Environmental Interest/Information System
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

FRP

AIR SYNTHETIC MINOR

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Biennial Reports:

Last Biennial Reporting Year: 2013

Annual Waste Handled:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Longitude:	-117.114435
Case Type:	Cleanup Program Site
Case Worker:	SM
Local Agency:	Not reported
RB Case Number:	9UT542
File Location:	Regional Board
Potential Media Affected:	Other Groundwater (uses other than drinking water), Soil, Surface water, Under Investigation
Potential Contaminants of Concern:	Diesel, MTBE / TBA / Other Fuel Oxygenates, Gasoline, * Petroleum - Automotive gasolines, * Petroleum - Diesel fuels
Site History:	On January 17,2007 gasoline was released onto soil due to a failed pump seal. Groundwater monitoring wells were installed on July 20, 2007. Volatile fuel hydrocarbons concentration in wellhead samples have declined in all wells since the beginning of initial mobile treatment system (MTS) activities. For more information see Additional Remediation Report for Tank MV-18 Transfer Pump Release dated May 13, 2008 under the Site Documents tab.

Primary Waste:	CNWTRS
Waste Type2:	Not reported
Waste2:	Contaminated Ground Water
Primary Waste Type:	Hazardous/Influent or Solid Wastes that contain toxic, corrosive, ignitable or reactive substances and must be managed according to applicable DOHS standards.
Secondary Waste:	Not reported
Secondary Waste Type:	Not reported
Design Flow:	1
Baseline Flow:	0
Reclamation:	No reclamation requirements associated with this facility.
POTW:	The facility is not a POTW.

MISSION VALLEY TERMINAL (Continued) **1007200773**

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category A - Any major NPDES facility, any non-NPDES facility (particularly those with toxic wastes) that would be a major if discharge was made to surface or ground waters, or any Class I disposal site. Includes any small-volume complex facility (particularly those with toxicwastes) with numerous discharge points, leak detection systems or ground water monitoring wells.

Description:	Accident involving big rig with two tankers. Back tanker (4,000) gallons flipped over and caught fire. Most of the substance is burning, not sure exactly how much has been spilled. People downstream are monitoring, nothing significant, maybe 40ppmm, a thick sheen. Fish and Game is on scene. Substance is boomed and dyked. Fire Dept. is letting the substance burn off.

9300 FRIARS RD **CA HIST UST** **N/A**
SAN DIEGO, CA 92120

WDS:
Facility ID: San Diego 000000630
Facility Type: Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping.
Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
NPDES Number: Not reported
Subregion: 9

MISSION VALLEY PLANT (Continued) **U001572762**

Facility Telephone:	Not reported
Facility Contact:	THOMAS FARRAR
Agency Name:	HANSON AGGREGATES
Agency Address:	PO BOX 639069
Agency City,St,Zip:	SAN DIEGO 92163
Agency Contact:	PETE ZAGAR
Agency Telephone:	8585772772
Agency Type:	Private
SIC Code:	1442
SIC Code 2:	3273
Primary Waste Type:	Inert/Influent or Solid Wastes that do not contain soluble pollutants or organic wastes and have little adverse impact on water quality. Such wastes could cause turbidity and siltation. Uncontaminated soils, rubble and concrete are examples of this category.
Primary Waste:	WSHWTR
Waste Type2:	Not reported
Waste2:	Washwater Waste (Product washwater wastes: E.G., photo reuse wastewater, vegetable washwater)
Primary Waste Type:	Inert/Influent or Solid Wastes that do not contain soluble pollutants or organic wastes and have little adverse impact on water quality. Such wastes could cause turbidity and siltation. Uncontaminated soils, rubble and concrete are examples of this category.
Secondary Waste:	Not reported
Secondary Waste Type:	Not reported
Design Flow:	0
Baseline Flow:	0
Reclamation:	No reclamation requirements associated with this facility.
POTW:	The facility is not a POTW.
Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

LOC Case Number:	Not reported
File Location:	Local Agency
Potential Media Affect:	Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern:	Benzene, Toluene, Xylene, MTBE / TBA / Other Fuel Oxygenates, Gasoline
Site History:	Analytical results for soil samples collected during a piping/dispenser upgrade inspection on December 1, 2003, indicated that an unauthorized release of gasoline had occurred at the site (note that a previous release from a waste oil tank was addressed under H12334-001). The maximum detected gasoline concentration in the samples, which were collected beneath former dispenser locations and associated product piping trenches, was 4,480 milligrams per kilogram (mg/kg). Subsequent site assessment activities have included the installation of three, on-site monitoring wells (DW3, DW5, and DW6) in July 2007. Analytical results for soil samples collected from the well borings suggest that petroleum hydrocarbon impacts to soil are primarily within 5 feet of the ground surface. Depth-to-water measurements range from approximately 11 to 14.5 feet below the ground surface. Groundwater samples collected from DW3, which is located downgradient of the western dispenser island, indicate primary impacts by benzene, toluene, ethylbenzene, and xylenes (BTEX) and the fuel oxygenate methyl-tert-butyl ether (MTBE). The dissolved contaminant plume appears to have migrated offsite to the northwest. A workplan for the installation of five, off-site monitoring wells was approved by DEH on May 12, 2009, to provide further plume definition.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Lead Agency:	SAN DIEGO COUNTY LOP
Case Worker:	EB
Local Agency:	SAN DIEGO COUNTY LOP
RB Case Number:	9UT1104
LOC Case Number:	H13025-001
File Location:	Local Agency
Potential Media Affect:	Aquifer used for drinking water supply
Potential Contaminants of Concern:	Gasoline
Site History:	Hydrocarbon contamination was discovered in soil samples from borings drilled as part of an initial site assessment conducted in August 1988. Total petroleum hydrocarbons as gasoline (TPHg) and total recoverable petroleum hydrocarbons (TRPH) impacted soil (>100 mg/kg) was discovered in the northern portion of the site in association with the former waste oil tanks and west of the former gasoline tanks at the southern portion of the site. 464 tons of impacted soil were removed during tank removal activities in 1992 and disposed off-site. The consultant estimated that 174 cubic yards of contaminated soil remains on-site at depths of 10 to 18 feet below ground surface. . Four underground storage tanks were removed from the site in July of 1992. In August 1992, the site was razed and the property was redeveloped. An auto dealership currently occupies the site. There are currently ten monitoring wells associated with the site. One well (MW12) installed off-site, originally belonged to Atlantic Richfield Company site at 6110 Mission Gorge Road, and one well, MW4, was destroyed because it was dry. Groundwater monitoring has been conducted since February 1993. Free product was detected in well MW2 in 1993 and in well MW5 in 1993 and 1994. Free product has not been detected in any well since 1994. In March 2011, the maximum concentration of benzene detected was 180 ug/l in well MW2, and total petroleum hydrocarbons as gasoline at 10,000 ug/l in well MW7. The maximum TBA was detected in well MW2 at 4 ug/l and MTBE was detected at an estimated concentration of 4 ug/l (MW2). Ethyl benzene was detected at 990 ug/l in well MW2. Well MW2 is located at the western property boundary and well MW7 is located off-site to the west, on the west side of Mission Gorge Road. The consultant stated that it was unlikely that the contamination would migrate along utility line given the depth to water has ranged from approximately 14.27 to 21.25 feet below ground surface which is below the depth of most utilities. The potential risk for vapor intrusion to the onsite building was evaluated using groundwater data from the nearest well, MW1. The maximum concentrations of benzene, ethyl benzene and MTBE detected in groundwater from MW1 were used in the SAM Vapor risk model. The potential risk of vapor intrusion off-site was evaluated using groundwater data from the nearest well, MW9. Benzene and ethyl benzene concentrations were used in the SAM Vapor risk model to determine if a full-scale human health vapor risk assessment was warranted. The results indicated that the excess cancer risk from vapor intrusion from groundwater was less than 1 x 10-6; both on and off-site, therefore the consultant concluded that a soil vapor survey and further health risk assessments were not warranted. The concentrations of benzene, ethyl benzene, MTBE and TBA in groundwater are limited in extent and show decreasing trends. The plume does not extend to down-gradient wells MW10 through MW12. MTBE and TBA concentrations have been below the maximum contaminant level (MCL) and State action limit (AL), respectively, with the exception of well MW2, for the past several sampling events. According to the consultant, there are five potential public/private supply wells

MISSION GORGE TEXACO SERVICE (Continued) **S103666655**

within a half-mile radius of the site that do not have complete exposure pathways. The consultant stated that the City of San Diego that serves this area does not currently have supply wells in the area and does have plans to install water production wells in the Mission Valley area in the future. The City of San Diego indicated that it intended to wait until the remediation of the contamination at the Mission Valley tank farm was completed prior to groundwater development. Due to the proximity of the location of the Mission Valley tank farm and the time it will take for remediation of that plume the consultant concluded it is likely that the groundwater ingestion pathway will remain anincomplete pathway. Trend analyses indicate that benzene concentrations in groundwater should naturally attenuate to the maximum contaminant level (MCL) of 1 ug/l in approximately 28 years and ethyl benzene to 300 ug/l in approximately 24 years. The consultant recommends no further action for the site and destruction of the monitoring wells. DEH concurs with this recommendation.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

9449 FRIARS ROAD **N/A**
SAN DIEGO, CA 92108

SLIC:
Region: STATE
Facility Status: **Completed - Case Closed**
Status Date: 02/11/2014
Global Id: T10000004719
Lead Agency: SAN DIEGO COUNTY LOP
Lead Agency Case Number: DEH2013-LSAM-000173
Latitude: 32.7857772620997
Longitude: -117.116467952728
Case Type: Cleanup Program Site
Case Worker: CH
Local Agency: SAN DIEGO COUNTY LOP
RB Case Number: Not reported
File Location: Not reported
Potential Media Affected: Other Groundwater (uses other than drinking water), Soil
Potential Contaminants of Concern: Alcohols, Gasoline
Site History: On April 25, 2013, DEH received an application for the Voluntary Assistance Program for oversight of investigation of an ethanol spill in the parking lot of Qualcomm Stadium. On April 7, 2013, a tanker containing approximately 8,000 gallons of ethanol with trace (1-5%) gasoline overturned at the intersection of San Diego Mission Road and Mission Village Drive. The spilled ethanol flowed into two areas of the Qualcomm Stadium parking lot, northeast along San Diego Mission Road across from Murphy Canyon Road (area B), and southwest along Mission Village Drive (area A). Approximately 2,000 gallons of ethanol was pumped out of the tanker and approximately 2,500 gallons of ethanol was recovered from puddles in the Qualcomm Stadium parking lot. The remaining approximately 3,500 gallons of ethanol either evaporated, penetrated the surface of the parking lot, and/or entered the storm drain system in area A. On April 10, 2013, two soil samples were collected at 0.5 feet below ground surface (bgs) from each spill area. Ethanol was detected in all four soil samples at a maximum concentration of 7,800 milligrams per kilogram in area A. Additional soil sampling was completed adjacent to the previous soil sampling locations in each area on September 24, 2013. Ethanol was not

QUALCOMM STADIUM PARKING LOT NORTHEAST (Continued) **S108224233**

detected in the area B samples, collected at 0.5 and 1 foot bgs. Ethanol was detected in one of the soil samples from area A, at 63 mg/kg at 0.5 feet bgs and at 36 mg/kg at 1 foot bgs. Ethanol was not detected in this location at 5 feet bgs. The consultant used this data to calculate the half-life of ethanol at the site, which ranged from 13 to 24 days. The consultant concludes that the shallow ethanol impacts to soil at the site are degrading rapidly. On September 24, 2013, soil sampling was also completed adjacent to observed or suspected breaches in the affected portions of the storm drain and in five storm drain catch basins. A total of 18 samples, collected at depths of 4 and 8 feet bgs, were analyzed, and ethanol was not detected in any of the samples. The consultant concludes that there is no evidence of ethanol releases to the subsurface via the storm drain. The ethanol spill occurred in the vicinity of a petroleum release from Kinder Morgan, the Mission Valley Terminal case, which is overseen by the Regional Water Quality Control Board. There are numerous groundwater monitoring wells associated with this case that are installed in the Qualcomm Stadium parking lot. The results of groundwater monitoring indicated that ethanol was detected in one well, R-44AM, at a concentration of 79 micrograms per liter (ug/l) on May 7, 2013. The flow of spilled ethanol passed within approximately 50 feet of well R-44AM. Ethanol was not detected in this well when it was sampled on August 5, 2013. The consultant concludes that ethanol impacted a localized area of shallow groundwater in the vicinity of the spill, and that aerobic and/or anaerobic degradation processes are mitigating groundwater impacts via natural attenuation. Based upon the soil and groundwater sampling data, the consultant recommends no further action to delineate or remediate subsurface impacts associated with the ethanol spill. DEH concurs with the consultants conclusions and recommendations.

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110002798802

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Potential Contaminants of Concern:	Gasoline
Site History:	Historically there was a case opened on this site in 1989 (H12154-00). This case was related to the waste oil tank removed in 1984. The case was subsequently closed in 1992 following corrective action. In May 1999, a limited site investigation (Phase II Investigation) was completed as part of a due diligence activity. This work consisted of drilling a total of eight soil boring, and analysis of 25-soil samples. The soil sample result indicated there had been a release from the operating gasoline underground storage tank (UST) system. The current case, H12154-002. was opened based on this investigation. Between March of 2001 and November of 2008, ten groundwater monitoring wells were installed and three additional soil borings were advanced. Also between 2001 and 2005 the UST system went through several system upgrades to meet changing regulatory requirements. Additional soil sampling was completed relate to some of this work. The site assessment activities and the UST system upgrade testing provided sufficient information to define the extent to soil impacts on-site. The consultant has estimated that there was a total of 1,394 cubic yards of impacted soil in the areas of the USTs system (refer to Figure 6 of the Updated Site Conceptual Model (SCM), Additional Site Assessment Report and Corrective Action Plan (CAP) dated April 15, 2009). Since approximately 109 cubic yards of soils were removed from the site as part of the UST system upgrades, there is approximately 1,285 cubic yards of impacted soil with greater than 100 mg/kg total petroleum hydrocarbons remaining on-site. Between April 2001 and January 2010 groundwater was monitored and sampled. The groundwater monitoring demonstrated that groundwater flow is to the southwest at a gradient of 0.001 to 0.002. The groundwater monitoring has defined the dissolved plume with the leading edge of the plume extending approximately 200 feet southwest of the site, beneath Mission Center Road. Currently the mass of the dissolved impacts are limited to the site. In November 2003, a dual-phase extraction (DPE) test was conducted at the site. The test was run for 6.5 hours. The test removed an estimated 168 pounds of hydrocarbons and 60 gallons of water. The consultant concluded that DPE would be an effective remedial alterative for the site. Further site investigation was completed between 2004 and 2008 to update the

MISSION CENTER TEXACO (Continued) **S104575938**

site conceptual model. The current SCM is presented in the April 15, 2009 CAP. Trend analysis and environmental fate and transport modeling were used to evaluate natural attenuation of the dissolved plume and a vapor health risk analysis was completed to evaluate potential health risk to the occupants of the service station building. The consultant has concluded that the trend analysis and environmental fate and transport modeling have demonstrated the dissolved plume is stable in aerial extend and the concentration are decreasing overtime. They have estimated that benzene will reach it primary maximum contaminant level (1 ug/l) by 2029, MTBE will reach it secondary maximum contaminant level (5 ug/l) by 2015, and TBA will reach its California Action Level (12 ug/l) by 2040. They have also concluded that the residual-dissolved phase contaminants do not pose a risk to human health, nearby receptors, and/or the environment. According to the City of San Diego Water Department there are no plans to install water supply wells in the vicinity. Based on available data, DEH concurs with the consultants conclusions.

MOBIL SERVICE STATION #18-G6F (Continued) **S100178890**

LOC Case Number: H13029-001
File Location: Local Agency
Potential Media Affect: Aquifer used for drinking water supply
Potential Contaminants of Concern: Gasoline, Waste Oil / Motor / Hydraulic / Lubricating
Site History: On September 8, 1988, the Department of Environmental Health (DEH) directed soil sampling associated with the replacement of four gasoline and used oil underground storage tanks (USTs). The DEH inspector observed indications that a release of hydrocarbons had occurred. Approximately 720 cubic yards of hydrocarbon-impacted soil were excavated from the used oil UST excavation. DEH subsequently opened unauthorized release case H13029-001 and requested that hydrocarbon impacts be assessed. As a result, several monitoring wells and borings were installed at the site to assess sorbed- and dissolved-phase hydrocarbons. Hydrocarbon-impacted soil was primarily observed in the central and western portions of the site with concentrations of total petroleum hydrocarbons as gasoline and benzene detected as high as 5,500 and 20 milligrams per kilogram, respectively. Dissolved-phase and liquid-phase hydrocarbons (LPH) have historically been observed in the central and western to southwestern portions of the site. LPH, while observed historically, never reached a measurable thickness and has not been observed at the site since 1999, approximately 12 years ago. Concentrations of dissolved-phase benzene and MTBE were detected up to a maximum of 4,700 and 1,040 micrograms per liter, respectively. Numerous groundwater sampling activities indicated that dissolved-phase hydrocarbon impacts were generally confined to the site boundaries. A natural attenuation evaluation was conducted at the site. Based on trend analysis conducted with site specific data, the consultant determined that natural attenuation is an effective mitigation strategy and estimates that MTBE will reach the secondary maximum contaminant level (MCL) of 5 micrograms per liter within approximately 11 years or by the year 2022. Benzene is estimated to reach the primary MCL of 1 microgram per liter within approximately 41 years or by the year 2052. A soil vapor probe was installed immediately beneath the station building slab to evaluate the potential vapor risk to onsite building occupants. Direct measurement of soil gas indicated that constituents of concern were not present beneath the structure at levels above the laboratory reporting limit. The subsequent vapor risk evaluation conducted with a contaminant value of half the laboratory reporting limit indicated an acceptable level of risk of less than one in a million for the existing commercial site use. The City of San Diego is the local water purveyor and has indicated that they are evaluating potential groundwater use within the Mission Valley Aquifer. However, at this time, the details of any future groundwater development in the vicinity of this site are not clear. As a result, DEH is closing the unauthorized release case for this site. The City of San Diego has reviewed documents associated with this case and is aware of the existing site conditions. Should additional information be provided to DEH which indicates there is a reasonable potential for health impacts to exist or emerge in the near future, as judged by DEH or the Regional Water Quality Control Board, this case will be reopened and appropriate actions will be required of the responsible party to mitigate such risks. A receptor pathway evaluation conducted by the consultant did not identify any complete pathways which could potentially impact human health or the environment based on existing information. The consultant prepared a corrective action plan for the

MOBIL SERVICE STATION #18-G6F (Continued) **S100178890**

site and notified the public, including surrounding property owners and other interested parties, of the recommendation to implement natural attenuation and close the associated DEH case. Based on the provided data, DEH agrees with the consultants recommendation for no further action at this time.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Facility Has Received Notices of Violations:
Regulation violated: Not reported
Area of violation: Generators - General
Date violation determined: 10/16/2003
Date achieved compliance: 01/16/2004
Violation lead agency: State
Enforcement action: Not reported
Enforcement action date: Not reported
Enf. disposition status: Not reported

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violations Active Permits:

Facility Id: 129603
Update Date: 11/02/2012
Inspection Date: 03/21/2007
Violation Code: 6HV3114
Violation: 2NDRY CONT TEST NOT DONE/SENT TO CUPA
Violation Citation: Secondary containment testing not done at 6/36 months and/or not sent to CUPA within 30 days. 25284.1; 2637(a)&(e)
Activity: ACTIVE

Facility Id: 129603
Update Date: 11/02/2012
Inspection Date: 08/27/2003
Violation Code: 6HV0202
Violation: WASTE CONTAINER W/O LABELS
Violation Citation: Hazardous waste containers &/or tanks are missing labels, accumulation date and/or are improperly labeled. CCR 66262.34(a)(2); 66262.34(a)(3) & 66262.34(f)
Activity: ACTIVE

Facility Id: 129603
Update Date: 11/02/2012
Inspection Date: 08/27/2003
Violation Code: 6HV1604
Violation: 2ND. CONTAINMENT NOT KEPT EMPTY
Violation Citation: Secondary containment not kept empty. 66265.196(b)(c), 66265.194(c)
Activity: ACTIVE

Facility Id: 129603
Update Date: 11/02/2012
Inspection Date: 08/27/2003
Violation Code: 6HV0205
Violation: WASTE CONTAINER: POOR CONDITION
Violation Citation: Failed to transfer hazardous waste from a container that leaked or was in poor condition to another container in good condition. CCR 66265.171

35 **MISSION VALLEY PLANT COMPLEX** **CA WDS** **S105255810**
5745 MISSION CENTER RD **N/A**
SAN DIEGO, CA 92108

WDS:
Facility ID: San Diego 000000260
Facility Type: Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping.
Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
NPDES Number: Not reported
Subregion: 9
Facility Telephone: Not reported
Facility Contact: TONY VARISCO
Agency Name: VULCAN MATERIALS
Agency Address: PO BOX 3098
Agency City,St,Zip: SAN DIEGO 92163
Agency Contact: tony varisco
Agency Telephone: 8585473768
Agency Type: Private
SIC Code: 1442
SIC Code 2: 3273
Primary Waste Type: Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Primary Waste: WSHWTR
Waste Type2: Not reported
Waste2: Washwater Waste (Product washwater wastes: E.G., photo reuse wastewater, vegetable washwater)
Primary Waste Type: Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Secondary Waste: Not reported
Secondary Waste Type: Not reported
Design Flow: 0
Baseline Flow: 0
Reclamation: No reclamation requirements associated with this facility.
POTW: The facility is not a POTW.
Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher

MISSION VALLEY PLANT COMPLEX (Continued) **S105255810**

Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

FINDS:

Registry ID: 110013854668

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Potential Media Affect:	Aquifer used for drinking water supply
Potential Contaminants of Concern:	Gasoline
Site History:	The site was historically operated as a gasoline service station and is located on a dissected mesa in the Linda Vista area of metropolitan San Diego. Four underground storage tanks (USTs) were removed from the site by the owner/operator (Exxon) just prior to sale of its property in August 1982. The service station ceased operation following the UST removals, which were performed before the County required UST closure permits. The former USTs included one 280-gallon waste oil tank, two 3,000-gallon gasoline tanks, and one 5,000-gallon gasoline tank that had been installed in 1961. Initial subsurface investigations at the site included a soil gas survey and soil sample collection from three trenches excavated across the former gasoline UST pit and from three additional trenches located near product lines (Note: the product lines were removed under permit in May 1994). Petroleum hydrocarbon detections were associated with soil gas samples collected southwest of the station building, either within the footprint of the former gasoline UST pit or within approximately 5 feet of its perimeter. Analytical results for soil samples collected in the UST pit area included a maximum total petroleum hydrocarbon (TPH) concentration of 6,240 milligrams per kilogram (mg/kg). Based on the soil sample results, DEH opened an unauthorized release case on July 7, 1993. Site investigations performed from 1995 to 2003 by Environmental Resolutions, Inc. (ERI) included the advancement and sampling of four borings and the installation of four vapor extraction wells (VEW1 through VEW4), of which two were dual-nested; four, dual-nested, groundwater monitoring wells (MW1s/d, MW2s/d, MW3s/d, and MW5s/d); two additional dual-nested vapor extraction wells (SVE5s/d and SVE6s/d); and groundwater monitoring well MW4. Two of the dual-nested groundwater monitoring wells (MW3s/d and MW5s/d) were installed on the adjoining property to the southwest, the site of a 7-11 convenience store. Three pairs of groundwater monitoring wells (MW9s/MW9d, MW10s/MW10d, and MW11s/MW11d) were installed on the adjoining 7-11 property during field activities performed in June 2008 by ETIC Engineering, Inc. Groundwater monitoring well pair MW7s/MW7d was installed in the alley adjoining the site to the northeast in January 2010. Groundwater monitoring well pair MW6s/MW6d was installed onsite near the Linda

TST (Continued) **S109040306**

Vista Road right-of-way in April and August 2010. [Note: Following the advancement of the well boring MW-13 to a total depth of 163 feet in November 2009, the conductor casing broke and it was abandoned in place. The MW-13 well boring, which was located in the UST pit area, was destroyed under permit]. Fill materials were encountered to a depth of approximately 13 feet bgs in trenches excavated during initial site assessment activities in 1991. Subsurface bedrock units underlying the fill materials consisted primarily of well-indurated pebble and cobble conglomerates and thin, interbedded sandstones. A 55-foot thick, massive sandstone unit was logged, underlain by alternating layers of sandy siltstone, mudstone, and sandstone to the maximum depth of exploration (163 feet bgs). Most of the site vapor extraction and groundwater monitoring well borings were advanced using either air rotary or sonic methods. [Note: Neither of these methods was conducive to preservation of petroleum and aromatic hydrocarbons in formation samples]. Two groundwater zones were identified beneath the site in the massive sandstone unit. Groundwater is measured in upper zone wells at a depth of approximately 105 feet bgs. The water level in lower zone wells occurs at approximately 115 feet bgs. According to the consultant (Cardno ERI), The upper and lower zones appear to be consistently separate but may actually be in communication with one another. The movement of groundwater beneath the site is complex due to the variability in material sizes, porosity and permeability of the conglomerate and sandstone. The groundwater flow directions interpreted from water elevation data for the two zones have been variable, but the most recent data (June 2013) suggest a southeasterly flow direction for the upper zone and a northerly flow direction for the lower zone. [DEH notes that the screened interval for each of the upper zone monitoring wells terminates at depths of 107 or 108 feet bgs; the water level in each of these wells had fallen to approximately 107 feet bgs or deeper when monitored in June 2013 (i.e., the wells were dry or nearly so). Two of the wells screened across the lower zone were also dry, indicating water levels had fallen below 125 feet bgs in some areas of the site]. Free product has been detected historically in five wells (MW1s, MW1d, MW4, SVE5s and SVE6d) at maximum apparent thicknesses of 2.75, 6.75, 5.78, 0.25 and 8.73 feet, respectively. Monthly bailing activities were initiated in July 1997 and suspended in May 2010. Approximately 627 gallons of product had been recovered by bailing. Free product was observed in four wells (MW1s, MW1d, MW4, and SVE6d) during the most recent monitoring round performed on June 12, 2013 (SVE5s was dry). The measured apparent thicknesses of free product were 0.07, 0.13, 3.43, and 0.02 feet, respectively [Note: The free product thickness in MW-4 increased from 0.80 foot to 3.43 feet from June 2012 to June 2013 as the water level fell 3.89 feet. In contrast, water levels in MW1s, MW1d, and SVE6d dropped 0.3 foot, 1.39 feet, and 1.62 feet, respectively, during the same period]. From July 1999 to April 2006, a soil vapor extraction (SVE) system operated at the site. In October 2001, slurping tubes were installed in lower zone wells MW1d and SVE6d, both of which had free product. The SVE system and slurping tubes operated continuously through the first few months of 2002 until free product was no longer detected. In the latter half of 2003, MW-4 was manifolded to the SVE to facilitate removal of free product. Approximately 100,565 pounds of hydrocarbon vapors were extracted during the system operation. The system was shut down in 2006 due to low vapor influent concentration. Evaluation of rebound,

TST (Continued) **S109040306**

including occasional bailing of free product, was performed following cessation of system operation. According to Cardno ERIs site conceptual model, the gasoline release at the site appears to have migrated vertically through the vadose zone to groundwater. DEH notes that the gasoline then spread laterally in the massive sandstone unit as free product and a dissolved contaminant plume. The consultant estimated the areal extent of the free product plume to be 540 square feet and that an estimated 69.38 cubic yards of gasoline-impacted bedrock remains in place. The free product plume is confined to the site. The length of the dissolved contaminant plume was estimated to be less than 100 feet. Although the site source area lies approximately 50 feet inside the boundary of a non-beneficial use area, the upper zone may be tributary to the Mission Hydrologic Area, which has beneficial uses, including municipal supply. The nearest production wells to the site are located in Mission Valley more than one-half mile from the site and are used for golf course irrigation purposes. A human health risk assessment was performed for the site building in November 2009 by ETIC. The calculated carcinogenic risk was less than the threshold value of 1 x 10-6. Although free product remains in the subsurface at depths greater than 100 feet, thicknesses have generally decreased. A revised Corrective Action Plan (CAP) for the site was submitted to DEH in May 2013 proposed site remediation by natural attenuation. The consultant recommended no further action and case closure. DEH concurs with these recommendations.

56 **CAMINO DEL RIO MAINT. FACILITY** **CA WDS** **S105558041**
2915 CAMINO DEL RIO SOUTH **N/A**
SAN DIEGO, CA 92108

WDS:

Facility ID:	San Diego 000000995
Facility Type:	Other - Does not fall into the category of Municipal/Domestic, Industrial, Agricultural or Solid Waste (Class I, II or III)
Facility Status:	Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
NPDES Number:	CAS000003 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board
Subregion:	9
Facility Telephone:	Not reported
Facility Contact:	ERIC PENNY
Agency Name:	CALTRANS DISTRICT 11
Agency Address:	2829 JUAN STREET PO BOX 85406
Agency City,St,Zip:	SAN DIEGO 922865406
Agency Contact:	CORY BINNS
Agency Telephone:	6196883626
Agency Type:	State
SIC Code:	1611
SIC Code 2:	Not reported
Primary Waste Type:	Nonhazardous Solid Wastes/Influent or Solid Wastes that contain nonhazardous putrescible and non putrescible solid, semisolid, and liquid wastes (E.G., garbage, trash, refuse, paper, demolition and construction wastes, manure, vegetable or animal solid and semisolid waste).
Primary Waste:	STORMS
Waste Type2:	Not reported
Waste2:	Stormwater Runoff
Primary Waste Type:	Nonhazardous Solid Wastes/Influent or Solid Wastes that contain nonhazardous putrescible and non putrescible solid, semisolid, and liquid wastes (E.G., garbage, trash, refuse, paper, demolition and construction wastes, manure, vegetable or animal solid and semisolid waste).
Secondary Waste:	Not reported
Secondary Waste Type:	Not reported
Design Flow:	0
Baseline Flow:	0
Reclamation:	No reclamation requirements associated with this facility.
POTW:	The facility is not a POTW.
Treat To Water:	Major Threat to Water Quality. A violation could render unusable a ground water or surface water resource used as a significant drink water supply, require closure of an area used for contact recreation, result in long-term deleterious effects on shell fish spawning or growth areas of aquatic resources, or directly expose the public to toxic substances.
Complexity:	Category A - Any major NPDES facility, any non-NPDES facility (particularly those with toxic wastes) that would be a major if discharge was made to surface or ground waters, or any Class I disposal site. Includes any small-volume complex facility (particularly those with toxicwastes) with numerous discharge points, leak detection systems or ground water monitoring wells.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
