1 Introduction

The City of Redlands (Lead Agency) received an application from Prologis Inc. (applicant) for the redevelopment of an existing industrial warehouse site with a 197,397-square foot Class A light industrial building which includes 8,000-square foot of office space on approximately 10.98 acres of land in the City of Redlands, California. The approval of the application constitutes a *project* that is subject to review under the California Environmental Quality Act (CEQA) 1970 (Public Resources Code §§ 21000, *et seq.*), and the CEQA Guidelines (14 California Code of Regulations §§ 15000, *et. seq*.).

This Initial Study was prepared to assess the short-term, long-term, and cumulative environmental impacts resulting from the proposed project. This report was prepared to comply with CEQA Guidelines § 15063, which sets forth the required contents of an Initial Study. These include:

- A description of the project, including the location of the project (See Section 2);
- Identification of the environmental setting (See Section 2.10);
- Identification of environmental effects by the use of a checklist, matrix, or other methods, provided that entries on the checklist or other form are briefly explained to indicate that there is some evidence to support the entries (See Section 4);
- Discussion of ways to mitigate significant effects identified, if any (See Section 4);
- Examination of whether the project is compatible with existing zoning, plans, and other applicable land use controls (See Section 4.11); and
- The name(s) of the person(s) who prepared or participated in the preparation of the Initial Study (See Section 5).

1.1 – Purpose of CEQA

CEQA § 21000 of the California Public Resources Code provides as follows:

The Legislature finds and declares as follows:

a) The maintenance of a quality environment for the people of this state now and in the future, is a matter of statewide concern.
b) It is necessary to provide a high-quality environment that at all times is healthful and pleasing to the senses and intellect of man.
c) There is a need to understand the relationship between the maintenance of high-quality ecological systems and the general welfare of the people of the state, including their enjoyment of the natural resources of the state.
d) The capacity of the environment is limited, and it is the intent of the Legislature that the government of the state take immediate steps to identify any critical thresholds for the health and safety of the people of the state and take all coordinated actions necessary to prevent such thresholds being reached.
e) Every citizen has a responsibility to contribute to the preservation and enhancement of the environment.
f) The interrelationship of policies and practices in the management of natural resources and waste disposal requires systematic and concerted efforts by public and private interests to enhance environmental quality and to control environmental pollution.
g) It is the intent of the Legislature that all agencies of the state government which regulate activities of private individuals, corporations, and public agencies which are found to affect the quality of the environment, shall regulate such activities so that major consideration is given to preventing environmental damage while providing a decent home and satisfying living environment for every Californian.

The Legislature further finds and declares that it is the policy of the state to:

h) Develop and maintain a high-quality environment now and in the future, and take all action necessary to protect, rehabilitate, and enhance the environmental quality of the state.
i) Take all action necessary to provide the people of this state with clean air and water, enjoyment of aesthetic, natural, scenic, and historic environmental qualities, and freedom from excessive noise.
j) Prevent the elimination of fish or wildlife species due to man's activities, ensure that fish and wildlife populations do not drop below self-perpetuating levels, and preserve for future generations representations of all plant and animal communities and examples of the major periods of California history.
k) Ensure that the long-term protection of the environment, consistent with the provision of a decent home and suitable living environment for every Californian, shall be the guiding criterion in public decisions.
l) Create and maintain conditions under which man and nature can exist in productive harmony to fulfill the social and economic requirements of present and future generations.
m) Require governmental agencies at all levels to develop standards and procedures necessary to protect environmental quality.
n) Require governmental agencies at all levels to consider qualitative factors as well as economic and technical factors and long-term benefits and costs, in addition to short-term benefits and costs, and to consider alternatives to proposed actions affecting the environment.

A concise statement of legislative policy, with respect to public agency consideration of projects for some form of approval, is found in CEQA § 21002, quoted below:

> The Legislature finds and declares that it is the policy of the state that public agencies should not approve projects as proposed if there are feasible alternatives or feasible mitigation measures available which would substantially lessen the significant environmental effects of such projects, and that the procedures required by this division are intended to assist public agencies in systematically identifying both the significant effects of proposed projects and the feasible alternatives or feasible mitigation measures which will avoid or substantially lessen such significant effects. The Legislature further finds and declares that in the event that specific economic, social, or other conditions make infeasible such project alternatives or such mitigation measures, individual projects may be approved in spite of one or more significant effects thereof.

1.2 – Public Comments

Comments from all agencies and individuals are invited regarding the information contained in this Initial Study. Such comments should explain any perceived deficiencies in the assessment of impacts in the Initial Study. To request an appointment to review these materials, please contact:

Sean Reilly, Principal Planner
City of Redlands, Planning Department
35 Cajon Street, Suite 15-A
Redlands, California 92373
909-798-7555

All written comments received during the 30-day public review period for the Initial Study/Mitigated Negative Declaration will be considered by the City of Redlands prior to adoption.

2 Project Description

2.1 – Project Title

301 Tennessee Street Warehouse Project

2.2 – Lead Agency Name and Address

City of Redlands
Planning Department
35 Cajon Street, Suite 15-A
Redlands, California 92373
909-798-7555

2.3 – Contact Person and Phone Number

Sean Reilly, Principal Planner
909-798-7555, ext. 7344

2.4 – Project Location

The project site is made up of two parcels located on the northwest corner of State Street and Tennessee Street in the City of Redlands, California. (See Exhibit 1 Project Location Map). The surrounding uses include commercial/industrial uses north of the project site, and light industrial uses to the east, west and south of the site.

- Latitude 34° 03’ 27” North, Longitude 117° 12’ 02” West
- APNs #0292-192-11-0000 and 0292-192-14-0000

2.5 – Project Sponsor’s Name and Address

Prologis Inc.
3546 Concours St. Suite 100
Ontario, CA 91764

2.6 – General Plan Land Use Designation

Light Industrial

2.7 – Zoning District

Industrial District (I-P)

2.8 – Project Description

The project includes demolition of an existing manufacturing warehouse and a single-family house, and the construction of a 197,397 square foot light industrial building and associated parking and landscaping improvements. The approximately 10.98 acre site encompasses two parcels, located at the northwest corner of State Street and Tennessee Street in the City of Redlands, California. (APNs

#0292-192-11-0000 and 0292-192-14-0000) (see Exhibits 1-4). The proposed light industrial building would be 189,397 square feet with 8,000 square feet of first and second floor office space totaling 197,397 square feet. Based on the preliminary grading plans, the project would require approximately 23,154 cubic yards of soil import.

Architecture & Fencing

Eight-foot-high decorative walls are proposed around the perimeter of the truck yard area to screen operations from the outside of the project site. The truck entrances located on Kansas Street and Tennessee street would be fenced with eight-foot-high wrought iron fencing.

Landscaping

The proposed project includes approximately 84,845 square feet of ornamental landscaping that would cover 18% of the site. Landscaping would be visible from Kansas street along the west side of the site, Tennessee Street along the east, State Street on the south, and the Orange Blossom Trail that runs along the north face of the project site. The proposed landscaping would include 24-inch and 36-inch box trees, various shrubs, and ground covers to screen the proposed building, and parking and loading areas from off-site viewpoints.

Access and On-Site Circulation

Passenger vehicle access to the project site would be provided via a 30-foot-wide driveway on the east side of the site on Tennessee Street. Primary truck access to the project site would be provided via a 40-foot-wide driveway on the west side of the site along Kansas Street and via one 40-foot-wide driveway on the east side of the site on Tennessee Street. Secondary truck access would be provided via one 40-foot-wide driveway on the south side of the site on State Street. Emergency vehicle access would be provided through the parking lot and around the building with a 30-foot fire lane.

Drainage and Wet Utilities

The proposed project would install new onsite water and sewer lines that would connect to the existing infrastructure in the surrounding streets. Drainage from the proposed project would surface flow through the site and use catch basins and landscape drains to collect for treatment. The subsurface storm drain would be used to convey flows into a proposed underground chamber infiltration system. The underground chambers would be located in the northwesterly landscape area and would fully infiltrate the water volume to the surrounding water system.

Building Operations

The project site is within the light industrial (LI) general plan land use designation and industrial district zone (I-P). The light industrial general plan land use designation allows for manufacturing, distribution, research, and development (R&D) industries, and ancillary commercial uses. The Industrial District (I-P) zoning allows for the development of all industrial uses which is conducive to employees and citizens of the community. Typical operations of the project site may include employees and customers travelling to and from the facility, delivery of materials to the site, and truck loading and unloading. Approximately 10% of warehouse operations would involve cold storage. The project is anticipated to operate 24-hours a day, 7 days per week.

Construction Schedule

Construction activities for the project include demolition, site preparation, grading, building construction, paving, and architectural coatings. Demolition of the existing structures would take three (3) months to complete. Construction of the new building will take nine (9) months. Paving and landscaping would take one (1) month. Additionally, all offsite improvements would take one (1) month. The project would require approximately 24,477 cubic yards of soil import.

2.9 – Surrounding Land Uses

Surrounding land uses are summarized in Table 1.

Table 1
Surrounding Land Uses

Direction	Zoning Designation	Zoning District	Existing Land Use
Project Site	Light Industrial	I-P (Industrial District)	Former La-Z-Boy Facility Single Family Home
North	Office	I-P (Industrial District) M-1(Light Industrial District) C-M (Commercial Industrial) FP-1 (Flood Plan District)	Commercial Shopping Center
South	Light Industrial	I-P (Industrial District)	Industrial Warehouse (SCE Service Center)
East	Light Industrial	A-P (Administrative and Professional Office District) M-P (Planned Industrial District)	Undeveloped land/graded land used for parking
West	Office	EV/IC – (Commercial Industrial)	Industrial Warehouse

2.10 – Environmental Setting

The project is located on an irregularly shaped property approximately 10.98 acres in size on two parcels in a developed area of the City of Redlands, California. It is currently developed with an existing 193,469 square foot former La-Z-Boy Facility manufacturing warehouse and a non-conforming single-family house that is not occupied. The facility was occupied by La-Z-Boy until October 2019, and was subsequently purchased by Esri, a geographic information systems supplier in January 2020. The property was listed for purchase and bought again on April 5th, 2022. *The existing tenant is a 3PO (3rd partly logistics operator) for clothing distribution to major retailers such as Macy's, Target, Amazon, etc. Their hours of operation are 7am to 5pm Monday through Friday.* The property is well maintained with medium-sized trees distributed throughout the property, hedges, and grass with minimal weeds. The project site is flat, with an approximate elevation of 1,358 feet above mean sea level (AMSL). Regional access to the project site is provided by the Interstate 10 Freeway (I-10) located approximately 0.6 miles north.

2.11 – Required Approvals

Various permits, approvals, and actions by the City of Redlands and various public agencies may be required to execute and implement the proposed project. The permits from the lead agency that are necessary include:

- Planning Commission Review and Approval No. 948
- Conditional Use Permit No. 1181
- Demolition Permit No. 371
- Grading Permit No. 373
- Parcel Merger No. 6
- Compliance with the requirements of CEQA

- Building Permit

2.12 – Other Public Agency Whose Approval is Required

- N/A

3 Determination

3.1 – Environmental Factors Potentially Affected

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a 'Potentially Significant Impact' as indicated by the checklist on the following pages.

☐	Aesthetics	☐	Agriculture Resources	☑	Air Quality
☑	Biological Resources	☑	Cultural Resources	☐	Energy
☑	Geology /Soils	☐	Greenhouse Gas Emissions	☑	Hazards & Hazardous Materials
☐	Hydrology / Water Quality	☐	Land Use / Planning	☐	Mineral Resources
☐	Noise	☐	Population / Housing	☐	Public Services
☐	Recreation	☐	Transportation/Traffic	☑	Tribal Cultural Resources
☐	Utilities / Service Systems	☐	Wildfire	☐	Mandatory Findings of Significance

3.2 – Determination

☐	I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.
☑	I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.
☐	I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.
☐	I find that the proposed project MAY have a 'potentially significant impact' or 'potentially significant unless mitigated' impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.
☐	I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

Name: Sean Reilly, Principal Planner Date

This Page Intentionally Left Blank.

4.1 – Aesthetics

Except as provided in Public Resources Code Section 21099, would the project:

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Have a substantial adverse effect on a scenic vista?	☐	☐	☑	☐
b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within view from a state scenic highway?	☐	☐	☐	☑
c) In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public view are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?	☐	☐	☑	☐
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	☐	☐	☑	☐

a) Less than Significant Impact. Scenic vistas can generally be defined as natural landscapes that form views of unique flora, geologic, or other natural features that are generally free from urban intrusions. Such resources can be impacted when a structure is built that blocks the view of the vista, or if a development is built on the vista itself. Typical scenic vistas include views of mountains and hills, large, uninterrupted open spaces, and bodies of water. Scenic vistas generally play a large role in the way a community defines itself and effects development patterns as projects are designed to take advantage of viewsheds.

Redland's visual character is tied to its surrounding open space areas, and as such is incorporated into the City's General Plan. The City has overtime acquired open space land around Redlands and incorporated it into a concept called the "Emerald Necklace"; a series of open space and park areas surrounding the City connected by scenic trails and roads. Areas within the City's Planning Area include 254 acres of the San Timoteo Canyon south of the City called the "San Timoteo Nature Sanctuary". Also, to the south, the City owns 338 acres of Live Oak Canyon, 245 acres of which is specifically set aside for conservation. The 4,000 acres of the Santa Ana River Wash makes up the northern boundary of the City, and is owned by multiple stakeholders including Federal, State, and local governments,

utilities, and private groups. The Crafton Hills Open Space makes up part of the eastern portion of the City's Planning Area, and with a general elevation above 2,400 feet, the area is valuable to the City as natural habit and scenic resource. The General Plan ensures the preservation of Redlands' open space corridors and limits development on and around those areas to preserve its visual character and limit encroachment. The General Plan does not designate any scenic vistas within the City. The project site is located in a developed area of the city and is zoned for light industrial uses. Surrounding zoning uses include industrial, commercial, and high-density residential uses. The project is located in an urbanized area, and fits the zoning designated by the City. Furthermore, the project would follow the City's Zoning and Building Codes and will not exceed the City's 50-foot height limit on light industrial zoning, and as such will fit the character of the area as regulated by the City. The proposed project would not constitute any significant loss of visibility to Redlands' scenic vistas as the area's developed industrial setting limits existing scenic vistas. Impacts to the visibility of scenic vistas in Redlands would be less than significant.

b) No Impact. There are no State Scenic Highways on or near the project site, and the site is not visible to a designated state scenic highway as identified on the California Scenic Highway Mapping System. The nearest officially designated scenic highways are California State Route 243 just outside of Banning, and California State Route 38 near Big Bear Lake; the former starting approximately 24 miles southeast of the project site. As of this document being written, State Route 38 in Redlands has not been officially designated but is eligible. The City Council has designated a number of corridors within the city as scenic highways, drives, and historic streets. Designated streets and those under consideration for designation are listed in the "Distinctive City" Element of the City's General Plan.[1] The project site is not located on or near any such corridors and would not impact the quality of those streets during construction or during long-term operations. No impacts would occur.

c) Less than Significant Impact. The proposed industrial facility building has been designed according to City design guidelines, including requirements for architectural quality, landscaping, and screening, and would be consistent in character and quality with the surrounding industrial and commercial developments. The project site would undergo visual changes consistent with an ongoing construction project and would temporarily change the visual character of the site and surrounding area. However, the project would not substantially degrade the existing visual character and qualities of the site and its surroundings and would have a less than significant impact.

d) Less than Significant Impact. Excessive or inappropriately directed lighting can adversely impact night-time views by reducing the ability to see the night sky and stars. Glare can be caused by unshielded or misdirected lighting sources, or reflective surfaces. Impacts associated with glare range from a simple nuisance to potentially dangerous. Sources of daytime glare are typically concentrated in commercial areas and associated parking areas that contain reflective materials such as hi-efficiency window glass, highly polished surfaces, and expanses of pavement.

Development of parking improvements, related lighting, and associated glare prevention would be conducted in accordance with design standards in the City of Redlands Code of Ordinances; Chapter 18.112.260: Dust, Heat, and Glare Restrictions.[2] Glare is not expected to result from the increase in pavement or from the warehouse building. Adhering to Redlands Code of Ordinances would ensure any impacts related to excessive or inappropriately directed lighting would be less than significant.

4.2 – Agriculture and Forest Resources

In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. Would the project:

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	☐	☐	☐	☑
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?	☐	☐	☐	☑
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104 (g))?	☐	☐	☐	☑
d) Result in loss of forest land or conversion of forest land to non-forest use?	☐	☐	☐	☑
e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to non-agricultural use or conversion of forest land to non-forest use?	☐	☐	☐	☑

a) No Impact. The California Important Farmland Finder prepared by the California Department of Conservation does not identify the project site as being located on prime farmland, unique farmland, or farmland of Statewide Importance.[3] The City of Redlands General Plan does identify portions of the north and eastern city for Agricultural and Open Space uses. The project site is located away from any

land zoned for agricultural uses, and there would be no conversion of farmlands to non-agricultural uses, and as a result the project would have no impact.

b) No Impact. The project site is not located on land that is used for or conflicts with nearby agriculturally zoned land. The project site is currently zoned Industrial District (I-P) which does not allow for agricultural uses.[4] The parcels comprising the project site are not involved in an active Williamson Act contract. There would be no conflict with existing zoning for agricultural use or a Williamson Act contract and therefore there would be no impact.

c) No Impact. Public Resources Code Section 12220(g) identifies forest land as *land that can support 10-percent native tree cover of any species, including hardwoods, under natural conditions, and that allows for management of one or more forest resources, including timber, aesthetics, fish and wildlife, biodiversity, water quality, recreation, and other public benefits*. The project site and surrounding properties are not currently being managed or used for forest land as identified in Public Resources Code Section 12220(g). The project site is zoned Light Industrial for various industrial uses that include warehousing, office space, storage, and manufacturing. As such, development of the project would have no impact on any timberland or forestland zoning.

d) No Impact. As indicated in 4.2 c), the area is not designated as forest land; thus, there would be no loss of forest land or conversion of forest land to non-forest use as a result of the project. No impacts would occur.

e) No Impact. The project site is currently occupied by a warehouse facility and (1) one single family home and is zoned for light industrial uses. The surrounding zoning designations include industrial zoning to the south and west, industrial and commercial zoning to the north, administrative zoning to the east, and public/institutional zoning to the southwest. None of the surrounding sites contain existing agricultural or forest uses. The development of this proposed project would not change the existing environment in a manner that would result in the conversion of forest land to non-forest use. No impact would occur.

4.3 – Air Quality

Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations. Would the project:

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Conflict with or obstruct implementation of the applicable air quality plan?	☐	☐	☑	☐
b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?	☐	☐	☑	☐
c) Expose sensitive receptors to substantial pollutant concentrations?	☐	☑	☐	☐
d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	☐	☐	☑	☐

An *Air Quality, Health Risk, Greenhouse Gas, and Energy Impact Report* was prepared for the proposed project by LSA, dated January 2023 (See Appendix A). The report estimates the potential air quality emissions for the proposed project and evaluates project emissions against applicable South Coast Air Quality Management District (SCAQMD)-recommended California Environmental Quality Act (CEQA) significance thresholds for construction and operation.

a) Less than Significant Impact. A consistency determination plays an essential role in local agency project review by linking local planning and unique individual projects to the air quality plans. A consistency determination fulfills the CEQA goal of fully informing local agency decision-makers of the environmental costs of the project under consideration at a stage early enough to ensure that air quality concerns are addressed. Only new or amended General Plan elements, Specific Plans, and significantly unique projects need to undergo a consistency review due to the air quality plan strategy being based on projections from local General Plans.

The SCAQMD Air Quality Management Plan (AQMP) is based on regional growth projections developed by Southern California Association of Governments (SCAG). The proposed project would include 197,397 square feet of warehouse use. The proposed project would not house more than 1,000 persons, occupy more than 40 acres of land, or encompass more than 650,000 square feet of floor area. Thus, the proposed project would not be defined as a regionally significant project under CEQA; therefore, it does not meet SCAG's Intergovernmental Review criteria.

The City's General Plan is consistent with the SCAG Regional Comprehensive Plan Guidelines and the SCAQMD AQMP. Pursuant to the methodology provided in Chapter 12 of the SCAQMD CEQA Air Quality Handbook, consistency with the AQMP is affirmed if the project:

1. would not increase the frequency or severity of an air quality standards violation or cause a new violation
2. is consistent with the growth assumptions in the AQMP.

Consistency review is presented as follows:

Referring to Consistency Criterion 1; the project would result in short-term construction and long-term operational pollutant emissions that are all less than the CEQA significance emissions thresholds established by SCAQMD, as demonstrated below; therefore, the project would not result in an increase in the frequency or severity of an air quality standards violation or cause a new air quality standard violation.

Referring to Consistency Criterion 2; the CEQA Air Quality Handbook indicates that consistency with AQMP growth assumptions must be analyzed for new or amended General Plan elements, Specific Plans, and significant projects. Significant projects include airports, electrical generating facilities, petroleum and gas refineries, designation of oil drilling districts, water ports, solid waste disposal sites, and offshore drilling facilities; therefore, the proposed project is not defined as significant. In addition, the proposed project would not require a change to the General Plan land use designation or the current zoning and would be consistent with the City's General Plan and Zoning Ordinance. Therefore, the proposed project would be consistent with the growth assumptions set forth by SCAG and the AQMP.

Based on the consistency analysis presented above, the proposed project would be consistent with the regional AQMP, and impacts would be less than significant.

b) Less than Significant Impact. The Basin is designated as non-attainment for Ozone (O_3) and Particulate Matter less than 2.5 microns ($PM_{2.5}$) for federal standards and non-attainment for O_3, PM_{10}, and $PM_{2.5}$ for State standards. The SCAQMD's nonattainment status is attributed to the region's development history. Past, present, and future development projects contribute to the region's adverse air quality impacts on a cumulative basis. By its very nature, air pollution is largely a cumulative impact. No single project is sufficient in size to, by itself, result in nonattainment of ambient air quality standards. Instead, a project's individual emissions contribute to existing cumulatively significant adverse air quality impacts. If a project's contribution to the cumulative impact is considerable, then the project's impact on air quality would be considered significant.

In developing thresholds of significance for air pollutants, the SCAQMD considered the emission levels for which a project's individual emissions would be cumulatively considerable. If a project exceeds the identified significance thresholds, its emissions would be cumulatively considerable, resulting in significant adverse air quality impacts to the region's existing air quality conditions. Therefore, additional analysis to assess cumulative impacts is unnecessary. The following analysis assesses the potential project-level construction- and operation-related air quality impacts.

<u>Construction Emissions</u>
During construction, short-term degradation of air quality may occur due to the release of particulate emissions generated by demolition, grading, paving, building, and other activities. Emissions from construction equipment are also anticipated and would include carbon monoxide (CO), nitrogen oxides (NO_x), sulfur oxides (SO_x), volatile organic compounds (VOCs), directly-emitted particulate matter ($PM_{2.5}$ and PM_{10}), and toxic air contaminants (TACs) such as diesel exhaust particulate matter.

Project construction activities would include demolition, grading, site preparation, building, paving, and architectural coating activities. Construction-related effects on air quality from the proposed project would be greatest during the site preparation phase due to the disturbance of soils. If not properly controlled, these activities would temporarily generate particulate emissions. Sources of fugitive dust would include disturbed soils at the construction site. Unless properly controlled, vehicles leaving the site would deposit dirt and mud on local streets, which could be an additional source of airborne dust after it dries. PM_{10} emissions would vary from day to day, depending on the nature and magnitude of construction activity and local weather conditions. PM_{10} emissions would depend on soil moisture, silt content of soil, wind speed, and the amount of operating equipment. Larger dust particles would settle near the source, while fine particles would be dispersed over greater distances from the construction site.

Water or other soil stabilizers can be used to control dust, resulting in emission reductions of 50 percent or more. The SCAQMD has established Rule 403: Fugitive Dust, which would require the applicant to implement measures that would reduce the amount of particulate matter generated during the construction period.

In addition to dust-related PM_{10} emissions, heavy trucks and construction equipment powered by gasoline and diesel engines would generate CO, SO_2, NO_x, VOCs and some soot particulate ($PM_{2.5}$ and PM_{10}) in exhaust emissions. If construction activities were to increase traffic congestion in the area, CO and other emissions from traffic would increase slightly while those vehicles idle in traffic. These emissions would be temporary in nature and limited to the immediate area surrounding the construction site.

Construction emissions were estimated for the project using CalEEMod. Table 2 lists the tentative project construction schedule beginning in June 2023 and ending in May 2024. Table 3 lists the potential construction equipment to be used during project construction under each phase of construction. Other precise details of construction activities are unknown at this time; therefore, default settings (e.g., construction equipment) from CalEEMod were assumed. Table 4 identifies the total annual emissions associated with construction activities. CalEEMod output sheets are included in Appendix A.

Note: Maximum emissions of VOC occurred during the overlapping building construction and architectural coating phases.
CO = carbon monoxide lbs./day = pounds per day
SCAQMD = South Coast Air Quality Management District SOX = sulfur oxides PM10 = particulate matter less than 10 microns in size NOX = nitrogen oxides
PM2.5 = particulate matter less than 2.5 microns in size VOC = volatile organic compounds

As shown in Table 4, construction emissions associated with the project would not exceed the SCAQMD thresholds for VOC, NO_x, CO, SO_X, $PM_{2.5,}$ or PM_{10} emissions. In addition to the construction period thresholds of significance, the project is required to comply with regional rules that assist in reducing short-term air pollutant emissions. SCAQMD Rule 403 requires that fugitive dust be controlled with best-available control measures so that the presence of such dust does not remain visible in the atmosphere beyond the property line of the emission source. In addition, SCAQMD Rule 403 requires implementation of dust suppression techniques to prevent fugitive dust from creating a nuisance off site. Even though the project's construction would not exceed any of the emissions thresholds as noted in Table 4, compliance with Rule 403 dust suppression techniques can further reduce the fugitive dust generation (and thus, the PM_{10} component). With compliance with Rule 403, construction of the proposed project would not result in emissions that would cause a cumulatively considerable net increase of any criteria pollutant for which the project is nonattainment under an applicable federal or State ambient air quality standard. Therefore, the proposed project would not lead to new or substantially more severe significant impacts associated with construction-related air quality, and as such, impacts would be less than significant.

Operational Emissions

Long-term air pollutant emission impacts are those associated with mobile sources (e.g., vehicle and truck trips), energy sources (e.g., natural gas), and area sources (e.g., architectural coatings and the use of landscape maintenance equipment) related to the proposed project. PM_{10} emissions result from running exhaust, tire and brake wear, and the entrainment of dust into the atmosphere from vehicles traveling on paved roadways. Entrainment of PM_{10} occurs when vehicle tires pulverize small rocks and pavement, and the vehicle wakes generate airborne dust. The contribution of tire and brake wear is small compared to the other PM emission processes. Gasoline-powered engines have small rates of PM emissions compared with diesel-powered vehicles. Energy source emissions result from activities in buildings for which electricity and natural gas are used. The quantity of emissions is the product of usage intensity (i.e., the amount of natural gas) and the emission factor of the fuel source. Major sources of energy demand for the proposed project could include building mechanical systems, such as heating and air conditioning. Typically, area source emissions consist of direct sources of air emissions located at the project site, including architectural coatings, consumer products, and the use of landscape maintenance equipment. Long-term operation emissions associated with the proposed project were calculated using CalEEMod. Model results are shown in Table 5 below. CalEEMod output sheets are included in Appendix A.

Table 5
Project Operational Emissions

Emission Type	Pollutant Emissions (lbs/day)					
	VOC	**NO_X**	**CO**	**SO_X**	**PM_{10}**	**PM2.5**
Existing Uses Operational Emissions						
Area Sources	4.6	<0.1	0.6	<0.1	0.1	0.1
Energy Sources	<0.1	0.1	0.1	<0.1	<0.1	<0.1
Mobile Sources	3.9	20.6	40.7	0.1	8.9	2.5
Total Project Emissions	**8.5**	**20.7**	**41.4**	**0.1**	**9.0**	**2.6**
Proposed Project Operational Emissions						
Area Sources	4.5	<0.1	<0.1	0.0	<0.1	<0.1
Energy Sources	<0.1	0.4	0.3	<0.1	<0.1	<0.1
Mobile Sources – Vehicles/Light Duty Trucks	1.5	4.8	21.0	0.1	7.3	2.0
Mobile Sources – Heavy Duty Trucks	0.6	34.0	8.1	0.2	6.0	1.9
Total Project Emissions	**6.6**	**39.2**	**29.4**	**0.3**	**13.3**	**3.9**
Net Total Emissions	**-1.9**	**-18.5**	**-12.0**	**0.2**	**4.3**	**1.3**
SCAQMD Thresholds	55.0	55.0	550.0	150.0	150.0	55.0
Significant?	**No**	**No**	**No**	**No**	**No**	**No**

Note: Maximum emissions of VOC occurred during the overlapping building construction and architectural coating phases.
CO = carbon monoxide
lbs/day = pounds per day
SCAQMD = South Coast Air Quality Management District
SOX = sulfur oxides
PM10 = particulate matter less than 10 microns in size
NOX = nitrogen oxides
PM2.5 = particulate matter less than 2.5 microns in size
VOC = volatile organic compounds

The results shown in Table 5 indicate the project would not exceed the significance criteria for VOC, NO_X, CO, SO_X, PM_{10}, or $PM_{2.5}$ emissions; thus, the proposed project would not have a significant effect on regional air quality. Therefore, operation of the project would not result in a cumulatively considerable net increase of any criteria pollutant for which the project is nonattainment under an applicable federal or State ambient air quality standard. Impacts would be less than significant.

c) Less than Significant Impact with Mitigation Incorporated. Sensitive receptors are defined as people that have an increased sensitivity to air pollution or environmental contaminants. Sensitive receptor locations include schools, parks and playgrounds, daycare centers, nursing homes, hospitals, and residential dwelling units. The closest sensitive receptor to the project site is Redlands Adventist Academy Kindergarten and Kids Care, located approximately 275 feet southeast of the project site's southern boundary opposite West State Street. Other sensitive receptors include the Redlands Apartments, located approximately 900 feet southeast from the project site southern boundary.

The following section describes the potential impacts on sensitive receptors from construction and operation of the proposed project. Health risk impacts associated with project construction and operation are evaluated separately to correctly estimate the risk for each type of receptor (i.e., sensitive vs. worker locations, since sensitive receptors start at the 3rd trimester and workers start at age 16.) The risk is calculated starting at the 3rd trimester going to 30.25 years, which is broken down into three bins: 3rd trimester to under 2 years; 2 years to under 16 years; and 16 years to 30 years. This is consistent with OEHHA's standard method of calculating a 30-year risk (i.e., the sum of all three bins). The Health Risk Assessment (HRA) analysis and results are presented below; data outputs are included in Appendix A.

Construction Health Risk Assessment

A construction HRA, which evaluates construction-period health risk to off-site receptors, was performed for the proposed project. Table 6, below, identifies the results of the analysis assuming the use of Tier 2 construction equipment, as proposed by the project, at the maximally exposed individual (MEI), which is the nearest sensitive receptor. Model snapshots of the sources are shown in Appendix A.

Table 6
Unmitigated Health Risks from Project Construction to Off-Site Receptors

Location	Carcinogenic Inhalation Health Risk in One Million	Chronic Inhalation Hazard Index	Acute Inhalation Hazard Index
Worker Receptor Risk	3.31	0.162	0.000
Sensitive Receptor Risk	13.92	0.011	0.000
Day Care Receptor Risk	14.03	0.015	0.000
SCAQMD Significance Threshold	**10.0 in One Million**	**1.0**	**1.0**
Significant?	**Yes**	**No**	**No**

Source: LSA (January, 2023).
SCAQMD = South Coast Air Quality Management District

As shown in Table 6, the maximum cancer risk for the day care receptor MEI would be 14.03 in one million and the sensitive receptor MEI would be 13.92 in one million, which would both exceed the SCAQMD cancer risk threshold of 10 in one million. The worker receptor risk would be lower at 3.31 in one million, which would not exceed the threshold. The total chronic hazard index would be 0.162 for the worker receptor MEI, 0.015 for the day care receptor, and 0.011 for the sensitive receptor MEI, which would all be below the threshold of 1.0. In addition, the total acute hazard index would be nominal (0.000), which would also not exceed the threshold of 1.0. As indicated above, the cancer risk of 14.03 in one million at the day care receptor and 13.92 in one million at the sensitive receptor would exceed SCAQMD thresholds. Therefore, implementation of **Mitigation Measure AIR- 1** would be required to reduce pollutant concentrations during project construction. Table 7 identifies the results of the analysis with implementation of **Mitigation Measure AIR-1**.

Table 7
Mitigated Health Risks from Project Construction to Off-Site Receptors

Location	Carcinogenic Inhalation Health Risk in One Million	Chronic Inhalation Hazard Index	Acute Inhalation Hazard Index
Worker Receptor Risk	0.59	0.030	0.000
Sensitive Receptor Risk	2.49	0.002	0.000
Day Care Receptor Risk	2.55	0.003	0.000
SCAQMD Significance Threshold	10.0 in One Million	1.0	1.0
Significant?	No	No	No

Source: LSA (January, 2023).
SCAQMD = South Coast Air Quality Management District

As shown in Table 7, the mitigated cancer risk at the day care receptor MEI would be 2.55 in one million and 2.49 in one million at the sensitive receptor MEI, which would not exceed the SCAQMD cancer risk of 10 in one million. Therefore, with implementation of **Mitigation Measure AIR-1**, construction of the

proposed project would not exceed SCAQMD thresholds and would not expose nearby sensitive receptors to substantial pollutant concentrations. Impacts would be less than significant.

Operational Health Risk Assessment

To determine the potential health risk to people living and working near the proposed project associated with the exhaust of diesel-powered trucks and equipment, an operational HRA was conducted for the proposed project. The carcinogenic and chronic health risks from the proposed project are shown in Table 8. The residential risk incorporates both the risk for a child living in a nearby residence for 9 years (the standard period of time for child risk) and an adult living in a nearby residence for 30 years (considered a conservative period of time for an individual to live in any one residence). The HRA model snapshots and outputs are included in Appendix A.

Table 8
Health Risks from Project Operation to Off-Site Receptors

Location	Carcinogenic Inhalation Health Risk in One Million	Chronic Inhalation Hazard Index	Acute Inhalation Hazard Index
Worker Receptor Risk	7.69	0.020	0.000
Sensitive Receptor Risk	7.49	0.004	0.000
Day Care Receptor Risk	8.05	0.003	0.000
SCAQMD Significance Threshold	**10.0 in one million**	**1.0**	**1.0**
Significant?	**No**	**No**	**No**

Source: LSA (January, 2023).
SCAQMD = South Coast Air Quality Management District

As shown in Table 8, the maximum cancer risk for the day care receptor MEI would be 8.05 in one million and the cancer risk for the sensitive receptor MEI would be 7.49 in one million, which would both be less than the threshold of 10 in one million. The worker receptor risk would be 7.69 in one million. The total chronic hazard index would be 0.004 for the sensitive receptor MEI, 0.003 for the day care receptor MEI, and 0.020 for the worker receptor MEI, all of which are below the threshold of 1.0. In addition, the total acute hazard index would be nominal (0.000), which would also not exceed the threshold of 1.0. As these results show, all health risk levels to nearby residents, workers, and the day care from operation-related emissions of TACs would be well below the SCAQMD's HRA thresholds. No significant health risk would occur from project operation emissions.

In December 2018, in the case of *Sierra Club v. County of Fresno* (2018) 6 Cal.5th 502, (Friant Ranch) the California Supreme Court held that an air quality analysis must meaningfully connect the identified air quality impacts to the human health consequences of those impacts, or meaningfully explain why that analysis cannot be provided. As discussed in the SCAQMD Brief filed in the Friant Ranch case, correlating a project's criteria air pollutant emissions to specific health impacts is challenging. The SCAQMD, which has among the most sophisticated air quality modeling and health impact evaluation capability of any of the air districts in the State, and thus it is uniquely situated to express an opinion on how lead agencies should correlate air quality impacts with specific health outcomes noted that it may be "difficult to quantify health impacts for criteria pollutants." SCAQMD used O_3 as an example of why it is impracticable to determine specific health outcomes from criteria pollutants for all but very large, regional-scale projects.

First, forming O_3 "takes time and the influence of meteorological conditions for these reactions to occur, so ozone may be formed at a distance downwind from the sources." Second, "it takes a large amount of additional precursor emissions (NOx and VOCs) to cause a modeled increase in ambient ozone

levels over an entire region," with a 2012 study showing that "reducing NOx by 432 tons per day (157,680 tons/year) and reducing VOC by 187 tons per day (68,255 tons/year) would reduce ozone levels at the SCAQMD's monitor site with the highest levels by only 9 parts per billion"

SCAQMD concluded that it "does not currently know of a way to accurately quantify ozone-related health impacts caused by NOx or VOC emissions from relatively small projects." The San Joaquin Valley Air Pollution Control District (SJVAPCD) ties the difficulty of correlating the emission of criteria pollutants to health impacts to how ozone and particulate matter are formed, stating that "[b]ecause of the complexity of ozone formation, a specific tonnage amount of NOx or VOCs emitted in a particular area does not equate to a particular concentration of ozone in that area." Similarly, the tonnage of PM "emitted does not always equate to the local PM concentration because it can be transported long distances by wind," and "[s]econdary PM, like ozone, is formed via complex chemical reactions in the atmosphere between precursor chemicals such as SOx and NOx," meaning that "the tonnage of PM-forming precursor emissions in an area does not necessarily result in an equivalent concentration of secondary PM in that area." The disconnect between the amount of precursor pollutants and the concentration of ozone or PM formed makes it difficult to determine potential health impacts, which are related to the concentration of ozone and PM experienced by the receptor rather than levels of NOx, SOx, and VOCs produced by a source.

Most local agencies lack the data to do their own assessment of potential health impacts from criteria air pollutant emissions, as would be required to establish customized, locally specific thresholds of significance based on potential health impacts from an individual development project. The use of national or "generic" data to fill the gap of missing local data would not yield accurate results because such data does not capture local air patterns, local background conditions, or local population characteristics, all of which play a role in how a population experiences air pollution. Because it is impracticable to accurately isolate the exact cause of a human disease (for example, the role a particular air pollutant plays compared to the role of other allergens and genetics in cause asthma), existing scientific tools cannot accurately estimate health impacts of the project's air emissions without undue speculation. As previously stated, no significant health risk would occur from project operation emissions, and as such, impacts would be less than significant.

d) Less than Significant Impact. According to the SCAQMD CEQA Air Quality Handbook, land uses associated with odor complaints include agricultural operations, wastewater treatment plants, landfills, and certain industrial operations (such as manufacturing uses that produce chemicals, paper, etc.). During project construction, some odors may be present due to diesel exhaust. However, these odors would be temporary and limited to the construction period. The proposed project would not include any activities or operations that would generate objectionable odors and once operational, the project would not be a source of odors. Therefore, the proposed project would not result in other emissions (such as those leading to odors) affecting a substantial number of people. Impacts would be less than significant.

Mitigation Measures

AIR-1: During construction of the proposed project, the project contractor shall ensure all off-road diesel-powered construction equipment of 50 horsepower or more used for the project is equipped with Level 3 diesel particulate filters or equivalent.

4.4 - Biological Resources

Would the project:

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	☐	☐	☑	☐
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Game or US Fish and Wildlife Service?	☐	☐	☐	☑
c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	☐	☐	☐	☑
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	☐	☑	☐	☐
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	☐	☐	☑	☐

f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	☐	☐	☐	☑

a) Less than Significant Impact. The project site is significantly disturbed and is almost completely developed. The site is occupied by a residential property and the old La-Z-Boy facility. The Project site is not identified as critical habitat for any sensitive, threatened, or endangered species. Landscaping currently exists onsite; however, the ornamental vegetation is not native habitat. Onsite vegetation includes landscape ornamental trees, and shrubs. Considering the highly developed and disturbed nature of the project site the proposed project would not result in any significant impacts to sensitive species or their habitats.

Special-Status Plants

No special-status plant species are expected to be present on the project site due to the extent of current development and subsequent lack of suitable habitat; therefore, no impacts to special-status plants are anticipated as a result of project implementation.

Special Status Wildlife Species

Special-status wildlife species include those species listed as endangered or threatened under the Federal Endangered Species Act (FESA) or the California Endangered Species Act (CESA); candidates for listing by the U.S. Fish and Wildlife Services or California Department of Fish and Wildlife (USFWS & CDFW respectively); and species of special concern to the CDFW; and birds protected by the CDFW under California Fish and Game Code (CFGC) Sections 3503 and 3513.

No special-status wildlife species are expected to be impacted by project construction due to a lack of suitable habitat and high degree of site disturbance from existing development within and surrounding the project site.

b) No Impact. The project site is located in a heavily developed area of Redlands, and no riparian vegetation or other sensitive natural habitats are present on the project site as indicated in the City's General Plan.[5] Furthermore, no such features were detected by the National Wetlands Inventory at or near the project site.[6] As such, there will be no impacts.

c) No Impact. No state or federally protected wetlands or similar waterways are present on the project site. No wetlands were identified by the National Wetlands Inventory, or the City's General Plan at or near the project site.[7] There is a human-made channel, the Mission Channel, that moves seasonal stream waters immediately north of the project. The proposed project would not impact this waterway as project disturbances would not extend beyond the site boundary. Therefore; there would be no impacts related to wetlands.

d) Less than Significant with Mitigation Incorporated. The City does not maintain any wildlife corridors and the project site is surrounded on all sides by development and surface street features. The Federal Migratory Bird Treaty Act (MBTA; 16 USC sections 703–711) and California Fish and Game Code (CFGC) sections 3503, 3503.5, and 3513 extend protection to many avian species known to occur in the project area. The Eucalyptus trees that would be removed as part of the proposed project are ornamental; however, ornamental trees still have the potential to provide nesting habitat for bird species protected by the CFGC sections 3503 and 3513. In addition, there is potential

for tree-nesting birds to establish nests in the Eucalyptus trees prior to project-related construction. The loss of an active nest of common or special-status bird species and/or their eggs or young as a result of project construction would be considered a violation of the CFGC, section 3503, 3503.5, 3513 and therefore, would be considered a potentially significant impact. Therefore, implementation of **Mitigation Measure BIO-1** would be required to reduce impacts to nesting birds to a less than significant level.

e) Less than Significant Impact. The project would not conflict with local policies or ordinances protecting biological resources. During construction operations, trees and other plant varieties will need to be removed to accommodate current building designs and construction. The removal of trees and plants during construction activities will not interfere with Redlands' Tree Protection Guidelines as outlined in the City's Municipal Code.[8] The Guidelines are applicable to "Native or Specimen trees, Landmark trees, and Public Trees" as defined by the City. Trees on the project site have not been designated as native or specimen by the City, are not of any historic significance that would warrant a landmark designation, and trees on the project site are not located on public land, and do not qualify as public trees. Impacts will be less than significant.

f) No Impact. The City of Redlands is an active participant in the Upper Santa Ana River Wash Habitat Conservation Plan (the Wash Plan).[9] The project site is located south of the plan, outside of its boundaries. The project site is not located within an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other local, regional, or state habitat conservation plan. No impacts would occur.

Mitigation Measures

BIO-1: If vegetation removal is scheduled during the nesting season (typically February 1 to September 1), then a focused survey for active nests shall be conducted by a qualified biologist no more than five (5) days before the beginning of project-related activities (e.g., demolition, excavation, grading and vegetation removal). Surveys must be conducted in proposed work areas, staging and storage areas, and soil, equipment, and material stockpile areas. For passerines and small raptors, surveys must be conducted within a 250-foot radius surrounding the work area (in non-developed areas and where access is feasible). For larger raptors, such as those from the genus *Buteo*, the survey area must encompass a 500-foot radius. Surveys must be conducted by a qualified biologist during weather conditions suited to maximize the observation of possible nests and concentrate on areas of suitable habitat. If a lapse in project-related work of five days or longer occurs, an additional nest survey is required before work can be reinitiated. If nests are encountered during any preconstruction survey, a qualified biologist must determine if it may be feasible for construction to continue as planned without impacting the success of the nest, depending on conditions specific to each nest and the relative location and rate of construction activities. Any nest(s) within the project site shall be monitored by a qualified biologist during vegetation removal if work is occurring directly adjacent to the pre-determined no-work buffer. If the qualified biologist determines construction activities have potential to adversely affect a nest, the biologist will immediately inform the construction manager to halt construction activities within minimum exclusion buffer of 50 feet for songbird nests, and 200 to 500 feet for raptor nests, depending on species and location. Construction activities within the no-work buffer may proceed after a qualified biologist determines the nest is no longer active due to natural causes (e.g., young have fledged, predation or other non-anthropogenic nest failure).

4.4 – Cultural Resources

Would the project:

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Cause a substantial adverse change in the significance of a historical resource pursuant to '15064.5?	☐	☐	☐	☑
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to '15064.5?	☐	☑	☐	☐
c) Disturb any human remains, including those interred outside of dedicated cemeteries?	☐	☑	☐	☐

A *Historical/Archaeological Resource Survey Report* was conducted to assess possible cultural and historical impacts associated with the construction and operation of the project (see Appendix B). The survey was prepared by CRM Tech on February 15th, 2023, and is attached as Appendix B.

a) No Impact. CEQA Guidelines state the term "historical resources" applies to resources that meet any of the criteria for listing on the California Register of Historical Resources.

> (1) Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage.
> (2) Is associated with the lives of persons important in our past.
> (3) Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values.
> (4) Has yielded, or may be likely to yield, information important in prehistory or history. (PRC §5024.1(c)).

According to the records search and site visits conducted through the survey, the project site does not include any structure that could be considered historic in nature. In addition, according to the Historical Survey, neither the Former La-Z-Boy Plant nor the unoccupied single-family residence at 360 Kansas Street meet any of the criteria for listing in the California Register of Historical Resources or for local designation, and neither structure qualifies as a "historical resource." Therefore, the project would not result in any adverse change in the significance of a historical resource as defined in CEQA Guidelines §15064.5 and no impacts would occur.

b) Less than Significant with Mitigation Incorporated. Given that the project site has been substantially disturbed by development over time, any archaeological resources that may exist likely have been previously unearthed, disturbed, or left in place. As such, significant surficial and subsurface archaeological resources are unlikely to occur on the Project site or be encountered during earthwork activities. However, in the unlikely event that archeological materials are uncovered during ground-disturbing activities, and at the request of the Yuhaaviatam of San Manuel Nation (formerly known as the San Manuel Band of Mission Indians), **Mitigation Measures CUL-1 and CUL-2** have been

incorporated to reduce potentially significant impacts. With implementation of Mitigation Measures **CUL-1 and CUL-2**, impacts will be less than significant as a result of construction of the proposed Project.

c) Less than Significant with Mitigation Incorporated. No known human remains are anticipated to be located on or beneath the project site. However, these findings do not preclude the existence of previously unknown human remains located below the ground surface, which may be encountered during construction excavations associated with the project, and it is possible to encounter buried human remains during construction. At the request of the Yuhaaviatam of San Manuel Nation (formerly known as the San Manuel Band of Mission Indians), **Mitigation Measure CUL-3** has been incorporated to reduce potentially significant impacts to previously unknown human remains that may be unexpectedly discovered during project implementation. In the unlikely event that human remains are uncovered the contractor is required to halt work in the immediate area of the find and to notify the County Coroner, in accordance with Health and Safety Code § 7050.5, who must then determine whether the remains are of forensic interest. If the Coroner, with the aid of a supervising archaeologist, determines that the remains are or appear to be of a Native American, they must contact the Yuhaaviatam of San Manuel Nation Cultural Resources Department for further investigations and proper recovery of such remains, if necessary. With implementation of **Mitigation Measure CUL-3**, impacts will be less than significant as a result of construction of the proposed Project.

Mitigation Measures

CUL-1: In the event that cultural resources are discovered during project activities, all work in the immediate vicinity of the find (within a 60-foot buffer) shall cease and a qualified archaeologist meeting Secretary of Interior standards shall be hired to assess the find. Work on the other portions of the project outside of the buffered area may continue during this assessment period. Additionally, the Yuhaaviatam of San Manuel Nation Cultural Resources Department (YSMN) shall be contacted, as detailed within TCR-1, regarding any pre-contact and/or historic-era finds and be provided information after the archaeologist makes his/her initial assessment of the nature of the find, so as to provide Tribal input with regards to significance and treatment.

CUL-2: If significant pre-contact and/or historic-era cultural resources, as defined by CEQA (as amended, 2015), are discovered and avoidance cannot be ensured, the archaeologist shall develop a Monitoring and Treatment Plan, the drafts of which shall be provided to YSMN for review and comment, as detailed within TCR-1. The archaeologist shall monitor the remainder of the project and implement the Plan accordingly.

CUL-3: If human remains or funerary objects are encountered during any activities associated with the project, work in the immediate vicinity (within a 100-foot buffer of the find) shall cease and the County Coroner shall be contacted pursuant to State Health and Safety Code §7050.5 and that code enforced for the duration of the project.

4.5 – Energy

Would the project:

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption or energy resources, during project construction or operation?	☐	☐	☑	☐
b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	☐	☐	☑	☐

An *Air Quality, Health Risk, Greenhouse Gas, and Energy Impact Report* was prepared for the proposed project by LSA, dated January 2023 (See Appendix A) to evaluate the potential air quality, energy and greenhouse gas impacts associated with the construction and operation of the proposed project. This report is consistent with the guidance and recommendations contained in the South Coast Air Quality Management District's (SCAQMD) California Environmental Quality Act (CEQA) Air Quality Handbook. The information presented below is condensed from the report prepared by LSA in December 2022 and is attached as Appendix A.

a) Less than Significant Impact. Implementation of the proposed project would result in the consumption of electricity, natural gas, and petroleum fuels during construction and operation of the business park / warehousing land uses.

Construction Energy Use

Construction of the proposed project is assumed to begin in June 2023 and end in May 2024. The project would require energy for activities such as the manufacture and transportation of building materials, grading activities, and building construction. Construction of the proposed project would require electricity to power construction-related equipment. Construction of the proposed project would not involve the consumption of natural gas. The construction-related equipment would not be powered by natural gas, and no natural gas demand is anticipated during construction. Transportation energy represents the largest energy use during construction and would occur from the transport and use of construction equipment, delivery vehicles and haul trucks, and construction worker vehicles that would use petroleum fuels (e.g., diesel fuel and/or gasoline). Therefore, the analysis of energy use during construction focuses on fuel consumption. Construction trucks and vendor trucks hauling materials to and from the project site would be anticipated to use diesel fuel, whereas construction workers traveling to and from the project site would be anticipated to use gasoline-powered vehicles. Fuel consumption from transportation uses depends on the type and number of trips, vehicle miles travelled (VMT), the fuel efficiency of the vehicles, and the travel mode. Estimates of fuel consumption (diesel fuel and gasoline) from construction equipment, construction trucks, and construction worker vehicles were based on default construction equipment assumptions and trip estimates from CalEEMod and fuel efficiencies from EMFAC2021. Fuel consumption estimates are presented in Table 9, below.

Table 9
Proposed Project Energy Consumption Estimates During Construction

Energy Type	Total Fuel Consumption	Percentage of Increase Countywide
Diesel Fuel (total gallons)	68,917.10	0.02
Gasoline (total gallons	30,348.00	<0.01
Source: LSA, 2023.		

As indicated in Table 9, the project would consume approximately 68,917.1 gallons of diesel fuel and approximately 30,348.0 gallons of gasoline during construction. Based on fuel consumption obtained from CARB's California Emissions Factor Model, Version 2021 (EMFAC2021), approximately 321.6 million gallons of diesel and approximately 915.5 million gallons of gasoline are estimated to have been consumed from vehicle trips in San Bernardino County in 2022. Therefore, construction of the proposed project would increase the annual construction generated fuel use in San Bernardino County by approximately 0.02 percent for diesel fuel usage and by less than 0.01 percent for gasoline fuel usage. As such, project construction would have a negligible effect on local and regional energy supplies. Furthermore, impacts related to energy use during construction would be temporary and relatively small in comparison to San Bernardino County's overall use of the State's available energy resources. No unusual project characteristics would necessitate the use of construction equipment that would be less energy efficient than at comparable construction sites in the region or the State. In addition, construction activities are not anticipated to result in an inefficient use of energy as gasoline and diesel fuel would be supplied by construction contractors who would conserve the use of their supplies to minimize their costs on the project. The project would not cause or result in the need for additional energy facilities or an additional or expanded delivery system. For these reasons, fuel consumption during construction would not be inefficient, wasteful, or unnecessary, and impacts would be less than significant.

Operational Energy Use

Operational energy use is typically associated with natural gas use, electricity consumption, and fuel used for vehicle trips associated with a project. Energy consumption was estimated for the proposed project using default energy intensities by land use type in CalEEMod. The proposed project would also result in energy usage associated with gasoline and diesel fuel consumed by project-related vehicle and truck trips. Fuel use associated with vehicle and truck trips generated by the proposed project was calculated based on the project's Traffic Impact Analysis 59, which identifies that the existing conditions typically generate approximately 928 average daily trips and that the proposed project would generate approximately 962 average daily trips, including 681 passenger vehicle trips, 55 two-axle truck trips, 54 three-axle truck trips, and 172 four-axle truck trips. The amount of operational fuel use was estimated using CARB's EMFAC2021 model, which provided projections for typical daily fuel usage in San Bernardino County. Electricity, natural gas, and fuel usage estimates associated with the proposed project are shown in Table 10, below.

As shown in Table 10, the estimated potential net increase in electricity demand associated with the operation of the proposed project is 612,787 kWh per year. Total electricity consumption in San Bernardino County in 2020 was 15,968.5 GWh (15,968,515,536 kWh). Therefore, operation of the proposed project would increase the annual electricity consumption in San Bernardino County by less than 0.01 percent. As also shown in Table 10, the estimated potential net increase in natural gas demand associated with operation of the proposed project is 8,559.3 therms per year. Natural gas consumption in San Bernardino County in 2020 was 527 million therms (527,236,428 therms). Therefore, operation of the proposed project would negligibly increase the annual natural gas consumption in San Bernardino County by less than 0.01 percent.

Table 10
Energy Consumption Estimates During Project Operation

Energy Type	Annual Energy Consumption
Existing Use Operational Energy Consumption	
Electricity Consumption (kWh/year)	623,199.0
Natural Gas Consumption (therms/year)	5,225.9
Proposed Project Operational Energy Consumption	
Electricity Consumption (kWh/year)	1,235,986.0
Natural Gas Consumption (therms/year)	13,785.2
Net Electricity Consumption	612,787.0
Net Natural Gas Consumption	8,559.3
Existing Uses Automotive Fuel Consumption	
Gasoline (gallons/year)	270,581.1
Diesel Fuel (gallons/year)	150,360.6
Proposed Project Automotive Fuel Consumption	
Gasoline (gallons/year)	207,395.2
Diesel Fuel (gallons/year)	272,935.6
Net Gasoline Consumptions	-63,185.9
Net Diesel Fuel Consumption	122,563.0
Source: LSA, 2023.	

Electrical and natural gas demand associated with project operations would not be considered inefficient, wasteful, or unnecessary in comparison to other similar developments in the region. Furthermore, the proposed project would not conflict with or obstruct a State or local plan for renewable energy or energy efficiency. The project would be required to adhere to all federal, State, and local requirements for energy efficiency, including the Title 24 standards. Title 24 building energy efficiency standards establish minimum efficiency standards related to various building features, including appliances, water and space heating and cooling equipment, building insulation and roofing, and lighting, which would reduce energy usage.

As shown in Table 10, fuel consumption associated with the vehicle trips generated by the proposed project would result in a net decrease of approximately 63,185.9 gallons of gasoline and a net increase of approximately 122,563.0 gallons of diesel from existing conditions. This analysis conservatively assumes that all vehicle trips generated as a result of project operation would be new to San Bernardino County. Based on fuel consumption obtained from EMFAC2021, approximately 321.6 million gallons of diesel and approximately 915.5 million gallons of gasoline will be consumed from vehicle trips in San Bernardino County in 2022. Therefore, vehicle and truck trips associated with the proposed project would increase the annual fuel use in San Bernardino County by approximately less than 0.01 percent for gasoline fuel usage and approximately 0.04 percent for diesel fuel usage. Fuel consumption associated with vehicle trips generated by project operations would not be considered inefficient, wasteful, or unnecessary in comparison to other similar developments in the region, and as such, impacts would be less than significant.

b) Less than Significant Impact. In 2002, the Legislature passed SB 1389, which required the CEC to develop an integrated energy plan every two years for electricity, natural gas, and transportation fuels

for the Integrated Energy Policy Report. The plan calls for the State to assist in the transformation of the transportation system to improve air quality, reduce congestion, and increase the efficient use of fuel supplies with the least environmental and energy costs. To further this policy, the plan identifies a number of strategies, including assistance to public agencies and fleet operators in implementing incentive programs for ZEVs and their infrastructure needs, and encouragement of urban designs that reduce VMT and accommodate pedestrian and bicycle access.

The CEC's 2021 Integrated Energy Policy Report and 2022 Integrated Energy Policy Report Update provide the results of the CEC's assessments of a variety of energy issues facing California. As indicated above, energy usage on the project site during construction would be temporary in nature and would be relatively small in comparison to the overall use in the County. In addition, energy usage associated with operation of the proposed project would be relatively small in comparison to the overall use in San Bernardino County, and the State's available energy resources. Therefore, energy impacts at the regional level would be negligible. Because California's energy conservation planning actions are conducted at a regional level, and because the proposed project's total impact on regional energy supplies would be minor, the proposed project would not conflict with or obstruct California's energy conservation plans as described in the CEC's Integrated Energy Policy Report. Additionally, as demonstrated above, the proposed project would not result in the inefficient, wasteful, and unnecessary consumption of energy. Potential impacts related to conflict with or obstruction of a State or local plan for renewable energy or energy efficiency would be less than significant.

4.6 – Geology and Soils

Would the project:

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:				
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	☐	☐	☑	☐
ii) Strong seismic ground shaking?	☐	☐	☑	☐
iii) Seismic-related ground failure, including liquefaction?	☐	☐	☑	☐
iv) Landslides?	☐	☐	☐	☑
b) Result in substantial soil erosion or the loss of topsoil?	☐	☐	☑	☐
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	☐	☐	☑	☐
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1997), creating substantial direct or indirect risks to life or property?	☐	☐	☑	☐

e) Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?	☐	☐	☐	☑
f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	☐	☑	☐	☐

a.i) Less than Significant Impact. The City of Redlands is located in a known fault zone according to the Alquist-Priolo Earthquake Fault Zoning Map. Redlands is between the San Andreas fault zone to the northeast, and the San Jacinto fault zone (also referred to as the Loma Linda Fault) to the southwest. The project site is not located within a designated Alquist-Priolo designated fault zone.[10] The Crafton Hills fault zone, also referred to as the Redlands Fault, traverses through the southeastern portion of the city. The project site is located approximately 2 miles northwest of the Crafton Hills fault zone. Redlands is located in a seismically active region with a high potential for seismic hazards and damage to occur. According to the City General Plan, development should be restricted within and near Alquist-Priolo designated fault zones.[11] Furthermore, structures should incorporate design standards recommended by the most current California Building Code (CBC). The project is not located on or near a Alquist-Priolo fault zone, and would adhere to design and repair requirements adopted in the current City of Redlands Code of Ordinances from the 2019 CBC.[12] Design requirements adopted by the city would be sufficient in mitigating seismic hazards to the proposed project, and as such, impacts are determined to be less than significant.

a.ii) Less than Significant Impact. The project site is subject to ground shaking given its proximity to fault zones and Southern California location. Per the City's General Plan, the potential for ground shaking and seismic-related damages are also dependent on the underlying soil composition.[13] The City is built on alluvium materials that can intensify ground shaking. The project site is of no greater risk to ground shaking than another area of Redlands, and while a structure may be damaged during an earthquake, adherence to design requirements adopted from the CBC would minimize damage to property within the structure, as they are designed to not collapse. The CBC is intended to provide minimum requirements to prevent major structural failure and loss of life. Impacts due to ground shaking would be less than significant.

a.iii) Less than Significant Impact. Liquefaction is a form of ground failure that occurs when soil transforms from a solid state to liquefied condition due to intense seismic ground shaking. Liquefaction typically occurs in loose granular materials, such as alluvium-type soils. Saturated soils or areas located near waterways and areas with a high groundwater level are also susceptible to such ground failure. Parts of the City of Redlands are susceptible to liquefaction and ground failure from seismically induced ground shaking. However, the City's General Plan indicates that the project site is not located in an area considered susceptible to liquefaction.[14] Impacts related to seismic-related ground failure and liquefaction will be less than significant.

a.iv) No Impact. The City's General Plan outlines areas in Redlands susceptible to landslides. According to the Healthy Community Element of the Redlands General Plan, the project site is not located in an area with high susceptibility, or even low to medium susceptibility, to landslide or ground subsidence.[15] There are no anticipated impacts related to landslides.

b) Less than Significant Impact. Topsoil is used to cover surface areas for the establishment and maintenance of vegetation due to its high concentrations of organic matter and microorganisms. The project site is located in an already developed area of Redlands, although there is the potential to expose surface soils to wind and water erosion during demolition and construction activities. However, wind erosion would be minimized through soil stabilization measures required by SCAQMD Rule 403 (Fugitive Dust), such as daily watering.[16] Stormwater related erosion would further be prevented through control practices outlined in the Redlands NPDES program.[17] Following project construction, the site itself would consist of mostly impervious surfaces and landscaping. Impacts related to soil erosion would be less than significant with the implementation of existing regulations.

c) Less than Significant Impact. Lateral spreading is the downslope movement of surface sediment due to liquefaction in a subsurface layer. The downslope movement is due to a combination of gravity and ground shaking. Lateral spreading has been observed to generally take place toward a free face (i.e., retaining wall, slope, or channel) and to lesser extent on ground surfaces with a very gentle slope. As previously discussed, the project site is in an area with a low susceptibility to liquefaction, and thus a low potential for lateral spreading to occur on the project site. The project site is located in a flat developed area, and any soil instability on the project site would not cause landslides. The project is required to be constructed in accordance with the CBC, and keeping in compliance with existing CBC regulations would limit hazard impacts arising from unstable soils to less than significant levels.

d) Less than Significant Impact. Construction of the proposed project is required to comply with the California Building Code (CBC); requiring building permits constructed to comply with current building code standards. These standards include consideration of geological and seismic conditions. Soil conditions at the site would be identified and considered as part of the design process. Compliance with existing CBC regulations would limit hazard impacts arising from liquefaction, landslides, lateral spreading, and unstable soils to less than significant.

e) No Impact. The project proposes to install new onsite water and sewer lines that would connect to the existing municipal sewer infrastructure in the surrounding streets. The underground chambers will be in the northwesterly landscape area and fully infiltrate the water volume. The proposed project would connect to this system and would not require the use of septic tanks. No impact will occur.

f) Less than Significant with Mitigation Incorporated. The proposed project site is currently developed in an urbanized area and therefore has no unique paleontological or geological resources on or near it. Development of the proposed warehouse will require demolition of the existing buildings, as well as site preparation, grading, and construction operations. Given that the proposed project site has been previously disturbed, it is considered unlikely that paleontological resources (fossil evidence of life from past geologic time frames) will be found. However, in the event that paleontological materials are uncovered, **Mitigation Measure GEO-1** is incorporated to ensure that uncovered resources are evaluated and curated as recommended by a qualified paleontologist. Impacts to paleontological resources would be less than significant with mitigation incorporation.

Mitigation Measures

GEO-1: If paleontological materials are uncovered during grading or other earth moving activities, the contractor shall be required to halt work in the immediate area of the find, and to retain a professional paleontologist to examine the materials to determine whether it is a significant paleontological resource. If this determination is positive, the resource shall be left in place, if determined feasible by the project paleontologist. Otherwise, the scientifically consequential information shall be fully recovered by the paleontologist. Work may continue outside of the area of the find; however, no further work shall occur

in the immediate location of the find until all information recovery has been completed and a report concerning it filed with the Community Development Director. The applicant shall bear the cost of implementing this mitigation.

4.7 – Greenhouse Gas Emissions

Would the project:

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	☐	☐	☑	☐
b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	☐	☐	☑	☐

An *Air Quality, Health Risk, Greenhouse Gas, and Energy Impact Report* was prepared to evaluate the potential air quality, energy and greenhouse gas impacts associated with the construction and operation of the proposed project (see Appendix A). This report is consistent with the guidance and recommendations contained in the South Coast Air Quality Management District's (SCAQMD) California Environmental Quality Act (CEQA) Air Quality Handbook. The information presented below is condensed from the report prepared by LSA in December 2022 and is attached as Appendix A.

a) Less than Significant Impact. Gases that trap heat in the atmosphere and affect regulation of the earth's temperature are known as GHG. Many chemical compounds found in the earth's atmosphere exhibit the GHG property. GHG's allow sunlight to enter the atmosphere freely. When sunlight strikes the earth's surface, it is either absorbed or reflected back toward space. Earth that has absorbed sunlight warms up and emits infrared radiation toward space. GHG absorbs this infrared radiation and "trap" the energy in the earth's atmosphere.

GHG that contribute to climate change are a different type of pollutant than criteria or hazardous air pollutants because climate change is global in scale, both in terms of causes and effects. Some GHG are emitted to the atmosphere naturally by biological and geological processes such as evaporation (water vapor), aerobic respiration (carbon dioxide), and off-gassing from low oxygen environments such as swamps or exposed permafrost (methane); however, GHG emissions from human activities such as fuel combustion (e.g., carbon dioxide) and refrigerants use (e.g., hydrofluorocarbons) significantly contribute to overall GHG concentrations in the atmosphere, climate regulation, and global climate change. The Earth's average near-surface atmospheric temperature rose 0.6 ± 0.2° Celsius (°C) or 1.1 ± 0.4° Fahrenheit (°F) in the 20th century. The prevailing scientific opinion on climate change is that most of the warming observed over the last 50 years is attributable to human activities. The increased amounts of carbon dioxide (CO_2) and other GHGs are the primary causes of the human-induced component of warming. GHGs are released by the burning of fossil fuels, land clearing, agriculture, and other activities, and lead to an increase in the greenhouse.

The 1997 United Nations' Kyoto Protocol international treaty set targets for reductions in emissions of four specific GHG – carbon dioxide, methane, nitrous oxide, and sulfur hexafluoride – and two groups of gases – hydrofluorocarbons and perfluorocarbons. These GHG are the primary GHG emitted into the atmosphere by human activities. Water vapor is also a common GHG that regulates the earth's

temperature; however, the amount of water vapor in the atmosphere can change substantially from day to day, whereas other GHG emissions remain in the atmosphere for longer periods of time. Black carbon consists of particles emitted during combustion; although a particle and not a gas, black carbon also acts to trap heat in the Earth's atmosphere. The six common GHG are described below.

- **Carbon Dioxide (CO_2)**. CO_2 is released to the atmosphere when fossil fuels (oil, gasoline, diesel, natural gas, and coal), solid waste, and wood or wood products are burned.
- **Methane (CH_4)**. CH_4 is emitted during the production and transport of coal, natural gas, and oil. Methane emissions also result from the decomposition of organic waste in municipal solid waste landfills and the raising of livestock.
- **Nitrous Oxide (N_2O)**. N_2O is emitted during agricultural and industrial activities, as well as during combustion of solid waste and fossil fuels.
- **Sulfur Hexafluoride (SF_6)**. SF_6 is commonly used as an electrical insulator in high voltage electrical transmission and distribution equipment such as circuit breakers, substations, and transmission switchgear. Releases of SF_6 occur during maintenance and servicing as well as from leaks of electrical equipment.
- **Hydrofluorocarbons (HFCs) and Perfluorocarbons (PFCs)**. HFCs and PFCs are generated in a variety of industrial processes. Although the amount of these gases emitted into the atmosphere is small in terms of their absolute mass, they are potent agents of climate change due to their high global warming potential.

GHG can remain in the atmosphere long after they are emitted. The potential for a particular greenhouse gas to absorb and trap heat in the atmosphere is considered its global warming potential (GWP). The reference gas for measuring GWP is CO_2, which has a GWP of one. By comparison, CH_4 has a GWP of 28, which means that one molecule of CH_4 has 28 times the effect on global warming as one molecule of CO_2. Multiplying the estimated emissions for non-CO_2 GHG by their GWP determines their CO_2 equivalent (CO_2e), which enables a project's combined GWP to be expressed in terms of mass CO_2 emissions.

Project GHG Emissions

The City of Redlands total emissions were 419,417 $MTCO_2e$ per year in 2015. The emissions inventory covers direct and indirect GHG emissions from sources within the boundaries of Redlands. The emissions inventory tallies emissions from ten sectors. The largest sector is transportation at approximately 41 percent, followed by residential and commercial sectors at approximately 23 and 17 percent, respectively. Off-road equipment is 8 percent of the total emissions. Industrial and solid wastes are 5 percent and 4 percent of the total emissions, respectively. Public lighting, water transport, distribution and treatment, and wastewater are all less than 1 percent of the total emissions.

<u>Short-term Emissions</u>
Construction activities associated with the proposed project would produce combustion emissions from various sources. During construction, GHGs would be emitted through the operation of construction equipment and from worker and builder supply vendor vehicles, each of which typically use fossil-based fuels to operate. The combustion of fossil-based fuels creates GHGs such as CO_2, CH_4, and N_2O. Furthermore, CH_4 is emitted during the fueling of heavy equipment. Exhaust emissions from on-site construction activities would vary daily as construction activity levels change.

As indicated above, the SCAQMD does not have an adopted threshold of significance for construction-related GHG emissions. However, lead agencies are required to quantify and disclose GHG emissions that would occur during construction. The SCAQMD then requires the construction GHG emissions to

be amortized over the life of the project, defined by the SCAQMD as 30 years[i], added to the operational emissions, and compared to the applicable interim GHG significance threshold tier.

Using CalEEMod, it is estimated that the project would generate approximately 690.1 $MTCO_2e$ during construction of the project. When annualized over the 30-year life of the project, annual emissions would be 23.0 $MTCO_2e$. Table 11 lists the construction GHG emissions (details are provided in the CalEEMod output in Appendix A). Construction emissions would be temporary in nature and would only occur for the duration of the construction period.

Table 11
Construction Greenhouse Gas Emissions

Construction Year	Annual Emissions (MT/yr.)			
	CO_2	CH_4	N_2O	CO_2e
2023	428.0	0.1	<0.1	436.7
2024	249.9	<0.1	<0.1	253.4
Total Construction GHG Emissions				**690.1**
Amortized Annual Construction GHG Emissions				**23.0**

Source: Compiled by LSA (January 2023).
MT/yr. = metric tons per year
N_2O = nitrous oxide
CH_4 = methane
CO_2 = carbon dioxide
CO_2e = carbon dioxide equivalent

Long-term Emissions

Long-term GHG emissions are typically generated from mobile sources (e.g., vehicle trips), area sources (e.g., maintenance activities and landscaping), indirect emissions from sources associated with energy consumption, waste sources (land filling and waste disposal), and water sources (water supply and conveyance, treatment, and distribution). Mobile-source GHG emissions would include project-generated vehicle and truck trips to and from the project. Area-source emissions would be associated with activities such as landscaping and maintenance on the project site. Energy source emissions would be generated at off-site utility providers because of increased electricity demand generated by the project. Waste source emissions generated by the proposed project include energy generated by land filling and other methods of disposal related to transporting and managing project-generated waste. In addition, water source emissions associated with the proposed project are generated by water supply and conveyance, water treatment, water distribution, and wastewater treatment. Following guidance from the SCAQMD, GHG emissions were estimated for the operational year of 2024 using CalEEMod. Table 12 shows the calculated GHG emissions for the proposed project.

[i] The SCAQMD has identified the average operational lifespan of buildings to be 30 years. Website: http://www.aqmd.gov/docs/default-source/ceqa/handbook/greenhouse-gases-(ghg)-ceqa-significance-thresholds/ghgattachmente.pdf [accessed November 2022].

Table 12
Greenhouse Gas Emissions

Emissions Source	Operational Emissions (MT/yr.)

Source: Compiled by LSA (January 2023).
MT/yr. = metric tons per year
N_2O = nitrous oxide
CH_4 = methane
CO_2 = carbon dioxide
CO_2e = carbon dioxide equivalent

As discussed above, a project would have less than significant GHG emissions if it would result in operational-related GHG emissions of less than 3,000 MT CO_2e/yr. Based on the analysis results, the proposed project would result in an increase of approximately 2,304.4 MT CO_2e/yr. Therefore, operation of the proposed project would not generate significant GHG emissions that would have a significant effect on the environment. As such, impacts would be less than significant.

b) Less than Significant Impact. The proposed project would not conflict with the City of Redlands' Climate Action Plan, the San Bernardino Greenhouse Gas Reduction Plan, the 2022 Scoping Plan, or the 2020-2045 RTP/SCS. The project's consistency with these plans is described in more detail below.

Climate Action Plan

As described above, the City adopted a CAP in December 2017. The consistency of the project with the goals of this CAP fulfills the CEQA goal of fully informing local-agency decision-makers of the environmental impact of the project under consideration at a stage early enough to ensure that GHG emissions are addressed. The proposed project would be consistent with the transportation goals of the CAP by providing additional parking options for electric vehicles and carpool/vanpool vehicles. The proposed project would also be consistent with the CAP goal of increasing energy efficiency in new buildings by complying with the latest California Building Code (Title 24), including the latest CALGreen Code standards. Construction of the project would include a diversion of construction waste from landfills to recycling consistent with current local and State standards and CAP goals to increase

diversion and reduction of waste. As such, the proposed project would be consistent with applicable CAP goals.

San Bernardino County Regional Greenhouse Gas Reduction Plan

As discussed above, the City of Redlands was a participant in the San Bernardino County Regional Greenhouse Gas Reduction Plan, which identifies the County's vision and goals on reducing GHG emissions in the different cities, local government facilities, and communities. Table 13 below presents the proposed project's compliance with each reduction measure evaluated for the City of Redlands, as identified in the San Bernardino County Regional Greenhouse Gas Reduction Plan.

Table 13
Project Consistency with City of Redlands GHG Reduction Measures

Measure	Description	Project Consistency
	Building Energy	
Policies	• **8-A.10:** Integrate trees and shade into the built environment to mitigate issues such as stormwater runoff and the urban heat island effect. • **8-P.1:** Promote energy efficiency and conservation technologies and practices that reduce the use and dependency on nonrenewable resources of energy by both City government and the community. • **8-P.2:** Promote energy awareness community-wide by educating the community regarding energy audits and incentive programs (tax credits, rebates, exchanges, etc.) available for energy conservation. • **8-P.3:** Proactively review and update City plans, resolutions, and ordinances to promote greater energy efficiency in both existing and new construction in regard to site planning, architecture, and landscape design. • **8-A.14**: Seek funding programs to assist low and moderate-income households in energy conservation. • **8-A.12:** Explore participating in new high-efficiency technology programs such as LED lighting for City facilities, safety lighting in parks and other public spaces, and LED street lighting conversion for all City-owned streetlights. • **8-P.10:** Demonstrate leadership by reducing the use of energy and fossil fuel consumption in municipal operations, including transportation, waste reduction, and recycling, and by promoting efficient building design and use. • **8-P.9**: Undertake initiatives to enhance sustainability by reducing the community's GHG emissions. • **8-A.20:** Support energy resiliency through a diversified system of energy sources including zero and near-zero emission technologies.	***Not Applicable.*** This measure is not applicable as the City would be responsible for implementing this measure. However, the proposed project would comply with the CALGreen Code, regarding building energy efficiency and other green building standards. In addition, the proposed project would include approximately 81,630 sq ft of ornamental landscaping that would cover 17 percent of the site.

	• **8-A.21**: Support the development of distributed energy resources (DER), such as combined heat and power (CHP) from microturbines, fuel cells, etc., to assist in local energy security.	
	On-Road	
Policies	• **8-P.10:** Demonstrate leadership by reducing the use of energy and fossil fuel consumption in municipal operations, including transportation, waste reduction, and recycling, and by promoting efficient building design and use. • **8-A.7:** Seek alternatives to reduce non-renewable energy consumption attributable to transportation within the Planning Area. Seek funding and other assistance from the South Coast Air Quality Management District (AQMD) for installation of electric vehicle charging stations at appropriate locations throughout the City. • **4-P.44**: Provide choices for travel options, including walking, biking, vehicular, and transit. • **4-P.52**: Encourage stops of larger trains (Metrolink) in stations that can adequately accommodate their size and have greater availability of and access to parking. • **4-P.41**: Foster a connected, accessible, and active community by creating attractively designed pedestrian- and transit-oriented villages with a mix of uses in a compact area. • **4-A.105:** Create an active and compact transit-oriented core with a mix of residential and commercial/office uses. Allow for the reuse of commercial sites as office centers. San Bernardino Council of Governments Reduction Profiles—Redlands San Bernardino County Regional Greenhouse Gas Reduction Plan 3-156 March 2021 ICF 4-A.101: Implement bicycle route improvements that provide intra-City and regional connections, connecting to Loma Linda, the City of San Bernardino, and north to the Santa Ana River Trail. **4-A.100**: Provide streetscape improvements along the major corridors of California Street and Redlands Boulevard to enhance comfort and safety for all modes of travel. • **4-A.116**: Implement bicycle route improvements that provide strong east-west connections to other Transit Villages as well as north-south connections to improve access to existing neighborhoods to the north. Routes would include the Orange Blossom Trail, the Lugonia Trail on New York Street, and a route along Texas Street.	***Not Applicable.*** The proposed project would include a speculative warehouse building. Future tenants of the building would implement mass transit encouragement measures as applicable.

	8-P.9: Undertake initiatives to enhance sustainability by reducing the community's GHG emissions.	
Off-Road		
Policies	**8-P.9:** Undertake initiatives to enhance sustainability by reducing the community's GHG emissions.	***Consistent.*** The proposed project would comply with the CALGreen Code, regarding water conservation and green building standards. In addition, the proposed project would include electric vehicle spaces.
Solid Waste Management		
Policies	• **8-P.10:** Demonstrate leadership by reducing the use of energy and fossil fuel consumption in municipal operations, including transportation, waste reduction, and recycling, and by promoting efficient building design and use. **8-A.42:** Adopt a construction and demolition waste recycling ordinance that requires, except in unusual circumstances, all construction, demolition and renovation projects that meet a certain size or dollar value to divert from landfills 100 percent of all cement concrete and asphalt concrete, and an average of at least 75 percent of all remaining non-hazardous debris	***Consistent.*** The proposed project would be consistent with County Solid Waste and State requirements for waste reduction.
Wastewater Treatment		
Policies	• **8-A.29:** Reduce consumption of carbon-based fuels for conveyance and treatment of water and wastewater. **8-A.27**: Seek funding sources to implement renewable energy sources determined to be feasible for water and wastewater operations.	***Consistent.*** The proposed project would comply with the CALGreen Code, regarding water conservation and green building standards.
Water Conveyance		
Policies	• **8-P.4**: Promote residential and commercial water conservation using multiple strategies. • **8-P.5:** Conserve the highest quality of water reasonably available for domestic use. • **8-P.6:** Minimize dependence on imported water through efficient use of local surface sources, using wise groundwater management practices, conservation measures, and the use of reclaimed wastewater and non- potable water for irrigation of landscaping and agriculture, where feasible. **8-P.8**: Promote sustainability by reducing the community's greenhouse gas (GHG) emissions and fostering green development patterns – including buildings, sites, and landscapes.	***Not Applicable.*** This measure is not applicable as the City would be responsible for implementing this measure. However, the proposed project would comply with the CALGreen Code, regarding water conservation and green building standards.

CALGreen Code = California Green Building Standards Code GHG = greenhouse gas
sq ft = square feet

2022 Scoping Plan

The following discussion evaluates the proposed project according to the goals of the 2022 Scoping Plan, EO B-30-15, SB 32, and AB 197. EO B-30-15 added the immediate target of reducing GHG emissions to 40 percent below 1990 levels by 2030. CARB released a second update to the Scoping Plan, the 2017 Scoping Plan, to reflect the 2030 target set by EO B-30-15 and codified by SB 32. SB 32 affirms the importance of addressing climate change by codifying into statute the GHG emissions reductions target of at least 40 percent below 1990 levels by 2030 contained in EO B-30-15. SB 32 builds on AB 32 and keeps the State on the path toward achieving its 2050 objective of reducing emissions to 80 percent below 1990 levels. The companion bill to SB 32, AB 197, provides additional direction to the CARB related to the adoption of strategies to reduce GHG emissions. Additional direction in AB 197 intended to provide easier public access to air emissions data that are collected by CARB was posted in December 2016.

In addition, the 2022 Scoping Plan assesses progress toward the statutory 2030 target, while laying out a path to achieving carbon neutrality no later than 2045. The 2022 Scoping Plan focuses on outcomes needed to achieve carbon neutrality by assessing paths for clean technology, energy deployment, natural and working lands, and others, and is designed to meet the State's long-term climate objectives and support a range of economic, environmental, energy security, environmental justice, and public health priorities.

The 2022 Scoping Plan focuses on building clean energy production and distribution infrastructure for a carbon-neutral future, including transitioning existing energy production and transmission infrastructure to produce zero-carbon electricity and hydrogen, and utilizing biogas resulting from wildfire management or landfill and dairy operations, among other substitutes. The 2022 Scoping Plan states that in almost all sectors, electrification will play an important role. The 2022 Scoping Plan evaluates clean energy and technology options and the transition away from fossil fuels, including adding four times the solar and wind capacity by 2045 and about 1,700 times the amount of current hydrogen supply. As discussed in the 2022 Scoping Plan, EO N-79-20 requires that all new passenger vehicles sold in California will be zero-emission by 2035, and all other fleets will have transitioned to zero-emission as fully possible by 2045, which will reduce the percentage of fossil fuel combustion vehicles.

Energy efficient measures are intended to maximize energy efficiency building and appliance standards, pursue additional efficiency efforts including new technologies and new policy and implementation mechanisms, and pursue comparable investment in energy efficiency from all retail providers of electricity in California. In addition, these measures are designed to expand the use of green building practices to reduce the carbon footprint of California's new and existing inventory of buildings. The proposed project would be required to comply with the latest Title 24 standards of the CCR, established by the CEC, regarding energy conservation and green building standards.

Water conservation and efficiency measures are intended to continue efficiency programs and use cleaner energy sources to move and treat water. Increasing the efficiency of water transport and reducing water use would reduce GHG emissions. As noted above, the proposed project would be required to comply with the latest Title 24 standards of the CCR, which includes a variety of different measures, including reduction of wastewater and water use. Therefore, the proposed project would not conflict with any of the water conservation and efficiency measures.

The goal of transportation and motor vehicle measures is to develop regional GHG emissions reduction targets for passenger vehicles. The second phase of Pavley standards will reduce GHG emissions from new cars by 34 percent from 2016 levels by 2025, resulting in a 3 percent decrease in average vehicle

emissions for all vehicles by 2020. Vehicles traveling to the project site would comply with the Pavley II (LEV III) Advanced Clean Cars Program. Therefore, the proposed project would not conflict with the identified transportation and motor vehicle measures.

2020-2045 RTP/SCS

SCAG's RTP/SCS identifies that land use strategies that focus on new housing and job growth in areas served by high quality transit and other opportunity areas would be consistent with a land use development pattern that supports and complements the proposed transportation network. The core vision in the 2020–2045 RTP/SCS is to better manage the existing transportation system through design management strategies, integrate land use decisions and technological advancements, create complete streets that are safe to all roadway users, preserve the transportation system, and expand transit and foster development in transit oriented communities. The 2020–2045 RTP/SCS contains transportation projects to help more efficiently distribute population, housing, and employment growth, as well as forecast development that is generally consistent with regional-level general plan data. The forecasted development pattern, when integrated with the financially constrained transportation investments identified in the 2020–2045 RTP/SCS, would reach the regional target of reducing GHG emissions from autos and light-duty trucks by 19 percent by 2035 (compared to 2005 levels). The 2020–2045 RTP/SCS does not require that local general plans, specific plans, or zoning be consistent with the 2020–2045 RTP/SCS, but provides incentives for consistency for governments and developers.

Implementing SCAG's RTP/SCS will greatly reduce the regional GHG emissions from transportation, helping to achieve statewide emissions reduction targets. As stated above, the proposed project would result in a minimal increase in daily trips compared to existing conditions and would in no way conflict with the stated goals of the RTP/SCS; therefore, the proposed project would not interfere with SCAG's ability to achieve the region's GHG reduction target of 19 percent below 2005 per capita emissions levels by 2035. Furthermore, the proposed project is not regionally significant per State CEQA Guidelines Section 15206 and as such, it would not conflict with the SCAG RTP/SCS targets since those targets were established and are applicable on a regional level.

Based on the nature of the proposed project, it is anticipated that implementation of the proposed project would not interfere with SCAG's ability to implement the regional strategies outlined in the RTP/SCS.

4.8 – Hazards and Hazardous Materials

Would the project:

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	☐	☑	☐	☐
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	☐	☑	☐	☐
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	☐	☑	☐	☐
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	☐	☐	☐	☑
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?	☐	☐	☑	☐
f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	☐	☐	☑	☐
g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?	☐	☐	☑	☐

A *Phase I Environmental Site Assessment (ESA)*, dated March 31st, 2022, was prepared for the project by Roux Associates, Inc. (see Appendix C). The ESA was performed on both parcels associated with the project; APNs 0292-192-11-0000 at 301 Tennessee Street and 0292-192-14-0000 at 360 Kansas Street. Those parcels will be referred to as Parcel 1 and 2 respectively. The information in this section relates to hazards and hazardous wastes and is based on the information and analysis provided in the Phase I ESA.

a) Less than Significant Impact with Mitigation Incorporated. Implementation of the project could create significant hazards as a result of the routine transport, use, or disposal of hazardous materials during the construction of the proposed project and subsequent operation of the project. The results of the Phase I Environmental Site Assessment found evidence of three Recognized Environmental Conditions (RECs) representing the presence or likely presence of hazardous substance at the property. The identified RECs include: (1) releases at a former fire suppression water trap; (2) leaks from a former 300-gallon gasoline underground storage tank (UST); and (3) a leaking former solvent degreaser.

(1) Fire Suppression Trap. The first REC is a former fire suppression fire trap located on Parcel 1 and involves the release (leak) of volatile organic compounds (VOCs) primarily consisting of trichloroethene (TCE) and tetrachloroethene (PCE) into the soil. A soil investigation conducted in 1994 identified soil impacted by VOCs and total petroleum hydrocarbons (TPH) in the vicinity of a former "fire suppression water overflow collection trap (seepage pit)". Later soil investigations on Parcel 1 further suggested the origin of contamination was the seepage pit. Impacted soil vapor throughout Parcel 1 is limited to the upper 15 feet, except for the suspected seepage pit, where prior investigations have reported TCE in the soil vapor up to 95 feet below ground surface (bgs). Groundwater samples collected at a permanent monitoring well at the seepage pit (MW-1) have indicated TCE concentrations slightly exceeding drinking standards. Furthermore, indoor air investigations conducted within the former La-Z-Boy building on Parcel 1, identified indoor air impacted by VOCs. The impacts to indoor air are potentially the result of vapor intrusion but are considered more likely to be caused by foam roofing material known to contain (and potentially off-gas) PCE.

(2) Underground Storage Tank. According to records made available by the County of San Bernardino Fire Protection District: Hazardous Materials Division (CSBFD-HMD), the second REC is a 300-gallon gasoline UST formerly located on Parcel 2, approximately 50 feet north of the current residential building. The former UST was removed June 26, 1995, under the supervision of the CSBFD-HMD. A closure letter was issued July 3, 1995, however, in the opinion of the ESA, the closure investigation conducted at the time does not meet current regulatory requirements. Confirmation samples taken at the time did not report VOCs and TPH-gasoline above reporting limits.

(3) Former Solvent Degreaser. Records provided by the South Coast Air Quality Management District (SCAQMD) indicate a former solvent degreaser was installed on site in 1984. No site plans or any records or actions to abandon the degreaser were reviewed by Roux in preparation for the ESA and is considered a data gap. However, given the use of chlorinated solvents used, it is considered an REC as well.

No Controlled Recognized Environmental Conditions (cRECs) or Historical RECs (hRECs) were identified in the Phase I ESA.

Other Environmental Features. The Phase I ESA did acknowledge the existence of Other Environmental Features (OEFs) as "environmental conditions that do not meet the definition of a REC,

but which may warrant mention in a comprehensive Phase I ESA." OEFs identified in the assessment include former agricultural operations and pesticide usage, a former on-site railroad spur, hazardous chemical storage (degreaser, wax, diesel, and hydraulic fluid), and an unused groundwater well to the east of the residential building on Parcel 2.

A Limited Phase II Site Investigation was prepared by GSI Environmental Inc. for Acc Bld, LLC: Redlands, dated April 1, 2022, and was reviewed by Roux in preparation for this assessment. GSI installed two temporary groundwater monitoring wells at the southern boundary of Parcel 1 for soil vapor monitoring. A total of 46 samples, 23 from each well, were analyzed for VOCs. No VOCs were reported above laboratory reporting limits in the second well (GSI-B2). VOCs detected in the first well (GSI-B1) (chloroform, 1,1-DCE, and TCE) were detected, but were below applicable limits. VOCs were not detected in the grab groundwater samples collected from GSI-B1 and GSI-B2 temporary monitoring wells. TCE, 1,1-DCA and 1,1-DCE were detected above applicable Screening levels in the previously existing MW-1; and GSI concluded that there is a VOC contamination at the northern portion of the project site, near MW-1, and that such VOC concentrations have slightly impacted the groundwater. GSI recommended the implementation of a soil vapor extraction (SVE) to remediate soil at the project site, and recommends groundwater monitoring only, not remediation.

Short-term Activities (Construction): Project construction activities would involve the temporary use and transport of fuels, equipment, earth and building materials, among other potentially hazardous materials. The contractor would be required to develop and adhere to a Health and Safety Plan, which pursuant to California state Health and Safety Code Chapter 6.95, Division 20 (§§ 25500-25532), would minimize potentially hazardous effects of handling potentially hazardous materials during construction.[18] Construction operations would require the removal, clean up, and proper disposal of RECs and OEFs identified at the project site. The project will be in the jurisdiction of, and in compliance with, the Environmental Protection Agency (EPA) and County of San Bernardino, which manage the inspection, regulation, transportation, use, and disposal of hazardous materials in Redlands

Past and ongoing soil and groundwater testing has identified areas of contaminated soil on the project site. Onsite soils must meet state health standards for industrial uses to minimize potential public or worker health conditions during and after grading. Implementation of **Mitigation Measure HAZ-1**, which requires soil testing and removal of contaminated soils (if found), would help assure onsite soils meet applicable health and safety standards during project grading and prior to any new occupancy of the project site.

Construction activities may also involve the placement of remediation equipment or improvements within the proposed project – these improvements are incorporated into **Mitigation Measures HAZ-2 through HAZ-4**. **Mitigation Measure HAZ-2** requires implementation of on-site soil vapor extraction (SVE) system remediation activities, Mitigation Measure HAZ-3 requires installation of a vapor intrusion mitigation system (VIMS) beneath the proposed warehouse, and HAZ_4 requires preparation of a soil management plan (SMP). With implementation of these measures, potential impacts to the surrounding area from the disposal or transport of onsite hazardous materials or waste will be reduced to less than significant levels.

Long-term Activities (Operation)
With regard to project operation, the site is zoned as Light Industrial, which allows light manufacturing, warehousing, storage, and office uses. The proposed project is a warehouse, meant for the storage and movement of materials. The specific materials moved through the proposed industrial facility site are unknown prior to its construction, however 10% of storage space is being designated for cold storage usage. In compliance with the San Bernardino County Hazardous Waste Management Plan (HWMP), the City of Redlands requires businesses that use or generate hazardous materials to keep

an inventory of the amounts and types on-site. The transport, use, and/or disposal of hazardous materials is not associated with or expected with this project. The project will generate limited amounts of Household Hazard Waste (HHW), wastes prohibited or discouraged from being disposed of at local landfills. The San Bernardino County Fire Protection District operates a Household Hazardous Waste Program, with 14 permanent HHW collection facilities. These facilities will allow easy disposal of any HHW generated on-site. Through adherence to local regulations, the use of common household hazardous materials, created waste, and their disposal do not present a substantial health risk to the community. Impacts associated with the routine transport, use, or disposal of hazardous materials or wastes would be less than significant.

Remediation and Monitoring

Based on past onsite hazmat contamination conditions, safe operation of the new warehouse will depend on the success of ongoing and planned remediation activities (if needed) during project construction, and monitoring activities (if needed) post construction. **Mitigation Measures HAZ-2 through HAZ-4** address the potential remediation and monitoring activities on the site that may be needed to reduce impacts related to past contamination of the site by hazardous materials.

Based on this analysis, the project will not create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials. With implementation of the recommended mitigation measures and related regulatory compliance, potential impacts will be reduced to less than significant levels.

b) Less than Significant Impact with Mitigation Incorporated. According to the State Water Resources Control Board there are no open cases of leaking underground storage tanks (LUST) on site (see section 4.8d below). A 300-gallon gasoline UST located on Parcel 2 was removed June 26, 1995, under the supervision of the CSBFD-HMD. A Phase I ESA was conducted on Parcel 2 by Northgate Environmental Management, Inc. (Northgate) on June 10, 2020. Roux reviewed this report, which did not identify any hRECs on the property, and identified one REC related to the former UST previously discussed. The ESA did not suggest any additional recommendations. Per the Phase II Site Investigation prepared by GSI Environmental Inc., it was concluded that there is a VOC contamination at the northern portion of the project site (Parcel 1), and that the VOC concentrations have slightly impacted the groundwater. Recommendations include the implementation of soil vapor extraction (SVE) to remediate soil at the project site, and groundwater monitoring. Although the various hazmat studies indicate the VOC concentrations may not present a significant hazard to the public or environment, potential impacts from the subsurface release of hazardous materials into the environment would be reduced to less than significant levels by implementation of **Mitigation Measures HAZ-1 through HAZ-**4 as discussed in Threshold 4.8.a above.

Other environmental features of possible concern identified in the ESA may create a potential hazard to the public or environment. The project site was once used for agricultural purposes from the early 1900s to the mid-1960s; and as such pesticide usage most likely occurred. Furthermore, a rail line from the Southern Pacific Railroad previously ran along what is currently State Street. A railroad spur was identified to be present at the project site from at least 1967 to the late 1980s. A shallow soil investigation conducted in 2019 and tested for organochlorine pesticides (OCPs), heavy metals, TPH, and semi-volatiles organic compounds (SVOCs). According to the investigations, no compounds were detected above applicable screening levels or typical background concentrations. Additionally, hazardous chemicals were stored on site at the former La-Z-Boy facilities. No significant staining was observed during the ESA that could be attributed to hazardous material storage. Stained or shallow contaminated soils should be disposed of if encountered with regard to local requirements.

Based on this analysis, impacts to the public through the accidental release of hazardous materials would be reduced to less than significant levels by implementation of **Mitigation Measures HAZ-1 through HAZ-4** as discussed in Threshold 4.8.a above.

c) Less than Significant Impact with Mitigation Incorporated. The Redlands Adventist Academy (grades K-12) is located at 130 Tennessee Street, approximately 0.1-mile southeast of the project site, while the Arrowhead Christian Academy Upper School (grades 9-12) is located at 105 Tennessee Street approximately 0.1-mile south of the project site. As discussed in Thresholds 9.a and 9.b above, the project has some potential to result in the release of hazardous materials during remediation, grading, or construction related to remediation of the existing contamination. However, implementation of **Mitigation Measures HAZ-1 through HAZ-4** would help ameliorate any significant impacts to local schools during project construction or operation. Therefore, the project would not emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school. With the recommended mitigation any impacts would be reduced to less than significant levels.

d) No Impact. The proposed project is not located on a site listed on the state *Cortese List*, a compilation of various sites throughout the state that have been compromised due to soil or groundwater contamination from past uses.[19] Based upon review of the *Cortese List*, the project site is not:

- listed as a hazardous waste and substance site by the Department of Toxic Substances Control (DTSC),[20]
- listed as a leaking underground storage tank (LUST) site by the State Water Resources Control Board (SWRCB),[21]
- listed as a hazardous solid waste disposal site by the SWRCB,[22]
- currently subject to a Cease and Desist Order (CDO) or a Cleanup and Abatement Order (CAO) as issued by the SWRCB,[23] or
- developed with a hazardous waste facility subject to corrective action by the DTSC.[24]

Based on the above review of the Cortese List, the proposed project would not create a significant hazard to the public or the environment. No impact would occur.

e) Less than Significant Impact. The project site is located approximately 4 miles south of the San Bernardino International Airport (SBIA), and 5 miles west of the Redlands Municipal Airport. The project site is outside of the SBIA and Redlands Airport noise contour maps (See Noise Appendix D). The proposed project would adhere to noise and safety policies in Redlands' General Plan.[25] The project site is not located within two miles of a local airport and would not create excessive noise to local residents. Impacts would be less than significant.

f) Less than Significant Impact. Construction of the proposed project would not interfere with access for emergency personnel or the evacuation of onsite staff. Access to the project site would be available through four driveways; one on State Street, two on Tennessee Street, and one on Kansas Street. A 30-foot fire lane would connect all four driveways and wraps around the perimeter of the proposed warehouse except for the southern facing side of the building. Construction operations conducted at the project site would not significantly impede the flow of traffic on major evacuation routes in and around the City of Redlands, which include Interstates 10, 15, 210, and 215, and State Highways 30, 60, 66, 71, and 83. The project would not impair implementation of or physically interfere with an adopted emergency response plan or evacuation plan because no permanent public street or lane closures are proposed. Construction work in the street associated with the project would be limited to a nominal potential traffic diversion. Project impacts would be less than significant.

g) Less than Significant Impact. The project site is not located within or near any State Responsibility Areas or other wildland areas; the nearest such area being in adjacent Loma Linda as part of the San Timoteo Canyon.[26] Any potential impacts related to wildland fire would be less than significant.

Mitigation Measures

HAZ-1 **Soil Testing.** Prior to issuance of a grading permit, representative soil sampling shall be conducted onsite at depths of one and three feet and tested for organochlorine pesticides (OCPs) and heavy metals which may be present from past agricultural activities. The developer shall retain a qualified environmental professional (QEP) to design and supervise the sampling and testing. A final report shall be prepared summarizing the results of this testing and where onsite soils meet current industrial standards for sampled materials.

If the QEP determines that all onsite soil meets industrial standards, no further action is required. If onsite soils do not meet industrial standards, the QEP will work with the developer and grading contractor to determine how onsite soils can be mixed with clean offsite or imported soils to achieve the industrial standard for the entire site. The QEP, developer, and grading contractor shall also identify if or how much soil needs to be removed from the site. The collection and disposal of any excavated contaminated soils shall be in accordance with applicable hazardous materials regulations.

HAZ-2 **Soil Vapor Extraction (SVE) System.** Onsite SVE remediation activities began in September 2022 and were ongoing during preparation of the CEQA document. Two deep extraction wells (SVE-1 and SVE-2) are located on the northern and western portions of the site outside of the existing warehouse building. However, these wells would be impacted by development of the new warehouse project. Based on ongoing soil vapor monitoring, the existing SVE remediation activities will be completed by June 2023. SVE remediation activities shall be completed, and a final report submitted to the City prior to issuance of a grading permit for the proposed project. Regulatory oversight and approval of this system will be at the discretion of the San Bernardino County Fire Department as the County's Certified Unified Program Agency (CUPA). If the CUPA declines to be the regulatory authority for this oversight, the applicant shall enter into a Voluntary Cleanup Program (VCP) with the California Department of Toxic Substances Control (DTSC). The applicant must document the site meets all applicable health standards for groundwater and soil per the appropriate regulatory authority discussed above before a grading permit can be issued. Additional details on the SVE system can be found in Roux's SVE Pilot Test Technical Memorandum dated January 4, 2023 and the DRAFT Construction Completion Report dated March 3, 2023.

Once it is documented that applicable health standards have been met by the existing SVE activities, they can be shut down and all wells and subsurface piping shall be removed from the site. Confirmatory soil vapor samples will then be used to conduct a post-remediation human health risk assessment (HHRA). If the post-remediation HHRA shows risk less than 1:1,000,000 ("one in a million new cancer deaths"), no additional work associated with residual VOC concentrations is required (i.e., Mitigation Measure HAZ-3 is not required). If the post-remediation HHRA shows a risk greater than 1:1,000,000 then the developer shall implement Mitigation Measure HAZ-3.

HAZ-3 **Vapor Intrusion Mitigation System (VIMS).** If the post-remediation HHRA outlined in HAZ-2 shows risk greater than 1:1,000,000, a passive sub-slab Vapor Intrusion

Mitigation System (VIMS) shall be installed beneath the future warehouse building. The VIMS will generally consist of the following components (from bottom to top): (1) Gravel bed above the certified pad; (2) Horizontal perforated piping within the gravel bed to capture and convey residual vapors; (3) Spray-applied barrier above the gravel bed and below the building slab; and (4) Vertical risers to vent vapors to the atmosphere above the roof line.

If the VIMS is determined to be necessary, it shall be designed by a qualified professional engineer (P.E.) licensed in California. The VIMS design will be finalized prior to the start of building construction.

The VIMS system shall be designed to allow regular monitoring of vapor concentrations. After occupancy, monitoring shall be conducted and documented quarterly for the first year, semi-annually the second year, and annually thereafter for five years.

The installation and monitoring of the VIMS system shall be under the oversight of the City Engineering Department in consultation with the County Fire Department, Hazardous Materials Division as the Certified Unified program Agency (CUPA) for the County.

HAZ-4 **Soil Management Plan (SMP).** After remediation is complete and prior to grading and earth movement, a Soil Management Plan (SMP) shall be prepared to provide protocols and procedures if unexpected or unknown subsurface conditions are encountered at the project site. The SMP shall be shared with all contractors involved with earth movement and import activities, if any. The SMP shall identify parties to be contacted if unexpected or unknown conditions are encountered, including an environmental professional and regulatory agencies, if necessary (e.g., if an underground storage tank is encountered).

4.9 – Hydrology and Water Quality

Would the project:

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?	☐	☐	☑	☐
b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	☐	☐	☑	☐
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:	☐	☐	☑	☐
i) result in substantial erosion or siltation on- or off-site;	☐	☐	☑	☐
ii) substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site;	☐	☐	☑	☐
iii) create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or	☐	☐	☑	☐
iv) impede or redirect flood flows?	☐	☐	☑	☐
d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	☐	☐	☑	☐

Would the project:

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	☐	☐	☑	☐

a) Less than Significant Impact. The project site is zoned as Light Industrial, meant for manufacturing, distribution, research and development (R&D) industries, and ancillary commercial uses. The project site is currently developed with an existing former manufacturing warehouse and unoccupied single-family home. The proposed project includes the demolition of existing onsite structures and the construction of a warehouse and associated parking and landscape improvements. By their nature, these kinds of facilities require a significant amount of parking, truck-staging, and vehicle circulation, in addition to the building facilities themselves. This in turn increases the amount of impermeable surfaces and the amount of flows into storm drains. Landscape coverage around the project site serves to provide relief for this. Construction and operation of the proposed warehouse would be required to comply with federal, state, and local water guidelines and requirements.

According to the City's General Plan, Redlands belongs to the Upper Santa Ana River Watershed Integrated Regional Water Management Plan (IRWM), a plan with the objective of improving water supply reliability, flood management, stormwater recharge, water quality, and habitats/open space. Development of the proposed warehouse would have to adhere to benchmarks outlined in the San Bernardino Valley Regional Urban Water Management Plan (RUWMP). Additionally, landscaping associated with the development of the proposed project would be in compliance with Chapter 15-54 of the Redlands Municipal Code, Water Efficient Landscape Requirements. Compliance with such requirements include following irrigation schedules, water efficiency audits, and non-potable irrigation systems among other guidelines. Furthermore, the project would be required to adhere to all Santa Ana Regional Water Quality Control Board (SARWQCB) permitting requirements for construction and NPDES standards for stormwater runoff, as well as adhere to City ordinances requiring the use of Best Management Practices (BMPs) to control the release of potential pollutants entering storm drain systems.[27] Such BMPs include, but are not limited to, routine street sweeping, routine storm drain and catch basin cleaning, regular pavement repair/maintenance, spill prevention practices, etc. With adherence to SARWQCB permitting requirements and NPDES standards, and adherence to City guidelines, impacts to water quality standards or waste discharge requirements will be less than significant.

b) Less than Significant Impact. Construction of the proposed warehouse and associated parking has the potential to interfere with groundwater recharge and can potentially deplete supplies. The nearest monitoring well to the project site is located approximately 0.4 miles southeast of the project site. The well has a depth of 548 feet, and the most recent readings, taken December 1, 2022, indicate a depth to groundwater of 180.1 feet.[28] The low water table recorded indicates the project will have a less than significant impact on groundwater supplies. The proposed project includes the demolition of the current 193,469 square-foot manufacturing building, and the development of a 193,469 square-foot warehouse building, 267 parking spaces, and the paving of driveways for truck and car access. The paving of previously undeveloped land and the increase in building surface area would increase impervious surface coverage on the site, thereby potentially reducing the total amount of infiltration

onsite. However, development of the proposed warehouse will include approximately 84,845 square feet of ornamental landscaping that would cover 18% of the site. Additionally, drainage from the proposed project would surface flow through the site and use catch basins and landscape drains to collect for treatment. The subsurface storm drain would be used to convey flows into a proposed underground chamber infiltration system. The project site is not utilized for groundwater recharge and would include landscaping and drainage improvements that will contribute to infiltration. The development of the project site would have a less than significant impact on the groundwater table level.

c.i) Less than Significant Impact. The City of Redlands is located in and around several regional watersheds. The City's existing water system is reliant on the Mill Creek and Santa Ana Watersheds. No rivers or streams intersect the project site. The project would not result in the alteration of drainages and drainage patterns, as the project would install new onsite water and sewer lines that would connect to the existing infrastructure in the surrounding streets. Drainage facilities on-site would be regularly maintained. Development of the proposed project would include construction activities such as demolition, site preparation, and grading. According to the City, all grading plans within the city require a standalone Erosion Control Plan.[29] Adherence to the City's erosion plan guidelines during construction of the proposed warehouse and proper maintenance of drainage facilities would decrease the likelihood of erosion of sensitive stream habitats, and as such any impacts to streams or rivers near the project site will be less than significant.

c.ii) Less than Significant Impact. No rivers or streams traverse the project site; thus, the project would not result in the alteration of any stream course. During construction, the project applicant would be required to comply with drainage and runoff guidelines pursuant to Redlands Municipal Code Chapter 15.54.200.[30] Due to the developed condition of the project site, the proposed project would not alter the existing drainage pattern of the site or surrounding area or increase runoff. With regard to project operation, construction of the project would increase the net area of impermeable surfaces on the site; therefore, increased discharges to the City's existing storm drain system may occur. Surface runoff associated with the proposed development would be collected on site through multiple drainage areas and infiltration systems and conveyed to the City's storm drainage system. All drainage plans are subject to City review and approval. The project site is zoned for light industrial uses and as a result could increase pollutants entering drainage systems. Construction of the proposed project will be required to adhere to all SARWQCB permitting requirements and NPDES standards for stormwater runoff, as well as adhere to City ordinances requiring the use of BMPs to control the release of potential pollutants entering storm drain systems as indicated in the City's General Plan. Compliance with local drainage guidelines and implementation of pollutant-related BMPs would make potential impacts less than significant.

c.iii) Less than Significant Impact. Development of the proposed project would increase the net area of impermeable surfaces on the site. Construction of the proposed project would install new onsite water and sewer lines connecting to the existing infrastructure in the surrounding streets. Drainage from the proposed project would surface flow through the site and utilize catch basins and landscape drains to collect for treatment. Subsurface storm drains would convey flows into a proposed underground chamber infiltration system. All drainage plans are subject to City review and approval. The proposed project is zoned for light industrial use and could result in substantial pollutant loading. As discussed in sections 4.9a and 4.9c.ii, BMPs would be required to be incorporated to protect water quality. With proper maintenance of drainage facilities and adherence to BMPs, impacts would be less than significant.

c.iv) Less than Significant Impact. According to flood maps prepared by the Federal Emergency Management Agency (FEMA), the project site is located in an area designated as "Flood Zone AO"; a special flood hazard area subject to inundation by the 1% annual chance flood with average flood depths

between 1 to 3 feet.[31] This designation is considered for river or stream flood hazard areas; the project site is adjacent to the Mission Channel, an irrigation canal that originally provided water to farms, and now serves to carry stormwater and runoff out of the city. The project site is currently occupied by a former La-Z-Boy manufacturing warehouse and unoccupied single-family home. The demolition of existing structures, grading, and construction of the proposed warehouse, parking, and landscaping would not impede or redirect flood flows, nor will it impact the flow of the Mission Channel. The project site is in a special flood hazard area; however, construction and operation of the project would not impede or redirect flood flows from the current condition because construction of the proposed warehouse would take place entirely within the existing footprint of the site and would not encroach on the flood control channel to the north. In addition, the proposed project would comply with City of Redlands Municipal Code Chapter 15.32 (Flood Damage Protection), which would ensure flood flows would not be impeded. Impacts will be less than significant.

d) Less than Significant Impact. The City is not exposed to tsunami hazards due to its inland location. In addition, according to the California Department of Water Resources, the City of Redlands is not located in a dam inundation area.[32] There are no impacts related to tsunami or dam inundation. The project site is located in a special flood hazard area, as indicated previously by FEMA, subject to inundation by the 1% annual chance flood. However, adherence to City ordinances requiring the use of BMPs to control the release of potential pollutants would reduce the potential for the release of pollutants in the event of inundation by a flood. Impacts would be less than significant.

e) Less than Significant Impact. The Santa Ana Regional Water Quality Control Board's (SARWQCB) Basin Plan is designed to preserve and enhance water quality and protect the beneficial uses of all regional waters. Development of the proposed project will be required to adhere to requirements of the Basin Plan. This includes the incorporation of BMPs to protect water quality during construction and operational periods. Development of the project site would be subject to all existing water quality regulations and programs, including all applicable construction permits. Existing General Plan policies related to groundwater quality are applicable to the project. The Sustainable Community Element includes policies that aim to limit potential water quality impacts and to promote groundwater conservation. Implementation of General Plan policies and the Regional Basin Plan would ensure that water quality impacts related to the proposed project would be less than significant.

4.10 – Land Use and Planning

Would the project:

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Physically divide an established community?	☐	☐	☐	☑
b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	☐	☐	☐	☑

a) No Impact. The irregularly shaped project site is comprised of 2 parcels with an existing manufacturing warehouse and a single-family house. The project site is surrounded by commercial, industrial, and transportation-related land uses, and will not include the reconfiguration of existing roadways or streets. There are residential uses near the project site, however the project will not divide an established community and, as such, no impacts will occur.

b) No Impact. The project would not conflict with light industrial land uses (manufacturing, distribution, commercial) designated in the Redlands General Plan.[33] The proposed project is located within the Zoning designation of Light Industrial (I-P) which permits warehouses. The site is not located in a specific plan area. The proposed project does not require a general plan amendment or change of zone and will be required to comply with all applicable policies, requirements, and regulations of any agency with jurisdiction over the project adopted for the purpose of avoiding or mitigating an environmental effect. No impact will occur.

4.11 – Mineral Resources

Would the project:

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	☐	☐	☑	☐
b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	☐	☐	☑	☐

a) Less Than Significant Impact. The California Surface Mining and Reclamation Act identifies and protects mineral resources within the State of California. It establishes several Mineral Resource Zones, divisions of land containing within them various amounts of known or unknown mineral resources. According to the City's General Plan, the northeast portion of the project site is adjacent to an MRZ-2 area, the designation suggesting that significant mineral resources may be present.[34] The General Plan further indicates that the project site is not located in an area designated by the State Mining and Geology Board as having regionally significant PCC-grade aggregate resources. The project site is located in an urbanized area of Redlands, with developments currently on and surrounding the property that include business, industrial, and residential uses. The demolition and redevelopment of the project site would not constitute a loss of aggregate mineral resources to the City or the State as its urban location is incompatible with mining operations and would negatively impact surrounding businesses and residents. Furthermore, the majority of the project site is located in an area with undetermined mineral resource occurrences. The proposed project is in a developed area of the City, incompatible with mining extraction operations, and would have a less than significant impact on mineral resources available to the City.

b) Less than Significant Impact. Mineral resources found in Redlands have been deemed significant to the region and the State, however such mineral resources identified have not been designated as locally significant to the City of Redlands. The northeast portion of the project site is adjacent to an MRZ-2 area, of which significant mineral deposits are likely to be present. However, the area is zoned as Light Industrial (I-P), meant for light industrial uses related to warehousing, wholesaling, and manufacturing uses. The area is urbanized and is surrounded by areas that would not support the development of mining operations and the subsequent increase in mining related pollution. The development of the project does not constitute a loss of mineral resources as the surrounding land uses do not support the development of mining operations. Potential impacts to locally important mineral resources would be less than significant.

4.12 – Noise

Would the project:

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	☐	☐	☑	☐
b) Generation of excessive groundborne vibration or groundborne noise levels?	☐	☐	☑	☐
c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	☐	☐	☑	☐

A *Noise and Vibration Impact Analysis* was prepared by LSA (January, 2023) to evaluate and document noise levels associated with construction and operation of the proposed warehouse (See Appendix D). The information in this section is taken from the *Noise and Vibration Impact Analysis* for the proposed project. Additional detail regarding how noise is defined and measured can be found in the report in Appendix D.

a) Less than Significant Impact. Physical damage to human hearing begins at prolonged exposure to sound levels higher than 85 dBA. Exposure to high sound levels affects the entire system, with prolonged sound exposure in excess of 75 dBA increasing body tensions, thereby affecting blood pressure and functions of the heart and the nervous system. In comparison, extended periods of sound exposure above 90 dBA would result in permanent cell damage. When the sound level reaches 120 dBA, a tickling sensation occurs in the human ear, even with short-term exposure. This level of sound is called the threshold of feeling. As the sound reaches 140 dBA, the tickling sensation is replaced by a feeling of pain in the ear (i.e., the threshold of pain). A sound level of 160–165 dBA will result in dizziness or a loss of equilibrium. The ambient or background noise problem is widespread and generally more concentrated in urban areas than in outlying, less developed areas.

Construction Noise Impact Analysis

Two types of short-term noise impacts could occur during the construction of the proposed project. First, construction crew commutes and the transport of construction equipment and materials to the site for

the proposed project would incrementally increase noise levels on access roads leading to the site. Although there would be a relatively high single-event noise-exposure potential causing intermittent noise nuisance (passing trucks at 50 ft would generate up to 84 dBA L_{max}), the effect on longer-term ambient noise levels would be small when compared to existing daily traffic volumes on Kansas Street, West State Street, and Tennessee Street. Because construction-related vehicle trips would not approach existing daily traffic volumes, as less trips would be made over a shorter-period of time, traffic noise would not increase by 3 dBA CNEL. A noise level increase of less than 3 dBA would not be perceptible to the human ear in an outdoor environment. Therefore, short-term, construction-related impacts associated with worker commute and equipment transport to the project site would be less than significant. The second type of short-term noise impact is noise generated during construction at the project site which includes demolition of the existing structures and other site improvements, site preparation, grading, building construction, paving, and architectural coating on the project site. Construction is completed in discrete steps, each of which has its own mix of equipment and, consequently, its own noise characteristics. These various sequential phases would change the character of the noise generated on the site and, therefore, the noise levels surrounding the site as construction progresses. Despite the variety in the type and size of construction equipment, similarities in the dominant noise sources and patterns of operation allow construction-related noise ranges to be categorized by work phase. Table 14 lists typical construction equipment noise levels recommended for noise impact assessments, based on a distance of 50 feet between the equipment and a noise receptor, taken from the FHWA Roadway Construction Noise Model. In addition to the reference maximum noise level, the usage factor provided in Table 14 is used to calculate the hourly noise level impact for each piece of equipment

Table 14
Typical Construction Equipment Noise Levels

Equipment Description	Acoustical Usage Factor (%)[1]	Maximum Noise Level (L_{max}) at 50 Feet[2]
Auger Drill Rig	20	84
Backhoes	40	80
Compactor (ground)	20	80
Compressor	40	80
Cranes	16	85
Dozers	40	85
Dump Trucks	40	84
Excavators	40	85
Flat Bed Trucks	40	84
Forklift	20	85
Front-end Loaders	40	80
Graders	40	85
Impact Pile Drivers	20	95
Jackhammers	20	85
Paver	50	77
Pickup Truck	40	55
Pneumatic Tools	50	85
Pumps	50	77
Rock Drills	20	85
Rollers	20	85
Scrapers	40	85
Tractors	40	84
Trencher	50	80
Welder	40	73

Source: FHWA Roadway Construction Noise Model User's Guide, Table 1 (FHWA 2006).
Note: Noise levels reported in this table are rounded to the nearest whole number.
[1] Usage factor is the percentage of time during a construction noise operation that a piece of construction equipment is operating at full power.
[2] Maximum noise levels were developed based on Specification 721.560 from the Central Artery/Tunnel program to be consistent with the City of Boston's Noise Code for the "Big Dig" project.
FHWA = Federal Highway Administration
Lmax = maximum instantaneous sound level

The project construction composite noise levels at a distance of 50 feet would range from 74 dBA Leq to 88 dBA Leq with the highest noise levels occurring during the site preparation and grading phases. Table 15 shows the nearest sensitive uses to the project site, their distance from the center of construction activities, and composite noise levels expected during construction. These noise level projections do not consider intervening topography or barriers. Construction equipment calculations are provided in Appendix D.

Table 15
Potential Construction Noise Impacts at Nearest Receptor

Receptor (Location)	Composite Noise Level (dBA L_{eq}) at 50 Feet [1]	Distance (feet)	Composite Noise Level (dBA L_{eq})
Industrial Uses (West)	88	315	72
Industrial Uses (South)		485	68
Commercial Uses (North)		485	68
School (South)		715	63

Source: Compiled by LSA (2023).
[1] The composite construction noise level represents the site preparation and paving phases which are expected to result in the greatest noise level as compared to other phases.
dBA Leq = average A-weighted hourly noise level

While construction noise would vary, it is expected that composite noise levels during construction at the nearest off-site industrial uses to the east would reach 72 dBA Leq while construction noise levels would approach 63 dBA Leq at the nearest sensitive use (School) to the south during daytime hours. These predicted noise levels would only occur when all construction equipment is operating simultaneously; and therefore, are assumed to be conservative. While construction-related short-term noise levels have the potential to be higher than existing ambient noise levels in the project area under existing conditions, the noise impacts would no longer occur once project construction is completed.

Noise impacts associated with construction activities are regulated by the City's noise ordinance. The proposed project would comply with the construction hours specified in the City's Noise Ordinance, which states that construction activities are allowed between the hours of 7:00 a.m. and 6:00 p.m. on weekdays, including Saturdays, with no activities taking place at any time on Sundays or federal holidays.

As it relates to off-site uses, construction-related noise impacts would remain below the 80 dBA Leq and 90 dBA Leq construction noise level criteria, as established by the FTA for residential and industrial land uses, respectively, for the average daily condition as modeled from the center of the project site and therefore would be considered less than significant. Best construction practices shall be implemented to minimize noise impacts to surrounding receptors. Adhering to the practices outlined

below, would ensure impacts to the surrounding area from construction-related activities would be less than significant.

Construction Noise Control Best Management Practices.
In addition to compliance with the City's Municipal Code, which states that construction activities are allowed between the hours of 7:00 a.m. and 6:00 p.m. on weekdays, including Saturdays, with no activities taking place at any time on Sundays or federal holidays, the following best construction practices would further minimize construction noise impacts:

- The project construction contractor shall equip all construction equipment, fixed or mobile, with properly operating and maintained noise mufflers consistent with manufacturer's standards.
- The project construction contractor shall locate staging areas away from off-site sensitive uses during the later phases of project development.
- The project construction contractor shall place all stationary construction equipment so that emitted noise is directed away from sensitive receptors nearest the project site whenever feasible.

Operational Noise Impact Analysis

Long-Term Off-Site Traffic Noise Impacts
As a result of the implementation of the proposed project, off-site traffic volumes on surrounding roadways have the potential to increase. The proposed project trips generated were obtained from the *Focused Traffic Analysis for the 301 Tennessee Street Industrial Building.* The proposed project would generate a net increase of 71 passenger car equivalent (PCE) trips. Based on data from the City of Redlands Maps and Geographic Data, the existing average daily traffic (ADT) on Tennessee Street is 12,000.

An increase of approximately 0.02 dBA CNEL is expected along the streets adjacent to the project site. A noise level increase of less than 1 dBA would not be perceptible to the human ear; therefore, the traffic noise increase in the vicinity of the project site resulting from the proposed project would be less than significant.

Long-Term Off-Site Stationary Noise Impacts
Adjacent off-site land uses would be potentially exposed to stationary-source noise impacts from the proposed on-site mechanical equipment, trash bin activities, and truck deliveries and loading and unloading activities. The potential noise impacts to off-site sensitive land uses from the proposed HVAC equipment, cold storage fan units, trash bin emptying, and truck delivery activities are discussed below. To provide a conservative analysis, it is assumed that operations would occur equally during all hours of the day and that half the 25 loading docks would be active at all times. Additionally, it is assumed that within any given hour, three heavy trucks would maneuver to park near or back into one of the proposed loading docks. To determine the future noise impacts from project operations to the noise sensitive uses, a 3-D noise model, SoundPLAN, was used to incorporate the site topography as well as the shielding from the proposed building on-site.

Heating, Ventilation, and Air Conditioning Equipment
The project would have various rooftop mechanical equipment including HVAC units on the proposed building. To be conservative, it is assumed the project could have eight (8) rooftop HVAC units and operate 24 hours per day and would generate sound power levels (SPL) of up to 87.9 dBA SPL, based on manufacturer data (Trane).

Trash Bin Emptying Activities

The project is estimated to have a trash dumpster near the western property line of the proposed project site. The trash emptying activities would occur for a period less than one minute and would generate sound power levels (SPL) of up to 118.6 dBA SPL or 84 dBA Leq at 50 feet, based on reference information within SoundPLAN.

Cold Storage Fan Units

According to the project description, approximately 10% of the project could be utilized for cold storage. Noise levels generated by cold storage fan units would be similar to noise readings from previously gathered reference noise level measurements, which generate a noise level of 57.5 dBA Leq at 60 ft based on measurements taken by LSA (Operational Noise Impact Analysis for Richmond Wholesale Meat Distribution Center [LSA 2016]).

Truck Deliveries and Truck Loading and Unloading Activities

Noise levels generated by delivery trucks would be similar to noise readings from truck loading and unloading activities, which generate a noise level of 75 dBA Leq at 20 ft based on measurements taken by LSA. Shorter term noise levels that occur during the docking process taken by LSA were measured to be 76.3 dBA L8 at 20 ft. Delivery trucks would arrive on site and maneuver their trailers so that trailers would be parked within the loading docks. During this process, noise levels are associated with the truck engine noise, air brakes, and back-up alarms while the truck is backing into the dock. These noise levels would occur for a shorter period of time (less than five minutes). After a truck enters the loading dock, the doors would be closed, and the remainder of the truck loading activities would be enclosed and therefore much less perceptible. To present a conservative assessment, it is assumed that truck arrivals and departure activities could occur twice in a given hour for a period of less than five (5) minutes each and unloading activities could occur at 13 docks simultaneously for a period of more than 30 minutes in a given hour.

Combined Project Operations

As show in the Appendix D, the operational noise levels associated with the proposed project would not exceed 75 dBA Leq at the project boundaries, therefore, noise levels would noise exceed the City's exterior noise level limit of 75 dBA Leq anytime for industrial uses. Tables K and L below show the combined hourly noise levels generated by HVAC equipment, cold storage fans, trash emptying activities, and truck delivery activities at the closest off-site, non-industrial, land uses. The project-related noise level impacts would approach 47.5 dBA at the office uses to the north during daytime and nighttime hours and 38.5 dBA at the school to the south during daytime hours. These levels would be well below the City's exterior daytime noise standard of 65 dBA Leq for office uses and the exterior daytime standard of 60 dBA Leq for institutional uses (school) as well as 60 dBA Leq for office uses during nighttime hours. It is assumed that project operations during the more sensitive nighttime hours would not affect the school use to the south as the school would not be in operation during those hours. The project-related noise level impacts would approach 47.5 dBA at the office uses to the north.

Because project noise levels would not generate a noise level increase of 4 dBA when ambient noise levels exceed the City's exterior noise standards or generate a noise level increase of 6 dBA when ambient noise levels are below the City's exterior noise standards, impacts to the surrounding areas from project operation would be less than significant.

b) Less than Significant Impact.

Construction Vibration Impacts

This construction vibration impact analysis discusses the level of human annoyance using vibration levels in root-mean-square (RMS) (in/sec) and assesses the potential for building damages using vibration levels in peak particle velocity (PPV) (in/sec). This is because vibration levels calculated in RMS are best for characterizing human response to building vibration, while vibration level in PPV is best for characterizing potential for damage. Table 16 shows the PPV and RMS values at 25 ft. from the construction vibration source. As shown in Table 16, bulldozers, and other heavy-tracked construction equipment (expected to be used for this project) generate approximately 0.089 PPV in/sec or 0.063 in/sec RMS of ground-borne vibration when measured at 25 ft. The distance to the nearest buildings for vibration impact analysis is measured between the nearest off-site buildings and the project construction boundary (assuming the construction equipment would be used at or near the project setback line).

Table 16
Vibration Source Amplitudes for Construction Equipment

Equipment	Reference PPV/RMS at 25 Feet	
	PPV (in./sec.)	RMS (in./sec.)
Pile Driver (Impact), Typical	0.644	0.457
Pile Driver (Sonic), Typical	0.170	0.121
Vibratory Roller	0.210	0.149
Hoe Ram	0.089	0.063
Large Bulldozer[1]	0.089	0.063
Caisson Drilling	0.089	0.063
Loaded Trucks[1]	0.076	0.054
Jackhammer	0.035	0.025
Small Bulldozer	0.003	0.002

Source: *Transit Noise and Vibration Impact Assessment Manual* (FTA 2018).
[1] Equipment shown in **bold** is expected to be used on site.
ft = foot/feet
FTA = Federal Transit Administration
in/sec = inch/inches per second

Table 17
Potential Construction Vibration Annoyance Impacts at Nearest Receptor

Receptor (Location)	Composite Noise Level (dBA L_{eq}) at 50 Feet [1]	Distance (feet)	Composite Noise Level (dBA L_{eq})
Industrial Uses (West)	0.063	315	0.0014
Industrial Uses (South)		485	0.0007
Commercial Uses (North)		485	0.0007
School (South)		715	0.0004

Source: Compiled by LSA (2023).
[1] The reference vibration level is associated with a large bulldozer which is expected to be representative of the heavy equipment
used during construction.
[2] The reference distance is associated with the average condition, identified by the distance from the center of construction
activities to surrounding uses
ft = foot/feet
in/sec = inch/inches per second
RMS = root mean square velocity

Table 18
Potential Construction Vibration Damage Impacts at Nearest Receptor

Receptor (Location)	Composite Noise Level (dBA L_{eq}) at 50 Feet [1]	Distance (feet)	Composite Noise Level (dBA L_{eq})
Industrial Uses (West)	0.089	100	0.011
Industrial Uses (South)		140	0.007
Commercial Uses (North)		155	0.006
School (South)		380	0.002

Source: Compiled by LSA (2023).
[1] The reference vibration level is associated with a large bulldozer which is expected to be representative of the heavy equipment
used during construction.
[2] The reference distance is associated with the peak condition, identified by the distance from the perimeter of construction
activities to surrounding structures
ft = foot/feet
in/sec = inch/inches per second
PPV = peak particle velocity

As discussed above, the threshold at which vibration levels would result in annoyance would be 0.01 in/sec RMS and the FTA guidelines indicate that for a non-engineered timber and masonry building, the construction vibration damage criterion is 0.2 in/sec in PPV.

Based on the information provided in Table 17, vibration levels are expected to approach 0.0014 in/sec RMS at the closest industrial uses to the west and 0.0004 in/sec RMS at the closest sensitive use (School) to the south and would not exceed the annoyance thresholds.

Based on the information provided in Table 18, vibration levels are expected to approach 0.011 at the surrounding structures and would be below the 0.2 PPV in/sec threshold. Other building structures surrounding the project site are farther away and would experience further reduced vibration. Therefore, no construction vibration impacts would occur, impacts will be less than significant.

Operational Vibration Impacts

The proposed project would not generate vibration levels related to on-site operations. In addition, vibration levels generated from project-related traffic on the adjacent roadways are unusual for on- road vehicles because the rubber tires and suspension systems of on-road vehicles provide vibration isolation. Vibration levels generated from project-related traffic on the adjacent roadways would be less than significant.

c) Less than Significant Impact. Aircraft flyovers may be audible on the project site due to aircraft activity in the vicinity. The nearest airports to the project are San Bernardino International Airport (SBIA) and Redlands Municipal Airport (REI) approximately 3.30 miles to the northwest and northeast of project site, respectively. The project site is located well outside the SBD Airport Influence Area according to the 2017 Existing CNEL Contours and Generalized Land Uses – San Bernardino International Airport (San Bernardino County, 2017) as well as outside the REI 60 dBA CNEL Airport Noise Contour according to Figure 7-7: Airport Hazards in the City's General Plan.[35] Therefore, the project would not be adversely affected by airport/airfield noise, nor would the project contribute to or result in adverse airport/airfield noise impacts, and as such, impacts would be less than significant.

4.13 – Population and Housing

Would the project:

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	☐	☐	☑	☐
b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	☐	☐	☐	☑

a) Less than Significant Impact The project site is designated for light industrial uses and is currently occupied by a warehouse building and one unoccupied single-family home. Because the proposed project would replace an existing use, and potential employees of the proposed warehouse would be drawn from the existing population in the area, it is not anticipated that the proposed project would result in a substantial increase in the number of employees on the project site. In addition, the project does not involve the extension of roads or other major infrastructure improvements that would indirectly induce unplanned population growth. The project complies with the City of Redlands General Plan and Zoning Ordinance.[36] The project site is zoned as Light Industrial for industrial, manufacturing, and warehousing purposes. The project is consistent with this criterion and is consistent with the anticipated buildout of the City's General Plan and would not induce any unplanned population growth. Impacts will be less than significant.

b) No Impact. Currently there is a single-family home located on the project site, however the home is not occupied. No housing would be displaced as a result of project development and as such there will be no impact.

4.14 – Public Services

Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Fire protection?	☐	☐	☑	☐
b) Police protection?	☐	☐	☑	☐
c) Schools?	☐	☐	☑	☐
d) Parks?	☐	☐	☑	☐
e) Other public facilities?	☐	☐	☑	☐

a) Less than Significant Impact. The project is located in the service area of the City of Redlands Fire Department. The Fire Department responds to medical emergencies, hazardous materials incidents, rescue calls, and motor-related accidents, in addition to regular fire suppression services. There are four stations in Redlands[37]:

- Fire Station 261: 525 E Citrus Ave.
- Fire Station 262: 1690 Garden St.
- Fire Station 263: 10 W Pennsylvania Ave.
- Fire Station 264: 1270 W Park Ave.

The fire station nearest to the project site is Station 264, located approximately one quarter mile to the north. Future tenants of the proposed industrial facility that may store and use hazardous materials would be required to adhere to local and state regulations pertaining to the handling and storage of such materials. The project may create an incremental increase in demand for fire services. Development impact fees that are collected at the time of building permit issuance for approved projects would offset any incremental in demand for fire protection and emergency medical services. Fees go towards fire facilities and charge at a current rate of $716.94 per 1,000 square feet of office space, and $223.67 per 1,000 square feet of warehouse space.[38] Impacts related to expansion of fire protection services will be less than significant.

b) Less than Significant Impact. The project area is served by the Redlands Police Department. The Police Department and Patrol building is located at 1270 W Park Ave, Building C, Redlands, CA 92373. The station is approximately 0.3 miles north of the project site. Development of the project site may generate an incremental increase in the need for police protection in the project area. However, this incremental increase is consistent with the buildout of the City's General Plan. The Police Department reviews its needs on a yearly basis and adjusts service levels as needed to maintain an adequate level

of public protection. Additionally, Development Impact Fees collected at the time of building permit issuance will help to offset incremental impacts of development on demand for services. Fees go towards law enforcement facilities and charge a current rate of $37.40 per 1,000 square feet of office space, and $11.67 per 1,000 square foot warehouse space.[39] Therefore, a less than significant impact to police services would occur.

c) Less than Significant Impact. The project includes construction of a warehouse facility, associated parking, and landscape improvements. The project will not result in any direct population growth, or associated growth in students, within the Redlands Unified School District. As most of the employees that would staff the warehouse could be expected to come from the local population, a substantial increase in the school populations is unlikely. However, payment of development impact fees required under State law would offset the cost of increased demand for school district facilities in the future. The Redlands Unified School District has established a school fee and charge a current rate of $0.56 per square foot of industrial development built.[40] Any project impacts on school facilities would be less than significant.

d) Less than Significant Impact. Development of the project could have the potential to impact demand on parks and recreation facilities if it induced substantial population growth in the area. However, as most of the staff of the warehouse could reasonably be expected to come from the local population, the project is not expected to induce significant change to the local population. As such, the proposed warehouse project will not result in any direct population growth that would require expansion or acquisition of recreational facilities. Less than significant impacts would occur.

e) Less than Significant Impact. The project is not expected to create an increase in residents that would generate additional demand for public facilities. However, payment of development impact fees required determined by the City of Redlands would offset the cost of increased demand for such facilities in the future. Fees for public facilities are at a current rate of $852.83 per 1,000 square feet of office space, and $266.06 per 1,000 square feet of warehousing.[41] Potential impacts to public facilities in Redlands would be less than significant.

4.15 – Recreation

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	☐	☐	☐	☑
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	☐	☐	☐	☑

a) No Impact. The project includes the demolition of the former 193,469 square foot La-Z-Boy warehouse, and the construction of a 197,397 square foot light industrial building. Employees of the warehouse would be drawn from existing residents within or near the City of Redlands. As such, the project itself would not create demand for additional parks, or other recreational activities as the workforce would be drawn from the existing population of the area and from additional housing planned by the City to accommodate anticipated buildout of the City's General Plan. There are no anticipated impacts to recreational facilities.

b) No Impact. The project does not include any recreational facilities or require the construction of new facilities, and there would not be an adverse physical effect to the environment. Therefore, there would be no impact.

4.16 – Transportation

Would the project:

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?	☐	☐	☑	☐
b) Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?	☐	☐	☑	☐
c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	☐	☐	☑	☐
d) Result in inadequate emergency access?	☐	☐	☑	☐

A *Focused Traffic Analysis and VMT Screening Analysis* for the proposed project was prepared by EPD Solutions, Inc., dated January 30th, 2023 (See Appendix E). The information presented below is provided from the aforementioned evaluations.

a) Less than Significant Impact. The Focused Traffic Analysis and VMT Screening Analysis was prepared to determine whether the project meets the VMT requirements for the San Bernardino County Transportation Authority (SBCTA) Guidelines and screens out from needing to conduct a detailed analysis. In addition, CEQA Guidelines section 15064.3(A) states that Vehicle Miles Traveled is the most appropriate measure for transportation impacts, and Level of Service shall not be considered an environmental impact and "a project's effect on automobile delay shall not constitute a significant environmental impact" (for CEQA purposes). Table 19 below shows the estimated trip generation for the proposed project based on trip generation rates collected from the Institute of Transportation Engineers (ITE) Trip Generation Manual (11th Edition, 2021). The vehicle mix was also determined using the ITE Manual. The forecast was determined by using ITE Land Use Code 110 General Light Industrial, and 140 Manufacturing to derive net site specific trip generation estimates for the proposed 197,397 square foot warehousing project, which includes the storage and cold storage of materials and the use of office and maintenance areas.

The trip generation takes credit for the existing warehouse and single-family house. As shown in Table 19, the existing manufacturing use is estimated to generate a total of 919 daily trips including 132 AM peak hour trips and 143 PM peak hour trips whereas the single-family house is estimated to generate a total of 9 daily trips including 1 AM peak hour trip and 1 PM peak hour trip. When adjusted for heavy truck trips and applying a passenger car equivalent (PCE) factors the existing manufacturing use would generate 1,307 daily trips including 190 PCE trips during the AM peak hour and 206 PCE trips during

the PM peak hour. In total, the existing land use generates 1,316 daily PCE trips, 191 PCE trips during the AM peak hour and 207 PCE trips during the PM peak hour. The proposed general light industrial use, including 10% cold storage, would generate 1,387 daily PCE trips, 212 PCE trips during the AM peak hour, and 187 PCE trips during the PM peak hour.

The resulting net trip generation on the project site would result in 71 daily PCE trips, 21 PCE trips during the AM peak hour, and -20 PCE trips during the PM peak hour. The project trips were distributed throughout the study area based on logical travel paths and patterns. The project truck and passenger car trip distribution and the project trip assignment are provided in Appendix E.

Measure U Focused Traffic Analysis

Measure U was an initiative approved by the voters of Redlands in 1997 to enact several principles of managed development within the City of Redlands. The principles in Measure U have been incorporated throughout the new 2035 General Plan, as well as several sections of the Redlands Municipal Code. The Focused Traffic Analysis evaluated the project using the applicable Measure U Policies identified in the Connected City Element of the City of Redlands 2035 General Plan as well as the County of San Bernardino Transportation Impact Study Guidelines (TIS Guidelines). The Measure U Policies are largely based on Level of Service (LOS) standards that measure traffic congestion. A detailed LOS evaluation is included in the Focused Traffic Analysis (See Appendix E) in order to demonstrate project compliance with Measure U. Each Measure U policy is provided below followed by a brief explanation of how the project complies with the policy.

Policy 5.20a: Maintain LOS C or better as the standard at all intersections presently at LOS C or better.

As shown in Table 20 of the Focused Traffic Analysis, all study intersections currently operate at LOS C or better except for the intersection of Kansas Street and State Street during the AM Peak hour. The addition of project traffic would not cause any location to deteriorate from LOS C to worse than LOS C.

> *Policy 5.20b: Within the area identified in GP Figure 5-1, including that unincorporated County area identified on GP Figure 5-1 as the "donut hole", maintain LOS C or better; however, accept a reduced LOS on a case-by-case basis upon approval by a four-fifths (4/5ths) vote of the total authorized membership of the City Council.*

It is to be noted that Measure U Policy 5.20b would not apply since the project is not within the area identified in GP Figure 5-1.

> *5.20c: Where the current level of service at a location within the City of Redlands is below the Level of Service (LOS) C standard, no development project shall be approved that cannot be mitigated so that it does not reduce the existing level of service at that location except as provided in Section 5.20b.*

As shown in Table 20, the intersection of Kansas Street and State Street would operate at LOS F during the AM peak hour. Addition of project traffic would not change the delay or LOS at the intersection. Therefore, no mitigation is necessary as the project does not reduce the existing level of service at the intersection.

> *5.20f: If monitoring of conditions at intersections within the East Valley Corridor Specific Plan area and intersections affected by EVC development indicates that peak hour LOS will drop below the standards set by Policies 5.20a, 5.20b, 5.20c revise the EVC Specific Plan. Revisions necessary may include additional roadway improvements, mandated higher TDM (Travel Demand Management, See Section 5.40) reductions in single-occupant vehicle trip share, reduction of intensity of development, or changes in use of undeveloped sites.*

As discussed above, the project does not result in a drop in LOS at any intersection and therefore would not cause the LOS to drop below the referenced standards. The proposed project's study area intersections were evaluated with and without project trips to comply with the City's Measure U policies by determining if the project would cause any LOS deficiencies. As previously noted, CEQA Guidelines section 15064.3(A) states that Vehicle Miles Traveled is the most appropriate measure for transportation impacts, and Level of Service shall not be considered an environmental impact and "a project's effect on automobile delay shall not constitute a significant environmental impact" (for CEQA purposes). All study area intersections would operate at satisfactory LOS in the Existing and Existing Plus Project Conditions except for the intersection of Kansas Street and State Street which would continue to operate at an LOS F; however, the project does not impact the intersection since it does not increase the time delay. As such, the project would not result in any unsatisfactory LOS; therefore, the project would be in compliance with Measure U, no improvements would be required, and impacts would be less than significant.

b) Less than Significant Impact. In December 2018, the California Natural Resources Agency certified and adopted the updated CEQA Guidelines package. The amended CEQA Guidelines, specifically Section 15064.3, recommend the use of Vehicle Miles Travelled (VMT) as the primary metric for the evaluation of transportation impacts, under CEQA, associated with land use and transportation projects. In general terms, VMT quantifies the amount and distance of automobile travel attributable to a project or region. All agencies and projects State-wide are required to utilize the updated CEQA guidelines recommending the use of VMT for evaluating transportation impacts as of July 1, 2020. CEQA Guidelines allow for lead agency discretion in establishing methodologies and thresholds provided there is substantial evidence to demonstrate that the established procedures promote the

intended goals of the legislation. The City of Redlands CEQA Assessment VMT Analysis Guidelines provides guidelines for analysis of transportation impacts under CEQA. The guidelines also provide three types of screening that can be applied to determine if a project is exempt from project-level VMT analysis. The project was screened using the SBCTA VMT Screening Tool. If a project meets one of the following criteria, then the VMT impact of the project is considered less-than significant and no further analysis of VMT would be required:

1. The project is located within a Transit Priority Area.
2. The project is located in a low VMT generating area.
3. The project is considered a local serving use or would generate less than 3,000 metric tons of CO2 equivalent (3,000 MT CO2e) per year.

Below are the results of the screening criteria satisfaction for the project:

Screening Criteria 1 – The project is located within a Transit Priority Area:
The SBCTA tool illustrates that a majority of the project site is located within a Transit Priority Area, however this criterion would not apply as the project has a floor area ratio (FAR) of 0.44. The City of Redlands CEQA Assessment VMT Analysis Guidelines state that this criterion should be applied to projects with an FAR of 0.75 or more.

Screening Criteria 2 – Low VMT Generating Area:
The City's guidelines include a screening threshold for projects located in a low VMT generating area. The project's site was evaluated using the SBCTA VMT Screening Tool as discussed previously. The project is located within TAZ 53827301. The criteria applied to this project was 15% below the County baseline using the Origin-Destination VMT per Service Population. As shown in Appendix E, the Countywide VMT/Service Population is 33.3 and the threshold would be 28.3 VMT/Service Population. The screening tool indicates that these TAZs have an OD VMT/Service Population of 61.7. This is 85.29% above the threshold and would not be considered to generate a low VMT.

Screening Criteria 3 - The project is considered a local serving use or would generate less than 3,000 metric tons of CO2 equivalent (3,000 MT CO2e) per year.
Under the Project Type Screening criteria, projects which generate less than 3,000 MT CO2e per year can be presumed to have a less than significant impact on VMT. The project meets the criteria for classification as a warehousing land use. The City of Redlands guidelines state that warehousing uses of 463,400 square feet or less are presumed to generate less than 3,000 metric tons of CO2 equivalent (3,000 MT CO2e) per year and can be presumed to result in a less than significant VMT impact.

The proposed project is determined to have a less than significant impact on VMT since it satisfies one of more of the VMT screening criteria established by the City of Redlands CEQA Assessment VMT Analysis Guidelines. The project's VMT impact is considered less than significant and no additional VMT analysis is required.

c) Less than Significant Impact. A significant impact would occur if the proposed project substantially increased an existing hazardous design feature or introduced incompatible uses to the existing traffic pattern. Access to the site would be provided via four driveways; two driveways on Tennessee Street: a 40-foot truck accessible driveway located at the northeast corner of the site and a 30-foot driveway for passenger cars only located at the southeast corner of the project. Additionally, a 40-foot driveway for truck access will be located on West State Street, and another 40-foot driveway for both truck and passenger car access will be located on Kansas Street. The project does not involve any changes to the alignment or uses of existing roadways, and the proposed project is consistent with City of Redlands driveway spacing and design requirements. Construction operations occurring on site would comply with

the California Building Code adopted in the City of Redlands Municipal Code.[42] The proposed project would not result in a traffic safety hazard due to any design features, and impacts would be less than significant.

d) Less than Significant Impact. A significant impact would occur if the design of the proposed project would not satisfy emergency access requirements of the City of Redlands Fire Department or in any other way threaten the ability of emergency vehicles to access and serve the project site or adjacent uses. The proposed project would not result in inadequate emergency access. As previously discussed above, access to the site will be provided via four driveways; a 40-foot truck accessible driveway and a 30-foot driveway passenger car driveway on Tennessee Street, a 40-foot truck accessible driveway on West State Street, and another 40-foot truck and passenger car accessible driveway on Kansas Street. The driveway width is sufficient to provide access to fire and emergency vehicles and is consistent with California Fire Code requirements. All access features are subject to and must satisfy the City of Redlands design requirements, including the Fire Department's requirements. This project would therefore not result in adverse impacts with regard to emergency access. Impacts would be less than significant.

4.17 – Tribal Cultural Resources

Would the project:

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a Cultural Native American tribe, and that is:				
i) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k), or	☐	☑	☐	☐
ii) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	☐	☑	☐	☐

a.i) Less than Significant with Mitigation Incorporated. A significant impact would occur if the proposed project would cause a substantial adverse change in the significance of a tribal cultural resource listed or eligible for listing in the California Resources of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k). The project site is currently developed, and there are no historic resources on, adjacent to, or in proximity to the project site listed in the California Register of Historical Resources pursuant to Section 15064.5. The City does not have any landmarks listed under its historic preservation program as defined in Public Resources Code Section 5020.1(k). However, in compliance with Assembly Bill 52, Native American tribes traditionally and culturally affiliated with the geographic area of the Project site were notified of the proposed Project on September 22, 2022 (See Appendix D). The tribes notified included:

- Gabrieleno Band of Mission Indians – Kizh Nation
- Morongo Band of Mission Indians
- Soboba Band of Luiseno Indians
- Torres Martinez Desert Cahuilla Indian
- The Yuhaaviatam of San Manuel Nation (formerly known as the San Manuel Band of Mission Indians)

On September 26, 2022, the City received a response from Ryan Nordness, Cultural Resources Analyst for the Yuhaaviatam of San Manuel Nation (YSMN). In the email, Mr. Nordness noted the project site is located in the Serrano ancestral territory and is of interest to the Tribe. However, given the "nature and location of the project" and the current state of knowledge regarding the area, YSMN has no concerns with the implementation of the project as planned. Furthermore, in the response, the YSMN requested that mitigation measures be included to reduce potential impacts to less than significant. Therefore, with incorporation of **Mitigation Measures TCR-1 and TCR-2**, impacts to listed or eligible tribal cultural resources would be less than significant.

a.ii) Less than Significant with Mitigation Incorporated. Government Code §§ 65352.3 and 65562.5 (SB 18); and Public Resources Code §§ 21073, 21074, 21080.3.1, 21080.3.2, 21082.3, 21083.09, 21084.2, and 21084.3 (AB 52) provide that a project that may cause a substantial adverse change to a defined Tribal Cultural Resource (TCR) can result in a significant effect on the environment. AB 52 requires tribes interested in development projects within a traditionally and culturally affiliated geographic area to notify a lead agency of such interest and to request notification of future projects subject to CEQA prior to determining if a negative declaration, mitigated negative declaration, or environmental impact report is required for a project. The Lead Agency is required to notify tribes within 14 days of deeming a development application complete subject to CEQA to notify the requesting tribe as an invitation to consult on the project. AB 52 identifies examples of mitigation measures that will avoid or minimize impacts to TCR. The bill makes the above provisions applicable to projects that have a notice of preparation or a notice of intent to adopt a negative declaration/mitigated negative declaration circulated on or after July 1, 2015. Although there is no indication of TCRs at the project site, AB 52 is clear in stating that it is the responsibility of the Public Agency (i.e., Lead Agency) to consult with Native American tribes early in the CEQA process to allow tribal governments, lead agencies, and project proponents to discuss the appropriate level of environment review, identify and address potential adverse impacts to TCRs, and reduce the potential for delay and conflict in the environmental review process (see Public Resources Code Section 2108.3.2). Specifically, government-to-government consultation may provide "tribal knowledge" of the project area that can be used in identifying TCRs that cannot be obtained through other investigative means. Pursuant to AB 52, as the CEQA Lead Agency, the City of Redlands sent AB 52 consultation notification letters via email on September 22, 2022. On September 26, 2022, the City received a response from Ryan Nordness, Cultural Resources Analyst for the Yuhaaviatam of San Manuel Nation (YSMN). In the email, YSMN requested that mitigation measures be included to reduce potential impacts to less than significant. Therefore, with incorporation of **Mitigation Measures TCR-1 and TCR-2**, impacts to listed or eligible tribal cultural resources would be less than significant.

Mitigation Measures

TCR-1 **Cultural Resources Monitoring and Treatment.** The Yuhaaviatam of San Manuel Nation Cultural Resources Department (YSMN) shall be contacted, as detailed in CUL-1, of any pre-contact and/or historic-era cultural resources discovered during project implementation and be provided information regarding the nature of the find, so as to provide Tribal input with regards to significance and treatment. Should the find be

deemed significant, as defined by CEQA (as amended, 2015), a cultural resources Monitoring and Treatment Plan shall be created by the archaeologist, in coordination with YSMN, and all subsequent finds shall be subject to this Plan. This Plan shall allow for a monitor to be present that represents YSMN for the remainder of the project, should YSMN elect to place a monitor on-site.

TCR-2 **Archaeological Documentation.** Any and all archaeological/cultural documents created as a part of the project (isolate records, site records, survey reports, testing reports, etc.) shall be supplied to the applicant and Lead Agency for dissemination to YSMN. The Lead Agency and/or applicant shall, in good faith, consult with YSMN throughout the life of the project.

4.18 - Utilities and Service Systems

Would the project:

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or stormwater drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	☐	☐	☑	☐
b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years?	☐	☐	☑	☐
c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	☐	☐	☑	☐
d) Generate solid waste in excess of State and local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	☐	☐	☑	☐
e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	☐	☐	☐	☑

a) Less than Significant Impact. The Redlands Municipal Utilities & Engineering Department delivers water to over 23,000 service connections throughout its service area, including those in Redlands, Mentone, parts of Crafton Hills, San Timoteo Canyon, and San Bernardino. The Department receives its water from a mix of sources including local groundwater wells, the Mill Creek Watershed, Santa Ana Watershed, and imported water provided through the State Water Project. The City utilizes 23 groundwater wells, 44 booster pumps, 18 reservoirs, and 450 miles of transmission lines to deliver water.[43] Additionally, the City operates two surface water treatment plants, Tate and Hinkley, which provide treated water from the Mill Creek and Santa Ana watersheds respectively, and State Water Project (SWP).[44] The City maintains ownership in multiple local private and mutual water companies to

bolster and secure reliable water supplies for their treatment plants. Wastewater is collected and treated at the Redlands Wastewater Treatment Facility and has a treatment capacity of 9.5 million gallons.

As discussed in the Hydrology and Water Quality section and Project Description, the project would install new water and sewer lines onsite connecting to the existing infrastructure in Redlands. The project would not generate substantially increased runoff from new impermeable surfaces on site. As part of the proposed project, catch basins and landscape drains will collect surface runoff onsite for treatment. The subsurface storm drain would move surface flows to an underground infiltration system located in the northwestern area of the project site. No additional improvements are anticipated to either sewer lines or treatment facilities to serve the project. Standard connection fees would address any incremental impacts of the project. Therefore, the project would result in less than significant impact as a result of new or expanded water supply and wastewater treatment facilities.

Impacts related to electric power, natural gas, and telecommunications facilities would also be less than significant. The project will connect to existing facilities and will not require any extension of services. Therefore, the proposed warehouse would not require or result in the relocation or construction of new or expanded water, wastewater treatment or stormwater drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause a significant environmental effect. Less than significant impacts would occur.

b) Less than Significant Impact. According to the *2020 Integrated Regional Urban Water Management Plan* (*UWMP*) for the Upper Santa Ana River Watershed Region, the City of Redlands is projected to have a total demand of 25,818 acre-feet (AF) in 2025.[45] The same estimates calculated a supply total of 31,039 AF in 2020, a difference of 5,221 AF. The project would generate a marginal increase in additional demand for water from the City of Redlands' water supply, relative to overall existing citywide demand. As the Urban Water Management Plan anticipates an overall increase in demand associated with development in the area over 2015 conditions, and the proposed project is within the expected buildout and zoning of the City, water demand for this project is within that demand assumption, and as such, impacts would be less than significant. The project would not substantially deplete water supplies, and the project would have a less than significant impact on entitled water supplies.

c) Less than Significant Impact. Potentially significant impacts could occur as a result of this project if it results in a determination by the wastewater treatment provider which serves or may serve the project that it does not have adequate capacity to serve the project's projected demand in addition to the provider's existing commitments. As detailed in Sections 4.19.a and 4.19.b, the project would be adequately served by existing wastewater treatment facilities. Therefore, a less than significant impact would occur.

d) Less than Significant Impact. Significant impacts could occur if the proposed project would exceed the existing permitted landfill capacity or violates federal, state, and local statutes and regulations. Solid waste disposal services are overseen by the City of Redlands Trash Collection. Solid waste collected in Redlands is primarily transferred to the San Timoteo Landfill in Redlands, located approximately 6 miles south of the project site. According to CalRecycle, the San Timoteo Landfill has a maximum capacity of 23,685,785 tons, with a remaining capacity of 12,360,396 tons measured April 30th, 2019.[46] Construction of the facility is anticipated to generate some solid waste, with an estimated total waste generation of approximately 5044.3 lbs., per employee, per year.[47] Because there would be adequate landfill capacity in the region to accommodate project-generated waste, and the proposed project is not expected to generate a substantial quantity of solid waste, impacts to solid waste disposal capacity would be less than significant.

e) No Impact. The proposed project is required to comply with all applicable federal, state, County, and City statutes and regulations related to solid waste as a standard project condition of approval. Therefore, no impact would occur.

4.18 – Wildfire

If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?	☐	☐	☐	☑
b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	☐	☐	☐	☑
c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	☐	☐	☐	☑
d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	☐	☐	☐	☑

a) No Impact. The project site is not located within or near any State Responsibility Areas, the nearest being in adjacent Loma Linda as part of the San Timoteo Canyon.[48] There are no wildland conditions in the urbanized area where the project site is located. The City's General Plan identifies several evacuation routes; these routes were previously designated as potential evacuation routes in the 2007 San Bernardino General Plan.[49] These include: Interstates 10, 15, 210, and 215, and State Highways 30, 60, 66, 71, and 83. In the event of an earthquake, the following roads would provide safe access out of the San Bernardino Valley, as indicated by Caltrans and cited in the Redlands General Plan:

- Hospitality Lane from Tippecanoe Avenue to Waterman Avenue
- Coulston Street from Mountain View Avenue to Tippecanoe Avenue
- Lugonia Avenue from Orange Street to Mountain View Avenue
- Redlands Boulevard from Orange Street to Waterman Avenue

The proposed project would not interfere with the availability of these highways and roadways as evacuation routes. The project would not substantially impair any adopted or informal emergency response plan or evacuation plan, as such no impact would occur.

b) No Impact. The project site is not located within a fire hazard zone, as identified on the Very High Fire Hazard Severity Zone (VHFHSZ) maps prepared by the California Department of Forestry and Fire Protection (CALFIRE).[50] The nearest VHFHSZ is located approximately 3 miles southwest of the project site just south of Beaumont Avenue in Loma Linda. The project site is located in a heavily urbanized area and would not exacerbate wildfire risks, thereby exposing occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire. No impact would occur.

c) No Impact. The project site is not located within or near any State Responsibility Areas as indicated in Section 4.18a. None of the project improvements would exacerbate fire risk or would result in a temporary or ongoing impact from wildfires requiring the installation or maintenance of associated infrastructure that may exacerbate fire risk, or that may result in temporary or ongoing impacts to the environment. No impact would occur.

d) No Impact. The project site is not located within or near any State Responsibility Areas. According to the Federal Emergency Management Agency (FEMA) Flood Maps, the project site is in an area of 1% annual chance flood.[51] The project site is not located in a dam inundation area. The project site is located in a flat area, with little to no potential for landslides or downstream flooding or runoff. If such an event were to occur, the City of Redlands General Plan outlines policies and principles to mitigate potential impacts from flooding. Development of the proposed project would not exacerbate risks to people from flooding or landslides. No impacts would occur.

4.19 – Mandatory Findings of Significance

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	☐	☐	☑	☐
b) Does the project have impacts that are individually limited, but cumulatively considerable?	☐	☑	☐	☐
c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	☐	☐	☑	☐

a) Less than Significant with Impact. The proposed project would not substantially impact any scenic vistas, scenic resources, or the visual character of the area, as discussed in Section 4.1, and would not result in excessive light or glare. The project site is located within a developed area with no natural habitat. The proposed project would not significantly impact any sensitive plants, plant communities, fish, wildlife, or habitat for any sensitive species. Impacts to burrowing owl and migratory birds will be less than significant with mitigation and adherence to existing regulations. There are no jurisdictional waters on the project site. There will be no impacts to possible historical or archaeological resources.

The environmental analysis provided in Section 4.3 concludes that impacts related to emissions of criteria pollutants and other air quality impacts would be less than significant with mitigation. Section 4.8 concludes that impacts related to climate change would be less than significant. Impacts related to hydrology and water quality would be less than significant. Based on the preceding analysis of potential impacts in the responses to items 4.1 through 4.20, no evidence is presented that this proposed project would degrade the quality of the environment. Impacts related to degradation of the environment, biological resources, hydrology and water quality would be less than significant.

b) Less than Significant Impact. Cumulative impacts can result from the interactions of environmental changes resulting from one proposed project with changes resulting from other past, present, and future projects that affect the same resources, utilities and infrastructure systems, public services, transportation network elements, air basin, watershed, or other physical conditions. Such

impacts could be short-term and temporary, usually consisting of overlapping construction impacts, as well as long-term, due to the permanent land-use changes and operational characteristics involved with the proposed project. Cumulative impacts would be less than significant, as further discussed herein.

Aesthetics

Impacts related to aesthetics at the project-level have no potential for cumulative impacts because impacts are limited to on-site conditions and include no component that could result in similar impacts over time or space. Therefore, no cumulative impacts related to this topic would occur.

Agricultural Resources

The analysis provided in Sections 4.2 found that no individual impacts would occur; therefore, the Project could not contribute considerably to local agriculture or forestry.

Air Quality

The analysis provided in Section 4.3 and the Air Quality Health Risk Assessment found that impacts would be less than significant with adherence to the recommended mitigation below:

AIR-1: During construction of the proposed project, the project contractor shall ensure all off-road diesel-powered construction equipment of 50 horsepower or more used for the project is equipped with Level 3 diesel particulate filters or equivalent.

Biological Resources

The analysis provided in Section 4.4 found that no individual impacts to sensitive species or migratory birds would occur with implementation of mitigation; therefore, the project would not contribute considerably to regional impacts on such species, and impacts would be less than significant. project would have no other impacts on biological resources and would not result in localized or regional cumulative impacts, and as such, impacts would be less than significant. Mitigations for nesting birds include the following:

BIO-1: If vegetation removal is scheduled during the nesting season (typically February 1 to September 1), then a focused survey for active nests shall be conducted by a qualified biologist no more than five (5) days before the beginning of project-related activities (e.g., demolition, excavation, grading and vegetation removal). Surveys must be conducted in proposed work areas, staging and storage areas, and soil, equipment, and material stockpile areas. For passerines and small raptors, surveys must be conducted within a 250-foot radius surrounding the work area (in non-developed areas and where access is feasible). For larger raptors, such as those from the genus *Buteo*, the survey area must encompass a 500-foot radius. Surveys must be conducted by a qualified biologist during weather conditions suited to maximize the observation of possible nests and concentrate on areas of suitable habitat. If a lapse in project-related work of five days or longer occurs, an additional nest survey is required before work can be reinitiated. If nests are encountered during any preconstruction survey, a qualified biologist must determine if it may be feasible for construction to continue as planned without impacting the success of the nest, depending on conditions specific to each nest and the relative location and rate of construction activities. Any nest(s) within the project site shall be monitored by a qualified biologist during vegetation removal if work is occurring directly adjacent to the pre-determined no-work buffer. If the qualified biologist determines construction activities have potential to adversely affect a nest, the biologist will immediately inform the construction manager to halt construction activities within minimum exclusion buffer of 50 feet for songbird nests, and 200 to 500 feet for raptor nests, depending on species and location. Construction activities within the no-work buffer may proceed after a

qualified biologist determines the nest is no longer active due to natural causes (e.g., young have fledged, predation or other non-anthropogenic nest failure).

Cultural Resources

The analysis provided in Section 4.5 and the Historical/Archaeological Resources Survey found that impacts to historic or archaeological resources would be less than significant with adherence to the recommended Mitigation measures below. Mitigations for Cultural Resources include the following:

CUL-1: **Buried Cultural Resources.** In the event that cultural resources are discovered during project activities, all work in the immediate vicinity of the find (within a 60-foot buffer) shall cease and a qualified archaeologist meeting Secretary of Interior standards shall be hired to assess the find. Work on the other portions of the project outside of the buffered area may continue during this assessment period. Additionally, the Yuhaaviatam of San Manuel Nation Cultural Resources Department (YSMN) shall be contacted, as detailed within TCR-1, regarding any pre-contact and/or historic-era finds and be provided information after the archaeologist makes his/her initial assessment of the nature of the find, so as to provide Tribal input with regards to significance and treatment.

CUL-2: **Monitoring and Treatment.** If significant pre-contact and/or historic-era cultural resources, as defined by CEQA (as amended, 2015), are discovered and avoidance cannot be ensured, the archaeologist shall develop a Monitoring and Treatment Plan, the drafts of which shall be provided to YSMN for review and comment, as detailed within TCR-1. The archaeologist shall monitor the remainder of the project and implement the Plan accordingly.

CUL-3: **Funerary Discovery.** If human remains or funerary objects are encountered during any activities associated with the project, work in the immediate vicinity (within a 100-foot buffer of the find) shall cease and the County Coroner shall be contacted pursuant to State Health and Safety Code §7050.5 and that code enforced for the duration of the project.

Energy

The analysis provided in Section 4.6 found that no individual impacts related to energy use would occur as a result of the proposed project. Therefore, the project would not contribute to cumulative energy impacts.

Geology and Soils

Impacts related to geology at the project-level have no potential for cumulative impacts. Therefore, the proposed project would have no contribution to potential geological or soil degradation or other such impacts. If during construction operations, paleontological resources are discovered, **Mitigation Measure GEO-1** is given to establish proper care and attention to such discoveries. Impacts related to this topic would be less than significant. Mitigation for Geology and Soils are as follows:

GEO-1: If paleontological materials are uncovered during grading or other earth moving activities, the contractor shall be required to halt work in the immediate area of the find, and to retain a professional paleontologist to examine the materials to determine whether it is a significant paleontological resource. If this determination is positive, resource shall be left in place, if determined feasible by the project paleontologist. Otherwise, the scientifically consequential information shall be fully recovered by the paleontologist. Work may continue outside of the area of the find; however, no further work shall occur

in the immediate location of the find until all information recovery has been completed and a report concerning it filed with the Community Development Director. The applicant shall bear the cost of implementing this mitigation.

Greenhouse Gas Emissions

As discussed in Section 4.8, climate change is the result of numerous, cumulative sources of greenhouse gas emissions all over the world. The project would not contribute considerably to global climate change.

Hazardous Materials

The analysis provided in Section 4.9 related to hazards and hazardous materials, and the associated Phase I Environmental Site Assessment found that impacts would be less than significant with adherence to the following mitigation measures listed below. Additionally, compliance with all regulations related to the disposal and storage of household hazardous waste would ensure that impacts would be less than significant.

HAZ-1 **Soil Testing.** Prior to issuance of a grading permit, representative soil sampling will be conducted onsite at depths of one and three feet and tested for organochlorine pesticides (OCPs) and heavy metals which may be present from past agricultural activities. The developer shall retain a qualified environmental professional (QEP) to design and supervise the sampling and testing. A final report shall be prepared summarizing the results of this testing and where onsite soils meet current industrial standards for sampled materials.

If the QEP determines that all onsite soil meets industrial standards, no further action is required. If onsite soils do not meet industrial standards, the QEP will work with the developer and grading contractor to determine how onsite soils can be mixed with clean offsite or imported soils to achieve the industrial standard for the entire site. The QEP, developer, and grading contractor shall also identify if or how much soil needs to be removed from the site. The collection and disposal of any excavated contaminated soils shall be in accordance with applicable hazardous materials regulations.

HAZ-2 **Soil Vapor Extraction (SVE) System.** Onsite SVE remediation activities began in September 2022 and were ongoing during preparation of the CEQA document. Two deep extraction wells (SVE-1 and SVE-2) are located on the northern and western portions of the site outside of the existing warehouse building. However, these wells would be impacted by development of the new warehouse project. Based on ongoing soil vapor monitoring, the existing SVE remediation activities will be completed by June 2023. These activities must be completed, and a final report submitted to the City prior to issuance of a grading permit for the new warehouse. Regulatory oversight and approval of this system will be at the discretion of the San Bernardino County Fire Department as the County's Certified Unified Program Agency (CUPA). If the CUPA declines to be the regulatory authority for this oversight, the applicant shall enter into a Voluntary Cleanup Program (VCP) with the California Department of Toxic Substances Control (DTSC). The applicant must document the site meets all applicable health standards for groundwater and soil per the appropriate regulatory authority discussed above before a grading permit can be issued. Additional details on the SVE system can be found in Roux's SVE Pilot Test Technical Memorandum dated January 4, 2023 and the DRAFT Construction Completion Report dated March 3, 2023.

Once it is documented that applicable health standards have been met by the existing SVE activities, they can be shut down and all wells and subsurface piping shall be removed from the site. Confirmatory soil vapor samples will then be used to conduct a post-remediation human health risk assessment (HHRA). If the post-remediation HHRA shows risk less than 1:1,000,000 ("one in a million new cancer deaths"), no additional work associated with residual VOC concentrations is required (i.e., Mitigation Measure HAZ-3 is not required). If the post-remediation HHRA shows risk greater than 1:1,000,000 then the developer shall implement Mitigation Measure HAZ-3.

HAZ-3 **Vapor Intrusion Mitigation System (VIMS).** If the post-remediation HHRA outlined in HAZ-2 shows risk greater than 1:1,000,000, a passive sub-slab Vapor Intrusion Mitigation System (VIMS) shall be installed beneath the future warehouse building. The VIMS will generally consist of the following components (from bottom to top): (1) Gravel bed above the certified pad; (2) Horizontal perforated piping within the gravel bed to capture and convey residual vapors; (3) Spray-applied barrier above the gravel bed and below the building slab; and (4) Vertical risers to vent vapors to the atmosphere above the roof line.
If the VIMS is determined to be necessary, it shall be designed by a qualified professional engineer (P.E.) licensed in California. The VIMS design will be finalized prior to the start of building construction.

The VIMS system shall be designed to allow regular monitoring of vapor concentrations. After occupancy, monitoring shall be conducted and documented quarterly for the first year, semi-annually the second year, and annually thereafter for five years.

The installation and monitoring of the VIMS system shall be under the oversight of the City Engineering Department in consultation with the County Fire Department, Hazardous Materials Division as the Certified Unified program Agency (CUPA) for the County.

HAZ-4 **Soil Management Plan (SMP).** After remediation is complete and prior to grading and earth movement, a Soil Management Plan (SMP) shall be prepared to provide protocols and procedures if unexpected or unknown subsurface conditions are encountered at the project site. The SMP will be shared with all contractors involved with earth movement and import activities, if any. The SMP will identify parties to be contacted if unexpected or unknown conditions are encountered, including an environmental professional and regulatory agencies if necessary (e.g., if an underground storage tank is encountered).

Land Use and Planning

The analysis provided in Section 4.11 related to Land Use and Planning found that impacts would be less than significant; therefore, while the proposed project would contribute to individual, localized, or regional cumulative impacts, its contribution would not be considerable.

Mineral Resources

The analysis provided in Section 4.12 related to mineral resources found that there would be no impact; therefore, while the project would contribute to localized or regional cumulative impacts, the project contribution would not be considerable.

Noise

As discussed in Section 4.13, on-site operational noise is not anticipated to result in perceptible increases in ambient noise with the implementation of Best Management Practices. Therefore, the proposed project would not contribute considerably to noise levels in the immediate vicinity of the project. The project would contribute to temporary increases in noise levels in the immediate project vicinity during construction activities; however, Best Management Practices would be incorporated to ensure that impacts to nearby sensitive receptors remain less than significant. Therefore, the project would have no considerable contribution to cumulative noise impacts.

Population and Housing

The analysis provided in Section 4.14 related to Population and Housing found that no impacts would result; therefore, no cumulative impacts related to this topic would occur.

Public Services

The analysis provided in Section 4.15 related to Public Services found that impacts would be less than significant; therefore, while the proposed project would contribute to localized cumulative impacts, the contribution would not be cumulatively considerable.

Recreation

The analysis provided in Section 4.16 related to Recreation found that impacts would be less than significant; therefore, no cumulative impacts related to this topic would occur.

Traffic and Transportation

Traffic conditions were analyzed in Section 4.17 and found to be less than significant. The proposed project's contribution to cumulative impacts to local and regional transportation facilities would not be considerable.

Tribal Cultural Resources

The analysis provided in Section 4.18, the Historical/Archaeological Resources Survey, and consultation with the Yuhaaviatam of San Manuel Nation (YSMN), found that impacts to tribal cultural resources will be less than significant with adherence to the recommended Mitigation measures below. Mitigations for Cultural Resources include the following:

TCR-1 **Cultural Resources Monitoring and Treatment.** The Yuhaaviatam of San Manuel Nation Cultural Resources Department (YSMN) shall be contacted, as detailed in CUL-1, of any pre-contact and/or historic-era cultural resources discovered during project implementation, and be provided information regarding the nature of the find, so as to provide Tribal input with regards to significance and treatment. Should the find be deemed significant, as defined by CEQA (as amended, 2015), a cultural resources Monitoring and Treatment Plan shall be created by the archaeologist, in coordination with YSMN, and all subsequent finds shall be subject to this Plan. This Plan shall allow for a monitor to be present that represents YSMN for the remainder of the project, should YSMN elect to place a monitor on-site.

TCR-2 **Archaeological Documentation.** Any and all archaeological/cultural documents created as a part of the project (isolate records, site records, survey reports, testing reports, etc.) shall be supplied to the applicant and Lead Agency for dissemination to YSMN. The Lead Agency and/or applicant shall, in good faith, consult with YSMN throughout the life of the project.

Utilities and Service Systems

The analysis provided in Section 4.19 related to Utilities and Service Systems found that impacts would be less than significant; therefore, while the project would contribute to localized or regional cumulative impacts, the project contribution would not be considerable.

Wildfire

The analysis provided in Section 4.20 related to Wildfire found that no impacts would result; therefore, no cumulative impacts related to this topic would occur.

c) Less than Significant Impact. The proposed project would not have environmental effects which would cause substantial adverse effects on humans, either directly or indirectly, as noted in the previous sections above.

AIR-1: During construction of the proposed project, the project contractor shall ensure all off-road diesel powered construction equipment of 50 horsepower or more used for the project is equipped with Level 3 diesel particulate filters or equivalent.

BIO-1: If vegetation removal is scheduled during the nesting season (typically February 1 to September 1), then a focused survey for active nests shall be conducted by a qualified biologist no more than five (5) days before the beginning of project-related activities (e.g., demolition, excavation, grading and vegetation removal). Surveys must be conducted in proposed work areas, staging and storage areas, and soil, equipment, and material stockpile areas. For passerines and small raptors, surveys must be conducted within a 250-foot radius surrounding the work area (in non-developed areas and where access is feasible). For larger raptors, such as those from the genus *Buteo*, the survey area must encompass a 500-foot radius. Surveys must be conducted by a qualified biologist during weather conditions suited to maximize the observation of possible nests and concentrate on areas of suitable habitat. If a lapse in project-related work of five days or longer occurs, an additional nest survey is required before work can be reinitiated. If nests are encountered during any preconstruction survey, a qualified biologist must determine if it may be feasible for construction to continue as planned without impacting the success of the nest, depending on conditions specific to each nest and the relative location and rate of construction activities. Any nest(s) within the project site shall be monitored by a qualified biologist during vegetation removal if work is occurring directly adjacent to the pre-determined no-work buffer. If the qualified biologist determines construction activities have potential to adversely affect a nest, the biologist will immediately inform the construction manager to halt construction activities within minimum exclusion buffer of 50 feet for songbird nests, and 200 to 500 feet for raptor nests, depending on species and location. Construction activities within the no-work buffer may proceed after a qualified biologist determines the nest is no longer active due to natural causes (e.g., young have fledged, predation or other non-anthropogenic nest failure).

CUL-1: In the event that cultural resources are discovered during project activities, all work in the immediate vicinity of the find (within a 60-foot buffer) shall cease and a qualified archaeologist meeting Secretary of Interior standards shall be hired to assess the find. Work on the other portions of the project outside of the buffered area may continue during this assessment period. Additionally, the Yuhaaviatam of San Manuel Nation Cultural Resources Department (YSMN) shall be contacted, as detailed within TCR-1, regarding any pre-contact and/or historic-era finds and be provided information after the archaeologist makes his/her initial assessment of the nature of the find, so as to provide Tribal input with regards to significance and treatment.

CUL-2: If significant pre-contact and/or historic-era cultural resources, as defined by CEQA (as amended, 2015), are discovered and avoidance cannot be ensured, the archaeologist shall develop a Monitoring and Treatment Plan, the drafts of which shall be provided to YSMN for review and comment, as detailed within TCR-1. The archaeologist shall monitor the remainder of the project and implement the Plan accordingly.

CUL-3: If human remains or funerary objects are encountered during any activities associated with the project, work in the immediate vicinity (within a 100-foot buffer of the find) shall cease and the County Coroner shall be contacted pursuant to State Health and Safety Code §7050.5 and that code enforced for the duration of the project.

GEO-1: If paleontological materials are uncovered during grading or other earth moving activities, the contractor shall be required to halt work in the immediate area of the find, and to retain a professional paleontologist to examine the materials to determine whether it is a significant paleontological resource. If this determination is positive, the resource shall be left in place, if determined feasible by the project paleontologist. Otherwise, the scientifically consequential information shall be fully recovered by the paleontologist. Work may continue outside of the area of the find; however, no further work shall occur in the immediate location of the find until all information recovery has been completed and a report concerning it filed with the Community Development Director. The applicant shall bear the cost of implementing this mitigation.

HAZ-1 **Soil Testing.** Prior to issuance of a grading permit, representative soil sampling will be conducted onsite at depths of one and three feet and tested for organochlorine pesticides (OCPs) and heavy metals which may be present from past agricultural activities. The developer shall retain a qualified environmental professional (QEP) to design and supervise the sampling and testing. A final report shall be prepared summarizing the results of this testing and where onsite soils meet current industrial standards for sampled materials.

If the QEP determines that all onsite soil meets industrial standards, no further action is required. If onsite soils do not meet industrial standards, the QEP will work with the developer and grading contractor to determine how onsite soils can be mixed with clean offsite or imported soils to achieve the industrial standard for the entire site. The QEP, developer, and grading contractor shall also identify if or how much soil needs to be removed from the site. The collection and disposal of any excavated contaminated soils shall be in accordance with applicable hazardous materials regulations.

HAZ-2 **Soil Vapor Extraction (SVE) System.** Onsite SVE remediation activities began in September 2022 and were ongoing during preparation of the CEQA document. Two deep extraction wells (SVE-1 and SVE-2) are located on the northern and western portions of the site outside of the existing warehouse building. However, these wells would be impacted by development of the new warehouse project. Based on ongoing soil vapor monitoring, the existing SVE remediation activities will be completed by June 2023. These activities must be completed, and a final report submitted to the City prior to issuance of a grading permit for the new warehouse. Regulatory oversight and approval of this system will be at the discretion of the San Bernardino County Fire Department as the County's Certified Unified Program Agency (CUPA). If the CUPA declines to be the regulatory authority for this oversight, the applicant shall enter into a Voluntary Cleanup Program (VCP) with the California Department of Toxic Substances Control (DTSC). The applicant must document the site meets all applicable health standards for groundwater and soil per the appropriate regulatory authority discussed above before a grading permit can be issued. Additional details on the SVE system can be found in Roux's SVE Pilot Test Technical Memorandum dated January 4, 2023 and the DRAFT Construction Completion Report dated March 3, 2023.

Once it is documented that applicable health standards have been met by the existing SVE activities, they can be shut down and all wells and subsurface piping shall be removed from the site. Confirmatory soil vapor samples will then be used to conduct a post-remediation human health risk assessment (HHRA). If the post-remediation HHRA shows risk less than 1:1,000,000 ("one in a million new cancer deaths"), no additional

work associated with residual VOC concentrations is required (i.e., Mitigation Measure HAZ-3 is not required). If the post-remediation HHRA shows risk greater than 1:1,000,000 then the developer shall implement Mitigation Measure HAZ-3.

HAZ-3 **Vapor Intrusion Mitigation System (VIMS).** If the post-remediation HHRA outlined in HAZ-2 shows risk greater than 1:1,000,000, a passive sub-slab Vapor Intrusion Mitigation System (VIMS) shall be installed beneath the future warehouse building. The VIMS will generally consist of the following components (from bottom to top): (1) Gravel bed above the certified pad; (2) Horizontal perforated piping within the gravel bed to capture and convey residual vapors; (3) Spray-applied barrier above the gravel bed and below the building slab; and (4) Vertical risers to vent vapors to the atmosphere above the roof line.

If the VIMS is determined to be necessary, it shall be designed by a qualified professional engineer (P.E.) licensed in California. The VIMS design will be finalized prior to the start of building construction.

The VIMS system shall be designed to allow regular monitoring of vapor concentrations. After occupancy, monitoring shall be conducted and documented quarterly for the first year, semi-annually the second year, and annually thereafter for five years.

The installation and monitoring of the VIMS system shall be under the oversight of the City Engineering Department in consultation with the County Fire Department, Hazardous Materials Division as the Certified Unified program Agency (CUPA) for the County.

HAZ-4 **Soil Management Plan (SMP).** After remediation is complete and prior to grading and earth movement, a Soil Management Plan (SMP) shall be prepared to provide protocols and procedures if unexpected or unknown subsurface conditions are encountered at the project site. The SMP will be shared with all contractors involved with earth movement and import activities, if any. The SMP will identify parties to be contacted if unexpected or unknown conditions are encountered, including an environmental professional and regulatory agencies if necessary (e.g., if an underground storage tank is encountered).

TCR-1 **Cultural Resources Monitoring and Treatment.** The Yuhaaviatam of San Manuel Nation Cultural Resources Department (YSMN) shall be contacted, as detailed in CUL-1, of any pre-contact and/or historic-era cultural resources discovered during project implementation and be provided information regarding the nature of the find, so as to provide Tribal input with regards to significance and treatment. Should the find be deemed significant, as defined by CEQA (as amended, 2015), a cultural resources Monitoring and Treatment Plan shall be created by the archaeologist, in coordination with YSMN, and all subsequent finds shall be subject to this Plan. This Plan shall allow for a monitor to be present that represents YSMN for the remainder of the project, should YSMN elect to place a monitor on-site.

TCR-2 **Archaeological Documentation.** Any and all archaeological/cultural documents created as a part of the project (isolate records, site records, survey reports, testing reports, etc.) shall be supplied to the applicant and Lead Agency for dissemination to YSMN. The Lead Agency and/or applicant shall, in good faith, consult with YSMN throughout the life of the project.

INTRODUCTION

This air quality, health risk, energy, and greenhouse gas (GHG) impact report has been prepared to evaluate the potential air quality and GHG emissions impacts associated with the 301 Tennessee Street Industrial Project (project) in the City of Redlands (City), California. This report follows the guidelines identified by the South Coast Air Quality Management District (SCAQMD) in its *California Environmental Quality Act (CEQA) Air Quality Handbook*, and associated updates. In keeping with these guidelines, this analysis describes existing air quality, air quality and GHG emissions generated from project-related sources, regional air pollution, and global climate change. In addition, this analysis discusses energy use resulting from implementation of the proposed project and evaluates whether the proposed project would result in the wasteful, inefficient, or unnecessary consumption of energy resources or conflict with any applicable plans for renewable energy and energy efficiency.

PROJECT LOCATION AND DESCRIPTION

The proposed project is located at 301 Tennessee Street in the City of Redlands, San Bernardino County, California. The project site encompasses two parcels (Assessor's Parcel Numbers 0292-192-11-000 and 0292-192-14-0000), which total approximately 10.98 acres. The project site is currently developed with an existing 193,469-square-foot (sq ft) manufacturing warehouse and a single-family residence. The project would be accessible via four driveways; two would be located on Tennessee Street, one on West State Street, and one on Kansas Street. See Figure 1, Project Location, and Vicinity, and Figure 2, Project Site Plan, below.

The proposed project would consist of 197,397 sq ft of industrial warehouse facility (with 10 percent cold storage), including an office, landscaping, parking, and other site improvements. The project would include a total of 267 passenger parking spaces including electric vehicle, vanpool, and accessible spaces. The project would also provide 25 loading docks. In addition, the proposed project would have approximately 84,845 sq ft of ornamental landscaping that would cover 18 percent of the site. The project would be consistent with the City's General Plan and Zoning Ordinance and therefore would not require a change to the General Plan land use designation or the zoning code. The proposed project would be Leadership in Energy and Environmental Design (LEED) certified.

Typical operational characteristics include employees traveling to and from the site, delivery of products to the site, and truck loading and unloading. The project is assumed to operate 24 hours per day, 7 days per week; however, this may shift depending on the tenant, as the hours of operation are currently unknown.

Site Plan

I:\ESL2201.41\G\Site_Plan.ai (12/8/2022)

Based on the project's *Focused Traffic Analysis,* [1] existing conditions typically generate approximately 928 average daily trips and the proposed project would generate a total of approximately 961 average daily trips, including 680 passenger vehicle trips, 55 two-axle truck trips, 54 three-axle truck trips, and 172 four-axle truck trips, including 96 average daily trips associated with the cold storage uses and 865 average daily trips associated with the non-cold storage uses.

Construction activities for the project would occur over one phase and include demolition, site preparation, grading, building construction, paving, and architectural coatings. Construction would be anticipated to begin in June 2023 and end in May 2024. Based on the preliminary grading plans, the project would require approximately 23,154 cubic yards of soil import.

EXISTING LAND USES IN THE PROJECT AREA

For the purposes of this analysis, sensitive receptors are areas of the population that have an increased sensitivity to air pollution or environmental contaminants. Sensitive receptor locations include residences, schools, daycare centers, hospitals, parks, and similar uses that are sensitive to air quality. Impacts on sensitive receptors are of particular concern because those receptors are the population most vulnerable to the effects of air pollution.[2] The project site is surrounded primarily by general industrial facilities. The areas adjacent to the project site include the following uses: commercial shopping center to the north, industrial uses to the west and south, and undeveloped and graded land used for parking to the east.

The closest sensitive receptor to the project site is Redlands Adventist Academy Kindergarten and Kids Care, located approximately 275 feet southeast of the project site. southern boundary opposite West State Street. Other sensitive receptors include Redlands Christian Middle School, located approximately 380 feet from the project site, and Arrowhead Christian Academy Upper School, located approximately 715 feet south of the project site, and Redlands Apartments located approximately 900 feet southeast from the project site southern boundary. There are no other sensitive receptors located within 1,000 feet of the project site.

BACKGROUND

This section provides current background information on air pollutants and GHG emissions and their health effects. It also provides a description of the general health risks of toxics. In addition, this section provides background information on energy usage in the project area and provides regulatory background information, including federal, State, and local energy regulations.

AIR POLLUTANTS AND HEALTH EFFECTS

Both State and federal governments have established health-based ambient air quality standards (California Ambient Air Quality Standards [CAAQS] and National Ambient Air Quality Standards [NAAQS], respectively) for six criteria air pollutants:[3] carbon monoxide (CO), ozone (O_3), nitrogen dioxide (NO_2), sulfur dioxide (SO_2), lead (Pb), and suspended particulate matter (PM). In addition, the State has set standards for sulfates, hydrogen sulfide, vinyl chloride, and visibility-reducing particles. These standards are designed to protect the health and welfare of the populace with a reasonable margin of safety. Long-term exposure to elevated levels of criteria pollutants may result in adverse health effects. However, emission thresholds established by an air district are used to manage total regional emissions within an air basin based on the Basin's attainment status for criteria pollutants. These emission thresholds were established for individual projects that would contribute to regional emissions and pollutant concentrations and could adversely affect or delay the projected attainment target year for certain criteria pollutants.

Because of the conservative nature of the thresholds and the basin-wide context of individual project emissions, there is no known direct correlation between a single project and localized air quality-related health effects. One individual project that generates emissions exceeding a threshold does not necessarily result in adverse health effects for residents in the project vicinity. This condition is especially true when the criteria pollutants exceeding thresholds are those with regional effects, such as ozone precursors like nitrogen oxides (NO_X) and volatile organic compounds (VOCs).

Occupants of facilities such as schools, daycare centers, parks and playgrounds, hospitals, and nursing and convalescent homes are considered to be more sensitive than the general public to air pollutants because these population groups have increased susceptibility to respiratory disease. Persons engaged in strenuous outdoor work or exercise also have increased sensitivity to poor air quality. Residential areas are considered more sensitive to air quality conditions, compared to commercial and industrial areas, because people generally spend longer periods of time at their residences, with greater associated exposure to ambient air quality conditions. Recreational uses are also considered sensitive compared to commercial and industrial uses due to greater exposure to ambient air quality conditions associated with exercise.

[3] Criteria pollutants are defined as those pollutants for which the federal and State governments have established ambient air quality standards, or criteria, for outdoor concentrations in order to protect public health.

Ozone

Rather than being directly emitted, ozone (smog) is formed by photochemical reactions between NO_X and VOC. Ozone is a pungent, colorless gas. Elevated ozone concentrations result in reduced lung function, particularly during vigorous physical activity. This health problem is particularly acute in sensitive receptors such as the sick, elderly, and young children. Ozone levels peak during the summer and early fall months.

Carbon Monoxide

CO is formed by the incomplete combustion of fossil fuels, almost entirely from automobiles. It is a colorless, odorless gas that can cause dizziness, fatigue, and impairments to central nervous system functions. CO passes through the lungs into the bloodstream, where it interferes with the transfer of oxygen to body tissues.

Particulate Matter

Particulate matter is the term used for a mixture of solid particles and liquid droplets found in the air. Coarse particles are those that are 10 microns or less in diameter, or PM_{10}. Fine, suspended particulate matter with an aerodynamic diameter of 2.5 microns or less, or $PM_{2.5}$, is not readily filtered out by the lungs. Nitrates, sulfates, dust, and combustion particulates are major components of PM_{10} and $PM_{2.5}$. These small particles can be directly emitted into the atmosphere as byproducts of fuel combustion; through abrasion, such as tire or brake lining wear; or through fugitive dust (wind or mechanical erosion of soil). They can also be formed in the atmosphere through chemical reactions. Particulates may transport carcinogens and other toxic compounds that adhere to the particle surfaces and can enter the human body through the lungs.

Nitrogen Dioxide

NO_2 is a reddish brown gas that is a byproduct of combustion processes. Automobiles and industrial operations are the main sources of NO_2. Aside from its contribution to ozone formation, NO_2 also contributes to other pollution problems, including a high concentration of fine particulate matter, poor visibility, and acid deposition. NO_2 may be visible as a coloring component on high pollution days, especially in conjunction with high ozone levels. NO_2 decreases lung function and may reduce resistance to infection.

Sulfur Dioxide

SO_2 is a colorless, irritating gas formed primarily from incomplete combustion of fuels containing sulfur. Industrial facilities also contribute to gaseous SO_2 levels in the region. SO_2 irritates the respiratory tract, can injure lung tissue when combined with fine particulate matter, and reduces visibility and the level of sunlight.

Lead

Leaded gasoline (phased out in the United States beginning in 1973), paint (on older houses and cars), smelters (metal refineries), and the manufacture of lead storage batteries have been the primary sources of lead released into the atmosphere. Lead has multiple adverse neurotoxic health effects, and children are at special risk. Some lead-containing chemicals cause cancer in animals.

Lead levels in the air have decreased substantially since leaded gasoline was eliminated. Ambient lead concentrations are only monitored on an as-warranted, site-specific basis in California. On October 15, 2008, the United States Environmental Protection Agency (USEPA) strengthened the NAAQS for lead by lowering it from 1.5 to 0.15 micrograms per cubic meter ($\mu g/m^3$). The USEPA revised the monitoring requirements for lead in December 2010. These requirements focus on airports and large urban areas, resulting in an increase in 76 monitors nationally.

Volatile Organic Compounds

VOCs (also known as reactive organic gases [ROGs] and reactive organic compounds [ROCs]) are formed from the combustion of fuels and the evaporation of organic solvents. VOCs are not defined as criteria pollutants, however, because VOCs accumulate in the atmosphere more quickly during the winter, when sunlight is limited and photochemical reactions are slower, they are a prime component of the photochemical smog reaction. There are no attainment designations for VOCs.

Toxic Air Contaminants

In addition to the criteria pollutants discussed above, toxic air contaminants (TACs) are another group of pollutants of concern. TACs are injurious in small quantities and are regulated by the USEPA and the CARB. Some examples of TACs include benzene, butadiene, formaldehyde, and hydrogen sulfide. The identification, regulation, and monitoring of TACs is relatively recent compared to that for criteria pollutants.

TACs do not have ambient air quality standards, but are regulated by the USEPA, CARB, and the SCAQMD. In 1998, the CARB identified particulate matter from diesel-fueled engines as a TAC. The CARB has completed a risk management process that identified potential cancer risks for a range of activities using diesel-fueled engines.[4] High-volume freeways, stationary diesel engines, and facilities attracting heavy and constant diesel vehicle traffic (e.g., distribution centers and truck stops) were identified as posing the highest risk to adjacent receptors. Other facilities associated with increased risk include warehouse distribution centers, large retail or industrial facilities, high-volume transit centers, and schools with a high volume of bus traffic. Health risks from TACs are a function of both concentration and duration of exposure.

Unlike TACs emitted from industrial and other stationary sources noted above, most diesel particulate matter (DPM) is emitted from mobile sources—primarily "off-road" sources such as construction and mining equipment, agricultural equipment, and truck-mounted refrigeration units, as well as "on-road" sources such as trucks and buses traveling on freeways and local roadways.

Although not specifically monitored, recent studies indicate that exposure to diesel particulate matter may contribute significantly to a cancer risk (a risk of approximately 500 to 700 in 1,000,000) that is greater than all other measured TACs combined.[5] The technology for reducing DPM emissions from heavy-duty trucks is well established, and both State and federal agencies are moving aggressively to

[4] CARB. 2000. Stationary Source Division and Mobile Source Control Division. *Risk Reduction Plan to Reduce Particulate Matter Emissions from Diesel-Fueled Engines and Vehicles.* October.

[5] CARB. 2000. Stationary Source Division and Mobile Source Control Division. *Risk Reduction Plan to Reduce Particulate Matter Emissions from Diesel-Fueled Engines and Vehicles.* October.

regulate engines and emission control systems to reduce and remediate diesel emissions. The CARB anticipated that by 2020, average statewide DPM concentrations will decrease by 85 percent from levels in 2000 with full implementation of the CARB's Diesel Risk Reduction Plan,[6] meaning that the statewide health risk from DPM is expected to decrease from 540 cancer cases in 1,000,000 to 21.5 cancer cases in 1,000,000. The CARB 2000 Diesel Risk Reduction Plan is still the most recent version and has not been updated.

Table A summarizes the sources and health effects of air pollutants discussed in this section. Table B presents a summary of CAAQS and NAAQS.

Table A: Sources and Health Effects of Air Pollutants

Pollutants	Sources	Primary Effects
Carbon Monoxide (CO)	• Incomplete combustion of fuels and other carbon-containing substances, such as motor exhaust • Natural events, such as decomposition of organic matter	• Reduced tolerance for exercise • Impairment of mental function • Impairment of fetal development • Death at high levels of exposure • Aggravation of some heart diseases (angina)
Nitrogen Dioxide (NO_2)	• Motor vehicle exhaust • High temperature stationary combustion • Atmospheric reactions	• Aggravation of respiratory illness • Reduced visibility • Reduced plant growth • Formation of acid rain
Ozone (O_3)	• Atmospheric reaction of organic gases with nitrogen oxides in sunlight	• Aggravation of respiratory and cardiovascular diseases • Irritation of eyes • Impairment of cardiopulmonary function • Plant leaf injury
Lead (Pb)	• Contaminated soil	• Impairment of blood functions and nerve construction • Behavioral and hearing problems in children
Suspended Particulate Matter ($PM_{2.5}$ and PM_{10})	• Stationary combustion of solid fuels • Construction activities • Industrial processes • Atmospheric chemical reactions	• Reduced lung function • Aggravation of the effects of gaseous pollutants • Aggravation of respiratory and cardiorespiratory diseases • Increased cough and chest discomfort • Soiling • Reduced visibility
Sulfur Dioxide (SO_2)	• Combustion of sulfur-containing fossil fuels • Smelting of sulfur-bearing metal ores Industrial processes	• Aggravation of respiratory diseases (asthma, emphysema) • Reduced lung function • Irritation of eyes • Reduced visibility • Plant injury • Deterioration of metals, textiles, leather, finishes, coatings, etc.

Table B: Federal and State Ambient Air Quality Standards

Pollutant	Averaging Time	California Standards[a]		Federal Standards[b]		
		Concentration[c]	Method[d]	Primary[c,e]	Secondary[c,f]	Method[g]
Ozone (O_3)[h]	1-Hour	0.09 ppm (180 µg/m³)	Ultraviolet Photometry	–	Same as Primary Standard	Ultraviolet Photometry
	8-Hour	0.07 ppm (137 µg/m³)		0.070 ppm (137 µg/m³)		
Respirable Particulate Matter (PM_{10})[i]	24-Hour	50 µg/m³	Gravimetric or Beta Attenuation	150 µg/m³	Same as Primary Standard	Inertial Separation and Gravimetric Analysis
	Annual Arithmetic Mean	20 µg/m³		–		
Fine Particulate Matter ($PM_{2.5}$)[i]	24-Hour	-		35 µg/m³	Same as Primary Standard	Inertial Separation and Gravimetric Analysis
	Annual Arithmetic Mean	12 µg/m³	Gravimetric or Beta Attenuation	12.0 µg/m³		
Carbon Monoxide (CO)	8-Hour	9.0 ppm (10 mg/m³)	Non-Dispersive Infrared Photometry (NDIR)	9 ppm (10 mg/m³)	–	Non-Dispersive Infrared Photometry (NDIR)
	1-Hour	20 ppm (23 mg/m³)		35 ppm (40 mg/m³)		
	8-Hour (Lake Tahoe)	6 ppm (7 mg/m³)		–	–	
Nitrogen Dioxide (NO_2)[j]	Annual Arithmetic Mean	0.03 ppm (57 µg/m³)	Gas Phase Chemi-luminescence	53 ppb (100 µg/m³)	Same as Primary Standard	Gas Phase Chemi-luminescence
	1-Hour	0.18 ppm (339 µg/m³)		100 ppb (188 µg/m³)	-	
Lead (Pb)[l,m]	30-Day Average	1.5 µg/m³	Atomic Absorption	–	–	High-Volume Sampler and Atomic Absorption
	Calendar Quarter	–		1.5 µg/m³ (for certain areas)[l]	Same as Primary Standard	
	Rolling 3-Month Average[i]	–		0.15 µg/m³		
Sulfur Dioxide (SO_2)[k]	24-Hour	0.04 ppm (105 µg/m3)	Ultraviolet Fluorescence	0.14 ppm (for certain areas)	–	Ultraviolet Fluorescence; Spectro-photometry (Pararosaniline Method)
	3-Hour	–		–	0.5 ppm (1300 µg/m³)	
	1-Hour	0.25 ppm (655 µg/m³)		75 ppb (196 µg/m³)[k]	–	
	Annual Arithmetic Mean	–		0.030 ppm (for certain areas)[k]	–	
Visibility-Reducing Particles[l]	8-Hour	See footnote n	Beta Attenuation and Transmittance through Filter Tape.	No Federal Standards		
Sulfates	24-Hour	25 µg/m³	Ion Chromatography			
Hydrogen Sulfide	1-Hour	0.03 ppm (42 µg/m³)	Ultraviolet Fluorescence			
Vinyl Chloride[j]	24-Hour	0.01 ppm (26 µg/m³)	Gas Chromatography			

Source: California Air Resources Board (2016) (Website: https://www.arb.ca.gov/research/aaqs/aaqs2.pdf).

Table notes are provided on the following page.

[a] California standards for ozone, carbon monoxide (except 8-hour Lake Tahoe), sulfur dioxide (1- and 24-hour), nitrogen dioxide, and particulate matter (PM_{10}, $PM_{2.5}$, and visibility reducing particles), are values that are not to be exceeded. All others are not to be equaled or exceeded. California ambient air quality standards are listed in the Table of Standards in Section 70200 of Title 17 of the California Code of Regulations.

[b] National standards (other than ozone, particulate matter, and those based on annual arithmetic mean) are not to be exceeded more than once a year. The ozone standard is attained when the fourth highest 8-hour concentration measured at each site in a year, averaged over three years, is equal to or less than the standard. For PM_{10}, the 24-hour standard is attained when the expected number of days per calendar year with a 24-hour average concentration above 150 µg/m^3 is equal to or less than one. For $PM_{2.5}$, the 24-hour standard is attained when 98 percent of the daily concentrations, averaged over three years, are equal to or less than the standard. Contact USEPA for further clarification and current national policies.

[c] Concentration expressed first in units in which it was promulgated. Equivalent units given in parentheses are based upon a reference temperature of 25°C and a reference pressure of 760 torr. Most measurements of air quality are to be corrected to a reference temperature of 25°C and a reference pressure of 760 torr; ppm in this table refers to ppm by volume, or micromoles of pollutant per mole of gas.

[d] Any equivalent measurement method which can be shown to the satisfaction of the CARB to give equivalent results at or near the level of the air quality standard may be used.

[e] National Primary Standards: The levels of air quality necessary, with an adequate margin of safety to protect the public health.

[f] National Secondary Standards: The levels of air quality necessary to protect the public welfare from any known or anticipated adverse effects of a pollutant.

[g] Reference method as described by the USEPA. An "equivalent method" of measurement may be used but must have a "consistent relationship to the reference method" and must be approved by the USEPA.

[h] On October 1, 2015, the national 8-hour ozone primary and secondary standards were lowered from 0.075 to 0.070 ppm.

[i] On December 14, 2012, the national annual $PM_{2.5}$ primary standard was lowered from 15 µg/m^3 to 12.0 µg/m^3. The existing national 24- hour $PM_{2.5}$ standards (primary and secondary) were retained at 35 µg/m^3, as was the annual secondary standard of 15 µg/m^3. The existing 24-hour PM_{10} standards (primary and secondary) of 150 µg/m^3 also were retained. The form of the annual primary and secondary standards is the annual mean, averaged over 3 years.

[j] To attain the 1-hour national standard, the 3-year average of the annual 98th percentile of the 1-hour daily maximum concentrations at each site must not exceed 100 ppb. Note that the national 1-hour standard is in units of parts per billion (ppb). California standards are in units of parts per million (ppm). To directly compare the national 1-hour standard to the California standards the units can be converted from ppb to ppm. In this case, the national standard of 100 ppb is identical to 0.100 ppm.

[k] On June 2, 2010, a new 1-hour SO_2 standard was established, and the existing 24-hour and annual primary standards were revoked. To attain the 1-hour national standard, the 3-year average of the annual 99th percentile of the 1-hour daily maximum concentrations at each site must not exceed 75 ppb. The 1971 SO_2 national standards (24-hour and annual) remain in effect until one year after an area is designated for the 2010 standard, except that in areas designated nonattainment for the 1971 standards, the 1971 standards remain in effect until implementation plans to attain or maintain the 2010 standards are approved.

Note that the 1-hour national standard is in units of parts per billion (ppb). California standards are in units of parts per million (ppm). To directly compare the 1-hour national standard to the California standard the units can be converted to ppm. In this case, the national standard of 75 ppb is identical to 0.075 ppm.

[l] The CARB has identified lead and vinyl chloride as 'toxic air contaminants' with no threshold level of exposure for adverse health effects determined. These actions allow for the implementation of control measures at levels below the ambient concentrations specified for these pollutants.

[m] The national standard for lead was revised on October 15, 2008, to a rolling 3-month average. The 1978 lead standard (1.5 µg/m^3 as a quarterly average) remains in effect until one year after an area is designated for the 2008 standard, except that in areas designated nonattainment for the 1978 standard, the 1978 standard remains in effect until implementation plans to attain or maintain the 2008 standard are approved.

[n] In 1989, the CARB converted both the general statewide 10-mile visibility standard and the Lake Tahoe 30-mile visibility standard to instrumental equivalents, which are "extinction of 0.23 per kilometer" and "extinction of 0.07 per kilometer" for the statewide and Lake Tahoe Air Basin standards, respectively.

°C = degrees Celsius
µg/m^3 = micrograms per cubic meter
CARB = California Air Resources Board
mg/m^3 = milligrams per cubic meter
ppb = parts per billion
ppm = parts per million
USEPA = United States Environmental Protection Agency

ENERGY

Electricity

Electricity is a manmade resource. The production of electricity requires the consumption or conversion of energy resources (including water, wind, oil, gas, coal, solar, geothermal, and nuclear resources) into energy. Electricity is used for a variety of purposes (e.g., lighting, heating, cooling, and refrigeration, and for operating appliances, computers, electronics, machinery, and public transportation systems).

According to the most recent data available, in 2020, California's electricity was generated primarily by natural gas (37.06 percent), renewable sources (33.09 percent), large hydroelectric (12.21 percent), nuclear (9.33 percent), coal (2.74 percent), and other and unspecified sources. Total electric generation in California in 2020 was 272,576 gigawatt-hours (GWh), down 2 percent from the 2019 total generation of 277,704 GWh.[7]

The project site is within the service territory of Southern California Edison (SCE). SCE provides electricity to more than 15 million people in a 50,000-square-mile (sq mi) area of Central, Coastal, and Southern California.[8] According to the California Energy Commission (CEC), total electricity consumption in the SCE service area in 2020 was 83,532.6 GWh (32,475 GWh for the residential sector and 51,057 GWh for the non-residential sector). Total electricity consumption in San Bernardino County in 2020 was 15,968.5 GWh (15,968,515,536 kilowatt-hours (kWh).[9]

Natural Gas

Natural gas is a non-renewable fossil fuel. Fossil fuels are formed when layers of decomposing plant and animal matter are exposed to intense heat and pressure under the surface of the Earth over millions of years. Natural gas is a combustible mixture of hydrocarbon compounds (primarily methane) that is used as a fuel source. Natural gas is found in naturally occurring reservoirs in deep underground rock formations. Natural gas is used for a variety of uses (e.g., heating buildings, generating electricity, and powering appliances such as stoves, washing machines and dryers, gas fireplaces, and gas grills).

Natural gas consumed in California is used for electricity generation (45 percent), residential uses (21 percent), industrial uses (25 percent), and commercial uses (9 percent). California continues to depend on out-of-state imports for nearly 90 percent of its natural gas supply.[10]

10 CEC. 2021d. Supply and Demand of Natural Gas in California. Website: https://www.energy.ca.gov/data-reports/energy-almanac/californias-natural-gas-market/supply-and-demand-natural-gas-california (accessed November 2022).

The Southern California Gas Company (SoCalGas) is the natural gas service provider for the project site. SoCalGas provides natural gas to approximately 21.8 million people in a 24,000 sq mi service area throughout Central and Southern California, from Visalia to the Mexican border.[11] According to the CEC, total natural gas consumption in the SoCalGas service area in 2020 was 5,231 million therms (2,426 million therms for the residential sector). Total natural gas consumption in San Bernardino County in 2020 was 527 million therms (527,236,428 therms).[12]

Fuel

Petroleum is also a non-renewable fossil fuel. Petroleum is a thick, flammable, yellow-to-black mixture of gaseous, liquid, and solid hydrocarbons that occurs naturally beneath the earth's surface. Petroleum is primarily recovered by oil drilling. It is refined into a large number of consumer products, primarily fuel oil, gasoline, and diesel.

The average fuel economy for light-duty vehicles (autos, pickups, vans, and SUVs) in the United States has steadily increased from about 14.9 miles per gallon (mpg) in 1980 to 22.9 mpg in 2020.[13] Federal fuel economy standards have changed substantially since the Energy Independence and Security Act was passed in 2007. The Act, which originally mandated a national fuel economy standard of 35 mpg by year 2020[14], applies to cars and light trucks of Model Years 2011 through 2020. In March 2020, the USEPA and National Highway Traffic Safety Administration (NHTSA) finalized the Safer Affordable Fuel-Efficient (SAFE) Vehicles Rule for Model Years 2021–2026 Passenger Cars and Light Trucks, further detailed below.

Gasoline is the most used transportation fuel in California, with 97 percent of all gasoline being consumed by light-duty cars, pickup trucks, and sport utility vehicles. According to the most recent data available, total gasoline consumption in California was 289,918 thousand barrels or 1,464.7 trillion British Thermal Units (BTU) in 2020.[15] Of the total gasoline consumption, 273,289 thousand barrels or 1,380.7 trillion BTU were consumed for transportation Based on fuel consumption obtained from CARB's California Emissions Factor Model, Version 2021 (EMFAC2021), approximately 321.6 million gallons of diesel and approximately 915.5 million gallons of gasoline will be consumed from vehicle trips in San Bernardino County in 2022.

15 A British Thermal Unit is defined as the amount of heat required to raise the temperature of one pound of water by one degree Fahrenheit.

GREENHOUSE GASES AND GLOBAL CLIMATE CHANGE

Global climate change is the observed increase in the average temperature of the Earth's atmosphere and oceans in recent decades. The Earth's average near-surface atmospheric temperature rose 0.6 ± 0.2° Celsius (°C) or 1.1 ± 0.4° Fahrenheit (°F) in the 20th century. The prevailing scientific opinion on climate change is that most of the warming observed over the last 50 years is attributable to human activities. The increased amounts of carbon dioxide (CO_2) and other GHGs are the primary causes of the human-induced component of warming. GHGs are released by the burning of fossil fuels, land clearing, agriculture, and other activities, and lead to an increase in the greenhouse effect.[16]

GHGs are present in the atmosphere naturally, are released by natural sources, or are formed from secondary reactions taking place in the atmosphere. The gases that are widely seen as the principal contributors to human-induced global climate change are:

- CO_2
- Methane (CH_4)
- Nitrous oxide (N_2O)
- Hydrofluorocarbons (HFCs)
- Perfluorocarbons (PFCs)
- Sulfur hexafluoride (SF_6)

Over the last 200 years, humans have caused substantial quantities of GHGs to be released into the atmosphere. These extra emissions are increasing GHG concentrations in the atmosphere, and enhancing the natural greenhouse effect, which is believed to be causing global warming. While manmade GHGs include naturally occurring GHGs such as CO_2, methane, and N_2O, some gases, like HFCs, PFCs, and SF_6 are completely new to the atmosphere.

Certain gases, such as water vapor, are short-lived in the atmosphere. Others remain in the atmosphere for significant periods of time, contributing to climate change in the long term. Water vapor is excluded from the list of GHGs above because it is short-lived in the atmosphere and its atmospheric concentrations are largely determined by natural processes, such as oceanic evaporation. For the purposes of this air quality analysis, the term "GHGs" will refer collectively to the six gases listed above.

These gases vary considerably in terms of Global Warming Potential (GWP), which is a concept developed to compare the ability of each GHG to trap heat in the atmosphere relative to another gas. The GWP is based on several factors, including the relative effectiveness of a gas to absorb infrared radiation and length of time that the gas remains in the atmosphere ("atmospheric

[16] The temperature on Earth is regulated by a system commonly known as the "greenhouse effect." Just as the glass in a greenhouse lets heat from sunlight in and reduces the heat escaping, greenhouse gases like carbon dioxide, methane, and nitrous oxide in the atmosphere keep the Earth at a relatively even temperature. Without the greenhouse effect, the Earth would be a frozen globe; thus, although an excess of greenhouse gas results in global warming, the naturally occurring greenhouse effect is necessary to keep our planet at a comfortable temperature.

lifetime"). The GWP of each gas is measured relative to carbon dioxide, the most abundant GHG; the definition of GWP for a particular GHG is the ratio of heat trapped by one unit mass of the GHG to the ratio of heat trapped by one unit mass of CO_2 over a specified time period. GHG emissions are typically measured in terms of pounds or tons of "CO_2 equivalents" (CO_2e). Table C shows the GWP for each type of GHG. For example, SF_6 is 23,900 times more potent at contributing to global warming than CO_2.

Table C: Global Warming Potential of Greenhouse Gases

Gas	Atmospheric Lifetime (Years)	Global Warming Potential (100-Year Time Horizon)
Carbon Dioxide	50-200	1
Methane	12	21
Nitrous Oxide	120	310
HFC-23	260	11,700
HFC-134a	1	140
HFC-152a	1	140
PFC: Tetrafluoromethane (CF_4)	50,000	6,500
PFC: Hexafluoromethane (C_2F_6)	10,000	9,200
Sulfur Hexafluoride (SF_6)	3,200	23,900

Source: *Second Update to the Climate Change Scoping Plan: Building on the Framework* (CARB 2017). Website: www.arb.ca.gov/our-work/programs/ab-32-climate-change-scoping-plan/2017-scoping-plan-documents (accessed November 2022).

The following discussion summarizes the characteristics of the six GHGs and black carbon.

Carbon Dioxide

In the atmosphere, carbon generally exists in its oxidized form, as CO_2. Natural sources of CO_2 include the respiration (breathing) of humans, animals and plants, volcanic out gassing, decomposition of organic matter and evaporation from the oceans. Human caused sources of CO_2 include the combustion of fossil fuels and wood, waste incineration, mineral production, and deforestation. Natural sources release approximately 150 billion tons of CO_2 each year, far outweighing the 7 billion tons of man-made emissions of CO_2 each year. Nevertheless, natural removal processes, such as photosynthesis by land- and ocean-dwelling plant species, cannot keep pace with this extra input of man-made CO_2, and consequently, the gas is building up in the atmosphere.

In 2019, total annual CO_2 accounted for approximately 83 percent of California's overall GHG emissions.[17] Transportation is the single largest source of CO_2 in California, which is primarily comprised of on-road travel. Electricity production, industrial and residential sources also make important contributions to CO_2 emissions in California.

Methane

Methane is produced when organic matter decomposes in environments lacking sufficient oxygen. Natural sources include wetlands, termites, and oceans. Decomposition occurring in landfills accounts for the majority of human-generated CH_4 emissions in California and in the United States

[17] CARB. 2021. GHGs Descriptions & Sources in California. Website: ww2.arb.ca.gov/ghg-descriptions-sources (accessed November 2022).

as a whole. Agricultural processes such as intestinal fermentation, manure management, and rice cultivation are also significant sources of CH_4 in California. Total annual emissions of CH_4 accounted for approximately 9 percent of GHG emissions in California.[18]

Nitrous Oxide

Nitrous oxide is produced naturally by a wide variety of biological sources, particularly microbial action in soils and water. Tropical soils and oceans account for the majority of natural source emissions. Nitrous oxide is a product of the reaction that occurs between nitrogen and oxygen during fuel combustion. Both mobile and stationary combustion emit N_2O, and the quantity emitted varies according to the type of fuel, technology, and pollution control device used, as well as maintenance and operating practices. Agricultural soil management and fossil fuel combustion are the primary sources of human-generated N_2O emissions in California. Nitrous oxide emissions accounted for approximately 3 percent of GHG emissions in California in 2019.[19]

Hydrofluorocarbons, Perfluorocarbons, and Sulfur Hexafluoride

HFCs are primarily used as substitutes for ozone-depleting substances regulated under the Montreal Protocol.[20] PFCs and SF_6 are emitted from various industrial processes, including aluminum smelting, semiconductor manufacturing, electric power transmission and distribution, and magnesium casting. There is no aluminum or magnesium production in California; however, the rapid growth in the semiconductor industry leads to greater use of PFCs. HFCs, PFCs, and SF_6 accounted for about 5 percent of GHG emissions in California in 2019.[21]

Black Carbon

Black carbon is the most strongly light-absorbing component of PM formed by burning fossil fuels such as coal, diesel, and biomass. Black carbon is emitted directly into the atmosphere in the form of $PM_{2.5}$ and is the most effective form of PM, by mass, at absorbing solar energy. Per unit of mass in the atmosphere, black carbon can absorb one million times more energy than CO_2.[22] Black carbon contributes to climate change both directly, such as absorbing sunlight, and indirectly, such as affecting cloud formation. However, because black carbon is short-lived in the atmosphere, it can be difficult to quantify its effect on global warming.

Most U.S. emissions of black carbon come from mobile sources (52 percent), particularly from diesel-fueled vehicles. The other major source of black carbon is open biomass burning, including wildfires,

22 U.S. Environmental Protection Agency (USEPA). 2015. Black Carbon, Basic Information. February 14, 2017. Website: 19january2017snapshot.epa.gov/www3/airquality/blackcarbon/basic.html (accessed November 2022).

although residential heating and industry also contribute. The CARB estimates that the annual black carbon emissions in California will be reduced approximately 50 percent below 2013 levels by 2030.[23]

Effects of Global Climate Change

Effects from global climate change may arise from temperature increases, climate-sensitive diseases, extreme weather events, and air quality. There may be direct temperature effects through increases in average temperature leading to more extreme heat waves and less extreme cold spells. Those living in warmer climates are likely to experience more stress and heat-related problems. Heat-related problems include heat rash and heat stroke. In addition, climate-sensitive diseases may increase, such as those spread by mosquitoes and other disease-carrying insects. Such diseases include malaria, dengue fever, yellow fever, and encephalitis. Extreme events such as flooding and hurricanes can displace people and agriculture. Global climate change may also contribute to air quality problems from increased frequency of smog and particulate air pollution.[24]

Additionally, according to the 2006 California Climate Action Team (CAT) Report,[25] the following applicable climate change effects, which are based on trends established by the United Nations Intergovernmental Panel on Climate Change (IPCC), can be expected in California over the course of the next century:

- The loss of sea ice and mountain snow-pack, resulting in higher sea levels and higher sea surface evaporation rates with a corresponding increase in tropospheric water vapor due to the atmosphere's ability to hold more water vapor at higher temperatures.[26]
- Rise in global average sea level, primarily due to thermal expansion and melting of glaciers and ice caps in the Greenland and Antarctic ice sheets.[27]
- Changes in weather that include widespread changes in precipitation, ocean salinity, wind patterns, and more energetic aspects of extreme weather, including droughts, heavy precipitation, heat waves, extreme cold, and the intensity of tropical cyclones.[28]
- Decline of the Sierra snowpack, which accounts for approximately one-half of the surface water storage in California by 70 percent to as much as 90 percent over the next 100 years.[29]

29 CalEPA. 2006, op. cit.

- Increase in the number of days conducive to O_3 formation by 25–85 percent (depending on the future temperature scenario) in high O_3 areas by the end of the 21st century.[30]
- High potential for erosion of California's coastlines and seawater intrusion into the Delta and levee systems due to the rise in sea level.[31]

A summary of these potential effects is identified in Table D.

Table D: Potential Impacts of Global Warming and Expected Consequences for California

Potential Water Resource Impacts	Anticipated Consequences Statewide
Reduction of the State's average annual snowpack	• Specifically, the decline of the Sierra snowpack would lead to a loss in half of the surface water storage in California by 70% to 90% over the next 100 years • Potential loss of 5 million acre-feet or more of average annual water storage in the State's snowpack • Increased challenges for reservoir management and balancing the competing concerns of flood protection and water supply • Higher surface evaporation rates with a corresponding increase in tropospheric water vapor
Rise in average sea level	• Potential economic impacts related to coastal tourism, commercial fisheries, coastal agriculture, and ports • Increased risk of flooding, coastal erosion along the State's coastline, seawater intrusion into the Delta and levee systems
Changes in weather	• Changes in precipitation, ocean salinity, and wind patterns • Increased likelihood for extreme weather events, including droughts, heavy precipitation, heat waves, extreme cold, and the intensity of tropical cyclones
Changes in the timing, intensity, location, amount, and variability of precipitation	• Potential increased storm intensity and increased potential for flooding • Possible increased potential for droughts • Long-term changes in vegetation and increased incidence of wildfires • Changes in the intensity and timing of runoff • Possible increased incidence of flooding and increased sedimentation • Sea level rise and inundation of coastal marshes and estuaries • Increased potential for salinity intrusion into coastal aquifers (groundwater) • Increased potential for flooding near the mouths of rivers due to backwater effects
Increased water temperatures	• Increased environmental water demand for temperature control • Possible increased problems with foreign invasive species in aquatic ecosystems • Potential adverse changes in water quality, including the reduction of dissolved oxygen levels • Possible critical effects on listed and endangered aquatic species
Changes in urban and agricultural water demand	• Changes in demand patterns and evapotranspiration
Increase in the number of days conducive to O_3 formation	• Increased temperatures • Potential health effects, including adverse impacts to respiratory systems

REGULATORY SETTING

AIR QUALITY REGULATIONS

The USEPA and the CARB regulate direct emissions from motor vehicles. The SCAQMD is the regional agency primarily responsible for regulating air pollution emissions from stationary sources (e.g., factories) and indirect sources (e.g., traffic associated with new development), as well as monitoring ambient pollutant concentrations.

Federal Regulations

Federal Clean Air Act

The 1970 federal Clean Air Act (CAA) authorized the establishment of national health-based air quality standards and also set deadlines for their attainment. The federal Clean Air Act Amendments of 1990 changed deadlines for attaining national standards as well as the remedial actions required of areas of the nation that exceed the standards. Under the Clean Air Act, State and local agencies in areas that exceed the national standards are required to develop State Implementation Plans to demonstrate how they will achieve the national standards by specified dates.

State Regulations

California Clean Air Act

In 1988, the California Clean Air Act (CCAA) required that all air districts in the State endeavor to achieve and maintain CAAQS for CO, O_3, SO_2, and NO_2 by the earliest practical date. The California Clean Air Act provides districts with authority to regulate indirect sources and mandates that air quality districts focus particular attention on reducing emissions from transportation and area-wide emission sources. Each nonattainment district is required to adopt a plan to achieve a 5 percent annual reduction, averaged over consecutive 3-year periods, in district-wide emissions of each nonattainment pollutant or its precursors. A Clean Air Plan shows how a district would reduce emissions to achieve air quality standards. Generally, the State standards for these pollutants are more stringent than the national standards.

California Air Resources Board

The CARB is the State's "clean air agency." The CARB's goals are to attain and maintain healthy air quality, protect the public from exposure to toxic air contaminants, and oversee compliance with air pollution rules and regulations.

Assembly Bill 2588 Air Toxics "Hot Spots" Information and Assessment Act. Under Assembly Bill (AB) 2588, stationary sources of air pollutants are required to report the types and quantities of certain substances their facilities routinely released into the air. The goals of the Air Toxics "Hot Spots" Act are to collect emission data, identify facilities having localized impacts, determine health risks, and notify nearby residents of significant risks.

Regional Regulations

South Coast Air Quality Management District

The SCAQMD has jurisdiction over most air quality matters in the South Coast Air Basin (Basin). This area includes all of Orange County, Los Angeles County except for the Antelope Valley, the non-desert portion of western San Bernardino County, and the western and Coachella Valley portions of Riverside County. The SCAQMD is the agency principally responsible for comprehensive air pollution control in the Basin and is tasked with implementing certain programs and regulations required by the CAA and the CCAA. The SCAQMD prepares plans to attain CAAQS and NAAQS. SCAQMD is directly responsible for reducing emissions from stationary (area and point) sources. The SCAQMD develops rules and regulations, establishes permitting requirements, inspects emissions sources, and enforces such measures though educational programs or fines, when necessary.

On May 7, 2021, the South Coast AQMD Governing Board adopted Rule 2305, known as the Warehouse Indirect Source Rule (ISR). The rule requires warehouses greater than 100,000 square feet to directly reduce NO_x and DPM emissions, or to otherwise reduce emissions and exposure of these pollutants in nearby communities.

Warehouses are a key destination for heavy-duty trucks and have other sources of emissions like cargo handling equipment, all of which contribute to local pollution, including toxic emissions, to the communities that live near them. Emissions from sources associated with warehouses account for almost as much NO_x emissions as all the refineries, power plants and other stationary sources in the South Coast Air Basin combined. Those living within a half mile of warehouses are more likely to include communities of color, have higher rates of asthma and heart attacks, and a greater environmental burden. The warehouse rule is expected to reduce smog-forming emissions by 10 to 15 percent from warehouse-related sources.

As part of the rule, warehouse operators will need to earn a specified number of points annually. These points can be earned by completing actions from a menu that includes acquiring and using natural gas near-zero and/or zero-emission on-road trucks, zero-emission cargo handling equipment, solar panels or zero-emission charging and fueling infrastructure and more. As alternatives to the points system, warehouse operators can prepare and implement a custom plan specific to their site or choose to pay a mitigation fee. Funds from mitigation fees will be used to incentivize the purchase of cleaner trucks and charging/fueling infrastructure in communities near the warehouse that paid the mitigation fee.

The proposed project could be subject to the following additional SCAQMD rules and regulations:

- **Regulation IV - Prohibitions:** This regulation sets forth the restrictions for visible emissions, odor nuisance, fugitive dust, various air pollutant emissions, fuel contaminants, start-up/shutdown exemptions, and breakdown events.
    - **Rule 402 - Nuisance:** This rule restricts the discharge of any contaminant in quantities that cause or have a natural ability to cause injury, damage, nuisance, or annoyance to businesses, property, or the public.

- **Rule 403 - Fugitive Dust:** This rule requires the prevention, reduction, or mitigation of fugitive dust emissions from a project site. Rule 403 restricts visible fugitive dust to a project property line, restricts the net PM_{10} emissions to less than 50 µg/m^3 and restricts the tracking out of bulk materials onto public roads. Additionally, Rule 403 requires an applicant to utilize one or more of the best available control measures (identified in the tables within the rule). Control measures may include adding freeboard to haul vehicles, covering loose material on haul vehicles, watering, using chemical stabilizers, and/or ceasing all activities. Finally, Rule 403 requires that a contingency plan be prepared if so determined by the USEPA. In addition, SCAQMD Rule 403(e), Additional Requirements for Large Operations, includes requirements to provide Large Operation Notification Form 403 N, appropriate signage, additional dust control measures, and employment of a dust control supervisor that has successfully completed the Dust Control training class in the South Coast Air Basin.

- **Regulation XI - Source Specific Standards:** Regulation XI sets emissions standards for different sources.

  - **Rule 1113 - Architectural Coatings:** This rule limits the amount of VOCs from architectural coatings and solvents, which lowers the emissions of odorous compounds.

The SCAQMD is responsible for demonstrating regional compliance with ambient air quality standards but has limited indirect involvement in reducing emissions from fugitive, mobile, and natural sources. To that end, the SCAQMD works cooperatively with the CARB, the Southern California Association of Governments (SCAG), county transportation commissions, local governments, and other federal and State government agencies. It has responded to this requirement by preparing a series of Air Quality Management Plans (AQMPs) to meet CAAQS and NAAQS. SCAQMD and the SCAG are responsible for formulating and implementing the AQMP for the Basin. The main purpose of an AQMP is to bring the area into compliance with federal and State air quality standards. Every 3 years, SCAQMD prepares a new AQMP, updating the previous plan and 20-year horizon.[32]

SCAQMD approved the 2016 AQMP on March 3, 2017, and submitted the plan to CARB on March 10, 2017. Key elements of the 2016 AQMP include the following:

- Calculating and taking credit for co-benefits from other planning efforts (e.g., climate, energy, and transportation)

- A strategy with fair-share emission reductions at the federal, State, and local levels

- Investment in strategies and technologies meeting multiple air quality objectives

- Seeking new partnerships and significant funding for incentives to accelerate deployment of zero-emission and near-zero emission technologies

[32] SCAQMD. 2016. *Final 2016 Air Quality Management Plan*. March.

- Enhanced socioeconomic assessment, including an expanded environmental justice analysis
- Attainment of the 24-hour $PM_{2.5}$ standard in 2019 with no additional measures
- Attainment of the annual $PM_{2.5}$ standard by 2025 with implementation of a portion of the O_3 strategy
- Attainment of the 1-hour O_3 standard by 2022 with no reliance on "black box" future technology (CAA Section 182(e)(5) measures)

The SCAQMD is currently preparing the 2022 AQMP, which will address the requirements for meeting the 2015 O_3 standard. A Control Measures Workshop was held on November 10, 2021, to provide an overview of the control measures and strategies that are being developed/considered for the 2022 AQMP. The control measures include updated 2016 AQMP control measures and new control measures related to area, mobile, and stationary sources.

Southern California Association of Governments

SCAG is a council of governments for Los Angeles, Orange, Riverside, San Bernardino, Imperial, and Ventura Counties. It is a regional planning agency and serves as a forum for regional issues relating to transportation, the economy and community development, and the environment. SCAG is the federally designated Metropolitan Planning Organization (MPO) for the majority of the southern California region and is the largest MPO in the nation. With regard to air quality planning, SCAG prepares the Regional Transportation Plan (RTP) and Regional Transportation Improvement Program (RTIP), which address regional development and growth forecasts and form the basis for the land use and transportation control portions of the AQMP and are utilized in the preparation of the air quality forecasts and consistency analysis included in the AQMP. The RTP, RTIP, and AQMP are based on projections originating within local jurisdictions.

Although SCAG is not an air quality management agency, it is responsible for developing transportation, land use, and energy conservation measures that affect air quality. SCAG's Regional Comprehensive Plan (RCP) provides growth forecasts that are used in the development of air quality-related land use and transportation control strategies by the SCAQMD. The RCP is a framework for decision-making for local governments, assisting them in meeting federal and State mandates for growth management, mobility, and environmental standards, while maintaining consistency with regional goals regarding growth and changes. Policies within the RCP include consideration of air quality, land use, transportation, and economic relationships by all levels of government.

SCAG adopted the 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) (Connect SoCal) on September 3, 2020. Connect SoCal is a long-range visioning plan that balances future mobility and housing needs with economic, environmental, and public health goals. Connect SoCal is an important planning document for the region, allowing project sponsors to qualify for federal funding and takes into account operations and maintenance costs, to ensure reliability, longevity, and cost effectiveness. The forecasted development pattern, when integrated with the financially constrained transportation investments identified in Connect SoCal, would reach

the regional target of reducing GHG emissions from autos and light-duty trucks by 19 percent by 2035 (compared to 2005 levels).

Local Regulations

City of Redlands General Plan

Air quality is addressed in the Healthy Community Element of the City of Redlands General Plan.[33] The Healthy Community Element includes policies and implementing actions that aim to protect air quality within the City, promote a diverse and efficient transportation system that generates the minimum amount of pollutants, reduce vehicle miles traveled, cooperate to expand mass transit, and protect sensitive receptors from exposure to hazardous air pollutants. The following policies from the General Plan would be applicable to the proposed project:

- Provide, whenever possible, incentives for carpooling, flex time, shortened work weeks, telecommuting, and other means of reducing vehicular miles traveled.
- Ensure that construction and grading projects minimize short-term impacts to air quality:
    - Require grading projects to provide a stormwater pollution prevention plan (SWPPP) in compliance with City requirements, which include standards for best management practices (BMPs) that control pollutants from dust generated by construction activities and those related to vehicle and equipment cleaning, fueling, and maintenance;
    - Require grading projects to undertake measures to minimize mono-nitrogen oxides (NO_X) emissions from vehicle and equipment operations; and
    - Monitor all construction to ensure that proper steps are implemented.
- Enforce regulations to prevent trucks from excessive idling in residential areas.

ENERGY REGULATORY SETTING

Federal and State agencies regulate energy use and consumption through various means and programs. On the federal level, the U.S. Department of Transportation (USDOT), the United States Department of Energy, and the USEPA are three federal agencies with substantial influence over energy policies and programs. Generally, federal agencies influence and regulate transportation energy consumption through establishment and enforcement of fuel economy standards for automobiles and light trucks, through funding of energy-related research and development projects, and through funding for transportation infrastructure improvements. On the State level, the California Public Utilities Commission (CPUC) and the CEC are two agencies with authority over different aspects of energy.

The CPUC regulates privately owned electric, natural gas, telecommunications, water, railroad, rail transit, and passenger transportation companies and serves the public interest by protecting

[33] Redlands, City of. 2017. *City of Redlands General Plan 2035 Healthy Community Element*. December. Website: 07_healthy_community_low.pdf (cityofredlands.org) (accessed November 2022).

consumers and ensuring the provision of safe, reliable utility service and infrastructure at reasonable rates, with a commitment to environmental enhancement and a healthy California economy.

The CEC is the State's primary energy policy and planning agency. The CEC forecasts future energy needs, promotes energy efficiency, supports energy research, develops renewable energy resources, and plans for/directs state response to energy emergencies. The applicable federal, State, regional, and local regulatory framework is discussed below.

Federal Regulations

Energy Policy Act of 2005

The Energy Policy Act of 2005 seeks to reduce reliance on non-renewable energy resources and provide incentives to reduce current demand on these resources. For example, under this Act, consumers and businesses can obtain federal tax credits for purchasing fuel-efficient appliances and products (including hybrid vehicles), building energy-efficient buildings, and improving the energy efficiency of commercial buildings. Additionally, tax credits are available for the installation of qualified fuel cells, stationary microturbine power plants, and solar power equipment.

Safer Affordable Fuel-Efficient Vehicles Rule

On March 21, 2020, the USEPA and NHTSA finalized the SAFE Vehicles Rule for Model Years 2021–2026 Passenger Cars and Light Trucks (SAFE Vehicles Rule). The SAFE Vehicles Rule amends certain existing corporate average fuel economy (CAFE) and tailpipe CO_2 emissions standards for passenger cars and light trucks and establishes new standards, all covering model years 2021 through 2026. More specifically, the NHTSA set new CAFE standards for model years 2022 through 2026 and amended its 2021 model year CAFE standards, and the USEPA amended its CO_2 emissions standards for model years 2021 and later.

The current administration withdrew portions of the SAFE Rule, concluding that the SAFE Rule overstepped the agency's legal authority and finalized updated CAFE Standards for model years 2024 through 2026. The final rule establishes standards that would require an industry-wide fleet average of approximately 49 mpg for passenger cars and light trucks in model year 2026, by increasing fuel efficiency by 8 percent annually for model years 2024 and 2025, and 10 percent annually for model years 2026. The agency projects the final standards will save consumers nearly $1,400 in total fuel expenses over the lifetimes of vehicles produced in these model years and avoid the consumption of about 234 billion gallons of gas between model years 2030 to 2050. The NHTSA also projects that the standards will cut greenhouse gases from the atmosphere, reduce air pollution, and reduce the country's dependence on oil.

State Regulations

Assembly Bill 1575, Warren-Alquist Act

In 1975, largely in response to the oil crisis of the 1970s, the State Legislature adopted AB 1575 (also known as the Warren-Alquist Act), which created the CEC. The statutory mission of the CEC is to forecast future energy needs; license power plants of 50 megawatts (MW) or larger; develop energy

technologies and renewable energy resources; plan for and direct State responses to energy emergencies; and, perhaps most importantly, promote energy efficiency through the adoption and enforcement of appliance and building energy efficiency standards. AB 1575 also amended Public Resources Code (PRC) Section 21100(b)(3) and *State CEQA Guidelines* Section 15126.4 to require Environmental Impact Reports (EIRs) to include, where relevant, mitigation measures proposed to minimize the wasteful, inefficient, and unnecessary consumption of energy caused by a project. Thereafter, the State Resources Agency created Appendix F to the *State CEQA Guidelines*. Appendix F assists EIR preparers in determining whether a project will result in the inefficient, wasteful, and unnecessary consumption of energy. Appendix F of the *State CEQA Guidelines* also states that the goal of conserving energy implies the wise and efficient use of energy and the means of achieving this goal, including (1) decreasing overall per capita energy consumption; (2) decreasing reliance on fossil fuels such as coal, natural gas, and oil; and (3) increasing reliance on renewable energy sources.

Senate Bill 1389, Energy: Planning and Forecasting

In 2002, the State Legislature passed Senate Bill (SB) 1389, which required the CEC to develop an integrated energy plan every 2 years for electricity, natural gas, and transportation fuels for the California Energy Policy Report. The plan calls for the State to assist in the transformation of the transportation system to improve air quality, reduce congestion, and increase the efficient use of fuel supplies with the least environmental and energy costs. To further this policy, the plan identifies a number of strategies, including assistance to public agencies and fleet operators in implementing incentive programs for zero emission vehicles (ZEVs) and their infrastructure needs, and encouragement of urban designs that reduce vehicle miles traveled (VMT) and accommodate pedestrian and bicycle access.

In compliance with the requirements of SB 1389, the CEC adopts an Integrated Energy Policy Report every 2 years and an update every other year. The most recently adopted report includes the *2021 Integrated Energy Policy Report*[34] and the *2022 Integrated Energy Policy Report Update.*[35] The *Integrated Energy Policy Report* covers a broad range of topics, including decarbonizing buildings, integrating renewables, energy efficiency, energy equity, integrating renewable energy, updates on Southern California electricity reliability, climate adaptation activities for the energy sector, natural gas assessment, transportation energy demand forecast, and the California Energy Demand Forecast. The *Integrated Energy Policy Report* provides the results of the CEC's assessments of a variety of energy issues facing California. Many of these issues will require action if the State is to meet its climate, energy, air quality, and other environmental goals while maintaining energy reliability and controlling costs.

Renewable Portfolio Standard

SB 1078 established the California Renewable Portfolio Standards program in 2002. SB 1078 initially required that 20 percent of electricity retail sales be served by renewable resources by 2017;

[34] CEC. 2021. *2021 Integrated Energy Policy Report*. California Energy Commission. Docket Number: 21-IEPR-01.

[35] CEC. 2022. *2020 Integrated Energy Policy Report Update*. California Energy Commission. Docket Number: 22-IEPR-01.

however, this standard has become more stringent over time. In 2006, SB 107 accelerated the standard by requiring that the 20 percent mandate be met by 2010. In April 2011, SB 2 required that 33 percent of electricity retail sales be served by renewable resources by 2020. In 2015, SB 350 established tiered increases to the Renewable Portfolio Standards of 40 percent by 2024, 45 percent by 2027, and 50 percent by 2030. In 2018, SB 100 increased the requirement to 60 percent by 2030 and required that all the State's electricity come from carbon-free resources by 2045. SB 100 took effect on January 1, 2019.[36]

Title 24, California Building Code

Energy consumption by new buildings in California is regulated by the Building Energy Efficiency Standards, embodied in Title 24 of the California Code of Regulations (CCR), known as the California Building Code (CBC). The CEC first adopted the Building Energy Efficiency Standards for Residential and Non-residential Buildings in 1978 in response to a legislative mandate to reduce energy consumption in the State. The CBC is updated every 3 years, and the current 2019 CBC went into effect on January 1, 2020. The efficiency standards apply to both new construction and rehabilitation of both residential and non-residential buildings, and regulate energy consumed for heating, cooling, ventilation, water heating, and lighting. The building efficiency standards are enforced through the local building permit process. Local government agencies may adopt and enforce energy standards for new buildings, provided these standards meet or exceed those provided in CCR Title 24.

California Green Building Standards Code (CALGreen Code)

In 2010, the California Building Standards Commission (CBSC) adopted Part 11 of the Title 24 Building Energy Efficiency Standards, referred to as the California Green Building Standards Code (CALGreen Code). The CALGreen Code took effect on January 1, 2011. The CALGreen Code is updated on a regular basis, with the most recent update consisting of the 2019 CALGreen Code standards that became effective January 1, 2020. The next set of standards will be adopted in 2022 and apply to projects seeking building permits on or after January 1, 2023. The CALGreen Code established mandatory measures for residential and non-residential building construction and encouraged sustainable construction practices in the following five categories: (1) planning and design, (2) energy efficiency, (3) water efficiency and conservation, (4) material conservation and resource efficiency, and (5) indoor environmental quality. Although the CALGreen Code was adopted as part of the State's efforts to reduce GHG emissions, the CALGreen Code standards have co-benefits of reducing energy consumption from residential and non-residential buildings subject to the standard.

California Energy Efficiency Strategic Plan.

On September 18, 2008, the CPUC adopted California's first Long-Term Energy Efficiency Strategic Plan, presenting a roadmap for energy efficiency in California. The Strategic Plan was subsequently updated in January 2011 to include a lighting chapter. This comprehensive plan for 2009-2020 is the State's first integrated framework of goals and strategies for saving energy, covering government,

[36] California Public Utilities Commission (CPUC). 2019. Renewables Portfolio Standard Program. Website: cpuc.ca.gov/rps (accessed November 2022).

utility, and private sector actions. The Plan articulates a long-term vision and goals for each economic sector and identifies specific near-term, mid-term, and long-term strategies to assist in achieving those goals. The Plan also reiterates the following four specific programmatic goals known as the "Big Bold Energy Efficiency Strategies" that were established by the CPUC in Decisions D.07-10-032 and D.07-12-051:

- All new residential construction will be zero net energy (ZNE) by 2020;
- All new commercial construction will be ZNE by 2030;
- Heating, Ventilation and Air Conditioning (HVAC) will be transformed to ensure that its energy performance is optimal for California's climate; and
- All eligible low-income customers will be given the opportunity to participate in the low-income energy efficient program by 2020.

Regional Regulations

There are no regional regulations that apply to the proposed project.

Local Regulations

City of Redlands General Plan

Energy is addressed in the Sustainable Community Element in the City of Redlands General Plan.[37] The Sustainable Community Element includes goals, policies, and implementing actions that serve as an environmental steward and ensure that residents enjoy clean air and water, make efficient use of energy, water, and land resources, and grow in a manner in which increased population does not negatively impact resources. The following goals and policies from the General Plan would be applicable to the proposed project:

- Support San Bernardino County and San Bernardino Associated Governments (SANBAG) in implementation of their energy related policies;
- Encourage the use of construction, roofing materials, and paving surfaces with solar reflectance and thermal emittance values per the California Green Building Code (Title 24, Part 11 of the California Code of Regulations) to minimize heat island effects;
- Integrate trees and shade into the built environment to mitigate issues such as stormwater runoff and the urban heat island effect; and
- Support energy resiliency through a diversified system of energy sources including zero and near-zero emission technologies.

GLOBAL CLIMATE CHANGE REGULATORY SETTING

This section describes regulations related to Global Climate Change at the federal, State, and local level.

Federal Regulations

The United States has historically had a voluntary approach to reducing GHG emissions. However, on April 2, 2007, the United States Supreme Court ruled that the USEPA has the authority to regulate CO_2 emissions under the CAA. While there currently are no adopted federal regulations for the control or reduction of GHG emissions, the USEPA commenced several actions in 2009 to implement a regulatory approach to global climate change.

This includes the 2009 USEPA final rule for mandatory reporting of GHGs from large GHG emission sources in the United States. Additionally, the USEPA Administrator signed an endangerment finding action in 2009 under the Clean Air Act, finding that six GHGs (CO_2, CH_4, N_2O, HFCs, PFCs, SF_6) constitute a threat to public health and welfare, and that the combined emissions from motor vehicles cause and contribute to global climate change, leading to national GHG emission standards.

In October 2012, the USEPA and the NHTSA, on behalf of the U.S. Department of Transportation, issued final rules to further reduce GHG emissions and improve the CAFE standards for light-duty vehicles for model years 2017 and beyond (77 *Federal Register* 62624). The NHTSA's CAFE standards have been enacted under the Energy Policy and Conservation Act since 1978. This national program requires automobile manufacturers to build a single light-duty national fleet that meets all requirements under both federal programs and the standards of California and other states. This program would increase fuel economy to the equivalent of 54.5 miles per gallon, limiting vehicle emissions to 163 grams of CO_2 per mile for the fleet of cars and light-duty trucks by model year 2025 (77 *Federal Register* 62630).

On March 21, 2020, the USEPA and NHTSA finalized the SAFE Vehicles Rule. The SAFE Vehicles Rule amends certain existing CAFE and tailpipe CO_2 emissions standards for passenger cars and light trucks and establish new standards, all covering model years 2021 through 2026. More specifically, NHTSA set new CAFE standards for model years 2022 through 2026 and amended its 2021 model year CAFE standards, and the USEPA amended its CO_2 emissions standards for model years 2021 and later. On May 12, 2021, the NHTSA published a notice of proposed rulemaking in the *Federal Register*, proposing to repeal key portions of the SAFE Vehicles Rule that would have reduced CAFE standards. The final rule repealing portions of the SAFE Vehicles Rule was published on December 29, 2021. The repeal will allow California to set its own GHG standards if it chooses, even if the emissions standards conflict with CAFE standards enacted by the USDOT.

State Regulations

The CARB is the lead agency for implementing climate change regulations in the State. Since its formation, the CARB has worked with the public, the business sector, and local governments to find solutions to California's air pollution problems. Key efforts by the State are described below.

Assembly Bill 1493 (2002)

In a response to the transportation sector's significant contribution to California's CO_2 emissions, AB 1493 was enacted on July 22, 2002. AB 1493 requires the CARB to set GHG emission standards for passenger vehicles and light duty trucks (and other vehicles whose primary use is noncommercial personal transportation in the State) manufactured in 2009 and all subsequent model years. These standards (starting in model years 2009 to 2016) were approved by the CARB in 2004, but the needed waiver of CCAA Preemption was not granted by the USEPA until June 30, 2009. The CARB responded by amending its original regulation, now referred to as Low Emission Vehicle III, to take effect for model years starting in 2017 to 2025. The Trump administration revoked California's waiver in 2019; however, the Biden administration restored California's waiver in 2021.

Executive Order S-3-05 (2005)

Governor Arnold Schwarzenegger signed Executive Order (EO) S-3-05 on June 1, 2005, which proclaimed that California is vulnerable to the impacts of climate change. To combat those concerns, the executive order established California's GHG emissions reduction targets, which established the following goals:

- GHG emissions should be reduced to 2000 levels by 2010;
- GHG emissions should be reduced to 1990 levels by 2020; and
- GHG emissions should be reduced to 80 percent below 1990 levels by 2050.

The Secretary of the California Environmental Protection Agency (CalEPA) is required to coordinate efforts of various State agencies in order to collectively and efficiently reduce GHGs. A biannual progress report must be submitted to the Governor and State Legislature disclosing the progress made toward GHG emission reduction targets. In addition, another biannual report must be submitted illustrating the impacts of global warming on California's water supply, public health, agriculture, the coastline, and forestry, and report possible mitigation and adaptation plans to address these impacts.

The Secretary of CalEPA leads this CAT made up of representatives from State agencies as well as numerous other boards and departments. The CAT members work to coordinate statewide efforts to implement global warming emission reduction programs and the State's Climate Adaptation Strategy. The CAT is also responsible for reporting on the progress made toward meeting the statewide GHG targets that were established in the executive order and further defined under AB 32, the "Global Warming Solutions Act of 2006." The first CAT Report to the Governor and the Legislature was released in March 2006, which it laid out 46 specific emission reduction strategies for reducing GHG emissions and reaching the targets established in the Executive Order. The most recent report was released in December 2020.

Assembly Bill 32 (2006), California Global Warming Solutions Act

California's major initiative for reducing GHG emissions is AB 32, passed by the State legislature on August 31, 2006. This effort aims at reducing GHG emissions to 1990 levels by 2020. The CARB has established the level of GHG emissions in 1990 at 427 million metric tons (MMT) of CO_2e. The emissions target of 427 MMT requires the reduction of 169 MMT from the State's projected

business-as-usual 2020 emissions of 596 MMT. AB 32 requires the CARB to prepare a Scoping Plan that outlines the main State strategies for meeting the 2020 deadline and to reduce GHGs that contribute to global climate change. The Scoping Plan was approved by the CARB on December 11, 2008, and contains the main strategies California will implement to achieve the reduction of approximately 169 MMT CO_2e, or approximately 30 percent, from the State's projected 2020 emissions level of 596 MMT CO_2e under a business-as-usual scenario (this is a reduction of 42 MMT CO_2e, or almost 10 percent from 2002–2004 average emissions). The Scoping Plan also includes CARB-recommended GHG reductions for each emissions sector of the State's GHG inventory. The Scoping Plan calls for the largest reductions in GHG emissions to be achieved by implementing the following measures and standards:

- Improved emissions standards for light-duty vehicles (estimated reductions of 31.7 MMT CO_2e);
- The Low-Carbon Fuel Standard (15.0 MMT CO_2e);
- Energy efficiency measures in buildings and appliances and the widespread development of combined heat and power systems (26.3 MMT CO_2e); and
- A renewable portfolio standard for electricity production (21.3 MMT CO_2e).

The Scoping Plan identifies 18 emission reduction measures that address cap-and-trade programs, vehicle gas standards, energy efficiency, low carbon fuel standards, renewable energy, regional transportation-related GHG targets, vehicle efficiency measures, goods movement, solar roof programs, industrial emissions, high speed rail, green building strategies, recycling, sustainable forests, water, and air. The measures would result in a total reduction of 174 MMT CO_2e by 2020.

On August 24, 2011, the CARB unanimously approved both the new supplemental assessment and reapproved its Scoping Plan, which provides the overall roadmap and rule measures to carry out AB 32. The CARB also approved a more robust CEQA equivalent document supporting the supplemental analysis of the cap-and-trade program. The cap-and-trade took effect on January 1, 2012, with an enforceable compliance obligation that began January 1, 2013.

CARB has not yet determined what amount of GHG reductions it recommends from local government operations and local land use decisions; however, the Scoping Plan states that land use planning and urban growth decisions will play an important role in the State's GHG reductions because local governments have primary authority to plan, zone, approve, and permit how land is developed to accommodate population growth and the changing needs of their jurisdictions (meanwhile, CARB is also developing an additional protocol for community emissions). CARB further acknowledges that decisions on how land is used will have large impacts on the GHG emissions that will result from the transportation, housing, industry, forestry, water, agriculture, electricity, and natural gas emission sectors. The Scoping Plan states that the ultimate GHG reduction assignment to local government operations is to be determined. With regard to land use planning, the Scoping Plan expects an approximately 5.0 MMT CO_2e reduction due to implementation of SB 375.

In addition to reducing GHG emissions to 1990 levels by 2020, AB 32 directed the CARB and the CAT to identify a list of "discrete early action GHG reduction measures" that could be adopted and made

enforceable by January 1, 2010. On January 18, 2007, Governor Schwarzenegger signed EO S-1-07, further solidifying California's dedication to reducing GHGs by setting a new Low Carbon Fuel Standard (LCFS). This executive order sets a target to reduce the carbon intensity of California transportation fuels by at least 10 percent by 2020 and directs the CARB to consider the LCFS as a discrete early action measure. In 2011, U.S. District Court Judge Lawrence O'Neil issued an injunction preventing implementation of the LCFS, ruling that it is unconstitutional. In 2012, the Ninth Circuit Court of Appeal stayed the District Court's injunction, allowing implementation of the LCFS. The Ninth Circuit decided to uphold the LCFS.

In June 2007, the CARB approved a list of 37 early action measures, including three discrete early action measures (LCFS, Restrictions on GWP Refrigerants, and Landfill CH_4 Capture).[38] Discrete early action measures are measures that were required to be adopted as regulations and made effective no later than January 1, 2010, the date established by Health and Safety Code Section 38560.5. The CARB adopted additional early action measures in October 2007 that tripled the number of discrete early action measures. These measures relate to truck efficiency, port electrification, reduction of PFCs from the semiconductor industry, reduction of propellants in consumer products, proper tire inflation, and SF_6 reductions from the non-electricity sector. The combination of early action measures is estimated to reduce statewide GHG emissions by nearly 16 MMT.[39]

The CARB approved the First Update to the Climate Change Scoping Plan on May 22, 2014. The First Update identifies opportunities to leverage existing and new funds to further drive GHG emission reductions through strategic planning and targeted low carbon investments. The First Update defines CARB climate change priorities until 2020, and also sets the groundwork to reach long-term goals set forth in EOs S-3-05 and B-16-2012. The Update highlights California's progress toward meeting the "near-term" 2020 GHG emission reduction goals as defined in the initial Scoping Plan. It also evaluates how to align the State's "longer-term" GHG reduction strategies with other State policy priorities for water, waste, natural resources, clean energy, transportation, and land use. CARB released a second update to the Scoping Plan, the 2017 Scoping Plan,[40] to reflect the 2030 target set by EO B-30-15 and codified by SB 32.

The 2022 Scoping Plan[41] was approved in December 2022 and assesses progress toward achieving the SB 32 2030 target and laying out a path to achieve carbon neutrality no later than 2045. The 2022 Scoping Plan focuses on outcomes needed to achieve carbon neutrality by assessing paths for clean technology, energy deployment, natural and working lands, and others, and is designed to meet the State's long-term climate objectives and support a range of economic, environmental, energy security, environmental justice, and public health priorities.

Senate Bill 97 (2007)

SB 97, signed by the Governor in August 2007 (Chapter 185, Statutes of 2007; PRC Sections 21083.05 and 21097), acknowledges climate change is a prominent environmental issue that requires analysis under CEQA. This bill directed the Governor's Office of Planning and Research (OPR) to prepare, develop, and transmit to the California Resources Agency guidelines for mitigating GHG emissions or the effects of GHG emissions, as required by CEQA.

The California Natural Resources Agency adopted the amendments to the *State CEQA Guidelines* in November 2018, which went into effect in December 2018. The amendments do not identify a threshold of significance for GHG emissions, nor do they prescribe assessment methodologies or specific mitigation measures. The amendments encourage lead agencies to consider many factors in performing a CEQA analysis, but preserve the discretion granted by CEQA to lead agencies in making their own determinations based on substantial evidence. The amendments also encourage public agencies to make use of programmatic mitigation plans and programs when they perform individual project analyses.

Senate Bill 375 (2008)

SB 375, the Sustainable Communities and Climate Protection Act, which establishes mechanisms for the development of regional targets for reducing passenger vehicle GHG emissions, was adopted by the State on September 30, 2008. On September 23, 2010, the CARB adopted the vehicular GHG emissions reduction targets that had been developed in consultation with the Metropolitan Planning Organization (MPO); the targets require a 6 to 15 percent reduction by 2020 and between 13 to 19 percent reduction by 2035 for each MPO. SB 375 recognizes the importance of achieving significant GHG reductions by working with cities and counties to change land use patterns and improve transportation alternatives. Through the SB 375 process, MPOs such as the Fresno Council of Governments will work with local jurisdictions in the development of Sustainable Communities Strategy (SCS) designed to integrate development patterns and the transportation network in a way that reduces GHG emissions while meeting housing needs and other regional planning objectives. Pursuant to SB 375, the Los Angeles/Southern California reduction targets for per capita vehicular emissions were 8 percent by 2020 and are 19 percent by 2035 as shown in Table E.

Table E: Senate Bill 375 Regional Greenhouse Gas Emissions Reduction Targets

Metropolitan Planning Organization	By 2020 (percent)	By 2035 (percent)
San Francisco Bay Area	10	19
San Diego	15	19
Sacramento	7	19
Central Valley/San Joaquin	6-13	13-16
Los Angeles/Southern California	8	19

Source: California Air Resources Board (2018).

Executive Order B-30-15 (2015)

Governor Jerry Brown signed EO B-30-15 on April 29, 2015, which added the immediate target of:

- GHG emissions should be reduced to 40 percent below 1990 levels by 2030.

All State agencies with jurisdiction over sources of GHG emissions were directed to implement measures to achieve reductions of GHG emissions to meet the 2030 and 2050 targets. CARB was directed to update the AB 32 Scoping Plan to reflect the 2030 target, and therefore, is moving forward with the update process. The mid-term target is critical to help frame the suite of policy measures, regulations, planning efforts, and investments in clean technologies and infrastructure needed to continue reducing emissions.

Senate Bill 350 (2015) Clean Energy and Pollution Reduction Act

SB 350, signed by Governor Jerry Brown on October 7, 2015, updates and enhances AB 32 by introducing the following set of objectives in clean energy, clean air, and pollution reduction for 2030:

- Raise California's renewable portfolio standard from 33 percent to 50 percent; and
- Increasing energy efficiency in buildings by 50 percent by the year 2030.

The 50 percent renewable energy standard will be implemented by the CPUC for the private utilities and by the CEC for municipal utilities. Each utility must submit a procurement plan showing it will purchase clean energy to displace other non-renewable resources. The 50 percent increase in energy efficiency in buildings must be achieved through the use of existing energy efficiency retrofit funding and regulatory tools already available to state energy agencies under existing law. The addition made by this legislation requires State energy agencies to plan for and implement those programs in a manner that achieves the energy efficiency target.

Senate Bill 32, California Global Warming Solutions Act of 2016, and Assembly Bill 197

In summer 2016 the Legislature passed, and the Governor signed, SB 32, and AB 197. SB 32 affirms the importance of addressing climate change by codifying into statute the GHG emissions reductions target of at least 40 percent below 1990 levels by 2030 contained in Governor Brown's April 2015 EO B-30-15. SB 32 builds on AB 32 and keeps us on the path toward achieving the State's 2050 objective of reducing emissions to 80 percent below 1990 levels, consistent with an IPCC analysis of the emissions trajectory that would stabilize atmospheric GHG concentrations at 450 parts per million CO_2e and reduce the likelihood of catastrophic impacts from climate change.

The companion bill to SB 32, AB 197, provides additional direction to CARB related to the adoption of strategies to reduce GHG emissions. Additional direction in AB 197 meant to provide easier public access to air emissions data that are collected by CARB was posted in December 2016.

Senate Bill 100

On September 10, 2018, Governor Brown signed SB 100, which raises California's Renewables Portfolio Standard (RPS) requirements to 60 percent by 2030, with interim targets, and 100 percent by 2045. The bill also establishes a state policy that eligible renewable energy resources and zero-carbon resources supply 100 percent of all retail sales of electricity to California end-use customers and 100 percent of electricity procured to serve all State agencies by December 31, 2045. Under the

bill, the State cannot increase carbon emissions elsewhere in the western grid or allow resource shuffling to achieve the 100 percent carbon-free electricity target.

Executive Order B-55-18

EO B-55-18, signed September 10, 2018, sets a goal "to achieve carbon neutrality as soon as possible, and no later than 2045, and achieve and maintain net negative emissions thereafter." EO B-55-18 directs CARB to work with relevant state agencies to ensure future Scoping Plans identify and recommend measures to achieve the carbon neutrality goal. The goal of carbon neutrality by 2045 is in addition to other statewide goals, meaning not only should emissions be reduced to 80 percent below 1990 levels by 2050, but that, by no later than 2045, the remaining emissions be offset by equivalent net removals of CO_2e from the atmosphere, including through sequestration in forests, soils, and other natural landscapes.

Title 24, Part 11, Building Standards Code and CALGreen Code

In November 2008, the California Building Standards Commission established the California Green Building Standards Code (CALGreen Code), which sets performance standards for residential and non-residential development to reduce environmental impacts and encourage sustainable construction practices. The CALGreen Code addresses energy efficiency, water conservation, material conservation, planning and design, and overall environmental quality. The CALGreen Code is updated every 3 years and was most recently updated in 2019 to include new mandatory measures for residential as well as non-residential uses; the new measures took effect on January 1, 2020. The next set of standards will be adopted in 2022 and apply to projects seeking building permits on or after January 1, 2023.

California Building Efficiency Standards (Title 24, Part 6)

The California Building Standards Code, or Title 24 of the California Code of Regulations (CCR) contains the regulations that govern the construction of buildings in California. Within the Building Standards Code, two parts pertain to the incorporation of both energy efficient and green building elements into land use development. Part 6 is California's Energy Efficiency Standards for Residential and Non-Residential Buildings. These standards were first adopted in 1978 in response to a legislative mandate to reduce California's energy consumption and are updated on an approximately 3-year cycle to allow consideration and possible incorporation of new energy efficient technologies and methods. All buildings for which an application for a building permit is submitted on or after January 1, 2020, must follow the 2019 standards. The next set of standards will be adopted in 2022 and apply to projects seeking building permits on or after January 1, 2023. Energy efficient buildings require less electricity; therefore, increased energy efficiency reduces fossil fuel consumption and decreases GHG emissions.

Cap and Trade

The development of a cap-and-trade program was included as a key reduction measure of the CARB AB 32 Climate Change Scoping Plan. The cap-and-trade program will help put California on the path to meet its goal of reducing GHG emissions to 1990 levels by 2020 and ultimately achieving an 80 percent reduction from 1990 levels by 2050. The cap-and-trade emissions trading program developed by the CARB took effect on January 1, 2012, with enforceable compliance obligations

beginning January 1, 2013. The cap-and-trade program aims to regulate GHG emissions from the largest producers in the State by setting a statewide firm limit, or cap, on allowable annual GHG emissions. The cap was set in 2013 at approximately 2 percent below the emissions forecast for 2020. In 2014, the cap declined approximately 2 percent. Beginning in 2015 and continuing through 2020, the cap has been declining approximately 3 percent annually. The CARB administered the first auction on November 14, 2012, with many of the qualified bidders representing corporations or organizations that produce large amounts of GHG emissions, including energy companies, agriculture and food industries, steel mills, cement companies, and universities. On January 1, 2015, compliance obligation began for distributors of transportation fuels, natural gas, and other fuels. The cap-and-trade program was initially slated to sunset in 2020 but the passage of SB 398 in 2017 extended the program through 2030.

Executive Order N-79-20

EO N-79-20, which was signed by the Governor on September 23, 2020, sets the following goals for the State: 100 percent of in-state sales of new passenger cars and trucks shall be zero-emission by 2035; 100 percent of medium- and heavy-duty vehicles in the State shall be zero-emission by 2045 for all operations where feasible and by 2035 for drayage trucks; and 100 percent of off-road vehicles and equipment in the State shall be zero-emission by 2035, where feasible.

California Integrated Waste Management Act

To minimize the amount of solid waste that must be disposed of in landfills, the State Legislature passed the California Integrated Waste Management Act of 1989 (AB 939), effective January 1990. According to AB 939, all cities and counties were required to divert 25 percent of all solid waste from landfill facilities by January 1, 1995, and 50 percent by January 1, 2000. Through other statutes and regulations, this 50 percent diversion rate also applies to State agencies. In order of priority, waste reduction efforts must promote source reduction, recycling and composting, and environmentally safe transformation and land disposal. In 2011, AB 341 modified the California Integrated Waste Management Act and directed the California Department of Resources Recycling and Recovery (CalRecycle) to develop and adopt regulations for mandatory commercial recycling. The resulting 2012 Mandatory Commercial Recycling Regulation requires that on and after July 1, 2012, certain businesses that generate four cubic yards or more of commercial solid waste per week shall arrange recycling services. To comply with this requirement, businesses may either separate recyclables and self-haul them or subscribe to a recycling service that includes mixed waste processing. AB 341 also established a statewide recycling goal of 75 percent; the 50 percent disposal reduction mandate still applies for cities and counties under AB 939, the Integrated Waste Management Act. In April 2016, AB 1826 further modified the California Integrated Waste Management Act, requiring businesses that generate a specified amount of organic waste per week to arrange for recycling services for that organic waste in a specified manner. If CalRecycle determines that statewide disposal of organic waste has not been reduced by 50 percent below 2014 levels by 2020, businesses generating more than two cubic yards of organic waste per week would be subject to these waste collection requirements. CalRecycle plans to make this assessment in the fall of 2020. Diverting organic waste from landfills reduces emissions of CH_4. This is equivalent to reducing anaerobic decomposition of organic waste that would have otherwise occurred in landfills where organic waste is often buried with other inorganic waste.

Low Carbon Fuel Standard

In January 2007, EO S-01-07 established an LCFS. This executive order calls for a statewide goal to be established to reduce the carbon intensity of California's transportation fuels by at least 10 percent by 2020, and that an LCFS for transportation fuels be established for California. The LCFS applies to all refiners, blenders, producers, or importers ("Providers") of transportation fuels in California, including fuels used by off-road construction equipment. In June 2007, CARB adopted the LCFS under AB 32 pursuant to Health and Safety Code Section 38560.5, and, in April 2009, CARB approved the new rules and carbon intensity reference values with new regulatory requirements taking effect in January 2011. The standards require providers of transportation fuels to report on the mix of fuels they provide and demonstrate they meet the LCFS intensity standards annually. This is accomplished by ensuring that the number of "credits" earned by providing fuels with a lower carbon intensity than the established baseline (or obtained from another party) is equal to or greater than the "deficits" earned from selling higher intensity fuels. In response to certain court rulings, CARB re-adopted the LCFS regulation in September 2015, and the LCFS went into effect on January 1, 2016. In 2018, CARB approved amendments to the regulation to readjust carbon intensity benchmarks to meet California's 2030 GHG reductions targets under SB 32. These amendments include opportunities to promote zero emission vehicle (ZEV) adoption, carbon capture and sequestration, and advanced technologies for decarbonization of the transportation sector.

Advanced Clean Cars Program

In January 2012, CARB approved the Advanced Clean Cars program, which combines the control of GHG emissions and criteria air pollutants, as well as requirements for greater numbers of ZEVs, into a single package of regulatory standards for vehicle model years 2017 through 2025. The new regulations strengthen the GHG standard for 2017 models and beyond. This will be achieved through existing technologies, the use of stronger and lighter materials, and more efficient drivetrains and engines. The program's ZEVs regulation requires battery, fuel cell, and/or plug-in hybrid electric vehicles to account for up to 15 percent of California's new vehicle sales by 2025. The program also includes a clean fuels outlet regulation designed to support the commercialization of zero-emission hydrogen fuel cell vehicles planned by vehicle manufacturers by 2015 by requiring increased numbers of hydrogen fueling stations throughout the State. The number of stations will grow as vehicle manufacturers sell more fuel cell vehicles. By 2025, when the rules will be fully implemented, the statewide fleet of new cars and light trucks will emit 40 percent fewer GHGs and 75 percent fewer smog-forming emissions than 2012 model year vehicles.

Executive Order B-48-18

In January 2018, Governor Brown signed EO B-48-18 requiring all State entities to work with the private sector to have at least 5 million ZEVs on the road by 2030, as well as install 200 hydrogen fueling stations and 250,000 electric vehicle charging stations by 2025. It specifies that 10,000 of the electric vehicle charging stations should be direct current fast chargers. This order also requires all State entities to continue to partner with local and regional governments to streamline the installation of ZEV infrastructure. The Governor's Office of Business and Economic Development is required to publish a Plug-in Charging Station Design Guidebook and update the 2015 Hydrogen Station Permitting Guidebook to aid in these efforts. All State entities are required to participate in updating the 2016 Zero-Emissions Vehicle Action Plan to help expand private investment in ZEV

infrastructure with a focus on serving low-income and disadvantaged communities. Additionally, all State entities are to support and recommend policies and actions to expand ZEV infrastructure at residential land uses, through the LCFS Program, and recommend how to ensure affordability and accessibility for all drivers.

Regional Regulations

South Coast Air Quality Management District

In 2008, the SCAQMD formed a Working Group to identify GHG emissions thresholds for land use projects that could be used by local lead agencies in the Basin. The Working Group developed several different options that are contained in the SCAQMD 2008 draft guidance document titled Interim CEQA GHG Significance Threshold for Stationary Sources, Rules and Plans[42] that could be applied by lead agencies. On September 28, 2010, SCAQMD Working Group Meeting No. 15 provided further guidance, including a tiered approach for evaluating GHG emissions for development projects where the SCAQMD is not the lead agency. The SCAQMD has not presented a finalized version of these thresholds to the governing board.

The SCAQMD identifies the emissions level for which a project would not be expected to substantially conflict with any State legislation adopted to reduce statewide GHG emissions. As such, the utilization of a service population represents the rates of emissions needed to achieve a fair share of the State's mandated emissions reductions. Overall, the SCAQMD identifies a GHG efficiency level that, when applied statewide or to a defined geographic area, would meet the year 2020 and post-2020 emissions targets as required by AB 32 and SB 32. If projects are able to achieve targeted rates of emissions per the service population, the State will be able to accommodate expected population growth and achieve economic development objectives, while also abiding by AB 32's emissions target and future post-2020 targets.

Southern California Association of Governments

On September 3, 2020, SCAG adopted Connect SoCal–The 2020–2045 Regional Transportation Plan/Sustainable Communities Strategy (2020–2045 RTP/SCS).[43] In general, the SCS outlines a development pattern for the region, which, when integrated with the transportation network and other transportation measures and policies, would reduce VMT from automobiles and light-duty trucks and thereby reduce GHG emissions from these sources. For the SCAG region, CARB has set GHG reduction targets at 8 percent below 2005 per capita emissions levels by 2020, and 19 percent below 2005 per capita emissions levels by 2035. The RTP/SCS lays out a strategy for the region to meet these targets. Overall, the SCS is meant to provide growth strategies that will achieve the regional GHG emissions reduction targets. Land use strategies to achieve the region's targets include planning for new growth around high-quality transit areas and livable corridors, and creating neighborhood mobility areas to integrate land use and transportation and plan for more active

42 SCAQMD. 2008. Interim CEQA GHG Significance Threshold for Stationary Sources, Rules and Plans.

lifestyles.[44] However, the SCS does not require that local General Plans, Specific Plans, or zoning be consistent with the SCS; SCAG is required to consider local land use controls when drafting the SCS.

Local Regulations

County of San Bernardino Regional Greenhouse Gas Reduction Plan

As a response to the 2006 AB 32 law, a project partnership led by SANBAG, the predecessor agency to the San Bernardino County Transportation Authority (SBCTA), has compiled an inventory of GHG emissions and developed reduction measures that was adopted by the 21 Partnership Cities of San Bernardino County. The regional GHG reduction plan will serve as the basis for cities in San Bernardino County to develop more detailed community level climate action plans.

The City of Redlands was a participant in the San Bernardino County Regional Greenhouse Gas Reduction Plan, which identifies the County's vision and goals on reducing GHG emissions in the different cities, local government facilities, and communities. In response to these initiatives, an informal project partnership, led by the San Bernardino Council of Governments (SBCOG), compiled a GHG emissions inventory and an evaluation of reduction measures that could be adopted by the 25 Partnership Cities of San Bernardino County. The Partnership has committed to undertake the following actions that will reduce GHG emissions associated with its regional (or countywide) activities:

- Prepare a baseline (2016) GHG emissions inventory for each of the 25 Partnership Jurisdictions in the County;
- Prepare a future year (2020, 2030, and 2045) GHG emissions forecasts for each of the jurisdictions;
- Develop general GHG reduction measures and jurisdiction-specific measures appropriate for each jurisdiction; and
- Develop consistent baseline in information for jurisdictions to use for their development of community climate action plans (CAPs) meeting jurisdiction-identified reduction goals.

City of Redlands Climate Action Plan

The City of Redlands Climate Action Plan (CAP)[45] is designed to reinforce the City's commitment to reducing greenhouse gas (GHG) emissions and demonstrate how the City will comply with State of California's GHG emission reduction standards. The CAP has been prepared concurrently with the updated Redlands General Plan 2035, which includes strategies to reduce GHG emissions such as transit oriented and mixed-use development, integrated transportation and land use planning, promotion of bicycle and pedestrian movements, and parking and transportation demand management. To further reduce emissions outlined in the General Plan, the CAP adds several measures in areas such as photovoltaic systems, energy efficiency retrofits, facility commissioning,

44 Ibid

efficient lighting standards, and increased zero-emission vehicle travel. The following proposed GHG emission reduction strategies from the CAP are applicable to the proposed project:

- Adopt a commercial energy conservation ordinance requiring all new nonresidential developments with more than 50 cars surface parked or on roofs of parking structures to use PV panels over at least half of the surface/roof-parked cars, or provide equivalent energy conservation/generation by other means.

- Replace 50 percent of incandescent or halogen light bulbs in City facilities with LED or similarly efficient lighting.

- Evaluate the feasibility of adopting a minimum natural lighting and ventilation standard, developed based on local conditions. Demonstrate natural lighting and ventilation features in future renovations or new construction.

- Adopt requirements for ZEV parking for new developments.

City of Redlands General Plan

GHGs are addressed in the Sustainable Community Element in the City of Redlands General Plan.[46] The Sustainable Community Element includes goals, policies, and implementing actions that serve as an environmental steward and ensure that residents enjoy clean air and water, make efficient use of energy, water, and land resources, and grow in a manner in which increased population does not negatively impact resources. The following goals and policies from the General Plan would be applicable to the proposed project:

- Continue implementation and enforcement of the California Building and Energy codes to promote energy efficient building design and construction.

- Adopt a construction and demolition waste recycling ordinance that requires, except in unusual circumstances, all construction, demolition and renovation projects that meet a certain size or dollar value to divert from landfills 100 percent of all cement concrete and asphalt concrete, and an average of at least 75 percent of all remaining non-hazardous debris.

- Prepare a Landscape Manual or enhance landscape standards in the Municipal Code to mitigate urban heat island effects through maximum tree canopy coverage and minimum asphalt and paving coverage – particularly for denser areas like Downtown, Transit Villages, shopping centers, and industrial and other areas with expansive surface parking. Consider the reflectance of stone and rock ground cover in heat generation.

SETTING

This section provides the current SCAQMD attainment status, climate and air quality, ambient air quality monitoring results, and GHG emissions inventory.

ATTAINMENT STATUS

The CARB is required to designate areas of the state as attainment, nonattainment, or unclassified for all State standards. An *attainment* designation for an area signifies that pollutant concentrations did not violate the standard for that pollutant in that area. A *nonattainment* designation indicates that a pollutant concentration violated the standard at least once, excluding those occasions when a violation was caused by an exceptional event, as defined in the criteria. An *unclassified* designation signifies that data do not support either an attainment or nonattainment status. The CCAA divides districts into moderate, serious, and severe air pollution categories, with increasingly stringent control requirements mandated for each category.

The USEPA designates areas for O_3, CO, and NO_2 as either does not meet the primary standards, or cannot be classified, or better than national standards. For SO_2, areas are designated as does not meet the primary standards, does not meet the secondary standards, cannot be classified, or better than national standards.

Table F provides a summary of the attainment status for the Basin with respect to NAAQS and CAAQS.

Table F: Attainment Status of Criteria Pollutants in the South Coast Air Basin

Pollutant	State	Federal
O_3 1 hour	Nonattainment	Extreme Nonattainment
O_3 8 hour	Nonattainment	Extreme Nonattainment
PM_{10}	Nonattainment	Attainment/Maintenance
$PM_{2.5}$	Nonattainment	Serious Nonattainment
CO	Attainment	Attainment/Maintenance
NO_2	Attainment	Attainment/Maintenance
SO_2	N/A	Attainment/Unclassified
Lead	Attainment	Attainment[1]
All others	Attainment/Unclassified	Attainment/Unclassified

[1] Except in Los Angeles County.
CO = carbon monoxide
N/A = not applicable
NO_2 = nitrogen dioxide
O_3 = ozone
PM_{10} = particulate matter less than 10 microns in size
$PM_{2.5}$ = particulate matter less than 2.5 microns in size
SO_2 = sulfur dioxide

EXISTING CLIMATE AND AIR QUALITY

Air quality in the planning area is not only affected by various emission sources (e.g., mobile and industry), but also by atmospheric conditions (e.g., wind speed, wind direction, temperature, and rainfall). The combination of topography, low mixing height, abundant sunshine, and emissions from the second-largest urban area in the United States gives the Basin some of the worst air pollution in the nation.

The annual average temperature varies little throughout the Basin, ranging from the low to middle 60s°F. With a more pronounced oceanic influence, coastal areas show less variability in annual minimum and maximum temperatures than inland areas. The climatological station closest to the site is located on Redlands, California.[47] The monthly average maximum temperature recorded at this station ranged from 64.8°F in January to 94.5°F in July, with an annual average maximum of 78.1°F. The monthly average minimum temperature recorded at this station ranged from 39.4°F in January to 60.7°F in August, with an annual average minimum of 49.2°F. These levels are representative of the project area.

The majority of annual rainfall in the Basin occurs between November and April. Summer rainfall is minimal and is generally limited to scattered thundershowers in coastal regions and slightly heavier showers in the eastern portion of the Basin and along the coastal side of the mountains. Average monthly rainfall at the Redlands station varied from 0.07 inches in July to 2.68 inches in January, with an annual total of 13.56 inches. Patterns in monthly and yearly rainfall totals are unpredictable due to fluctuations in the weather.

The Basin experiences a persistent temperature inversion (increasing temperature with increasing altitude) as a result of the Pacific high. This inversion limits the vertical dispersion of air contaminants, holding them relatively near the ground. As the sun warms the ground and the lower air layer, the temperature of the lower air layer approaches the temperature of the base of the inversion (upper) layer until the inversion layer finally breaks, allowing vertical mixing with the lower layer. This phenomenon is observed in mid-afternoon to late afternoon on hot summer days when the air appears to clear up suddenly. Winter inversions frequently break by midmorning.

Winds in the project area blow predominantly from the south-southwest, with relatively low velocities. Wind speeds in the project area average about 5 miles per hour (mph). Summer wind speeds average slightly higher than winter wind speeds. Low average wind speeds, together with a persistent temperature inversion, limit the vertical dispersion of air pollutants throughout the Basin. Strong, dry, north or northeasterly winds, known as Santa Ana winds, occur during the fall and winter months, dispersing air contaminants. The Santa Ana conditions tend to last for several days at a time.

The combination of stagnant wind conditions and low inversions produces the greatest pollutant concentrations. On days of no inversion or high wind speeds, ambient air pollutant concentrations are the lowest. During periods of low inversions and low wind speeds, air pollutants generated in urbanized areas are transported predominantly on shore into Riverside and San Bernardino

[47] Western Regional Climate Center. Recent Climate in the West. Website: http://www.wrcc.dri.edu (accessed November 2022).

Counties. In the winter, the greatest pollution problems are CO and NO_X because of extremely low inversions and air stagnation during the night and early morning hours. In the summer, the longer daylight hours and brighter sunshine combine to cause a reaction between hydrocarbons and NO_x to form photochemical smog. Smog is a general term that is naturally occurring fog that has become mixed with smoke or pollution. In this context it is better described as a form of air pollution produced by the photochemical reaction of sunlight with pollutants that have been released into the atmosphere, especially by automotive emissions.

AIR QUALITY MONITORING RESULTS

Air quality monitoring stations are located throughout the nation and are maintained by the local air pollution control district and State air quality regulating agencies. The SCAQMD, together with the CARB, maintains ambient air quality monitoring stations in the Basin. The air quality monitoring stations closest to the project site are located at 500 N. Dearborn in Redlands, 24302 4th Street in San Bernardino, and 14360 Arrow Boulevard in Fontana, California.

Pollutant monitoring results for years 2019 to 2021 are shown in Table G. As indicated in the monitoring results, the federal PM_{10} standard had no exceedances during the 3-year period. The State PM_{10} standard had 2 exceedances in 2020 only. The federal $PM_{2.5}$ levels had 1 exceedance in 2019, 2 exceedances in 2020, and 1 exceedance in 2021. The State 1-hour O_3 standards were exceeded 73 times in 2019, 104 times in 2020, and 74 times in 2021. The State 8-hour O_3 standards were exceeded 111 times in 2019, 145 times in 2020, and 118 times in 2021. The Federal 8-hour O_3 standards were exceeded 109 times in 2019, 141 times in 2020, and 114 times in 2021. The CO, SO_2, and NO_2 standards were not exceeded in this area during the 3-year period.

GREENHOUSE GAS EMISSIONS INVENTORY

An emissions inventory that identifies and quantifies the primary human-generated sources and sinks of GHGs is a well-recognized and useful tool for addressing climate change. This section summarizes the latest information on global, United States, and California GHG emission inventories.

Global Emissions

Worldwide emissions of GHGs in 2018 totaled 25.6 billion metric tons of CO_2e. Global estimates are based on country inventories developed as part of the programs of the United Nations Framework Convention on Climate Change.[48]

[48] United Nations Framework Convention on Climate Change (UNFCCC). 2021. GHG Data from UNFCCC. Website: unfccc.int/process-and-meetings/transparency-and-reporting/greenhouse-gas-data/ghg-data-unfccc/ghg-data-from-unfccc (accessed November 2022).

Table G: Ambient Air Quality at Nearby Monitoring Stations

Pollutant	Standard	2019	2020	2021
Carbon Monoxide (CO)[2]				
Maximum 1-hour concentration (ppm)		1.3	1.9	2.0
Number of days exceeded:	State: > 20 ppm	0	0	0
	Federal: > 35 ppm	0	0	0
Maximum 8-hour concentration (ppm)		1.1	1.4	1.6
Number of days exceeded:	State: > 9 ppm	0	0	0
	Federal: > 9 ppm	0	0	0
Ozone (O_3)[1]				
Maximum 1-hour concentration (ppm)		0.137	0.173	0.145
Number of days exceeded:	State: > 0.09 ppm	73	104	74
Maximum 8-hour concentration (ppm)		0.118	0.137	0.120
Number of days exceeded:	State: > 0.07 ppm	111	145	118
	Federal: > 0.07 ppm	109	141	114
Coarse Particulates (PM_{10})[1]				
Maximum 24-hour concentration (µg/m^3)		42.4	82.9	41.8
Number of days exceeded:	State: > 50 µg/m^3	0	2	0
	Federal: > 150 µg/m^3	0	0	0
Annual arithmetic average concentration (µg/m^3)		ND	ND	22.3
Exceeded for the year:	State: > 20 µg/m^3	ND	ND	Yes
	Federal: > 50 µg/m^3	ND	ND	No
Fine Particulates ($PM_{2.5}$)[2]				
Maximum 24-hour concentration (µg/m^3)		60.5	56.6	57.9
Number of days exceeded:	Federal: > 35 µg/m^3	1	2	1
Annual arithmetic average concentration (µg/m^3)		ND	ND	11.9
Exceeded for the year:	State: > 12 µg/m^3	ND	ND	No
	Federal: > 15 µg/m^3	ND	Nd	No
Nitrogen Dioxide (NO_2)[2]				
Maximum 1-hour concentration (ppm)		0.059	0.054	0.056
Number of days exceeded:	State: > 0.250 ppm	0	0	0
Annual arithmetic average concentration (ppm)		0.014	0.014	0.015
Exceeded for the year:	Federal: > 0.053 ppm	No	No	No
Sulfur Dioxide (SO_2)[3]				
Maximum 1-hour concentration (ppm)		0.0024	0.0025	0.005
Number of days exceeded:	State: > 0.25 ppm	0	0	0
Maximum 24-hour concentration (ppm)		0.0009	0.0009	0.0009
Number of days exceeded:	State: > 0.04 ppm	0	0	0
	Federal: > 0.14 ppm	0	0	0
Annual arithmetic average concentration (ppm)		0.00041	0.00041	0.00024
Exceeded for the year:	Federal: > 0.030 ppm	No	No	No

United States Emissions

In 2019, the year for which the most recent data are available, the United States emitted about 6,558 MMT CO_2e. Overall, emissions in 2019 decreased by 1.7 percent since 2018 and were 13 percent 2005 levels. This decrease was driven largely by a decrease in emissions from fossil fuel combustion resulting from a decrease in total energy use in 2019 compared to 2018 and a continued shift from coal to natural gas and renewables in the electric power sector. Of the six major sectors – residential, commercial, agricultural, industry, transportation, and electricity generation – transportation accounted for the highest amount of GHG emissions in 2019 (approximately 29 percent), with electricity generation second at 25 percent and emissions from industry third at 23 percent.[49]

State of California Emissions

The State emitted approximately 418.2 MMT CO_2e emissions in 2019, 7.2 MMT CO_2e lower than 2018 levels and almost 13 MMT CO_2e below the 2020 GHG limit of 431 MMT CO_2e.[50] The CARB estimates that transportation was the source of approximately 40 percent of the State's GHG emissions in 2019, followed by industrial sources at approximately 21 percent and electricity generation at 14 percent. The remaining sources of GHG emissions were agriculture at 8 percent, residential activities at 7 percent, commercial activities at 4 percent, high GWP at 5 percent, and waste at 2 percent.[51]

City of Redlands Emissions

The City of Redlands total emissions were 419,417 MT CO_2e per year in 2015. The emissions inventory covers direct and indirect GHG emissions from sources within the boundaries of Redlands. The emissions inventory tallies emissions from ten sectors. The largest sector is transportation at approximately 41 percent, followed by residential and commercial sectors at approximately 23 and 17 percent, respectively. Off-road equipment is 8 percent of the total emissions. Industrial and solid wastes are 5 percent and 4 percent of the total emissions, respectively. Public lighting, water transport, distribution and treatment, and wastewater are all less than 1 percent of the total emissions.

51 Ibid.

METHODOLOGY

The methodology used to estimate air quality, health risk, GHG, and energy impacts is described below.

CONSTRUCTION EMISSIONS

Construction activities can generate a substantial amount of air pollution. Construction activities are considered temporary; however, short-term impacts can contribute to exceedances of air quality standards. Construction activities include demolition, site preparation, earthmoving, and general construction. The emissions generated from these common construction activities include fugitive dust from soil disturbance, fuel combustion from mobile heavy-duty diesel and gasoline powered equipment, portable auxiliary equipment, and worker commute trips.

The California Emissions Estimator Model version 2020.4.0 (CalEEMod) computer program was used to calculate emissions from on-site construction equipment and emissions from worker and vehicle trips to the site. This analysis assumes that construction would begin in June 2023 and would end in May 2024. The proposed project would include the demolition of an existing 193,469 sq ft warehouse building and single-family home, which was included in CalEEMod. Based on the preliminary grading plans, the project would require the import of approximately 23,154 cubic yards of soil[52], which was also included in CalEEMod. This analysis assumes the use of Tier 2 construction equipment and that the proposed project would comply with SCAQMD Rule 403 measures. This analysis also assumes the overlapping of building construction and architectural phases as part of the construction phase schedule. All other construction details are not yet known; therefore, default assumptions (e.g., construction worker and truck trips and fleet activities) from CalEEMod were used.

OPERATIONAL EMISSIONS

The air quality analysis includes estimating emissions associated with long-term operation of the proposed project. Consistent with the SCAQMD guidance for estimating emissions associated with land use development projects, the CalEEMod computer program was used to calculate the long-term operational emissions associated with the project. As discussed in the Project Description section, the proposed project would demolish a 193,469 sq ft warehouse building and a single-family residence and would construct a 197,397 sq ft warehouse building. Therefore, an existing conditions analysis was conducted using land code *Unrefrigerated Warehouse- No Rail* and *Single-Family Housing*.

The proposed project analysis was conducted assuming that 10 percent of building square footage would be refrigerated warehouse and the remaining 90 percent would be unrefrigerated warehouse. The proposed project analysis was conducted using land use codes *Unrefrigerated Warehouse-No Rail*, *Refrigerated Warehouse-No Rail*, *City Park*, and *Parking Lot.* Trip generation rates used in CalEEMod for the project were based on the project's *Focused Traffic Analysis Analysis,*

[52] The CalEEMod analysis evaluated the import of approximately 24,477 cubic yards of soil; however, the revised estimated import of 23,154 cubic yards of soil would not affect the conclusions contained herein.

[53] which identifies that the existing conditions typically generate approximately 928 average daily trips. The proposed project would generate a total of approximately 961 average daily trips, including 680 passenger vehicle trips, 55 two-axle truck trips, 54 three-axle truck trips, and 172 four-axle truck trips, including 96 average daily trips associated with the cold storage uses and 865 average daily trips associated with the non-cold storage uses.[54] This analysis assumes that the four+-axle truck trips would travel approximately 40 miles. To be conservative, separate CalEEMod analyses were prepared for the operational analysis. One CalEEMod run evaluated operational and vehicle and light duty truck trip emissions and another CalEEMod run evaluated four +-axle truck trip emissions.

CONSTRUCTION HEALTH RISK ASSESSMENT

A construction health risk assessment (HRA), which evaluates construction-period health risk to off-site receptors, was performed for the proposed project. To estimate the potential cancer risk associated with construction of the proposed project from equipment exhaust (including DPM), a dispersion model was used to translate an emission rate from the source location to a concentration at the receptor location of interest (i.e., a nearby residence and worksites). The HRA analyses used PM_{1o} emissions to represent DPM emissions, consistent with Office of Environmental Health Hazard Assessment (OEHHA) guidance[55]. Dispersion modeling varies from a simpler, more conservative screening-level analysis to a more complex and refined detailed analysis. This refined assessment was conducted using the CARB exposure methodology with the air dispersion modeling performed using the USEPA dispersion model AERMOD. The model provides a detailed estimate of exhaust concentrations based on site and source geometry, source emissions strength, distance from the source to the receptor, and meteorological data. Meteorological and terrain model inputs are included in the AERMOD input files. In addition, health risk variables are included in the HARP2 model output files. Concentrations presented are flagpole height: 0.

OPERATIONAL HEALTH RISK ASSESSMENT

To determine the potential health risk to people living and working near the proposed project associated with the exhaust of diesel-powered trucks and equipment, an operational Health Risk Assessment (HRA) was conducted for the proposed project. This HRA has been conducted using three models: (1) EMFAC2021 for on-road vehicle emissions factors and percentages of fuel type within the overall vehicle fleet; (2) the USEPA AERMOD air dispersion model to determine how the TACs would move through the atmosphere after release from sources both on site and on

---

53 Environment Planning Development Solutions, Inc. 2022. op. cit.

54 The CalEEMod analysis evaluated a total of approximately 962 average daily trips, including 681 passenger vehicle trips, 55 two-axle truck trips, 54 three-axle truck trips, and 172 four-axle truck trips. The proposed project's trip generation has since been modified that there would be one less passenger vehicle trip per day. This minimal modification to the project trip generation was reviewed by LSA and it was determined that the modified trip generation would not affect the conclusions contained herein.

55 Office of Environmental Health Hazard Assessment, Air Toxics Hot Spots Program Guidance Manual for the Preparation of Health Risk Assessments, February 2015, http://oehha.ca.gov/air/hot_spots/hotspots2015.html, accessed September 2022.

surrounding roadways; and (3) CARB's HARP2 model to translate the pollutant concentrations from AERMOD into individual health risks at any sensitive receptor locations surrounding the project site.

The first step of an HRA is to characterize the project-related emissions of TACs. The proposed project would generate 55 two-axle truck trips, 54 three-axle truck trips, and 172 four-axle truck trips, which would be a source of TAC emissions. The trucks would access the site by Tennessee Street, West State Street, and Kansas Street. The proposed project would provide 25 dock-high doors[56]; as the project would contain multiple loading docks, off-site queuing of trucks is not anticipated. While the TAC emissions from gasoline-powered vehicles have a small health effect compared to DPM, this HRA includes both gasoline- and diesel-powered vehicle emissions. For the diesel exhaust emissions, it is sufficient to only consider the DPM (PM_{10} and $PM_{2.5}$) portions of the exhaust; all the TACs for the gasoline exhaust emissions are contained in the ROG emissions. Using speciation data from CARB, the emission rates of the TAC components are derived from the total ROG emissions. These data are attached. As identified above, meteorological and terrain model inputs are included in the AERMOD input files. In addition, health risk variables are included in the HARP2 model output files. Concentrations presented are flagpole height: 0.

Project trucks would operate in two modes: stationary idling and moving on and off the site. The emissions from trucks while idling result in a much higher concentration of TACs at nearby sensitive receptors compared to the emissions from moving trucks. Idling emission factors included in the HRA modeling includes idling events. This is due to the dispersion of emissions that occurs with distance and with travel of the vehicle. For this HRA, the truck travel emissions were modeled as a series of volume sources along the on-site driveways, along Tennessee Street going north and south, along West State Street going east and west, and along Kansas Street going north and south. LSA assumed vehicles traveling on site would maneuver slowly, averaging approximately 5–15 miles per hour (mph), and that vehicles traveling on roadways would average 5–55 mph.

The idling emissions of trucks operating on the project site were modeled as point sources within the area sources representing the planned loading docks. EMFAC2021 was used to determine the emissions factors of idling and operating diesel trucks to determine the total emissions of DPM. While it is expected that the truck emissions rate will continue to reduce over time, an HRA only allows for a single emission rate to represent the entire 30-year exposure period. The use of emissions factors for the year 2023 was used as a conservative estimate of emissions, although, the project is not expected to be fully operational until 2024.

ENERGY USE

The analysis of electricity/natural gas usage is based on the CalEEMod modeling, which quantifies energy use for project operations. Fuel consumption (diesel fuel and gasoline) from vehicle trips during operation was estimated for the opening year (2024) of the proposed project based on trip estimates from the CalEEMod model and fuel efficiencies from the CARB's EMFAC2021 model. Estimates of fuel consumption (diesel fuel and gasoline) from construction trucks and construction

[56] Although the proposed project would include 25 dock-high doors, the HRA modeling combined several of the sources and included 14 idling points consistent with federal modeling guidance "Appendix W" which allows for similar sources to be combined.

worker vehicles were based on trip estimates from the CalEEMod model and fuel efficiencies from the CARB EMFAC2021 model.

The analysis focuses on the four sources of energy that are relevant to the proposed project: electricity, natural gas, project construction equipment fuel, and vehicle fuel necessary for project operations. For the purposes of this analysis, the amount of electricity, natural gas, construction fuel, and fuel use from operations are quantified and compared to that consumed in San Bernardino County. The electricity/natural gas use of the proposed project is analyzed as a whole on an annual basis.

GREENHOUSE GAS ANALYSIS

Recognizing that the field of global climate change analysis is rapidly evolving, the approaches advocated most recently indicate that for determining a project's contribution to GHG emissions, lead agencies should calculate, or estimate, emissions from vehicular traffic, energy consumption, water conveyance and treatment, waste generation, construction activities, and any other significant source of emissions within the project area. The CalEEMod results were used to quantify GHG emissions generated by the project.

THRESHOLDS OF SIGNIFICANCE

The *State CEQA Guidelines* indicate that a project would normally have a significant adverse air quality impact if project-generated pollutant emissions would:

- Conflict with or obstruct implementation of the applicable air quality plan;
- Result in a cumulatively considerable net increase of any criteria pollutant for which the project is nonattainment under applicable federal or state ambient air quality standards;
- Expose sensitive receptors to substantial pollutant concentrations; or
- Result in other emissions (such as those leading to odors) affecting a substantial number of people.

The *State CEQA Guidelines* indicate that a project would normally have a significant adverse energy impact if the project would:

- Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation; or
- Conflict with or obstruct a state or local plan for renewable energy or energy efficiency.

The *State CEQA Guidelines* indicate that a project would normally have a significant adverse greenhouse gas emission impact if the project would:

- Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment; or
- Conflict with an applicable plan, policy or regulation adopted for the purpose of reduction the emissions of greenhouse gases.

Certain air districts (e.g., SCAQMD) have created guidelines and requirements to conduct air quality analysis. The SCAQMD's current guidelines, the *CEQA Air Quality Handbook* with associated updates, were followed in this assessment of air quality and GHG impacts for the proposed project.

CRITERIA POLLUTANT THRESHOLDS

SCAQMD has established daily emissions thresholds for construction and operation of a proposed project in the Basin. The emissions thresholds were established based on the attainment status of the Basin with regard to air quality standards for specific criteria pollutants. Because the concentration standards were set at a level that protects public health with an adequate margin of safety, these emissions thresholds are regarded as conservative and would overstate an individual project's contribution to health risks.

Table H lists the CEQA significance thresholds for construction and operational emissions established for the Basin. Projects in the Basin with construction- or operation-related emissions that exceed any of their respective emission thresholds would be considered significant under SCAQMD guidelines. These thresholds, which SCAQMD developed and that apply throughout the Basin, apply as both project and cumulative thresholds. If a project exceeds these standards, it is considered to have a project-specific and cumulative impact.

Table H: Regional Thresholds for Construction and Operational Emissions

Emissions Source	Pollutant Emissions Threshold (lbs/day)					
	VOC	NO_x	CO	PM_{10}	$PM_{2.5}$	SO_x
Construction	75	100	550	150	55	150
Operations	55	55	550	150	55	150

Source: SCAQMD. Air Quality Significance Thresholds. Website: http://www.aqmd.gov/docs/default-source/ceqa/handbook/scaqmd-air-quality-significance-thresholds.pdf (accessed November 2022).

CO = carbon monoxide
lbs/day = pounds per day
NO_x = nitrogen oxides
PM_{10} = particulate matter less than 10 microns in size
$PM_{2.5}$ = particulate matter less than 2.5 microns in size
SCAQMD = South Coast Air Quality Management District
SO_X = sulfur oxides
VOC = volatile organic compounds

HEALTH RISK THRESHOLDS

The following limits for maximum individual cancer risk (MICR) and noncancer acute and chronic Hazard Index (HI) from project emissions of TACs are considered appropriate for use in determining the health risk for projects in the Basin:

- **MICR:** MICR is the estimated probability of a maximally exposed individual (MEI) contracting cancer as a result of exposure to TACs over a period of 30 years for adults and 9 years for children in residential locations and over a period of 25 years for workers. The MICR calculations include multipathway consideration, when applicable.

  The cumulative increase in MICR that is the sum of the calculated MICR values for all TACs would be considered significant if it would result in an increased MICR greater than 10 in 1 million (1×10^{-5}) at any receptor location.

- **Chronic HI:** Chronic HI is the ratio of the estimated long-term level of exposure to a TAC for a potential MEI to its chronic reference exposure level. The chronic HI calculations include multipathway consideration, when applicable.

  The project would be considered significant if the cumulative increase in total chronic HI for any target organ system would exceed 1.0 at any receptor location.

- **Acute HI:** Acute HI is the ratio of the estimated maximum 1-hour concentration of a TAC for a potential MEI to its acute reference exposure level.

  The project would be considered significant if the cumulative increase in total acute HI for any target organ system would exceed 1.0 at any receptor location.

The SCAQMD *CEQA Air Quality Handbook*[57] states that emissions of TACs are considered significant if an HRA shows an increased risk of greater than 10 in 1 million. Based on guidance from SCAQMD in the document *Health Risk Assessment Guidance for Analyzing Cancer Risks from Mobile Source Diesel Idling Emissions for CEQA Air Quality Analysis*[58], for the purposes of this analysis, the threshold of 10 in 1 million was used as the cancer risk threshold for the proposed project.

LOCALIZED IMPACTS ANALYSIS

The SCAQMD published its Final Localized Significance Threshold Methodology in July 2008, recommending that all air quality analyses include an assessment of air quality impacts to nearby sensitive receptors.[59] This guidance was used to analyze potential localized air quality impacts associated with construction of the proposed project. Localized significance thresholds (LST) are developed based on the size or total area of the emission source, the ambient air quality in the source receptor area, and the distance to the project. Sensitive receptors include residences, schools, hospitals, and similar uses that are sensitive to adverse air quality.

LSTs are based on the ambient concentrations of that pollutant within the project Source Receptor Area (SRA) and the distance to the nearest sensitive receptor. For the proposed project, the appropriate SRA for the LST is the nearby East San Bernardino Valley area (SRA 35). SCAQMD provides LST screening tables for 25, 50, 100, 200, and 500-meter source-receptor distances. As identified above, the closest sensitive receptor to the project site is Redlands Adventist Academy Kindergarten and Kids Care, located approximately 275 feet southeast (84 meters) from the project site southern boundary opposite West State Street. Based on the anticipated construction equipment, it is assumed that the maximum daily disturbed acreage for the proposed project would be 3.5 acres.[60] Table I lists the emissions thresholds that apply during project construction and operation.

Table I: South Coast Air Quality Management District Localized Significance Thresholds

Emissions Source	Pollutant Emissions Threshold (lbs/day)			
	NO_x	CO	PM_{10}	$PM_{2.5}$
Construction	298.3	3,386.3	47.5	14.0
Operations	298.3	3,386.3	12.0	3.9

LOCAL MICROSCALE CONCENTRATION STANDARDS

The significance of localized project impacts under CEQA depends on whether ambient CO levels in the vicinity of the project are above or below State and federal CO standards. Because ambient CO levels are below the standards throughout the Basin, a project would be considered to have a significant CO impact if project emissions result in an exceedance of one or more of the 1-hour or 8-hour standards. The following are applicable local emission concentration standards for CO:

- California State 1-hour CO standard of 20 parts per million (ppm)
- California State 8-hour CO standard of 9 ppm

GLOBAL CLIMATE CHANGE

To provide guidance to local lead agencies on determining significance for GHG emissions in their CEQA documents, SCAQMD convened a GHG CEQA Significance Threshold Working Group (Working Group). Based on the last Working Group meeting held in September 2010 (Meeting No. 15), SCAQMD proposed to adopt a tiered approach for evaluating GHG emissions for development projects where SCAQMD is not the lead agency:

- **Tier 1. Exemptions:** If a project is exempt from CEQA, project-level and cumulative GHG emissions are less than significant.

- **Tier 2. Consistency with a locally adopted GHG Reduction Plan:** If the project complies with a GHG emissions reduction plan or mitigation program that avoids or substantially reduces GHG emissions in the project's geographic area (i.e., city or county), project-level and cumulative GHG emissions are less than significant.

- **Tier 3. Numerical Screening Threshold:** If GHG emissions are less than the numerical screening-level threshold, project-level and cumulative GHG emissions are less than significant.

  For projects that are not exempt or where no qualifying GHG reduction plans are directly applicable, SCAQMD requires an assessment of GHG emissions. SCAQMD, under Option 1, is proposing a "bright-line" screening-level threshold of 3,000 MT CO_2e per year (or MT CO_2e/yr) for all land use types or, under Option 2, the following land-use-specific thresholds: 1,400 MT CO_2e commercial projects; 3,500 MT CO_2e for residential projects; or 3,000 MT CO_2e for mixed-use projects. This bright-line threshold is based on a review of the OPR database of CEQA projects. Based on their review of 711 CEQA projects, 90 percent of CEQA projects would exceed the bright-line thresholds identified above. Therefore, projects that do not exceed the bright-line threshold would have a nominal and therefore less than cumulatively considerable impact on GHG emissions.

- **Tier 4. Performance Standards:** If emissions exceed the numerical screening threshold, a more detailed review of the project's GHG emissions is warranted. SCAQMD has proposed an efficiency target for projects that exceed the bright-line threshold. The current recommended approach consists of per capita efficiency targets. SCAQMD is not recommending use of a percent emissions reduction target. Instead, SCAQMD proposes a 2020 efficiency target of

4.8 MT CO_2e/yr per service population (for project-level analyses and 6.6 MT CO_2e/yr per service population for plan-level projects (e.g., program-level projects such as general plans). The GHG efficiency metric divides annualized GHG emissions by the service population, which is the sum of residents and employees, per the following equation:

Rate of Emission: GHG Emissions (MT CO_2e/yr) ÷ Service Population

The efficiency evaluation consists of comparing the project's efficiency metric to efficiency targets. Efficiency targets represent the maximum quantity of emissions each resident and employee in the State of California could emit in various years based on emissions levels necessary to achieve the statewide GHG emissions reduction goals. A project that results in a lower rate of emissions would be more efficient than a project with a higher rate of emissions, based on the same service population. The metric considers GHG reduction measures integrated into a project's design and operation (or through mitigation). The per capita efficiency targets are based on the AB 32 GHG reduction target and 2020 GHG emissions inventory prepared for the CARB's 2008 Scoping Plan.

For the purpose of this analysis, the proposed project will be compared to the screening-level Tier 3 Numerical Screening Threshold of 3,000 MT CO_2e/yr for all land use types. The project is also evaluated for compliance with the County of San Bernardino Greenhouse Gas Reduction Plan, the City of Redlands CAP, the 2022 Scoping Plan, and the 2020–2045 RTP/SCS.

IMPACTS ANALYSIS

This section identifies the air quality, energy, and GHG emissions impacts associated with implementation of the proposed project.

AIR QUALITY IMPACTS

Air pollutant emissions associated with the project would occur over the short term from construction activities and over the long term from operational activities associated with the proposed land uses.

Consistency with Applicable Air Quality Plans

A consistency determination plays an essential role in local agency project review by linking local planning and unique individual projects to the air quality plans. A consistency determination fulfills the CEQA goal of fully informing local agency decision-makers of the environmental costs of the project under consideration at a stage early enough to ensure that air quality concerns are addressed. Only new or amended General Plan elements, Specific Plans, and significantly unique projects need to undergo a consistency review due to the air quality plan strategy being based on projections from local General Plans.

The AQMP is based on regional growth projections developed by SCAG. The proposed project would include 197,397 sq ft of warehouse uses. The proposed project would not house more than 1,000 persons, occupy more than 40 acres of land, or encompass more than 650,000 sq ft of floor area. Thus, the proposed project would not be defined as a regionally significant project under CEQA; therefore, it does not meet SCAG's Intergovernmental Review criteria.

The City's General Plan is consistent with the SCAG Regional Comprehensive Plan Guidelines and the SCAQMD AQMP. Pursuant to the methodology provided in the SCAQMD *CEQA Air Quality Handbook*, consistency with the Basin 2016 AQMP is affirmed when a project (1) would not increase the frequency or severity of an air quality standards violation or cause a new violation, and (2) is consistent with the growth assumptions in the AQMP. Consistency review is presented as follows:

1. The project would result in short-term construction and long-term operational pollutant emissions that are all less than the CEQA significance emissions thresholds established by SCAQMD, as demonstrated below; therefore, the project would not result in an increase in the frequency or severity of an air quality standards violation or cause a new air quality standard violation.

2. The *CEQA Air Quality Handbook* indicates that consistency with AQMP growth assumptions must be analyzed for new or amended General Plan elements, Specific Plans, and significant projects. Significant projects include airports, electrical generating facilities, petroleum and gas refineries, designation of oil drilling districts, water ports, solid waste disposal sites, and offshore drilling facilities; therefore, the proposed project is not defined as significant. In addition, the proposed project would not require a change to the General Plan land use designation or the current zoning, and would be consistent with the City's General Plan and Zoning Ordinance.

Based on the consistency analysis presented above, the proposed project would be consistent with the regional AQMP.

Criteria Pollutant Analysis

The Basin is designated as non-attainment for O_3 and $PM_{2.5}$ for federal standards and non-attainment for O_3, PM_{10}, and $PM_{2.5}$ for State standards. The SCAQMD's nonattainment status is attributed to the region's development history. Past, present, and future development projects contribute to the region's adverse air quality impacts on a cumulative basis. By its very nature, air pollution is largely a cumulative impact. No single project is sufficient in size to, by itself, result in nonattainment of ambient air quality standards. Instead, a project's individual emissions contribute to existing cumulatively significant adverse air quality impacts. If a project's contribution to the cumulative impact is considerable, then the project's impact on air quality would be considered significant.

In developing thresholds of significance for air pollutants, the SCAQMD considered the emission levels for which a project's individual emissions would be cumulatively considerable. If a project exceeds the identified significance thresholds, its emissions would be cumulatively considerable, resulting in significant adverse air quality impacts to the region's existing air quality conditions. Therefore, additional analysis to assess cumulative impacts is unnecessary. The following analysis assesses the potential project-level construction- and operation-related air quality impacts.

Construction Emissions

During construction, short-term degradation of air quality may occur due to the release of particulate emissions generated by demolition, grading, paving, building, and other activities. Emissions from construction equipment are also anticipated and would include CO, NO_x, ROG, directly-emitted particulate matter ($PM_{2.5}$ and PM_{10}), and TACs such as diesel exhaust particulate matter.

Project construction activities would include demolition, grading, site preparation, building, paving, and architectural coating activities. Construction-related effects on air quality from the proposed project would be greatest during the site preparation phase due to the disturbance of soils. If not properly controlled, these activities would temporarily generate particulate emissions. Sources of fugitive dust would include disturbed soils at the construction site. Unless properly controlled, vehicles leaving the site would deposit dirt and mud on local streets, which could be an additional source of airborne dust after it dries. PM_{10} emissions would vary from day to day, depending on the nature and magnitude of construction activity and local weather conditions. PM_{10} emissions would depend on soil moisture, silt content of soil, wind speed, and the amount of operating equipment. Larger dust particles would settle near the source, while fine particles would be dispersed over greater distances from the construction site.

Water or other soil stabilizers can be used to control dust, resulting in emission reductions of 50 percent or more. The SCAQMD has established Rule 403: Fugitive Dust, which would require the applicant to implement measures that would reduce the amount of particulate matter generated during the construction period.

In addition to dust-related PM_{10} emissions, heavy trucks and construction equipment powered by gasoline and diesel engines would generate CO, SO_2, NO_x, VOCs and some soot particulate ($PM_{2.5}$ and PM_{10}) in exhaust emissions. If construction activities were to increase traffic congestion in the

area, CO and other emissions from traffic would increase slightly while those vehicles idle in traffic. These emissions would be temporary in nature and limited to the immediate area surrounding the construction site.

Construction emissions were estimated for the project using CalEEMod. Table J lists the tentative project construction schedule beginning in June 2023 and ending in May 2024. Table K lists the potential construction equipment to be used during project construction under each phase of construction. Other precise details of construction activities are unknown at this time; therefore, default settings (e.g., construction equipment) from CalEEMod were assumed. Table L identifies the total annual emissions associated with construction activities. CalEEMod output sheets are included in Appendix A.

Table J: Tentative Project Construction Schedule

Phase Number	Phase Name	Phase Start Date	Phase End Date	Number of Days/Week	Number of Days

Maximum (lbs/day)	**28.6**	**69.0**	**42.6**	**0.2**	**10.0**	**5.5**
SCAQMD Thresholds	75.0	100.0	550.0	150.0	150.0	55.0
Exceeds?	**No**	**No**	**No**	**No**	**No**	**No**

Source: Compiled by LSA (January 2023).
Note: Maximum emissions of VOC occurred during the overlapping building construction and architectural coating phases.
CO = carbon monoxide
lbs/day = pounds per day
NO_X = nitrogen oxides
$PM_{2.5}$ = particulate matter less than 2.5 microns in size
PM_{10} = particulate matter less than 10 microns in size
SCAQMD = South Coast Air Quality Management District
SO_X = sulfur oxides
VOC = volatile organic compounds

As shown in Table L, construction emissions associated with the project would not exceed the SCAQMD thresholds for VOC, NO_x, CO, sulfur oxides (SO_X), $PM_{2.5,}$ or PM_{10} emissions. In addition to the construction period thresholds of significance, the project is required to comply with regional rules that assist in reducing short-term air pollutant emissions. SCAQMD Rule 403 requires that fugitive dust be controlled with best-available control measures so that the presence of such dust does not remain visible in the atmosphere beyond the property line of the emission source. In addition, SCAQMD Rule 403 requires implementation of dust suppression techniques to prevent fugitive dust from creating a nuisance off site. Even though the project's construction would not exceed any of the emissions thresholds as noted in Table L, compliance with Rule 403 dust suppression techniques can further reduce the fugitive dust generation (and thus, the PM_{10} component). With compliance with Rule 403, construction of the proposed project would not result in emissions that would cause a cumulatively considerable net increase of any criteria pollutant for which the project is nonattainment under an applicable federal or State ambient air quality standard. Therefore, the proposed project would not lead to new or substantially more severe significant impacts associated with construction-related air quality.

Operational Air Quality Impacts

Long-term air pollutant emission impacts are those associated with mobile sources (e.g., vehicle and truck trips), energy sources (e.g., natural gas), and area sources (e.g., architectural coatings and the use of landscape maintenance equipment) related to the proposed project.

PM_{10} emissions result from running exhaust, tire and brake wear, and the entrainment of dust into the atmosphere from vehicles traveling on paved roadways. Entrainment of PM_{10} occurs when vehicle tires pulverize small rocks and pavement, and the vehicle wakes generate airborne dust. The contribution of tire and brake wear is small compared to the other PM emission processes. Gasoline-powered engines have small rates of PM emissions compared with diesel-powered vehicles.

Energy source emissions result from activities in buildings for which electricity and natural gas are used. The quantity of emissions is the product of usage intensity (i.e., the amount of natural gas) and the emission factor of the fuel source. Major sources of energy demand for the proposed project could include building mechanical systems, such as heating and air conditioning.

Typically, area source emissions consist of direct sources of air emissions located at the project site, including architectural coatings, consumer products, and the use of landscape maintenance equipment.

Long-term operation emissions associated with the proposed project were calculated using CalEEMod. Model results are shown in Table M below. CalEEMod output sheets are included in Appendix A.

Table M: Project Operational Emissions

Emission Type	Pollutant Emissions (lbs/day)					
	VOC	NO_X	CO	SO_X	PM_{10}	$PM_{2.5}$
Existing Uses Operational Emissions						
Area Sources	4.6	<0.1	0.6	<0.1	0.1	0.1
Energy Sources	<0.1	0.1	0.1	<0.1	<0.1	<0.1
Mobile Sources	3.9	20.6	40.7	0.1	8.9	2.5
Total Project Emissions	**8.5**	**20.7**	**41.4**	**0.1**	**9.0**	**2.6**
Proposed Project Operational Emissions						
Area Sources	4.5	<0.1	<0.1	0.0	<0.1	<0.1
Energy Sources	<0.1	0.4	0.3	<0.1	<0.1	<0.1
Mobile Sources – Vehicles and Light Duty Trucks	1.5	4.8	21.0	0.1	7.3	2.0
Mobile Sources – Heavy Heavy Duty Trucks	0.6	34.0	8.1	0.2	6.0	1.9
Total Project Emissions	**6.6**	**39.2**	**29.4**	**0.3**	**13.3**	**3.9**
Net Total Emissions	**-1.9**	**18.5**	**-12.0**	**0.2**	**4.3**	**1.3**
SCAQMD Thresholds	55.0	55.0	550.0	150.0	150.0	55.0
Significant?	**No**	**No**	**No**	**No**	**No**	**No**

Source: Compiled by LSA (January 2023).
CO = carbon monoxide
lbs/day = pounds per day
NO_X = nitrogen oxides
$PM_{2.5}$ = particulate matter less than 2.5 microns in size
PM_{10} = particulate matter less than 10 microns in size
SCAQMD = South Coast Air Quality Management District
SO_X = sulfur oxides
ROG = volatile organic compounds

The results shown in Table M indicate the project would not exceed the significance criteria for VOC, NO_X, CO, SO_X, PM_{10}, or $PM_{2.5}$ emissions; thus, the proposed project would not have a significant effect on regional air quality. Therefore, operation of the project would not result in a cumulatively considerable net increase of any criteria pollutant for which the project is nonattainment under an applicable federal or State ambient air quality standard.

Localized Significance Analysis

Project construction and operation emissions were compared to the LST screening tables in SRA 35, based on an 84-meter source-receptor distance and a disturbed acreage of 3.5 acres. By design, the localized impacts analysis only includes on-site sources; however, the CalEEMod outputs do not

separate on-site and off-site emissions for mobile sources For a worst-case scenario assessment, the emissions detailed in Table O assume all area source emissions would occur on site, all of the energy source emissions would occur off site at the utility power stations, and 5 percent of the project-related new mobile sources, which is an estimate of the amount of project-related on-site vehicle travel, would occur on site. Considering the total trip length included in CalEEMod, the 5 percent assumption is conservative.

The results of the LST analysis, summarized in Table N and Table O, indicate that the project would not result in an exceedance of the SCAQMD LSTs during project construction or operation.

Table N: Project Localized Construction Emissions (lbs/day)

Source	NO_X	CO	PM_{10}	$PM_{2.5}$

Health Risk on Nearby Sensitive Receptors

Sensitive receptors are defined as people that have an increased sensitivity to air pollution or environmental contaminants. Sensitive receptor locations include schools, parks and playgrounds, daycare centers, nursing homes, hospitals, and residential dwelling units. The closest sensitive receptor to the project site is Redlands Adventist Academy Kindergarten and Kids Care, located approximately 275 feet southeast of the project site southern boundary opposite West State Street. Other sensitive receptors include the Redlands Apartments, located approximately 900 feet southeast from the project site southern boundary.

The following section describes the potential impacts on sensitive receptors from construction and operation of the proposed project. Health risk impacts associated with project construction and operation are evaluated separately to correctly estimate the risk for each type of receptor (i.e., sensitive vs. worker locations, since sensitive receptors start at the 3rd trimester and workers start

at age 16.) The risk is calculated starting at the 3rd trimester going to 30.25 years, which is broken down into three bins: 3rd trimester to under 2 years; 2 years to under 16 years; and 16 years to 30 years. This is consistent with OEHHA's standard method of calculating a 30-year risk (i.e., the sum of all three bins).

The HRA analysis and results are presented below; data outputs are included in Appendix B.

Construction Health Risk Assessment

A construction HRA, which evaluates construction-period health risk to off-site receptors, was performed for the proposed project. Table P, below, identifies the results of the analysis assuming the use of Tier 2 construction equipment, as proposed by the project, at the MEI, which is the nearest sensitive receptor. Model snapshots of the sources are shown in Appendix B.

Table P: Unmitigated Health Risks from Project Construction to Off-Site Receptors

Location	Carcinogenic Inhalation Health Risk in One Million	Chronic Inhalation Hazard Index	Acute Inhalation Hazard Index
Worker Receptor Risk	3.31	0.162	0.000
Sensitive Receptor Risk	13.92	0.011	0.000
Day Care Receptor Risk	14.03	0.015	0.000
SCAQMD Significance Threshold	**10.0 in one million**	**1.0**	**1.0**
Significant?	**Yes**	**No**	**No**

Source: LSA (January 2023).
SCAQMD = South Coast Air Quality Management District

As shown in Table P, the maximum cancer risk for the day care receptor MEI would be 14.03 in one million and the sensitive receptor MEI would be 13.92 in one million, which would both exceed the SCAQMD cancer risk threshold of 10 in one million. The worker receptor risk would be lower at 3.31 in one million, which would not exceed the threshold. The total chronic hazard index would be 0.162 for the worker receptor MEI, 0.015 for the day care receptor, and 0.011 for the sensitive receptor MEI, which would all be below the threshold of 1.0. In addition, the total acute hazard index would be nominal (0.000), which would also not exceed the threshold of 1.0. As indicated above, the cancer risk of 14.03 in one million at the day care receptor and 13.92 in one million at the sensitive receptor would exceed SCAQMD thresholds. Therefore, implementation of Mitigation Measure AIR-1 would be required to reduce substantial pollutant concentrations during project construction.

Mitigation Measure AIR-1 During construction of the proposed project, the project contractor shall ensure all off-road diesel-powered construction equipment of 50 horsepower or more used for the project is equipped with Level 3 diesel particulate filters or equivalent.

Table Q identifies the results of the analysis with implementation of Mitigation Measure AIR-1.

Table Q: Mitigated Health Risks from Project Construction to Off-Site Receptors

Location	Carcinogenic Inhalation Health Risk in One Million	Chronic Inhalation Hazard Index	Acute Inhalation Hazard Index
Worker Receptor Risk	0.59	0.030	0.000
Sensitive Receptor Risk	2.49	0.002	0.000
Day Care Receptor Risk	2.55	0.003	0.000
SCAQMD Significance Threshold	**10.0 in one million**	**1.0**	**1.0**
Significant?	**No**	**No**	**No**

Source: LSA (January 2023).
SCAQMD = South Coast Air Quality Management District

As shown in Table Q, the mitigated cancer risk at the day care receptor MEI would be 2.55 in one million and 2.49 in one million at the sensitive receptor MEI, which would not exceed the SCAQMD cancer risk of 10 in one million. Therefore, with implementation of Mitigation Measure AIR-1, construction of the proposed project would not exceed SCAQMD thresholds and would not expose nearby sensitive receptors to substantial pollutant concentrations.

Operational Health Risk Assessment

To determine the potential health risk to people living and working near the proposed project associated with the exhaust of diesel-powered trucks and equipment, an operational HRA was conducted for the proposed project. The carcinogenic and chronic health risks from the proposed project are shown in Table R. The residential risk incorporates both the risk for a child living in a nearby residence for 9 years (the standard period of time for child risk) and an adult living in a nearby residence for 30 years (considered a conservative period of time for an individual to live in any one residence). The HRA model snapshots and outputs are included in Appendix B.

Table R: Health Risks from Project Operation to Off-Site Receptors

Location	Carcinogenic Inhalation Health Risk in One Million	Chronic Inhalation Hazard Index	Acute Inhalation Hazard Index
Worker Receptor Risk	7.69	0.020	0.000
Sensitive Receptor Risk	7.49	0.004	0.000
Day Care Receptor Risk	8.05	0.003	0.000
SCAQMD Significance Threshold	**10.0 in one million**	**1.0**	**1.0**
Significant?	**No**	**No**	**No**

Source: LSA (January 2023).
SCAQMD = South Coast Air Quality Management District

As shown in Table R, the maximum cancer risk for the day care receptor MEI would be 8.05 in one million and the cancer risk for the sensitive receptor MEI would be 7.49 in one million, which would both be less than the threshold of 10 in one million. The worker receptor risk would be 7.69 in one million. The total chronic hazard index would be 0.004 for the sensitive receptor MEI, 0.003 for the day care receptor MEI, and 0.020 for the worker receptor MEI, all of which are below the threshold

of 1.0. In addition, the total acute hazard index would be nominal (0.000), which would also not exceed the threshold of 1.0. As these results show, all health risk levels to nearby residents, workers, and the day care from operation-related emissions of TACs would be well below the SCAQMD's HRA thresholds. No significant health risk would occur from project operation emissions.

In December 2018, in the case of *Sierra Club v. County of Fresno* (2018) 6 Cal.5th 502, (Friant Ranch) the California Supreme Court held that an air quality analysis must meaningfully connect the identified air quality impacts to the human health consequences of those impacts, or meaningfully explain why that analysis cannot be provided. As discussed in the SCAQMD Brief filed in the Friant Ranch case, correlating a project's criteria air pollutant emissions to specific health impacts is challenging. The SCAQMD, which has among the most sophisticated air quality modeling and health impact evaluation capability of any of the air districts in the State, and thus it is uniquely situated to express an opinion on how lead agencies should correlate air quality impacts with specific health outcomes noted that it may be "difficult to quantify health impacts for criteria pollutants." SCAQMD used O_3 as an example of why it is impracticable to determine specific health outcomes from criteria pollutants for all but very large, regional-scale projects.

First, forming O_3 "takes time and the influence of meteorological conditions for these reactions to occur, so ozone may be formed at a distance downwind from the sources." Second, "it takes a large amount of additional precursor emissions (NO_x and VOCs) to cause a modeled increase in ambient ozone levels over an entire region," with a 2012 study showing that "reducing NO_x by 432 tons per day (157,680 tons/year) and reducing VOC by 187 tons per day (68,255 tons/year) would reduce ozone levels at the SCAQMD's monitor site with the highest levels by only 9 parts per billion"

SCAQMD concluded that it "does not currently know of a way to accurately quantify ozone-related health impacts caused by NO_x or VOC emissions from relatively small projects." The San Joaquin Valley Air Pollution Control District (SJVAPCD) ties the difficulty of correlating the emission of criteria pollutants to health impacts to how ozone and particulate matter are formed, stating that "[b]ecause of the complexity of ozone formation, a specific tonnage amount of NO_x or VOCs emitted in a particular area does not equate to a particular concentration of ozone in that area." Similarly, the tonnage of PM "emitted does not always equate to the local PM concentration because it can be transported long distances by wind," and "[s]econdary PM, like ozone, is formed via complex chemical reactions in the atmosphere between precursor chemicals such as SO_x and NO_x," meaning that "the tonnage of PM-forming precursor emissions in an area does not necessarily result in an equivalent concentration of secondary PM in that area." The disconnect between the amount of precursor pollutants and the concentration of ozone or PM formed makes it difficult to determine potential health impacts, which are related to the concentration of ozone and PM experienced by the receptor rather than levels of NO_x, SO_x, and VOCs produced by a source.

Most local agencies lack the data to do their own assessment of potential health impacts from criteria air pollutant emissions, as would be required to establish customized, locally specific thresholds of significance based on potential health impacts from an individual development project. The use of national or "generic" data to fill the gap of missing local data would not yield accurate results because such data does not capture local air patterns, local background conditions, or local population characteristics, all of which play a role in how a population experiences air pollution. Because it is impracticable to accurately isolate the exact cause of a human disease (for

example, the role a particular air pollutant plays compared to the role of other allergens and genetics in cause asthma), existing scientific tools cannot accurately estimate health impacts of the project's air emissions without undue speculation.

Odors

During project construction, some odors may be present due to diesel exhaust. However, these odors would be temporary and limited to the construction period. The proposed project would not include any activities or operations that would generate objectionable odors and once operational, the project would not be a source of odors. Therefore, the proposed project would not result in other emissions (such as those leading to odors) affecting a substantial number of people.

ENERGY IMPACTS

The following describes the potential impacts regarding energy resources that could result from implementation of the proposed project.

Energy Consumption

The proposed project would increase the demand for energy through day-to-day operations and fuel consumption associated with project construction. This section discusses energy use resulting from implementation of the proposed project and evaluates whether the proposed project would result in the wasteful, inefficient, or unnecessary consumption of energy resources or conflict with any applicable plans for renewable energy and energy efficiency.

Construction Energy Use

Construction of the proposed project is anticipated to begin in June 2023 and end in May 2024. The project would require energy for activities such as the manufacture and transportation of building materials, grading activities, and building construction. Construction of the proposed project would require electricity to power construction-related equipment. Construction of the proposed project would not involve the consumption of natural gas. The construction-related equipment would not be powered by natural gas, and no natural gas demand is anticipated during construction.

Transportation energy represents the largest energy use during construction and would occur from the transport and use of construction equipment, delivery vehicles and haul trucks, and construction worker vehicles that would use petroleum fuels (e.g., diesel fuel and/or gasoline). Therefore, the analysis of energy use during construction focuses on fuel consumption. Construction trucks and vendor trucks hauling materials to and from the project site would be anticipated to use diesel fuel, whereas construction workers traveling to and from the project site would be anticipated to use gasoline-powered vehicles. Fuel consumption from transportation uses depends on the type and number of trips, VMT, the fuel efficiency of the vehicles, and the travel mode.

Estimates of fuel consumption (diesel fuel and gasoline) from construction equipment, construction trucks, and construction worker vehicles were based on default construction equipment assumptions and trip estimates from CalEEMod and fuel efficiencies from EMFAC2021. Fuel consumption estimates are presented in Table S. CalEEMod output sheets are included in Appendix A and detailed energy calculations are included in Appendix C.

Table S: Proposed Project Energy Consumption Estimates During Construction

Energy Type	Total Fuel Consumption	Percentage of Increase Countywide
Diesel Fuel (total gallons)	68,917.1	0.02
Gasoline (total gallons)	30,348.0	<0.01

Source: Compiled by LSA (January 2023).

As indicated in Table S, the project would consume approximately 68,917.1 gallons of diesel fuel and approximately 30,348.0 gallons of gasoline during construction. Based on fuel consumption obtained from CARB's California Emissions Factor Model, Version 2021 (EMFAC2021), approximately 321.6 million gallons of diesel and approximately 915.5 million gallons of gasoline will be consumed from vehicle trips in San Bernardino County in 2022. Therefore, construction of the proposed project would increase the annual construction generated fuel use in San Bernardino County by approximately 0.02 percent for diesel fuel usage and by less than 0.01 percent for gasoline fuel usage. As such, project construction would have a negligible effect on local and regional energy supplies. Furthermore, impacts related to energy use during construction would be temporary and relatively small in comparison to San Bernardino County's overall use of the State's available energy resources. No unusual project characteristics would necessitate the use of construction equipment that would be less energy efficient than at comparable construction sites in the region or the State. In addition, construction activities are not anticipated to result in an inefficient use of energy as gasoline and diesel fuel would be supplied by construction contractors who would conserve the use of their supplies to minimize their costs on the project. The project would not cause or result in the need for additional energy facilities or an additional or expanded delivery system. For these reasons, fuel consumption during construction would not be inefficient, wasteful, or unnecessary.

Operational Energy Usage

Operational energy use is typically associated with natural gas use, electricity consumption, and fuel used for vehicle trips associated with a project. Energy consumption was estimated for the proposed project using default energy intensities by land use type in CalEEMod.

The proposed project would also result in energy usage associated with gasoline and diesel fuel consumed by project-related vehicle and truck trips. Fuel use associated with vehicle and truck trips generated by the proposed project was calculated based on the project's Traffic Impact Analysis [61], which identifies that the existing conditions typically generate approximately 928 average daily trips and that the proposed project would generate approximately 962 average daily trips, including 681 passenger vehicle trips, 55 two-axle truck trips, 54 three-axle truck trips, and 172 four-axle truck trips. The amount of operational fuel use was estimated using CARB's EMFAC2021 model, which provided projections for typical daily fuel usage in San Bernardino County.

Electricity, natural gas, and fuel usage estimates associated with the proposed project are shown in Table T.

61 Environment Planning Development Solutions, Inc. 2022. op. cit.

As shown in Table T, the estimated potential net increase in electricity demand associated with the operation of the proposed project is 612,787 kWh per year. Total electricity consumption in San Bernardino County in 2020 was 15,968.5 GWh (15,968,515,536 kWh). Therefore, operation of the proposed project would increase the annual electricity consumption in San Bernardino County by less than 0.01 percent.

As shown in Table T, the estimated potential net increase in natural gas demand associated with operation of the proposed project is 8,559.3 therms per year. Natural gas consumption in San Bernardino County in 2020 was 527 million therms (527,236,428 therms). Therefore, operation of the proposed project would negligibly increase the annual natural gas consumption in San Bernardino County by less than 0.01 percent.

Table T: Energy Consumption Estimates During Project Operation

Energy Type	Annual Energy Consumption
Existing Uses Operational Energy Consumption	
Electricity Consumption (kWh/year)	623,199.0
Natural Gas Consumption (therms/year)	5,225.9
Proposed Project Operational Energy Consumption	
Electricity Consumption (kWh/year)	1,235,986.0
Natural Gas Consumption (therms/year)	13,785.2
Net Electricity Consumption	**612,787.0**
Net Natural Gas Consumption	**8,559.3**
Existing Uses Automotive Fuel Consumption	
Gasoline (gallons/year)	270,581.1
Diesel Fuel (gallons/year)	150,360.6
Proposed Project Automotive Fuel Consumption	
Gasoline (gallons/year)	203,309.0
Diesel Fuel (gallons/year)	495,545.5
Net Gasoline Consumption	**-67,272.1**
Net Diesel Fuel Consumption	**345,184.9**

Source: Compiled by LSA (January 2023).
kWh = kilowatt-hours

Electrical and natural gas demand associated with project operations would not be considered inefficient, wasteful, or unnecessary in comparison to other similar developments in the region. Furthermore, the proposed project would not conflict with or obstruct a State or local plan for renewable energy or energy efficiency. The project would be required to adhere to all federal, State, and local requirements for energy efficiency, including the Title 24 standards. Title 24 building energy efficiency standards establish minimum efficiency standards related to various building features, including appliances, water and space heating and cooling equipment, building insulation and roofing, and lighting, which would reduce energy usage.

As shown in Table T, fuel consumption associated with the vehicle trips generated by the proposed project would result in a net decrease of approximately 67,272.1 gallons of gasoline and a net increase of approximately 348,184.9 gallons of diesel from existing conditions. This analysis conservatively assumes that all vehicle trips generated as a result of project operation would be new

to San Bernardino County. Based on fuel consumption obtained from EMFAC2021, approximately 321.6 million gallons of diesel and approximately 915.5 million gallons of gasoline will be consumed from vehicle trips in San Bernardino County in 2022. Therefore, vehicle and truck trips associated with the proposed project would increase the annual fuel use in San Bernardino County by approximately less than 0.01 percent for gasoline fuel usage and approximately 0.11 percent for diesel fuel usage. Fuel consumption associated with vehicle trips generated by project operations would not be considered inefficient, wasteful, or unnecessary in comparison to other similar developments in the region.

Conflict with Renewable Energy or Energy Efficiency Plans

In 2002, the Legislature passed SB 1389, which required the CEC to develop an integrated energy plan every two years for electricity, natural gas, and transportation fuels for the Integrated Energy Policy Report. The plan calls for the State to assist in the transformation of the transportation system to improve air quality, reduce congestion, and increase the efficient use of fuel supplies with the least environmental and energy costs. To further this policy, the plan identifies a number of strategies, including assistance to public agencies and fleet operators in implementing incentive programs for ZEVs and their infrastructure needs, and encouragement of urban designs that reduce VMT and accommodate pedestrian and bicycle access.

The CEC's *2021 Integrated Energy Policy Report* and *2022 Integrated Energy Policy Report Update* provide the results of the CEC's assessments of a variety of energy issues facing California. As indicated above, energy usage on the project site during construction would be temporary in nature and would be relatively small in comparison to the overall use in the County. In addition, energy usage associated with operation of the proposed project would be relatively small in comparison to the overall use in San Bernardino County, and the State's available energy resources. Therefore, energy impacts at the regional level would be negligible. Because California's energy conservation planning actions are conducted at a regional level, and because the proposed project's total impact on regional energy supplies would be minor, the proposed project would not conflict with or obstruct California's energy conservation plans as described in the CEC's Integrated Energy Policy Report. Additionally, as demonstrated above, the proposed project would not result in the inefficient, wasteful, and unnecessary consumption of energy. Potential impacts related to conflict with or obstruction of a State or local plan for renewable energy or energy efficiency would be less than significant, and no mitigation is required.

GREENHOUSE GAS IMPACTS

This section describes the potential GHG impacts associated with implementation the proposed project.

Generation of Greenhouse Gas Emissions

This section describes the proposed project's construction- and operational-related GHG emissions and contribution to global climate change. The SCAQMD has not addressed emission thresholds for construction in its *CEQA Air Quality Handbook*; however, the SCAQMD requires quantification and disclosure. Thus, an evaluation of the project's impacts related to the release of GHG emissions for both construction and operational phases of the project is described below.

Short-Term Greenhouse Gas Emissions

Construction activities associated with the proposed project would produce combustion emissions from various sources. During construction, GHGs would be emitted through the operation of construction equipment and from worker and builder supply vendor vehicles, each of which typically use fossil-based fuels to operate. The combustion of fossil-based fuels creates GHGs such as CO_2, CH_4, and N_2O. Furthermore, CH_4 is emitted during the fueling of heavy equipment. Exhaust emissions from on-site construction activities would vary daily as construction activity levels change.

As indicated above, the SCAQMD does not have an adopted threshold of significance for construction-related GHG emissions. However, lead agencies are required to quantify and disclose GHG emissions that would occur during construction. The SCAQMD then requires the construction GHG emissions to be amortized over the life of the project, defined by the SCAQMD as 30 years[62], added to the operational emissions, and compared to the applicable interim GHG significance threshold tier.

Using CalEEMod, it is estimated that the project would generate approximately 690.1 MT CO_2e during construction of the project. When annualized over the 30-year life of the project, annual emissions would be 23.0 MT CO_2e. Table U lists the construction GHG emissions (details are provided in the CalEEMod output in Appendix A). Construction emissions would be temporary in nature and would only occur for the duration of the construction period.

Table U: Construction Greenhouse Gas Emissions

Construction Year	Annual Emissions (MT/yr)			
	CO_2	CH_4	N_2O	CO_2e
2023	428.0	0.1	<0.1	436.7
2024	249.9	<0.1	<0.1	253.4
Total Construction GHG Emissions				**690.1**
Amortized Construction Emissions				**23.0**

Source: Compiled by LSA (January 2023).
CH_4 = methane
CO_2 = carbon dioxide
CO_2e = carbon dioxide equivalent
MT/yr = metric tons per year
N_2O = nitrous oxide

Long-Term Greenhouse Gas Emissions

Long-term GHG emissions are typically generated from mobile sources (e.g., vehicle trips), area sources (e.g., maintenance activities and landscaping), indirect emissions from sources associated with energy consumption, waste sources (land filling and waste disposal), and water sources (water supply and conveyance, treatment, and distribution). Mobile-source GHG emissions would include project-generated vehicle and truck trips to and from the project. Area-source emissions would be associated with activities such as landscaping and maintenance on the project site. Energy source emissions would be generated at off-site utility providers because of increased electricity demand generated by the project. Waste source emissions generated by the proposed project include

62 The SCAQMD has identified the average operational lifespan of buildings to be 30 years. Website: http://www.aqmd.gov/docs/default-source/ceqa/handbook/greenhouse-gases-(ghg)-ceqa-significance-thresholds/ghgattachmente.pdf (accessed November 2022).

energy generated by land filling and other methods of disposal related to transporting and managing project-generated waste. In addition, water source emissions associated with the proposed project are generated by water supply and conveyance, water treatment, water distribution, and wastewater treatment.

Following guidance from the SCAQMD, GHG emissions were estimated for the operational year of 2024 using CalEEMod. Table V shows the calculated GHG emissions for the proposed project.

Table V: Greenhouse Gas Emissions

Emissions Source	Operational Emissions (MT/yr)				
	CO_2	CH_4	N_2O	CO_2e	Percentage of Total
Existing Uses					
Area Sources	<0.1	<0.1	<0.1	0.3	<1
Energy Sources	138.4	<0.1	<0.1	139.1	5
Mobile Sources	2,255.6	<0.1	<0.1	2,327.2	86
Waste Sources	37.2	2.2	0.0	92.1	3
Water Sources	117.8	1.5	<0.1	165.1	6
Total Existing Uses Emissions				**2,723.8**	100
Proposed Project Emissions					
Area Sources	<0.1	<0.1	0.0	<0.1	<1
Energy Sources	292.7	<0.1	<0.1	294.3	6
Mobile Sources – Vehicles and Light Duty Trucks	1,199.1	<0.1	0.1	1,218.8	24
Mobile Sources – Heavy Heavy Duty Trucks	3,099.5	0.1	0.5	3,249.2	65
Waste Sources	37.7	2.2	0.0	93.4	2
Water Sources	124.3	1.5	<0.1	172.5	3
Total Project Operational Emissions				**5,028.2**	**100**
Amortized Construction Emissions				23.0	-
Total Annual Emissions				**5,051.2**	**-**
Total Net Annual Emissions				**2,304.4**	**-**
SCAQMD Threshold				3,000	-
Exceed?				**No**	**-**

Source: Compiled by LSA (January 2023).
CH_4 = methane
CO_2 = carbon dioxide
CO_2e = carbon dioxide equivalent
MT/yr = metric tons per year
N_2O = nitrous oxide
SCAQMD = South Coast Air Quality Management District

As discussed above, a project would have less than significant GHG emissions if it would result in operational-related GHG emissions of less than 3,000 MT CO_2e/yr. Based on the analysis results, the proposed project would result in a net increase of approximately 2,304.4 MT CO_2e/yr. Therefore, operation of the proposed project would not generate significant GHG emissions that would have a significant effect on the environment.

Consistency with Greenhouse Gas Emissions Reduction Plans

An evaluation of the proposed project's consistency with the City's CAP, the County's Greenhouse Gas Reduction Plan, the 2022 Scoping Plan, and the 2020–2045 RTP/SCS is provided below.

Climate Action Plan

As described above, the City adopted a CAP in December 2017. The consistency of the project with the goals of this CAP fulfills the CEQA goal of fully informing local-agency decision-makers of the environmental impact of the project under consideration at a stage early enough to ensure that GHG emissions are addressed. The proposed project would be consistent with the transportation goals of the CAP by providing additional parking options for electric vehicles and carpool/vanpool vehicles. The proposed project would also be consistent with the CAP goal of increasing energy efficiency in new buildings by complying with the latest California Building Code (Title 24), including the latest CALGreen Code standards. Construction of the project would include a diversion of construction waste from landfills to recycling consistent with current local and State standards and CAP goals to increase diversion and reduction of waste. As such, the proposed project would be consistent with applicable CAP goals.

San Bernardino County Regional Greenhouse Gas Reduction Plan

As discussed above, the City of Redlands was a participant in the San Bernardino County Regional Greenhouse Gas Reduction Plan, which identifies the County's vision and goals on reducing GHG emissions in the different cities, local government facilities, and communities. Table W below presents the proposed project's compliance with each reduction measure evaluated for the City of Redlands, as identified in the San Bernardino County Regional Greenhouse Gas Reduction Plan.

Table W: Project Consistency with City of Redlands GHG Reduction Measures

Measure	Description	Project Consistency
Building Energy		
Policies	• **8-A.10:** Integrate trees and shade into the built environment to mitigate issues such as stormwater runoff and the urban heat island effect. • **8-P.1:** Promote energy efficiency and conservation technologies and practices that reduce the use and dependency on nonrenewable resources of energy by both City government and the community. • **8-P.2:** Promote energy awareness community-wide by educating the community regarding energy audits and incentive programs (tax credits, rebates, exchanges, etc.) available for energy conservation. • **8-P.3:** Proactively review and update City plans, resolutions, and ordinances to promote greater energy efficiency in both existing and new construction in regard to site planning, architecture, and landscape design. • **8-A.14**: Seek funding programs to assist low and moderate-income households in energy conservation. • **8-A.12:** Explore participating in new high-efficiency technology programs such as LED lighting for City facilities, safety lighting in parks and other public spaces,	***Not Applicable.*** This measure is not applicable as the City would be responsible for implementing this measure. However, the proposed project would comply with the CALGreen Code, regarding building energy efficiency and other green building standards. In addition, the proposed project would include approximately 81,630 sq ft of ornamental landscaping that would cover 17 percent of the site.

Table W: Project Consistency with City of Redlands GHG Reduction Measures

Measure	Description	Project Consistency
	and LED street lighting conversion for all City-owned streetlights. • **8-P.10:** Demonstrate leadership by reducing the use of energy and fossil fuel consumption in municipal operations, including transportation, waste reduction, and recycling, and by promoting efficient building design and use. • **8-P.9**: Undertake initiatives to enhance sustainability by reducing the community's GHG emissions. • **8-A.20:** Support energy resiliency through a diversified system of energy sources including zero and near-zero emission technologies. • **8-A.21**: Support the development of distributed energy resources (DER), such as combined heat and power (CHP) from microturbines, fuel cells, etc., to assist in local energy security.	
On-Road		
Policies	• **8-P.10:** Demonstrate leadership by reducing the use of energy and fossil fuel consumption in municipal operations, including transportation, waste reduction, and recycling, and by promoting efficient building design and use. • **8-A.7:** Seek alternatives to reduce non-renewable energy consumption attributable to transportation within the Planning Area. Seek funding and other assistance from the South Coast Air Quality Management District (AQMD) for installation of electric vehicle charging stations at appropriate locations throughout the City. • **4-P.44**: Provide choices for travel options, including walking, biking, vehicular, and transit. • **4-P.52**: Encourage stops of larger trains (Metrolink) in stations that can adequately accommodate their size and have greater availability of and access to parking. • **4-P.41**: Foster a connected, accessible, and active community by creating attractively designed pedestrian- and transit-oriented villages with a mix of uses in a compact area. • **4-A.105:** Create an active and compact transit-oriented core with a mix of residential and commercial/office uses. Allow for the reuse of commercial sites as office centers. San Bernardino Council of Governments Reduction Profiles—Redlands San Bernardino County Regional Greenhouse Gas Reduction Plan 3-156 March 2021 ICF λ 4-A.101: Implement bicycle route improvements that provide intra-City and regional connections, connecting to Loma Linda, the City of San Bernardino, and north to the Santa Ana River Trail. • **4-A.100**: Provide streetscape improvements along the major corridors of California Street and Redlands	***Not Applicable.*** The proposed project would include a speculative warehouse building. Future tenants of the building would implement mass transit encouragement measures as applicable.

Table W: Project Consistency with City of Redlands GHG Reduction Measures

Measure	Description	Project Consistency
	Boulevard to enhance comfort and safety for all modes of travel. • **4-A.116**: Implement bicycle route improvements that provide strong east-west connections to other Transit Villages as well as north-south connections to improve access to existing neighborhoods to the north. Routes would include the Orange Blossom Trail, the Lugonia Trail on New York Street, and a route along Texas Street. • **8-P.9:** Undertake initiatives to enhance sustainability by reducing the community's GHG emissions. .	

Table W: Project Consistency with City of Redlands GHG Reduction Measures

Measure	Description	Project Consistency
Off Road		
Policies	• **8-P.9:** Undertake initiatives to enhance sustainability by reducing the community's GHG emissions.	***Consistent.*** The proposed project would comply with the CALGreen Code, regarding water conservation and green building standards. In addition, the proposed project would include electric vehicle spaces.
Solid Waste Management		
Policies	• **8-P.10:** Demonstrate leadership by reducing the use of energy and fossil fuel consumption in municipal operations, including transportation, waste reduction, and recycling, and by promoting efficient building design and use. • **8-A.42:** Adopt a construction and demolition waste recycling ordinance that requires, except in unusual circumstances, all construction, demolition and renovation projects that meet a certain size or dollar value to divert from landfills 100 percent of all cement concrete and asphalt concrete, and an average of at least 75 percent of all remaining non-hazardous debris	***Consistent.*** The proposed project would be consistent with County Solid Waste and State requirements for waste reduction.
Wastewater Treatment		
Policies	• **8-A.29:** Reduce consumption of carbon-based fuels for conveyance and treatment of water and wastewater. • **8-A.27**: Seek funding sources to implement renewable energy sources determined to be feasible for water and wastewater operations.	***Consistent.*** The proposed project would comply with the CALGreen Code, regarding water conservation and green building standards.
Water Conveyance		
	• **8-P.4**: Promote residential and commercial water conservation using multiple strategies. • **8-P.5:** Conserve the highest quality of water reasonably available for domestic use. • **8-P.6:** Minimize dependence on imported water through efficient use of local surface sources, using wise groundwater management practices, conservation measures, and the use of reclaimed wastewater and non-potable water for irrigation of landscaping and agriculture, where feasible. • **8-P.8**: Promote sustainability by reducing the community's greenhouse gas (GHG) emissions and fostering green development patterns – including buildings, sites, and landscapes.	***Not Applicable.*** This measure is not applicable as the City would be responsible for implementing this measure. However, the proposed project would comply with the CALGreen Code, regarding water conservation and green building standards.

Source: Compiled by LSA (November 2022).
CALGreen Code = California Green Building Standards Code
GHG = greenhouse gas
sq ft = square feet

2022 Scoping Plan

The following discussion evaluates the proposed project according to the goals of the 2022 Scoping Plan, EO B-30-15, SB 32, and AB 197.

EO B-30-15 added the immediate target of reducing GHG emissions to 40 percent below 1990 levels by 2030. CARB released a second update to the Scoping Plan, the 2017 Scoping Plan, to reflect the 2030 target set by EO B-30-15 and codified by SB 32. SB 32 affirms the importance of addressing climate change by codifying into statute the GHG emissions reductions target of at least 40 percent below 1990 levels by 2030 contained in EO B-30-15. SB 32 builds on AB 32 and keeps the State on the path toward achieving its 2050 objective of reducing emissions to 80 percent below 1990 levels. The companion bill to SB 32, AB 197, provides additional direction to the CARB related to the adoption of strategies to reduce GHG emissions. Additional direction in AB 197 intended to provide easier public access to air emissions data that are collected by CARB was posted in December 2016.

In addition, the 2022 Scoping Plan assesses progress toward the statutory 2030 target, while laying out a path to achieving carbon neutrality no later than 2045. The 2022 Scoping Plan focuses on outcomes needed to achieve carbon neutrality by assessing paths for clean technology, energy deployment, natural and working lands, and others, and is designed to meet the State's long-term climate objectives and support a range of economic, environmental, energy security, environmental justice, and public health priorities.

The 2022 Scoping Plan focuses on building clean energy production and distribution infrastructure for a carbon-neutral future, including transitioning existing energy production and transmission infrastructure to produce zero-carbon electricity and hydrogen, and utilizing biogas resulting from wildfire management or landfill and dairy operations, among other substitutes. The 2022 Scoping Plan states that in almost all sectors, electrification will play an important role. The 2022 Scoping Plan evaluates clean energy and technology options and the transition away from fossil fuels, including adding four times the solar and wind capacity by 2045 and about 1,700 times the amount of current hydrogen supply. As discussed in the 2022 Scoping Plan, EO N-79-20 requires that all new passenger vehicles sold in California will be zero-emission by 2035, and all other fleets will have transitioned to zero-emission as fully possible by 2045, which will reduce the percentage of fossil fuel combustion vehicles.

Energy efficient measures are intended to maximize energy efficiency building and appliance standards, pursue additional efficiency efforts including new technologies and new policy and implementation mechanisms, and pursue comparable investment in energy efficiency from all retail providers of electricity in California. In addition, these measures are designed to expand the use of green building practices to reduce the carbon footprint of California's new and existing inventory of buildings. The proposed project would be required to comply with the latest Title 24 standards of the CCR, established by the CEC, regarding energy conservation and green building standards.

Water conservation and efficiency measures are intended to continue efficiency programs and use cleaner energy sources to move and treat water. Increasing the efficiency of water transport and reducing water use would reduce GHG emissions. As noted above, the proposed project would be required to comply with the latest Title 24 standards of the CCR, which includes a variety of different

measures, including reduction of wastewater and water use. Therefore, the proposed project would not conflict with any of the water conservation and efficiency measures.

The goal of transportation and motor vehicle measures is to develop regional GHG emissions reduction targets for passenger vehicles. The second phase of Pavley standards will reduce GHG emissions from new cars by 34 percent from 2016 levels by 2025, resulting in a 3 percent decrease in average vehicle emissions for all vehicles by 2020. Vehicles traveling to the project site would comply with the Pavley II (LEV III) Advanced Clean Cars Program. Therefore, the proposed project would not conflict with the identified transportation and motor vehicle measures.

2020-2045 RTP/SCS

SCAG's RTP/SCS identifies that land use strategies that focus on new housing and job growth in areas served by high quality transit and other opportunity areas would be consistent with a land use development pattern that supports and complements the proposed transportation network. The core vision in the 2020–2045 RTP/SCS is to better manage the existing transportation system through design management strategies, integrate land use decisions and technological advancements, create complete streets that are safe to all roadway users, preserve the transportation system, and expand transit and foster development in transit oriented communities. The 2020–2045 RTP/SCS contains transportation projects to help more efficiently distribute population, housing, and employment growth, as well as forecast development that is generally consistent with regional-level general plan data. The forecasted development pattern, when integrated with the financially constrained transportation investments identified in the 2020–2045 RTP/SCS, would reach the regional target of reducing GHG emissions from autos and light-duty trucks by 19 percent by 2035 (compared to 2005 levels). The 2020–2045 RTP/SCS does not require that local general plans, specific plans, or zoning be consistent with the 2020–2045 RTP/SCS, but provides incentives for consistency for governments and developers.

Implementing SCAG's RTP/SCS will greatly reduce the regional GHG emissions from transportation, helping to achieve statewide emissions reduction targets. As stated above, the proposed project would result in a minimal increase in daily trips compared to existing conditions and would in no way conflict with the stated goals of the RTP/SCS; therefore, the proposed project would not interfere with SCAG's ability to achieve the region's GHG reduction target of 19 percent below 2005 per capita emissions levels by 2035. Furthermore, the proposed project is not regionally significant per *State CEQA Guidelines* Section 15206 and as such, it would not conflict with the SCAG RTP/SCS targets since those targets were established and are applicable on a regional level.

Based on the nature of the proposed project, it is anticipated that implementation of the proposed project would not interfere with SCAG's ability to implement the regional strategies outlined in the RTP/SCS.

CONCLUSIONS

Based on the analysis presented above, the proposed project would not conflict with or obstruct implementation of SCAQMD air quality plans. In addition, construction and operation of the proposed project would not result in the generation of criteria air pollutants that would exceed SCAQMD thresholds of significance. With implementation of Mitigation Measure AIR-1, the proposed project is not expected to produce significant emissions that would affect nearby sensitive receptors. In addition, the proposed project would not result in a potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources during project construction or operation and would not conflict with or obstruct a State or local plan for renewable energy or energy efficiency. The project would also not result in objectionable odors affecting a substantial number of people. With regard to GHGs, the project would not result in substantial emissions during construction or operation. Additionally, the proposed project would not conflict with the objectives embodied in EO B-30-15, SB 32, or AB 197. Therefore, the proposed project's incremental contribution to cumulative GHG emissions would not be cumulatively considerable.

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Total project site is 10.98 acres, project consist of a 197,397 sq ft warehouse with 10% cold storage

Construction Phase - Construction would start in June 2023 and end in May 2024. Overlap of building construction and architectural coating phases.

Off-road Equipment - Default equipment

Demolition - Demolition of existing buildings

Grading - Project would require the import of 24,477 CY of soil

Vehicle Trips - Based on a trip generation of 96 ADT for Refrigerated Warehouse and 866 ADT for Unrefrigerated Warehouse (excluding 4-axle truck trips).

Construction Off-road Equipment Mitigation - Project will comply with SCAQMD rule 403, use of Tier 2 equipment

301 Tennessee Street Warehouse Project - Vehicles and Light Duty Trucks - San Bernardino-South Coast County, Annual

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

Fleet Mix - Based on estimated fleet mix (for passenger vehicles - assuming 50% LDA, 25% LDT1, and 25% LDT2, for 2-axle trucks, assuming 50% LHD1 and

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Total project site is 10.98 acres, project consist of a 197,397 sq ft warehouse with 10% cold storage

Construction Phase - Construction would start in June 2023 and end in May 2024. Overlap of building construction and architectural coating phases.

Off-road Equipment - Default equipment

Demolition - Demolition of existing buildings

Grading - Project would require the import of 24,477 CY of soil

Vehicle Trips - Based on a trip generation of 96 ADT for Refrigerated Warehouse and 866 ADT for Unrefrigerated Warehouse (excluding 4-axle truck trips).

Construction Off-road Equipment Mitigation - Project will comply with SCAQMD rule 403, use of Tier 2 equipment

301 Tennessee Street Warehouse Project - Vehicles and Light Duty Trucks - San Bernardino-South Coast County, Summer

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

Fleet Mix - Based on estimated fleet mix (for passenger vehicles - assuming 50% LDA, 25% LDT1, and 25% LDT2, for 2-axle trucks, assuming 50% LHD1 and

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Total project site is 10.98 acres, project consist of a 197,397 sq ft warehouse with 10% cold storage

Construction Phase - Construction would start in June 2023 and end in May 2024. Overlap of building construction and architectural coating phases.

Off-road Equipment - Default equipment

Demolition - Demolition of existing buildings

Grading - Project would require the import of 24,477 CY of soil

Vehicle Trips - Based on a trip generation of 96 ADT for Refrigerated Warehouse and 866 ADT for Unrefrigerated Warehouse (excluding 4-axle truck trips).

Construction Off-road Equipment Mitigation - Project will comply with SCAQMD rule 403, use of Tier 2 equipment

301 Tennessee Street Warehouse Project - Vehicles and Light Duty Trucks - San Bernardino-South Coast County, Winter

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

Fleet Mix - Based on estimated fleet mix (for passenger vehicles - assuming 50% LDA, 25% LDT1, and 25% LDT2, for 2-axle trucks, assuming 50% LHD1 and

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Total project site is 10.98 acres, project consist of a 197,397 sq ft warehouse with 10% cold storage

Construction Phase - Construction would start in June 2023 and end in May 2024. Overlap of building construction and architectural coating phases.

Off-road Equipment - Default equipment

Demolition - Demolition of existing buildings

Grading - Project would require the import of 24,477 CY of soil

Vehicle Trips - Based on a trip generation of 25 ADT for Refrigerated Warehouse and 149 ADT for Unrefrigerated Warehouse (4-axle truck trips only) and assuming a 40-mile trip length.

Construction Off-road Equipment Mitigation - Project will comply with SCAQMD rule 403, use of Tier 2 equipment

301 Tennessee Street Warehouse Project - Heavy Heavy Duty Trucks - San Bernardino-South Coast County, Annual

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

Fleet Mix - 100% HHDT trips.

City Park	1.86	Acre	1.86	84,845.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	32
Climate Zone	10			**Operational Year**	2024
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	390.98	**CH4 Intensity (lb/MWhr)**	0.033	**N2O Intensity (lb/MWhr)**	0.004

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Total project site is 10.98 acres, project consist of a 197,397 sq ft warehouse with 10% cold storage

Construction Phase - Construction would start in June 2023 and end in May 2024. Overlap of building construction and architectural coating phases.

Off-road Equipment - Default equipment

Demolition - Demolition of existing buildings

Grading - Project would require the import of 24,477 CY of soil

Vehicle Trips - Based on a trip generation of 25 ADT for Refrigerated Warehouse and 149 ADT for Unrefrigerated Warehouse (4-axle truck trips only) and assuming a 40-mile trip length.

Construction Off-road Equipment Mitigation - Project will comply with SCAQMD rule 403, use of Tier 2 equipment

301 Tennessee Street Warehouse Project - Heavy Heavy Duty Trucks - San Bernardino-South Coast County, Summer

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

Fleet Mix - 100% HHDT trips.

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Refrigerated Warehouse-No Rail	19.74	1000sqft	2.15	19,740.00	0
Unrefrigerated Warehouse-No Rail	177.66	1000sqft	4.50	177,657.00	0
Parking Lot	267.00	Space	2.47	106,800.00	0
City Park	1.86	Acre	1.86	84,845.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	32
Climate Zone	10			**Operational Year**	2024
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	390.98	**CH4 Intensity (lb/MWhr)**	0.033	**N2O Intensity (lb/MWhr)**	0.004

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Total project site is 10.98 acres, project consist of a 197,397 sq ft warehouse with 10% cold storage

Construction Phase - Construction would start in June 2023 and end in May 2024. Overlap of building construction and architectural coating phases.

Off-road Equipment - Default equipment

Demolition - Demolition of existing buildings

Grading - Project would require the import of 24,477 CY of soil

Vehicle Trips - Based on a trip generation of 25 ADT for Refrigerated Warehouse and 149 ADT for Unrefrigerated Warehouse (4-axle truck trips only) and assuming a 40-mile trip length.

Construction Off-road Equipment Mitigation - Project will comply with SCAQMD rule 403, use of Tier 2 equipment

301 Tennessee Street Warehouse Project - Heavy Heavy Duty Trucks - San Bernardino-South Coast County, Winter

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

Fleet Mix - 100% HHDT trips.

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Refrigerated Warehouse-No Rail	19.74	1000sqft	2.15	19,740.00	0
Unrefrigerated Warehouse-No Rail	177.66	1000sqft	4.50	177,657.00	0
Parking Lot	267.00	Space	2.47	106,800.00	0
City Park	1.86	Acre	1.86	84,845.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	32
Climate Zone	10			**Operational Year**	2024
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	390.98	**CH4 Intensity (lb/MWhr)**	0.033	**N2O Intensity (lb/MWhr)**	0.004

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Total project site is 10.98 acres, project consist of a 197,397 sq ft warehouse with 10% cold storage

Construction Phase - Construction would start in June 2023 and end in May 2024. Overlap of building construction and architectural coating phases.

Off-road Equipment - Default equipment

Demolition - Demolition of existing buildings

Grading - Project would require the import of 24,477 CY of soil

Vehicle Trips - Based on a trip generation of 96 ADT for Refrigerated Warehouse and 866 ADT for Unrefrigerated Warehouse

Construction Off-road Equipment Mitigation - Project will comply with SCAQMD rule 403, use of Tier 2 Level 3 DPF equipment

Fleet Mix - Based on estimated trip generation

301 Tennessee Street Warehouse Project - San Bernardino-South Coast County, Annual

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Unrefrigerated Warehouse-No Rail	193.47	1000sqft	4.44	193,469.00	0
Single Family Housing	1.00	Dwelling Unit	0.32	1,800.00	3

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	32
Climate Zone	10			**Operational Year**	2022
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	390.98	**CH4 Intensity (lb/MWhr)**	0.033	**N2O Intensity (lb/MWhr)**	0.004

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Project site is currently developed with a single home and a 193,469 sq ft warehouse

Construction Phase - Operational run only

Grading -

Vehicle Trips - Based on trip generation for the proposed project, warehouse would have 919 ADT and single-family house would have 9 ADT

Fleet Mix - Based on fleet mix distribution from traffic analysis of 53 medium trucks and 161 heavy trucks. Default fleet mix for single-family house.

Energy Use - Using historical data

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Project site is currently developed with a single home and a 193,469 sq ft warehouse

Construction Phase - Operational run only

Grading -

Vehicle Trips - Based on trip generation for the proposed project, warehouse would have 919 ADT and single-family house would have 9 ADT

Fleet Mix - Based on fleet mix distribution from traffic analysis of 53 medium trucks and 161 heavy trucks. Default fleet mix for single-family house.

Energy Use - Using historical data

301 Tennessee Street Warehouse Project - Existing Uses

San Bernardino-South Coast County, Winter

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Unrefrigerated Warehouse-No Rail	193.47	1000sqft	4.44	193,469.00	0
Single Family Housing	1.00	Dwelling Unit	0.32	1,800.00	3

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	32
Climate Zone	10			**Operational Year**	2022
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	390.98	**CH4 Intensity (lb/MWhr)**	0.033	**N2O Intensity (lb/MWhr)**	0.004

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Project site is currently developed with a single home and a 193,469 sq ft warehouse

Construction Phase - Operational run only

Grading -

Vehicle Trips - Based on trip generation for the proposed project, warehouse would have 919 ADT and single-family house would have 9 ADT

Fleet Mix - Based on fleet mix distribution from traffic analysis of 53 medium trucks and 161 heavy trucks. Default fleet mix for single-family house.

Energy Use - Using historical data
