associated air quality analysis, a conservative approach was used in the trip generation which assumes 2,641,000 million square feet of high-cube logistics and 2,773,050 million square feet of e-commerce uses, for a total of 5,675,410 million sf of combined high-cube logistics and e-commerce uses. This scenario provides for the maximum number of trips and related air quality impacts that could be associated with the Project. For instance, if the Project were to develop with up to approximately 6.6 million square feet of high-cube logistics uses only, the number of trips associated with the project would be less than if the project were to develop with the assumed 2,641,000 million square feet of high-cube logistics and 2,773,050 million square feet of e-commerce uses due to the higher intensity of trips generated with e-commerce uses.

2.9 SECTION 4.8, GREENHOUSE GAS EMISSIONS

Page 4.8-19, final paragraph, fourth sentence

This scenario provides for the maximum number of trips and related air quality impacts that could be associated with the Project. For instance, if the Project were to develop with up to approximately 6.6 million square feet of high-cube logistics uses only, the number of trips associated with the Project would be less than if the Project were to develop with the assumed 2,641,000 million square feet of high-cube logistics and 2,773,050 million square feet of e-commerce uses due to the higher intensity of trips generated with e-commerce uses.

Page 4.8-20, first paragraph, last sentence

occur in a combination that would not exceed the maximum number of vehicle trips analyzed within this EIR, which represents a conservative, worst-case scenario. For purposes of construction emissions

modeling, the maximum potential development of up to approximately 6.6 million square feet building area was modeled to reflect the maximum square footage of building construction potential.

Page 4.8-32, MM GHG-1

MM GHG-1 Project development proposals with building permit applications for tenant improvements by tenant/facility operator shall implement Screening Table Measures that demonstrate that each building achieve at least 100 points per the Screening Tables. The County shall verify that Screening Table Measures achieving the 100-point performance standard are incorporated in development plans prior to the issuance of building permit(s) and/or site plans (as applicable). The County shall verify implementation of the selected Screening Table Measures prior to the issuance of Certificate(s) of Occupancy. At the discretion of the County, measures that provide GHG reductions equivalent to GHG emissions reductions achieved via the Screening Table Measures may be implemented. Multiple development proposals may, at the discretion of the County, be allowed to collectively demonstrate achievement of at least 100 points per the Screening Tables. This mitigation measure applies only to tenant occupancy/tenant permits and not the building shell approvals and/or limited speculative tenant improvements installed for marketing purposes.

Page 4.8-32, MM GHG-2

MM GHG-2 As part of the building permit for tenant improvements by tenant/facility operator, the Project shall install solar photovoltaic (PV) panels or other source of renewable energy generation on-site, or otherwise acquire energy from the local utility that has been generated by renewable sources, that would provide at least 50 percent of the expected total building load. On-site solar PV or other clean energy systems shall be installed within two years of commencing operations. Each building shall include an electrical system and other infrastructure sufficiently sized to accommodate the PV arrays. The electrical system and infrastructure must be clearly labeled with noticeable and permanent signage. This mitigation measure applies only to tenant occupancy/tenant permits and not the building shell approvals and/or limited speculative tenant improvements installed for marketing purposes.

Page 4.8-33, MM GHG-3

MM GHG-3 Prior to the issuance of a building permit for the Shell Design by Site Developer ~~tenant improvements~~, the Site Developer ~~tenant~~ or successor in interest shall provide documentation to ~~the~~ San Bernardino County demonstrating that the Project is designed to achieve Leadership in Energy and Environmental Design (LEED) standards or meet or exceed CALGreen Tier 2 standards in effect at the time of building permit application. ~~This mitigation measure applies only to tenant permits and not the building shell approvals.~~

Page 4.8-33, MM GHG-4

MM GHG-4 The development shall divert a minimum of 75 percent of landfill waste. Prior to issuance of tenant occupancy permits, a recyclables collection and load area shall be constructed in compliance with County standards for Recyclable Collection and Loading Areas. This mitigation measure applies only to tenant occupancy/tenant permits and not the building shell approvals and/or limited speculative tenant improvements installed for marketing purposes.

Page 4.8-33, MM GHG-5

MM GHG-5 Prior to the issuance of tenant occupancy permits, the Planning Department shall confirm that tenant lease agreements include contractual language that all handheld landscaping equipment used onsite shall be 100 percent electrically powered. This mitigation measure applies only to tenant occupancy/tenant permits and not the building shell approvals and/or limited speculative tenant improvements installed for marketing purposes.

Page 4.8-38, Table 4.8-6: Project Consistency with Applicable Scoping Plan Measures, row 16, column 3

Water	Water	Title 24 Part 11 California Green Building Code Standards	**Consistent.** The Project would comply with the CalGreen standards, which requires a 20 percent reduction in indoor water use. The Project would also comply with the ~~City's~~ County's Water-Efficient Landscaping Regulations (Chapter 22, Section 63.2201 of the County's Code).
		SBX 7-7—The Water Conservation Act of 2009	
		Model Water Efficient Landscape Ordinance	

Page 4.8-39, Table 4.8-6: Project Consistency with Applicable Scoping Plan Measures, row 21, column 3

Recycling and Waste Management	Recycling and Waste	Title 24 Part 11 California Green Building Code Standards	**Consistent.** The Project would not conflict with implementation of these measures. The Project is required to achieve the recycling mandates via compliance with the CALGreen code. The ~~City~~ County has consistently achieved its state recycling mandates.
		AB 341 Statewide 75 Percent Diversion Goal	

2.10 SECTION 4.10, HYDROLOGY AND WATER QUALITY

Page 4.10-16, first paragraph, seventh sentence.

In accordance with the SWRCB Emergency Order published in May 2022, the use of potable water for landscaped areas will be prohibited. Therefore, ~~As an option to using potable water for irrigation uses,~~ new recycled water facilities would ~~may~~ be installed in the backbone streets (Streets "A," "B," "C," and "D"), shown in SCCIISP Figure 3-17: Conceptual Recycled Water Plan to provide irrigation water for the Project area.

Page 4.10-16, second paragraph, second sentence.

The Project would be developed within the western portion of the FWC service area. FWC receives groundwater from multiple groundwater sources including the Chino Basin, the Lytle Basin, and the Rialto-Colton Basin~~, and the No Man's Land Basin~~.

2.11 SECTION 4.11, LAND USE AND PLANNING

Page 4.11-5, after Speedway Commerce Center II Specific Plan section, before Section 4.11.3

Development Code Amendment

A text and map amendment to the Development Code will be made to identify the Specific Plan designation of SC/SP-COM on the official zoning map.

General Plan Amendment

A map amendment to the General Plan will be made to Special Development (SD), which is the land use category used to identify Specific Plan areas.

Page 4.11-10, Construction and Operations, added as 2nd paragraph

Neither a General Plan Amendment nor a Zone Change is required to allow or authorize the uses permitted in the Specific Plan area. Although the Project site currently contains a commercial land use designation, the underlying special development zoning allows for combination of residential, commercial, industrial, agricultural, open space and recreation uses, and similar and compatible uses. A text and map amendment to the Development Code and General Plan will be made to identify the Specific Plan designation on the official map.

Page 4.11-18, Table 4.11-4, Row 33

Goal TM-4 Complete Streets, Transit, and Active Transportation. On- and off-street improvements that provide functional alternatives to private car usage and promote active transportation in mobility focus areas.	
Policy TM-4.2: We evaluate the feasibility of installing elements of complete street improvements when planning roadway improvements in mobility focus areas, and we require new development to contribute to complete street improvements in mobility focus areas. In evaluating complete street improvements, we prioritize those in mobility focus areas that are within unincorporated environmental justice focus areas.	**Consistent:** The Project would involve improvements to surrounding roadways including Cherry Avenue. Improvements would include the creation of sidewalks to encourage pedestrian usage as well as a multi-use trail which will allow for bicycle and pedestrian travel.
Policy TM-4.5: Transit access to job centers and tourist destinations. We support and work with local transit agencies to generate public transportation systems that provide access to job centers and reduce congestion in tourist destinations in unincorporated areas.	**Consistent:** The Project has been and would continue to coordinate with Omnitrans to increase bus service into the Project site through the placement of bus stops.

2.12 SECTION 4.13, NOISE

Page 4.13-24, Subsection "Standard Conditions and Requirements:," second sentence

Standard Conditions are existing requirements and standard conditions that are based on local, state, or federal regulations or laws that are frequently required independently of CEQA review. The ~~City~~ County may impose additional conditions during the approval process, as appropriate.

Page 4.13-24, SC NOI-1

SC NOI-1 Prior to Grading Permit issuance, the Master Developer and/or Site Developer, as applicable, shall demonstrate, to the satisfaction of the County Engineer that the Project complies with the following:

- Construction contracts specify that all construction equipment, fixed or mobile, shall be equipped with properly operating and maintained mufflers and other State required noise attenuation devices.
- A sign, legible at 50 feet shall be posted at the Project construction site. The sign(s) shall be reviewed and approved by the Building Official and County ~~City~~ Planning Department, prior to posting and shall indicate the dates and duration of construction activities, as well as provide a contact name and a telephone number where residents can inquire about the construction process and register complaints.
- Prior to issuance of any Grading or Building Permit, the Contractor shall provide evidence that a construction staff member will be designated as a Noise Disturbance Coordinator and will be present on-site during construction activities. The Noise Disturbance Coordinator is responsible for responding to local complaints about construction noise. When a complaint is received, the Noise Disturbance Coordinator shall notify the County within 24-hours of the complaint, determine the cause (e.g., starting too early, bad muffler, etc.), and implement reasonable measures to resolve the complaint as deemed acceptable by the Public Works Department.
- Prior to issuance of any Grading or Building Permit, the Master Developer and/or Site Developer, as applicable, shall demonstrate to the satisfaction of the County Engineer that construction noise reduction methods shall be used where feasible. These reduction methods include shutting off idling equipment, installing temporary acoustic barriers around stationary construction noise sources, maximizing the distance between construction equipment staging areas and occupied residential areas, and electric air compressors and similar power tools.
- Construction haul routes shall be designed to avoid noise-sensitive uses (e.g., residences, convalescent homes, etc.) to the extent feasible.
- During construction, stationary construction equipment shall be placed such that emitted noise is directed away from sensitive noise receivers.
- Construction of the Project would be limited to the daytime hours of construction permitted (between the hours of 7:00 a.m. to 7:00 p.m. and would not occur on Sundays or Federal holidays as stated in the County Building Code Standards (§ 150.003 Construction: Hours of Construction) (unless otherwise approved by the County), and nighttime lighting would only be required seasonally.

2.13 SECTION 4.16, RECREATION

Page 4.16-6, Impact 4.16-2, Subsection "Construction and Operations," second paragraph, second-to-last sentence

This growth is accounted for in SCAG's demographic forecast as well as each ~~city's~~ County's general plan EIR, which found that recreational impacts would be less than significant. Therefore, the Project would not require the construction or expansion of recreational facilities that could result in an adverse physical effect on the environment and a less than significant would occur.

Page 4.16-7, Section 4.16.6 "Cumulative Impact," first paragraph, fourth sentence

This growth is accounted for in SCAG's demographic forecast as well as each ~~city's~~ County's general plan EIR, which found that recreational impacts would be less than significant.

2.14 SECTION 4.17, TRANSPORTATION

Page 4.17-9, New paragraph 8

Policy TM-4.2 We evaluate the feasibility of installing elements of complete street improvements when planning roadway improvements in mobility focus areas, and we require new development to contribute to complete street improvements in mobility focus areas. In evaluating complete street improvements, we prioritize those in mobility focus areas that are within unincorporated environmental justice focus areas.

2.15 SECTION 4.18, TRIBAL CULTURAL RESOURCES

Page 4.18-11, Mitigation Measure, MM TCR-2

MM TCR-2 Discovery of TCRs.

A. Upon the discovery of a TCR, all construction activities in the immediate vicinity of the discovery (i.e., not less than the surrounding ~~50~~ 60 feet) shall cease. The Consulting Tribes, Gabrieleño Band of Mission Indians – Kizh Nation and Yuhaaviatam of San Manuel Nation (YSMN) ~~San Manuel Band of Mission Indians (SMBMI)~~, shall be immediately informed of the discovery. An archaeologist that meets Secretary of Interior Professional Qualifications, a Kizh monitor and/or Kizh archaeologist, and a~~n~~ YSMN ~~SMBMI~~ CRM staff member will promptly report to the location of the discovery to evaluate the TCR and advise the project manager regarding the matter, protocol, and any mitigating requirements. No project construction activities shall resume in the surrounding 60 ~~50~~ feet of the discovered TCR unless and until the Consulting Tribes and archaeologist have completed their assessment/evaluation/treatment of the discovered TCR and surveyed the surrounding area. Treatment protocols outlined in TCR-3 shall be followed for all discoveries that do not include human remains.

   Additionally, the Yuhaaviatam of San Manuel Nation Cultural Resources Department (YSMN) shall be contacted, as detailed within TCR-1, regarding any pre-contact and/or historic-era cultural resources discovered during project implementation and be provided information regarding the nature of the find, so as to provide Tribal input with regards to significance and

treatment. Should the find be deemed significant, as defined by CEQA (as amended, 2015), a cultural resource Monitoring and Treatment Plan shall be created by the archaeologist, in coordination with YSMN, and all subsequent finds shall be subject to this Plan. This Plan shall allow for a monitor to be present that represents YSMN for the remainder of the project, should YSMN elect to place a monitor on-site.

Any and all archaeological/cultural documents created as a part of the project (isolate records, site records, survey reports, testing reports, etc.) shall be supplied to the applicant and Lead Agency for dissemination to YSMN. The Lead Agency and/or applicant shall, in good faith, consult with YSMN throughout the life of the project.

Page 4.18-14, third paragraph, second sentence

All future development with the potential to impact tribal cultural resources would be subject to compliance with the existing federal, state, and local regulatory framework concerning the protection of tribal cultural resources. Furthermore, each future project considered for approval by the ~~City~~ County would be required to include mitigation measures to protect resources if they are uncovered during grading activities.

2.16 SECTION 4.19, UTILITIES AND SERVICE SYSTEMS

Page 4.19-2, Table 4.19-1.

Table 4.19-1: Potable Water Demand by Land Use (AFY)

Land Use	2015 Volume	% of 2015 Total	2020 Total	% of 2020 Total	Numerical Change 2015 to 2020	% change 2015 to 2020

Notes:
IEUA = Inland Empire Utilities Agency
SBVMWD = San Bernardino Valley Municipal Water District

Page 4.19-4, Subsection "Imported Water," final sentence of subsection

Due to FWC's recent agreement with SBVMWD ~~Although FWC has no established allocation with the SBVWMD~~, FWC anticipates the importation of approximately 3,650 ~~3,200~~ AFY of imported water from SBVMWD by 2025. Additional water may be purchased from SBVMWD, if available, at a higher rate.

Page 4.19-4, Subsection "Wastewater and Recycled Water," first paragraph of subsection, new third paragraph

IEUA provides recycling and wastewater services for the cities of Chino, Chino Hills, Fontana, Montclair, Ontario, Upland, and Rancho Cucamonga. FWC receives recycled water resources from IEUA which operates four Regional Water Recycling Plants (RPs). However, FWC is the service provider for the direct use of recycled water for irrigation and any applicable industrial/commercial uses. The IEUA RP-4 is the wastewater treatment plant for the City of Fontana and its sphere of influence (SOI), which includes the Project site, located in the City of Rancho Cucamonga.

Page 4.19-9, new final paragraphs (three)

Under SB 610, water assessments must be furnished to local governments for inclusion in any environmental documentation for certain projects (as defined in CWC § 10912 [a]) subject to the State CEQA Guidelines.

California Public Utilities General Order 103

General Order 103 was enacted by CPUC with the purpose of establishing minimum design and development standards for water and wastewater utilities within the jurisdiction of CPUC. These standards include guidance on materials and infrastructure sizing and metering. Additionally, General Order 103 outlines policies which govern the utility's methods for public outreach and provides customer service and reporting standards. The general order is meant to provide consistency between utility services within the CPUC jurisdiction.

California Water Code, Section 64554: New and Existing Source Capacity

Section 64554(a) states that "At all times, a public water system's water source(s) shall have the capacity to meet the system's maximum day demand (MDD). MDD shall be determined pursuant to subsection (b)", which states that "a system shall estimate MDD and PHD for the water system as a whole (total source capacity and number of service connections) and for each pressure zone within the system (total water supply available from the water sources and interzonal transfers directly supplying the zone and number of service connections within the zone)." Subsequent subsections discuss well and groundwater capacity and reporting requirements.

California Water Code, Section 64572: Water Main Separation

Section 64572 describes the required separation for new water mains and new supply lines conveying such substances as untreated sewage; primary and secondary treated sewage; disinfected secondary recycled water; hazardous fluids; disinfected tertiary water; and storm drainage. Exemptions are also discussed as follows, "With State Board approval, newly installed water mains may be exempt from the separation distances in this section, except subsection (f), if the newly installed main is:

(1) less than 1320 linear feet,

(2) replacing an existing main, installed in the same location, and has a diameter no greater than six inches more than the diameter of the main it is replacing, and

(3) installed in a manner that minimizes the potential for contamination, including, but not limited to:

(A) sleeving the newly installed main, or

(B) utilizing upgraded piping material

Page 4.19-9, new discussion to following Assembly Bill 1668 and Senate Bill 606, and precede Assembly Bill 341

Additional Drought Actions and Regulations

California is once again in a period of extended severe drought. In response, Governor Newsom proclaimed a State of Emergency asking all Californians to reduce their water use by up to 20 percent. The Governor's action was in response to unprecedented drought conditions that have brought below average

snow and rainfall, resulting in record low water levels in the state's water reservoirs and historically low snowpack levels recorded in the Sierra Nevada mountain range.

In response to the governor's call to action, on April 26, 2022, the Board of Directors of the Metropolitan Water District of Southern California ("MWD"), Southern California's water wholesaler, declared a Water Shortage Emergency Condition for areas that depend on the State Water Project. MWD's Board voted unanimously to adopt a framework for an Emergency Water Conservation Program which requires local water suppliers, like FWC, to adopt one of two approaches to reduce water use; either (1) limit outdoor watering once per week, or (2) comply with monthly water allocation limits.

In addition to MWD's declaration and in response to the governor's call to action, on May 24, 2022, the State Water Resources Control Board ("SWRCB") adopted an Emergency Regulation to remain in effect for one year unless it is determined that drought conditions no longer persist or unless the regulation is renewed by the SWRCB. This regulation calls on each local water supplier to implement a Shortage Level 2 (ten to twenty percent) from its Water Supply Contingency Plan by June 10, 2022. The Regulation also bans use of potable water to irrigate turf on commercial, industrial, or institutional properties that are not regularly used for human recreational purposes or for civic or community events.

Page 4.13-13, Subsection "Water," 2nd paragraph

Potable and recycled water (if available) would be conveyed throughout the Project site via new water lines beneath Streets "A," "B," "C," and "D." The new infrastructure would include fire flow, domestic, and irrigation. The Project would also utilize existing water pipelines which run across Street A and along Cherry Avenue.

Page 4.19-15, Subsection "Water" first paragraph of subsection, fifth sentence

The WSA created for the Project concluded that the Project would generate a potable water demand of 596 AFY and a recycled water demand of 570 AFY, which would be accommodated by FWC based on its existing water supply projections with~~out~~ the construction of new and ~~or~~ expanded facilities. The Project would require construction of new and expanded facilities, including new water production, storage, and distribution infrastructure facilities.

Page 4.19-15, Subsection "Construction and Operations" second paragraph of subsection, first two sentences

Water use on the Project site ~~may~~ would involve the use of existing recycled water infrastructure, further reducing potable water demand. This ~~could~~ would be accomplished through the use of existing recycled waterlines along Napa Street and the installation of additional recycled water facilities within proposed Streets "A," "B," "C," and "D."

Page 4.19-16, second paragraph, last sentence

Since these water demands have been incorporated and accounted for, ~~and do not directly necessitate the further development of water infrastructure,~~ a less than significant impact would occur.

Page 4.19-18, References

Stetson Engineers, Inc. 2022. *Supplement to the Water Supply Assessment, Speedway Commerce Center II Project*.

Civiltec Engineering, Inc. 2022. *Hydraulic Assessment of Speedway Commerce Center II.*

2.17 SECTION 4.20, WILDFIRE

Page 4.20-8, new fourth paragraph

California Public Utilities General Order 103

General Order 103 was enacted by CPUC with the purpose of establishing minimum design and development standards for water and wastewater utilities within the jurisdiction of CPUC. These standards include guidance on materials and infrastructure sizing and metering. Additionally, General Order 103 outlines policies which govern the utility's methods for public outreach and provides customer service and reporting standards. The general order is meant to provide consistency between utility services within the CPUC jurisdiction.

Page 4.20-15, Section 4.20.6: "Cumulative Impact," second paragraph, last sentence

Future projects would be required to meet minimum standards for fire safety and comply with the Fire Code and ~~City~~ County regulations.

2.18 SECTION 5.0, OTHER CEQA CONSIDERATIONS

Page 5-4, Subsection "Population and Employment," second sentence

Population and employment information is provided in ***Section 4.14: Population and Housing***. The Project is anticipated to generate approximately 3,732 ~~3,127~~ employees as a result of implementation.

2.19 SECTION 6.0, ALTERNATIVES

Page 6-4, Objective 10

Objective 10: Develop and operate a large format high-cube logistics and e-commerce center that limits truck traffic disruption to residential areas within Southwestern San Bernardino County and neighboring jurisdictions.

Page 6-20, Reduced Footprint Alternative, Utilities and Service Systems

Project impacts to utilities and service systems would be less than significant in consideration of compliance with existing laws, ordinances, regulations, and standards. Both this Alternative and the Project would result in an increased demand for utilities. Demand for services including natural gas, electricity, water, wastewater treatment, and solid waste disposal would be less than that of the Project. New water production, storage, and distribution infrastructure facilities would be required, and existing utilities would be extended and upgraded as needed during construction of the Project or this Alternative to serve the anticipated demands and to accommodate operation of each. ~~While~~ The Project and this Alternative would increase the overall demand for services, ~~adequate~~ requiring increased capacity to

serve this Alternative and the Project ~~is anticipated~~. This Alternative would tie into existing and proposed utility lines within the existing roadways and within the existing already disturbed rights-of-way adjacent to the site, similar to the Project. No additional impacts to listed resources, including electricity, natural gas, sewer, water, and telecommunications infrastructure, would occur. Impacts under this Alternative would be reduced as compared to the Project, but would remain less than significant under both this Alternative and the Project.

Page 6-24, first paragraph, fifth sentence

The County does not contain areas with land use designations for either Forest Land or Timberland. The Project site is within SD-COM zoned land within the ~~City~~ County and there are no agricultural, forest land, or timberland zoning designated resources in this unincorporated portion of the County

Page 6-29, Commercial Project Alternative, Utilities and Service Systems

Both this Alternative and the Project would result in an increased demand for utilities. This Alternative's demands for services including natural gas, electricity, water, wastewater treatment, and solid waste disposal are anticipated to be greater than that of the Project. New water production, storage, and distribution infrastructure facilities would be required, and existing utilities would be extended and upgraded as needed during construction of the Project and this Alternative to serve the anticipated demands and to accommodate operation of each. ~~While~~ The Project and this Alternative would increase the overall demand for services, ~~adequate~~ requiring increased capacity to serve this Alternative and the Project ~~is anticipated~~. Project impacts to utilities and service systems would be less than significant in compliance with existing laws, ordinances, regulations, and standards. No additional unmitigated impacts to utilities and service systems including, electricity, natural gas, sewer, water, and telecommunications infrastructure, are anticipated to occur. It is anticipated that the Alternative would tie into existing and proposed utility lines within close proximity to the Project site.

Therefore, this Alternative would result in increased impacts to utilities and service systems as compared to the Project.

2.20 SECTION 8.0, EIR CONSULTATION AND PREPARATION

Page 8-1, last paragraph, first sentence

As noted above, the ~~City~~ County engaged in public and agency consultation through the NOP and public scoping process.

4.0
Appendices

Section 4.0 Final EIR Appendices

4.1 Technical Memorandum for Supplement to the Water Supply Assessment

The Technical Memorandum is a Supplement to the Water Supply Assessment (WSA) prepared in December 2021 by Stetson Engineers Inc. (Stetson) for San Gabriel Valley Water Company (San Gabriel) regarding the proposed Speedway Commerce Center II Project (Project).

4.2 Hydraulic Assessment of Speedway Commerce Center II Project

CIVILTEC engineering, inc. (Civiltec) prepared a hydraulic assessment of the proposed "Speedway Commerce Center II" development that is located within the service boundary of the San Gabriel Valley water Company, Fontana Water Company Division (FWC) and in the County of San Bernardino, California.

4.3 Speedway Commerce Center II Specific Plan Traffic Study

The Level of Service Traffic Study and Appendix were updated to address comments from the County and received from circulation of the Draft EIR. The updates were generally editorial with minor updates to the analysis however the conclusions and findings in the study did not change from the version included in the Draft EIR appendices.

MEMORANDUM

TO: **Mr. Bryant Marroquin**
Fontana Water Company

FROM: **Stetson Engineers Inc.**

SUBJECT: **Supplement to the Water Supply Assessment**
Speedway Commerce Center II Project

JOB NO.: **2048-18.1**

DATE: **June 17, 2022**

Introduction

This Technical Memorandum is a Supplement to the Water Supply Assessment (WSA) prepared in December 2021 by Stetson Engineers Inc. (Stetson) for San Gabriel Valley Water Company (San Gabriel) regarding the proposed Speedway Commerce Center II Project (Project). The proposed Project is located in the western portion of Fontana Water Company's (FWC) certificated service area as authorized by the California Public Utilities Commission (CPUC). The submitted WSA included a discussion of additional water infrastructure required to meet the industrial, commercial, and irrigation water demands for the proposed Project. The submitted WSA recommended additional water storage infrastructure for the proposed Project. The purpose of this Technical Memorandum is to provide additional information and analysis regarding the recommended additional water storage infrastructure requirements of the proposed Project.

Proposed Project Description

As described in the December 2021 WSA, the proposed Project is located east of Etiwanda Avenue, south of Whittram Avenue, north of San Bernardino Avenue, and west of Cherry Avenue. The proposed Project is located on a portion of the existing Auto Club Speedway site within an unincorporated area of San Bernardino County. It is anticipated the existing Auto Club Speedway race track will be reconfigured into a "short track" (i.e. the existing race track will be reduced in size). As a result, portions of the proposed Project will replace the remaining areas of the existing race track. The proposed Project will include seven buildings with a total of approximately 6,480,000 square feet (sf) of warehouse floor space and 120,000 sf of office floor space, for a total of 6,600,000 sf. The Project will also include approximately 4,497,483 sf (103.25 acres) of surrounding parking areas (pavement) and approximately 1,250,003 sf (28.70 acres) of landscaping on a Project site of approximately 522.22 acres. However, the proposed Project is separate from the Auto Club Speedway and will not include the reduced race track area (i.e. proposed short track).

Proposed Project Water Demands

The December 2021 WSA previously estimated the total water demand for the proposed Project, which includes commercial and industrial water demands (594 acre-feet per year, or AFY) and landscape irrigation (124 AFY), at approximately 718 AFY. The commercial and industrial water demands were previously based on a water use rate of 3,500 gallons per day (gpd) per acre derived from average recorded water use data for large industrial warehouse buildings within FWC's service area. However, pursuant to further review of the water demand for buildings of similar size and use in the vicinity, the water use rate was adjusted to 2,843 gpd per acre for the proposed Project. As a result, the updated commercial and industrial water demands are approximately 482 AFY, and the total updated water demand is approximately 606 AFY (including 124 AFY of landscape irrigation demand). However, in order for FWC to provide 606 AFY to the Project site,

FWC will need to produce water supplies which account for water losses within its water distribution system. Accounting for average system water losses (approximately 7.8 percent), FWC would need to produce approximately 657 AFY of water in order to supply 606 AFY to the Project site.

In order to determine the additional water storage infrastructure requirements of the proposed Project (discussed in the following sections), it is necessary to determine the Maximum Day Demand (MDD) and Peak Hour Demand (PHD) to account for fluctuations in water demands on a seasonal or hourly basis. The MDD and PHD are determined based on "peaking factors" relative to the Average Day Demand (ADD). Pursuant to historical water production records, FWC's "*2021 Water System Master Plan*" determined that a peaking factor of 1.7 (multiplied by the ADD) should be used to calculate the MDD, and that a peaking factor 1.6 (multiplied by the MDD) should be used to calculate the PHD. These peaking factors are consistent with the California Code of Regulations (§ 64554. New and Existing Source Capacity[1]) based on the following requirements: "*If daily water usage data are available, identify the day with the highest usage during the past ten years to obtain MDD; determine the average hourly flow during MDD and multiply by a peaking factor of at least 1.5 to obtain the PHD.*"

Based on an annual water requirement of 657 AFY for the proposed Project, the ADD is approximately 0.59 million gallons per day (MGD). Pursuant to the peaking factors identified above, the MDD is approximately 1.0 MGD and the PHD is approximately 0.07 million gallons per hour (MGH).

Reservoir Storage Capacity Analysis

The total reservoir storage required for the proposed Project is based on the following three (3) components:

1) Operational Storage;
2) Fire Storage; and
3) Emergency Storage.

These three required storage components are discussed in more detail below, and are based on design criteria from the following documents:

- California Code of Regulations (§ 64554)
- CPUC's General Order 103-A (September 2009)
- FWC's "*2021 Water System Master Plan*".
- American Water Works Association "M32 Computer Modeling of Water Distribution Systems" (2017)

Operational Storage

Operation storage (or equalization storage) is the amount of water required to meet demands in excess of the production and delivery capabilities of a water system. It is necessary to coordinate the production rates of water sources and the available storage capacity in a water system to provide a continuous flow of treated water supply. Water systems are often designed to have the capacity to supply the average flow on the day of maximum demand (i.e. MDD). The peak hour demand will be met by both the designed water production capacity (MDD) and outflow from the operational storage. This operational storage is continuously replenished throughout the day to maintain water quality.

Pursuant to the California Code of Regulations (§ 64554), large water systems (including FWC) are required to meet four hours of PHD with source capacity and storage capacity during the MDD. In addition, pursuant to the CPUC's General Order 103-A, dated September 2009, "*If a system provides potable water for fire protection service, new portions of the system shall have supply and storage facilities that are designed to meet MDD plus the required fire flow at the time of design*". As a result, an operational storage requirement equal to 100 percent of the MDD (or 1.0 MG) has been estimated for the proposed Project. This operation storage requirement is also consistent with the criteria identified in FWC's "*2021 Water System Master Plan*".

Fire Flow Storage

Fire storage is the volume of storage water reserved for firefighting. The fire storage volume is determined by multiplying the required fire flow rate by the required time duration. It is assumed that no more than one fire event would occur in any pressure zone at one time. The 2020 San Bernardino County Fire Code adopts the 2019 California Fire Code, which sets fire flow requirements based upon the building material (combustible or non-combustible), building size, and occupancy to determine the required fire flow and duration. Pursuant to the 2019 California Fire Code, the minimum fire flow requirements can range from 1,500 gallons per minute (gpm) (with 2 hours duration), for building sizes less than 3,600 sf, to 8,000 gpm (with 4 hours duration), for building sizes greater than 85,101 sf. Based on FWC's past experience, the maximum fire flow requirement for buildings similar in the size to the proposed Project is 4,000 gpm over a 4 hour duration[2]. This fire flow rate is equivalent with a reservoir storage requirement of 0.96 MG and is also consistent with criteria identified in FWC's "*2021 Water System Master Plan*".

[2] According to the largest building size in the proposed Project, the maximum fire flow requirement would be 6,000 gpm over a 4 hour duration based on the 2019 California Fire Code. The estimated fire flow storage here would be conservative on the low side.

Emergency Storage

Emergency storage provides water during emergencies. Emergencies cover a wide range of rare but probable events, such as pipeline failures, equipment failures, power outages, pumping system failures, water treatment plant failures, raw water contamination events, and natural disasters. The volume of water that is needed during an emergency is usually based on the estimated amount of time expected to elapse before the disruptions caused by the emergency are corrected. The occurrence and magnitude of emergencies are difficult to predict.

Pursuant to the American Water Works Association (AWWA) "M32 Computer Modeling of Water Distribution Systems", dated 2017, "*The amount of emergency storage is based on an assessment of the risk of failures and the desired degree of system dependability. As an example, a system operator may desire a full day of emergency storage in order to provide enough storage in the event of a system-wide power failure. An assessment must be made as to the type and nature of the emergency condition, including the frequency, intensity, and duration. In general, a vulnerability analysis, as described in AWWA Manual M19 {2001), should be used to determine emergency storage requirements. Some state or provincial regulations indicate the minimum emergency storage required for the community based on the average or maximum daily demands. In addition, water quality should be a part of the equation when determining the amount of emergency storage to provide. The utility may relax its minimum pressure requirements under emergency conditions as long as negative pressures are avoided.*

Although the California Code of Regulations does not have a defined requirement for emergency storage, the emergency storage criteria used in FWC's "*2021 Water System Master Plan*" is 50 percent of the MDD (or 0.50 MG). FWC's facilities depend on electrical utility services to operate. Disruption of electrical service may be caused by grid/distribution failures, natural hazards, or intentional power disruptions. Southern California Edison (SCE) provides electrical service to all FWC facilities. Due to the recent wildfire history in California, the State's investor-owned electric utilities, including SCE,

have implemented intentional de-energizations, or public safety power shutoffs (PSPS) during high-risk wildfire conditions. For example, the regional-wide power shutoff in October 2019 lasted about 3 to 5 days. FWC has dedicated backup generators at many critical facilities. However, pursuant to an analysis conducted in FWC's "*2021 Water System Master Plan*", there could be a shortage of about 50 percent of the MDD over a 5 day emergency period. The 0.50 MG volume of emergency storage ensures that FWC will have water available to distribute to the proposed Project during such an extended period.

Required Reservoir Storage Capacity

As discussed above, the total reservoir storage required for the proposed Project is based on Operational Storage (1.0 MG), Fire Storage (0.96 MG); and Emergency Storage (0.50 MG) components and totals approximately 2.5 MG. The tabulation below summarizes the total reservoir storage.

Projected Water Demand	657	AFY
Average Day Demand (ADD)	0.59	MGD
Maximum Day Demand (MDD, or 1.7 x ADD)	1.00	MGD
Peak Hour Demand (PHD, or 1.6 x MDD)	0.07	MGH
Reservoir Storage Components		
(1) Operation Storage (100 Percent of the MDD)	1.00	MG
(2) Fire Flow Storage (4,000 gpm over 4 hours)	0.96	MG
(3) Emergency Storage (50 percent of the MDD)	0.50	MG
Total Required Storage	**2.46**	**MG**

Subject: Hydraulic Assessment of Speedway Commerce Center II FINAL

Dear Ms. Guzman:

CIVILTEC engineering, inc. (Civiltec) has prepared a hydraulic assessment of the proposed "Speedway Commerce Center II" development that is located within the service boundary of the San Gabriel Valley water Company, Fontana Water Company Division (FWC) and in the County of San Bernardino, California. This development will include seven new warehouse buildings covering 6,600,000 square feet (sf) (152± acres (ac)), demolition of the existing race-track, reconfiguration of the existing race-track into a NASCAR short track, and construction of several parking lots of approximately 4,497,483 sf (103.2± ac). Domestic demands for the buildings and short track, irrigation demands (onsite and offsite), and fire demands have been developed.

The development is located east of Etiwanda Avenue, south of Whittram Avenue, north of San Bernardino Avenue, and west of Cherry Avenue. The development is expected to tie into the FWC water distribution system at three water tie-ins as follows:

- One tie-in will be on the existing 16-inch pipeline on the west side Cherry Avenue near Rancho Vista Drive
- The second tie-in will be on the existing 16-inch along Entry Road, west of Cherry Avenue.
- The third tie-in will be west of the development, on the existing 16-inch along Napa Street, just west of Perimeter Road.

This Hydraulic Assessment includes the project description, an estimate of the incremental increase in demand associated with the project, hydraulic analysis of the impact of the increase in demand, preliminary design of new infrastructure that meets the design criteria, and any recommendations for improvements to meet the proposed demands.

Project Description

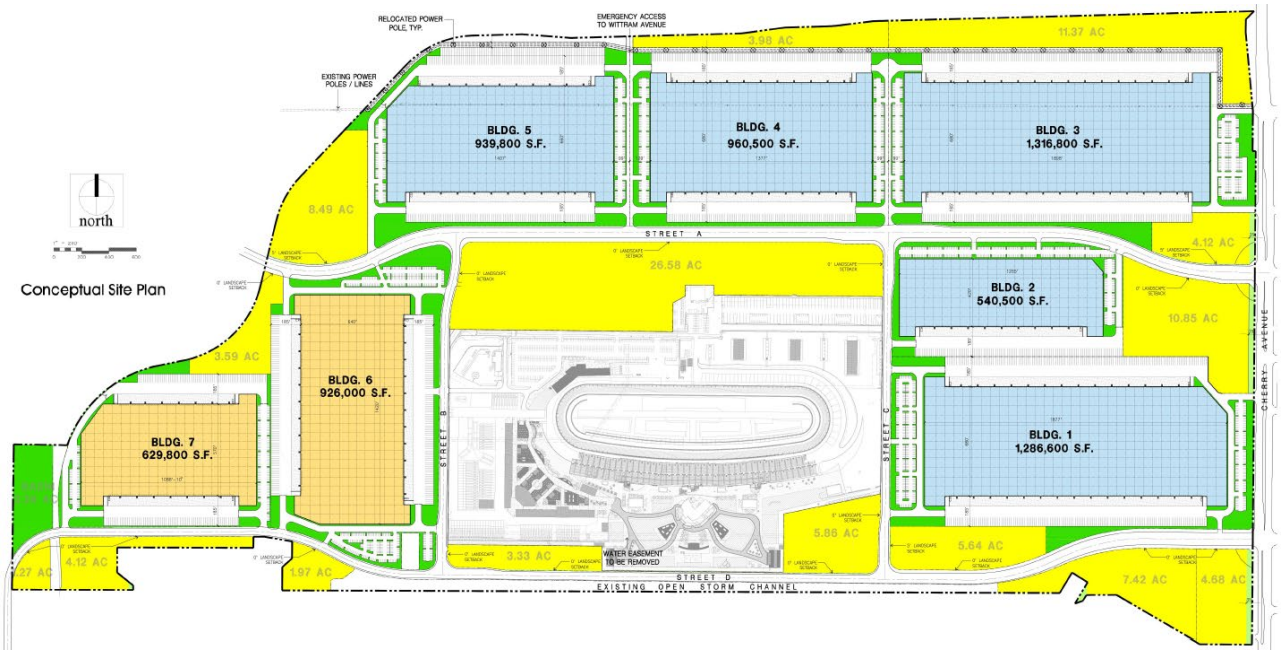
The Speedway Commerce Center II development covers approximately 780.6 ac in San Bernardino County. The development is located east of Etiwanda Avenue, south of Whittram Avenue, north of San Bernardino Avenue, and west of Cherry Avenue. The proposed development is located on a portion of the existing Auto Club Speedway. The existing Auto Club Speedway racetrack is planned to be reconfigured into a short track. Due to the reduced size of the track, portions of this development are planned to be constructed on space of the existing racetrack.

The development includes seven buildings that cover approximately 6,480,000 sf of warehouse floor space and 120,000 sf of office floor space for a total of 6,600,000 sf (152± ac). New parking lots will cover approximately 4,497,483 sf (103.2± ac) and the new landscaping of 1,250,003 sf (28.7± ac) will cover the project site of approximately 522.22 ac as shown in **Figure 1**.

Average Day Demands (ADD) and Fire Flow requirements for this project have been obtained from an exhibit from the Final Water Supply Assessment (WSA) for the Speedway Commerce Center II Project prepared by Stetson Engineers dated December 2021. The exhibit of the conceptual site plan can be found in **Appendix A** and the WSA prepared by Stetson Engineers can be found in **Appendix B**.

Based on the location of the proposed development, FWC will serve the proposed development from the Juniper Pressure Zone that has a hydraulic grade line (HGL) that ranges from 1,274 feet to 1,045 feet.

Figure 1 – Speedway Commerce Center II Development



Design Criteria

Design criteria is used to evaluate the hydraulic capacity of a distribution system. Evaluation consists of a quantitative analysis comparing field measurements or engineering calculations with a series of benchmarks that reflect customer expectations, the regulatory environment, sustainable design, redundancy/reliability, functionality, emergency preparedness, efficiency, and economics.

The design criteria discussed in this section were established from a combination of ***Civiltec's*** professional experience and the FWC 2021 Water System Master Plan (WMP) (**Appendix C**). The design criteria follow regulations stated as part of the 2009 California Public Utilities Commission (CPUC) General Order 103-A **(Appendix E)** and the 2019 California Code of Regulations Title 22 **(Appendix F)**

Water Pressure and Service Conditions

System Pressure

Goal for normal system pressure range: 40 psi to 125 psi

A set range of pressures is established within a domestic water system in order to provide consistent service to customers. The minimum pressure during Maximum Day Demand (MDD) is 40 psi.

Individual pressure regulators should be installed on any services that could have pressure greater than 80 psi at the meter as recommended in Section 1007 (b) of the Uniform Plumbing Code. It is typically the customer's responsibility to install and maintain these pressure regulators at their own expense.

Daily pressure fluctuation: 20 psi maximum

In order to provide consistent service delivery, a stable water pressure is desirable at service connections. Minimizing pressure fluctuation results in more consistent delivery.

Goal for minimum pressure during fire: 20 psi

When the system is providing the required fire flow rate, residual pressures should not fall below 20 psi. This threshold provides a buffer against the possibility of negative pressure in the distribution system which could cause in contamination ingress. This requirement is set by the San Bernardino County Fire Code (2020) which adopts the California Fire Code (2019).

Goal for maximum pressure during minimum hour demand with respect to facilities: 150 psi or pipeline pressure class, whichever is less.

Maximum pressures typically occur (1) at production and transmission facilities such as wells, booster pumping stations and control valves or (2) at low elevations. Under no circumstances should the pressure in the system exceed the pressure class rating of the pipe. During minimum hour demands when booster pumps are operating to refill reservoirs, pressures should not exceed 150 psi, or the pressure rating of the pipe, whichever is lower.

Supply

As noted in Appendix E in the FWC 2021 WMP, "pursuant to the 2019 CCR Title 22 and the 2009 CPUC General Order 103-A, the following criteria are recommended for sizing water supply criteria:"

In system with storage, provide firm supply capacity (largest well or treatment component out of service) equal to MDD; meet Peak Hour Demand (PHD) and fire flow requirement from a combination of supply sources and storage.

In a system that has storage, the supply portfolio must be capable of meeting MDD when the largest well or treatment component is out of service. The system must also be able to meet both PHD and the fire flow requirement using a combination of various supply and storage sources. This level of redundancy will allow FWC to maintain normal deliveries regardless of a temporary loss of a source of supply due to an unforeseen emergency or any maintenance.

In system without storage, provide firm supply capacity equal to PHD or MDD+FF, whichever is greater.

In the case of a system without storage, supply capacity must be able to be provided equal to the greater of PHD or MDD+FF. Since there is no storage in this scenario, the system must be able to supply to the greatest demand that could occur in order to allow FWC to maintain deliveries during the highest calculated demand scenario.

Storage Capacity

Sum of Operational (Equalization), Fire and Emergency Storage in each pressure zone

- Operational (Equalization) Storage, as noted under 2019 CCR Title 22, Section 64554:
  - In pressure zones with continuous water supply: 4 hours of PHD
  - In pressure zones without continuous water supply: 100% MDD
- Fire Storage:
  - For existing systems, fire flow demand for the most severe fire recommended in the pressure zone multiplied by the recommended duration.
  - For new or expanded systems, fire flow demand for the most severe fire recommended for the individual structure required in the system multiplied by the required duration, as noted under General Order 103-A, Section II-B-3b
- Emergency Storage, as noted under 2019 CCR Title 22, Section 64554:
  - 50% MDD (based on the assessment of public safety power shutoffs (PSPS) during high-risk wildfire conditions and the water system's dedicated backup generators)

The principal functions of storage are:

- To equalize fluctuations in hourly demand so that extreme and rapid variations in demand are not imposed on the source of supply;
- To provide water for firefighting; and
- To meet demand during an emergency such as a disruption of the major source of supply, a power outage, a pipe break, or any other unforeseen emergencies or maintenance issues.

Operational (Equalization) Storage: Operational storage is the volume needed to equalize the difference between supply and demand over the course of a day. It allows for system functionality. The maximum operational storage required is dependent on whether the pressure zone has a continuous water supply. The required value of operational storage in pressure zones with a continuous water supply is 4 hours of PHD. The requirement for pressure zones without continuous water supply is 100% of MDD.

Fire Storage: Fire storage is the volume representing one MDD event in terms of fire flow and duration. For existing system evaluation, the fire storage must be the fire demand for the most severe fire recommended in the pressure zone multiplied by the recommended duration. For new or expanded systems, the fire storage must be the fire demand for the most severe fire recommended for the individual structure.

Emergency Storage: Emergency storage is the volume that is required to meet demands during emergencies and times of planned and unplanned equipment outages (pump breakdown, power failure, pipeline rupture etc.). This storage will provide FWC the capability to meet demands while having time to solve any issues and return to normal operation. Emergency storage is 50% of MDD based on an assessment of public safety power shutoffs (PSPS during high-risk wildfire conditions and the water system's dedicated backup generators).

Pumping Capacity

In pressure zones with gravity storage, provide firm pumping capacity (largest pump out of service) equal to MDD.

In pressure zones with gravity storage, system pressure fluctuates relative to the water surface in the reservoir and establishes the hydraulic gradient of the zone. Booster pumping stations should be sized to supply MDD with the largest pump out of service in this case. If there are sources of supply other than booster stations in the zone, then the combination of the capacity of the sources of supply and the capacity of booster stations should provide these criteria instead. This will provide redundancy in the case of the largest pump out of service and allow the system to continue operation.

In pressure zones without gravity storage, provide firm pumping capacity equal to MDD+FF or PHD, whichever is greater.

In pressure zones without gravity storage, the system is pressurized by booster pumps. There are various means that can be used to establish the hydraulic gradient in this case: (1) a balance is established between pumps (which add pressure) and relief valves (which reduce pressure), (2) pumps may be equipped to regulate the amount of energy they impart to the water with variable frequency drives (VFDs), (3) pressure is established in a hydropneumatic tank by an air compressor. Since there is no elevated storage to equalize supply and demand, the pressure zone must be supplied by the booster pumps and other supply sources.

In this case, booster pumping stations must provide firm pumping capacity equal to MDD+FF or PHD, whichever is greater. If there are sources of supply other than booster stations in the zone, then the combination of the capacity of the sources of supply and the capacity of booster stations should provide these criteria instead. This will provide redundancy in the case of the largest pump out of service and allow the system to continue operation.

Pipeline Sizes

Minimum size for pipeline replacement and new mains is 6-inches.

Transmission Mains

Maximum pipe velocity under normal operating conditions: 6 feet per second (fps)

Maximum energy loss under normal operating conditions: 3 feet of head loss per 1000 feet

Transmission mains carry large volumes of water between facilities within a water system. Energy losses can be managed by controlling pipe velocity. Over-sizing transmission mains to reduce velocity and head loss can inadvertently increase detention time and lead to water quality issues. Therefore, a system must simultaneously balance energy loss and water quality.

Distribution Mains

Sized to satisfy three conditions:

(1) MDD+FF with residual pressure of 20 psi
(2) PHD with a minimum system pressure of 40 psi
(3) Maximum pipe velocity: 10 fps

Distribution mains carry water to fire hydrants and service connections within a water system. Mains must be sized to efficiently operate under peak demand conditions and satisfy fire flow demands.

System Design

Land Use and Water Demand

A WSA for the Speedway Commerce Center II Project was prepared by Stetson Engineers dated December 2021 along with a Supplement dated May 10, 2022. This WSA contains ADD for the warehouse/office space that were derived from record water use data for similar site buildings within FWC's service area and the irrigation demands were derived from Department of Water Resources (DWR) water budget calculator. These demands were utilized because they are based upon historical usages for similar industrial projects within the area and is site specific.

Demand Calculations Using Provided Average Day Demands from WSA

As mentioned, ADD for this project have been extracted from the WSA for the Speedway Commerce Center II. A summary of the provided ADD are shown in Table 1. The project site contains "large industrial warehouse buildings" for warehouse/office space area. The water duty factor associated with that category was calculated to be 2,843 gallons per day (gpd)/ac.

$$Large\ Industrial\ Warehouse\ Demand\ = Water\ Duty\ Factor * Area\ (AC)$$

$$Large\ Industrial\ Warehouse\ Demand\ = 2{,}843 \frac{gpd}{ac} * 152\ ac = 430{,}758\ gpd = 482\ AFY$$

As for the irrigation demand, the WSA states the water budget calculator provided by DWR is used. It utilized: Reference Evapotranspiration (Eto), Plant Factor (PF), Irrigation Area (IA), and Irrigation Efficiency (IE) of the project site. The calculation uses all those components to create the irrigation water demand formula as shown below.

$$Irrigation\ Water\ Demand\ = ETo * 0.62 * \frac{PF * IA}{IE}$$

$$Irrigation\ Water\ Demand\ = 60.77\ inch * 0.62 * \frac{0.6 * 1{,}250{,}003\ SF}{0.7} = 124\ AFY$$

As for water loss, the supplement to the WSA states FWC would need to account for water losses within its water distribution system which averaged to approximately 7.8%. Hence, water loss was calculated to be 45,527 gpd or 32 gpm.

Together, the overall ADD for the Speedway Commence Center II development was calculated to be approximately 657 AFY or 408 gpm as shown below.

Table 1 – Average Day Demands per WSA

Land Use	Water Duty Factor (gpd/ac)	Water Duty Factor (gpy)	Area (ac)	Demand (gpd)	Demand (gpm)	Demand (AFY)
Large Industrial Warehouse	2,843	-	152	430,758	299	482
Irrigation	-	40,368,739	-	110,707	77	124
Water Loss (7.8%)				45,527	32	51
			Total	**586,992**	**408**	**657**

Peaking Factors

The peaking factors were obtained from the FWC 2021 WMP[1]. Using peaking factors and the provided ADD of the development, the other two demand scenarios, MDD and PHD can be calculated for this analysis as shown in Table 2.

Table 2 – FWC Peaking Factors and Development Demands

Demand Scenario	Peaking Factor Ratio	Peaking Factor	Demand (gpd)	Demand (gpm)	Demand (AFY)
ADD	AD:AD	1.00	586,992	408	657
MDD	AD:MD	1.70	997,886	693	
PHD	AD:PHD	2.72	1,596,617	1,109	

Fire Flow Requirements

The fire flow requirement for this project has been provided through the Water Supply Assessment for the Speedway Commerce Center II Project prepared by Stetson Engineers. The highest fire demand requirement for this development is 4,000 gpm for a duration of 4 hours as shown in Table 3.

Table 3 – Highest Fire Demand Requirement for the Development

Fire Demand Requirement Flow (gpm)	Fire Demand Requirement Duration (hours)
4,000	4

This fire flow requirement follows the criteria from Table 7.1 of the Fontana Water Company Division 2021 Water System Master Plan. This criterion is based on the 2020 San Bernardino Fire Code (which adopts the 2019 California Fire Code). The fire flow requirements per land use can be found in Table 4.

[1] Section ES.5 in 2021 Water Master Plan for Fontana Water Company.

Table 4 – Fire Demand Requirements per FWC WMP

Land Use	Fire Demand Requirement Flow (gpm)	Fire Demand Requirement Duration (hours)
Single Family Residential	1,000	1

Supply Analysis

Existing Supply Conditions

As mentioned, the development is located within the Juniper Pressure Zone. The Juniper Pressure Zone has existing well capacity as well as existing storage capacity.

The wells located in the Juniper Pressure Zone can be found in Table 5. The largest well capacity in the pressure zone is F17C. With that supply out of service, the total supply capacity is 5,731 gpm. This correlates to the summary data in Table 8.1, Existing System Water Capacity Analysis in the FWC 2021 WMP.

Table 5 – Juniper Pressure Zone Wells

Well	Capacity (gpm)
F17B	2,132
F17C	2,955
F21B	2,384
F23A	1,215
Capacity with Largest Source Offline (gpm)	5,731

Per the Design Criteria from the FWC WMP:

In system with storage, provide firm supply capacity (largest well or treatment component out of service) equal to MDD; meet PHD and fire flow requirement from a combination of supply sources and storage.

First Criteria for Supply:

To meet the first criteria for supply, the system must provide sufficient supply capacity with the largest well or treatment component out of service to meet MDD.

As stated in Table 8.1, Existing System Water Capacity Analysis in the FWC 2021 WMP **(Appendix G)**, for the Grouped Juniper Zone, the existing firm supply capacity is 5,731 gpm and the existing MDD is 11,662 gpm. With these two values, the firm supply balance within this pressure zone is confirmed to be (5,931 gpm) as shown below.

Existing Firm Supply Balance:

$$Existing\ Firm\ Supply\ Balance_{Juniper\ Zone} = Existing\ Capacity_{Juniper\ Zone} - Existing\ MDD_{Juniper\ Zone}$$

$$Existing\ Firm\ Supply\ Balance_{Juniper\ Zone} = 5{,}731\ gpm - 11{,}662\ gpm = (5{,}931\ gpm)$$

Utilizing the firm supply balance, by adding the incremental MDD due to the development, the new firm supply balance will now be (6,624 gpm).

New Firm Supply Balance:

$$New\ Firm\ Supply\ Balance_{Juniper\ Zone} = Existing\ Firm\ Supply\ Balance_{Juniper\ Zone} + Incremental\ MDD\ Increase\ due\ to\ development$$

$$Surplus\ or\ Defict_{Juniper} = (5{,}931\ gpm) + 693\ gpm = (6{,}624\ gpm)$$

There are not enough sources to provide MDD with the largest source out of service with the current deficit.

Second Criteria for Supply:

To meet the second criteria for supply, the system must provide sufficient supply capacity with all supply components in operation to meet PHD+FF requirements.

$$PHD_{Development} = 1{,}108\ \frac{gal}{min} * \frac{60\ min}{1\ hour} * \frac{1\ MG}{10^6\ gal} = 0.07\ MG$$

$$FF_{Development} = 4{,}000\ \frac{gal}{min} * 4\ hr * \frac{60\ min}{1\ hour} * \frac{1\ MG}{10^6\ gal} = 0.96\ MG$$

New PHD +FF:

$$PHD + FF\ Requirement = 0.07\ MG + 0.96\ MG = 1.03\ MG$$

Based on the results of the second criteria for supply, the developer would need to provide a source of supply to meet the minimum capacity of 1.03 MG and be able to meet 693 gpm with a new well.

Recommend Supply CIP

There are two supply design criterion that need to be met according to the FWC's WMP. One is to ensure MDD could be met with the largest well out of service in the pressure zone and the other is to ensure PHD+FF requirement could be met using supply and storage capacities for this particular pressure zone. After conducting the supply analysis with the incremental demands due to the Speedway Commence Center II development, the largest resulting incremental supply deficit for this development is 693 gpm under the MDD conditions.

A new groundwater well is required to supply the development with a minimum capacity of 693 gpm. Based upon discussion of these supply calculation results with the SGVWC Staff, the proposed new well can be built on the existing Reservoir F7 Site, just north of the Speedway site.

Storage Analysis

Per the Design Criteria from the FWC WMP:

Sum of Operational (Equalization), Fire and Emergency Storage in each pressure zone

- Operational (Equalization) Storage, as noted under 2019 CCR Title 22, Section 64554:
  - In pressure zones with continuous water supply: 4 hours of PHD
  - In pressure zones without continuous water supply: 100% MDD
- Fire Storage:
  - For existing systems, fire flow demand for the most severe fire recommended in the pressure zone multiplied by the recommended duration.
  - For new or expanded systems, fire flow demand for the most severe fire recommended for the individual structure required in the system multiplied by the required duration, as noted under General Order 103-A, Section II-B-3b
- Emergency Storage, as noted under 2019 CCR Title 22, Section 64554:
  - 50% MDD (based on the assessment of public safety power shutoffs (PSPS) during high-risk wildfire conditions and the water system's dedicated backup generators)

As stated in Table 8.3, Existing System Storage Capacity Analysis in the FWC 2021 WMP **(Appendix G)**, there is an existing storage deficit of 5.17 MG within the Juniper Pressure Zone.

Existing Storage Conditions

As shown in Table 6, there is an existing storage deficit in the Juniper Pressure Zone of 5.17 MG.

Table 6 – Existing Storage Conditions

Total Storage (MG)	Fire Storage			Operational (Equalization) Storage	Emergency Storage	Total Required Storage	Surplus or (Deficit) (MG)
	(gpm)	(hrs)	(MG)	(4 hours of PHD) (MG)	(50% of 1 day of MDD) (MG)	(MG)	
8.67	4,000	4	0.96	4.48	8.40	13.84	(5.17)

Applications of Incremental Increase in Demand

Both the operational storage and the emergency storage is driven by MDD for the Speedway Commerce Center II Development.

Operational Storage:

$$Operational\ Storage = 100\%\ of\ MDD_{Development}$$

$$Operational\ Storage = 1.0 * 693\ \frac{gal}{min} * \frac{60\ min}{1\ hour} * \frac{24\ hours}{1\ day} * \frac{1\ MG}{10^6\ gal} = 1.00\ MG$$

Fire Storage:

$$Fire\ Storage = 4{,}000\ gpm\ for\ 4\ hours$$

$$Fire\ Storage = 4{,}000\ \frac{gal}{min} * 4\ hr * \frac{60\ min}{1\ hour} * \frac{1\ MG}{10^6\ gal} = 0.96\ MG$$

Emergency Storage:

$$Emergency\ Storage = 50\%\ of\ MDD_{Development}$$

$$Emergency\ Storage = 0.50 * 693\ \frac{gal}{min} * \frac{60\ min}{1\ hour} * \frac{24\ hours}{1\ day} * \frac{1\ MG}{10^6\ gal} = 0.50\ MG$$

Total Storage:

$$Total\ Storage = Operation\ Storage + Fire\ Storage + Emergency\ Storage$$

$$1.00\ MG + 0.96\ MG + 0.50\ MG = 2.46\ MG$$

Based on the results of the storage criteria, the developer would need to construct a storage reservoir with a minimum capacity of 2.46 MG to meet the FWC's design criteria.

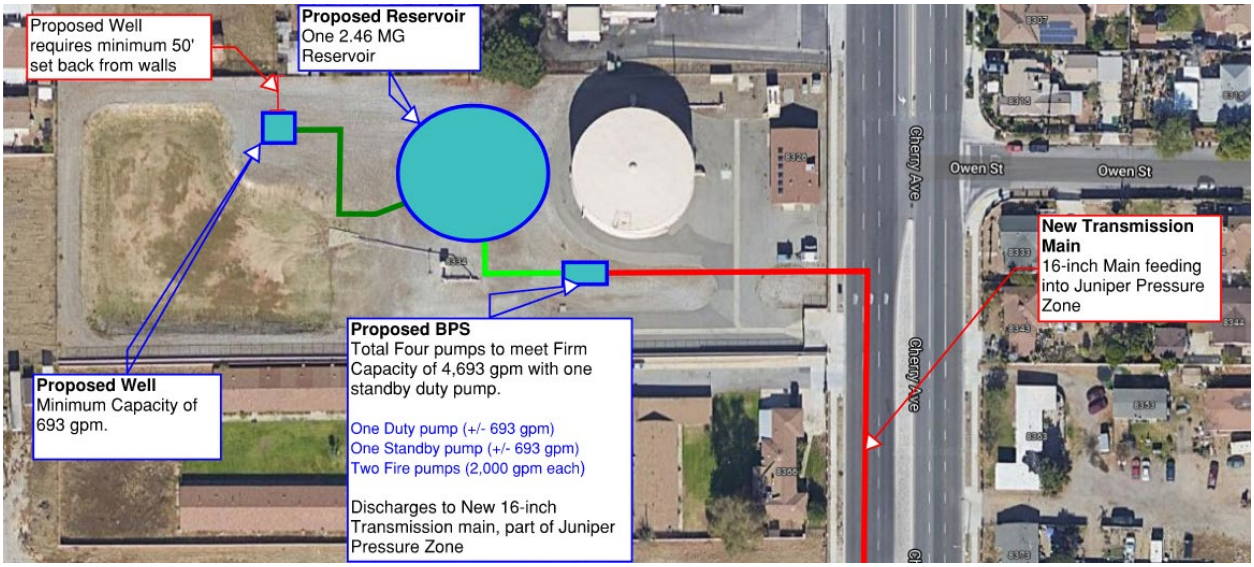
Recommended Storage CIP

It is recommended one 2.46 MG reservoir be constructed to address the anticipated storage deficiencies due to the Speedway Commerce Center II development.

After discussing these storage calculation results with the FWC Staff, the proposed 2.46 MG can be built on the existing Reservoir F7 Site. The proposed reservoir should be sized to fit on the site, but may not necessarily match the height of the existing Reservoir F7 that has a maximum water height of 25 feet in accordance with AWWA freeboard requirements. Since the new reservoir will be supplied by a new well and will be dedicated to serve the Speedway Commerce Center II development, the reservoir height does not have to match the existing Reservoir F7. With that assumption, the reservoir may be sized with a 32-feet or 40-feet shell height. Based upon these possible shell heights, the reservoir is sized to have a diameter of approximately 126.91 feet or 110.98 feet respectively, to provide the required 2.46 MG usable capacity. Alternatively, an equal height reservoir can be constructed at the back of the site by backfilling the existing detention basin. The final configuration of the reservoir location and height will be determined by FWC.

The reservoir is proposed to be built at the base elevation of 1,209 feet, with a maximum water depth of either 29 or 37 feet. This will result in an HGL of 1,238 feet or 1,246. Due to the proposed location and HGL of the proposed reservoir, a booster pump station is required to pump MDD plus fire flow to the development which equates to 4,693 gpm. The booster pump station will contain two 693± gpm pumps (one duty, one standby) each sized to meet MDD requirements. The booster pump station will also contain two 2,000± gpm pumps sized to pump the fire flow requirement to the development. These two larger pumps plus one of the smaller pumps should be sized to produce 4,693 gpm as a firm capacity. The booster pump station will also be built on the existing Reservoir F7 Site as shown in **Figure 2** below.

Figure 2 – Proposed Well, Reservoir and Booster Pump Station at Existing F7 Site



In order to deliver the required water supply from the new reservoir and booster pump station, approximately 4,240 LF of 16-inch transmission main is needed to supply water to the tie-in into Juniper Pressure Zone just north of the Speedway site.

Booster Pump Analysis

Per the Design Criteria from the FWC WMP:

In pressure zones with gravity storage, provide firm pumping capacity (largest pump out of service) equal to MDD.

As stated in Table 8.4, Existing System Booster Pumping Capacity Analysis in the FWC 2021 WMP **(Appendix G)**, there is an existing surplus in booster pump capacity of 18,984 gpm within the Juniper Pressure Zone. With the increase in MDD of 693 gpm due to the development, the surplus decreases to 18,291 gpm.

Existing Booster Pump Conditions

Per the 2021 WMP, the Juniper Pressure Zone has gravity storage and according to the design criteria, the system must provide firm pumping capacity equal to MDD.

The plants that serve the Juniper Pressure Zone and their respective booster pumps are shown in Table 7. The firm pumping capacities (total capacity with the largest pump out of service) of each plant is also shown in the table.

Table 7 – Juniper Pressure Zone Booster Pumps

Plant	Booster Pump Name	Booster Pump Available Capacity (gpm)	Firm pumping Capacity (gpm)
F17	F17B1	1,876	10,864
	F17B2	1,912	
	F17B3	2,382	
	F17B4	2,447	
	F17B5	2,336	
	F17B6	2,358	
F21	F21B1	1,047	2,978
	F21B2	1,062	
	F21B3	869	
	F21B4	1,482	
F23	F23B1	1,066	3,984
	F23B2	1,298	
	F23B3	1,620	
	F23B4	1,807	
F43	F43B1	2,590	12,820
	F43B2	2,473	
	F43B3	2,729	
	F43B4	2,564	
	F43B5	2,591	
	F43B6	2,602	
Total Firm Supply Capacity (gpm)			**30,646**

The existing firm pumping capacity of the Juniper Pressure Zone is 30,646 gpm. The existing MDD of the pressure zone is 11,662 gpm. This leaves a surplus of 18,984 gpm in the system as shown in Table 8.

Table 8 – Existing Booster Pump Conditions

Existing Pump Station Capacity (gpm)	MDD (gpm)	Existing Capacity Surplus or (Deficit) (gpm)
30,646	11,662	18,984

Applications of Incremental Increase in Demand

With the anticipated increase in demand from the Speedway Commerce Center II Development, the MDD for the Juniper Zone will increase by 693 gpm.

Existing Firm Booster Capacity Balance:

$$Existing\ Firm\ Booster\ Capacity_{Juniper\ Zone} = Existing\ Pump\ Station\ Capacity_{Juniper\ Zone} - Existing\ MDD_{Juniper\ Zone}$$

$$Existing\ Firm\ Booster\ Capacity_{Juniper\ Zone} = 30{,}646\ gpm - 11{,}662\ gpm = 18{,}984\ gpm$$

New Firm Booster Capacity Balance:

$$New\ Firm\ Booster\ Capacity_{Juniper\ Zone} = Existing\ Firm\ Booster\ Capacity_{Juniper\ Zone} - Incremental\ MDD\ Increase$$

$$New\ Firm\ Booster\ Capacity_{Juniper\ Zone} = 18{,}984\ gpm - 693\ gpm = 18{,}291\ gpm$$

Although there is a surplus in the pressure zone with the incremental demand increase of the development, there is still a need to install a booster pump station at the existing F7 Site to pump the water out of the proposed reservoir to feed into the Juniper Zone.

System Computer Model

The Speedway Commerce Center II development was incorporated into FWC's existing hydraulic model. The development was modeled to receive flow from all the reservoirs that serve the Juniper Zone by either gravity flow or pumped. Elevations were obtained from Google Earth and the scenarios tested were ADD, MDD, PHD, and MDD+FF.

Pipe Sizing and Layout

To best size the proposed pipelines and to ensure the design criteria is met, the worst-case scenario MDD+FF was utilized to determine the size of the pipelines within the development. The surrounding existing pipelines were also taken into consideration when sizing.

MDD+FF under ultimate buildout is calculated to be approximately 4,693 gpm. The proposed worst-case scenario demand with the design criteria with the maximum desired pipe velocity be 10 fps for distribution mains, the smallest possible size diameter for the pipeline would be 12-inch. If the mains were sized as an 8-inch, the velocities experienced under MDD+FF conditions would be as high as 13.5 fps, exceeding the design criteria.

After programming the new pipelines to be 12-inch and leaving the existing mains along Entry Road as 16-inch within the development, each phase was incrementally tested under the MDD+FF scenario to determine if the proposed pipeline configuration would be sufficient to meet flows. Table 9 displays the results of the ranges of available fire flows during each incremental phase.

Table 9 – Available Fire Flow Ranges per Phase

Available Fire Flow at 20psi Residual (gpm)			
Phase	**1a**	**1a + 1b**	**Ultimate Buildout 1a +1b + 2**
Fire Flow Requirement	4,000	4,000	4,000
Lowest Flow	5,198	5,242	5,684
Highest Flow	7,946	8,343	8,971

Since all design criteria requirements were met by sizing the development per the pipeline configuration, the preliminary pipeline layout was programmed as shown in Figure 3. The dotted blue pipes are the existing 16-inch mains that are currently served by the Juniper pressure zone. The figure below also shows the three tie-ins into the existing FWC water infrastructure to ensure adequate flow to the development. Figure 4 shows the proposed tie-in into the existing 16-inch main in Cherry Avenue for the proposed 16-inch transmission main coming from the proposed booster pump station at the existing F7 Site, south of Owens Street required as the offsite portion required for the development.

Figure 3 – Preliminary Pipeline Layout – Onsite

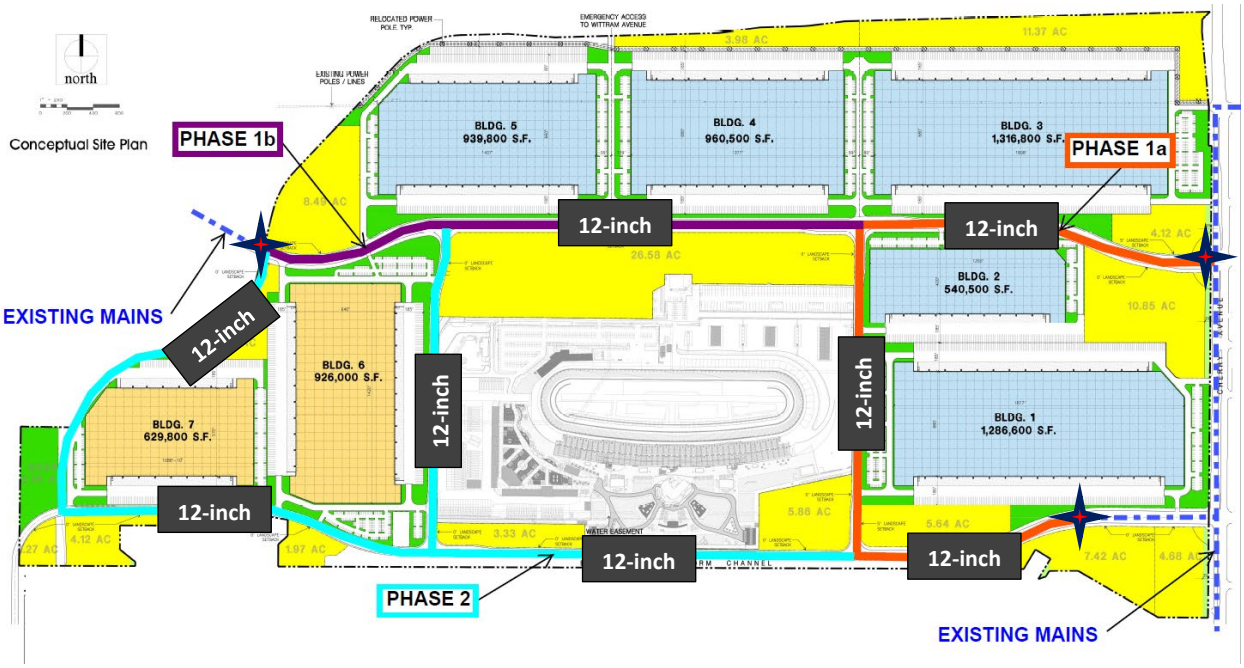


Figure 4 – Preliminary Tie-in for the Offsite Portion

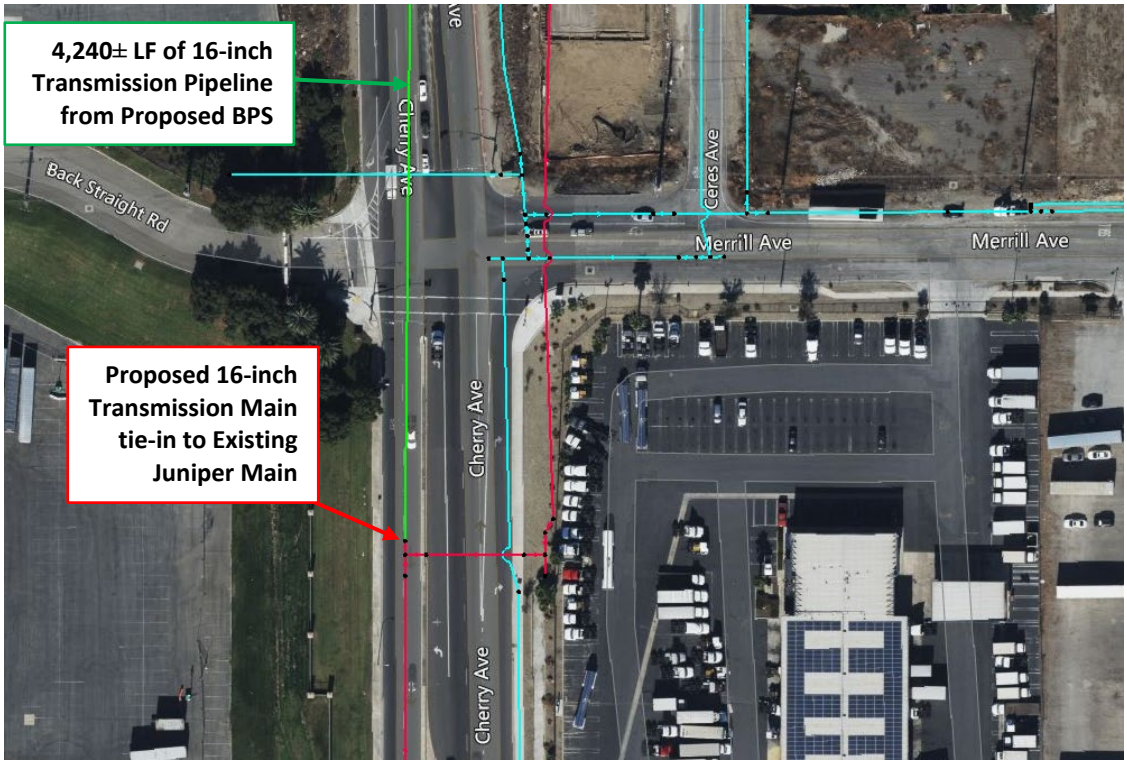


Distribution System Design Criteria Analysis

After the preliminary pipeline layout was configured into the hydraulic model, the other simulated scenarios, such as ADD, MDD and PDH were tested. The junction and pipeline output results of each of these scenarios are provided as **Appendix D** in the report. The results for each scenario were tested against the FWC's design criteria.

System Pressure Criteria*: Goal for normal system pressure range: 40 psi to 125 psi*

Normal system pressures would represent the ADD scenario. Under this scenario, pressures ranged from 44 psi to 71 psi, which meet the design criteria.

Fire Flow Residual Pressures: *Goal for minimum pressure during fire: 20 psi*

Under all phased MDD+FF scenarios for performed for this analysis, the minimum pressure did not drop below 20 psi when provided adequate available fire flow. When running MDD+FF, the lowest residual pressure was 37.4 psi.

Transmission Main Pipeline Criteria - Velocity*: Maximum pipe velocity under normal operating conditions: 6 feet per second (fps)*

Under MDD+FF, when flowing 4,693 gpm throughout the development, the pipe velocity along the transmission mains on Cherry Avenue was 2.88 fps. Under ADD, the maximum pipe velocity along the transmission mains was 1.89 fps. All normal operating simulations displayed velocities under 4.84 fps within the Speedway site, meeting criteria.

Transmission Main Pipeline Criteria - Headloss*: Maximum energy loss under normal operating conditions: 3 feet of head loss per 1000 feet*

Under ADD, the maximum headloss along the transmission mains on Cherry Avenue ranged from 2.7 feet of head loss per 1,000 feet, which meet the design criteria.

Distribution Main Pipeline Criteria*: Goal for distribution mains must satisfy three conditions to be adequately sized to meet design criteria.*

(1) MDD+FF with residual pressure of 20 psi
(2) PHD with a minimum system pressure of 40 psi
(3) Maximum pipe velocity: 10 fps

The results show the pipelines are sized to meet all three of the requirements.

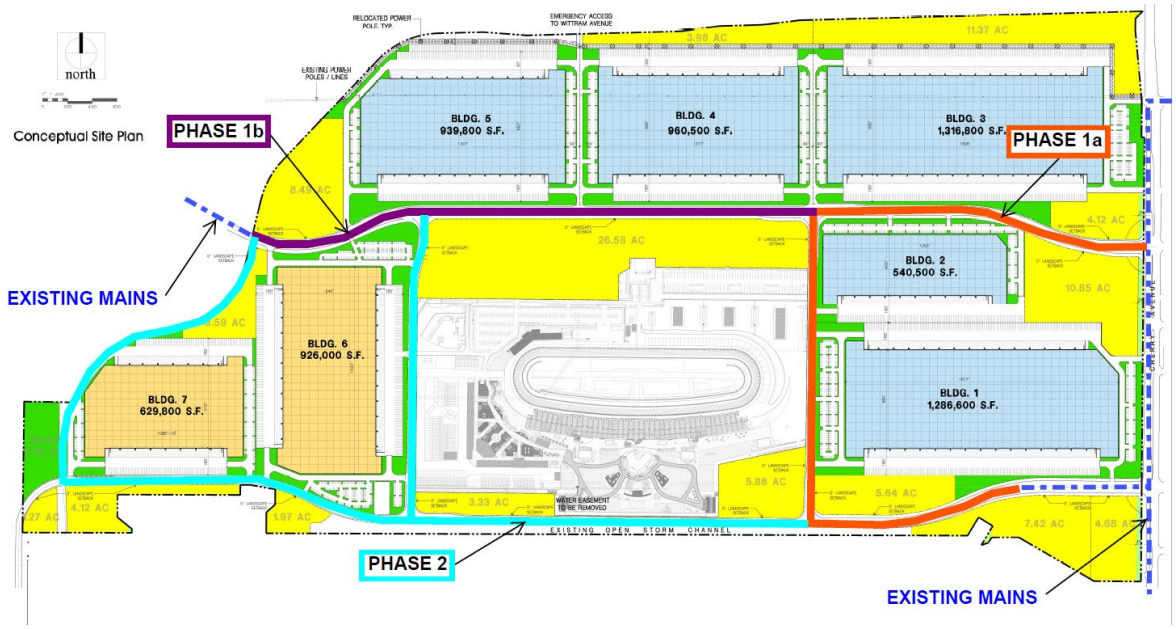
(1) The minimum residual pressure under MDD+FF (4,693 gpm) did not drop below 37 psi, which is greater than the required 20 psi.
(2) The minimum pressure under PHD was 42 psi, which is greater than the required 40 psi.
(3) The maximum pipe velocity under MDD+FF was 7.07 fps, which is below the required 10 fps.

Phasing

According to the WSA, the developer would like to stage the project into three phases as shown in Figure 5. The offsite work phasing was determined by FWC staff and deemed critical to be constructed to provide sufficient supply to the development.

- **Phase 1a** would consist of constructing buildings 1 through 3 (approximately 3,143,900 sf or 72.17 ac) and constructing approximately 5,775± LF of proposed 12-inch pipeline within the on-site portion of the development. In addition to the onsite work, there is a need to construct off-site infrastructure to meet incremental demands due to the development.
    - Offsite Work: Construct 2.46 MG Reservoir at the existing Reservoir F7 Site (west of the intersection of Owens Street and Cheery Avenue), the new booster pump station and a new groundwater well (approximately 1,000 feet depth) at the F7 site
    - Along with the new reservoir, well and booster pump station, approximately 4,240± LF of 16-inch transmission main along Cherry Avenue from the proposed booster pump at the existing Reservoir F7 Site to existing 16-inch tee on the west side of Cherry Avenue, approximately 245 feet south of Merrill Avenue.
- **Phase 1b** would consist of constructing buildings 4 and 5 (approximately 1,900,300 sf or 43.62 ac) and constructing approximately 5,905± LF of proposed 12-inch pipeline within the development.
- **Phase 2 (Ultimate Build-Out)** would consist of constructing buildings 6 and 7 (approximately 1,555,800 sf or 35.72 ac) and constructing approximately 7,480± LF of proposed 12-inch pipeline to complete the development.

Figure 5 – Ultimate Phase Build Out



Needed Infrastructure

The following new facilities are needed to provide supply, storage, and service to the Speedway Commerce Center II development. The total length of the pipelines by pipe diameter size, well capacity and storage capacity to meet the 2021 WMP design criteria is shown in Table 10.

Table 10 – Needed Infrastructure

Type of Facility	Diameter (inch)	Length (feet)	Minimum Capacity (gpm)	Minimum Storage Capacity (MG)
Pipelines – Onsite	12	19,160±	-	-
Pipelines – Offsite	16	4,240±	-	-
Well	-	-	693	-
Storage Reservoir	-	-	-	2.46
Booster Pump Station			4,693	

In addition to the above listed improvements, it is also necessary to construct a building to house the needed booster pumps as well as related work such as piping, electrical system, telemetry controls and electrical panel and conduits for the proposed well. The capacity of the electrical service at the site needs to be verified to confirm it can handle the additional load from the booster pumps and well pump. In the event it cannot supply the additional load, the Southern California Edison service will need to be upsized and related infrastructure improvements.

Please contact the undersigned with any questions regarding these analyses.

Very truly yours,

1.0 EXECUTIVE SUMMARY

Fontana Water Company (FWC) has prepared this Water Supply Assessment (WSA) for the proposed industrial development known as the Speedway Commerce Center II Project (the "Project"). The water demands for the Project are included in this WSA.

The present and future water supplies available to FWC to provide water service to the Project are groundwater pumped from the Chino Basin, Lytle Basin, and Rialto Basin, surface water diversions from Lytle Creek, imported State Water Project water from Inland Empire Utilities Agency (IEUA) and San Bernardino Valley Municipal Water District (SBVMWD), and recycled water.

The Chino Basin has enhanced reliability during drought and is FWC's most reliable source of water supply. The Chino Basin Watermaster and its technical staff ensure long-term reliability of water supplies from the Chino Basin. The Watermaster, under the direct supervision of the San Bernardino County Superior Court, manages basin water supplies, arranges for local and supplemental groundwater recharge and implements and administers the Chino Basin physical solution as prescribed in the governing Superior Court groundwater pumping rights adjudication (the "Chino Basin Judgment").

The Chino Basin Watermaster's groundwater management responsibilities are closely coordinated with IEUA water management goals and implementation of strategies. IEUA's role as a regional water wholesaler includes delivery of supplemental, imported, untreated State Water Project (SWP) water directly to water purveyors like FWC, delivery of water from the Metropolitan Water District of Southern California (MWD) to the Chino Basin Watermaster for groundwater recharge, exchange, groundwater banking, and conjunctive use programs, as well as delivery of recycled water. IEUA has also analyzed future water demands and water supplies within its service area, which includes most of FWC's service area, including the Project, and concluded that sufficient water supplies will be available for the next 20 years through 2045, including during single and multiple (five consecutive) dry years.

This WSA analyzes and evaluates FWC's historical water supplies, water rights, current Urban Water Management Plans (UWMPs) developed by FWC and IEUA, the Chino Basin Optimum Basin Management Plan, and the historical and future availability of SWP water.

Based on that analysis and evaluation, this WSA shows clearly that FWC's available water supplies will be sufficient to meet all of the water demands of the entire Project for the next 20 years through 2045, including during single and multiple dry years.

2.0 INTRODUCTION

PROJECT DESCRIPTION

The proposed Project is located east of Etiwanda Avenue, south of Whittram Avenue, north of San Bernardino Avenue, and west of Cherry Avenue. The proposed Project is located on a portion of the existing Auto Club Speedway site within an unincorporated area of San Bernardino County. It is anticipated the existing Auto Club Speedway race track will be reconfigured into a "short track" (i.e. the existing race track will be reduced in size). As a result, portions of the proposed Project will replace the remaining areas of the existing race track. The proposed Project will include seven buildings with a total of approximately 6,480,000 square feet (sf) of warehouse floor space and 120,000 sf of office floor space, for a total of 6,600,000 square feet. The Project will also include approximately 4,497,483 sf (103.25 acres) of surrounding parking areas (pavement) and approximately 1,250,003 sf (28.70 acres) of landscaping on a Project site of approximately 522.22 acres. However, the proposed Project is separate from the Auto Club Speedway and will not include the reduced race track area (i.e. proposed short track). The Project information used in this WSA was based on a Project conceptual site plan (Scheme 24) prepared by HPA Architecture dated November 17, 2021 (See Appendix A). The proposed Project is located in the western portion of FWC's certificated service area as authorized by the California Public Utilities Commission (CPUC) (Figure 1). The Project is located within the following Assessor Parcel Numbers:

- 0231-011-09
- 0231-011-10
- 0231-011-11
- 0231-011-12
- 0231-111-17

- 0231-111-06
- 0231-111-10

PURPOSE AND SCOPE OF ASSESSMENT

The Project is located within FWC's present CPUC certificated service area, as shown in Figure 1. FWC is ready, willing, and able to provide all necessary water utility service to meet all of the water supply needs of the entire Project.

The purpose of this WSA is to evaluate and confirm FWC's ability to provide all public utility water service to the Project. The reliability of future water supplies available to FWC is based on FWC's longstanding water rights and access to local groundwater and surface water supplies as listed in Table 1 (Summary of FWC Water Rights). Also, it is based on the Chino Basin Watermaster's and IEUA's water management goals and implementation strategies, such as the Optimum Basin Management Plan, supplemental imported water distribution programs, and the use of recycled water. This WSA evaluates all of FWC's available water supply sources and projected water demands within its service area, including the Project area.

TABLE 1 SUMMARY OF FWC WATER RIGHTS

Sources of Supply	Water Right	Description
Lytle Creek (Surface Water) **Lytle Basin**	Lytle Judgments, (1897 McKinley Decree and January 28, 1924 Judgment)	• Entitled to divert up to 3,480.78 miner's inches (~50,400 AFY) from Lytle Creek Region, including up to 2,500 miner's inches (~36,200 AFY) of combined surface and groundwater extractions to augment surface water diversions. • Entitled to divert groundwater from Lytle Basin up to 1,300 miner's inches (~18,800 AFY).
Chino Basin	Chino Basin Judgment, 1978	• Unrestricted pumping to provide water for beneficial use for FWC customers subject to existing appropriative rights, groundwater storage, leases, and replenishment through Watermaster. • Safe yield of Chino Basin = 131,000 AFY (subject to change). • 11.659 percent share of the "Operating Safe Yield." (FWC and FUWC)
Rialto Basin	1961 Rialto Basin Decree and 2021 Rialto Basin Groundwater Council	• Adjustable rights subject to curtailment based on the Key Wells • Rialto Adjustable Rights = 5,564 AFY • Fixed Rights = 370 AFY • Fixed Rights – Standby Rialto Lease = 1,600 AFY

Note: AFY = Acre-Feet per Year

Water Supply Planning Provisions

Population growth in the State of California (State) has resulted in increased demands on water systems. The State legislature has enacted laws to ensure that the increased demands are adequately addressed and that a firm source of water supply is available prior to approval of certain new developments. The regulations include California Water Code Division 6, Part 2.10, Sections 10910-10915 (Water Supply Planning to Support Existing and Planned Future Use) (California Water Code) which is briefly described below. The provisions of the California Water Code seek to promote more collaborative planning between local water suppliers and cities and counties and require detailed information regarding water availability to be provided to city and county land use planners prior to approval of certain specified large land use development projects.

This WSA was prepared pursuant to the requirements of the California Water Code for the approach, required information, and criteria confirming that FWC has sufficient water supplies to meet the projected demands of the Project, in addition to existing and planned future uses. The UWMP is a foundational document for compliance with the California Water Code. The provisions of the California Water Code repeatedly identify the UWMP as a planning document that can be used by a water supplier to meet the standards set forth in both statutes. California Environmental Quality Act (CEQA) guidelines section 15083.5 contains similar provisions regarding consultation with water agencies for certain projects. FWC's 2020 UWMP (June 2021), Metropolitan Water District of Southern California's (MWD's) 2020 UWMP (June 2021), and IEUA's 2020 UWMP Update (June 2021) were prepared pursuant to California Water Code Division 6, Part 2.55, Section 10608 (Sustainable Water Use and Demand Reduction) and California Water Code Division 6, Part 2.6, Sections 10608-10656 (Urban Water Management Planning) and the Water Conservation Act of 2009 (also known as SB X7-7), describe future water demands and future availability of the water supply sources used by FWC and other retail water agencies operating within IEUA's service area. These UWMP documents were used to prepare this WSA.

This WSA includes specific Project water demand estimates and available sources of water supply. FWC will separately notify the Project developer of the specific water supply distribution system and infrastructure facilities required for FWC to provide water utility service to the Project. In addition to the annual Project water demand estimates shown in Section 4.0 of this WSA, FWC's notice to the Project developer also will include a review of any peaking factors (maximum day demands and peak hour demands), fire flow demands, storage, booster pump, and pipeline infrastructure requirements for the proposed Project together with FWC's estimate of the costs for all of the required facilities which the Project developer must deposit with FWC before those required facilities can be installed. Further information regarding the requirements for water storage facilities for the project is provided in Section 4.0 below.

FWC owns easements, and rights-of-way over the Project site between 20 to 50 feet wide for installation, operation, and maintenance of water facilities and related access to the Project site. Additionally, FWC owns approximately 8,000 linear feet of 16-inch diameter underground

steel water pipeline on the Project site. Recycled water pipelines will need to be constructed on the Project site for landscape irrigation. Recycled water is currently being delivered by IEUA to the Banana Basin and Hickory Basin recharge basins, located adjacent to the Project site.

California Water Code (Sections 10910-10915)

Existing law requires every urban water supplier to identify, as part of its UWMP, the existing and planned sources of water available to the supplier. Existing law prohibits an urban water supplier that fails to prepare or submit its UWMP to the Department of Water Resources (DWR) from receiving financial or drought assistance from the state until the plan is submitted.

The California Water Code requires an urban water supplier to include in its UWMP a description of all water supply projects and programs that may be undertaken to meet total projected water use over the next 20 years. The California Water Code requires a city or county that determines a project is subject to the CEQA to identify any public water system that may supply water for proposed developments and to request those public water systems to prepare a specific WSA, including for proposed industrial projects occupying more than 40 acres of land or having more than 650,000 square feet (sf) of floor area. If the water demands for the proposed developments have been accounted for in a recently adopted UWMP, the water supplier may incorporate information contained in that plan to satisfy certain requirements of a WSA. The California Water Code requires the assessment to include, along with other information, an identification of existing water supply entitlements, water rights, or water service contracts relevant to the identified water supply for the proposed project and the quantities of water received in prior years pursuant to those entitlements, rights, and contracts.

The California Water Code also requires the public water system, or the city or county, as applicable, to submit its plans for acquiring additional water supplies if that entity concludes that water supplies are, or will be, insufficient.

3.0 FWC'S HISTORICAL WATER SUPPLIES AND USES

HISTORICAL WATER SUPPLIES

FWC is a public utility water company subject to the regulatory jurisdiction of the CPUC. FWC provides public utility water service to most of the City of Fontana and to portions of the City of Rialto, the City of Rancho Cucamonga, and to adjoining unincorporated areas of San Bernardino County. FWC's CPUC certificated service area encompasses approximately 52 square miles bordered generally by the Riverside County line on the south, Etiwanda and Cherry Avenues on the west, Lytle Creek Wash and Linden Avenue on the east, and Highland and Summit Avenues on the north, as shown on Figure 1.

FWC currently derives its water supply from 29 active groundwater production wells and a surface water treatment plant, the Summit Water Treatment Plant. The water supply is produced from groundwater wells in the Chino Basin, Rialto Basin, and Lytle Basin, and surface water from Lytle Creek. FWC also receives untreated SWP water from IEUA and SBVMWD which is treated at FWC's Summit Water Treatment Plant. The groundwater basins are shown on Figure 2. FWC receives well water, local surface water, imported water, or a combination of those sources at various points in its water distribution system. In addition, FWC has two emergency interconnections, with a total capacity of 3,000 gallons per minute (gpm), to receive water from Cucamonga Valley Water District (CVWD). Emergency interconnections are distribution system interconnections between water purveyors for use during critical situations where one system is temporarily unable to provide sufficient potable water to meet minimum health and/or fire protection needs. Emergency interconnections allow FWC to continue serving water during critical situations such as local water supply shortages as a result of earthquakes, fires, prolonged power outages, and droughts.

Table 1 summarizes FWC's water rights, most of which are held by Fontana Union Water Company (Fontana Union) and are subject to FWC's irrevocable right to utilize, pursuant to court-approved agreements with CVWD and Fontana Union of which FWC is a principal shareholder.

Historical annual water supplies utilized by FWC are summarized in Table 2. Annual water supplies from 2001 to 2020 ranged from 34,895 acre-feet (AF) in 2016 to 49,879 AF in 2007, with an average annual production of 42,907 AFY.

TABLE 2 HISTORICAL ANNUAL WATER SUPPLY PRODUCTION BY FWC (AFY)

Year	Groundwater					Imported Water	Lytle Creek	Recycled Water	Total
	Lytle Basin	Chino Basin	Rialto Basin	No-Man's Land	Subtotal				
2001	8,869	18,766	6,106	3,123	36,864	--	6,235	--	43,098
2002	7,520	23,060	9,452	3,135	43,166	933	2,048	--	46,147

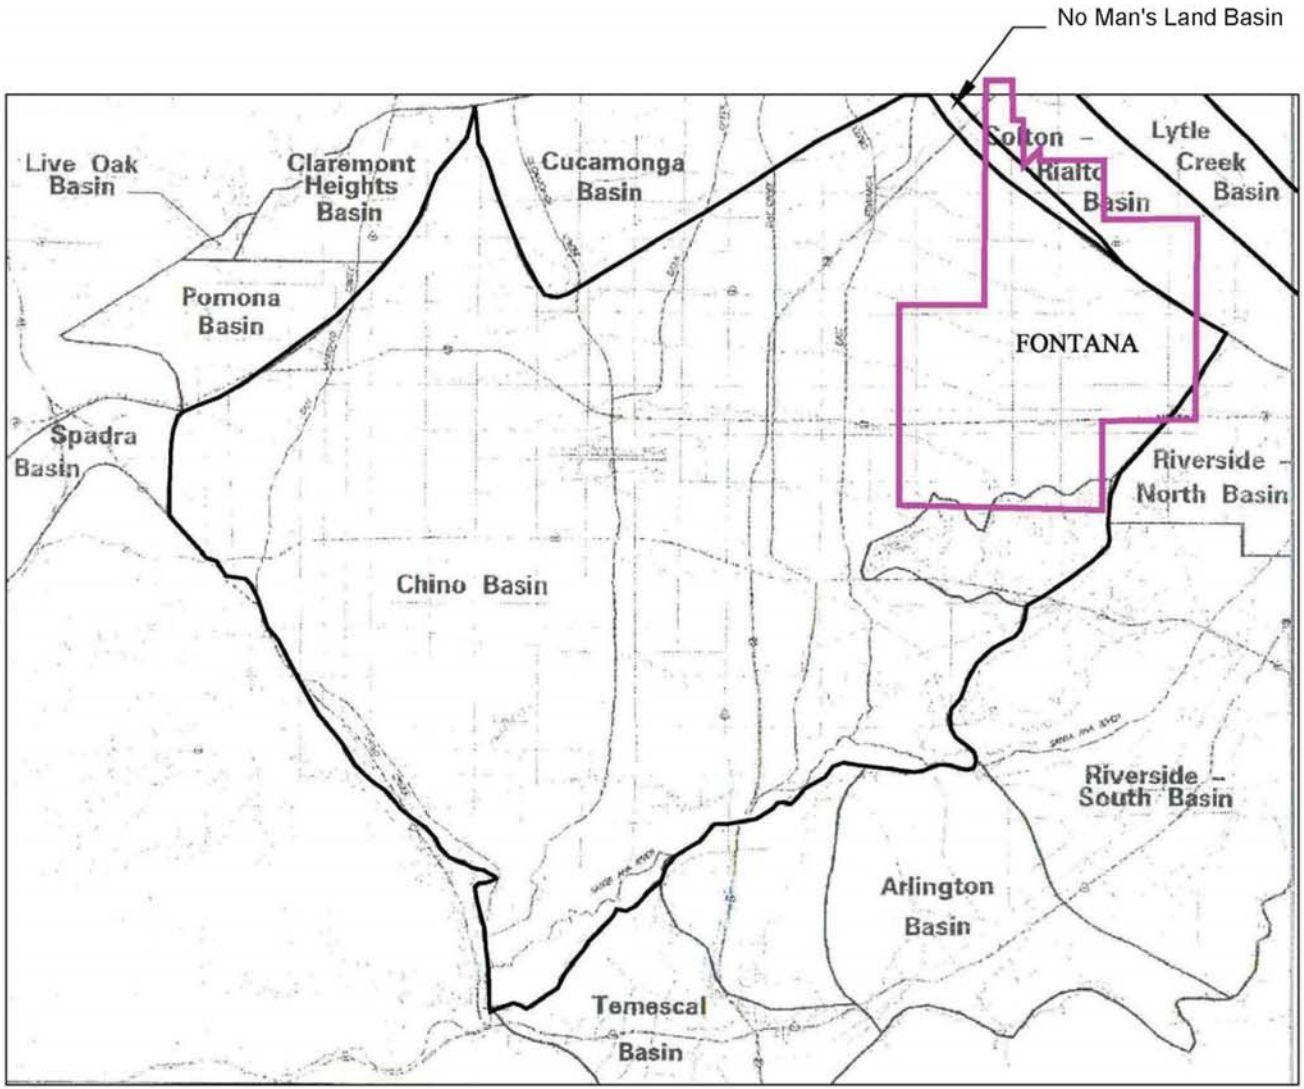
FWC records

FIGURE 2



CHINO GROUNDWATER BASIN AND SURROUNDING BASINS

The following describes the FWC's sources of water supplies and water rights in more detail.

Chino Basin

The Chino Basin is FWC's largest and most reliable groundwater source. During the last 20 years, FWC's production from the Chino Basin ranged from approximately 2,509 AFY in 2011 to 24,718 AFY in 2004, as shown in Table 2. In most years, the Chino Basin accounted for a significant portion of FWC's total water supply.

The Chino Basin, in San Bernardino County, is the largest groundwater basin in the Upper Santa Ana River Watershed. The Chino Basin is bounded by the Rialto-Colton, Chino, San Jose, and Cucamonga faults, and by the Puente Hills and the San Gabriel Mountains. The total surface area of the basin is approximately 154,000 acres (240 square miles).

The Chino Basin currently has over 5,000,000 AF of water in storage, with an additional unused storage capacity, based on historical water levels in the basin, of about 1,000,000 AF. Over the past 20 years, total groundwater production from the Chino Basin has ranged from approximately 133,275 AFY to 188,910 AFY[1]. A majority of production is pumped for municipal and industrial purposes and the remaining production is pumped by agricultural producers.

The Chino Basin was adjudicated under the Chino Basin Judgment, entered on January 27, 1978 by the Superior Court for the County of San Bernardino. FWC is a party to the Chino Basin Judgment and is classified as an appropriator. The Chino Basin Judgment established an average Safe Yield in the Chino Basin of 131,000 AFY (July 1 to June 30), pursuant to the most recent Safe Yield reset effective in 2020. The Safe Yield is defined in the Chino Basin Judgment as "the long-term average annual quantity of ground water (excluding replenishment of stored water but including return flow to the Basin from use of replenishment or stored water) which can be produced from the Chino Basin under conditions of a particular year without causing an undesirable result." The 1978 Chino Basin Judgment's allocation of the Safe Yield of the Chino Basin includes three separate Pools: the "Overlying Agricultural Pool", the "Overlying Non-Agricultural Pool", and the "Appropriative Pool." FWC's appropriative rights together with those of Fontana Union (of which FWC is a principal shareholder) currently amount to

[1] Pursuant to the Chino Basin Watermaster "*Fiscal Year 2019-20, 43rd Annual Report*", Appendix Hhttp://www.cbwm.org/rep_annual.htm

approximately 11.659 percent share of the Safe Yield. Appendix B provides the historical Chino Basin production by Pool presented in the Chino Basin Watermaster's "Fiscal Year 2019-20 Annual Report".

Appropriators who are parties to the Chino Basin Judgment, such as FWC, are authorized to produce groundwater in excess of their rights. Appropriators pay assessments for such production to the Chino Basin Watermaster. The assessments are used to replenish the basin through imported surface water recharge. The Chino Basin Watermaster purchases water to replenish the Chino Basin from the MWD through IEUA or Three Valleys Municipal Water District. Additional supplemental sources of replenishment water come from recycled water and from increased recharge of local storm water capture. Reliability of water purchased from IEUA to replenish the Chino Basin is discussed in Section 4.

In addition, the Chino Basin Watermaster reallocates the unused portion of the Chino Basin safe yield from the Overlying Agricultural Pool to the Appropriative Pool members as a supplement to the Appropriative Pool share of Operating Safe Yield rights in any year. These transfers are permanent if agricultural land has been converted to non-agricultural use, or temporary if agricultural pool extractions are less than their share of the safe yield. From fiscal year 2000-01 to fiscal year 2019-20, the total portion of the annual Agricultural Pool available for reallocation to Appropriative Pool members[2] has ranged from 40,822 AF to 61,014 AF, with an annual average of 50,457 AF of which FWC receives a portion. As agricultural production declines within the Chino Basin, the reallocation of water to the Appropriative Pool will increase.

Lytle Creek Region

FWC produces water from the Lytle Creek Region that consists of surface water from Lytle Creek and groundwater from Lytle Basin. The Lytle Creek Watershed is approximately 46.4 square miles. The area of the Lytle Basin is approximately 22.3 square miles. Lytle Creek is located in the Lytle Creek Watershed which originates in the vicinity of Mount San Antonio in the San Bernardino National Forest and includes the Upper Santa Ana River Basin located in San Bernardino County. Lytle Creek includes the North Fork Lytle Creek, Middle Fork Lytle Creek, and South Fork Lytle Creek, each flowing eastward. Water from Lytle Creek is diverted by

[2] Pursuant to the Chino Basin Watermaster "*Fiscal Year 2019-20, 43rd Annual Report*", Appendix G

Southern California Edison to generate electricity from two hydroelectric power plants in the Lytle Creek Region. Following the power generation, Lytle Creek water is diverted to FWC's Afterbay where it is shared with other water purveyors pursuant to long standing agreements. FWC's share is diverted to FWC's Summit Water Treatment Plant where it is treated for domestic water use within FWC's distribution system. In addition to Lytle Creek surface flows, FWC obtains water from the Grapeland Tunnel, which is a groundwater infiltration system with extensive collector lines in Lytle Creek Canyon tributaries and a large line running below the streambed of Lytle Creek. Water from the Grapeland Tunnel historically flowed through a large transmission pipeline directly into FWC's water system. Because water from the Grapeland Tunnel is under the influence of surface water, water from the Grapeland Tunnel is currently combined with the Lytle Creek stream flow in the Afterbay and then flows to the Summit Water Treatment Plant.

The 1897 McKinley Decree, which specifies surface water allocations, and the January 28, 1924 Judgment by the Superior Court for the County of San Bernardino, which confirms the McKinley Decree and specifies allowed groundwater diversions, allow Fontana Union Water Company and FWC to divert surface water and pump groundwater from the Lytle Creek Region up to a maximum of 3,480.78 miner's inches, or 69.6 cubic feet per second (cfs) (approximately 50,400 AFY). The amount includes up to 2,500 miner's inches, (approximately 36,200 AFY) of allowable combined surface and groundwater extractions to augment deficiencies in surface water diversions. FWC is allowed to extract and divert a combined 1,300 miner's inches, or 26 cfs (approximately 18,800 AFY) of groundwater from the Lytle Creek Region. The Lytle Basin is managed by the Lytle Creek Water Conservation Association which is made up of the successors to the parties of the 1897 McKinley Decree and the 1924 Judgment. FWC's diversion and production of water from the Lytle Creek Region can vary due to fluctuations in rainfall, snowpack and runoff, especially during dry years.

Rialto Basin

The Rialto Basin underlies a portion of the Upper Santa Ana Valley in southwestern San Bernardino County and northwestern Riverside County. The Rialto Basin is about 10 miles long and varies in width from about 3.5 miles in the northwestern part to about 1.5 miles in the southeastern part. The Rialto Basin is bounded by the San Gabriel Mountains on the northwest, the San Jacinto fault on the northeast, the Badlands on the southeast, and the Chino Basin on the southwest.

Under the December 22, 1961 Rialto Basin Court Decree, FWC, by virtue of its shareholdings in Fontana Union, is entitled to produce water from the Rialto Basin. Parties to the Rialto Basin Decree, including FWC, are authorized to pump from the Rialto Basin without limitation, except pumping during certain months in some water years can be affected by groundwater elevations measured between March and May for three specific "index" wells (Duncan Well, Willow Street Well, and Boyd Well). On February 3, 2021, Fontana Union Water Company, West Valley Water District, the City of Rialto, and the City of Colton entered into the Rialto Basin Groundwater Council (RBGC) Framework Agreement for the purpose of groundwater management and coordination in the Rialto Basin. The RBGC Framework Agreement incorporates the FWC production right from No Man's Land Basin into the Rialto Basin groundwater production limitations. FWC's water rights in the Rialto Basin are subject to the December 22, 1961 Rialto Basin Court Decree which are affected by the average water elevations in three index wells and other provisions among the RBGC Framework Agreement parties. The water rights allocation of Rialto Basin and No Man's Land groundwater to FWC are divided into adjustable rights and fixed rights. An additional discussion regarding FWC's water rights in the Rialto Basin and No Man's Land is provided in Section 5.0.

Inland Empire Utilities Agency

IEUA, originally known as Chino Basin Municipal Water District, was formed by popular vote of its residents in June 1950, to become a member agency of MWD for the purpose of importing supplemental water to augment local stream and groundwater supplies. Since its formation in 1950, IEUA has significantly expanded its services. These include production of recycled water, wholesaling of untreated imported water and recycled water supplies, sewage treatment, co-composting of manure and municipal biosolids, desalinization of groundwater supplies and disposal of non-reclaimable industrial wastewater and brine. IEUA does not provide treated MWD water to retail water purveyors in its service area.

FWC is located within IEUA's service area. FWC has upgraded (including construction of conventional pretreatment facilities and capacity expansion) its existing surface water treatment plant (the Summit Water Treatment Plant) to treat SWP water from IEUA and

SBVMWD, in addition to surface water from Lytle Creek. The 2008 Summit Water Treatment Plant upgrades increased the plant's capacity from 17 million gallons per day (MGD) to 29 MGD. FWC has the facilities and capacity to receive up to 40 cfs of untreated imported SWP water from IEUA and 14 cfs of untreated imported SWP water from SBVMWD. IEUA's water management goals and implementation strategies, such as its imported water distribution policy, groundwater banking, conjunctive use programs, and use of recycled water, enhances the reliability of water supplies utilized by FWC. The following discussion of water sources, future water demands, and future water supplies in IEUA's service area illustrates that sufficient water is available for FWC and the other purveyors within IEUA's service area in the future.

IEUA wholesales untreated SWP water and provides industrial/municipal wastewater collection and treatment services, and other related services for the western portion of San Bernardino County. IEUA's service area is located in the southwestern section of San Bernardino County. The 242-square mile service area, which encompasses the Chino Groundwater Basin, consists of a relatively flat alluvial valley from east to west which slopes downward from north to south at a one to two percent grade.

IEUA's service area includes the cities of Fontana, Chino, Chino Hills, Montclair, Pomona, Ontario, Rancho Cucamonga and Upland. According to IEUA's 2020 UWMP, approximately 906,000 people resided in IEUA's service area as of 2020. IEUA's service area, as shown in Figure 3, lies almost entirely within the Chino Groundwater Basin.

Water used in IEUA's service area comes from both local and imported sources. Local sources include local groundwater, surface water and, most recently, recycled water. IEUA purchases untreated imported SWP water from MWD for wholesale redistribution to local retail water purveyors within its service area, including FWC. The local retail water purveyors must first treat the imported MWD water before delivery to their potable water customers.

According to IEUA's 2020 UWMP, total local groundwater production by FWC and other local retail water agencies in IEUA's service area was approximately 92,834 AF in fiscal year 2019-20, which includes production from the Chino Basin as well as the other local groundwater sources shown in Figure 2.

FWC and a number of other retail water agencies in IEUA's service area that produce groundwater from the Chino Basin also obtain a portion of their water from local surface sources. The principal sources of surface water include Lytle Creek, San Antonio Canyon, Cucamonga Canyon, Day Creek, Deer Creek, and several smaller surface streams. According to IEUA's 2020 UWMP, annual production from all such local surface supplies was approximately 16,652 AF in fiscal year 2019-20.

Historical MWD deliveries to IEUA's service area are shown in Table 3. Full service imported water deliveries from MWD to IEUA over the past 20 years have ranged from approximately 31,713.8 AF of water in fiscal year 2015-16 to a peak of approximately 81,616 AF in fiscal year 2008-09. Additional imported water supplies from IEUA can be used for groundwater replenishment, thereby augmenting the annual yield and production from the Chino Basin.

2) Seasonal Storage Service Program and Cyclic Storage Account

Water recycling involves treatment of wastewater to create a high quality, safe source of water for landscape irrigation, industrial uses, and groundwater recharge. A recycled water marketing program was initiated by IEUA in 1999. Recycled water is a critical component of the Optimum Basin Management Plan developed by the Chino Basin Watermaster in 2000 to address water supply and quality issues in the Chino Basin. Recycled water has become an increasingly important source of renewable local water supply for the region. FWC has already taken steps in constructing a recycled water system and is providing recycled water to customers in its service area who are able to use recycled water. Based on the IEUA's "Fiscal Year 2019-2020 Recycled Water Annual Report[3]," recycled water supplies from IEUA's facilities totaled approximately 56,388 AF in fiscal year 2019-20. The total recycled water demands in IEUA's service area in fiscal year 2019-20 were 30,495 AF, or approximately 54 percent of the available recycled water supply. The recycled water supply and demand from IEUA's facilities is expected to increase to 66,836AF and 44,691 AF, respectively, by fiscal year 2044-45 (IEUA 2020 UWMP, Tables 2-3 and 3-3). Remaining future projected recycled water supplies will be used for groundwater recharge purposes and to meet Santa Ana River obligations.

The population within IEUA's service area is projected by the local retail water agencies (including FWC) to collectively increase from approximately 906,046 in 2020 to 1,119,568 people by the year 2045 (Table 4). This represents an increase of approximately 213,500 people over a 25-year period, an average annual growth rate of approximately 0.9 percent.

TABLE 4 CURRENT AND PROJECTED POPULATION IN IEUA'S SERVICE AREA [1]

Year	2020	2025	2030	2035	2040	2045
Population	906,046	945,849	987,401	1,031,771	1,074,773	1,119,568

1) Source: IEUA 2020 UWMP (June 2021), Table 1-4

As a result of this projected regional population growth, water demand in IEUA's service area is expected to increase by approximately 33 percent over the 25-year period from 2020 to 2045. Table 5 presents the projected water demands for IEUA's service area. According to IEUA's 2020 UWMP, total annual water use is expected to increase from approximately 96,934 AF in fiscal year 2019-20 to approximately 128,756 AF in fiscal year 2044-45.

1) Source: IEUA 2020 UWMP (June 2021), Table 2-4.

Projected water supplies within IEUA's service area include groundwater, surface water, recycled water, and untreated imported water purchased from MWD. Table 6 summarizes the total available supplies and water demands under a normal year.

TABLE 6 IEUA FUTURE WATER DEMAND/SUPPLY BALANCE IN NORMAL YEARS [1] (AFY)

Year	2025	2030	2035	2040	2045
Supply Totals	153,356	156,490	157,425	160,119	160,119
Demand Totals	116,716	120,927	124,136	128,212	128,756
Surplus	36,640	35,563	33,289	31,907	31,363

1) Source: IEUA 2020 UWMP (June 2021), Table 7-4

According to IEUA's 2020 UWMP, total supplies from the Chino Basin and adjacent groundwater basins are projected at 137,318 AFY through fiscal year 2044-45 for normal years, although the Chino Basin could accommodate much greater water production rates if necessary.

According to IEUA's 2020 UWMP, IEUA projected total supplies from surface water within its service area at approximately 10,089 AFY through fiscal year 2044-45 for normal years. Surface water flows are substantially greater in wet years and less during dry years.

According to IEUA's 2020 UWMP, the direct use of recycled water within IEUA's service area in fiscal year 2019-20 was approximately 30,496 AF. Recycled water use during normal years is expected to increase to approximately 44,691 AFY by fiscal year 2044-45. As part of an existing agreement with IEUA, the City of Fontana is entitled to approximately 12,000 AFY of tertiary treated recycled water. FWC has completed a project with the City of Fontana for the direct use of recycled water in the southern portion of FWC's service area known as the 1158 Zone. This project will provide up to approximately 2,000 AFY of recycled water within the City of Fontana to schools, parks, and commercial customers as part of a multi-phased program. FWC is looking to expand its direct use projects with the City of Fontana in the future. Additional discussion regarding recycled water, including FWC's agreements to provide recycled water to the California Speedway Corporation and California Steel Industries, is provided in Section 5.0.

According to IEUA's 2020 UWMP, imported water supplied from the SWP and the Colorado River provided by IEUA are projected to be 98,928 AF through fiscal year 2044-45.

FWC supports and works closely with IEUA to implement a mix of water management strategies to meet the region's long-term needs. IEUA's water management goals are the following:

- Implement an effective conservation program that will maximize efficient water use and reuse in IEUA's service area;
- Continue development of a groundwater recovery program;
- The Dry-Year Yield Program (DYYP) is a groundwater storage and recovery program where supplemental water is stored in the Chino Basin during surplus years and could be recovered in-lieu of imported water from MWD through IEUA. The DYYP was developed jointly by the Chino Basin Watermaster, the IEUA, and MWD. The DYYP can store up to 100,000 AF with maximum replenishment of 25,000 AFY and maximum extraction of 33,000 AFY. The agreement that authorized the DYYP will expire in 2028. IEUA "Addendum No. 2 to the Optimum Basin Management Plan" was prepared in February 2021 and addresses managed storage within the Chino Basin following the termination of the DYYP. Based on the Chino Basin Watermaster's findings, the Local Storage Limitation Solution (LSLS) was developed. From July 1, 2017 through June 30, 2021, the Safe Storage Capacity of the Chino Basin was 600,000 AF. The Safe Storage Capacity was increased to 700,000 AF through an August 2021 San Bernardino County Superior Court ruling.
- Achieve maximum use of all available storm water;

- Achieve maximum reuse of all available recycled water; and
- Minimize dependence on imported water supplies.

The water demands and supplies for IEUA's service area were analyzed by IEUA to assess the region's ability to meet demands given a repeat of California's severe drought from 2011 to 2014. Table 7 and Table 8 present the supply-demand balance for single and multiple year drought scenarios for fiscal years 2024-25 and 2044-45. With the implementation of the local programs outlined above, the region is expected to meet 100 percent of its dry year demand.

TABLE 7 IEUA'S 2025 WATER SUPPLY AND DEMAND IN NORMAL, SINGLE DRY, AND MULTIPLE DRY YEARS [1] (AFY)

Demand and Supply	Normal Year	Single Dry Year	Multiple Dry Years				
			Dry Year 1	Dry Year 2	Dry Year 3	Dry Year 4	Dry Year 5
Total Water Supply	153,356	153,329	153,329	153,329	153,329	153,329	153,329

San Bernardino Valley Municipal Water District

SBVMWD was formed in 1954. It is an independent SWP contractor and is not a member agency of MWD. The District's services include providing wholesale distribution of untreated imported SWP water, and wastewater, stormwater disposal, recreation, and fire protection services.

SBVMWD, which covers approximately 325 square miles in southwestern San Bernardino County, currently serves a population of approximately 715,900. SBVMWD's service area includes the eastern two-thirds of the San Bernardino Valley, the Crafton Hills, and a portion of the Yucaipa Valley, and includes all or portion of the cities and communities of San Bernardino, Colton, Fontana, Loma Linda, Redlands, Rialto, Bloomington, Highland, Grand Terrace, and Yucaipa.

Groundwater from the Colton, Rialto, Bunker Hill, Yucaipa, and San Timoteo Basins, is the principal local source of supply in SBVMWD's service area. Other sources of water supply include surface water from Lytle Creek, the Santa Ana River, and Mill Creek as well as imported SWP water.

SBVMWD's contract entitlement for SWP water was 1,677 AF in 1972, the initial year of deliveries, and increased to a maximum entitlement of 102,600 AF in 1991. The entitlement is the fifth largest of all SWP contractors.

FWC has the ability to purchase and use untreated imported water from SBVMWD. A portion of FWC's service area is within SBVMWD's service area. FWC did not receive any SWP water from SBVMWD from 2012 to 2020. FWC projects receiving up to 3,200 AFY of imported untreated SWP water from SBVMWD. FWC has upgraded its existing Summit Water Treatment Plant to treat approximately 29 MGD of Lytle Creek surface water and SWP water. The Summit Water Treatment Plant will treat the imported untreated SWP water from SBVMWD in addition to treating available Lytle Creek surface water and untreated SWP water from IEUA.

4.0 FWC'S FUTURE WATER DEMANDS WITH THE PROJECT

FWC's 2020 UWMP was completed and adopted in June 2021 and includes water demand projections for FWC's service area over the next twenty years (through 2045).

Water demands projected in FWC's 2020 UWMP were calculated based on the urban per capita water use target developed per the Water Conservation Bill of 2009 (SB X7-7) and population projections within FWC's service area. Methodologies for calculating urban per capita water use were published by DWR in its February 2016 guidance document[4]. The methodology applied to FWC included an urban per capita water use reduction of 20 percent by 2020. DWR's guidance document was used by FWC to calculate a projected urban per capita water use target of 165 gallons per capita per day through 2045.

Projected water demands for the proposed Project include commercial, industrial and landscape irrigation demands. Based on the Project site map prepared by HPA Architecture, the proposed Project is estimated to include approximately 6,600,000 sf of combined warehouse and office building space, 103.25 acres of parking and pavement, and 1,250,003 sf of landscaping on a Project site of approximately 522.22 acres. The total Project water demand was estimated by multiplying the planned Project site area by a water use rate of 3,500 gallons per day (gpd) per acre derived from average recorded water use data for large industrial warehouse buildings within FWC's service area. The estimated water demand for the commercial and industrial area of the Project is approximately 594 AFY (or 6,600,000 sf x (1 acre / 43,560 sf) x 3,500 gpd per acre x (0.00112 AFY / 1 gpd)).

The Project landscape irrigation demand was estimated using a water budget calculator from DWR. The water budget calculator estimates the water use of a landscaped area based on the following components:

- Reference Evapotranspiration (ETo)

[4] California Department of Water Resources, Division of Statewide Integrated Water Management, Water Use and Efficiency Branch. *Methodologies for Calculating Baseline and Compliance Urban Per Capita Water Use*. February 2016.

- ETo refers to the total amount of water lost through evaporation in the soil and transpiration of plants
- The average ETo in the vicinity of the Project site is approximately 60.77 inches per year[5]

- Plant Factor (PF)
  - The PF is a factor (generally from 0 to 1) for each type of irrigated plant and is based on the water requirements for the plant
  - Plants with a lower PF (0 to 0.3) require less water than plants with a higher PF (0.7 to 1.0). The PF for turf is approximately 0.7[6]. The PF for medium water use trees, shrubs and groundcover is approximately 0.5. A PF of 0.6 has been estimated for the Project which is based on different landscaped areas consisting of turf, trees, shrubs and groundcover.

- Irrigated Area (IA)
  - Based on the Project site map prepared by HPA Architecture (Appendix A), the irrigated area is approximately 1,250,003 square feet

- Irrigation Efficiency (IE)
  - The IE is a factor (generally from 0 to 1) which represents irrigation efficiency.
  - Irrigation systems which are well designed and operated can have an efficiency range of 0.8 to 0.9. Irrigation systems which are poorly designed and operated may have efficiencies less than 0.5[7]. An irrigation efficiency of 0.7 (representing rotor and standard drip irrigation) has been estimated for the Project.

The estimated irrigation water demand at each potential site is then calculated based on the following formula:

---

[5] Pursuant to the International Water Management Institute's "World Water & Climate Atlas" (http://wcatlas.iwmi.org)

[6] http://ucanr.edu/sites/UrbanHort/Water_Use_of_Turfgrass_and_Landscape_Plant_Materials/SLIDE__Simplified_Irrigation_Demand_Estimation/

[7] "*A Guide to Estimating Irrigation Water Needs of Landscape Plantings in California",* University of California Cooperative Extension California, DWR, August 2000

Irrigation Water Demand = (ETo) x (0.62) x ([PF x IA] / IE)

It should be noted 0.62 represents a factor used to convert units from "inches per year" to "gallons per square foot per year". The potential irrigation water demand is in units of "gallons per year". Based on the formula, the estimated irrigation water demand for the Project is approximately 40,368,739 gallons per year (or 60.77 inches x 0.62 x ([0.6 x 1,250,003 square feet] / 0.7)) or 124 AFY (or 40,368,739 gallons per year x (1 acre-foot / 325,851 gallons)). The irrigated water demands include offsite irrigation demands (parkways and medians) which would be maintained by the County of San Bernardino, and onsite irrigation demands (onsite landscaping) which would be maintained by the owner.

The proposed Project is located on a portion of the existing Auto Club Speedway site within an unincorporated area of San Bernardino County. It is anticipated the existing Auto Club Speedway race track will be reconfigured into a "short track" (i.e. the existing race track will be reduced in size). As a result, portions of the proposed Project will replace the remaining areas of the existing race track. Based on FWC records, potable water use at the Project site over the past four years has averaged approximately 4 .1 AFY. In addition, the existing Auto Club Speedway currently utilizes an onsite well to meet irrigation demands (approximately 400 AFY). Because the proposed Project is separate from the Auto Club Speedway and will not include the reduced race track area (i.e. proposed short track), the projected water demands for the proposed Project are considered separate from the water demands from the Auto Club Speedway.

The total estimated water demand for the Project, which includes commercial and industrial water demands (594 AFY) and landscape irrigation (124 AFY), is approximately 718 AFY. However, in order for FWC to provide 718 AFY to the Project site, FWC will need to produce water supplies which account for water losses within its water distribution system. Pursuant to Water Loss Audits[8] prepared by FWC (pursuant to the California Water Code), FWC's water system losses have averaged approximately 7.8 percent over the past five years (from calendar year 2016 to calendar year 2020). Accounting for this average water loss, FWC

[8] https://wuedata.water.ca.gov/awwa_plans

would need to produce approximately 780 AFY of potable water in order to supply 718 AFY to the Project site.

As a result of an existing water storage deficiency in the water system utilized to provide water supply and service to the Project, FWC must construct additional water storage infrastructure facilities to supply water to the Project. To meet the Project's industrial, commercial and irrigation water demands, FWC estimates that an additional 2.7 million gallons (MG) in water storage infrastructure facilities are required to be constructed to provide water service to the Project, including new water storage reservoirs, piping, and pumping equipment. If recycled water would be available to meet demands for irrigation water use, FWC would be required to extend new recycled water mains to provide recycled water service to the Project and would then be required to construct only an additional 2.4 MG in new water storage infrastructure facilities in order to provide sufficient water supply to meet the commercial and industrial water demands for the Project.

FWC's 2020 UWMP includes current and projected future water demands for its service area over the next 25 years. It is anticipated construction of the Project will be completed by 2025 (i.e. after 2020). The additional water demands (780 AFY) for the proposed Project are incorporated within the existing and projected water demands (potable and recycled) presented in FWC's adopted 2020 UWMP over a 20-year period and through 2045, as shown in Table 9. A further description regarding FWC's recycled water facilities, agreements, demands, and supplies is provided in Section 5.0

It should be noted, the projected water demands for the proposed "Goodman Industrial Park Fontana III Project", the "Southwest Fontana Logistics Center Project", the "Fontana Foothills Industrial Project", the "Sierra Business Center", the "Speedway Commercial Development Project", and the "Duke-Cypress at Slover Industrial Project" (six separate active/proposed projects located within FWC's service area) were also included in the overall water demands identified in FWC's 2020 UWMP. The overall projected water demands for FWC from FWC's 2020 UWMP, which incorporates the demands from the proposed Project and the six separate active/proposed projects, are provided in Table 9.

TABLE 9 PROJECTED WATER DEMAND ESTIMATES (AFY)

YEAR	2025	2030	2035	2040	2045
Potable Water Demands[1]	44,593	45,409	46,665	47,942	48,943
Recycled Water Demands[2]	1,000	1,500	2,000	2,500	3,000
Total FWC Projected Water Demands[2]	**45,593**	**46,909**	**48,665**	**50,442**	**51,943**

Notes:

[1] Water demands from the Speedway Commerce Center II Project (Project) are assumed to be included in water demands identified from FWC's 2020 UWMP. It is anticipated water demands for the Project will begin by 2025.

[2] Demand projections reported in FWC's 2020 UWMP, Table 4-4

5.0 FWC'S FUTURE WATER SUPPLIES

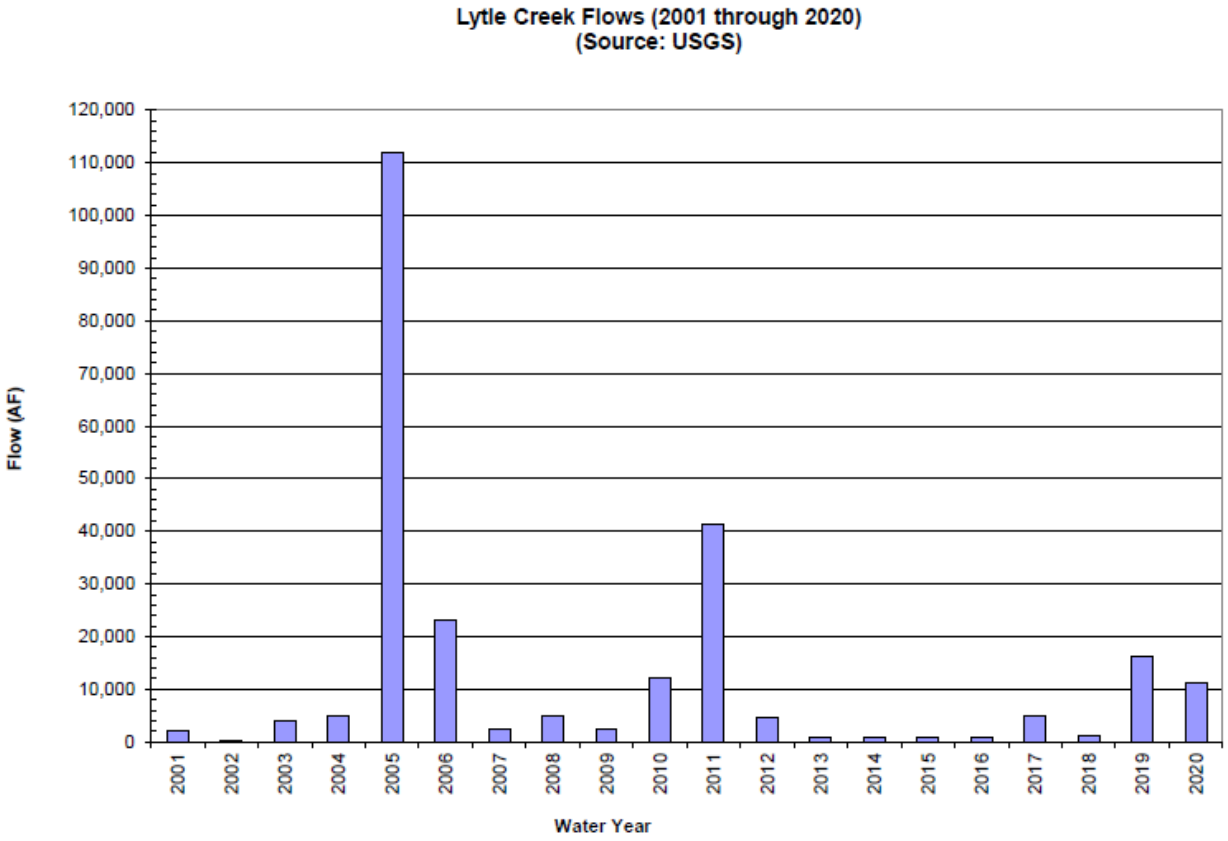
FWC's principal future water supplies available and documented in its 2020 UWMP are groundwater pumped from Chino Basin, Lytle Basin, and Rialto Basin, and surface water from Lytle Creek, recycled water, and imported water from SBVMWD and IEUA. The following describes the potential yield from these sources.

LYTLE CREEK

FWC is entitled to divert up to 3,480.78 miner's inches (approximately 50,400 AFY) from the Lytle Creek Region, including up to 2,500 miner's inches (approximately 36,200 AFY) of combined surface and groundwater extractions to augment surface water diversions. Annual Lytle Creek flows from 2001 to 2020 based on United States Geological Survey (USGS) data are shown in Figure 4. USGS data from a Lytle Creek gaging station[9] in the vicinity and upstream of FWC's diversion and intake facilities was used to determine the annual Lytle Creek flows. Based on USGS data, recent drought periods occurred from 1999 to 2004, 2007 to 2009, and 2012 to 2018. Pursuant to FWC's 2020 UWMP, and based on historical diversions during normal rainfall years, FWC's projected water supplies from Lytle Creek during normal rainfall years are estimated at approximately 4,860AFY over the next twenty years. FWC's 2020 UWMP estimates that Lytle Creek projected surface water supplies could be reduced by 83 percent (to 826 AFY) in single dry or multiple dry years.

[9] https://waterdata.usgs.gov/nwis

FIGURE 4 HISTORICAL LYTLE CREEK FLOWS (2001-2020)



Source: USGS 11062000 (Lytle C NR Fontana CA) gauge station

LYTLE BASIN

FWC can pump and divert more than 18,800 AFY of groundwater from the Lytle Basin. The Lytle Basin is subject to changes in groundwater elevation depending on rainfall, snowpack, and stormwater runoff. This was demonstrated after the significant rainfall received during 1993 and 2010. In the months following a series of storms during those very wet years, basin static water levels increased as much as 200 feet in three months. However, basin static water levels could likewise decrease and thus affect groundwater production during sustained dry years. Pursuant to FWC's 2020 UWMP, and based on historical production during normal rainfall years, FWC's projected water supplies from the Lytle Basin during normal rainfall years and single dry are estimated at 6,390 AFY over the next twenty years. FWC's 2020 UWMP estimates that Lytle Basin projected groundwater supplies could be reduced by 35 percent (to 4,154 AFY) in multiple dry years.

CHINO BASIN

FWC's average annual production from the Chino Basin from 2001 to 2020 was approximately 14,824 AFY. During the most recent five years, FWC's annual production ranged from approximately 9,351 AFY to 16,299 AFY. According to IEUA's 2020 UWMP, total Chino Basin groundwater production in IEUA's service area in a normal year is estimated to be 109,813AFY through fiscal year 2044-45. The Chino Basin Judgment authorizes FWC to produce all the water it requires from the Chino Basin for beneficial use by FWC's customers, subject to replenishment requirements. With over 5,000,000 AF of water currently in storage, more than ample water is present in the Chino Basin to allow FWC to do so. FWC will construct additional wells and associated infrastructure in the Chino Basin to match additional water supply with additional water demands from growth in the number of customers. Because of groundwater contamination in the Chino Basin from nitrate and perchlorate, production of groundwater from affected wells may be interrupted until wellhead treatment or remedy is installed. FWC has the necessary technical and financial resources available to allow FWC to quickly respond to any such water quality incidents to assure continuity and reliability of water service. FWC's Wells F17B, F17C, F21B, and F23A, which pump from the Chino Basin, currently have perchlorate treatment equipment, which removes perchlorate from these sources. FWC plans to utilize best available treatment technologies to install additional treatment, install alternative technologies such as packers, and drill replacement wells as needed to meet its water supply needs.

RIALTO BASIN

On February 3, 2021, the Rialto Basin Groundwater Council Framework Agreement was signed by Fontana Union Water Company, West Valley Water District, the City of Rialto, and the City of Colton to incorporate the FWC production rights from No Man's Land Basin (previously unrestricted) into the Rialto Basin that is subject to curtailment. The RBGC Framework Agreement was created for the purposes of coordinating, developing, and implementing groundwater management activities that affect groundwater management and sustainability in the Rialto Basin. The agreement acknowledged FWC's production capabilities of 5,014 AFY from the No Man's Land Basin and incorporated them with the Rialto Basin production capacity limits in the 1961 Rialto Basin Court Decree.

FWC's water rights as allowed under the 1961 Decree and the RBGC Framework Agreement are listed below:

- Adjustable Rights: 5,564 AFY
- Fixed Rights: 370 AFY
- Fixed / Standby Rialto Lease: 1,600 AFY

- Combined Rights: 7,534 AFY (as of 2020 before adjustment)

Pursuant to the 1961 Decree and declining groundwater elevations in the three index wells in the Rialto Basin, FWC projects a 30 percent curtailment to its annual adjustable water rights by 2025. The curtailment is anticipated to decrease by 2 percent every five years thereafter (e.g., 28 percent curtailment in 2030) to reflect a coordinated plan to recharge the Rialto Basin. Groundwater production of approximately 5,865 AFY is estimated to be available to FWC from the Rialto Basin during normal, single-dry and multiple-dry years in 2025, and is expected to increase to 6,310 AFY by 2045.

RECYCLED WATER

Achieving maximum use of all available recycled water is one of FWC's and IEUA's water management goals. Recycled water is used for groundwater recharge and storage as well as direct use by customers who are equipped and able to use recycled water. As shown in Table 2, FWC began using recycled water supplies within its service area in 2016 (with a recycled water demand of 387 AF in 2020). FWC strongly supports the use of recycled water and will provide recycled water to its customers who are able to use it when it is made available. FWC has completed a project with the City of Fontana for the direct use of recycled water in the southern portion of FWC's service area known as the 1158 Zone. This project will provide up to approximately 2,000 AFY of recycled water within the City of Fontana to schools, parks, and commercial customers as part of a multi-phased program. As part of an existing agreement with IEUA, the City of Fontana is entitled to approximately 12,000 AFY of tertiary treated recycled water. FWC has designed and is constructing recycled water distribution system facilities in the 1158 Zone to meet those needs. Recycled water will be provided by IEUA's Regional Water Recycling Plant 4. In addition, facilities also will be required to distribute recycled water from IEUA to FWC's customers beyond the 1158 Zone. Those additional facilities will include

pipelines, booster stations and reservoirs. In 2015, FWC entered into separate agreements with IEUA, the California Speedway Corporation (Speedway), and California Steel Industries (CSI) in which FWC will deliver recycled water supplies from IEUA to the Speedway and CSI. FWC will deliver up to 450 AFY of recycled water to the Speedway and up to 550 AFY of recycled water to CSI over an initial term of 60 years. The 2015 recycled water agreement between FWC and the Speedway is provided in Appendix C. IEUA has constructed the recycled water transmission and distribution facilities to the Speedway and CSI.

IEUA's 2020 UWMP projected the total recycled water use (for direct use and groundwater recharge) within IEUA's service area at approximately 66,836 AFY by the year 2045. As shown in Table 10, IEUA projects having enough supply to meet the recycled water demand within IEUA's service area. The report also projected that IEUA would supply approximately 8,350 AFY of recycled water for distribution within the City of Fontana. The report identified potential recycled water uses irrigation of golf courses, landscaping, parks, and schools, agricultural uses, commercial car washes and laundries, industrial cooling towers, miscellaneous construction and dust control uses, and groundwater recharge. Pursuant to FWC's 2020 UWMP, FWC is projected to use approximately 1,000 AFY of recycled water within its service area by 2025, with a gradual increase to approximately 3,000 AFY of recycled water by 2045. FWC's increased future use of recycled water for landscape and agricultural irrigation (including potential landscaping for proposed developments such as the Project), construction, industrial cooling, and groundwater recharge use, will offset the need for potable water use within FWC's service area. In the future, the Project could be connected to IEUA's regional recycled water line if there are sufficient recycled water demands in the area.

TABLE 10 PROJECTED RECYCLED WATER SUPPLY AND DEMAND ESTIMATES (AFY)

YEAR	2025	2030	2035	2040	2045
Demands (Direct Use)	22,880	24,877	25,742	27,771	28,271
Demands (Groundwater Recharge)	16,420	16,420	16,420	16,420	16,420
Total IEUA Projected Recycled Water Demand[1]	**39,300**	**41,297**	**42,162**	**44,191**	**44,691**
Total IEUA Projected Recycled Water Supply[2]	**60,073**	**63,207**	**64,142**	**66,836**	**66,836**

Notes:

[1] Demand projections reported in IEUA's 2020 UWMP, Table 5-2
[1] Supply projections reported in IEUA's 2020 UWMP, Table 4-6

IMPORTED WATER SUPPLIES

As discussed previously, FWC can purchase untreated imported SWP water from SBVMWD and untreated imported water supplies from MWD (including Colorado River water, SWP water, water storage, and water transfers) through IEUA[10]. According to FWC's 2020 UWMP, FWC conservatively estimates it will receive up to 15,000 AFY of SWP water from IEUA and up to 3,200 AFY of SWP water from SBVMWD over the next twenty years. FWC has the capacity to purchase additional imported SWP water from IEUA and SBVMWD if needed to meet current and future water demands reported in the FWC's 2020 UWMP. A discussion regarding the reliability of these imported water supply sources is provided below.

COLORADO RIVER WATER

In addition to obtaining water from the SWP, MWD obtains water from the Colorado River. MWD owns and operates the Colorado River Aqueduct which conveys water from Lake Havasu on the Colorado River to water transmission pipelines and to Lake Matthews for storage. MWD's Colorado River water right includes a fourth and fifth priority under the 1931 Seven Party Agreement relating to California's share in the Colorado River water supply. In 1964 a United States Supreme Court decree (Arizona v. California) limited California to 4.4 million AF per year from the Colorado River plus any available surplus water. An amount of 550,000 AF was allotted to California under the fourth priority right and an amount of 662,000 AF was allotted to California under the fifth priority right. MWD can receive water under the fifth priority right when the United States Secretary of the Interior determines that there is a surplus of water or if Arizona or Nevada does not use all of their allocated water.

Under a 2007 agreement reached by the seven States of the Colorado River Basin, if Lake Mead's level drops to 1,075 feet, an official shortage would be declared. That declaration would

[10] FWC has an additional existing standby connection with IEUA to receive untreated water from MWD at its Plant F43.

trigger cuts in water deliveries to Arizona and Nevada. During 2019, the seven States of the Colorado River Basin developed two drought contingency plans: the Upper Basin Drought Contingency Plan (Upper Basin DCP) and the Lower Basin Drought Contingency Plan (Lower Basin DCP). The Upper Basin DCP is designed to: a) protect critical elevations at Lake Powell and help assure continued compliance with the 1922 Colorado River Compact, and b) authorize storage of conserved water in the Upper Basin that could help establish the foundation for a Demand Management Program that may be developed in the future. The Lower Basin DCP is designed to: a) require Arizona, California and Nevada to contribute additional water to Lake Mead storage at predetermined elevations, and b) create additional flexibility to incentivize additional voluntary conservation of water to be stored in Lake Mead. Under the Lower Basin DCP, the state of California is required to make the following annual DCP contribution based on projected January 1st Lake Mead elevations:

- Elevation above 1,040 feet and at or below 1,045 feet – 200,000 AF
- Elevation above 1,035 feet and at or below 1,040 feet – 250,000 AF
- Elevation above 1,030 feet and at or below 1,035 feet – 300,000 AF
- Elevation at or below 1,030 feet – 350,000 AF

On August 16, 2021, the United States Bureau of Reclamation (USBR) released the "Colorado River Basin August 2021 24-Month Study" used to set annual operations for Lake Powell and Lake Mead. Based on the results of the Study, the USBR declared the first federal water shortage declaration for the Colorado River Basin. Because of the 2019 DCP, California has so far been spared from cuts to its Colorado River supplies for 2022. In response to the continued drought conditions and the USBR declaration, MWD's Board of Directors declared a Water Supply Alert on August 17, 2021, calling for consumers and businesses to voluntarily reduce their water use and help preserve the region's storage reserves. A Water Supply Alert is the third of four escalating conditions in MWD's framework indicating the urgency of Southern California's need to save water. The action calls for water agencies to reduce their water demand through public awareness campaigns and by adopting local measures including increased outdoor water use efficiency, prohibiting home car washing or filling of ornamental water

features, and requiring that restaurants only serve water upon request. MWD's declaration seeks to avoid the need for more severe actions, including moving to the fourth and final stage in MWD's framework. In addition, while shortages in the Colorado River can potentially impact water supplies, MWD owns priority rights to the Colorado River and water supply will not be impacted in the immediate future. MWD has indicated that its supplies from the Colorado river will not be impacted in 2022 and may be impacted in 2023 and more likely in 2024, if the drought continues[11], which could potentially trigger a Water Supply Allocation Plan through which MWD would implement higher rates for increased use among its member agencies.

In April 2021, Governor Gavin Newsom proclaimed a drought emergency in several counties. By July 2021, Governor Newsom expanded the drought emergency to a total of 50 counties (excluding the six counties within MWD's service area). However, in October 2021, Governor Newsom widened the drought emergency to all counties and called on local and regional water agencies to implement their Water Shortage Contingency Plans to conserve water. The governor also urged Californians to voluntarily reduce their water by 15 percent.

On July 1, 2021, FWC adopted a resolution to approve its 2020 Urban Water Management Plan and Water Shortage Contingency Plan. FWC's 2020 Urban Water Management Plan describes FWC's historical and existing water conservation program, the status of implementation of Demand Management Measures, and projected future conservation implementation. FWC's Water Shortage Contingency Plan describes the actions FWC will take to reduce demands or increase supplies under 10, 20, 30, 40, 50 percent, and greater than 50 percent shortage conditions.

STATE WATER PROJECT

The SWP is a water storage and delivery system maintained and operated by DWR. MWD holds a long-term contract with DWR for SWP water. MWD currently has a contractual

[11] https://www.latimes.com/california/story/2021-08-17/amid-worsening-drought-mwd-declares-water-supply-alert

'Table A' amount of 1,911,500 AFY of SWP water ('Table A' represents the proportion of available SWP water allocated and delivered to each SWP contractor). The delivery reliability of SWP water is discussed below.

The San Francisco Bay-Sacramento River Delta area (Bay-Delta) is a part of the SWP water delivery system. The reliability of the Bay-Delta to deliver water may be impacted by potential risks associated with endangered species, earthquakes, levee failure, and climate change. In order to mitigate these potential risks, State and federal resources and environmental protection agencies and a broad range of stakeholders are involved in a multiyear planning process to develop programs to greatly improve the capacity and reliability of the SWP and the environmental conditions of the Bay-Delta, including projects related to DWR's SWP conveyance capacity, water quality, and operation of the SWP.

The State of California enacted comprehensive legislation, including the Sacramento-San Joaquin Delta Reform Act of 2009 (California Water Code Division 35) which provided for an independent state agency, the Delta Stewardship Council. Pursuant to that act, the Delta Stewardship Council developed a comprehensive management plan that provides more reliable water supply for California and protects and enhances the Delta ecosystem (through development and implementation of a Delta Plan). The Delta Stewardship Council adopted a final Delta Plan in May 2013 which is the comprehensive long-term management plan for the Delta to improve statewide water supply reliability and to protect the Delta. Subsequently its 14 regulatory policies were approved by the Office of Administrative Law and became effective with legally-enforceable regulations on September 1, 2013. The Delta Stewardship Council also adopted a Programmatic Environmental impact Report (PEIR) on the Delta Plan in May 2013. The PEIR evaluates the potential impact of the Delta Plan and identifies mitigation measures. The Delta Plan was amended in February 2016, September 2016, April 2018, July 2019, and March 2020. The Delta Plan contains a set of 14 regulatory policies as well as 95 recommendations, which are non-regulatory but identify actions essential to increasing water supply reliability while protecting, restoring, and enhancing the Delta ecosystem. In May 2020, the Delta Stewardship Council authorized the Ecosystem Amendment for environmental review under CEQA. As a result, a draft Program Environmental Impact Report (PEIR) was prepared and is undergoing a 64-day public review from September 27, 2021 to November 30, 2021. The Delta Stewardship

Council is also currently considering an amendment to Chapter 7 (Delta Levees Investment Strategy, or DLIS). The DLIS is a multiyear project to update the Delta Plan's 2013 interim priorities for flood risk reduction and to guide the prioritization of Delta investments that reduce flood risk and better integrate Delta levees with other Delta actions and statewide flood control. The Delta Stewardship Council approved the DLIS priorities in 2018, however the amendment was rescinded in order to evaluate new levee geometry and hydraulic data. In August 2021, the Delta Stewardship Council directed staff to reinitiate the rulemaking process for DLIS.

In June 2013, a lawsuit was filed by the State Water Contractors and others seeking to overturn the Delta Stewardship Council's adoption of the Delta Plan, promulgation of related regulations, and certification of the above referenced PEIR. The litigation brought by the State Water Contractors and others claims that the Delta Stewardship Council exceeded its authority under the Sacramento-San Joaquin Delta Reform Act of 2009 and failed to analyze impacts under CEQA, particularly foreseeable impacts of the Delta Plan on water supplies around the state. In May 2016, the Superior Court upheld the Delta Stewardship Council on the vast majority of issues, including that the Council used best available science in developing the Delta Plan. The Court also ruled that the Delta Plan's regulations promote improved water quality, its flow recommendations promote conditions for species recovery, it promotes risk reduction strategies, and its conservation measures promote reduced reliance on the Delta. The Court, however, invalidated the entire Delta Plan because of what it identified as inadequacies in the following areas:

- The lack of enforceable, quantifiable targets for achieving reduced Delta reliance, reduced harm from invasive species, restoring more natural flows and increased water supply reliability, and
- Inadequate "promotion" of conveyance options to improve the way water projects move water across the Delta.

In November and December 2016, the Delta Stewardship Council and other parties have appealed the Court's ruling, which means the invalidation of the Delta Plan was placed on hold. In April 2020, the Third District Court of Appeal (Appellate Court) sided with the Delta Stewardship Council on all remaining issues from the 2013 lawsuit, and found the alleged failure

to have sufficient performance measures and to promote conveyance options were both moot because of subsequent amendments to the Delta Plan. In August 2020, the California Supreme Court declined a petition for review made by State Water Contractors in response to the Appellate Court decision. As a result, the central role of the Delta Stewardship Council in Delta water management and land use remains intact and is the governing law[12].

Governor Jerry Brown announced the creation of the California EcoRestore program in April 2015, committing to restore more than 30,000 acres of Delta habitat, which will be implemented on an accelerated timeline independent of the proposed water conveyance facilities. This comprehensive suite of habitat restoration actions under the California EcoRestore program includes specific targets for floodplain, tidal and sub-tidal, managed wetlands, and fish passage improvements to benefit native fish species and a commitment to adaptive management.

DWR's "The Final State Water Project Delivery Capability Report 2019" (2019 Report), dated August 26, 2020, indicates that there is a 72 percent likelihood (77 percent in the 2017 Final State Water Project Delivery Capability Report) that more than 2,000 thousand acre-feet per year (taf/year) of Table A water will be delivered under current conditions. The 2019 Report incorporated future impacts on water deliveries as a result of climate change and potential limited pumping of the SWP to protect salmon, smelt, and other species in the Sacramento-San Joaquin Delta and Central Valley areas, including operational restrictions of the biological opinions issued by the U.S. Fish and Wildlife Service (USFWS) in December 2008 and the National Marine Fisheries Service (NMFS) in June 2009 governing the SWP and Central Valley Project (a Federal water storage and conveyance facility) operations. In August 2016, Reclamation and DWR requested reinitiating consultation with the USFWS and the NMFS on long-term operations of the Central Valley Project (CVP) and SWP due to new information and science on declining fish species populations. The USFWS and the NMFS released the "Biological Opinion for the Reinitiation of Consultation on the Coordinated Operations of the CVP and SWP", dated October 2019, included proposed CVP and SWP operations plans. In February 2020, Reclamation approved a Record of Decision regarding modifications to long-

[12] https://www.deltacouncil.ca.gov/pdf/news-release/2020-08-12-supreme-court-upholds-delta-plan-affirms-council-authority-for-sustainable-management-of-the-delta.pdf

term operations of the CVP. The 2019 Report also incorporated DWR operations as a result of the new Incidental Take Permit (ITP) issued by the California Department of Fish and Wildlife to DWR in March 2020. The ITP covers fish species (including the Delta smelt, Longfin smelt, winter-run Chinook salmon and spring-run Chinook salmon) which are subject to incidental take through long-term operation of the SWP. In February 2020, the Bureau of Reclamation released a Record of Decision which identified the following operations:

- Additional pumping curtailments if monitoring and analysis show Delta smelt and salmon are sensitive to the effects of water exports while also allowing for more pumping when species are not present in areas most affected by pumping;
- Provide enhanced cold water management of imperiled winter-run Chinook salmon populations on Battle Creek; and,
- Implement a strategy to supplement Delta smelt in the wild in the next 3 to 5 years.

In April and May of 2019, Governor Gavin Newsom announced a new approach for Delta water conveyance through a single tunnel alternative (to improve delivery reliability) and released Executive Order 10-19 directing state agencies to assess new planning for the single tunnel project (Delta Conveyance Project). DWR subsequently withdrew all project approvals and permit applications for the previously proposed twin tunnels project under the California WaterFix and Bay Delta Conservation Plan (BDCP). DWR released a "Notice of Preparation of Environmental Impact Report for the Delta Conveyance Project" in January 2020 to start planning for the Delta Conveyance Project. DWR also released a scoping summary report in July 2020 and anticipates release of a Public Draft Environmental Impact Report / Environmental Impact Statement for review mid-2022[13].

As discussed previously, on August 17, 2021, MWD's Board of Directors declared a Water Supply Alert on August 17, 2021, calling for consumers and businesses to voluntarily reduce their water use and help preserve the region's storage reserves. In early 2021, the California Department of Water Resources reduced the allocation of supplies delivered on the

[13] https://water.ca.gov/-/media/DWR-Website/Web-Pages/Programs/Delta-Conveyance/DC_Schedule_August2020_508.pdf?la=en&hash=9069D624DB200C0BC9C8B57BAA51DB7FC3CCB19B

State Water Project from 10 percent to 5 percent which resulted in MWD receiving about a one-month supply. If dry year conditions continue, SWP allocations in 2022 could be set to zero.

On November 9, 2021, MWD adopted a resolution declaring a Regional Drought Emergency and called upon its Member Agencies to reduce use of SWP supplies. MWD's Member Agencies which depend on the SWP include the Los Angeles Department of Water and Power, Calleguas Municipal Water District, Las Virgenes Municipal Water District, Upper San Gabriel Valley Municipal Water District, Three Valleys Municipal Water District, and IEUA. MWD requested these six agencies to implement actions they deem necessary under their Water Shortage Contingency Plans, including enforcing restrictions limiting outdoor water days and lowering the amount of water allowed under a first-tier price. MWD's resolution also provides MWD's General Manager with authority to take actions needed to address the regional drought emergency, including the following: enhance local water production, recycling, conservation, and storage; purchase, transfer, and exchange water supplies; procure equipment, materials, services, and supplies; and provide media buying and placement services for a water awareness and conservation advertising campaign. MWD also expanded several water saving programs including increased rebates for turf removal and providing additional funding for rebate programs for water-efficient toilets and devices.

As discussed previously, FWC adopted a resolution to approve its 2020 Urban Water Management Plan and Water Shortage Contingency Plan on July 1, 2021. FWC's 2020 Urban Water Management Plan describes FWC's historical and existing water conservation program, the status of implementation of Demand Management Measures, and projected future conservation implementation. FWC's Water Shortage Contingency Plan describes the actions FWC will take to reduced demands or increase supplies under 10, 20, 30, 40, 50 percent, and greater than 50 percent shortage conditions.

Imported Water from SBVMWD

FWC projects receiving up to 3,200 AFY of imported water supplies from SBVMWD. FWC expects to receive greater quantities of SWP water from SBVMWD as population and water use increase in the SBVMWD portion of FWC's service area.

The delivery reliability of SWP water from SBVMWD is similar to the previous discussion of SWP deliveries above. SBVMWD currently has a contractual 'Table A' amount of 102,600 AFY of SWP water. FWC's 2020 UWMP conservatively projects that it will receive up to 3,200 AFY of SWP water from SBVMWD in the next twenty years. Supplies from SBVMWD could be reduced by up to 95 percent in single dry years and up to 78 percent during multiple dry years. SBVMWD anticipates storage of SWP water during normal and wet years for use, along with direct deliveries, during dry years. Imported water provided by SBVMWD will be treated at FWC's Summit Water Treatment Plant, which is discussed in the following section on imported water from IEUA.

Imported Water from IEUA

FWC's upgraded Summit Water Treatment Plant can treat imported water from IEUA and SBVMWD and local surface water from Lytle Creek. The Summit Water Treatment Plant, which has a capacity of up to 29 MGD, includes a 40 cfs connection with IEUA to receive untreated SWP water. FWC's 2020 UWMP conservatively assumed that FWC will receive up to approximately 15,000 AFY of SWP water from IEUA in the next twenty years. Imported water supplies will allow FWC flexibility in managing its water supply sources both short and long term, as well as in normal and dry years. Also, the upgraded Summit Water Treatment Plant allows FWC to treat and maximize the use of SWP supplies and turbid Lytle Creek storm water flows that could not be used in the past.

WATER SUPPLY SUMMARY

Based on the above discussion of the available water supply sources, FWC's water supply-demand balance in normal, single dry, and multiple dry years during the next twenty years are summarized in Tables 11, 12, and 13, respectively.

The Chino Basin is an important source of groundwater for FWC now and will continue to be in the future. In addition, the Chino Basin Watermaster's Optimum Basin Management Program (the Chino Basin Watermaster updated the "Optimum Basin Management Program Report" in January 2020), including a Storage Management Plan, will greatly increase the Chino Basin's reliability and safe yield through recharge of imported water, additional local storm water, and recycled water. FWC currently has a total pumping capacity from the Chino Basin of approximately 35,000 gpm. At the present time FWC has five inactive wells in the Chino Basin (with a total pumping capacity of approximately 9,500 gpm or 15,300 AFY) which cannot be used because of high levels of perchlorate and nitrate contamination.

FWC is planning to restore most, if not all, of the lost pumping capacity in the Chino Basin through construction of additional wells or installing wellhead treatment or alternative remedies (e.g. packers) on existing wells in the near future. FWC is also planning to replace existing aging and poor producing wells, which will result in a net increase in production over existing capacity. Additional well capacity will provide emergency water supply in case of interruptions of water service due to migration of contamination, loss of power, physical damage to electrical power supply equipment, or failure of a water transmission pipeline.

Tables 11, 12, and 13 show that the water supplies available to FWC will be sufficient to meet all present and future water supply requirements of the Project for the next twenty years (through 2045), including during single and multiple dry years.

TABLE 11 FWC'S FUTURE WATER SUPPLIES IN NORMAL YEARS (AFY)

Year		2025	2030	2035	2040	2045
Demands from 2020 UWMP[1]		**45,593**	**46,909**	**48,665**	**50,442**	**51,943**
Potable Water Demand		44,593	45,409	46,665	47,942	48,943
Recycled Water Demand		1,000	1,500	2,000	2,500	3,000
Total FWC Projected Water Demands[1]		**45,593**	**46,909**	**48,665**	**50,442**	**51,943**
Water Supplies[2]	Surface Water	4,860	4,860	4,860	4,860	4,860
	Lytle Basin	6,390	6,390	6,390	6,390	6,390
	Chino Basin	9,278	9,983	11,128	12,293	13,183

* Total Production adjusted from prior annual reports to include previously omitted production from wells that have become non-active over time.

[1] Includes 3,945 AF of mined water pumped by Edison as agent for IEUA.
[2] Does not include 7,674.3 AF exchanged with MWDSC.
[3] Does not include 6,423.6 AF exchanged with MWDSC.
[4] Does not include 16,377.1 AF exchanged with MWDSC.
[5] Does not include 14,929.1 AF exchanged with MWDSC.
[6] Does not include 12,202.4 AF exchanged with MWDSC.
[7] Does not include 13,657.3 AF exchanged with MWDSC.
[8] Does not include 20,194.7 AF exchanged with MWDSC.
[9] Does not include 4,221.9 AF exchanged with MWDSC.
[10] Does not include 6,167.2 AF exchanged with MWDSC.
[11] Does not include 4,275.4 AF exchanged with MWDSC.
[12] Does not include 216.5 AF exchanged with MWDSC.
[13] Represents total physical production by Pools, not assessed production.
[14] Production by the Chino Basin Desalters is not considered assessable production; Desalter replenishment obligation accounting is shown in the Assessment Package.
[15] Production by DTSC is accounted separately, by agreement, such that the production is not assessed by Watermaster.
[16] Total reflects physical production by pumpers and does not account for any adjustments that are made in the Assessment Packages.
[17] Total Agricultural Pool production revised due to incorrect multiplier used on an irrigation well meter.

APPENDIX C

AGREEMENT FOR THE PROVISION OF SEWER AND RECYCLED WATER SERVICE

This Agreement is entered into this, the 24 day of Nov., 2015 ("Effective Date"), by and between Inland Empire Utilities Agency, a Municipal Water District; City of Fontana; Fontana Water Company; and California Speedway Corporation d/b/a Auto Club Speedway ("Speedway").

RECITALS

WHEREAS, Inland Empire Utilities Agency is a Municipal Water District organized and existing pursuant to Section 71000, et seq. of the California *Water Code* and is authorized to provide wastewater treatment and recycled water services to property owned, operated, managed, and controlled by Speedway; and

WHEREAS, The City of Fontana is a general law city located within the County of San Bernardino, State of California; and

WHEREAS, Fontana Water Company, a division of San Gabriel Valley Water Company, a California corporation, is a public utility water company subject to regulatory jurisdiction of the California Public Utilities Commission doing business in the County of San Bernardino, with its principal place of business being 15966 Arrow Route, Fontana, California; and is authorized to provide public utility water service, including service of recycled water, to its customers, such as Speedway's property, which are located within its service area as authorized and approved by the California Public Utilities Commission; and

WHEREAS, Speedway owns, operates, manages, and controls certain real property within the County of San Bernardino, State of California, which property is more commonly identified as the Auto Club Speedway of Southern California; and

NOW THEREFORE, the Parties hereto agree as follows:

I. DEFINITIONS

1.1 "Capital Costs" shall mean all actual, out of pocket costs incurred by IEUA for the design, engineering, construction, permitting and all other similar third party costs of constructing the Temporary System, Permanent System and Recycled Water System.

1.2 "City" shall mean the City of Fontana.

1.3 "Connection Point" shall mean that location where the Temporary System and Permanent System are connected to the Lift Station (see 1.6 below).

1.4 "CSI" shall mean California Steel Industries.

1.5 "IEUA" shall mean the Inland Empire Utilities Agency, a Municipal Water District.

1.6 "Lift Station" shall mean that lift station facility owned by IEUA located on San Bernardino Avenue and depicted on Exhibit "A" of this Agreement.

1.7 "NAPA Properties" shall mean those four properties which are identified by the following San Bernardino County Assessor's Parcel Numbers: 0229-291-039-0000, 0229-291-034-0000, 0229-291-040-0000, and 0229-291-031-0000, and which are understood to be currently owned, respectively, by Triple-S California Logistics LLC, a Texas limited liability company ("Triple-S"); Maas-Hansen Steel Corporation, a California corporation ("Maas"); McLeod Properties, Fontana LLC, a California limited liability company and Budway Enterprises, Inc., a California corporation (collectively, "McLeod"), and West Valley MRF, LLC, a California limited liability company ("MRF").

1.8 "Party" or "Parties" shall mean an entity, individually, or the entities, collectively, that are bound by and have executed this Agreement.

1.9 "Permanent System" shall mean that certain gravity sewer pipe for the transmission of wastewater to be designed and constructed by IEUA from the point of connection on the Sewer Property up to the point of connection to the IEUA Lift Station, and as depicted on Exhibit "B" of this Agreement. Sewer Property is that property owned by PAC Operating Limited Partnership, a Delaware limited partnership ("POLP") and more commonly identified as Parcel 8 of Parcel Map 15640 recorded in San Bernardino Official Records, Book 207, Pages 26-30.

1.10 "Prologis" shall mean PAC Operating Limited Partnership, a Delaware limited partnership and CCG Ontario Operations, LLC collectively.

1.11 "Pumping Rights" shall mean those rights owned by Speedway to pump and use up to 475 acre feet of water per year from Chino Basin Management Zone 3 as more thoroughly described in the water rights agreement between CCG Ontario Operations, LLC and Speedway as successors-in-interest to Kaiser Ventures and Speedway Development Corporation respectively.

1.12 "PWWTP" shall mean the Prologis Wastewater Treatment Plant.

1.13 "Regional Contract" shall mean the Chino Basin Regional Sewerage Service Contract with Exhibits (as amended October 19, 1994) as amended from time to time.

1.14 "Related Contracts" shall mean the following contracts: (a) this , (b) the Agreement for the Provision of Recycled Water and Sewer Service between IEUA, the City, the Water Company (defined below) and CSI dated substantially concurrently herewith, and (c) the Agreement for the Provision of Sewer Service between IEUA, the City, the Water Company, and Prologis (defined below) dated substantially concurrently herewith, all of which are for the provision of temporary wastewater services, permanent wastewater services, and/or recycled water services.

1.15 "RWS" shall mean that infrastructure designed, constructed, maintained, and controlled by IEUA to provide wholesale recycled water service to the Water Company which will provide retail recycled water service to Speedway connections, as depicted on Exhibit "C" attached hereto.

1.16 "Speedway" shall mean California Speedway Corporation dba Auto Club Speedway.

1.17 "Storage Account" shall mean the account established by Speedway through Watermaster, containing unused Pumping Rights held exclusively for the benefit of IEUA.

1.18 "Temporary System" shall mean that certain above-ground piping for wastewater transmission to be designed and constructed by IEUA and operated and maintained by POLP from the point of connection on the Sewer Property up to the point of connection to the IEUA Lift Station, and as depicted on Exhibit "D" of this Agreement, which shall remain in service from the date of its completion until such time as the Permanent System is completed and accepting wastewater flows. By separate agreement with IEUA, CSI shall maintain that portion of the Temporary System located on its property.

1.19 "Third-Party Properties" shall mean all of those properties located within the Kaiser Distribution Center industrial park which park is depicted on Exhibit "E" attached hereto, and/or which includes, but is not limited to, those parcels which are understood to be currently owned by Watson Land Company, the Estate of James Campbell, the David F. Bolger Sixth Amended and Restated Revocable Trust, the Appel Family Trust, BNSF, and various entities which are affiliated with POLP, or other entities which have not yet developed their parcels within the park.

1.20 "Water Company" shall mean the Fontana Water Company.

1.21 "Watermaster" shall mean the Chino Basin Watermaster.

II. WASTEWATER SERVICES

2.1 Temporary System. Within ninety (90) days of the execution of Related Contracts by IEUA, Prologis, CSI, Speedway, Water Company, and City, IEUA shall design and construct the Temporary System which shall divert all flows currently treated at the PWWTP to IEUA's Lift Station. The Temporary System will be constructed above-ground and located as depicted in Exhibit "D" attached hereto. IEUA and the Speedway shall cooperate with each other to support IEUA in the planning and implementation of the construction of the Temporary System and other reasonably required site improvements on Speedway property necessary to implement the Temporary System.

2.2 Service Date. Upon completion of the Temporary System, IEUA will begin accepting all untreated wastewater flows diverted from the PWWTP.

2.3 Operation and Maintenance. Prologis and CSI, by separate agreement, will operate and maintain the Temporary System from the location of the PWWTP to the IEUA Lift Station until such time as the Permanent System is operational so that it is accepting all flows of untreated wastewater from Prologis and all current users of the PWWTP. At such time, the Temporary System will be dismantled by IEUA

2.4 Permanent System. IEUA shall design and cause to be constructed all infrastructure necessary to create the Permanent System to divert all wastewater flows from the PWWTP to the Lift Station as depicted in Exhibit "B" attached hereto. The Permanent System will replace the Temporary System.

2.5 Capital Cost. The Capital Cost shall be allocated equally between Prologis, CSI, and Speedway up to a total amount of Three Hundred Thousand Dollars ($300,000) each. If bids for the construction of the Permanent System exceed the not to exceed cost stated above, the Parties shall reopen negotiations and shall have the option to withdraw from this Agreement. The reimbursable Capital Costs shall be paid within thirty (30) days of acceptance of the Permanent System as complete by the Board of Directors of IEUA. The Capital Costs that are allocated to Speedway shall be paid only as provided in Section 4.1 of this Agreement although Speedway may, at its sole discretion, utilize the alternative method of payment described in Section 5.1 of this Agreement. Speedway shall not have any responsibility for the failure of CSI or Prologis to timely pay their respective share of the Capital Costs.

2.6 Operation and Maintenance. Speedway shall own, operate, manage, control, inspect, maintain, and repair those permanent sewer infrastructure facilities located on Speedway properties up to the point of connection to the Permanent Systems depicted on Exhibit "B". IEUA shall own, operate, manage, control, inspect maintain and repair those permanent sewer infrastructure facilities located in the public right of way. In the event of the sale of all or part of its properties, it shall be incumbent upon Speedway to assign to its successor-in-interest, the ownership and obligation for operation, management, control, inspection, maintenance, repair, and replacement of the sewer infrastructure associated with the sold property. In the absence of

any such assignment, Speedway shall remain responsible for all said infrastructure. IEUA shall have no responsibility for the operation or maintenance of existing or future systems located on Speedway property or to any successors-in-interest to Speedway.

2.7 Transition of Service. Speedway and IEUA shall cooperate with each other in the transition of wastewater treatment services from the PWWTP to the Permanent System. Not more than sixty (60) days prior to such transition, IEUA shall submit a schedule prepared in coordination with CSI, Prologis, and Speedway proposing the acts required of each Party, and the timing thereof, to accomplish the transition. Upon approval by CSI, Prologis, and Speedway, the schedule shall be implemented with the costs associated with the transition activities described in this Section 2.7 shall be borne by the Party incurring the expense.

2.8 Waste Regulation. The Temporary and Permanent Systems are to be used for domestic waste only of a nature materially similar to the waste water that the Speedway is sending to the PWWTP as of the Effective Date. Speedway shall ensure that its use of the Temporary System and Permanent System will be in compliance with all applicable laws, ordinances, and regulations, including those contained in the Regional Contract as set forth in Exhibit "G" attached hereto. IEUA shall be responsible for the administration of the pretreatment program with CSI, Speedway, Prologis, NAPA Properties and Third Party Properties.

2.9 Connection Fees. Speedway shall owe IEUA for all connection fees associated with connecting its property to the Permanent System in the amount prescribed by the Regional Contract. Speedway shall pay such connection fees to IEUA as provided in Section 4.1 of this Agreement. Speedway may, at its sole discretion, utilize an alternative method of payment as described in Section 5.1 of this Agreement. Speedway shall report any future fixture unit additions to IEUA and City and shall pay applicable connection fees in accordance with the applicable terms and conditions of the Regional Contract. The current rates are set forth in Exhibit "F" attached hereto and are subject to change by action of the Board of Directors of IEUA.

2.10 Valuation of Costs and Fees. If Speedway elects to pay Capital Costs and connection fees by cash payment as provided in Section 5.1 of this agreement, then Speedway shall pay the actual cost incurred for Capital Costs as set forth in section 2.5 of this Agreement and connection fees estimated to be an additional Three Million Dollars ($3,000,000). If Speedway elects to pay Capital Costs and connection fees through assignment of Pumping Rights as provided in Section 4.1 of this agreement, the total value thereof shall be equal to fifty percent (50%) of the volume of the Pumping Rights.

2.11 User Fees. Speedway shall pay monthly wastewater user fees as billed by City in accordance with the rate structure established by City for such services for similarly situated outside of City users. Speedway shall provide site water use data to City as required to complete the monthly wastewater billing. User fees shall be assessed from the date that IEUA begins

accepting untreated wastewater flows into the Temporary System. The current rates are set forth in Exhibit "F" and are subject to change by action of the City's City Council.

2.12 Failure to Perform. In the event that IEUA fails to perform any of the services contemplated in Section II within two years of the effective date of this Agreement, then Speedway shall have the right to terminate this Agreement. Provided, however, that the Speedway must first deliver to the IEUA a Notice of Intent to Terminate, and the IEUA shall have a reasonable opportunity (which shall not exceed sixty [60] days) to perform the obligation.

III. RECYCLED WATER

3.1 Design and Construction. IEUA shall design and cause to be constructed the RWS as depicted in Exhibit "C" which shall serve recycled water to the Water Company for delivery by Water Company to Speedway for industrial and irrigation use. Through separate agreement with Speedway, IEUA may also design and assist in the construction of recycled water infrastructure on Speedway property. The RWS shall be constructed only if Water Company obtains California Public Utilities Commission (CPUC) approval of recycled water rates as provided in Section 3.3 of this Agreement, and shall be deemed completed upon acceptance of the project by IEUA's Board of Directors. The City agrees to cooperate and support the development of the RWS infrastructure, which would enable IEUA to comply with the provisions of this Agreement.

3.2 Ownership, Operation, and Maintenance. IEUA shall own, operate, inspect, manage, maintain, and repair the RWS depicted in Exhibit "C" up to the point of connection at Speedway. Said RWS shall be deemed a constituent of IEUA's overall recycled water system. Speedway shall own, operate, inspect, manage, maintain and repair recycled water infrastructure located on Speedway Property up to the point of connection to the RWS. Water Company shall own, operate, inspect, manage, maintain, repair, and read the water meters at each such point of connection.

3.3 Rates. Speedway shall incur costs and fees for only to the extent that recycled water is utilized and then only as set forth in this Section 3.3. Current rates for recycled water are set forth in Exhibit "F". In accordance with Section 3.1 Water Company will seek CPUC approval to provide recycled water to Speedway at a rate equal to 85% of the Metropolitan Water District of Southern California's ("MWD") full service untreated Tier 1 rate, including any future adjustments thereto. Upon and subject to such CPUC approval, Water Company shall provide recycled water service to Speedway subject to and in accordance with the Water Company's applicable tariff rules and schedules on file with and approved by the CPUC including but not limited to Tariff Schedule FO-6. However, in consideration of (i) IEUA's commitment to design, construct, own, operate, inspect, manage, maintain and repair the recycled water system as provided in Sections 3.1 and 3.2 above; (ii) Speedway's commitment to reimburse IEUA for the capital costs of constructing the recycled water system as provided in Section 3.6 below; (iii) Speedway's long-term interest in use of recycled water thereby

potentially conserving significant quantities of high quality, local, potable water resources; and (iv) IEUA's commitment to make available to Water Company recycled water pursuant to the terms and conditions of the Regional Contract as provided in Section 3.4 below, Water Company will provide recycled water service to Speedway at a discounted quantity rate which differs from the rates for Recycled Water Metered Service set forth in Water Company's Tariff Schedule No. FO-6. Such discounted quantity rate shall be determined by substituting the quantity rate shown in Tariff Schedule No. FO-6 with an agreed-upon rate equal to 85% of the MWD full service untreated Tier 1 rate and by eliminating any temporary surcharge or surcredit that would otherwise apply from time to time. Because such rates differ from Water Company's applicable tariff schedule, such rates will become effective only upon authorization by the CPUC. Sections 3.1 through 3.5 of this Agreement at all times shall be subject to such modifications as the CPUC may direct from time to time in the exercise of its jurisdiction, provided however, nothing in Part III of this Agreement shall preclude any of the parties from opposing any such modifications by the CPUC, through any available legal and/or administrative means. Water Company shall seek CPUC approval within ninety (90) days of the execution of this Agreement by all of the Parties hereto. Should such CPUC approval not be obtained within 12 months of the above-stated date, the Parties hereto shall meet and confer in good faith to consider the project being implemented with resulting terms acceptable to the Parties.

3.4 Quantity and Quality Delivered. IEUA shall supply recycled water through Water Company for use at Speedway pursuant to the terms and conditions of the Regional Contract, and any amount delivered shall not be deemed part of the City's base entitlement as described therein. It is expected that the annual use of recycled water by Speedway will be 450 acre feet. The Parties hereto recognize that demand may increase over time and any additional demands shall be subject to recycled water availability and further agreement between the Parties. All recycled water provided by IEUA shall meet the water recycling criteria established by the State Water Resources Control Board – Division of Drinking Water in terms of quality and level of treatment required for allowable use. In the event that the IEUA does not supply enough recycled water to meet the Speedway's needs, for any reason, then the Speedway shall be entitled, without any penalty, to utilize any water available to the Speedway in order to do so, including the portion of the Pumping Rights allocated to recycled water capital costs as outlined in Section 3.6 of this Agreement. Use of recycled water is deemed a priority use. Further, this Agreement contains no "take or pay" provision and Speedway shall be the sole determinant of its actual volume of recycled water use, from the volume made available to Speedway.

3.5 Irrigation System. Within thirty (30) days of completion of the RWS, Speedway, at its sole expense, shall convert its entire irrigation system to use primarily recycled water provided the IEUA and Water Company is able to supply adequate recycled water.

3.6 Capital Costs. Speedway shall pay the Capital Costs associated with constructing the RWS as provided in Section 4.1 of this Agreement and shall be solely responsible for the recycled water infrastructure located on Speedway property up to the point of connection to the RWS. If, in its sole discretion, the Speedway elects to pay Capital Costs by cash payment as provided in Section 5.1 of this Agreement, then Speedway shall pay the actual cost incurred for

Capital Costs estimated to be Three Million Dollars ($3,000,000). If Speedway elects to pay Capital Costs through assignment of Pumping Rights as provided in Section 4.1 of this Agreement, the total thereof shall be equal to fifty percent (50%) of the volume of the Pumping Rights.

3.7 Failure to Perform. Until IEUA completely performs all of the services contemplated in Section III, Speedway shall be excused from performance obligations set forth in Section III and Section 4.1 herein as to those obligations not performed by IEUA. Speedway will be obligated to compensate IEUA for those obligations that are performed by IEUA in compliance with the provisions of this Agreement. If IEUA fails to completely perform its obligations set forth in this Section III within two (2) years of the completion date of the Permanent System, then Speedway shall have the right to terminate Section III and Section 4.1 of this Agreement provided, however, that the Speedway must (i) deliver to the IEUA a Notice of Intent to Terminate Section III, and the IEUA has a reasonable opportunity (which shall not exceed sixty [60] days) to perform the obligation and (ii) Speedway shall be responsible for its portion of the Capital Costs and connection fees of the Permanent System, which Speedway may pay out pro rata over a ten (10) year time frame.

IV. PAYMENT THROUGH ASSIGNMENT OF PUMPING RIGHTS

4.1 Assignment of Pumping Rights. Speedway will assign its Pumping Rights to IEUA as full consideration for all Capital Costs and connection costs related to the design and construction of the Temporary System, the Permanent System and the RWS. The assignment shall have a term of sixty (60) years and shall be allocated as follows:

Years one (1) through forty (40) – 450 acre feet per year

Years forty-one (41) through fifty (50) – 300 acre feet per year

Years fifty-one (51) through sixty (60) – 150 acre feet per year

IEUA shall be entitled to utilize Pumping Rights as determined in its sole discretion, subject only to Watermaster oversight and approval. The assigned pumping rights shall be free, clear, and exclusive of the rights of all others who claim an interest therein. Subject to the terms herein, this assignment shall survive and be effective despite the sale of Speedway property, lease of Speedway property or cessation of business.

4.2 Storage of Pumping Rights. If, at any time and for any reason, IEUA is precluded from or elects not to exercise its assignment or use of Pumping Rights, in whole or in part, then all unused Pumping Rights shall be accumulated by Speedway in the Storage Account for later IEUA use. Speedway shall report to IEUA annually with respect to the amount of Pumping Rights held in the Storage Account. Once each year, IEUA shall have the right to audit the Storage Account subject to reasonable notice to Speedway. The Storage Account shall be

subject to losses normally assessed to Overlying (Non-Agricultural) Pool storage accounts by Watermaster.

4.3 Assignment of Stored Water. IEUA shall retain sole discretion over the assignment of Pumping Rights held in the Storage Account, however, any assignment shall be subject to Watermaster oversight. The assignment of Pumping Rights shall be subject to the provisions of the Restated Judgment and other Watermaster documents as applicable, in the case of *Chino Basin Municipal Water District v. City of Chino*, Case No. RCV 51010, as implemented by Watermaster. Speedway shall cooperate and shall perform all acts reasonably required of it by IEUA, Watermaster or others to complete any assignment of water held in the Storage Account, at no cost to IEUA.

4.4 Condition Precedent. The assignment of Pumping Rights described herein shall be conditioned upon reaching an agreement with Prologis whereby Prologis agrees to the assignment, and waives and releases any interest they may have in the Pumping Rights.

4.5 Grant Funding. IEUA shall exercise its best efforts to obtain grant funding from available sources to offset, in part, the cost of design and construction of the RWS. As set forth in Section 3.6 of this Agreement, IEUA shall also retain the discretion to utilize grant funding to offset the capital costs associated with constructing recycled water infrastructure situated on Speedway property, including onsite retrofits for additional recycled water connections at Speedway facilities. Speedway shall exercise its best efforts in support and cooperation with IEUA to obtain grant funding. In the event that the IEUA secures any grant funding, then Speedway's amount due for capital costs and connection fees shall be reduced by the amount of the grant funding proportionally allocated to Speedway in an amount determined by IEUA in the exercise of reasonable discretion.

V. ALTERNATIVE PAYMENT

5.1 Lump Sum Payment. Speedway shall have the option, at its sole discretion, to pay its share of any Capital Costs and connection fees for both wastewater and recycled water systems that is still due at the time of payment in one lump sum payment in lieu of continuing to assign pumping rights as set forth in Section 4.1 of this Agreement. Capital Costs shall not include grant funding. The IEUA's claims for Capital Costs and connection fees shall be supported by documentation to the Speedway's satisfaction establishing the amount claimed was incurred and was reasonable and necessary.

In the event that the Speedway exercises its right under Section 5.1, any and all value derived from the sale or banking of water (at the value set forth by the Metropolitan Water District full service untreated Tier 1 water value) recovered through the exercise of Pumping Rights shall offset, in like amount, capital costs and connection fees owed to IEUA by Speedway.

VI. TERM

6.1 Term of Agreement. This Agreement shall begin on the date that all Related Contracts are executed by the respective Parties and shall continue for a term of sixty (60) years whereupon the sewer services and recycled water services shall continue to be provided by IEUA and Water Company, respectively, under terms and conditions then applicable to persons and/or entities similarly situated to Speedway.

6.2 Termination. This Agreement may be terminated by either Speedway or IEUA upon a material breach by the other Party. A breach of this Agreement will only be considered a material breach after a Party has delivered to the other Party a Notice of Intent to Declare a Material Breach, and the breaching Party has received a reasonable opportunity to cure the breach but has failed or refused to do so within that time.

VII. INSURANCE

7.1 Insurance. IEUA and Speedway shall each provide insurance so as to provide protection as described in this Agreement. The Parties shall furnish to each other certificates issued by insurance companies reasonably acceptable to one another showing policies carried and the limits of coverage as follows:

(a) Speedway and IEUA shall maintain Workers' Compensation Insurance for their respective employees to the extent of statutory limits and Occupational Disease and Employer's Liability Insurance for not less than $1,000,000.

(b) Speedway and IEUA shall maintain Commercial General Liability Insurance, including but not limited to Products and Completed Operations and Contractual Liability, as applicable to their obligations under this Agreement with limits not less than:

  (i) Personal Injury - $1,000,000 per occurrence; and

  (ii) Property Damage - $1,000,000 per occurrence.

(c) Each Party shall maintain Automobile Liability Insurance with limits not less than:

  (i) Bodily Injury - $1,000,000 each accident; and

  (ii) Property Damage - $1,000,000 each accident.

7.2 Certificates of Insurance. Each Party shall provide certificates of insurance to the other during the term of this Agreement certifying that such coverages shall remain in effect for the duration of this Agreement; provided, however, that IEUA shall deliver certificates of insurance to Speedway during the term of this Agreement with a satisfactory loss payable endorsement naming Speedway as a loss payee, or in the case of any real property, an additional insured, such endorsements to contain a waiver of warranties. All certificates of insurance shall state that prior to cancellation, non-renewal or any material change, thirty (30) calendar days

written notice shall be given to IEUA. Failure of IEUA or Speedway to enforce the minimum insurance requirements listed above shall not relieve Speedway or IEUA of responsibility for maintaining these coverages.

7.3 Occurrence Policy. All insurance required hereunder shall provide insurance for occurrences from the Effective Date hereof throughout the later of the expiration or termination hereof.

VIII. INDEMNITY

8.1 Indemnification by Speedway. Speedway shall fully indemnify, save harmless, and defend IEUA and any of its officers, directors, employees, contractors, and agents or assignees from and against any and all costs, claims, and expenses incurred by such parties in connection with or arising from any claimed interest to Pumping Rights asserted by third-parties, or any claim by a third-party for physical damage to or physical destruction of property, or death of or bodily injury to any person, but only to the extent caused by the negligence, gross negligence, or willful misconduct of Speedway or it agents or employees or others under the control of Speedway in performing any of the conditions and covenants of this Agreement.

8.2 Indemnification by IEUA. IEUA shall fully indemnify, save harmless, and defend Speedway or any of its officers, directors, employees, contractors, and agents from and against any and all costs, claims, and expenses incurred by such parties in connection with or arising from any claim by a third-party for physical damage to or physical destruction of property, or death or bodily injury to any person, but only to the extent caused by the negligence, gross negligence, or willful misconduct of IEUA or its agents or employees or others under the control of IEUA.

IX. GENERAL PROVISIONS

9.1 Amendments. This Agreement may only be amended, modified, changed, or rescinded in a writing signed by each of the Parties hereto.

9.2 Interpretation. The language of this Agreement shall not be construed for or against any Party, as each Party has participated in the drafting of this Agreement and had the opportunity to have its counsel review it. Whenever the context and construction so requires, all words used in the singular shall be deemed to be used in the plural, all masculine shall include the feminine and neuter, and vice-versa. Unless the context otherwise requires, references herein: (i) to Sections and Exhibits mean the Sections of and the Exhibits attached to this Agreement; and (ii) to an agreement, instrument, or other document means such agreement, instrument, or other document as amended, supplemented, and modified in writing from time to time to the extent permitted by the provisions thereof and by this Agreement.

9.3 Headings. The headings of the Sections hereof are inserted for convenience only and shall not be deemed a part of this Agreement.

9.4 Partial Invalidity. If any one or more of the covenants or agreements provided in this Agreement to be performed should be determined to be invalid or contrary to law, such covenant or agreement shall be deemed and construed to be severable from the remaining covenants and agreements herein contained and shall in no way affect the validity of the remaining provisions of this Agreement.

9.5 Counterparts. This Agreement may be executed in several counterparts, all or any of which shall be regarded for all purposes as one original and shall constitute and be but one and the same instrument.

9.6 Governing Law. This Agreement shall be governed by and construed in accordance with the laws of the State of California.

9.7 Notices. Any notices required or permitted to be given hereunder shall be given in writing and shall be delivered: (a) in person; or (b) by Federal Express or another reputable commercial overnight courier that guarantees next day delivery and provides a receipt; and (c) such notices shall be addressed as follows:

If to IEUA:
Inland Empire Utilities Agency

If to City:
City of Fontana
Attention: City Manager
8353 Sierra Ave.
Fontana, CA 92335

9.8 Merger of Prior Agreements. This Agreement and the Exhibits hereto constitute the entire agreement between the Parties and supersede all prior agreements and understandings between the Parties relating to the subject matter hereof.

9.9 Attorney's Fees. If any legal action or any arbitration or other proceeding is brought for the enforcement of this Agreement, or because of an alleged dispute, breach, default, or misrepresentation in connection with any of the provisions of this Agreement, the successful or prevailing party shall be entitled to recover reasonable attorney's fees and other costs incurred in that action or proceeding, in addition to any other relief to which it or they may be entitled.

9.10 Dispute Resolution. The Parties shall seek to resolve any dispute concerning the interpretation or implementation of this Agreement through good faith negotiation, involving, as and when appropriate, the general manager or chief executive officer of each of the Parties. Any dispute that remains unresolved thirty (30) days after notice of the dispute is made to the Parties, shall be resolved by a single arbitrator with substantial experience in the matter or matters in dispute, conducted in accordance with Judicial Arbitration and Mediation Services (JAMS). The JAMS arbitrator shall apply the American Arbitration Association's rules on commercial disputes, which shall govern any arbitration. If the Parties cannot agree on a single arbitrator within ten (10) days of the written election to submit the matter to arbitration, any Party may request JAMS to appoint a single, neutral arbitrator. The Parties shall use their reasonable best efforts to have the arbitration proceeding concluded within ninety (90) business days of selection of the arbitrator.

9.11 Cooperation. The Parties acknowledge that they are entering into a long-term arrangement in which the cooperation of all of them will be required, including the execution of necessary documents. The Parties agree to cooperate in good faith with each other in the development, construction, ownership, operation, and maintenance of the facilities that are described in this Agreement and that the Parties will support IEUA in the planning and implementation of the construction of the Temporary System, Permanent System, and other reasonably required site improvements on property owned by Speedway to the extent necessary

to achieve performance of the terms and conditions of this Agreement. . The Parties agree to cooperate in good faith with Fontana Water Company in its implementation of recycled water service at CSI's property, including support of Fontana Water Company's efforts to obtain PUC approvals necessary to implement this Agreement. Provided, however, that this Section 9.12 is not intended to impose any substantive obligations or cost on either Party beyond those expressly included in this Agreement.

9.12 Independent Contractors. The Parties agree that they are independent contractors and shall be at all times solely responsible for themselves, as well as their respective officers, directors, members, partners, employees, agents, and contractors as to workmanship, accidents, injuries, wages, supervision, and control. This Agreement may not be altered in any manner, such as course of conduct or practice, so as to change the relationship or responsibilities of the Parties as independent contractors.

9.13 Third-Party Beneficiaries. This Agreement is for the sole benefit of the Parties hereto, and nothing in this Agreement or any action taken hereunder shall be construed to create any duty, liability, or standard of care to any person not a Party to this Agreement. Except as specifically otherwise provided herein, no person shall have any rights or interest, direct or indirect, in this Agreement.

9.14 Savings Clause. Each term and condition of this Agreement is deemed to have independent effect and the invalidity of any partial or whole paragraph shall not invalidate the remaining paragraphs. The obligation to perform all of the terms and conditions of this Agreement shall remain in effect regardless of the performance of any invalid term by the other Party.

The effective date of this Agreement is the date of execution by the last Party to sign (the "Effective Date").

CHINO BASIN REGIONAL

SEWAGE SERVICE CONTRACT

(AS AMENDED APRIL 12, 19984, AS AMENDED

OCTOBER 19, 1994)

Section 1. DEFINITIONS

Unless otherwise required by the context, various terms used in this contract, including the recitals, shall have the meanings set forth in this section. The singular number includes the plural and the plural the singular.

"Acquire" or "Acquisition" means to acquire or make the acquisition of one or more of the following:

A. Fee simple title to land.

B. Any interest in land by deed, easement, lease, sublease, contract or otherwise.

C. Title to or any interest in any existing facilities located upon land.

D. Interests or capacity rights in any land or facilities owned by others.

"Capacity Demand" means the volume and strength (i.e., biochemical oxygen demand and suspended solids) of sewage discharged from the Community Sewer System of a Contracting Agency into the Regional Sewerage System expressed in Equivalent Dwelling Units. (Added April 12, 1984)

"Capital Outlay Ordinance" means Ordinance No. 24 of CBMWD (Added April 12, 1984)

"Capital Capacity Reimbursement Account" means the accounts established and maintained by the Contracting Agencies and to which are deposited or credited Capital Capacity Reimbursement Payments. (Added April 12, 1984)

"Capital Capacity Reimbursement Payment" means a deposit or credit made to the Capital Capacity Reimbursement Account of a Contracting Agency for new connections to its Community Sewer System. (Added April 12, 1984)

"CBMWD" means the Chino Basin Municipal Water District, a municipal water district.

"Chino Basin" means that area underlain by the Chino And Cucamonga groundwater basins and that portion of the Claremont Heights groundwater basin within San Bernardino County which groundwater basins are described in Bulletin No. 53 of the California Division of Water Resources, dated March, 1947, and entitled "South Coastal Basin Investigation - Overdraft on Groundwater Basins."

"Commercial Unit" means a building, establishment or premises where businesses selling goods or providing professional or other services to the public or governmental offices are or will be located. (Added April 12, 1984)

"Community Sewer System" means all facilities owned, controlled or operated by a sewage collection agency for the purpose of collecting and conducting sewage to a delivery point, including collector sewers conducting sewage from the originating premises, trunk sewers conducting sewage from

tributary collector sewers or other trunk sewers and any facilities appurtenant to the foregoing.

"Contracting Agency" means any sewage collection agency located, in whole or in part, within the boundaries of CBMWD which has entered into a Service Contract with CBMWD. (Amended April 12, 1984)

"Demand Deficit" means the difference between the aggregate total Forecasted Demand of a Contracting Agency and the total aggregate Equivalent Dwelling Units connected to its Community Sewer System during an eight-year period commencing with the fifth fiscal year preceding the fiscal year for which CBMWD is at the time of the determination of such difference preparing a Ten-Year Forecast, and including the initial three fiscal years of such Ten-Year Forecast. (Added April 12, 1984)

"Delivery Point" means the transfer point at which sewage is delivered from a Community Sewer System into the Regional Sewerage System.

"Dispose" or "Disposal" means any process or method for the elimination or beneficial use of sewage and any effluent or solid waste residuals thereof, including exportation from the Chino Basin.

"Disposal Facilities" means all facilities owned, controlled and operated by CBMWD to meet effluent discharge requirements, excluding reclamation facilities operated by CBMWD to meet obligations under the judgment entered in the action entitled Orange County Water District v. City of Chino, et al.

(Case No. 117628, Superior Court, County of Orange), or to meet the requirements of Contracting Agencies exercising the right of first purchase of reclaimed effluent. (Added April 12, 1984)

"Effluent" means the liquid outflow at the discharge point of any treatment or reclamation facility.

"Equivalent Dwelling Unit" or "EDU" means a measure of sewage flow equivalent in quantity and strength to the daily flow of an average single family household determined as provided in Exhibit "J" hereto. (Added April 12, 1984)

"Expansion" means the acquisition or construction of new facilities for the Regional Sewerage System and the making of any replacements, betterments, additions or extensions of the Regional Sewerage System.

"Facilities" means any pipelines, buildings, structures, works, improvements, fixtures, machinery, equipment, or appliances and any real property, or interests therein, necessary or convenient for the construction, maintenance and operation of any of the foregoing.

"Fiscal Year" means a 12-month period commencing on July 1 and ending on the following June 30.

"Forecasted Demand" means the yearly forecasted or estimated volume and strength of sewage discharged from the Community Sewer System of a Contracting Agency into the Regional Sewerage System expressed in Equivalent Dwelling Units as set forth in a Ten-Year Forecast. (Added April 12, 1984)

"Industrial Unit" means a building, establishment or premises where manufacturing, fabrication or assembly operations or industrial or chemical processes are conducted. (Added April 12, 1984)

"Industrial Waste" means any waste water and any water borne solid, liquid, or gaseous wastes resulting from any producing, manufacturing, or processing operations of whatever nature as more particularly defined, from time to time, by any federal, state, or regional agency authorized by law to prescribe quality standards for the discharge of sewage effluent and industrial waste effluent within the Chino Basin.

"Interceptor Sewer" (Deleted April 12, 1984)

"Non-Domestic Waste" means waste or wastewater discharged into the Community Sewer System of a Contracting Agency which has a greater concentration of total dissolved solids or biochemical oxygen demand or any other constituents limited by CBMWD than the waste or wastewater discharged from the typical single family domestic household in the Contracting Agency's Service Area. as defined in the current contract. (Amended October 19, 1994)

"Non-Reclaimable Waste Disposal System" means the system owned and operated by CBMWD primarily for the disposal of nonreclaimable industrial waste. (Added April 12, 1984)

"Original Contracting Agencies" means any one or any two or more of the Cucamonga County Water District or the Cities of Upland, Ontario, Montclair, Chino or Fontana who, on or before July 31, 1972, shall have authorized execution of a

Service Contract with CBMWD.

"Outfall Sewer" means any sewer transmitting treated effluent from the discharge point of a sewage treatment and disposal plant to a point of disposal or reuse.

"Reclaim" or "Reclamation" means any process or method for altering the quality of treated sewage effluent to standards superior to those prescribed for treatment, as specified in Exhibit "A" attached hereto and made a part hereof.

"Regional Interceptor" means a sewer which receives sewage from the most downstream trunk or collector sewer of a Community Sewer System, or a portion thereof, for the purpose of transmitting the sewage to a Regional Treatment Plant or to any other point of disposal, and any facilities appurtenant thereto, or any sewer which is utilized for the transmission of the sewage of two or more Contracting Agencies to such a plant or point of disposal. (Added April 12, 1984)

"Regional Policy Committee" means the committee provided for in Section 24 hereof. (Added April 12, 1984)

"Regional Sewerage System" means all facilities owned, controlled or operated by CBMWD and any interest or capacity rights of CBMWD in facilities owned, controlled, or operated by others, for the purpose of transmitting, treating and disposing of sewage, including interceptor sewers, sewage treatment and disposal plants, outfall sewers, facilities for the disposal of effluent and solid waste residuals and any facilities appurtenant to the foregoing; the Regional Sewerage System shall

not include any reclamation facilities or portions of reclamation facilities which are operated by or for the benefit of CBMWD to meet obligations under the judgment entered in the action entitled Orange County Water District v. City of Chino, et al. (Case No. 117628, Superior Court, County of Orange), or to meet the requirements of Contracting Agencies exercising the right of first purchase of reclaimed effluent; provided that the Regional Sewerage System shall include all other disposal facilities which are required to meet the requirements of the National Pollutant Discharge Elimination System Permit or permits or Waste Discharge Requirements issued to CBMWD by the Regional Water Quality Control Board, Santa Ana Region, for the operation of the Regional Treatment Plants and, to the extent it is used as provided in Section 8 hereof, the Nonreclaimable Waste Disposal System. (Amended April 12, 1984)

"Regional Technical Committee" means the committee provided for in Section 25 hereof. (Added April 12, 1984)

"Regional Treatment Plant" means a sewage and wastewater treatment plant operated by CBMWD as part of the Regional Sewerage System. (Added April 12, 1984)

"Regional Wastewater Capital Improvement Fund" means the fund of CBMWD into which is deposited or to which is credited all Improvement District "C" tax revenues and standby charge revenues received by CBMWD and all Supplemental Capital Outlay Funds received by CBMWD from the Contracting Agencies for the acquisition, construction, improvement and expansion of the

Regional Sewerage System. (Added April 12, 1984)

"Residential Unit" means a single family residence, a condominium unit, an apartment unit or other such structure or portion thereof which is equipped and suitable for human habitation or a mobile home space in a mobile home park, not including, however, transient lodging rooms in motels or hotels which are considered to be commercial units. (Added April 12, 1984)

"Service Area" means all territory now or hereafter served by the Community Sewer System owned, controlled or operated by any sewage collection agency.

"Service Contract" means this contract and any substantially similar contract between CBMWD and a Contracting Agency providing for the transmission, treatment and disposal of the sewage of the agency by means of the Regional Sewerage System.

"Sewage" means any liquid waste and water borne solid waste resulting from residential, commercial, industrial, or institutional activities or uses.

"Sewage Collection Agency" means the County of San Bernardino and any city or special district, other than CBMWD, which is located in whole or in part within CBMWD and which is authorized to own, control and operate a Community Sewer System.

"Sewer" means any pipeline conducting sewage, either by gravity or by pressure, and any facilities appurtenant thereto.

"Sewer User Charge" means any charge, fee, rental, or rate, excluding property taxes and Capital Capacity Reimbursement Payments, which is imposed on and collected from the owner, lessee, or occupant of property for providing him with the services and facilities of any Community Sewer System or the Regional Sewerage System, or both. (Amended April 12, 1984)

"Supplemental Capital Outlay Funds" means contributions by a Contracting Agency from its Capital Capacity Reimbursement Account reserves to CBMWD to supplement the funding of the planning, design and construction of Regional Sewerage System capital improvement projects. (Added April 12, 1984)

"Transmit" or "Transmission" means the conducting (i) of sewage from any delivery point to a sewage treatment and disposal plant or other point of disposal or (ii) of effluent from a sewage treatment and disposal plant to a point of disposal or reuse.

"Treat" or "Treatment" means any process or method for altering the quality of sewage to standards equal to those prescribed in Exhibit "A" hereof.

"Undersigned Contracting Agency" includes only the contracting agency specifically designated in the first paragraph of this sewage service contract and the signatory of this particular contract.

Section 2. RIGHTS AND OBLIGATIONS

The Contracting Agencies shall have the right to deliver all sewage collected by their respective Community Sewer Systems to the Regional Sewerage System and CBMWD shall have the obligation to receive into the Regional Sewerage System all sewage so delivered by the Contracting Agencies. Notwithstanding the foregoing, a Contracting Agency may acquire, construct, own and operate a wastewater treatment plant or permit another person, firm or corporation to acquire or construct a wastewater treatment plant which will be controlled and operated by the Contracting Agency when to do so is not detrimental to the operation of the Regional Sewerage System.

A Contracting Agency which intends to acquire or construct and own, operate and maintain a wastewater treatment plant shall notify CBMWD and the Regional Technical Committee in writing of its intentions. Such a notice shall include the following information: the location and capacity of the proposed wastewater treatment plant, the method and location of disposal or reuse of the effluent therefrom, the area which will be sewerage through said plant and the quantity of wastewater flow, if any, which will be removed from any Regional Treatment Plant. The Regional Technical Committee shall make a recommendation as to whether the Contracting Agency's operation of the proposed Wastewater treatment plant will be detrimental to the operation of the Regional Sewerage System within 45 days of the receipt of the Contracting Agency's written notice. Upon

receipt of such recommendation, the Board of Directors of CBMWD shall within 45 days of the receipt of the Regional Technical Committee recommendation make a determination as to whether the Contracting Agency's operation of the proposed wastewater treatment plant will be detrimental to the operation of the Regional Sewerage System, and thereafter forthwith notify the Contracting Agency and all other Contracting Agencies in writing of such determination. Any Contracting Agency may within 20 days of the date of such written notification file a written request for a hearing with the Secretary of CBMWD. Upon receipt of such a written request, the Board of Directors of CBMWD shall schedule and conduct a hearing on its determination within 30 days of the date of receipt of such written request, and at the conclusion thereof shall affirm or modify its determination. The provisions of Section 26A hereof shall apply with respect to such hearings.

The failure of the Regional Technical Committee or the Board of Directors of CBMWD to take any action required by this section within the time specified herein or to take any action required by said Section 26A within the time specified therein shall be deemed a determination by said committee or said Board that the operation of the proposed wastewater treatment plant by the Contracting Agency giving notice will not be detrimental to the operation of the Regional Sewerage System; provided that, said committee or said Board may extend the time within which action is required of it under this section for a period of 30

days by giving written notice of such extension to all Contracting Agencies at least seven days prior to the expiration of the time specified herein.

Notwithstanding the prior provisions of this section, removal of sewage flows by a Contracting Agency from an existing Regional Treatment Plant to a wastewater treatment plant to be owned or controlled and operated by the Contracting Agency shall not be considered detrimental to the operation of the Regional Sewerage System, providing that the remaining flows into said Regional Treatment Plant will meet the quality standards set forth in and established by CBMWD and will not result in the effluent from said plant violating the waste discharge requirements prescribed for said plant by the California Regional Water Quality Control Board; and provided further that the construction by a Contracting Agency of a wastewater treatment plant for the treatment and disposal of sewage from a Community Sewer System constructed by the Contracting Agency in an area which was prior to the construction of said plant unsewered shall not be considered to be detrimental to the operation of the Regional Sewerage System.

A Contracting Agency which constructs such a plant may enter into a contract with CBMWD for the maintenance and operation of the plant; provided that CBMWD shall not be obligated to enter into such a contract. A Contracting Agency which acquires or constructs such a wastewater treatment plant shall be solely responsible for the cost and expense of the

acquisition or construction and maintenance and operation of said plant. Any such wastewater treatment plant which is acquired or constructed and owned by a Contracting Agency shall not be acquired or operated by CBMWD as a part of the Regional Sewerage System without the written consent of all other Contracting Agencies except the State of California. (Amended April 12, 1984)

Section 3. COMMUNITY SEWER SYSTEMS

Each Contracting Agency shall have the exclusive right to own and operate a Community Sewer System within its Service Area and to determine in which areas within its Service Area it will operate a Community Sewer System. Each Contracting Agency shall be responsible for all costs and expenses of the acquisition, construction, maintenance and operation of its Community Sewer System. (Amended April 12, 1984)

Section 4. SEWER USER CHARGES

Each Contracting Agency may, in the manner provided by law, impose and collect sewer user charges within its Service Area for providing the services and facilities of its Community Sewer System and of the Regional Sewerage System and shall be entitled to retain, use and expend the charges for any lawful purpose. CBMWD shall not impose sewer user charges within the Service Area of any Contracting Agency without the prior consent of the Contracting Agency. (Amended April 12, 1984)

Section 5. REGIONAL INTERCEPTORS

Regional Interceptors are a part of the Regional Sewerage System and their design and construction or acquisition shall be financed as provided in section 9 hereof. Any Contracting Agency may make a written request to CBMWD for a determination as to whether or not an existing sewer has become a Regional Interceptor. Each such request received by CBMWD shall be referred to the Regional Technical Committee and such committee shall make a written recommendation to the Board of Directors of CBMWD as to whether or not the interceptor in question shall be acquired by CBMWD as a Regional Interceptor. Any Contracting Agency which disagrees with such a recommendation of the Regional Technical Committee may file a written request for a hearing thereon with the Secretary of the Board of Directors of CBMWD. Upon receipt of such a request, said Board of Directors shall schedule and conduct a hearing and give notice thereof in accordance with the provisions of section 26A hereof. Notwithstanding the preceding provisions of this section, a sewer which is utilized for the transmission of sewage of two or more Contracting Agencies and which is transmitting less than 300,000 gallons per day of sewage for the most upstream Contracting Agency shall not be acquired by CBMWD as a Regional Interceptor unless it is determined by the Board of Directors of CBMWD after recommendation by the Regional Technical Committee that such acquisition is in the best interest of the Regional Sewerage System. (Amended April 12, 1984)

Section 6. (DELETED April 12, 1984)

Section 7. REGIONAL SEWERAGE SYSTEM

CBMWD shall own and operate a Regional Sewerage System for the transmission, treatment and disposal of sewage delivered by the Contracting Agencies. The Regional Sewerage System, including any interests or capacity rights of CBMWD in facilities owned, controlled or operated by others, shall be as shown or described in the Chino Basin Regional Sewerage Plan, as provided in the Capital Outlay Ordinance, Ordinance No. 24 of CBMWD, a copy of which is attached hereto as Exhibit "B", or any amendment thereof.

Since August 14, 1972 CBMWD has proceeded with the construction of regional treatment, disposal and transmission facilities shown and described in the said Chino Basin Regional Sewerage Plan and shown on the map attached hereto as Exhibit "E". Future construction and expansion of said Regional Sewerage System facilities will be required to meet the needs of the Contracting Agencies and shall be funded as provided in Section 9 hereof.

CBMWD shall pay all costs and expenses incurred in the acquisition, construction, maintenance, and operation of the Regional Sewerage System. Each Contracting Agency shall, as provided in Section 17 hereof, pay to CBMWD service charges representing a pro rata share of all net audited costs incurred by CBMWD in the maintenance and operation of the Regional Sewerage System, and each Contracting Agency shall contribute

Supplemental Capital Outlay Funds to CBMWD for the improvement and expansion of the Regional Sewerage System as provided in Section 9 hereof. (Amended April 12, 1984)

Section 8. DISPOSAL OF SEWAGE BY CBMWD'S NON-RECLAIMABLE WASTE DISPOSAL SYSTEMS

CBMWD may provide for the transmission, treatment and disposal of any sewage delivered by a Contracting Agency either by means of the Regional Sewerage System, CBMWD's existing Nonreclaimable Waste Disposal System or any other nonreclaimable waste disposal system which CBMWD may hereafter own or have an interest in. For the purpose of this contract, sewage delivered into a Nonreclaimable Waste Disposal System by a Contracting Agency shall be deemed delivered into the Regional Sewerage System and the Contracting Agency shall be liable only for payment of the service charges hereinafter provided for. To the extent that sewage of any Contracting Agency is transmitted, treated and disposed of by means of a Nonreclaimable Waste Disposal System, a portion of the costs of the maintenance and operation of that system shall be included in the net audited costs of the maintenance and operation of the Regional Sewerage System and in the service charge rate as provided in Section 17 hereof. Such portion shall include: (i) charges actually paid or incurred by CBMWD to any person or public or private entity providing for the further transmission, treatment and disposal of the sewage delivered by a Contracting Agency and (ii) a pro rata share of the total costs of maintenance and operation of

those parts of the Nonreclaimable Waste Disposal System actually used by CBMWD for the transmission of said sewage to the person or public or private entity providing for the further transmission, treatment, and disposal thereof. Said pro rata share shall be in the proportion that the quantity of sewage delivered into the Nonreclaimable Waste Disposal System by all Contracting Agencies bears to the total quantity of all sewage and nonreclaimable industrial wastes delivered by CBMWD to the person or public or private entity providing for the further transmission, treatment, and disposal thereof.

Any capital costs associated with the disposal of Regional Sewerage System sewage through a Nonreclaimable Waste Disposal System, including the cost of acquiring permanent capacity or usage rights in Nonreclaimable Waste Disposal System facilities, shall be funded as provided in Section 9 hereof. (Amended April 12, 1984)

Section 9. CAPITAL FINANCING OF REGIONAL SEWERAGE SYSTEM

A. General

The Regional Sewerage System and any improvement or expansion of that system will provide benefits to the entire territory served by that system in that the entire territory will be benefited by the protection of public health, the protection of the quality of water sources, the improvement of water management through integrated use of all sources of water supply, including sewage treatment plant effluent, the

improvement of general conditions for individual, residential, commercial and agricultural development and the reduction in costs for the transmission, treatment, and disposal of sewage by the pro rata sharing of all costs incurred by CBMWD in the maintenance and operation of the Regional Sewerage System.

The acquisition, construction, improvement and expansion of the Regional Sewerage System shall be financed with Improvement District "C" real property tax revenues, revenues from sewage service standby or availability charges levied by the Board of Directors of CBMWD, grants and other financial assistance which may be available from any federal, state, local or other source and Supplemental Capital Outlay Funds contributed by the Contracting Agencies.

B. Improvement District "C" - Acquisition From Original Contracting Agencies and Expansion of Regional Sewerage System

CBMWD has heretofore initiated and completed proceedings under the provisions of Part 8 (commencing with Section 72000) of Division 20 of the Water Code for the formation of Improvement District "C" for the purpose of (i) acquiring certain existing sewage facilities for the Regional Sewerage System from some of the Contracting Agencies, (ii) the expansion of that system, and (iii) levying and collecting taxes in said improvement district for payment of the costs and expenses of the foregoing. The boundaries of Improvement

District "C" are shown on Exhibit "D" attached hereto and made a part hereof.

C. Acquisition of Sewage Treatment Plants and Interceptor Sewers of Other Sewage Collection Agencies; Annexation to Improvement District "C"

Upon obtaining the written approval of all Contracting Agencies, other than the State of California, CBMWD may acquire all or any part of any existing sewage treatment and disposal plant or interceptor sewers owned by any sewage collection agency and all such property, upon its acquisition, shall become a part of the Regional Sewerage System.

Any agreement by CBMWD for the acquisition of any existing sewage treatment and disposal plant or interceptor sewer, as part of the Regional Sewerage System, shall provide for either the annexation of the area benefited by said existing facilities to Improvement District "C" or sewer service under provisions of Section 12 hereof for the benefited area, and for the designation of the Contracting Agency which shall be responsible for the operation of the Community Sewer System within said area. CBMWD agrees that if it initiates and conducts proceedings for the annexation of such territory to Improvement District "C", the Contracting Agency responsible for the operation of the Community Sewer System therefore shall be liable as a condition of annexation for payment of (i) all costs

and expenses incurred by CBMWD incident to such annexation proceedings, including legal and engineering fees, reproduction, publication, mailing, administration any other related costs and expenses, (ii) capital outlay charges and extraordinary capital outlay charges, as provided for in Section 12 hereof, and (iii) Capital Capacity Reimbursement Payments which would have been payable or credited to the Contracting Agency's Capital Capacity Reimbursement Account if the annexed territory had been part of said improvement district from its formation. The total of such charges and payments shall be adjusted for the present value of the sewage facilities acquired by CBMWD. All such payments received by CBMWD pursuant to this part C shall be credited to the Regional Wastewater Capital Improvement Fund.

D. Improvement District "C" Taxes; Sewage Service Standby or Availability Charges

The primary source of financing the acquisition, improvement and expansion of the Regional Sewerage System shall be CBMWD's share of the property tax revenues allocated each fiscal year by the County Auditor of the County of San Bernardino to CBMWD for Improvement District "C". Upon receipt, CBMWD shall deposit or credit the total amount of such property tax revenues in or to the Regional Wastewater Capital Improvement Fund and all such amounts together with all interest earned thereon shall be available to and utilized by CBMWD solely for the purpose of financing the acquisition, improvement

and expansion of the Regional Sewerage System.

The Board of Directors of CBMWD may fix, levy, and collect sewage service standby or availability charges for the propose of financing the acquisition, improvement and expansion of the Regional Sewerage System. When collected, such charges shall be deposited in or credited to the Regional Wastewater Capital Improvement Fund and use for the aforesaid purpose. Any ordinance or any amendment of an ordinance imposing such charges shall be adopted by the Board of Directors of CBMWD in the manner provided in section 5 of the Capital Outlay Ordinance, or any amendment thereof, and the applicable provisions of the Municipal Water District Act of 1911, Division 20 of the Water Code. Notwithstanding the preceding provisions of this paragraph, upon receiving written request from a majority of the Contracting Agencies for the levy and collection by CBMWD of such sewage service standby or availability charges, the Board of Directors of CBMWD shall initiate the proceedings necessary for the fixing, levying and collection of such charges; provided that the Board of Directors of CBMWD may, after the public hearing on the fixing, levying and collection of such charges, elect not to fix, levy and collect such charges if it determines in its sole discretion that such an election is in the best interest of the Contracting Agencies and CBMWD.

E. Capital Capacity Reimbursement Account and Capital Capacity Reimbursement Payments

1. General

For the purpose of providing Supplemental Capital Outlay Funds to CBMWD, each Contracting Agency shall establish and maintain throughout the term of this Contract a Capital Capacity Reimbursement Account to which the Contracting Agency shall deposit or credit its Capital Capacity Reimbursement Payments. The amounts so deposited or credited by a Contracting Agency to its said account shall be used by the Contracting Agency only for the purpose of providing Supplemental Capital Outlay Funds to CBMWD; provided that interest earned on such amounts shall not be so restricted and may be used by the Contracting Agency for any lawful purpose. The source of Capital Capacity Reimbursement Payments shall be at the discretion of each Contracting Agency.

2. Capital Capacity Reimbursement Payments

Each Contracting Agency shall have deposited or credited to its Capital Capacity Reimbursement Account a Capital Capacity Reimbursement Payment for each connection which has been or will be made to its Community Sewer System or for each change in use of an existing commercial or industrial connection in an amount determined as follows:

(a) Prior to July 1, 1984:

(1) $950 for each newly constructed, Residential Unit which is connected to the Contracting Agency's Community Sewer

System after July 1, 1979, not including, however, any such units which are replacements for similar units which were connected to said system.

(2) For each newly constructed Commercial Unit or Industrial Unit which is connected to the Contracting Agency's Community Sewer System after January 1, 1980, the amount of such payment shall be $150 plus $30 per fixture unit as defined in the Uniform Plumbing Code and $0.50 per gallon estimated sewage flow in excess of 3,000 gallons per day up to a maximum of 15,000 gallons per day; provided that for any such unit or use having an estimate sewage flow in excess of 15,000 gallons per day, the amount of the Capital Capacity Reimbursement Payment therefore shall be determined by the Regional Technical Committee and approved by CBMWD.

(b) After the date set forth in paragraph (a) above the amount of the Capital Capacity Reimbursement Payment for each new connection to a Contracting Agency's Community Sewer System and for each change in use of any existing Commercial Unit or Industrial Unit which results in an increase in volume or strength of sewage therefrom shall be determined by computing the number of Equivalent Dwelling Units therefor as provided in Exhibit "J" attached hereto and made a part hereof and applying the then current Capital Capacity Reimbursement Payment amount as established by the Regional Policy Committee to each such EDU.

Notwithstanding the preceding provisions of this subpart 2, the amount which a Contracting Agency is required to have deposited in or credited to its Capital Capacity Reimbursement account for any such new connection or change of use shall be reduced by payments, if any, made by the Contracting Agency to CBMWD for the new connection or change of use under either of the following agreements: The agreement entitled "Agreement to Increase Capacity of Regional Plant No. 2 of the Chino Basin Municipal Water District", entered into on May 26, 1979, between CBMWD, City of Chino and the County of San Bernardino or the agreement entitled "Agreement for Interim Sewage Treatment Plant between Chino Basin Municipal Water District and the Cities of Upland and Ontario and the Cucamonga County Water District," entered into on January 23, 1979.

A Capital Capacity Reimbursement Payment shall be deposited or credited to a Contracting Agency's Capital Capacity Reimbursement Account for such a new connection or change of use at the time of the issuance of a building permit or a sewer connection permit, whichever is issued earlier, or for changes in the use of existing Commercial Units and Industrial Units, the permit required therefor.

3. Capital Capacity Reimbursement Reports

(a) Each Contracting Agency shall report monthly to CBMWD, at such time as CBMWD shall designate, the balance of the funds in its Capital Capacity Reimbursement Account as of the last day of the preceding month. Such monthly reports shall be

in writing and shall also contain the number of building permits and sewer permits which were issued in the Contracting Agency's Service Area during the preceding month and estimated volume of sewage flows for all residential, commercial and industrial connections within the Contracting Agency's Service Area for the current month and the cumulative total thereof. Commercial and industrial sewer connection permits shall be listed by individual permit with the number of fixture units and expected volume and strength of sewage for each permit.

(b) CBMWD shall maintain a summary accounting of the Capital Capacity Reimbursement Account reserves of all Contracting Agencies and shall make written quarterly reports to the Contracting Agencies on or before January 15, April 15, July 15 and October 15 of each fiscal year which shall include: (i) the amounts of the Capital Capacity Reimbursement Account reserves of all Contracting Agencies as of the last day of the second month of the preceding quarter (i.e., November 30, February 28, May 31 and August 31, respectively), (ii) the amount of the Regional Wastewater Capital Improvement Fund reserves as of the last day of the preceding quarter (i.e., the preceding three calendar months), (iii) a summary of all expenditures from said fund during the preceding quarter for each Regional Sewerage System capital improvement project then in progress, (iv) an estimate of the amounts to be expended from said fund for each such project during the quarter then commencing or in progress (the "current quarter"), (v) the

estimated amount of Supplemental Capital Outlay Funds, if any, which it will be necessary for the Contracting Agencies to contribute to CBMWD during the current quarter in order to provide a working capital balance in said fund which shall not exceed $1,000,000 on the last day of the second month of the quarter next succeeding the current quarter (i.e., May 31, August 31, November 30 and February 28, respectively), and (vi) the amount, if any, of the contribution of Supplemental Capital Outlay Funds for each Contracting Agency for the current quarter, determined as provided in subparts 5 and 6 of this part E.

4. Determination of Demand Deficits

Annually at the time of the preparation of each Ten-Year Forecast, pursuant to Section 9A hereof, CBMWD shall determine each Contracting Agency's Demand Deficit, if any. The determination of Demand Deficits pursuant to this subpart is for the sole purpose of allocating shortages in Supplemental Capital Outlay Fund payments as provided in subpart 6 of this part E. Except as provided in said subpart 6, such determinations shall not result in the creation of an obligation or indebtedness on the part of any Contracting Agency to CBMWD or other Contracting Agencies.

5. Supplemental Capital Outlay Fund Payments

On July 15, October 15, January 15, and April 15 of any fiscal year CBMWD may require payment by each Contracting Agency from its Capital Capacity Reimbursement Account of

Supplemental Capital Outlay Funds for the planning, design and construction of Regional Sewerage System capital improvement projects in the amount, if any, set forth for the Contracting Agency in the quarterly report due from CBMWD on such date. Upon receiving such a demand from CBMWD each Contracting Agency shall pay the amount demanded to CBMWD within 45 days of receipt of such demand. The amount of each Contracting Agency's proportionate share of the total amount of Supplemental Capital Outlay Funds demanded by CBMWD from all Contracting Agencies shall be determined based on the percentage which the amount of Supplemental Capital Outlay Funds demanded by CBMWD from all Contracting Agencies is to the total amount of the current Capital Capacity Reimbursement Account reserves of all Contracting Agencies set forth in the quarterly report upon which the demand is based. The amount demanded by CBMWD from each Contracting Agency on any such date shall be an amount determined by applying the percentage thus obtained to the balance of the reserves, not including interest, in the Contracting Agency's Capital Capacity Reimbursement Account set forth in the quarterly report upon which the demand is based. All amounts received by CBMWD from the Contracting Agencies as Supplemental Capital Outlay Funds shall be deposited in or credited to the Regional Wastewater Capital Improvement Fund. All such amounts together with all interest earned thereon shall be available and utilized by CBMWD solely for the purpose of financing the acquisition, improvement and expansion of the

Regional Sewerage System.

6. Allocation of Supplemental Capital Outlay Fund Shortages

If at the time of any demand by CBMWD for Supplemental Capital Outlay Funds, pursuant to subpart 5 of this part E, there are not sufficient funds deposited or credited to the Capital Capacity Reimbursement Accounts of all Contracting Agencies to pay the full amount of the demand, each Contracting Agency which has a Demand Deficit shall pay to CBMWD the full balance then deposited or credited to its Capital Capacity Reimbursement Account plus an amount determined based on the percentage which the amount of its Demand Deficit is of the total Demand Deficit for all Contracting Agencies. The amount to be paid by each such Contracting Agency shall be determined by multiplying the difference between the Supplemental Capital Outlay Fund demand and the total amount of the Capital Capacity Reimbursement Account balances of all Contracting Agencies by the percentage thus determined. (Amended April 12, 1984)

F. Investment of Regional Wastewater Capital Improvement Fund

All amounts deposited or credited to the Regional Wastewater Capital Improvement Fund shall be invested by CBMWD in a prudent manner in accordance with sound investment practices for the investment of public funds and pursuant to Section 53635 and 53651 of the Government Code. All earnings from such investments shall remain in the Regional Wastewater

Capital Improvement Fund and shall be reinvested and used solely for the purpose of financing the acquisition, improvement and expansion of the Regional Sewerage System.

Section 9A. FORECASTING AND PLANNING

A. Contracting Agency Reports

1. Annual Forecast

Prior to January 15, of each year, each Contracting Agency shall submit to CBMWD an updated forecast of its Capacity Demand for the succeeding ten fiscal years, which shall contain in a format required by CBMWD an estimate of the annual increase in volume of combined residential, commercial and reclaimable domestic strength industrial sewage to be delivered from the Contracting Agency's Community Sewer System into the Regional Sewerage System for each such year and the number of Equivalent Dwelling Units associated with such estimated volume.

2. Monthly Reports

On such date as CBMWD may designate, each Contracting Agency shall submit to CBMWD monthly reports of sewered building activity. Each such report shall contain the following information in a format which will allow tracking through the development process:

(a) The number of building permits issued during the month for structures which will contribute sewage to the Regional Sewerage System;

(b) Estimate volume of sewage and EDUs for such building permits;

(c) The tract number and number of lots for each tentative tract map approved during the month;

(d) The tract number and number of lots or dwelling units for each final tract map recorded during the month;

(e) The number of final inspections or certificates of occupancy issued during the month for structures which will contribute sewage to the Regional Sewerage System;

(f) The estimate volume of sewage and EDUs for all such structures.

B. CBMWD Reports

1. Ten-Year Forecast

Prior to April 1 of each year, CBMWD shall prepare and deliver to the Regional Technical Committee and the Regional Policy Committee a ten-year forecast of the Capacity Demands of all Contracting Agencies and a forecast of the dates of commencement and completion of the design and construction of capital improvement projects which will be necessary to enable the Regional Sewerage System to meet the forecasted Capacity Demands of all Contracting Agencies. Such forecasts, hereinafter referred to as the "Ten-Year Forecast," shall include:

(a) Estimates for each Regional Treatment Plant of the Capacity Demand of each Contracting Agency which receives sewerage service thereat as of June 30 of each year;

(b) An estimate of the amount of existing unused capacity for each Regional Treatment Plant as of July 1 of each year;

(c) Projected dates for the commencement and completion of design and construction of capital improvement projects necessary to meet forecasted Capacity Demands;

(d) An estimate of the amount of capacity to be added by each such project;

(e) Projected annual expenditures for the design and construction of such projects;

(f) The current balance of funds in the Regional Wastewater Capital Improvement Fund and an estimate for each year identified by source of the amount to be deposited into said fund;

(g) Current reserves in the Capital Capacity Reimbursement Accounts of all Contracting Agencies;

(h) The estimate Supplemental Capital Outlay Funds to be contributed by each Contracting Agency to CBMWD for each fiscal year included in the Ten-Year Forecast;

(i) The Demand Deficit, if any, of each Contracting Agency;

(j) A recommendation as to whether the amount of the Capital Capacity Reimbursement Payment should be increased or decreased and, if so, the amount of increase or decrease.

2. Mid-Year Report as to Financial Requirements

Prior to October 1 of each year, CBMWD shall prepare

and submit to the Regional Technical Committee and the Regional Policy Committee for review and comment a report as to the progress and status of the design and construction of capital improvement projects. Said report shall also contain revisions or current information regarding the matters referred to in subparagraphs (a), (b), (e), (g), (i) and (j) of subpart 1 of this part B.

3. Review by Regional Policy Committee

A. Ten-Year Forecast

Within 45 days after receipt from CBMWD of a Ten-Year Forecast, the Regional Policy Committee shall prioritize the capital improvement projects recommended therein and make such further recommendations to CBMWD as it deems appropriate. Capital improvement projects shall be prioritized based on the Forecasted Demands for all Contracting Agencies who do or will receive sewerage service therefrom or thereat as of the end of the third fiscal year included in the Ten-year Forecast, and facilities having the highest ratio of forecasted rates of flow to rated capacity shall be given the highest priority. Interceptor sewers shall be considered to be at 100 percent of capacity when the forecasted rate of flow therein will result in a depth of flow therein of three-fourths of the pipe diameter thereof; sewage treatment and disposal plants shall be considered to be 100 percent of capacity when the projected rate of flow into the plant will exceed 80 percent of the rated capacity thereof as determined by the Regional Technical

Committee. The prioritization of the Regional Policy Committee shall be binding upon CBMWD, and CBMWD shall follow the recommendations of the Regional Policy Committee with respect to scheduling of design and construction of prioritized capital improvement projects unless the Board of Directors of CBMWD determines, based on specific findings, that the Regional Policy Committee's recommended schedule for design and construction would impair its ability to operate the Regional Sewerage System or would impose unreasonable burdens upon it with respect to construction supervision or administration or financing of Regional Sewerage System capital improvement projects or unless a Contracting Agency objects in writing to the recommendations of the Regional Policy Committee. In the event of such a determination by CBMWD's Board of Directors or such a written objection, the hearing procedures set forth in Section 26A hereof shall apply and CBMWD's Board of Directors shall not make a final determination with respect to the Regional Policy Committee's recommendation until such hearing procedures have been completed.

B. Mid-Year Reports

Within 45 days after receipt from CBMWD of a mid-year report as provided in subpart 2 of this part B the Regional Policy Committee may but need not make recommendations or comments to CBMWD with respect thereto. CBMWD's Board of Directors shall follow the recommendations of the Regional Policy Committee with respect to such reports unless it

determines, based on specific findings, that to do so would impair its ability to operate the Regional Sewerage System or impose unreasonable burdens with respect to the timing of design and construction or financing of design and construction of Regional Sewerage System capital improvement projects or unless a Contracting Agency objects thereto in writing. In the event of such a determination by said Board of Directors or the filing of such a written objection, the hearing procedures set forth in Section 26A hereof shall apply and CBMWD's Board of Directors shall not make a final determination with respect to the Regional Policy Committee's recommendations until such hearing procedures have been completed.

C. Determination of Capital Capacity Reimbursement Amount; Amendment of Exhibit "J"

The Regional Policy Committee may prior to July 1 or January 1 of any year determine to increase or decrease the amount of the Capital Capacity Reimbursement Payment to be deposited or credited by the Contracting Agencies to their Capital Capacity Reimbursement Accounts for all new connections to their Community Sewer Systems based upon the estimated financial requirements set forth in a Ten-Year Forecast or mid-year report received from CBMWD. Prior to either of said dates, the Regional Policy Committee may also determine to modify the table and formulae set forth in Exhibit "J" hereto for determining Equivalent Dwelling Units and the amount of Capital Capacity Reimbursement Payment for new connections to Community

Sewer Systems. If the Regional Policy Committee determines that it is necessary to increase or decrease the amount of such payment or to modify such formulae, or both, the chairman of said committee shall communicate such determination or determinations in writing to the Board of Directors of CBMWD, and upon receiving such a communication, said Board of Directors shall adopt a resolution implementing the increase or decrease in the amount of Capital Capacity Reimbursement Payment and the modification of said table and formulae or both, and setting forth the date when such increase or decrease or such modification or both will become effective. Such a determination or determinations by the Regional Policy Committee and the adoption of such a resolution by the Board of Directors of CBMWD shall be binding on all Contracting Agencies, and they shall expeditiously implement the resulting change in the amount of Capital Capacity Reimbursement Payment by appropriate legislative and administrative action.

D. Reclaimable Industrial Waste

No allowance shall be made in Contracting Agency reports submitted to CBMWD pursuant to part A of this section or in any Ten-Year Forecast for any expected increase in the volume or strength of sewage attributable to proposed new industrial connections to Community Sewer Systems which are expected to discharge more than 15,000 gallons per day of reclaimable domestic strength industrial waste. All such proposed new

connections shall be reviewed by CBMWD and the Regional Technical Committee on a case-by-case basis to determine whether the waste to be discharged therefrom shall be taken into the Regional Sewerage System and the appropriate connection point' provided that, CBMWD and the Regional Technical Committee shall not disapprove such an industrial connection to a Contracting Agency's Community Sewer System unless it is determined by CBMWD or said committee that the sewage to be discharged there from will not meet the quality standards set forth by CBMWD, or will adversely affect the ability of the Regional Treatment Plant where the sewage therefrom will be treated to meet the Forecasted Demands of other Contracting Agencies which also receive sewerage service thereat, or will result in the effluent from said plant violating the waste discharge requirements prescribed for said plant by the California Regional Water Quality Control Board. (Amended October 19, 1994)

E. Forecast for Purposes of Determining Demand Deficits

Notwithstanding the preceding provisions of this section, for purposes of determining the Demand Deficits, if any, of the Contracting Agencies, as provided in subpart 4 of part E of Section 9 hereof, the Forecasted Demand for each Contracting Agency for each of the initial two years of each Ten-Year Forecast shall be deemed to be the same as was set forth for each of said years in the preceding Ten-Year Forecast. CBMWD shall set forth separately in each Ten-Year Forecast the

Forecasted Demand for each Contracting Agency for the initial two years thereof, determined as in this part provided. Said portion of each such Ten-Year Forecast shall be applicable only for purposes of determinations to be made pursuant to said subpart 4 and for no other purpose. Notwithstanding the preceding provisions of this part E, if in this most recent Annual Forecast, pursuant to subpart 1 of part A of this Section 9A, preceding the preparation of any Ten-Year Forecast a Contracting Agency has increased its Forecasted Demand for either of the initial two years of the Ten-Year Forecast over the Forecasted Demand set forth in the preceding Ten-Year Forecast, the Forecasted Demand for that Contracting Agency for each of such initial two years of the Ten-Year Forecast then begin prepared shall be the increased Forecasted Demand set forth therefor in the Contracting Agency's said Annual Forecast. (Added April 12, 1984)

Section 9B. AVAILABLE SEWERAGE CAPACITY

A. Monitoring and Reports

To ensure that available unused capacity in the Regional Sewerage System is and will be utilized to provide sewerage service to the Contracting Agencies based on their Forecasted Demands contained in the Ten-Year Forecasts, and that no Contracting Agency is deprived of sewerage service based on its Forecasted Demand as the result of any other Contracting Agency or Contracting Agencies utilizing capacity of the Regional Sewerage System substantially in excess of its or their

Forecasted Demand or Demands, respectively, CBMWD shall, at intervals not exceeding 60 days in duration, determine the quantity of sewage entering the Regional Sewerage System from the Community Sewer System of each Contracting Agency. On or before March 1 and September 1 of each fiscal year CBMWD shall submit to the Regional Policy Committee a written report regarding the relationship between the actual Capacity Demand of each Contracting Agency and the Contracting Agency's Forecasted Demand for the fiscal year.

B. New Connections

So long as the Capacity Demand of a Contracting Agency does not at any time in any fiscal year exceed its Forecasted Demand for the year by more than 15 percent or 100,000 gallons per day, whichever is greater, or if said 15 percent exceeds 200,000 gallons per day, the Contracting Agency may allow new connections to its Community Sewer System without restriction. However, if at any time during any fiscal year the Contracting Agency's Capacity Demand exceeds its Forecasted Demand for the year by more than 15 percent or 100,000 gallons per day, whichever is greater, or if said 15 percent exceeds 200,000 gallons per day, the Contracting Agency shall not allow further connections to its Community Sewer System until and unless it is determined by CBMWD that the Contracting Agency's Capacity Demand no longer so exceeds its Forecasted Demand.

C. Transfer of Capacity Demand

Notwithstanding the provisions of part B of this section, a Contracting Agency whose Capacity Demand exceeds its Forecasted Demand by more than 15 percent or 100,000 gallons per day, whichever is greater, or if said 15 percent exceeds 200,000 gallons per day ("Exceeding Contracting Agency"), may continue to allow new connections to its Community Sewer System if it receives a transfer of a portion of the Forecasted Demand of a Contracting Agency which receives sewerage service at the same Regional Treatment Plant and whose Capacity Demand is more than 15 percent or 100,000 gallons per day, whichever is greater, less than its Forecasted Demand. In the event of such a transfer, the portion of the Forecasted Demand of the transferring Contracting Agency to be transferred shall be deducted from the Forecasted Demand of the transferring agency and added to the Forecasted Demand of the Exceeding Contracting Agency for purposes of determining whether the Exceeding Contracting Agency's Capacity Demand will continue to exceed its Forecasted Demand by more than 15 percent or 100,000 gallons per day, whichever is greater, or if said 15 percent exceeds 200,000 gallons per day. Such transfers of Forecasted Demand between Contracting Agencies shall become effective upon the filing with CBMWD of a written agreement between the affected Contracting Agencies. A transferring Contracting Agency shall not receive

any payment or other consideration from the Exceeding Contracting Agency for the transfer of Forecast Demand.

D. Policy Committee Review

If CBMWD determines that a Contracting Agency's Capacity Demand is exceeding the Contracting Agency's Forecasted Demand for the fiscal year by more than 15 percent or 100,000 gallons per day, whichever is greater, or if said 15 percent exceeds 200,000 gallons per day, or if a Contracting Agency determines at any time that its Capacity Demand will so exceed its Forecasted Demand, the Contracting
Agency may request the Regional Technical Committee and the Regional Policy Committee to determine whether because of Regional Sewerage System capital improvement projects then under construction or the construction of which will be commenced within the next six months, it can nevertheless be allowed to continue to make new connections to its Community Sewer System without affecting the availability of capacity in the Regional Treatment Plant where it receives sewerage service for other Contracting Agencies which also receive such service at such plant.

Such a request shall be made in writing and copies thereof shall be delivered to CBMWD and all Contracting Agencies. Upon receipt of any such written request, the Regional Technical Committee shall conduct an investigation and make recommendations to the Regional Policy Committee as to whether or not because of such current and pending Regional

Sewerage System capital improvement projects the Contracting Agency requesting the determination may be allowed to continue to make new connections to its Community Sewer System without affecting the availability of capacity in the Regional Treatment Plant where it receives sewerage service for other Contracting Agencies.

The Regional Policy Committee shall upon the basis of such recommendation determine whether or not the Contracting Agency requesting the determination should be allowed to continue to make new connections to its Community Sewer System and make a recommendation thereon to CBMWD; provided that, CBMWD shall not allow a Contracting Agency requesting such a determination to make new connections to its Community Sewer System at any time after its Capacity Demand exceeds its Forecasted Demand for a fiscal year by more than 15 percent or 100,000 gallons per day, whichever is greater, or if said 15 percent exceeds 200,000 gallons per day, if the Regional Policy Committee recommends against such new connections unless, following a hearing conducted pursuant to the provisions of Section 26A hereof, the Board of Directors of CBMWD determines by resolution containing specific findings that because of such current and pending Regional Sewerage System capital improvement projects the Contracting Agency should be allowed to continue to make new connections to its Community Sewer System. (Added April 12, 1984)

Section 9C. MAJOR CONSTRUCTION CONTRACTS

A. Construction Contracts

CBMWD shall not proceed with the award of a construction contract for a budgeted Regional Sewerage System capital improvement project which will involve an expenditure in excess of $1,000,000 without the approval of the Regional Policy Committee. (Such projects are hereinafter referred to as "Major Projects.") To assist in the Regional Policy Committee's review of Major Projects, CBMWD shall prepare and submit to the Regional Policy Committee a short-term financial forecast for each Major Project which shall cover the anticipated duration of the project. The forecast shall include and consider current building and sewer connection activity as reported by each Contracting Agency, Regional Wastewater Capital Improvement Fund and Capital Capacity Reimbursement Account balances and other relevant data requested by the Regional Policy Committee. The Regional Policy Committee shall meet to approve or disapprove any Major Project within 45 days after receipt of the completed short-term financial forecast therefor. Such approval or disapproval shall be based on the availability of Regional Wastewater Capital Improvement Fund and Capital Capacity Reimbursement Account balances to finance the construction of the project.

B. Design Contracts

1. Prioritized Projects

CBMWD shall not award a contract for the design of any Major Project which has not been prioritized by the Regional Policy Committee pursuant to subpart 3 of part B of Section 9A hereof.

2. Selection of Design Engineers

Before proceeding with the design of any Major Project, CBMWD shall prepare and issue requests for proposals to qualified engineering firms experienced in the design of wastewater facilities. The Regional Technical Committee shall review all proposals received and, within 45 days after receipt thereof, deliver to CBMWD an unranked recommended list of no less than three (3) qualified engineering firms. CBMWD shall select the design engineer from the committee's recommended list. Upon failure of the Regional Technical Committee to deliver such a listing to CBMWD within 45 days after receipt of the proposals for the design of a project, CBMWD may select any qualified engineering firm submitting a proposal as the design engineer.

3. Design Review

CBMWD shall keep the Regional Technical Committee fully informed of the progress and details of design of all Major Projects through three (3) formal meetings with the design engineer and periodic progress reports by CBMWD. The three formal meetings shall occur:

(a) The first meeting shall occur within thirty (30) days after the design engineer is given notice to proceed. At that meeting the general details of design shall be discussed and agreed upon by the committee and the design engineer.

(b) The second meeting shall occur upon the completion of 10 percent of the design work. At that meeting the design engineer shall have completed and submit to the committee an analysis of unit process requirements and sizing, preliminary layouts and flow sheets, and a preliminary estimate of construction cost. Based on the discussion at this meeting, the design engineer shall prepare and deliver to the committee a written report, which shall when agreed to by the committee, serve as the basis for final design.

(c) The third meeting shall occur upon the completion of 60 to 70 percent of the design work and shall be for the purpose of an in depth review by the committee. (Added April 12, 1984)

Section 10. (Deleted April 12, 1984)

Section 11. AVAILABILITY OF REGIONAL SYSTEM; CBMWD'S PERFORMANCE

A. Contracting Agencies

The services and facilities of the Regional Sewerage System shall be available to any property within Improvement District "C," subject to such terms and conditions as may be prescribed by a Contracting Agency for connection to its Community Sewer System.

B. Other Sewage Collection Agencies

CBMWD shall not make the services and facilities of the Regional Sewerage System available, other than on a temporary, emergency basis, to any sewage collection agency which is not a party to a Service Contract until such agency has entered into a service contract. Any Contracting Agency may restrain violations of the provisions of this part B by mandamus, injunction or other appropriate remedy.

C. CBMWD's Performance

CBMWD shall exert every reasonable effort to insure that capital improvement projects necessary to enable the Regional Sewerage System to meet the Forecasted Demands of all Contracting Agencies are planned, designed and constructed in a timely manner and so that the Regional Sewerage System will at all time be able to provide for the Capacity Demands of all Contracting Agencies. The Contracting Agencies recognize that the timing of the planning, design and construction of such capital improvement projects is largely dependent upon the Contracting Agencies making reasonable accurate projections of increased connections to and usage of their Community Sewer Systems. (Amended April 12, 1984)

Section 12. EXTRA-TERRITORIAL SEWER SERVICE

A. Service Outside the Boundaries of CBMWD and Improvement District "C"

1. Upon the Effective Date of a Service Contract

Any Contracting Agency which, upon the effective date

of the Service Contract with that agency, was furnishing sewer service to any territory outside the boundaries of CBMWD and Improvement District "C," may continue to furnish such service and shall be entitled to the services and facilities of the Regional Sewerage System for that purpose. Each Contracting Agency providing sewer service to any such outside territory shall file a map or maps with the secretary of CBMWD showing the boundaries of all such territory.

2. After the Effective Date of a Service Contract

Any Contracting Agency, after the effective date of the Service Contract with that agency, may furnish sewer service to additional territory outside the boundaries of CBMWD and of Improvement District "C." Prior to furnishing such sewer service, the Contracting Agency shall file a written request with CBMWD. Upon receipt of such a written request, CBMWD shall notify all other Contracting Agencies in writing of the receipt of the request. At the written request of any Contracting Agency, CBMWD shall schedule a hearing on the written request for extra-territorial service, and the hearing shall be conducted by CBMWD in accordance with the hearing procedures set forth in Section 26A hereof; provided that such a request for a hearing must be received by CBMWD within thirty (30) days after the date of CBMWD's written notice of the receipt of the request.

The hearing shall be upon the question of authorizing sewer service to the additional territory. Upon the conclusion

of the hearing, the Board of Directors of CBMWD shall by resolution authorize sewer service to all or any part of the additional territory by the applicant or applicants unless it determines that such service is not in the public interest, in which case the resolution of said Board of Directors shall set forth findings in support of that determination.

B. Annual Capital Outlay Charge for Territory Outside CBMWD and Improvement District "C"

In addition to the payment of service charges, each Contracting Agency providing the services and facilities of the Regional Sewerage System to territory outside CBMWD and Improvement District "C" shall be obligated to pay CBMWD special capital outlay charges for such territory, as provided in subpart 1 or 2 of this part B or both such subparts, if both are applicable. Moneys received by CBMWD in payment of special capital outlay charges shall be deposited or credited to the Regional Wastewater Capital Improvement Fund and utilized, together with all interest earned thereon, solely for the purpose of financing the acquisition, improvement and expansion of the Regional Sewerage System.

1. Annual Capital Outlay Charge

The Contracting Agency shall annually pay CBMWD a special capital outlay charge in an amount equivalent to the amount of the property tax and other revenue which CBMWD would have received during the fiscal year if such property were within Improvement District "C." Such charge shall be payable

by the Contracting Agency during each fiscal year in the amounts and at the times specified by CBMWD.

2. Extraordinary Capital Outlay Charge

If any Contracting Agency furnishes sewer service to any additional territory outside of CBMWD and Improvement District "C" pursuant to subpart 2 of part A of this section after the effective date of the Service Contract with that agency, the Contracting Agency shall pay to CBMWD an extraordinary capital outlay charge with respect to such territory. Such charge shall be in an amount equal to the total of (i) all past capital outlay taxes which would have been imposed by CBMWD prior to July 1, 1978 upon taxable property within such territory had it been subject to taxation by CBMWD for capital outlay taxes under the Capital Outlay Ordinance, (ii) an amount equivalent to the total property tax revenue which would have been received by CBMWD pursuant to Sections 96 through 99 of the Revenue and Taxation Code for all fiscal years subsequent to July 1, 1978, and (iii) and an amount equal to all other revenues which CBMWD would have received had such territory been within Improvement District "C." CBMWD may authorize any extraordinary capital outlay charges to be paid in deferred installments plus interest over a period not exceeding 25 years from the commencement of sewer service to the extra-territorial territory or the unexpired term of this contract, whichever may be the shorter.

C. Capital Capacity Reimbursement Account Payments

If any Contracting Agency furnishes sewer service to any additional territory pursuant to subpart 2 of part A of this section after the effective date of the Service Contract with that agency, the Contracting Agency shall deposit or credit to its Capital Capacity Reimbursement Account a Capital Capacity Reimbursement Payment for each new Residential Unit which was or is connected to its Community Sewer System within that territory subsequent to July 1, 1979 and for each newly constructed Commercial Unit or Industrial Unit which was or is connected to the Community Sewer System within that territory subsequent to January 1, 1980, the amount of which shall be determined as provided in subpart 2 of part E of Section 9 hereof. (Amended April 12, 1984)

Section 13. DELIVERY POINTS: CONNECTION COSTS

Each Contracting Agency shall deliver sewage from its Community Sewer System into the Regional Sewerage System at such delivery points as may, from time to time, be requested by the Contracting Agency and approved by CBMWD. CBMWD shall give the Regional Technical Committee not less than 60 days' written notice of its intention to approve any new delivery point. Upon receipt of a favorable report and recommendation from the committee or upon failure of the committee to report within said 60-day period, CBMWD may authorize the new delivery point. If the Regional Technical Committee recommends against a new delivery point for any Contracting Agency, the Contracting Agency may file a written request for a hearing with the

secretary of the Board of Directors of CBMWD. Upon receipt of such a request, said Board of Directors shall schedule and conduct a hearing in accordance with the provisions of Section 26A hereof. All costs and expenses of making the connection between the Regional Sewerage System and the Community Sewer System of any Contracting Agency shall be borne by the Contracting Agency. (Amended April 12, 1984)

Section 14. DETERMINATION OF SEWAGE DELIVERIES: COSTS OF MEASURING EQUIPMENT

CBMWD shall determine the amount of sewage delivered to the Regional Sewerage System by all Contracting Agencies and shall maintain accurate and complete records thereof. The amount of sewage delivered to the Regional Sewerage System by each Contracting Agency shall be determined by CBMWD based on a standard daily measurement or contribution per Equivalent Dwelling Unit agreed to from time to time by CBMWD and the Regional Technical Committee.

If required by CBMWD, after recommendation of the Regional Technical Committee, a Contracting Agency shall install, at its expense, and CBMWD shall maintain and operate at its expense, measuring devices and equipment for measuring the flow of sewage from the Contracting Agency's Community Sewer System into the Regional Sewerage System. Prior to installation, CBMWD shall approve the design of such measuring devices and equipment and shall inspect and approve their installation. Such measuring devices and equipment shall be

examined, tested and serviced regularly, but not less than once a year, by CBMWD to insure their accuracy. At any time CBMWD or any Contracting Agency may inspect any such measuring device and equipment and all records and measurements taken therefrom. (Amended April 12, 1984)

Section 15. CONTROL AND DISPOSITION OF SEWAGE: CONTRACTING AGENCIES RIGHT OF PURCHASE OF TREATED OR RECLAIMED EFFLUENT

A. General

Subject to the provisions of this Section 15 and Section 16, CBMWD shall have total ownership and control of all sewage delivered into the Regional Sewerage System for the purpose of transmission, treatment and disposal thereof; subject to the right of first purchase by any Contracting Agency, the use of all treated effluent from the Regional Sewerage System shall be within the sole discretion of CBMWD. If any Contracting Agency exercises its right of first purchase of treated effluent, then such agency shall have the total ownership and control of all treated effluent delivered to it and the use thereof shall be within the sole discretion of that agency.

B. Right of Purchase of Treated or Reclaimed Effluent

Each Contracting Agency, at its option, shall have the right of first purchase of treated or reclaimed effluent under either of the following two alternatives:

1. Each Contracting Agency shall have the right of first purchase of treated effluent, as provided in Section 16 hereof; or

2. Upon written request by any Contracting Agency, CBMWD shall enter into an agreement, substantially similar to Exhibit G, attached hereto and made a part hereof, for reclamation of treated effluent and the right of first purchase of reclaimed effluent. Upon execution by a Contracting Agency of such an agreement and upon the availability to the Contracting Agency of reclaimed effluent pursuant thereto, all or any portion of the disposal costs of the Regional Sewerage System attributable to the disposal of the treated effluent of the Contracting Agency and to the disposal of reclaimed effluent by CBMWD downstream from any CBMWD reclamation facility or facilities reclaiming the treated effluent of the Contracting Agency shall be excluded from the service charge of the Contracting Agency as determined under Sections 17 and 18 hereof, and shall be financed by CBMWD from sources other than service charges, Improvement District "C" tax revenues and Supplemental Capital Outlay Funds. (Amended April 12, 1984).

Section 16. SALE, BENEFICIAL USE OR DISPOSAL OF TREATED EFFLUENT

A. Purchase of Treated Effluent from CBMWD

1. Contracting Agencies: Right of Purchase

Each Contracting Agency shall have the right of first purchase from CBMWD of treated effluent in a total quantity not

exceeding the base entitlement of the Contracting Agency.

2. Base Entitlement of Contracting Agencies

The total base supply of effluent which is subject to the right of first purchase from CBMWD by the Contracting Agencies receiving sewerage service at any Regional Treatment Plant shall be the total quantity of sewage delivered into the Regional Sewerage System by all such Contracting Agencies, measured at the intake point of the Regional Treatment Plant, less normal processing losses resulting from the treatment of sewage. Sewage exported from the Chino Basin by CBMWD pursuant to Section 8 hereof shall not be part of the total base supply.

Each Contracting Agency, including any Contracting Agency whose sewage is exported pursuant to Section 8 hereof, shall have a base entitlement to a portion of the total base supply of effluent, said portion being in the proportion that the quantity of sewage delivered into the Regional Sewerage System by the Contracting Agency bears to the total quantity of sewage delivered into the Regional Sewerage System by all Contracting Agencies.

3. Delivery Points

Unless otherwise agreed by CBMWD, the delivery point or points of any Contracting Agency exercising its rights of first purchase of treated effluent shall be the discharge point or points of each Regional Treatment Plant or any disposal facility of CBMWD which provides further treatment and disposal of wastewater from any Regional Treatment Plant.

4. Exercise of Base Entitlement at Various Discharge Points

If none of the sewage collected by a Contracting Agency is exported pursuant to Section 8 hereof, the base entitlement of such agency shall be exercised as provided in paragraph a of this subpart 4. If all of the sewage collected by a Contracting Agency is exported, the base entitlement of such agency shall be exercised as provided in paragraph b of this subpart E. If only a portion of the sewage collected by a Contracting Agency is exported, the portion of the base entitlement of such agency represented by nonexported sewage shall be exercised as provided in said paragraph a and the portion represented by exported sewage shall be exercised as provided in said paragraph b.

The base entitlement of each Contracting Agency shall be exercised in quantities and at delivery points determined as follows:

a. If the sewage collected by a Contracting Agency ("agency sewage") is treated:

(1) At a single Regional Treatment Plant, the total base entitlement of such agency shall be exercised from treated effluent discharge from that plant or any disposal facility of CBMWD providing further treatment and disposal of wastewater from that plant.

(2) At two or more Regional Treatment Plants, the base entitlement of such agency shall be exercised from each such plant in the proportion that the total sewage of the particular agency which is treated at that plant bears to the total sewage of all agencies whose sewage is treated at that plant or any disposal facility of CBMWD providing further treatment and disposal of wastewater from that plant.

b. If all of the sewage collected by a Contracting Agency is exported, the base entitlement of such agency shall be exercised from a pro rata share of treated effluent discharged from each of the Regional Treatment Plants, computed as follows:

(1) Based upon the preceding fiscal year, a determination of the ratio of the total quantity of all agency sewage treated by each Regional Treatment Plant to the total quantity of all agency sewage treated by all such plants or all such plants and any disposal facility of CBMWD providing further treatment and disposal of wastewater from any such plant.

(2) The pro rata share of an exporting agency for each Regional Treatment Plant shall be determined by multiplying the ratio for that plant, computed under (1) above, by the base entitlement of such agency.

5. Delivery Facilities and Costs of Delivery of Treated Effluent

Delivery facilities shall consist of any facilities for the delivery of treated effluent from the point of discharge of any Regional Treatment Plant to the point of use of the effluent. This contract and the service charge provided herein shall not apply to any such delivery facilities or to the financing thereof. CBMWD or any Contracting Agency may, at its own expense, acquire, construct, or make a contribution toward the financing of capital costs and maintenance and operation of any delivery facilities. CBMWD, or any Contracting Agency or Agencies or any combination thereof, may provide for delivery facilities by contract entered into between or among themselves or with any other person or public or private entity.

6. Price for Purchase of Treated Effluent

Any Contracting Agency exercising the right of first purchase of treated effluent shall be entitled to take delivery thereof at no cost, except for the costs of delivery, if any, of CBMWD.

7. Use of Purchased Treated Effluent

Any Contracting Agency exercising its right of first purchase of treated effluent may make any lawful use thereof, including beneficial use, sale, or other disposal and shall be entitled to retain all revenues received by it as a result thereof.

8. Contract for Joint Exercise or Transfer of Rights of First Purchase

Subject to the rights of CBMWD hereunder, any or all of the Contracting Agencies may be contract provided for the joint exercise of any of their respective rights of first purchase of treated effluent or for the sale, exchange or transfer of such rights. Certified copies of all such contracts shall be filed with CBMWD by the parties thereto.

B. Disposition by CBMWD of Unclaimed Treated Effluent

To the extent that any of the Contracting Agencies fail to exercise their respective rights of first purchase of treated effluent, CBMWD may make any lawful use of such effluent, including beneficial use, sale or other disposition inside or outside the Chino Basin; provided, that:

1. CBMWD shall not, for a consideration, sell or otherwise dispose of any treated effluent for beneficial use inside the Chino Basin without review and approval by a majority of the Contracting Agencies; and

2. If CBMWD, for a consideration, sells or otherwise disposes of any treated effluent for beneficial use inside or outside the Chino Basin, any portion of the consideration in excess of CBMWD's net audited costs of reclamation and delivery shall be apportioned and credited:

a. 85% to the Regional Sewerage System Maintenance and Operation Fund, and

b. 15% to the Regional Wastewater Capital Improvement Fund.

C. Measurement of Treated Effluent

CBMWD shall install, maintain, and operate measuring devices and equipment for the measurement of deliveries of treated effluent to the Contracting Agencies at a location or locations mutually agreed upon by CBMWD and the Contracting Agencies. The measuring devices and equipment shall be examined, tested and serviced regularly to insure their accuracy. At any time, CBMWD or any Contracting Agency may inspect any measuring devices and equipment and all records and measurements taken therefrom.

D. Notice of Proposed Delivery

Prior to the commencement of each fiscal year, notice of the delivery of treated effluent shall be given as follows:

1. Request by CBMWD

Between the first day of January and the first day of March of each year, CBMWD shall request each Contracting Agency to provide CBMWD with a schedule of the estimated flow and quantity of treated effluent to be delivered to each person or agency during the next fiscal year and the proposed points of delivery. The rates of flow and quantity shall not exceed the delivery capability of the facilities then in operation.

2. Response by Contracting Agencies

Within 30 days of the date of each such request by CBMWD, each Contracting Agency shall provide CBMWD with the schedule requested pursuant to subpart 1 above; provided that if a Contracting Agency does not intend to exercise its right of first purchase, it need not respond in any manner to CBMWD.

3. Allocation of Treated Effluent

On or before the first day of May of each year, CBMWD shall allocate treated effluent to the Contracting Agencies that have submitted schedules pursuant to subpart 2 above.

4. Additional Allocation of Treated Effluent

At any time during the fiscal year and upon 60 days written notice to CBMWD, a Contracting Agency may apply for the delivery of any treated effluent then available at a rate of flow or quantity greater than that allocated pursuant to subpart 3 above. However, the rates of flow and quantity shall not exceed the delivery capability of the treatment facilities then in operation. (Amended April 12, 1984)

Section 17. SERVICE CHARGES FOR MAINTENANCE AND OPERATION OF THE REGIONAL SEWER SYSTEM

All Contracting Agencies shall pay service charges for all sewage delivered to the Regional Sewerage System. Each Contracting Agencies shall pay its pro rata share of all net audited costs incurred by CBMWD in the maintenance and operations of the system. Net audited costs consist of:

A. Costs of maintenance and operation of all transmission and treatment facilities comprising the Regional Sewerage System and all disposal facilities required for the disposition of any treated effluent discharged from that system; and

B. Any other costs reasonably related to the maintenance and operation of the system; and

C. Based upon generally accepted engineering and accounting principles, reasonable reserves for the estimated costs and expenses of:

1. Replacement of any facilities where the costs and expenses of replacement are customarily considered a part of the costs and expenses of extraordinary maintenance which adds to the normal service life of facilities; and

2. Unforeseen contingencies; and

D. Actual costs and expenses incurred by CBMWD for the transmission, treatment and disposal of any sewage delivered by a Contracting Agency through Nonreclaimable Waste Disposal System of CBMWD as provided for in Section 8 hereof.

(Amended April 12, 1984)

Section 18. SERVICE CHARGE RATE

Concurrently with adoption of the Regional Sewerage System budget, the Board of Directors of CBMWD shall fix the service charge rate for the fiscal year. The rate shall be expressed in dollars and cents for each Equivalent Dwelling Unit (EDU) of sewage and shall be computed by subtracting from the

total estimated maintenance and operation expenses of the Regional Sewerage System the amount of any estimated revenues from the sale of effluent or sludge or other such offsetting revenues, and dividing the difference by the total estimated EDU's of sewage to be delivered into the system, all as set forth in the Regional Sewerage System budget adopted for the fiscal year. The estimated EDU's of sewage delivered into the Regional Sewerage System shall be determined based on a standard daily measurement or contribution of sewage per EDU agreed to from time to time by CBMWD and the Regional Technical Committee. (Amended April 12, 1984)

Section 19. REGIONAL SEWERAGE SYSTEM BUDGETS

A. Fiscal Year Budgets

For each fiscal year the Board of Directors of CBMWD shall cause to be prepared and shall adopt a Regional Sewerage System budget.

B. Form and Content of Budgets

The budget for each fiscal year shall contain a plan of financial operations for the Regional Sewerage System for the fiscal year and shall contain an estimate of the requirements for expenditures, including provisions for any reserves, and the means of financing such requirements. The budget shall be itemized and shall show in reasonable detail the nature and purpose of each item of revenue and expense and the actual or estimated amount thereof. The budget shall be in two parts. One part shall consist of a plan of financial operations for the

capital costs of the acquisition and construction of the Regional Sewerage System, and the other part shall consist of a plan of financial operation for the maintenance and operation of the system, prepared as follows:

1. Capital Improvement Fund Budget

The part covering the costs of the acquisition and construction of the Regional Sewerage System shall show:

a. The various items and amounts of capital costs and the total thereof;

b. The total amount in the Regional Wastewater Capital Improvement Fund and the available and unencumbered balance of such fund as of the commencement of the fiscal year and an estimate of the amount therein and the unencumbered balance thereof as of the end of the fiscal year;

c. The amounts, if any, of CBMWD revenues from sources other than Improvement District "C" property taxes which are or will be available for payment of capital costs and the total thereof;

d. The estimated amount of Improvement District "C" property taxes to be received during the fiscal year;

e. The projected amount of Supplemental Capital Outlay Fund contributions required from each Contracting Agency during the fiscal year and the total thereof.

2. Maintenance and Operations Fund Budget

The part covering the maintenance and operation of the Regional Sewerage System shall show:

a. The various items and amounts of maintenance and operation expenses and the total thereof;

b. The total amount in any reserves theretofore established, and the available and unencumbered balance in such reserves as of the commencement and end of the fiscal year;

c. The amount of service charges payable by each Contracting Agency and the total paid or payable by all Contracting Agencies;

d. The amounts, if any, of revenue from sources other than services charges which will be available for payment of maintenance and operation expenses and the total thereof;

e. The total amount required to be raised from service charges for payment of maintenance and operations expenses;

f. The quantity of sewage to be delivered by each Contracting Agency during the fiscal year and the total thereof;

g. The rate of the service charge for the fiscal year;

h. The amount of any surplus of service charges received by CBMWD during the fiscal year preceding the fiscal year the fiscal year then in progress in excess of the cost of maintenance and operation of the Regional Sewerage System for that year which was transferred to the Regional Sewerage System Operation and Maintenance Fund reserve for replacement of Regional Sewerage System facilities as a result of the annual audit for such preceding fiscal year, or the amount, if any, of

any shortage in the amount of service charges received by CBMWD during such preceding fiscal year less than the cost of maintenance and operation of the Regional Sewerage System for that year which was transferred from said reserve during the year then in progress as a result of the annual audit for such preceding fiscal year;

i. The proportionate amount of any such shortage which will be added to the total service charge of each Contracting Agency for the fiscal year next succeeding the fiscal year then in progress.

C. Comparative Data

For comparative purposes, the amounts and rates set forth in budgets shall be shown as follows:

1. On an actual basis for the second fiscal year preceding that to which the budget is to apply;

2. On an estimated or actual basis for the first fiscal year preceding that to which the budget is to apply;

3. On an estimated basis for the fiscal year to which such budget is to apply;

D. Preparation and Approval of Proposed Budgets

Not later than April 1 of each year, the Board of Directors of CBMWD shall direct its General Manager, or such other person or persons as the Board may designate, to prepare and submit to the Board a proposed budget for the next fiscal year. Upon submission of the proposed budget, the Board of Directors may make changes therein and, not

later than May 1 of each year, shall adopt a resolution declaring its intention to adopt the proposed budget and specifying a time, not earlier than June 1 nor later than June 30, and a place at which the Board of Directors will hold a hearing on the question of the adoption of such budget.

E. Notice and Hearing on Proposed Budget

Immediately after adoption of the resolution of intention, the secretary of CBMWD shall mail a copy of the resolution and the proposed budget to each Contracting Agency and to each member of the Regional Policy Committee. The Regional Policy Committee shall review the proposed budget and, not later than 10 days preceding the date fixed for hearing, shall submit its written report and recommendation thereon to the General Manager of CBMWD and to each Contracting Agency.

At the hearing on the proposed budget, the Board of Directors of CBMWD shall consider the report and recommendations of the Regional Policy Committee and the comments of all interested persons. At any time prior to the adoption of the budget, the Board may make such changes in the proposed budget as it deems advisable.

F. Adoption of Budget and Determination of the Service Charge Rate

Not later than June 30 of each year, the Board of Directors of CMBWD shall by resolution adopt the budget and determine the rate of service charge for the fiscal

year. The several amounts of proposed expenditures specified in the adopted budget shall be deemed appropriated for the fiscal year and for the purposes specified in the budget and the Board of Directors of CBMWD shall be authorized to make expenditures and incur obligations in accordance therewith. The Board of Directors shall alter or adopt the budget in accordance with the report and recommendations of the Regional Policy Committee, unless the Board of Directors, based on specific findings in said resolution, determines that such alteration or adoption impairs CBMWD's ability to operate the Regional Sewerage System. Such resolution shall set forth findings in support of the determinations of the Board of Directors.

If the Board of Directors fails to adopt a budget by June 30 of any fiscal year then, until such time as the Board shall adopt such budget, the budget last adopted and the service charge rate determined therein shall constitute the budget and rate for such fiscal year.

G. Capital Improvement Projects

The several amounts of proposed expenditures specified in the adopted budget for any fiscal year for capital improvements shall be deemed appropriated for the fiscal year and for the projects specified in the budget and the Board of Directors shall be authorized to make expenditures and incur obligations in accordance therewith. In the event that subsequent County Auditor estimates of Improvement District "C"

property tax revenues are received which adversely impact the funding of budgeted capital improvement projects, CBMWD shall initiate a budget review through the Regional Policy Committee and amend the budget as necessary. If the Board of Directors fails to adopt a budget by June 30 of any fiscal year then, until such time as the Board shall adopt such budget, funds necessary to complete capital acquisition and improvement projects initiated as a result of the last approved budget shall be considered appropriate and work in progress continued. No new capital improvement projects shall be initiated prior to adoption of the budget. However, the Contracting' Agencies shall continue to be obligated to make Supplemental Capital Outlay Fund payments to CBMWD pursuant to subpart 5 of part E of Section 9 hereof.

H. Adoption of Separate Budgets

Notwithstanding the preceding provisions of this section, the Board of Directors of CBMWD may elect for any fiscal year to separately prepare and adopt a Capital Improvement Fund Budget and a Maintenance and Operation Fund Budget. If said Board elects to so proceed, each such separate budget shall be prepared in accordance with the provisions of this section which are applicable thereto. Both said budgets shall be processed and adopted in accordance with the procedures and pursuant to the time schedule set forth in parts D, E and F of this section. (Amended April 12, 1984)

Section 20. BILLING AND PAYMENT OF SERVICE CHARGES

A. Monthly Statements of Service Charges

Not later than 15 days after the end of each month, CBMWD shall mail a statement of service charges to each Contracting Agency, setting forth the quantity and Equivalent Dwelling Units of sewage delivered during such month from the Contracting Agency's Community Sewer System into the Regional Sewerage System and the total thereof, the service charge rate applicable thereto and the total service charge due and payable to CBMWD for said month. Monthly service charges shall be based on the service charge rate fixed in the Regional Sewerage System budget for the fiscal year then in progress. The Equivalent Dwelling Units (EDU) of sewage delivered by the Contracting Agencies shall be determined based on a standard daily measurement or contribution of sewage per EDU agreed to from time to time by CBMWD and the Regional Technical Committee.

B. Payment of Statements; Interest on Overdue Payments

Each Contracting Agency shall pay the amount of the service charge set forth in any statement on or prior to its due date, namely, the forty-fifth day following the date of the mailing of such statement. Any such amount not paid by the due date shall accrue interest on a monthly basis from the due date at an annual rate equal to the current federal discount rate plus 2 percent.

Interest paid upon any delinquent amount shall be credited to the Regional Sewerage System Maintenance and Operation Fund unless, by reason of such delinquency, CBMWD shall have advanced the amount of the delinquency from other sources, in which case, the interest shall be credited to such fund as the Board Of Directors of CBMWD may designate.

A Contracting Agency shall not be entitled to withhold payment, in whole or in part, of the amount of any statement for service charges pending action pursuant to part D of this Section 20.

C. Adjustment for Net Audited Costs

If, upon completion of the CBMWD annual audit for fiscal year, it is determined that the amount received by CBMWD during such year from service charges is more or less than the cost of maintenance and operation of the Regional Sewerage System for the year, the surplus or shortage, as the case may be, shall be transferred to or made up from the Regional Sewerage System Operation and Maintenance Fund reserve for replacement of Regional Sewerage System facilities (the "Replacement Reserve"). If such an audit results in a surplus being transferred to the Replacement Reserve, an appropriate adjustment shall be made in the budget for the fiscal year next succeeding the fiscal year then in progress and the rate of the service charge for that fiscal year shall be adjusted accordingly. If such an audit results in a shortage being made up out of the Replacement Reserve, an

appropriate adjustment shall be made in the budget for the fiscal year next succeeding the fiscal year then in progress to provide for the reinstatement of the amount of the shortage, and the service charge rate for that fiscal year shall be adjusted accordingly.

D. Adjustment for Overpayment or Underpayment

Upon disagreement between any Contracting Agency and CBMWD over the amount of service charges or the discovery of an error in computation of service charges for a Contracting Agency, which is not resolved within 30 days, CBMWD shall immediately provide written notice of such disagreement or error to the Regional Technical Committee and shall request a recommendation and report from the committee. If such a written report is filed with CBMWD within 60 days of giving notice, CBMWD shall credit or debit any affected Contracting Agency's service charge account for the following month in the manner recommended by the Regional Technical Committee. If such a written report is not filed with CBMWD within 60 days of giving notice, or upon request of the Regional Technical Committee or any Contracting Agency, the Board of Directors of CBMWD shall initiate hearing procedures on said disagreement or error in accordance with Section 26A hereof. Upon the conclusion of the hearing, the Board of Directors of CBMWD shall, by resolution, make its determination on service charge adjustments, due dates and any interest due, and shall provide for the appropriate

credit to or debit of any affected Contracting Agency's service charge account for the following month.

E. Deposit of Payments in Maintenance and Operation Fund

All monies received by CBMWD in payment of service charges shall be deposited in and credited to a separate fund or account in the treasury of CBMWD, to be known as the "Regional Sewerage System Maintenance and Operation Fund." All monies in said fund and interest earned thereon shall be used and expended only for payment of maintenance and operation expenses paid or incurred by CBMWD under the provisions of this contract. (Amended April 12, 1984)

Section 21. (DELETED October 19, 1994) (See Regional Pretreatment Agreement)

Section 22. (DELETED October 19, 1994) (See Regional Pretreatment Agreement)

Section 23. GRANTS AND FINANCIAL ASSISTANCE

CBMWD and the Contracting Agencies shall exercise their best efforts to obtain the maximum amounts of grants and other financial assistance which may be available from any federal, state, local, or other source for defraying all or any part of the capital costs and the maintenance and operation expenses of the Regional Sewerage System. The General Manager of CBMWD, the Regional Policy Committee, and the Regional Technical Committee shall keep each other fully informed of any available grant or financial assistance programs known to any of them.

Prior to undertaking negotiations for a grant or

other financial assistance affecting the Regional Sewerage System, CBMWD shall give the Regional Policy Committee written notice of its intention to do so. Thereupon the committee may designate one representative who shall be entitled to participate with CBMWD in all such negotiations. The representative shall be a person skilled in the design, construction, maintenance, and operation of sewage facilities and may be a member of the Regional Technical Committee. The representative shall keep the Regional Policy Committee and the Regional Technical Committee fully informed concerning the status of the negotiations and the nature and contents ,of any proposed final application or agreement for grant or other financial assistance.

In addition, CBMWD shall annually submit a report to the Regional Policy Committee on any pending or proposed applications for grants or other financial assistance. Such report shall accompany each proposed annual budget and be mailed in the manner provided in part E of Section 19 hereof.

Each Contracting Agency shall be jointly responsible with CBMWD for all conditions, restrictions, or limitations imposed by any agency as a condition for extending a grant or other financial assistance. Any such agency, CBMWD, or any Contracting Agency may restrain any violation of such conditions, restrictions, or limitations by mandamus, injunction or other appropriate remedy.

CBMWD's costs for the acquisition, construction,

maintenance, or operation of the Regional Sewerage System shall be reduced by amounts of any grants or other financial assistance received therefor by CBMWD from the federal or state government. (Amended April 12, 1984)

Section 24. REGIONAL POLICY COMMITTEE

The parties desire to provide for a Regional Policy Committee to advise CBMWD of the needs and views of the Contracting Agencies concerning CBMWD's policies and activities in the financing, acquisition, construction, maintenance and operation of the Regional Sewerage System, to make reports and recommendations with respect thereto, and to fully inform the Contracting Agencies concerning such policies and activities.

Each Contracting Agency shall appoint one regular member and one alternate member to the Regional Policy Committee. Both such members shall be members of the Contracting Agency's governing body. The regular and alternate members so appointed shall serve at the pleasure of the appointing agency. Each Contracting Agency shall give the secretary of CBMWD immediate notice of all appointments and removals made by it and of the name and mailing address of each appointee. CBMWD shall appoint one regular member and one or more alternates to the Regional Policy Committee. The members so appointed shall be members of the Board of Directors of CBMWD and shall serve at the pleasure of CBMWD. The CBMWD member shall be entitled to participate at all regular and special

meetings of the committee but shall have no vote.

Each regular member of the Regional Policy Committee or his alternate, except the member or alternate appointed by CBMWD, shall have one vote.

A majority vote shall be required to carry any matter before the committee. A majority shall consist of members representing a majority of the Contracting Agencies, not including the State of California.

The committee shall hold a regular meeting on or before the second Thursday of every other month and shall meet in special meeting at the call of any member or at the call of CBMWD. The committee may adopt such procedures and rules as it deems advisable concerning its officers, meetings and the manner and method of making its reviews, reports and recommendations on any matter affecting the acquisition, construction, maintenance and operation of the Regional Sewerage System.

CBMWD shall, if requested by the committee, provide the committee with a meeting place and with the services, advice and assistance of members of its staff. All records, reports and other information of CBMWD pertaining to the financing, acquisition, construction, maintenance and operation of the Regional Sewerage System shall be available for inspection by members of the committee. CBMWD agrees to maintain and make available to the committee accurate records of all of its costs, disbursements and receipts with respect to activities under this contract. (Amended April 12, 1984)

Section 25. REGIONAL TECHNICAL COMMITTEE

The parties desire to provide for a Regional Technical Committee. The members and alternate members of the Regional Technical Committee shall be appointed, vote and be governed in the same manner provided in Section 24 hereof for the Regional Policy Committee, except that the members and alternates shall be officers or employees of the Contracting Agencies, or other persons knowledgeable in the design, construction, maintenance and operation of sewage facilities, and that CBMWD shall be entitled to appoint one member and one alternate member with the same right of participation and voting as other members. The committee shall hold a regular bimonthly meeting and shall meet in special meeting at the call of any member.

The committee may, and upon request by the Regional Policy Committee or CBMWD shall, review and make recommendations concerning any of the following technical matters: the acquisition, design, construction, maintenance, operation, or financing of sewer facilities, sewage treatment, reclamation, or disposal facilities, sewage and effluent measuring devices and equipment, Community Sewer Systems and the Regional Sewerage System; sewer user charges; service charges; quality standards for sewage and any effluent; and any other technical matter related to any of the foregoing. (Amended April 12, 1984)

Section 26. INSPECTION OF FACILITIES

Any authorized officer or employee of CBMWD may enter and inspect any part of the Community Sewer System of any Contracting Agency or any member of the Regional Policy Committee or Regional Technical Committee may enter and inspect any part of the Regional Sewerage System. Except during emergencies, such inspections shall be made during normal working hours on regular business days and upon the giving of not less than 24 hours prior notice of the inspection. Any inspecting officer, employee or member of the Regional Policy Committee or Regional Technical Committee shall bear proper credentials of authority and identification. The right of entry and inspection shall be limited to public streets, easements and property within which the systems shall be located. The rights of inspection shall include observation, measurement, sampling and testing. (Amended April 12, 1984)

Section 26A. HEARINGS

The provisions of this section and the procedures herein set forth shall apply to all hearings to be conducted by the Board of Directors of CBMWD with respect to determinations, reports and recommendations of the Regional Policy Committee and protests and complaints of Contracting Agencies with respect to determinations of said committee and CBMWD.

A. Notice of Hearings

The secretary of CBMWD shall give notice of hearings by publication, posting and mailing as specified below:

1. Publication. Notice of hearings shall be published pursuant to Section 6066 of the Government Code in one or more newspapers of general circulation within CBMWD. Publication of notice shall be commenced at least 15 days prior to the date specified therein for hearing.

2. Posting. Notice of hearing shall be posted on or near the door of the meeting room of the Board of Directors of CBMWD. Posted notice shall be commenced at least 15 days prior to the date specified therein for hearing and shall continue to the time of the hearing.

3. Mailing. Mailed notice shall be given to all members of the Regional Policy Committee and to all Contracting Agencies and to all other persons requesting such notice in writing. Mailed notice shall be sent by first class mail and shall be deemed to have given when so deposited in the United States mail postage prepaid.

B. Hearing

Hearings shall be held upon the date and at the time specified in the notice and may be continued from time to time, but not to exceed 60 days from the date specified in the notice. At each hearing, prior to consideration of any protests, objections or evidence, the Board of Directors of CBMWD shall cause to be read aloud or summarized any reports and recommendation made by the Regional Policy Committee and, in the case of annexations, the Local Agency Formation Commission. Thereafter, the Board of Directors of CBMWD shall hear and

receive all oral and written protests, objections and evidence which may be made, presented or filed by any Contracting Agency or any interested person. Any Contracting Agency or person who shall have filed a protest may withdraw the same at any time prior to the conclusion of the hearing.

C. Hearing Resolution

Not later than 30 days after the conclusion of the hearing, the Board of Directors of CBMWD shall by resolution make its determination on the matter being considered. Such resolution shall contain findings in support of the determination and shall be deemed a final administrative action. A certified copy of each such resolution adopted by the Board of Directors of CBMWD shall be mailed by the secretary of CBMWD in the manner provided for in subpart 3 of part A of this section to each Contracting Agency and person who presented or filed a protest, objection or evidence at the hearing within 15 days of the date of the adoption of the resolution. Any Contracting Agency may challenge any such resolution and determination by administrative mandamus, injunctive or other appropriate action or proceeding. (Added April 12, 1984)

Section 27. EFFECTIVE DATE OF CONTRACT

This contract between CBMWD and the undersigned Contracting Agency shall become effective after the occurrence of all of the following events:

(1) The authorization and execution of this contract by CBMWD and the undersigned Contracting Agency.

(2) The acquisition or construction by CBMWD of facilities for the Regional Sewerage System adequate to provide for the transmission, treatment, and disposal of all sewage then collected by the Community Sewer System of the undersigned Contracting Agency.

(3) The initiation and conduct of proceedings for and the completion of the formation of Improvement District "C" (either with or without elections, as provided by law) in substantial conformity with resolution of intention, Exhibit "C" hereof, and with boundaries substantially identical to those specified in Paragraph B of Section 9 hereof.

(4) The adoption by the Board of Directors of CBMWD of a capital outlay ordinance, substantially in the form set forth in Exhibit "B" hereof.

Not later than 15 days following the occurrence of the last such event, CBMWD shall give written notice thereof to the undersigned Contracting Agency. The notice shall specify a date, as determined by CBMWD, which shall be the effective date of this contract. The effective date shall be the first day of any calendar month occurring not sooner than one month nor later than one year after the date of giving the written notice.

Section 28. TERM OF CONTRACT

The term of this contract and any other Service Contract entered into between CBMWD and any sewage collection agency, shall be 50 years from the earliest effective date specified, in the original Service Contract between CBMWD and

any Contracting Agency, said date being January 2, 1973. It is the intent of the parties that all Service Contracts providing for the services and facilities of the Regional Sewerage System shall have the same termination date, without regard to the effective dates of the individual contracts.

In order to provide for a periodic review and update, as necessary, of the provisions of this contract, CBMWD and the Contracting Agencies agree to enter good faith discussions at intervals not exceeding five years or at the request of the majority of the Contracting Agencies. (Amended April 12, 1984)

Section 29. RENEWAL; OPTION FOR CONTINUED SERVICE

No later than two years prior to the end of the term of this contract or any earlier termination or extension of this contract, the parties shall negotiate for the extension or renewal of this contract upon comparable terms and conditions. If the parties have been unable to agree thereon, then any Contracting Agency, by written notice given to CBMWD at least 12 months prior to the expiration of said term, may elect to receive continued service after the expiration of said term upon the following conditions:

A. If, by reason of continued service, no expansion is required in any facilities of the Regional Sewerage System in existence upon the expiration of the term of this contract, the Contracting Agency may deliver sewage into the system in any quantity and at any flow rates. If, by reason of continued service, such expansion shall be required, the annual quantity

and flow rates of sewage to be delivered into the Regional Sewerage System by the Contracting Agency shall not exceed the quantity and flow rates delivered by the agency during the last full fiscal year preceding the expiration of said term.

B. The service charge rate shall be determined as provided in Section 18 hereof.

C. The sewage quality standards shall be in accordance with those in effect during the last full fiscal year preceding the expiration of said term or any higher standards prescribed by any federal, state or regional agency authorized by law to prescribe quality standards for effluent discharges.

D. CBMWD shall maintain and operate the Regional Sewerage System under substantially the same physical conditions of service as prevailed during the last fiscal year preceding the expiration of said term.

Other terms and conditions of continued service shall be reasonable and equitable and shall be mutually agreed upon and, if they provide for continued service for a specified number of years, a Contracting Agency shall have the option to receive further continued service upon the expiration of that and each succeeding period of continued service. (Amended April 12, 1984)

Section 30. AUTHORIZATION AND EXECUTION OF SEWAGE SERVICE AND ACQUISITION CONTRACTS

A. Authorization of Any Sewage Collection Agency

All proposed contracts between CBMWD and any sewage collection agency for the purpose of (i) providing the agency

with the services and facilities of the Regional Sewerage System under a Service Contract, (ii) the acquisition by CBMWD of any existing sewage treatment and disposal plant or interceptor sewer, or (iii) both (i) and (ii), shall be authorized for execution by CBMWD. The agency shall furnish CBMWD with a certified copy of the resolution authorizing execution by the agency, together with a certified copy of the proposed contract referred to therein. The resolution shall contain all restrictions, limitations, and conditions, if any, which may have been imposed on the execution of the contract.

B. Amendment of Any Existing Contract; New Contracts with Subsequent Contracting Agencies

If CBMWD proposes (i) to amend or rescind any existing Service Contract with a Contracting Agency or (ii) to enter a new Service Contract or a contract for the transfer of any existing sewage facilities to CBMWD, as part of the Regional Sewerage System, the Board of Directors of CBMWD shall adopt a resolution declaring its intention to do so and shall specify a time, not sooner than 60 days after the adoption of the resolution, and a place at which the Board will hold a hearing on the question of the proposed amendment, rescission or new contract, as the case may be. Immediately thereafter the secretary of CBMWD shall mail a copy of the resolution, together with a copy of the proposed amendment, rescission or new contract to the clerk or secretary of each Contracting Agency and to each member of the Regional Policy Committee. The

Regional Policy Committee shall review the proposal and, not later than 10 days preceding the date of the hearing, shall submit its written report and recommendation thereon to the general manager of CBMWD and to each Contracting Agency.

At the hearing on the proposal, the Board shall consider the report and recommendation of the Regional Policy Committee and shall hear representatives of any Contracting Agency, members of the committee, and any other interested persons. The Board may modify the proposal and, upon the conclusion of the hearing, order the authorization for execution by CBMWD of the proposed amendment, rescission, or new contract, as the case may be. (Amended April 12, 1984)

Section 31. NOTICE

Notices authorized or required to be given by any provision of this contract shall be deemed to have been given upon delivery, if delivered personally, or upon deposit in the mails, if enclosed in a properly addressed envelope and deposited in the United States mails for delivery by registered or certified mail.

Notice shall be given to the parties by delivery or mailing to the following officers of the parties at the following addresses:

CBMWD Secretary, Chino Basin Municipal Water District
8555 Archibald Avenue
Rancho Cucamonga, California

Undersigned Contracting Agency:

_____
_____
_____
_____

At any time a party may give written notice to the other party of a change in the designated officer or address.

Notice to members of the Regional Policy Committee or the Regional Technical Committee shall be given to the persons and at the addresses designated in the notices of appointment filed with the Secretary of CBMWD.

Section 32. PARTIAL INVALIDITY

The invalidity of any provision of this contract shall not affect the validity of the remainder thereof which can be given effect without such invalid provision.

MEMORANDUM

TO: **Mr. Bryant Marroquin**
Fontana Water Company

FROM: **Stetson Engineers Inc.**

SUBJECT: **Supplement to the Water Supply Assessment**
Speedway Commerce Center II Project

JOB NO.: **2048-18.1**

DATE: **June 17, 2022**

Introduction

This Technical Memorandum is a Supplement to the Water Supply Assessment (WSA) prepared in December 2021 by Stetson Engineers Inc. (Stetson) for San Gabriel Valley Water Company (San Gabriel) regarding the proposed Speedway Commerce Center II Project (Project). The proposed Project is located in the western portion of Fontana Water Company's (FWC) certificated service area as authorized by the California Public Utilities Commission (CPUC). The submitted WSA included a discussion of additional water infrastructure required to meet the industrial, commercial, and irrigation water demands for the proposed Project. The submitted WSA recommended additional water storage infrastructure for the proposed Project. The purpose of this Technical Memorandum is to provide additional information and analysis regarding the recommended additional water storage infrastructure requirements of the proposed Project.

Proposed Project Description

As described in the December 2021 WSA, the proposed Project is located east of Etiwanda Avenue, south of Whittram Avenue, north of San Bernardino Avenue, and west of Cherry Avenue. The proposed Project is located on a portion of the existing Auto Club Speedway site within an unincorporated area of San Bernardino County. It is anticipated the existing Auto Club Speedway race track will be reconfigured into a "short track" (i.e. the existing race track will be reduced in size). As a result, portions of the proposed Project will replace the remaining areas of the existing race track. The proposed Project will include seven buildings with a total of approximately 6,480,000 square feet (sf) of warehouse floor space and 120,000 sf of office floor space, for a total of 6,600,000 sf. The Project will also include approximately 4,497,483 sf (103.25 acres) of surrounding parking areas (pavement) and approximately 1,250,003 sf (28.70 acres) of landscaping on a Project site of approximately 522.22 acres. However, the proposed Project is separate from the Auto Club Speedway and will not include the reduced race track area (i.e. proposed short track).

Proposed Project Water Demands

The December 2021 WSA previously estimated the total water demand for the proposed Project, which includes commercial and industrial water demands (594 acre-feet per year, or AFY) and landscape irrigation (124 AFY), at approximately 718 AFY. The commercial and industrial water demands were previously based on a water use rate of 3,500 gallons per day (gpd) per acre derived from average recorded water use data for large industrial warehouse buildings within FWC's service area. However, pursuant to further review of the water demand for buildings of similar size and use in the vicinity, the water use rate was adjusted to 2,843 gpd per acre for the proposed Project. As a result, the updated commercial and industrial water demands are approximately 482 AFY, and the total updated water demand is approximately 606 AFY (including 124 AFY of landscape irrigation demand). However, in order for FWC to provide 606 AFY to the Project site,

FWC will need to produce water supplies which account for water losses within its water distribution system. Accounting for average system water losses (approximately 7.8 percent), FWC would need to produce approximately 657 AFY of water in order to supply 606 AFY to the Project site.

In order to determine the additional water storage infrastructure requirements of the proposed Project (discussed in the following sections), it is necessary to determine the Maximum Day Demand (MDD) and Peak Hour Demand (PHD) to account for fluctuations in water demands on a seasonal or hourly basis. The MDD and PHD are determined based on "peaking factors" relative to the Average Day Demand (ADD). Pursuant to historical water production records, FWC's "*2021 Water System Master Plan*" determined that a peaking factor of 1.7 (multiplied by the ADD) should be used to calculate the MDD, and that a peaking factor 1.6 (multiplied by the MDD) should be used to calculate the PHD. These peaking factors are consistent with the California Code of Regulations (§ 64554. New and Existing Source Capacity[1]) based on the following requirements: "*If daily water usage data are available, identify the day with the highest usage during the past ten years to obtain MDD; determine the average hourly flow during MDD and multiply by a peaking factor of at least 1.5 to obtain the PHD.*"

Based on an annual water requirement of 657 AFY for the proposed Project, the ADD is approximately 0.59 million gallons per day (MGD). Pursuant to the peaking factors identified above, the MDD is approximately 1.0 MGD and the PHD is approximately 0.07 million gallons per hour (MGH).

Reservoir Storage Capacity Analysis

The total reservoir storage required for the proposed Project is based on the following three (3) components:

1) Operational Storage;
2) Fire Storage; and
3) Emergency Storage.

These three required storage components are discussed in more detail below, and are based on design criteria from the following documents:

- California Code of Regulations (§ 64554)
- CPUC's General Order 103-A (September 2009)
- FWC's "*2021 Water System Master Plan*".
- American Water Works Association "M32 Computer Modeling of Water Distribution Systems" (2017)

Operational Storage

Operation storage (or equalization storage) is the amount of water required to meet demands in excess of the production and delivery capabilities of a water system. It is necessary to coordinate the production rates of water sources and the available storage capacity in a water system to provide a continuous flow of treated water supply. Water systems are often designed to have the capacity to supply the average flow on the day of maximum demand (i.e. MDD). The peak hour demand will be met by both the designed water production capacity (MDD) and outflow from the operational storage. This operational storage is continuously replenished throughout the day to maintain water quality.

Pursuant to the California Code of Regulations (§ 64554), large water systems (including FWC) are required to meet four hours of PHD with source capacity and storage capacity during the MDD. In addition, pursuant to the CPUC's General Order 103-A, dated September 2009, "*If a system provides potable water for fire protection service, new portions of the system shall have supply and storage facilities that are designed to meet MDD plus the required fire flow at the time of design*". As a result, an operational storage requirement equal to 100 percent of the MDD (or 1.0 MG) has been estimated for the proposed Project. This operation storage requirement is also consistent with the criteria identified in FWC's "*2021 Water System Master Plan*".

Fire Flow Storage

Fire storage is the volume of storage water reserved for firefighting. The fire storage volume is determined by multiplying the required fire flow rate by the required time duration. It is assumed that no more than one fire event would occur in any pressure zone at one time. The 2020 San Bernardino County Fire Code adopts the 2019 California Fire Code, which sets fire flow requirements based upon the building material (combustible or non-combustible), building size, and occupancy to determine the required fire flow and duration. Pursuant to the 2019 California Fire Code, the minimum fire flow requirements can range from 1,500 gallons per minute (gpm) (with 2 hours duration), for building sizes less than 3,600 sf, to 8,000 gpm (with 4 hours duration), for building sizes greater than 85,101 sf. Based on FWC's past experience, the maximum fire flow requirement for buildings similar in the size to the proposed Project is 4,000 gpm over a 4 hour duration[2]. This fire flow rate is equivalent with a reservoir storage requirement of 0.96 MG and is also consistent with criteria identified in FWC's "*2021 Water System Master Plan*".

[2] According to the largest building size in the proposed Project, the maximum fire flow requirement would be 6,000 gpm over a 4 hour duration based on the 2019 California Fire Code. The estimated fire flow storage here would be conservative on the low side.

Emergency Storage

Emergency storage provides water during emergencies. Emergencies cover a wide range of rare but probable events, such as pipeline failures, equipment failures, power outages, pumping system failures, water treatment plant failures, raw water contamination events, and natural disasters. The volume of water that is needed during an emergency is usually based on the estimated amount of time expected to elapse before the disruptions caused by the emergency are corrected. The occurrence and magnitude of emergencies are difficult to predict.

Pursuant to the American Water Works Association (AWWA) "M32 Computer Modeling of Water Distribution Systems", dated 2017, "*The amount of emergency storage is based on an assessment of the risk of failures and the desired degree of system dependability. As an example, a system operator may desire a full day of emergency storage in order to provide enough storage in the event of a system-wide power failure. An assessment must be made as to the type and nature of the emergency condition, including the frequency, intensity, and duration. In general, a vulnerability analysis, as described in AWWA Manual M19 {2001), should be used to determine emergency storage requirements. Some state or provincial regulations indicate the minimum emergency storage required for the community based on the average or maximum daily demands. In addition, water quality should be a part of the equation when determining the amount of emergency storage to provide. The utility may relax its minimum pressure requirements under emergency conditions as long as negative pressures are avoided.*

Although the California Code of Regulations does not have a defined requirement for emergency storage, the emergency storage criteria used in FWC's "*2021 Water System Master Plan*" is 50 percent of the MDD (or 0.50 MG). FWC's facilities depend on electrical utility services to operate. Disruption of electrical service may be caused by grid/distribution failures, natural hazards, or intentional power disruptions. Southern California Edison (SCE) provides electrical service to all FWC facilities. Due to the recent wildfire history in California, the State's investor-owned electric utilities, including SCE,

have implemented intentional de-energizations, or public safety power shutoffs (PSPS) during high-risk wildfire conditions. For example, the regional-wide power shutoff in October 2019 lasted about 3 to 5 days. FWC has dedicated backup generators at many critical facilities. However, pursuant to an analysis conducted in FWC's "*2021 Water System Master Plan*", there could be a shortage of about 50 percent of the MDD over a 5 day emergency period. The 0.50 MG volume of emergency storage ensures that FWC will have water available to distribute to the proposed Project during such an extended period.

Required Reservoir Storage Capacity

As discussed above, the total reservoir storage required for the proposed Project is based on Operational Storage (1.0 MG), Fire Storage (0.96 MG); and Emergency Storage (0.50 MG) components and totals approximately 2.5 MG. The tabulation below summarizes the total reservoir storage.

Projected Water Demand	657	AFY
Average Day Demand (ADD)	0.59	MGD
Maximum Day Demand (MDD, or 1.7 x ADD)	1.00	MGD
Peak Hour Demand (PHD, or 1.6 x MDD)	0.07	MGH
Reservoir Storage Components		
(1) Operation Storage (100 Percent of the MDD)	1.00	MG
(2) Fire Flow Storage (4,000 gpm over 4 hours)	0.96	MG
(3) Emergency Storage (50 percent of the MDD)	0.50	MG
Total Required Storage	**2.46**	**MG**

Appendix C – Design Criteria from Fontana Water Company Division 2021 Water System Master Plan

Appendix C – Design Criteria from Fontana Water Company Division 2021 Water System Master Plan

Table 7.1 Summary of Performance and Design Criteria for San Gabriel's Fontana Division Water Distribution System

Component	Performance Criteria for Existing System Evaluation	Design Criteria for New or Expanded Systems
Maximum Pressure[1]		
ADD	125 psi	125 psi
Minimum Hour Demand	150 psi	150 psi
Minimum Pressure[1]		
MDD	40 psi	40 psi
PHD	30 psi	40 psi
MDD + Fire Flow[2]	20 psi	20 psi
Fire Flow Requirements[2]		
MDD	Single Family Residential: 1,000 gpm for 1 hour. Multi-Family Residential: 2,500 gpm for 2 hours. Commercial/ Industrial/Governmental: 4,000 gpm for 4 hours.	The same criteria as in the 2020 San Bernardino County Fire Code (which adopts the 2019 California Fire Code, Appendix B.) (or current fire code) for individual structures.
Pipeline Velocity and Head Loss[3]		
Maximum Velocity under PHD	6 fps	6 fps
Maximum Velocity under MDD plus Fire Flow	10 fps	10 fps
Maximum Head Loss under PHD for Small Pipes (< 16")	5 ft per 1,000 ft	5 ft per 1,000 ft
Maximum Head Loss under PHD for Large Pipes (≥ 16")	3 ft per 1,000 ft	3 ft per 1,000 ft
Water Supply Capacity[4], [5]		
MDD	*In pressure zones with storage:* • Provide firm supply capacity (largest well or treatment component out of service) equal to MDD; meet PHD and fire flow requirement from a combination of supply sources and storage. *In pressure zones without storage:* • Provide firm supply capacity equal to PHD or MDD plus fire flow, whichever is greater.	*In system with storage:* • Provide firm supply capacity (largest well or treatment component out of service) equal to MDD; meet PHD and fire flow requirement from a combination of supply sources and storage. *In system without storage:* • Provide firm supply capacity equal to PHD or MDD plus fire flow, whichever is greater.
Storage Capacity		
Operational Storage[4]	In pressure zones with continuous water supply: • 4 hours of PHD. In pressure zones without continuous water supply: • 100% MDD	In system with continuous water supply: • 4 hours of PHD In system without continuous water supply: • 100% MDD
Fire Storage	Fire flow demand for the most severe fire recommended in the pressure zone multiplied by the recommended duration	Fire flow demand for the most severe fire for the individual structure required in the system multiplied by the required duration
Emergency Storage[3]	50% MDD (based on the assessment of public safety power shutoffs (PSPS) during high-risk wildfire conditions and the water system's dedicated backup generators)	50% MDD (based on the assessment of public safety power shutoffs (PSPS) during high-risk wildfire conditions and the water system's dedicated backup generators)
Total water storage capacity	Equalization Storage + Fire storage + Emergency Storage	Equalization Storage + Fire storage + Emergency Storage
Booster Pumping Capacity		
MDD	*In pressure zones with gravity storage:* • Provide firm pumping capacity (largest pump out of service) equal to MDD. *In pressure zones without gravity storage:* • Provide firm pumping capacity equal to MDD plus fire flow or PHD, whichever is greater.	*In system with gravity storage:* • Provide firm pumping capacity (largest pump out of service) equal to MDD. *In system without gravity storage:* • Provide firm pumping capacity equal to MDD plus fire flow or PHD, whichever is greater.
Minimum Size for Pipeline Replacement and New Mains[6]		
Minimum Size for Pipeline Replacement and New Mains	Not Applicable	6 inches

GENERAL ORDER 103-A

PUBLIC UTILITIES COMMISSION OF THE STATE OF CALIFORNIA
EFFECTIVE SEPTEMBER 10, 2009

RULES GOVERNING WATER SERVICE, INCLUDING MINIMUM STANDARDS FOR OPERATION, MAINTENANCE, DESIGN AND CONSTRUCTION

TABLE OF CONTENTS

Page

I. General 1
1. Intent 1
A. Purpose 1
B. Limits of Order 1
C. Expiration of Economic Life 1
D. Absence of Civil Liability 1
E. Applicability 1
2. Definitions 1
3. Abbreviations and Acronyms: 5
4. Information Available to Public 6
5. Access to Property 7
A. When 7
B. Secure Access 7
C. Proper Identification 7
6. Accidents/Acts of Terror 7
7. Reports and Notifications to the Commission 8
8. Exemptions or Variances from These Rules 8
9. Preemption of Local Authority 8
II. Standards of Service 9
1. General 9
2. Water Quality and Supply Requirements 9
A. Quality of Water 9

B. Quantity of Water 10
(1) Source 10
(2) Operation of Supply System 11
(3) Potable Water System Capacity 11
(4) Sewer System Capacity 12
3. Continuity of Service 12
A. Emergency Interruptions 12
B. Scheduled Interruptions 12
C. Minimum Standards for Repairs 12
D. Records of Interruptions 13
E. Reports to Commission 13
4. Water Supply Measurement 13
A. Measuring Devices 13

Appendix C – Records Retention Schedules
Appendix D – Report Card Billing
Appendix E – Customer Service and Reporting Standards for Class A and B Utilities

I. General

1. Intent

A. Purpose

The purpose of these rules is to establish minimum standards to be followed in the design, construction, location, maintenance and operation of the facilities of water and wastewater utilities operating under the jurisdiction of the Commission. Each of these rules is subject to active oversight and enforcement by the Commission.

B. Limits of Order

These rules do not supersede the effective tariff rules of the water and wastewater utilities or any other subsequent Commission order.

C. Expiration of Economic Life

Nothing contained in these rules shall be construed to require the replacement or abandonment of facilities in use at the time of adoption of these rules, prior to the expiration of their economic life, unless the Commission orders the abandonment or replacement of particular facilities found to be inadequate for the provision of proper public utility service.

D. Absence of Civil Liability

These rules are adopted by the Commission to establish minimum standards in the design, construction, maintenance and operation of water and wastewater utilities operating under the jurisdiction of the Commission. Such rules shall not impose upon these utilities, and these utilities shall not be subject to, any civil liability for damages, if liability would not exist had these rules not been adopted.

E. Applicability

The following rules relating to the construction, reconstruction, maintenance, and operation of water and wastewater facilities shall be observed in this state unless otherwise authorized or directed by the Commission. The sections of these rules applicable to wastewater utilities are specified in Appendices A and B.

2. Definitions

A. Bill. Any invoice for water or wastewater service including final invoices and invoices for maintenance or repair service.

B. Commission. The Public Utilities Commission of the State of California.

C. Complaint. A request requiring an investigation or action on the part of the utility to address an alleged problem, deficiency, or inadequacy in the utility's provision, pricing, or billing for its service. An inquiry to the utility not requiring an investigation or action is not a complaint.

D. County Health Department. The county agency governing water quality for the county.

E. Customer. Any person, firm, association, corporation or governmental agency supplied or entitled to be supplied with water or wastewater service for compensation by a utility.

F. Customer Service Lateral. All pipe, tubing, valves and fittings connecting a customer sewer system to the point where the lateral enters the public right of way including all pipe, fittings and valves necessary to make the connection.

G. Department. The Division of Drinking Water and Environmental Management of the Department of Public Health of the State of California, or its successor; or the County Health Department, that has jurisdiction over the utility.

H. Distribution System. All physical parts of the water system, including, but not limited to pipes, valves, pumping stations, storage tanks or reservoirs, and service lines that are located between the water treatment plant or the source if there is no treatment, and the consumer's service connection.

I. Maximum Day Demand. The actual, estimated or projected amount of water utilized by consumers during the highest day of use, midnight to midnight, excluding fire flow as defined in Waterworks Standards, CCR Title 22, Section 64551.30.

J. Normal Business Hours. 8 a.m. to 5 p.m., Monday through Friday, excluding utility holidays, unless otherwise posted at the utility's office.

K. Peak Hour Demand. The amount of water utilized by consumers during the highest hour of use during the maximum day, excluding fire flow as defined in Waterworks Standards, CCR Title 22, Section 64551.35.

L. Pressure Zone. Sections of the water system that are segregated by a controlled change in the hydraulic grade line.

M. Regional Board. The Regional Water Quality Control Board that has jurisdiction over the specific wastewater or reclamation facilities.

N. Recycled water system. Water recycling, also known as reclamation or reuse, is an umbrella term encompassing the process of treating wastewater, and then storing, distributing, and using the recycled water. Recycled water is defined in California Water Code Section 13050(n) to mean "water which, as a result of treatment of waste, is suitable for a direct beneficial use or a controlled use that would not otherwise occur." A recycled water system includes all real estate, fixtures, and personal property owned, controlled, operated, or managed in connection with or to facilitate the collection, treatment, creation, development, storage, supply, distribution, sale, furnishing, carriage, apportionment, or measurement of recycled water.

O. Service Line. All the pipe, tubing, valves and fittings connecting a water main to an individual water meter or service connection, including all pipe, fittings and valves necessary to make the connection.

P. Source Capacity. The total amount of water supply available expressed as a flow from all active sources permitted for use by the water system, including approved surface water, groundwater, and purchased water. (Waterworks Standards, CCR Title 22, Section 64551.40.)

Q. State Board. State Water Resources Control Board

R. Storage Capacity. The total volume of water supply available from used and useful storage tanks or reservoirs approved by the Department as an active part of the utility's water system.

S. Sewer system. As defined in Public Utilities Code Section 230.5, all real estate, fixtures, and personal property owned, controlled, operated, or managed in connection with or to facilitate sewage collection, treatment, and disposition for sanitary or drainage purposes. Sewer system(s) include any and all trunk lines and connecting sewers, interceptors, outfall lines and sanitary sewage treatment or disposal plants or works, and any and all drains, conduits, and outlets for surface or storm waters, and any and all other works, property or structures necessary or convenient for the collection or disposal of sewage, industrial waste, or surface or storm waters.

T. Tariff Rule. A Rule in the tariffs that has been approved by the Commission.

U. Urban Water Management Plan. A plan prepared in response to California Water Code Sections 10610 through 10656.

V. Utility. A person, a sole proprietorship, a partnership, a limited liability corporation, a company, an association, or a joint stock association that provides water or sewer service and is under Commission jurisdiction. As used in this order, a utility includes the lessees, trustees, receivers or trustees appointed by any court whatsoever, of the corporation.

W. Utility Service Lateral. All the pipe, tubing, valves and fittings connecting a customer service lateral to the sewer main.

X. Wastewater Meter. Any device used for the purpose of measuring the quantity of wastewater produced.

Y. Wastewater system. Any sewer service system or recycled water system subject to the Commission's regulation. The wastewater system does not include the service lateral from the premise to the entrance into the public right-of-way for eventual connection to the utility system.

Z. Wastewater utility. Any corporation or person owning, controlling, operating, or managing any wastewater system subject to the Commission's regulation. A sewer system utility as defined in Public. Utility Code Section 230.5 is a wastewater utility.

AA. Water Main. Any pipeline, except for user service lines, within the distribution system.

AB. Water Meter. Any device used for the purpose of measuring the quantity of water delivered.

AC. Water Service Connection. The point of connection from a service line or ditch owned by the utility or from the outlet connection of a utility water meter assembly or other measurement device, or the service connection point, to the customer's piping or ditch.

AD. Water System. The interconnected reservoirs, pipes, sources of supply, real estate, and facilities used to provide water service to a particular set of customers.

AE. Water Treatment Plant. A group or assemblage of structures, equipment, and processes that treat or condition the water supply of a public water system for the purpose of meeting drinking water standards, consistent with the definition of Water Treatment Facility in the Department's CCR Title 22, Chapter 13 (Operator Certification).

AF. Waterworks Standards. Regulations adopted by the Department that take cognizance of the latest available "Standards of Minimum Requirements for Safe Practice in the Production and Delivery of Water for Domestic Use" adopted by the California section of the American Water Works Association (Section 116275 of the Health and Safety Code.) The Waterworks Standards may be found in California Code of Regulations, Title 22, Division 4, Chapter 16.

AG. Water Utility. Any corporation or person owning, controlling, operating or managing any water system subject to the Commission's regulation.

3. Abbreviations and Acronyms:

A. AWWA. American Water Works Association.

B. WEF. Water Environment Federation.

C. CCR. California Code of Regulations.

D. DPH. Department of Public Health of the State of California.

E. MDD. Maximum Day Demand.

F. PHD. Peak Hour Demand.

G. BOD. Biochemical Oxygen Demand.

H. TSS. Total Suspended Solids.

I. TDS. Total Dissolved Solids.

J. PDC. Peak Daily Capacity.

K. MGD. Million Gallons per Day.

L. mg/L. milligrams per liter.

M. psi. Pressure measurement of "pounds per square inch" as registered on a gauge.

N. US EPA. United States Environmental Protection Agency.

O. UWMP. Urban Water Management Plan.

4. Information Available to Public

The utility shall maintain and make available for public inspection at one or more of the utility's commercial offices, in structure and languages to properly inform the customer, information regarding the service rendered, including the following:

A. A description in writing of the utility services provided;

B. Copies of all active Tariffs including rates, general rules of the utility, service area maps and forms of contracts and applications applicable to the territory served from that office;

C. Information about the utility's method of reading meters;

D. Bill Analysis. A statement of the past readings of the meters serving a customer's own premises for a period of two years;

E. Consumer Confidence Report. Each utility operating a potable water system must annually mail or deliver a copy of the Consumer Confidence Report to each customer;

F. Conservation programs and opportunities;

G. Low-income ratepayer assistance programs;

H. Customer rights and obligations;

I. Information on obtaining emergency assistance; and

J. How customers can make suggestions or complaints.

This information, except for items (B), (D), and (E) above shall be made available in language(s), other than English, that are predominantly spoken in each utility's service territory. In addition, this information, except for item (D) above, shall be available in electronic form on the company's website, if a website is maintained. All Class A and B water utilities shall maintain a website with the above listed information, except for item (D).

5. Access to Property

A. When

The utility shall at all reasonable hours have safe access to meters, service connections, customer service laterals and any utility-owned property located on the customer's premises for the purposes of installation, maintenance, operation, or removal.

B. Secure Access

The utility may request the customer to secure any animals to ensure the safety of the utility's representative or the utility may enlist the aid of appropriate agencies, if required, to ensure safe access, particularly when animals on the customer's premises prevent access in times of an emergency.

C. Proper Identification

(1) Any utility representative whose duties require entering the customer's premises shall wear a distinguishing uniform or other insignia, identifying the utility representative as an employee of the utility, or carry other identification such as a badge to verify employment by the utility, to be shown by the utility representative upon request.

(2) The utility shall inform the customer in such a manner that the utility can prove the customer was aware of impending access to utility-owned property, except in events associated with the safety of the water supply. This requirement includes language barriers or issues covered by the Americans with Disabilities Act.

6. Accidents/Acts of Terror

A. The utility shall cooperate with the Commission to promote a reduction in hazards within the industry and to the public.

B. The utility shall keep a record of any accident endangering the public in general, its employees, or disrupting the facilities for supplying water or wastewater service to the public which may have caused substantial property damage, personal injury or death. This information shall be available for inspection by the Commission for the period prescribed by the California Code of Civil Procedure, or as prescribed by the Federal Department of Homeland Security, or for five years, whichever is greater. The utility shall fully cooperate with the Commission in the event of an investigation by the Commission staff.

7. Reports and Notifications to the Commission

A. The utility shall furnish to the Commission staff, at such times and in such form as the staff may require results or summaries of any tests required by these rules and any information concerning the utility's facilities or operations which the Commission may request for assessing the practices of the utility.

B. Reports and notifications to the Commission required by this General Order shall be filed with the Division of Water and Audits, or its successor, with a copy sent to the Division of Ratepayer Advocates (DRA), or its successor. Class C and D utilities are not required to provide copies of the reports required by this General Order to DRA.

8. Exemptions or Variances from These Rules

A. This General Order may be amended to ensure consistency with applicable statutes, Commission orders and industry standards. The Commission may adopt the amendments by resolution, with such modification as the Commission deems appropriate, following notice and opportunity to comment on the proposed amendments. After being amended, the text of this General Order will be published at the Commission's Internet site.

B. A utility may request exemption from the requirements of this General Order by application. Any utility that proposes an exemption or variance from this General Order must explain to the Commission any effects the proposed exemption or variance would have on public health risks, service quality, or rates and must bear the burden of justifying any adverse effect.

C. Where exceptions to this General Order are requested that are of minor importance or temporary in nature, the utility may file a request and showing of necessity for relief by an Advice Letter, in accordance with General Order 96-B.

9. Preemption of Local Authority

Local agencies acting pursuant to local authority are preempted from regulating water production, storage, treatment, transmission, distribution, or other facilities (including the location of such facilities) constructed or installed by water or wastewater utilities subject to the Commission's jurisdiction. However, in locating such projects, the utility should consult with local agencies regarding land use matters.

II. Standards of Service

1. General

A. Subject to the Commission's oversight, each utility shall operate its system so as to deliver reliable, high quality service to its customers at reasonable cost.

B. Each water utility shall ensure that it complies with the Department's permit requirements and all applicable drinking water regulations.

C. Each wastewater utility shall ensure that it complies with the State Board, Regional Board, and County Health Department permit requirements and all applicable regulations.

2. Water Quality and Supply Requirements

A. Quality of Water

(1) General. Any utility serving water for human consumption shall provide water that is not harmful or dangerous to health and, insofar as practicable, free from objectionable odors, taste, color and turbidity.

(2) The utility shall comply with applicable state and federal laws pertaining to water quality, and with related regulations of the Department and US EPA and all additional requirements of the Commission.

(3) If the Department or US EPA finds a utility to be out of compliance with the water quality regulations specified in section II.2.A(2), the utility shall promptly notify the Commission, by telephone or e-mail, with confirmation in writing. Any report submitted to the Department or US EPA in such circumstances shall be submitted concurrently to the Commission.

(4) If a utility notifies its customers of a water quality event, it shall simultaneously provide such notice to the Commission, by telephone or e-mail, with confirmation in writing.

(5) Each utility shall have representative samples of its water analyzed by a Department accredited laboratory, as required pursuant to California Health and Safety Code Sections 116390 and 100825-100920, at intervals specified by the Department.

(6) It is not intended that any rule contained in this General Order shall supersede or conflict with the regulations of the Department or US EPA. Compliance by a utility with the regulations of the Department or US EPA on a particular subject matter shall constitute compliance with such of these rules as relate to the same subject matter except as otherwise ordered by the Commission.

(7) In accordance with the Commission's Decision 07-05-062 or subsequent order, in each general rate case of a Class A water utility, the Presiding Officer shall appoint a water quality expert to assist the Commission in making specific findings and recommendations concerning the Class A water utilities' water quality compliance, unless good cause exists to forego such appointment.

(8) Appointment of a water expert may not be necessary if the utility has met all sampling and testing requirements, and has no test results on facilities in active service that exceed the maximum contaminant levels (MCLs) established by the Department, and no party raises concerns of merit.

(9) Recycled water shall meet the Department's recycled water requirements of Article 4, Chapter 7, Part 12 of Division 104 of the California Health and Safety Code.

(10) Any unauthorized waste discharge (as defined in the utility's tariff rules) into a utility's wastewater system shall be grounds for disconnection at the customer service lateral from the utility's system.

B. Quantity of Water

(1) Source

All water supplied by the water utility shall be:

(a) Obtained from a permitted source;

(b) Obtained from a source or sources reasonably adequate to provide a reliable supply of water; or

(c) Produced from a source or sources described in the utility's Urban Water Management Plan (UWMP) that has been reviewed by the Commission in its most recent general rate case or in an

amendment to such UWMP that the utility has submitted by advice letter for review by the Division of Water and Audits, or its successor.

(2) Operation of Supply System

(a) The potable water supply system, including wells, reservoirs, pumping equipment, treatment and filtration works, mains, meters and service pipes shall be free from sanitary defects.

(b) No physical connection between the distribution system of a public potable water supply and that of any other water supply shall be permitted except in compliance with the Regulations Relating to Cross Connections of the Department contained in the CCR, Title 17, Division 1, Chapter 5, Subchapter 1, Group 4, Articles 1 and 2, or its successor.

(c) Production from groundwater and surface water sources shall comply with relevant Waterworks Standards and, in the case of a utility that has submitted a UWMP for Commission review, shall be conducted in accordance with a UWMP that has been reviewed by the Commission in the utility's most recent general rate case or in accordance with an amendment to such UWMP that the utility has submitted by advice letter for review by the Division of Water and Audits, or its successor.

(3) Potable Water System Capacity

(a) A system's facilities shall have the capacity to meet the source capacity requirements as defined in the Waterworks Standards, CCR Title 22, Section 64554, or its successor. If, at any time, the system does not have this capacity, the utility shall request a service connection moratorium until such time as it can demonstrate the source capacity has been increased to meet system requirements.

(b) If a system provides potable water for fire protection service, new portions of the system shall have supply and storage facilities that are designed to meet MDD plus the required fire flow at the time of design. *See*, Section VI of this General Order for fire flow guidelines.

(c) The system's MDD and PHD shall be determined in accordance with Waterworks Standards, CCR Title 22, Section 64554, or its successor.

(4) Sewer System Capacity

Once use of a utility sewer system's facilities has reached 80 % of design average daily flow as specified in the permit as issued by the Regional Board, the utility shall request a service connection moratorium until such time as it can demonstrate the system capacity has been increased to meet system requirements.

3. Continuity of Service

A. Emergency Interruptions

(1) Each utility shall make all reasonable efforts to prevent interruptions to service and when such interruptions occur shall reestablish service with the shortest possible delay consistent with the safety of its customers, its employees, and the general public.

(2) If an emergency interruption of service affects the service to any public fire protection device, within 120 minutes of discovery of the interruption by the utility, the utility shall notify the Fire Chief or other public official responsible for fire protection of such interruption and of subsequent restoration of normal service.

B. Scheduled Interruptions

(1) Whenever any utility finds it necessary to schedule an interruption to its service, it shall notify all customers to be affected by the interruption, stating the approximate time and anticipated duration of the interruption. Scheduled interruptions shall be made at such hours as will provide the least inconvenience to the customers consistent with reasonable operations.

(2) Where public fire protection is provided by the facilities affected by the interruptions, the utility shall report to the Fire Chief or other officials responsible for fire protection when the interruption is scheduled, the approximate time, and anticipated duration. In addition, the Fire Chief or other official responsible for fire protection shall be notified within 60 minutes upon restoration of service.

C. Minimum Standards for Repairs

All repairs associated with a utility's water and wastewater system shall include, as a minimum:

(1) a determination whether temporary service can be provided;

(2) the proper used of road hazard signs, traffic cones, and barriers;

(3) a call to the regional underground service alert center to identify buried utilities in the area;

(4) hydrostatic testing per applicable AWWA pipe standard, and bacteriological testing according to AWWA C651;

(5) disinfection of mains, and the Department's or County Health's permission to return the line to service;

(6) backfill and pipe bedding shall be per applicable AWWA pipe installation standard;

(7) ground surface shall be repaired to at least its original condition.

D. Records of Interruptions

Each utility shall keep a complete record of all interruptions, both emergency and scheduled, when more than 10 service connections are interrupted. These records of interruptions shall include the information listed in Appendix C to this General Order and shall be kept with the utility's records in accordance with the retention schedule listed in Appendix C.

E. Reports to Commission

All emergency interruptions involving an entire system, an entire separately operated system of a multi-system utility or a major portion of an entire or separately operated system shall be reported to the Commission by the utility as soon as possible after occurrence, by telephone or e-mail stating the cause, date, time, estimated duration, location, approximate number of customers affected and remedial steps being taken to restore service.

4. Water Supply Measurement

A. Measuring Devices

Measuring devices known as source flow meters are required for each water system source, except at any inactive source. In accordance with Waterworks Standards, CCR Title 22, Section 64561, the utility shall, for each water system:

(1) Install a flow meter at a location between each water source and the entry point to the distribution system;

(2) Meter the quantity of water flow from each source to determine total production; and

(3) Each month, determine and record the total monthly production from each source.

B. Records

The yearly water supply totals by type of source shall be recorded in the appropriate service territory or rate-making district, and transmitted annually to the Commission as provided in the utility's annual reports to the Commission.

III. Standards of Design and Construction

1. General

A. The design and construction of the utility's water or wastewater system(s) shall conform to acceptable engineering standards and practices. Each system shall be designed and operated so as to provide reasonably adequate and safe service to its customers and shall conform to the requirements of the Department and this General Order.

(1) A professional Civil, Mechanical, or Electrical engineer registered in the State of California shall approve all design and construction documents of a utility's water or wastewater system(s) as required by the California Business and Professions Code Sections 6700 – 6799, or its successor.

(2) The design and construction of distribution reservoirs must conform to the requirements of the DPH's Waterworks Standards, CCR Title 22, Section 64585 with reference to sanitation and potability of water.

(3) All new mains, pumps, tanks, wells and other facilities for handling potable water and repaired mains and other facilities shall be thoroughly disinfected before being connected to the system. The method of disinfection shall be conducted in accordance with Waterworks Standards, CCR Title 22, Sections 64580, 64582, and 64583, or their successors.

B. For systems applying for federal funds, under the Drinking Water State Revolving Fund or its successors, applicants must describe the design basis of all new facilities to be constructed using the criteria contained in the technical, managerial, and financial requirements of Waterworks Standards, CCR Title 22, Chapter 12, Sections 63026, 63027, and 63028, or their successors.

2. Materials and Specifications

A. Suitability

(1) Materials used to construct component parts of a water system including, but not limited to, conduits, pipes, couplings, caulking materials, protective linings and coatings, services, valves, hydrants, pumps, tanks, backflow devices, and reservoirs, shall be capable of withstanding the internal and external forces to which they may be subjected in service per applicable AWWA Standards.

(a) No person shall use any pipe, plumbing fitting or fixture, solder, or flux that is not “lead free” in the installation or repair of any water system, except when necessary for the repair of leaded joints of cast iron pipes.

For the purposes of this section, "lead free" means in compliance with California Health and Safety Code Section 116875, as amended by Stats. 2006 Ch. 853 or a subsequent enactment.

(b) Materials and equipment shall be selected to mitigate corrosion, electrolysis and deterioration.

(2) Materials used to construct component parts of wastewater system(s) including, but not limited to, conduits, pipes, couplings, caulking materials, protective linings and coatings, valves, pumps, tanks, backflow devices, and reservoirs, shall be capable of withstanding the internal and external forces to which they may be subjected in service per applicable standards.

B. Specification

Materials and equipment shall be specified by a properly qualified person.

C. Newly Developed Materials and Equipment

The Commission does not intend to prevent the use of newly developed materials and equipment that otherwise meet the requirements described above.

3. Distribution System

A. Mains

(1) Water mains shall be installed below the frost line or be otherwise protected to prevent freezing and shall have no less than 30-inches of cover over the top of the pipe in public streets or alleys except when it is necessary to avoid underground obstructions or rocky or hardpan conditions where such depth is not feasible.

(2) All pipe and service lines that are not electrically continuous and installed using the open cut method shall be installed with continuous tracer tape or wire.

B. Layout of Water Mains

Water mains shall be laid out only in segmented grids and looped, and should be located within streets, where practical. Dead-end water mains shall be installed only if:

(1) Looping or gridding is impractical due to topography, geology, pressure zone boundaries, unavailability of easements or locations of users; or

(2) The main is to be extended in the near future and the planned extension will eliminate the dead-end conditions.

C. Minimum Pipe Sizes

(1) The distribution system shall be of adequate size, and designed in conjunction with related facilities to maintain the minimum flow and pressure requirements of this General Order.

(2) In no event shall the minimum pipe size for new mains be less than six inches in diameter when used in conjunction with a fire protection system. Otherwise, the minimum pipe size for new mains shall be no less than four inches in diameter.

D. Water Main Separations

The minimum separation distances shall be as set forth in the DPH's Waterworks Standards, CCR Title 22, Section 64572, or its successor.

E. Water Main Valves

(1) Sufficient valves shall be provided on water mains in accordance with the DPH's Waterworks Standards, CCR Title 22, Sections 64577 and 64578, or their successors.

(2) A flushing valve or blowoff shall be provided at the end of each newly installed dead-end water main (per Waterworks Standards, CCR Title 22, Section 64575.)

4. Materials Standards for Water Mains

All new water main materials used in the distribution system shall comply with the Department's Waterworks Standards, CCR Title 22, Section 64570, or its successor. The utility shall consider the cost effectiveness, for the intended application, of the material it selects.

5. Service Connection Pipe and Fittings

A. General

(1) Service connection pipe and fittings shall be designed for cold water working pressures of not less than 150 psi.

(2) Copper tubing shall be commercial designation of type K or L. Plastic tubing and fittings shall be products tested and certified as suitable for use in potable water piping systems by the National Sanitary Foundation, the Canadian Standards Association Testing Laboratory, or another testing agency acceptable to the Department.

B. Conditions for Adding Service Connections

(1) New service connections shall not be added to a water distribution system if the additional connections will cause system pressures or water supply to be reduced below the standards set forth in this General Order.

(2) New service connections shall not be added to a wastewater distribution system if the additional connections will cause the system to exceed the capacity requirements set forth in this General Order.

C. Size of Water Service Line

The size, design, material and installation of the water service line shall conform to the reasonable requirements of the utility, provided, however, that the minimum size of the pipe shall not be less than ¾-inch nominal size. The utility may require the customer to provide such data as may be necessary for the utility to properly size a service larger than ¾-inch nominal size consistent with the requirements of fire flow.

D. Depth of Water Service Line

Except in unusual conditions all service pipes shall be laid at a depth sufficient to prevent freezing, except where services are not intended for use during freezing weather and are drained prior to such weather, and at a depth of not less than 18 inches except at its termination in connecting with the meter or customer's piping.

6. Distribution Reservoirs

Distribution reservoirs (as defined in Waterworks Standards, CCR Title 22, Section 64551.10) shall meet the criteria specified in the DPH's Waterworks Standards, CCR Title 22, Section 64585.

7. Recycled Water and Reservoirs

No utility may use a reservoir that is directly augmented with recycled water as a source of supply, unless approved by the Department.

8. Reliability for Water Facilities

A. Surface Water Treatment Facilities shall meet the reliability standards set forth in the DPH's Waterworks Standards, CCR Title 22, Section 64659, or its successor.

B. All other critical equipment not addressed above shall have adequate redundancy and reliability, including fixed or portable backup power, incorporated as determined by the utility and approved by the Commission to meet the requirements of this General Order.

9. Sewer Systems

A. Mains and Submains

(1) Sewer mains shall be sized for the ultimate development of the area, and shall be designed for an average daily per capita flow of sewage of not less than 100 gallons per day.

(2) The minimum size for mains and submains shall be eight inches in diameter.

(3) Submains shall be designed to carry, when running full, not less than 400 gallons daily per capita contributions of sewage.

(4) New sewer mains shall be installed at least 10 feet horizontally from, and at least one foot vertically below, any parallel pipeline conveying potable water.

B. Utility Service Laterals

(1) Utility service laterals shall be designed to carry, when running full, not less than 400 gallons daily per capita contributions of sewage.

(2) The minimum size for a service lateral shall be 4 inches.

(3) Utility service laterals shall maintain a 2% minimum and 4% maximum slope.

IV. Measurement of Service

1. Method of Measuring Service

A. Metering

Consistent with the requirements of Public Utilities Code Section 781, which generally requires the Commission to hold a hearing and make certain findings before customers who were unmetered on January 1, 1979 can be required to have a meter, all water provided by a utility shall be metered, except that the utility may, after authorization has been obtained from the Commission, provide flat rate or estimated service.

B. Registration of Meter

All meters used for metered sales excluding sales from irrigation systems or other irrigation sales must have registration devices indicating the volume of water in either cubic feet or United States gallons or multiples

thereof. Where a constant or multiplier is necessary to convert the meter reading to cubic feet or gallons, the constant must be indicated on the meter or on the meter-reading sheet.

C. Irrigation Meters

Irrigation service may be provided with meters that measure in acre-feet or miner's inch days. This service may also be rendered on a volume basis by the use of a calibrated orifice such as the miner's inch box, by the use of weirs or otherwise measured as provided in applicable tariff schedules.

D. Report on Meter Readings to the Commission

All utilities that have metered service connections shall read each customer's meter according to the utility's tariff schedules. All utilities shall make a summary of quantities used, by classification of service, in the appropriate service territory or rate-making district, and include the summary in the annual report submitted to the Commission.

2. Meter Test Facilities and Equipment

A. Test Facilities

Each utility furnishing metered water or wastewater service shall*:*

(1) Have the necessary standard facilities, instruments and other equipment for testing its meters in compliance with these rules, or

(2) Arrange to have its meters tested by another entity equipped to test meters in compliance with these rules.

B. Shop Equipment

The meter test shop shall be provided with the necessary equipment to test up through 2-inch meters including a quick acting valve for controlling the starting and stopping of the test and a device for regulating the flow of water through the meter under test. The accuracy of the test equipment and test procedures shall be sufficient to enable shop test of the meter type used by the utility with an error not to exceed the applicable AWWA standard (M6 or its successor).

C. Test Measurement Standards

Measuring devices for test of meters shall consist of calibrated tanks for volumetric measurement, tanks mounted upon scales for gravimetric measurement or standard meters.

(1) Basic Standards

(a) When a volumetric tank is used, it shall be accompanied by a certificate of accuracy acceptable to the Commission from a County Department of Weights and Measures or other acceptable entity.

(b) When a gravimetric standard is used, the scales shall be tested and calibrated at least once every year by such approved laboratory, or County Office of Weights and Measures and a record maintained of the results of the test.

(c) Standard meters may be used for field tests of meter accuracy provided they are tested and calibrated to permit the test of meters within the limits of accuracy required by these rules, either by the utility with its volumetric or gravimetric standard equipment or by an approved laboratory at least once every 180 days while the standard meter is in use and a record of such tests shall be kept by the utility for a period of not less than five years.

(2) Basic Standards for Meter Testing

(a) The minimum requirement for testing meters from 5/8 x ¾-inch through 2-inch shall include a 10 and a 1 cubic-foot tank for meters registering in cubic feet or a 100- and a 10-gallon tank for meters registering in gallons.

3. Accuracy Requirements of Water Meters

A. General

All meters used for measuring quantities of water delivered to customers shall be in good mechanical condition, shall be adequate in size and designed for the type of service measured and shall be accurate to within generally accepted standards. The standards of accuracy for meters are set forth in paragraphs B and C, following.

B. Test Flows

For determination of minimum test flow and normal test flow limits, the Commission adopts as a guide the appropriate standard specifications of the applicable AWWA standard (M6 or its successor.)

When bench testing, the small meters (5/8 x ¾-inch through 2-inch) a multi-jet meter and a positive displacement meter should not be tested in-line.

C. Determination of Accuracy

(1) Meters shall be tested at three or more test flows per the applicable AWWA standard (M6 or its successor):

(2) A meter shall not be placed in service unless the meter test meets or exceeds the applicable AWWA standard (M6 or its successor)

D. Sealing of Meter

Upon completion of adjustment and test of any water meter under the provisions of these rules, the utility shall affix a suitable seal in such a manner that adjustment or registration of the meter cannot be altered without breaking the seal, where applicable.

E. Record of Test

(1) A complete record of all meter tests, including data sufficient to allow verification of test calculations, shall be recorded by the meter tester.

(2) Such record shall include: the identifying number of the meter; the type and size of the meter; the constant of the meter; the date and kind of test made; the reading of the meter before making any test and after the test; the test volume; and the error as found at each test.

(3) The complete record of test of each meter shall be retained for at least five years.

4. Initial Tests of Meters

Every water meter shall be tested as required by these rules prior to its installation either by the manufacturer, the utility or a reliable organization equipped for meter testing.

5. Repaired or Tested Meters

All water meters removed from service for repair or test in accordance with these rules shall be restored to the prescribed limits of accuracy as required by these rules before being placed back in service.

6. Periodic Tests of Water Meters

A. Maximum Time Periods for Meters in Service

(1) No meter shall be allowed to remain in service without retesting for any more than the number of years indicated in the following tabulation:

Size of Meter	Maximum Period
Smaller than 1 – inch	20 years
1 – inch	15 years
Larger than 1 – inch	10 years

(2) Requests to extend the maximum period may be made by advice letter based on relevant economic factors and meter accuracy.

B. Frequency of Periodic Tests

Nothing in these rules shall be construed to mean that such periodic tests may not be made more frequently than the maximum period specified.

C. Report of Periodic Tests of Meters

Each utility shall make a summary of all periodic tests of meters made each calendar year as required by these rules and shall submit such summary concurrently with, or as part of, the utility's Annual Report to the Commission for that year.

7. Meter Records

A. Contents and Retention of Meter Records

(1) Each utility shall keep records for each meter owned and used by it for any purpose including the identification number, name of manufacturer, serial number, type, size and the dates of installation and removal. These records shall also give condensed information, including dates, concerning all tests.

(2) When changing out a meter, the utility shall retain the written record of the date of the change, meter readings on the day of the change-out and the serial numbers of the old and the new meter. This information will be available to the customer upon request.

(3) Meter records shall be maintained for the useful life of the meter.

V. Rates and Billing

1. Filing of Tariffs

The utility shall file with the Commission its tariff schedules containing all tariff sheets in accordance with the procedure prescribed by the Commission.

2. Information on Bills

The utility shall render a bill to each customer for each billing period. All bills must show the time period, price per unit delivered, date bill is due, date when any late fee can be applied and the Commission's policy on late fees. Bills for metered service must include all the information shown in Appendix D.

3. Sewer Service

A. For billing purposes, except as determined by the utility, the customer is always the property owner.

B. Each sewer bill must show the time period, date bill is due, date when any late fee can be applied and the Commission's policy on late fees.

VI. Fire Protection Standards

1. Design Requirements

The flow standards for public fire protection purposes set forth below are those the Commission considers appropriate on an average statewide basis.

A. Standards of Local Fire Protection Agencies Govern

The Commission recognizes that there are widely varying conditions bearing on fire protection throughout the urban, suburban, and rural areas of California. Therefore, the standards prescribed by the local fire protection agency or other prevailing local governmental agency shall govern.

B. Application of the Utility's Main Extension Rule

Such local flow standards shall be followed whether greater or lesser than those set forth in this chapter. Mains designed for and capable of

providing flows in excess of the fire flow requirements referenced in this General Order, shall be considered mains providing excess flow for the purpose of the application of the utility's main extension rule.

2. Initial Construction, Extension, or Modification

In the initial construction, extension, or modification of a water system required to serve a new applicant or a change in use, the facilities constructed, extended, or modified shall be designed to be capable of providing, for a minimum of two hours, at a minimum of 20 psi, the flows specified in the 2007 California Fire Code, Appendix B, or its successor.

3. Replacement of Mains

A. Changes to Fire Code

The utility shall not be responsible for modifying or replacing at its expense any existing facilities, which are otherwise adequate, in order to provide increased fire flow or duration due to changes in the standards after the initial construction.

B. Replacement for Other Reasons

When a main requires replacement for other reasons, the new main, if used or useful for fire protection purposes, shall be sized to accommodate the governing fire flow standard.

4. Fire Hydrants

Fire hydrants shall be attached to the distribution system at the locations and spacing designated by the agency responsible for their use for fire fighting purposes.

5. Fire Hydrant Service Agreement

A. Charges for furnishing water to entities providing fire protection services to others shall be pursuant to written agreement in accordance with Public Utilities Code Section 2713, or its successor.

B. Each water utility shall make all reasonable efforts to form or renew agreements with entities providing fire protection services that are beneficial to the utility and its customers.

C. When such written agreement is entered into between the utility and the fire protection agency which requires the utility to be responsible for all or any portion of the capital expenditures or maintenance costs associated with providing fire hydrant service, such expenditures and costs may be included by the utility in its general plant accounts and operating expenses for ratemaking purposes.

D. The utility may bill the fire protection agency for fire hydrant service charges only under written agreement with the agency that it will pay such charges. Fire hydrant charges made under written agreement will also be included in revenues for ratemaking purposes.

E. In the absence of any written agreement between the utility and the fire protection agency, the utility will be responsible for maintaining fire hydrant service to the extent of its means. All cost associated with providing this service may be included for ratemaking purposes.

F. Fire hydrant service agreements between the fire protection agency and the utility shall be submitted by advice letter in accordance with General Order 96-B.

VII. Operation and Maintenance

1. Operation and Maintenance (O&M) Plans

A. Water Quality Procedures for Water Utilities

Each water utility shall have a set of O&M plans that includes sampling protocols used in water quality testing and describes the normal operating procedures of the Utility and its facilities.

B. Contents of O&M Plan for Water Utilities

The O&M Plan shall include, as applicable:

(1) The operations and maintenance schedule for each unit process for each treatment plant;

(2) The operations and maintenance schedule for each groundwater source and unit process;

(3) The operations and maintenance schedule for each purchased water connection;

(4) The schedule and procedure for flushing dead end mains and the distribution system, and the procedures for disposal of the flushed water, including dechlorination;

(5) The schedule for routine inspection of reservoirs, and the procedures for cleaning reservoirs;

(6) The schedule and procedures for inspecting, repairing, and replacing water mains;

(7) The plan for responding to emergencies as described in Section VII.3 of this General Order;

(8) The training protocols for use by employees for interacting with customers;

(9) The schedule and procedures for either testing backflow prevention assemblies or notifying customers of their obligation to test backflow prevention assemblies;

(10) The schedule and procedures for routine maintenance of water main valves, combination air vacuum release valves, fire hydrants, and valves;

(11) The schedule and program for maintenance and calibration of source flow meters;

(12) The qualifications and training of operating personnel including water treatment and cross connection certification; and

(13) The program for bio-film control in water mains.

C. Submission of Summary of O&M Plan for Water Utilities to the Commission

(1) Each water utility shall have on file a summary of its current O&M plan(s), electronically or in hard copy form, with the Division of Water and Audits, or its successor. The submission of these O&M plans shall be subject to the protections against unauthorized disclosure as provided by Public Utilities Code Section 583 and the corresponding exclusion from public inspection provided by General Order 66-C, Section 2.2.

(2) When these O&M plans change substantially and at least every five years, the water utility shall file updated summaries.

D. Submission of Department O&M Plans for Water Utilities to the Commission

Any water utility that has prepared an O&M Plan for the Department shall submit a copy of such O&M Plan to the Commission. The submission of an O&M Plan shall be subject to the protections against unauthorized disclosure as provided by Public Utilities Code Section 583 and the corresponding exclusion from public inspection provided by General Order 66-C, Section 2.2.

E. Submission of O&M Plans for Wastewater System Utilities to the Commission

Each wastewater utility shall submit to the Commission a copy of the O&M Plan required by the State Board General Order 0003-2006 (May 1, 2006, or its successor.) The submission of the O&M Plan shall be subject to the protections against unauthorized disclosure as provided by Public Utilities Code Section 583 and the corresponding exclusion from public inspection provided by General Order 66-C, Section 2.2.

F. Availability of O&M Plan for Commission Review

The latest O&M plans shall be available for Commission review. In its Annual Reports, each water utility shall identify the location(s) of or the method for accessing (e.g., the website) its O&M plan.

2. Asset Management Requirements

A. Due to the water and wastewater industries' long lived infrastructure and high fixed costs, the effective management of the planning, construction, maintenance and operation of assets is a critical component in delivering good customer service and ensuring the ongoing viability of services.

B. Effective asset management helps achieve or maintain service and other business performance requirements, manage risks, and improve efficiency. To support the asset management system requirements all utilities shall conduct regular reviews of their asset management system, employing either internal or external resources, as appropriate. Utilities shall report to the Commission on any major plans to retrofit existing facilities, use of cathodic protection programs, and other efforts to minimize deterioration and extend service life. The Commission may determine whether additional third-party review of a utility's asset management plan, as a recoverable cost, is warranted.

C. Wastewater systems shall maintain their sanitary sewer management plan according to the State Board General Order GO-0003, 2006, or its successor.

3. Emergency/Disaster Response Plan

A. Each water utility shall have an Emergency Response Plan pursuant to the Department's requirements, as set by the US EPA, Government Code Section 8607.2, or its successor.

B. Each wastewater system shall have an Emergency Response Plan pursuant to the State Board GO-0003, 2006, or its successor.

4. Records and Reports

See Appendix C for retention schedules.

A. System Plans, Maps, Drawings and Other Records

All water and wastewater system utilities shall have on file at their principal or local office plans, maps, drawings or other records of all system facilities. The plans, maps, drawings or other records shall be clear and legible. At a minimum these records will include:

(1) Location of all pumping stations, diversion works, water or sewer treatment plants, sources of supply, storage facilities, size, type of material and location of all mains (including recycled water mains) and ditches, including valves and sluice gates, gauges, interconnections with other systems and fire hydrants;

(2) Location, size and material of each service line;

(3) A schematic drawing or map of all pumping stations, water or wastewater treatment plants to show the size and location of all major equipment, pipelines, connections, valves and other equipment; and

(4) The date of construction of all plant.

B. Updates and Review

(1) The water and wastewater system(s) plans, maps, drawings and other records shall be updated as significant changes occur, and maintained until replaced or superseded by updated plans or drawings.

(2) The most current plans, drawings, maps, and other records shall be available for Commission review.

C. Underground Damage Prevention

The utility shall comply with all California regulations on underground damage prevention.

5. Water Treatment and Water Distribution Operators

A. General

The utility shall ensure that all water treatment and water distribution facilities are operated by personnel appropriately certified by the Department. Water treatment and water distribution certification are governed by Articles 1 through 5 of Title 22, Division 4, Chapter 13, and Article 2 of Title 22, Division 4, Chapter 15, or its successor.

B. Treatment Facility Operator Certification

All treatment facility operators shall be certified by the Department for the functions they perform.

C. Distribution System Operator Certification

All distribution system operators shall be certified by the Department for the functions they perform.

D. Cross-Connection Operator Certification

All cross-connection operators shall be certified by the California/Nevada AWWA, or equivalent organization.

E. Wastewater Treatment and Wastewater Distribution Operators

All wastewater treatment and wastewater distribution operators shall be certified by the State Water Resources Control Board, Office of Operator Certification.

6. Pressures

A. Variations in Pressure

Each potable water distribution system shall be operated in a manner to assure that the minimum operating pressure at each service connection throughout the distribution system is not less than 40 psi nor more than 125 psi, except that during periods near PHD the pressure may not be less than 30 psi and that during periods of hourly minimum demand the

pressure may be not more than 150 psi. Subject to the minimum pressure requirements of 40 psi, variations in pressures under normal operation shall not exceed 50% of the average operating pressure.

The average operating pressure shall be determined by computing the arithmetical average of at least 24 consecutive hourly pressure readings.

B. New Systems

Each new distribution system shall be designed to provide a minimum operating pressure at each service connection of not less than 40 psi during PHD. If a utility cannot meet this requirement as a result of cost and/or system limitation, the utility must request an exemption in accordance with Section I.8.A of this General Order.

C. Changes to Existing Distribution Systems

Changes shall be designed to maintain an operating pressure at each service connection of not less than 40 psi during PHD. If a utility cannot meet this requirement as a result of cost and/or system limitation, the utility must request an exemption in accordance with Section I.8.A of this General Order.

D. Pressure Requirement Exceptions

A water utility may furnish service to a customer at less than the pressure requirement specified in this General Order, if the customer is fully advised of the conditions under which service will be provided, and a customer agreement is secured in writing. The limited nature of the service shall also be recorded as a deed restriction on the property. The properties receiving service at other than specified operating pressures specified in this General Order shall be identified on the utility's service area map.

E. Pressure Recorders

Each utility shall maintain one or more pressure recorders for each separately operated system for the purpose of making pressure surveys as required by these rules. These recorders shall be able to record the pressure experienced on such a system and shall be able to record a continuous 24-hour test. Each utility serving 1000 or more customers in a separately operated system or 1000 or more customers in any separately operated system of a multi-system utility shall maintain one

or more of these pressure recorders in service at some representative points, as determined by the utility.

F. Pressure Surveys

(1) At regular intervals, but not less than once each year, each utility shall make a survey of pressures in its distribution system of sufficient magnitude to indicate the pressures maintained at representative points on its system. Such surveys should be made at or near the period of PHD and MDD. The pressure records for these surveys shall show the date and time of beginning and end of the test and the location at which the test was made.

(2) Records of these pressure surveys shall be maintained by the utility for a period of at least three years or after the next general rate case filing, whichever is longer, and shall be made available to representatives, agents or employees of the Commission upon request.

VIII. Customer Service and Reporting Standards for Water and Wastewater Utilities

1. General

Consumers expect and should receive service that is consistently adequate, reliable, and in compliance with applicable water quality standards. Standardized reporting requirements and regular reporting are necessary for regulators to be able to monitor service quality and changes in performance. Reporting requirements should be carefully designed to yield accurate data that is uniform and consistent.

2. Reporting

When a utility is required to report the following information it shall do so in accordance with Appendix E of this General Order or the utility's tariffs.

(A) Performance results including meter reading and work completion standards shall be aggregated quarterly, and shall be reported annually to the Commission in the utility's annual report.

(B) Reports on company-wide performance shall be made in conjunction with each utility's annual report to the Commission's Division of Water and Audits (or its successor), with copies provided to the DRA (or its successor).

(C) Reports shall include both annual and quarterly averages. Annual averages shall be derived from raw data, not by averaging quarterly averages.

(D) Where quarterly performance is substantially out of compliance with an applicable standard (defined in the context of each performance measure), the utility shall within 30 days of the end of the quarter in which this provision is triggered, submit a plan to Division of Water and Audits, or its successor, indicating how it will remedy the deficiency.

(E) Performance shall be evaluated and reported as a percentage to one decimal place for all performance areas unless otherwise specified. Actual performance shall be rounded up when the relevant decimal place is 5 or more. The utility shall retain all of its reports that support the results for each of the performance areas for a period of not less than 36 months after the results are reported. The utility shall provide these reports upon request to the Commission.

(F) The utility shall explain in its annual report any change to the utility's measurement protocol or to the internal reporting methods that are used to obtain the data measured.

(G) The utility's annual report shall identify any missing data or events that could reasonably affect the quality of the data reported.

(H) The utility may seek a variance from any applicable performance standard in accordance with Section I.8.A of this General Order. A variance may be granted for demonstrated good cause, such as where the circumstances causing the failure were beyond the utility's control, and the utility can demonstrate that its level of preparedness and response was reasonable in light of the cause of the failure.

3. Telephone Performance Standards

Each utility shall provide emergency telephone access, including after-hours access, for its customers. If a telephone complaint pertains to an urgent service issue presenting health or safety concerns, the utility shall respond within 24 hours. Class A and B water utilities shall comply with telephone performance standards set forth in Appendix E of this General Order.

4. Billing Performance Standards

(A) Class A and B water utilities shall establish billing performance standards as set forth in Appendix E of this General Order.

(B) Performance results shall be reported in accordance with Section VIII.B.

5. Meter Reading Performance Standards

(A) Class A and B water utilities shall establish meter reading performance standards in accordance with Appendix E of this General Order.

(B) Each utility shall report their performance results in accordance with Section VIII.B.

6. Work Completion Performance Standards

(A) When scheduling appointments, the utility will provide the customer with a four-hour period during which the utility representative will be at the customer's premises. The utility must attempt to notify the customer as soon as it is aware that the meeting time must be changed. Class A and B water utilities shall determine the performance of the scheduled appointment in accordance with Appendix E of this General Order.

(B) Class A and B water utilities shall determine the percentage of customer-requested work not completed on or before the scheduled date in accordance with Appendix E of this General Order.

(C) The utility must correct all problems that result from the flooding of sewers for which it is responsible within 48 hours of being informed of the flooding event. Extreme precipitation events, such as 100 or 500 year floods, shall be addressed on a best efforts basis by the utility.

7. Response to Customer and Regulatory Complaint Performance Standards

(A) Upon complaint to the utility by a customer communicated to the utility's office, by letter, by telephone, or by email or to the utility's internet web page if it supplies a site for customer service, the utility shall make every reasonable effort to contact the customer within three business days to acknowledge receipt of the complaint.

(B) The utility shall provide, within 10 business days of receipt, a substantive response to customer complaints expressed directly to the utility by any method of contact.

(C) The utility shall provide a substantive response to informal customer complaints to the Commission within 20 business days after the complaint has been forwarded to the utility by the Commission.

(D) If the utility needs additional time to respond fully to a complaint received directly from a customer or indirectly by way of the Commission, the utility shall within the initial response period request a specific additional

time for response and shall provide a final response within the requested additional time.

(E) The utility shall keep a record of each complaint, categorized by the nature of the complaint, that shows the name and address of the complainant, the date and nature of the complaint, and the nature and date of adjustment or disposition, for a period lasting from the time the complaint is filed with the utility until issuance of the principal decision in its next general rate case.

(F) After issuance of the general rate case final decision subsequent to the filing of the complaint, the utility shall retain, at its option, either the original complaints or a summary of such complaints. Inquiries with reference to rates or charges, which require no further action by the utility, need not be recorded. Complaints that are determined to be out of the direct control of the utility (including but not limited to complaints relating to natural disasters) may be recorded in a summary list only.

(G) Class A and B water utilities shall establish a customer and regulatory complaint performance measure as set forth in Appendix E.

APPENDIX A
NON POTABLE WATER SYSTEMS

Sections of Rules Governing Water Service Including Minimum Standards for Design and Construction which shall be applicable to utility water systems supplying water not intended or claimed to be potable from ditches, canals or other conduits.

Section I – General

All paragraphs of this section, except Paragraph 4, (1) and (5)

Section II – Standards of Service

Paragraphs 2 B. (1) and (8), 3 and 4 of this section, except that paragraph 3C. shall not apply to scheduled interruptions as provided in applicable tariffs.

Section III – Standards of Design and Construction

None.

Section IV – Measurement of Service

All paragraphs of the section, except when sales are measured by other than displacement meters as provided in applicable tariff schedules only paragraphs 1C, 3A and 3E, 5, 6A, and 7 shall apply.

Section V – Rates and Billing

All paragraphs of the section.

APPENDIX A
NON-POTABLE WATER SYSTEMS

Section VI – Fire Protection Standards

None

Section VII – Operations and Maintenance, Records and Reports

Paragraphs 1, 2, 3 A (1) and 3 C.

Section VIII - Customer Service and Reporting Standards

Paragraphs 1, 2, 3, 4, 5, 6 A through C and 7 A through G.

(END OF APPENDIX A)

APPENDIX B
SEWER SYSTEMS

Sections of Rules Governing Water Service Including Minimum Standards for Design and Construction which shall NOT be applicable to sewer system utilities.

Section I – General

Paragraph 3, (1), (2), (6), (7) and (8)

Section II – Standards of Service

Paragraphs 2 A. (1) through (7)

Paragraphs 2 B. (1) through (5)

Section III – Standards of Design and Construction

Paragraphs 1 A. (3) and B

Paragraphs 2 A. (1)

Paragraphs 3 through 7

Section IV – Measurement of Service

Paragraphs 1 A and C

Paragraphs 2 B and C

Paragraphs 3, 5, and 6

Section V – Rates and Billing

Paragraph 2

Section VI – Fire Protection Standards

(ALL)

APPENDIX B
SEWER SYSTEMS

Section VII – Operations and Maintenance, Records and Reports

Paragraphs 1 A and B

Paragraphs 2 A and B

Paragraphs 3 A

Paragraphs 4 A (2)

Paragraphs 5 A through D

Paragraphs 7 and 8 (all)

Section VIII - Customer Service and Reporting Standards

Paragraph 7 G

(END OF APPENDIX B)

APPENDIX C
RECORDS RETENTION SCHEDULES
(Resolution No. A-4691, July 12, 1977)

PUBLIC UTILITIES COMMISSION
REGULATIONS TO GOVERN THE PRESERVATION OF RECORDS OF WATER UTILITIES, CLASSES A, B & C

GENERAL INSTRUCTIONS

SCOPE OF THIS PART

The regulations in this part apply to all records prepared by or on behalf of water utilities, Classes A, B and C.

The regulations in this part shall not be construed as excusing compliance with any other lawful requirement for the preservation of records for periods longer than those prescribed herein.

DESIGNATION OF SUPERVISORY OFFICIAL

Each water utility subject to the regulations herein shall designate one or more persons and positions with official responsibility to supervise the utility's program for preservation and the authorized destruction of its records.

PROTECTION AND STORAGE OF RECORDS

The water utility shall provide reasonable protection for records subject to the regulations herein. Records shall be arranged in such a manner as to be easily identifiable and accessible to representatives of this Commission.

MICROFILM AND TAPE CERTIFICATION

All microfilm and tape records shall contain labels including the title, date prepared, name of official responsible for validating the data, date of completion,

and certification that the records are true and accurate reproductions of the original records.

All film stock shall be approved operationally-permanent record microcopying type, which meets the current specifications of the National Bureau of Standards.

RETENTION PERIODS

The retention periods specified in these regulations are minimum periods. The utility may retain records for longer periods when appropriate.

PREMATURE DESTRUCTION OR LOSS OF RECORDS

When records are destroyed or lost before the expiration of the prescribed period of retention, a certified statement listing the records destroyed and prescribing the circumstances of accidental or other premature destruction or loss shall be filed with the Commission within sixty (60) days from the date of discovery of such destruction.

RECORDS OF SERVICES PERFORMED BY AFFILIATE

The water utilities to which the regulations herein apply shall assure the availability of records of services performed by associated and affiliated companies for the periods indicated herein, as are necessary, to support the cost of services rendered to it by an associated or affiliated company.

RECORDS OF INTERRUPTIONS

Records of interruption shall be maintained by the utility for a period of 4 years or after the next general rate case filing, whichever period is longer.

APPENDIX C
RECORDS RETENTION SCHEDULES

Water Quality Records Retention

Results of water quality testing, including tests conducted in connection with disinfection of new or repaired mains and disinfection of reservoirs or wells, records of flushing of mains, and records of reservoir inspections and cleaning, shall be maintained for at least three years.

APPENDIX C
RECORDS RETENTION SCHEDULES

SCHEDULE OF RECORDS AND PERIODS OF RETENTION

Description	Retention Period
CORPORATE AND GENERAL	
1. Capital stock records:	6 years after cancellation or other closing of accounts.
2. Proxies and voting lists:	3 years.
3. Annual reports or formal communications or statements to stockholders:	Life of corporation.
4. Debt security records:	6 years after redemption, payment or cancellation.
5. Filings with and authorizations by the Commission:	25 years or until all securities covered are retired, whichever is shorter.
6. Corporate organizational documents:	Life of corporation, with the exception of permits, deeds and title documents which shall be retained for 6 years after termination or disposition of property.
7. Contracts and agreements (except contracts provided for elsewhere):	6 years with the following exceptions:
(a) Contracts or agreements for the acquisition or disposition of investments (excluding temporary cash investments):	25 years after disposition.
(b) Memoranda essential to clarifying or explaining provisions of contracts listed above:	For the same periods as contracts to which they relate.

APPENDIX C
RECORDS RETENTION SCHEDULES

SCHEDULE OF RECORDS AND PERIODS OF RETENTION

Description	Retention Period
CORPORATE AND GENERAL, continued	
(c) Card or book records of contract, leases, and agreements made, showing dates of expirations and of renewals, memoranda of receipts and payments under such contacts, etc.:	For the same periods as contracts to which they relate
8. Accountants' and auditors' reports, internal and external:	7 years after date of report or Commission audit, whichever comes last
9. Automatic data processing records:	Retain original source data for the periods prescribed elsewhere in the schedule; retain all other data as long as part of active program
10. General and subsidiary ledgers and journals; journal vouchers, journal entries (including supporting detail), vouchers and voucher registers:	50 years
11. Trial balance sheets of general and subsidiary ledgers:	3 years
12. Cash books, general and subsidiary or auxiliary books:	10 years after close of fiscal year

APPENDIX C
RECORDS RETENTION SCHEDULES

SCHEDULE OF RECORDS AND PERIODS OF RETENTION

Description	Retention Period
CORPORATE AND GENERAL, continued	
13. Accounts receivable and supporting records:	3 years
14. Records of securities owned, in treasury, or with custodians (excluding temporary investment of cash):	6 years after disposition of investment
15. Payroll records and insurance records:	6 years, except where information transferred to other records
16. Assignments, attachments, and garnishments:	None
17. Records of injuries and damages:	2 years after settlement or other disposition

APPENDIX C
RECORDS RETENTION SCHEDULES

SCHEDULE OF RECORDS AND PERIODS OF RETENTION

Description	Retention Period
OPERATIONS AND MAINTENANCE	
18. Production records of sources of supply, pumping, transmission, and distribution:	15 years, except as follows:
(a) Water reports showing purchases and exchanges:	25 years
(b) Water treatment records:	10 years
(c) Daily dispatch logs:	1 year
(d) Customer service records:	5 years
(e) Maintenance work and job orders:	6 years
(f) Equipment repair records:	Life of equipment
19. Personnel records including employees' benefit and pension records, and operating and procedural instructions issued by the company to employees:	3 years after termination of employment, plan or instructions
20. Plant and depreciation records, including plant inventory, drilling, appraisals, engineering records, construction records and contracts relating to above.	50 years

APPENDIX C
RECORDS RETENTION SCHEDULES

SCHEDULE OF RECORDS AND PERIODS OF RETENTION

Description	Retention Period
MISCELLANEOUS	
21. All purchase and supply records:	6 years
22. All revenue, accounting and collecting records:	10 years, except as follows:
(a) Where refunds required:	6 years after refund
(b) Documents relating to donations and contributions:	50 years
(c) Published rates and service schedule:	50 years
23. Tax records:	7 years after settlement
24. Treasury records (funds, deposits, receipts and disbursements):	Completion of annual audit by independent accountants
25. All annual reports to the Commission and special reports relating to plant and utility property:	Life of corporation
26. All other reports and documents:	Fulfillment of regulatory requirements

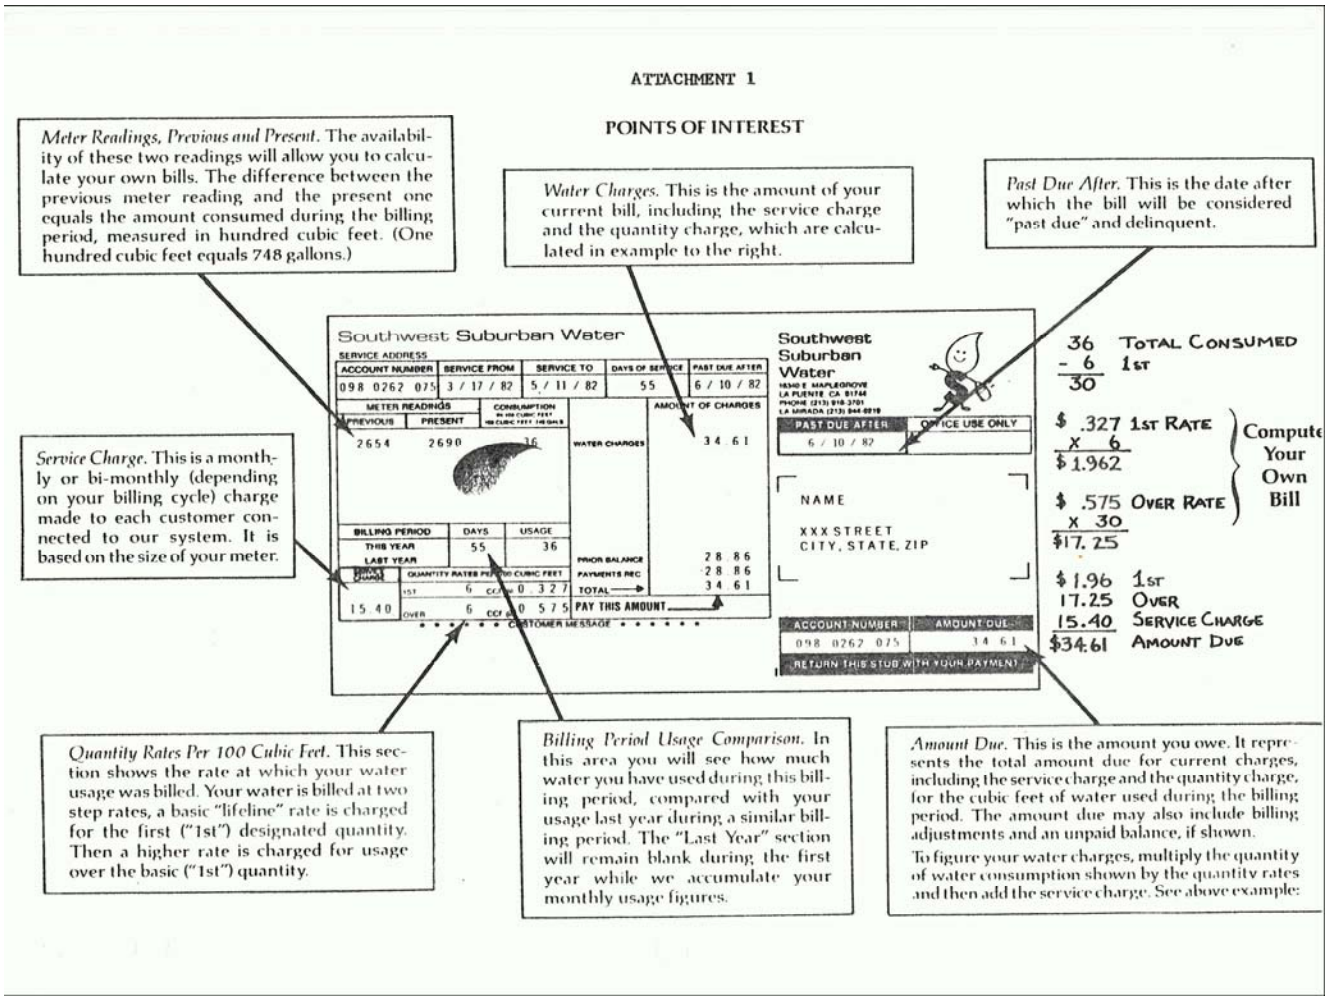
27.	Life or mortality study data for depreciation purposes:	Life of corporation

(END OF APPENDIX C)

APPENDIX D
REPORT CARD BILLING

This Appendix explains the minimum amount of information that must be included with the bill to the customer.

Meter Readings: Previous and Present; Service Charge; Commodity Charge; Past due after date; Quantity per billing unit (Hundred Cubic Feet, thousand Gallons etc.); Billing period; Usage Comparison; Amount Due.



(END OF APPENDIX D)

APPENDIX E
CUSTOMER SERVICE AND REPORTING STANDARDS FOR CLASS A AND B WATER UTILITIES THAT EMPLOY AUTOMATED CALL DISTRIBUTION SYSTEMS

1. Telephone Performance Standards

To ensure that customer inquiries have timely responses during normal business hours, all water utilities which employ automated call distribution systems (ACD) shall comply with telephone performance standards and reporting criteria as follows:

(A) Call answer performance measures

Call Answering Service Level: Percentage of customers reaching a utility representative during normal business hours within 30 seconds after requesting to speak with a customer service representative (CSR)

Performance shall be calculated as follows:

Number of calls reaching a utility representative within 30 seconds divided by number of attempts to reach a utility representative.

Performance measure: greater than or equal to 80%

For this performance measure, substantially out of compliance is deemed to be less than 60%

Source of data: data obtained from the utility's ACD system. The data will include all calls reaching the ACD during the normal business hours.

(B) Abandoned call rate performance measure

Abandoned call rate during normal business hours: Percentage of calls abandoned before reaching a utility representative (requested by the customer) during normal business.

Performance shall be calculated as follows:

Number of calls abandoned/Number of attempts to reach a utility representative

Abandoned call rate performance measure: less than or equal to 5%.

Source of data: The standard shall be measured by using data obtained from the utility's ACD system during normal business hours

2. Billing Performance Standards

(A) Bill rendering performance measure

Percentage of bills rendered (mailed) within seven calendar days of the scheduled billing date. Performance shall be calculated as follows:

Number of bills not rendered within seven calendar days of the scheduled billing date/Total number of bills scheduled to be rendered.

Exclusions: The measurement will exclude accounts that were activated within 10 calendar days prior to the normal billing cycle; accounts that are scheduled to receive a final bill within 10 calendar days after the normal billing cycle; off-system sales; utility use accounts; periods during which rates are changed.

Bill rendering performance measure: greater than or equal to 99%

Source of data: This standard shall be measured by using data obtained from the utility's Customer Information System, or equivalent records. Results shall be reported to one decimal place.

(B) Bill accuracy performance measure

Bills found inaccurate: Percentage of bills found inaccurate after being sent to customers, brought to a utility's attention either as result of customer complaints and/or by the utility's own efforts. Performance shall be calculated as follows:

Number of bills rendered inaccurately for the cycle/Total number of bills rendered for the billing cycle

Exclusions: This standard does not include bills found to be inaccurate strictly as result of estimation, bills where the inaccuracy does not affect the calculation of the bill, or where the fault does not lie with the utility.

Percentage of inaccurate bills performance measure: less than or equal to 3.0%

Source of data: This standard shall be measured by using data obtained from the utility's Customer Information System or equivalent records. Results shall be reported to the second decimal place.

(C) Payment posting error performance measure

Payment posting errors: Percentage of customer payments posted incorrectly due to the utility's error. Performance shall be calculated as follows:

Number of payment posting errors/Total number of payments posted

Payment posting error performance measure*:* less than or equal to 1.0 %

Source of data: This Standard shall be measured by using data obtained from the utility's Customer Information System or equivalent manual records.

(D) Final Read and Final Bill

The utility is required to read the customer's meter on the day the customer specifies so long as five (5) calendar days notice is given by the customer. The utility will provide a final bill within 14 calendar days of the meter read.

APPENDIX E
CUSTOMER SERVICE AND REPORTING STANDARDS
FOR CLASS A AND B UTILITIES

3. Meter Reading Performance Standard

(A) Percentage of actual meter readings per billing cycle: Percentage of meters not read each cycle in relation to the numbers that were scheduled to be read, exclusive of meters covered by AMR. Performance shall be calculated as follows:

Number of scheduled meters not read/Number of meter readings scheduled

Meter reading performance measure: less than or equal to 3.0%

Source of data: Data shall be obtained from the utility's Customer Information System.

4. Work Completion Performance Standards

(A) Scheduled appointments performance measure

Keeping Scheduled Appointments: When scheduling appointments, the utility will provide the customer with a four-hour period during which the utility representative will be at the customer's premises. The utility must attempt to notify the customer as soon as it is aware that the meeting time must be changed. Performance shall be calculated as follows:

Number of scheduled appointments missed/Number of scheduled appointments

Scheduled appointments performance measure: less than or equal to 5.0%

(B) Customer requested work completion performance measure

Percentage of customer-requested work not completed on or before the scheduled date: The percentage of jobs resulting from customer requests for meter turn-ons, meter read-over, disconnects and reconnects (collectively "customer orders") that are not completed on or before the scheduled date. Performance shall be calculated as follows:

Number of customer orders not completed on or before the scheduled date/Total number of customer orders scheduled and completed in the reporting month.

Exclusions: When an event outside of the utility's control occurs resulting in the work not being completed as promised, utility will renegotiate the scheduled date with the customer.

Customer requested work performance measure: less than or equal to 5%

Source of data: For all customer orders, data shall be obtained from the utility's Customer Information System or equivalent record.

When a customer calls for included work, a service request is created for the date promised to the customer. Reports are generated monthly of all meter orders closed during the prior month and are reviewed for the following exclusions: (1) delayed at the customer's request or because the customer was not ready for the work to be performed, (2) meter order request not the result of a customer request but rather an internal request for meter order work, (3) non-regulated business activities.

5. Response to Customer and Regulatory Complaints Performance Standard

(A) Rate of complaints to the Commission's Consumer Affairs Branch (CAB): Percentage of customers who file complaints with the Commission's CAB. Performance shall be calculated as follows:

Number of complaints reported annually to the utility by the CAB/Total number of customers

Performance measure: less than or equal to 0.1%

Source of data: Data shall be obtained from the quarterly reports provided by the Commission to the utility from the Commission's Consumer Affairs Tracking System. Results shall be reported to the second decimal place.

APPENDIX E
CUSTOMER SERVICE AND REPORTING STANDARDS
FOR CLASS A AND B UTILITIES

6. Service Interruption

Each Utility shall keep a complete record of all interruptions, both emergency and scheduled, when more than 10 service connections are interrupted. These records of interruptions are to be kept with the utility's permanent records and shall include:

1. Date and time of service interruption
2. Date and time service is restored
3. Number of service connections affected
4. Equipment that operated or failed
5. Cause of interruption
6. Actions required to restore service
7. Identification of person reporting
8. Steps taken to prevent recurrence

(END OF APPENDIX E)

Appendix F – 2019 California Code of Regulations Title 22, Section 64554

Cal. Code Regs. Tit. 22, § 64554 - New and Existing Source Capacity

Current through Register 2021 Notice Reg. No. 52, December 24, 2021

(a) At all times, a public water system's water source(s) shall have the capacity to meet the system's maximum day demand (MDD). MDD shall be determined pursuant to subsection (b).

(1) For systems with 1,000 or more service connections, the system shall be able to meet four hours of peak hourly demand (PHD) with source capacity, storage capacity, and/or emergency source connections.

(2) For systems with less than 1,000 service connections, the system shall have storage capacity equal to or greater than MDD, unless the system can demonstrate that it has an additional source of supply or has an emergency source connection that can meet the MDD requirement.

(3) Both the MDD and PHD requirements shall be met in the system as a whole and in each individual pressure zone.

(b) A system shall estimate MDD and PHD for the water system as a whole (total source capacity and number of service connections) and for each pressure zone within the system (total water supply available from the water sources and interzonal transfers directly supplying the zone and number of service connections within the zone), as follows:

(1) If daily water usage data are available, identify the day with the highest usage during the past ten years to obtain MDD; determine the

average hourly flow during MDD and multiply by a peaking factor of at least 1.5 to obtain the PHD.

(2) If no daily water usage data are available and monthly water usage data are available:

(A) Identify the month with the highest water usage (maximum month) during at least the most recent ten years of operation or, if the system has been operating for less than ten years, during its period of operation;

(B) To calculate average daily usage during maximum month, divide the total water usage during the maximum month by the number of days in that month; and

(C) To calculate the MDD, multiply the average daily usage by a peaking factor that is a minimum of 1.5; and

(D) To calculate the PHD, determine the average hourly flow during MDD and multiply by a peaking factor that is a minimum of 1.5.

(3) If only annual water usage data are available:

(A) Identify the year with the highest water usage during at least the most recent ten years of operation or, if the system has been operating for less than ten years, during its years of operation;

(B) To calculate the average daily use, divide the total annual water usage for the year with the highest use by 365 days; and

(C) To calculate the MDD, multiply the average daily usage by a peaking factor of 2.25.

(D) To calculate the PHD, determine the average hourly flow during MDD and multiply by a peaking factor that is a minimum of 1.5.

(4) If no water usage data are available, utilize records from a system that is similar in size, elevation, climate, demography, residential property size, and metering to determine the average water usage per service connection. From the average water usage per service connection, calculate the average daily demand and follow the steps in paragraph (3) to calculate the MDD and PHD.

(c) Community water systems using only groundwater shall have a minimum of two approved sources before being granted an initial permit The system shall be capable of meeting MDD with the highest-capacity source off line.

(d) A public water system shall determine the total capacity of its groundwater sources by summing the capacity of its individual active sources. If a source is influenced by concurrent operation of another source, the total capacity shall be reduced to account for such influence. Where the capacity of a source varies seasonally, it shall be determined at the time of MDD.

(e) The capacity of a well shall be determined from pumping data existing prior to March 9, 2008 or in accordance with subsection (f) or (g). Prior to conducting a well capacity test pursuant to subsection (g), a system shall submit the information listed below to the State Board for review and approval. For well capacity tests conducted pursuant to subsection (f), the information shall be submitted to the State Board if requested by the State Board.

(1) The name and qualifications of the person who will be conducting the test;

(2) The proposed test's pump discharge rate, based on the design rate determined during well development and/or a step-drawdown test.

(3) A copy of a United States Geological Survey 7 1/2-minute topographic map of the site at a scale of 1:24,000 or larger (1 inch equals 2,000 feet or 1 inch equals less than 2,000 feet) or, if necessary, a site sketch at a scale providing more detail, that clearly indicates;

(A) The well discharge location(s) during the test, and

(B) The location of surface waters, water staff gauges, and other production wells within a radius of 1000 feet;

(4) A well construction drawing, geologic log, and electric log, if available;

(5) Dates of well completion and well development, if known;

(6) Specifications for the pump that will be used for the test and the depth at which it will draw water from the well;

(7) A description of the methods and equipment that will be used to measure and maintain a constant pumping rate;

(8) A description of the water level measurement method and measurement schedule;

(9) For wells located in or having an influence on the aquifer from which the new well will draw water, a description of the wells' operating schedules and the estimated amount of groundwater to be extracted, while the new well is tested and during normal operations prior to and after the new well is in operation;

(10) A description of the surface waters, water staff gauges, and production wells-shown in (3)(B);

(11) A description of how the well discharge will be managed to ensure the discharge doesn't interfere with the test;

(12) A description of how the initial volume of water in the well's casing, or bore hole if there is no casing at the time, will be addressed to ensure it has no impact on the test results; and

(13) A written description of the aquifer's annual recharge.

(f) To determine the capacity of a well drilled in alluvial soils when there is no existing data to determine the capacity, a water system shall complete a constant discharge (pumping rate) well capacity test and determine the capacity as follows:

(1) Take an initial water level measurement (static water level) and then pump the well continuously for a minimum of eight hours, maintaining the pump discharge rate proposed in subsection (e)(2);

(2) While pumping the well, take measurements of the water level drawdown and pump discharge rates for a minimum of eight hours at a frequency no less than every hour;

(3) Plot the drawdown data versus the time data on semi-logarithmic graph paper, with the time intervals on the horizontal logarithm axis and the drawdown data on the vertical axis;

(4) Steady-state is indicated if the last four hours of drawdown measurements and the elapsed time yield a straight line in the plot developed pursuant to subsection (3). If steady-state is not achieved, the pump discharge rate shall be continued for a longer period of time or adjusted, with paragraphs (2) and (3) above repeated, until steady-state is achieved.

(5) Discontinue pumping and take measurements of the water level drawdown no less frequently than every 15 minutes for the first two hours and every hour thereafter for at least six hours or until the test is complete; and

(6) To complete the test, the well shall demonstrate that, within a length of time not exceeding the duration of the pumping time of the well capacity test, the water level has recovered to within two feet of the static water level measured at the beginning of the test or to a minimum of ninety-five percent of the total drawdown measured during the test, whichever is more stringent.

(7) The capacity of the well shall be the pump discharge rate determined by a completed test.

(g) The capacity of a well whose primary production is from a bedrock formation, such that the water produced is yielded by secondary permeability features (e.g., fractures or cracks), shall be determined pursuant to either paragraph (1) or (2) below.

(1) The public water system shall submit a report, for State Board review and approval, proposing a well capacity based on well tests and the evaluation and management of the aquifer from which the well draws water. The report shall be prepared and signed by a California registered geologist with at least three years of experience with groundwater hydrology, a California licensed engineer with at least five years of experience with groundwater hydrology, or a California certified hydrogeologist. Acceptance of the proposed well capacity by the State Board shall, at a minimum, be based on the State Board's review and approval of the following information presented in the report in support of the proposed well capacity:

(A) The rationale for the selected well test method and the results;

(B) The geological environment of the well;

(C) The historical use of the aquifer;

(D) Data from monitoring of other local wells;

(E) A description of the health risks of contaminants identified in a source water assessment, as defined in section 64401.57 of Title 22, and the likelihood of such contaminants being present in the well's discharge;

(F) Impacts on the quantity and quality of the groundwater;

(G) How adjustments were made to the estimated capacity based on drawdown, length of the well test, results of the wells test, discharge options, and seasonal variations and expected use of the well; and

(H) The well test(s) results and capacity analysis.

(2) During the months of August, September, or October, conduct either a 72-hour well capacity test or a 10-day well capacity test, and determine the well capacity using the following procedures:

(A) Procedures for a 72 hour well capacity test:

1. For the purpose of obtaining an accurate static water level value, at least twelve hours before initiating step 2., pump the well at the pump discharge rate proposed in subsection (e)(2) for no more than two hours, then discontinue pumping;

2. Measure and record the static water level and then pump the well continuously for a minimum of 72 hours starting at the pump discharge rate proposed in (e)(2);

3. Measure and record water drawdown levels and pump discharge rate:

a. Every thirty minutes during the first four hours of pumping,

b. Every hour for the next four hours, and

c. Every four hours thereafter until the water drawdown level is constant for at least the last four remaining measurements, and;

4. Plot the drawdown and pump discharge rate data versus time data on semi-logarithmic graph paper, with the time intervals on the horizontal logarithmic axis and the drawdown and pump discharge rate data on the vertical axis.

(B) Procedures for a 10 day well capacity test:

1. For the purpose of obtaining an accurate static water level value, at least twelve hours before initiating step 2., pump the well at the pump discharge rate proposed in subsection (e)(2) for no more than two hours, then discontinue pumping;

2. Measure and record the static water level and then pump the well continuously for a minimum of 10 days starting at the pump discharge rate proposed in (e)(2);

3. Measure and record water drawdown levels and pumping rate:

a. Every thirty minutes during the first four hours of pumping,

b. Every hour for the next four hours,

c. Every eight hours for the remainder of the first four days,

d. Every 24 hours for the next five days, and

e. Every four hours thereafter until the water drawdown level is constant for at least the last four remaining measurements, and;

4. Plot the drawdown and pump discharge rate data versus time data on semi-logarithmic graph paper, with the time intervals on the horizontal logarithmic axis and the drawdown and pump discharge rate data on the vertical axis.

(C) To complete either the 72-hour or 10-day well capacity test the well shall demonstrate that, within a length of time not exceeding the duration of the pumping time of the well capacity test, the water level has recovered to within two feet of the static water level measured at the beginning of the well capacity test or to a minimum of ninety-five percent of the total drawdown measured during the test, whichever is more stringent. If the well recovery does not meet these criteria, the well capacity cannot be determined pursuant to subsection (g)(2) using the proposed pump rate. To demonstrate meeting the recovery criteria, the following water level data in the well shall be measured, recorded, and compared with the criteria:

1. Every 30 minutes during the first four hours after pumping stops,

2. Hourly for the next eight hours, and

3. Every 12 hours until either the water level in the well recovers to within two feet of the static water level measured at the beginning of the well capacity test or to a at least ninety-five percent of the total drawdown measured during the test, which ever occurs first.

(D) Following completion of a 72-hour or 10-day well capacity test, the well shall be assigned a capacity no more than:

1. For a 72-hour test, 25 percent of the pumping rate at the end of a completed test's pumping.

2. For a 10-day test, 50 percent of the pumping rate at the end a completed test's pumping.

(h) The public water system shall submit a report to the State Board that includes all data and observations associated with a well capacity test conducted pursuant to subsection (f) or (g), as well as the estimated capacity determination methods and calculations. The data collected during pumping and recovery phases of the well capacity tests shall be submitted in an electronic spreadsheet format in both tabular and graphic files.

(i) An assigned well capacity may be revised by the State Board if pumping data collected during normal operations indicates that the assigned well capacity was not representative of the actual well capacity.

(j) If directed by the State Board to do so, based on adverse conditions that may lead or may have led to a regional aquifer's inability to meet a water system's demand on such an aquifer, the water system shall submit a report to the State Board that includes regional aquifer recharge estimates and a water balance analysis. The report shall be prepared and signed by a California registered geologist with at least three years of experience with groundwater hydrology, a California licensed engineer with at least five years of experience with groundwater hydrology, or a California certified hydrogeologist.

(k) The source capacity of a surface water supply or a spring shall be the lowest anticipated daily yield based on adequately supported and documented data.

(l) The source capacity of a purchased water connection between two public water systems shall be included in the total source capacity of the purchaser if the purchaser has sufficient storage or standby source capacity to meet user requirements during reasonable foreseeable shutdowns by the supplier.

TRAFFIC STUDY
FOR THE PROPOSED
SPEEDWAY COMMERCE CENTER II SPECIFIC PLAN PROJECT
IN THE COUNTY OF SAN BERNARDINO

INTRODUCTION

Purpose and Study Objectives

This traffic study has been prepared to address the traffic-related issues associated with the proposed Speedway Commerce Center II Specific Plan (SCCIISP) project in unincorporated San Bernardino County. This traffic study has been conducted in accordance with the traffic study requirements of the County of San Bernardino and with the San Bernardino Association of Governments (SANBAG) Congestion Management Program (CMP).

This report includes a description of existing traffic conditions in the surrounding area, estimated project trip generation and distribution, and future traffic growth. Where necessary, circulation system improvements have been identified to address future traffic condition needs at the study locations. It should be noted that this LOS-based traffic study is not a CEQA-required document and does not identify impacts or mitigation.

PROJECT DESCRIPTION

Project Overview

The project site is located north of the San Bernardino Freeway (I-10) and San Bernardino Avenue in unincorporated San Bernardino County and within the City of Fontana Sphere of Influence (SOI). The project site is bounded by Cherry Avenue to the east, the Burlington Northern and Santa Fe (BNSF) Railroad to the north, the West Valley Materials Recycling Facility to the west, and California Steel Industries to the south and would surround the Auto Club Speedway (ASC) generally on three sides. The site is shown in its regional setting on Figure 1.

The Project encompasses approximately 433 acres of the approximately 522-acre site that is currently developed with the Auto Club Speedway (ACS), formerly California Speedway, in the County. The Project proposes conceptual land uses that include, but are not limited to, approximately 6.6 million square feet (SF) of high cube warehouse and e-commerce uses with approximately 12 acres (261,360 SF) of accessory commercial uses[1]. The Project site would also be developed with greenbelts, public roads, other support amenity features, and water detention areas. Construction of the Project, including recordation of final subdivision map(s) and design review may be progressively implemented in stages, provided that vehicular access, public facilities, and infrastructure are constructed to adequately service the development, or as needed for public health and safety. However, the actual phasing sequence and timeframe may vary depending on market conditions. A copy of the project site plan is provided on Figure 2.

[1] The Project would be developed in two phases. Phase 1 including E-Commerce and Truck Storage, and Phase 2 including High-Cube Short-Term Storage, High-Cube Cold Storage, and Commercial. Additional information can be found on Page 46 of this report.

Land Use Plan

Speedway Commerce Center II

FIGURE 2
SITE PLAN

PROPOSED SITE CIRCULATION

The Project site currently has access at Merrill Avenue, Rancho Vista Drive, and Randall Avenue off of Cherry Avenue on the site's eastern edge, and Napa Street and VIP Road on the site's western edge. The access at Randall Avenue is signalized.

Internal circulation currently includes Perimeter Road, Calabash Avenue, Back Strait Road, VIP Road, Entry Road, and Rancho Vista Drive. These internal roads may be modified or enhanced to accommodate the traffic trips anticipated with the Project. Private drives aisles are proposed to connect individual buildings within the Project area. Drive aisles would be located and sized at the time of review.

Vehicular Circulation

Four new public roads would be constructed to provide access to the Specific Plan's land uses and ACS. Vehicular circulation improvements proposed as part of the Project are as follows:

Cherry Avenue – Cherry Avenue is an existing roadway for which no improvements are proposed.

Street "A" - Street "A" is a proposed east-west public roadway which would be designed as a collector roadway. It would connect Cherry Avenue on the Project's eastern edge with existing Napa Street on the west. It would form an intersection with Rancho Vista Drive to the east of Cherry Avenue. Street "A" improvements would consist of a 96-foot right-of-way with four travel lanes, a 14-foot-wide painted median, and pedestrian walkways and parkway plantings. A 10-foot-wide multi-use pathway is proposed on the northern edge of the street. It is anticipated that the intersections of Street "A" at Street "B" and Street "A" at Street "C" would be signalized.

Street "D" - Street "D" is a proposed east-west public roadway which would be designed as a collector roadway. Street "D" would connect Cherry Avenue on the Project area's eastern edge and existing VIP Road on its western edge. The cross section for Street "D" is variable, with several different conditions and rights-of-way. See the Specific Plan for further details. It is anticipated that the intersections of Street "D" at Street "B" and Street "D" at Street "C" would be unsignalized.

VIP Access Road - VIP Access Road is an existing street which connects Street "D" (the existing southern perimeter road) to San Bernardino Avenue to the south. Improvements to VIP Road include a 50-foot right-of-way with two southbound travel lanes and one northbound travel lane.

Street's "B" and "C" - Street's "B" and "C" are proposed north-south public roadway which would be designed as collector roadways. They would serve as internal circulation routes and connect Street's "A" and "D". These streets would also serve as a pedestrian connection between the ACS and the seasonal Metrolink transit stop. Improvements for Streets "B" and "C" include a 60-foot right-of-way with two travel lanes, a 12-foot painted median, and six-foot sidewalks.

Transit/Rail

There are no existing public transit routes or stops adjacent to the Project area. The closest Omnitrans Transit System routes are Route 66 along W. Foothill Boulevard and Route 61 along San Bernardino Avenue. As the Project develops, the Transit System may assess the potential demand for these facilities in the area and may establish new or extended routes in the area. Coordination with Omnitrans would be required as the Project builds out to determine the need for future bus service to the Project site.

Metrolink is a commuter rail system serving Southern California region including Los Angeles, Orange, Riverside, San Bernardino, and Ventura counties, as well as to Oceanside in San Diego County. Metrolink has an existing rail line adjacent to the Project area's northern boundary. The closest Metrolink stops are located approximately 3.5 miles east and west of the project site.

Bike/Pedestrian Facilities

Sidewalks would be provided on all street sections within the Project area. For Street "A", a 10-foot-wide multi-purpose trail would be provided for internal connectivity.

ANALYSIS SCENARIOS AND METHODOLOGY

Analysis Scenarios

In accordance with the traffic study requirements of the County of San Bernardino, the project will be evaluated in the morning and evening peak hours for the following conditions:

- Existing Conditions
- Opening Year 2024
- Opening Year 2024 Plus Phase 1
- Opening Year 2027
- Opening Year 2027 Plus Project (Phases 1 and 2)
- Horizon Year 2040
- Horizon Year 2040 Plus Project

Study Locations

The study locations were established in consultation with County staff through the Scoping Agreement process. A copy of the approved Scope of Study Form is provided in *Appendix A*.

Study Intersections:

Existing lane configurations and traffic control at the study intersections are shown on Figure 3.

Intersection Analysis – HCM Methodology

Peak hour intersection operations were evaluated using the methodology outlined in the Highway Capacity Manual (HCM), consistent with the requirements of the County of San Bernardino and the San Bernardino County CMP. The intersection analysis was conducted using the Vistro software program and using the input parameters specified in the San Bernardino County CMP.

Per the HCM Methodology, Level of Service (LOS) for signalized intersections is defined in terms of average vehicle delay. Specifically, LOS criteria are stated in terms of the average control delay per vehicle during the peak hours. The average control delay includes initial deceleration delay, queue move-up time, and final acceleration time in addition to the stop delay.

The procedure for unsignalized intersection analysis determines the average total delay, expressed in seconds of delay per vehicle for left turns from the major street and from the stop-controlled minor street traffic stream for a two-way stop controlled (TWSC) intersection. Delay values are calculated based on the relationship between traffic on the major street and the availability of acceptable "gaps" in this stream through which conflicting traffic movements can be made. For TWSC intersections the Level of Service is based on the turning movement with the highest average delay. For an all-way stop controlled (AWSC) intersection the Level of Service is based on the overall intersection delay.

The chart on the following page provides a description of the operating characteristics of each Level of Service and average seconds of delay for signalized and unsignalized intersections.

LEVEL OF SERVICE DEFINITIONS	
Level of Service	Description
A	No approach phase is fully utilized by traffic and no vehicle waits longer than one red indication. Typically, the approach appears quite open, turns are made easily and nearly all drivers find freedom of operation.
B	This service level represents stable operation, where an occasional approach phase is fully utilized, and a substantial number are approaching full use. Many drivers begin to feel restricted within platoons of vehicles.
C	This level still represents stable operating conditions. Occasionally drivers may have to wait through more than one red signal indication, and backups may develop behind turning vehicles. Most drivers feel somewhat restricted but not objectionably so.
D	This level encompasses a zone of increasing restriction, approaching instability at the intersection. Delays to approaching vehicles may be substantial during short peaks within the peak period; however, enough cycles with lower demand occur to permit periodic clearance of developing queues, thus preventing excessive backups.
E	Capacity occurs at the upper end of this service level. It represents the most vehicles that any particular intersection approach can accommodate. Full utilization of every signal cycle is seldom attained no matter how great the demand.
F	This level describes forced flow operations at low speeds, where volumes exceed capacity. These conditions usually result from queues of vehicles backing up from a restriction downstream. Speeds are reduced substantially, and stoppages may occur for short or long periods of time due to the congestion. In the extreme case, both speed and volume can drop to zero.

LEVEL OF SERVICE CRITERIA FOR SIGNALIZED AND UNSIGNALIZED INTERSECTIONS		
Level of Service [1]	Signalized Intersections (Average delay per vehicle, in seconds) [2]	Unsignalized Intersections (Average delay per vehicle, in seconds) [3]
A	≤ 10	0 – 10
B	> 10 – 20	> 10 – 15
C	> 20 – 35	> 15 – 25
D	> 35 – 55	> 25 – 35
E	> 55 – 80	> 35 – 50
F	> 80	> 50

[1] Per the San Bernardino County CMP, intersections will be considered deficient (LOS F) if the critical v/c ratio equals or exceeds 1.0.
[2] Source: Highway Capacity Manual (HCM 6th Edition), Exhibit 18-4.
[3] Source: Highway Capacity Manual (HCM 6th Edition), Exhibits 19-1 and 20-2.

Level of Service Standards and Measure of Significance

Below are the LOS standards and measures of significance to determine project-related effects by jurisdiction. It should be noted that for study intersections to which the project contributes less than 50 peak hour trips, the project-related effect is considered to be less than significant.

San Bernardino County

The County of San Bernardino minimum Level of Service standards require that intersections in the Valley regions operate at LOS D or better during the morning and evening peak hours.

Traffic effects at signalized intersections are considered locally significant when any of the following occurs between the "without project" and the "plus project" conditions:

- Any signalized study intersection in the Valley region that is operating at an acceptable LOS D or better without project traffic in which the addition of project traffic causes the intersection to degrade to an LOS E or F shall identify improvements to improve operations to LOS D or better.
- Any signalized study intersection in the Valley region that is operating at LOS E or F without project traffic where the project increases delay by 5.0 or more seconds shall identify improvements to offset the increase in delay.

Unsignalized intersections will require operational improvements if the study determines either section a) or both sections b) and c) occur:

a) The addition of project-related traffic causes the intersection to degrade from an LOS D or better to an LOS E or worse in the Valley region.
b) The project adds 5.0 seconds or more of delay to an intersection that is already projected to operate without project traffic at an LOS E or F in the Valley region.
c) One or both of the following conditions are met:
    i. The project adds ten (10) or more trips to any minor street approach
    ii. The intersection meets the peak hour traffic signal warrant after the addition of project traffic.

New development is required to identify improvements at intersections that show a locally significant project effect as shown above and operate at LOS E or worse under "Plus Project" conditions. The Level of Service must be improved to LOS D or better for study intersections.

City of Fontana

The City of Fontana *Traffic Impact Analysis (TIA) Guidelines for Vehicle Miles Traveled (VMT) and Level of Service Assessment* (June 2020) establishes minimum Level of Service standards, which require that intersections operate at LOS C or better during the morning and evening peak hours.

Traffic effects are considered significant when the LOS between the "without project" and "plus project" increases by the following thresholds:

With Project LOS	Significance Threshold
A/B	10.0 Seconds
C	8.0 Seconds
D	5.0 Seconds
E	3.0 Seconds
F	1.0 Second

City of Rancho Cucamonga

The City of Rancho Cucamonga *Traffic Impact Analysis Guidelines* (June 2020) establishes minimum Level of Service standards which require that intersections operate at LOS D or better during the morning and evening peak hours. Consistent with the San Bernardino County guidelines, a project-related effect at signalized intersections within the City of Rancho Cucamonga are considered to be locally significant when any of the following occurs between the "without project" and the "plus project" conditions:

- Any signalized study intersection that is operating at an acceptable LOS D or better without project traffic in which the addition of project traffic causes the intersection to degrade to an LOS E or F shall identify improvements to improve operations to LOS D or better.
- Any signalized study intersection that is operating at LOS E or F without project traffic where the project increases delay by 5.0 or more seconds shall identify improvements to offset the increase in delay.

State-Controlled Intersections (Caltrans)

For State-controlled intersections, if an existing State highway facility is operating at less than LOS D, the existing MOE (measure of effectiveness) should be maintained.

General Plan Circulation Maps

The San Bernardino County General Plan Circulation and Transportation map, the City of Fontana Hierarchy of Streets map, and the City of Rancho Cucamonga Layered Roadway Network map provide roadway designations for the roadway system serving the Specific Plan area and the surrounding vicinity. A copy of the Circulation Maps for San Bernardino County, the City of Fontana, and the City of Rancho Cucamonga, are provides in Figures 4A, 4B, and 4C, respectively.

EXISTING TRAFFIC CONDITIONS

Existing Street System

Regional access to the site is provided primarily by the Interstate 10 (I-10) Freeway, located approximately 1.5 mile south of the project site; Interstate 15 (I-15) Freeway, located approximately 2.5 miles west of the project site; and State Route 210 (SR-210), located approximately 3.5 miles north of the project site. The following provides a description of the roadways surrounding the project site.

Cherry Avenue is a north-south roadway with 3 lanes in each direction that connects to the I-10 and SR-210 freeway ramps. In the project vicinity, Cherry Avenue forms the eastern project boundary. The posted speed limit is 40 miles per hour, and on-street parking is prohibited on both sides. In the San Bernardino County General Plan, Cherry Avenue is designated as a Major Highway north of I-15, a Major Divided Highway between I-15 and I-10, and a Major Arterial Highway south of I-10. Cherry Avenue is designated in the City of Fontana Circulation Element as a Primary Highway north of SR-210 and south of Jurupa Avenue, and a Major Highway between SR-210 and Jurupa Avenue, as well as an 8-Lane Major Highway near the I-10 interchange.

Beech Avenue is a north-south roadway with 2 lanes in each direction north of Foothill Boulevard, and 1 lane in each direction south of Foothill Boulevard. Beech Avenue connects to the I-10 and SR-210 freeway ramps. The posted speed limit is 40 mph, and on-street parking is permitted on both sides. In the San Bernardino County General Plan, Beech Avenue is designated as a Secondary Highway within the project vicinity. Beech Avenue is designated in the City of Fontana Circulation Element as a Primary Highway.

Citrus Avenue is a north-south roadway with 2 lanes in each direction that connects to the I-10 and SR-210 freeway ramps. The posted speed limit is 40 mph, and on-street parking is prohibited on both sides. In the San Bernardino County General Plan, Citrus Avenue is designated as a Major Divided Highway north of Baseline Avenue and a Secondary Highway south of Baseline Avenue. Citrus Avenue is designated in the City of Fontana Circulation Element as a Primary Highway north of Baseline Avenue and south of Jurupa Avenue; a Secondary Highway between Baseline Avenue and Jurupa Avenue; as well as a Major Highway at the SR-210 and I-10 interchanges.

Sierra Avenue is a north-south roadway with 3 lanes in each direction that connects to the I-10 and SR-210 Ramps. The posted speed limit is 50 mph, and on-street parking is prohibited on both sides. In the San Bernardino County General Plan, Sierra Avenue is designated as a Major Divided Highway north of Baseline Avenue, a Major Highway between Baseline Avenue and San Bernardino Avenue, and a Major Divided Highway south of San Bernardino Avenue. Sierra Avenue is designated in the City of Fontana Circulation Element as a Primary Highway north of I-15 and south of Jurupa Avenue; a Major Highway between I-15 and Jurupa Avenue; as well as an 8-Lane Major Highway at the SR-210 and I-10 interchanges.

Highland Avenue is an east-west roadway with 2 lanes in each direction. The posted speed limit is 45 mph, and on-street parking is prohibited on both sides. In the San Bernardino County General Plan, Highland Avenue is designated as a Major Highway. Highland Avenue is designated in the City of Fontana Circulation Element as a Primary Highway.

Baseline Avenue is an east-west roadway with 3 lanes in each direction that connects to the I-15 freeway ramps. The posted speed limit is 45 mph, and on-street parking is prohibited on both sides. In the San Bernardino County General Plan, Baseline Avenue is designated as a Major Highway west of I-15 and a Major Divided Highway east of I-15. Baseline Avenue is designated in the City of Fontana Circulation Element as a Modified Major Highway and an 8-Lane Major Highway at the I-15 interchange. In the City of Rancho Cucamonga Circulation Element, Base Line Road is designated as an Arterial Roadway within the study area.

Foothill Boulevard is an east-west roadway with 3 lanes in each direction that connects to the I-15 freeway ramps. The posted speed limit is 50 mph, and on-street parking is prohibited on both sides. In the San Bernardino County General Plan, Foothill Boulevard is designated as a Major Divided Highway west of East Street, a Major Arterial Highway between East Street and Citrus Avenue, and a Major Divided Highway east of Citrus Avenue. Foothill Boulevard is designated in the City of Fontana Circulation Element as a Modified Major Highway. In the City of Rancho Cucamonga Circulation Element, Foothill Boulevard is designated as a Boulevard.

Arrow Route is an east-west roadway with 1 lane in each direction. The posted speed limit is 45 mph, and on-street parking is prohibited on both sides. In the San Bernardino County General Plan, Arrow Route is designated as a Major Highway. Arrow Route is designated in the City of Fontana Circulation Element as a Primary Highway. In the City of Rancho Cucamonga Circulation Element, Arrow Highway is designated as an Arterial Roadway.

Whittram Avenue is an east-west roadway with 1 lane in each direction. In the project vicinity, Whittram Avenue forms the northern project boundary. The posted speed limit is 40 mph, and on-street parking is permitted on both sides. In the San Bernardino County General Plan, Whittram Avenue is designated as a Secondary Highway. Whittram Avenue is designated in the City of Fontana Circulation Element as a Secondary Highway.

Merrill Avenue is an east-west roadway with 1 lane in each direction. The posted speed limit is 40 mph, and on-street parking is permitted on both sides. In the San Bernardino County General Plan, Merrill Avenue is designated as a Secondary Highway west of Fontana Avenue, a Major Highway between Fontana Avenue and Sierra Avenue, and a Secondary Highway east of Sierra Avenue. Merrill Avenue is generally designated in the City of Fontana Circulation Element as a Secondary Highway.

Randall Avenue is an east-west roadway with 1 lane in each direction. The posted speed limit is 40 mph, and on-street parking is prohibited on both sides. In the San Bernardino County General Plan, Randall Avenue is designated as a Secondary Highway. Randall Avenue is generally designated in the City of Fontana Circulation Element as a Modified Secondary Highway.

San Bernardino Avenue/4th Street is an east-west roadway with 2 lanes in each direction that connects to the I-15 freeway ramps. The posted speed limit is 55 mph, and on-street parking is prohibited on both sides. In the San Bernardino County General Plan, San Bernardino Avenue is designated as a Major Divided Highway west of Fontana Avenue and a Secondary Highway east of Fontana Avenue. San Bernardino Avenue is designated in the City of Fontana Circulation Element as a Primary Highway west of Elm Avenue and east of Locust Avenue, and a Modified Secondary Highway between Elm Avenue and Locust Avenue. In the City of Rancho Cucamonga Circulation Element, San Bernardino Avenue/4th Street is designated as an Arterial Roadway.

Valley Boulevard is an east-west roadway with 3 lanes in each direction that connects to the I-10 freeway ramps. The posted speed limit is 50 mph, and on-street parking is prohibited on both sides. In the San Bernardino County General Plan, Valley Boulevard is designated as a Major Arterial Highway west of Sierra Avenue and a Major Divided Highway east of Sierra Avenue. Valley Boulevard is designated in the City of Fontana Circulation Element as a Major Highway.

Existing Transit Service

Transit service to the project area is provided by OmniTrans, which serves the City of San Bernardino and surrounding cities. The OmniTrans bus stop closest to the project site is a Route 61 stop, located on the south east corner of the intersection of Cherry Avenue and San Bernardino Avenue. A description of the bus routes serving the project area are provided below.

OmniTrans Route 61 operates in the County of San Bernardino, traveling along San Bernardino Avenue. Route 61 operates on weekdays from approximately 4:35 AM to 8:45 PM with approximately 20-minute headways (the time between bus arrivals) during peak hours and 30-minute headways during off-peak hours, Saturdays from approximately 5:20 AM to 9:10 PM with approximately 30-minute headways, and Sundays from approximately 5:35 AM to 6:10 PM with approximately 30-minute headways.

OmniTrans Route 66 operates in the County of San Bernardino, traveling along Foothill Boulevard. Route 66 operates on weekdays from approximately 4:10 AM to 10:35 PM with approximately 20-minute headways during peak hours and 30-minute headways during off-peak hours, Saturdays from approximately 5:45 AM to 9:20 PM with approximately 30-minute headways, and Sundays from approximately 6:50 AM to 6:30 PM with approximately 50-minute headways.

The Metrolink is also accessible by the project site with the Fontana Metrolink Station located approximately 3.5 miles east of the project site near Sierra Avenue and the Rancho Cucamonga Metrolink Station located approximately 3.5 miles west of the project site near Milliken Avenue.

Existing Traffic Volumes

Morning and evening peak hour turning movement counts for the study intersections were obtained in August and September 2021, while school was in session. Existing morning and evening peak hour intersection volumes are presented on Figure 5. Copies of the traffic data collection worksheets are provided in *Appendix B*.

The traffic counts included vehicle classifications for passenger cars, 2-axle trucks, 3-axle trucks, and 4+-axle trucks. The vehicle classification data was used to develop Passenger Car Equivalent (PCE) volumes by applying a PCE factor of 1.5 PCE for 2-axle trucks, 2.0 PCE for 3-axle trucks, and 3.0 for 4+-axle trucks. PCE worksheets are provided in *Appendix C*.

Existing Peak-Hour Operating Conditions

Intersection Level of Service analysis was conducted for the morning and evening peak hours using the analysis procedures and assumptions described previously in this report. The results are shown on Table 1.

Review of this table indicates that the following study intersections currently operate at an unacceptable Level of Service:

- #22 – Beech Ave at Foothill Blvd: AM – LOS F; PM – LOS F
- #32 – Beech Ave at Whittram Ave: PM – LOS E
- #59 – Beech Ave at Valley Blvd: AM – LOS F; PM – LOS F
- #72 – Cherry Ave at Santa Ana Ave: AM – LOS F; PM – LOS F

Copies of the intersection analysis worksheets are provided in *Appendix D*.

Notes:
- Bold values indicate intersections operating at an unacceptable Level of Service
- Delay values for unsignalized intersections represent the average vehicle delay on the worst (highest delay) intersection approach.

F = Fontana; SB = San Bernardino County; RC = Rancho Cucamonga; C = Caltrans

OPENING YEAR 2024 CONDITIONS

The project Opening Year for Phase 1 is anticipated to be Year 2024. Opening Year 2024 Base traffic forecasts have been developed by adding an ambient growth factor of 2.0 percent per to existing traffic volumes at the study intersections.

Cumulative Projects

In addition to ambient growth, traffic volumes from Cumulative Projects in the Project vicinity are added to develop Opening Year 2024 forecasts. Cumulative Projects consist of any project that has been approved and is not yet occupied, and projects that are in various stages of the application and approval process but have not yet been approved. The locations of the Cumulative Projects are shown on Figure 6.

Information regarding Cumulative Projects in the area was obtained from San Bernardino County and the Cities of Fontana, Ontario, and Rancho Cucamonga staff. A summary of the Cumulative Projects, including the associated trip generation is provided on Table 2. The trip generation estimates for the Cumulative Projects were developed by Kimley-Horn.

Trip distribution and assignment for the Cumulative Projects were developed by Kimley-Horn. Traffic volumes associated with the Cumulative Projects were compiled for each of the study intersections and are shown on Figure 7. The Cumulative Projects traffic volumes were added to the Opening Year 2024 Base traffic volumes to develop Opening Year 2024 forecasts, which are shown on Figure 8.

Peak Hour Operating Conditions

Intersection Level of Service analysis was conducted for Opening Year 2024 conditions, and the results are shown on Table 3. Intersection analysis worksheets for this scenario are provided in *Appendix D*. Review of this table indicates that, with the addition of ambient growth and Cumulative Project traffic, the following intersections would operate at an unacceptable Level of Service under Opening Year 2024 conditions:

- #10 – Etiwanda Ave at Base Line Rd: AM – LOS E
- #22 – Beech Ave at Foothill Blvd: AM – LOS F; PM – LOS F
- #32 – Beech Ave at Whittram Ave: AM – LOS E; PM – LOS E
- #35 – Beech Ave at Merrill Ave: PM – LOS E
- #40 – Beech Ave at Randall Ave: AM – LOS F
- #59 – Beech Ave at Valley Blvd: AM – LOS F; PM – LOS F
- #72 – Cherry Ave at Santa Ana Ave: AM – LOS F; PM – LOS F

Notes:
- Bold values indicate intersections operating at an unacceptable Level of Service

- Delay values for unsignalized intersections represent the average vehicle delay on the worst (highest delay) intersection approach.

F = Fontana; SB = San Bernardino County; RC = Rancho Cucamonga; C = Caltrans

PROJECT TRAFFIC

Project Trip Generation

Generally, trip generation estimates for the project are based on daily and peak hour trip generation rates obtained from the Institute of Transportation Engineers (ITE) Trip Generation Manual (10th Edition[2]).

Based on information provided the applicant, the following phases and mix of uses are assumed for this analysis and applicable ITE Land Use Category for each land use are as follows:

Land Use	ITE Land Use Code	Quantity	Unit
Phase 1			
E-Commerce	N/A	2,773,050	Sq. Ft.
Truck Storage	N/A	98	Acres
Phase 2 (in addition to Phase 1)			
High-Cube Short-Term Storage	154	2,141,000	Sq. Ft.
High-Cube Cold Storage	157	500,000	Sq. Ft.
Retail / Commercial	820	261,360	Sq. Ft.

Trip generation rates for the E-Commerce component of the project were based on empirical trip generation count data collected for similar E-Commerce projects, provided by the applicant. The Institute of Transportation Engineers (ITE) Trip Generation Manual (10th Edition) does not currently have a land use for truck storage facilities. Operational forecast data for the proposed Project were provided by the applicant and approved by the County of San Bernardino. A copy of the operational forecast and supporting data is provided in the Approved Scoping Agreement in *Appendix A*.

Passenger vehicle and truck mix assumptions were applied to the truck-intensive uses of the project, based on the City of Fontana Truck Trip Generation Study. Passenger car equivalent (PCE) factors were then applied to the truck types, based on number of axles (1.5 PCE for 2-axle trucks, 2.0 PCE for 3-axle trucks, and 3.0 PCE for 4+-axle trucks) to determine the total PCE trips to be generated by the project.

Trip generation rates and the resulting project PCE trips for Phase 1 of the project are summarized on Table 4. Review of this table indicates that Phase 1 of the Project is forecasted to generate 32,477 daily PCE trips on a daily basis, with 1,643 PCE trips during the morning peak hour (1,041 inbound and 602 outbound) and 3,099 PCE trips (1,700 inbound and 1,399 outbound) during the evening peak hour.

[2] Based on a comparison of 10th and 11th Edition trip rates for High-Cube Short-Term Storage, High-Cube Cold Storage, and Retail uses, the 10th Edition rates were higher and has been used for analysis as a conservative approach, consistent with the Scoping document. The E-Commerce and Truck Storage rates were based on actual counts.

Trip generation rates and the resulting project PCE trips for Phases 1 and 2 of the project (the total Project) are also summarized on Table 4 (previously mentioned). Review of this table indicates that the Project is forecasted to generate 47,352 daily PCE trips on a daily, with 2,188 PCE trips during the morning peak hour (1,425 inbound and 763 outbound) and 4,114 PCE trips (2,118 inbound and 1,997 outbound) during the evening peak hour. Further breakdown of project trip generation and PCE trips can be found in *Appendix A*.

Trip Distribution and Assignment

Project trip distribution assumptions for the project site were developed considering the proposed site uses, and routes to and from the freeway system. Trip distribution assumptions for passenger vehicles and trucks are shown on Figure 9. Trip distribution percentages at each study intersection were applied to the project trip generation to determine the project trips through each intersection. The Phase 1 project-related peak hour trips are shown on Figure 10. The entire project-related peak hour trips (Phases 1 and 2) are shown on Figure 11.

Based on the Trip Generation and Trip Distribution of the project, the following study intersections would have less than 50 peak hour trips:

- #2 – Citrus Ave at SR-210 WB Ramps
- #3 – Sierra Ave at SR-210 WB Ramps
- #5 – Citrus Ave at SR-210 EB Ramps
- #6 – Sierra Ave at SR-210 EB Ramps
- #7 – Beech Ave at Highland Ave
- #8 – Citrus Ave at Highland Ave
- #9 – Sierra Ave at Highland Ave
- #10 – Etiwanda Ave at Base Line Rd
- #11 – I-15 SB Ramps at Base Line Rd
- #32 – Beech Ave at Whittram Ave
- #54 – Beech Ave at Fontana Ave

FIGURE 11D
PROJECT-RELATED TRAFFIC VOLUMES (PHASES 1 AND 2)

OPENING YEAR 2024 PLUS PHASE 1 CONDITIONS

Phase 1 project-related traffic for the Speedway Commerce Center II project was added to the Opening Year 2024 traffic volumes, and the resulting "Plus Phase 1" traffic volumes are shown on Figure 12. The following roadway network connections to the site have been assumed in the Opening Year 2024 conditions:

- Connection to existing Napa Street is not assumed
- Connection to existing VIP Road is not assumed

Peak Hour Operating Conditions

Intersection Level of Service analysis was conducted for the Opening Year 2024 Plus Phase 1 condition. The results are shown on Table 5. Copies of the intersection analysis worksheets are provided in *Appendix D*. Review of Table 5 indicates that, with the addition of Phase 1 project traffic, the following intersection(s) would operate at an unacceptable Level of Service under Opening Year 2024 Plus Phase 1 conditions:

- #10 – Etiwanda Ave at Base Line Rd: AM – LOS E
- #22 – Beech Ave at Fontana Ave: AM – LOS F; PM – LOS F
- #26 – Cherry Ave at Arrow Rte: PM – LOS F
- #31 – Cherry Ave at Whittram Ave: PM – LOS F
- #32 – Beech Ave at Whittram Ave: AM – LOS E; PM – LOS E
- #34 – Cherry Ave at Merrill Ave: PM – LOS E
- #35 – Beech Ave at Merrill Ave: PM – LOS F
- #39 – Cherry Ave at Randall Ave: AM – LOS F; PM – LOS F
- #40 – Beech Ave at Randall Ave: AM – LOS F; PM – LOS F
- #41 – Fontana Ave/Catawba Ave at Randall Ave: AM – LOS E; PM – LOS F
- #44 – I-15 SB Ramps/Ontario Mills Dr at Fourth St: PM – LOS E
- #47 – Commerce Dr at San Bernardino Ave: PM – LOS F
- #49 – Cherry Ave at San Bernardino Ave: PM – LOS F
- #57 – Cherry Ave at Valley Blvd: PM – LOS E
- #59 – Beech Ave at Valley Boulevard: AM – LOS F; PM – LOS F
- #72 – Cherry Ave at Santa Ana Ave: AM – LOS F; PM – LOS F

Based on the significance thresholds presented earlier in this report, the Phase 1 project-related effect would be considered to have a cumulative effect at the following intersections under Opening Year 2024 Plus Phase 1 conditions:

- #22 – Beech Ave at Foothill Blvd
- #26 – Cherry Ave at Arrow Rte
- #31 – Cherry Ave at Whittram Ave

- #34 – Cherry Ave at Merrill Ave
- #35 – Beech Ave at Merrill Ave
- #39 – Cherry Ave at Randall Ave
- #40 – Beech Ave at Randall Ave
- #41 – Fontana Ave/Catawba Ave at Randall Ave
- #44 – I-15 SB Ramps/Ontario Mills Dr at Randall Ave
- #47 – Commerce Dr at San Bernardino Ave
- #49 – Cherry Ave at San Bernardino Ave
- #57 – Cherry Ave at Valley Blvd
- #59 – Beech Ave at Valley Blvd
- #72 – Cherry Ave at Santa Ana Ave

Recommended improvements to address the project-related effects at study intersections are presented in the Recommended Improvements section of this report. Copies of intersection analysis worksheets are provided in *Appendix D*.

- Bold values indicate intersections operating at an unacceptable Level of Service
- Delay values for unsignalized intersections represent the average vehicle delay on the worst (highest delay) intersection approach.

F = Fontana; SB = San Bernardino County; RC = Rancho Cucamonga; C = Caltrans

OPENING YEAR 2027 CONDITIONS

The project Opening Year for Phase 2 is anticipated to be Year 2027. Opening Year 2027 traffic forecasts have been developed by adding an ambient growth factor of 2.0 percent per year to Opening Year 2027 traffic volumes at the study intersections. Traffic volumes for Opening Year 2027 are shown on Figure 13.

Peak Hour Operating Conditions

Intersection Level of Service analysis was conducted for Opening Year 2027 conditions, and the results are shown on Table 6. Intersection analysis worksheets for this scenario are provided in *Appendix D*. Review of this table indicates that, with the addition of ambient growth and cumulative projects traffic, the following intersections would operate at an unacceptable Level of Service under Opening Year 2027 conditions:

- #9 – Sierra Ave at Highland Ave: PM – LOS E
- #10 – Etiwanda Ave at Base Line Rd: AM – LOS E
- #15 – Citrus Ave at Baseline Ave: AM – LOS E
- #22 – Beech Ave at Foothill Blvd: AM – LOS F; PM – LOS F
- #23 – Citrus Ave at Foothill Blvd: PM – LOS E
- #26 – Cherry Ave at Arrow Rte: PM – LOS E
- #32 – Beech Ave at Whittram Ave: AM – LOS E; PM – LOS F
- #35 – Beech Ave at Merrill Ave: AM – LOS E; PM – LOS F
- #40 – Beech Ave at Randall Ave: AM – LOS F
- #44 – I-15 SB Ramps/Ontario Mills Dr at Fourth St: PM – LOS E
- #45 – I-15 NB Ramps at Fourth St: AM – LOS E
- #47 – Commerce Dr at San Bernardino Ave: PM – LOS E
- #56 – Commerce Dr/I-10 Ramps at Valley Blvd: PM – LOS E
- #59 – Beech Ave at Valley Blvd: AM – LOS F; PM – LOS F
- #60 – Citrus Ave at Valley Blvd: AM – LOS E
- #61 – Sierra Ave at Valley Blvd: PM – LOS E
- #68 – Sierra Ave at I-10EB/WB Ramps: PM – LOS E
- #72 – Cherry Ave at Santa Ana Ave: AM – LOS F; PM – LOS F

Notes:
- Bold values indicate intersections operating at an unacceptable Level of Service
- Delay values for unsignalized intersections represent the average vehicle delay on the worst (highest delay) intersection approach.

F = Fontana; SB = San Bernardino County; RC = Rancho Cucamonga; C = Caltrans

OPENING YEAR 2027 PLUS PROJECT (PHASES 1 AND 2) CONDITIONS

Phases 1 and 2 project-related traffic were added to the Opening Year 2027 traffic volumes, and the resulting "Plus Phases 1 and 2" traffic volumes are shown on Figure 14. The following roadway network connections to the site have been assumed in the Opening Year 2027 conditions:

- Connection to existing Napa Street is assumed with 2 lanes westbound and 2 lanes eastbound
- Connection to existing VIP Road is assumed with 2 lanes southbound and 1 lane northbound. Truck access will be restricted on VIP Road

Peak Hour Operating Conditions

Intersection Level of Service analysis was conducted for the Opening Year 2027 Plus Project (Phases 1 and 2) condition. The results are shown on Table 7. Copies of the intersection analysis worksheets are provided in *Appendix D*. Review of Table 7 indicates that, with the addition of Phases 1 and 2 project traffic, the following intersections would operate at an unacceptable Level of Service under Opening Year 2027 Plus Project (Phases 1 and 2) conditions:

- #9 – Sierra Ave at Highland Ave: PM – LOS E
- #10 – Etiwanda Ave at Base Line Rd: AM – LOS E
- #15 – Citrus Ave at Baseline Ave: AM – LOS E
- #20 – Etiwanda Ave at Foothill Blvd AM – LOS E; PM – LOS E

Based on the County standards presented earlier in this report, the Phases 1 and 2 project-related effect would be considered to have a cumulative effect at the following intersections under Opening Year 2027 Plus Project (Phases 1 and 2) conditions:

- #20 – Etiwanda Ave at Foothill Blvd
- #22 – Beech Ave at Foothill Blvd
- #23 – Citrus Ave at Foothill Blvd
- #26 – Cherry Ave at Arrow Rte
- #31 – Cherry Ave at Whittram Ave
- #33 – Etiwanda Ave at Napa St
- #34 – Cherry Ave at Merrill Ave
- #35 – Beech Ave at Merrill Ave
- #39 – Cherry Ave at Randall Ave
- #40 – Beech Ave at Randall Ave
- #41 – Fontana Ave/Catawba Ave at Randall Ave
- #44 – I-15 SB Ramps/Ontario Mills Dr at Fourth St
- #47 – Commerce Dr at San Bernardino Ave
- #49 – Cherry Ave at San Bernardino Ave
- #57 – Cherry Ave at Valley Blvd
- #59 – Beech Ave at Valley Blvd
- #60 – Citrus Ave at Valley Blvd
- #63 – Cherry Ave at I-10 WB Ramps
- #68 – Sierra Ave at I-10 EB/WB Ramps
- #72 – Cherry Ave at Santa Ana Ave

Recommended improvements to address the project-related effects are presented in the Recommended Improvements section of this report. Copies of intersection analysis worksheets are provided in *Appendix D*.

- Bold values indicate intersections operating at an unacceptable Level of Service
- Delay values for unsignalized intersections represent the average vehicle delay on the worst (highest delay) intersection approach.

F = Fontana; SB = San Bernardino County; RC = Rancho Cucamonga; C = Caltrans

HORIZON YEAR 2040 CONDITIONS

To derive the Horizon Year 2040 intersection turning movement forecasts, the San Bernardino Transportation Analysis Model (SBTAM) Base Year 2012 and Build-out Year 2040 future traffic projections were used. The raw volumes obtained from the model output were post- processed by determining the annual growth between the base model year (2012) and the future model year (2040) and applying the growth increment to existing count volumes. This was accomplished using the B- Turns methodology, developed by the Federal Highway Administration (FHWA). As a conservative approach, if a turning movement volume produced by this process was less than the Opening Year 2027 forecast volume for that movement, manual adjustments were made to assure that all forecast build-out year volumes would not be less than the Opening Year 2027 forecast volumes. The SBTAM Model plots and B-Turns worksheets are provided in *Appendix E.* The resulting traffic volumes for Horizon Year 2040 condition are shown on Figure 15.

Peak Hour Operating Conditions

Intersection Level of Service analysis was conducted for the Horizon Year 2040 condition. The results are shown on Table 8. Copies of intersection analysis worksheets are provided in *Appendix D*.

Review of this table indicates that, under Horizon Year 2040 conditions, the following intersections would operate at an unacceptable Level of Service:

- #10 – Etiwanda Ave at Base Line Rd: AM – LOS E
- #21 – Cherry Ave at Foothill Blvd: PM – LOS E
- #22 – Beech Ave at Foothill Blvd: AM – LOS F; PM – LOS F
- #23 – Citrus Ave at Foothill Blvd: PM – LOS F
- #24 – Sierra Ave at Foothill Blvd: PM – LOS E
- #25 – Etiwanda Ave at Arrow Rte: AM – LOS E; PM – LOS F
- #26 – Cherry Ave at Arrow Rte: PM – LOS E
- #28 – Citrus Ave at Arrow Rte: AM – LOS E
- #31 – Cherry Ave at Whittram Ave: PM – LOS E
- #32 – Beech Ave at Whittram Ave: AM – LOS F; PM – LOS F
- #34 – Cherry Ave at Merrill Ave: PM – LOS E
- #35 – Beech Ave at Merrill Ave: AM – LOS F; PM – LOS F
- #40 – Beech Ave at Randall Ave: AM – LOS F; PM – LOS F
- #41 – Fontana Ave/Catawba Ave at Randall Ave: AM – LOS F; PM – LOS F
- #47 – Commerce Dr at San Bernardino Ave: PM – LOS E
- #54 – Beech Ave at Fontana Ave: AM – LOS F; PM – LOS F
- #56 – Commerce Dr/I-10 Ramps at Valley Blvd: PM – LOS E
- #57 – Cherry Ave at Valley Blvd: PM – LOS E
- #59 – Beech Ave at Valley Blvd: AM – LOS F; PM – LOS F

- #60 – Citrus Ave at Valley Blvd: AM – LOS E
- #68 – Sierra Ave at I-10EB/WB Ramps: PM – LOS E
- #70 – Rochester Ave at Arrow Rte: AM – LOS F; PM – LOS F
- #72 – Cherry Ave at Santa Ana Ave: AM – LOS F; PM – LOS F

Notes:
- Bold values indicate intersections operating at an unacceptable Level of Service

- Delay values for unsignalized intersections represent the average vehicle delay on the worst (highest delay) intersection approach.

F = Fontana; SB = San Bernardino County; RC = Rancho Cucamonga; C = Caltrans

HORIZON YEAR 2040 PLUS PROJECT CONDITIONS

Project-related traffic was added to the Horizon Year 2040 traffic volumes. Horizon Year 2040 Plus Project traffic volumes at the study intersections are shown on Figure 16. Under Horizon Year 2040 conditions, truck access will continue to be restricted on VIP Road.

Peak Hour Operating Conditions

Intersection Level of Service analysis was conducted for the Horizon Year 2040 Plus Project condition. The results are shown on Table 9. Copies of intersection analysis worksheets are provided in *Appendix D*.

Review of this table indicates that, with the addition of project traffic, the following intersection(s) would operate at an unacceptable Level of Service:

- #10 – Etiwanda Ave at Base Line Rd: AM – LOS E
- #15 – Citrus Ave at Baseline Ave: AM – LOS E
- #20 – Etiwanda Ave at Foothill Blvd: PM – LOS F
- #21 – Cherry Ave at Foothill Blvd: PM – LOS E
- #22 – Beech Ave at Foothill Blvd: AM – LOS F; PM – LOS F
- #23 – Citrus Ave at Foothill Blvd: PM – LOS F
- #24 – Sierra Ave at Foothill Blvd: PM – LOS E
- #25 – Etiwanda Ave at Arrow Rte: AM – LOS E; PM – LOS F
- #26 – Cherry Ave at Arrow Rte: AM – LOS E; PM – LOS F
- #28 – Citrus Ave at Arrow Rte: AM – LOS E
- #30 – Etiwanda Ave at Whittram Ave: PM – LOS E
- #31 – Cherry Ave at Whittram Ave: PM – LOS F
- #32 – Beech Ave at Whittram Ave: AM – LOS F; PM – LOS F
- #33 – Etiwanda Ave at Napa St: PM – LOS F
- #34 – Cherry Ave at Merrill Ave: PM – LOS F
- #35 – Beech Ave at Merrill Ave: AM – LOS F; PM – LOS F
- #39 – Cherry Ave at Randall Ave: PM – LOS F
- #40 – Beech Ave at Randall Ave: AM – LOS F; PM – LOS F
- #41 – Fontana Ave/Catawba Ave at Randall Ave: AM – LOS F; PM – LOS F
- #44 – I-15 SB Ramps/Ontario Mills Dr at Fourth St: PM – LOS E
- #47 – Commerce Dr at San Bernardino Ave: PM – LOS F
- #49 – Cherry Ave at San Bernardino Ave: PM – LOS E
- #51 – Fontana Ave/Elm Ave at San Bernardino Ave: PM – LOS E
- #54 – Beech Ave at Fontana Ave: AM – LOS F; PM – LOS F
- #56 – Commerce Dr/I-10 Ramps at Valley Blvd: PM – LOS F
- #57 – Cherry Ave at Valley Blvd: PM – LOS E
- #59 – Beech Ave at Valley Blvd: AM – LOS F; PM – LOS F

- #60 – Citrus Ave at Valley Blvd: AM – LOS E
- #66 – Cherry Ave at I-10 EB Ramps: PM – LOS E
- #68 – Sierra Ave at I-10EB/WB Ramps: PM – LOS E
- #70 – Rochester Ave at Arrow Rte: AM – LOS F; PM – LOS F
- #72 – Cherry Ave at Santa Ana Ave: AM – LOS F; PM – LOS F

Based on the County standards presented earlier in this report, the Phases 1 and 2 project-related effect would be considered to have a cumulative effect at the following intersections under Horizon Year 2040 Plus Project conditions:

- #15 – Citrus Ave at Baseline Ave
- #20 – Etiwanda Ave at Foothill Blvd
- #23 – Citrus Ave at Foothill Blvd
- #24 – Sierra Ave at Foothill Blvd
- #25 – Etiwanda Ave at Arrow Rte
- #26 – Cherry Ave at Arrow Rte
- #30 – Etiwanda Ave at Whittram Ave
- #31 – Cherry Ave at Whittram Ave
- #32 – Beech Ave at Whittram Ave
- #33 – Etiwanda Ave at Napa St
- #34 – Cherry Ave at Merrill Ave
- #35 – Beech Ave at Merrill Ave
- #39 – Cherry Ave at Randall Ave
- #40 – Beech Ave at Randall Ave
- #41 – Fontana Ave/Catawba Ave at Randall Ave
- #44 – I-15 SB Ramps/Ontario Mills Dr at Fourth St
- #47 – Commerce Dr at San Bernardino Ave
- #49 – Cherry Ave at San Bernardino Ave
- #51 – Fontana Ave/Elm Ave at San Bernardino Ave
- #56 – Commerce Dr/I-10 Ramps at Valley Blvd
- #57 – Cherry Ave at Valley Blvd
- #60 – Citrus Ave at Valley Blvd
- #66 – Cherry Ave at I-10 EB Ramps
- #68 – Sierra Ave at I-10 EB/WB Ramps
- #70 – Rochester Ave at Arrow Rte
- #72 – Cherry Ave at Santa Ana Ave

Recommended improvements to address the project-related effects are presented in the Recommended Improvements section of this report. Copies of intersection analysis worksheets are provided in *Appendix D*.

- Bold values indicate intersections operating at an unacceptable Level of Service
- Delay values for unsignalized intersections represent the average vehicle delay on the worst (highest delay) intersection approach.

F = Fontana; SB = San Bernardino County; RC = Rancho Cucamonga; C = Caltrans

TRAFFIC SIGNAL WARRANT ANALYSIS

Traffic signal warrant analyses were conducted for the following unsignalized intersections:

- #22 – Beech Ave at Foothill Blvd
- #35 – Beech Ave at Merrill Ave
- #40 – Beech Ave at Randall Ave
- #41 – Catawba Ave at Randall Ave
- #59 – Beech Ave at Valley Blvd

Signal warrants were based on the 2014 California Manual on Uniform Traffic Control Devices (CA MUTCD). The warrants were conducted using Warrant 3 (Peak Hour Warrant) for the following scenarios:

- Existing Conditions
- Horizon Year 2040
- Horizon Year 2040 Plus Project

Traffic Signal Warrant Analysis worksheets are provided in *Appendix F*. Based on the signal warrant analysis, Warrant 3 was met during the following scenarios:

- Existing Conditions
    - #22 – Beech Ave at Foothill Blvd: AM & PM
- Horizon Year 2040
    - #35 – Beech Ave at Merrill Ave: AM & PM
    - #40 – Beech Ave at Randall Ave: AM & PM
    - #41 – Catawba Ave at Randall Ave: AM & PM
    - #59 – Beech Ave at Valley Blvd: AM & PM

The CA MUTCD specifically states that, "The satisfaction of a traffic signal warrant or warrants shall not in itself require the installation of a traffic control signal." The reference document goes on to state a number of other factors to take into account when considering a signal for a specific location, including whether or not a signal would improve the overall safety of the intersection, whether it would benefit or disrupt progressive traffic flow, and consideration of site-specific characteristics such as queuing, signal spacing, and overall delay to the main street through movements.

The decision to install a traffic signal should be based on engineering judgement, and not solely upon satisfying a single peak hour warrant. It is recommended that a decision about signalization at the intersection should be made based on future observations as well as engineering judgement, based on the factors listed above.

RECOMMENDED IMPROVEMENTS

Based on the respective jurisdictional LOS standards and criteria noted earlier in the report, under the Horizon Year 2040 Plus Project Conditions, the project-related effect would be considered significant at the following intersections:

- #15 – Citrus Ave at Baseline Ave
- #20 – Etiwanda Ave at Foothill Blvd
- #22 – Beech Ave at Foothill Blvd
- #23 – Citrus Ave at Foothill Blvd
- #24 – Sierra Ave at Foothill Blvd
- #25 – Etiwanda Ave at Arrow Rte
- #26 – Cherry Ave at Arrow Rte
- #30 – Etiwanda Ave at Whittram Ave
- #31 – Cherry Ave at Whittram Ave
- #32 – Beech Ave at Whittram Ave
- #33 – Etiwanda Ave at Napa St
- #34 – Cherry Ave at Merrill Ave
- #35 – Beech Ave at Merrill Ave
- #39 – Cherry Ave at Randall Ave
- #40 – Beech Ave at Randall Ave
- #41 – Fontana Ave/Catawba Ave at Randall Ave
- #44 – I-15 SB Ramps/Ontario Mills Dr at Fourth St
- #47 – Commerce Dr at San Bernardino Ave
- #49 – Cherry Ave at San Bernardino Ave
- #56 – Commerce Dr/I-10 Ramps at Valley Blvd
- #57 – Cherry Ave at Valley Blvd
- #60 – Citrus Ave at Valley Blvd
- #63 – Cherry Ave at I-10 WB Ramps
- #66 – Cherry Ave at I-10 EB Ramps
- #67 – Citrus Ave at I-10 EB Ramps
- #68 – Sierra Ave at I-10 EB/WB Ramps
- #70 – Rochester Ave at Arrow Rte
- #72 – Cherry Ave at Santa Ana Ave

Implementation of the following improvements under applicable Opening Year 2024, Opening Year 2027, and Horizon Year 2040 scenarios are recommended to address the project's effect at the study intersections:

<u>#15 – Citrus Ave at Baseline Ave</u>

- Add a dedicated northbound right-turn lane with overlap phasing

#20 – Etiwanda Ave at Foothill Blvd

- Widen all approaches by 1 through lane
- Add southbound right-turn overlap phasing (Programmed Improvement; Rancho Cucamonga CIP)

#22 – Beech Ave at Foothill Blvd

- Traffic Signal recommended (Programmed Improvement; Fontana CIP)

#23 – Citrus Ave at Foothill Blvd

- Widen north, south, and eastbound approaches by 1 through lane (Programmed Improvement; SBCTA Arterial Projects)
- Add a 2nd westbound left-turn lane

#24 – Sierra Ave at Foothill Blvd

- Restripe southbound approach to provide dual left-turn lanes

#25 – Etiwanda Ave at Arrow Rte

- Add 2nd eastbound through lane (Programmed Improvement; Rancho Cucamonga CIP)

#26 – Cherry Ave at Arrow Rte

- Widen all approaches by 1 through lane

#30 – Etiwanda Ave at Whittram Ave

- Widen north and southbound approaches by 1 through lane (Programmed Improvement; SBCTA Arterial Projects)

#31 – Cherry Ave at Whittram Ave

- Add eastbound right-turn overlap phasing

#32 – Beech Ave at Whittram Ave

- Traffic Signal recommended under Horizon Year 2040 conditions

#33 – Etiwanda Ave at Napa St

- Widen north and southbound approaches by 1 through lane (Programmed Improvement; SBCTA Arterial Projects)
- Add northbound right-turn lane with overlap phasing
- Add westbound right-turn overlap phasing

#34 – Cherry Ave at Merrill Ave

- Widen north and southbound approaches by 1 through lane (Programmed Improvement; SBCTA Arterial Projects)

#35 – Beech Ave at Merrill Ave

- Traffic Signal recommended under Horizon Year 2040 conditions (Programmed Improvement; SBCTA Arterial Projects)
- Add a southbound left-turn lane

#39 – Cherry Ave at Randall Ave

- Add east and westbound right-turn overlap phasing
- Add a 2nd northbound left-turn lane
- Modified eastbound approach – 1 left, 1 through, and 2 rights
- Modified westbound approach – 1 left, 2 through, 1 right

#40 – Beech Ave at Randall Ave

- Traffic Signal recommended under Horizon Year 2040 conditions (Programmed Improvement; SBCTA Arterial Projects)

#41 – Fontana Ave/Catawba Ave at Randall Ave

- Traffic Signal recommended under Horizon Year 2040 conditions

#44 – I-15 SB Ramps/Ontario Mills Dr at Fourth St

- Add westbound right-turn overlap phasing
- Add eastbound right-turn overlap phasing

#47 – Commerce Dr at San Bernardino Ave

- Analyze as a cluster intersection with INT #48
- Modify northbound approach to 1 left-turn lane, 1 shared through-right lane, and 1 right-turn lane

#49 – Cherry Ave at San Bernardino Ave

- Widen westbound approach by 1 through lane (Programmed Improvement; SB County CIP)
- Restripe northbound approach to provide a dedicated right-turn lane

#51 – Fontana Ave/Elm St at San Bernardino Ave

- Widen eastbound approach by 1 through lane (Programmed Improvement; SB County CIP)

#56 – Commerce Dr/I-10 Ramps at Valley Blvd

- Modify the northbound approach to be 1 dedicated left, 2 throughs, and 1 free right
- Add eastbound right-turn overlap phasing

#57 – Cherry Ave at Valley Blvd

- Add northbound right-turn overlap phasing

#59 – Beech Ave at Valley Blvd

- Traffic Signal recommended under Horizon Year 2040 conditions
- Widen all approaches by 1 through lane (Programmed Improvement; SBCTA Arterial Projects)

#60 – Citrus Ave at Valley Blvd

- Add eastbound right-turn overlap phasing

#63 – Cherry Ave at I-10 WB Ramps

- Restripe westbound approach to provide 1 left and 2 right-turn lanes

#66 – Cherry Ave at I-10 EB Ramps

- Restripe eastbound approach to provide 1 left, 1 shared through-right, and 1 right
- Add 2nd left-turn lane

#67 – Citrus Ave at I-10 EB Ramps

- Add 2nd southbound left-turn lane

#68 – Sierra Ave at I-10 EB/WB Ramps

- Add 3rd eastbound left-turn lane

#70 – Rochester Ave at Arrow Rte

- Add northbound right-turn overlap phasing

#72 – Cherry Ave at Santa Ana Ave

- Restripe eastbound approach to provide a dedicated left and a shared through-right lane

A summary of the intersection operation before and after implementation of the recommended improvements is provided on Table 10. Copies of intersection analysis worksheets with improvements are provided in *Appendix G*. Recommended improvements may include a combination of fee payments to established programs, construction of specific improvements, payment of a fair-share contribution toward future improvements, or a combination of these approaches. The project fair share proportion for non-programmed improvements at deficient study intersections under Horizon Year 2040 conditions is shown on Table 11. For programmed improvements, the developer will pay into the regional transportation fee program.

Notes:

- [1] Fair Share percentage is to be applied to non-programmed improvements
- [2] Fair Share for intersections failing under existing conditions was calculated using the total 2040 volume

EVENT TRAFFIC MANAGEMENT

The Project would construct new public roads, improving access to and within the site, and construct additional transportation improvements. The Project would therefore improve emergency access to the site, including to the proposed Planning Areas and the Next Gen motorsports facility. With the Project buildout and operation, however, there would be an increase in traffic during major race and ancillary events held at the Next Gen motorsports facility. As race day access and management during a race event is dependent on the size and type of event and is subject to change with traffic conditions, and phased Project improvements, a Transportation Management Association shall be formed for the SCCII SP and Next Gen motorsports facility who will be responsible to prepare a Traffic Management Plan for applicable events in accordance with Mitigation Measure (MM) TRANS-1, which would require the Master Developer to form a Transportation Management Association and MM TRANS-2, which is incorporated as a condition of approval for the Next Gen Project

Additionally, the Project would be reviewed by the County of San Bernardino Public Works and Fire Departments to ensure the project sufficiently avoids hazards related to design features and that adequate emergency access is provided to the site. As a result, the Project would not substantially increase delays on street segments substantially that would result in inadequate emergency access. Therefore, impacts would be less than significant with mitigation.

Mitigation Measures

MM TRANS-1 Master Developer will form a Transportation Management Association by the date of issuance of the first building permit issued for the development.

MM TRANS-2 A comprehensive traffic management plan shall be submitted and approved by the County Engineer to manage traffic to and from the Next Gen motorsports facility and SCCII SP Project during race weekends and as required during ancillary events. Manual traffic control, including signage, traffic control personnel, and routing shall be provided by the Transportation Management Association to ensure that all intersections affected by race-related or ancillary event-related traffic, will function at LOS E or better at midday and in the p.m. peak hour on Friday, as well as all day Saturday and Sunday and on weekdays during ancillary events. The TMP shall be submitted a minimum of 30 days prior to each event.

In addition, manual traffic control shall also be employed as determined by the County of San Bernardino in consultation with the California Highway Patrol; Cities of Fontana, Rancho Cucamonga, and Ontario; and the Fontana Unified School District, where needed, to safely move traffic through intersections affected by traffic.

FINDINGS AND CONCLUSIONS

- The Project proposes conceptual land uses that include, but are not limited to, approximately 6.6 million square feet (SF) of high cube warehouse and e-commerce uses with approximately 12 acres (261,000 SF) of accessory commercial uses.

- Under Existing Conditions, the following study intersections currently operate at an unacceptable Level of Service (LOS):

    - #22 – Beech Ave at Foothill Blvd
    - #32 – Beech Ave at Whittram Ave
    - #59 – Beech Ave at Valley Blvd
    - #72 – Cherry Ave at Santa Ana Ave

- The Opening Year for Phase 1 of the project is anticipated to be Year 2024. The Opening Year 2024 scenario includes a 2% ambient annual growth rate and the addition of Cumulative Project traffic. Under Opening Year 2024 conditions, the following study intersections would operate at an unacceptable Level of Service:

    - #10 – Etiwanda Ave at Base Line Rd
    - #22 – Beech Ave at Foothill Blvd
    - #32 – Beech Ave at Whittram Ave
    - #35 – Beech Ave at Merrill Ave
    - #40 – Beech Ave at Randall Ave
    - #59 – Beech Ave at Valley Blvd
    - #72 – Cherry Ave at Santa Ana Ave

- Phase 1 of the proposed project is estimated to generate 32,477 PCE trips daily, with 1,643 PCE trips in the morning peak hour and 3,099 PCE trips in the evening peak hour.

- The entire proposed project (Phases 1 and 2) is estimated to generate 47,352 PCE trips daily, with 2,188 PCE trips in the morning peak hour and 4,114 PCE trips in the evening peak hour.

- Phase 1 project traffic was added to Opening Year 2024 traffic volumes to establish Opening Year 2024 Plus Phase 1 conditions. Under this scenario, the following study intersections would operate an acceptable Level of Service:

    - #10 – Etiwanda Ave at Base Line Rd
    - #22 – Beech Ave at Fontana Ave
    - #26 – Cherry Ave at Arrow Rte
    - #31 – Cherry Ave at Whittram Ave
    - #32 – Beech Ave at Whittram Ave

- #34 – Cherry Ave at Merrill Ave
- #35 – Beech Ave at Merrill Ave
- #39 – Cherry Ave at Randall Ave
- #40 – Beech Ave at Randall Ave
- #41 – Fontana Ave/Catawba Ave at Randall Ave
- #44 – I-15 SB Ramps/Ontario Mills Dr at Fourth St
- #47 – Commerce Dr at San Bernardino Ave
- #49 – Cherry Ave at San Bernardino Ave
- #57 – Cherry Ave at Valley Blvd
- #59 – Beech Ave at Valley Boulevard
- #72 – Cherry Ave at Santa Ana Ave

- The Opening Year for Phase 2 of the project is anticipated to be Year 2027. The Opening Year 2027 scenario includes a 2% ambient annual growth rate and the addition of Cumulative Project traffic. Compared to Opening Year 2024 conditions, the following study intersections would operate at an unacceptable Level of Service under Opening Year 2027 conditions:

    - #9 – Sierra Ave at Highland Ave
    - #10 – Etiwanda Ave at Base Line Rd
    - #15 – Citrus Ave at Baseline Ave
    - #22 – Beech Ave at Foothill Blvd
    - #23 – Citrus Ave at Foothill Blvd
    - #26 – Cherry Ave at Arrow Rte
    - #32 – Beech Ave at Whittram Ave
    - #35 – Beech Ave at Merrill Ave
    - #40 – Beech Ave at Randall Ave
    - #44 – I-15 SB Ramps/Ontario Mills Dr at Fourth St
    - #45 – I-15 NB Ramps at Fourth St
    - #47 – Commerce Dr at San Bernardino Ave
    - #56 – Commerce Dr/I-10 Ramps at Valley Blvd
    - #59 – Beech Ave at Valley Blvd
    - #60 – Citrus Ave at Valley Blvd
    - #61 – Sierra Ave at Valley Blvd
    - #68 – Sierra Ave at I-10EB/WB Ramps
    - #72 – Cherry Ave at Santa Ana Ave

- Project traffic (Phases 1 and 2) was added to Opening Year 2027 traffic volumes to establish Opening Year 2027 Plus Phases 1 and 2 conditions. With the addition of project traffic, the following additional study intersections would operate at an unacceptable Level of Service under Opening Year 2027 Plus Project (Phases 1 and 2) conditions:

- #9 – Sierra Ave at Highland Ave
- #10 – Etiwanda Ave at Base Line Rd
- #15 – Citrus Ave at Baseline Ave
- #20 – Etiwanda Ave at Foothill Blvd
- #22 – Beech Ave at Foothill Blvd
- #23 – Citrus Ave at Foothill Blvd
- #26 – Cherry Ave at Arrow Rte
- #31 – Cherry Ave at Whittram Ave
- #32 – Beech Ave at Whittram Ave
- #33 – Etiwanda Ave at Napa St
- #34 – Cherry Ave at Merrill Ave
- #35 – Beech Ave at Whittram Ave
- #39 – Cherry Ave at Randall Ave
- #40 – Beech Ave at Randall Ave
- #41 – Fontana Ave/Catawba Ave at Randall Ave
- #44 – I-15 SB Ramps/Ontario Mills Dr at Fourth St
- #45 – I-15 NB Ramps at Fourth St
- #47 – Commerce Dr at San Bernardino Ave
- #49 – Cherry Ave at San Bernardino Ave
- #56 – Commerce Dr/I-10 Ramps at Valley Blvd
- #57 – Cherry Ave at Valley Blvd
- #59 – Beech Ave at Valley Blvd
- #60 – Citrus Ave at Valley Blvd
- #61 – Sierra Ave at Valley Blvd
- #63 – Cherry Ave at I-10 WB Ramps
- #68 – Sierra Ave at I-10 EB/WB Ramps
- #72 – Cherry Ave at Santa Ana Ave

- The San Bernardino Transportation Analysis Model (SBTAM) was used to develop forecast volumes for Horizon Year 2040 conditions. Compared to Opening Year 2027 conditions, the following additional study intersections would operate at an unacceptable Level of Service under Horizon Year 2040 conditions:

    - #10 – Etiwanda Ave at Base Line Rd
    - #21 – Cherry Ave at Foothill Blvd
    - #22 – Beech Ave at Foothill Blvd
    - #23 – Citrus Ave at Foothill Blvd
    - #24 – Sierra Ave at Foothill Blvd
    - #25 – Etiwanda Ave at Arrow Rte
    - #26 – Cherry Ave at Arrow Rte
    - #28 – Citrus Ave at Arrow Rte
    - #31 – Cherry Ave at Whittram Ave

- #32 – Beech Ave at Whittram Ave
- #34 – Cherry Ave at Merrill Ave
- #35 – Beech Ave at Merrill Ave
- #40 – Beech Ave at Randall Ave
- #41 – Fontana Ave/Catawba Ave at Randall Ave
- #47 – Commerce Dr at San Bernardino Ave
- #54 – Beech Ave at Fontana Ave
- #56 – Commerce Dr/I-10 Ramps at Valley Blvd
- #57 – Cherry Ave at Valley Blvd
- #59 – Beech Ave at Valley Blvd
- #60 – Citrus Ave at Valley Blvd
- #68 – Sierra Ave at I-10 EB/WB Ramps
- #70 – Rochester Ave at Arrow Rte
- #72 – Cherry Ave at Santa Ana Ave

- Project traffic (Phases 1 and 2) was added to Horizon Year 2040 traffic volumes to establish the conditions for Opening Year 2027 Plus Phases 1 and 2 conditions. With the addition of project traffic, the following additional study intersections would operate at an unacceptable Level of Service under Horizon Year 2040 Plus Project (Phases 1 and 2) conditions:

  - #10 – Etiwanda Ave at Base Line Rd
  - #15 – Citrus Ave at Baseline Ave
  - #20 – Etiwanda Ave at Foothill Blvd
  - #21 – Cherry Ave at Foothill Blvd
  - #22 – Beech Ave at Foothill Blvd
  - #23 – Citrus Ave at Foothill Blvd
  - #24 – Sierra Ave at Foothill Blvd
  - #25 – Etiwanda Ave at Arrow Rte
  - #26 – Cherry Ave at Arrow Rte
  - #28 – Citrus Ave at Arrow Rte
  - #30 – Etiwanda Ave at Whittram Ave
  - #31 – Cherry Ave at Whittram Ave
  - #32 – Beech Ave at Whittram Ave
  - #33 – Etiwanda Ave at Napa St
  - #34 – Cherry Ave at Merrill Ave
  - #35 – Beech Ave at Merrill Ave
  - #39 – Cherry Ave at Randall Ave
  - #40 – Beech Ave at Randall Ave
  - #41 – Fontana Ave/Catawba Ave at Randall Ave
  - #44 – I-15 SB Ramps/Ontario Mills Dr at Fourth St
  - #47 – Commerce Dr at San Bernardino Ave

- #49 – Cherry Ave at San Bernardino Ave
- #51 – Fontana Ave/Elm Ave at San Bernardino Ave
- #54 – Beech Ave at Fontana Ave
- #56 – Commerce Dr/I-10 Ramps at Valley Blvd
- #57 – Cherry Ave at Valley Blvd
- #59 – Beech Ave at Valley Blvd
- #60 – Citrus Ave at Valley Blvd
- #66 – Cherry Ave at I-10 EB Ramps
- #68 – Sierra Ave at I-10 EB/WB Ramps
- #70 – Rochester Ave at Arrow Rte
- #72 – Cherry Ave at Santa Ana Ave

- Based on the respective jurisdictional LOS standards and criteria noted earlier in the report, under the Horizon Year 2040 Plus Project Conditions, the project-related effect would be considered significant at the following intersections:

  - #15 – Citrus Ave at Baseline Ave
  - #20 – Etiwanda Ave at Foothill Blvd
  - #23 – Citrus Ave at Foothill Blvd
  - #24 – Sierra Ave at Foothill Blvd
  - #25 – Etiwanda Ave at Arrow Rte
  - #26 – Cherry Ave at Arrow Rte
  - #30 – Etiwanda Ave at Whittram Ave
  - #31 – Cherry Ave at Whittram Ave
  - #32 – Beech Ave at Whittram Ave
  - #33 – Etiwanda Ave at Napa St
  - #34 – Cherry Ave at Merrill Ave
  - #35 – Beech Ave at Merrill Ave
  - #39 – Cherry Ave at Randall Ave
  - #40 – Beech Ave at Randall Ave
  - #41 – Fontana Ave/Catawba Ave at Randall Ave
  - #44 – I-15 SB Ramps/Ontario Mills Dr at Fourth St
  - #47 – Commerce Dr at San Bernardino Ave
  - #49 – Cherry Ave at San Bernardino Ave
  - #51 – Fontana Ave/Elm Ave at San Bernardino Ave
  - #56 – Commerce Dr/I-10 Ramps at Valley Blvd
  - #57 – Cherry Ave at Valley Blvd
  - #60 – Citrus Ave at Valley Blvd
  - #66 – Cherry Ave at I-10 EB Ramps
  - #68 – Sierra Ave at I-10 EB/WB Ramps
  - #70 – Rochester Ave at Arrow Rte
  - #72 – Cherry Ave at Santa Ana Ave

- Recommended improvements under applicable Opening Year 2024, Opening Year 2027, and Horizon Year 2040 conditions were provided to address the project's effect at the study intersections

- Recommended improvements may include a combination of fee payments to established programs, construction of specific improvements, payment of a fair-share contribution toward future improvements, or a combination of these approaches.

APPENDIX A

APPROVED SCOPE OF STUDY FORM

SCOPE FOR TRAFFIC STUDY

Project Name:	Speedway Commerce Center II

This Scope for Traffic Study acknowledges San Bernardino County Department of Public Works, Traffic Division requirements of traffic impact analysis for the project and is subject to change:

Project Address:	9300 Cherry Ave, Fontana, CA 92335		
Project Description:	Industrial Uses – See Attachment A – Site Plan		
City:	County of San Bernardino		
Project Buildout Year:	2027	**Ambient Growth Rate per Year:**	2%
Closest Intersection (Xtn) to the Project			
Xtn N/S Street Name:	Cherry Avenue		
Xtn E/W Street Name:	Randall Avenue		
Thomas Guide Pg+Grid:		**County Supervisorial District:**	2

	Engineer	**Developer**
Company:	Kimley-Horn and Associates, Inc.	Hillwood Enterprises, L.P.

Traffic Division Representative **Date**

SCOPE FOR TRAFFIC STUDY

Project Name:	Speedway Commerce Center II

1. Traffic Distribution: See Attachment C (Study Area)

2. Trip Credit: Exact amount of credit subject to approval by Traffic Division.

Transportation Demand Management (TDM)	No	
Existing Active Land Use	No	
Previous Land Use	No	
Internal Trip Reduction	No	
Pass-by Trip Reduction	Yes	See Attachment B6

3. Related Projects: Consultant should check with Planning in the San Bernardino County Department of Land Use Services and planning departments of adjoining Cities. Documentation of the consultation from these agencies shall be included in the traffic study. Related projects list shall be submitted to Traffic Division for our review and approval before being incorporated in the study.

4. Freeway Analysis: The potential traffic impact on the following Freeway(s) must be considered.

No longer required based on new Caltrans guidelines.

The applicant shall consult with the State of California Department of Transportation (Caltrans) to determine the California Environmental Quality Act levels of significance with regard to traffic impacts on Caltrans' freeway facilities. This consultation shall also include a determination of Caltrans requirements for the study of traffic impacts to its facilities and the mitigation of any such impacts. This analysis must follow the most current Caltrans' Guide for the Preparation of Traffic Impact Studies (December 2002) and can be obtained from http://www.dot.ca.gov/hq/traffops/developserv/operationalsystems/reports/tiguide.pdf. If Caltrans finds that the project has a significant impact on the freeway, Caltrans shall be requested to include the basis for this finding in their response. If fees are proposed to mitigate the freeway impact, Caltrans shall be requested to identify the specific project to which the fees will apply. These written comments from Caltrans shall be included with the traffic study and submitted to Public Works for review and approval. If a documented good faith effort is made to consult with Caltrans and written comments cannot be obtained from within a reasonable amount of time, an analysis of the freeway impact shall be made using HCM procedures. Appendix A of the SANBAG CMP outlines allowable modifications to these procedures. The SANBAG CMP can be viewed online at: http://www.sanbag.ca.gov/planning/subr_congestion.html

SCOPE FOR TRAFFIC STUDY

Project Name:	Speedway Commerce Center II

* - Average Vehicle Trip Ends.
For ITE Land Uses provide number and name of Land Use. e.g. LU 814 - Variety Store
[1] Trip Generation Rates for E-Commerce are based on actual counts with a blended rate of 10 months non-peak and 2 months peak season.
[2] Trip Generation Rates for Truck Storage are based on information provided by the City of San Bernardino based on data from similar facilities.
Note: PCE = Passenger Car Equivalent-

SCOPE FOR TRAFFIC STUDY

Project Name:	Speedway Commerce Center II

6. Study Intersections: At minimum, the study shall include the following intersections. The list is subject to change after related projects, trip generation and distribution are determined. Consultant should check with adjoining Cities regarding their requirements in addition to the following County/City intersections. Documentation of the consultation from these agencies shall be included in the traffic study.

Cities to be consulted: Fontana, Rancho Cucamonga

Project Name:	Speedway Commerce Center II

7. Other:

Per discussion with County staff, new counts will be conducted at the study locations.
Traffic counts should include the following parameters:
• Must be taken on Tuesdays, Wednesdays, or Thursdays.
• Must exclude holidays, and the first weekdays before and after the holiday.
• Must be taken on days when local schools or colleges are in session.
• Must be taken on days of good weather, and avoid atypical conditions (e.g., road construction, detours, or major traffic incidents).
For all proposed mitigation measures, a conceptual plan for the improvements shall be submitted to our Traffic Studies section for review and approval prior to the approval of the Traffic Impact Analysis. All proposed improvements shall be within the right-of-way.
For all cumulative mitigation measures, a cost estimate for the improvement shall be submitted.
This study will be analyzed under the following scenarios:
• Existing Conditions
• Opening Year 2024
• Opening Year 2024 Plus Phase 1
• Opening Year 2027
• Opening Year 2027 Plus Project (Phases 1 and 2)
• Horizon Year 2040
• Horizon Year 2040 Plus Project
A VMT analysis will be performed using the SBTAM model based on VMT per employee for home-based work trip purpose (attractions) consistent with the San Bernardino County *Transportation Impact Study Guidelines* (July 2019)

This analysis must follow the most current Traffic Impact Study Guidelines for the County as stated in the County's Road Planning and Design Standards.

Project Name:	Speedway Commerce Center II

8. Fees

The County charges on an actual cost basis for review of traffic studies. An initial deposit of $1082 is required at the time that a land use application is filed with the Department of Land Use Services If the review costs exceed the initial deposit, the applicant will be expected to provide additional funds and the review will be suspended until the additional funds are deposited.

9. Contact Information:

Please submit a signed copy of this scope for approval by the Traffic Division. Draft scopes may be sent electronically. Final scope with signature should be submitted in person or by US Mail to:

County of San Bernardino
Dept. of Public Works, Traffic Division
