OUR COMMITMENT TO SUSTAINABILITY | ESA helps a variety of public and private sector clients plan and prepare for climate change and emerging regulations that limit GHG emissions. ESA is a registered assessor with the California Climate Action Registry, a Climate Leader, and founding reporter for the Climate Registry. ESA is also a corporate member of the U.S. Green Building Council and the Business Council on Climate Change (BC3). Internally, ESA has adopted a Sustainability Vision and Policy Statement and a plan to reduce waste and energy within our operations. This document was produced using recycled paper.

0.0 Executive Summary

1. Introduction to the Draft EIR

The subject of this Draft Environmental Impact Report (Draft EIR) is the proposed Alhambra Community Center Project (Project). A summary of the Project is provided below, with a more detailed description included in Chapter II, *Project Description*, of the Draft EIR.

Because the Project will require approval of certain discretionary actions by the City of Alhambra (City), the Project is subject to the California Environmental Quality Act (CEQA), for which the City is the designated Lead Agency. The City's Parks and Recreation Department is administering the process by which the environmental document is prepared and reviewed. The City determined that the Project may have a significant effect on the environment, and that an EIR should be prepared.

As described in Sections 15121(a) and 15362 of the CEQA Guidelines, an EIR is an informational document that will inform public agency decision makers and the public of the significant environmental effects of a project, identify possible ways to minimize the significant effects, and describe reasonable alternatives to a project. The purpose of this Draft EIR, therefore, is to focus the discussion on those potential effects on the environment of the Project that the Lead Agency has determined could be significant. In addition, feasible mitigation measures are required, when applicable, that could reduce or avoid significant impacts of the Project.

2. Organization of the Draft EIR

The Draft EIR is organized as follows:

0.0 **Executive Summary**. This section includes an overview of the Project; identifies the Project's significant impacts and proposed mitigation measures and alternatives that would reduce or avoid impacts; a list of areas of controversy known to the Lead Agency, including issues raised by agencies and the public; and issues to be resolved, including the choice among alternatives and whether or how to mitigate the significant effects.

I. **Introduction**. This chapter describes the purpose of the EIR, including CEQA compliance requirements, the steps undertaken to date regarding implementation of the CEQA process, and the Draft EIR's organization.

II. **Project Description**. This chapter describes the location, objectives, and physical and operational characteristics of the Project. This chapter also includes a list of discretionary approvals per CEQA Guidelines Section 15124(d).

III. **Environmental Setting**. This chapter presents an overview of the Project's environmental setting, including on-site and surrounding land uses. This chapter also provides a list and the mapped locations of past, present, and probable future projects (i.e., cumulative projects) considered in the analysis of potential Project contributions to cumulative impacts.

IV. **Environmental Impact Analysis**. This chapter contains the environmental setting, regulatory framework, methodology, thresholds of significance, Project characteristics, Project-specific and cumulative impact analyses, mitigation measures, and conclusions regarding the level of significance after mitigation for each of the following environmental issues: (A) Biological Resources; (B) Cultural Resources; (C) Geology and Soils; (D) Noise; and (E) Tribal Cultural Resources.[1]

V. **Alternatives**. This chapter describes a reasonable range of alternatives to the Project, including Alternative 1 - No Project/No Build Alternative, Alternative 2 – Full Preservation Alternative, and Alternative 3 – Partial Preservation Alternative. This section also evaluates the environmental effects of the alternatives for each issue area analyzed in the Draft EIR and provides a comparative analysis of the impacts of the Project and the impacts of the alternatives.

VI. **Other CEQA Considerations**. This chapter includes a discussion of issues required by CEQA that are not covered in other chapters. This includes a discussion of significant unavoidable impacts, reasons why the Project is being proposed notwithstanding significant unavoidable impacts, significant irreversible environmental changes, growth-inducing impacts, potential secondary effects caused by the implementation of the mitigation measures for the Project, and effects found not to be significant.

VII. **References**. This chapter lists the references and sources used in the preparation of this Draft EIR.

VIII. **List of EIR Preparers and Organizations and Persons Contacted**. This chapter lists the persons, public agencies, and organizations that were consulted or who contributed to the preparation of this Draft EIR.

3. Summary of the Project

The City proposes to develop the Alhambra Community Center Project on the 612 W. Shorb Street site, which totals approximately 1.37-acre (59,485 SF) and also on the adjacent W. Shorb Street right-of-way, which the City intends to abandon and which Alhambra Unified School District intends to transfer its reversionary interest in (curb, gutter, sidewalk and street between 6th and 7th Streets) to the City so as to expand the

[1] The Initial Study concluded that all other environmental issues would not be evaluated further in the Draft EIR in accordance with CEQA Guidelines Section 15063(c)(3)(B). For further discussion of these issues and more detailed evaluation of potential impacts found not to be significant refer to the Initial Study provided in **Appendix A** of this Draft EIR.

Project Site by 17,707 SF in the area of the former/abandoned road right-of-way. These two areas total 77,192 SF (1.77-acres) (the Project Site) and include the existing W. Shorb Street right-of-way in the northern portion of the Project Site, the existing one- and two-story abandoned brick (21,470 SF) medical clinic building (the Shorb Clinic) sited on the central portion of the Project Site, and associated surface parking found in the southern portion for the Project Site. The Project intends to adaptively reuse the northwest portion of the existing Shorb Clinic building's two-story element (approximately 9,000 SF), known as the west wing and demolish the balance of the existing Shorb Clinic facility. Along with the 9,000 SF of the existing Shorb Clinic building's west wing to be renovated and adaptively reused, the City intends to construct new one- and two-story community center buildings (up to a height of approximately 38 feet) totaling 16,000 SF, hereinafter referred to as the east wing and the north pavilion, along with associated parking and site improvements containing an additional approximate 35,650 SF of hardscaped open space and courtyards and 16,542 SF of exterior landscape areas, parkways and plantings.

While the Project as proposed contains 25,000 SF of community center uses, the funding sources for the entire Project are not entirely accounted for. Currently, the grant funding that has been secured for the Project is only sufficient to construct a 17,000 SF facility. The City is hopeful that it will be able to secure additional funding, in which case the size of the Project would increase to between 21,000 and 25,000 SF. To ensure the most conservative impact analysis and to provide coverage for the largest possible project, this Draft EIR assumes the development of the largest option, a 25,000 SF community center. All figures, including floor plans (Figure II-4 and Figure II-5), can be found within Chapter II, *Project Description*, of this Draft EIR. The portion of the Project's floor plans without an overlay of diagonal hatching or diagonal cross hatching represents the 17,000 SF development currently funded. The single line diagonal hatching outlines the first and second floor building area to be constructed should funding for a 21,000 SF facility be secured. The two-line cross hatching pattern outlines the first and second floor building area to be constructed should funding for a 25,000 SF facility be secured.

Once constructed, operation of the Project would be split between three broad program elements: 1) recreation and community center programs; 2) building support functions; and 3) exterior space programs. The primary program consists of active community center uses, including but not limited to: 1) a large, single-story divisible event space that can be split into three separate high volume spaces (along with attendant warming kitchen and banquet facility storage for tables and chairs, foyer and outdoor event court); 2) a series of larger capacity group fitness/multi-purpose rooms with interior ceiling heights between approximately ten and twelve feet, and smaller, lower capacity multi-purpose rooms and a recreation room, all of varying dimensions and sizes (typically between approximately 500 SF and 1,300 SF) that would be split between the west wing, east wing, and north pavilion (with smaller spaces in the west wing); and 3) main support/administrative uses would be located in the west wing and include a lobby, restrooms, multiple storage locations, director and staff offices, as well as back-of-house facilities such as electrical, janitorial, audio and visual, and circulation.

The Project would provide a total of 93 vehicular parking spaces, with 70 spaces to be provided on-site and 23 spaces to be provided west of the Project Site on 7th Street as perpendicular parking. Electric vehicle (EV) spaces are to be provided as required by the building code in effect at the time of Project approval, but likely to be no less than 17 EV capable spaces with four of those spaces designated as EV Charging Spaces (EVCS) based on the requirements of Section 5.106.5.3 of the 2022 California Green Building Standards Code, Title 24, Part 11 (CALGreen) with July 2024 Supplement. Two vehicular ingress/egress access points would be provided to/from the Project Site, including a two-way entrance/exit along S. 7th Street and a two-way entrance/exit along S. 6th Street. The Project would provide 19 bicycle parking spaces. In addition to the development of the community center building, the Project proposes the vacation of the existing public right of way along W. Shorb Street between S. 7th Street and S. 6th Street. The street vacation would expand the site by approximately 17,700 SF, affording the Project's event space, bike path and courtyards additional land area. The City would also restripe the 80-foot-wide S. 7th Street right-of-way, between Valley Boulevard and W. Shorb Street, to accommodate 23 perpendicular parking spaces along the east side of 7th Street.

For figures and a more detailed project description, please see Chapter II, *Project Description,* of this Draft EIR.

4. Environmental Review Process

a) Initial Study

In accordance with CEQA Guidelines Section 15063(a), the City prepared an Initial Study (located in **Appendix A**, *Initial Study,* of this Draft EIR). The Initial Study determined that the Project had the potential to result in significant impacts associated with a number of environmental issues. As a result, the Initial Study determined that this Draft EIR should address those issues where the Project could result in significant environmental impacts and consider mitigation measures.

The Draft EIR focuses primarily on changes in the environment that would result from the Project, individually and cumulatively with other development projects. The Draft EIR identifies potentially significant direct and indirect impacts resulting from construction and operation of the Project and provides Project Design Features (PDF) and mitigation measures to reduce or avoid such effects. Based on public input and the results of the Initial Study, this Draft EIR addresses environmental effects in the following areas:

- Biological Resources (special-status species and the movement of wildlife species)
- Cultural Resources (historic and archaeological resources)
- Geology and Soils (paleontological resources)
- Noise (all except airport land use plan, private airstrip)
- Tribal Cultural Resources

Based on the Initial Study, issues for which no significant impacts are anticipated to occur are listed in Chapter VI, *Other CEQA Considerations*, of this Draft EIR, and include Aesthetics, Agriculture and Forestry Resources, Air Quality, Biological Resources (all except special-status species and the movement of wildlife species), Cultural Resources (human remains), Energy, Geology and Soils (all except paleontological resources), Greenhouse Gas Emissions, Hazards and Hazardous Materials, Hydrology and Water Quality, Land Use and Planning, Mineral Resources, Noise (airport land use plan, private airstrip), Population and Housing, Public Services, Recreation, Transportation, Utilities and Service Systems, and Wildfire.

b) Notice of Preparation, Public Scoping Meeting, and Areas of Controversy

Pursuant to the provision of CEQA Guidelines Section 15082, the City circulated an NOP to State, regional, and local agencies, interested organizations, and members of the public for a 30-day period, commencing May 28, 2024, and ending June 27, 2024. The purpose of the NOP was to formally convey that the City was preparing a Draft EIR for the Project and to solicit input regarding the scope and content of the Draft EIR. The NOP also disclosed that an Initial Study was prepared for the Project (as detailed above) and made available together with the NOP for public review and comment. See **Appendix A**, *Initial Study*, and **Appendix B**, *Notice of Preparation*, of this Draft EIR. In addition, the NOP included notification that a public scoping meeting would be held to further inform public agencies and other interested parties of the Project, share information regarding the environmental process, and solicit input regarding the scope and content of the Draft EIR. The public scoping meeting was held in-person on June 18, 2024. City staff, environmental consultants, and Project representatives were available during this meeting.

A total of eight written comment letters and emails responding to the NOP were submitted to the City. In addition, four comment cards and verbal comments were received and documented at the Public Scoping Meeting. Comments were received from various public agencies, organizations, interested parties, and area residents. Public comments received during the NOP circulation period are provided in **Appendix C**, *NOP and Scoping Meeting Comments*, of this Draft EIR.

The following summarizes the key potential environmental issues raised in response to the NOP and during the public scoping meeting (the reference in parenthesis is the EIR chapter/section in which the analysis is provided).

- Historic Resources (Chapter IV.B, *Cultural Resources*);
- Tribal consultation (Chapter IV.E, *Tribal Cultural Resources*);
- Wastewater service (Appendix A, *Initial Study*);
- Lighting (Appendix A, *Initial Study*); and
- Transportation (Appendix A, *Initial Study*).

Other potential areas of controversy and issues to be resolved by the City's decision makers may include whether or how to mitigate potentially significant environmental impacts from the Project, and whether one of the alternatives should be approved rather than the Project. Other comments raised in letters submitted to the City include the following:

- Project definition (including use of the event space);
- Project outreach; and
- Alternatives.

c) Public Review of the Draft EIR

The Draft EIR is subject to a 45-day review period in which the document is made available to responsible and trustee agencies and interested parties. In compliance with the provision of Sections 15085 and 15087 of the CEQA Guidelines, the City, serving as the Lead Agency prepared a Notice of Completion (NOC) and a Notice of Availability (NOA) of a Draft EIR, which indicated that the Draft EIR was available for public review. The City (1) provided a hardcopy of the NOA and Draft EIR to Alhambra City Hall and the Alhambra Civic Center Library; (2) posted the NOA and the Draft EIR on the City's website at http://www.cityofalhambra.org/743/Alhambra-Community-Center-Project; (3) filed the NOC, NOA, and Draft EIR with the State Clearinghouse; (4) published the NOA in the Pasadena Star-News newspaper; (5) mailed the NOA to the last known name and address of all organizations and individuals who previously requested such notice in writing or attended public meetings about the Project; and (6) filed a copy of the NOA with the County Clerk. The public review period commenced on August 30, 2024 and will end on October 14, 2024 for a total of 45 days.

Any public agency or members of the public desiring to comment on the Draft EIR must submit their comments in writing or send them via email to the following address prior to the end of the public review period:

Mail to: Mike Macias
City of Alhambra, Parks and Recreation Department
111 South First Street
Alhambra, CA 91801

Email: mmacias@cityofalhambra.org

Upon the close of the public review period, the City will proceed to evaluate and prepare responses to all relevant comments received from public agencies and other interested parties during the public review period. A Final EIR will then be prepared. Pursuant to CEQA Guidelines Section 15132, the Final EIR will consist of possible revisions to the Draft EIR, comments submitted by responsible agencies or reviewing parties during the public circulation period for the Draft EIR, and City responses to those comments. After the Final

EIR is completed and at least 10 days prior to its certification, responses to comments made by public agencies on the Draft EIR will be provided to the commenting agencies.

5. Significant and Unavoidable Impacts

Section 15126.2(a) of the State CEQA Guidelines requires that an EIR describe significant environmental impacts of a project on the environment. Based on the analysis included in Chapter IV, *Environmental Impact Analysis*, of the Draft EIR, the Project would result in significant unavoidable environmental impacts related to Cultural Resources (historical resources). All other impacts associated with the Project would either be less than significant or reduced to a less-than-significant level with mitigation.

As discussed in Section IV.B, *Cultural Resources*, the Project Site in its existing condition was determined to be individually eligible as a historical resource for both the National Register of Historic Places and the California Register of Historical Resources under criteria A/1 and C/3, and is considered a historical resource according to CEQA. The proposed demolitions of the existing east wing and the new construction as part of the Project constitute a substantial adverse change to the historic resource such that the eligibility for listing would be lost. Therefore, impacts related to causing a substantial adverse change in the significance of a historic resource would be significant and unavoidable. Mitigation Measures CUL-MM-1 through CUL-MM-6 would reduce, but would not eliminate, potential impacts on historical resources (project-specific and cumulative). Impacts would be significant and unavoidable.

6. Alternatives to the Project

As detailed further within Chapter V, *Alternatives*, the following alternatives to the Project have been selected to inform evaluation of the Project in light of the significant environmental impacts of the Project, the objectives established for the Project, the feasibility of the alternatives considered, and public input received during the scoping period:

- Alternative 1: No Project/No Build Alternative
- Alternative 2: Full Preservation Alternative
- Alternative 3: Partial Preservation Alternative

The three alternatives are summarized below and are compared to the Project within **Table ES-1**, *Overview of the Project Alternatives*.

TABLE ES-1
OVERVIEW OF THE PROJECT ALTERNATIVES

Use or Feature	Project	Alternative 1: No Project/ No Build	Alternative 2: Full Preservation Alternative	Alternative 3: Partial Preservation Alternative
Adaptive Re-use of the Shorb Clinic	9,000 SF	—	21,470 SF	14,000 SF
Community Center Building (new construction)	16,000 SF	—	3,530 SF	11,000 SF
Abandon W. Shorb Street	Yes	No	Yes	Yes
Onsite Parking	70 spaces	38 spaces (existing)	38 spaces	57 spaces
Excavation Depth	5 feet (25 feet for the drywell infiltration basin)	—	5 feet (25 feet for the drywell infiltration basin)	5 feet (25 feet for the drywell infiltration basin)

SOURCE: ESA 2024

a) Alternative 1: No Project/No Build Alternative

In accordance with the CEQA Guidelines, the No Project/No Build Alternative (Alternative 1) for a development project on an identifiable property consists of the circumstance under which the project does not proceed. CEQA Guidelines Section 15126.6(e)(3)(B) states that, "in certain instances, the no project alternative means 'no build' wherein the existing environmental setting is maintained." Accordingly, for purposes of this analysis, Alternative 1 assumes that no new development would occur within the Project Site. As detailed in Chapter II, *Project Description*, of this Draft EIR, the Project Site currently includes an existing one- and two-story abandoned brick medical clinic building. Under the No Project/No Build Alternative, the Project would not be developed and the Shorb Clinic would remain as a closed and abandoned building, consistent with existing conditions.

b) Alternative 2: Full Preservation Alternative

The Full Preservation Alternative (Alternative 2) would retain the Shorb Clinic in its entirety (21,470 SF), and update and renovate the building as needed in accordance with the Secretary of the Interior's Standards (SOI Standards), which establish professional standards and provide guidance on the preservation of historic properties. The Shorb Clinic space would be programmed consistent with activities that can be accommodated within the existing structure's limited dimensions, such as small classrooms, small meeting rooms or offices. In addition, an independent event space structure would be constructed on-site, located adjacent to the existing Shorb Clinic, which would accommodate a community center use (3,530 SF).

c) Alternative 3: Partial Preservation Alternative

The Partial Preservation Alternative (Alternative 3) would retain the entirety of the Shorb Clinic's two-story west wing (14,000 SF), and update and renovate the building in accordance with the SOI Standards. The Shorb Clinic space would be programmed consistent with activities that can be accommodated within the existing structure's limited dimensions, such as small classrooms, small meeting rooms or offices, In addition, an independent structure would be constructed on-site, either attached or located adjacent to the existing Shorb Clinic, which would accommodate an event space and other community center uses (11,000 SF).

d) Environmentally Superior Alternative

CEQA Guidelines Section 15126.6(e)(2) indicates that an analysis of alternatives to a proposed project shall identify an environmentally superior alternative among the alternatives evaluated in an EIR and that if the "no project" alternative is the environmentally superior alternative, the EIR shall identify another environmentally superior alternative among the remaining alternatives. Selection of an environmentally superior alternative is based on comparison of the alternatives to determine which among the alternatives would reduce or eliminate the impacts associated with the Project to the greatest degree.

A comparative summary of the environmental impacts anticipated under each Alternative to the environmental impacts associated with the Project is provided in Table V-2, *Comparison of Impacts Associated with the Alternatives and the Project*, in Chapter V, *Alternatives*, of this Draft EIR. As indicated in Table V-2, Alternative 1, the No Project/No Build Alternative, would lessen environmental impacts of all resource areas except for historical resources, where a greater impact would occur to historical resources over time compared to the Project. Alternative 2, the Full Preservation Alternative, would involve less new development compared to the Project and full retention of the Shorb Clinic. Alternative 2 would reduce and eliminate the Project's significant unavoidable impacts related to historical resources. As shown in Table V-2, Alternative 2 would result in 12 "similar" impacts for the issue areas analyzed compared to the Project, and one "less" impacts compared to the Project. Alternative 3, the Partial Preservation Alternative, would involve less new development compared to the Project and partial retention of the Shorb Clinic. Alternative 3 would result in 13 "similar" impacts for the issue areas analyzed compared to the Project, although it is important to note that impacts to historical resources would be to a lesser extent than the Project, as a greater portion of Shorb Clinic would be retained under Alternative 3 as compared to the Project. Alternative 3 would result in no "less" impacts compared to the Project. Therefore, Alternative 2 is considered the environmentally superior alternative, as it would reduce the magnitude of overall impacts compared to the Project to a greater extent than Alternative 3 since it would include full preservation of the Shorb Clinic. However, as shown in Table V-3*, Ability of Alternatives to Meet Primary Project Objectives*, in Chapter V, *Alternatives*, of this Draft

EIR, Alternative 2 would not meet or meet to a lesser extent than the Project most of the Project Objectives.

7. Environmental Impacts and Mitigation Measures

This section provides a summary of impacts, mitigation measures, and impacts after implementation of the mitigation measures associated with implementation of the Project. The summary is provided by environmental issue area below in **Table ES-2**, *Summary of Project Impacts and Mitigation Measures*. As previously detailed, the City prepared an Initial Study (located in **Appendix A**, *Initial Study,* of this Draft EIR). The Initial Study determined that a number of issue areas would not cause a potentially significant adverse impact, and therefore those issue areas are not listed within Table ES-2 below. Table ES-2 provides the impact statement for each issue area evaluated in Chapter IV, *Environmental Impact Analysis*, and includes mitigation measures, as applicable.

In addition to the mitigation measures listed within Table ES-2, the City proposes to implement Project Design Features (PDFs) that specifically relate to environmental considerations. The PDFs would be included in the Mitigation Monitoring and Reporting Program (MMRP) required in association with certification of the EIR.

> **PDF-TR-1: Construction Management and Traffic Plan** – A Construction Management and Traffic Plan (CMTP) will be developed by the contractor and approved by the City of Alhambra to alleviate potential construction period impacts. The Plan would include but not necessarily be limited to:
>
> - name and telephone number of a contact person regarding traffic complaints or emergency situations;
> - community notification procedures and contact information for local police, fire, and emergency response organizations and procedures for the continuous coordination of construction activity;
> - procedures for training the flag person(s) used in implementing the plan;
> - the location, times, and estimated duration of any temporary lane closures;
> - developing, and once approved, managing the haul route plan and construction parking management plan;
> - timing of disruptive construction activities; scheduling of deliveries, pick-ups and hauling of material during non-peak travel periods to the extent possible;
> - the contractor will provide an estimate of truck volume and schedule. Areas will be designated by the City for the staging of all trucks. All earth-moving and ready-mix trucks will be equipped with two- way radios so that the drivers at the staging areas are linked to a person controlling traffic at the Project Site. Trucks will follow a City-approved route to the Project Site.

PDF-HYDRO-1: Drywell Infiltration Basin – The edge of any drywell infiltration basin shall be installed at least 20 feet away from the proposed and existing neighboring structures, as well as private property lines. Stormwater infiltration shall only occur in native soils located at least 10 feet below the existing grade. Soils located within the upper 10 feet should not become wet or saturated as a result of a drywell. It is anticipated that a settling chamber will be installed within this upper zone; therefore, the seams and bottom of the settling chamber shall be adequately sealed to prevent infiltration at this zone. All infiltration devices shall be provided with overflow protection. Once the device is full of water, additional water flowing to the device should be diverted to another acceptable disposal area or disposed offsite in an acceptable manner.

TABLE ES-2
SUMMARY OF PROJECT IMPACTS AND MITIGATION MEASURES

Resource Area Thresholds	Mitigation Measures	Significance after Mitigation
Biological Resources		
Threshold a) Would the Project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service? As no candidate, sensitive, or special-status plants occur on the Project Site, no impacts would occur. Therefore, no mitigation measures were required or included. Because there is low potential for any candidate, sensitive, or special-status wildlife species to occur on the Project Site, impacts would be less than significant. Therefore, no mitigation measures were required or included.	None required	Less than Significant
Threshold d) Would the Project interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites? By avoiding nesting season, or by conducting pre-construction surveys during nesting season and avoiding direct impacts to active nests, potentially significant direct and indirect impacts on nesting bird species would be reduced to a less-than-significant level with implementation of mitigation.	**BIO-MM-1:** Prior to the issuance of any grading permit that would remove potentially suitable nesting habitat for raptors or songbirds, the City of Alhambra shall demonstrate and guarantee to the satisfaction of the City Planning Department that either of the following has been or shall be accomplished: 1. Vegetation removal activities will be scheduled outside the nesting season (September 1 to January 31 for songbirds; September 1 to December 31 for raptors) to avoid potential impacts to nesting birds. 2. Any construction activities that occur during the nesting season (February 1 to August 31 for songbirds; January 1 to August 31 for raptors) will require that all suitable habitat be thoroughly surveyed for the presence of nesting birds by a qualified biologist experienced in avian nesting bird behavior (i.e., a professional	Less than Significant with Mitigation

TABLE ES-2
SUMMARY OF PROJECT IMPACTS AND MITIGATION MEASURES

Resource Area Thresholds	Mitigation Measures	Significance after Mitigation
	biologist with a minimum of two years of avian survey experience or equivalent) within 7 days before commencement of clearing. If any active nests are detected, a buffer of 300 feet around the nest (500 feet for raptors), or as determined appropriate by the qualified biologist based on species- and site-specific conditions, will be delineated, flagged, and avoided until the nesting cycle is complete. The buffer may be modified and/or other recommendations proposed to minimize disturbance to the nest as determined appropriate by the qualified biologist.	
Cultural Resources		
Threshold a) Would the Project cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5? While the Project is designed to follow the SOI Standards to an extent via the partial adaptive reuse of the west wing, the demolition of the east wing and construction of a new east wing would result in material changes that would substantially detract from the integrity of the Project Site such that it would no longer be able to convey its historic associations. The proposed demolition of the existing east wing and the new construction detailed above constitute a substantial adverse change to the resource such that the eligibility for listing would be lost. Therefore, mitigation measures would be required to be implemented. However, even with implementation of mitigation measures, the impact of the proposed Project on the Project Site/Historic Resource would be significant and unavoidable.	**CUL-MM-1:** The City of Alhambra shall retain a qualified preservation consultant who meets the Secretary of the Interior's Professional Qualifications Standards for Architectural History, Architecture, or Historic Architecture pursuant to 36 CFR 61. The consultant should have at least 10 years of experience in design review and collaborative experience in applying the Standards (Qualified Preservation Professional) to provide input as part of the Project redesign which will incorporate the rehabilitation, adaptive reuse, or the retention of a portion of the historical resource in accordance with the Secretary of the Interior's Standards for Rehabilitation. A list or matrix detailing the character-defining features list of the building shall be prepared. The purpose of the character-defining features matrix is to identify those features or elements that give the building its individual and unique visual character and which should be taken into account to preserve and/or rehabilitate them to the maximum extent possible, according to the National Park Service. The character-defining features matrix shall be prepared as a part of the Project design process. **CUL-MM-2:** The City of Alhambra shall retain a qualified preservation consultant who meets the Secretary of the Interior's Professional Qualifications Standards for Architectural History, Architecture, or Historic Architecture pursuant to 36 CFR 61 and who has at least 10 years of experience in design review and collaborative experience in applying the Standards (Qualified Preservation Professional) to review	Significant and Unavoidable

TABLE ES-2
SUMMARY OF PROJECT IMPACTS AND MITIGATION MEASURES

Resource Area Thresholds	Mitigation Measures	Significance after Mitigation
	the final plans for the rehabilitation of the Project Site at 612 West Shorb Street and all new proposed construction and to ensure conformance with the Secretary of the Interior's Standards for Rehabilitation (Standards). Once the final design and the 90–100 percent construction plans become available, they shall be reviewed by a Qualified Preservation Professional for conformance with the Standards for Rehabilitation. Upon completion of the final design plans and the 90-100 percent construction plans, the Qualified Preservation Professional shall submit a draft report and make the necessary recommendations to ensure the design is in conformance with the Standards to the extent feasible. After the City has made the final revisions, the Qualified Preservation Professional shall review the final construction plans and prepare a final report documenting conformance with the Standards. The final plan review report shall be submitted along with the final plan set prior to submittal of construction drawings and issuance of a grading permit and/or building permit. The lead agency governing the Project is the City of Alhambra who would be responsible for ensuring that this mitigation measure is completed prior to the issuance of a grading permit and/or building permit for the proposed Project. **CUL-MM-3:** The City of Alhambra shall retain a qualified preservation consultant, meeting the Secretary of the Interior's Professional Qualifications Standards for Architectural History, Architecture, or Historic Architecture pursuant to 36 CFR 61 and who has at least 10 years of demonstrated experience conducting Standards conformance reviews to prepare a detailed historic preservation treatment and protection plan. The historic preservation treatment and protection plan will detail the specific treatment procedures, protection, removal, and process of each character-defining feature of the subject property prior to construction and preservation of the same character-defining feature post-construction. These specifications for preservation treatments shall be included in the final construction documents to ensure protection and preservation of the historic features of the subject property in conformance with the	

TABLE ES-2
SUMMARY OF PROJECT IMPACTS AND MITIGATION MEASURES

Resource Area Thresholds	Mitigation Measures	Significance after Mitigation
	Secretary of Interior Standards. The preservation treatment plan shall be approved by the planning department of the City of Alhambra as a part of the project review process, and the final Preservation Treatment Plan shall be submitted with the final construction documents to the City prior to issuance of a grading and/or building permit. **CUL-MM-4:** The City of Alhambra shall retain a qualified preservation consultant, meeting the Secretary of the Interior's Professional Qualifications Standards for Architectural History, Architecture, or Historic Architecture pursuant to 36 CFR 61 and who has at least 10 years of demonstrated experience conducting Standards conformance reviews and construction monitoring, who shall conduct construction monitoring at key points when historic fabric may be affected—including during both demolition and construction—to ensure that damage to any historic fabric is avoided or minimized. The qualified preservation professional shall conduct the monitoring and provide preservation treatment recommendations to address any unanticipated issues that may arise and to ensure that the Project is completed in conformance with the Standards. The construction monitoring process shall be documented in a monitoring report for each visit, and a substantial completion letter report shall document Project conformance with the Standards. At the completion of construction, the monitoring reports and completion report shall be placed in the property file at the Planning Division. **CUL-MM-5:** Prior to initiation of construction, the City of Alhambra shall commission a qualified architectural historian who satisfies the Secretary of the Interior's Professional Qualification Standards for Architectural History (36 CFR 61), and a qualified photographer to record the existing conditions at 612 West Shorb Street in a HABS Level III report that shall document the history and significance of the Alhambra Health Clinic in a written narrative and professional photographs in accordance with HABS guidelines. HABS Level III documentation is considered the appropriate level of documentation for a building that is significant at the local level, according to the	

TABLE ES-2
SUMMARY OF PROJECT IMPACTS AND MITIGATION MEASURES

Resource Area Thresholds	Mitigation Measures	Significance after Mitigation
	National Park Service's 2003 Guidelines for Architectural and Engineering Documentation. The HABS shall serve as a baseline reference to inform future work that may be undertaken at this location. The HABS Level III report shall include the original historic plan, existing conditions plans, exterior and interior views, and an architectural data form, along with supporting documentation and references per HABS guidelines. The report shall be archivally produced and deposited in a publicly accessible archive, such as the Alhambra Public Library, the Los Angeles Public Library, the Los Angeles Conservancy and/or the South Central Coastal Information Center (SCCIC) located at California State University Fullerton. **CUL-MM-6:** An Interpretative Exhibit, which would promote cultural awareness of the history of the Alhambra Health Center and its relationship to the development of medical services in Los Angeles County and as an important institutional building in the early history of Alhambra, shall be developed and be located at a prominent location as part of the Project. The Interpretative Exhibit shall be open to the public and would present a photographic history of the Center and showcase other information that would educate the public about the evolution of public health services in Los Angeles County and the early history of the City of Alhambra. The Interpretative Exhibit shall be completed and open to the public after the new development as part of the Project is placed in service. In this manner, information about the Project Site's construction and design as well as the associated history, would be retained and preserved.	

TABLE ES-2
SUMMARY OF PROJECT IMPACTS AND MITIGATION MEASURES

Resource Area Thresholds	Mitigation Measures	Significance after Mitigation
Threshold b) Would the Project cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5? There is a moderate to high potential for yielding buried precontact archaeological resources and buried historic-period archaeological resources within the Project Site during construction of the Project. Mitigation measures would be required to reduce potential impacts to previously unknown archaeological resources.	**CUL-MM-7**: Prior to issuance of demolition permit, the City of Alhambra shall retain an archaeologist who meets the Secretary of the Interior's Professional Qualifications Standards for Archaeology (Qualified Archaeologist) to oversee an archaeological monitor who shall be present during construction excavations such as demolition, clearing/grubbing, grading, trenching, or any other construction excavation activity associated with the Project. The minimum education and experience for a Qualified Archaeologist include a graduate degree in archaeology, or related field; at least one year of full-time professional experience or equivalent specialized training in archaeological research, administration, or management. The minimum education and experience for an archaeological monitor includes having a bachelor's degree in a relevant field of study and either two months of archaeological construction monitoring experience or two months of supervised training with prehistoric archaeological materials in a field or laboratory setting. The frequency of monitoring shall be based on the rate of excavation and grading activities, proximity to known archaeological resources, the materials being excavated (younger alluvium vs. older alluvium), and the depth of excavation, and if found, the abundance and type of archaeological resources encountered, as determined by the Qualified Archaeologist. The frequency of monitoring shall be determined based on the factors presented above, and full-time archaeological monitoring in any area can be reduced to part-time inspections or cease entirely if determined appropriate by the Qualified Archaeologist, in consultation with the City. Prior to commencement of excavation activities, a Cultural Resources Sensitivity Training shall be given for construction personnel. The training session shall be carried out by the Qualified Archaeologist and shall focus on how to identify indications of archaeological resources that may be encountered during earthmoving activities and the procedures to be followed in such an event. **CUL-MM-8**: In the event that historic or precontact archaeological resources (e.g., artifacts, cultural soils, features, etc.) are unearthed, ground-disturbing activities shall be halted or diverted away from the	Less than Significant with Mitigation

TABLE ES-2
SUMMARY OF PROJECT IMPACTS AND MITIGATION MEASURES

Resource Area Thresholds	Mitigation Measures	Significance after Mitigation
	vicinity of the find by the archaeological monitor, so that the find can be evaluated by the Qualified Archaeologist. If for some reason the archaeological monitor is not on site, the area will be avoided by the construction crew and the Qualified Archaeologist shall be contacted. After consulting with the City, the Qualified Archeologist shall establish an appropriate buffer area in accordance with industry standards, reasonable assumptions regarding the potential for additional discoveries in the vicinity, and safety considerations for those making an evaluation and potential recovery of the discovery. This buffer area shall be established around the resource and will demarcate where construction activities shall not be allowed to continue. Work shall be allowed to continue outside of the buffer area. All archaeological resources unearthed by Project construction activities shall be evaluated by the Qualified Archaeologist. If the Qualified Archaeologist determines the find to constitute a “historical resource” pursuant to CEQA Guidelines Section 15064.5(a) or a “unique archaeological resource” pursuant to Public Resources Code Section 21083.2(g), the Qualified Archaeologist shall coordinate with the City of Alhambra to develop a reasonable and feasible treatment plan that would serve to reduce impacts to the resources. The treatment plan established for the resources shall be in accordance with CEQA Guidelines Section 15064.5(f) for historical resources and Public Resources Code Sections 21083.2(b) for unique archaeological resources. The treatment plan shall include measures regarding the curation of the recovered resources that may include curation at a public, non-profit institution with a research interest in the materials, such as the Natural History Museum of Los Angeles County or the Fowler Museum, if such an institution agrees to accept the material. If no institution accepts the resources, they may be donated to a local school or historical society in the area for educational purposes. **CUL-MM-9**: Prior to the release of the grading bond, the Qualified Archaeologist shall prepare a final report and appropriate California Department of Parks and Recreation (DPR) Site Forms at the conclusion of archaeological monitoring. The report shall include a	

TABLE ES-2
SUMMARY OF PROJECT IMPACTS AND MITIGATION MEASURES

Resource Area Thresholds	Mitigation Measures	Significance after Mitigation
	description of resources unearthed, if any, treatment of the resources, results of the artifact processing, analysis, and research, and evaluation of the resources with respect to the California Register of Historical Resources and CEQA. The report and the DPR Site Forms shall be submitted by the City to the South Central Coastal Information Center, and representatives of other appropriate or concerned agencies to signify the satisfactory completion of the Project and required mitigation measures.	
Geology and Soils		
Threshold f) Would the Project directly or indirectly destroy a unique paleontological resource or site or unique geologic feature? The potential to encounter buried paleontological resources during construction of the Project is considered high. Therefore, as the Project could directly or indirectly destroy unique paleontological resources, impacts on buried paleontological resources are considered potentially significant and mitigation measures would be required.	**GEO-MM-1:** Prior to the issuance of grading permits, the City of Alhambra shall retain a federally-qualified Paleontologist meeting the Society of Vertebrate Paleontology (SVP) Standards. The qualified Paleontologist shall have the following qualifications: a graduate degree in paleontology or geology, at least two full years of professional experience as assistant to a Project Paleontologist with administration and project management experience, proficiency in recognizing fossils in the field, expertise in local geology, stratigraphy, and biostratigraphy, and experience collecting vertebrate fossils in the field. The qualified Paleontologist shall provide technical and compliance oversight of all work as it relates to paleontological resources, shall attend the Project kick-off meeting, and Project progress meetings. The qualified Paleontologist shall be responsible for monitoring and overseeing paleontological monitors (meeting SVP standards) that will observe grading and excavation activities on site. **GEO-MM-2:** Paleontological monitoring shall be conducted during construction excavations into undisturbed older alluvial sediments that exceed 10 feet in depth. Monitoring shall consist of visually inspecting fresh exposures of rock for larger fossil remains and, where appropriate, collecting and wet screening sediment samples of promising horizons for smaller fossil remains. If significant vertebrate fossils are found by screening, it will be necessary to collect a 6,000-pound sample for screening, per SVP Guidelines (2010). The sample can be collected by construction machinery and stockpiled and	Less than Significant with Mitigation

TABLE ES-2
SUMMARY OF PROJECT IMPACTS AND MITIGATION MEASURES

Resource Area Thresholds	Mitigation Measures	Significance after Mitigation
	processed in a safe location on site, or transported to another site for processing. The frequency of monitoring inspections shall be determined by the qualified Paleontologist and shall be based on the rate of excavation and grading activities, the materials being excavated, and the depth of excavation, and if found, the abundance and type of fossils encountered. Full-time monitoring can be reduced to part-time inspections, or ceased entirely, if determined that the paleontological resources potential has been exhausted by the qualified Paleontologist. If a potential fossil is found, the paleontological monitor (or a qualified Paleontologist) shall have authority to temporarily stop excavation activity or to temporarily divert or redirect grading and excavation activities in the area of the exposed fossil to facilitate evaluation of the discovery. An appropriate buffer area shall be established by the qualified Paleontologist around the resource demarcating where construction activities shall not be allowed to continue. Work shall be allowed to continue outside of the buffer area. At the qualified Paleontologist's discretion, and to reduce any construction delay, the grading and excavation contractor shall assist in removing rock/sediment samples for initial processing and evaluation. If preservation in place is not feasible, the qualified Paleontologist shall implement a paleontological salvage program to remove the resources from their location. **GEO-MM-3:** Any significant fossils recovered during Project-related excavations shall be prepared to the point of identification. The residue form sediment samples shall be dried and sorted with a binocular dissecting microscope. Both macrofossils and vertebrate microfossils shall be prepared to the point of identification, identified, and curated into an accredited repository, such as the Natural History Museum of Los Angeles County. The qualified Paleontologist shall prepare a final report summarizing the results of the monitoring and salvaging efforts, the methodology used in these efforts, as well as a description of the fossils collected and their significance. The report shall accompany the specimens to the accredited repository. The report shall also be	

TABLE ES-2
SUMMARY OF PROJECT IMPACTS AND MITIGATION MEASURES

Resource Area Thresholds	Mitigation Measures	Significance after Mitigation
	submitted to the City to signify the satisfactory completion of the Project and required mitigation measures	
Noise		
Threshold a) Would the Project result in generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies? Construction of the Project would result in a significant increase over ambient noise levels and would exceed the City of Alhambra's noise standards for construction noise, making impacts from construction noise potentially significant, requiring the implementation of mitigation measures.	**NOI-MM-1:** Construction of the Project shall be restricted to the allowed hours of construction for the City of Alhambra, meaning construction activities shall not take place between the hours of 7 p.m. and 7 a.m. Monday through Saturday, or at any time on Sunday or a federal holiday, and provided any vibration created does not endanger the public health, welfare and safety. **NOI-MM-2:** Stationary noise sources (e.g., generators and air compressors) shall be located as far from sensitive receptors as possible, and they shall be muffled and enclosed within temporary sheds or insulation barriers. Stockpiling of materials shall be located as far as feasible from nearby noise-sensitive receptors. Construction trucks and equipment shall utilize the best available noise control techniques including improved mufflers, use of intake silencers, ducts, engine enclosures, and acoustically attenuating shields or shrouds. The use of improved mufflers, use of intake silencers, ducts, engine enclosures, and/or acoustically attenuating shields or shrouds, in combination with other noise reduction techniques if required, shall reduce equipment noise level by 6 dBA. For noise-generating construction work occurring on the existing W. Shorb Street, the following measure shall be incorporated to reduce noise exposure and associated impacts to receptor location R1: schedule noise-generating construction work occurring on the existing W. Shorb Street to time periods when baseball games are not scheduled at the Moor Field Park.	Less than Significant with Mitigation

TABLE ES-2
SUMMARY OF PROJECT IMPACTS AND MITIGATION MEASURES

Resource Area Thresholds	Mitigation Measures	Significance after Mitigation
Threshold b) Would the Project generate excessive groundborne vibration or groundborne noise levels? The Project would retain a portion of the existing Shorb Clinic on-site, which is considered a historical resource. Given that construction activities would occur on the building itself, vibration levels would exceed the threshold for historic buildings. Therefore, a potentially significant impact would occur and mitigation would be required.	**NOI-MM-3:** The developer shall conduct construction vibration monitoring to document conditions at the Shorb Clinic prior to, during, and after vibration-generating demolition and construction. The construction vibration monitoring shall be implemented by a qualified acoustic engineer and/or structural engineer with documented experience with the Secretary of the Interior's Professional Qualification Standards. The monitoring shall include the following tasks: • Performance of a photo survey, elevation survey, and tile/crack monitoring survey for the west wing portion of Shorb Clinic which will be retained as part of the Project. Surveys shall be performed prior to and in regular intervals during all vibration-generating activities when vibration inducing equipment is used within 15 feet of this structure and during and after the partial demolition of this structure. • Conduct a post-construction survey on the structure following the completion of vibration-generating demolition and construction activities and ensure appropriate repairs are made in accordance with the Secretary of the Interior's Standards where damage has occurred as a result of those activities.	Less than Significant with Mitigation
Tribal Cultural Resources		
Threshold a) Would the Project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:	**TCR-MM-1:** Prior to the issuance of a demolition permit for the Project, the City shall retain one or more Native American Monitor(s) from a local traditionally and culturally affiliated California Native American tribe(s). The Native American Monitor(s) shall be present during the following construction activities that have the potential for encountering tribal cultural resources: demolition, pavement removal, clearing/grubbing, drilling/augering, potholing, grading, trenching, excavation, tree removal or other ground disturbing activity associated with the Project (collectively "ground disturbing activities"). Notwithstanding the foregoing, Native American monitoring shall not be required for any moving of soils after they have been initially	Less than Significant with Mitigation

TABLE ES-2
SUMMARY OF PROJECT IMPACTS AND MITIGATION MEASURES

Resource Area Thresholds	Mitigation Measures	Significance after Mitigation
i. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1 (k)? *ii. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe?* The Project Site would have a moderate to high potential for encountering previously unknown tribal cultural resources during construction. As a result, there is potential that the Project could cause a substantial adverse change in the significance of a tribal cultural resource as described in PRC Section 21084.2. Accordingly, impacts on tribal cultural resources are considered potentially significant, and mitigation measures would be required.	disturbed or displaced by Project-related construction. The City shall prepare a monitoring agreement with the Tribes that outlines the roles and responsibilities of the Native American Monitor(s). Prior to the commencement of ground disturbing activities, a Tribal Cultural Resources Sensitivity Training session shall be held for those construction personnel who will be directly involved in the ground disturbing activities. The training session shall be carried out by the Native American Monitor(s) and shall focus on how to identify tribal cultural resources that may be encountered during ground disturbing activities and the procedures to be followed in such an event. If the Native American Monitor(s) is not present at the Project Site on any given workday, the ground disturbing activities may continue if the workers involved in such activities attended the training session. Full-time monitoring may be reduced to part-time inspections, or ceased entirely, if determined appropriate by the Native American Monitor(s) in the event there appears to be little to no potential for impacting tribal cultural resources. Native American monitoring shall conclude no later than conclusion of ground disturbing activities. **TCR-MM-2:** The Native American Monitor(s) shall complete daily monitoring logs that provide descriptions of the relevant ground-disturbing activities, the type of construction activities performed, locations of ground-disturbing activities, soil types, cultural-related materials, and any other facts, conditions, materials, or discoveries of significance to the Tribes. Monitor logs shall identify and describe any discovered tribal cultural resources, including but not limited to, Native American cultural and historical artifacts, remains, places of significance, etc., as well as any discovered Native American (ancestral) human remains and burial goods. Copies of monitor logs shall be provided to the City upon written request to the Tribes. The City shall not be deemed to be out of compliance with this measure if the Native American Monitor(s) fails to complete or submit any such monitoring logs. **TCR-MM-3:** In the event of a discovery of potential tribal cultural resources at the Project Site, the Qualified Archaeologist identified in	

TABLE ES-2
SUMMARY OF PROJECT IMPACTS AND MITIGATION MEASURES

Resource Area Thresholds	Mitigation Measures	Significance after Mitigation
	Mitigation Measure CUL-MM-7 [after consultation with the Native American Monitor(s)] shall have the authority to temporarily divert, redirect, or halt ground-disturbance activities to allow identification, evaluation, and potential recovery of such potential resources. After consulting with the Native American Monitor(s) and the City, the Qualified Archaeologist shall establish an appropriate buffer area in accordance with industry standards, reasonable assumptions regarding the potential for additional discoveries in the vicinity, and safety considerations for those making an evaluation and potential recovery of the discovery. This buffer area shall be established around the find where ground-disturbing activities shall not be allowed to continue. Work shall be allowed to continue outside of the buffer area. Within three (3) business days of such discovery, a meeting shall take place between the Qualified Archaeologist, the Tribes, and the City to discuss the significance of the find and whether it qualifies as a tribal cultural resource pursuant to Public Resources Code Section 21074(a). If, as a result of the meeting and after consultation with the Tribes and the Qualified Archaeologist, the City determines, based on substantial evidence, that the resource is in fact a tribal cultural resource, the Qualified Archaeologist shall develop a reasonable and feasible treatment plan, with input from the Tribes as necessary, and with the concurrence of the City's Planning Director. The treatment measures in the treatment plan shall be in compliance with any applicable federal, State, or local laws, rules or regulations. The treatment plan shall also include measures regarding the curation of the recovered resources. The City may recommence ground disturbance activities inside of the specified radius of the discovery site only after it has complied with all of the recommendations developed and approved pursuant to the process set forth in the above paragraphs. The recovered Native American resources may be placed in the custody of the Tribes, who may choose to use them for their educational purposes or they may be curated at a public, non-profit	

TABLE ES-2
SUMMARY OF PROJECT IMPACTS AND MITIGATION MEASURES

Resource Area Thresholds	Mitigation Measures	Significance after Mitigation
	institution with a research interest in the materials. If neither the Tribes nor an institution accepts the resources, they may be donated to a local school or historical society in the area for educational purposes. Notwithstanding the above paragraph, any information determined to be confidential in nature by the City Attorney's office, shall be excluded from submission to the SCCIC or the general public under the applicable provisions of the California Public Records Act, Sections 7927.000 and 7929.005.	

This page intentionally left blank

I. Introduction

1. Purpose of the Draft EIR

As described in Sections 15121(a) and 15362 of the California Environmental Quality Act (CEQA) Guidelines, an Environmental Impact Report (EIR) is an informational document that will inform decision-makers and the general public of the environmental impacts resulting from the project, identify possible ways to minimize any significant effects, and consider reasonable project alternatives. The City of Alhambra (City) is the Lead Agency under CEQA responsible for preparing this Draft EIR. This Draft EIR has been prepared in conformance with CEQA (California Public Resources Code [PRC] Section 21000 et seq.), and the CEQA Guidelines (California Code of Regulations [CCR], Title 14, Section 15000 et seq.). The primary CEQA Guidelines sections governing the content of this document are CEQA Guidelines Sections 15120 through 15132 (Contents of an EIR) and CEQA Guidelines Section 15161 (Project EIR).

The City is responsible for processing and approving the Project pursuant to PRC Section 21067. The City will consider the information in this Draft EIR, along with other information that may be presented during the CEQA process, including the Initial Study and a Final EIR. The EIR will be used in connection with all other permits and all other approvals necessary for the construction and operation of the Alhambra Community Center Project (Project). The EIR will be used by the City's Community Development Department, which comprises the Divisions of Building, Code Enforcement and Planning; Department of Public Works; and other responsible public agencies that must approve activities undertaken with respect to the Project.

In accordance with CEQA Guidelines Section 15121, this Draft EIR provides specific information regarding the environmental effects associated with redevelopment of the 612 W. Shorb Street site (Project Site) and ways to minimize any significant environmental effects through mitigation measures or reasonable alternatives to the Project. This Draft EIR complies with CEQA Guidelines Section 15064, which discusses determining the significance of the environmental effects caused by a project. For some effects, significant environmental impacts cannot be mitigated to a level considered less than significant; in such cases, impacts are considered significant and unavoidable. In accordance with CEQA Guidelines Section 15093(b), if a public agency approves a project that has significant impacts that are not substantially mitigated (i.e., significant unavoidable impacts where impacts cannot be mitigated to less-than-significant levels), the agency must state in writing the specific reasons for approving the project based on the Final EIR and any other information in the public record for the project. This is known as a "statement of overriding considerations."

This document analyzes the environmental effects of the Project, as described in detail in Chapter II, *Project Description*, of this Draft EIR to the degree of specificity appropriate

to permit full assessment of the potential significant environmental impacts of the Project, as required under CEQA Guidelines Section 15146. This analysis considers the activities associated with the Project to determine the short-term and long-term effects associated with their implementation. This Draft EIR discusses both the direct and indirect impacts of the Project, as well as the cumulative impacts associated with other past, present, and reasonably foreseeable future projects. CEQA requires the preparation of an objective, full disclosure document to inform agency decision-makers and the general public of the direct and indirect environmental effects of the proposed action, including mitigation measures and reasonable alternatives that can reduce or eliminate any identified significant adverse impacts.

2. Environmental Review Process

In compliance with the CEQA Guidelines, the City has taken steps to provide opportunities for participation in the environmental process. During the preparation of the Draft EIR, an effort was made to contact various State, regional, and local government agencies and other interested parties to solicit comments and inform the public of the Project. As further described below, this effort included the distribution of an Initial Study and Notice of Preparation (NOP), which included noticing for a public scoping meeting.

a) Initial Study

In accordance with CEQA Guidelines Section 15063(a), the City prepared an Initial Study (located in **Appendix A**, *Initial Study,* of this Draft EIR). The Initial Study determined that the Project had the potential to result in significant impacts associated with a number of environmental issues. As a result, the Initial Study determined that this Draft EIR should address those issues where the Project could result in significant environmental impacts and consider mitigation measures.

The Draft EIR focuses primarily on changes in the environment that would result from the Project, individually and cumulatively with other development projects. The Draft EIR identifies potentially significant direct and indirect impacts resulting from construction and operation of the Project and provides Project Design Features (PDF) and mitigation measures to reduce or avoid such effects. Based on public input and the results of the Initial Study, this Draft EIR addresses environmental effects in the following areas:

- Biological Resources (special-status species and the movement of wildlife species)
- Cultural Resources (historic and archaeological resources)
- Geology and Soils (paleontological resources)
- Noise (all except airport land use plan, private airstrip)
- Tribal Cultural Resources

Based on the Initial Study, issues for which no significant impacts are anticipated to occur are listed in Chapter VI, *Other CEQA Considerations*, of this Draft EIR, and include

Aesthetics, Agriculture and Forestry Resources, Air Quality, Biological Resources (all except special-status species and the movement of wildlife species), Cultural Resources (human remains), Energy, Geology and Soils (all except paleontological resources), Greenhouse Gas Emissions, Hazards and Hazardous Materials, Hydrology and Water Quality, Land Use and Planning, Mineral Resources, Noise (airport land use plan, private airstrip), Population and Housing, Public Services, Recreation, Transportation, Utilities and Service Systems, and Wildfire. See the Initial Study in **Appendix A,** *Initial Study,* of this Draft EIR for further discussions.

b) Notice of Preparation

Pursuant to the provision of CEQA Guidelines Section 15082, the City circulated an NOP together with the Initial Study to State, regional, and local agencies, interested organizations, and members of the public for a 30-day period, commencing May 28, 2024, and ending June 27, 2024. The purpose of the NOP was to formally convey that the City was preparing a Draft EIR for the Project and to solicit input regarding the scope and content of the Draft EIR. See **Appendix B**, *Notice of Preparation*, of this Draft EIR.

c) Public Scoping Meeting

The NOP included notification that a public scoping meeting would be held to further inform public agencies and other interested parties of the Project, share information regarding the environmental process, and solicit input regarding the scope and content of the Draft EIR. The public scoping meeting was held in-person on June 18, 2024. City staff, environmental consultants, and Project representatives were available during this meeting.

d) Comments Received

A total of eight written comment letters and emails responding to the NOP were submitted to the City. In addition, four comment cards and verbal comments were received and documented at the Public Scoping Meeting. Comments were received from various public agencies, organizations, business, interested parties, and area residents. Public comments received during the NOP circulation period are provided in **Appendix C**, *NOP and Scoping Meeting Comments*, of this Draft EIR, and are summarized in the Executive Summary.

3. Format of the Draft EIR

The Draft EIR includes an Executive Summary, eight chapters, and appendices, which are organized as follows:

Executive Summary. The Executive Summary includes an overview of the Project; identifies the Project's significant impacts and proposed mitigation measures and alternatives that would reduce or avoid impacts; a list of areas of controversy known to the Lead Agency, including issues raised by agencies and the public; and issues to be resolved, including the choice among alternatives and whether or how to mitigate the significant effects.

I. **Introduction**. This chapter describes the purpose of the EIR, including CEQA compliance requirements, the steps undertaken to date regarding implementation of the CEQA process, and the Draft EIR's organization.

II. **Project Description**. This chapter describes the location, objectives, and physical and operational characteristics of the Project. This chapter also includes a list of discretionary approvals per CEQA Guidelines Section 15124(d).

III. **Environmental Setting**. This chapter presents an overview of the Project's environmental setting, including on-site and surrounding land uses. This chapter also provides a list and the mapped locations of past, present, and probable future projects (i.e., cumulative projects) considered in the analysis of potential Project contributions to cumulative impacts.

IV. **Environmental Impact Analysis**. This chapter contains the environmental setting, regulatory framework, methodology, thresholds of significance, Project characteristics, Project-specific and cumulative impact analyses, mitigation measures, and conclusions regarding the level of significance after mitigation for each of the following environmental issues: (A) Biological Resources; (B) Cultural Resources; (C) Geology and Soils; (D) Noise; and (E) Tribal Cultural Resources.[1]

V. **Alternatives**. This chapter describes a reasonable range of alternatives to the Project, including Alternative 1 - No Project/No Build Alternative, Alternative 2 – Full Preservation Alternative, and Alternative 3 – Partial Preservation Alternative. This section also evaluates the environmental effects of the alternatives for each issue area analyzed in the Draft EIR and provides a comparative analysis of the impacts of the Project and the impacts of the alternatives.

VI. **Other CEQA Considerations**. This chapter includes a discussion of issues required by CEQA that are not covered in other chapters. This includes a discussion of significant unavoidable impacts, reasons why the Project is being proposed notwithstanding significant unavoidable impacts, significant irreversible environmental changes, growth-inducing impacts, potential secondary effects caused by the implementation of the mitigation measures for the Project, and effects found not to be significant.

VII. **References**. This chapter lists the references and sources used in the preparation of this Draft EIR.

VIII. **List of EIR Preparers and Organizations and Persons Contacted**. This chapter lists the persons, public agencies, and organizations that were consulted or who contributed to the preparation of this Draft EIR.

[1] The Initial Study concluded that all other environmental issues would not be evaluated further in the Draft EIR in accordance with CEQA Guidelines Section 15063(c)(3)(B). For further discussion of these issues and more detailed evaluation of potential impacts found not to be significant refer to the Initial Study provided in **Appendix A** of this Draft EIR.

4. Public Review of the Draft EIR

The Draft EIR is subject to a 45-day review period in which the document is made available to responsible and trustee agencies and interested parties. In compliance with the provision of Sections 15085 and 15087 of the CEQA Guidelines, the City, serving as the Lead Agency prepared a Notice of Completion (NOC) and a Notice of Availability (NOA) of a Draft EIR, which indicated that the Draft EIR was available for public review. The City (1) provided a hardcopy of the NOA and Draft EIR to Alhambra City Hall and the Alhambra Civic Center Library; (2) posted the NOA and the Draft EIR on the City's website at http://www.cityofalhambra.org/743/Alhambra-Community-Center-Project; (3) filed the NOC, NOA, and Draft EIR with the State Clearinghouse; (4) published the NOA in the Pasadena Star-News newspaper; (5) mailed the NOA to the last known name and address of all organizations and individuals who previously requested such notice in writing or attended public meetings about the Project; and (6) filed a copy of the NOA with the County Clerk. The public review period commenced on August 30, 2024 and will end on October 14, 2024 for a total of 45 days.

Any public agency or members of the public desiring to comment on the Draft EIR must submit their comments in writing or send them via email to the following address prior to the end of the public review period:

Mail to: Mike Macias
City of Alhambra, Parks and Recreation Department
111 South First Street
Alhambra, CA 91801

Email: mmacias@cityofalhambra.org

Upon the close of the public review period, the City will proceed to evaluate and prepare responses to all relevant comments received from public agencies and other interested parties during the public review period. A Final EIR will then be prepared. Pursuant to CEQA Guidelines Section 15132, the Final EIR will consist of possible revisions to the Draft EIR, comments submitted by responsible agencies or reviewing parties during the public circulation period for the Draft EIR, and City responses to those comments. After the Final EIR is completed and at least 10 days prior to its certification, responses to comments made by public agencies on the Draft EIR will be provided to the commenting agencies.

This page intentionally left blank

II. Project Description

1. Introduction

The purpose of this section is to describe the characteristics and objectives of the Alhambra Community Center Project (Project). The City of Alhambra (City) proposes to develop the Project on the 612 W. Shorb Street site. The Project Site currently includes an existing one- and two-story abandoned brick medical clinic building (the Shorb Clinic) sited on the central portion of the Project Site with associated surface parking found in the southern portion for the Project Site. The Project would abandon the adjacent W. Shorb Street to expand the Project Site. The Project would adaptively reuse the northwest portion of the existing Shorb Clinic building's two-story element, known as the west wing and demolish the balance of the existing Shorb Clinic facility. Along with the existing Shorb Clinic building's west wing to be renovated and adaptively reused, the City would construct new one- and two-story community center buildings, along with associated parking and site improvements including courtyards and exterior landscaped areas.

The description below includes the following information:

- The Project Site's location and setting;
- A general description of the Project's technical and environmental characteristics;
- The Project Objectives;
- Discretionary Actions and Approvals for the Project; and,
- A brief statement regarding the intended uses of this Draft Environmental Impact Report (Draft EIR).

2. Environmental Setting

a) Project Site Location

The Project Site is located at 612 W. Shorb Street on an approximately 1.77-acre (77,192 square feet) site within the City, see **Figure II-1**, *Regional and Project Vicinity Location*. Specifically, the Project Site is located on a horizontally-oriented 'L'-shaped plot between S. 7th Street and S. 6th Street and includes the right-of-way at W. Shorb Street to the north (see **Figure II-2**, *Project Location – Aerial Photograph*). The Project Site Assessor's Parcel number (APN) is 5350-007-900 (the W. Shorb Street right-of-way portion to be abandoned does not have an APN number).

Alhambra Community Center Project

Figure II-2
Project Location
Aerial Photograph

ESA

b) Surrounding Uses

The Project Site is located at 612 W. Shorb Street in the central portion of the City, in the San Gabriel Valley within Los Angeles County, bordered by the cities of Monterey Park, San Gabriel, San Marino, South Pasadena and Los Angeles. Regional access is provided by the San Bernadino Freeway (Interstate 10 [I-10]) located approximately 0.5 mile south of the Project Site. Local access to the Project Site is provided via W. Shorb Street, S. 7th Street, S. 6th Street, and W. Valley Boulevard. See **Figure II-1**, *Regional and Project Vicinity Location*, for the location of the Project Site. See **Figure II-2**, *Project Location – Aerial Photograph*, for an aerial image of the Project Site and surrounding development.

The area surrounding the Project Site is well developed. Land uses located adjacent to the Project Site include: Moor Field to the north, which is operated under a joint use agreement between the City and the Alhambra Unified School District; S. 6th Street to the east with single-family residential properties bordering the east side of S. 6th Street, the Alhambra Fire Department Station #72 immediately south with commercial uses, and W. Valley Boulevard beyond; and S. 7th Street immediately to the west with religious institutions beyond (although the parcel has a General Plan designation as low-density residential, the Evangelical Formosan Church of Alhambra occupies the site).

The surrounding area to the north of the Project Site across W. Shorb Street has a General Plan land use designation of Open Space. Areas to the east and west are designated by the General Plan as Low Density Residential; and areas to the south are designated as a Public Facility associated with the Alhambra Fire Department and beyond that the linear Valley Specific Plan, which runs on the north and south side of W. Valley Boulevard.

The Project Site is served by several public transit options along W. Valley Boulevard, provided by the City of Alhambra and Los Angeles Metro. Most significantly, the Project Site is located within 500 feet of the W. Valley Boulevard/S. 6th Street bus stop, which serves Los Angeles County Metro Bus Line 76, as well as the Alhambra Community Transit Green Line. In addition, the Project Site is located 0.2 mile east of the W. Valley Boulevard/Atlantic Boulevard major transit stop, and as such, is within a half-mile of a High Quality Transit Corridor (HQTC) and located within a High Quality Transit Area (HQTA) (SCAG 2023).[1] Other transit operations in the vicinity of the Project Site include Metro Bus Line 260 – Artesia Station to Pasadena via Atlantic-Fair Oaks, approximately 0.3 miles west of the Project Site.

3. Project Site Characteristics

a) Land Use Designation and Zoning

The General Plan Land Use designation for the Project Site is Public Facilities, which provides for the orderly development, use, and operation of buildings and other facilities

[1] Chapter VII, *References*, lists the references and sources used in the preparation of this Draft EIR.

operated and under the control of a public agency. The Public Facilities land use designation does not support residential and/or residential mixed-use projects. Per the Alhambra Zoning Code (Zoning Code), the Project Site is also zoned Public Facilities (PF). The PF Zoning Code is intended to provide for a broad range of government, institutional, educational, and other facilities operated and under the control of a public agency. The PF Zone implements the Public Facilities and Institutional General Plan Land Use Designations and allows a maximum building height of 5 stories/55 feet or if adjacent to a residential zone or use, 3 stories/40 feet.

b) Existing Conditions

The Project Site includes the existing 1.37-acre (59,485 square feet [SF]) lot and the adjacent W. Shorb Street right-of-way, which the City intends to abandon to expand the Project Site by 17,707 SF. These two areas total 77,192 SF (1.77-acres).

The Project Site currently includes an existing one- and two-story abandoned brick medical clinic building (the Shorb Clinic) sited on the central portion of the Project Site. The existing Shorb Clinic, constructed in 1930 in the Monterey Style, totals 21,470 SF. Landscaped grass lawns currently surround the existing building. The brick building's footprint is comprised of two L-shaped forms: a two-story wing at the west side of the building and a one-story wing at the east side of the building. Mature trees and plantings are located primarily along the north, west, and east elevations. The existing surface parking lot is accessible from S. 6th Street and off a southern alleyway in the southwest corner of the property. The Project Site slopes upward to the center of the lot, and two sets of steps extend from the sidewalk along W. Shorb Street towards the building.

4. Project Characteristics

a) Project Overview

The City proposes to develop the Alhambra Community Center Project on the 612 W. Shorb Street site, which totals approximately 1.37-acre (59,485 SF) and also on the adjacent W. Shorb Street right-of-way, which the City intends to abandon and which Alhambra Unified School District intends to transfer its reversionary interest in (curb, gutter, sidewalk and street between 6th and 7th Streets) to the City so as to expand the Project Site by 17,707 SF. These two areas total 77,192 SF (1.77-acres) (the Project Site) and are improved with an existing one- and two-story abandoned brick (21,470 SF) medical clinic building (the Shorb Clinic) sited on the central portion of the Project Site with associated surface parking found in the southern portion for the Project Site. The Project intends to adaptively reuse the northwest portion of the existing Shorb Clinic building's two-story element (approximately 9,000 SF), known as the west wing, and demolish the balance of the existing Shorb Clinic facility. Along with the 9,000 SF of the existing Shorb Clinic building's west wing to be renovated and adaptively reused, the City intends to construct new one- and two-story community center buildings (up to a height of approximately 38 feet) totaling 16,000 SF, hereinafter referred to as the east wing and

the north pavilion, along with associated parking and site improvements containing an additional approximate 35,650 SF of hardscaped open space and courtyards and 16,542 SF of exterior landscape areas, parkways and plantings. These components of the proposed Project are shown in **Figure II-3**, *Site Plan*.

While the Project as proposed contains 25,000 SF of community center uses, the funding sources for the entire Project are not entirely accounted for. Currently, the grant funding that has been secured for the Project is only sufficient to construct a 17,000 SF facility. The City is hopeful that it will be able to secure additional funding, in which case the size of the Project would increase to between 21,000 and 25,000 SF. To ensure the most conservative impact analysis and to provide coverage for the largest possible project, this Draft EIR assumes the development of the largest option, a 25,000 SF community center. The floor plans shown in **Figure II-4**, *First Floor Plan*, and **Figure II-5**, *Second Floor Plan* visually convey these floor plan sizing options. The portion of the Project's floor plans without an overlay of diagonal hatching or diagonal cross hatching represents the 17,000 SF development currently funded. The single line diagonal hatching outlines the first and second floor building area to be constructed should funding for a 21,000 SF facility be secured. The two-line cross hatching pattern outlines the first and second floor building area to be constructed should funding for a 25,000 SF facility be secured.

Once constructed, operation of the Project would be split between three broad program elements: 1) recreation and community center programs; 2) building support functions; and 3) exterior space programs. The primary program consists of active community center uses, including but not limited to: 1) a large, single-story divisible event space that can be split into three separate high volume spaces (along with attendant warming kitchen and banquet facility storage for tables and chairs, foyer and outdoor event court); 2) a series of larger capacity group fitness/multi-purpose rooms with interior ceiling heights between approximately ten and twelve feet, and smaller, lower capacity multi-purpose rooms and a recreation room, all of varying dimensions and sizes (typically between approximately 500 SF and 1,300 SF) that would be split between the west wing, east wing, and north pavilion (with the smaller spaces in the west wing); and 3) main support/administrative uses would be located in the west wing and include a lobby, restrooms, multiple storage locations, director and staff offices, as well as back-of-house facilities such as electrical, janitorial, audio and visual, and circulation. Please see **Figure II-3**, *Site Plan*, **Figure II-4**, *First Floor Plan*, and **Figure II-5**, *Second Floor Plan*. The Project would provide a total of 93 vehicular parking spaces, with 70 spaces to be provided on-site and 23 spaces to be provided west of the Project Site on 7th Street as perpendicular parking. Electric vehicle (EV) spaces are to be provided as required by the building code in effect at the time of Project approval, but likely to be no less than 17 EV capable spaces with four of those spaces designated as EV charging spaces based on the requirements of Section 5.106.5.3 of the 2022 California Green Building Standards Code, Title 24, Part 11 (CALGreen) with July 2024 Supplement. Two vehicular ingress/egress access points would be provided to/from the Project Site, including a two-way entrance/exit along S. 7th Street and a two-way entrance/exit along S. 6th Street. The Project would provide 19 bicycle parking spaces.

Second Floor Plan

ESA

In addition to the development of the community center building, the Project proposes the vacation of the existing public right of way along W. Shorb Street between S. 7th Street and S. 6th Street. The street vacation would expand the site by approximately 17,700 SF, affording the Project's event space, bike path and courtyards additional land area. The City would also restripe the 80-foot-wide S. 7th Street right-of-way, between W. Valley Boulevard and W. Shorb Street, to accommodate 23 perpendicular parking spaces along the east side of 7th Street.

b) Building Floor Plans and Project Uses

Figure II-4, *First Floor Plan*, illustrates the layout of the first floor. As shown in **Figure II-4**, the proposed east wing would be L-shaped with the south portion of this east wing reaching two-stories and the east portion of the east wing built in a single story that contains the event space. There would be a rectangular pavilion (known as the north pavilion) in the north center adjacent to the east wing that would be a single story and contain high-ceiling multi-purpose rooms. The configuration of the Project's proposed buildings would allow for outdoor active uses and event courts. The retained Shorb Clinic west wing would include interior spaces generally smaller in overall square footage and with far shorter ceiling heights than the new-build east wing and north pavilion. As previously detailed, the west wing would include a lobby, restrooms, multiple storage locations, director and staff offices, as well as back-of-house facilities such as electrical, janitorial, audio and visual, and circulation.

Figure II-5, *Second Floor Plan*, shows the second story portion of the existing Shorb Clinic west wing building to be retained on the west side of the site and the new east wing buildings, part of which would include a roof deck on the western part of the east wing. The partial second floor of the new east wing building would include a high-ceiling multipurpose room and additional event space adjacent to the roof deck, which overlooks the active courtyard and would provide open views to Moor Field and the San Gabriel Mountains beyond.

Per the newly adopted (March 2024) Alhambra Zoning Code, Chapter 23.07.030 and its Table 23.07.030, which provides the development Standards applicable in the Public Facilities zone district, buildings can be a maximum height of 5 stories or up to 55 feet; or 3 stories and 40 feet if within 50 feet of a residential zone or use.[2] The Project is proposing to build to 38 feet, which would be lower than the maximum permitted height (see **Figure II-6**, *Longitudinal and Transverse Sections*, **Figure II-7**, *South and West Elevations*, and **Figure II-8**, *North and East Elevations*, for sections and elevations).

[2] It should be noted that as of August 2024, the zoning code is in the process of being revised to exempt City projects from the application of the zoning code. It is anticipated the City Council's consideration of such amendments will be complete prior to the completion of the Final EIR. As such, the current development standards identified will not apply to this building should the City Council adopt the revised code. In that event, although the City will not be required to conform to these requirements, the City nevertheless has designed the Project to be much smaller than the maximum contemplated in the zoning code.

ESA

The Alhambra Zoning Code, Chapter 23.42.020 (D), allows for lots with an area of 60,000 SF or more to be eligible for a maximum floor area ratio (FAR) of 1.5. With the Project Site standing at 1.77 acres (77,192 SF), the FAR of the Project is 0.32:1, substantially below the maximum allowed FAR of 1.5.

c) Architectural Design

The Project consists of a hybrid campus, including the retention of the west wing of the existing Shorb Clinic building, measuring 9,000 SF, and new construction to replace the existing east wing. The existing structure that would be retained as part of the Project is the larger, two-story portion that includes the full-width balcony on the front façade that defines the building's Monterey style, as well as its other most notable character-defining features, including its low-pitch cross-gabled roof clad in terracotta barrel tiles, the majority of its six-over-six double-hung wood sills with rowlock sills, and wood French doors on the second level of the north elevation. Interior character-defining features to be retained include a lobby with an original interior staircase and tile murals. The eastern wing would be demolished in its entirety, although portions of the interior historic fabric would be partially retained and reused, including historic interior tile murals and light fixtures. The removal of the existing east wing of the Shorb Clinic building would open small portions of the east and south façade that would be infilled with a combination of solid and glazed materials in order to visually distinguish these components from the historic fabric.

The portion of the existing Shorb Clinic building (west wing) to remain is situated on the west side of the Project Site and would have a large entry courtyard that extends towards Moor Field, including an entry plaza that continues Moor Field's park-like setting into the community center. The remaining buildings on the Project Site (the east wing and the north pavilion), would be connected by paving, enclosed hallways, or trellises, inspired by the idea of the connecting gems of a necklace and designed to create a campus design look and feel. The exterior design components of the new east wing building would derive materiality from the historic fabric of the existing Shorb Clinic building, including brick, stone, and plaster materials. Architectural elements such as trellises and arches would also be used to reference and complement the existing historic structure but would be designed in a modern way to clearly show the distinction from the historic structure. The new components would have a taller ceiling height and would be more expansive and flexible to meet the needs of the City's proposed uses/programming while remaining visually compatible with the existing structure. The new components of the Project would have large windows that would open to the exterior courts and north towards Moor Field to allow daylighting and natural ventilation.

The Project Site design reflects the local vernacular and prioritizes the accessibility, approachability, and connectedness that the City would like the Project to represent. There would be permeability from the building exterior into the central courtyard to activate and link the outdoor spaces of the community center and Moor Field. The building would be positioned with the new two-story portion of the east wing on the south side,

creating a strong edge along the parking area, with exposure to the north with sweeping views toward the San Gabriel Mountains. The one-story portions of the new east wing building towards the north would maximize daylighting and create a soft edge to Moor Field. The campus would be planned to separate the parking area from the main building and courtyard areas to create an environment that would encourage community engagement. There would be a drop-off area at the intersection of S. 7th and W. Shorb Streets to provide direct access to both the Project Site and Moor Field, and there would be an entrance from the parking area on the south side of the buildings that would be used by visitors and event staff. See **Figure II-9,** *Aerial Views,* and **Figure II-10,** *Renderings,* for aerial views and 3D renderings.

The proposed Project would generally comply with all applicable development standards as provided in the Alhambra Zoning Code. The Alhambra Zoning Code requires setbacks of at least 20 feet for buildings up to two stories or 26 feet in height and 25 feet for buildings higher than 26 feet. Projections to within 10 feet of the front property line are permitted for up to 25 percent of the front building length. The existing Shorb Clinic west wing building along S. 7th Street has a setback of 12 feet and 10 inches, which encroaches on the 20-foot setback but would be maintained as it is an existing condition. Along S. 6th Street, the new east wing building would be set back 20 feet from the property line.

d) Access, Parking, and Circulation

(1) Vehicular Access

There are currently two driveways to access the Project Site, one at the southwest corner of S. 7th Street and the other a narrow drive aisle off S. 6th Street. Vehicular access to the Project Site under the proposed Project would be provided via two ingress/egress access points, on S. 7th Street and S. 6th Street. Both ingress/egress access points would provide full access to on-site surface parking.

Access for trucks and deliveries would be off S. 6th Street, where the loading area is located on the northeastern side of the Project Site (see **Figures II-3** and **II-4)**. The trash enclosures would be accessible via the driveway entrance on S. 6th Street.

(2) Bicycle Access

Bicycle access to the Project Site would be provided at the intersection of S. 7th and W. Shorb Streets and adjacent to the south entrance in order to complement the goals of the City's mobility plan and encourage visitors to use alternative means of transportation to visit the Project. The driveways on S. 7th Street and S. 6th Street would be designed to the maximum extent feasible with no intervening structures or signs blocking views up and down the streets to provide maximum visibility between all roadway users. Bicycle parking amenities would also be provided onsite for visitors. The Project would provide 19 bicycle parking spaces.

\\EgnyteDrive\oneesa\Shared\projects\2023\D2023007738.00 - The Alhambra Community Center Project\05 Graphics-GIS-Modeling-USE AZURE\Initial Study

The City's Active Transportation Plan proposes a Class IIIB bicycle lane on W. Shorb Street adjacent to the Project Site. As part of its vacation of W. Shorb Street between S. 7th and S. 6th Streets, the Project's landscape design would also include the development of a bicycle and pedestrian pathway along the north side of the site to connect S. 7th and S. 6th Streets in compliance with the Active Transportation Plan.

The design for this bicycle lane has not been finalized by the City; however, the exterior design reflects the City's goals to ensure safe travel by bicyclists and pedestrians by creating off-street pathways and effective signage. Vehicular traffic would not be allowed to use the multi-use path, thus in essence the City would be creating a higher Class I bicycle lane between S. 7th and S. 6th Streets.

(3) Pedestrian Circulation

The Project Site would be oriented such that users would be able to access the Project Site from multiple access points on the northwest and southwest of the building and sidewalks would be provided to allow community connections to the development.

(4) Vehicle Parking

On-site surface parking containing 70 vehicular parking spaces would be provided on the Project Site with a further 23 spaces provided on the east side of 7th Street as on-street perpendicular parking for a total of 93 parking spaces. EV-capable, EV-ready and full EV charging stations would be provided per CALGreen code requirements at the time the building permit is issued, but likely would be no less than 17 EV capable spaces with four of those spaces designated as EV charging spaces. The vehicle parking spaces would be clearly identified either by specific ground painting or signage.

e) Open Space and Landscaping

The Project would include a total of 7,574 SF of internal courtyard and roof deck open space. Of the total amount of open space, 4,376 SF would be provided as an event courtyard, 2,134 SF as an active courtyard, and 1,064 SF as an event roof deck. The event courtyard would contain seating and landscaping; and the active courtyard would contain seating and landscaping with a central element such as a water feature. The event roof deck would have seating and tables with landscaping.

In addition to the formal structured open space, the Project would have 16,542 SF of exterior, outdoor, common landscape spaces which would include areas for sitting, for active play, fitness, outdoor art, and events. These parkways and plantings surrounding the buildings would include a bike path incorporated into the garden paseo, north of the buildings, in the area that fronts on to Moor Field as it traverses between S. 6th and S. 7th Streets.

Landscaping would be provided in accordance with Alhambra Zoning Code Requirements. Perimeter planting at S. 6th and S. 7th Streets would integrate with the public ROW and buffer the community. Designated entrance points at S. 7th and W. Shorb

Streets and from within the parking lot would be defined by plazas with seating, bike parking, and a drop-off area at W. Shorb Street. The center of the Project Site would feature a large flexible courtyard with formal and active zones. The second-floor deck of the new east wing building would include trees in containers, shade sails, and seating for small and large groups.

Plantings would feature California Native trees such as Engelmann Oak (*Quercus engelmannii*) and Torrey Pine (*Pinus torreyana*), where possible, with a focus on providing shade and interest. Existing trees removed for ill health or construction would be replaced with in kind species or with California Natives, where appropriate. New shrubs and ground cover would be drought tolerant and maintainable.

A new irrigation system would be installed as part of the proposed Project. New trees would have root watering bubblers and shrubs would be irrigated with an efficient drip system that includes a weather-based smart controller.

f) Lighting and Signage

Exterior lighting would incorporate low-level, downward facing exterior lights on the buildings and along pathways for security and wayfinding purposes. In addition, low-level lighting to accent signage, architectural features, and landscaping elements would be incorporated throughout the Project Site. Lighting for the Project would be designed to minimize light trespass and glare from buildings and the Project Site onto adjacent properties, providing comfort, safety, and nighttime visibility through shielded, focused and directed illumination. New street and pedestrian lighting within the public right-of-way would comply with applicable city regulations and would require approval from the City to maintain appropriate and safe lighting levels on sidewalks and roadways while minimizing light and glare on adjacent properties.

All proposed lighting for the Project's uses would be provided in accordance with Alhambra Zoning Code requirements, which provide the general standards for outdoor lighting to regulate lighting fixtures and design, energy use, light shielding, light intensity, and lighting placement.

Proposed signage, including building signage, parking entry signage, and general wayfinding pedestrian signage, would be designed to be aesthetically compatible with the proposed architecture of the Project Site and would comply with the requirements of the Alhambra Zoning Code (23.12.090). No off-site advertising signage is proposed. New signage would be architecturally integrated into the design of the proposed building and would establish appropriate identification for the proposed uses. Exterior lighting for signage would be directed onto signs to avoid creating off-site glare. Illumination used for Project signage would comply with light intensities set forth in the Alhambra Zoning Code, as measured at the property line of the nearest residentially zoned property.

g) Site Security

The Project would incorporate a security program to ensure the safety of visitors. During construction, the Project Site would be fenced and gated with surveillance cameras to monitor the site during off hours. During operation, access to recreational uses would be unrestricted during business hours. Facility operations would include staff training and building access/design to assist in crime prevention efforts and to reduce the demand for police protection services. Site security would include the provision of 24-hour video surveillance. Security cameras would be located to capture views at the perimeter of the proposed buildings; at main pedestrian and vehicular entries; and other outdoor locations as appropriate. During operation of the Project, access to publicly accessible areas, parking areas, and common open space areas would be well illuminated.

h) Sustainability Features

Energy saving and sustainable design features would be incorporated into the Project as the proposed buildings would comply with the applicable Title 24 California Code of Regulations. Design features would include elements such as energy-efficient lighting, solar panels, rainwater harvesting, and infiltration systems and materials made from recycled or renewable resources with the goal to reach LEED Silver standards. As it relates to energy conservation, the Project would include LED lighting throughout the Project Site and would install ENERGY STAR-rated appliances. As it relates to water conservation, the Project would incorporate efficient water management through low flow faucets and water-efficient landscape design with weather-based controllers and drip irrigation systems.

i) Utilities and Service Facilities

Due to the Shorb Clinic already having connections to the City's water, electricity, and sewer systems and per the functional assessment undertaken for the site, some of the existing site utilities would be sufficient to support the design, notably the water connection. However, it is anticipated that the Alhambra Fire Department would require post indicator valves, double detector check valves, an automatic fire sprinkler system and a Fire Department Connection (FDC).[3] The City also operates and maintains the sewage collection system that services the property, and per the *Will Serve* letter from the Director of Public Works & Utilities (see Appendix H of the Initial Study, located in **Appendix A** of this Draft EIR), both water and sewage systems have sufficient capacity to serve the Project.

j) Project Design Features

The above sections identify general characteristics of the Project upon which the analyses of this Draft EIR are based. In addition to these Project characteristics, the City proposes to implement Project Design Features (PDFs) that specifically relate to environmental

[3] In the event of a fire, emergency responders can connect a hose line from their pump truck to the FDC and pump additional water into the fire sprinkler system to ensure sufficient water and pressure to suppress the fire in the building effectively.

considerations. The PDFs would be included in the Mitigation Monitoring and Reporting Program (MMRP) required in association with certification of the EIR.

PDF-TR-1: Construction Management and Traffic Plan – A Construction Management and Traffic Plan (CMTP) shall be developed by the contractor and approved by the City of Alhambra to alleviate potential construction period impacts. The Plan would include but not necessarily be limited to:

- Name and telephone number of a contact person regarding traffic complaints or emergency situations;
- Community notification procedures and contact information for local police, fire, and emergency response organizations and procedures for the continuous coordination of construction activity;
- Procedures for training the flag person(s) used in implementing the plan;
- The location, times, and estimated duration of any temporary lane closures;
- Developing, and once approved, managing the haul route plan and construction parking management plan;
- Timing of disruptive construction activities; scheduling of deliveries, pick-ups and hauling of material during non-peak travel periods to the extent possible;
- The contractor will provide an estimate of truck volume and schedule. Areas will be designated by the City for the staging of all trucks. All earth-moving and ready-mix trucks will be equipped with two- way radios so that the drivers at the staging areas are linked to a person controlling traffic at the Project Site. Trucks will follow a City-approved route to the Project Site.

PDF-HYDRO-1: Drywell Infiltration Basin – The edge of any drywell infiltration basin shall be installed at least 20 feet away from the proposed and existing neighboring structures, as well as private property lines. Stormwater infiltration shall only occur in native soils located at least 10 feet below the existing grade. Soils located within the upper 10 feet should not become wet or saturated as a result of a drywell. It is anticipated that a settling chamber will be installed within this upper zone; therefore, the seams and bottom of the settling chamber shall be adequately sealed to prevent infiltration at this zone. All infiltration devices shall be provided with overflow protection. Once the device is full of water, additional water flowing to the device should be diverted to another acceptable disposal area or disposed offsite in an acceptable manner.

k) Construction Schedule and Activities

As mentioned in the Project Design Features section above, a CMTP which defines the scope and scheduling of planned construction activities, as well as the City's proposed construction site management responsibilities, shall be prepared by the contractor as Project Design Feature PDF-TR-1, to ensure minimal impacts to neighboring residents and land uses and to avoid interruption of pedestrian, vehicle, and alternative transportation

modes and public transit. The CMTP will facilitate communication and coordination with residents and business owners/others in the neighborhood. Additionally, per California Department of Transportation (Caltrans) recommendations, large-size truck travel would be limited to off-peak commute hours to the maximum extent feasible, details of which would be outlined in the CTMP. Furthermore, Caltrans requires a permit for any heavy construction equipment and or materials that require the use of oversized transport vehicles on State highways. Should this be required, details would be provided within the CTMP.

The Alhambra Zoning Code prohibits construction between the hours of 7:00 P.M. and 7:00 A.M. Monday through Saturday, and at any time on Sunday or Federal Holidays. While the Project would be exempt from complying with zoning requirements, due to the proximity to sensitive residential receptors, construction of the Project would adhere to zoning requirements as reasonably practicable.

The Project would require demolition of the existing Shorb Clinic building components that are not being retained and excavation and grading would also be required across the site to accommodate the new building foundations, utilities, and other improvements. Construction staging would be entirely internal to the Project Site. The Project would require excavation to a maximum depth of 5 feet below grade at the new construction locations. In addition to the excavation of the Project's above ground structures, their foundations and utilities, and including the storm water runoff (low impact development) drywell infiltration basin and over-excavation, the Project would require 6,270 cubic yards (CY) of cut, 7,130 CY fill and attendant soil import of 860 CY. The drywell infiltration basin would be installed at an approximate depth of 25 feet below grade.[4]

During construction, electricity from the grid would be consumed to power the construction trailers (lights, electronic equipment, and heating and cooling) and exterior uses such as mobile lighting masts, conveyance of water for dust control, and any electrically driven construction equipment. The use of generators would not occur.

Project construction would occur in one single phase (dependent on funding), and is anticipated to commence in Spring 2025, and is expected to take approximately 17 months to complete. Full build-out is expected in Summer 2026.

l) Operations

The new community center would generally operate in three main sessions: morning (beginning at approximately 7am) to early afternoon; after school; and evening (until approximately 10pm). Generally, the morning to early afternoon would be for pre-school classes and 'active' senior programming classes. After school programs and services for youngsters (between 7-18 years of age) would include (but not be limited to) tap and ballet, music classes, art classes, and recreation programs. Evening use would generally

[4] A drywell infiltration basin is an underground structure (often a cylinder with holes) that collects and stores excess water runoff. Rainwater collects in the drywell and then slowly leaks out through the holes and into the ground.

be for adult enrichment activities and would include (but not be limited to) art, dance, yoga, Zumba, fitness, or as a meeting space for non-profit organizations. It is estimated that 250-300 participants would use the facility on average per day.

Events would be held throughout the year within the event space, courtyards or event roof deck areas. These events might include weddings, civic and neighborhood receptions, and/or cultural events, birthday parties, and other gatherings.[5]

The Project would employ five full-time positions, the Deputy Director, Supervisor, Clerical staff and two Coordinators, and, on a part-time basis, two Recreation Leaders.

Loading for the event space would be at the northeast corner of the Project Site, adjacent to S. 6th Street, and would be sited within the imaginary plane of the building set back. Passenger pick-up/drop-off would be located along the western side of the S. 7th Street/W. Shorb Street intersection.

5. Project Objectives

Section 15124(b) of the State CEQA Guidelines states that a project description shall contain "a statement of the objectives sought by the proposed project," and further states that "the statement of objectives should include the underlying purpose of the project."

The underlying purpose of the Project is for the City of Alhambra to create a 25,000 square foot community center for its residents that meets the following design objectives. As further required by the State CEQA Guidelines, the specific objectives of the Project are provided below. These are divided into Primary Objectives and Secondary Objectives. Primary Objectives are those critical to achieving the underlying purpose, whereas the Secondary Objectives are those that the Project desires to include but are not fundamental to achieve the Project's aim:

a) Primary Objectives

1. Provide large, unobstructed, visually pleasing and well-functioning spaces (ranging between 800 SF to 1,200 SF) with ceiling clear heights of 10 to 12 feet for fitness, gatherings, recreation, artistic and creative pursuits, and wellness activities; all intended to promote an active, engaged and healthy lifestyle within the community.
2. Provide a large, divisible and unobstructed multipurpose event space of approximately 4,500 SF with a clear ceiling height of 15 feet. This space would be divided into three 1,500 SF sections. The event space would be leasable and served by associated support spaces.

[5] Based upon the proposed gross floor area of the Project, the Project-specific Traffic Impact Study Scoping Memorandum (Appendix I of the Initial Study, located in Appendix A of this Draft EIR) determined that the operation of the Project would result in an additional 721 daily trips along local roadways, per the Institute of Transportation Engineers (ITE) trip generation rate for a recreational community center use.

3. Maximize the use of natural light and ventilation to create a welcoming and energy-efficient space through the use of large windows and door openings, skylights, and open spaces.
4. The building and grounds would be accessible to people of all ages and abilities and would include grading and landscape design that provides an accessible primary route of travel.
5. Provide a connection to the natural environment through the creation of indoor/outdoor spaces.
6. Promote an unencumbered physical and visual connection to Moor Field to facilitate activities consistent with the existing joint-use agreement with the Alhambra Unified School District and to foster future opportunities for additional park and open space development and the alignment of Moor Field's programs and uses with those of the new community center.
7. Provide efficient day to day functionality, for City staff and the community at large, including loading, service access, and parking on-site and in the immediate vicinity to reduce impact to the surrounding neighborhood.
8. Create revenue generating functional spaces that can be utilized contemporaneously as other activities are ongoing in adjacent community center facilities.
9. Maximize the utility of the $25 million grant awarded by the State of California for the Project Site at 7th and W. Shorb Streets which expires mid-2026.
10. Provide a comprehensive program of activities and a gathering node for the community of South Alhambra.

b) Secondary Objectives

1. Incorporate modern technology for presentations, workshops and interactive displays to enhance education and information dissemination to the residents.
2. Incorporate acoustic attenuating materials and strategic placement of adjacent rooms and activities to minimize sound transmission and to ensure that different activities within the center can occur simultaneously without disturbance.
3. Implement environmentally friendly design elements, such as energy-efficient lighting, solar panels, rainwater harvesting and infiltration systems and materials made from recycled or renewable resources with the goal to reach LEED Silver standards.
4. Provide ample storage for equipment and materials related to various activities and programs, which would enhance the flexibility and usability of each space.
5. Provide out of door areas such as courtyards and gardens to foster outdoor activities, social interactions and relaxation. Some of these outdoor areas are to be secured when the building is closed.
6. Accommodate the current and future mobility goals of the City for bicycle and pedestrian traffic as well as alternative forms of access.

6. Discretionary Actions and Approvals

In addition to the development of the community center buildings, the Project proposes the vacation of W. Shorb Street between S. 7th Street and S. 6th Street. Other discretionary entitlements, reviews, and approvals required or requested for the Project may include, but would not necessarily be limited to, the following:

- City Council Review; and
- South Coast Air Quality Management District (SCAQMD) Rule 1403 Procedure 5 Plan approval.

In addition, the Project would require ministerial permits, including but not limited to demolition, grading, building, haul route, and engineering permits.

7. Intended Use of the EIR

This Draft EIR serves as the environmental document for consideration of the City's discretionary actions associated with development of the Project. This Draft EIR is also intended to cover all federal, state, regional, and/or local government discretionary or ministerial permits or approvals that may be required to develop the Project, whether or not they are explicitly listed above. State and regional agencies and City departments and commissions that may have jurisdiction over the Project include, but are not limited to:

- Alhambra Fire Department;
- Alhambra Police Department;
- Alhambra Public Works Department;
- Alhambra Utilities Department;
- Los Angeles Regional Water Quality Control Board; and
- South Coast Air Quality Management District.

This page intentionally left blank

III. Environmental Setting

1. Overview of Environmental Setting

CEQA Guidelines Section 15125 requires that an EIR include a description of the existing environment. This chapter provides a general overview of the environmental setting for the Project, however, detailed information on existing conditions for each environmental resource area evaluated in this Draft EIR is provided in Chapter IV, *Environmental Impact Analysis*. This chapter also provides an overview of related projects that are considered in the Draft EIR in evaluating cumulative impacts that could result from the Project together with other projects.

a) Regional Setting

The Project Site is located at 612 W. Shorb Street in the central portion of the City, in the San Gabriel Valley within Los Angeles County, bordered by the cities of Monterey Park, San Gabriel, San Marino, South Pasadena and Los Angeles. Regional access is provided by the San Bernadino Freeway (Interstate 10 [I-10]) located approximately 0.5 mile south of the Project Site. Local access to the Project Site is provided via W. Shorb Street, S. 7th Street, S. 6th Street, and W. Valley Boulevard. The Project Site is located 0.2 mile east of the W. Valley Boulevard/Atlantic Boulevard major transit stop, and as such, is within a half-mile of a High Quality Transit Corridor (HQTC) and located within a High Quality Transit Area (HQTA) (SCAG 2023).

b) Local Setting and On-Site Conditions

The Project Site is located at 612 W. Shorb Street within the City of Alhambra (City), see **Figure II-1**, *Regional and Project Vicinity Location*. Specifically, the Project site is located on a horizontally-oriented 'L'-shaped plot between S. 7th Street and S. 6th Street and includes the right-of-way at W. Shorb Street to the north (see **Figure II-2**, *Project Location – Aerial Photograph*). The Project site Assessor's Parcel number (APN) is 5350-007-900. The Project Site includes the existing 1.37-acre (59,485 SF) lot and the adjacent W. Shorb Street right-of-way, which the City intends to abandon to expand the Project Site by 17,707 SF. These two areas total 77,192 SF (1.77-acres).

The Project Site currently includes an existing one- and two-story abandoned brick medical clinic building (the Shorb Clinic) sited on the central portion of the Project Site. The existing Shorb Clinic, constructed in 1930 in the Monterey Style, totals 21,470 SF. Landscaped grass lawns currently surround the existing building. The brick building's footprint is comprised of two L-shaped forms: a two-story wing at the west side of the building and a one-story wing at the east side of the building. Mature trees and plantings are located primarily along the north, west, and east elevations. The existing surface parking lot is accessible from S. 6th Street and off a southern alleyway in the southwest

corner of the property. The Project Site slopes upward to the center of the lot, and two sets of steps extend from the sidewalk along W. Shorb Street towards the building.

c) Land Use Designation and Zoning

The General Plan Land Use designation for the Project Site is Public Facilities, which provides for the orderly development, use, and operation of buildings and other facilities operated and under the control of a public agency. The Public Facilities land use designation does not support residential and/or residential mixed-use projects. Per the Alhambra Zoning Code (Zoning Code), the Project Site is also zoned Public Facilities (PF). The PF Zoning Code is intended to provide for a broad range of government, institutional, educational, and other facilities operated and under the control of a public agency. The PF Zone implements the Public Facilities and Institutional General Plan Land Use Designations and allows a maximum building height of 5 stories/55 feet or if adjacent to a residential zone or use, 3 stories/40 feet.

d) Surrounding Uses

The area surrounding the Project Site is well developed. Land uses located adjacent to the Project Site include: Moor Field to the north, which is operated under a joint use agreement between the City and the Alhambra Unified School District; S. 6th Street to the east with single-family residential properties bordering the east side of S. 6th Street, the Alhambra Fire Department Station #72 immediately south with commercial uses, and W. Valley Boulevard beyond; and S. 7th Street immediately to the west with religious institutions beyond (although the parcel has a General Plan designation as low-density residential, the Evangelical Formosan Church of Alhambra occupies the site).

The surrounding areas to the north of the Project Site across W. Shorb Street has a General Plan land use designation of Open Space. Areas to the east and west are designated by the General Plan as Low Density Residential; and areas to the south are designated as a Public Facility associated with the Alhambra Fire Department and beyond that the linear Valley Specific Plan, which runs on the north and south side of Valley Boulevard.

The Project Site is served by several public transit options along Valley Boulevard, provided by the City of Alhambra and Los Angeles Metro. Most significantly, the Project Site is located within 500 feet of the W. Valley Boulevard/S. 6th Street bus stop, which serves Los Angeles County Metro Bus Line 76, as well as the Alhambra Community Transit Green Line. Other transit operations in the vicinity of the Project Site include Metro Bus Line 260 – Artesia Station to Pasadena via Atlantic-Fair Oaks, approximately 0.3 miles west of the Project Site.

e) Related Projects

Section 15130 of the State CEQA Guidelines requires EIRs to consider the significant environmental effects of a proposed project as well as the project's "cumulative impacts."

CEQA defines a cumulative impact as an impact that is created as a result of the combination of the project evaluated in the EIR together with other projects causing related impacts (State CEQA Guidelines Section 15355). As stated in State CEQA Guidelines Section 15130(a)(1), the cumulative impacts discussion in an EIR need not discuss impacts that do not result in part from the project evaluated in the EIR. Cumulative impacts may be analyzed by considering a list of past, present, and probable future projects producing related or cumulative impacts (State CEQA Guidelines Section 15130(b)(1)(A)).

All projects that are proposed (i.e., with pending applications), recently approved, under construction, or reasonably foreseeable that could contribute to a cumulative impact on the local environment when considered in conjunction with the proposed project are included in an EIR. These projects can include, if necessary, projects outside of the control of the lead agency. If a concise list of such projects is not available, cumulative impacts may be analyzed using the regional or area-wide growth projections contained in an adopted or certified general plan or related planning document. This EIR's cumulative impact analysis uses the project list methodology.

In the Draft EIR, cumulative impact analyses are provided for each environmental issue discussed in Chapter IV, *Environmental Impact Analysis*, and can be found in each respective subsection (e.g., Air Quality, Transportation, etc.) under the heading "Cumulative Impacts".

The list of other development projects (referred to throughout the Draft EIR as "cumulative projects") is based on information provided by the City of Alhambra's Community Development Department. Though the buildout years for these cumulative projects are uncertain and may be well beyond the projected buildout year of the proposed Project, and notwithstanding that some may never be approved or developed, all were considered as part of this Draft EIR and conservatively assumed to be completed by the Project buildout year. The locations of the cumulative projects are depicted on **Figure III-1**, *Cumulative Project Location Map*. A review was carried out of all projects that are proposed, on appeal, approved, or under construction and the following projects are within a 1-mile radius of the Project Site:

- 749-753, 801 S Sierra Vista Ave (Residential - 18 DU) - Planning approved, In Building plan check.
- 234 S Curtis Ave (New 4-unit 3,975 square foot apartment complex) - Planning approved, In Building plan check.
- 38 S Second St (Residential & Commercial Mixed Use – 50 DU) - Planning approved, In Building plan check.
- 1000 S 5th (PD-21-44 - Demo house/garage, rebuild 2-story home/garage) - Planning approved, In Building plan check.
- 123 S Marguerita Ave (4-unit, 4,000 square foot apartment complex) - Planning approved, Under construction.

- 205-207 S Marguerita Ave (7-unit, 13,197 square foot residential condominium development) - Planning approved, In Building plan check.
- 501 S Garfield (PD-22-33 - combine dental and office space) - Planning approved, In Building plan check.
- 727 S Sierra Vista Ave (New 6-unit, 5,471 square foot residential condominium complex) - Building permits issued.
- 823 S Sierra Vista (PD-23-62, VAR-23-18 - detached 2nd unit w/garage) - Planning approved, Not in Building plan check yet.
- 24 & 28 E Valley (Vehicle sales and vehicle accessories/parts sales; parking lot & site improvements) - Planning approved, Not in Building plan check yet.
- 1000 & 1008 S Garfield (PD-23-42, LOTM-23-04 – construct a dental clinic building) - Planning approved, Not in Building plan check yet (Proof of COA).
- 929 S 8th (PD-20-21 - ADU /2-car garage) - Planning approved, Under construction.
- 747-753 S Stoneman (Residential- Construction of 4 new residential buildings, 10-unit condos) - Planning approved, Construction complete, Permits ready for final.
- 720 S Stoneman Ave (7-unit, 6,477 square foot residential condominium complex) - In Planning process.
- 231-235 S Curtis Ave (New 9-unit, 12,650 square foot residential condominium complex) - In Planning process.
- 35-40-200 W Bay St (Expand church into adjacent office) - In Planning process.

IV. Environmental Impact Analysis

1. Introduction

The focus of Chapter IV is on the potentially significant adverse environmental impacts that could occur as a result of the Project. The sections included are those that have the potential to result in significant adverse impacts to the physical environment. The following sections are included in this chapter:

- Biological Resources (Section A)
- Cultural Resources (Section B)
- Geology and Soils (Section C)
- Noise (Section D)
- Tribal Cultural Resources (Section E)

Based on the Initial Study (**Appendix A** of this EIR), public comments received during the NOP circulation period, and input received during the EIR Scoping Meeting, it was determined that several issue areas would not be subject to significant impacts due to implementation of the Project. These issue areas include Aesthetics, Agriculture and Forestry Resources, Air Quality, Biological Resources (all except special-status species and the movement of wildlife species), Cultural Resources (human remains), Energy, Geology and Soils (all except paleontological resources), Greenhouse Gas Emissions, Hazards and Hazardous Materials, Hydrology and Water Quality, Land Use and Planning, Mineral Resources, Noise (airport land use plan, private airstrip), Population and Housing, Public Services, Recreation, Transportation, Utilities and Service Systems, and Wildfire. See Chapter VI, *Other CEQA Considerations*, and the Initial Study (**Appendix A**) of this Draft EIR for a discussion of those issue areas for which a detailed analysis is not included and the basis for those determinations.

2. Format of the Environmental Impact Analysis

Each section in this chapter addresses a specific environmental issue area as listed above and includes the following components:

- **Environmental Setting:** The Environmental Setting includes the Regulatory Framework and Existing Conditions subsections. The Regulatory Framework subsection presents information on the laws, regulations, plans, and policies that relate to the issue area being discussed. Regulations originating from federal, State, regional, and local levels are discussed as appropriate. The Existing Conditions subsection describes the physical characteristics and existing environmental conditions within and in the vicinity of the Project area.

- **Thresholds of Significance:** This subsection presents the criteria established by the Lead Agency to identify at what level an impact would be considered significant and require implementation of mitigation measures.
- **Methodology:** This subsection provides a description of the methodology used for the analysis of the environmental issue addressed in the section.
- **Project Design Features:** This subsection presents any relevant Project Design Features (PDFs) applicable to the environmental issue addressed in the section. PDFs are specific design elements or Project commitments that have been voluntarily incorporated into the Project that serve to minimize or avoid significant environmental effects. Because PDFs have been incorporated into the Project, they are accounted for in determining the significance of Project's impacts, and do not constitute mitigation measures, as defined by CEQA Guidelines Section 15126.4. However, the PDFs will be included in the Mitigation Monitoring and Reporting Program (MMRP) for the EIR to ensure their implementation is tracked and confirmed as the Project is carried out.
- **Analysis of Project Impacts:** This subsection provides an analysis of the nature and extent of potential Project impacts. These analyses address direct (or primary) effects of the Project as well as the indirect (or secondary) impacts. This subsection also provides any mitigation measures (beyond the PDFs) used to reduce or eliminate Project impacts that have been determined significant based on the established thresholds of significance.
- **Cumulative Impacts:** A discussion of the effects of the Project when combined with the effects of related projects, which include other past, present and future probable projects is provided. The approach to addressing cumulative impacts, including a list of related projects, is described in Chapter III, *Environmental Setting*, of this Draft EIR.
- **Mitigation Measures:** This subsection provides mitigation measures, if necessary, to reduce significant impacts identified in the analysis of the Project.
- **Level of Significance after Mitigation:** A discussion of the significance of each impact after mitigation is provided.

3. Terminology Used in this EIR

In evaluating the impacts of the Project, the impact is determined by applying the evaluation criteria, or threshold of significance, presented for each resource area. The following terms are used to describe the effect:

- **Threshold of significance:** A threshold of significance is a criterion applied by the Lead Agency to identify significant adverse environmental impacts. A threshold is defined by a Lead Agency based on guidance found in CEQA or the CEQA Guidelines, scientific and factual data relative to the Lead Agency jurisdiction, views of the public in affected areas, the policy/regulatory environment of affected jurisdictions, and other factors.

- **Less than significant impact:** A less than significant impact does not result in a substantial, or potentially substantial, adverse change in any of the physical conditions within the area affected by the project, including land, air, water, minerals, flora, fauna, ambient noise, and objects of historic or aesthetic significance (see CEQA Guidelines Section 15382). Impacts determined to be less than significant do not require mitigation measures.
- **Significant impact:** Public Resources Code (PRC) Section 21068 defines a significant impact as "a substantial, or potentially substantial, adverse change in the environment." The environmental checklist included as Appendix G of the CEQA Guidelines provides additional guidance for determining which impacts would be regarded as significant. This EIR applies the thresholds contained within Appendix G and identified in each section's "Thresholds of Significance," and uses the CEQA definition of "significant impact." Feasible mitigation measures or alternatives to the Project must be identified and adopted if they would avoid or substantially reduce the significant impact.
- **Significant and unavoidable impact:** A significant and unavoidable impact is a substantial adverse effect on the environment that cannot be avoided or mitigated to a less than significant level. A project with significant and unavoidable impacts could still proceed, but the City would be required to prepare a statement of overriding considerations, pursuant to CEQA Guidelines Section 15093, explaining what factors the City considered in approving the project notwithstanding the potential for significant environmental impacts.

As indicated above, the proposed Project includes PDFs which are features or commitments voluntarily committed to as part of the Project that serve to reduce or avoid environmental impacts. PDFs are accounted for in the Draft EIR analyses prior to determining the significance of Project impacts on a given environmental issue area. Chapter II, *Project Description*, of this Draft EIR provides a summary of the PDFs. The PDFs in their entirety are provided within each section of the applicable environmental issue area.

Mitigation measures are measures identified to avoid or reduce a significant impact that has been identified through environmental analysis. Mitigation measures generally include provisions for:

- Avoiding the impact by not taking a certain action or parts of an action;
- Minimizing the impact by limiting the degree or magnitude of the action and its implementation;
- Rectifying the impact by repairing, rehabilitating or restoring the affected environment;
- Reducing or eliminating the impact over time by preservation and maintenance operations during the life of the action; and
- Compensating for the effect by replacing or providing substitute resources or environments.

Both PDFs and mitigation measures will be adopted as part of the MMRP so that their implementation can be tracked by the City to ensure compliance.

IV. Environmental Impact Analysis

A. Biological Resources

1. Introduction

This section of the Draft EIR addresses the potential impacts of the Project on biological resources. Specifically, this section identifies sensitive biological resources that are known to occur or have the potential to occur on or near the Project Site, assesses the potential significant impacts to these biological resources from the Project, and recommends mitigation measures to avoid, minimize, or reduce the significance of any potential impacts, where necessary. In addition, this section analyzes the Project's incremental contribution to cumulative biological resources impacts from past, present, and reasonably foreseeable future projects. The biological resources and analysis described in this section are based on a literature review (included in **Appendix D** of this Draft EIR), the information and findings obtained during research conducted by ESA, and other sources referenced throughout this section.

2. Environmental Setting

a) Regulatory Framework

(1) Federal

(a) Federal Endangered Species Act (FESA)

The FESA of 1973, as amended (16 United States Code [USC] Sections 1531 et seq.), provides the regulatory framework for the protection of plant and animal species (and their associated critical habitats), which are formally listed, proposed for listing, or candidates for listing as endangered or threatened under the FESA. The FESA has four major components: (1) provisions for listing species; (2) requirements for consultation with the United States Fish and Wildlife Service (USFWS) and the National Marine Fisheries Service (NMFS); (3) prohibitions against "taking" of listed species; and (4) provisions for permits that allow an incidental "take." The FESA also discusses recovery plans and the designation of critical habitat for listed species. Both the USFWS and the NMFS share the responsibility for administration of the FESA. During the CEQA review process, each agency is given the opportunity to comment on the potential of a project to affect listed plants and animals.

The FESA is implemented by USFWS through a program that identifies and provides for protection of various species of fish, wildlife, and plants deemed to be in danger of or threatened with extinction. As part of this regulatory act, the FESA provides for

designation of critical habitat, defined in FESA Section 3(5)(A) as specific areas within the geographical range occupied by a species where physical or biological features "essential to the conservation of the species" are found and that "may require special management considerations or protection." Critical habitat may also include areas outside the current geographical area occupied by the species that are nonetheless "essential for the conservation of the species."

For purposes of this section, the following acronyms are used for federal status species:

FE Federally-listed as Endangered

FT Federally-listed as Threatened

FPE Federally proposed for listing as Endangered

FPT Federally proposed for listing as Threatened

FPD Federally proposed for delisting

FC Federal candidate species (former C1 species).

(b) Migratory Bird Treaty Act

All migratory bird species that are native to the United States or its territories are protected under the federal Migratory Bird Treaty Act (MBTA). The federal MBTA prohibits any person unless permitted by regulations, to "pursue, hunt, take, capture, kill, attempt to take, capture or kill, possess, offer for sale, sell, offer to purchase, purchase, deliver for shipment, ship, cause to be shipped, deliver for transportation, transport, cause to be transported, carry, or cause to be carried by any means whatever, receive for shipment, transportation or carriage, or export, at any time, or in any manner, any migratory bird, included in the terms of this Convention…for the protection of migratory birds…or any part, nest, or egg of any such bird" (16 USC Section 703).

The list of migratory birds protected by the MBTA includes nearly all bird species native to the United States. The statute was extended in 1974 to include parts of birds, as well as eggs and nests. Thus, it is illegal under the MBTA to take, including killing, capturing, selling, trading, and transport, protected migratory bird species without prior authorization by the USFWS (USFWS 2024c). Activities that result in removal or destruction of an active nest (a nest with eggs or young being attended by one or more adults) would violate the MBTA. While destruction of a nest by itself is not prohibited under the MBTA, nest destruction that results in the unpermitted take of migratory birds or their eggs is illegal and fully prosecutable under the MBTA.

(c) Federal Noxious Weed Act

Federal Noxious Weed Act - Public Law 93-629 (7 U.S.C. 2801 et seq.; 88 Stat. 2148), enacted January 3, 1975, established a Federal program to control the spread of noxious

weeds. The Secretary of Agriculture was given the authority to designate plants as noxious weeds by regulation, and the movement of all such weeds in interstate or foreign commerce was prohibited except under permit. The Secretary was also given authority to inspect, seize and destroy products, and to quarantine areas if necessary to prevent the spread of such weeds. The Secretary was also authorized to cooperate with other Federal, State and local agencies, farmers associations and private individuals in measures to control, eradicate, or prevent or retard the spread of such weeds (USFWS 1975).

(2) State

(a) California Endangered Species Act (CESA)

Under the CESA, the California Department of Fish and Wildlife (CDFW) is responsible for maintaining a list of threatened and endangered species. The CDFW also maintains a list of candidate species, which are species formally under review for addition to either the list of endangered species or the list of threatened species.

The CESA prohibits the take of plant and animal species that the California Fish and Game Commission has designated as either threatened, rare, or endangered in California. “Take” in the context of this regulation means to hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture, or kill a listed species. The take prohibitions also apply to candidates for listing under the CESA. However, CESA Section 2081 allows the CDFW to issue permits for the minor and incidental take of species by an individual or permitted activity listed under the CESA.

In accordance with the requirements of the CESA, an agency reviewing a project within its jurisdiction must determine if any State-listed endangered, rare, threatened, or candidate species could be present in the project area. The agency also must determine if the project could have a potentially significant impact on such species. In addition, the CDFW encourages informal consultation on any project that could affect any State-listed endangered, rare, threatened, or candidate species.

For the purposes of this section, the following acronyms are used for State listed status species:

SE State-listed as Endangered

ST State-listed as Threatened

SR State-listed as Rare

SCE State candidate for listing as Endangered

SCT State candidate for listing as Threatened

(b) California Fish and Game Code - Stream and Riparian Habitat, Fully Protected Species, and Species of Special Concern

Pursuant to California Fish and Game Code Section 1600, CDFW has authority over all perennial, intermittent, and ephemeral rivers, streams, and lakes in the state, and requires any person, state or local governmental agency, or public utility to notify the CDFW before beginning any activity that would "substantially divert or obstruct the natural flow of, or substantially change or use any material from the bed, channel, or bank of, any river, stream, or lake, or deposit or dispose of debris, waste, or other material containing crumbled, flaked, or ground pavement where it may pass into any river, stream, or lake" that supports fish or wildlife resources.

A stream is defined as a "body of water that flows at least periodically or intermittently through a bed or channel having banks and supports fish or other aquatic life. This includes watercourses having a surface or subsurface flow that supports or has supported riparian vegetation" (California Code of Regulations, Title 14 Section 1.72). A Lake or Streambed Alteration Agreement may be required for any Proposed Project that would result in an adverse impact to a river, stream, or lake. CDFW jurisdiction typically extends to the top of the bank and out to the outer edge of adjacent riparian vegetation if present. However, CDFW can take jurisdiction over a body of flowing water and the landform that conveys it, including water sources and adjoining landscape elements that are byproducts of and affected by interactions with flowing water without regard to size, duration, or the timing of flow.

The classification of "fully protected species" was the CDFW's initial effort to identify and provide additional protection to those animals that were rare or faced possible extinction. Lists were created for fish, amphibians and reptiles, birds, and mammals. Most of the species on these lists have subsequently been listed under CESA and/or FESA. The California Fish and Game Code Sections (fish in Section 5515, amphibians and reptiles in Section 5050, birds in Section 3511(b), and mammals in Section 4700) dealing with "fully protected" species state that these species "may not be taken or possessed at any time and no provision of this code or any other law shall be construed to authorize the issuance of permits or licenses to take any fully protected species," although take may be authorized for necessary scientific research. This language makes the "fully protected" designation the strongest and most restrictive regarding the "take" of these species. In 2003, the California Fish and Game Code sections dealing with fully protected species were amended to allow the CDFW to authorize takings resulting from recovery activities for State-listed species.

Species of "special concern" are broadly defined as animals not listed under the FESA or CESA but that are nonetheless of concern to the CDFW because they are declining at a rate that could result in listing or because they historically occurred in low numbers and

known threats to their persistence currently exist.[1] This designation is intended to result in special consideration for these animals by the CDFW, land managers, consulting biologists, and others, and is intended to focus attention on the species to help avert the need for listing under FESA and CESA, and recovery efforts that might ultimately be required. This designation is also intended to stimulate collection of additional information on the biology, distribution, and status of poorly known at-risk species, and focus research and management attention on them. Although these species generally have no special legal status, they may require consideration under CEQA during project review if they meet the definition of endangered, rare or threatened species in CEQA Guidelines Section 15380 which is not limited to listed species.

For the purposes of this section, the following acronyms are used for State protected or special status species:

SFP State Fully Protected

SSC California Species of Special Concern

(c) California Fish and Game Code Sections 3503 and 3513

According to Section 3503 of the California Fish and Game Code it is unlawful to take, possess, or needlessly destroy the nest or eggs of any bird, except English sparrows (*Passer domesticus*) and European starlings (*Sturnus vulgaris*). Section 3503.5 specifically protects birds in the orders Falconiformes and Strigiformes (birds-of-prey). Section 3513 prohibits the take or possession of any migratory non-game bird. Disturbance that causes nest abandonment and/or loss of reproductive effort is considered a "take" by the CDFW.

(d) Sensitive Vegetation Communities

Sensitive vegetation communities are natural communities and habitats that are unique, of relatively limited distribution in the region, or of particularly high wildlife value. These resources have been defined by federal, State, and local conservation plans, policies, or regulations. The CDFW ranks such vegetation communities as "threatened" or "very threatened" and keeps records of their occurrences in the California Natural Diversity Database (CNDDB). Sensitive vegetation communities are also identified by the CDFW on its List of California Natural Communities Recognized by the CNDDB. Impacts to these vegetation communities and habitats identified in local or regional plans, policies, regulations, or by federal or State agencies must be considered and evaluated under CEQA.

[1] CDFW, Species of Special Concern, https://wildlife.ca.gov/Conservation/SSC, accessed April 17, 2024.

(3) Local

(a) City of Alhambra General Plan 2019

The City's General Plan provides direction regarding the City's vision for future development in the City and includes several chapters to help guide the design of future development. It also contains several broad goals, objectives, and policies for neighborhood design to create a more livable city for existing and future residents. These goals and policies are stated not in terms of specific design guidelines but in terms of general neighborhood-wide design policies.

The General Plan serves as a guide for the City's overall long-range growth and development policies and serves as a guide to update community plans, specific plans, and the citywide elements. These citywide elements address functional topics that cross community boundaries, such as transportation, and address these topics in detail.

The General Plan consists of seven elements, including the Land Use and Community Design Element, Mobility Element, Quality of Life Element, Resources Element, Services and Infrastructure Element, Health and Safety Element, and Housing Element. Each element addresses its respective subject and the City's 20-year vision for the future. With regard to biological resources, the General Plan's Resources Element establishes the following goals and policies applicable to the Project:

> **Goal R-2:** Conservation and enhancement of open spaces, greenbelts, and natural areas.
>
> > *Policy R-2B:* Explore opportunities to incorporate green space into development projects and expand open spaces in the City.
> >
> > *Policy R-2C:* Avoid impacts to sensitive biological species and habitats through compliance with state and federal laws and regulations pertaining to biological resource conservation.

(b) Tree Preservation Ordinance

City of Alhambra's Zoning Code Section 23.12.170, *Tree Preservation*, was established to recognize oaks and other California native and mature trees as significant aesthetic and ecological resources and to create favorable conditions for the preservation and propagation of plant heritage for the benefit of the current and future residents of the City.[2].

[2] It should be noted that as of August 2024, the zoning code is in the process of being revised to exempt City projects from the application of the zoning code. It is anticipated the City Council's consideration of such amendments will be complete prior to the completion of the Final EIR. As such, the current Tree Preservation Ordinance identified would not apply to this Project should the City Council adopt the revised code. In that event, the City would not be required to conform to these requirements.

The following classes are considered protected trees:

- *Quercus* family trees (oaks) taller than 15 feet, or with a trunk diameter larger than 12 inches in diameter, or 36 inches in circumference, measured at a point four and one-half feet above the root crown.
- California native trees taller than 15 feet, or with a trunk diameter larger than 12 inches in diameter, or 36 inches in circumference, measured at a point four and one-half feet above the root crown.
- Mature tree: A tree taller than 20 feet or with a trunk diameter larger than 24 inches in diameter, or 75 inches in circumference, measured at a point four and one-half feet above the root crown.

The code requires an application for a Tree Permit for the removal of a healthy protected tree on private property. The Project Site is not located on private property, and therefore the Tree Preservation Ordinance does not apply.

b) Biological Resources Background

The Project Site is located in a developed urban area in the City of Alhambra, and the Project Site and adjacent areas are fully developed with public facilities and residential and commercial uses. The existing building and mature trees located on the Project Site present the only potential habitat for special-status wildlife species consisting primarily of bat species. A Construction Site Tree Evaluation Report (hereafter referenced as the 'tree survey') was conducted by West Coast Arborists in October 2023, and is located in Appendix C of the Initial Study, which is located in **Appendix A** of this Draft EIR.

(1) General Characterization of the Project Site

The potential for special-status species to occur on the Project Site is based on the presence of suitable habitat, the known distribution and habitat requirements of a species, and the proximity of the site to previously recorded occurrences. Additional sources of information used to determine habitat suitability and potential for presence of special-status species include aerial photographs, topographic maps, soil survey maps, geological maps, and Project plans. ESA conducted a literature review, which included a review of the CDFW's California Natural Diversity Database (CNDDB) (CDFW 2024a), the California Native Plant Society's (CNPS) Online Inventory of Rare and Endangered Plants (CNPS 2024), and the USFWS's Information for Planning and Consultation (IPaC) (USFWS 2024a). These databases are sensitive resource databases for special-status species known to occur in the Project vicinity.

(2) Land Cover Types and Vegetation Communities

The nomenclature used to describe the vegetation is based on *A Manual of California Vegetation*, *Second Edition (Manual)*(Sawyer et al. 2009), or land cover types are characterized based on species dominance when not recognized in the *Manual*. Land

cover types located within the Project Site and surrounding areas are described in detail below. No vegetation communities exist on the Project Site.

The entire Project Site (1.77 acres) is developed with the existing Shorb clinic, including a portion of W. Shorb Street, paved pedestrian access paths, parking, ornamental landscaping, and other pedestrian-related improvements. Based on the tree survey conducted, ornamental landscaping within the Project Site comprises mostly non-native, landscape species, which include Italian cypress (*Cupressus sempervirens*), olive (*Olea europaea*), evergreen pear (*Pyrus kawakamii*), Hollywood juniper (*Juniperus chinensis 'Torulosa'*), jacaranda (*Jacaranda mimosifolia*), crape myrtle (*Lagerstroemia indica*), and carrot wood (*Cupaniopsis anacardioides*). In addition, three native species are intermixed within the ornamental landscaping, including coast live oak (*Quercus agrifolia*), hollyleaf cherry (*Prunus ilicifolia*), and one California fan palm (*Washingtonia filifera*), which is dead.

As described in the tree survey, 40 trees were identified during the tree survey of the Project Site. The Alhambra Zoning Code Section 23.12.170, *Tree Preservation,* only protects trees on private property. The Project Site is not located on private property, and therefore the Tree Preservation Ordinance does not apply. Nevertheless, as mentioned in Chapter II, *Project Description*, of this Draft EIR, plantings would feature California Native trees such as Engelmann Oak (*Quercus engelmannii*) and Torrey Pine (*Pinus torreyana*), where possible, with a focus on providing shade and interest. Existing trees removed for ill health or construction would be replaced with in kind species or with California Natives, where appropriate. New shrubs and ground cover would be drought tolerant and maintainable.

(3) Wildlife Movement Corridors

Wildlife corridors link together areas of suitable habitat that are otherwise separated by rugged terrain, changes in vegetation, or human disturbance. The fragmentation of open space areas by urbanization creates isolated "islands" of wildlife habitat. In the absence of habitat linkages that allow movement to adjoining open space areas, various studies have concluded that some wildlife species, especially the larger and more mobile mammals, will not likely persist over time in fragmented or isolated habitat areas because they prohibit the infusion of new individuals and genetic material (MacArthur and Wilson 1967, Soulé 1987, Harris and Gallagher 1989, Bennett 1990).

Wildlife movement activities usually fall into one of three movement categories: (1) dispersal (*e.g.*, juvenile animals from natal areas, or individuals extending range distributions); (2) seasonal migration; and (3) movements related to home range activities (foraging for food or water, defending territories, searching for mates, breeding areas, or cover). Although the nature of each of these types of movement is species specific, large open spaces will generally support a diverse wildlife community representing all types of movement (Fahrig and Merriam 1985). Each type of movement may also be represented at a variety of scales from non-migratory movement of amphibians, reptiles, and some

birds, on a “local” level to many square mile home ranges of large mammals moving at a “regional” level.

Due to its urban setting, the Project Site supports limited potential live-in and marginal movement habitat for species on a local scale (*e.g.*, birds and small mammal species). The limited potential for local movement is due to the limited resources for wildlife as a result of the existing commercial development, which is subject to frequent human disturbance. The Project Site does not facilitate wildlife movement for species on a regional scale and is not identified as a regionally important dispersal or seasonal migration corridor because only urban-tolerant species are present and there is no suitable adjacent wildlife habitat to which to disperse or migrate. As discussed above, wildlife corridors link together areas of suitable habitat that are otherwise separated by rugged terrain, changes in vegetation, or human disturbance. The Project Site is located proximate to major roadways and urban development. The Project Site is not within any linkages identified by the South Coast Missing Linkages report (South Coast Wildlands 2008); the closest linkage designs identified are the San Gabriel – San Bernardino Connection, located approximately 25 miles northeast and the Santa Monica – Sierra Madre Connection, located approximately 28 miles northwest. Since the Project Site is not identified as a linkage by the South Coast Wildlands and it does not support habitat that connects two or more habitat patches that would otherwise be fragmented or isolated from one another, the Project Site is not considered a wildlife corridor. Regional movement through the Project Site and the surrounding vicinity is greatly restricted due to the urbanization of the region and the proximity to major roadways (Mission Road and Valley Boulevard) and the nearby I-10. The eastern, western, and southern portions of the Project Site are located adjacent to major roadways and urban development. Although the Alhambra Wash is less than 1.3 miles to the northeast, it would not provide wildlife movement to the Project Site because of the nearly vertical walls of the channel and the intervening urban development blocking direct access. Thus, no regional movement through the Project Site is expected as a consequence of the urbanized region and the proximity to major transportation routes.

Movement on a local scale likely occurs with species adapted to urban environments (*e.g.*, common birds, rodents). Local movement, however, is not restricted for aerial species, such as birds, which have the ability to travel over or around potential movement obstacles, such as roadways or construction sites. On the Project Site and adjacent areas, numerous trees, shrubs, and other vegetation are present that would allow bird species to roost, nest, and forage.

(4) Sensitive Biological Resources

The following is a discussion of the sensitive biological resources that occur or have the potential to occur on the Project Site based on existing conditions and habitat requirements for special-status species. Special-status species are those that have been afforded special recognition by federal, State, or local resource conservation agencies and organizations. The CNDDB and CNPS databases were queried for special-status

species records within the Los Angeles United States Geological Survey topographic quadrangle and the surrounding eight quadrangles, including El Monte, Mt. Wilson, Pasadena, Burbank, Hollywood, Inglewood, South Gate, and Whitter.

(a) Sensitive Natural Communities

A review of the most current edition of CDFW's *California Natural Community List* (CDFW 2023) developed for the CNDDB was conducted to determine if any of the plant communities mapped within the Project Site are considered "rare and worthy of consideration". CDFW considers any plant alliance with a State (S; within California) rank of S1 to S3 to be considered a sensitive community. Global (G; full natural range within and outside of California) rarity ranks follow the same system as that for State ranks. The Project Site is developed and does not support any CNDDB high inventory priority (i.e., G3/S3 or rarer) communities that are considered sensitive due to their decline in the region and/or their ability to support sensitive species.

(b) Special-Status Plant Species

Special-status plants include those listed or candidates for listing by the USFWS and CDFW, as well as species considered special-status by both CDFW and CNPS (California Rare Plant Ranks [CRPRs] 1A, 1B, 2A, and 2B). Several plant species were reported in the vicinity based on CNDDB, CNPS, and IPaC searches, totaling 75 species within the 9-quadrangle search, which includes the Project Site. No special-status plant species are present within the Project Site, and none are expected to occur within the Project Site for one or more of the following reasons: 1) the lack of suitable habitat within the Project Site, 2) the Project site location is outside of the species' elevation range or distribution, and/or 3) the lack of suitable microhabitat (*e.g.*, soils, hydrology, etc.) within the Project Site. Thus, focused plant surveys are not warranted. Furthermore, the Project Site is not within critical habitat for any listed plant species.

(c) Special-Status Wildlife Species

Special-status wildlife species include those species listed as Endangered or Threatened under the FESA or CESA, candidates for listing by the USFWS or CDFW, and Species of Special Concern to the CDFW. A total of 35 special-status wildlife species were reported in the search based on CNDDB and IPaC, which includes the Project Site and the surrounding 9 USFWS quadrangles. Three of the species were identified as having a low potential to occur within the Project Site based on the literature review and presence of suitable habitat on the Project Site. No special-status species have a high potential to occur on site. The three species with potential to occur on the Project Site are discussed in more detail here:

Hoary bat (*Lasiurus cinereus*): This bat species is not a State Species of Special Concern. This species is found throughout California. Habitats suitable for bearing young include all woodlands and forests with medium to large trees and dense foliage. During migration in southern California, males are found in foothills, deserts, and mountains, and females have been found in lowlands and coastal valleys.

Hoary bat was determined to have a low potential to roost and forage on the Project Site because there is limited marginal habitat on site and there are no recent nearby occurrences recorded in the CNDDB. Although the species roosts in trees, it tends to roost at the edge of clearings and prefers forested habitats. Trees within the ornamental landscaping on-site do not constitute woodland or forest habitat. In addition, the tree evaluation report determined that the majority of the trees on site were in poor to fair shape. There are three occurrences of the species in the CNDDB recorded within approximately 5 miles of the Project Site, all of which were recorded in 1945 or earlier. The most recent nearby occurrence was recorded in 1992 approximately 8 miles northwest of the Project Site (Western Bat Working Group 2024a).

Pallid bat (*Antrozous pallidus*): This bat species is a State Species of Special Concern. This species is associated with grasslands, shrublands, woodlands, and forests from sea level up through mixed conifer forests. The species is most common in open, dry habitats with rocky areas for roosting; however, the species has been observed to roost in both human-occupied and vacant buildings (Western Bat Working Group 2024b).

Although there is potential roosting habitat present on the Project Site, pallid bat was determined to have a low potential to roost and forage on the Project Site because there is limited marginal habitat for roosting (*e.g.*, a building) or foraging, there are no woodland habitats in the vicinity, and there are no recent occurrences in the vicinity. The three occurrences recorded in the CNDDB within 5 miles of the Project Site were recorded in 1932 or earlier in areas associated with habitat that is more suitable for the species. The most recent occurrence was recorded approximately 9 miles west of the Project Site in 1971.

Western mastiff bat (*Eumops perotis californicus*): This bat species is a State Species of Special Concern. This species is associated with many open, semi-arid to arid habitats, including conifer and deciduous woodlands, coastal scrub, annual and perennial grasslands, palm oases, chaparral, desert scrub, and urban settings.

Western mastiff bat was determined to have low potential to roost and forage on the Project Site because there is limited marginal habitat suitable for roosting (*e.g.*, palm trees) or foraging on the site and there are no recent occurrences in the vicinity recorded in the CNDDB. The species is found primarily in desert areas and favors habitats with open space such as woodlands and grasslands. The trees on site could potentially provide a temporary roosting site for western mastiff bat, although their roosts are typically in crevices of cliffs and at least 15 feet above the ground. There are only three palm species on the site: one California fan palm, which is dead, and two Mexican fan palms, which are 10 and 5 feet tall, respectively, and thus provide limited, low-quality palm tree habitat. The nearest CNDDB occurrence of this species within the vicinity of the Project Site was recorded in 1918, approximately 700 feet to the north, and most records for this species occur over 5 miles away from the Project Site. The most recent occurrence in the vicinity was in 1991 and approximately 11 miles west of the Project Site.

(5) Migratory Birds and Raptors

The Project Site supports potential nesting and foraging habitat for numerous migratory birds and raptor species. There are trees and shrubs on site that could be used as nesting sites, as well as areas where ground-nesting species could nest.

(6) Critical Habitat

Under the FESA, the USFWS and NMFS are required to designate Critical Habitat for endangered and threatened species. Critical Habitat is defined as areas of land, water, and air space containing the physical and biological features essential for the survival and recovery of endangered and threatened species. Designated Critical Habitat includes sites for breeding and rearing, movement or migration, feeding, roosting, cover, and shelter. Designated Critical Habitats require special management and protection of existing resources, including water quality and quantity, host animals and plants, food availability, pollinators, sunlight, and specific soil types. Critical Habitat delineates all suitable habitat, occupied or not, essential to the survival and recovery of the species.

The nearest designated Critical Habitat is approximately 3.8 miles to the southeast of the Project Site for coastal California gnatcatcher (*Polioptila californica californica*) (USFWS 2024b). There is no connectivity between the Project Site and the Designated Critical Habitat because the locations are separated by residential development and freeways and highways.

3. Project Impacts

a) Thresholds of Significance

In accordance with the State CEQA Guidelines Appendix G (Appendix G), the Project would have a significant impact related to biological resources if it would:

Threshold a) ***Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?***

Threshold b) ***Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?***

Threshold c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

Threshold d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery site?

Threshold e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

Threshold f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

In assessing impacts related to biological resources in this section, the City used Appendix G as the thresholds of significance. Potentially significant impacts related to biological resources are discussed and analyzed further below.

The City determined in the Initial Study that the following environmental issue areas would result in no impacts or less-than-significant impacts, and therefore, they are scoped out of this Draft EIR. Please refer to **Appendix A** of this Draft EIR for a copy of the Initial Study and additional information regarding the following issue areas:

Threshold b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?

Threshold c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

Threshold e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

Threshold f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

As detailed in the Initial Study, impacts related to adverse effects on riparian habitat or other sensitive natural community, wetlands, local policies, or ordinances protecting biological resources and approved local, regional, or state habitat conservation plans were determined to be no impact or less-than-significant and therefore are not addressed in this Draft EIR.

b) Methodology

The analysis below examines the potential direct and indirect impacts to plant and wildlife resources that may occur as a result of implementation of the Project. Direct impacts involve the loss, modification, or disturbance of natural habitats (*i.e.*, vegetation or plant communities), which in turn directly affect plant and wildlife species dependent on that habitat. Direct impacts also include the destruction of individual plants or wildlife, which is typically the case in species of low mobility (*e.g.*, plants, amphibians, reptiles, and small mammals). The collective loss of individuals in these manners may also directly affect regional population numbers of a species or result in the physical isolation of populations, thereby reducing genetic diversity and, hence, population stability.

Indirect impacts involve the effects of increases in ambient levels of sensory stimuli (*e.g.*, noise, light), unnatural predators (*e.g.*, domestic cats and other non-native animals), and competitors (*e.g.*, exotic plants, non-native animals). Indirect impacts may be associated with the construction and/or eventual habitation/operation of a project; therefore, these impacts may be both short-term and long-term in their duration. These impacts are commonly referred to as “edge effects” and may result in changes in the behavioral patterns of wildlife as well as reduced wildlife diversity and abundance in habitats adjacent to the Project Site.

The determination of impacts in this analysis is based on both the Project development and the sensitivity of plant and wildlife species to be affected.

c) Analysis of Project Impacts

Threshold a) Would the project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?

(1) Impact Analysis

(a) Candidate, Sensitive, or Special-Status Plants

(i) Direct impacts

Development of the Project Site would result in the demolition of some existing buildings and the direct removal of numerous ornamental tree species. The existing trees on site

were in poor to fair shape due to the lack of regular irrigation and maintenance during the approximately twenty year period since the building was closed in 2002 (West Coast Arborists 2023). Common tree species present within the Project Site occur in large numbers throughout the region, and their removal does not meet the significance thresholds defined above for impacts to candidate, sensitive, or special-status species.

A total of 40 special-status plant species were reported in the vicinity of the Project Site based on CNDDB and CNPS records searches. Because of the high level of human disturbance, the urban setting, and the lack of suitable habitat to support special-status plants, none of the 40 species are expected to occur on the Project Site. Therefore, the Project would have no direct impact on candidate, sensitive, or special-status plant species.

(ii) Indirect impacts

Indirect impacts to special-status plant species from the Project would not meet the significance threshold defined above because none of the 40 special-status plant species identified in the records searches are expected to occur within the Project Site. Indirect Project construction and operation activities, including changes in the ambient levels of light and noise, would not result in significant impacts to special-status, candidate, and/or sensitive plant species because only common or cultivated species are found within the Project Site and no candidate, sensitive, or special-status species are expected.

(b) Candidate, Sensitive, or Special-Status Wildlife Species

(i) Direct Impacts

Development of the Project Site would potentially result in the disruption and removal of habitat and loss or displacement of special-status wildlife species. A total of 32 special-status wildlife species of the 35 such species identified as recorded in the Project vicinity in available databases are not expected to occur within the Project Site due to the lack of suitable habitat or because the Project Site is outside the known distribution range for the species. Because these 32 species are not expected to be present on the Project Site, the Project would have no impact on these species.

Three bat species were identified as having a low potential to occur within the Project Site. Hoary bat, which is not a State Species of Special Concern, was determined to have a low potential to be present on the Project Site due to lack of quality habitat and recent nearby CNDDB occurrences. Pallid bat and western mastiff bat, which are State Species of Special Concern, were also determined to have a low potential to be present on the Project Site due to lack of quality habitat and recent nearby CNDDB occurrences. As discussed above, the Project Site is highly developed and surrounded by other highly developed land. The only potential habitat for these species on the site consists of ornamental trees and a vacant building that would be low quality, marginally suitable habitat for roosting; thus, there is a low potential for these three species to occur within the Project Site, and even if present, redevelopment of the Project Site would not

significantly impact regional populations of these species. Due to the low potential that these bat species would occur on the Project Site, Project direct impacts to these species would be less than significant.

(ii) Indirect Impacts

Indirect effects of the Project (*e.g.*, lighting, noise) would be similar to those currently experienced from existing on-site conditions, because the Project land use (i.e., community center) would be similar to the existing land uses (i.e., community clinic) and surrounding land uses (i.e. recreational uses). Regardless, due to the low potential that these bat species would occur on the Project Site, Project indirect impacts to these species would be less than significant.

(2) Mitigation Measures

As no candidate, sensitive, or special-status plants occur on the Project Site, no impacts would occur. Thus, no mitigation measures for candidate, sensitive, or special-status plants are required.

Because there is low potential for any candidate, sensitive, or special-status wildlife species to occur on the Project Site, impacts would be less than significant. Therefore, no mitigation measures for candidate, sensitive, or special-status wildlife species are required.

(3) Level of Significance After Mitigation

As no candidate, sensitive, or special-status plants occur on the Project Site, no impacts would occur. Therefore, no mitigation measures were required or included.

Because there is low potential for any candidate, sensitive, or special-status wildlife species to occur on the Project Site, impacts would be less than significant. Therefore, no mitigation measures were required or included.

Threshold d) Would the Project interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery site?

(1) Impact Analysis

(a) Wildlife Movement and Corridors

Although construction of the Project would likely cause short-term disturbance to local wildlife movement through the removal of the mature trees on site, these effects would not likely affect wildlife movement on a regional scale due to the urban setting of the Project Site, the low quality of any potential habitat, and absence of regional wildlife movement corridors within the Project Site. Any species that would occur on the Project Site would be urban-adapted species and could use other sites nearby for foraging and

nesting. Moreover, the majority of the trees currently present on the Site are in poor to fair condition. The Project Site is not within or adjacent to any existing wildlife corridors or connectivity areas, and construction and operations would therefore not impact any such areas. In addition, site conditions after completion of construction are expected to be similar to current conditions, if not better as a result of the trees that would be planted, as detailed in Chapter II, *Project Description*, of this Draft EIR. Therefore, Project impacts on the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors would be less than significant.

(b) Native Wildlife Nursery Sites

Potential wildlife nursery sites within the Project Site include a vacant building and ornamental trees. As discussed earlier, bats have a low potential to occur on the Project Site due to the low quality of habitat and the urban setting. However, nesting birds have the potential to use the ornamental trees and shrubs on site for nesting and foraging. The quality of most trees currently on the Project Site was determined to be poor to fair. It is likely that many of the trees would be replaced with similar trees or California native trees. There are also other similar sites nearby that could be used for foraging and nesting while construction is occurring. Thus, there would be less than significant long-term impact to the available potential nesting habitat on the Project Site.

Nesting activity typically occurs from February 1 to August 31 for songbirds and January 1 to August 31 for raptors. Disturbing or destroying active nests is a violation of the MBTA. In addition, California Department of Fish and Game Code 3513 provides protection to the birds listed under the MBTA, and nests and eggs are protected under Fish and Wildlife Code Section 3503. As such, there is potential for significant impacts to nesting bird in the form of direct impacts (*e.g.*, through nest removal) or indirect impacts (*e.g.*, by noise or human activities causing abandonment of the nest). Mitigation Measure BIO-MM-1 would reduce any direct and indirect impacts to nesting birds to a less-than-significant level. Therefore, with implementation of Mitigation Measure BIO-MM-1, direct impacts to wildlife nursery sites, including bird nesting sites, would be reduced to a less than significant level.

Lighting and noise levels would be similar to the current levels. Therefore, indirect impacts from lighting, noise, and human activity during Project operation would not diminish long-term survival of nesting birds and, therefore, would not be significant.

(2) Mitigation Measures

The following mitigation measure is proposed to reduce potentially significant direct impacts on native wildlife nursery sites (nesting bird species):

> **BIO-MM-1:** Prior to the issuance of any grading permit that would remove potentially suitable nesting habitat for raptors or songbirds, the City of Alhambra shall demonstrate and guarantee to the satisfaction of the City Planning Department that either of the following has been or shall be accomplished:

1. Vegetation removal activities will be scheduled outside the nesting season (September 1 to January 31 for songbirds; September 1 to December 31 for raptors) to avoid potential impacts to nesting birds.
2. Any construction activities that occur during the nesting season (February 1 to August 31 for songbirds; January 1 to August 31 for raptors) will require that all suitable habitat be thoroughly surveyed for the presence of nesting birds by a qualified biologist experienced in avian nesting bird behavior (*i.e.*, a professional biologist with a minimum of two years of avian survey experience or equivalent) within 7 days before commencement of clearing. If any active nests are detected, a buffer of 300 feet around the nest (500 feet for raptors), or as determined appropriate by the qualified biologist based on species- and site-specific conditions, will be delineated, flagged, and avoided until the nesting cycle is complete. The buffer may be modified and/or other recommendations proposed to minimize disturbance to the nest as determined appropriate by the qualified biologist.

(3) Level of Significance After Mitigation

Project impacts regarding wildlife corridors would be less than significant, and no mitigation measures are required or included.

By avoiding nesting season, or by conducting pre-construction surveys during nesting season and avoiding direct impacts to active nests, potentially significant direct and indirect impacts on nesting bird species would be reduced to a less-than-significant level with implementation of Mitigation Measure BIO-MM-1.

d) Cumulative Impacts

(1) Impact Analysis

There are 16 related projects that were considered in the cumulative impacts analysis (as detailed within Chapter III, *Environmental Setting*, of this Draft EIR). These projects are all within one mile of the Project Site and are also in developed urban settings. The majority are projects to build apartment or condominium complexes, along with a few small commercial projects. Because these projects are in the same urbanized area as the Project Site, they likely have similarly low potential to impact biological resources.

The Project Site is in an urbanized area and is already developed with limited biological resources (i.e., nesting birds), and would propose redevelopment of the Project Site that would continue to support nesting birds. Site conditions after completion of construction are expected to be similar to current conditions, if not better as a result of the trees that would be planted, as detailed in Chapter II, *Project Description*, of this Draft EIR. The 16 related projects that were considered in the cumulative impacts analysis are also within existing urbanized areas that are already developed and have limited biological resources. Thus, the Project, together with all the cumulative projects, would not combine to create a potentially significant cumulative impact to biological resources.

(2) Mitigation Measures

No additional mitigation measures are required beyond those identified for the proposed Project.

(3) Level of Significance After Mitigation

Cumulative impacts for the Project related to biological resources would be less than significant without additional mitigation measures beyond that identified for nesting bird species.

IV. Environmental Impact Analysis

B. Cultural Resources

1. Introduction

This section evaluates potential impacts on archaeological resources and historical resources. The analysis is based on the *Alhambra Community Center Project – Archaeological Resources Assessment Report* (Archaeological Assessment Report) and *Alhambra Heath Center, 612 West Shorb Street Historic Resource Assessment* (Historic Resources Assessment Report) prepared by ESA (2024a and b) provided in **Appendix E** and **Appendix F**, respectively, of this Draft EIR.

2. Environmental Setting

a) Regulatory Framework

(1) Federal

(a) National Historic Preservation Act of 1966

The principal federal law addressing historic properties is the National Historic Preservation Act (NHPA), as amended (54 USC 300101 et seq.), and its implementing regulations (36 CFR Part 800). Section 106 of the NHPA requires a federal agency with jurisdiction over a proposed federal action (referred to as an "undertaking") to take into account the effects of the undertaking on historic properties, and to provide the Advisory Council on Historic Preservation (ACHP) an opportunity to comment on the undertaking.

The term "historic properties" refers to "any prehistoric or historic district, site, building, structure, or object included in, or eligible for inclusion in, the National Register" (36 CFR Part 800.16(*l*)(1)). The implementing regulations (36 CFR Part 800) describe the process for identifying and evaluating historic properties, for assessing the potential adverse effects of federal undertakings on historic properties, and seeking to develop measures to avoid, minimize, or mitigate adverse effects. The Section 106 process does not require the preservation of historic properties; instead, it is a procedural requirement mandating that federal agencies take into account effects to historic properties from an undertaking prior to approval.

The steps of the Section 106 process are accomplished through consultation with the State Historic Preservation Officer (SHPO), federally recognized Indian tribes, local governments, and other interested parties. The goal of consultation is to identify potentially affected historic properties, assess effects to such properties, and seek ways

to avoid, minimize, or mitigate any adverse effects on such properties. The agency also must provide an opportunity for public involvement (36 CFR 800.1(a)). Consultation with Indian tribes regarding issues related to Section 106 and other authorities (such as NEPA and Executive Order No. 13007) must recognize the government-to-government relationship between the Federal Government and Indian tribes, as set forth in Executive Order 13175, 65 FR 87249 (November 9, 2000), and Presidential Memorandum of November 5, 2009.

Under the NHPA, the Secretary of Interior is responsible for establishing professional standards and for providing guidance on the preservation of the nation's historic properties. See below discussion of these standards.

(b) National Register of Historic Places

The National Register of Historic Places (National Register) was established by the NHPA of 1966, as "an authoritative guide to be used by federal, state, and local governments, private groups and citizens to identify the Nation's historic resources and to indicate what properties should be considered for protection from destruction or impairment" (36 CFR 60.2) (U.S. Department of the Interior 2002). The National Register recognizes a broad range of cultural resources that are significant at the national, state, and local levels and can include districts, buildings, structures, objects, prehistoric archaeological sites, historic-period archaeological sites, traditional cultural properties, and cultural landscapes. As noted above, a resource that is listed in or eligible for listing in the National Register is considered "historic property" under Section 106 of the NHPA.

To be eligible for listing in the National Register, a property must be significant in American history, architecture, archaeology, engineering, or culture. Properties of potential significance must meet one or more of the following four established criteria:

A. Are associated with events that have made a significant contribution to the broad patterns of our history
B. Are associated with the lives of persons significant in our past
C. Embody the distinctive characteristics of a type, period, or method of construction or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction
D. Have yielded, or may be likely to yield, information important in prehistory or history

In addition to meeting one or more of the criteria of significance, a property must have integrity. Integrity is defined as the ability of a property to convey its significance. The National Register recognizes seven qualities that, in various combinations, define integrity, including location, design, setting, materials, workmanship, feeling, and association. To retain historic integrity, a property must possess several, and usually most, of these seven aspects. Thus, the retention of the specific aspects of integrity is paramount for a property to convey its significance.

Ordinarily, religious properties, moved properties, birthplaces or graves, cemeteries, reconstructed properties, commemorative properties, and properties that have achieved significance within the past 50 years are not considered eligible for the National Register unless they meet one of the Criteria Considerations (A-G), in addition to meeting at least one of the four significance criteria and possessing integrity.

(c) Archaeological Resources Protection Act of 1979

The Archaeological Resources Protection Act of 1979 (ARPA) (16 USC 470aa-470mm) was enacted to "secure, for the present and future benefit of the American people, the protection of archaeological resources and sites which are on public lands and Indian lands, and to foster increased cooperation and exchange of information between governmental authorities, the professional archaeological community, and private individuals." Under this Act, archaeological resources are defined as material remains of past human life or activities that are of archaeological interest and are over 100 years old. The primary focus of the Act is to protect archaeological resources on public and Indian lands, and to prevent looting and destruction of archaeological resources. The statute provides for stiff civil and criminal penalties, including fines up to $100,000 and/or 5 years in prison for second-time offenders. The Act also governs archaeological excavation and disposition of collections from sites on public and Indian lands, and requires researchers to obtain a permit prior to excavating or removing any archaeological materials on federal lands. The Act further requires that the nature and location of archaeological resources be kept confidential unless providing the information would further the purposes of the statute and not create a risk of harm to such resources.

(d) Native American Graves Protection and Repatriation Act of 1990

Requirements for responding to discoveries of Native American human remains and associated funerary objects on federal land are addressed under the Native American Graves Protection and Repatriation Act of 1990 (NAGPRA) (25 USC 3001–3013) and its implementing regulations (43 CFR Part 10). If human remains, funerary objects, sacred objects, or objects of cultural patrimony are discovered on federal or tribal lands, the federal agency must determine and consult with the lineal descendants and culturally affiliated Indian tribes, and carry out appropriate treatment and disposition of the discovered remains, including transfer of custody. An *Indian tribe* is defined as any tribe, band, nation, or other organized group or community of Indians that is recognized as eligible for the special programs and services provided by the U.S. to Indians because of their status as Indians. NAGPRA does not require federal agencies to consult with non-federally recognized tribes. However, there are some cases in which non-federally recognized tribes may be appropriate claimants for cultural items. Federal agencies that wish to return Native American human remains and cultural items to non-federally recognized tribes may do so after review and approval by the NAGPRA Review Committee.

NAGPRA also requires permitting of the intentional removal from, or excavation of, Native American cultural items from federal or tribal lands for purposes of discovery, study, or removal; establishes criminal penalties for trafficking in human remains or cultural objects; and requires agencies and museums that receive federal funding to inventory those items in their possession, identify the descendants of and repatriate those items.

(e) Secretary of the Interior's Standards

The Secretary of the Interior's Standards (36 Code of Federal Regulations [CFR] Part 68) were originally designed for use by the National Park Service and intended for application in a federal context. The stated intent of the Standards is to "set forth standards for the treatment of historic properties containing standards for preservation, rehabilitation, restoration, and reconstruction" (36 CFR 68.1). One set of standards – preservation, rehabilitation, restoration or reconstruction – will apply to a property undergoing treatment, depending upon the property's significance, existing physical condition, the extent of documentation available and interpretive goals, when applicable, and are to be applied in a reasonable manner, taking into consideration economic and technical feasibility (36 CFR 68.3). The Standards for Rehabilitation (as defined under 36 CFR 68.3(b)) are most applicable to projects where compatibility with historic building alterations or alterations to a building's environment is being evaluated and can pertain to historic buildings of all materials, construction types, sizes, and occupancy and encompass the exterior and the interior, related landscape features and the building's site and environment as well as attached, adjacent, or related new construction.

The Standards were subsequently incorporated into CEQA Guidelines Section 15064.5(b) as a gauge against which lead agencies complying with CEQA could measure project impacts to historical resources. As stated under the prior CEQA subsection, generally a project that complies with the Standards is considered to have mitigated its impacts to historical resources to a less-than-significant level (CEQA Guidelines Section 15064.5(b)(3); see also *League for Protection of Oakland's Architectural and Historic Resources v. City of Oakland* (1997) 52 Cal.App.4th 896.) Although not prescriptive and as suggested by the term "generally" as used in the CEQA Guidelines, the appropriate application of the Standards, or a subset thereof, requires careful consideration by a lead agency of the specific significance, characteristics, and condition of the historical resource for which impacts are being evaluated.

(2) State

(a) California Environmental Quality Act

CEQA is the principal statute governing environmental review of projects occurring in the state and is codified as Public Resources Code (PRC) Section 21000 et seq. CEQA requires lead agencies to determine if a proposed project would have a significant effect on the environment, including significant effects on historical or unique archaeological resources. Under PRC Section 21084.1, a project that may cause a substantial adverse

change in the significance of an historical resource is a project that may have a significant effect on the environment.

CEQA Guidelines Section 15064.5(a) recognizes that historical resources include: (1) a resource listed in, or determined to be eligible by the State Historical Resources Commission, for listing in the California Register of Historical Resources (California Register); (2) a resource included in a local register of historical resources, as defined in PRC Section 5020.1(k) or identified as significant in a historical resource survey meeting the requirements of PRC Section 5024.1(g); and (3) any object, building, structure, site, area, place, record, or manuscript which a lead agency determines to be historically significant or significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California by the lead agency, provided the lead agency's determination is supported by substantial evidence in light of the whole record. The fact that a resource does not meet the three criteria outlined above does not preclude the lead agency from determining that the resource may be an historical resource as defined in PRC Sections 5020.1(j) or 5024.1.

If a lead agency determines that an archaeological site is a historical resource, the provisions of PRC Section 21084.1 and CEQA Guidelines Section15064.5 apply. If an archaeological site does not meet the criteria for a historical resource contained in the CEQA Guidelines, then the site may be treated in accordance with the provisions of PRC Section 21083.2, which is as a unique archaeological resource. As defined in PRC Section 21083.2(g), a "unique" archaeological resource is an archaeological artifact, object, or site, about which it can be clearly demonstrated that without merely adding to the current body of knowledge, there is a high probability that it meets any of the following criteria:

- Contains information needed to answer important scientific research questions and there is a demonstrable public interest in that information;
- Has a special and particular quality such as being the oldest of its type or the best available example of its type; or,
- Is directly associated with a scientifically recognized important prehistoric or historic event or person.

If an archaeological site meets the criteria for a unique archaeological resource as defined in PRC Section 21083.2(g), then the site is to be treated in accordance with the provisions of PRC Section 21083.2, which state that if the lead agency determines that a project would have a significant effect on unique archaeological resources, the lead agency may require reasonable efforts be made to permit any or all of these resources to be preserved in place (PRC Section 21083.1(a)). If preservation in place is not feasible, mitigation measures shall be required. CEQA Guidelines Section 15064.5(c)(4) notes that if an archaeological resource is neither a unique archaeological nor a historical resource, the effects of the project on those resources shall not be considered a significant effect on the environment.

A significant effect under CEQA would occur if a project results in a substantial adverse change in the significance of a historical resource as defined in CEQA Guidelines Section 15064.5(a). As defined in CEQA Guidelines Section 15064.5(b)(1)), substantial adverse change is "physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of a historical resource would be materially impaired." According to CEQA Guidelines Section 15064.5(b)(2), the significance of a historical resource is materially impaired when a project demolishes or materially alters in an adverse manner those physical characteristics that:

A. Convey its historical significance and that justify its inclusion in, or eligibility for, inclusion in the California Register; or

B. Account for its inclusion in a local register of historical resources pursuant to section 5020.1(k) of the Public Resources Code or its identification in a historical resources survey meeting the requirements of section 5024.1(g) of the Public Resources Code, unless the public agency reviewing the effects of the project establishes by a preponderance of evidence that the resource is not historically or culturally significant; or

C. Convey its historical significance and that justify its eligibility for inclusion in the California Register as determined by a Lead Agency for purposes of CEQA.

In general, pursuant to CEQA Guidelines Section 15064.5(b)(3), a project that complies with the *Secretary of the Interior's Standards for the Treatment of Historic Properties with Guidelines for Preserving, Rehabilitating, Restoring, and Reconstructing Historic Buildings* (Standards) is considered to have mitigated its impacts to historical resources to a less-than-significant level (Grimmer 2017).

(b) California Register of Historical Resources

The California Register is "an authoritative listing and guide to be used by State and local agencies, private groups, and citizens in identifying the existing historical resources of the State and to indicate which resources deserve to be protected, to the extent prudent and feasible, from substantial adverse change" (PRC Section 5024.1[a]). The criteria for eligibility for the California Register are based upon the National Register of Historic Places (National Register) criteria (PRC Section 5024.1[b]). Certain resources are determined by the statute to be automatically included in the California Register, including California properties formally determined eligible for, or listed in, the National Register.

To be eligible for the California Register, a prehistoric or historic-period property must be significant at the local, state, and/or federal level under one or more of the following four criteria:

1. Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage;
2. Is associated with the lives of persons important in our past;

3. Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values; or
4. Has yielded, or may be likely to yield, information important in prehistory or history.

A resource eligible for the California Register must meet one of the criteria of significance described above, and retain enough of its historic character or appearance (integrity) to be recognizable as a historical resource and to convey the reason for its significance. It is possible that a historic resource may not retain sufficient integrity to meet the criteria for listing in the National Register, but it may still be eligible for listing in the California Register.

Additionally, the California Register consists of resources that are listed automatically and those that must be nominated through an application and public hearing process. The California Register automatically includes the following:

- California properties listed on the National Register and those formally determined eligible for the National Register;
- California Registered Historical Landmarks from No. 770 onward; and,
- Those California Points of Historical Interest that have been evaluated by the OHP and have been recommended to the State Historical Commission for inclusion on the California Register.

Other resources that may be nominated to the California Register include:

- Historical resources with a significance rating of Category 3 through 5 (those properties identified as eligible for listing in the National Register, the California Register, and/or a local jurisdiction register);
- Individual historical resources;
- Historical resources contributing to historic districts; and,
- Historical resources designated or listed as local landmarks, or designated under any local ordinance, such as an historic preservation overlay zone. (PRC Section 5024.1(d)-(e).)

(c) California Government Code Sections 6254(r) and 6254.10

These sections of the California Public Records Act were enacted to protect archaeological sites from unauthorized excavation, looting, or vandalism. Section 6254(r) explicitly authorizes public agencies to withhold information from the public relating to "Native American graves, cemeteries, and sacred places maintained by the Native American Heritage Commission." Section 6254.10 specifically exempts from disclosure requests for "records that relate to archaeological site information and reports, maintained by, or in the possession of the Department of Parks and Recreation, the State Historical Resources Commission, the State Lands Commission, the Native American Heritage

Commission, another state agency, or a local agency, including the records that the agency obtains through a consultation process between a Native American tribe and a state or local agency."

(3) Local

(a) City of Alhambra General Plan

The City's General Plan provides direction regarding the City's vision for future development in the City and includes several chapters to help guide the design of future development. It also contains several broad goals, objectives, and policies for neighborhood design to create a more livable city for existing and future residents. These goals and policies are stated not in terms of specific design guidelines, but in terms of general neighborhood-wide design policies.

The General Plan serves as a guide for the City's overall long-range growth and development policies and serves as a guide to update community plans, specific plans, and the citywide elements. These citywide elements address functional topics that cross community boundaries, such as transportation, and address these topics in detail.

The General Plan consists of seven elements, including the Land Use and Community Design Element, Mobility Element, Quality of Life Element, Resources Element, Services and Infrastructure Element, and Health and Safety Element. Each element addresses its respective subject and the City's 20-year vision for the future. With regard to cultural resources, the General Plan's Resources Element and Quality of Life Element establish the following goals and policies applicable to the Project:

Goal QL-7: Provision and maintenance of community events and cultural activities and facilities that meet community needs and preferences.

Goal R-6: Preservation of the cultural identity of Alhambra as a diverse residential and commercial city with distinct single-family neighborhoods.

Policy R-6A: Promote and encourage the preservation of Alhambra's significant historic, architectural, cultural, archaeological, and paleontological resources.

Policy R-6B: Promote the formation and maintenance of neighborhood associations to foster neighborhood preservation.

***Policy R-6C*:** Promote and maintain the unique history and architectural character of individual neighborhoods.

Policy R-6D: Develop and implement design standards that maintain the character of established residential neighborhoods, as discussed in the Land Use and Community Design chapter.

Policy R-6E: Enforce applicable historic preservation laws to preserve state or federally designated historic resources and other resources (e.g., archaeological and paleontological) eligible for such designation.

Policy R-6F: Investigate the possible establishment of a local regulatory framework for the designation and protection of significant historic and cultural resources.

(b) Historic Preservation Program

The City of Alhambra has initiated the development of a Historic Preservation Program to recognize and protect historic resources throughout the City. This initiative has been divided into three phases, of which Phases 1 and 2 are complete as of August 2024. Phase 1 involved the preparation of a comprehensive Citywide Historic Context Statement by the Historic Resources Group and was completed in 2022. Phase 2 concluded with the Citywide Historic Resources Survey that was carried out in 2023 and 2024. The City of Alhambra is currently involved in drafting Alhambra's Historic Preservation Ordinance as part of Phase 3 of the Historic Preservation Program. The purpose of the Historic Preservation Program is to serve as a guide to enable citizens, planners, and decision-makers to understand the built environment; provide a framework for the development of a comprehensive historic preservation program; and to provide a framework for the continuing process of identifying historic, architectural, and cultural resources in the City (City of Alhambra 2024).

b) Existing Conditions

(4) Historical Resources

(a) Mission San Gabriel and Racho Huerta de Cuati

Most of the land comprising the present-day City of Alhambra was part of Mission San Gabriel, established in 1771 by the Spanish missionaries. In 1784, Manuel Nieto, a soldier at the Los Angeles Presidio, received a 300,000-acre land grant known as Rancho Los Nietos from Governor Pedro Fages (Brigandi 2019). In 1830, Nieto was forced to give the portion of the land back to the San Gabriel Mission. This portion of the land was acquired by a Gabrielino/Tongva/Kizh woman, Victoria Bartolomea Comicrabit, who descended from a prestigious line of tribal chiefs (Lothrop 1994). This land was known as Rancho Huerta de Cuati, and Victoria and her husband Hugo Reid, a thriving rancher, cultivated the land for agricultural use for fourteen years (Bureau of Land Management 2018). Victoria had to sell the land due to a questionable legal claim, the death of her husband, and financial constraints due to prolonged legal battles. She eventually sold the property to Benjamin Davis Wilson on February 6, 1854 (Huntington Library 2023).

(b) City of Alhambra

Benjamin Wilson was a rich trapper and trader originally from Tennessee, who visited Southern California in 1841. Fascinated by the San Gabriel Valley, Wilson settled in the area and purchased a large tract of land in what is now Pasadena, San Gabriel, Westwood, and San Pedro. He married Ramona Yorba, the daughter of Bernardo Yorba who owned Rancho de Santa Anna, and remarried in 1853 to Margaret Hereford, following the death of Ramona in 1849.

By 1854, Wilson had purchased Rancho Huerta de Cuati and developed the land with a variety of fruits, including large orange groves, as well as ornamental trees. The ranch was laid out in avenues and named Lake Vineyard. Wilson expanded to viticulture and partnered with his son-in-law, James De Barth Shorb, originally from Baltimore, to keep the ranch afloat and eventually to expand the winery. In 1871, Wilson purchased the land on which the present-day Alhambra would be developed. Wilson and Shorb established the Lake Vineyard Land and Water Association in 1875 and began developing the future Alhambra Tract. The land was subdivided into five- and ten-acre parcels and named after Washington Irving's book "The Alhambra," that Shorb's daughter was reading at the time (Historic Resources Group 2022).

Shorb, trained as an engineer, developed an iron pipe water system exclusive to the Alhambra Tract lots. This unique amenity, as well as the proximity of the Southern Pacific Railroad, resulted in the successful sale of all the lots on the tract. With the help of Shorb's irrigation method, the lots were cultivated into small orchards with orange groves, pepper trees, and lined cypress hedges (Historic Resources Group 2022). Based on this success, Wilson and Shorb purchased adjacent land to the west and named it the Alhambra Addition Tract (Historic Resources Group 2022).

The completion of the transcontinental railroad in 1869 led to increased visitors to Southern California in the late 1880s and, subsequently, significant population growth in the Greater Los Angeles Area. To fulfill the increased demand for housing, parcels on the Alhambra Addition Tract were further subdivided into smaller lots. The area, formerly dominated by agriculture, saw a flurry of real estate development during the early 1880s, with the establishment of the Alhambra Hotel, grocery stores, blacksmith shops, three churches, a dry goods store, a drugstore and two commercial blocks (Studer 1962). However, the land boom in Southern California was short-lived and left behind a tangled mess of the pastoral Alhambra Addition filled with dead trees, undergrowth, and many vacant lots in the mid-1880s. This combination of events resulted in Alhambra's population becoming largely comprised of immigrants (Historic Resources Group 2022).

Around the mid-1880s, James Shorb moved his family closer to the Alhambra Tract at the behest of his daughter Edith, who wanted to attend school closer to her father. Shorb donated the land he received as a gift from Wilson to the Sisters of Holy Cross when he married Maria, Wilson's daughter with his wife Ramona (Frueholz 2024). This land was called the Ramona Tract, named after Shorb's mother-in-law. In 1889, the Catholic Sisters established the Ramona Convent School, which is still extant (Frueholz 2024).

Alhambra slowly started to recover from the aftermath of the late 1880s land crash, with residents insisting on incorporation and the formation of a town improvement association to improve the "sanitary and living conditions of the town (Orozco 2012). The town developed with many civic institutions and schools, including the First Methodist Church, the First Presbyterian Church, and the First Baptist Church. In 1893, the town's first hospital was established in a remodeled bungalow at the corner of Second Street and Boabdil Street (Historic Resources Group 2022). Regular rail service to Los Angeles was

established in 1902, allowing Alhambra to grow as an early streetcar suburb of the City (Historic Resources Group 2022).

Alhambra was formally incorporated as a city on July 11, 1903, after several attempts by the residents (Orozco 2012). The first decades of the 20th century saw Alhambra develop civic infrastructure, including city hall, a public library, road improvements, and a fire department to support the growing population (Historic Resources Group 2022). The early 20th century saw a substantial rise in the population of Alhambra from 5,000 residents in 1910 to 40,000 in 1930 (Orozco 2012). Municipal water, gas, electric, and waste management departments supported the growth of neighborhoods created on large tracts of land that were further subdivided (Historic Resources Group 2022). This included the Ramona Tract, where the Project Site is located, subdivided in 1929.

In the decades leading up to the outbreak of World War II, Alhambra underwent a demographic transition. The dual forces of restrictive federal immigration policies throughout the 1920s and the development of exclusionary housing loans beginning in 1939, backed by the federal government's Home Owners Loan Corporation, led to Alhambra becoming a city where the majority of the population was White and the number of foreign-born residents shrunk (Historic Resources Group 2022). Still, the continued prominence of Los Angeles County's agricultural industry, along with the growth of industrial manufacturing to support military preparations, drew thousands of Americans to the San Gabriel Valley, bringing Alhambra's population to just under 40,000 residents in 1940 (Historic Resources Group 2022). Civic infrastructure in the 1930s was largely constructed by Los Angeles County, as in the case of the Project Site, or through New Deal-funded projects, such as the expansion of school buildings in the city (Historic Resources Group 2022).

Following the Attack on Pearl Harbor and America's entry into World War II, President Roosevelt signed Executive Order 9066. Japanese residents of the San Gabriel Valley were relocated to Santa Anita or Pomona Assembly Centers, located at the racetrack and fairgrounds, respectively. This unprecedented Executive Order ensured that first and second-generation Japanese Americans, many of whom were legally American citizens, were detained for the duration of the war for no reason. Internees were only permitted to bring one suitcase with them, and many lost their homes, business, and property because of foreclosure during the War. After their initial relocation to the Assembly Centers, most of the San Gabriel Valley Japanese internees spent the majority of WWII at Heart Mountain in Wyoming (*San Gabriel Valley in Time*, 2022). Alhambra was considered to be part of a potential combat zone if Japanese forces attacked the American West Coast, leading to a U.S. Army Unit being stationed in the City (Historic Resources Group 2022). Residents of Alhambra found work in the wartime industrial boom, though population growth stagnated during the war years.

The passage of the Servicemen's Readjustment Act in 1944, commonly known as the G.I. Bill, led to an explosion in new residential construction. Through this bill, veterans could obtain a house with no down payment. Nationally, veterans were responsible for

20 percent of new home construction in the post-war era; it is likely to have been higher in Los Angeles County, which saw massive population growth in the post-war era (U.S. Department of Defense 2019). This funding, combined with postwar economic prosperity for US industry and the ability to mass-produce houses, led to a boom in residential construction. In 1948, Alhambra's residential construction for that year was valued at $12,309,205 (Historic Resources Group 2022). Alhambra's population continued to grow, though less drastically than surrounding cities with less pre-war residents, from 40,000 in 1940 to 54,000 in 1960, an increase of 35 percent.

Following the initial wave of post-war residential immigration, new residents to the area in the later half of the 20th century were largely Asian immigrants, helped significantly by the passage of the Immigration and Nationality Act of 1965 (Cheng 2013). The largest wave of new residents to the San Gabriel Valley at this time were immigrants from Taiwan and Hong Kong who came to America for educational and economic opportunities, especially in the face of political strife in their homeland (Cheng 2013). The demographic shift in Alhambra and the greater San Gabriel Valley was compounded by a second wave of white flight as the children of the initial post-war residents moved or sold their homes. Throughout the 1960s and 1970s, the need for more housing units predicated a shift to multi-family apartment complexes, many of which replaced former single-family residences (Historic Resources Group 2022).

Infrastructure improvements, including the construction of the San Bernardino and Long Beach freeways (Interstate 10 and 710, respectively), further assisted Alhambra residents in accessing a variety of opportunities for work in Los Angeles County (Historic Resources Group 2022). Redevelopment projects throughout the 1960s and 1970s included the construction of a new headquarters for the fire department in 1968, a new Community Hospital and courthouse in 1974, and a new public library in 1975 (Historic Resources Group 2022). Today, Alhambra is a well-developed suburban city with 26 identified residential neighborhoods and various institutions, businesses, religious structures, and hospitals that cater to the community at large.

(c) Previous Evaluations of the Project Site

The Project Site at 612 West Shorb Street has been identified as a historical resource in two previous surveys, once in 1984 and once in 1994. The *Alhambra Historic and Cultural Resources Survey, 1984-1985*, was a part of the State Historic Survey Program, wherein the City of Alhambra received a grant from the California Office of Historic Preservation to conduct a historic resources survey. The 1984-1985 survey recognized the Alhambra Health Center at 612 West Shorb Street as an important civic institution, along with the neighboring fire station, Alhambra Fire Department Station No 2. Both buildings were evaluated for eligibility in the National Register of Historic Places and given the status code of "3", denoting that a property "Appears eligible for individual listing" (Johnson Heumann Research Associates 1984). The California OHP updated the status codes in August of 2003, after which the Alhambra Health Center was given an updated status code of "3S," meaning the property "appears eligible for National Register individually through survey evaluation" (California Office of Historic Preservation 2003). The 1994-

1995 survey was conducted by Historic Resources Group, where the Alhambra Health Center at 612 West Shorb Street was given the status "2S2," stating it was "individually determined eligible for NR by consensus through Section 106 process."

In 2023 and 2024, during the preparation of this Draft EIR and associated technical reports, Historic Resources Group, in conjunction with the City of Alhambra, released the "City of Alhambra Historic Resources Survey Report," the first comprehensive citywide survey of the built environment of Alhambra. The draft DPR 523 forms prepared by HRG recommend 612 W. Shorb Street as eligible for the NR under Criterion 1/A under the following contexts:

- City Expansion and Industrial Growth (1920-1940)
- Civic and Institutional Development (1920-1940)

In addition, 612 W. Shorb Street was recommended eligible for the NR under Criterion 3/C an "example of Monterey Colonial Revival style architecture in Alhambra" (Historic Resources Group 2023).

(d) BERD and SCCIC Search

A records search for the proposed Project through the California BERD was conducted by ESA staff on August 23, 2023. The Project Site has been previously recorded in the BERD and is given the status code "2S2." The BERD replaces the former Historic Properties Directory (HPD) that previously provided evaluation status information for resources processed through the OHP. The records search included a review of all previously documented historic architectural resources and studies within a 0.25-mile radius of the Project. A records search for the Project was conducted on September 20, 2022, at the South Central Coastal Information Center (SCCIC) housed at University of California, Fullerton. The records search included a review of all recorded archaeological resources, historic architectural resources, and previous studies within the Project Area and a quarter-mile radius of the Project Area. The SCCIC record search indicated four cultural resources studies conducted within a quarter-mile radius of the Project Area, but no resources.

There is one identified historic resource immediately adjacent to the Project Site, described below:

> 1215 S 6th St, City of Alhambra Fire Department Station 72: The Alhambra Fire Station No.2 at 1215 S 6th Street is located 114 feet southeast of the Alhambra Community Center. The Alhambra Fire Station No.2 was designed by architect John Walker Smart and constructed in 1930 to serve the southeast section of the City of Alhambra. Both the Alhambra Community Center and the Alhambra Fire Station were designed to blend in with the neighboring residential community in terms of massing and scale. As listed above, the fire station has a status code of "3S" as it is an "appears eligible for NR as an individual property through survey evaluation."

(e) Site Survey and Property Research

Shannon Papin and Anokhi Varma conducted a site survey of the Project Site on September 1, 2023. This intensive-level pedestrian survey documented the existing conditions of the exterior of the Project Site and its immediate vicinity. Ms. Papin later toured the interior of the building in February of 2024. ESA conducted research on the Project Site's construction and occupancy history and analyzed its history within the context of the development of City of Alhambra, and public medical services in Los Angeles County.

(f) Significance Evaluation

The property history, architectural description, and historic contexts included in this report provide the background necessary to evaluate the historic and architectural significance of the Project Site, including the history of its construction and alterations. In order to be eligible as a historical resource, a property must possess both significance and integrity.

ESA evaluated the Project Site against the criteria for listing in the National Register and the California Register, under the contexts *Public and Private Health and Medicine in Los Angeles (1850-1980)* and the sub-context *Los Angeles County Health Centers (1900-1930)*, both developed by ESA.

ESA also evaluated the Project Site against the criteria for listing in the National Register and the California Register, under the contexts *Development of the Built Environment in Alhambra, 1920-1940, Theme: Civic and Institutional Development, 1920-1940*, and *Monterey Style (1925-1955),* developed by Historic Resources Group as part of the City of Alhambra Historic Context Statement.

(i) Broad Patterns of History

With regard to broad patterns of history, the following are the relevant criteria:

- National Register Criterion A: Is associated with events that have made a significant contribution to the broad patterns of our history.
- California Register Criterion 1: Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage.

The Alhambra Health Center was constructed at 612 West Shorb Street in Alhambra, California in 1930 and was one of the most modern and well-equipped health centers in Southern California at the time of its opening. Originally named the Alhambra Health and Wellness Center, the center was established as part of a Los Angeles County program dedicated to making healthcare and hygiene services more accessible to the public in the more outlying areas of the county. The facility served as a comprehensive medical complex for the growing communities of the San Gabriel Valley, and housed multiple clinics, laboratories, an emergency hospital, a women's ward, administrative offices, a nursing section, and district sanitation offices. The mission of the Los Angeles County-planned health center program was to ensure a high level of "efficiency in community

medical and promotion of hygienic safeguards" along with the foresight to design each center as an "architectural asset to the place in which it is located" (Los Angeles Times 1929). The Alhambra Center was constructed in central Alhambra with these goals in mind. It was among the largest and most well-appointed health centers to be established in Los Angeles County in the 1930s, serving approximately 130,000 visitors in its first year alone. Out of the six original health clinics constructed by Los Angeles County, the Project Site is one of three that remain extant. The Center remained in full-time service to the general public until its closure in 2002. The Alhambra Health Center is significant at a local level under criterion A/1 for being one of the earliest and largest county-owned medical centers in the public healthcare system of Los Angeles County, offering a wide variety of healthcare services at one location for over 70 years.

The Alhambra Health Center is also significant for its association with the early civic and institutional development of the City of Alhambra. Often known as "the gateway to the San Gabriel Valley," Alhambra was one of the foremost cities established after the Southern Pacific Railroad was extended through the valley in 1873. What had previously been a strictly rural and agricultural area with loose associations to the nearby San Gabriel Mission, the area saw rapid development in the land boom of the 1880s, with further growth incentivized by one of the first iron pipe water systems in Los Angeles. Residential, civic, and institutional development remained steady after the city's incorporation in 1903, peaking between 1920 and 1929 when 3,761 land parcels were developed in Alhambra. Built to serve the burgeoning population of the east San Gabriel Valley, the Alhambra Health Clinic at 612 West Shorb Street was the first public medical institution built in the city of Alhambra, and it continued to serve the population for over 70 years.

Therefore, the Alhambra Health Center at 612 West Shorb Street is significant under National Register Criterion A at the local level of significance, as well as California Register Criterion 1, for its association with the Los Angeles County public health and medical system. The period of significance for the Project Site runs from its original construction in 1930 through 1978, which is the end of the historic era as defined by CEQA.

In addition, the Alhambra Health Center at 612 West Shorb Street is significant under National Register Criterion A at the local level of significance and California Register Criterion 1 for its association with the early civic and institutional development of the city of Alhambra. The period of significance for the Project Site runs from its original construction in 1930 through 1940.

(ii) Significant Persons

With regard to associations with important persons, the following are the relevant criteria:

- National Register Criterion B: Is associated with the lives of persons significant in our past.
- California Register Criterion 2: Is associated with the lives of persons important in our past.

The Alhambra Health Center at 612 West Shorb Street is not identified with historic personages at the national, state, or local level. It is not associated with significant individual owners or occupants. Research did not indicate that a significant individual was associated with the property during the 71-year period the building was in use as a hospital and medical clinic.

Therefore, the Alhambra Health Center at 612 W. Shorb Street does not appear to be significant under National Register Criterion B or California Register Criterion 2.

(iii) Architecture

With regard to architecture, design, or construction, the following are the relevant criteria:

- National Register Criterion C: Embodies the distinctive characteristics of a type, period, or method of construction or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction.
- California Register Criterion 3: Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values.

The Alhambra Health Center was designed by Los Angeles County architect Karl Wilhelm Muck and constructed in 1930. Muck designed several health centers in his role as a Los Angeles County architect, and while he is not a notable practitioner, the building itself is an excellent example of the Monterey Revival style, exhibiting typical massing, fenestration, materials, and details. Spanish influences are evident in its double-L shaped footprint with a small courtyard/lawn between the east and west wings and the low-pitched gable roof of red mission-style tiles, while American Colonial Revival details include brick construction and 6/6 wood sash windows with rowlock sills, many with green wood shutters and wrought-iron fixtures. Distinctive to the Monterey Revival style, a wood balcony with slender columns and a simple balustrade, all painted white, is cantilevered off the second floor of the north elevation. The Alhambra Health Center remains in its original location in downtown Alhambra, setback from the northeast corner of West Shorb Street and South Sixth Street, with grassy lawns between the complex and the streets and a surface parking lot directly southwest of the building. While Alhambra has grown significantly since the building's original construction in 1930, the city remains an urban center of the western San Gabriel Valley, and the neighborhood immediately surrounding the Center remains a suburban residential environment. The building retains nearly all of its original design, materials, and craftsmanship. The removal of an original lime whitewash on the brick exteriors is the only known significant alteration.

Monterey Revival is one of the few architectural styles native to California, and the Alhambra Health Center is a remarkably intact example of that style. Combined with the immediately adjacent Fire Station No. 2, the building serves as a historic centerpiece of central Alhambra and an exemplary representation of institutional architecture in public medicine.

Therefore, the Alhambra Health Center at 612 West Shorb Street is significant under National Register Criterion C at the local level of significance and California Register Criterion 1, as an example of the Monterey Revival style. The period of significance for the Project Site is 1930, the date of its original construction.

(iv) Data

- National Register Criterion D: It yields, or may be likely to yield, information important in prehistory or history.
- California Register Criterion 4: Has yielded, or may be likely to yield, information important in prehistory or history.

While most often applied to archaeological districts and sites, Criterion D/4 can also apply to buildings, structures, and objects that contain important information. In order for these types of properties to be eligible under Criterion D/4, they themselves must be or must have been, the principal source of the important information. None of the buildings on the Project Site appear to yield significant information that would expand our current knowledge or theories of design, methods of construction, operation, or other information that is not already known about the period in which they were constructed, their method of construction, or their design. The building reflects common building practices and materials of the early twentieth century, which have already been well documented.

Therefore, Alhambra Health Center at 612 West Shorb Street, does not meet the eligibility requirements under National Register Criterion D and California Register Criterion 4.

(g) Integrity Analysis

The National Register and California Register recognizes a property's integrity through seven aspects or qualities: location, setting, design, materials, workmanship, feeling, and association. Eligible properties should retain several, if not most, of these aspects. Both registers require that a resource retain sufficient integrity to convey its significance, and the property must retain the essential physical features that enable it to convey its historical identity. Integrity is based on significance and understanding why a property is important. *National Register Bulletin 15* states that “only after significance is fully established can you proceed to the issue of integrity” (U.S. Department of the Interior 2002).

Location – The property has not moved from its original location; therefore, it retains the integrity of location.

Setting – The Project Site is located in central Alhambra, in a historic neighborhood with mixed uses, including residential development to the east and northwest, with commercial development to the south along Valley Boulevard and institutional development to its immediate north and west. The immediate surroundings of the Project Site have not undergone major changes since its original construction in 1930 and have remained largely intact, excepting the expansion of the adjacent church and further development

along the commercial strip of Valley Boulevard. While Alhambra has grown in size and population since the building's original construction in 1930, the neighborhood of the Project Site remains a center of business and service-related activity in the eastern San Gabriel Valley. The building's location has not changed, nor has its historical association with the surrounding landscape, neighborhood, or city. Therefore, the property retains integrity of setting.

Design – The Project Site was originally designed and constructed as a split-level brick structure in the Monterey Style. The building has undergone only minor alterations since 1930 and retains the majority of its character-defining features, including the original double L-shaped footprint that divides the building into two wings, the brick exterior in a 4/1 common bond, the window and door openings, the wood shutters with metal ties, and the cantilevered wood balcony at the second floor on the north elevation. Apart from the structural upgrades in 2005 (done mostly on the interior) and removal of the exterior whitewash, the building remains intact as an example of the Monterey Style as applied to a public medical facility. Therefore, the property retains the integrity of design.

Workmanship – The property's original workmanship from 1930, including the wall assembly, wood frame cantilever balconies, brick and mortar work, and coursed red clay tile roof remain intact. A seismic update in 2005 added interior shear walls and roof diaphragms and removed exterior limewash, but otherwise there have been few, if any alterations to the building. Therefore, the property retains integrity of workmanship.

Materials –The property retains the majority of its original exterior materials, including brick in a 4/1 common bond, 6/6 wood sash windows with wood shutters, wood balconies and staircases, and mission-style clay tile roofing. The most significant alterations appear to be the removal of a whitewashed lime finish on the building and the replacement in kind of the original red clay tile roofing. Therefore, the property retains the integrity of materials.

Feeling – Despite the removal of the exterior whitewash finish of the building, all other characteristics specific to the Monterey style of architecture have been retained and preserved. The building retains its original design, materials, workmanship, and setting and continues to relay the feeling of an institutional building in the first half of the 20th century. While its specific use as a medical clinic is not discernable from the exterior, it is easily recognizable as a historic building of civic importance from the early days of Alhambra's existence. Therefore, the property still conveys the historic character of the Monterey Style Alhambra Health Center and retains the integrity of feeling.

Association – The building was originally designed as a health and medical center and remained in use as such for over 70 years. It is an intact representation of an institutional building designed to be an "architectural asset to the place in which it is located," during a period of significant development in the outlying, now suburban areas of Los Angeles County (Los Angeles Times 1929). Although the San Gabriel Valley and Alhambra specifically have grown substantially since the building's original construction, they

remain part of the broader metropolitan area of the City of Los Angeles, with large population numbers requiring services. While most medical centers constructed today are not designed in a manner as high-style as the Alhambra Health Center, it is a rare remnant from a period where institutional architecture was designed to inspire the residents of the surrounding community. Therefore, the property still retains its integrity of association.

(5) Archaeological Resources

(a) Precontact Setting

The first generalized chronology of coastal southern California was produced by William J. Wallace in 1955, dividing the precontact past into four general time periods. Wallace referred to these as Horizon I through IV, with Horizon I being speculative due to limited evidence at the time. The subsequent three periods were called the "Millingstone," the "Intermediate," and the "Late" horizons (Wallace 1955). This remains a basis for commonly used chronologies of the region. In the late 1960s, Claude Warren (1968) and Makoto Kowta (1969) revised and updated Warren's chronology, using terms for periods based on particular locales. Excavations in Orange County by Mason and Peterson (1994) led to refinement of the Millingstone Period into three subcategories (MS1-3). More recent refinements to this chronology were based on the decades of excavation at Playa Vista along the Ballona Lagoon (Stoll et al. 2003; Homburg et al. 2014). This report follows that most recent chronology: the Paleocoastal Period (12,000 to 8,500 years before present [B.P.]), the Millingstone Period (8,500 to 3,000 B.P.), the Intermediate Period (3,000 to 1,000 B.P.), and the Late Period (1,000 B.P. to A.D. 1542), ending at the first documented contact between indigenous Californians and Europeans (Homburg et al. 2014). This chronology is manifested in the archaeological record by particular artifacts and burial practices that indicate specific technologies, economic systems, trade networks, and other aspects of culture.

(i) Paleocoastal Period (12,000–8,500 B.P.)

While it is not certain when humans first came to California, their presence in Southern California by about 11,000 B.P. has been well documented (Erlandson et al. 2007a). At Daisy Cave, on San Miguel Island, cultural remains have been radiocarbon dated to between 11,100 and 10,950 B.P. Radiocarbon dates from the Arlington Springs Woman site on Santa Rosa Island indicate a human presence in the region by about 13,000 years B.P. (Erlandson et al. 2007a; Glassow et al. 2007). On the southern Channel Island of San Clemente, site SCLI-43 (Eel Point) revealed evidence of boat technology dating to around 8,000 B.P. (Cassidy et al. 2004). This fits with the coastal migration hypothesis from Erlandson and others (2007b) wherein humans followed the coast and the offshore kelp forest habitats from northeast Eurasia. Contrary to the common view of early inhabitants of North America, based largely on the Clovis tool technology, the limited evidence indicates that Paleocoastal peoples along the Pacific appear had diverse diets, harvesting plants, fishing, gathering marine shellfish, and hunting sea birds and marine mammals (Erlandson et al. 2007a; Glassow et al. 2007). However, there is limited archaeological

evidence of Paleocoastal occupation with secure dates in the Los Angeles Basin. This changes with the onset of the following Millingstone Period (Douglass et al. 2014).

(ii) Millingstone Period (8,500–3,000 B.P.)

The Millingstone Period saw the appearance or significant increase of ground stone implements for plant processing and is characterized by regional differentiation and adaptation to local conditions and the intensified use of ground stone (Douglass et al. 2014; Wallace 1955). Millingstone cultures were characterized by the collection and processing of plant foods such as small seeds, and the hunting of a wider variety of game animals, as well as continued exploitation of shellfish (Byrd and Raab 2007; Wallace 1955). Millingstone cultures also established more permanent settlements that were located primarily on the coast and in the vicinity of estuaries, lagoons, lakes, streams, and marshes where the inhabitants had access to a variety of resources, including seeds, fish, shellfish, small mammals, and birds. During the Millingstone Period, more sites are present in the interior of the Los Angeles Basin and portions of the coast may have been abandoned or used in a limited fashion. This may have been caused by a decline in coastal shellfish populations due to extensive estuary silting (Byrd and Raab 2007). While the early use of acorns may extend to the early Millingstone Period or earlier, the appearance and shift from milling slabs to mortars and pestles after around 5,000 B.P. indicates that this became an important food during the late Millingstone Period (Douglass et al. 2014). An artifact unique to Southern California, the cogstone or cogged stone, is a marker of the Millingstone Period, although the use and purpose of this type of ground stone is unknown (Douglass et al. 2014).

(iii) Intermediate Period (3,000–1,000 B.P.)

Many aspects of Millingstone culture persisted into the Intermediate Period, but there are also significant socioeconomic changes, including shifts in economic activities and trade, settlement patterns, and mortuary activities, as well as introduction of new technologies (Byrd and Raab 2007; Douglass et al. 2014; Erlandson 1994; Wallace 1955; Warren 1968). The indigenous populations of coastal Southern California were becoming less mobile and gathering in small sedentary villages with satellite resource-gathering camps. Increasing population size necessitated the intensified use of existing terrestrial and marine resources (Erlandson 1994). Manos and metates, used to process small seeds, become quite rare while the rate of mortars and pestles continue to increase. This could indicate that a reliance on acorns or geophytes largely replaced the earlier reliance on small seeds, but paleoethnobotanical research has shown little reliance on acorns in the coastal region south of the Santa Inez Mountains and geophytes rarely appear in assemblages (Douglass et al. 2014; Reddy 2016). During this period stone-lined earth ovens appear in the Los Angeles Basin, suggesting that agave or yucca were being processed, supported by carbonized yucca found in earth ovens in the San Gabriel Mountains (Douglass et al. 2014; Johnson 1966; Milburn, Doan, and Huckabee 2009). The Intermediate Period overall is characterized by increased labor specialization, expanded trading networks for both utilitarian and non-utilitarian materials, and extensive travel routes. Around 1,500 B.P., near the end of this period,

bow and arrow technology is introduced to the region while Yuman-type pottery appears at the end of the period, marking the shift into the subsequent Late Period (Byrd and Raab 2007; Douglass et al. 2014).

(iv) Late Period (1,000 B.P.–A.D. 1542)

The Late Period in the Los Angeles Basin is associated with the florescence of the Gabrielino. This period saw the development of elaborate trade networks in the region and beyond and extensive use of shell-bead currency. Increasing social differentiation is suggested by complex villages and burial areas with variable mortuary practices and different amounts of items included in burials (Douglass et al. 2014). In the Newport Bay and San Joaquin Hills area, Koerper and others (2002) observed only a small number of large residential sites and a greater number of smaller residential sites with non-contemporaneous discrete hearth features, suggesting shifting occupation of family groups. This is interpreted to show a settlement pattern consisting of dispersed family groups that revolved around a relatively limited number of permanent village settlements that centrally with respect to a variety of resources (Koerper et al. 2002). Evidence in some areas indicates that overexploitation of larger, high-ranked food resources may have led to a shift in subsistence, towards a focus on acquiring greater amounts of smaller resources, such as shellfish and small-seeded plants (Byrd and Raab 2007). Fishing became an increasingly significant part of subsistence strategies at this time, and investment in fishing technologies, including the plank canoe, are reflected in the archaeological record (Erlandson 1994). The end of this period, sometimes referred to as the Protohistoric Period, saw the first contact with the Spanish and the beginning of colonization and missionization of the region (Douglass et al. 2014).

(b) Ethnographic and Ethnohistoric Setting

The Project Site is within the traditional and ancestral territory of people referred to as the Gabrielino or Gabrieleño, including those who self-identify as the Tongva or the Kizh (Bean and Smith 1978; Golla 2011). The following summary is not intended to provide a comprehensive account of these groups, but is instead a brief historical overview based on available information from resources cited below.

(i) Gabrielino (or Tongva and Kizh)

The terms “Gabrielino” or “Gabrieleño” generally refer to those Native Americans who were forcibly removed from their lands and relocated by the Spanish to Mission San Gabriel Arcángel, as well as their descendants today (Bean and Smith 1978). Additionally, two indigenous terms are commonly used by descendants and tribal groups to refer to themselves, with some descendant groups preferring Tongva and others preferring Kizh (Heizer 1968). The Gabrielino language is a dialect of the Gabrielino-Fernandeño (Tongva) language, part of the Takic branch of the Uto-Aztecan language family (Bean and Smith 1978; Golla 2011). Prior to European colonization, speakers of the Gabrielino-Fernandeño language occupied a diverse area that included the watersheds of the Los Angeles, San Gabriel, and Santa Ana rivers; the Los Angeles basin; and the islands of San Clemente, San Nicolas, and Santa Catalina (Bean and Smith 1978; Golla 2011).

Speakers of the closely related Fernandeño dialect occupied the San Fernando Valley and the northern parts of the Santa Monica Mountains, while the areas south and east were home to Gabrielino-speakers (Golla 2011). The neighbors of the Gabrielino-Fernandeño-speakers included the Chumash and Tataviam to the northwest and west, the Juañeno to the southeast, the Serrano to the north and northeast, and the Cahuilla to the east. The Gabrielino are reported to have been second only to the Chumash in terms of population size and regional influence (Bean and Smith 1978).

The Gabrielino were hunter-gatherers and lived in permanent communities located near persistent water supplies, with distributed camps and settlements at areas with food resources. Subsistence consisted of hunting, fishing, and gathering. Small terrestrial game was hunted with deadfalls, rabbit drives, and by burning undergrowth, while larger game such as deer were hunted using bows and arrows (Bean and Smith 1978). The lifeways of the colonial-period Gabrielino were very similar to those documented archaeologically from the Late Prehistoric Period (1,500 years B.P. to the mission era), a time associated with the florescence of the Gabrielino (Wallace 1955). Community populations generally ranged from 50 to 100 inhabitants, although larger settlements may have existed. Kroeber (1925) estimated that the population of the Gabrielino to be around 5,000 in the pre-contact period, a number that Cook (1976) agreed with, despite there being at least 5,500 baptisms at the San Gabriel and San Fernando missions alone. Preston (1996; 1999; 2002) argues that this number is low (along with most estimates of precolonial Indigenous Californian populations) as European diseases rapidly arrived in California, likely prior to Spanish missionaries. Events such as the devastating 1781 smallpox outbreak at Mission San Gabriel Arcangel were unlikely to have been confined to just the mission and would have had depopulating effects on the surrounding areas (Preston 2002). The fact that overall, there are few epidemics recorded during the early Spanish colonial period, despite the presumed lack of immunity to European diseases in Indigenous Californians, suggests that many of these diseases had already arrived through the extensive precolonial trade networks (Preston 2002). It follows then that the populations observed by the Spanish and who were subject to baptism in the missions had already experienced declines from these diseases.

In October of 1542, Juan Rodriguez Cabrillo was the first European to make contact with the Gabrielino when his ship landed on what is likely Santa Catalina Island. The following day Cabrillo sailed across the channel into what he called the “Bay of Smokes,” commonly considered to be San Pedro Bay. Interestingly, some of the Gabrielino who paddled out to meet Cabrillo’s ship communicated that there were parties of Spanish exploring the interior, perhaps the multiple expeditions to the Southwest Pueblo region in the 1530s, Francisco de Ulloa’s 1536 visit to the Gulf of California, or Hernando Alarcón’s exploration of the lower Colorado River (Elsasser 1979; McCawley 1994; Rabbitt 1976). After sailing north to Monterey Bay, Cabrillo’s party overwintered on Santa Catalina, where Cabrillo himself died (McCawley 1994). In 1595, Sebastian Rodriguez Cermeño’s ship, the San Agustín, wrecked off Drakes Bay in Marin County, and he and his crew built a small boat and travelled down the California coast for seven weeks before arriving in Navidad, Mexico. This crew likely interacted with Gabrielino people during this voyage (Dell’Osso

1995). Seven years later, Sebastián Vizcaíno followed Cabrillo and stopped in Santa Catalina in 1602 (McCawley 1994). The next Spanish contact was with Gaspar de Portolá, who crossed Gabrielino territory three times in 1769 traveling between San Diego and Monterey as the first expedition of Spanish conquest and colonization (McCawley 1994).

Travel diaries and other records produced by early explorers and missionaries indicate that at least 26 Gabrielino villages were within a mile to known Los Angeles River courses, while an additional 18 villages were reasonably close to the river (Gumprecht 2001). Combining the named villages in other documents, there were at least 25 villages in the San Gabriel Valley, with a concentration in the area adjacent and between the Rio Hondo and San Gabriel River (Johnston 1962; McCawley 1994). For more information, see "Review of Native American Villages" below.

(c) SCCIC Records Search

A cultural resources records search for the Project was conducted by ESA staff on August 29, 2023, at the California Historical Resources Information System (CHRIS) - SCCIC, housed at California State University, Fullerton. The records search included a review of all recorded cultural resources and previous studies within the Project Site and a 0.50-mile radius. The records search results indicate that 11 cultural resources studies have been conducted within a 0.50-mile radius of the Project Site. Approximately five percent of the 0.50-mile records search radius has been included in previous cultural resources assessments. Of the 11 previous studies, none have included the Project Site. The records search results also indicate that there is only one previously recorded cultural resource within a 0.50-mile radius of the Project Site. This consists of a historic architectural resource, the Union Pacific Railroad (P-19-186112). No archaeological resources have been recorded within the Project Site or the 0.50-mile radius.

(d) Sacred Lands File Search

The Native American Heritage Commission (NAHC) maintains a confidential Sacred Lands File (SLF) which contains sites of traditional, cultural, or religious value to the Native American community. The NAHC was contacted on December 12, 2023, to request a search of the SLF. The NAHC responded to the request in a letter dated January 10, 2024, indicating that the results were negative.

(e) Review of Native American Villages

The *Gabrielino Indians at the Time of the Portola Expedition*, illustrated by Allen W. Welts (1955) and labeled by Bernice Johnston (1962) depicts the villages of *Otsungna*, *Sibangna* and "*Apachiangna/Santcangna*" in the vicinity of the Project Site (Johnston 1962). McCawley's (1996) *Gabrielino Communities Located on the Los Angeles-Santa Ana Plain* map also depicts the villages of *Ochuunga* (another name for *Otsungna*) and *Toviscanga* in the vicinity of the Project Site.

(f) Review of Historical Routes

Review of the *Kirkman-Harriman Pictorial and Historical Map of Los Angeles County* (Kirkman 1937) depicts the Project Site as located immediately south of and in close proximity to Gaspar de Portolá's "First Exploring Route". The Kirkman (1937) map also depicts "Mission Roads" just north of the Project Site and leading to the Mission San Gabriel Arcángel located 1.7 miles northeast of the Project Site. Welts' (1955) *Gabrielino Indians at the Time of the Portola Expedition* map also shows Portolá's route passing through the vicinity of the Project Site. The 1870 US General Land Office (GLO) Plat Map for Township 1 South, Range 12 West, shows many roads throughout the area, including one that matches the route of Kirkman's Mission Roads passing right by the Project Site. This route of Mission Road can be clearly seen in 1870 *Road from Los Angeles to the Monte and San Gabriel River* maps produced by Frank Lecouvreur (1870a; 1870b; 1870c). This road intersects with another road very near to the Project Site in Section 15 and the other road may represent a second Mission San Gabriel to Los Angeles Road on a more southerly route. A road matching the rough course of that can be seen on G. Hansen's 1856 *Map of Los Angeles City*.

(g) Review of Historical Maps and Aerial Photographs

Historical maps and aerial photographs were reviewed to provide historical information about the Project Site's land uses and contribute to an assessment of its archaeological sensitivity. Maps depicting the vicinity of the Project Site that predated 1850 were not available. The earliest map is the 1852 diseño for Rancho Rosa de Castilla, which shows one route of Mission Road.

The 1857 Map of the Mission Lands of San Gabriel shows the Project Site, but does not include details in the immediate area. However, it does depict partial routes of the southern route between Los Angeles and the San Gabriel Mission that would logically extend very near the Project Site. These same roads are depicted on the 1865 map of the township (Hansen 1865). The 1870 US GLO Plat Map for Township 1 South, Range 12 West (surveyed prior to 1869) does not show any houses in the vicinity of the Project Site but does depict a large number of roads passing through the section between Los Angeles and the Mission.

The first detailed depiction of the Project Site is on a series of 1870 transportation maps produced by Lecouvreur for Los Angeles County. This shows the parcel as empty, but close to the Los Angeles to El Monte and San Gabriel River road (now Valley Blvd) and near two portions of roads labeled "Road to the New Mission".

USGS topographic maps available for the area include the 1894, 1896, and 1900 Los Angeles and Pasadena 15-minute quadrangles. The 1928 historical aerial photograph was reviewed for the Project Site. A Sanborn Fire Insurance map was available for 1931 (EDR 2023).

A review of the 1894, 1896, and 1900 topographic maps shows the Project Site as undeveloped and an unnamed wash, later labeled as the Alhambra Wash (tributary of

Rio Hondo), depicted approximately 1.6 miles to the east. The Southern Pacific Railroad is depicted approximately 0.50 miles to the north of the Project Site. A 1928 aerial photograph shows the Project Site as developed with a residence on the northeast and second residence overlapping the western portion. The 1931 Sanborn Map depicts the Project Site as containing a double-L-shaped split-level brick structure, labeled the Alhambra Health Center, with a hospital in the one-story wing and welfare offices in the two-story wing of the center. The Project Site had been developed along West Shorb Street, bound by 7th Street to the west and 6th Street to east.

(h) Review of Geotechnical Report

The *Geotechnical Engineering Investigation* report (geotechnical report) prepared for the Project (Geotechnologies, Inc. 2023) indicates that a total of five exploratory borings (using 8-inch diameter hollow stem augers) were drilled at the Project Site. The borings extended to depths between 2 and 50 feet below ground surface (bgs). The borings contained fill soils from the surface down to 3 to 5 feet bgs. There were native alluvial sediments beneath the fill strata. The alluvial sediments consisted of a combination of sands and silts with cobbles and pebbles (Geotechnologies, Inc. 2023).

(i) Cultural Resources Survey

A cultural resources survey of the Project Site was conducted on September 1, 2023. The survey was aimed at identifying any archaeological resources within the Project Site. The archaeological survey was opportunistic, identifying any areas with visible ground surface. No cultural resources were encountered within the Project Site during the pedestrian survey. With the exception of the 16,000 square feet covered by the existing buildings, the pedestrian survey covered approximately 100 percent of the Project Site. Ground surface visibility was less than five percent due to most of the Project Site being developed with surface parking and covered with sod/grasses/trees.

(j) Archaeological Sensitivity Assessment

(i) Precontact Archaeological

Review of the Geologic Map of the Los Angeles quadrangle (scale 1:24,000) by Dibblee and Ehrenspeck (1989) indicates that Quaternary alluvium is mapped at surface within the Project Site. The Holocene-age of this alluvium encompasses the entirety of human occupation in North America, and is, therefore, conducive to the preservation of subsurface precontact archaeological deposits. Although the results of the records searches through the SCCIC and NAHC yielded negative results, archival research demonstrates that there is the possibility of encountering buried deposits. The Project Site is located between the Los Angeles River to the west and the Hondo River to the east, with the Alhambra Wash in the general vicinity, providing beneficial conditions for precontact use and occupation. Additionally, the archival research indicates that several villages were located in the vicinity of the Project Site. Locations for villages, settlements, and resource processing areas were chosen to be close enough to water sources to access water, plant, and animal resources that riparian corridors provided, even when

there was little water present. Larger settlements were located far enough away to reduce the risk of flooding. Additionally, villages were surrounded by smaller settlements, camps, and activity areas, and extended beyond village boundaries. While the current route of Mission Road is approximately 0.6 miles north of the Project Site, historical research showed that there were more than one road between the Pueblo of Los Angeles and Mission San Gabriel, and that such routes were not tightly bounded. Historical documents indicate that the Project Site was between multiple routes, with one passing perhaps through or immediately west of the Project Site, another less than a mile east, and the predecessor of the current road between 0.5 and 0.75 miles to the north. These roads likely represent a continuation of precontact travel and trade routes. Based on these results, the Project Site has a moderate to high potential for encountering buried precontact archaeological resources beneath the recent fill soil layers.

(ii) Historic-Period Archaeological

The archival research shows that the Project Site is depicted on multiple maps as being along important travel routes. Review of the *Kirkman-Harriman Pictorial and Historical Map of Los Angeles County* (Kirkman 1937) found that it depicts the Project Site as located immediately south and in close proximity to Gaspar de Portolá's "First Exploring Route" and "Mission Roads" located just north of the Project Site running between Mission San Gabriel Arcángel and the Pueblo (later City) of Los Angeles. This research also found that the Project Site was developed in the early 20th century, with a residence on the northeast and another residence partially falling within the western portion of the Project Site. The northeast and western portions of the Project Site are currently undeveloped and covered with sod. It is not clear when exactly these residences were built, but they date to the period before organized trash collection and may have had associated refuse pits or privies. Based on these results, the Project Site has a moderate to high potential for encountering buried historic-period archaeological deposits associated with the previous residential uses at the Project Site, as well as with Portolá's exploration route and the mission roads and travel corridors.

3. Project Impacts

a) Thresholds of Significance

In accordance with Appendix G of the CEQA Guidelines, a Project would have a significant impact related to cultural resources if it would:

Threshold a) Cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5;

Threshold b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5; or

Threshold c) Disturb any human remains including those interred outside of formal cemeteries.

Assessment of the Project's potential impacts related to historical resources was performed utilizing guidance detailed in *California Office of Historic Preservation Technical Assistance Series #1: California Environmental Quality Act (CEQA) and Historical Resources* (Guidelines) (California Office of Historic Preservation 2001). These Guidelines define "substantial adverse change" as follows:

> "Substantial adverse change" includes demolition, destruction, relocation, or alternation such that the significance of an historical resource would be impaired (PRC Section 5020.1 (q)).
>
> While demolition and destruction are fairly obvious significant impacts, it is more difficult to assess when change, alteration, or relocation crosses the threshold of substantial adverse change. The CEQA Guidelines provide that a project that demolishes or alters those physical characteristics of an historical resource that convey its historical significance (i.e., its character-defining features) can be considered to materially impair the resource's significance.

The City determined in the Initial Study that the following environmental issue area would result in less-than-significant impacts and, therefore, are scoped out of this Draft EIR. Please refer to **Appendix A** of this Draft EIR for a copy of the Initial Study and additional information regarding the following issue areas:

Threshold c) Disturb any human remains including those interred outside of formal cemeteries.

As further detailed in the Initial Study, a number of regulatory provisions address the handling of human remains inadvertently uncovered during excavation activities. These include State Health and Safety Code Section 7050.5, PRC Section 5097.98, and CEQA Guidelines Section 15064.5(e). Pursuant to these codes, in the event of the discovery of unrecorded human remains during construction, excavations shall be halted and the County Coroner shall be notified. If the human remains are determined to be Native American, the California Native American Heritage Commission NAHC) would be notified within 24 hours, and the guidelines of the NAHC would be adhered to in the treatment and disposition of the remains. Compliance with these existing regulatory protocols would ensure that impacts on human remains would be less than significant. No further analysis of this issue is therefore included in this Draft EIR.

b) Methodology

(1) Historical Architectural Resources

Under CEQA, the evaluation of impacts to historical resources consists of a two-part inquiry: (1) a determination of whether the Project site contains or may otherwise impact any historic resource(s), and, if so, (2) a determination of whether the Project would result in a "substantial adverse change" in the significance of the identified resource or resources (PRC Section 21084.1; CEQA Guidelines Section 15064.5). The analysis of impacts to historical architectural resources is based on the Historic Resources Analysis, included in **Appendix F**

of this Draft EIR which includes: (1) identification of potential historical resources within the Project Site and surrounding area; (2) a summary of site-specific research of the Project Site, including its development history, architectural history, and occupancy history; (3) a pedestrian survey; and (4) a significance evaluation of the Project Site for its listing on the National Register of Places and the California Register of Historical Resources; and (5) an integrity analysis.

(2) Archaeological Resources

The analysis of impacts to archaeological resources is based on the Archeological Resources Report, included in **Appendix E** of this Draft EIR, which includes: (1) a cultural resource records search conducted at the CHRIS-SCCIC; (2) a SLF search through the NAHC; (3) review of Native American villages; (4) review of historical routes; (5) review of historical maps and aerial photographs; (6) review of the geotechnical report prepared for the Project; (7) a pedestrian survey; and (8) and a subsurface sensitivity assessment.

c) Analysis of Project Impacts

Threshold a) Would the Project cause a substantial adverse change in the significance of a historical resource as defined in Section 15064.5?

(1) Impact Analysis

(a) Direct Impacts

Under CEQA Guidelines Section 15064.5 (b), the changes to a building and its setting would only cause a substantial adverse change if they would detract from the integrity (location, design, setting, materials, workmanship, feeling, association) of the historical resource such that the historical resource's ability to convey its significance would be materially impaired to the degree that it would no longer be eligible as a historical resource pursuant to CEQA Guidelines Section 15064.5 (a). As discussed above, the Project Site was determined to be individually eligible as a historical resource for both the National Register of Historic Places and the California Register of Historical Resources under criteria A/1 and C/3. As such, the property is considered a historical resource according to CEQA.

The proposed Project includes a partial demolition and partial adaptive reuse of the Project Site wherein the two-story wing (west wing) would be adaptively reused, and the single-story (east wing) would be demolished in preparation for the construction of a new east wing. The existing building has been abandoned since 2002 and is largely deteriorated, however this deterioration has not affected the Project Site's integrity of location, setting, design, workmanship, materials, feeling, and association and therefore it is still able to convey its historic significance as it relates to the Project Site's association with the Los Angeles County public health and medical system, Los Angeles County public health clinics of the early twentieth century, the early civic and institutional

development of the City of Alhambra, and an example of the Monterey Revival Style of architecture.

The Project proposes to retain the northern half and part of the southern half of the two-story west wing of the Project Site, which includes the full-width balcony on the front façade that defines the building's Monterey style, and other significant character-defining features, including its low-pitch cross-gabled roof clad in terracotta barrel tiles, the majority of its six-over-six double-hung wood sills with rowlock sills, and wood French doors on the second level of the north elevation. Interior character-defining features to be retained include a lobby with an original interior staircase and tile murals. The eastern wing will be demolished in its entirety, although portions of the interior historic fabric would be partially retained and reused, including historic interior tile murals and light fixtures.

As detailed within Chapter II, *Project Description*, the new east wing of the proposed Project would be a series of buildings inspired by the idea of the connecting gems of a necklace and designed to create a campus design look and feel. The exterior design components of the new east wing building would derive materiality from the historic fabric of the existing Shorb Clinic building, including brick, stone, and plaster materials. Architectural elements such as trellises and arches would also be used to reference and complement the existing historic structure, but they would be designed in a modern way to show the distinction from the historic structure clearly.

While the Project is designed to follow the SOI Standards to an extent via the partial adaptive reuse of the west wing, the demolition of the east wing and construction of a new east wing would result in material changes that would substantially detract from the integrity of the Project Site such that it would no longer be able to convey its historic associations. The proposed demolition of the existing east wing and the new construction detailed above constitute a substantial adverse change to the resource such that the eligibility for listing would be lost. Therefore, the impact of the proposed Project on the Project Site/Historic Resource would be significant.

(b) Indirect Impacts

Indirect impacts were analyzed to determine if the proposed Project would result in a substantial material change to the integrity of historical resources located within 0.25-mile of the Project Site that would detract from their ability to convey their significance. There are 12 historical resources that have been previously identified within 0.25-mile of the Project Site, and one resource (Alhambra Fire Station #72) within 150 feet, that has indirect views of the Project Site. The other resources do not have a direct or indirect view of the Project Site. These resources are identified in Table 1 of the Historic Resources Assessment Report (located in **Appendix F** of this Draft EIR).

The resource at 1215 S 6th Street, the Alhambra Fire Station #72 is located adjacent to and 114 feet southeast of the Alhambra Community Center. The fire station has an indirect view of the Alhambra Community Center from its public right of way on S 6th Street. Currently, the east elevation of the existing one-story east wing is partially visible

from the public right of way of the fire station. A wood fence separates the fire station from the Shorb Clinic. The fire station is, however, not visible from the public right of way of the Shorb Clinic.

The proposed Project would not affect the integrity of location, design, materials, workmanship, feeling, or association of the Alhambra Fire Station #72, nor would the proposed Project affect the integrity of setting, as the Alhambra Fire Station #72 was designed to complement the surrounding residential neighborhood. The immediate surroundings of the Alhambra Fire Station #72 have not undergone major changes since its original construction in 1930 and have remained largely intact further development along the commercial strip of Valley Boulevard. While Alhambra has grown in size and population since the building's original construction in 1930, the neighborhood of the Alhambra Fire Station #72 remains a center of business and service-related activity in the eastern San Gabriel Valley. The building's location has not changed, nor has its historical association with the surrounding landscape, neighborhood, or city.

Therefore, the proposed Project would have less than significant indirect impacts on 1215 S 6th Street due to the demolition of the partially visible existing one-story east wing of the Shorb Clinic and construction of a new one-and two-story east wing to the immediate north of the fire station.

(2) Mitigation Measures

The following mitigation measures would be required for the Project to address potential historical resource impacts:

> **CUL-MM-1:** The City of Alhambra shall retain a qualified preservation consultant who meets the Secretary of the Interior's Professional Qualifications Standards for Architectural History, Architecture, or Historic Architecture pursuant to 36 CFR 61. The consultant should have at least 10 years of experience in design review and collaborative experience in applying the Standards (Qualified Preservation Professional) to provide input as part of the Project redesign which will incorporate the rehabilitation, adaptive reuse, or the retention of a portion of the historical resource in accordance with the Secretary of the Interior's Standards for Rehabilitation. A list or matrix detailing the character-defining features list of the building shall be prepared. The purpose of the character-defining features matrix is to identify those features or elements that give the building its individual and unique visual character and which should be taken into account to preserve and/or rehabilitate them to the maximum extent possible, according to the National Park Service. The character-defining features matrix shall be prepared as a part of the Project design process.
>
> **CUL-MM-2:** The City of Alhambra shall retain a qualified preservation consultant who meets the Secretary of the Interior's Professional Qualifications Standards for Architectural History, Architecture, or Historic Architecture pursuant to 36 CFR 61 and who has at least 10 years of experience in design review and collaborative

experience in applying the Standards (Qualified Preservation Professional) to review the final plans for the rehabilitation of the Project Site at 612 West Shorb Street and all new proposed construction and to ensure conformance with the Secretary of the Interior's Standards for Rehabilitation (Standards). Once the final design and the 90–100 percent construction plans become available, they shall be reviewed by a Qualified Preservation Professional for conformance with the Standards for Rehabilitation. Upon completion of the final design plans and the 90-100 percent construction plans, the Qualified Preservation Professional shall submit a draft report and make the necessary recommendations to ensure the design is in conformance with the Standards to the extent feasible. After the City has made the final revisions, the Qualified Preservation Professional shall review the final construction plans and prepare a final report documenting conformance with the Standards. The final plan review report shall be submitted along with the final plan set prior to submittal of the construction drawings and issuance of a grading permit and/or building permit. The lead agency governing the Project is the City of Alhambra who would be responsible for ensuring that this mitigation measure is completed prior to the issuance of a grading permit and/or building permit for the proposed Project.

CUL-MM-3: The City of Alhambra shall retain a qualified preservation consultant, meeting the Secretary of the Interior's Professional Qualifications Standards for Architectural History, Architecture, or Historic Architecture pursuant to 36 CFR 61 and who has at least 10 years of demonstrated experience conducting Standards conformance reviews to prepare a detailed historic preservation treatment and protection plan. The historic preservation treatment and protection plan will detail the specific treatment procedures, protection, removal, and process of each character-defining feature of the subject property prior to construction and preservation of the same character-defining feature post-construction. These specifications for preservation treatments shall be included in the final construction documents to ensure protection and preservation of the historic features of the subject property in conformance with the Secretary of Interior Standards. The preservation treatment plan shall be approved by the planning department of the City of Alhambra as a part of the project review process, and the final Preservation Treatment Plan shall be submitted with the final construction documents to the City prior to issuance of a grading and/or building permit.

CUL-MM-4: The City of Alhambra shall retain a qualified preservation consultant, meeting the Secretary of the Interior's Professional Qualifications Standards for Architectural History, Architecture, or Historic Architecture pursuant to 36 CFR 61 and who has at least 10 years of demonstrated experience conducting Standards conformance reviews and construction monitoring, who shall conduct construction monitoring at key points when historic fabric may be affected— including during both demolition and construction—to ensure that damage to any historic fabric is avoided or minimized. The qualified preservation professional shall conduct the monitoring and provide preservation treatment recommendations to address any

unanticipated issues that may arise and to ensure that the Project is completed in conformance with the Standards. The construction monitoring process shall be documented in a monitoring report for each visit, and a substantial completion letter report shall document Project conformance with the Standards. At the completion of construction, the monitoring reports and completion report shall be placed in the property file at the Planning Division.

CUL-MM-5: Prior to initiation of construction, the City of Alhambra shall commission a qualified architectural historian who satisfies the Secretary of the Interior's Professional Qualification Standards for Architectural History (36 CFR 61), and a qualified photographer to record the existing conditions at 612 West Shorb Street in a HABS Level III report that shall document the history and significance of the Alhambra Health Clinic in a written narrative and professional photographs in accordance with HABS guidelines. HABS Level III documentation is considered the appropriate level of documentation for a building that is significant at the local level, according to the National Park Service's 2003 Guidelines for Architectural and Engineering Documentation. The HABS shall serve as a baseline reference to inform future work that may be undertaken at this location. The HABS Level III report shall include the original historic plan, existing conditions plans, exterior and interior views, and an architectural data form, along with supporting documentation and references per HABS guidelines. The report shall be archivally produced and deposited in a publicly accessible archive, such as the Alhambra Public Library, the Los Angeles Public Library, the Los Angeles Conservancy and/or the South Central Coastal Information Center (SCCIC) located at California State University Fullerton.

CUL-MM-6: An Interpretative Exhibit, which would promote cultural awareness of the history of the Alhambra Health Center and its relationship to the development of medical services in Los Angeles County and as an important institutional building in the early history of Alhambra, shall be developed and be located at a prominent location as part of the Project. The Interpretative Exhibit shall be open to the public and would present a photographic history of the Center and showcase other information that would educate the public about the evolution of public health services in Los Angeles County and the early history of the City of Alhambra. The Interpretative Exhibit shall be completed and open to the public after the new development as part of the Project is placed in service. In this manner, information about the Project Site's construction and design as well as the associated history, would be retained and preserved.

(3) Level of Significance After Mitigation

The proposed multiple mitigation measures include HABS Level III recordation of the building and its site prior to the commencement of any demolition or construction activities. However, even with the implementation of Mitigation Measures CUL-MM-1

through CUL-MM-6, the Project mitigation measures would not reduce the impact on the Project Site/Historic Resource to less than significant.

The Project's mitigation measures are proposed to reduce, but would not eliminate, potential impacts on historical resources. Impacts would be significant and unavoidable.

Threshold b) Would the Project cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?

(1) Impact Analysis

As detailed within the Archaeological Assessment Report (**Appendix E** of this Draft EIR), although the records searches through the SCCIC and NAHC yielded negative results, the additional archival research suggests that there is a moderate to high potential for yielding buried precontact archaeological resources based on the following reasons: 1) the soils within the Project Site (Quaternary alluvium) are of an age conducive to the preservation of subsurface precontact archaeological deposits; 2) the Project Site is located between two rivers and near a wash, providing beneficial conditions for precontact use and occupation; 3) several Native American villages were located in the vicinity of the Project Site; 4) historical research showed that the Project Site was between multiple routes and these routes likely represent a continuation of precontact travel and trade routes. The archival research also indicates that there is a moderate to high potential for encountering buried historic-period archaeological resources based on that fact that: 1) the Project Site was once located along important historic travel routes; and 2) the Project Site was developed in the early 20th century with two residences, which may date to the period before organized trash collection and may have had associated refuse pits or privies. Since the Project includes ground disturbance up to 5 feet in depth and up to 25 feet deep for the drywell infiltration basin, the following mitigation measures are proposed in order to reduce potential impacts to previously unknown archaeological resources.

(2) Mitigation Measures

The following mitigation measures are required to address potential impacts on archaeological resources during Project construction:

> **CUL-MM-7**: Prior to issuance of demolition permit, the City of Alhambra shall retain an archaeologist who meets the Secretary of the Interior's Professional Qualifications Standards for Archaeology (Qualified Archaeologist) to oversee an archaeological monitor who shall be present during construction excavations such as demolition, clearing/grubbing, grading, trenching, or any other construction excavation activity associated with the Project. The minimum education and experience for a Qualified Archaeologist include a graduate degree in archaeology, or related field; at least one year of full-time professional experience or equivalent specialized training in archaeological research, administration, or management. The minimum education and experience for an archaeological monitor includes having a bachelor's degree in a relevant field of study and either two months of

archaeological construction monitoring experience or two months of supervised training with prehistoric archaeological materials in a field or laboratory setting. The frequency of monitoring shall be based on the rate of excavation and grading activities, proximity to known archaeological resources, the materials being excavated (younger alluvium vs. older alluvium), and the depth of excavation, and if found, the abundance and type of archaeological resources encountered, as determined by the Qualified Archaeologist. The frequency of monitoring shall be determined based on the factors presented above, and full-time archaeological monitoring in any area can be reduced to part-time inspections or ceased entirely if determined appropriate by the Qualified Archaeologist, in consultation with the City. Prior to commencement of excavation activities, a Cultural Resources Sensitivity Training shall be given for construction personnel. The training session shall be carried out by the Qualified Archaeologist and shall focus on how to identify indications of archaeological resources that may be encountered during earthmoving activities and the procedures to be followed in such an event.

CUL-MM-8: In the event that historic or precontact archaeological resources (e.g., artifacts, cultural soils, features, etc.) are unearthed, ground-disturbing activities shall be halted or diverted away from the vicinity of the find by the archaeological monitor, so that the find can be evaluated by the Qualified Archaeologist. If for some reason the archaeological monitor is not on site, the area will be avoided by the construction crew and the Qualified Archaeologist shall be contacted. After consulting with the City, the Qualified Archeologist shall establish an appropriate buffer area in accordance with industry standards, reasonable assumptions regarding the potential for additional discoveries in the vicinity, and safety considerations for those making an evaluation and potential recovery of the discovery. This buffer area shall be established around the resource and will demarcate where construction activities shall not be allowed to continue. Work shall be allowed to continue outside of the buffer area.

All archaeological resources unearthed by Project construction activities shall be evaluated by the Qualified Archaeologist. If the Qualified Archaeologist determines the find to constitute a “historical resource” pursuant to CEQA Guidelines Section 15064.5(a) or a “unique archaeological resource” pursuant to Public Resources Code Section 21083.2(g), the Qualified Archaeologist shall coordinate with the City of Alhambra to develop a reasonable and feasible treatment plan that would serve to reduce impacts to the resources. The treatment plan established for the resources shall be in accordance with CEQA Guidelines Section 15064.5(f) for historical resources and Public Resources Code Sections 21083.2(b) for unique archaeological resources. The treatment plan shall include measures regarding the curation of the recovered resources that may include curation at a public, non-profit institution with a research interest in the materials, such as the Natural History Museum of Los Angeles County or the Fowler Museum, if such an institution agrees to accept the material. If no institution accepts the resources, they may be donated to a local school or historical society in the area for educational purposes.

CUL-MM-9: Prior to the release of the grading bond, the Qualified Archaeologist shall prepare a final report and appropriate California Department of Parks and Recreation (DPR) Site Forms at the conclusion of archaeological monitoring. The report shall include a description of resources unearthed, if any, treatment of the resources, results of the artifact processing, analysis, and research, and evaluation of the resources with respect to the California Register of Historical Resources and CEQA. The report and the DPR Site Forms shall be submitted by the City to the South Central Coastal Information Center, and representatives of other appropriate or concerned agencies to signify the satisfactory completion of the Project and required mitigation measures.

(3) Level of Significance After Mitigation

Impacts related to archaeological resources during Project construction would be reduced to less than significant with implementation of the Mitigation Measures CUL-MM-7 through CUL-MM-9.

d) Cumulative Impacts

(1) Impact Analysis

(a) Historical Resources

While the proposed Project's indirect impacts on the adjacent historic resource Alhambra Fire Station #72 were found to be less than significant, as detailed in the indirect impacts analysis above, the Project's direct effects on the Project Site/Historic Resource were found to be significant and unavoidable. Regardless of any other related development projects in the vicinity of the Project Site, there is a significant and unavoidable impact from the Proposed Project on the Project Site/Historic Resource.

(b) Archaeological Resources

Many of the related projects identified in Chapter III, *Environmental Setting*, of this Draft EIR, would require excavation that could potentially expose or damage potential archaeological resources. However, these related projects are located in developed urban areas with sites that have been previously disturbed, and the potential to encounter and cause a significant impact on surface resources is unlikely. Further, in association with CEQA review, and depending on the depth of excavation and sensitivity of respective sites, mitigation measures or conditions of approval would be required for related projects that have the potential to cause significant impacts to undiscovered archaeological resources, including existing regulations for undiscovered human remains. Implementation of such mitigation measures, conditions of approval, and compliance with regulations would avoid significant impacts. State requirements regarding impacts on archaeological resources and CEQA compliance require monitoring of excavation activities and treatment and/or curation of discovered resources where appropriate (Public Resources Code Section 15064.5). Such standard construction practices, particularly over a range of project sites, provide for protection, recovery and curation of

discovered resources and preserve their contributions to the knowledge base of past population activity in the area. For those projects not subject to CEQA review, there would be some potential for impacts on archaeological resources and human remains in the event there are excavations that extend into soils conducive to retaining resources, however, regulations contained in the California Health and Safety Code and Penal Code would apply in some instances, and circumstances involving a loss of such resources are expected to be limited. Therefore, the cumulative effects from cumulative projects are considered less than significant.

The Project is required to comply with the Mitigation Measures CUL-MM-7 through CUL-MM-9 and regulations cited above in the event resources are found, thus ensuring proper identification, treatment and preservation of any resources, and reducing significant impacts on archaeological resources to less than significant levels. These regulations require excavation monitoring, and treatment and curation of discoveries. Therefore, to the extent impacts on archaeological resources from cumulative projects may occur, further contribution from the Project would not be cumulatively considerable, and the cumulative impacts of the Project would be less than significant.

(2) Mitigation Measures

Cumulative impacts to historic resources were determined to be significant and unavoidable due to the proposed Projects impacts on the Project Site/Historic Resource. Mitigation Measures CUL-MM-1 through CUL-MM-6, detailed above, are required to reduce the cumulative impacts to historic resources.

Cumulative impacts to archaeological resources were determined to be less than significant with the implementation of Mitigation Measures CUL-MM-7 through CUL-MM-9.

(3) Level of Significance After Mitigation

Even with implementation of Mitigation Measures CUL-MM-1 through CUL-MM-6, which are proposed to reduce, but would not eliminate, potential cumulative impacts on historical resources, the cumulative impacts to historic resources would be lessened, but not to a less than significant level. In this case, cumulative impacts to historic resources would be significant and unavoidable.

Cumulative impacts related to archaeological resources would be less than significant without additional mitigation measures beyond those required for the Project.

IV. Environmental Impact Analysis

C. Geology and Soils

1. Introduction

This section evaluates potential impacts to paleontological resources and unique geologic features. The analysis of paleontological resources is based on a review of the paleontological resources database search results conducted by the Natural History Museum of Los Angeles County (LACM) (located in **Appendix G** of this Draft EIR), geologic map and literature review, review of the geotechnical engineering investigation, and a paleontological sensitivity analysis.

2. Environmental Setting

a) Regulatory Framework

(1) State

(a) California Public Resources Code Section 5097.5

PRC Section 5097.5 provides protection for paleontological resources on public lands, where Section 5097.5(a) states, in part, that:

No person shall knowingly and willfully excavate upon, or remove, destroy, injure, or deface, any historic or prehistoric ruins, burial grounds, archaeological or vertebrate paleontological site, including fossilized footprints, inscriptions made by human agency, rock art, or any other archaeological, paleontological or historical feature, situated on public lands, except with the express permission of the public agency having jurisdiction over the lands.

(b) Society for Vertebrate Paleontology Standard Guidelines

As discussed above, PRC Section 5097.5 and the California Environmental Quality Act Statute require protection of paleontological resources. Although not as a formal regulation per se, the Society for Vertebrate Paleontology (SVP) has established standard guidelines that outline professional protocols and practices for conducting paleontological resource assessments and surveys, monitoring and mitigation, data and fossil recovery, sampling procedures, and specimen preparation, identification, analysis, and curation (SVP 2010).

The SVP guidelines are the industry standard (SVP 1995). As defined by the SVP, significant nonrenewable paleontological resources are:

> Fossils and fossiliferous deposits here are restricted to vertebrate fossils and their taphonomic and associated environmental indicators. This definition excludes invertebrate or paleobotanical fossils except when present within a given vertebrate assemblage. Certain invertebrate and plant fossils may be defined as significant by a project paleontologist, local paleontologist, specialists, or special interest groups, or by lead agencies or local governments.

As defined by the SVP, significant fossiliferous deposits are:

> A rock unit or formation which contains significant nonrenewable paleontologic resources, here defined as comprising one or more identifiable vertebrate fossils, large or small, and any associated invertebrate and plant fossils, traces, and other data that provide taphonomic, taxonomic, phylogenetic, ecologic, and stratigraphic information (ichnites and trace fossils generated by vertebrate animals, e.g., trackways, or nests and middens which provide datable material and climatic information). Palaeontologic resources are considered to be older than recorded history and/or older than 5,000 years BP [before present].

Based on the significance definitions of the SVP, all identifiable vertebrate fossils are considered to have significant scientific value (SVP 1995). This position is adhered to because vertebrate fossils are relatively uncommon, and only rarely will a fossil locality yield a statistically significant number of specimens of the same genus. Therefore, every vertebrate fossil found has the potential to provide significant new information on the taxon it represents, its paleoenvironment, and/or its distribution. Furthermore, all geologic units in which vertebrate fossils have previously been found are considered to have high sensitivity. Identifiable plant and invertebrate fossils are considered significant if found in association with vertebrate fossils or if defined as significant by project paleontologists, specialists, or local government agencies.

(2) Local

(a) City of Alhambra General Plan

The City's General Plan provides direction regarding the City's vision for future development in the City and includes several chapters to help guide the design of future development. It also contains several broad goals, objectives, and policies for neighborhood design to create a more livable city for existing and future residents. These goals and policies are stated not in terms of specific design guidelines, but in terms of general neighborhood-wide design policies.

The General Plan serves as a guide for the City's overall long-range growth and development policies and serves as a guide to update community plans, specific plans,

and the citywide elements. These citywide elements address functional topics that cross community boundaries, such as transportation, and address these topics in detail.

The General Plan consists of seven elements, including the Land Use and Community Design Element, Mobility Element, Quality of Life Element, Resources Element, Services and Infrastructure Element, and Health and Safety Element. Each element addresses its respective subject and the City's 20-year vision for the future. With regard to paleontological resources, the General Plan's Resources Element and Quality of Life Element establish the following goals and policies applicable to paleontological resources:

> **Goal R-6:** Preservation of the cultural identity of Alhambra as a diverse residential and commercial city with distinct single-family neighborhoods.
>
> ***Policy R-6A:*** Promote and encourage the preservation of Alhambra's significant historic, architectural, cultural, archaeological, and paleontological resources.
>
> ***Policy R-6E:*** Enforce applicable historic preservation laws to preserve state or federally designated historic resources and other resources (e.g., archaeological and paleontological) eligible for such designation.

b) Existing Conditions

(1) LACM Records Search

ESA requested a paleontological resources database search on December 12, 2023 from the Natural History Museum of Los Angeles County (LACM) for records of fossil localities in and around the Project Site. The purpose of the museum records search was to: (1) determine whether any previously recorded fossil localities occur in the Project Site, (2) assess the potential for disturbance of these localities during construction, and (3) evaluate the paleontological sensitivity within the Project Site and vicinity. The results from the LACM were received on January 7, 2024, and are located within **Appendix G** of this Draft EIR. The results indicate that no fossil localities fall within the Project Site, but that fossil localities exist nearby from the same sedimentary deposits that occur in the Project Site, either at surface or at depth (**Table IV.C-1***, Summary of LACM Fossil Localities*). The LACM records show several localities from the marine Miocene aged formations [specimens of great pipefish (*Syngnathus avus*), *Ellima elmodenae*, and two different types of herring (*Clupea hadleyi*and *Xyne*]. These units (Modelo Formation) are not expected to be encountered by the Project , as excavation for the Project would be in the Pleistocene alluvium. Similar aged deposits of Pleistocene alluvium near the Project site have yielded horse (*Equus*), sabertooth cat (*Smilodon*), deer (*Odocoileus*), turkey (Meleagris), and mastodon (*Mammut*), mostly found at unknown depths and depths between 20 and 35 feet below ground surface (bgs) (Bell 2024).

TABLE IV.C-1
SUMMARY OF LACM FOSSIL LOCALITIES

Locality Number	Formation	Taxa	Depth
LACM VP 1031	Modelo Formation (soft punky diatomaceous shale)	Great pipefish (*Syngnathus avus*); *Ellima elmodenae*; herring (*Clupea hadleyi*)	Unknown
LACM VP 1027	Modelo Formation (diatomite)	Herring (*Xyne*)	Unknown
LACM VP 3363	Unknown Formation (Pleistocene; sand and silt)	Horse (*Equus*)	Unknown
LACM VP 1023	Unknown Formation (Pleistocene)	sabertooth cat (*Smilodon*), horse (*Equus*), deer (*Odocoileus*), Turkey (*Meleagris*)	Unknown (excavations for storm drains)
LACM VP 2032	Unknown Formation (Pleistocene, silt & clay)	Mastodon (*Mammut*)	20-35 ft bgs

SOURCE: Natural History Museum of Los Angeles County, 2024

(2) Geologic Map and Literature Review

The broad geological context of the Project Site is shown on the 1:24,000 scale map by Dibblee and Ehrenspeck (1989), which depicts Quaternary alluvium deposits of Holocene-age and described as unconsolidated floodplain deposits of silt, sand and gravel. The Project Site is located on the broad alluvial valley directly east of exposed bedrock outcrops of Pliocene to Miocene-aged marine deposits. Valley floors like these are common in the greater Los Angeles Basin and formed in the past several million years as the surrounding mountains (*e.g.*, Transverse Ranges, Peninsular Ranges) uplifted as a consequence of the northern migration of the San Andreas Fault system (Sylvester and O'Black Gans). The exposed Pliocene-Miocene units are folded into a tight syncline that is more weathered in the center. The units repeat in an anticline northwest of the Project Site. The closest surface outcrops to the Project Site expose the Repetto Member of the Pliocene Fernando Formation (Tfr). Dibblee and Ehrenspeck (1989) show these units dipping at 28 degrees to the northeast and, thus, are likely to be found at depth below the alluvium.

Additional analysis of the Quaternary geological map of Bedrossian et al. (2012) provides more detail than the Dibblee and Ehrenspeck (1989) map, which focuses on bedrock geology. Bedrossian et al. (2012) depicts the Project Site as situated within older, middle to late Pleistocene alluvial fans (Qof) that overlies the Miocene bedrock. The Qof is noted as being slightly to moderately consolidated and dissected and composed of boulders, cobbles, gravel, sand, and silt. Younger alluvium (Qya) is mapped closer to the exposed bedrock west of the Project Site. The apron of older fans is extensive and extends east past San Marino and San Gabriel to the Eaton Wash.

(3) Geotechnical Engineering Investigation

The *Geotechnical Engineering Investigation* (Geotechnologies, Inc. 2023) report prepared for the Project (Appendix D of the Initial Study, located in **Appendix A** of the Draft EIR) describes a total of five exploratory borings (using 8-inch diameter hollowstem augers) drilled at the Project Site, extending to depths between 2 and 50 feet bgs. The borings contained fill soils from the surface down to 3 to 5 feet bgs. There were native alluvial sediments beneath the fill strata. The alluvial sediments consisted of a combination of sands and silts with cobbles and pebbles (Geotechnologies, Inc. 2023). None of the reported borehole logs note a shift to the Repetto member of the Pliocene Fernando Formation.

(4) Paleontological Sensitivity Analysis

The LACM records search results, as well as the geologic map and literature review were used to assign paleontological sensitivity to the geologic units at surface and underlying the Project Site, following the guidelines of the SVP (2010):

- **Quaternary Alluvium (Qa):** The Project Site is depicted as located within Holocene-age Quaternary alluvium deposits. The Holocene-age alluvial deposits are assigned a **Low Potential** to contain paleontological resources given their young age.
- **Older Fan Deposits (Qof):** The Project Site has also been depicted as located atop older, Pleistocene fan deposits. The fan deposits are of an age to preserve significant Ice Age fossils and terrestrial fossils of this age are recorded by the LACM from this area. Therefore, this unit is assigned a **High Potential** to contain paleontological resources.

3. Project Impacts

a) Thresholds of Significance

In accordance with Appendix G of the CEQA Guidelines, a Project would have a significant impact related to geology and soils if it would:

Threshold a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:

i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issues by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publications 42.

ii) Strong seismic ground shaking?

iii) Seismic-related ground failure, including liquefaction?

iv) Landslides?

Threshold b) Result in substantial soil erosion or the loss of topsoil?

Threshold c) Be located on a geologic unit or soil that is unstable or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse?

Threshold d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?

Threshold e) Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?

Threshold f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

The City determined in the Initial Study that the following environmental issue areas would result in less-than-significant impacts and, therefore, are scoped out of this Draft EIR. Please refer to **Appendix A** of this Draft EIR for a copy of the Initial Study and additional information regarding the following issue areas:

Threshold a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:

(i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issues by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publications 42.

(ii) Strong seismic ground shaking?

(iii) Seismic-related ground failure, including liquefaction?

(iv) Landslides

Threshold b) Result in substantial soil erosion or the loss of topsoil?

Threshold c) ***Be located on a geologic unit or soil that is unstable or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse?***

Threshold d) ***Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?***

Threshold e) ***Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?***

As detailed in the Initial Study, impacts related to geologic hazards, soil erosion, unstable soils, expansive soils, and soils inadequate of supporting septic tanks were determined to be no impact or less-than-significant and therefore are not addressed further in this Draft EIR.

b) Methodology

The analysis of paleontological resources include a review of the paleontological resources database search results conducted by the LACM, geologic map and literature review, review of the geotechnical engineering investigation, and a paleontological sensitivity analysis.

Paleontological sensitivity is the potential for a geologic unit to produce scientifically significant fossils that could yield information important to prehistory, or that embody the distinctive characteristics of a type of organism, environment, period of time, or geographic region. This is determined by rock type, past history of the geologic unit in producing significant fossils, and fossil localities recorded from that unit; for this reason, paleontological sensitivity depends on the known fossil data collected from the entire geologic unit, not just a specific survey. The SVP defines four categories of paleontological sensitivity or, per the SVP guidelines, potential, for the presence of paleontological resources – high, low, undetermined, and no potential. For geologic units with high potential, full-time monitoring is typically appropriate during any project-related ground disturbance because of the risk to paleontological resources. For geologic units with low potential, protection or salvage efforts are not generally required because of the low risk of encountering paleontological resources. For geologic units with undetermined potential, accepted professional practice typically includes field surveys conducted by a qualified vertebrate paleontologist to determine the paleontological potential of the rock units present in the study area, which in turn prescribes how mitigation measures should be assigned. For geologic units with no potential to produce scientifically significant fossils, no protection or salvage efforts are normally required.

c) Analysis of Project Impacts

Threshold f) Would the Project directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

(1) Impact Analysis

As discussed above in Section 2, Environmental Setting, Existing Conditions, geologic mapping indicates that the surface of the Project Site is underlain by Holocene-age alluvium and Pleistocene-age alluvial fans (Qof). The Holocene-age alluvium has a low sensitivity given their young age; however, the Pleistocene-age alluvial fans have a high sensitivity for paleontological resources due to the old age of the deposits. The paleontological resources records search conducted through the LACM indicates that several localities from the marine Miocene aged formations [specimens of great pipefish (*Syngnathus avus*), *Ellima elmodenae*, herring (*Clupea hadleyi*), and herring (*Xyne*)] have been documented in the vicinity. These units (Modelo Formation) are not expected to be encountered by the Project, as excavation for the Project would be in the Pleistocene alluvium. Similar aged deposits of Pleistocene alluvium near the Project site have yielded horse (*Equus*), sabertooth cat (*Smilodon*), deer (*Odocoileus*), turkey (Meleagris), and mastodon (*Mammut*), mostly found at unknown depths and depths between 20 and 35 feet bgs. Given the positive results of the LACM records search, and since excavations for the Project would extend to a depth of 25 feet for the drywell infiltration basin, the potential to encounter buried paleontological resources during construction of the Project is considered high. Therefore, as the Project could directly or indirectly destroy unique paleontological resources, impacts on buried paleontological resources are considered potentially significant.

(2) Mitigation Measures

The following mitigation measures address the potential for impacts in the event buried paleontological resources are encountered during excavation for the Project.

> **GEO-MM-1:** Prior to the issuance of grading permits, the City of Alhambra shall retain a federally-qualified Paleontologist meeting the Society of Vertebrate Paleontology (SVP) Standards. The qualified Paleontologist shall have the following qualifications: a graduate degree in paleontology or geology, at least two full years of professional experience as assistant to a Project Paleontologist with administration and project management experience, proficiency in recognizing fossils in the field, expertise in local geology, stratigraphy, and biostratigraphy, and experience collecting vertebrate fossils in the field. The qualified Paleontologist shall provide technical and compliance oversight of all work as it relates to paleontological resources, shall attend the Project kick-off meeting, and Project progress meetings. The qualified Paleontologist shall be responsible for monitoring and overseeing paleontological monitors (meeting SVP standards) that will observe grading and excavation activities on site.

GEO-MM-2: Paleontological monitoring shall be conducted during construction excavations into undisturbed older alluvial sediments that exceed 10 feet in depth. Monitoring shall consist of visually inspecting fresh exposures of rock for larger fossil remains and, where appropriate, collecting and wet screening sediment samples of promising horizons for smaller fossil remains. If significant vertebrate fossils are found by screening, it will be necessary to collect a 6,000-pound sample for screening, per SVP Guidelines (2010). The sample can be collected by construction machinery and stockpiled and processed in a safe location on site, or transported to another site for processing. The frequency of monitoring inspections shall be determined by the qualified Paleontologist and shall be based on the rate of excavation and grading activities, the materials being excavated, and the depth of excavation, and if found, the abundance and type of fossils encountered. Full-time monitoring can be reduced to part-time inspections, or ceased entirely, if determined that the paleontological resources potential has been exhausted by the qualified Paleontologist. If a potential fossil is found, the paleontological monitor (or a qualified Paleontologist) shall have authority to temporarily stop excavation activity or to temporarily divert or redirect grading and excavation activities in the area of the exposed fossil to facilitate evaluation of the discovery. An appropriate buffer area shall be established by the qualified Paleontologist around the resource demarcating where construction activities shall not be allowed to continue. Work shall be allowed to continue outside of the buffer area. At the qualified Paleontologist's discretion, and to reduce any construction delay, the grading and excavation contractor shall assist in removing rock/sediment samples for initial processing and evaluation. If preservation in place is not feasible, the qualified Paleontologist shall implement a paleontological salvage program to remove the resources from their location.

GEO-MM-3: Any significant fossils recovered during Project-related excavations shall be prepared to the point of identification. The residue form sediment samples shall be dried and sorted with a binocular dissecting microscope. Both macrofossils and vertebrate microfossils shall be prepared to the point of identification, identified, and curated into an accredited repository, such as the Natural History Museum of Los Angeles County. The qualified Paleontologist shall prepare a final report summarizing the results of the monitoring and salvaging efforts, the methodology used in these efforts, as well as a description of the fossils collected and their significance. The report shall accompany the specimens to the accredited repository. The report shall also be submitted to the City to signify the satisfactory completion of the Project and required mitigation measures.

(3) Level of Significance After Mitigation

Implementation of Mitigation Measures GEO-MM-1 through GEO-MM-3 would require retention of a federally-qualified Paleontologist meeting the SVP Standards in order to provide technical and compliance oversight, construction worker paleontological resources sensitivity training, and paleontological resources monitoring. Impacts related to paleontological resources during Project construction would be reduced to less than significant with implementation of the above mitigation measures. The Project would have

no impacts to paleontological resources during operation as there would be no continuous groundbreaking and excavation activities during Project operation.

d) Cumulative Impacts

(1) Impact Analysis

As previously discussed, the region is known to have paleontological resources, and like the Project, other related projects in the vicinity that involve excavation into native soils have the potential to encounter paleontological resources due to prior discoveries in the area and the generally high sensitivity of underlying soils. Accordingly, cumulative impacts prior to mitigation would be significant. Similar to the Project, related projects would be required to implement monitoring and preservation measures or conditions of approval.

(2) Mitigation Measures

The Project would be required to implement Mitigation Measures GEO-MM-1 through GEO-MM-3, and related projects that involve excavation into native soils are expected to implement similar mitigation measures or conditions of approval.

(3) Level of Significance After Mitigation

Cumulative impacts related to paleontological resources under the Project would be potentially significant prior to implementation of mitigation measures. With implementation of Mitigation Measures GEO-MM-1 through GEO-MM-3, Project impacts would be reduced to a less than significant level, and implementation of similar mitigation measures or conditions of approval by related projects would similarly reduce impacts to a less than significant level. Paleontological resources, if encountered during excavation, would be protected and recovered and would contribute to the body of scientific knowledge of paleontological resources. The Project's contribution to cumulative impacts would not be cumulatively considerable and, therefore, cumulative impacts would be less than significant.

IV. Environmental Impact Analysis

D. Noise

1. Introduction

This section of the Draft EIR discusses the fundamentals of sound and vibration; estimates the existing sound environment; examines federal, state, and local noise guidelines, policies, and standards; reviews noise levels at existing receptor locations; evaluates potential noise impacts associated with the Project and provides mitigation to reduce noise impacts at noise sensitive receiving land uses. Noise monitoring data and calculations are included in **Appendix H** of this Draft EIR.

2. Environmental Setting

a) Regulatory Framework

(1) Federal

(a) Federal Laws, Regulations, and Policies

The Noise Control Act of 1972 establishes a national policy to promote an environment for all Americans to be free from noise that jeopardizes their health and welfare.

Information on Levels of Environmental Noise Requisite to Protect Health and Welfare with an Adequate Margin of Safety, commonly referenced as the "Levels Document," establishes an L_{dn} of 55 dBA as the requisite level, with an adequate margin of safety, for areas of outdoor uses, including residences and recreation areas (USEPA 1974). This document identifies safe levels of environmental noise exposure without consideration of costs for achieving these levels or other potentially relevant considerations.

(i) Federal Highway Administration

The purpose of the Federal Highway Administration (FHWA) Noise Abatement Procedure is to provide procedures for noise studies and noise abatement measures to help protect the public health and welfare, supply noise abatement criteria, and establish requirements for information to be given to local officials for use in the planning and design of highways. It establishes five categories of noise-sensitive receptors and prescribes the use of the hourly Leq as the criterion metric for evaluating traffic noise impacts.

(ii) Occupational Safety and Health Administration

The Occupational Safety and Health Administration's (OSHA) Occupation Noise Exposure Hearing Conservation Amendment (Federal Register 48 [46], 9738–9785, 1983) stipulates that protection against the effects of noise exposure shall be provided for employees when sound levels exceed 90 dBA over an 8-hour exposure period. Protection shall consist of feasible administrative or engineering controls. If such controls fail to reduce sound levels to within acceptable levels, personal protective equipment shall be provided and used to reduce exposure of the employee. Additionally, a Hearing Conservation Program must be instituted by the employers whenever employee noise exposure equals or exceeds the action level of an 8-hour time-weighted average sound level of 85 dBA. The Hearing Conservation Program requirements consist of periodic area and personal noise monitoring, performance and evaluation of audiograms, provision of hearing protection, annual employee training, and record keeping.

(b) Federal Transit Administration

The criteria for environmental impact from groundborne vibration are based on the maximum levels for a single event. **Table IV.D-1**, *Construction Vibration Damage Criteria*, lists the potential vibration damage criteria associated with construction activities, as suggested in the *Transit Noise and Vibration Impact Assessment* (FTA 2018).

TABLE IV.D-1
CONSTRUCTION VIBRATION DAMAGE CRITERIA

Building Category	PPV (inch/sec)	Approximate L_V[a]
Reinforced-concrete, steel or timber (no plaster)	0.50	102
Engineered concrete and masonry (no plaster)	0.30	98
Non-engineered timber and masonry buildings	0.20	94
Buildings extremely susceptible to vibration damage	0.12	90

NOTES:
PPV = peak particle velocity; LV = velocity in decibels; inch/sec = inches per second
[a] Root-mean-square velocity in decibels (VdB) re 1 microinch per second.
SOURCE: FTA 2018*, Table 7-5*

Federal Transit Administration (FTA) guidelines show that a vibration level of up to 102 VdB (equivalent to 0.5 inch/sec in Root Mean Square (RMS)) (FTA 2018) is considered safe for buildings consisting of reinforced concrete, steel, or timber (no plaster), and would not result in any construction vibration damage. For a non-engineered timber and masonry building, the construction vibration damage criterion is 94 VdB (0.2 inch/sec in RMS).

Based on Table 8-3 in the FTA's *Transit Noise and Vibration Impact Assessment* (FTA 2018), interpretation of vibration criteria for detailed analysis is 78 VdB for residential uses

during daytime hours. During nighttime hours, the vibration criterion is 72 VdB. For office and office buildings, the FTA guidelines suggest that a vibration level of 84 VdB should be used for detailed analysis.

(2) State

(a) California Code of Regulations

Title 24 of the California Code of Regulations (CCR) establishes the California Building Code (CBC). The most recent building standard adopted by the legislature and used throughout the state is the 2022 version, which took effect on January 1, 2023. The State of California's noise insulation standards are codified in the California Green Building Standards Code (Title 24, Part 11, Chapter 5). These noise standards are for new construction in California for the purposes of interior compatibility with exterior noise sources. The regulations specify that acoustical studies must be prepared when noise-sensitive structures, such as residences, schools, or hospitals, are near major transportation noises, and where such noise sources create an exterior noise level of 65 dBA CNEL, or higher. Acoustical studies that accompany building plans must demonstrate that the structure has been designed to limit interior noise in habitable rooms to acceptable noise levels of 50 dBA Leq during any hour of operation.

(b) California Department of Transportation Vibration/Groundborne Noise Standards

California has not adopted statewide standards or regulations for evaluating vibration or groundborne noise impacts from land use development projects.

(3) Local

(a) City of Alhambra General Plan Health and Safety Element

California Government Code Section 65302(g) requires that a noise element be included in the general plan of each county and city in the state. The City discusses noise in the Health and Safety Element, adopted in August 2019. The Health and Safety Element contained in the Alhambra General Plan identifies and describes potential public health safety challenges such as earthquakes, hazardous materials incidents, floods, and noise that can and may affect Alhambra, as well as the requirements and resources available to respond when a public health and safety incident or emergency occurs. The City's Land Use/Noise Compatibility Matrix is presented in **Table IV.D-2** *Noise and Land Use Compatibility Matrix - California.* As detailed in Chapter II, *Project Description*, the Project consists of the development of a community center, inclusive of support/administrative offices, exterior recreational facilities, and parking. As shown in Table IV.D-2, the guidelines recommended an exterior noise exposure of 50 to 70 dB Ldn for office uses as considered "Normally Acceptable" and 70 to 75 dB Ldn for office uses is considered "Conditionally acceptable".

TABLE IV.D-2
NOISE AND LAND USE COMPATIBILITY MATRIX - CALIFORNIA

Land Use	Community Noise Exposure CNEL (dBA)			
	Normally Acceptable[a]	Conditionally Acceptable[b]	Normally Unacceptable[c]	Clearly Unacceptable[d]
Residential – Low density, Single-Family, Duplex, Mobile Homes	50 – 60	60 – 70	70 – 75	75 – 85
Residential – Multiple Family	50 – 60	60 – 70	70 – 75	70 – 85
Transient Lodging – Motel, Hotels	50 – 60	60 – 70	70 – 80	80 – 85
Schools, Libraries, Churches, Hospitals, Nursing Homes	50 – 60	60 – 70	70 – 80	80 – 85
Auditoriums, Concert Halls, Amphitheaters	NA	50 – 70	70 - 85	NA
Sports Arenas, Outdoor Spectator Sports	NA	50 – 75	75 - 85	NA
Playgrounds, Neighborhood Parks	50 – 70	NA	70 – 75	75 – 85
Golf Courses, Riding Stables, Water Recreation, Cemeteries	50 – 75	NA	75 – 80	80 – 85
Office Buildings, Business Commercial and Professional	50 – 70	70 – 75	75 – 85	NA
Industrial, Manufacturing, Utilities, Agriculture	50 – 75	75 – 80	80 – 85	NA

NOTES:

[a] **Normally Acceptable –** Specified land use is satisfactory, based upon the assumption that any buildings involved are of normal conventional construction, without any special noise insulation requirements.

[b] **Conditionally Acceptable –** New construction or development should be undertaken only after a detailed analysis of the noise reduction requirements is made and needed noise insulation features included in the design. Conventional construction, but with closed windows and fresh air supply systems or air conditioning, will normally suffice.

[c] **Normally Unacceptable –** New construction or development should be discouraged. If new construction or development does proceed, a detailed analysis of the noise reduction requirements must be made and needed noise insulation features included in the design.

[d] **Clearly Unacceptable** – New construction or development should generally not be undertaken.

NA: Not Applicable

SOURCE: City of Alhambra General Plan-Figure 23, August 2019

The Safety and Health Element of the General Plan contains the following goal and policies related to noise:

Goal HS-6: Minimization of exposure to excessive noise.

Policy HS-6A: Avoid or reduce excessive noise impacts on noise-sensitive receptors through land use planning, review of new development proposals, and physical interventions such as noise insulation in building design, setbacks, or noise barriers, when necessary.

Policy HS-6B: Comply with and enforce applicable City Municipal Code standards related to noise.

Policy HS-6C: Use the land use/noise compatibility matrix on page 94 to determine the compatibility of proposed new development in the City within ambient noise levels.

Policy HS-6D: Ensure that the potential impacts of transportation noise sources (including non-roadway sources such as helicopter operations and train movement), are analyzed, and, when necessary, mitigated through the environmental review process.

Policy HS-6E: Establish and maintain coordination among City departments and other relevant agencies involved in noise abatement.

(b) Alhambra Municipal Code

Chapter 18.02 of the Alhambra Municipal Code (AMC) contains noise and vibration control regulations that would have a limited applicability to the Project's construction noise sources, as the AMC exempts construction noises and vibrations from the chapter's provisions during the daytime hours when the Project's construction activities would occur. Specifically, Section 18.02.060(C) exempts "[n]oise sources associated with or vibration created by construction, repair, remodeling or grading of any real property…provided the activities do not take place between the hours of 7 p.m. and 7 a.m. on weekdays including Saturday, or at any time on Sunday or a federal holiday, and provided any vibration created does not endanger the public health, welfare and safety."

For other non-exempt noise sources, the following noise standards are instituted by AMC Section 18.02050(A) and are shown in **Table IV.D-3***, City of Alhambra Noise Ordinance Limits,* below:

TABLE IV.D-3
CITY OF ALHAMBRA NOISE ORDINANCE LIMITS

Noise Zone[1]	Allowable Noise Level
Residential	55 dBA
Commercial	70 dBA
Mixed-Use	60 dBA

NOTES:

1 Section 18.02.040 defines the noise zones accordingly:

Residential Noise Zone. All single, double- and multiple-family residential properties (R-1, R-2, R-3, or R-4), excluding dwelling units in the Mixed Use District.

Commercial Noise Zone. All commercial, manufacturing, and industrial properties (C-1, C-2, M-1, M-2 and the like).

Mixed Use Noise Zone. All dwelling units in the Mixed Use District.

SOURCE: City of Alhambra Municipal Code, Section 18.02.050.

AMC Section 18.02.050 instructs that the allowable noise levels are not to be exceeded at the receiving property "as measured inside any dwelling unit or commercial structure at a point at least four feet from the wall, ceiling or floor nearest the noise source with windows and doors opening to the exterior of the structure in a closed position." For instances when the ambient noise level exceeds the allowable noise level standard, Section 18.02.050 instructs that the maximum allowable noise level should be represented by the maximum ambient noise level.

AMC Section 18.02.100 prohibits groundborne vibrations that are "perceptible without instruments at any point on any affected property adjoining the property on which the vibration source is located." It goes on to specify that "the perception threshold shall be presumed to be more than 0.05 inches per second RMS vertical velocity." As Section 18.02.060(C) would exempt the Project's construction sources from this provision, the applicability of Section 18.02.100's vibration standard would be limited to the Project's operations.

b) Existing Conditions

The predominant existing noise source surrounding the Project Site is traffic noise from S. 6th Street, W. Shorb Street, and S. 7th Street. Secondary noise sources include residential and general commercial-related activities, such as loading area/delivery truck activities, trash compaction, and refuse service activities. Periodic noise also occurs from residential activities, including lawnmowing and landscaping activities, from residences surrounding the Project site, and from recreational activities located at Moor Field Park. In addition, the occasional emergency siren noise from the Alhambra Fire Station #72 also affects the local ambient noise environment.

(1) Noise-Sensitive Receptor Locations

Some land uses are considered more sensitive to noise than others due to the amount of noise exposure and the types of activities typically involved at the receptor location. Residences, schools, motels and hotels, libraries, religious institutions, hospitals, nursing homes, and parks are generally more sensitive to noise than commercial and industrial land uses. Existing noise sensitive uses near the Project Site include the following, identified below as R1-R4, which will be used to identify these receptors in the analysis:

- R1: Moor Field Park located to the north of the Project Site, north of W. Shorb Street, with a property line adjacent to the Project boundary.
- R2: Single-Family residences located to the east of the Project Site, east of S. 6th Street, with a property line approximately 60 feet from the Project boundary.
- R3: Single-family residential uses located to the south of the Project Site, on the south side of W. Valley Boulevard between S. 6th and S. 7th Street, with a property line approximately 400 feet from the Project boundary.

- R4: Evangelical Formosan Church of Alhambra located to the west of the Project Site, on the west side of S. 7th Street, with a property line approximately 80 feet to the west of the Project Site.

(2) Vibration-Sensitive Receptor Locations

Typically, groundborne vibration generated by man-made activities (i.e., rail and roadway traffic, operation of mechanical equipment and typical construction equipment) diminishes rapidly with distance from the vibration source. Construction activities, such as the use of bulldozers, would have the greatest effect on vibration-sensitive land uses. Energy is lost during the transfer of energy from one particle to another, and, as a result, vibration becomes less perceptible with increasing distance from the source. With respect to potential structural damage, structures within approximately 100 feet to the Project Site are analyzed to determine if there would be impacts resulting in structural damage. As shown in Table IV.D-2, the structural category/construction type (i.e., reinforced-concrete, engineered concrete, non-engineered timber, building susceptible to damage, and historic buildings) determines the vibration damage criteria for a specific building/structure.[1] The structures in the vicinity of the Project Site for analysis purposes are defined as non-engineered timber and masonry buildings capable of handling up to 0.2 in/sec PPV of vibration. The following structures were considered in the vibration analysis:

- Alhambra Fire Department Station #72 located to the southeast of the Project Site, where the building is approximately 15 feet from the nearest construction activity.
- R4: Evangelical Formosan Church of Alhambra located to the west of the Project Site, on the west side of S. 7th Street, where the building is approximately 105 feet to the west of the Project Site when measured from the façade.
- The on-site existing west wing portion of Shorb Clinic, which will be retained as part of the Project.

With respect to human annoyance, sensitive land uses include buildings where use of vibration-sensitive equipment is used (*e.g.*, hospitals, research, and manufacturing), residential land uses and buildings where people normally sleep, schools, churches, and doctor's offices.[2] Therefore, the land uses within approximately 100 feet to the Project Site considered for human annoyance impacts are:

- R2: Single-family residential uses located to the east of the Project Site, on the east side of S. 6th Street, where the nearest exterior building façade is approximately 80 feet from the Project boundary.

---

1 Where the structural category/type of a vibration-sensitive receptor is unclear, the analysis herein utilizes a conservative assumption. For example, although structures where industrial processes take place would generally be constructed of concrete, the threshold for non-engineered timber and masonry has been applied due to the uncertainty of building construction.

2 FTA, Transit Noise and Vibration Impact Assessment Manual, Table 6-1, September 2018.

(3) Ambient Noise Levels

To quantify the existing noise environment, two sets of short-term (15-minute) measurements were conducted at four locations, representing the ambient noise levels at land uses identified as M1 through M4 in **Figure IV.D-1**, *Surrounding Land Uses and Noise Measurement Locations*. A 15-minute measurement is a reasonable duration for sampling ambient noise levels where street traffic is the dominant source, as traffic noise generally does not vary significantly within an hour. However, for this project two noise measurements were taken at M1 through M3 to capture the noise difference from a baseball game occurring at Moors Varsity Baseball Field, which is located to the north of Project. Ambient sound measurements were conducted on Monday, February 26, 2024 to characterize the existing noise environment in the Project vicinity. The first set of measurements were taken between 2:30 p.m. and 4:30 p.m. to capture ambient afternoon noise levels.

Noise measurements were conducted using Larson-Davis LxT1 Sound Level Meters (SLM). The Larson-Davis LxT1 SLM is a Type 1 standard instrument as defined in the American National Standard Institute (ANSI) S1.4. All instruments were calibrated and operated according to the applicable manufacturer specification. The recording microphones were placed at a height of 5 feet above the local grade elevation. The sound level meters were set up to collect the hourly average noise level (Leq). The results of the ambient sound measurements are summarized in **Table IV.D-4**, *Summary of Ambient Noise Measurements*.

TABLE IV.D-4
SUMMARY OF AMBIENT NOISE MEASUREMENTS

Measurement Location	Pre-Game Measured Ambient Morning Noise Levels, dBA L_{eq}	Mid-Game Measured Ambient Daytime Noise Levels, dBA L_{eq}
M1	56.1	60.5
M2	56.1	59.9
M3	66.2	65.5
M4	64.5	--

NOTES:

M1: represents the ambient noise environment for receptors at location R1.

M2: represents the ambient noise environment for receptors at location R1/R4.

M3: represents the ambient noise environment for receptors at location R2.

M4: represents the ambient noise environment for receptors at location R3. A mid-game measurement was not taken at this location due to the distance from Moor Field.

(4) Ambient Vibration Levels

(a) Groundborne Vibration Levels

Field observations noted that other sources of groundborne vibration in the Project Site vicinity are primarily limited to heavy-duty vehicular travel (e.g., refuse trucks, delivery trucks, etc.) on local roadways. Trucks traveling at a distance of 50 feet typically generate groundborne vibration velocity levels of 65 VdB (approximately 0.0068 in/sec PPV).[3]

(b) Groundborne Noise Levels

Groundborne noise levels would generally be 20 to 50 decibels lower than the velocity level depending on the frequency level of the source.[4] With a background groundborne vibration level in residential areas of 50 VdB or lower, groundborne noise levels would be approximately 0 to 30 dBA. A bus traveling at a distance of 50 feet would generate groundborne noise levels of approximately 23 to 38 dBA. The approximate level of human perception of groundborne noise is 25 dBA for low frequency vibration (near 30 Hz) and 40 dBA for mid-frequency vibration (near 60 Hz).[5]

3. Project Impacts

a) Thresholds of Significance

(1) Appendix G of the State CEQA Guidelines

In accordance with Appendix G of the CEQA Guidelines, the Project would have a significant impact related to noise and vibration if it would result in the:

Threshold a) ***Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the Project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies;***

Threshold b) ***Generation of excessive groundborne vibration or groundborne noise levels; or***

Threshold c) ***For a Project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the Project expose people residing or working in the project area to excessive noise levels.***

The City determined in the Initial Study that the following environmental issue areas would result in no impacts or less-than-significant impacts and, therefore, are scoped out of this

3 FTA, Transit Noise and Vibration Impact Assessment Manual, Figure 5-4, September 2018.

4 FTA, Transit Noise and Vibration Impact Assessment Manual, September 2018, p. 146.

5 FTA, Transit Noise and Vibration Impact Assessment Manual, September 2018, p. 120.

Draft EIR. Please refer to **Appendix A** of this Draft EIR for a copy of the Initial Study and additional information regarding the following issue areas:

Threshold c) ***For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels.***

As detailed in the Initial Study, impacts related to noise issues due to airport proximity were determined to be no impact, and therefore are not addressed further in this Draft EIR.

(2) Construction Noise

Significant impacts to construction noise would occur if construction noise would be generated between the hours of 7 p.m. and 7 a.m. on weekdays including Saturday, or at any time on Sunday or a federal holiday (see AMC Section 18.02.060(C), or would cause the exterior ambient noise environment to change in such a manner that the interior noise environment of noise sensitive receptors would exceed 55 dBA Leq. In addition, worker, vendor, and haul trips could cause a significant impact if it results in an increase by 3 dBA CNEL to or within the "normally unacceptable" or "clearly unacceptable" categories; or the Project causes the ambient noise levels measured at the property line of affected uses to increase by 5 dBA CNEL or more within the "normally acceptable" or "conditionally acceptable" categories.[6]

(3) Operational Noise

Significant impacts to operational noise would occur if noise levels would exceed the City of Alhambra standards shown in Table IV.D-3 for the respective land uses.

(4) Groundborne Vibration

Significant impacts to vibration would occur if construction equipment would result in a PPV (in/sec) over 0.2 PPV (in/sec) which is the FTA threshold set forth for non-engineered timber and masonry buildings. For evaluating human annoyance, the FTA threshold of 78 RMS VdB is applicable to surrounding sensitive receptors.

---

6 As a 3 dBA increase represents a barely noticeable change in noise level, this threshold considers any increase in ambient noise levels to or within a land use's "normally unacceptable" or "clearly unacceptable" noise/land use compatibility categories to be significant so long as the noise level increase can be considered barely perceptible. For instances when the noise level increase would not necessarily result in "normally incompatible" or "clearly incompatible" noise/land use compatibility, a readily noticeable 5 dBA increase would still be considered significant. Increases less than 3 dBA CNEL/Ldn are unlikely to result in noticeably louder ambient noise conditions and would therefore be considered less than significant.

b) Methodology

Noise impacts are assessed based on a comparative analysis of the noise levels resulting from the proposed Project and the noise levels under existing conditions.

(1) Construction Noise

Analysis of temporary construction noise effects is based on typical construction phases, published or previously measured decibel levels of construction equipment and attenuation of those noise levels due to distances, presence of any barriers between the construction activity and the sensitive receptors near the sources of construction noise, and time of day and expected duration of construction activity. Sensitive receptor distances are measured from the sensitive receptor property boundary to the work area.

Noise impacts from short-term construction activities could exceed noise thresholds and could result in a significant construction impact if short-term construction activity occurred outside of the daytime hours permitted by the City's municipal code noise ordinance and/or results in the local ambient noise environment to change in such a manner that the interior noise environment of surrounding sensitive receptors exceeds 55 dBA Leq when construction occurs.

Construction of the proposed Project would generate noise levels higher than the current ambient noise levels. Construction noise levels are estimated using the equipment noise levels provided in the Federal Highway Administration (FHWA) Roadway Construction Noise Model User's Guide (FHWA, January 2006). For construction noise, equipment source noise levels included in the FHWA Roadway Construction Noise Model (RCNM, FHWA 2006) are used for the impact analysis. Off-site sensitive receptors are evaluated with their distance to the Project Site, shielding provided by intervening buildings or structures, and calculated equivalent continuous noise levels (Leq) with the equipment's maximum noise level (L_{max}) and its acoustical utilization factor (AUF).

During construction of the Project, noise levels would be generated from offsite mobile noise sources such as vehicular traffic. The noise levels generated by these mobile noise sources are assessed in this study with the FHWA approved traffic noise source noise modeling guidelines. For Project-related construction traffic noise, a significant impact would occur if the Project worker, vendor, and haul trips would cause the ambient noise levels measured at the property line of noise-sensitive receptor uses to increase by 3 dBA CNEL to or within the "normally unacceptable" or "clearly unacceptable" categories; or the Project causes the ambient noise levels measured at the property line of noise sensitive receptor uses to increase by 5 dBA CNEL or more within the "normally acceptable" or "conditionally acceptable" categories.

(2) Construction Vibration

Vibration from construction is evaluated for potential impacts at sensitive receptors. Typical activities evaluated for potential building damage due to construction vibration include demolition, pile driving, and drilling or excavation in proximity to structures. The

groundborne vibration is also evaluated for perception to eliminate annoyance. Vibration propagates according to the following expression, based on point sources with normal propagation conditions:

$$PPV_{equip} = PPV_{ref} \times (25/D)^{1.5}$$

Where PPV (equip) is the peak particle velocity in inches per second of the equipment adjusted for distance, PPV (ref) is the reference vibration level in inches per second at 25 feet, and D is the distance from the equipment to the receiver. The PPV is defined as the maximum instantaneous positive or negative peak of the vibration and is often used in monitoring vibration because it is related to the stresses experienced by structures.

To determine the potential for annoyance, the RMS vibration level (L_v) at any distance (D) is estimated based on the following equation:

$$L_v(D) = L_v(25\ ft) - 30\log(D/25)$$

(3) Operational Stationary Noise

A resulting off-site noise level at residences and other sensitive receptors from stationary, non-transportation sources that exceed levels in Table IV.D-3 would result in a significant noise impact.

(4) Operational Traffic Noise

For Project-related operational traffic-related noise, if the Project causes the ambient noise levels measured at the property line of noise sensitive receptor uses to increase by 3 dBA CNEL to or within the “normally unacceptable” or “clearly unacceptable” categories; or the project causes the ambient noise levels measured at the property line of noise sensitive receptor uses to increase by 5 dBA CNEL or more within the “normally acceptable” or “conditionally acceptable” categories, a significant impact would occur.

c) Analysis of Project Impacts

Threshold a) Would the Project result in the generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

(1) Impact Analysis

(a) On-Site Construction Noise

Construction noise levels associated with the proposed project would fluctuate depending on the particular type, number, and duration of uses of various pieces of construction equipment during various construction phase activities. Material haul truck trips (from spoils and deliveries) would raise ambient noise levels along haul routes, depending on

the number of haul trips made and types of vehicles used. **Table IV.D-5**, *Typical Noise Levels from Construction Equipment,* below, shows the typical maximum and average noise levels produced by various types of construction equipment.

TABLE IV.D-5
TYPICAL NOISE LEVELS FROM CONSTRUCTION EQUIPMENT

Construction Equipment	Maximum Noise Level (dBA, L_{max} at 50 feet)	Average Noise Level (dBA, Leq at 50 feet)[a]
Air Compressor	78	74
Backhoe	78	74
Chain Saw	84	77
Compactor (Ground)	83	76
Concrete Mixer Truck	79	75
Concrete Pump Truck	81	74
Dozer	82	78
Dump Truck	77	73
Excavator	81	77
Flat-Bed Truck	74	70
Front End Loader	79	75
Grader	85	81
Jack Hammer	89	82
Paver	77	74
Pneumatic Tool	85	82
Roller	80	73
Scraper	84	80
Tractor	84	80
Welder/Torch	74	70

NOTES:

[a] The average noise levels for the construction equipment at 50 feet were calculated from the maximum noise levels using the usage factors for each piece of equipment provided in the FHWA's RCNM.

SOURCE: FHWA 2018.

Consistent with the modeling conducted for the air quality and greenhouse gas emissions analysis (analyzed within the Initial Study, located in Appendix A of this Draft EIR) using the California Emissions Estimator Model (CalEEMod) for construction of the project, construction noise is estimated based on the same types and number of construction equipment expected to be used in each construction phase for the components of the proposed Project.

The noise levels shown below in **Table IV.D-6**, *Summary of Construction Noise at Each Receiver Location,* represent composite noise levels associated with typical construction activities, which consider both the number and spacing of heavy construction equipment that are typically used during each phase of construction. These noise levels would diminish rapidly with distance from the construction site at a rate of approximately 6 dBA per doubling of distance. For example, a noise level of 84 dBA Leq measured at 50 feet from the noise source to the receptor would reduce to 78 dBA Leq at 100 feet from the source to the receptor and reduce by another 6 dBA Leq to 72 dBA Leq at 200 feet from the source to the receptor.

TABLE IV.D-6
SUMMARY OF CONSTRUCTION NOISE AT EACH RECEIVER LOCATION

	Construction Noise Levels (Leq, dBA)			
Construction Phase	**R1**	**R2**	**R3**	**R4**
Demolition	87	80	65	77
Grading	87	80	67	78
Building Construction	75	72	62	70
Paving	87	80	67	79
Architectural Coating	82	74	59	72
Maximum Exterior Noise Levels without Mitigation	**87.2**	**80.4**	**67.1**	**79.0**
Exterior to Interior Noise Attenuation	NA [b]	60.4	47.1	59.0
Threshold (55 dBA Leq interior)	NA	55	55	55
Exceeds Threshold?	**NA**	**Yes**	**No**	**Yes**
Maximum Exterior Noise Levels with Mitigation [a]	**NA**	**74.4**	**67.1**	**73.0**
Exterior to Interior Noise Attenuation	NA	54.4	47.1	53.0
Threshold (Threshold 55 dBA Leq Interior)	NA	55	55	55
Exceeds Threshold?	**NA**	**No**	**No**	**No**

NOTE:

[a] Noise mitigation includes dBA reduction from the usage of improved mufflers which provides at minimum a 6 dBA reduction in noise. In addition, R3 is mostly blocked by the commercial buildings just south of the Project site; therefore, noise would be lower than what is modeled.

[b] NA = Not Applicable. R1 represents Moor Field Park located to the north of the Project Site. As it is a park, the interior noise threshold of 55 dBA Leq does not apply to outdoor spaces. R1 would exceed the local ambient environment by more than 5 dBA Leq, requiring implementation of noise mitigation.

As shown in Table IV.D-6, construction of the Project would result in noise level increases up to 87.2 dBA Leq at noise-sensitive receptor location R1, before mitigation. This would exceed the ambient noise levels by more than 5 dBA Leq and thus exceed the City of

Alhambra's noise standards for construction noise, making impacts from construction noise potentially significant. However, with the implementation of Mitigation Measures NOI-MM-1 and NOI-MM-2, impacts would be reduced to less than significant. With Mitigation Measure NOI-MM-1, construction hours would be required to comply with the City of Alhambra noise standards, which prohibits construction activities between the hours of 7 p.m. and 7 a.m. on weekdays including Saturday, or at any time on Sunday or a federal holiday, and provided any vibration created does not endanger the public health, welfare and safety. With compliance to the allowed hours of construction under the City of Alhambra, the Project's construction exceedance over the standards set by the City of Alhambra would be exempt. Although the Project's construction noise would be exempt from the City's noise ordinance provisions, noise levels also would expose residences to interior noise levels that are in excess of AMC Section 18.02.050's 55 dBA allowable noise level for residential noise zones. Assuming a standard exterior to interior noise reduction factor of 20 dB for "light frame" buildings with closed "sash" windows (consistent per Section 18.02.050's measurement instructions), the Project's construction-related noise level of 79.0 dBA Leq at R4 would equate to an interior noise level of 59.0 dBA Leq, 4 dBA Leq above the 55 dBA interior standard. This exceedance would also occur at R2. Mitigation Measure NOI-MM-2 would require the usage of enhanced mufflers and other best practices which have shown to reduce noise levels by at least 6 dBA Leq. Therefore, with implementation of Mitigation Measures NOI-MM-1 and NOI-MM-2, construction noise impacts would be reduced to less than significant.

(b) Off-Site Construction Noise

Construction crew commutes and the transport of construction equipment and materials to the site for the Project would incrementally increase noise levels on access roads leading to the site. Although there would be a relatively high single-event noise-exposure potential causing intermittent noise nuisance (passing trucks at 50 feet would generate up to a maximum of 87 dBA Lmax), the effect on longer-term (hourly or daily) ambient noise levels would be small. Therefore, short-term construction-related impacts associated with worker commute and equipment transport to the Project Site would be less than significant.

(c) On-Site Operational Noise

(i) Heating, Ventilation, and Air-Conditioning Systems

The HVAC systems for maintaining comfortable temperatures within the buildings developed under the Project would consist largely of packaged air conditioning systems. The precise locations of HVAC systems are unknown at this time. Possible HVAC system locations would include street level and rooftops. HVAC units can generate noise levels of approximately 51 dBA Leq at a reference distance of 100 feet from the operating units during maximum heating or air conditioning operations. The operation of mechanical equipment such as air conditioning equipment may generate audible noise levels. The City's Municipal Code noise ordinance established a noise standard of 55 dBA Leq for residential uses.

The closest offsite sensitive receptor/residence is located 60 feet away to the east of the Project Site boundary, which would receive a noise increase of 4 dBA as it would be closer than the reference distance of 100 feet. As such, noise associated with HVAC would be around 55 dBA Leq at 60 feet or lower if the HVAC is located further away from the edge of the project site boundary (e.g. located more towards the center of the Project Site). Therefore, impacts would be less than significant, and no mitigation measures are required.

(d) Off-Site Operational Noise

Operation of the Proposed Project would result in an increase in trips along the local roadways which could potentially result in a significant noise increase. Based upon the traffic memorandum for the Alhambra Community Center, the operation of the Project would result in an additional 721 trips along local roadways. Given that the project is in an urbanized area with surrounding land uses involving institutional, commercial, residential, and religious uses, the ADT would be much higher than the 721 additional trips produced by the Project. Therefore, the 721 additional trips along the roadway segments would not result in a significant increase over ambient, and impacts would be less than significant, no mitigation measures are required.

(2) Mitigation Measures

As analyzed above, the Project's on-site construction activities would result in significant noise impacts without the implementation of mitigation measures. Therefore, the following noise mitigation measures are recommended to reduce the Project's construction-related noise impacts to sensitive uses in the vicinity of the Project Site:

NOI-MM-1: Construction of the Project shall be restricted to the allowed hours of construction for the City of Alhambra, meaning construction activities shall not take place between the hours of 7 p.m. and 7 a.m. Monday through Saturday, or at any time on Sunday or a federal holiday, and provided any vibration created does not endanger the public health, welfare and safety.

NOI-MM-2: Stationary noise sources (*e.g.*, generators and air compressors) shall be located as far from sensitive receptors as possible, and they shall be muffled and enclosed within temporary sheds or insulation barriers. Stockpiling of materials shall be located as far as feasible from nearby noise-sensitive receptors. Construction trucks and equipment shall utilize the best available noise control techniques including improved mufflers, use of intake silencers, ducts, engine enclosures, and acoustically attenuating shields or shrouds. The use of improved mufflers, use of intake silencers, ducts, engine enclosures, and/or acoustically attenuating shields or shrouds, in combination with other noise reduction techniques, shall reduce equipment noise level by 6 dBA. For noise-generating construction work occurring on the existing W. Shorb Street, the following shall be incorporated to reduce noise exposure and associated impacts to receptor location R1: schedule noise-generating construction work

occurring on the existing W. Shorb Street to time periods when baseball games are not scheduled at the Moor Field Park.

(3) Level of Significance After Mitigation

With implementation of NOI-MM-1 and NOI-MM-2, the Project's noise impacts would be mitigated to a less than significant level. With Mitigation Measure NOI-MM-1, construction hours would be required to comply with the City of Alhambra noise standards. Mitigation Measure NOI-MM-2 would require the usage of enhanced mufflers and other best practices which have shown to reduce noise levels by at least 6 dBA Leq, which would reduce the exposure at location R2 and R4 to less than significant noise impacts as a 55 dBA Leq noise environment during construction would be met. In addition, NOI-MM-2 would avoid noise exposure at location R1, as Moor Field Park would be a vacant baseball field that is not open to the public.

Threshold (b): Would the Project generate excessive groundborne vibration or groundborne noise levels?

(1) Impact Analysis

(a) Construction

Typical activities that could generate groundborne vibration during construction include demolition, pile driving, and drilling or excavation in close proximity to structures. FTA's threshold of architectural damage for conventional sensitive structures is 0.2 in/sec PPV and the FTA threshold of human annoyance to groundborne vibration is 78 VdB RMS (FTA 2018). Construction of the project would employ conventional activities and the equipment/techniques to be used would not cause excessive groundborne vibration. Paving would occur where the west side of the Project to account for the additional street side parking along 7th Street, thus a vibratory roller would be used in this location. The distance from the equipment that produces vibration would vary in distance when analyzing for vibration damage and vibration annoyance.

(i) Off-Site Buildings

For vibration damage, the nearest receptor would be the fire station to the south of the Project Site boundary where the nearest heavy equipment, which would be a large bulldozer, would produce vibration levels of up to 0.14 PPV in/sec at 15 feet to the fire station façade. The vibratory roller which would be located further away from the fire station façade at 200 feet would produce vibration levels of up to 0.009 PPV in/sec as shown in **Table IV.D-7**, *Vibration Damage for Construction Equipment at the Nearest Building*. To analyze human annoyance, the nearest residence to the Project Site was selected for analysis as residential land uses would be more perceptible to human annoyance when compared to the surrounding land uses. Residential land uses are more perceptible to human annoyance given that the occupants would reside in the same location during the entire duration of construction and is also where occupants would sleep. When compared to the surrounding land uses, nonresidential occupants would not

remain the same for the entire duration of construction, or are external land uses which would be less perceptible to human annoyance from vibration. When analyzing from the Project Site boundary to the façade of the residence, the RMS VdB from the nearest heaviest equipment, which would be the large bulldozer, would reach vibration levels of up to 77 VdB. The vibratory roller which would be located further away at a distance of 400 feet would produce a vibration level of up to 70 VdB as shown in **Table IV.D-8**, *Vibration Annoyance for Construction Equipment at the Nearest Sensitive Receptor*. Therefore, the proposed construction activities would result in vibration levels below the FTA threshold for architectural damage and below the vibration annoyance level for sensitive receptors. Therefore, impacts are found to be less than significant, and no mitigation is required.

TABLE IV.D-7
VIBRATION DAMAGE FOR CONSTRUCTION EQUIPMENT AT THE NEAREST BUILDING

Construction Equipment	PPV at 25 Feet (inches/second)	PPV at 200 Feet (inches/second)	PPV at 15 Feet (inches/second)
Large Bulldozer/Drill Rig	0.089	--	0.191
Loaded Trucks	0.076	--	0.164
Vibratory Roller	0.210	0.009	--
Jackhammer	0.035	--	0.075
Small Bulldozer	0.003	--	0.006

TABLE IV.D-8
VIBRATION ANNOYANCE FOR CONSTRUCTION EQUIPMENT AT THE NEAREST SENSITIVE RECEPTOR

Construction Equipment	RMS at 25 Feet (VdB)	RMS at 400 Feet (VdB)	RMS at 80 Feet (VdB)
Large Bulldozer/Drill Rig	87	--	76.9
Loaded Trucks	86	--	70.8
Vibratory Roller	94	69.9	--
Jackhammer	79	--	68.9
Small Bulldozer	58	--	42.8

SOURCE: FTA 2018

(ii) On-Site Building

Although off-site buildings would be below the FTA threshold, thus being less than significant under CEQA purview, the Project would retain a portion of the existing Shorb

Clinic on-site. The on-site Shorb Clinic is considered a historical resource and thus would have vibration damage occur at a lower threshold compared to surrounding buildings. The FTA, as previously identified in Table IV.D-1, identified that vibration damage to historic buildings would occur at 0.12 PPV (in/sec). Given that construction activities would occur on the building itself, vibration levels would exceed the 0.12 PPV (in/sec) threshold for historic buildings. Therefore, mitigation is required.

(b) Operational Vibration

The Project's operations would include typical public space-grade stationary mechanical and electrical equipment for the proposed buildings, such as air handling units, condenser units, and exhaust fans, which would produce vibration. Ground-borne vibration generated by each of the above-mentioned activities would generate approximately up to 0.005 inch-per-second PPV adjacent to the Project Site.[7] The potential vibration levels from Project operational sources at the closest sensitive receptor locations would be less than the threshold of perceptibility of 0.05 inch-per-second PPV as dictated by the City of Alhambra's Municipal Code. As such, vibration impacts associated with operation of the Project would be below the significance threshold, and impacts would be less than significant.

(2) Mitigation Measures

No mitigation measures are required for off-site vibration impacts.

The following groundborne vibration mitigation measures is recommended to reduce the Project's construction-related groundborne vibration impact to the Shorb Clinic:

NOI-MM-3: The developer shall conduct construction vibration monitoring to document conditions at the Shorb Clinic prior to, during, and after vibration-generating demolition and construction. The construction vibration monitoring shall be implemented by a qualified acoustic engineer and/or structural engineer with documented experience with the Secretary of the Interior's Professional Qualification Standards. The monitoring shall include the following tasks:

- Performance of a photo survey, elevation survey, and tile/crack monitoring survey for the west wing portion of Shorb Clinic which will be retained as part of the Project. Surveys shall be performed prior to and in regular intervals during all vibration-generating activities when vibration inducing equipment is used within 15 feet of this structure and during and after the partial demolition of this structure.
- Conduct a post-construction survey on the structure following the completion of vibration-generating demolition and construction activities and ensure appropriate repairs are made in accordance with the Secretary of the Interior's Standards where damage has occurred as a result of those activities.

[7] This vibration estimate is based on data presented in the Federal Transit Administration, 2018.

(3) Level of Significance After Mitigation

With implementation of NOI-MM-3, the Project would ensure that the remaining portion of the Shorb Clinic would be structurally and visually fixed and would prevent a compromise to the safety of any future tenants within the building. Impacts to the Shorb Clinic would be mitigated to less than significant.

d) Cumulative Impacts

(1) Impact Analysis

(a) Construction Noise

Cumulative construction impacts could occur when multiple construction projects are occurring simultaneously with the proposed Project. The cumulative noise levels would be intermittent, temporary and would cease at the end of the respective construction periods. It is not likely that maximum construction noise impacts from related projects would occur simultaneously, as sound levels vary from day to day depending on the construction activity performed that day and its location on the development site. Although there would be an increase in temporary ambient sound levels, noise from construction activities is localized and would normally only affect the areas within 500 feet from individual construction sites due to the distance noise attenuation rate of 6 dBA per doubling of distance.

According to CEQA Guidelines Section 15300.2(b), cumulative impacts may occur if the impact of successive projects of the same type in the same place, over time is significant. Noise from the construction of development projects is generally localized to the immediate area of the project site and typically has the potential to affect noise-sensitive uses within 500 to 1,000 feet from the construction site, due to the effect of noise attenuation from increasing distance away from a site. Other projects requiring discretionary approval would be required to conduct their own analysis under CEQA, demonstrate compliance with applicable City noise ordinance standards including limiting noise from construction equipment, and provide mitigation measures, if required. Since the nearest cumulative project, which is the 929 S. 8th Street project, is outside the 1,000 feet radius of the Alhambra Community Center Project, construction activities associated with the Alhambra Community Center Project would not combine with cumulative projects to create a potentially significant cumulative impact. Therefore, cumulative noise from cumulative construction projects would not be substantially different than that generated by the Project. As such, the Project would not result in a cumulatively considerable construction noise impact.

(b) Operational Noise

Since the nearest cumulative project, which is the 929 S. 8th Street project, is outside the 1,000 feet radius of the Alhambra Community Center Project, operational activities associated with the Alhambra Community Center Project would not combine with

cumulative projects to create a potentially significant cumulative impact. As such, the Project would not result in a cumulatively considerable operational noise impact.

(c) Construction and Operational Vibration

Ground-borne vibration generated by man-made activities attenuates rapidly with distance from the source of the vibration. Man-made vibration issues are, therefore, usually confined to short distances from the source (i.e., 50 feet or less). Due to the rapid attenuation characteristics of ground-borne vibration, there is no expected potential for cumulative construction- or operational-period impacts with respect to ground-borne vibration from related projects given that the nearest project is located more than 1,000 feet away from the Project Site boundary (929 S. 8th Street project). Therefore, the Project would not combine with cumulative projects to create a potentially significant cumulative impact and the Project would not result in a cumulatively considerable vibration impact.

(2) Mitigation Measures

No additional mitigation measures are required beyond those identified for the proposed Project.

(3) Level of Significance After Mitigation

Cumulative impacts related to construction noise and vibration would be less than significant without additional mitigation measures beyond that identified for the Proposed Project.

IV. Environmental Impact Analysis

E. Tribal Cultural Resources

1. Introduction

This section evaluates potential impacts on tribal cultural resources. The analysis is based on a Sacred Lands File (SLF) search conducted by the California Native American Heritage Commission (NAHC), consultations between the City and Native American tribes pursuant to Assembly Bill (AB) 52, as well as the *Archaeological Resources Assessment Report* (Archaeological Report) prepared by ESA, that is provided in **Appendix E** of this Draft EIR. Native American consultation documentation related to AB 52 consultations is provided in **Appendix I** of this Draft EIR.

2. Environmental Setting

a) Regulatory Framework

(1) State

The following describes the primary State regulatory requirement (AB 52) regarding tribal cultural resources.

(a) Assembly Bill 52

AB 52 was approved on September 25, 2014. The act amended California Public Resources Code (PRC) Section 5097.94, and added PRC Sections 21073, 21074, 21080.3.1, 21080.3.2, 21082.3, 21083.09, 21084.2, and 21084.3. The primary intent of AB 52 is to involve California Native American Tribes early in the environmental review process and to establish a category of resources related to Native Americans, known as tribal cultural resources, that require consideration under CEQA. PRC Section 21074(a)(1) and (2) defines tribal cultural resources as “sites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American Tribe” that are either included or determined to be eligible for inclusion in the California Register or included in a local register of historical resources, or a resource that is determined to be a tribal cultural resource by a lead agency, in its discretion and supported by substantial evidence. A tribal cultural resource is further defined by PRC Section 20174(b) as a cultural landscape that meets the criteria of subdivision (a) to the extent that the landscape is geographically defined in terms of the size and scope of the landscape. PRC Section 20174(c) provides that a historical resource described in Section 21084.1, a unique archaeological resource as defined in subdivision (g) of Section 21083.2, or a “nonunique archaeological resource” as defined in subdivision (h) of Section

21083.2 may also be a tribal cultural resource if it conforms with the criteria of subdivision (a).

PRC Section 21080.3.1 requires that, within 14 days of a lead agency determining that an application for a project is complete, or a decision by a public agency to undertake a project, the lead agency shall provide formal notification to the designated contact, or a tribal representative, of California Native American Tribes that are traditionally and culturally affiliated with the geographic area of the project (as defined in PRC Section 21073) and who have requested in writing to be informed by the lead agency of projects within their geographic area of concern.[1] Tribes interested in consultation must respond in writing within 30 days from receipt of the lead agency's formal notification and the lead agency must begin consultation within 30 days of receiving the tribe's request for consultation.[2]

PRC Section 21080.3.2(a) identifies the following as potential consultation discussion topics: the type of environmental review necessary; the significance of tribal cultural resources; the significance of the project's impacts on the tribal cultural resources; project alternatives or appropriate measures for preservation; and mitigation measures. Consultation is considered concluded when either: (1) the parties agree to measures to mitigate or avoid a significant effect, if a significant effect exists, on a tribal cultural resource; or (2) a party, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached.[3]

In addition to other CEQA provisions, the lead agency may certify an EIR or adopt a mitigated negative declaration for a project with a significant impact on an identified tribal cultural resource, only if a California Native American tribe has requested consultation pursuant to Section 21080.3.1 and has failed to provide comments to the lead agency, or requested a consultation but failed to engage in the consultation process, or the consultation process occurred and was concluded as described above, or if the California Native American tribe did not request consultation within 30 days.[4]

PRC Section 21082.3(c)(1) states that any information, including, but not limited to, the location, description, and use of the tribal cultural resources, that is submitted by a California Native American tribe during the environmental review process shall not be included in the environmental document or otherwise disclosed by the lead agency or any other public agency to the public without the prior consent of the tribe that provided the information. If the lead agency publishes any information submitted by a California Native American tribe during the consultation or environmental review process, that information shall be published in a confidential appendix to the environmental document unless the

1 Public Resources Code, Section 21080.3.1(b) and (c).

2 Public Resources Code, Sections 21080.3.1(d) and 21080.3.1(e)

3 Public Resources Code, Section 21080.3.2(b)

4 Public Resources Code, Section 21082.3(d)(2) and (3)

tribe that provided the information consents, in writing, to the disclosure of some or all of the information to the public.

Confidentiality does not apply to data or information that are, or become, publicly available, are already in lawful possession of the applicant before the provision of the information by the California Native American tribe, are independently developed by the applicant or the applicant's agents, or are lawfully obtained by the applicant from a third party that is not the lead agency, a California Native American tribe, or another public agency.[5]

(b) Treatment of Human Remains

The disposition of burials falls first under the general prohibition on disturbing or removing human remains under California Health and Safety Code (CHSC) Section 7050.5. More specifically, remains suspected to be Native American are treated under CEQA Guidelines Section 15064.5. PRC Section 5097.98 illustrates the process to be followed if remains are discovered. If human remains are discovered during excavation activities, the following procedure shall be observed:

- Stop immediately and contact the County Coroner.
- If the remains are determined to be of Native American descent, the Coroner has 24 hours to notify the NAHC.
- The NAHC will immediately notify the person it believes to be the most likely descendant (MLD) of the deceased Native American.
- The MLD has 48 hours to make recommendations to the owner, or representative, for the treatment or disposition, with proper dignity, of the human remains and grave goods.
- If the owner does not accept the MLD's recommendations, the owner or the MLD may request mediation by the NAHC.

(2) Local

(a) City of Alhambra General Plan 2019

The City's General Plan provides direction regarding the City's vision for future development in the City and includes several chapters to help guide the design of future development. It also contains several broad goals, objectives, and policies for neighborhood design to create a more livable city for existing and future residents. These goals and policies are stated not in terms of specific design guidelines, but in terms of general neighborhood-wide design policies.

The General Plan serves as a guide for the City's overall long-range growth and development policies and serves as a guide to update community plans, specific plans,

5 Public Resources Code, Section 21082.3(c)(2)(B).

and the citywide elements. These citywide elements address functional topics that cross community boundaries, such as transportation, and address these topics in detail.

The General Plan consists of seven elements, including the Land Use and Community Design Element, Mobility Element, Quality of Life Element, Resources Element, Services and Infrastructure Element, and Health and Safety Element. Each element addresses its respective subject and the City's 20-year vision for the future. With regard to archaeological resources, the General Plan's Resources Element establishes the following goals and policies applicable to the Project:

> **Goal R-6:** Preservation of the cultural identity of Alhambra as a diverse residential and commercial city with distinct single-family neighborhoods.
>
> > ***Policy R-6A:*** Promote and encourage the preservation of Alhambra's significant historic, architectural, cultural, archaeological, and paleontological resources.

b) Existing Conditions

(1) Project Site

The Project Site is underlain by artificial fill (at approximate depths of 3 to 5 feet below grade) over native alluvial soils (Geotechnologies, Inc., 2023). The near surface artificial fill on site consists of silty sands, which are dark brown in color, moist, loose to medium dense. The native alluvial soils below the artificial fill consists of sands, silty sands, and sandy silt. The native alluvial soils range from dark brown to dark yellowish brown in color, medium dense to very dense, very stiff, and fine to medium grained, with various amounts of cobbles and pebbles.

(2) Ethnographic Setting

The Project Site is within the traditional and ancestral territory of people referred to as the Gabrielino or Gabrieleño, including those who self-identify as the Tongva or the Kizh (Bean and Smith 1978; Golla 2011). The following summary is not intended to provide a comprehensive account of these groups, but is instead a brief historical overview based on available information from resources cited below.

The terms "Gabrielino" or "Gabrieleño" generally refer to those Native Americans who were forcibly removed from their lands and relocated by the Spanish to Mission San Gabriel Arcángel, as well as their descendants today (Bean and Smith 1978). Additionally, two indigenous terms are commonly used by descendants and tribal groups to refer to themselves, with some descendant groups preferring Tongva and others preferring Kizh (Heizer 1968). The Gabrielino language is a dialect of the Gabrielino-Fernandeño (Tongva) language, part of the Takic branch of the Uto-Aztecan language family (Bean and Smith 1978; Golla 2011:178-179). Prior to European colonization, speakers of the Gabrielino-Fernandeño language occupied a diverse area that included the watersheds of the Los Angeles, San Gabriel, and Santa Ana rivers; the Los Angeles basin; and the islands of San Clemente, San Nicolas, and Santa Catalina (Bean and Smith 1978; Golla

2011:178-180). Speakers of the closely related Fernandeño dialect occupied the San Fernando Valley and the northern parts of the Santa Monica Mountains, while the areas south and east were home to Gabrielino-speakers (Golla 2011:178-179). The neighbors of the Gabrielino-Fernandeño-speakers included the Chumash and Tataviam to the northwest and west, the Juañeno to the southeast, the Serrano to the north and northeast, and the Cahuilla to the east. The Gabrielino are reported to have been second only to the Chumash in terms of population size and regional influence (Bean and Smith 1978).

The Gabrielino were hunter-gatherers and lived in permanent communities located near persistent water supplies, with distributed camps and settlements at areas with food resources. Subsistence consisted of hunting, fishing, and gathering. Small terrestrial game was hunted with deadfalls, rabbit drives, and by burning undergrowth, while larger game such as deer were hunted using bows and arrows (Bean and Smith 1978). The lifeways of the colonial-period Gabrielino were very similar to those documented archaeologically from the Late Prehistoric Period (1,500 years B.P. to the mission era), a time associated with the florescence of the Gabrielino (Wallace 1955). Community populations generally ranged from 50 to 100 inhabitants, although larger settlements may have existed. Kroeber (1925:893) estimated that the population of the Gabrielino to be around 5,000 in the pre-contact period, a number that Cook (1976:38-41) agreed with, despite there being at least 5,500 baptisms at the San Gabriel and San Fernando missions alone. Preston (1996; 1997; 2002) argues that this number is low (along with most estimates of precolonial Indigenous Californian populations) as European diseases rapidly arrived in California, likely prior to Spanish missionaries. Events such as the devastating 1781 smallpox outbreak at Mission San Gabriel Arcangel were unlikely to have been confined to just the mission and would have had depopulating effects on the surrounding areas (Preston 2002:84). The fact that overall, there are few epidemics recorded during the early Spanish colonial period, despite the presumed lack of immunity to European diseases in Indigenous Californians, suggests that many of these diseases had already arrived through the extensive precolonial trade networks (Preston 2002:86). It follows then that the populations observed by the Spanish and who were subject to baptism in the missions had already experienced declines from these diseases.

In October of 1542, Juan Rodriguez Cabrillo was the first European to make contact with the Gabrielino when his ship landed on what is likely Santa Catalina Island. The following day Cabrillo sailed across the channel into what he called the “Bay of Smokes,” commonly considered to be San Pedro Bay. Interestingly, some of the Gabrielino who paddled out to meet Cabrillo’s ship communicated that there were parties of Spanish exploring the interior, perhaps the multiple expeditions to the Southwest Pueblo region in the 1530s, Francisco de Ulloa’s 1536 visit to the Gulf of California, or Hernando Alarcón’s exploration of the lower Colorado River (Elsasser 1979; McCawley 1996; Rabbitt 1976). After sailing north to Monterey Bay, Cabrillo’s party overwintered on Santa Catalina, where Cabrillo himself died (McCawley 1996). In 1595, Sebastian Rodriguez Cermeño’s ship, the San Agustín, wrecked off Drakes Bay in Marin County, and he and his crew built a small boat and travelled down the California coast for seven weeks before arriving in Navidad, Mexico. This crew likely interacted with Gabrielino people during this voyage (Dell’Osso

1995). Seven years later, Sebastián Vizcaíno followed Cabrillo and stopped in Santa Catalina in 1602 (McCawley 1996). The next Spanish contact was with Gaspar de Portolá, who crossed Gabrielino territory three times in 1769 traveling between San Diego and Monterey as the first expedition of Spanish conquest and colonization (McCawley 1996).

Travel diaries and other records produced by early explorers and missionaries indicate that at least 26 Gabrielino villages were within a mile to known Los Angeles River courses, while an additional 18 villages were reasonably close to the river (Gumprecht 2001). Combining the named villages in other documents, there were at least 25 villages in the San Gabriel Valley, with a concentration in the area adjacent and between the Rio Hondo and San Gabriel River (Johnston 1962; McCawley 1994).

(3) South Central Coastal Information Center Records Search and Other Archival Research

As noted in the Archaeological Report, archival research was conducted for the Project, which included a records search at the California Historical Resources Information System (CHRIS) South Central Coastal Information Center (SCCIC). The records search included a review of all recorded cultural resources and previous cultural resource studies within the Project Site and a 0.50-mile radius. The records search results indicate that 11 cultural resources studies have been conducted within a 0.50-mile radius of the Project Site, but none overlap with the Project Site. In addition, one historic architectural resource (P-19-186112; the Union Pacific Railroad) was recorded within a 0.50-mile radius of the Project Site. No archaeological resources have been recorded within the Project Site or the 0.50-mile radius.

(4) Sacred Lands File Search

The Native American Heritage Commission (NAHC) maintains a confidential Sacred Lands File (SLF) which contains sites of traditional, cultural, or religious value to the Native American community. On December 12, 2023, the NAHC was contacted to request a search of the SLF. The NAHC responded to the request in a letter dated January 10, 2024, indicating that the results were negative.

(a) Assembly Bill 52 Tribal Consultation

The City submitted notification and request to consult letters to eleven individuals and organizations on February 14, 2024, pursuant to AB 52. In particular, AB 52 letters were sent via certified mail to the following California Native American tribes and individuals:

- Andrew Salas and Christina Swindall Martinez, Gabrieleño Band of Mission Indians—Kizh Nation
- Anthony Morales, Gabrielino/Tongva San Gabriel Band of Mission Indians
- Sandonne Goad, Gabrielino/Tongva Nation

- Robert Dorame and Christina Conley, Gabrielino Tongva Indians of California Tribal Council
- Samuel Dunlap and Charles Alvarez, Gabrielino-Tongva Tribe
- Lovina Redner, Santa Rosa Band of Cahuilla Indians
- Jessica Valdez and Joseph Ontiveros, Soboba Band of Luiseño Indians

The City received an email response on April 3, 2024, from the Gabrielino Tongva Indians of California Tribal Council (Gabrielino Tongva) indicating that they have concerns because the Project Site is located within the village of *Ochuunga* and requested review of the Archaeological Report for the Project. On August 6, 2024 the City provided the Gabrielino Tongva with the Archaeological Report for the Project. On the same day, the Gabrielino Tongva indicated to the City that Native American monitoring should be incorporated into the report. On August 13, 2024, the City replied to the Gabrielino Tongva indicating that Native American monitoring will be included as a mitigation measure in the Tribal Cultural Resources Section of the Draft EIR.

The City received a letter response on February 23, 2024, from the Gabrieleño Band of Mission Indians–Kizh Nation (Kizh Nation) requesting consultation on the Project. On May 13, 2024 the Kizh Nation and the City agreed to an expedited consultation via email. On May 14, 2024, the Kizh Nation indicated via email that the Project Site has a high cultural sensitivity because it is located within and around a perennial Community (*Toviscangna*), adjacent to sacred water courses and major traditional trade routes. The Kizh Nation provided screenshots of historic maps, screenshots from historic books, explanatory text, and mitigation measures on tribal cultural resources. The electronic documents included: historic maps from 1881 and 1898 (unknown source), the Kirkman-Harriman Pictorial and Historical Map of Los Angeles County (1938), screenshots of California's Gabrielino Indians (1962) book, and a screenshot of The First Angelinos (1996) book. In their email correspondence to the City on May 14, 2024, the Kizh Nation requested for the City to provide any and all information regarding the history of the subsurface soils within the Project Site. The City provided the *Geotechnical Engineering Investigation* report for the Project on May 16, 2024.

The AB 52 Native American notification letters and documentation related to consultations between the City, Gabrielino Tongva, and the Kizh Nation are provided in Appendix I of this Draft EIR. The City has not received any other responses from the Native American community.

3. Project Impacts

a) Thresholds of Significance

In accordance with Appendix G of the CEQA Guidelines, a project would have a significant impact related to tribal cultural resources if it would:

Threshold a) ***Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:***

i) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1 (k), or

ii) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.

b) Methodology

The analysis is based on a SLF search conducted by the NAHC, consultations between the City and Native American tribes pursuant to AB 52, as well as the Archaeological Report prepared by ESA. Specifically, the City submitted notification and request to consult letters to Native American individuals and organizations and conducted follow-up Native American consultation.

c) Analysis of Project Impacts

Threshold a) ***Would the Project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:***

i) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1 (k)?

ii) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe?

(1) Impact Analysis

As discussed in the Archaeological Report, no known prehistoric archaeological resources were identified within or immediately adjacent to the Project Site. The SLF search conducted through the NAHC indicated that the Project Site was negative for known resources in the SLF database.

On April 3, 2024 the Gabrielino Tongva indicated that they have concerns because the Project Site is located within the village of *Ochuunga* and requested review of the Archaeological Report. After their review of the Archaeological Report, the Gabrielino Tongva indicated that Native American monitoring should be included in the Archaeological Report. The City indicated to the Gabrielino Tongva that Native American monitoring will be included as a mitigation measure in the Tribal Cultural Resources Section of the Draft EIR.

On May 14, 2024, the Kizh Nation indicated via email that the Project Site has a high cultural sensitivity because it is located within and around a perennial Community (*Toviscangna*), adjacent to sacred water courses and major traditional trade routes. The Kizh Nation provided screenshots of historic maps, screenshots from historic books, explanatory text, and mitigation measures on tribal cultural resources. The electronic documents included: historic maps from 1881 and 1898 (unknown source), the Kirkman-Harriman Pictorial and Historical Map of Los Angeles County (1938), screenshots of California's Gabrielino Indians (1962) book, and a screenshot of The First Angelinos (1996) book. The 1881 and 1898 historic maps depict the general location of the Project Site such as being located within Rancho Potrero Grande and in the general vicinity of a railroad (unknown source). The Kirkman-Harriman Pictorial and Historical Map of Los Angeles County (1938) shows the Project Site as located in the vicinity of Gaspar de Portolá's "First Exploring Route" and "Mission Roads" that lead to the Mission San Gabriel Arcángel. The screenshots (three total) of California's Gabrielino Indians (1962) book identifies the place name of *Toviscanga*. A fourth screen shot of California's Gabrielino Indians (1962) book shows a picture of an "Indian-made wheelbarrow used at San Gabriel Mission". The screenshot of The First Angelinos (1996) book indicates that *Toviscanga* was the site of the Mission San Gabriel Arcángel and that the name was penned by

Junipero Serra on the Book of Confirmations at the mission. As a result, specific evidence of village locations located within or overlapping the Project Site was not provided. Therefore, no known tribal cultural resources, as defined in PRC Sections 21074(a)(1), or resources determined by the City in its discretion and supported by substantial evidence to be significant pursuant to PRC Section 5024.1 have been identified within the Project Site as a result of AB 52 consultation, or as a result of the SLF search through the NAHC and the SCCIC.

However, due to the Project Site being located in the vicinity of the villages of *Ochuunga* and *Toviscanga,* in the vicinity of Portolá's "First Exploring Route" and "Mission Roads" that lead to the Mission San Gabriel Arcángel, and the AB 52 consultation efforts, the Project Site appears to have a moderate to high potential for encountering previously unknown tribal cultural resources during construction. As a result, there is potential that the Project could cause a substantial adverse change in the significance of a tribal cultural resource as described in PRC Section 21084.2. Accordingly, impacts on tribal cultural resources are considered potentially significant, and mitigation measures are provided below.

(2) Mitigation Measures

TCR-MM-1: Prior to the issuance of a demolition permit for the Project, the City shall retain one or more Native American Monitor(s) from a local traditionally and culturally affiliated California Native American tribe(s). The Native American Monitor(s) shall be present during the following construction activities that have the potential for encountering tribal cultural resources: demolition, pavement removal, clearing/grubbing, drilling/augering, potholing, grading, trenching, excavation, tree removal or other ground disturbing activity associated with the Project (collectively "ground disturbing activities"). Notwithstanding the foregoing, Native American monitoring shall not be required for any moving of soils after they have been initially disturbed or displaced by Project-related construction. The City shall prepare a monitoring agreement with the Tribes that outlines the roles and responsibilities of the Native American Monitor(s). Prior to the commencement of ground disturbing activities, a Tribal Cultural Resources Sensitivity Training session shall be held for those construction personnel who will be directly involved in the ground disturbing activities. The training session shall be carried out by the Native American Monitor(s) and shall focus on how to identify tribal cultural resources that may be encountered during ground disturbing activities and the procedures to be followed in such an event. If the Native American Monitor(s) is not present at the Project Site on any given workday, the ground disturbing activities may continue if the workers involved in such activities attended the training session. Full-time monitoring may be reduced to part-time inspections, or ceased entirely, if determined appropriate by the Native American Monitor(s) in the event there appears to be little to no potential for impacting tribal cultural resources. Native American monitoring shall conclude no later than conclusion of ground disturbing activities.

TCR-MM-2: The Native American Monitor(s) shall complete daily monitoring logs that provide descriptions of the relevant ground-disturbing activities, the type of construction activities performed, locations of ground-disturbing activities, soil types, cultural-related materials, and any other facts, conditions, materials, or discoveries of significance to the Tribes. Monitor logs shall identify and describe any discovered tribal cultural resources, including but not limited to, Native American cultural and historical artifacts, remains, places of significance, etc., as well as any discovered Native American (ancestral) human remains and burial goods. Copies of monitor logs shall be provided to the City upon written request to the Tribes. The City shall not be deemed to be out of compliance with this measure if the Native American Monitor(s) fails to complete or submit any such monitoring logs.

TCR-MM-3: In the event of a discovery of potential tribal cultural resources at the Project Site, the Qualified Archaeologist identified in Mitigation Measure CUL-MM-7 [after consultation with the Native American Monitor(s)] shall have the authority to temporarily divert, redirect, or halt ground-disturbance activities to allow identification, evaluation, and potential recovery of such potential resources. After consulting with the Native American Monitor(s) and the City, the Qualified Archaeologist shall establish an appropriate buffer area in accordance with industry standards, reasonable assumptions regarding the potential for additional discoveries in the vicinity, and safety considerations for those making an evaluation and potential recovery of the discovery. This buffer area shall be established around the find where ground-disturbing activities shall not be allowed to continue. Work shall be allowed to continue outside of the buffer area.

Within three (3) business days of such discovery, a meeting shall take place between the Qualified Archaeologist, the Tribes, and the City to discuss the significance of the find and whether it qualifies as a tribal cultural resource pursuant to Public Resources Code Section 21074(a). If, as a result of the meeting and after consultation with the Tribes and the Qualified Archaeologist, the City determines, based on substantial evidence, that the resource is in fact a tribal cultural resource, the Qualified Archaeologist shall develop a reasonable and feasible treatment plan, with input from the Tribes as necessary, and with the concurrence of the City's Planning Director. The treatment measures in the treatment plan shall be in compliance with any applicable federal, State, or local laws, rules or regulations. The treatment plan shall also include measures regarding the curation of the recovered resources.

The City may recommence ground disturbance activities inside of the specified radius of the discovery site only after it has complied with all of the recommendations developed and approved pursuant to the process set forth in the above paragraphs.

The recovered Native American resources may be placed in the custody of the Tribes, who may choose to use them for their educational purposes or they may be curated at a public, non-profit institution with a research interest in the materials.

If neither the Tribes nor an institution accepts the resources, they may be donated to a local school or historical society in the area for educational purposes.

Notwithstanding the above paragraph, any information determined to be confidential in nature by the City Attorney's office, shall be excluded from submission to the SCCIC or the general public under the applicable provisions of the California Public Records Act, Sections 7927.000 and 7929.005.

(3) Level of Significance After Mitigation

In the event unknown tribal cultural resources are unearthed during construction of the Project, with implementation of the above mitigation measures, potentially significant impacts on tribal cultural resources would be reduced to a less than significant level.

d) Cumulative Impacts

(1) Impact Analysis

As demonstrated above, prior to mitigation, the Project would have a potentially significant impact on tribal cultural resources even though there are no resources listed or determined eligible for listing, on the national, State, or local register of historical resources, and the Lead Agency determined that no resources were identified during AB 52 tribal consultation that are eligible for listing under the criteria in PRC Section 5024.1(c). This significant impact finding is due to the potential to encounter tribal cultural resources at depth during construction. This potential exists due to the Project Site being located in the vicinity of Native American villages (*Ochuunga* and *Toviscangna*).

As with the Project, each related project would also be required to engage in AB 52 consultation with Native American tribes in order to identify any tribal cultural resources that could potentially be impacted by the related project and to address potentially significant impacts, if identified. The related projects may require mitigation similar to that applicable to the Project, especially if those related projects are in areas of heightened sensitivity similar to the Project Site.

Accordingly, in light of the Project's mitigation measures and similar anticipated mitigation requirements for Projects in areas of heightened sensitivity, the Project would not result in a cumulatively considerable contribution to tribal cultural resource impacts with the implementation of Mitigation Measures TCR-MM-1 through TCR-MM-3.

(2) Mitigation Measures

No additional mitigation measures to address cumulative impacts beyond the Project are required.

(3) Level of Significance After Mitigation

Cumulative impacts regarding tribal cultural resources would be less than significant without additional mitigation measures beyond that identified for the Project.

V. Alternatives

1. Introduction

Under the California Environmental Quality Act (CEQA), and as indicated in California Public Resources Code (PRC) Section 21002.1(a), the identification and analysis of alternatives to a project is a fundamental aspect of the environmental review process intended to consider ways to mitigate or avoid the significant environmental effects of a project.

Guidance regarding the definition of Project alternatives is provided in CEQA Guidelines Section 15126.6(a) as follows:

> *[a]n EIR shall describe a range of reasonable alternatives to the project, or to the location of the project, which would feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any of the significant effects of the project, and evaluate the comparative merits of the alternatives.*

The CEQA Guidelines indicate that the selection of project alternatives should be based primarily on the ability of the alternative to avoid or substantially lessen significant impacts relative to the proposed project, "even if these alternatives would impede to some degree the attainment of the project objectives, or would be more costly." (CEQA Guidelines Section 15126.6(b)). The CEQA Guidelines further direct that the range of alternatives be guided by a "rule of reason," such that only those alternatives necessary to permit a reasoned choice are analyzed (CEQA Guidelines Section 15126.6(f)).

The project alternatives selected for analysis in an EIR, must be feasible. CEQA Guidelines Section 15126.6(f)(1) states that:

> *Among the factors that may be taken into account when addressing the feasibility of alternatives are site suitability, economic viability, availability of infrastructure, general plan consistency, other plans or regulatory limitations, jurisdictional boundaries (projects with a regionally significant impact should consider the regional context), and whether the proponent can reasonably acquire, control or otherwise have access to the alternative site (or the site is already owned by the proponent).*

CEQA Guidelines Section 15626.6(e) requires the analysis of a "no project" alternative and, depending on the circumstances, evaluation of alternative location(s) for the project, if feasible (CEQA Guidelines Sections 15126.6(e) and 15126.6(f)(1)). Based on the alternatives analysis, an environmentally superior alternative is to be designated. In general, the environmentally superior alternative is the alternative with the least adverse impacts on the environment. If the environmentally superior alternative is the "no project"

alternative, the EIR shall also identify another environmentally superior alternative among the other alternatives (CEQA Guidelines Section 15126.6(e)(2)).

CEQA Guidelines Section 15126.6(d) states that the EIR is required to provide sufficient information about each alternative to allow meaningful evaluation, analysis and comparison with the proposed project. It further states that, if an alternative would cause one or more significant effects in addition to those that would be caused by the proposed project, the alternatives analysis need not discuss those effects in the same level of detail as the significant effects of the project are discussed.

2. Objectives of the Project

Section 15124(b) of the State CEQA Guidelines states that a project description shall contain "a statement of the objectives sought by the proposed project," and further states that "the statement of objectives should include the underlying purpose of the project."

The underlying purpose of the Project is for the City of Alhambra to create a 25,000 SF community center for its residents that meets the following design objectives. As further required by the State CEQA Guidelines, the specific objectives of the Project are provided below. These are divided into Primary Objectives and Secondary Objectives. Primary Objectives are those critical to achieving the underlying purpose, whereas the Secondary Objectives are those that the Project desires to include but are not fundamental to achieve the Project's aim:

a) Primary Objectives

1. Provide large, unobstructed, visually pleasing and well-functioning spaces (ranging between 800 SF to 1,200 SF) with ceiling clear heights of 10 to 12 feet for fitness, gatherings, recreation, artistic and creative pursuits, and wellness activities; all intended to promote an active, engaged and healthy lifestyle within the community.
2. Provide a large, divisible and unobstructed multipurpose event space of approximately 4,500 SF with a clear ceiling height of 15 feet. This space would be divided into three 1,500 SF sections. The event space would be leasable and served by associated support spaces.
3. Maximize the use of natural light and ventilation to create a welcoming and energy-efficient space through the use of large windows and door openings, skylights, and open spaces.
4. The building and grounds would be accessible to people of all ages and abilities and would include grading and landscape design that provides an accessible primary route of travel.
5. Provide a connection to the natural environment through the creation of indoor/outdoor spaces.

6. Promote an unencumbered physical and visual connection to Moor Field to facilitate activities consistent with the existing joint-use agreement with the Alhambra Unified School District and to foster future opportunities for additional park and open space development and the alignment of Moor Field's programs and uses with those of the new community center.
7. Provide efficient day to day functionality, for City staff and the community at large, including loading, service access, and parking on-site and in the immediate vicinity to reduce impact to the surrounding neighborhood.
8. Create revenue generating functional spaces that can be utilized contemporaneously as other activities are ongoing in adjacent community center facilities.
9. Maximize the utility of the $25 million grant awarded by the State of California for the Project Site at 7th and W. Shorb Streets which expires mid-2026.
10. Provide a comprehensive program of activities and a gathering node for the community of South Alhambra.

b) Secondary Objectives

1. Incorporate modern technology for presentations, workshops and interactive displays to enhance education and information dissemination to the residents.
2. Incorporate acoustic attenuating materials and strategic placement of adjacent rooms and activities to minimize sound transmission and to ensure that different activities within the center can occur simultaneously without disturbance.
3. Implement environmentally friendly design elements, such as energy-efficient lighting, solar panels, rainwater harvesting and infiltration systems and materials made from recycled or renewable resources with the goal to reach LEED Silver standards.
4. Provide ample storage for equipment and materials related to various activities and programs, which would enhance the flexibility and usability of each space.
5. Provide out of door areas such as courtyards and gardens to foster outdoor activities, social interactions and relaxation. Some of these outdoor areas are to be secured when the building is closed.
6. Accommodate the current and future mobility goals of the City for bicycle and pedestrian traffic as well as alternative forms of access.

3. Overview of Selected Alternatives

As stated above, the intent of the alternatives analysis is to determine if there are feasible alternatives that would avoid or substantially reduce the significant impacts of a proposed project while still meeting most of the project's objectives. Based on the analysis in Chapter IV, *Environmental Impacts Analysis*, of this Draft EIR, implementation of the Project would result in a significant impact that cannot be feasibly mitigated to a less-than-significant level with regard to cultural resources, specifically, a significant and

unavoidable impact would occur regarding a substantial adverse change in the significance of the Project Site's historical resource. The following alternatives to the Project have been selected to inform evaluation of the Project in light of the significant environmental impacts of the Project, the objectives established for the Project (listed above), the feasibility of the alternatives considered, and public input received during the scoping period:

- Alternative 1: No Project/No Build Alternative
- Alternative 2: Full Preservation Alternative
- Alternative 3: Partial Preservation Alternative

Alternative 1 is a No Project/No Build Alternative pursuant to CEQA Guidelines Section 15126.6(e). Under the No Project/No Build Alternative, the Project would not be developed and the Shorb Clinic would remain as a closed and abandoned building, consistent with the existing on-site conditions.

In addition to the No Project/No Build Alternative, two development alternatives are included for analysis in this Draft EIR. Two alternatives (Alternatives 2 and 3) would reduce the amount of new construction dedicated as a community center building compared to the Project. In addition, the two alternatives would reduce the total square footage of demolition of the existing Shorb Clinic compared to the Project (thus increasing the square footage of the building that would be adaptively re-used). The three alternatives, including the No Project/No Build Alternative, are listed below and described in more detail in this chapter. The alternatives considered for evaluation are compared to the Project, as summarized in **Table V-1**, *Overview of the Project Alternatives*.

TABLE V-1
OVERVIEW OF THE PROJECT ALTERNATIVES

Use or Feature	Project	Alternative 1: No Project/ No Build	Alternative 2: Full Preservation Alternative	Alternative 3: Partial Preservation Alternative
Adaptive Re-use of the Shorb Clinic	9,000 SF	—	21,470 SF	14,000 SF
Community Center Building (new construction)	16,000 SF	—	3,530 SF	11,000 SF
Abandon W. Shorb Street	Yes	No	Yes	Yes
Onsite Parking	70 spaces	38 spaces (existing)	38 spaces	57 spaces
Excavation Depth	5 feet (25 feet for the drywell infiltration basin)	—	5 feet (25 feet for the drywell infiltration basin)	5 feet (25 feet for the drywell infiltration basin)

SOURCE: ESA 2024

4. Alternatives Considered and Rejected

CEQA Guidelines Section 15126.6(c) describes that an EIR should identify alternatives that were considered for analysis but rejected as infeasible and briefly explain the reasons for their rejection. According to the CEQA Guidelines, the following factors may be used to eliminate alternatives from detailed consideration: the alternative's failure to meet most of the basic project objectives, the alternative's infeasibility, or the alternative's inability to avoid significant environmental impacts. Alternatives that have been considered and rejected from detailed consideration are discussed below.

a) Off-Site Location Alternative

CEQA does not require that analysis of alternative sites always be included in an EIR. However, if all the surrounding circumstances make it reasonable to consider an alternative site, then an alternative location should be considered and analyzed in the EIR. Per CEQA Guidelines Section 15126.6(f)(2), in making the decision to include or exclude analysis of an alternative site, the "key question and first step in analysis is whether any of the significant effects of the project would be avoided or substantially lessened by putting the project in another location. Only locations that would avoid or substantially lessen any of the significant effects of the project need to be considered for inclusion in the EIR." If no feasible alternative locations exist, the EIR must disclose the reasons for this conclusion. According to CEQA Guidelines Sections 15126.6(f)(1) and (f)(2), among the factors that may be considered when addressing the feasibility of an alternative site are general suitability, economic viability, availability of infrastructure, general plan consistency, and whether the proponent can reasonably acquire, control, or otherwise have access to the alternative site. The above is in light of the fact that, per CEQA Section 15126.6(a), "An EIR shall describe a range of reasonable alternatives to the project, or to the location of the project, which would feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any of the significant effects of the project."

Under the Off-Site Location Alternative, the Shorb Clinic would remain in its existing condition as a closed and abandoned building, and the City would choose an alternative site location to construct a new community center. Under this alternative, no mothballing, removal, or cleanup would occur on the Project Site. The building and its significant historic features would continue to be unprotected from the elements, as well as from continued threats of vandalism. This would eventually, over time, degrade the building's integrity, causing it to no longer convey its significance and to lose its eligibility to the National Register. Under the Off-Site Location Alternative, impacts related to historic architectural resources would likely be equal to those of the Project in the short term (significant and unavoidable), however, potentially be greater than those of the Project in the long term (under the Project a portion of Shorb Clinic would be rehabilitated, while under the Off-Site Location Alternative none of the site would be rehabilitated). No mitigation measures would be implemented under this alternative to address the deteriorating historical resources. In addition, the City does not have ownership or control

of any other suitable site within the City of Alhambra. Further, the $25 million grant awarded by the State of California to fund the Project is tied to the Shorb Clinic site. Therefore, the flexibility and funding to develop a similar project on the same or similar scale at another location is not feasible, and this alternative would not avoid or lessen the significant impact to historical resources. Accordingly, an off-site alternative has not been carried forward for further analysis.

b) Shorb Clinic Relocation Alternative

Under the Shorb Clinic Relocation Alternative, the Shorb Clinic structure would be relocated to an alternative receiver site purchased by the City, clearing the Project Site of all existing development to allow for construction of a new community center building at the Project Site. Under this alternative, the receiver site for the Shorb Clinic would be required to be in a historically appropriate setting to avoid significant and unavoidable historical resource impacts. Priorities for a receiver site would include a location within the same subdivision or similar pattern of development, a location in close proximity to the existing site, a compatible neighborhood context and pattern of development, and a similar parcel configuration and setback. While moving a historic structure inevitably destroys some of the historic fabric and lessens its historic integrity, it is a preferable option to demolition. However, as detailed above in the Off-Site Location Alternative, the City does not have ownership or control of any other suitable site within the City of Alhambra. In addition, the $25 million grant awarded by the State of California to fund the Project is tied to the Shorb Clinic site, and there is not available funding for the City to purchase a receiver site. Therefore, the flexibility and funding to relocate the Shorb Clinic structure to another location is not feasible and this alternative has not been carried forward for further analysis.

c) Other Use Alternative

Under the Other Use Alternative, the Shorb Clinic would be retained in its entirety (21,470 SF) and no new structures would be constructed. The Shorb Clinic would be renovated in accordance with the Secretary of the Interior's Standards (SOI Standards). The space would be programmed consistent with activities that would be accommodated within the existing structure's limited dimensions, such as small classrooms, small meeting rooms, or offices, or other uses including but not limited to a homeless shelter, or a medical clinic. Under this alternative, the Project's significant and unavoidable historical resource impact would not occur, as the Shorb Clinic would be renovated in accordance with SOI Standards. However, the Other Use Alternative would not meet the underlying purpose of the Project and the mandate of the grant funds, which is to create a 25,000 SF community center for its residents. In addition, a majority of the Project's Primary Objectives would not be met. Therefore, as the Other Use Alternative would fail to meet most of the basic project objectives, this alternative has not been carried forward for further analysis.

5. Analysis Format

In accordance with CEQA Guidelines Section 15126.6(d), three feasible alternatives to the Project are evaluated in sufficient detail to determine whether the overall environmental impacts would be less than, similar to, or greater than the corresponding impacts of the Project. Furthermore, each alternative is evaluated to determine whether the Project objectives, identified above and within Chapter II, *Project Description*, of this Draft EIR would be met by the alternative. The evaluation of each of the alternatives follows the format described below:

- A description of the alternative.
- The environmental impacts of the alternative before and after implementation of reasonable mitigation measures for each environmental issue area analyzed in the EIR are described. Where applicable, the evaluation is divided between temporary impacts that would occur during the Project's construction phase and impacts that would occur during the Project's operational phase.
- Environmental impacts of the alternative and the Project are compared for each environmental issue area evaluated in Chapter IV, Environmental Impacts Analysis, the Draft EIR. Where the impact of the alternative would be less severe than the impact of the Project, the comparative impact is said to be "less." Where the alternative's net impact would be more severe than the Project, the comparative impact is said to be "greater." Where the impacts of the alternative and Project would be roughly equivalent, the comparative impact is said to be "similar." The evaluation also documents whether compared to the Project, an impact would be entirely avoided, whether a significant impact under the Project could be reduced to a less-than-significant level in the alternative, or whether it would be feasible to mitigate a significant unavoidable impact under the alternative to a less-than-significant level.
- The comparative analysis of the impacts is followed by a general discussion of the extent to which the underlying purpose and Project Objectives would be attained by the alternative.

At the end of the section, a comparison of the alternative's impacts and consistency with Project Objectives is provided. Pursuant to CEQA Guidelines Section 15126.6(e)(2) an Environmentally Superior Alternative is identified. The comparative impacts of the Project and the alternatives are summarized in **Table V-2** below.

6. Alternatives Analysis

a) Alternative 1: No Project/No Build Alternative

(1) Description of the Alternative

In accordance with the CEQA Guidelines, the No Project/No Build Alternative (Alternative 1) for a development project on an identifiable property consists of the

circumstance under which the project does not proceed. CEQA Guidelines Section 15126.6(e)(3)(B) states that, "in certain instances, the no project alternative means 'no build' wherein the existing environmental setting is maintained." Accordingly, for purposes of this analysis, Alternative 1 assumes that no new development would occur within the Project Site. As detailed in Chapter II, *Project Description*, of this Draft EIR, the Project Site currently includes an existing one- and two-story abandoned brick medical clinic building. Under the No Project/No Build Alternative, the Project would not be developed and the Shorb Clinic would remain as a closed and abandoned building, consistent with existing conditions.

(2) Environmental Impacts

(a) Biological Resources

(i) Candidate, Sensitive, or Special Status Species

No development would occur under Alternative 1 and existing use of the site as an abandoned building would continue as currently operated. As such, this alternative would not result in direct or indirect impacts to candidate, sensitive, or special-status plant or wildlife species. Accordingly, because Alternative 1 would not change any conditions at the Project Site, no impacts would occur. As such, impacts under Alternative 1 would be less than the Project.

(ii) Wildlife Movement and Nursery Sites

Under Alternative 1, no development would occur, and, as such, this alternative would not result in any removal of landscaped vegetation or ornamental trees that might have effects on nesting birds during construction. Therefore, Alternative 1 would have no impact, as it would not interfere with the movement of any native resident or migratory fish or wildlife species or within established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery site. As such, impacts under Alternative 1 would be less than the Project.

(b) Cultural Resources

(i) Historical Resources

For Alternative 1, the individually eligible building on the Project Site would remain in its current deteriorating and exposed condition. No mothballing, removal, or cleanup would occur on the Project Site. The building and its significant historic features would continue to be unprotected from the elements, as well as from continued threats of vandalism. This would eventually, over time, degrade the building's integrity, causing it to no longer convey its significance and to lose its eligibility to the National Register. Furthermore, any future reuse of the building may become more expensive due to prolonged exposure and deterioration increasing the cost to rehabilitate. Based on the above, the No Project Alternative would ultimately not avoid the significant and unavoidable impacts related to historic architectural resources. Impacts related to historic architectural resources would

likely be equal to those of the Project in the short term, however potentially be greater than those of the Project in the long term (under the Project, a portion of Shorb Clinic would be rehabilitated, while under this alternative none of the site would be rehabilitated and fall into worse disrepair). Unlike the Project, no mitigation measures would be implemented under this No Project Alternative to address the deteriorating historical resources. As such, impacts under Alternative 1 would ultimately be greater than the Project.

(ii) Archaeological Resources

Alternative 1 would not require any excavation activities that would potentially encounter previously undiscovered archaeological resources. Accordingly, because Alternative 1 would involve no excavation or ground disturbance, it would have no impact on archaeological resources. As such, Alternative 1 would avoid the Project's less-than-significant impacts (after Mitigation Measures CUL-MM-7 to CUL-MM-9) related to an adverse change in the significance of an archaeological resource. Thus, impacts related to archaeological resources would be less under Alternative 1 than the Project.

(c) Geology and Soils

(i) Paleontological Resources

Alternative 1 would not require any excavation activities that would potentially encounter previously undiscovered paleontological resources. Accordingly, because Alternative 1 would involve no excavation or ground disturbance, it would have no impact on paleontological resources. As such, Alternative 1 would avoid the Project's less-than-significant impacts (after Mitigation Measures GEO-MM-1 to GEO-MM-3) related to destroying a unique paleontological resources or unique geologic feature. Thus, impacts related to paleontological resources would be less under Alternative 1 than the Project.

(d) Noise

Alternative 1 would not involve any construction activities and, therefore, would not generate construction noise or groundborne vibration impacts. As such, Alternative 1 would avoid the Project's less-than-significant impacts (after Mitigation Measures NOI-MM-1 to NOI-MM-3) related to construction noise and groundborne vibration. Thus, impacts related to noise would be less under Alternative 1 than the Project.

(e) Tribal Cultural Resources

Alternative 1 would not require any excavation activities that would potentially encounter previously undiscovered tribal cultural resources. Accordingly, because Alternative 1 would involve no excavation or ground disturbance, it would have no impact on tribal cultural resources. As such, Alternative 1 would avoid the Project's less-than-significant impacts (after Mitigation Measures TCR-MM-1 through TCR-MM-3) related to an adverse change in the significance of a tribal cultural resource. Thus, impacts related to tribal cultural resources would be less under Alternative 1 than the Project.

(3) Relationship of the Alternative to Project Objectives

As described above, Alternative 1 assumes that no new development of a community center building or rehabilitation of the Shorb Clinic would occur on the Project Site. As such, Alternative 1 would not meet the underlying purpose of the Project and would not achieve any of the Project's Primary Objectives. Specifically, Alternative 1 would not meet the following Primary Objectives:

1. Provide large, unobstructed, visually pleasing and well-functioning spaces (ranging between 800 SF to 1,200 SF) with ceiling clear heights of 10 to 12 feet for fitness, gatherings, recreation, artistic and creative pursuits, and wellness activities; all intended to promote an active, engaged and healthy lifestyle within the community.
2. Provide a large, divisible and unobstructed multipurpose event space of approximately 4,500 SF with a clear ceiling height of 15 feet. This space would be divided into three 1,500 SF sections. The event space would be leasable and served by associated support spaces.
3. Maximize the use of natural light and ventilation to create a welcoming and energy-efficient space through the use of large windows and door openings, skylights, and open spaces.
4. The building and grounds would be accessible to people of all ages and abilities and would include grading and landscape design that provides an accessible primary route of travel.
5. Provide a connection to the natural environment through the creation of indoor/outdoor spaces.
6. Promote an unencumbered physical and visual connection to Moor Field to facilitate activities consistent with the existing joint-use agreement with the Alhambra Unified School District and to foster future opportunities for additional park and open space development and the alignment of Moor Field's programs and uses with those of the new community center.
7. Provide efficient day to day functionality, for City staff and the community at large, including loading, service access, and parking on-site and in the immediate vicinity to reduce impact to the surrounding neighborhood.
8. Create revenue generating functional spaces that can be utilized contemporaneously as other activities are ongoing in adjacent community center facilities.
9. Maximize the utility of the $25 million grant awarded by the State of California for the Project Site at 7th and W. Shorb Streets which expires mid-2026.
10. Provide a comprehensive program of activities and a gathering node for the community of South Alhambra.

b) Alternative 2: Full Preservation Alternative

(1) Description of the Alternative

The Full Preservation Alternative (Alternative 2) would retain the Shorb Clinic in its entirety (21,470 SF), and update and renovate the building as needed in accordance with the SOI Standards. The Shorb Clinic space would be programmed consistent with activities that can be accommodated within the existing structure's limited dimensions, such as small classrooms, small meeting rooms, or offices. In addition, an independent event space structure would be constructed on-site, located adjacent to the existing Shorb Clinic, which would accommodate a community center use (3,530 SF).

(2) Environmental Impacts

(a) Biological Resources

(i) Candidate, Sensitive, or Special Status Species

Under Alternative 2, the entirety of the Shorb Clinic would remain in its existing configuration and new construction would occur for an adjacent community center building. As with the Project, development under Alternative 2 would potentially result in the removal of ornamental tree species and potentially result in the disruption and removal of habitat. Similar to the Project, as no candidate, sensitive, or special-status plants occur on the Project Site, no impacts to special status plant species would occur. In addition, because there is low potential for any candidate, sensitive, or special-status wildlife species to occur on the Project Site, impacts to special status wildlife species would also be less than significant. When compared to the Project, impacts related to candidate, sensitive, or special status plant and wildlife species under Alternative 2 would be similar to the Project.

(ii) Wildlife Movement and Nursery Sites

As with the Project, Alternative 2 would include construction that would potentially remove trees used for nesting and foraging. Alternative 2, as with the Project, would implement Mitigation Measure BIO-MM-1, which would avoid nesting season or conduct pre-construction surveys during nesting season to avoid direct impacts to active nests. Under Alternative 2, as with the Project, potentially significant direct and indirect impacts on nesting bird species would be mitigated to a less-than-significant level. When compared to the Project, impacts related to biological resources under Alternative 2 would be similar to the Project.

(b) Cultural Resources

(i) Historical Resources

Alternative 2 would preserve the existing building on the Project Site in accordance with the SOI Standards and would require minimal rehabilitation. Under this Alternative, the

medical clinic building would sustain its existing form, layout, and integrity to maintain its landmark status, features, spaces, and spatial relationships. Character-defining features would be retained if possible, if "deterioration requires repair or replacement; the new material will match the old in composition, design, color and, texture" (SOI Standard 6). Although the building was retrofitted for earthquake safety in 2005, it is not currently ADA-accessible. It would also still require asbestos abatement, lead paint abatement, the addition of a sprinkler system, a new plumbing system, a new electrical system, and functional HVAC. Nevertheless, this same work would be required under the current Project. A conditions assessment report authored in 2008 described the building as being in "fair to poor" condition, and it likely has further deteriorated since then, requiring rehabilitation work. Therefore, under this Alternative, mitigation measures would be required to reduce the potential adverse impacts. These mitigation measures would include the implementation of SOI Standards Plan Review (Mitigation Measure CUL-MM-2), construction monitoring (Mitigation Measure CUL-MM-4), and a Historic American Buildings Survey (HABS) Report (Mitigation Measure CUL-MM-5). After completion of Alternative 2, the Project Site would retain the medical clinic building as well as its eligibility, with the implementation of appropriate mitigation measures. This Full Preservation Alternative would also have no indirect impacts to recorded or potential historic resources in the Project vicinity. Accordingly, impacts to historical resources would be less than significant and would avoid the significant unavoidable impact that would occur under the Project.

(ii) Archaeological Resources

Similar to the Project, Alternative 2 would install a drywell infiltration basin to a depth of 25 feet, and would generally excavate to a maximum depth of 5 feet below grade for the construction of the community center building. The archaeological sensitivity assessment indicates that the Project Site has a moderate to high potential for encountering buried precontact archaeological resources and historic-period archaeological resources. Therefore, impacts to previously unknown buried prehistoric archaeological resources are considered potentially significant. Alternative 2, as with the Project, would implement Mitigation Measures CUL-MM-9 through CUL-MM-11. With the implementation of these measures, Alternative 2, as with the Project, would provide for appropriate treatment and/or preservation of archaeological resources if encountered. Under Alternative 2, as with the Project, potentially significant impacts to archaeological resources would be mitigated to a less-than-significant level. When compared to the Project, impacts related to archeological resources under Alternative 2 would be similar to the Project.

(c) Geology and Soils

(i) Paleontological Resources

Similar to the Project, with the exception of a drywell infiltration basin installed to a depth of 25 feet, Alternative 2 would generally excavate to a maximum depth of 5 feet below grade. Given the positive results of the Natural History Museum of Los Angeles County (LACM) records search, and since excavations for Alternative 2 would extend to a depth

of 25 feet, the potential to encounter buried paleontological resources during construction of the Alternative 2 is considered high, similar to the Project. Therefore, impacts to previously unknown buried paleontological resources are considered potentially significant. Alternative 2, as with the Project, would implement Mitigation Measures GEO-MM-1 through GEO-MM-3. With the implementation of these measures, Alternative 2 would provide for appropriate treatment and/or preservation of paleontological resources if encountered. Under Alternative 2, as with the Project, potentially significant impacts to paleontological resources would be mitigated to a less-than-significant level. When compared to the Project, impacts related to paleontological resources under Alternative 2 would be similar to the Project.

(d) Noise

(i) On-Site Construction Noise

Under Alternative 2, the entirety of the Shorb Clinic would remain in its existing configuration and new construction would occur for an adjacent community center building. As with the Project, there would be a significant increase over ambient noise that could affect nearby sensitive receptors during the construction phase of Alternative 2. Alternative 2 would not include demolition, which has the highest noise levels in Table IV.D-7, therefore, construction noise would be reduced under Alternative 2, but impacts would remain potentially significant due to other construction noise that would occur. Alternative 2, as with the Project, would implement Mitigation Measures NOI-MM-1 and NOI-MM-2. With the implementation of these measures, Alternative 2, as with the Project, would reduce construction noise. Under Alternative 2, as with the Project, potentially significant impacts due to on-site construction noise would be mitigated to a less-than-significant level. When compared to the Project, impacts related to on-site construction noise under Alternative 2 would be similar to the Project.

(ii) Off-Site Construction Noise

Similar to the Project, Alternative 2 would include construction crew commutes and the transport of construction equipment and materials to the Project Site, which would incrementally increase off-site noise levels on access roads leading to the site. However, similar to the Project, the effect on longer-term (hourly or daily) ambient noise levels would be small. Therefore, similar to the Project, short-term construction-related impacts associated with worker commute and equipment transport to the Project Site under this alternative would be less than significant. When compared to the Project, impacts related to off-site construction noise under Alternative 2 would be similar to the Project.

(iii) On-Site Operational Noise

Similar to the Project, Alternative 2 would include HVAC systems for maintaining comfortable temperatures within the buildings. The operation of mechanical equipment such as air conditioning equipment may generate audible noise levels. Alternative 2 would include HVAC systems at a similar distance from sensitive receptors as the Project. Similar to the Project, noise associated with HVAC systems would be less than significant,

and no mitigation would be required. When compared to the Project, impacts related to on-site operational noise under Alternative 2 would be similar to the Project.

(iv) Off-Site Operational Noise

Operation of Alternative 2, as with the Project, would result in an increase in trips along the local roadways which could potentially result in a significant noise increase. Alternative 2 would include a similar number of trips as the Project along local roadways. Therefore, similar to the Project, additional trips along the roadway segments under Alternative 2 would not result in a significant increase over ambient noise levels and impacts would be less than significant. When compared to the Project, impacts related to off-site operational noise under Alternative 2 would be similar to the Project.

(v) On-Site Vibration

Under Alternative 2, as with the Project, on-site groundborne vibration would occur as part of the construction phase. The on-site Shorb Clinic is considered a historical resource. While the Shorb Clinic would be retained in its entirety, construction activities would occur on the building itself (required for building upgrades such as a new plumbing system, a new electrical system, and functional HVAC), and vibration levels would exceed the threshold for historic buildings. Alternative 2, as with the Project, would implement Mitigation Measure NOI-MM-3. With the implementation of this measure, Alternative 2 would mitigate construction groundborne vibration. Under Alternative 2, as with the Project, potentially significant impacts to on-site construction groundborne vibration would be mitigated to a less-than-significant level. When compared to the Project, impacts related to on-site construction groundborne vibration under Alternative 2 would be similar to the Project.

(vi) Off-Site Vibration

In regard to off-site vibration impacts, similar to the Project, the nearest off-site receptor under Alternative 2 would be the fire station to the south of the Project Site. While Alternative 2 would retain Shorb Clinic in its entirety, updates to the building would be required and new construction would occur for development of the community center building, requiring similar construction equipment as the Project (and thus similar vibration levels). Under Alternative 2, similar to the Project, construction activities would result in less than significant vibration levels and no mitigation would be required. When compared to the Project, impacts related to off-site construction groundborne vibration under Alternative 2 would be similar to the Project.

(vii) Operational Vibration

Similar to the Project, operation of Alternative 2 would include typical public space-grade stationary mechanical and electrical equipment for the proposed buildings, such as air handling units, condenser units, and exhaust fans, which would produce vibration. Similar to the Project, vibration impacts associated with operation of Alternative 2 would be less than significant and no mitigation measures would be required. When compared to the

Project, impacts related to operational vibration under Alternative 2 would be similar to the Project.

(e) Tribal Cultural Resources

Similar to the Project, Alternative 2 would install a drywell infiltration basin to a depth of 25 feet and would generally excavate to a maximum depth of 5 feet below grade for the construction of the community center building. Due to the Project Site's location and AB 52 consultation efforts, the Project Site would have a moderate to high potential for encountering previously unknown tribal cultural resources during construction. As a result, similar to the Project, impacts on tribal cultural resources under Alternative 2 would be considered potentially significant and Mitigation Measures TCR-MM-1 through TCR-MM-3 would be implemented. Under Alternative 2, as with the Project, potentially significant impacts to tribal cultural resources would be mitigated to a less-than-significant level. When compared to the Project, impacts related to tribal cultural resources under Alternative 2 would be similar to the Project.

(3) Relationship of the Alternative to Project Objectives

As described above, Alternative 2 would retain the Shorb Clinic in its entirety (21,470 SF) and update and renovate the building in accordance with the SOI Standards. The Shorb Clinic space would be programmed consistent with activities that can be accommodated within the existing structure's limited dimensions, such as small classrooms, small meeting rooms, or offices. In addition, an independent event space structure would be constructed on-site, located adjacent to the existing Shorb Clinic, which would accommodate a community center use (3,530 SF). Overall, compared to the Project, Alternative 2 represents a reduced scope of development containing a community center use (smaller than the Project), and full preservation of the Shorb Clinic (larger than the Project).

Alternative 2 would fully meet the following Primary Objectives:

4. The building and grounds would be accessible to people of all ages and abilities and would include grading and landscape design that provides an accessible primary route of travel.

Alternative 2 would partially meet the following Primary Objectives, but to a lesser extent than the Project since it would provide a smaller community center space.

8. Create revenue generating functional spaces that can be utilized contemporaneously as other activities are ongoing in adjacent community center facilities.
10. Provide a comprehensive program of activities and a gathering node for the community of South Alhambra.

As described above, Alternative 2 would fully retain Shorb Clinic and provide a 3,530 SF community center space. Due to the limited dimensions of the existing Shorb Clinic

rooms, full preservation of the Shorb Clinic would hinder the ability to provide well-functioning spaces ranging between 800 SF to 1,200 SF. In addition, the 3,530 SF community center space would fail to provide a large 4,500 SF multipurpose event space. Additionally, as the Shorb Clinic would be fully retained, windows would remain in their current configuration and would not maximize the use of natural light and ventilation. With the Shorb Clinic remaining in its existing configuration, indoor/outdoor spaces would be limited and hinder connection to the natural environment, and obstruct open space development and connection to Moor Field. Due to the limited dimensions of the Shorb Clinic rooms, interior corridors, and small windows, which would be retained under this alternative, day to day functionality of City staff would be hindered, and loading and parking would be limited. Thus, Alternative 2 would not meet the following Primary Objective:

1. Provide large, unobstructed, visually pleasing and well-functioning spaces (ranging between 800 SF to 1,200 SF) with ceiling clear heights of 10 to 12 feet for fitness, gatherings, recreation, artistic and creative pursuits, and wellness activities; all intended to promote an active, engaged and healthy lifestyle within the community.
2. To provide a large, divisible and unobstructed multipurpose event space of approximately 4,500 SF with a clear ceiling height of 15 feet. This space would be divided into three 1,500 SF sections. The event space would be leasable and served by associated support spaces.
3. Maximize the use of natural light and ventilation to create a welcoming and energy-efficient space through the use of large windows and door openings, skylights, and open spaces.
5. Provide a connection to the natural environment through the creation of indoor/outdoor spaces.
6. Promote an unencumbered physical and visual connection to Moor Field to facilitate activities consistent with the existing joint-use agreement with the Alhambra Unified School District and to foster future opportunities for additional park and open space development and the alignment of Moor Field's programs and uses with those of the new community center.
7. Provide efficient day to day functionality, for City staff and the community at large, including loading, service access, and parking on-site and in the immediate vicinity to reduce impact to the surrounding neighborhood
9. Maximize the utility of the $25 million grant awarded by the State of California for the Project Site at 7th and W. Shorb Streets which expires mid-2026.

c) Alternative 3: Partial Preservation Alternative

(1) Description of the Alternative

The Partial Preservation Alternative (Alternative 3) would retain the entirety of the Shorb Clinic's two-story west wing (14,000 SF), and update and renovate the building in accordance with the SOI Standards. The Shorb Clinic space would be programmed consistent with activities that can be accommodated within the existing structure's limited dimensions, such as small classrooms, small meeting rooms, or offices. In addition, an independent structure would be constructed on-site, either attached or located adjacent to the existing Shorb Clinic, which would accommodate an event space and other community center uses (11,000 SF).

(2) Environmental Impacts

(a) Biological Resources

(i) Candidate, Sensitive, or Special Status Species

Under Alternative 3, a portion of Shorb Clinic would remain and new construction would occur for an adjacent or attached community center building. As with the Project, development under Alternative 3 would potentially result in the removal of ornamental tree species and potentially result in the disruption and removal of habitat. Similar to the Project, as no candidate, sensitive, or special-status plants occur on the Project Site, no impacts would occur. In addition, because there is low potential for any candidate, sensitive, or special-status wildlife species to occur on the Project Site, impacts would be less than significant. When compared to the Project, impacts related to candidate, sensitive, or special status plant and wildlife species under Alternative 3 would be similar to the Project.

(ii) Wildlife Movement and Nursery Sites

As with the Project, Alternative 3 would include construction that would potentially remove trees used for nesting and foraging. Alternative 3, as with the Project, would implement Mitigation Measure BIO-MM-1, which would avoid nesting season or conduct pre-construction surveys during nesting season to avoid direct impacts to active nests. Under Alternative 3, as with the Project, potentially significant direct and indirect impacts on nesting bird species would be mitigated to a less-than-significant level. When compared to the Project, impacts related to biological resources under Alternative 3 would be similar to the Project.

(b) Cultural Resources

(i) Historical Resources

Alternative 3 would preserve the entirety of the two-story west wing, including its character-defining balcony, and similar to the Project, add a new structure on the Project

Site. The eastern wing of the medical clinic building would be demolished, and the entirety of the two-story west wing would be renovated in accordance with the SOI Standards.

This alternative is preferable to the Project, as the west wing would be entirely saved rather than just partially saved. However, it is unknown what the specific plans for the new construction would be and how they would further impact the eligibility of the medical clinic building. Construction of the new adjacent or attached structure would need to be designed in a way that would "not destroy historic materials, features, and spatial relationships that characterize the property" and the new adjacent or attached structure must be differentiated from the existing two-story wing, in addition to being "compatible with the historic materials, features, size, scale and proportion, and massing to protect the integrity of the property and its environment" (SOI Standard 9).

Under Alternative 3, mitigation measures would be required to reduce potential adverse impacts. These measures would include the implementation of SOI Standards Plan Review (Mitigation Measure CUL-MM-2), construction monitoring (Mitigation Measure CUL-MM-4), and a HABS Report (Mitigation Measure CUL-MM-5). However, the demolition of an entire wing of the current building would not maintain the existing form and relationship between the east and west wings of the building, and it is likely that the two-story wing on its own would not retain enough integrity to maintain its eligibility as a historic resource. The demolition of the east wing in its entirety would have a significant and unavoidable impact to historical resources, similar to the Project (although to a lesser extent than the Project, as a greater portion of Shorb Clinic would be retained under this alternative as compared to the Project).

(ii) Archaeological Resources

Similar to the Project, Alternative 3 would install a drywell infiltration basin to a depth of 25 feet, and would generally excavate to a maximum depth of 5 feet below grade for construction of the community center building. The archaeological sensitivity assessment indicates that the Project Site has a moderate to high potential for encountering buried precontact archaeological resources and historic-period archaeological resources. Therefore, impacts to previously unknown buried prehistoric archaeological resources are considered potentially significant. Alternative 3, as with the Project, would implement Mitigation Measures CUL-MM-9 through CUL-MM-11. With the implementation of these measures, Alternative 3, as with the Project, would provide for appropriate treatment and/or preservation of archaeological resources if encountered. Under Alternative 3, as with the Project, potentially significant impacts to archaeological resources would be mitigated to a less-than-significant level. When compared to the Project, impacts related to archeological resources under Alternative 3 would be similar to the Project.

(c) Geology and Soils

(i) Paleontological Resources

Similar to the Project, with the exception of a drywell infiltration basin installed to a depth of 25 feet, Alternative 3 would generally excavate to a maximum depth of 5 feet below grade. Given the positive results of the LACM records search, and since excavations for Alternative 3 would extend to a depth of 25 feet, the potential to encounter buried paleontological resources during construction of the Alternative 3 is considered high, similar to the Project. Therefore, impacts to previously unknown buried paleontological resources are considered potentially significant. Alternative 3, as with the Project, would implement Mitigation Measures GEO-MM-1 through GEO-MM-3. With the implementation of these measures, Alternative 3 would provide for appropriate treatment and/or preservation of paleontological resources if encountered. Under Alternative 3, as with the Project, potentially significant impacts to paleontological resources would be mitigated to a less-than-significant level. When compared to the Project, impacts related to paleontological resources under Alternative 3 would be similar to the Project.

(d) Noise

(i) On-Site Construction Noise

Under Alternative 3, a portion of Shorb Clinic would remain and new construction would occur for an adjacent or attached community center building. As with the Project, there would be a significant increase over ambient noise that could affect nearby sensitive receptors during the construction phase of Alternative 3. Therefore, impacts would remain potentially significant due to construction noise that would occur. Alternative 3, as with the Project, would implement Mitigation Measures NOI-MM-1 and NOI-MM-2. With the implementation of these measures, Alternative 3, as with the Project, would reduce on-site construction noise. Under Alternative 3, as with the Project, potentially significant impacts due to on-site construction noise would be mitigated to a less-than-significant level. When compared to the Project, impacts related to on-site construction noise under Alternative 3 would be similar to the Project.

(ii) Off-Site Construction Noise

Similar to the Project, Alternative 3 would include construction crew commutes and the transport of construction equipment and materials to the Project Site, which would incrementally increase off-site noise levels on access roads leading to the site. However, similar to the Project, the effect on longer-term (hourly or daily) ambient noise levels would be small. Therefore, similar to the Project, short-term construction-related impacts associated with worker commute and equipment transport to the Project Site under this alternative would be less than significant. When compared to the Project, impacts related to off-site construction noise under Alternative 3 would be similar to the Project.

(iii) On-Site Operational Noise

Similar to the Project, Alternative 3 would include HVAC systems for maintaining comfortable temperatures within the buildings. The operation of mechanical equipment such as air conditioning equipment may generate audible noise levels. Alternative 3 would include HVAC systems at a similar distance from sensitive receptors as the Project. Similar to the Project, noise associated with HVAC systems would be less than significant, and no mitigation would be required. When compared to the Project, impacts related to on-site operational noise under Alternative 3 would be similar to the Project.

(iv) Off-Site Operational Noise

Operation of Alternative 3, as with the Project, would result in an increase in trips along the local roadways which could potentially result in a significant noise increase. Alternative 3 would include a similar number of trips as the Project along local roadways. Therefore, similar to the Project, additional trips along the roadway segments under Alternative 3 would not result in a significant increase over ambient noise levels and impacts would be less than significant. When compared to the Project, impacts related to off-site operational noise under Alternative 3 would be similar to the Project.

(v) On-Site Vibration

Under Alternative 3, as with the Project, on-site groundborne vibration would occur as part of the construction phase. The on-site Shorb Clinic is considered a historical resource. Given that construction activities would occur on the building itself, vibration levels would exceed the threshold for historic buildings. Alternative 3, as with the Project, would implement Mitigation Measure NOI-MM-3. With the implementation of this measure, Alternative 3 would mitigate construction groundborne vibration. Under Alternative 3, as with the Project, potentially significant impacts to on-site construction groundborne vibration would be mitigated to a less-than-significant level. When compared to the Project, impacts related to on-site construction groundborne vibration under Alternative 3 would be similar to the Project.

(vi) Off-Site Vibration

In regard to off-site vibration impacts, similar to the Project, the nearest off-site receptor under Alternative 3 would be the fire station to the south of the Project Site. Alternative 3 would require similar construction equipment as the Project (and thus similar vibration levels). Under Alternative 3, similar to the Project, construction activities would result in less than significant vibration levels and no mitigation would be required. When compared to the Project, impacts related to off-site construction groundborne vibration under Alternative 3 would be similar to the Project.

(vii) Operational Vibration

Similar to the Project, operation of Alternative 3 would include typical public space-grade stationary mechanical and electrical equipment for the proposed buildings, such as air handling units, condenser units, and exhaust fans, which would produce vibration. Similar

to the Project, vibration impacts associated with operation of Alternative 3 would be less than significant and no mitigation measures would be required. When compared to the Project, impacts related to operational vibration under Alternative 3 would be similar to the Project.

(e) Tribal Cultural Resources

Similar to the Project, Alternative 3 would install a drywell infiltration basin to a depth of 25 feet and would generally excavate to a maximum depth of 5 feet below grade for the construction of the community center building. Due to the Project Site's location and AB 52 consultation efforts, the Project Site would have a moderate to high potential for encountering previously unknown tribal cultural resources during construction. As a result, similar to the Project, impacts on tribal cultural resources under Alternative 3 would be considered potentially significant, and Mitigation Measures TCR-MM-1 through TCR-MM-3 would be implemented. Under Alternative 3, as with the Project, potentially significant impacts to tribal cultural resources would be mitigated to a less-than-significant level. When compared to the Project, impacts related to tribal cultural resources under Alternative 3 would be similar to the Project.

(3) Relationship of the Alternative to Project Objectives

As described above, Alternative 3 would retain the entirety of the Shorb Clinic's two-story west wing (14,000 SF), and renovate the building in accordance with the SOI Standards. The Shorb Clinic space would be programmed consistent with activities that can be accommodated within the structure's limited dimensions, such as small classroom, small meeting rooms, or offices. In addition, an independent structure would be constructed on-site, either attached or located adjacent to the existing Shorb Clinic, which would accommodate an event space and other community center uses (11,000 SF). Overall, compared to the Project, Alternative 3 represents a reduced scope of development containing a community center use (smaller than the Project), and partial preservation of Shorb Clinic (larger than the Project).

Alternative 3 would fully meet the following Primary Objectives:

2. To provide a large, divisible and unobstructed multipurpose event space of approximately 4,500 SF with a clear ceiling height of 15 feet. This space would be divided into three 1,500 SF sections. The event space would be leasable and served by associated support spaces.

4. The building and grounds would be accessible to people of all ages and abilities and would include grading and landscape design that provides an accessible primary route of travel.

Alternative 3 would partially meet the following Primary Objectives, but to a lesser extent than the Project since it would provide a smaller community center space (and therefore less well-functioning spaces, and revenue compared to the Project). Under this alternative, the use of natural light and ventilation, connection to the natural environment,

and connection to Moor Field would still occur, as a portion of the Shorb Clinic would be demolished allowing for use of open space and larger windows, however it would be to a lesser degree compared to the Project. The following Primary Objectives would be partially met by Alternative 3:

1. Provide large, unobstructed, visually pleasing and well-functioning spaces (ranging between 800 SF to 1,200 SF) with ceiling clear heights of 10 to 12 feet for fitness, gatherings, recreation, artistic and creative pursuits, and wellness activities; all intended to promote an active, engaged and healthy lifestyle within the community.

3. Maximize the use of natural light and ventilation to create a welcoming and energy-efficient space through the use of large windows and door openings, skylights, and open spaces.

5. Provide a connection to the natural environment through the creation of indoor/outdoor spaces.

6. Promote an unencumbered physical and visual connection to Moor Field to facilitate activities consistent with the existing joint-use agreement with the Alhambra Unified School District and to foster future opportunities for additional park and open space development and the alignment of Moor Field's programs and uses with those of the new community center.

7. Provide efficient day to day functionality, for City staff and the community at large, including loading, service access, and parking on-site and in the immediate vicinity to reduce impact to the surrounding neighborhood.

8. Create revenue generating functional spaces that can be utilized contemporaneously as other activities are ongoing in adjacent community center facilities.

10. Provide a comprehensive program of activities and a gathering node for the community of South Alhambra.

As Alternative 3 would provide a smaller community center space than the Project (using the limited dimensions of the existing Shorb Clinic rooms), Alternative 3 would not deploy grant funding to achieve the maximum utility of a community center use. Thus, Alternative 3 would not meet the following Primary Objective:

9. Maximize the utility of the $25 million grant awarded by the State of California for the Project Site at 7th and W. Shorb Streets which expires mid-2026.

7. Environmentally Superior Alternative

CEQA Guidelines Section 15126.6(e)(2) indicates that an analysis of alternatives to a proposed project shall identify an environmentally superior alternative among the alternatives evaluated in an EIR and that if the "no project" alternative is the

environmentally superior alternative, the EIR shall identify another environmentally superior alternative among the remaining alternatives. Selection of an environmentally superior alternative is based on comparison of the alternatives to determine which among the alternatives would reduce or eliminate the impacts associated with the Project to the greatest degree. The comparative impacts of the Project and the Project alternatives are summarized in **Table V-2**, *Comparison of the Impacts of the Project and Alternatives*, below. In addition, **Table V-3**, *Ability of Alternatives to Meet Project Objectives*, is also provided to show a comparison of the ability of the analyzed alternatives to meet Project Objectives.

Alternative 1, the No Project/No Build Alternative, would lessen environmental impacts of all resource areas except for historical resources, where a greater impact would occur to historical resources compared to the Project. As previously detailed, the individually eligible building on the Project Site would remain in its current deteriorating and exposed condition. The building and its significant historic features would continue to be unprotected from the elements, as well as from continued threats of vandalism. This would eventually, over time, degrade the building's integrity, causing it to no longer convey its significance and to lose its eligibility to the National Register. Therefore, while other resource areas impacts would be lessened compared to the Project, due to a greater impact to historical resources, Alternative 1 would not be considered the environmentally superior alternative.

Alternative 2, the Full Preservation Alternative, would involve less new development compared to the Project and full retention of the Shorb Clinic. Alternative 2 would reduce and eliminate the Project's significant unavoidable impacts related to historical resources. As shown in Table V-2, Alternative 2 would result in 12 "similar" impacts for the issue areas analyzed compared to the Project, and one "less" impact compared to the Project. Alternative 3, the Partial Preservation Alternative, would involve less new development compared to the Project and partial retention of the Shorb Clinic. Alternative 3 would result in 13 "similar" impacts for the issue areas analyzed compared to the Project, although it is important to note that impacts to historical resources would be to a lesser extent than the Project, as a greater portion of Shorb Clinic would be retained under Alternative 3 as compared to the Project. Alternative 3 would result in no "less" impacts compared to the Project. Therefore, Alternative 2 is considered the environmentally superior alternative, as it would reduce the magnitude of overall impacts compared to the Project to a greater extent than Alternative 3 since it would include full preservation of the Shorb Clinic.

However, because Alternative 2 would develop a smaller community center building than the Project, Alternative 2 would not meet or meet to a lesser extent than the Project most of the Project Objectives: providing large well-functioning spaces and a multi-purpose event space for community activities; maximizing the use of large windows and open spaces; providing connection to the natural environment; promoting the connection to Moor Field; providing efficient day to day functionality for the community; creating revenue generating functional spaces; maximizing grant funds; and providing a comprehensive program of activities and a gathering node for the community.

TABLE V-2
COMPARISON OF IMPACTS ASSOCIATED WITH THE ALTERNATIVES AND THE PROJECT

Threshold	Project	Alternative 1: No Project/ No Build Alternative	Alternative 2: Full Preservation Alternative	Alternative 3: Partial Preservation Alternative
Biological Resources				
Candidate, Sensitive, or Special Status Species	Less than Significant	Less (No Impact)	Similar (Less than Significant)	Similar (Less than Significant)
Wildlife Movement and Nursery Sites	Less than Significant with Mitigation	Less (No Impact)	Similar (Less than Significant with Mitigation)	Similar (Less than Significant with Mitigation)

VI. Other CEQA Considerations

1. Significant Unavoidable Impacts

Section 15126.2 (b) of the State CEQA Guidelines requires that an EIR describe any significant impacts that cannot be avoided. Specifically, Section 15126.2(b) states:

> *Describe any significant impacts, including those which can be mitigated but not reduced to a level of insignificance. Where there are impacts that cannot be alleviated without imposing an alternative design, their implications and the reasons why the project is being proposed, notwithstanding their effect, should be described.*

Based on the analysis included in Chapter IV, *Environmental Impact Analysis*, of the Draft EIR, the Project would result in significant unavoidable environmental impacts related to Cultural Resources (historical resources). All other impacts associated with the Project would either be less than significant or reduced to a less-than-significant level with mitigation.

a) Cultural Resources

As discussed in Section IV.B, *Cultural Resources*, the Project Site in its existing condition was determined to be individually eligible as a historical resource for both the National Register of Historic Places and the California Register of Historical Resources under criteria A/1 and C/3, and is considered a historical resource according to CEQA. The proposed demolitions of the existing east wing and the new construction as part of the Project constitute a substantial adverse change to the historic resource such that the eligibility for listing would be lost. Therefore, impacts related to causing a substantial adverse change in the significance of a historic resource would be significant and unavoidable.

The following mitigation measures have been identified to reduce the Project's historic resource impacts:

> **CUL-MM-1:** The City of Alhambra shall retain a qualified preservation consultant who meets the Secretary of the Interior's Professional Qualifications Standards for Architectural History, Architecture, or Historic Architecture pursuant to 36 CFR 61. The consultant should have at least 10 years of experience in design review and collaborative experience in applying the Standards (Qualified Preservation Professional) to provide input as part of the Project redesign which will incorporate the rehabilitation, adaptive reuse, or the retention of a portion of the historical resource in accordance with the Secretary of the Interior's Standards for Rehabilitation. A list or matrix detailing the character-defining features list of the building shall be prepared. The purpose of the character-defining features matrix is to identify those features or elements that give the building its individual and

unique visual character and which should be taken into account to preserve and/or rehabilitate them to the maximum extent possible, according to the National Park Service. The character-defining features matrix shall be prepared as a part of the Project design process.

CUL-MM-2: The City of Alhambra shall retain a qualified preservation consultant who meets the Secretary of the Interior's Professional Qualifications Standards for Architectural History, Architecture, or Historic Architecture pursuant to 36 CFR 61 and who has at least 10 years of experience in design review and collaborative experience in applying the Standards (Qualified Preservation Professional) to review the final plans for the rehabilitation of the Project Site at 612 West Shorb Street and all new proposed construction and to ensure conformance with the Secretary of the Interior's Standards for Rehabilitation (Standards). Once the final design and the 90–100 percent construction plans become available, they shall be reviewed by a Qualified Preservation Professional for conformance with the Standards for Rehabilitation. Upon completion of the final design plans and the 90-100 percent construction plans, the Qualified Preservation Professional shall submit a draft report and make the necessary recommendations to ensure the design is in conformance with the Standards to the extent feasible. After the City has made the final revisions, the Qualified Preservation Professional shall review the final construction plans and prepare a final report documenting conformance with the Standards. The final plan review report shall be submitted along with the final plan set prior to submittal of the construction drawings and issuance of a grading permit and/or building permit. The lead agency governing the Project is the City of Alhambra who would be responsible for ensuring that this mitigation measure is completed prior to the issuance of a grading permit and/or building permit for the proposed Project.

CUL-MM-3: The City of Alhambra shall retain a qualified preservation consultant, meeting the Secretary of the Interior's Professional Qualifications Standards for Architectural History, Architecture, or Historic Architecture pursuant to 36 CFR 61 and who has at least 10 years of demonstrated experience conducting Standards conformance reviews to prepare a detailed historic preservation treatment and protection plan. The historic preservation treatment and protection plan will detail the specific treatment procedures, protection, removal, and process of each character-defining feature of the subject property prior to construction and preservation of the same character-defining feature post-construction. These specifications for preservation treatments shall be included in the final construction documents to ensure protection and preservation of the historic features of the subject property in conformance with the Secretary of Interior Standards. The preservation treatment plan shall be approved by the planning department of the City of Alhambra as a part of the project review process, and the final Preservation Treatment Plan shall be submitted with the final construction documents to the City prior to issuance of a grading and/or building permit.

CUL-MM-4: The City of Alhambra shall retain a qualified preservation consultant, meeting the Secretary of the Interior's Professional Qualifications Standards for

Architectural History, Architecture, or Historic Architecture pursuant to 36 CFR 61 and who has at least 10 years of demonstrated experience conducting Standards conformance reviews and construction monitoring, who shall conduct construction monitoring at key points when historic fabric may be affected— including during both demolition and construction—to ensure that damage to any historic fabric tis avoided or minimized. The qualified preservation professional shall conduct the monitoring and provide preservation treatment recommendations to address any unanticipated issues that may arise and to ensure that the Project is completed in conformance with the Standards. The construction monitoring process shall be documented in a monitoring report for each visit, and a substantial completion letter report shall document Project conformance with the Standards. At the completion of construction, the monitoring reports and completion report shall be placed in the property file at the Planning Division.

CUL-MM-5: Prior to initiation of construction, the City of Alhambra shall commission a qualified architectural historian who satisfies the Secretary of the Interior's Professional Qualification Standards for Architectural History (36 CFR 61), and a qualified photographer to record the existing conditions at 612 West Shorb Street in a HABS Level III report that shall document the history and significance of the Alhambra Health Clinic in a written narrative and professional photographs in accordance with HABS guidelines. HABS Level III documentation is considered the appropriate level of documentation for a building that is significant at the local level, according to the National Park Service's 2003 Guidelines for Architectural and Engineering Documentation. The HABS shall serve as a base line reference to inform future work that may be undertaken at this location. The HABS Level III report shall include the original historic plan, existing conditions plans, exterior and interior views, and an architectural data form, along with supporting documentation and references per HABS guidelines. The report shall be archivally produced and deposited in a publicly accessible archive, such as the Alhambra Public Library, the Los Angeles Public Library, the Los Angeles Conservancy and/or the South Central Coastal Information Center (SCCIC) located at California State University Fullerton.

CUL-MM-6: An Interpretative Exhibit, which would promote cultural awareness of the history of the Alhambra Health Center and its relationship to the development of medical services in Los Angeles County and as an important institutional building in the early history of Alhambra, shall be developed and be located at a prominent location as part of the Project. The Interpretative Exhibit shall be open to the public and would present a photographic history of the Center and showcase other information that would educate the public about the evolution of public health services in Los Angeles County and the early history of the City of Alhambra. The Interpretative Exhibit shall be completed and open to the public after the new development as part of the Project is placed in service. In this manner, information about the Project Site's construction and design as well as the associated history, would be retained and preserved.

Mitigation Measures CUL-MM-1 through CUL-MM-6 would reduce, but would not eliminate, potential impacts on historical resources (project-specific and cumulative). Impacts would remain significant and unavoidable even with these mitigation measures.

2. Reasons Why the Project Is Being Proposed, Notwithstanding Significant Unavoidable Impacts

In addition to identification of a project's significant unavoidable impacts, Section 15126.2(c) of the CEQA Guidelines states that where there are impacts that cannot be alleviated without imposing an alternative design, their implications and the reasons why the project is being proposed, notwithstanding their effect, should be described.
As discussed in Chapter II, Project Description, of the Draft EIR, the Project would create a much needed community center in the City of Alhambra (City) to serve its residents while preserving and adaptively reusing the architecturally significant portions of the existing Shorb Clinic. The Project would provide a comprehensive program of activities for all ages within the community of South Alhambra. The space would allow for fitness, gatherings, recreation, artistic and creative pursuits, and wellness activities; all intended to promote an active, engaged and healthy lifestyle within the community.

3. Significant Irreversible Environmental Changes

Section 15126.2(d) of the CEQA Guidelines states that the "[u]ses of nonrenewable resources during the initial and continued phases of the project may be irreversible since a large commitment of such resources makes removal or nonuse thereafter unlikely." Section 15126.2(d) further states that "[i]rretrievable commitments of resources should be evaluated to assure that such current consumption is justified."

The types and level of development associated with the Project would consume limited, slowly renewable and non-renewable resources. This consumption would occur during construction of the Project and would continue throughout its operational lifetime. The development of the Project would require a commitment of resources that would include: (1) building materials, (2) fuel and operational materials/resources, and (3) the transportation of goods and people to and from the Project Site.

Construction of the Project would result in the generation of construction and demolition debris such as metal scrap, lumber, and concrete. As discussed in Section XIX, Utilities and Service Systems within the Initial Study (Appendix A of the Draft EIR), it is anticipated that a large amount of the construction debris would be recycled and diverted in order to comply with AB 939, which requires cities to divert at least 50 percent of their solid waste generation into recycling. Proper separation of demolition debris would assist environmental clean up and allow for the proper disposal of hazardous materials that may be found within existing buildings or in on-site soil materials.

Construction of the Project would require consumption of resources that cannot be replenished or which may renew slowly as to be considered non-renewable. These

resources would include certain types of lumber and other forest products, aggregate materials used in concrete and asphalt (*e.g.*, sand, gravel and stone), metals (*e.g.*, steel, copper and lead), petrochemical construction materials (*e.g.*, plastics) and water. Fossil fuels, such as gasoline and oil, would also be consumed in the use of construction vehicles and equipment.

The commitment of resources required for the type and level of proposed development would limit the availability of these resources for future generations for other uses during the operation of the Project. However, this resource consumption would be consistent with growth and anticipated change in the greater Los Angeles region. The Project would be developed within an existing urbanized area and, as a community institution, would reduce VMT as its use is local serving in nature (as detailed in Section XVII, Transportation, of the Initial Study, located in Appendix A of the Draft EIR), which could also potentially reduce the need for additional infrastructure. In addition, the Project would be consistent with the Alhambra Building Code, which requires that energy efficient, renewable, and water saving features and technologies be utilized in Project design and construction.

Based on the above, Project construction and operation would require the irretrievable commitment of limited, slowly renewable, and non-renewable resources, which would limit the availability of these resources and the Project Site for future generations or for other uses. However, the consumption of such resources would not be considered substantial and would be consistent with regional and local growth forecasts and development goals for the area. Therefore, although irreversible environmental changes would result from the Project, such changes are concluded to be less than significant, and the limited use of nonrenewable resources that would be required by Project construction and operation is justified.

4. Growth-Inducing Impacts

Section 15126.2(e) of the State CEQA Guidelines requires a discussion of the ways in which a proposed project could be growth-inducing. This would include ways in which the project would foster economic or population growth, or the construction of additional housing, either directly or indirectly, in the surrounding environment. Section 15126.2(e) of the State CEQA Guidelines states the following:

> *Discuss the ways in which the proposed project could foster economic or population growth, or the construction of additional housing, either directly or indirectly, in the surrounding environment. Included in this are projects which would remove obstacles to population growth (a major expansion of a wastewater treatment plant might, for example, allow for more construction in service areas). Increases in the population may further tax existing community service facilities, requiring construction of new facilities that could cause significant environmental effects. Also discuss the characteristic of some projects which may encourage and facilitate other activities that could significantly affect the environment, either individually or cumulatively. It*

must not be assumed that growth in any area is necessarily beneficial, detrimental, or of little significance to the environment.

As a proposed community center, the Project would not provide new residential uses or additional housing, and would not necessitate the extension of roads or other infrastructure. The Project would be developed on an infill site within an existing urbanized area. The infrastructure *(e.g.*, water facilities, electricity transmission lines, natural gas lines, etc.) associated with the Project would not induce growth because the facilities would only serve the Project. The construction of a potential growth-inducing roadway or other infrastructure extensions would not be required. The Project Site is already developed and connected to all local utility infrastructures, including water, wastewater, electricity, and natural gas. The area surrounding the Project Site is already developed, and the Project would not remove impediments to growth. The Project Site is located within an urban area that is currently served by existing utilities and infrastructure. Although the Project may require minor local infrastructure upgrades to maintain and improve water, sewer, electricity, and natural gas lines on-site and in the immediate vicinity of the Project Site, such improvements would be limited to serving Project related demand and would not necessitate major local or regional utility infrastructure improvements that have not otherwise been accounted and planned for on a regional level.

Overall, the Project would be consistent with the growth forecast for the City and would be consistent with regional policies to reduce urban sprawl, efficiently utilize existing infrastructure, reduce regional congestion, and improve air quality through the reduction of VMT. In addition, the Project would not require any new major roadways nor would the Project open any large undeveloped areas for new use. Any access improvements would be limited to driveways necessary to provide immediate access to the Project Site and to improve safety and walkability. Therefore, direct and indirect growth-inducing impacts would be less than significant.

5. Potential Secondary Effects of Mitigation Measures

Section 15126.4(a)(1)(D) of the CEQA Guidelines states that “if a mitigation measure would cause one or more significant effects in addition to those that would be caused by the project as proposed, the effects of the mitigation measure shall be discussed but in less detail than the significant effects of the project as proposed.” With regard to this section of the CEQA Guidelines, the potential impacts that could result with the implementation of each mitigation measure identified for the Project were reviewed.

All of the mitigation measures identified for the Project are listed in Table ES-1 in Section 0.0, Executive Summary, of the Draft EIR. The mitigation measures would not generate any additional traffic, pollutant emissions, noise, or demand for public services or utilities. Thus, the mitigation measures identified for the Project would not result in any secondary environmental impacts.

6. Impacts Found Not to Be Significant

CEQA Guidelines Section 15128 states that an EIR shall contain a brief statement indicating reasons that various possible significant effects of a Project were determined not to be significant and were not discussed in detail in the Draft EIR. The Initial Study, provided in **Appendix A** of the Draft EIR, supports findings that the Project would result in less than significant impacts related to Aesthetics, Agriculture and Forestry Resources, Air Quality, Biological Resources (all except special-status species and the movement of wildlife species), Cultural Resources (human remains), Energy, Geology and Soils (all except paleontological resources), Greenhouse Gas Emissions, Hazards and Hazardous Materials, Hydrology and Water Quality, Land Use and Planning, Mineral Resources, Noise (airport land use plan, private airstrip), Population and Housing, Public Services, Recreation, Transportation, Utilities and Service Systems, and Wildfire. As such, the Initial Study concluded that these issues would not be evaluated further in the Draft EIR in accordance with CEQA Guidelines Section 15063(c)(3)(B). For further discussion of these issues and more detailed evaluation of potential impacts found not to be significant refer to the Initial Study provided in **Appendix A** of this Draft EIR.

ALHAMBRA COMMUNITY CENTER PROJECT

Initial Study

1. Project Information

1. Project Title:	Alhambra Community Center Project
2. Lead Agency Name and Address:	City of Alhambra Parks & Recreation Department 111 South First Street Alhambra, CA 91801
3. Contact Person and Phone Number:	Mike Macias Director of Parks and Recreation (626) 570-5044
4. Project Location:	The Project Site is located at 612 W. Shorb Street on an approximately 1.77-acre (77,192 square feet) site within the City of Alhambra (City), see **Figure 1**, *Regional and Project Vicinity Location*. Specifically, the Project site is located on a horizontally-oriented 'L'-shaped plot between S. 7th Street and S. 6th Street and includes the right-of-way at W. Shorb Street to the north (see **Figure 2**, *Project Location – Aerial Photograph*). The Project site Assessor's Parcel number (APN) is 5350-007-900.
5. Project Sponsor's Name and Address:	City of Alhambra Parks & Recreation Department 111 South First Street Alhambra, CA 91801
6. General Plan Designation(s):	The General Plan Land Use designation for the Project Site is Public Facilities which provides for the orderly development, use, and operation of buildings and other facilities operated and under the control of a public agency.
7. Zoning:	The Project Site is zoned Public Facilities (PF). The PF zoning district is intended to provide for a broad range of government, institutional, educational, and other facilities operated and under the control of a public agency.

8. Description of Project:

The City of Alhambra (City) proposes to develop the Alhambra Community Center Project on the 612 W. Shorb Street site, which totals approximately 1.37-acre (59,485 square feet [SF]) and also on the adjacent W. Shorb Street right-of-way, which the City intends to abandon and which Alhambra Unified School District intends to transfer its reversionary interest in (curb, gutter, sidewalk and street between 6th and 7th Streets) to the City so as to expand the Project Site by 17,707 SF. These two areas total 77,192 SF (1.77-acres) (the Project Site) and are improved with an existing one- and two-story abandoned brick (21,470 SF) medical clinic building (the Shorb Clinic) sited on the northern portion of the Project Site with associated surface parking found in the southern portion for the Project Site. The Project intends to adaptively reuse the northwest portion of the existing Shorb Clinic building's two-story element (approximately 9,000 SF), known as the west wing and demolish the balance of the existing Shorb Clinic facility. Along with the 9,000 SF of the existing Shorb Clinic building's west wing to be renovated and adaptively reused, the City intends to construct a new one- and two-story community center building (up to a height of approximately 38 feet) totaling 16,000 SF, hereinafter referred to as the east wing and the north pavilion, along with associated parking and site improvements containing an additional approximate 35,650 SF of hardscaped open space and courtyards and 16,542 SF of exterior landscape areas, parkways and plantings.

While the Project as proposed contains 25,000 SF of community center uses, the funding sources for the entire Project are not entirely accounted for. Currently, the grant funding that has been secured for the Project is only sufficient to construct a 17,000 SF facility. The City is hopeful that it will be able to secure additional funding, in which case the size of the Project would increase to between 21,000 and 25,000 SF. To ensure the most conservative impact analysis and to provide coverage for the largest possible project, this Initial Study assumes the development of the largest option, a 25,000 SF community center. The floor plans shown in **Figure 4**, *First Floor Plan*, and **Figure 5**, *Second Floor Plan* visually convey these alternatives. The portion of the Project's floor plans without an overlay of diagonal hatching or diagonal cross hatching represents the 17,000 SF development currently funded. The single line diagonal hatching outlines the first and second floor building area to be constructed should funding for a 21,000 SF facility be secured. The two-line cross hatching pattern outlines the first and second floor building area to be constructed should funding for a 25,000 SF facility be secured.

Once constructed, operation of the Project would be split between three broad program elements: 1) recreation and community center programs; 2) building support functions; and 3) exterior space programs. The primary program consists of active community center uses, including but not limited to: 1) a large, single-story divisible event space that can be split into three separate high volume spaces (along with attendant warming kitchen and banquet facility storage for tables and chairs, foyer and outdoor event court); 2) a series of larger capacity group fitness/multi-purpose rooms with interior ceiling heights between approximately ten and twelve feet, smaller, lower capacity multi-purpose rooms and a recreation room, all of varying dimensions and sizes (typically between approximately 500 SF and 1,300 SF) that would be split between the west wing, and the two east wing structures; and 3) main support/administrative uses would be located in the west wing and include a lobby, restrooms, multiple storage locations, director and staff offices, as well as back-of-house facilities such as electrical, janitorial, audio and visual, and circulation. Please see

Figure 3, *Site Plan*, **Figure 4**, *First Floor Plan*, and **Figure 5**, *Second Floor Plan*. The Project would provide a total of 93 vehicular parking spaces, with 70 spaces to be provided on-site and 23 spaces to be provided west of the Project Site on 7th Street as perpendicular parking. Electric vehicle (EV) spaces are to be provided as required by the building code in effect at the time of Project approval, but likely to be no less than 17 EV capable spaces with four of those spaces designated as EV Charging Spaces (EVCS) based on the requirements of Section 5.106.5.3 of the 2022 California Green Building Standards Code, Title 24, Part 11 (CALGreen) with July 2024 Supplement. Two vehicular ingress/egress access points would be provided to/from the Project Site, including a two-way entrance/exit along S. 7th Street and a two-way entrance/exit along S. 6th Street. The Project would provide 19 bicycle parking spaces.

In addition to the development of the community center building, the Project proposes the vacation of the existing public right of way along W. Shorb Street between S. 7th Street and S. 6th Street. The street vacation would expand the site by approximately 17,700 SF, affording the Project's event space, bike path and courtyards additional land area. The City would also restripe the 80-foot-wide S. 7th Street right-of-way, between Valley Boulevard and W. Shorb Street, to accommodate 23 perpendicular parking spaces along the east side of 7th Street.

Building Floor Plans and Project Uses

Figure 4, *First Floor Plan*, illustrates the layout of the first floor. As shown in **Figure 4**, the new construction east wing would be L-shaped with the south portion of this east wing reaching two-stories and the east portion of the east wing built in a single story that contains the event space. There would be a rectangular pavilion (known as the north pavilion) in the north center adjacent to the east wing that would be single story and contain high-ceiling multi-purpose rooms. The configuration of the Project's proposed buildings would allow for outdoor active and event courts. The retained Shorb Clinic west wing would include interior spaces generally smaller in overall square footage and with far shorter ceiling heights than the new-build east wing and north pavilion, and include a recreation room, restrooms, administration offices, reception, and lobby.

Figure 5, *Second Floor Plan*, shows the second story portion of the existing Shorb Clinic west wing building to be retained on the west side of the site and the new east wing buildings, part of which would include a roof deck on the western part of the east wing. The partial second floor of the new east wing building would include a high-ceiling multipurpose room and additional event space adjacent to the roof deck, which overlooks the active courtyard and would provide open views to Moor Field and the San Gabriel Mountains beyond.

Per the newly adopted (March 2024) Alhambra Zoning Code, Chapter 23.07.030 and its Table 23.07.030, which provides the development Standards applicable in the Public Facilities zone district, buildings can be a maximum height of 5 stories or up to 55 feet; or 3 stories and 40 feet if within 50 feet of a residential zone or use.[1] The Project is proposing to build to 38 feet, which would be considerably lower than the maximum permitted height (see **Figure 6**, *Longitudinal and Transverse Sections*, **Figure 7**, *South and West Elevations*, and **Figure 8**, *North and East Elevations*, for sections and elevations).

The Alhambra Zoning Code, Chapter 23.42.020 (D), allows for lots with an area of 60,000 SF or more to be eligible for a maximum floor area ratio (FAR) of 1.5. With the Project Site standing at 1.77 acres (77,192 SF), the FAR of the Project is 0.32:1, substantially below the maximum FAR of 1.5 allowed.

Architectural Design

The Project consists of a hybrid campus, including the retention of the west wing of the existing Shorb Clinic building, measuring 9,000 SF, and new construction to replace the existing east wing. The existing structure that would be retained as part of the Project is the larger, two-story portion that includes the full-width balcony on the front façade that defines the building's Monterey style, as well as its other most notable character-defining features, including a lobby with a significant original interior staircase. Other character-defining features that would be partially retained include historic interior tile murals and wood doors and hardware. The removal of the east wing would open small portions of the east and south façade that would be infilled with a combination of solid and glazed materials in order to visually distinguish these components from the historic fabric.

The portion of the existing Shorb Clinic building (west wing) to remain is situated on the west side of the Project Site and would have a large entry courtyard that extends towards Moor Field, including an entry plaza that continues Moor Field's park-like setting into the community center. The remaining buildings on the Project Site would be the east wing and the north pavilion, all connected by paving, enclosed hallways, or trellises, inspired by the idea of the connecting gems of a necklace and designed to create a campus design look and feel. The exterior design components of the new east wing building would derive materiality from the historic fabric of the existing Shorb Clinic building, including brick, stone, and plaster materials. Architectural elements such as trellises and arches would also be used to reference and complement the existing historic structure but would be designed in a modern way to clearly show the distinction from the historic structure. The new components would have a taller ceiling height and would be more expansive and flexible to meet the needs of the City's proposed uses/programming while remaining visually compatible with the existing structure. The new components of the Project would have large windows that would open to the exterior courts and north towards Moor Field to allow daylighting and natural ventilation.

[1] It should be noted that as of May 2024, the zoning code is in the process of being revised to exempt City projects from the application of the zoning code. It is anticipated the City Council's consideration of such amendments will be complete prior to the completion of the Draft EIR. As such, the current development standards identified will not apply to this building should the City Council adopt the revised code. In that event, although the City will not be required to conform to these requirements, the City nevertheless has designed the Project to be much smaller than the maximum contemplated in the zoning code.

Alhambra Community Center Project

Figure 8
North and East Elevations

ESA

The Project Site design reflects the local vernacular and prioritizes the accessibility, approachability, and connectedness that the City would like the Project to represent. There would be permeability from the building exterior into the central courtyard to activate and link the outdoor spaces of the community center and Moor Field. The building would be positioned with the new two-story portion of the east wing on the south side, creating a strong edge along the parking area, with exposure to the north with sweeping views toward the San Gabriel Mountains. The one-story portions of the new east wing building towards the north would maximize daylighting and create a soft edge to Moor Field. The campus would be planned to separate the parking area from the main building and courtyard areas to create an environment that would encourage community engagement. There would be a drop-off area at the intersection of S. 7th and W. Shorb Streets to provide direct access to both the Project Site and Moor Field, and there would be an entrance from the parking area on the south side of the buildings that would be used by visitors and event staff. See **Figure 9** and **Figure 10** for aerial views and 3D renderings.

The proposed Project would generally comply with all applicable development standards as provided in the Alhambra Zoning Code. The Alhambra Zoning Code requires setbacks of at least 20 feet for buildings up to two stories or 26 feet in height and 25 feet for buildings higher than 26 feet. Projections to within 10 feet of the front property line are permitted for up to 25 percent of the front building length. The existing Shorb Clinic west wing building along S. 7th Street has a setback of 12 feet and 10 inches, which encroaches on the 20-foot setback but would be maintained as it is an existing condition. Along S. 6th Street, the building would be set back 20 feet from the property line.

Vehicular and Bicycle Access, Parking and Circulation

Vehicular Access

There are currently two driveways to access the Project Site, one at the southwest corner of S. 7th Street and the other a narrow drive aisle off S. 6th Street. Vehicular access to the Project Site under the proposed Project would be provided via two ingress/egress access points, on S. 7th Street and S. 6th Street. Both ingress/egress access points would provide full access to on-site surface parking.

Access for trucks and deliveries would be off S. 6th Street, where the loading area is located on the northeastern side of the Project Site (see **Figures 3** and **4)**. The trash enclosures would be accessible via the driveway entrance on S. 6th Street.

Bicycle Access

Bicycle access to the Project Site would be provided at the intersection of S. 7th and W. Shorb Streets and adjacent to the south entrance in order to complement the goals of the City's mobility plan and encourage visitors to use alternative means of transportation to visit the Project. The driveways on S. 7th Street and S. 6th Street would be designed to the maximum extent feasible with no intervening structures or signs blocking views up and down the streets to provide maximum visibility between all roadway users. Bicycle parking amenities would also be provided onsite for visitors. The Project would provide 19 bicycle spaces.

\\EgnyteDrive\oneesa\Shared\projects\2023\D2023007738.00 - The Alhambra Community Center Project\05 Graphics-GIS-Modeling-USE AZURE\Initial Study

The City's Active Transportation Plan proposes a Class IIIB bicycle lane on W. Shorb Street adjacent to the Project Site. As part of its vacation of W. Shorb Street between S. 7th and S. 6th Streets, the Project's landscape design would also include the development of a bicycle and pedestrian pathway along the north side of the site to connect S. 7th and S. 6th Streets in compliance with the Active Transportation Plan. The design for this bicycle lane has not been finalized by the City; however, the exterior design reflects the City's goals to ensure safe travel by bicyclists and pedestrians by creating off-street pathways and effective signage. Vehicular traffic would not be allowed to use the multi-use path, thus in essence the City would be creating a higher Class I bicycle lane between S. 7th and S. 6th Streets.

Pedestrian Circulation

The Project Site would be oriented such that users would be able to access the Project Site from multiple access points on the northwest and southwest of the building and sidewalks would be provided to allow community connections to the development.

Vehicle Parking

On-site surface parking containing 70 vehicular parking spaces would be provided on the Project Site with a further 23 spaces provided on the east side of 7th Street as on-street perpendicular parking for a total of 93 parking spaces. EV-capable, EV-ready and full EV charging stations would be provided per CALGreen code requirements at the time the building permit is issued, but likely would be no less than 17 EV capable spaces with four of those spaces designated as EVCS spaces. The vehicle parking spaces would be clearly identified either by specific ground painting or signage.

Open Space and Landscaping

The Project would include a total of 7,574 SF of internal courtyard and roof deck open space. Of the total amount of open space, 4,376 SF would be provided as an event courtyard, 2,134 SF as an active courtyard, and 1,064 SF as an event roof deck. The event courtyard would contain seating and landscaping; and the active courtyard would contain seating and landscaping with a central element such as a water feature. The event roof deck would have seating and tables with landscaping.

In addition to the formal structured open space, the Project would have 16,542 SF of exterior, outdoor, common landscape spaces which would include areas for sitting, for active play, fitness, outdoor art, and events. These parkways and plantings surrounding the buildings would include a bike path incorporated into the garden paseo, north of the buildings, in the area that fronts on to Moor Field as it traverses between S. 6th and S. 7th Streets.

Landscaping would be provided in accordance with Alhambra Zoning Code Requirements. Perimeter planting at S. 6th and S. 7th Streets would integrate with the public ROW and buffer the community. Designated entrance points at S. 7th and W. Shorb Streets and from within the parking lot would be defined by plazas with seating, bike parking, and a drop-off area at W. Shorb Street. The center of the Project Site would feature a large flexible courtyard with formal and active zones. The second-floor deck of the new east wing building would include trees in containers, shade sails, and seating for small and large groups.

Plantings would feature California Native trees such as Engelmann Oak (*Quercus engelmannii*) and Torrey Pine (*Pinus torreyana*), where possible, with a focus on providing shade and interest. Existing trees removed for ill health or construction would be replaced with in kind species or with California Natives, where appropriate. New shrubs and ground cover would be drought tolerant and maintainable.

A new irrigation system would be installed as part of the proposed Project. New trees would have root watering bubblers and shrubs would be irrigated with an efficient drip system that includes a weather-based smart controller.

Lighting and Signage

Exterior lighting would incorporate low-level, downward facing exterior lights on the buildings and along pathways for security and wayfinding purposes. In addition, low-level lighting to accent signage, architectural features, and landscaping elements would be incorporated throughout the Project Site. Lighting for the Project would be intended to minimize light trespass and glare from buildings and the Project Site onto adjacent properties, providing comfort, safety, and nighttime visibility through shielded, focused and directed illumination. New street and pedestrian lighting within the public right-of-way would comply with applicable city regulations and would require approval from the City to maintain appropriate and safe lighting levels on sidewalks and roadways while minimizing light and glare on adjacent properties.

All proposed lighting for the Project's uses would be provided in accordance with Alhambra Zoning Code requirements, which provide the general standards for outdoor lighting to regulate lighting fixtures and design, energy use, light shielding, light intensity, and lighting placement.

Proposed signage, including building signage, parking entry signage, and general wayfinding pedestrian signage, would be designed to be aesthetically compatible with the proposed architecture of the Project Site and would comply with the requirements of the Alhambra Zoning Code (23.12.090). No off-site advertising signage is proposed. New signage would be architecturally integrated into the design of the proposed building and would establish appropriate identification for the proposed uses. Exterior lighting for signage would be directed onto signs to avoid creating off-site glare. Illumination used for Project signage would comply with light intensities set forth in the Alhambra Zoning Code, as measured at the property line of the nearest residentially zoned property.

Site Security

The Project would incorporate a security program to ensure the safety of visitors. During construction, the Project Site would be fenced and gated with surveillance cameras to monitor the site during off hours. During operation, access to recreational uses would be unrestricted during business hours. Facility operations would include staff training and building access/design to assist in crime prevention efforts and to reduce the demand for police protection services. Site security would include the provision of 24-hour video surveillance. Security cameras would be located to capture views at the perimeter of the proposed buildings; at main pedestrian and vehicular entries; and other outdoor locations as appropriate. During operation of the Project, access to publicly accessible areas, parking areas, and common open space areas would be well illuminated.

Sustainability Features

Energy saving and sustainable design features would be incorporated into the Project as the proposed buildings would comply with the applicable Title 24 California Code of Regulations. Design features would include elements such as energy-efficient lighting, solar panels, rainwater harvesting, and infiltration systems and materials made from recycled or renewable resources with the goal to reach LEED Silver standards. As it relates to energy conservation, the Project would include LED lighting throughout the Project Site and would install ENERGY STAR-rated appliances. As it relates to water conservation, the Project would incorporate efficient water management through low flow faucets and water-efficient landscape design with weather-based controllers and drip irrigation systems.

Utilities and Service Facilities

Due to the Shorb Clinic already having connections to the City's water, electricity, and sewer systems and per the functional assessment undertaken for the site, some of the existing site utilities would be sufficient to support the design, notably the water connection. However, it is anticipated that the Alhambra Fire Department would require post indicator valves, double detector check valves, an automatic fire sprinkler system and a Fire Department Connection (FDC).[2] The City also operates and maintains the sewage collection system that services the property, and per the *Will Serve* letter from the Director of Public Works & Utilities (see **Appendix H**), both water and sewage systems have sufficient capacity to serve the Project. Additionally, see Section XIX, *Utilities and Service Systems*, for further details.

Project Design Features

The above sections identify general characteristics of the Project upon which the analyses of this Initial Study are based. In addition to these Project characteristics, the City proposes to implement Project Design Features (PDFs) that specifically relate to environmental considerations. The PDFs would be included in the Mitigation Monitoring and Reporting Program (MMRP) required in association with certification of the EIR.

> **PDF-TR-1: Construction Management and Traffic Plan** – A Construction Management and Traffic Plan (CMTP) will be developed by the contractor and approved by the City of Alhambra to alleviate potential construction period impacts. The Plan would include but not necessarily be limited to:
>
> - name and telephone number of a contact person regarding traffic complaints or emergency situations;
> - community notification procedures and contact information for local police, fire, and emergency response organizations and procedures for the continuous coordination of construction activity;
> - procedures for training the flag person(s) used in implementing the plan;

[2] In the event of a fire, emergency responders can connect a hose line from their pump truck to the FDC and pump additional water into the fire sprinkler system to ensure sufficient water and pressure to suppress the fire in the building effectively.

- the location, times, and estimated duration of any temporary lane closures;
- developing, and once approved, managing the haul route plan and construction parking management plan;
- timing of disruptive construction activities; scheduling of deliveries, pick-ups and hauling of material during non-peak travel periods to the extent possible;
- the contractor will provide an estimate of truck volume and schedule. Areas will be designated by the City for the staging of all trucks. All earth-moving and ready-mix trucks will be equipped with two- way radios so that the drivers at the staging areas are linked to a person controlling traffic at the Project Site. Trucks will follow a City-approved route to the Project Site.

PDF-HYDRO-1: Drywell Infiltration Basin – The edge of any drywell infiltration basin shall be installed at least 20 feet away from the proposed and existing neighboring structures, as well as private property lines. Stormwater infiltration shall only occur in native soils located at least 10 feet below the existing grade. Soils located within the upper 10 feet should not become wet or saturated as a result of a drywell. It is anticipated that a settling chamber will be installed within this upper zone; therefore, the seams and bottom of the settling chamber shall be adequately sealed to prevent infiltration at this zone. All infiltration devices shall be provided with overflow protection. Once the device is full of water, additional water flowing to the device should be diverted to another acceptable disposal area, or disposed offsite in an acceptable manner.

Construction Schedule/Activities

As mentioned in the Project Design Features section above, a CMTP which defines the scope and scheduling of planned construction activities, as well as the City's proposed construction site management responsibilities, shall be prepared by the contractor as Project Design Feature PDF-TR-1, to ensure minimal impacts to neighboring residents and land uses and to avoid interruption of pedestrian, vehicle, and alternative transportation modes and public transit. The CMTP will facilitate communication and coordination with residents and business owners/others in the neighborhood. Additionally, per California Department of Transportation (Caltrans) recommendations, large-size truck travel would be limited to off-peak commute hours to the maximum extent feasible, details of which would be outlined in the CTMP. Furthermore, Caltrans requires a permit for any heavy construction equipment and or materials that require the use of oversized transport vehicles on State highways. Should this be required, details would be provided within the CTMP.

The Alhambra Zoning Code prohibits construction between the hours of 7:00 P.M. and 7:00 A.M. Monday through Saturday, and at any time on Sunday or Federal Holidays. While the Project would be exempt from complying with zoning requirements, due to the proximity to sensitive residential receptors, construction of the Project would adhere to zoning requirements as reasonably practicable.

The Project would require demolition of the existing Shorb Clinic building components that are not being retained and excavation and grading across the site to accommodate the new building foundations, utilities, and other improvements. Construction staging would be entirely internal to the Project Site. The Project would require excavation to a maximum depth of 5 feet below grade at the new construction locations. In addition to the excavation of the Project's above ground

structures, their foundations and utilities, and including the storm water runoff (low impact development) drywell infiltration basin and over-excavation, the Project would require 6,270 cubic yards (CY) of cut, 7,130 CY fill and attendant soil import of 860 CY. The drywell infiltration basin would be installed at an approximate depth of 25 feet below grade.[3]

During construction, electricity from the grid would be consumed to power the construction trailers (lights, electronic equipment, and heating and cooling) and exterior uses such as mobile lighting masts, conveyance of water for dust control, and any electrically driven construction equipment. The use of generators would not occur.

Project construction would occur in one single phase (dependent on funding), and is anticipated to commence in Spring 2025, and is expected to take approximately 17 months to complete. Full build-out is expected in Summer 2026.

Operations

In terms of operations, the new community center would generally operate in three main sessions: morning (beginning at approximately 7am) to early afternoon; after school; and evening (until approximately 10pm). Generally, the morning to early afternoon would be for pre-school classes and 'active' senior programming classes. After school programs and services for youngsters (between 7-18 years of age) would include (but not be limited to) tap and ballet, music classes, art classes, and recreation programs. Evening use would generally be for adult enrichment activities and would include (but not be limited to) art, dance, yoga, Zumba, fitness, or as a meeting space for non-profit organizations. It is estimated that 250-300 participants would use the facility on average per day.

Events would be held throughout the year within the event space, courtyards or event roof deck areas. These events might include weddings, civic and neighborhood receptions, and/or cultural events, birthday parties, and other gatherings.

The Project would employ five full-time positions, the Deputy Director, Supervisor, Clerical staff and two Coordinators, and, on a part-time basis, two Recreation Leaders.

Loading for the event space would be at the northeast corner of the Project Site, adjacent to S. 6th Street, and would be sited within the imaginary plane of the building set back. Passenger pick-up/drop-off would be located along the western side of the S. 7th Street/W. Shorb Street intersection.

9. Surrounding Land Uses and Setting:

The Project Site is located at 612 W. Shorb Street in the central portion of the City, in the San Gabriel Valley within Los Angeles County, bordered by the cities of Monterey Park, San Gabriel, San Marino, South Pasadena and Los Angeles. Regional access is provided by the San Bernadino Freeway (Interstate 10 [I-10]) located approximately 0.5 mile south of the Project Site. Local access

[3] A drywell infiltration basin is an underground structure (often a cylinder with holes) that collects and stores excess water runoff. Rainwater collects in the drywell and then slowly leaks out through the holes and into the ground.

to the Project Site is provided via W. Shorb Street, S. 7th Street, S. 6th Street, and Valley Boulevard. The Project Site is located 0.2 mile east of the Valley Boulevard/Atlantic Boulevard major transit stop, and as such, is within a half-mile of a High Quality Transit Corridor (HQTC) and located within a High Quality Transit Area (HQTA).[4] See **Figure 1**, *Regional and Project Vicinity Location*, for the location of the Project Site. See **Figure 2**, *Project Location – Aerial Photograph*, for an aerial image of the Project Site and surrounding development.

The area surrounding the Project Site is well developed. Land uses located adjacent to the Project Site include: Moor Field to the north, which is operated under a joint use agreement between the City and the Alhambra Unified School District; S. 6th Street to the east with single-family residential properties bordering the east side of S. 6th Street, the Alhambra Fire Department Station #72 immediately south with commercial uses, and Valley Boulevard beyond; and S. 7th Street immediately to the west with religious institutions beyond (although the parcel has a General Plan designation as low-density residential, the Evangelical Formosan Church of Alhambra occupies the site).

The surrounding areas to the north of the Project Site across W. Shorb Street has a General Plan land use designation of Open Space. Areas to the east and west are designated by the General Plan as Low Density Residential; and areas to the south are designated as a Public Facility associated with the Alhambra Fire Department and beyond that the linear Valley Specific Plan, which runs on the north and south side of Valley Boulevard.

The Project Site is served by several public transit options along Valley Boulevard, provided by the City of Alhambra and Los Angeles Metro. Most significantly, the Project Site is located within 500 feet of the Valley Boulevard/S. 6th Street bus stop, which serves Los Angeles County Metro Bus Line 76, as well as the Alhambra Community Transit Green Line. Other transit operations in the vicinity of the Project Site include Metro Bus Line 260 – Artesia Station to Pasadena via Atlantic-Fair Oaks, approximately 0.3 miles west of the Project Site.

General Plan Land Use and Zoning

The General Plan Land Use designation for the Project Site is Public Facilities, which provides for the orderly development, use, and operation of buildings and other facilities operated and under the control of a public agency. The Public Facilities land use designation does not support residential and/or residential mixed-use projects. Per the Alhambra Zoning Code (Zoning Code), the Project Site is also zoned Public Facilities (PF). The PF zoning code is intended to provide for a broad range of government, institutional, educational, and other facilities operated and under the control of a public agency. The PF Zone implements the Public Facilities and Institutional General Plan Land Use Designations and allows a maximum building height of 5 stories/55 feet or if adjacent to a residential zone or use, 3 stories/40 feet.

[4] Southern California Association of Governments (SCAG). 2023. Connect SoCal: The 2024-2045 Regional Transportation Plan/Sustainable Communities Strategy – Local Data Exchange (LDX) Process Data/Map Book for the City of Alhambra. Available at: https://scag.ca.gov/sites/main/files/file-attachments/alhambra_0.pdf?1700068201. Accessed April 29, 2024.

10. Other public agencies whose approval is required:

In addition to the development of the community center buildings, the Project proposes the vacation of W. Shorb Street between S. 7th Street and S. 6th Street. Other discretionary entitlements, reviews, and approvals required or requested for the Project may include, but would not necessarily be limited to, the following:

- City Council Review; and
- South Coast Air Quality Management District (SCAQMD) Rule 1403 Procedure 5 Plan approval.

In addition, the Project would require ministerial permits, including but not limited to demolition, grading, building, haul route, and engineering permits.

11. Have California Native American tribes traditionally and culturally affiliated with the project area requested consultation pursuant to Public Resources Code section 21080.3.1? If so, is there a plan for consultation that includes, for example, the determination of significance of impacts to tribal cultural resources, procedures regarding confidentiality, etc.?

Note: Conducting consultation early in the CEQA process allows tribal governments, lead agencies, and project proponents to discuss the level of environmental review, identify and address potential adverse impacts to tribal cultural resources, and reduce the potential for delay and conflict in the environmental review process. (See Public Resources Code section 21080.3.2.) Information may also be available from the California Native American Heritage Commission's Sacred Lands File per Public Resources Code section 5097.96 and the California Historical Resources Information System administered by the California Office of Historic Preservation. Please also note that Public Resources Code section 21082.3(c) contains provisions specific to confidentiality.

A record search of the Native American Heritage Commission (NAHC) Sacred Lands File (SLF) identified 11 contacts split between seven California Native American tribes. The City of Alhambra sent notification letters on February 14, 2024 to the Native American tribes that were on the Project's Assembly Bill (AB) 52 list (**Appendix A**). The Gabrieleño Band of Mission Indians – Kizh Nation requested consultation with the City on February 23, 2024. Due to the reevaluation of the Project, the City responded to the tribe on March 11, 2024 requesting to postpone consultation until a decision had been made on the Project. Contact was re-initiated by the City on May 6, 2024 and on May 10, 2024 the tribe responded to provide the option of an expedited consultation where consultation is undertaken via email. The City agreed to that email consultation on May 13, 2024 and the tribe provided consultation via email on May 14, 2024. As of the release of this Initial Study, the consultation with the tribe is in the process of being finalized.

Additionally, the Gabrielino Tongva Indians of California tribe noted on April 3, 2024 that the Project Site is within the tribe's village site of Ochuunga and requested the Cultural Assessment for the Project. The report will be provided to the Gabrielino Tongva Indians of California tribe when it has been finalized.

Environmental Factors Potentially Affected

The environmental factors checked below would be potentially affected by this Project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

☐ Aesthetics	☐ Agriculture and Forestry Resources	☐ Air Quality
☒ Biological Resources	☒ Cultural Resources	☐ Energy
☒ Geology/Soils	☐ Greenhouse Gas Emissions	☐ Hazards & Hazardous Materials
☐ Hydrology/Water Quality	☐ Land Use/Planning	☐ Mineral Resources
☒ Noise	☐ Population/Housing	☐ Public Services
☐ Recreation	☐ Transportation	☒ Tribal Cultural Resources
☐ Utilities/Service Systems	☐ Wildfire	☒ Mandatory Findings of Significance

DETERMINATION: (To be completed by the Lead Agency)

On the basis of this initial study:

☐ I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

☐ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.

☒ I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☐ I find that the proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

☐ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

2. Environmental Checklist

Aesthetics

Issues (and Supporting Information Sources):		Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
I.	**AESTHETICS —** Except as provided in Public Resources Code Section 21099, would the project:				
a)	Have a substantial adverse effect on a scenic vista?	☐	☐	☒	☐
b)	Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	☐	☐	☒	☐
c)	In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?	☐	☐	☒	☐
d)	Create a new source of substantial light or glare which would adversely affect daytime or nighttime views in the area?	☐	☐	☒	☐

Discussion

a) **Less Than Significant Impact.** A scenic vista is generally defined as a public viewpoint that provides expansive views of a highly valued landscape for the benefit of the public. According to the City's General Plan, there are no designated scenic vistas within the city (City of Alhambra, 2019). The Project Site is located within an urbanized area, with a mix of residential, retail, business, institutional, and other services in the nearby vicinity. There are no scenic vistas that would be affected by the Project, although on clear days, long-range views north to the San Gabriel Mountains are possible from adjacent streets. As mentioned in the Project Description, the proposed Project building closest to the existing Shorb Clinic building would include an elevated roof deck opening towards the north with sweeping views of the San Gabriel Mountains, creating a more visually appealing scenic viewpoint than currently exists. According to the City's General Plan, the Project Site is adjacent to the neighborhood of Mayfair Park (S. 6th Street delineates the western boundary of the neighborhood) which is one of Alhambra's most intact historic neighborhoods (Alhambra Preservation Group, 2020). However, the Project Site is not located in a scenic resource area or area with protected views designated by the City. Therefore, development of the Project would not have a substantial adverse effect on a scenic vista and impacts would be less than significant. No further analysis of this issue is warranted in the EIR.

b) **Less Than Significant Impact.** The Project Site is located in an urbanized area and is currently occupied by the vacant Shorb Clinic. The nearest designated scenic highway is the Arroyo Seco Historic Parkway Scenic Byway (also known as the Pasadena Freeway / U.S. 110), which is located between downtown Los Angeles and Glenarm Street in Pasadena. At its closest point, it is 2.95 miles northwest of the Project Site. Additionally,

the nearest eligible scenic highway is the U.S. Highway 710, located approximately 5.1 miles northwest of the Project Site (California Department of Transportation [Caltrans], 2018). Due to distance and intervening structures, development of the Project would not substantially damage scenic resources, including but not limited to, trees, rock outcroppings, and historic buildings within a State scenic highway as there are none adjacent to or in the immediate vicinity of the Project Site. Impacts would be less than significant, and no further analysis of this issue is warranted in the EIR.

c) **Less Than Significant Impact.** As previously discussed, the Project is located in an urbanized area. As such, this analysis focuses on whether the Project would conflict with applicable zoning and other regulations governing scenic quality. The Project would be consistent with applicable zoning regulations regarding scenic quality, as discussed below.

With regard to land use and zoning designation, the Project Site is designated as Public Facilities in the City's General Plan Land Use Map (City of Alhambra, 2024a) and also zoned as Public Facilities in the City's Zoning Map (City of Alhambra, 2024b). The Public Facilities zoning designation is intended to provide for the orderly development, use, and operation of buildings and other facilities operated and under the control of a public agency. The Project would retain the Public Facilities designation and not conflict with applicable zoning and other regulations governing scenic quality. The Project would be designed with Alhambra General Plan Land Use & Community Design principles in mind, notably the need for an attractive and aesthetically pleasing environment. The Project would be responsibly designed to be cognizant of the goals of the Alhambra General Plan, including Goal LU-1 relating to protection and enhancement of single-family neighborhoods (Policy LU-1A and LU-1B), and through tailoring building height and scale to be sensitive to surrounding residential uses (Policy LU-1C). Additionally, the Project is incorporating aspects of Goal LU-3, LU-4 and LU-8 related to Community Character (Policy LU-3A and LU-3B), Placemaking (Policy LU-4A through LU-4C) and Public Spaces (Policy LU-8A through LU-8D) into the design ensuring that the new build portion of the facility would include high-quality community appearance, be of visual interest and provide a quality public space. Furthermore, the Project would generally be constructed with adherence to Alhambra Zoning Code Chapters 23.12 General Site Regulations, 23.07.030 Development Standards; 23.13 Building and Site Design Standards; and 23.17 Landscaping Standards. Additionally, please see Table 9, *City of Alhambra General Plan Goals and Policies Consistency*, in the Land Use section of this Draft Initial Study for an analysis of the Project's consistency with relevant plans and policies.

As it relates to visual character, the Public Facilities designation allows a maximum height of 5 stories or up to 55 feet; or 3 stories and 40 feet if within 50 feet of a residential zone or use (City of Alhambra, 2024c). The proposed maximum building height would be 38 feet at the top of the roof on one of the new buildings. The exterior design components of the new east wing building would derive materiality from the historic fabric of the existing Shorb Clinic building, including brick, stone, and plaster materials. Architectural elements such as trellises and arches would also be used to reference and complement the existing historic structure, but they would be designed in a modern way to clearly show the

distinction from the historic structure. The new components would have a taller ceiling height and would be more expansive and flexible to meet the needs of the City's proposed uses/programming while remaining visually compatible with the existing structure. The new components of the Project would have large windows that would open to the exterior courts and north towards Moor Field to allow daylighting and natural ventilation. Furthermore, the Project would provide 16,542 SF of landscaped space with different species of shrubs and grasses and trees, which will feature California Native trees such as Engelmann Oak and Torrey Pine (where possible) with a focus on providing shade and interest, and courtyards to improve the community-orientated space.

In summary, the Project would not conflict with applicable zoning and other regulations governing scenic quality. Impacts would be less than significant, and no further analysis of this issue is warranted in the EIR.

d) **Less Than Significant Impact.** The Project Site is located within an urbanized area, characterized by moderate ambient nighttime lighting levels due to the developed nature of the area, as well as from adjacent properties. Artificial light sources include exterior lighting for security, architectural highlighting, incidental landscape lighting, and illuminated signage at the adjacent Evangelical Formosan Church of Alhambra and the Alhambra Fire Department Station #72. Automobile headlights, and streetlights for visibility and safety purposes along the adjacent streets contribute to overall ambient lighting levels as well.

Similar to the surrounding uses, the Project would include low to moderate levels of interior and exterior lighting for security, parking, signage and architectural highlighting. Soft accent lighting used for signage, and architectural highlighting would be directed to permit visibility of the highlighted elements but, would not be so bright as to cause substantial light spillover. All proposed signage and outdoor lighting would generally be consistent with applicable regulations contained within the City's Zoning Code such as 23.12.090 *Lighting and Illumination* which specifies minimum illumination levels, maximum heights of lighting fixtures, and requires all lights to be directed, oriented, and shielded to prevent light trespass or glare onto adjacent properties. In adherence to light trespass requirements within the City's Zoning Code, the light level at property lines shall not exceed 0.3 footcandles. Furthermore, applicable Backlight-Uplight-Glare (BUG) standards established by the Illuminating Engineering Society of North America (IESNA) would also be adhered to as well as CALGreen code requirements related to light pollution reduction (see Chapter 5, Section 5.106.8). Compliance with these existing regulations and standards would ensure that impacts regarding Project lighting are less than significant as they would ensure that light levels at property lines would not create a new source of substantial light or glare which would adversely affect daytime or nighttime views in the area.

Glare occurs from sunlight reflected from reflective materials utilized in existing buildings along the adjacent roadways and from vehicle windows and surfaces. Glare-sensitive receptors include the residential uses surrounding the Project Site. As glare is a temporary phenomenon that changes with the movement of the sun, receptors other than motorists are

generally less sensitive to glare impacts than to light impacts. Any glass fenestration incorporated into the Project's components would be designed with low-reflectivity values (no mirror-like tints or films), in order to comply with the Bird-Safe Buildings Act (2019) and additionally, adherence to Chapter 5, Section 5.106.8.2 of the CALGreen code would aid minimizing off-site glare. To the extent glare is experienced by adjacent uses or the occupants of vehicles on nearby streets it would be minimal and temporary, changing with the movement of the sun throughout the course of the day and the seasons of the year. As mentioned, adherence to IESNA BUG standards would also help minimize glare to the maximum extent feasible. Based on the above, glare impacts would be less than significant, and no further analysis of this issue is warranted in the EIR.

Agriculture and Forestry Resources

Issues (and Supporting Information Sources):	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
II. AGRICULTURE AND FORESTRY RESOURCES — In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Dept. of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. Would the project:				
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	☐	☐	☐	☒
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?	☐	☐	☐	☒
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?	☐	☐	☐	☒
d) Result in the loss of forest land or conversion of forest land to non-forest use?	☐	☐	☐	☒
e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?	☐	☐	☐	☒

Discussion

a) **No Impact.** The city does not contain any Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (California Department of Conservation [DOC], 2022a). According to the DOC, the Project Site is identified as "Urban and Built-Up Land." Additionally, the Project Site is designated as Public Facilities in the City's General Plan Land Use Map (City of Alhambra, 2024a) and also zoned as Public Facilities in the City's Zoning Map (City of Alhambra, 2024b). The proposed zoning for the Project would remain as Public Facilities. The Project would not result in the conversion of Prime Farmland, Unique Farmland, or Farmland of Statewide Importance to a non-agricultural use and impacts would not occur. No further analysis of this issue is warranted in the EIR.

b) **No Impact.** As mentioned previously, the Project Site is designated as Public Facilities in the City's General Plan and also zoned as such. The proposed zoning for the Project would remain the same. The Project Site is not zoned for agricultural uses and is not under a Williamson Act contract (DOC, 2022b). Therefore, implementation of the Project would not conflict with existing zoning for agricultural use or a Williamson Act contract, and impacts would not occur. No further analysis of this issue is warranted in the EIR.

c) **No Impact.** As mentioned previously, the Project Site is designated as Public Facilities in the City's General Plan and also zoned as such. The proposed zoning for the Project would remain the same. The Project Site is not designated as forest land, timberland, or timberland zoned Timberland Production, and no loss of forest land or timberland would occur. The City has no such resources within its boundary. Therefore, implementation of the Project would not conflict with existing zoning for forest land, timberland, or timberland zoned Timberland Production and impacts would not occur. No further analysis of this issue is warranted in the EIR.

d) **No Impact.** As mentioned previously, no forest land exists within the City. As such, implementation of the Project would not result in the loss of forest land or conversion of forest land to non-forest use. Therefore, implementation of the Project would not result in the loss of forest land or conversion of forest land to non-forest use and impacts would not occur. No further analysis of this issue is warranted in the EIR.

e) **No Impact.** As mentioned under Thresholds a) through d), there would be no impacts associated with the conversion of Farmland to non-agricultural use or conversion of forest land to non-forest use. Therefore, implementation of the Project would not conflict in the existing environment or conversion of land use and no impact would occur. No further analysis of this issue is warranted in the EIR.

Air Quality

Issues (and Supporting Information Sources):	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
III. AIR QUALITY — Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations. Would the project:				
a) Conflict with or obstruct implementation of the applicable air quality plan?	☐	☐	☒	☐
b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?	☐	☐	☒	☐
c) Expose sensitive receptors to substantial pollutant concentrations?	☐	☐	☒	☐
d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	☐	☐	☒	☐

Discussion

a) **Less Than Significant Impact.** The proposed Project is located within the 6,745-square-mile South Coast Air Basin (Basin). Air quality planning for the Basin is under the jurisdiction of the South Coast Air Quality Management District (SCAQMD). SCAQMD is the agency principally responsible for comprehensive air pollution control in the Basin. The Basin is subject to the SCAQMD's Air Quality Management Plan (AQMP), which was created to meet the California Ambient Air Quality Standards (CAAQS) and National Ambient Air Quality Standards (NAAQS) for criteria air pollutants. The AQMP contains a comprehensive list of pollution control strategies directed at reducing emissions from stationary sources and on-road and off-road mobile sources and achieving ambient air quality standards. These strategies are developed, in part, based on regional population, housing, and employment projections prepared by the Southern California Association of Governments (SCAG). As part of its air quality planning, SCAG has prepared the Regional Comprehensive Plan (RCP) and Guide and the Regional Transportation Program/Sustainable Communities Strategy (RTP/SCS), these plans provide the basis for the land use and transportation components of the AQMP and are used in the preparation of the air quality forecasts and the consistency analysis included in the AQMP. Both the RCP and AQMP are based, in part, on projections originating with County of Los Angeles and City of Alhambra general plans. The proposed Project would be subject to the SCAQMD's AQMP.

The most current AQMP is the 2022 Air Quality Management Plan (2022 AQMP), which was adopted on December 2, 2022 (SCAQMD 2022). The goal of the 2022 AQMP is to provide a regional roadmap to help the Air Basin achieve the USEPA's NAAQS 2015 8-hour ozone standard (70 parts per billion). The 2022 AQMP builds upon measures already in place from previous AQMPs. It also includes a variety of additional strategies such as regulation, accelerated deployment of available cleaner technologies (e.g., zero emissions technologies, when cost-effective and feasible, and low NOx technologies in other applications), best management practices, co-benefits from existing programs (e.g., climate and energy efficiency), incentives, and other CAA measures to achieve the 2015 8-hour ozone standard.

The proposed Project's consistency with applicable air quality plans is provided below. There are no applicable numerical thresholds of significance for this consistency analysis. In accordance with the SCAQMD's CEQA Air Quality Handbook, the following criteria were used to evaluate the proposed Project's consistency with the SCAQMD's 2022 AQMP:

- Criterion 1: Will the project result in any of the following:
  - An increase in the frequency or severity of existing air quality violations; or
  - Cause or contribute to new air quality violations; or
  - Delay timely attainment of air quality standards or the interim emission reductions specified in the AQMP.
- Criterion 2: Will the project exceed the assumptions utilized in preparing the AQMP?

The proposed Project's potential impacts with respect to these criteria are discussed to assess the consistency with the SCAQMD's 2022 AQMP.

Criterion 1

Consistent with the first criterion, the proposed Project would not conflict with the ability of federal, State, and local agencies to implement fair-share emissions strategies or achieve compliance with criteria pollutant standards or other federal requirements. Specifically, the proposed Project's volatile organic compound (VOC), nitrogen oxides (NO_X), carbon monoxide (CO), sulfur dioxide (SO_2), respirable particulate matter (10 microns or smaller in diameter, PM10), and fine particulate matter (2.5 microns or smaller in diameter, PM2.5) emissions resulting from construction and operation were analyzed to ascertain any potential effects on regional and localized concentrations and determine the potential for such emissions to cause or contribute to a violation of the ambient air quality standards. As discussed under response to Section III (b) and response to Section III (c), the proposed Project's construction and operational emissions would not exceed the SCAQMD's regional mass emissions thresholds for VOC, NO_X, CO, SO2, PM10 or PM2.5 or the localized significance thresholds (LSTs) for NO_X, CO, PM10 or PM2.5, or generate roadway traffic congestion at an intersection that would result in a CO hotspot in excess of the ambient air quality standards as a result of Project motor vehicle operations. The proposed Project's emissions would therefore not increase concentrations of criteria pollutants or their precursors in a manner that would conflict with or obstruct SCAQMD's efforts to achieve attainment of ambient air quality standards for any criteria pollutant for which it is currently not in attainment or jeopardize the current attainment status of the Basin for other criteria pollutants. Therefore, in response to Criterion 1, the proposed Project would not result in an increase in the frequency or severity of existing air quality violations, cause or contribute to new air quality violations, or delay timely attainment of air quality standards or the interim emissions reductions specified in the AQMP. No further analysis of this issue is warranted in the EIR.

Criterion 2

With respect to the second criterion for determining consistency with AQMP growth assumptions, the projections in the AQMP for achieving air quality goals are based on assumptions in SCAG's 2020–2045 RTP/SCS regarding population, housing, and growth

trends.[5] Determining whether or not a project exceeds the assumptions reflected in the AQMP involves the evaluation of consistency with applicable population, housing, and employment growth projections and appropriate incorporation of AQMP control measures. The following discussion provides an analysis with respect to these criteria.

Air Quality Management Plan Consistency

The proposed Project would not obstruct implementation of the 2022 AQMP for, as discussed below, its construction and operational emissions would be less than significant. The proposed Project would comply with applicable required fleet rules and control strategies to reduce on-road truck emissions (i.e., 13 California Code of Regulations, Section 2025 [CARB Truck and Bus regulation]), and other applicable SCAQMD rules specified and incorporated in the 2022 AQMP. As discussed above, projects, uses, and activities that are consistent with the applicable growth projections and control strategies used in the development of the AQMP would not jeopardize attainment of the air quality levels identified in the AQMP. As discussed below, compliance with the applicable required fleet rules and control strategies and requirements would render it consistent with, and meet or exceed, the AQMP requirements for control strategies intended to reduce emissions from construction equipment and activities. Thus, the proposed Project's criteria pollutant emissions would not cause the Basin's criteria pollutant emissions to worsen so as to impede the SCAQMD's efforts to achieve attainment with respect to any criteria pollutant for which it is currently not in attainment of the NAAQS and CAAQS (e.g., ozone, PM10, and PM2.5),[6] or to cause the Basin to deteriorate from its current attainment status with respect to any other criteria pollutant emissions.

As further discussed below, the proposed Project is also consistent with the 2022 AQMP. The proposed Project incorporates into its design appropriate control strategies set forth in the 2022 AQMP for achieving its emission reduction goals and would be consistent with the demographic and economic assumptions upon which the plan is based.

Construction

Control Strategies

During its construction phase, the proposed Project would ensure compliance with CARB's requirements to minimize short-term emissions from on-road and off-road diesel equipment, and with SCAQMD's regulations such as SCAQMD Rule 403 for controlling fugitive dust and SCAQMD Rule 1113 for controlling VOC emissions from architectural coatings. Compliance with these regulatory measures and requirements would be consistent with and meet or exceed the AQMP requirements for control strategies intended to reduce emissions from construction equipment and activities.

---

5 It should be noted that even though there is a newer version of the RTP/SCS (Connect SoCal 2024-2050), the 2022 AQMP incorporates the 2020-2045 RTP/SCS. The next AQMP is not expected until 2026, which would incorporate Connect SoCal 2024-2050 at that time.

6 The Los Angeles County portion of the Basin is designated as nonattainment for the federal lead standard; however, this was due to localized emissions from two lead-acid battery recycling facilities in the City of Vernon and the City of Industry that are no longer operating. For reference refer to South Coast Air Quality Management District, Board Meeting, Agenda No. 30, Adopt the 2012 Lead State Implementation Plan for Los Angeles County, May 4, 2012.

Growth Projections

The proposed Project would generate short-term construction jobs, but these jobs would not necessarily bring new construction workers or their families into the region, since construction workers are typically drawn from an existing regional pool who travel among construction sites within the region. Construction workers are not typically brought from other regions to work on developments such as the proposed Project. Moreover, these jobs would be relatively small in number and temporary in nature. Therefore, the proposed Project's construction jobs would not conflict with the long-term employment or population projections upon which the 2022 AQMP is based.

Operations

The Project location, design, and land uses would support land use and transportation control strategies related to reducing vehicle trips for people working and visiting the Project by increasing housing density near public transit. The Project is considered a "public facility" project, as it further develops public use property within an already developed urban area. The Project is located in a Transit Priority Area (TPA). Specifically, the Project Site is located within a quarter mile of the Valley and 6th Street stop (Alhambra Community Transit [ACT] Green Line), which provides transportation service around the City of Alhambra along Valley Boulevard (from Fremont to Vega) and Main Street (from Palm to Chapel) and provides connections to the ACT Blue Line, which connects to California State University, Los Angeles and Metrolink. The Project's location in a TPA provides evidence of the Project's consistency with the 2022 AQMP's goal of reducing mobile source emissions as a source of NO_X and PM2.5. Additionally, the Project would include both sidewalks and bicycle parking stalls to serve the users of the community center.

As described above, by locating the new community center within an area that has existing high quality public transit (with access to existing local bus and rail service), housing, retail, and restaurants, all within walking distance, and by including features that support and encourage pedestrian activity and other non-vehicular transportation and increased transit use in the City, the Project would reduce vehicle trips and VMT, and resulting air pollutant emissions.

Growth Projections

The Project is anticipated to be fully operational in 2026. The Project's growth would be consistent with the growth projections contained in the 2020-2040 RTP/SCS, which is incorporated into the 2022 AQMP. The Project would increase employees(five full time employees and two part time employees), but would comprise a negligible portion of the City's total employment, which was estimated at 37,400 in 2016 and projected to reach 40,600 in 2045.[7] As such, the Project would have a very small effect on the overall household, population and employment projections for the City. It is estimated that 250-300 participants would use the facility on average per day; however, such users would be located within the region. It would not result in new families moving into the region. As such, the

[7] Southern California Association of Governments, Demographics and Growth Forecast, Technical Report. September 3, 2020. Final Connect SoCal Demographics and Growth Forecast Adopted September 3, 2020.Available: https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocal_demographics-and-growth-forecast.pdf?1606001579. Accessed April 2024.

Project would have a very small effect on the overall household, population and employment projections for the City. Therefore, the increases in residents would be consistent with SCAG's 2020-2045 RTP/SCS goals and emission projections in the 2022 AQMP.

Projects, uses, and activities that are consistent with the applicable growth projections and control strategies used in the development of the AQMP would not jeopardize attainment of the air quality reductions identified in the AQMP. Based on the above, the proposed Project would not conflict with growth projections in the 2022 AQMP and impacts would be less than significant. No further analysis of this issue is warranted in the EIR.

b) **Less Than Significant Impact.** As indicated above, the Project Site is located within the South Coast Air Basin. State and federal air quality standards are exceeded in many parts of the Basin for ozone (O_3) and PM2.5, including those monitoring stations nearest to the Project area, and the Basin is designated a State and federal non-attainment area for these pollutants. The Basin is also designated as a State non-attainment area for PM10. The proposed Project would contribute to local and regional air pollutant emissions during construction (short-term or temporary) and operation. However, based on the following analysis, construction and operation of the proposed Project would result in less-than-significant impacts relative to the daily significance thresholds for criteria air pollutant emissions established by the SCAQMD for construction and operational phases.

Daily regional construction and operational source project ozone precursor and criteria pollutant emissions such as VOC, NO_X, CO, SO_2, PM10, and PM2.5 were estimated using the most recent version of the California Emissions Estimator Model (CalEEMod) software, an emissions inventory software program recommended by SCAQMD. CalEEMod is based on outputs from the CARB OFFROAD model and the CARB on-road vehicle emissions factor (EMFAC) model, which are emissions estimation models developed by CARB and used to calculate emissions from construction activities, heavy-duty off-road equipment, and on-road vehicles. Activities parameters, such as number of pieces of equipment and equipment usage hours were provided by the City or based on CalEEMod defaults for such developments.

Construction

Construction activities associated with the proposed Project would generate temporary and short-term emissions of VOC, NO_X, CO, SO_2, PM10, and PM2.5. Construction related emissions are expected from demolition, grading, building construction, paving, and architectural coating. During demolition, the air quality modeling conservatively assumes approximately 9,500 cubic yards (CY) of building and hardscape debris would be generated and exported.[8] During grading, for modeling purposes it was assumed that approximately 6,150 CY of soil would be cut and, of that volume, approximately 2,950 CY would be retained on-site as fill material. The remaining approximately 3,200 CY would

8 The estimated debris volume of 9,500 CY is based on the conservative assumption that the entire existing building would be demolished and that all existing hardscape on the Project Site would be removed. Since the west wing of the existing Shorb Clinic building would be retained, the actual debris volume would be less.

be exported.[9] The proposed Project's construction is expected to commence in the second quarter of 2025 and would last through the third quarter of 2026. If the proposed Project's construction commences later than the anticipated start date, air quality impacts would be less than those analyzed herein, because a more energy-efficient and cleaner burning construction equipment fleet mix would be expected in the future, pursuant to State regulations that require construction equipment fleet operators to phase-in less polluting heavy-duty equipment. Therefore, air quality impacts would generally be less than those analyzed herein due to the likelihood of less emissions generated in a day.

The duration of construction activity and associated equipment represents a reasonable approximation of the expected construction fleet as required per CEQA guidelines. Site-specific construction fleet may vary due to specific Project needs at the time of construction. The duration of construction activity and associated construction equipment was estimated based on consultation with the City. A detailed summary of construction equipment assumptions by phase and the emissions modeling results are provided in the modeling files in **Appendix B** of this IS.

Construction of the proposed Project is estimated to last approximately 17 months. Construction duration by phase is provided in **Table 1**, *Estimated Construction Schedule*.

TABLE 1
ESTIMATED CONSTRUCTION SCHEDULE

Activity	Start Date	End Date	Duration (Work Days)
Alhambra Community Center			
Demolition	4/1/2025	4/30/2025	**22**
Grading / Excavation	5/1/2025	6/30/2025	**43**
Building Construction	7/1/2025	7/31/2026	**284**
Architectural Coating	7/1/2026	7/31/2026	**23**
Paving	8/1/2026	8/31/2026	**21**

SOURCE: City of Alhambra 2024, in consultation with the Applicant

The maximum daily regional emissions from these activities are estimated by construction phase and compared to the SCAQMD significance thresholds. Maximum daily emissions are calculated by taking the sum of the overlapping phases for each criteria pollutant. As shown in **Table 2**, *Maximum Regional Construction Emissions – Without Mitigation (Pounds per Day)*, emissions resulting from the proposed Project construction would not exceed any criteria pollutant thresholds established by the SCAQMD (SCAQMD 2015).

[9] Soil transport is modeled based on an estimate of 3,200 cubic yards. Refined estimates for the Project may require less soil transported to or from the site. Therefore, the emissions estimates associated with truck transport of soil likely represents a slightly conservative (i.e., environmentally protective) analysis.

Therefore, impacts would be considered less than significant, and no mitigation is required. No further analysis of this issue is warranted in the EIR.

TABLE 2
MAXIMUM REGIONAL CONSTRUCTION EMISSIONS – WITHOUT MITIGATION (POUNDS PER DAY)

Construction Phases	VOC	NO_x	CO	SO_2	PM10[b]	PM2.5[b]
Demolition (2025)	1.7	22.3	19.6	<0.1	5.4	1.6

[b] Emissions include fugitive dust control measures consistent with SCAQMD Rule 403.

SOURCE: ESA 2024

Operation

For the Project operational year, 2026, operational criteria pollutant emissions were calculated for mobile vehicular emissions and for use of the Site. Operations would adhere to the applicable codes including 2022 Title 24 Green Building Code. Operational emission estimates include compliance with SCAQMD Rule 1113 (Architectural Coatings), which limits the VOC content of architectural coatings, which may occur during periodic maintenance (CalEEMod default assumption).

Daily trip generation rates for the Project were provided by the Project's Transportation Assessment and include trips associated with the proposed Project. VMT was provided by the results from CalEEMod. Landscape equipment emissions are based on off-road emission factors from CARB. Emissions from the use of consumer products and the reapplication of architectural coatings are based on data provided in CalEEMod. As discussed previously, operational emissions are assumed to be net new since the Project Site is currently abandoned and not in operation.

The results of the regional criteria pollutant emission calculations for VOC, NO_X, CO, SO_2, PM10, and PM2.5 are presented in **Table 3,** *Estimated Maximum Unmitigated Regional Operational Emissions.* As shown in Table 3, the Project's maximum daily operational emissions would be below the SCAQMD regional mass numeric indicators of significance. A detailed summary of the operational emissions modeling results are provided in the modeling files in **Appendix B** of this IS. Therefore, the Project would not result in new

significant construction air quality impacts and would be less than significant. No further analysis of this issue is warranted in the EIR.

TABLE 3
ESTIMATED MAXIMUM REGIONAL OPERATIONAL EMISSIONS (POUNDS PER DAY)[a]

Source	VOC	NO_X	CO	SO_2	PM10	PM2.5

NOTES:

[a] Totals may not add up exactly due to rounding in the modeling calculations.

[b] The Project would renovate the existing building to an all-electric design. No natural gas energy emissions would occur.

SOURCE: ESA 2024.

c) **Less Than Significant Impact.** According to the SCAQMD CEQA Air Quality Handbook, sensitive receptors include residences, schools, playgrounds, childcare centers, athletic facilities, long-term health care facilities, rehabilitation centers, convalescent centers, and retirement homes.

The localized effects from the on-site portion of the emissions were evaluated at nearby sensitive receptor locations potentially impacted by the proposed Project according to the SCAQMD's Localized Significance Threshold Methodology (June 2003, revised July 2008), which relies on on-site mass emission rate screening tables and Project-specific dispersion modeling, which may be used for sites greater than 5 acres or for projects that exceed the screening tables, as appropriate (SCAQMD 2008). LSTs represent the maximum emissions from a project site that are not expected to result in an exceedance of a NAAQS or CAAQS.

The LSTs are applicable to NO_X, CO, PM10, and PM2.5. For NO_X and CO, the thresholds are based on the ambient air quality standards. For PM10 and PM2.5, the thresholds are based on requirements in SCAQMD Rule 403 (Fugitive Dust) for construction and Rule 1303 (New Source Review Requirements) for operations. The SCAQMD has established screening criteria that can be used to determine the maximum allowable daily emissions that would satisfy the LSTs and, therefore, not cause or contribute to an exceedance of the applicable ambient air quality standards without project-specific dispersion modeling. The screening criteria depend on: (1) the area in which the project is located, (2) the size of the project area, and (3) the distance between the project area and the nearest sensitive receptor (e.g., residences, schools, hospitals). For the proposed Project, the appropriate Source Receptor Area (SRA) for the LSTs is the West San Gabriel

Valley (SRA 8). The nearest sensitive receptors to the proposed Project are the residential uses located 65 feet to the east of the Project Site boundary. The total acreage disturbed in any one day is estimated to be 1.77 acres. The LST analysis were based on the SCAQMD's look-up tables for between a 1- to 2-acre site in SRA 8 with sensitive receptors located close to the Project Site (i.e., within 25 meters [82 feet] or less) from the Project Site (June 2003, revised July 2008).

The localized effects from the on-site portion of the proposed Project's daily emissions were evaluated at the sensitive receptor locations that would be potentially impacted by the proposed Project according to the SCAQMD's LST methodology. SCAQMD's Methodology clearly states that "off-site mobile emissions from the project should not be included in the emissions compared to LSTs." Therefore, for purposes of the LST analysis, only emissions included in the CalEEMod "on-site" emissions outputs were considered, plus the truck idling emissions (e.g., haul trucks and vendor trucks) that were calculated separately using the EMFAC emission factors for heavy-heavy-duty (HHD) vehicles. Daily localized emissions caused by the proposed Project were compared to the LSTs in the SCAQMD's look-up tables to determine whether the emissions would cause violations of ambient air quality standards.

Construction Emissions

Localized Construction Emissions

Table 4, *Maximum Daily Localized Construction Emissions*, presents the localized emissions from on-site equipment during the construction of the proposed Project, located 25 meters (82 feet) east of the Project Site, in the vicinity of the Project area without mitigation.

TABLE 4
MAXIMUM DAILY LOCALIZED CONSTRUCTION EMISSIONS[a]

	Emissions (pounds per day)			
Year	**NO_x**	**CO**	**PM10[b]**	**PM2.5[b]**
Alhambra Community Center - Construction Phases				
Demolition (2025)	14.7	15.6	3.4	1.0
Grading/Excavation (2025)	14.1	14.5	2.5	1.5
Building Construction (2025)	10.3	11.2	0.4	0.3
Building Construction (2026)	9.9	11.2	0.3	0.3
Paving (2026)	4.4	6.5	0.2	0.2
Architectural Coating (2026)	0.9	1.1	<0.1	<0.1
Overlapping Building Construction (2026) and Architectural Coating (2026)	10.8	12.3	0.3	0.3
Project Maximum Daily Emissions	**14.7**	**15.6**	**3.4**	**1.5**
SCAQMD LST Significance Thresholds	**91.3**	**748.3**	**5.5**	**5.5**
Exceeds Thresholds	**No**	**No**	**No**	**No**

NOTE:

[a] Totals may not add up exactly due to rounding in the modeling calculations.

[b] Emissions include fugitive dust control measures consistent with SCAQMD Rule 403.

SOURCE: ESA 2024

Based on the results summarized in Table 4, the unmitigated proposed Project impacts would not exceed the LSTs. No further analysis of this issue is warranted in the EIR.

Operational Emissions

According to SCAQMD LST methodology, LSTs would apply to the operational phase of a project, if the project includes stationary sources, or attracts mobile sources. With regard to on-site sources of emissions, the proposed Project would generate emissions from area sources located on-site such as combustion from landscaping equipment, and use of consumer products. **Table 5**, *Maximum Daily Localized Operational Emissions*, presents the localized emissions from on-site equipment during the operation of the proposed Project.

TABLE 5
MAXIMUM DAILY LOCALIZED OPERATIONAL EMISSIONS[a]

Operational Activity	NO_X	CO	PM10	PM2.5
Area (Consumer Products, Landscaping)	<0.1	1.1	<0.1	<0.1
Energy (Natural Gas)[b]	0	0	0	0
Project Maximum Daily Emissions	**<0.1**	**1.1**	**<0.1**	**<0.1**
SCAQMD LST Significance Thresholds[c]	**91**	**748**	**1.0**	**1.0**
Exceeds Thresholds	**No**	**No**	**No**	**No**

NOTE:

[a] Totals may not add up exactly due to rounding in the modeling calculations.

[b] The Project would renovate the existing building to an all-electric design. No natural gas energy emissions would occur.

[c] Operations associated with the proposed project would occur approximately 65 feet from the nearest sensitive receptors. The localized analysis conservatively assumes operations would be within 82 feet from the nearest sensitive receptors.

SOURCE: ESA 2024

Based on the results summarized in Table 5, the unmitigated proposed Project impacts would not exceed the LSTs. No further analysis of this issue is warranted in the EIR.

CO "Hot Spot" Analysis

A CO hotspot is an area of localized CO pollution that is caused by severe vehicle congestion on major roadways, typically near intersections. While construction-related traffic on the local roadways would occur during construction, the net increase of construction worker vehicle trips to the existing daily traffic volumes on the local roadways would be relatively small and would not result in CO hotspots. Additionally, the construction-related vehicle trips would be short-term, and cease once construction activities are completed. As mentioned in the traffic memorandum, the proposed Project would result in approximately 721 daily trips or less. Therefore, the proposed Project would not cause or contribute to the formation of CO hotspots based on the AQMP's 2003 study, which estimates 100,000 vehicles per day could cause the formation of a CO hotspot (SCAQMD 2003a). Therefore, impacts would be less than significant. No further analysis of this issue is warranted in the EIR.

Toxic Air Contaminants

Concentrations of toxic air contaminants (TACs), or in federal parlance, hazardous air pollutants (HAPs), are also used as indicators of ambient air quality conditions. A TAC is defined as an air pollutant that may cause or contribute to an increase in mortality or in serious illness, or that may pose a hazard to human health. TACs are usually present in minute quantities in the ambient air; however, their high toxicity or health risk may pose a threat to public health even at low concentrations.

Intermittent construction activities associated with the proposed Project would result in short-term emissions of diesel particulate matter, which the State has identified as a TAC. During construction, the exhaust of off-road heavy-duty diesel equipment would emit diesel particulate matter (DPM) during general construction activities, such as excavation, materials transport and handling, and building construction. During operational activities DPM would be emitted by the diesel trucks traveling to, on, and from the Project Site for equipment inspections, monitoring and testing. However, the number of trips would be minimal.

Diesel particulate matter poses a carcinogenic health risk that is generally measured using an exposure period of 30 years for sensitive residential receptors, according to the California Environmental Protection Agency, Office of Environmental Health Hazard Assessment (OEHHA) Air Toxics Hot Spots Program Guidance Manual for Preparation of Health Risk Assessments (OEHHA Guidance), which was updated in 2015 with new exposure parameters including age sensitivity factors (OEHHA 2015). Sensitive receptors include residential uses located approximately 65 feet east of the Project Site.

Construction

Temporary TAC emissions associated with DPM emissions from heavy construction equipment would occur during construction activities. According to OEHHA and the SCAQMD's Health Risk Assessment Guidance for Analyzing Cancer Risks from Mobile Source Diesel Idling Emissions for CEQA Air Quality Analysis, (SCAQMD 2003b) health effects from TACs are described in terms of individual cancer risk based on a lifetime (i.e., 70-year) resident exposure duration. Given the temporary and short-term construction schedule (approximately 17 months), the proposed Project would not result in a long-term (i.e., lifetime or 70-year) exposure as a result of construction activities.

The proposed Project would be consistent with the applicable 2022 AQMP requirements for control strategies intended to reduce emissions from construction equipment and activities. The proposed Project would comply with regulatory control measures including the CARB Air Toxics Control Measure (ATCM) that limits diesel powered equipment and vehicle idling to no more than 5 minutes at a location, and the CARB In-Use Off-Road Diesel Vehicle Regulation that requires fleets to retire, replace, or repower of older, dirtier engines with newer emission-controlled models; compliance with these would minimize emissions of TACs during construction. SCAQMD recommends that construction health risk assessments be conducted for substantial sources of DPM emissions (e.g., earth-moving construction activities) in proximity to sensitive receptors and has provided guidance for analyzing mobile source diesel emissions. Although sensitive receptors, including

residential uses, are located to the east of the Project Site, localized DPM emissions (strongly correlated with PM2.5 emissions) are less than significant (as shown in Table 4, above). Although the localized analysis does not directly measure health risk impacts, it does provide data that can be used to evaluate the potential to cause health risk impacts. The low level of PM2.5 emissions coupled with the relatively short-term duration of construction activity anticipated at 17 months resulted in an overall low level of DPM concentrations in the Project area. Furthermore, compliance with the aforementioned CARB ATCM anti-idling measure further minimizes DPM emissions in the Project area. Thus, although there are sensitive receptors located within proximity to the Project Site, compliance with regulatory control measures and the limited duration of construction activities would minimize exposures. No further analysis of this issue is warranted in the EIR.

Operations

SCAQMD recommends that health risk assessments be conducted for substantial sources of DPM emissions (e.g., truck stops and warehouse distribution facilities) and has provided guidance for analyzing mobile source diesel emissions. The Project is a community center and would not generate a substantial number of daily truck trips. Furthermore, typical sources of hazardous TACs include industrial manufacturing processes and automotive repair facilities. The Project would not include any of these potential sources, although minimal emissions may result from the use of consumer products (e.g., typical household and commercial cleaning products). Based on this, the Project is not expected to release substantial amounts of TACs. Therefore, based on the limited activity of TAC sources and TAC concentrations at off-site sensitive receptors relative to existing conditions, the Project would not warrant the need for a health risk assessment associated with on-site activities, and potential TAC impacts would be less than significant. No further analysis of this issue is warranted in the EIR.

d) **Less Than Significant Impact.** Potential sources that may emit odors during construction activities include construction equipment exhaust and the use of architectural coatings and solvents. According to the SCAQMD CEQA Air Quality Handbook, construction equipment is not a typical source of odors. SCAQMD Rule 1113 limits the amount of VOCs from architectural coatings and solvents. Further, construction odor emissions would be temporary, short-term, and intermittent in nature and would cease upon completion of construction. Through adherence with mandatory compliance with SCAQMD Rules, no construction activities or materials would create objectionable odors. The nearest sensitive receptors are single-family residences located approximately 65 feet to the east of the Project Site. The proposed Project's uses would not typically generate nuisance odors at nearby sensitive receptors.

According to the SCAQMD CEQA Air Quality Handbook, land uses associated with odor complaints typically include agricultural uses, wastewater treatment plants, food processing plants, chemical plants, composting operations, refineries, landfills, dairies, and fiberglass molding facilities. The proposed Project does not include any of the land uses associated with odor complaints.

Furthermore, as discussed in Thresholds b and c, above, construction and operational emissions would not exceed the SCAQMD regional significance thresholds for attainment, maintenance, or unclassifiable criteria air pollutants (i.e., CO and SO_2).

Therefore, impacts related to other emissions, including those that would lead to odors adversely affecting a substantial number of people, would be less than significant. No further analysis of this issue is warranted in the EIR.

Biological Resources

Issues (and Supporting Information Sources):	*Potentially Significant Impact*	*Less Than Significant with Mitigation Incorporated*	*Less Than Significant Impact*	*No Impact*
IV. BIOLOGICAL RESOURCES — Would the project:				
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	☒	☐	☐	☐
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	☐	☐	☐	☒
c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	☐	☐	☐	☒
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	☒	☐	☐	☐
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	☐	☐	☒	☐
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	☐	☐	☐	☒

Discussion

a) **Potentially Significant Impact.** The Project Site and adjacent areas are fully developed with public facilities, residential and commercial uses. The existing buildings and mature trees located on the Project Site present the only potential habitat for special-status wildlife species consisting primarily of bat species. According to the California Natural Diversity Data Base (CNDDB) species and habitats identified by the California Department of Fish and Wildlife (CDFW) and the United States Fish and Wildlife Service (USFWS) as candidate, sensitive, or special status that are potentially present within the Project Site and adjacent areas include but are not limited to pallid bat (*Antrozous pallidus*), western mastiff bat (*Eumops perotis californicus*), and hoary bat (*Lasiurus cinereus*) (CDFW 2023a). However, it should be noted that the three records for these species are historic with the most recent recorded in 1931. No other CNDDB records were documented within the Project Site. Overall, there is a low potential for these species or their habitats to be affected by the construction of the proposed Project, especially given the fact that the last-known records of bat species were 93 years ago. According to the Construction Site Tree Evaluation Report (**Appendix C**), the Project Site contains 40 trees. During Project construction activities, the removal of any of these trees would be required to comply with the Migratory Bird Treaty Act (MBTA), which regulates vegetation removal during the

nesting season to ensure that significant impacts to migratory birds would not occur. Additionally, California Department of Fish and Game Code 3513 provides protection to the birds listed under the MBTA, essentially all native birds. Other Fish and Game Codes provide further protection to certain types of birds, such as raptors. To the extent that vegetation removal activities must occur during the nesting season, which CDFW biologists define as from February 1 to September 1 for MBTA species (typical breeding season for raptors is September 16 to December 31), a biological monitor would need to be present during the removal activities to ensure that no active nests would be impacted. If any active nests are detected, the area would be flagged with a buffer (ranging between 50 and 300 feet, as determined by the monitoring biologist), and the area would be avoided until the nesting cycle has been completed or the monitoring biologist has determined that the nest has failed. With compliance with existing regulatory requirements, impacts to any species identified as a candidate, sensitive, or special-status species and particularly nesting and migratory birds would likely be less than significant. However, to ensure that mitigation measures for preconstruction surveys, biological monitors and special provisions if surveys find special status bat species living or roosting in the clinic building are considered further, this topic will be analyzed in greater detail in the EIR.

b) **No Impact.** According to the National Wetlands Inventory Mapper, there are no riparian wetland or sensitive natural community areas located within or adjacent the Project Site (USFW 2023). The potential closest mapped feature, the Alhambra Wash, is located approximately 1.1 miles to the northwest, adjacent to the Alhambra Municipal Golf Course. Therefore, implementation of the proposed Project would have no impact to riparian habitat or other sensitive natural communities and further analysis of this issue in the EIR is not warranted.

c) **No Impact.** According to the National Wetlands Inventory Mapper, there are no state or federally protected wetlands located within or adjacent the Project Site (USFW 2023). The closest potential mapped feature, the Alhambra Wash, is located approximately 1.1 miles to the northwest adjacent to the Alhambra Municipal Golf Course. Therefore, implementation of the proposed Project would have no impact to state or federally protected wetlands and further analysis of this issue in the EIR is not warranted.

d) **Potentially Significant Impact**. Wildlife corridors are features that exist as topographical or structural pinch points that, among other purposes, are utilized by wildlife for travel between one geographical area to the next. While these resources may support limited biological function and are perhaps utilized strictly for travel purposes, for example, a dry culvert under a roadway or bridge; more often, they contain natural vegetation and habitats that support foraging, roosting, and breeding activities, as well. Very often, particularly in the case of riparian corridors, aquatic species depend entirely on these features to persist.

Wildlife corridors and any designated essential connectivity areas are not present within or in the immediate vicinity of the Project Site, and the proposed Project would not result in impacts to existing wildlife corridors or affect wildlife movement (CDFW 2023b). However as mentioned in Threshold IV a), according to the Construction Site Tree

Evaluation Report (**Appendix C**) the Project Site contains 40 trees. During Project construction activities, the removal of any of these trees would be required to comply with the Migratory Bird Treaty Act (MBTA), which regulates vegetation removal during the nesting season to ensure that significant impacts to migratory birds would not occur. Additionally, California Department of Fish and Game Code 3513 provides protection to the birds listed under the MBTA, essentially all native birds. Other Fish and Game Codes provide further protection to certain types of birds, such as raptors. With compliance with existing regulatory requirements, impacts to nesting and migratory birds would likely be less than significant. However, to ensure that mitigation measures for preconstruction surveys, biological monitors and special provisions if surveys find special status bat species living or roosting in the clinic building are considered further, this topic will be analyzed in greater detail in the EIR.

e) **Less Than Significant Impact.** Implementation of the proposed Project would require the removal and encroachment of protected trees, although the exact number is still to be determined. Pursuant to the Alhambra Zoning Code Section 23.12.170 Tree Preservation, the following classes are considered protected trees (City of Alhambra 2024):

- Quercus family trees (oaks) taller than 15 feet, or with a trunk diameter larger than 12 inches in diameter, or 36 inches in circumference, measured at a point four and one-half feet above the root crown.
- California native trees taller than 15 feet, or with a trunk diameter larger than 12 inches in diameter, or 36 inches in circumference, measured at a point four and one-half feet above the root crown.
- Mature tree: A tree taller than 20 feet or with a trunk diameter larger 24 inches in diameter, or 75 inches in circumference, measured at a point four and one-half feet above the root crown.

According to the Construction Site Tree Evaluation Report (**Appendix C**) the Project Site contains 40 trees, of which 21 meet the definition of a protected tree as described in the Tree Preservation section (WCA 2023). These trees include Italian cypress (*Cupressus sempervirens*), olive (*Olea europaea*), evergreen pear (*Pyrus kawakamii*), Hollywood juniper (*Juniperus chinensis 'Torulosa'*), jacaranda (*Jacaranda mimosifolia*), crape myrtle (*Lagerstroemia indica*), carrot wood (*Cupaniopsis anacardioides*), coast live oak (*Quercus agrifolia*) and holly oak (*Quercus ilex*). At the time of this Initial Study, Project plans are in a preliminary stage and full impacts to these protected trees are unknown. However, as the Construction Site Tree Evaluation Report notes, only 12 of the protected trees are in fair to good condition with the remainder in poor condition (with one tree dead and another in very-poor condition). Additionally, the report notes that most of the trees on the site were either too large or in too poor health to be considered as transplant possibilities. With the changes to the Alhambra Zoning Code that exempt City projects from the application of the zoning code, the Project would not need to adhere to the Tree Preservation requirements of Alhambra Zoning Code Section 23.12.170, although it is likely that many of the trees would be replaced. Given the poor condition of the trees on site, and the fact that the Project would be exempt from the requirements of tree replacement, Project

implementation would therefore have a less than significant impact to any local policies or ordinances protecting biological resources and further analysis of this issue in the EIR is not warranted.

f) **No Impact.** The Project Site and the City are fully developed and do not have any adopted local, regional, or state Habitat Conservation Plans or Natural Community Conservation Plans that apply to any portion of the City (CDFW 2023c). Therefore, Project implementation would have no impact to adopted biological plans and further analysis of this issue in the EIR is not warranted.

Cultural Resources

Issues (and Supporting Information Sources):	*Potentially Significant Impact*	*Less Than Significant with Mitigation Incorporated*	*Less Than Significant Impact*	*No Impact*
V. CULTURAL RESOURCES — Would the project:				
a) Cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5?	☒	☐	☐	☐
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?	☒	☐	☐	☐
c) Disturb any human remains, including those interred outside of dedicated cemeteries?	☐	☐	☒	☐

Discussion

a) **Potentially Significant Impact.** Under CEQA, a project may have a significant effect on the environment if it may cause "a substantial adverse change in the significance of an historical resource" (Public Resources Code Section 21084.1; 14 California Code of Regulations (CCR; henceforth referenced as CEQA Guidelines) 15064.5(b)). If a site is listed or eligible for listing in the California Register of Historical Resources (CRHR), or included in a local register of historic resources, or identified as significant in a historical resources survey (meeting the requirements of Public Resources Code Section 5024.1(q)), it is a historical resource and is presumed to be historically or culturally significant for the purposes of CEQA (CEQA Guidelines Section 15064.5(a)). Through research, survey, and subsequent evaluation under the applicable federal, state, and local eligibility criteria, the Shorb Clinic (also known as the Alhambra Health Center) located at 612 West Shorb Street meets the level of significance required for individual listing on the National Register and the California Register under criterion A/1, for its association with early medical and health services in Los Angeles County and for its association with the early institutional development of the City of Alhambra, and under criterion C/3, as an excellent example of the Monterey Revival architectural style. The building has undergone minimal alterations and retains a high degree of historical integrity. Therefore, the Shorb Clinic located at 612 West Shorb Street, is considered a historical resource pursuant to CEQA and should be assigned the California Register Status Code of "3S," meaning the property "appears eligible for National Register individually through survey evaluation" (California Office of Historic Preservation, 2020). As the Project would partially demolish the existing Shorb Clinic, which is considered a historic resource according to CEQA due to the above explanation, this would cause adverse changes to historical resources within the City. Therefore, this potentially significant impact will be analyzed in greater detail in the EIR.

b) **Potentially Significant Impact.** Archaeological resources are features, such as tools, utensils, carvings, fabric, building foundations, etc., that document evidence of past human endeavors and that may be historically or culturally important to a significant earlier community. The Project Site is currently developed with an existing clinic and because grading or excavation at the time of prior construction may have been limited, the potential existence of extant archaeological resources below grade is unknown and archaeological resources may be present. Although the maximum depth of excavation is likely to be to a

depth of only five feet (with the exception of the drywell infiltration basin which is likely to be installed at a depth of 25 feet), the construction of the new build portions of the community center could cause inadvertent discovery of archaeological resources beneath the site in native soils. The deeper the excavation, the more likely the risk of encountering archaeological resources. Therefore, this potential impact will be analyzed in greater detail in the EIR.

c) **Less Than Significant Impact**. As previously indicated, the Project Site is fully developed. Nevertheless, the Project would require excavation that could extend into native soils, with the potential to encounter previously unknown human remains. A number of existing regulatory provisions mandate requirements for the handling of human remains inadvertently uncovered during excavation activities. These include State Health and Safety Code Section 7050.5, Public Resources Code Section 5097.98, and CEQA Guidelines Section 15064.5(e). Pursuant to these codes, in the event of the discovery of unrecorded human remains during construction, excavations shall be halted, and the County Coroner shall be notified. If the human remains are determined to be Native American, the California Native American Heritage Commission (NAHC) would be notified within 24 hours and the guidelines of the NAHC would be adhered to in the treatment and disposition of the remains. Compliance with these regulatory protocols would ensure that impacts on human remains would be less than significant, and this issue need not be evaluated further in an EIR.

Energy

Issues (and Supporting Information Sources):	*Potentially Significant Impact*	*Less Than Significant with Mitigation Incorporated*	*Less Than Significant Impact*	*No Impact*
VI. ENERGY — Would the project:				
a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	☐	☐	☒	☐
b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	☐	☐	☒	☐

Discussion

a) **Less Than Significant Impact.** The Project would result in energy demand from the use of construction equipment for a temporary period of approximately 17 months. Energy demand from the use of transportation fuels from construction activities would be generated by the operation of vehicles and equipment used for various construction activities, such as excavation and grading. Electricity would be consumed to power the construction trailers (lights, electronic equipment, and heating and cooling) and exterior uses such as mobile lighting masts, conveyance of water for dust control, and any electrically driven construction equipment. Construction-related energy and transportation fuel demand from construction equipment would vary depending on factors such as the type and number of equipment and the time duration that each equipment is powered on and used. A detailed summary of construction equipment assumptions by phase and the emissions modeling results are provided in the modeling files in **Appendix B** of this IS. Construction of the proposed Project is estimated to last approximately 17 months. Construction duration by phase is provided in Table 1, above. Electricity would only be used for necessary construction-related activities and would be limited to working hours. Natural gas would not be consumed during construction of the Project. Construction energy usage for heavy-duty construction equipment, haul trucks, vendor trucks, and worker trips is shown in **Table 6**, *Summary of Energy Consumption During Project Construction*.

Construction equipment and trucks would be required to comply with applicable provisions of regulations to improve fuel efficiency, including the Phase 1 and Phase 2 heavy-duty truck standards. Furthermore, trucks would need to comply with the 2004 CARB Airborne Toxic Control Measure (ATCM) (CARB 2004a) to limit heavy-duty diesel motor vehicle idling to 5 minutes or less at any given location. Therefore, construction of the Project would not result in the wasteful, inefficient, or unnecessary consumption of transportation fuel resources and impacts would be less than significant. No further analysis of this issue is warranted in the EIR.

TABLE 6
SUMMARY OF ENERGY CONSUMPTION DURING PROJECT CONSTRUCTION

Fuel Type	Quantity
Gasoline	**gallons**
On-Road Construction (Workers)	539
Total Gasoline (17 months)	**539**
Diesel	**gallons**
On-Road Construction Equipment	34,909
Off-Road Construction Equipment	7,996
Total Diesel (17 months)	**42,905**
Electricity	**MWh**
Water Conveyance for Dust Control	2.1
Temporary Construction Trailer	58
Total Electricity (17 months)	**60.1**
Annualized Gasoline Use (gal)	**381**
Annualized Diesel Use (gal)	**30,290**
Annualized Electricity (MWh)	**42.4**

NOTES:
gal = gallons; MWh = megawatt-hours
SOURCE: ESA 2024

Operation of the Project would generate additional daily trips from visitors traveling to and from the community center. However, given the small size of the community center, the additional trips would not result in an appreciable increase in vehicle fuel usage. Furthermore, the Project would provide bicycle and pedestrian access to encourage alternative modes of transportation to and from the site and would reduce the number of vehicle trips. The Project would also provide EV-capable, EV-ready and full EV charging stations per CALGreen code requirements (CBSC 2022) at the time the building permit is issued, but likely would be no less than 17 EV capable spaces and four EVCS spaces, which would encourage the use of alternatively fueled vehicles, thus reducing the amount of transportation fuels. During operation of the proposed project, electricity would be consumed for the operation of the community center, which includes electricity for building lighting, heating/cooling, water conveyance, and wastewater treatment. The Project is redeveloping an existing developed site and the existing building would be upgraded with improved building energy efficiency per current standards as well as implementing voluntary building energy efficiency improvements with the goal to reach LEED Silver certification standards or equivalent. Building lighting would be energy-efficient (i.e., light-emitting diode [LED]) and other equipment installed would be new and designed to meet applicable current energy standards for such equipment. No natural gas would be used during building operational activities. Energy saving and sustainable design features would be incorporated into the Project as the proposed buildings would comply with the applicable CALGreen Regulations (CBSC 2022). In addition to energy-efficient

lighting, design features would also include elements such as ENERGY STAR appliances, solar panels, rainwater harvesting, and infiltration systems and materials made from recycled or renewable resources. As it relates to water conservation, the Project would incorporate efficient water management through low flow faucets and water-efficient landscape design with weather-based controllers and drip irrigation systems. **Table 7**, *Summary of Energy Consumption During Project Operation*, provide a summary of the electricity, natural gas, and transportation fuel usage during operation of the Project.

TABLE 7
SUMMARY OF ENERGY CONSUMPTION DURING PROJECT OPERATION

Energy Type[a]	Annual Quantity[b]
Electricity	
Proposed Project:	
Building Energy[c]	615 MWh
City Park	8 MWh
Parking Lot	32 MWh
EV Charging	6 MWh
Water Conveyance	4.6 MWh
Total Electricity	**666 MWh**
Natural Gas	
Proposed Project:	
Building Energy[c]	0 cf
Total Natural Gas	**0 cf**
Transportation	
Proposed Project:	
Gasoline	70,958 gallons
Diesel	12,414 gallons
Plug-In Hybrid	799 gallons
Natural Gas	6,635 gallons
Total Transportation – Gasoline	**71,757 gallons**
Total Transportation – Diesel	**12,414 gallons**
Total Transportation – Natural Gas	**6,635 gallons**

NOTES:

MWh = megawatt-hours; cf = cubic feet

Detailed calculations are provided in **Appendix B** of this IS/MND.

[a] The Project would comply with applicable Title 24 and CALGreen requirements.

[b] Totals may not add up due to rounding of decimals.

[c] The Project would renovate the existing building to an all-electric design. No natural gas energy consumption would occur. Energy that would be used by natural gas appliances and systems in a traditional building as reported in CalEEMod was converted to an electricity building energy equivalent and added to the building's electricity demand.

SOURCE: ESA 2024

Given the minimal energy consumption of the Project and that the project would be designed with energy efficient lighting and equipment, operation of the Project would not result in a substantial increase in energy consumption and would not result in the wasteful, inefficient, or unnecessary consumption of electricity resources; impacts were found to be less than significant. No further analysis of this issue is warranted in the EIR.

b) **Less Than Significant Impact.** The Project would not conflict with or obstruct a state or local plan for renewable energy or energy efficiency. With respect to truck fleet operators, the United States Environmental Project Agency (USEPA) and National Highway Traffic Safety Administration (NHTSA) have adopted fuel efficiency standards for medium- and heavy-duty trucks. The Phase 1 heavy-duty truck standards apply to combination tractors, heavy-duty pickup trucks and vans, and vocational vehicles and are phased in for model years 2014 through 2018 and result in a reduction in fuel consumption from 6 to 23 percent over the 2010 baseline, depending on the vehicle type (USEPA 2011). USEPA and NHTSA also adopted the Phase 2 heavy-duty truck standards, which would be phased in from model years 2021 through 2027 and require the phase-in of a 5 to 25 percent reduction in fuel consumption over the 2017 baseline depending on the compliance year and vehicle type (USEPA 2016). In June 2020, the Advanced Clean Trucks (ACT) regulation was approved by CARB, which mandates zero-emission vehicle (ZEV) sales requirements for truck manufacturers and a one-time reporting requirement for large entities and fleets.[10] The ACT has different truck sales requirement for the different vehicle groups. Manufacturers will need to increase their percentage of ZEVs in order to achieve 55 percent of Class 2b–3 truck sales, 75 percent of Class 4–8 Vocational straight truck sales, and 40 percent of Class 7–8 Tractor sales by 2035. The regulation is designed to accelerate widespread adoption of ZEVs in the medium- and heavy-duty truck sector to reduce on-road mobile source emissions on the path to carbon neutrality by 2045 (EO B-55-18). These regulations would have an overall beneficial effect on reducing fuel consumption from trucks over time as older trucks are replaced with newer models that meet the standards. In addition, construction equipment and trucks are required to comply with CARB regulations regarding heavy-duty truck idling limits of five minutes at a location and the phase-in of off-road emission standards that result in an increase in energy savings in the form of reduced fuel consumption from more fuel-efficient engines. Although these regulations are intended to reduce criteria pollutant emissions, compliance with the anti-idling and emissions regulations would also result in the efficient use of construction related energy.

As discussed above, the Project is designed in a manner that is consistent with and not in conflict with relevant energy conservation plans that are intended to encourage development that results in the efficient use of energy resources. The Project would comply with applicable regulatory requirements for the design of new buildings, including the provisions set forth in the Title 24 standards and CALGreen Building Code (CBSC 2022). In addition, the Project has a goal to reach LEED Silver Certified performance level. The Project would include, but would not be limited to, solar panels, water-efficient landscape

[10] CARB, Advanced Clean Trucks, https://ww2.arb.ca.gov/our-work/programs/advanced-clean-trucks. Accessed April 2024.

design, rainwater management systems, high-efficiency plumbing fixtures and weather-based controller and drip irrigation systems to promote a reduction of indoor and outdoor water use; EV charging, EV capable and EV ready spaces; bicycle facilities that would meet or exceed the respective City codes; Energy Star–labeled appliances, where possible; energy-efficient and water conserving HVAC systems; and active circulation.

The Project would also be consistent with and not conflict with regional planning strategies that address energy conservation. SCAG's Connect SoCal (2020 and 2023) focuses on creating livable communities with an emphasis on sustainability and integrated planning, and identifies mobility, economy, and sustainability as the three principles most critical to the future of the region. As part of the approach, Connect SoCal focuses on reducing fossil fuel use by decreasing VMT, encouraging the reduction of building energy use, and increasing use of renewable sources. The Project's design and its location on an infill site within proximity to transit; its proximity to existing off-site retail, restaurant, entertainment, commercial, and job destinations; and its walkable/bikeable environment would achieve a reduction in VMT. The Project Site is served by several public transit options along Valley Boulevard, provided by the City of Alhambra and Los Angeles Metro. Most significantly, the Project Site is located within 500 feet of the Valley Boulevard/S. 6th Street bus stop, which serves Los Angeles County Metro Bus Line 76, as well as the Alhambra Community Transit Green Line. Other transit operations in the vicinity of the Project Site include Metro Bus Line 260 – Artesia Station to Pasadena via Atlantic-Fair Oaks, approximately 0.3 mile west of the Project Site. These land use characteristics are included in the transportation fuel demand for the Project's mobile sources. With respect to operational transportation-related fuel usage, the Project would support statewide efforts to improve transportation energy efficiency and reduce transportation energy consumption with respect to private automobiles. The Project would also benefit from fuel and automotive manufacturers' compliance with CAFE fuel economy standards and the Pavley Standards, which are designed to result in more efficient use of transportation fuels (NHTSA 1975; CARB 2004b). As a result, the Project would implement project design features and incorporate water conservation, energy conservation, landscaping, and other features consistent with applicable actions and strategies in the CALGreen Building Code. The Project's design would comply with existing energy standards and incorporate project design features to reduce energy consumption. Therefore, the Project would not conflict with energy conservation plans and impacts would be less than significant. No further analysis of this issue is warranted in the EIR.

iii) Seismic-related ground failure, including liquefaction?	☐	☐	☒	☐
iv) Landslides?	☐	☐	☐	☒
b) Result in substantial soil erosion or the loss of topsoil?	☐	☐	☒	☐
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse?	☐	☐	☒	☐
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?	☐	☐	☒	☐
e) Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?	☐	☐	☐	☒
f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	☒	☐	☐	☐

Discussion

The analysis in this section is based on the information provided in the Geotechnical Engineering investigation (Geotechnical Report) prepared by Geotechnologies, Inc. (Geotechnologies) on December 11, 2023, contained in **Appendix D** of this IS.

a.i) **Less Than Significant Impact.** A fault is a plane or surface in the earth which failure has occurred and materials on opposite sides have moved relative to one another in response to the accumulation and release of stress. The United States Geological Survey (USGS) defines active faults as those that have had surface displacements within the Holocene epoch (about the last 11,700 years). Potentially active faults are those that have had surface displacement during Quaternary time, within the last 1.6 million years. California Geological Survey (CGS) policy is to delineate a boundary from 200 to 500 feet wide on each side of the Holocene-Active fault trace. Based on the Geotechnical Report (**Appendix D**) and CGS Earthquake Zones of Required Investigation map viewer (CGS, 2023), there are no active, potentially active, or inactive faults mapped on the Project Site.

The closest active fault is the Raymond Fault, located approximately 2.6 miles north of the Project Site. In addition, the subject site is not located within an Alquist-Priolo Earthquake Fault Zone. Based on these considerations, the potential for surface ground rupture at the subject site is considered low by the geotechnical engineers. Nonetheless, the new build aspects of the Project will be designed with earthquake structural design components required by the building code in order to protect against significant cosmetic damage and serious economic loss, which in turn, would help protect health and safety of humans that may be in or near the building. The existing building also underwent seismic retrofit performed in 2005. Therefore, less than significant impacts would result from fault rupture of a known earthquake fault directly on the Project Site and with Project design being in accordance with building code requirements, less than significant impacts would occur. No further analysis of this issue is warranted in the EIR.

a.ii) **Less Than Significant Impact.** The proposed Project is located in Southern California, an area that is subject to strong seismic ground shaking. Seismically induced ground acceleration is the shaking motion that is produced by an earthquake. As noted in Response 3.7.a.i above, there are no known active faults within the Project Site. The closest active fault is the Raymond Fault, located approximately 2.6 miles north of the Project Site. The Project includes the both adaptive reuse of the existing building and construction of new community center elements which could experience moderate to high ground motion from local or regional faults. Although some structural damage is typically not avoidable during a large earthquake, the proposed new construction elements would be constructed to meet existing construction ordinances and the most recent California Building Code (CBC) in order to protect against building collapse and major injury during a seismic event. The CBC includes specific design measures, which are based on the determination of Site Classification and Seismic Design Categories specific to the Project Site. These design measures are intended to maximize structural stability in the event of an earthquake. Furthermore, the Project would comply with the CGS Special Publication 117A, *Guidelines for Evaluating and Mitigating Seismic Hazards in California*, which provides guidance for evaluation and mitigation of earthquake-related hazards. The existing building also underwent seismic retrofit performed in 2005. In addition, a final design-level geotechnical report must ultimately be prepared and approved by the City prior to issuance of building permits, and would be based on the final construction and building plans. Implementation of the site-specific structural and seismic design parameters and recommendations for foundations and retaining walls of the final design-level geotechnical report would further ensure that seismic-related ground shaking impacts would not directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death. Therefore, adherence to regulatory requirements would reduce impacts related to strong seismic shaking to a less than significant level. No further analysis of this issue is warranted in the EIR.

a.iii) **Less Than Significant Impact.** Liquefaction is a phenomenon in which unconsolidated, water-saturated sediments become unstable due to the effects of strong seismic shaking. During an earthquake, these sediments can behave like a liquid, potentially causing severe damage to overlying structures. Lateral spreading is a variety of minor landslide that occurs

when unconsolidated liquefiable material breaks and spreads due to the effects of gravity, usually down gentle slopes. Liquefaction-induced lateral spreading has been defined as the finite, lateral displacement of gently sloping ground as a result of pore-pressure buildup or liquefaction in a shallow underlying deposit during an earthquake. The occurrence of this phenomenon is dependent on many complex factors, including the intensity and duration of ground shaking, particle-size distribution, and density of the soil. In general, a relatively high potential for liquefaction exists in loose, sandy soils that are within 50 feet of the ground surface and are saturated (below the groundwater table).

The potential damaging effects of liquefaction include differential settlement, loss of ground support for foundations, ground cracking, heaving and cracking of structure slabs due to sand boiling, and buckling of deep foundations due to ground settlement. Dynamic settlement (i.e., pronounced consolidation and settlement from seismic shaking) may also occur in loose, dry sands above the water table, resulting in settlement of and possible damage to overlying structures. Lateral spreading can move blocks of soil, placing strain on buried pipelines that can lead to leaks or pipe failure.

According to both the California Department of Conservation (DOC) liquefaction hazard zone assessment (DOC, 2023a) and the Geotechnical Report, the Project Site is not located within a Liquefaction Zone. The liquefaction analysis conducted as part of the Geotechnical Report consisted of data obtained from borings explored and excavated to a depth of approximately 50 feet. According to Geotechnologies' review of the California Geological Survey Seismic Hazard Evaluation Report 029 Plate 1.2 entitled "Historically Highest Ground Water Contours,' the historically highest groundwater level is approximately 150 feet below grade. Based on the medium dense to dense nature of the underlying soils, and the depth to the historic highest groundwater level, the potential for liquefaction occurring at the site is considered to be remote by the geotechnical engineers. Therefore, impacts related to liquefaction would be less than significant and no further analysis of this issue is warranted in the EIR.

a.iv) **No Impact.** The geologic and topographic characteristics of an area often determine its potential for landslides. Landslides (or slope failure) refer to the dislodging and falling of a mass of soil or rocks along a sloped surface. Although the potential for small-scale slope failure may exist in the city, particularly along stream banks, margins of drainage channels, and similar settings where steep banks or slopes occur, the flat terrain of the Project Site minimizes this potential geologic hazard. In addition, according to the Landslide Inventory, the Project Site is not located within in area or is in proximity to an area which would pose a danger to the people or structures on site due to landsliding (DOC, 2023b). Therefore, given the Project Site's topography, impacts to seismically induced landslides would not occur. No further analysis of this issue is warranted in the EIR.

b) **Less Than Significant Impact.** The Project Site will be mostly impervious and there would not be open spaces with exposed topsoil. Construction activities would require grading, excavation, and other construction activities that have the potential to disturb existing soils within the Project Site and expose these soils to rainfall or wind during

construction, thus having the potential for soil erosion. Standard erosion controls would be imposed during site preparation and grading activities. Wind erosion would be minimized through soil stabilization measures required by SCAQMD Rule 403 (Fugitive Dust), which requires activities such as daily watering. Potential for water erosion would be reduced by implementation of standard erosion control measures imposed during site preparation and grading activities. Construction activities would be carried out in accordance with applicable standard erosion control practices required pursuant to the CBC and the requirements of the National Pollutant Discharge Elimination System (NPDES) General Construction Permit issued by the Los Angeles Regional Water Quality Control Board (LARWQCB), as applicable. Consistent with these requirements, due to Project construction activities resulting in one acre or more of land disturbance, a Stormwater Pollution Prevention Plan (SWPPP) would be prepared that incorporates Best Management Practices (BMPs) to control erosion during the Project's construction period. Any BMPs included as part of the SWPPP would thus be implemented as part of the Project. Following Project construction, the Project Site would be covered completely by paving, structures, and landscaping, and would generate little if any soil erosion. Thus, impacts due to erosion of topsoil would be less than significant, as the Project would comply with applicable regulatory requirements. No further analysis of this issue is warranted in the EIR.

c) **Less Than Significant Impact.** Unstable geologic units or soils commonly occur when there are landslides, lateral spreading, subsidence/collapse, or liquefaction.

Landslides

The geologic and topographic characteristics of an area often determine its potential for landslides. Landslides (or slope failure) refer to the dislodging and falling of a mass of soil or rocks along a sloped surface. Although the potential for small-scale slope failure may exist in the city, particularly along stream banks, margins of drainage channels, and similar settings where steep banks or slopes occur, the relatively flat terrain of the Project Site minimizes this potential geologic hazard. Therefore, given the Project Site's topography, seismically induced landslides would not pose a danger to the people or structures onsite. Therefore, no impacts would result, and no further analysis of this issue is warranted in the EIR.

Lateral Spreading

Lateral spreading movement occurs when a soil mass slides laterally on liquefied soil layers, moving downslope or towards a free face. The Project Site is not located within a liquefaction hazard zone and therefore, there is limited potential for lateral spreading to occur at the Project Site (DOC, 2023a). Based on the liquefaction analysis conducted as part of the Geotechnical Report, discussed in threshold a.iii above, the potential for liquefaction on the Project Site is not likely (Geotechnologies, 2023). The new build Project elements would be built subject to the seismic design criteria of the most recent CBC and the existing building also underwent seismic retrofit performed in 2005. The CBC includes provisions that would reduce lateral spreading impacts onsite. Therefore, lateral spreading impacts would be less than significant, and no further analysis of this issue is warranted in the EIR.

Subsidence/Collapse

Subsidence or collapse is the sinking of the ground surface caused by the compression of earth materials resulting from manmade activities, such as groundwater or oil and gas withdrawal. The resulting compression typically occurs only once within affected soils and cannot be repeated during fluctuations of the groundwater level or from peat oxidation.

The Project Site is underlain by artificial fill (at approximate depths of 3 to 5 feet below grade) over native alluvial soils. The near surface artificial fill on site consists of silty sands, which are dark brown in color, moist, loose to medium dense. The native alluvial soils below the artificial fill consists of sands, silty sands, and sandy silt. The native alluvial soils range from dark brown to dark yellowish brown in color, medium dense to very dense, very stiff, and fine to medium grained, with various amounts of cobbles and pebbles (Geotechnologies, 2023). The Geotechnical Report recommends the Project would be designed and constructed on conventional foundations bearing in a newly placed compacted fill pad. Additionally, the City would construct the proposed Project in conformance with the most recently adopted CBC, which includes provisions to reduce subsidence and collapse impacts, and applicable recommendations made in the Geotechnical Report prepared for the Project. Therefore, subsidence and collapse impacts would be less than significant, and no further analysis of this issue is warranted in the EIR.

Liquefaction

Liquefaction is a phenomenon that occurs when soil undergoes transformation from a solid state to a liquefied condition due to the effects of increased pore-water pressure. This typically occurs where susceptible soils (particularly soils in the medium sand to silt range) are located over a high groundwater table. A high groundwater table is described as one within 50 feet of the surface. As stated in the Geotechnical Report, the Project Site is not located within a liquefaction zone (Geotechnologies, 2023) and liquefaction risk is considered to be remote. However, to ensure that the proposed Project would not experience structural damage due to liquefaction, the City would design and construct the proposed Project in conformance with the most recently adopted CBC, which would ensure liquefaction impacts are less than significant. Thus, impacts related to liquefaction, as discussed in Response a.iii above, would be less than significant, and no further analysis of this issue is warranted in the EIR.

d) **Less Than Significant Impact.** Expansive soil is characterized by a clay composition whereby clay particles expand dramatically upon wetting. Structures constructed on expansive soils require special design considerations that are identified within the CBC. The geologic materials encountered on the Project Site have been identified as having a very low expansion potential (Geotechnologies, 2023). Nonetheless, to ensure that the proposed development would not experience structural damage due to expansive soil, the City would design and construct the proposed Project in conformance with the most recently adopted CBC. Therefore, impacts related to expansive soils would be less than significant, and no further analysis of this issue is warranted in the EIR.

e) **No Impact.** The Project Site is located in an urbanized area where municipal wastewater infrastructure already exists. The Project would not include the use of any septic tanks; additional wastewater output would be connected and treated by the City's wastewater treatment system. Additionally, adaptation of the existing storm drains and surface drains would collect runoff from the Project Site. Thus, the existing stormwater drainage system is capable of handling existing and proposed stormwater volumes from the Project Site. Therefore, impacts related to septic tanks would not occur, and no further analysis of this issue is warranted in the EIR.

f) **Potentially Significant Impact.** The Natural History Museum of Los Angeles County record search conducted for the Project (**Appendix E**) did not determine the presence of any fossil localities that lie directly within the proposed Project area. The Project Site's earth materials consist of artificial fill over alluvial soils (Geotechnologies, 2023; Dibblee Geological Foundation, 1989), which are considered to have low to high paleontological resource sensitivity, depending on whether they are younger (low sensitivity) or older (high sensitivity) Holocene-aged deposits (Society of Vertebrate Paleontology, 2021). The site appears to be within older alluvium (Qoa) according to Yerkes (1997) but within younger alluvium (Qa) according to Dibblee Geological Foundation (1989) and as presented in the Geotechnical Report. Older alluvium has high paleontological sensitivity because it is of an age known to preserve fossil resources and has a well-established record of fossil preservation throughout the Los Angeles Basin (see for instance Jefferson, 1991a and 1991b). Additionally, the records search identified fossil localities nearby (within 1.8-miles to 5-miles) from the same sedimentary deposits that may occur in the proposed Project area, either at the surface or at depth. However, as specified in the Geotechnical Report (Geotechnologies, 2023), fill materials were encountered in all exploratory borings across the site at depths of approximately three to five feet below the existing site grade. The Project would excavate to a maximum depth of five feet, with the exception of the drywell infiltration basin which is likely to be installed at a depth of 25 feet resulting in approximately 24 CY of soil export, thus there would be a relatively low potential to encounter older alluvium deposits, which have a much higher paleontological sensitivity, in the areas of the Project Site where excavation would be into native soil. The drywell infiltration basin would be installed in one discreet area of the site, and excavation to the 25 feet depth would only be applicable to the drywell installation location and would not be a uniform 25 feet excavation depth across the entire Project Site. Given that the majority of excavation activities would be within the 3-5 feet of existing fill, and due to the relatively low potential that previously undiscovered resources could be exposed during construction activities, in the event that paleontological resources are encountered during construction, compliance with Public Resources Code Section 5097, as amended, would be required. Public Resources Code Section 5097, as amended, requires in the event of discovery of paleontological resources that all construction activity ceases until appropriate investigation and/or salvage measures have been established by the City. This would be consistent with General Plan Policy R-6A, which aims to promote and encourage the preservation of Alhambra's significant historic, architectural, cultural, archaeological, and paleontological resources. This approach is also reinforced in Policy R-6E which aims to enforce applicable historic preservation laws to preserve state or federally designated

historic resources and other resources (e.g., archaeological and paleontological resources) eligible for such designation. Nevertheless, given the excavation depth of 25 feet for the drywell infiltration basin and the potential to encounter paleontological resources, this topic will be analyzed in greater detail in the EIR.

Greenhouse Gas Emissions

Issues (and Supporting Information Sources):	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
VIII. GREENHOUSE GAS EMISSIONS — Would the project:				
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	☐	☐	☒	☐
b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	☐	☐	☒	☐

Discussion

a,b) **Less Than Significant Impact.** Gases that trap heat in the atmosphere are called greenhouse gases (GHGs). The major concern with GHGs is that increases in their concentrations are causing global climate change. Global climate change is a change in the average weather on Earth that can be measured by wind patterns, storms, precipitation, and temperature. Although there is disagreement as to the rate of global climate change and the extent of the impacts attributable to human activities, most in the scientific community agree that there is a direct link between increased emissions of GHGs and long-term global temperature increases.

The State of California defines GHGs as carbon dioxide (CO_2), methane (CH_4), nitrous oxide (N_2O), sulfur hexafluoride (SF_6), perfluorocarbons (PFCs), and hydrofluorocarbons (HFCs). Because different GHGs have different global warming potentials (GWPs) and CO_2 is the most common reference gas for climate change, GHG emissions are often quantified and reported as CO_2 equivalents (CO_2e). For example, CH_4 has a GWP of 25 (over a 100-year period); therefore, 1 metric ton (MT) of CH_4 is equivalent to 25 MT of CO_2 equivalents ($MTCO_2e$). The State uses the GWP ratios available from the United Nations Intergovernmental Panel on Climate Change (IPCC) and published in the *Fourth Assessment Report* (AR4) (IPCC 2007). By applying the GWP ratios, Project-related CO_2e emissions can be tabulated in metric tons (MT) per year. Large emission sources are reported in million metric tons (MMT) of CO_2e.[11]

The Natural Resources Agency has produced climate change assessments which detail impacts of global warming in California (DOJ 2024).[12] These include:

- Sea level rise, coastal flooding and erosion of California's coastlines would increase, as well as sea water intrusion.
- The Sierra snowpack would decline between 70 and 90 percent, threatening California's water supply.

[11] A metric ton is 1,000 kilograms; it is equal to approximately 1.1 U.S. tons and approximately 2,204.6 pounds.

[12] State of California, Department of Justice, Office of the Attorney General, Climate Change Impacts in California, https://oag.ca.gov/environment/impact. Accessed May 2024.

- Higher risk of forest fires resulting from increasing temperatures and making forests and brush drier. Climate change will affect tree survival and growth.
- Attainment of air quality standards would be impeded by increasing emissions, accelerating chemical processes, and raising inversion temperatures during stagnation episodes resulting in public health impacts.
- Habitat destruction and loss of ecosystems due to climate change affecting plant and wildlife habitats.
- Global warming can cause drought, warmer temperatures and saltwater contamination resulting in impacts to California's agricultural industry.

With regard to public health, as reported by the Center for Health and the Global Environment at the Harvard Medical School, the following are examples of how climate change can affect cardio-respiratory disease: (1) pollen is increased by higher levels of atmospheric CO_2; (2) heat waves can result in temperature inversions, leading to trapped masses or unhealthy air contaminants by smog, particulates, and other pollutants; and (3) the incidence of forest fires is increased by drought secondary to climate change and to the lack of spring runoff from reduced winter snows. These fires can create smoke and haze, which can settle over urban populations causing acute and exacerbating chronic respiratory illness.[13]

California generated 381.3 $MMTCO_2e$ in 2021, the latest year for which data are available from CARB (CARB 2023). Combustion of fossil fuel in the transportation sector was the single largest source of California's GHG emissions in 2021, accounting for almost 38 percent of total GHG emissions in the State. This sector was followed by the industrial sector (19 percent) and the electric power sector (16 percent) (CARB 2023).

Impacts of GHGs are borne globally, as opposed to localized air quality effects of criteria air pollutants and toxic air contaminants. The quantity of GHGs that it takes to ultimately result in climate change is not precisely known; however, it is clear that the quantity is enormous, and no single project would measurably contribute to a noticeable incremental change in the global average temperature, or to global, local, or micro climates. From the standpoint of CEQA, GHG impacts to global climate change are inherently cumulative.

The City of Alhambra has not adopted a threshold of significance for GHG emissions that would be applicable to this Project. In December 2008, the SCAQMD adopted a 10,000 $MTCO_2e$ per year significance threshold for projects in which the SCAQMD is the lead agency. SCAQMD has not formally adopted a significance threshold for GHG emissions generated by a project for which SCAQMD is not the lead agency, nor a uniform methodology for analyzing impacts related to GHG emissions on global climate change. In the absence of any applicable adopted or accepted numerical threshold of significance for GHG emissions, the methodology for evaluating the proposed Project's impacts related to GHG emissions focuses on its consistency with State, regional, and local plans adopted

[13] Paul R. Epstein, et al., Urban Indicators of Climate Change, Report from the Center for Health and the Global Environment, (Harvard Medical School and the Boston Public Health Commission, August 2003), unpaginated.

for the purpose of reducing and/or mitigating GHG emissions. This evaluation of consistency with such plans is the sole basis for determining the significance of the proposed Project's GHG-related impacts on the environment. Notwithstanding, for informational purposes, the analysis also calculates the amount of GHG emissions that would be attributable to the proposed Project using recommended air quality models, as described below. The primary purpose of quantifying the proposed Project's GHG emissions is to satisfy CEQA Guidelines Section 15064.4(a), which calls for a good-faith effort to describe and calculate emissions. However, the significance of the proposed Project's GHG emissions impacts is not based on the amount of GHG emissions resulting from the proposed Project. Consistent with SCAQMD guidance, total emissions from construction are amortized over an assumed project lifetime of 30 years and added to operational emissions (SCAQMD 2008).

CEQA Guidelines 15064.4 (b)(1) states that a lead agency may use a model or methodology to quantify GHGs associated with a project. CalEEMod (Version 2022.1) is a model that is used to estimate construction-source and operational-source emissions from direct and indirect sources. Accordingly, CalEEMod has been used for this proposed Project to estimate the proposed Project's emissions (refer to **Appendix B** of this IS for additional details).

Construction Emissions

Construction activities associated with the proposed Project would result in emissions of CO_2 and, to a lesser extent, CH_4 and N_2O. Construction-period GHG emissions were quantified based on the same construction schedule and activities as described above in Section III (b). To amortize the emissions over the life of a project, the SCAQMD recommends calculating the total GHG emissions attributable to construction activities, dividing it by a 30-year project life, and then adding that number to a project's annual operational-phase GHG emissions. As such, construction emissions were amortized over a 30-year period and included in the proposed Project's annual operational-phase GHG emissions.

Operational Emissions

GHG Emissions

Operational activities associated with the proposed Project would result in emissions of CO_2 and, to a lesser extent CH_4 and N_2O. Operational sources of GHG emissions would include mobile sources from vehicles traveling to and from the site, and indirect GHG emissions from export of electricity, water consumption, and waste generation.

A maximum of 721 trips per day are expected (General Technologies and Solutions 2024). GHG emissions from mobile sources are based on the vehicle emission factors from EMFAC2021 and the default trip length and trip distribution values for the Project land uses in CalEEMod, which are Air District-wide average trip distance and trip distribution values. Daily trip generation from the proposed Project's TIA report, provided in **Appendix I** of this IS, were used to estimate the total VMT for the Project trips through CalEEMod.

Emissions of GHGs also resulted from the consumption of fossil fuels to generate electricity and to provide heating and hot water to the Project Site. The Project's electricity demands are supplied by SCE, which indicates their renewable power accounted for 33.2 percent in 2022.

GHG emissions from solid waste disposal are also calculated using CalEEMod. Emissions are based on solid waste calculated for the proposed Project and the GHG emission factors for solid waste decomposition. The GHG emission factors, particularly for CH_4, depend on characteristics of the landfill, such as the presence of a landfill gas capture system and subsequent flaring or energy recovery. The default values, as provided in CalEEMod, for landfill gas capture (e.g., no capture, flaring, energy recovery) are statewide averages and are used in this assessment.

Emissions Summary

The proposed Project's annual GHG emissions are shown in **Table 8**, *Annual Project Greenhouse Gas Emissions*. As shown, the proposed Project's total GHG emissions would be 868 $MTCO_2e$. GHG emission calculations are provided in **Appendix B** of this IS.

TABLE 8
ANNUAL PROJECT GREENHOUSE GAS EMISSIONS

Emissions Sources	CO_2e (Metric Tons per Year)[a]
Area	1
Energy (Electricity, Natural Gas)[b]	103

Construction[c]	9
Project Total GHG Emissions	**868**

NOTES:

[a] Totals may not add up exactly due to rounding in the modeling calculations. Refer to **Appendix B** of this IS/MND for details.

[b] The Project would renovate the existing building to an all-electric design. No natural gas energy consumption would occur. Energy that would be used by natural gas appliances and systems in a traditional building as reported in CalEEMod was converted to an electricity building energy equivalent and added to the building's electricity demand GHG emissions.

[c] Construction emissions are amortized over 30 years.

SOURCE: ESA 2024

Conflicts with GHG Reduction Plans, Policies and Regulations

The City of Alhambra General Plan does not identify specific GHG or climate change policies or goals. In the absence of any adopted, quantitative threshold, the proposed Project would not have a significant effect on the environment if the proposed Project is found to be consistent with the applicable regulatory plans and policies to reduce GHG emissions, including CARB's 2022 Scoping Plan for Achieving Carbon Neutrality

(Scoping Plan) (CARB 2022) and the Southern California Association of Governments (SCAG) Connect SoCal 2024 (SCAG 2024).

2022 Scoping Plan

Jurisdictions taking meaningful climate action aligned with the State's climate goals in the absence of a CEQA-qualified Climate Action Plan should also look to the three priority areas to reduce GHG emissions: transportation electrification, VMT reduction, and building decarbonization. To assist local jurisdictions, the 2022 Scoping Plan, Appendix D presents a non-exhaustive list of impactful GHG reduction strategies that can be implemented by local governments within the three priority areas (Priority GHG Reduction Strategies for Local Government Climate Action Priority Areas).[14] Specifically, Table 3 of Appendix D discusses attributes for residential and mixed-use projects that would accommodate growth in a manner consistent with State GHG reduction and equity prioritization goals.[15]

Transportation Electrification

The priority GHG reduction strategies for local government climate action related to transportation electrification are discussed below and would support the Scoping Plan action to have 100 percent of all new passenger vehicles to be zero emissions by 2035 (see Table 2-1 of the 2022 Scoping Plan).

The CARB approved the Advanced Clean Cars II rule which codifies Executive Order N-79-20 and requires 100 percent of new cars and light trucks sold in California be zero-emission vehicles by 2035. The State has also adopted AB 2127, which requires the CEC to analyze and examine charging needs to support California's EVs in 2030. This report would help decision-makers allocate resources to install new EV chargers where they are needed most. The Project is designed in a manner that is consistent with and not in conflict with transportation electrification strategies. The Project would include solar panels, EV charging, EV capable and EV ready spaces, as well as bicycle facilities that would meet or exceed the respective City codes. EV spaces are to be provided as required by the building code in effect at the time of Project approval, but likely to be no less than 17 EV capable spaces with four of those spaces designated as EVCS based on the requirements of Section 5.106.5.3 of the 2022 California Green Building Standards Code, Title 24, Part 11 (CALGreen) with July 2024 Supplement.

VMT Reduction

The priority GHG reduction strategies for local government climate action related to VMT reduction are discussed below and would support the Scoping Plan action to reduce VMT per capita 25 percent below 2019 levels by 2030 and 30 percent below 2019 levels by 2045.

The Project is located in a Transit Priority Area (TPA). Specifically, the Project Site is located within a quarter mile of the Valley and 6th Street stop (Alhambra Community

[14] Table 1 of Appendix D, 2022 Scoping Plan, November 2022.

[15] Table 3 of Appendix D, 2022 Scoping Plan, November 2022.

Transit [ACT] Green Line), which provides transportation service around the City of Alhambra along Valley Boulevard (from Fremont to Vega) and Main Street (from Palm to Chapel) and provides connections to the ACT Blue Line, which connects to California State University, Los Angeles and Metrolink. The Project's location in a TPA provides evidence of the Project's consistency with the 2022 Scoping Plan strategy of reducing VMT and mobile source emissions. Additionally, the Project would include both sidewalk bicycle parking stalls to serve the users of the community center and further reduce VMT.

Building Decarbonization

The priority GHG reduction strategies for local government climate action related to electrification are discussed below and would support the Scoping Plan actions regarding meeting increased demand for electrification without new fossil gas-fire resources and all electric appliances beginning in 2026 (residential) and 2029 (commercial) (see Table 2-1 of the Scoping Plan).

California's transition away from fossil fuel–based energy sources will bring the Project's GHG emissions associated with building energy use down to zero as our electric supply becomes 100 percent carbon free. California has committed to achieving this goal by 2045 through SB 100, the 100 Percent Clean Energy Act of 2018. SB 100 strengthened the State's Renewables Portfolio Standard (RPS) by requiring that 60 percent of all electricity provided to retail users in California come from renewable sources by 2030 and that 100 percent come from carbon-free sources by 2045. The land use sector will benefit from RPS because the electricity used in buildings will be increasingly carbon-free, but implementation does not depend (directly, at least) on how buildings are designed and built.

The Project would directly support building electrification as the Project will utilize only electricity and no natural gas in the renovated building. While building electrification would result in higher electricity usage, it would greatly reduce the use of a fossil fuel and the associated GHG emissions (i.e., natural gas combustion) from building energy demand. The Project would also comply with applicable solar installation regulatory requirements and include solar panels.

Connect SoCal 2024

The purpose of Connect SoCal is to achieve the regional per capita GHG reduction targets for the passenger vehicle and light-duty truck sector established by CARB pursuant to SB 375. To accomplish this goal, Connect SoCal identifies various strategies to reduce per capita VMT. Connect SoCal is expected to help SCAG reach its GHG reduction goals, as identified by CARB, with reductions in per capita passenger vehicle GHG emissions for specified target years.

In order to assess the Project's potential to conflict with Connect SoCal, this section analyzes the Project's land use characteristics for consistency with the strategies and policies set forth in Connect SoCal to meet GHG emission-reduction targets set by

CARB.[16] Generally, projects are considered to not conflict with applicable land use plans and regulations, such as SCAG's Connect SoCal, if they are compatible with the general intent of the plans and would not preclude the attainment of their primary goals.

The Project would support reducing VMT given that it is a community center development in an infill location surrounded by other existing uses, including residential uses that would utilize the services of the Project. The Project is located in a TPA and is located within a quarter mile of the Valley Boulevard and S. 6th Street stop (ACT Green Line), which provides transportation service around the City of Alhambra along Valley Boulevard (from Fremont to Vega) and Main Street (from Palm to Chapel) and provides connections to the ACT Blue Line, which connects to California State University, Los Angeles and Metrolink. The Project's location in a TPA provides evidence of the Project's consistency with the Connect SoCal strategy of reducing VMT and mobile source emissions. Additionally, the Project would include both sidewalks and bicycle parking stalls to serve the users of the community center and further reduce VMT. As such, the Project would not conflict with Connect SoCal goals and benefits intended to improve mobility and access to diverse destinations, provide better "placemaking," provide more transportation choices, and reduce vehicular demand and associated emissions.

GHG Emissions and Plan, Policy, and Regulation Impact Summary

Overall, the Project would generate a minimal amount of GHG emissions. The Project would not conflict with the CARB 2022 Scoping Plan and the SCAG Connect SoCal 2024. Therefore, the Project would not conflict with an applicable plan, policy, or regulation to reduce GHG emissions. As such, impacts would be less than significant. No further analysis of this issue is warranted in the EIR.

Hazards and Hazardous Materials

Issues (and Supporting Information Sources):	*Potentially Significant Impact*	*Less Than Significant with Mitigation Incorporated*	*Less Than Significant Impact*	*No Impact*
IX. HAZARDS AND HAZARDOUS MATERIALS — Would the project:				
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	☐	☐	☒	☐
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	☐	☐	☒	☐
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	☐	☐	☒	☐
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	☐	☐	☒	☐
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?	☐	☐	☐	☒
f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	☐	☐	☒	☐
g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury, or death involving wildland fires?	☐	☐	☒	☐

Discussion

The analysis in this section is based on the information provided in the Phase I Environmental Site Assessment prepared by EFI Global, Inc (EFI) on December 29, 2023, contained in **Appendix F** of this IS and the Asbestos and Lead Assessment prepared by EFI on November 14, 2023 (**Appendix G**).

a) **Less Than Significant Impact.** Exposure of the public or the environment to hazardous materials could occur through improper handling or use of hazardous materials or hazardous wastes particularly by untrained personnel, a transportation accident, environmentally unsound disposal methods, or fire, explosion, or other emergencies. The severity of potential effects varies with the activity conducted, the concentration and type of hazardous material or wastes present, and the proximity of sensitive receptors.

Proposed Project construction could expose construction workers and the public to temporary hazards related to the transport, use, and maintenance of construction materials (i.e., oil, diesel fuel, and transmission fluid), and/or handling/transport of demolition debris and import/export of soils. However, these activities would be short-term, and the materials

used would not be in such quantities or stored in such a manner as to pose a significant safety hazard. Proposed Project construction activities would demonstrate compliance with the applicable laws and regulations governing the use, storage, and transportation of hazardous materials/waste, ensuring that all potentially hazardous materials are used and handled in an appropriate manner.

A Phase I Environmental Site Assessment was prepared for the Project to assess the potential for Project implementation to result in impacts related to hazards and hazardous materials (**Appendix F**). The Phase I Environmental Site Assessment did not identify a Recognized Environmental Condition (REC) controlled RECs (CRECs), or historical RECs (HRECs) associated with hazards or hazardous materials at the Project Site. However, an Asbestos and Lead Assessment was undertaken in November 2023 (see **Appendix G**) to determine the presence of asbestos-containing materials (ACM) and/or lead-based paint (LBP). The laboratory results indicated that the thermal system pipe insulation, acoustic ceiling material, ceiling plaster and ceiling tape contain asbestos above the threshold limit of one percent, or require additional analysis to confirm they are less than one percent, and are to be treated and disposed of as ACM. The ACM disposal should be undertaken by a licensed California Department of Industrial Relations (DIR) Department of Occupational Safety and Health (DOSH) contractor. Additionally, per SCAQMD guidelines for asbestos site clean-ups Rule 1403 Procedure 5 Plan approval is required prior to removal of ACM (SCAQMD 2016). It was also recommended that abatement monitoring be performed by the asbestos consultant if asbestos abatement is to be performed while non-abatement persons (employees, tenants, other building occupants, or general public) are present in adjacent areas. Regarding the LBP assessment, over 112 samples were found to contain greater than 0.7 mg/cm^2 of lead and are considered lead-based paint. Recommendations for LBP removal include removal by certified lead trained personnel in accordance with all applicable federal, state and local regulations. All suspected lead laden components shall undergo paint film stabilization before components are removed by manual intact methods. LBP that will be impacted by hot work (welding, torch cutting, etc.) must be removed from the component by lead abatement workers to allow a minimum of 6 inches' clearance on either side of the location of the hot work to prevent the volatilization of lead into the air.

Based on the above, the Project would be in full compliance with all applicable federal, state, and local requirements concerning the use, storage, and management of hazardous materials, including, but not limited to the Resource Conservation and Recovery Act (RCRA), Hazardous Materials Transportation Act (HMTA), California Hazardous Waste Control Law, federal and state Occupational Safety and Health Acts, SCAQMD rules, and permits and associated conditions issued by the City of Alhambra. The Project will additionally be required to remove ACM and LBP materials using a licensed contractor and to adhere to all regulations governing Asbestos and LBP handling and removal. State-level agencies, in conjunction with the United States Environmental Protection Agency (USEPA) and California Occupational Safety and Health Administration (Cal/OSHA), regulate removal, abatement, and transport procedures for ACM. ACM is regulated under state regulations including the California Code of Regulations (CCR), Title 8, Division 1,

Chapter 4, Article 4, Sections 1529 and 5208. The Project would also comply with the requirements of SCAQMD Rule 1403. Releases of asbestos from demolition or construction activities are prohibited by these regulations and medical evaluation and monitoring is required for employees performing activities that could expose them to asbestos. Additionally, the regulations include warnings that must be heeded and practices that must be followed to reduce the risk for asbestos emissions and exposure. Finally, federal, state, and local agencies must be notified prior to the onset of demolition or construction activities with the potential to release asbestos. The demolition of buildings containing LBPs is subject to a comprehensive set of California regulatory requirements that are designed to assure the safe handling and disposal of these materials.[17] Cal/OSHA has established limits of exposure to lead contained in dusts and fumes, which provides for exposure limits, exposure monitoring, and respiratory protection, and mandates good working practices by workers exposed to lead, particularly since demolition workers are at greatest risk of adverse exposure. Lead-contaminated debris and other wastes must also be managed and disposed of in accordance with applicable provisions of the California Health and Safety Code. Through compliance with these existing legal and regulatory requirements, and through remediation or abatement of ACM/LBP materials in accordance with all applicable regulations and standards before building demolition commences, demolition and construction impacts would be less than significant.

Operation of the Project would involve the routine use of small quantities of potentially hazardous materials typical of those used in community facilities including cleaning products, paints, and those used for maintenance of landscaping. Such use would be consistent with those currently occurring at other nearby commercial and residential properties. As a community development, the Project would not involve the routine transport, use, and disposal of large quantities of hazardous materials. The Project's limited use of common hazardous materials can typically be disposed of at Class II or III landfills, which accept most common waste materials, such as those identified above. In addition, all hazardous materials used on the Project Site during operation would be used, stored, and disposed of in accordance with all applicable federal, state, and local requirements. Compliance with applicable regulations would ensure that operational impacts are less than significant, and no further analysis of this issue is warranted in the EIR.

b) **Less Than Significant Impact.** During demolition, excavation, on-site grading, and building construction, hazardous materials such as fuel and oils associated with construction equipment, as well as coatings, paints, adhesives, and caustic or acidic cleaners, could be used, and therefore, would require proper handling and management and, in some cases, disposal. The use, handling, storage, and disposal of these materials could increase the opportunity for hazardous materials releases and, subsequently, the exposure of people and the environment to hazardous materials. However, as previously discussed, all potentially hazardous materials used during construction of the Project would be used and disposed of in accordance with manufacturers' specifications and instructions,

[17] See Title 17, California Code Of Regulations, Division 1, Chapter 8, Accreditation, Certification, and Work Practices. For Lead-Based Paint and Lead Hazards, Sections 35001 to 36100. See also California Code of Regulations, Title 8, Section 1532.1. Lead.

thereby reducing the risk of hazardous materials use. In addition, the Project would comply with all applicable federal, State, and local requirements concerning the use, storage, and management of hazardous materials. Based on the above, compliance with existing regulations would ensure the Project construction activities would not create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment.

As discussed previously, the Phase I Environmental Site Assessment revealed no evidence of RECs in connection with the Project Site but the presence of ACM and LBP was noted in the Asbestos and Lead Assessment. As mentioned previously, with compliance with regulations, and through remediation or abatement of ACM/LBP materials in accordance with all applicable regulations and standards before building demolition commences, demolition and construction impacts would be less than significant.

Operation of the Project Site would involve the routine use of small quantities of potentially hazardous materials typical of those used in residential uses. As stated previously, activities involving the handling and disposal of hazardous waste would occur in compliance with all applicable federal, state, and local requirements concerning the handling and disposal of hazardous waste. With applicable regulations and requirements compliance, operational activities would not create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment. Impacts would be less than significant, and no further analysis of this issue is warranted in the EIR.

c) **Less Than Significant Impact.** Some populations (e.g., children, elderly, sick or disabled persons) are more susceptible to health effects of hazardous materials than the general population. Hazardous materials used near schools, day care centers, senior living communities, hospitals, etc., must consider potential health effects to these populations, often referred to as "sensitive receptors." Construction or redevelopment on contaminated properties that could potentially generate vapors or fugitive dust containing contaminants may potentially pose a health risk to these populations. In addition, commercial businesses in proximity to sensitive receptors may have hazardous emissions or handle hazardous or acutely hazardous materials or wastes that could pose a health risk to these sensitive receptors.

There are two schools and other sensitive receptors located within an 0.25-mile radius of the Project Site. The nearest existing schools to the Project site are Moor Field Early Education Center located approximately 0.2 mile north, and Ramona Elementary School located approximately 0.2 mile southeast. Additionally, the Evangelical Formosan Church of Alhambra provides day care for children on Sundays (10am-11am) and the Church of Jesus Christ of Latter-day Saints also provides service for children. Other nearby schools to the Project include the Marguerita Elementary School (located approximately 0.5 mile southwest), Ramona Convent Secondary School (located approximately 0.6 mile southwest), Northrup Elementary School (located 0.6 mile northwest), and Baldwin Elementary School (located 0.9 mile northeast). The onsite use of hazardous materials at

the proposed community development would be restricted to cleaning solvents and paints used by facility maintenance staff and cleaning solvents. The materials used by facility staff would be in small quantities and stored in compliance with state and federal requirements. Because no substantial amounts of hazardous materials would be used or stored onsite, potential hazardous impacts to occupants at adjacent or nearby properties would be less than significant. No further analysis of this issue is warranted in the EIR.

d) **Less Than Significant Impact.** Section 65962.5 of the California Government Code requires the California Environmental Protection Agency to develop and update annually the Cortese List, which is a "list" of hazardous waste sites and other contaminated sites. While Section 65962.5 makes reference to the preparation of a "list," many changes have occurred related to web-based information access since 1992 and information regarding the Cortese List is now compiled on the websites of multiple agencies, such as the Department of Toxic Substances Control (DTSC), the State Water Board, and CalEPA. The DTSC maintains the EnviroStor database, which includes sites on the Cortese List and also identifies potentially hazardous sites where cleanup actions (such as a removal action) or extensive investigations are planned or have occurred. The database provides a listing of Federal Superfund sites (National Priorities List); State Response sites; Voluntary Cleanup sites; and School Cleanup sites. Geotracker is the State Water Resources Control Board's data management system for managing sites that impact groundwater, especially those that require groundwater cleanup (USTs, Department of Defense, Site Cleanup Program) as well as permitted facilities such as operating USTs and land disposal sites. CalEPA's database includes lists of sites with active Cease and Desist Orders or Cleanup and Abatement Orders from the State Water Board.

The Phase I Environmental Site Assessment for the Project Site obtained a database search report, which is included within Appendix L of the Phase I Environmental Site Assessment (**Appendix F**). The report documents findings of various federal, state, and local regulatory database searches regarding properties with known or suspected releases of hazardous materials or petroleum hydrocarbons. A review of the Cortese list, as provided by EDR, within Appendix L revealed that there are 10 Cortese sites within approximately 0.5 mile of the target property. However, the Phase I Environmental Site Assessment determined that based on the lack of evidence of a release and down-gradient location with regard to the Project Site, the listings are not expected to represent a significant environmental concern for the Project Site. Therefore, impacts would be less than significant, and no further analysis of this issue is warranted in the EIR.

e) **No Impact.** The Project Site is not located within the vicinity of a private airstrip, heliport, or helistop or within an airport land use plan or within 2 miles of a public or private airport. The City of Alhambra does not contain any airports, but there is one airport within 5 miles of the Project Site, the San Gabriel Valley Airport (Los Angeles County, 2009) but it is outside any airport influence area. In addition, all air traffic within the city would be subject to stringent Federal Aviation Administration (FAA) and Caltrans regulations to protect the public from potential aircraft hazards or other safety concerns such as excessive noise. Therefore, the Project is not located within an airport

land use plan area and would not result in airport-related safety hazards or excessive noise for people residing or working in the Project area. No impacts would occur, and this issue will not be evaluated further in an EIR.

f) **Less Than Significant Impact.** The proposed Project includes partial demolition of the existing clinic and construction of new community center elements. As mentioned in the Project Description, surrounding uses include public/institutional uses directly north; residential uses immediately east; commercial uses immediately south; and institutional use (zoned as residential use) immediately west of the Project Site.

Slow-moving construction-related traffic along local roadways could reduce optimal traffic flows and could delay emergency vehicles traveling through the Project area. To prevent potentially significant construction-related traffic impacts, the proposed Project's contractor would implement a construction traffic management plan, per PDF-TR-1, prior to the initiation of any construction activities to ensure that access for all road users is maintained near the Project Site. Furthermore, the Project would be subject to review and approval by all applicable city departments to ensure that the proposed Project complies with City requirements related to emergency response. As such, construction impacts would be less than significant.

The City's Disaster Route Map (County of Los Angeles, 2023) includes Valley Boulevard and Garfield Avenue near the Project Site. The major streets and highways within the City maintain minimum right of way widths and would continue to ensure that various evacuation routes are accessible to residents and businesses. As such, operation of the Project would not interfere with an adopted emergency response plan and/or the emergency evacuation plan. Operational impacts would be less than significant, and no further analysis of this issue is warranted in the EIR.

g) **Less Than Significant Impact.** The Project Site is located in an entirely urbanized area, away from wildlands and the risks of wildfire. The Project Site is located outside the CAL FIRE State Responsibility Area (CAL FIRE, 2022) and also outside a Very Fire Hazard Severity Zone (LA County Fire Department, 2023) and no people or structures would be exposed to significant risk of loss, injury, or death involving wildland fires. Additionally, the Project would be required to comply with all applicable fire codes and building code standards. Therefore, impacts related to wildfires would be less than significant, and no further analysis of this issue is warranted in the EIR.

Hydrology and Water Quality

Issues (and Supporting Information Sources):	*Potentially Significant Impact*	*Less Than Significant with Mitigation Incorporated*	*Less Than Significant Impact*	*No Impact*
X. HYDROLOGY AND WATER QUALITY — Would the project:				
a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?	☐	☐	☒	☐
b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	☐	☐	☒	☐
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:				
i) result in substantial erosion or siltation on- or off-site;	☐	☐	☒	☐
ii) substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite;	☐	☐	☒	☐
iii) create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or	☐	☐	☒	☐
iv) impede or redirect flood flows?	☐	☐	☒	☐
d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	☐	☐	☒	☐
e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	☐	☐	☒	☐

Discussion

a) **Less Than Significant Impact.** Regarding surface water quality, in California, the NPDES stormwater permitting program is administered by the State Water Resources Control Board (SWRCB) through its nine Regional Water Quality Control Boards (RWQCBs). This NPDES permit, referred to as General Permit for Stormwater Discharges from Construction Activities by the SWRCB, establishes a risk-based approach to stormwater control requirements for construction projects. The City of Alhambra is within the jurisdiction of the Los Angeles Regional Water Quality Control Board (LARWQCB), which is responsible for the preparation and implementation of the water quality control plan for the Los Angeles Region.

The Construction General Permit regulates construction activity, including clearing, grading, and excavation of areas one acre or more in size, and prohibits the discharge of materials other than stormwater, authorized non-stormwater discharges, and all discharges that contain a hazardous substance, unless a separate NPDES permit has been issued for those discharges. For all construction activities disturbing one acre of land or more, California also mandates the development and implementation of Stormwater Pollution

Prevention Plans (SWPPP). The SWPPP documents the selection and implementation of BMPs to prevent discharges of water pollutants to surface or groundwater. The SWPPP also charges owners with stormwater quality management responsibilities. The developer or contractor for a construction site subject to the General Permit must prepare and implement a SWPPP that meets the requirements of the General Permit.

During construction, per the NPDES Construction General Permit, the Project would be required to implement a SWPPP that includes BMPs to reduce pollutants in stormwater runoff from the Project Site. The BMPs would adhere to the California Stormwater Quality Association BMP Handbook and would include, but not be limited to use of sandbags, storm drain inlets protection, stabilized construction entrance, wind erosion control, and stockpile management to minimize the discharge of pollutants in stormwater during construction. All construction activities would occur in accordance with City grading permit regulations contained within the Alhambra code of ordinances.

With the implementation of site-specific BMPs included as part of the SWPPP and implementation of standard construction practices, construction of the Project would not result in discharges that would violate any surface water quality standard or waste discharge requirements. Therefore, construction-related impacts on any surface water quality would be less than significant.

Regarding operation, stormwater discharge is generated by rainfall that runs off the land and impervious surfaces, such as paved streets, parking lots, and rooftops. Stormwater discharge may include pollutants of concern, which are expected to be generated by the Project that could affect stormwater quality. During Project operation, pollutants of concern within stormwater runoff may include, but are not limited to, pollutants such as sediment, nutrients, pesticides, metals, pathogens, oil and grease, and trash. This stormwater runoff can flow directly into storm drains and continue untreated. Untreated stormwater runoff degrades water quality in surface waters and groundwater and can affect drinking water, human health, plant and animal habitats, and the water quality in off-site drainages and surface water bodies.

Alhambra Code of Ordinances Chapter 16.36, Section 16.36.050 requires stormwater pollution Low Impact Development (LID) control measures to control pollutants, pollutant loads, and runoff volume to the maximum extent feasible by minimizing impervious surface area and controlling runoff from impervious surfaces through infiltration, evapotranspiration, bioretention and/or rainfall harvest and use. The Project is also required to comply with County and City LID requirements, which require implementation of a stormwater treatment system that captures the 85th percentile runoff volume for treatment. The Project's Geotechnical Report (**Appendix D**) concluded that the use of a drywell infiltration basin system for the purpose of stormwater infiltration disposal (the design infiltration rate is 42.9 in/hr) is feasible from a geotechnical standpoint.[18] As recommended by the geotechnical engineers, and as required per PDF-HYDRO-1, the edge

[18] A drywell infiltration basin is an underground structure (often a cylinder with holes) that collects and stores excess water runoff. Rainwater collects in the drywell and then slowly leaks out through the holes and into the ground.

of any drywell infiltration basin would be installed at least 20 feet away from the proposed and existing neighboring structures, as well as private property lines. The native site soils encountered during the geotechnical explorations consist primarily of sandy soils suitable for stormwater infiltration. The onsite soils are in very low expansion range and the historic groundwater depth for the Project Site was noted to be approximately 150 feet below grade. As detailed in PDF-HYDRO-1, the proposed drywell infiltration basin system would be installed outside of any proposed structures and the edge of any drywell would be installed at least 20 feet away from the proposed and existing neighboring structures, as well as private property lines. The design of the system would ensure that stormwater infiltration shall only occur in native soils located at least 10 feet below the existing grade. Soils located within the upper 10 feet should not become wet or saturated as a result of a drywell. It is anticipated that a settling chamber will be installed within this upper zone; therefore, the seams and bottom of the settling chamber should be adequately sealed to prevent infiltration at this zone. It is likely that Project Site and building runoff will be captured and directed to the drywell system, where the 85th percentile storm event runoff will be captured, treated and infiltrated. Per the geotechnical engineer's recommendations and PDF-HYDRO-1, all infiltration devices would be provided with overflow protection. Once the device is full of water, additional water flowing to the device should be diverted to another acceptable disposal area, or disposed offsite in an acceptable manner. The final design and location of the drywell infiltration basin system will be subject to review and approval by the City of Alhambra Department of Public Works.

Source control measures per the City's LID requirements, include good housekeeping relating to outdoor storage of materials and outdoor trash storage areas. Any on-site use of hazardous materials to be used in association with operation of the Project, such as small quantities of potentially hazardous materials in the form of cleaning solvents, painting supplies, and pesticides for landscaping, as well as fuel storage associated with maintenance and/or emergency equipment, would be contained, stored, and used in accordance with manufacturers' instructions and handled in compliance with applicable standards and regulations, such that no hazardous materials be exposed to or otherwise would adversely impact groundwater quality.

Due to the incorporation of the required LID system and BMPs, operation of the Project would not result in discharges that would cause (1) pollution which would alter the quality of the waters of the State to a degree which unreasonably affects beneficial uses of the waters; (2) contamination of the quality of the waters of the State by waste to a degree which creates a hazard to the public health through poisoning or through the spread of diseases; or (3) nuisance that would be injurious to health, affect an entire community or neighborhood, or any considerable number of persons, and occurs during or as a result of the treatment or disposal of wastes.

Furthermore, the existing Project Site was developed prior to the enforcement of storm water quality BMP design, implementation, and maintenance requirements. The existing Project Site currently does not implement BMPs and has no significant means for use or treatment of stormwater runoff. Therefore, with implementation of the LID BMPs, the

Project would substantially improve the quality of stormwater runoff discharged from the Project Site. Accordingly, operation of the Project would not result in discharges that violate any water quality standards or waste discharge requirements. Therefore, impacts resulting from Project operation would be less than significant with respect to surface water quality.

Regarding groundwater quality, excavation would occur to a depth of approximately five feet below ground surface (bgs) for the lowest foundations and to 25 feet for the drywell infiltration basin installation. As described in the Geotechnical Report prepared for the Project, the highest historical groundwater level is approximately 150 feet below grade and no groundwater was encountered in the borings, drilled to a maximum depth of 50 feet below the existing ground surface. Based on historic groundwater levels in the Project Site vicinity and the depth of proposed construction, groundwater is not expected to be encountered during construction. However, in the unanticipated event that groundwater seepage were to occur within any of the deeper excavations, dewatering would be conducted in accordance with General NPDES Permit, in which the City must submit a Notice of Intent (NOI) to discharge groundwater generated from dewatering operations during construction in accordance with the requirements of the NPDES permit. Dewatering operations are practices that discharge groundwater that must be removed from a work location into the storm drain system to proceed with construction. Discharges from dewatering operations can contain high levels of fine sediments, which, if not properly treated, could lead to exceedance of the NPDES requirements. Temporary pumps and filtration would be utilized in compliance with the NPDES permit. If dewatering is required, the treatment and disposal of the dewatered water would, therefore, occur in accordance with the requirements of LARWQCB's Waste Discharge Requirements for Discharges of Groundwater from Construction and Project Dewatering to Surface Waters in Coastal Watersheds of Los Angeles and Ventura Counties.

Although not anticipated based on the Project's Phase I Environmental Site Assessment (**Appendix F**), should grading and excavation encounter the presence of contaminated soils, there could be a potential to impact groundwater quality. In the event that contaminated soils were to be encountered during construction, soils would be tested to determine the nature and extent of the contamination and appropriate handling, disposal, and/or treatment would be implemented in accordance with applicable regulations (see Section IX, *Hazards and Hazardous Materials*, for further details). In addition, Project construction activities would occur in accordance with City grading permit regulations. Furthermore, as part of standard construction practices undertaken in compliance with various regulations (e.g., California Health and Safety Code Chapter 6.95, Section 25501(n), Title 22 California Code of Regulations [CCR] Section 66261.10 through 66261.24), and federal Occupational Safety and Health Act of 1970 (OSHA), and Title 8 CCR Cal/OSHA), soil is routinely tested for contaminants to ensure removed soils meet the disposal requirements of the receiving construction and demolition (C&D) facility or construction site. With the removal of any potential contaminated soils and/or materials, grading and excavation activities would not pose a significant hazard to groundwater quality. Therefore, construction-related impacts on groundwater quality would be less than significant.

The Project does not include the installation or operation of water wells, or any extraction or recharge system that is in the vicinity of the coast, within an area of known groundwater contamination or seawater intrusion, in proximity to a municipal supply well, or within a spreading ground facility.

Operational activities that typically affect groundwater quality include spills of hazardous materials and leaking underground storage tanks (USTs). Surface spills from the handling of hazardous materials at non-industrial sites most often involve small quantities that are removed in a timely manner, thereby, resulting in little effect on groundwater. Other types of risks such as leaking UST's have a greater potential to affect groundwater. However, no USTs would be installed as part of the Project and no USTs exist on the site. Therefore, operation of the Project would not result in discharges that would violate any groundwater quality standard or waste discharge requirement. Operation-related impacts on groundwater quality would be less than significant. Overall, impacts would be less than significant and no further analysis of this issue is warranted in the EIR.

b) **Less Than Significant Impact.** The Project Site is located in an urbanized area of the City and is currently developed with a partial two-story building and associated surface parking. The Project Site does not currently provide a substantial opportunity for recharge of groundwater and the Project does not propose the development of long-term groundwater production wells, which would lead to decreased groundwater supplies. However, the City's main source of water comes from local groundwater from the Main San Gabriel Water Basin, with the remainder from a service connection with the Metropolitan Water District (City of Alhambra, 2022) and water supplied to the Project Site would be derived from the City's existing water supply and infrastructure. Per the *Will Serve* letter from the Director of Public Works & Utilities (see **Appendix H**), water systems have sufficient capacity to serve the Project. Given the temporary nature of construction activities, while some dewatering could be necessary during construction activities (although considered very unlikely given the historic depth to groundwater, which is estimated at 150 ft bgs), such dewatering activities would not be of an extent that would substantially alter groundwater supplies due to shallow depth of excavation and groundwater levels being considerably deeper than anticipated depths of excavation (maximum of 25 feet). In addition, with development of the Project, while the impervious area on the Project Site would increase, the potential for decreased groundwater recharge would be offset with the Project's proposed drywell system, whereby stormwater runoff would be directed to the drywell for infiltration. Thus, despite an increase in impermeable surfaces, with the drywell system in place, there would not be a substantial change to groundwater recharge conditions. Also, the Project would include the installation of filters as part of the drywell system and other BMPs, which would allow for treatment of the on-site stormwater prior to contact with the groundwater below. Furthermore, the Project would not include the installation of water supply wells on the Project Site. Based on the above, the Project would not substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that the Project may impede sustainable groundwater management of the basin. Impacts would be less than significant, and this issue need not be evaluated further in an EIR.

c.i) **Less Than Significant Impact.** No streams or rivers occur on site. As discussed previously, the Project would increase the amount of impermeable surface area on the Project Site. However, the Project would include a drywell system that captures the 85th percentile runoff volume for treatment and infiltration consistent with the City's LID requirements and preferred stormwater management system priorities. Under the Project conditions, stormwater runoff from the Project Site would be entirely captured and treated by the LID drywell system as described previously. Per the same as under existing conditions, treated stormwater would flow into the City's municipal storm drain system which would accommodate the runoff. The Project would not substantially alter the existing drainage pattern of the Project Site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces. As such, the Project would not result in substantial erosion or siltation on- or off-site, and impacts would be less than significant. No further evaluation of this issue is warranted in the EIR.

c.ii) **Less Than Significant Impact.** Construction activities have the potential to temporarily alter existing drainage patterns and flows on the Project Site by exposing the underlying soils, modifying flow direction, and making the Project Site temporarily more permeable. As discussed above in Response X.a above, the Project would implement a SWPPP that specifies BMPs and erosion control measures used during construction to manage runoff flows. These BMPs are designed to contain stormwater or construction watering on the Project Site such that runoff does not impact off-site drainage facilities or receiving waters. In addition, Project construction activities would occur in accordance with City grading permit regulations that require necessary measures, plans, and inspections to reduce sedimentation and erosion. Thus, through compliance with all NPDES General Construction Permit requirements and compliance with applicable City grading permit regulations, construction activities for the Project would not substantially increase the rate or amount of surface runoff in a manner that would result in flooding on- or off-site. As such, construction-related impacts to hydrology would be less than significant.

With respect to operations, as discussed above in Response X.c.i above, the Project would increase the amount of impermeable surface area on the Project Site. However, the Project would include a drywell system that captures the 85th percentile runoff volume for treatment and provides for onsite infiltration back into the groundwater consistent with the City's LID preferred stormwater management system priorities. Flows would be accommodated by the stormwater treatment and conveyance system. Furthermore, the estimated peak rate of runoff for a 50-year storm event with the existing site is: 6.29 cubic feet per second (cfs) and the proposed system is estimated to result in a peak rate of runoff for a 50-year storm event of 6.36 cfs. Project runoff would be very similar to existing conditions. Therefore, the Project would not substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- and off-site. Project impacts would be less than significant and no further evaluation of this issue is warranted in the EIR.

c.iii) **Less Than Significant Impact.** Flows would be accommodated by the proposed stormwater drywell treatment and conveyance system, which would capture, treat and infiltrate the 85th percentile storm event consistent with the City's LID requirements and

preferred stormwater management system priorities. In addition, as discussed under Response X.a above, the implementation of BMPs required by the City would target the pollutants that could potentially be carried in stormwater runoff. As such, the Project would not violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality. Therefore, with the incorporation of the proposed drywell system and LID BMPs, operation of the Project would not create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff. Thus, Project impacts would be less than significant, and no further evaluation of this issue is warranted in the EIR.

c.iv) **Less Than Significant Impact.** The Project Site, is designated by the Federal Emergency Management Agency (FEMA) as an Area of Minimal Flood Hazard (Zone X) and is not located within a mapped flood zone, including the 100-year flood zone. The Project Site is located in an urbanized area and there are no rivers, streams, or other water bodies (natural or urban) that could produce substantial flood flows on or through the Project Site, the closest being the Alhambra Wash located approximately 1.3 miles northeast. Therefore, the Project would not substantially alter the existing drainage pattern of the Project Site or area in a manner which would impede or redirect flood flows. Impacts would be less than significant, and no further evaluation of this issue is warranted in the EIR.

d) **Less Than Significant Impact.** Seiches are large waves generated by ground shaking effects within enclosed bodies of water. The Santa Fe Dam, is the closest dam and is located within 9.4 miles of the Project Site. The dam is a flood risk management dam located on the San Gabriel River that is owned and operated by the United States Army Corps of Engineers (USACE) in the Los Angeles District. The primary purpose of the Santa Fe Dam is to reduce the risk of flood damage for the densely populated area between the dam and Whitter Narrows Reservoir. According to the USACE's National Inventory of Dams Advanced Map Viewer, the Project Site is not located within the downstream inundation area for the Santa Fe Dam (USACE, 2023). Additionally, the Project Site is not at risk of inundation from neither the Garvey Reservoir (2 miles southeast) nor the Laguna Regulating Basin (2.1 miles southwest). As such, the Project would have a less than significant impact related to seiches.

Tsunamis are tidal waves generated by a significant disturbance undersea, such as a tectonic displacement of sea floor associated with large, shallow earthquakes. As the City of Alhambra is landlocked and located over 20.3 miles from the Pacific Ocean, tsunamis are not considered a hazard for the city. Therefore, implementation of the Project would not increase the risk of tsunami within the city and no impact would occur.

As discussed in Response X.c.iv above, no portion of the Project Site lies in a flood hazard zone subject to 100-year and 500-year floods (FEMA, 2023). Furthermore, as discussed in Section IX, *Hazards and Hazardous Materials*, the Project would not involve the storage or use of significant quantities of hazardous materials, and construction of new structures would be required to comply with CBC regulations related to flooding. Therefore, risks

related to the release of hazardous materials due to inundation are minimal, and impacts would be less than significant. For these reasons, further analysis of these issues is not warranted in the EIR.

e) **Less Than Significant Impact.** Potential water quality and groundwater impacts associated with the Project are discussed under Responses X.a and X.b of this section. As required by Section 303(d) of the Clean Water Act (CWA), the State and the Regional Water Boards assess water quality data for California's waters every two years to determine if they contain pollutants at levels that exceed protective water quality criteria and standards. The LARWQCB most recently prepared a list of impaired waterbodies in the region as part of the 2022 assessment cycle. This list is referred to as the 303(d) list. All waterbodies on the 303(d) list are subject to the development of a Total Maximum Daily Load (TMDL). The nearest water body to the Project Site that has been identified as an impaired water body is the Alhambra Wash, located approximately 1.3 miles northeast (SWRCB 2022a). Impairment for the Alhambra Wash is due to ammonia (SWRCB 2022b).

As previously discussed, in terms of polluted runoff, the Project's proposed uses would be typical of community center uses and would not introduce substantial sources of polluted water that a use such as an industrial use would generate, for example. Moreover, the Project will also include the use of a drywell which would serve to address and minimize any potential polluted runoff generated by the Project. As such, the Project would not conflict with or obstruct any water quality control plans. No other water quality control plans or sustainable groundwater management plans would be affected by the development of the Project.

The Project falls under the jurisdiction of the LARWQCB (Region 4) Basin Plan for the Coastal Watersheds of Los Angeles and Ventura Counties. The LARWQCB is also given authority to issue waste discharge requirements, enforce actions against stormwater discharge violators, and monitor water quality. As discussed in Response X.a, since the construction site would be greater than one acre, the Project would be required to obtain coverage under the NPDES Construction General Permit, which would be under the jurisdiction of the LARWQCB. In accordance with the requirements of this permit, the Project would implement a SWPPP that specifies BMPs and erosion control measures to be used during construction to manage runoff flows, prevent pollution, and avoid on- or off-site flooding during construction. The NPDES Construction General Permit and SWPPP measures are designed to contain and treat, as necessary, stormwater or construction watering on the Project Site, so runoff does not impact off-site drainage facilities or receiving waters with sediment or other pollutants. In addition, the Project would be required to comply with all applicable City grading permit regulations that require necessary measures, plans, and inspections to reduce sedimentation and erosion, control runoff from the construction site, and avoid on- and off-site flooding during the construction period. Compliance with the Construction General Permit and City grading permits during construction would prevent degradation of water quality, which would be consistent with the objectives of the Basin Plan, resulting in a less than significant impact.

The Project would not conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan. Therefore, impacts would be less than significant, and further analysis of this issue in the EIR is not warranted.

Land Use and Planning

Issues (and Supporting Information Sources):	*Potentially Significant Impact*	*Less Than Significant with Mitigation Incorporated*	*Less Than Significant Impact*	*No Impact*
XI. LAND USE AND PLANNING — Would the project:				
a) Physically divide an established community?	☐	☐	☒	☐
b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	☐	☐	☒	☐

Discussion

a) **Less Than Significant Impact.** The Project Site is currently developed with a partial two-story building, surface parking and ornamental landscaping. The Project vicinity is urbanized and generally built out and is characterized by a mix of commercial and residential uses and includes a fully developed roadway system. As such, the Project would represent redevelopment of an already fully developed site. Furthermore, although the Project would close W. Shorb Street between S. 6th Street and S. 7th Street, bicycle and pedestrian access would still be permitted and access to S. 6th Street would still be available from S. 7th Street via Valley Boulevard, and vice versa. The Project would encourage multiple modes of travel by providing bicycle access and bicycle parking spaces. As such, the Project would not physically divide an established community, the impact would be less than significant, and further analysis of this issue in the EIR is not warranted.

b) **Less Than Significant Impact**. The General Plan Land Use designation for the Project Site is Public Facilities which provides for the orderly development, use, and operation of buildings and other facilities operated and under the control of a public agency. The Project Site is also zoned Public Facilities (PF). The PF zoning code is intended to provide for a broad range of government, institutional, educational, and other facilities operated and under the control of a public agency. The Project would be consistent with both the Land use and Zoning designations and, as shown in **Table 9**, *City of Alhambra General Plan Goals and Policies Consistency*, would be generally consistent with the Alhambra General Plan policies relating to land use and community design, mobility, quality of life, resources, services and infrastructure, and health and safety. Additionally, although the Southern California Association of Governments (SCAG) *Connect SoCal 2024* (SCAG, 2024) is a long-term plan for the Southern California region, the Project has assessed consistency against the applicable goals of *Connect SoCal 2024*, as set out in **Table 10**, *SCAG Connect SoCal 2024 Goals and Policies Consistency*. It should be noted that although Table 9 and Table 10 indicate a limited amount of goals and policies related to resources such as air quality, greenhouse gases/climate change, noise and cultural resources, potential conflicts with policy documents, plans and regulations related specifically to those resource areas will be assessed in the respective sections of the Draft EIR. As discussed in the below compatibility analyses, the Project would generally be consistent with the applicable and relevant policies and objectives of the City of Alhambra's General Plan, the City's Zoning Code and SCAG's 2024-2040 RTP/SCS. Therefore, impacts would be less than significant and further analysis of this issue in the EIR is not warranted.

TABLE 9
CITY OF ALHAMBRA GENERAL PLAN GOALS AND POLICIES CONSISTENCY

Goal/Policy	Would the Project Conflict?
City of Alhambra General Plan	
Land Use & Community Design	
Goal LU-1 Preservation of the character of existing single-family neighborhoods	
Policy LU-1A Celebrate and enhance each neighborhood's individual attributes and characteristics.	**Consistent**: The Project would be built to the east and west of an existing single-family residential neighborhood but would be separated from it by existing roadways. Although the Project would not develop any single-family homes, the Project's design would help enhance the adjacent neighborhood. The Project would be designed to ensure there would be no conflict with the adjacent neighborhood of Mayfair Park (S. 6th Street delineates the western boundary of the neighborhood) which is one of Alhambra's most intact historic neighborhoods. Additionally, the Project use would continue as a public facility similar to its existing use, which serves and supports the adjacent residential neighborhoods, and would add a multifaceted community center that is integrated into the adjacent Moor Field.
Policy LU-1B Protect and enhance the unique character and identity of single-family neighborhoods.	
Policy LU-1C Tailor building height and scale to be sensitive to surrounding residential and commercial uses.	**Consistent**: Per the newly adopted Alhambra Zoning Code (2024), Chapter 23.07.030 and its Table 23.07.030, which provides the development Standards applicable in the Public Facilities zone district, buildings can be a maximum height of 5 stories or up to 55 feet; or 3 stories and 40 feet if within 50 feet of a residential zone or use. The Project is proposing to build to 38 feet, which would be considerably lower than the maximum permitted height.
Policy LU-1D Encourage land use patterns that minimize incompatibility between uses.	**Consistent**: Project design, parking, and circulation will all be developed in accordance with City regulations, which will also help to eliminate any potential conflict between uses.
Goal LU-2 Enhancement of commercial and industrial areas to attract jobs and expand the City's tax base	
Policy LU-2A Promote the use of high-quality design, materials, landscaping, and pedestrian connections.	**Consistent**: The Project would enhance the existing Shorb Clinic on the Project Site by blending the new community center into the overall site plan with a consistent landscaping theme and the installation of pedestrian pathways. The design of the Project pays close attention to the existing historic and contemporary building scale, massing, and style present at the Project Site and utilizes high-quality materials intended to create a well-integrated mixed-use urban community.
Policy LU-2B Encourage flexibility of use in building and site design to accommodate a range of uses and business sizes.	**Consistent**: The Project would enhance the existing Shorb Clinic on the Project Site and provide flexibility in design so that while the community center use would be the main use, the facility could be used for other community purposes.
Policy LU-2C Design parking and loading areas as an integral part of the total project design. Locate parking and loading areas so that the visual impacts of these areas on adjacent development and the public right-of-way are minimized, and screen them attractively using a combination of fencing and landscaping.	**Consistent:** The Project would create approximately 93 parking spaces which would largely be in the same area as existing. Loading zones would be sufficiently screened from residential properties on the adjacent S. 6th Street.

Goal/Policy	Would the Project Conflict?
Policy LU-2F Provide transparent decision-making processes that facilitate the public engagement of diverse stakeholders.	**Consistent:** Throughout the development of the Alhambra Community Center, the community and community groups (such as those concerned with historic preservation) have been involved, and whose comments have helped shaped the design of the Project, notably at the March 25, 2024 City Council meeting at which the design of the facility was voted on.
Goal LU-3 A high-quality overall community appearance and identity	
Policy LU-3A Foster new development that is consistent with the established land use type, intensity, character, and scale of the area.	**Consistent:** The Project would redevelop the Project Site to partially reuse the existing Shorb Clinic and create a new community center. As the Project Site has a General Plan Land Use designation and is zoned as Public Facilities, the new development would be consistent with the existing land use type. Scale and intensity of design will be consistent with the Alhambra Zoning Code.
Goal LU-4 Focal points throughout the City that encourage diverse public places and foster economic growth	
Policy LU-4A Design focal points and architectural features in the development or rehabilitation of existing neighborhoods.	**Consistent:** The Project would redevelop the Project Site to partially reuse the existing Shorb Clinic and create a new community center that would exhibit architectural features typical of the City and would revitalize the existing vacant building. Additionally, landscaping and trees would feature prominently throughout the Project Site and would line the pedestrian/bicycle pathway connecting S. 7th Street and S. 6th Street. Art, including ceramic artwork from the Shorb Clinic would be incorporated into the design of the Project.
Policy LU-4B Enhance public buildings and parks by enhancing spatial definition, creating focal points, and providing landscaping and trees.	
Policy LU-4C Encourage art in public buildings and private businesses permanently or as part of a rotation of exhibitions.	
Goal LU-8 Maintenance and development of quality public spaces	
Policy LU-8A Continue to implement the parkway tree planting plan to promote pedestrian activity by establishing well-designed streetscapes, active ground floor uses, and tree-canopied sidewalks that are unique to the neighborhood.	**Consistent:** As specified previously, trees would feature prominently throughout the Project Site and would line the pedestrian/bicycle pathway connecting S. 7th Street and S. 6th Street.
Policy LU-8B Ensure that signs, lighting, and other potential nuisances are sensitive to existing residential neighbors.	**Consistent:** Per the Aesthetics section of this Initial Study, all proposed signage and outdoor lighting would generally be consistent with applicable regulations contained within the City's Zoning Code such as 23.12.090 Lighting and Illumination, which specifies minimum illumination levels, maximum heights of lighting fixtures, and requires all lights to be directed, oriented, and shielded to prevent light trespass or glare onto adjacent properties. In adherence to light trespass requirements, the light level at property lines shall not exceed 0.3 footcandles. Furthermore, applicable Backlight-Uplight-Glare (BUG) standards established by the Illuminating Engineering Society of North America (IESNA) would also be adhered to as well as CALGreen code requirements related to light pollution reduction (see Chapter 5, Section 5.106.8)
Policy LU-8D Integrate group gathering spaces, drought-tolerant landscaping, trees, picnic areas, and community gardens into existing and future public spaces.	**Consistent:** Xeriscape landscaping would be included in the Project's landscape design to conserve water use. The connecting gems conceptual design provides group gathering spaces. As specified previously, trees would feature prominently throughout the Project Site

Goal/Policy	Would the Project Conflict?
Mobility	
Goal M-2 A circulation system that accommodates and encourages the use of alternative modes of transportation, including walking, bicycling, and transit	
Policy M-2A Ensure that new development accommodates, and does not have a negative impact on, alternative transportation modes.	**Consistent:** The Project would include bicycle parking and ensure adequate pedestrian access throughout in the form of and pedestrianized walkways.
Policy M-2F As feasible, implement improvements to the City's bike network. The bikeway system should connect to the regional system and may need to be adjusted over time as conditions change. The bike network will include, as appropriate, enhancements to bicyclist safety and bike parking.	**Consistent:** The Project Site (between 7th and 6th Street) is identified in the City of Alhambra's Active Transportation Plan (2024) as the site of a new Class IIIB bicycle path. The Project is consistent with both Policy M-2F and the Active Transportation Plan as the landscape design includes a bicycle and pedestrian pathway along the north side of the site to connect S. 7th and S. 6th Streets.
Goal M-3 Parking facilities that meet community needs	
Policy M-3A Maintain parking standards that meet demand but do not unnecessarily encourage use of the drive-alone automobile.	**Consistent:** The Project would provide 93 parking spaces, with a portion of these set aside for EV use. The Project would encourage active transportation through provision of items such as bicycle parking and pedestrianized walkways.
Quality of Life	
Goal QL-6 Provision of adequate and accessible recreation and open space amenities	
Policy QL-6A Where feasible and desirable, add new recreation facilities such as dog parks and fitness courses.	**Consistent:** The Project would create a new community center with recreational facilities, new open space and passive recreation opportunities across the site.
Policy QL-6E Coordinate with school districts on the joint use of schools as recreational areas. In the event of continued declining public school enrollment and/or school closures, consider the possible conversion of school sites to recreational use.	**Consistent:** The Project would seek agreement with Alhambra Unified School District for the shared use of Moor Field during certain times, and would facilitate reciprocity, if program scheduling permits.
Policy QL-6F Encourage the development of quality commercial recreational facilities on privately held and City-owned land under long-term lease or concession agreements. Such agreements allow the City to provide a wider range of facilities than it could on its own, without heavy financial risk. Examples of such facilities might include roller skating rinks, and racquetball courts.	**Consistent: E**vents would be held throughout the year within the courtyard or event roof deck areas. These events might include weddings, civic and neighborhood receptions, and/or cultural events, birthday parties, and other gatherings.
Policy QL-6G Where feasible and desirable, utilize vacant properties to provide new open space and passive recreation opportunities in the form of pocket parks and/or community gardens.	**Consistent:** The Project would adaptively reuse the existing, vacant, Shorb Clinic, and would provide new open space and passive recreation opportunities in the form of courtyards and access onto Moor Field.
Policy QL-6I Consider environmental justice issues as they relate to the equitable provision of desirable public amenities such as parks, recreational facilities, community gardens, and other beneficial uses that improve the quality of life.	**Consistent:** The Project Site is adjacent to an area identified as an environmental justice community, to the east. The Project would provide the community with access to a new community center and would provide new open space and passive recreation opportunities.

Goal/Policy	Would the Project Conflict?
Goal QL-7 Provision and maintenance of community events and cultural activities and facilities that meet community needs and preferences	
Policy QL-7A Promote partnerships among arts and cultural groups, community organizations, and the business community to develop and expand events, activities, and programs for all ages.	**Consistent:** The Project would allow for arts and cultural groups, community organizations, and the business community to use the Alhambra Community Center for a range of purposes, activities and programs for all ages. Art, including ceramic artwork from the Shorb Clinic would be incorporated into the design of the Project and the Alhambra Community Center would enable a wide range of enjoyable, educational, and stimulating exhibits to be featured along with a variety of cultural events, festivals, activities, and performances.
Policy QL-7B Continue to offer enjoyable, educational, and stimulating exhibits and activities that celebrate Alhambra's history.	
Policy QL-7C Encourage and support cultural events, festivals, activities, and performances.	
Goal QL-8 Access to community events to benefit the entire community, including residents, businesses, visitors, and tourists	
Policy QL-8A Develop and maintain community facilities, such as a museum and/or community center celebrating important people and events in the City's history.	**Consistent:** The Project is for the creation of a community center.
Goal QL-9 Quality educational opportunities that maximize the use of school facilities	
Policy QL-9A Continue support for youth and senior educational programs.	**Consistent:** The Project would enable a wide range of enjoyable, educational, and stimulating exhibits to be featured along with a variety of cultural events, festivals, activities, and performances, suitable for all ages.
Policy QL-9B Continue joint use of space at school district facilities as needed for City programs.	**Consistent:** The Project would seek agreement with Alhambra Unified School District for the shared use of Moor Field during certain times, and would facilitate reciprocity, if program scheduling permits.
Goal QL-10 Economic and racial integration, fair housing opportunities, and the elimination of discrimination	
Policy QL-10C Promote education that teaches skills that match local job opportunities.	**Consistent:** The Project would provide education classes on a range of topics, some of which could potentially teach skills that match local job opportunities.
Goal QL-11 Equal opportunity for active inclusion in governmental processes, programs, and decisions	
Policy QL-11A Support programs that celebrate cultural differences and similarities and promote tolerance.	**Consistent:** The Project would include provision of a range of programs that are suitable for a wide-ranging audience, potentially including programs that celebrate cultural differences and similarities and promote tolerance. The Alhambra Community Center would likely feature community information boards on a range of topics to benefit Alhambra's residents. As of now, the program is yet to be planned to the level of detail required to determine true consistency with this policy.
Policy QL-11B Provide transparent decision-making processes that facilitate public engagement of diverse stakeholders.	**Consistent:** Throughout the development of the Alhambra Community Center, the community and community groups (such as those concerned with historic preservation) have been involved, and whose comments have helped shaped the design of the Project, notably at the March 25, 2024 City Council meeting at which the design of the facility was voted on.

Goal/Policy	Would the Project Conflict?
Resources	
Goal R-1 Maintenance of water supplies that meet the needs of Alhambra residents, businesses, and visitors	
Policy R-1B Encourage water conservation and, when feasible, use recycled water in residential, commercial, industrial, public, and other developments.	**Consistent:** The Project would incorporate efficient water management through low flow faucets and water-efficient landscape design with weather-based controllers and drip irrigation systems.
Policy R-1E Maximize stormwater filtration and/ or infiltration through use of low-impact development methods.	**Consistent:** Alhambra Code of Ordinances Chapter 16.36, Section 16.36.050 requires stormwater pollution Low Impact Development (LID) control measures to control pollutants, pollutant loads, and runoff volume to the maximum extent feasible by minimizing impervious surface area and controlling runoff from impervious surfaces through infiltration, evapotranspiration, bioretention and/or rainfall harvest and use. The Project is also required to comply with County and City LID requirements, which require implementation of a stormwater treatment system that captures the 85th percentile runoff volume for treatment. Adherence to these requirements would make the Project consistent with this policy.
Goal R-2 Conservation and enhancement of open spaces, greenbelts, and natural areas	
Policy R-2A Preserve, maintain, and expand the City's urban forest.	**Consistent:** According to the Construction Site Tree Evaluation Report, most of the trees on the site are either too large or in too poor health to be considered as transplant possibilities and as such those which impact redevelopment plans would be removed and replaced. With the changes to the Alhambra Zoning Code that exempt City projects from the application of the zoning code, the Project would not need to adhere to the Tree Preservation requirements of Alhambra Zoning Code Section 23.12.170, although it is likely that many of the trees would be replaced. Replaced trees would maintain the City's urban forest.
Policy R-2C Avoid impacts to sensitive biological species and habitats through compliance with state and federal laws and regulations pertaining to biological resource conservation.	**Consistent:** According to the CNDDB, species and habitats identified by CDFW and USFWS as candidate, sensitive, or special status that are potentially present within the Project Site and adjacent areas include but are not limited to pallid bat (*Antrozous pallidus*), western mastiff bat (*Eumops perotis californicus*), and hoary bat (*Lasiurus cinereus*). However, it should be noted that the three records for these species are historic with the most recent recorded in 1931. No other CNDDB records were documented within the Project Site. Overall, there is a low potential for these species or their habitats to be affected by the construction of the proposed Project, especially given the fact that the last-known records of bat species were 93 years ago. As such the Project would not impact sensitive biological species and habitats and would adhere to federal laws and regulations pertaining to biological resource conservation, such as the MBTA.

Goal/Policy	Would the Project Conflict?
Goal R-3 Minimization of energy use and its associated impacts to air quality and climate change	
Policy R-3B Encourage the use of energy saving designs, systems, and innovations in public and private building construction.	**Consistent:** Energy saving and sustainable design features would be incorporated into the Project as the proposed buildings would comply with the applicable Title 24 California Code of Regulations. Design features would include elements such as energy-efficient lighting, solar panels, rainwater harvesting, and infiltration systems and materials made from recycled or renewable resources with the goal to reach LEED Silver standards. As it relates to energy conservation, the Project would include LED lighting throughout the Project Site and would install ENERGY STAR-rated appliances. The Project would comply with CalGreen requirements of the California Building Code and incorporates green and conservation features. The Project would also be consistent with the City of Alhambra Building Code, which requires incorporation of features that reduce energy and water use, waste, and overall carbon footprint.
Policy R-3C Promote using renewable energy, such as solar panels and biomethane.	
Goal R-4 Minimization of Alhambra's contribution to regional air pollution and local exposure to elevated air pollution concentrations	
Policy R-4A Coordinate as appropriate with SCAQMD to ensure compliance with applicable emissions standards.	**Consistent:** The SCAQMD published the CEQA Air Quality Handbook to provide local governments with guidance for analyzing and mitigating project-specific air quality impacts. The CEQA Air Quality Handbook provides standards, methodologies, and procedures for conducting air quality analyses in EIRs. Additionally, the SCAQMD has published a guidance document called the Final Localized Significance Threshold Methodology for CEQA Evaluations that is intended to provide guidance when evaluating the localized effects from mass emissions during construction. Air Quality emissions will be assessed in accordance with SCAQMD recommended methodologies and compliance with applicable emissions standards, which will be set out in the Project's Draft EIR.
Policy R-4C Use SCAQMD recommended methodologies to analyze and mitigate the air quality impacts of individual development projects.	
Goal R-5 Minimization of Alhambra's contribution to global climate change by reducing GHG emissions to the degree feasible	
Policy R-5C Encourage the use of green building technology for building retrofits and pursue LEED-certification for new development.	**Consistent:** The Project is redeveloping an existing developed site and the existing building would be upgraded with improved building energy efficiency per current standards as well as implementing voluntary building energy efficiency improvements with the goal to reach LEED Silver certification or equivalent. Building lighting would be energy-efficient (i.e., light-emitting diode [LED]) and other equipment installed would be new and designed to meet applicable current energy standards for such equipment.
Policy R-5D Incorporate GHG reduction strategies into urban design and planning.	
Policy R-5E Provide community outreach to educate the public about climate change and efforts that residents can make to reduce GHG emissions.	**Consistent:** The Project would include provision of a range of programs that are suitable for a wide-ranging audience, potentially including programs that educate the public about climate change and efforts that residents can make to reduce GHG emissions. The Alhambra Community Center would likely feature community information boards on a range of topics to benefit Alhambra's residents. As of now, the program is yet to be planned to the level of detail required to determine true consistency with this policy.

Goal/Policy	Would the Project Conflict?
Goal R-6 Preservation of the cultural identity of Alhambra as a diverse residential and commercial city with distinct single-family neighborhoods	
Policy R-6A Promote and encourage the preservation of Alhambra's significant historic, architectural, cultural, archaeological, and paleontological resources.	**Partially Consistent:** The Shorb Clinic located at 612 West Shorb Street meets the level of significance required for individual listing on the National Register and the California Register under criterion A/1, for its association with early medical and health services in Los Angeles County and for its association with the early institutional development of the City of Alhambra, and under criterion C/3, as an excellent example of the Monterey Revival architectural style. The building has undergone minimal alterations and retains a high degree of historical integrity and is considered a historical resource pursuant to CEQA. However, it has been recognized by the City and historic preservation groups that reuse of the existing building in its entirety is impractical and doesn't fulfil the objectives of the Alhambra Community Center Project and would not meet the needs of the community. As such, as a compromise, at the March 25, 2024 City Council meeting, the adaptive reuse of the building was selected as the design option, harnessing historic preservation with a new-build element. While the Project would not be consistent with preservation policies related to historic resources, there are no other viable alternatives to completely preserve the Shorb Clinic. Related to archaeological, and paleontological resources, Public Resources Code Section 5097.5(a) notes 'a person shall not knowingly and willfully excavate upon, or remove, destroy, injure, or deface, any historic or prehistoric ruins, burial grounds, archaeological or vertebrate paleontological site, including fossilized footprints, inscriptions made by human agency, rock art, or any other archaeological, paleontological or historical feature, situated on public lands, except with the express permission of the public agency having jurisdiction over the lands.' Public Resources Code Section 5097, as amended, requires in the event of discovery of archeological/paleontological resources that all construction activity ceases until appropriate investigation and/or salvage measures have been established by the City. Adherence to these laws would ensure the Project is consistent with the policies under Goal R-6.
Policy R-6C Promote and maintain the unique history and architectural character of individual neighborhoods.	
Policy R-6E Enforce applicable historic preservation laws to preserve state or federally designated historic resources and other resources (e.g., archaeological and paleontological) eligible for such designation.	
Services & Infrastructure	
Goal SI-1 Attraction of development that provides benefits to the community and expands the local tax base in a fiscally responsible manner	
Policy SI-1A Encourage new development that provides benefits to the community in balance with the costs of the provision of urban services.	**Consistent:** The Project would provide benefits to the community in the form of a new community center and would also hold events throughout the year within the courtyard or event roof deck areas. These events might include weddings, civic and neighborhood receptions, and/or cultural events, birthday parties, and other gatherings and would help to generate additional revenue streams for the City.
Policy SI-1B Continue to promote the efficient and cost-effective use of public facilities and services.	

Goal/Policy	Would the Project Conflict?
Health & Safety	
Goal HS-1 Minimization of impacts to people and property due to soil instability	
Policy HS-1A Minimize the risk to life or limb, and property damage resulting from soil and related hazards.	**Consistent:** According to both the California Department of Conservation (DOC) liquefaction hazard zone assessment (DOC, 2023a) and the Project's Geotechnical Report (**Appendix D**), the Project Site is not located within a Liquefaction Zone and not located within in area or is in proximity to an area which would pose a danger to the people or structures on site due to landsliding (DOC, 2023b). Therefore, the Project would be consistent with policies that minimize impacts to people and property.
Policy HS-1B Continue to enforce building code requirements to minimize exposure to geologic hazards.	
Goal HS-2 Minimization of impacts to people and property due to seismic threats	
Policy HS-2A Minimize the loss of life, serious injuries, and major social and economic disruption caused by damage to vulnerable buildings in an earthquake.	**Consistent:** Based on the Geotechnical Report (**Appendix D**) and CGS Earthquake Zones of Required Investigation map viewer (CGS, 2023), there are no active, potentially active, or inactive faults mapped on the Project Site. Nonetheless, the new build aspects of the Project will be designed with earthquake structural design components required by the building code to protect against significant cosmetic damage and serious economic loss, which in turn, would help protect health and safety of humans that may be in or near the building. The existing Shorb Clinic building also underwent seismic retrofit performed in 2005. Furthermore, the Project would comply with the CGS Special Publication 117A, Guidelines for Evaluating and Mitigating Seismic Hazards in California, which provides guidance for evaluation and mitigation of earthquake-related hazards.
Policy HS-2B Require new developments and existing public facilities to comply with established seismic safety standards and consider location-specific seismic hazards.	
Policy HS-2C Promote the upgrade of seismically hazardous buildings for the protection of health and safety.	
Policy HS-2D Ensure that current geologic knowledge and state-certified professional review are incorporated into the design, planning, and construction stages of development projects, and that site-specific data are applied to each project.	
Policy HS-2G Educate the public on the hazards that seismic activities can pose to the City and its residents.	**Consistent:** The Project would include provision of a range of programs that are suitable for a wide-ranging audience, including programs that educate the public on the hazards that seismic activities can pose to the City and its residents. The Alhambra Community Center would likely feature community information boards on a range of topics to benefit Alhambra's residents. As of now, the program is yet to be planned to the level of detail required to determine true consistency with this policy.
Goal HS-3 Proper management of stormwater to minimize the potential effects of flooding on people and property	
Policy HS-3B Address site-specific flood issues through improvements to storm drain infrastructure.	**Consistent:** Alhambra Code of Ordinances Chapter 16.36, Section 16.36.050 requires stormwater pollution Low Impact Development (LID) control measures to control pollutants, pollutant loads, and runoff volume to the maximum extent feasible by minimizing impervious surface area and controlling runoff from impervious surfaces through infiltration, evapotranspiration, bioretention and/or rainfall harvest and use. The Project is also required to comply with County and City LID requirements, which require implementation of a stormwater treatment system that captures the 85th percentile runoff volume for treatment. Adherence to these requirements would make the Project consistent with this policy.

Goal/Policy	Would the Project Conflict?
Goal HS-4 Minimization of injury, loss of life, property damage, and economic and social disruption caused by hazardous materials	
Policy HS-4A Prevent and plan for response to hazardous materials releases. Policy HS-4B Encourage and support enforcement of state and federal laws and regulations pertaining to the generation, use, handling, storage, and transport of hazardous materials.	**Consistent:** A Phase I Environmental Site Assessment was prepared for the Project to assess the potential for Project implementation to result in impacts related to hazards and hazardous materials (**Appendix F**). The Phase I Environmental Site Assessment did not identify a Recognized Environmental Condition (REC) controlled RECs (CRECs), or historical RECs (HRECs) associated with hazards or hazardous materials at the Project Site. However, an Asbestos and Lead Assessment was undertaken in November 2023 (see **Appendix G**) which noted the presence of Asbestos Containing Material (ACM). ACM disposal would be undertaken by a licensed California Department of Industrial Relations (DIR) Department of Occupational Safety and Health (DOSH) contractor. Additionally, per SCAQMD guidelines for asbestos site clean-ups Rule 1403 Procedure 5 Plan approval is required prior to removal of ACM (SCAQMD 2016). It was also recommended that abatement monitoring be performed by the asbestos consultant if asbestos abatement is to be performed while non-abatement persons (employees, tenants, other building occupants, or general public) are present in adjacent areas. Recommendations for Lead Based Paint (LBP) removal include removal by certified lead trained personnel in accordance with all applicable federal, state and local regulations. The Project would be in full compliance with all applicable federal, state, and local requirements concerning the use, storage, and management of hazardous materials, including, but not limited to the Resource Conservation and Recovery Act (RCRA), Hazardous Materials Transportation Act (HMTA), California Hazardous Waste Control Law, federal and state Occupational Safety and Health Acts, SCAQMD rules, and permits and associated conditions issued by the City of Alhambra. The Project will additionally be required to remove ACM and LBP materials using a licensed contractor and to adhere to all regulations governing Asbestos and LBP handling and removal. State-level agencies, in conjunction with the United Stated Environmental Protection Agency (USEPA) and California Occupational Safety and Health Administration (Cal/OSHA), regulate removal, abatement, and transport procedures for asbestos-containing materials (ACM). ACM is regulated under state regulations including the California Code of Regulations (CCR), Title 8, Division 1, Chapter 4, Article 4, Sections 1529 and 5208. The Project would also comply with the requirements of SCAQMD Rule 1403. Releases of asbestos from demolition or construction activities are prohibited by these regulations and medical evaluation and monitoring is required for employees performing activities that could expose them to asbestos. Additionally, the regulations include warnings that must be heeded and practices that must be followed to reduce the risk for asbestos emissions and exposure. Finally, federal, state, and local agencies must be notified prior to the onset of demolition or construction activities with the potential to release asbestos. The demolition of buildings containing LBPs is subject to a comprehensive set of California regulatory requirements that are designed to assure the safe handling and disposal of these materials and the Project would fully comply with these.

Goal/Policy	Would the Project Conflict?
Policy HS-4D Coordinate as appropriate with the Department of Transportation and the California Highway Patrol to regulate the routing of vehicles carrying potentially hazardous materials along transportation corridors that reduce public exposure to risk	**Consistent:** State-level agencies, in conjunction with USEPA and Cal/OSHA, regulate removal, abatement, and transport procedures for ACM. Lead-contaminated debris and other wastes must also be managed and disposed of in accordance with applicable provisions of the California Health and Safety Code. Additionally, the Project would coordinate as appropriate with Caltrans and CHP to regulate the routing of vehicles carrying potentially hazardous materials along transportation corridors. This could be through hauling of material during non-peak travel periods to the extent possible. Through compliance with these existing legal and regulatory requirements, and through remediation or abatement of ACM/LBP materials in accordance with all applicable regulations and standards before building demolition commences
Goal HS-5 Prevention and minimization of the adverse effects of emergencies	
Policy HS-5B Make the public aware of City emergency response plans, procedures, resources, risk reduction strategies, and mitigation measures.	**Consistent:** The Project would include provision of a range of programs that are suitable for a wide-ranging audience, including programs that educate the public on emergency response plans, procedures, resources, risk reduction strategies, and mitigation measures. The Alhambra Community Center would likely feature community information boards on a range of topics to benefit Alhambra's residents. As of now, the program is yet to be planned to the level of detail required to determine true consistency with this policy.
Goal HS-6 Minimization of exposure to excessive noise	
Policy HS-6A Avoid or reduce excessive noise impacts on noise-sensitive receptors through land use planning, review of new development proposals, and physical interventions such as noise insulation in building design, setbacks, or noise barriers when necessary.	**Consistent:** Construction of the Project would require the use of heavy construction equipment (e.g., bulldozers, backhoes, cranes, loaders, etc.) that would generate noise on a short-term basis. Therefore, construction of the Project could generate a temporary increase in ambient noise levels in excess of applicable standards for nearby sensitive receptors. This topic will be assessed in the Draft EIR and should excessive noise impacts be identified, the Project will seek to minimize these to the extent feasible with mitigation measures or Project Design Features.
Policy HS-6B Comply with and enforce applicable City Municipal Code standards related to noise.	**Consistent:** The Project would comply with the requirements of the City's Municipal Code Title XVIII: Community Noise and Vibration Control.
Policy HS-6C Use the land use/noise compatibility matrix on page 94 to determine the compatibility of proposed new development in the City with ambient noise levels	**Consistent:** The Project doesn't have an applicable land use category in the Land Use/Noise Compatibility Matrix within the General Plan. However, the community center use would likely be between the Schools, Libraries, Churches, Hospitals, Nursing Homes category and the playgrounds, neighborhood parks category, which allows for an unconditionally acceptable community noise exposure level of up to 60 dBA and 70 dBA respectively. This topic will be assessed in the Draft EIR and should excessive noise impacts be identified, the Project will seek to minimize these to the extent feasible with mitigation measures or Project Design Features.
Policy HS-6D Ensure that the potential impacts of transportation noise sources (including non-roadway sources such as helicopter operations and train movement) are analyzed and, when necessary, mitigated through the environmental review process.	**Consistent:** This topic will be assessed in the Draft EIR and should excessive noise impacts be identified, the Project will seek to minimize these to the extent feasible with mitigation measures or Project Design Features.

Goal/Policy	Would the Project Conflict?
Goal HS-7 Healthy lifestyles for Alhambra residents	
Policy HS-7A Facilitate development and operation of fitness centers such as gyms, yoga and dance studios, martial arts centers, and rock climbing facilities.	**Consistent:** The Project is for the creation of a community center, which would allow for a variety of uses including gym, yoga and dance and martial arts.
Policy HS-7C Encourage community design that facilitates active transportation such as walking and bicycling	**Consistent:** The Project would encourage active transportation through provision of items such as bicycle parking and pedestrianized walkways.
Goal HS-9 Accessibility to affordable and nutritious foods	
Policy HS-9C Support community education programs on healthy eating habits and lifestyles, including addressing topics such as nutrition, physical activity, and vegetable gardening.	**Consistent:** The Project would include provision of a range of programs that are suitable for a wide-ranging audience, including programs that educate the public on healthy eating habits and lifestyles, including addressing topics such as nutrition, physical activity, and vegetable gardening. The Alhambra Community Center would likely feature community information boards on a range of topics to benefit Alhambra's residents. As of now, the program is yet to be planned to the level of detail required to determine true consistency with this policy.
Policy HS-9D Promote healthy lifestyles, activities, and food choices at City offices and City-organized events.	**Consistent:** The Project is for the creation of a community center, which would allow for a variety of uses and would promote healthy lifestyles and activities. Should the Alhambra Community Center host and cater events, healthy food choices would be included at City-organized events.
Goal HS-10 Protection of residents, businesses, and visitors from the adverse effects of climate change	
Policy HS-10D Work with local organizations to raise awareness about climate change impacts	**Consistent:** The Project would include provision of a range of programs that are suitable for a wide-ranging audience, including programs that educate the public on and raise awareness about climate change impacts. The Alhambra Community Center would likely feature community information boards on a range of topics to benefit Alhambra's residents. As of now, the program is yet to be planned to the level of detail required to determine true consistency with this policy.

TABLE 10
SCAG CONNECT SOCAL 2024 GOALS AND POLICIES CONSISTENCY

Goal/Policy	Would the Project Conflict?
Connect SoCal 2024	
Mobility	
04. Ensure the implementation of Complete Streets that are sensitive to urban, suburban or rural contexts and improve transportation safety for all, but especially for vulnerable road users (e.g., people, especially older adults and children, walking and biking).	**Consistent:** The Project Site (between 7th and 6th Street) is identified in the City of Alhambra's Active Transportation Plan (2024) as the site of a new Class IIIB bicycle path. The Project is consistent with Connect SoCal 2024 policies relating to mobility and the Active Transportation Plan as the landscape design includes a bicycle and pedestrian pathway along the north side of the site to connect S. 7th and S. 6th Streets. The Project would create a new community center with recreational facilities, new open space and passive recreation opportunities across the site and would include bicycle parking and ensure adequate pedestrian access throughout. The Project would eliminate conflicts between vulnerable road users and vehicles through closing W. Shorb Street between S. 7th and S. 6th Streets.
07. Encourage and support the implementation of projects, both physical and digital, that facilitate multimodal connectivity, prioritize transit and shared mobility, and result in improved mobility, accessibility, and safety.	
22. Eliminate transportation-related fatalities and serious injuries (especially those involving vulnerable road users, such as people, especially older adults and children, walking and biking) on the regional multimodal transportation system.	
Communities	
45. Advance community-centered interventions, resources and programming that serve the most disadvantaged communities and people in the region, like Priority Equity Communities, with strategies that can be implemented in the short-to-long-term.	**Consistent:** The Project Site is adjacent to an area identified as an environmental justice community, to the east. The Project would provide the community with access to a new community center and would provide new open space and passive recreation opportunities. The Project would include provision of a range of programs that are suitable for a wide-ranging audience, potentially including programs that celebrate cultural differences and similarities and promote tolerance. The Alhambra Community Center would likely feature community information boards on a range of topics to benefit Alhambra's residents. As of now, the program is yet to be planned to the level of detail required to determine true consistency with this policy.
47. Increase equitable, inclusive, and meaningful representation and participation of people of color and disadvantaged communities in planning processes.	**Consistent:** Throughout the development of the Alhambra Community Center, the community and community groups (such as those concerned with historic preservation) have been involved, and whose comments have helped shaped the design of the Project, notably at the March 25, 2024 City Council meeting at which the design of the facility was voted on. Throughout the Draft EIR process, the community, including the environmental justice community to the east will have meaningful opportunities to input into the Project, such as at the Scoping Meeting and in responding to both the Notice of Preparation and the Notice of Availability.
Environment	
51. Reduce hazardous air pollutants and greenhouse gas emissions and improve air quality throughout the region through planning and implementation efforts.	**Consistent:** The SCAQMD published the CEQA Air Quality Handbook to provide local governments with guidance for analyzing and mitigating project-specific air quality impacts. The CEQA Air Quality Handbook provides standards, methodologies, and procedures for conducting air quality analyses in EIRs. Additionally, the SCAQMD has published a guidance document called the Final Localized Significance Threshold Methodology for CEQA Evaluations that is intended to provide guidance when evaluating the localized effects from mass

Goal/Policy	Would the Project Conflict?
	emissions during construction. Air quality and greenhouse gas emissions will be assessed in accordance with SCAQMD recommended methodologies and compliance with applicable emissions standards, which will be set out in the Project's Draft EIR. Energy saving and sustainable design features would be incorporated into the Project as the proposed buildings would comply with the applicable Title 24 California Code of Regulations. Design features would include elements such as energy-efficient lighting, solar panels, rainwater harvesting, and infiltration systems and materials made from recycled or renewable resources with the goal to reach LEED Silver standards. As it relates to energy conservation, the Project would include LED lighting throughout the Project Site and would install ENERGY STAR-rated appliances. The Project would comply with CalGreen requirements of the California Building Code and incorporates green and conservation features. The Project would also be consistent with the City of Alhambra Building Code, which requires incorporation of features that reduce energy and water use, waste, and overall carbon footprint
55. Promote equitable use of and access to clean transportation technologies so that all may benefit from them.	**Consistent:** The Project would provide 93 parking spaces, with a portion of these set aside for EV use. The Project would encourage active transportation through provision of items such as bicycle parking and pedestrianized walkways.
61. Encourage the protection and restoration of natural habitat and wildlife corridors.	**Consistent:** According to the CNDDB, species and habitats identified by CDFW and USFWS as candidate, sensitive, or special status that are potentially present within the Project Site and adjacent areas include but are not limited to pallid bat (*Antrozous pallidus*), western mastiff bat (*Eumops perotis californicus*), and hoary bat (*Lasiurus cinereus*). However, it should be noted that the three records for these species are historic with the most recent recorded in 1931. No other CNDDB records were documented within the Project Site. Overall, there is a low potential for these species or their habitats to be affected by the construction of the proposed Project, especially given the fact that the last-known records of bat species were 93 years ago. Additionally, according to the Construction Site Tree Evaluation Report, most of the trees on the site are either too large or in too poor health to be considered as transplant possibilities and as such those which impact redevelopment plans would be removed and replaced. Replacement trees would maintain the City's urban forest to a small extent. This topic will be assessed in the Draft EIR and should biological resources impacts be identified, the Project will seek to minimize these to the extent feasible with mitigation measures or Project Design Features.
67. Promote sustainable water use planning, practices and storage that improve regional water security and resilience in a drier environment.	**Consistent:** The Project would incorporate efficient water management through low flow faucets and water-efficient landscape design with weather-based controllers and drip irrigation systems. Xeriscape landscaping would be included in the Project's landscape design to conserve water use.

Mineral Resources

Issues (and Supporting Information Sources):	*Potentially Significant Impact*	*Less Than Significant with Mitigation Incorporated*	*Less Than Significant Impact*	*No Impact*
XII. MINERAL RESOURCES — Would the project:				
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	☐	☐	☒	☐
b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?	☐	☐	☐	☒

Discussion

a) **Less Than Significant Impact.** Minerals are defined as any naturally occurring chemical elements or compounds formed from inorganic processes and organic substances. The California Surface Mining and Reclamation Act of 1975 requires that all cities address significant mineral resources, classified by the State Geologist and designated by the State Mining and Geology Board, in their General Plans. Mineral resources could include oil wells, natural gas wells, and mineral deposits, among others.

Mineral Land Classification of the San Gabriel Valley Production-Consumption (P-C) Region is presented in Special Report 143, Part IV (SR 143, Part IV) – *Mineral Land Classification of the Greater Los Angeles Area, Part 1V, Classification of Sand and Gravel Resource Areas, San Gabriel Valley Production-Consumption Region*, which was published in 1982 and includes a complete set of classification maps covering the entire P-C region (CGS, 1982), which includes the City of Alhambra. In 1988, a subsequent report presented a reclassification of approximately 230 acres known as the Fish Canyon Quarry area, from MRZ-3 to MRZ-2. Since the 1988 report, no new construction aggregate resource areas have been identified and no areas within the San Gabriel Valley P-C Region have been reclassified (CGS, 2010).

Based on a review of the City of Alhambra's General Plan, the City lacks mineral resource extraction areas as soil types found in the City, such as gravely loams, sandy loams, and clays, do not contain any significant mineral resources (Rincon, 2018). The Project Site is not located within a City-designated Mineral Resource Zone. However, according to Plate 4-1 of SR 143, Part IV, the Project Site lies within an identified Mineral Resource Zone 3 (MRZ-3), as designated by the State Mining and Geology Board. Areas designated MRZ-3 are considered to contain mineral deposits for which the significance cannot be determined from available data. Since the Project would occur in a developed, urban environment, and the Project Site currently does not support active aggregate or petroleum mining operations given the nature of the immediate vicinity and land uses of the area; no such operations would be explored or permitted. Therefore, the proposed Project would not result in the loss of availability of important mineral resources that would be of value to the region and the residents of the state. Impacts would be less than significant, and no further analysis of this issue is warranted in the EIR.

b) **No Impact**. The Project Site is not located within a City-designated Mineral Resource Zone as there are none within the City (Rincon, 2018). Since the Project would occur in a developed, urban environment, the Project would not result in the loss of availability of a known or locally important mineral resource. No impact would occur, and no further analysis of this issue is warranted in the EIR.

Noise

Issues (and Supporting Information Sources):	*Potentially Significant Impact*	*Less Than Significant with Mitigation Incorporated*	*Less Than Significant Impact*	*No Impact*
XIII. NOISE — Would the project result in:				
a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	☒	☐	☐	☐
b) Generation of excessive groundborne vibration or groundborne noise levels?	☒	☐	☐	☐
c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	☐	☐	☐	☒

Discussion

a) **Potentially Significant Impact.** The area surrounding the Project Site is developed with recreational uses to the north, residential uses to the northwest and the east/northeast, and institutional uses to the west. Construction of the Project would require the use of heavy construction equipment (e.g., bulldozers, backhoes, cranes, loaders, etc.) that would generate noise on a short-term basis. Therefore, construction of the Project could generate a temporary increase in ambient noise levels in excess of applicable standards for nearby sensitive receptors. In addition, operational activities including on-site (mechanical and loading and refuse collection) and off-site noise (traffic) would generate noise. Therefore, further analysis on this environmental issue will be included in the EIR.

b) **Potentially Significant Impact.** The Project would include construction and operational activities, which could generate temporary and permanent groundborne noise and vibration. Therefore, these issues will be analyzed further in the EIR.

c) **No Impact.** The Project is located approximately five miles from the San Gabriel Valley Airport and 14 miles from the Hollywood Burbank Airport. However, the Project Site is located outside of these airports' 65 dBA Community Noise Equivalent Level (CNEL) noise contour and outside of the airport influence area. Therefore, construction or operation of the proposed Project would not expose people to excessive airport related noise levels and impacts would be less than significant. Therefore, no impact would occur, and no further analysis of this issue is warranted in the EIR.

Population and Housing

Issues (and Supporting Information Sources):	*Potentially Significant Impact*	*Less Than Significant with Mitigation Incorporated*	*Less Than Significant Impact*	*No Impact*
XIV. POPULATION AND HOUSING — Would the project:				
a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	☐	☐	☒	☐
b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	☐	☐	☐	☒

Discussion

a) **Less Than Significant Impact.** The Project consists of the demolition of the Shorb Clinic and construction of a community center in its place. Although the Project would result in the generation of jobs, both for construction and operation, it would be unlikely to generate a substantial increase in population for the City of Alhambra. Both construction workers and employees needed for operation are expected to live within the wider region up to 30 minutes' drive from the Project Site (U.S. Census Bureau, 2021) and not necessarily from within the City of Alhambra. The Southern California Association of Governments (SCAG) estimates that the population of the City of Alhambra will increase by 2,721 households and generate 1,830 new jobs between 2019 and 2050 (SCAG, 2023). Even in the unlikely event that the five new full time jobs, two part time jobs and at this point in time (May 2024) an unknown amount of construction worker jobs created by the proposed Project were to result in new residents to Alhambra (conservatively estimated as 50 new residents in total),[19] the Project would result in an increase of a small fraction of expected City population and employment growth (SCAG 2021, 2023). The Project is thus not expected to induce substantial growth within the City. Therefore, the Project's potential for growth inducing impacts would be less than significant. No further analysis of this issue is warranted in the EIR.

b) **No Impact.** The Project Site is currently occupied by the Shorb Clinic and developed with a partial two-story building, surface parking and ornamental landscaping. There is currently no housing at the Project Site and the construction of the Project would not displace population or housing located within areas adjacent to the Project Site. Therefore, the Project would not displace people or housing that would necessitate developed housing elsewhere and impacts would not occur. No further analysis of this issue is warranted in the EIR.

[19] Based on SCAG 2021 estimates for Households by Household Size which indicates the most commonly occurring household size is of two people and the second-most commonly occurring household is of one person.

Public Services

Issues (and Supporting Information Sources):	*Potentially Significant Impact*	*Less Than Significant with Mitigation Incorporated*	*Less Than Significant Impact*	*No Impact*
XV. PUBLIC SERVICES —				
a) Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the following public services:				
i) Fire protection?	☐	☐	☒	☐
ii) Police protection?	☐	☐	☒	☐
iii) Schools?	☐	☐	☒	☐
iv) Parks?	☐	☐	☒	☐
v) Other public facilities?	☐	☐	☒	☐

Discussion

a.i) **Less Than Significant Impact.** The proposed Project would be served by the City of Alhambra Fire Department Station 72, Southeast District, addressed 1215 S Sixth Street, located adjacent to the Project Site and equipped with an Engine company (City of Alhambra, 2024a). The second closest station is Alhambra Fire Dept. Station 74, addressed 2505 W Norwood Place, located 1.3 miles west of the Project Site and equipped with an Engine company and a Rescue Ambulance (City of Alhambra, 2024b). As discussed in Section XIV.a, *Population and Housing*, the proposed Project would not be expected to generate a significant increase in new residents. Additionally, the Project would provide adequate emergency access, emergency water supply, sprinkler installation, fire alarms, and fire suppression systems, as well as compliance with the California Fire Code and California Building Code standards. Therefore, the Project would not create a significant influx of new residents to the city requiring public services and would not require the addition of a new fire station or modifications to an existing fire station to serve the Project Site. Therefore, the proposed Project impact on fire protection services would be less than significant. No further analysis of this issue is warranted in the EIR.

a.ii) **Less Than Significant Impact.** The Project would be served by the City of Alhambra Police Department, addressed 211 S 1st Street, approximately 1-mile from the Project Site. The Alhambra Police Department works under an Area Command service delivery model, dividing the City into four distinct geographic areas (1 through 4). The Project Site is within Area 2 - South of Mission Road & East of Atlantic Boulevard (City of Alhambra, 2024c). As discussed in Section XIV.a, *Population and Housing*, the proposed Project would not be expected to generate a significant increase in new residents. Therefore, the proposed Project would not create a significant influx of new residents to the city requiring public services and would not require the addition of a new police station or modifications to an existing police station to serve the Project Site. Additionally, the proposed Project would

incorporate alarm and video surveillance systems, which would ensure the safety of its staff and visitors. Therefore, the proposed Project would have less than significant impact on police protection services. No further analysis of this issue is warranted in the EIR.

a.iii) **Less Than Significant Impact.** As mentioned in Section IX.c, *Hazards and Hazardous Materials*, there are two schools located within a 0.25-mile radius of the Project Site. The nearest existing schools to the Project Site are Moor Field Early Education Center located approximately 0.2 miles north, and Ramona Elementary School located approximately 0.2 miles southeast. As discussed in Section XIV.a, *Population and Housing*, the proposed Project would not be expected to generate a significant increase in new residents. Therefore, the Project would not create a significant influx of new residents to the city requiring public services such as schools or create a substantial increase in the demand for schools. As such, the proposed Project would not result in the physical deterioration of existing schools or require new or expanded school facilities. Less than significant impacts would occur, and no further analysis of this issue is warranted in the EIR.

a.iv) **Less Than Significant Impact.** The closest City Park is Almansor Park, located at 800 S Almansor Street, approximately 1 mile northeast of the Project Site. The second closest City Park is Emery Park, located at 2709 Mimosa Street, approximately 1.4 miles northwest of the Project Site (City of Alhambra, 2024d). Additionally, outside of school use times, Moor Field, directly adjacent to the Project Site can be used, including the running track and baseball diamonds. Almansor Park provides a gymnasium, basketball courts, lawn bowling, tennis courts, soccer fields, ball fields, walking trails, picnic pavilion and picnic tables, shade structures and restrooms (City of Alhambra, 2024e). Emery includes an open grass area, picnic tables, playground equipment, barbecues, restrooms, activity room and kitchen facility (City of Alhambra, 2024f). As discussed in Section XIV.a, *Population and Housing,* the Project would not create a significant influx of new residents to the city requiring public services such as parks or create a substantial increase in the demand for park facilities. As such, the proposed Project would not result in the physical deterioration of existing park facilities or require new or expanded park facilities. Less than significant impacts would occur, and no further analysis of this issue is warranted in the EIR.

a.v) **Less Than Significant Impact.** As discussed in Section XIV.a, *Population and Housing*, the proposed Project would not be expected to generate a significant increase in new residents. In terms of other public facilities, the closest library is Alhambra Civic Center Library, 101 S 1st Street, located approximately 0.9 mile north of the Project Site. The Project would not create a substantial increase in the demand for other public facilities such as libraries or create a substantial increase in the demand for libraries. As such, the Project would not result in the physical deterioration of existing libraries or require new or expanded library facilities. In terms of the Alhambra Community Center Project, which in itself is the adaptive reuse of the existing Shorb Clinic to create a new public facility (a community center), the potential environmental impacts associated with the construction and development of this project have been assessed throughout this Initial Study. Any impact areas identified as resulting in potentially significant impacts as determined throughout this analysis, will be evaluated in greater detail in the Draft EIR.

The Alhambra Community Center would include programming for all ages and the creation of the facility could potentially alleviate pressure on other public facilities within the City, such as the Joslyn Adult Recreation Center at 210 N Chapel Avenue and the Emery Park Youth Center at 2709 Mimosa Street. Both of these facilities offer leisure classes (City of Alhambra, 2024g) and the Senior Division at the Joslyn Center offers programs and activities for adults aged 60 and over, including recreation, social services, nutrition, and transportation (City of Alhambra, 2024h). The Granada Park Activity Room and Gym at 2000 Hellman Avenue additionally hosts activity classes for children, Tai Chi Chuan, Kendo Dojo and Kung Fu classes, amongst others. As such, through the development of the new community center and associated programming suitable for a range of youth to senior residents, the Project would not negatively impact acceptable service ratios, response times or other performance objectives for any of the public facilities which currently share a range of community uses. The Project would potentially allow some of the existing community uses to be moved to the purpose-built facility. Less than significant impacts would occur, and no further analysis of this issue is warranted in the EIR.

Recreation

Issues (and Supporting Information Sources):	*Potentially Significant Impact*	*Less Than Significant with Mitigation Incorporated*	*Less Than Significant Impact*	*No Impact*
XVI. RECREATION —				
a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	☐	☐	☒	☐
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	☐	☐	☒	☐

Discussion

a) **Less Than Significant Impact.** As discussed in Section XIV.a, *Population and Housing,* the Project would not create a significant increase of new residents to the City. Additionally, the Project would adaptively reuse part of the existing Shorb Clinic and create a new community center facility for fitness, gatherings, recreation, artistic and creative pursuits, education and wellness activities, thereby potentially reducing the use of existing neighborhood and regional parks and deterioration of facilities elsewhere. As explained previously, the Project would, therefore, not create a significant influx of new residents to the City requiring recreational facilities and would not result in the physical deterioration of existing park facilities or require new expanded park facilities. No further analysis of this issue is warranted in the EIR.

b) **Less Than Significant Impact.** As stated above, the Project would create a new community center facility for fitness, gatherings, recreation, artistic and creative pursuits, education, and wellness activities. The Project would therefore provide on-site recreational uses. However, while the Project would enable use of the community center for recreational pursuits, the community center would provide much more than solely recreational facilities as it would also be used as a meeting space and allow for a range of events in the multi-purpose rooms and to host events on the roof deck, which would not necessarily be recreational in nature. The community center would be open to the public and would provide classes, social activities, recreational activities, educational activities, support and/or public information offered for all residents of the community, and not just those seeking recreational activities. As such, and as discussed in Section XV.a.v, *Public Services*, the Alhambra Community Center would include programming for all ages and the creation of the facility could potentially alleviate pressure on other public facilities within the City, including those currently used for recreational activities. Impacts would be less than significant and no further analysis of this issue is warranted in the EIR.

Transportation

Issues (and Supporting Information Sources):	*Potentially Significant Impact*	*Less Than Significant with Mitigation Incorporated*	*Less Than Significant Impact*	*No Impact*
XVII. TRANSPORTATION — Would the project:				
a) Conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?	☐	☐	☒	☐
b) Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?	☐	☐	☒	☐
c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	☐	☐	☒	☐
d) Result in inadequate emergency access?	☐	☐	☒	☐

Discussion

a) **Less than Significant Impact.** The Project Site is currently occupied by the Shorb Clinic and developed with a partial two-story building, surface parking and ornamental landscaping. The clinic has no patrons and thus no associated trips as the building has been non-operational for a considerable number of years. The Project would replace the development on the Project Site with a new community center building, which would increase the associated vehicular, bicycle, and pedestrian traffic, as well as transit demand. Project construction would also result in a temporary increase in traffic in the Project area as the result of construction-related truck trips and worker vehicle trips and could necessitate temporary construction-related lane closures and impede vehicular, bicycle, and pedestrian access in the Project vicinity. However, with the inclusion of PDF-TR-1, a CTMP would ensure minimal impacts to neighboring residents and land uses and avoid interruption of pedestrian, vehicle, and alternative transportation modes and public transit during construction. This would also help ensure the Project is consistent with General Plan Mobility goals and policies (City of Alhambra 2019) including Policy M-1C to provide adequate and safe access for all users, including pedestrians, bicyclists, and motorists of all ages and abilities.

The Project Site is located in an area well served by public transportation, including the Alhambra Community Transit Green Line (City of Alhambra, 2024a) and LA Metro Bus Route 76 (LA Metro, 2023), and the Project would include bicycle parking facilities and would encourage alternative means of transport. Additionally, the Project Site (between 7th and 6th Street) is identified in the City of Alhambra's Active Transportation Plan (2024b) as the site of a new Class IIIB bicycle path. The Project is consistent with the Active Transportation Plan as the landscape design includes a bicycle and pedestrian pathway along the north side of the site to connect S. 7th and S. 6th Streets. Vehicular traffic would not be allowed to use the multi-use path, thus the City would be creating a higher Class I bicycle lane between S. 7th and S. 6th Streets. The Traffic Impact Study Scoping memorandum (**Appendix I**) notes that the trip generation rate for Recreational Community Center is 28.82 daily trips based on a 1,000 sq ft gross floor area (GFA). Through multiplying this figure (28.82) by the Project footprint (25,000 sq ft divided by 1,000 sq ft GFA, i.e. 25.00) it would

have the potential to generate 721 trips per day (28.82 x 25.00), including 48 AM Peak Hour trips and 63 PM Peak Hour trips. It should be noted that the final project plans may have a lower GFA, therefore the number of trips generated may ultimately be lower. Additionally, per the *City of Alhambra Transportation Study Guidelines for Vehicle Miles Traveled and Level of Service Assessment* (2020), some project types have been identified as having the presumption of a less than significant impact. The Project as a Community institution (public libraries, fire stations, local government) would be screened out for VMT analysis. Therefore, the Project would have a less than significant impact on vehicular, bicycle, pedestrian, and public transportation networks during construction and operation. Therefore, the Project is considered consistent with applicable programs, plans, ordinances, and policies, such as the Active Transportation Plan and the City of Alhambra General Plan policies addressing the circulation system and impacts would be less than significant and no further analysis of this issue is warranted in the EIR.

b) **Less than Significant Impact.** As stated in Section XVII.a, development of the Project would generate additional traffic beyond existing conditions. Per State CEQA Guidelines, Section 15064.3(b), the Project's transportation impacts will be evaluated based on a vehicle miles traveled (VMT) analysis. Proposed CEQA Guideline Section 15064.3, subdivision (b)(1), states that lead agencies generally should presume that certain projects proposed within 0.5 miles of an existing major transit stop or an existing stop along a high-quality transit corridor will have a less-than-significant impact on VMT. This presumption would not apply, however, if project-specific or location-specific information indicates that the project will still generate significant levels of VMT. Per the Traffic Impact Study Scoping memorandum (**Appendix I**), some project types have been identified as having the presumption of a less than significant impact. The following VMT screening analysis follows the project steps outlined in the City's guidelines:

- Transit Priority Area Screening – Projects located within a Transit Priority Area (TPA) may be presumed to have a less than significant impact. The project site is within a TPA. However, per the City's guidelines, this criterion is not applicable to projects with a floor area ratio (FAR) of less than 0.75. The current planned FAR of the project is 0.38. Therefore, the project does not meet this screening criterion.
- Low VMT Area Screening – The project is within a low VMT-generating area according to the San Gabriel Valley Council of Governments (SGVCOG VMT Tool).
- Project Type Screening – The following is one of the uses that can be presumed to have a less than significant impact absent substantial evidence to the contrary, as its uses are local serving in nature:
  - Community institutions (public libraries, fire stations, local government)

  With the proposed use (Recreational Community Center) falling within the above category of community institutions, this project can be screened out for VMT analysis.

Therefore, the analysis provided within the Traffic Impact Study Scoping memorandum prepared for the Project demonstrates that VMT Impacts have been assessed in accordance with the State CEQA Guidelines and the approved and applicable local guidelines and impacts would be less than significant and no further analysis of this issue is warranted in the EIR.

c) **Less than Significant Impact.** The proposed Project does not include design features, such as sharp curves or dangerous intersections, or incompatible uses that would result in traffic safety hazards. Ingress and egress movements for the proposed Project would be facilitated via the driveway entrances to the car park on S. 6th Street and S. 7th Street. The proposed Project would be subject to review and approval by the City of Alhambra Community Development and Public Works Departments. Access to the Project Site would be required to comply with all City design standards, which would ensure adequate design and construction of proposed improvements. Therefore, implementation of the proposed Project would result in less than significant impacts and no further analysis of this issue is warranted in the EIR.

d) **Less than Significant Impact.** Slow-moving construction-related traffic along Valley Boulevard could reduce optimal traffic flows and could delay emergency vehicles traveling through the Project area. In addition, certain construction activities, such as roadway amendments along S. 6th Street, utility relocation or extensions, and drainage reconstruction could require temporary lane closures. However, this would not result in a significant impact on traffic flows because construction-related traffic would only occur during short periods of time during the day and would cease upon completion. In addition, prior to construction activities, a construction traffic control plan would be prepared for the proposed Project to ensure that adequate emergency access exists during construction. There would be no impacts during operation as emergency vehicles would route around the Project Site. As such, impacts would be less than significant and no further analysis of this issue is warranted in the EIR.

Tribal Cultural Resources

Issues (and Supporting Information Sources):	*Potentially Significant Impact*	*Less Than Significant with Mitigation Incorporated*	*Less Than Significant Impact*	*No Impact*
XVIII. TRIBAL CULTURAL RESOURCES —				
a) Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:				
i) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources. Code Section 5020.1(k), or	☒	☐	☐	☐
ii) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	☒	☐	☐	☐

Discussion

a.i) **Potentially Significant Impact.** Assembly Bill (AB) 52 requires that prior to release of an EIR for a project, the lead agency shall consult with Native American Tribes to identify, evaluate, and mitigate impacts to tribal cultural resources if a Tribe has formally requested consultation (OPR, 2017). A record search of the Native American Heritage Commission (NAHC) Sacred Lands File (SLF) was completed for the Project which returned negative results. However, the absence of specific site information in the SLF does not indicate the absence of cultural resources in the Project area. As such, to allow for compliance with AB 52, which mandates Native American consultation, this issue will be included in the EIR.

a.ii) **Potentially Significant Impact.** As above, to allow for compliance with AB 52, which mandates Native American consultation if requested, this issue will be included in the EIR.

References

Utilities and Service Systems

Issues (and Supporting Information Sources):	*Potentially Significant Impact*	*Less Than Significant with Mitigation Incorporated*	*Less Than Significant Impact*	*No Impact*
XIX. UTILITIES AND SERVICE SYSTEMS — Would the project:				
a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	☐	☐	☒	☐
b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?	☐	☐	☒	☐
c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	☐	☐	☒	☐
d) Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	☐	☐	☒	☐
e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	☐	☐	☒	☐

Discussion

a) **Less than Significant Impact.** The Project would have a net new increase in activity and occupation of the Project Site compared to existing conditions. Although the Project's proposed increase in use and additional developed floor area would be greater than it is currently, the potential of the Project to result in the construction of new or expanded water (including those related to fire flow), wastewater treatment, storm water drainage, electric power, natural gas or telecommunications facilities, would not be likely to cause significant environmental effects as set out in the following paragraphs.

With regard to water and wastewater, the City maintains and operates a State Water Resources Control Board approved potable water system and also operates and maintains the sewage collection system that services the property. According to the Will Serve letter (**Appendix H**), both systems have sufficient capacity to serve the proposed Project and thus should not result in the relocation or construction of new or expanded water or wastewater treatment facilities. The Project would increase water demand compared to the Project site's existing conditions; however, water use would be characteristic of an institutional (and governmental) development with surface parking and landscaping. According to the city's 2020 Urban Water Management Plan (UWMP), the city's water demand is expected to increase from 10,433 acre-feet per year (AFY) in 2025 to 10,812 AFY in 2045 which is an approximate increase of 379 AFY. This increase in demand is projected to be accommodated by various supply sources and per the UWMP, the City is able to provide sufficient water supplies to meet the projected water demands of its

customers, including during a five consecutive year drought period. Additionally, per the City's Sewer Master Plan (2007) and its Sewer System Management Plan (2019), the City implements a capital improvement plan (CIP) that provides hydraulic capacity of key sanitary sewer system elements and identifies portions of the sanitary sewer system that require upgrades as needed. As the Will Serve letter notes, the existing system has sufficient capacity, therefore, the Project would not require or result in the relocation or construction of new or expanded water or wastewater facilities, the construction or relocation of which could cause significant environmental effects. Impacts would be less than significant, and no further analysis of this issue is warranted in the EIR.

In terms of stormwater drainage, the existing Project Site already has stormwater drains on site. To enhance pollutant removal and groundwater recharge benefits, improvements can be made beyond conventional stormwater quality control measures through the use of Low Impact Development (LID) strategies. Under the Project, stormwater runoff from the Project Site would be entirely captured and treated by the LID drywell system as described previously, which would be more beneficial than the existing stormwater system as it allows stormwater to slowly percolate into the ground on site. As such, implementation of the LIDs would ensure that the site conditions are more favorable than the existing storm drain system, thereby negating negative effects on the environment. Impacts would be less than significant, and and no further analysis of this issue is warranted in the EIR.

The existing building is served by Southern California Edison (SCE) for its electricity needs and Southern California Gas (SoCalGas) for its gas needs. The Project would continue to be served by SCE and SoCalGas. As both providers already deliver their services to homes and businesses in the vicinity of the Project Site, it is anticipated that existing power and gas facilities would be sufficient to support the Project's needs based on the fact that both providers' systems are designed to operate using a combination of storage and pipeline supplies (gas) and storage and transmission capabilities (electricity) to meet customer demand. As such, no substantial upgrades to offsite power or gas facilities are anticipated. Therefore, the Project would not require or result in the relocation or construction of new or expanded power and gas facilities, the construction or relocation of which could cause significant environmental effects. Impacts would be less than significant, and no further analysis of this issue is warranted in the EIR.

With regard to telecommunications, the Project Site is located in a developed and urbanized area that is served by existing telecommunication services. The Project would include the installation of new underground telecommunication lines (for internet, telephone, and other services), as needed, to serve the use proposed on the Project Site. Construction impacts associated with the installation of new telecommunication infrastructure would likely involve trenching to place the lines below ground surface. When considering impacts resulting from the installation of any required telecommunications infrastructure, all impacts are of a relatively short duration and would cease to occur when installation is complete. Installation of new telecommunications infrastructure, if needed, is expected to be limited to on-site telecommunications distribution and minor off-site work associated with connections to the broader infrastructure system. As telecommunication providers already deliver their services

to homes and businesses in the vicinity of the Project Site, it is anticipated that existing telecommunications facilities would be sufficient to support the Project's needs for telecommunication services. As such, no substantial upgrades to offsite telecommunications facilities are anticipated. Therefore, the Project would not require or result in the relocation or construction of new or expanded telecommunication facilities, the construction or relocation of which could cause significant environmental effects. Impacts would be less than significant, and no further analysis of this issue is warranted in the EIR.

As set out above, the Project would not result in the construction of new or expanded water (including those related to fire flow), wastewater treatment, storm water drainage, electric power, natural gas or telecommunications facilities, the construction or relocation of which could cause significant environmental effects. Therefore, implementation of the proposed Project would result in less than significant impacts and no further analysis of this issue is warranted in the EIR.

b) **Less than Significant Impact.** The Project would increase water demand within the Project Site compared to existing conditions. However, as set out in the Will Serve letter and UWMP (see threshold XIX (a) above), the approved potable water system has sufficient capacity to serve the proposed Project. In the event that the City of Alhambra Utilities Department requires water service upgrades due to future users being greater than currently anticipated, taking into account the water conservation measures proposed by the Project, as applicable, these will be required as a Condition of Approval during Project review by the City. Impacts would be less than significant, and no further analysis of this issue is warranted in the EIR.

c) **Less than Significant Impact.** Wastewater generated by the City is treated by the Sanitation Districts of Los Angeles County (LACSD), with the majority treated at the Whittier Narrows Water Reclamation Plant (WNWRP) which has a capacity of 15 million gallons of wastewater per day (MGD), and the balance treated at the Joint Water Pollution Control Plant (JWPCP) which has a design capacity of 400 MGD. LACSD estimates approximately 69 gallons per person per day of wastewater is generated within LACSD's service area (City of Alhambra, 2021a), totaling approximately 5.5 million gallons per day or approximately 6,500 Acre feet per Year (AFY). According to the City of Los Angeles Bureau of Engineering's Sewage Generation Factors (City of Los Angeles, 2019) for a community center, the generation factor equals 3 gallons per day (GPD) per occupant. Based on 300 users per day the wastewater generated would be approximately 900 gallons per day, which when combined with LACSD's service area total of 5.5 million gallons per day would be well under LACSD's generation per person per day estimations and also the wastewater treatment plants would have sufficient remaining capacity (WNWRP would have approximately 9.5 MGD remaining)to treat the Project's wastewater generated. Impacts would be less than significant, and no further analysis of this issue is warranted in the EIR.

d) **Less than Significant Impact.** Consolidated Disposal Service, also known as Republic Services, provides exclusive solid waste and recycling collection services for the City of

Alhambra (City of Alhambra, 2021b). Construction of the Project would result in generation of construction and demolition debris such as metal scrap, lumber, concrete which will be collected and diverted to a construction and demolition debris facility for materials to be recycled and/or discarded. It is anticipated that a large amount of the construction debris would be recycled in accordance with Assembly Bill 939, California Integrated Waste Management Act, which requires each jurisdiction in California to divert at least 50 percent of its waste stream away from landfills either through waste reduction, recycling or other means. Residual wastes, such as trash, packing materials, and certain non-recyclable plastics could require disposal at landfill, which would likely be at a County of Los Angeles landfill, such as the Sunshine Canyon Landfill (Browning-Ferris Industries, 2024). Disposal and recycling of the construction debris would be required to comply with all federal, State, and local regulations.

In addition to in-County landfills, out-of-County disposal facilities may also be available to the City such as hazardous waste landfill sites in Kettleman City (Kings County) or Buttonwillow (Kern County). Aggressive waste reduction and diversion programs on a Countywide level have helped reduce disposal levels at the County's landfills and based on the Los Angeles County Integrated Waste Management Plan (ColWMP), the County anticipates that future Class III disposal needs can be adequately met through 2034 through a number of strategies that would be carried out in coming years. Such strategies include the following: (1) maximize waste reduction and recycling; (2) expand existing landfills; (3) study, promote, and develop alternative technologies; (4) expand transfer and processing infrastructure; and (5) promote out-of-county disposal (including waste-by-rail). It should also be noted that with annual reviews of demand and capacity in each subsequent Annual Report, the 15-year planning horizon provides sufficient lead time for the County to address any future shortfalls in landfill capacity (County of Los Angeles, 2021).

The California Department of Resources and Recycling and Recovery (CalRecycle) estimates solid waste generation factors, which for public/institutional facilities equals 0.007 lbs/sq ft /day (CalRecycle, 2019). Based on the proposed 25,000 sq ft new facility the waste generation would equal 175 lbs/day of solid waste or 32 tons per year (tpy). The annual amount of solid waste generated by the Project would represent an incremental fraction of a percent of the estimated 142.67 million tons of remaining disposal capacity for the County's Class III landfills. The Sunshine Canyon Landfill is the primary recipient of the City's waste disposal. The maximum daily capacity for this landfill is 12,100 tons per day (tpd) and the 2020 disposal rate was 7,907 tpd, indicating an unused daily capacity of 4,193 tpd. If all the Project's waste were taken to Sunshine Canyon Landfill, the Project's additions to the daily disposal of 12,100 tons would be a fraction of a percent of the unused daily capacity of 4,193 tons per day. Based on the above, the solid waste generated by the Project could be accommodated by the County's available regional landfills. Therefore, based on capacity remaining at landfills identified in the ColWMP, particularly the Sunshine Canyon landfill, the Project would not generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals.

CalRecycle is the California State Agency that promotes the importance of reducing waste and oversees California's waste management and recycling efforts. CalRecycle has issued jurisdiction waste diversion rate targets equivalent to 50 percent of the waste stream as expressed in pounds per person per day. Thus, it is important to note that the estimate of solid waste generated by the Project is conservative, in that the amount of solid waste that would need to be landfilled would likely be less than this forecast based on local implementation of solid waste diversion targets. Therefore, the Project would not cause any significant impacts from conflicting with statutes or regulations related to solid waste during operation. Impacts would be less than significant, and no further analysis of this issue is warranted in the EIR.

e) **Less than Significant Impact.** All local governments, including the City of Alhambra, are required under AB 939, the Integrated Waste Management Act of 1989, to develop source reduction, reuse, recycling, and composting programs to reduce tonnage of solid waste going to landfills. Cities must divert at least 50 percent of their solid waste generation into recycling. If the local jurisdiction's solid waste exceeds the target, the local jurisdiction would be required to pay fines or penalties from the State for not complying with AB 939. The waste generated by the Project would be incorporated into the waste stream of City of Alhambra, and diversion rates would not be substantially altered. The Project does not include any component that would conflict with state laws governing construction or operational solid waste diversion and would comply pursuant to local implementation requirements. Impacts would be less than significant, and no further analysis of this issue is warranted in the EIR.

Wildfire

Issues (and Supporting Information Sources):	*Potentially Significant Impact*	*Less Than Significant with Mitigation Incorporated*	*Less Than Significant Impact*	*No Impact*
XX. WILDFIRE — If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:				
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?	☐	☐	☒	☐
b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	☐	☐	☒	☐
c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	☐	☐	☒	☐
d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	☐	☐	☒	☐

Discussion

a–d) **Less than Significant Impact.** The proposed Project would be located in an urban area of the City of Alhambra. Based on a review of the Very High Fire Hazard Severity Zones (VHFHSZ) in LRA map, the Project Site is not located within an area that is designated as a VHFHSZ (CAL FIRE, 2023). The nearest VHFHSZ designated in a Local Responsibility Area (LRA) is located approximately 2.2 miles northwest of the Project Site in the Monterey Hills area, and outside the City of Alhambra boundary. Due to the distance from a VHFHSZ, the proposed Project would result in less than significant impacts related to wildfires. No further analysis of this issue is warranted in the EIR.

Mandatory Findings of Significance

Issues (and Supporting Information Sources):	*Potentially Significant Impact*	*Less Than Significant with Mitigation Incorporated*	*Less Than Significant Impact*	*No Impact*
XXI. MANDATORY FINDINGS OF SIGNIFICANCE —				
a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	☒	☐	☐	☐
b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?	☒	☐	☐	☐
c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	☒	☐	☐	☐

Discussion

a) **Potentially Significant Impact.** As discussed throughout this Initial Study, the Project would have the potential to degrade the quality of the environment in terms of the following environmental topics: Biological Resources (sensitive species and wildlife corridors), Cultural Resources (all except disturbance to human remains), Geology and Soils (paleontological resources), Noise (all but aircraft noise), and Tribal Cultural Resources (all). It is recommended that Project impacts for the above topics be evaluated further in the EIR.

b) **Potentially Significant Impact.** The potential for cumulative impacts occurs when the independent impacts of a given Project are combined with the impacts of related projects in proximity to the Project Site that would create impacts that are greater than those of the Project alone. Related projects include past, current, and/or probable future projects whose development could contribute to potentially significant cumulative impacts in conjunction with a given project. Information on future projects within a 1-mile radius of the proposed development was obtained from the City of Alhambra's Community Development Department. A review was carried out of all projects that are proposed, on appeal, approved, or under construction and the following projects are within a 1-mile radius of the project site:

- 749-753, 801 S Sierra Vista Ave (Residential - 18 DU) - Planning approved, In Building plan check.
- 234 S Curtis Ave (New 4-unit 3,975 square foot apartment complex) - Planning approved, In Building plan check.
- 38 S Second St (Residential & Commercial Mixed Use – 50 DU) - Planning approved, In Building plan check.

- 1000 S 5th (PD-21-44 - Demo house/garage, rebuild 2-story home/garage) - Planning approved, In Building plan check.
- 123 S Marguerita Ave (4-unit 4,000 square foot apartment complex) - Planning approved, Under construction.
- 205-207 S Marguerita Ave (7-unit, 13,197 square foot residential condominium development) - Planning approved, In Building plan check.
- 501 S Garfield (PD-22-33 - combine dental and office space) - Planning approved, In Building plan check.
- 727 S Sierra Vista Ave (New 6-unit 5,471 square foot residential condominium complex) - Building permits issued.
- 823 S Sierra Vista (PD-23-62, VAR-23-18 - detached 2nd unit w/garage) - Planning approved, Not in Building plan check yet.
- 24 & 28 E Valley (Vehicle sales and vehicle accessories/parts sales; parking lot & site improvements) - Planning approved, Not in Building plan check yet.
- 1000 & 1008 S Garfield (PD-23-42, LOTM-23-04 – construct a dental clinic building) - Planning approved, Not in Building plan check yet (Proof of COA).
- 929 S 8th (PD-20-21 - ADU /2-car garage) - Planning approved, Under construction.
- 747-753 S Stoneman (Residential- Construction of 4 new residential buildings, 10-unit condos) - Planning approved, Construction complete, Permits ready for final.
- 720 S Stoneman Ave (7-unit 6,477 square foot residential condominium complex) - In Planning process.
- 231-235 S Curtis Ave (New 9-unit 12,650 square foot residential condominium complex) - In Planning process.
- 35-40-200 W Bay St (Expand church into adjacent office) - In Planning process.

Each of the topics determined to have the potential for significant impacts in this Initial Study will be subject to further evaluation in the EIR, including evaluation of the potential for cumulatively significant impacts. Topics for which Initial Study determinations were "No Impact" or "Less Than Significant Impact" have been determined not to have the potential for significant cumulative impacts and do not warrant further assessment in the EIR.

As analyzed above, the Project would not have a significant impact on aesthetic resources related to scenic vistas, scenic resources within a state scenic highway, and light and glare. In addition, related projects would be reviewed on a case-by-case basis by City of Alhambra to comply with the Alhambra Code requirements regarding building heights, setbacks, massing, and lighting, or, for those projects that require discretionary actions, to undergo site-specific review regarding building density, design, and light and glare effects. Therefore, the Project's contribution to aesthetics impacts would not be cumulatively considerable. Thus, cumulative impacts would be less than significant.

The Project Site is located in an urbanized area and is currently developed with a clinic and associated paved surface parking. No agricultural or forestry uses are located on the Project

Site. In addition, the Project Site is not designated as Prime Farmland, Unique Farmland, or Farmland of Statewide Importance by the Farmland Mapping and Monitoring Program, is not zoned for agriculture or forestry use, and is not under a Williamson Act contract. The same is likely true of related projects given their location within urbanized areas. However, even if some of the related projects are exceptions to the above, the Project would not convert farmland, forest land, or designated Farmland, would not conflict with existing zoning for agricultural or forestry use, and would not conflict with a Williamson Act contract. Therefore, the Project's contribution to agricultural and forestry resources would not be cumulatively considerable. Therefore, cumulative impacts would be less than significant.

The Project would have a less than significant impact related to air quality emissions and emissions of odors. By locating the new community center within an area that has existing high quality public transit (with access to existing local bus and rail service), housing, retail, and restaurants, all within walking distance, and by including features that support and encourage pedestrian activity and other non-vehicular transportation and increased transit use in the City, the Project would reduce vehicle trips and VMT and resulting air pollutant emissions. Additionally, projects, uses, and activities that are consistent with the applicable growth projections and control strategies used in the development of the AQMP would not jeopardize attainment of the air quality reductions identified in the AQMP. Furthermore, the Project is considerably beneath SCAQMD Regional Significance Thresholds and SCAQMD LST Significance Thresholds. With regard to odors, it is anticipated that the related projects in the surrounding area would not be uses associated with major odor producing uses such as manufacturing, smelting, food packaging, and other industrial uses. Related projects would be subject to compliance with applicable SCAQMD regulations regarding air quality emissions and odor control. Thus, with compliance to applicable regulatory requirements and site-specific mitigation, as necessary, the Project's contribution to air quality impacts would not be cumulatively considerable. Thus, cumulative impacts would be less than significant.

With respect to Biological Resources, impacts to sensitive plant and animal species would not be cumulatively considerable, as no such habitat occurs on the Project Site. Biological resources are generally site-specific and need to be evaluated within the context of each individual project. Furthermore, related projects would be required to comply with existing regulatory requirements and the building permit review and approval process, which address these subjects. Thus, with compliance to these regulatory requirements and site-specific mitigation as necessary, the Project's contribution to biological resources impacts would not be cumulatively considerable. Thus, cumulative impacts would be less than significant.

Impacts related to disturbance of human remains (as part of Cultural Resources) are site-specific and as such, are assessed on a site-by-site basis. As discussed previously, compliance with applicable regulatory protocols would ensure that impacts on human remains would be less than significant. It is anticipated that compliance with existing regulations would be incorporated into the approval of each related Project. Compliance with applicable regulatory requirements by the Project and related projects would ensure

the Project does not contribute to cumulatively considerable impacts with regard to disturbance of human remains.

Impacts related to energy include the impacts from known development projects, as well as general ambient growth projected to occur, such as that envisioned in the City's General Plan and through regional plans such as SCAG's Connect SoCal 2024. Some of this growth is anticipated to occur on or around properties in the Project. In addition, each of the identified cumulative projects would be individually evaluated with respect to consideration of energy conservation features that could alleviate electrical demand, including compliance with Title 24 and the City Building Code regulations and other State Building Codes. Nonetheless, regardless of the number and location of the cumulative projects, the Project, together with the cumulative developments, would not create an impact that is cumulatively considerable, as each development project would have to comply with site-specific development standards, as well as federal, state, and local energy regulations. As such, cumulative impacts related to consumption of energy and consistency with plans for energy efficiency and renewable energy would be less than significant.

As analyzed above, the Project would result in less than significant impacts to geology and soils. The Project Site is not underlain by an active earthquake fault and, thus, would not contribute to cumulative seismic rupture impacts. Although seismic shaking would occur on the Project Site as well as related project sites, applicable regulatory requirements require consideration of seismic loads in structural design for all related projects. As such, cumulative impacts associated with ground shaking would be less than significant. The Project Site is not located within a State-designated hazard zone for liquefaction. The Project Site is not prone to landslide hazards. As such, the Project would not cumulatively contribute to liquefaction or landslide impacts. While the loss of topsoil among the Project and related projects during construction could result in cumulative erosion impacts, the Project and related projects would be required to implement applicable local, regional and State regulations for grading and excavations during construction, including SWPPP requirements. The Project's contribution to potential cumulative impacts from lateral spreading, subsidence, liquefaction, or collapse would also be less than significant. The Project and related project sites are located in an urbanized area and would connect to existing wastewater infrastructure. Thus, the Project and related projects would not need to use septic tanks or alternative waste disposal systems and, as such, cumulative impacts relative to waste disposal capacity would be nil. Because the Project would not contribute considerably to geology and soils impacts, the Project's cumulative geology and soil impacts would be less than significant.

As mentioned previously, the City of Alhambra General Plan does not identify specific GHG or climate change policies or goals. In the absence of any adopted, quantitative thresholds, the proposed project would not have a significant effect on the environment if the proposed project is found to be consistent with the applicable regulatory plans and policies to reduce GHG emissions, including CARB's 2022 Climate Scoping Plan and SCAG's 2020–2045 RTP/SCS. The 2020–2045 RTP/SCS focuses on "growth in existing urban regions and opportunity areas, where transit and infrastructure are already in place.

Locating new growth near bikeways, greenways, and transit would increase active transportation options and the use of other transit modes, thereby reducing number of vehicle trips and trip lengths and associated emissions." Regardless of the number and location of the cumulative projects, the Project, together with the cumulative developments, would not create an impact that is cumulatively considerable, as each development project would have to be consistent with applicable regulatory plans and policies to reduce GHG emissions. As the Project would be within a Transit Priority Area and includes a Class I bicycle lane as part of the Project's development, the Project would thus be consistent with the 2020–2045 RTP/SCS. As such, cumulative impacts related to greenhouse gases would not be cumulatively considerable. Thus, cumulative impacts would be less than significant.

Many of the related projects would use, handle, store, and/or transport hazardous materials or require demolition of structures containing such materials. As with the Project, related projects would be required to use and store all potentially hazardous materials in accordance with the manufacturers' instructions and handle materials in accordance with Federal, State, and local health and safety standards and regulations. Compliance with existing standards and regulations would ensure that the related projects would not result in significant impacts to the public or the environment through the routine transport, storage, use, disposal, or handling of hazardous materials. Some of the related projects may be on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5. However, each related project would be required to comply with existing Federal, State, and local regulations related to hazardous materials sites, including cleanup sites, and hazardous materials generators. Cumulative impacts would therefore be less than significant in this regard.

Some of the related projects may also include the use of hazardous materials and, as with the Project, be located within one-quarter mile of a school. However, related projects would be subject to environmental review to evaluate potential impacts from hazardous materials releases within one-quarter mile of a school. The Project would not have a considerable contribution related to the use or release of hazardous materials. With the implementation of existing regulations, cumulative impacts with respect to impacts on schools would be less than significant.

Because the Project Site is not located within the vicinity of a private airstrip or an airport land use plan or within 2 miles of a public airport or public use area, the Project's contribution to cumulative impacts regarding safety hazards or exposing people residing or working in the Project area to excessive noise levels would not be cumulatively considerable. Thus, cumulative impacts in this regard would be less than significant.

The related projects would potentially increase the volume of stormwater runoff and contribute to pollutant loading in stormwater runoff within the local vicinity of the Project Site. However, as with the Project, the related projects are located within urbanized areas, which are largely characterized by existing buildings and paved surfaces with limited landscaped areas. Accordingly, the potential to generate a notable amount of new

impermeable surfaces is limited. Pursuant to the City's LID stormwater requirements, related projects would be required to capture and treat runoff flow during storm events similar to the Project. Furthermore, the related projects would be subject to State NPDES permit requirements for both construction and operation. Each project greater than one-acre in size would be required to develop a SWPPP and would be evaluated individually to determine appropriate BMPs and treatment measures to avoid or minimize impacts to water quality. Smaller projects would be minor infill projects with drainage characteristics similar to existing conditions, with negligible impacts. In addition, the City of Alhambra Department of Public Works reviews all construction projects on a case-by-case basis to ensure that sufficient local and regional drainage capacity is available. Thus, compliance with applicable regulatory requirements would avoid significant impacts on drainage/flooding conditions and the quality of water reaching the public drainage system. Cumulative impacts to hydrology and water quality would be less than significant.

Due to their site-specific nature, impacts related to wildfire are typically assessed on a project-by-project basis for a particular localized area. As with the Project, related projects would address site-specific wildfire hazards through implementation of site-specific recommendations and/or mitigation measures. Related projects would also be subject to local and state regulations and standards for fire safety. Regardless, because the Project is not subject to wildland fire hazards, the Project's contribution to wildfire impacts would not be cumulatively considerable. Thus, cumulative impacts would be less than significant.

Related projects could potentially result in an increase in pollutants due to inundation in flood hazard areas, tsunami zones or seiche zones. However, as with the Project, related projects would be subject to applicable LID requirements and, for applicable projects, NPDES permit requirements, including development of SWPPPs for construction projects greater than 1 acre, compliance with LID requirements during operation, and compliance with other local requirements pertaining to surface water quality. It is anticipated that related projects would also be evaluated on an individual basis to determine appropriate BMPs and treatment measures to avoid significant impacts to surface water quality. Therefore, the Project and related projects would not result in significant cumulative impacts with respect to impacts associated with increases in pollutants due to inundation in flood hazard areas and impacts would not be cumulatively considerable.

Impacts regarding physically dividing a community is site-specific, and because the Project would have a less than significant impact on this topic, the Project's contribution would not be cumulatively considerable. Additionally, consistency with plans, policies and regulations is site-specific and furthermore, all cumulative projects in the City would be subject to the same local development standards and potential mitigation requirements as the Project. Accordingly, the Project would not combine with the cumulative projects to create a cumulatively significant land use impact, and therefore, cumulative impacts would be less than significant.

As discussed above, the Project would have less than significant impact on mineral resources. Because of the large number and broad extent of oil drilling districts and State-

designated oil fields in the greater area, some of the related projects may be located within these designated areas. However, with implementation of new methodologies, such as slant drilling, related projects would not substantially reduce extraction capabilities, impede exploratory operations, or would cumulatively result in the significant loss of availability of oil resources. Regardless, because the Project would have a less than significant impact incremental contribution to the potential impact on mineral resources, the Project would have less than significant cumulative impact on such resources.

Regarding public services and recreation, the Project would result in less than significant impacts, and because the Project would have a less than significant impact on the issues within these topics, the Project's contribution would not be cumulatively considerable. Related projects would cumulatively generate the need for additional public services nd ecreational facilities. The related projects would generate revenue to the City's general funds that could be used to fund public services expenditures as necessary to offset the cumulative incremental impact. Therefore, cumulative impacts would be less than significant.

With regard to utilities infrastructure, cumulative construction impacts associated with the installation of utilities infrastructure would primarily involve minor trenching in order to place lines below the surface and/or connections to existing infrastructure. This trenching, if any, and the associated installation of such infrastructure would typically occur within the already developed sites and/or within the adjacent right-of-way and would be limited in extent and temporary in nature. Prior to ground disturbance, Project contractors would coordinate with the City and utility company to identify the locations and depth of all utilities and the City/utility company would be notified in advance of proposed ground disturbance activities to avoid other existing utility lines and disruption of utility service. Furthermore, a Construction Traffic Management Plan for each related project would be prepared in order to minimize disruptions to traffic flow, which would consider any related project-related utility improvements, as necessary. Lastly, any impacts associated with the construction of such infrastructure would be accounted for in the impact analysis for the Project and related projects in other sections of their respective CEQA documents (e.g., Air Quality, Noise, Transportation, etc.). Thus, cumulative impacts would be less than significant.

Solid waste disposal is a regional issue addressed by regional agencies, in this case the County of Los Angeles. The remaining disposal capacity for the County's Class III landfills is estimated at approximately 142.67 million tons. The Sunshine Canyon Landfill is the primary recipient of the City's waste disposal. The maximum daily capacity for this landfill is 12,100 tpd and the 2020 disposal rate was 7,907 tpd, indicating an unused daily capacity of 4,193 tons. Thus, sufficient capacity would be available to meet the demand created by related projects at the County's Class III landfills, including the Sunshine Canyon Landfill. As discussed above, the Project impacts on solid waste disposal would be less than significant. In addition, similar to the Project, related projects would be required to comply with applicable regulations related to solid waste, including those pertaining to waste reduction and recycling. Detailed components regarding waste reduction and recycling would be finalized for each related project on a project-by-project basis at the time of plan

submittal to the City for the necessary building permits and reviews conducted pursuant to checklist items in the City's Green Building Code or other solid waste requirements, as applicable. As such, impacts to the solid waste system from cumulative development would be less than significant and thus, the Project would not contribute to a cumulatively significant solid waste impact.

Based on the above, Project implementation would not be expected to result in a considerable contribution to cumulatively significant impacts for the environmental topics discussed above. No further discussion of potential cumulative effects for these topics in the EIR is required.

Environmental topics for which the determination in this Initial Study is "Potentially Significant Impact" have been determined to have the potential for significant cumulative impacts as the Project could potentially contribute considerably to cumulative impacts in terms of these topics. These topics include: Cultural Resources (all except disturbance to human remains), Noise (all but aircraft noise) and Tribal Cultural Resources (all). It is recommended that the potential cumulative impacts of the Project related to these topics be evaluated further in the EIR.

c) **Potentially Significant Impact.** As discussed throughout this Initial Study, the Project could result in potentially significant environmental impacts in terms of the following environmental topics: Biological Resources (sensitive species and wildlife corridors), Cultural Resources (all except disturbance to human remains), Geology and Soils (paleontological resources), Noise (all but aircraft noise) and Tribal Cultural Resources (all). These impacts could have potentially adverse effects on human beings, and therefore, these topics will be evaluated further in the EIR.

Subject: **Alhambra Community Center Project**
Assembly Bill 52, Request for Consultation on Tribal Cultural Resources

Dear Chairperson Alvarez,

The City of Alhambra (City) is contacting you in compliance with the California Assembly Bill (AB) 52 (including the California Public Resources Code Section 21080.3.1) for the Alhambra Community Center Project (Project). Pursuant to the California Environmental Quality Act Review (CEQA), the City will serve as the Lead Agency for the environmental review of the Project. Please find below a description of the Project and the name of our Project point of contact. Figures showing the Project's location are attached. Also attached is a Sacred Lands File search through the Native American Heritage Commission, as requested by the City, that yielded negative results.

Project Description

The City proposes to develop the Project located at 612 W. Shorb Street within the City's limits. The Project Site is currently improved with an existing one- and two-story abandoned brick medical clinic building sited on the northern portion of the Project Site with associated surface parking found in the southern portion for the Project Site. The Project intends to demolish the existing building and develop a new partial two-story community center building.

Pursuant to California Public Resources Code Section 21080.3, you have 30 days from the receipt of this letter to request in writing, consultation with the City. Should the Gabrielino-Tongva Tribe request consultation, the City will begin the consultation process within 30 days of receiving your request.

To request consultation under AB 52 for the Project, please submit your request, in writing to:

Mike Macias
Director of Parks and Recreation
City of Alhambra
Parks & Recreation Department
111 South First Street
Alhambra, CA 91801
Email: mmacias@cityofalhambra.org

We understand that consultation is a private and ongoing process; we would appreciate any input the Gabrielino-Tongva Tribe may have on the Project.

Very Respectfully,

Mike Macias
Director of Parks and Recreation

Re: Alhambra Community Center Project, Los Angeles County

Dear Ms. Clark:

A record search of the Native American Heritage Commission (NAHC) Sacred Lands File (SLF) was completed for the information you have submitted for the above referenced project. The results were negative. However, the absence of specific site information in the SLF does not indicate the absence of cultural resources in any project area. Other sources of cultural resources should also be contacted for information regarding known and recorded sites.

Attached is a list of Native American tribes who may also have knowledge of cultural resources in the project area. This list should provide a starting place in locating areas of potential adverse impact within the proposed project area. I suggest you contact all of those indicated; if they cannot supply information, they might recommend others with specific knowledge. By contacting all those listed, your organization will be better able to respond to claims of failure to consult with the appropriate tribe. If a response has not been received within two weeks of notification, the Commission requests that you follow-up with a telephone call or email to ensure that the project information has been received.

If you receive notification of change of addresses and phone numbers from tribes, please notify me. With your assistance, we can assure that our lists contain current information.

If you have any questions or need additional information, please contact me at my email address: Andrew.Green@nahc.ca.gov.

Sincerely,

Andrew Green

This list is current only as of the date of this document. Distribution of this list does not relieve any person of statutory responsibility as defined in Section 7050.5 of the Health and Safety Code, Section 5097.94 of the Public Resource Section 5097.98 of the Public Resources Code.

This list is only applicable for contacting local Native Americans with regard to cultural resources assessment for the proposed Alhambra Community Center Project, Los Angeles County.

Record: PROJ-2024-000180
Report Type: List of Tribes
Counties: Los Angeles
NAHC Group: All

Appendix B
Air Quality Emissions Modeling

B.1-1 Air Quality CalEEMod Detailed Report

Alhambra Community Center Project Detailed Report

Table of Contents

1. Basic Project Information

1.1. Basic Project Information

1.2. Land Use Types

1.3. User-Selected Emission Reduction Measures by Emissions Sector

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

2.2. Construction Emissions by Year, Unmitigated

2.3. Construction Emissions by Year, Mitigated

2.4. Operations Emissions Compared Against Thresholds

2.5. Operations Emissions by Sector, Unmitigated

2.6. Operations Emissions by Sector, Mitigated

3. Construction Emissions Details

3.1. Demolition (2025) - Unmitigated

3.2. Demolition (2025) - Mitigated

3.3. Grading (2025) - Unmitigated

3.4. Grading (2025) - Mitigated

3.5. Building Construction (2025) - Unmitigated

3.6. Building Construction (2025) - Mitigated

3.7. Building Construction (2026) - Unmitigated

3.8. Building Construction (2026) - Mitigated

3.9. Paving (2026) - Unmitigated

3.10. Paving (2026) - Mitigated

3.11. Architectural Coating (2026) - Unmitigated

3.12. Architectural Coating (2026) - Mitigated

4. Operations Emissions Details

4.1. Mobile Emissions by Land Use

4.1.1. Unmitigated

4.1.2. Mitigated

4.2. Energy

4.2.1. Electricity Emissions By Land Use - Unmitigated

4.2.2. Electricity Emissions By Land Use - Mitigated

4.2.3. Natural Gas Emissions By Land Use - Unmitigated

4.2.4. Natural Gas Emissions By Land Use - Mitigated

4.3. Area Emissions by Source

4.3.1. Unmitigated

4.3.2. Mitigated

4.4. Water Emissions by Land Use

4.4.1. Unmitigated

4.4.2. Mitigated

4.5. Waste Emissions by Land Use

4.5.1. Unmitigated

4.5.2. Mitigated

4.6. Refrigerant Emissions by Land Use

4.6.1. Unmitigated

4.6.2. Mitigated

4.7. Offroad Emissions By Equipment Type

4.7.1. Unmitigated

4.7.2. Mitigated

4.8. Stationary Emissions By Equipment Type

4.8.1. Unmitigated

4.8.2. Mitigated

4.9. User Defined Emissions By Equipment Type

4.9.1. Unmitigated

4.9.2. Mitigated

4.10. Soil Carbon Accumulation By Vegetation Type

4.10.1. Soil Carbon Accumulation By Vegetation Type - Unmitigated

4.10.2. Above and Belowground Carbon Accumulation by Land Use Type - Unmitigated

4.10.3. Avoided and Sequestered Emissions by Species - Unmitigated

4.10.4. Soil Carbon Accumulation By Vegetation Type - Mitigated

4.10.5. Above and Belowground Carbon Accumulation by Land Use Type - Mitigated

4.10.6. Avoided and Sequestered Emissions by Species - Mitigated

5. Activity Data

5.1. Construction Schedule

5.2. Off-Road Equipment

5.2.1. Unmitigated

5.2.2. Mitigated

5.3. Construction Vehicles

5.3.1. Unmitigated

5.3.2. Mitigated

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

5.5. Architectural Coatings

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

5.6.2. Construction Earthmoving Control Strategies

5.7. Construction Paving

5.8. Construction Electricity Consumption and Emissions Factors

5.9. Operational Mobile Sources

5.9.1. Unmitigated

5.9.2. Mitigated

5.10. Operational Area Sources

5.10.1. Hearths

5.10.1.1. Unmitigated

5.10.1.2. Mitigated

5.10.2. Architectural Coatings

5.10.3. Landscape Equipment

5.10.4. Landscape Equipment - Mitigated

5.11. Operational Energy Consumption

5.11.1. Unmitigated

5.11.2. Mitigated

5.12. Operational Water and Wastewater Consumption

5.12.1. Unmitigated

5.12.2. Mitigated

5.13. Operational Waste Generation

5.13.1. Unmitigated

5.13.2. Mitigated

5.14. Operational Refrigeration and Air Conditioning Equipment

5.14.1. Unmitigated

5.14.2. Mitigated

5.15. Operational Off-Road Equipment

5.15.1. Unmitigated

5.15.2. Mitigated

5.16. Stationary Sources

5.16.1. Emergency Generators and Fire Pumps

5.16.2. Process Boilers

5.17. User Defined

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

5.18.1.2. Mitigated

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

5.18.1.2. Mitigated

5.18.2. Sequestration

5.18.2.1. Unmitigated

5.18.2.2. Mitigated

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

6.2. Initial Climate Risk Scores

6.3. Adjusted Climate Risk Scores

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

7.2. Healthy Places Index Scores

7.3. Overall Health & Equity Scores

7.4. Health & Equity Measures

7.5. Evaluation Scorecard

7.6. Health & Equity Custom Measures

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	Alhambra Community Center Project
Construction Start Date	4/1/2025
Operational Year	2026
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	0.50
Precipitation (days)	18.2
Location	34.07919575994478, -118.13007895760487
County	Los Angeles-South Coast
City	Alhambra
Air District	South Coast AQMD
Air Basin	South Coast
TAZ	4956
EDFZ	7
Electric Utility	Southern California Edison
Gas Utility	Southern California Gas
App Version	2022.1.1.22

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description

General Office Building	25.0	1000sqft	0.38	25,000	2,500	—	—	—
City Park	0.17	Acre	0.17	0.00	7,500	7,500	—	—
Parking Lot	93.0	Space	0.84	0.00	0.00	—	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Construction	C-10-A	Water Exposed Surfaces
Construction	C-10-B	Water Active Demolition Sites

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

Un/Mit.	TOG	ROG	NOx	CO	SO2	PM10E	PM10D	PM10T	PM2.5E	PM2.5D	PM2.5T	BCO2	NBCO2	CO2T	CH4	N2O	R	CO2e

5.18.2.2. Mitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	15.4	annual days of extreme heat
Extreme Precipitation	7.00	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	1	1	3
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	69.3

AQ-PM	76.5
AQ-DPM	95.1
Drinking Water	93.5
Lead Risk Housing	81.5
Pesticides	0.00
Toxic Releases	75.6
Traffic	57.5
Effect Indicators	—
CleanUp Sites	54.3
Groundwater	42.8
Haz Waste Facilities/Generators	20.3
Impaired Water Bodies	0.00
Solid Waste	9.67
Sensitive Population	—
Asthma	26.0
Cardio-vascular	15.7
Low Birth Weights	60.1
Socioeconomic Factor Indicators	—
Education	60.1
Housing	80.1
Linguistic	96.3
Poverty	73.0
Unemployment	41.8

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract

Economic	—
Above Poverty	37.0973951
Employed	34.1075324
Median HI	25.22776851
Education	—
Bachelor's or higher	48.05594765
High school enrollment	10.27845502
Preschool enrollment	65.76414731
Transportation	—
Auto Access	40.33106634
Active commuting	58.28307455
Social	—
2-parent households	27.92249455
Voting	2.091620685

2016 Voting	6.3

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	69.0
Healthy Places Index Score for Project Location (b)	23.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Lot Acreage: 1.77. Landscaping assumed equal to 10% of Community Center floor area plus Exterior Facility area.
Construction: Construction Phases	Project Applicant Construction Schedule (approx. 17 months with completion in 2026).
Construction: Off-Road Equipment	Demolition: Added Jackhammer (powered by generator); Building Construction: Added Aerial Lift and Pump.
Construction: Trips and VMT	Trips rounded up to nearest even number. Demolition haul trucks increased to account for average load of 10 cy (instead of the default 16 cy). Grading haul trucks increased to account for average load of 14 cy (instead of default 16 cy). Max trips from either Building Construction and Paving phases applied to both phases.
Construction: Architectural Coatings	Architectural Coating for Community Center and Parking Lot. CalEEMod default values.
Operations: Vehicle Data	GTS, Traffic Impact Study Scoping memorandum (revised), April 2024. Recreational Community Center (ITE 495): 28.82 trips/1000 SF/day.
Operations: Energy Use	Lighting electricity applied to Exterior Facility area (modeled in CalEEMod as City Park). General Office Building will use only electrification - no natural gas will be used. Therefore default natural gas results are converted and added to the default general office electricity usage.
Operations: Water and Waste Water	Indoor Water: Based on 300 users per day, the wastewater generated would be approximately 900 gal/day or 328,500 gal/yr (IS/NOP). Assumes wastewater is 80% of water demand. Outdoor Water: CalEEMod default.
Operations: Solid Waste	Based on the proposed 29,000 sq ft new facility the waste generation would equal 203 lbs/day of solid waste or 37 tons per year (tpy) (IS/NOP).

B.1-2 Assumptions

Alhambra Community Center Project
Construction Assumptions

Site Information

Information	Value	Notes
Address:	612 W. Shorb Street, Alhambra, CA 91803	
Site (acres):	1.77	*DEIR Chapter 2, Table 2-1; KFA 2023*
Lot Area (sqft):	*77,101*	
Source-Receptor Area (for SCAQMD only)	8 (West San Gabriel Valley)	
CEC Forecasting EDFZ Zone:	7	
Utility:	SCE, Clean Power Alliance	
Operational Year:	2026	*DEIR Chapter 2, Section 2.6*

Project Land Uses

Land Use Type	CalEEMod LandUse Type	CalEEMod LandUse Subtype	Amount	Unit	Building sq.ft.	Lot (sq.ft)	Acres	Notes
Community Center and Support/Admin	Commercial	General Office	25.00	1000 SF	25,000		0.38	*ACC IS Project Description; KFA 2024*
Exterior Facilities	City Park	City Park	7.6	1000 SF			0.17	*ACC IS Project Description; KFA 2024*
Landscaping	N/A (included as Community Center Landscaping)	N/A (included as Community Center Landscaping)	10.1	1000 SF				*Assumes 10% of Community Center floor area plus Exterior Facility area.*
On-Site Surface Parking	Parking	Parking Lot	70	spaces			1.22	*ACC IS Project Description; KFA 2024*
Off-Site Surface Parking	Parking	Parking Lot	23	spaces				*ACC IS Project Description; KFA 2024*
				Total	25,000	0	1.77	

Construction Schedule

Phase	Start Date	End Date	Duration	Working Days	Worker Trips	Vendor	Haul Trips	Notes
Demolition	4/1/2025	4/30/2025	1 month	22	16		88	CalEEMod (trips rounded up to nearest even number; trucks adjusted for 10 CY capacity)
Grading/Excavation	5/1/2025	6/30/2025	2 months	43	10		12	CalEEMod (trips rounded up to nearest even number; trucks adjusted for 14 CY capacity)
Building Construction	7/1/2025	7/31/2026	11 months	284	14	6		CalEEMod (trips rounded up to nearest even number)
Architectural Coating	7/1/2026	7/31/2026	1 month (overlap)	23	4			CalEEMod (trips rounded up to nearest even number)
Paving	8/1/2026	8/31/2026	1 month	21	14	6		CalEEMod (trips rounded up to nearest even number)

Demolition Export Quantities

Parameters	Amount	Notes
Existing Building (SF)	23,000	*ACC IS Project Description; KFA 2024*
Existing Building Height (ft)	42	*Assupmtion*
Existing Building (Cft)	966,000	*Calculation*
Existing Building (CY)	35,778	*Calculation*
Building Demolition Debris Amount (CY)	**9,000**	***Calculation (rounded up)***
Hardscape Area (SF)	22,250	*Estimated via aerial imagery*
Hardscape Thickness (ft)	0.5	*Assumption*
Hardscape Volume (Cft)	11,125	*Calculation*
Hardscape Volume (CY)	**500**	***Calculation (rounded up)***
Total Demolition Debris (Tons)	**4,750**	*Calculation*
Total Demolition Debris (CY)	**9,500**	*Calculation*
Haul Truck Capacity (CY)	10	*Assumption*
Total Haul Trucks Required	950	*Calculation*
Total Haul Truck Trips (In + Out)	**1,900**	*Calculation*
Haul Days	22	*see Construction Schedule*
Daily Haul Truck Trips (In + Out)	**88**	*Calculation*

Grading Export Quantities

Parameters	Amount	Notes
Excavation Volume (CY) - Cut	6,150	*DEIR Chapter 2*
Volume (CY) Retained On-Site - Fill	2,950	*DEIR Chapter 2*
Volume (CY) Exported	3,200	*DEIR Chapter 2*
Haul Truck Capacity (CY)	14	*Assumption*
Total Haul Trucks Required	229	*Calculation*
Total Haul Truck Trips (In + Out)	458	*Calculation*
Haul Days	43	*see Construction Schedule*
Daily Haul Truck Trips (In + Out)	**12**	*Calculation*

Soil transport is modeled based on preliminary estimate of 3,200 cubic yards. Refined estimates for the Project may require less soil transported to or from the site. Therefore, the emissions estimates associated with truck transport of soil likely represents a slightly conservative (i.e., environmentally protective) analysis.

Alhambra Community Center Project
Construction Equipment

Off-Road Heavy-Duty Construction Equipment - Maximum Month

Construction Phase	CalEEMod Phase Type	Heavy-Duty Equipment	No. of Heavy-Duty Equipment	No. of hours/day	Hours of Operation/Week Per Equipment	Emissions Tier Rating (After Mitigation if required)	Notes/Comments
Demolition	**Demolition**	Concrete/Industrial Saw	1	8	40	None	
		Jackhammer (powered by Generator)	1	8	40	None

Alhambra Community Center Project
Operational Assumptions

Operational Mobile Inputs

Trip Rate	28.82	trips / 1000 sf / day (GTS, Traffic Impact Study Scoping memorandum (revised), April 2024. Recreational Community Center (ITE 495): 28.82 trips/1000 SF/day)
Building Square Feet	25,000	
Daily Trips	721	

Adjustments to Energy

Exterior Facilities	7.6	1000 sf
	876	kWh/unit/year
	6,658	kWh/year

Adjustments to Water

Indoor Water:	Based on 300 users per day, the wastewater generated would be approximately 900 gal/day or 328,500 gal/yr (IS/NOP). Assumes wastewater is 80% of water demand.	410,625
Outdoor Water:	CalEEMod default.	

Adjustments to Solid Waste

Project:	Based on the proposed 25,000 sq ft new facility the waste generation would equal 175 lbs/day of solid waste or 32 tons per year (tpy) (IS/NOP).

Alhambra Community Center Project
Operational Energy and GHG Analysis

Estimated Electricity demand from Electric Vehicle Supply Equipment (EVSE)

Land Use Type	Number of Spaces	Percent of Spaces with EV Chargers [b]	Number of EVSE Charging Spaces	Average Charge (kWh/day) [a]	Days/Year	Electricity Demand (kWh/yr)	Electricity Demand (MWh/yr)
Total	**93**	**4%**	**4**	**4.4**	**365**	**6,424**	**6.42**

Electricity Emission Factor (MT CO2/MWh)	Electricity Emission Factor (lbs CO2/MWh)	Total EV Charging GHG Emissions Per Year
0.19	428.38	1.25
(MT CH4/MWh)	**(lbs CH4/MWh)**	
1.50E-05	0.033	
(MT N2O/MWh)	**(lbs N2O/MWh)**	
1.81E-06	0.004	

Notes:

a. Estimated based on reference sources listed below.

b. Per California Building Code, Part 11, Chapter 5 (101-150 spaces requires 25 EV Capable spaces and 6 EV Charger spaces).

	3044	725	1537	1501

Sources and Assumptions:
CalEEMod Appendix G, Table G-32
-Electricity Intensity Factors - California Emissions Estimator Model (CalEEMod).
-Estimated construction water use assumed to be generally equivalent to landscape irrigation, based on a factor of 20.94 gallons per year per square foot of landscaped area within the Los Angeles area (Mediterranean climate), which assumes high water demand landscaping materials and an irrigation system efficiency of 85%. Factor is therefore (20.94 GAL/SF/year) x (43,560 SF/acre) / (365 days/year) / (0.85) = 2,940 gallons/acre/day, rounded up to 3,000 gallons/acre/day. (U.S. Department of Energy, Energy Efficiency & Renewable Energy, Federal Energy Management Program. "Guidelines for Estimating Unmetered Landscaping Water Use." July 2010. Page 12, Table 4 - Annual Irrigation Factor – Landscaped Areas with High Water Requirements).

Sources and Assumptions:

CalEEMod Appendix A, Pg. 8, based on given piece of equipment can pass over in an 8-hour workday

-Electricity Intensity Factors - California Emissions Estimator Model (CalEEMod).

-Estimated construction water use assumed to be generally equivalent to landscape irrigation, based on a factor of 20.94 gallons per year per square foot of landscaped area within the Los Angeles area (Mediterranean climate), which assumes high water demand landscaping materials and an irrigation system efficiency of 85%. Factor is therefore (20.94 GAL/SF/year) x (43,560 SF/acre) / (365 days/year) / (0.85) = 2,940 gallons/acre/day, rounded up to 3,000 gallons/acre/day. (U.S. Department of Energy, Energy Efficiency & Renewable Energy, Federal Energy Management Program. “Guidelines for Estimating Unmetered Landscaping Water Use." July 2010. Page 12, Table 4 - Annual Irrigation Factor – Landscaped Areas with High Water Requirements).

Tree Condition 2
Appendix A Site Photos 6
Appendix B Assumptions and Limiting Conditions 26
Appendix C Certificate of Performance 27

Background and Assignment

Assignment

The assignment per the Scope of Work on Proforma 85729 includes a site visit to map and inspect the existing trees at 612 West Shorb Street in Alhambra, California and an evaluation of the age, health, estimated value, transplant possibility, protected tree status, and whether each tree is native to California. This report presents the location and data for the categories above for each tree on the subject site. The site visit was conducted by West Coast Arborists Board Certified Master Arborist Jeff Crain on October 13, 2023.

Limits of the Assignment

Soil type and degree of soil compaction can impact tree growth rate and alter the pattern and direction of root growth. Since soil sampling and analysis were not part of this assignment, any potential impacts of soil type or level of compaction to growth rate or root growth are not considered in this report.

The report is not intended to be legal advice and does not represent legal advice as such.

Purpose and Use of the Report

The purpose of this report is to provide the City of Alhambra Parks and Recreation staff the necessary data to evaluate the existing trees during the planning phase of a potential development project at 612 West Shorb Street. An analysis of potential construction impacts requires details of new construction and grade changes not currently available at this early planning stage. Evaluation of potential construction impacts and recommended tree protection measures will be necessary for any trees to be retained once the construction details are developed. The City of Alhambra, as the controlling agency, will have the final decision as to which trees, if any will be retained or removed as part of the project.

General Site Conditions

The property at 612 West Shorb Street is occupied by a large, two-story, brick building occupying most of the north half of the site, a fire station in the southeast quarter, and a parking lot in the southwest quarter. The site is bounded by South 7th Street to the west, West Shorb Street to the North, South 6th Street to the east, and an alley way to the south. City sidewalks and parkways lie between the main site and the streets on the north, west, and east sides. The site map on page 3 (Figure 1) shows an aerial view of the property with the location of the trees surveyed.

The main building runs east to west, with two north to south oriented wings both emerging from the south side of the main building, one at the east end and the other roughly at the east-west midpoint. This building served as a medical clinic prior to permanent closure in the early 1990's and is currently unoccupied. The adjacent land is mostly turf with shrubs and trees concentrated along the perimeter of the building. There is a turf courtyard between the two wings of the building with a small parking area on the south side and the associated entry/exit connecting with south 6th Street to the east.

The Fire Station in the southwest portion of the property consists of the main, brick building facing South 6th Street and a parking area on the western half. There are two smaller storage buildings in the northwest and southwest corner of the parking area and the station area is fenced off from the rest of the subject site. There are two lawn areas adjacent to the building, one on the north side from the sidewalk along South 6th Street running west to the midpoint of the station area and the other on the south side. The two lawn areas are divided by the driveway for the station. There are no trees located within the station area.

The parking lot in the southwest quarter of the property is paved with the only landscaping confined to two planting strips along the south and west sides. The southern planter is bounded by a small block wall on the south side, since the elevation of the lot is approximately twelve inches above the grade of the adjacent alleyway.

Tree Condition

A total of 40 trees, and large shrubs that had reached small tree size were identified during the site visit. Table 1 lists the species, diameter at breast height (DBH, approximately 4.5 feet above ground level), height, approximate age, health condition, estimated value, transplant possibility, native status, and protected status of each existing tree by the tree number that corresponds to the locations shown in Figure 1. Photos of the trees on site can be found in Appendix A. Protected status was determined according to the City of Alhambra Tree Preservation Ordinance (O2M18-4737) which qualifies as protected:

- Native tree species
    - fifteen feet (15') or taller, or
    - twelve inches (12") or greater in diameter, or
    - thirty-six inches (36") or greater in circumference
- All other mature trees
    - twenty feet (20') or taller, or
    - twenty-four inches (24") or greater in diameter, or
    - seventy-five inches (75") or greater in circumference

In general, the existing trees were in poor to fair shape, likely due to the lack of regular irrigation and maintenance during the period since the building was closed. Those trees considered in good health were larger, mature trees that were well established prior to the closure and have been able to sustain themselves on natural precipitation amounts or by extending roots into other water sources.

Most of the trees on the site were either too large or in too poor health to be considered as transplant possibilities. The cost to transplant those listed in Table 1 with a moderate transplant possibility will need to be considered against replacement cost of a new tree of the same species if the City decides on this option.

The age of each tree was estimated based on the size relative to the average growth rate for the particular species. The lack of regular irrigation on the site and long periods of drought in recent years can have significant impacts on tree growth and may have led to the age being underestimated.

Adjacent street trees were included in this report since the extent of the proposed project was unknown at the time of the site visit. These trees could be impacted by construction along the perimeter of the subject site.

Appendix B Assumptions and Limiting Conditions

1. Care has been taken to obtain all information from reliable sources. All data has been verified insofar as possible; however, the Consultant can neither guarantee nor be responsible for the accuracy of information provided by others. Standard of Care has been met with regards to this project within reasonable and normal conditions.

2. The Consultant will not be required to give testimony or to attend court due to this report unless subsequent contractual arrangements are made, including payment of an additional fee for such services as described in the fee schedule and contract of engagement.

3. Loss or alteration of any part of this report invalidates the entire report.

4. Possession of this report or a copy thereof does not imply right of publication or use for any purpose by any other than the person to whom it is addressed, without the prior written consent of the Consultant.

5. This report and any values expressed herein represent the opinion of the Consultant, and the Consultant's fee is in no way contingent upon the reporting of a stipulated result, a specified value, the occurrence of a subsequent event, nor upon any finding to be reported.

6. Unless expressed otherwise: 1) information contained in this report covers only those items that were examined and reflects the condition of those items at the time of inspection; and 2) the inspection is limited to visual examination of accessible items without dissection, excavation, or coring, unless otherwise stated. There is no warranty or guarantee, expressed or implied, that problems or deficiencies of the tree(s) or property in question may not arise in the future.

7. Arborists are tree specialists who use their education, knowledge, training, and experience to examine trees, recommend measures to enhance the beauty and health of trees, and attempt to reduce the risk of living near trees. It is highly recommended that you follow the arborist recommendations; however, you may choose to accept or disregard the recommendations and/or seek additional advice.

8. Arborists cannot detect every condition that could possibly lead to the structural failure of a tree. Trees are living organisms that fail in ways we do not fully understand. Conditions are often hidden within trees and below ground. Arborists cannot guarantee that a tree will be healthy or safe under all circumstances, or for a specific period.

9. Any recommendations and/or performed treatments (including, but not limited to, pruning or removal) of trees may involve considerations beyond the scope of the arborist's services, such as property boundaries, property ownership, site lines, disputes between neighbors, and any other related issues. Arborists cannot take such considerations into account unless complete and accurate information is disclosed to the arborist. An arborist can then be expected to consider and reasonably rely on the completeness and accuracy of the information provided.

10. The author has no personal interest or bias with respect to the subject matter of this report or the parties involved. He/she has inspected the subject tree(s) and to the best of their knowledge and belief, all statements and information presented in the report are true and correct.

Appendix C Certificate of Performance

I, Jeff Crain certify that:

- I have personally inspected the trees referred to in this report and have stated my findings accurately. The extent of the assessment is stated in the attached report and the Limits of the Assignment.
- I have no current or prospective interest in the tree or the property that are the subject of this report and have no personal interest or bias with respect to the parties involved.
- The analysis, opinions, and conclusions stated herein are my own and are based on current scientific procedures and facts.
- My analysis opinions, and conclusions were developed, and this report has been prepared according to commonly accepted arboricultural practices.
- No one provided significant professional assistance to me, except as indicated within the report.
- My compensation is not contingent upon the reporting of a predetermined conclusion that favors the cause of the client or any other party nor upon the results of the assessment, the attainment of stipulated results, or the occurrence of any subsequent events.

I further certify that I am a member of good standing of the International Society of Arboriculture. I have been involved in the field of municipal arboriculture in a full-time capacity for a period of more than 20 years.

Respectfully,

Jeff Crain

Attention: Mike Macias

Subject: Geotechnical Engineering Investigation
Alhambra Community Center
612 West Shorb Street, Alhambra, California

Dear Mr. Macias:

This letter transmits the Geotechnical Engineering Investigation for the subject site prepared by Geotechnologies, Inc. This report provides geotechnical recommendations for the development of the site, including earthwork, seismic design, retaining walls, excavations and foundation design. Engineering for the proposed project should not begin until approval of the geotechnical investigation is granted by the local building official. Significant changes in the geotechnical recommendations may result due to the building department review process.

The validity of the recommendations presented herein is dependent upon review of the geotechnical aspects of the project during construction by this firm. The subsurface conditions described herein have been projected from limited subsurface exploration and laboratory testing. The exploration and testing presented in this report should in no way be construed to reflect any variations which may occur between the exploration locations, or which may result from changes in subsurface conditions.

Should you have any questions please contact this office.

Respectfully submitted,
GEOTECHNOLOGIES, INC.

GEOTECHNICAL ENGINEERING INVESTIGATION
ALHAMBRA COMMUNITY CENTER
612 WEST SHORB STREET
ALHAMBRA, CALIFORNIA

INTRODUCTION

This report presents the results of the geotechnical engineering investigation performed on the subject site. The purpose of this investigation was to identify the distribution and engineering properties of the geologic materials underlying the site, and to provide geotechnical recommendations for the design of the proposed development.

This investigation included five exploratory borings, collection of representative samples, laboratory testing, engineering analysis, review of published geologic data, review of available geotechnical engineering information and the preparation of this report. The exploratory boring locations are shown on the enclosed Plot Plan. The results of the exploration and the laboratory testing are presented in the Appendix of this report.

PROPOSED DEVELOPMENT

Information concerning the proposed development was furnished by Cowley Real Estate, and by the office of KFA Architecture. The site is proposed to be developed with a community center. The proposed development will include the construction of a 25,000 square feet multi-purpose facility, as well as the expansion of an existing paved parking lot. The multi-purpose facility structure is proposed to be two stories in height, and will be built at-grade. The project will include vacating a portion of Shorb Street. Grading will consist of removal and recompaction of the existing unsuitable soils.

Any changes in the design of the project or location of any structure, as outlined in this report, should be reviewed by this office. The recommendations contained in this report should not be considered valid until reviewed and modified or reaffirmed, in writing, subsequent to such review.

SITE CONDITIONS

The site is located at 612 West Shorb Street, in the City of Alhambra, California. The Project Site is approximately 1.9 acres in area, bounded by Shorb street to the north, south 6th street to the east, Alhambra Fire Department Station 72 and an alley to the south, and south 7th street to the to the west.

The site grade descends gently to the south. The site is currently developed with a two-story structure with associated parking lots. It is anticipated that the existing two-story building will be demolished to allow for the construction of the proposed building.

The vegetation on the site consists of grass lawns, trees and shrubs contained in planter areas. Drainage across the site is by sheetflow to the city streets.

GEOTECHNICAL EXPLORATION

FIELD EXPLORATION

The site was explored on October 18, 2023, by drilling five exploratory borings. The borings were drilled to depths varying between 20 and 50 feet below the existing grade with the aid of a truck-mounted drilling rig using 8-inch diameter hollowstem augers. The exploration locations are shown on the Plot Plan and the geologic materials encountered are logged on Plates A-1 through A-5.

The location of exploratory borings was determined from hardscaped features shown in the enclosed Plot Plan. The location of the exploratory borings should be considered accurate only to the degree implied by the method used.

Geologic Materials

Fill materials were encountered in all exploratory borings, at depths of approximately 3 to 5 feet below the existing site grade. The fill consists of silty sands, which are dark brown in color, moist, loose to medium dense.

The fill is in turn underlain by native alluvial soils, consisting of sands, silty sands and sandy silt. The native alluvial soils range from dark brown to dark and yellowish brown in color, medium dense to very dense, very stiff, and fine to medium grained, with various amount of cobbles and pebbles.

More detailed descriptions of the earth materials encountered may be obtained from individual logs of the subsurface excavations.

Groundwater

Groundwater was not encountered during exploration, conducted to a maximum depth of 50 feet below the existing grade. The historically highest groundwater level was established by review of the Los Angeles 7½ Minute Quadrangle Seismic Hazard Zone Report, 029 Plate 1.2 entitled "Historically Highest Ground Water Contours". Review of this plate indicates that the historically highest groundwater level is on the order of 150 feet below grade.

Fluctuations in the level of groundwater may occur due to variations in rainfall, temperature, and other factors not evident at the time of the measurements reported herein. Fluctuations also may occur across the site. High groundwater levels can result in changed conditions.

Caving

Caving could not be directly observed during exploration due to the continuously-case design of the hollowstem augers. Based on the experience of this firm, large diameter excavations, excavations that encounter granular, cohesionless soils will most likely experience caving.

SEISMIC EVALUATION

REGIONAL GEOLOGIC SETTING

The subject property is located in the northern portion of the Peninsular Ranges Geomorphic Province. The Peninsular Ranges are characterized by northwest-trending blocks of mountain ridges and sediment-floored valleys. The dominant geologic structural features are northwest trending fault zones that either die out to the northwest or terminate at east-trending reverse faults that form the southern margin of the Transverse Ranges.

The Los Angeles Basin is located at the northern end of the Peninsular Ranges Geomorphic Province. The basin is bounded by the east and southeast by the Santa Ana Mountains and San Joaquin Hills, to the northwest by the Santa Monica Mountains. Over 22 million years ago the Los Angeles basin was a deep marine basin formed by tectonic forces between the North American and Pacific plates. Since that time, over 5 miles of marine and non-marine sedimentary rock as well as intrusive and extrusive igneous rocks have filled the basin. During the last 2 million years, defined by the Pleistocene and Holocene epochs, the Los Angeles basin and surrounding mountain ranges have been uplifted to form the present-day landscape. Erosion of the surrounding mountains has resulted in deposition of unconsolidated sediments in low-lying areas by rivers such as the Los Angeles River. Areas that have experienced subtle uplift have been eroded with gullies.

REGIONAL FAULTING

Based on criteria established by the California Division of Mines and Geology (CDMG) now called California Geologic Survey (CGS), Faults may be categorized as Holocene-active, Pre-Holocene faults, and Age-undetermined faults. Holocene-active faults are those which show evidence of surface displacement within the last 11,700 years. Pre-Holocene faults are those that have not moved in the past 11,700 years. Age-undetermined faults are faults where the recency of fault movement has not been determined.

Buried thrust faults are faults without a surface expression but are a significant source of seismic activity. They are typically broadly defined based on the analysis of seismic wave recordings of hundreds of small and large earthquakes in the southern California area. Due to the buried nature of these thrust faults, their existence is usually not known until they produce an earthquake. The risk for surface rupture potential of these buried thrust faults is inferred to be low (Leighton, 1990). However, the seismic risk of these buried structures in terms of recurrence and maximum potential magnitude is not well established. Therefore, the potential for surface rupture on these surface-verging splays at magnitudes higher than 6.0 cannot be precluded.

SEISMIC HAZARDS AND DESIGN CONSIDERATIONS

The primary geologic hazard at the site is moderate to strong ground motion (acceleration) caused by an earthquake on any of the local or regional faults. The potential for other earthquake-induced hazards was also evaluated including surface rupture, liquefaction, dynamic settlement, inundation and landsliding.

Surface Rupture

In 1972, the Alquist-Priolo Special Studies Zones Act (now known as the Alquist-Priolo Earthquake Fault Zoning Act) was passed into law. As revised in 2018, The Act defines

"Holocene-active" Faults utilizing the same aging criteria as that used by California Geological Survey (CGS). However, established state policy has been to zone only those faults which have direct evidence of movement within the last 11,700 years. It is this recency of fault movement that the CGS considers as a characteristic for faults that have a relatively high potential for ground rupture in the future.

CGS policy is to delineate a boundary from 200 to 500 feet wide on each side of the Holocene-Active fault trace based on the location precision, the complexity, or the regional significance of the fault. If a site lies within an Earthquake Fault Zone, a geologic fault rupture investigation must be performed that demonstrates that the proposed building site is not threatened by surface displacement from the fault before development permits may be issued.

Ground rupture is defined as surface displacement which occurs along the surface trace of the causative fault during an earthquake. Based on research of available literature and results of site reconnaissance, no known Holocene-active or Pre-Holocene faults underlie the subject site.

Based on review of the enclosed Earthquake Zone of Required Investigation Map, the closest fault to the site which could cause surface rupture is the Raymond Fault which is located approximately 2.5 miles north of the Project Site. In addition, the subject site is not located within an Alquist-Priolo Earthquake Fault Zone. Based on these considerations, the potential for surface ground rupture at the subject site is considered low.

Liquefaction

Liquefaction is a phenomenon in which saturated silty to cohesionless soils below the groundwater table are subject to a temporary loss of strength due to the buildup of excess pore pressure during cyclic loading conditions such as those induced by an earthquake. Liquefaction-related effects include loss of bearing strength, amplified ground oscillations, lateral spreading, and flow failures.

The Seismic Hazards Maps of the State of California (CDMG, 1999), does not classify the site as part of the potentially "Liquefiable" area. This determination is based on groundwater depth records, soil type and distance to a fault capable of producing a substantial earthquake.

Groundwater was not encountered during exploration to a depth of 50 feet. The historically highest groundwater level was established by review of California Geological Survey Seismic Hazard Evaluation Report 029 Plate 1.2 entitled "Historically Highest Ground Water Contours". Review of this plate indicates that the historically highest groundwater level is on the order of 150 feet below grade.

Based on the medium dense to dense nature of the underlying soils, and the depth to the historic highest groundwater level, the potential for liquefaction occurring at the site is considered to be remote.

Dynamic Dry Settlement

Seismically-induced settlement or compaction of dry or moist, cohesionless soils can be an effect related to earthquake ground motion. Such settlements are typically most damaging when the settlements are differential in nature across the length of structures.

A site-specific seismic dry sand settlement analysis was performed utilizing Tokimatsu and Seed's procedure for the soils encountered in Boring B3 (Tokimatsu and Seed, 1987). The enclosed dynamic dry settlement analysis is based on a peak ground acceleration (PGA_M) of 0.97g, and a mean magnitude (M_W) of 6.9. These values were obtained from the SEAOC/OSHPD U.S. Seismic Design Maps tool and the USGS Probabilistic Seismic Hazard Deaggregation program (USGS, 2014).

The site-specific seismic dry sand settlement analysis was performed to a depth of 50 feet. Based on the parameters provided above, the enclosed seismically-induced dry sand settlement calculation resulted in a total dynamic dry settlement of 0.35 inches. Differential dynamic dry settlement would not be expected to exceed two-thirds of the total dynamic settlement, or 0.23 inches, and would be expected to occur over a distance of 30 feet.

Tsunamis, Seiches and Flooding

Tsunamis are large ocean waves generated by sudden water displacement caused by a submarine earthquake, landslide, or volcanic eruption. Review of the County of Los Angeles Flood and Inundation Hazards Map, Leighton (1990), indicates the site does not lie within the mapped tsunami inundation boundaries.

Seiches are oscillations generated in enclosed bodies of water which can be caused by ground shaking associated with an earthquake. No major water-retaining structures are located immediately up gradient from the project site. Therefore, the risk of flooding from a seismically-induced seiche is considered to be remote.

Review of the County of Los Angeles Flood and Inundation Hazards Map, Leighton (1990), indicates the site does not lie within mapped inundation boundaries due to a breached upgradient reservoir.

Landsliding

The probability of seismically-induced landslides occurring on the site is considered to be low due to the general lack of elevation difference across or adjacent to the site.

CONCLUSIONS AND RECOMMENDATIONS

Based upon the exploration, laboratory testing, and research, it is the finding of Geotechnologies, Inc. that construction of the proposed community center is considered feasible from a geotechnical engineering standpoint provided the advice and recommendations presented herein are followed and implemented during construction.

Fill materials were encountered during exploration to depths ranging between approximately 3 and 5 feet below the existing grade. The existing fill materials are considered to be unsuitable for support of the proposed foundations, floor slabs, or additional fill. However, the existing fill materials may be reused for the preparation of a compacted fill pad. Groundwater was not encountered during exploration to the maximum excavated depth of 50 feet.

The proposed development will be constructed at or near the existing grade. It is recommended that the proposed structure be supported by conventional foundations bearing in a newly placed compacted fill pad. For the preparation of a compacted fill pad, all the existing fill materials and upper native soils shall be properly removed and recompacted to a minimum depth of 5 feet below the existing site grade or 3 feet below proposed foundations, whichever is greater. In addition, the compacted fill should extend horizontally a minimum of 3 feet beyond the edge of foundations, or for a distance equal to the depth of fill below the foundation, whichever is greater.

Foundations for small outlying structures, such as property line walls, planters, trach enclosures, and canopies, which are not to be tied-in to the proposed buildings, may be supported on conventional foundations bearing in native soils, and/or properly placed compacted fill.

The validity of the conclusions and design recommendations presented herein is dependent upon review of the geotechnical aspects of the proposed construction by this firm. The subsurface conditions described herein have been projected from borings on the site as indicated and should in no way be construed to reflect any variations which may occur between these borings or which may result from changes in subsurface conditions. Any changes in the design or location of any structure, as outlined in this report, should be reviewed by this office. The recommendations contained herein should not be considered valid until reviewed and modified or reaffirmed subsequent to such review.

Los Angeles County Code Sections 110 and 111

The following statement is made in regard to Los Angeles County Code Sections 110 and 111: It is the opinion of the undersigned based on the findings of this investigation that provided the recommendations presented in this report are followed, the proposed development will be safe for its intended use against hazard from landsliding, settlement or slippage. The proposed development will have no adverse effect on the stability of the site of adjoining properties.

SEISMIC DESIGN CONSIDERATIONS

California Building Code Seismic Parameters

Based on information derived from the subsurface investigation, the subject site is classified as Site Class D, which corresponds to a "Stiff Soil" Profile, according to Table 20.3-1 of ASCE 7-16. This information and the site coordinates were input into the OSHPD seismic utility program in order to calculate ground motion parameters for the site.

CALIFORNIA BUILDING CODE SEISMIC PARAMETERS	
California Building Code	2022
ASCE Design Standard	7-16
Risk Category	II
Site Class	D
Mapped Spectral Acceleration at Short Periods (S_S)	2.032g
Site Coefficient (F_a)	1.0
Maximum Considered Earthquake Spectral Response for Short Periods (S_{MS})	2.032g
Five-Percent Damped Design Spectral Response Acceleration at Short Periods (S_{DS})	1.355g
Mapped Spectral Acceleration at One-Second Period (S_1)	0.731g
Site Coefficient (F_v)	1.7*
Maximum Considered Earthquake Spectral Response for One-Second Period (S_{M1})	1.243g*
Five-Percent Damped Design Spectral Response Acceleration for One-Second Period (S_{D1})	0.829g*

* *According to ASCE 7-16, a Long Period Site Coefficient (F_v) of 1.7 may be utilized provided that the value of the Seismic Response Coefficient (C_s) is determined by Equation 12.8-2 for values of $T \leq 1.5T_s$ and taken as equal to 1.5 times the value computed in accordance with either Equation 12.8-3 for $T_L \geq T > 1.5T_s$ or equation 12.8-4 for $T > T_L$. Alternatively, a site-specific ground motion hazard analysis may be performed in accordance with ASCE 7-16 Section 21.1 and/or a ground motion hazard analysis in accordance with ASCE 7-16 Section 21.2 to determine ground motions for any structure.*

EXPANSIVE SOILS

The upper onsite geologic materials are in the very low expansion range. The Expansion Index was found to be between 3 and 10 for bulk samples representative of the upper on-site soils. Recommended reinforcing is noted in the "Foundation Design" and "Slabs on Grade" sections of this report.

SOIL CORROSION POTENTIAL

The results of the soil corrosivity testing performed on samples representative of the onsite soils by Project X Corrosion Engineering indicate that the electrical resistivities of the soils are mildly corrosive to general metals when saturated. The soil pH value of the samples was between 7.6 and 8.3. pH levels were determined to be at levels not detrimental to copper or aluminum alloys, but can allow corrosion of steel and iron in moist environments.

Chloride levels in the samples are low and may cause insignificant corrosion of metals. Ammonia and Nitrates concentrations were not high enough to cause accelerated corrosion of copper and copper alloys, such as brass.

Per ACI 318-14, Table 19.3.1.1, sulfate levels in the samples are categorized as S0 and are negligible for corrosion of metals and cement. Per ACI 318-14 Table 19.3.2.1 any type of cement can be used.

Detailed results, discussion of results and recommended mitigating measures are provided within the enclosed Corrosion Evaluation Report prepared by Project X Corrosion Engineering, dated December 5, 2023.

GRADING GUIDELINES

Site Preparation

- A thorough search should be made for possible underground utilities and/or structures. Any existing or abandoned utilities or structures located within the footprint of the proposed grading should be removed or relocated as appropriate.

- All vegetation, existing fill, and soft or disturbed geologic materials should be removed from the areas to receive controlled fill. All existing fill materials and any disturbed geologic materials resulting from grading operations shall be completely removed and properly recompacted prior to foundation excavation.

- Any vegetation or associated root system located within the footprint of the proposed structures should be removed during grading.

- Subsequent to the indicated removals, the exposed grade shall be scarified to a depth of six inches, moistened to optimum moisture content, and recompacted in excess of the minimum required comparative density.

- The excavated areas shall be observed by the geotechnical engineer prior to placing compacted fill.

Recommended Overexcavation

For the construction of the recommended compacted fill pad, all existing fill materials and upper native soils shall be removed from the building area and recompacted to a minimum depth of 5 feet below the existing site grade or a minimum depth of 3 feet below the bottom of all foundations, whichever is greater. The compacted fill shall extend horizontally a minimum of 3 feet beyond the edge of foundations or for a distance equal to the depth of fill below the foundations, whichever is greater. It is very important that the position of the proposed structure is accurately located so that the limits of the graded area are accurate and the grading operation proceeds efficiently.

Compaction

All fill should be mechanically compacted in layers not more than 8 inches thick. The materials placed should be moisture conditions to within 3 percent of the optimum moisture content of the particular material placed. All fill shall be compacted to at least 90 percent of the maximum laboratory dry density for the materials used. The maximum density shall be determined by the laboratory operated by Geotechnologies, Inc. in general accordance with the most recent revision of ASTM D 1557.

Field observation and testing shall be performed by a representative of the geotechnical engineer during grading to assist the contractor in obtaining the required degree of compaction and the proper moisture content. Where compaction is less than required, additional compactive effort shall be made with adjustment of the moisture content, as necessary, until a minimum of 90 percent compaction is obtained.

Acceptable Materials

The excavated onsite materials are considered satisfactory for reuse in the controlled fills as long as any debris and/or organic matter is removed. Cobbles were observed in the native soils. Cobbles larger than 6 inches should not be used for the compacted fill.

Any imported materials shall be observed and tested by the representative of the geotechnical engineer prior to use in fill areas. Imported materials should contain sufficient fines so as to be relatively impermeable and result in a stable subgrade when compacted. Any required import materials should consist of geologic materials with an expansion index of less than 40. The water-soluble sulfate content of the import materials should be less than 0.1% percentage by weight.

Imported materials should be free from chemical or organic substances which could affect the proposed development. A competent professional should be retained in order to test imported materials and address environmental issues and organic substances which might affect the proposed development.

Utility Trench Backfill

Utility trenches should be backfilled with controlled fill. The utility should be bedded with clean sands at least one foot over the crown. The remainder of the backfill may be onsite soil compacted to 90 percent of the laboratory maximum dry density. Utility trench backfill should be tested by representatives of this firm in general accordance with the most recent revision of ASTM D 1557.

Shrinkage

Shrinkage results when a volume of soil removed at one density is compacted to a higher density. A shrinkage factor between 5 and 15 percent should be anticipated when excavating and recompacting the existing fill and underlying native geologic materials on the site to an average comparative compaction of 92 percent.

Weather Related Grading Considerations

When rain is forecast all fill that has been spread and awaits compaction shall be properly compacted prior to stopping work for the day or prior to stopping due to inclement weather. These fills, once compacted, shall have the surface sloped to drain to an area where water can be removed.

Temporary drainage devices should be installed to collect and transfer excess water to the street in non-erosive drainage devices. Drainage should not be allowed to pond anywhere on the site, and especially not against any foundation or retaining wall. Drainage should not be allowed to flow uncontrolled over any descending slope.

Work may start again, after a period of rainfall, once the site has been reviewed by a representative of this office. Any soils saturated by the rain shall be removed and aerated so that the moisture content will fall within three percent of the optimum moisture content.
Surface materials previously compacted before the rain shall be scarified, brought to the proper moisture content and recompacted prior to placing additional fill, if considered necessary by a representative of this firm.

Geotechnical Observations and Testing During Grading

Geotechnical observations and testing during grading are considered to be a continuation of the geotechnical investigation. It is critical that the geotechnical aspects of the project be reviewed by

representatives of Geotechnologies, Inc. during the construction process. Compliance with the design concepts, specifications or recommendations during construction requires review by this firm during the course of construction. Any fill which is placed should be observed, tested, and verified if used for engineered purposes. Please advise this office at least twenty-four hours prior to any required site visit.

Proper compaction is necessary to reduce settlement of overlying improvements. Some settlement of compacted fill should be anticipated. Any utilities supported therein should be designed to accept differential settlement. Differential settlement should also be considered at the points of entry to the structure.

FOUNDATION DESIGN

Conventional Foundations

The proposed structure may be supported on conventional foundations bearing in the uniform compacted fill pad. Continuous foundations may be designed for a bearing capacity of 3,000 pounds per square foot and should be a minimum of 12 inches in width, 18 inches in depth below the lowest adjacent grade and 18 inches into the recommended bearing material.

Column foundations may be designed for a bearing capacity of 3,500 pounds per square foot, and should be a minimum of 24 inches in width, 18 inches in depth below the lowest adjacent grade and 18 inches into the recommended bearing material.

The bearing capacity increase for each additional foot of width is 200 pounds per square foot. The bearing capacity increase for each additional foot of depth is 700 pounds per square foot. The maximum recommended bearing capacity is 5,000 pounds per square foot.

The bearing capacities indicated above are for the total of dead and frequently applied live loads, and may be increased by one third for short duration loading, which includes the effects of wind or seismic forces.

Miscellaneous Foundations

Conventional foundations for structures such as privacy walls or trash enclosures which will not be rigidly connected to the proposed structure may bear in native soils. Continuous footings may be designed for a bearing capacity of 2,000 pounds per square foot, and should be a minimum of 12 inches in width, 18 inches in depth below the lowest adjacent grade and 18 inches into the recommended bearing material. No bearing capacity increases are recommended.

Since the recommended bearing capacity is a net value, the weight of concrete in the foundations may be taken as 50 pounds per cubic foot and the weight of the soil backfill may be neglected when determining the downward load on the foundations.

Foundation Reinforcement

All continuous foundations should be reinforced with a minimum of four #4 steel bars. Two should be placed near the top of the foundation, and two should be placed near the bottom.

Lateral Design

Resistance to lateral loading may be provided by friction acting at the base of foundations and by passive earth pressure. An allowable coefficient of friction of 0.38 may be used with the dead load forces.

Passive geologic pressure for the sides of foundations poured against undisturbed or recompacted soil may be computed as an equivalent fluid having a density of 250 pounds per cubic foot with a

maximum earth pressure of 1,500 pounds per square foot. The passive and friction components may be combined for lateral resistance without reduction. A one-third increase in the passive value may be used for short duration loading such as wind or seismic forces.

Foundation Settlement

Settlement of the foundation system is expected to occur on initial application of loading. The maximum static settlement is not expected to exceed ½-inch. Differential static settlement between new foundations is not expected to exceed ¼-inch.

In addition to static settlement, the existing and proposed foundations should be able to withstand seismically induced settlement. The static and seismic settlements are additive. Seismic dry settlement of up to 0.35 inches could potentially occur during the design-based seismic event. The differential seismically induced settlement is expected to be in the order of 0.23 inches.

Based on the above considerations, it is recommended that the foundation system is able to tolerate a total settlement (static plus seismic) of up to 0.85 inches, and a differential settlement (static plus seismic) of up to ½-inch. The differential settlement would be expected to occur over a distance of 30 feet.

Foundation Observations

It is critical that all foundation excavations are observed by a representative of this firm to verify penetration into the recommended bearing materials. The observation should be performed prior to the placement of reinforcement. Foundations should be deepened to extend into satisfactory geologic materials, if necessary. Foundation excavations should be cleaned of all loose soils prior to placing steel and concrete. Any required foundation backfill should be mechanically compacted, flooding is not permitted.

RETAINING WALL DESIGN

Miscellaneous Retaining Walls

Subterranean basements are not anticipated for the project, as the proposed community center will be built at-grade. Retaining wall recommendations are provided herein to aid in the design of miscellaneous retaining walls, such as the ones required for elevator pits or planters. Foundations for these walls may be designed in accordance with the "Foundation Design" section above.

Additional active pressure should be added to the retaining wall design for any additional surcharge conditions, such as adjacent traffic and structures. For traffic surcharge, the upper 10 feet of any retaining wall adjacent to streets, driveways or parking areas should be designed to resist a uniform lateral pressure of 100 pounds per square foot, acting as a result of an assumed 300 pounds per square foot traffic surcharge. If the traffic is more than 10 feet from the retaining walls, the traffic surcharge may be neglected.

Retaining walls may be designed as cantilever, or restrained, based on the following table:

	RESTRAINED CONDITION (at-rest earth pressure)	**CANTILEVER CONDITION (active earth pressure)**
Height of Wall (Feet)	Triangular Distribution of Pressure (Pounds per Cubic Foot)	Triangular Distribution of Pressure (Pounds per Cubic Foot)
Up to 6 feet	62	30

Additional active pressure should be added for a surcharge condition due to sloping ground, vehicular traffic or adjacent structures.

Dynamic (Seismic) Earth Pressure

Based on the California Building Code, retaining walls exceeding 6 feet in height shall be designed to resist the additional earth pressure caused by seismic ground shaking. Miscellaneous retaining walls anticipated for the proposed project are not expected to exceed 6 feet in height. Therefore, the dynamic earth pressure may be omitted.

Retaining Wall Drainage

Retaining walls should be provided with a subdrain covered with a minimum of 12 inches of gravel, and a compacted fill blanket or other seal at the surface. The onsite geologic materials are acceptable for use as retaining wall backfill as long as they are compacted to a minimum of 90 percent of the maximum density as determined by the most recent revision of ASTM D 1557.

As an alternative to the standard perforated subdrain pipe and gravel drainage system, the use of gravel pockets and weepholes is an acceptable drainage method. Weepholes shall be a minimum of 2 inches in diameter, placed at 8 feet on center along the base of the wall. Gravel pockets shall be a minimum of 1 cubic foot in dimension and may consist of three-quarter inch to one-inch crushed rocks, wrapped in filter fabric. Subdrainage pipes should outlet to an acceptable location.

Certain types of subdrain pipe are not acceptable to the various municipal agencies, it is recommended that prior to purchasing subdrainage pipe, the type and brand is cleared with the proper municipal agencies.

The lateral earth pressures recommended above for retaining walls assume that a permanent drainage system will be installed so that external water pressure will not be developed against the walls. If a drainage system is not provided, the walls should be designed to resist an external hydrostatic pressure due to water in addition to the lateral earth pressure. In any event, it is recommended that retaining walls be waterproofed.

Sump Pump Design

The purpose of the recommended retaining wall backdrainage system is to relieve hydrostatic pressure. The potential miscellaneous retaining walls are not expected to exceed a depth of 6 feet. Therefore, the only water which could affect the proposed retaining walls would be irrigation water and precipitation. Additionally, the proposed site grading is such that all drainage is directed to the street and the structure has been designed with adequate non-erosive drainage devices.

Based on these considerations the retaining wall backdrainage system is not expected to experience an appreciable flow of water, and in particular, no groundwater will affect it. However, for the purposes of design, a flow of 5 gallons per minute may be assumed.

Waterproofing

Moisture effecting retaining walls is one of the most common post construction complaints. Poorly applied or omitted waterproofing can lead to effloresence or standing water inside the building. Efflorescence is a process in which a powdery substance is produced on the surface of the concrete by the evaporation of water. The white powder usually consists of soluble salts such as gypsum, calcite, or common salt. Efflorescence is common to retaining walls and does not affect their strength or integrity.

It is recommended that retaining walls be waterproofed. Waterproofing design and inspection of its installation is not the responsibility of the geotechnical engineer. A qualified waterproofing consultant should be retained in order to recommend a product or method which would provide protection to below grade walls.

Retaining Wall Backfill

Any required backfill should be mechanically compacted in layers not more than 8 inches thick, to at least 90 percent relative compaction, obtainable by the most recent revision of ASTM D 1557 method of compaction. Flooding should not be permitted. Compaction within 5 feet, measured horizontally, behind a retaining structure should be achieved by use of light weight, hand operated compaction equipment.

Proper compaction of the backfill will be necessary to reduce settlement of overlying walks and paving. Some settlement of required backfill should be anticipated, and any utilities supported therein should be designed to accept differential settlement.

TEMPORARY EXCAVATIONS

Excavations in the order of 5 feet in vertical height are anticipated for the recommended removal and recompaction and foundation excavations. The excavations are expected to expose fill and stiff native soils, which are suitable for vertical excavations up to 5 feet where not surcharged by adjacent traffic or structures.

Surcharged and unsurcharged vertical excavations may be performed vertically to a maximum height of 6 feet with the aid of slot-cuts, as recommended in the following section. Where sufficient space is available, temporary unsurcharged embankments could be cut at a uniform 1:1 slope gradient to a maximum depth of 12 feet. A uniform sloped excavation is sloped from bottom to top and does not have a vertical component.

Where sloped embankments are utilized, the tops of the slopes should be barricaded to prevent vehicles and storage loads near the top of slope within a horizontal distance equal to the depth of the excavation. If the temporary construction embankments are to be maintained during the rainy season, berms are strongly recommended along the tops of the slopes to prevent runoff water from

entering the excavation and eroding the slope faces. Water should not be allowed to pond on top of the excavation nor to flow towards it.

Slot Cutting

To maintain a stable vertical excavation, the slot cutting method may be utilized to perform surcharged and unsurcharged vertical excavations up to a height of 6 feet. The "A-B-C" slot-cutting procedure is recommended.

The slot cutting method employs the earth as a buttress and allows the earth excavation to proceed in phases. The initial excavation consists of excavating the "A" slots. Alternate "A" slots of 8 feet may be worked. The remaining earth buttresses ("B" and "C" slots) should be 16 feet in width. The "A" slots should be properly backfilled, before the "B" slots are excavated. The height of the slots shall not exceed 6 feet.

Excavation Observations

It is critical that the soils exposed in the cut slopes are observed by a representative of Geotechnologies, Inc. during excavation so that modifications of the slopes can be made if variations in the geologic material conditions occur. Water should not be allowed to pond on top of the excavation or to flow towards it. Many building officials require that temporary excavations should be made during the continuous observations of the geotechnical engineer. All excavations should be stabilized within 30 days of initial excavation.

SLABS ON GRADE

Concrete Slabs-on Grade

Interior concrete floor slabs-on-grade and outdoor concrete flatwork should be a minimum of 4 inches in thickness, and should be reinforced with a minimum of #3 steel bars on 18-inch centers each way.

Interior slabs-on-grade should be cast over properly controlled fill materials. Outdoor concrete flatwork should be cast over undisturbed native soils, or properly controlled fill materials. Any geologic materials loosened or over-excavated should be wasted from the site or properly compacted to 90 percent of the maximum dry density.

Design of Slabs That Receive Moisture-Sensitive Floor Coverings

Geotechnologies, Inc. does not practice in the field of moisture vapor transmission evaluation and mitigation. Therefore, where necessary, it is recommended that a qualified consultant should be engaged to evaluate the general and specific moisture vapor transmission paths and any impact on the proposed construction. The qualified consultant should provide recommendations for mitigation of potential adverse impacts of moisture vapor on various components of the structure.

Where any dampness would be objectionable or where the slab will be cast below the historic high groundwater level, it is recommended that floor slabs should be waterproofed. A qualified waterproofing consultant should be engaged in order to recommend a product and/or method which would provide protection from unwanted moisture.

All concrete slabs-on-grade should be supported on vapor retarder/barrier. The design of the slab and the installation of the vapor retarder/barrier should comply with the most recent revisions of ASTM E 1643 and ASTM E 1745. The vapor retarder/barrier should comply with ASTM E 1745

Class A requirements. The necessity of a vapor retarder/barrier is not a geotechnical issue and should be confirmed by qualified members of the design team.

Where a vapor retarder/barrier is used, it should be placed on a level and compact subgrade. Precautions should be taken to protect the vapor retarder/barrier from damage during installation of reinforcing, utilities and concrete. The use of stakes driven thought the vapor retarder/barrier should be avoided. Repair any damaged areas of the vapor retarder/barrier prior to concrete placement.

Concrete Crack Control

The recommendations presented in this report are intended to reduce the potential for cracking of concrete slabs-on-grade due to settlement. However even where these recommendations have been implemented, foundations, stucco walls and concrete slabs-on-grade may display some cracking due to minor soil movement and/or concrete shrinkage. The occurrence of concrete cracking may be reduced and/or controlled by limiting the slump of the concrete used, proper concrete placement and curing, and by placement of crack control joints at reasonable intervals, in particular, where re-entrant slab corners occur.

For standard control of concrete cracking, a maximum crack control joint spacing of 15 feet should not be exceeded. Lesser spacings would provide greater crack control. Joints at curves and angle points are recommended. The crack control joints should be installed as soon as practical following concrete placement. Crack control joints should extend a minimum depth of one-fourth the slab thickness. Construction joints should be designed by a structural engineer.

Complete removal of the existing fill soils beneath outdoor flatwork such as walkways or patio areas, is not required, however, due to the rigid nature of concrete, some cracking, a shorter design life and increased maintenance costs should be anticipated. In order to provide uniform support

beneath the flatwork it is recommended that a minimum of 12 inches of the exposed subgrade beneath the flatwork be scarified and recompacted to 90 percent relative compaction.

PAVEMENTS

Prior to placing paving, the existing grade should be scarified to a depth of 12 inches, moistened as required to obtain optimum moisture content, and recompacted to 95 percent of the maximum dry density as determined by the most recent revision of ASTM D 1557. The design team should be aware that removal of all existing fill in the area of new paving is not required, however, pavement constructed in this manner will most likely have a shorter design life and increased maintenance costs. The following pavement sections are recommended:

Service	Asphalt Pavement Thickness Inches	Base Course Inches
Passenger Cars	3	4
Moderate Truck	4	6
Heavy Truck	5	9

Service	Concrete Pavement Thickness Inches	Base Course Inches
Passenger Car and Moderate Truck	6	4
Heavy Truck	7 ½	4

For standard crack control maximum expansion joint spacing of 15 feet should not be exceeded. Lesser spacings would provide greater crack control. Joints at curves and angle points are recommended. Concrete paving should be reinforced with a minimum of #3 steel bars on 18-inch centers each way.

Aggregate base should be compacted to a minimum of 95 percent of the most recent revision of ASTM D 1557 laboratory maximum dry density. Base materials should conform to Sections 200-2.2 or 200-2.4 of the "Standard Specifications for Public Works Construction", (Green Book), latest edition.

The performance of pavement is highly dependent upon providing positive surface drainage away from the edges. Ponding of water on or adjacent to pavement can result in saturation of the subgrade materials and subsequent pavement distress.

SITE DRAINAGE

Proper surface drainage is critical to the future performance of the project. Saturation of a soil can cause it to lose internal shear strength and increase its compressibility, resulting in a change in the designed engineering properties. Proper site drainage should be maintained at all times.

All site drainage, with the exception of any required to disposed of onsite by stormwater regulations, should be collected and transferred to the street in non-erosive drainage devices. The proposed structure should be provided with roof drainage. Discharge from downspouts, roof drains and scuppers should not be permitted on unprotected soils within five feet of the building perimeter. Drainage should not be allowed to pond anywhere on the site, and especially not against any foundation or retaining wall. Drainage should not be allowed to flow uncontrolled over any descending slope. Planters which are located within a distance equal to the depth of a retaining wall should be sealed to prevent moisture adversely affecting the wall. Planters which are located within five feet of a foundation should be sealed to prevent moisture affecting the earth materials supporting the foundation.

STORMWATER DISPOSAL

Regulatory agencies have been requiring the disposal of a certain amount of stormwater generated on a site by infiltration into the site soils. Increasing the moisture content of a soil can cause it to

lose internal shear strength and increase its compressibility, resulting in a change in the designed engineering properties. This means that any overlying structure, including buildings, pavements and concrete flatwork, could sustain damage due to saturation of the subgrade soils. Proper site drainage is critical to the performance of any structure in the built environment.

Percolation Testing

Percolation testing was conducted in Boring B-4, following the procedure for boring percolation test provided in the Guidelines for Design, Investigation and Reporting Low Impact Development Stormwater Infiltration (GS200.2), dated June 30, 2021, presented in the Administrative Manual for the County of Los Angeles, Department of Public Works, Geotechnical and Material Engineering Division.

Boring B-4 was drilled to a depth of 30 feet below the existing grade. At the completion of drilling, a 2-inch diameter casing was placed within the center of the borehole for the purpose of conducting percolation testing. The casing consisted of a solid PVC pipe from the ground surface to a depth of 20 feet, and slotted PVC pipe between depths of 20 and 30 feet. A sand pack consisting of #3 Monterey Sand was poured into the annular space around the slotted portion of the casing. A 1-foot thick, hydrated bentonite seal was placed over the sand and drill cuttings were placed to the ground surface.

After the casing was installed, the borehole was filled with water for the purpose of pre-soaking for a minimum of 4 hours. After presoaking, the borehole was refilled with water, and the rate of drop in the water level was measured. The percolation test readings were recorded a minimum of 8 times or until a stabilized rate of drop was obtained, whichever occurred first.

The table below summarizes the results of the infiltration rate derived from the testing. This rate includes correction factors (RF_t, RF_v, and RF_s), as required by the County of Los Angeles procedure.

Boring No.	Depth of Boring Below Existing Ground Surface (ft)	Percolation Testing Conducted Between Depths (ft)	Infiltration Rate (in/hr)
B-4	30	20 to 30	42.9

At the completion of the percolation testing, the PVC casing was removed from the percolation testing well, and the resulting hole was backfilled with on-site soils to the ground surface.

The Proposed System

Preliminarily, it is anticipated that the infiltration system may consist of a drywell system. The final location and design of the proposed infiltration system shall be reviewed and approved by this office prior to construction to evaluate whether the intent of the recommendations provided by this firm are satisfied.

Stormwater Disposal Recommendations

Based on the results of the exploration, testing and research, it is the finding of this firm that the use of a drywell system for the purpose of stormwater infiltration disposal is feasible from a geotechnical standpoint. The drywell system is not expected to impact the neighboring or proposed developments, provided the advice and recommendations presented herein are implemented during design and construction.

The native site soils encountered during the geotechnical explorations conducted by this firm consist primarily of sandy soils suitable for stormwater infiltration. The on-site soils are in very low expansion range. The previous section of this report presents the anticipated infiltration rate of selected soil layers. These infiltration rates may be utilized by the civil engineer for the design of a stormwater infiltration system suitable for the project.

The potential drywell system should be installed outside the proposed structure. It is recommended that the edge of any drywell is installed at least 20 feet away from the proposed and existing neighboring structures, as well as private property lines. Stormwater infiltration shall only occur in native soils located at least 10 feet below the existing grade. Soils located within the upper 10 feet should not become wet or saturated as a result of a drywell. It is anticipated that a settling chamber will be installed within this upper zone; therefore, the seams and bottom of the settling chamber should be adequately sealed to prevent infiltration at this zone.

Caving should be anticipated to occur in the drilled drywell shafts. The use of casing to maintain open shafts for installation of the drywells may be necessary.

It is recommended that the design team, including the structural engineer, waterproofing consultant, plumbing engineer, environmental engineer and landscape architect be consulted in regards to the design and construction of filtration systems. The design and construction of stormwater infiltration systems is not the responsibility of the geotechnical engineer. However, based on the experience of this firm, it is recommended that several aspects of the use of such facilities should be considered by the design and construction team:

- All infiltration devices should be provided with overflow protection. Once the device is full of water, additional water flowing to the device should be diverted to another acceptable disposal area, or disposed offsite in an acceptable manner.
- All connections associated with stormwater infiltration systems should be sealed and water-tight. Water leaking into the subgrade soils can lead to loss of strength, piping, erosion, settlement and/or expansion of the effected earth materials.
- Excavations proposed for the installation of stormwater systems should comply with the “Temporary Excavations” sections of this geotechnical engineering investigation, as well as CalOSHA Regulations where applicable.

DESIGN REVIEW

Engineering of the proposed project should not begin until approval of the geotechnical report by the Building Official is obtained in writing. Significant changes in the geotechnical recommendations may result during the building department review process.

It is recommended that the geotechnical aspects of the project be reviewed by this firm during the design process. This review provides assistance to the design team by providing specific recommendations for particular cases, as well as review of the proposed construction to evaluate whether the intent of the recommendations presented herein are satisfied.

CONSTRUCTION MONITORING

Geotechnical observations and testing during construction are considered to be a continuation of the geotechnical investigation. It is critical that this firm review the geotechnical aspects of the project during the construction process. Compliance with the design concepts, specifications or recommendations during construction requires review by this firm during the course of construction. All foundations should be observed by a representative of this firm prior to placing concrete or steel. Any fill which is placed should be observed, tested, and verified if used for engineered purposes. Please advise Geotechnologies, Inc. at least twenty-four hours prior to any required site visit.

If conditions encountered during construction appear to differ from those disclosed herein, notify Geotechnologies, Inc. immediately so the need for modifications may be considered in a timely manner.

It is the responsibility of the contractor to ensure that all excavations and trenches are properly sloped or shored. All temporary excavations should be cut and maintained in accordance with applicable OSHA rules and regulations.

EXCAVATION CHARACTERISTICS

The exploration performed for this investigation is limited to the geotechnical excavations described. Direct exploration of the entire site would not be economically feasible. The owner, design team and contractor must understand that differing excavation and drilling conditions may be encountered based on boulders, gravel, oversize materials, groundwater and many other conditions. Fill materials, especially when they were placed without benefit of modern grading codes, regularly contain materials which could impede efficient grading and drilling. Southern California sedimentary bedrock is known to contain variable layers which reflect differences in depositional environment. Such layers may include abundant gravel, cobbles and boulders. Similarly, bedrock can contain concretions. Concretions are typically lenticular and follow the bedding. They are formed by mineral deposits. Concretions can be very hard. Excavation and drilling in these areas may require full size equipment and coring capability. The contractor should be familiar with the site and the geologic materials in the vicinity.

CLOSURE AND LIMITATIONS

The purpose of this report is to aid in the design and completion of the described project. Implementation of the advice presented in this report is intended to reduce certain risks associated with construction projects. The professional opinions and geotechnical advice contained in this report are sought because of special skill in engineering and geology and were prepared in accordance with generally accepted geotechnical engineering practice. Geotechnologies, Inc. has a duty to exercise the ordinary skill and competence of members of the engineering profession. Those who hire Geotechnologies, Inc. are not justified in expecting infallibility, but can expect reasonable professional care and competence.

The recommendations of this report pertain only to the site investigated and are based upon the assumption that the geologic conditions do not deviate from those disclosed in the investigation. If any variations are encountered during construction, or if the proposed construction will differ

from that anticipated herein, Geotechnologies, Inc. should be notified so that supplemental recommendations can be prepared.

This report is issued with the understanding that it is the responsibility of the owner, or the owner's representatives, to ensure that the information and recommendations contained herein are brought to the attention of the project architect and engineer and are incorporated into the plans. The owner is also responsible to see that the contractor and subcontractors carry out the geotechnical recommendations during construction.

The findings of this report are valid as of the date of this report. However, changes in the conditions of a property can occur with the passage of time, whether they are due to natural processes or the works of man on this or adjacent properties. In addition, changes in applicable or appropriate standards may occur, whether they result from legislation or the broadening of knowledge. Accordingly, the findings of this report may be invalidated wholly or partially by changes outside control of this firm. Therefore, this report is subject to review and should not be relied upon after a period of three years.

Geotechnical observations and testing during construction is considered to be a continuation of the geotechnical investigation. It is, therefore, most prudent to employ the consultant performing the initial investigative work to provide observation and testing services during construction. This practice enables the project to flow smoothly from the planning stages through to completion.

Should another geotechnical firm be selected to provide the testing and observation services during construction, that firm should prepare a letter indicating their assumption of the responsibilities of geotechnical engineer of record. A copy of the letter should be provided to the regulatory agency for review. The letter should acknowledge the concurrence of the new geotechnical engineer with the recommendations presented in this report.

EXCLUSIONS

Geotechnologies, Inc. does not practice in the fields of methane gas, radon gas, environmental engineering, waterproofing, dewatering organic substances or the presence of corrosive soils or wetlands which could affect the proposed development including mold and toxic mold. Nothing in this report is intended to address these issues and/or their potential effect on the proposed development. A competent professional consultant should be retained in order to address environmental issues, waterproofing, organic substances and wetlands which might affect the proposed development.

GEOTECHNICAL TESTING

Classification and Sampling

The soil is continuously logged by a representative of this firm and classified by visual examination in accordance with the Unified Soil Classification system. The field classification is verified in the laboratory, also in accordance with the Unified Soil Classification System. Laboratory classification may include visual examination, Atterberg Limit Tests and grain size distribution. The final classification is shown on the excavation logs.

Samples of the geologic materials encountered in the exploratory borings were collected and transported to the laboratory. Undisturbed samples of soil are obtained at frequent intervals. Unless noted on the excavation logs as an SPT sample, samples acquired while utilizing a hollow-stem auger drill rig are obtained by driving a thin-walled, California Modified Sampler with successive 30-inch drops of a 140-pound hammer. The soil is retained in brass rings of 2.50 inches outside diameter and 1.00 inch in height. The central portion of the samples are stored in close fitting, waterproof containers for transportation to the laboratory. Samples noted on the excavation logs as SPT samples are obtained in general accordance with the most recent revision of ASTM D 1586. Samples are retained for 30 days after the date of the geotechnical report.

Moisture and Density Relationships

The field moisture content and dry unit weight are determined for each of the undisturbed soil samples, and the moisture content is determined for SPT samples in general accordance with the most recent revision of ASTM D 4959 or ASTM D 4643. This information is useful in providing a gross picture of the soil consistency between exploration locations and any local variations. The dry unit weight is determined in pounds per cubic foot and shown on the “Excavation Logs”, A-Plates. The field moisture content is determined as a percentage of the dry unit weight.

Direct Shear Testing

Shear tests are performed in general accordance with the most recent revision of ASTM D 3080 with a strain controlled, direct shear machine manufactured by Soil Test, Inc. or a Direct Shear Apparatus manufactured by GeoMatic, Inc. The rate of deformation ranges between approximately 0.005 and 0.025 inches per minute. Each sample is sheared under varying confining pressures in order to determine the Mohr-Coulomb shear strength parameters of the cohesion intercept and the angle of internal friction. Samples are generally tested in an artificially saturated condition. Depending upon the sample location and future site conditions, samples may be tested at field moisture content. The results are plotted on the "Shear Test Diagram," B-Plates.

The most recent revision of ASTM 3080 limits the particle size to 10 percent of the diameter of the direct shear test specimen. The sheared sample is inspected by the laboratory technician running the test. The inspection is performed by splitting the sample along the sheared plane and observing the soils exposed on both sides. Where oversize particles are observed in the shear plane, the results are discarded and the test run again with a fresh sample.

Consolidation Testing

Settlement predictions of the soil's behavior under load are made on the basis of the consolidation tests in general accordance with the most recent revision of ASTM D 2435. The consolidation apparatus is designed to receive a single one-inch high ring. Loads are applied in several increments in a geometric progression, and the resulting deformations are recorded at selected time intervals. Porous stones are placed in contact with the top and bottom of each specimen to permit addition and release of pore fluid. Samples are generally tested at increased moisture content to determine the effects of water on the bearing soil. The normal pressure at which the water is added is noted on the drawing. Results are plotted on the "Consolidation Test," C-Plates.

Expansion Index Testing

The expansion tests performed on the remolded samples are in accordance with the Expansion Index testing procedures, as described in the most recent revision of ASTM D 4829. The soil sample is compacted into a metal ring at a saturation degree of 50 percent. The ring sample is then placed in a consolidometer, under a vertical confining pressure of 1 lbf/square inch and inundated with distilled water. The deformation of the specimen is recorded for a period of 24 hour or until the rate of deformation becomes less than 0.0002 inches/hour, whichever occurs first. The expansion index, EI, is determined by dividing the difference between final and initial height of the ring sample by the initial height, and multiplied by 1,000.

Laboratory Compaction Characteristics

The maximum dry unit weight and optimum moisture content of a soil are determined in general accordance with the most recent revision of ASTM D 1557. A soil at a selected moisture content is placed in five layers into a mold of given dimensions, with each layer compacted by 25 blows of a 10 pound hammer dropped from a distance of 18 inches subjecting the soil to a total compactive effort of about 56,000 pounds per cubic foot. The resulting dry unit weight is

determined. The procedure is repeated for a sufficient number of moisture contents to establish a relationship between the dry unit weight and the water content of the soil. The data when plotted represent a curvilinear relationship known as the compaction curve. The values of optimum moisture content and modified maximum dry unit weight are determined from the compaction curve.

LEGEND

Qa: Surficial Sediments - alluvium: clay, sand & gravel

Qog: Elevated remnants of older alluvial gravel and fanglomerate deposits, weakly indurated

Tfr: Marine Claystone - Gray, soft, vaguely bedded claystone

Tush: Unnamed Shale - Gray to light brown, thin bedded, silty clay shale, locally contains scattered large calcareous nodules

Tmsh: Monterey Formation - White-weathering, thin bedded, platy, siliceous shale, locally porcelaneous and silty

Tmss: Tan to light gray, semi-friable arkosic sandstone; includes some interbedded silty shale

1 Executive Summary

A corrosion evaluation of the soils at Alhambra Community Center was performed to provide corrosion control recommendations for general construction materials. The site is located at W Shorb St and S. 6th St, Alhambra, CA (34°04'45.2"N 118°07'47.6"W). Three (3) samples were tested to a depth of 5.0 ft. Site ground water and topography information was provided by Geotechnologies, Inc.. Groundwater depth was determined to be 150 feet below finished grade.

Every material has its weakness. Aluminum alloys, galvanized/zinc coatings, and copper alloys do not survive well in very alkaline or very acidic pH environments. Copper and brasses do not survive well in high nitrate or ammonia environments. Steels and irons do not survive well in low soil resistivity and high chloride environments. High chloride environments can even overcome and attack steel encased in normally protective concrete. Concrete does not survive well in high sulfate environments. And nothing survives well in high sulfide and low redox potential environments with corrosive bacteria. This is why Project X tests for these 8 factors to determine a soil's corrosivity towards various construction materials. **Depending solely on soil resistivity or Caltrans corrosion guidelines (which concentrate on concrete/steel highways), will over-simplify descriptions as corrosive or non-corrosive. This approach will not detect these other factors attacking other metals because it is possible to have bad levels of corrosive ions and still have greater than 1,100 ohm-cm soil resistivity. We have observed this fact on thousands of soil samples tested in our laboratory.**

It should not be forgotten that import soil should also be tested for all factors to avoid making your site more corrosive than it was to begin with.

The recommendations outlined herein are not a substitute for any design documents previously prepared for the purpose of construction and apply only to the depth of samples collected.

Soil samples were tested for minimum resistivity, pH, chlorides, sulfates, ammonia, nitrates, sulfides and redox.

As-Received soil resistivities ranged between 167,500 ohm-cm and 227,800.0 ohm-cm. This data would be similar to a Wenner 4 pin test in the field and used in the design of a cathodic protection or grounding bed system. This resistivity can change seasonally depending on the weather and moisture in the ground. This is why minimum resistivity is more important for categorizing soil corrosivity. An as-received reading alone can be misleading because condensation or minor water leaks will occur underground along pipe surfaces creating a saturated soil environment in the trench on infrastructure surfaces. This is why minimum or saturated soil resistivity measurements are more important than as-received resistivities. This is also mentioned in AWWA C105 Appendix A "*The interpretation of the results of resistivity measurements is extremely important. A determination based on a four-pin reading with dry topsoil averaged with wetter subsoil would probably be inaccurate. Only by determining the resistivity in soil at pipe depth can an accurate interpretation be made. Also, the local situation should be determined concerning groundwater table, the presence of shallow groundwater, and the approximate percentage of time the soil is likely to be water saturated.*

In making field determinations of resistivity, temperature is important. Resistivity increases as the temperature decreases. As the water in the soil approaches freezing, resistivity increases greatly and, therefore, is not reliable. Field determinations under frozen soil conditions should be avoided. Reliable results under these conditions can be obtained only by the collection of suitable subsoil samples for analysis in laboratory conditions at a proper temperature.".

Saturated soil resistivities ranged between 10,050 ohm-cm to 32,830 ohm-cm. The worst of these values is considered to be mildly corrosive to general metals.

PH levels ranged between 7.6 to 8.3 pH. PH levels were determined to be at levels not detrimental to copper or aluminum alloys. The pH of these samples can allow corrosion of steel and iron in moist environments.

Chlorides ranged between 13 mg/kg to 77 mg/kg. Chloride levels in these samples are low and may cause insignificant corrosion of metals.

Sulfates ranged between 10 mg/kg to 13 mg/kg. Sulfate levels in these samples are negligible for corrosion of cement. Any type of cement can be used that does not contain encased metal.

Ammonia ranged between 1.4 mg/kg to 4.0 mg/kg. Nitrates ranged between 4.3 mg/kg to 20.1 mg/kg. Concentrations of these elements were not high enough to cause accelerated corrosion of copper and copper alloys such as brass.

Sulfides presence was determined to be negative. REDOX ranged between + 126 mV to + 145 mV. The probability of corrosive bacteria was determined to be low due to the sulfide and positive REDOX levels determined in these samples.

Import soil should ideally have the following properties to avoid significant corrosion controls:

1. A minimum resistivity greater than 3,000 ohm-cm
2. Sulfates less than 1,000 mg/kg
3. Chlorides less than 300 mg/kg
4. pH between 6.5 and 8.5
5. Ammonia less than 10 mg/kg
6. Nitrates less than 50 mg/kg
7. Sulfides less than 1 mg/kg
8. REDOX potential greater than 100 mV.

2 Corrosion Control Recommendations

The following recommendations are based upon the results of soil testing.

2.1 Cement

The highest reading for sulfates was 13 mg/kg or 0.0013 percent by weight.

Per ACI 318-14, Table 19.3.1.1, sulfate levels in these samples categorized as S0 and are negligible for corrosion of metals and cement. Per ACI 318-14 Table 19.3.2.1 any type of cement not containing steel or other metal can be used.

2.2 Steel Reinforced Cement/ Cement Mortar Lined & Coated (CML&C)

Chlorides in soil can overcome the corrosion inhibiting property of cement for steel, as it can also break through passivated surfaces of aluminum and stainless steels.[1,2] The highest concentration of chlorides was 77 mg/kg.

[1] Design Manual 303: Cement Cylinder Pipe. Ameron. p.65
[2] *Chapter 19, Table 1904.2.2(1), 2012 International Building Code*

Chloride levels in these samples are not significantly corrosive to metals not in tension. Standard cement cover may be used in these soils.

Though soils at some locations are significantly corrosive to various metals, per ACI 318-14 Chapter 19 Table 19.3.1.1, all slabs on this site exposure categories and class for **Corrosion Protection of Reinforcement (C) would be considered C1** as Concrete exposed to moisture [mud/rain] (slab sides and bottom) but not to an external source of chlorides. Though there are chlorides in the soil, ACI 318's definition of "external source of chlorides" consists of deicing chemicals, salt, brackish water, seawater, or spray from these sources. The chloride levels in seawater are typically over 19,000 mg/L or 19,000 ppm.

When concrete is tested for water-soluble chloride ion content, the tests should be made at an age of 28 to 42 days. The limits in Per ACI 318-14 Table 5.3.2.1 are to be applied to chlorides contributed from the concrete ingredients, not those from the environment surrounding the concrete.[3]

2.3 Stainless Steel Pipe/Conduit/Fittings

Stainless steels derive their corrosion resistance from their chromium content and oxide layer which needs oxygen to regenerate if damaged. Thus stainless steel is not good for deep soil applications where oxygen levels are extremely low. Stainless steels should not be installed deeper than a plant root zone. Stainless steels typically have the same nobility as copper on the galvanic series and can be connected to copper. If stainless steel must be used, it must be backfilled with soil having greater than 10,000 ohm-cm resistivity and excellent drainage. 304 Stainless steel will also corrode if in contact with carbon materials such as activated carbon. Stainless steel welds should be pickled.

The soil at this site has low probability for anaerobic corrosive bacteria and low chloride levels. Per Nickel Institute guidelines, 304 or 316 Stainless steels can be used in these soils.

2.4 Steel Post Tensioning Systems

The proper sealing of stressing holes is of utmost importance in PT Systems. Cut off excess strand 1/2" to 3/4" back in the hole. Coat or paint exposed anchorage, grippers, and stub of strands with "Rust-o-leum" or equal. After tendons have been coated, the cement contractor shall dry pack blockouts within ten (10) days. A non-shrink, non-metallic, non-porous moisture-insensitive grout (Master EMACO S 488 or equivalent), or epoxy grout shall be used for this purpose. If an encapsulated post-tension system is used, regular non-shrink grout can be used.

Due to the low chloride concentrations measured on samples obtained from this site, post-tensioned slabs should be protected in accordance with soil considered normal (non-corrosive).[4,5] Addition of grease caps to the cut strand at live end anchors can deter construction defect accusations but are not needed.

---

[5] *Specification for Unbonded Single Strand Tendons. Post-tensioning Institute (PTI), Phoenix, AZ, 2000.*

2.5 Steel Piles

Steel piles are most susceptible to corrosion in disturbed soil where oxygen is available. Further, a dissimilar environment corrosion cell would exist between the steel embedded in cement, such as pile caps and the steel in the soil. In the cell, the steel in the soil is the anode (corroding metal), and the steel in cement is the cathode (protected metal). This cell can be minimized by coating the part of the steel piles that will be embedded in cement to prevent contact with cement and reinforcing steel.

Piles driven into soils without disturbing soils will avoid oxygen introduction and low corrosion rates unless there is a probability for corrosive anaerobic bacteria. Galvanized steel's zinc coating can provide significant protection for driven piles. In corrosive soils in which normal zinc coatings are not enough, the life of piles can be extended by increasing zinc coating thickness, using sacrificial metal, or providing a combination of epoxy coatings and cathodic protection. Corrosion has been observed to be extremely localized even at and below underground water tables. Pit depths of this magnitude do not have an appreciable effect on the strength or useful life of piling structures because the reduction in pile cross section is not significant.[6] Pitting is of more importance to pipes transporting liquids or gases which should not be leaked into the ground.

The following recommendations are recommended to achieve desired life. We defer to structural engineers to use our estimated corrosion rates and to choose from the corrosion control options listed below.

1) Sacrificial metal by use of thicker piles per non-disturbed soil corrosion rates, or
2) Galvanized steel piles per non-disturbed soil corrosion rates, or
3) Combination of galvanized and sacrificial metal per non-disturbed soil corrosion rates, or
4) For no loss of metal, coat entire pile with abrasion resistant epoxy coating such as 3M Scotchkote 323, or PowercreteDD, or equivalent, or
5) Use high yield steel which will corrode at the same rate as mild steel but have greater yield strength and thus be able to suffer more material loss than mild steel.

2.5.1 Expected Corrosion Rate of Steel and Zinc in disturbed soil

In general, the corrosion rate of metals in soil depends on the electrical resistivity, the elemental composition, and the oxygen content of the soil. Soils can vary greatly from one acre to the next, especially at earthquake faults. The better a soil is for farming; the easier it will be for corrosion to take place. Expansive soils will also be considered disturbed simply because of their nature from dry to wet seasons.

In Melvin Romanoff's NBS Circular 579, the corrosion rates of carbon steels and various metals was studied over long term periods. Various metals were placed in various soil types to gather corrosion rate data of all metals in all soil types. Samples were collected and material loss measured over the course of 20 years in some sites. The following corrosion rates were estimated by comparing the worst results of soils tested with similar soils in Romanoff's studies

[6] Melvin Romanoff, Corrosion of Steel Pilings in Soils, National Bureau of Standards Monograph 58, pg 20.

and Highway Research Board's publications.[7] The corrosion rate of zinc in disturbed soils is determined per Romanoff studies and King Nomograph.[8]

Expected Corrosion Rate for Steel = 0.60 mils/year for one sided attack

Expected Corrosion Rate for Zinc = 0.08 mils/year for one sided attack.

Note: 1 mil = 0.001 inch

In undisturbed soils, a corrosion rate of 0.60 mil/year for steel is expected with little change in the corrosion rate of zinc due to it's low nobility in the galvanic series.

Per CTM 643: Years to perforation of corrugated galvanized steel culverts

- 87.3 Years to Perforate 18 gage (0.052in)metal
- 113.6 Years to Perforation for a 16 gage metal culvert
- 139.8 Years to Perforation for a 14 gage metal culvert
- 192.2 Years to Perforation for a 12 gage metal culvert
- 244.6 Years to Perforation for a 10 gage metal culvert
- 297.0 Years to Perforation for a 8 gage metal culvert

2.5.2 Expected Corrosion Rate of Steel and Zinc in Undisturbed soil

Expected Corrosion Rate for Steel = 0.60 mils/year for one sided attack

Expected Corrosion Rate for Zinc = 0.08 mils/year for one sided attack.

Note: 1 mil = 0.001 inch

2.6 Steel Storage tanks

Underground fuel tanks must be constructed and protected in accordance with California Underground Storage Tank Regulations, CCR, Title 23, Division 3, Chapter 16. Metals should be protected with cathodic protection or isolated from backfill material with an epoxy coating.

2.7 Steel Pipelines

Though a site may not be corrosive in nature at the time of construction, **installation of corrosion test stations and electrical continuity joint bonding should be performed during construction** so that future corrosion inspections can be performed. If steel pipes with gasket joints or other possibly non-conductive type joints are installed, their joints should be bonded across by welding or pin brazing a #8 AWG copper strand bond cable. Electrical continuity is necessary for corrosion inspections and for cathodic protection.

Corrosion test stations should be installed every 1,000 feet of pipeline.

Test stations shall have two #8 HMWPE copper strand wire test leads welded or pin brazed to the underground pipe, brought up into the test station hand hole and marked CTS. Wires should be brought into test station hand hole at finished grade with 12 inches of wire coiled within test station.

[7] Field test for Estimating Service Life of Corrugated Metal Culverts, J.L. Beaton, Proc. Highway Research Board, Vol 41, P. 255, 1962
[8] King, R.A. 1977, Corrosion Nomograph, TRRC Supplementary Report, British Corrosion Journal

At isolation joints and pipe casings, 4 wire test stations shall be installed using #8 HMWPE copper strand wire test leads. Use different color wires to distinguish which wires are bonded to one side of isolation joint or to casing. Wires should be brought into test station hand hole at finished grade with 12 inches of wire coiled within test station.

Prevent dissimilar metal corrosion cells per NACE SP0286:

1) Electrically isolate dissimilar metal connections
2) Electrically isolate dissimilar coatings (Epoxy vs CML&C) segments connections
3) Electrically isolate river crossing segments
4) Electrically isolate freeway crossing segments
5) Electrically isolate old existing pipelines from new pipelines
6) Electrically isolate aboveground and underground pipe segments with flange isolation joint kits per NACE SP0286 to avoid galvanic corrosion cells. **These are especially important for fire risers.**

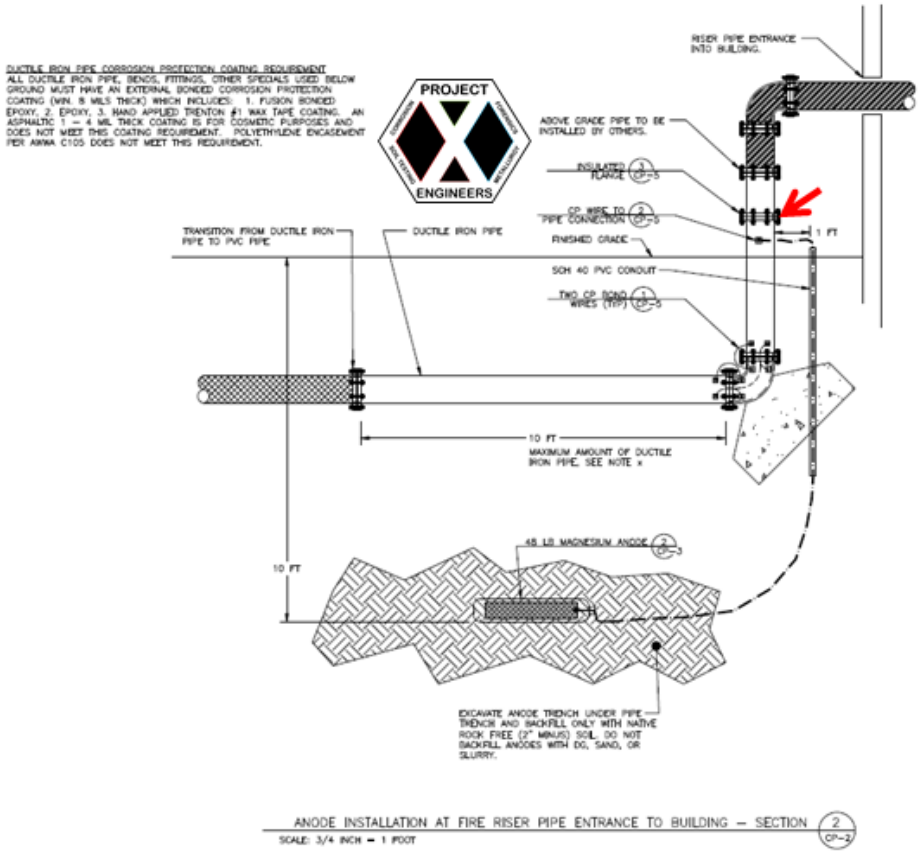

Figure 1- Fire Riser Detail: Install Isolation joint at red arrow

The bare steel surfaces, the corrosivity at this site is mildly corrosive to steel. The corrosion control options for this site are as follows:

1) Apply impermeable dielectric coating such as minimum 10 mil thick polyethylene, or
2) Tape coating system per AWWA C214, or

3) Wax tape all metallic surfaces per AWWA C217, or
4) Coal tar enamel per AWWA C203, or
5) Fusion bonded epoxy per AWWA C213, or
6) For bare steel surfaces, such as welded pipe joints, apply 3 inch thick field coating of Type II cement or high pH slurry that will maintain pH higher than 12. Cement is both a corrosion inhibitor and a coating for ferrous metals. Cement naturally holds a pH of 12 or higher for many years if not exposed to high levels of carbon dioxide. (For CML&C pipes, CML&C factory applied 3/4 inch thick coating is equivalent and needs no extra thickness added.)

It is critical for the life of the pipe that the protective wrap contains no openings or holes. Prevent damage to the protective sleeve during backfilling of the pipe trench. Penetrations of any kind within these or other protective materials generally leads to accelerated corrosion failure due to the fact that the corrosion attack is concentrated at the location of these penetrations. Cathodic protection will protect these defects. The better the coating, the less expensive a cathodic protection system will be in anode material and power requirement if needed.

2.8 Steel Fittings

The corrosivity at this site is mildly corrosive to steel. The corrosion control options for this site can be one of the following:

1) Apply impermeable dielectric coating such as minimum 10 mil thick polyethylene, or
2) Tape coating system per AWWA C214, or
3) Wax tape all metallic surfaces per AWWA C217, or
4) Coal tar enamel per AWWA C203, or
5) Fusion bonded epoxy per AWWA C213
6) Use powder coated steel with minimum 60 micron (2-3 mil) thick coating[9], or
7) Galvanized steel, or
8) Apply standard concrete cover of Type II cement or high pH slurry that will maintain pH higher than 12. Cement is both a corrosion inhibitor and a coating for ferrous metals. Cement naturally holds a pH of 12 or higher for many years if not exposed to high levels of carbon dioxide.

It is critical for the life of the metal that the protective wrap contains no openings or holes. Prevent damage to the protective sleeve during backfilling of the pipe trench. Penetrations of any kind within these or other protective materials generally leads to accelerated corrosion failure due to the fact that the corrosion attack is concentrated at the location of these penetrations. [9] Manish Kumar Bhadu, Akshya Kumar Guin, Veena Singh, Shyam K. Choudhary, "Corrosion Study of Powder-Coated Galvanised Steel", International Scholarly Research Notices, vol. 2013, Article ID 464710, 9 pages, 2013

expensive a cathodic protection system will be in anode material and power requirement if needed.

2.9 Ductile Iron (DI) & Cast Iron Fittings

AWWA C105 developed a 10 point system to classify sites as aggressive or non-aggressive to ductile iron materials. It is a tool to help in deciding whether or not to use polyethylene encasement [AWWA C105 Appendix A]. The 10-point system does not, and was never intended to; quantify the corrosivity of a soil. It is a tool used to distinguish nonaggressive from aggressive soils relative to iron pipe. Soils <10 points are considered nonaggressive to iron pipe, whereas soils ≥10 points are considered aggressive. A 15 and a 20 point soil are both considered aggressive to iron pipe, however, because of the nature of the soil parameters measured, the 20 point soil may not necessarily be more aggressive than the 15 point soil. The criterion is based upon soil resistivities, soil drainage, pH, sulfide presence, and reduction-oxidation (REDOX) potential. The soil samples tested for this site resulted in a score of 1 out of 25.5. A score greater or equal to 10 points classifies soils as aggressive to iron materials and would recommend the use of polyethylene encasement or other coating. The black coating on iron pipes is purely for aesthetic purposes and should not be relied upon for underground corrosion protection.[10]

The corrosivity at this site is mildly corrosive to iron. The corrosion control options for this site are as follows:

1) Apply impermeable dielectric coating such as minimum 10 mil thick polyethylene, or
2) Tape coating system per AWWA C214, or
3) Wax tape all metallic surfaces per AWWA C217, or
4) Coal tar enamel per AWWA C203, or
5) Fusion bonded epoxy per AWWA C213
6) Apply standard concrete cover of Type II cement or high pH slurry that will maintain pH higher than 12. Cement is both a corrosion inhibitor and a coating for ferrous metals. Cement naturally holds a pH of 12 or higher for many years if not exposed to high levels of carbon dioxide.

It is critical for the life of the metal that the protective wrap contains no openings or holes. Prevent damage to the protective sleeve during backfilling of the pipe trench. Penetrations of any kind within these or other protective materials generally leads to accelerated corrosion failure due to the fact that the corrosion attack is concentrated at the location of these penetrations. Cathodic protection will protect these defects. The better the coating, the less expensive a cathodic protection system will be in anode material and power requirement if needed.

2.10 Ductile Iron & Cast Iron Pipe

AWWA C105 developed a 10 point system to classify sites as aggressive or non-aggressive to ductile iron materials. The 10-point system does not, and was never intended to, quantify the corrosivity of a soil. It is a tool used to distinguish nonaggressive from aggressive soils relative to iron pipe. Soils <10 points are considered nonaggressive to iron pipe, whereas soils ≥10 points are considered aggressive. A 15 and a 20 point soil are both considered aggressive to iron pipe, however, because of the nature of the soil parameters measured, the 20 point soil may not necessarily be more aggressive than the 15 point soil. The criterion is based upon soil resistivities, soil drainage, pH, sulfide presence, and reduction-oxidation (REDOX) potential. The soil samples tested for this site resulted in a score of 1 out of 25.5. A score greater or equal to 10 points classifies soils as aggressive to iron materials. The black coating on iron pipes is purely for aesthetic purposes and should not be relied upon for corrosion protection.[11]

Though a site may not be corrosive in nature at the time of construction, **installation of corrosion test stations and electrical continuity joint bonding should be performed during construction** so that future corrosion inspections can be performed. If steel pipes with gasket joints or other possibly non-conductive type joints are installed, their joints should be bonded across by welding or pin brazing a #8 AWG copper strand bond cable. Electrical continuity is necessary for corrosion inspections and for cathodic protection. **If using thermite, perform one test bond using a half-charge then pressure test to confirm excess heat and pinholes were not created.**

Pea gravel is used by plumbers to lay pipes and establish slopes. If the gravel has more than 200 ppm chlorides or is not tested, a 25 mil plastic should be placed between the gravel and pipe to avoid corrosion.

Corrosion test stations should be installed every 1,000 feet of pipeline.

Test stations shall have two #8 HMWPE copper strand wire test leads welded or pin brazed to the underground pipe, brought up into the test station hand hole and marked CTS. Wires should be brought into test station hand hole at finished grade with 12 inches of wire coiled within test station.

At isolation joints and pipe casings, 4 wire test stations shall be installed using #8 HMWPE copper strand wire test leads. Use different color wires to distinguish which wires are bonded to one side of isolation joint or to casing. Wires should be brought into test station hand hole at finished grade with 12 inches of wire coiled within test station.

Prevent dissimilar metal corrosion cells per NACE SP0286:

1) Electrically isolate dissimilar metal connections
2) Electrically isolate dissimilar coatings (Epoxy vs CML&C) segments connections
3) Electrically isolate river crossing segments
4) Electrically isolate freeway crossing segments
5) Electrically isolate old existing pipelines from new pipelines

[11] https://www.dipra.org/ductile-iron-pipe-resources/frequently-asked-questions/corrosion-control

6) Electrically isolate aboveground and underground pipe segments with flange isolation joint kits per NACE SP0286**. These are especially important for fire risers.**

The corrosivity at this site is mildly corrosive to iron. The corrosion control options for this site are as follows:

1) Apply impermeable dielectric coating such as minimum 10 mil thick polyethylene, or
2) Tape coating system per AWWA C214, or
3) Wax tape all metallic surfaces per AWWA C217, or
4) Coal tar enamel per AWWA C203, or
5) Fusion bonded epoxy per AWWA C213
6) Apply standard concrete cover of Type II cement or high pH slurry that will maintain pH higher than 12. Cement is both a corrosion inhibitor and a coating for ferrous metals. Cement naturally holds a pH of 12 or higher for many years if not exposed to high levels of carbon dioxide.

It is critical for the life of the metal that the protective wrap contains no openings or holes. Prevent damage to the protective sleeve during backfilling of the pipe trench. Penetrations of any kind within these or other protective materials generally leads to accelerated corrosion failure due to the fact that the corrosion attack is concentrated at the location of these penetrations. Cathodic protection will protect these defects. The better the coating, the less expensive a cathodic protection system will be in anode material and power requirement if needed.

2.11 Copper Materials

Copper is an amphoteric material which is susceptible to corrosion at very high and very low pH. It is one of the most noble metals used in construction thus typically making it a cathode when connected to dissimilar metals. Copper's nobility can change with temperature, similar to the phenomenon in zinc. When zinc is at room temperature, it is less noble than steel and can provide cathodic protection to steel. But when zinc is at a temperature above 140F such as in a water heater, it becomes more noble than the steel and the steel becomes the sacrificial anode. This is why zinc is not used in steel water heaters or boilers. Cold copper has one native potential, but when heated it develops a more electronegative electro-potential aka open circuit potential. Thus hot and cold copper pipes should be electrically isolated from each other to avoid creation of a thermo-galvanic corrosion cell.

2.11.1 Copper Pipes

The lowest pH for this area was measured to be 7.6. Copper is greatly affected by pH, ammonia and nitrate concentrations[12]. The highest nitrate concentration was 20.1 mg/kg and the highest ammonia concentration was 12.6 mg/kg at this site.

These soils were determined mildly corrosive to copper and copper alloys such as brass.

[12] Corrosion Data Handbook, Table 6, Corrosion Resistance of copper alloys to various environments, 1995

Underground, aboveground, cold water, and hot water pipes should be electrically isolated from each other by use of dielectric unions and plastic in-wall pipe supports per NACE SP0286. The following are corrosion control options for underground copper water pipes.

1) Cover cold copper piping with minimum 8 mil polyethylene and backfill with clean sand with 2 inch minimum cover above and below tubing. Backfill should have a pH between 6 and 8 with electrical resistivity greater than 2,000 ohm-cm
2) Heat increases corrosion rates. Hot water pipes should be installed within PVC piping to prevent soil contact, or
3) Cover hot water pipes with minimum 8 mil polyethylene sleeve or incase in double 4-mil thick polyethylene sleeves over a suitable primer

It is critical for the life of the metal that the protective wrap contains no openings or holes. Prevent damage to the protective sleeve during backfilling of the pipe trench. Penetrations of any kind within these or other protective materials generally leads to accelerated corrosion failure due to the fact that the corrosion attack is concentrated at the location of these penetrations. Cathodic protection will protect these defects. The better the coating, the less expensive a cathodic protection system will be in anode material and power requirement if needed.

2.11.2 Brass Fittings

Brass fittings should be electrically isolated from dissimilar metals by use of dielectric unions or isolation joint kits per NACE SP0286.

These soils were determined to be mildly corrosive to copper and copper alloys such as brass.

The following are corrosion control options for underground brass.

1) Cover with minimum 10 mil polyethylene or other impermeable coating and backfill with clean sand with 4 inch minimum cover above and below brass. Backfill should have a pH between 6 and 8 with electrical resistivity greater than 2,000 ohm-cm, or
2) Wrap fitting or valves in wax tape

It is critical for the life of the metal that the protective wrap contains no openings or holes. Prevent damage to the protective sleeve during backfilling of the pipe trench. Penetrations of any kind within these or other protective materials generally leads to accelerated corrosion failure due to the fact that the corrosion attack is concentrated at the location of these penetrations. Cathodic protection will protect these defects. The better the coating, the less expensive a cathodic protection system will be in anode material and power requirement if needed.

2.11.3 Bare Copper Grounding Wire

It is assumed that corrosion will occur at all sides of the bare wire, thus the corrosion rate is calculated as a two sided attack determining the time it takes for the corrosion from two sides to meet at the center of the wire. The estimated life of bare copper wire for this site is the following:[13]

[13] Soil-Corrosion studies 1946 and 1948: Copper Alloys, Lead, and Zinc, Melvin Romanoff, National Bureau of Standards, Research Paper RP2077, 1950

Size (AWG)	Diameter (mils)	Est. Time to penetration (Yrs)
14	64.1	1068.3
13	72	1200.0
12	80.8	1346.7
11	90.7	1511.7
10	101.9	1698.3
9	114.4	1906.7
8	128.5	2141.7
7	144.3	2405.0
6	162	2700.0
5	181.9	3031.7
4	204.3	3405.0
3	229.4	3823.3
2	257.6	4293.3
1	289.3	4821.7

If the bare copper wire is being used as a grounding wire connected to less noble metals such as galvanized steel or carbon steel, the less noble metals will provide additional cathodic protection to the copper reducing the corrosion rate of the copper.

It is recommended that a corrosion inhibiting and water-repelling coating be applied to aboveground and belowground copper-to-dissimilar metal connections to reduce risk of dissimilar corrosion. This can be wax tape, or other epoxy coating.

Tinned copper wiring or laying copper wire in conductive concrete can protect against chemical attack in soils with high nitrates, ammonia, sulfide and severely low soil electrical resistivity.

2.12 Aluminum Pipe/Conduit/Fittings

Aluminum is an amphoteric material prone to pitting corrosion in environments that are very acidic or very alkaline or high in chlorides.

Conditions at this site are safe for aluminum.

Aluminum derives its corrosion resistance from its oxide layer which needs oxygen to regenerate if damaged, similar to stainless steels. Thus aluminum is not good for deep soil applications. Since aluminum corrodes at very alkaline environments, it cannot be encased or placed against cement or mortar such as brick wall mortar up against an aluminum window frame.

Aluminum is also very low on the galvanic series scale making it most likely to become a sacrificial anode when in contact with dissimilar metals in moist environments. Avoid electrical continuity with dissimilar metals by use of insulators, dielectric unions, or isolation joints per NACE SP0286. Pooling of water at post bottoms or surfaces should be avoided by integrating good drainage.

2.13 Carbon Fiber or Graphite Materials

Carbon fiber or other graphite materials are extremely noble on the galvanic series and should always be electrically isolated from dissimilar metals. They can conduct electricity and will create corrosion cells if placed in contact within a moist environment with any metal.

2.14 Plastic and Vitrified Clay Pipe

No special precautions are required for plastic and vitrified clay piping from a corrosion viewpoint.

Protect all metallic fittings and pipe restraining joints with wax tape per AWWA C217, cement if previously recommended, or epoxy.

3 CLOSURE

In addition to soils chemistry and resistivity, another contributing influence to the corrosion of buried metallic structures is stray electrical currents. These electrical currents flowing through the earth originate from buried electrical systems, grounding of electrical systems in residences, commercial buildings, and from high voltage overhead power grids. Therefore, it is imperative that the application of protective wraps and/or coatings and electrical isolation joints be properly applied and inspected.

It is the responsibility of the builder and/or contractor to closely monitor the installation of such materials requiring protection in order to assure that the protective wraps or coatings are not damaged.

The recommendations outlined herein are in conformance with current accepted standards of practice that meet or exceed the provisions of the Uniform Building Code (UBC), the International Building Code (IBC), California Building Code (CBC), the American Cement Institute (ACI), Nickel Institute, National Association of Corrosion Engineers (NACE International), Post-Tensioning Institute Guide Specifications and State of California Department of Transportation, Standard Specifications, American Water Works Association (AWWA) and the Ductile Iron Pipe Research Association (DIPRA).

Our services have been performed with the usual thoroughness and competence of the engineering profession. No other warranty or representation, either expressed or implied, is included or intended.

Please call if you have any questions.

5 Corrosion Basics

In general, the corrosion rate of metals in soil depends on the electrical resistivity, the elemental composition, and the oxygen content of the soil. Soils can vary greatly from one acre to the next, especially at earthquake faults. The better a soil is for farming; the easier it will be for corrosion to take place. Expansive soils should be considered disturbed simply because of their nature from dry to wet seasons.

5.1 Pourbaix Diagram – In regards to a material's environment

All metals are unique and have a weakness. Some metals do not like acidic (low pH) environments. Some metals do not like alkaline (high pH) environments. Some metals don't like either high or low pH environments such as aluminum. These are called amphoteric materials. Some metals become passivated and do not corrode at high pH environments such as steel. These characteristics are documented in Marcel Pourbaix's book "Atlas of electrochemical equilibria in aqueous solutions"

In the mid 1900's, Marcel Pourbaix developed the Pourbaix diagram which describes a metal's reaction to an environment dependent on pH and voltage conditions. It describes when a metal remains passive (non-corroding) and in which conditions metals become soluble (corrode). Steels are passive in pH over 12 such as the condition when it is encased in cement. If the cement were to carbonate and its pH reduce to below 12, the cement would no longer be able to act as a corrosion inhibitor and the steel will begin to corrode when moist.

Some metals such as aluminum are amphoteric, meaning that they react with acids and bases. They can corrode in low pH and in high pH conditions. Aluminum alloys are generally passive within a pH of 4 and 8.5 but will corrode outside of those ranges. This is why aluminum cannot be embedded in cement and why brick mortar should not be laid against an aluminum window frame without a protective barrier between them.

5.2 Galvanic Series – In regards to dissimilar metal connections

All metals have a natural electrical potential. This electrical potential is measured using a high impedance voltmeter connected to the metal being tested and with the common lead connected to a copper copper-sulfate reference electrode (CSE) in water or soil. There are many types of reference electrodes. In laboratory measurements, a Standard Hydrogen Electrode (SHE) is commonly used. When different metal alloys are tested they can be ranked into an order from most noble (less corrosion), to least noble (more active corrosion). When a more noble metal is connected to a less noble metal, the less noble metal will become an anode and sacrifice itself through corrosion providing corrosion protection to the more noble metal. This hierarchy is known as the galvanic series named after Luigi Galvani whose experiments with electricity and muscles led Alessandro Volta to discover the reactions between dissimilar metals leading to the early battery. The greater the voltage difference between two metals, the faster the corrosion rate will be.

Table 1- Dissimilar Metal Corrosion Risk

	Zinc	Galvanized Steel	Aluminum	Cast Iron	Lead	Mild Steel	Tin	Copper	Stainless Steel
Zinc	None	Low	Medium	High	High	High	High	High	High
Galvanized Steel	Low	None	Medium	Medium	Medium	High	High	High	High
Aluminum	Medium	Medium	None	Medium	Medium	Medium	Medium	High	High
Cast Iron	High	Medium	Medium	None	Low	Low	Low	Medium	Medium
Lead	High	Medium	Medium	Low	None	Low	Low	Medium	Medium
Mild Steel	High	High	Medium	Low	Low	None	Low	Medium	Medium
Tin	High	High	Medium	Low	Low	Low	None	Medium	Medium
Copper	High	High	High	Medium	Medium	Medium	Medium	None	Low
Stainless Steel	High	High	High	Medium	Medium	Medium	Medium	Low	None

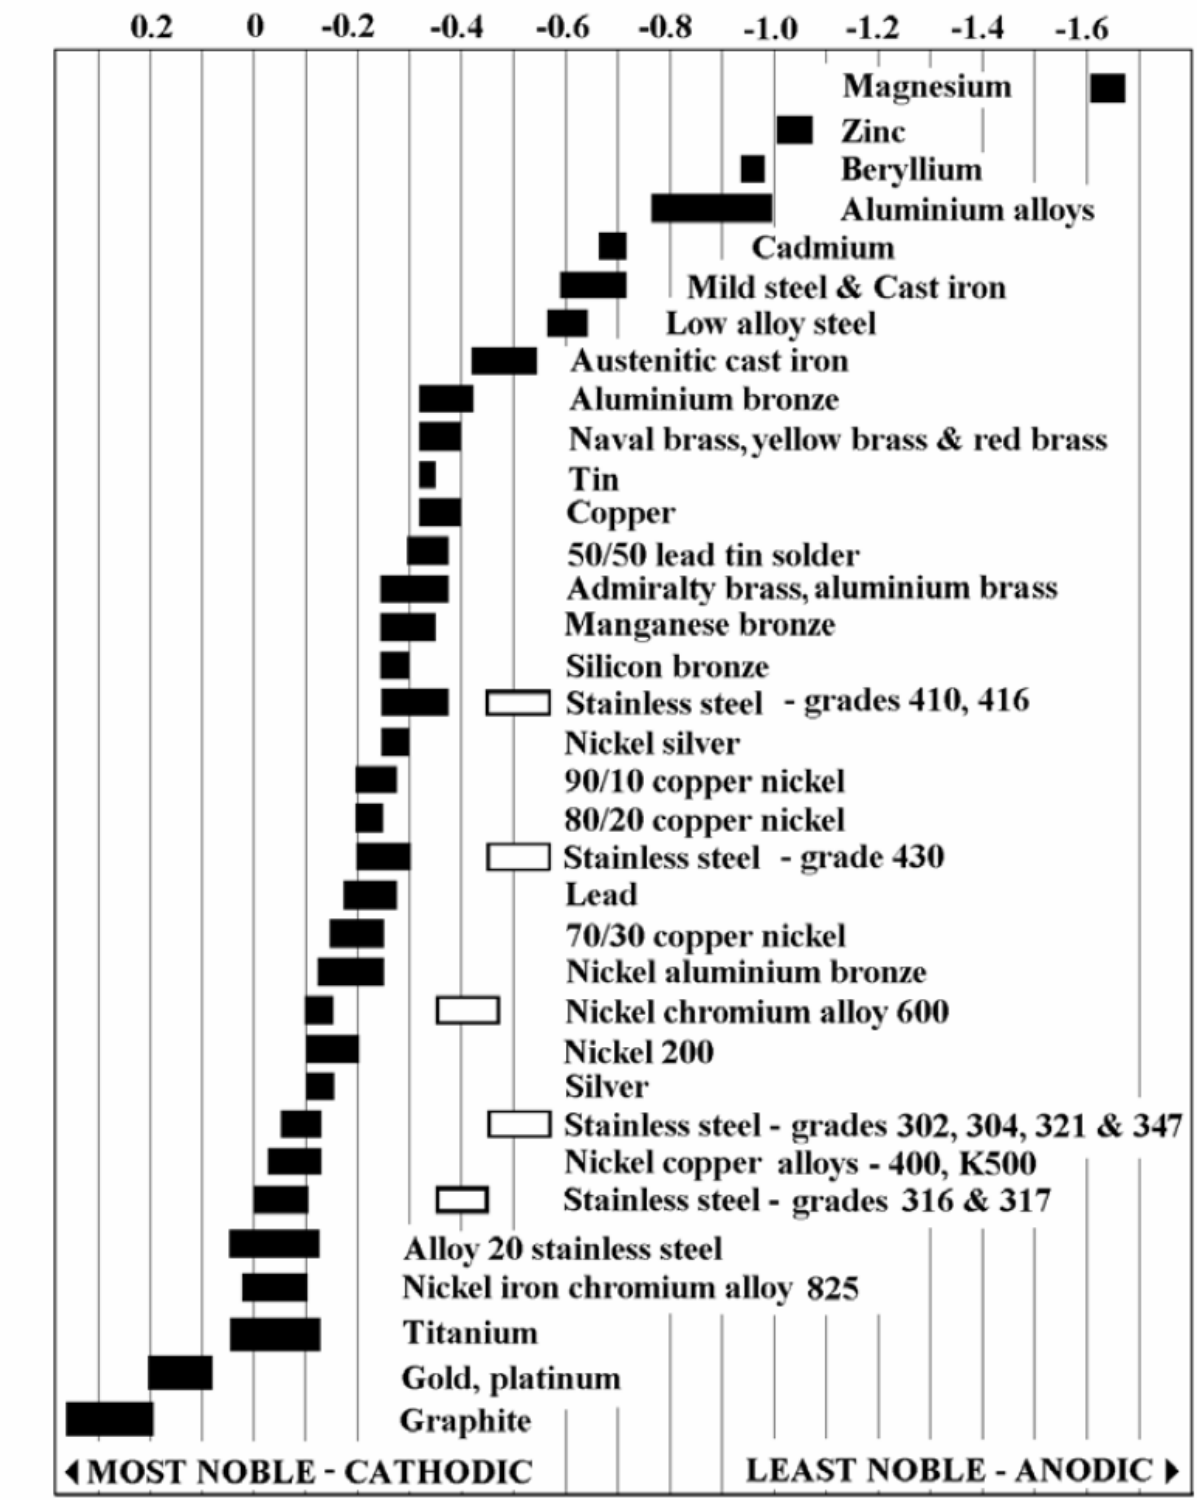

Figure 5 - Galvanic series of metals relative to CSE half cell.

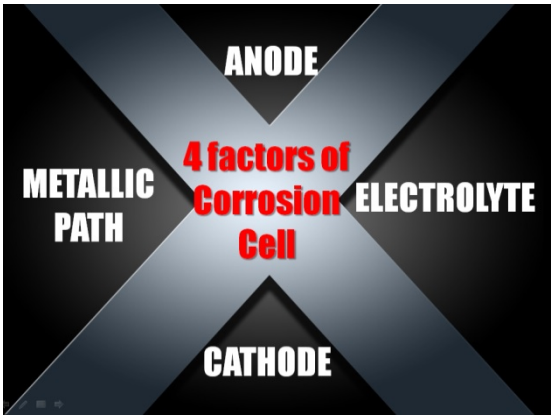
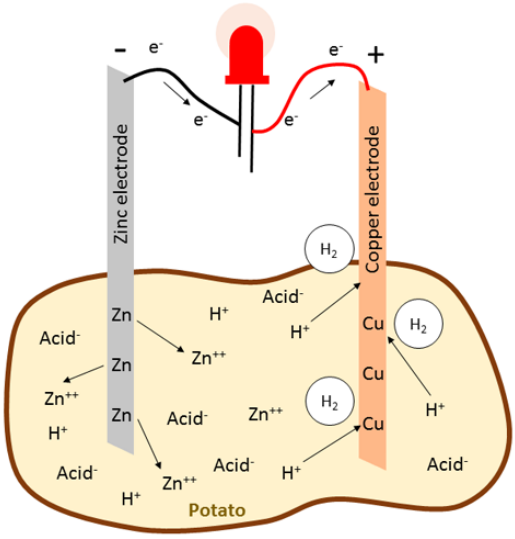
5.3 Corrosion Cell

In order for corrosion to occur, four factors must be present. (1) The anode (2) the cathode (3) the electrolyte and (4) the metallic or conductive path joining the anode and the cathode. If any one of these is removed, corrosion activity will stop. This is how a simple battery produces electricity. An example of a non-metallic yet conductive material is graphite. Graphite is similar in nobility to gold. Do not connect graphite to anything in moist environments.



The anode is where the corrosion occurs, and the cathode is the corrosion free material. Sometimes the anode and cathode are different materials connected by a wire or union. Sometimes the anode and cathode are on the same pipe with one area of the pipe in a low oxygen zone while the other part of the pipe is in a high oxygen zone. A good example of this is a post in the ocean that is repeatedly splashed. Deep underwater, corrosion is minimal, but at the splash zone, the corrosion rate is greatest.



Low oxygen zones and crevices can also harbor corrosive bacteria which in moist environments will lead to corrosion. This is why pipes are laid on backfill instead of directly on native cut soil in a trench. Filling a trench slightly with backfill before installing pipe then finishing the backfill creates a uniform environment around the entire surface of the pipe.

The electrolyte is generally water, seawater, or moist soil which allows for the transfer of ions and electrical current. Pure water itself is not very conductive. It is when salts and minerals dissolve into pure water that it becomes a good conductor of electricity and chemical reactions. Metal ores are turned into metal alloys which we use in construction. They naturally want to return to their natural metal ore state but it requires energy to return to it. The corrosion cell, creates the energy needed to return a metal to its natural ore state.

The metallic or conductive path can be a wire or coupling. Examples are steel threaded into a copper joint, or an electrician grounding equipment to steel pipes inadvertently connecting electrical grid copper grounding systems to steel or iron underground pipes.

The ratio of surface area between the anode and the cathode is very important. If the anode is very large, and the cathode is very small, then the corrosion rate will be very small and the anode may live a long life. An example of this is when short copper laterals were connected to a large and long steel pipeline. The steel had plenty of surface area to spread the copper's attack, thus corrosion was not

noticeable. But if the copper was the large pipe and the steel the short laterals, the steel would corrode at an amazing rate.

5.4 Design Considerations to Avoid Corrosion

The following recommendations are based upon typical observations and conclusions made by forensic engineers in construction defect lawsuits and NACE International (Corrosion Society) recommendations.

5.4.1 Testing Soil Factors (Resistivity, pH, REDOX, SO, CL, NO3, NH3)

As previously mentioned, different factors can cause corrosion. The most useful and common test for categorizing a soil's corrosivity has been the measure of soil resistivity which is typically measured in units of (ohm-cm) by corrosion engineers and geologists. Soil resistivity is the ability of soil to conduct or resist electrical currents and ion transfer. The lower the soil resistivity, the more conductive and corrosive it is. The following are "generally" accepted categories but keep in mind, the question is not "Is my soil corrosive?", the question should be, "What is my soil corrosive to?" and to answer that question, soil resistivity and chemistry must be tested. Though **soil resistivity is a good corrosivity indicator for steel materials, high chlorides or other corrosive elements do not always lower soil resistivity, thus if you don't test for chlorides and other water soluble salts, you can get an unpleasant surprise.** The largest contributing factor to a soil's electrical resistivity is its clay, mineral, metal, or sand make-up.

Table 2 - Corrosion Basics- An Introduction, NACE, 1984, pg 191

(Ohm-cm)	Corrosivity Description
0-500	Very Corrosive
500-1,000	Corrosive
1,000-2,000	Moderately Corrosive
2,000-10,000	Mildly Corrosive
Above 10,000	Progressively less corrosive

Testing a soil's pH provides information to reference the Pourbaix diagram of specific metals. Some elements such as ammonia and nitrates can create localized alkaline conditions which will greatly affect amphoteric materials such as aluminum and copper alloys.

Excess sulfates can break-down the structural integrity of cement and high concentrations of chlorides can overcome cement's corrosion inhibiting effect on encased ferrous metals and break down protective passivated surface layers on stainless steels and aluminum.

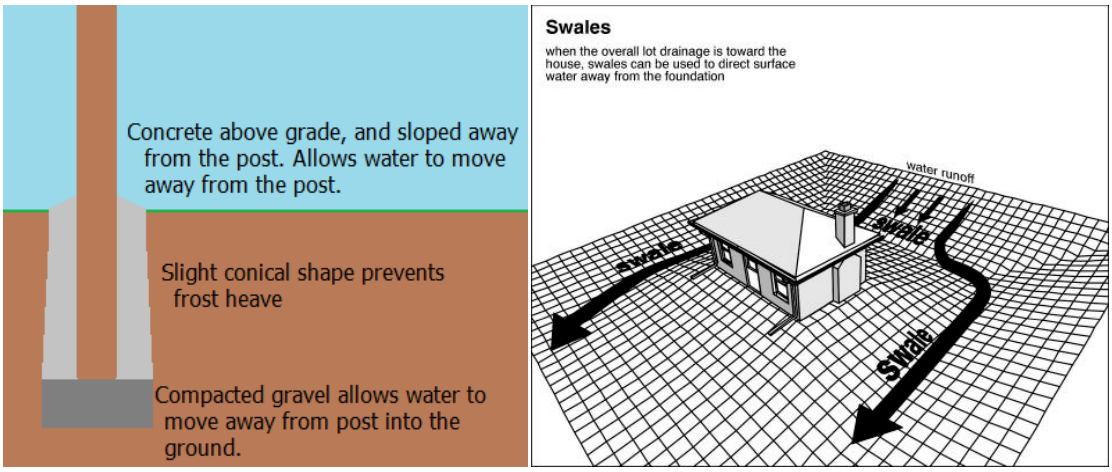
Corrosive bacteria are everywhere but can multiply significantly in anaerobic conditions with plentiful sulfates. The bacteria themselves do not eat the metal but their by-products can form corrosive sulfuric acids. The probability of corrosive bacteria is tested by measuring a soil's oxidation-reduction (REDOX) electro-potential and by testing for the presence of sulfides.

Only by testing a soil's chemistry for minimum resistivity, pH, chlorides, sulfates, sulfides, ammonia, nitrate, and redox potential can one have the information to evaluate the corrosion risk to construction materials such as steel, stainless steel, galvanized steel, iron, copper, brass, aluminum, and concrete.

5.4.2 Proper Drainage

It cannot be emphasized enough that pooled stagnant water on metals will eventually lead to corrosion. This stands for internal corrosion and external corrosion situations. In soils, providing good drainage will lower soil moisture content reducing corrosion rates. Attention to properly sealing polyethylene wraps around valves and piping will avoid water intrusion which would allow water to pool against metals. Above ground structures should not have cupped or flat surfaces that will pond water after rain or irrigation events.

Buildings typically are built on pads and have swales when constructed to drain water away from buildings directing it towards an acceptable exit point such as a driveway where it continues draining to a local storm drain. Many homeowners, landscapers and flatwork contractors appear to not be aware of this and destroy swales during remodeling. The majority of garage floor and finished grade elevations are governed by drainage during design.[14,15]



5.4.3 Avoiding Crevices

Crevices are excellent locations for oxygen differential induced corrosion cells to begin. Crevices can also harbor corrosive bacteria even in the most chemically treated waters. Crevices will also gather salts. If water's total alkalinity is low, its ability to maintain a stable pH can also become more difficult within a crevice allowing the pH to drop to acidic levels continuing a pitting process. Welds in extremely corrosive environments should be complete and well filleted without sharp edges to avoid crevices. Sharp edges should be avoided to allow uniform coating of protective epoxy. Detection of crevices in welds should be treated immediately. If pressures and loads are low, sanding and rewelding or epoxy patching can be suitable repairs. Damaged coatings can usually be repaired with Direct to Metal paints. **Scratches and crevice corrosion are like infections, they should not be left to fester or the infection will spread making things worse.**

[14] https://www.fencedaddy.com/blogs/tips-and-tricks/132606467-how-to-repair-a-broken-fence-post

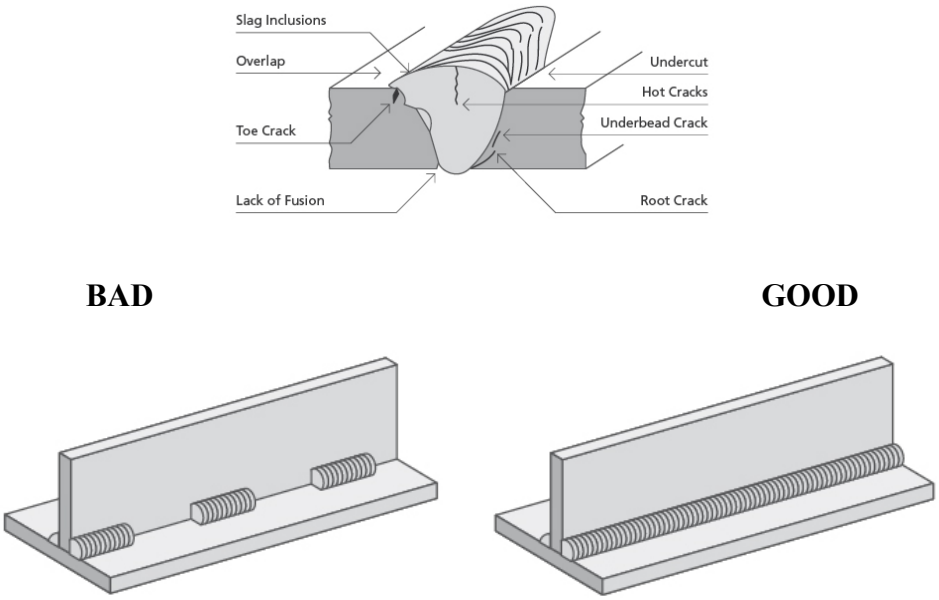

Figure 6- Defects which form weld crevices[16]

5.4.4 Coatings and Cathodic Protection

When faced with a corrosive environment, the best defense against corrosion is removing the electrolyte from the corrosion cell by applying coatings to separate the metal from the soil. During construction and installation, there is always some scratch or damage made to a coating. NACE training recommends that coatings be used as a first line of defense and that sacrificial or impressed current cathodic protection is used as a 2nd line of defense to protect the scratched areas. Use of a good coating dramatically reduces the amount of anodes a CP system would need. If CP is not installed as a 2nd line of defense in an extremely corrosive environment, the small scratched zones will suffer accelerated corrosion. CP details such as anode installation instructions must be designed by corrosion engineers or vessel manufacturers on a per project basis because it depends on electrolyte resistivity, surface area of infrastructure to be protected, and system geometry.

There are two types of cathodic protection systems, a Galvanic Anode Cathodic Protection (GACP) system and an Impressed Current Cathodic Protection (ICCP) system. A Galvanic Anode Cathodic Protection (GACP) system is simpler to install and maintain than an Impressed Current Cathodic Protection (ICCP) system. To protect the metals, they must all be electrically continuous to each other. In a GACP system, sacrificial zinc or magnesium anodes are then buried at locations per the CP design and connected by wire to a structure at various points in system. At the connection points, a wire connecting to the structure and the wire from the anode are joined in a Cathodic Protection Test Station hand hole which looks similar in size and shape to an irrigation valve pull box. By coating the underground structures, one can reduce the number of anodes needed to provide cathodic protection by 80% in many instances.

An ICCP system requires a power source, a rectifier, significantly more trenching, and more expensive type anodes. These systems are typically specified when bare metal is requiring protection

[16] http://www.daroproducts.co.uk/makes-good-weld/

in severely corrosive environments in which galvanic anodes do not provide enough power to polarize infrastructure to -850 mV structure-to-soil potential or be able to create a 100 mV potential shift as required by NACE SP169 to control corrosion. In severely corrosive environments, a GACP system simply may not last a required lifetime due to the high rate of consumption of the sacrificial anodes. ICCP system rectifiers must be inspected and adjusted quarterly or at a minimum bi-annually per NACE recommendations. Different anode installations may be possible but for large sites, anodes are placed evenly throughout the site and all anode wires must be trenched to the rectifier. For a large site, it may be beneficial to use two or more rectifiers to reduce wire lengths or trenching.

To simplify, a GACP system can be installed and practically forgotten with minor trenching because the anodes can be installed very close to the structures. An ICCP system must be inspected annually and anode wires run back to the rectifier which itself connects to the pile system. If any type of trenching or development is expected to occur at the site during the life of the site, it is a good idea to inspect the anode connections once a year to make sure wires are not cut and that the infrastructure is still being provided adequate protection. A common situation that occurs with ICCP systems is that a contractor accidently cuts the wires during construction then reconnects them incorrectly, turning the once cathode, into a sacrificing anode.

Design of a cathodic protection system protecting against soil side corrosion requires that Wenner Four Pin ground resistance measurements per ASTM G57 be performed by corrosion engineers at various locations of the site to determine the best depths and locations for anode installations. Ideally, a sample pile is installed and experiments determining current requirement are conducted. Using this data, the decision is made whether a GACP system is feasible or if an ICCP must be used.

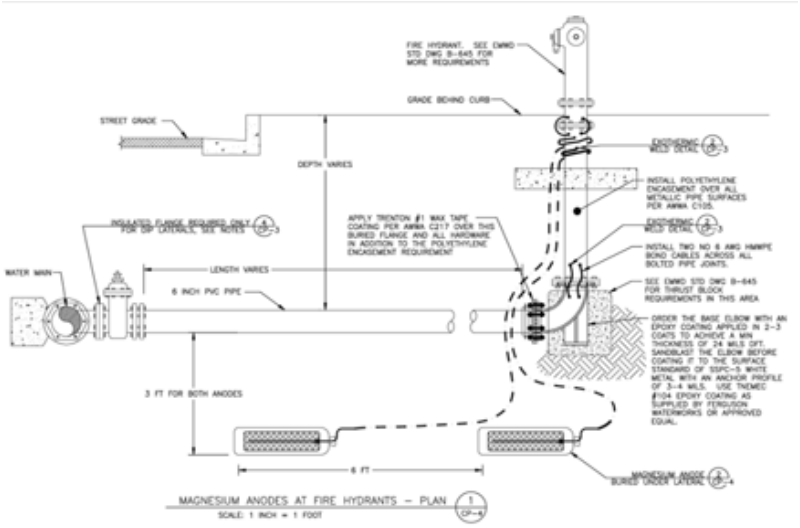

Figure 7- Sample anode design for fire hydrant underground piping

Vessels such as water tanks will have protective interior coatings and anodes to protect the interior surfaces. Anodes can also be buried on site and connected to system skid supports to protect the metal in contact with soil. A good example of a vessel cathodic protection system exists in all home water heaters which contain sacrificial aluminum or magnesium anodes. In environments that exceed 140F, zinc anodes cannot be used with carbon steel because they become the aggressor (Cathodic) to

the steel instead of sacrificial (anodic). Anodes in vessels containing extremely brackish water with chloride levels over 2,000 ppm should inspect or change out their anodes every 6 months.

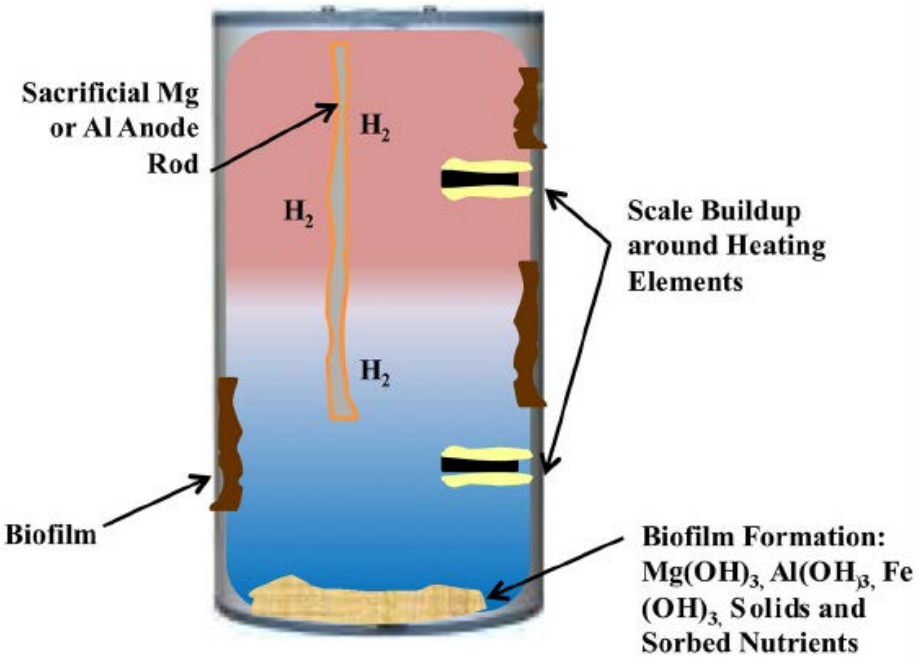

Figure 8- Cross section of boiler with anode

Cathodic protection can only protect a few diameters within a pipeline thus it is not recommended for small diameter pipelines and tubing internal corrosion protection. Anodes are like a lamp shining light in a room. They can only protect along their line of sight.

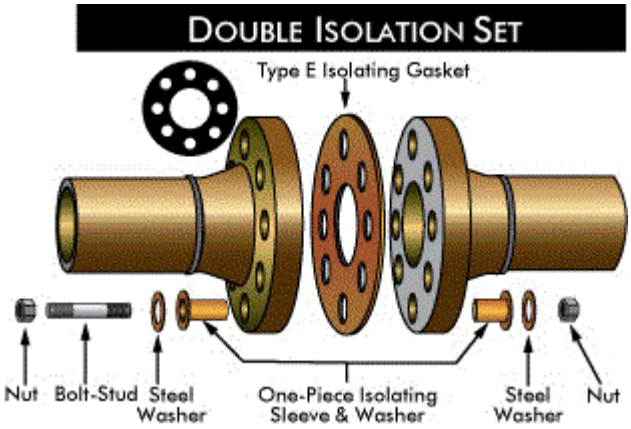
5.4.5 Good Electrical Continuity

In order for cathodic protection to protect a long pipeline or system of pipes from external soil side corrosion, they must all be electrically continuous to each other so that the electric current from the anode can travel along the pipes, then return through the earth to the anode. Electrical continuity is achieved by welding or pin brazing #8 AWG copper strand bond cable to the end of pipe sticks which have rubber gaskets at bell and spigots. If steel pipes are joined by full weld, bonding wires are not needed.

Electrical continuity between dissimilar metals is not desirable. Isolation joints or di-electric unions should be installed between dissimilar metals, such as steel pipes connecting to a brass valve per NACE SP0286. Bonding wires should then be welded onto the steel pipes by-passing the brass valve so that the cathodic protection system's current can continue to travel along the steel piping but isolate the brass valve from the steel pipeline. Another option would be to provide a separate cathodic protection system for steel pipes on both sides of the brass valve.

Typically, water heater inlets and outlets, gas meters and water meters have dielectric unions installed in them to separate utility property from homeowner property. This also protects them in the case that a home owner somehow electrically connects water pipes or gas pipes to a neighborhood electrical grounding system which can potentially have less noble steel in soil now connected to much

more noble copper in soil which will then create a corrosion cell. This is exactly how a lemon powered clock works when a galvanized zinc nail and a steel nail are inserted into a lemon then connected to a clock. The clock is powered by the corrosion cell created.



5.4.6 Bad Electrical Continuity

Bad electrical continuity is when two different materials or systems are made electrically continuous (aka shorted) when they were not designed to be electrically continuous. Examples of this would be when gas lines are shorted to water lines or to electrical grounding beds. Very often, fire risers are shorted to electrical grounding systems, and water pipes at business parks. Since fire risers usually have a very short ductile iron pipe in the ground which connects to PVC pipe systems, they tend to experience leaks after 7 to 10 years of being attacked by underground copper systems.

It is absolutely imperative that any copper water piping or other metal conduits penetrating cement slab or footings, not come in contact with the reinforcing steel or post-tensioning tendons to avoid creation of galvanic corrosion cells.

5.4.7 Corrosion Test Stations

Corrosion test stations should be installed every 1,000 feet along pipelines in order to measure corrosion activity in the future. For a simple pipeline, two #8 AWG copper strand bond cable welded or pin brazed onto the pipeline are run up to finished grade and left in a hand hole. Corrosion test stations are used to measure pipe-to-soil electro potential relative to a copper copper-sulfate reference electrode to determine if the pipe is experiencing significant corrosion activity. By measuring test stations along a pipeline, hot spots can be determined, if any. The wires also allow for electrical continuity testing, condition assessment, and a multitude of other types of tests.

At isolation joints and pipe casings, two wires should be welded to either side of the isolation joint for a total of 4 wires to be brought up to the hand hole. This allows for future tests of the isolation joint, casing separation confirmation, and pipe-to-soil potential readings during corrosion surveys.

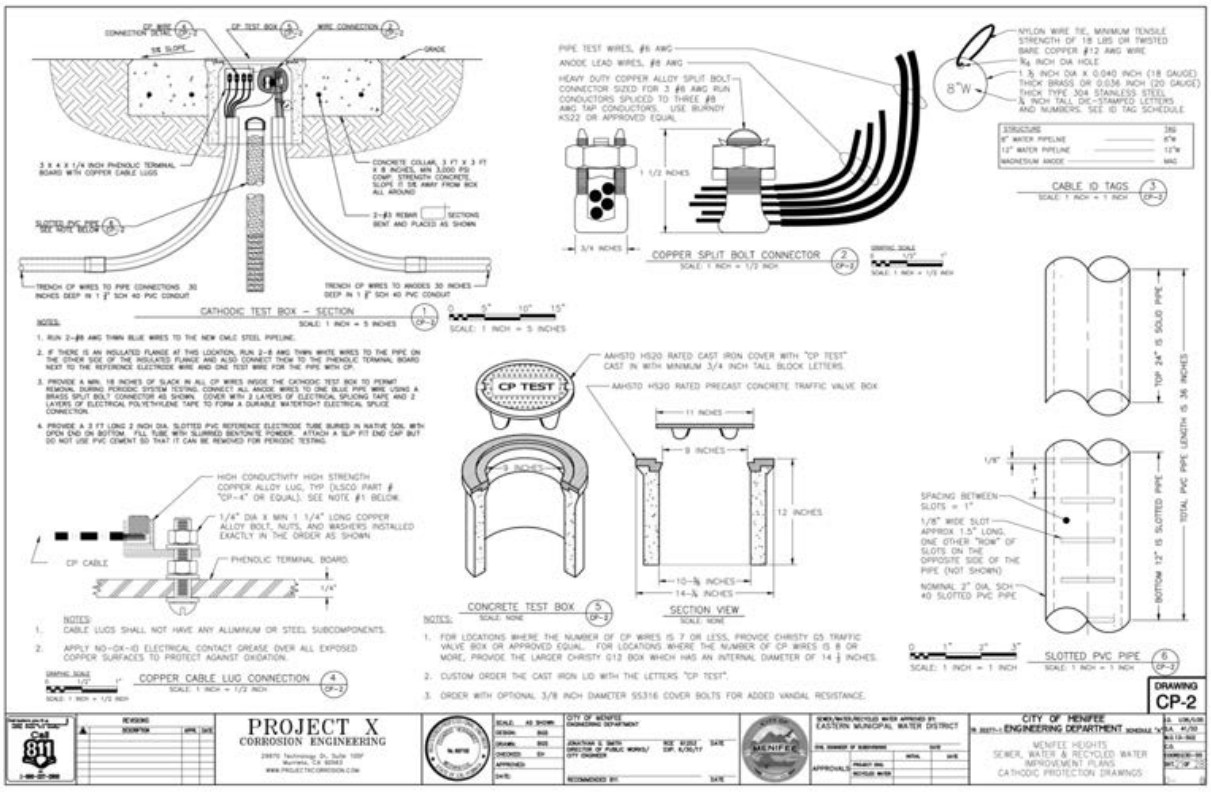


Figure 9- Sample of corrosion test station specification drawing

5.4.8 Excess Flux in Plumbing

Investigations of internal corrosion of domestic water plumbing systems almost always finds excess flux to be the cause of internal pitting of copper pipes. Some people believe that there is no such thing as too much flux. Flux runs have been observed to travel up to 20 feet with pitting occurring along the flux run. Flushing a soldered plumbing system with hot water for 15 minutes can remove significant amounts of excess flux left in the pipes. If a plumbing system is expected to be stagnant for some time, it should be drained to avoid stagnant water conditions that can lead to pitting and dezincification of yellow brasses.

5.4.9 Landscapers and Irrigation Sprinkler Systems

A significant amount of corrosion of fences is due to landscaper tools scratching fence coatings and irrigation sprinklers spraying these damaged fences. Recycled water typically has a higher salt content than potable drinking water, meaning that it is more corrosive than regular tap water. The same risk from damage and water spray exists for above ground pipe valves and backflow preventers. Fiber glass covers, cages, and cement footings have worked well to keep tools at an arm's length.

5.4.10 Roof Drainage splash zones

Unbelievably, even the location where your roof drain splashes down can matter. We have seen drainage from a home's roof valley fall directly down onto a gas meter causing it's piping to corrode at an accelerated rate reaching 50% wall thickness within 4 years. It is the same effect as a splash

zone in the ocean or in a pool which has a lot of oxygen and agitation that can remove material as it corrodes.

5.4.11 Stray Current Sources

Stray currents which cause material loss when jumping off of metals may originate from direct-current distribution lines, substations, or street railway systems, etc., and flow into a pipe system or other steel structure. Alternating currents may occasionally cause corrosion. The corrosion resulting from stray currents (external sources) is similar to that from galvanic cells (which generate their own current) but different remedial measures may be indicated. In the electrolyte and at the metal-electrolyte interfaces, chemical and electrical reactions occur and are the same as those in the galvanic cell; specifically, the corroding metal is again considered to be the anode from which current leaves to flow to the cathode. Soil and water characteristics affect the corrosion rate in the same manner as with galvanic-type corrosion.

However, stray current strengths may be much higher than those produced by galvanic cells and, as a consequence, corrosion may be much more rapid. Another difference between galvanic-type currents and stray currents is that the latter are more likely to operate over long distances since the anode and cathode are more likely to be remotely separated from one another. Seeking the path of least resistance, the stray current from a foreign installation may travel along a pipeline causing severe corrosion where it leaves the line. Knowing when stray currents are present becomes highly important when remedial measures are undertaken since a simple sacrificial anode system is likely to be ineffectual in preventing corrosion under such circumstances.[17] Stray currents can be avoided by installing proper electrical shielding, installation of isolation joints, or installation of sacrificial jump off anodes at crossings near protected structures such as metal gas pipelines or electrical feeders.

re: Paleontological resources for the Alhambra Community Center Project (D202300738.00)

Dear Fatima:

I have conducted a thorough search of our paleontology collection records for the locality and specimen data for proposed development at the Alhambra Community Center project area as outlined on the portion of the Los Angeles USGS topographic quadrangle map that you sent to me via e-mail on December 12, 2023. We do not have any fossil localities that lie directly within the proposed project area, but we do have fossil localities nearby from the same sedimentary deposits that may occur in the proposed project area, either at the surface or at depth.

The following table shows the closest known localities in the collection of the Natural History Museum of Los Angeles County (NHMLA).

Locality Number	Location	Formation	Taxa	Depth
LACM VP 1031	Emery Park Hill, SE of the train station at the intersection of Huntington & Main Sts; Alhambra	Modelo Formation (soft punky diatomaceous shale)	Great pipefish (*Syngnathus avus*); *Ellima elmodenae*; herring (*Clupea hadleyi*)	Unknown
LACM VP 1027	Valley Blvd. at Highbury St.; Los Angeles	Modelo Formation (diatomite)	Herring (*Xyne*)	Unknown
LACM VP 3363	W of Monterey Pass Road in Coyote Pass; E of the Long Beach Freeway & S of the N boundary of Section 32; Monterey Park	Unknown Formation (Pleistocene; sand and silt)	Horse (*Equus*)	Unknown
LACM VP 1023	Workman & Alhambra Sts	Unknown Formation (Pleistocene)	sabertooth cat (*Smilodon*), horse (*Equus*), deer (*Odocoileus*), Turkey (*Meleagris*)	Unknown (excavations for storm drains)
LACM VP 2032	Los Angeles Brickyard Mission Rd. & Daly St.	Unknown Formation (Pleistocene, silt & clay)	Mastodon (*Mammut*)	20-35 ft bgs

VP, Vertebrate Paleontology; IP, Invertebrate Paleontology; bgs, below ground surface

This records search covers only the records of the NHMLA. It is not intended as a paleontological assessment of the project area for the purposes of CEQA or NEPA. Potentially fossil-bearing units are present in the project area, either at the surface or in the subsurface. As such, NHMLA recommends that a full paleontological assessment of the project area be conducted by a paleontologist meeting Bureau of Land Management or Society of Vertebrate Paleontology standards.

Sincerely,

Alyssa Bell, Ph.D.
Natural History Museum of Los Angeles County

EXECUTIVE SUMMARY

EFI Global, Inc. (EFI) has performed a Phase I Environmental Site Assessment (Phase I ESA) for City of Alhambra (Client) of a commercial property located at 612 West Shorb Avenue, in the City of Alhambra, Los Angeles County, California (the "Subject Property"). The Subject Property's Assessor's Parcel Number (APN) is 5350-007-900.

According to EFI's research and information provided by the Client, the following addresses have been found to be associated with the Subject Property: 600, 612, and 622 West Shorb Avenue, 1301 6th Street, and 1300 7th Street.

The research conducted for this study and the report prepared are in conformance with the United States Environmental Protection Agency (USEPA) All Appropriate Inquiry (AAI) standard and the American Society for Testing and Materials (ASTM) International E1527-21 scope of work.

Site Description

The Subject Property is located on the southwest corner of the West Shorb Street and South 6th Street intersection, extending west to South 7th Street, in the City of Alhambra (Figures 1 and 2).

The Subject Property is approximately 1.38 acres in size and is developed with a commercial structure with a partial basement, which is approximately 22,929 square feet in total size. The building is currently unoccupied and boarded closed and was formerly known as the Alhambra Health Center utilized for medical services.

The remaining portions of the Subject Property consist of an asphalt paved parking area on the southwest portion and limited landscaped areas with accessways in the remainder.

The surrounding area is developed with a mix of commercial and residential properties (Figures 3 and 4).

- No significant limitations were encountered during EFI's reconnaissance of the Subject Property.
- No significant hazardous material storage or recognized environmental conditions (RECs) were observed at the Subject Property.

Groundwater is estimated to be approximately in excess of 250 feet below ground surface (bgs) in the area of the Subject Property and is assumed to flow towards the southeast.

Historical Land Use

According to EFI's review of the historical resources, the Subject Property was undeveloped land sometime prior to 1894 until as late as 1926. By 1928, the Subject Property was developed with two residential structures on the southeast and southwest portions, and vacant land with vegetation in the remainder. The residential structures were removed prior to 1930.

The Subject Property was redeveloped with the existing commercial structure on the central portion in 1930 to be utilized as a health center. By 1948, the Subject Property was developed with a parking lot on the southwest portion, and limited landscaped areas with accessways in the remainder. The Subject Property has remained in this configuration through the present and is planned for redevelopment as a community center.

Historical tenants of the Subject Property have included: Los Angeles County Health Care Center (1992-2010), Los Angeles County Youth Clinics (1995), and Alhambra Health Department (2010) at 612 West Shorb Street.

- None of the historical resources utilized as part of this assessment covered the periods from 1901 to 1923, constituting a data gap. However, based on the undeveloped nature of the site from 1894 through at least 1926, the data gap is not expected to significantly alter the findings of this report.

Environmental Data Search

Alhambra Health Center (612 West Shorb Street) – The Subject Property is listed on the Facility and Manifest Data (HAZNET) and Hazardous Waste Tracking System (HWTS) databases. According to the information provided in the HAZNET and HWTS listings, Alhambra Health Center was assigned the USEPA Identification (ID) Number CAC002590283, from May 9, 2005, to November 6, 2005. The business generated approximately 0.01 tons of other organic solids and 0.84 tons of asbestos-containing waste in 2005. The produced hazardous wastes were disposed of via transfer station and landfill disposal.

Based on the lack of evidence of a release, use for medical purposes, and proper handling and disposal of hazardous waste generated, the above mentioned listings are not expected to represent a significant environmental concern for the Subject Property.

None of the other sites listed on the regulatory database report are considered pose a significant threat or potential vapor encroachment condition (pVEC) to the Subject Property as there is no indication of a release at the respective sites, a release has occurred but groundwater has not been impacted, a release has occurred but the case is closed, or the sites are located cross- or down-gradient of the Subject Property and in excess of 1/10 mile from the Subject Property or the critical distance per the Vapor Encroachment Screening (VES) standard.

Appropriate Federal, State, County, and City Agencies were researched pertaining to any related files/permits issued for the Subject Property, including but not limited to previous and/or current hazardous material usage and underground storage tanks (USTs). A list of all agencies contacted and their responses are included in Section 6.0. Salient agency records, if identified, are summarized below, while discussions of all records obtained are detailed in Sections 6.1 and 6.2.

- According to a review of the Hazardous Waste Tracking System (HWTS) database, the Alhambra Health Center was assigned the USEPA ID Number CAC002590283 from May 9, 2005, to November 6, 2005, as an inactive generator which is further discussed in the section above.

Note that the above agency requests were made and the online database searches were conducted on December 22 and 27, 2023, with responses received through December 29, 2023.

At the time this report was issued, no responses have been received from the Los Angeles Regional Water Quality Control Board (LARWQCB) and Department of Toxic Substances Control (DTSC) regarding 600, and 622 West Shorb Avenue, 1301 6th Street, and 1300 7th Street, or Los Angeles County Sanitation District (LACSD) and the City of Alhambra City Clerk regarding all Subject Property addresses. Should relevant information be obtained from these agencies subsequent to issuing this report, EFI will prepare and issue an addendum to the Client.

User Provided

Per the ASTM International E1527 standard, the User is responsible for obtaining judicial records for environmental liens or Activity and Use Limitations (AULs) recorded against the Subject Property.

EFI notes that the User did not engage EFI in obtaining judicial records for environmental liens or AULs that may be associated with the Subject Property. Additionally, these documents were not provided to EFI by the User for review and incorporation into this assessment. The lack thereof or inability to obtain this information represents a data gap. However, based on the quality of historical and regulatory information researched and reviewed as part of this assessment, this data gap is not considered to be significant.

FINDINGS AND CONCLUSIONS

EFI has performed a Phase I ESA in conformance with the scope and limitations of ASTM International E1527-21, at 612 West Shorb Avenue, Alhambra, California, the Subject Property. Any exceptions to or deletions from this practice are described in the individual sections of this report.

This assessment has revealed no evidence of significant data gaps, RECs, controlled RECs (CRECs), or historical RECs (HRECs) in connection with the Subject Property.

Significant Data Gaps

No significant data gaps were identified during the course of this assessment.

Recognized Environmental Conditions (REC)

No RECs were identified during the course of this assessment.

Controlled Recognized Environmental Conditions (CREC)

No CRECs were identified during the course of this assessment.

Historical Recognized Environmental Conditions (HREC)

No HRECs were identified during the course of this assessment.

RECOMMENDATIONS

Based on the foregoing, no additional investigation is recommended at this time.

1.0 INTRODUCTION

EFI Global, Inc. (EFI) has performed a Phase I Environmental Site Assessment (Phase I ESA) for a commercial property located at 612 West Shorb Avenue, in the City of Alhambra, Los Angeles County, California (the "Subject Property"; Figures 1 through 4).

This report has been prepared for the sole use of City of Alhambra (Client or User).

According to the User, the User is the owner of the Subject Property performing due diligence on the Subject Property as part of the redevelopment process.

1.1 Phase I ESA Purpose and Objectives

The research conducted for this study and the report prepared are in general conformance with the United States Environmental Protection Agency (USEPA) All Appropriate Inquiry (AAI) standard and the American Society for Testing and Materials (ASTM) International E1527-21 "Standard Practices for Environmental Site Assessments: Phase I Environmental Site Assessment Process". The primary purpose for performing a Phase I ESA is to "...permit a user to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on CERCLA liability" (ASTM, 2021). An environmental site assessment meeting or exceeding this practice and completed less than 180 days prior to the date of acquisition is presumed to be valid under this standard.

In order to maintain landowner liability protections, the User also has the following continuing obligations: "(1) No disposal of hazardous substances can occur after the person acquires the property; (2) Provide all legally required notices with respect to the discovery or release of any hazardous substances at the facility; (3) Exercise appropriate care with respect to hazardous substances by taking reasonable steps to stop any continuing release; prevent any threatened future releases; and prevent or limit human, environmental, or natural resource exposure to any previously released hazardous substance; (4) Provide full cooperation, assistance, and access to persons who are authorized to conduct response actions or natural resource restoration (including the cooperation and access necessary for the installation, integrity, and maintenance of any complete or partial response actions or natural resource restoration); (5) Comply with any land use restrictions established or relied on in connection with the response action, and not impede the effectiveness or integrity of any institutional control employed at the vessel or facility in connection with a response action; and (6) Comply with any request for information or administrative subpoena issued under CERCLA" (ASTM, 2021).

The goal of this process is to identify any (1) significant data gaps, (2) recognized environmental conditions (RECs), (3) controlled recognized environmental conditions (CRECs), and/or (4) historical recognized environmental conditions (HRECs) associated with the Subject Property. These terms as defined by ASTM are discussed below.

This investigation is not an environmental compliance audit and is not designed to determine if the operations of an existing facility are in compliance with applicable environmental laws and regulations.

- A **significant data gap** is defined as "a data gap that affects the ability of the environmental professional to identify a recognized environmental condition" (ASTM, 2021).

- A **recognized environmental condition** is defined as "...(1) the presence of hazardous substances or petroleum products in, on, or at the Subject Property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the Subject Property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the Subject Property under conditions that pose a material threat of a future release to the environment" (ASTM, 2021).

- A **controlled recognized environmental condition** is defined as a "recognized environmental condition affecting the Subject Property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations)" (ASTM, 2021).

- A **historical recognized environmental condition** is defined as "a previous release of hazardous substances or petroleum products affecting the Subject Property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the Subject Property to any controls (for example, activity and use limitations or other property use limitations). A historical recognized environmental condition is not a recognized environmental condition" (ASTM, 2021). The HREC designation requires the comparison of residual contamination concentrations, if any, to current regulatory standards.

- A ***de minimis condition*** is defined as "a condition related to a release that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. A condition determined to be a de minimis condition is not a recognized environmental condition nor a controlled recognized environmental condition" (ASTM, 2021).

- A **business environmental risk** is defined as "a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of commercial real estate, not necessarily related to those environmental issues required to be investigated in this practice" (ASTM, 2021).

In order to identify environmental conditions at the Subject Property, the Phase I ESA includes a site inspection, interviews with parties familiar with the Subject Property, historical research into the past uses of the Subject Property, and an environmental records search with regard to the Subject Property, adjoining and immediately surrounding properties, and the surrounding area. In addition, EFI provides an opinion regarding the potential for non-scope considerations including but not limited to asbestos containing materials, lead-based paints, mold, radon, methane, and wetlands as they relate to the Subject Property.

1.2 Significant Assumptions

While this report provides an overview of potential environmental concerns, both past and present, the environmental assessment is limited by the availability of information at the time of the assessment. Conducting interviews with knowledgeable parties and reviewing those documents that

are publicly available, reasonably ascertainable, and practically reviewable controls the completeness of this assessment. The inability to review documents which do not exist or are not publicly available, reasonably ascertainable, or practically reviewable may result in a data gap. Further, it is assumed the records provided by various data sources inquired with during the preparation of this report, including but not limited to public agencies, constitute all responsive records for the Subject Property within the respective data sources' repositories.

This assessment has been conducted, in part, based on information, data or reports provided or prepared by others. EFI reviews and interprets these documents in good faith and relies that the provided data and documents are true, accurate, and complete.

1.3 Limitations and Exceptions

This report has been prepared in accordance with generally accepted environmental methodologies and practices referred to in ASTM E1527-21 and contains all of the limitations inherent in these methodologies. No environmental site assessment can wholly eliminate uncertainty regarding the potential for recognized environmental conditions in connection with a property. Performance of this practice is intended to reduce, but not eliminate, uncertainty regarding the potential for recognized environmental conditions in connection with a property, and this practice recognizes reasonable limits of time and cost. The possibility remains that unreported disposal of waste, chemicals, or other materials, or other activities impairing the environmental condition of the Subject Property may have occurred which could not be identified.

Certain environmental conditions are impossible to visually identify; their presence can be verified only by testing and analysis. EFI can make no direct inferences as to the subsurface conditions at the Subject Property based on the Phase I scope of work, which does not include a physical investigation of the subsurface. Conditions other than those observed may exist in inaccessible or unobserved areas of the Subject Property. During site reconnaissance, materials identified on the Subject Property were not disturbed and underlying conditions were not observed. The findings of this report cannot be extended to portions of the Subject Property that were not directly observed.

This assessment is limited by the availability of information at the time of the assessment. The conclusions and recommendations presented in this report are based on EFI's professional judgement. Nothing in this report, including but not limited to EFI's conclusions and recommendations, should be considered or construed as legal advice. Unless otherwise stated in the report, third-party liabilities have not been assessed within the scope of work.

Unless otherwise stated in the report, environmental conditions at the Subject Property were assessed assuming the Subject Property use remains the same, and no redevelopment or new construction occurs at the Subject Property. Should there be a substantial change in the functional utilization of the Subject Property, or if additional improvements are planned, the conclusions presented herein may not be valid.

No warranties, expressed or implied, are made as to the professional services provided under the terms of EFI's contract(s) or specified in this report. Further, EFI cannot warrant against undiscovered environmental liabilities. Environmental conditions at the Subject Property were assessed within the context of EFI's contract(s), the scope of work authorized by the Client, and existing environmental regulations of applicable jurisdiction(s) as of the date of the report.

Regulatory requirements, regulations and guidance are subject to change subsequent to the date of the report. Unless otherwise stated in the report, evaluating compliance of past, present or future owners or operators with applicable local, provincial and federal government laws and regulations

was not included within the scope of the assessment. Unless otherwise stated in the report, this assessment did not include a review or audit of operational environmental compliance issues, or of any environmental management systems (EMS) that may or should exist on the Subject Property.

All components of this report, including but not limited to text, signatures, certifications, figures, tables, attachments, appendices, supporting documents and addenda, are integral to the reporting of the assessment. Certain portions of this report, particularly tables and figures, may utilize color to fully convey technical information. This report may not be reproduced, except in full, without written approval of EFI.

1.4 Reliance

All reports, both verbal and written, are for the sole benefit of City of Alhambra. This report has no other purpose and may not be relied upon by any other person or entity without the written consent of EFI. Either verbally or in writing, third parties may come into possession of this report or all or part of the information generated as a result of this work. In the absence of a written agreement with EFI granting reliance rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against EFI, its officers, employees, vendors, successors or assigns.

Reliance is provided in accordance with EFI's Contract and Terms and Conditions executed September 14, 2023 which authorized this assessment.

1.5 User's Responsibilities

The USEPA AAI and ASTM International E1527-21 Standards describe tasks to be performed by the User or on behalf of the User seeking to qualify for CERCLA liability. A User may include, without limitation, a potential purchaser of Subject Property, a potential tenant of Subject Property, an owner of the Subject Property, a lender, or a property manager. These tasks include the following:

- The User should obtain and review Land Title Records and Judicial Records for Environmental Liens and Activity and Use Limitations (AULs) by relying on Transaction-Related Title Insurance Documentation Such as Preliminary Title Reports and Title Commitments or Title Search Information Reports Such as Condition of Title, Title Abstracts, and AUL/ Environmental Lien Reports. If environmental liens or AULs encumbering the Subject Property or in connection with the Subject Property are identified, the User should provide that information to the Environmental Professional (EFI).

- The User should provide the Environmental Professional (EFI) with any specialized or actual knowledge the User has with regard to RECs, environmental liens, or AULs in connection with the Subject Property.

- If the User is aware of any commonly known information in the community about the Subject Property with respect to RECs, the User should provide the information to the Environmental Professional (EFI).

- If this Phase I ESA was prepared as due diligence for a property transaction, it is the responsibility of the User to consider the relationship of the purchase price to the fair market value of the Subject Property. If the purchase price is significantly lower than the fair market value, the User should identify the alternate reason for the low purchase price if the lower purchase price is not related to the Subject Property being affected by hazardous substances or petroleum products.

Discussion of items provided by the User during this assessment, if any, are included in Section 3.5.

2.0 SITE DESCRIPTION

The Subject Property is located on the southwest corner of the West Shorb Street and South 6th Street intersection, extending west to South 7th Street, in the City of Alhambra (Figures 1 and 2).

The Subject Property is approximately 1.38 acres in size and is developed with a commercial structure with a partial basement, which is approximately 22,929 square feet in total size. The building is currently unoccupied and boarded closed and was formerly known as the Alhambra Health Center utilized for medical services.

The remaining portions of the Subject Property consist of an asphalt paved parking area on the southwest portion and limited landscaped areas with accessways in the remainder.

The surrounding area is developed with a mix of commercial and residential properties (Figures 3 and 4).

2.1 Current and Historical Addresses

According to EFI's research and information provided by the Client, the following addresses have been found to be associated with the Subject Property: 600, 612, and 622 West Shorb Avenue, 1301 6th Street, and 1300 7th Street, Alhambra, California.

2.2 Legal Description

According to the Los Angeles County Assessor's Office, the Subject Property is located in the City of Alhambra, and is identified by Assessor's Parcel Number (APN): 5350-007-900.

The legal description of the Subject Property parcel is listed as: "TRACT # 6527 LOTS 9,10,11,12,13,14, 15 AND LOT 16".

The Subject Property information is provided in Appendix A.

2.3 Physical Setting

The elevation of the Subject Property is approximately 429 feet above mean sea level (United States Geological Survey [USGS] Los Angeles, California 7.5-minute topographic quadrangle). Based on review of the GeoCheck Section of the Environmental Data Resources, Inc. (EDR) Radius Map report, the Subject Property is not situated within a 100 or 500-year Federal Emergency Management Agency (FEMA) Flood Zone.

Based on EFI's review of groundwater data presented in the State Water Resources Control Board (SWRCB) GeoTracker website, groundwater was reported at a leaking underground storage tank (LUST) cleanup site (601 West Valley Boulevard) approximately 20 feet south of the Subject Property. According to the reviewed Initial Site Assessment Report, groundwater was reported in 1994 at approximately in excess of 250 feet below ground surface (bgs). However, perched and semi-perched aquifers may be present beneath the Subject Property. Based on topographic map interpretation, regional groundwater flow direction is estimated to be towards the southeast; however, local groundwater flow direction may vary.

3.0 SITE RECONNAISSANCE/INTERVIEWS

The purpose and objective of the site reconnaissance is to collect information from visual and/or physical observations. The site inspection attempts to identify current Subject Property use(s), current hazardous materials storage, evidence of past Subject Property uses, past hazardous material storage, and evidence of other RECs.

3.1 Site Reconnaissance

On December 27, 2023, Salena Johnson with EFI conducted a site reconnaissance of the Subject Property, unaccompanied.

The visual reconnaissance consisted of observing the boundaries of the Subject Property and systematically traversing the Subject Property to provide an overlapping field of view, wherever possible. The periphery of the on-site structure was observed. EFI personnel was also onsite October 26, 27, and 30, 2023, from which photographs were reviewed for interior observation notes.

The following table describes the Subject Property structure and utility providers.

Building Name(s):	*Alhambra Health Center*
Number of Floors:	1 and 2 floors with a partial basement
Total Square Feet of Space (approximate):	22,929 square feet
Construction Completion Date (year):	1930
Construction Type:	Brick, concrete foundations, and pitched roofs with Spanish roof tiles
Interior Finishes Description:	Drywall systems, wood paneling, ceramic tile, vinyl tile, vinyl sheet flooring
Exterior Finishes Description:	Brick
Cooling System Type:	Unknown
Heating System Type:	Unknown
Emergency Power:	None
Potable Water Supply/Source:	City of Alhambra
Sewage Disposal System:	City of Alhambra
Natural Gas Service:	Southern California Gas Company
Electrical Service:	Southern California Edison

The following table summarize EFI's site reconnaissance observations. Notable Subject Property features observed from the site inspection are depicted on Figure 4. The photograph log of the site reconnaissance is provided in Appendix B.

Yes	No	Observed Feature(s)
☐	✔	Hazardous Substances and Petroleum Products
☐	✔	Drums, Totes, and Intermediate Bulk Containers
☐	✔	Unidentified Substance Containers
☐	✔	Underground Storage Tanks
☐	✔	Aboveground Storage Tanks

Yes	No	Observed Feature(s)
☐	✔	Strong, Pungent, or Noxious Odors
☐	✔	Standing Surface Water/Pits/Ponds/Lagoons and Pools
✔	☐	Drains/Sumps/Clarifiers/Interceptors
☐	✔	Septic Systems/Cesspools
☐	✔	Stained or Corroded Surfaces/Stained Soil or Pavement/Stressed Vegetation
☐	✔	Electrical or Hydraulic Equipment with the Potential to Contain Fluids
☐	✔	Wells (Dry, Irrigation, Injection, Monitoring, Soil Vapor, Abandoned, etc.)
☐	✔	Evidence of Borings
☐	✔	Evidence of Improper Solid Waste Disposal/Dumping/Fill Areas

3.1.1 Interior Observations

The Subject Property contains one structure which is 1-story on the east portion and 2-story on the west portion with partial basement. The structure was previously utilized as a medical center and is currently unoccupied.

The structure is divided into hallways and rooms. The basement includes a Southern California Edison vault which was inaccessible. Some drains were observed. Given the former use of the Subject Property for medical purposes and lack of significant documented hazardous materials, the presence of the drains is not considered an environmental concern.

The condition of building materials and painted surfaces was poor with damaged material and flaking/pealing paint observed throughout. Some of the damaged building materials appear to be from water damage.

No significant hazardous material storage or RECs were observed in the interior portions of the Subject Property.

3.1.2 Exterior Observations

The exterior portions of the Subject Property consist of asphalt and concrete paved parking areas and access ways and landscaped areas. The concrete paved parking area consisted of an entrance alleyway located on the eastern portion of the Subject Property from South 6th Street. The paved area appeared in good condition with minor staining and cracking observed typical of regular automotive use.

The asphalt paved parking area occupies the southwestern portion of the Subject Property. At the time of the site reconnaissance, the asphalt paved parking area was enclosed by a chain link fence and was utilized as storage of construction machinery (two excavators and two generators) and construction materials including a storage container. Three stockpiles of soil were additionally observed in the asphalt paved parking area. The soil was observed with no staining or odors. The condition of the asphalt paved area was obstructed by a soil debris layer. However, no evidence of significant staining or cracking was observed. Based on the former use of the Subject Property for medical purposes and the planned redevelopment, this presumed temporary storage is not of a significant environmental concern at this time.

The southern portion of the Subject Property structure was observed with an exterior wood fueled furnace with a chimney. Based on the vacant nature of the Subject Property structure at the time of the site reconnaissance, the furnace is likely no longer in use.

No pole or pad mounted transformers or equipment with the potential to contain polychlorinated biphenyls (PCB) were observed on-site.

No RECs were observed in the exterior portions of the Subject Property.

3.1.3 Subject Property and Immediately Surrounding Geography

The surrounding area is fairly flat with topographic slope to the south. No nearby hills or bedrock outcroppings were observed in the area of the Subject Property. No lakes, ponds, rivers, or streams were observed in the surrounding area.

3.1.4 Reconnaissance Limitations

No significant limitations were encountered during EFI's reconnaissance of the Subject Property.

3.2 Adjoining and Immediately Surrounding Properties

The adjoining and immediately surrounding properties (within 100 feet of the Subject Property boundary) were visually and physically observed from public right-of-ways and the Subject Property in an attempt to identify RECs. EFI's observations are summarized in the following table:

Direction	Adjoining/ Immediately Surrounding	Historical and Current Address(es)	Current Uses and Historical Uses of Concern
North	Adjoining	1001 South 6th Street and 1000, 1006, 1008 and 1023 South 8th Street	Commercial
East	Adjoining	1228, 1232, 1236, 1240, 1244, 1246, and 1248 South 6th Street	Residential
South	Adjoining/ Immediately Surrounding	1215 South 6th Street, 601, 625, 641, and 647 West Valley Boulevard	Commercial
West	Adjoining/ Immediately Surrounding	701 West Valley Boulevard, 706 West Shorb Street, and 1209 South 7th Street	Commercial

- The adjoining/immediately surrounding properties to the south were listed on the regulatory database report and are further discussed in Section 5.2 below.

3.3 Surrounding Property Uses (Beyond 100 feet)

The surrounding area is developed with commercial and residential structures.

3.4 Interviews

The purpose of interviews is to obtain information from those associated with the Subject Property to identify RECs in connection with the Subject Property.

Documentation associated with the following interviews, if any, is provided in Appendix C.

3.4.1 Subject Property Owner

An environmental questionnaire was provided to the property owner's representative, which has not been returned prior to issuance of the report. Based on the quality of information obtained from other sources, this limitation is not expected to alter the findings of this investigation.

3.4.2 Key Site Manager/Subject Property Occupant(s)

A site manager or Subject Property occupant was unavailable for interview during the course of the site reconnaissance as the Subject Property is unoccupied and the site reconnaissance was conducted without accompaniment.

3.4.3 Neighboring Property Owners/Tenants

Per ASTM, an attempt to interview neighboring property owners/tenants should be conducted when the Subject Property is abandoned and/or unsecured land, with evidence of uncontrolled access.

As the Subject Property is currently developed and utilized for commercial purposes, no neighboring property owners/tenants were interviewed during this assessment.

3.5 User Interview, Information, and Provided Documents

EFI provided the User Questionnaire to Mr. Charles Cowley who is the owner's representative. The User Questionnaire has yet to be returned at the time of issuance, therefore the answers to the following AAI Standard Questions are unknown.

AAI Standard Questions	Yes/No
Did a search of land title records (or judicial records where appropriate, see Note 1 below) identify any environmental liens filed or recorded against the Subject Property under federal, tribal, state, or local law?	
Did a search of land title records (or judicial records where appropriate, see Note 1 below) identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the Subject Property and/or have been filed or recorded against the Subject Property under federal, tribal, state or local law?	
Do you have any specialized knowledge or experience related to the Subject Property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the Subject Property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?	
Does the purchase price being paid for this Subject Property reasonably reflect the fair market value of the Subject Property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the Subject Property?	
Are you aware of commonly known or reasonably ascertainable information about the Subject Property that would help the environmental professional to identify conditions indicative of releases or threatened releases?	

AAI Standard Questions	Yes/No
Based on your knowledge and experience related to the Subject Property, are there any obvious indicators that point to the presence or likely presence of releases at the Subject Property?	
*Note 1—In certain jurisdictions, federal, tribal, state, or local statutes, or regulations specify that environmental liens and AULs be filed in judicial records rather than in land title records. In such cases judicial records shall be searched for environmental liens and AULs.	

3.5.1 Environmental Lien and AUL Search

Per the ASTM International E1527 standard, the User is responsible for obtaining judicial records for environmental liens or Activity and Use Limitations (AULs) recorded against the Subject Property.

EFI notes that the User did not engage EFI in obtaining judicial records for environmental liens or AULs that may be associated with the Subject Property. Additionally, these documents were not provided to EFI by the User for review and incorporation into this assessment. The lack thereof or inability to obtain this information represents a data gap. However, based on the quality of historical and regulatory information researched and reviewed as part of this assessment, this data gap is not considered to be significant.

Documentation, if any, is included in Appendix D.

3.5.2 User Provided Documents

No documents were provided to EFI by the User.

User provided documentation, if any, is included in Appendix E.

4.0 HISTORICAL LAND USE

A review of historical data including, but not limited to, those derived from standard historical resources and other historical sources are provided in this section. The objective of obtaining, reviewing, and analyzing historical resources is to develop a history of the previous uses of the Subject Property, adjoining properties, and surrounding area, in order to help identify the likelihood of past uses having led to RECs in connection with the Subject Property. During EFI's historical review, acute attention is paid to the Subject Property. Data relating to the adjoining and immediately surrounding properties (within 100 feet of the Subject Property boundary) and the surrounding area is reviewed to the extent that it is revealed in the course of researching the Subject Property itself.

4.1 Topographic Map Review

Topographic maps of many portions of the United States date back to 1879 and the series of 7.5-minute quadrangles was officially completed in 1992. More than 55,000 7.5-minute maps were made to cover the 48 conterminous States. This is the only uniform map series that covers the entire area of the United States in considerable detail. Traditionally, topographic maps show both natural and man-made features. Items searched for in each topographic map included, but were not limited to: evidence of tanks, landfills, water drainage pathways, or areas which show significant evidence of fill, et cetera.

Available topographic maps dated from 1894 to 2022 were obtained from EDR and reviewed for this assessment. A summary of EFI's observations is presented in the following table.

The topographic maps are provided in Appendix F.

Year	Subject Property	Adjoining Property Observations & Notable Surrounding Area Observations
1894, 1896, and 1900	Depicted without structures.	**All**: No structures. No notable features were observed in the surrounding area.
1924 and 1926	Depicted without structures.	**North**: A roadway with no structures beyond. **East**: A roadway with no structures beyond. **South**: No structures. **West**: No structures. No notable features were observed in the surrounding area.

Year	Subject Property	Adjoining Property Observations & Notable Surrounding Area Observations
1953	Depicted with the existing commercial structure on the central portion and shaded red indicating structural development in the remainder.	**North**: A roadway and the Moor Field beyond. **East**: A roadway and shaded red indicating urban development beyond. **South**: Shaded red indicating urban development and a roadway beyond. **West**: A roadway and a church structure beyond. No notable features were observed in the surrounding area.
1966, 1972, and 1981	Depicted with the existing commercial structure on the central portion and vacant land in the remainder.	**North**: A roadway and the Moor Field beyond. **East**: A roadway and shaded red indicating urban development beyond. **South**: Shaded red indicating urban development; a structure by 1972. **West**: A roadway and church structures beyond. No notable features were observed in the surrounding area.
1991	Not depicted.	**All**: Not depicted. No notable features were observed in the surrounding area.

Year	Subject Property	Adjoining Property Observations & Notable Surrounding Area Observations
1994	Depicted with the existing commercial structure on the central portion and vacant land in the remainder.	**North**: A roadway and the Moor Field beyond. **East**: A roadway and shaded red indicating urban development beyond. **South**: Shaded red indicating urban development and a structure. **West**: A roadway and church structures beyond. No notable features were observed in the surrounding area.

- Topographic Maps that were created in 2012, 2015, 2018, and 2022 do not depict any structures and only indicate street development and street names. This does not indicate that structures were not present at that time.

4.2 Aerial Photography Review

Aerial Photography of many portions of the United States dates back to the 1920's. Items searched for in each photograph included, but were not limited to: evidence of tanks, gas stations, industrial site usage, water drainage pathways, areas which show evidence of drums or excessive debris, discolored or stained soils, areas of distressed vegetation, et cetera.

Available aerial photographs dated from 1928 to 2020 were obtained from EDR and reviewed for this assessment. A summary of EFI's observations is presented in the following table.

The aerial photographs are provided in Appendix G.

Year	Subject Property	Adjoining Property Observations & Notable Surrounding Area Observations
1928	Appears to be developed with two residential structures on the southeast and southwest portions, and vacant land with vegetation in the remainder.	**North**: An unimproved roadway and vacant land beyond. **East**: A roadway and vacant land beyond. **South**: Vacant land. **West**: Vacant land. No notable features were observed in the surrounding area.

Year	Subject Property	Adjoining Property Observations & Notable Surrounding Area Observations
1938	Appears to be developed with the existing commercial structure on the central portion, and landscaped areas in the remainder.	**North**: A roadway and vacant land beyond. **East**: A roadway and residential structures beyond. **South**: Vacant land and the City of Alhambra Fire Department. **West**: A roadway and vacant land beyond. The notable features observed in the surrounding area include a gasoline service station to the south.
1948, 1952, 1964, 1972, 1977, 1981, 1989, 1994, 2002, 2005, 2009, 2012, 2016, and 2020	Appears to be developed with the existing commercial structure on the central portion, a parking lot on the southwest portion, and limited landscaped areas with accessways in the remainder.	**North**: A roadway and vacant land beyond; a baseball field by 1964. **East**: A roadway and residential structures beyond. **South**: The City of Alhambra Fire Department and a roadway and commercial structures beyond. **West**: A roadway and vacant land beyond; commercial structures by 1952. The notable features observed in the surrounding area include a gasoline service station to the south. The south portions of the 1938 and 1948 aerial photographs and the east portion of the 1981 aerial photograph were not depicted.

- Aerial photographs indicate that the surrounding property to the south was utilized by a gasoline service station from at least 1938 to at least 2020. For further discussion, refer to Section 5.2.

4.3 Sanborn Map Review

Originally compiled by the Sanborn Map Company of Pelham, New York (Sanborn Map) for fire insurance companies to assess fire risks related to building materials and hazardous materials storage, today Sanborn maps are an invaluable tool for Environmental Professionals in determining historical site use and the potential for environmental conditions. Sanborn map coverage is available

from as early as 1867 in some cities. Although Sanborn maps were created for approximately twelve thousand cities and towns in the United States, Canada, and Mexico, Sanborn map coverage is not available in newer and more rural communities.

Sanborn map coverage was obtained from EDR from 1912 to 1981 and reviewed for this assessment. A summary of EFI's observations is presented in the following table.

The Sanborn map search is provided in Appendix H.

Year	Subject Property	Adjoining Property Observations & Notable Surrounding Area Observations
1912	Not depicted.	**All**: Not depicted. No notable features were observed in the surrounding area.
1931, 1950, 1959, and 1981	Depicted with the existing commercial structure on the central portion, and a vacant lot in the remainder.	**North**: West Shorb Avenue and vacant lots beyond. **East**: 6th Street and vacant lots beyond; dwellings by 1950. **South**: The City of Alhambra Fire Department (1215 and 1315 6th Street) and an alleyway and a gasoline service station (601 West Valley Boulevard and 1329 6th Street) beyond; a tire storage structure (601 ½ West Valley Boulevard) and an auto repair structure (625 and 625 ½ West Valley Boulevard) beyond by 1950; a metal painting structure and an additional auto repair structure (625 and 625 ½ West Valley Boulevard) beyond by 1959; the tire storage structure (601 ½ West Valley Boulevard), the metal painting structure and the additional auto repair structure (625 and 625 ½ West Valley Boulevard) was removed by 1981. **West**: 7th Street and vacant lots beyond; church structures by 1950. No notable features were observed in the surrounding area.

- Sanborn maps indicated the following historical street addresses associated with the Subject Property: 600 and 622 West Shorb Avenue, 1301 6th Street, and 1300 7th Street. These addresses were researched during the completion of this report.

- Additionally, Sanborn maps indicated the south adjoining property at
    - 1215 and 1315 6th Street was occupied by the City of Alhambra Fire Department from at least 1931 to at least 1981,
    - 601 and 601 ½ West Valley Boulevard and 1329 6th Street was occupied by a gasoline service station from at least 1931 to at least 1981 and by a tire storage structure from at least 1950 to at least 1981,
    - and 625 and 625 ½ West Valley Boulevard was occupied by two auto repair structures from at least 1950 to at least 1981 and by a metal painting structure from at least 1959 to at least 1981. For further discussion, please refer to Section 5.2.

4.4 City Directory Review

City directories have been published since the 1800's and provide detailed occupant information for the Subject Property and its surrounding area at five-year intervals. The purpose of the City Directory research is to attempt to determine the businesses that historically occupied the Subject Property.

Historical city directories provided by EDR for the years 1926 to 2020 and reviewed by EFI are listed below.

The EDR City Directory Abstract Report is provided in Appendix I.

Subject Property

612 West Shorb Street	
Date	**Listing**
1992	Los Angeles County Health Care Center
1995	Los Angeles County Health Care Center and Los Angeles County Youth Clinics
2010	Alhambra Health Department and Los Angeles County Health Care

Adjoining Properties

Adjoining Property	Years	Property Use	Listings of Concern
North	-	-	-
East	1950, 1957, 1960, 1966, 1999, 2000, 2005, 2006, 2010, 2014, and 2020	Residential	-

Adjoining Property	Years	Property Use	Listings of Concern
Southeast (Immediately surrounding and Adjoining)	1975	Commercial	Marco's Auto Body at 625 West Valley Boulevard
	1980	Commercial	Marco's Auto Body at 625 West Valley Boulevard and Union Oil Service Station and ALS Union Service at 601 West Valley Boulevard
	1985	Commercial	Union Oil Service Station and ALS Union Service at 601 West Valley Boulevard and Western Union Tire Company (Co.) and TOK Auto Repair at 625 West Valley Boulevard
	1992 and 1995	Commercial	George's Unocal at 601 West Valley Boulevard and Western Union Tire Co. and TOK Auto Repair at 625 West Valley Boulevard
	2005	Commercial	Auto Pros at 601 West Valley Boulevard
	2006 and 2010	Commercial	Auto Pros at 601 West Valley Boulevard and Western Union Tire Co. and TOK Auto Repair at 625 West Valley Boulevard
	2014 and 2020	Commercial	Auto Pros at 601 West Valley Boulevard and Western Union Tire Co. at 625 West Valley Boulevard
West	1950, 1957, 1960, 1966, 1976, 1985, 1986, 1990, 1992, 1995, 1999, 2000, 2005, 2006, 2010, 2014, and 2020	Commercial	-

The addresses identified as adjoining and immediately surrounding properties in Section 3.2 were reviewed during the City Directory research and did not reveal any uses of concern except for the south adjoining property at

- 625 West Valley Boulevard was occupied by Marco's Auto Body from at least 1975 to at least 1980, by Western Union Tire Co. from at least 1985 to at least 2020, and by TOK Auto Repair from at least 1985 to at least 2020,
- 601 West Valley Boulevard was occupied by Union Oil Service Station and ALS Union Service from at least 1980 to at least 1985, by George's Unocal from at least 1992 to at least 1995, and by Auto Pros from at least 2005 to at least 2020,
- and 1215 South 6th Street was occupied by the City of Alhambra Fire Department in at least 2005.

For further discussion please refer to Section 5.2.

4.5 Building Department Records Review

The building permit records for the Subject Property addresses were requested from the City of Alhambra City Clerk. Items considered in the course of the building permit review are previous Subject Property usage, previous ownership, and the construction or demolition of any structures that may have had a negative environmental impact on the Subject Property.

At the time this report was issued, no response has been received from the City of Alhambra City Clerk. Should relevant information be obtained from this agency subsequent to issuing this report, EFI will prepare and issue an addendum to the Client.

Documents, if any, are provided in Appendix J.

4.6 Other Historical Sources

In order to further research data gaps, EFI consulted additional resources to further establish the history of the Subject Property. This research may include, but is not limited to: newspapers, miscellaneous maps, books about the history of the area, imagery, land title records, historical societies, interviews, internet searches, and other historical data.

No additional research was conducted during this assessment.

Documentation, if any, is included in Appendix K.

4.7 Historical Summary

According to EFI's review of the historical resources, the Subject Property was undeveloped land sometime prior to 1894 until as late as 1926. By 1928, the Subject Property was developed with two residential structures on the southeast and southwest portions, and vacant land with vegetation in the remainder. The residential structures were removed prior to 1930.

The Subject Property was redeveloped with the existing commercial structure on the central portion in 1930 to be utilized as a health center. By 1948, the Subject Property was developed with a parking lot on the southwest portion, and limited landscaped areas with accessways in the remainder. The Subject Property has remained in this configuration through the present and is planned for redevelopment as a community center.

Historical tenants of the Subject Property have included: Los Angeles County Health Care Center (1992-2010), Los Angeles County Youth Clinics (1995), and Alhambra Health Department (2010) at 612 West Shorb Street.

4.8 Historical Data Failure

None of the historical resources utilized as part of this assessment covered the periods from 1901 to 1923, constituting a data gap. However, based on the undeveloped nature of the site from 1894 through at least 1926, the data gap is not expected to significantly alter the findings of this report.

5.0 RECORDS REVIEW AND VAPOR ENCROACHMENT SCREEN

A radial database search was conducted in accordance with the specifications defined in ASTM International E1527-21 which sets the radial search distances for each regulatory database. A copy of the database report is presented in Appendix L of this report.

Following are summaries of the information found for the Subject Property and adjoining and immediately surrounding properties within the relevant database listings and EFI's opinion regarding the potential for the Subject Property to be impacted. Furthermore, EFI considered database listings for surrounding area properties with reported releases.

EFI's opinion is based on the information found in the database listings, through other historical and regulatory resources, "Standard Guide for Vapor Encroachment Screening (VES) on Property Involved in Real Estate Transactions" (ASTM International E2600-15), and assumed groundwater flow direction discussed in Section 2.3.

5.1 Subject Property

Alhambra Health Center (612 West Shorb Street) – The Subject Property is listed on the Facility and Manifest Data (HAZNET) and Hazardous Waste Tracking System (HWTS) databases. According to the information provided in the HAZNET and HWTS listings, Alhambra Health Center was assigned the USEPA Identification (ID) Number CAC002590283, from May 9, 2005, to November 6, 2005. The business generated approximately 0.01 tons of other organic solids and 0.84 tons of asbestos-containing waste in 2005. The produced hazardous wastes were disposed of via transfer station and landfill disposal.

Based on the lack of evidence of a release, use for medical purposes, and proper handling and disposal of hazardous waste generated, the abovementioned listings are not expected to represent a significant environmental concern for the Subject Property.

5.2 Adjoining and Immediately Surrounding Properties

City of Alhambra Fire Department (1215 South 6th Street) - The southeast adjoining property (hydrologically down-gradient) is listed on the Underground Storage Tank (UST), Statewide Environmental Evaluation and Planning System Underground Storage Tank (SWEEPS UST), Facility Inventory Database (CA FID UST), California Environmental Reporting System (CERS), CERS Underground Storage Tank Program (CERS TANKS), and Hazardous Substance Storage Container Database (HIST UST) databases.

According to the information provided in the UST, SWEEPS UST, CA FID UST, and HIST UST listings, the City of Alhambra Fire Department maintained at least six (6) USTs, including an active (1) 1,000-gallon unleaded motor vehicle fuel UST with an installation date of June 30, 1989, two (2) 1,000-gallon diesel UST with an installation date of November 15, 1989, a (1) 280-gallon diesel fuel UST with unknown installation date, and at least two (2) USTs with no information regarding content, capacity, or installation and removal dates.

According to the CERS and CERS TANKS listings, the City of Alhambra Fire Department was reported as a chemical storage facility and underground storage tank holder, under the CERS ID Number 10309603. The business received several violations between 2015 and 2022 during the routine and non-routine inspections conducted by the Los Angeles County Fire Department (LACFD) and Los Angeles County Department of Public Works (LACDPW). The majority of the violations were returned to compliance after the issuance.

Based on the lack of evidence of a release and down-gradient location with regard to the Subject Property, the abovementioned listings are not expected to represent a significant environmental concern for the Subject Property.

Service Station 0801 / Leo's Union Service / Auto Pros 76 #2705602 / Unocal #0801 / Union Oil Service Station LEAS / Circle K Stores #5602 / Unocal 76 Service Station 0801 / H&T Union 76 #3 / Union Oil Company (Co.) (601 West Valley Boulevard) - The southeast immediately surrounding property (hydrologically down-gradient), located to the south of the fire department and across an alley, is listed on the HIST UST, EDR Exclusive Historic Gas Stations (EDR Hist Auto), CERS, CERS Hazardous Chemical Management (CERS HAZ WASTE), CERS TANKS, Los Angeles County Hazardous Material Storage - Industrial Waste and Underground Storage Tank Sites Street Number List (LA Co. HMS), HWTS, HAZNET, Leaking Underground Storage Tank (LUST), "Cortese" Hazardous Waste and Substances Sites List (CORTESE), Hazardous Waste & Substance Site List (HIST CORTESE), UST, SWEEPS UST, CA FID UST, and Well Investigation Program Case List (WIP) databases.

According to the EDR Hist Auto listing, the property was utilized by several gasoline service stations from at least 1956 to at least 2014, including Leo's Union Service (1956), Munsee Leo's Union Service Station (1968-1971), Munsee Leo & CA Union Oil Dealers (1972), Criswell Allen (1973-1988), Preston's Unocal Service (1989), Gulesserian George (1994-1995), Auto Pulse 76 (1997-2014), Service Pros Unocal 76 (1998-2014), and Tosco Corp (1998-1999).

According to the UST, HIST UST, SWEEPS UST, and CA FID UST listings,

- Service Station 0801 maintained at least three USTs, including one 550-gallon waste oil UST, one 9,940-gallon unleaded fuel UST, and a premium fuel UST with unknown capacity. The waste oil and unleaded fuel USTs were installed in 1971.

- Unocal 76 Service Station 0801 maintained at least 5 active USTs, including one 500-gallon waste oil UST, at least one 550-gallon waste oil UST, and one 12,000-gallon regular unleaded motor vehicle fuel UST. The USTs were installed on March 27 and 28, 1991.

- Auto Pros 76 #2705602 maintained three USTs, including one 500-gallon waste oil UST, one 12,000-gallon premium unleaded fuel UST, and one 12,000-gallon regular unleaded fuel UST. The USTs were installed on December 14, 1992.

- Union Oil Service Station LEAS maintained a 607-gallon waste oil UST and Circle K Stores #5602 maintained at least a UST with unknown capacity and content. No further information was provided.

According to the information provided in the HAZNET and HWTS listings, H&T Union 76 #3 was assigned the USEPA ID Number CAL000194815 from January 12, 1999, to June 30, 2001. The business generated approximately 0.06 and 1.41 tons of aqueous solution with total organic residues of less than 10 percent in 1999 and approximately 1.38 tons of oil/water separation sludge in 2000. The produced hazardous wastes were disposed of via a transfer station and recycler.

According to the CERS HAZ WASTE, CERS TANKS, and CERS listings,

- Unocal #0801 was reported as a LUST cleanup site under the CERS ID Number T0603703552.

- Auto Pros 76 #2705602 was reported as a hazardous waste generator, chemical storage facility, and underground storage tank holder, under the CERS ID Number 10305310. The business received several violations between 2016 and 2022 during the routine inspections conducted by the LACFD and LACDPW. All the violations except one were returned to compliance after issuance.

According to the LA Co. HMS listing, Auto Pros 76 #2705602 was associated with an unspecified permit with Facility ID Number 010129-071588, and Unocal 76 Service Station 0801 was associated with a closed permit with Facility ID Number 010129-009996. No further information was provided.

Union Oil Co. was reported in the WIP listing due to possible association with the nearby NPL Site (San Gabriel Valley). The listing reported the site with a backlog file status in the well investigation program case list. No further information was provided.

According to the LUST, CORTESE, and HIST CORTESE listings, and information provided in the GeoTracker online database, an unauthorized release of gasoline that impacted soil was discovered on December 18, 1992, during the removal and replacement of the two 12,000-gallon gasoline and one 250-gallon waste oil UST. During the tank removal, petroleum hydrocarbon and chlorinated compounds were detected from the collected soil samples. Following the discovery, a total of 370 tons of soil was excavated and removed from the site.

From October 31, 1994, to January 31, 1995, interim remediation of hydrocarbon-affected soil by vapor extraction was performed. Approximately 208 gallons of equivalent gasoline volume were recovered during this period. In February 1995, a supplementary site assessment was conducted and no petroleum hydrocarbon concentrations were detected in soil samples analyzed from any of the installed soil borings. Groundwater was not encountered in any of these assessments.

On July 26, 1996, a site closure letter and on September 12, 1996, a report of abandonment operations were submitted to the California Regional Water Quality Control Board (CRWQCB). According to the GeoTracker online database, the case was completed with closure as of July 26, 1996.

Based on the case closure issued by the overseeing regulatory agency and down-gradient location with regard to the Subject Property, the abovementioned release case is not expected to represent a significant environmental concern for the Subject Property.

Western Union Tire / TOK Auto Repair (625 West Valley Boulevard) - The southeast adjoining property (hydrologically down-gradient) located approximately 20 feet south across an alleyway, is listed on the CERS, CERS HAZ WASTE, HAZNET, HWTS, and WIP databases.

According to the information provided in the HAZNET and HWTS listings, Western Union Tire was assigned the USEPA ID Number CAL000057923 from March 10, 1992, to June 30, 2008, and was also assigned the North American Industry Classification System (NAICS) Code 44132 for tire dealers. The business generated 0.08 to 2.96 tons of hazardous waste in the form of aqueous solution with total organic residues less than 10 percent and unspecified aqueous solution between 1997 and 2003. The produced hazardous wastes were disposed of via a transfer station and recycler.

According to the CERS and CERS HAZ WASTE listings, Western Union Tire was reported as a hazardous waste generator and chemical storage facility, under the CERS ID Number 10307107. The business received several violations between 2016 and 2022 during the routine and non-routine inspections conducted by the LACFD. All the violations except one were returned to compliance after issuance.

TOK Auto Repair was reported in the WIP listing due to possible association with the nearby NPL Site (San Gabriel Valley). The listing reported the site with a backlog file status in the well investigation program case list. No further information was provided.

Based on the lack of evidence of a release, proper handling and disposal of hazardous waste generated, and cross-gradient location with regard to the Subject Property, the abovementioned listings are not expected to represent a significant environmental concern for the Subject Property.

No other adjoining/immediately surrounding properties (within 100 feet) were listed on any of the regulatory databases researched.

5.3 Surrounding Area

None of the other sites listed on the regulatory database report are considered pose a significant threat or potential vapor encroachment condition (pVEC) to the Subject Property as there is no indication of a release at the respective sites, a release has occurred but groundwater has not been impacted, a release has occurred but the case is closed, or the sites are located cross- or down-gradient of the Subject Property and in excess of 1/10 mile from the Subject Property or the critical distance per the VES standard.

5.4 Orphan Sites

Orphan sites are unmappable sites which appear in a list form in the Radius Map Report rather than on the standard Radius Map. Two orphan sites were identified in the Radius Map Report prepared for this Subject Property. The sites were manually mapped to determine the location of the site relative to the Subject Property and groundwater gradient.

A cursory review of these listings indicated that none of these sites are associated with the Subject Property or adjoining properties or are otherwise considered to represent a REC to the Subject Property.

6.0 AGENCY RECORDS AND FILE REVIEWS

6.1 Federal and State Agencies

The Los Angeles Regional Water Quality Control Board (LARWQCB), Department of Toxic Substances Control (DTSC), and South Coast Air Quality Management District (SCAQMD) were contacted regarding permits, air emissions, and site investigation files for the Subject Property. Additionally, the USEPA's Envirofacts, MyProperty, and UST Finder online databases and the State Water Resources Control Board's (SWRCB) GeoTracker, SCAQMD's online Facility Information Detail (FIND), and DTSC's online EnviroStor and Hazardous Waste Tracking System (HWTS) online databases were searched for information on the Subject Property to identify any evidence of previous or current hazardous material usage.

- According to responses from LARWQCB and DTSC, there are no records for the Subject Property address 612 West Shorb Avenue.
- According to response from SCAQMD and a review of the SWRCB's GeoTracker, DTSC's EnviroStor, and the USEPA's Envirofacts, MyProperty, and UST Finder databases, there are no files for the Subject Property.
- According to a review of the HWTS database, the Alhambra Health Center was assigned the USEPA ID Number CAC002590283 from May 9, 2005, to November 6, 2005, as an inactive generator which is further discussed in Section 5.1.

Note that the above agency requests were made and the online database searches were conducted on December 22 and 27, 2023, with responses received through December 29, 2023.

Requests, responses and records from the above-referenced agencies are included in Appendices M and N.

The California Department of Conservation, Geologic Energy Management Division (CalGEM) online mapping application Well Finder was reviewed for information pertaining to oil and gas exploration on or nearby the Subject Property.

- No oil wells were identified within 500 feet of the Subject Property.

In addition, the Pipeline and Hazardous Materials Safety Administration (PHMSA) National Pipeline Mapping System Public Map Viewer was reviewed for information on natural gas and hazardous material pipelines on or nearby the Subject Property.

- No natural gas or hazardous material pipelines were identified on or nearby the Subject Property.

Record of the above can be referenced in Appendix O.

6.2 Local Agencies

The Los Angeles County Sanitation District (LACSD) and the City of Alhambra City Clerk were contacted regarding hazardous materials, underground storage tanks, and industrial waste discharge records for the Subject Property. Additionally, the Los Angeles County Fire Department Health and

Hazardous Materials Division's (LACFD HHMD's) Active and Inactive CUPA Program Records, Site Mitigation Unit (SMU) Case Records and the Los Angeles County Department of Public Works (LACPW) online databases were reviewed for information pertaining to the Subject Property.

- According to a review of the abovementioned databases, there are no records on file for the Subject Property.

Note that the above agency requests were made and the online database searches were conducted on December 22 and 27, 2023.

Requests, responses and records from the above-referenced agencies are included in Appendix P.

6.3 Agency Records Research Limitations

At the time this report was issued, no responses have been received from the LARWQCB and DTSC regarding 600, and 622 West Shorb Avenue, 1301 6th Street, and 1300 7th Street, or LACSD and the City of Alhambra City Clerk regarding all Subject Property addresses. Should relevant information be obtained from these agencies subsequent to issuing this report, EFI will prepare and issue an addendum to the Client.

7.0 CONSIDERATIONS BEYOND SCOPE

ASTM International E1527-21 identifies additional conditions which, should they exist at the Subject Property, may create a human health risk to the occupants of the site. These risks may also create additional costs to the property owner in the form of identification, operations & maintenance, and cleanup or remediation.

7.1 Asbestos Containing Building Materials

Asbestos is a group of naturally occurring minerals used in many products, including building materials vehicle brakes, insulation and other products that require resistance to heat and corrosion. Asbestos includes: chrysotile, amosite, crocidolite, tremolite asbestos, anthophyllite asbestos, actinolite asbestos, and any of these materials that have been chemically treated and/or altered.

The inhalation of asbestos fibers by workers can cause cancer and other serious diseases of the lungs and other organs that may not appear until years after the exposure has occurred. For instance, asbestosis can cause a buildup of scar-like tissue in the lungs and result in loss of lung function. Asbestos fibers associated with these health risks are too small to be seen with the naked eye, and smokers are at higher risk of developing some asbestos-related diseases.

Asbestos-containing materials (ACMs) do not always pose a hazard to occupants and workers in buildings that contain these materials. Intact, undisturbed ACMs generally do not pose a health risk. ACMs may become hazardous and pose an inhalation risk when they are damaged, disturbed in some manner, or deteriorate over time and asbestos fibers are released into building air.

ACMs can be found in a multitude of building products which include decorative and acoustical plaster texture, fire-proofing (Monokote), joint compound, attic and wall insulation, resilient floor covering, mastic, recessed lighting fixtures, wiring, elevator brakes, fire doors, pipe insulation, pipe gaskets, duct insulation, duct tape, siding and roofing materials (tar/shingles), textured paint, stucco, concrete, asphalt underlayment (Petromat) and plaster.

Local jurisdictions have specific laws and regulations regarding asbestos and actions including building renovations and building demolition.

- Based on the age of the on-site structure, there is a potential for asbestos-containing building materials at the Subject Property. Building materials were in poor condition. EFI conducted an Asbestos and Lead Assessment under separate cover.

Documentation regarding the above, if any, is included in Appendix Q.

7.2 Lead-Based Paint

Although the use of lead-based paint (LBP) in residential structures has been prohibited since 1978, it may still be used in commercial and industrial buildings. It is approximated that 80 percent of buildings built prior to 1978 contain LBP. Even at low levels, lead poisoning can cause intelligence quotient (IQ) deficiencies, reading and learning disabilities, impaired hearing, reduced attention spans, hyperactivity, and other behavioral problems with children under 6 years old being most at risk.

Lead is a highly toxic metal that was used for many years in products found in and around homes and commercial buildings. Lead can be found in dust from friction surfaces of windows and doors that are painted with lead-based paint and from building components coated with LBP that has begun

peeling, flaking, and chalking. There is also the potential for soil to have elevated lead levels due to leaching from LBP on nearby structures and deposition of airborne lead when leaded fuel was in use prior to the 1976 ban and phase out.

Since the 1980's, lead has been phased out in gasoline, reduced in drinking water, reduced in industrial air pollution, and banned or has been limited in use in consumer products.

Local, State, and Federal agencies, including the USEPA, Department of Housing and Urban Development (HUD), and Occupational Safety & Health Administration (OSHA), have set various action limits that have been enacted with the intent to prevent human exposure and contamination of the surrounding environment.

- Based on the age of the on-site structure, there is a potential for LBP at the Subject Property. Several painted surfaces appeared in poor condition at the time of our site reconnaissance. EFI conducted an Asbestos and Lead Assessment under separate cover.

Documentation regarding the above, if any, is included in Appendix Q.

7.3 Radon

Radon is a radioactive gas that has been found in structures all over the United States. Radon is produced from the natural breakdown of uranium in soil, rock, and water. Radon typically moves up through the ground and into structures through cracks and other holes in the foundation. Movement of radon through the earth is strongly influenced by moisture content and permeability of soil, porosity, and degree of fracturing in rocks, as well as surface meteorological conditions. High levels of radon have been discovered in every state.

Radon cannot be seen, smelled, or tasted. Breathing air-containing radon may increase the risk of getting lung cancer. The Surgeon General of the United States has warned that radon is the second leading cause of lung cancer in the United States today after smoking.

The USEPA has designated three zones depending on radon potential. Zone 1 is an area with the average predicted indoor radon concentration in residential dwellings exceeding the USEPA action limit of 4.0 picoCuries per Liter (pCi/L). Zone 2 are areas with average predicted indoor radon concentration of 2.0 - 4.0 pCi/L and Zone 3 are those areas with an average predicted indoor radon concentration in residential dwellings below 2.0 pCi/L.

Testing for the presence of radon is fairly inexpensive, simple and is the only way to be certain of the on-site concentrations. Various types of sampling methods exist to determine the concentration. On-site radon sampling was not performed during the completion of this assessment.

- Based on research by the USEPA, the average radon concentrations for Los Angeles County are between 2.0 pCi/L and 4.0 pCi/L, which is below the 4.0 pCi/L action level set by the USEPA; however, site specific radon levels vary greatly within the USEPA radon zones and on-site radon measurements would need to be collected in order to determine the radon levels at the Subject Property.

Documentation regarding the above, if any, is included in Appendix Q.

7.4 Microbial Growth and Moisture Intrusion

Mold and mildew are simple, microscopic organisms in the Fungi kingdom that can grow virtually anywhere if they have adequate moisture, nutrients, air and appropriate temperatures. Depending on the particular mold or fungus, growing colonies can be almost any color. Most household molds and fungi (mildews) are white, black, grey, or brown colored. Spores of dozens of kinds of mold and fungus (mildew) are present at all times in indoor and outdoor air. These spores can settle, germinate and grow wherever good growth conditions are found. They can grow on soil, plants, dead plant materials, foods, fabrics, paper, wood and many other materials found within buildings. Many molds are not harmful and actually have a beneficial role in the environment and in living systems. In soil, molds play a crucial part in decomposition of organic matter and in making nutrients available to plants.

When mold and fungi (mildews) growth occurs in buildings, it can be very destructive to the materials on which they grow and cause high levels of airborne mold spores and volatile organic compounds associated with the characteristic musty / moldy odor. They cause staining, decomposition (rotting of materials) and objectionable, musty odors. Where colonies are extensive they can also produce enough spores, and by-products to be harmful to health. Many of the by-products of mold and fungus (mildew) are irritating to skin, eyes and respiratory tracts. Some molds produce true allergic sensitization and allergic reactions in susceptible people. Some molds produce toxic by-products that could be harmful to skin, and poisonous if ingested or inhaled in quantity. Persons with compromised immune systems may even experience systemic fungal infections of the respiratory tract.

EFI observed a limited amount of interior areas of the subject building(s) in order to identify the significant, visible presence of mold. This activity was not intended to discover all areas which may be affected by mold growth at the Subject Property. Potential areas of mold not observed as part of this limited assessment, include but are not limited to, pipe chases, HVAC systems and within enclosed wall and ceiling cavities that may be present in the Subject Property. A complete mold assessment, which may include various types of sampling, would be required to determine if mold levels within the subject building(s) are at levels acceptable by industry standards.

- EFI observed evidence that suggests the presence of potential mold growth including water staining and discoloration. No sampling was conducted as part of this assessment.

Documentation regarding the above, if any, is included in Appendix Q.

7.5 Methane Gas

In response to growing concern regarding methane intrusion into buildings and to the potential for methane build-up underneath buildings, certain municipalities have established methane requirements for structures based on the proximity to oil wells and landfills. If a Subject Property is located in the proximity of active or abandoned oil wells or landfills, methane mitigation devices installed prior to construction activities at a Subject Property may be necessary.

- The Los Angeles County Department of Public Works, Solid Waste Information Management System was reviewed to determine if the Subject Property is within 1,000 feet of a landfill or 300 feet of an oil well. According to the information reviewed, the Subject Property is not located within 1,000 feet of a landfill or 300 feet of an oil well. Therefore, the potential for the presence of methane beneath the Subject Property is considered low.

Documentation regarding the above, if any, is included in Appendix Q.

7.6 Wetlands

According to the Clean Water Act, a wetland is "those areas that are inundated or saturated by surface or groundwater at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions." Wetland areas have been identified as ecologically diverse and sensitive areas and are generally subject to more stringent development, re-development, and building regulations.

- According to the US Fish and Wildlife Service Geospatial Wetlands Information online map, there are no mapped wetlands on the Subject Property. Additionally, no evidence of wetlands, settling ponds, lagoons, surface impoundments, natural catch-basins, or potential wetland features (watermarks on tree trunks, drift lines, buttressed roots, etc.) were observed at the Subject Property during this investigation and no evidence of potential water features were noted on the reviewed historical source documents.

Documentation regarding the above, if any, is included in Appendix Q.

8.0 FINDINGS AND CONCLUSIONS

EFI has performed a Phase I ESA in conformance with the scope and limitations of ASTM International E1527-21, at 612 West Shorb Avenue, Alhambra, California, the Subject Property. Any exceptions to or deletions from this practice are described in the individual sections of this report.

This assessment has revealed no evidence of significant data gaps, RECs, CRECs, or HRECs in connection with the Subject Property.

8.1 Significant Data Gaps

No significant data gaps were identified during the course of this assessment.

8.2 Recognized Environmental Condition (REC)

No RECs were identified during the course of this assessment.

8.3 Historical Recognized Environmental Condition (HREC)

No HRECs were identified during the course of this assessment.

8.4 Controlled Recognized Environmental Condition (CREC)

No CRECs were identified during the course of this assessment.

9.0 RECOMMENDATIONS

Based on the foregoing, no additional investigation is recommended at this time.

10.0 SIGNATURES

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in § 312.10 of 40 CFR 312. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject Property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

STORM WATER PROVISIONS

ATTACHMENT A

BEST MANAGEMENT PRACTICES FOR CONSTRUCTION ACTIVITIES*

Storm Water Pollution Control Requirements for Construction Activities
Minimum Water Quality Protection Requirements for All Development Construction Projects/Certification Statement

The following is intended minimum notes or as an attachment for construction and grading plans and represent the minimum standards of good housekeeping which must be implemented on all construction sites regardless of size. (Applies to all permits)

- Eroded sediments and other pollutants must be retained on site and may not be transported from the site via sheetflow, swales, area drains, natural drainage courses or wind.
- Stockpiles of earth and other construction related materials must be protected from being transported from the site by the forces of wind or water.
- Fuels, oils, solvents and other toxic materials must be stored in accordance with their listing and are not to contaminate the soil and surface waters. All approved storage containers are to be protected from the weather. Spills must be cleaned up immediately and disposed of in a proper manner. Spills may not be washed into the drainage system.
- Non-storm water runoff from equipment and vehicle washing and any other activity shall be contained at the project site.
- Excess or waste concrete may not be washed into the public way or any other drainage system. Provisions shall be made to retain concrete wastes on site until they can be disposed of as solid waste.
- Trash and construction related solid wastes must be deposited into a covered receptacle to prevent contamination of rainwater and dispersal by wind.
- Sediments and other materials may not be tracked from the site by vehicle traffic. The construction entrance roadways must be stabilized so as to inhibit sediments from being deposited into the public way. Accidental depositions must be swept up immediately and may not be washed down by rain or other means.
- Any slopes with disturbed soils or denuded of vegetation must be stabilized so as to inhibit erosion by wind and water.
- ☐ Other: _____

As the project owner or authorized agent of the owner, I have read and understand the requirements listed above, necessary to control storm water pollution from sediments, erosion, and construction materials, and I certify that I will comply with these requirements.

GENERAL NOTES

1. THE INTENT OF THESE DRAWINGS AND SPECIFICATIONS IS TO INCLUDE ALL LABOR, MATERIALS AND SERVICES NECESSARY FOR COMPLETION OF ALL WORK SHOWN, PRESCRIBED, OR REASONABLY IMPLIED BUT NOT LIMITED TO THAT EXPLICITLY INDICATED IN THE CONTRACT DOCUMENTS.

2. STRUCTURAL, ELECTRICAL, AND PLUMBING, DRAWINGS ARE SUPPLEMENTAL TO THE ARCHITECTURAL DRAWINGS. THE CONTRACTOR SHALL REVIEW ALL PLANS AND DRAWINGS. IN THE EVENT OF CONFLICTING STATEMENTS, INSUFFICIENT INFORMATION OR ERRORS, THE CONTRACTOR SHALL IMMEDIATELY NOTIFY THE ENGINEER AND OBTAIN CLARIFICATION BEFORE ANY WORK IS BEGUN. WORK INSTALLED WHERE CONFLICTING CONDITIONS EXIST SHALL BE CORRECTED AT CONTRACTORS EXPENSE.

3. ALL WORK SHALL BE IN ACCORDANCE WITH THE LATEST ADOPTED EDITION OF THE UBC, TITLE 24 OF THE CALIFORNIA CODE OF REGULATIONS, LOS ANGELES COUNTY BUILDING CODE AND ALL OTHER APPLICABLE CODES, ORDINANCES AND REGULATIONS. NOTHING HEREIN SHALL BE INTERPRETED TO THE CONTRARY.

4. ALL ELECTRICAL AND PLUMBING WORK SHALL CONFORM TO THE REQUIREMENTS OF ALL LEGALLY CONSTITUTED AUTHORITIES HAVING JURISDICTION.

5. WHENEVER AN ARTICLE, DEVICE, OR PIECE OF EQUIPMENT IS SHOWN, INDICATED, OR REFERRED TO ON THE DRAWINGS OR THESE NOTES IN THE SINGULAR NUMBER, SUCH REFERENCES APPLY TO AS MANY SUCH ARTICLES AS ARE REQUIRED TO COMPLETE THE INSTALLATION.

6. ANY ITEMS INDICATED WITH "(E)" SHALL BE DEEMED TO BE EXISTING. ANY ITEMS INDICATED OTHERWISE SHALL BE CONSIDERED NEW WORK AND SHALL BE PART OF THIS CONTRACT, UNLESS NOTED OTHERWISE.

7. ARCHITECT WILL INTERPRET THE INTENT OF THE DOCUMENTS IN CASE OF POSSIBLE CONFLICT OR DISCREPENCY.

8. DO NOT SCALE THE DRAWINGS.

9. ALL DIMENSIONS ARE TO FACE OF FINISH UNLESS SHOWN OTHERWISE.

10. DETAILS NOTED AS "TYP" OR "TYPICAL" SHALL APPLY IN ALL CASES WHETHER OR NOT SPECIFICALLY REFERENCED.

11. DRAWING KEYNOTE SYSTEM: A KEYNOTING SYSTEM IS USED ON THE DRAWINGS FOR MATERIALS REFERENCES AND NOTES. REFER TO THE KEYNOTE LEGEND ON THE DRAWINGS FOR INFORMATION WHICH RELATES TO EACH KEYNOTE SYMBOL ON TEH RESPECTIVE DRAWING. EACH KEYNOTE SYMBOL CONSISTS OF A 5-DIGIT NUMBER FOLLOWED BY A PERIOD AND LETTER SUFFIX. THE FIRST 4 DIGITS OF THE NUMBER GENERALLY RELATE TO THE SPECIFICATION SECTION WHICH COVERS THE ITEM THAT IS REFERENCED, AND THE LETTER SUFFIX IDENTIFIES THE SPECIFIC REFERENCE NOTATION USED ON TEH DRAWING. THE LETTER SUFFIX DOES NOT RELATE TO ANY CORRESPONDING REFERENCE LETTER IN THE SPECIFICATION. THE ORGANIZATION OF THE KEYNOTING SYSTEM ON THE DRAWINGS, WITH THE KEYNOTE REFERENCE NUMBERS RELATED TO THE SPECIFICATIONS SECTIONS NUMBERING SYSTEM, SHALL NOT CONTROL THE CONTRACTOR IN DIVIDING THE WORK AMONG SUBCONTRACTORS OR IN ESTABLISHING THE EXTENT OF WORK TO BE PERFORMED AT ANY TRADE.

12. EXISTING CONDITIONS MAY NOT BE SHOWN EXACTLY. THE GENERAL CONTRACTOR AND ALL SUB-CONTRACTORS SHALL VERIFY ALL DIMENSIONS AND CONDITIONS ON THE JOB SITE PRIOR TO BEGINNING CONSTRUCTION AND SHALL REPORT ANY DISCREPANCIES OR UNIDENTIFIED CONDITIONS TO THE ARCHITECT FOR RESOLUTION BEFORE ANY WORK IS BEGUN, OR IMMEDIATELY UPON DISCOVERY.

13. NEITHER THE ARCHITECT'S REVIEW NOR APPROVAL OF SHOP DRAWINGS SHALL RELIEVE THE CONTRACTOR FROM RESPONSIBILITY FOR DEVIATIONS FROM DRAWINGS OR SPECIFICATIONS UNLESS HE HAS CALLED THE ARCHITECT'S ATTENTION IN WRITING TO SUCH DEVIATIONS AT THE TIME OF SUBMISSION NOR SHALL IT RELIEVE HIM OF RESPONSIBILITY FOR ERRORS OF ANY SORT IN THE SHOP DRAWINGS.

14. PROVIDE ATTACHMENT AND CONNECTION DEVICES AND METHODS FOR SECURING WORK PROPERLY AS IT IS INSTALLED: TRUE TO LINE AND LEVEL, PER CODE AND WITHIN RECOGNIZED INDUSTRY TOLERANCES IF NOT OTHERWISE INDICATED. ALLOW FOR EXPANSIONS AND BUILDING MOVEMENTS. PROVIDE UNIFORM JOINT WIDTHS IN EXPOSED WORK, ORGANIZED FOR BEST POSSIBLE VISUAL EFFECT. REFER QUESTIONABLE VISUAL-EFFECTS CHOICES TO ARCHITECT FOR FINAL DECISION.

15. THE CONTRACTOR SHALL BE RESPONSIBLE FOR MEANS, METHODS, TECHNIQUES AND PROCEDURES EMPLOYED IN THE PERFORMANCE OF WORK IN, ON OR ABOUT THE JOB SITE; THE CONTRACTOR SHALL COORDINATE AND VERIFY ALL WORK PERFORMED BY SUB-CONTRACTORS.

16. LOCATIONS OF ALL UTILITIES SHOWN ON THE DRAWINGS ARE APPROXIMATE. THE CONTRACTOR SHALL EXERCISE EXTREME CAUTION IN EXCAVATION AND TRENCHING TO AVOID INTERCEPTING EXISTING PIPING OR CONDUITS. THE CONTRACTOR IS RESPONSIBLE TO VERIFY LOCATION OF ALL SITE UTILITIES AND TO COORDINATE AND AVOID CONFLICT IN THE LOCATIONS OF NEW UNDERGROUND AND SITE UTILITIES. THE CONTRACTOR SHALL INCLUDE ALL NECESSARY UTILITY FEES, METERS/AND CONNECTIONS IN HIS BID. CALL DIG ALERT 1-800-227-2600.

17. ALL CONTRACTORS AND SUB-CONTRACTORS PERFORMING WORK ON, OR RELATED TO THIS PROJECT SHALL CONDUCT THEIR OPERATIONS SO THAT ALL EMPLOYEES ARE PROVIDED A SAFE PLACE TO WORK AND THE PUBLIC IS PROTECTED, AND SHALL COMPLY WITH THE "OCCUPATIONAL SAFETY AND HEALTH REGULATION" OF THE U.S. DEPARTMENT OF LABOR AND WITH ANY AND ALL OTHER APPLICABLE STATE AND/OR LOCAL SAFETY REGULATIONS.

18. WORKMANSHIP STANDARDS: REMOVE AND REPLACE WORK WHICH DOES NOT COMPLY WITH WORKMANSHIP STANDARDS AS SPECIFIED AND AS RECOGNIZED IN THE CONSTRUCTION INDUSTRY FOR APPLICATIONS INDICATED. REMOVE AND REPLACE OTHER WORK DAMAGED OR DETERIORATED BY FAULTY WORKMANSHIP OR ITS REPLACEMENT.

19. MANUFACTURER'S INSTRUCTIONS: WHERE INSTALLATIONS INCLUDE MANUFACTURED PRODUCTS, COMPLY WITH MANUFACTURER'S APPLICABLE INSTRUCTIONS AND RECOMMENDATIONS FOR INSTALLATION, TO EXTENT THESE ARE MORE EXPLICIT OR MORE STRINGENT THAN REQUIREMENTS INDICATED IN CONTRACT DOCUMENTS.

20. ITEMS TO BE REUSED OR STORED: EXERCISE THE GREATEST POSSIBLE CARE WHEN REMOVING ITEMS SCHEDULED FOR REUSE. USE ONLY MECHANICS SKILLED IN THE APPROPRIATE CRAFTS. IDENTIFY POINT OF REUSE, STORE AND PROTECT AT LOCATIONS AS DIRECTED BY OWNER OR OWNER'S REPRESENTATIVE. CLEAN REUSED ITEMS BEFORE INSTALLING AT NEW LOCATIONS. MOUNT ITEMS IN SAME MANNER AS PREVIOUSLY DONE UNLESS NOTED OTHERWISE.

21. ANY REQUIRED INTERRUPTION OF OR REMOVAL OF ANY UTILITY SERVICE SERVING THE EXISTING FACILITY SHALL NOT BE PERFORMED UNTIL A MINIMUM OF 72-HOUR PRIOR NOTICE IS GIVEN TO THE OWNER BY THE CONTRACTOR. SUCH WORK AS RELATES TO THE NEW OR EXISTING WORK SHALL BE COORDINATED WITH THE OWNER AND THE APPLICABLE UTILITY COMPANY, AS MAY BE NECESSARY.

GENERAL NOTES

22. CUTTING AND PATCHING: EXECUTE CUTTING, FITTING AND PATCHING OF WORK REQUIRED TO MAKE THE SEVERAL PARTS FIT PROPERLY, TO REMOVE AND REPLACE DEFECTIVE WORK, TO REMOVE AND REPLACE WORK NOT CONFORMING TO REQUIREMENTS OF THE CONTRACT DOCUMENTS, AND TO INSTALL SPECIFIED WORK IN EXISTING CONSTRUCTION. PERFORM REMOVALS TO EXTENT REQUIRED PLUS SUCH ADDITIONAL REMOVALS AS ARE NECESSARY FOR COMPLETION EVEN THOUGH NOT INDICATED OR SPECIFIED.

23. RESTORE WORK WHICH HAS BEEN CUT OR REMOVED, INSTALL NEW PRODUCTS TO PROVIDE COMPLETED WORK IN ACCORDANCE WITH THE CONTRACT DOCUMENTS. REFINISH PATCHED, NEW AND EXISTING SURFACES TO MATCH ADJACENT, UNDISTURBED CONSTRUCTION. WHERE REPAINTING IS NECESSARY, THE PAINTING SHALL BE CARRIED TO NATURAL BREAKS OR NATURAL TERMINATIONS, AS APPROVED. PRIOR TO PAINTING, PREPARE PATCHED AREAS AS SPECIFIED FOR THE SAME NEW WORK.

24. MATERIALS: EXCEPT AS OTHERWISE INDICATED OR APPROVED BY ARCHITECT, PROVIDE MATERIALS FOR CUTTING-AND-PATCHING WHICH WILL RESULT IN EQUAL-OR-BETTER WORK THAN WORK BEING CUT-AND-PATCHED IN TERMS OF PERFORMANCE CHARACTERISTICS AND INCLUDING VISUAL EFFECT WHERE APPLICABLE. USE MATERIALS IDENTICAL WITH ORIGINAL MATERIALS WHERE FEASIBLE AND WHERE RECOGNIZED THAT SATISFACTORY RESULTS CAN BE PRODUCED THEREBY. REMOVE AND REPLACE WORK JUDGED BY ARCHITECT TO BE CUT-AND-PATCHED IN A VISUALLY UNSATISFACTORY OR OTHERWISE OBJECTABLE MANNER. RESTORE EXPOSED FINISHES OF RESTRICTION ONTO RETAINED WORK ADJOINING, IN A MANNER WHICH WILL ELIMINATE EVIDENCE OF PATCHING.

25. FINAL CLEANING MUST BE DONE TO OWNER'S SATISFACTION AND SHALL INCLUDE, BUT NOT BE LIMITED TO, CLEANING OF EXISTING LIGHT FIXTURES AND LAMPS AND REMOVAL OF TEMPORARY PROTECTION DEVICES. SEE SPECIFICATIONS FOR ADDITIONAL FINAL CLEANING REQUIREMENTS.

26. THE STRUCTURE IS DESIGNED AS A STABLE UNIT AFTER ALL COMPONENTS ARE IN PLACE. THE CONTRACTOR SHALL DESIGN AND PROVIDE ALL SHORING AND BRACING NECESSARY TO ENSURE THE STABILITY OF ANY AND ALL PARTS OF THE BUILDING DURING CONSTRUCTION.

27. UNLESS SPECIFICALLY SHOWN OR NOTED ON THE DRAWINGS, NO STRUCTURAL MEMBER SHALL BE CUT, NOTCHED, BORED, WELDED, OR OTHERWISE MODIFIED WITHOUT THE PERMISSION OF THE ENGINEER.

28. INSPECTION OF CONDITIONS: INSPECT SUBSTRATE TO RECEIVE WORK AND CONDITIONS UNDER WHICH WORK WILL BE PERFORMED, AND REPORT UNSATISFACTORY CONDITIONS. DO NOT PROCEED WITH THE WORK UNTIL UNSATISFACTORY CONDITIONS HAVE BEEN CORRECTED.

29. CHANGES TO THE APPROVED DRAWINGS AND SPECIFICATIONS SHALL BE MADE BY ADDENDA OR CHANGE ORDER.

QUALITY STANDARDS

GENERAL

1. ALL WALLS, DOORS AND THEIR RELATED FRAMES, AND WINDOWS AND THEIR RELATED FRAMES SHALL BE PLUMB AND STRAIGHT, TYPICAL.

2. ALL WALLS, CEILINGS AND MISCELLANEOUS ITEMS SUCH AS HANDRAILS, ALL PREVIOUSLY PAINTED ITEMS, SHALL RECEIVE PAINT, WHETHER INDICATED OR NOT, EXCEPTION: UNLESS NOTED OTHERWISE, DO NOT PAINT UNPAINTED CONCRETE, UNPAINTED MASONRY, CASEWORK, OR FACTORY FINISHED ITEMS SUCH AS LIGHT FIXTURES, CARPET, COVERPLATES, GRILLES, FIXTURES, NEW CEILING TILES, ETC.

CEILING

3. FINISH CEILINGS SHALL BE FLUSH AND LEVEL, UNLESS NOTED OTHERWISE.

CORRIDOR

4. MINIMUM CORRIDOR WIDTH SHALL BE 44" CLEAR. ELECTRICAL CABINETS, WAINSCOT, ETC. SHALL NOT PROJECT INTO THIS CLEAR DIMENSION.

DOORS

5. ALL PIN-TYPE HINGES WHICH ARE ACCESSIBLE FROM OUTSIDE THE SECURED AREA WHEN THE DOOR IS CLOSED SHALL HAVE NON-REMOVABLE HINGE PINS. IN ADDITION, THEY SHALL HAVE MINIMUM 1/4" DIAMETER STEEL JAMB STUD WITH 1/4" MINIMUM PROTECTION UNLESS THE HINGES ARE SHAPED TO PREVENT REMOVAL OF THE DOOR IF THE HINGES PINS ARE REMOVED.

6. THE STRIKE PLATE FOR LATCHES AND THE HOLDING DEVICE FOR PROJECTING DEADBOLTS IN WOOD CONSTRUCTION SHALL BE SECURED TO THE JAMB AND THE WALL FRAMING WITH SCREWS NOT LESS THAN 2 1/2" IN LENGTH.

7. DEADBOLTS SHALL HAVE HARDENED INSERTS. DEADLOCKING LATCH KEY-OPERATED LOCKS ON EXTERIOR; LOCKS OPENABLE WITHOUT KEY, SPECIAL KNOWLEDGE OR EFFORT ON INTERIOR.

8. STRAIGHT DEADBOLTS SHALL HAVE A MINIMUM THROW OF 1" AND AN EMBEDMENT OF NOT LESS THAN 5/8".

9. A HOOK-SHAPED OR AN EXPANDING-LUG DEADBOLT SHALL HAVE A MINIMUM THROW OF 3/4".

10. CYLINDER GUARDS SHALL BE INSTALLED ON ALL CYLINDER LOCKS WHENEVER THE CYLINDER PROJECTS BEYOND THE FACE OF THE DOOR OR IS OTHERWISE ACCESSIBLE TO GRIPPING TOOLS.

11. SECURE INACTIVE LEAF OF DOUBLE DOOR AND UPPER LEAF OF DUTCH DOOR.

FLOOR

12. THE SURFACE OF THE FLOORS SHALL BE SLIP-RESISTANT. WALKS SHALL BE AS SLIP-RESISTANT AS A MEDIUM SALTED FINISH.

GYPSUM BOARD

1. GYPSUM WALLBOARD AND SOFFITS SHALL CONFORM TO CHAPTER 25 OF TITLE 24, PART 2, UNLESS OTHERWISE NOTED.
2. GYPSUM WALLBOARD SHALL CONFORM TO CHAPTER 47 OF C.B.C. U.N.O.
3. ALL GYPSUM BOARD USED IN JANITOR'S ROOMS AND ALL TOILET ROOMS SHALL BE WATER RESISTANT EXCEPT AT CEILINGS PER 1997 UBC SECTION 2512.
3. J-BOXES INSTALLED ON OPPOSITE SIDES OF FIRE RATED WALLS SHALL BE MINIMUM 24" APART.

ACCESSIBLITY NOTES

GENERAL

1. DURING PERIODS OF PARTIAL OR RESTRICTED USE OF A BUILDING OR FACILITY, THE ENTRANCES USED FOR PRIMARY ACCESS SHALL BE ACCESSIBLE TO AND USABLE BY PHYSICALLY HANDICAPPED PERSONS.

2. THE SPACE REQUIRED FOR A WHEELCHAIR TO MAKE A 180 DEGREE TURN IS A CLEAR SPACE OF 60" DIAMETER OR A T-SHAPED SPACE.

3. IF THE CLEAR FLOOR SPACE ONLY ALLOWS A FORWARD APPROACH TO AN OBJECT, THE MAXIMUM HIGH FORWARD REACH ALLOWED SHALL BE 48". SEE FIGURE 11B-5C(a) IN THE 1999 U.B.C. THE MINIMUM LOW FORWARD REACH IS 15". IF THE HIGH FORWARD REACH IS OVER AN OBSTRUCTION, REACH AND CLEARANCES SHALL BE AS SHOWN IN FIGURE 11B-5C(b) IN THE 1999 U.B.C.

4. IF THE CLEAR FLOOR SPACE ALLOWS PARALLEL APPROACH BY A PERSON IN A WHEELCHAIR, THE MAXIMUM HIGH SIDE REACH ALLOWED SHALL BE 54" AND THE LOW SIDE REACH SHALL BE NO LESS THAN 9" ABOVE THE FLOOR AS SHOWN IN FIGURES 11B-5(a) & (b)IN THE 1999 U.B.C. IF THE SIDE REACH IS OVER AN OBSTRUCTION, THE REACH AND CLEARANCES SHALL BE AS SHOWN IN FIGURE 11B-5D(c) IN THE 1999 U.B.C.

5. EMPLOYEE WORK AREAS SHALL BE ACCESSIBLE BY MEANS OF A 36" MINIMUM AISLE AND A 32" MINIMUM CLEAR OPENING DOOR WIDTH.

6. WHERE FIXED OR BUILT-IN SEATING, TABLES, OR COUNTERS ARE PROVIDED FOR THE PUBLIC, AND IN GENERAL EMPLOYEE AREAS, 5%, BUT NOT LESS THAN 1 MUST BE ACCESSIBLE. AS REQUIRED IN SECTION 11228.

7. MOUNTING HEIGHTS: WHERE MOUNTING HEIGHTS ARE NOT INDICATED, MOUNT INDIVIDUAL UNITS OF WORK AT MOUNTING HEIGHTS AS LISTED IN APPLICABLE CODE, ESPECIALLY CA TITLE 24. REFER QUESTIONABLE MOUNTING HEIGHT CHOICES TO ARCHITECT FOR FINAL DECISION.

8. THE TOPS OF TABLES AND COUNTERS SHALL BE 28" TO 34" FROM THE FLOOR OR GROUND.

9. WHERE A SINGLE COUNTER CONTAINS MORE THAN ONE TRANSACTION STATION, SUCH AS (BUT NOT LIMITED TO) A BANK COUNTER WITH MULTIPLE TELLER WINDOWS OR A RETAIL SALES COUNTER WITH MULTIPLE CASH REGISTER STATIONS, AT LEAST 5%, BUT NEVER LESS THAN 1, OF EACH TYPE OF STATION SHALL BE LOCATED AT A SECTION OF COUNTER THAT IS AT LEAST 36" LONG AND NO MORE THAN 28" TO 34" HIGH.

PATH OF TRAVEL

1. GROUND AND FLOOR SURFACES ALONG ACCESSIBLE ROUTES AND IN ACCESSIBLE ROOMS AND SPACES, INCLUDING FLOORS, WALKS, RAMPS, STAIRS, AND CURB RAMPS, SHALL BE STABLE, FIRM, AND SLIP RESISTANT.

2. IN BUILDINGS OR FACILITIES, FLOORS OF A GIVEN STORY SHALL BE A COMMON LEVEL THROUGHOUT, OR SHALL BE CONNECTED BY PEDESTRIAN RAMPS OR SPECIAL ACCESS LIFTS.

3. IF CARPET OR CARPET TILE IS USED ON A GROUND OR FLOOR SURFACE, IT SHALL BE SECURELY ATTACHED; HAVE A FIRM CUSHION, PAD OR BACKING OR NO CUSHION OR PAD; AND HAVE A LEVEL LOOP TEXTURED LOOP, LEVEL CUT PILE, OR LEVEL CUT/UNCUT PILE TEXTURE. THE MAXIMUM PILE HEIGHT SHALL BE 1/2". EXPOSED EDGES OF CARPET SHALL BE FASTENED TO FLOOR SURFACES AND HAVE TRIM ALONG THE ENTIRE LENGTH OF THE EXPOSED EDGE.

4. OBJECTS PROJECTING FROM THE WALLS WITH THEIR LEADING EDGES BETWEEN 27" AND 80" ABOVE THE FINISHED FLOOR SHALL PROTRUDE NO MORE THAN 4" INTO WALKS, HALLS, CORRIDORS, PASSAGEWAYS OR AISLES.

5. OBJECTS MOUNTED WITH THEIR LEADING EDGED AT OR BELOW 27" ABOVE THE FINISHED FLOOR MAY PROTRUDE ANY AMOUNT INTO WALKS, HALLS, CORRIDORS, PASSAGEWAYS OR AISLES.

6. FREE-STANDING OBJECTS MOUNTED ON POSTS OR PYLONS MAY OVERHANG 12" MAXIMUM FROM 27" TO 80" ABOVE THE GROUND OR FINISHED FLOOR.

7. PROTRUDING OBJECTS SHALL NOT REDUCE THE CLEAR WIDTH OF AN ACCESSIBLE ROUTE OR MANEUVERING SPACE.

8. WALKS, HALLS, CORRIDORS, PASSAGEWAYS, AISLES OR OTHER CIRCULATION SPACES SHALL HAVE 80" MINIMUM CLEAR HEAD ROOM.

9. ANY OBSTRUCTION THAT OVERHANGS A PEDESTRIAN WAY SHALL BE A MINIMUM OF 80" ABOVE THE WALKING SURFACE AS MEASURED FROM THE BOTTOM OF THE OBSTRUCTION.

10. IF A WALK CROSSES OR ADJOINS A VEHICULAR WAY, AND THE WALKING SURFACES ARE NOT SEPARATED BY CURBS, RAILINGS OR OTHER ELEMENTS BETWEEN THE PEDESTRIAN AREAS AND VEHICULAR AREAS, THE BOUNDARY BETWEEN THE AREAS SHALL BE DEFINED BY A CONTINUOUS DETECTABLE WARNING WHICH IS 36" WIDE, COMPLYING WITH SECTION 1024.3 IN THE 1999 U.B.C.

ACCESS WALKS

1. SITE DEVELOPMENT AND GRADING SHALL BE DESIGNED TO PROVIDE ACCESS TO ALL ENTRANCES AND EXTERIOR GROUND FLOOR EXITS, AND ACCESS TO NORMAL PATHS OF TRAVEL, AND WHERE NECESSARY TO PROVIDE ACCESS, SHALL INCORPORATE PEDESTRIAN RAMPS, CURB RAMPS, ETC.

2. THE ACCESSIBLE ROUTE OF TRAVEL SHALL BE THE MOST PRACTICAL DIRECT ROUTE BETWEEN ACCESSIBLE BUILDING ENTRANCES, ACCESSIBLE SITE FACILITIES, AND THE ACCESSIBLE ENTRANCE TO THE SITE.

3. AT LEAST ONE ACCESSIBLE ROUTE WITHIN THE BOUNDARY OF THE SITE SHALL BE PROVIDED FROM PUBLIC TRANSPORTATION STOPS, ACCESSIBLE PARKING AND ACCESSIBLE PASSENGER LOADING ZONES, AND PUBLIC STREETS OR SIDEWALKS, TO THE ACCESSIBLE BUILDING ENTRANCES THEY SERVE. THE ACCESSIBLE ROUTE SHALL, TO THE MAXIMUM EXTENT FEASIBLE, COINCIDE WITH THE ROUTE FOR THE GENERAL PUBLIC.

4. WALKS AND SIDEWALKS SHALL HAVE A CONTINUOUS COMMON SURFACE, NOT INTERRUPTED BY STEPS OR BY ABRUPT CHANGES IN LEVEL EXCEEDING 1/2", AND SHALL BE A MINIMUM OF 48" IN WIDTH.

ACCESSIBLITY NOTES

5. ABRUPT CHANGES IN LEVEL, EXCEPT BETWEEN A WALK OR SIDEWALK AND DRIVEWAY, OR WHEN A GAURDRAIL OR HANDRAIL IS PROVIDED, EXCEEDING 4 INCHES IN A VERTICAL DIMENSION SHALL BE IDENTIFIED BY CURBS PROJECTING AT LEAST 6 INCHES IN HEIGHT ABOVE WALK OR SIDEWALK SURFACE TO WARN THE BLIND OF A POTENTIAL DROP-OFF.

6. WHEN ABRUPT CHANGES IN LEVEL NOT EXCEEDING 1/2" OCCUR, THEY SHALL BE BEVELED WITH A SLOPE NO GREATER THAN 1:2, EXCEPT THAT LEVEL CHANGES NOT EXCEEDING 1/4" SHALL BE VERTICAL.

7. ABRUPT CHANGES IN LEVEL ALONG ANY ACCESSIBLE ROUTE EXCEEDING 1/2" SHALL COMPLY WITH THE REQUIREMENTS FOR CURB RAMPS.

8. WHEN THE SLOPE IN THE DIRECTION OF TRAVEL OF ANY WALK EXCEEDS 1 VERTICAL TO 20 HORIZONTAL IT SHALL COMPLY WITH THE PROVISION IN SECTION 1007 AS A PEDESTRIAN RAMP.

9. WALK AND SIDEWALK SURFACE CROSS SLOPES SHALL NOT EXCEED 1/4" PER FOOT EXCEPT WHEN THE ENFORCING AGENCY FINDS THAT DUE TO LOCAL CONDITIONS IT CREATES AN UNREASONABLE HARDSHIP, THE CROSS SLOPE CAN BE INCREASED TO A MAXIMUM OF 1/2" PER FOOT FOR DISTANCES NOT TO EXCEED 20'.

10. WALKS SHALL BE PROVIDED WITH A LEVEL AREA NOT LESS THAN 60" AT A DOOR OR GATE THAT SWINGS TOWARD THE WALK, AND NOT LESS THAN 48" WIDE BY 44" DEEP AT A DOOR GATE THAT SWINGS AWAY FROM THE WALK.

11. WALKS SHALL EXTEND A MINIMUM OF 24" TO THE SIDE OF THE STRIKE EDGE OF A DOOR OR A GATE THAT SWINGS TOWARD THE WALK.

12. ALL WALKS WITH CONTINUOUS GRADIENTS SHALL HAVE LEVEL AREAS AT LEAST 5' IN LENGTH AT INTERVALS OF AT LEAST EVERY 400'.

13. WALK SURFACES WITH A SLOPE OF LESS THAN 6% GRADIENT SHALL BE AT LEAST AS SLIP-RESISTANT AS THAT DESCRIBED AS A MEDIUM SALTED FINISH.

14. WALK SURFACES WITH A SLOPE OF 6% OR GREATER GRADIENT SHALL BE SLIP RESISTANT.

PARKING

1. IN PARKING FACILITIES THAT DO NOT SERVE A PARTICULAR BUILDING, ACCESSIBLE PARKING SHALL BE LOCATED ON THE SHORTEST ACCESSIBLE ROUTE OF TRAVEL TO AN ACCESSIBLE PEDESTRIAN ENTRANCE OF THE PARKING FACILITY.

2. WHEN MORE THAN ONE ACCESSIBLE PARKING SPACE IS PROVIDED, IN LIEU OF PROVIDING A 14' WIDE SPACE FOR EACH PARKING SPACE, TWO SPACES CAN BE PROVIDED WITHIN A 23' WIDE AREA LINED TO PROVIDE A 9' PARKING AREA ON EACH SIDE OF A 5' LOADING AND UNLOADING ACCESS AISLE IN THE CENTER.

3. THE MINIMUM LENGTH OF AN ACCESSIBLE PARKING SPACE SHALL BE 18'.

4. ONE IN EVERY EIGHT ACCESSIBLE SPACES, BUT NOT LESS THAN ONE, SHALL BE SERVED BY AN ACCESS AISLE 96" WIDE MINIMUM AND SHALL BE DESIGNATED VAN ACCESSIBLE. ALL SUCH SPACES MAY BE GROUPED ON ONE LEVEL OF THE PARKING STRUCTURE.

5. SURFACE SLOPES OF ACCESSIBLE PARKING SPACES SHALL BE THE MINIMUM POSSIBLE AND SHALL NOT EXCEED 1/4" PER FOOT IN ANY DIRECTION.

6. ACCESSIBLE PARKING SPACES SHALL BE SO LOCATED THAT PERSONS WITH DISABILITIES ARE NOT COMPELLED TO WHEEL OR WALK BEHIND PARKED CARS OTHER THAN THEIR OWN.

7. IN EACH PARKING AREA, A CURB OR WHEELSTOP SHALL BE PROVIDED TO PREVENT ENCROACHMENT OF CARS OVER THE REQUIRED WIDTH OF WALKWAYS WHERE NECESSARY.

8. EACH PARKING SPACE RESERVED FOR PERSONS WITH DISABILITIES IS IDENTIFIED BY A REFLECTORIZED SIGN PERMANENTLY POSTED IMMEDIATELY AT THE HEAD OF EACH STALL OR SPACE, CONSISTING OF A PROFILE VIEW OF A WHEELCHAIR WITH OCCUPANT IN WHITE OR DARK BLUE BACKGROUND. THE SIGN SHALL NOT BE SMALLER THAN 70 SQUARE INCHES IN AREA AND, WHEN IN A PATH OF TRAVEL SHALL BE POSTED AT A MINIMUM HEIGHT OF 80" FROM THE BOTTOM OF THE SIGN TO THE PARKING SPACE FINISHED GRADE.

9. SIGNS TO IDENTIFY ACCESSIBLE PARKING SPACES ARE CENTERED ON THE STALL AT THE INTERIOR END OF THE PARKING SPACE AT A MINIMUM HEIGHT OF 80" FROM THE BOTTOM OF THE SIGN TO THE PARKING SPACE FINISHED GRADE.

10. VAN ACCESSIBLE PARKING SPACES SHALL HAVE AN ADDITIONAL SIGN STATING "VAN ACCESSIBLE" MOUNTED BELOW THE SYMBOL OF ACCESSIBILITY.

11. AN ADDITIONAL SIGN SHALL ALSO BE POSTED, IN A CONSPICUOUS PLACE, AT EACH ENTRANCE TO OFF-STREET PARKING FACILITIES, OR IMMEDIATELY ADJACENT TO AND VISIBLE FROM EACH STALL OR SPACE. THE SIGN SHALL BE NOT LESS THAN 17" BY 22" IN SIZE WITH LETTERING NOT LESS THAN 1" IN HEIGHT, WHICH CLEARLY AND CONSPICUOUSLY STATES THE FOLLOWING: "UNAUTHORIZED VEHICLES PARKED IN DESIGNATED ACCESSIBLE SPACES NOT DISPLAYING DISTINGUISHING PLACARDS OR LICENSE PLATES ISSUED FOR PERSONS WITH DISABILITIES MAY BE TOWED AWAY AT OWNER'S EXPENSE. TOWED VEHICLES MAY BE RECLAIMED AT _____ OR BY TELEPHONING (626) 570-5168."

12. THE SURFACE OF EACH ACCESSIBLE PARKING SPACE OR STALL SHALL HAVE A SURFACE IDENTIFICATION DUPLICATING EITHER OUTLINING OR PAINTING THE STALL OR SPACE IN BLUE AND OUTLINING ON THE GROUND IN THE STALL OR SPACE IN WHITE OR SUITABLE CONTRASTING COLOR A PROFILE VIEW DEPICTING A WHEELCHAIR OCCUPANT; OR OUTLINING A PROFILE VIEW OF A WHEELCHAIR WITH OCCUPANT IN WHITE ON BLUE BACKGROUND. THE PROFILE VIEW SHALL BE LOCATED SO THAT IT IS VISIBLE TO A TRAFFIC ENFORCEMENT OFFICER WHEN A VEHICLE IS PROPERLY PARKED IN THE SPACE AND SHALL BE 36"H X 36"W.

ACCESS RAMP

1. THE MAXIMUM SLOPE OF A RAMP THAT SERVES ANY ENTRY, PROVIDES ACCESS FOR PERSONS WITH DISABILITIES, OR IS IN THE PATH OF TRAVEL SHALL BE 1' RISE IN 12' OF HORIZONTAL RUN.

2. THE CROSS SLOPE OF RAMP SURFACES SHALL BE NO GREATER THAN 1:50.

3. THE WIDTH OF RAMPS SHALL BE AS REQUIRED FOR STAIRWAYS AND EXITS.

4. PEDESTRIAN RAMPS SERVING PRIMARY ENTRANCES TO BUILDINGS HAVING AN OCCUPANT LOAD OF 300 OR MORE SHALL HAVE A MINIMUM CLEAR WIDTH OF 60".

5. NOT USED.

6. ALL OTHER PEDESTRIAN RAMPS SERVING PRIMARY ENTRANCES SHALL HAVE A MINIMUM WIDTH OF 48".

7. LANDINGS SHALL BE PROVIDED AT THE TOP AND BOTTOM OF EACH RAMP.

8. INTERMEDIATE LANDINGS SHALL BE PROVIDED AT INTERVALS NOT EXCEEDING 30" OF VERTICAL RISE AND AT EACH CHANGE OF DIRECTION.

9. TOP LANDINGS SHALL NOT BE LESS THAN 60" WIDE AND SHALL HAVE A LENGTH OF NOT LESS THAN 60" IN THE DIRECTION OF RAMP RUN.

10. DOORS IN ANY POSITION SHALL NOT REDUCE THE MINIMUM DIMENSION OF THE RAMP LANDING TO LESS THAN 42" AND SHALL NOT REDUCE THE REQUIRED WIDTH BY MORE THAN 3'-0" WHEN FULLY OPEN.

11. THE WIDTH OF THE LANDING SHALL EXTEND 24" PAST THE STRIKE EDGE OF ANY DOOR OR GATE FOR EXTERIOR RAMPS AND 18" PAST THE STRIKE EDGE FOR INTERIOR RAMPS.

12. AT BOTTOM AND INTERMEDIATE LANDINGS, THE WIDTH SHALL BE AT LEAST THE SAME AS REQUIRED FOR THE RAMP.

13. INTERMEDIATE LANDING AT A CHANGE OF DIRECTION IN EXCESS OF 30 DEGREES AND BOTTOM LANDINGS SHALL HAVE A DIMENSION IN THE DIRECTION OF RAMP RUN OF NOT LESS THAN 72" TO ACCOMMODATE THE HANDRAIL EXTENSION.

14. OTHER INTERMEDIATE LANDINGS SHALL HAVE A DIMENSION IN THE DIRECTION OF RAMP RUN OF NOT LESS THAN 60".

15. RAMPS LANDINGS ARE NOT CONSIDERED IN DETERMINING THE MAXIMUM HORIZONTAL DISTANCE OF EACH RAMP.

16. HANDRAILS ARE REQUIRED ON RAMPS THAT PROVIDE ACCESS IF THE RAMP SLOPE EXCEEDS 1' RISE IN 20' OF HORIZONTAL RUN.

17. HANDRAILS SHALL BE PLACED ON EACH RAMP, SHALL BE CONTINUOUS THE FULL LENGTH OF THE RAMP, SHALL BE 34" TO 38" ABOVE THE RAMP SURFACE, SHALL EXTEND A MINIMUM OF 1' BEYOND THE TOP AND BOTTOM OF THE RAMP, AND THE ENDS SHALL BE RETURNED.

18. THE GRIP PORTION OF HANDRAILS SHALL BE NOT LESS THAN 1-1/4" NOR MORE THAN 1-1/2", OR THE SHAPE SHALL PROVIDE AN EQUIVALENT GRIPPING SURFACE, AND ALL SURFACES SHALL BE SMOOTH WITH NO SHARP CORNERS. HANDRAILS SHALL NOT ROTATE WITHIN THEIR FITTINGS.

19. HANDRAILS PROJECTING FROM A WALL SHALL HAVE A SPACE OF 1-1/2" BETWEEN THE WALL AND THE HANDRAIL.

20. HANDRAILS MAY BE LOCATED IN A RECESS IF THE RECESS IS A MAXIMUM OF 3" DEEP AND EXTENDS AT LEAST 18" ABOVE THE TOP OF THE RAIL.

21. ANY WALL OR OTHER

ACCESSIBLITY NOTES (CONTINUED)

17. TOILET TISSUE DISPENSERS SHALL BE LOCATED ON THE WALL WITHIN 12" OF THE FRONT EDGE OF THE TOILET SEAT AND NO LOWER THAN 19" FROM THE FLOOR. DISPENSERS THAT CONTROL DELIVERY OR THAT DO NOT PERMIT CONTINUOUS PAPER FLOW SHALL NOT BE USED.

18. TOILET ROOM FLOORS SHALL HAVE A SMOOTH, HARD, NON-ABSORBENT SURFACE SUCH AS PORTLAND CEMENT, CONCRETE, CERAMIC TILE OR OTHER APPROVED MATERIAL WHICH EXTENDS UPWARD ONTO THE WALLS AT LEAST 5". WALLS WITHIN WATER CLOSET COMPARTMENTS AND WALLS WITHIN 24" OF THE FRONT AND SIDES OF URINALS SHALL BE SIMILARLY FINISHED TO A HEIGHT OF 48" AND, EXCEPT FOR STRUCTURAL ELEMENTS, THE MATERIALS USED IN SUCH WALLS SHALL BE A TYPE WHICH IS NOT ADVERSELY AFFECTED BY MOISTURE.

19. GRAB BARS AT THE SIDE SHALL BE AT LEAST 42" LONG WITH THE FRONT END POSITIONED 24" IN FRONT OF THE WATER CLOSET STOOL AND WITH THE BACK END POSITIONED NO MORE THAN 12" FROM THE REAR WALL. GRAB BARS AT THE BACK SHALL NOT BE LESS THAN 36" LONG.

20. GRAB BARS SHALL BE SECURELY ATTACHED 33" ABOVE AND PARALLEL TO THE FLOOR, EXCEPT THAT WHERE A TANK-TYPE TOILET IS USED WHICH OBSTRUCTS PLACEMENT AT 33", THE GRAB BAR MAY BE AS HIGH AS 36".

21. THE DIAMETER OR WIDTH OF THE GRIPPING SURFACES OF A GRAB BAR SHALL BE 1-1/4" TO 1-1/2" OR THE SHAPE SHALL PROVIDE AN EQUIVALENT GRIPPING SURFACE. IF GRAB BARS ARE MOUNTED ADJACENT TO A WALL, THE SPACE BETWEEN THE WALL AND THE GRAB BARS SHALL BE 1-1/2".

22. BENDING STRESS IN A GRAB BAR OR SEAT INDUCED BY THE MAXIMUM BENDING MOMENT FROM THE APPLICATION OF A 250-LB POINT LOAD SHALL BE LESS THAN THE ALLOWABLE STRESS FOR THE MATERIAL OF THE GRAB BAR OR SEAT.

23. SHEAR STRESS INDUCED IN A GRAB BAR OR SEAT BY THE APPLICATION OF A 250-LB POINT LOAD SHALL BE LESS THAN THE ALLOWABLE SHEAR STRESS FOR THE MATERIAL OF THE GRAB BAR OR SEAT, AND ITS MOUNTING BRACKET OR OTHER SUPPORT IS CONSIDERED TO BE FULLY RESTRAINED, THEN DIRECT AND TORSIONAL SHEAR STRESSES SHALL NOT EXCEED THE ALLOWABLE SHEAR STRESS.

24. SHEAR FORCE INDUCED IN FASTENER OR MOUNTING DEVICES FROM THE APPLICATION OF A 250-LB POINT LOAD, PLUS THE MAXIMUM MOMENT FROM THE APPLICATION OF A 250-LB POINT LOAD, SHALL BE LESS THAN THE ALLOWABLE WITHDRAWAL LOAD BETWEEN THE FASTENED AND SUPPORTING STRUCTURE.

25. TENSILE FORCE INDUCED IN A FASTENER BY A DIRECT TENSION FORCE OF A 250-LB POINT LOAD, PLUS THE MAXIMUM MOMENT FROM THE APPLICATION OF A 250-LB POINT LOAD, SHALL BE LESS THAN THE ALLOWABLE WITHDRAWAL LOAD BETWEEN THE FASTENER AND SUPPORTING STRUCTURE.

26. GRAB BARS SHALL NOT ROTATE WITHIN THEIR FITTINGS.

27. DRINKING FOUNTAIN BUBBLERS SHALL BE ACTIVATED BY A CONTROL THAT IS EASILY OPERATED BY A DISABLED PERSON SUCH AS A HAND-OPERATED LEVER TYPE CONTROL LOCATED WITHIN 6" OF THE FRONT OF THE DRINKING FOUNTAIN. THE BUBBLER OUTLET ORIFICE SHALL BE LOCATED WITHIN 6" OF THE FRONT OF THE DRINKING FOUNTAIN AND AT LEAST ONE OUTLET SHALL BE WITHIN 36" OF THE FLOOR. THE WATER STREAM FROM THE BUBBLER SHALL BE SUFFICIENTLY PARALLEL TO THE FRONT EDGE OF THE DRINKING FOUNTAIN.

TELEPHONE

1. IF PUBLIC TELEPHONES ARE PROVIDED, THEY SHALL BE MADE ACCESSIBLE.

2. A CLEAR FLOOR OR GROUND SPACE AT LEAST 30" BY 48" THAT ALLOWS EITHER A FORWARD OR PARALLEL APPROACH BY A PERSON USING A WHEELCHAIR SHALL BE PROVIDED AT TELEPHONES.

3. BASES, ENCLOSURES AND FIXED SEATS SHALL NOT IMPEDE APPROACHES TO TELEPHONES BY PEOPLE WHO USE WHEELCHAIRS.

4. THE HIGHEST OPERABLE PART OF THE TELEPHONE SHALL BE WITHIN 48" OF THE FLOOR IF FORWARD APPROACHED AND 54" IF SIDE APPROACHED.

5. TELEPHONES MOUNTED DIAGONALLY IN A CORNER THAT REQUIRE WHEELCHAIR USERS TO REACH DIAGONALLY SHALL HAVE THE HIGHEST OPERABLE PART NO HIGHER THAN 54" ABOVE THE FLOOR.

6. THE CORD FROM THE TELEPHONE TO THE HANDSET SHALL BE AT LEAST 29" LONG.

7. TELEPHONES SHALL HAVE PUSH-BUTTON CONTROLS WHERE SERVICE FOR SUCH EQUIPMENT IS AVAILABLE.

8. FOR FORWARD APPROACH TELEPHONES, IF THE ENCLOSURE OVERHANG IS GREATER THAN 12", THE CLEAR WIDTH OF THE ENCLOSURE SHALL BE 30" MINIMUM; IF THE CLEAR WIDTH OF THE ENCLOSURE IS LESS THAN 30", THE HEIGHT OF THE LOWEST OVERHANGING PART SHALL BE EQUAL TO OR GREATER THAN 27".

9. ENTRANCES TO FULL-HEIGHT ENCLOSURES SHALL BE 30" WIDE MINIMUM.

10. TELEPHONES SHALL BE EQUIPPED WITH A RECEIVER THAT GENERATES A MAGNETIC FIELD IN THE AREA OF THE RECEIVER CAP. IF BANKS OF PUBLIC TELEPHONES ARE PROVIDED, AT LEAST ONE IN EACH BANK AND A TOTAL OF AT LEAST 25% OF THE TOTAL NUMBER OF PUBLIC TELEPHONES, INCLUDING CLOSED CIRCUIT TELEPHONES IN A BUILDING OR FACILITY, SHALL BE EQUIPPED WITH VOLUME CONTROL. SUCH TELEPHONES SHALL BE CAPABLE OF A MINIMUM OF 12 DBA AND A MAXIMUM OF 18 DBA ABOVE NORMAL. IF AN AUTOMATIC RESET IS PROVIDED, 18 DBA MAY BE EXCEEDED. PUBLIC TELEPHONES WITH VOLUME CONTROL SHALL BE HEARING AID COMPATIBLE AND SHALL BE IDENTIFIED BY A SIGN CONTAINING A DEPICTION OF A TELEPHONE HANDSET WITH RADIATING SOUND WAVES.

11. IF A TOTAL OF FOUR OR MORE PUBLIC TELEPHONES ARE PROVIDED AT THE INTERIOR AND EXTERIOR OF A SITE, AND IF AT LEAST ONE OF THE TOTAL IS IN AN INTERIOR LOCATION, THEN AT LEAST ON INTERIOR PUBLIC TEXT TELEPHONE SHALL BE PROVIDED.

12. TEXT TELEPHONES SHALL COMPLY WITH THE FOLLOWING: TEXT TELEPHONES USED WITH A PAY TELEPHONE SHALL BE PERMANENTLY AFFIXED WITHIN OR ADJACENT TO THE TELEPHONE ENCLOSURE. IF AN ACOUSTIC COUPLER IS USED, THE TELEPHONE CORD SHALL BE SUFFICIENTLY LONG TO ALLOW CONNECTION OF THE TEXT TELEPHONE AND TELEPHONE RECEIVER.

ACCESSIBLITY NOTES (CONTINUED)

13. PAY TELEPHONES DESIGNED TO ACCOMMODATE A PORTABLE TEXT TELEPHONE SHALL BE EQUIPPED WITH A SHELF AND AN ELECTRICAL OUTLET WITHIN OR ADJACENT TO THE TELEPHONE ENCLOSURE. THE TELEPHONE HANDSET SHALL BE CAPABLE OF ACCOMMODATING A TEXT TELEPHONE AND SHALL HAVE 6" MINIMUM VERTICAL CLEARANCE IN THE AREA WHERE THE TEXT TELEPHONE IS TO BE PLACED.

14. EQUIVALENT FACILITATION MAY BE SUBSTITUTED FOR THE ABOVE REQUIREMENTS AS DESCRIBED IN SECTION 1117B.2.9.2.3.

15. TEXT TELEPHONES SHALL BE IDENTIFIED BY THE INTERNATIONAL TDD SYMBOL (SEE FIGURE 11B-4 IN 1994 U.B.C.). IF A FACILITY HAS A PUBLIC TEXT TELEPHONE, DIRECTIONAL SIGNAGE INDICATING THE LOCATION OF THE NEAREST SUCH TELEPHONE SHALL BE PLACED ADJACENT TO ALL BANKS OF TELEPHONES THAT DO NOT CONTAIN A TEXT TELEPHONE. SUCH DIRECTIONAL SIGNAGE SHALL INCLUDE THE INTERNATIONAL TDD SYMBOL. IF A FACILITY HAS NO BANKS OF TELEPHONES, THE DIRECTIONAL SIGNAGE SHALL BE PROVIDED AT THE ENTRANCE OR IN A BUILDING DIRECTORY.

16. IF TELEPHONE BOOKS ARE PROVIDED, THEY SHALL BE LOCATED WITH IN 48" OF THE FLOOR IF FORWARD APPROACHED AND 54" IF SIDE APPROACHED.

17. THE HIGHEST OPERABLE PART OF ALL CONTROLS, DISPENSERS, RECEPTACLES, AND OTHER OPERABLE EQUIPMENT SHALL BE PLACED WITHIN 48" OF THE FLOOR BUT NOT LOWER THAN 15" IF FORWARD APPROACHED AND WITHIN 54" BUT NOT LOWER THAN 9" IF SIDE APPROACHED.

SIGNS

1. CHARACTERS AND NUMBERS ON SIGNS SHALL BE SIZED ACCORDING TO THE VIEWING DISTANCE FROM WHICH THEY ARE TO BE READ. THE MINIMUM HEIGHT IS MEASURED USING AN UPPER CASE X. LOWER CASE CHARACTERS ARE PERMITTED. FOR SIGNS SUSPENDED OR PROJECTED ABOVE THE FINISH FLOOR IN COMPLIANCE WITH SECTION 11218 IN THE 1999 U.B.C., THE MINIMUM CHARACTER SHALL BE 3".

2. CHARACTERS AND SYMBOLS SHALL CONTRAST WITH THEIR BACKGROUND, EITHER LIGHT CHARACTERS ON A DARK BACKGROUND OR DARK CHARACTERS ON A LIGHT BACKGROUND.

3. WHEN RAISED CHARACTERS OR SYMBOLS ARE USED, THEY SHALL CONFORM TO THE FOLLOWING:

   LETTERS AND NUMBERS ON SIGNS SHALL BE RAISED 1/32" MINIMUM AND SHALL BE SAN-SERIF UPPERCASE CHARACTERS ACCOMPANIED BY GRADE 2 BRAILLE.

   RAISED CHARACTERS OR SYMBOLS SHALL BE A MINIMUM OF 5/8" HIGH.

   PICTORIAL SYMBOL SIGNS (PICTOGRAMS) SHALL BE ACCOMPANIED BY THE EQUIVALENT VERBAL DESCRIPTION PLACED DIRECTLY BELOW THE PICTOGRAM. THE BORDER DIMENSION OF THE PICTOGRAM SHALL BE A MINIMUM OF 6" IN HEIGHT.

4. THE INTERNATIONAL SYMBOL OF ACCESSSIBILITY SHALL CONSIST OF A WHITE FIGURE ON A BLUE BACKGROUND. THE BLUE SHALL BE EQUAL TO COLOR NO. 15090 IN FEDERAL STANDARD 595B.

5. LETTERS AND NUMBERS ON SIGNS SHALL HAVE A WIDTH TO HEIGHT RATIO OF BETWEEN 3:5 AND 1:1 AND A STROKE WIDTH TO HEIGHT RATIO BETWEEN 1:5 AND 1:10.

6. CONTRACTED GRADE 2 BRAILLE SHALL BE USED WHEREVER BRAILLE SYMBOLS ARE REQUIRED. DOTS SHALL BE 1/10" ON CENTERS IN EACH CELL WITH 2/10" SPACE BETWEEN CELLS. DOTS SHALL BE RAISED A MINIMUM OF 1/40" ABOVE THE BACKGROUND.

7. ALL BUILDING ENTRANCES THAT ARE ACCESSIBLE TO AND USABLE BY PERSONS WITH DISABILITIES AND AT EVERY MAJOR JUNCTION ALONG OR LEADING TO AN ACCESSIBLE ROUTE OF TRAVEL SHALL BE IDENTIFIED WITH A SIGN DISPLAYING THE INTERNATIONAL SYMBOL ACCESSIBILITY AND WITH ADDITIONAL DIRECTIONAL SIGNS, AS REQUIRED, TO BE VISIBLE TO PERSONS ALONG APPROACHING PEDESTRIAN WAYS.

8. WHEN PERMANENT IDENTIFICATION IS PROVIDED FOR ROOMS AND SPACES, RAISED LETTERS SHALL BE PROVIDED AND SHALL BE ACCOMPANIED BY BRAILLE IN CONFORMANCE WITH SECTION 11178.5.4. THROUGH 11178.5.6.3 IN THE 1999 U.B.C. SIGNS SHALL BE INSTALLED ON THE WALL ADJACENT TO THE LATCH SIDE OF THE DOOR. WHERE THERE IS NO WALL SPACE ON THE LATCH SIDE, INCLUDING AT DOUBLE LEAF DOORS, SIGNS SHALL BE PLACED ON THE NEAREST ADJACENT WALL, PREFERABLY ON THE RIGHT. MOUNTING HEIGHT SHALL BE 60" ABOVE THE FINISHED FLOOR TO THE CENTERLINE OF THE SIGN. MOUNTING LOCATION SHALL BE DETERMINED SO THAT A PERSON MAY APPROACH WITHIN 3" OF SIGNAGE WITHOUT ENCOUNTERING PROTRUDING OBJECTS OR STANDING WITHIN THE SWING OF A DOOR.

HISTORICAL BLDG. CODE NOTES

CHAPTER 34, DIVISION II, CALIFORNIA BUILDING CODE, 2001

1. REPAIRS TO ANY PORTION OF A QUALIFIED HISTORICAL BUILDING OR PROPERTY MAY BE MADE IN-KIND WITH HISTORIC MATERIALS AND THE USE OF ORIGINAL OR EXISTING HISTORIC METHODS OF CONSTRUCTION, SUBJECT TO CONDITIONS OF THIS CODE. (SEE 8-105.1)

2. IT IS THE INTENT OF THIS CODE TO ALLOW THE USE OF THESE ALTERNATIVES OR ANY OTHER ACCEPTABLE REGULATION OR METHODOLOGY OF DESIGN OR CONSTRUCTION IN WHOLE OR IN PART, WITH THE REGULAR CODE, OR IN ANY COMBINATION OF THE REGULAR CODE AND THIS CODE. THESE REGULATIONS ARE NOT INTENDED TO PRECLUDE THE USE OF ANY PROPOSED ALTERNATIVE OR METHOD OF DESIGN OR CONSTRUCTION NOT SPECIFICALLY PRESCRIBED OR OTHERWISE ALLOWED BY THESE REGULATIONS. ANY OTHER ALTERNATIVE MAY BE SUBMITTED OF EVALUATION TO THE APPROPRIATE ENFORCING AGENCY FOR REVIEW AND ACCEPTANCE. THE ENFORDING AGENCY MAY REQUEST THAT SUFFICIENT EVIDENCE OR PROOF BE SUBMITTED TO SUBSTANTIAL ANY CLAIMS THAT MAY BE MADE REGARDING SUCH ALTERNATIVES. ANY ALTERNATIVE OFFERED IN LIEU OF THAT PRESCRIBED OR ALLOWED IN THIS CODE SHALL BE REASONABLY EQUIVALENT IN QUALITY, STRENGTH, EFFECTIVENESS, DURABILITY AND SAFETY TO THAT OF THIS CODE.

3. EXISTING OR ORIGINAL ROOFING MATERIALS MAY BE REPAIRED OR RECONSTRUCTED SUBJECT TO THE FOLLOWING REQUIREMENTS:
   a. THE ORIGINAL OR HISTORIC ROOFING SYSTEM SHALL BE DETAILED OR MODIFIED AS NECESSARY IN ORDER TO BE CAPABLE OF PROVIDING SHELTER TO THE BUILDING OCCUPANTS AND EXCLUDE DAMPNESS, WHILE PRESERVING THE HISTORIC MATERIALS AND APPEARANCE OF THE ROOF.
   b. WOODEN ROOF MATERIALS MAY BE UTILIZED WHERE FIRE RESISTANCE IS REQUIRED PROVIDED THEY ARE TREATED WITH FIRE-RETARDANT TREATMENTS TO ACHIEVE AN EQUIVALENCE TO A CLASS C FIRE-RESISTIVE RATING, OR AS OTHERWISE PERMITTED ON A CASE-BY CASE BASIS.

4. THE REGULAR CODE FOR ACCESS FOR PERSONS WITH DISABILITIES SHALL BE APPLIED TO QUALIFIED HISTORICAL BUILDINGS OR PROPERTIES UNLESS STRICT COMPLIANCE WITH THE REGULAR CODE WILL THREATEN OR DESTROY THE HISTORICAL SIGNIFICANCE OR CHARACTER-DEFINING FEATURES OF THE BUILDING OR PROPERTY.

5. IF THE HISTORICAL SIGNIFICANCE OR CHARACTER-DEFINING FEATURES ARE THREATENED, ALTERNATIVE PROVISIONS FOR ACCESS MAY BE APPLIED PURSUANT TO THIS CHAPTER PROVIDED THE FOLLOWING CONDITIONS ARE MET:
   a. SUCH ALTERNATIVE PROVISIONS SHALL BE APPLIED ONLY ON AN ITEM-BY-ITEM OR A CASE-BY-CASE BASIS (SEE, SECTION 8-603)
   b. THE ALTERNATIVE PROVISION ARE APPLIED ACCORDING TO THE PRIORITIES OUTLINED IN SCITON 8-603 WHEREBY THE ALTERNATIVE PROVIDING THE GREATEST ACCESSIBILITY IS LISTED FIRST.
   c. DOCUMENTATION IS PROVIDED STATING THE REASONS FOR THE APPLICATION OF THE ALTEERNATIVE PROVISIONS, SUCH DOCUMENTATION SHALL BE MAINTAINED AS A PART OF THE PUBLIC RECORD.

6. ENTRY. THESE ALTERNATIVES DO NOT ALLOW EXCEPTIONS FOR THE REQUIREMENT OF LEVEL LANDINGS IN FRONT OF DOORS, EXCEPT AS PROVIDED IN SECTION 8-603.3. ALTERNATIVES LISTED IN ORDER OF PRIORITY ARE:
   a. ACCESS TO ANY ENTRANCE USED BY THE GENERAL PUBLIC AND NO FURTHER THAN 200 FEET(60,960mm) FROM THE PRIMARY ENTRANCE.
   b. ACCESS AT ANY ENTRANCE NOT USED BY THE GENERAL PUBLIC BUT OPEN AND UNLOCKED WITH DIRECTIONAL SIGNS AT THE PRIMARY ENTRANCE AND AS CLOSE AS POSSIBLE TO, BUT NO FURTHER THAN200 FEET (60,960mm)FROM, THE PRIMARY ENTRANCE.

7. DOORS. ALTERNATIVES LISTED IN ORDER OF PRIORITY ARE:
   a. SINGLE-LEAF DOOR WHICH PROVIDES A MINIMUM 30 INCHES (762mm) OF CLEAR OPENING.
   b. SINGLE-LEAF DOOR WHICH PROVIDES A MINIMUM 29½ INCHES (749mm) CLEAR OPENING.
   c. DOUBLE DOOR, ONE LEAF OF WHICH PROVIDES A MINIMUM 29½ INCHES (749mm) CLEAR OPENING.
   d. DOUBLE DOOR OPERABLE WITH A POWER-ASSIST DEVICE TO PROVIDE A MINIMUM 29½ INCHES (749mm) CLEAR OPENING WHEN BOTH DOORS ARE IN THE OPEN POSITION.

8. POWER-ASSISTED DOORS. A POWER-ASSISTED DOOR OR DOORS MAY BE CONSIDERED AN EQUIVALENT ALTERNATIVE TO LEVEL LANDINGS, STRIKESIDE CLEARANCE AND DOOR-OPENING FORCES REQUIRED BY THE REGULAR CODE.

9. TOILET ROOM. IN LEIU OF SEPARATE-GENDER TOILET FACILITIES AS REQUIRED IN THE REGULAR CODE, AN ACCESSIBLE UNISEX TOILET FACILITY MAY BE DESIGNATED.

10. EXTERIOR AND INTERIOR RAMPS AND LIFTS. ALTERNATIVES LISTED IN ORDER OR PRIORITY ARE:
    a. A LIFT OR A RAMP OF GREATER THAN STANDARD SLOPE BUT NO GREATER THAN 1:10, FOR HORIZONTAL DISTANCES NOT TO EXCEED 12 FEET (3,658mm). SIGNS SHALL BE POSTED AT UPPER AND LOWER LEVELS TO INDICATE STEEPNESS OF THE SLOPE.
    b. ACCESS BY RAMPS OF 1:6 SLOPE FOR HORIZONTAL DISTANCE NOT TO EXCEED 13 INCHES (330mm). SIGNS SHALL BE POSTED AT UPPER AND LOWER LEVELS TO INDICATE STEEPNESS OF THE SLOPE.
    c. ACCESS PROVIDED BY EXPERIENCES, SERVICES, FUNCTIONS, MATERIALS AND RESOURCES THROUGH METHODS, INCLUDING, BUT NOT LIMITED TO, MAPS, PLANS, VIDEOS, VIRTUAL REALITY, AND RELATED EQUIPMENT, AT ACCESSIBLE LEVELS. THIS ALTERNATIVE SHALL BE DOCUMENTED AS REQUIRED IN SECTION 8-605

11. EQUIVALENT FACILITATION. USE OF OTHER DESIGNS AND TECHNOLIGIES, OR DEVIATION FROM PARTICULAR TECHNICAL AND SCOPING REQUIREMENTS, ARE PERMITTED IF THE APPLICATION OF THE ALTERNATIVE PROVISIONS CONTAINED IN SECTION 8-603 WOULD THREATEN OR DESTROY THE HISTORICAL SIGNIFICANCE OR CHARACTER-DEFINING FEATURES OF THE BUILDING OR SITE OR CAUSE UNREASONABLE HARDSHIP. ALTERNATIVES TO SECTION 8-604 ARE PERMITTED ONLY WHERE THE FOLLOWING CONDITIONS ARE MET:
    a. SUCH ALTERNATIVES SHALL BE APPLIED ONLY ON AN ITEM-BY-ITEM OR A CASE-BY-CASE BASIS.
    b. THE ALTERNATIVE DESIGN AND/OR TECHNOLOGIES USED WILL PROVIDE SUBSTANTIALLY EQUIVALENT OR GREATER ACCESSIBILITY TO, AND USABILITY OF, THE FACILITY.
    c. THE OFFICAL CHARGED WITH THE ENFORCEMENT OF THE STANDARDS SHALL DOCUMENT THE REASONS FOR THE APPLICATION OF THE ALTERNATIVE DESIGN AND/OR TECHNOLOGIES AND THEIR EFFECT ON THE HISTORICAL SIGNIFICANCE OR CHARACTER-DEFINING FEATURES. SUCH DOCUMENTATION SHALL BE IN ACCORDANCE WITH SECTION 8-602.2, ITEM 3, AND SHALL INCLUDE THE OPINIONS AND COMMENTS OF STATE OR LOCAL ACCESSIBILITY OFFICIALS AND THE OPINIONS AND COMMENTS OF REPRESENTATIVE LOCAL GROUPS OF PEOPLE WITH DISABILITIES. SUCH DOCUMENTATION SHALL BE RECORDED AND ENTERED INTO THE PERMANENT FILE OF THE ENFORCING AGENCY.

HISTORICAL BLDG. CODE NOTES (CONTINUED)

12. EXCEPTIONS. IF THE HISTORICAL SIGNIFICANCE OR CHARACTER-DEFINING FEATURES WOULD BE THREATENED OR DESTROYED BY THE APPLICATION OF ALTERNATIVE ACCESS STANDARDS AS PROVIDED BY THIS CHAPTER, AND NO EQUIVALENT FACILITATION AS PROVIDED IN SECTION 8-604 IS FEASIBLE, AND EXCEPTION FROM THE LITERAL REQUIREMENTS FOR FULL AND EQUAL ACCESS OR ANY ALTERNATIVE PROVISIONS MAY BE PROVIDED ONLY IF THE FOLLOWING CONDITIONS ARE MET:
    a. SUCH EXCEPTION IS CONSIDERED ONLY ON AN ITEM-BY-ITEM OR A CASE-BY-CASE BASIS.
    b. INTERPRETIVE EXHIBITS AND/OR EQUAL SERVICES OF THE EXEMPTED SIGNIFICANT HISTORICAL ASPECTS ARE PROVIDED FOR THE PUBLIC IN A LOCATION FULLY ACCESSIBLE TO AND USABLE BY PERSONS WITH DISABILITIES, INCLUDING PERSONS WITH HEARING AND SIGHT IMPAIRMENT.
    c. SERVICES ARE PROVIDED IN AN ACCESSIBLE LOCATION EQUAL TO THOSE PROVIDED IN THE EXCEPTED LOCATION.
    d. THE OFFICAL CHARGED WITH ENFORCEMENT OF THE STANDARDS SHALL DOCUMENT THE REASONS FOR THE APPLICATION OF THE ALTERNATIVE DESIGN AND/OR TECHNOLOGIES AND THEIR EFFECT ON THE HISTORICAL SIGNIFICANCE OR CHARACTER-DEFINING FEATURES. SUCH DOCUMENTATION SHALL BE IN ACCORDANCE WITH SECTION 8-602.2, ITEM 3, AND SHALL INCLUDE THE OPINIONS AND COMMENTS OF STATE OR LOCAL ACCESSIBILITY OFFICALS, AND THE OPINIONS AND COMMENTS OF REPRESENTATIVE LOCAL GROUPS OF PEOPLE WITH DISABILITIES. SUCH DOCUMENTATION SHALL BE RECORDED AND ENTERED INTO THE PERMANENT FILE OF THE ENFORCING AGENCY.

13. WHERE NONSTRUCTURAL HISTORIC MATERIALS EXIST IN USES WHICH DO NOT MEET THE REQUIREMENTS OF THE REGULAR CODE, THEIR CONTINUED USE IS ALLOWED BY THIS CODE, PROVIDED THAT ANY PUBLIC HEALTH AND LIFE-SAFETY HAZARDS ARE MITIGATED SUBJECT TO THE CONCURRENCE OF THE ENFORCING AGENCY.

14. EXISTING SOLID MASONRY WALLS OF ANY TYPE, EXCEPT ADOBE, MAY BE ALLOWED, WITHOUT TESTING, A MAXIMUM VALUE OF 3 POUNDS PER SQUARE INCH (20.7kPa) IN SHEAR WHERE THERE IS A QUALIFYING STATEMENT BY THE ARCHITECT OR ENGINEER THAT AN INSPECTION HAS BEEN MADE, THAT MORTAR JOINTS ARE FILLED AND THAT BOTH BRICK AND MORTAR ARE REASONABLY GOOD. THE ALLOWABLE SHEAR STRESS ABOVE APPLIES TO UNREINFORCED MASONRY, EXCEPT ADOBE, WHERE THE MAXIMUM RATIO OF UNSUPPORTED HEIGH OR LENGTH TO THICKNESS DOES NOT EXCEED 12, AND WHERE MINIMUM QUALITY MORTAR IS USED OR EXISTS. WALL HEIGHT OR LENGTH IS MEASURED TO SUPPORTING OR RESISTING ELEMENTS THAT ARE AT LEAST TWICE AS STIFF AS THE TRIBUTARY WALL. STIFFNESS IS BASED ON THE GROSS SECTION. ALLOWABLE SHEAR STRESS MAY BE INCREASED BY THE ADDITION OF 10 PRECENT OF THE AXIAL DIRECT STRESS DUE TO THE WEIGHT OF THE WALL DIRECTLY ABOVE. HIGHER QUALITY MORTAR MAY PROVIDE A GREATER SHEAR VALUE AND SHALL BE TESTED IN ACCORDANCE WITH UBC STANDARD 21-6 AS REFERENCED IN THE 1997 UBC.

15. RECONSTRUCTED WALLS. TOTALLY RECONSTRUCTED WALLS UTILIZING ORIGINAL BRICK OR MASONRY, CONSTRUCTED SIMILAR TO ORIGINAL, SHALL BE CONSTRUCTED IN ACCORDANCE WITH THE REGULAR CODE. REPAIRS OR INFILLS MAY BE CONSTRUCTED IN A SIMILAR MANNER TO THE ORIGINAL WALLS WITHOUT CONFORMING TO THE REGULAR CODE.

HAZARDOUS MATERIALS

1. ASBESTOS CONTAINING MATERIALS ARE PRESENT IN THIS BUILDING AND WILL BE ENCOUNTERED DURING THE EARTHQUAKE REPAIRS. REFER TO THE HAZARDOUS MATERIALS SURVEY REPORT FOR THE IDENTIFICATION OF THE LOCATIONS OF ASBESTOS CONTAINING MATERIALS. ALSO REFER TO THE CONSTRUCTION DRAWINGS AND SPECIFICATION SECTION 02082 - "ASBESTOS REMOVAL" FOR FURTHER INFORMATION AND PROCEDURAL REQUIREMENTS.

2. LEAD-BASED MATERIALS ARE PRESENT IN THIS BUILDING AND WILL BE ENCOUNTERED DURING THE EARTHQUAKE REPAIRS. REFER TO THE HAZARDOUS MATERIALS SURVEY REPORT FOR THE IDENTIFICATION OF THE LOCATIONS OF LEAD-BASED MATERIALS. ALSO REFER TO THE CONSTRUCTION DRAWINGS AND SPECIFICATION SECTION 02083 - "LEAD-BASED PAINT REMOVAL" FOR FURTHER INFORMATION AND PROCEDURAL REQUIREMENTS.

STORM WATER PROVISIONS

1. ERODED SEDIMENTS AND OTHER POLLUTANTS MUST BE RETAINED ON SITE AND MAY NOT BE TRANSPORTED FROM THE SITE VIA SHEETFLOW, SWALES, AREA DRAINS, NATURAL DRAINAGE COURSES OR WIND.

2. STOCKPILES OF EARTH AND OTHER CONSTRUCTION RELATED MATERIALS MUST BE PROTECTED FROM BEING TRANSPORTED FROM THE SITE BY THE FORCES OF WIND OR WATER.

3. FUELS, OILS, SOLVENTS AND OTHER TOXIC MATERIALS MUST BE STORED IN ACCORDANCE WITH THEIR LISTING AND ARE NOT TO CONTAMINATE THE SOIL AND SURFACE WATERS. ALL APPROVED STORAGE CONTAINERS ARE TO BE PROTECTED FROM THE WEATHER. SPILLS MUST BE CLEANED UP IMMEDIATELY AND DISPOSED OF IN A PROPER MANNER. SPILLS MAY NOT BE WASHED INTO THE DRAINAGE SYSTEM.

4. NON-STORM WATER RUNOFF FROM EQUIPMENT AND VEHICLE WASHING AND ANY OTHER ACTIVITY SHALL BE CONTAINED AT THE PROJECT SITE.

5. EXCESS OR WASTE CONCRETE MAY NOT BE WASHED INTO THE PUBLIC WAY OR ANY OTHER DRAINAGE SYSTEM. PROVISIONS SHALL BE MADE TO RETAIN CONCRETE WASTES ON SITE UNTIL THEY CAN BE DISPOSED OF AS SOLID WASTE.

6. TRASH AND CONSTRUCTION RELATED SOLID WASTES MUST BE DEPOSITED INTO A COVERED RECEPTACLE TO PREVENT CONTAMINATION OF RAINWATER AND DISPERSAL BY WIND.

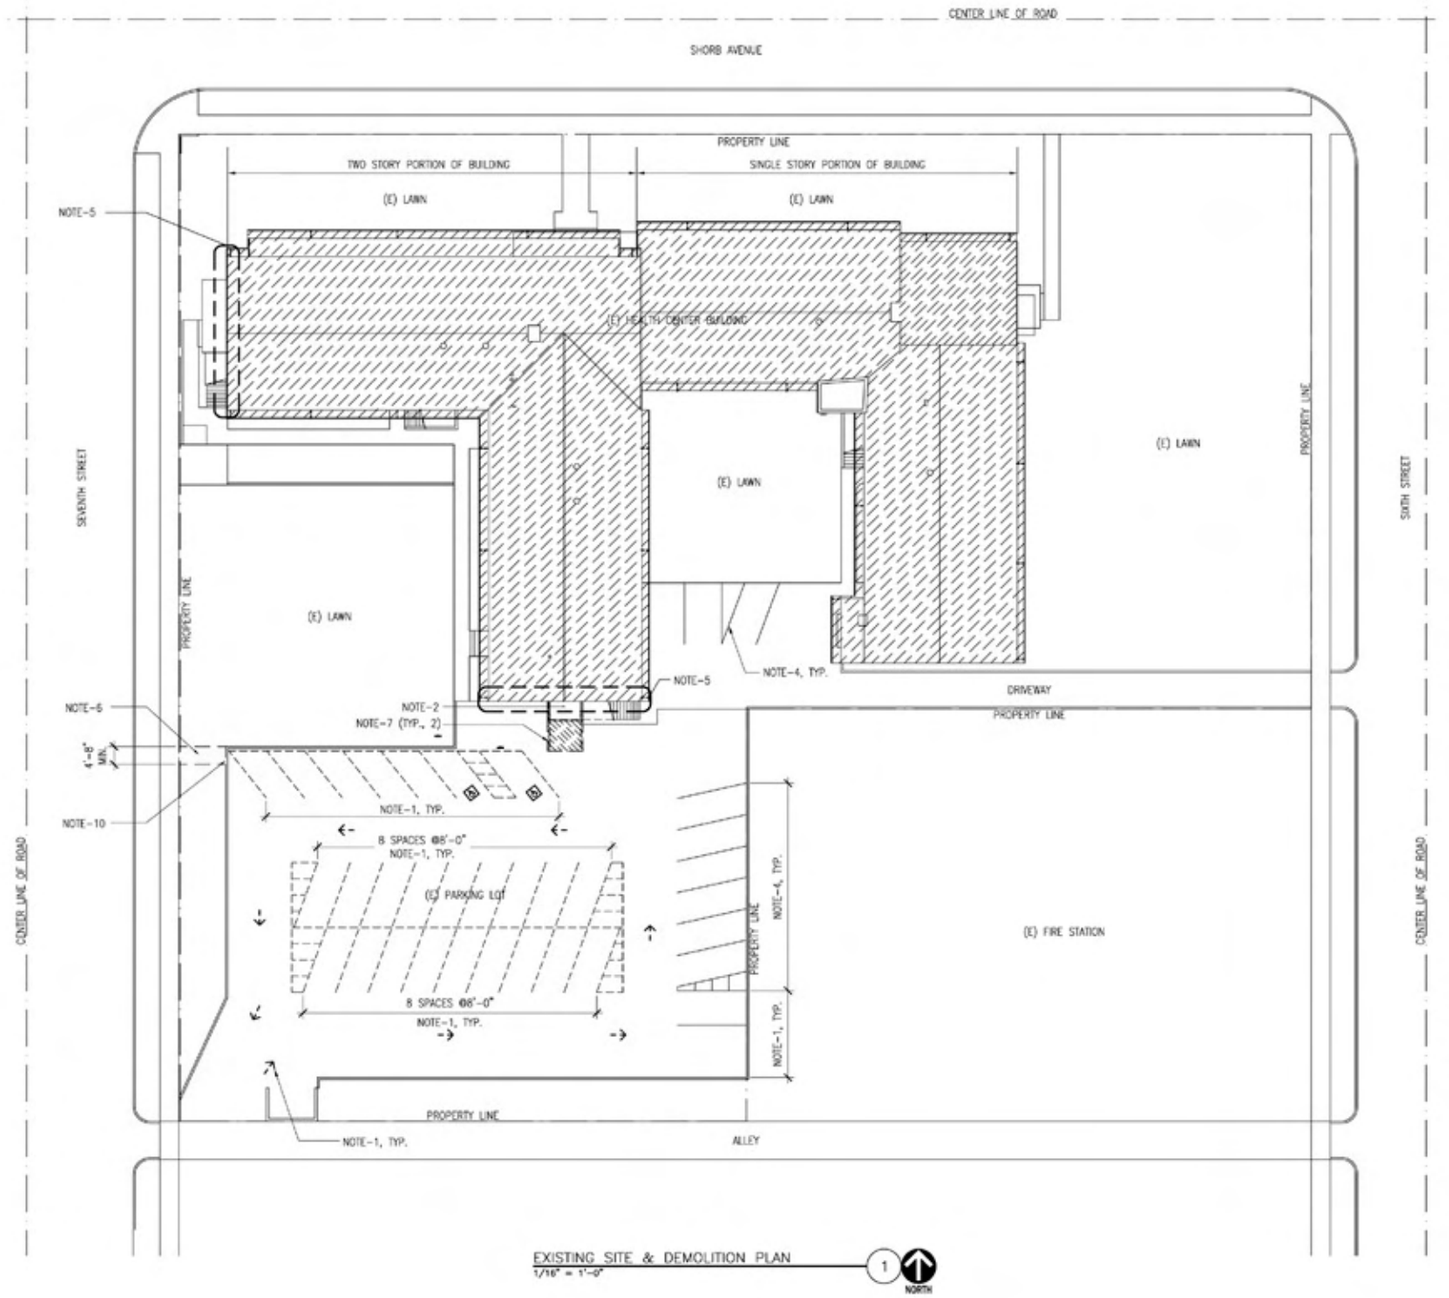
7. SEDIMENTS AND OTHER MATERIALS MAY NOT BE TRACKED FROM THE SITE BY VEHICLE TRAFFIC. THE CONSTRUCTION ENTRANCE ROADWAYS MUST BE STABILIZED SO AS TO INHIBIT SEDIMENTS FROM BEING DEPOSITED INTO THE PUBLIC WAY. ACCIDENTAL DEPOSITIONS MUST BE SWEPT UP IMMEDIATELY AND MAY NOT BE WASHED DOWN BY RAIN OR OTHER MEANS.

8. ANY SLOPES WITH DISTURBED SOILS OR DENUDED OF VEGETATION MUST BE STABILIZED SO AS TO INHIBIT EROSION BY WIND AND WATER.

HISTORIC RESOURCE EVALUATION

SUMMARY REVIEW: THE FOLLOWING TABLE LISTS FEATURES THAT ARE "IMPACTED" BY WORK THAT IS SHOWN ON THE CONSTRUCTION DRAWINGS, CLASSIFIES THOSE FEATURES AS CHARACTER-DEFINING OR NOT, AND EVALUATES WHETHER THERE IS A NEGATIVE IMPACT ON EACH FEATURE. IF AN IMPACTED FEATURE IS NOT CHARACTER-DEFINING, THEN THERE IS BY DEFINITION NO IMPACT WITH RESPECT TO HISTORIC FABRIC AND VISUAL CHARACTER. THE INDIVIDUAL IMPACTS ON HISTORIC FABRIC AND VISUAL CHARACTER ARE NOT SUBSTANTIAL, AND THE ACCUMULATION OF IMPACTS ON THE BUILDING AND SITE ARE NOT SUBSTANTIAL. THE BUILDING BENEFITS SUBSTANTIALLY BY THE APPROPRIATE ADDITION OF STRUCTURAL FEATURES THAT RESIST SEISMIC FORCES, THEREBY DECREASING THE RISK OF DAMAGE TO THE HISTORIC RESOURCE IN THE EVENT OF AN EARTHQUAKE. THEREFORE, THE PROPOSED WORK CONFORMS TO THE SECRETARY OF THE INTERIOR'S STANDARDS FOR REHABILITATION IN THE OPINION OF THE PROJECT CONSULTANTS.

Item No.	Work Item	Comments	Feature Impacted	Character-Defining	Evaluation
1	Remove existing parking striping in south parking lot	All areas where striping is removed will be slurry sealed to match adjacent asphalt	Parking lot/asphalt	No	No impact
2	Provide new parking striping in south parking lot and install detectable warning surface between parking lot and walkway	New striping will match existing colors. Accessible parking spaces and path of travel shall be blue. Detectable warning surface will be installed in asphalt surface	Parking lot/asphalt	No	No impact
3	Provide directional signage at various locations to accessible entrances	Required by state and federal accessibility laws	Public sidewalk/ parking areas	No	No impact
4	Remove small area of existing turf and concrete curb on west side and provide concrete infill to match adjacent sidewalk	Provides accessible path of travel	Lawn/concrete curb	No	No impact
5	Remove and re-install existing roof tiles to allow new construction	Tiles are being removed to allow seismic upgrades including installation of new plywood sheathing on the roof for seismic strengthening. The roof tiles to be removed are historically significant and care will be taken in their removal per notes on the drawings. If tiles are accidentally broken, they will be replaced in kind at the approval of the architect.	Roof tiles	Yes	Removing the roof tiles and re-installing them so they will remain in no substantial loss to historic fabric or visual character
6	Repair earthquake damage on south and west gable walls	Wall cracks are to be repaired by grout injection, wood shear panels, ceiling, grout is color & texture-matched to existing	South and west gable walls	Yes	These repairs will benefit the resource by strengthening the wall, and improve the visual character of the building
7	Repair stucco damage on south and west elevations	Crews were taken to determine the construction and strength of the original wall. Bricks adjacent to the cross beds will be removed to access and repair the cross. Bricks will be replaced in kind at the approval of the architect.	South and west elevations	Yes	These repairs will benefit the resource by restoring the visual character of the brick wall
8	Repair brick push-pull test damage on all elevations	Areas of previous repair at push-pull test locations will be re-pointed to match existing stucco	All elevations	Yes	These repairs will benefit the resource by restoring the visual character of the brick walls
9	Remove existing concrete entrance ramp and adjacent metal railing	Replace with new handrail and concrete ramp that meets state and federal accessibility laws	Concrete ramp	No	This is an appropriate and compatible, relatively small, and reversible addition at the rear of the building
10	Install surface mounted push plate and door operating system. Provide new automatic hardware for doors at building entrance	System will be mounted to historically significant wood post near of building entrance. Hardware will convert manual swing doors to power operation with electric strike and remote control operation, meeting both accessibility and security requirements	Existing wood post/ Entrance doors	Yes	Instrumental impact to visual character. The addition of automated door hardware will enable the operation of the historically significant doors while providing an accessible entrance.
11	Remove and re-install existing pair of doors at building entrance.	Doors are being removed to abate lead based paint. The doors are historically significant and will be reinstalled. Abatement will use methods described in specifications for historic elements.	Entrance doors	Yes



EXISTING SITE & DEMOLITION PLAN

KEYNOTES

NOTE-1 REMOVE (E) PARKING STRIPING AND DIRECTIONAL ARROWS.

NOTE-2 (E) BRICK LANDING TO REMAIN. BRICK IS OF HISTORICAL SIGNIFICANCE.

NOTE-3 DO NOT DISTURB (E) WOOD POSTS (ON (E) BRICK LANDING) SUPPORTING LANDING ABOVE.

NOTE-4 (E) STRIPING TO REMAIN.

NOTE-5 SEE STRUCTURAL DRAWINGS FOR EARTHQUAKE DAMAGE REPAIR. (1,2 / S3-2)

NOTE-6 REMOVE (E) TURF AS REQUIRED TO PROVIDE ACCESSIBLE PATH OF TRAVEL.

NOTE-7 (E) METAL RAILING BETWEEN (E) BRICK WALL AND (E) WOOD POSTS TO REMAIN. REMOVE (E) METAL RAILING ATTACHED TO (E) CONCRETE RAMP.

NOTE-8 NOT USED.

NOTE-9 NOT USED.

NOTE-10 SAW-CUT AND REMOVE (E) PORTION OF CURB AS REQUIRED TO ALLOW FOR ACCESSIBLE PATH OF TRAVEL.

LEGEND

(E) ROOF TILE IS OF HISTORIC SIGNIFICANCE AND SHALL BE REMOVED W/OUT BREAKAGE. IN THE EVENT BREAKAGE OCCURS, CONTRACTOR SHALL REPLICATE EACH BROKEN TILE IN SHAPE, SIZE, COMPOSITION AND FINISH. ARCHITECT SHALL REVIEW SAMPLES FOR EXACT MATCH. REINSTALL. SEE (1 / A1.2) AND STRUCTURAL DRAWINGS FOR FURTHER INFORMATION.

REFER TO SPECIFICATION SECTION 01351 "SPECIAL PROCEDURES FOR HISTORIC TREATMENT".

PROPERTY LINE

CENTER LINE OF ROAD

REMOVE (E) CONCRETE RAMP.

GENERAL NOTES

1. REFER TO STRUCTURAL DRAWINGS FOR ADDITIONAL INFORMATION.
2. THE SCOPE OF THE PROJECT INCLUDES THE COMPLETE REMOVAL AND REPLACEMENT OF THE EXISTING ROOF TILE AND ASBESTOS CONTAINING COMPOSITION ROOFING MATERIAL, AND A PORTION OF THE EXISTING ROOF SHEATHING. THE CONTRACTOR SHALL BE RESPONSIBLE FOR MAKING THE BUILDING WATERTIGHT AT ALL TIME. ANY DAMAGE TO ANY PORTION OF THE BUILDING CAUSED BY THE CONTRACTOR'S FAILURE TO MAKE THE BUILDING WATERTIGHT, SHALL BE THE CONTRACTOR'S RESPONSIBILITY TO REPAIR OR REPLACE. THIS INCLUDES BUT IS NOT LIMITED TO: WALLS, FLOORING, CEILING, STRUCTURAL MEMBERS AND CONNECTIONS, WINDOWS, DOORS, ELECTRICAL AND MECHANICAL SYSTEMS, LIGHTING FIXTURES, CASEWORK AND BUILDING FINISHES, EQUIPMENT, ANY MOLD REMOVAL AND DAMAGE TO ANY ITEMS IN THE BUILDING.

SHEET 16 OF 26

SEISMIC RETROFIT OF UNREINFORCED MASONRY

1. BUILDING SHALL NOT BE OCCUPIED DURING THE RETROFIT WORK.
2. ALL CONSTRUCTION IS EXISTING (DENOTED "E" ON DRAWINGS) UNLESS NOTED AS NEW (DENOTED "N" ON DRAWINGS).
3. IN-PLACE SHEAR TESTS ON BRICK MASONRY WERE PERFORMED TO DETERMINE THE ALLOWABLE SHEAR STRESSES. THE IN-PLANE SHEAR TESTS WERE PERFORMED BY SMITH-EMERY COMPANY. THE TEST RESULTS ARE SHOWN ON S1-2 & S1-3.
4. SHEAR BOLTS, TENSION BOLTS, AND COMBINATION BOLTS TO BE EMBEDDED IN EXISTING URM WALLS SHALL CONFORM TO THE FOLLOWING:
   (A) DRILLING SHALL BE DONE WITH AN ELECTRICAL ROTARY DRILL.
   (B) DRILLED HOLES SHALL BE CLEANED WITH A NYLON BRUSH AND COMPRESSED AIR.
   (C) HIT HY-20 ADHESIVE IS INJECTED INTO A GALVANIZED SCREEN TUBE WHICH IS THEN DEPOSITED INTO THE PREDRILLED HOLE.
5. TEST REQUIREMENTS:
   (A) TENSION BOLTS –
      1) FIVE PERCENT OF ANCHORS MUST BE TESTED, WITH A MINIMUM OF TWO TEST REQUIRED. TEST MUST SHOW BOLTS CAN MAINTAIN A TENSILE LOAD OF 3,000 POUNDS FOR 5 MINUTES.
      2) TWENTY PERCENT OF INSTALLED ANCHORS MUST BE TESTED BY A SPECIAL INSPECTOR USING A TORQUE-CALIBRATED WRENCH TO A MINIMUM TORQUE OF 60 FOOT-POUNDS.
   (B) SHEAR BOLTS –
      TWENTY FIVE PERCENT OF ANCHORS MUST BE TESTED BY A SPECIAL INSPECTOR USING A TORQUE-CALIBRATED WRENCH TO A MINIMUM TORQUE OF 60 FOOT-POUNDS.
6. IMPACT TYPE TOOLS SHALL NOT BY USED ON ANY EXISTING MASONRY WALLS INCLUDING REMOVAL OF BRICK.
7. ANY DAMAGED OR CRACKED UNREINFORCED MASONRY WALLS OR CONCEALED STRUCTURAL DAMAGE DISCOVERED DURING CONSTRUCTION SHALL BE BROUGHT TO THE ENGINEERS ATTENTION.
8. ALL MASONRY WALLS HAVING DETERIORATED MORTAR JOINTS SHALL BE PROPERLY POINTED SUCH WORK SHALL BY DONE UNDER CONTINUOUS INSPECTION OF A REGISTERED DEPUTY INSPECTOR WHO MUST FILE A WRITTEN REPORT FOR APPROVAL WITH THE DEPARTMENT.
9. REPOINTING IS REQUIRED ON ALL JOINTS AS INDICATED ON THE DRAWINGS. REPOINTING WORK SHALL BE MADE UNDER THE CONTINUOUS INSPECTION BY A DEPUTY INSPECTOR. THE FOLLOWING GUIDELINES ARE TO BE FOLLOWED WHILE PERFORMING THE WORK.

(A) MORTARS FOR REPOINTING SHOULD BE SOFTER IN COMPRESSIVE STRENGTH THAN THE MASONRY UNITS AND NO HARDER THAN THE HISTORIC MORTAR. THIS IS NECESSARY TO PREVENT DAMAGE TO THE MASONRY UNITS. STRESSES WITHIN A WALL CAUSED BY EXPANSION, CONTRACTION, AND OTHER CAUSES MUST BE RELIEVED BY THE SOFTER MORTAR GIVE RATHER THAN MASONRY UNITS.

(B) JOINT PREPARATION: OLD MORTAR SHALL BE REMOVED BY HAND TO 1¼" DEPTH OR TO THE END OF ANY LOOSE OR DISINTEGRATED MORTAR. ON WALLS WITH LARGE STEPPING JOINT CRACKS CAUSED BY EARTHQUAKE DAMAGE, A CARBIDE POWER SAW (GRINDER) MAY BE USED ONLY IF DEMONSTRATED ADEQUATELY TO THE ENGINEER AND THE INSPECTOR THAT NO FINAL PREPARATION OF THE JOINT SHALL BE FINISHED BY HAND. BEFORE PLACING MORTAR, JOINTS SHALL BE RINSED WITH A WATER JET TO REMOVE ALL LOOSE PARTICLES AND DUST. AT THE TIME OF FILLING, THE JOINTS SHALL BE DAMP BUT WITH NO STANDING WATER PRESENT..

(C) MORTAR PREPARATION: MORTAR SHALL BE CAREFULLY DRY MIXED BY VOLUME BEFORE THE ADDITION OF WATER. HALF THE WATER SHOULD BE ADDED, FOLLOWED BY MIXING FOR APPROXIMATELY 5 MINUTES. THEN THE REMAINING WATER ADDED IN INCREMENTS UNTIL THE DESIRED CONSISTENCY IS REACHED. MORTAR SHALL BE USED WITH 40 MINUTES OF FINAL MIXING, AND NOT BE RETEMPERED.

(D) FILLING THE JOINTS THE DEEPER JOINTS SHALL BY FILLED FIRST, COMPACTING THE NEW MORTAR IN SEVERAL ½" LAYERS. IT IS IMPORTANT TO ALLOW EACH LAYER IS APPLIED AS THIS WILL MINIMIZE SHRINKAGE. THE JOINT SHALL BE TOOLED TO MARCH THE EXISTING AFTER THE FINAL LAYER REMOVE EXCESS MORTAR TO CLEAN WITH A BRISTLE BRUSH AFTER MORTAR IS DRIED BUT PRIOR TO HARDENING (1 TO 2 HOURS).

(E) CLEANING: CAREFUL JOINT FILLING WILL MINIMIZE THE NEED FOR CLEANING. THE MORTAR SHALL BE FULLY HARDENED BEFORE CLEANING (30 DAYS IS USUALLY SUFFICIENT). CLEAN MORTAR ONLY USING WATER AND A STIFF NATURAL BRISTLE BRUSH. ANY CLEANING OTHER THAN WATER SHALL HAVE PRIOR APPROVAL FROM THE ENGINEER.

STRUCTURAL STEEL

1. STRUCTURAL STEEL SHALL BE DETAILED, FABRICATED AND ERECTED BY AN APPROVED AND LICENSED FABRICATOR IN ACCORDANCE WITH THE AISC SPECIFICATION FOR THE DESIGN, FABRICATION AND ERECTION OF STRUCTURAL STEEL FOR BUILDINGS (LATEST EDITION), AND WITH CHAPTER 22 OF THE CODE.
2. ALL STRUCTURAL STEEL SHALL CONFORM TO THE ASTM DESIGNATION AS INDICATED BELOW (UNO):

CONNECTION PLATES, ANGLES, CHANNELS, AND MISC.	A-36
BOLTS	A-325 U.N.O.
THREADED RODS IN MASONRY	A-36

3. BOLT HOLES USED IN STEEL SHALL BE 1/16" LARGER IN DIAMETER THAN NOMINAL SIZE OF BOLT USED, EXCEPT AS NOTED.
4. ALL STRUCTURAL STEEL SURFACES THAT ARE ENCASED IN CONCRETE, SPRAY ON FIREPROOFING, OR ARE ENCASED BY BUILDING FINISH, SHALL BE LEFT UNPAINTED.
5. ALL WELDING IS TO BE DONE BY CERTIFIED WELDERS USING E70XX ELECTRODES (UNO). ALL WELDS SHALL BE IN CONFORMITY WITH THE PROJECT SPECIFICATIONS AND THE CODE FOR WELDING IN BUILDING CONSTRUCTION (AWS D1.1 LATEST REVISION) OF THE AMERICAN WELDING SOCIETY. SEE SPECIAL INSPECTIONS SECTION FOR WELDING INSPECTION REQUIREMENTS.
6. WELD LENGTHS CALLED FOR ON PLANS ARE THE NET EFFECTIVE LENGTH REQUIRED. WHERE FILLET WELD SYMBOL IS GIVEN WITHOUT INDICATION OF SIZE, USE MINIMUM SIZE WELDS AS SPECIFIED IN AISC MANUAL OF STEEL CONSTRUCTION 9TH EDITION, SECTION 1.17.2.
7. ALL EXPOSED STRUCTURAL STEEL AND MISCELLANEOUS METAL SHALL BE HOT DIP GALVANIZED AFTER FABRICATION.

HOLDOWNS

1. ALL HOLDOWNS SHALL BE SIMPSON TYPE. ANY SUBSTITUTION SHALL BE SUBMITTED TO THE ENGINEER FOR REVIEW.
2. STUD BOLTS ATTACHING HOLDOWNS TO WOOD MEMBERS SHALL BE NO CLOSER THAN 7x BOLT DIAMETER FROM END OF MEMBER.
3. PROVIDE ALL WASHERS REQUIRED BY MANUFACTURER TO ATTAIN FULL DESIGN VALUES.

SPECIAL INSPECTIONS

THE FOLLOWING ELEMENTS OF CONSTRUCTION SHALL BE INSPECTED BY A REGISTERED SPECIAL INSPECTOR PRIOR TO COVERING OF WORK:

1. ADHESIVE ANCHORS IN EXISTING MASONRY.
2. REINFORCING STEEL WELDING.
3. HOLDOWNS

TESTING

ALL MATERIALS INSTALLED WILL BE SUBJECT TO TESTING. SUCH TESTS WILL BE PERFORMED AT THE OWNERS EXPENSE. THE CONTRACTOR SHALL FACILITATE FOR THE EXECUTION OF SUCH TESTS IF DEEMED REQUIRED. ANY DIFFICIENCES FOUND SHALL BE REPAIRED OR REPLACED AT NO COST TO THE OWNER. THESE TESTS MAY INCLUDE BUT NOT LIMITED TO PULL-OUT TESTS FOR ANCHOR BOLTS.

STRUCTURAL OBSERVATION

1. A PRE-CONSTRUCTION MEETING INCLUDING THE STRUCTURAL ENGINEER, THE CONTRACTOR, AND AN APPROPRIATE SUBCONTRACTOR SHALL BE HELD TO REVIEW THE DETAILS OF THE STRUCTURAL SYSTEM TO BE STRUCTURALLY OBSERVED.
2. DURING THE COURSE OF CONSTRUCTION, THE STRUCTURAL ENGINEER SHALL VISUALLY REVIEW THE STRUCTURAL SYSTEM FOR GENERAL CONFORMANCE WITH THE APPROVED PLANS. ANY OBSERVED DEFICIENCES SHALL BE REPORTED IN WRITING TO THE OWNER'S REPRESENTATIVE AND TO THE CONTRACTOR.

GENERAL

1. ALL WORK SHALL CONFORM TO THE MINIMUM STANDARDS OF THE FOLLOWING CODES: COUNTY OF LOS ANGELES, 1999 BUILDING CODE, CHAPTER 96, AND ANY OTHER REGULATING AGENCIES WHICH HAVE AUTHORITY OVER ANY PORTION OF THE WORK, INCLUDING THE STATE OF CALIFORNIA DIVISION OF INDUSTRIAL SAFETY, AND THOSE CODES & STANDARDS LISTED IN THESE NOTES.
2. THE CONTRACTOR SHALL VERIFY ALL DIMENSIONS & EXISTING CONDITIONS PRIOR TO STARTING CONSTRUCTION. THE ENGINEER SHALL BE NOTIFIED OF ANY DISCREPANCIES OR INCONSISTENCIES. ANY WORK PERFORMED IN CONFLICT WITH THE CONTRACT DOCUMENTS OR ANY CODE REQUIREMENTS SHALL BE CORRECTED BY THE CONTRACTOR AT THEIR OWN EXPENSE AND AT NO EXPENSE TO THE OWNER.
3. THE REMOVAL, CUTTING DRILLING ETC. OF EXISTING WORK SHALL BE PERFORMED WITH GREAT CARE AND SMALL TOOLS IN ORDER NOT TO JEOPARDIZE THE STRUCTURAL INTEGRITY OF THE BUILDING. IF EXISTING STRUCTURAL MEMBERS, NOT INDICATED FOR REMOVAL, INTERFER WITH THE NEW WORK, THE ENGINEER SHALL BE NOTIFIED IMMEDIATELY, AND APPROVAL OBTAINED, BEFORE REMOVAL OF THE EXISTING MEMBERS.
4. NOTES AND DETAILS ON DRAWINGS SHALL TAKE PRECEDENCE OVER GENERAL NOTES. WHERE NO DETAILS ARE GIVEN, CONSTRUCTION SHALL BE AS SHOWN FOR SIMILAR WORK.
5. THE CONTRACT STRUCTURAL DRAWINGS AND SPECIFICATIONS REPRESENT THE FINISHED STRUCTURE. THEY DO NOT INDICATE STRUCTURE, THE METHOD OF CONSTRUCTION. THE CONTRACTOR SHALL PROVIDE ALL MEASURES NECESSARY TO PROTECT THE STRUCTURE AND ITS OCCUPANTS DURING CONSTRUCTION. SUCH MEASURES SHALL INCLUDE BUT NOT BE LIMITED TO, SCAFFOLDING, BRACING, SHORING FOR LOADS DUE TO CONSTRUCTION EQUIPMENT, ETC. OBSERVATION/VISITS TO THE SITE BY THE STRUCTURAL ENGINEER SHALL NOT INCLUDE INSPECTION OF THE ABOVE ITEMS.
6. THE CONTRACTOR SHALL BE RESPONSIBLE FOR RESTORING ALL FINISHES, INCLUDING, BUT NOT LIMITED TO, CEILINGS, PARTITIONS, EFFECTED PAINTED SURFACES, ROOFING AND FIREPROOFING MATERIAL TO THEIR ORIGINAL CONDITIONS AFTER THE STRUCTURAL WORK IS COMPLETED.
7. THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE TEMPORARY OR PERMANENT RELOCATION OF ALL BUILDING SYSTEMS OR ANY OF THEIR COMPONENTS INCLUDING ELECTRICAL, MECHANICAL, FIRE SPRINKLER, PLUMBING AND COMMUNICATION LINE'S WHERE REQUIRED TO ACCOMPLISH THE STRUCTURAL RETROFIT WORK. SUCH WORK SHALL BE CLOSELY COORDINATED WITH THE BUILDING OWNERS AND THEIR TENANTS.
8. CONSTRUCTION MATERIAL SHALL BE SPREAD OUT IF PLACED ON FRAMED ROOF OR FLOOR. LOAD SHALL NOT EXCEED 20 PSF ON FRAMED ROOF AND 50 PSF ON FRAMED FLOOR.

ADHESIVE ANCHORS

1. NEW THREADED RODS SHALL BE ATTACHED TO STRUCTURE BY: HILTI TYPE HIT HY-20 ADHESIVE PER ICBO REPORT NUMBER 4815 OR APPROVED EQUAL.
2. INSTALL ANCHORS PER MANUFACTURER SPECIFICATIONS.
3. WHEN INSTALLING ANCHORS TO MASONRY, USE CARE AND CAUTION TO AVOID CUTTING OR DAMAGING THE EXISTING REINFORCING BARS.

WOOD

1. ALL STRUCTURAL LUMBER SHALL BE DOUGLAS FIR, VISUALLY GRADED OR MACHINE GRADED UNDER THE 1970 LUMBER GRADING RULES OF WEST COAST LUMBER INSPECTION BUREAU. ALL LUMBER SHALL BEAR LEGIBLE IDENTIFICATION STAMP. ALL FRAMING MEMBERS SHALL BE AS FOLLOWS U.N.O.:

THICKNESS	GRADE
LARGER THAN 2" NOM.	GRADE NO. 1

2. LUMBER SHALL BE DRY AND WELL SEASONED, AND THE MOISTURE CONTENT SHALL NOT EXCEED 19%.
3. ALL LUMBER IN CONTACT WITH CONCRETE OR MASONRY SHALL BE PRESSURE TREATED PER SPECIFICATIONS.
4. ALL STRUCTURAL PLYWOOD SHEATHING SHALL BE DOUGLAS FIR STANDARD GRADE CDX WITH EXTERIOR GLUE CONFORMING TO THE LATEST EDITION OF PS 1. ALL PANELS SHALL BEAR LEGIBLE DFPA STAMPS. ORIENTED STRAND BOARS (OSB) MAYBE SUBSTITUTED FOR PLYWOOD SHEATHING, IF IT IS RATED BY APA'S PERFORMANCE STANDARD RATING AND IS OF THE SAME NUMBER OF LAYERS AS PLYWOOD PLY INDICATED ON PLANS.
5. ALL SHEATHING SHALL BE LAID FACE GRAIN PERPENDICULAR TO FRAMING AND SHALL BE APPROVED BY THE BUILDING INSPECTOR BEFORE COVERING.
6. ALL NAILINGS SHALL CONFORM TO THE APPLICABLE BUILDING CODE AND REGULATIONS.
7. ALL BOLT HEADS AND NUTS WHICH BEAR AGAINST THE FACE OF WOOD MEMBERS SHALL BE PROVIDED WITH METAL WASHERS.
8. ALL NAILS FOR CONNECTING WOOD MEMBERS SHALL BE COMMON WIRE WHICH CONFORM TO TABLE 23-I-G OF THE CODE AND SECTION 2340.1.2 OF THE CODE, MINIMUM NAILING REQUIREMENTS OUTLINED IN TABLE 23-I-Q SHALL BE FOLLOWED UNLESS OTHERWISE NOTED.
9. RETIGHTEN BOLTS BEFORE CLOSING-IN.
10. USE OF MACHINE NAILING IS SUBJECT TO A SATISFACTORY JOBSITE DEMONSTRATION FOR EACH PROJECT AND THE APPROVAL BY THE PROJECT ARCHITECT OR STRUCTURAL ENGINEER AND THE OFFICE OF THE STATE ARCHITECT, THE APPROVAL IS SUBJECT TO CONTINUED SATISFACTORY PERFORMANCE. MACHINE NAILING WILL NOT BE APPROVED IN 5/16" PLYWOOD. IF NAILHEADS PENETRATE THE OUTER PLY MORE THAN WOULD BE NORMAL FOR A HAND HAMMER OR IF MINIMUM ALLOWABLE EDGE DISTANCES ARE NOT MAINTAINED, THE PERFORMANCE WILL BE DEEMED UNSATISFACTORY.
11. ALL BOLTS CALLED OUT ON DRAWINGS, INCLUDING ANCHOR BOLTS (A.B.) SHALL HAVE STEEL SQUARE PLATE WASHERS AS LISTED BELOW UNDER THE HEAD AND/OR NUT BEARING ON WOOD.

BOLT DIAMETER	1/2"	5/8"	3/4"	7/8"	1"
WASHER - THICKNESS	3/16"	1/4"	5/16"	5/16"	3/8"
WASHER - WIDTH	2"	2 1/2"	2 3/4"	3"	3 1/2"

ALL ANCHOR BOLTS (A.B.) SHALL BE 12" LONG, UNLESS NOTED OTHERWISE.

12. FRAMING ACCESSORIES AND STRUCTURAL FASTENERS SHALL BE MANUFACTURED BY SIMPSON STRONG TIE (OR ENGINEER APPROVED EQUAL) AND OF THE SIZE AND TYPE SHOWN ON THE DRAWINGS. HARDWARE SHALL BE FULLY NAILED FOR MAXIMUM CAPACITY, UNLESS NOTED OTHERWISE.

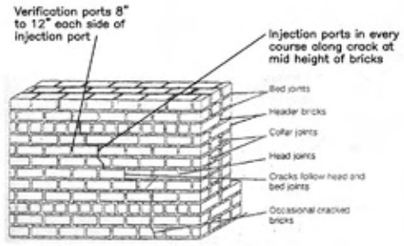

FIGURE 1 :
INJECTION AND VERIFICATION PORT PATTERN

CRACK REPAIR OF UNREINFORCED MASONRY WALLS WITH GROUT INJECTION
(MODIFIED CITY OF L.A. RGA #1-91)

1. MATERIALS

A. GROUT (PARTS SHALL BE MEASURED BY VOLUME)

- 3 PARTS #60 SILICA SAND
- 1 PART #90 SILICA SAND
- 1 PART PLASTIC PORTLAND CEMENT
- 1/2 PART TYPE S LIME
- 1/2 PART TYPE F FLY ASH

APPROXIMATELY 2-1/2 PARTS OF WATER SHALL BE ADDED. WATER SHALL BE SUFFICIENT TO ACHIEVE A POURABLE BUT NOT WATERY CONSISTENCY AS DETERMINED BY THE FLOW TEST DESCRIBED BELOW.

CONDUCT A FLOW TEST OF EACH GROUT MIX BATCH FOR EACH DAY OF GROUTING. THE PROCEDURE IS AS FOLLOWS:

- A GROUT SAMPLE SHALL BE TAKEN FROM THE INJECTION WAND. FILL A 2 INCH DIAMETER BY 4 INCH HIGH CYLINDER.
- POUR THE SAMPLE SLOWLY FROM 12 INCHES HIGH ONTO AN IMPERVIOUS SMOOTH LEVEL SURFACE.
- PROPER CONSISTENCY IS INDICATED BY A SIX INCH TO 8 INCH DIAMETER PUDDLE ON THE IMPERVIOUS SURFACE.

WATER MAY BE ADDED TO THE MIX TO MAINTAIN THE REQUIRED CONSISTENCY. GROUT SHALL NOT BE USED MORE THAN 2-1/2 HOURS AFTER INITIALLY ADDING WATER TO THE DRY INGREDIENTS.

GROUT SHALL ATTAIN A MINIMUM COMPRESSIVE STRENGTH OF 2,000 PSI AT 28 DAYS.

B. MORTAR (TYPE N)

- 4-1/2 TO 6 PARTS MASONRY SAND
- 1 PART TYPE I OR TYPE II LOW ALKALI CEMENT
- 1 PART TYPE S LIME

2. PREPARATION OF THE WALLS

A. APPLY 1 COAT OF A MASONRY SEALANT TO ANY PORTION OF MASONRY WALL TO REMAIN EXPOSED ON WHICH GROUT MAY SPILL.

B. REMOVE LOOSE MORTAR FROM OPEN JOINTS. MORTAR NOT BONDED TO AT LEAST ONE BRICK OF AN OPEN JOINT, OR EASILY DEBONDED SHALL BE REMOVED.

C. CLEAN THE CRACKS BY FLUSHING WITH WATER.

D. FILL THE PREMOISTENED CRACKS AND OPEN JOINTS WITH PRE-HYDRATED MORTAR 1/2 INCH DEEP. TOOL THE MORTAR JOINTS TO MATCH THE ADJACENT EXISTING JOINTS.

E. REMOVE AND RESET, WITH MORTAR, BRICKS THAT ARE DETERMINED VISUALLY OR BY HAND TO BE DEBONDED FROM ADJACENT BRICKS. CLEAN LOOSE MORTAR FROM THE CAVITY AND FLUSH WITH WATER BEFORE RESETTING THE BRICK.

F. DRILL 3/4 INCH MINIMUM DIAMETER INJECTION HOLES INTO THE CRACK AT A HEAD JOINT OR CRACKED BRICK IN EACH COURSE OF A BRICK. HOLES SHALL PENETRATE TO THE NEAR FACE OF THE FAR WYTHE OF BRICK. SEE FIGURE 1.

G. DRILL 3/4 INCH MINIMUM DIAMETER VERIFICATION PORTS INTO THE HEAD APPROXIMATELY 8 TO 12 INCHES ON EACH SIDE OF THE CRACK TO THE SAME DEPTH AS IN F. SEE FIGURE 1.

H. THOROUGHLY WASH AND SATURATE THE WALL BY FLUSHING WITH WATER APPROXIMATELY 24 HOURS BEFORE INJECTION. USE WATER AT CITY PRESSURE THROUGH AN INJECTION AND THAT CAN BE INSERTED THE FULL DEPTH OF THE HOLES. FLUSH EACH INJECTION HOLE AND VERIFICATION PORT, WORKING FROM FAR COLLAR JOINT FROM TO NEAR COLLAR JOINT IN EACH HOLE AND FROM TOP TO BOTTOM. FLUSH EACH HOLE UNTIL THE WATER FLOWS CLEAR.

I. THOROUGHLY SATURATE THE WALL BY THE SAME METHOD IMMEDIATELY PRIOR TO GROUT INJECTION. REPEAT IF MORE THAN TWO HOURS HAVE ELAPSED BETWEEN FLUSHING AND INJECTION.

3. GROUT INJECTION

GROUT SHALL BE DELIVERED INTO THE WALL THROUGH AN INJECTION WAND CAPABLE OF SEALING THE INJECTION HOLE APPROXIMATELY 2 INCHES BEHIND THE NOZZLE. THE GROUT PUMP SHALL BE ABLE TO DEVELOP AT LEAST 30 P.S.I. INJECT GROUT INTO THE WALL AT EACH INJECTION HOLE, FILLING THE COLLAR JOINTS STARTING AT THE FAR COLLAR JOINT, PROCEEDING TO THE NEAR COLLAR JOINT, WORKING FROM ON END TO THE OPPOSITE END. VERIFICATION PORTS SHOULD BE PLUGGED AS GROUT FLOWS FROM THEM. WHEN GROUT FLOWS FROM THE INJECTION HOLE ABOVE, APPLY A TEMPORARY PLUG TO THE HOLE BEING INJECTED AND APPLY GROUT TO THE INJECTION HOLE ABOVE. CONTINUE UNTIL ALL INJECTION HOLES HAVE BEEN INJECTED. INJECT GROUT INTO VERIFICATION PORTS FROM WHICH NO FLOW OCCURS. WASH GROUT SPILLAGE FROM THE WALL IMMEDIATELY.

4. CLEAN-UP

A. WHEN THE GROUT IS FIRM, REMOVE THE TEMPORARY PLUGS AND POINT HOLES WITH MORTAR. TOOL THE MORTAR TO MATCH THE ADJACENT EXITING. REFER TO SEISMIC RETROFIT OF UNREINFORCED MASONRY NOTES ON SHEET S1-1 FOR EXISTING BRICK REPOINTING REQUIREMENTS.

B. REMOVE AND DISPOSE OF ALL SPILLED MORTAR AND GROUT.

5. INSPECTION

CONTINUOUS INSPECTION SHALL BE PERFORMED BY A CONCRETE OR MASONRY DEPUTY BUILDING INSPECTOR. THE DEPUTY INSPECTOR SHALL BE PRESENT DURING WASHOUT, BATCHING AND ALL INJECTION OF THE GROUT. HOWEVER, DEPUTY INSPECTION IS NOT REQUIRED DURING THE INITIAL WASHOUT OF THE HOLES WHICH OCCURS 24 HOURS PRIOR TO INJECTION.

1/8" = 1'-0"
NORTH

GENERAL NOTES

1. REFER TO SPECIFICATION SECTION (1)08710 (FINISH HARDWARE) AND SECTION 08740 (LOW ENERGY DOOR OPERATORS) FOR PRODUCT SPECIFICATION, DESIGN INTENT AND FUNCTIONAL REQUIREMENTS. CONTRACTOR SHALL SUBMIT COMPLETE SHOP DRAWINGS FOR A FULLY OPERABLE SYSTEM. REFER TO MANUFACTURER'S WIRING DIAGRAMS DOOR-O-MATIC

NOTES

(1) DOOR SWING – WD SWING ASSEMBLY OPERATOR MOUNTED IN VESTIBULE. LOCATE EXTERIOR BOX ON PUSH SIDE OF THE DOOR. ELECTRIC STRIKE AT HEADER OF THE DOOR WITH LOW VOLTAGE POWER SUPPLY.

(2) INTERIOR PAIR DOOR (PUSH–PULL) WITHOUT LOCKING, OPERATOR MOUNTED IN VESTIBULE.

(3) ELECTRIC DOOR STRIKE WITH POWER SUPPLY

(4) N.P. PUSH PLATE WITH HANDICAP SIGN +42"MT MOUNTED ON EXISTING WOOD POST.

(5) PUSH PLATE WITH HANDICAP SIGN, +42"MT MOUNTED ON EXISTING WALL.

(6) EXISTING FLUSH MOUNTED PANEL/LOAD CENTER (E)1213; 100AMP 120/240V+43M 30 CIRCUITS. USE EXISTING SPACE (E)3 TO POWER THE DOOR OPERATORS(), INTERCOM STATION, TIME CLOCK, ELECTRIC DOOR STRIKE AND POWER SUPPLIES. PROVIDE (1)20A–1P CIRCUIT BREAKER TO MATCH EXISTING BY TYPE, STYLE AND AIC RATING. LABEL NEW BREAKER AS "DOT DOOR HARDWARE" AND UPDATE PANEL DIRECTORY. PROVIDE BREAKER LOCK–ON DEVICE.

(7) PROVIDE SURFACE MOUNTED VIDEO SECURITY ENTRY AND ACCESS CONTROL SYSTEM– MANUFACTURED BY AIPHONE MODEL #KCS–1MRD WITH KC–DAR AND KC–1MRD, PS–2410A POWER SUPPLY, 2 WIRE 18 AWG CABLES #841802 BETWEEN KC–1MRD, KC–DAR, POWER SUPPLY PS–2410A & DOOR STRIKE. (MAX–DISTANCE 330 FEET FROM STATION TO MONITOR, 16 FEET TO POWER SUPPLY). CONNECT NORMALLY OPEN DRY CONTACT FOR DOOR RELEASE. PROVIDE KA–DOR STAINLESS, STEEL HOUSING FOR KC–DAR DOOR STATION AND WDM–S DESK STAND FOR AIPHONE MONITOR.

(8) THE DOOR ACCESS ENTRY SYSTEM SHALL BE TIME CLOCK CONTROLLED FOR NORMAL BUSINESS HOURS. TIME CLOCK SHALL BE TORK #E2300L–36. AFTER HOUR USAGE SHALL BE CONTROLLED BY AIPHONE VIDEO SECURITY ENTRY AND ACCESS CONTROL SYSTEM.

(9) INSIDE MONITOR STATION, DESK MOUNTED WITH PS–2410A POWER SUPPLY. PROVIDE 120V POWER TO POWER SUPPLY.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by EFI Global Inc. were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by EFI Global Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

Summary information obtained is provided in the text of this report.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.
