Construction Truck and Construction Worker Vehicle Fuel Efficiency				
		EMFAC 2021 Outputs		
Vehicle Type	Vehicle Class	Fuel Consumption (1,000 gallons/day)	VMT (miles/ day)	Fuel Efficency (miles/gallon)
Construction Truck	MHDT	88.8	797273.2	9.0
	HHDT	711.5	4294976.0	6.0
	HHDT/MHDT	-	-	7.5
Construction Worker Vehicle	LDA	1140.9	33073440.0	29.0
	LDT1	104.7	2503906	23.9
	LDT2	561.9	13160213	23.4
	Worker Mix	-	-	26.3

Notes:

[1] For construction trucks assumes 50 percent HHDT and 50 percent MHDT vehicles, consistent with assumptions in CalEEMod for hauling trucks. For construction worker vehicles assumes 50 percent LDA, 25 percent LDT1, and 25 percent LDT2 vehicles, consistent with assumptions in CalEEMod for worker vehicles.

[2] EMFAC2021 was run for San Bernardino County for the construction year 2023. Data was aggregated over all vehicle model years and speed bins.

[3] The fuel efficiency was calculated by dividing the VMT (miles/day) by the fuel consumption (gallons/day).

Construction Vehicle Fuel Use - Diesel Vehicles						
Phase	Trip Type	Total Trips	Trip Length (miles)	Total VMT	Diesel Fuel Effiency (miles/gallon)	Fuel Usage (gallons/year)
Demolition	Hauling	880	20	17600	6.0	2933.3
Grading	Hauling	3060	20	61200	6.0	10200.0
Building Construction	Vendor	18048	6.9	124531.2	7.5	16604.2
					Total	**29737.5**

Diesel

[1] Assumes 100 percent HHDT vehicles for haul trucks and 50 percent HHDT/50 percent MHDT vehicles for MHDT, consistent with assumptions in CalEEMod.

[2] EMFAC2021 was run for San Bernardino County for the construction year 2023. Data was aggregated over all vehicle model years and speed bins.

[3] The fuel efficiency was calculated by dividing the VMT (miles/day) by the fuel consumption (gallons/day).

USGS Quadrangle: Redlands, Calif., 7.5' quadrangle (Rancho San Bernardino land grant; T1S R3W, San Bernardino Baseline and Meridian)

Project Size: Approximately 11 acres

Keywords: Western Redlands area; eastern San Bernardino Valley; Phase I cultural resources survey; Site 3693-1H*: former La-Z-Boy plant at 301 Tennessee Street, ca. 1965; Site 3693-2H*: former Alex and Sadie Kimm residence at 360 Kansas Street, ca. 1950; Architect Leon Armantrout; no "historical resources" under CEQA provisions.

* *Temporary designations, pending assignment of permanent identification numbers*

EXECUTIVE SUMMARY

Between November 2022 and February 2023, at the request of MIG, Inc., CRM TECH performed a cultural resources study on approximately 11 acres of previously developed urban land in the western portion of the City of Redlands, San Bernardino County, California. The subject property of the study consists of Assessor's Parcel Numbers 0292-192-11 and 0292-192-14, located at the northwest corner of Tennessee Street and State Street, in a portion of the Rancho San Bernardino land grant lying within what would be the southeast quarter of Section 28, T1S R3W, San Bernardino Baseline and Meridian.

The study is part of the environmental review process for a proposed warehouse project that will require the demolition of the existing buildings on the property, including a former La-Z-Boy furniture manufacturing plant, a single-family residence, and several ancillary buildings. The City of Redlands, as the lead agency for the project, required the study in compliance with the California Environmental Quality Act (CEQA). The purpose of the study is to provide the City with the necessary information and analysis to determine whether the proposed project would cause substantial adverse changes to any "historical resources," as defined by CEQA, that may exist in or near the project area.

In order to identify such resources, CRM TECH conducted a historical/archaeological resources records search, initiated a Native American Sacred Lands File search, consulted with local historical organizations, pursued historical background research, and carried out an intensive-level field survey and field inspection of the buildings. The results of these research procedures indicate that the former La-Z-Boy furniture manufacturing plant dates to 1965 and operated at this location until 2019, while the residence was built around 1950.

Although both buildings have been expanded and altered, they retain sufficient historical characteristics to relate to their periods of origin and were therefore recorded into the California Historical Resources Inventory with the temporary designations of 3963-1H and -2H, pending assignment of permanent identification numbers. They do not, however, appear to be eligible for listing in the California Register of Historical Resources or for local designation by the City of Redlands. Therefore, they do not constitute "historical resources" for CEQA-compliance purposes.

No other potential "historical resources" were encountered within or adjacent to the project area. However, the State of California Native American Heritage Commission stated that the Sacred Lands File maintained by the commission indicated the presence of unspecified Native American cultural resource(s) in the general vicinity of the project location and referred further inquiry to the local Native American tribes. According to CEQA guidelines, the identification of potential "tribal cultural resources" is beyond the scope of this study and needs to be addressed through government-to-government consultations between the City of Redlands and the pertinent Native American groups pursuant to Assembly Bill (AB) 52.

Based on these findings, CRM TECH recommends to the City of Redlands a tentative conclusion of *No Impact* on cultural resources, pending completion of the AB 52 consultation process. No additional cultural resources investigation is recommended for the project unless development plans undergo such changes as include areas not covered by this study. However, if buried cultural materials are encountered during any earth-moving operations associated with the project, all work within 50 feet of the discovery should be halted or diverted until a qualified archaeologist can evaluate the nature and significance of the finds.

INTRODUCTION

Between November 2022 and February 2023, at the request of MIG, Inc., CRM TECH performed a cultural resources study on approximately 11 acres of previously developed urban land in the western portion of the City of Redlands, San Bernardino County, California (Fig. 1). The subject property of the study consists of Assessor's Parcel Numbers (APN) 0292-192-11 and 0292-192-14, located at the northwest corner of Tennessee Street and State Street, in a portion of the Rancho San Bernardino land grant lying within what would be the southeast quarter of Section 28, T1S R3W, San Bernardino Baseline and Meridian (Figs. 2, 3).

The study is part of the environmental review process for a proposed warehouse project that will require the demolition of the existing buildings on the property, including a former La-Z-Boy furniture manufacturing plant, a single-family residence, and several ancillary buildings. The City of Redlands, as the lead agency for the project, required the study in compliance with the California Environmental Quality Act (CEQA; PRC §21000, et seq.). The purpose of the study is to provide the City with the necessary information and analysis to determine whether the proposed project would cause substantial adverse changes to any "historical resources," as defined by CEQA, that may exist in or near the project area.

In order to identify such resources, CRM TECH conducted a historical/archaeological resources records search, initiated a Native American Sacred Lands File search, consulted with local historical organizations, pursued historical background research, and carried out an intensive-level field survey and field inspection of the buildings. The following report is a complete account of the methods, results, and conclusion of the study. The qualifications of personnel who participated in the study are presented in Appendix 1.

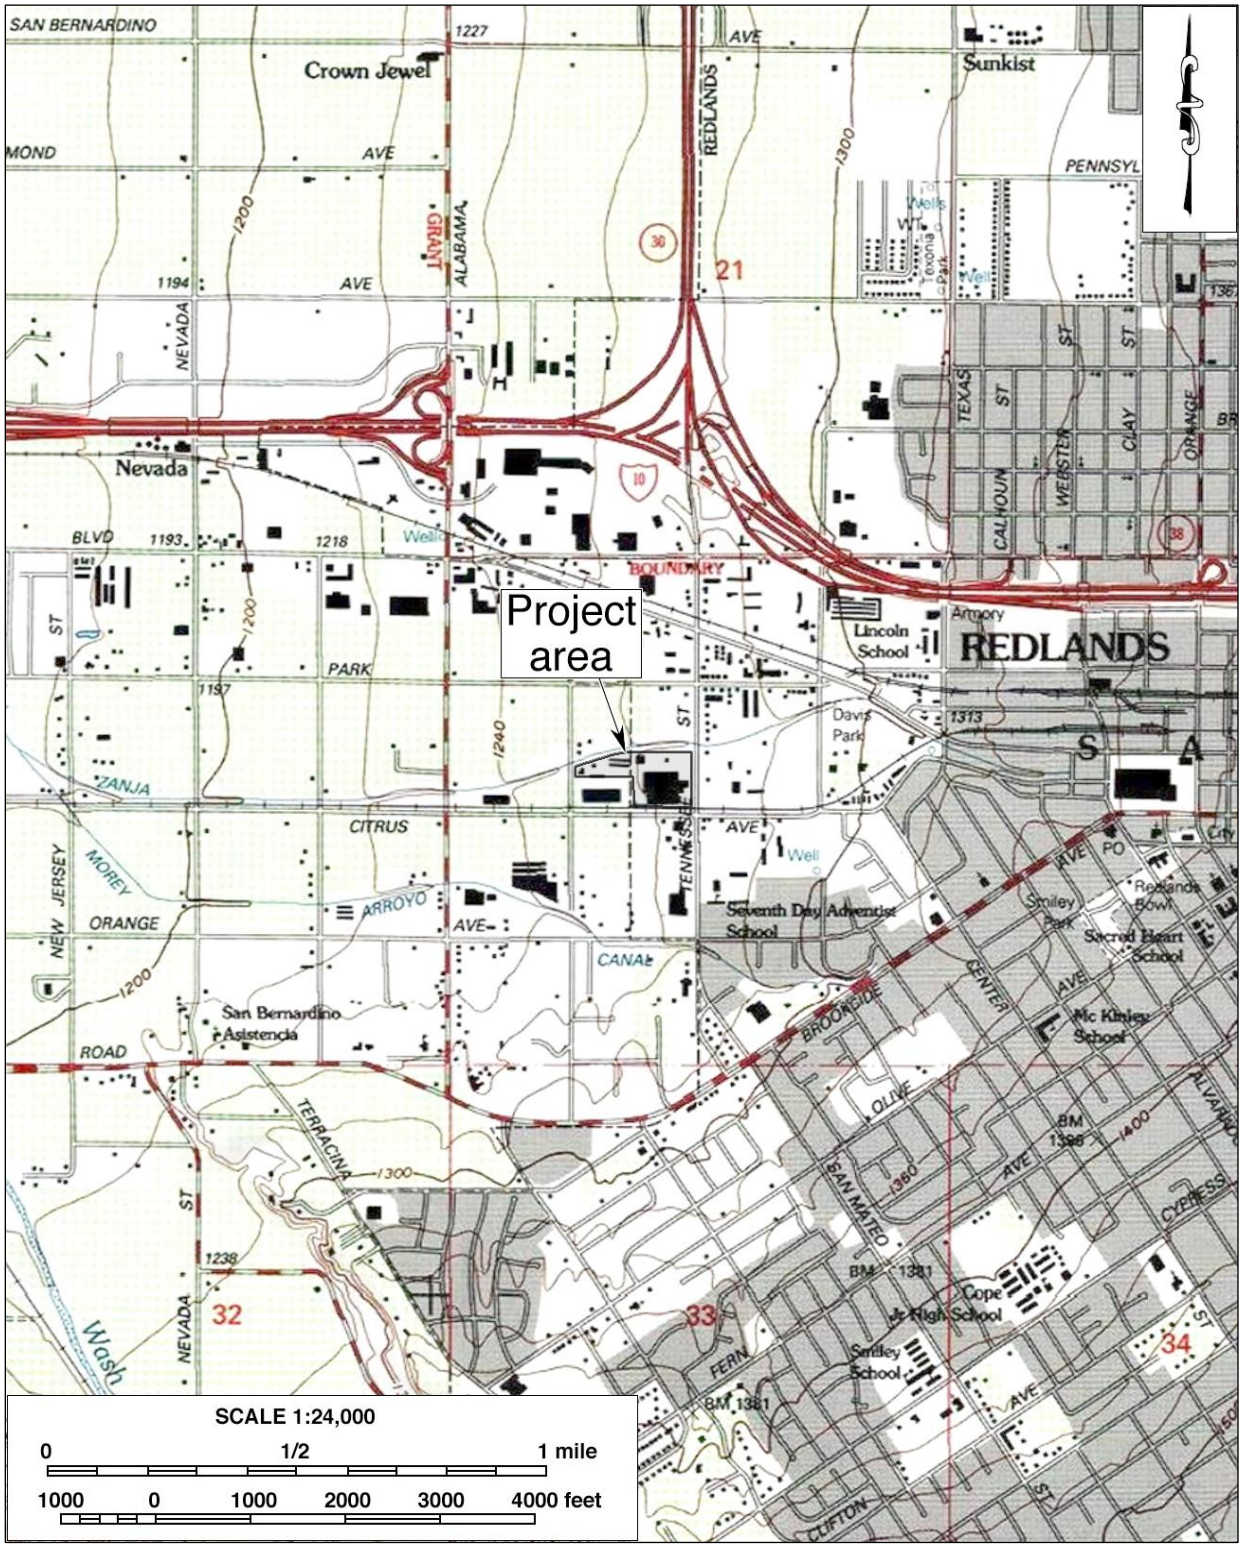

Figure 2. Location and configuration of the project area. (Based on USGS Redlands, Calif., 7.5' quadrangle [USGS 1996])

Figure 3. Recent satellite image of the project area. (Based on Google Earth imagery)

SETTING

CURRENT NATURAL SETTING

The City of Redlands is situated in the eastern San Bernardino Valley, a broad inland valley bound by the San Gabriel and San Bernardino mountain ranges on the north and a series of low rocky hills on the south. Geologically, the San Bernardino Valley lies on the northern rim of the Peninsular Ranges geomorphic province, adjacent to the Transverse Ranges province. The natural environment of the region is characterized by its temperate Mediterranean climate. Precipitation is typically less than 20 inches annually, falling mostly between November and April.

The approximately 11-acre project area is an irregularly shaped tract of commercial property bounded on the east by Tennessee Street, on the south by State Street, on the west by Kansas Street, and on the north by the "Mission Zanja," a drainage channel bearing a name that often causes confusion with the historic Mill Creek Zanja further to the south. The main building of the former La-Z-Boy furniture manufacturing plant and two associated smaller buildings occupy the eastern two-thirds of the property, and the modest single-family residence stands in the western portion along Kansas Street (Figs. 4, 5). The surrounding properties are primarily commercial in character.

Elevations in the project area range approximately from 1,245 feet to 1,260 feet above mean sea level over relatively level terrain. Vegetation consists mostly of introduced species, such as eucalyptus trees and a string of lemon trees along part of the northern border and landscaping plants near the buildings, including pomegranate and gum trees around the residence, along with various small grasses and shrubs. Surface soils over most of the project area consist of medium brown, fine- to medium-grained sands.

Figure 5. Eastern portion of the project area (APN 0292-192-11). (Photograph taken November 17, 2022; view to the south)

CULTURAL SETTING

Prehistoric Context

The earliest evidence of human occupation in inland southern California was discovered below the surface of an alluvial fan in the northern Lakeview Mountains overlooking the San Jacinto Valley, with radiocarbon dates clustering around 9,500 B.P. (Horne and McDougall 2008). Another site found near the shoreline of Lake Elsinore, close to the confluence of Temescal Wash and the San Jacinto River, yielded radiocarbon dates between 8,000 and 9,000 B.P. (Grenda 1997). Additional sites with isolated Archaic dart points, bifaces, and other associated lithic artifacts from the same age range have been found in the nearby Cajon Pass area, typically atop knolls with good viewsheds (Basgall and True 1985; Goodman and McDonald 2001; Goodman 2002; Milburn et al. 2008).

The cultural history of southern California has been summarized into numerous chronologies, including work by Chartkoff and Chartkoff (1984), Warren (1984), and others. The prehistory of Riverside County specifically has been addressed by O'Connell et al. (1974), McDonald, et al. (1987), Keller and McCarthy (1989), Grenda (1993), Goldberg (2001), and Horne and McDougall (2008). Although the beginning and ending dates of different cultural horizons vary regionally, the general prehistory framework for inland southern California can be divided into three periods:

- Paleoindian Period (ca. 18,000-9,000 B.P.): Native people of this period created fluted spearhead bases designed to be hafted to wooden shafts. The distinctive method of thinning bifaces and spearhead preforms by removing long, linear flakes leave diagnostic Paleoindian markers at tool-making sites. Other artifacts associated with the Paleoindian toolkit include choppers, cutting tools, retouched flakes, and perforators. Sites from this period are sparse across the landscape and most are deeply buried.

- Archaic Period (ca. 9,000-1,500 B.P.): Archaic sites are characterized by abundant lithic scatters of considerable size with many biface thinning flakes, bifacial preforms broken during manufacture, and well-made groundstone bowls and basin metates. As a product of making dart points, many biface thinning waste flakes were generated at individual production stations, which is a diagnostic feature of Archaic sites.
- Late Prehistoric Period (ca. 1,500 B.P.-contact): Sites from this period typically contain small lithic scatters from the manufacture of small arrow points, expedient groundstone tools such as tabular metates and unshaped manos, wooden mortars with stone pestles, acorn or mesquite bean granaries, ceramic vessels, shell beads suggestive of extensive trading networks, and steatite implements such as pipes and arrow shaft straighteners.

Ethnohistoric Context

The Redlands area lies in the traditional homeland of the Serrano Indians, although the Native population at the time of European contact are believed to have been Gabrielino from the San Gabriel Valley, who were later succeeded by a Mountain Cahuilla group from the San Jacinto and Santa Rosa Mountains around 1846 (Strong 1929:8). Serrano ancestral territory is centered in the San Bernardino Mountains, but also includes a portion of the San Bernardino Valley and the southern rim of the Mojave Desert, extending from today's Victorville eastward to Twentynine Palms. "Serrano" derives from a Spanish term meaning "mountaineer" or "highlander." The basic written sources on Serrano culture are Kroeber (1925), Strong (1929), and Bean and Smith (1978).

Prior to European contact, Serrano were primarily hunters and gatherers and occasional fishers, who settled near where flowing water emerged from the mountains. They were loosely organized into exogamous clans led by hereditary heads, and the clans in turn were affiliated with one of two exogamous moieties. The exact nature of the clans, their structure, function, and number are not known, except that each clan was the largest autonomous political and landholding unit, the core of which was the patrilineage. There was no pan-tribal political union among the clans. Despite their linguistic differences, Serrano, Gabrielino and Cahuilla societies shared many characteristics in social organization and material culture.

Although contact with Europeans may have occurred as early as 1771 or 1772, Spanish influence on Serrano lifeways was minimal until the 1810s, when a mission *asistencia* was established in the vicinity of present-day Redlands. Between then and the end of the mission era in 1834, most of the Serrano in the western portion of their traditional territory were removed to the nearby missions. In the eastern portion, a series of punitive expeditions in 1866-1870 resulted in the death or displacement of almost all remaining Serrano population in the San Bernardino Mountains. Today, most Serrano descendants are affiliated with the Yuhaaviatam of San Manuel Nation (formerly known as the San Manuel Band of Mission Indians), the Morongo Band of Mission Indians, or the Serrano Nation of Indians.

Historic Context

The San Bernardino Valley, including the Redlands area, received its first European visitors in 1771, when a small force of Spanish soldiers traveled through the area under the command of Pedro Fages, the military *comandante* of Alta California (Beck and Haase 1974:15). After the establishment of Mission San Gabriel that year, the San Bernardino Valley nominally became a part of the vast

landholdings of that mission. The name "San Bernardino" was bestowed on the valley when the San Bernardino *Asistencia*, along with a mission rancho bearing the same name, was officially established in 1819, originally on the north side of present-day Mission Road in nearby Loma Linda (Lerch and Haenszel 1981).

Historically, the project area was located on the periphery of "Old San Bernardino," the site of the earliest non-Native settlement in the eastern San Bernardino Valley. It was centered around the adobe storehouse of Rancho San Bernardino and extended from the easternmost portion of Loma Linda to the westernmost portion of Redlands (Hall 1888). In 1842, after secularization of the mission system, the Mexican authorities in Alta California granted Rancho San Bernardino, along with several other adjacent former mission ranchos, to members of a prominent Los Angeles family, the Lugos (Schuiling 1984:34). After nine years of cattle raising on their 35,000-acre domain, the Lugo family sold the entire rancho in 1851 to Amasa M. Lyman and Charles C. Rich, leaders of a Mormon colony that was to become today's City of San Bernardino (*ibid*.:45).

In the early 1880s, Frank E. Brown and Edward G. Judson purchased a portion of the rancho and combined it with other land acquisitions to form the town of Redlands (Schuiling 1984:86). To ensure a reliable water supply for the new colony, in 1883-1884 Brown and Judson constructed the Bear Valley Reservoir in the San Bernardino Mountains for the exclusive use of Redlands settlers (*ibid.*). Amid the great southern California land boom of the 1880s and the thriving citrus industry, the Redlands colony incorporated in 1888 and soon became the best-known winter retreat in the nation (*ibid.*:87). An influx of winter residents from the eastern United States perpetuated Redlands' image as an affluent city characterized by vast citrus groves surrounding elegant mansions of gentlemen farmers.

In the mid-20th century, and particularly after World War II, the expansive citrus groves increasingly gave way urban expansion and increasing diversification of Redlands' economic interests. After U.S. Highway 99 (Redlands Boulevard) was realigned in 1946, commercial development that was previously concentrated in the historic downtown area began to muster along the new route toward the western city limit, and then to the north after Interstate Highway 10 was completed in 1962 (ARG 2017:145, 148). Over the last few decades of the 20th century, like many other former small rural towns in southern California, Redlands increasingly took on the characteristics of a "bedroom community." Nevertheless, the citrus culture that developed during the late 19th and early 20th centuries continues to be an integral part of the City's identity.

RESEARCH METHODS

RECORDS SEARCH

On December 7, 2022, CRM TECH archaeologist Nina Gallardo conducted the records search at the South Central Coastal Information Center (SCCIC), California State University, Fullerton, which is the State of California's official cultural resource records repository for San Bernardino County. During the records search, Gallardo examined maps, records, and electronic databases at the SCCIC for previously identified cultural resources and existing studies within a one-mile radius of the project area. Previously identified cultural resources include properties designated as California

Historical Landmarks, Points of Historical Interest, or San Bernardino County Historical Landmarks, as well as those listed in the National Register of Historic Places, the California Register of Historical Resources, or the California Historical Resources Inventory.

SACRED LANDS FILE SEARCH

On November 4, 2022, CRM TECH submitted a written request to the State of California Native American Heritage Commission (NAHC) for a records search in the commission's Sacred Lands File. The NAHC is the State of California's trustee agency for the protection of tribal cultural resources as defined by California Public Resources Code §21074 and is tasked with identifying and cataloging properties of Native American cultural value throughout the state, including places of special religious, spiritual, or social significance and known graves and cemeteries. The NAHC's reply is summarized below and attached to this report in Appendix 2.

LOCAL COMMUNITY CONSULTATION

As a part of the research procedures, the Redlands Historical Museum Association and the Redlands Area Historical Society were contacted for supplementary information on the history of the subject property and for local community input regarding potential historic interest in any of the buildings on the property. The contact was initiated by e-mail on January 4, 2023, and included a map showing the project location and photographs of the historic-era buildings identified on the property. A follow-up e-mail was sent on January 14. To date, no reply has been received from either group.

HISTORICAL RESEARCH

Historical research for this study was completed in two phases. The preliminary background research was conducted by CRM TECH historian Terri Jacquemain on the basis of published literature in local and regional history, U.S. General Land Office (GLO) land survey plat maps dated 1858, U.S. Geological Survey (USGS) topographic maps dated 1901-1996, and aerial/satellite photographs taken in 1938-2022. The historic maps are available at the websites of the U.S. Bureau of Land Management and the USGS. The aerial and satellite images are available through the Google Earth software, at the Nationwide Environmental Title Research (NETR) Online website, and at the FrameFinder Online website hosted by the University of California, Santa Barbara.

After the identification of historic-era buildings in the project area, Jacquemain pursued more specific and in-depth research on the history of these buildings. Sources consulted during this phase of the research included primarily the archival records of the City of Redlands and the County of San Bernardino, particularly building safety records and real property assessment records, materials on file at the A.K. Smiley Public Library, and various online genealogical and commercial business databases.

FIELD SURVEY

On November 17, 2022, CRM TECH archaeologists Hunter O'Donnell and Cynthia Ayala conducted the intensive-level field survey of the project area by walking parallel north-south transects spaced 15 meters (approximately 50 feet) apart across all open areas on the property. In this way, the ground surface in the entire project area was carefully examined for any evidence of

human activities dating to the prehistoric or historic period (i.e., 50 years or older). While most of the project area is paved or occupied by buildings, ground visibility was good to excellent (85-90%) over the rest of the property except for a few pockets of excessive duff under trees and clusters of vegetation along the peripheries.

In conjunction with the archaeological survey, O'Donnell carried out a field inspection of the buildings and other built-environment features in the project area and field recordation on those that appeared to be more than 45 years old and retained at least a recognizable level of historical characteristics. The field recordation consisted mainly of detailed notations and preliminary photo-documentation of the structural and architectural characteristics and current conditions. The field data and observations were compiled into standard record forms for submittal to the California Historical Resources Inventory (see App. 3).

RESULTS AND FINDINGS

RECORDS SEARCH

According to SCCIC records, the project area had not been surveyed for cultural resources prior to this study, and no cultural resources had been recorded on the property. Within the one-mile scope of the records search, some 75 cultural resources studies completed between 1973 and 2015 have been reported to the SCCIC (Fig. 6). Most of these studies were clustered to the west of Alabama Street, attesting to the increased development activities on former citrus land in the Old San Bernardino area since CEQA mandates were implemented in the 1970s. To the east of the project area, a number of small-scale studies have occurred near the City's downtown core.

As a result of the past survey efforts, some 179 historical/archaeological sites of historical origin were previously recorded within the one-mile radius. Closest to the project area among them, along State Street adjacent to the southern property boundary, was Site 36-027672, the former alignment of the 1888 San Bernardino and Redlands Railroad Company motor line, also known as the Redlands Central Railway or the "Redlands Dinky." The 10-mile-long narrow-gauge rail line linked the two cities, with passenger fares costing 30¢ one-way and 50¢ for a round trip (Landis n.d.). As is the case with many early infrastructure features, Site 36-027672 exists only on paper today.

Other sites recorded within the one-mile radius include well-known local historical landmarks such as the Mill Creek Zanja, the reconstructed San Bernardino *Asistencia*, and the Bryn Mawr Townsite, but the majority of the sites consists of buildings, including many in the City's designated historic districts, along with structural foundations, roads, and refuse scatters. Other than the no-longer-extant 36-027672, none of the sites were recorded in the immediate vicinity of the project area. As such, they require no further consideration during this study. No cultural resources of prehistoric—i.e., Native American—origin have been identified within the scope of the records search.

SACRED LANDS FILE SEARCH

In response to CRM TECH's inquiry, the NAHC reported in a letter dated December 8, 2022, that the Sacred Lands File indicated the presence of Native American cultural resource(s) in the general vicinity of the project location, but the nature and location of the resource(s) were not disclosed.

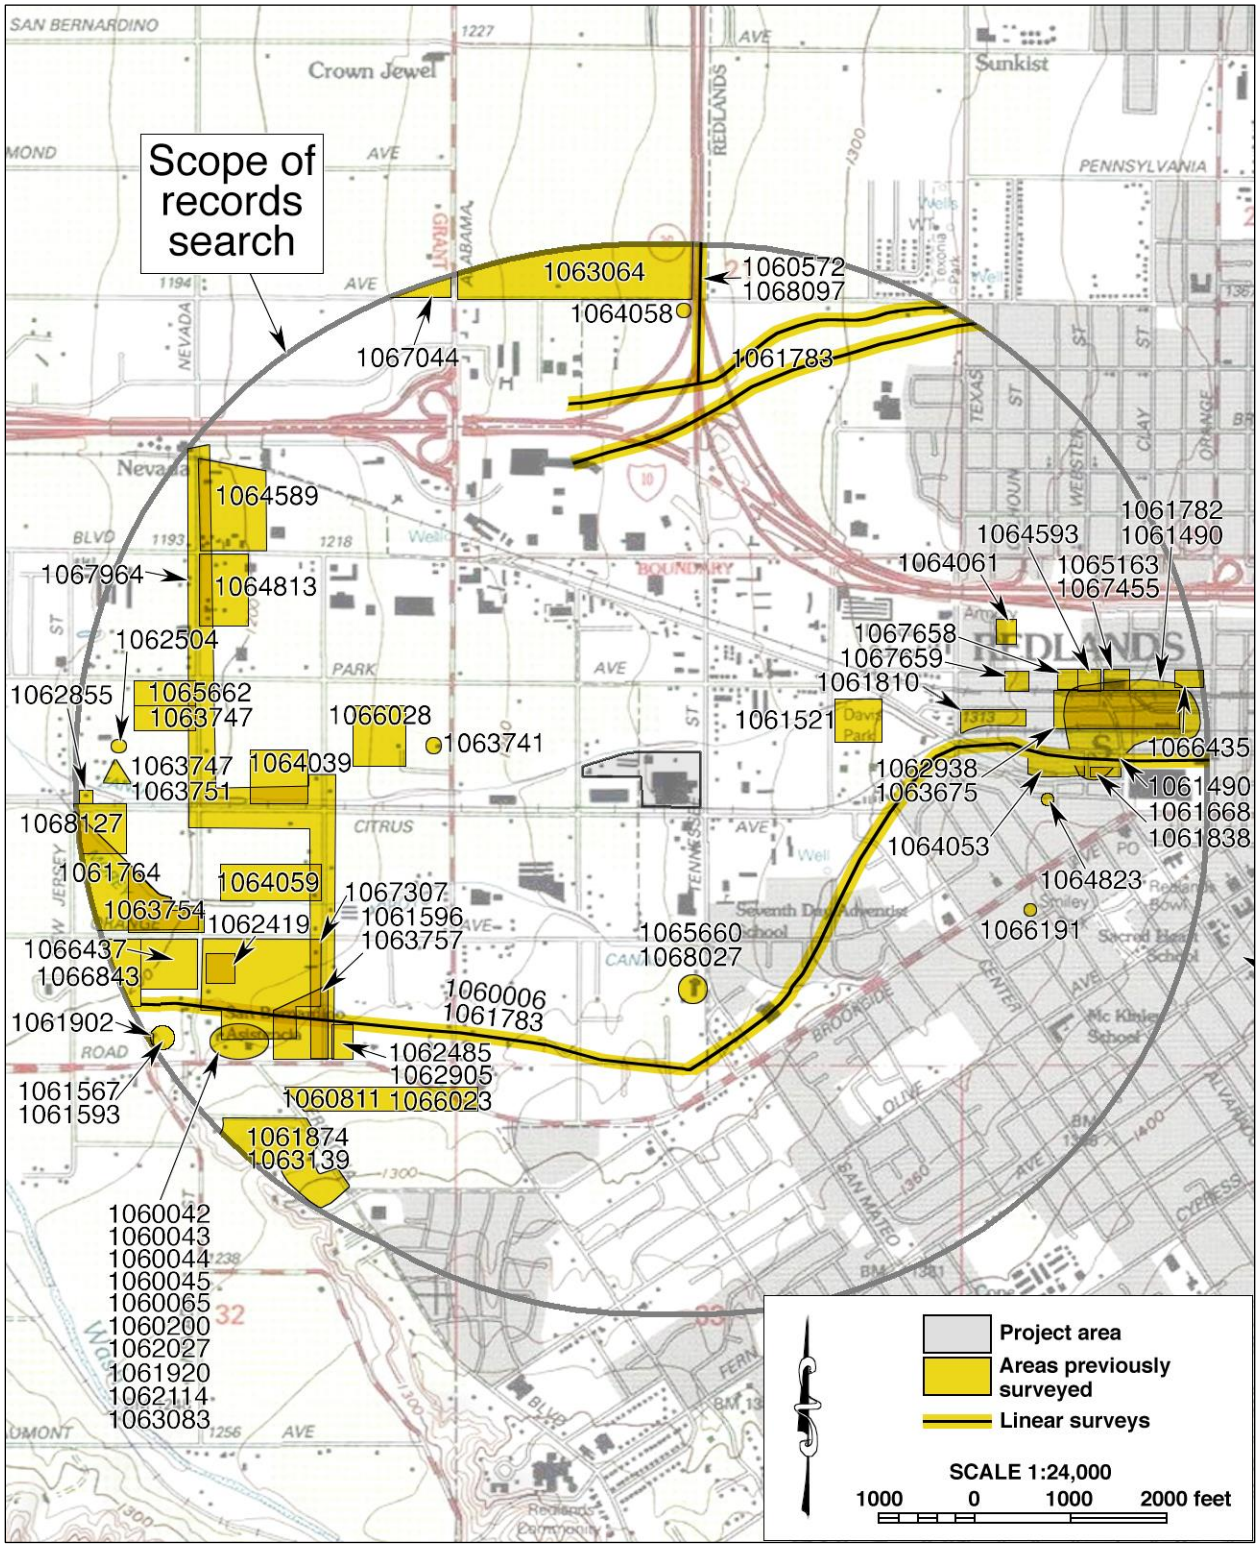

Figure 6. Previous cultural resources studies in the vicinity of the project area. Locations of historical/archaeological resources are not shown as a protective measure.

The NAHC recommended that local Native American groups be consulted for further information and provided a referral list of 11 tribal representatives affiliated with 10 local Native American groups. The NAHC's reply is attached to this report in Appendix 3 for reference by the City of Redlands in future government-to-government consultations with the local Native American groups.

HISTORICAL RESEARCH

The project area is situated about a mile east-northeast of Old San Bernardino, the center of early settlement during the Mission, Rancho, and Mormon periods in the history of San Bernardino Valley, but historical sources consulted for this study yielded no indication that it was involved in any of these early developments, except perhaps as farmland (Figs. 7-10). In the late 19th century, the project area sat in a flood-prone area near the confluence of what are now the Mission Zanja and the Morey Arroyo, amid a regular grid of roads, with the "Dinky" line (Site 36-027672) running along its southern boundary (Fig. 8).

By the late 1930s the project area and nearly all of the surrounding properties were covered by citrus groves, and a building, presumably a farmstead, had appeared near the southeast corner of the project area, as early channelization efforts along the Mission Zanja and the Morey Arroyo facilitated growth in the vicinity (NETR Online 1938; Fig. 9). The Mission Zanja connects to the original Mill Creek Zanja to the east of downtown Redlands near Laramie Park, but it was not a part of the historically significant irrigation canal, which was built in 1819-1820, the first irrigation work completed in San Bernardino County (Beattie 1951:42; Haenszel and Reynolds 1975:10). The 12-mile course of the Mill Creek Zanja ran roughly a half-mile south of the project location at its closest point.

After World War II, land in this area remained predominantly devoted to citrus groves and outside the boundary of the City of Redlands, which in 1959 was at Tennessee Street (UCSB FrameFinder 1952; NETR Online 1959-1968; Fig. 10). In the 1960s, the City's master plan codified land annexation further west, and earmarked it for industrial growth away from the core area (ARG 2017:149). The industrial district was bounded roughly by Redlands Boulevard/Colton Avenue, Tennessee Street, Orange Avenue, and New Jersey Street. Among the earlier industrial enterprises near the project location at the time were a textile knitting factory, a Gill Battery manufacturing plant, and a lumber and wrecking yard (ARG 2017:148, 149). Over the next three decades, industrial development continued to usurp the groves, often replacing them with large industrial buildings of concrete tilt-up construction and designed for truck access and freight distribution. By 1980 most of the citrus land had been laid fallow or replaced by commercial and industrial development, a trend that has continued to the present (NETR Online 1980-2020; Google Earth 1994-2022).

The residence at 360 Kansas Street was built around 1950, accompanied by a long rectangular structure at the rear, or the east (UCSB FrameFinder 1952; NETR Online 1959; County Assessor n.d.). A similar building combination had also appeared on Kansas Street just north of the Mission Zanja (*ibid.*). In 1954, the residence was occupied by Alex and Sadie Kimm, whose address was listed on Kansas Street and "one block north of Citrus" (now State Street; Ancestry.com n.d.). Family members John and Mary Jean Kimm lived on Kansas Street "two blocks north of Citrus" (*ibid.*), possibly in the similar residence across the drainage.

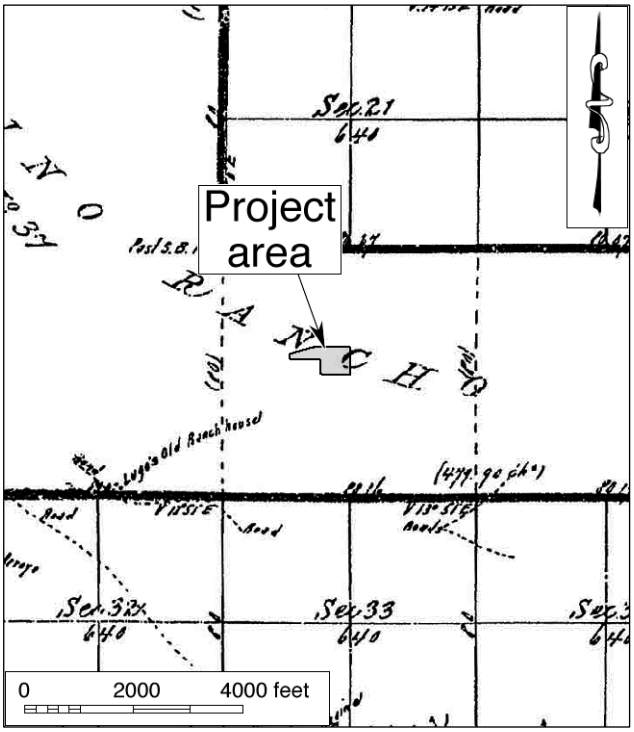

Figure 7. The project area and vicinity in 1853-1857. (Source: GLO 1858)

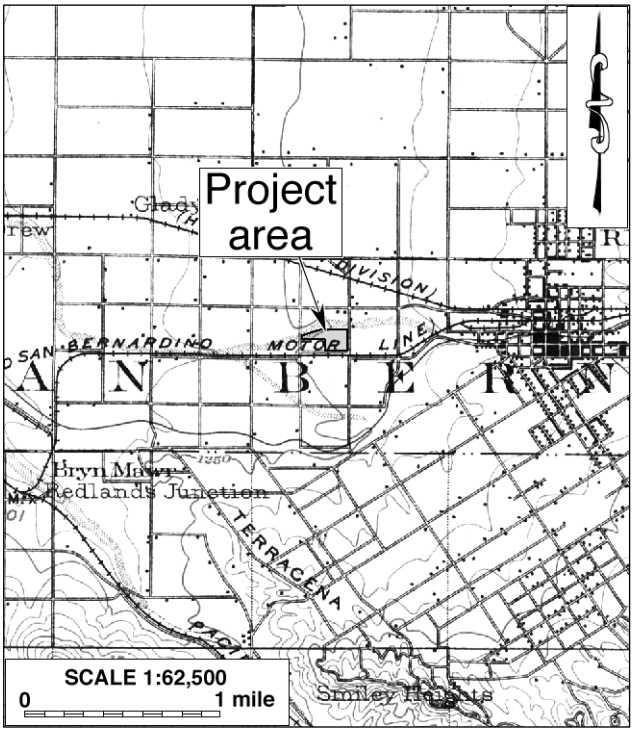

Figure 8. The project area and vicinity in 1898-1899. (Source: USGS 1901)

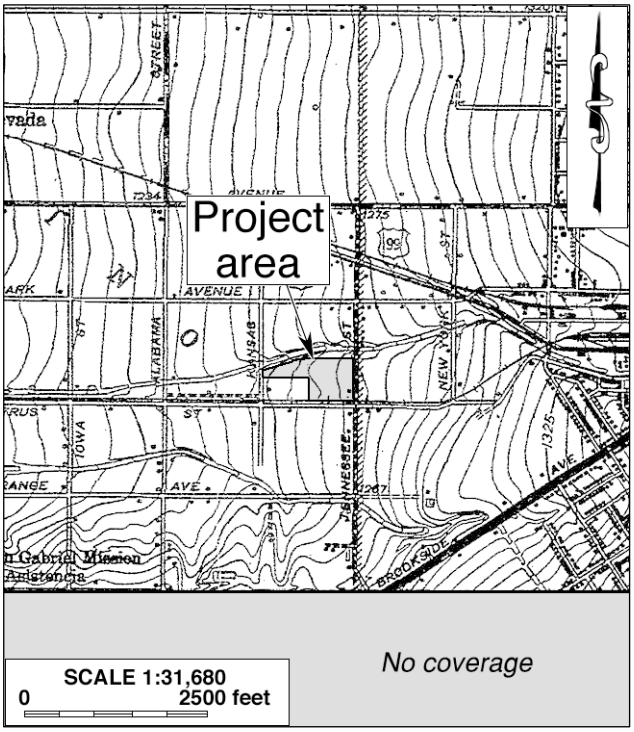

Figure 9. The project area and vicinity in 1939. (Source: USGS 1943)

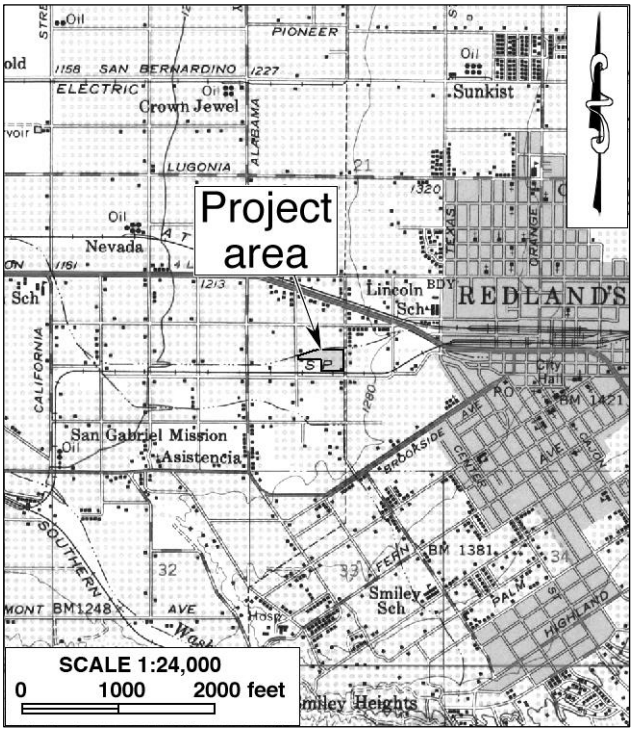

Figure 10. The project area and vicinity in 1952. (Source: USGS 1954)

Lead by patriarch Harkel A. Kimm and his wife Anna, who in 1954 lived on Alabama Street north of Barton Road, the Kimm family were in the business of chicken ranching (Ancestry.com n.d.). Harkel and Anna Kimm were both born in the Netherlands and had journeyed to Montana by 1919 when their youngest son Alex was born (*ibid.*). By 1940, they had settled in Redlands (*ibid.*). The elder Kimms were among some 400,000 Dutch immigrants who came to the U.S. between 1845 and 1930, with enough eventually settling in the Redlands area to form a small but cohesive community based primarily on their Christian Reformed faith and the dairy industry (ARG 2017:208). Alex and Sadie Kimm remained property owners in the project area until 1995, when the land was deeded to Rettig Machine Shop. City building safety records indicate the building suffered fire damage in 1982 (City of Redlands 1982).

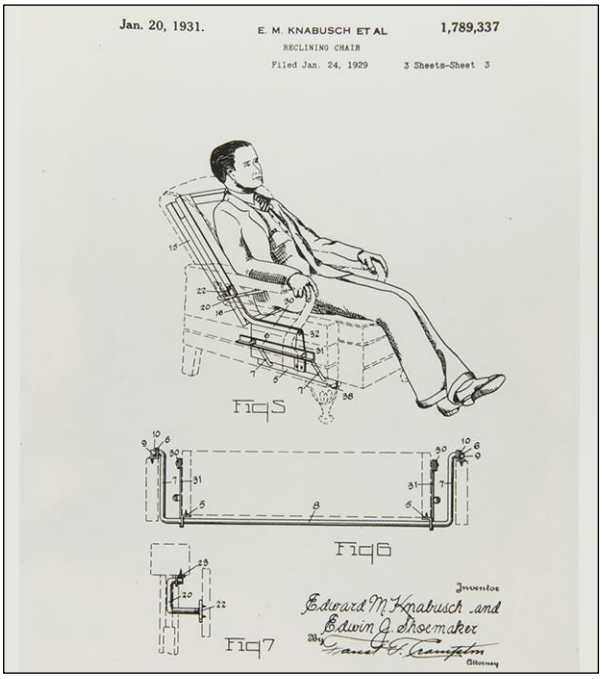

Figure 11. Patent illustration for the original La-Z-Boy Reclining Chair, January 24, 1929. (Source: The Henry Ford n.d.)

The former La-Z-Boy furniture manufacturing plant at 301 Tennessee was built for the company in 1965 and served in that capacity until October 2019, when the plant was closed (City of Redlands 1965; Kibby 1965:1; Iyer 2019). The company was founded in 1927 by cousins Edwin J. Shoemaker and Edward M. Knabusch, who produced their first chair in a garage in Monroe, Michigan (La-Z-Boy n.d.). It was a simple wood-slat chair, but with an innovative mechanism that allowed the occupant to recline (*ibid*.).

As they sought to bring their chair to the market, it was suggested that they upholster it for indoor use (La-Z-Boy n.d.). The duo took the advice and then filed for a patent in 1929 (La-Z-Boy n.d.; Fig. 11). Eventually the furniture line was expanded to encompasses other brands and living room staples such as sofas and loveseats, and the company was incorporated in 1941 (La-Z-Boy.com n.d.). In March 1972, La-Z-Boy went public, having by then established nine manufacturing plants in the United States: two in Michigan, one in Redlands, and six more in several eastern states (Encyclopedia.com n.d.). Today, La-Z-Boy is an internationally recognized brand and is among the leading residential furniture producers worldwide, with its headquarters still in Monroe, Michigan (*ibid*.).

During its 54-year tenure at the Redlands location, La-Z-Boy employed as many as 350 workers, who made and upholstered the company's flagship recliner and other branded products, accounting for about 10% of the company's output (Iyer 2019; Slaughter 2019). The plant was the company's first west of the Mississippi, built after Redlands' civic agencies vied to be the choice among eight contenders. Efforts included hosting La-Z-Boy co-founder Edward Knabusch and his wife at the residence of then-mayor Waldo Burroughs, followed up by city representatives paying a one-day visit to the company headquarters in Michigan (Kibby 1965:1). The company was active in the

Redlands community as a sponsor of the annual Redlands Bowl Summer Music Festival, and in 2011 became the City of Redlands' first recipient of the Mayor's Green Action Award for reducing its landfill waste from manufacturing (Iyer 2019).

The 1960s-1970s industrial buildings constructed in the western Redlands industrial district were commonly plain box-like buildings, but some owners of the era opted to contract stylized primary facades for their buildings, including the Lazy-Z-Boy furniture manufacturing plant, which was designed by Redlands architect Leon H. Armantrout (City of Redlands 1965; ARG 2017:149). Armantrout moved to Redlands in 1960 and opened his office there in 1964 (Johnson 2002). He has built an impressive body of work in Mid-Century Modern and Late Modern styles, including many custom homes and eye-catching institutional, professional, commercial, educational, and religious buildings (*ibid.*). In 2013, Armantrout donated a catalog of his Redlands architectural drawings to the A.K. Smiley Public Library (Schwartz 2013), among them those for the First United Methodist Church, the relocation and expansion of the ESRI campus, Redlands Community Center, Town Square Design for Redlands Mall, Empire Bowl, Redlands Medical Center, and the San Bernardino County Museum.

Constructed by local contractors Forsberg and Gregory, Inc., the La-Z-Boy building was originally a 72,000-square-foot manufacturing plant (City of Redlands 1965). In 1972-1973, 43,600 square feet were added to the factory and 800 square feet to the front office, followed by a 624-square-foot tilt-up panel addition and another 9,225 square feet in 1991 (City of Redlands 1972-1991). The two ancillary buildings to the north of the main plant, measuring 12,000 and 28,000 square feet, are both concrete tilt-up structures erected in 1969, again by Forsberg and Gregory, Inc., but with no architect identified in the building permits (City of Redlands 1969). A 1,300-square-foot conference room was added in 2004, and the monument sign along Tennessee Street was installed in 2014 (City of Redlands 2004-2014).

FIELD SURVEY

Field observations confirm that no vestige of Site 36-027672, the Redlands Dinky line, exists in the vicinity of the project area, and no evidence of any prehistoric cultural resources was encountered within or adjacent to the project boundaries. The ground surface has been extensively disturbed by agricultural operations and construction activities in the past, leaving little potential for any prehistoric or early historic archaeological remains to survive intact.

The three streets adjacent to the project area, Tennessee Street, Kansas Street, and State Street, all date to the historic period, but their current configuration and appearance reflect the results of repeated upgrading and regular maintenance in recent times, and none of them exhibits any distinctively historical characteristics. As working components of the modern transportation infrastructure, these streets are not considered potential "historical resources." Similarly, the Mission Zanja adjacent to the northern project boundary is an unremarkable earthen drainage of common design and construction practices that has been constantly maintained in the modern era. With no anticipated impacts from the project as proposed, it requires no further consideration during this study.

Historical research has revealed that the La-Z-Boy plant and residence on the property are both more than 50 years of age. While both have been significantly altered, field survey observations confirm that they retain a recognizable level of historical characteristics. As such, they were recorded into the California Historical Resources Inventory during this study and designated temporarily as Sites 3963-1H and -2H, pending assignment of permanent identification numbers by the SCCIC. These buildings represent the only potential "historical resources" in the project area.

Site 3963-1H (Former La-Z-Boy Plant)

The former La-Z-Boy manufacturing plant at 301 Tennessee Street consists of a main office/ warehouse building and two smaller auxiliary buildings of concrete tilt-up construction situated to the north, all of them resting on concrete slab foundations with flat roofs (Fig. 12). The main building is a tall one-story steel-frame and concrete structure that covers nearly two acres. Its squarish shape is a product of later additions that effectively doubled the original footprint, while some of the additions resulted in protrusions from the building. The concrete cladding covers nearly all of the exterior, leaving the building relatively blind but punctuated by loading docks with roll-up doors or single entries filled with metal commercial doors.

The rectangular front office portion on the eastern side, facing Tennessee Street, has a flat but lower roof, with its Armantrout-designed Modern-style elements somewhat overshadowed by the sizable unadorned additions at either end. Nevertheless, the Modern style remains apparent in the deeply recessed main entry between slightly over-extended brick partitions sheltering a plateglass wall and a metal-framed glass door with a transom. Varnished pine wood slats cover the entry ceiling, while square cut-outs in the brick sides allow a view of low-growing tropical plant gardens that flank the entry. A steel-framed enclosure reaching the roof level is filled on the top two-thirds by smoke glass, and open at the bottom. The entry is accessed by a brick-edged pebbled concrete walkway, flanked by low planters and paved parking lots and driveway.

Figure 12. Former La-Z-Boy furniture manufacturing plant at 301 Tennessee Street. (Photograph taken on February 14, 2023; view to the northwest)

Figure 13. Single-family residence at 360 Kansas Street. (Photograph taken on November 17, 2022; view to the northwest)

Site 3963-2H (Former Kimm Residence)

Located at 360 Kansas Street, this Ranch-style, one-story single-family residence with an attached garage is a wood-framed structure built on a U-shaped plan. It rests on a concrete foundation and is surmounted by a medium-pitched hip roof sheathed in brown composition shingles (Fig. 13). An addition with a shed roof is attached to the eastern (rear) side at the middle section. Light-colored stucco clads most of the exterior, although there are small half-wall sections of brick-and-mortar and vertical tooth-and-groove wood siding on the rear addition. Fenestration is a mix of vintage and recent windows of various size, as are the sashes adorning the entry doors. A modern metal roll-up door fills the entry to the garage, which is topped by a cupola at the roof ridge. Two corrugated-metal sheds accompany the house in the rear.

DISCUSSION

APPLICABLE REGULATORY FRAMEWORK

The purpose of this study is to identify any cultural resources in the project area and to assist the City of Redlands in determining whether they meet the official definition of "historical resources," as provided in the California Public Resources Code, in particular CEQA. According to PRC §5020.1(j), "'historical resource' includes, but is not limited to, any object, building, site, area, place, record, or manuscript which is historically or archaeologically significant, or is significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California."

More specifically, CEQA guidelines state that the term "historical resources" applies to any such resources listed in or determined to be eligible for listing in the California Register of Historical Resources, included in a local register of historical resources, or determined to be historically significant by the lead agency (Title 14 CCR §15064.5(a)(1)-(3)). Regarding the proper criteria for

the evaluation of historical significance, CEQA guidelines mandate that "generally a resource shall be considered by the lead agency to be 'historically significant' if the resource meets the criteria for listing on the California Register of Historical Resources" (Title 14 CCR §15064.5(a)(3)). A resource may be listed in the California Register if it meets any of the following criteria:

(1) Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage.
(2) Is associated with the lives of persons important in our past.
(3) Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values.
(4) Has yielded, or may be likely to yield, information important in prehistory or history. (PRC §5024.1(c))

A local register of historical resources, as defined by PRC §5020.1(k), "means a list of properties officially designated or recognized as historically significant by a local government pursuant to a local ordinance or resolution." For individual properties and historic districts in the City of Redlands, the City's Historic and Scenic Preservation Ordinance outlines a series of 11 eligibility criteria, any one of which may render a property eligible for designation by the City of Redlands as a "landmark" or a "historic property":

A. It has significant character, interest, or value as part of the development, heritage or cultural characteristics of the city of Redlands, state of California, or the United States;
B. It is the site of a significant historic event;
C. It is strongly identified with a person or persons who significantly contributed to the culture, history or development of the city;
D. It is one of the few remaining examples in the city possessing distinguishing characteristics of an architectural type or specimen;
E. It is a notable work of an architect or master builder whose individual work has significantly influenced the development of the city;
F. It embodies elements of architectural design, detail, materials, or craftsmanship that represents a significant architectural innovation;
G. It has a unique location or singular physical characteristics representing an established and familiar visual feature of a neighborhood, community, or the city;
H. It has unique design or detailing;
I. It is a particularly good example of a period or style;
J. It contributes to the historical or scenic heritage or historical or scenic properties of the city (to include, but not be limited to, landscaping, light standards, trees, curbings, and signs);
K. It is located within a historic and scenic or urban conservation district, being a geographically definable area possessing a concentration of historic or scenic properties which contribute to each other and are unified aesthetically by plan or physical development. (MC §2.62.170)

RESOURCE EVALUATIONS

Site 3963-1H (Former La-Z-Boy Plant)

The former La-Z-Boy furniture manufacturing plant at 301 Tennessee Street was built in 1965 and is among several industrial buildings constructed in the vicinity during the 1960s-1970s period, in the early days of the development of an industrial district in the western portion of the City of Redlands. Its construction reflected the City's increasing efforts to diversify its economic base in the post-

World War II era. At the time, the La-Z-Boy Company was already prominent in the industry and was pursuing a multi-state expansion. The building is arguably associated with a pattern of events or a local historical theme, namely Redlands' transition away from its horticulture roots, and is also notable for its association to an innovative, industry-leading company. In neither case, however, does the building demonstrate a particularly important or close association in comparison to other properties known for similar associations.

To wit, the historical theme of mid-20th century industrial growth is well-represented by industrial and commercial enterprises of similar vintage throughout the Redland area, particularly the western portion of the city, and furniture manufacturing was not a dominant industry in the area or a particularly prominent element of the local economy. In regard to the association to the La-Z-Boy Company, although hailed as being the "first west of the Mississippi" the building was not a flagship building of the La-Z-Boy Company, but rather an outpost far from the company's Michigan headquarters, and one that appeared on the scene decades after the company had garnered wide-spread brand recognition.

Sources consulted during this study have yielded no evidence that the former La-Z-Boy plant is closely associated with any specific events or persons of recognized historic significance. In terms of architectural, structural, engineering, or aesthetic merits, the building was designed by prominent Redland architect Leon Armantrout, who worked primarily in mid-20th century Modern and Late Modern styles. As noted above, Leon Armantrout's body of work is well represented in his catalogue of architectural drawings within the City of Redlands and the larger southern California region. For this building, the Modern-style design elements are largely confined to the central portion of the primary façade, while the rest of the building is functionally utilitarian, an expression sometimes in keeping with the style but overall appearing more vernacular or altered by later additions.

The La-Z-Boy plant is among a handful of industrial buildings to his credit, but despite being fewer in number, it does not stand out as an important or particularly remarkable example of Armantrout's body of work or of any style, property type, period, region, and method of construction. Furthermore, the 1960s era in industrial development is well documented in historical accounts, contemporary literature, as well as archival records, both nationwide and in the City of Redlands. As a result, this building holds little potential for any new or important data for the study of this subject. Based on these considerations, the present study concludes that 3963-1H does not appear eligible for listing in the California Register of Historical Resources or for local designation by the City of Redlands. Therefore, it does not meet the definition of a "historical resource" under CEQA provisions.

Site 3963-2H (Former Kimm Residence)

The Ranch-style residence at 360 Kansas Street was constructed around 1950. While it retains some elements recognizable to the era in scale and materials, such as a few surviving double-hung windows and a single-car garage, it has been significantly altered by additions, exterior wall cladding, and modern window replacements. Nevertheless, as a rural residence built amidst the groves in the waning years of Redlands robust citrus cultivation era, it shares an association with the city's long-held historical heritage and ensuing "citrus culture." Another historical theme that the

residence is associated with is the post-World War II boom in urban/suburban development throughout the U.S. and especially in southern California. While the residence retains sufficient integrity to relate to these patterns of events, once again it does not demonstrate a unique, significant, or particularly close association with the historical themes in comparison to the numerous other residential buildings of similar character and similar vintage that survive in and around Redlands.

The historical background research has not identified any persons or specific events of recognized significance in the history of the residence, nor any prominent architects, designers, or builders in association with its construction. Architecturally, the building is essentially vernacular in appearance, owing partly to the alterations, and does not represent an important example of its style,, type, period, region, or method of construction. With no notable qualities in design or construction, no documented historical association of importance, and little potential to yield any historical information, the residence at 360 Kansas Street does not appear to meet any of the criteria for listing the California Register of Historical Resource or for local designation, and does not qualify as a "historical resource," as defined above.

CONCLUSION AND RECOMMENDATIONS

CEQA establishes that a project that may cause a substantial adverse change in the significance of a "historical resource" is a project that may have a significant effect on the environment (PRC §21084.1). "Substantial adverse change," according to PRC §5020.1(q), "means demolition, destruction, relocation, or alteration such that the significance of a historical resource would be impaired."

In summary, the present study identified and recorded two groups of historic-period buildings within the project area, a La-Z-Boy furniture manufacturing plant at 301 Tennessee Street (Site 3963-1H) and a residence at 360 Kansas Street (Site 3963-2H), but neither of them appears eligible for listing in the California Register of Historical Resources or for local designation by the City of Redlands. Therefore, they do not constitute "historical resources" for CEQA-compliance purposes.

No other potential "historical resources" were encountered within or adjacent to the project area. However, the NAHC's response during this study indicated the presence of unspecified Native American cultural resource(s) in the general vicinity of the project location and referred further inquiry to the local Native American tribes. According to CEQA guidelines, the identification of potential "tribal cultural resources" is beyond the scope of this study and needs to be addressed through government-to-government consultations between the City of Redlands and the pertinent Native American groups pursuant to Assembly Bill (AB) 52.

Based on these findings, CRM TECH presents the following recommendations to the City of Redlands:

- A tentative conclusion of *No Impact* on known cultural resources appears to be appropriate for this project, pending the completion of the AB 52 consultation process to ensure the proper identification of potential "tribal cultural resources."

- No additional cultural resources investigation is necessary for the proposed project unless development plans undergo such changes as to include areas not covered by this study.
- If buried cultural materials are discovered during earth-moving operations associated with the project, all work within 50 feet of the discovery should be halted or diverted until a qualified archaeologist can evaluate the nature and significance of the finds.

PERSONNEL QUALIFICATIONS

PRINCIPAL INVESTIGATOR, HISTORY/ARCHITECTURAL HISTORY

Education

1988-1993	Graduate Program in Public History/Historic Preservation, University of California, Riverside.
1987	M.A., American History, Yale University, New Haven, Connecticut.
1982	B.A., History, Northwestern University, Xi'an, China.
2000	"Introduction to Section 106 Review," presented by the Advisory Council on Historic Preservation and the University of Nevada, Reno.
1994	"Assessing the Significance of Historic Archaeological Sites," presented by the Historic Preservation Program, University of Nevada, Reno.

Professional Experience

2002-	Principal Investigator, CRM TECH, Riverside/Colton, California.
1993-2002	Project Historian/Architectural Historian, CRM TECH, Riverside, California.
1993-1997	Project Historian, Greenwood and Associates, Pacific Palisades, California.
1991-1993	Project Historian, Archaeological Research Unit, University of California, Riverside.
1990	Intern Researcher, California State Office of Historic Preservation, Sacramento.
1990-1992	Teaching Assistant, History of Modern World, University of California, Riverside.
1988-1993	Research Assistant, American Social History, University of California, Riverside.
1985-1988	Research Assistant, Modern Chinese History, Yale University.
1985-1986	Teaching Assistant, Modern Chinese History, Yale University.
1982-1985	Lecturer, History, Xi'an Foreign Languages Institute, Xi'an, China.

Cultural Resources Management Reports

Preliminary Analyses and Recommendations Regarding California's Cultural Resources Inventory System (with Special Reference to Condition 14 of NPS 1990 Program Review Report). California State Office of Historic Preservation working paper, Sacramento, September 1990.

Numerous cultural resources management reports with the Archaeological Research Unit, Greenwood and Associates, and CRM TECH, since October 1991.

PRINCIPAL INVESTIGATOR, ARCHAEOLOGY
Michael Hogan, Ph.D., RPA (Registered Professional Archaeologist)

Education

1991	Ph.D., Anthropology, University of California, Riverside.
1981	B.S., Anthropology, University of California, Riverside; with honors.
1980-1981	Education Abroad Program, Lima, Peru.
2002	"Section 106—National Historic Preservation Act: Federal Law at the Local Level," UCLA Extension Course #888.
2002	"Recognizing Historic Artifacts," workshop presented by Richard Norwood, Historical Archaeologist.
2002	"Wending Your Way through the Regulatory Maze," symposium presented by the Association of Environmental Professionals.
1992	"Southern California Ceramics Workshop," presented by Jerry Schaefer.
1992	"Historic Artifact Workshop," presented by Anne Duffield-Stoll.

Professional Experience

2002-	Principal Investigator, CRM TECH, Riverside/Colton, California.
1999-2002	Project Archaeologist/Field Director, CRM TECH, Riverside, California.
1996-1998	Project Director and Ethnographer, Statistical Research, Inc., Redlands, California.
1992-1998	Assistant Research Anthropologist, University of California, Riverside.
1992-1995	Project Director, Archaeological Research Unit, U.C. Riverside.
1993-1994	Adjunct Professor, Riverside Community College, Mt. San Jacinto College, U.C. Riverside, Chapman University, and San Bernardino Valley College.
1991-1992	Crew Chief, Archaeological Research Unit, U.C. Riverside.
1984-1998	Project Director, Field Director, Crew Chief, and Archaeological Technician for various southern California cultural resources management firms.

Research Interests

Cultural Resource Management, Southern Californian Archaeology, Settlement and Exchange Patterns, Specialization and Stratification, Culture Change, Native American Culture, Cultural Diversity.

Cultural Resources Management Reports

Principal investigator for, author or co-author of, and contributor to numerous cultural resources management study reports since 1986.

Memberships

Society for American Archaeology; Society for California Archaeology; Pacific Coast Archaeological Society; Coachella Valley Archaeological Society.

PROJECT HISTORIAN/ARCHITECTURAL HISTORIAN
Terri Jacquemain, M.A.

Education

Re: Proposed Redlands Warehouse Project at 301 Tennessee Street Assessor's Parcel Numbers 0292-192-11 and -14 (CRM TECH No. 3963) Project, San Bernardino County

Dear Ms. Gallardo:

A record search of the Native American Heritage Commission (NAHC) Sacred Lands File (SLF) was completed for the information submitted for the above referenced project. The results were positive. Please contact the Tribes on the attached list for information. Please note that tribes do not always record their sacred sites in the SLF, nor are they required to do so. A SLF search is not a substitute for consultation with tribes that are traditionally and culturally affiliated with a project's geographic area. Other sources of cultural resources should also be contacted for information regarding known and recorded sites, such as the appropriate regional California Historical Research Information System (CHRIS) archaeological Information Center for the presence of recorded archaeological sites.

Attached is a list of Native American tribes who may also have knowledge of cultural resources in the project area. This list should provide a starting place in locating areas of potential adverse impact within the proposed project area. Please contact all of those listed; if they cannot supply information, they may recommend others with specific knowledge. By contacting all those listed, your organization will be better able to respond to claims of failure to consult with the appropriate tribe. If a response has not been received within two weeks of notification, the Commission requests that you follow-up with a telephone call or email to ensure that the project information has been received.

If you receive notification of change of addresses and phone numbers from tribes, please notify the NAHC. With your assistance, we can assure that our lists contain current information.

If you have any questions or need additional information, please contact me at my email address: Cameron.vela@nahc.ca.gov.

Sincerely,

Cameron Vela

e. Other Locational Data: (e.g., parcel #, directions to resource, elevation, decimal degrees, etc., as appropriate) Assessor's Parcel Number 0929-192-11; on the northwest corner of State Street and Tennessee Street

***P3a Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries) The former La-Z-Boy manufacturing plant at 301 Tennessee Street consists of a main office/warehouse building and two smaller auxiliary buildings of concrete tilt-up construction situated to the north, all of them resting on concrete slab foundations with flat roofs. The main building is a tall one-story steel-frame and concrete structure that covers nearly two acres. Its squarish shape is a product of later additions that effectively doubled the original footprint, while some of the additions resulted in protrusions from the building. The concrete cladding covers nearly all of the exterior, leaving the building relatively blind but punctuated by loading docks with roll-up doors or single entries filled with metal commercial doors. (*Continued on p. 4*)

B9a. Architect: Leon H. Armantrout

b. Builder: Forsberg and Gregory, Inc.

***B10. Significance: Theme** Post-World War II industrial development

Area Redlands

Period of Significance 1960s

Property Type Industrial/manufacturing

Applicable Criteria N/A

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.) The former La-Z-Boy furniture manufacturing plant a is among several industrial buildings constructed in the vicinity during the 1960s-1970s period, in the early days of the development of an industrial district in the western portion of the City of Redlands. Its construction reflected the City's increasing efforts to diversify its economic base in the post-World War II era. At the time, the La-Z-Boy Company was already prominent in the industry and was pursuing a multi-state expansion. The building is (*Continued on p. 4*)

Recorded by: Hunter O'Donnell
***Date:** November 17, 2022 √ Continuation Update

***P3a. Description (**continued**):** The rectangular front office portion on the eastern side, facing Tennessee Street, has a flat but lower roof, with its Armantrout-designed Modern-style elements somewhat overshadowed by the sizable unadorned additions at either end. Nevertheless, the Modern style remains apparent in the deeply recessed main entry between slightly over-extended brick partitions sheltering a plateglass wall and a metal-framed glass door with a transom. Varnished pine wood slats cover the entry ceiling, while square cut-outs in the brick sides allow a view of low-growing tropical plant gardens that flank the entry. A steel-framed enclosure reaching the roof level is filled on the top two-thirds by smoke glass, and open at the bottom. The entry is accessed by a brick-edged pebbled concrete walkway, flanked by low planters and paved parking lots and driveway.

***B6. Construction History (continued):** main plant, measuring 12,000 and 28,000 square feet, are both concrete tilt-up structures erected in 1969. A 1,300-square-foot conference room was added in 2004, and the monument sign along Tennessee Street was installed in 2014.

Architect Leon H. Armantrout moved to Redlands in 1960 and opened his office there in 1964. He has built an impressive body of work in Mid-Century Modern and Late Modern styles, including many custom homes and eye-catching institutional, professional, commercial, educational, and religious buildings. In 2013, Armantrout donated a catalog of his Redlands architectural drawings to the A.K. Smiley Public Library, among them those for the First United Methodist Church, the relocation and expansion of the ESRI campus, Redlands Community Center, Town Square Design for Redlands Mall, Empire Bowl, Redlands Medical Center, and the San Bernardino County Museum.

***B10. Significance (continued):** arguably associated with a pattern of events or a local historical theme, namely Redlands' transition away from its horticulture roots, and is also notable for its association to an innovative, industry-leading company. In neither case, however, does the building demonstrate a particularly important or close association in comparison to other properties known for similar associations.

To wit, the historical theme of mid-20th century industrial growth is well-represented by industrial and commercial enterprises of similar vintage throughout the Redland area, particularly the western portion of the city, and furniture manufacturing was not a dominant industry in the area or a particularly prominent element of the local economy. In regard to the association to the La-Z-Boy Company, although hailed as being the "first west of the Mississippi" the building was not a flagship building of the La-Z-Boy Company, but rather an outpost far from the company's Michigan headquarters, and one that appeared on the scene decades after the company had garnered wide-spread brand recognition.

Sources consulted during this study have yielded no evidence that the former La-Z-Boy plant is closely associated with any specific events or persons of recognized historic significance. In terms of architectural, structural, engineering, or aesthetic merits, the building was designed by prominent Redland architect Leon Armantrout, who worked primarily in mid-20th century Modern and Late Modern styles. Armantrout's body of work is well represented in his catalogue of architectural drawings within the City of Redlands and the larger southern California region. For this building, the (*Continued on p. 5*)

Recorded by: Hunter O'Donnell
***Date:** November 17, 2022 √ Continuation Update

***B10. Significance (continued):** Modern-style design elements are largely confined to the central portion of the primary façade, while the rest of the building is functionally utilitarian, an expression sometimes in keeping with the style but overall appearing more vernacular or altered by later additions.

The La-Z-Boy plant is among a handful of industrial buildings to his credit, but despite being fewer in number, it does not stand out as an important or particularly remarkable example of Armantrout's body of work or of any style, property type, period, region, and method of construction. Furthermore, the 1960s era in industrial development is well documented in historical accounts, contemporary literature, as well as archival records, both nationwide and in the City of Redlands. As a result, this building holds little potential for any new or important data for the study of this subject. Based on these considerations, the former La-Z-Boy furniture manufacturing plant does not appear eligible for listing in the National Register of Historic Places or the California Register of Historical Resource.

***P3a Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries) This Ranch-style one-story residence with an attached garage is a wood-framed structure built on a U-shaped plan. It rests on a concrete foundation and is surmounted by a medium-pitched hip roof sheathed in brown composition shingles. An addition with a shed roof is attached to the eastern (rear) side at the middle section. Light-colored stucco clads most of the exterior, although there are small half-wall sections of brick-and-mortar and vertical tooth-and-groove wood siding on the rear addition. Fenestration is a mix of vintage and recent windows of various size, as are the sashes adorning the entry doors. A modern metal roll-up door fills the entry to the garage, which is topped by a cupola at the roof ridge. Two wood-framed corrugated-metal sheds accompany the house in the rear.

B1. Historic Name:
2.Common Name:
B3. Original Use: Residence
B4. Present Use: Vacant

***B5. Architectural Style:** Ranch

***B6. Construction History:** (Construction date, alterations, and date of alterations) The residence was built around 1950 and was originally accompanied by a long rectangular structure at the rear, or east. In 1954 it was the family home of Alex and Sadie Kimm, who were engaged in chicken ranching with other family members. The Kimms remained property owners until 1995, when it was deeded to Rettig Machine Shop. Building permits for this address include one issued to the Kimms in 1982 to repair fire damage and a reroof permit issued to Bob Rettig in 2010.

Period of Significance 1945-1965
Property Type Residential
Applicable Criteria N/A

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.) While this circa 1950 residence retains some elements recognizable to the era in scale and materials, such as a few surviving double-hung windows and a single-car garage, it has been significantly altered by additions, exterior wall cladding, and modern window replacements. Nevertheless, as a rural residence built amidst the groves in the waning years of Redlands robust citrus cultivation era, it shares an association with the city's long-held historical heritage and ensuing "citrus culture." (*Continued on p. 4*)

Recorded by: Hunter O'Donnell
***Date:** November 17, 2022 √ Continuation Update

***B10. Significance (continued):** Another historical theme that the residence is associated with is the post-World War II boom in urban/suburban development throughout the U.S. and especially in southern California. While the residence retains sufficient integrity to relate to these patterns of events, it does not demonstrate a unique, significant, or particularly close association with the historical themes in comparison to the numerous other residential buildings of similar character and similar vintage that survive in and around Redlands.

The historical background research has not identified any persons or specific events of recognized significance in the history of the residence, nor any prominent architects, designers, or builders in association with its construction. Architecturally, the building is essentially vernacular in appearance, owing partly to the alterations, and does not represent an important example of its style, type, period, region, or method of construction. With no notable qualities in design or construction, no documented historical association of importance, and little potential to yield any historical information, the residence at 360 Kansas Street does not appear to meet any of the criteria for listing the National Register of Historic Places or California Register of Historical Resources.

Subject:	RE: City of Redlands AB-52 Tribal Consultation Notice - CRA-948, Tennessee Warehouse Project
Date:	Monday, September 26, 2022 12:51:06 PM

[**NOTICE:** This message originated outside of City of Redlands -- **DO NOT CLICK** on **links** or open **attachments** unless you are sure the content is safe.]

Hello Sean,
Thank you for contacting the Yuhaaviatam of San Manuel Nation (formerly known as the San Manuel Band of Mission Indians) regarding the above referenced project. YSMN appreciates the opportunity to review the project documentation, which was received by our Cultural Resources Management Department on September 22nd, 2022, pursuant to CEQA (as amended, 2015) and CA PRC 21080.3.1. The proposed project area exists within Serrano ancestral territory and, therefore, is of interest to the Tribe. However, due to the nature and location of the proposed project, and given the CRM Department's present state of knowledge, YSMN does not have any concerns with the project's implementation, as planned, at this time. As a result, YSMN requests that the following language be made a part of the project/permit/plan conditions:

CUL MMs

1. In the event that cultural resources are discovered during project activities, all work in the immediate vicinity of the find (within a 60-foot buffer) shall cease and a qualified archaeologist meeting Secretary of Interior standards shall be hired to assess the find. Work on the other portions of the project outside of the buffered area may continue during this assessment period. Additionally, the Yuhaaviatam of San Manuel Nation Cultural Resources Department (YSMN) shall be contacted, as detailed within TCR-1, regarding any pre-contact and/or historic-era finds and be provided information after the archaeologist makes his/her initial assessment of the nature of the find, so as to provide Tribal input with regards to significance and treatment.

2. If significant pre-contact and/or historic-era cultural resources, as defined by CEQA (as amended, 2015), are discovered and avoidance cannot be ensured, the archaeologist shall develop a Monitoring and Treatment Plan, the drafts of which shall be provided to YSMN for review and comment, as detailed within TCR-1. The archaeologist shall monitor the remainder of the project and implement the Plan accordingly.

3. If human remains or funerary objects are encountered during any activities associated with the project, work in the immediate vicinity (within a 100-foot buffer of the find) shall cease and the County Coroner shall be contacted pursuant to State Health and Safety Code §7050.5 and that code enforced for the duration of the project.

TCR MMs

1. The Yuhaaviatam of San Manuel Nation Cultural Resources Department (YSMN) shall be contacted, as detailed in CR-1, of any pre-contact and/or historic-era cultural resources discovered during project implementation, and be provided information regarding the nature of the find, so as to provide Tribal input with regards to significance and treatment. Should the find be deemed significant, as defined by CEQA (as amended, 2015), a cultural resources Monitoring and Treatment Plan shall be created by the archaeologist, in coordination with YSMN, and all subsequent finds shall be subject to this Plan. This Plan shall allow for a monitor to be present that represents YSMN for the remainder of the project, should YSMN elect to place a monitor on-site.

2. Any and all archaeological/cultural documents created as a part of the project (isolate

records, site records, survey reports, testing reports, etc.) shall be supplied to the applicant and Lead Agency for dissemination to YSMN. The Lead Agency and/or applicant shall, in good faith, consult with YSMN throughout the life of the project.

Note: Yuhaaviatam of San Manuel Nation realizes that there may be additional tribes claiming cultural affiliation to the area; however, Yuhaaviatam of San Manuel Nation can only speak for itself. The Tribe has no objection if the agency, developer, and/or archaeologist wishes to consult with other tribes in addition to YSMN and if the Lead Agency wishes to revise the conditions to recognize additional tribes.

Please provide the final copy of the project/permit/plan conditions so that YSMN may review the included language. This communication concludes YSMN's input on this project, at this time, and no additional consultation pursuant to CEQA is required unless there is an unanticipated discovery of cultural resources during project implementation. If you should have any further questions with regard to this matter, please do not hesitate to contact me at your convenience, as I will be your Point of Contact (POC) for YSMN with respect to this project.

Respectfully,
Ryan Nordness

Subject: City of Redlands AB-52 Tribal Consultation Notice - CRA-948, Tennessee Warehouse Project

Good afternoon,
Please see the attached AB-52 Project Notification.

In accordance with Assembly Bill 52, the City of Redlands is sending this notice to inform California Native American tribes that have requested such notice of a project application within a geographic area with which the tribe is traditionally and culturally affiliated. California Public Resources Code §21080.3.1 requires this notice within 14 days of the City determining this application is complete and/or after the City has decided to undertake a project. California Native American tribes have 30 days from the date of this notice to request consultation with the City regarding this project.

Please contact me with any questions.

Thank you,

Sean Reilly

Executive Summary

Duke Realty Corporation (Duke, the User) retained Roux Associates, Inc. (Roux) to perform a Phase I Environmental Site Assessment (ESA) of the property located at 301 Tennessee Street and 360 Kansas Street, within the City of Redlands, San Bernardino County, California (the Site, Figure 1). According to the San Bernardino County Tax Assessor's office, the Site is comprised of parcels with Assessor's Parcel Numbers (APNs) 0292-192-11 and 0292-192-14 (see Figure 2). Roux performed this Phase I ESA in general accordance with the American Society for Testing Materials (ASTM) *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (ASTM E1527-13) in an effort to identify, to the extent feasible, the presence of recognized environmental conditions (RECs) with respect to the Site as defined in ASTM E1527-13. Exceptions to, or deletions from, this practice are described in Section 8.1 of this report.

As noted above, the Site consists of two adjoining parcels located in a commercial and light industrial area of the City of Redlands, California. For the purposes of this report, the two parcels are referred to as Parcel 1 (301 Tennessee Street) and Parcel 2 (360 Kansas Street). Historically, both parcels were cultivated as agricultural orchards from at least the early 1900s into the mid-1960s. Beginning in 1965, commercial development began on Parcel 1 with the construction of a portion of Building 1 and the entirety of Building 3. Building 2 on Parcel 1 was constructed in 1969 and Building 1 was expanded in several phases between 1969 and 1991. The original and only tenant at Parcel 1 was La-Z-Boy, Inc. (La-Z-Boy), a furniture manufacture, which ceased operations in 2019. By 1953, it appears that Parcel 2 had been redeveloped from fruit orchards with a residential structure and chicken ranch operation with multiple chicken coops. Chicken ranch operations reportedly ceased by the early 1990s. La-Z-Boy operations included the use of the eastern portion of Parcel 2 for trailer parking between the mid-1990s and 2019. Parcel 1 and associated buildings are currently vacant; while Parcel 2 remains occupied by the single-family residence and two garage structures.

On March 15, 2022, Roux visually assessed the Site during the site reconnaissance for potential RECs, including, but not limited to, potential underground storage tanks (USTs), aboveground storage tanks (ASTs), polychlorinated biphenyl (PCB)-containing equipment, hazardous materials storage or handling areas, containerized or bulk wastes, and visual indications of impacted soil.

Roux also performed a records review in an effort to identify RECs in connection with the Site. This records review addressed the Site and surrounding properties. Roux reviewed commercially available records associated with the Site and nearby properties to assess potential concerns associated with the migration of hazardous substances. The records review also included reasonably ascertainable historical data, which can be helpful in identifying the past uses of the Site and surrounding areas, as it may relate to the environmental condition of the Site.

Roux performed interviews and/or file reviews with various government agencies and other parties with possible knowledge of the Site and surrounding properties in an effort to identify current and past uses of the Site and surrounding areas, as they may relate to the environmental condition of the Site.

ASTM E 1527-13 defines a Recognized Environmental Condition (REC) as:

> "The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the

environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions."

A Controlled Recognized Environmental Condition (cREC) as:

> "A recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)."

And a Historical Recognized Environmental Condition (hREC) as:

> "A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). Before calling the past release a historical recognized environmental condition, the environmental professional must determine whether the past release is a *recognized* environmental condition at the time the Phase I Environmental Site Assessment is conducted (for example, if there has been a change in the regulatory criteria). If the EP considers the past release to be a recognized environmental condition at the time the Phase I ESA is conducted, the condition shall be included in the conclusions section of the report as a recognized environmental condition."

This Executive Summary provides a brief overview of the findings of this Phase I ESA. Although the Executive Summary is an integral part of a report, it does not substitute for reading the entire report or the appended or referenced documents in order to fully understand the findings and potential environmental concerns associated with the Site.

Recognized Environmental Conditions (RECs)

Based on the information obtained through the performance of this ESA, Roux identified the following RECs in connection with the current and historical operations at the Site or adjacent properties. To the extent possible, the locations of the RECs are shown in Figure 2. To avoid confusion, all RECs, cRECs, hRECs, and OEFs are numbered sequentially.

REC 1 – Historical Release at Former Fire Suppression Water Trap. Based on a review of previous subsurface environmental investigations conducted on Parcel 1, soil and soil vapor in the northern portion are impacted by volatile organic compounds (VOCs), primarily trichloroethene (TCE) and tetrachloroethene (PCE). An initial 1994 soil investigation conducted by RMT, Inc. (RMT) identified VOC and total petroleum hydrocarbon (TPH)-impacted soil in the vicinity of a reported former fire suppression water overflow collection trap (seepage pit). Subsequent soil vapor investigations in 2019 (LOR Geotechnical Group, Inc. [LOR]), 2021 (Partner Engineering and Science, Inc. [Partner]), and 2022 (GSI Environmental, Inc. [GSI]) conducted throughout Parcel 1 laterally delineated the VOC impacts, mainly TCE, and further suggested that the likely origin of contamination was the former seepage pit. Impacted soil vapor throughout Parcel 1 appears to be limited to the upper 15 feet, except at the suspected source area, where investigations have reported TCE in soil vapor at depths of up to 95 feet below ground

surface (bgs). Additionally, groundwater samples collected at a permanent monitoring well (MW-1, located at the suspected former fire trap) have reported TCE concentrations slightly exceeding drinking water standards.

Indoor air investigations conducted within the former La-Z-Boy buildings on Parcel 1, and within Building 1, have shown indoor air is impacted by VOCs. The source of the impacts to indoor air are potentially the result of vapor intrusion, but appear more likely to be caused by foam roofing material, which is known to contain (and potentially off-gas) PCE. The apparent release of VOC-containing materials at the former fire suppression water overflow collection trap, and the resulting soil vapor and groundwater impacts to the Site are considered a REC in the context of this Phase I ESA.

REC 2 – Former 300-Gallon Gasoline UST. According to available records provided by the CSBFD-HMD, a 300-gallon gasoline UST was formerly located on Parcel 2, approximately 50 feet north of the existing residential structure. This former UST was removed on June 26, 1995 under the oversight of the CSBFD-HMD. A confirmation soil sample was collected from beneath the tank invert and analyzed for TPH-gasoline (TPH-g) and gasoline-related VOCs, which were not reported above laboratory reporting limits. The CSBFD-HMD provided regulatory closure in a letter dated July 3, 1995 indicating that no further action was required. However, investigation performed at that time would be unlikely to meet current regulatory closure requirements. Only one confirmation soil sample was collected and there does not appear to have been any soil vapor sampling conducted in the vicinity of the former UST. The investigation following removal is considered insufficient, particularly without soil vapor sampling, and does not rule out potential soil vapor impacts from the historical UST. On this basis, this former UST, while it does have regulatory closure, is considered a REC in the context of this Phase I ESA.

REC 3 – Former Solvent Degreaser. Regulatory records provided by the South Coast Air Quality Management District (SCAQMD) indicate that a solvent degreaser was installed at the Site in 1984. The 1984 Permit to Operate for the degreaser states that “only 1,1,1-trichloroethane [1,1,1-TCA], trichlorotrifluoroethane, methylene chloride, or a combination of these solvents may be used as the cleaning solvent in this equipment”. Roux has not reviewed any Site plans indicating the location of this degreaser feature or if any action was taken to abandon it. The lack of information regarding the location and status of this degreaser is considered a data gap. The historical presence of the degreaser and the associated chlorinated solvent us is considered a REC in the context of this Phase I ESA.

Controlled Recognized Environmental Conditions (cRECs)

Roux did not identify known or suspected cRECs in connection with the current and historical operations at the Site.

Historical Recognized Environmental Conditions (hRECs)

Roux did not identify known or suspected hRECs in connection with the current and historical operations at the Site.

Other Environmental Features (OEFs)

The term recognized environmental condition is not intended to include de minimis conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Other environmental features (OEFs) are environmental conditions that do not meet the definition of a REC, but which may warrant mention in a comprehensive Phase I ESA. Based on the subject Phase I ESA, Roux identified the following OEFs. To the extent possible, the locations of the OEFs are shown in Figure 2.

OEF 4 – Former Agricultural Operations and Pesticide Usage. Historical aerial photographs document that the Site and surrounding parcels were consistently occupied by agricultural groves between at least 1900 into the mid-1960s. Although undocumented, the use of organochlorine pesticides (OCPs) was commonplace for similar operations during that time. A limited shallow soil investigation conducted at the Site in 2019 collected and analyzed soil samples for OCPs from seven locations on Parcel 1. Soil samples were collected between 1 and 3.5 feet bgs. The results of this investigation are discussed in Section 6.2. A total of five OCPs, including chlordane, DDE, DDT, dieldrin, and heptachlor epoxide, were detected above laboratory reporting limits, but were not detected above applicable residential or commercial screening levels. Considering the low concentrations of pesticides identified in shallow Site soils, it is unlikely that further investigation would be required if brought to the attention of a regulatory agency. On this basis, the historical pesticide use is considered an OEF in the context of this Phase I ESA.

OEF 5 – Former On-Site Railroad Spur. Based on a review of historical aerials and topographic maps, a former railroad track, identified as the Southern Pacific Railroad (SPRR), was present along current-day West State Street running east to west. Available information suggest that this main railroad line was present between at least 1899 to the late 1980s. Further, available records suggest that a rail spur emanating from this main line was present within the boundary of Parcel 1, just inside the southern border. This on-Site rail spur appears to have been present from at least 1967 (initial development) to the late 1980s. There is conflicting information between aerials and topographic maps on how long the railroad tracks remained, but they appear to have been absent in a 1985 aerial photograph. Railroad spurs can be potential sources of shallow soil contamination from a variety chemical of potential concern. A limited shallow soil investigation was conducted at the Site in 2019 (LOR) in the vicinity of the former railroad spur and off-Site main line. The results of this investigation are discussed in Section 6.2. Shallow soil samples were collected and analyzed for heavy metals, TPH, OCPs and semi-volatile organic compounds (SVOCs). According to LOR, no TPH or SVOCs were detected above laboratory reporting limits. Metals and OCPs were detected but at concentrations below applicable screening levels or typical background concentrations. The historical railroad spur on Site is identified as an OEF in the context of this Phase I ESA.

OEF 6 – Hazardous Chemical Storage. Hazardous chemicals have historically been and are currently stored at the Site. Historically, the La-Z-Boy operations maintained several hazardous materials, as documented in CSBFD-HMD records and previous environmental investigations. Documented hazardous materials formerly utilized by former La-Z-Boy operations included adhesives, heavy duty degreaser, wax, diesel, and hydraulic fluid. No hazardous materials of significant quantity were observed within the former La-Z-Boy facilities. On Parcel 2, hazardous materials were observed in the rear portion of the residential property. Roux observed what appeared to be four (4) 5-gallon containers and three (3) 55-gallon steel drums. The contents of these containers is unknown, but are likely petroleum products

(i.e., used motor oil, lubricating oil) used to maintain a front loader staged nearby. Both throughout Parcel 1 and Parcel 2, Roux did not observe significant staining that could be attributed to hazardous chemical storage. On this basis, current and historical hazardous material storage is considered an OEF in the context of this Phase I ESA.

OEF 7 – Unused Water Well on Site. An unused groundwater well and pump are located to the east of the single family residence on Parcel 2. The groundwater well is reportedly not used and it is unclear if it has been abandoned. This groundwater well is identified as an OEF in the context of this Phase I ESA.

1. Introduction

Roux Associates, Inc. (Roux) completed this Phase I Environmental Site Assessment (ESA) of the commercial property located at 301 Tennessee Street and 360 Kansas Street, City of Redlands, San Bernardino County, California (the Site). The Site location is shown in Figure 1 and the Site and vicinity is shown in Figure 2. Roux performed this Phase I ESA in compliance with the scope and limitations of American Society for Testing Materials (ASTM) E1527-13 and the terms and conditions of Roux' proposal dated March 1, 2022. Roux conducted this Phase I ESA for the benefit of Duke Realty Corporation (Duke, the User).

The following sections of this report present our Phase I ESA findings and conclusions. A glossary containing terms and definitions presented in ASTM E1527-13 is included in Appendix A – Glossary of Terms. Other appendices presented at the end of the report include historical topographic maps, historical aerial photographs, regulatory records review documentation, applicable historical records, and personnel qualifications.

1.1 Purpose

The purpose of this Phase I ESA is to identify and report, to the extent feasible, recognized environmental conditions (RECs) with respect to the Site. Performing a Phase I ESA in general compliance with ASTM E 1527-13 may enable a User to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) liability. That is, the practice that constitutes one of the requirements for "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined in 42 USC Section 9601(35) (B).

1.2 Scope of Services

The scope of services for this Phase I ESA included, but was not limited to, the activities listed below.

- A review of reasonably ascertainable and practicably reviewable topographic maps, historical aerial photographs, and city directories, if available, to investigate past Site conditions;
- A review of specific government lists pursuant to ASTM Standard E 1527-13 regarding environmental activities for the Site and local area properties;
- A review of recorded land title records, building, assessors, and fire department records, for permits, citations, and reports connected to the Site that were reasonably ascertainable, practicably reviewable, and publicly available within reasonable time and cost;
- An inspection by an environmental professional to investigate the current use of the Site and to identify environmental concerns including but not limited to, the presence of hazardous substances or petroleum products, wastes, underground storage tanks (USTs), aboveground storage tanks (ASTs), or other environmental concerns;
- Interviews with available representatives of the owner of the Site, occupants, and local government officials by an environmental professional; and
- Preparation of this Phase I ESA report.

Roux initiated this Phase I ESA pursuant to receipt of written authorization to proceed on March 1, 2022.

1.3 Standard of Care

Roux conducted this Phase I ESA using a defined scope of services considered appropriate and agreed upon by all parties on the date the service was authorized, unless the scope of services or the methods used were later modified, in writing, and accepted by all parties prior to performance. Roux conducted this Phase I ESA in accordance with generally accepted practices in a manner consistent with that level of care exercised by other members of our profession in the same locality and under similar conditions of time and accessibility of improvements and information. No other representations, expressed or implied, and no warranty or guarantee is included or intended to be part of this Phase I ESA.

Please note that the scope of services performed in execution of this assessment may not be appropriate to satisfy the needs of other parties. We, therefore, are not responsible for independent conclusions, opinions, or recommendations of others based on our assessment. Furthermore, this Phase I ESA relates to the environmental conditions of the Site and does not address issues raised in transactions such as business risk, purchase of business entities, or interests therein, or of their assets, that may well involve environmental liabilities pertaining to properties previously owned or operated or other offsite liabilities.

Additionally, the findings of this Phase I ESA are based on Roux' observations, inquiries, and historical research using reasonably ascertainable and practically reviewable information obtained within reasonable time and cost constraints. Roux does not represent that this Phase I ESA is an exhaustive investigation that reflects the findings of all of the information available for the Site, nor is it representative of future Site conditions. If additional information is generated from the Site, it should be provided to Roux so that we may evaluate its impact on our conclusions. As such, activities or episodes that transpire subsequent to this Phase I ESA are not considered in this assessment. It is not intended that a Phase I ESA in accordance with ASTM E1527-13 be an exhaustive assessment of a property nor can it wholly eliminate uncertainty regarding the potential for *recognized environmental conditions* in connection with a property.

1.4 Assumptions

This Phase I ESA Report, including the exhibits attached hereto, describes the results of Roux' investigation to identify the presence of *recognized environmental conditions* connected with the Site in accordance with ASTM E1527-13, as allowed by and consistent with the regulatory requirements of the All Appropriate Inquiry Rule, 40 CFR Part 312, Amendment to Standards and Practices for All Appropriate Inquires Under CERCLA, Final Rule, published December 30, 2013 (AAI Rule). Specifically, the preamble to the amended AAI Rule states:

> *The Environmental Protection Agency (EPA) today is taking final action to amend the standards and practices for conducting all appropriate inquiries under the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) to reference a standard practice recently made available by ASTM International, a widely recognized standards development organization. Specifically, this final rule amends the "All Appropriate Inquiries Rule" at 40 CFR Part 312 to reference ASTM International's E1527–13 "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process" and make clear that persons conducting all appropriate inquiries may use the procedures included in this standard to comply with the All Appropriate Inquiries Rule*[1].

[1] Federal Register: December 30, 2013 (Volume 78, Number 250) Page 79319

One of the requirements that a person acquiring real property must meet in order to qualify for either the innocent landowner, contiguous owner, or bona fide prospective purchaser (collectively hereinafter "Prospective Purchaser") defense to liability under the federal Comprehensive Environmental Response, Compensation, and Liability Act of 1980, as amended by the Superfund Amendments and Reauthorization Act of 1986, and the Small Business Liability Relief and Brownfields' Revitalization Act of 2002, 42 U.S.C. 9601-9675 (collectively referred to hereafter as "CERCLA") is that person must conduct all appropriate inquiries into the previous ownership and uses of the property in conformance with the AAI Rule (or the ASTM E1527-13) prior to acquisition of the property. The User has acknowledged that, under the AAI Rule, Roux' performance of this Phase I ESA in accordance with ASTM E1527-13 will not alone result in the User satisfying all requirements of the AAI Rule and will not in itself provide a defense to CERCLA liability. The User has acknowledged that the AAI Rule also requires that the Prospective Purchaser undertake certain additional inquiries and post-acquisition activities to satisfy the CERCLA AAI requirements. Accordingly, Roux makes no guarantees or warranties, expressed or implied, regarding this Phase I ESA, including without limitation, that this Phase I ESA will qualify the User for a defense to CERCLA liability.

Roux has performed this Phase I ESA in a professional manner using that degree of skill and care exercised for similar projects under similar conditions by reputable and competent environmental consultants. Professional judgments expressed herein are based on the facts currently available to Roux.

The AAI Rule requires, and the conclusions and recommendations stated herein represent, the application of a variety of engineering and technical disciplines to material facts and conditions associated with the Site. As such, these conclusions and recommendations are based on subjective interpretations and the exercise of discretion based on the facts available to Roux and conditions at the time of the performance of this Phase I ESA. Many of these facts and conditions are subject to change over time. Accordingly, the conclusions and recommendations must be considered within this context.

The User has agreed that Roux shall not be responsible for conditions or consequences arising from relevant facts that were concealed, withheld, or not fully disclosed at the time this Phase I ESA was performed. To the extent practicable, Roux has identified data gaps, and has evaluated the potential significance of such data gaps. Recommendations to address those data gaps are presented herein and are based on the data available at the time of the performance of this Phase I ESA. Implementation of the recommendations may not fully address the data gaps, and the information obtained from execution of those recommendations may alter and/or modify the interpretation of the Site conditions and conclusions, herein. This Phase I ESA does not include consideration of matters specifically excluded by ASTM E1527-13, including but not limited to, asbestos-containing building materials, radon, lead-based paint, lead in drinking water, wetlands, regulatory compliance, and mold unless specifically identified herein.

Roux has not collected any soil and/or groundwater samples on the Site for Phase I purposes, and is relying on information presented by others, often in preliminary, draft, or verbal form. By referencing this information, Roux does not accept responsibility for the accuracy of the underlying data, sampling methods, laboratory analysis, or documentation.

This Phase I ESA Report should not be considered a legal interpretation of existing environmental laws and regulations. This Phase I ESA was conducted with a reasonable degree of inquiry to identify *recognized environmental conditions*, but uncertainty is not eliminated. No Phase I ESA can wholly eliminate uncertainty regarding the potential for *recognized environmental conditions* in connection with a property.

The Phase I ESA process is intended to reduce, but not eliminate, the uncertainty involved with identifying *recognized environmental conditions*.

This Phase I ESA Report is not an appraisal or value judgment of the Site. The User has agreed that Roux shall not be liable for any use of this Phase I ESA Report as an appraisal or value judgment of the Site.

This Phase I ESA Report has been prepared for the exclusive use of the User for specific application to the Site covered by this Phase I ESA Report. The User has agreed that any third-party use of this Phase I ESA Report, upon disclosure by the User, is the sole responsibility and at the sole liability of the User.

1.5 User Reliance

No additional parties may use the information contained in this report without obtaining the written permission of Roux or the User. Roux' duties and obligations extend to the User and to no other party. Roux' duties and obligations to the User are not transferable to persons, corporations, or organizations without the express written consent of the User and Roux. The User may rely upon the information provided in this Phase I ESA report for a period of 180 days from the date of issue. After 180 days, this Phase I ESA should be updated in accordance with ASTM guidance. Roux will not be liable for any consequential damages arising from the use of this report for other than its intended purpose, for use of this report beyond 180 days of its issue date, or from unauthorized use by third parties.

This Phase I ESA report must be read and interpreted as a whole and can only be considered representative of the conditions of the Site as of the date of our site reconnaissance described herein. Roux makes no representation whatsoever concerning the condition of the Site beyond the date of our site reconnaissance described herein. Individual sections and appendices of this report are dependent on the balance of this report, and on the terms, conditions, and stipulations contained in the proposal and written amendments accepted by Roux.

2. Site Description

2.1 Site Location and Description

Site Information	
Site Name	Former La-Z-Boy West Facility (referring to Parcel 1)
Street Address(es)	Parcel 1: 301 Tennessee Street Parcel 2: 360 Kansas Street
City	Redlands
County	San Bernardino
State	California
Location	Situated between Kansas Street to the west, Tennessee Street to the east, West State Street to the south
Assessor's Parcel Number (APN)	Parcel 1: 0292-192-11 Parcel 2: 0292-192-14
Site Acreage (per San Bernardino County Assessor)	Parcel 1: 8.2 acres Parcel 2: 2.81 acres
Site Occupant(s)	Parcel 1: Vacant commercial building Parcel 2: Private residence and vacant property
Onsite Operations	Parcel 1: None, formerly La-Z-Boy manufacturing facility Parcel 2: Private residence in the western portion. Eastern portion of parcel is vacant.
Description of Onsite Structures	**Parcel 1** Building 1: Approximately 181,500 square foot warehouse structure Building 2: Approximately 12,000 square foot warehouse structure Building 3: Approximately 1,355 square foot structure **Parcel 2** One single-story residential dwelling and two sheet metal structures
Site Paving	Parcel 1: Primarily paved asphalt with landscaping and areas of concrete pavement. Parcel 2: Historical aerials show that the eastern portion of Parcel 2 has an asphalt paved layer, but the western portion is generally unpaved.
Site Grading	Parcel 1: Graded to drain to multiple areas with stormwater directed off-Site to the north, west and south. Parcel 2: Generally flat with a gradual slope to the north.
Site Vicinity	Primarily commercial and light industrial

Refer to Section 5.0 for a detailed description of the current condition of the Site and operations.

2.2 Vicinity General Characteristics

The facilities and improvements which are located immediately adjacent to the Site are provided in the following table.

Direction from Site	Improvements / Use (Addresses)
North	The Mission Zanja historical irrigation canal, now an intermittent tributary of the Santa Ana River followed by various commercial properties
Northeast	Tennessee Street followed by various commercial properties
East	Tennessee Street followed by a private residence
Southeast	Intersection of Tennessee Street and Kansas Street followed a Covenant Family Church (278 Tennessee Street #6), a Redland community News, a newspaper publisher (296 Tennessee Street) and a park
South	West State Street followed by Southern California Edison office and maintenance yard (287 Tennessee Street)
Southwest	Commercial structure occupied by Toy Locker RV and Boat Storage (300 Kansas Street), followed by intersection of Kansas Street and West State Street
West	Kansas Street followed by commercial warehouse occupied by Rettig Machine, a machine workshop (301 Kansas Street)
Northwest	Kansas Street followed by Santa Ana River and then commercial property, including Custom Material Sales (377 Kansas Street)

2.3 Past Use of the Site

The entire Site, both parcels, were historically utilized as agricultural fruit orchards from at least 1900, and likely earlier, into the mid-1960s. From at least 1930, a rural residence and garage were located in the southeast corner of Parcel 1. Beginning in 1965, the eastern portion of present-day Building 1 was constructed on Parcel 1 (initial 72,000 square feet) along with Building 3, the smallest structure. According to provided City of Redlands building permits, additions were made to Building 1 in 1969 (28,000 square feet), 1972 (43,600 square feet), 1973 (800 square feet), 1986 (21,000 square feet), and 1991 (9,225). Building 2, approximately 12,000 square feet, was constructed in 1969. Since commercial development in 1965, Parcel 1 has been occupied by La-Z-Boy, which recently vacated the Site in 2019. By 1953, it appears that Parcel 2 had been redeveloped with a residential dwelling and long rectangular structure, identified as a chicken coop. Chicken ranch operations on Parcel 2 would be expanded to occupy the entire parcel by 1959 and remained until their removal in the early 1990s. The residence in the western portion of Parcel 2 is still present. Between the mid-1990s to 2019, the eastern half of Parcel 2 was utilized as parking and storage of tractor trailers associated with the adjacent La-Z-Boy facility on Parcel 1; which ceased operations in 2019.

2.4 Physical Setting

Roux obtained and reviewed published, reasonably ascertainable information concerning the physical setting of the Site. The following is a summary of the information reviewed from those physical setting sources.

Physical Setting Summary	
United States Geological Survey (USGS) Topographic Map	Redlands, California Quadrangle

Physical Setting Summary	
Approximate Site Elevation / Source	1,245 to 1,265 feet above mean sea level (msl) / Redlands, California (2012) 7.5-minute quadrangle topographic map published by the USGS
Nearest Surface Water Features / Approximate Distance	Santa Ana River, located approximately 2.5 miles north of the Site
Regional Geology / Source	Site is located within Peninsular Ranges Geomorphic Province of Southern California near the San Bernardino Mountains. Vicinity is underlain by middle Holocene axial-valley alluvium deposits consisting of slightly to moderately consolidated silt, sand and gravel.
Site Topography / Source	Generally flat with a gradual slope to the west / Site observations and USGS topographic map
Hydrogeological Region / Source	Located the Upper Santa Ana Valley Groundwater Basin within the eastern portion of the Bunker Hill Subbasin, approximately two and half miles south of the Santa Ana River, which is typically dry.
Depth to Groundwater / Source	Approximately 112 to 115 feet below ground surface (bgs) / GSI, 2022
Groundwater Gradient Direction / Source	West to southwest / Groundwater monitoring data from *Draft Results of Limited Phase II Site Investigation* at Parcel 1 (GSI, 2022)
Onsite Soil	The Site is generally underlain with poorly graded sands, silty sands, and silty sands with gravel down to 100 feet bgs (GSI 2022)

3. Sources of Information

Sources of information utilized in preparing this Phase I ESA report included historical topographic maps; historical aerial photographs; a walkover survey of the Site and adjoining properties; in-person discussions with User and tenant personnel; a review of records available at selected local and state regulatory agencies; a review of databases maintained by local, state, and federal government agencies; and other records available from commercial and online sources.

3.1 Historical Sources

To help understand the history of the Site and past land uses, historical sources were obtained from Environmental Data Resources, Inc. (EDR), of Shelton, Connecticut. The sources and locations within the Appendices are provided in the table below.

EDR Historical Sources		
Historical Range	**Source**	**Appendix**
1989 - 2018	U.S. Geological Survey Topographic Maps Nationwide Environmental Title Research LLC (NETR) Historical Aerials Database	B
1930 - 2016	EDR Aerial Photographs "Decade Package" NETR Historical Aerials Database Google Earth	C
No Available Coverage	EDR "Certified Sanborn® Map Report"	D
1965 - 2017	EDR "City Directory Image Report"	E

Note: Due to copyright restrictions, the aerial photographs and topographic maps reviewed on Google Earth and NETR Historical Aerials Database were not included in the appendices.

3.2 Site Reconnaissance

On March 15, 2022, Roux personnel conducted a reconnaissance of the Site, including the interior of Building 1. Roux did not access the interior of Buildings 2 and 3 on Parcel 1, but was able to view portions of the interior from exterior windows. Roux did not access the interior of the residence located on Parcel 2. The observations made during the Site reconnaissance are discussed in Section 5.0 and throughout the report. A photographic log of the Site reconnaissance is included as Appendix G.

3.3 Regulatory Agencies

Roux contacted governmental agencies for reasonably ascertainable information concerning environmental conditions at the Site. Roux contacted or reviewed information from the agencies provided in the following table. Refer to Appendix H – Pertinent Regulatory Records for copies of the records reviewed. A summary of the information gathered from the regulatory agencies is provided in the table and details regarding the records were incorporated into applicable sections as noted.

Agency	Date Requested / Accessed	Response Date	Description of Records	Section Discussed
Federal				
U.S. Environmental Protection Agency (EPA) – FOIAonline	3/7/2022	3/18/2022	No records were associated with the Site.	N/A
U.S EPA MyProperty Database	3/7/2022	N/A	No records were associated with the Site.	N/A
National Pipeline Mapping System (NPMS) Online Database	3/7/2022	N/A	No records were associated with the Site and no pipelines were mapped within a 1-mile radius of the Site.	N/A
State				
State Water Resources Control Board (SWRCB): GeoTracker Online Database	3/7/2022	N/A	No records were associated with the Site. Only one release case is mapped within a 1,000 feet radius of this Site. This case, a closed Leaking Underground Storage Tank (LUST) case, is discussed in Section 7.0.	7.0
SWRCB: Storm Water Multiple Application and Report Tracking System (SMARTS) Online Database	3/7/2022	N/A	Available records provided by the SMARTS Online Database are discussed below.	3.3.1
Department of Toxic Substances Control (DTSC)	3/2/2022	3/3/2022	No records were associated with the Site.	N/A
DTSC: EnviroStor Online Database	3/2/2022	N/A	No records were associated with the Site. No listings were identified within 1,000 feet of the Site.	N/A
DTSC: Hazardous Waste Tracking System (HWTS) Online Database	3/7/2022	N/A	Several documents tracked the types and quantities of hazardous waste transported off Site for disposal between 1994 and 2019.	3.3.2
California Air Resources Board (CARB)	3/2/2022	3/7/2022	No records were associated with the Site.	N/A

Agency	Date Requested / Accessed	Response Date	Description of Records	Section Discussed
California Office of Environmental Health Hazard Assessment (OEHHA)	3/2/2022	3/15/2022	No records were associated with the Site.	N/A
CalEPA CalRecycle	3/2/2022	3/4/2022	No records were associated with the Site.	N/A
CalEPA CalRecycle Solid Waste Information System (SWIS) Online Database	3/7/2022	N/A	No records were associated with the Site.	N/A
State of California Department of Conservation: Geological Energy Management (CalGEM) Online Database	3/7/2022	N/A	There are no wells on Site and none within a one-mile radius of the Site.	N/A
County / Regional				
Santa Ana Regional Water Quality Control Board (SARWQCB)	3/2/2022	3/4/2022	Parcel 1: SA-RWQCB referred to records associated with storm water which were reviewed and discussed in the SMARTS section above. Parcel 2: No records were associated with the Site.	N/A
South Coast Air Quality Management District (SCAQMD)	3/2/2022	3/16/2022	Parcel 1: Records identified for the Site included facility equipment list reports, permits to operate, and notices of violation (NOVs). Parcel 2: No records were associated with the Site.	3.3.3
SCAQMD Facility Information Detail (FIND) Online Database	3/7/2022	N/A	Records identified for the Site included facility equipment list reports, permits to operate, and NOVs. These records are similarly to those provided directly by SCAQMD and are discussed together below.	3.3.3
County of San Bernardino Fire Protection District: Hazardous Materials Division (HMD)	3/2/2022	3/10/2022	The CSBFD-HMD provided available records for review which are discussed below.	3.3.4
County of San Bernardino Department of Public Health (DPH) – Environmental Health Services (EHS)	3/2/2022	3/7/2022	No records were associated with the Site.	N/A

Agency	Date Requested / Accessed	Response Date	Description of Records	Section Discussed
City / Local				
City of Redlands	3/2/2022	3/31/2022	Parcel 1: The City of Redlands provided historical permits associated with the address 301 Tennessee Street which are discussed below. Parcel 2: As of the publishing of this report, a response is still pending regarding this address.	3.3.5

3.3.1 SMARTS Online Database

According to the SMARTS online database, there are three listings for the former La-Z-Boy facility located at 301 Tennessee Street. The statuses of these industrial wastewater permits are terminated (WDID 8 36I027814), no action required (WDID 8 36NNA000237) and undetermined (WDID: non-filer). No other pertinent information was obtained from available files provided by SMARTs.

3.3.2 DTSC: HWTS Online Database

The Site is listed as La-Z-Boy (CAD005544465) at 301 Tennessee Street, and is registered as a permanent and inactive state generator, which expired as of 6/30/2020. Available information shows the facility generated hazardous waste between 1994 to 2019. Referenced documented waste included asbestos containing waste, unspecified aqueous solution, oxygenated solvents, hydrocarbon solvents, waste oil and mixed oil, unspecific oil-containing waste, adhesives, off-spec-aged-or surplus organics, liquids with halog organic compounds. Notably, the majority of this hazardous waste was generated and removed in 2019 and likely coincided with La-Z-Boy facility operations ceasing and vacating the Site.

The Site is listed as Hahan Contractors (CAC002775116) at 301 Tennessee Street, and is registered as a temporary and inactive state generator, which expired as of 9/16/2014. Available information shows that the facility generated 0.23 tons of asbestos containing waste in 2014.

The Site is listed as Alex Kimm (CAC001052608) at 360 Kansas Street, and is registered as a temporary and inactive state generator, which expired as of 10/25/2000. Available information indicates that at least 0.4 tons of unknown hazardous waste was removed in 1995; however previous environmental report indicate that the hazardous waste was “empty containers of 30 gallons or more” (Northgate, 2020).

3.3.3 SCAQMD and FINDs

The Site is listed as La-Z-Boy (ID 24248), at 301 Tennessee Street, and is listed as an active facility. Records provided by both SCAQMD and the online FINDs database included facility equipment list reports, permits to operate, and NOVs. Permitted equipment that reportedly existed at the La-Z-Boy facility included a drying oven, a dip tank for coating paint, a degreaser for methylene chloride, and up to up spray paint booths. Available documents indicate that at least two of these spray booths were glue spray booths. Available Permits to Operate indicate that the spray booths were installed between 1978 and 1981 and the degreaser was installed in 1984. The 1984 PTO for the degreaser states that “only 1,1,1-trichloroethane [1,1,1-TCA], trichlorotrifluoroethane, methylene chloride, or a combination of these solvents may be used as the cleaning solvent in this equipment”. The location of these features is unknown and Roux has not reviewed any diagrams or maps indicating their approximate locations. A SCAQMD Inspection Report from May 7, 2019 indicated that only two spray booths were in operation at the time.

SCAQMD/FINDS records also documented the removal of asbestos containing floor tiles in 2010 and the installation of the sub-slab depressurization system (SSDS) in 2020. The SSDS contains 25 subsystems located throughout the Site. Roux has not reviewed a diagram or map of the SSDS layout.

Provided SCAQMD/FINDS records are included in Appendix H.

3.3.4 County of San Bernardino Fire Protection District: Hazardous Materials Division (HMD)

In letters dated March 10, 2022, the CSBFD-HMD indicated that they have available records related to both Parcels 1 and 2. For Parcel 1, address 301 Tennessee Street, Roux conducted an in-person file review of

records that primarily pertained to hazardous materials and hazardous waste on Site. While there were no hazardous materials reviewed during the Site reconnaissance, CSBFD-HMD inventory list from 2011 report that historical hazardous materials previously stored on Site included multiple containers of adhesive (stored in 5-270 gallon containers), two 270-gallon totes of Cal Foam Bond 100, one 287-gallon propane tank, two 55-gallon drums of heavy duty degreaser, four 55-gallons drums of AW-60 wax, 1,000 pound pallet of poly glue, four 55-gallon drums of diesel, two 55-gallon drums of hydraulic fluid, and seven 55-gallon drums of universal waste (aerosols). A 2017 facility inspection report by the SBCFD-HMD states that the facility does not generate hazardous waste.

For Parcel 2, address 360 Kansas Street, CSBFD-HMD provided 11 pages of records documenting the removal of a 300 gallon gasoline UST on June 26, 1995. This 300-gallon UST was reportedly located approximately 50 feet north of the residential building. The installation date of this UST is unknown. One confirmation soil sample was collected from beneath the tank invert and laboratory analysis for total petroleum hydrocarbons-gasoline (TPH-g) and gasoline related volatile organic compounds (VOCs, (benzene, toluene, ethylbenzene, xylenes [BTEX]) were not reported above laboratory reporting limits. The CSBFD-HMD provided regulatory closure in a letter dated July 3, 1995 indicating that no further action was required. No other records pertaining to hazardous materials were provided for Parcel 2.

CBSBFD-HMD records are included in Appendix H.

3.3.5 City of Redlands

The City of Redlands provided a package of historical building permits associated with the address 301 Tennessee Street. Reviewed records were primarily related to the development and expansion of existing buildings, tenant improvements, and typical building permits (i.e., fire sprinklers, heating, ventilation, and air conditioning [HVAC] modifications, electrical, plumbing and sewer work). Roux did not identify any pertinent information from the available permits related to former features such as the degreaser or fire suppression pit. City of Redlands records are included in Appendix H.

At the time of this publication, a response for the address 360 Kansas Street is still pending.

3.4 Government Databases

To document potential sources of contamination at or near the Site, a government records search was conducted by EDR. The search included local, state, and federal records for the Site and for other properties within ASTM-standard distances of the Site. The records search is summarized in Section 7.0 and a copy of “The EDR Radius Map™ Report with GeoCheck®,” dated March 3, 2022, is included in its entirety as Appendix F. As recommended by ASTM, all but a few of the databases searched were “current,” i.e., had been updated within 90 days prior to the search date.

3.5 User Provided Information

ASTM E1527-13 provides that the User perform certain tasks. The purpose of this section is to present select User-provided information that can assist in identifying possible *recognized environmental conditions* in connection with the Site. According to ASTM E1527-13, these tasks do not require the technical expertise of an environmental professional and the environmental professional generally does not perform these tasks. Roux administered a questionnaire to the User at the beginning of this Phase I ESA to assist them with these tasks; however, the completed questionnaire has not been returned to Roux as of this report date.

4. Site History

This section documents the history of the Site and describes current conditions and existing or former environmental features.

4.1 Site History

The history of the Site and, to a lesser extent, the surrounding area, including previous land use, has been compiled based on information from the exhaustive list of sources provided in Section 3.

Summary of Historical Sources				
Decade	**Year**	**Source**	**Site Description**	**Vicinity Description**
Predevelopment History				
Pre-1900	1899	Historical Topographic Map: Redlands (15-minute)	Both parcels are undeveloped.	Adjacent north of the Site, which includes both parcels, is a natural channel traveling generally along the present day Mission Zanja Creek flood control channel, now is a tributary of the Santa Ana River. South of the Site, and immediately adjacent to Parcel 1, is the east-west trending railroad line, identified as the Southern Pacific Railroad – Redlands and San Bernardino Motor Line.
1900s	1901	Historical Topographic Map: Redlands (15-minute)	Same as previous description.	Same as previous description.
1910s	No resources available for review.			
1920s	No resources available for review.			
Agricultural Development				
1930s	1930	EDR Aerial Photograph	The Site, both parcels, are developed with agricultural groves. There appears to be a small structure, likely a residence, in the southeast corner of Parcel 1.	The Mission Zanja Creek channel is present north of the Site and the aerial image shows increased vegetation around the channel. Much of the surrounding area is agricultural groves with limited rural residential.
	1938	EDR Aerial Photograph	Same as previous description.	Same as previous description.

Summary of Historical Sources				
Decade	**Year**	**Source**	**Site Description**	**Vicinity Description**
	1949	EDR Aerial Photograph	Same as previous description.	Same as previous description.
1950s	1953	EDR Aerial Photograph	Parcel 1 remains unchanged from previous aerial descriptions. On Parcel 2, there are new structures, including a long rectangular structure that previous information has identified as a chicken coop associated with a chicken ranch. The majority of Parcel 2 is still occupied by agricultural groves.	Same as previous description.
	1954	Historical Topographic Map: Redlands (7.5-minute)	The Site is mapped as agricultural groves with a residential structure in the southeast corner of Parcel 1 and southwest corner of Parcel 2.	The intermittent Mission Zanja Creek channel is present to the north and the Southern Pacific Railroad is present to the south, along Citrus Avenue, which is the present-day West State Street.
	1959	EDR Aerial Photograph	Parcel 1 remains entirely occupied by agricultural groves and a small structure, likely residential in the southeast corner. Parcel 2 is cleared of agricultural groves and there appear to be two new rectangular structures associated with the chicken ranch operations.	Vicinity conditions are primarily agricultural groves, including immediately adjacent parcels; although there is limited commercial and residential development.
Commercial Redevelopment				
1960s	1966	EDR Aerial Photographs	Parcel 1 is cleared of agricultural groves and is being developed with the eastern half of the currently existing commercial warehouse structure (Building 1) and the smaller Building 3. Parcel 2 has three rectangular chicken coops and what appears to be the existing residential structure in the southwest corner of the Site.	Immediately adjacent parcels to the east and south are developed with commercial structures, some resembling the current Site conditions. Adjacent parcels to the southwest, west and north are still agricultural groves. There is significant development, likely commercial, to the northeast.
	1967	Historical Topographic Map: Redlands (7.5-minute)	Parcel 1 is mapped with Buildings 1 and 3 observed in the 1966 aerial photograph.	Vicinity conditions are consistent with previous conditions.
	1968	EDR Aerial Photograph	The eastern half of Parcel 1 is developed with a portion of Building 1 and then the smaller Building 3. The eastern half of Parcel 1 is undeveloped. Conditions are Parcel 2 remain unchanged from previous descriptions.	Immediately adjacent parcels to the southwest and south are no longer agricultural groves and appear to be in the process of commercial development.

Summary of Historical Sources				
Decade	**Year**	**Source**	**Site Description**	**Vicinity Description**
1970s	1973	Historical Topographic Map: Redlands (7.5-minute)	Same as previous description.	Same as previous description.
	1975	EDR Aerial Photograph	Parcel 1 is now developed with commercial structures resembling present-day conditions. Building 1 has been expanded with an addition to the west side and Building 2 is now present in the northwest corner of the parcel. Parcel 2 is still occupied by the chicken ranch and residential structure.	The Site vicinity has undergone significant redevelopment with primarily commercial/light industrial development to the north, east and south. Property to the west is still agricultural groves. The Mission Zanja Channel to the north of the Site is present.
1980s	1980	Historical Topographic Map: Redlands (7.5-minute)	This map shows the added development to Building 1 and structures associated with the chicken ranch operations on Parcel 2.	Same as previous description.
	1985	EDR Aerial Photograph	Same as previous description.	Same as previous description.
	1988	Historical Topographic Map: Redlands (7.5-minute)	Same as previous description.	Same as previous description.
	1989	EDR Aerial Photograph	Same as previous description.	Same as previous description.
1990s	1994	EDR Aerial Photograph	Parcel 1 is unchanged from previous descriptions. Parcel 2 has been cleared of the rectangular chicken coop structures, but the residential structure in the southwest corner is still present. There are storage containers located in the southeast corner of Parcel 2.	Previously observed agricultural development to the west has been replaced with commercial development. Much of the surrounding development resemble present-day conditions, which are primarily commercial operations.
	1996	Historical Topographic Map: Redlands (7.5-minute)	Same as previous description.	Same as previous description. The adjoining street to the south is still identified as Citrus Avenue and the railroad line is still mapped.
2000s	2002	EDR Aerial Photograph	Parcel 1 is unchanged from previous descriptions. The central and eastern portion of Parcel 2 is being utilized for storage of truck trailers from the adjacent La-Z-Boy facility.	Same as previous description.
	2006	EDR Aerial Photograph	Same as previous description.	Same as previous description.
	2009	EDR Aerial Photograph	Same as previous description.	Same as previous description.

Summary of Historical Sources				
Decade	**Year**	**Source**	**Site Description**	**Vicinity Description**
2010s	2012	Historical Topographic Map: Redlands (7.5-minute)	Same as previous description.	The adjoining street to the south, formerly Citrus Avenue, is now labeled as West State Street.
		EDR Aerial Photograph	Same as previous description.	Same as previous description.
	2015	Historical Topographic Map: Redlands (7.5-minute)	Same as previous description.	Same as previous description.
	2016	EDR Aerial Photograph	Same as previous description.	Same as previous description.
	2018	Historical Topographic Map: Redlands (7.5-minute)	Same as previous description.	Same as previous description.
2020s	2022	Site Reconnaissance	Parcel 1 and the eastern portion of Parcel 2 were vacant from previous operations; although Buildings 1, 2 and 3 remain. The western portion of Parcel 2 contains a residence, a garage structure and small shed structure.	Same as previous description.

5. Current Site Conditions

A Roux representative conducted a reconnaissance of the Site and surrounding areas on March 15, 2022. During the Site visit, Roux representative Mr. Justin Allen visited the Site and received access to the building on Parcel 1 from facility manager located across Tennessee Street to the east. Roux also visually and/or physically observed adjoining properties from reasonably accessible locations on the Site and public thoroughfares. During the Site reconnaissance, the weather was clear and the temperature was approximately 80° Fahrenheit. The following sections summarize observations during the inspection. Roux documented the Site Reconnaissance with photographs which are provided in Appendix G.

5.1 Site Reconnaissance

Parcel 1 contains three commercial buildings formerly utilized as the La-Z-Boy facility. All three buildings were completely vacated at the time of this Site reconnaissance. Building 1 is an approximately 181,500 square foot structure formerly used for manufacturing and assembly of furniture. In the eastern portion of Building 1 is office space, conference rooms, a cafeteria, and restrooms. The central and western portions of Building 1 were former reportedly utilized for manufacturing, storage and shipping of La-Z-Boy products, primarily furniture. Much of Building 1 was completely empty with the exception of metal racks in former storage areas. Roux observed multiple electrical panels and a handful of dry-type transformers inside Building 1. With the exception of main water lines, most utilities, including HVAC, appeared to be installed overhead. Roux observed components of the sub-slab depressurization system (SSDS), including vent riser piping and magnehelic gauges, situated throughout Building 1. There are multiple loading docks along the western side of Building 1. Two large piles of roofing insulation were located outside the west and north sides of Building 1. Roux was not able to access Building 2 but observations from an exterior window showed that the building was vacant, but did contain storage racks, furniture and other miscellaneous items. No chemicals or common chemical storage containers (i.e., drums or totes) were observed. Building 2 also contained one loading dock. Roux was not able to access Building 3 but observations from an opening in the roll up door indicated that it was also vacated. A compressor was observed in the garage portion.

The eastern portion of Parcel 2, that was formerly used at trailer storage for La-Z-Boy, was accessible and vacant. The eastern portion of Parcel 2 is paved with an asphalt-type layer according to historical aerials but much of the pavement was covered in dirt during the Site reconnaissance. The western portion of Parcel 2 is accessible from Kansas Street and is occupied by a private residence. Observations from the eastern portion of Parcel 2 and from Kansas Street noted that the area is unpaved expect for a small driveway. There is a sheet metal garage structure and associated storage shed located behind the residence along the northern portion of the parcel. Roux was unable to fully access this garage and storage shed during this Site reconnaissance. Previous reports have noted that the garage and storage shed were recently used by a masonry contractor for storage of materials and equipment. Also observed in the western portion of Parcel 2 was a boat, a front loader, multiple steel excavator buckets, a bus, and at least 10 shipping containers. The contents of the shipping containers is unknown and previous reports have stated these containers are rented to private tenants for storage.

5.2 Phase I ESA Observations

During Site reconnaissance, Roux personnel attempt to identify any environmental features that may be relevant in the context of the Phase I ESA. The features identified are summarized in the table below. Any such features are discussed in the following subsections.

Feature	Observed on the Site	Observed on an Adjacent Property
Areas of stressed vegetation		
Areas which receive flood or storm water from potentially contaminated areas		
Air Compressor Vent Discharges		
Chemical Storage and/or Use		
Drainage Swales and Culverts	X	
Discharge Areas		
Discolored or Spill Areas		
Drums (55 Gallons or Larger)	X	
Electrical Transformers	X	
Former Agricultural Applied Pesticide Area	X	
Hydraulic Lifts		
Incinerators		
Landfills or Landfarms		
Loading and Unloading Areas	X	
Non-Contact Cooling Water Discharge		
Oil-Water Separator(s)		
Open Areas Away from Production Areas		
Process Area Sinks and Piping		
Rail Cars/Railroad Spurs	X	
Septic Systems Leach Fields or Seepage Pits		
Silos		
Sprayfields		
Storm Sewer and Spill Containment Collection System		
Storm Water Detention Pond		
Surface Impoundments and Lagoons		
Underground / Aboveground Storage Tanks and Associated Piping	X	
Waste Piles	X	

5.2.1 Groundwater Well

Previous environmental reports identified a former groundwater well and pump located to the east of the single family residence on Parcel 2. The groundwater well is reportedly not used and it is unclear if it has been abandoned. Roux has not been able to locate a State or local identifier for this groundwater well.

5.2.2 Drainage Swales/Culverts

Storm drains (catch basins) were observed throughout the parking areas of the Site, particularly on Parcel 1, with flow being directed primarily to the off-Site channel to the north. Evidence of improper discharge, such as industrial wastewater, was not observed in the vicinity of these features. Based on the lack of information indicating a chemical release, these features are not considered to represent a significant environmental concern.

5.2.3 Drums (55 Gallons or Larger)

Roux observed up to twenty-two (22) 55-gallons drums containing investigation derived waste (IDW), primarily soil, which was generated from recent subsurface investigations by GSI Environmental Inc. (GSI). These IDW drums are being stored outside the loadings docs in the southwest corner of Building 1 on Parcel 1. Previous reports from 2020 documented several hazardous materials being stored in drums, totes, and other containers throughout the buildings. Documented hazardous materials formerly utilized by former La-Z-Boy operations included adhesives, heavy duty degreaser, wax, diesel, and hydraulic fluid. No hazardous materials of significant quantity were observed within the former La-Z-Boy facilities.

On Parcel 2, Roux observed at least three 55-gallon steel drums and up to six 5-gallon plastic buckets being stored near the front loader equipment. Roux was unable to view any labels or contents of these containers. Given their location next to the heavy machinery, it is possible that that contain petroleum-related materials (i.e., used oils, hydraulic fluid). Roux did not observe significant staining on the bare soil in the area.

5.2.4 Electrical Transformers

Roux observed multiple electrical transformers on Parcel 1, both inside the buildings and at least one transformer outside. All of the observed transformers were observed to be in good operation conditions with no evidence of leakage or staining. Roux observed signage for most of the interior transformers that they are dry-type transformers.

5.2.5 Former Agricultural Areas

Historical aerial photographs document that the Site, and surrounding parcels, were cultivated for agricultural purposes, ostensibly fruit orchards, from at least the early 1900s into the mid-1960s. Fruit growing in this area typically involved the intensive use of chemicals such as pesticides, herbicides, and fertilizers. Impacts from the historical agricultural usage and application of pesticides and herbicides may be present in the shallow soil. Previous subsurface investigations, discussed below in Section 6.2, have sampled shallow soil and analyzed samples for OCPs.

5.2.6 Loading and Un-Loading Areas

Roux observed loading docks along the west and north side of Building 1 and on the south side of Building 2. All of these loading docks were raised and did not contain truck wells or associated sump pumps. Roux did not observe significant surface staining at this loading areas, other than typical isolated staining associated with the presence of automobiles/trucks over a prolonged period of time.

5.2.7 Former USTs

As discussed in Section 3.3.4, historical records document that one UST, a 300-gallon gasoline UST, was removed from Parcel 2 in 1995. Full details on this removal are provided in Section 3.3.4.

5.2.8 Former Railroad Spurs

Based on a review of historical aerials and topographic maps, a former railroad track, identified as the Southern Pacific Railroad (SPRR), was present in current-day West Street and running east to west. Available information suggest that this main railroad line was present between at least 1899 to the late 1980s. Further, available information suggest that a rail spur emanating from this main line was present within the boundary of Parcel 1, just inside the southern border. This on-Site rail spur appears to have been present from at least 1967 to the mid-1980s. There is conflicting information between aerials and topographic maps on how long the railroad tracks remained, but they appear to have been absent in a 1985 aerial photograph. Railroad spurs can be potential sources of shallow soil contamination from a variety chemical of potential concern. As discussed in Section 6.2, LOR conducted a shallow soil investigation in the vicinity of the former railroad spur and off-Site main line. The results of this investigation are discussed in Section 6.2, but potential chemicals of concern, including pesticides and metals, were not detected above applicable screening levels.

5.2.9 Waste Piles

On Parcel 1, Roux observed two relatively large waste piles of what appeared to be roofing insulation (see Photos 23 and 29) located outside the north and west exteriors of Building 1. On Parcel 2, Roux observed isolated piles of miscellaneous waste material (scrap metal, furniture, and PVC piping) located in the rear (eastern) portion of the residence area. Also observed on Parcel 2 were several decommissioned vehicles. Roux did not observe any significant staining around the decommissioned vehicles or other waste piles. These waste piles are not considered to represent an environmental concern.

5.3 Vapor Intrusion

Roux performed a vapor migration/intrusion pathway assessment. Operation of the former La-Z-Boy facility on Parcel 1 has resulted in documented soil vapor contamination, likely as the result of solvent releases at a former fire suppression water overflow collection trap located just north of Building 1 and east of Building 3. The documented VOC soil vapor contamination throughout Parcel 1 constitutes a known source for potential vapor intrusion.

The former onsite operations have been identified elsewhere in this report as *recognized environmental conditions* or *other environmental features*.

6. Summary of Key Previous Investigations

The following sections provide a summary of previous environmental investigations at the Site. The following reports and their appendices are included in Appendix I – Pertinent Historical Records.

6.1 Kansas Street Phase I ESA (Northgate, 2020)

Roux reviewed a report titled *Phase I Environmental Site Assessment – 360 Kansas Street, Redlands, California* prepared by Northgate Environmental Management, Inc. (Northgate) and dated June 10, 2020. This report was prepared for ESRI Real Estate Transaction and Management (ESRI). Northgate did not identify any RECs for this property, Parcel 2; although they did identify one hREC related to the former 300-gallon UST (discussed in Section 3.3.4). Northgate also identified the following four "business environmental risks" for Parcel 2:

- Historical orchard operations from at least the late 1890s through the early 1930s and the associated potential pesticide usage;
- A former groundwater well and pump are located to the east of the residential structure (discussed in Section 5.2.1);
- Several decommission vehicles and "oily residue" was observed on the floor of the structure but not on the surrounding soil;
- Adjacent properties to the east (Parcel 1), south and west were identified as "historic manufacturing of furniture, plastics and a machine shop, respectively".

Northgate did not present any recommendations in this report.

6.2 Phase I and Phase II ESA (LOR, 2020)

Roux reviewed a report titled *Phase I and Phase II Environmental Site Assessment – Former La-Z-Boy West Facility* prepared by LOR Geotechnical Group, Inc. (LOR) and dated January 21, 2020). This report was prepared for NYS New, LLC. This report included a Phase I ESA and a Phase II subsurface investigation conducted by LOR, which included soil and soil vapor sampling conducted between September and November 2019.

From the Phase I ESA portion of this report, LOR identified one hREC and two RECs, which are based on a previous environmental investigation and LOR's investigation conducted at the Site (Parcel 1). Roux has not been provided or reviewed the previous investigation reports discussed below.

1994 RMT, Inc. Soil Investigation

The hREC identified by LOR was "concentrations of trace chlorinated VOCs within the upper 30 feet in the north central portion of the subject site near or in the vicinity of a former collection trap (seepage pit) for fire suppression water" (LOR, 2020). These VOC concentrations in soil were identified in a 1994 soil investigation conducted by RMT, Inc. (RMT). Roux has not been provided this RMT report; however, the LOR report summarized that seven soil borings (SB-1 through SB-7) were advanced to between 30-50 feet bgs to "determine whether soil in the vicinity of the former fire suppression water overflow collection trap (seepage pit) had been impacted" (LOR, 2020). Soil samples between 10 to 30 feet bgs were analyzed for TPH-g, TPH-diesel (TPH-d), TPH-motor oil (TPH-mo) and VOCs. According to LOR, TPH-mo was detected in two 15-foot soil samples at 93 and 100 milligrams per kilogram (mg/kg). Maximum detections of reported

VOCs included total xylenes (maximum 0.007 mg/kg), 1,1,1-TCA (0.74 mg/kg), 1,1,2-trichlorethane (1,1,2-TCA, 0.007 mg/kg), trichloroethene (TCE, 0.10 mg/kg), 1,1-dichloroethane (1,1-DCA, 0.008 mg/kg), 1,1-dichloroethene (1,1-DCE, 0.064 mg/kg), cis-1,2-dichloroethelene (cis-1,2-DCE, 0.045 mg/kg), and methylene chloride (0.008 mg/kg). It is reported that the soil samples with the highest VOC detections were located at the boring nearest to the former collection trap (SB-2). RMT prepared a health risk/hazard assessment to evaluate, "the leaching potential of TPH and hydrocarbon VOCs to groundwater". LOR stated that RMT "estimated the combined health risks (cancer) and hazard quotients were less than 1 in a million (10^{-6}) and 1, respectively" and RMT concluded that VOC and TPH-impacted soils "posed little or no health risk/hazard or potential of adversely impacted groundwater quality" (LOR, 2020).

2019 LOR Subsurface Investigation

LOR conducted a subsurface investigation in October and November 2019 which included hand auguring seven boring locations (SS-5 through SS-11) to approximately 1 to 1.5 feet bgs. Shallow soil samples were collected at SS-5 through SS-7 to "evaluate potential impacts from the offsite, former main railway line within West State Street)" and at SS-8 through SS-11 to "evaluate potential impacts from the former onsite agricultural grove" (LOR, 2019).

In November 2019, 34 borings (SVP-1 through SVP-34) were advanced to between 3 and 5 feet bgs and soil vapor probes (SVP-1 through SVP-34) were installed. Soil samples were also collected at SVP-2 through SVP-4 (referred to as SS-2 through SS-4) from approximately 1, 1.5, 3.5 and 4 feet bgs. These soil samples were collected "to evaluate potential impacts from the former railroad spur track and/or fill materials along the south side of the original portion of Building 1". LOR reported there were no indications of soil contamination in the field (i.e., odor or staining).

Soil samples collected at 1 and 3.5 feet from SS-2 through SS-4 were analyzed for TPH, semi volatile organic compounds (SVOCs), and organochlorine pesticides (OCPs); while the soil samples collected at 1.5 and 4 feet bgs were analyzed for Title 22 metals. Soil samples collected at 1 or 1.5-feet from SS-5 through SS-11 were also analyzed for Title 22 metals. Based on a review of the provided data, none of the soil samples exceeded applicable DTSC screening levels of residential or industrial property, with the exception of arsenic. Arsenic was detected between 1.02 to 8.87 mg/kg; which is below the typical California background concentration of 12 mg/kg. TPH and SVOCs were not detected above laboratory reporting limits in the soil samples analyzed. Reportable concentrations of OCPs, particularly chlordane, DDE, DDT, Dieldrin, and heptachlor epoxide, were detected above reporting limits; however, none were reported above applicable DTSC screening levels. LOR concluded that, "elevated concentrations of some California Title 22 heavy metals" are a REC, but noted that "arsenic is not anticipated to have a significant impact on the subject site". It should be noted that LOR referenced the expected local background range of arsenic to be 4 mg/kg, for which one detection of arsenic exceeded (8.87 mg/kg at SS-3-1.5).

A total of 37 soil vapor samples (34 primary and three duplicate) were collected and analyzed for TPH-g and VOCs by 8260B. While TPH-g was not reported above laboratory reporting limits, the following VOCs were detected above reporting limits: chloroform, 1,1,-DCA, 1,1-DCE, PCE, 1,1,1-TCA, TCE and cis-1,2-DCE. PCE was detected in 22 of the 37 soil vapor samples at concentrations between 0.02 micrograms per liter (µg/L) and 0.61 µg/L and TCE was detected in 24 of the 37 soil vapor samples at concentrations between 0.12 µg/L and 37.33 µg/L. LOR summarized that the "highest reported concentrations of VOCs were at soil vapor probe SVP-20, located at the estimated location of the former subsurface collection trap for fire

suppression water" (LOR, 2020). Detections of VOCs from this LOR investigation, and primarily TCE and PCE, are situated in the northern half of Parcel 1.

2019 Citadel Indoor Air Sampling Event

Following the LOR subsurface soil vapor results, an indoor air sampling event was conducted on November 19, 2019 by Citadel Environmental Health and Safety Consultants (Citadel). This indoor air sampling event included one ambient sample (SC1) and a total of ten indoor air samples (SC2 through SC11) collected in Buildings 1 and 2 and analyzed for VOCs. From the two indoor samples collected in Building 2, LOR reported that detections of benzene (0.51 micrograms per cubic meter µg/m^3) and naphthalene (0.39 µg/m^3) exceeded applicable DTSC screening levels for residential and commercial air. From the eight indoor air samples collected in Building 1, multiple VOCs, including 1,1,1-TCA (maximum concentration of 22 µg/m^3), benzene (0.65 µg/m^3), PCE (32 µg/m^3) and TCE (4.0 µg/m^3), were reported at concentrations exceeding applicable DTSC screening levels for residential and commercial air.

The presence of VOCs in shallow soil vapor and indoor air were identified as a REC by LOR. Additionally, LOR recommend that action be taking the mitigate and/or remediate soil vapor and indoor air issues, including potential implementation of a SSDS and soil vapor extraction system. Further, it was recommended by LOR that the buildings on Site remain vacant until "sufficient control of indoor air has been established" (LOR, 2020).

6.3 Sub-Slab Depressurization Results (Rincon, 2020)

Roux reviewed a letter report titled *Sub-Slab Depressurization Results, Permit No. G61173, A/N 61982* prepared by Rincon Consultants, Inc. (Rincon) and dated August 28, 2020. The letter report was prepared on behalf of ESRI. According to this letter, a total of 26 sub-slab depressurization (SSD) units were installed at the Site around June and July 2020 under SCAQMD permit number G61173.

Roux observed vertical piping associated with the SSD units during the March 2022 Site reconnaissance.

6.4 February 2021 Indoor Air Monitoring Data (Rincon, 2021)

The Client provided Roux with a two data tables, presumably prepared by Rincon, which provided indoor air monitoring data between November 2019 and February 2021. Based on a review of the data and the available information, PCE was detected in nine indoor air samples in Building 1 at concentrations between 4.2 to 14 µg/m^3. A second table showing PCE indoor air data from seven monitoring events dating back to November 2019 indicated that indoor air PCE concentrations in Building 1 have decreased, but still exceed the applicable indoor air commercial screening level of 2 µg/m^3. Editorial Note: Table 2 of this information, which is included in Appendix I, is labeled *Table 2 – Indoor Air TCE Summary*, but the data presented is actually for compound PCE.

6.5 Additional Site Characterization Report (Partner, 2021a)

Roux reviewed a report titled *Additional Site Characterization Report* prepared by Partner Engineering and Science, Inc. (Partner) dated June 23, 2021. This report was prepared for Acc Bld, LLC. In January 2021, Partner installed 16 nested soil vapor probes (B1-B12 and B15-B18). Boring B1 was advanced to approximately 75 feet bgs; B17 was advanced to 6.5 feet bgs due to refusal; and the remaining 14 borings were advanced to approximately 15 feet bgs. At B1, nested soil vapor probes were installed at 5, 15, 30,

50, and 75 feet bgs. Nested soil vapor probes were installed at 5 and/or 15 feet in the other 15 borings. In addition to the 16 borings for soil and soil vapor sampling, Partner installed one groundwater monitoring well, MW1, adjacent to B1, in April 2021. MW1 was advanced to approximately 130.5 feet bgs and soil samples were collected in 5-foot intervals from 80 feet to terminal depth. A soil vapor monitoring probe was also installed at 95 feet bgs. Figure 3 shows the locations of these Partner borings and historical borings from RMT and LOR.

Soil, groundwater and soil vapor samples were analyzed for VOCs. Soil vapor samples were collected and analyzed on Site by a mobile laboratory. The following bullets summarize the laboratory data from Partner's investigation.

- In soil, no VOCs were detected above applicable residential or commercial screening levels. TCE was detected in 5 of the 66 soil samples at concentrations ranging from 2.3 to 4.1 micrograms per kilogram (µg/kg). Only two other compounds, benzene (twice) and naphthalene (once) were detected above reporting limits.
- VOCs detected in soil gas samples above their applicable screening levels at least once included TCE, PCE, 1,1-DCE, 1,1-DCA, 1,1,1-TCA, 1,1,2-TCA and chloroform.
- TCE was detected in 31 of the 35 soil gas samples at concentrations ranging from 0.026 to 23 µg/L and 23 of the detections exceeded the applicable commercial SL of 0.10 µg/L. Partner concluded that the highest concentrations of VOCs, particularly TCE and PCE, were at boring B1 located in the vicinity of the former fire suppression water overflow collection trap.
- Partner concluded that the lateral extent of TCE in soil vapor at 5 feet bgs was delineated to the east, south and west; however, there is some uncertainty to the north and northwest.
- TCE was detected in soil vapor at B1 from 5 to 95 feet, "indicating that the release has impacted the vertical soil column above groundwater at that location. The highest TCE concentration at B1 was detected at 30 feet bgs, located just above a silt layer that was encountered at approximately 35 feet bgs".
- From the groundwater samples, several similar VOCs were detected, but only TCE and 1,1-DCE were detected in groundwater above the respective Maximum Contaminant Levels (MCLs). From MW1, TCE was detected at 18.1 µg/L and 1,1-DCE was detected at 10.3 µg/L.

Partner concluded this report stating that the investigation results "indicate that a release of chlorinated VOCs, primarily TCE, occurred in the vicinity of the former fire suppression water overflow collection trap. The release has migrated horizontally impacting the majority of the Site's [Parcel 1] footprint and migrated vertically to groundwater" (Partner, 2021a).

6.6 Additional Indoor Air Quality Screening (Partner, 2021b)

Roux reviewed a report titled *Additional Indoor Air Quality Screening* prepared by Partner and dated October 22, 2021. This report was prepared for Acc Bld, LLC. The stated objective of this report was to conduct further evaluation of PCE detected in indoor air. Notably, this report summarizes that a November 2020 indoor air quality screening, including a 3-day real-time air sampling episode, "indicated that the PCE impacts to indoor air were most likely unrelated to vapor intrusion from the subsurface and identified the building's insulation as a likely source" (Partner, 2021b). After the Client removed the building insulation (which was observed outside the structure during Roux's 2022 reconnaissance), verification indoor air sampling in January and February 2021 showed that "PCE concentrations in indoor air decreased by at least 50%, but remained above regulatory screening levels [2 µg/m^3]" (Partner, 2021b).

Partner continued to conduct additional rounds of discrete indoor air sampling and collected core samples from the roofing material which identified that the likely source of the PCE in indoor air was the roof decking, and particularly the foam material which had PCE concentrations as high as 933 mg/kg. It is unclear if additional mitigation or remediation activities have been conducted to address the roof decking with PCE containing material.

6.7 Results of Limited Phase II Site Investigation – (GSI, 2022)

Roux reviewed a report titled *Results of Limited Phase II Site Investigation* prepared by GSI Environmental Inc. (GSI) and dated April 1, 2022 This report was prepared for Acc Bld, LLC: Redlands. In February 2022, GSI installed and surveyed two temporary groundwater monitoring wells (GSI-B1 and GSI-B2) along the southern boundary of Parcel 1 and then converted these borings into semi-permanent soil vapor monitoring wells with soil vapor probes at 5, 15, 30, 50, 75 and 95 feet bgs. GSI also sampled the previously installed Partner soil vapor probes (B1 through B12 and B15 through B18). Groundwater was encountered at 112.98 feet bgs in GSI-B1 and at 114.58 feet bgs in GSI-B2. Based on observed groundwater depths, GSI concluded that groundwater flow direction is inferred to be towards the west/southwest.

A total of 46 soil samples (23 from each GSI-B1 and GSI-B2) were analyzed for VOCs. GSI reported that no VOCs were detected above laboratory reporting limits. Soil vapor samples collected from the existing Partner probes detected VOCs, including the previously reported COPCs, above laboratory reporting limits. GSI reported that probes at multiple depths from boring B1 contained concentrations of chloroform, 1,1-DCA, and TCE above the applicable SLs. From the newly installed soil vapor probes at GSI-B1 and GSI-B2, no VOCs were reported above laboratory RLs in GSI-B2. VOCs detected in GSI-B1 (chloroform, 1,1-DCE, and TCE) were detected, but were below applicable SLs. VOCs were not detected in the grab groundwater samples collected from GSI-B1 and GSI-B2 temporary monitoring wells. TCE, 1,1-DCA and 1,1-DCE were detected above applicable SLs in the previously existing MW-1.

GSI concluded, similar to others, that there is VOC contamination in the northern portion of the Site, near MW-1, and that “VOC concentrations in soil and soil vapor have slightly impacted the groundwater” (GSI, 2022). GSI recommended the implementation of a SVE to remediate soil and soil vapor in the northern portion of the Site, but does not recommend groundwater remediation, only groundwater monitoring.

7. Database Records Review

7.1 Standard Environmental Record Sources

According to ASTM Standard E1527-13, the purpose of reviewing regulatory records is to obtain and review records that will help identify *recognized environmental conditions* in connection with the Site. In addition, some records to be reviewed pertain not only to the Site, but also to properties within an additional "approximate minimum search distance" in order to help assess the likelihood of problems from migrating hazardous substances or petroleum products. The basis of the "approximate minimum search distance" is the Site boundary.

Roux retained EDR of Shelton, Connecticut to provide an ASTM Radius Map Report (EDR Report) for this Site. This report is a computerized search of select state and federal environmental databases that identify various properties with a record of environmental activity. Roux reviewed the report and summarized the relevant findings in the following sections. A copy of the compiled EDR Report has been included as Appendix F. The EDR report includes a detailed description of each of the databases searched, providing a summary of the type of information provided by each. A summary of Roux' review of the EDR Report listings is provided in Table 1.

The following section describes the findings of the database search. Roux used professional judgement in determining which EDR-listed sites to include in the narrative of this report. Facilities adjoining the Site were included due to their proximity to the Site and the potential for surface water discharges (e.g., storm water runoff, surface water effluent discharges) to enter the Site or through the migration of groundwater. Sites with listings indicative of a release (e.g., SHWS, LUST, RELEASE) are likewise discussed below. Nonadjacent facilities with database listings not necessarily indicative of a release (hazardous waste generator, FINDS, ECHO, NPDES, HAZNET, AST, or UST) will not be discussed unless considered potentially relevant in context of the Phase I ESA.

7.1.1 Site (Target Property)

Address	Owner/Operator	Database
301 Tennessee Street	La-Z-Boy West	San Bern. Co. Permit, FINDS, ECHO
	Lazboy West	EMI, NPDES, CERS, CIWQS
	La-Z-Boy	RCRA NonGen / NLR, HAZNET, HWTS
	301 Tennessee Street	HMIRS
	Hahan Contractors	HAZNET, HWTS

The EDR database report identified several listings for the La-Z-Boy facility at 301 Tennessee Street associated with the Site. The facility was also identified in the database report by the names, Lazboy West, La-Z-Boy West, 301 Tennessee Street, and Hahan Contractors. For the purpose of this report, the listings are summarized here; however, detailed discussion of historical manufacturing activities, subsurface investigations, and completed remedial actions can be found in Section 6.0.

The San Ber. Co. Permit database reports three inactive permits: (1) Hazardous materials 4-10 chemicals, expired August 31, 2020; (2) Conditionally exempt small quantity generator, expired August 31, 2015; and (3) Emergency Planning and Community Right-to-Know (EPCRA) facility, expired August 31, 2013. According to the CIWQS database, the Site maintained an industrial stormwater permit, which expired on November 1, 2019. The HAZNET database reports hazardous waste generator from 1993 to 2019. The HMIRS database reports a hazardous material incident on February 14, 2018. Transit on the highway transport, the cargo tank motor vehicle was involved in a rollover accident where the tank shell was punctured and 56 gallons of diesel fuel was released. The remaining databases did not contain additional information relevant to the environmental history of the Site. Given that the hazardous material incident took place off-Site, this listing is not considered to represent a significant environmental concern to the Site.

7.1.2 Adjoining and Nearby Properties

Discussions of adjoining and nearby properties of potential environmental concern as noted in Table 1 are provided below.

- **Redlands Service Center (287 Tennessee Street).** The Redlands Service Center, located approximately 100 feet south of the Site, is listed on the AST, HIST UST, and ENF databases. The AST listing did not contain any information regarding the AST. The HIST UST listing indicates a 10,000-gallon unleaded motor vehicle fuel UST was housed at the facility. No additional information was provided. The ENF listing reports an illegal discharge; the case was referred to the County of San Bernardino Fire Protection District: HMD on April 15, 2000. Roux has requested records from the CSBFD-HMD pertaining to this reported discharge and a response is still pending.

  This facility is also listed under the name, SCE Redlands Service Center. The SCE Redlands Service Center is listed on the CERS HAZ WASTE, CERS TANK, HAZNET, San Bern. Co. Permit, CERS, and HWTS databases. The San Bern. Co. Permit listing identifies the facility as a super large quantity generator that houses 11 to 30 hazardous material chemicals and has a 10,000 to 100,000-gallon capacity for an aboveground petroleum storage tank. The remaining databases did not contain additional information relevant to the environmental history of the facility.

- **Dutch Girl Laundry & Cleaners (414 Tennessee Street, Suite K).** The Dutch Girl Laundry & Cleaners facility, located at approximately 450 feet northeast of the Site, is listed on the EDR Hist Cleaner database. The EDR Hist Cleaner listing reports dry-cleaning plant, except rugs operations from 2003 through 2014.

  This facility is also listed under the names, Dutch Girl Dry Cleaners & Laundry and Dutch Girl Cleaners. The Dutch Girl Dry Cleaners & Laundry is listed on the DRYCLEANERS, HAZNET, and HWTS databases. The DRYCLEANERS listing identifies the facility as a dry-cleaning and laundry service as of March 6, 2003. The remaining databases did not contain additional information relevant to the environmental history of the facility. The Dutch Girl Cleaners is listed on the CERS HAZ WASTE, DRYCLEANERS, San Bern. Co. Permit, and CERS databases. The DRYCLEANERS listing describes a dry cleaning equipment utilizing petroleum solvent. Absent any indication of a release to the subsurface, this facility is not considered to represent a significant concern to the Site.

- **Auto Analysts (446 Tennessee Street).** The Auto Analysts facility, located approximately 670 feet northeast of the Site, is listed on the EDR Hist Auto database. The EDR Hist Auto listing reports general automotive repair shops operations from 1992 through 2001 and automotive transmission repair shop operations from 2011 through 2014. Absent any indication of a release to the subsurface, the Auto Analysts facility is not considered to represent a significant concern to the Site.

- **Plant #1 - Dunmovin (410 Missouri Court).** The Plant #1 – Dunmovin facility, located approximately 1,740 feet west of the Site, is listed on the US MINES and ABANDONED MINES. The

ABANDONED MINES listing reports violations related to crushed, broken stone on October 1, 2015 and March 5, 2018 for the abandoned mine with a standard industrial classification code of construction, sand, and gravel. Absent any indication of a release to the subsurface, the Plant #1 - Dunmovin facility is not considered to represent a significant concern to the Site.

- **Argon Fuel (1205/1255 Redlands Boulevard).** The Argon Fuel facility, located approximately 1,200 feet north of the Site, is listed on the CPS-SLIC and CERS databases. According to the associated GeoTracker case (T10000011531), the facility is an open – site assessment case as of July 13, 2018. In June 2003, eight ASTs, containing diesel fuel, gasoline, kerosene, or waste oil, and three fuel dispensers were removed as part of demolition activities.

  Following AST removal, a total of 36 confirmation soil samples were collected approximately two to three feet below ground surface (bgs) in the vicinity of the ASTs and indicated petroleum fuel releases. In December 2003, the impacted shallow soil was excavated and verification soil samples were indicated that the vertical extent of impacted soil was not delineated in three excavation areas. In May 2004, a total of 24 soil samples from two borings were collected from depths of 20 to 130 feet bgs. TPH in the gasoline, kerosene, and diesel ranges were reported at maximum concentration of 9,030 mg/kg, 4,570 mg/kg, and 2,710 mg/kg, respectively. Methyl tert-butyl ether (MTBE) was reported at a maximum concentration of 191 mg/kg. In addition, one grab groundwater sample was collected at a depth of 130 feet bgs and indicated significant concentrations of TPH in the gasoline range (86,000 µg/L, benzene (6,920 µg/L), toluene (19,100 µg/L), ethylbenzene (2,250 µg/L), and xylene (12,700 µg/L), MTBE (102,000 µg/L), TAME (1,600 µg/L), and tertiary butyl alcohol (TBA) (17,800 µg/L).

  In October 2017, further soil and groundwater investigations were conducted at the facility due to the potential of contaminant migration from adjacent and nearby properties with documented historical use of chlorinated solvents and automotive fuels and lubricants. Analytical results from this investigation confirmed the presence of TPH, BTEX, and MTBE in soil and VOCs in groundwater. It was concluded that soil impacts may have been due to the historical on-site ASTs, given the evidence of TPH in the gasoline and diesel range. Additional groundwater investigation was recommended to determine the source of groundwater impacts.

  Given that the distance of the facility to the Site, the mobility of impacted soil is limited, and the depth to groundwater was encountered at 130 and 146 feet bgs during the May 2004 and October 2017 investigations, the impacts to soil and groundwater at the Argon Fuel is not considered to represent a significant concern to the Site.

7.1.3 Orphan Sites

The EDR Report includes a section addressing “Orphan Sites.” Orphan sites are sites, which, due to incomplete geographic location data, incomplete address information or incorrect address information, cannot be plotted correctly. The database report identified three unmapped facilities.

- **Redlands Smudge Pot Tanks Site (100 Feet West of Redlands Blvd and Texas).** The Redlands Smudge Pot Tanks Site facility, located approximately 2,850 feet east of the Site, is listed on the SEMS database. The SEMS listing identifies the facility as a non-National Priorities List facility with no assessment investigation needed. No additional information was provided. This listing is not indicative of a release; therefore, the Redlands Smudge Pot Tanks Site facility is not considered to represent a significant concern to the Site.

- **Alabama Street Illegal Disposal Site (Alabama Street and Pioneer Avenue).** The Alabama Street Illegal Disposal Site facility, located approximately 1.71 miles northwest of the Site, is listed on SWF/LF database. The SWF/LF listing identifies the facility as a closed solid waste. This listing is

not indicative of a release; therefore, the Alabama Street Illegal Disposal Site facility is not considered to represent a significant concern to the Site.

- **Edison/Redlands MGP (501-525 West Redlands).** The Edison/Redlands MGP facility, located approximately 3,600 feet east of the Site, is listed on the EDR MGP database. The EDR MGP listing identifies the facility as a manufactured gas plant (MGP). The facility was constructed in 1900 and ceased MGP operations in 1921. This listing is not indicative of a release; therefore, the Edison/Redlands MGP facility is not considered to represent a significant concern to the Site.

8. Findings

Roux has performed this Phase I ESA in general compliance with the scope and limitations of ASTM Standard Practice E1527-13. Roux separated the findings of this assessment into the following four categories: *recognized environmental conditions*, *controlled recognized environmental conditions*, *historical recognized environmental conditions* and *other environmental features*.

8.1 Data Gaps

During conduct of this ESA, the following data gaps, as defined in ASTM Standard E1527-13 were identified:

- The timing of the report did not allow for all contacted agencies, specifically the USEPA, DTSC and City of Redlands, to respond to the records requests issued. This data gap is not considered significant due to sufficient information available from previous environmental reports, the EDR report, and city, county, and state websites.

- Previous Site owners/operators related to the former La-Z-Boy operations were not available for an interview. This data gap is not considered significant due to sufficient information regarding Site history available from EDR historical documents and FOIA requests; however, information regarding the location and status of former features such as the degreaser and fire suppression pit would be valuable.

- Site reconnaissance limitations including not being able to fully access Buildings 2 and 3 on Parcel 1 and the structures on Parcel 2. This data gap is not considered significant due to sufficient previous information, including photographs, of the structures.

- Soil vapor sampling does not appear to have been conducted during the closure of the 300-gallon gasoline UST located on Parcel 2. The lack of soil vapor sampling confirming that there are no residual impacts to soil vapor is identified as a data gap.

8.2 Recognized Environmental Conditions

Based on the information obtained through the performance of this ESA, Roux identified the following RECs in connection with the current and historical operations at the Site or adjacent properties. To the extent possible, the locations of the RECs are shown in Figure 2. To avoid confusion, all RECs, cRECs, hRECs, and OEFs are numbered sequentially.

REC 1 – Historical Release at Former Fire Suppression Water Trap. Based on a review of previous subsurface environmental investigations conducted on Parcel 1, soil and soil vapor in the northern portion are impacted by volatile organic compounds (VOCs), primarily trichloroethene (TCE) and tetrachloroethene (PCE). An initial 1994 soil investigation conducted by RMT, Inc. (RMT) identified VOC and total petroleum hydrocarbon (TPH)-impacted soil in the vicinity of a reported former fire suppression water overflow collection trap (seepage pit). Subsequent soil vapor investigations in 2019 (LOR Geotechnical Group, Inc. [LOR]), 2021 (Partner Engineering and Science, Inc. [Partner]), and 2022 (GSI Environmental, Inc. [GSI]) conducted throughout Parcel 1 laterally delineated the VOC impacts, mainly TCE, and further suggested that the likely origin of contamination was the former seepage pit. Impacted soil vapor throughout Parcel 1 appears to be limited to the upper 15 feet, except at the suspected source area, where investigations have reported TCE in soil vapor at depths of up to 95 feet below ground surface (bgs). Additionally, groundwater samples collected at a permanent monitoring well (MW-1,

located at the suspected former fire trap) have reported TCE concentrations slightly exceeding drinking water standards.

Indoor air investigations conducted within the former La-Z-Boy buildings on Parcel 1, and within Building 1, have shown indoor air is impacted by VOCs. The source of the impacts to indoor air are potentially the result of vapor intrusion, but appear more likely to be caused by foam roofing material, which is known to contain (and potentially off-gas) PCE. The apparent release of VOC-containing materials at the former fire suppression water overflow collection trap, and the resulting soil vapor and groundwater impacts to the Site are considered a REC in the context of this Phase I ESA.

REC 2 – Former 300-Gallon Gasoline UST. According to available records provided by the CSBFD-HMD, a 300-gallon gasoline UST was formerly located on Parcel 2, approximately 50 feet north of the existing residential structure. This former UST was removed on June 26, 1995 under the oversight of the CSBFD-HMD. A confirmation soil sample was collected from beneath the tank invert and analyzed for TPH-gasoline (TPH-g) and gasoline-related VOCs, which were not reported above laboratory reporting limits. The CSBFD-HMD provided regulatory closure in a letter dated July 3, 1995 indicating that no further action was required. However, investigation performed at that time would be unlikely to meet current regulatory closure requirements. Only one confirmation soil sample was collected and there does not appear to have been any soil vapor sampling conducted in the vicinity of the former UST. The investigation following removal is considered insufficient, particularly without soil vapor sampling, and does not rule out potential soil vapor impacts from the historical UST. On this basis, this former UST, while it does have regulatory closure, is considered a REC in the context of this Phase I ESA.

REC 3 – Former Solvent Degreaser. Regulatory records provided by the South Coast Air Quality Management District (SCAQMD) indicate that a solvent degreaser was installed at the Site in 1984. The 1984 Permit to Operate for the degreaser states that "only 1,1,1-trichloroethane [1,1,1-TCA], trichlorotrifluoroethane, methylene chloride, or a combination of these solvents may be used as the cleaning solvent in this equipment". Roux has not reviewed any Site plans indicating the location of this degreaser feature or if any action was taken to abandon it. The lack of information regarding the location and status of this degreaser is considered a data gap. The historical presence of the degreaser and the associated chlorinated solvent us is considered a REC in the context of this Phase I ESA.

8.3 Controlled Recognized Environmental Conditions

Roux did not identify known or suspected cRECs in connection with the current and historical operations at the Site or adjacent properties.

8.4 Historical Recognized Environmental Conditions

Roux did not identify known or suspected hRECs in connection with the current and historical operations at the Site or adjacent properties.

8.5 Other Environmental Features

OEFs are environmental conditions that do not meet the definition of a REC, cREC, or hREC, but which may warrant mention in a comprehensive Phase I ESA. Based on the subject Phase I ESA, Roux identified the following OEFs at or in the vicinity of the Site. To the extent possible, the locations of the OEFs are shown in Figure 2.

OEF 4 – Former Agricultural Operations and Pesticide Usage. Historical aerial photographs document that the Site and surrounding parcels were consistently occupied by agricultural groves between at least 1900 into the mid-1960s. Although undocumented, the use of organochlorine pesticides (OCPs) was commonplace for similar operations during that time. A limited shallow soil investigation conducted at the Site in 2019 collected and analyzed soil samples for OCPs from seven locations on Parcel 1. Soil samples were collected between 1 and 3.5 feet bgs. The results of this investigation are discussed in Section 6.2. A total of five OCPs, including chlordane, DDE, DDT, dieldrin, and heptachlor epoxide, were detected above laboratory reporting limits, but were not detected above applicable residential or commercial screening levels. Considering the low concentrations of pesticides identified in shallow Site soils, it is unlikely that further investigation would be required if brought to the attention of a regulatory agency. On this basis, the historical pesticide use is considered an OEF in the context of this Phase I ESA.

OEF 5 – Former On-Site Railroad Spur. Based on a review of historical aerials and topographic maps, a former railroad track, identified as the Southern Pacific Railroad (SPRR), was present along current-day West State Street running east to west. Available information suggest that this main railroad line was present between at least 1899 to the late 1980s. Further, available records suggest that a rail spur emanating from this main line was present within the boundary of Parcel 1, just inside the southern border. This on-Site rail spur appears to have been present from at least 1967 (initial development) to the late 1980s. There is conflicting information between aerials and topographic maps on how long the railroad tracks remained, but they appear to have been absent in a 1985 aerial photograph. Railroad spurs can be potential sources of shallow soil contamination from a variety chemical of potential concern. A limited shallow soil investigation was conducted at the Site in 2019 (LOR) in the vicinity of the former railroad spur and off-Site main line. The results of this investigation are discussed in Section 6.2. Shallow soil samples were collected and analyzed for heavy metals, TPH, OCPs and semi-volatile organic compounds (SVOCs). According to LOR, no TPH or SVOCs were detected above laboratory reporting limits. Metals and OCPs were detected but at concentrations below applicable screening levels or typical background concentrations. The historical railroad spur on Site is identified as an OEF in the context of this Phase I ESA.

OEF 6 – Hazardous Chemical Storage. Hazardous chemicals have historically been and are currently stored at the Site. Historically, the La-Z-Boy operations maintained several hazardous materials, as documented in CSBFD-HMD records and previous environmental investigations. Documented hazardous materials formerly utilized by former La-Z-Boy operations included adhesives, heavy duty degreaser, wax, diesel, and hydraulic fluid. No hazardous materials of significant quantity were observed within the former La-Z-Boy facilities. On Parcel 2, hazardous materials were observed in the rear portion of the residential property. Roux observed what appeared to be four (4) 5-gallon containers and three (3) 55-gallon steel drums. The contents of these containers is unknown, but are likely petroleum products (i.e., used motor oil, lubricating oil) used to maintain a front loader staged nearby. Both throughout Parcel 1 and Parcel 2, Roux did not observe significant staining that could be attributed to hazardous chemical storage. On this basis, current and historical hazardous material storage is considered an OEF in the context of this Phase I ESA.

OEF 7 – Unused Water Well on Site. An unused groundwater well and pump are located to the east of the single family residence on Parcel 2. The groundwater well is reportedly not used and it is unclear if it has been abandoned. This groundwater well is identified as an OEF in the context of this Phase I ESA.

10. Signature of Environmental Professional

Roux performed this assessment in accordance with the generally accepted practices for environmental assessments at the time of implementation. Roux made a reasonable effort to ensure that the information presented in this report is materially complete and accurate.

Roux completed a Phase I ESA in general compliance with the scope and limitations of ASTM Practice E1527-13 of the residential property located at 360 Kansas Street and of the light industrial property located at 301 Tennessee Street, Redlands, San Bernardino County, California.

“We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental professional as defined in §312.10 of 40 CFR 312” and,

“We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.”

Roux performed this Phase I ESA by, or under direct supervision of, the undersigned environmental professionals.

Respectfully Submitted,

ROUX ASSOCIATES, INC.

APPENDIX A

Glossary of Key Terms

GLOSSARY OF KEY TERMS

This appendix provides definitions, description of terms, and a list of acronyms for many of the words used in ASTM E 1527-13. These terms are an integral part of ASTM E 1527-13 and are critical to understanding ASTM E 1527-13 and its use.

DEFINITIONS:

Abandoned Property – *property* that can be presumed to be deserted, or an intent to relinquish possession or control can be inferred from the general disrepair or lack of activity thereon such that a reasonable person could believe that there was an intent on the part of the current *owner* to surrender rights to the *property*.

Activity and Use Limitations – Legal or physical restrictions or limitations on the use of, or access to, a site or facility: *(1)* to reduce or eliminate potential exposure to *hazardous substances* or *petroleum products* in the soil, soil vapor, groundwater, and/or surface water on the *property*, or *(2)* to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment. These legal or physical restrictions, which may include institutional and/or *engineering controls*, are intended to prevent adverse impacts to individuals or populations that may be exposed to *hazardous substances* and *petroleum products* in the soil, soil vapor, groundwater, and/or surface water on the *property*.

Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) – The list of sites compiled by EPA that EPA has investigated, or is currently investigating, for potential hazardous substance contamination for possible inclusion on the National Priorities List.

Construction debris – Concrete, brick, asphalt, and other such building materials discarded in the construction of a building or other improvement to property.

Contaminated public wells – Public wells used for drinking water that have been designated by a government entity as contaminated by toxic substances (for example, chlorinated solvents), or as having water unsafe to drink without treatment.

Contiguous Property Owner Liability Protection – a person may qualify for the *contiguous property owner liability protection* if, among other requirements, such person owns real *property* that is contiguous to, and that is or may be contaminated by *hazardous substances* from other real *property* that is not owned by that person. Furthermore, such person conducted *all appropriate inquiries* at the time of acquisition of the *property* and did not know or have reason to know that the *property* was or could be contaminated by a *release* or threatened *release* from the contiguous *property*. The *all appropriate inquiries* must not result in knowledge of contamination. If it does, then such person did “know” or “had reason to know” of contamination and would not be eligible for the *contiguous property owner liability protection*.

Controlled Recognized Environmental Condition – a *recognized environmental condition* resulting from a past *release* of *hazardous substances* or *petroleum products* that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with *hazardous substances* or *petroleum products* allowed to remain in place subject to the implementation of required controls (for example, *property* use restrictions, *activity and use limitations*, *institutional controls*, or *engineering controls*).

CORRACTS list – a list maintained by EPA of *hazardous waste* treatment, storage, or disposal facilities and other RCRA-regulated facilities (due to past interim status or storage of *hazardous waste* beyond 90 days)

that have been notified by the U.S. Environmental Protection Agency to undertake corrective action under RCRA. The *CORRACTS list* is a subset of the EPA database that manages RCRA data.

Demolition debris – Concrete, brick, asphalt, and other such building materials discarded in the demolition of a building or other improvement to property.

Drum – A container (typically, but not necessarily, holding 55 gal (208 L) of liquid) that may be used to store *hazardous substances* or *petroleum products.*

Dry wells – Underground areas where soil have been removed and replaced with pea gravel, coarse sand, or large rocks. Dry wells are used for drainage, to control storm runoff, for the collection of spilled liquids (intentional and non-intentional), and wastewater disposal (often illegal).

Dwelling – Structure of portion thereof used for residential habitation.

Engineering controls – Physical modifications to a site or facility (for example, capping, slurry walls, or point of use water treatment) to reduce or eliminate the potential for exposure to contaminants in the soil or groundwater on the property.

Environmental lien – A charge, security, or encumbrance upon title to a *property* to secure the payment of a cost, damage, debt, obligation, or duty arising out of response actions, cleanup, or other remediation of *hazardous substances* or *petroleum products* upon a *property*, including (but not limited to) liens imposed pursuant to CERCLA 42 USC § 9607(1) and similar state or local laws.

ERNS list – EPA's emergency response notification system list of reported CERCLA hazardous substance releases or spills in quantities greater than the reportable quantity, as maintained at the National Response Center. Notification requirements for such releases or spills are codified in 40 CFR parts 302 and 355.

Federal Register (FR) – Publication of the Untied States government published daily (except for federal holidays and weekends) containing all proposed and final regulations and some other activities of the federal government. When regulations become final, they are included in the Code of Federal Regulations (CFR), as well as published in the Federal Register.

Fire insurance maps – Maps produced for private fire insurance map companies that indicate uses of properties at specified dates and that encompass the property. These maps are often available in local libraries, historical societies, private resellers, or from the map companies who produced them. See Question 23 of the transaction screen process in Practice E 1528 and 7.3.4.2 of this practice.

Hazardous substance – A substance defined as hazardous pursuant to CERCLA 42 USC § 9601(14), as interpreted by EPA regulations and the courts: "(A) any substance designated pursuant to section 1321(b)(2)(A) of Title 33, (B) any element, compound, mixture, solution, or substance designated pursuant to section 9602 of this title, (C) any hazardous waste having the characteristics identified under or listed pursuant to section 3001 of the Soil Waste Disposal Act (42 USC § 6921) (but not including any waste the regulation of which under the Solid Waste Disposal Act (42 USC § 6901 *et seq.*) has been suspended by Act of Congress), (D) any toxic pollutant listed under section 1317(a) of Title 33, (E) any hazardous air pollutant listed under section 112 of the Clean Air Act (42 USC § 7412), and (F) any imminently hazardous chemical substance or mixture with respect to which the Administrator (of EPA) has taken action pursuant to section 2606 of Title 15. The term does not include petroleum, including crude oil or any fraction thereof, which is not otherwise specifically listed or designated as a hazardous substance under subparagraphs (A)

through (F) of this paragraph; the term does not include natural gas, natural gas liquids, liquefied natural gas, or synthetic gas usable for fuel (or mixtures of natural gas and such synthetic gas)."

Hazardous waste – Any hazardous waste having the characteristics identified under or listed pursuant to section 3001 of the Solid Waste Disposal Cat (42 USC § 6921) (but not including any waste the regulation of which under the Solid Waste Disposal Act (42 USC § 6901 *et seq.*) has been suspended by Act of Congress). The Solid Waste Disposal Act of 1980 amended RCRA. RCRA defines hazardous waste, in 42 USC § 6903, as: "a solid waste, or combination of solid wastes, which because of its quantity, concentration, or physical, chemical, or infectious characteristics may – (A) cause, or significantly contribute to an increase in mortality or an increase in serious irreversible, or incapacitating reversible, illness; or (B) pose a substantial present or potential hazard to human health or the environment when improperly treated, stored, transported, or disposed of, or otherwise managed."

Institutional control – A legal or administrative restriction (e.g., deed restriction, restrictive zoning) on the use of, or access to, a site or facility to reduce or eliminate potential exposure to contaminants in the soil or groundwater on the property.

Landfill – A place, location, tract of land, area, or premises used for the disposal of solid wastes as defined by state solid waste regulations. The term is synonymous with the term *solid waste disposal site* and is also known as a garbage dump, trash dump, or similar term.

Local street directories – Directories published by private (or sometimes government) sources that show ownership, occupancy, and/or use of sites by reference to street addresses. Often, local street directories are available at libraries of local governments, colleges or universities, or historical societies.

Material safety data sheet (MSDS) – Written or printed material concerning a hazardous substance which is prepared by chemical manufacturers, importers, and employers for hazardous chemicals pursuant to OSHA's Hazard Communication Standard, 29, CFR 1910.1200.

National Contingency Plan (NCP) – The National Oil and Hazardous Substances Pollution Contingency Plan, found at 40 CFR § 300, that is the EPA's blueprint on how hazardous substances are to be cleaned up pursuant to CERCLA.

National Priorities List (NPL) – List compiled by the EPA, pursuant to CERCLA 42 USC § 9605(a)(8)(B), of properties with the highest priority for cleanup pursuant to EPA's Hazard Ranking System. See 40 CFR Part 300.

Occupants – Those tenants, subtenants, or other persons or entities using the *property* or a portion of the *property.*

Owner – Generally the fee owner of record for the *property*.

Petroleum exclusion – The exclusion from CERCLA liability provided in 42 USC § 9601(14), as interpreted by the courts and EPA: "The term (hazardous substance) does not include petroleum, including crude oil or any fraction thereof which is not otherwise specifically listed or designated as a hazardous substance under subparagraphs (A) through (F) of this paragraph, and the term does not include natural gas, natural gas liquids, liquefied natural gas, or synthetic gas usable for fuel (or mixtures of natural gas and such synthetic gas)."

Petroleum products – Those substances included within the meaning of the *petroleum exclusion* to CERCLA, 42 USC § 9601(14), as interpreted by the courts and EPA, that is: petroleum, including crude oil or any fraction thereof which is not otherwise specifically listed or designated as a hazardous substance under Subparagraphs (A) through (F) of 42 USC § 9601(14), natural gas, natural gas liquids, liquefied natural gas, and synthetic gas usable for fuel (or mixtures of natural gas and such synthetic gas). (The word fraction refers to certain distillates of crude oil, including gasoline, kerosene, diesel oil, jet fuels, and fuel oil, pursuant to *Standard Definitions of Petroleum Statistics*[1]*.)*

Phase I Environmental Site Assessment – The process described in this practice.

Pits, ponds, or lagoons – Man-made or natural depressions in the ground surface that are likely to hold liquids or sludge containing *hazardous substances* or *petroleum products*. The likelihood of such liquids or sludge being present is determined by evidence of factors associated with the pit, pond, or lagoon, including, but not limited to, discolored water, distressed vegetation, or the presence of an obvious wastewater discharge.

Property – The real property that is the subject of the *environmental site assessment* described in this practice. Real property includes buildings and other fixtures and improvement located on the property and affixed to the land.

Property tax files – The files kept for property tax purposes by the local jurisdiction where the property is located and includes records of past ownership, appraisals, maps, sketches, photos, or other information that is reasonable ascertainable and pertaining to the property.

RCRA generators – Those persons or entities that generate hazardous waste, as defined and regulated by RCRA.

RCRA generators list – List kept by the EPA of those persons or entities that generate hazardous wastes as defined and regulated by RCRA.

RCRA TSD facilities – Those facilities at which treatment, storage, and/or disposal of hazardous wastes takes place, as defined and regulated by RCRA.

RCRA TSD facilities list – List kept by the EPA of those facilities at which treatment, storage, and/or disposal of hazardous wastes takes place, as defined and regulated by RCRA.

Recorded land title records – Records of fee ownership, leases, land contracts, easements, liens, and other encumbrances on or of the property recorded in the place where land title records are, by law or custom, recorded for the local jurisdiction in which the *property* is located. (Often such records are kept by a municipal or county recorder or clerk.) Such records may be obtained from title companies or directly from the local government agency. Information about the title to the property that is recorded in a U.S. district court or any place other than where land title records are, by law or custom, recorded for the local jurisdiction in which the property is located, are not considered part of recorded land title records.

Records of emergency release notifications (SARA § 304) – Section 304 of EPCRA or Title III of SARA requires operators of facilities to notify their local emergency planning committee (as defined in EPCRA) and the state emergency response commission (as defined in EPCRA) of any release beyond the facility's boundary of any reportable quantity of any extremely hazardous substance. Often the local fire department is the local emergency planning committee. Records of such notifications are "Records of Emergency Release Notifications" (SARA§ 304).

Report – The written record of a transaction screen process as required by Practice E 1528 or the written report prepared by the environmental professional and constituting part of a "Phase I Environmental Site Assessment," as required by this practice.

Solid waste disposal site – A place, location, tract of land, area, or premises used for the disposal of solid wastes as defined by state solid waste regulations. The term is synonymous with the term *landfill* and is also known as a garbage dump, trash dump, or similar term.

Solvent – A chemical compound that is capable of dissolving another substance and may itself be a *hazardous substance,* used in a number of manufacturing/industrial processes including, but not limited to, the manufacture of paints and coatings for industrial and household purposes, equipment clean-up, and surface degreasing in metal fabricating industries.

State registered USTs – State lists of underground storage tanks required to be registered under Subtitle I, Section 9002 of RCRA.

Sump – A pit, cistern, cesspool, or similar receptacle where liquids drain, collect, or are stored.

TSD facility – Treatment, storage, or disposal facility (*see RCRA TSD facilities*).

Underground storage tank (UST) - Any tank, including underground piping connected to the tank, that is or has been used to contain *hazardous substances* or *petroleum products* and the volume of which is 10% or more beneath the surface of the ground.

USGS 7.5 Minute Topographic Map – The map (if any) available from or produced by the United States Geological Survey, entitled "USGS 7.5 Minute Topographic Map," and showing the property.

Wastewater – Water that (1) is or has been used in an industrial or manufacturing process, (2) conveys or has conveyed sewage, or (3) is directly related to manufacturing, processing, or raw materials storage areas at an industrial plant. Wastewater does not include water originating on or passing through or adjacent to a site, such as storm water flows, that has not been used in industrial or manufacturing processes, has not been combined with sewage, or is not directly related to manufacturing, processing, or raw materials storage areas at an industrial plant.

Zoning/land use records – Those records of the local government in which the *property* is located, indicating the uses permitted by the local government in particular zones within its jurisdiction. The records may consist of maps and/or written records. They are often located in the planning department of a municipality or county.

DEFINITIONS SPECIFIC TO ASTM E 1527-13:

Actual knowledge – The knowledge actually possessed by an individual who is a real person, rather than an entity. Actual knowledge is to be distinguished from constructive knowledge that is knowledge imputed to an individual or entity.

Adjoining properties – Any real property or properties the border of which is contiguous or partially contiguous with that of the property, or that would be contiguous or partially contiguous with that of the property but for a street, road, or other public thoroughfare separating them.

Aerial photographs – Photographs taken from an airplane or helicopter (from a low enough altitude to allow identification of development and activities) of areas encompassing the property. Aerial photographs are often available from government agencies or private collections unique to a local area.

Appropriate inquiry – That inquiry constituting "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined in CERCLA, 42 USC § 9601(35)(B), that will give a party to a *commercial real estate* transaction the *innocent landowner defense* to the CERCLA liability (42 USC § 9601(A) and (B) and § 9607(b)(3)), assuming compliance with other elements of the defense. See Appendix X1.

Approximate minimum search distance – The area for which records must be obtained and reviewed pursuant to Section 7 subject to the limitations provided in that section. This may include areas outside the *property* and shall be measured from the nearest *property* boundary. This term is used in lieu of radius to include irregularly-shaped properties.

Building department records – Those records of the local government in which the property is located indicating permission of the local government to construct, alter, or demolish improvements on the property. Often, building department records are located in the building department of a municipality or county.

Business environmental risk – A risk which can have a material environmental or environmentally-driven financial impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in this practice. Consideration of *business environmental risk* issues may necessitate that an *environmental professional* address one or more non-scope considerations, some of which are identified in Section 12.

Commercial real estate – Any real property except a dwelling or property with no more than four dwelling units exclusively for residential use (except that a dwelling or property with no more than four dwelling units exclusively for residential use is included in this term when it has a commercial function, as in the building of such dwellings for profit). This term includes, but is not limited to, undeveloped real property and real property used for industrial, retail, office, agricultural, other commercial, medical, or educational purposes; property used for residential purposes that has more than four residential dwelling units; and any property with no more than four dwelling units for residential use when it has a commercial function, as in the building of such dwellings for profit.

Commercial real estate transaction – A transfer of title to or possession of real property or receipt of a security interest in real property, except that it does not include transfer of title to or possession of real property or the receipt of a security interest in real property with respect to an individual dwelling or building containing fewer than five dwelling units, nor does it include the purchase of a lot or lots to construct a dwelling for occupancy by a purchaser, but a commercial real estate transaction does include real property purchased or leased by persons or entities in the business of building or developing dwelling units.

Controlled Recognized Environmental Condition – a *recognized environmental condition* resulting from a past *release* of *hazardous substances* or *petroleum products* that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with *hazardous substances* or *petroleum products* allowed to remain in place subject to the implementation of required controls (for example, *property* use restrictions, *activity and use limitations*, *institutional controls*, or *engineering controls*).

Due diligence – The process of inquiring into the environmental characteristics of a parcel of *commercial real estate* or other conditions, usually in connection with a commercial real estate transaction. The degree and kind of due diligence vary for different properties and differing purposes.

Environmental audit – The investigative process to determine if the operations of an existing facility are in compliance with applicable environmental laws and regulations. This term should not be used to describe Practice E 1528 or this practice, although an environmental audit may include an *environmental site assessment* or, if prior audits are available, may be part of an environmental site assessment.

Environmental professional – A person processing sufficient training and experience necessary to conduct a *site reconnaissance, interviews,* and other activities in accordance with this practice, and from the information generated by such activities, having the ability to develop opinions and conclusions regarding *recognized environmental conditions* in connection with the *property* in question. An individual's status as an environmental professional may be limited to the type of assessment to be performed or to specific segments of the assessment for which the professional is responsible. The person may be an independent contractor or an employee of the *user.*

Environmental site assessment (ESA) – The process by which a person or entity seeks to determine if a particular parcel of real *property* (including improvements) is subject to *recognized environmental conditions.* At the option of the *user*, an environmental site assessment may include more inquiry than that constituting *appropriate inquiry* or, if the user is not concerned about qualifying for the *innocent landowner defense,* less inquiry than that constituting *appropriate inquiry.* An environmental site assessment is both different from and less rigorous than an *environmental audit.*

Fill dirt – Dirt, soil, sand, or other earth, obtained off-site, that is used to fill holes or depressions, create mounds, or otherwise artificially change the grade or elevation of real property. It does not include material that is used in limited quantities for normal landscaping activities.

Hazardous waste/contaminated sites – Sites on which a release has occurred, or is suspected to have occurred, of any *hazardous substance, hazardous waste,* or *petroleum products,* and that release or suspected release has been reported to a government entity.

Historical Recognized Environmental Condition – a past *release* of any *hazardous substances* or *petroleum products* that has occurred in connection with the *property* and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the *property* to any required controls (for example, *property* use restrictions, *activity and use limitations*, *institutional controls*, or *engineering controls*). Before calling the past *release* a *historical recognized environmental condition*, the *environmental professional* must determine whether the past *release* is a *recognized environmental condition* at the time the *Phase I Environmental Site Assessment* is conducted (for example, if there has been a change in the regulatory criteria). If the EP considers the past *release* to be a *recognized environmental condition* at the time the Phase I ESA is conducted, the condition shall be included in the conclusions section of the report as a *recognized environmental condition*.

Innocent landowner defense – That defense to CERCLA liability provided in 42 USC § 9601(35) and § 9607(b)(3). One of the requirements to qualify for this defense is that the party make "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice." There are additional requirements to qualify for this defense.

Interviews – Those portions of this practice that are contained in Section 9 and 10 thereof and address questions to be asked of *owners* and *occupants* of the *property* and questions to be asked of local government officials.

Key site manager – The person identified by the *owner* of a *property* as having good knowledge of the uses and physical characteristics of the property.

Local government agencies – Those agencies of municipal or county government having jurisdiction over the *property.* Municipal and county government agencies include, but are not limited to, cities, parishes, townships, and similar entities.

LUST sites – State lists of leaking underground storage tank sites. Section 9003 (h) of Subtitle I of RCRA gives EPA and states, under cooperative agreements with EPA, authority to clean up releases from UST systems or require owners and operators to do so.

Major occupants – Those tenants, subtenants, or other persons or entities each of which uses at least 40% of the leasable area of the *property* or any anchor tenant when the *property* is a shopping center.

Material threat – A physically observable or obvious threat which is reasonable likely to lead to a release that, in the opinion of the *environmental professional,* is threatening and might result in impact to human health and the environment. An example might include an aboveground storage tank that contains a hazardous substance and which shows evidence of damage. The damage would represent a material threat if it is deemed serious enough that it may cause or contribute to tank integrity failure with a release of contents to the environment.

Obvious – That which is plain or evident; a condition or fact that could not be ignored or overlooked by a reasonable observer while *visually* or *physically observing the property.*

Other historical sources – Any source or sources other than those designated in 7.3.4.1-7.3.4.8 that are credible to a reasonable person and that identify past uses of the property. The term includes, but is not limited to, miscellaneous maps, newspaper archives, and records in the files and/or personal knowledge of the *property owner* and/or *occupants.*

Physical setting sources – sources that provide information about the geologic, hydrogeologic, hydrologic, or topographic characteristics of a *property.*

Practically reviewable – Information that is practically reviewable means that the information is provided by the source in a manner and in a form that, upon examination, yields information relevant to the *property* without the need for extraordinary analysis of irrelevant data. The form of the information shall be such that the user can review the records for a limited geographic area. Records that cannot be feasibly retrieved by reference to the location of the *property* or a geographic area in which the *property* is located are not generally *practically reviewable.* Most databases of public records are *practically reviewable* if they can be obtained from the source agency by the county, city, zip code, or other geographic area of the facilities listed in the record system. Records that are sorted, filed, organized, or maintained by the source agency only chronologically are not generally practically reviewable. Listings in publicly available records which do not have adequate address information to be located geographically are not generally considered practically reviewable. For large databases with numerous facility records (such as RCRA hazardous waste generators and registered underground storage tanks), the records are not *practically reviewable* unless they can be obtained from the source agency in the smaller geographic area of zip codes. Even when information is provided by zip code for some large databases, it is common for an unmanageable number of sites to be

identified within a given zip code. In these cases, it is not necessary to review the impact of all of the sites that are likely to be listed in any given zip code because that information would not be *practically reviewable*. In other words, then so much data is generated that it cannot be feasibly reviewed for its impact on the *property,* it is not *practically reviewable.*

Preparer – The person preparing the *transaction screen questionnaire* pursuant to Practice E 1528, who may be either the user or the person to whom the user has delegated the preparation of the *transaction screen questionnaire.*

Publicly available – Information that is publicly available means that the source of the information allows access to the information by anyone upon request.

Reasonably ascertainable – For purposes of both this practice and Practice E 1528, information that is (1) *publicly available,* (2) obtainable from its source within reasonable time and cost constraints, and (3) *practically reviewable.*

Recognized Environmental Conditions – the presence or likely presence of any *hazardous substances* or *petroleum products* in, on, or at a *property*: (*1*) due to release to the environment; (*2*) under conditions indicative of a *release* to the *environment*; or (*3*) under conditions that pose a *material threat* of a future *release* to the *environment*. *De minimis conditions* are not *recognized environmental conditions*.

Records review – That part that is contained in Section 7 of this practice addresses which records shall or may be reviewed.

Site reconnaissance – That part that is contained in Section 8 of this practice and addresses what should be done in connection with the *site visit.* The site reconnaissance includes, but is not limited to, the *site visit* done in connection with such a Phase I Environmental Site Assessment.

Site visit – The visit to the property during which observations are made constituting the *site reconnaissance* section of this practice and the *site visit* requirement of Practice E 1528.

Standard environmental record sources – Those records specified in 7.2.1.1.

Standard historical sources – Those sources of information about the history of uses of the property specified in 7.3.4.

Standard physical setting source – A current USGS 7.5-minute topographic map (if any) showing the area on which the property is located.

Standard practice(s) – The activities set forth in either and both this practice and Practice E 1528.

Standard sources – Sources of environmental, physical setting, or historical records specified in Section 7 of this practice.

Transaction screen process – The process described in Practice E 1528.

Transaction screen questionnaire – The questionnaire provided in Section 6 of Practice E 1528.

User – The party seeking to use Practice E 1528 to perform an *environmental site assessment* of the *property*. A user may include, without limitation, a purchaser of *property,* a potential tenant of *property,* an *owner* of *property,* a lender, or a property manager.

Visually and/or physically observed – During a *site visit* pursuant to Practice E 1528, or pursuant to this practice, this term means observations made by vision while walking through a *property* and the structures located on it and observations made by the sense of smell, particularly observations of noxious or foul odors. The term "walking through" is not meant to imply that disabled persons who cannot physically walk may not conduct a *site visit;* they may do so by the means at their disposal for moving through the *property* and the structures located on it.

ACRONYMS:

CERCLA – Comprehensive Environmental Response, Compensation and Liability Act of 1980 (as amended, 42 USC § 9601 *et seq.*)

CERCLIS – Comprehensive Environmental Response, Compensation and Liability Information System (maintained by EPA)

CFR – Code of Federal Regulations

CORRACTS – Facilities subject to corrective action under RCRA

EPA – United States Environmental Protection Agency

EPCRA – Emergency Planning and Community Right to Know Act (also known as SARA Title III), 42 USC § 11001 *et seq.*)

ERNS – Emergency response notification system

ESA – Environmental site assessment (different than an *environmental audit*)

FOIA – U.S. Freedom of Information Act (5 USC 552 *et seq.*)

FR – Federal Register

LUST – Leaking underground storage tank

MSDS – Material safety data sheet

NCP – National Contingency Plan

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Roux Associates were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Roux Associates were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OR DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT.** Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction orforecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal RCRA facilities undergoing Corrective Action

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 09/13/2021 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or

dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 09/13/2021 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/13/2021 has revealed that there are 10 RCRA-SQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 10/25/2021 has revealed that there are 5 ENVIROSTOR sites within approximately 1 mile of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 09/13/2021 has revealed that there are 28 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

US MINES: Mines Master Index File. The source of this database is the Dept. of Labor, Mine Safety and Health Administration.

A review of the US MINES list, as provided by EDR, has revealed that there are 2 US MINES sites within approximately 0.25 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
PLANT #1 - DUNMOVIN		***WNW 1/8 - 1/4 (0.153 mi.)***	***K65***	***320***
Database: MINES VIOLATIONS, Date of Government Version: 06/30/2021				
ROBERTSON'S		W 1/8 - 1/4 (0.232 mi.)	Q96	463
Database: US MINES, Date of Government Version: 11/02/2021 Mine ID:: 0404652				

ABANDONED MINES: An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

A review of the ABANDONED MINES list, as provided by EDR, and dated 09/14/2021 has revealed that there is 1 ABANDONED MINES site within approximately 0.25 miles of the target property.

FINDS: The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 11/04/2021 has revealed that there are 2 FINDS sites within approximately 0.001 miles of the target property.

HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency. This database begins with calendar year 1993.

A review of the HAZNET list, as provided by EDR, and dated 12/31/2019 has revealed that there are 2 HAZNET sites within approximately 0.001 miles of the target property.

CERS: The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

A review of the CERS list, as provided by EDR, and dated 10/18/2021 has revealed that there are 2 CERS sites within approximately 0.001 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto site within approximately 0.125 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
AUTO ANALYSTS	446 TENNESSEE ST	NNE 0 - 1/8 (0.100 mi.)	H47	254

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist Cleaner site within approximately 0.125 miles of the target property.

Description of Events:	Not reported
Recommendations/Actions Taken:	THIS INCIDENT WAS DISCUSSED WITH ALL OUR DRIVERS DURING OUR QUARTERLY SAFETY MEETINGS IN FEBRUARY. FLYERS TRANSPORTATION HAS RECENTLY SIGNED A CONTRACT WITH SMARTDRIVE SYSTEMS A VIDEO INTELLIGENCE SOLUTIONS PROVIDER TO INSTALL BOTH FORWARD AND DRIVER FACING CAMERAS IN OUR ENTIRE FLEET. THE LIABILITY COVERAGE IS GREAT BUT THE KEY SELLING POINT IS THEIR VIDEO SAFETY COACHING SYSTEM THAT WILL ALLOW US TO PRO-ACTIVELY COACH DRIVERS ON HABITS OR BEHAVIORS THAT WOULDNGCOT NORMALLY HAVE BEEN OBSERVED DURING OUR DRIVER RIDE ALONG OBSERVATIONS BECAUSE THIS IS USUALLY WHEN DRIVERS ARE ON THEIR BEST BEHAVIOR.

Environmental Interest/Information System:
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
OSHA ESTABLISHMENT
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
OSHA ESTABLISHMENT

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Registry ID: 110070695196

Click Here:

Environmental Interest/Information System:

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

AIR EMISSIONS CLASSIFICATION UNKNOWN

SPARTECH PLASTICS INC (Continued) **1000148996**

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
HAZARDOUS AIR POLLUTANT MAJOR
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Reclamation:	Not reported
POTW:	Not reported
Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Violation Date: 08-10-2021
Citation: HSC 6.95 25508.2 - California Health and Safety Code, Chapter 6.95, Section(s) 25508.2
Violation Description: Failure to annually review and electronically certify that the business plan is complete and accurate on or before the annual due date.
Violation Notes: Returned to compliance on 08/10/2021. OBSERVATION: At the time of the inspection the business plan was last reviewed and certified via CERS on 10/25/2018. The business plan annual review/certification violation was corrected on site at the time of the inspection.
Violation Division: San Bernardino County Fire Department
Violation Program: HMRRP
Violation Source: CERS,

Site ID: 432064
Site Name: CHEP-Redlands
Violation Date: 08-07-2018
Citation: HSC 6.95 25508.1(a)-(f) - California Health and Safety Code, Chapter 6.95, Section(s) 25508.1(a)-(f)
Violation Description: Failure to electronically update business plan within 30 days of any one of the following events: A 100 percent or more increase in the quantity of a previously disclosed material. Any handling of a previously undisclosed hazardous materials at or above reportable quantities. A change of business address, business ownership, or

CHEP-REDLANDS (Continued) **S122499453**

	business name. A substantial change in the handler's operations that requires modification to any portion of the business plan.
Violation Notes:	Returned to compliance on 10/25/2018. OBSERVATION: Observed (10) 8-gallon cylinders of propane that was previously undisclosed on facility's business plan. CORRECTIVE ACTION: Submit the updated business plan information into the California Environmental Reporting System (CERS).
Violation Division:	San Bernardino County Fire Department
Violation Program:	HMRRP
Violation Source:	CERS,
Site ID:	432064
Site Name:	CHEP-Redlands
Violation Date:	08-10-2021
Citation:	HSC 6.95 25508(a)(3 - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(3
Violation Description:	Failure to report program data electronically.
Violation Notes:	Returned to compliance on 08/10/2021. OBSERVATION: At the time of the inspection the owner information and billing contact information submitted on the Business Owner/Operator Identification page submitted via CERS on 10/25/2018 was inaccurate. The business owner/operator identification page was corrected on site at the time of the inspection.

Violations:
Site ID: 378117
Site Name: Simply Toyota
Violation Date: 09-16-2021
Citation: HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes: OBSERVATION:(1) 15 gallon container of used antifreeze had a hazardous waste label with an accumulation start date of 08/03/2019, indicating time exceeded for removing waste offsite. CORRECTIVE ACTION: Dispose of hazardous waste that has been stored over the applicable time limit and provide documentation that the violation has been corrected.

REDLANDS CITY (Continued) **S106838120**

Violation Date: 12-21-2018
Citation: 23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)
Violation Description: Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.
Violation Notes: Returned to compliance on 01/18/2019. OBSERVATION: Overfill Prevention Equipment testing was not conducted every 36 months. CORRECTIVE ACTION: As of October 13, 2018, Overfill Prevention Equipment must be tested every 36 months. Contact the OFM office to schedule an appointment within 30 days.

Violation Date:	02-21-2020
Citation:	23 CCR 16 2716(e) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2716(e)
Violation Description:	For designated operator (DO) monthly inspections conducted before October 1, 2018, failure to comply with one or more of the following requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been trained in accordance with 23 CCR 2715(c). For designated operator (DO) 30 day inspections conducted on and after October 1, 2018, failure to conduct the designated UST operator visual inspection at least once every 30 days.
Violation Notes:	Returned to compliance on 02/21/2020. OBSERVATION: The DO monthly inspections are to be conducted once every 30 days. The following DO monthly inspections were not conducted every 30 days: March 2019, June 2019, October 2019, December 2019, and January 2020. CORRECTIVE ACTION: Spoke with Monica Duran about the recent law change as of October 2018. No further action required.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
OSHA ESTABLISHMENT
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART)

TOM BELL COLLISION CENTER (Continued) **1000104649**

provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site ID: 433536
CERS ID: 10755973
CERS Description: Chemical Storage Facilities

Violations:
Site ID: 433536
Site Name: American Tire Depot 68
Violation Date: 09-29-2021
Citation: HSC 6.95 25508.1(a)-(f) - California Health and Safety Code, Chapter 6.95, Section(s) 25508.1(a)-(f)
Violation Description: Failure to electronically update business plan within 30 days of any one of the following events: A 100 percent or more increase in the quantity of a previously disclosed material. Any handling of a previously undisclosed hazardous materials at or above reportable quantities. A change of business address, business ownership, or business name. A substantial change in the handler's operations that requires modification to any portion of the business plan.
Violation Notes: OBSERVATION: Motor oil is being under reported in CERS. (4) 120 gallon containers of motor oil was observed onsite. CORRECTIVE ACTION: Update the required business plan information via CERS. Your CERS ID number is 10755973.
Violation Division: San Bernardino County Fire Department

Violation Source: CERS,

Site ID: 433536
Site Name: American Tire Depot 68
Violation Date: 09-29-2021
Citation: HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes: Returned to compliance on 09/30/2021. OBSERVATION: Owner/Operator is a small quantity generator and failed to send hazardous waste offsite for treatment, storage, or disposal within 180 days. (1) 55 gallon drum of used antifreeze showed an accumulation start date of 02/27/2020. CORRECTIVE ACTION: Dispose of hazardous waste that has

TOM BELL COLLISION CENTER (Continued) **1000104649**

been stored over the applicable time limit and provide documentation that the violation has been corrected.

	6.5, Section(s) Multiple Sections
Violation Description:	Haz Waste Generator Program - Operations/Maintenance - General
Violation Notes:	Returned to compliance on 07/25/2017. Hazardous waste accumulation time exceeded (CCR 66262.34(a)) If a generator produces more than 2,200 lbs per month of a hazardous waste the accumulation time limit is 90 days. If a generator produces more than 220 lbs but less than 2,200 lbs of hazardous waste per month the accumulation time line is 180 days. If a generator produces less than 220 lbs per month of a hazardous waste, the accumulation clock starts the day they reach 100 kg or 1 kg of extremely hazardous waste and can accumulate for 90 days from that point. Hazardous waste disposal records must be retained for three years from the date the waste was hauled from the accumulation-site. Observed (2) 30 gallon drums of waste coolant, and (1) 500 gallon aboveground storage tank of used oil with an accumulation start date of 08/22/2014. The accumulation time time has been exceeded. Compliance Requirement: Remove waste coolant and used oil within 30 days of this report. SUBMIT copies of the waste records to this [Truncated]

Site ID:	76861
Site Name:	TOM BELL COLLISION CENTER
Violation Date:	03-04-2015
Citation:	HSC 6.5 Multiple Sections - California Health and Safety Code, Chapter 6.5, Section(s) Multiple Sections
Violation Description:	Haz Waste Generator Program - Operations/Maintenance - General
Violation Notes:	Returned to compliance on 07/25/2017. Failure to operate and maintain facility to prevent a fire, spill or release (CCR 66265.31) Facilities shall be maintained and operated to minimize the possibility of a fire, explosion, or any release of hazardous waste or hazardous waste constituents to air, soil, or surface water which could threaten human health or the environment. Observed waste coolant residues on top of the (2) 30 gallon drums of waste coolant. Corrective Text: Properly clean up the waste coolant from the top of the waste coolant drums, and manage all spent absorbent as a hazardous waste. Submit the Certificate of Compliance (CofC) to this Division within 30 days of receipt of this report.
Violation Division:	San Bernardino County Fire Department
Violation Program:	HW

REDLANDS GAS & FOOD MART (Continued) **S103625066**

Violation Description:	Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.
Violation Notes:	Returned to compliance on 10/18/2019. OBSERVATION: The Overfill Prevention Equipment Testing records were not available for on site review. Per A & P Compliance Testing technician Paulo Magana and Designated Operator Reports, the testing was complete on 11-7-2018. The install date for the USTs is 1998 and the system has single wall vent piping. A&P Compliance indicated that the ATGs were tested but the ball floats were not tested. CORRECTIVE ACTION: The Ball Float Valves were tested this date and PASSED. Violation corrected on site.

Latitude:	34.06056
Longitude:	-117.20033
Case Type:	Cleanup Program Site
Case Worker:	CAB
Local Agency:	Not reported
RB Case Number:	T10000011531
File Location:	All Files are on GeoTracker or in the Local Agency Database
Potential Media Affected:	Aquifer used for drinking water supply, Soil, Soil Vapor
Potential Contaminants of Concern:	Diesel, Gasoline
Site History:	On June 19, 2003, various above ground fuel storage tanks (ASTs), above and below ground piping, and fuel dispensers were removed from the site during demolition activities. The ASTs were reported to contain diesel fuel, gasoline or kerosene. Additionally, an underground storage tank (UST) containing waste oil was also excavated and removed. The tank and fuel system removal activities were completed by A&J ENVIRONMENTAL, INC. of Riverside, California. During the removal of the various fueling systems on June 19, 2003, under the supervision of Ms. Betti MacGregor of the SBCFD, initial compliance soil samples were collected by A&J staff. All samples were collected between approximately two and three feet below site grade. The results of the soil analyses showed evidence of petroleum fuel releases near several of the fueling system features. On December 18, 2003, AEM observed the excavation of the shallow soil in the areas of elevated concentrations of petroleum compounds, based on the previous samples collected on June 19, 2003. Verification samples were then collected from the bottom and sidewalls of five distinct excavated areas. These verification soil samples indicated that the vertical extent of impacted soil was not removed in three of the five excavation locations.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

JERRY MURPHYS REDLANDS DODGE (Continued) **1000134975**

program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Manufactured Gas Plants:

The site is a 1-acre parcel which was operated as a MGP from 1906 to 1921 by various utility companies. In 1921, the Gas Company discontinued operations at the site. The site was dismantled prior to 1928. PEA field work conducted in June 1993 revealeed visible soil contamination (possibly with lampblack).

SO CAL GAS/REDLANDS I (STATE ST.) MGP (Continued) **S106568286**

Completed Document Type: Standard Voluntary Agreement
Completed Date: 07/28/2000
Comments: DTSC entered into a Voluntary Cleanup Agreement (Agreement) with Southern California Gas Company (Proponent). The purpose of this Agreement is for the Proponent to conduct a Site Investigation to further characterize the existing soil contamination and to prepare a removal action workplan and implement a removal action under the oversight of DTSC.

Completed Area Name: PROJECT WIDE

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Annual Oversight Cost Estimate
Completed Date: 09/28/2018
Comments: Cost Estimated

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 12/21/2001
Comments: RP placed wood chips to fully cover the exposed soil in two planters at the site. High concentrations of lead have been detected at these planters during previous investigations. The placement of these wood chips is a temporary measure that will minimize the contaminant exposure to human health.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan
Completed Date: 09/11/2003
Comments: CEQA - ND: DTSC completed Removal Action Workplan (RAW) and Negative Declaration (ND). The RAW and ND were approved on 9/11/03. The Notice of Determination (NOD) of a CEQA was signed on 9/11/03. Removal action will occur with the adjacent Redlands II site. The proposed cleanup option is excavation and offsite treatment and offsite stabilization. Approximately 40,000 cubic yards of contaminated soil will be removed from these two sites.

Quarterly Update:	Entered 11/15/07. Teledyne Continental Motors, Battery Products Operations (TBP) is located in Redlands, CA and occupies approximately five acres of land surrounded by 15 acres of vacant land also owned by Teledyne. The TBP facility began operations at this location in 1967. TBP manufactures lead-acid storage batteries for aircraft, emergency lighting systems, and vehicles. TBP handled and stored hazardous materials or wastes on several locations at the facility. Environmental studies at the facility were carried out under two administrative processes; Resource Conservation and Recovery Act (RCRA) closure and RCRA corrective action. The results of soil, soil gas, and groundwater investigations conducted at the facility were presented in the RCRA Facility Investigation Report and Closure Reports which indicated the presence of chemical residues in different areas of the facility. Three areas required soil remediation prior to RCRA closure. The cleanup of the three areas included excavating soil with chemical residues and disposing the excavated soil at a permitted off-site disposal facility. Approximately 350 cubic yards of soil contaminated with lead and sulfate were excavated from the former evaporation pond and percolation pond. In addition, approximately 10 cubic yards of soil contaminated with lead, solvents (TCE, PCE, and 1,1,1-TCA), and sulfate were excavated from the Old Container Storage Unit. DTSC issued public notice of the proposed RCRA corrective action program cleanup plan for the TBP facility during two public notice periods between May 2000 and August 2000. DTSC required cleanup via excavation of small areas of lead residues at the Acid Scrubber Water Storage Tanks and Waste Water Treatment Plant. An Open House to receive comments on the soil removal plan was held on July 26, 2001. Approximately one cubic yard of soil was excavated and disposed of at an off-site hazardous waste disposal facility. Sampling conducted after excavation indicated that the levels of lead remaining after the excavation a

Eval General Type: Compliance Evaluation Inspection
Eval Date: 11-05-2019
Violations Found: No
Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: Regional Board staff Mr. Elliott and Ms. Mendoza were escorted through the facility by Mr. Vincent Jermany, Director of Operations. The SWPPP, daily tank inspections, and twice weekly sweeping logs were present. The last daily inspection log was dated 11/5/19 and the sweeping log was dated 10/29/19. The scrap metal roll off bin did not have a lid but Mr. Jermany indicated that a tarp is available to place over the bin when rain is forecast. Cardboard trash bins had lids that were closed. Housekeeping appeared to be well kept. The discharge sampling location was observed and appeared to be clear of trash, debris, and sediment. Mr. Jermany did not appear to be aware of the required Level 2 ERA report due on January 1, 2020. The 2016-17 facility AdHoc average lead concentrations exceeded the NAL and a Level 1 ERA was submitted. The BMP recommendations appeared to be primarily focused on housekeeping improvements. "Use tarping or covered rolloff to cover the outdoor material storage. Increase frequency of sweeping the site with sweeper, in areas located away from air monitors, catch basins and sumps to be inspected monthly. Cleaning will be conducted immediately when significant sediment buildup is observed. Catch basins and sumps will be cleaned annually, at a minimum." The 2018-19 AdHoc reports average lead concentration of 0.30 mg/L exceeded the NAL of 0.262 mg/L. The Level 2 ERA report is due by January 1, 2020.

Violations Found:	No
Eval Type:	Industrial Storm Water Compliance Evaluation
Eval Notes:	Regional Board staff Mr. Elliott and Ms. Mendoza were escorted through the facility by Mr. Vincent Jermany, Director of Operations. The SWPPP, daily tank inspections, and twice weekly sweeping logs were present. The last daily inspection log was dated 11/5/19 and the sweeping log was dated 10/29/19. The scrap metal roll off bin did not have a lid but Mr. Jermany indicated that a tarp is available to place over the bin when rain is forecast. Cardboard trash bins had lids that were closed. Housekeeping appeared to be well kept. The discharge sampling location was observed and appeared to be clear of trash, debris, and sediment. Mr. Jermany did not appear to be aware of the required Level 2 ERA report due on January 1, 2020. The 2016-17 facility AdHoc average lead concentrations exceeded the NAL and a Level 1 ERA was submitted. The BMP recommendations appeared to be primarily focused on housekeeping improvements. "Use tarping or covered rolloff to cover the outdoor material storage. Increase frequency of sweeping the site with sweeper, in areas located away from air monitors, catch basins and sumps to be inspected monthly. Cleaning will be conducted immediately when significant sediment buildup is observed. Catch basins and sumps will be cleaned annually, at a minimum." The 2018-19 AdHoc reports average lead concentration of 0.30 mg/L exceeded the NAL of 0.262 mg/L. The Level 2 ERA report is due by January 1, 2020.

Violation Notes:	The Teledyne Battery Products Level 1 ERA Report for Lead, Total (Recoverable) has not been submitted for the July 1, 2016 - June 30, 2017 reporting year.
Violation Division:	Water Boards
Violation Program:	INDSTW
Violation Source:	SMARTS,
Site ID:	74280
Site Name:	TELEDYNE BATTERY PRODUCTS
Violation Date:	10-31-2016
Citation:	HSC 6.95 25508.1(a)-(f) - California Health and Safety Code, Chapter 6.95, Section(s) 25508.1(a)-(f)
Violation Description:	Failure to electronically update business plan within 30 days of any one of the following events: A 100 percent or more increase in the quantity of a previously disclosed material. Any handling of a previously undisclosed hazardous materials at or above reportable quantities. A change of business address, business ownership, or business name. A substantial change in the handler's operations that requires modification to any portion of the business plan.
Violation Notes:	Returned to compliance on 11/30/2016. (1) 55 gallon drum of Ethylene Glycol was not reported as inventory. Site map to include hazardous materials storage and handling areas, emergency shut offs, emergency response equipment.
Violation Division:	San Bernardino County Fire Department
Violation Program:	HMRRP
Violation Source:	CERS,
Site ID:	74280
Site Name:	TELEDYNE BATTERY PRODUCTS
Violation Date:	05-09-2018
Citation:	HSC 6.5 25244.21 - California Health and Safety Code, Chapter 6.5, Section(s) 25244.21
Violation Description:	Failure to adequately complete, and maintain for review, all requirements of the source reduction evaluation review and plan (SB-14).
Violation Notes:	Returned to compliance on 06/06/2018. OBSERVATION: A source reduction evaluation review and plan with all the required information has not been completed and maintained for review. CORRECTIVE ACTION: Complete a source reduction report with all the required information and submit a copy to the CUPA.
Violation Division:	San Bernardino County Fire Department
Violation Program:	HWLQG
Violation Source:	CERS,
Site ID:	74280
Site Name:	TELEDYNE BATTERY PRODUCTS
Violation Date:	05-09-2018
Citation:	22 CCR 15 66265.192(a) - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.192(a)
Violation Description:	Failure to obtain and maintain a written assessment reviewed and certified by an independent, qualified, professional engineer prior to placing the tank system in service. The written assessment shall state that, the new hazardous waste tank system has sufficient structural integrity, is acceptable for the transferring, storing and treating of hazardous waste, and that the tanks and containment system including the foundation, structural support, seams, connections, and pressure controls (if applicable) are suitably designed to meet the regulation.

TELEDYNE BATTERY (Continued) **1000201837**

Violation Notes: Returned to compliance on 06/06/2018. OBSERVATION: A written hazardous waste tank assessment has not been maintained for the water treatment tank system. CORRECTIVE ACTION: Obtain a written hazardous waste tank system assessment for the water treatment tank system in accordance with 22 CCR 15 66265.192 and submit a copy to the CUPA.

Eval Date:	11-05-2019
Violations Found:	No
Eval Type:	Industrial Storm Water Compliance Evaluation
Eval Notes:	Regional Board staff Mr. Elliott and Ms. Mendoza were escorted through the facility by Mr. Vincent Jermany, Director of Operations. The SWPPP, daily tank inspections, and twice weekly sweeping logs were present. The last daily inspection log was dated 11/5/19 and the sweeping log was dated 10/29/19. The scrap metal roll off bin did not have a lid but Mr. Jermany indicated that a tarp is available to place over the bin when rain is forecast. Cardboard trash bins had lids that were closed. Housekeeping appeared to be well kept. The discharge sampling location was observed and appeared to be clear of trash, debris, and sediment. Mr. Jermany did not appear to be aware of the required Level 2 ERA report due on January 1, 2020. The 2016-17 facility AdHoc average lead concentrations exceeded the NAL and a Level 1 ERA was submitted. The BMP recommendations appeared to be primarily focused on housekeeping improvements. "Use tarping or covered rolloff to cover the outdoor material storage. Increase frequency of sweeping the site with sweeper, in areas located away from air monitors, catch basins and sumps to be inspected monthly. Cleaning will be conducted immediately when significant sediment buildup is observed. Catch basins and sumps will be cleaned annually, at a minimum." The 2018-19 AdHoc reports average lead concentration of 0.30 mg/L exceeded the NAL of 0.262 mg/L. The Level 2 ERA report is due by January 1, 2020.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 05/25/2021

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners
EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

DUKE - TENNESSEE/KANSAS
301 TENNESSEE AVE
REDLANDS, CA 92373

TARGET PROPERTY COORDINATES

Latitude (North):	34.056446 - 34ˆ 3’ 23.21’’
Longitude (West):	117.201214 - 117ˆ 12’ 4.37’’
Universal Tranverse Mercator:	Zone 11
UTM X (Meters):	481430.2
UTM Y (Meters):	3768238.2
Elevation:	1266 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	12014994 REDLANDS, CA
Version Date:	2018

EDR’s GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

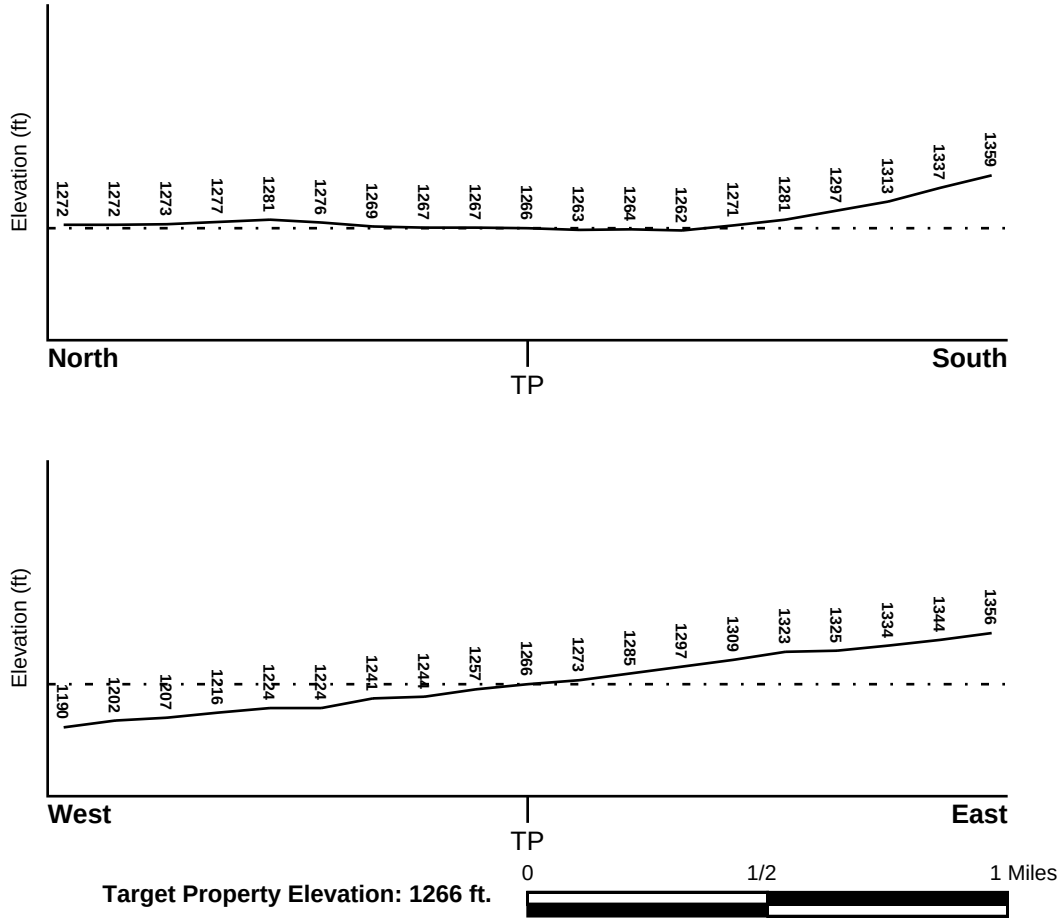
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General West

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 1266 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06065C0090G	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06071C8704H	FEMA FIRM Flood data
06071C8708H	FEMA FIRM Flood data
06071C8716H	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
NOT AVAILABLE	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
H32	1/2 - 1 Mile South	WNW
1G	1/2 - 1 Mile South	WNW

For additional site information, refer to Physical Setting Source Map Findings.

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Hanford

Soil Surface Texture: sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information

	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	11 inches	sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 7.8 Min: 5.6
2	11 inches	59 inches	fine sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 7.8 Min: 5.6

Soil Map ID: 2

Soil Component Name: TUJUNGA

Soil Surface Texture: gravelly loamy sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information

	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	18 inches	gravelly loamy sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.8 Min: 6.1
2	18 inches	59 inches	loamy sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.8 Min: 6.1

Soil Map ID: 3

Soil Component Name: GREENFIELD

Soil Surface Texture: sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	16 inches	sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 7.8 Min: 6.6
2	16 inches	50 inches	fine sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 7.8 Min: 6.6
3	50 inches	59 inches	sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 7.8 Min: 6.6

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.
