlement Consent Decree) with EPA. On November 29, 1990, EPA issued Fairchild and eight other parties a Unilateral Administrative Order for RD/RA.

Site Description: The Middlefield/Ellis/Whisman (MEW) Study Area is located in Santa Clara County in the city of Mountain View, California. The site is divided into a Local Study Area (LSA) and a Regional Study Area (RSA). The LSA consists of three National Priority List (NPL) sites (Fairchild, Intel and Raytheon), as well as several non-Superfund sites. The LSA encompasses about 1/2 square mile of the RSA and contains primarily light industrial and commercial areas, with some residential areas west of Whisman Road. The RSA encompasses approximately 8 square miles and includes Moffett Naval Air Station (an NPL site) and National Aeronautics and Space Administration (NASA) Ames Research Center, along with light industrial, commercial, agricultural, park, golf course, undeveloped land, residential, motel and school land uses. Various owners or occupants in the area around the intersections of Middlefield Road, Ellis Street, Whisman Road, and the Bayshore Freeway (U.S. Highway 101), are or were involved in the manufacture of semiconductors, metal finishing operations, parts cleaning, aircraft maintenance, and other activities requiring the use of a variety of chemicals. Site investigations at several of these facilities have revealed the presence of toxic chemicals in the subsurface soils and groundwater. To investigate the extent of groundwater contamination emanating from the LSA, and soil contamination at their respective facilities, Fairchild, Intel, and Raytheon performed a Remedial Investigation and a Feasibility Study of potential remedial alternatives under the direction of EPA. There are no natural surface drainage features within the Local Study Area. The nearest significant natural surface drainage features of the Regional Study Area are Stevens Creek to the west and Calabazas Creek to the east. Calabazas Creek is located approximately four miles east of the MEW Study Area. Stevens Creek forms the western boundary of the Regional Study Area. Both discharge into the San Francisco Bay. Surface water runoff from most of the RSA and all of the LSA south of the Bayshore Freeway is intercepted by a storm drain system and is discharged into Stevens Creek. To the north of the Bayshore Freeway, most of the runoff from Moffett Field Naval Air Station is collected by a storm drain system that ultimately discharges to Guadalupe Slough of San Francisco Bay. Runoff from the northwestern portion of Moffett Field discharges into Stevens Creek. The Local and Regional Study Areas are underlain by a thick sequence of unconsolidated sediments deposited into a structural depression. The sediments are comprised of alluvial fan, estuarine, and bay mud deposits. Repeated variations in sea levels resulted in a complex sedimentary sequence characterized by irregular interbedding and interfingering of coarse and fine grained deposits. Groundwater aquifers at the site are subdivided into shallow and deep aquifer systems, separated by a laterally extensive regional aquitard. The shallow aquifer system comprises aquifers and aquitards to a depth of approximately 160 feet below the surface. Within the shallow system four primary hydrogeologic aquiferzones have been identified based upon the occurrence of aquifer material and a similar depth below the surface. The

FAIRCHILD SEMICONDUCTOR CORP. (MOUNTAIN VIEW PLANT) (Continued) **1000260555**

shallow aquifer system is comprised of the A-aquifer and the underlying B1-, B2- and B3- aquifers. The regional B-C aquitard separates the B3-aquifers from the C-aquifer and the deep aquifer system. Current groundwater flow in aquifer zones above the B-C aquitard is generally to the north, toward San Francisco Bay. During 1981 and 1982, preliminary investigations of facilities within the LSA indicated significant concentrations of contaminants in soil and groundwater. By 1984, the Fairchild, Intel and Raytheon sites, located within the LSA, were proposed for the NPL. By 1985, five companies within the LSA (Fairchild, Intel, Raytheon, NEC, and Siltec) initiated a joint investigation to document and characterize the distribution of chemicals emanating from their facilities. In April 1985, the California Regional Water Quality Control Board - San Francisco Bay Region (RWQCB) adopted Waste Discharge Requirements (WDRs) for each of the five companies. The primary cause of the subsurface contamination was from leaking storage tanks and lines, and poor waste management practices. On August 15, 1985, Fairchild, Intel, and Raytheon entered into a Consent Order with the EPA, the RWQCB, and the California Department of Health Services (DHS). Since signing of the Consent Order, the three companies have carried out an extensive Remedial Investigation and Feasibility Study (RI/FS) of chemicals emanating from the LSA and soil contamination at their respective facilities. Work has been performed under the supervision of EPA, the RWQCB, DHS, and the Santa Clara Valley Water District (SCVWD). Prior to and during the site investigation, the companies have been conducting interim cleanup activities at the site. These interim remedial actions include tank removals, soil removal and treatment, well sealing, construction of slurry walls, and hydraulic control and treatment of local groundwater. NEC and Siltec declined to enter into the Consent Order and were placed under RWQCB enforcement authority. The three companies followed an approved Quality Assurance and Quality Control (QA/QC) Plan and approved Sampling Plans. In addition, split samples were collected by EPA from selected wells and these results were compared with the companies' sampling results. EPA determined that the companies' data quality was adequate for the purpose of the RI/FS. The MEW Remedial Investigation Report was concluded in July, 1988. The draft Feasibility Study and EPA's Proposed Plan were presented to the community for review and public comment in November, 1988. In May 1989, Special Notice letters for the Remedial Design/Remedial Action (RD/RA) Consent Decree were sent out to the five (5) original companies and twelve (12) other Potentially Responsible Parties (PRPs). The Regional Water Quality Control Board - San Francisco Bay Region (RWQCB) was the lead agency until April 1985, when the Board referred the five companies to EPA for cleanup under Superfund. In May, 1985, EPA sent general notice letters, pursuant to Section 106 of CERCLA, to the five companies. NEC and Siltec chose not to participate in the RI/FS negotiations and were referred back to the RWQCB. In August 1985, Fairchild, Intel, and Raytheon signed an Administrative Order on Consent with EPA, to conduct an RI/FS of the MEW area. The RWQCB and California Department of Health Services were cosignees of the Consent Order. The Consent Order and Work Plan called for a comprehensive groundwater investigation of the MEW area and site specific (source) investigation at Fairchild, Intel, and Raytheon. The RWQCB issued Waste Discharge Requirements (WDRs) for NEC and Siltec which paralleled the Consent Order schedule and requirements. During the course of the RI/FS, EPA gathered new information and evaluated existing information concerning other Potentially Responsible Parties (PRPs). During December 1987 and January 1988, EPA issued twenty-four (24) RCRA 3007/CERCLA 104 information request letters to various other parties in the MEW area. In July 1988, EPA issued a RCRA 3013 Unilateral Order to GTE to begin an investigation of its property, to determine if the company had contributed to the MEW groundwater plume. After evaluating the 3007/104 response letters, EPA sent General Notice Letters to seventeen (17) PRPs in September 1988. An

FAIRCHILD SEMICONDUCTOR CORP. (MOUNTAIN VIEW PLANT) (Continued) **1000260555**

initial PRP meeting was sponsored by EPA in October 1988, to explain the Superfund process to the noticed PRPs. EPA issued seven (7) additional General Notice and/or information request letters in March 1989. EPA subsequently issued Special Notice Letters for conducting the selected remedies in May 1989. A Record of Decision addressing OU01 of the Fairchild Semiconductor Corp. Site was completed in June 1989. EPA is now changing the June 9, 1989 ROD by specifying final cleanup standards rather than just goals. EPA is making this change because it has determined that there is insufficient information at this time to invoke a waiver to ARARs. However, EPA continues to recognize that it is always possible that the chosen remedy will be demonstrated to be unattainable. Therefore, EPA recognizes that if data are generated that demonstrate that the selected remedy cannot be achieved, EPA may need to reconsider its decision embodied in the ROD. An Explanation of Significant Differences addressing Operable Unit 01 of the Fairchild Semiconductor Corporation Site was completed in September, 1990. An Explanation of Significant Differences addressing Operable Unit 1 at the Fairchild Semiconductor Corp. (Mountain View Plant) site was completed in April 1996. OU 01 ROD Amendment (2010): The Fairchild Semiconductor (Mountain View) Site is one of the sites comprising the Middlefield-Ellis-Whisman (MEW) study area. The MEW Area is a heavily populated, light-industrial, commercial, and residential area that currently hosts semiconductor, computer software, electronics businesses, and other commercial offices and light manufacturing facilities. The western boundary of the Vapor Intrusion Study Area is primarily residential. The Moffett Field Area is primarily used for military housing, air operations, storage, educational facilities, research and development, office, and retail space. NASA's redevelopment plans in the Moffett Field Area include demolition of all non-historic structures. Plans are underway to redevelop unimproved land at Moffett Field into sustainable research facilities including office, educational, recreational, and residential uses. Cleanup actions are being taken at the Site under the 1989 Record of Decision (ROD) to restore groundwater to its potential beneficial use, which is designated as drinking water. Note that the groundwater at the Site is not currently being used for drinking water or other domestic purposes. The MEW Site is not located in an environmentally sensitive area. Based on EPA's updated understanding of the way chemicals can potentially migrate from the subsurface soil and groundwater to the indoor air, EPA requested the Potentially Responsible Parties (PRPs) for the Middlefield-Ellis-Whisman (MEW) groundwater contamination - the MEW Companies, U.S. Navy, and National Aeronautics and Space Administration (NASA) - to evaluate the potential vapor intrusion pathway into buildings overlying shallow trichloroethylene (TCE) groundwater contamination at the MEW Site. During 2003 through 2008, the MEW Companies, NASA, U.S. Navy, and EPA collected over 3,000 air samples from 47 commercial buildings and 20 residences within the Vapor Intrusion Study Area. The indoor air vapor intrusion investigation included the following types of samples: indoor air, outdoor ambient air, pathway air, crawlspace air, and sub-slab soil gas. Indoor air samples were collected in the breathing zone (approximately 3 to 5 feet above floor level) in occupied or potentially occupied areas. Pathway samples were collected in areas where potential conduits (such as penetrations through slab, drains, utility lines or vaults) into the building were observed that might provide a direct route for volatile organic compound (VOC) vapor migration into the building. Outdoor ambient air samples were collected immediately outside the building, including near the air ventilation system air intake, for comparison to indoor air to evaluate the potential contribution of VOCs from outdoor air to indoor air. Additionally, EPA outdoor reference and MEW/NASA background outdoor air samples were collected at distances of 0.25 to 1.5 miles away from the MEW Site to assess background levels of VOCs in the general area. The indoor air results were

FAIRCHILD SEMICONDUCTOR CORP. (MOUNTAIN VIEW PLANT) (Continued) **1000260555**

compared to (1) short-term health-based screening levels; (2) long-term health-based screening levels, and (3) outdoor ambient air. During the Supplemental Remedial Investigation, EPA used an interim long-term TCE indoor air screening level of 2.7 micrograms per cubic meter (ug/m3) for commercial buildings and 1 ug/m3 for residential buildings. Subsequent to the Supplemental Remedial Investigation, EPA established interim TCE indoor air action levels (now TCE indoor air cleanup levels) of 5 ug/m3 for commercial buildings and 1 ug/m3 for residential buildings. EPA also assessed the vapor intrusion pathway using multiple lines of evidence. The types of information used include building surveys, chemical use, operations, historical facility and property information, site geology and hydrogeology, and subsurface and air sampling information and conditions (groundwater, soil gas, sub-slab soil gas, crawlspace, pathway samples), chemical ratios, and tracer compounds, to determine whether the indoor air concentrations were attributable to subsurface Site contamination and not other sources, such as consumer products or outdoor background air sources. The Supplemental Remedial Investigation results also support the following conclusions: Indoor air results indicate there are no immediate or short-term health concerns. All indoor air concentrations are below the screening criteria for acute and short-term health-based screening criteria (Agency for Toxic Substances Disease Registry [ATSDR] Minimal Risk Levels). Therefore, EPA's focus is whether trichloroethylene (TCE) and other Site chemicals of potential concern in indoor air pose an unacceptable risk of chronic health effects from long-term exposure (30 years for residential exposure and 25 years for non-residential exposure). TCE in indoor air was detected above EPA's interim long-term TCE indoor air screening level in 17 commercial buildings and three residences within the Vapor Intrusion Study Area. Where discrete mitigation measures (e.g., sealing conduits, enhanced mechanical ventilation, air purifiers, sub-slab vapor control systems) were implemented, indoor TCE concentrations were reduced to below the interim screening level. Increasing air exchange rates generally resulted in decreasing indoor air TCE concentrations. Vapor intrusion resulting in concentrations above interim long-term indoor air screening levels appears more likely in commercial buildings when ventilation systems are not providing sufficient air exchanges with outside air in all or part of a building. Buildings overlying elevated groundwater concentrations appear to have a greater likelihood of indoor air TCE concentrations exceeding the TCE screening level, but actual indoor air concentrations are also dependent on other building factors such as air ventilation system operations, building configuration, and preferential pathways into the building. The highest TCE indoor air concentrations were found in a building with a basement, where there was direct contact with groundwater (644 National Avenue in the MEW Area). Elevated concentrations were also found in a NASA building, where the ventilation system introduced air from beneath the raised floor into the building (N210 in the Moffett Field Area). A Record of Decision Amendment addressing vapor intrusion at Operable Unit 01 of the Fairchild Semiconductor (Mountain View) Site was completed in August 2010.

Secondary Waste:	Not reported
Secondary Waste Type:	Not reported
Design Flow:	0
Baseline Flow:	0
Reclamation:	No reclamation requirements associated with this facility.
POTW:	The POTW Does not have an approved pretreatment program. Some POTWs may have local pretreatment programs that have not been approved by the regional board and/or EPA.
Treat To Water:	Moderate Threat to Water Quality. A violation could have a major adverse impact on receiving biota, can cause aesthetic impairment to a significant human population, or render unusable a potential domestic or municipal water supply. Awsthetic impairment would include nuisance from a waste treatment facility.
Complexity:	Category B - Any facility having a physical, chemical, or biological waste treatment system (except for septic systems with subsurface disposal), or any Class II or III disposal site, or facilities without treatment systems that are complex, such as marinas with petroleum products, solid wastes, and sewage pump out facilities.

CA WDS:

Facility ID:	San Francisco Bay 438165002
Facility Type:	Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping.
Facility Status:	Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
NPDES Number:	CAG912003 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board
Subregion:	2
Facility Telephone:	Not reported
Facility Contact:	Reshma Shah (LFR)
Agency Name:	SIEMENS ISELIN
Agency Address:	170 WOOD AVENUE SOUTH
Agency City,St,Zip:	ISELIN 8830
Agency Contact:	GARY JONES
Agency Telephone:	7323213866
Agency Type:	Private
SIC Code:	3674
SIC Code 2:	Not reported
Primary Waste Type:	Hazardous/Influent or Solid Wastes that contain toxic, corrosive, ignitable or reactive substances and must be managed according to applicable DOHS standards.
Primary Waste:	CNWTRS
Waste Type2:	Not reported
Waste2:	Contaminated Ground Water
Primary Waste Type:	Hazardous/Influent or Solid Wastes that contain toxic, corrosive, ignitable or reactive substances and must be managed according to applicable DOHS standards.
Secondary Waste:	Not reported
Secondary Waste Type:	Not reported
Design Flow:	0
Baseline Flow:	0
Reclamation:	No reclamation requirements associated with this facility.
POTW:	The POTW Does not have an approved pretreatment program. Some POTWs may have local pretreatment programs that have not been approved by the regional board and/or EPA.
Treat To Water:	Moderate Threat to Water Quality. A violation could have a major adverse impact on receiving biota, can cause aesthetic impairment to a significant human population, or render unusable a potential domestic or municipal water supply. Awsthetic impairment would include nuisance from a waste treatment facility.
Complexity:	Category B - Any facility having a physical, chemical, or biological waste treatment system (except for septic systems with subsurface

MICREL INC, WAFER FAB DIVISION (Continued) **S100938958**

disposal), or any Class II or III disposal site, or facilities without treatment systems that are complex, such as marinas with petroleum products, solid wastes, and sewage pump out facilities.

Classification: Large Quantity Generator

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A

E G AND G PETICON (Continued) **1000232148**

CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D007
Waste name: CHROMIUM

Waste code: D008
Waste name: LEAD

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Violation Status: No violations found

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Event:	Igration of Contaminated Groundwater under Control, More information is needed to make a determination.
Event date:	12/01/1997
Event:	Igration of Contaminated Groundwater under Control, More information is needed to make a determination.
Event date:	08/30/2006
Event:	Igration of Contaminated Groundwater under Control, Yes, Migration of Contaminated Groundwater Under Control has been verified. Based on a review of information contained in the EI determination, it has been determined that migration of contaminated groundwater is under control at the facility. Specifically, this determination indicates that the migration of contaminated groundwater is under control, and that monitoring will be conducted to confirm that contaminated groundwater remains within the existing area of contaminated groundwater. This determination will be re-evaluated when the Agency becomes aware of significant changes at the facility.
Event date:	08/30/2006

GTE OSI (Continued) **1000880930**

Latitude:	37.388101
Longitude:	-122.057616
Case Type:	Cleanup Program Site
Case Worker:	LG
Local Agency:	Not reported
RB Case Number:	43s1029
File Location:	Not reported
Potential Media Affected:	Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern:	* Solvents
Site History:	No Water Board oversight of cleanup at this site. This case is included in Geotracker because the site is covered by the Water Boards NPDES general permits for discharges from pump and treat systems to surface waters (one each for fuels- and VOC-impacted sites). This can happen for two reasons: (i) the site is overseen by another agency (e.g., USEPA or DTSC) and needs coverage under one of the NPDES general permits or (ii) construction dewatering in an area of groundwater contamination necessitates NPDES general permit coverage. Including this case in Geotracker helps staff to receive and review required NPDES reports.

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Hazardous Waste Summary:

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Waste code: D004
Waste name: ARSENIC

Waste code: D007
Waste name: CHROMIUM

Waste code: D008
Waste name: LEAD

Waste code: D011
Waste name: SILVER

Waste code: F006
Waste name: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

SIERRA CIRCUITS, INC. (Continued) **1000368651**

Waste code: F007
Waste name: SPENT CYANIDE PLATING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS

Biennial Reports:

Last Biennial Reporting Year: 2013

Annual Waste Handled:

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 166080

Waste code: D003

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 10/25/2013

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Local Lists of Hazardous waste / Contaminated Sites

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 05/28/2014

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

Data Release Frequency: Quarterly

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995

Data Release Frequency: No Update Planned

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)
The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR US Hist Cleaners: EDR Exclusive Historic Dry Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities
Source: Department of Social Services
Telephone: 916-657-4041

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

Most Recent Revision:	1999

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NNE

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
SANTA CLARA, CA	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 06085C - FEMA DFIRM Flood data

Additional Panels in search area: Not Reported

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
MOUNTAIN VIEW	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/4 - 1/2 Mile NW
Site Name:	Nec
Site EPA ID Number:	CAD980883268
Surficial Aquifer Flow Dir.:	North-Northwest
Measured Depth to Water:	10 feet.
Hydraulic Connection:	The surficial aquifers (present to a depth of 137 feet) and the lower aquifer are separated by a clay aquitard, but are interconnected in the vicinity of the site.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information based on site-specific subsurface investigations is documented in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site--specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Quaternary
Code:	Q *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name:	BOTELLA
Soil Surface Texture:	clay loam
Hydrologic Group:	Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.
Soil Drainage Class:	Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel:	MODERATE
Depth to Bedrock Min:	> 60 inches
Depth to Bedrock Max:	> 60 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	9 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.60 Min: 0.20	Max: 7.30 Min: 5.60
2	9 inches	41 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.60 Min: 0.20	Max: 7.80 Min: 5.60
3	41 inches	76 inches	sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 0.60 Min: 0.20	Max: 7.80 Min: 5.60

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: No Other Soil Types

Surficial Soil Types: No Other Soil Types

Shallow Soil Types: No Other Soil Types

Deeper Soil Types: No Other Soil Types

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations
Source: Department of Conservation
Telephone: 916-323-1779
Oil and Gas well locations in the state.

RADON

State Database: CA Radon
Source: Department of Health Services
Telephone: 916-324-2208
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through 2013. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

EDR Inquiry # 4036105.3

Contact: Daniela Hamann-Nazaroff

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Iris Environmental were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Site Name: 433 Clyde
Address: 433 Clyde Avenue

www.edrnet.com

EDR Environmental Lien and AUL Search

The EDR Environmental Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

User Questionnaire

USER / CLIENT QUESTIONNAIRE
FOR A PHASE I ENVIRONMENTAL SITE ASSESSMENT (ESA) COMPLIANT WITH ASTM E 1527-13

INTRODUCTION: In order to qualify for one of the Landowner Liability Protections (LLP) offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001, the user (in this case, Google Inc.), must provide the following information (if available) to Iris Environmental. Failure to provide this information could result in a determination that "all appropriate inquiry" is not complete, and liability protection may be forfeited.

REQUIRED INFORMATION AND USER/CLIENT QUESTIONS

1. **Environmental liens that are filed or recorded against the site.**
   Did a search of recorded land title records (or judicial records where appropriate) identify any environmental liens filed or recorded against the property under federal, tribal, state or local law? No

2. **Activity and use limitations (AULs) that are in place at the site or that have been filed or recorded against the property.**
   Did a search of recorded land title records (or judicial records where appropriate) identify any AULs, such as engineering controls, land use restrictions, or institutional controls that are in place at the property and /or have been filed or recorded against the property under federal, tribal, state or local law? No

3. **Specialized knowledge or experience of the person seeking to qualify for the LLP.**
   Do you have any specialized knowledge or experience related to the property or nearby properties? For example are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business? No

4. **Relationship of the purchase price to the fair market value of the property if it were not contaminated.**
   Does the purchase price being paid for this property reasonable reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether this lower purchase price is because contamination is known or believed to be present at the property? I don't know

5. **Commonly known or reasonably ascertainable information about the property.**
   Are you aware of commonly known or reasonable ascertainable information about the property that would help Iris Environmental to identify conditions indicative of releases or threatened releases? For example:
   a. Do you know the past uses of the property? No
   b. Do you know of specific chemicals that are present or once were present at the property? No
   c. Do you know if spills or other chemical releases that have taken place at the property? No
   d. Do you know of any environmental cleanups that have taken place at the property? No

6. **The degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation.**
   Based on your knowledge and experience related to the property, are there any obvious indicators that point to the presence or likely presence of releases at the property? No

CERTIFICATION

This environmental review of the office space at 440 Clyde Avenue in Mountain View, California was conducted by Iris Environmental on behalf of Google Inc. The review conducted by Iris Environmental meets or exceeds the requirements for a Phase I Environmental Site Assessment (ESA) specified in the ASTM International (ASTM) Standard E 1527-13, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.

Qualifications for the environmental professionals involved in this review, Robert Balas, Karen Smith and Daniela Hamann-Nazaroff of Iris Environmental, are included in Appendix A.

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental professional as defined in §312.10 of 40 CFR 312. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed all the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

LIMITATIONS

This report has been prepared exclusively for use by Google Inc., its successors and assignees and may not be relied upon by any other person or entity without the express written permission of Iris Environmental. The conclusions presented in this report represent Iris Environmental's professional judgment based on the information available to us during the course of this assignment and on conditions that existed at the time of the assessment. We have made no independent verification of the information provided to Iris Environmental. While Iris Environmental has no reason to doubt the accuracy of any of the information provided, this report is accurate and complete only to the extent that information provided to Iris Environmental was itself accurate and complete.

I. INTRODUCTION

Iris Environmental was retained by Google Inc. (the Client) to conduct a Phase I Environmental Site Assessment (ESA) of 440 Clyde Avenue in Mountain View, California (the Site). The purpose of the Phase I ESA was to identify Recognized Environmental Conditions (RECs), as defined in the ASTM International Standard E 1527-13, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (ASTM Standard).

This report presents the results of our investigation. It is based on the following:

A visit to the Site by Ms. Daniela Hamann-Nazaroff of Iris Environmental on January 10, 2014. Ms. Hamann-Nazaroff walked both interior and exterior areas of the Site. Photographs taken during the visit to the Site are included in Appendix B.

An interview during the Site visit with Gloria Arredondo, Property Manager for Dostart Development Company, LLC, the Site owner's representative.

Observation of adjoining properties from the Site boundaries.

A review of previous reports provided by the client.

A search of regulatory agency databases for the Site, adjoining properties, and vicinity conducted by Environmental Data Resources (EDR) and reported to Iris Environmental on October 10, 2013. A copy of the EDR report is presented as Appendix C.

A review of the United States Geological Survey (USGS) 7.5-minute topographical map for Mountain View (dated 1997), historical topographic maps of the same quadrangle dated 1948, 1953, 1961 (photo-revised 1968, 1973, and 1981), 1991, and 1997; 15-minute topographical maps for Palo Alto (dated 1899, 1943, 1947, 1948, and 1961); and 30-minute topographical map for Santa Cruz from 1902. Copies of the topographic maps are provided in Appendix D.

A review of historical aerial photographs dated 1939, 1948, 1956, 1968, 1974, 1982, 1991, 1999, 2005, 2006, 2009, 2010, and 2012 provided by EDR. Copies of the aerial photographs are provided in Appendix D.

A review of the City Directory Abstract provided by EDR. A copy is included in Appendix D.

A review of documents pertaining to the Site on file at the Mountain View Fire Department and Mountain View Building Department. Key documents obtained from these agencies are provided in Appendix E.

A review of the RWQCB's Geotracker and DTSC's Envirostor databases for online documents on file for the Site, adjoining properties, and vicinity.

Iris Environmental requested historical fire insurance maps of the Site and adjoining properties from EDR, which reported that fire insurance maps are not available (see Appendix D).

Iris Environmental requested documents from the Santa Clara County Department of Environmental Health, Department of Toxic Substances Control (DTSC), Bay Area Air Quality Management District (BAAQMD), Regional Water Quality Control Board San Francisco Region

(RWQCB), and the United States Environmental Protection Agency (USEPA) which reported no documents for the Site were available.

No environmental or drinking water samples were collected as part of Iris Environmental's Phase I ESA activities.

II. FINDINGS AND CONCLUSIONS

Iris Environmental has performed a Phase I Environmental Site Assessment (ESA) in conformance with the scope and limitations of ASTM Practice E 1527-13 of the property located at 440 Clyde Avenue in Mountain View, California. There were no exceptions to, or deletions from, this practice.

A. Recognized Environmental Conditions

ASTM Standard E 1527-13 defines a REC as (emphasis in original to indicate formally defined terms): "the presence or likely presence of any *hazardous substances* or *petroleum products* in, on, or at a *property*: (*1*) due to release to the environment; (*2*) under conditions indicative of a *release* to the *environment*; or (*3*) under conditions that pose a *material threat* of a future *release* to the *environment*. *De minimis conditions* are not *recognized environmental conditions.*"

In addition, ASTM Standard E 1527-13 defines a controlled recognized environmental condition (CREC; a type of REC) as (emphasis in original to indicate formally defined terms): "a *recognized environmental condition* resulting from a past *release* of *hazardous substances* or *petroleum products* that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with *hazardous substances* or *petroleum products* allowed to remain in place subject to the implementation of required controls (for example, *property* use restrictions, *activity and use limitations*, *institutional controls*, or *engineering controls*).[1] A condition considered by the *environmental professional* to be a *controlled recognized environmental condition* shall be listed in the findings section of the *Phase I Environmental Site Assessment report*, and as a *recognized environmental condition* in the conclusions section of the *Phase I Environmental Site Assessment report*."[2]

This Phase I ESA has identified the following REC in connection with the Site:

Volatile organic compounds (VOCs), including PCE and trichloroethylene (TCE), have been detected in on-Site groundwater since investigations began in the late 1980s. The groundwater impacts are likely the result of the known Hewlett Packard (HP)/E/M Lubricant comingled groundwater plume.

[1] For example, a leaking underground storage tank that has been cleaned up to a commercial use standard, but does not meet unrestricted residential cleanup criteria, would be considered a controlled recognized environmental condition. The "control" is represented by the restriction that the property use remain commercial.
[2] A condition identified as a *controlled recognized environmental condition* does not imply that the *environmental professional* has evaluated or confirmed the adequacy, implementation, or continued effectiveness of the required control that has been, or is intended to be, implemented.

The main concerns with volatile organic compounds (VOCs) in groundwater are the potential for chemical vapor intrusion to indoor air and the associated degradation of indoor air quality within current or future buildings and the management of impacted groundwater and soil during any dewatering or excavation which may occur during construction. Vapor intrusion impacts are possible. Depending on risk tolerance, indoor air quality testing may be warranted.

B. Historical Recognized Environmental Conditions

ASTM Standard E 1527-13 defines a historical recognized environmental condition (HREC, which is not a REC) as: "a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). Before calling the past release a historical recognized environmental condition, the environmental professional must determine whether the past release is a recognized environmental condition at the time the Phase I Environmental Site Assessment is conducted (for example, if there has been a change in the regulatory criteria). If the EP considers the past release to be a recognized environmental condition at the time the Phase I ESA is conducted, the condition shall be included in the conclusions section of the report as a recognized environmental condition."

This Phase I ESA has identified the following HREC in connection with the Site:

Two above-ground tetrachloroethylene (PCE) tanks were formerly located on-Site used for bulk storage of PCE for off-Site distribution. PCE has been detected in on-Site soils and groundwater near the former PCE tanks. A Status of Property letter dated February 26, 2007 from the RWQCB to the current Site owner, Mr. Steve Dostart of 440 Clyde Avenue Associates LLC states that no further action related to the pollutant release at the Site is required and attributed some, if not all, of the PCE impacts in groundwater to off-Site sources.

C. De Minimis Conditions

ASTM Standard E 1527-13 defines a de minimis condition as (emphasis in original to indicate formally defined terms): "a condition that generally does not present a threat to human health or the *environment* and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis conditions* are not *recognized environmental conditions* nor *controlled recognized environmental conditions*."

This Phase I ESA has revealed no de minimis conditions in connection with the Site.

In addition, the following asset management and potential areas of concern, which are not considered RECs, are noted:

Based on aerial photographs reviewed, the Site has historically been developed with agricultural use between at least the late 1940s to the mid 1960s. Although not documented at the Site, activities commonly associated with orchards include the use and storage of hazardous materials and petroleum products (*e.g.*, agricultural chemicals). Information was not available as to the

potential historical usage of pesticides, fertilizers or insecticides. Based on our experience, these residual concentrations, if present, are not typically at concentrations that would require cleanup by a regulatory agency or pose a significant human health risk to commercial or industrial site users. There is potential that the near surface soils contain residual agricultural chemicals that may affect disposal costs in the event redevelopment is planned. Two soil samples collected on the northern side of the Site adjacent to the former rail spur in 2007 did not contain pesticides and metals were detected at concentrations below screening levels. One additional sample on the south side of the Site was analyzed for pesticides, which were not detected.

According to a previous Phase I report, approximately 3.5 feet of fill was spread over the proposed 450 Clyde Avenue building pad prior to construction in 1965. The origin of the fill was not listed.

As discussed above, the two soil samples collected in 2007 adjacent to the former rail spur did not detect pesticides or metals above screening criteria. VOCs were also analyzed and not detected in one of the two samples along the rail spur. Based on these sampling results, it appears that significant chemical concentrations are unlikely to be present in soil as a result of rail spur operations.

III. DESCRIPTION OF THE SITE AND ITS OPERATIONS

A. Site Description

1. Physical Description and Setting

The Site is located at 440 Clyde Avenue in Mountain View, Santa Clara County, California, as shown on Figure 1. The Site covers an area of approximately 3.071 acres, and is identified as Assessor's Parcel Number (APN) 160-57-009. Key features of the Site include:

- Two office buildings approximately 47,536 square feet in total.
- The northern building is currently identified as 450 Clyde and is a single-story structure built in 1965.
- The southern building is currently identified as 440 Clyde and is a two-story structure built in 1984.
- Surrounding parking and landscaped areas.
- One groundwater monitoring well (W-39) associated with the upgradient Hewlett Packard and E/M Corporation groundwater plume is located on-Site near the southwest corner of the 440 Clyde building.

The approximate layout of the Site at the time of Iris Environmental's Site visit is indicated in Figure 2. The Site is owned by 440 Clyde Avenue Associates LLC and is located in a light industrial area, dominated by office buildings.

Pacific Gas & Electric (PG&E) provides electricity and natural gas to the Site. Water and sanitary sewer service is reportedly provided by the City of Mountain View.

2. General Site Conditions

At the time of Iris Environmental's Site visit, general housekeeping at the Site was good. No areas of oil or other staining of concrete, asphalt, or soils were noted at the Site. There was no visible evidence that significant spills or leaks had occurred. No evidence of stressed vegetation was noted at the Site during the Site visit.

The detection of noise and odors is dependent on the weather conditions and ongoing operations. At the time of the Site visit, Iris Environmental did not note strong odors or excessive noise at the Site.

3. Geological Setting

Based on a review of the 1997 USGS topographic map, ground elevation at the Site is approximately 50 feet above mean sea level. The majority of the Site is flat with a slight downward slope to the north-northeast.

The Site is situated on the western portion of the Santa Clara Valley within the Coast Ranges geomorphic province of California. The Santa Clara Valley is generally bounded by the Santa Cruz Mountains to the west, by the San Francisco Bay to the north, and by the Diablo Range to the east. The Site is located in the Confined Aquifer Zone of the interior portion of the Santa Clara Valley Basin. A Phase II investigation conducted on-Site in 2007 found that the upper ten feet of sediment at the Site were primarily fine-grained silty clays and clayey silts (GeoTrans 2007).

4. Hydrogeological Setting

The nearest natural body of surface water is Stevens Creek located approximately 1.1 miles east of the Site. The San Francisco Bay is located 3.4 miles to the north of the Site.

Storm water collection drains were observed on the building and in the parking areas. Storm water at the Site reportedly drains to the storm water system at Clyde Avenue.

The EDR Report (EDR 2013a) indicates that the Site is not within a flood zone area.

Groundwater in the site vicinity can be broadly grouped into an upper zone and a lower zone. The lower zone generally occurs at depths greater than 150 feet and constitutes the principal pumping zone. Groundwater in the upper zone occurs at depths less than 100 feet and is considered a perched zone that is usually unsuitable for production well purposes due to the generally low yielding capabilities and/or impairment by natural water quality problems (i.e. salinity) (E_2Ca, 1990).

The regional groundwater flow in the shallow aquifer (upper zone) at the Site and vicinity is in a northerly to north-by-northeasterly direction (E_2Cb, 1990). A Phase II investigation conducted on-Site in 2007 reports that groundwater was encountered around ten feet below ground surface (bgs) (GeoTrans 2007).

One groundwater monitoring well, W39, is located on the southern portion of the Site, as shown on Figures 2 and 3. This well was installed by HP during investigation of their upgradient facility, as further discussed in Section III.I below.

B. Adjoining Properties Description

1. Physical Description

Surrounding land uses include:

- North – 500 Clyde Avenue occupied by Cobalt Technologies which manufactures bio-based chemicals at a lower cost than petroleum-derived chemicals. A National Fire Protection Agency Hazard Identification Sign on the door of this facility notes flammable and health hazard materials are used inside.
- South – 420 Clyde Avenue occupied by Four in One Co. a facility that creates Asian sauces and condiments for industrial use.
- East – 433 Clyde Avenue, which is occupied by Rimnetics Inc., a molder for structural parts and enclosures for medical devices, lab equipment, construction, and IT, and Minimatics Inc., a precision machining service for the high tech industry, and 441 Clyde, which is occupied by Ethical Naturals, Inc., a supplier of botanical ingredients for supplement, beverage, and food markets, and Grainger Industrial Supply.
- West – 441 Logue Avenue occupied by Elance an online staffing platform for graphic designers.

Based on observations made from the Site and public right of ways, these properties appear to be in good condition with well maintained landscaped areas. Based on the current uses of the adjoining properties, and observations made at the time of the Site reconnaissance, Iris considers that adjoining property uses are not of potential concern.

C. Site History

Iris Environmental reviewed historical aerial photographs, historical topographic maps, historical City Directories, previous reports, and information made available by local regulatory agencies to develop an understanding of historical uses of the Site and surrounding areas. A request for historical fire insurance maps was submitted, but none were available for review (see Appendix D).

Key milestones in the history of the Site and adjacent properties are listed in Table 1 of this Phase I ESA report.

Based on a review of topographic maps, aerial photos, and previous Site reports, the Site was undeveloped in the early 1900s. By 1948, the Site appears to be cultivated for agricultural use. In 1965, the northern building (450 Clyde) was constructed on-Site and Clyde Avenue was under construction. According to a previous Phase I report, approximately 3.5 feet of fill was spread over the proposed 175 feet by 116 feet building pad. The origin of the fill was not listed (PSI 1997). By 1968, Clyde Avenue appears built out and the Site appears unchanged until 1984

when the southern building (440 Clyde) was constructed (GeoTrans 2007). No significant changes were noted on-Site between 1984 and today.

The surrounding area appears largely undeveloped in the early 20th century. In the 1940s the region is developed for agricultural purposes. In the early 1960s roads in the vicinity of the Site are constructed bringing with them increased development. Throughout the late 1960s through 1980s development increases in the Site vicinity replacing the agricultural land. By the 1990s the surrounding area is fully developed. No significant changes are noted between the 1990s and today.

D. Description of Operations

1. Current Operations

The 440 Clyde Avenue building was vacant and unused at the time of the Site visit. According to Ms. Arredondo, the 440 Clyde Avenue building was vacated on December 31, 2013 by Audience Inc., who used the building for office space.

The 450 Clyde building is occupied by Pelican Imaging which uses the building for office space. Pelican Imaging designs cameras for mobile devices and has a small space in the building set up as a portrait studio. No chemicals are used in the studio with the exception of acetone, which was stored in a 16-ounce container.

2. Past Operations

Previous Phase Is conducted for the Site include information about tenants that have previously occupied the Site. The duration of occupancy for many of the tenants is uncertain. The following tenants and dates were noted from various sources (PSI 1997, Lowney Associates 2000, GeoTrans 2007):

The 450 Clyde Avenue building was constructed in 1965 as Moseman Industrial Warehouse and was occupied by MBL Laundry Supply and Fabricated Metals from 1968 to approximately 1975 (PSI 1997, EDR 2013). Based on a review of records on file at the MVBD, two aboveground storage tanks used to store PCE were installed on-Site near the southwest corner of the 450 Clyde Avenue building in 1969, as further discussed in Section F below.

The 440 Clyde Avenue building was constructed in 1984. Both buildings were occupied by Apple Computers in 1989 and Quickturn is listed as a tenant in 1993. Between 1994 and 1996, both buildings were occupied by Quickturn and Pie Design Systems. In 1997, the 440 Clyde building was occupied by Marimba, a computer software development company, and the 450 Clyde Avenue building was vacant (PSI 1997). In 2000, the 440 Clyde Avenue building was occupied by Marimba and 450 Clyde was occupied by Differential (GeoTrans 2000). Spike Source was a tenant between 2009 and 2010. Differential Inc., Receipt.com, and Audience Inc. are listed in the city directories as tenants of the 440 Clyde building in 2013 (EDR 2013) and tenant records from 2013 show Pelican Imaging as the tenant in 450 Clyde.

Additionally, in the 1960s a Southern Pacific Railroad spur was located on-Site along the northern property boundary (GeoTrans 2007). The location of the former railroad spur is shown on Figures 2 and 3. The spur connected to the larger Southern Pacific Railroad network to the west and terminated near the northeast corner of the Site.

E. Polychlorinated Biphenyls (PCBs) and Asbestos

1. PCBs

Ms. Arredondo was not aware of any PCB-containing equipment on-Site. One electrical transformer was located on-Site to the west of the 440 Clyde building. The transformer is operated and maintained by PG&E and appeared in good condition. No staining or discoloration was noted. PCBs were not detected in one soil sample collected adjacent to the transformer during a 1987 soil investigation (Chips 1987).

2. Asbestos

No previous asbestos surveys were provided to Iris Environmental. Based on the dates of construction of the 450 Clyde and 440 Clyde buildings (1965 and 1984, respectively), it is possible that asbestos-containing materials are present in the 450 Clyde building. Building materials were observed to be in good condition.

F. Hazardous Materials Use and Storage

1. Hazardous Materials Use

According to Ms. Arredondo, hazardous materials are not used on-Site. A small bottle (less than 16 ounces) of acetone was noted in the studio space. No other hazardous materials were observed on-Site during Iris Environmental's Site reconnaissance, with the exception of cleaning supplies and paints and enamels stored in 5-gallon or smaller containers in janitorial closets in the buildings.

A hydraulic elevator is present in the 440 Clyde building. Iris Environmental was not able to access to the elevator mechanical room during the site visit. According to Ms. Arredondo, the Site owner maintains a contract with an elevator maintenance company and Ms. Arredondo was unaware of any leaks or spills from the hydraulic elevator equipment.

Records on file at the MVFD indicate that Audience Inc. filed for a hazardous material storage exemption in 2013 because the amount of hazardous materials stored on-Site was below maximum exempted quantities as specified by the City of Mountain View. A record dated February 25, 2013 from the MVFD confirms that Audience is exempt from reporting and had been removed from the hazardous materials database. Audience reportedly stored two sealed lead acid batteries containing a total of approximately 40 gallons of sulfuric acid in two locations in the 440 Clyde Avenue building. Audience vacated the building December 31, 2013 and the lead acid batteries were not noted on-Site during the Site visit.

MVBD records indicate that PCE was formerly stored on-Site in two aboveground storage tanks associated with MBL Laundry Service, as further discussed below in the Aboveground Storage Tanks section.

2. Underground Storage Tanks (USTs)

No indication of current underground storage tanks (USTs) were observed while on-Site. Evidence of former USTs was not found during this assessment.

3. Aboveground Storage Tanks

No indications of current aboveground storage tanks (ASTs) were observed while on-Site. Two aboveground storage tanks formerly located on-Site were used for bulk storage of PCE reportedly for the sole purpose of off-Site distribution (GeoTrans 2007). Facility drawings from 1969 on file at the MVBD show two 8-foot diameter, 16-foot tall aboveground storage tanks situated on a 7-inch thick concrete pad that extended from the 450 Clyde Avenue building approximately 20 feet on the south side of the southwest corner of the building (Lowney 2000, GeoTrans 2007). A pump assembly was located adjacent to the southern tank on the pad, and a 2-inch diameter fill line was located along the exterior of the tanks, coming down to the pump area. No piping into the building was shown on the drawings (GeoTrans 2007). Drawings on file at the MVBD indicate that the ASTs had been removed prior to construction of the 440 Clyde building in 1984 (GeoTrans 2007).

4. Drums and Small Containers

No drums or small containers were observed at the Site with the exception of small containers (five gallons or smaller) of cleaning supplies and paint stored in janitorial closets in the buildings. As noted above a 16-ounce bottle of acetone was also noted in the studio space in the 450 Clyde Avenue building.

G. Nonhazardous and Hazardous Waste

1. Nonhazardous Waste

Nonhazardous waste is limited to typical office waste. Office waste is disposed of in a dumpster on the north side of the 450 Clyde Avenue building and disposed of off-Site by the City of Mountain View and Recology. The dumpster area appeared in good condition with waste and recyclables properly sorted.

2. Hazardous Waste

No hazardous waste generation was observed at the Site. Historical records reviewed did not indicate historical hazardous waste generation by tenants in these buildings.

H. Air Emissions

The Bay Area Air Quality Management District has no records regarding emissions at the Site. No air emission sources were observed on-Site.

I. Wastewater

Industrial and Sanitary Wastewater

Industrial wastewater is not currently generated on-Site. Sanitary wastewater is discharged into the municipal sewer system, which is maintained by the City of Mountain View.

Storm Water

Storm water collection drains were observed on the buildings and in the parking areas. Storm water at the Site reportedly drains to the storm water system on Clyde Avenue. No indications of potential storm water contamination sources were observed during the Site visit.

It is not known whether storm water quality has been impacted in the past. No documentation pertaining to storm water issues was contained within City or County files. Ms. Arredondo was not aware of any spills, leaks or fires with the potential to impact storm water that had occurred at the Site in the past.

J. Previous Environmental Reports

The following is a list of key environmental documents which pertain to the subject Site provided by the Client, found on Geotracker, or found on the Santa Clara County Local Oversight Program website. Information from these documents is included where relevant in the report.

Analysis of Soil Samples Taken at 440 Clyde Avenue, Mountain View, CA, a proposed leasing site for Apple Corporation. Dated August 9, 1987. Prepared by CHIPS Environmental Consultants.

- *Phase I Environmental Site Assessment Report for the Research & Development Facility 440 Clyde Avenue, Mountain View, California 94043*. Dated November 20, 1997. Prepared by Professional Service Industries, Inc.
- *Phase I Environmental Site Assessment, 440 Clyde Avenue, Mountain View, California.* Dated May 1, 2000. Prepared by Lowney Associates.
- *Phase I and Screening Level Phase II Environmental Assessment, Two Commercial Buildings, 440 Clyde Avenue, Mountain View, California.* Dated February 6, 2007. Prepared by GeoTrans, Inc.
- Letter: *Status of Property at 440 Clyde Avenue, Mountain View, Santa Clara County, CA.* Dated February 26, 2007. Prepared by Bruce H. Wolfe of the San Francisco Bay Regional Water Quality Control Board.

K. On-Site Soil, Soil Vapor, and Groundwater Contamination

Potential sources of on-Site soil, soil vapor and / or groundwater contamination at the Site include:

- Former Operations: Two aboveground PCE tanks formerly located on-Site were used for bulk storage of PCE for off-Site distribution. There are no records of spills or releases, but PCE was detected on-Site soils near the former PCE tanks and PCE has been detected in on-Site groundwater and may be present in soil vapor.
- Former Rail Spur: A Southern Pacific Rail Spur was formerly located along the northern Site boundary.

Potential off-Site sources of groundwater contamination include:

- The comingled Hewlett Packard/E/M Lubricant groundwater plume: VOCs, including PCE and TCE, are present in on-Site and upgradient groundwater.
- The E/M Lubricants Soil Vapor Plume: PCE is present in soil vapor at the 875 Maude facility located south and upgradient of the Site.

Note that this Site has a Status of Property letter issued by the RWQCB in 2007, which states that no further action related to the pollutant release at the Site is required and attributed some, if not all, of the PCE impacts in groundwater to off-Site sources. The letter notes that no further action related to pollutants at the subject site is required.

Potential Sources of on-Site Contamination

Former Operations

Former on-Site tenants, MBL Laundry Supply and Fabricated Metals, had two aboveground PCE storage tanks installed in 1969 and removed sometime in the late 1970s, as shown on Figure 2. A previous Site owner stated that the tenant did not conduct dry cleaning on-Site, but rather was a wholesaler to dry cleaners (GeoTrans 2007). No manufacturing activities involving solvents or other compounds are known to have occurred on-Site.

A 1987 soil investigation consisting of ten on-Site soil borings did not detect any VOCs, including PCE. One soil sample location was in the vicinity of the former aboveground PCE tanks and VOCs were not detected in a soil sample collected from a depth of four feet bgs at this location (Chips 1987).

A 2007 investigation collected soil samples at seven locations across the Site including two in the vicinity of the former aboveground PCE tanks. PCE was detected in three soil samples near the former PCE aboveground tanks at the following concentrations:

Sample ID	Depth (ft bgs)	Detected PCE Concentration (mg/kg)
SB-2	5	0.088
SB-3	5	0.055
SB-3	10	0.054

The maximum detected PCE concentration of 0.088 milligrams per kilogram (mg/kg) is below the RWQCB Environmental Screening Level (ESL) for shallow soil of 2.6 mg/kg for commercial/industrial land use. PCE was not detected in any other soil samples (GeoTrans 2007). The results of this investigation indicate that residual PCE soil impacts may be present in the vicinity of the former PCE aboveground storage tanks.

The main concerns with VOCs in groundwater and soil are the potential for chemical vapor intrusion to indoor air and the associated degradation of indoor air quality within current or future buildings and the management of impacted groundwater and soil during any dewatering or excavation which may occur during construction. Vapor intrusion impacts are possible. Depending on risk tolerance, indoor air quality testing may be warranted.

Former Railroad Spur

In 2007, shallow soil samples were collected by GeoTrans to evaluate soil quality along the Southern Pacific Railroad spur. Two samples (SB-5 and SB-7) were analyzed for pesticides, chromium, lead, nickel, and zinc. Pesticides and lead were not detected in the soil samples. Chromium (51 mg/kg), nickel (59 mg/kg), and zinc (55 mg/kg) were detected at concentrations below the current commercial soil ESLs for these metals of 750, 150, and 600 mg/kg, respectively. A five foot sample from SB-5 was also analyzed for VOCs, which were not detected (GeoTrans 2007).

Potential off-Site Sources of Groundwater Contamination

Hewlett Packard/E/M Lubricant Plume

VOCs, principally PCE and TCE, have been detected in on-Site groundwater since investigations began in the late 1980s. Several investigations conducted in the Site vicinity related to the upgradient comingled Hewlett Packard (HP)/E/M Lubricant plume have identified VOCs in on-Site groundwater, as summarized below.

1987: Groundwater Monitoring Begins

One groundwater monitoring well (W39) was installed by HP to monitor the extent of the HP/EM Lubricant plume near the upgradient edge of the 440 Clyde building, as shown on Figure 2. PCE has been detected in this on-Site well (W39) since groundwater monitoring began in 1987. A downgradient well (W41) is located off-Site to the north of the Site. The upgradient well (W39) located on the southern edge of the Site has consistently exhibited elevated or similar concentrations of PCE as compared to the downgradient well (W41) located just north of the Site property line.

1995: RWQCB Order

A 1995 RWQCB document titled, *Revising Site Cleanup Requirements for Hewlett Packard*, identified the Site as one of several potential PCE source sites contributing to the HP groundwater plume. The RWQCB noted that, "Elevated concentrations in wells W39, W41, and W42 indicate there may be a separate source area. PCE concentrations in well W39 have consistently been higher than any other HP monitoring well, averaging about 1000 ppb" (RWQCB 1995).

1997: CPT Hydropunch Groundwater Investigation

In 1997, groundwater samples were collected from over 30 CPT hydropunch and monitoring well locations on the off-Site HP/EM Lubricant properties as well as downgradient properties, including two hydropunch (CPT96-7 and -9) and one groundwater monitoring well (W39) sample collected from the Site, as shown on Figure 2. TCE was detected in CPT96-7 at a concentration of 22 µg/L and PCE was detected at a concentration of 74 µg/L in CPT96-9. Both TCE and PCE were detected in on-Site well W39 at concentrations of 44 and 320 µg/L, respectively (LFR 1997).

2007: Phase II Investigation

As a part of a 2007 Phase II investigation conducted by GeoTrans Inc., six grab groundwater samples were collected from the Site, as shown on Figure 2. PCE was detected in groundwater in all samples, but was found at the highest concentrations at the two samples in the vicinity of the former PCE tanks. The upgradient PCE concentration detected during this investigation was more than an order of magnitude lower than the concentrations detected in the vicinity of the PCE tanks.

Sample ID	Location	Depth to Groundwater (ft bgs)	Detected PCE Concentration (µg/L)
SB-1	Upgradient	8.2	2.6
SB-2	Near former PCE tank	10.4	41
SB-3	Near former PCE tank	9.3	37
SB-5	Downgradient	9.5	34

2007: RWQCB Status of Property Letter

On February 26, 2007, the RWQCB issued a Status of Property letter to the current owner, Mr. Steve Dostart of 440 Clyde Avenue Associates LLC, which states that no further action related to the pollutant release at the Site is required and attributed some, if not all, of the PCE impacts in groundwater to off-Site sources. The letter notes that concentrations of PCE and other VOCs in groundwater have historically been higher along the upgradient boundary of the subject property (at well W39) than well locations downgradient of the subject property, including well W41, and asserts that no further action related to pollutants at the subject site is required. The Status of Property letter states:

> "In general, the Water Board does not pursue enforcement actions against a property owner whose land overlies contaminated groundwater if that contamination is solely the result of migration of groundwater contaminants from an off-site source or sources. Accordingly, the Water Board will not name current and future owners of the subject property as discharges with respect to groundwater pollution from off-site sources."

2013: Most Recent Groundwater Monitoring Results

In the most recent groundwater monitoring event in April 2013, PCE was detected in the on-Site well (W39) at a concentration of 29 µg/L, equal to the maximum PCE concentration detected in groundwater at the upgradient E/M Lubricant facility. This concentration is below both the RWQCB ESL for groundwater that is not a current or potential source of drinking water of 63 µg/L and the groundwater ESL for evaluation of potential vapor intrusion for a commercial scenario of 640 µg/L, but above the MCL of 5 µg/L.

TCE was detected in on-Site well W39 at a concentration of 28 µg/L, which is below the ESL for groundwater that is not a current or potential source of drinking water of 130 µg/L. This level is also below the groundwater ESL for evaluation of potential vapor intrusion for a commercial scenario of 1,300 µg/L, but above the MCL of 5 µg/L. TCE found on-Site may be migrating on-Site from upgradient sources and/or the result of PCE degradation.

PCE and TCE were detected in the off-Site downgradient well W41 at concentrations of 20 and 13 µg/L, respectively, which supports the statement in the Status of Property letter that concentrations of PCE and other VOCs in groundwater have historically been higher along the upgradient boundary of the subject property (at well W39) than well locations downgradient of the subject property, including well W41.

Off-Site Soil Vapor Plume

In 2012, a soil vapor investigation was conducted at the upgradient E/M Lubricants facility. The soil vapor investigation was conducted to evaluate vapor intrusion issues resulting from the VOCs in groundwater. The investigation found concentrations of PCE above the commercial shallow soil vapor ESL for PCE of 2,100 µg/m^3. Indoor air samples detected PCE above the commercial indoor air ESL for PCE of 2.1 µg/m^3 (RWQCB 2013). While the potential for vapor intrusion depends largely on the integrity of the building envelope, the concentrations of PCE detected in groundwater at the E/M Lubricants facility are similar to on-Site PCE groundwater concentrations. Given the similar groundwater concentrations, vapor intrusion may be a potential concern for the Site as well. Additionally, the possibility exists that the elevated concentrations of PCE in soil vapor at 875 Maude could migrate on-Site.

L. Records Review

1. EDR Report

Iris Environmental reviewed a report prepared by EDR that summarizes the results of a search of federal and state regulatory agency databases. The EDR report is included in Appendix C. The database search was conducted to evaluate whether the Site or any nearby properties are under

investigation for potential environmental issues or have been identified as conducting operations that could potentially impact the environment. The EDR report includes searches of databases of sites with engineering controls and institutional controls. The findings of the EDR search are summarized below.

EDR conducted its search of environmental databases on October 10, 2013. Because the environmental databases themselves are sometimes not updated by the specific regulatory agencies for periods of up to 1 year (depending on the database), the database search conducted herein will not necessarily list a facility or site for which an environmental investigation/listing has been initiated subsequent to the last update. The dates of database updates are provided in Appendix C.

EDR conducted searches of the following federal databases, and all search radii were selected in accordance with ASTM standards:

USEPA National Priorities List (NPL) for Uncontrolled Hazardous Waste Sites – 1-mile radius;

USEPA Delisted NPL – ½-mile radius;

USEPA Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) and CERCLIS-No Further Remedial Action Planned (CERCLIS-NFRAP) – ½-mile radius;

Corrective Action Site List (CORRACTS) of Resource Conservation and Recovery Act (RCRA) hazardous waste treatment, storage, and disposal (TSD) facilities subject to corrective action under RCRA – 1-mile radius;

Resource Conservation and Recovery Act Information System (RCRIS) database of TSD facilities not subject to corrective action and hazardous waste generators – ½-mile radius (TSD) and property and adjoining properties (generators);

Engineering Controls Sites List (US ENG CONTROLS) – property only;

Sites with Institutional Controls (US INST CONTROL) – property only; and

Emergency Response Notification System (ERNS) – property only.

EDR also conducted searches of the following State of California and tribal databases:

RESPONSE database – 1-mile-radius;

ENVIROSTOR database – 1-mile-radius;

California Solid Waste Inventory System (SWIS) – ½-mile radius;

Spills, Leaks, Investigation and Clean Up (SLIC) cost recovery listing – ½-mile radius;

Leaking Underground Storage Tanks (LUST) Information System – ½-mile radius;

Underground Storage Tank (UST) Registrations Database – property and adjoining properties;

Site Mitigation and Brownfield Re-use Program Facility Sites with Deed Restrictions and Hazardous Waste Management Program Facility Sites with Deed / Land Use Restrictions (DEED) database – property only;

Underground Storage Tanks on Indian Land (Indian UST) database – property and adjoining properties; and

Leaking Underground Storage Tanks on Indian Land (Indian LUST) database – ½-mile radius.

Databases searched by EDR that record information on deed restrictions, engineering controls and institutional controls (DEED, US ENG CONTROL, US INST CONTROL) did not show any listings for the Site. Additionally, the Site is not listed in any databases in the EDR report.

Adjacent property, 441 Logue Avenue, is listed on the CA LUST and CA HAZNET databases. The LUST case received regulatory closure in 1996. While sampling showed that residual petroleum hydrocarbons remain in soil on this adjacent property, the investigation determined that the contamination was localized, lacked mobility, and was not a risk to current or future human health (Emcon 1996).

Adjacent property, 420 Clyde Avenue, is listed in the CA HIST UST, CA FID UST and CA SWEEPS UST databases for former underground diesel and gasoline fuel tanks. No other information is provided but, as this address is not listed under current LUST databases, Geotracker or the Santa Clara Valley Local Oversight Program, it is unlikely to impact conditions on-Site.

Adjacent property, 433 Clyde Avenue, is listed in the CA Envirostor Database and is further discussed below in the ENVIROSTOR section.

Adjacent property, 441 Clyde Avenue, is listed in the CA CUPA database as generating less than 10 gallons of hazardous waste per year.

Adjacent property, 500 Clyde Avenue, is listed in the CA CUPA listings as generating less than 5 tons of waste per year.

Several additional facilities in the vicinity of the Site were identified within the ASTM-specified search radii as summarized below:

NPL

Four facilities are listed within one mile of the Site.

Moffett Naval Air Station, Intel Corporation, Raytheon Company, and Fairchild Semiconductor Corporation are all part of the MEW Study Area. The primary chemicals of potential concern in the Study Area are TCE and its breakdown products *cis*-1,2-dichloroethene (*cis*-1,2-DCE), and vinyl chloride (VC). Due to the crossgradient location of the MEW plume with regards to the Site, it is unlikely to impact subsurface conditions at the Site.

CERCLIS

Four facilities are listed within 0.5 miles of the Site.

Three of the facilities, Moffett Naval Air Station, Intel Corporation, and Raytheon Company are part of the MEW Study Area and are discussed above in the NPL section.

NEC, located at 501 Ellis Street 0.191 miles northwest of the Site, is also located within the MEW Study Area. As stated above, due to the crossgradient location of the MEW plume with regards to the Site, it is unlikely to impact subsurface conditions at the Site.

CERCLIS NFRAP

Four facilities are listed within 0.5 miles of the Site.

Hewlett Packard Mountain View is listed at 333 Logue Avenue, 0.193 miles southwest of the Site. The database listing states the HP facility was referred to the RWQCB. The Geotracker website lists the facility address at 690 East Middlefield Road, which is discussed in detail in Section III.I.

Cooper Vision is listed at 455 E Middlefield Road, 0.319 miles west-southwest of the Site. The EDR report has little information regarding the CERCLIS-NFRAP listing: the discovery occurred in January 1987 and the preliminary assessment was completed in September 1987. The report states that the facility does not qualify for the NPL based on the existing information. The facility is also listed as a handler (non-generator) of hazardous wastes. No violations have been reported and there is no other information available about the facility. Therefore, based on the regulatory status of this facility, it is unlikely to impact subsurface conditions at the Site.

SILTEC at 405 National Avenue, 0.321 miles northwest of the Site and Air Prods & Chems Inc. at 465 North Whisman Road, 0.496 miles west-northwest of the Site are both located downgradient of the Site. Due to the downgradient location of these facilities, it is unlikely that these facilities have impacted subsurface conditions at the Site.

CORRACTS

Three facilities are listed within one mile of the Site.

Fairchild Semiconductor is discussed in the NPL section.

GTE OSI (cross referenced as Sylvania Systems Group GTE Pro) listed at 100 Ferguson Drive is located 0.575 miles southwest of the Site. The facility is also listed in the RCRA SQG, Envirostor, SLIC, and UST databases and is further discussed in the Envirostor section below.

Memotronics is listed at 1058 West Evelyn Avenue, 0.903 miles south of the Site. According to the most recent corrective action summary dated February 19, 2010 listed in the EDR report, migration of contaminated groundwater is under control at the facility. Therefore, this facility is unlikely to impact subsurface conditions at the Site.

RCRA GENERATOR

Two facilities are listed as large quantity generators (LQG) within 0.25 miles of the Site. Chemocentryx is listed at 850 Maude Avenue, 0.064 miles south, southwest of the Site. As no violations have been reported, it is unlikely the facility has impacted subsurface conditions at the Site.

Meta Technologies Inc. listed at 885 Maude Ave, is 0.0191 miles south of the Site. The facility has received multiple notices of minor violations classified as: general, TSD-container use and management, system standards, and generators-general. The facility was considered a 'significant non-complier' in 2006, but in 2007 is listed as 'not a significant non-complier.' The

EDR report does not provide additional details. This facility is also listed on the Envirostor database, as further discussed below.

Twenty-four facilities (two duplicates) are listed as small quantity generators (SQG) within 0.25 miles of the Site. Two facilities are part of the HP/EM Lubricant Plume which is discussed in Section III.I. Two facilities are within the MEW Study Area which is discussed above in the NPL section. Nine facilities are downgradient of the Site, and are therefore unlikely to impact subsurface conditions at the Site. The remaining eleven facilities have not received any violations, and are therefore unlikely to impact subsurface conditions at the Site.

CA RESPONSE

One facility is listed within one mile of the Site.

Apple, located at 985 Almanor Avenue, is 0.642 miles east and crossgradient from the Site. The facility is also listed on Geotracker under California Microwave and is under RWQCB oversight. Soils containing VOCs greater than 0.5 ppm were excavated in June of 1995. Soil excavation effectively removed the source of PCE to groundwater, and the facility is currently capped with buildings and asphalt. Due to the crossgradient location and distance from the Site, this facility is unlikely to impact subsurface conditions at the Site.

ENVIROSTOR

Twenty-eight (and one duplicate) facilities are listed within one mile of the Site.

Three facilities, Hewlett Packard, Siltec, and Apple, have been previously discussed.

Seven facilities, Raytheon Company, Fairchild Semiconductor, Intel Corporation, Spectrian Corp, National Semiconductor, NEC, and Technitron Inc. are all part of the MEW Study Area which is discussed above in the NPL section. As stated above, due to the crossgradient and downgradient location of the MEW plume with regards to the Site, it is unlikely to impact subsurface conditions at the Site.

Four facilities, Air Prods & Chems Inc, Ferguson Business Park, Shea Homes, and Moffett Mil Airfield are listed as having received no further action status and therefore are unlikely to impact subsurface conditions at the Site.

Six facilities, St. Microwave Corp., AZ Electronic Materials, Micrel/Litronix (also listed as 639 Pastorial SMI REM Site), TRU-SI, Ensign Gladys, and Micromask, are located crossgradient from the Site and are unlikely to impact subsurface conditions at the Site.

Meta Technologies Inc. at 885 Maude Avenue is located approximately 0.1 mile south of the Site. According to the Envirostor listing, the facility is also known as Martex Circuits Inc. and is an inactive tiered permit case. Based on the regulatory status, this facility is unlikely to impact subsurface conditions at the Site.

Acurex Corporation listed at 433 Clyde Avenue is 0.038 miles south southeast of the Site. A Phase II investigation conducted in 1986 for 433 Clyde did not detect TCE in the three wells on the northern property line suggesting that the plume has not migrated offsite (Levine Fricke 1986). Based on this data, this facility is unlikely to impact subsurface conditions at the Site.

Sylvania Systems Group GTE Pro (aka GTE OSI) at 100 Ferguson Drive is located approximately 0.5 miles southwest of the Site. Groundwater at this facility is contaminated with VOCs, principally TCE and cis-1,2-DCE. Soil and groundwater contamination at the facility is being remediated under a voluntary program, under oversight of the USEPA. Remediation has included an ongoing groundwater pump and treatment system, and soil vapor extraction. The most recent groundwater monitoring report indicates that the plume is present approximately 2,000 feet southwest and likely crossgradient from the Site. Therefore, this facility is unlikely to impact subsurface conditions at the Site.

303 Ravendale is located 0.635 miles south-southwest of the Site. The case status is currently open and undergoing a site assessment: the RWQCB is working to define the extent of contamination of TCE in the groundwater. According to a 2007 monitoring report, the maximum TCE concentration detected in groundwater on the property was 52 µg/L. The groundwater flow direction is north (PES Environmental Inc. 2007). Due to the distance and the likely crossgradient location of the Site relative to 303 Ravendale, this facility is unlikely to impact subsurface conditions at the Site.

Conductus Inc. listed at 969 W Maude Avenue, is 0.505 miles southeast of the Site. According to Envirostor, the facility is a tiered permit facility with an inactive status. No other information is available. Based on the regulatory status and the crossgradient location relative to the Site, this facility is unlikely to impact subsurface conditions at the Site.

Power Spectra Inc. listed at 919 Hermosa Court is located 0.700 miles southeast of the Site. According to Envirostor, the facility is a tiered permit facility with an inactive status. Based on the regulatory status and the distance to the Site, this facility is unlikely to impact subsurface conditions at the Site.

EG and G Peticon listed at 345 Portrero Ave is 0.766 miles south southeast of the Site. According to Envirostor, the facility is a tiered permit facility with an inactive status. Based on the regulatory status and the distance to the Site, this facility is unlikely to impact subsurface conditions at the Site.

Sierra Circuits Inc. is listed at 1108 West Evelyn Avenue is 0.867 miles south of the Site. According to Envirostor, the facility is a tiered permit facility with an inactive status. No other information is available. Based on the regulatory status and the distance to the Site, this facility is unlikely to impact subsurface conditions at the Site.

LUST

Eight facilities (four duplicates) are listed within 0.5 miles of the Site.

Seven of the facilities are listed as having received regulatory closure and are unlikely to impact subsurface conditions at the Site.

Peninsula Transmission Service at 1094 West Maude Avenue, is located 0.22 miles southeast and crossgradient of the Site. Based on the crossgradient location, this facility is unlikely to impact subsurface conditions at the Site.

SLIC

Twelve facilities (one duplicate) are listed within 0.5 miles of the Site.

Five facilities, NEC, Raytheon, 487 E Middlefield Sobrato, MEW NPDES, and Summit Corporation of America, are located within the MEW Study Area as discussed above in the NPL listing.

Three facilities, 690 E Middlefield, Hewlett Packard, and E/M Lubricants, are associated with the Hewlett Packard E/M Lubricant plume as discussed above in Section III.I.

One facility, Peninsula Transmission Service, received case closure and is therefore unlikely to impact subsurface conditions at the Site.

Two facilities, Cypress Business Park and Acurex Corp (also listed as Aerotherm) are located downgradient (north) of the Site. Based on their downgradient location relative to the Site, it is unlikely these facilities will impact subsurface conditions at the Site.

MALC, located at 1022-1034 Maude, is 0.304 miles southeast of the Site. A leak was detected at this facility in 1997 and the case is currently open with verification monitoring. In 2006, the facility was determined to be a Category 1 facility. A Category 1 LUST is characterized by soil or groundwater contamination that does not pose an immediate human health threat and does not extend off-Site onto neighboring properties. Therefore, this facility is unlikely to impact subsurface conditions at the Site.

VCP

One facility is listed within 0.5 miles of the Site.

Technitron Inc. listed at 630 National Avenue, is 0.368 miles northwest of the Site. This facility is located within the MEW Study Area which is discussed above in the NPL section. As the facility is downgradient of the Site, it is unlikely to impact subsurface conditions at the Site.

Orphan Sites

Eight "orphan" sites (one duplicate) were identified in the EDR Report. None of the orphan sites listed in ATSM Standard databases were observed within the vicinity of the Site. Seven were down- or crossgradient to the Site. The eighth, whose location could not be identified, is listed as a RCRA-LQG with no violations found. Due to the distances, locations, and regulatory statuses of these sites, they are unlikely to impact subsurface conditions at the Site.

Summary

Iris Environmental considers that, with the exception of the facilities which contribute to the Hewlett Packard and E/M plumes (discussed in Section III.I), none of the facilities identified by EDR have the potential to significantly impact subsurface conditions at the Site.

2. Environmental Liens and Activity and Use Limitations

Iris Environmental reviewed an Environmental Lien Search Report for the Site, prepared by EDR, for evidence of environmental liens and Activity and Use Limitations (AULs) at the Site. AULs are defined in the ASTM Standard as (emphasis in original to indicate formally defined terms): "legal or physical restrictions or limitations on the use of, or access to, a site or facility: (1) to reduce or eliminate potential exposure to *hazardous substances* or *petroleum products* in the soil, soil vapor, groundwater, and/or surface water on the *property*, or (2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of

a condition of no significant risk to public health or the environment. These legal or physical restrictions, which may include institutional and/or *engineering controls*, are intended to prevent adverse impacts to individuals or populations that may be exposed to *hazardous substances* and *petroleum products* in the soil, soil vapor, groundwater, and/or surface water on the *property.*[3]

No environmental liens or AULs were noted on the Environmental Lien Search Report provided by EDR.

M. Interviews with Local Government Officials

Iris Environmental requested documents from the following agencies:

Agency	Date of Request	Files Reviewed
DTSC – Berkeley	10/9/2013	No records available.
DTSC – Sacramento	10/9/2013	No records available.
Santa Clara County Department of Environmental Health	10/9/2013	No records available.

N. Information Provided by the User

In compliance with ASTM E 1527-13, a user/client questionnaire was completed by Mr. Jay Bechtel of Google. The information provided in the questionnaire is summarized here and a copy of the questionnaire is provided in Appendix F.

Mr. Bechtel is not aware of any environmental cleanup liens against the Site and has no specialized knowledge of the Site. He is not aware of any land use restrictions at the Site. He indicated that the purchase price is considered to be fair market value and is not aware of past uses of the Site.

[3] The term *AUL* is taken from Guide E2091 to include both legal (that is, institutional) and physical (that is, engineering) controls within its scope. Other agencies, organizations, and jurisdictions may define or utilize these terms differently (for example, EPA and California do not include physical controls within their definitions of "*institutional controls*." Department of Defense and International County/City Management Association use "Land Use Controls." The term "land use restrictions" is used but not defined in the *Brownfields Amendments*).

O. Data Gaps

Standard ASTM E1527-13 defines a data gap as, "a lack of or inability to obtain information required by this practice despite *good faith* efforts by the *environmental professional* to gather the information" (emphasis in original to indicate formally defined terms). Significant data gaps are identified as those that affected our ability to identify RECs. No significant data gaps were identified during this ESA.

IV. DEVIATIONS FROM THE ASTM STANDARD

There were no deletions or deviations from ASTM Practice E 1527-13 in conducting this Phase I Environmental Site Assessment.

Tables

Table 1 – Summary of Historical Records

Date (1)	Source	Finding
1899	Topographic Map	Site and surrounding area is undeveloped
1902	Topographic Map	No significant changes from previous map.
1939	Aerial Photo	Site is vacant and appears cleared for agriculture. Surrounding area is cleared for agriculture as well.
1943	Topographical Map	Site and surrounding area appears undeveloped.
1947	Topographical Map	No significant changes from previous map.
1948	Topographical Map	Development of agricultural land especially to the south of the Site. Moffett Field to the north is established.
1948	Aerial Photograph	No significant change from previous photo.
1953	Topographic Map	Site remains unchanged. Agriculture increases in surrounding area.
1956	Aerial Photograph	No significant changes from previous photo.
1961	Topographic Map	Development is increasing in surrounding area and agriculture is decreasing.
1968	Aerial Photograph	The northern building (450 Clyde) appears on-Site. The southern portion of the Site remains vacant. Buildings have been constructed on the properties to the east, west, and south. The property located immediately north of the Site remains vacant.
1968	Topographic Map	The northern building (450 Clyde) is noted on map. Clyde Avenue has been constructed. Development continues in surrounding area.
1973	Topographic Map	Site appears unchanged. More buildings are noted in the vicinity of Clyde Avenue.
1974	Aerial Photograph	Site appears unchanged. More buildings are constructed in the Site vicinity.
1981	Topographic Map	Site appears unchanged. Agricultural uses have been replaced with development in the area surrounding the Site.
1982	Aerial Photograph	Site appears unchanged.
1991	Topographic Map	Site and surrounding area is indicated as developed.

1991	Aerial Photograph	The southern building (440 Clyde) has been constructed. The Site appears developed to its current configuration
1997	Topographic Map	No significant changes from previous map.
1999	Aerial Photograph	No significant changes from previous photo.
2005	Aerial Photograph	No significant changes from previous photo. Surrounding area is developed to its current configuration.
2006	Aerial Photograph	No significant changes from previous photo.
2009	Aerial Photograph	No significant changes from previous photo.
2010	Aerial Photograph	No significant changes from previous photo.
2012	Aerial Photograph	No significant changes from previous photo.

Notes:

1) While historical records were not available for the property at 5 year intervals (the suggested frequency in the ASTM Standard), we do not consider this data gap to be significant to the identification of RECs at the Site, as sufficient information was available to develop an understanding of past property uses.

Qualifications of Environmental Professionals

ROBERT B. BALAS

EDUCATION

1993 M.Eng.S., Environmental Engineering, University of California at Berkeley

1982 A.B., Physics, Dartmouth College, Hanover, NH

EXPERIENCE

Robert Balas, Principal of the Air Sciences Group, is the Principal in charge of all environmental fate and transport modeling and all air monitoring programs. Mr. Balas has been with Iris Environmental for seven years, and has over 20 years of environmental consulting experience with a focus on indoor and outdoor air monitoring, subsurface modeling, emissions estimation, regulatory compliance, and emission control techniques. Mr. Balas has been instrumental in incorporating site-specific and engineering control elements into the existing fate and transport models, and has used his expertise in the vapor intrusion pathway to assist clients in identifying engineering modifications to impacted buildings as a means of mitigating potential indoor air exposures.

- Mr. Balas is currently assisting a large tenant located on a California Superfund site in Mountain View, California. The principal constituents of concern at the site are chlorinated solvents in the groundwater. Our support has involved ongoing indoor and outdoor air sampling to determine the exposure concentrations resulting from the constituents of concern. Based on the data collected during the indoor air sampling program, we have been working with the tenant to identify the likely fate and transport pathway or pathways responsible for any elevated exposure levels of concern through advanced modeling using the Johnson and Ettinger model. Based on this analysis we will determine what mitigation measures can or need to be taken to reduce exposure to potential chemicals of concern, and calculate any associated costs. Currently, we are following the status of USEPA Region IX's reevaluation of all chlorinated solvent sites, specifically related to the examination of the indoor air vapor transport pathway and the reevaluation of the carcinogenic potency of trichloroethylene (TCE).

- Mr. Balas is currently assisting a large tenant located on chlorinated solvent plume in Newport Beach, California. The principal constituents of concern at the site are chlorinated solvents in the groundwater. Our support has involved subsurface soil gas sampling coupled with an ongoing indoor air sampling to determine the exposure concentrations resulting from the constituents of concern. Based on the data collected during the sampling program, we have been working with Regional Water Quality Control Board (RWQCB) and the Department of Toxic Substances Control to identify building of concern and likely indoor air exposure pathways. Based on this analysis we developed a detailed mitigation approach to reduce exposure to potential chemicals of concern, and are currently implementing this approach with RWQCB oversight.

- Mr. Balas is currently assisting a large tenant located on a California Superfund site in Mountain View, California. The principal constituents of concern at the site are chlorinated

solvents in the groundwater. Our support has involved ongoing indoor and outdoor air sampling to determine the exposure concentrations resulting from the constituents of concern. Based on the data collected during the indoor air sampling program, we have been working with the tenant to identify the likely fate and transport pathway or pathways responsible for any elevated exposure levels of concern through advanced modeling using the Johnson and Ettinger model. Based on this analysis we will determine what mitigation measures can or need to be taken to reduce exposure to potential chemicals of concern, and calculate any associated costs. Currently, we are following the status of USEPA Region IX's reevaluation of all chlorinated solvent sites, specifically related to the examination of the indoor air vapor transport pathway and the reevaluation of the carcinogenic potency of trichloroethylene (TCE).

- Mr. Balas completed an air modeling human health risk assessment for a former petroleum storage and dispensing facility located near the Port of San Francisco, California. The site had undergone site closure as an industrial facility but now was being proposed for commercial and residential use. Elevated levels of petroleum-related compounds and methane present in the soil and groundwater posed a potential issue for both residential and commercial redevelopment. Furthermore, local community groups were concerned regarding the proximity of significant industrial ambient air pollution sources, including a local concrete batch plant. Iris Environmental was retained to complete a human health risk assessment to determine whether on-site residual levels of petroleum constituents and off-site sources of air toxics would adversely impact human health under the planned development activities. Mr. Balas used the methane-modified Johnson and Ettinger model to estimate impacts resulting from subsurface contamination and the SCREEN3 dispersion model to determine on-site impacts associated with off-site sources. By incorporating site-specific development plans for a basement garage below the residential portion of the development, and using the direction of prevailing wind to reduce the impact of some off-site sources, Mr. Balas was able to show that the planned redevelopment could go forward with *de minimus* risk. The risk assessment was approved by both the Redevelopment Agency and the Department of Public Health without any comments, and redevelopment of the industrial property is moving forward on schedule.

- Mr. Balas has performed CO hotspots and criteria pollutant analysis for residential developments in Fairfield, California. The Bay Area Air Quality Management District's screening-level analysis was employed to estimate CO concentrations in the vicinity of 15 roadway intersections, under three project scenarios. Results of the screening procedure indicated that the proposed project would not produce a significant impact at any of the 15 roadway intersections, and therefore no detailed CO dispersion analysis was necessary. The URBEMIS model was used to evaluate criteria pollutant emissions from the proposed development.

- Mr. Balas has developed human health risk assessment in support of an Environmental Impact Report required for a proposed redevelopment in San Francisco. The proposed development included the construction of a multi-use building occupied by retail space at street level and by residents on upper floors. The purpose of the risk assessment was to determine whether the residual chemicals at the Site could adversely impact human health during development and proposed future land use. As exposure to these chemicals could

potentially occur both during Site development and future land use, the health risks associated with the construction phase and future land use were both evaluated.

- Mr. Balas has provided Environmental Impact Report assistance for the Los Angeles Airport proposed expansion, including reviewing emissions estimation methods, air dispersion modeling, and plume rise calculations. This review included using USEPA approved methods outlined in *AP-42: Compilation of Air Pollutant Emission Factors* and the Gaussian plume dispersion model Industrial Source Complex Short Term 3 (ISCST3). Meteorological data was reviewed for appropriate application and proposed plume rise calculations for aircraft were modified to more accurately reflect jet motion on take-off and landing.

- Mr. Balas is managing the fate and transport modeling components of the Mission Bay Development project in San Francisco, California. He developed an innovative approach to estimate the impacts associated with dust emissions. This approach used on-site ambient air data combined with ISCST3 dispersion modeling to predict potential off-site impacts. He also modified the Johnson and Ettinger indoor air model to account for the enhanced flux of subsurface volatile organic compounds associated with elevated levels of methane. This modified model was then used to estimate potential exposure concentrations in a proposed building. A subsurface vapor mitigation measure was then proposed, and he demonstrated that the expected pressure drop below the building resulting from this measure would be sufficient to protect the occupants of the building. Both of these analyses were integral in getting the Regional Water Quality Control Board and the Department of Public Health to accept the proposed mitigation measure with no remediation required.

- Mr. Balas is currently assisting a large biotechnology research company increase the size of their campus through the development of additional park and commercial space. The principal constituent of concern at the site is naturally occurring asbestos (NOA). Our support has involved meeting the requirements of the California Air Resources Board *Asbestos Airborne Toxic Control Measure for Construction, Grading, Quarrying and Surface Mining Operations*, developing air monitoring plans to ensure no off-site impacts, and direct negotiations with the local air district. As a part of the development of air monitoring plans, efforts have included the development of the appropriate asbestos screening level based on potential Proposition 65 exposures and long-term human health exposures. Currently, we are following the status of USEPA Region IX's re-evaluation of asbestos exposure risk, specifically related to short-term exposures of NOA.

- Mr. Balas has assisted in the development of a residential property located in the Sierra foothills. The principal constituent of concern at the site is naturally occurring asbestos (NOA). Our support has involved development of a dust mitigation plan, direct negotiations with the local air district, and on-going air sampling to determine potential exposure concentrations resulting from the NOA. Efforts have included the development of the appropriate asbestos screening level based on potential Proposition 65 exposures and long-term human health exposures. Based on the data collected during the sampling program, we have been working with the air district to speed the entitlement process forward. Based on our analysis, we developed control measures for site development in conjunction with the air district.

- Mr. Balas has overseen the environmental issues associated with a large scale residential development in the Sierra foothills. He is directing an asbestos air sampling program as part of a comprehensive dust mitigation program during site development. During the course of the project, Mr. Balas worked with the local air pollution control officer to develop ambient air sampling protocols and cutting-edge dust control regulations.

- At the request of a national development firm and environmental counsel, Mr. Balas has overseen a number of mold remediation projects, including conducting investigations to successfully identify the source of water damage, directing remediation efforts to repair water damage, modeling to determine where hidden molds might be present, and air monitoring to ensure that remedial efforts were successful. Mr. Balas has recently completed post-remediation air monitoring in an condominium complex in Emeryville, California to show the successful removal of water damaged drywall. A moisture meter was used throughout the apartment to ensure that there were no areas with elevated levels of moisture that might result in future mold issues. A study of the apartment ventilation system was also conducted to ensure that it was operating properly and there were no possible sources of mold remaining.

- Mr. Balas has overseen the environmental issues associated with the Third Street light rail development in San Francisco. He reviewed an asbestos air sampling program developed by Dr. Wayne Berman as part of a comprehensive dust mitigation program during site development. During the course of the project, Mr. Balas worked with Dr. Berman to develop the appropriate asbestos cancer slope factor, including adjustments for variable fiber length.

- Mr. Balas completed an air modeling human health risk assessment for a former landfill located near Union City, California. The landfill had undergone closure but was being proposed for commercial use (a sporting complex). Elevated levels of metals, chlorinated compounds, and methane present in the soil and groundwater posed a potential issue for commercial redevelopment. Furthermore, the local community and City Council were concerned regarding the potential for the airborne dispersion of dust and gases during development activities and subsurface migration of gases after development was completed. Iris Environmental was retained to complete a human health risk assessment to determine whether on-site residual levels of landfill constituents would adversely impact human health under the planned development activities and planned post-development use. The SCREEN3 dispersion model was used to determine potential on- and off-site impacts associated with redevelopment of the landfill. Mr. Balas developed a methane-modified Johnson and Ettinger model to estimate impacts resulting from subsurface contamination migrating on- and off-site after the completion of development activities. The completed risk assessment showed that the planned development could go forward with de minimus risk assuming the inclusion of standard landfill mitigation measures. The completed risk assessment was reviewed by the City Council and their consultants, and no substantive changes were required.

- Mr. Balas has overseen and developed innovative air modeling approaches for a number of former manufactured gas plant sites, located in California. While elevated levels of carcinogenic polycyclic aromatic hydrocarbons (PAHs) typically drive the cleanup, isolated

pockets of volatile organic compounds (VOCs) left after the removal of PAHs, can sometimes cause a problem for proposed residential uses. In particular, use of the standard Johnson and Ettinger Model to analyze residential indoor air exposure will often result in extremely low cleanup goals. By decoupling the subsurface transport portion of the model from the indoor dispersion portion, Mr. Balas was able to incorporate the relevant processes of biodegradation and downward flux, to more accurately model the impacts associated with residual VOCs, and obtain a more realistic cleanup goal.

- Mr. Balas has provided leadership for the development an Environmental Management System (EMS) at an international manufacturing concern. He has reviewed the policies, procedures, programs, and organizational structure, both formal and informal, used to manage environmental affairs across all three key media (air, water, and waste). He focused on maintaining environmental compliance during changes in operations or regulatory requirements. He conducted a series of interviews and plant visits to assess the status of environmental practices and procedures. Based on these environmental audits, an Environmental Management System (EMS) was designed both to assist in improving environmental compliance and to help in meeting the challenges posed by Change. The EMS consists of four interconnecting environmental management tools that assist in achieving environmental compliance during both Change and daily operations. Component tools of the EMS include the following: environmental procedures for all environmental activities, including a detailed description of personnel responsibilities; databases for proper information management; training programs to ensure all personnel are familiar with proper environmental procedures; and an internal audit system to provide an ongoing self-assessment of progress towards environmental compliance.

- Mr. Balas has also improved the existing methods to determine an appropriate cleanup level associated with protection of groundwater for a shipyard in San Diego, California. To the standard default approach in the EPA-approved Soil Screening Guidance and the Central Valley RWQCB Designated Level Methodology; Mr. Balas added the impact of biodegradation on the downward flux of VOCs in soil to the groundwater table. The addition of this element allowed for a much more realistic estimate of potential impacts, and removed from consideration source areas that would have otherwise required remediation.

- Mr. Balas provided technical and project management leadership for a state-of-the-art hazardous waste treatment, storage, and disposal facility. He conducted a complete environmental regulatory permit audit, identifying areas of concern. He has provided strategic guidance on achieving complete regulatory compliance including guidance on meeting local air district, Title V, AB 2588, and Proposition 65 requirements. He completed all aspects of work needed to meet permit conditions including: air modeling work for the annual risk assessment; an ambient air monitoring program; calculation of criteria and toxic pollutant emissions due to volatilization, erosion, and vehicle traffic; and all required reports and recordkeeping requirements.

- Mr. Balas provided air modeling and subsurface fate and transport expertise for the redevelopment of the former Pacific Refinery in Hercules, California that is undergoing dismantling and redevelopment into a 220-acre residential community. He appeared as an expert witness before Bay Area Air Quality Management District Hearing Board to present

innovative approach to achieve variance from Regulation 8, Rule 40. The Board ultimately granted the variance.

- Mr. Balas directed the emissions estimation and air modeling work necessary to determine the off-site impacts from a refinery explosion. Meteorological data from six different weather stations were integrated to get a complete picture of the local wind patterns. Video footage was also used to pinpoint off-site impacts. Plume-rise algorithms were modified to account for the burning of hydrocarbon slops in the bottom of a holding tank.

- Mr. Balas provided senior technical and project management for multiple subsurface transport studies. Projects included characterization of subsurface flux of chlorinated solvents, heavy metals, and petroleum hydrocarbons into both commercial and residential indoor environments. He used both analytical and computer model approaches to estimate contaminant transport in groundwater to indoor air. He has prepared and presented technical strategies and findings before local, state, and federal agencies.

- Conducted numerous indoor and outdoor air modeling analysis for Proposition 65 analyses associated with emissions from a wide variety of industrial facilities and consumer products including glass bottling facilities, battery manufacturing plants, chromium plating facilities, electrical circuit board manufacturing plants, waste-to-energy plants, metal parts manufacturing plants, dry cleaning facilities, glues, and printer cartridges.

- Mr. Balas prepared the emissions inventory and dispersion modeling analysis to support a facility-wide permit application. He modeled multi-source dispersion of air emissions and estimated increases in ambient air concentration of specific pollutants to determine scope of potentially impacted area. The results of the dispersion modeling analysis were compared with health-based standards.

- Mr. Balas planned program flow for a regulatory environmental management system (EMS). Decisions on calculation methods, database access considerations, and logic flow were made. Based on the program flow, the complexity of the program, and the speed of execution, a programming platform was selected. The EMS integrated air emissions estimation, air dispersion modeling, exposure assessment, multipathway risk assessment, and compliance report generation. Dialog boxes were designed and implemented to facilitate user interface with the software.

- Mr. Balas used a groundwater flow and contaminant transport model to estimate groundwater impacts from a chlorinated organic compound spill. To accurately depict the downwards flow of chlorinated organic compounds, a source apportionment model was developed. A sensitivity analysis was used to determine the maximum off-site exposure concentration.

- Mr. Balas provided technical leadership on the development of a fate and transport model of contaminant flow in the Los Angeles storm water system, to determine the potential for exceedances of the MTBE odor threshold due to releases from petrochemical facilities. An analytical model was used to calculate the water velocity distribution in the storm drain

- Mr. Balas modeled a petroleum spill from soil to surface water and estimated the downward flux to groundwater. He calculated the extent of dispersion of these chemicals in

groundwater as they flowed into a nearby river and determined the potential health risk to residents due to exposure in nearby surface waters.

- Mr. Balas oversaw estimation of emissions from a styrene-butadiene rubber facility and estimation of off-site impacts using ISC3. He produced a report criticizing opposing experts' approach and presenting a correct approach.

- Mr. Balas estimated emissions from numerous petroleum refineries, selected appropriate meteorological data, and analyzed dispersion modeling results by comparing to air quality guidelines.

- Mr. Balas refined screening emissions modeling of fugitive volatile and semi-volatile organic chemicals from contaminated ground water and soil for health risk assessments and remediation plans.

- Mr. Balas conducted a water vapor dispersion modeling analysis for a paper mill to determine fog generation potential from the wastewater operations. He also considered complex wind and emission generation issues.

KAREN T. SMITH

EDUCATION

1992 B.A., Environmental Sciences, University of Virginia

EXPERIENCE

Ms. Smith is a Manager at Iris Environmental with over twelve years of experience in environmental consulting with emphasis on due diligence and human health risk assessment. She has conducted and managed numerous Phase I Environmental Site Assessments and compliance audits for properties throughout the U.S. and Canada. Ms. Smith has calculated cancer risks and noncancer hazard indices as well as risk-based cleanup levels for multi-pathway exposure to chemicals in various media at Superfund sites and other facilities. Ms. Smith has substantial experience conducting research in support of litigation and in database development and management. The following projects are representative of Ms. Smith's experience:

- Conducted Phase I Environmental Site Assessments and compliance audits for numerous commercial and industrial facilities located in the U.S. and Canada. Properties audited include: manufacturers of epoxy counter tops, plywood, plastic bottles, plastic cutlery, candles, paint brushes, windows, woven wire products, automobile parts, packaging machinery, and lightning surge protection equipment; marine repair facilities and terminals; a fuel supply company; medical facilities; hotels; a commercial/industrial facility with over 30 tenants; a commercial garbage collection company; self-storage facilities; shopping centers; a billboard company; and undeveloped lots and vacant buildings.

- Managed the updating of Phase I Environmental Site Assessments for 17 sites located throughout the U.S. Coordinated with the client, the target company, and staff from four offices; conducted assessments at six of the sites; and wrote and reviewed updated reports.

- Researched history and status of underground storage tanks at a 260-acre site. Reviewed documents and conducted searches at regulatory agencies. Prepared report documenting research and findings.

- Researched the historical uses, investigations, and remedial activities conducted at eighteen individual parcels located on a Superfund site. Histories were used in fact sheets prepared to provide information to employees of the current site tenant.

- Prepared storm water pollution prevention and monitoring plans for multiple facilities of a plastics manufacturer located in Northern and Southern California.

- Assisted a new owner of 25 gasoline stations with the transfer of ownership of underground storage tank, air, and other permits and hazardous materials business plans.

Contacted county agencies and air quality management districts to determine requirements for ownership transfers and prepared documents for submittal to the county agencies.

- Assisted in the preparation of a RCRA Part B Permit Application for a hazardous waste transfer facility in Southern California.

- Calculated cancer risks and noncancer hazard indices for populations exposed to chemicals present in the soil, sediment, surface water, and ground water at a Superfund site. Conducted a multi-pathway evaluation of risks including ingestion of fish and produce.

- Calculated site-specific cleanup levels protective of human health and the environment for six former underground storage tank sites. Evaluated multi-pathway exposure to petroleum products in soil, ground water, and surface water. Site-specific cleanup levels were used to develop risk management plans that were submitted to the San Francisco Regional Water Quality Control Board.

- Calculated site-specific cleanup levels protective of human health for a 245-acre site. Calculated cleanup levels using site-specific data and assumptions for exposure to petroleum products, VOCs, and SVOCs via inhalation.

- Calculated risk-based cleanup levels for VOCs in ground water and inorganics in soil at a former printed circuit board and electronics assembly facility.

- Conducted a Preliminary Endangerment Assessment including report production following DTSC guidelines for a former manufacturing facility. Exposure to a petroleum-based thinner via inhalation of soil vapors and direct contact with soil was evaluated.

- Conducted screening health risk assessments to determine risks associated with a natural petroleum seep near a residential development, and to determine risks associated with petroleum hydrocarbon-containing soil at a former warehouse/distribution center.

- Calculated acceptable soil cleanup levels for residential exposure to metals at a former circuit manufacturing site.

- Researched national and international standards and guidelines for methylmercury by conducting a literature search and contacting various national and international agencies.

- Researched state and federal regulatory requirements for chemical ingredients of several furniture protection/polish products. Summarized the status of chemicals under state and federal regulations including RCRA, EPCRA, the Clean Water Act, TSCA, and Proposition 65.

- Developed databases of existing soil and groundwater data for several sites, including one contaminated with petroleum products and one contaminated with a variety of organic and inorganic chemicals. Compared existing data to health-based soil clean-up levels and selected constituents of concern for further evaluations.

- Provided litigation support for a major utility company in southern California suing its insurance company for costs incurred for investigations, evaluations, and remedial activities at former manufactured gas sites. Reviewed historical documents to identify the materials used and activities that occurred at the sites that may have resulted in site contamination, evaluated current site investigation results, and determined the fate and transport of the site contaminants in surface and subsurface soils and groundwater.

- Investigated several incidents at a local municipal water supplier in which 1,2-dichloroethane was detected in finished water at concentrations above state and federal MCLs. Conducted literature searches, visited water treatment plants, interviewed plant managers and sample collectors. Prepared a report on investigation findings.

- Conducted an analysis of the potential hazards posed by No. 2 Fuel Oil contained in underground storage tanks.

DANIELA D. HAMANN-NAZAROFF

EDUCATION

2012 M.S., Environmental Engineering, Stanford University

2010 B.S., Environmental Science, UCLA

EXPERIENCE

Ms. Hamann-Nazaroff is a scientist at Iris Environmental. She has worked at Iris Environmental since 2013 after graduating from Stanford University. Her experience includes fate and transport modeling, vapor intrusion analysis, risk characterization, and air quality monitoring. The following projects are representative of Ms. Hamann-Nazaroff's experience:

- Ms. Hamann-Nazaroff has investigated the indoor air quality of numerous commercial spaces in the San Francisco Bay Area. She collected indoor air and ambient air samples at these facilities and examined the results in order to determine whether vapor intrusion was occurring at levels which could result in adverse health effects for the facilities occupants.

- Ms. Hamann-Nazaroff has performed screening level human health risk evaluations. She has performed subsurface fate and transport modeling to evaluate whether vapor intrusion from the subsurface into the overlying buildings was occurring at significant levels with respect to the long-term health of building occupants at both industrial and commercial facilities.

- Ms. Hamann-Nazaroff has developed an Indoor Air Sampling and Analysis Plan (SAP) for commercial buildings in the San Francisco Bay Area. She calculated risk-based screening levels at the facility and analyzed previous indoor air, groundwater, and soil vapor investigations to develop the SAP with the ultimate goal of delineating the extent of vapor intrusion impacts.

- Ms. Hamann-Nazaroff monitored dust levels on construction sites in San Francisco Bay Area and oversaw best management practices to reduce dust generation. Monitoring was conducted to prevent impact to off-site populations.

Appendix B

Site Photographs (1-10-14)

Photo #1: View of the on-Site building from Clyde Avenue.

Photo #2: View to the east along from the parking lot

Photo #3: View to the north of 450 Clyde from the south side of 440 Clyde.

Photo #4: View of the south side of 440 Clyde.

Photo #5: View to the groundwater monitoring well located on-Site.

Photo #6: View of the vacant interior office space of 440 Clyde.

Photo #7: View of a vacant break area of 440 Clyde.

Photo #8: View of small drums and containers of paint.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 04/26/2013 has revealed that there are 4 NPL sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

Federal CERCLIS list

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 04/26/2013 has revealed that there are 4 CERCLIS sites within approximately 0.5 miles of the target property.

Federal CERCLIS NFRAP site List

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 04/26/2013 has revealed that there are 4 CERC-NFRAP sites within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 07/11/2013 has revealed that there are 3 CORRACTS sites within approximately 1 mile of the target property.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 07/11/2013 has revealed that there is 1 RCRA-TSDF site within approximately 0.5 miles of the target property.

AIR PRODS & CHEMS INC	*465 N WHISMAN RD*	*1/4 - 1/2 (0.496 mi.) WNW*	*97*	*286*

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 07/11/2013 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 07/11/2013 has revealed that there are 26 RCRA-SQG sites within approximately 0.25 miles of the target property.

US INST CONTROL: A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

A review of the US INST CONTROL list, as provided by EDR, and dated 06/17/2013 has revealed that there are 3 US INST CONTROL sites within approximately 0.5 miles of the target property.

State- and tribal - equivalent CERCLIS

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 09/05/2013 has revealed that there are 29 CA ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

CA LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the State Water Resources Control Board Leaking Underground Storage Tank Information System.

A review of the CA LUST list, as provided by EDR, and dated 07/26/2013 has revealed that there are 12

CA LUST sites within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 07/11/2013 has revealed that there are 5 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 2 EDR US Hist Auto Stat sites within approximately 0.25 miles of the target property.

Site	Address	Dist / Dir	Map ID	Page
Not reported	1096 W MAUDE AVE	1/8 - 1/4 (0.219 mi.) SE	Q68	232

Summary Details:

Conditions at proposal April 10, 1985): Moffett Naval Air Station covers 8,700 acres in Sunnyvale, Santa Clara County, California. In the past, various solvents and sludges were disposed on-site into ponds and landfills and onto the ground.As a result, soil and ground water on-site are contaminated. The major contaminants in ground water are volatile organic compounds. About 272,000 people depend on wells within 3 miles of the station as a source of drinking water. Moffett Naval Air Station is participating in the Installation Restoration Program IRP), established in 1978. Under this program, the Department of Defense seeks to identify, investigate, and clean up contamination from ha ardous materials. The Navy has completed Phase I records search) of the program and is beginning Phase II remedial investigation). Moffett Naval Air Station is in the South Bay Area of San Francisco. In October 1984, 19 non-Federal sites in the area were proposed for the NPL. Facilities at these sites have used a variety of toxic chemicals, primarily chlorinated organic solvents, which contaminate a common ground water basin. Although these sites are listed separately, EPA intends to apply an area-wide approach to the problem as well as take site-specific action as necessary. Status July 22, 1987): In May 1985, the California Regional Water Quality Control Board adopted Waste Discharge Requirements for Moffett Naval Air Station.The requirements outline specific tasks and compliance dates Moffett must follow to define the full extent of contamination in soils and ground water. In April 1986, the Navy released the final report for the verification step of Phase II.Moffett is revising the quality assurance project plan and sample plan for the characteri ation step of Phase II. Within the boundaries of this Federal facility, including this specific site, there are no areas subject to the Subtitle C corrective action authorities of the Resource Conservation and Recovery Act. Therefore, this Federal facility site is being placed on the Federal section of the NPL.

Site Description: Moffett Field was continuously operated by the U.S. military after it was commissioned in 1933 to support the West Coast Dirigibles of the lighter than air (LTA) program until 1994. In 1939, a permit was granted to Ames Aeronautical Laboratory to use part of the station. In 1942, the station was returned to Navy control and was named Naval Air Station Moffett Field. In late 1942, the heavier than air (HTA) program was initiated and began to take precedence over the LTA program. In 1945, the HTA program was moved and Moffett Field was used as a major overhaul and repair base. In 1949, the station became home to the Military Air Transport Service Squadron. By 1950, Moffett Field was the largest naval air transport base on the West Coast, and in 1953 it became home to all Navy fixed-wing land-based antisubmarine efforts. A weapons department was formed on the base in 1954, and in February 1966 the base activated its high speed refueling facilities. During the station reorganization in 1973, it became the headquarters of the Commander Patrol Wings, US Pacific Fleet. During the 1980s and early 1990s, the mission of Moffett Field was to support antisubmarine warfare training and patrol squadrons, and it became the largest P-3 Orion patrol aircraft base in the world with nearly 100 aircraft. No heavy manufacturing or major aircraft maintenance was conducted, but a significant amount of unit and intermediate level maintenance occurred. In April 1991, Moffett Field was designated for closure, and on July 1, 1994, control of the base was transferred to National Aeronautics and Space Administration (NASA). Wastes have been generated at Moffett Field through maintenance operations, fuel management, and fire training since the early 1930s. Chemicals of potential concern include

MOFFETT NAVAL AIR STATION (Continued) **1000228683**

waste oils and jet fuels; solvents and cleaners; washing compounds; and lesser amounts of gasoline, hydraulic fluids, asbestos, paints, pesticides, battery acid, and PCBs. Wastes were disposed of in unlined landfills, drained through drainage ditches and unpaved areas, and stored temporarily in unlined wastewater ponds. In addition, some underground storage tanks (USTs) and sumps were found to have leaked petroleum hydrocarbons and fuels, and lesser amounts of waste oils and solvents. Environmental studies were initiated at Moffett Field in 1984. The Navy began conducting these environmental restoration activities as part of the Department of Defense Installation Restoration Program (IRP). The Navy conducted an initial assessment study (IAS) in 1984 to gather data on the past use and disposal of hazardous materials at the base. Nineteen sites were identified as potential sources of wastes, including nine sites identified in the IAS and 10 sites added during subsequent investigations. Five additional sites were identified during field investigation in the early 1990s. The Environmental Protection Agency (EPA) proposed placing Moffett Field on the National Priorities List (NPL) in June 1986, and it was placed on the NPL in 1987. The Remedial Investigation and Feasibility Study (RI/FS) is coordinated through the August 1990 Federal Facility Agreement (FFA) with EPA and the State of California. The RI was implemented in two phases. The Phase I characterization was complete in August 1990. The Phase II investigations were initiated in 1990 to provide more detailed, site specific data. In October, 1992 EPA determined that the aquifers on the western side of Moffett Field were co-mingled with a regional volatile organic compound (VOC) plume emanating from the Middlefield-Ellis-Whisman (MEW) Superfund site south of Moffett Field. EPA determined that these aquifers were subject to the 1989 EPA Record of Decision (ROD) already written for the MEW site and would be remediated per the MEW ROD. Consequently, OU4 (West-side Aquifers) was deleted and OU5 (East-side aquifers) was modified to include all aquifers not part of the regional plume. In May 1989, the Navy developed a community relations plan (CRP). The OU5 RI report was released in August 1993. The OU5 FS report was released in August 1995 Moffett Field. The proposed plan for remediation of OU5 was released to the public in October, 1995. A public comment period was held from October 27, 1995 through November 30, 1995 with a public meeting on November 16, 1995. Moffett Field has been continuously operated by the U.S. military since it was commissioned in 1933. In 1945, Moffett Field was used as a major overhaul and repair base. In 1954, a weapons department was formed at the base, and then during the 1980s and early 1990s, the mission of Moffett Field was to support antisubmarine warfare training and patrol squadrons. No heavy manufacturing or major aircraft maintenance was conducted at Moffett Field, but a significant amount of unit- and intermediate-level maintenance occurred. In April 1991, Moffett Field was designated for closure as an active military base under the Department of Defense Base Realignment and Closure (BRAC) program. After closure, control of the base was transferred to the National Aeronautics and Space Administration (NASA), however, the Navy will continue with environmental restoration activities and remain responsible for remediating Navy contaminant sources. Wastes have been generated at Moffett Field through maintenance operations, fuel management, and fire training since the early 1930s. Chemicals of potential concern include waste oils and jet fuels; solvents and cleaners; washing compounds; and lesser amounts of gasoline, hydraulic fluids, asbestos, paints, pesticides, battery acid, and polychlorinated biphenyls (PCBs). Wastes were disposed of in unlined landfills, drained through drainage ditches and unpaved areas, and stored temporarily in unlined wastewater ponds. In addition, some underground storage tanks and sumps (many of them now removed) were found to have leaked petroleum hydrocarbons and fuels, and lesser amounts of waste oils and solvents. Environmental studies were initiated at Moffett Field in 1984 with

MOFFETT NAVAL AIR STATION (Continued) **1000228683**

an initial assessment of past use and disposal of hazardous materials. Nineteen sites were identified as potential waste sources. Remedial Investigation/Feasibility Study (RI/FS) work was coordinated through the August 1990 Federal Facility Agreement with EPA and the State. The Phase I RI characterization was completed in August 1990. The more detailed Phase II investigations identified the need to separate the site into six Operable Units (OUs). NAS Moffett Field is located in California, 35 miles south of San Francisco, 10 miles north of San Jose, and about 1 mile south of the southwestern edge of San Francisco Bay, in Santa Clara County, California. The facility encompasses 2,200 acres in Santa Clara County; the facility address is Moffett Field, California 94035. NAS Moffett Field is bounded by saltwater evaporation ponds to the north, Stevens Creek to the west, U.S. Highway 101 (Bayshore Freeway) to the south, and the Lockheed Martin Aerospace Center to the east. Several industrial facilities are located south of the Bayshore Freeway. In particular, a group of companies is located in a 0.5-square-mile area, bounded by U.S. Highway 101. Middlefield Road, Ellis Street, and Whisman Road (MEW). This area is known as the MEW Superfund study area and contains three Superfund sites. Moffett Field also borders the cities of Mountain View and Sunnyvale, California. The City of Sunnyvale is located south and east; the City of Mountain View borders Moffett Field on the south and west. The NASA Ames Research Center is located west and north of the runways. The U.S. military continuously operated NAS Moffett Fiefld as Naval Air NAS Sunnyvale from its date of commission in April 1933 until it was transferred to NASA on July 1, 1994. The Navy used the station as an air base until October 1935, when it was transferred to the Army Air Corps for use as a training base. During the Army's tenure, the National Advisory Committee for Aeronautics (NACA) established Ames Research Center in December 1939 on land adjacent to MFA. The base returned to Navy control and was renamed NAS Moffett Field in April 1942. By 1950, NAS Moffett Field was the largest naval air transport base on the West Coast and became the first all-weather air station. In 1958, NACA became NASA and Ames Research Center became the NASA Ames Research Center. Between 1973 and 1994, the mission of NAS Moffett Field involved support of antisubmarine warfare training and patrol squadrons. At one point, MFA was the largest P-3 base in the world, with nearly 100 P-3C Orion patrol aircraft. These aircraft were assigned to nine squadrons, supported by 5,500 military, 1,500 civilian, and 1,000 reservist personnel. No heavy manufacturing or major aircraft maintenance was conducted at NAS Moffett Field during the last mission; instead, mostly unit- and intermediate-level maintenance occurred. In April 1991, the station was designated for closure as an active military base under the U.S. Department of Defense (DoD) Base Realignment and Closure (BRAC) program. NASA assumed control of the base beginning in July 1994. Military housing units and associated facilities were transferred to Onizuka Air Force Base at the same time. Since the early 1980s, DoD has been identifying, evaluating, and controlling the spread of contaminants from historical hazardous waste sites as part of the Installation Restoration Program (IRP) at MFA. This work is coordinated through a Federal Facility Agreement with the U.S. Environmental Protection Agency (EPA) and the California Regional Water Quality Control Board, San Francisco Bay Region (RWQCB). The Navy is the lead agency for this work. The Navy and NASA signed a memorandum of understanding (MOU) on December 22, 1992, concerning environmental activities at the station. Under the MOU, the Navy will continue with environmental restoration and will remain responsible for remediating Navy contaminant sources. NASA is responsible for non-environmental operations and ongoing environmental compliance. NASA is planning to develop a world-class, shared-use educational and research and development campus at Moffett Field, California, in association with government entities, academia, industry, and nonprofit organizations. The NASA Ames Development Plan includes proposed development of

MOFFETT NAVAL AIR STATION (Continued) **1000228683**

four areas: -NASA Research Park: A 213-acre parcel located between Ames Research Center facilities, MFA, U.S. Highway 101, and the military housing area -Eastside/Airfield District: A 952-acre parcel that includes MFA and property located east of the airfield -Bay View District: A 95-acre parcel located north of the Ames Research Center facilities -Ames Research Center Facilities: A 240-acre parcel comprising the existing NASA Ames Research Center campus Surface water channels and ditches will be maintained for drainage purposes. Groundwater is not currently used at MFA. The only exception is water from a single well screened in the deep C aquifer (deeper than 155 feet below ground surface) used by NASA for fire fighting, composting, and agricultural purposes. This well is located in the northwestern corner of the Ames Research Center area. Public water is supplied to MFA from the Hetch Hetchy aqueduct owned by the City of San Francisco. Groundwater is unlikely to be used as a water supply source in the future because of poor ambient quality and low formation yield to a well. NASA's draft Programmatic Environmental Impact Statement does not consider development of groundwater as a future water supply source. EPA proposed MFA as a National Priorities List (NPL) site in June 1986, and MFA was included on the NPL in July 1987. Inclusion on the NPL initiated the Remedial Investigation (RI) and Feasibility Study (FS) process, as required by the CERCLA. The Navy began environmental studies at MFA in 1984. Twenty sites were originally identified as IRP sites at MFA. Investigations during the station-wide RI identified six additional, potentially contaminated sites. Only three sites were assigned numbers (Sites 21 through 23), and none of the additional sites was designated as an operable unit (OU). The six additional sites, which were investigated under the CERCLA program, are: Site 21, Site 22, Site 23, the Weapons Storage Bunkers, the former Industrial Wastewater Flux Ponds, and an ephemeral wetland located at an improperly abandoned agricultural well. Later, the Navy defined four additional sites (Sites 25 through 28), originally included as parts of other sites under previously established OUs. These sites include Site 25, the Eastern Diked Marsh and stormwater retention pond (included in OU6); Site 26, the east side aquifers (included in OU5); Site 27, the Northern Channel (included in OU6); and Site 28, the west side aquifers. All of the sites identified were investigated under the CERCLA program. The current OU definitions and study areas are: OU1: Soils and groundwater at Sites 1 and 2 landfills OU2-East: Soils at Sites 3, 4, 6, 7, 10 (runways), 11, and 13 OU2-West: Soils at Sites 8, 10 (Chase Park), 14-North, 16, 17, and 18 OU5: Aquifers on the eastern side of MFA that are not part of the regional plume or OU1 (Site 26) OU6: Wetland areas, Sites 25 and 27 Petroleum Sites: Sites 5, 9, 12, 14-South, 15, 19, 20, and 24 Additional Sites: Sites 21, 22, 23, Weapons Storage Bunkers, upland soil areas, Human Health Risk Assessment (HHRA) Exposure Area 4158, former Industrial Wastewater Flux Ponds, and the abandoned former agricultural well. Human health and ecological risk assessments were conducted as part of the station-wide RI. As agreed upon by the Navy, EPA, and RWQCB, six sites were recommended for No Action (formally referred to as No Further Action) in the 2001 Final Addendum to the Revised Final Station-wide Feasibility Study Report and have been addressed separately from the IR program. These sites are: Site 23, Golf Course Fill Area 3; Weapons Storage Bunkers; Former Industrial Wastewater Flux Ponds; Former Abandoned Agricultural Well; Upland Soils (areas that support upland plant communities); Station-wide Remedial Investigation HHRA Exposure Areas 3782, 3785, 3974, 4090, and 4158. The addendum to the report provides additional documentation to support the No Action recommendations for these sites. Two of the sites, Industrial Wastewater Flux Ponds and Former Abandoned Agricultural Well, were closed with concurrences from EPA or Santa Clara Valley Water District; therefore, they were not considered further in the CERCLA process. Three of the HHRA exposure areas, 3782, 3785, and 3974, are being addressed as part of other remedial actions or

MOFFETT NAVAL AIR STATION (Continued) **1000228683**

maintenance programs. The remaining No Action Sites (Site 23-Golf Course Fill Area 3, Weapons Storage Bunkers, Upland Soils, HHRA Exposure Area 4090, and HHRA Exposure Area 4158) were included in the Proposed Plan. The Proposed Plan was made available to the public during a formal comment period from December 15, 2001 through January 28, 2002. A public meeting was held on January 10, 2002 and a responsiveness summary was issued on May 28, 2002. As the proposed plan and earlier versions of the ROD suggest, HHRA Exposure Area 4090 was listed as a No Action Site even though this area was included in the station-wide ecological assessment for wetland areas being addressed under a separate action (Site 27). Because there are potential risk issues associated with this site, the HHRA Exposure Area 4090 is no longer identified as a No Action Site in this ROD. Instead, this site will be addressed under the ongoing Site 27 investigation. Site 23 Golf Course Fill Area: Site 23 is located on 2 acres, just south of the Northern Weapons Bunker area, in the western portion of the golf course. Golf Course Fill Area 3 is shown in aerial photographs taken in 1977 as one of several ponds on the golf course. Three of the ponds on the golf course were dry, and some debris was visible in the area of Golf Course Fill Area 3 in an aerial photograph taken in 1987. No information on the source of the material discarded in this area could be found. However, numerous small piles of soil, concrete, disaggregated asphalt, grass clippings, and mulch were identified during a site walk conducted in March 1994. In addition, some airplane parts, consisting of several pieces of aluminum (brought to Site 23 for disposal after a plane crashed at MFA), and some electronics equipment were found in the area. A magnetometer survey of this area was conducted in 1995. The results of the survey do not indicate that significant quantities of metallic materials were buried at the site. This evidence instead suggests that the area was never trenched and was used primarily for incidental disposal of excess soil and debris from the golf course. A No Further Action ROD was completed for Site 23 on August 19, 2002. Weapons Storage Bunkers: There are two groups of weapons storage bunkers: the Northern Weapons Storage Bunkers and the Southern Weapons Storage Bunkers. The weapons storage bunkers are located in two fenced areas in the northeastern portion of MFA, near the golf course. The Northern Weapons Storage Bunkers cover about 5 acres and include seven high-explosive magazines. The Southern Weapons Storage Bunkers cover about 10 acres and include nine high-explosive magazines. Each magazine consists of a heavy-gauge, corrugated steel arch that forms its roof and sides. The floors of the magazines are concrete, without drains. Each magazine is about 30 feet long, 20 feet wide, and 20 feet high. The magazines are covered with soil, forming long, earth-covered bunkers. Only one magazine in the Northern Weapons Storage Bunkers is still used and stores ammunition for the California Air National Guard. The Northern Weapons Storage Bunkers contained two diesel storage tanks. One of the tanks was removed in 1992, and the other tank was removed in 1994. No source for or evidence of contamination was identified in the Southern Weapons Storage Bunkers. A site inspection at the Northern Weapons Storage Bunkers in May 1994 found that the cement apron on the southern side was free of staining or significant cracking, and the buildings were released for unrestricted use. The high-explosive magazines at the Northern Weapons Storage Bunkers also were investigated for radioactive contamination; however, no radioactivity was found. An inventory revealed two diesel storage tanks in this area. Tank 22 was a 600-gallon underground storage tank that held diesel fuel and was removed in 1992; Tank 102, a 55-gallon aboveground storage tank that contained diesel fuel, was removed in April 1994. Tanks 22 and 102 are evaluated and closed separately from CERCLA sites under the policy and guidance of RWQCB. Closure of Tank 22 is documented in the Phase I petroleum sites closure report. Tank 102 is being investigated during the Phase III tank investigation. The Phase III investigation involves tanks that require further

MOFFETT NAVAL AIR STATION (Continued) **1000228683**

assessment for closure. This work may include document research, sampling, and geophysical surveys. The results of this work will be included in the Phase III petroleum sites closure report. No soil samples were collected at the Southern Weapons Storage Bunkers, because no source for, or evidence of, soil contamination was identified. Based on the Navy's stated historical use of the bunkers, the Southern Weapons Storage Bunkers were not tested for radioactive contamination before they were transferred to the California Air National Guard in 1994. There is no reason to suspect that these facilities were used for storage of radioactive materials. Groundwater in the area of the weapons storage bunkers is addressed separately as part of OU5. OU5 includes all aquifers that are not affected by the regional plume in groundwater. As part of the RI for OU5, data for groundwater samples from all wells on the eastern side of the base, including monitoring wells near the weapons storage bunkers, were evaluated and are addressed in the OU5 ROD. A No Further Action ROD was completed for the Weapons Storage Bunkers August 19, 2002. Upland Soils: Upland soils are areas of MFA that support upland plant communities and include virtually all areas at the airfield that are not covered by ditches, marshes, or wetlands. Human activity has been significant in these areas. Certain areas of upland soils, such as open grassy areas and the edges of golf courses and recreational fields, are actively managed as burrowing owl habitat, but the majority of upland soils areas are either paved, landscaped, or have been altered substantially by land use during the last 100 years. A No Further Action ROD was completed for the Upland Soils area on August 19, 2002. Area 4158: HHRA Exposure Area 4158 is located slightly south, but almost adjacent to IRP Site 11 - Engine Test Stand Area. A No Further Action ROD was completed for the Human Health Risk Assessment Area 4158 on August 19, 2002. OU 7 The Site 22 Landfill is located in the northeastern corner of MFA. The Site 22 Landfill covers approximately 9.4 acres and contains an estimated total refuse (waste) volume of 92,000 cubic yards. The site was used as an active landfill from 1950 through 1967. The refuse is believed to consist primarily of domestic waste, as confirmed through exploratory trenching. Results of environmental investigations indicate that in some places, the waste is located beneath the groundwater table, while in others, waste is located near the surface (above the groundwater table). The Site 22 Landfill now underlies holes 6 and 7 of a golf course, which is operated by the United States Air Force. The fairway and putting greens for these holes are located on top of the landfill. The rough for holes 6 and 7, which contains trees, is on the sloped part of the landfill. Soil borings and trenching indicate that most of the landfill is covered with approximately 1.5 feet of soil; however, soil thickness in a few areas is less than 1 foot. The Site 22 Landfill was characterized in the Final Station-wide RI Report and the Additional Sites Investigation Phase II Draft Final Report. Because operating records do not exist for the Site 22 Landfill, the history of the landfill was researched by studying aerial photographs and historical maps of the area and interviewing base personnel. This review indicated that the landfill was active from 1950 to 1967. Base personnel reported that Site 22 was used as a municipal landfill after the landfill at Site 2 was closed. Visual characterization of waste excavated at Site 2 confirmed that Site 2 contained primarily domestic waste; therefore, it was expected (and later confirmed) that the Site 22 Landfill also contained domestic waste. In 1973, the Site 22 Landfill was converted into holes 6 and 7 of the MFA golf course. In April 1998, an additional investigation was initiated to provide supplemental information about the Site 22 Landfill and its surrounding area. As part of this additional investigation, exploratory trenches were dug to further evaluate the vertical and horizontal extent of refuse within the landfill. The exploratory trenching uncovered municipal waste such as old tires, newspapers, vacuum tubes, and shampoo bottles. Based on the results of the trenching, the extent of the landfill was

MOFFETT NAVAL AIR STATION (Continued) **1000228683**

estimated to be approximately 9.4 acres, and the volume of refuse was estimated at approximately 92,000 cubic yards. The Air Force operates and maintains the golf course located in the northeast corner of the facility, which encompasses the Site 22 Landfill. The golf course has been maintained and operated for over 30 years, and there are no plans to change the land use of this area. It is therefore, likely that the Site 22 Landfill will remain part of the golf course. The selection and screening of remedial alternatives was thus conducted based on the premise that continued use as a golf course is the most likely future land use scenario, which has been confirmed with NASA personnel. A ROD addressing OU 7 was completed in June 2002. OU 8: Site 27 includes the Northern Channel, related ditches that drain into the Northern Channel, the berms along either side of the Northern Channel, and the debris pile near the Building 191 lift station. The Northern Channel is located near the northeastern boundary of the former NAS Moffett Field. Historically, the Northern Channel has received stormwater runoff from the former NAS Moffett Field and NASA Ames Research Center. Portions of the Northern Channel that are owned by Lockheed, Cargill Salt, and the Santa Clara Valley Water District extend eastward, approximately 5,500 feet beyond the boundary of the former NAS Moffett Field. The areas that make up Site 27 are summarized below: -Northern Channel and Berms: Nearly 2 miles long, the Northern Channel receives stormwater from the eastern portion of the former NAS Moffett Field. Water in the channel flows east, approximately 1 mile beyond the boundary of the former NAS Moffett Field into Lockheed Channel. The Northern Channel flows by gravity at this termination point through a pipe to the terminus of the Lockheed Channel, which runs parallel to the eastern end of the Northern Channel. The two channels are separated by a levee. Water from the terminus of Lockheed Channel is pumped into the Moffett Channel, which drains into Guadalupe Slough and eventually into San Francisco Bay. The Northern Channel provides brackish surface water habitat of moderate value to wildlife. The surface area of the channel is about 9 acres; its bottom substrate is sediment, and the banks are fill material. The width of the channel is 40 to 50 feet, but increases to 70 feet at the western end; the channel is about 10,000 feet long, and the bottom of the channel lies approximately 2.8 feet below mean sea level. The north levee is made of compacted hard clay and is approximately 5 feet high (above the water level in the channel), with flat surfaces and steep side slopes. The slopes of the bank are moderately eroded with loose surface material that supports a moderate amount of plants. The south levee is also made of compacted clays and supports a greater diversity of vegetation. Wildlife surveys have detected the presence of the western pond turtle, various plants, and a wide variety of shore birds and waterfowl in the area.
-Marriage Road Ditch: Located east of the runways, Marriage Road Ditch divides the golf course at the former NAS Moffett Field. The ditch extends about 2,300 feet, and the bottom of the ditch is 5 to 6 feet below mean sea level. Water flowing in Marriage Road Ditch is perennial and portions of the ditch are lined with concrete. Surface water from the east apron area and from the storm drains in and around Hangars 2 and 3 discharges into the ditch. Marriage Road Ditch receives additional runoff from the southern two-thirds of the runways and the golf course east and west of the ditch. Surface water from Marriage Road Ditch drains into North Patrol Road Ditch. During the rainy season, surface water from Marriage Road Ditch is occasionally pumped directly into the Northern Channel to prevent flooding during storms. The probable source of contamination in Marriage Road Ditch is historical surface water runoff from storm drains. These storm drains collected runoff from the paved and unpaved areas around Hangars 2 and 3 and conveyed it to Marriage Road Ditch. The ditch provides habitat for insects, worms, snails, and the western pond turtle. Several species of plants grow in and along the sides of the ditch. -Patrol Road Ditch: Patrol Road Ditch (also known as the East Patrol

MOFFETT NAVAL AIR STATION (Continued) **1000228683**

Road Ditch) is a surface drainage feature that runs 2,100 feet along the eastern boundary of the former NAS Moffett Field; the bottom of the ditch is about 5 to 6 feet below mean sea level. The ditch is part of the storm drain system at the former NAS Moffett Field. Its flow in the southern end is intermittent and depends on rainfall. The northern end of the ditch receives regular runoff from irrigation of the golf course and contains water year round. Surface water from Patrol Road Ditch flows into North Patrol Road Ditch through a culvert during periods of high water; water from the ditch is occasionally pumped directly to the Northern Channel during winter rainstorms. The probable source of contamination is surface water runoff into the storm drains that feed into Patrol Road Ditch. During the wet season, the northern end of the ditch provides open water and emergent vegetation. During the dry season, the southern end consists of habitat similar to upland areas. Several species of birds have been identified in Patrol Road Ditch. -North Patrol Road Ditch: This ditch runs 4,300 feet along the North Patrol Road, parallel to and south of the Northern Channel. The western portion of the ditch is lined with concrete, lies about 5 to 6 feet below mean sea level, and generally contains water year-round. The North Patrol Road Ditch carries surface water from east to west toward the Building 191 lift station. The North Patrol Road Ditch is an integral part of the storm drain system at Moffett. North Patrol Road Ditch receives stormwater from Marriage Road Ditch, Patrol Road Ditch, and the golf course. Surface water flow through the North Patrol Road Ditch is intermittent and depends on rainfall. The banks of the ditch are defined and are made of fill material and emergent vegetation but represent poor wetland habitat. Species observed here include ducks, doves, burrowing owls, and squirrels. -Debris Pile: The debris pile is located north of the Building 191 lift station at the western end of the Northern Channel, between the north bank of the channel and south bank of the U.S. Fish and Wildlife Service Diked Ponds. The pile consists of about 10,000 cubic yards of dredged sediment from the Northern Channel and construction debris from the 1950s to 1990s.

Ownership of the Northern Channel and related areas within Site 27 is divided among NASA, Lockheed, U.S. Fish and Wildlife Service, Santa Clara Valley Water District, Cargill Salt, and the City of Sunnyvale. NASA owns the southern berm along the northern boundary of the former NAS Moffett Field and a portion of the property where the debris pile is located. In addition, NASA owns the Marriage Road Ditch, the Patrol Road Ditch, and the North Patrol Ditch. Lockheed owns the southern berm along the northern boundary of its property and a small portion of the Northern Channel. Cargill Salt owns the remainder of the berm, the Northern Channel, and the remainder of the area where the debris pile is located. U.S. Fish and Wildlife Service purchased the saltwater evaporation ponds adjacent to Site 27 from Cargill Salt in 2003. The City of Sunnyvale owns ponds and a publicly owned treatment works located near the eastern end of the Northern Channel. In addition, Sunnyvale leases a portion of the berms for hiking and biking trails. In April 1991, the Base Realignment and Closure Commission voted to (1) decommission the former NAS Moffett Field, (2) transfer naval operations from the former NAS Moffett Field to other naval facilities, and (3) transfer most of the former NAS Moffett Field property to the NASA Ames Research Center. The areas south and west of Site 27 are part of the former NAS Moffett Field. Current tenants include the U.S. Army, the U.S. Air Force, and the California Air National Guard. Current uses include airfield operations, military facilities, and NASA research facilities. The former NAS Moffett Field has a fully functional federal airport and maintains facilities for military personnel and their families, including housing, commissary, clinic, service station, tennis courts, and a golf course. The tidal salt marsh and mud flats north and northeast of the former NAS Moffett Field were diked more than 50 years ago and were formerly used as commercial saltwater evaporation ponds. Cargill Salt, the

MOFFETT NAVAL AIR STATION (Continued) **1000228683**

former owner, sold the ponds to the U.S. Fish and Wildlife Service in 2003. Stormwater drainage is expected to be the future use of the Northern Channel and associated ditches, as it has been for the last 50 years. Remedial alternatives were selected and screened based on the premise that continued use for stormwater drainage is the most likely future land use scenario. Existing beneficial uses of groundwater, including municipal and domestic, industrial process, and industrial and agricultural water supply, are listed in the Basin Plan. Concentrations of total dissolved solids in groundwater in the area of Site 27 do not meet criteria in U.S. Environmental Protection Agency classification guidelines for a potential source of drinking water. According to the Basin Plan, the beneficial uses for surface water near the site are freshwater/estuarine habitat and wildlife habitat. A Record of Decision (ROD) addressing Operable Unit 08 at the NAS Moffett Field site was completed in July 2005.

Pathway: GROUND WATER PATHWAY
Scoring: 2

Summary Details:

Conditions at proposal October 15, 1984): Intel Corp. manufactured semiconductors at a plant in Mountain View, Santa Clara County, California, between 1968 and 1981. At that time, the facility occupied 2 acres and was surrounded by residential areas, office buildings, and other semiconductor-manufacturing plants. Monitoring wells on the site are contaminated with trichloroethylene, xylene, vinyl chloride, and 1,1- and trans-1,2-dichloroethylene, according to analyses conducted by a consultant to Intel. Contamination is believed to have resulted from leaking underground solvent tanks. About 270,000 people depend on wells within 3 miles of the site as a source of drinking water. Since early 1982, Intel hasbeen pumping ground water and treating it by carbon adsorption. The company intends to implement additional cleanup activities, including the installation of a system to pump and treat contaminated ground water and excavation of soil beneath the underground storage tanks, which were previously removed. The company is working with the California Regional Water Quality Control Board CRWQCB) to determine the full extent of the contamination. This is one

INTEL CORP. (MOUNTAIN VIEW PLANT) (Continued) **1000203455**

of 19 sites in the SouthBay Area of San Francisco. Facilities at these sites have used a variety of toxic chemicals, primarily chlorinated organic solvents, which contaminate a common ground water basin. Although these sites are listed separately, EPA intends to apply an area-wide approach to the problem as well as take specific action as necessary. Status June 10, 1986): Intel has removed approximately 4,600 cubic yards of contaminated soil and has installed four wells to pump and treat contaminated ground water. CRWQCB has issued Waste Discharge Requirements to the company. The requirements are the board s legal mechanism for regulating activities at facilities under its jurisdiction. On August 15, 1985, EPA issued a CERCLA Administrative Order on Consent to Intel Corp. s Mountain View Plant, as well as to Fairchild Camera s and Raytheon Corp. s Mountain View Plants. The order calls for the three companies to conduct a joint remedial investigation/feasibilitystudy of the area to determine the type and extent of contamination and identify alternatives for remedial action.

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART)

INTEL CORP. (MOUNTAIN VIEW PLANT) (Continued) **1000203455**

provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

CHEMOCENTRYX (Continued) **1007199396**

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Waste code: D022
Waste name: CHLOROFORM

Waste code: F002
Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE LISTED IN F001, F004, OR F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Facility name: ARASOR CORP
Site name: LIGHTBIT CORP
Classification: Small Quantity Generator

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Violation Status: No violations found

Potential Contaminants of Concern:	1,1,1-Trichloroethane (TCA), Other Chlorinated Hydrocarbons, Other Solvent or Non-Petroleum Hydrocarbon, Tetrachloroethylene (PCE), Trichloroethylene (TCE)
Site History:	The E/M Lubricant facility was operated as a metal coating facility by E/M Corporation. As a dry lubricant application facility, activities included application of graphite or molybdenum coating to metal parts and degreasing. Improper storage and handling of degreasing materials impacted soil and groundwater. Adjacent sites with solvent releases are common.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:
Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D008
Waste name: LEAD

Waste code: D011
Waste name: SILVER

Waste code: F006
Waste name: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC AND ALUMINUM

META TECHNOLOGIES INC. (Continued) **1000404147**

PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HITACHI CHEMICAL DIAGNOSTICS INC (Continued) **1008152364**

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Historical Generators:
Date form received by agency: 07/12/2012
Facility name: INSULECTRO
Classification: Small Quantity Generator

Hazardous Waste Summary:
Waste code: 121
Waste name: 121

Waste code: 122
Waste name: 122

INSULECTRO (Continued) **1014950470**

Waste code: 135
Waste name: 135

Waste code: 331
Waste name: 331

Waste code: 791
Waste name: 791

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Case Type:	Cleanup Program Site
Case Worker:	MBR
Local Agency:	Not reported
RB Case Number:	43S0048
File Location:	Regional Board
Potential Media Affected:	Indoor Air, Other Groundwater (uses other than drinking water), Soil, Soil Vapor
Potential Contaminants of Concern:	1,1,1-Trichloroethane (TCA), Other Chlorinated Hydrocarbons, Tetrachloroethylene (PCE), Trichloroethylene (TCE)
Site History:	1. Site Location: The site is located at 690 East Middlefield Road in Mountain View. It has also been previously identified as being located at 333 Logue Avenue. The site is bounded by East Middlefield Road on the southwest, Logue Avenue on the west, Maude Avenue on the northeast, and Mountain ViewlAlviso Road (highway 237) on the southeast. Three buildings occupy the site and are currently used for software duplication and distribution, parts distribution, and administrative offices. Areas surrounding the building are paved. Adjacent properties are developed for commercial and light industrial use. Prior to the early 1960s, land use in the site vicinity was agricultural. 2. Site History: Hewlett Packard Company (HP) began construction of the buildings in 1966. Previous activities on the site included metal cleaning, polishing, coating and painting operations, and production and testing' of magnetic head assemblies. These activities required the use of chemical such as degreasers, paint thinners, acids, and detergents; and generated a variety of hazardous wastes. As a result of subsurface soil investigations by HP beginning in 1983, volatile organic compounds (VOCs) were detected at the site. 3. Named Dischargers: HP, as owner and operator of the site, is named as a discharger. Order No. 95-131

Primary Waste:	Contaminated Ground Water
Primary Waste Type:	Hazardous/Influent or Solid Wastes that contain toxic, corrosive,

690 EAST MIDDLEFIELD (Continued) **S104156118**

ignitable or reactive substances and must be managed according to applicable DOHS standards.
Secondary Waste: Not reported
Secondary Waste Type: Not reported
Design Flow: 0
Baseline Flow: 0
Reclamation: No reclamation requirements associated with this facility.
POTW: The POTW Does not have an approved pretreatment program. Some POTWs may have local pretreatment programs that have not been approved by the regional board and/or EPA.
Treat To Water: Moderate Threat to Water Quality. A violation could have a major adverse impact on receiving biota, can cause aesthetic impairment to a significant human population, or render unusable a potential domestic or municipal water supply. Awsthetic impairment would include nuisance from a waste treatment facility.
Complexity: Category B - Any facility having a physical, chemical, or biological waste treatment system (except for septic systems with subsurface disposal), or any Class II or III disposal site, or facilities without treatment systems that are complex, such as marinas with petroleum products, solid wastes, and sewage pump out facilities.

Potential Media Affected:	Indoor Air, Other Groundwater (uses other than drinking water), Soil Vapor
Potential Contaminants of Concern:	Dichloroethane (DCA), Dichloroethene (DCE), Other Chlorinated Hydrocarbons, Tetrachloroethylene (PCE), Trichloroethylene (TCE), Vinyl chloride
Site History:	Background On March 2, 1998, the Regional Water Board issued a letter concurring that the volatile organic compounds (VOCs) concentrations in groundwater detected at the Site were associated with the VOC plume originating from the upgradient Hewlett-Packard E/M Lubricants facilities. However, the letter requested a deed restriction be placed on the Site for the notification of the presence of onsite impacted soil and groundwater and for the prohibition the drilling of water production wells and use of the shallow groundwater without prior notification to the Regional Water Board. On July 8, 2013, the Regional Water Board issued a cost recovery agreement letter in

CYPRESS BUSINESS PARK (Continued) **S113804588**

response to the June 19, 2013, Request for Agency Oversight of a Brownfield Site, regarding the redevelopment at the Site and Water Board review the Site Management Plan (SMP). Site Management Plan Summary Regional Water Board approval of the SMP was required by the City of Mountain View as a condition for obtaining the demolition/building permit. The SMP describes appropriate safe construction practices and soil/groundwater management procedures for redevelopment construction, including contingency procedures The proposed redevelopment covered under the SMP entails construction of a two-building office campus, including two above-grade open-air parking structures. There will be minimal site grading, and the buildings will be at-grade (i.e., no subsurface occupied spaces or parking areas). Despite the expected low and declining VOC concentrations in groundwater, as a precaution the office buildings have vapor intrusion mitigation system to mitigate any potential vapor intrusion concerns from the underlying VOC groundwater plume. Specifically, the SMP proposes a vapor intrusion mitigation system using a sprayed-in-place vapor barrier, such as Liquid Boot, and a sub-slab passive venting installed beneath the vapor barrier. Proper installation of the vapor barrier and the venting system will be verified by PES Environmental, Inc. Additionally, the SMP proposes environmental monitoring and/or field screening of the following. Worker health and safety Installation of the geotechnical test piles Removal of the building foundation slab and parking lot Demolition of the existing subsurface utilities Installation of the subsurface utilities Grading activities Construction of the building and parking structure foundation Discovery of unexpected below grade features Reuse of graded soil Disposal of excess soil

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

Case Type:	Cleanup Program Site
Case Worker:	LG
Local Agency:	Not reported
RB Case Number:	43s1028
File Location:	Not reported
Potential Media Affected:	Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern:	* Solvents
Site History:	No Water Board oversight of cleanup at this site. This case is included in Geotracker because the site is covered by the Water Boards NPDES general permits for discharges from pump and treat systems to surface waters (one each for fuels- and VOC-impacted sites). This can happen for two reasons: (i) the site is overseen by another agency (e.g., USEPA or DTSC) and needs coverage under one of the NPDES general permits or (ii) construction dewatering in an area of groundwater contamination necessitates NPDES general permit coverage. Including this case in Geotracker helps staff to receive and review required NPDES reports.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Summary Details:

Conditions at proposal October 15, 1984): Raytheon Corp. manufactures semiconductor products at a plant in Mountain View, Santa Clara County, California. The facility occupies about 30 acres and is surrounded by industrial, business, and residential areas. Soil and ground water beneath the site are contaminated with trichloroethylene, 1,1,1-trichloroethane, and 1,1- and trans-1,2- dichloroethylene, according to analyses conducted by a consultant to Raytheon. Contaminationis believed to have resulted from a leaking underground chemical storage tank and/or concrete acid neutrali ation sumps. About 270,000 people depend on wells within 3 miles of the site as a source of drinking water. In late 1982, Raytheon conducted an investigation to determine if downgradient ground water contamination near the north property boundary resulted from a source on its property. Raytheon concluded that it was not possible to establish a specific source of contamination based on data obtained from its investigation. At present, Raytheon is working with the California Regional Water Quality Control Board CRWQCB) to determine the full extent of the problem.
This is one of 19 sites in the South BayArea of San Francisco. Facilities at these sites have used a variety of toxic chemicals, primarily chlorinated organic solvents, which contaminate a common ground water basin. Although these sites are listed separately, EPA intends to apply an area-wide approach to the problem as well as take specific action as necessary. Status

RAYTHEON CORP. (Continued) **1000407768**

June 10, 1986): In an attempt to determine the full extent of ground water contamination, Raytheon has installed three wells to pump and treat ground water to contain the contaminated plume. CRWQCB has issued Waste Discharge Requirements to the company. The requirements are the board s legal mechanism for regulating activities at facilities under its jurisdiction.
On August 15, 1985,EPA issued a CERCLA Administrative Order on Consent to Raytheon Corp. s Mountain View Plant, as well as to Fairchild Camera s and Intel Corp. s Mountain View Plants. The order calls for the three companies to conduct a joint remedial investigation/feasibility study of the area to determine the type and extent of contamination and identify alternatives for remedial action.

Longitude:	-122.05327
Case Type:	Cleanup Program Site
Case Worker:	LG
Local Agency:	Not reported
RB Case Number:	43s1038
File Location:	Not reported
Potential Media Affected:	Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern:	* Solvents
Site History:	No Water Board oversight of cleanup at this site. This case is included in Geotracker because the site is covered by the Water Boards NPDES general permits for discharges from pump and treat systems to surface waters (one each for fuels- and VOC-impacted sites). This can happen for two reasons: (i) the site is overseen by another agency (e.g., USEPA or DTSC) and needs coverage under one of the NPDES general permits or (ii) construction dewatering in an area of groundwater contamination necessitates NPDES general permit coverage. Including this case in Geotracker helps staff to receive and review required NPDES reports.

Background Info:	to drinking water aquifers.
	Raytheon entered into a consent agreement with EPA in August,

RAYTHEON CORPORATION (Continued) **S100833418**

1985. Raytheon removed a leaking tank in December of 1987, installed surface drainage controls, and is operating a groundwater extraction system. The groundwater extraction system was installed in 1982, and involves treating the extracted water with either air or steam stripping. DHS reviews Raytheon's monthly reports on this system. Raytheon is also currently participating in an area-wide remedial investigation and feasibility study.
The Raytheon Corporation operates a semiconductor manufacturing plant at this 30-acre site. Chemicals used in the manufacturing process and wastes generated by this process are handled and stored onsite. The site is located adjacent to industrial, commercial and residential development. This site is part of the Middlefield, Ellis, Whisman (MEW) area.
Soil and groundwater beneath the site are contaminated with trichloroethylene (TCE), trichloroethane (TCA), dichloroethylene (DCE), and chloroform. Contamination is believed to have resulted from leaking underground chemical storage tanks and/or concrete acid neutralization sumps.
About 270,000 people live within a 3-mile radius of the site and depend on groundwater as a source of drinking water. Groundwater contamination at the site represents a significant threat

FAIRCHILD SEMICONDUCTOR OF CA (Continued) **1001226951**

EPA Region: 09
Classification: Small Small Quantity Generator
Description: Handler: generates more than 100 and less than 1000 kg of hazardous waste during any calendar month and accumulates less than 6000 kg of hazardous waste at any time; or generates 100 kg or less of hazardous waste during any calendar month, and accumulates more than 1000 kg of hazardous waste at any time

Owner/Operator Summary:
Owner/operator name: FAIRCHILD SEMICONDUCTOR
Owner/operator address: 333 WESTERN AVE
SOUTH PORTLAND, ME 04106
Owner/operator country: Not reported
Owner/operator telephone: (207) 775-8984
Legal status: Private
Owner/Operator Type: Owner
Owner/Op start date: Not reported
Owner/Op end date: Not reported

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Hazardous Waste Summary:
Waste code: D000
Waste name: Not Defined

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE

FAIRCHILD SEMICONDUCTOR OF CA (Continued) **1001226951**

DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Waste code: D004
Waste name: ARSENIC

Waste code: D006
Waste name: CADMIUM

Waste code: D007
Waste name: CHROMIUM

Waste code: D008
Waste name: LEAD

Waste code: D009
Waste name: MERCURY

Waste code: D011
Waste name: SILVER

Waste code: D035
Waste name: METHYL ETHYL KETONE

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F005
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

CA BOND EXP. PLAN:

Reponsible Party:	NPL SITE CLEANUP WORKPLAN
Project Revenue Source Company:	Not reported
Project Revenue Source Addr:	Not reported
Project Revenue Source City,St,Zip:	Not reported
Project Revenue Source Desc:	The RP will fund the characterization and remedial action at the site. State Bond funds will be used for oversight of the RP's activities. The Department has budgeted $50,000 for direct costs related to the project and will seek to recover all actual costs from the responsible party.
Site Description:	The Raytheon Corporation operates a semiconductor manufacturing plant at this 30-acre site. Chemicals used in the manufacturing process and wastes generated by this process are handled and stored onsite. The site is located adjacent to industrial, commercial and residential development.
Hazardous Waste Desc:	Soil and ground water beneath the site are contaminated with trichloroethylene (TCE), trichloroethane (TCA), dichloroethylene (DCE), and chloroform. Contamination is believed to have resulted from leaking underground chemical storage tanks and/or concrete acid neutralization sumps.
Threat To Public Health & Env:	About 270,000 people live within a 3-mile radius of the site and depend on ground water as a source of drinking water. Ground water contamination at the site represents a significant threat to drinking water aquifers.
Site Activity Status:	Raytheon entered into a consent agreement with the EPA in August, 1985. Raytheon has removed the leaking tank, installed surface drainage controls and is operating a ground water extraction system. Raytheon is also currently participating in an area-wide remedial investigation and feasibility study.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Waste name: SILVER

Waste code: D018
Waste name: BENZENE

Waste code: D019
Waste name: CARBON TETRACHLORIDE

Waste code: D022
Waste name: CHLOROFORM

Waste code: F002
Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE LISTED IN F001, F004, OR F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT

NAXCOR (Continued) **1005441330**

NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F005
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F024
Waste name: PROCESS WASTES, INCLUDING BUT NOT LIMITED TO, DISTILLATION RESIDUES, HEAVY ENDS, TARS, AND REACTOR CLEAN-OUT WASTES, FROM THE PRODUCTION OF CERTAIN CHLORINATED ALIPHATIC HYDROCARBONS BY FREE RADICAL CATALYZED PROCESSES. THESE CHLORINATED ALIPHATIC HYDROCARBONS ARE THOSE HAVING CARBON CHAIN LENGTHS RANGING FROM ONE TO AND INCLUDING FIVE, WITH VARYING AMOUNTS AND POSITIONS OF CHLORINE SUBSTITUTION. (THIS LISTING DOES NOT INCLUDE WASTEWATERS, WASTEWATER TREATMENT SLUDGES, SPENT CATALYSTS, AND WASTES LISTED IN SECTION 261.31 OR SECTION 261.32).

Waste code: F025
Waste name: CONDENSED LIGHT ENDS, SPENT FILTERS AND FILTER AIDS, AND SPENT DESICCANT WASTES FROM THE PRODUCTION OF CERTAIN CHLORINATED ALIPHATIC HYDROCARBONS, BY FREE RADICAL CATALYZED PROCESSES. THESE CHLORINATED ALIPHATIC HYDROCARBONS ARE THOSE HAVING CARBON CHAIN LENGTHS RANGING FROM ONE TO AND INCLUDING FIVE, WITH VARYING AMOUNTS AND POSITIONS OF CHLORINE SUBSTITUTION.

Waste code: K014
Waste name: BOTTOMS FROM THE ACETONITRILE PURIFICATION COLUMN IN THE PRODUCTION OF ACRYLONITRILE

Waste code: K020
Waste name: HEAVY ENDS FROM THE DISTILLATION OF VINYL CHLORIDE IN VINYL CHLORIDE MONOMER PRODUCTION.

Waste code: K042
Waste name: HEAVY ENDS OR DISTILLATION RESIDUES FROM THE DISTILLATION OF TETRACHLOROBENZENE IN THE PRODUCTION OF 2,4,5-T.

Waste code: K105
Waste name: SEPARATED AQUEOUS STREAM FROM THE REACTOR PRODUCT WASHING STEP IN THE PRODUCTION OF CHLOROBENZENES.

Violation Status: No violations found

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART)

NAXCOR (Continued) **1005441330**

provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Local Agency:	Not reported
RB Case Number:	43s1042
File Location:	Not reported
Potential Media Affected:	Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern:	* Solvents
Site History:	No Water Board oversight of cleanup at this site. This case is included in Geotracker because the site is covered by the Water Boards NPDES general permits for discharges from pump and treat

487 E MIDDLEFIELD SOBRATO PRP (Continued) **S104586556**

systems to surface waters (one each for fuels- and VOC-impacted sites). This can happen for two reasons: (i) the site is overseen by another agency (e.g., USEPA or DTSC) and needs coverage under one of the NPDES general permits or (ii) construction dewatering in an area of groundwater contamination necessitates NPDES general permit coverage. Including this case in Geotracker helps staff to receive and review required NPDES reports.

CA WDS:

Facility ID:	San Francisco Bay 438522001
Facility Type:	Other - Does not fall into the category of Municipal/Domestic, Industrial, Agricultural or Solid Waste (Class I, II or III)
Facility Status:	Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
NPDES Number:	CAG912003 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board
Subregion:	2
Facility Telephone:	4158991600
Facility Contact:	Susan Gahry (PES)
Agency Name:	SIEMENS ISELIN
Agency Address:	170 Wood Avenue South
Agency City,St,Zip:	Iselin 8830
Agency Contact:	GARY JONES
Agency Telephone:	7323213866
Agency Type:	Private
SIC Code:	0
SIC Code 2:	Not reported
Primary Waste:	Contaminated Ground Water
Primary Waste Type:	Hazardous/Influent or Solid Wastes that contain toxic, corrosive, ignitable or reactive substances and must be managed according to applicable DOHS standards.
Secondary Waste:	Not reported
Secondary Waste Type:	Not reported
Design Flow:	0
Baseline Flow:	0
Reclamation:	Not reported
POTW:	Not reported
Treat To Water:	Moderate Threat to Water Quality. A violation could have a major adverse impact on receiving biota, can cause aesthetic impairment to a significant human population, or render unusable a potential domestic or municipal water supply. Awsthetic impairment would include nuisance from a waste treatment facility.
Complexity:	Category B - Any facility having a physical, chemical, or biological waste treatment system (except for septic systems with subsurface disposal), or any Class II or III disposal site, or facilities without treatment systems that are complex, such as marinas with petroleum products, solid wastes, and sewage pump out facilities.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

SILTEC (Continued) **1000397953**

corrective action activities required under RCRA.

Background Info:	Fairchild operates a semiconductor manufacturing plant at this 56-acre site. Chemicals used in the manufacturing processa and wastes generated as a result of this process have been handled & stored onsite. The site is adjacent to residential & industrial development. This site is part of the Middlefield-Ellis-Whisman (MEW) area. In 1982, soil and groundwater contamination were discovered. The sources of contamination were leaking underground storage tanks containing solvents. At that time, there were a total of 71 tanks & sumps used for the onsite storage of hazardous materials and wastes. The contaminants which have been detected in soil and groundwater include trichloroethylene (TCE), trichloroethane (TCA), dichloroethylene (DCE) and chloroform. Groundwater contamination represents a significant threat to aquifers used as a source of drinking water. About 270,000 people reside within a 3-mile radius of the site. One private well has been closed due to the encroachment of contaminants. To date, three contaminated private wells have been identified. The City of Mountain View operates a municipal well (No. 18) 1.2 miles from the site. Fairchild entered into a consent agreement with EPA to conduct RI/FS in August, 1985. As an initial stabilization action, six of the 71 tanks and sumps used to store hazardous materials and wastes were excavated and removed. A groundwater extraction system consisting of 25 extraction wells has been installed and is operating.

CA BOND EXP. PLAN:

Reponsible Party:	NPL SITE CLEANUP WORKPLAN
Project Revenue Source Company:	Not reported
Project Revenue Source Addr:	Not reported
Project Revenue Source City,St,Zip:	Not reported
Project Revenue Source Desc:	The RP will fund the characterization and remedial action at this site. State Bond funds will be used for oversight of the RP's activities. DHS has budgeted $25,000 for oversight activities. DHS will seek cost recovery for its direct costs includingstaff costs and overhead associated with the project.
Site Description:	Fairchild operates a semiconductor manufacturing plant at this 56-acre site. Chemicals used in the manufacturing process and wastes generated as a result of this process have been handled and stored onsite. The site is adjacent to residential and industrial development.
Hazardous Waste Desc:	In 1982, soil and ground water contamination were discovered. The sources of contamination were leaking underground storage tanks containing solvents. At that time, there were a total of 71 tanks and sumps used for the onsite storage of hazardous materials and wastes. The contaminants which have been detected in soil and ground water include trichloroethylene (TCE), trichloroethane (TCA), dichloroethylene (DCE) and chloroform.
Threat To Public Health & Env:	Ground water contamination represents a significant threat to aquifers used as a source of drinking water. About 270,000 people reside within a 3-mile radius of the site. One private well has been closed due to the encroachment of contaminants. To date, three contaminated private wells have been identified. The City of Mountain View operates a municipal well (No. 18) 1.2 miles from the site.
Site Activity Status:	Fairchild entered into a consent agreement with EPA in August, 1985. As an initial remedial measure, six of the 71 tanks and sumps used to store hazardous materials and wastes were excavated and removed. A ground water extraction system consisting of 25 extraction wells has been installed and is operating. Fairchild is also participating in an area-wide remedial investigation and feasibility study.

Potential Contaminants of Concern:	Not reported
Site History:	No Water Board oversight of cleanup at this site. This case is included in Geotracker because the site is covered by the Water Boards NPDES general permits for discharges from pump and treat systems to surface waters (one each for fuels- and VOC-impacted sites). This can happen for two reasons: (i) the site is overseen by another agency (e.g., USEPA or DTSC) and needs coverage under one of the NPDES general permits or (ii) construction dewatering in an area of groundwater contamination necessitates NPDES general permit coverage. Including this case in Geotracker helps staff to receive and review required NPDES reports.

CA BOND EXP. PLAN:

Reponsible Party:	NPL SITE CLEANUP WORKPLAN
Project Revenue Source Company:	Not reported
Project Revenue Source Addr:	Not reported
Project Revenue Source City,St,Zip:	Not reported
Project Revenue Source Desc:	The RP will fund the characterization and remedial action at the site. State Bond funds will be used for oversight of the RPs activities. DHS has budgeted $50,000 for direct costs related to the project and will seek to recover all actual costs fromthe responsible party.
Site Description:	Between 1968 and 1981, Intel Corporation operated a semiconductor manufacturing plant at the site. Chemicals used in the manufacturing process and wastes generated by this process were handled and stored onsite. The site is located adjacent to residential and commercial development.
Hazardous Waste Desc:	In 1981, soil and ground water contamination was discovered at the site. An investigation determined that the sources of contamination were leaking underground storage tanks containing solvents. The types of contaminants identified include trichloroethylene (TCE), xylene, Freon-113, trichloroethane (TCA), dichloroethylene (DCE) and vinyl chloride.
Threat To Public Health & Env:	Approximately 270,000 people living within a 3-mile radius of the facility depend on ground water as a principal sources of drinking water. Three private wells have been contaminated. Five municipal wells belonging to the City of Mountain View and five City of Sunnyvale wells are located within a three-mile radius of the site. The City of Mountain View's well No. 18 is located 1.1 miles from the facility and is 2,600 feet away from a contaminated monitoring well.
Site Activity Status:	Intel entered into a consent agreement with EPA in August, 1985. All five underground tanks and sumps at the site have been excavated along with 4,600 cubic yards of contaminated soil. Ground water monitoring and extraction wells have been installedfor plume characterization, monitoring and extraction. About 72,000 gallons of contaminated ground water is pumped daily and treated by carbon adsorption prior to discharge to Stevens Creek, Whisman Slough and the San Francisco Bay.

Background Info:	Between 1968, and 1981, Intel Corporation operated a semiconductor manufacturing plant at the site. Chemicals used in the manufacturing process and wastes generated by this process were handled and stored onsite. The site is located adjacent to residential and commercial development. This site is part of the Middlefield-Ellis-Whisman (MEW) study area. In 1981, soil and groundwater contamination was discovered at the site. An investigation determined that the sources of contamination were leaking underground storage tanks containing solvents. The types of contaminants identified include trichloroethylene (TCE), xylene, Freon-113, trichloroethane (TCA), dichloroethylene (DCE), and vinyl chloride. Approximately 270,000 people living within a 3-mile radius of the facility depend on groundwater as a principal source of drinking water. Three private wells have been contaminated. Five municipal wells belonging to the City of Mountain View and five City of Sunnyvale wells are located within a three-mile radius of the site. The City of Mountain View's well No. 18 is located 1.1 miles from the facility & is 2,600 feet away from a contaminated monitoring well. In August, 1985, Intel entered into a consent agreement with EPA to conduct a RI/FS. All five underground tanks and sumps at the site have been excavated along with 4,600 cubic yards of contaminated soil. Groundwater monitoring and extraction wells have been installed

INTEL CORPORATION (MOUNTAIN VIEW PLANT) (Continued) **S105628343**

	for plume characterization, monitoring and extraction. About 72,000 gallons of contaminated groundwater is pumped daily and treated by carbon adsorption prior to discharge to Stevens Creek, Whisman Slough and the San Francisco Bay.

Summary Details:

Conditions at proposal October 15, 1984): Fairchild Semiconductor Corp. manufactures semiconductors in Mountain View, Santa Clara County, California. The facility occupies approximately 56 acres and is surrounded by residential and industrial areas. This site was originally proposed under the name Fairchild Camera Instrument Corp. Mountain View Plant). The company took the new name in 1986. Monitoring wells on the site are contaminated with trichloroethylene,1,1,1-trichloroethane, 1,1- and trans-1,2-dichloroethylene, according to analyses conducted by a consultant to Fairchild. Contamination is believed to have resulted from leaking underground tanks. About 270,000 people depend on wells within 3miles of the site for drinking water. Since early 1982, Fairchild has been investigating the site geology and hydrogeology and attempting to define the lateral and vertical extent of solvents underlying the site. Fairchild has installedtwo wells to pump and treat the contaminated ground water plume. The company is working with the California Regional Water Quality Control Board to further define the extent of contamination and outline various cleanup strategies. The plant received Interim Status under Subtitle C of the Resource Conservation and Recovery Act RCRA) when the company filed Part A of a permit application. This is one of 19 sites in the South Bay Area of San Francisco. Facilities at these sites have used a variety of toxic chemicals, primarily chlorinated organic solvents, which contaminate a common ground water basin. Although these sites are listed separately, EPA intends to apply an area-wide approach to the problem as well astake specific action as necessary. Status February 1986): Continuing to determine the extent

FAIRCHILD SEMICONDUCTOR CORP. (MOUNTAIN VIEW PLANT) (Continued) **1000260555**

of ground water contamination, Fairchild has installed more than 100 monitoring wells. On August 15, 1985, EPA issued an AdministrativeOrder on Consent under CERCLA Section 106 a) to Fairchild s Mountain View Plant, as well as to Intel Corp. s and Raytheon Corp. s Mountain View Plants. The order calls for the companies to conduct a joint remedial investigation/feasibility study of the area to determine the type and extent of contamination and identify alternatives for remedial action. Status June 1988): EPA is proposing to drop Fairchild Semiconductor Corp. s Mountain View Plant from the proposed NPL. Because the site is a treatment and storage facility, it is subject to the corrective action authorities of Subtitle C RCRA. Fairchild now has 25 wells in operation that pump and treat contaminated ground water; has installed three undergroundslurry walls to control migration of contaminated ground water. EPA has sealed two abandoned agricultural wells that were carrying contamination to the deeper aquifers. EPA may also pursue cleanup under RCRA authorities and will ensure that the cleanup protects public health and the environment. EPA can later repropose the site for the NPL if it determines that the owner or operator is unable or unwilling to clean up the site effectively. Status February 11, 1991): EPAis adding this site to the NPL because, although it is subject to RCRA Subtitle C, the transfer of primary responsibility from CERCLA to RCRA would delay and complicate the overall cleanup of the site. The RI was concluded in July 1988. Adraft FS and EPA s Proposed Plan were presented to the community for a 60-day public comment period in November 1988. EPA signed the Record of Decision ROD) identifying the selected remedy on June 9, 1989. On September 21, 1990, EPA issued an Explanation of Significant Differences clarifying the ROD. In May 1989, EPA sent Special Notice Letters calling for a remedial design/remedial action RD/RA) Consent Decree to Fairchild and 16 other parties potentially responsible for wastes associated with the site. Fairchild failed to conclude a settlement Consent Decree) with EPA. On November 29, 1990, EPA issued Fairchild and eight other parties a Unilateral Administrative Order for RD/RA.

Primary Waste:	Not reported
Primary Waste Type:	Not reported
Secondary Waste:	Not reported
Secondary Waste Type:	Not reported
Design Flow:	0
Baseline Flow:	0
Reclamation:	No reclamation requirements associated with this facility.
POTW:	The POTW Does not have an approved pretreatment program. Some POTWs may have local pretreatment programs that have not been approved by the regional board and/or EPA.
Treat To Water:	Moderate Threat to Water Quality. A violation could have a major adverse impact on receiving biota, can cause aesthetic impairment to a significant human population, or render unusable a potential domestic or municipal water supply. Awsthetic impairment would include nuisance from a waste treatment facility.
Complexity:	Category B - Any facility having a physical, chemical, or biological waste treatment system (except for septic systems with subsurface disposal), or any Class II or III disposal site, or facilities without treatment systems that are complex, such as marinas with petroleum products, solid wastes, and sewage pump out facilities.

Case Type: Cleanup Program Site
Case Worker: LG
Local Agency: Not reported
RB Case Number: 43s1029
File Location: Not reported
Potential Media Affected: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: * Solvents
Site History: No Water Board oversight of cleanup at this site. This case is included in Geotracker because the site is covered by the Water Boards NPDES general permits for discharges from pump and treat systems to surface waters (one each for fuels- and VOC-impacted sites). This can happen for two reasons: (i) the site is overseen by another agency (e.g., USEPA or DTSC) and needs coverage under one of the NPDES general permits or (ii) construction dewatering in an area of groundwater contamination necessitates NPDES general permit coverage. Including this case in Geotracker helps staff to receive and review required NPDES reports.

Event: Igration of Contaminated Groundwater under Control, More information is needed to make a determination.

Event date: 08/30/2006
Event: Igration of Contaminated Groundwater under Control, Yes, Migration of Contaminated Groundwater Under Control has been verified. Based on a review of information contained in the EI determination, it has been determined that migration of contaminated groundwater is under control at the facility. Specifically, this determination indicates that the migration of contaminated groundwater is under control, and that monitoring will be conducted to confirm that contaminated groundwater remains within the existing area of contaminated groundwater. This determination will be re-evaluated when the Agency becomes aware of significant changes at the facility.

Event date: 08/30/2006
Event: Igration of Contaminated Groundwater under Control, Yes, Migration of Contaminated Groundwater Under Control has been verified. Based on a review of information contained in the EI determination, it has been determined that migration of contaminated groundwater is under control at the facility. Specifically, this determination indicates that the migration of contaminated groundwater is under control, and that monitoring will be conducted to confirm that contaminated groundwater remains within the existing area of contaminated groundwater. This determination will be re-evaluated when the Agency becomes aware of significant changes at the facility.

Event date: 04/09/2007
Event: Current Human Exposures under Control, Yes, Current Human Exposures Under Control has been verified. Based on a review of information contained in the EI determination, current human exposures are expected to be under control at the facility under current and reasonably expected conditions. This determination will be re-evaluated when the Agency/State becomes aware of significant changes at the facility.

Event date: 04/09/2007
Event: Current Human Exposures under Control, Yes, Current Human Exposures Under Control has been verified. Comments:	Not reported
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Site Screening
Completed Date:	11/19/1990
Comments:	Completed Site Screening. 19 soil samples have been randomly taken at a depth of approximately 1 foot. Samples were analyzed for organochlorine pesticides. 2 samples had slightly elevated DDD, DDE, and DDT (1.62 and 1.32 ppm). 1 sample had slightly elevated chlordane. Site Screening done recommends a Preliminary Endangerment Assessment (PEA). More samples are needed to characterize the vertical extent of contamination. Depending upon the pesticide-use history, soil samples need to be analyzed not only for chlorinated pesticides but also metals, organophospates, and carbamates.

Case Type:	Cleanup Program Site
Case Worker:	MBR
Local Agency:	Not reported
RB Case Number:	43S0529
File Location:	Regional Board
Potential Media Affected:	Other Groundwater (uses other than drinking water), Soil, Soil Vapor
Potential Contaminants of Concern:	Not reported
Site History:	California Microwave (CMI) operated a production facility at 985 Almanor until 1996. The company's headquarters were located at 990 Almanor. The production facility manufactured proprietary electronic equipment for telecommunication transmission and distribution, as well as defense applications. Chemical wastes included 1,1,1-trichloroethane (TCA), freon, methyl ethyl ketone, deoxidizer, waste oil and mixed oil, sodium hydroxide, allodyning solution, waste water, and solid wastes. Inspections conducted in the 1980's by the Department of Health Services, Toxic Substances Control Division (DHS, currently the Department of Toxic Substances Control, DTSC) found leaking drums, ponded water, stains on blacktop, and unlabelled drums were observed. Enforcement actions were taken by DHS, including requiring the construction of a bermed hazardous waste storage area. Soil and groundwater investigations were performed under the oversight of the San Francisco Bay Regional Water Quality Control Board (RWQCB). Soils containing VOCs greater than 0.5 parts per million (ppm) were excavated in June of 1995. Groundwater analyses indicated that TCE was migrating onto the former CMI facility from neighboring companies upgradient of the Site. RWQCB noted that the PCE in groundwater appeared to originate from an on-site source. Following this report, RWQCB did not pursue further investigation at the Site for several reasons. Soil removal effectively removed the source of PCE to grounwater, and the Site is currently capped with buildings and asphalt. The concentrations of VOCs in the groundwater beneath the Site were also not high enough compared to levels of VOCs in the local groundwater plume to warrant further work at this time, and the PCE contamination was limited to shallow groundwater.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Historical Generators:
Date form received by agency: 03/04/1999
Facility name: E G AND G PETICON
Site name: EG&G RETICON
Classification: Large Quantity Generator

Date form received by agency: 02/03/1992
Facility name: E G AND G PETICON
Site name: EG&G/RETICON
Classification: Large Quantity Generator

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D007
Waste name: CHROMIUM

Waste code: D008
Waste name: LEAD

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Violation Status: No violations found

FINDS:

Registry ID: 110009529876

Environmental Interest/Information System
The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and

E G AND G PETICON (Continued) **1000232148**

their precursors, as well as hazardous air pollutants (HAPs).

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CA WDS:
Facility ID: San Francisco Bay 438165002
Facility Type: Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping.
Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
NPDES Number: CAG912003 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board
Subregion: 2
Facility Telephone: Not reported
Facility Contact: Reshma Shah (LFR)
Agency Name: SIEMENS ISELIN
Agency Address: 170 WOOD AVENUE SOUTH
Agency City,St,Zip: ISELIN 8830
Agency Contact: GARY JONES
Agency Telephone: 7323213866
Agency Type: Private
SIC Code: 3674
SIC Code 2: Not reported
Primary Waste: Contaminated Ground Water
Primary Waste Type: Hazardous/Influent or Solid Wastes that contain toxic, corrosive, ignitable or reactive substances and must be managed according to applicable DOHS standards.
Secondary Waste: Not reported
Secondary Waste Type: Not reported
Design Flow: 0
Baseline Flow: 0
Reclamation: No reclamation requirements associated with this facility.
POTW: The POTW Does not have an approved pretreatment program. Some POTWs may have local pretreatment programs that have not been approved by the regional board and/or EPA.
Treat To Water: Moderate Threat to Water Quality. A violation could have a major adverse impact on receiving biota, can cause aesthetic impairment to a significant human population, or render unusable a potential domestic or municipal water supply. Awsthetic impairment would include nuisance from a waste treatment facility.
Complexity: Category B - Any facility having a physical, chemical, or biological waste treatment system (except for septic systems with subsurface disposal), or any Class II or III disposal site, or facilities without treatment systems that are complex, such as marinas with petroleum products, solid wastes, and sewage pump out facilities.

Environmental Interest/Information System

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Waste code: D004
Waste name: ARSENIC

Waste code: D007
Waste name: CHROMIUM

Waste code: D008
Waste name: LEAD

Waste code: D011
Waste name: SILVER

Waste code: F006
Waste name: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

SIERRA CIRCUITS, INC. (Continued) **1000368651**

Waste code: F007
Waste name: SPENT CYANIDE PLATING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 04/26/2013
Date Data Arrived at EDR: 05/09/2013

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 04/26/2013

Next Scheduled EDR Contact: 10/21/2013
Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 04/26/2013

Next Scheduled EDR Contact: 10/21/2013
Data Release Frequency: Quarterly

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 04/26/2013

Data Release Frequency: Varies

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 07/11/2013

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Last EDR Contact: 09/05/2013
Next Scheduled EDR Contact: 11/18/2013
Data Release Frequency: Quarterly

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Local Lists of Hazardous waste / Contaminated Sites

US CDL: Clandestine Drug Labs
A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 08/06/2013

Data Release Frequency: Varies

US HIST CDL: National Clandestine Laboratory Register

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

2020 COR ACTION: 2020 Corrective Action Program List
The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)
The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

EPA WATCH LIST: EPA WATCH LIST
EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data
Source: Rextag Strategies Corp.
Telephone: (281) 769-2247
U.S. Electric Transmission and Power Plants Systems Digital GIS Data

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

UTM Y (Meters):	4139235.0

USGS TOPOGRAPHIC MAP

Target Property Map:	37122-D1 MOUNTAIN VIEW, CA
Most Recent Revision:	1999

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NNE

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
SANTA CLARA, CA	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 06085C - FEMA DFIRM Flood data

Additional Panels in search area: Not Reported

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
MOUNTAIN VIEW	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/4 - 1/2 Mile NW
Site Name:	Nec
Site EPA ID Number:	CAD980883268
Surficial Aquifer Flow Dir.:	North-Northwest
Measured Depth to Water:	10 feet.
Hydraulic Connection:	The surficial aquifers (present to a depth of 137 feet) and the lower aquifer are separated by a clay aquitard, but are interconnected in the vicinity of the site.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information based on site-specific subsurface investigations is documented in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site--specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Quaternary
Code:	Q *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name:	BOTELLA
Soil Surface Texture:	clay loam
Hydrologic Group:	Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.
Soil Drainage Class:	Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel:	MODERATE
Depth to Bedrock Min:	> 60 inches
Depth to Bedrock Max:	> 60 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	9 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.60 Min: 0.20	Max: 7.30 Min: 5.60
2	9 inches	41 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.60 Min: 0.20	Max: 7.80 Min: 5.60
3	41 inches	76 inches	sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 0.60 Min: 0.20	Max: 7.80 Min: 5.60

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: No Other Soil Types

Surficial Soil Types: No Other Soil Types

Shallow Soil Types: No Other Soil Types

Deeper Soil Types: No Other Soil Types

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Health Services
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations
Source: Department of Conservation
Telephone: 916-323-1779
Oil and Gas well locations in the state.

RADON

State Database: CA Radon
Source: Department of Health Services
Telephone: 916-324-2208
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through 2013. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

The Sanborn Library includes more than 1.2 million Sanborn fire insurance maps, which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ☑ Library of Congress
- ☑ University Publications of America
- ☑ EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

Iris Environmental (the client) is permitted to make up to THREE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

EDR Environmental Lien and AUL Search

The EDR Environmental Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

Subject: Status of Property at 440 Clyde Avenue, Mountain View, Santa Clara County, CA

Dear Mr. Dostart:

This letter explains the status of the subject property with respect to groundwater pollution in the vicinity. No further action related to pollutants at the subject site is required.

Background

The subject property is located south of the Hetch Hetchy Aqueduct, west of the Sunnyvale Municipal Golf Course, and east of Logue Court. It is our understanding that Dostart Development Company LLC plans to form an entity named 440 Clyde Associates LLC which intends to purchase the subject property and retain the two on-site buildings for commercial uses.

A Phase I and Screening Level Phase II Environmental Assessment Report for the subject property was completed by GeoTrans, Inc. on February 6, 2007. A Phase I Environmental Assessment Report for the subject site was also completed by Professional Service Industries in 1997, and by Lowney Associates in 2000. Based on historical information, the subject property was used for agricultural purposes from prior to 1939 to the early 1960s. In 1965, Pauline Moseman constructed the existing single-story building on the subject property. MBL Equipment Company (MBL Laundry Supply) appears to have been the primary tenant from 1965 until the late 1970s, at which time minor tenants occupied the building. In 1984 a separate two-story building was constructed south of the single-story building, and Apple Computer occupied both buildings. Since that time, both on-site buildings have been occupied by software design related tenants, including Quickturn Design Systems, Pie Design Systems, Marimba Inc., Differential Inc., and the most recent tenant BMC Software. BMC Software is in the process of

vacating both buildings, and the buildings are currently unoccupied. Hazardous materials have not been used or stored on the subject property in reportable quantities since approximately the late 1970s.

Storage of solvents has been documented on the subject property. MBL Equipment had two above-ground tetrachloroethene (PCE) storage tanks adjacent to the south side of the southwest corner of the single-story (northern-most) building. The tanks were outside the building on a concrete pad, and are thought to have been installed in 1969 and removed in the late 1970's. By 1984 the two tanks were no longer on the subject property. The bulk PCE storage was for supplying dry cleaning businesses off-site. No manufacturing activities involving solvents or other compounds are known to have occurred on the subject property.

On-site Investigations

In 1987 Chips Environmental Consultants, on behalf of Apple Computer, drilled ten soil borings on the subject property for collection of soil samples for analysis of VOCs, petroleum hydrocarbons, and PCBs. No soil contamination was found in the ten samples analyzed. In 1997 Levine-Fricke-Recon, as part of a regional study along Maude and Clyde Avenues, drilled two CPT borings on the subject Property for collection of soil lithology and analysis of groundwater samples. PCE was found in one groundwater sample at 74 ug/l and trichloroethene (TCE) was found in the second groundwater sample at 22 ug/l. No other VOCs were detected in the two groundwater samples. Both PCE and TCE were reported in groundwater samples collected from upgradient CPT boring locations in the same range or higher.

In 2007 GeoTrans, on behalf of Dostart Development Company, LLC, drilled seven soil borings on the subject property for collection of soil and groundwater samples for analysis of VOCs, pesticides and metals. VOCs were detected in groundwater from all six borings completed to groundwater. The highest concentrations of VOCs detected were PCE at 41 ug/l, TCE at 22 ug/l, 1,1-dichloroethane at 3.7 ug/l, 1,1-dichloroethene at 4.1 ug/l, cis-1,2-dichloroethene at 1.8 ug/l, and 1,1,1-trichloroethane at 1.8 ug/l. All compounds except TCE and PCE were below drinking water standards.

The concentrations of TCE and PCE in the groundwater under the subject property are well below levels that would suggest a potential human health risk from intrusion of volatile organic vapors into indoor air. Both PCE and TCE were reported in groundwater samples collected from upgradient sites in the same range or higher.

Trace levels of PCE were detected from two of six soil borings, each completed near the former PCE above-ground tank location. The concentrations of PCE detected, from 54 to 88 ug/kg, were below the Water Board's Environmental Screening Levels for commercial land use. No pesticide compounds were detected in the three shallow soil samples analyzed, and no metal

compounds were found at concentrations above background levels in the two shallow soil samples analyzed.

Based upon the available information, including the current land use, and with the provision that the information provided to this agency was accurate and representative of site conditions, no further action related to the pollutant release at the subject site is required.

Off-site Groundwater Pollution

One groundwater monitoring well, W39, exists on the subject property that is currently used to monitor the extent of an upgradient VOC plume originating from the 690 East Middlefield Road and 875B Maude Avenue sites. Another groundwater monitoring well, W41, is located just north (downgradient) of the subject property that is also used to monitor the upgradient VOC plume. Concentrations of PCE and other VOCs in groundwater have historically been higher along the upgradient boundary of the subject property (at Well W39) than well locations downgradient of the subject property, including well W41.

In general, the Water Board does not pursue enforcement actions against a property owner whose land overlies contaminated groundwater if that contamination is solely the result of migration of groundwater contaminants from an off-site source or sources. Accordingly, the Water Board will not name current and future owners of the subject property as discharges with respect to groundwater pollution from off-site sources. However, the Board may hold such a property owner responsible for investigation or cleanup tasks if he or she refuses to provide reasonable access to an upgradient discharger attempting to investigate and cleanup off-site groundwater pollution.

If you have any questions concerning this letter, please contact Michelle Rembaum-Fox of my staff at (510) 622-2387 [e-mail mrembaumfox@waterboards.ca.gov].

Sincerely,

Bruce H. Wolfe

Client/User Questionnaire

USER / CLIENT QUESTIONNAIRE
FOR A PHASE I ENVIRONMENTAL SITE ASSESSMENT (ESA) COMPLIANT WITH ASTM E 1527-05

INTRODUCTION

In order to qualify for one of the Landowner Liability Protections (LLP) offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001, the user (in this case, Google, Inc.), must provide the following information (if available) to Iris Environmental. Failure to provide this information could result in a determination that "all appropriate inquiry" is not complete, and liability protection may be forfeited.

QUESTIONS

1. **Environmental cleanup liens that are filed or recorded against the site.**

Are you aware of any environmental cleanup liens against the property that are filed under federal, tribal, state or local law? NO

2. **Activity and land use limitations (AULs) that are in place at the site or that have been filed or recorded in a registry.**

Are you aware of any AULs, such as engineering controls, land use restrictions, or institutional controls that are in place at the site and / or have been filed or recorded in a registry under federal, tribal, state or local law? NO

3. **Specialized knowledge or experience of the person seeking to qualify for the LLP.**

As the user of this ESA, do you have any specialized knowledge or experience related to the property or nearby properties, for example are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business? NO

4. **Relationship of the purchase price to the fair market value of the property if it were not contaminated.**

Does the purchase price being paid for this property reasonable reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether this lower purchase price is because contamination is known or believed to be present at the property? YES

5. **Commonly known or reasonably ascertainable information about the property.**

Are you aware of commonly known or reasonable ascertainable information about the property that would help Iris Environmental to identify conditions indicative of releases or threatened releases? For example:

a. Do you know the past uses of the property? NO
b. Do you know of specific chemicals that are present or once were present at the property? NO
c. Do you know if spills or other chemical releases that have taken place at the property? NO
d. Do you know of any environmental cleanups that have taken place at the property? NO

6. **The degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation.**

Based on your knowledge and experience related to the property, are there any obvious indicators that point to the presence or likely presence of contamination at the property? NO

CERTIFICATION

This environmental review of the property located at 440 Logue Avenue in Mountain View, California was conducted by Iris Environmental on behalf of Google Inc. The review conducted by Iris Environmental meets or exceeds the requirements for a Phase I Environmental Site Assessment (ESA) specified in the ASTM International (ASTM) Standard E 1527-13, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.

Qualifications for the environmental professionals involved in this review, Robert Balas, Karen Smith and Daniela Hamann-Nazaroff of Iris Environmental, are included in Appendix A.

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental professional as defined in §312.10 of 40 CFR 312. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed all the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

LIMITATIONS

This report has been prepared exclusively for use by Google Inc., its successors and assignees and may not be relied upon by any other person or entity without the express written permission of Iris Environmental. The conclusions presented in this report represent Iris Environmental's professional judgment based on the information available to us during the course of this assignment and on conditions that existed at the time of the assessment. We have made no independent verification of the information provided to Iris Environmental. While Iris Environmental has no reason to doubt the accuracy of any of the information provided, this report is accurate and complete only to the extent that information provided to Iris Environmental was itself accurate and complete.

I. INTRODUCTION

Iris Environmental was retained by Google Inc. (the Client) to conduct a Phase I Environmental Site Assessment (ESA) of 440 Logue Avenue in Mountain View, California (the Site). The purpose of the Phase I ESA was to identify Recognized Environmental Conditions (RECs), as defined in the ASTM International Standard E 1527-13, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (ASTM Standard).

This report presents the results of our investigation. It is based on the following:

A visit to the Site by Ms. Daniela Hamann-Nazaroff of Iris Environmental on April 9, 2014. Ms. Hamann-Nazaroff walked both interior and exterior areas of the Site. Photographs taken during the visit to the Site are included in Appendix B.

An interview during the Site visit with Mr. LeRoy Franzoia, the owner of California Flower Shippers.

Observation of adjoining properties from the Site boundaries.

A search of regulatory agency databases for the Site, adjoining properties, and vicinity conducted by Environmental Data Resources (EDR) and reported to Iris Environmental on April 2, 2014. A copy of the EDR report is presented as Appendix C.

A review of the United States Geological Survey (USGS) 7.5-minute topographical map for Mountain View (dated 1997), historical topographic maps of the same quadrangle dated 1948, 1953, 1961 (photo-revised 1968, 1973, and 1981), 1991, and 1997; 15-minute topographical maps for Palo Alto (dated 1899, 1943, 1947, 1948, and 1961); and 30-minute topographical map for Santa Cruz from 1902. Copies of the topographic maps are provided in Appendix D.

A review of historical aerial photographs dated 1939, 1948, 1956, 1968, 1974, 1980, 1991, 1998, 2005, 2006, 2009, 2010, and 2012 provided by EDR. Copies of the aerial photographs are provided in Appendix D.

A review of the City Directory Abstract provided by EDR. A copy is included in Appendix D.

A review of documents pertaining to the Site on file at the Mountain View Fire Department (MVFD) and Santa Clara County Water District (SCVWD). Key documents obtained from these agencies are provided in Appendix E.

A review of the RWQCB's Geotracker and DTSC's Envirostor databases for online documents on file for the Site, adjoining properties, and vicinity.

Iris Environmental requested historical fire insurance maps of the Site and adjoining properties from EDR, which reported that fire insurance maps are not available (see Appendix D).

Iris Environmental requested documents from the Santa Clara County Department of Environmental Health, Department of Toxic Substances Control (DTSC), Bay Area Air Quality Management District (BAAQMD), Regional Water Quality Control Board San Francisco Region (RWQCB), and the United States Environmental Protection Agency (USEPA) which reported no documents for the Site or adjoining properties were available.

No environmental or drinking water samples were collected as part of Iris Environmental's Phase I ESA activities.

II. FINDINGS AND CONCLUSIONS

Iris Environmental has performed a Phase I Environmental Site Assessment (ESA) in conformance with the scope and limitations of ASTM Practice E 1527-13 of the property located at 440 Logue Avenue in Mountain View, California. There were no exceptions to, or deletions from, this practice.

A. Recognized Environmental Conditions

ASTM Standard E 1527-13 defines a REC as (emphasis in original to indicate formally defined terms): "the presence or likely presence of any *hazardous substances* or *petroleum products* in, on, or at a *property*: (*1*) due to release to the environment; (*2*) under conditions indicative of a *release* to the *environment*; or (*3*) under conditions that pose a *material threat* of a future *release* to the *environment*. *De minimis conditions* are not *recognized environmental conditions.*"

In addition, ASTM Standard E 1527-13 defines a controlled recognized environmental condition (CREC; a type of REC) as (emphasis in original to indicate formally defined terms): "a *recognized environmental condition* resulting from a past *release* of *hazardous substances* or *petroleum products* that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with *hazardous substances* or *petroleum products* allowed to remain in place subject to the implementation of required controls (for example, *property* use restrictions, *activity and use limitations*, *institutional controls*, or *engineering controls*).[1] A condition considered by the *environmental professional* to be a *controlled recognized environmental condition* shall be listed in the findings section of the *Phase I Environmental Site Assessment report*, and as a *recognized environmental condition* in the conclusions section of the *Phase I Environmental Site Assessment report*."[2]

This Phase I ESA has identified the following RECs in connection with the Site:

- Volatile organic compounds (VOCS) are present in on-Site groundwater monitoring well R43A, which is part of the MEW groundwater plume monitoring well network. 1,1-dichloroethane (1,1-DCA) has been detected in the on-Site well (8.9 micrograms per liter [µg/L]) above the commercial RWQCB Environmental Screening Level (ESL) of 5 µg/L. Trichloroethene (TCE), 1,1-dichloroethene (1,1-DCE), and cis-1,2-dichloroethene (cis-1,2-DCE) have been detected in this on-Site well at concentrations below their respective

[1] For example, a leaking underground storage tank that has been cleaned up to a commercial use standard, but does not meet unrestricted residential cleanup criteria, would be considered a controlled recognized environmental condition. The "control" is represented by the restriction that the property use remain commercial.
[2] A condition identified as a *controlled recognized environmental condition* does not imply that the *environmental professional* has evaluated or confirmed the adequacy, implementation, or continued effectiveness of the required control that has been, or is intended to be, implemented.

ESLs. Based on these monitoring results, low levels of chlorinated VOCs may be present in groundwater on the Site.

- The main concerns with VOCs in groundwater are the potential for chemical vapor intrusion to indoor air and the associated degradation of indoor air quality within current or future buildings and the management of impacted groundwater and soil during any dewatering or excavation which may occur during construction.

B. Historical Recognized Environmental Conditions

ASTM Standard E 1527-13 defines a historical recognized environmental condition (HREC, which is not a REC) as: "a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). Before calling the past release a historical recognized environmental condition, the environmental professional must determine whether the past release is a recognized environmental condition at the time the Phase I Environmental Site Assessment is conducted (for example, if there has been a change in the regulatory criteria). If the EP considers the past release to be a recognized environmental condition at the time the Phase I ESA is conducted, the condition shall be included in the conclusions section of the report as a recognized environmental condition."

This Phase I ESA has identified the following HREC in connection with the Site:

- Residual total petroleum hydrocarbons as gasoline (TPHg) and benzene, toluene, ethylbenzene, and xylene (BTEX) compounds may be present in soil and groundwater at concentrations below commercial RWQCB ESLs due to releases from a former gasoline underground storage tank (UST). The Site received a No Further Action letter for the UST release in 2005 and is listed as case closed on the RWQCB Geotracker database.

C. De Minimis Conditions

ASTM Standard E 1527-13 defines a de minimis condition as (emphasis in original to indicate formally defined terms): "a condition that generally does not present a threat to human health or the *environment* and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis conditions* are not *recognized environmental conditions* nor *controlled recognized environmental conditions*."

This Phase I ESA has revealed no de minimis conditions in connection with the Site.

In addition, the following asset management and potential areas of concern, which are not considered RECs, are noted:

- Based on a review of the Preliminary Title Report prepared for the Site, a Southern Pacific Transportation Company (SPTC) easement crosses the Site.

- Based on aerial photographs reviewed, the Site has historically been developed with agricultural use between at least the late 1940s to the early 1960s. Although not documented at the Site, activities commonly associated with orchards include the use and storage of hazardous materials and petroleum products (*e.g.*, agricultural chemicals). Information was not available as to the potential historical usage of pesticides, fertilizers or insecticides. Based on our experience, these residual concentrations, if present, are not typically at concentrations that would require cleanup by a regulatory agency or pose a significant human health risk to commercial or industrial site users. There is potential that the near surface soils contain residual agricultural chemicals that may affect disposal costs in the event redevelopment is planned.
- A SPTC rail spur that crosses the Site from the south to the east has been present on-Site from the late 1960s to today. No record of soil sampling near the rail spur that crosses the track was found during this assessment. There is potential that the near surface soils contain residual chemicals associated with railroad tracks (pesticides, TPH, metals) that may affect disposal costs in the event redevelopment is planned.
- Based on the date of construction of the current on-Site buildings (circa 1968), it is possible that asbestos-containing materials and PCB-containing materials are present in the on-Site buildings.

III. DESCRIPTION OF THE SITE AND ITS OPERATIONS

A. Site Description

1. Physical Description and Setting

The Site is located 440 Logue Avenue in Mountain View, Santa Clara County, California, as shown on Figure 1. The Site covers an area of approximately 1.3 acres, and is identified as Assessor's Parcel Number (APN) 160-58-001. The Site consists of an approximately 12,960 square-foot building and a 1,230 square-foot metal-sided shed. The remainder of the Site includes an abandoned rail siding which curves across the property from the south to the east, paved parking areas, unpaved vacant space, and landscaped areas. One outdoor transformer operated and maintained by PG & E was noted at the north of the Site. One monitoring well is located on-Site near the northeastern Site boundary associated with the Middlefield Ellis Whisman (MEW) groundwater plume in the Site vicinity. The approximate layout of the Site at the time of Iris Environmental's Site visit is indicated in Figure 2.

The Site is currently owned by California Flower Shippers, Inc. The Site is located in a light industrial area, dominated by office buildings and research and development facilities.

Pacific Gas & Electric (PG&E) provides electricity and natural gas to the Site. Water and sanitary sewer service is reportedly provided by the City of Mountain View.

2. General Site Conditions

At the time of Iris Environmental's Site visit, general housekeeping at the Site was fair. The facility appeared well used, and Mr. Franzoia said that there had been no remodeling of facility since California Flower Shippers first occupied the space in 1972. The interior storage spaces in the warehouse were somewhat disorderly, but mostly consisted of cardboard boxes. The visible portions of the concrete floor were not significantly cracked. The warehouse floor was wet with water used to water the flowers. A floor drain runs across the entire width of the warehouse and in the freezer rooms. According to Mr. Franzoia, California Flower Shippers only uses water on their products and the drain is connected to the municipal sewer. No areas of oil or other staining of concrete, asphalt, or soils were noted at the Site.

Multiple trucks associated with Site operations were parked inside the warehouse and in the outside space. According to Mr. Franzoia, vehicle maintenance is conducted off-Site by a third party vendor.

The exterior area was partially paved and partially dirt. The asphalt paving was very old and weathered. There was no visible evidence that significant spills or leaks had occurred. The location of the former UST is capped with cement which, due to sedimentation, has cracked and subsided. A recent application of asphalt on the subsided areas has been applied to even out the surface. No evidence of stressed vegetation was noted at the Site during the Site visit.

The exterior shed was rather dilapidated and, judging by the dry leaves which had accumulated on the floor, was not actively used. Extra flower tables, shelves, and a boat were stored in the shed at the time of the Site visit. Mr. Franzoia stated that California Flower Shippers did not actively use the shed for on-Site operations.

A SPTC railroad spur and remains of a crossing gate were also present on-Site.

The detection of noise and odors is dependent on the weather conditions and ongoing operations. At the time of the Site visit, Iris Environmental did not note strong odors or excessive noise at the Site.

3. Geological Setting

Based on a review of the 1997 USGS topographic map, ground elevation at the Site is approximately 50 feet above mean sea level. The majority of the Site is flat with a slight downward slope to the north-northeast.

The Site is situated on the western portion of the Santa Clara Valley within the Coast Ranges geomorphic province of California. The Santa Clara Valley is generally bounded by the Santa Cruz Mountains to the west, by the San Francisco Bay to the north, and by the Diablo Range to the east. The Site is located in the Confined Aquifer Zone of the interior portion of the Santa Clara Valley Basin. A Phase II investigation conducted on-Site in 2004 found, in general, plastic sandy and silty clay to a depth of 2 to 4 feet. The clay was underlain by varying sequences of

moderately to low plasticity silt and clay to a depth of 14 feet. These sediments were underlain by silty sand and sand to a depth of 16 feet (Hoexter 2004).

4. Hydrogeological Setting

The nearest natural body of surface water is Stevens Creek located approximately 1.0 miles east of the Site. The San Francisco Bay is located 3.4 miles to the north of the Site.

Storm water collection drains were observed on the building and in the parking areas. Storm water at the Site reportedly drains to the storm water system at Logue Avenue.

The EDR Report (EDR 2014a) indicates that the Site is not within a 100- or 500-year flood zone area.

Groundwater in the site vicinity can be broadly grouped into an upper zone and a lower zone. The lower zone generally occurs at depths greater than 150 feet and constitutes the principal pumping zone. Groundwater in the upper zone occurs at depths less than 100 feet and is considered a perched zone that is usually unsuitable for production well purposes due to the generally low yielding capabilities and/or impairment by natural water quality problems (i.e. salinity) (E_2Ca 1990).

The regional groundwater flow in the shallow aquifer (upper zone) at the Site and vicinity is in a northerly to north-by-northeasterly direction (Hoexter 2004). An investigation conducted on-Site in 2004 encountered groundwater at approximately 13 to14 feet below ground surface (bgs) which stabilized at 10 feet bgs.

A groundwater monitoring well associated with the MEW groundwater plume in the Site vicinity is located near the northeastern Site boundary. The groundwater level measured in the on-Site well during the most recent March 2013 sampling event was 6.89 feet bgs (Geosyntec 2014).

B. Adjoining Properties Description

1. Physical Description

Surrounding land uses include:

- North – 500-506 Logue Avenue, an office building occupied by Coupons.com.
- South – 400 Logue Avenue, an office building occupied by Coupons.com.
- East – Logue Avenue, beyond which is an office building occupied by Elance (441 Logue Avenue). Of note, this facility is a former leaking underground storage tank (LUST) site that received regulatory closure in 1996.
- West – Santa Clara Valley Transportation Authority (VTA) Light Rail tracks, beyond which is a commercial building occupied by Tango (475 Ellis Street).

Based on observations made from the Site and public right of ways, these properties appear to be in good condition with well maintained landscaped areas. Based on the current uses of the adjoining properties, and observations made at the time of the Site reconnaissance, Iris considers that adjoining property uses are not of potential concern.

C. Site History

Iris Environmental reviewed historical aerial photographs, historical topographic maps, historical City Directories, and information made available by local regulatory agencies to develop an understanding of historical uses of the Site and surrounding areas. A request for historical fire insurance maps was submitted, but none were available for review (see Appendix D).

Key milestones in the history of the Site and adjacent properties are listed in Table 1 of this Phase I ESA report.

Based on a review of topographic maps and aerial photos, the Site was undeveloped in the early 1900s. By 1939, the Site appears to be cultivated for agricultural use. By 1961, Logue Avenue and Maude Avenue have been constructed, but the Site remains vacant. By 1968, the current on-Site building and shed are visible on-Site. Additionally, the railroad tracks that cross the Site are visible on-Site. The Site appears unchanged to the present.

The surrounding area appears largely undeveloped in the early 20th century. In the 1940s the surrounding area is used for agricultural purposes. In the early 1960s roads in the vicinity of the Site are constructed bringing with them increased development. Throughout the late 1960s through 1980s this development in the Site vicinity increasingly replaces the agricultural land. By the 1990s the surrounding area is fully developed. No significant changes are noted between 1990s and today.

D. Description of Operations

1. Current Operations

The 440 Logue building is currently occupied by California Flower Shippers, a wholesale flower company. The on-Site building consists of a small office space, and a large warehouse with walk-in freezers. According to Mr. Franzoia, on-Site operations involve preparing flowers for shipment by trimming, arranging, watering, and packaging the flowers. Mr. Franzoia stated that no hazardous materials are used in on-Site operations.

2. Past Operations

The on-Site building and shed were constructed around 1968. The Site was first occupied by Amlings of California Inc., a wholesale florist. In 1972, California Flower Shippers began operations at the Site and has continued their operations to the present day. Mr. Franzoia stated that the Site had been vacant for two years prior to their occupancy and mentioned that a photo developing company may have previously occupied the Site. No additional records were found regarding previous Site tenants.

SPTC railroad tracks were constructed traversing the Site from the south to the east in the 1960s. According to Mr. Franzoia, California Flower Shippers has never used the rail in conjunction with their operations. The time frame during which the railroad tracks were used is unknown. The tracks are still visible today but are no longer in use.

E. Polychlorinated Biphenyls (PCBs) and Asbestos

1. PCBs

Mr. Franzoia was not aware of any PCB-containing equipment on-Site. Since the fluorescent lights in the warehouse were reportedly installed when California Flower Shippers first occupied the Site in 1972, it is possible that the light ballasts contain PCBs.

One electrical transformer, which is operated and maintained by PG&E, was located on-Site. The transformer appeared in good condition. No staining or discoloration was noted.

2. Asbestos

No previous asbestos surveys were provided to Iris Environmental. Based on the date of construction of the current on-Site building (circa 1968), it is possible that asbestos-containing materials are present in the building. Building materials were observed to be in fair condition.

F. Hazardous Materials Use and Storage

1. Hazardous Materials Use

Various small containers of hazardous materials were observed on-Site during Iris Environmental's Site reconnaissance. Hazardous materials observed include small quantities of cleaning supplies (e.g. Windex), paints (one gallon or smaller cans), and oils (e.g. WD-40). Just for Flowers 12-ounce spray-on dye cans were also noted on-Site. Review of the spray-on dye MSDS indicates that the dye contains acetone, propylene glycol methyl ether, isopropyl alcohol, and propane. A locked flammables storage cabinet was not accessible during the Site visit. According to Mr. Franzoia, fuel for a barbeque grill is stored in the cabinet. The on-Site fork lift is powered by a 20 pound propane tank.

Historically, hazardous materials including isopropyl alcohol and gasoline were stored in drums and USTs and used on-Site, as further discussed below and in Section K.

2. Underground Storage Tanks (USTs)

Two former 1,390-gallon USTs, one containing gasoline and one containing isopropyl alcohol, were present on-Site near the southwestern corner of the building, as shown on Figure 2. Records on file at the MVFD indicate that the USTs were fiberglass and were installed at the Site in 1974 and 1975. The USTs were removed in December 1988. The isopropyl alcohol was used to dye flowers in the northwest corner of the warehouse. The gasoline and associated dispenser, which was located on the western side of the building north of the former USTs, were likely used

to fuel trucks which transported the flowers to and from the Site. Investigations associated with the USTs are further discussed in Section K.

3. Aboveground Storage Tanks

No aboveground storage tanks (ASTs) were observed on-Site. No historical records indicate existence of any ASTs.

4. Drums and Small Containers

No drums or small containers were observed at the Site with the exception of small containers (five gallons or smaller) of cleaning supplies, one-gallon paint cans, 12-ounce spray cans of flower dye, and a 20-pound propane tank for the forklift.

Records on file at the MVFD indicate that a maximum quantity of 110 gallons isopropyl alcohol and 50 pounds of calcium bicarbonate was stored in drums at the Site in 1990.

G. Nonhazardous and Hazardous Waste

1. Nonhazardous Waste

Nonhazardous waste currently generated at 440 Logue consists of office wastes, packaging material (cardboard), and plant matter. Waste is collected in dumpsters for off-Site disposal by the City of Mountain View and Recology. The dumpster area appeared in fair condition.

2. Hazardous Waste

No hazardous waste generation was observed at the Site.

H. Air Emissions

The Bay Area Air Quality Management District has no records regarding emissions at the Site. No air emission sources were observed on-Site.

I. Wastewater

Industrial and Sanitary Wastewater

Industrial wastewater is not currently generated on-Site. Water collected in the floor drain within the warehouse and other sanitary wastewater is discharged into the municipal sewer system, which is maintained by the City of Mountain View.

Storm Water

Storm water collection drains were observed on the building and in the parking areas. Storm water at the Site reportedly drains to the storm water system on Logue Avenue. No indications of potential storm water contamination sources were observed at the Site during the Site visit.

It is not known whether storm water quality has been impacted in the past. No documentation pertaining to storm water issues was contained within City or County files. Mr. Franzoia was not aware of any spills, leaks or fires with the potential to impact storm water that had occurred at the Site in the past.

J. Previous Environmental Reports

The following is a list of key environmental documents which pertain to the subject Site provided by the Client, found on Geotracker, and found on the Santa Clara County Local Oversight Program website. Information from these documents is included where relevant in the report.

- *Underground Storage Tank Unauthorized Release (Leak)/Contamination Site Report*. Prepared by the MVFD. Dated December 27, 1988.

- *Preliminary Site Assessment, California Flower Shippers SCVWD ID No. 06S2W23G02 Case No. 14-202, 440 Logue Avenue, Mountain View, California*. Prepared by Hoexter Consulting Inc. Dated July 16, 2004.

- *Fuel Leak Site Case Closure—California Flower Shippers Inc., 440 Logue Avenue, Mountain View, CA; LOP Case No. 14-202, SCVWDID No. 06S2W23G02f. Prepared by SCCDEH*. Dated February 8, 2005.

K. On-Site Soil, Soil Vapor, and Groundwater Contamination

Potential sources of on-Site soil, soil vapor and / or groundwater contamination at the Site include:

- Leaking Underground Storage Tanks: Residual TPHg and BTEX compounds may be present in soil and groundwater due to releases from a former gasoline UST.
- VOCS in on-Site Groundwater: Chlorinated VOCs have been detected in on-Site groundwater monitoring well R43A.
- Railroad Tracks: Pesticides, TPH, and metals may be present in surface soils associated with the presence of the SPTC rail spur that crosses the Site from the south to the east.

Known surrounding groundwater contamination plumes include:

- Hewlett Packard (HP) Groundwater Plumes: TCE is present in groundwater within approximately 450 feet east and southeast (crossgradient) of the Site.
- E/M Lubricants Groundwater Plumes: Tetrachloroethene (PCE) is present in groundwater within approximately 450 feet east and southeast (crossgradient) of the Site.

- MEW Groundwater Plume: VOCs are present in groundwater approximately 500 feet west (crossgradient) of the Site.

Potential Sources of on-Site Contamination

Leaking Underground Storage Tanks

1988 Tank Removal

Two USTs, a 1,390-gallon gasoline tank and a 1,390-gallon isopropyl alcohol tank, were removed from the Site on December 6, 1988 under MVFD permit. Six soil confirmation samples were collected from below the tanks (2 samples at 12 feet bgs), the side walls (2 samples at 12 feet bgs), the pipe run (1 sample at 2.5 feet bgs), and below the dispenser (1 sample at 2.5 feet bgs). The sample from below the gasoline tank (S-2) was noted to have a strong gasoline odor. TPHg was detected in five of the six samples at concentrations ranging from 1.3 milligrams per kilogram (mg/kg) to 180 (mg/kg). The maximum concentration was detected in sample S-2, which was collected below the gasoline tank. This concentration is below the current commercial deep soil ESL where groundwater is not a current or potential drinking water resource (1,000 mg/kg). BTEX compounds were not detected in any sample except sample S-2 in which toluene (6.6 mg/kg), ethylbenzene (3.8 mg/kg), and xylene (2.3 mg/kg) were detected at concentrations below current commercial deep soil ESLs where groundwater is not a current or potential drinking water resource. Industrial solvents were not detected in any sample except for propyl benzene, which was detected in sample S-2 at a concentration of 1.1 mg/kg (MVFD 1988). An ESL has not been established for this compound. No excavation or other remediation activities were conducted in 1988 (SCCDEH 2005).

2004 Investigation

At the request of the SCVWD, a limited subsurface investigation was conducted at the Site in 2004. Seven borings were advanced in the vicinity of the former USTs and soil and grab groundwater samples were collected and analyzed for TPHg, BTEX compounds, and nine oxygenated volatile organic and fuel additives (groundwater only). TPHg and BTEX were not detected in any of the soil samples collected from depths between 4 and 14.5 feet bgs. Benzene and toluene were detected at concentrations of 0.68 micrograms per liter (µg/L) and 0.90 µg/L, respectively, in grab groundwater sample EB-3 in the former dispenser location. These concentrations are below groundwater ESLs for groundwater that is not a current or potential drinking water resource of 27 µg/L (benzene) and 130 µg/L (toluene). Xylenes, ethylbenzene, TPHg, and the various fuel additives were not detected in groundwater (Hoexter 2004).

This investigation also included a conduit study. Based on the results of the study, no underground utilities or other conduits were found in the vicinity of the former USTs. The closest underground line transmits liquid nitrogen and is situated along the northern property boundary approximately 150 feet downgradient of the former USTs (Hoexter 2004).

Case Closure 2005

Based on the results of the 2004 investigation, the Site applied for and received a No Further Action (NFA) letter from the SCCDEH with concurrence from the RWQCB in 2005 (SCCDEH 2005; see Appendix E). According to the NFA letter, "Residual contamination both in soil and groundwater remains at the site that could pose an unacceptable risk under certain site development activities such as site grading, excavation, or the installation of water wells. The County and the appropriate planning and building department shall be notified prior to any changes in land use, grading activities, excavation, and installation of water wells." The NFA letter also notes that, "The levels of residual contamination and any associated site risk are expected to reduce with time" (SCCDEH 2005).

VOCs in On-Site Groundwater

One groundwater monitoring well, R43A, which is part of the MEW plume monitoring well network, is located near the northeastern Site boundary, as shown on Figure 2. This well has been monitored on an annual basis since 1985 but groundwater monitoring data was only found for 1985, 1986, and 2004 to 2013. 1,1-DCA was detected at a concentration of 8.9 µg/L during the 2013 monitoring event, which is above the groundwater ESL for 1,1-DCA of 5 µg/L. TCE, 1,1-DCE, and cis-1,2-DCE have been detected in this on-Site well at concentrations below their respective ESLs. Based on these monitoring results, low levels of chlorinated VOCs may be present in groundwater on the Site.

The main concerns with VOCs in groundwater are the potential for chemical vapor intrusion to indoor air and the associated degradation of indoor air quality within current or future buildings and the management of impacted groundwater and soil during any dewatering or excavation which may occur during construction.

Railroad Tracks

A SPTC rail spur that crosses the Site from the south to the east has been present on-Site from the late 1960s to today. No record of soil sampling near the rail spur that crosses the track was found during this assessment.

Known Surrounding Groundwater Contamination Plumes

HP TCE Groundwater Plume

The Site is located west of and crossgradient from the Hewlett Packard TCE groundwater plume. The HP source site is located southeast and cross- to downgradient from the Site. Current 2013 delineation of the plume extends within 450 feet to the east and crossgradient of the Site, as shown on Figure 3 (Stantec 2013). As shown on Figure 3, TCE has also been detected in off-Site well W13, which is located approximately 450 feet southeast and crossgradient of the Site. As discussed above, TCE has been detected at concentrations below the ESL in the on-Site groundwater monitoring well (R43A).

Hewlett Packard submitted a Site Closure Request for the former HP facility at 690 East Middlefield Road to the RWQCB in July 2013. There are no publically available documents supporting closure of the HP facility as of April 2014.

E/M Lubricants PCE Groundwater Plume

The Site is located west of and crossgradient from the E/M Lubricants PCE groundwater plume. The E/M Lubricants source site is located southeast and crossgradient from the Site. Current 2013 delineation of the plume extends within 450 feet to the east and crossgradient of the Site, as shown on Figure 3 (Stantec 2013). As shown on Figure 3, PCE has also been detected in off-Site well W13, which is located approximately 450 feet southeast and crossgradient of the Site. PCE was not detected in on-Site groundwater monitoring well (R43A) in historical monitoring events reviewed during this assessment.

MEW Groundwater Plume

The MEW Study Area encompasses the light-industrial and commercial area bounded by Whisman Road to the west, Middlefield Road to the south, Ellis Street to the east, and Highway 101 to the north and is located west of the Site. During 1981 and 1982, preliminary investigations at the MEW Study Area identified VOCs in soil and groundwater. TCE is the predominant chemical found in the subsurface within the MEW Study Area, and was selected by the USEPA as the primary indicator chemical to be used to monitor and evaluate soil and groundwater quality, cleanup activities, and consequent remedial progress at the MEW Study Area. Remediation of regional groundwater impacted by chemicals released on properties within the MEW Study Area is being jointly performed by 11 potential responsible parties (PRPs).

The most recent 2013 Annual Groundwater Monitoring Report for the MEW plume delineation indicates that the eastern edge of the MEW plume is estimated to be within approximately 500 feet west (crossgradient) of the Site. The plume delineation is based on data from well NEC11A which detected TCE at a concentration of 22 µg/L and is located approximately 400 feet north and downgradient of the Site. TCE was not detected in monitoring well NEC20A, which is located just south of NEC11A and north of the Site (Geosyntec 2014). As noted above, VOCs have been detected in on-Site MEW well R43A.

L. Records Review

1. EDR Report

Iris Environmental reviewed a report prepared by EDR that summarizes the results of a search of federal and state regulatory agency databases. The EDR report is included in Appendix C. The database search was conducted to evaluate whether the Site or any nearby properties are under investigation for potential environmental issues or have been identified as conducting operations that could potentially impact the environment. The EDR report includes searches of databases of sites with engineering controls and institutional controls. The findings of the EDR search are summarized below.

EDR conducted its search of environmental databases on April 2, 2014. Because the environmental databases themselves are sometimes not updated by the specific regulatory agencies for periods of up to 1 year (depending on the database), the database search conducted herein will not necessarily list a facility or site for which an environmental investigation/listing

has been initiated subsequent to the last update. The dates of database updates are provided in Appendix C.

EDR conducted searches of the following federal databases, and all search radii were selected in accordance with ASTM standards:

USEPA National Priorities List (NPL) for Uncontrolled Hazardous Waste Sites – 1-mile radius;

USEPA Delisted NPL – ½-mile radius;

USEPA Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) and CERCLIS-No Further Remedial Action Planned (CERCLIS-NFRAP) – ½-mile radius;

Corrective Action Site List (CORRACTS) of Resource Conservation and Recovery Act (RCRA) hazardous waste treatment, storage, and disposal (TSD) facilities subject to corrective action under RCRA – 1-mile radius;

Resource Conservation and Recovery Act Information System (RCRIS) database of TSD facilities not subject to corrective action and hazardous waste generators – ½-mile radius (TSD) and property and adjoining properties (generators);

Engineering Controls Sites List (US ENG CONTROLS) – property only;

Sites with Institutional Controls (US INST CONTROL) – property only; and

Emergency Response Notification System (ERNS) – property only.

EDR also conducted searches of the following State of California and tribal databases:

RESPONSE database – 1-mile-radius;

ENVIROSTOR database – 1-mile-radius;

California Solid Waste Inventory System (SWIS) – ½-mile radius;

Spills, Leaks, Investigation and Clean Up (SLIC) cost recovery listing – ½-mile radius;

Leaking Underground Storage Tanks (LUST) Information System – ½-mile radius;

Underground Storage Tank (UST) Registrations Database – property and adjoining properties;

Site Mitigation and Brownfield Re-use Program Facility Sites with Deed Restrictions and Hazardous Waste Management Program Facility Sites with Deed / Land Use Restrictions (DEED) database – property only;

Underground Storage Tanks on Indian Land (Indian UST) database – property and adjoining properties; and

Leaking Underground Storage Tanks on Indian Land (Indian LUST) database – ½-mile radius.

Databases searched by EDR that record information on deed restrictions, engineering controls and institutional controls (DEED, US ENG CONTROL, US INST CONTROL) did not show any listings for the Site.

The Site address, 440 Logue Avenue, is listed on the CA LUST. The LUST listing was discussed above in Section K.

The following adjacent properties were also listed on databases:

- East: 441 Logue Avenue is listed on the CA LUST and HAZNET. The 441 Logue facility received regulatory closure in 1996. According to the Closure Report, "The diesel pollution is localized and does not present a threat to beneficial uses of groundwater" (SCVWD 1996). Therefore, this facility is unlikely to impact conditions at the Site.

- West: 475 Ellis is listed on the AST database. No additional data is provided.

Several facilities in the vicinity of the Site were identified within the ASTM-specified search radii as summarized below:

NPL

Four facilities are listed within one mile of the Site.

Moffett Naval Air Station, Intel Corporation, Raytheon Company, and Fairchild Semiconductor Corporation are all part of the MEW Study Area. The MEW Plume is discussed above in Section K. Due to the crossgradient location of the MEW plume with regards to the Site, it is unlikely to impact subsurface conditions at the Site.

CERCLIS
Five facilities are listed within 0.5 miles of the Site.

All five of the facilities, Moffett Naval Air Station, Intel Corporation, Fairchild Semiconductor Corporation, NEC and Raytheon Company, are part of the MEW Study Area and are discussed above in the NPL section. As stated above, due to the crossgradient location of the MEW plume with regards to the Site, it is unlikely to impact subsurface conditions at the Site.

CERC-NFRAP

Five facilities are listed within 0.5 miles of the Site.

Fairchild Linear Products Division is part of the MEW Study Area discussed above in the NPL section.

Hewlett Packard Mountain View is listed at 333 Logue Avenue, 0.224 miles south of the Site. The database listing states the HP facility was referred to the RWQCB. The Geotracker website lists the facility address at 690 East Middlefield Road, which is discussed above in the Hewlett Packard E/M Lubricant Plume in Section K.

Cooper Vision is listed at 455 E Middlefield Road, 0.306 miles west-southwest of the Site. The EDR report has little information regarding the CERCLIS-NFRAP listing: the discovery

occurred in January 1987 and the preliminary assessment was completed in September 1987. The report states that the site does not qualify as a NPL based on the existing information. The facility is also listed as a handler (non-generator) of hazardous wastes. No violations have been reported and there is no other information available about the facility. Based on the available data, this facility is unlikely to impact subsurface conditions at the Site.

Mitsubishi Silicon America (also referred to as SILTEC) at 405 National Avenue, 0.287 miles northwest of the Site and Air Prods & Chems Inc. at 465 North Whisman Road, 0.450 miles west-northwest of the Site are both located downgradient of the Site. Due to the downgradient location of these facilities, it is unlikely that these facilities have impacted subsurface conditions at the Site.

CORRACTS

Two facilities are listed within one mile of the Site.

Fairchild Semiconductor is discussed under NPL.

Sylvania Systems Group GTE Pro (cross referenced as GTE OSI) listed at 100 Ferguson Drive is located 0.570 miles southwest of the Site. The facility is also listed under the RCRA SQG, Envirostor, SLIC, and UST databases. According to the EDR report, migration of TCE-contaminated groundwater and human exposures to contamination from this facility are under control. Therefore, this facility is unlikely to impact subsurface conditions at the Site.

RCRA GENERATOR

Two facilities are listed as a large quantity generator (LGQ) within 0.25 miles of the Site.

Chemocentryx is listed at 850 Maude Avenue, 0.173 miles southeast of the Site. As no violations have been reported, it is unlikely the facility has impacted subsurface conditions at the Site.

Meta Technologies Inc. listed at 885 Maude Ave, is 0.238 miles southeast of the Site. The facility has received multiple notices of minor violations classified as: general, TSD-container use and management, system standards, and generators-general. The facility was considered a ‘significant non-complier’ in 2006, but in 2007 is listed as ‘not a significant non-complier’. The EDR report does not provide additional details. It is unlikely that these violations will impact the subsurface conditions at the Site. The facility is also listed under the CA HIST UST, CA EMI, and CA Envirostor databases. No information regarding the former UST is available. The EMI listing is for emissions of organic hydrocarbon gases and reactive organic gases which amount to less than 0.02 per year. According to the Envirostor listing, the facility is also known as Martex Circuits Inc. and is an inactive tiered permit case. These listings do not appear to impact subsurface conditions on-Site.

Nineteen facilities (four duplicates) are listed as small quantity generators (SQG) within 0.25 miles of the Site. Two facilities are part of the HP/EM Lubricant Plume which is discussed

under Section III.I. Five facilities are within the MEW study area which is discussed above under NPL. Six facilities are downgradient of the Site, and therefore unlikely to impact subsurface conditions on-Site. The remaining six facilities have not received any violations, and therefore are unlikely to impact subsurface conditions on-Site.

CA RESPONSE

One facility is listed within one mile of the Site.

Apple, listed at 985 Almanor Avenue, is 0.836 miles east and crossgradient from the Site. The facility is also listed on Geotracker under California Microwave and is under RWQCB oversight. Soils containing VOCs greater than 0.5 ppm were excavated in June of 1995. Soil removal effectively removed the source of PCE to groundwater, and the facility is currently capped with buildings and asphalt. Due to the crossgradient location and distance from the Site, this facility is unlikely to impact subsurface conditions at the Site.

ENVIROSTOR

Twenty-seven (and one duplicate) facilities are listed within one mile of the Site.

Five facilities, Meta Technologies Inc., Hewlett Packard, Mitsubishi Silicon America, Apple, Sylvania Systems Group GTE Pro (aka GTE OSI) have been previously discussed.

Seven facilities, Raytheon Company, Fairchild Semiconductor, Intel Corporation, Spectrian Corp, Fairchild Linear Production Division, NEC, and DOMO PCB Inc. are all a part of the MEW Study Area, which is discussed above in the NPL section. As stated above, due to the crossgradient and downgradient location of the MEW plume with regards to the Site, it is unlikely to impact subsurface conditions at the Site.

Four facilities, Air Prods & Chems Inc, Ferguson Business Park, Shea Homes, and Moffett Mil Airfield, are listed as having received no further action status and therefore are unlikely to impact subsurface conditions at the Site.

Five facilities, St. Microwave Corp., AZ Electronic Materials, Micrel/Litronix (also listed as 639 Pastorial SMI REM Site), TRU-SI, and Ensign Gladys, , are located crossgradient from the Site and are unlikely to impact subsurface conditions at the Site.

Acurex Corporation listed at 433 Clyde Avenue is 0.235 miles southeast of the Site. The EDR report includes comments from a site screening completed in 1990 which states, “The contamination is isolated near the drum storage area of this 1.1 acre facility” (EDR 2013a). A Phase II investigation conducted in 1986 for 433 Clyde did not detect TCE in the three wells on the northern property line suggesting that the plume has not migrated offsite (Levine Fricke 1986). Based on this data, it is unlikely to impact subsurface conditions on-Site.

Arvea Solar Inc. listed at 303 Ravendale is 0.664 miles south southwest of the Site. The facility is currently open and undergoing a site assessment: the RWQCB is working to define the extent of contamination of TCE in the groundwater. According to a 2007 monitoring report, the

maximum detected of TCE on the property was 52 µg/L in groundwater. The groundwater flow direction is north (PES Environmental Inc. 2007). Due to the distance and the slight crossgradient location of Site relative to 303 Ravendale, it is unlikely to impact subsurface conditions at the Site.

Conductus Inc. listed at 969 W Maude Avenue, is 0.721 miles southeast of the Site. According to Envirostor, the facility is a tiered permit facility with an inactive status. No other information is available. The facility is also listed as a small and large quantity generator of hazardous wastes. According to the EDR report, no violations have been found. Based on this data and the crossgradient location relative to the Site, this facility is unlikely to impact subsurface conditions at the Site.

Power Spectra Inc. listed at 919 Hermosa Court is located 0.901 miles southeast of the Site. According to Envirostor, the facility is a tiered permit facility with an inactive status. Based on the regulatory status and the distance to the Site, this facility is unlikely to impact subsurface conditions at the Site.

EG and G Peticon listed at 345 Portrero Ave is 0.965 miles south southeast of the Site. According to Envirostor, the facility is a tiered permit facility with an inactive status. The facility is also listed as a large quantity generator of hazardous wastes and having a historic underground storage tank. According to the EDR report, neither violations nor releases have been found. Based on the regulatory status and the distance to the Site, this facility is unlikely to impact subsurface conditions at the Site.

Sierra Circuits Inc. is listed at 1108 West Evelyn Avenue is 0.975 miles south of the Site. According to Envirostor, the facility is a tiered permit facility with an inactive status. No other information is available. The facility is also listed under the RCRA-LQG, Hist LUST, CA EMI, and CA NPDES databases. Nonetheless, based the distance to the Site, this facility is unlikely to impact subsurface conditions at the Site.

LUST

Seven facilities (one duplicate) are listed within 0.5 miles of the Site.

Six of the facilities, including Roseburg Forest Products, which is located adjacent to the Site across Logue Avenue at 441 Logue Avenue, are listed as having received regulatory closure and are unlikely to pose a threat to subsurface conditions at the Site.

Peninsula Transmission Service at 1094 West Maude Avenue, is located crossgradient 0.430 miles southeast of the Site. Based on the crossgradient location, this LUST site is unlikely to impact subsurface conditions at the Site.

SLIC

Fifteen facilities (one duplicate) are listed within 0.5 miles of the Site.

Nine facilities, NEC, Raytheon, 487 E Middlefield Sobrato, MEW NPDES, MEW-RGRP Treatment System, Fairchild Semiconductor corporation (515 N Whisman) and Fairchild Semiconductor System (313 Fairchild), and Hawthorne Property, and 369 N Whisman, are located within the MEW Study Area discussed above in the NPL section.

Three facilities, 690 E Middlefield and Hewlett Packard, 875 Maude Avenue, are associated with the Hewlett Packard E/M Lubricant plume as discussed above in Section K.

One facility, Peninsula Transmission Service, received case closure and is therefore unlikely to impact the subsurface conditions at the Site.

Two facilities, Cypress Business Park and Acurex Corp (also listed as Aerotherm) are located downgradient (north) of the Site. Based on their downgradient location relative to the Site, it is unlikely they will impact subsurface conditions on-Site.

Orphan Sites

Eleven "orphan" sites (two duplicates) were identified in the EDR Report. None of the orphan sites listed in ATSM Standard databases were observed within the vicinity of the Site. Eight were down- or crossgradient to the Site. Three were not within the vicinity of the Site. Due to the distance or location of these sites, they are unlikely to impact subsurface conditions at the Site.

Summary

Iris Environmental considers that none of the facilities identified by EDR have the potential to significantly impact subsurface conditions at the Site.

2. Environmental Liens and Activity and Use Limitations

Iris Environmental reviewed the report titled *The EDR Environmental Lien and AUL Search Report 440 Logue Avenue, Mountain View CA 94043* prepared by EDR (EDR 2014b) for evidence of environmental liens and Activity and Use Limitations (AULs) at the Site. AULs are defined in the ASTM Standard as legal or physical restrictions or limitations on the use of, or access to, a site or facility: (1) to reduce or eliminate potential exposure to hazardous substances or petroleum products in the soil or groundwater on the property, or (2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment.

No environmental liens or AULs were noted by EDR.

M. Interviews with Local Government Officials

Iris Environmental requested documents from the following agencies:

Agency	Date of Request	Files Reviewed

DTSC – Berkeley	4/2/2014	No records available.
DTSC – Sacramento	4/2/2014	No records available.
Santa Clara County Department of Environmental Health	4/2/2014	No records available other than those available on-line, which were reviewed and referenced throughout the report.
BAAQMD	4/2/2014	No records available.
Mountain View Fire Department	4/2/2014	Files reviewed and referenced throughout the report.
RWQCB	4/2/2014	No records available.
USEPA Region IX	4/2/2014	No records available.

N. Information Provided by the User

In compliance with ASTM E 1527-13, a user/client questionnaire was completed by Mr. Martin Suen of Google. The information provided in the questionnaire is summarized here and a copy of the questionnaire is provided in Appendix F.

Mr. Suen is not aware of any environmental cleanup liens against the Site and has no specialized knowledge of the Site. He is not aware of any land use restrictions at the Site. He is not aware of past uses of the Site.

O. Data Gaps

Standard ASTM E1527-13 defines a data gap as, "a lack of or inability to obtain information required by this practice despite *good faith* efforts by the *environmental professional* to gather the information" (emphasis in original to indicate formally defined terms). Significant data gaps are identified as those that affected our ability to identify RECs. No significant data gaps were identified during this ESA.

IV. DEVIATIONS FROM THE ASTM STANDARD

There were no deletions or deviations from ASTM Practice E 1527-13 in conducting this Phase I Environmental Site Assessment.

Tables

Table 1 – Summary of Historical Records

Date (1)	Source	Finding
1899	Topographic Map	Site and surrounding area is undeveloped
1902	Topographic Map	No significant changes from previous map.
1939	Aerial Photo	Site is vacant and appears cleared for agriculture. Surrounding area is cleared for agriculture as well.
1943	Topographical Map	Site and surrounding area appears undeveloped.
1947	Topographical Map	No significant changes from previous map.
1948	Topographical Map	Site is developed for agriculture. Development of agricultural land has increased in the surrounding area.
1948	Aerial Photograph	No significant change from previous photo.
1953	Topographic Map	Site remains unchanged. Southern Pacific Railroad is noted to the west of the Site. Agriculture increases in surrounding area.
1956	Aerial Photograph	No significant changes from previous photo.
1961	Topographic Map	Logue Avenue is built. Development is increasing in surrounding area and agriculture is decreasing.
1968	Aerial Photograph	Building appears on-Site. Railroad tracks are visible across the Site. Properties immediately east and west are developed. Development is increasing in the surrounding area.
1968	Topographic Map	The on-Site building and shed are noted on map. The rail line is noted on-Site. Development continues in surrounding area.
1973	Topographic Map	Site appears unchanged. More buildings are noted around the Logue cul-de-sac just north of the Site.
1974	Aerial Photograph	Site appears unchanged. More buildings are constructed to the north. The lot just south of the Site remains vacant.
1980	Aerial Photograph	Site appears unchanged. General Site vicinity appears developed.
1981	Topographic Map	Site appears unchanged. The building to the south of the Site (400 Logue) is noted. Agricultural uses have been replaced with development in the surrounding area.
1991	Topographic Map	Site and surrounding area is indicated as developed.

Date (1)	Source	Finding
1991	Aerial Photograph	No significant changes from previous photo.
1997	Topographic Map	No significant changes from previous map.
1999	Aerial Photograph	No significant changes from previous photo.
2005	Aerial Photograph	No significant changes from previous photo. Surrounding area appears in its current configuration.
2006	Aerial Photograph	No significant changes from previous photo.
2009	Aerial Photograph	No significant changes from previous photo.
2010	Aerial Photograph	No significant changes from previous photo.
2012	Aerial Photograph	No significant changes from previous photo.

Notes:

1) While historical records were not available for the property at 5 year intervals (the suggested frequency in the ASTM Standard), we do not consider this data gap to be significant to the identification of RECs at the Site, as sufficient information was available to develop an understanding of past property uses.

Qualifications of Environmental Professionals

ROBERT B. BALAS

EDUCATION

1993 M.Eng.S., Environmental Engineering, University of California at Berkeley

1982 A.B., Physics, Dartmouth College, Hanover, NH

EXPERIENCE

Robert Balas, Principal of the Air Sciences Group, is the Principal in charge of all environmental fate and transport modeling and all air monitoring programs. Mr. Balas has been with Iris Environmental for seven years, and has over 20 years of environmental consulting experience with a focus on indoor and outdoor air monitoring, subsurface modeling, emissions estimation, regulatory compliance, and emission control techniques. Mr. Balas has been instrumental in incorporating site-specific and engineering control elements into the existing fate and transport models, and has used his expertise in the vapor intrusion pathway to assist clients in identifying engineering modifications to impacted buildings as a means of mitigating potential indoor air exposures.

- Mr. Balas is currently assisting a large tenant located on a California Superfund site in Mountain View, California. The principal constituents of concern at the site are chlorinated solvents in the groundwater. Our support has involved ongoing indoor and outdoor air sampling to determine the exposure concentrations resulting from the constituents of concern. Based on the data collected during the indoor air sampling program, we have been working with the tenant to identify the likely fate and transport pathway or pathways responsible for any elevated exposure levels of concern through advanced modeling using the Johnson and Ettinger model. Based on this analysis we will determine what mitigation measures can or need to be taken to reduce exposure to potential chemicals of concern, and calculate any associated costs. Currently, we are following the status of USEPA Region IX's reevaluation of all chlorinated solvent sites, specifically related to the examination of the indoor air vapor transport pathway and the reevaluation of the carcinogenic potency of trichloroethylene (TCE).

- Mr. Balas is currently assisting a large tenant located on chlorinated solvent plume in Newport Beach, California. The principal constituents of concern at the site are chlorinated solvents in the groundwater. Our support has involved subsurface soil gas sampling coupled with an ongoing indoor air sampling to determine the exposure concentrations resulting from the constituents of concern. Based on the data collected during the sampling program, we have been working with Regional Water Quality Control Board (RWQCB) and the Department of Toxic Substances Control to identify building of concern and likely indoor air exposure pathways. Based on this analysis we developed a detailed mitigation approach to reduce exposure to potential chemicals of concern, and are currently implementing this approach with RWQCB oversight.

- Mr. Balas is currently assisting a large tenant located on a California Superfund site in Mountain View, California. The principal constituents of concern at the site are chlorinated

solvents in the groundwater. Our support has involved ongoing indoor and outdoor air sampling to determine the exposure concentrations resulting from the constituents of concern. Based on the data collected during the indoor air sampling program, we have been working with the tenant to identify the likely fate and transport pathway or pathways responsible for any elevated exposure levels of concern through advanced modeling using the Johnson and Ettinger model. Based on this analysis we will determine what mitigation measures can or need to be taken to reduce exposure to potential chemicals of concern, and calculate any associated costs. Currently, we are following the status of USEPA Region IX's reevaluation of all chlorinated solvent sites, specifically related to the examination of the indoor air vapor transport pathway and the reevaluation of the carcinogenic potency of trichloroethylene (TCE).

- Mr. Balas completed an air modeling human health risk assessment for a former petroleum storage and dispensing facility located near the Port of San Francisco, California. The site had undergone site closure as an industrial facility but now was being proposed for commercial and residential use. Elevated levels of petroleum-related compounds and methane present in the soil and groundwater posed a potential issue for both residential and commercial redevelopment. Furthermore, local community groups were concerned regarding the proximity of significant industrial ambient air pollution sources, including a local concrete batch plant. Iris Environmental was retained to complete a human health risk assessment to determine whether on-site residual levels of petroleum constituents and off-site sources of air toxics would adversely impact human health under the planned development activities. Mr. Balas used the methane-modified Johnson and Ettinger model to estimate impacts resulting from subsurface contamination and the SCREEN3 dispersion model to determine on-site impacts associated with off-site sources. By incorporating site-specific development plans for a basement garage below the residential portion of the development, and using the direction of prevailing wind to reduce the impact of some off-site sources, Mr. Balas was able to show that the planned redevelopment could go forward with *de minimus* risk. The risk assessment was approved by both the Redevelopment Agency and the Department of Public Health without any comments, and redevelopment of the industrial property is moving forward on schedule.

- Mr. Balas has performed CO hotspots and criteria pollutant analysis for residential developments in Fairfield, California. The Bay Area Air Quality Management District's screening-level analysis was employed to estimate CO concentrations in the vicinity of 15 roadway intersections, under three project scenarios. Results of the screening procedure indicated that the proposed project would not produce a significant impact at any of the 15 roadway intersections, and therefore no detailed CO dispersion analysis was necessary. The URBEMIS model was used to evaluate criteria pollutant emissions from the proposed development.

- Mr. Balas has developed human health risk assessment in support of an Environmental Impact Report required for a proposed redevelopment in San Francisco. The proposed development included the construction of a multi-use building occupied by retail space at street level and by residents on upper floors. The purpose of the risk assessment was to determine whether the residual chemicals at the Site could adversely impact human health during development and proposed future land use. As exposure to these chemicals could

potentially occur both during Site development and future land use, the health risks associated with the construction phase and future land use were both evaluated.

- Mr. Balas has provided Environmental Impact Report assistance for the Los Angeles Airport proposed expansion, including reviewing emissions estimation methods, air dispersion modeling, and plume rise calculations. This review included using USEPA approved methods outlined in *AP-42: Compilation of Air Pollutant Emission Factors* and the Gaussian plume dispersion model Industrial Source Complex Short Term 3 (ISCST3). Meteorological data was reviewed for appropriate application and proposed plume rise calculations for aircraft were modified to more accurately reflect jet motion on take-off and landing.

- Mr. Balas is managing the fate and transport modeling components of the Mission Bay Development project in San Francisco, California. He developed an innovative approach to estimate the impacts associated with dust emissions. This approach used on-site ambient air data combined with ISCST3 dispersion modeling to predict potential off-site impacts. He also modified the Johnson and Ettinger indoor air model to account for the enhanced flux of subsurface volatile organic compounds associated with elevated levels of methane. This modified model was then used to estimate potential exposure concentrations in a proposed building. A subsurface vapor mitigation measure was then proposed, and he demonstrated that the expected pressure drop below the building resulting from this measure would be sufficient to protect the occupants of the building. Both of these analyses were integral in getting the Regional Water Quality Control Board and the Department of Public Health to accept the proposed mitigation measure with no remediation required.

- Mr. Balas is currently assisting a large biotechnology research company increase the size of their campus through the development of additional park and commercial space. The principal constituent of concern at the site is naturally occurring asbestos (NOA). Our support has involved meeting the requirements of the California Air Resources Board *Asbestos Airborne Toxic Control Measure for Construction, Grading, Quarrying and Surface Mining Operations*, developing air monitoring plans to ensure no off-site impacts, and direct negotiations with the local air district. As a part of the development of air monitoring plans, efforts have included the development of the appropriate asbestos screening level based on potential Proposition 65 exposures and long-term human health exposures. Currently, we are following the status of USEPA Region IX's re-evaluation of asbestos exposure risk, specifically related to short-term exposures of NOA.

- Mr. Balas has assisted in the development of a residential property located in the Sierra foothills. The principal constituent of concern at the site is naturally occurring asbestos (NOA). Our support has involved development of a dust mitigation plan, direct negotiations with the local air district, and on-going air sampling to determine potential exposure concentrations resulting from the NOA. Efforts have included the development of the appropriate asbestos screening level based on potential Proposition 65 exposures and long-term human health exposures. Based on the data collected during the sampling program, we have been working with the air district to speed the entitlement process forward. Based on our analysis, we developed control measures for site development in conjunction with the air district.

- Mr. Balas has overseen the environmental issues associated with a large scale residential development in the Sierra foothills. He is directing an asbestos air sampling program as part of a comprehensive dust mitigation program during site development. During the course of the project, Mr. Balas worked with the local air pollution control officer to develop ambient air sampling protocols and cutting-edge dust control regulations.

- At the request of a national development firm and environmental counsel, Mr. Balas has overseen a number of mold remediation projects, including conducting investigations to successfully identify the source of water damage, directing remediation efforts to repair water damage, modeling to determine where hidden molds might be present, and air monitoring to ensure that remedial efforts were successful. Mr. Balas has recently completed post-remediation air monitoring in an condominium complex in Emeryville, California to show the successful removal of water damaged drywall. A moisture meter was used throughout the apartment to ensure that there were no areas with elevated levels of moisture that might result in future mold issues. A study of the apartment ventilation system was also conducted to ensure that it was operating properly and there were no possible sources of mold remaining.

- Mr. Balas has overseen the environmental issues associated with the Third Street light rail development in San Francisco. He reviewed an asbestos air sampling program developed by Dr. Wayne Berman as part of a comprehensive dust mitigation program during site development. During the course of the project, Mr. Balas worked with Dr. Berman to develop the appropriate asbestos cancer slope factor, including adjustments for variable fiber length.

- Mr. Balas completed an air modeling human health risk assessment for a former landfill located near Union City, California. The landfill had undergone closure but was being proposed for commercial use (a sporting complex). Elevated levels of metals, chlorinated compounds, and methane present in the soil and groundwater posed a potential issue for commercial redevelopment. Furthermore, the local community and City Council were concerned regarding the potential for the airborne dispersion of dust and gases during development activities and subsurface migration of gases after development was completed. Iris Environmental was retained to complete a human health risk assessment to determine whether on-site residual levels of landfill constituents would adversely impact human health under the planned development activities and planned post-development use. The SCREEN3 dispersion model was used to determine potential on- and off-site impacts associated with redevelopment of the landfill. Mr. Balas developed a methane-modified Johnson and Ettinger model to estimate impacts resulting from subsurface contamination migrating on- and off-site after the completion of development activities. The completed risk assessment showed that the planned development could go forward with de minimus risk assuming the inclusion of standard landfill mitigation measures. The completed risk assessment was reviewed by the City Council and their consultants, and no substantive changes were required.

- Mr. Balas has overseen and developed innovative air modeling approaches for a number of former manufactured gas plant sites, located in California. While elevated levels of carcinogenic polycyclic aromatic hydrocarbons (PAHs) typically drive the cleanup, isolated

pockets of volatile organic compounds (VOCs) left after the removal of PAHs, can sometimes cause a problem for proposed residential uses. In particular, use of the standard Johnson and Ettinger Model to analyze residential indoor air exposure will often result in extremely low cleanup goals. By decoupling the subsurface transport portion of the model from the indoor dispersion portion, Mr. Balas was able to incorporate the relevant processes of biodegradation and downward flux, to more accurately model the impacts associated with residual VOCs, and obtain a more realistic cleanup goal.

- Mr. Balas has provided leadership for the development an Environmental Management System (EMS) at an international manufacturing concern. He has reviewed the policies, procedures, programs, and organizational structure, both formal and informal, used to manage environmental affairs across all three key media (air, water, and waste). He focused on maintaining environmental compliance during changes in operations or regulatory requirements. He conducted a series of interviews and plant visits to assess the status of environmental practices and procedures. Based on these environmental audits, an Environmental Management System (EMS) was designed both to assist in improving environmental compliance and to help in meeting the challenges posed by Change. The EMS consists of four interconnecting environmental management tools that assist in achieving environmental compliance during both Change and daily operations. Component tools of the EMS include the following: environmental procedures for all environmental activities, including a detailed description of personnel responsibilities; databases for proper information management; training programs to ensure all personnel are familiar with proper environmental procedures; and an internal audit system to provide an ongoing self-assessment of progress towards environmental compliance.

- Mr. Balas has also improved the existing methods to determine an appropriate cleanup level associated with protection of groundwater for a shipyard in San Diego, California. To the standard default approach in the EPA-approved Soil Screening Guidance and the Central Valley RWQCB Designated Level Methodology; Mr. Balas added the impact of biodegradation on the downward flux of VOCs in soil to the groundwater table. The addition of this element allowed for a much more realistic estimate of potential impacts, and removed from consideration source areas that would have otherwise required remediation.

- Mr. Balas provided technical and project management leadership for a state-of-the-art hazardous waste treatment, storage, and disposal facility. He conducted a complete environmental regulatory permit audit, identifying areas of concern. He has provided strategic guidance on achieving complete regulatory compliance including guidance on meeting local air district, Title V, AB 2588, and Proposition 65 requirements. He completed all aspects of work needed to meet permit conditions including: air modeling work for the annual risk assessment; an ambient air monitoring program; calculation of criteria and toxic pollutant emissions due to volatilization, erosion, and vehicle traffic; and all required reports and recordkeeping requirements.

- Mr. Balas provided air modeling and subsurface fate and transport expertise for the redevelopment of the former Pacific Refinery in Hercules, California that is undergoing dismantling and redevelopment into a 220-acre residential community. He appeared as an expert witness before Bay Area Air Quality Management District Hearing Board to present

innovative approach to achieve variance from Regulation 8, Rule 40. The Board ultimately granted the variance.

- Mr. Balas directed the emissions estimation and air modeling work necessary to determine the off-site impacts from a refinery explosion. Meteorological data from six different weather stations were integrated to get a complete picture of the local wind patterns. Video footage was also used to pinpoint off-site impacts. Plume-rise algorithms were modified to account for the burning of hydrocarbon slops in the bottom of a holding tank.

- Mr. Balas provided senior technical and project management for multiple subsurface transport studies. Projects included characterization of subsurface flux of chlorinated solvents, heavy metals, and petroleum hydrocarbons into both commercial and residential indoor environments. He used both analytical and computer model approaches to estimate contaminant transport in groundwater to indoor air. He has prepared and presented technical strategies and findings before local, state, and federal agencies.

- Conducted numerous indoor and outdoor air modeling analysis for Proposition 65 analyses associated with emissions from a wide variety of industrial facilities and consumer products including glass bottling facilities, battery manufacturing plants, chromium plating facilities, electrical circuit board manufacturing plants, waste-to-energy plants, metal parts manufacturing plants, dry cleaning facilities, glues, and printer cartridges.

- Mr. Balas prepared the emissions inventory and dispersion modeling analysis to support a facility-wide permit application. He modeled multi-source dispersion of air emissions and estimated increases in ambient air concentration of specific pollutants to determine scope of potentially impacted area. The results of the dispersion modeling analysis were compared with health-based standards.

- Mr. Balas planned program flow for a regulatory environmental management system (EMS). Decisions on calculation methods, database access considerations, and logic flow were made. Based on the program flow, the complexity of the program, and the speed of execution, a programming platform was selected. The EMS integrated air emissions estimation, air dispersion modeling, exposure assessment, multipathway risk assessment, and compliance report generation. Dialog boxes were designed and implemented to facilitate user interface with the software.

- Mr. Balas used a groundwater flow and contaminant transport model to estimate groundwater impacts from a chlorinated organic compound spill. To accurately depict the downwards flow of chlorinated organic compounds, a source apportionment model was developed. A sensitivity analysis was used to determine the maximum off-site exposure concentration.

- Mr. Balas provided technical leadership on the development of a fate and transport model of contaminant flow in the Los Angeles storm water system, to determine the potential for exceedances of the MTBE odor threshold due to releases from petrochemical facilities. An analytical model was used to calculate the water velocity distribution in the storm drain

- Mr. Balas modeled a petroleum spill from soil to surface water and estimated the downward flux to groundwater. He calculated the extent of dispersion of these chemicals in

groundwater as they flowed into a nearby river and determined the potential health risk to residents due to exposure in nearby surface waters.

- Mr. Balas oversaw estimation of emissions from a styrene-butadiene rubber facility and estimation of off-site impacts using ISC3. He produced a report criticizing opposing experts' approach and presenting a correct approach.

- Mr. Balas estimated emissions from numerous petroleum refineries, selected appropriate meteorological data, and analyzed dispersion modeling results by comparing to air quality guidelines.

- Mr. Balas refined screening emissions modeling of fugitive volatile and semi-volatile organic chemicals from contaminated ground water and soil for health risk assessments and remediation plans.

- Mr. Balas conducted a water vapor dispersion modeling analysis for a paper mill to determine fog generation potential from the wastewater operations. He also considered complex wind and emission generation issues.

KAREN T. SMITH

EDUCATION

1992 B.A., Environmental Sciences, University of Virginia

EXPERIENCE

Ms. Smith is a Manager at Iris Environmental with over twelve years of experience in environmental consulting with emphasis on due diligence and human health risk assessment. She has conducted and managed numerous Phase I Environmental Site Assessments and compliance audits for properties throughout the U.S. and Canada. Ms. Smith has calculated cancer risks and noncancer hazard indices as well as risk-based cleanup levels for multi-pathway exposure to chemicals in various media at Superfund sites and other facilities. Ms. Smith has substantial experience conducting research in support of litigation and in database development and management. The following projects are representative of Ms. Smith's experience:

- Conducted Phase I Environmental Site Assessments and compliance audits for numerous commercial and industrial facilities located in the U.S. and Canada. Properties audited include: manufacturers of epoxy counter tops, plywood, plastic bottles, plastic cutlery, candles, paint brushes, windows, woven wire products, automobile parts, packaging machinery, and lightning surge protection equipment; marine repair facilities and terminals; a fuel supply company; medical facilities; hotels; a commercial/industrial facility with over 30 tenants; a commercial garbage collection company; self-storage facilities; shopping centers; a billboard company; and undeveloped lots and vacant buildings.

- Managed the updating of Phase I Environmental Site Assessments for 17 sites located throughout the U.S. Coordinated with the client, the target company, and staff from four offices; conducted assessments at six of the sites; and wrote and reviewed updated reports.

- Researched history and status of underground storage tanks at a 260-acre site. Reviewed documents and conducted searches at regulatory agencies. Prepared report documenting research and findings.

- Researched the historical uses, investigations, and remedial activities conducted at eighteen individual parcels located on a Superfund site. Histories were used in fact sheets prepared to provide information to employees of the current site tenant.

- Prepared storm water pollution prevention and monitoring plans for multiple facilities of a plastics manufacturer located in Northern and Southern California.

- Assisted a new owner of 25 gasoline stations with the transfer of ownership of underground storage tank, air, and other permits and hazardous materials business plans.

Contacted county agencies and air quality management districts to determine requirements for ownership transfers and prepared documents for submittal to the county agencies.

- Assisted in the preparation of a RCRA Part B Permit Application for a hazardous waste transfer facility in Southern California.

- Calculated cancer risks and noncancer hazard indices for populations exposed to chemicals present in the soil, sediment, surface water, and ground water at a Superfund site. Conducted a multi-pathway evaluation of risks including ingestion of fish and produce.

- Calculated site-specific cleanup levels protective of human health and the environment for six former underground storage tank sites. Evaluated multi-pathway exposure to petroleum products in soil, ground water, and surface water. Site-specific cleanup levels were used to develop risk management plans that were submitted to the San Francisco Regional Water Quality Control Board.

- Calculated site-specific cleanup levels protective of human health for a 245-acre site. Calculated cleanup levels using site-specific data and assumptions for exposure to petroleum products, VOCs, and SVOCs via inhalation.

- Calculated risk-based cleanup levels for VOCs in ground water and inorganics in soil at a former printed circuit board and electronics assembly facility.

- Conducted a Preliminary Endangerment Assessment including report production following DTSC guidelines for a former manufacturing facility. Exposure to a petroleum-based thinner via inhalation of soil vapors and direct contact with soil was evaluated.

- Conducted screening health risk assessments to determine risks associated with a natural petroleum seep near a residential development, and to determine risks associated with petroleum hydrocarbon-containing soil at a former warehouse/distribution center.

- Calculated acceptable soil cleanup levels for residential exposure to metals at a former circuit manufacturing site.

- Researched national and international standards and guidelines for methylmercury by conducting a literature search and contacting various national and international agencies.

- Researched state and federal regulatory requirements for chemical ingredients of several furniture protection/polish products. Summarized the status of chemicals under state and federal regulations including RCRA, EPCRA, the Clean Water Act, TSCA, and Proposition 65.

- Developed databases of existing soil and groundwater data for several sites, including one contaminated with petroleum products and one contaminated with a variety of organic and inorganic chemicals. Compared existing data to health-based soil clean-up levels and selected constituents of concern for further evaluations.

- Provided litigation support for a major utility company in southern California suing its insurance company for costs incurred for investigations, evaluations, and remedial activities at former manufactured gas sites. Reviewed historical documents to identify the materials used and activities that occurred at the sites that may have resulted in site contamination, evaluated current site investigation results, and determined the fate and transport of the site contaminants in surface and subsurface soils and groundwater.

- Investigated several incidents at a local municipal water supplier in which 1,2-dichloroethane was detected in finished water at concentrations above state and federal MCLs. Conducted literature searches, visited water treatment plants, interviewed plant managers and sample collectors. Prepared a report on investigation findings.

- Conducted an analysis of the potential hazards posed by No. 2 Fuel Oil contained in underground storage tanks.

DANIELA D. HAMANN-NAZAROFF

EDUCATION

2012 M.S., Environmental Engineering, Stanford University

2010 B.S., Environmental Science, UCLA

EXPERIENCE

Ms. Hamann-Nazaroff is a scientist at Iris Environmental. She has worked at Iris Environmental since 2013 after graduating from Stanford University. Her experience includes fate and transport modeling, vapor intrusion analysis, risk characterization, and air quality monitoring. The following projects are representative of Ms. Hamann-Nazaroff's experience:

- Ms. Hamann-Nazaroff has investigated the indoor air quality of numerous commercial spaces in the San Francisco Bay Area. She collected indoor air and ambient air samples at these facilities and examined the results in order to determine whether vapor intrusion was occurring at levels which could result in adverse health effects for the facilities occupants.

- Ms. Hamann-Nazaroff has performed screening level human health risk evaluations. She has performed subsurface fate and transport modeling to evaluate whether vapor intrusion from the subsurface into the overlying buildings was occurring at significant levels with respect to the long-term health of building occupants at both industrial and commercial facilities.

- Ms. Hamann-Nazaroff has developed an Indoor Air Sampling and Analysis Plan (SAP) for commercial buildings in the San Francisco Bay Area. She calculated risk-based screening levels at the facility and analyzed previous indoor air, groundwater, and soil vapor investigations to develop the SAP with the ultimate goal of delineating the extent of vapor intrusion impacts.

- Ms. Hamann-Nazaroff monitored dust levels on construction sites in San Francisco Bay Area and oversaw best management practices to reduce dust generation. Monitoring was conducted to prevent impact to off-site populations.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 10/25/2013 has revealed that there are 4 NPL sites within approximately 1 mile of the target property.

Federal CERCLIS list

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 10/25/2013 has revealed that there are 5 CERCLIS sites within approximately 0.5 miles of the target property.

Federal CERCLIS NFRAP site List

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 10/25/2013 has revealed that there are 5 CERC-NFRAP sites within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 09/10/2013 has revealed that there are 2 CORRACTS sites within approximately 1 mile of the target property.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 09/10/2013 has revealed that there are 2 RCRA-TSDF sites within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 09/10/2013 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/10/2013 has revealed that there are 23 RCRA-SQG sites within approximately 0.25 miles of the target property.

Federal institutional controls / engineering controls registries

US ENG CONTROLS: A listing of sites with engineering controls in place.

A review of the US ENG CONTROLS list, as provided by EDR, and dated 12/17/2013 has revealed that there are 4 US ENG CONTROLS sites within approximately 0.5 miles of the target property.

FAIRCHILD SEMICONDUCTOR CORP.	***464 ELLIS ST***	***1/4 - 1/2 (0.480 mi.) NW***	***X90***	***302***

US INST CONTROL: A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

A review of the US INST CONTROL list, as provided by EDR, and dated 12/17/2013 has revealed that there are 4 US INST CONTROL sites within approximately 0.5 miles of the target property.

State- and tribal - equivalent NPL

CA RESPONSE: Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

A review of the CA RESPONSE list, as provided by EDR, and dated 02/03/2014 has revealed that there is 1 CA RESPONSE site within approximately 1 mile of the target property.

State- and tribal - equivalent CERCLIS

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 02/03/2014 has revealed that there are 28 CA ENVIROSTOR sites within approximately 1 mile of the target property.
