Title:	13267 Requirement for Technical Reports/Information for Shell San Jose Terminal
Description:	13267 letter requires 5 report submittals aimed at achieving and demonstrating full delineation of TPH, BTEX, and MTBE impacts to groundwater, source identification and evaluation, and a comprehensive remedial action plan for all impacts. The letter also requires a report documenting storm water sampling to better evaluate storm water discharge threats and BMP appropriateness. Submittal due dates range from January 15, 2007 through August 15, 2007.

Completed Info:

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Land Use Restriction
Completed Date:	10/26/2004
Comments:	RMDL - GW - DTSC approved the completion report for the installation and start up of the groundwater extraction trench. A Deed restriction was recorded on the portion of the site where the groundwater contamination exist which prevents use of the property for residential and other purposes. Alll allowed uses and developments of the property shall preserve the intergrity of the extraction trench, extraction wells, and groundwater treatment system and monitoring wells at the site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction - Site Inspection/Visit
Completed Date: 08/05/2011
Comments: During the inspection it was observed that the bolts were missing from the monitoring wells. Otherwise,the restricted portion of the Site complied with the conditions of the Deed Restriction.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Action Completion Report
Completed Date: 02/17/2002
Comments: RMDL - PH 3 - DTSC approved the implementation report for the Phase 3 area. Phase 3 consists of soil in the remaining 16 acres of the site, which is bounded on the north by Hope Drive, Lick Mill Boulevard on the west, Guadaluoe River on the east, and the Mansion Grove Apartments on the south. Between January 2001 and December 2001, approximately 55,000 cubic yards of contaminated soils were excavated from the Phase 3 area of the site and either disposed offsite or reused in the nearby CalTrans Highway 87 construction project.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Action Completion Report
Completed Date: 11/07/2001
Comments: Remedial action completed which consisted of excavation of contaminated soil containing metals and polynuclear aromomatic hydrocarbons (PAH) and disposed to an offsite facility.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported

DRAFT

RIVERMARK PROPERTIES (Continued) **S105557606**

Completed Document Type: Design/Implementation Workplan
Completed Date: 12/19/2000
Comments: DTSC approved a remedial design for the soil removal activities.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Action Completion Report
Completed Date: 10/26/2004
Comments: DTSC approved the implementation of the remedial action which consisted of the installation of the exraction trench and the its treatment system, including the groundwater monitoring system.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Design/Implementation Workplan
Completed Date: 06/09/2003
Comments: DES - GW - DTSC approved the Remedial Design and Implementation Plan for ground water. Phase 4 consists of implementation of the groundwater remedy in the 2.2 acre area north of Mansion Grove apartments where groundwater contaminated with volatile organic constituents will be extracted and treated. The remedy consists of the installation of three extraction wells at the property boundary of Mansion Grove in March 2003 and the extraction trench at the leading edge of the contaminated groundwater in February 2004.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Action Completion Report
Completed Date: 07/12/2002
Comments: RMDL - PH 1 - DTSC approved the Remedial Action Implementation Report for Phase 1 area. Phase 1 consists of soils on approximately 130 acres generally bounded by Hope Drive on the north, Agnew Road on the west, Lick Mill Boulevard on the east, and Montague Expressway on the south. Between December 20, 2000 and June 15, 2001, approximately 182,600 tons of soils contaminated with hazardous levels of arsenic, lead, mercury and DDT were excavated from Phase 1 and disposed at permitted landfill. Approximately 269,400 tons of soil contaminated with non-hazardous levels of arsenic, lead or PAHs were either transported to the CalTrans Highway 87 construction project for reuse, or to permitted landfill for disposal.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Action Plan
Completed Date: 11/20/2000
Comments: RAP - DTSC approved the RAP which required that any soil above the remedial goals be excavated and properly managed off-site. The groundwater beneath the site will be remediated by the construction of an extraction trench at the property boundary of Mansion Grove, and an additional extraction trench at the leading edge of the contaminated groundwater. The site cleanup was broken up into four phases to support development schedules for the site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation / Feasibility Study
Completed Date: 08/16/2000

DRAFT

RIVERMARK PROPERTIES (Continued) **S105557606**

Comments: Approved the Remedial Investigation Report for the site which delineated the extent of soil and groundwater contamination. Soil was contaminated with the following: arsenic, lead, mercury, DDT, chlordane, polycyclic aromatic hydrocarbons (PAHs), perchloroethylene (PCE) and trichloroethylene (TCE). Groundwater investigation showed PCE, TCE, 1,1-dichloroethylene (DCE), cis-1,2-DCE, 1,2-dichloroethane (DCA) and vinyl chloride (VC) to be above the drinking water standards in the area north of the Mansion Grove Site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: 5 Year Review Reports
Completed Date: 02/07/2008
Comments: The 5 Year Report indicates the existing system at the site is effective in controlling offsite migration of groundwater contaminants.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DRAFT

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 05/08/2012
Date Data Arrived at EDR: 05/10/2012
Date Made Active in Reports: 05/15/2012
Number of Days to Update: 5

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 03/30/2012
Date Data Arrived at EDR: 04/05/2012
Date Made Active in Reports: 05/15/2012

Next Scheduled EDR Contact: 10/22/2012
Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991
Date Data Arrived at EDR: 02/02/1994

DRAFT

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 03/30/2012
Date Data Arrived at EDR: 04/05/2012
Date Made Active in Reports: 05/15/2012

Next Scheduled EDR Contact: 10/22/2012
Data Release Frequency: Quarterly

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 12/27/2011
Date Data Arrived at EDR: 02/27/2012
Date Made Active in Reports: 03/12/2012

Data Release Frequency: Varies

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Date of Government Version: 12/28/2011
Date Data Arrived at EDR: 02/27/2012
Date Made Active in Reports: 03/12/2012

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

DEMO

Federal institutional controls / engineering controls registries

US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 12/30/2011
Date Data Arrived at EDR: 12/30/2011

Last EDR Contact: 06/11/2012
Next Scheduled EDR Contact: 09/24/2012
Data Release Frequency: Varies

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Date of Government Version: 06/27/2011

Local Lists of Hazardous waste / Contaminated Sites

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 02/02/2012
Date Data Arrived at EDR: 03/13/2012
Date Made Active in Reports: 06/14/2012

DRAFT

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

DRAFT

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

DRAFT

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

EDR PROPRIETARY RECORDS

EDR Proprietary Records

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Historical Auto Stations: EDR Proprietary Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc.

DRAFT

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

DRAFT

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data
Source: Rextag Strategies Corp.
Telephone: (281) 769-2247
U.S. Electric Transmission and Power Plants Systems Digital GIS Data

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities
Source: Department of Social Services
Telephone: 916-657-4041

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

MONTAGUE PARK
2860 JUNCTION AVENUE
SAN JOSE, CA 95134

TARGET PROPERTY COORDINATES

Latitude (North):	37.399 - 37° 23' 56.40''
Longitude (West):	121.9281 - 121° 55' 41.16''
Universal Tranverse Mercator:	Zone 10
UTM X (Meters):	594876.6
UTM Y (Meters):	4139471.0
Elevation:	25 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	37121-D8 MILPITAS, CA
Most Recent Revision:	1980

DRAFT

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

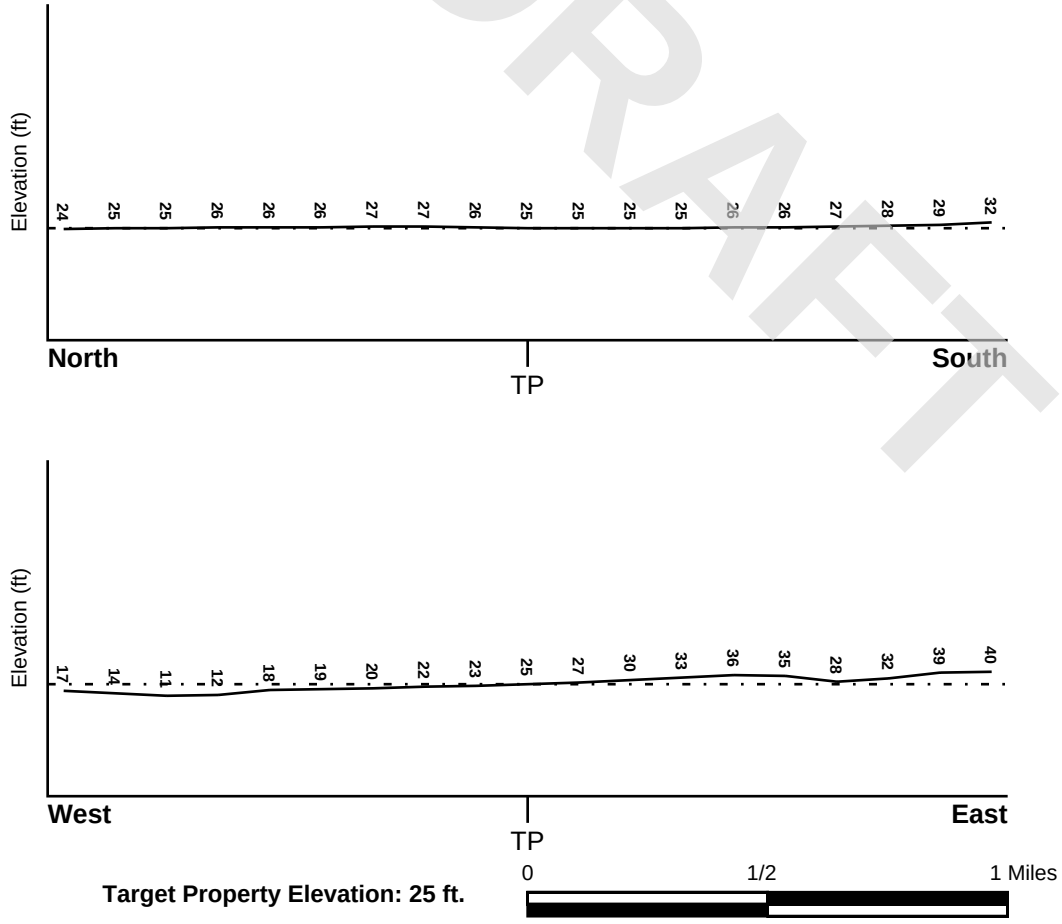
Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General West

DRAFT

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 25 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
SANTA CLARA, CA	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 06085C - FEMA DFIRM Flood data

Additional Panels in search area: Not Reported

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
MILPITAS	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/4 - 1/2 Mile West
Site Name:	Lick James Mansion/Mansion Grove
Site EPA ID Number:	CAD980735971
Surficial Aquifer Flow Dir.:	NOT AVAILABLE.
Measured Depth to Water:	approximately 12 feet.
Hydraulic Connection:	A confining layer separates the surficial and lower aquifers, but an interconnection between the aquifers occurs.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information based on site-specific subsurface investigations is documented in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

DRAFT

* ©1996 Site--specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Quaternary
Code:	Q *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name:	BOTELLA
Soil Surface Texture:	clay loam
Hydrologic Group:	Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.
Soil Drainage Class:	Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel:	MODERATE
Depth to Bedrock Min:	> 60 inches
Depth to Bedrock Max:	> 60 inches

DRAFT

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	9 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.60 Min: 0.20	Max: 7.30 Min: 5.60
2	9 inches	41 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.60 Min: 0.20	Max: 7.80 Min: 5.60
3	41 inches	76 inches	sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 0.60 Min: 0.20	Max: 7.80 Min: 5.60

DRAFT

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: No Other Soil Types

Surficial Soil Types: No Other Soil Types

Shallow Soil Types: No Other Soil Types

Deeper Soil Types: No Other Soil Types

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Health Services
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations
Source: Department of Conservation
Telephone: 916-323-1779
Oil and Gas well locations in the state.

RADON

State Database: CA Radon
Source: Department of Health Services
Telephone: 916-324-2208
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through 2006. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

1.0 EXECUTIVE SUMMARY

1.1 Findings and Conclusions Summary

At the request of LaSalle Investment Management, Inc., ATC performed a Phase I Environmental Site Assessment (ESA) of the Montague Park property (herein referred to as the property). The property is located at 3050 Zanker Road, 2880 Junction Avenue, 2860 Junction Avenue, 2840 Junction Avenue, and 411 East Plumeria Drive in the City of San Jose, California in an area that is primarily characterized by commercial and multi-family residential use. The property consists of an approximately 23.62-acre lot with five, two-story buildings encompassing approximately 422,532 square feet of space constructed in two phases from circa 1985 to 1990. The current use of the property is commercial and research and development.

ATC Associates Inc. (ATC) has performed this Phase I Environmental Site Assessment (ESA) in conformance with the scope and limitations of ASTM Standard Practice E 1527-05 and the LaSalle Investment Management Inc., *Phase I Environmental Assessment Minimum Investigation and Reporting Guideline* (hereafter referred to as the "Guideline"), dated October 13, 2006. Any exceptions to, or deletions from, this practice are described in Section 2.0 of this report. This assessment has revealed no evidence of *recognized environmental conditions* in connection with the property.

Records Review

- The property was developed as row crops, with what appeared to be a farmhouse located further to the north, between approximately 1939 and the 1970s. The property was undeveloped between the 1970s and 1985, when property buildings located at 3050 Zanker Road, 2860 Junction Avenue and 411 East Plumeria Drive were constructed. Property buildings located at 2880 and 2840 Junction Avenue were later constructed in 1990. Development of the surrounding area appears to have occurred between 1982 and 1993.
- According to the EDR database report, the property is listed in federal and state regulatory databases. Ultratech Stepper Inc., located at 2880 Junction Avenue, is listed as a Facility Index System/Facility Registry System (FINDS) facility, and a Facility and Manifest Data (HAZNET) facility. The facility is also listed as a Resource Conservation and Recovery Act (RCRA) Small Quantity Generator (SQG) of hazardous waste, with no violations found. Ultratech Inc., located at 3050 Zanker Road, is listed on the RCRA-SQG, FINDS, HAZNET, San Jose HAZMAT Facilities (San Jose HAZMAT), and Emissions Inventory Data (EMI) databases. The facility is listed as a small-quantity generator with no violations found. The facility has been tracked by EMI since approximately 1996 and emissions are reported in listings dated 2004 and 2005. No violations were reported for the property. It is ATC's opinion that these regulatory database listings are not considered to represent a *recognized environmental condition* to the property.
- No indication of a *recognized environmental condition*, *historical recognized environmental condition*, or *de minimis condition* was noted on the property or surrounding area during the records review.
- ATC's review of published radon data indicates that the property is located in EPA Radon Zone 2, or an area of moderate propensity with regard to the potential for elevated levels of radon gas (between 2 and 4 picoCuries per liter of air).
- Based on the age of the property improvements (1985-1990), as well as the commercial usage of the property, lead-based paint (LBP) was not addressed for this Phase I ESA and no additional investigation appears warranted at this time.

DRAFT

- Prior reports indicate that four former onsite monitoring wells (originally installed in 1986 for an unknown purpose) were properly decommissioned in 2000 and are not considered to represent an environmental concern.
- Prior reports indicate that asbestos was detected in grey roofing sealant, transite roofing screens, and beige 12" x 12" vinyl floor tiles in the storage room of 2840 Junction Avenue, and in beige/black mastic in the roof access room. An asbestos Operations and Maintenance (O&M) Program, dated August 9, 2005, is in place for the property.
- Based on a review of the United States Department of the Interior, National Wetlands Inventory (NWI) Map (online Wetlands Mapper at http://www.nwi.fws.gov/), there are no jurisdictional wetlands on the property.
- According to the Federal Emergency Management Agency (FEMA), the property is located in Flood Zone A, which is identified by FEMA as "areas of 100-year flood; base flood elevations and flood hazard factors not determined" (Community Number 060349, Panel Number 0008F, dated December 16, 1988).

Site Reconnaissance

- No indication of a *recognized environmental condition*, *historical recognized environmental condition*, or *de minimis condition* was visually or physically observed on the property or adjoining properties during the site reconnaissance.
- Two diesel-powered emergency generators were observed at 3050 Zanker Road and 2840 Junction Avenue. The generators are reportedly owned and operated by the corresponding building tenants. According to the site contacts, no known leaks or spills have occurred with respect to the ASTs. ATC noted the generators to be in good condition with no leaks or spills observed on the underlying concrete pads or surrounding area. Given the equipment age and observed condition, the ASTs are not considered to represent an environmental concern to the property.
- Developer waste generated, during typical Ultratech laboratory operations, travels via gravity from clean room sinks to two onsite treatment systems. Mr. Tom Tran, Ultratech Environmental Health and Safety Engineer II and site escort, indicated that the treatment system units are comprised of three tanks in which two reagents (sulfuric acid and sodium hydroxide) are added in order to neutralize developer waste. The nonhazardous discharge (effluent) is subsequently discharged via the sanitary sewer, per City of San Jose Environmental Services Department Watershed Protection requirements. No violations or releases are reported for the treatment systems and the treatment systems are not considered to represent an environmental concern to the property.
- Mold growth was not observed at the property during the site reconnaissance. Water stained ceiling tiles were observed in some of the tenant suites. It was reported that minor roof penetrations were associated with recent HVAC equipment installation at 2860 Junction Avenue; these resulted in water leaks which have since been repaired.

Environmental Sampling

- ATC collected a total of 57 samples of building materials as part of this assessment and submitted them to a laboratory for asbestos content analysis. Analytical results did not detect asbestos in the samples taken.
- A total of 10 lead in drinking water samples were collected during the site reconnaissance. Analytical results revealed two fixtures that resulted in lead concentrations exceeding the EPA Action Level (15 parts per billion [ppb]). Water from a faucet on the first floor of 411 East Plumeria Drive and a drinking fountain on the first floor of 3050 Zanker Road had lead concentrations of 43 ppb and 17

DRAFT

ppb, respectively. Elevated lead concentrations do not appear to be system wide and therefore ATC recommends installation of point-of-use filtration on fixtures resulting in concentrations above 15 ppb.

1.2 Recommendations

Based on information collected from the ESA, ATC offers the following recommendations:

- ATC recommends that the existing asbestos O&M Program be updated with results of ATC's limited asbestos survey.

- Installation of point-of-use filtration on fixtures resulting in lead concentrations above 15 ppb.

DRAFT

1.3 Significant Data Gap Summary

The following is a summary of *significant data gaps* identified in this report.

SIGNIFICANT DATA GAP SUMMARY		
Report Section		**Description**
3.5	**Current Uses of Adjoining Properties**	No *significant data gap* identified.
4.2	**Environmental Liens or Activity and Use Limitations (AULs)**	No *significant data gap* identified.
5.1	**Standard Environmental Records**	No *significant data gap* identified.
5.2	**Physical Setting Sources**	No *significant data gap* identified.
5.3	**Historical Records Sources**	No *significant data gap* identified.
6.1	**Methodology and Limiting Conditions**	ATC was not granted access to clean rooms within research and development areas or machinery areas in which noise levels warranted additional personal protective equipment. Access was not provided to a portion of the storage closets and elevator machine room, within the building located at 411 East Plumeria Drive, due to key limitations (lockbox access). However, based on reported operations within these areas, limited views from the exterior, and access to the remaining portions of the buildings, this limitation is not considered significant to the findings and conclusions of this assessment.
7.0	**Interviews**	No *significant data gap* identified.

2.0 INTRODUCTION

2.1 Purpose

The purpose of this Phase I ESA was to identify *recognized environmental conditions* and certain potential environmental conditions outside the scope of ASTM Standard Practice E 1527-05 in connection with the property at the time of the site reconnaissance. This report documents the findings, opinions and conclusions of the Phase I ESA.

2.2 Scope

This Phase I ESA was conducted in general accordance with the ASTM Standard Practice E 1527-05 and the LaSalle Investment Management Inc. Guideline, consistent with a level of care and skill ordinarily practiced by the environmental consulting profession currently providing similar services under similar circumstances. Significant additions, deletions or exceptions to ASTM Standard Practice E 1527-05 are noted below or in the corresponding sections of this report. The scope of this assessment included an evaluation of the following:

- Physical setting characteristics of the property through a review of referenced sources such as topographic maps and geologic, soils and hydrologic reports.

- Usage of the property, adjoining properties and surrounding area through a review of referenced historical sources such as land title records, fire insurance maps, city directories, aerial photographs, prior reports and interviews.

- Observations and interviews regarding current property usage and conditions including: the use, treatment, storage, disposal or generation of hazardous substances, petroleum products, hazardous wastes, nonhazardous solid wastes and wastewater.

- Usage of adjoining and surrounding area properties and the likely impact of known or suspected releases of hazardous substances or petroleum products from those properties on the property.

- Information in referenced environmental agency databases and local environmental records, within the specified approximate minimum search distance from the property.

The scope of the assessment also included consideration of the following environmental issues or conditions that are beyond the scope of ASTM Standard Practice E 1527-05:

- Mold Screening to report the findings of a baseline survey of readily observable mold and conditions conducive to mold on the property identified by limited interview, document review and physical observation and to provide an opinion on whether an identified condition warrants further action. The scope of work for the Mold Screening was intended to be consistent with ASTM Standard Practice E 2418-06: S*tandard Guide for Readily Observable Mold and Conditions Conducive to Mold in Commercial Buildings: Baseline Survey Process* and the scope of work defined in the LaSalle Investment Management, Inc. Guideline. The Mold Screening did not include destructive methods of observation. No sampling or laboratory analyses were conducted. The Mold Screening service as described herein was limited in scope and by the time and cost considerations typically associated with performing a Phase I ESA. No method can

DRAFT

guarantee that a hazard will be discovered if evidence of the hazard is not encountered within the performance of the Mold Screening as authorized and that opinions and conclusions must, out of necessity, be extrapolated from limited information and discrete, non-continuous data points. Unidentified mold or other microbial conditions may exist on the property.

- Limited Asbestos Screening (LAS) survey consisting of the identification of suspect asbestos-containing material (ACM) in accessible areas and the collection and laboratory analysis of bulk samples. The survey was "limited" in that it was not intended to comply with the sampling requirements described in 40 CFR Part 763 or 40 CFR Part 61. The limited survey was performed to identify the presence of readily accessible suspect ACM and to develop recommendations as to the need for a more thorough survey and/or an Operations and Maintenance (O&M) program. The survey did not attempt to sample each homogeneous area or fully characterize each suspect material. Untested potential ACM is considered suspect until tested and proven otherwise.

- Radon document review, consisting of the review of published radon data with regard to the potential for elevated levels of radon gas in the surrounding area of the property.

- Lead in drinking water Screening survey consisting of the collection of initial (first draw) samples from representative cold drinking water faucets in occupied areas. This was a screening survey that was intended to evaluate the potential of elevated levels of lead in drinking water and the prudence of further action.

- Visual observation of Lead-based paint (LBP), consisting of providing an opinion on the potential for LBP based on the construction date of buildings on the property and visual observation of the condition of suspect LBP.

- Wetlands document review, consisting of a review of a current National Wetlands Inventory map of the surrounding area to note if the property is identified as having a wetland.

- Flood plain document review, consisting of a review of a reasonably ascertainable flood plain map of the surrounding area to note if the property is identified as being located within a flood plain.

2.3 Significant Assumption

Any assumptions in this report were not considered as having significant impact on the determination of *recognized environmental conditions* associated with the property.

2.4 Limitations and Exceptions

ATC has prepared this Phase I ESA report using reasonable efforts to identify *recognized environmental conditions* associated with hazardous substances or petroleum products at the property. Findings contained within this report are based on information collected from observations made on the day(s) of the site reconnaissance and from reasonably ascertainable information obtained from certain public agencies and other referenced sources.

DRAFT

The ASTM Standard Practice E 1527-05 recognizes inherent limitations for Phase I ESAs, including, but not limited to:

- *Uncertainty Not Eliminated* – A Phase I ESA cannot completely eliminate uncertainty regarding the potential for *recognized environmental conditions* in connection with any property.

- *Not Exhaustive* – A Phase I ESA is not an exhaustive investigation of the property and environmental conditions on such property.

- *Past Uses of the Property* – Phase I requirements only require review of standard historical sources at five year intervals. Therefore, past uses of property at less than five year intervals may not be discovered.

Users of this report may refer to ASTM Standard Practice E 1527-05 for further information regarding these and other limitations. This report is not definitive and should not be assumed to be a complete and/or specific definition of all conditions above or below grade. Current subsurface conditions may differ from the conditions determined by surface observations, interviews and reviews of historical sources. The most reliable method of evaluating subsurface conditions is through intrusive techniques, which are beyond the scope of this report. Information in this report is not intended to be used as a construction document and should not be used for demolition, renovation, or other property construction purposes. Any use of this report by any party, beyond the scope and intent of the original parties, shall be at the sole risk and expense of such user.

ATC makes no representation or warranty that the past or current operations at the property are, or have been, in compliance with all applicable federal, state and local laws, regulations and codes. This report does not warrant against future operations or conditions, nor does it warrant against operations or conditions present of a type or at a location not investigated. Regardless of the findings stated in this report, ATC is not responsible for consequences or conditions arising from facts not fully disclosed to ATC during the assessment.

An independent data research company provided the government agency database referenced in this report. Information on surrounding area properties was requested for approximate minimum search distances and is assumed to be correct and complete unless obviously contradicted by ATC's observations or other credible referenced sources reviewed during the assessment. ATC shall not be liable for any such database firm's failure to make relevant files or documents properly available, to properly index files, or otherwise to fail to maintain or produce accurate or complete records.

ATC used reasonable efforts to identify evidence of aboveground and underground storage tanks and ancillary equipment on the property during the assessment. "Reasonable efforts" were limited to observation of accessible areas, review of referenced public records and interviews. These reasonable efforts may not identify subsurface equipment or evidence hidden from view by things including, but not limited to, snow cover, paving, construction activities, stored materials and landscaping.

Any estimates of costs or quantities in this report are approximations for commercial real estate transaction due diligence purposes and are based on the findings, opinions and conclusions of this assessment, which are limited by the scope of the assessment, schedule demands, cost constraints, accessibility limitations and other factors associated with performing the Phase I ESA. Subsequent determinations of costs or quantities may vary from the estimates in this report. The estimated costs or

DRAFT

quantities in this report are not intended to be used for financial disclosure related to the Financial Accounting Standards Board (FASB) Statement No. 143, FASB Interpretation No. 47, Sarbanes/Oxley Act or any United States Securities and Exchange Commission reporting obligations, and may not be used for such purposes in any form without the express written permission of ATC.

ATC is not a professional title insurance or land surveyor firm and makes no guarantee, express or implied, that any land title records acquired or reviewed in this report, or any physical descriptions or depictions of the property in this report, represent a comprehensive definition or precise delineation of property ownership or boundaries.

The Environmental Professional Statement in Section 1.1 of this report does not "certify" the findings contained in this report and is not a legal opinion of such *Environmental Professional*. The *Environmental Professional* Statement is intended to document ATC's opinion that an individual meeting the qualifications of an Environmental Professional was involved in the performance of the assessment and that the activities performed by, or under the supervision of, the *Environmental Professional* were performed in conformance with the standards and practices set forth in 40 CFR Part 312 per the methodology in ASTM Standard Practice E 1527-05 and the scope of work for this assessment.

Per ASTM Standard Practice E 1527-05, Section 6, User Responsibilities, the User of this assessment has specific obligations for performing tasks during this assessment that will help identify the possibility of *recognized environmental conditions* in connection with the property. Failure by the User to fully comply with the requirements may impact their ability to use this report to help qualify for *Landowner Liability Protections* (LLPs) under Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). ATC makes no representations or warranties regarding a User's qualification for protection under any federal, state or local laws, rules or regulations.

In accordance with the ASTM Standard Practice E 1527-05, this report is presumed to be valid for a six month period. If the report is older than six months, the following information must be updated in order for the report to be valid: (1) regulatory review, (2) site visit, (3) interviews, (4) specialized knowledge and (5) environmental liens search. Reports older than one year may not meet the ASTM Standard Practice 1527-05 and therefore, the entire report must be updated to reflect current conditions and property-specific information.

Other limitations and exceptions that are specific to the scope of this report may be found in corresponding sections.

2.5 Special Terms and Conditions (User Reliance)

This report is for the use and benefit of, and may be relied upon by, LaSalle Investment Management, Inc. and any of their affiliates, and third parties authorized in writing by LaSalle Investment Management, Inc. and ATC, including the lender(s) in connection with a secured financing of the property, and their respective successors and assigns. Any third party agrees by accepting this report that any use or reliance on this report shall be limited by the exceptions and limitations in this report, and with the acknowledgment that actual site conditions may change with time, and that hidden conditions may exist at the property that were not discovered within the authorized scope of the assessment. Any use by or distribution of this report to third parties, without the express written consent of ATC, is at the sole risk and expense of such third party.

DRAFT

ATC makes no other representation to any third party except that it has used the degree of care and skill ordinarily exercised by environmental consultants in the preparation of the report and in the assembling of data and information related thereto. No other warranties are made to any third party, either expressed or implied. Unless otherwise agreed upon in writing by ATC and a third party, ATC's liability to any third party authorized to use or rely on this report with respect to any acts or omissions shall be limited to a total maximum amount of $100,000.

DRAFT

3.0 SITE DESCRIPTION

3.1 Location and Legal Description

The property addresses are 3050 Zanker Road, 2880 Junction Avenue, 2860 Junction Avenue, 2840 Junction Avenue, and 411 East Plumeria Drive, San Jose, Santa Clara County, California. A Site Vicinity Map is located in Appendix A and Site Photographs are provided in Appendix C. According to information obtained from the City of San Jose Planning Department (SJPD), the property is identified as Santa Clara County Assessor's Parcel Numbers (APNs) 101-31-001 (3050 Zanker Road), 101-31-002 (2880 Junction Avenue), 101-31-003 (2860 Junction Avenue), 101-31-004 (2840 Junction Avenue), and 101-31-005 (411 East Plumeria Drive). According to the SJPD, the property is currently zoned as IP, which is defined as Industrial Park.

3.2 Surrounding Area General Characteristics

The property is located in an area that is primarily characterized by commercial and multi-family residential use. Specific adjacent property uses are described in detail in Section 3.5. The topography in the property vicinity is generally flat with a gentle topographic gradient towards the west.

3.3 Current Use of the Property

The property is a multi-tenant commercial and research and development complex known as Montague Park. The property consists of five, two-story buildings containing approximately 422,532 square feet of building area, situated on an approximately 23.62-arce lot. Buildings located at 3050 Zanker Road, 2860 Junction Avenue, and 411 East Plumeria Drive were constructed circa 1985, whereas buildings located at 2880 and 2840 Junction Avenue were constructed circa 1990. Asphalt-paved parking areas, concrete-paved sidewalks, and landscaping encompass the remainder of the property footprint.

Following is a table summarizing tenant use of the property. A Site Plan is located in Appendix B.

TENANT USE OF THE PROPERTY			
Tenant Name	**Location**	**Type of Use**	**Comments**
Ultratech	3050 Zanker Road	Commercial office and wafer production labs	See Section 6.0
Ultratech	2880 Junction Avenue, first floor	Commercial office and research and development labs	See Section 6.0
Foveon Inc.	2880 Junction Avenue, second floor	Commercial office	None
MediaTek	2860 Junction Avenue	Commercial office	None
Vacant Unit	2860 Junction Avenue, southern portion of the first floor	Commercial office	None
Pillar Data Systems	2840 Junction Avenue	Commercial office	See Section 6.0
Vacant Building	411 East Plumeria Drive	Commercial office	None

DRAFT

3.4 Description of Property Improvements

The following table provides general descriptions of the property improvements.

PROPERTY IMPROVEMENTS	
Size of Property (approximate)	Approximately 23.62 acres.
General Topography of Property	The topography in the property vicinity is generally flat with a gentle topographic gradient towards the west.
Adjoining and/or Access/Egress Roads	The property is accessed via Zanker Road to the west, Junction Avenue to the south, and East Plumeria Drive to the east.
Paved or Concrete Areas (including parking)	Asphalt-paved parking and drive areas and concrete pedestrian walkways.
Unimproved Areas	None.
Landscaped Areas	Landscaped road frontages, parking medians, and building perimeters.
Surface Water	None.
Potable Water Source	San Jose Municipal Water Company
Sanitary Sewer Utility	City of San Jose.
Storm Sewer Utility	City of San Jose.
Electrical Utility	Pacific Gas & Electric Company (PG&E).
Natural Gas Utility	PG&E.
Current Occupancy Status	The property buildings are approximately 75% occupied.
Unoccupied Buildings/Spaces/Structures	411 East Plumeria Drive (entire building) and 2860 Junction Avenue (southern portion of the first floor).
Number of Occupied Buildings	Four.
General Building Description	Five two-story commercial office and research and development buildings.
Number of Floors	Two stories per building.
Total Square Feet of Space (approximate)	Approximately 422,532 square feet.
Construction Completion Date (year)	Buildings located at 3050 Zanker Road, 2860 Junction Avenue, and 411 East Plumeria Drive were constructed circa 1985. Buildings located at 2880 and 2840 Junction Avenue were constructed circa 1990.
Construction Type	Concrete tilt-up structures built on slab-on-grade foundation. The original built-up roofing systems were recently overlaid with a sprayed polyurethane foam with an acrylic coating. A shipping/receiving dock area was observed at the rear of each building.
Interior Finishes Description	The five property buildings have interior finishes that include carpet, resilient floor tile, ceramic floor/wall tile, wallboard (and associated joint compound), and acoustic ceiling tiles.
Exterior Finishes Description	The five property buildings have exterior finishes that include painted concrete tilt-up panels. Exterior windows include window wall and aluminum and glass continuous ribbon window assemblies along the building fronts.
Cooling System Type	Base building cooling is provided to each of the five buildings by roof-mounted boxcar package units ranging in size from 50 to 75 tons each.

DRAFT

PROPERTY IMPROVEMENTS	
Heating System Type	Heating is provided to buildings 3050, 2880, and 2840 by roof-mounted gas-fired boilers that deliver heating hot water to perimeter variable air volume (VAV) boxes. Heating is provided to Buildings 2860 and 411 by roof-mounted gas-fired duct furnaces.
Emergency Power	Two tenant-owned/maintained emergency generators, powered by diesel (aboveground storage tanks [ASTs] with 180-gallon and 450-gallon capacities), are located at 3050 Zanker Road and 2840 Junction Avenue (see Section 6.4).

3.5 Current Uses of Adjoining Properties

Current uses of the adjoining properties were observed to be as follows:

Direction from Property	Address	Occupant(s) Name	Current Use	Potential Environmental Conditions
North (beyond Montague Expressway)	3100-3200 Zanker Road	Lockheed Martin Corporation	Commercial office, technology research	None
	345 Village Center Drive	Elan at River Oaks Apartments	Multi-family residential apartments	None
	680 P River Oaks Parkway	Hobee's Restaurant	Restaurant	None
	690 River Oaks Parkway	Washington Mutual	Banking center	None
	3151 Zanker Road (northwest, beyond the intersection of Montague Expressway and Zanker Road)	Broadcom	Commercial office	None
South (beyond Junction Avenue)	2950 Zanker Road	Commercial office building	Commercial office	None
	2851 Junction Avenue	County of Santa Clara Department of Child Support Services	Commercial office	None
	2841 Junction Avenue	Commercial office building	Commercial office	None
	2833 Junction Avenue	Commercial office building	Commercial office	None
	Not available (beyond the intersection of Junction Avenue and East Plumeria Drive)	Under construction	Under construction	None
East (beyond East Plumeria Drive)	510 East Plumeria Drive	Techwell	Commercial office	None

DRAFT

Direction from Property	Address	Occupant(s) Name	Current Use	Potential Environmental Conditions
	677 River Oaks Parkway	Commercial office building	Commercial office	None
	679 River Oaks Parkway	Commercial office building	Commercial office	None
	697 River Oaks Parkway	Commercial office building	Commercial office	None
West (beyond Zanker Road)	3081 Zanker Road	Semi	Commercial office	None
	3061 Zanker Road	Commercial office building	Commercial office	None

Lockheed Martin (3100-3200 Zanker Road), Honeywell Electronic Mater (677 River Oaks Parkway), MCI (2950 Zanker Road), Qualcomm Mems Inc. (2581 Junction Avenue), and Aurora Systems, Inc. (2841 Junction Avenue, Suite 200) are identified on federal and state database listings (refer to Section 5.1). Due to the absence of reported violations or releases, these listings are not considered to represent an environmental concern to the property. Based upon information obtained from the database review and visual observations performed during the site inspection, no further evaluation of the adjacent properties appears warranted at this time. A Site Plan illustrating the locations of the aforementioned properties is included in Appendix B.

DRAFT

4.0 USER PROVIDED INFORMATION

The following section summarizes information (if any) provided by LaSalle Investment Management, Inc. (User) with regard to the Phase I ESA. Documentation may be found in Appendix D or where referenced in this report.

4.1 Title Records

At the request of LaSalle Investment Management, Inc., ATC requested title records information from Ameristar Information Network, Ltd (Ameristar) through Environmental Data Resources, Inc. (EDR). A detailed discussion of the review is found in Section 5.3.4 of this report.

4.2 Environmental Liens or Activity and Use Limitations (AULs)

At the request of LaSalle Investment Management, Inc., ATC obtained title records information from EDR to provide the environmental lien search report, which was ultimately prepared by NETR Real Estate Research & Information. As such, a search for environmental liens and AULs was completed as part of the title records review and is discussed in Section 5.3.4 of this report.

4.3 Specialized Knowledge

User provided documentation (prior reports), which contain specialized knowledge regarding *recognized environmental conditions* associated with the property (refer to Section 5.3.9).

4.4 Significant Valuation Reduction for Environmental Issues

User provided no information regarding a significant valuation reduction for environmental issues associated with the property.

4.5 Owner, Property Manager and Occupant Information

User identified Menlo Equities Management Company as the property manager.

4.6 Reason for Performing Phase I ESA

According to the LaSalle Investment Management Guideline, the requested services will be used in connection with a commercial real estate transaction to identify environmental risks that will affect the value or the use of the property. The intent of the investigation will be to identify environmental conditions that present a business risk to the Property.

4.7 Other User Provided Documents

ATC was not provided with a completed "User Questionnaire" as required by ASTM 1527-05 Standards. The lack of this questionnaire constitutes a data gap; however, based on other available information and resources, this "*data gap*" is not considered significant.

Per the ASTM Standard Practice E 1527-05 ATC obtained the documents listed below from the User. Further discussion may be found in relevant sections of this report.

DRAFT

OTHER USER PROVIDED DOCUMENTS		
Title	**Date (if known)**	**Author and/or Source (if known)**
Phase I Environmental Site Assessment	May 27, 2005	SECOR International Incorporated
ALTA / ACSM Land Title Survey	June 2005	Kier & Wright Civil Engineers & Surveyors, Inc.
Asbestos Operations and Maintenance Plan	August 9, 2005	SECOR International Incorporated
Right to Rely on Phase I Environmental Site Assessment Report	September 19, 2006	SECOR International Incorporated
Phase I Environmental Site Assessment	September 22, 2006	Iris Environmental
Property Condition Assessment	October 27, 2006	Marx/Okubo Associates, Ltd.

DRAFT

5.0 RECORDS REVIEW

5.1 Standard Environmental Records

The regulatory agency database report discussed in this section, provided by EDR of Milford, Connecticut, was reviewed for information regarding reported releases of hazardous substances and petroleum products on or near the property. ATC also reviewed the "unmappable" (also referred to as "orphan") listings within the database report, cross-referencing available address information and facility names. Unmappable sites are listings that could not be plotted with confidence, but are potentially in the general area of the property based on the partial street address, city, or zip code. Any unmappable site that was identified by ATC as a being within the approximate minimum search distance from the property based on the site reconnaissance and/or cross-referencing to mapped listings, is included in the discussion within this section. The complete regulatory agency database report may be found in Appendix E.

The following is a summary of the findings of the database review.

SUMMARY OF FEDERAL, STATE AND TRIBAL DATABASE FINDINGS			
Regulatory Database	**Approx. Minimum Search Distance**	**Property Listed?**	**# Sites Listed**
Federal National Priority (NPL)	1 mile	No	0
Federal Delisted NPL	½ mile	No	0
Federal Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) list	½ mile	No	2
Federal CERCLIS No Further Remedial Action Planned (NFRAP)	½ mile	No	3
Federal Resource Conservation and Recovery Act (RCRA), Corrective Action facilities (CORRACTS)	1 mile	No	3
Federal RCRIS non- CORRACTS Treatment, Storage, and Disposal Facilities (TSD)	½ mile	No	2
Federal RCRA Generators	Property & Adjoining	**Yes**	**2**
Federal Institutional Control/Engineering Control Registry	Property	No	0
Federal Emergency Response Notification System (ERNS) list	Property	No	0
State and Tribal NPL	1 mile	No	2
State and Tribal CERCLIS	½ mile	No	10
State and Tribal Landfill or Solid Waste Disposal Sites	½ mile	No	0
State and Tribal Leaking Underground Storage Tanks (LUST)	½ mile	No	11
State and Tribal Registered Underground Storage Tanks (UST)	Property & Adjoining	No	0
State and Tribal Institutional Control/Engineering Control Registry	Property	No	0
State and Tribal Voluntary Cleanup Site	½ mile	No	1
State and Tribal Brownfield Sites	½ mile	No	0

DRAFT

5.1.1 Federal Agency Database Findings

The following listing(s) with a known or significant potential for release and impact on the property were identified in the federal agency databases searched:

Ultratech Inc.
3050 Zanker Road
Databases: RCRA-SQG, Facility Index System/Facility Registry System (FINDS), Facility and Manifest Data (HAZNET), San Jose HAZMAT Facilities (San Jose HAZMAT), and Emissions Inventory Data (EMI)
Approximate Distance from the Property: N/A (Property)
Assumed Groundwater Gradient: N/A (Property)
Regulatory Data Summary: The facility is listed as a small-quantity generator with no violations found. The FINDS listing, associated with other listings, indicates that the site is tracked by the RCRA database, California Hazardous Waste Tracking System, and National Emissions Inventory. The HAZNET database indicates that the following chemicals were removed from the facility for disposal via transfer station, recycler, or other means: unspecified solvent mixture waste, liquids with halogenated organic compounds greater than 1,000 milligrams per liter, waste oil and mixed oil, off-specification aged or surplus organics, unspecified organic liquid mixture, other organic solids, laboratory waste chemicals, alkaline solution without metals, liquids with pH less than two, and other inorganic solid waste. The San Jose HAZMAT listing classifies the facility as having miscellaneous complex firms and labs. The facility has been tracked by EMI since approximately 1996 and emissions are reported in listings dated 2004 and 2005. No violations were reported for the property.
Discussion: Based on the absence of reported violations or releases and current observations made during the site reconnaissance, these listings are not considered to represent an environmental concern to the property.

Ultratech Stepper Inc.
2880 Junction Avenue
Databases: RCRA-SQG, FINDS, and HAZNET
Approximate Distance from the Property: N/A (Property)
Assumed Groundwater Gradient: N/A (Property)
Regulatory Data Summary: The facility is listed as a small-quantity generator of hazardous waste, with no violations found. The FINDS database listing, associated with other listings, confirms that the site is tracked by the RCRA database and California Hazardous Waste Tracking System. The HAZNET database indicates that unspecified, organic liquid mixture and other organic solids were removed from the facility for disposal.
Discussion: Based on the absence of reported violations or releases and current observations made during the site reconnaissance, these listings are not considered to represent an environmental concern to the property.

Qualcomm Mems Inc.
2581 Junction Avenue
Databases: RCRA-SQG, FINDS, HAZNET, and San Jose HAZMAT
Approximate Distance from the Property: Adjacent to the south
Assumed Groundwater Gradient: Cross-gradient

DRAFT

Regulatory Data Summary: The facility is listed as a small-quantity generator with no violations found. The FINDS listing, associated with other listings, indicates that the site is tracked by the RCRA database. The HAZNET database indicates that oxygenated solvents (acetone, butanol, ethyl acetate, etc.) were removed from the facility for disposal. The San Jose HAZMAT listing indicates that the facility is classified as having miscellaneous complex firms and labs with no violations reported.
Discussion: Based on the absence of reported violations or releases, these listings are not considered to represent an environmental concern to the property.

IT Corp San Jose Transfer Facility / Snider JR/RW Trucking
3010 Zanker Road
Databases: RCRA-SQG, FINDS, HAZNET, RCRA-TSDF, CORRACTS, CERC-NFRAP, and Envirostor
Approximate Distance from the Property: EDR plots the facility in two locations, six feet to the west-southwest and 620 feet to the north-northwest. Records maintained at the Department of Toxic Substances Control indicate that the facility was located greater than 5,000 feet to the north of the property.
Assumed Groundwater Gradient: Cross-gradient
Regulatory Data Summary: The facility or area was assigned a low correction action priority in March 1991. Eight RCRA violations (dated between 1987 and 1988), reported for the facility, achieved compliance in 1988 and 1989. The FINDS database listing, associated with other listings, indicates that the facility is tracked by the RCRA database and New Jersey Environmental Management System. The HAZNET database indicates that unspecified organic liquid mixture and unspecified oil-containing waste were removed from the facility for disposal. The CERC-NFRAP listing indicates that a discovery (EDR listing does not elaborate on the type of discovery) was made in August 1990, preliminary assessment was performed in March 1991, and the site was later archived in January 1996. The Envirostor listing reports the potential contaminants as halogenated organics compounds, lead, and Chromium VI. Approximately 54 cubic yards of hazardous soil and 1,830 cubic yards of non-hazardous soil were excavated, removed, and disposed off-site. The Regional Water Quality Control Board is reportedly the lead agency. Removal action completion reports were completed in 1983 and 1991. Site screening was completed in June 2002. No use restrictions are reported for the site. ATC reviewed available information for the facility from the Department of Toxic Substances Control (DTSC) Envirostor website (http://www.envirostor.dtsc.ca.gov/public/). Envirostor information indicates that the non-operating hazardous waste transfer facility is listed as historical/inactive with acceptable clean closure dated December 10, 1991. Envirostor plots the facility at the southwest corner of the intersection of Zanker Road and Innovation Drive, which roughly corresponds to EDR's estimation of 620 feet to the north-northwest. ATC additionally performed a file review at the DTSC; available topographic maps of the facility indicate that IT Corp was located generally north of the property by at least 5,000 feet. DTSC records also confirm that facility closure and corrective active have been completed.
Discussion: Based on the actual distance from the property (greater than 5,000 feet to the north) and current regulatory status (corrective action complete), these listings are not considered to represent an environmental concern to the property.

Based on distance, topography, assumed groundwater gradient, current regulatory status, and/or the absence of reported releases, none of the other sites listed in the federal agency databases are considered to represent a likely past, present or material threat of release on the property.

DRAFT

5.1.2 State and Tribal Database Findings

The following listing(s) with a known or significant potential for release and impact on the property were identified in the state and tribal databases searched:

U.S. Postal Service
2731 Junction Avenue
Databases: LUST, HAZNET, Cortese, and HIST LUST SANTA CLARA
Approximate Distance from the Property: 26 feet to the south
Assumed Groundwater Gradient: Cross-gradient
Regulatory Data Summary: A gasoline release affected groundwater and achieved regulatory case closure in October 2001. The HIST LUST SANTA CLARA listing confirms that regulatory case closure was granted in October 2001. The HAZNET database indicates that empty containers of 30 gallons or more and unspecified organic liquid mixture were removed from the facility for disposal via recycler.
Discussion: Based on distance, location, and/or current status with the environmental agencies, this facility does not appear to represent an environmental concern to the property.

Lockheed Martin
3100 Zanker Road, Suite 240 / 3110 Zanker Road / 3120 Zanker Road, Suite 280
Databases: San Jose HAZMAT
Approximate Distance from the Property: Adjacent to the north, beyond Montague Expressway
Assumed Groundwater Gradient: Cross-gradient
Regulatory Data Summary: The San Jose HAZMAT listing indicates that the facility is classified as an auto wrecking or miscellaneous simple facility with no violations reported.
Discussion: Based on the absence of reported violations or releases, the listing is not considered to represent an environmental concern to the property.

Honeywell Electronic Mater
677 River Oaks Parkway
Databases: San Jose HAZMAT
Approximate Distance from the Property: Adjacent to the east, beyond the intersection of Montague Expressway and East Plumeria Drive
Assumed Groundwater Gradient: Upgradient
Regulatory Data Summary: The San Jose HAZMAT listing indicates that the facility is classified as an auto repair facility with no violations reported.
Discussion: Based on the absence of reported violations or releases, the listing is not considered to represent an environmental concern to the property.

MCI
2950 Zanker Road
Databases: San Jose HAZMAT
Approximate Distance from the Property: Adjacent to the south, beyond Junction Avenue
Assumed Groundwater Gradient: Cross-gradient
Regulatory Data Summary: The San Jose HAZMAT listing indicates that the facility is classified as having miscellaneous complex firms and labs with no violations reported.

DRAFT

Discussion: Based on the absence of reported violations or releases, the listing is not considered to represent an environmental concern to the property.

Aurora Systems, Inc.
2841 Junction Avenue, Suite 200
Databases: San Jose HAZMAT
Approximate Distance from the Property: Adjacent to the south, beyond Junction Avenue
Assumed Groundwater Gradient: Cross-gradient
Regulatory Data Summary: The San Jose HAZMAT listing indicates that the facility is classified as an auto wrecking or miscellaneous simple facility with no violations reported.
Discussion: Based on the absence of reported violations or releases, the listing is not considered to represent an environmental concern to the property.

Based on distance, topography, assumed groundwater gradient, current regulatory status, and/or the absence of reported releases, none of the other sites listed in the state and tribal databases are considered to represent a likely past, present or material threat of release on the property.

5.1.3 Local Environmental Records Sources

Local Health Department

ATC contacted the County of Santa Clara Department of Environmental Health (CSCDEH) to review available information regarding the property. Records on file were dated from 2000 to 2007, pertained to Ultratech operations, and included hazardous material inventory statements, hazardous waste treatment notification, an operations and maintenance manual for Ultratech's pH neutralization system, influent analyses, wastewater treatment system closure proposal, and financial assurance annual certification. The hazardous waste treatment notification, dated 2001, indicated the onsite presence of a single tank, two stage acid waste neutralization system (located at 2880 Junction Avenue) which processed approximately 30,000 gallons per month of waste water (corrosive developer waste and deionized water from various lab rinse operations) on a continuous interval. A non-hazardous aqueous waste was discharged to the municipal sewer system. The system was reportedly monitored by digital flow meters and a continuous chart recorder. No current violations are reported.

Two hazardous waste treatment systems are currently located on the property and are further discussed in Section 6.9.

ATC's review of CSCDEH records did not reveal the presence of *recognized environmental conditions* at the property.

Local Environmental Agency

ATC contacted the Regional Water Quality Control Board (RWQCB) to review available information regarding the property. According to Ms. Melinda Wong of the RWQCB (November 30, 2007 telephone conversation), no records are available for the property.

DRAFT

Department of Toxic Substances Control

ATC contacted the DTSC to review available information regarding the property. According to Ms. Lule Varela of the DTSC (December 3, 2007 written correspondence), no records are available for the property.

Bay Area Air Quality Management District

ATC contacted the Bay Area Air Quality Management District (BAAQMD) to review available information regarding the property. Available records provided by the BAAQMD pertain to Ultratech operations performed at 3050 Zanker Road and 2880 Junction Avenue.

Records for 3050 Zanker Road reference photolithographic steppers, an emergency generator, solvent cleaning, and a wipe cleaning area utilized by the research and development lab. Emission sources include fuel combustion and organic solvent. Approved emissions (permit-to-operate renewed on October 6, 2007) are listed as 0.11 tons/year organics, 0.01 tons/year nitrogen oxides, and 0.01 tons/year carbon monoxide. BAAQMD records for the tenant are dated between 1994 and 2007.

Records for 2880 Junction Avenue reference organic solvent emission sources associated with the research and development application lab. Approved emissions (permit-to-operate renewed on February 1, 2007) are listed as 0.10 tons/year organics. BAAQMD records for the tenant are dated between 2000 and 2007.

No violations are reported. ATC's review of BAAQMD records did not reveal the presence of *recognized environmental conditions* at the property.

Fire Department

ATC reviewed available records for the property in the City of San Jose Fire Department (SJFD) electronic database, located at San Jose City Hall. Available records predominantly pertain to Ultratech operations and include hazardous waste inventory statements, hazardous material business plans, hazardous materials storage system permits (including AST/piping system liquid for liquid solvent waste, 3050 Zanker Road), and hazardous material plan checks.

A hazardous materials inventory statement, dated 1992, references a diesel-powered emergency generator, with a 200-gallon diesel AST, formerly located at 411 East Plumeria Drive. The generator was associated with Viking Freight Systems, a former building occupant.

A hazardous materials storage system installation application confirms that a diesel-powered emergency generator, with a 450-gallon AST, was installed at 2840 Junction Avenue in 1999. The corresponding tenant, at the date of installation, was Lifeguard Healthcare.

A "Geotechnical Engineering Investigation, Proposed Mechanical Yard," prepared by Bay Area Geotechnical Group and dated August 6, 2004, was available for review. The geotechnical investigation was prepared prior to the construction of a mechanical yard along the western edge of the building located at 3050 Zanker Road. During the geotechnical investigation, groundwater was encountered at depths between 12.5 and 18.5 feet below ground surface. The report also typified soil conditions at the property as follows:

DRAFT

The subsurface soil conditions encountered at the boring locations are typical of alluvium, i.e., interlayered and interfingured deposits of gravels, sands, silts, clays and mixtures thereof. The near surface soils up to the depth of 19 feet below the ground surface (bgs) consist of stiff to very stiff lean clay. Increasing proportions of sands and silts were encountered at about 19 feet bgs. At about 21 feet, the soils encountered in the boreholes transitioned to medium dense silty sand. The silt content in the subsurface soils continued to decrease with depth and as a result the soil layer starting at 29 feet was logged as loose fine to medium sand with a trace of silt. The thickness of this layer was estimated to be about 6 feet. Medium stiff lean clay was encountered below the sand layer, to the maximum depth of drilling – 40.5 feet.

No violations are reported. ATC's review of SJFD records did not reveal the presence of *recognized environmental conditions* at the property.

Department of Planning and Zoning

ATC spoke with Ms. Janice (last name withheld) of the SJPD (December 6, 2007 telephone conversation) who stated that the property is zoned Industrial Park which is appropriate for the current use.

Building Department

ATC reviewed available building department records at the City of San Jose Building Department (SJBD). Available records are discussed in Section 5.3.7.

Electrical Utility Company

ATC spoke with Mr. Brian (last name withheld) of the City of San Jose Public Works Department (December 7, 2007 telephone conversation) who confirmed that PG&E provides electricity to the property. Please refer to Section 6.6 for further information on the potential presence of suspect PCB-containing electrical equipment on the property.

Water Utility

ATC spoke with Mr. Brian (last name withheld) of the City of San Jose Public Works Department (December 7, 2007 telephone conversation) who confirmed that the San Jose Municipal Water Company (Muni Water) provides potable water utilities to the property. Mr. Brian (last name withheld) estimated that the water system for the property was installed in 1984 and knew of no problems with regard to the quality of drinking water supplied to the property.

Potable water in the property vicinity is provided by Muni Water. ATC reviewed the 2007 Water Quality Report produced by Muni Water. Muni Water purchases a blend of Hetch Hetchy water and treated water from the San Francisco Public Utilities Commission (SFPUC). In 2006, the Hetch Hetchy Watershed provided most of the total SFPUC water supply, with the rest supplemented by local watersheds in Alameda and Santa Clara Counties. The major water source originates from spring snowmelt flowing down the Tuolumne River, and is stored in the Hetch Hetchy Reservoir. The Alameda Watershed spans more than 35,000 acres in Alameda and Santa Clara Counties. Surface water from rainfall and runoff is collected in the Calaveras and San Antonio Reservoirs. The SFPUC's Water Quality Bureau regularly collects and tests water samples from reservoirs and designated sampling points throughout the system to ensure that the SFPUC's water meets or exceeds federal and state drinking water standards. In 2006,

DRAFT

Muni Water met all state and federal primary drinking water standards. No concerns were noted during the review of Muni Water data.

ATC spoke with Mr. Mansour Nasser, representative of Muni Water (December 10, 2007 telephone communication), who indicated that an approximately 20,000-gallon AST, located north of the property buildings near 3050 Zanker Road, is owned by Muni Water. The "surge tank" is utilized to maintain system pressure when water is drawn from an adjacent well. Mr. Nasser stated that water is currently drawn from Hetch Hetchy, as opposed to local wells; therefore, the "surge tank" is inactive.

Sewer Utility

ATC spoke with Mr. Brian (last name withheld) of the City of San Jose Public Works Department (December 7, 2007 telephone conversation) who confirmed that the City of San Jose provides municipal storm and sanitary utilities to the property. Mr. Brian (last name withheld) estimated that the system is approximately 23 years-old and knew of no problems relating to the storm or sanitary sewer system in the property vicinity.

Other Local Environmental Records Sources

No additional local environmental records sources were reviewed.

5.2 Physical Setting Sources

5.2.1 Topography

Based on the United States Geological Survey (USGS) 7.5-Minute Topographic Map Series, *Milpitas, California, Quadrangle* Topographic Map, 1961 (photorevised in 1980), the property is located approximately 26 feet above mean sea level (MSL) and has a sloping topography towards the west.

A copy of the topographic map is included in Appendix A.

5.2.2 Geology

The property is located in the northern portion of San Jose. This area of Santa Clara County is primarily underlain by alluvium that has accumulated in the area since the Holocene time, according to the 1991 compilation by D.L. Wagner, E.J. Bortugno, and R.D. McJunkin, *Geologic Map of the San Francisco-San Jose Quadrangle, California*.

5.2.3 Soils

ATC reviewed soil data for the property that was provided in the EDR database report. According to the information provided in the EDR database report, soils in the property vicinity are classified as Botella clay loam at depths ranging between zero and nine inches below ground surface (bgs), silty clay loam at depths ranging between nine and 41 inches bgs, and sandy clay loam at depths ranging between 41 and 76 inches bgs. The hydrologic group is designated as Class B with moderate infiltration rates. The soils are moderately well and well drained soils with moderately coarse textures. The soil does not meet the requirements of a hydric soil. Further onsite soil discussion is provided in Section 5.1.3.

DRAFT

ATC did not observe obvious evidence of imported fill material during the site reconnaissance or through a review of available historical or physical setting sources.

5.2.4 Hydrology

Considering the surface topography for the property area, as interpreted from the Milpitas Quadrangle map, local groundwater would be expected to flow towards the west. Therefore, in assessing potential off-site environmental impacts, facilities located directly east of the property are of primary concern. However, actual groundwater flow direction is often locally influenced by factors such as underground structures, seasonal fluctuations, soil and bedrock geology, production wells, and other factors beyond the scope of this study. The actual groundwater flow direction under the property can be accurately determined only by installing groundwater-monitoring wells, which was beyond the scope of this project.

ATC reviewed a "Geotechnical Engineering Investigation, Proposed Mechanical Yard," prepared by Bay Area Geotechnical Group and dated August 6, 2004. The geotechnical investigation was prepared prior to the construction of a mechanical yard along the western edge of the building located at 3050 Zanker Road. During the geotechnical investigation, groundwater was encountered at depths between 12.5 and 18.5 feet below ground surface.

ATC reviewed the online USGS National Atlas website (http://nationalatlas.gov/natlas/Natlasstart.asp) for available potable aquifer information for the property. According to the National Atlas website, the property is located above a California Coastal Basin aquifer. ATC spoke with Mr. Dave Higgins of the Santa Clara Valley Water District (December 11, 2007 telephone conversation). According to Mr. Higgins, the property is located above the Santa Clara aquifer.

5.2.5 Other Physical Setting Sources

Flood Plain Map

According to the Federal Emergency Management Agency (FEMA), the property is located in Flood Zone A, which is identified by FEMA as "areas of 100-year flood; base flood elevations and flood hazard factors not determined" (Community Number 060349, Panel Number 0008F, dated December 16, 1988).

A copy of the flood plain map is included in Appendix L.

Wetlands Map

Based on a review of the United States Department of the Interior, National Wetlands Inventory (NWI) Map (online Wetlands Mapper at http://www.nwi.fws.gov/), there are no jurisdictional wetlands on the property. Furthermore, ATC did not observe any areas suggestive of wetlands at the property.

A copy of the NWI map is included in Appendix L.

Endangered Species

The review of endangered species was not required by the scope of work for this Phase I ESA.

DRAFT

5.3 Historical Records Sources

The following table summarizes the findings of the research presented below pertaining to historical property and surrounding area uses.

HISTORICAL USE SUMMARY				
Period	**Identified Historical Uses**		**Source(s)**	**Intervals/Comments**
	Property	**Surrounding Area**		
Prior to 1940	Agricultural	Agricultural Residential	Aerial Photographs Topographic Maps	A 1939 aerial photograph was the earliest record found.
1940-1960	Agricultural	Agricultural Residential	Aerial Photographs Topographic Maps City Directories	No significant data gaps.
1961-1980	Agricultural	Agricultural Commercial	Aerial Photographs Topographic Maps City Directories	No significant data gaps.
1981 to present	Agricultural Undeveloped Commercial/R&D	Agricultural Undeveloped Residential Commercial	Aerial Photographs Topographic Maps City Directories Tax Records Building Department Zoning Department	The existing property buildings were constructed in approximately 1985 (3050, 2860, and 411) and 1990 (2880 and 2840).

5.3.1 Aerial Photographs

ATC reviewed available aerial photographs of the property and surrounding areas as provided by EDR. Available aerial photographs ranged from 1939 to 1998. The available aerial photograph intervals did not strictly comply with the minimum review criteria specified in the LaSalle Investment Management, Inc. Guideline. However, based on the other historical records available, the fact that the property was undeveloped prior to 1985, and the minimal use change since development of the property, it is ATC's professional opinion that this limitation does not affect the conclusions of this report. The following are descriptions and interpretations from the aerial photograph review.

AERIAL PHOTOGRAPH SUMMARY		
Year	**Scale**	**Comments**
1939, 1956, and 1965	1 inch = 555 feet, 1 inch = 555 feet, and 1 inch = 333 feet, respectively	**Property**: Agricultural land. **Surrounding Area**: The adjacent properties to the north, east, south and west appear to be developed as agricultural land. What appears to be a residence or farmhouse is located to the north of the property.
1982	1 inch = 690 feet	**Property**: Undeveloped land. **Surrounding Area**: The adjacent properties include Montague Expressway followed by undeveloped land to the north, East Plumeria Drive followed by commercial development to the east, Junction Avenue followed by undeveloped or graded land to the south, and Zanker Avenue followed by undeveloped or agricultural land to the west.

DRAFT

AERIAL PHOTOGRAPH SUMMARY		
Year	**Scale**	**Comments**
1993 and 1998	1 inch = 666 feet and 1 inch = 666 feet, respectively	**Property**: Appears to be developed with the current property building configuration. **Surrounding Area**: The adjacent properties include Montague Expressway followed by commercial and residential development to the north, East Plumeria Drive followed by commercial development to the east, Junction Avenue followed by commercial development and undeveloped land to the south, and Zanker Avenue followed by commercial development to the west.

The review of aerial photographs did not identify past uses indicating *recognized environmental conditions* at the property or surrounding area.

Historical use of the property has included agriculture. Agricultural uses may potentially represent an environmental concern, as the historical use of pesticides and herbicides on the property may result in residual pesticides and herbicides in surface soils. However, based on the grading and development of the property and the fact that it has been ATC's experience that pesticides and herbicides originally applied for agricultural purposes generally do not require remedial action, the historical use of agricultural chemicals on the property is not considered to represent an environmental concern.

Copies of reproducible aerial photographs are included in Appendix F.

5.3.2 Fire Insurance Maps

Sanborn Fire Insurance Maps were initially produced to provide information to the insurance industry on the fire risks associated with buildings and other structures located within urban areas. These maps may now be utilized as a resource to document land use and structural change over time.

A search for fire insurance maps for the property and surrounding area was conducted by EDR. No such maps for the property were available. A copy of the No Sanborn Map Coverage letter is included in Appendix G.

5.3.3 Property Tax Files

ATC reviewed available tax files maintained at the Santa Clara County Assessor's Office for historical ownership information on the property. Documentation is included in Appendix G. The review of tax files did not identify past uses indicating *recognized environmental conditions* at the property.

TAX RECORDS OWNERSHIP SUMMARY	
Owner	**Date**
WB Montague Park Owner LLC	September 2006 to present
Amstar 8 LLC	August 2005 to September 2006
Montague LLC	January 1997 to August 2005

5.3.4 Recorded Land Title Records

At the request of LaSalle Investment Management, Inc., ATC has requested title records information from EDR who contracted with Ameristar located in Southlake, Texas. Deed records were reviewed from 1940

DRAFT

to 2007. The current owner was listed as WB Montague Park Owner, LLC. The following is a summary of the recorded land title records search.

LAND TITLE RECORDS OWNERSHIP SUMMARY			
Grantor	**Grantee**	**Date**	**Inst. No.**
Martin T. Waddington and Vida Waddington	Walter G. Brown	September 20, 1940	N/A
Walter W. Brown as Co-Trustee under the Trust created by the Tenants of the Last Will and Testament of Walter G. Brown, deceased	George M. Brown (1/3) and Walter W. Brown (1/3) and Shirley Brown Fisher (1/3)	May 20, 1977	N/A
George M. Brown (1/3) and Walter W. Brown (1/3) and Shirley Brown Fisher (1/3)	Southern Pacific Industrial Development Company	May 18, 1977	N/A
Southern Pacific Industrial Development Company	Exchange Intemediary, Inc.	December 16, 1986	9070280
Exchange Intemediary, Inc.	Equitable Life Assurance Society of the United States	December 16, 1986	9070281
Equitable Life Assurance Society of the United States	Montague, LLC	January 29, 1997	13593423
Montague, LLC	Amstar-8, LLC	August 24, 2005	18540241
Amstar-8, LLC	WB Montague Park Owner, LLC	September 29, 2006	19124893

At the request of LaSalle Investment Management, Inc., ATC contracted EDR to provide the environmental lien search report, which was ultimately prepared by NETR Real Estate Research & Information. There were no environmental liens or other activity and use limitations (AULs) identified in connection with the property. Title to the property is vested in WB Montague Park Owner LLC as recorded via a deed dated September 28, 2006, recorded September 9, 2006. The title was received from AMSTAR-8 LLC. A copy of the environmental lien search report is included in Appendix D.

5.3.5 Historical USGS Topographic Quadrangles

ATC reviewed available historical USGS Topographic Quadrangles for information regarding past uses of the property. EDR provided historical topographic maps dated 1953, 1961, 1961 (photorevised 1968), 1961 (photorevised 1973), and 1961 (photorevised 1980). Property structures are not depicted on any of the available historical topographic maps. Topographic maps dated 1953 through 1973 depict agricultural land in the property vicinity. The 1980 topographic map depicts undeveloped land in the property vicinity with what appears to be Montague Expressway to the north. Documentation is included in Appendix G. The review of historical USGS Topographic Quadrangles did not identify past uses indicating *recognized environmental conditions* at the property or surrounding area.

5.3.6 City Directories

A City Directory Abstract for the property and surrounding area was provided by EDR in order to evaluate information indicating past occupants/uses of the property. Directories were reviewed at approximately five-year intervals for the years 1922 through 2001. The following are descriptions and interpretations from ATC's historical city directory review. Documentation is included in Appendix G.

DRAFT

CITY DIRECTORY SUMMARY	
Year	**Comments**
1922 - 1974	**Property**: Addresses are not listed in the research source. **Surrounding Area**: Addresses are not listed in the research source.
1975	**Property**: Addresses are not listed in the research source. **Surrounding Area**: A single family residence (2810 Junction Avenue) is located in the property vicinity.
1978 - 1982	**Property**: Addresses are not listed in the research source. **Surrounding Area**: Addresses are not listed in the research source.
1985 - 1986	**Property**: Addresses are not listed in the research source. **Surrounding Area**: Various commercial businesses are located further south of the property (2890 and 2895 Zanker Road).
1991	**Property**: Compression Labs (2860 Junction Avenue). **Surrounding Area**: Various commercial businesses are located further south of the property (2880, 2881, 2890, and 2911 Zanker Road). Various commercial businesses are located south of the property (2833 and 2841 Junction Avenue).
1996	**Property**: General Instrument (2860 Junction Avenue) and Diamond Multimedia (2880 Junction Avenue). **Surrounding Area**: Various commercial businesses are located further south of the property (2890 Zanker Road). Various commercial businesses are located south of the property (2833 and 2841 Junction Avenue).
2000	**Property**: Communications Fujitsu Network / Fujitsu Network / Transmission Systems (2860 Junction Avenue) and Diamond Computers / Systems Diamond Multimedia (2880 Junction Avenue). **Surrounding Area**: Various commercial businesses are located further south of the property (2890, 2911, and 2912 Zanker Road). Various commercial businesses are located south of the property (2833 and 2841 Junction Avenue).
2001	**Property**: Addresses are not listed in the research source. **Surrounding Area**: Addresses are not listed in the research source.

The review of city directories did not identify past uses indicating *recognized environmental conditions* at the property or surrounding areas.

5.3.7 Building Department Records

ATC reviewed available historical building department records at the City of San Jose Building Department (SJBD) for information regarding past uses of the property. Available records included finalized building permits for each property building, dated 1984. Individual tenant suites have undergone periodic tenant improvements since the original construction. Although building permits for each property building were approved in 1984, additional historical and supporting documentation indicate that the property buildings were constructed in two phases; the first three buildings (3050 Zanker Road, 2860 Junction Avenue, and 411 East Plumeria Drive) were constructed in 1985 and the last two (2880 and 2840 Junction Avenue) were constructed in 1990. The review of building department records did not identify past uses indicating *recognized environmental conditions* at the property. Documentation is included in Appendix G.

5.3.8 Zoning/Land Use Records

ATC reviewed available historical zoning/land use records at the SJPD for information regarding past uses of the property. According to Ms. Janice (last name withheld) of the SJPD (December 6, 2007 telephone conversation), the property is currently zoned as Industrial Park. The zoning designation is appropriate for the current use. No historical zoning/land use records regarding past uses of the property were readily available for review. The review of historical zoning/land use records did not identify past uses indicating *recognized environmental conditions* at the property or surrounding area. Documentation is included in Appendix G.

5.3.9 Prior Reports

The following provides a summary of information from prior reports made available to ATC for review. Documentation is included in Appendix H.

PRIOR REPORT SUMMARY			
Consultant/ Report Title	**Date**	**Environmental Conditions**	**Conclusions & Recommendations**
SECOR International Incorporated / Phase I Environmental Site Assessment	5/27/05	• Reviewed Hygientics Environmental Services, Inc. prior Phase I ESA, dated December 1996, in which no RECs were identified. Asbestos was detected in grey roofing sealant, transite roofing screens, beige 12"x12" vinyl floor tiles in the storage room of 2840 Junction Avenue, and in beige/black mastic in the roof access room. • Reviewed Terracon prior Phase I ESA, dated December 1999, in which four onsite monitoring wells were considered to represent an REC. • Reviewed Well Destruction Details (Lowney Associates, February 2000) which contained monitoring well destruction details of four onsite groundwater monitoring wells. • Two diesel-powered backup generators, with approximately 200-gallon ASTs were observed on the property.	• The assessment revealed no evidence of RECs or HRECs in connection with the property. No further investigation was recommended.
Iris Environmental (Iris) / Phase I Environmental Site	9/22/06	• Two onsite diesel-powered emergency generators; one	• No evidence of RECs or de minimis conditions in

DRAFT

PRIOR REPORT SUMMARY			
Consultant/ Report Title	**Date**	**Environmental Conditions**	**Conclusions & Recommendations**
Assessment		operated by Ultratech Inc. and one operated by Pillar Data Systems. • An emergency generator enclosure was installed at 411 East Plumeria Drive in 1988. • Iris observed a mechanical and processing yard on the southern side of 3050 Zanker Road which employs wastewater neutralization systems. • Iris observed a 1,050 pound stainless steel tank of tetrafluoroethane used as refrigerant in the clean room of 3050 Zanker Road. • Four prior onsite monitoring wells were properly decommissioned in 2000. The wells were originally installed in November 1986 and groundwater depth was measured at between 13 and 21 feet bgs.	connection with the property or adjacent properties. No recommendations were offered.

DRAFT

The review of prior reports did not identify past uses indicating *recognized environmental conditions* at the property or surrounding area. ATC generally concurs with the findings of the prior documentation. However, the reports identified the presence of ACMs within the property buildings. Please refer to Section 8.1 for additional information pertaining to asbestos at the property.

ATC notes that prior reports did not specifically discuss reasoning for onsite well installation in 1986. No groundwater monitoring well/sampling records, pertaining to these wells, were available for review at local environmental agencies. ATC spoke with Mr. Dave Higgins of the Santa Clara Valley Water District (December 11, 2007 telephone conversation) who inspected well destruction activities at the property. Mr. Higgins indicated that if groundwater monitoring wells were installed for geotechnical investigations, unrelated to potential threats to environmental health, the previous owners are not required to submit reports and/or sampling records to environmental agencies. Given that the former onsite groundwater monitoring wells did not appear to have been associated with on or offsite releases, were not considered to represent RECs to the property in prior reports, and were properly decommissioned in 2000, ATC does not consider the former presence of the groundwater monitoring wells to represent an environmental concern.

ATC makes no warranty, guaranty or certification regarding the quality, accuracy or reliability of any prior report provided to ATC and discussed in this Phase I ESA report. ATC expressly disclaims any and all liability for any errors or omissions contained in any prior reports provided to ATC and discussed in this Phase I ESA report.

5.3.10 Other Historical Sources

No other historical sources were reviewed.

DRAFT

6.0 SITE RECONNAISSANCE

The following is a summary of visual and/or physical observations of the property on the day of the site visit. Photographs can be found in Appendix C.

6.1 Methodology and Limiting Conditions

The site reconnaissance consisted of visual and/or physical observations of: the property and improvements; adjoining sites as viewed from the property; and, the surrounding area based on visual observations made during the trip to and from the property. Unimproved portions of the property (if any) were observed along the perimeter and in a general grid pattern in safely accessible areas. Building exteriors (if any) were observed along the perimeter from the ground, unless described otherwise. Building interiors (if any) were observed as they were made safely accessible, unless described otherwise. At the time of the site reconnaissance, the weather was cool and sunny. There were no visibility limitations due to weather conditions.

ATC was able to access the majority of the property. Due to safety considerations, the roofs of the subject property buildings were not accessed at the time of the property visit. ATC was not granted access to clean rooms within research and development areas or machinery areas in which noise levels warranted additional personal protective equipment. Access was not provided to a portion of the storage closets and elevator machine room, within the building located at 411 East Plumeria Drive, due to key limitations (lockbox access). No other access restrictions were encountered.

6.2 Hazardous Substance Use, Storage, and Disposal

ATC observed the use, storage or disposal of hazardous substances on the property as summarized below.

HAZARDOUS SUBSTANCE SUMMARY TABLE

Type/Use of Material	Quantity (No./Size)	Container Type	Location	Hazardous Waste?	MSDS or Labels?	Container Condition	Evidence of Release?
Liquid nitrogen	Two / 265-liter and one / 230-liter	Cylinders	3050 and 2880 buildings	No	Yes	Good	No
Used mercury arc lamps	One / 10-gallon	Metal container	3050 building lab area	Yes (universal waste)	Yes	Good	No
Used batteries	~Six / five-gallon	Plastic containers	3050 and 2880 buildings (Ultratech break areas)	Yes (universal waste)	Yes	Good	No
Waste with developer (wipes)	One / 30-gallon	Plastic trash can with lid	3050 building lab	Yes	Yes	Good	No

DRAFT

HAZARDOUS SUBSTANCE SUMMARY TABLE							
Type/Use of Material	**Quantity (No./Size)**	**Container Type**	**Location**	**Hazardous Waste?**	**MSDS or Labels?**	**Container Condition**	**Evidence of Release?**
Mixed solvent waste	One / five-gallon, one / 30-gallon, and one / 55-gallon	Metal and plastic containers	3050 and 2880 buildings	Yes	Yes	Good	No
Cooling water (laser heat exchanger)	Four / 55-gallon	Plastic drums	3050 building	No	Yes	Good	No
Waste stripper resist	Two / 55-gallon	Drum	3050 and 2880 buildings	Yes	Yes	Good	No
Lab trash	Two / 55-gallon	Drum	3050 and 2880 buildings	Yes	Yes	Good	No
Developer	160 / one-gallon	Plastic retail package	3050 and 2880 buildings (chemical storage cabinets)	Yes	Yes	Good	No
Stripper	75 / one-gallon	Plastic retail package	3050 and 2880 buildings (chemical storage cabinets)	Yes	Yes	Good	No
Photo resist	10 / one-gallon	Plastic retail package	3050 and 2880 buildings (chemical storage cabinets)	Yes	Yes	Good	No
Acetone	12 / one-gallon	Plastic retail package	3050 and 2880 buildings (chemical storage cabinets)	No	Yes	Good	No
Isopropyl alcohol	12 / one-gallon	Plastic retail package	3050 and 2880 buildings (chemical storage cabinets)	No	Yes	Good	No
Sulfuric acid	One / 30-gallon	Plastic container	2880 building	Yes	Yes	Good	No

DRAFT

HAZARDOUS SUBSTANCE SUMMARY TABLE							
Type/Use of Material	**Quantity (No./Size)**	**Container Type**	**Location**	**Hazardous Waste?**	**MSDS or Labels?**	**Container Condition**	**Evidence of Release?**
Sodium hydroxide	One / 330-gallon	Plastic container	2880 building	Yes	Yes	Good	No
Compressed nitrogen	One / 1,000-liter and two / standard	Cylinder	2880 building	No	Yes	Good	No
Flux remover	30 / ~14 ounce	Aerosol spray cans	2880 building (Foveon Inc. work station)	No	Yes	Good	No
Paint	16 / five-gallon, 10 / one-gallon, and one / one-pint	Retail packages	411 building (loading area)	No	Yes	Good	No
Janitorial supplies	150 / five-gallons or less	Retail packages	Janitorial closets throughout	No	Yes	Good	No
Engine oil	One / one-gallon	Retail package	2840 building (backup generator area)	No	Yes	Good	No
Forklift batteries	Three / standard	Standard retail	3050 and 2840 buildings (forklifts)	Yes	Yes	Good	No

DRAFT

ATC observed the use and storage of these materials at the property to be consistent with generally accepted practices and the containers and surrounding surfaces were generally in good condition with no observed leaks or spills. Secondary containment was observed to be associated with hazardous waste storage containers. Based on the observed conditions, the hazardous substance use, storage and disposal at the property is not considered to represent a *recognized environmental condition*. Hazardous waste, stored within secondary containment, is reportedly removed from the property buildings by contracted waste haulers on specific intervals (varies per waste stream).

6.3 Underground Storage Tanks (USTs)

ATC did not observe evidence of USTs on the property.

A copy of the Exhibit VI – AST/UST Questionnaire is included in Appendix L.

6.4 Aboveground Storage Tanks (ASTs)

ATC observed evidence of ASTs on the property as summarized below.

AST SUMMARY TABLE							
Location	**Year Installed**	**Construction Materials**	**Contents**	**Capacity (gallons)**	**Use Status**	**Registration**	**Leak Detection & Prevention**
East of 3050	Unknown	Steel	Diesel	~180 gallons	Active	Yes	Yes
East of 2840	1999	Steel	Diesel	~450 gallons	Active	Yes	Yes
2880	Unknown	Plastic	Reverse osmosis deionized water	~1,000 gallons	Active	N/A	N/A

The ASTs, enclosed within emergency generators, contain diesel fuel to power emergency generators for 3050 Zanker Road and 2840 Junction Avenue. The generators are reportedly owned and operated by the corresponding building tenants. According to the site contacts, no known leaks or spills have occurred with respect to the ASTs. ATC noted the generators to be in good condition with no leaks or spills observed on the underlying concrete pads or surrounding area. BAAQMD permit records are further discussed in Section 5.1.3. Given the equipment age and observed condition, the ASTs are not considered to represent an environmental concern to the property.

ATC notes that a vacant generator enclosure was observed to the west of 411 East Plumeria Drive. SJFD records confirm that a diesel emergency generator was installed in 1992. The generator has since been removed and ATC observed the enclosure, and underlying concrete, to be in good condition with no visible evidence of leaks or spills.

A copy of the Exhibit VI – AST/UST Questionnaire is included in Appendix L.

6.5 Other Petroleum Products

ATC observed evidence of the use, storage or disposal of other petroleum products on the property as summarized below.

OTHER PETROLEUM PRODUCTS				
Type of Material	**Quantity & Container Type**	**Location**	**Use**	**Condition of Containers & Area**
Elevator hydraulic fluid	In five passenger elevator equipment systems, each with an approximate 3,500-pound capacity	Elevator equipment rooms in each building, installed between approximately 1985 and 1990	Elevator operation	Good, no leaks or spills; no reported system failures; regularly serviced by Elevator Service Company, Inc.; elevator inspections range in date; the elevator permit in 411 East Plumeria Drive expired in December 2000.

DRAFT

Based on the installation date, the hydraulic fluid contained within the hydraulic elevator systems is unlikely to contain PCBs. Given the routine equipment maintenance, current inspection status, and absence of spills or releases, the hydraulic fluid/elevator operation is not considered to represent an environmental concern.

6.6 Polychlorinated Biphenyls (PCBs)

Hydraulic oils used prior to 1979 may contain small quantities of PCBs. Potential hydraulic oil sources include, but are not limited to, hydraulic elevators, lifts, trash compactors, and air compressors.

ATC observed two hydraulic dock levelers (2860 Junction Avenue [one] and 2880 Junction Avenue [one]) and one hydraulic compactor (northeast of 3050 Zanker Road). No stains or other evidence of spills were observed around the dock levelers and compactor. Considering that the property was developed between 1985 and 1990, it is unlikely that the hydraulic fluid-containing equipment on the property contains PCBs.

ATC observed eight (8) pad-mounted electrical transformers located throughout the property. No stains or spills were observed around the transformers. ATC notes that the transformers are reportedly owned and operated by PG&E, and as such, they accept responsibility for any cleanup from leakage or repair or replacement activities, provided the cause is not customer misuse. Given the utility ownership and observed conditions, the pad-mounted electrical transformers are not considered to represent a likely past, present or material threat of release, nor do they represent a *recognized environmental condition* to the property at this time. Furthermore, given the age of the property improvements, it is not considered likely that the transformer fluid contains PCBs.

Fluorescent light ballasts are a potential source of PCBs. An inspection of light ballasts was beyond the scope of work for this assessment. Based on the construction dates, the ballasts are not likely to contain PCBs. However, ATC recommends that if leaking ballasts are identified in the future or ballasts are removed during renovations, they should be inspected for labeling regarding the PCB-classification and disposed of in accordance with applicable regulations.

No other potential PCB-containing equipment was observed at the property.

6.7 Unidentified Substance Containers

ATC did not observe the presence of unidentified substance containers on the property.

6.8 Nonhazardous Solid Waste

ATC observed evidence of the generation, storage or disposal of nonhazardous solid waste on the property as summarized below.

DRAFT

NONHAZARDOUS SOLID WASTE SUMMARY TABLE						
Type of Waste	**Generation Process**	**Quantity**	**Type of Storage**	**Location**	**Disposal/Removal Method & Frequency**	**Evidence of Release?**
Municipal trash / cardboard recycling	Routine operations	~Eight	Dumpster or compactor	Typically near loading areas of the building perimeters	Allied Waste / as needed basis	No
Used cooking grease	Food preparation	One	Grease trap (above ground)	2880 Ultratech cafeteria	Burr Plumbing / as needed	No

Waste disposal is generally the responsibility of the individual tenant and is therefore arranged separately by the tenants and performed on tenant-specific intervals. The generation and storage of nonhazardous solid waste on the property is not considered to represent an environmental concern.

6.9 Wastewater

ATC observed evidence of wastewater generated, treated or discharged (including sanitary sewage and stormwater) on the property or to adjoining properties as summarized below.

WASTEWATER SUMMARY TABLE			
Type of Wastewater	**Generation Process**	**Treatment System?**	**Discharged To?**
Commercial sanitary sewage	Restrooms	N/A	Sanitary sewer
Stormwater	Storm water runoff	N/A	Storm sewer
Neutralized developer	Ultratech lab operations	Yes	Sanitary sewer

Developer waste generated, during typical Ultratech laboratory operations, travels via gravity from clean room sinks to two onsite treatment systems. Mr. Tom Tran, Ultratech Environmental Health and Safety Engineer II and site escort, indicated that the treatment system units are comprised of three tanks in which two reagents (sulfuric acid and sodium hydroxide) are added in order to neutralize developer waste. The nonhazardous discharge (effluent) is subsequently discharged via the sanitary sewer, per City of San Jose Environmental Services Department Watershed Protection requirements. No violations or releases are reported for the treatment systems.

The generation and discharge of wastewater at the property is not considered to represent an environmental concern.

6.10 Waste Pits, Ponds and Lagoons

ATC did not observe evidence of waste pits, ponds or lagoons on the property.

6.11 Sumps

ATC did not observe evidence of sumps on the property.

DRAFT

6.12 Septic Systems

ATC did not observe evidence of a septic system on the property.

6.13 Stormwater Management System

Surface stormwater runoff is intercepted by catch basins located within the paved parking and drive areas. The runoff water then flows into the municipal storm water system. Stormwater runoff from the roofs drains via roof drains to the surface level where it then travels via sheet flow and eventually drains into the catch basins.

6.14 Wells

ATC did not observe evidence of wells on the property.

Former onsite groundwater monitoring wells (refer to Section 5.3.9) were properly decommissioned in 2000 and are not considered to represent an environmental concern.

DRAFT

7.0 INTERVIEWS

The following persons were interviewed to obtain information regarding *recognized environmental conditions* in connection with the property:

INTERVIEW SUMMARY				
Role	**Name**	**Title/Company**	**Years Assoc. With Property**	**Interview Type**
Site Contact	Ms. Lyn Barshay	Vice President, Property Manager / Menlo Equities Management Company	9	Telephone
Site Escort	Mr. Tom Tran	Environmental Health and Safety Engineer II / Ultratech	2	In person
Site Escort	Mr. Jim Faler	Facilities Assistant / Pillar Data Systems	4	In person
Site Escort	Mr. Michael Woodbury	Facilities Technician / MediaTek	Less than 1	In person
Local Govt. Official	Ms. Janice (last name withheld)	Representative / City of San Jose Planning Department	N/A	Telephone
Local Govt. Official	Mr. Mansour Nasser	Representative / San Jose Municipal Water Company	N/A	Telephone
Local Govt. Official	Mr. Dave Higgins	Representative / Santa Clara Valley Water District	N/A	Telephone

Pertinent information from the interviews is discussed in applicable sections of this report with details (including failed attempts to interview) documented on Record of Communication forms in Appendix J.

DRAFT

8.0 OTHER ENVIRONMENTAL CONDITIONS

8.1 Asbestos-Containing Material (ACM)

ATC conducted a limited survey of the property for the presence of asbestos-containing materials. The inspection was conducted for the purpose of estimating material financial liabilities that asbestos-containing materials could represent to the owner of the improvements and to identify those materials and/or conditions that represent a health and safety risk to the occupants. It should be noted that suspect ACM that has not been identified in this report may be located within walls, ceiling cavities and other non-accessible areas. Precaution should be used in relation to these currently unidentified materials until proper sampling and analysis have determined the asbestos content.

Documentation Review

ATC reviewed the previous Phase I ESA prepared by SECOR International Incorporated (SECOR) dated May 27, 2005. SECOR reviewed a prior Phase I ESA by Hygienetics Environmental Services, Inc. which stated that ACM had been identified in the property buildings. Asbestos was reportedly detected in the grey roofing sealant, transite roofing screens, and beige 12" x 12" vinyl floor tiles in the storage room in 2840 Junction Avenue, and in the beige/black mastic in the roof access room. SECOR indicated that based on the construction dates of the property buildings (1985-1990), significant quantities of ACM would not be expected to be present. SECOR prepared an asbestos Operations and Maintenance (O&M) Program, dated August 9, 2005, which is currently being implemented at the property.

Inspection

On November 27, 2007, ATC inspected accessible areas of the Site. Several suspect ACMs were observed at the Site and samples were collected. ATC identified suspect asbestos-containing materials in the form of 2' x 4' ceiling tile, 2' x 2' ceiling tile, gypsum composite wallboard (drywall), 12" x 12" floor tile, covebase mastic, sheet vinyl, carpet mastic, and roofing materials.

Sample Analytical Results

ATC collected a total of 57 samples as part of this assessment. Bulk samples collected included 12" x 12" floor tile, floor tile mastic, 2' x 4' ceiling tile, drywall, joint compound, and plaster. The samples were analyzed by Hygeia Laboratories Inc. located in Sierra Madre, California. The samples, with the exception of the floor tile samples, were analyzed by the USEPA-approved Polarized Light Microscopy with Dispersion Staining (PLM/DS) method in accordance with the EPA Method 600/M4-82-020 and 600/R-93/116. All floor tile samples were analyzed by the USEPA-approved Transmission Electron Microscopy (TEM) method. Table 1 lists the results of samples collected as part of this investigation as well as those materials that were not sampled as part of this investigation. Analytical data packages are included in Appendix K.

ACM SURVEY RESULTS/INVENTORY

ND – No Asbestos Detected
NS – Not Sampled
SF – Square Feet
LF – Linear Feet

DRAFT

Due to the age of the buildings, the current test results, and the good condition of the asbestos containing materials, asbestos is not an environmental concern to the property at this time. Prior to impact by future renovation or demolition activity, areas of the facility not included within the scope of the asbestos inspection reported herein should be surveyed to confirm the presence or absence of additional asbestos-containing materials (ACM) in accordance with EPA NESHAPS, State of California, and OSHA requirements.

ATC recommends that the existing asbestos O&M Program be updated with results of ATC's limited asbestos survey.

8.2 Radon

Radon is a naturally occurring colorless, odorless gas that is a by-product of the decay of radioactive materials potentially present in bedrock and soil. The EPA guidance action level for annual residential exposure to radon is 4.0 picoCuries per liter of air (pCi/L). The guidance action level is not a regulatory requirement for private owners of commercial real estate, but is commonly used for comparison purposes to suggest whether further action at a building may be prudent.

ATC's review of published radon data indicates that the property is located in an area of moderate propensity with regard to the potential for elevated levels of radon gas. Santa Clara County is listed as being within Zone 2, where average indoor levels are expected to be between 2 and 4 pCi/L. Additional EPA statistics for Santa Clara County report results for 70 short-term tests with an average radon concentration, from first floor living areas, as 1.363 pCi/L. Given the available statistics and the commercial usage of the property improvements, radon is not considered to represent a concern, and no additional investigations are recommended at this time.

8.3 Lead in Drinking Water

ATC conducted a screening survey and collected 10 drinking water samples for lead analysis from the property. Sample collection protocols generally followed the initial (first draw) screening strategy outlined in the EPA protocol for schools and non-residential buildings (812-B-94-002). Water sources included cold drinking water taps in representative occupied areas. ATC coordinated with property management to assure that an appropriate number of sources were flushed and left unused for no less than six hours and no more than 18 hours prior to sampling. The water samples were analyzed using EPA METHOD 200.9 OR SM 3113B. Samples were analyzed by McCampbell Analytical, Inc. in Pittsburg, California. The ~~l~~aboratory analytical report~~s~~ can be found in Appendix K.

The following table summarizes the results of water samples collected from the property.

LEAD IN DRINKING WATER SCREENING SURVEY RESULTS			
Sample No.	**Sample Type**	**Sample Location**	**Lead Concentration (ppb)**
01	First Draw	411 - first floor break room	11
02	First Draw	411 - second floor break room	43
03	First Draw	2840 - first floor drinking fountain	0.95
04	First Draw	2840 - first floor break room	BDL
05	First Draw	2860 - second floor drinking fountain	6.7
06	First Draw	2860 - first floor break room	10
07	First Draw	3050 - first floor drinking fountain	17

DRAFT

LEAD IN DRINKING WATER SCREENING SURVEY RESULTS			
Sample No.	**Sample Type**	**Sample Location**	**Lead Concentration (ppb)**
08	First Draw	3050 - second floor break room	BDL
09	First Draw	2880 - first floor drinking fountain	1.3
10	First Draw	2880 - first floor cafeteria	3.8

ppb – parts per billion
BDL - Below Detection Level of 1 part per billion.

ATC compared the results of the analyses to the EPA Action Level for public drinking water suppliers of 15 parts per billion (ppb). A public water supplier must begin treatment and public notification when more than 10% of its drinking water sources test greater than the Action Level. The Action Level was not health-based, but was based on EPA's estimation that 90% of public water sources will test below 15 ppb. The Action Level is not a regulatory requirement for private building owners, but is commonly used for comparison purposes to suggest whether further action at a building may be prudent. The lead in drinking water results revealed two fixtures whose lead concentrations exceeded the EPA Action Level. Water from a faucet on the first floor of 411 East Plumeria Drive and a drinking fountain on the first floor of 3050 Zanker Road had lead concentrations of 43 ppb and 17 ppb, respectively. Elevated lead concentrations do not appear to be system wide and therefore ATC recommends installation of point-of-use filtration on fixtures resulting in concentrations above 15 ppb.

8.4 Lead-Based Paint (LBP)

Based on the commercial usage of the property, LBP was not addressed for this Phase I ESA and no additional investigation is recommended at this time.

8.5 Mold Screening

ATC conducted a screening survey for readily observable mold and conditions conducive to mold on the property. The screening consisted of limited interview, document review and physical observation.

Ms. Audrey Krompholz of ATC spoke with Ms. Lyn Barshay, Vice President, Property Manager of Menlo Equities Management Company regarding potential mold conditions at the property. Ms. Barshay was unaware of any current mold issues associated with the property buildings. According to Ms. Barshay, minor roof penetrations were caused as a result of recent HVAC equipment installation at 2860 Junction Avenue; these resulted in water leaks which have since been repaired.

ATC obtained prior reports, further discussed in Section 5.3.9, in which no mold or moisture related issues were identified. A copy of referenced documents may be found in Appendix H.

During the site reconnaissance, ATC conducted a physical observation of certain HVAC system areas and other representative building areas as described in Section 2.2. ATC was escorted by various facility representatives who provided access and answered questions. ATC utilized a Tramex moisture meter to confirm the moisture content of building materials suspected of having been impacted by water intrusion. The following building areas were excluded from the physical observation: ATC was not granted access to clean rooms within research and development areas, machinery areas in which noise levels warranted additional personal protective equipment, and a portion of the storage closets / elevator machine room located at 411 East Plumeria Drive. No evidence of mold growth was observed during the site reconnaissance. Limited water stained ceiling tiles were observed in isolated areas of the tenant spaces.

DRAFT

Approximately four square feet of moisture impacted drywall was observed in the vicinity of a floor drain, located within a janitorial closet of 2840 Junction Avenue. Moisture readings from the drywall material were within normal range.

Based on the results of the interview, document review and physical observation, ATC found no evidence indicating potential mold impact at the property.

A copy of the Exhibit VII – Indoor Air Quality Questionnaire is included in Appendix L.

8.6 Additional User Requested Conditions

No additional User requested conditions were included within the scope of this assessment.

NOTES:

1. All distances shown hereon are in feet and decimals thereof.
2. This survey was prepared from information furnished in a Commitment of Title Insurance, prepared by First American Title Insurance Company, dated May 24, 2005, number NCS-163080-SC. No liability is assumed for matters of record not stated in said preliminary title report that may affect the boundary lines, exceptions, or easements affecting the property.
3. Physical items shown on this survey are limited to those items visible as of the date of this survey. Subsurface structures, if any, are not shown, with the exception of underground utilities lines. The locations of these underground utility lines have been compiled from available plans and no warranty is implied as to the exact location of these lines. Said subsurface objects may include, but are not limited to, concrete footings, slabs, shoring, structural piles, utility vaults, piping, underground tanks, and any other subsurface structures not revealed by a surface inspection.
4. A.P.N. 097 – 14 – 066, 067, 068, 069 & 070
5. Zoning: This survey makes no evaluation as to compliance with zoning and building codes and/or ordinances other than current municipal building setback line locations.

   The subject property is currently zoned "IP"; Industrial.

   The current building setbacks for this zoning designation are:

   Front: 15'
   Side: 0'
   Rear: 0'
   Parking Requirement: 1 parking space per 300 sq. ft. of building.
   Information was obtained from the City of San Jose, Planning Department on May 20, 2005.
6. Basis of Bearings: The bearing of North 34°14'03" West taken on the centerline of Junction Avenue as shown on that certain Parcel Map filed for record on November 29, 1984 in Book 536 of Maps at Pages 25 & 26, Santa Clara County Records was taken as the Basis for all Bearings shown hereon.
7. Flood Zone: The subject property is shown on the Federal Emergency Management Agency Flood Insurance Rate Map, Community Panel Numbers 060349 0008 F & 060349 0013 F, dated July 10, 1997 per the letter of map revision, as being located in Flood Zone "AO" & "B";

   "AO" Areas of 100-year shallow flooding with a depth of one (1) foot; average depths of inundation area shown, but no flood hazard factors are determined.

   "B" Areas between limits of the 100-year flood and 500-year flood; or cetain areas subject to 100-year flooding with average depths less than one (1) foot or where the contributing drainage area is less than one squae mile; or areas protected by levees from the base flood.

   Information was obtained from the City of San Jose, Public Works Department on May 20, 2005.

(8) 8. Note the effects of the Covenants, conditions, restrictions and easements in the document recorded December 23 1980 as Book F805, Page 634 of Official Records.

(9) 9. Note the effects of the Covenants, conditions, restrictions and easements in the document recorded January 02, 1981 as Book F826, Page 281 of Official Records.

(17) 10. Note the effects of the fact that the land lies within the boundaries of the Rincon de los Esteros Redevelopment Project Area, as disclosed by various documents of record.

(18) 11. Note of the effects of the terms and provisions contained in the document entitled "Certificate of Permit" recorded July 21, 1994 as Instrument No. 12586093 of Official Records.

(19) 12. Note the effects of the terms and provisions contained in the document entitled "Certificate of Permit" recorded March 11, 1998 as Instrument No. 14090483 of Official Records.

(20) 13. Note the effects of the terms and provisions contained in the document entitled "Certificate of Permit" recorded July 19, 2000 as Instrument No. 15320501 of Official Records.

(21) 14. Note the effects of the terms and provisions contained in the document entitled "Certificate of Permit" recorded July 27, 2001 as Instrument No. 15795773 of Official Records.

SURVEYORS CERTIFICATE

I hereby certify to WB Montague Park Owner, LLC, a Delaware limited liability company, Four Corners Properties II, LLC, a Delaware limited liability company, Morgan Stanley Credit Corporation, a Delaware corporation, and its successors and assigns and First American Title Insurance Company

(1) This survey was made on the ground as per the field notes shown on this survey and correctly shows (i) the boundaries and areas of the subject property and the size, location, and type of buildings and improvements thereon and the distance therefrom to the nearest facing exterior property lines of the subject property, (ii) the location of all rights- of – way, easements, and any other matters of record affecting or benefiting the subject property, (iii) the location of the parking areas on the subject property showing the number of parking spaces provided thereby, (iv) all abutting dedicated public streets providing access to the subject property, together with the width and name thereof, and (v) all other significant items on the subject property;

(2) Except as shown heron, there are no (i) encroachments upon the subject property, (ii) encroachments on adjacent property, streets or alleys by any improvements on the subject property, (iii) party walls, (iv) conflicts or protrusions.

(3) Adequate ingress to and egress from the subject property is provided by Zanker Road, Junction Avenue, and Plumeria Drive, the same being paved, dedicated public right(s)- of-way maintained by the city of San Jose.

(4) All required building set back lines on the subject property are located as shown herein.

(5) Pursuant to the Accuracy Standards as adopted by the ALTA, NSPS and ACSM and in effect on the date of this certification, undersigned further certifies that proper field procedures, instrumentation, and adequate survey personnel were employed in order to achieve results comparable to those outlined in the "Minimum Angel, Distance, and Closure Requirements for Survey Measurements Which Control Land Boundaries for ALTA/ACSM Land Title Surveys."

MONTAGUE PARK
San Jose, California

I. PROPERTY IDENTIFICATION

Name:	Montague Park San Jose, California
Type:	Office/R&D
Age:	Constructed in phases beginning in 1984 (±22 years old)
Site Area:	±23.6 acres per the ALTA Survey
Flood Plain:	According to a Flood Determination Report prepared by CBCInnovis, the property is located in Flood Zone B, Areas between limits of 100-500 year flood; or certain areas subject to 100 year flooding with average depths less than one feet or where contributing drainage area is less than 1 square mile; or areas protected by levees from base flood determined per Map Panel No. 0603490013 E, dated July 10, 1997.
Legal Description:	None provided.
Zoning:	According to the City of San Jose Zoning Department, the project is zoned IP (Industrial Park Zoning). The Industrial Park zoning designation is an exclusive designation intended for a wide variety of industrial users such as research and development, manufacturing, assembly, testing, and offices. Industrial uses are consistent with this designation insofar as any functional or operational characteristics of a hazardous or nuisance nature can be mitigated through design controls. Areas exclusively for industrial uses may contain a very limited amount of supportive commercial uses, in addition to industrial uses, when those uses are of a scale and design providing support only to the needs of businesses and their employees in the immediate industrial area. These commercial uses should be located within a larger industrially utilized building to protect the character of the area and maintain land use compatibility. When located within an area with a Mixed Industrial Use Overlay General Plan Designation or a Combined Industrial/Commercial General Plan Designation, a broader range of uses, both free standing and in combination with others, will be considered including uses such as retail, Church/Religious Assembly, social and community centers, recreational uses, or similar uses but only when the non-industrial use does not result in the imposition of additional constraints on neighboring industrial users in the exclusively industrial areas.

II. EXECUTIVE SUMMARY

Based upon our observations, and information received from interviews, Marx/Okubo Associates, Inc. (Marx/Okubo) has prepared the following opinions of probable cost to repair or correct deficiencies or items of deferred maintenance:

Description	Immediate	Years 1-5	Years 6-10
SITE	0	126,600	74,600
STRUCTURE	16,000	0	0
ENVELOPE & EXTERIOR	40,100	343,900	894,000
INTERIOR IMPROVEMENTS	0	0	0
MECHANICAL/ELECTRICAL	500	373,500	895,400
BUILDING EQUIPMENT	0	0	0
CODE REVIEW	0	0	0
DISABLED-ACCESSIBILITY	62,300	0	0
TOTAL COSTS	**118,900**	**844,000**	**1,864,000**

* Refer to Section XII. Deficiencies and Recommendations for a detailed breakdown.

DRAFT

The project consists of five, two-story office buildings, containing approximately 422,532 square feet (sf) of building area (according to the offering memorandum), on an approximately 23.62-acre site in San Jose, California. The buildings were reportedly completed in two phases from ± 1985 to 1990. Surrounding properties generally include similar low-rise office/R&D type developments. Overall, the project was found to be in good condition, with conditions generally consistent with the type of construction, age and use of the property.

The site is fully improved with asphalt paved drives and surface parking areas, concrete curbs and sidewalks, and mature trees and landscape areas served by an automatic irrigation system. Marx/Okubo counted a total of 1,421 parking spaces, including 244 compact spaces, 34 standard disabled-accessible stalls, and five van-accessible stalls. The rear elevations of each building have a combination of dock high and drive-up loading doors. Each main building entrance is provided with an exterior water feature. The site improvements are generally in good current condition with a few noted exceptions. Localized areas of deteriorated asphalt paving should be removed and replaced in the immediate term to restore the overall integrity of the paving surface. Regularly scheduled crack repair, seal coating, and restriping of the asphalt pavement will be necessary in the next few years and then every ±five years thereafter. With the exception of the tile lined fountain at Building 2860, the exterior fountains at the building main entrances are unlined and will require installation of a fluid applied waterproofing coating at the basin. Select pruning of mature trees that overhang building roofs or are in contact with building exterior walls should be performed as part of regular site maintenance.

The structures are tilt-up concrete construction with lateral force resisting systems consisting of plywood roof and floor diaphragms transferring loads to the perimeter concrete tilt-up shear wall panels and interior steel braced frames. All the buildings are two-story and irregular in plan with similar configurations built between 1985 and 1990 and have reportedly not been modified.

Drawings have been reviewed for this project, and our site visit indicates that buildings appear to be in general conformance with the codes and standard practices in effect at the time of their construction. The materials and construction methods employed are of reasonable quality and the buildings are apparently in good physical condition. The buildings are anticipated to have average performance (with similar damage) when compared to standard construction for the building type as defined by ATC-13 under similar ground motions. Marx/Okubo anticipates that the structures will maintain their vertical load carrying capacity during a code level event. Based on our review of the available information, and assessment of the basic building type and site seismicity issues, the estimated loss at each building (2840 ,2860, 2880, 3050, and 411) would be defined as a 475-year Scenario Expected Loss (SEL) of 12% and a Scenario Upper Loss (SUL) of 19%.

Exterior walls typically consist of reinforced concrete tilt-up panels with single color heavily textured latex paint finish and fully adhered marble tile along the building fronts. Wall panel joints are polyurethane. Building entrances are full height tempered glass while secondary entries are conventional anodized aluminum frame and tempered glass doors with push/pull hardware, deadbolts and closers. Service doors are hollow-metal with a paint finish. Exterior windows include window wall and aluminum and glass continuous ribbon window assemblies along the building fronts, conventional storefronts at the elevated balcony, and individual punched windows at the building sides and rear. Glazing is lightly tinted single pane, although certain areas of window wall have a solar film. Soffits are cement plaster with a paint finish. Rooftop-mounted fabric sunshades are provided over the exterior balcony and main entry of each building. Balconies have a fluid-applied traffic coating (likely urethane based) over plywood sheathing sloped to perimeter deck drains with painted pipe railings. The building exteriors are generally in good condition, with certain specific issues noted. A number of localized wall panel cracks and weld-plate spalls noted at the concrete tilt-up panels appear to be allowing moisture to penetrate the cracks. These should be repaired by low-pressure epoxy injection to restore the structural integrity of the panel and to prevent corrosion of the underlying steel reinforcing. Wall surfaces will need to be repainted in the immediate areas to match adjacent surfaces. Marble tile and mortar will require generalized refurbishment (restorative repairs at mortar joints) and localized repair and/or replacement of cracked or spalled tile to restore the finish appearance. The regularly scheduled crack repair, prep and repainting of the building exteriors will be necessary in the near term at all buildings except Building 2860, which was recently repainted, and then again every ± seven years thereafter. Scheduled replacement of the tilt-up wall panel sealant joints should be completed at all buildings concurrently with the longer term exterior repainting. On going remedial wet sealing of aged and weathered window glazing gaskets will be required to maintain the integrity of the assemblies. Fabric sunshades require overall maintenance and repair and scheduled replacement of the fabric will be necessary. Scheduled rejuvenation of the exterior balcony waterproofing membranes with a high-quality fluid applied coating will be necessary in the near term and typically every ± five years.

The original built-up roofs have been overlaid with a sprayed polyurethane foam with an acrylic coating. The parapet flashing consists of similar materials as the roofing field. The flashing extends part way up the wall and is covered with a sheet metal counterflashing detail or terminates at the parapet top and covered with a sheet metal coping detail. The mechanical equipment is mounted on flashed curbs or sleepers. The sightscreen is mounted on wood sleepers with a flashed sleeper support. There are no means for expansion and contraction incorporated into the roofing system.

The roofs were designed with adequate slope and drainage, however, there is evidence of standing water in selected areas. The roof areas sheet flow to interior drains with either interior or scupper type overflows. The decks drain to interior drains. The roofs are in generally good condition. Minor immediate repairs to the roofing field are necessary. The acrylic coating over the foam roofs will need to be reapplied in the next eight to 10 years. With recommended repairs and annual maintenance these roofs could perform for 10+ years. The wood framed sightscreen will require immediate repairs to localized damaged hardboard panels as well a provisions for ongoing future repairs to deteriorated 2x framing members.

The building interiors primarily consist of conventional office type use, with a shipping/receiving area at the rear of the building. Each of the buildings is currently configured for a single tenant, and there are no interior common areas. The interior improvements are generally considered to be market standard materials and finishes, including commercial grade carpeting and VCT flooring, a combination of painted gypsum board over metal stud framing at the walls, and suspended acoustical tile ceiling. A cafeteria and full service kitchen and cooking facilities is provided at the second floor of Building 411. The improvements are generally in good condition, except for several moisture deteriorated acoustical ceiling tiles at the second floor of Building 411, which should be removed and replaced as part of regular building maintenance. Otherwise, no significant issues were noted with the building interiors.

Base building cooling is provided to each of the five buildings by roof-mounted boxcar package units ranging in size from 50 to 75 tons each. Heating is provided to Buildings 2840, 2880, and 3050 by roof-mounted gas fired boilers that deliver heating hot water to perimeter zone variable air volume (VAV) boxes. Heating is provided to Buildings 2860 and 411 by roof-mounted gas-fired duct furnaces. Zone level air distribution is provided to Buildings 2840, 2860, 2880, and 3050 by pneumatically controlled VAV boxes. Building 411 is provided with low voltage direct digital controlled (DDC) VAV boxes. Boxcar units on each building are original, ± 16 to 20 years old and in good working condition for their age. However they will be reaching the end of their useful life and provisions should be made to begin replacement of unit compressors followed by the replacement of the entire box car units at the end of the assessment period. Duct furnaces on Buildings 411 and 2860 are also original and provisions should be made to replace them based age, wear and tear, and end of their useful life. Building 3050 is provided with three boxcar units for base building cooling, however four units are specified in the drawing provided for our review. It is unclear why only three are installed and if the current tenant moves out and their auxiliary cooling systems are removed, additional cooling capacity may be required, which could include the installation of a new boxcar unit. A reserve has been added to the cost table for this item.

Each building is provided with a dedicated 2" domestic water main equipped with a backflow prevention device and two parallel connected water meters. Each building is also provided with a dedicated 2" irrigation water main equipped with a backflow prevention device and a meter. Domestic hot water is provided to each building by tank type electric hot water heaters. Where visible domestic water pipe in each building was observed to be copper pipe of an unknown type, while waste and storm drainpipe was observed to be cast iron. The domestic hot water heater in Building 411 should be replaced in the six- to 10-year term due to age, wear and tear, and end of useful life. Installation of flexible gas line connection on roof-mounted gas-fired equipment is recommended.

DRAFT

Installation an earthquake shut-off valve and/or excess flow shut off valve on natural gas mains is recommended to reduce possible building damage or loss during a seismic event.

Power is provided to each building by utility provided pad-mounted transformers at 480/277 volts, 3-phase. 4-wire. Buildings 2840, 2860, 2880, and 411 are each provided with a capacity of 2,000 amps. Building 2880 also has a second 480/277-volt, 2,000-amp dedicated main service installed that appears to serve tenant process systems. The main electrical service to Building 3050 is provided at a capacity of 4,000 amps. Building 3050 also has a second 480/277-volt, 3,000-amp main service that is tied to a double-ended main-tie-main substation that provides redundant power to dedicated tenant systems. Base building electrical capacities to Buildings 2840, 2860, 2880, 411, and 3050 is 19.4, 20.6, 19.4, 17.8 and 31.4 watts per square foot respectively, all of which are within industry standards. It is recommended that infrared testing on main electrical panels in each building be completed along with any necessary repairs.

Each building appears to be fully fire sprinklered. A dedicated 8" main fire sprinkler service that serves a single 6" riser is provided to each building. Dedicated fire alarm panels are provided to each building. Horn/strobe devices appear to be provided throughout each building. Smoke detectors are installed throughout Buildings 2840, 411 and 3050, while Buildings 2860 and 2880 have smoke detector installed in some isolated areas. Five-year tests will be required on the fire sprinkler systems in the one- to five-year term. A fire sprinkler head cabinet is not installed at the riser in Building 2840 as required by code. Recalled fire sprinkler heads manufactured by Central are installed in Building 411. The manufacturer currently operates a program for recalled sprinkler head replacement at no cost to the owner. It is unclear if the building is currently scheduled for sprinkler head replacement. As a contingency a cost for this item is included in the event that the building is not scheduled or the program is not applicable.

The property does do not fully comply with applicable disabled accessibility guidelines. Five designated accessible pedestrian routes from the adjacent public sidewalk need to be provided to each building main entry. Several of the routes will require removal of existing landscaping and construction of new concrete walkways and compliant curb ramps. A number of disabled-accessible parking stalls were noted to be non-compliant due to flared curb ramps that protrude into the side aisles of the parking stalls. Marx/Okubo recommends tearing out and replacing raised sidewalks and curb ramps at these portions and replacing with a sidewalk that is flush with the asphalt paving. Six disabled accessible parking stalls at Building 3050 lack adequate signage and require the installation of compliant pole-mounted placards. Localized existing toilet flush valves at disabled accessible restroom stalls do not face the compliant direction and should be reinstalled as a maintenance item.

DRAFT

III. OBSERVATION INFORMATION

A. INTRODUCTION

Marx/Okubo has completed an Existing Building Property Condition Assessment of Montague Park in San Jose, California, for Four Corners Properties, LLC. This survey consists of a review of the physical conditions; architectural, structural, mechanical, and electrical components accessible or visible during the site visit; and the quality of construction. The sole purpose of this report is to observe the major aspects of the property, evaluate their condition and report our findings to the Client to whom this report is addressed. It is not the intent of Marx/Okubo to assume any part of the design or construction responsibility.

This report was prepared for and may be relied upon by Morgan Stanley Mortgage Capital Inc. and its successors and assigns (collectively, "Morgan Stanley") with respect to loans placed upon the property (or on direct or indirect ownership interests in the owner of the property) described in the report. Any rating agency or issuer or purchaser of any security collateralized or otherwise backed by such loans may further rely upon the reports. Marx/Okubo also consents to the inclusion of this report in any form, whether in paper or digital format, including any electronic media such as CD-ROM or the internet, in the Prospectus Supplement relating to any "Securitization" (defined as an offering of debt securities that, as applicable, are registered with the Securities Exchange Commission pursuant to the Securities Act of 1933, as amended (the "Act"), or are privately placed pursuant to an exemption from the Act, in which the property reported upon may be part of a pool of properties owned by various non-affiliated owners collateralizing such offering), and we consent to the reference to our firm under the caption "Experts" in such Prospectus Supplement.

This is a general overall assessment and in no way infers that every aspect of the project has been reviewed. Marx/Okubo assumes limited liability regarding the content of this report, as the Property Condition Assessment was limited to reviewing only those components and systems, which were visible or readily accessible at the time of the site observation. Other possible constraints and impacts are not known to this office. No material samples were taken from the building and no tests on the building or its systems were performed. Within these limitations, our responsibility is to observe the property, identify deficiencies and/or areas of deferred maintenance, address potential life safety, accessibility, or code non-conformance issues and to provide opinions of probable cost to correct or modify these conditions. Towards this end, this report focuses on deficiencies and problems rather than the positive aspects of the project and may, therefore, seem negatively biased. Subject to the above, the use of this report is limited to and can be used and relied upon by the Client to whom it is addressed.

DRAFT

A. INTRODUCTION *(cont.)*

Each of the identifiable corrective, repair or deferred maintenance items were noted in the field, and opinions of probable cost have been compiled to make the required repairs. A representative group of photographs has been taken depicting the conditions and components of the buildings, and also to identify the problem areas. Opinions of probable cost are based upon quantity take-offs and a unit pricing method to arrive at line item totals. Unit prices are based upon historical data compiled by this office, and in no way imply that bids were received from trade subcontractors. No bid documents or corrective drawings were produced.

The local Building Department, Zoning Administrator and Fire Marshal's offices have been contacted to determine the applicable regulatory criteria and asked to review their records for outstanding violations against the property. A detailed compliance survey related to ADA, building codes and zoning issues was not performed. Marx/Okubo does not perform work related to environmental assessment or insect infestation and assumes no liability either regarding of these issues or the work of other independent consultants which may have been retained for these types of review.

DRAFT

B. SITE OBSERVATION

Observation Team: Marx/Okubo Associates, Inc. is a group of engineers, architects and construction consultants providing construction-related consulting services to approximately 50 lenders, both nationally and internationally. The main office of Marx/Okubo is located in Denver, Colorado, with additional offices in Irvine, San Francisco, and Pasadena, California; Seattle, Washington; Houston and Dallas, Texas; and Hartford, Connecticut.

The firm consists of approximately 40 professionals with various architectural and engineering backgrounds and extensive construction experience. Our firm is also involved in construction workout projects, owner representation in the development process, as well as in a wide variety of concerns having to do with the construction process.

Observation Information: The project observation was conducted by a Marx/Okubo team of four including Phillip Helms-Cook, RA, NCARB, Senior Vice President. Marx/Okubo retained several consultants to evaluate various systems at the project. Dennis Furia and Alistair Lizaranzu, CE of Biggs Cardosa Associates performed the structural review of the project. Jeff Finazzo of Proactive Engineering reviewed the mechanical, electrical, plumbing, and fire protection systems. Bruno Jahn of Kelleher, Boyd & Associates was retained to review the roofing systems. The site observation took place on August 31, 2006, with follow-up site visits.

C. DOCUMENTS REVIEWED

See attached exhibit for documents reviewed.

IV. SITE

A. UTILITY SERVICE PROVIDERS

Water: San Jose Water Company (City of San Jose)

Sanitary/Sewer: City of San Jose

Natural Gas: Pacific Gas & Electric (PG&E)

Electricity: PG&E

Telephone: AT&T

Trash Removal: Allied Waste

Condition: No significant issues were noted.

B. STORM DRAINAGE

Description: Storm drainage typically consists of surface sheet flow to catch basins located in the asphalt paved parking areas, which are assumed to be connected to the underground municipal storm drainage system.

Condition: No significant issues were noted.

C. TRAFFIC CONTROL

Description: Vehicular access to the site is via multiple curb cut entries off of the surrounding streets.

Signalization: No signalization is provided at any of the site entrances or at the interior of the site.

Interior Access: Drive aisles are generally continuous and provide access to the parking areas and loading areas at each building. The site is generally configured to provide adequate turning radius access for passenger type vehicles, city delivery type vehicles, and tractor-trailer type trucks.

Condition: No significant issues were noted.

DRAFT

D. PARKING

Description: Asphalt-paved drive aisles and parking areas are provided around the perimeter of each building. Parking stalls are typically double-loaded and are oriented perpendicular to the drive lanes. Disabled-accessible parking spaces are located near building entries.

Ratio: Marx/Okubo counted a total of 1,421 parking spaces, including 244 compact spaces, 34 standard disabled-accessible stalls, and five van-accessible stalls. Based on the reported square footage and the number of parking spaces counted, the parking ratio is 3.39 spaces per 1,000 sf of building area.

Adequacy: The parking ratio of 3.39 spaces per 1,000 sf is considered to be within industry standards for this type of property.

Lighting: Parking area lighting is provided by pole-mounted HID type fixtures in the parking areas and wall-pack type fixtures mounted on the building elevations.

Condition: The size of stalls, configuration, and quantity of parking at the property generally appears adequate for the intended use. No significant issues were noted.

E. PAVING AND SIDEWALKS

Paving: The drive lanes and surface parking areas are typically asphalt paved. Curb cut entries have concrete aprons. The loading areas are asphalt paved. The trash enclosures have concrete aprons. Cast concrete curbs are provided at the perimeters of the parking areas and at landscape islands.

Sidewalks/Paths: Pedestrian walkways are provided along the front elevations of the buildings. The walkways at the main entry are broom finished concrete.

Condition: The asphalt paving is generally in good condition. Localized sections of alligatored asphalt paving should be removed and replaced to prevent moisture infiltration into the underlying subgrade. The regularly scheduled crack repair, seal coat, and restriping of all asphalt-paved areas should be anticipated in the near term and then every ±five years thereafter.

F. LANDSCAPE/IRRIGATION

Landscape: Landscaping includes a combination of trees, shrubs, flowering plants, ground cover, and lawn areas at street frontages, parking area islands, and around the building perimeter.

DRAFT

F. LANDSCAPE/IRRIGATION *(cont.)*

Irrigation: Landscaped areas are served by an automatic irrigation system.

Condition: The landscaping appears to be generally well maintained, with no significant issues noted.

G. EARTHWORK/GRADING/EROSION CONTROL

Description: All areas of the site are fully improved with landscaping, concrete and asphalt paving, or building improvements. No special earthwork, grading, or erosion control measures are required.

Condition: No significant issues were noted.

H. RETAINING WALLS

Description: The site is relatively flat and no retaining walls are provided or required.

Condition: Not applicable.

I. FENCING

Description: Mechanical enclosures have chain link metal fencing with vertical wood slats, and chain link metal gates.

Condition: No significant issues were noted.

J. SIGNAGE

Description: Pedestal type project monument signage is provided in the landscape area along the Junction Avenue street frontage. The signs appear to be metal set on a concrete base.

Condition: No significant issues were noted.

DRAFT

K. LOADING DOCKS AND RAMPS

Description: A combination of at-grade and dock-high loading docks are provided at the various buildings (see following table for specifics). The dock-high loading docks typically have concrete aprons, catch basins, and rubber truck bumpers. Some of the docks have dock levers. All doors are overhead coiling un-insulated painted metal.

Address	Dock-High OH Doors	At Grade OH Door	Total per building
3050 Zanker Road	-	2- 10'x12' 2- 12'x12'	4
2880 Junction Avenue	2- 12'x12'	-	2
2860 Junction Avenue	2- 9'x10'	-	2
2840 Junction Avenue	2- 12'x12'	-	2
411 East Plumeria Avenue	2- 12'x12'	-	2
		TOTAL	**12**

Condition: No significant issues were noted.

L. SITE AMENITIES

Description: Each main building entrance is provided with an exterior water feature contained by cast concrete walls.

Condition: With the exception of the tile lined fountain at Building 2860, the exterior fountains at the building main entrances are unlined and will require installation of a fluid applied waterproofing coating at the basin.

M. TRASH ENCLOSURES

Description: The trash enclosures consists of tilt-up concrete walls and chain link metal fencing with vertical wood slats, and chain link metal gates. The trash enclosures have a concrete apron.

Condition: No significant issues were noted.

N. ALTA SURVEY

Description: No ALTA survey was provided.

Condition: Not applicable

DRAFT

V. STRUCTURE

A. BUILDING FRAMING SYSTEMS

Foundation Systems: The foundation system for all buildings consists of isolated spread footings at interior steel columns and strip footings at exterior concrete walls. Typical interior load bearing columns are supported by 4'-0" square or 5'-6" square by 1'-6" deep footings, with 4-#5 or 5-#6 bars bottom reinforcement each way. Typical braced frame footings are 9'-0" square or 10'-0" square by 5'-0" deep, with 8-#6 bars top and bottom reinforcement each way at exterior columns, and 5'-6" square by 2'-0" deep, with 5-#6 bars top and bottom reinforcement each way at interior braced frame columns. Perimeter strip footings are typically 5'-6" wide by 2'-6" deep with 3-#6 bottom bars, 2-#5 top bars, with #4 ties at 12" on-center. The ground floor consists of a 5" concrete slab-on-grade with welded wire mesh reinforcement, supported directly on the prepared sub-base material. There is no information available with regards to procedures that may have been undertaken to mitigate the potential liquefiable soil at the site.

Condition: No exposed foundations were observed during our site visit for any of the buildings. No signs of significant building settlement, distress, or overloading were noted at any of the building elements that we observed.

Vertical Load Systems: All buildings are of concrete "tilt-up" construction with wood framed panelized roof and floor systems supported by steel pipe or tube or wide-flange columns and perimeter walls. The roof and floor systems for these buildings consist of a panelized roof system with plywood sheathing, 2x sub purlins, 4x purlins, and glue laminated girders. The girders are supported by interior steel columns and exterior concrete walls, which are then supported by the foundation system.

Condition: The buildings appear to be in good structural condition. No cracks in the interior gypsum board walls were observed. Signs of previous water intrusion were noted at some building locations, but Marx/Okubo understands that the affected roofs have been adequately repaired to prevent further water intrusion.

Lateral Load Systems: Lateral loads for these buildings result primarily from wind pressure and earthquake inertia forces acting on structural and non-structural elements. Out-of-plane forces acting on exterior panels are transferred to the roof and floor diaphragms. The lateral force-resisting system for these buildings typically consists of the panelized roof and floor diaphragms which deliver the lateral load to the perimeter concrete walls and interior knee-braced frames. These walls and frames in turn transfer the load to the foundations.

Perimeter walls are typically 6"-thick and are reinforced with a single curtain of reinforcement; they have unsupported heights of 16' and are laterally supported by roof and floor diaphragms. At building entrances, 12"-thick walls with two curtains of reinforcement are used with an unsupported height of 34' for these panels.

DRAFT

A. BUILDING FRAMING SYSTEMS *(cont.)*

***Lateral Load Systems** (cont.):* Perimeter walls are connected to roof diaphragms at sub-purlins (steel channel ledgers bolted to walls and to 3x sub-purlins at 4' on-center) and purlins (hangers with side plates bolted to 4x purlins and connected to pilasters with lug bolts). At floor diaphragms, purlins are connected to perimeter walls by means of tie rods transferring loads across sub-diaphragms.

Knee-braced frames consist of two-bay frames with W24 or W26 columns and tube steel sections for top and bottom chords, as well as braces, arranged in such a fashion as to form an A-shaped knee brace 6' deep and 28' long per bay. At the foundation, the column base plates are connected with welded angles bolted into interconnecting grade beams with anchor bolts to help transfer shear forces to the foundation. Column axial forces are transferred into supporting spread footings by means of anchor bolts.

Most structural elements were not observed during our site observation as they were concealed by architectural finishes and cladding, but elements which were visible appeared to be in good physical condition and conformed to information provided in the drawings.

Condition: Based on our limited review, the buildings appear to be in compliance with the codes and standard construction practices in effect at the time of their construction. The materials and construction methods employed are of reasonable quality and are adequate for their intended use.

While the roof structures appear to be in compliance with the codes in effect at the time of construction for gravity loads, the code criteria for some wood framing became more restrictive in the 1994 Uniform Building Code (UBC). These code changes were intended to apply to new construction; however, we are aware of some building jurisdictions applying the stricter requirements when new loads are added to existing structures. Therefore, it is possible that substantial strengthening could be required in the future by the addition of small loads, such as rooftop mechanical units and fire sprinkler upgrades.

B. DESIGN CRITERIA

Design Loads: According to our knowledge of the code at the time of construction, the following loads were likely to have been used in the design of these buildings:

DESCRIPTION	
Vertical Design Live Loads	
Roof	20 psf
Floor	100 psf
Offices	50 psf
Lateral Design Criteria	
Wind	70 MPH, Exp. C
Earthquake	Zone 4

DRAFT

C. EVALUATION AND ISSUES OF LATERAL LOAD RESISTING SYSTEM

Based on the available information, the following items are of significance, and are reflected in our scenario loss estimates.

Positive Features:

- The load path from roof to foundation is complete for these buildings, both for gravity and lateral loads.
- Structural elements in the superstructures appear to have the connectivity needed to meet life safety requirements.

Negative Features:

- Adequate solid walls appear to have been provided to resist lateral loads per our limited cursory review, in view of the lightweight panelized diaphragm. However, should loads exceed code requirements at the time of design, there is very limited system redundancy as perimeter frames might not be adequate to resist additional loads. This is due to the presence of extensive number of openings in the tilt-up walls which causes a short-column condition at pilasters, which in past earthquakes have been susceptible to undesirable brittle seismic response.
- Shear walls have a single curtain of reinforcement in both the horizontal and vertical directions, which results in greatly decreased wall capacity and also in an undesirable brittle behavior.
- Connections between adjacent wall panels consist of steel embedment plates with a vertically welded bar at some locations and welded bent plates at other locations. These connections are intended to tie the panels together to resist overturning forces generated by wind or seismic loads. These connections are rigid, exhibit a brittle failure mode and often result in localized damage to the concrete walls in a moderate to large earthquake.
- There is no information available with regards to design or construction procedures undertaken to mitigate the potential liquefiable soil at the site.

Expected Performance: According to our review, these buildings are anticipated to have average performance (with somewhat similar damage) when compared to standard construction for building types as defined by ATC-13 under similar ground motions. This level of performance is used as the basis for our scenario loss estimates. We anticipate that the structures will maintain their vertical load-carrying capacity during a code level event.

D. SEISMIC PERFORMANCE EVALUATION

Methodology: The potential losses to a building in an earthquake can be expressed in terms of percent of replacement value providing that, (1) seismic hazards, which affect the building and site, can be estimated, and (2) the vulnerability of the structure to those hazards is known or can be estimated.

DRAFT

D. SEISMIC PERFORMANCE EVALUATION *(cont.)*

***Methodology** (cont.):* Typical seismic hazards include strong ground motion, liquefaction, landslide, and surface fault rupture. These hazards are discussed in the section below. The vulnerability of the structures is assessed from the building complex and document review (described in the previous sections) and is compared with damage to similar structures during previous earthquakes. The principal database for earthquake damage estimates was developed through a consensus of expert opinions gathered from professionals primarily from California and is known as ATC-13 Earthquake Damage Evaluation Data for California.

In applying ATC-13, it is important to recognize the basis and limitations of this document. ATC-13 is a collection of expert opinions gathered through a variety of interview techniques with professionals in seismology, structural engineering, and architecture. ATC-13 was published in 1985 and thus does not represent data developed following either the Loma Prieta or Northridge events. It represents the impressions of experts on expected damage to California buildings based on a variety of Modified Mercalli Intensity (MMI). It is not based on actual earthquakes. The impressions or opinions of these experts have been averaged and correlated in such a way as to present a statistical basis useful in making distinctions between various building complex types.

The methodology used in this analysis is based on correlating the seismicity in the San Jose area for the various events of interest to MMI. Knowing these intensities, along with the building type, the ATC-13 database is used to estimate the base scenario losses. These figures are then adjusted in an attempt to account for the most significant, building-specific characteristics. Engineering judgment and experience coupled with the positive and negative features determined from the seismic evaluation of this building – not generic computer algorithms – are used as the basis for modifying ATC-13 data.

Seismic Sources: San Jose, California is located in one of the most seismically active regions in the United States. The Hayward Fault system is 7 kilometers located east of the property, the Calaveras fault is located within 12 kilometers from the site, and the San Andreas Fault is 22 kilometers west of the site.

A number of moderate to large earthquakes are of significance to the historical seismicity of the area. Three nineteenth century earthquakes – two on the Hayward Fault in 1836 and 1868, and one on the San Andreas Fault in 1838 – are estimated to have been magnitude 7 earthquakes. They were followed by the 1906 San Francisco earthquake ($M_S = 8.3$). Between 1906 and 1989, the region did not experience any earthquakes of magnitude 6 or greater until the 1989 Loma Prieta earthquake ($M_S = 7.1$). The seismicity in San Jose is also influenced by the known faults in the area, their potential faulting length and relative orientation. The known, near-site faults are listed below:

DRAFT

D. SEISMIC PERFORMANCE EVALUATION *(cont.)*

***Seismic Sources** (cont.):*

Controlling Fault	Estimated MCE (M_W)	Dist to Site (km)
Hayward Fault (southeast extension)	6.5	7
Hayward Fault	7.1	11
Calaveras	6.8	12
Monte Vista Shannon	6.5	17
San Andreas Fault (Peninsula)	7.9	22

The proximity of these faults is of special note because of the near field effects on ground motion from an earthquake located along the fault. These near field effects extend out approximately 15 kilometers on either side of the fault zone. Near field effects are fairly well acknowledged and have only recently been incorporated into the building code.

Seismic Source: Recent earthquakes in Southern and Central California – namely Coalinga, Whittier Narrows, and Northridge – have occurred along blind-thrust faults. These faults do not have readily identifiable surface features and are not extensively mapped. The potential for strong-ground motion to occur due to blind-thrust faulting in Northern California is somewhat in doubt. However, a moderate to large earthquake centered even closer to the site cannot be completely ruled out.

Near Field Effects: According to the 1998 UBC mapping, the project site is located less than 10 km from a type B fault. According to the 1997 UBC, the design loads would be increased in the velocity portion of the response spectrum to account for near-field effects.

Estimated PGA and MMI: Based on the recent CGS mapping, the 475-year peak ground acceleration for the site (based on latitudinal and longitudinal coordinates) is 0.51g. Based on the source information and site conditions, Marx/Okubo estimates that the 475-year event (10 percent chance of exceedance in 50 years) would have an MMI of VIII-IX.

MODIFIED MERCALLI INTENSITY SCALE

Intensity Value and Description	
I.	Not felt except by a very few under especially favorable circumstances.
II.	Felt only by a few persons at rest, especially on upper floors of buildings. Delicately suspended objects may swing.
III.	Felt quite noticeably by persons indoors, especially on upper floors of buildings. Many people do not recognize it as an earthquake. Standing motorcars may rock slightly. Vibration similar to the passing of a truck. Duration estimated.
IV.	Felt indoors by many, outdoors by few during the day. At night, some awakened. Dishes, windows, doors disturbed; walls make cracking sound. Sensation like heavy truck striking building. Standing motorcars rocked noticeably.
V.	Felt by nearly everyone, many awakened. Some dishes, windows broken. Unstable objects overturned. Pendulum clocks may stop.
VI.	Felt by all; many frightened. Some heavy furniture moved; a few instances of fallen plaster. Damage slight.

DRAFT

D. SEISMIC PERFORMANCE EVALUATION *(cont.)*

***Estimated PGA and MMI** (cont.):*

MODIFIED MERCALLI INTENSITY SCALE *(cont.)*

Intensity Value and Description	
VII.	Damage negligible in building of good design and construction; slight to moderate in well-built ordinary structures; considerable damage in poorly built or badly designed structures; some chimneys broken. Noticed by persons driving motorcars.
VIII.	Damage slight in specially designed structures; considerable in ordinary substantial buildings with partial collapse. Damage great in poorly built structures. Fall of chimneys, factory stacks, columns, monuments, and walls. Heavy furniture overturned.
IX.	Damage considerable in specially designed structures; well-designed frame structure thrown out of plumb. Damage great in substantial buildings, with partial collapse. Buildings shifted off foundations.
X.	Some well-built wooden structures destroyed; most masonry and frame structures destroyed with foundations. Rails bent.

Adapted from ATC-13

Liquefaction and other Geologic Hazards: This site is located within an area that has been designated as a liquefaction zone by the California Seismic Hazard Mapping Act prepared by the California Department of Conservation (CDC).

Based on our general knowledge of soils in the area, it is assumed that the potential for liquefaction is moderate at the site. It is assumed that the potential of dynamic settlement and lateral spreading are low. The site is relatively level, so it is assumed that the potential of seismically induced landslides is very low at the site.

Surface Rupture Potential: The potential for surface fault rupture is considered to be low to moderate. While the site in question is near several active faults, it is not situated within a Special Study Zone as defined by the Alquist-Priolo Earthquake Fault Zoning Act.

E. LOSS ESTIMATION

Based on the earthquake intensity given above and the lateral systems described in the previous section, the scenario losses are estimated below:

Building	475-year Return Period	
	SEL	SUL
Montague Park (All Buildings)	12%	19%

Note that the SEL and SUL estimates represent the mean and 90th percentile scenario loss, respectively, which could be experienced by buildings of this type when compared with their replacement value. These loss values are rough estimates – as demonstrated by the wide range between the mean and 90th percentile values. This range should be considered when averaging these figures.

DRAFT

E. LOSS ESTIMATION *(cont.)*

While a scenario loss analysis is an important tool for comparing buildings, it does not attempt to determine the real losses in a particular building for a particular event.

Finally, the damage estimates given in this report are limited to physical damage and do not include loss of business or goods.

F. SUMMARY

General: This project includes the review an existing commercial building complex consisting of five buildings located in San Jose, California. All buildings are "tilt-up" construction with lateral force resisting systems consisting of plywood roof and floor diaphragms transferring loads to perimeter concrete "tilt-up" shear wall panels and interior steel knee-braced frames.

All buildings appear to be in good physical condition, and no significant structural deficiencies were observed during our site visit. In general, the foundation systems appear to carry the existing loads with no noticeable distress.

According to our review, these buildings are anticipated to have average performance (with somewhat similar damage) when compared to standard construction for building types as defined by ATC-13 under similar ground motions. This level of performance is used as the basis for our scenario loss estimates. We anticipate that the structures will maintain their vertical load-carrying capacity during a code level event.

Recommendations: No structural repair or retrofit work is deemed necessary at this time.

G. SUB-PURLIN HANGERS

Description: As part of the wood-framed roof structures, the roof framing systems are supported by sub purlins supported by metal hangers and multi-layer foil-type sheet insulation is stapled to the underside of the panelized wood roof structures, concealing the hangers within the cavity and resulting in trapped moisture within the space between the foil and the underside of the roof deck.

Condition: There has historically been an issue with multi-layer foil-type sheets with no fiberglass batt insulation in minimally conditioned warehouse-type structures, as it creates a trapped air space where moisture can accumulate and cause deterioration of purlin and sub-purlin hangers. The risk is less in fully air-conditioned buildings with fiberglass batt insulation (primarily the case here). No significant visible indications of corrosion (stains on visible portions of purlins) were noted. Marx/Okubo recommends continued monitoring of the sub-purlin hangers as part of ongoing maintenance.

DRAFT

VI. ENVELOPE AND EXTERIOR

A. ROOFING

Description: According to the information provided by the building owner, the original roof has been overlaid with a sprayed polyurethane foam with an acrylic coating. The parapet flashing consists of similar materials as the roofing field. The flashing extends part way up the wall and is covered with a sheet metal counterflashing detail or terminates at the parapet top and is covered with a sheet metal coping detail. The mechanical equipment is mounted on flashed curbs or sleepers. The sightscreen is mounted on wood sleepers with a flashed sleeper support. There are no means for expansion and contraction incorporated into the roofing system. These roofs were designed with adequate slope and drainage. However, there is evidence of standing water in selected areas. The roof areas drain to an interior drains with interior overflows or a scupper type overflow. Each building has one small deck with a reinforced fluid applied acrylic coating over a plywood deck. The decks drain to interior drains. There is a fabric canopy over part of the deck.

Condition: These roofs are in generally good condition and performing consistently with roofs of similar age and construction. Immediate repairs to all roofs will be required and will include permanently flashing new jacks, clearing scuppers, and repairing gouges, blisters and other defects. The acrylic coating over the foam roofs will need to be reapplied in the next eight to 10 years. With recommended repairs and annual maintenance these roofs could perform for 10+ years. The wood framed sightscreen will require immediate repairs to localized damaged hardboard panels as well a provisions for ongoing future repairs to deteriorated 2x framing members.

B. EXTERIOR WALLS

Description: Exterior walls typically consist of reinforced concrete tilt-up panels with single color heavily textured latex paint finish. Wall panels are typically 6" and 12" thickness, depending on location, and are 36' in height. Along the building front elevation, are fully adhered 24" square, 1/2" thick marble tile beneath exterior ribbon windows that terminate at a sheet metal j-screed molding. Joints between the concrete tilt-up panels typically have polyurethane sealant over backer rod.

Condition: The building exteriors are generally in good condition, with certain specific issues noted. A number of localized wall panel cracks and weld-plate spalls noted at the concrete tilt-up panels should be repaired by low-pressure epoxy injection to restore the structural integrity of the panel and to minimize further corrosion of the underlying steel reinforcing. Cracked and broken marble tile was noted at Building 411 while hairline mortar cracking and erosion was typical at building corners and transitions. Marble tile and mortar will require generalized refurbishment and localized repair and/or replacement in the immediate to restore the finish appearance. The regularly scheduled crack repair, prep and repainting of the building exteriors will be required in the next several years at all buildings except Building 2860, which was recently repainted and then again approximately every five years thereafter.

DRAFT

B. EXTERIOR WALLS *(cont.)*

***Condition** (cont.):* Scheduled replacement of the tilt-up wall panel sealant joints should be completed at all buildings concurrently with the far term exterior repainting.

C. THERMAL INSULATION

Description: Fiberglass batt insulation of an undetermined thickness was observed at the underside of the wood roof structure.

The exterior concrete tilt-up wall panels are typically exposed on the interior face and have a knock-down textured latex paint finish. No insulation is provided.

Condition: No significant issues were noted.

D. WINDOWS

Description: Exterior windows consist of window wall systems and continuous ribbon windows along the building front elevation, conventional anodized aluminum storefront type assemblies at the elevated balcony, and individual punched windows at the building sides and rear. Window wall systems are constructed of single pane tinted glazing (some locations are a solar film application) secured in recessed anodized aluminum frames by continuous butyl gaskets and have low profile beauty frame caps. Ribbon windows are similarly constructed and consist either of vertical beauty caps or silicone butt joints. Conventional storefront and individual punched windows are single pane tinted glazing in anodized aluminum frames.

Window Covers: Window coverings consist of horizontal metal mini-blinds.

Condition: Brittle, retracted and weathered butyl gaskets as well as a partial remedial wet sealing of window corners was noted throughout the Building 2860 window wall system. On going remedial wet sealing of aged and weathered window glazing gaskets will be required over the term to maintain the integrity of the assemblies.

E. EXTERIOR DOORS/FRAMES

Description: Building main entry doors are full height tempered glass assemblies with chrome-plated top and bottom rails, pull-type door hardware, and pneumatic closure devices. Secondary entries are conventional anodized aluminum storefront type assemblies. Secondary exit and service doors are hollow-metal hung in hollow-metal frames with paint finish and have lever-style or security-grade hardware. Loading doors consist of uninsulated metal overhead coiling with paint finish.

DRAFT

E. EXTERIOR DOORS/FRAMES *(cont.)*

Weather Tightness: The doors generally appear to be properly weather stripped. Drip edge head flashing is typically provided at secondary doors and weather seals are installed at loading doors.

Condition: No significant issues were noted.

F. EXTERIOR SOFFITS, TRIM AND TRELLISES

Description: Soffits consist of painted cement plaster with sheet metal control joints and recessed pendant sprinkler heads. Soffit ventilation consists of individual painted sheet metal grilles. A rooftop-mounted fabric sunshade is provided over the second floor exterior balcony and main entry along the building front elevation.

Condition: At several locations, the fabric sunshade has been torn by unsecured sections of the bent angle supports, and overall maintenance and repair should be completed in the immediate to address loose or unsecured attachment points and any areas of damaged or torn material. Scheduled replacement of the sunshade fabric will be necessary over the term.

G. EXTERIOR BALCONIES

Description: The exterior balcony at each building is constructed of plywood sheathing over 4x wood purlins spaced at 18" on-center and is sloped to individual perimeter primary deck drains that appear to be tightlined discharging below grade. No overflow drains were observed. The fluid-applied waterproofing membrane is applied up the interior face of a low-profile curb and terminates beneath the aluminum sill track of the storefront window system or a sheet metal screed. The exterior railing wall is constructed of cement plaster over conventional light gauge metal stud framing with an aluminum coping that is integral to the ground floor exterior window wall system. Painted pipe railing is attached to the interior face of the railing wall.

Condition: The integrity of the waterproofing membrane varies by building location. Isolated field and perimeter transition repairs using compatible sealant products were typically observed. Scheduled rejuvenation of the membrane with a high-quality fluid applied waterproofing coating will be necessary typically every ± five years.

H. EXTERIOR LANDINGS, STAIRS AND RAILINGS

Description: None provided.

Condition: Not applicable.

DRAFT

VII. INTERIOR IMPROVEMENTS

A. INTERIOR WALLS

Description: The building interiors primarily consist of conventional office type use, with shipping/receiving areas at the rear of the buildings. A cafeteria and full service kitchen with cooking facilities is provided at second floor of Building 411. Interior walls generally consist of painted gypsum board over metal stud framing.

Condition: The interior improvements are generally considered to be market standard materials and finishes, and are generally in good condition, with wear and deterioration consistent with the age of the various improvements. No significant issues were noted.

B. INTERIOR DOORS/FRAMES

Description: Doors are typically solid-core wood with a stain finish set in anodized aluminum or painted hollow metal frames. Certain core area doors are hollow metal in hollow metal frames with a paint finish. Door hardware is typically lever style.

Condition: No significant issues were noted.

C. CEILINGS

Description: Ceilings typically consist of 2x4 suspended acoustical tiles with lay-in florescent lighting fixtures. A few areas at the ground floor have exposed structure at the underside of the ceiling.

Condition: The ceilings are generally in good condition. Stained acoustical ceiling tiles at the second floor should be removed and replaced. Otherwise, no significant issues were noted.

D. FLOORS

Description: Office areas typically have direct glue-down commercial grade carpeting. Break room and lab areas typically have vinyl composite tile (VCT) flooring. The shipping/receiving area has an exposed concrete slab-on-grade or VCT flooring.

Condition: No significant issues were noted.

DRAFT

E. RESTROOMS

Description: Two sets of multiple occupancy men's and women's restrooms are provided on each floor. Several restrooms are provided shower and locker facilities. Finishes in the restrooms typically include ceramic tile at the floors, ceramic tile at the lower portions of the wet walls (all walls at the shower/locker areas), painted gypsum board at the remaining walls and painted gypsum board at the ceiling. Toilet partitions are floor-mounted plastic laminate. Countertops are plastic laminate. Standard commercial grade plumbing fixtures and accessories are provided throughout.

Condition: No significant issues were noted.

F. UTILITY ROOMS

Description: Utility rooms typically have painted gypsum board at the walls. The floors are typically exposed concrete or VCT finished. Ceilings are either painted gypsum board or exposed to the underside of the floor/roof structure.

Condition: No significant issues were noted.

G. INTERIOR STAIRS

Description: The building is served by multiple sets of stairs; the main lobby stairs are open between floors and egress stairs are enclosed. The lobby stairs are fully carpeted and have painted wood railings.

Condition: No significant issues were noted.

DRAFT

VIII. MECHANICAL/ELECTRICAL

A. HEATING, VENTILATION, AND AIR CONDITIONING

Air Conditioning/Heating Systems: Base building cooling is provided to each of the five buildings by roof-mounted boxcar package units ranging in size from 50 to 75 tons each. Heating is provided to Buildings 2840, 2880, and 3050 by roof-mounted gas fired boilers that deliver heating hot water to perimeter zone VAV boxes. Heating is provided to Buildings 2860 and 411 by roof-mounted gas-fired duct furnaces. The following table details base building mechanical equipment:

DRAFT

Building 411					
Equipment	**Manufacturer**	**Model**	**Qty**	**Age**	**Capacity (ea.)**
Boxcar	Trane	SXHCC5540	4	20 years	55 tons
Duct Furnace	Trane	No Access	2	20 years (est.)	150,000 Input BTU/HR (est.)
Duct Furnace	Trane	No Access	2	20 years (est.)	200,000 Input BTU/HR (est.)
Duct Furnace	Modine	HFG400SM	1	7 years	200,000 Input BTU/HR

Building 2840					
Equipment	**Manufacturer**	**Model**	**Qty**	**Age**	**Capacity (ea.)**
Boxcar	Trane	SXHCC6040	4	16 years	60 tons
Boiler	Rite	250	1	16 years	2.5 Mil. Input BTU/HR

Building 2860					
Equipment	**Manufacturer**	**Model**	**Qty**	**Age**	**Capacity (ea.)**
Boxcar	Trane	SXHCC5040	1	18 years	50 tons
Boxcar	Trane	SXHCC6040	2	18 years	60 tons
Duct Furnace	Trane	GFNCC40EEC	5	18 years	350,000 Input BTU/HR
Split System	Carrier	Unknown	5	8 years	5 tons

Building 2880					
Equipment	**Manufacturer**	**Model**	**Qty**	**Age**	**Capacity (ea.)**
Boxcar	Trane	SXHCC6040	4	18 years	60 tons
Boiler	Raypak	H92342	1	18 years	2.34 Mil. Input BTU/HR

Building 3050					
Equipment	**Manufacture**	**Model**	**Qty**	**Age**	**Capacity (ea.)**
Boxcar	Trane	SXHCC6040	2	19 years	60 tons
Boxcar	Trane	SXHCC7540	1	19 years	75 tons
Boiler	Raypak	H91532	2	1 year	1.53 Mil. Input BTU/HR

A. HEATING, VENTILATION, AND AIR CONDITIONING *(cont.)*

***Air Conditioning/Heating Systems** (cont.):* Tenant auxiliary cooling units are provided in each building that appears to serve computer server rooms. Buildings 3050 and 2840 have a large amount tenant auxiliary systems including package units, air cooled chillers, exhaust fans, vacuum and process air equipment. Tenant systems are generally mounted on the roofs and/or at grade level next to the building behind equipment screens.

Ventilation: Air distribution is provided to Buildings 2840, 2880, and 3050 by pneumatically controlled zone level VAV boxes. Perimeter VAV boxes are equipped with hot water reheat coils while interior zones are cooling only. Building 2860 is provided with pneumatically controlled VAV boxes with perimeter zones being a dual duct (heating-cooling) type and interior zones cooling only. Building 411 is also provided with a perimeter zone dual duct system, however the VAV boxes in this building are controlled by low voltage DDC. Each boxcar unit is equipped with economized damper sections that are capable of providing 100% outside air to the buildings. Roof-mounted fan provided exhaust for restroom in each building. Building 411 has a cafeteria that has a cooking grill that is served by a roof-mounted exhaust fan and an evaporative cooler for make up air.

Controls: Wall-mounted pneumatic thermostats provided control for the VAV boxes in Buildings 2840, 2860, 2880, and 3050. A roof-mounted control air compressor is provided on each of these buildings. Building 411 is provided with a CSI building management system (BMS) that consists of multiple building temperature sensors, direct control of VAV boxes and major base building mechanical equipment and a computer front end control system with graphical user interface software. Building 3050 is provided with a Johnson Metasys BMS system that controls tenant auxiliary systems as well as basic on/off control of the base building boxcar units.

Age: The majority of the base building mechanical equipment including the boxcar and duct furnace units on each building are original approximately 16 to 20 years old and appears to be in good condition for their age. Some of the compressors within the boxcar units have been replaced in each building, with the exception of Building 411, on which all boxcar compressors are original.

Maintenance: It appears that maintenance for the major building mechanical equipment is provided by an outside contractor. Terms of any maintenance contract were not provided for review. Tenant auxiliary systems are the responsibility of the tenant.

Condition: Buildings 2860 and 3050 each have boxcar units. However, plans show four boxcar units were originally specified for these buildings. This assumption is supported by the fact that the base building cooling capacity for each building using the three boxcar units is below industry standards. As listed in the table in the mechanical section, Building 2860 is provided with 5 tons split system units with remote condensers located on the roof. These units appear to serve a large open office area on the first floor.

DRAFT

A. HEATING, VENTILATION, AND AIR CONDITIONING *(cont.)*

***Condition** (cont.):* It is unclear why these split systems were added, however this additional capacity does bring the overall building cooling capacity to within industry standards and it appears that they are a part of the base building system. Building 3050 has a large amount of tenant auxiliary cooling systems that make up for the lack of capacity that a 4th boxcar unit would provide. If the existing tenant were to move out and the building was brought back to 100% base building systems, (tenant auxiliary systems removed) additional cooling capacity would be required. Marx/Okubo has included a cost in the cost table for the addition of a 4th boxcar unit on Building 3050 as a contingency.

Total base building cooling capacity to Buildings 3050, 411, 2840, 2860, and 2880 is approximately 488, 380, 321, 372 and 321 sf per ton respectively. The calculations are based on base building mechanical equipment only. Each is within industry standards for buildings with similar use and occupancy in the buildings geographical area, with the exception of Building 3050. As mentioned in the above paragraph, Building 3050 has a large amount of tenant auxiliary cooling systems that make up for the lack of capacity.

The boxcar package units are in good condition for their age. However, they will be reaching the end of their useful life at the end of the assessment period and provisions should be made to begin replacement. Additionally, we recommend that provisions be made for compressor replacements on the boxcar units within the assessment period based on age, wear and tear end of useful life. The duct furnaces on Buildings 411 and 2860 are original. Signs of leaks were observed on some of the duct furnace enclosures. Marx/Okubo recommends provisions be made to replace the duct furnaces within the assessment period based on age, wear and tear and end of useful life. Marx/Okubo recommends installing flexible gas line connections on all roof-mounted gas fired equipment to reduce the possible damage during a seismic event. This is a recommended safety upgrade, not required.

B. PLUMBING

Domestic Water Piping: Where visible, domestic water pipe was observed to be copper tubing of an unknown type in each building.

Water Service: Each building is provided with domestic water service by dedicated 2" water mains equipped with an above ground backflow prevention device and dual parallel connected meters. Domestic water mains for each building are located on Junction Boulevard. Each building also has a dedicated irrigation water main, which are also equipped with above ground backflow prevention devices and meters.

Water Heaters: Domestic hot water is provided to each building by tank type electric hot water heaters ranging is size from approximately 50 to 80 gallons. The cafeteria in Building 2880 is provided with a dedicated 120 gallon electric hot water tank. All domestic hot water tanks observed were installed with earthquake bracing as required.

C. FIRE PROTECTION SYSTEM *(cont.)*

Fire Alarm Service: Each building is provided with a dedicated fire alarm system with varying levels of initiating and indicating devices. The flowing chart details the fire alarm systems in each building were devices where visible and were access was permitted:

Building 411			
Mnfr.	**Model**	**Initiating Devices**	**Indicating Devices**
Fire Lite	MS-9200	Smoke Det. (throughout) Water Flow Switch on Riser	Horn/Strobes (throughout) Bell (on bldg. exterior)

Building 2840			
Mnfr	**Model**	**Initiating Devices**	**Indicating Devices**
Fire Lite	MS-9200	Smoke Det. (throughout) Pull Stations (balcony doors) Water Flow Switch on Riser	Horn/Strobes (throughout) Bell (on bldg. exterior)

Building 2860			
Mfg	**Model**	**Initiating Devices**	**Indicating Devices**
Notifier	AFP-2000	Smoke Det. (elect. & fire control rm.) Pull Stations (entry/exit doors) Water Flow Switch on Riser	Horn/Strobes (throughout) Bell (on bldg. exterior)

Building 2880			
Mfg	**Model**	**Initiating Devices**	**Indicating Devices**
Notifier	AFP-2000	Smoke Det. (at fire doors & elev.) Pull Stations (entry/exit doors & stairs) Water Flow Switch on Riser	Horn/Strobes (throughout) Bell (on bldg. exterior)

Building 3050			
Mfg	**Model**	**Initiating Devices**	**Indicating Devices**
Cerberus	MXL/ MXLV	Smoke Det. (throughout) Pull Stations (lobby) Water Flow Switch on Riser	Horn/Strobes (throughout) Bell (on bldg. exterior)

Building 2860 is provided with a remote annunciator in the main lobby. Each main fire alarm panel appears to be monitored by a remote monitoring station through a phone line connection. Cabinet-mounted fire extinguishers are provided throughout each building.

Condition: Recalled fire sprinkler heads manufactured by Central are installed in Building 411. The manufacture currently has a program for recalled sprinkler head replacement at no cost to owner. It is unclear if the building is currently on the waiting list and/or scheduled for sprinkler head replacement. As a contingency, Marx/Okubo has included a cost for this item in this building in the event that the building is not scheduled or the program is no longer available in the future. A fire sprinkler head cabinet is not installed at the riser in Building 2840 as required. Five-year test will be required on the sprinkler systems within the assessment period.

DRAFT

B. PLUMBING *(cont.)*

Plumbing Waste & Vent Lines: Where visible, waste and storm drain piping consisted of cast iron pipe. All waste lines to city connections appear to be gravity feed. No sewage ejection or sump pump systems appear to be provided.

Fixtures: Typical plumbing fixtures include wall-mounted urinals and a mix of wall- and floor-mounted water closets. All fixtures observed were a non-low flow type. Shower facilities are provided in various floor restrooms in some buildings.

Water Feature: Each building is provided with a display water fountain at the main entry doors that consists of submersible pumps and vertical water displays. The fountains also appear to be provided with underwater with lighting fixtures.

Natural Gas Services: A single main natural gas service is supplied to each building. A single meter and pressure regulating devices are provided to each building at grade level near the point of entry into the buildings.

Age: The age and condition of the fixtures varies with tenant finish; however, the majority appears to be from original construction. However, domestic hot water heaters appear to be mostly upgraded form original. The main supply and waste lines were installed under the core and shell construction.

Condition: The plumbing systems and equipment appears to be in good condition with no major issues noted. No significant problems were noted or reported with plumbing leaks or drain blockages. While not required by code, Marx/Okubo recommends installing an earthquake shut-off valve and/or excess flow shut off valve on natural gas mains to reduce the buildings damage or loss during a seismic event. Building 3050 already has an earthquake shut-off valve installed. One domestic hot water heater in Building 411 will be 20+ years old within the assessment period and provisions should be made for its replacement.

C. FIRE PROTECTION SYSTEM

Fire Sprinkler Service: The building appears to be fully fire sprinklered. Dedicated 8" main fire water services are provide to each building. Fire pumps are not provided or appear to be required. Each 8" main provides fire sprinkler water to a single 6" riser in each building through post indicated valves (PIV) located at Junction Boulevard. Each 6" riser is equipped with a water flow switch and a water gong tied to an exterior mounted alarm bell.

Fire department connections are located at each build PIV valve. Fire hydrants are located in various areas on the site and on the main street. Building 2860 also has a 4" pre-action system tapped off of the main 6" risers that appears to have severed a computer room for a previous tenant. Fire sprinkler design data at each riser is .18 GPM over 3,000 sf, which is suitable for Ordinary II hazard classification.

DRAFT

C. FIRE PROTECTION SYSTEM *(cont.)*

***Condition** (cont.):* Provisions should be made for testing and any necessary repairs required as result of tests. The fire alarm systems appear to be in good condition with No major issues noted.

D. ELECTRICAL SYSTEM

Description of Service: Power is provided to each building by utility provided pad-mounted transformers at 480/277 volts, 3-phase, 4-wire. Buildings 2840, 2860, 2880, and 411 are each provided with a capacity of 2,000 amps. Building 2880 also has a second 480/277-volt, 2,000 amp dedicated main service installed that appears to serve tenant process systems. Each of these services are separately metered. The main electrical service to Building 3050 is provided at a capacity of 4,000 amps. Building 3050 also has a dedicated 480/277-volt, 3,000-amp double-ended main-tie-main substation that provides redundant power to the dedicated tenant systems that appears to be fed from the buildings main 4,000-amp electrical service. A second main incoming service appears to be connected to the 3,000-amp tenant main panel for redundancy. It appears that this tenant electrical panel is separately metered. This second main service may actually be a connection point for a generator for temporary emergency power or a provision for a future connection to a second main electrical service. Based on limited access to this building we were unable to fully evaluate this main electrical service for a complete understanding of how it services the building. Base building electrical capacities to Buildings 2840, 2860, 2880, 411, and 3050 are 19.4, 20.6, 19.4, 17.8 and 31.4 watts per square foot respectively, all of which are within industry standards.

Typical interior lighting in each building consists of 2x2 and 2x4 T8 fluorescent fixtures as well as recessed spot fluorescent fixtures. One exception is Building 2840, which is provided with 2x2 and 2x4 T-12 fixtures. Programmable master time clock controllers are provided in Buildings 411 and 2840. A Touchplate master lighting control system is provided in Building 3050. Interior lighting control systems were not found in Buildings 2860 and 2880, however they also appear to be provided with time clock controllers. Interior motion sensors where observed in Buildings 411, 2840, and 2860. Exterior lighting primarily consists of pole and building-mounted HID fixtures controlled by time clocks and photocells.

No base building emergency power systems are provided. A tenant owned emergency generator is provided at Building 3050 that backs up tenant process systems. Emergency egress lighting is provided to each building by battery backed up exit signs and lighting fixtures.

Condition: The major building electrical systems and equipment appears to be in good condition. No evidence or records of infrared surveys of the main electrical switchgear and panels was noted. Marx/Okubo recommends completing infrared surveys on all main electrical distribution panels in each building and budgeting for any repairs necessary as a result of tests.

DRAFT

IX. BUILDING EQUIPMENT

A. VERTICAL TRANSPORTATION

Description: Each building is provided with a single two-stop hydraulic elevator rated for 3,500 pounds or 23 people. The elevator was manufactured by Dover Elevator Co., and appears original to the building. Each elevator cab is equipped with a hands-free emergency phone and the doors are equipped with infrared motion sensors. One exception is the elevator cab in Building 3050, which has a corded emergency phone.

Condition: The hydraulic elevator equipment was observed to be in good condition with no major issues noted. Elevator ride appeared normal with no major issues identified. The operating permits in the elevator cabs were noted to be expired, with the exception of Building 2840, which expires in March 2007. Five-year load tests were indicated on the elevator machine equipment to have been completed within the last two to six years. The elevators in Buildings 411 and 2860 are currently due for a five-year test. The elevators in Buildings 2840, 2880, and 3050 will be due within the next two to three years.

B. SECURITY SYSTEMS

Description: Each building is provided with tenant owned and maintained security systems consisting of door contacts and motion sensors. Security camera systems were observed at Buildings 2840, 2860, and 3050 at interior and exterior locations. Tenant owned card key access control systems were observed at each building.

Condition: No major operation issues were identified with the current system installed at the building. Maintenance of the tenant owned systems are the responsibility of the tenant.

C. COMMUNICATION SYSTEMS

Description: Each building is provided with between 200 to 600 pairs of phone lines. Main telephone point of entry into each building is typically located in the main electrical room; fiber optic cable was identified in Buildings 411 and 2840.

Condition: No significant issues were noted.

DRAFT

X. CODE REVIEW

A. CODE CLASSIFICATION

The buildings were reportedly constructed in two phases beginning in 1984. Buildings in Phase I were likely constructed under the provisions of the 1979 or 1982 edition of the Uniform Building Code (UBC). Buildings in Phase II were reportedly built in 1989-1990 and likely constructed under the provisions of the 1988 edition of the UBC. According to the original construction drawings from 1984, the construction is Type 3N, non-rated, and the occupancy classification is B-2 (office).

B. CERTIFICATES OF OCCUPANCY/BUILDING PERMITS

Marx/Okubo visited the City of San Jose Building Department in an effort to obtain a copy of the original shell building Certificates of Occupancy. No Certificates of Occupancy were available from the Building Department.

C. GOVERNMENT AGENCY REVIEW

Marx/Okubo contacted the following governmental agencies for the purpose of determining if any outstanding building or fire code violations exist at the property, or if any retroactive codes affect the property.

Building Department: Marx/Okubo conducted research at the online permit information site and visited the City of San Jose Planning, Building, and Code Enforcement Department on September 6, 2006 to view files not available on the online site. No corrective items were found in the available documents and no open complaints or violations are currently on file.

Fire Department: Marx/Okubo conducted research at the online permit information site and visited the City of San Jose Planning, Building, and Code Enforcement Department on September 6, 2006 to view files not available on the online site. No corrective items were found in the available documents and no open complaints or violations are currently on file.

Planning Department: Marx/Okubo contacted the City of San Jose Planning Department and received confirmation that the zoning for the subject property is Industrial Park as indicated on the City's official website.

Zoning: The Industrial Park zoning designation is an exclusive designation intended for a wide variety of industrial users such as research and development, manufacturing, assembly, testing, and offices. Industrial uses are consistent with this designation insofar as any functional or operational characteristics of a hazardous or nuisance nature can be mitigated through design controls.

DRAFT

C. GOVERNMENT AGENCY REVIEW

Zoning (cont.): Areas exclusively for industrial uses may contain a very limited amount of supportive commercial uses, in addition to industrial uses, when those uses are of a scale and design providing support only to the needs of businesses and their employees in the immediate industrial area. These commercial uses should be located within a larger industrially utilized building to protect the character of the area and maintain land use compatibility. When located within an area with a Mixed Industrial Use Overlay General Plan Designation or a Combined Industrial/Commercial General Plan Designation, a broader range of uses, both free standing and in combination with others, will be considered including uses such as retail, Church/Religious Assembly, social and community centers, recreational uses, or similar uses but only when the non-industrial use does not result in the imposition of additional constraints on neighboring industrial users in the exclusively industrial areas.

Permitted uses include research and development, commercial support, public eating establishments, offices, business and administrative. Minimum building setbacks are 15' front, 25' for parking, no side or rear setbacks unless adjacent to residential and a 45' maximum height. Parking requirements are 1 space per 250 sf for office and 1/350 for research and development.

D. MEANS OF EGRESS

Description: At the ground floors, egress is directly to the exterior via the main entry/exit doors through the ground floor corridors and lobbies or through secondary exit doors. At the second floors, primary egress is through the fire-rated corridors which are open to the main lobby, and then down the lobby stairs directly to the exterior at-grade via the main building entry doors. Additional means of egress from the second floor tenant spaces is via enclosed stair cases at building corners.

Exit Signage: Battery back-up type illuminated egress signage and emergency light fixtures were typically observed at individual tenant spaces.

Condition: No significant issues were noted.

DRAFT

XI. DISABLED ACCESSIBILITY

In July 1990, the Americans with Disabilities Act (ADA) was signed into law, extending civil rights protection to persons with disabilities.

The intent of the ADA is to provide accommodations to persons with disabilities and access equal to, or similar to, that available to the general public. The ADA requires that architectural and communication barriers be removed from existing public accommodations, effective January 26, 1992, provided that it is "readily achievable" to do so. "Readily achievable" measures may include, but may not be limited to: installing ramps; making curb cuts in sidewalks and entrances; rearranging furniture; installing flashing alarm lights; widening doors and many other items to make public accommodations more accessible.

Marx/Okubo made a general review of the property for compliance with the specific criteria set forth in the Americans with Disabilities Act Accessibility Guidelines (ADAAG). It is not clear who takes on the responsibility of barrier removal, whether it is the tenant or Property Management. It appears consultation with a professional fully knowledgeable with ADA requirements would greatly benefit the barrier removal process, both in terms of time and money. The Americans with Disabilities Act sets forth "recommended priorities for public accommodation". In general, the four priorities are as follows: 1) Access from public sidewalks, parking or public transportation to a building entrance; 2) Access to any areas or goods or services that are made available to the public; 3) Access to restroom facilities; and 4) Access in remaining ways to goods and services provided.

Marx/Okubo wishes to point out that alterations to existing buildings are required to comply "if an altered space or area is an area of the facility that contains a primary function". Primary function is defined as "a major activity for which the facility is intended". The statute further requires that "to the maximum extent feasible, the path of travel to the altered area, and the restrooms, telephones and drinking fountains serving the altered area, are readily accessible to and usable by individuals with disabilities, including individuals who use wheel chairs, unless the cost and scope of such alterations is disproportionate to the cost of the overall alteration". The authorities have defined "disproportionate" as when the cost of alterations of the accessible path of travel exceeds 20% of the cost of the alteration to the primary function area. Many state and local governments are incorporating the ADAAG into their building code.

The following issues were noted:

- Five designated accessible pedestrian routes from the adjacent public sidewalk need to be provided to each building main entry. Several of the routes will require removal of existing landscaping and construction of new concrete walkways and compliant curb ramps.
- A number of disabled-accessible parking stalls were noted to be non-compliant due to flared curb ramps that protrude into the side aisles of the parking stalls. Marx/Okubo recommends tearing out and replacing raised sidewalks and curb ramps at these portions and replacing with a sidewalk that is flush with the asphalt paving.

DRAFT

- Six disabled accessible parking stalls at Building 3050 lack adequate signage and require the installation of compliant pole-mounted placards.
- Localized existing toilet flush valves at disabled accessible restroom stalls do not face the compliant direction and should be reinstalled as a maintenance item.

This limited ADA review was done to identify major barriers and costs associated with a possible removal scenario. There may be other scenarios. This is not to be construed as a barrier removal plan. The ADA and ADAAG should be thoroughly reviewed prior to implementing a barrier removal plan. It should be noted that the obligation to remove barriers is a continuing one; therefore, the issues should be kept in mind for long range planning purposes.

DRAFT

XII. DEFICIENCIES AND RECOMMENDATIONS

A. EXPLANATION OF RECOMMENDATIONS

Recommendations for remedial work addressing all significant building deficiencies are included in this section. Recommendations are divided into the following three categories:

Immediate: All safety and life threatening code violations. Also included are problems, which, if left unrepaired over the next year, would result in serious damage to the buildings or their contents.

Necessary: Although not life threatening, these may produce serious deterioration to the building or other improvements if left uncorrected within one to five years.

Long Term: While currently in good condition, these items are approaching the end of their economic life and may need replacement within six to ten years.

Opinions of probable cost are provided for each recommendation. Costs are based on Marx/Okubo's experience with projects of a similar type, known construction industry average cost per square foot, or historical cost data. Cost information is inclusive of labor, material, design fees, appropriate overhead, general conditions and profit. It is exclusive of any local taxes that may be assessed on this project. It is assumed that remedial work will be performed by outside contractors. All suggested recommendations contained within this report will require further investigation and repair design prior to implementation. The figures included in the opinion of probable cost of repairs should only be considered as budgetary figures, and could substantially increase or decrease upon defining repair methods.

B. METHOD OF DETERMINING COSTS

The opinions of probable cost are based on certain repair methods conceptualized by this office, and could greatly be affected by the final corrective solution employed. The costs have been assembled for budgetary purpose only, and should not be considered as final costs to repair items identified in this report. The methods of repair, details and specifications required for corrective work will require further study by an expert in each field. It should be clearly understood that these are only suggested repair costs.

C. ITEMS NOT CONSIDERED

It should be noted that items, such as tenant improvement repairs and ADA requirements within tenant spaces, have not been included as part of the deferred maintenance, as these items are typically addressed during the tenant build-out. This office did not prepare any opinions of probable cost for items considered to be routine maintenance, such as replacement of hardware or items costing less than $1,000 in value, unless they are repeated throughout the project. Routine maintenance items are considered to consist of cleaning, replacement of miscellaneous parts, changing filters and other repairs, which are performed typically by a building engineer and maintenance contractors.

DRAFT

MONTAGUE PARK
San Jose, California

OPINIONS OF PROBABLE DEFERRED MAINTENANCE AND CAPITAL COSTS

	Description	Immediate	Years 1-5	Years 6-10	Comments
	SITE				
1.	Remove and replace localized areas of deteriorated and alligatored asphalt paving.		20,000		Four sections at entry drives from heavy vehicular traffic. To restore the integrity and prolong useful life of pavement.
2.	Regularly scheduled crack repair, seal coat, and restriping of asphalt paved surface parking areas.		74,600	74,600	Complete in phases. Required approximately every ±five years. Includes fire lane curb repainting.
3.	Scheduled rejuvenation of the exterior fountain basin fluid applied waterproofing coating.		32,000		To inhibit moisture infiltration through cast concrete fountain walls and basin.
	Site - Subtotal	**$0**	**$126,600**	**$74,600**	
	STRUCTURE				
4.	Epoxy injection repair of localized open cracking of the concrete wall panel at Building 2860.	1,000			Wall panel at northwest corner stairwell requires structural repair.
5.	Structural repairs to localized areas of concrete wall panel cracking and spalling.	15,000			Deterioration typically at weld-plate panel connections.
6.	Monitor multi-layer foil-type insulation at underside of roof framing for sub purlin hanger deterioration.		Maintenance	Maintenance	No current indications of issues noted. Ongoing monitoring recommended as part of ongoing maintenance.
	Structure - Subtotal	**$16,000**	**$0**	**$0**	
	ENVELOPE & EXTERIOR				
7.	Restorative repairs of exterior marble tile and mortar cladding system.	10,000			Replace cracked or damaged tiles and repair deteriorated mortar joints.
8.	Regularly scheduled crack repair, prep and repainting of building exteriors.		57,200	70,700	Necessary every ±five years. Year 1-5 cost excludes Building 2860, which was repainted in 2006.
9.	Scheduled replacement of tilt-up wall panel joint sealants.			13,000	Based on age and expected useful life. Perform at time of exterior repainting in Years 6-10.
10.	Restorative wet seal of weather deteriorated window wall glazing gaskets.		171,800	171,800	Based on observed age and exposure related deterioration. Phased completion across both terms of 10% per year.
11.	Scheduled rejuvenation of the exterior balcony waterproofing traffic coatings.	15,600	62,400	78,000	Use a high-quality fluid applied coating to protect underlying plywood sheathing.
12.	Immediate repairs and scheduled replacement of fabric awning system at second floor exterior decks.	5,000		88,000	Based on observed age and expected useful life. Immediate repair of localized worn areas.
	Roof Repairs/Replacement				
13.	Immediate repair of localized areas of damaged mechanical sightscreen.	6,000			Repair or replace broken or cracked hardboard panels.
14.	Reserve to resecure or replace weathered mechanical sightscreen 2x wood framing members.		15,000	15,000	Complete on an ongoing basis as needed.
15.	Immediate repair of gouges, blisters, and other defects.	3,500	0	0	Includes localized flashing of roof jacks and clearing several blocked scuppers.
16.	Scheduled reapplication of acrylic foam coating.	0	0	420,000	210,000 sf @ $2.00.
17.	Annual maintenance costs.	0	37,500	37,500	$1,500 per year per building.
	Envelope & Exterior - Subtotal	**$40,100**	**$343,900**	**$894,000**	
	INTERIOR IMPROVEMENTS				
18.	No significant immediate issues noted.	0			
	Interior Improvements - Subtotal	**0**	**0**	**0**	
	MECHANICAL/ELECTRICAL				
19.	Reserve to replace compressors in boxcar package units at Building 2840 due to age, wear and service life.		33,000	49,500	Replace one compressor per year in Years 4 through 8.
20.	Reserve to replace compressors in boxcar package units at Building 2860 due to age, wear and service life.		61,000		Replace one compressor per year in Years 2 through 5.
21.	Reserve to replace duct furnaces on Building 2860 due to age, wear and service life.		20,100	13,400	Includes labor, materials, rigging and permits. Five units total. Replace one per year starting in Year 3.
22.	Replace boxcar package unit on Building 2860 based on age, wear and service life.			81,000	Includes labor, materials, rigging and permits. Replace one unit in Year 10 (60-ton).
23.	Reserve to replace compressors in boxcar package units at Building 2880 due to age, wear and service life.		66,000	49,500	Replace one compressor per year in Years 2 through 8.
24.	Replace boxcar package unit on Building 2880 based on age, wear and service life.			81,000	Includes labor, materials, rigging and permits. Replace one unit in Year 10 (60-ton).
25.	Reserve to replace compressors in boxcar package units at Building 3050 due to age, wear and service life.		52,000	19,000	Replace one compressor per year in Years 3 through 6.
26.	Replace boxcar package units on Building 3050 based on age, wear and service life.			181,500	Includes labor, materials, rigging and permits. Replace one unit in Year 9 and one in Year 10 (One 60-ton and one 75-ton unit).
27.	Reserve to install new boxcar package unit and ductwork in Building 3050 (three of four units specified on original plans are currently installed).			217,500	Installing a fourth unit may be required if existing tenant moves out and supplementary tenant cooling systems are removed. Includes boxcar unit and associated air distribution systems.

DRAFT

MONTAGUE PARK
San Jose, California

OPINIONS OF PROBABLE DEFERRED MAINTENANCE AND CAPITAL COSTS

	Description	Immediate	Years 1-5	Years 6-10	Comments
	MECHANICAL/ELECTRICAL *(cont.)*				
28.	Reserve to replace compressors in boxcar package units at Building 411 due to age, wear and service life.		75,000	45,000	Labor and materials. Replace one compressor per year in Years 1 through 8.
29.	Reserve to replace duct furnaces on Building 411 due to age, wear and tear, end of useful life		19,400	6,000	Includes labor, materials, rigging and permits. Four units total. Replace one per year starting in Year 3.
30.	Replace boxcar package units on Building 411 based on age, wear and service life.			149,000	Includes labor, materials, rigging and permits. Replace one unit in Year 9 and one in Year 10. (Both 55-ton units)
31.	Install flexible gas line connections at rooftop gas-fired equipment in each building		1,500		Labor and materials. Five units at Building 411, five units at Building 2860. Recommended safety upgrade, not required.
32.	Install earthquake shutoff valve on natural gas mains in each building to reduce possible catastrophic damage during seismic event.		8,000		Recommended safety upgrade, not required by code. One per building, with exception of Building 3050, which already has one installed.
33.	Replace domestic hot water heater in Building 411 due to age, wear and service life.			3,000	Includes labor and material. Earthquake bracing already installed as required. Complete in Year 6.
34.	Complete infrared testing on main electrical panels in each building.		20,000		Recommended preventative maintenance measure as a part of regular property maintenance.
35.	Complete five-year fire sprinkler test in each building.		17,500		Includes labor and materials for test and repairs as necessary.
36.	Install fire sprinkler head cabinet with spare heads at fire sprinkler riser in Building 2840.	500			
37.	Contingency reserve for replacement of recalled fire sprinkler heads in Building 411.				Assumed to be covered under manufacturers voluntary replacement program.

OPINIONS OF PROBABLE DEFERRED MAINTENANCE AND CAPITAL COSTS ANTICIPATED BY LANDLORI AT CURRENT VACANT BUILDINGS

	Description	Immediate Costs to Landlord at Buildings 2860 and 411	Comments
	SITE		
1.	Remove and replace localized areas of deteriorated and alligatored asphalt paving.	8,000	Four sections at entry drives from heavy vehicular traffic. To restore the integrity and prolong useful life of pavement. Complete at time of new tenant improvements.
	Site - Subtotal	**$8,000**	
	STRUCTURE		
2.	Epoxy injection repair of localized open cracking of the concrete wall panel at Building 2860.	1,000	Wall panel at northwest corner stairwell requires structural repair.
3.	Structural repairs to localized areas of concrete wall panel cracking and spalling.	7,500	Deterioration typically at weld-plate panel connections.
	Structure - Subtotal	**$8,500**	
	ENVELOPE & EXTERIOR		
4.	Restorative repairs of exterior marble tile and mortar cladding system.	4,000	Replace cracked or damaged tiles and repair deteriorated mortar joints.
5.	Rejuvenation of the exterior balcony waterproofing traffic coating at Building 2860.	15,600	Use a high-quality fluid applied coating to protect underlying plywood sheathing.
6.	Immediate repairs and scheduled replacement of fabric awning system at second floor exterior decks.	2,000	Based on observed age and expected useful life. Immediate repair of localized worn areas.
	Roof Repairs/Replacement		
7.	Immediate repair of localized areas of damaged mechanical sightscreen.	2,400	Repair or replace broken or cracked hardboard panels.
8.	Immediate repair of gouges, blisters, and other defects.	1,400	Includes localized flashing of roof jacks and clearing several blocked scuppers.
	Envelope & Exterior - Subtotal	**$25,400**	
	INTERIOR IMPROVEMENTS		
9.	No significant immediate issues noted.	0	
	Interior Improvements - Subtotal	**$0**	
	MECHANICAL/ELECTRICAL		
10.	Contingency reserve for replacement of recalled fire sprinkler heads in Building 411.	0	No cost to owner, assumed to be covered under manufacturers voluntary replacement program.
	Mechanical/Electrical - Subtotal	**$0**	
	BUILDING EQUIPMENT		
11.	No significant immediate issues noted.	0

OPINIONS OF PROBABLE DEFERRED MAINTENANCE AND CAPITAL COSTS ANTICIPATED BY FUTURE TENANTS AT BUILDINGS 2860 and 411

	Description	Years 1-5	Years 6-10	Comments
	SITE			
1.	Remove and replace localized areas of deteriorated and alligatored asphalt paving.	8,000		Four sections at entry drives from heavy vehicular traffic. To restore the integrity and prolong useful life of pavement. Complete at time of new tenant improvements.
2.	Regularly scheduled crack repair, seal coat, and restriping of asphalt paved surface parking areas.	29,900	29,900	Complete in phases. Required approximately every ±five years. Includes fire lane curb repainting.
3.	Scheduled rejuvenation of the exterior fountain basin fluid applied waterproofing coating.	8,000		To inhibit moisture infiltration through cast concrete fountain walls and basin.
	Site - Subtotal	**$45,900**	**$29,900**	
	STRUCTURE			
4.	Monitor multi-layer foil-type insulation at underside of roof framing for sub purlin hanger deterioration.	Maintenance	Maintenance	No current indications of issues noted. Ongoing monitoring recommended as part of ongoing maintenance.
	Structure - Subtotal	**$0**	**$0**	
	ENVELOPE & EXTERIOR			
5.	Regularly scheduled crack repair, prep and repainting of building exteriors.	14,900	28,400	Necessary every ±five years. Year 1-5 cost excludes Building 2860, which was repainted in 2006.
6.	Scheduled replacement of tilt-up wall panel joint sealants.		5,200	Based on age and expected useful life. Perform at time of exterior repainting in Years 6-10.
7.	Restorative wet seal of weather deteriorated window wall glazing gaskets.	68,900	68,900	Based on observed age and exposure related deterioration. Phased completion across both terms of 10% per year.
8.	Scheduled rejuvenation of the exterior balcony waterproofing traffic coatings.	15,600	31,200	Use a high-quality fluid applied coating to protect underlying plywood sheathing.
9.	Immediate repairs and scheduled replacement of fabric awning system at second floor exterior decks.		35,200	Based on observed age and expected useful life. Immediate repair of localized worn areas.
	Roof Repairs/Replacement			
10.	Reserve to resecure or replace weathered mechanical sightscreen 2x wood framing members.	6,000	6,000	Complete on an ongoing basis as needed.
11.	Scheduled reapplication of acrylic foam coating.		159,000	79,500 sf @ $2.00.
12.	Annual maintenance costs.	15,000	15,000	$1,500 per year per building.
	Envelope & Exterior - Subtotal	**$120,400**	**$348,900**	
	INTERIOR IMPROVEMENTS			
13.	No significant immediate issues noted.	0		
	Interior Improvements - Subtotal	**$0**	**$0**	
	MECHANICAL/ELECTRICAL			
14.	Reserve to replace compressors in boxcar package units at Building 2860 due to age, wear and service life.	61,000		Replace one compressor per year in Years 2 through 5.
15.	Reserve to replace duct furnaces on Building 2860 due to age, wear and service life.	20,100	13,400	Includes labor, materials, rigging and permits. Five units total. Replace one per year starting in Year 3.
16.	Replace boxcar package unit on Building 2860 based on age, wear and service life.		81,000	Includes labor, materials, rigging and permits. Replace one unit in Year 10 (60-ton).
17.	Reserve to replace compressors in boxcar package units at Building 411 due to age, wear and service life.	75,000	45,000	Labor and materials. Replace one compressor per year in Years 1 through 8.
18.	Reserve to replace duct furnaces on Building 411 due to age, wear and tear, end of useful life	19,400	6,000	Includes labor, materials, rigging and permits. Four units total. Replace one per year starting in Year 3.
19.	Replace boxcar package units on Building 411 based on age, wear and service life.		149,000	Includes labor, materials, rigging and permits. Replace one unit in Year 9 and one in Year 10 (both 55-ton units).
20.	Install flexible gas line connections at rooftop gas-fired equipment in each building	1,500		Labor and materials. Five units at Building 411, five units at Building 2860. Recommended safety upgrade, not required.
21.	Install earthquake shutoff valve on natural gas mains in each building to reduce possible catastrophic damage during seismic event.	4,000		Recommended safety upgrade, not required by code. One per building.
22.	Replace domestic hot water heater in Building 411 due to age, wear and service life.		3,000	Includes labor and material. Earthquake bracing already installed as required. Complete in Year 6.
23.	Complete infrared testing on main electrical panels in each building.	8,000		Recommended preventative maintenance measure as a part of regular property maintenance.
24.	Complete five-year fire sprinkler test in each building.	7,000		Includes labor and materials for test and repairs as necessary.
	Mechanical/Electrical - Subtotal	**$196,000**	**$297,400**	
	BUILDING EQUIPMENT			
25.	No significant immediate issues noted.	0

LIMITATIONS

The conclusions and recommendations contained in this report/assessment are based upon professional opinions with regard to the subject matter. These opinions have been arrived at in accordance with currently accepted hydrogeologic and engineering standards and practices applicable to this location and are subject to the following inherent limitations:

1. The data and findings presented in this report are valid as of the dates when the investigations were performed. The passage of time, manifestation of latent conditions or occurrence of future events may require further exploration at the Site, analysis of the data, and reevaluation of the findings, observations, and conclusions expressed in the report.
2. The data reported and the findings, observations, and conclusions expressed in the report are limited by the Scope of Work. The Scope of Work was defined by the request of the client, the time and budgetary constraints imposed by the client, and availability of access to the Site.
3. Because of the limitations stated above, the findings, observations, and conclusions expressed by SECOR in this report are not, and should not be, considered an opinion concerning the compliance of any past or present owner or operator of the Site with any federal, state or local law or regulation.
4. No warranty or guarantee, whether expressed or implied, is made with respect to the data or the reported findings, observations, and conclusions, which are based solely upon Site conditions in existence at the time of investigation.
5. SECOR reports present professional opinions and findings of a scientific and technical nature. While attempts were made to relate the data and findings to applicable environmental laws and regulations, the report shall not be construed to offer legal opinion or representations as to the requirements of, nor compliance with, environmental laws, rules, regulations or policies of federal, state or local governmental agencies. Any use of the report constitutes acceptance of the limits of SECOR's liability. SECOR's liability extends only to its client and not to any other parties who may obtain the report. Issues raised by the report should be reviewed by appropriate legal counsel.

DRAFT

1.0 INTRODUCTION AND PURPOSE OF THE ASBESTOS OPERATIONS AND MAINTENANCE PROGRAM

It is the intent of this manual to provide an effective Asbestos Operations and Maintenance (O&M) Program for the subject property (facility) identified as the five commercial buildings identified as 3050 Zanker Road, 2840, 2860 and 2880 Junction Avenue, and 411 Plumeria Drive in San Jose, California. The facility owner is committed to providing a safe and healthful environment for all personnel, tenants, and contractors who currently live-in, work at, or may otherwise enter the facility.

The primary objective of this program is to control and minimize the exposure of the facility employees, tenants, subcontractors, and the general public to asbestos fiber releases. This program is also designed to prevent contamination of the environment through proper handling and disposal of asbestos-containing materials (ACMs). This O&M Program includes specific practices and procedures as they apply to building cleaning, maintenance, renovation, and general operations. The O&M Program should remain in effect until all ACM has been removed from the facility and is properly documented as such. This manual describes administrative requirements of the O&M Program and establishes work practice guidelines and procedures, which reduce the potential for release of asbestos fibers during routine maintenance operations and emergencies involving ACMs.

ACMs exist in many building environments. These materials must be properly managed to minimize or prevent potential health hazards. This manual was developed for use by the Asbestos Program Coordinator (APC) for the facility and the employees at the facility and should be used to implement and maintain an O&M Program.

SECOR International Incorporated (SECOR) performed a limited visual inspection for suspect ACMs at the facility as part of a Phase I Environmental Site Assessment (ESA) in May of 2005. Suspect ACMs were identified at the facility. All suspect ACMs identified during SECOR's survey should be presumed to contain asbestos for the purposes of operations and maintenance activities. Any material suspected of containing asbestos (which has not previously been sampled) should be reported to the APC before work on a project involving the suspect material(s) begins and the material(s) should be incorporated into this O&M Program.

This O&M Program was established to manage the suspect/presumed ACMs identified at the facility. It should be noted that the mere presence of ACM does not constitute an exposure risk to facility occupants or workers. ACM presents an exposure risk only when the material(s) are disturbed and/or asbestos fibers become airborne. Such releases do not normally occur; however, they may occur if the ACMs are or become friable (easily crumbled by hand pressure), disturbed and/or damaged; or when non-friable

DRAFT

ACMs are improperly handled and rendered friable (such as by cutting, drilling, or sanding the material(s)). This O&M Program was established specifically to provide the following information:

- Identify ACMs, presumed asbestos-containing materials (PACM), and suspected ACM at the facility.
- Establish an O&M Program for the facility in order to manage and maintain the ACM as long as the material(s) remains in place.
- Train employees on the use and purpose of the O&M Program and provide general information on related health effects and regulatory issues.
- Provide a mechanism to periodically assess and evaluate the condition of the ACMs.
- Provide direction on handling ACM.

This manual provides a general understanding of asbestos, its uses and potential health hazards, and provides a format for organizing and implementing the O&M Program. SECOR recommends that at least one person be appointed as the APC for the Facility. The APC should have the knowledge, experience, and proper training to implement the O&M Program. SECOR recommends that the APC implement an Asbestos Material Inventory Program for the facility. The Asbestos Material Inventory Program is discussed in Section 5.1. A thorough understanding of the information presented in this manual and completion of training described in Section 5.5 and 7.4.3 are essential for effective use of this manual.

DRAFT

2.0 FACILITY DESCRIPTION AND ASBESTOS SURVEY FINDINGS

The Site is occupied by five two-story commercial R&D/office buildings that were constructed between 1985 and 1990. SECOR was provided portions of two previously prepared reports presenting the findings of limited asbestos surveys conducted at the Site. The initial ACM survey was conducted in 1996 by Hygienetics Inc. Hygienetics collected 26 bulk samples of representative suspect ACMs throughout the Site. The 1996 Hygienetics report identified asbestos in the following materials:

- 12-inch by 12-inch vinyl floor tile and mastic
- Roofing material (sealant/mastic)
- Transite (asbestos cement) roofing screen panels

In 1999, Terracon conducted a second limited asbestos survey. Terracon collected a total of 24 bulk samples. None of the samples collected and analyzed by Terracon contain asbestos.

As no records of asbestos abatement have been identified, SECOR recommends treating the following materials identified by Hygienetics as ACM:

- 12-inch by 12-inch vinyl floor tile and mastic
- Roofing material (sealant/mastic)
- Transite (asbestos cement) roofing screen panels

All of the identified suspect ACMs were observed to be in good condition with no areas of damage. Based on the condition of the suspect ACMs at the time of SECOR's inspection, SECOR recommended that the identified suspect ACMs be managed in-place under an Asbestos O&M program until the condition of the materials change or until the materials would be impacted by renovations or demolition activities. All other suspect ACMs should be treated as ACM or sampled and analyzed for asbestos content prior to any disturbance.

DRAFT

3.0 OPERATIONS AND MAINTENANCE PROGRAM REQUIREMENTS

The following O&M Program requirements are to be adhered to at the facility:

- Prohibit unauthorized individuals (including employees, tenants, and contractors) from intentionally handling or disturbing ACMs.
- Prohibit unauthorized activities that require handling or disturbing ACMs.
- Establish procedures for activities that may require handling or disturbing ACMs.
- Assess and evaluate ACMs on a regular schedule (semi-annually) to identify changes in condition or accessibility. By monitoring ongoing conditions, changes in the condition of the ACMs can be identified and addressed appropriately.
- Respond to changes in the ACM condition, so that authorized personnel may promptly respond when ACMs have become damaged and/or friable.
- All intentional handling or disturbance of ACM (including maintenance, renovation or removal activities), should be performed by properly trained personnel.
- All asbestos-related work should be authorized by the APC.
- Newly discovered ACM in a work area undergoing maintenance or renovation activities should be immediately reported to the APC prior to any handling or disturbance of the material(s).
- All contractors (no exceptions), maintenance personnel, tenants, facility employees, etc., shall be notified of the presence and location of all ACMs.

NOTE: It will be the discretion of the APC to contract with a Certified Asbestos Consultant for purposes of asbestos management services. Asbestos management services may include the following:

- Preparation of specifications for asbestos abatement activities.
- Project monitoring of asbestos abatement contractor activities.
- Personal or project area air monitoring.
- Final inspection procedures.
- Preparation of a final closure report.

DRAFT

4.0 OPERATIONS AND MAINTENANCE PROGRAM ADMINISTRATION PERSONNEL RESPONSIBILITIES

The following work procedures have been developed specifically for the facility and facility owner in order to manage ACMs currently existing at the facility. These procedures are intended to minimize the disturbance of ACMs by employees and contractors who are not licensed asbestos abatement contractors or personnel trained in accordance with the manual. The APC and employees involved in maintenance activities should be familiar with these procedures. Should a situation arise that is not covered by the procedures, the APC or facility management should be contacted immediately and prior to any work activity.

The successful implementation of this O&M Program requires careful coordination between the APC, facility management personnel, employees, contractors, etc. Additionally, in some instances, asbestos abatement contractors may also be utilized.

4.1 ASBESTOS PROGRAM COORDINATOR

The APC for the facility will be responsible for communicating the requirements outlined in the O&M Program and for answering any questions concerning the program. The APC will be responsible for the implementation and enforcement of this O&M Program. The specific responsibilities of the APC include:

- Maintain asbestos material inventory.
- Notify management, employees, tenants, contractors, etc. at the facility of the presence and known locations of all ACMs and PACMs.
- Ensure proper safety training (for example, asbestos awareness training; inspection and assessment) for employees who perform maintenance or housekeeping activities in areas that ACMs are present.
- Respond to questions about the O&M Program from employees and others.
- Conduct or coordinate surveillance of ACMs on a routine basis.
- Maintain records of notifications, periodic surveillance, incident and emergency response activities, training, and other asbestos related activities. All asbestos-related records are to be retained permanently.
- Coordinate with a Certified Asbestos Consultant and a licensed asbestos abatement contractor during construction and maintenance activities that may require handling or disturbing ACMs.
- Coordinate facility personnel during incident and emergency response activities to initially isolate areas where disturbance of ACMs have occurred, and coordinating with a Certified Asbestos Consultant and a licensed asbestos abatement contractor in order to complete the isolation and to ensure the clean up of the affected areas.

DRAFT

- Ensure compliance with applicable federal, state, and local regulations.

4.2 FACILITY MANAGEMENT

The facility management will be responsible for ensuring employee compliance with the O&M Program and coordinating maintenance and renovation activities with regard to ACMs. Specific responsibilities include:

- Support the APC with regard to asbestos situations.
- Emphasize to employees the need to adhere to the established O&M Program.
- Ensure that the APC provides proper safety training to specific employees prior to assigning them to work in areas that contain ACMs.
- Coordinate maintenance and renovation activities with the APC to ensure that the ACMs are properly addressed.

4.3 EMPLOYEES

The facility employees are responsible for adhering to the requirements and procedures established in this O&M Program. The intent of the O&M Program is to ensure that no employee is exposed to any potential asbestos hazard in the work place. Employees who have questions regarding the O&M Program should contact the APC or facility management.

4.4 CONTRACTORS

All contracted facility contractors are responsible for adhering to the requirements and procedures established in this O&M Program. All contractors are required to fill out all of the proper forms prior to engaging in any asbestos related work at the facility. The intent of the O&M Program is to ensure that no contractors' employee is exposed to any potential asbestos hazard in the work place. Contractors' employees who have questions regarding the O&M Program should contact the APC or facility management.

DRAFT

5.0 O&M PROGRAM ADMINISTRATIVE REQUIREMENTS

5.1 ASBESTOS MATERIAL INVENTORY

The APC should ensure that an asbestos material inventory is completed and maintained for the facility. The inventory shall consist of known ACMs, PACMs, and suspected ACMs. It is the ultimate responsibility of the APC to properly document all locations of all known ACMs, PACMs, and suspected ACMs at the facility on an ongoing basis. Directions for completing the inventory are included below.

The asbestos material inventory is recommended to be completed in the following manner:

KNOWN ACM

A. Ensure that the inventory contains a listing of all known ACMs.

The information in the inventory should include the following:

- A listing of all known ACMs in the facility;
- The type of ACMs - for example, floor tile or spray-on acoustical ceiling texture;
- The general location of the ACMs in the facility; and
- The percent and type of asbestos in the ACMs.

If any of this information is missing from the inventory, please refer to the asbestos survey report or contact the APC to obtain the necessary information and incorporate this information into the inventory.

B. Determine and record the approximate quantity of the known ACMs in the facility.

- SECOR recommends that either the APC or a licensed asbestos abatement contractor quantify the material(s) prior to any scheduled maintenance or renovation activities. The APC is responsible for determining and recording the approximate quantity of known ACMs at the facility.

PRESUMED ACM

A. Determine and record the presence of PACM in the facility.

PACM includes the following materials:

DRAFT

- Thermal system insulation (TSI) in buildings constructed before 1981. TSI is a material that is applied to pipes, fittings, boilers, breaching, tanks, ducts, or other structural components to prevent heat loss or gain.
- Surfacing materials in buildings constructed prior to 1980. Surfacing materials are materials that have been sprayed, troweled on, or otherwise applied to surfaces (i.e., sprayed-on acoustical ceiling material, fireproofing, etc.).
- Resilient flooring materials installed prior to 1980.

Record all material(s) determined to be PACM in the inventory. Record this information by type of material.

B. Determine and record the general location, approximate date of installation, and approximate quantity of PACM.

SUSPECTED ACM

A. Determine and record the presence of suspected ACMs in the facility.

- Suspected ACMs consist of materials in buildings that have not been identified as known ACMs, but are suspected to contain asbestos.

Record all materials suspected of containing asbestos in the inventory. Record this information by type of material.

B. Determine and record the general location, approximate date of installation, and approximate quantity of suspected material(s).

- It is possible to rebut the presumption that PACM or suspected ACMs do contain asbestos. Specific procedures set forth in the Occupational Safety and Health Administration (OSHA) General Industry and Construction Industry Standards must be followed to do so. Generally, these procedures require that materials be surveyed in accordance with the Environmental Protection Agency (EPA) and the Asbestos Hazard Emergency Response Act (AHERA) survey protocol in order to determine asbestos content. Only accredited AHERA Inspectors and Management Planners can conduct this type of work. If PACM or suspected ACMs are found to be non-asbestos-containing by an AHERA inspection, these materials should be removed from the asbestos material inventory.

DRAFT

5.2 NOTIFICATION PROCEDURES

The APC should ensure that employees, tenants, and contractors are given appropriate notice concerning the presence and location of ACMs in the facility as required by the O&M Program and federal, state, and local regulations. Where necessary, special notifications shall be provided to non-English speaking or reading, disabled employees, tenants, and contractors in order to ensure conveyance of this information. The APC shall ensure compliance with the following notification requirements, in addition to applicable federal, state, and local regulations.

5.2.1 All Employees

The APC should ensure that a general notification is posted in a readily accessible location to inform all employees of the presence and location of ACMs at the facility. The APC should also provide non-English translations of the notification as appropriate. An example of an employee notification letter is provided as Appendix A.

5.2.2 Management, Maintenance, and Other Personnel

The APC should ensure that an individual notification of the presence and location of ACMs at the facility is provided to management, maintenance, and all other personnel who manage or work in areas that contain asbestos. Individual written notification shall consist of both a notification letter and a notification acknowledgment form. The APC should also provide non-English translations of the notification as appropriate. A notification acknowledgment form is provided in Appendix B.

The APC will be responsible for ensuring that all employee notifications and acknowledgments have been received and recorded.

5.2.3 Tenants

The APC should ensure that written notification of the presence and location of ACMs at the facility are provided to tenants who occupy areas containing ACMs. An example of a tenant notification letter is provided Appendix C.

5.2.4 Contractors

The APC will be responsible for ensuring that written notification of the presence and location of all ACMs at the facility is provided to all contractor's and contractor's employees' that may work in any area which contains ACM(s). An example of a contractor notification letter is provided as Appendix D.

The APC will be responsible for ensuring that all contractor/subcontractor notifications have been received and recorded.

DRAFT

In addition, the APC will be responsible for ensuring that all asbestos abatement contractors receive all written notifications for asbestos related work.

5.3 SIGNS AND LABELS

The APC will be responsible for ensuring compliance with following Sign and Labeling requirements, in addition, to applicable federal, state, and local regulations. Signs and labels should include the following:

DANGER
ASBESTOS
CANCER AND LUNG DISEASE HAZARD
AUTHORIZED PERSONNEL ONLY

In addition, where the use of respirators and protective clothing are required in the area, the signs and labels should include the following:

RESPIRATORS AND PROTECTIVE CLOTHING ARE REQUIRED IN THIS AREA

5.3.1 Signs

The APC will be responsible for ensuring that signs are posted at the entrance to mechanical rooms or areas that contain the presence of asbestos. The APC will be responsible for providing non-English translations of the signs as appropriate.

5.3.2 Labeling

The APC will be responsible for ensuring that, where feasible, labels are affixed to installed ACM products in order to identify that the material(s) contains asbestos. The APC will be responsible for providing non-English translations of the labels as appropriate.

DRAFT

5.4 PERIODIC SURVEILLANCE PROCEDURES

Periodic surveillance procedures are conducted at the facility in order to continually assess and evaluate the condition of the ACMs. These surveillance procedures will consist of semi-annual surveillance of the condition of the ACMs. This surveillance is necessary to maintain current information for the condition of the ACMs and to allow prompt and appropriate action to be initiated before a change in the material condition results in a potential asbestos exposure hazard. The information will also serve as documented historical data for the facility owner.

The initial SECOR visual inspection for the facility was performed by a SECOR representative and accredited AHERA Inspector. The periodic surveillance to be performed under this section will be performed by the APC and include review of each of the ACMs (i.e., ACM, PACM, and suspected ACM) listed on the Asbestos Material Inventory.

5.4.1 Change in Condition Reporting

During their daily activities, employees, maintenance personnel, and contractors may observe changes in the condition of ACMs at the facility. In particular, changes such as color change or delamination from the applied surface, water damage, or other damage due to routine maintenance procedures or accidental disturbance are significant. When such changes have been observed, the employee, maintenance personnel, or contractor should inform the APC or facility management immediately and complete a Change in Condition Form.

5.4.2 Semi-annual Surveillance

The APC will be responsible for performing semi-annual, visual surveillance to assess the changes in condition of the ACMs at the facility. This visual surveillance is not to include physically disturbing the ACMs. In the initial semi-annual surveillance, the condition of the ACMs will be observed and documented to establish a baseline for subsequent semi-annual surveillance. Also, for the initial semi-annual surveillance, the APC should refer to the report prepared by SECOR in order to document general condition of the material(s). For each semi-annual surveillance, the APC will be responsible for completing a Building Surveillance Form which notes the condition of the ACM and any changes since the last surveillance. The APC will be responsible for noting any physical damage, change in friability, change in color, delamination from the applied surface and any other damage. The surveillance should include the known areas of ACMs as identified in the Asbestos Material Inventory.

If any damaged or friable ACMs are identified during the surveillance inspections, the APC should initiate abatement and/or repair of the material(s). The APC will be responsible for coordinating with a Certified Asbestos Consultant and/or Licensed asbestos abatement contractor, as necessary, for abatement and/or repair of the damaged and/or friable ACMs.

DRAFT

5.5 TRAINING REQUIREMENTS

All employees and maintenance personnel who perform maintenance and housekeeping activities in areas that contain ACMs at the facility are required to attend an Asbestos Awareness Training Program prior to working in these areas and with ACMs. This training may also be provided to selected management personnel and other designated personnel as directed by the APC or facility management.

This training should meet the requirements set forth in 8 CCR 29, 1529 by California OSHA. Depending on the selected training of the individuals, those trained would be qualified to conduct Class III or Class IV work. Class I and Class II work applies to employees engaged in full abatement activities.

Typically, the following persons should be required to attend the Asbestos Awareness Training Program:

- APC
- Selected management personnel
- Employees and maintenance personnel
- Any other persons as designated by the APC or facility management

5.5.1 Asbestos Training Program

The APC is responsible for ensuring that the employee training list is maintained for all asbestos-related employee training. The training for the APC and any other staff the APC deems necessary shall be equivalent in curriculum, training method and length to the EPA Model Accreditation Plan (MAP) asbestos abatement Contractor/Supervisor ("**Competent Person**") training (40 CFR Part 763, Subpart E, Appendix C). This will ensure that the APC and those other similarly trained individuals can identify and react to potential asbestos hazards and incidents.

The Competent Person training shall be conducted in a manner that the employee is able to understand. Course work should include "hands on" training and shall be provided by an EPA Accredited Training provider. The employer shall ensure that each employee is informed of the following:

- Methods of recognizing asbestos, including the requirements in the OSHA Construction Standard 29 CFR 1926.1101, paragraph (k)(1), which presumes that certain building materials contain asbestos.
- The health effects associated with asbestos exposure.
- The relationship between smoking and asbestos in producing lung cancer.

DRAFT

- The nature of operations that could result in exposure to asbestos, the importance of necessary protective controls to minimize exposure including, as applicable, engineering controls, work practices, respirators, housekeeping procedures, hygiene facilities, protective clothing, decontamination procedures, emergency procedures, and waste disposal, and any necessary instruction in the use of these controls and procedures where Class III and IV work will be or is performed.
- The purpose, proper use, fitting instructions, and limitations of respirators as required by 29 CFR 1910.134.
- The appropriate work practices for performing the asbestos job.
- Medical Surveillance program requirements.

Training for maintenance and other staff (**"Operations and Maintenance Training"**) that is likely to disturb the identified or other suspect ACMs shall be consistent with OSHA Class III training. Class III work includes repair and maintenance operations, where ACM, including TSI and surfacing ACM, may be disturbed. Course work should include "hands on" training and shall take at least 16 hours. The employer shall ensure that each employee is informed of the following:

- Methods of recognizing asbestos, including the requirements in the OSHA Construction Standard 29 CFR 1926.1101, paragraph (k)(1), which presumes that certain building materials contain asbestos.
- All the items listed for Competent Person Training.

Training for Class IV Asbestos Work (**"Asbestos Awareness Training"**) shall be conducted in a manner that the employee is able to understand. Class IV work includes maintenance and custodial activities during which employees handle, but do not disturb ACM and activities to cleanup dust, waste, and debris resulting from Class I, II, and III activities. Course work should include "hands on" training and shall take at least 2 hours. The Asbestos Awareness Training Program includes the following:

- Methods of recognizing asbestos, including the requirements in paragraph (k)(1) of the Employee Information and Training section that presumes that certain building materials contain asbestos.
- The health effects associated with asbestos exposure.
- The relationship between smoking and asbestos in producing lung cancer.

DRAFT

The nature of operations that could result in exposure to asbestos, the importance of necessary protective controls to minimize exposure including, as applicable, engineering controls, work practices, respirators, housekeeping procedures, hygiene facilities, protective clothing, decontamination procedures, emergency procedures, and waste disposal procedures, and any necessary instruction in the use of these controls and procedures; where Class III and IV work will be or is performed, the contents of EPA 20T-2003, "Managing Asbestos in Place" July 1990 or its equivalent in content.

- The purpose, proper use, fitting instructions, and limitations of respirators as required by 29 CFR 1910.134.
- The appropriate work practices for performing the asbestos job.
- Medical Surveillance program requirements.
- The content of the Federal OSHA Standard, including appendices.
- The names, addresses, and phone numbers of public health organizations which provide information, materials and/or conduct programs concerning smoking cessation.
- The requirements for posting signs and affixing labels and the meaning of the required legends for such signs and labels.

This training should last a minimum of two hours. Following the training program, all personnel will be required to sign an Asbestos Certification Form.

5.5.2 Annual Refresher Training

Those employees required to attend the Asbestos Training Program should also attend an annual refresher course. The annual refresher training should consist of the same Asbestos Awareness Training Program as identified in Section 5.5 above.

Following the annual refresher training, all personnel should sign an Asbestos Awareness Certification Form. The APC should ensure that the employee training list is maintained for all employee annual refresher training.

DRAFT

6.0 ASBESTOS WORK PROCEDURES

6.1 MAINTENANCE ACTIVITIES

The following work procedures have been developed specifically for the facility and the facility owner in order to manage ACMs currently existing at the facility. These procedures are intended to minimize the disturbance of ACMs by employees and contractors who are not licensed asbestos abatement contractors or personnel trained in accordance with the manual. The APC and employees involved in maintenance activities should be familiar with these procedures. Should a situation arise that is not covered by the procedures, the APC or facility management should be contacted immediately and prior to any work activity.

6.1.1 Maintenance Activities Involving Drywall and Joint Compound and Wall Plaster

The drywall and joint compound from retail floor area, restrooms and warehouse should be considered as ACM. The material is considered to be non-friable and has a low to moderate potential for fiber release. SECOR recommends treating all of the material as asbestos-containing.

Drywall and joint compound and drywall and plaster that are in good condition pose no asbestos exposure threat; however, the following activities are prohibited:

- Sanding of the material is prohibited.
- Stripping or cutting into the material with high-speed saws is prohibited.

NOTE: If repair work is expected to be performed, the APC will be responsible for ensuring that the material is properly dealt with by trained and certified persons.

Maintenance activities that may cause disturbance of the material include, but are not limited to, the following:

- Replacement of damaged areas.
- Relocating/moving any stationary equipment.
- Repeated abrasion from mechanical equipment, such as sanding or grinding.
- Minor construction or renovation damage such as nailing, screwing, or drilling into the material.
- Other activities that could cause damage or abrasions to the material.

DRAFT

Any work conducted under this O&M Plan shall be limited to the disturbance of sections of drywall and joint compound of less than six square feet in area. Projects involving the disturbance of more than six square feet of drywall and joint compound shall be performed by licensed asbestos abatement contractors.

Signage/Security

Prior to the commencement of any asbestos related work, the vicinity of the work shall be cleared of tenants, or other persons not involved with the maintenance operations. This activity may include relocating tenants or conducting work while tenants are not in the area, etc.

Once the area has been secured, proper signs/barriers shall be posted to prevent tenants and other persons not involved in the maintenance activity from entering the work area. The signs and barriers shall be posted in locations which allow the worker to conduct the maintenance operation and provide adequate warning to prevent entrance. The signs and barrier shall include the words "Danger, Asbestos-Cancer and Lung Disease Hazard-Authorized Personnel Only" in accordance with the OSHA Standards.

Work Area Preparation

Once the work area has been defined by signs and barrier tape, plastic sheeting shall be placed in the immediate vicinity of the maintenance work. The plastic sheeting shall be placed in a manner as to collect any debris which is generated as a result of the maintenance or renovation operation. That is, if a small section of drywall is removed and replaced in a bathroom, it may be most practical to lay plastic sheeting on the floor of the entire bathroom. Additionally, other horizontal surfaces such as counter tops, furniture, and window sills should be covered with plastic if in the work area. The plastic should be installed with tape to prevent movement.

Procedures

The drywall and joint compound to be disturbed shall be wetted using a hand-held sprayer to reduce the dust generated when cut. The cutting shall be performed using a hand-held razor-knife or manual drywall saw in to the wetted surface. After completion of the maintenance operation, the general vicinity of the project should be misted with water to help all airborne fibers settle to horizontal surfaces. Once the area has been misted with water, a High Efficiency Particulate Air (HEPA) vacuum should be used to collect all visible debris. A through visual inspection of the vicinity of the project should be conducted after HEPA vacuuming to ensure that all visible debris has been collected.

DRAFT

6.1.2 Maintenance Activities Involving Floor Tile and Mastic, Carpet Mastic and Sheet Vinyl Floor Covering

Asbestos-containing floor tile and mastic, carpet mastic and/or sheet vinyl floor covering have not been identified as ACM at the facility. However, if additional sources of these materials are identified they should be treated as ACM until tested. The floor covering materials are non-friable and have a low potential for fiber release unless the flooring is damaged and rendered friable. The associated mastic is non-friable and has a low potential for fiber release. SECOR recommends treating all floor covering materials and mastic as asbestos-containing.

Flooring materials that are in good condition may be subjected to normal cleaning activities (i.e., cleaning, buffing, mopping, and waxing) that are not expected to disturb the material. The following requirements apply when performing activities on floor tile materials:

- Sanding of floor tile is prohibited.
- Stripping of finishes should be conducted using low abrasion pads at speeds lower than 300 rotation per minute (rpm) and wet methods.
- Burnishing or dry-buffing may be performed only on flooring that has sufficient finish so that the pad cannot contact the flooring material.
- Non-asbestos-containing floor covering materials may be installed over existing flooring materials as long as the existing material is not disturbed or removed.

NOTE: The APC will be responsible for properly documenting that ACM flooring exists under the non-ACM material.

Maintenance activities that may cause disturbance of floor tile and mastic include, but are not limited to, the following:

- Replacement of damaged floor tile.
- Relocating/moving any stationary equipment.
- Repeated abrasion from mechanical equipment, such as sanding or grinding.
- Coring of floor slabs
- Minor construction or renovation damage such as nailing, screwing, or drilling into the floors.
- Other activities that could cause damage or abrasions to any floor tile.

Any work conducted under this O&M Plan shall be limited to the disturbance of sections of flooring of less than four square feet in area. Projects involving the disturbance of more than four square feet of flooring shall be performed by licensed asbestos abatement contractors.

DRAFT

Signage/Security

Prior to the commencement of any asbestos related work, the vicinity of the work shall be cleared of tenants, or other persons not involved with the maintenance operations. This activity may include relocating tenants or conducting work while tenants are not in the area, etc.

Once the area has been secured, proper signs/barriers shall be posted to prevent tenants and other persons not involved in the maintenance activity from entering the work area. The signs and barriers shall be posted in locations which allow the worker to conduct the maintenance operation and provide adequate warning to prevent entrance. The signs and barrier shall include the words "Danger, Asbestos-Cancer and Lung Disease Hazard-Authorized Personnel Only" in accordance with the OSHA Standards.

Procedures

The flooring to be disturbed shall be wetted using a hand-held sprayer to reduce the dust generated when cut. The cutting shall be performed through a wetted sponge into the wetted surface. If feasible, an entire floor tile may be removed intact in order to conduct the maintenance operation. After completion of the maintenance operation, the general vicinity of the project should be misted with water to help all airborne fibers settle to horizontal surfaces. Once the area has been misted with water, a High Efficiency Particulate Air (HEPA) vacuum should be used to collect all visible debris. A through visual inspection of the vicinity of the project should be conducted after HEPA vacuuming to ensure that all visible debris has been collected.

6.1.3 Maintenance Activities Involving Thermal System Insulation

Thermal system insulation (TSI or pipe, elbow or boiler insulation) has not been identified as ACM. However, if TSI which has not been previously sampled, it should be treated as asbestos-containing until tested. TSI is friable and has a medium potential for fiber release unless the TSI is damaged, then it has a high potential for fiber release. SECOR recommends treating all TSI materials as asbestos-containing.

TSI materials should not be disturbed unless required for a maintenance project. The following requirements apply when performing activities on TSI:

- High speed saws or sanders are prohibited.
- Non-asbestos-containing jackets (canvas, plastic or aluminum) may be installed over the TSI as long as the existing material is not disturbed or removed.

Maintenance activities that may cause disturbance of floor tile and mastic include, but are not limited to, the following:

DRAFT

- ❑ Replacement or repair of valves, elbows or small sections of pipe for maintenance purposes.

Any work conducted under this O&M Plan shall be limited to the disturbance of sections of TSI of less than two linear or square feet of insulation on a pipe or vessel or one valve, fitting or elbow per project. Projects involving the disturbance of more than these quantities shall be performed by licensed asbestos abatement contractors.

Signage/Security

Prior to the commencement of any asbestos related work, the vicinity of the work shall be cleared of tenants, or other persons not involved with the maintenance operations. This activity may include relocating tenants or conducting work while tenants are not in the area, etc.

Once the area has been secured, proper signs/barriers shall be posted to prevent tenants and other persons not involved in the maintenance activity from entering the work area. The signs and barriers shall be posted in locations which allow the worker to conduct the maintenance operation and provide adequate warning to prevent entrance. The signs and barrier shall include the words "Danger, Asbestos-Cancer and Lung Disease Hazard-Authorized Personnel Only" in accordance with the OSHA Standards.

Work Area Preparation

Once the work area has been defined by signs and barrier tape, plastic sheeting shall be placed in the immediate vicinity of the maintenance work. The plastic sheeting shall be placed in a manner as to collect any debris which is generated as a result of the maintenance or renovation operation. That is, if a small section of TSI is removed within a small room, it may be most practical to lay plastic sheeting on the floor of the entire room. Additionally, other horizontal surfaces such as counter tops, furniture, and window sills should be covered with plastic if in the work area. The plastic should be installed with tape to prevent movement.

It is anticipated that most TSI removal projects will be conducted using the Glove-bag technique. The use of the Glove-bag shall be performed using a HEPA vacuum for negative pressure within the Glove-bag and a hand-held water sprayer to wet the TSI prior to disturbance.

Procedures

Once the glove-bag has been installed on the piece of equipment to be worked, the TSI shall be wetted using a hand-held sprayer to reduce the dust generated when cut. The cutting shall be performed using a hand-held razor-knife or similar tool. Once the maintenance operation has been completed, the waste shall remain in the Glove-bag and the bag closed in on itself. After completion of the maintenance operation, the general vicinity of the project should be misted with water to help

DRAFT

all airborne fibers settle to horizontal surfaces. Once the area has been misted with water, a High Efficiency Particulate Air (HEPA) vacuum should be used to collect all visible debris. A through visual inspection of the vicinity of the project should be conducted after HEPA vacuuming to ensure that all visible debris has been collected.

6.1.4 Maintenance Activities Involving Transite

Transite (asbestos cement) products have not been identified at the facility. If transite products are identified at the facility, they should be treated as asbestos-containing. Transite is non-friable and has a low potential for fiber release unless it is damaged and rendered friable. SECOR recommends treating all transite as asbestos-containing.

Transite that is in good condition may be subjected to normal cleaning activities (i.e., cleaning, buffing, mopping, and waxing) that are not expected to disturb the material. The following requirements apply when performing activities on transite materials:

- Sanding of transite tile is prohibited.
- Non-asbestos-containing materials may be installed over existing transite materials as long as the existing material is not disturbed or removed.

NOTE: The APC will be responsible for properly documenting that ACM transite exists under/behind the non-ACM material.

Maintenance activities that may cause disturbance of transite include, but are not limited to, the following:

- Replacement of damaged countertops or hoods.
- Installing hanger hooks or other items into transite panels.
- Repeated abrasion from mechanical equipment, such as sanding or grinding.
- Coring of counter tops or hoods.
- Minor construction or renovation damage such as nailing, screwing, or drilling into the transite.
- Other activities that could cause damage or abrasions to any transite.

Any work conducted under this O&M Plan shall be limited to the disturbance of sections of transite of less than four square feet in area. Projects involving the disturbance of more than four square feet of transite shall be performed by licensed asbestos abatement contractors.

DRAFT

Signage/Security

Prior to the commencement of any asbestos related work, the vicinity of the work shall be cleared of tenants, or other persons not involved with the maintenance operations. This activity may include relocating tenants or conducting work while tenants are not in the area, etc.

Once the area has been secured, proper signs/barriers shall be posted to prevent tenants and other persons not involved in the maintenance activity from entering the work area. The signs and barriers shall be posted in locations which allow the worker to conduct the maintenance operation and provide adequate warning to prevent entrance. The signs and barrier shall include the words "Danger, Asbestos-Cancer and Lung Disease Hazard-Authorized Personnel Only" in accordance with the OSHA Standards.

Procedures

The transite to be disturbed shall be wetted using a hand-held sprayer to reduce the dust generated when cut. The cutting shall be performed through a wetted sponge into the wetted surface. After completion of the maintenance operation, the general vicinity of the project should be misted with water to help all airborne fibers settle to horizontal surfaces. Once the area has been misted with water, a High Efficiency Particulate Air (HEPA) vacuum should be used to collect all visible debris. A through visual inspection of the vicinity of the project should be conducted after HEPA vacuuming to ensure that all visible debris has been collected.

6.1.5 Incidental Spill or Release Clean-up

Incidental spills or releases may occur when a tenant bumps the drywall, tears the vinyl flooring or runs into the TSI with a piece of equipment or tool, etc. These incidents are most effectively cleaned up as soon as reported to prevent additional release from tracking etc.

Security/Signage

If possible, given the situation, prior to the commencement of any asbestos related work, the vicinity of the work shall be cleared of tenants and other persons not involved with the spill or release clean-up activity. This activity may include relocating tenants or conducting work while tenants are not in the vicinity etc.

Once the area has been secured, proper signs/barriers shall be posted to prevent tenants and other persons not involved in the maintenance activity from entering the work area. The signs and barriers shall be posted in locations which allow the worker to conduct the maintenance operation and provide adequate warning to prevent entrance. The signs and barrier shall include the words "Danger, Asbestos-Cancer and Lung Disease Hazard-Authorized Personnel Only" in accordance with the OSHA Standards.

DRAFT

Work Area Preparation

Once the work area has been defined by signs and barrier tape, plastic sheeting shall be placed in the immediate vicinity of the clean-up work, if practical. The plastic sheeting shall be placed in a manner as to collect any debris which is generated as a result of the clean-up activity.

Procedures

The response to most Incidental Spills or Releases should be the immediate clean-up of all visible debris. An initial inspection of the vicinity of the release should be conducted. If more than one handful of debris has been released, the spill should be treated as a Routine Maintenance Operation. If more than one waste bag of debris will be generated as a result of the cleanup, then a licensed abatement contractor should be contracted to perform the work. After the inspection, the general vicinity of the release should be misted with water to help all airborne fibers settle to horizontal surfaces. Once the area has been misted with water, a High Efficiency Particulate Air (HEPA) vacuum should be used to collect all visible debris. A through visual inspection of the vicinity of the release should be conducted after HEPA vacuuming to ensure that all visible debris has been collected. **It may be necessary to collect clearance air samples as a result of a spill or release, this decision will be made on a case-by-case basis.**

6.2 RENOVATION, DEMOLITION, AND REPAIR ACTIVITIES

The facility management should notify the APC of any renovation, demolition, or repair work scheduled to be performed at the facility. The APC will be responsible for reviewing all proposed renovation, demolition, and repair work to determine the potential for disturbance to ACMs during the proposed renovation or repair activity. Prior to the renovation, demolition, or repair activity, the APC will review the area of the facility where the renovation or repair will occur and complete a Work Review Form. Based on this review, the APC will determine the applicability and ensure compliance of the federal NESHAP requirements, federal and state OSHA requirements, and local asbestos regulation requirements.

The APC should provide facility management with a copy of the completed form. The renovation or repair activity may not begin until the APC has completed the review and any recommendations have been addressed.

6.3 ASBESTOS-ABATEMENT WORK ACTIVITIES

The APC should ensure that any work requiring the handling or disturbance of ACMs is performed by a licensed asbestos abatement contractor in accordance with federal, state, and local laws, and this O&M Program. The APC will be responsible for authorizing the asbestos abatement contractor to perform asbestos-related work using a Work Permit (Appendix E). The asbestos abatement contractor may not begin any work at the facility until a Work Permit is issued. The APC will be responsible for ensuring that the Work Permit Log is maintained for all work permits issued.

DRAFT

The licensed asbestos abatement contractor will be responsible for ensuring that all ACM waste generated during abatement activities conducted at the facility is disposed of at a disposal facility (i.e., landfill) that is permitted to accept ACM waste. The characterization, record keeping, and documentation of the waste will be coordinated by/with the APC.

The APC will be responsible for ensuring that all documentation related to asbestos work activities at the facility is properly recorded, maintained, and available to facility personnel.

6.4 NEW CONSTRUCTION ACTIVITIES

At this time, the use of asbestos in certain forms has not been banned in the United States and asbestos is still used or found in new construction materials and products. For this reason, the APC should ensure that all new construction materials and products to be used at the facility are certified by the manufacturer as asbestos free or are accompanied by Material Safety Data Sheets (MSDS)/Product Data Sheets (PDS) that indicate they are asbestos free. As applicable, the APC should ensure that the architect for the construction project provides a written certification that all materials and products used on the project are asbestos free. This documentation should be maintained for each new construction project at the facility.

The APC will be responsible for ensuring that all asbestos-free certifications and/or documentation related to new construction activities at the facility is maintained in the Record Keeping Section.

6.5 WORK CONDUCTED BY CONTRACTORS

All work conducted by contractors at the facility will be conducted in accordance with applicable federal, state, and local regulations. The term contractor shall include all companies or firms that perform contracted work for the facility owner at the facility including housekeeping contractors, maintenance contractors, construction contractors, mechanical/HVAC contractors, electrical contractors, plumbing contractors, subcontractors, consultants, etc.

Prior to any contractor performing any renovation, demolition, or repair work at the facility, a Work Review Form should be completed by the APC for the proposed work activity. Renovation, demolition, or repair work activities may not begin until the APC has completed the review and any recommendations have been addressed.

The APC should ensure that all contractors whose work activities will require handling of or disturbance to ACMs are licensed asbestos abatement contractors with adequate employee training and insurance documentation. SECOR recommends that the APC hire a licensed asbestos abatement contractor to abate ACMs subject to handling or disturbance prior to the initiation of work by other contractors (i.e., plumbers).

Any work that will require the handling or disturbance of ACMs should be authorized by the APC using a Work Permit. Asbestos-related work activities at the facility may not begin until a Work Permit is issued. An example of a work permit is included as Appendix E.

6.6 AIR MONITORING

Prior to any activity which may disturb ACM, the employee should begin OSHA Exposure Monitoring. The OSHA Exposure Monitoring is required on any project where ACM (a material which contains more than one-tenth of one percent asbestos) is disturbed. The air monitoring must be conducted by an EPA AHERA Accredited Competent Person. The air samples should be collected in accordance with the OSHA Standards which require Phase Contrast Microscopy (PCM) analysis. PCM analysis is not capable of defining asbestiform versus non-asbestiform fibers. However, PCM is the only method available for Employee Exposure Monitoring.

It is possible to document that a specific task (i.e., removing two square feet of drywall, etc.) will not exceed the OSHA permissible exposure limit (PEL) on a routine basis. The APC may wish to document this information in a negative exposure assessment (NEA). If an NEA is prepared, the specific task may not require additional exposure monitoring and may reduce the level of personal protective equipment required. Prior to preparation of an NEA, the APC should ensure that all requirements set forth by OSHA have been met.

6.7 PERSONNEL PROTECTIVE EQUIPMENT AND DE-CONTAMINATION

All employees who engage in Routine Maintenance Operations or Renovation Projects are required to use proper personnel protective equipment (PPE). PPE consists of disposable coveralls, gloves, eye-protection and a respirator equipped with HEPA filters. The APC is required to provide each worker who may come into contact with ACM with the proper PPE. PPE should be used on all projects for which a NEA has not been prepared.

Prior to any operations involving contact with ACM, the worker shall don the PPE and use it until the task is complete. When the task is complete (or a break is taken), the worker shall use the HEPA vacuum to remove all visible debris from the disposable coveralls, gloves and respirator. Then, the worker shall remove the coveralls and gloves, placing them into the waste container. A clean and wet toilette should be used to wipe hands and face prior to the removal of the respirator. Once cleaned, the respirator shall be removed and placed into its storage container.

6.8 ASBESTOS WASTE COLLECTION, STORAGE AND DISPOSAL

All waste generated as a result of ACM related work shall be placed into containers labeled in accordance with EPA, OSHA and DOT regulations. The containers (bags or drums) should be leak-tight and have moisture in them. The waste containers shall be stored in a secured location such as a locked garage or shed until they are collected by a Hazardous Waste Transporter for disposal. The storage area should be identified as such with signs. Waste stored in the Storage Area should be dated and not allowed to accumulate for a period of longer than 90-days. Asbestos waste which is friable must be disposed of as Friable-Asbestos Waste (Hazardous). Non-friable asbestos waste such as floor tile and roofing materials can be disposed of as Non-friable -Asbestos Waste (Non-Hazardous). For this reason, Friable and Non-friable asbestos should be segregated, if possible. This should assist in cutting the cost of disposal.

DRAFT

7.0 DOCUMENTATION/RECORD KEEPING

Documentation of all asbestos-related training, notification, surveillance, and work activities should be completed and maintained by the APC and filed at the facility. The following sections briefly describe the O&M Program's requirements for maintaining documents and completing the O&M Program forms provided.

7.1 O&M PROGRAM FORMS

The original forms to be utilized in the O&M Program are provided as Appendices. The APC may need to obtain some of the information in this section.

- Asbestos Program Coordinator Form - form should be completed by the APC to identify the APC and the designated alternate.
- Operations and Maintenance Program/Emergency Contacts Form - form should be completed by the APC to identify the name and telephone numbers for the designated contacts (to be provided by the APC).
- Directory of Regulatory Agencies and Authorities - directory should be completed by the APC to identify address and telephone numbers of the local emergency response authorities (to be provided by the APC).
- Employee Notification List - list should be maintained by the APC to document issuance of employee notification letters and receipt of acknowledgment forms (to be provided by the APC).
- Employee Notification Letter - letter should be completed by the APC and provided to facility management, maintenance personnel, etc., who manage or work in areas which contain ACM (Appendix A).
- Employee Notice Acknowledgment Form - form should be completed by the APC and signed by facility management, maintenance personnel, etc., who may potentially handle or disturb ACM paint (Appendix B).
- Tenant Notification List - list should be maintained by the APC to document issuance of tenant notification letters (to be provided by the APC).
- Tenant Notification Letter - list should be completed by the APC and provided to tenants who occupy areas containing ACM paint (Appendix C).
- Contractor/Subcontractor Notification List - list should be maintained by the APC to document issuance of contractor/subcontractor notification letters and receipt of contractor/subcontractor certifications (to be provided by the APC).
- Contractor/Subcontractor Notification Letter - letter should be completed by the APC and be provided to all contractors and subcontractors who perform work at the facility (Appendix D).

DRAFT

- ❑ Contractor/Subcontractor Certification of Insurance - form should be completed by the APC and signed by all asbestos abatement contractors and subcontractors performing work at the facility (to be collected by the APC).
- ❑ Asbestos Material Inventory Form - form should be completed by the APC. Information to be provided by the APC should include approximate quantities of previously identified ACM; identifying PACM and suspected ACM at the facility, their general location, approximate installation date and approximate quantities (to be provided by the APC).
- ❑ Work Permit Log - log should be maintained by the APC to document issuance of work permits to asbestos abatement contractors for asbestos-related work activities at the facility (Appendix E).
- ❑ List of Abatement Work Completed - list should be maintained by the APC to document asbestos abatement work performed at the facility (to be provided by the APC).
- ❑ Building Surveillance Form - form should be completed by the APC (to be provided by the APC).
- ❑ Change in Condition Form - form should be completed by the APC (to be provided by the APC).
- ❑ Asbestos Certification Form - form should be completed by the APC (to be provided by the APC).
- ❑ Work Review Form - form should be completed by the APC (to be provided by the APC).
- ❑ List of Equipment and Supplies if provided as Appendix F.
- ❑ Medical Questionnaire is provided as Appendix G.
- ❑ Written Respiratory Protection and Fit-Test Program is provided as Appendix H.
- ❑ Qualitative Fit-Testing Protocol is provided as Appendix I.
- ❑ Qualitative Fit-Test Procedure is provided as Appendix J.
- ❑ Respirator Selection Criteria is provided as Appendix K.
- ❑ Asbestos Disposal Procedures is provided as Appendix L.
- ❑ Asbestos Program Coordinator Form is provided as Appendix M.
- ❑ Employee Notification List is provided as Appendix N.
- ❑ Glossary of Terms is provided as Appendix O.

DRAFT

8.0 ASBESTOS STANDARDS AND GUIDELINES

Asbestos operations are regulated on the federal, state, and local levels. Applicable standards are described in the following subsections.

8.1 FEDERAL OCCUPATIONAL SAFETY AND HEALTH ADMINISTRATION

The Federal Occupational Safety and Health Administration (OSHA) regulates asbestos exposure in all work as defined in 29 CFR 1926.1101, including but not limited to the following:

- Demolition or salvage of structures where asbestos is present.
- Removal or encapsulation of materials containing asbestos.
- Construction, alteration, repair, maintenance, or renovation of structures, substrates, or portions thereof that contain asbestos.
- Installation of products containing asbestos.
- Asbestos spill/emergency cleanup.
- Transportation, disposal, storage, containment of, and housekeeping activities involving asbestos or products containing asbestos on the site or location at which construction activities are performed.

Coverage under this standard shall be based on the nature of the work operation involving asbestos exposure.

On August 10, 1994, the Federal OSHA issued revised asbestos regulations that became effective on October 11, 1994. The revised regulations include several new vocabulary terms and philosophies and incorporate the training requirements of the February 3, 1994, Environmental Protection Agency (EPA) Asbestos Model Accreditation Plan (MAP).

Changes in the OSHA standards that will have a broad impact in situations where asbestos is involved include the following:

- Redefinition of an ACM as "any material containing more than one percent asbestos."
- Newly defined classifications for asbestos work, identified as: Class I, II, III, and IV.

DRAFT

- Specific language regarding particular Classes (Class I, II, III, and IV) of asbestos removal work in the OSHA Construction Standard. For instance, for a traditional asbestos abatement project involving removal of pipe insulation or surfacing material (Class I project), using the containment method, the air within the containment must be changed "at least 4 times per hour, and a minimum of 0.02 column inches of water pressure differential, relative to outside pressure, shall be maintained within the negative-pressure enclosure as evidenced by manometric measurements."
- Reduction of the Permissible Exposure Limit (PEL) for airborne asbestos from 0.2 to 0.1 fibers per cubic centimeter (f/cc).
- OSHA has eliminated the "Action Level" of 0.1 f/cc.
- Where respirators are required to be worn, the acceptable upper limit concentration of airborne asbestos fibers for use of a given type of respirator has been reduced by a factor of 2.

8.2 STATE OF CALIFORNIA OCCUPATIONAL SAFETY AND HEALTH ADMINISTRATION

Cal/OSHA Standards Board has enacted regulations which establish limits on the amount of asbestos to which an employee may be exposed, measured by the 8-hour, time-weighted average concentration and by the short-time concentration. The regulation applies to all industries, including the construction industry. The specific asbestos requirements are contained in Title 8 of the California Code of Regulations (CCR) and in the California Health and Safety Code.

Under the California Health and Safety Code, construction materials containing more than 0.1 percent asbestos by weight are defined as asbestos-containing construction materials (ACCMs). Effective January 1, 1989, an addition to the California Health and Safety Code mandated by Assembly Bill 3713 requires building owners to provide written notice to employees and other persons concerning the presence of asbestos.

The Cal-OSHA Asbestos Standards are contained in Title 8 CCR Sections 1529 and 5208. The Asbestos Standard in Section 1529 applies to asbestos-related construction work, such as routine building maintenance, asbestos removal, renovation, demolition, and excavation which may involve exposure to asbestos as a natural constituent, and asbestos spill/emergency cleanup. The Asbestos Standard in Section 5208 applies to General Industry.

The Cal-OSHA Asbestos Standard mandates a permissible exposure limit (PEL) of 0.2 f/cc of air, determined as an 8-hour time-weighted average and an excursion limit of 1.0 f/cc average over a sampling period of 30 minutes. Proposition 65, the Safe Drinking Water and Enforcement Act of 1986 was enacted on February 27, 1987. This act prohibits all building owners and private businesses with 10 or more employees from "knowingly" or "intentionally" exposing any individual to a listed chemical (including asbestos) without first providing a "clear and reasonable warning" of

DRAFT

such exposure. For asbestos, the level at which warning requirements are exempted or the "no significant risk" level is 100 fibers inhaled per day or 140 million fibers ingested per day.

8.2.1 California Health and Safety Code 25915

The California Health and Safety Code 25915 (former Connelly Bill) requires all building owners in the State of California to provide written notification to employees, tenants, and contractors of the presence and location of ACCMs within their buildings. Some exclusions to the notification rule for restricted access areas is allowed. All documentation related to asbestos surveys (and air monitoring) must be made available to employees, tenants, or contractors for review. ACCMs are defined as any materials with an asbestos content of greater than one-tenth of 1 percent (>0.1%).

The California Health and Safety Code also requires that a seller with any knowledge of ACMs on a property disclose such information or knowledge to other parties involved in a real estate transaction.

8.3 UNITED STATES ENVIRONMENTAL PROTECTION AGENCY ASBESTOS HAZARD EMERGENCY RESPONSE ACT

Under the Asbestos Hazard Emergency Response Act (AHERA), the U.S. EPA requires each elementary school to perform an inspection for asbestos-containing building materials (ACBMs) and to prepare an asbestos management plan. The AHERA regulation further requires a reinspection of the ACBMs at least once every 3 years.

In its guidance document, Guidance for Controlling Asbestos-Containing Materials in Buildings, EPA 560/5-85-024, June 1985, which is applicable to all asbestos removal operations, EPA has recommended 0.01 f/cc, the limit of reliable quantification, as a clearance limit for airborne fiber concentrations determined by Phase Contrast Microscopy (PCM).

8.4 UNITED STATES ENVIRONMENTAL PROTECTION AGENCY NATIONAL EMISSION STANDARDS FOR HAZARDOUS AIR POLLUTANTS

The EPA National Emission Standards for Hazardous Air Pollutants (NESHAP) Asbestos Regulations (Title 40 CFR Part 61, Subpart M) set standards for asbestos mills, manufacturing demolitions and renovations, spraying, fabricating, insulating materials, and waste disposal.

The NESHAP regulation must be followed during any maintenance or renovation activities that might disturb ACMs. The EPA and local air pollution control district (APCD) offices must be notified prior to asbestos demolition/renovation activities involving specified quantities of materials. In addition, ACMs must be wetted prior to removal; no visible emissions to the outside environment is permitted. The NESHAP Regulation is administered by the Bay Area Air Quality Management District (BAAQMD) through Regulation 11, Rule 2.

DRAFT

APPENDIX A
Employee Notification Letter

WARNING:

THIS AREA CONTAINS ASBESTOS, A CHEMICAL KNOWN TO CAUSE CANCER.

The asbestos is located in this area is in the form of (i.e., drywall texture). The material is located throughout the (i.e., office area). Please contact the APC prior to proceeding with any work in this area. A Work Permit must be obtained from the APC.

> NOTE: Additional work authorization forms may apply prior to work in this area. The following must be considered: 1) a description of the specific location of the ACMs, 2) the appropriate work procedures to follow in this area, and 3) the actions to be taken in the event any ACM is disturbed while you are working in this area.

Please note that the mere presence of ACMs does not constitute a hazard to a worker in the immediate vicinity of the material(s); but, there is a potential for release of airborne asbestos if the material(s) are disturbed or damaged, and airborne asbestos may be a hazard.

APPENDIX C

Tenant Notification Letter

DRAFT

APPENDIX C
Tenant Notification Letter

Sample:

Business Operator
3050 Zanker Road, 2840, 2860 and 2880 Junction Avenue
and 411 Plumeria Drive
San Jose, California

Memo to Tenants.
RE: Asbestos Notification
Date: August 2, 2005

DRAFT

Dear Tenant:

During the time period the Site was constructed, asbestos, which is a naturally occurring mineral, was a common component of building materials used not only in the construction buildings such as the facility, but also in the construction of hospitals, schools, commercial and industrial buildings.

The facility owners/managers commissioned SECOR International Incorporated (SECOR), to complete a limited asbestos assessment of the facility. As part of the inspection, SECOR inspected representative areas of the buildings for ACMs. The following suspect ACMs exist at the facility:

- Drywall and texture

SECOR inspectors noted that these materials remain in generally good condition, and in their current condition should not pose a health threat to building occupants. Asbestos-containing materials do not present a health hazard merely due to their presence. Rather, asbestos fibers become a health hazard when they become airborne and are ingested or inhaled.

An asbestos Operations and Maintenance Program (O&M) has been prepared for this facility. This program includes the following: 1) identification and listing of all asbestos-containing materials and their location; 2) building policies for addressing asbestos-containing materials; 3) communication requirements; 4) training requirements; 5) monitoring and surveillance requirements; 6) procedures for asbestos related work; and 7) a brief discussion of these materials. This program is available for your review at the Management Office.

Proper maintenance is important to control the release of asbestos from any building materials. As a general rule, residents should follow these specific guidelines:

- Do not drill into any ceiling, wall or flooring material
- Do not cut into any ceiling, wall or flooring material
- Do not staple any ceiling, wall or flooring material
- Do not sand any ceiling, wall or flooring material
- Do not scrape any ceiling, wall or flooring material
- Do not tack into any ceiling, wall or flooring material
- Do not bore into any ceiling, wall or flooring material

- Do not replace any light fixture or other fixtures installed in ceilings or walls
- Do not nail or drill anything into walls or ceilings
- Do not pierce the surface of the ceiling, wall or floor by drilling or any other method
- Do not hang plants, mobiles or other objects from the ceiling or walls
- Do not allow any object to come into contact with the ceiling or walls
- Do not permit water or any other liquid to disintegrate the ceiling or walls
- Do not undertake any repairs with respect to the ceiling, walls or floor material.

Finally, if you are contemplating any tenant improvements, it is critical that those contemplated improvements be reported to and reviewed well in advance with Management. Please immediately report any damage to the Management Office.

If you have any questions regarding this notice, need further information, or have any plans for tenant improvements, which might disturb any of the materials identified, please contact the Management Office.

Your cooperation with respect to health and safety of all is appreciated.

APPENDIX F

List of Equipment and Supplies

DRAFT

APPENDIX F
List of Equipment and Supplies

The following equipment and supplies are suggested to be maintained by the APC for use during in-house activities involving ACMs:

- Personal Protective Equipment
  - Respirators
    -- Half-face negative Pressure air-purifying respirators (one for each person performing routine maintenance work or asbestos-related inspection activities)
    -- Full-face powered air-purifying respirators (PAPR) - optional
    -- High efficiency particulate air (HEPA) filters for each type of respirator
  - Disposable Suits
    -- Full-body suits with attached head and foot covers
  - Equipment
    -- HEPA vacuum cleaners with attachments with extra filters and bags.
    -- Amended-water hand-pump spray containers
    -- Calibrated low-flow air sampling pumps with chargers
  - Supplies
    -- Six-mil polyethylene disposable bags (glove bags)
    -- Duct tape
    -- Utility knives, bone saw, scrub brushes, and wire cutters
    -- Asbestos warning signs and barrier tape
    -- Asbestos warning labels
    -- 50-gallon drums for waste disposal
    -- Heavy duty staplers
    -- Smoke tubes and aspirator bulbs
    -- Disposable towels
    -- Rags
    -- Encapsulant
    -- Surfactant
    -- Spray adhesive
    -- Temporary lighting
    -- Electrical extension cords
    -- Transport carts
    -- Ladders

DRAFT

APPENDIX G

Medical Questionnaire

DRAFT

APPENDIX G
Medical Questionnaire

Dear Asbestos Program Coordinator:

A medical examination has been conducted for _____, _____
(Name of Employee) (SS Number)

by _____, on _____
(Name of Examining Physician) (Date)

The medical examination was conducted in accordance with the requirements of the Federal Occupational Safety and Health Administration (OSHA), Occupational Exposure to Asbestos, Construction Industry Standard found in 29 CFR 1926.1101. The examination included, at a minimum, the following elements as required by 29 CFR 1926.1101, subpart (M).

1. A medical and work history
2. Standard medical questionnaire contained in Part 1 of Appendix D.
3. A physical examination directed to the pulmonary and gastrointestinal systems, including a chest roentgenogram to be administered at the discretion of the physician, and pulmonary function tests of forced vital capacity (FVC) and forced expiratory volume at one second (FEV (1)). Interpretation and classification of chest shall be conducted in accordance with Appendix E to this section.
4. Any other examinations or tests deemed necessary by the examining physician.

A copy of the examining physician's written opinion has been forwarded to

_____
(Name of Employer)

The employer shall obtain a written opinion from the examining physician. This written opinion shall contain the results of the medical examination and shall include:

1. The Physician's opinion as to whether the employee has any detected medical conditions that would place the employee at an increased risk of material health impairment from exposure to asbestos;
2. Any recommended limitations on the employee or on use of personal protective equipment such as respirators; and
3. A statement that the employee has been informed by the physician of the results of the medical examination and of any medical conditions that may result from asbestos exposure.
4. A statement that the employee has been informed by the physician of the increased risk of lung cancer attributable to the combined effect of smoking and asbestos exposure.

Specific findings or diagnosis unrelated to occupational exposure to asbestos are not to be revealed in the written opinion. The employer shall provide a copy of the physician's written opinion to the affected employee within 30 days from its receipt. The employer has been instructed to maintain these records for the duration of employment plus 30 years.

DRAFT

APPENDIX H

Written Respiratory Protection and Fit-Test Program

DRAFT

Respirator Wear Activity

Light, medium, or heavy work.

Respirator Characteristics, capabilities, and limitations

Table F-1 describes some of the characteristics, capabilities, and limitations of various types of respirators.

DRAFT

TABLE I-1
LIMITATIONS OF RESPIRATORS

1. All Respirators

   - Certain gases are capable of harming the body by routes other than the respiratory tract; therefore, protective clothing may also be needed.

2. Air-Purifying Respirators

   - Do not protect against oxygen-deficient atmospheres
   - Protect only against specific contaminants for which cartridges/canisters/filters have been tested and certified
   - Protect only against limited concentrations of contaminants
   - Not for use against vapors or gases with poor warning properties
   - Not for use in immediately dangerous-to-life-or-health (IDLH) atmospheres

3. Supplied Air Respirators

   - Length of air line limits mobility of wearer
   - Must have source of breathing air or quality compressed air
   - Compressed air supply can be a source of contamination, unless adequate precautions are taken
   - Not for use in IDLH atmospheres (unless pressure-demand with escape provisions)
   - Provides no protection if air supply fails (unless equipped with escape provisions)

4. Self-Contained Breathing Apparatus (SCBA)

   - Heavy and bulky
   - Service life is limited by amount of air or oxygen in apparatus
   - Extensive training and maintenance required for safe use

Respirator Protection Factor

A respirator protection factor is a measure of the degree of protection the respirator provides. Protection factors vary depending on the type of respirator: the higher the protection factor, the greater the degree of protection.

Respirator Use

Respirator Seals

A face-fitting respirator may not be worn if facial hair interferes with the seal between the facepiece and the face. Also, glasses with temples which interfere with the seal of a full-facepiece respirator may not be used.

Contact Lenses

Do not wear contact lenses in areas where respirators are required.

Monitoring Respirator Use

The APC will be responsible for monitoring proper respirator use.

Air Monitoring

Area air monitoring should be periodically performed by a Certified Asbestos Consultant in order to evaluate that the proper respiratory protection is being used.

Training and Fitting

To ensure proper and safe use of respirators, employees (who wear respirators) should be trained annually using the outline in Table F-2, as a guideline. Qualitative and/or quantitative fee testing will be done every 6 months for negative pressure respirators. Full-face negative pressure respirators must be quantitatively fit-tested if they are to be used for protection against asbestos. Positive and/or negative pressure fit checks should be performed each time the respirator is worn.

DRAFT

Table I-2 - Training Outline

1. Objective

   To learn about the selection, use, fitting, and care of respirators.

2. Hazard Assessment

   A. Type of Respiratory Hazards

   - Oxygen Deficiency
   - Gases and vapors
   - Particulates

   B. Exposure Limits Specified by Federal OSHA

   - Permissible Exposure Limit (PEL) equals 0.1 fibers per cubic centimeter of air as averaged over an 8-hour time-weighted average
   - Short-Term Exposure Limit (STEL) equals 1.0 fibers per cubic centimeter of air as averaged over a period of 30-minutes
   - 8-hour time-weighted average concentration to which nearly all employees can be exposed without adverse effects.

   C. Immediately Dangerous-To-Life-or-Health (IDLH)

   - Poses immediate threat
   - Extra Precautions required
   - Only a few respirators suitable for this type of condition

   D. Regulations

   - 29-CFR 1926.1101, subpart (h), Respiratory Protection
   - ANSI Z88.2 - Practices for Respiratory Protection
   - NIOSH - Respirator Approval

DRAFT

3. Selection of Respirator

   A. Types of Respirators

      - Air purifying
      - Supplied air
      - Self-contained breathing apparatus

   B. Limitations of Respirator

      - Oxygen deficiency
      - IDLH
      - Cartridges - specific contaminants with warning properties

   C. Protection Factors

4. Maintenance and Storage

   A. Change cartridges when odor, irritation, or resistance to breathing is detected

   B. Disassemble and wash with warm, soapy water after each use

   C. Protect from dust, sunlight, moisture, chemicals, heat, and cold

   D. All respirators should be cleaned following each use

      A. NIOSH Cleaning Procedures

      - Remove the air purifying elements and valve flaps
      - Do not attempt to remove paint, varnish, or lacquer from cartridges or filters. When these air purifying elements contain accumulations of paint, enamel, or lacquer, they must be worn.
      - Other surfaces of the respirator facepiece covered with accumulations of paint, enamel, or lacquer may be wiped with a cloth that has been soaked with an appropriate cleaning agent. If found effective, mineral spirits, turpentine, or naphtha may be used; these solvents, however, will degrade the facepiece in time. Soap and warm water is the best cleaning solution. After cleaning, the agent is wiped from the facepiece with a dry cloth.

APPENDIX J

Qualitative Fit-Test Procedure

DRAFT

APPENDIX J
Qualitative Fit-Test Procedure

The following is the negative pressure fit-check, and qualitative fit-test protocol:

A. Respiratory Selection

- The test subject should be allowed to choose the most comfortable respirator from a selection of respirators, including respirators of various sizes from different manufacturers. The selection should include various sizes of elastomeric half facepieces and from at least two manufacturers. Each respirator should be equipped with a combination of high-efficiency particulate air (HEPA) and acid gas cartridges.

- The selection process should be conducted in a room separate from the fit-test room in order to prevent odor fatigue. Prior to the selection process, the test subject should be shown how to put on a respirator, how it should be positioned on the face, how set strap tension, and how to determine a comfortable respirator fit. A mirror should be available to assist the subject in evaluating the fit and positioning of the respirator. This instruction may not constitute the subject's formal training on respirator use, as this is only a review.

- The more comfortable facepieces are noted; the most comfortable mask is donned and worn at least five minutes to assess comfort. All donning and adjustments of the facepiece should be performed by the test subject without assistance from the APC or other persons.

- Assessment of comfort should include reviewing the following points with the test subject and allowing the test subject adequate time to determine the comfort of the respirator.

    - Positioning of mask on nose
    - Room for eye protection
    - Room to talk
    - Positioning mask on face and cheeks

- The following criteria should be used to help determine the adequacy of the respirator fit:

    - Chin properly placed
    - Strap tension
    - Fit across nose bridge
    - Distance from nose to chin
    - Tendency to slip
    - Self-observation in mirror

DRAFT

The test subject should conduct the conventional negative-pressure and positive pressure fit checks before the irritant smoke test is conducted. The subject should be told to fit the mask by rapidly moving the head from side-to-side and up and down, while taking a few deep breaths.

B. Negative Pressure Check

For this test, the user should close off the inlet of the cartridges or filters by covering with the palms or squeezing the breathing tube so it does not allow air to pass; inhale gently so the facepiece collapses slightly; and hold his or her breath for about 10 seconds.

If the facepiece remains slightly collapsed and no inward leakage is detected, the respirator probably fits tightly. This test, of course, can only be used on respirators with tight-fitting facepieces. It also has potential drawbacks, such as the hand pressure modifying the facepiece seal and causing false results.

C. Positive Pressure Check

This test is very similar in principle to the negative pressure test. It is conducted by closing off/covering the exhalation valve and exhaling gently into the facepiece. The respirator fit is considered satisfactory if slight positive pressure can be built up inside the facepiece without any evidence of outward leakage around the facepiece. For some respirators, this test requires that the wearer remove the exhalation valve cover. This removal often disturbs the respirator fit if not done before the respirator is put on. This test is easy for respirators whose valve cover has a single, small port that can be closed by the palm or finger.

D. Fit-Test Procedure

1. The test subject should be allowed to smell a weak concentration of the irritant smoke to familiarize the subject with the characteristic odor.

2. The test subject should properly don the respirator selected and wear it for at least 10 minutes before starting the fit-test procedure.

3. The APC or test conductor should review this protocol with the test subject before testing.

4. The test subject should perform the conventional positive-pressure and negative pressure fit checks. Failure of either check should be cause to select an alternate respirator.

DRAFT

5. Break both ends of a ventilation tube containing stannic oxychloride, such as the MSA Part No. 5645 or equivalent. Attach a short length of tubing to one end of the smoke tube. Attach the other end of the smoke tube to a low pressure air pump set to deliver 200 milliliters per minute.

6. Advise the test subject that the smoke can be irritating to the eyes and instruct the test subject to keep eyes closed while the test is performed.

7. The APC or test conductor should direct the stream of irritant smoke from the tube towards the face seal area of the test subject. The person conducting the test should begin with the tube at least 12 -inches from the facepiece and gradually move to within one inch, moving around the whole perimeter of the mask.

8. The test subject should be instructed to do the following exercises while the respirator is being challenged by the irritant smoke. Each exercise should be performed for one minute.

9. Breathe normally

10. Breathe deeply. Be certain breaths are deep and regular.

11. Turn head all the way from one side to the other. Be certain movement is complete. Inhale on each side. Do not bump the respirator against the shoulders.

12. No head up and down. Be certain motions are complete and made every second. Inhale when head is in full-up position (looking toward ceiling). Do not bump the respirator against chest.

13. Talk out loud and slowly for several minutes. The following paragraph is called the Rainbow Passage. Reading it will result in a wide range of facial movements, and, thus, be useful to satisfy this requirement. Alternative passages which serve the same purpose may also be used.

RAINBOW PASSAGE

When the sunlight strikes raindrops in the air, they act like a prism and form a rainbow. The rainbow is a division of white light into many beautiful colors. These take the shape of a long, round arch, with its patch high above and its two ends apparently beyond the horizon. There is, according to legend, a boiling pot of gold at one end. People look, but no one ever finds it. When a man looks for something beyond its reach, his friends says he is looking for the pot of gold at the end of the rainbow.

DRAFT

14. Jog in-place

15. The test subject should indicate to the APC or the test conductor if the irritant smoke is detected. If smoke is detected, the APC or test conductor should stop the test. In this case, the tested respirator is rejected and another respirator should be selected.

16. Each test subject passing the irritant smoke test (i.e., without detecting the smoke) should be given a sensitivity check of smoke from the same tube to determine if the test subject reacts to the smoke. Failure to evoke a response should void the fit test.

17. Steps 4, 9, and 10 of this fit-test protocol should be performed in a location with exhaust ventilation sufficient to prevent general contamination of the testing area by the test agents.

18. The test should not be conducted if there is any hair growth between the skin and the facepiece sealing surface.

19. If hair growth or apparel interfere with a satisfactory fit, they should be altered or removed so as to eliminate interference and allow a satisfactory fit. If a satisfactory fit is still not attained, the test subject must use a positive pressure respirator such as a powered air-purifying respirator, supplied-air respirator, or self-contained breathing apparatus.

20. If a test subject exhibits difficulty in breathing during the tests, he or she should be referred to a physician trained in respiratory diseases or pulmonary medicine to determine whether the test subject can wear a respirator while performing his or her duties.

21. Qualitative fit testing should be repeated at least every 6 months.

22. In addition, because the sealing of the respirator may be affected, qualitative fit testing should be repeated immediately when the test subject has:

- A weight change of 20 pounds or more
- Significant facial scarring in the area of the facepiece seal
- Significant dental changes (i.e., multiple extractions without prothesis or acquiring dentures)
- Reconstructive or cosmetic surgery
- Any other condition that may interfere with facepiece sealing

DRAFT

APPENDIX K

Respirator Selection Criteria

DRAFT

APPENDIX K
Respirator Selection Criteria

Airborne Concentrations of Asbestos, Tremolite, Anthophyllite, Actinolite, or Combination of These Minerals	Minimum Required Respirator
Not in excess of 0.1 f/cc	Half-mask air-purifying respirator equipped with HEPA filters (quantitative or qualitative fit-test required)
Not in excess of 0.2 f/cc	Helmet or hood-equipped powered air-purifying respirator equipped with HEPA filters
Not in excess of 0.5 f/cc	Full facepiece air-purifying respirator equipped with HEPA filters (quantitative fit-test required) or Half mask powered air-purifying respirator equipped with HEPA filters
Not in excess of 1 f/cc	Full facepiece powered air-purifying respirator equipped with HEPA filters or Any air-supplied respirator (Type "C") operated in continuous flow mode
Not in excess of 10 f/cc	Full facepiece supplied-air (Type "C") operated in pressure demand mode
Greater than 10 f/cc	Full facepiece supplied-air respirator (Type "C") operated in pressure demand mode, equipped with auxiliary positive pressure self-contained breathing apparatus worn on person

NOTE: The minimum required respirator is based on 1) the protection factor assigned to the respirator by the OSHA asbestos standard (Title 8 CCR Section 1529), 2) a maximum airborne fiber concentration of 0.01 f/cc inside the respirator, which is the EPA-recommended clearance criterion when phase contrast microscopy is an acceptable method of analysis, and 3) the assumption that the respirator has been properly fitted and tested. Respirators assigned for higher airborne concentrations may be used at lower concentrations. A HEPA filter is a filter that is at least 99.97% efficient against mono-dispersed particles of 0.3 micrometers in diameter, or larger.

f/cc = fiber per cubic centimeter
HEPA = High Efficiency Particulate Air

DRAFT

APPENDIX L

Asbestos Disposal Procedures

DRAFT

APPENDIX L
Asbestos Disposal Procedures

Friable asbestos is a regulated hazardous waste and must be disposed of in accordance with applicable state and local regulations. This section presents the sequence of events that is required for asbestos waste disposal.

In preparation for waste disposal, perform the following:

(a) All solid waste materials containing friable asbestos that result from an asbestos removal project, an asbestos encapsulation project, an asbestos-related dismantling project, or an asbestos-related demolition project, shall be handled in the following manner:

1. All friable asbestos-containing waste shall be placed in tightly sealed containers in a wet condition before it is removed from the work area. Waste containers shall be double bagged in not less than 6-mil thick, liquid-tight, clear plastic bags unless the waste contains rigid or heavy objects that are likely to tear the bags. If bag damage is likely to occur, the waste shall be placed in fiber or metal containers that are equipped with a plastic bag liner and a tight fitting lid which can be firmly fastened in position. Large sections of structural items, such as pipe or duct work that has been removed with friable ACMs left in placed, may be tightly wrapped in not less than a double layer of 6-mil thick, clear plastic sheeting for disposal purposes if they cannot be placed in containers. All exposed surfaces of the friable ACM shall be in a wet condition when an item is wrapped.

2. The exterior surface of each container or individually wrapped object shall be cleaned free of all visible debris and an asbestos caution label shall be securely attached before the container or wrapped object is removed from the work area to another area for storage or transport purposes.

3. Before each container or wrapped object of friable ACM is removed from the work area to another area for storage or transport purposes, the waste generator shall place on the exterior of each container or wrapped object specific information which will identify the asbestos removal project, asbestos encapsulation project, asbestos-related dismantling project, or asbestos-related demolition project at which the waste was generated. The identifying information shall be legible and printed with indelible ink. The waste generator shall mark each container or wrapped object by:

   - Printing or attaching to each container or wrapped object a label that contains the name of the licensed business entity or approved public agency that carried out the project and the project location at which the waste was generated; or

   - Attaching to each container or wrapped object a label which meets the requirements of applicable federal EPA or OSHA regulations pertaining to the identification or containers or wrapped objects used for the disposal of ACMs.

DRAFT

4. Each waste container shall be carefully handled and transported in order to prevent breaking or opening. Whenever a container breaks or otherwise becomes unable to completely contain the waste, the waste shall be immediately transferred into another sealed container that complies with the requirements of subsections (a)(1) and (a)(2) of this regulation. Any friable asbestos-containing solid waste materials that come out of the original container shall be immediately cleaned up after being saturated with water and placed in the replacement container.

5. Friable asbestos-containing solid waste shall not be transported from a work site or disposed of unless the waste generator has received prior approval from the department for its disposal at an approved disposal site. Application for disposal approval shall be made in writing and contain the following information.

   - The type of waste intended to be disposed of and the name of the premises at which it was generated.
   - The amount of waste designed for disposal, express either as cubic yards of containerized materials or linear feet of individually wrapped materials.
   - The disposal site to which the waste is to be transported.
   - The time period over which the waste is expected to be transported to the disposal site.
   - The name of the waste generator and the person responsible for transporting the waste to the disposal site.

6. Waste shall be transported in vehicles that have completely enclosed cargo areas, or a four-sided cargo area which shall be completely covered with 6-mil thick plastic sheeting or other equivalent covering while the waste is being transported. All visible debris remaining in the vehicle cargo area after the waste has been deposited at the disposal area shall be immediately removed by wet cleaning methods and disposed of in accordance with the requirements of this subsection.

7. The waste generator shall remain responsible for storage, transport, and disposal of the waste in accordance with this subsection until the time that the waste is delivered to and accepted by the operator of an approved waste disposal site. The waste generator shall be released from further responsibility for handling of the waste when the disposal site operator acknowledges, in writing, that the delivered waste has been properly identified as friable ACM and has been delivered in a manner and condition that is acceptable to the disposal site operator.

DRAFT

(b) Wastewater and other liquid waste that contains friable ACMs that result from an asbestos removal project, an asbestos encapsulation project, or an asbestos-related maintenance, dismantling or demolition operation may be disposed of by mixing them with solid waste materials and disposing of the mixture in accordance with the requirements of subsection (a) of this regulation. Wastewater that cannot be handled in this manner shall be disposed of by one of the following methods:

1. Wastewater from decontamination showers and final cleanup of waste containers and equipment may be disposed of in public sewer systems either by discharge into the plumbing system where the waste is generated, or by storing the waste and discharging it directly into the sewer system at a location designated by the operator of the system. The wastewater shall be free of any material that is likely to cause stoppage in the plumbing or sewer systems.

2. Discharge of any other asbestos-contaminated wastewater or liquid waste or the use of any other method for the disposal of contaminated liquid wastes shall only be at a location and in a manner specifically approved by the department in writing.

WARNING: THIS AREA CONTAINS ASBESTOS, A CHEMICAL KNOWN TO CAUSE CANCER.

The asbestos located in this area is in the form of (input exact material). The material is located throughout the facility. Please contact the APC prior to proceeding with any work in this area. A Work Permit must be obtained from the APC. NOTE: additional work authorization forms may apply prior to work in this area. The following must be considered: 1) a description of the specific location of the ACMs, 2) the appropriate work procedures to follow in this area, and 3) the actions to be taken in the event any ACM is disturbed while you are working in this area.

Please note that the mere presence of ACMs does not constitute a hazard to a worker in the immediate vicinity of the material(s); but, there is a potential for release of airborne asbestos if the material(s) are disturbed or damaged, and airborne asbestos may be a hazard.

APPENDIX O

Glossary of Terms

DRAFT

APPENDIX O
Glossary of Terms

Abatement - Procedures to decrease or eliminate fiber release from precast, spray-applied, or trowel-applied asbestos-containing materials. Accepted options include enclosure, removal or encapsulation.

Air Monitoring - The process of measuring the fiber content of a specific volume of air in a stated period of time.

Asbestos - A group of naturally occurring minerals that separate into fibers. There are six asbestos minerals: Chrysotile, Amosite, Crocidolite, Anthophyllite, Tremolite, and Actinolite.

Asbestos-Containing Materials (ACMs) - any material containing more than 1 percent asbestos.

Cementitious - Materials that are densely packed, non-fibrous, and having a cement-like appearance.

Class I Asbestos Work - Activities involving the removal of TSI and surfacing ACM and PACM.

Class II Asbestos Work - Activities involving the removal of ACM that is not TSI or surfacing material. This includes, but is not limited to, the removal of asbestos-containing wallboard, floor tile and sheeting, roofing and siding shingles, and construction mastics.

Class III Asbestos Work - Repair and maintenance operations, where ACM, including TSI and surfacing ACM and PACM, may be disturbed.

Class IV Asbestos Work - Maintenance and custodial activities during which employees handle but do not disturb ACM or PACM and activities to clean up dust, waste, and debris resulting from Class I, II and III activities.

Contractor - All contracted firms that perform work at the facility (for example, contractors, subcontractors, consultants, and testing firms).

Encapsulation - The sealing of asbestos surfaces involving application of a material (encapsulant) that will envelope or coat the fiber matrix, eliminate fallout, and protect against contact damage.

Enclosure - Procedures necessary to completely enclose material containing asbestos behind airtight, impermeable, permanent barriers.

Environmental Air Monitoring - Air monitoring of general conditions in a given space.

EPA - U.S. Environmental Protection Agency responsible for enforcement through regulation Title 40, Part 61 of work involving the demolition or renovation of more than 160 square feet or 260 linear feet of asbestos-containing material.

DRAFT

APPENDIX O
Glossary of Terms
(Continued)
Page 2

Friable Material - Material that, when dry, can be crumbled, pulverized, or reduced to powder by hand pressure. This includes non-friable materials which during the course of renovation or other activities can become "friable."

Homogeneous - Having the same composition throughout.

Homogeneous Area - Area of surfacing material or thermal system insulation that is uniform in color and texture.

Non-Friable Material - Material that, when dry, cannot be crumbled, pulverized, or reduced to powder by hand pressure.

NIOSH - National Institute of Occupational Safety and Health responsible for respirator efficiency rating and air monitoring analytical methods.

OSHA - Occupational Safety and Health Administration responsible for enforcement through regulations 29 CFR Parts 1910 and 1926 of employee protection from exposure to asbestos in the work place and during emergency responses.

Presumed ACM (PACM) - Thermal system insulation, surfacing material and resilient flooring material found in buildings constructed no later than 1980.

Prevalent Levels - Air fiber concentrations observed or measured under normal conditions.

Removal - The act of removing asbestos-containing or contaminated materials from the structure to an EPA approved disposal site.

Surfacing Material - Material that is sprayed, troweled-on or otherwise applied to surfaces (such as acoustical plaster on ceilings and fireproofing materials on structural members, or other materials on surfaces for acoustical, fireproofing, and other purposes).

Suspected ACM - Materials in buildings constructed after 1980 or materials installed after 1980 that have not been identified as known ACM, but are believed, for whatever reason, to contain asbestos. Also, materials other than surface materials, TSI and resilient flooring material in buildings constructed before 1981 or installed before 1981 that have not been identified as ACM, but are believed to contain asbestos.

Thermal System Insulation (TSI) - Material applied to pipes, fittings, boilers, breaching, tanks, ducts, or other structural components to prevent heat loss or gain.

Work Area - Area of project which receives "abatement" or is contaminated.

Four Corners Properties, LLC
600 Montgomery Street, 32nd Floor
San Francisco, CA 94111

RE: RIGHT TO RELY ON PHASE I ENVIRONMENTAL SITE ASSESSMENT REPORT MONTAGUE PARK, SAN JOSE, CALIFORNIA

Dear Mr. Burkard:

In accordance with your request and authorization received from our client, Amstar Group, LLC, SECOR International Incorporated (SECOR) hereby authorizes Four Corners Properties, LLC, Westbrook Partners, and Morgan Stanley (the "Relying Parties") to rely on the Report prepared by SECOR, which is identified below:

- *Phase I Environmental Site Assessment Report, Montague Park, 3050 Zanker Road, 2840-2880 Junction Avenue, and 411 Plumeria Drive, San Jose, California*, dated May 27, 2005, SECOR Job # B3OT.90179.00.0001.

The Relying Parties may rely on the Report to the same extent as if they were the original addressee thereof, subject to the terms and conditions contained herein. The findings, recommendations and conclusions contained in the Report are based solely upon our investigation, are subject to the limitations set forth therein, and are valid as of the date of the Report.

This reliance is subject to acceptance by Four Corners Properties, LLC of the terms and conditions included as an attachment to this letter and upon SECOR's receipt of $500 in consideration for this reliance. Any use of or reliance upon this information by a party other than the parties specifically referenced in this letter shall be solely at the risk of such third party and without legal recourse against SECOR and Amstar Group, LLC, or their subsidiaries and affiliates, or their respective employees, officers or directors, regardless of whether the action in which recovery of damages is sought is based upon contract, tort (including the sole, concurrent or other negligence and strict liability of SECOR), statute or otherwise.

SECOR

As evidence of acceptance of this reliance letter, two duplicate originals of the letter should be signed by an authorized representative of Four Corners Properties, LLC in the space provided below and the executed letters should be returned to SECOR with the fee amount. SECOR will countersign this reliance letter and forward an executed original to your attention.
If you have any questions, please call me at (503) 691-2030.

Sincerely,
SECOR International Incorporated

Ross R. Simmons

Name and Title: Ross R. Simmons, Principal	Name and Title:
Date:	Date:

TERMS AND CONDITIONS

1. **STANDARD OF PERFORMANCE; SECOR** shall perform its services in accordance with generally accepted engineering and consulting standards in effect at the time services were performed. SECOR makes no other warranty, express or implied, regarding its services.

2. **ENVIRONMENTAL ASSESSMENTS: SECOR's** report presents professional opinions and findings of a scientific and technical nature. While attempts have been made to relate the data and findings to applicable environmental laws and regulations, the report shall not be construed to offer legal opinion or representations as to the requirements of, or compliance with environmental laws, rules, regulations or policies of federal, state or local government agencies. Any use of the report constitutes acceptance of the limits of SECOR's liability. SECOR's liability extends only to the party using and/or relying on this report (hereinafter, "CLIENT"), and not to any other parties who may obtain the report from CLIENT.

3. **CONSULTANT'S LIABILITY: SECOR** shall perform its work as an independent contractor, and shall have responsibility for and control over details and means of the performance for the work described in the Scope of Work. SECOR is not the agent of the CLIENT when performing this Agreement, unless agreed to by SECOR and CLIENT in writing and only to the extent expressly agreed to by SECOR. Notwithstanding any other provision contained herein, SECOR's aggregate liability for damages arising out of the services rendered pursuant to this Agreement, whether arising out of tort or contract, is limited to an amount not to exceed $50,000 or the total gross billings of SECOR to SECOR's original client for the work, whichever is less. This aggregate liability includes liability associated with the CLIENT's or any other party's reliance on SECOR's Phase I reports pursuant to Paragraph 2 of this AGREEMENT. SECOR is not liable for any consequential or indirect damages, including but not limited to lost profits, loss of use of property and CLIENT's breach of other contracts. SECOR will be responsible only for the activities of its employees and for SECOR's subcontractors.

4. **CLIENT INDEMNIFICATION: CLIENT** and SECOR agree to indemnify and hold each other harmless from any claims, loss, injury, damage, fines, causes of action, attorney's fees, costs and litigation expenses ("claims") asserted against or incurred by the indemnitee by any person or entity (including, without limitation, SECOR's and CLIENT's employees) proximately caused by, in whole or in part, the indemnitor's negligence or intentional misconduct. When such claim is due to negligence or intentional misconduct of both SECOR and CLIENT, each shall be entitled to contribution from the other in proportion to their allocable shares of responsibility as determined by agreement or dispute resolution. Attorney's fees and litigation expenses recoverable under this paragraph include fees and costs incurred in establishing a party's right to indemnification.

5. **HAZARDOUS SUBSTANCES:** If state or federally regulated hazardous, toxic or dangerous wastes as defined by state or federal regulations (hereinafter "wastes") are encountered at the site, and if these "wastes" require handling, transportation or disposal at an off-site facility SECOR will assist in advising the CLIENT of the CLIENT's options. However, SECOR will not "arrange" (as defined in 42 U.S.C. 9607) for disposal of, accept title to, sign manifests for, or take control of any "wastes." CLIENT shall indemnify and hold SECOR harmless from any claims, damages, fines and fees, litigation or expenses, arising out of or in any way related to handling, transportation and disposal of any "wastes" in the course of SECOR's performance of this Agreement.

6. **CLIENT-PROVIDED INFORMATION: SECOR** is entitled to rely on all information furnished or to be furnished by CLIENT. CLIENT agrees to defend and indemnify SECOR, its officers, agents and employees from any and all claims of any kind arising out of or relating to any claims caused by or contributed to by any errors or omissions in information provided to SECOR.

7. **ASSIGNMENT: SECOR** shall not assign this Authorization without prior written consent of CLIENT, but may, employ any other party it deems necessary or proper for any part of the work required to be performed by SECOR under the terms of this Authorization.

8. **TERMINATION:** Either party may terminate this Authorization at any time upon seven (7) days prior written notice to the other. In such event, SECOR will be compensated for services performed under the Authorization to the termination date together with all costs arising out of such termination.

9. **APPLICABLE LAW:** This contract shall be enforced in accordance with the laws of the State of Washington.

10. **TIME LIMIT FOR CLAIMS:** Any claim brought by CLIENT against SECOR will be brought not later than one year after the date of substantial completion of SECOR's services hereunder or the expiration of the appropriate statute of limitations, whichever is earlier.

11. **ATTORNEY'S, AGENT, OR COLLECTION AGENCY FEES AND EXPENSES:** In the event this Authorization should be referred to an attorney at law, agent, or collection agency for collection, CLIENT agrees to pay such reasonable fees SECOR may incur, in the collection hereof.

12. **ENTIRE AGREEMENT:** The Agreement (and any referenced attachments) constitutes the entire agreement between CLIENT and SECOR and supersedes all prior or oral or written representations or agreements. This Agreement shall not be modified except in writing and signed by both parties. If any provision of this Agreement is determined by a court to be invalid or unenforceable, the remainder of this Agreement shall remain in full force and effect.

The EDR Environmental LienSearch™ Report

The EDR Environmental LienSearch Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

FEDERAL RECORDS

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 04/23/2007 has revealed that there are 2 CERCLIS sites within approximately 0.5 miles of the target property.

AUTEK SYSTEMS CORP	***109 BONAVENTURA DR***	***1/4 - 1/2 SSW***	***L52***	***76***

CERCLIS-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 06/21/2007 has revealed that there are 3 CERC-NFRAP sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 06/26/2007 has revealed that there are 3 CORRACTS sites within approximately 1 mile of the target property.

RCRAInfo: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System(RCRIS). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month Large quantity generators generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 06/13/2006 has revealed that there are 2 RCRA-TSDF sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

STATE AND LOCAL RECORDS

HIST CAL-SITES: Formerly known as ASPIS, this database contains both known and potential hazardous substance sites. The source is the California Department of Toxic Substance Control. No longer updated by the state agency. It has been replaced by ENVIROSTOR.

A review of the HIST Cal-Sites list, as provided by EDR, and dated 08/08/2005 has revealed that there is 1 HIST Cal-Sites site within approximately 1 mile of the target property.

CORTESE: This database identifies public drinking water wells with detectable levels of contamination, hazardous substance sites selected for remedial action, sites with known toxic material identified through the abandoned site assessment program, sites with USTs having a reportable release and all solid waste disposal facilities from which there is known migration. The source is the California Environmental Protection Agency/Office of Emergency Information.

A review of the Cortese list, as provided by EDR, and dated 04/01/2001 has revealed that there are 7 Cortese sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

NOTIFY 65: Notify 65 records contain facility notifications about any release that could impact drinking water and thereby expose the public to a potential health risk. The data come from the State Water Resources Control Board's Proposition 65 database.

A review of the Notify 65 list, as provided by EDR, and dated 10/21/1993 has revealed that there is 1 Notify 65 site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Dist / Dir	Map ID	Page
EQUILON SAN JOSE TERMINAL (SHE	***2165 O'TOOLE AVE***	***1/2 - 1 ESE***	***Q66***	***163***

VCP: Contains low threat level properties with either confirmed or unconfirmed releases and the project proponents have request that DTSC oversee investigation and/or cleanup activities and have agreed to provide coverage for DTSC's costs.

A review of the VCP list, as provided by EDR, and dated 08/28/2007 has revealed that there is 1 VCP site within approximately 0.5 miles of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 08/28/2007 has revealed that there are 9 ENVIROSTOR sites within approximately 1 mile of the target property.

California - Hazardous Waste Tracking System - Datamart

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Reclamation: Not reported
POTW: Not reported
Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Comments:	Contamination in soil is below residential levels. No further action is required.Completed Site Screening. Soil samples detected dichloroethylene in the soil beneath the floor. Over 8 cubic yards of soil was excavated and disposed off-site. Analyses of soil samples taken from the bottom of the excavation indicated levels lessthan 100 ppb. Based on this information, the SF Regional Water Quality Control Board (RWQCB), the lead agency, decided that the remaining contaminant no longer posed a threat to groundwater and no further action was required. The soil level is below residential standards.

Comments:	Completed Site Screening. During the investigation of groundwater, free product containing toluene and hexane was discovered in one monitoring well. The free product is believed to be the result of an overflow from an underground sump connected toCompleted Site Screening. On December 13, 1989, the SF Regional Water Quality Control Board (RWQCB) issued Order No. 89-182 addressing site investigation cleanup of the soil and groundwater pollution. From 1993 to 1999, a combined soil vapor and gThe Regional Water Quality Board is actively overseeing the cleanup of the site.the solvent recovery system.roundwater extraction operated on the site. The cleanup plan did not meet expectations. Removal efficiency was low and there were a number of operational difficulties due to site soil conditions. The RWQCB issued an amended order, requiring excavation of vadose zone soil that exceeds the risk based cleanup goals; and monitored natural attenuation for impacted groundwater.

Other Pertinent Environmental Activity Identified at Site

TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

DRAFT

FOXBORO/ICT (Continued) **1000164393**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities,

parties will pay all costs associated with remedial investigations and cleanup activities.

Site Description: Mansion Grove is a 29 acre residential apartment complex currently under construction. The site was occupied by facilities involved in metals reclamation and the manufacture and recycling of solvents and other chemicals for over 70 years. During excavations for several building foundations, contaminated soil was discovered.

Hazardous Waste Desc: Soil testing has detected the presence of volatile organic compounds including halogenated solvents, naphthalene compounds, polynuclear aromatic compounds and petroleum hydrocarbons. There is potential for ground water contamination.

Threat To Public Health & Env: Residential apartments are located adjacent to areas of contaminated soil. The site is fenced and posted to prevent public contact with contaminated soil.

Site Activity Status: A removal of 6000 cubic yards of contaminated soil adjacent to occupied buildings was completed by the RP under DHS oversight in 1988. Preliminary ground water investigations have been initiated.

Comments: The 5 Year Review Report indicates that the groundwater and the soil vapor remediation systems are containing the offsite migration of contaminants.The approval of the Operation and Maintenance Plan which lays out plan how to operate and maintain both the soil vapor and the groundwater monitorng and extraction treatment systems.Completed the start-up of the groundwater and the soil vapor extraction and treatment systems.DTSC approved a detailed design for the installation of the soil vapor (expanded) and groundwater monitoring extraction system.The installation of a soil vapor extraction system, including its wells and associated piping and a carbon adsorption unit, were completed to remediate soils contaminated with volatile organic compounds.Removal action completed which consisted of excavation of contaminated soil with volatile organic compounds and disposed to an offsite facility.Report approved.DTSC approved revisions to the Annual Report.DTSC has no technical comments.DTSC has no comments.Fact Sheet provides project updates.DTSC review indicates there was no historical chemical usage at the proposed locations of the Oak Grove Court and Riverside Court; and no contamination above the cleanup/screening level has been detected at the Mansion Court.An amendment to Order HAS 88-89-019 (November 7, 1996) was also issued to ensure the operation and maintenance of both systems until such time that cleanup objectives are met.Certification - Ongoing operation and maintenance consists of the continued extraction and treatment of the groundwater and soil vapor.A Negative Declaration was adopted for the site.DTSC adopted a Negative Declaration for the proposed RAW.An Order was issued to require Mansion Grove to conduct groundwater monitoring and among other things to , submit a Remedial Investigation/Feasibility Study and a Remedial Aciton Workplans.Amendment to the Order to include the requirements for the Operation and Maintenance (O&M) of the extraction trench and the three extraction wells (E-6, E-7 and E-8)A Removal Action Workplan was approved for the installation of a soil vapor extraction system.The HRA concluded that there are no significant health effects associated with the contaminants detected at the site. The groundwater at the site is not the source for drinking water.A Remedial Action Plan was approved on November 30,

MANSION GROVE (Continued) **S101272885**

1994 which required the installation of groundwater and the expansion of the soil vapor extraction and treatment systems.The Remedial Investigation and Feasibility Study Report confirms the presence of volatile organic compounds in soil and groundwater.The Public Participation plan for the site was approved.A Preliminary Assessment Report was completed and made a recommendation for the inclusion of the site into the State Superfund but will continue to work with Prometheus Development Company to develop a plan for a Remedial Investigation/Feasibility Study.

FINDS:
Other Pertinent Environmental Activity Identified at Site

California - Hazardous Waste Tracking System - Datamart

TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource

DRAFT

VAN WATERS AND ROGERS INC (Continued) **1000136188**

Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

RCRAInfo Corrective Action Summary:
Event: Igration of Contaminated Groundwater under Control, Yes, Migration of Contaminated Groundwater Under Control has been verified. Based on a review of information contained in the EI determination, it has been determined that migration of contaminated groundwater is under control at the facility. Specifically, this determination indicates that the migration of contaminated groundwater is under control, and that monitoring will be conducted to confirm that contaminated groundwater remains within the existing area of contaminated groundwater. This determination will be re-evaluated when the Agency becomes aware of significant changes at the facility.
Event Date: 12/28/2000

Event: Current Human Exposures under Control, Yes, Current Human Exposures Under Control has been verified. Based on a review of information contained in the EI determination, current human exposures are expected to be under control at the facility under current and reasonably expected conditions. This determination will be re-evaluated when the Agency/State becomes aware of significant changes at the facility.
Event Date: 12/28/2000

Event: Stabilization Construction Completed
Event Date: 07/01/1997

Event: Stabilization Measures Evaluation,This facility is not amenable to stabilization activity at the present time for reasons other than 1) it appears to be technically infeasible or inappropriate (NF) or 2) there is a lack of technical information (IN). Reasons for this conclusion may be the status of closure at the facility, the degree of risk, timing considerations, the status of corrective action work at the facility, or other administrative considerations.
Event Date: 07/26/1994

Event: CA Prioritization, Facility or area was assigned a high corrective action priority.
Event Date: 07/25/1994

Event: Igration of Contaminated Groundwater under Control, Yes, Migration of Contaminated Groundwater Under Control has been verified. Based on a review of information contained in the EI determination, it has been determined that migration of contaminated groundwater is under control at the facility. Specifically, this determination indicates that the migration of contaminated groundwater is under control, and that monitoring will be conducted to confirm that contaminated groundwater remains within the existing area of contaminated groundwater. This determination will be re-evaluated when the Agency becomes aware of significant changes at the facility.
Event Date: 07/15/1993

Responsible Party: Not reported
Recent Dtw: Not reported
Substance Released: 13
Facility Status: **Case Open**

CORRACTS:

EPA ID: CAD010925576
EPA Region: 09
Area Name: ENTIRE FACILITY
Actual Date: 07/01/1997
Action: CA650 - Stabilization Construction Completed
NAICS Code(s): 42469
Other Chemical and Allied Products Merchant Wholesalers

EPA ID: CAD010925576
EPA Region: 09
Area Name: ENTIRE FACILITY
Actual Date: 07/15/1993
Action: CA750YE - Migration of Contaminated Groundwater under Control, Yes, Migration of Contaminated Groundwater Under Control has been verified
NAICS Code(s): 42469
Other Chemical and Allied Products Merchant Wholesalers

EPA ID: CAD010925576
EPA Region: 09
Area Name: ENTIRE FACILITY
Actual Date: 07/15/1993
Action: CA550 - Certification Of Remedy Completion Or Construction Completion
NAICS Code(s): 42469
Other Chemical and Allied Products Merchant Wholesalers

EPA ID: CAD010925576
EPA Region: 09
Area Name: ENTIRE FACILITY
Actual Date: 07/17/1985
Action: CA100 - RFI Imposition
NAICS Code(s): 42469
Other Chemical and Allied Products Merchant Wholesalers

EPA ID: CAD010925576
EPA Region: 09
Area Name: ENTIRE FACILITY
Actual Date: 07/17/1985
Action: CA600SR - Stabilization Measures Implemented, Primary measure is source removal and/or treatment
NAICS Code(s): 42469

DRAFT

CA BOND EXP. PLAN:

Reponsible Party:	RWQCB REFERRAL SITE
Project Revenue Source Company:	Not reported
Project Revenue Source Addr:	Not reported
Project Revenue Source City,St,Zip:	Not reported
Project Revenue Source Desc:	Van Waters and Rogers, Inc., the responsible party is conducting cleanup activities under the direction of the RWQCB. The RWQCB will continue to have lead responsibility for monitoring Van Waters and Roger's progress under an existing cooperative agreement between the RWQCB, EPA and DHS. The RWQCB is conducting the work with support from the EPA through a cooperative agreement. Until such time as the RWQCB refers the site to DHS for follow-up using Bond funds, no money will be budgeted from this fund for this site.
Site Description:	Van Waters and Rogers is a division of Univar which operates a chemical blending, storage and distribution facility. The site encompasses about 12 acres in the City of San Jose. The facility contains about 36 underground tanks which store a variety of organic compounds.
Hazardous Waste Desc:	In 1982, soil and ground water contamination was discovered at the site. This contamination was caused by spillage, inadequate handling practices and/or leakage from tanks and piping. The following contaminants have been detected: trichloroethane (TCA), perchloroethylene (PCE), dichloroethane (DCA), dichloroethylene (DCE), methylene chloride, vinyl chloride, toluene, ketones, xylene and alcohols.
Threat To Public Health & Env:	Ground water contamination at the site represents a potential threat to public health and the environment. Domestic wells are located one-half mile downgradient of the site.
Site Activity Status:	Van Waters and Rogers, Inc, has installed and is operating a ground water extraction system. The lead responsibility within DHS for oversight of remedial activities at this site has been transferred to the regional facilities permitting unit.

Comments: Approved the Remedial Investigation Report for the site which delineated the extent of soil and groundwater contamination. Soil was contaminated with the following: arsenic, lead, mercury, DDT, chlordane, polycyclic aromatic hydrocarbons (PAHs), perRMDL - PH 3 - DTSC approved the implementation report for the Phase 3 area. Phase 3 consists of soil in the remaining 16 acres of the site, which is bounded on the north by Hope Drive, Lick Mill Boulevard on the west, Guadaluoe River on the east, anDTSC approved a remedial design for the soil removal activities.RMDL - PH 1 - DTSC approved the Remedial Action Implementation Report for Phase 1 area. Phase 1 consists of soils on approximately 130 acres generally bounded by Hope Drive on the north, Agnew Road on the west, Lick Mill Boulevard on the east, and MDES - GW - DTSC approved the Remedial Design and Implementation Plan for ground water. Phase 4 consists of implementation of the groundwater remedy in the 2.2 acre area north of Mansion Grove apartments where groundwater contaminated with volatile oRemedial action completed which consisted of excavation of contaminated soil containing metals and polynuclear aromomatic hydrocarbons (PAH) and disposed to an offsite facility.DTSC approved the implementation of the remedial action which consisted of the installation of the exraction trench and the its treatment system, including the groundwater monitoring system.RAP - DTSC approved the RAP which required that any soil above the remedial goals be excavated and properly managed off-site. The groundwater beneath the site will be remediated by the construction of an extraction trench at the property boundary ofNo problems noted during the inspection.RMDL - GW - DTSC approved the completion report for the installation and start up of the groundwater extraction trench. A Deed restriction was recorded on the portion of the site where the groundwater contamination exist which prevents use of the prThe Rivermark Partners entered into a Voluntary Cleanup Agreement with DTSC in 1999 to investigate and remediate the site to residential standards where possible.CERT - DTSC certified that all remedial actions are complete and that the site will continue to extract groundwater and treat and discharge it through the neighboring Mansion Grove system.operty for residential and other purposes. Alll allowed uses and developments of the property shall preserve the intergrity of the extraction trench, extraction wells, and groundwater treatment system and monitoring wells at the site.d the Mansion Grove Apartments on the south. Between January 2001 and December 2001, approximately 55,000 cubic yards of contaminated soils were excavated from the Phase 3 area of the site and either disposed offsite or reused in the nearby CalTranschloroethylene (PCE) and trichloroethylene (TCE). Groundwater investigation showed PCE, TCE, 1,1-dichloroethylene (DCE), cis-1,2-DCE, 1,2-dichloroethane (DCA) and vinyl chloride (VC) to be

RIVERMARK PROPERTIES (Continued) **S105557606**

above the drinking water standards in the area north of theontague Expressway on the south. Between December 20, 2000 and June 15, 2001, approximately 182,600 tons of soils contaminated with hazardous levels of arsenic, lead, mercury and DDT were excavated from Phase 1 and disposed at permitted landfill. ApMansion Grove, and an additional extraction trench at the leading edge of the contaminated groundwater. The site cleanup was broken up into four phases to support development schedules for the site.rganic constituents will be extracted and treated. The remedy consists of the installation of three extraction wells at the property boundary of Mansion Grove in March 2003 and the extraction trench at the leading edge of the contaminated groundwateHighway 87 construction project.proximately 269,400 tons of soil contaminated with non-hazardous levels of arsenic, lead or PAHs were either transported to the CalTrans Highway 87 construction project for reuse, or to permitted landfill for disposal.Mansion Grove Site.r in February 2004.

Comments:	PCE and gasoline spills in June '84 and December '85 recently triggered countyt involvement. Preliminary assessment of 1987 recommended DTSC (then DHS) and city of San Jose review permit to upgrade spill containment. But also says No Further Action(NFA). No further action per EPA preliminary assessment for the site only determined that the hazard ranking score (HRS) would not admit it into National Priority List (NPL). DTSC's recommendation on re-evaluation of the site reflects the departments own criteria. Recommendation is County Lead. Limited DTSC involvement anticipated.

EPA Waste Codes Addendum

Code	Description
D001	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
D002	A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
D035	METHYL ETHYL KETONE
D039	TETRACHLOROETHYLENE
D040	TRICHLOROETHYLENE
F002	THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE LISTED IN F001, F004, OR F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
F003	THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
F005	THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

FEDERAL RECORDS

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 07/18/2007

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 08/09/2007

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

DRAFT

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991
Date Data Arrived at EDR: 02/02/1994
Date Made Active in Reports: 03/30/1994
Number of Days to Update: 56

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 04/23/2007
Date Data Arrived at EDR: 06/20/2007
Date Made Active in Reports: 08/29/2007

Source: EPA
Telephone: 703-412-9810
Last EDR Contact: 09/19/2007
Next Scheduled EDR Contact: 12/17/2007
Data Release Frequency: Quarterly

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

RCRA: Resource Conservation and Recovery Act Information

DRAFT

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 06/13/2006
Date Data Arrived at EDR: 06/28/2006

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

DRAFT

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

DEED: Deed Restriction Listing
Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

ENVIROSTOR: EnviroStor Database
The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

EDR PROPRIETARY RECORDS

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Historical Auto Stations: EDR Proprietary Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc.

SAN DIEGO COUNTY:

Hazardous Materials Management Division Database

The database includes: HE58 - This report contains the business name, site address, business phone number, establishment 'H' permit number, type of permit, and the business status. HE17 - In addition to providing the same information provided in the HE58 listing, HE17 provides inspection dates, violations received by the establishment, hazardous waste generated, the quantity, method of storage, treatment/disposal of waste and the hauler, and information on underground storage tanks. Unauthorized Release List - Includes a summary of environmental contamination cases in San Diego County (underground tank cases, non-tank cases, groundwater contamination, and soil contamination are included.)

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data
Source: PennWell Corporation
Telephone: (800) 823-6277
This map includes information copyrighted by PennWell Corporation. This information is provided on a best effort basis and PennWell Corporation does not guarantee its accuracy nor warrant its fitness for any particular purpose. Such information has been reprinted with the permission of PennWell.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Elevation:	26 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	37121-D8 MILPITAS, CA
Most Recent Revision:	1980

DRAFT

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

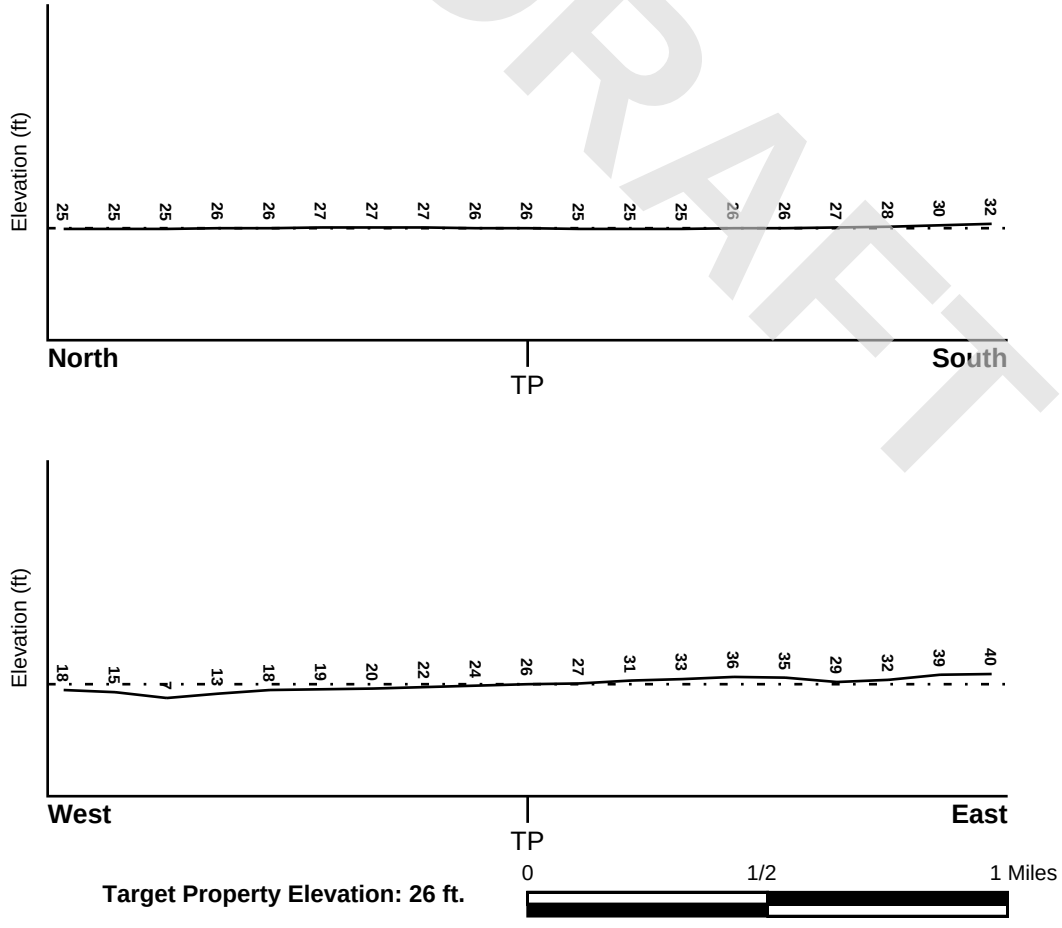
Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General West

DRAFT

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 26 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

MILPITAS	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/2 - 1 Mile West
Site Name:	Lick James Mansion/Mansion Grove
Site EPA ID Number:	CAD980735971
Surficial Aquifer Flow Dir.:	NOT AVAILABLE.
Measured Depth to Water:	approximately 12 feet.
Hydraulic Connection:	A confining layer separates the surficial and lower aquifers, but an interconnection between the aquifers occurs.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information based on site-specific subsurface investigations is documented in the CERCLIS investigation report(s)

DRAFT

* ©1996 Site--specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

DRAFT

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Quaternary
Code:	Q *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name:	BOTELLA
Soil Surface Texture:	clay loam
Hydrologic Group:	Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.
Soil Drainage Class:	Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel:	MODERATE
Depth to Bedrock Min:	> 60 inches
Depth to Bedrock Max:	> 60 inches

DRAFT

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	9 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.60 Min: 0.20	Max: 7.30 Min: 5.60
2	9 inches	41 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.60 Min: 0.20	Max: 7.80 Min: 5.60
3	41 inches	76 inches	sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 0.60 Min: 0.20	Max: 7.80 Min: 5.60

DRAFT

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: No Other Soil Types

Surficial Soil Types: No Other Soil Types

Shallow Soil Types: No Other Soil Types

Deeper Soil Types: No Other Soil Types

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Health Services
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations
Source: Department of Conservation
Telephone: 916-323-1779

RADON

State Database: CA Radon
Source: Department of Health Services
Telephone: 916-324-2208
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDRs professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

EDR City Directory Abstract

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening report designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

SUMMARY

- ***City Directories:***

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through 2001. (These years are not necessarily inclusive.) A summary of the information obtained is provided in the text of this report.

This report compiles information by geocoding the subject properties (that is, plotting the latitude and longitude for such subject properties and obtaining data concerning properties within 1/8th of a mile of the subject properties). There is no warranty or guarantee that geocoding will report or list all properties within the specified radius of the subject properties and any such warranty or guarantee is expressly disclaimed. Accordingly, some properties within the aforementioned radius and the information concerning those properties may not be referenced in this report.

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

The Sanborn Library includes more than 1.2 million Sanborn fire insurance maps, which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ✓ Library of Congress
- ✓ University Publications of America
- ✓ EDR Private Collection

1.0 EXECUTIVE SUMMARY

Property Name ("subject property"):	Montague Park
Subject Property Address (or Other Physical Location Description):	3050 Zanker Road, 2840-2880 Junction Avenue, and 411 Plumeria Drive
Observed Current Subject Property Use/Operations:	Research and Design/Office Complex
Date of Site Reconnaissance:	May 19, 2005

SECOR International Incorporated (SECOR) performed a Phase I Environmental Site Assessment (ESA) of the property referenced above. The site reconnaissance consisted of a walk-through inspection of the interior and exterior areas of the subject property. A review of pertinent, readily available records of local, state, and federal agencies, and interviews with persons knowledgeable about the current site activities were also conducted.

Amstar Group, LLC, potential purchasers of the subject property, requested that the Phase I ESA be completed in accordance with ASTM Standard Practices E1527-97 and E1527-00 *Standard Practice for ESAs: Phase I ESA Process* and the scope of work described in Exhibit A in the August 16, 2004 *Master Environmental Consulting Agreement* between SECOR and Amstar Group, LLC. SECOR was retained by Amstar Group, LLC to evaluate the presence of recognized environmental conditions (RECs) and historical recognized environmental conditions (HREC) as defined in ASTM, and to evaluate other aspects of the environmental condition of the property as specified in the Agreement.

JPMorgan Chase Bank, N.A., J.P. Morgan Mortgage Capital Inc. and their affiliates, employees, agents, successors and assigns may rely upon this report in evaluating a request for an extension of credit to be secured by the property (the "Mortgage Loan"). This report may also be used and relied upon by any actual or prospective purchaser, transferee, assignee, or servicer of the Mortgage Loan (or any portion thereof), any actual or prospective investor (including agent or advisor) in any securities evidencing a beneficial interest in or backed by the Mortgage Loan (or any portion thereof), any rating agency actually or prospectively rating any such securities, any indenture trustee, and any institutional provider(s) from time to time of any liquidity facility or credit support for such financing. In addition, this report or a reference to this report may be included or quoted in any offering circular, private placement memorandum, registration statement or prospectus and SECOR agrees to cooperate in answering questions by any of the above parties in connection with a securitization or transaction involving the Mortgage Loan (or any portion thereof) and/or such securities. This report has no other purpose and should not be relied upon by any other person or entity.

Site Reconnaissance

The subject property is comprised of five two-story R&D/office buildings totaling 417,532 square feet on an approximately 23.6-acre crescent shaped site in San Jose.

No surface staining or other indications of hazardous materials releases were observed on the subject property.

SECOR's reconnaissance of the subject property and surrounding area did not identify evidence of a REC or HREC.

History of Subject Property

A review of aerial photographs, interviews, and other related records searches was conducted to identify the past uses of the subject property. The results of these reviews are summarized below:

Year	Summary of Subject Property Use
At least 1948 to sometime prior to 1985	The subject property was agricultural land.
1985 to 1990	The subject property was developed with five two-story R&D/Office buildings in two phases, the first three buildings (3050 Zanker Road, 2860 Junction Avenue, and 411 Plumeria Drive) were constructed in 1985 and the last two (2840 and 2880 Junction Avenue) were constructed in 1990.
1990 to present	The subject property has operated as a R&D/Office Park occupied by various tenants.

It is SECOR's opinion that none of the findings discovered during the historical review described above indicated the existence of a REC or HREC to the subject property.

Provided Documents Review

SECOR reviewed several provided documents containing information on the general conditions, history, and environmental conditions of the subject property:

- *Updated Phase I Environmental Site Assessment,* December 19, 1996, Hygienetics Environmental Services, Inc.

  Hygienetics Environmental Services was contracted by Menlo Equities Associates LLC to conduct this Updated Phase I ESA of the subject property. At the time of the report the subject property was owned by Equitable Life Assurance Society of the United States and the subject property buildings operated as Ultratech Stepper, Diamond Multimedia, General Instrument (formerly Compression Labs, Inc.), Lifeguard Health Care, and Viking Freight Systems, Inc. This assessment did not identify recognized environmental conditions associated with the subject property buildings. Hygienetics reported that asbestos-containing materials (ACM) had been identified in the subject property buildings. Asbestos was detected in the grey roofing sealant, in the transite roofing screens, in the beige 12-inch by 12-inch vinyl floor tiles in the storage room in 2840 Junction Avenue, and in the beige/black mastic in the roof access room.

- *Document Review For Montague Park Development Property in San Jose, California,* December 20, 1996, Clayton Environmental Consultants

  Clayton Environmental Consultants, Inc. (Clayton) was contracted by Menlo Equities Associates LLC to review the Updated Phase I ESA of the subject property conducted by Hygienetics Environmental Services. Clayton concluded that the Hygienetics Environmental Services Updated Phase I ESA report was generally acceptable with current industry standards for Phase I Environmental Site Assessments.

DRAFT

Based on the findings of the Hygienetics Environmental Services report, Clayton recommended no further investigation at that time.

- *Phase I Environmental Site Assessment,* December 2, 1999, Terracon

  Terracon was contracted by Starwood Asset Services, Inc. and Montague LLC to conduct this Phase I ESA of the subject property. At the time of the report the subject property was owned by Montague LLC and the subject property buildings operated as Ultratech Stepper, Diamond Multimedia Systems, Inc., Fujitsu Network Communications, Lifeguard, Inc., and Phoenix Technology, Inc. Terracon identified no evidence of recognized environmental conditions in connection with the subject property except the following:

  Four monitoring wells were located on the subject property at the time of Terracon's site reconnaissance. Terracon recommended that the purpose of these monitoring wells be determined to assess the potential for groundwater contamination on the subject property. Terracon recommended that a written well survey request be filed with the Santa Clara Valley Water District for information on these wells and that local and regional regulatory agencies be contacted for further information on contamination investigations in the immediate area that may impact the subject property.

- *Site Maps and Well Construction Logs*, December 20, 1999, Santa Clara Valley Water District

  This document includes the site maps and well construction logs for the wells which were previously located on parcels 097-14070 (changed to 097-14-086), 097-14069 (changed to 097-14-085), 097-14-068, 097-14-066 of the subject property. It appears that these documents were obtained by Menlo Equities Management Company as a result of the recommendation by Terracon.

- *Well Destruction Details, Montague Park Site, San Jose, CA*, February 18, 2000, Lowney Associates

  Lowney Associates was contracted by Menlo Equities Management Company to complete the destruction of four on-site ground water monitoring wells at the Montague Park site. This document contains the monitoring well destruction details for those wells which were previously located on the subject property. Each of the monitoring wells was destroyed in accordance with Santa Clara Valley Water District (SCVWD) guidelines. In accordance with the permit conditions, and under the observations of the SCVWD inspector Mr. Dave Higgins, two of the four monitoring wells were pressure grouted with cement to the top of the well casings. The remaining two monitoring wells were over-drilled to a total depth of 25.5 feet and backfilled with cement slurry under the observation of Mr. Higgins. Work was performed by a licensed C57 driller (Exploration Geoservices, Inc.), as required by the SCVWD. Copies of the well destruction completion notices and permits were attached to this document.

  SECOR did not observe any signs of these wells which had previously been located on the subject property during the site reconnaissance.

DRAFT

Environmental Agency Database Review

SECOR reviewed a listing of properties on federal and state databases of known or suspected contaminated sites and other related environmental databases provided by Environmental Data Resources, Inc. (EDR). A copy of the complete database report is provided in Appendix D.

The EDR report contained several listings for 3000 and 3010 Zanker Road under the names IT Corp, IT Corp San Jose Transfer Facility, International Technology, Inc. and Snider JT/RW Trucking. This location was listed as a RCRA small-quantity generator of hazardous waste, a RCRA TSD and CORRACTS facility, and on the CERCLIS-NFRAP list. According to the EDR report, the facility was also referred by the California DTSC to the San Francisco Bay Area Regional Water Quality Control Board (RWQCB). According to the EDR report, IT Corp operated a hazardous waste transfer facility at this address from 1974 to 1986 on property leased from the City of San Jose. In 1986, the concrete holding waste tanks were removed. Elevated concentrations of metals and xylenes were detected in soil and groundwater. Following removal of approximately 1,800 cubic yards of impacted soil, the DTSC issued closure for the site in 1991.

Although [illegible] addresses correspond roughly to the current addresses of the subject property, historical records do not indicate any such use for the subject property. Aerial photographs from 1980 depict the subject property to be in agricultural use for row crops or orchards during the time when the hazardous waste facility reportedly operated. The current subject property buildings were constructed in 1985, when the hazardous waste facility was reported to be operating and prior to the reported remedial excavation of contaminated soil. The EDR report indicates the facility location to be along Zanker Road approximately 1/8 mile north of the subject property. Although SECOR was unable to determine the exact former location of this facility, the known history of the subject property and the regulatory closure for the IT Corp facility indicate that these listings do no represent a recognized environmental condition for the subject property.

Based on the distance, absence of reported releases, or regulatory closure, none of the remaining listings identified by the EDR report represent a recognized environmental condition for the subject property.

Conclusions

SECOR performed a Phase I ESA of the Montague Park, located at 3050 Zanker Road, 2840-2880 Junction Avenue, and 411 Plumeria Drive in San Jose, California in accordance with the procedures of the American Society of Testing and Materials, including ASTM Standard Practice E1527-97, and the August 16, 2004 *Master Environmental Consulting Agreement* between SECOR and Amstar Group, LLC. Exceptions to, or deletions from, this practice are described in Section 2.0 of this report. The results of this Phase I ESA represent a review of current conditions at the property, based on available information as described above.

This assessment has revealed no evidence of recognized environmental conditions RECs or HRECs in connection with the subject property. No further investigation is warranted.

DRAFT

2.0 OBJECTIVES AND LIMITATIONS

2.1 OBJECTIVES

The Phase I ESA was completed in accordance with ASTM Standard Practices E1527-97 and E1527-00 *Standard Practice for ESAs: Phase I ESA Process* and the scope of work described in Exhibit A in the August 16, 2004 *Master Environmental Consulting Agreement* between SECOR and Amstar Group, LLC. SECOR was retained by Amstar Group, LLC to evaluate the presence of recognized environmental conditions (RECs), as defined in ASTM, and to evaluate other aspects of the environmental condition of the property as specified in the Agreement.

2.2 CONTACT INFORMATION

Client ("User"):	Amstar Group, LLC
Subject Property Owner ("Owner"):	Montague LLC
"Key Subject Property Manager":	Mr. Alan Webber, Senior Vice President/Property Manager – Menlo Equity Management
Date Project Authorized:	May 10, 2005

2.3 USER PROVIDED INFORMATION

Prior to initiating the site reconnaissance, SECOR requested the following information from the User of this Phase I ESA report:

Information on Environmental Liens on the Subject Property:	None provided
Information on Subject Property Activity or Use Limitations:	None provided
Specialized Knowledge or Experience That is Material to RECs in Connection With the Subject Property:	None provided
Knowledge that Subject Property Purchase/Sale Price is Significantly Lower Than Market Value:	None provided
Reason Why the User Wants to Have the Phase I ESA Performed:	As a component of the innocent landowner defense to CERCLA liability provided in 42 USC § 9601 (35) and §9607 (b) (3).

Documents provided to SECOR by the User or Owner are described in Section 4.9.

2.4 LIMITATIONS

The conclusions presented in this report are professional opinions based on data described in this report. These opinions have been arrived at in accordance with currently accepted industry standards and practices applicable to this location at the time the work was conducted, and in accordance with the standards set forth in the August 16, 2004 *Master Environmental*

DRAFT

Consulting Agreement between SECOR and Amstar Group, LLC. The opinions and conclusions in this report are subject to the following inherent limitations:

1. SECOR derived the data in this report primarily from visual inspections, examination of records in the public domain, interviews with individuals having information about the site, and a limited number of environmental reports associated with the site. The passage of time, manifestation of latent conditions, or occurrence of future events may require further exploration at the site, analysis of the data, and re-evaluation of the findings, observations, and conclusions in the report.

2. The data reported and the findings, observations, and conclusions expressed in the report are derived from the scope of services. The scope of services is set forth in the August 16, 2004 *Master Environmental Consulting Agreement* between SECOR and Amstar Group, LLC.

3. SECOR Phase I ESA reports present professional opinions and findings of a scientific and technical nature. While attempts were made to relate the data and findings to applicable environmental laws and regulations, the report shall not be construed to offer legal opinion or representations as to the requirements of, nor compliance with, environmental laws, rules, regulations, or policies of federal, state, or local government agencies. SECOR's liability extends only to Amstar Group, LLC and other parties specifically identified by Amstar Group LLC pursuant to conditions in the August 16, 2004 *Master Environmental Consulting Agreement* between SECOR and Amstar Group, LLC.

4. The conclusions presented in this report are professional opinions based on data described in this report. They are intended only for the purpose, site location, and project indicated. This report is not a definitive study of contamination at the site and should not be interpreted as such.

5. This report is based, in part, on unverified information supplied to SECOR by third-party sources. While efforts have been made to substantiate this third-party information, SECOR cannot guarantee its completeness or accuracy.

6. It is important to note that issues of mold contamination are at times not easily resolved and can go unresolved. SECOR will provide professional opinions based upon our observations, any data we collect and our experience, but we can not provide any warranties or guarantees associated with this service.

7. Environmental consulting related to the technical specialty of mold and mold-related issues is an emerging and rapidly evolving discipline. Currently, there are no nationally established and accepted standards for assessing for the presence and/or impact of mold. SECOR will provide professional opinions based upon our observations, data, and our experience. However, it should be noted that in a rapidly emerging area with no recognized national standard, reasonable professionals might disagree as to the scope of work, findings or conclusions and recommendations. Further, this work should not be assumed to meet national standards or standards that may be established in the future.

DRAFT

2.5 DATA GAPS AND/OR RESTRICTIONS

Data Gaps In, or Deletions From, the Above-Referenced Scope of Work:	SECOR was unable to determine use of the subject property prior to 1948, at which time the subject property was agricultural land. This exception is not expected to alter the conclusions of this report.
Weather-Related Restrictions:	None
Facility Access Restrictions:	None
In the opinion of the Environmental Professional, do the identified data gaps or restrictions prevent the development of conclusions regarding the presence of RECS on the subject property?	No

DRAFT

3.0 SITE RECONNAISSANCE

3.1 SUBJECT PROPERTY NAME AND LOCATION

Subject Property Name:	Montague Park
Street Address (or Other Physical Subject Property Location Description):	3050 Zanker Road, 2840-2880 Junction Avenue, and 411 Plumeria Drive, San Jose, California

Figure 1 in Appendix A shows the location of the subject property.

3.2 SITE DESCRIPTION

The subject property is comprised of five two-story R&D/office buildings totaling 417,532 square feet on an approximately 23.6-acre crescent shaped site in northern San Jose. The subject property is bound to the north by the Montague Expressway, to the east by Plumeria Drive, to the west by Zanker Road, and to the south by Junction Avenue.

Five structures were observed on the subject property during the site reconnaissance. Each of the structures is a two-story commercial building and range in size from approximately 74,129 square feet (2860 Junction Avenue) to approximately 97,910 square feet (3050 Zanker Road). The buildings were constructed in two phases with the first three buildings (3050 Zanker Road, 2860 Junction Avenue, and 411 Plumeria Drive) constructed in 1985 and the last two (2840 and 2880 Junction Avenue) constructed in 1990.

The buildings are indicated to be supported on a system of reinforced-concrete, continuous perimeter foundations and intermediate interior footings for the support of interior steel columns. The ground floor is concrete slab-on-grade and the second floors are of wood framing. The primary construction materials of the subject property buildings include concrete tilt-up exterior panels, interior steel columns; and glue-laminated wood beams and wood purlins, which support the panelized wood roof decks. Steel-braced frames are located within the buildings for lateral resistance. Interior construction of the buildings includes 12" x 12" vinyl tile, vinyl tile, sheet vinyl, carpeted, ceramic, tile, wood, and stone tile floors; drop-in panel and sheetrock ceilings; knock-down textured sheetrock walls; and fluorescent, incandescent, and mercury vapor lighting. Additionally, each building is equipped with one elevator.

Figure 2 in Appendix A presents a site plan for the subject property. Photographs of the subject property are provided in Appendix B.

3.3 SITE RECONNAISSANCE METHODOLOGY

SECOR Inspector Name:	Jeremy Zimber
Date of Site Reconnaissance:	May 19, 2005
Weather Conditions During Site Reconnaissance:	Cloudy with light rain, approximately 55 degrees.

DRAFT

Subject Property Representative Present During Site Reconnaissance:	Mr. Alan Webber, Senior Vice President/Property Manager – Menlo Equity Management
Methodology - SECOR utilized the following methodology to observe the subject property:	
• Traverse the outer site boundary.	
• Traverse transects across the site.	
• Traverse the periphery of all structures on the site.	
• Visually observe accessible interior areas expected to be used by occupants or the public, maintenance and repair areas, and utility areas, and a representative sample of other occupied spaces.	

3.4 SITE OBSERVATIONS

3.4.1 Exterior Property Areas

The 23.6-acre subject property is sub-divided into five separate parcels placing each building on its own separate legal parcel with associated parking. Paved vehicular access to the subject property is provided from the east along Plumeria Drive, from the west along Zanker Road, and from the south along Junction Avenue. Pedestrian sidewalks also traverse the subject property to provide access to the separate buildings. Approximately 95 percent of the subject property is occupied by buildings or pavement. The remaining five percent of the subject property is landscaped.

No other structures, besides the subject property buildings, were observed on the subject property. Five pad-mounted electrical transformers were located on the subject property and observed to be in good condition with no evidence of leakage or staining. Two diesel-powered backup generators with approximately 200-gallon diesel belly tanks were observed on the subject property. One is used by Ultratech Stepper and is located east of their 3050 Zanker Road facility. The other is used by Pillar Data Systems and is located near the southeast corner of their facility at 2840 Junction Avenue. There was no evidence of prior leakage or a release from either of these back-up generators.

No visible evidence of landfills, dumps, trenches, direct burial activities, or other evidence of on-site disposal was observed on the subject property.

No stained or discolored soils, pavement, or other exterior surfaces were observed.

3.4.2 Interior Observations

Building A, 3050 Zanker Road, is Ultratech Stepper's main manufacturing facility. Ultratech Stepper designs, manufactures and markets photolithography equipment used worldwide in the fabrication of semiconductor and nanotechnology devices. The first floor is comprised of a 5,000-square-foot clean room which is both temperature and humidity controlled, and associated manufacturing and support areas. In addition, there are two large open office areas in the front portion of the building. A large mechanical yard is situated at the rear of the building which contains processing and mechanical equipment. The main first floor restrooms include shower facilities for both men and women. The second floor is primarily open office with perimeter private offices and a cafeteria/break area supported by an outdoor balcony.

Building B, 2880 Junction Avenue, provides administrative support and training areas for Ultratech Stepper as well as a full-service cafeteria on the second floor with an adjacent outdoor balcony and a nearby fitness center. The first floor clean room is similar to the one in the 3050 building; however, its use is exclusively for training purposes and is located in close proximity to the training rooms.

Building C, 2860 Junction Avenue, is currently vacant office space. The first floor is primarily an open office environment with perimeter private offices and an approximately 5,000 square foot lab area. The second floor is also open office space and includes a cafeteria/break area with an adjacent outdoor balcony. Restrooms are centrally located on both the first and second floors with showers in both the men's and women's first floor facilities.

Building D, 2840 Junction Avenue, is occupied by Pillar Data Systems. Pillar Data Systems develops hardware and software incorporating both network attached storage and storage area network functionality. The first floor includes an open office space and an approximately 10,000-square-foot dry lab area. The second floor has an executive wing with private offices, additional open office space, and a cafeteria/break area.

Building E, 411 Plumeria Drive, is currently vacant office space. The first floor is an open office space with perimeter private offices and a small server room. The second floor is an open office space with a large full service cafeteria and break area adjacent to the outdoor balcony. Restrooms are centrally located on both floors with showers in both the men's and women's facilities on the first floor.

Overall, SECOR visually observed flooring, walls, ceilings, plumbing fixtures, and windows within the common areas of the buildings. SECOR did not observe visible evidence of significant water damage, moisture intrusion, or mold growth in any of the areas inspected.

3.4.3 Hazardous Materials

Hazardous materials observed on the subject property during the site reconnaissance were noted as: elevator hydraulic fluid for one elevator in each of the five buildings, materials used at the Ultratech Stepper facility, and small quantities of commercial janitorial supplies and paint at the Pillar Data Systems facility.

No leaks or staining were observed in the five elevator equipment rooms.

The following approximate quantities of hazardous materials were in the chemical storage areas and laboratories of the Ultratech Stepper facility:

- 120 1-gallon containers of developer
- 10 1-gallon containers of photoresist
- 25 1-gallon containers of acetone
- 20 1-gallon containers of isopropyl alcohol
- 50 1-gallon containers of old stripper
- 65 1-gallon container of new stripper
- Small quantities of 1-gallon containers of methanol, dichloromethane, kerosene, metal cool, cutting fluid, ethylene glycol, sulfuric acid, and nitric acid

DRAFT

The majority of the chemicals were stored in the exterior, locked, covered free standing chemical storage locker in the maintenance area, along the south side of Ultratech's 3050 Zanker Road facility. The chemical storage locker is equipped with a grated floor for secondary containment of any spills. Ultratech's 2880 Junction Avenue facility has a chemical storage room equipped with free-standing double containment pallets. According to Mr. Charles Wurm, the environmental health and safety engineer for Ultratech Stepper, only small quantities of chemicals are issued at a time. Each operator is required to store all hazardous materials within appropriate flammable cabinets when not in use.

The resist and stripper are applied to the silicon wafers that have been lithographed with circuit board patterns to alternately cover and strip the desired pattern on the wafer. Most of the application systems are computer controlled closed loop systems located inside a clean room on the first floor of the 3050 Zanker Road building. The satellite containers of the resist, stripper, and any flammable materials (acetone, isopropyl alcohol, and other solvents) are stored in a locked flammable storage cabinets locate in proximity to these clean rooms.

The containers with an approximate capacity of greater than five gallons are labeled, covered, and stored in such a manner as to contain possible spills of leaks. Additionally, floor drains or other visible rapid pathways for contaminant migration from this area were not observed during the site reconnaissance. No signs of leaks or spills were observed and MSDS sheets were maintained on-site for review.

According to Mr. Wurm, the environmental health and safety engineer for Ultratech Stepper, their facilities annually generate approximately two 55-gallon containers of waste flammable liquids, three gallons of waste acetone, three gallons of waste isopropyl alcohol, and several pounds of used wipes and towels. These materials are collected in drums and disposed off-site by a licensed transporter, Advanced Chemical Transport, Inc. Manifests for these disposals are retained by the environmental health and safety engineer, Mr. Wurm.

Commercial janitorial cleaning supplies and solvents are located in the janitor's closet on the second floor of the Pillar Data Systems building. These cleaning supplies include detergents, sanitizers, stainless steel polish, hand soap, and Ajax. Limited amounts of gasoline, solvents, paints, degreasers, and cleaners were located in the dry lab area on the first floor of Pillar Data Systems. These materials were observed to be contained within locked flammables cabinets and showed no signs of leakage or spills. MSDS sheets were maintained on-site for review.

No strong, pungent or noxious odors were noted during SECOR's site reconnaissance.

No pools of liquid were observed in interior areas of the subject property buildings.

3.4.4 Floor Drains, Sumps, and Other Subgrade Structures

Floor drains were observed within the restroom/shower and cafeteria kitchen areas of the buildings on the subject property. These floor drains are reported by Mr. Webber to be connected to the sanitary sewer system provided to the subject property by the City of San Jose.

DRAFT

Additionally floor drains were observed in Ultratech Stepper's maintenance area, and are used during maintenance drain down of air conditioning units and components of the processed cooling water system for the facility. These floor drains are reported by Mr. Charles Wurm, environmental health and safety engineer for Ultratech Stepper, to be connected to the municipal sanitary sewer system.

No subgrade grease traps were observed or reported to be in use at the subject property.

No evidence of water wells, cisterns, or other subsurface structures was observed on the subject property.

3.4.5 Solid Waste

Two solid waste dumpsters and two cardboard dumpsters, for Ultratech Stepper, are located near the southeast corner of their 3050 Zanker Road facility. The solid waste dumpsters are picked up on a regular basis by Waste Management and are transported to the Guadalupe Landfill in San Jose for disposal. The cardboard dumpsters are picked up on a regular basis by Waste Management and transported off site for recycling. No staining was observed on or in the vicinity of the dumpsters.

Two solid waste dumpsters and two cardboard dumpsters for Pillar Data Systems are located to the east of their 2840 Junction Avenue facility. The solid waste dumpsters are picked up on a regular basis by BFI and are transported to the Newby Island Landfill in Milpitas for disposal. The cardboard dumpsters are picked up on a regular basis by BFI and transported off site for recycling. No staining was observed on or in the vicinity of the dumpsters.

3.4.6 Utilities

Electrical and natural gas service is supplied to the subject property by Pacific Gas & Electric (PG&E). Sanitary sewer service and potable water for the subject property is supplied by the City of San Jose.

3.4.7 Wastewater Discharges

The subject property has a wastewater discharge permit, issued by the Santa Clara Watershed Protection Department for the pH neutralization system in the maintenance areas located at Ultratech Stepper's facilities. The neutralized wastewater is discharged to the sanitary sewer system. The neutralization system has a continuous digital and paper recorder of the pH of the treated water. Semi-annual sampling is conducted on the following parameters: chromium, toluene, xylenes, pH, and methylene chloride. There is also a deionized water system in the maintenance area. The deionized water is piped directly into the laboratories of these facilities. According to Jack Dickinson, Environmental Compliance Inspector with the Watershed Protection Department, both announced and unannounced inspections of the operations of the facility are conducted. Ultratech Stepper has not received any permit violations at the subject property buildings.

DRAFT

3.4.8 Stormwater

Stormwater at the subject property moves via sheetflow across the property and empties into one of several stormwater drains located across the subject property. The storm water drains discharge to the City of San Jose stormwater sewer system. No staining, discoloration, or evidence of release was observed at the subject property in the vicinity of stormwater drains.

3.4.9 Air Emissions

SECOR reviewed a permit issued by the Bay Area Air Quality Management District to Ultratech Stepper to operate wipe cleaning operations at their facilities. According to Mr. Charles Wurm, the environmental health and safety engineer for Ultratech Stepper, towels and wipes with small amounts of acetone, isopropyl alcohol, and methanol are used for cleaning of parts at their facility. SECOR observed multiple self closing metal containers, ranging from two-and-a-half to five gallons in size, which are used as satellite accumulation storage for the used wipes in the assembly and manufacturing labs of the facility. These containers are identified with a checkerboard marking and are only collected by Mr. Wurm on a weekly basis.

3.4.10 Aboveground Storage Tanks (ASTs)

Two diesel-powered backup generators with approximately 200-gallon double-walled steel diesel belly tanks were observed on the subject property. One is used by Ultratech Stepper and is located east of their 3050 Zanker Road facility. The other is used by Pillar Data Systems and is located near the southeast corner of their facility at 2840 Junction Avenue. There was no evidence of prior leakage or a release from either of these back-up generators.

3.4.11 Underground Storage Tanks (USTs)

No evidence indicating the former or current presence of USTs was observed on the subject property during SECOR's site reconnaissance.

3.4.12 Pipelines

No reports or other evidence that would indicate the presence of underground pipelines containing hydrocarbons or other products was discovered during the investigation of the subject property.

3.4.13 Polychlorinated Biphenyls

SECOR observed five pad-mounted electrical transformers on the subject property, which are owned by Pacific General & Electric (PG&E). All of these transformers appeared to be in good working condition with no signs of staining or leakage observed. According to PG&E, the pad-mounted transformers at the subject property were installed after 1984 and are therefore non-PCB containing.

DRAFT

3.4.14 High-Voltage Electric Transmission Lines

No high-voltage electric transmission lines were observed on or adjacent to the subject property.

3.4.15 Site Reconnaissance Conclusions

It is SECOR's opinion, based on the findings described above, that the reconnaissance of the subject property did not identify evidence of a REC or HREC. No further investigation is warranted.

3.5 AREA RECONNAISSANCE

The subject property is located in an area of mixed industrial, commercial and residential development in the City of San Jose, California.

3.5.1 Adjacent Properties

During the site reconnaissance, SECOR observed the following uses of adjacent properties.

North:	Two municipal water supply wells are located adjacent to the northern boundary of the subject property along the Montague Expressway. Across the intersection of Zanker Road and the Montague Expressway to the northwest of the subject property is Broadcom. Lockheed Martin is located across the Montague Expressway to the north of the subject property.
South:	The subject property is bounded on the south by Junction Avenue and Plumeria Drive. A commercial building (2950 Zanker Road), County of Santa Clara – Department of Child Support Services, and the Central Park Plaza office park are across Junction Avenue to the south. Techwell, Earth Tech, and an unoccupied commercial building (410 Plumeria Drive) are located across Plumeria Drive.
East:	The subject property is bounded on the east by the Montage Expressway. The Elan Apartments and River Oaks Village Shopping Center are located across the street to the east.
West:	The subject property is bounded on the west by Zanker Road, with Semi, Neoforma, and Neophotonics across the street to the west.

3.5.2 Adjacent Properties Conclusion

It is SECOR's opinion, based on the findings described above, that the reconnaissance of adjacent properties did not identify evidence of a REC or HREC. No further investigation is warranted.

DRAFT

4.0 HISTORICAL SITE USE

4.1 PROPERTY OWNERSHIP RECORDS

According to records of the Santa Clara County Tax Assessor's office, the subject property is currently owned by Montague LLC. The subject property is sub-divided into five separate parcels placing each building on its own separate legal parcel. The buildings of the subject property are identified by the following Santa Clara County Tax Assessor's Parcel Numbers:

- 3050 Zanker Road – 097-14-086
- 2880 Junction Avenue – 097-14-085
- 2860 Junction Avenue – 097-14-068
- 2840 Junction Avenue – 097-14-067
- 411 Plumeria Drive – 097-14-066

According to a chain-of-title acquired from Banks Information Solutions, Inc. of Austin, Texas, the subject property is currently owned by Montague, LLC. They acquired the property in 1997 from The Equitable Life Assurance Society of the United States. In 1986, the property was transferred from the Southern Pacific Industrial Development Company to Exchange Intermediary, Inc. and then to The Equitable Life Assurance Society of the United States. In 1975, the property was transferred from the Lawyers Title Insurance Company to the Southern Pacific Industrial Development Company. In 1974, the property was transferred from Olivia Brennan to the Lawyers Title Insurance Company. In 1968, the property was transferred from R.D. Brennan to Olivia Brennan. In 1956, Adele Datroni distributed one-half interest of the property to Olivia Brennan who in turn transferred it to Olivia Brennan and R.D. Brennan. In 1947, the property was transferred from the California Pacific Title Insurance Company with one-half interest of the property going to R. D. Brennan and Olivia Brennan and the other one-half interest of the property going to Adele Datroni. In 1946, the property was transferred Emily J. Horn to E. Larsen and then to the California Pacific Title Insurance Company. Prior to 1940 the property was owned by E. Larsen.

These owners are not known to be associated with the generation, distribution, storage, or disposal of hazardous waste in conjunction with the subject property. Based on this information, further research of prior ownership does not appear warranted and was not performed. A copy of the chain-of-title report is provided in Appendix C.

4.2 AERIAL PHOTOGRAPH REVIEW

SECOR reviewed aerial photographs for the subject property vicinity for the years 1948, 1960, 1968, and 1980 at the Dr. Martin Luther King Jr. Library in San Jose. Additionally, SECOR reviewed aerial photographs for the subject property vicinity for the years 1995 and 2001 at the Santa Clara County Planning Department. No aerial photographs prior to 1948 were located. Observations of photographs reviewed for the subject property are listed in the following table:

Year	Scale	Observations, Subject Property and Adjoining Properties
1948	Unknown	The subject property and adjoining properties appeared as orchard lands. No structures appeared on the subject property or adjoining properties. Dirt roads traverse transects across the subject property vicinity.
1960	Unknown	The subject property and adjoining properties appeared similar as they did in the 1948 aerial photograph.

1968	Unknown	The subject property and adjoining properties appeared similar as they did in the 1960 aerial photograph.
1980	Unknown	The subject property appeared as a crescent-shaped parcel of land, similar to its current orientation. The subject property appeared as agricultural land, but it is unclear whether it was utilized for row crops or as orchards. The Montague Expressway bordered the subject property to the north, beyond which appeared as agricultural land with a dirt road located in the current location of Research Drive. To the south appeared a dirt road in the current location of Junction Avenue. Beyond this dirt road appeared cleared areas to the southwest, near the corner of Zanker Road, and to the southeast near a dirt road in the current location of Plumeria Drive. The remainder of this adjoining property to the south appeared as undeveloped land. To the west appeared Zanker Road, beyond which were agricultural lands. To the east appeared a dirt road in the current location of Plumeria Drive, beyond which was agricultural lands. To the northeast, beyond the Montague Expressway and the River Oaks Parkway, appeared three commercial structures. To the northwest, beyond the Montague Expressway and Zanker Road, appeared orchard lands.
1995	Unknown	The subject property appeared in its current configuration. To the south of the 2860 Junction Avenue building of the subject property, beyond Junction Avenue appeared undeveloped land. The remaining adjoining properties appeared in their current configuration.
2001	Unknown	The subject property appeared in its current configuration. To the south of the 2860 Junction Avenue building of the subject property, beyond Junction Avenue appeared some construction underway in the current location of the County of Santa Clara – Department of Child Support Services (2851 Junction Avenue). The remaining adjoining properties appeared in their current configuration.

4.3 SANBORN FIRE INSURANCE MAPS

Historical Sanborn maps were prepared for the more densely populated, fully developed areas within a given city limit. Due to the location of the subject property, SECOR was unable to locate historical fire insurance maps for this area at the Dr. Martin Luther King Jr. Library in San Jose.

4.4 HISTORICAL TOPOGRAPHIC MAPS

SECOR reviewed the following historic topographic maps for the subject property vicinity.

Map Name, Year & Scale	Observations
USGS 7.5-minute topographic map, Milpitas, CA quadrangle, 1961, revised 1979, 1:25,000	The topographic map depicts no structures on the subject property. Montague Expressway was depicted to the north of the subject property. No potential environmental concerns were depicted on the map.

4.5 CITY DIRECTORIES

SECOR reviewed historic city directories for listings of the subject property address and adjoining property addresses at the Dr. Martin Luther King Jr. Library in San Jose. Listed

occupants of the subject property are summarized in the following table. All addresses in bold in the following table are representative of the subject property.

Year	Occupant of Subject Property/Adjoining Properties
1965	Zanker Road: There are no listings in the vicinity of the subject property. Junction Avenue: There are no listings in the vicinity of the subject property. Plumeria Drive and River Oaks Parkway were not yet listed.
1970	Zanker Road: 3000 – System Freight Ways Junction Avenue: There are no listings in the vicinity of the subject property. Plumeria Drive and River Oaks Parkway were not yet listed.
1975	Zanker Road: 3000 – Tempco Transportation 3010 – Industrial Environmental No # – City of San Jose Junction Avenue: There are no listings in the vicinity of the subject property. Plumeria Drive and River Oaks Parkway were not yet listed.
1981	Zanker Road 3000 – NO OCCUPANT LISTED 3010 – IT Corporation Junction Avenue: There are no listings in the vicinity of the subject property. Plumeria Drive and River Oaks Parkway were not yet listed.
1985	Zanker Road: 2950 – M A D Computers Inc. 3000 – NO OCCUPANT LISTED 3010 – IT Corporation Junction Avenue: There are no listings in the vicinity of the subject property. Plumeria Drive: 410 – SYDIS River Oaks Parkway: 683 – NO OCCUPANT LISTED 691 – NO OCCUPANT LISTED 695 – Pantronix Corporation

DRAFT

4.6 LOCAL BUILDING DEPARTMENT RECORDS

Local building department permit files were reviewed by SECOR for records helpful in identifying historical uses of the subject property, or indicative of potential environmental concerns.

Agency Name, Contact Information	Findings
City of San Jose - Building & Code Enforcement 801 N. 1st Street San Jose, CA 95110	SECOR reviewed the permit files for the subject property buildings, which contained various building permits for additions/alterations during tenant improvements, fire alarm system inspection reports, overhead sprinkler system drawings, sign permits, and building plans for the subject property buildings. No information of environmental concern was identified in the permit files.

4.7 LOCAL PLANNING/ZONING DEPARTMENT RECORDS

SECOR contacted the local planning and zoning department for information about current property zoning, records helpful in identifying historical uses of the subject property, or records indicative of potential environmental concerns.

Agency Name, Contact Information	Finding
Santa Clara County Planning and Zoning Department Santa Clara County Building 70 W. Hedding Street East Wing, 7th Floor San Jose, CA 95110	According to the Santa Clara County Planning and Zoning Department, the subject property is zoned I for Industrial.

4.8 OTHER HISTORICAL DATA SOURCES

No other sources of historical information were reviewed during this assessment.

4.9 PROVIDED DOCUMENTS

SECOR reviewed the following previous environmental reports and other documents concerning the subject property provided by the User and Owner:

Document Name:	*Updated Phase I Environmental Site Assessment,* December 19, 1996, Hygienetics Environmental Services, Inc.
Hygienetics Environmental Services was contracted by Menlo Equities Associates LLC to conduct this Updated Phase I ESA of the subject property. At the time of the report the subject property was owned by Equitable Life Assurance Society of the United States and the subject property buildings operated as Ultratech Stepper, Diamond Multimedia, General Instrument (formerly Compression Labs, Inc.), Lifeguard Health Care, and Viking Freight Systems, Inc. Hygienetics reported that asbestos-containing materials (ACM) were identified in the subject property buildings. Asbestos was detected in the grey roofing sealant, in the transite roofing screens, in the beige 12-inch by 12-inch vinyl floor tiles in the storage room in 2840 Junction Avenue, and in the beige/black mastic in the roof access room. This assessment did not	

DRAFT

identify recognized environmental conditions associated with the subject property buildings.	
Document Name:	*Document Review For Montague Park Development Property in San Jose, California*, December 20, 1996, Clayton Environmental Consultants.
Clayton Environmental Consultants, Inc. (Clayton) was contracted by Menlo Equities Associates LLC to review the Updated Phase I ESA of the subject property conducted by Hygienetics Environmental Services. Clayton concluded that the Hygienetics Environmental Services Updated Phase I ESA report was generally acceptable with current industry standards for Phase I Environmental Site Assessments. Clayton recommended no further investigation at that time.	
Document Name:	*Phase I Environmental Site Assessment,* December 2, 1999, Terracon
Terracon was contracted by Starwood Asset Services, Inc. and Montague LLC to conduct this Phase I ESA of the subject property. At the time of the report the subject property was owned by Montague LLC and the subject property buildings operated as Ultratech Stepper, Diamond Multimedia Systems, Inc., Fujitsu Network Communications, Lifeguard, Inc., and Phoenix Technology, Inc. Terracon concluded that their assessment revealed no evidence of recognized environmental conditions in connection with the subject property except the following: • Four monitoring wells were located on the subject property at the time of Terracon's site reconnaissance. Terracon recommended that the purpose of these monitoring wells be determined. Terracon recommended that a written well survey request be filed with the Santa Clara Valley Water District for information on these wells and that local and regional regulatory agencies be contacted for further information on contamination investigations in the immediate area that may impact the subject property.	
Document Name:	*Site Maps and Well Construction Logs*, December 20, 1999, Santa Clara Valley Water District.
This document includes the site maps and well construction logs for the wells which were previously located on parcels 097-14070 (changed to 097-14-086), 097-14069 (changed to 097-14-085), 097-14-068, 097-14-066 of the subject property. It appears that these documents were obtained by Menlo Equities Management company as a result of the recommendation by Terracon.	
Document Name:	*Well Destruction Details, Montague Park Site, San Jose, CA*, February 18, 2000, Lowney Associates
Lowney Associates was contracted by Menlo Equities Management Company to complete the destruction of four on-site ground water monitoring wells at the Montague Park site. This document contains the monitoring well destruction details for those wells which were previously located on the subject property. Each of the monitoring wells was destroyed in accordance with Santa Clara Valley Water District (SCVWD) guidelines. Per the permit conditions, and under the observations of the SCVWD inspector Mr. Dave Higgins, two of the four monitoring wells were pressure grouted with cement grout to the top of the well casings. The remaining two monitoring wells were over-drilled to a total depth of 25.5 feet and backfilled with cement slurry under the observation of Mr. Higgins. Work was performed by a licensed C57 driller (Exploration Geoservices, Inc.), as required by the SCVWD. Copies of the well destruction completion notices and permits were attached to this document. SECOR did not observe any signs of these wells which had previously been located on the subject property during the site reconnaissance.	

DRAFT

4.10 SUMMARY OF HISTORICAL RESEARCH CONCLUSIONS

It is SECOR's opinion, based on the findings described above, that the review of historical records did not identify evidence of a REC or HREC. No further investigation is warranted.

DRAFT

5.0 PHYSICAL SETTING

5.1 REGIONAL AND LOCAL TOPOGRAPHY

Based on a review of the United States Geological Survey (USGS) 7.5-minute topographic map, Milpitas, CA Quadrangle 1961, revised 1979, the subject property is situated at an elevation of approximately 25 feet above mean sea level (MSL). The surface topography in the vicinity of the subject site appears to slope gently to the west-southwest. The nearest major surface water body is Coyote Creek, located approximately one-half mile to the east of the subject property. Surface water runoff from the subject property discharges to the municipal storm sewer system via surface drains via sheet flow.

5.2 REGIONAL GEOLOGY

The subject property is located within the Santa Clara Valley, a large sedimentary basin consisting of alluvial deposits and termed alluvium. The Santa Clara Valley is bound by the Diablo Mountain range to the east and the Santa Cruz Mountain range to the west.

The *Soil Survey of Santa Clara Area* classifies the primary soil types present in the area of the subject property as follows:

The Pescadero clay is found on 0 to 1 percent slopes. In a typical profile the surface layer is dark grayish brown clay. The subsoil is grayish brown, calcareous mottled clay. The soils generally have slow permeability. Surface runoff is generally very slow and available water capacity is high.

The Mocho clay loam is found on 0 to 1 percent slopes. In a typical profile the surface layer is brown or pale brown calcareous clay loam. The subsoil is grayish brown, dark gray or black clay or clay loam. These soils generally have moderate to slow permeability. Surface runoff is generally very slow and available water capacity is high.

The Mocho clay loam over Crepley or Campbell soils is found on 0 to 3 percent slopes. In a typical profile the surface layer is brown or pale brown slightly calcareous friable clay loam. The subsoil is dark gray or grayish brown clay or clay loam. These soils generally have moderate to slow permeability. Surface runoff is generally slow and available water capacity is high.

5.3 REGIONAL GROUNDWATER

Typically, shallow groundwater flow direction can be estimated by examination of the surface topography. Groundwater generally flows from areas of high elevation to areas of low elevation. Shallow groundwater usually parallels or migrates towards nearby surface water bodies. Surface features such as streets, utility trenches, and paved areas can locally alter the flow direction of shallow groundwater.

The topography of the subject property was observed to slope gently to the west-southwest. Shallow groundwater is expected to generally follow the contour of the land to the west-southwest of the subject property.

Based on water well information obtained from the Santa Clara Valley Water District, static water level in the vicinity of the subject property is estimated to be 13 to 21 feet below ground surface.

DRAFT

6.0 REGULATORY AGENCY RECORDS REVIEW

6.1 LOCAL HEALTH/ENVIRONMENTAL DEPARTMENT

SECOR contacted the local health department for records pertaining to use or storage of hazardous materials at the subject property, or records of documented spills or other releases of hazardous materials to the environment, or other potential environmental concerns at the subject property.

Agency Name, Contact Information	Finding
Santa Clara County Environmental Health Department 1555 Berger Drive, Suite 300 San Jose, CA	SECOR contacted the Santa Clara County Environmental Health Department concerning permits, hazardous materials, violations, underground or aboveground storage tanks, wells (monitoring or sampling data), and remedial action at the subject property. SECOR reviewed active files for the 3050 Zanker Road and 2880 Junction Avenue Ultratech Stepper facilities of the subject property. These files contained small quantity hazardous waste generator permit applications, certifications of financial assurance, hazardous waste inventory forms, hazardous materials compliance inspection reports, and documentation concerning the rinsewater pH neutralization system used at these facilities. No violations were noted during the hazardous materials compliance inspections conducted at these facilities. There was no information concerning hazardous materials releases or remedial action conducted at either of these facilities. In addition, SECOR reviewed an inactive file for the 2860 Junction Avenue building of the subject property. A former occupant of this building, Compression Labs, was a small quantity hazardous waste generator. It appears that Compression Labs was generating approximately 30 gallons of Freon waste annually as result of their video conferencing systems assembly operations. This file contained a small quantity hazardous waste generator permit application, a hazardous waste inventory form, and a hazardous waste generator inspection report. Violations noted during the inspection dated February 28, 1989 included: lack of an on-site contingency plan, no documented personnel training program, no documented monitoring program, no secondary containment of waste containers of Freon, and no accumulation start date on waste container label. It was indicated that within 15 days of this inspection all violations indicated were corrected and approved by the Santa Clara County Toxics Control Unit.

DRAFT

6.2 LOCAL FIRE DEPARTMENT

SECOR contacted the local fire department regarding records of hazardous material responses or violations, records of underground storage tanks, records of spills or other releases of hazardous materials, or other potential environmental concerns at the subject property.

Agency Name, Contact Information	Finding
San Jose Fire Department 170 W. San Carlos Street San Jose, CA 95113 (408) 277-4656	SECOR reviewed the San Jose Fire Department's property file for the subject property. The file contained annual fire safety inspections, plan checks for tenant improvements, fire sprinkler drawings, and fire alarm permits for all of the subject property buildings. In addition, the property file for 3050 Zanker Road contained a hazardous materials management plan and hazardous materials storage inspection records for a former occupant of this building, Chips & Technologies. It appears that Chips & Technologies performed research and design of integrated circuits at this facility in the early 1990s. This facility generated less than 55 gallons per year of a flammable combination liquid waste containing isoparaffinic petroleum solvents. A hazardous materials storage inspection conducted on March 31, 1992 indicated violations including lack of secondary containment for hazardous wastes, improper drum labeling, and an unauthorized discharge in the waste area of this facility. It was noted that within 30 days of these findings a follow-up inspection was conducted and all violations were corrected. All evidence of the discharge had been removed and properly disposed of, with a manifest, as hazardous waste. SECOR also reviewed the current property files for both the 3050 Zanker Road and 2880 Junction Avenue Ultratech Stepper facilities at the fire department. These files contained hazardous material and waste inventories for both of these facilities as well as routine hazardous materials storage inspection records. No violations were noted at either of these facilities during the hazardous materials storage inspections. There was also information contained in these records regarding routine inspections of the back-up generators located at the 3050 Zanker Road and 2840 Junction Avenue facilities of the subject property.

DRAFT

6.3 FEDERAL AND STATE REGULATORY AGENCIES

SECOR reviewed regulatory databases maintained by various federal and state environmental agencies, which were provided by Environmental Data Resources, Inc. (EDR) of Milford, Connecticut. A copy of the complete database listings obtained from EDR and a map showing the locations of listed sites relative to the subject property are presented in Appendix D. According to EDR, the information from the various federal and state agencies is obtained and updated regularly per ASTM standards. Dates of the individual databases and lists utilized by EDR are included in the report in Appendix D.

The purpose of the review was to identify reported listings for the subject property or other properties within the search radius specified in ASTM E1527.

The EDR document lists a number of sites as "orphan sites." EDR was unable to confirm the locations of these sites, or assess whether they were located within the designated search radius. SECOR independently reviewed the locations of these "orphan sites", to the extent possible, using various maps and our knowledge of the subject property area. Any of the "orphan sites" determined to be within the designated search radius are included in the listings and discussions in the following sections.

6.3.1 EPA National Priority List

The EPA NPL of hazardous waste sites was reviewed. The NPL includes uncontrolled or abandoned hazardous waste sites which have been assigned the highest risk, based on the EPA's Hazard Ranking System, and which have been targeted for long-term remediation under the federal Superfund program. The NPL was reviewed for listed sites within a one-mile radius of the subject property.

6.3.2 EPA CERCLIS Inventory

The EPA CERCLIS inventory of potential hazardous waste sites under investigation was reviewed. This list includes sites that are, or have previously been, evaluated for possible inclusion on the NPL. The CERCLIS inventory was reviewed for listed sites within a one-half-mile radius of the subject property.

The CERCLIS database includes a subset of sites that have been assigned NFRAP status. These are sites where, following an initial investigation, no contamination was found, contamination was removed quickly, or the contamination was not serious enough to require NPL consideration.

6.3.3 RCRA TSD Facilities and CORRACTS List

The Resource Conservation and Recovery Act (RCRA) program is designed to identify and track hazardous waste from the point of generation to the point of disposal. The Resource Conservation and Recovery Information System (RCRIS) lists facilities that are permitted for treatment, storage, or disposal (TSD) of EPA-regulated hazardous waste. It also contains information pertaining to the status of facilities tracked by the RCRA Administrative Action Tracking System (RAATS). RAATS lists RCRA violations under administrative review or sanction by the EPA. In addition, the EPA maintains the Corrective Action-site (CORRACTS) list, which is a database of RCRA-permitted facilities that are undergoing a corrective action pursuant to an order issued by the EPA

DRAFT

under RCRA Section 3008(h). A "corrective action order" may be issued by the EPA when there is a release of hazardous waste into the environment from an RCRA facility. The order may require corrective actions that extend beyond the facility's border. The CORRACTS list was searched for sites within a one-mile radius of the subject property. The RCRA database was searched for TSD facilities within a one-half mile radius of the subject property.

6.3.4 RCRA Large Quantity Hazardous Waste Generators Database

Generators of hazardous waste are required under RCRA to obtain a generator identification number from the EPA. Generators of hazardous waste that have obtained identification numbers and either generate more than 1,000 kilograms (Kg) of hazardous waste per month or meet other applicable requirements of RCRA are listed in the RCRIS database as Large Quantity Generators (LQGs). The RCRIS database also contains information pertaining to the status of facilities tracked by RAATS. The database was reviewed for listed generators and RAATS-listed facilities on or adjacent to the subject property.

6.3.5 RCRA Small Quantity Hazardous Waste Generators Database

Generators of hazardous waste that have obtained identification numbers and either generate between 100 Kg and 1,000 Kg of hazardous waste per month or meet other applicable requirements of RCRA are listed in the RCRIS database as Small Quantity Generators (SQGs). RCRIS also contains information pertaining to the status of facilities tracked by RAATS. The database was reviewed for listed generators and RAATS-listed facilities on or adjacent to the subject property.

6.3.6 ERNS and State Spills Database

The EPA Emergency Response Notification System (ERNS) database and equivalent state lists (if any) include information on sudden or accidental releases of hazardous substances and petroleum into the environment. The ERNS and Spills databases were reviewed for listings of the subject property address.

6.3.7 State Superfund Sites

The state equivalent of the federal NPL list is identified in the database search report in Appendix D. The state superfund database was searched for listings within a one-mile radius of the subject property.

6.3.8 State CERCLIS-Equivalent Database

The state equivalent of the federal CERCLIS database is identified in the database search report in Appendix D. The state sites database was searched for listings within a one-half mile radius of the subject property.

6.3.9 Leaking Underground Storage Tank (LTANKS) Records

The state, or a local agency with administrative authority delegated by the state, maintains a database of known leaking underground storage tank (LTANKS) sites. These databases are identified in the database search report in Appendix D. The

DRAFT

LTANKS database was searched for listed LTANKS sites within one-half mile of the subject property.

6.3.10 Underground Storage Tank (UST) Records

The state, or a local agency with administrative authority delegated by the state, maintains a database of registered USTs. This database is identified in the database search report in Appendix D. This database was searched for listings on or adjacent to the subject property.

6.3.11 Solid Waste Facilities

The state maintains a database of facilities that have filed for a permit for operation of a solid waste landfill or processing facility. This database is identified in the database search report in Appendix D. This database was searched for sites within one-half mile of the subject property.

6.4 LIST OF RECORDED SITES

6.4.1 On-Site Listings

The subject property was identified as a RCRA small-quantity generator of hazardous waste under the name of Ultratech Stepper, Inc. at 2880 Junction Avenue and 3050 Zanker Road. No indication of hazardous waste violations or releases was included in the data provided by EDR. Based on the absence of reported hazardous substance releases, this listing does not represent a recognized environmental condition and no further investigation is warranted.

6.4.2 Adjacent Site Listings

Seagate Technology, 3061 Zanker Road, is listed as a RCRA small-quantity generator of hazardous waste. The 3061 Zanker Road address is currently occupied by Neoforma, and is located across Zanker Road to the west of the subject property. No indication of hazardous waste violations or releases was included in the data provided by EDR.

Lockheed Martin Tact Def Sys Eagan, 3151 Zanker Road, is listed as a RCRA small-quantity generator of hazardous waste. The 3151 Zanker Road address is currently occupied by Broadcom, and is located across the intersection of Zanker Road and Montague Expressway to the northwest of the subject property. No indication of hazardous waste violations or releases was included in the data provided by EDR.

Lightwave Microsystems, 2911 Zanker Road, is not listed in the RCRIS system as a generator of hazardous waste. However, Lightwave Microsystems is included in the California state HazNet database. 2911 Zanker Road, currently occupied by Neophotonics, is located across Zanker Road from the subject property.

Based on the absence of reported hazardous substance releases, these listings do not represent a recognized environmental condition and no further investigation is warranted.

DRAFT

6.4.3 Other Site Listings Within Searched Area

Other locations listed within the search areas for each databases in Section 6.3 are presented in the database search report at Appendix D. SECOR evaluated each of these listings in regard to their potential to impact the subject property. No NPL, ERNS, UST or solid waste landfill listings were identified within the searched radius.

The EDR report contained several listings for 3000 and 3010 Zanker Road under the names IT Corp, IT Corp San Jose Transfer Facility, International Technology, Inc. and Snider JT/RW Trucking. This location was listed as a RCRA small-quantity generator of hazardous waste, a RCRA TSD and CORRACTS facility, and on the CERCLIS-NFRAP list. According to the EDR report, the facility was also referred by the California DTSC to the San Francisco Bay Area Regional Water Quality Control Board (RWQCB). According to the EDR report, IT Corp operated a hazardous waste transfer facility at this address from 1974 to 1986 on property leased from the City of San Jose. In 1986, the concrete holding waste tanks were removed. Elevated concentrations of metals and xylenes were detected in soil and groundwater. Following removal of approximately 1,800 cubic yards of impacted soil, the DTSC issued closure for the site in 1991.

Although the listed addresses correspond roughly to the current addresses of the subject property, historical records do not indicate any such use for the subject property. Aerial photographs from 1980 depict the subject property to be in agricultural use for row crops or orchards during the time when the hazardous waste facility reportedly operated. The current subject property buildings were constructed in 1985, when the hazardous waste facility was reported to be operating and prior to the reported remedial excavation of contaminated soil. The EDR report indicates the facility location to be along Zanker Road approximately 1/8 mile north of the subject property. Although SECOR was unable to determine the exact former location of this facility, the known history of the subject property and the regulatory closure for the IT Corp facility indicate that these listings do no represent a recognized environmental condition for the subject property.

Based on the distance, absence of reported releases, or regulatory closure, none of the remaining listings identified by the EDR report represent a recognized environmental condition for the subject property.

6.5 REGULATORY AGENCY LIST REVIEW CONCLUSIONS

It is SECOR's opinion, based on the findings described above, that the review of the environmental agency database search report did not identify evidence of a REC or HREC. No further investigation is warranted.

DRAFT

7.0 INTERVIEWS

7.1 INTERVIEW WITH KEY SITE MANAGER

Name, Title, Telephone, Years Familiar with Subject Property	Mr. Alan Webber, Property Manager, 408-567-9900 Mr. Webber has been associated with the subject property for approximately five years.
Current Use of Subject Property:	Research and Design/Office Complex
Past Use(s) of Subject Property:	Farm Land
Current Use of Surrounding Properties:	Industrial and Commercial office buildings and residential apartments.
Past Use(s) of Surrounding Properties:	Farm Land
Current or Past Hazardous/ Petroleum Material Use, Storage, Disposal:	Two diesel-powered backup generators are located on the subject property. One is used by Ultratech Stepper and is located at their 3050 Zanker Road facility. The other is used by Pillar Data Systems and is located at their 2840 Junction Avenue facility. Ultratech Stepper stores hazardous materials on site and is a small quantity generator of hazardous waste.
Current or Past Regulatory Action(s):	None
Past Releases of Hazardous/Petroleum Materials on the Property:	None
Other Environmental Information (Permits, etc.):	None

DRAFT

7.2 REQUIRED QUESTIONS

SECOR interviewed the User, Owner, and Key Site Manager regarding their awareness of any pending, threatened, or past incidences of the following:

	Owner	Key Site Manager	User
- Litigation Relevant to Hazardous Substances or Petroleum Products in, on, or From Subject Property?	None	None	N/A
- Administrative Proceedings Relevant to Hazardous Substances or Petroleum Products in, on, or From Subject property?	None	None	N/A
- Notices From Any governmental entity regarding possible violations of environmental laws or possible liability relating to hazardous substances or petroleum products?	None	None	N/A

7.3 INTERVIEWS WITH MAJOR OCCUPANTS

Name, Title	Telephone	Comments
Mr. Charles Wurm, Environmental Health and Safety Engineer for Ultratech Stepper	408-321-8835	Mr. Wurm accompanied SECOR during the walkthrough of the Ultratech Stepper buildings of the subject property. Mr. Wurm has been the Environmental Health and Safety Engineer at the Ultratech facilities of the subject property for approximately eight months. Mr. Wurm knew of no environmental issues associated with the Ultratech buildings of the subject property.
Mr. Jim Faler, Facilities Assistant	408-503-4077	Mr. Faler accompanied SECOR during the walkthrough of the Pillar Data Systems building of the subject property. Mr. Faler has been the Facilities Assistant at the Pillar Data Systems facility of the subject property for approximately two years. Mr. Faler knew of no environmental issues associated with the Pillar Data Systems building of the subject property.

7.4 INTERVIEWS WITH OTHERS

No other persons were interviewed by SECOR.

7.5 OPINION

It is SECOR's opinion that, based on the findings described above, information obtained during the interviews did not indicate the existence of a REC or HREC to the subject property.

DRAFT

8.0 OTHER ENVIRONMENTAL CONDITIONS

8.1 PRELIMINARY ASBESTOS ASSESSMENT

A visual assessment for the presence of asbestos-containing material (ACM) was conducted during the SECOR site inspection. SECOR's inspection was non-destructive in nature; that is, there was no demolition of building components in order to access hidden materials such as internal wall insulation or pipe chases, or flooring materials under carpeting.

No friable potential ACM was observed during SECOR's inspection of the subject property. Based on the construction dates of the subject property building (1985-1990), significant quantities of ACM would not be expected to be present. No further investigation appears to be warranted.

8.2 LIMITED EVALUATION OF MOLD AND MOISTURE ISSUES

A limited visual assessment for evidence of mold-like substances or conditions conducive to mold growth was completed by SECOR as part of the Phase I ESA. SECOR's assessment was limited to a visual inspection of readily accessible public areas for evidence of water damage or persistent moisture.

No visual observations of areas of persistent moisture or apparent mold growth were observed during the site assessment.

8.3 LIMITED EVALUATION OF LEAD-BASED PAINT ISSUES

Concern for lead-based paint (LBP) is primarily related to residential structures. The risk of lead toxicity in LBP varies based upon the condition of the paint and the year of its application. The U.S. Department of Housing and Urban Development (HUD) has identified the following risk factors:

- The age of the dwelling as follows:
  - The maximum risk is from paint applied before 1950.
  - There is severe risk from paint applied before 1960.
  - There is moderate risk from deteriorated paint applied before 1970.
  - There is slight risk from the paint that is intact but applied before 1977.
- The condition of the painted surfaces.
- The presence of children and certain types of households in the building.
- Previously reported cases of lead poisoning in the building or area.

The present subject property improvements were constructed between 1985 and 1990 and the observed painted surfaces appeared to be in good condition, with no visual evidence of cracking or peeling.

8.4 EVALUATION OF RADON EXPOSURE RISKS

Radon is a colorless, tasteless radioactive gas with an EPA-specified action level of 4.0 PicoCuries per liter of air (pCi/L). Radon gas has a very short half-life of 3.8 days. The health risk potential of radon is associated with its rate of accumulation within confined areas,

DRAFT

particularly confined areas near or in the ground, such as basements, where vapors can readily transfer to indoor air from the ground through foundation cracks or other pathways. Large, adequately ventilated rooms generally present limited risk for radon exposure.

According to regional radon information obtained from the EPA, the subject property is located within EPA-designated Zone 2 for radon gas. Average radon concentrations within Zone 2 are reported to be between 2 and 4 pCi/L, below EPA-designated action levels for radon mitigation and/or control measures (USEPA, 1993). Based on SECOR's review of available information, as well as the absence of basements within the subject property building, elevated radon levels are not expected to accumulate in the subject property building.

DRAFT

9.0 FINDINGS AND CONCLUSIONS

SECOR performed a Phase I ESA of Montague Park, located at 3050 Zanker Road, 2840-2880 Junction Avenue, and 411 Plumeria Drive, San Jose, California in accordance with the procedures of the American Society of Testing and Materials, including ASTM Standard Practice E1527-97, and the August, 16, 2004 *Master Environmental Consulting Agreement* between SECOR and Amstar Group, LLC. Exceptions to, or deletions from, this practice are described in Section 2.0 of this report. The results of this Phase I ESA represent a review of current conditions at the property, based on available information as described above.

This assessment has revealed no evidence of RECs or HRECs in connection with the subject property. No further investigation is warranted.

ADDRESS

2860 JUNCTION AVENUE
SAN JOSE, CA 95134

COORDINATES

Latitude (North):	37.398900 - 37° 23' 56.0"
Longitude (West):	121.929800 - 121° 55' 47.3"
Universal Tranverse Mercator:	Zone 10
UTM X (Meters):	594726.2
UTM Y (Meters):	4139458.2
Elevation:	24 ft. above sea level

USGS TOPOGRAPHIC MAP ASSOCIATED WITH TARGET PROPERTY

Target Property:	37121-D8 MILPITAS, CA
Source:	USGS 7.5 min quad index

TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

DRAFT

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the ASTM E 1527-00 search radius around the target property for the following databases:

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

DRAFT

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

DRAFT

FEDERAL ASTM STANDARD

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA).
CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 02/15/2005 has revealed that there are 3 CERCLIS sites within approximately 0.75 miles of the target property.

CERCLIS-NFRAP: As of February 1995. CERCLIS sites designated "No Further Remedial Action Planned" (NFRAP) have been removed from CERCLIS. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund Action or NPL consideration. EPA has removed approximately 25,000 NFRAP sites to lift the unintended barriers to the redevelopment of these properties and has archived them as historical records so EPA does not needlessly repeat the investigations in the future. This policy change is part of the EPA's Brownfields Redevelopment Program to help cities, states, private investors and affected citizens to promote economic redevelopment of unproductive urban sites.

A review of the CERC-NFRAP list, as provided by EDR, and dated 03/22/2005 has revealed that there are 3 CERC-NFRAP sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 03/29/2005 has revealed that there are 4 CORRACTS sites within approximately 1.25 miles of the target property.

RCRAInfo: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System(RCRIS). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month Large quantity generators generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 03/13/2005 has revealed that there are 2 RCRA-TSDF sites within approximately 0.75 miles of the target property.

HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency

A review of the HAZNET list, as provided by EDR, and dated 12/31/2002 has revealed that there are 10 HAZNET sites within approximately 0.25 miles of the target property.

Address(es) :	3010 ZANKER ROAD SAN JOSE, CA 95131
Address(es) :	3010 ZANKER ROAD SAN JOSE, CA 95134
Background Info :	commercial area occupied by office buildings. Currently the
Background Info :	RWQCB is overseeing the groundater issues at the Site.
Background Info :	The former San Jose Transfer facility was set up to
Background Info :	consolidate hazardous wastes for shipment to regulated
Background Info :	disposal sites. Since the early 1970s the City of San Jose has
Background Info :	owned the site. In January 1974 the City of San Jose entered
Background Info :	into an agreement with Industrial Tank, Inc. and Oscar E.
Background Info :	Erickson Inc. for the construction and operation of an
Background Info :	industrial waste transfer facility. The transfer facility was on
Background Info :	approximately 1.8 acre of land and consisted of 14 concrete
Background Info :	storage areas for storing drums and above-ground tanks. The
Background Info :	types of wastes that were received at the site were flammable
Background Info :	liquids and solids, caustic compounds, oxidizing chemicals, acids
Background Info :	acids, poisons and other regulated materials.
Background Info :	Not reported
Background Info :	In 1986 the tanks and containers were cleaned and removed.
Background Info :	In 1987 IT ceased its operations. The Department of Health
Background Info :	Services (DHS), predecessor to Department of Toxic
Background Info :	Substances Control (DTSC), was the lead agency that
Background Info :	oversaw all closure activities at the site. In September 1990
Background Info :	soil and groundwater samples were taken and analyzed
Background Info :	according to an approved Closure Plan. Soil sample results
Background Info :	indicated the presence of metals and chlorinated hydrocarbons.
Background Info :	Groundwater results indicated metals and total xylenes.

DRAFT

IT, SAN JOSE (Continued) **S102008396**

Background Info :	Chemicals of concern in groundwater were nickel (0.14 ppm)
Background Info :	and total xylenes (7.0 ppm). Heavy metals of concern in soil
Background Info :	were cadmium (65 ppm), chromium (960 ppm), lead (930
Background Info :	ppm) and mercury (9.9 ppm). Chlorinated hydrocarbons of
Background Info :	concern in soil were 1,1,1-trichloroethane (0.008 ppm),
Background Info :	trichloroethene (0.200 ppm), and tetrachloroethene (0.75
Background Info :	ppm). The November 1989 closure plan indicated that the
Background Info :	site would be considered clean if the confirmation samples
Background Info :	were less than background plus two standard deviations. The
Background Info :	site was cleaned closed by excavating, removing, and
Background Info :	disposing off-site 54 cubic yard of hazardous soil and 1,830
Background Info :	cubic yard of non-hazardous soil. DTSC acknowledged that
Background Info :	the hazardous waste storage facility was closed and approved
Background Info :	the certifications of closure on December 10, 1991 (No
Background Info :	closure report is available in the file). The site is now a

RCRAInfo Corrective Action Summary:

Event:	Current Human Exposures under Control, Yes, Current Human Exposures Under Control has been verified. Based on a review of information contained in the EI determination, current human exposures are expected to be under control at the facility under current and reasonably expected conditions. This determination will be re-evaluated when the Agency/State becomes aware of significant changes at the facility.
Event Date:	12/28/2000
Event:	Igration of Contaminated Groundwater under Control, Yes, Migration of Contaminated Groundwater Under Control has been verified. Based on a review of information contained in the EI determination, it has been determined that migration of contaminated groundwater is under control at the facility. Specifically, this determination indicates that the migration of contaminated groundwater is under control, and that monitoring will be conducted to confirm that contaminated groundwater remains within the existing area of contaminated groundwater. This determination will be re-evaluated when the Agency becomes aware of significant changes at the facility.
Event Date:	12/28/2000
Event:	Stabilization Construction Completed
Event Date:	07/01/1997
Event:	Stabilization Measures Evaluation,This facility is not amenable to stabilization activity at the present time for reasons other than 1) it appears to be technically infeasible or inappropriate (NF) or 2) there is a lack of technical information (IN). Reasons for this conclusion may be the status of closure at the facility, the degree of risk, timing considerations, the status of corrective action work at the facility, or other administrative considerations.
Event Date:	07/26/1994
Event:	CA Prioritization, Facility or area was assigned a high corrective action priority.
Event Date:	07/25/1994
Event:	Certification Of Remedy Completion Or Construction Completion
Event Date:	07/15/1993

BEP:

Site Description :	Van Waters and Rogers is a division of Univar which operates a chemical blending, storage and distribution facility. The site encompasses about 12 acres in the City of San Jose. The facility contains about 36 underground tanks which store a variety of organic compounds.
Hazardous Waste Desc :	In 1982, soil and ground water contamination was discovered at the site. This contamination was caused by spillage, inadequate handling practices and/or leakage from tanks and piping. The following contaminants have been detected: trichloroethane (TCA), perchloroethylene (PCE), dichloroethane (DCA), dichloroethylene (DCE), methylene chloride, vinyl chloride, toluene, ketones, xylene and alcohols.
Threat To Public Health & Env :	Ground water contamination at the site represents a potential threat to public health and the environment. Domestic wells are located one-half mile downgradient of the site.
Site Activity Status :	Van Waters and Rogers, Inc, has installed and is operating a ground water extraction system. The lead responsibility within DHS for oversight of remedial activities at this site has been transferred to the regional facilities permitting unit.
Project Revenue Source Co. :	Not Reported
PRS Company Address :	Not reported Not reported
Project Revenue Source Desc :	Van Waters and Rogers, Inc., the responsible party is conducting cleanup activities under the direction of the RWQCB. The RWQCB will continue to have lead responsibility for monitoring Van Waters and Roger's progress under an existing cooperative agreement between the RWQCB, EPA and DHS. The RWQCB is conducting the work with support from the EPA through a cooperative agreement. Until such time as the RWQCB refers the site to DHS for follow-up using Bond funds, no money will be budgeted from thisfund for this site.
Responsible Party :	RWQCB REFERRAL SITE

BEP:

Site Description :	Mansion Grove is a 29 acre residential apartment complex currently under construction. The site was occupied by facilities involved in metals reclamation and the manufacture and recycling of solvents and other chemicals for over 70 years. During excavations for several building foundations, contaminated soil was discovered.
Hazardous Waste Desc :	Soil testing has detected the presence of volatile organic compounds including halogenated solvents, naphthalene compounds, polynuclear aromatic compounds and petroleum hydrocarbons. There is potential for ground water contamination.
Threat To Public Health & Env :	Residential apartments are located adjacent to areas of contaminated soil. The site is fenced and posted to prevent public contact with contaminated soil.
Site Activity Status :	A removal of 6000 cubic yards of contaminated soil adjacent to occupied buildings was completed by the RP under DHS oversight in 1988. Preliminary ground water investigations have been initiated.
Project Revenue Source Co. :	Not Reported
PRS Company Address :	Not reported Not reported
Project Revenue Source Desc :	DHS will be issuing remedial action order or entering into an enforceable agreement with the responsible parties. DHS has budgeted $100,000 for oversight/monitoring of cleanup efforts. DHS will recover 100 percent of direct costs plus staff costs andoverhead related to the project. The responsible parties will pay all costs associated with remedial investigations and cleanup activities.
Responsible Party :	RESPONSIBLE PARTY-LEAD SITE CLEANUP WORKPLAN

EPA Waste Codes Addendum

Code	Description
D001	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
D002	A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
D003	A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.
D004	ARSENIC
D007	CHROMIUM
D009	MERCURY
D011	SILVER
D035	METHYL ETHYL KETONE
D039	TETRACHLOROETHYLENE
F002	THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE LISTED IN F001, F004, OR F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
F003	THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Elapsed ASTM days: Provides confirmation that this EDR report meets or exceeds the 90-day updating requirement of the ASTM standard.

FEDERAL ASTM STANDARD RECORDS

NPL: National Priority List
Source: EPA
Telephone: N/A
National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 04/28/05

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System
Source: EPA
Telephone: 703-413-0223
CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 02/15/05
Date Made Active at EDR: 04/06/05
Database Release Frequency: Quarterly

Date of Data Arrival at EDR: 03/22/05
Elapsed ASTM days: 15
Date of Last EDR Contact: 03/22/05

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned
Source: EPA
Telephone: 703-413-0223
As of February 1995, CERCLIS sites designated "No Further Remedial Action Planned" (NFRAP) have been removed from CERCLIS. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund action or NPL consideration. EPA has removed approximately 25,000 NFRAP sites to lift the unintended barriers to the redevelopment of these properties and has archived them as historical records so EPA does not needlessly repeat the investigations in the future. This policy change is part of the EPA's Brownfields Redevelopment Program to help cities, states, private investors and affected citizens to promote economic redevelopment of unproductive urban sites.

RCRA: Resource Conservation and Recovery Act Information
Source: EPA
Telephone: 800-424-9346
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 03/13/05

FEDERAL ASTM SUPPLEMENTAL RECORDS

BRS: Biennial Reporting System
Source: EPA/NTIS
Telephone: 800-424-9346
The Biennial Reporting System is a national system administered by the EPA that collects data on the generation and management of hazardous waste. BRS captures detailed data from two groups: Large Quantity Generators (LQG) and Treatment, Storage, and Disposal Facilities.

UMTRA: Uranium Mill Tailings Sites
Source: Department of Energy
Telephone: 505-845-0011
Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized. In 1978, 24 inactive uranium mill tailings sites in Oregon, Idaho, Wyoming, Utah, Colorado, New Mexico, Texas, North Dakota, South Dakota, Pennsylvania, and on Navajo and Hopi tribal lands, were targeted for cleanup by the Department of Energy.

DEED: Deed Restriction Listing
Source: Department of Toxic Substances Control
Telephone: 916-323-3400
Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Date of Next Scheduled EDR Contact: 05/30/05

US BROWNFIELDS: A Listing of Brownfields Sites
Source: Environmental Protection Agency
Telephone: 202-566-2777
Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data
Source: PennWell Corporation
Telephone: (800) 823-6277
This map includes information copyrighted by PennWell Corporation. This information is provided on a best effort basis and PennWell Corporation does not guarantee its accuracy nor warrant its fitness for any particular purpose. Such information has been reprinted with the permission of PennWell.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics

APPENDIX E

ENVIRONMENTAL PROFESSIONAL'S QUALIFICATIONS

JEREMY M. ZIMBER
Assistant Scientist

B.S. Environmental Management, 1999, Rochester Institute of Technology, Rochester, New York

---

Chemist

- Performed solvent extraction of semivolatile compounds from soil, water, drinking water and other matrices.
- Calibrated, ran and maintained GPC for sample clean up. Maintained data records.

Hazardous Materials Technician

- Provided waste management to small, medium and large hazardous waste generators. Field labor ranged from tab packing and container transportation to clean room decontamination.
- Prepared manifests, bills of lading, and labeling for generators.

Environmental Scientist

- Conducted soil vapor assessments for VOC's in soil gases near/aboveground storage tanks.
- Performed landfill post-closure monitoring activities including those required for groundwater and landfill gas, in addition to routine inspections.
- Performed field and laboratory tests on collected samples to classify soil and rock and to evaluate their properties.
- Conducted asbestos surveys, evaluated its hazard, and oversaw abatement when deemed necessary.

Environmental Scientist

- Performed site assessments for land transfers, underground storage tanks, surface spills and other potential contaminated sites_ Site assessments ranged in scope from site reconnaissance and literature review (Phase 1) to detailed hydrogeologic studies and site remediation (Phase 11).
- Provided geotechnical services ranging from sail suitability determinations to earthwork guide specifications and construction monitoring.

Environmental Chemist

- Performed solvent extraction of petroleum products from soil, water, and other matrices.
- Managed waste of laboratory.
- Maintained equipment and sample preparation supplies.

DRAFT

Lab Analyst-Wet Chemistry

- Performed chemical analysis of drinking water, wastewater and waste solids for a number of organic and inorganic constituents.
- Maintained data records.

DRAFT

JESSICA JENKINS
Senior Project Manager

M.S. Environmental Science, University of Wisconsin – Green Bay, 1996
B.A. Environmental Science, Baylor University, 1994

Ms. Jenkins has 9 years of experience as an environmental consultant. She is a Project Manager in charge of projects and personnel in the Portland, Oregon office. Ms. Jenkins has specific technical expertise in site investigation, risk assessment, regulatory compliance, and the development of remediation/closure strategies. Her technical expertise and experience is presented below.

Technical Expertise

- Conducted investigations and remedial activities of industrially or commercially developed properties planned for commercial or residential re-development involving a high level of interaction with natural resource management agencies utilizing a variety of risk-based regulatory programs (both voluntary and enforcement).
- Managed and conducted multiple Phase I/Phase II Environmental Site Assessments for a variety of industrial, commercial, and vacant properties utilizing the American Society for Testing and Materials guidelines, in addition to various state, regional, and local regulations.
- Managed and conducted multiple UST-related investigations, including assessment, remediation, risk assessment and regulatory closure.

Project Experience

- Project Manager for several portfolios of retail petroleum sites for major oil companies with the intent to aggressively achieve regulatory closure. Responsibilities included preparing technical scopes of work for each project, oversight of staff and subcontractors, budget development and management, evaluation of data and applicable regulations, identifying complete exposure pathways and sensitive receptors, interpretation of data affecting commercial, residential and construction worker receptors, reviewing and preparing regulatory assessments and reporting forms, and ensuring reimbursement from state petroleum funds.

- Project Manager for site investigation, remediation, and pending regulatory closure of a 60-acre former industrial rail yard in Houston, Texas for a private developer. Project was performed with support from the City of Houston's Brownfields Land Redevelopment Program through the USEPA Brownfields Redevelopment Program. Following successful remediation of soil and groundwater contamination (including petroleum hydrocarbons and chlorinated solvents), redevelopment of the subject site as mixed residential and commercial properties was planned for mid-2005. The site was evaluated within the Texas Risk Reduction Program regulatory program as a residential land-use site (project value is $3.9 million). Responsibilities included pro forma development and negotiation of cost-cap/pollution legal liability insurance policy, team oversight, proper collection of data and evaluation of applicable regulations, and report preparation.

- Investigated chlorinated solvent contamination of groundwater at a privately-owned property adjacent to a federal Superfund site (Sol-Lynn Transformers) in Houston, Texas. Contaminants were tetrachloroethylene, trichloroethene, and vinyl chloride. Responsibilities included sampling oversight of several different consulting firms representing various responsible parties and

DRAFT

coordination of efforts with local USEPA representatives. Following successful groundwater modeling efforts and natural attenuation studies, redevelopment of the subject site as mixed residential and commercial properties was evaluated using a variety of administrative and institutional control methods.

Business Experience

Founding member of a limited partnership in Houston, Texas. The partnership conducted full-service environmental consulting services for a variety of commercial and industrial clients, specializing in due diligence. Responsibilities included hiring team members, client development, budgeting, project management, obtaining office space, equipment, supplies, services, and securing certifications, licenses, contracts, and subcontractor agreements.

ROSS SIMMONS, R.E.A.
Principal, Due Diligence Group Leader

B.S. Political Science, Lewis & Clark College

Mr. Simmons has over 15 years of experience in the areas of project management, subsurface investigations and remediation, real estate environmental assessments, asbestos assessments, and air quality permitting. Mr. Simmons has worked closely with many industrial and real estate development companies, real estate lenders, and related institutions regarding evaluation of environmental risk. These clients have included several of the nation's largest banks, all of the major regional lenders in the Pacific Northwest, numerous life insurers, pension fund managers, and surety companies. He has also worked with environmental issues for the Resolution Trust Corporation, the Federal Deposit Insurance Corporation, Fannie Mae, and the U.S. Department of Housing and Urban Development (HUD). He is well-versed in regulatory requirements, the writing and editing of technical reports, marketing administration, and public relations.

Project Experience

- Managed a pre-purchase evaluation for a national wood products manufacturing firm in its acquisition of an 80-year old manufacturing facility in Wisconsin. The due diligence evaluation included a walk-through inspection of the facility, a review of standard historical sources to determine historic site uses, and review of state environmental cleanup files related to historic spills at the site. SECOR also evaluated existing permits for air emissions, a permit for discharge of wastewaters to an on-site pond, and a NPDES permit for discharge from the pond to a nearby river. SECOR's evaluation included the history of compliance with these permits, and whether the existing permit conditions were sufficient for planned future facility operations of the buyer.

- Managed Phase I and Phase II environmental site assessments for a Utah telecommunications facility that was part of a business merger. The facility was located in an area of historic subsurface contamination resulting from fertilizer manufacturing and petroleum bulk storage facilities. SECOR completed a fast-track soil and groundwater sampling program to evaluate the nature and extent of impact to the subject property from the historic neighboring activities.

- Served as coordinator of environmental management program for a diesel engine manufacturing client and its nationwide network of sales and service facilities. The program included Phase I and Phase II assessments to evaluate potential site contamination and estimate cleanup costs during the transfer of ownership between franchisees. Managed environmental due diligence activities for approximately seven such business ownership transactions, performing work at nearly 100 locations in more than 20 states. Also provided due diligence services to this client associated with property purchases and sales, and business refinance transactions.

- Managed a soil and groundwater contamination project for an industrial park in Tacoma. The project included soil borings and groundwater monitoring wells around two underground storage tank (UST) farms, and investigation of solvent contamination in soil and groundwater resulting from malfunctioning distilling equipment. Involved the use of soil vapor sampling, soil borings, and groundwater monitoring wells to assess the nature and extent of the contamination. Developed a wide range of costs for potential remediation options. Completed all work within 60 days to meet a deadline for closing of a financing transaction with a major life insurance company.

- Managed completion of as many as 250 Phase I environmental site assessments per year. Responsible for client relations, technical review, scheduling and marketing, as well as performing

many site assessments. Also performed and oversaw many Phase II and Phase III ESA investigations involving USTs, soil and groundwater contamination, asbestos, radon, and other chemicals of concern.

- Served as the key client contact for Phase I projects performed for a major industrial real estate trust at more than 200 sites in 22 states. Directly performed Phase I ESAs as well as providing resource coordination and quality assurance roles.

- Completed a Phase I assessment of an 18-building, 100-tenant industrial complex, and Phase II soil sampling activities adjacent to three tenant spaces where surface releases of oil and solvents were known to have occurred. Participated in negotiations among senior executives of two major real estate investment trusts (buyer and seller), along with consultants and attorneys representing the two parties.

- Managed the completion of Phase I ESAs for a portfolio of loans on 68 multi-family, retail, and office properties in southern California during a six-week period.

- Managed Phase I assessments of 36 hotel properties in seven states. Completed all work within eight weeks to permit closing of a financing transaction. Responsible for coordinating activities of more than a dozen site inspectors, researchers, drafters, and report writers to maintain technical and presentation consistency throughout all 36 reports.

- Assisted with the management and coordination of Phase I assessments of 33 bank branch locations in three states. Completed project within the 45 days required for a major California bank that was acquiring a failed thrift from the Resolution Trust Corporation. Responsible for scheduling, consistency, and technical review of all reports. Also completed site inspections, historical data research, environmental record reviews, and reports for several branch locations.

- Participated on a project team that prepared air quality operating permit applications under Title V of the federal Clean Air Act Amendments for 12 industrial facilities in Oregon and Washington. The applications were among the first in the country to be completed under this relatively new program. Included identification of all applicable regulatory requirements, development of compliance monitoring plans, project coordination and quality assurance/quality control (QA/QC) of the application documents. The facilities included wood products plants, paper-production facilities, a kraft pulp mill, bulk fuel terminals, and a bath tub manufacturer.

- Served as technical writer, responsible for the preparation of Resource Conservation and Recovery Act (RCRA) closure plans for surface impoundments at a Washington aluminum smelter. Included presentation of data documenting nature and extent of soil/groundwater contamination, plans and specifications for construction of lined and capped sludge disposal pits, and programs for post-closure groundwater monitoring.

- Managed investigation and remediation of a heating oil release from USTs at a Portland apartment complex. Topography made assessment of subsurface geology and contamination difficult due to the steep hillside and heavily developed urban setting. Involved negotiation with the Oregon Department of Environmental Quality (ODEQ) staff and the client's lender, as well as the typical aspects of soil and groundwater assessment.

- Managed investigation of a suspected heating oil release from a UST at a downtown Portland apartment site. An inactive tank was the suspected source of petroleum seepage to a subsurface drainage system at a nearby public facility. Required negotiations with the ODEQ and the client's lender to define an appropriate scope of investigation while attempting to minimize the client's overall costs.

DRAFT

- Managed investigation and remediation of a bank branch property located on the site of a former service station. Removed gasoline and waste oil-contaminated soil, which was treated on site, while investigations were carried out to determine the extent of groundwater contamination beneath an adjoining arterial street.

- Managed Phase I assessments at 11 bank branch locations in Oregon as required for a bank merger transaction.

- Managed Phase I assessments of 11 bank branch locations in Ohio for a Seattle-based life insurance and surety company. Included scheduling and coordination of field inspection crew, contact with local and state environmental authorities in Ohio, report preparation, and client relations.

- Performed Phase I ESAs of a multi-building, multi-tenant industrial park and a research and technology campus.

- Prepared asbestos operations and maintenance program plans for multi-family residential and office properties.

- Managed preparation and submittal of air quality permit application under federal and state Prevention of Significant Deterioration rules for expansion of production at a pulp mill.

- Managed preparation of air quality Notice of Intent to Construct for bulk petroleum facility modification.
- Participated on a project team that performed environmental review of proposed municipal landfills on behalf of neighborhood group opposed to the siting. Included research, review, and presentation of data about site geology and hydrogeology, wetlands, slope stability, and fishery resources in nearby streams.

- Responsible for project tracking and reporting activities for a $3 million polychlorinated biphenyl (PCB) cleanup project at an Alaska oil field.

- Served as technical writer, responsible for preparation of RCRA closure and post-closure plans for penta, arsenic, and cyanide contamination in groundwater at a Hillsboro, Oregon, wood-treatment plant.

- Served as technical writer for the preparation of permit application under the Toxic Substances Control Act to operate thermal treatment unit for removal of PCBs from soil.

CERTIFICATION

This environmental review of Montague Park, in San Jose, California, which consists of five two-story office buildings with addresses at 411 Plumeria Drive, 2840, 2860, and 2880 Junction Avenue, and 3050 Zanker Road in San Jose, California was conducted by Iris Environmental on behalf of Four Corner Properties, LLC. The review conducted by Iris Environmental meets or exceeds the requirements for a Phase I Environmental Site Assessment specified in the American Society for Testing and Materials (ASTM) Standard E 1527-05, Standard Practice for Environmental Site Assessments: Phase I Environmental Assessment Process.

Resumes for the environmental professionals involved in this review, Mr. Cook, Mr. Montag, and Mr. Alger of Iris Environmental, are included in Appendix A.

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental professional as defined in §312.10 of 40 CFR 312. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed all the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

LIMITATIONS

This report was prepared for Four Corners Properties, LLC and may be relied upon by Four Corners Properties. LLC, as well as by Morgan Stanley Mortgage Capital Inc. and its successors and assigns (collectively, "Morgan Stanley") with respect to any loans placed upon the property (or on direct or indirect ownership interests in the owner of the property) described in the report. Iris Environmental allows reliance on this report for due diligence purposes consistent with contractual terms between Iris Environmental and its client; Four Corners Properties, LLC. Any rating agency or issuer or purchaser of any security collateralized or otherwise backed by such loans may further rely upon the reports. We also consent to the inclusion of this report in any form, whether in paper or digital format, including any electronic media such as CD-ROM or the internet, in the Prospectus Supplement relating to any "Securitization" (defined as an offering of debt securities that, as applicable, are registered with the Securities Exchange Commission pursuant to the Securities Act of 1933, as amended (the "Act"), or are privately placed pursuant to an exemption from the Act, in which the property reported upon may be part of a pool of properties owned by various non-affiliated owners collateralizing such offering), and we consent to the reference to our firm under the caption "Experts" in such Prospectus Supplement.

The conclusions presented in this report represent Iris Environmental's professional judgment based on the information available to us during the course of this assignment and on conditions that existed at the time of the assessment. No independent verification of the information provided to Iris Environmental was made. While Iris Environmental has no reason to doubt the accuracy of any of the information provided, this report is accurate and complete only to the extent that information provided to Iris Environmental was itself accurate and complete.

DRAFT

I. INTRODUCTION

Iris Environmental was retained by Four Corners Properties, LLC (the "Client") to conduct an environmental review of Montague Park, in San Jose, California, (the Site). The Site consists of five two-story office buildings with addresses at 411 Plumeria Drive, 2840, 2860, and 2880 Junction Avenue, and 3050 Zanker Road in San Jose, California. The purpose of the review was to identify any Recognized Environmental Conditions, as defined in the American Society for Testing and Materials (ASTM) Standard E 1527-05, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.

This report presents the results of our investigation. It is based on the following:

- A visit to the Site by Michael Montag and Kevin Cook of Iris Environmental on September 8, 2006. Each building was walked through where access was provided and surrounding exterior grounds were also walked.
- An interview during the Site visit with Tom Tran, the Environmental Health and Safety Engineer at Ultratech, and James Collins, a facilities manager at Pillar, and Mr. Alan Webber, a Senior Vice President for Menlo Equities Management Company (Menlo Equities), the current site owner on September 8, 2006.
- A review of documents pertaining to the Site available online and at the City of San Jose Fire, Building and Planning Departments. Records from the Santa Clara Valley Water District (SCVWD) describing former monitoring wells in the Montague Park vicinity were provided by Mr. Webber of Menlo Equities.
- A search of regulatory agency databases for the Site and vicinity conducted by EDR and reported to Iris Environmental on August 31, 2006. A copy of the EDR report is presented as Appendix B.
- A review of the United States Geological Survey (USGS) 7.5-minute topographical map for Milpitas, California (dated 1961, photo revised 1980), and historical topographic maps of the same quadrangle dated 1973, 1968, 1961, and 1953. Copies of the topographic maps are provided in Appendix C.
- A review of historical aerial photographs dated 1998, 1993, 1982, 1965, 1956, and 1939 provided by Environmental Data Resources (EDR). Copies of the aerial photographs are provided in Appendix C.

Iris Environmental contacted the San Jose Fire Department (SJFD), the San Jose Building Services Department (SJBSD), the Santa Clara County Department of Environmental Health Hazardous Materials Compliance Division (SCDEH), the Regional Water Quality Control Board (RWQCB), the Department of Toxic Substances Control (DTSC), and the Bay Area Air Quality Management District (BAAQMD) to inquire whether there are any conditions of environmental concern at the Site. Iris Environmental also requested historical fire insurance maps of the Site and vicinity from EDR, which subsequently reported that fire insurance maps are not available (see Appendix C).

No environmental or drinking water samples were collected as part of Iris Environmental's effort.

DRAFT

II. FINDINGS AND CONCLUSIONS

Iris Environmental has performed a Phase I Environmental Site Assessment (ESA) in conformance with the scope and limitations of ASTM Practice E 1527-05 of the Montague Park, in San Jose, California, which consists of five two-story office buildings with addresses at 411 Plumeria Drive, 2840, 2860, and 2880 Junction Avenue, and 3050 Zanker Road in San Jose, California. Any exceptions to, or deletions from this practice are described in Section IV of this report.

One data gap currently exists due to the inability to access the clean rooms operated in the Ultratech facilities. While no evidence was observed during the Site visit that suggested a potential concern might be formulated after inspecting the clean rooms, the lack of inspection is considered a data gap for this assessment. If access is made available in the future, Iris Environmental can inspection the clean rooms and issue an addendum letter to this Phase I describing our findings.

ASTM Standard E-1527-05 defines a Recognized Environmental Condition as "the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products onto structures on the property or into the ground, groundwater or surface water of the property."

This Phase I ESA has revealed no evidence of Recognized Environmental Conditions in connection with the Site.

The following de minimis conditions have been identified at the Site: None. De minimis conditions are defined as those which do not generally present a material risk of harm to public health or the environment, and that generally would not be the subject of an enforcement action if brought to the attention of the appropriate governmental agencies:

DRAFT

III. DESCRIPTION OF THE SITE AND ITS OPERATIONS

A. SITE DESCRIPTION

1. Physical Description and Setting

The Site is located at 411 Plumeria Drive, 2840, 2860, and 2880 Junction Avenue, and 3050 Zanker Road in the City of San Jose, Santa Clara County California (the Site) as shown on Figure 1. The Site covers an area of approximately 23.6 acres. The Site consists of five two story office/laboratory buildings totaling 412,532 square feet. Each building is surrounded with parking and some landscaping.

Building 1, 3050 Zanker Road, consists of 97,910 square feet of office space and laboratories.

Building 2, 2880 Junction Avenue, consists of 79,143 square feet of office space and laboratories.

Building 3, 2860 Junction Avenue, consists of 74,129 square feet of currently unoccupied office space.

Building 4, 2840 Junction Avenue, consists of 86,602 square feet of office space and warehouse/distribution space.

Building 5, 411 Plumeria Drive, consists of 79,748 square feet of currently unoccupied office space.

A total of five pad mounted transformers were observed on the Site and appeared to be in good condition with no evidence of leakage or staining.

Two diesel powered back-up generators are located at the Site. One is located east of Building 1 and operated by Ultratech Inc. The other is located near the southeast corner of Building 4 and is used by Pillar Data Systems.

Other features include:

Hazardous waste storage areas. One located in an exterior freestanding chemical storage locker along the south side of Building 1. An interior chemical storage room in Building 2. See Section E for further information.

A mechanical and processing yard on the south side of Building 1 which employs wastewater neutralization systems. See Section E for further information.

A 1,050 pound stainless steel tank of tetrafluoroethane used as refrigerant in the clean room of Building 1. Tetrafluoroethane is a non-VOC compound.

A small machine shop in Building 1.

Flammable materials cabinets in Buildings 1, 2 and 3.

A small neutralization room in Building 2.

Clean rooms with temperature and humidity controls in Buildings 1 and 2. See sections C and E for further information.

DRAFT

A contractor shed located between Buildings 1 and 2 that contains piping for facility maintenance.

Two solid waste dumpsters and one cardboard recycling dumpster located on the southeast side of Building 1.

Two solid waste dumpsters and two cardboard recycling dumpsters one the east of Building 4.

The approximate layout of the Site at the time of Iris Environmental's Site visit is indicated in Figure 2 (reproduced from Secor 2005). The Site is owned by Montague Park LLC, and is managed by Menlo Equities Management Company (Menlo Equities).

The Site is surrounded by various office and light industrial buildings. On the northern boundary of the Site are located two San Jose Municipal Water Company wells. Across the intersection of Zanker Road and Montague Expressway to the northwest is Broadcom. Across Montague Expressway to the north of the Site is Lockheed Martin. The southern end of the Site is bounded by East Plumeria Drive and Junction Ave to the southwest. The Santa Clara County Department of Child Services is across Junction Ave as is the Central Park Plaza office park. Techwell and EarthTech are located across E. Plumeria Dr. To the east across Montague Expressway are the Elan Apartments and the River Oaks Village Shopping center. To west across Zanker Road are Semi, Neoforma, GHX and Neophotonics.

Based on the observations made of these adjoining properties, they are unlikely to present any potential concern or likely to represent an REC.

Pacific Gas & Electric (PG&E) provides electricity and natural gas to the Site. Water and sanitary sewer service is reportedly provided by the San Jose Municipal Water Company.

2. General Site Conditions

At the time of Iris Environmental's Site visit, three of the office buildings were occupied. Ultratech Inc. occupies Buildings 1 at 3050 Zanker Road and Building 2 at 2880 Junction Avenue. Pillar Data Systems occupies Building 4 at 2840 Junction Avenue. 2860 Junction Avenue and 411 Plumeria Drive were vacant.

At the time of Iris Environmental's Site visit, general housekeeping was good at all buildings and across the Site. Minor staining as would be expected from the normal operation of motor vehicles was noted at the various loading docks and in the parking lot. The cleanrooms in the Ultratech facilities were not available for inspection. Although the detection of noise and odors is dependent on the weather conditions and ongoing operations at the time of the Site visit, Iris Environmental did not note strong odors or excessive noise at the Site. No evidence of distressed vegetation was noted during the Site visit.

DRAFT

3. Geological Setting

Four monitoring wells were installed in the Montague Office Park in November of 1986. According to the well logs, the Montague Office Park vicinity is underlain by silty and sandy clays to the total depth of the wells, approximately 25 feet below ground surface (bgs). The Site is located in the northern portion of the Santa Clara Valley, a topographic valley that is located at the southern end of a structural depression extending northward under San Francisco Bay to the Petaluma, Sonoma, and Napa Valleys. The Site region is generally underlain by medium-grained alluvium consisting of unconsolidated, moderately sorted, moderately permeable fine sand, silt and clayey silts, with occasional thin beds of coarse sand. Regional thicknesses of these mixed deposits are generally 0 to 12 feet thick, and overlie the unconsolidated and semi-consolidated alluvial deposits that comprise the aquifers of the Santa Clara Valley.

4. Hydrogeological Setting

Based on a review of the 1980 Milpitas USGS topographic map showing the Site vicinity, ground elevation at the Site is approximately 20 feet above mean sea level. The Site topography is generally flat. Coyote Creek flows roughly northward toward San Francisco Bay between levees located approximately one-half mile east of the Site, while the Guadalupe River is located approximately one mile west of the Site. Storm water at the Site drains into storm drains located in the surrounding streets. The EDR Report (EDR 2006) indicates that the Site is located within the federally designated 100-year flood zone.

According to the well logs for the wells installed in 1986 at the Montague Park office complex, groundwater in the vicinity of the Site was encountered at approximately 21 feet below ground surface (bgs) in the well located on the Site. For the wells installed farther to the north within the Montague Park office complex, groundwater was noted as being encountered as shallow as 13 feet bgs, with standing water in the wells following well completion as shallow as 7 feet bgs. The EDR report generated for this Phase I investigation provided no specific information about groundwater flow direction (EDR 2006). Examination of the 1980 Milpitas USGS topographic map indicates that the surface topography slopes gently to the west-southwest. Shallow groundwater can be expected to follow this contour pattern. However, agency files that might indicate more precisely the direction of deeper groundwater flows were not examined.

B. SITE HISTORY

Iris Environmental reviewed historical aerial photographs and historical topographic maps to develop an understanding of historical uses of the Site and surrounding area. In order to gain an understanding of Site construction history, information on file at the City of San Jose Building Department as well as Site construction plans provided by Menlo Equities were reviewed. A request for historical fire insurance maps was submitted, but none were available for review (see Appendix C).

DRAFT

The earliest historical records reviewed for this investigation show that the Site area was primarily used for agriculture. On the 1939 aerial photograph, the Site vicinity appears to be an agricultural field. On the 1956 and 1965 aerial photographs, the Site appears to be covered by orchards. The 1953, 1961, 1968, and 1973 topographic maps of the area also indicate that the Site vicinity was covered with orchards. Scattered farm buildings are visible on the aerial photographs and on the topographic maps, but none appear to be located in the immediate vicinity of the Site. On the 1973 and earlier topographic maps, the only major structure in the vicinity located between the Guadalupe River and Coyote Creek is the east area of Agnews State Hospital, located approximately three-quarters of a mile to the north of the Site (this area is not visible on the aerial photographs). Some development of commercial- or industrial-type buildings across Trimble Road to the south is also visible on the 1973 topographic map.

On the 1980 topographic map, orchards are no longer indicated, and the Montague Expressway has been built, arcing around to the north of the Site and passing the Site location on the east. Development is more extensive south of Trimble Road, with a few buildings being indicated south of the Site and just north of Trimble Road. On the 1982 aerial photo to the west of the Site, most of the area between the Montague Expressway and Trimble Road on the opposite (west) side of Alviso Road from the Site has undergone extensive development of commercial- or industrial-type buildings. On this same photo immediately south of the Site, two office buildings have been constructed across Plumeria Drive.

The 1993 aerial photograph shows the Site and the surrounding area fully developed. This is in accord with records reviewed from SJDBS and the Site development history according to Mr. Webber. According to Mr. Webber and the plans provided by Menlo Equities, plans for Site development were submitted in mid-1984, and development of the Montague Park office complex began shortly thereafter.

C. DESCRIPTION OF OPERATIONS

1. Current Operations

Building 1, 3050 Zanker Road, is Ultratech Inc.'s main R&D/manufacturing facility. Ultratech designs, manufactures and markets photolithography equipment used worldwide in the fabrication of semiconductor and nanotechnology devices, and has pioneered laser processing technology for integrated circuit manufacturing. The first floor of Building 1 consists of a 5,000 square foot clean room that includes a process lab and a bonding lab as well as related support areas including a shipping and receiving area. Office space is also located on the first floor. The second floor consists of office space, a gym and a break room area. The photolithographic process is a wet procedure used to transfer a pattern from a photomask to the surface of a silicon wafer. The wafers are dipped into a developer solution and then coated with a photoresist, the excess of which is removed with solvents. In the lasothermal process, the wafers are

then subjected to targeted heat. The handling, neutralization and disposal of these chemicals is discussed in Section E.

Building 2, 2880 Junction Avenue, is also occupied by Ultratech. A clean room located on the first floor serves as an applications lab in which testing and development of new developers and photo resists takes place. This lab is also used as a training room for customers of Ultratech's equipment. The second floor consists of office space, a full service cafeteria and an auditorium.

Building 3, 2860 Junction Avenue is currently unoccupied. The first floor is open office space with private offices on the perimeter and a large lab area. The second floor is also vacant office space with a cafeteria as well.

Building 4, 2840 Junction Avenue, is occupied by Pillar Data Systems. Pillar Data Systems develops software and assembles data storage network devices in this facility. This process involves minor soldering in the assembly room. The first floor includes an open office space and a large dry hardware lab area in which assembly and testing takes place. The second floor has private and open offices as well as a break room.

Building 5, 411 Plumeria Drive is currently unoccupied. The first floor is open office space with private offices on the perimeter and a small server room. The second floor is also vacant office space plus cafeteria.

2. Past Operations

Building 1: Files at the San Jose Building Department (SJBD) indicate that Chips & Technologies Inc. occupied the building from 1987 to 1992. These permits are electrical and mechanical in nature and do not indicate the use of hazardous materials. In 1993, building records indicate that Ultratech Stepper (the former name of Ultratech Inc.) was the tenant.

Building 2: According to San Jose Fire Department files, the building was occupied by Chips & Technologies Inc. in 1987. A 1992 Hazardous Materials Business Plan (HMBP) indicated that Chips & Technologies was an R&D facility for integrated circuits. The tenant disposed of less than 55 gallons of isoparaffin petroleum solvent annually. According to the 1995 Fire Safety Inspection, Diamond Multimedia occupied the building. They remained the tenant until 2000 when Ultratech became the tenant, according to building permit records.

Building 3: According to SJBD files, the building was occupied by Compression Labs in1987. The San Jose Fire Department on-line database indicates that hazardous materials storage permits were issued in 1989; however, the files are not available in the online database and at the time of the writing of this report, the SJFD had not yet responded to requests for further information. According to SJBD, General Instrument became the tenant in 1996. In 1999, Fujitsu Instruments is listed as the tenant. They appear to have occupied the building until 2005 when the SECOR Phase I lists the building as empty. The permits reviewed were for electrical and mechanical construction or operation and do not indicate the use of hazardous materials.

DRAFT

Building 4: According to SJBD permit files, the building was occupied by Chips & Technologies Inc. in 1992. In 1995, Interactive Network was at the site. In 1999, Lifeguard, Inc., an HMO, is listed as the tenant. In 2002, Pillar was the tenant and undertook major renovations to create their assembly room, according to the permit files.

Building 5: According to SJBD permits, a certificate of occupancy was issued for Viking Freight Systems in 1986. Of note, an emergency generator enclosure and a kitchen were installed in the Site building in 1988 by the tenant Viking Freight Systems. Tenant improvement plans were also commissioned for major modifications of the Site building by Phoenix Technologies in September of 1996.

D. POLYCHLORINATED BIPHENYLS (PCBS) AND ASBESTOS

1. PCBs

Mr. Webber was not aware of any PCB-containing equipment on-Site. Five transformers, one at each building was observed on the north side of each building, but labeling on each transformer did not indicate that it contained PCBs. Due to the age of the buildings, it is not expected that the transformers or any light ballasts contain PCBs at these facilities.

2. Asbestos

Mr. Webber was not aware of an asbestos survey for the Site. Due to the age of the buildings, it is not expected that asbestos containing materials are present in these facilities.

E. HAZARDOUS MATERIALS USE AND STORAGE

1. Hazardous Materials Use

Though no elevator maintenance records were reviewed, the building elevators, one in each building, likely contain hydraulic fluid. The elevator electrical rooms adjacent to the elevators are clean, and did not have any staining on the floor. According to Mssrs. Webber, Tran and Collins, they have never seen or smelled any evidence of leaking hydraulic fluid in the vicinity of the elevators, and no major maintenance has ever been necessary for the elevators.

Mr. Tran of Ultratech Inc. stated that the following approximate quantities of hazardous materials were in the chemical storage areas of Building 1 and 2:

- 120 1-gallon containers of developer (2.3% solution of tetramethyl ammonium hydroxide)
- 10 1-gallon containers of photoresist
- 25 1-gallon containers of acetone
- 50 1-gallon containers of old stripper
- 65 1-gallon containers of new stripper

DRAFT

- Several 12 gallon containers of 60% sulfuric acid solution.
- Several 15 gallon containers of 30-50% sodium hydroxide solution
- Small quantities of 1-gallon containers of methanol, dichloromethane, kerosene, metal cool, cutting fluid, ethylene glycol, sulfuric acid and nitric acid.
- 1 1,050 lbs tank of tetrafluoroethane (non-VOC refrigerant) in Building 1

Hazardous Materials Business Plans (HMBP) dating from the year 2000 were reviewed for Buildings 1 and 2 on the online archive at the SJFD. More recent HMPB were not available as of the time of the writing of this report. According to the SJFD, all available records are posted on the public database. According to Mr. Tran, Ultratech submitted a HMBP in 2005.

According to Mr. Tran, no other spills or leaks of hazardous materials have occurred at the Ultratech facilities on the Site.

In Building 4, commercial janitorial cleaning supplies, including detergents, sanitizers, and hand soap, are located in a janitor's closet on the second floor. No spills or staining were observed in this room. Small quantities of solvents were stored in a flammable materials cabinet in the shipping room.

No Hazardous materials were observed in the unoccupied Buildings 3 and 5.

2. Underground Storage Tanks

Mr. Webber was not aware of any current or former underground storage tanks (USTs) at the Site, and Iris Environmental did not identify any evidence of such during the Site visit. The Site was not listed on the UST or LUST databases in the EDR report.

3. Aboveground Storage Tanks

Building 1 contains several ASTs:

- One 1,050 lb tank of tetrafluoroethane, a non-VOC refrigerant, used in the clean room cooling systems. This tank was not observed on the site visit, but the approved permit for the tank was examined in the SJFD files.
- A 1000 L tank of liquid nitrogen in the equipment room for the wastewater treatment system.
- Three large tanks for waste water treatment.
- One 180 gallon double walled steel diesel belly tank for the back-up generator is located on the east side of the building.

Building 2 contains several AST's:

- One 1,000L Liquid Nitrogen tank for cooling processes in the water treatment system.
- Three large tanks for waste water treatment

DRAFT

At Building 4, an approximately 200 gallon double walled steel diesel belly tank for the back-up generator is located on the east side of the building.

There was no evidence of spills, leaks or releases from either the Building One or Four diesel tanks.

4. Drum and Small Containers

In Building 1, the majority of chemicals are stored in the exterior, locked and covered free-standing chemical storage locker located in the maintenance area along the south side of Ultratech's 3050 Zanker Road facility. The chemical storage locker is equipped with a grated floor for capturing and secondary containment of spills. The stripper, developer and photoresist chemicals are stored in one gallon containers in the quantities noted in section E.1. Sulfuric acid and Sodium Hydroxide for the wastewater neutralization systems are stored in 12 and 15 gallon, appropriately labeled plastic containers. Although Iris environmental was not allowed into the clean rooms at the time of the Site visit, Mr. Tran of Ultratech stated that no chemicals were issued for clean room use in quantities larger than one gallon.

A drum labeled mercury which is used to store used mercury vapor lamps was observed in Building 1.

Building 2 has a chemical storage room equipped with free standing double containment pallets. The stripper, developer and photoresist chemicals are stored in one gallon containers on these pallets in the quantities noted in section E.1. Although Iris Environmental was not allowed into the clean rooms at the time of the Site visit, Mr. Tran of Ultratech stated that no chemicals were issued for clean room use in Building 2 in quantities larger than a gallon. The quantities of chemicals stored in Building 2 are relatively minor compared to those in Building 1.

F. NONHAZARDOUS AND HAZARDOUS WASTE

1. Nonhazardous Waste

Two solid waste dumpsters and one cardboard recycling dumpster are located near the southeast portion of Building 1 for use by both Ultratech facilities. No staining was observed on or near the vicinity of the dumpsters. According to Mr. Tran, the solid waste and recyclables are picked up regularly and disposed of properly.

Two solid waste dumpsters and two cardboard recycling dumpsters are located on the east side of building 4. According to Mr. Collins, solid waste and recyclables are picked up regularly and disposed of properly. Mr. Collins also stated that ACL Inc. picks up approximately ten used computer monitors and CPUs twice a month for recycling.

2. Hazardous Waste

Buildings 3, 4 and 5 do not generate any hazardous waste.

DRAFT

Buildings 1 and 2, the Ultratech Inc. Facilities, generate approximately 2.5 tons of hazardous waste a year according to Mr. Tran of Ultratech. All hazardous waste, including used chemical containers and drums, is collected and disposed of offsite, by a licensed transporter, Advanced Chemical Transport, Inc. This waste stream includes the following according to Mr. Tran:

- Approximately one 55 gallon drum a month of spent stripper.
- Approximately one 55 gallon drum a quarter of used acetone wipes.
- Approximately one 55 gallon drum a month of treated, used lasothermal cooling water, treated with an anti-corrosive and microbiocide. This water has elevated levels of lead and zinc.
- Occasional drum of used mercury vapor lamps.

G. AIR EMISSIONS

In response to a file review request, The Bay Area Air Quality Management District (BAAQMD) furnished copies of permits for Ultratech's wipe cleaning operations at Buildings 1 and 2 and the permit for the back-up diesel generator located at Building 1. Towels and wipes with acetone, isopropyl alcohol, and methanol are used in these processes. No evidence of violations were found. The BAAQMD stated they had no permits for buildings 3, 4 and 5.

H. WASTEWATER

1. Industrial and Sanitary Wastewater

According to Mr. Tran of Ultratech Inc., both their facilities have a wastewater discharge permit from the City of San Jose for the neutralization systems discharge to the sanitary sewer system. The neutralization system employs a three tank system in which wastewater from the clean room sinks flows to an initial waste tank for treatment, then to a second treatment tank and then to a third tank for discharge. The system has a continuous digital and paper recorder of the pH of the treated water. Every six months sampling is conducted for pH, metals, and TTOs. According to Mr. Tran, Ultratech has received no violations at either facility.

2. Storm Water

Storm water runoff at the Site either infiltrates into the landscaping or runs off hard surfaces into storm drains in the parking lots and surrounding streets. While poor housekeeping and surface spills could allow for contamination of storm water, housekeeping at the Site was good, and no evidence of spills was noted during the Site visit.

DRAFT

I. ON-SITE SOIL AND GROUNDWATER CONTAMINATION

The Site was not identified on any federal or state databases reviewed by EDR. No records indicating the presence of soil or that groundwater contamination might exist for the Site were reviewed as of the issuance of this report. However, at time of this report's issuance no reply from the Santa Clara DEH had been received which would indicate whether the DEH has files on the Site.

J. RECORDS REVIEW

Iris Environmental reviewed a report prepared by EDR that summarizes the results of a search of federal and state regulatory agency databases. The EDR report is included in Appendix B. The database search was conducted to determine whether the Site or any nearby properties are under investigation for potential environmental issues or have been identified as conducting operations that could potentially impact the environment. The findings of the EDR search are summarized below.

EDR conducted its search of environmental databases on August 31, 2006. Because the environmental databases themselves are sometimes not updated by the specific regulatory agencies for periods of up to one year (depending on the database), the database search conducted herein will not necessarily list a facility or site for which an environmental investigation /listing has been initiated subsequent to the last update.

EDR conducted searches of the following federal databases, and all search radii were selected in accordance with ASTM standards:

- U.S. Environmental Protection Agency (USEPA) National Priorities List (NPL) for Uncontrolled Hazardous Waste Sites (updated 4/19/2006) - one-mile radius;
- USEPA Proposed NPL (updated 4/19/2006) – one mile radius;
- USEPA Delisted NPL (updated 4/19/2006) – one mile radius;
- USEPA Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS; updated 6/19/2006) and CERCLIS-No Further Remedial Action Planned (CERCLIS-NFRAP; updated 2/1/2006) one-half-mile radius;
- Corrective Action Site List (CORRACTS) of Resource Conservation and Recovery Act (RCRA) hazardous waste treatment, storage, and disposal (TSD) facilities subject to corrective action under RCRA (updated 3/15/2006) - one-mile radius;
- Resource Conservation and Recovery Act Information System (RCRIS) database of TSD facilities not subject to corrective action and hazardous waste generators (updated 6/16/2006) - one-half-mile radius (TSD) and property and adjoining properties (generators);
- Federal institutional control / engineering control registries (updated 3/21/2006) – and one half mile radius

DRAFT

- Emergency Response Notification System (ERNS; updated 12/31/2005) - property only.

EDR also conducted searches of the following State of California and tribal databases:

EDR also conducted searches of the following State of California and tribal databases:

- Annual Work Plan (AWP; updated August 2005) - one-mile-radius;
- ENVIROSTOR database (updated June 2005) - one-half-mile-radius;
- California Solid Waste Inventory System (SWIS; updated June 2006) - one-half-mile radius;
- Leaking Underground Storage Tanks (LUST) Information System (updated July 2006) - one-half-mile radius; and
- Underground Storage Tank (UST) Registrations Database (updated July 2006) - property and adjoining properties.
- Site Mitigation and Brownfield Re-use Program Facility Sites with Deed Restrictions and Hazardous Waste Management Program Facility Sites with Deed / Land Use Restrictions (DEED) database (updated July 1 2006) – property only;
- Voluntary Cleanup Program properties (VCP) (updated June 2006) – one-half mile radius;
- Underground Storage Tanks on Indian Land (Indian UST) database (updated June 2006) – property and adjoining properties; and
- Leaking Underground Storage Tanks on Indian Land (Indian LUST) database (updated June 2006) – one-half mile radius.

In addition to the listed ASTM-standard federal and State of California databases, EDR searched a variety of ASTM-supplemental databases. Except for where the Site itself is listed in such supplemental databases, details of the results of those searches are not summarized in this report, but can be found in the EDR report included in Appendix B.

The Site was identified on the RCRIS SQG database at the Ultratech Inc. facilities addresses 3050 Zanker Road and 2880 Junction Ave. The RCRIS SQG listings indicate that no violations were recorded at either address. These Site addresses were also identified on the HAZNET, FINDS, and EMI databases (not included in the ASTM Standard). The HAZNET listing indicates that hazardous waste generated at these Site addresses was disposed of properly. The FINDS database listing indicates that there is other pertinent environmental activity at these Site addresses. The EMI database listing provides information on emissions from these Site addresses reported to the Bay Area Air Quality Management District for 1996, 1997, 2003 and 2004. The 3050 Zanker Road address was also listed on the SAN JOSE HAZMAT database which lists facilities employing hazardous materials in the City of San Jose.

DRAFT

No facilities in the vicinity of the Site were identified on any of the following databases within the radii specified in the ASTM Standard: NPL, Proposed and Delisted NPL, USENG/INST Controls, and UST. The remaining results from databases searched by EDR are discussed below.

CERCLIS

Two facilities within 0.5 mile of the Site are listed in the CERCLIS database. The listing for Quebecor Printing San Jose, Inc, at 696 East Trimble Road, includes little information beyond the fact that a preliminary site assessment was conducted in the late 1980's. It appears that this site changed names and was eventually listed as a LUST site instead; see further details about this site below under the LUST database description.

Autek Systems Corp., an electroplating facility at 109 Bonaventura Drive, was listed as under discovery in June of 1991, deferred to RCRA in August of 1990 and finally listed as a CERCLIS archived site in January of 1996. See the RCRA database listing for further information.

CERCLIS-NFRAP

Three facilities within 0.5 mile of the Site are listed in the CERCLIS-NFRAP. International Technology Corporation San Jose Transfer Facility, at 3010 Zanker Rd., was listed as under discovery in August of 1990 and archived in January of 1996. Further information is under the Envirostor database description. IMP Inc., at 2830 North First Street, was listed as under discovery in May of 1986 and archived in November of 1987. Foxboro/ICT, at 199 River Oaks Parkway, was listed as under discovery in April of 1988 and archived in February of 1989. Further information is under the LUST database description.

CORRACTS

Three facilities within 1 mile of the Site are listed in the CORRACTS database. The listing for International Technology Corporation San Jose Transfer Facility, at 3010 Zanker Rd., indicates that the facility was assigned a low corrective action priority in 1991. Further information is under the Envirostor database listing.

The listing for Autek Systems Corp., at 109 Bonaventura Drive, indicates that the facility was assigned a low corrective action priority in August of 1990. See the RCRA database listing for further information.

According to the database, at the Van Waters and Rogers, Inc. a solvent distributor facility at 2556 Junction Avenue to the southeast of the Site, groundwater was discovered to be contaminated with solvents in 1980. Further information is under the Envirostor database listing.

RCRA-TSD

Two facilities located within 0.5 mile of the Site are listed on the RCRA-TSD database.

DRAFT

The listing for the International Technology Corporation San Jose Transfer Facility, at 3010 Zanker Rd., indicates that eight violations were reported, as summarized below:

- TSD – Land ban requirements – two violations;
- Generator – Land ban requirements – two violations;
- TSD – Other requirements – three violations;
- TSD – Financial Responsibility requirements – one violation

All of the violations were corrected.

The listing for Autek Systems Corp., at 109 Bonaventura Drive, indicates that three violations were reported, as summarized below:

- TSD – Other requirements – two violations;
- TSD – Financial Responsibility requirements – one violation

All of the violations were corrected.

RCRA-LQG

One facility within 0.25 mile of the Site is listed on the RCRA-LGQ database. No violations were reported at this facility

RCRA-SQG

Eighteen facilities within 0.25 mile are listed on the RCRA-SQG database. No violations were reported at any of the facilities.

Response

According to the database, Mallinckrodt Inc. at 4101 Lick Mill Blvd. to the west of the Site entered Discovery in 1981. See the Envirostor listing for further information

Envirostor

Nine facilities located within 1 mile of the Site are listed on the Envirostor database. According to this database, the International Technology Corporation San Jose Transfer Facility, at 3010 Zanker Rd., was set up to consolidate hazardous wastes for shipment to regulated disposal sites. Since the early 1970s the City of San Jose has owned the site. In January 1974 the City of San Jose entered into an agreement with Industrial Tank, Inc. and Oscar E. Erickson Inc. for the construction and operation of an industrial waste transfer facility. The transfer facility was on approximately 1.8 acre of land and consisted of 14 concrete storage areas for storing drums and above-ground tanks. The types of wastes that were received at the site were flammable liquids and solids, caustic compounds, oxidizing chemicals, acids, poisons and other regulated materials. In 1986 the tanks and containers were cleaned and removed. In 1987, IT ceased its operations.

The Department of Health Services (DHS), predecessor to Department of Toxic Substances Control (DTSC), was the lead agency that oversaw all closure activities at

DRAFT

the site. In September 1990 soil and groundwater samples were taken and analyzed according to an approved Closure Plan. Soil sample results indicated the presence of metals and chlorinated hydrocarbons. Groundwater results indicated metals and total xylenes. The November 1989 closure plan indicated that the site would be considered clean if the confirmation samples were less than background plus two standard deviations. The site is now a commercial area occupied by office buildings. Currently, the RWQCB is overseeing the groundwater issues at the site.

According to the database, Orchard Properties located at 58 Dagget Drive, approximately 0.25 mile south/southwest of the Site was a former electronics manufacturing facility. In 1991, soil samples detected dichloroethylene in the soil beneath the floor. Over 8 cubic yards of soil was excavated and disposed off-site. Analyses of soil samples taken from the bottom of the excavation indicated levels less than 100 ppb. Based on this information, the SF Regional Water Quality Control Board (RWQCB), the lead agency, decided that the remaining contaminant no longer posed a threat to groundwater and no further action was required. The soil dichloroethylene level was also below residential standards.

According to the database, San Jose Graphics, which is also listed under the names Arcata Graphics Quebecor and Arcata Graphics Printing, located at 696 Trimble Road to the southeast of the Site had solvent and petroleum product releases discovered in 1989. Further information is under the LUST database description.

According to the database, Montague Seely at 691 Montague Expressway to the east/southeast of the Site, in 1991 was found to have pesticide, and petroleum hydrocarbon contamination from former agricultural use. Low level contamination that presented no threat to public health resulted in a No Further Action determination.

According to the database, Mallinckrodt Inc. located at 4101 Lick Mill Blvd. to the west of the Site was historically used for the manufacture and storage of various chemical compounds, including alcohol and solvents, solvent recycling and metal reclamation. Discovery began in 1981 and found solvent contamination in soil and groundwater. Remediation commenced in 1988. A 5-Year Review Report issued in 2002 indicates that the groundwater and the soil vapor remediation systems are containing the offsite migration of contaminants.

According to the database, Montague Center at Rincon Circle/O'Toole located to the east of the Site was found to have pesticide, and metals contamination from former agricultural use. Low level contamination that presented no threat to public health resulted in a No Further Action determination.

According to the database, at the Van Waters and Rogers, Inc. solvent distributor facility at 2556 Junction Avenue to the southeast of the Site, groundwater was discovered to be contaminated with solvents in 1980. Following remediation activities over the course of the next two decades, the migration of contaminated groundwater is listed as being under control in 2000, and current human exposures are listed as being under control in 2002.

According to the database, Rivermark Properties at Montague Expressway and Agnew Road to the west of the Site, entered into a voluntary clean-up program for agricultural waste contamination in 1991. In 1994, CERT - DTSC certified that all remedial actions are complete and that the site will continue to extract groundwater and treat and discharge it through the neighboring Mansion Grove system. The site is now occupied by residential and commercial development.

According to the database, Shell Oil Co. / San Jose Pipeline located at 2165 O'Toole Avenue to the east/southeast of the Site had PCE and gasoline spills in 1984 and 1985. After assessment, a No Further Action determination was made.

LUST

Eight facilities within 0.5 mile of the Site are listed on the LUST database. Cases have been closed at five of these facilities. Details for the remaining facilities are as follows:

The Foxboro ICT at 199 River Oaks parkway is listed as having a solvent plume from a leaking underground tank which was discovered in 1988. According to groundwater monitoring reports on the GeoTracker website, A Pump and Treat system was installed, and the RWQCB subsequently authorized its shut down in 1999 as the plume was deemed to have been stabilized on the property. Groundwater monitoring continues at present. This plume is not considered to be a threat to the Subject Site.

Two other listings are for the same address: Arcata Graphics Quebecor and Arcata Graphics Printing, both located at 696 Trimble Road, to the southeast of the Site. According to the various database listings for this Site, it appears that the Arcata Graphics facility had a UST that leaked petroleum hydrocarbons and non-chlorinated solvents into the groundwater. A preliminary site assessment was completed in 1994, with free-phase solvents noted in the groundwater. The implemented remediation plan is reported as removing the free product and pumping and treating the groundwater. Monitoring data from this site shows that the TPH plume has only migrated approximately 150 feet offsite, and the solvent plume has not migrated off site. (RWQCB *Final Site Cleanup Requirements* 2001).

Twelve "orphan" sites were identified in the EDR Report. None of these orphan sites were observed within the vicinity of the Site.

K. LOCAL AGENCY REVIEWS

Iris Environmental contacted the San Jose Fire Department (SJFD), the San Jose Building Services Department (SJBSD), the Santa Clara County Department of Environmental Health Hazardous Materials Compliance Division (SCDEH), the Regional Water Quality Control Board (RWQCB), the Department of Toxic Substances Control (DTSC), and the Bay Area Air Quality Management District (BAAQMD) to inquire whether there are any conditions of environmental concern at the Site.

DRAFT

The DTSC and RWQCB responded that no records are on file for the Site address. The SCDEH responded that they had no files for 2860 and 2840 Junction Ave and 411 Plumeria Drive. However, the 2005 SECOR Phase I states that their review of SCDEH files for the 2860 Junction Avenue facility showed minor violations that were reportedly corrected and approved within 15 days (SECOR 2005). Iris Environmental reviewed SCDEH files for 3050 Zanker Road and 2880 Junction Avenue. These files consisted of Hazardous Materials inventories, permits and inspection records. Minor violations of container labelling regulations and staff training records were noted at the 2880 Junction Ave. facility in 2002 and were reported as corrected.

In addition to the submittal of formal file requests, the San Jose City Hall Records Imaging System (CHRIS) database was searched manually for the Site addresses. The CHRIS database system allows searches of building and planning records and permits, and is designed to contain files maintained by the SJFD. Database entries were observed for the Site address. These entries consisted of building and electrical permits as well as Hazardous Materials Business Plans, permits and inspection records for Ultratech Inc. Buildings 1 and 2. None of the files reviewed appear to indicate conditions of environmental concern.

L. OTHER ENVIRONMENTAL CONDITIONS

1. Asbestos

Although Mr. Webber was not aware of an asbestos survey for the Site, the Secor Phase I reports that they examined a 1996 Phase I entitled *Updated Phase I Environmental Site Assessment*, December 19, 1996 by Hygientics Environmental Services, Inc., in which it is reported that "asbestos containing materials were identified in the subject property buildings. Asbestos was detected in the grey roofing sealant, in the transite roofing screens, in the beige 12-inch by 12-inch vinyl floor tiles in the storage room in 2840 Junction Ave., and in the beige/black mastic in the roof access room. This assessment [Hygientics report] did not identify recognized environmental conditions associated with the subject property buildings" (SECOR 2005).

2. Mold

During the Site inspection tour, Iris Environmental did not observe any evidence of mold, mold-substances, water-damage or other conditions conducive to mold growth in the Site buildings.

3. Monitoring Wells

According to a letter from Lowney Associates to Menlo Equities Management dated February 18, 2000, all four monitoring wells located at the Montague Park office complex were properly decommissioned according to SCVWD guidelines in January of 2000 (Lowney Associates 2000). A copy of this letter and the related Well Destruction Completion Notices are included in Appendix

DRAFT

D. No records of the purpose or sampling of these wells were located in any regulatory agency files reviewed for this assessment.

40-Hour Hazardous Waste Operations/Emergency Response
8-Hour Annual Refresher - Hazardous Waste Operations/Emergency Response

DRAFT

EXPERIENCE

Mr. Alger has over 21 years of experience applying geology, engineering geology, and construction skills to the investigation and remediation of environmentally-impacted sites and geologic hazards. His diverse experience in groundwater and vadose zone investigations for environmentally affected sites supplements the traditional evaluation tools used for study of geologic hazards and the design of effective site remediation. The following projects are representative of Mr. Alger's experience:

- Peer reviewer and critical oversight – Complex Chemical Sites Litigation in Santa Fe Springs, California: Ongoing, multiyear project on behalf of insurance company clients. Field phases of work has included hands-on logging and geologic observations of multiple aquifer investigations, using various drilling methods and investigation techniques. Role has included mediation and litigation support to assist in resolving causation debate, plus translation of technical issues for non-technical parties.
- Port of Oakland Consulting Services contract: Project manager/coordinator for joint venture providing as-needed consulting services for a major west coast transportation client. Project services have included multiphase investigations and risk assessment of a former trucking distribution facility for redevelopment into a maintenance services complex; Phase II screening evaluation of transportation corridor properties for consideration of possible risk-based redevelopment; compliance monitoring of combined sewer systems; site investigation and

remediation; and comprehensive Phase I historical analysis of Port terminals for use in planning future site redevelopment.

- Accelerated Site Investigation and Remediation, Lincoln Center, Stockton, California: Co-project manager for multimillion dollar, fast-tracked RI/FS project to address PCE-affected soil and groundwater at an operating shopping center in Stockton, California, under a court-directed settlement. Directly responsible for all interim and final design, construction, and operation of soil-vapor and groundwater remediation systems. Coordinated field investigations to support rapid design of 17-well groundwater extraction system, conducted aquifer testing to support design, and served as senior manager for system construction that included a 500 gpm treatment plant and over 5,000 feet of double contained piping. Developed and conducted an elaborate five-day soil-vapor extraction pilot testing program and designed the resulting 35-well, 5-acre soil-vapor extraction system to eliminate elevated PCE soil vapor concentrations. The SVE system now in successful operation, was constructed throughout the shopping center using trenching and directional drilling methods to install over 6,000 feet of conveyance piping.
- Remediation prior to Redevelopment, Former Automobile Plant, Milpitas, California: Created and applied a rapid team approach to perform over 26 indoor and outdoor excavations and demolitions within one year to prepare a former automobile assembly plant for redevelopment; removed, sorted, off-hauled, or bioremediated 17,000 yards of soil affected with fuels and solvents. Work was considered a primary critical path step to redevelopment and associated funding. Project was completed on schedule with no cost overruns; saved client more than $100,000 from original budget despite expanding scope due to previously undetected solvent-affected soils. Maintained daily briefing meetings with clients, construction managers, and regulatory officials to accelerate approval of each sampling event and excavation.
- Remedial Excavation, Gateway Park, City of San Mateo, California: Provided environmental oversight for the City of San Mateo to facilitate remediation of soil impacted with petroleum hydrocarbons beneath a recently constructed city park. This high profile project required relocation of San Mateo's primary street access from the freeway to downtown and necessitated substantial shoring to protect the roadway and an adjacent creek. The project required continuous coordination between field sampling crews, laboratories and the excavation contractor. Soils were screened and sorted for offsite disposal if impacted, or for reuse. Work included pre- and post-construction regulatory negotiations with both the San Mateo County Department of Health Services and the RWQCB that resulted in successful closure.
- Remediation for Redevelopment, San Francisco, California: Directed shored excavation to 25 feet below grade in loose, gasoline-affected sands for redevelopment of a former gas station into a multi-story building with an underground garage. Included managing confined-space underpinning and installation of a passive vapor control liner, construction management for all subgrade phases, and critical path method scheduling.
- Site Remediation, former Chevron Commercial Facility, Emeryville, California: On-site project leader directing two environmental contractors excavating over 15,000 yards of petroleum- and chlorinated hydrocarbon-affected soil from a former bulk terminal and asphalt research laboratory prior to sale for redevelopment. Majority of soil was excavated and handled at night under level B (supplied air) conditions.

- Vadose Zone and Groundwater Remediation Pilot Testing; various sites: Participated or directed soil-vapor extraction, multiphase extraction, air sparging, and bioventing pilot tests at a range of sites to characterize vadose-zone conditions for both feasibility studies and the design of remediation systems. This work has ranged from simple, single-day tests to detailed, multiple-scenario studies. Monitoring has included helium gas tracers, oxygen, and carbon dioxide soil-vapor analysis and pressure/vacuum instrumentation.
- Dewatering Fatal Flaw Analysis: Designed and implemented multiple well aquifer testing program in advance of deep bay side excavation to assess potential for excessive sea water inflow to overwhelm standard construction dewatering systems. Performed tidal studies and aquifer pumping tests and conducted data analysis.
- Developed and implemented rapid site assessment programs for subsurface investigations beneath both active terminals and 24-hour active aircraft repair facilities at San Francisco International Airport to reassess outdated petroleum hydrocarbon release data. These programs have required extensive interaction with client and airport management teams. Successful implementation of the work has resulted in data that has supported restructuring of site remediation goals.
- Mission Bay Brownfields Redevelopment project, San Francisco, California: Assistant project manager responsible for scoping and implementation of Maher-ordinance required fill site investigations prior to site redevelopment. As part of each investigation project, Staff reviewed parcel-specific site history and existing environmental data to develop sampling programs designed to evaluate environmental risk. Each parcel field investigation program included the collection of soil and ground water samples, preparation of summary reports, permitting and Agency negotiations.
- Strategic Insurance Claim Support: Mr. Alger provides integrated management support to a number of insurance carriers dealing with a range of environmental claims. This support aims to fill the technical gap that commonly exists between the adjuster and the variety of external participants on a claim, and seeks to manage the complexity of cost and data issues. Common services provided include third party review of consultant invoices and work plans; strategic planning and case review for litigation; and communication facilitation between parties, carriers, and consultants.
- Mediation expert for San Jose area dry cleaners litigation. Review data and developed opinions on causation, timing, and environmental impacts from historical dry cleaner operations. Mediation presentation led to early settlement of litigation and favorable position for client.
- Provided third-party review of redevelopment for 24 industrial properties, including a large coal gasification plant, into a major sports arena complex. Provided legal staff for future lessee with independent analysis of economy and efficiency of site remediation efforts.
- Performed and directed third-party review, effectiveness evaluation, and curtailment evaluations for an operating soil-vapor extraction system installed in a complex geological setting. Presented program recommendations to the regulating agency to accelerate closure of the system.
- Conceptualized an economical approach to, and completed site characterization and feasibility studies for xylene- and chlorinated hydrocarbon-affected soil and groundwater at a former

polyester resins plant. Prepared feasibility study and engineering evaluations, and performed soil-vapor and groundwater extraction tests to verify engineering design concepts.

- Provided technical evaluation of remedial alternatives and feasibility study for remediation of chemical-affected groundwater at a Southern California Superfund site. Work included developing surface-water infiltration mitigation measures and assisting in both the initial screening and detailed analysis tasks for preparation of the feasibility study report.
- Served as team member of first successful pneumatic fracturing pilot program to increase soil permeability and enhance soil-vapor extraction flow rates and chemical mass recovery at a TCE-affected site near San Jose, California. Responsible for soil-vapor extraction testing and evaluation.
- Investigated free-product plume migration in a bedrock hillside environment from a petroleum pipeline using portable drilling equipment; evaluated remedial options that addressed difficult logistics; and prepared construction drawings and specifications for a passive system to collect product in a remote setting.
- Assisted in the third-party review of fixed-price proposals submitted for remediation of soil and groundwater at a former truck stop. Provided independent cost analyses, clarified proposal specifics with bidders, and prepared detail list for contract preparation and negotiations.
- Served as senior registered reviewer for Phase I site assessments conducted for financial and industrial property clients. Provided staff with guidance on site investigation procedures, sampling protocol, and worst-case scenario loss analysis. Evaluated site use histories using document search products, aerial photographic interpretation, and facility worker interviews.
- Investigated the extent of petroleum and chlorinated hydrocarbons in soil and multiple groundwater zones at the NASA facility in Sunnyvale, California, using dual-tube-driven sampler equipment.
- Revised a pre-existing Evaluation Monitoring Program for Hillside Landfill in Colma, California to address continuing impacts to groundwater and ongoing monitoring. The updated program included developing and initiating a water infiltration management project for closed portions of the facility that are overlain by an irrigated golf course.
- Designed and constructed a unique, portable, solar-powered free-product recovery system to remediate a gasoline plume at a remote site.
- Served as the engineering geologist responsible for pre-construction geotechnical investigations, oversight of client and third-party residential and commercial grading projects, and geologic hazard investigations. Specialized in landslide and distressed soil evaluations, using field mapping, aerial photographic interpretation, boring programs, and geotechnical methods to define potential hazards.
- Participated in field mapping and preparation of a geological hazard assessment for rockfalls and landslides in Yosemite National Park. Mapped rock fall features and detailed debris flow sequences and deposits. Age-dated hazard features using dendrochronology techniques and archeological records. Peer reviewed draft and final U.S. Geological Survey report and map products.

DRAFT

- Served as a grading inspector under contract with the Town of Danville Building Department, jointly responsible for starting inspection and enforcement of new grading codes focused on hillside development. Developed sediment and erosion control handbook for town contractors.
- Served as geologist for compilation of Geographical Information System (GIS) planning-zoning program for the Town of Moraga. Mapped and compiled nine basic data maps of geology, landslide history, vegetation, and slope for incorporation into a multitasking GIS system to produce planning tools and for use in litigation defense.
- Served as project Geologist for geologic hazards section of a development-level environmental impact report for a coastal bluff subdivision in Half Moon Bay, California.
- Performed aerial photo and field mapping to prepare a series of geologic hazard maps for the City of Belmont for use in future land use planning and development zoning.

Williams College, BA in English, June 1990.

CERTIFICATION

OSHA 40-Hour Hazwoper Training, 2001
Annual 8 Hour Refresher Courses 2002-2006

EXPERIENCE

Mr. Cook is a staff scientist at Iris Environmental. He has five years of experience working as an environmental consultant and his work focuses largely on field operations and due diligence projects. This work has included the following:

- Assisted investigations of a 300-acre Brownfield redevelopment site in the South of Market area in San Francisco, CA. Responsible for soil sampling and air quality monitoring, writing summary reports, master service agreements and permit applications, providing cost estimates and analyzing laboratory data.

- Performed extended asbestos monitoring at a 70 acre housing development site in El Dorado County. Worked with construction contractors to insure compliance with target goals. Wrote project summary report and developed corresponding tables and figures.

- Performed due-diligence for standard Phase I Environmental Site Assessments and nonstandard assessments of commercial and industrial sites throughout the San Francisco Bay Area in California. Work includes file reviews at regulatory agencies, aerial photographic evaluations, database searches and reviews, site visits, and interviews. Composed and assisted with Phase I reports for various sites, among them a closed landfill and a former junkyard, industrial facilities, schools, residences, office buildings, warehouses, and agricultural properties.

- Performed strategic environmental research and analysis for a large insurance company. Assessed the quality and cost effectiveness of third party consultants. Researched site liability issues through file reviews at regulatory agencies, database searches and reviews.

1995	B.A. with Honors in Geology, with a concentration in Environmental Studies, Williams College, cum laude

CERTIFICATION AND TRAINING

Hazardous Waste Operations and Emergency Response Training
Title 22/RCRA Hazardous Waste Compliance Training

EXPERIENCE

Mr. Montag is a Manager at Iris Environmental. He has approximately seven years of experience working in the environmental research and consulting fields. His work has been focused in the following areas: due diligence; compliance management and the development of environmental management systems; redevelopment and construction support services; geologic site assessments; and environmental trends research and data analysis. The following projects are representative of Mr. Montag's experience:

- Act as lead investigator for Phase I Environmental Site Assessments at a variety of locations, including a former computer hardware manufacturing facility in Goleta, California; an industrial parcel located at the Port of San Francisco; a parcel slated for commercial development in Fremont, California; a historic railroad facility located in San Diego, California; and a steel processing facility located on a Superfund site in Los Angeles, California. Often on an accelerated schedule, conduct site visits and interviews with former site personnel, perform regulatory file reviews to document potential site environmental concerns, and provide primary authorship of the final ASTM-compliant Phase I reports.

- Provide environmental due diligence, data evaluation, and regulatory status assessment for a variety of clients in contexts other than Phase I ESAs. Tasks have included due-diligence research, reviewing and summarizing site technical information, acquiring and interpreting site hydrogeologic information, and interfacing with regulators to determine regulatory scope and jurisdiction. Projects have included research and other transactional support services for a major real estate investment management firm; a site assessment of a 50-acre parcel with a history of hazardous materials use extending back nearly a century for a highly visible industrial client in Oakland, California; assisting in the review of site history and remediation activities at a former aerospace manufacturing facility in a heavily impacted industrial area in Southern California in preparation for site redevelopment; an assessment of potential hazards presented by soil gas over ground water impacted by solvents for a proposed sensitive-use redevelopment at a site in Newport Beach, California; and a similar review for a site located in Florida.

DRAFT

Michael E. Montag

- Provide environmental services directly related to construction and site redevelopment at a variety of locations, including providing primary environmental management for the development of a major new institutional structure in Oakland, California. Activities have included planning for management of potentially impacted soils; profiling of materials for waste characteristics, and management of such materials under RCRA guidelines; negotiations with landfills for appropriate waste disposal; authoring of required agency submittals, including storm water management, dust control, and health and safety plans; and other environmental oversight and management tasks related to site construction activities. Managed the permit acquisition process and providing ongoing monitoring and oversight for a large construction dewatering system; activities include acquiring NPDES and local utility permits, water sampling for compliance, and system oversight. Currently managing an emissions monitoring program under California Air Quality Management rules.

- Acted as a primary member of the team providing environmental services for the redevelopment of the California Academy of Sciences and Steinhart Aquarium in Golden Gate Park. Coordinated monitoring of abatement activities in conjunction with demolition of Academy buildings. Provided management of contractor services and offered technical expertise and logistical support for hazardous materials management. Assisted in the Phase I ESA, including providing the primary due diligence research for the Phase I ESA conducted for the Academy's Transition Facility. Acted as primary field technician for a logistically challenging soil investigation that was conducted inside the Academy facility prior to vacating and demolition to assess appropriate soil handling protocols during site demolition and reconstruction.

- Act as supervisor for a variety of geologic investigations at locations throughout California. Coordinate mobilization efforts for sampling; interface with client and regulatory contacts; supervise subcontractor sampling of soil, soil gas, and groundwater; maintain lithologic, worker safety, and general field records of investigation activities; submit samples for laboratory analysis and coordinate quality control and data analysis of results; and write reports describing findings of investigations, often including preliminary assessment of results in relation to agency-promulgated screening levels. Interface with various experts regarding appropriate sampling practices and analytical procedures for rapidly evolving field of soil gas sample collection and analysis.

- Assisted with strategic claim support services for a large insurance provider. Provided third-party review of documents and invoices submitted for claims, and summarized findings in a regulatory review and event history. Conducted extensive research on potential environmental liabilities of claimants at both the plant level and on a company-wide basis for sites located nationwide.

- Assisted in the development of an environmental management system for regulatory compliance for an international manufacturing company. Projects included developing environmental procedures for many environmental activities, including those related to hazardous materials and hazardous waste management; assisted with the development of and training in electronic databases for proper

information management, including the creation of a technical training manual for database users; aided in the development of an internal audit system to provide an ongoing self-assessment of progress towards environmental compliance; and helped to organize and participate in corporate training seminars.

- Assist in investigations and project management during the build-out of the Mission Bay Redevelopment Area, a 300-acre brownfield redevelopment site in the South of Market area in San Francisco, California. Responsible for soil, soil gas, and groundwater sampling as a part of geologic and hydrogeologic investigations; writing and editing summary reports; and analyzing laboratory data. Assisting with the management of ongoing environmental compliance activities during Site redevelopment. Provided field oversight of activities related to ongoing litigation at site.

- Managed the field component of a major ongoing quarterly ground water monitoring program at a US EPA Superfund site in Palo Alto, California, including sample collection, data quality control, and reporting.

- Conducted research in various topics related to sustainable business practices and the emerging field of industrial ecology, including extensive research related to the composition of materials flows to landfills and the feasibility of landfill mining.

- Authored articles and provided intensive research support in a variety of environmental topics, including the human effects of natural disasters and global transportation trends; this research contributed to the various international publications produced by the Worldwatch Institute in Washington, D.C.

- Acted as a field assistant on a long-term wildlife study project in Torres del Paine National Park, Patagonia, Chile.

- W.M. Keck Fellow. Sponsored by the W.M. Keck Foundation to conduct geologic research near Cooke City, Montana. Developed and implemented a field investigation of the impacts of hard rock mining and mine reclamation activities on soil and surface water.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

FEDERAL RECORDS

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 06/19/2006 has revealed that there are 2 CERCLIS sites within approximately 0.5 miles of the target property.

Site	Address	Dist / Dir	Map ID	Page

CERCLIS-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 02/01/2006 has revealed that there are 3 CERC-NFRAP sites within approximately 0.5 miles of the target property.

RCRAInfo: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System(RCRIS). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month Large quantity generators generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 06/13/2006 has revealed that there are 2 RCRA-TSDF sites within approximately 0.5 miles of the target property.

NOTIFY 65: Notify 65 records contain facility notifications about any release that could impact drinking water and thereby expose the public to a potential health risk. The data come from the State Water Resources Control Board's Proposition 65 database.

A review of the Notify 65 list, as provided by EDR, and dated 10/21/1993 has revealed that there is 1 Notify 65 site within approximately 1 mile of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 05/10/2006 has revealed that there are 9 ENVIROSTOR sites within approximately 1 mile of the target property.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

Other Pertinent Environmental Activity Identified at Site:

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

Baseline Flow: Not reported
Facility Type: Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping.
Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
Agency Type: Private
Waste Type: Not reported
Threat to Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.
Reclamation: Not reported

Comments:	The 5 Year Review Report indicates that the groundwater and the soil vapor remediation systems are containing the offsite migration of contaminants.The approval of the Operation and Maintenance Plan which lays out plan how to operate and maintain both the soil vapor and the groundwater monitorng and extraction treatment systems.Completed the start-up of the groundwater and the soil vapor extraction and treatment systems.DTSC approved a detailed design for the installation of the soil vapor (expanded) and groundwater monitoring extraction system.A Remedial Action Plan was approved on November 30, 1994 which required the installation of groundwater and the expansion of the soil vapor extraction and treatment systems.The Remedial Investigation and Feasibility Study Report confirms the presence of volatile organic compounds in soil and groundwater.The installation of a soil vapor extraction system, including its wells and associated piping and a carbon adsorption unit, were completed to remediate soils contaminated with volatile organic compounds.Certification - Ongoing operation and maintenance consists of the continued extraction and treatment of the groundwater and soil vapor.DTSC adopted a Negative Declaration for the proposed RAW.Amendment to the Order to include the requirements for the Operation and Maintenance (O&M) of the extraction trench and the three extraction wells (E-6, E-7 and E-8)An Order was issued to require Mansion Grove to conduct groundwater monitoring and among other things to , submit a Remedial Investigation/Feasibility Study and a Remedial Aciton Workplans.A Negative Declaration was adopted for the site.An amendment to Order HAS 88-89-019 (November 7, 1996) was also issued to ensure the operation and maintenance of both systems until such time that cleanup objectives are met.A Removal Action Workplan was approved for the installation of a soil vapor extraction system.The Public Participation plan for the site was approved.Removal action completed

Site 2 of 2 in cluster P

BEP:

Site Description :	Mansion Grove is a 29 acre residential apartment complex currently under construction. The site was occupied by facilities involved in metals reclamation and the manufacture and recycling of solvents and other chemicals for over 70 years. During excavations for several building foundations, contaminated soil was discovered.
Hazardous Waste Desc :	Soil testing has detected the presence of volatile organic compounds including halogenated solvents, naphthalene compounds, polynuclear aromatic compounds and petroleum hydrocarbons. There is potential for ground water contamination.
Threat To Public Health & Env :	Residential apartments are located adjacent to areas of contaminated soil. The site is fenced and posted to prevent public contact with contaminated soil.
Site Activity Status :	A removal of 6000 cubic yards of contaminated soil adjacent to occupied buildings was completed by the RP under DHS oversight in 1988. Preliminary ground water investigations have been initiated.
Project Revenue Source Co. :	Not Reported
PRS Company Address :	Not reported Not reported
Project Revenue Source Desc :	DHS will be issuing remedial action order or entering into an enforceable agreement with the responsible parties. DHS has budgeted $100,000 for oversight/monitoring of cleanup efforts. DHS will recover 100 percent of direct costs plus staff costs andoverhead related to the project. The responsible parties will pay all costs associated with remedial investigations and cleanup activities.

Site 1 of 3 in cluster Q

BEP:
- Site Description : Van Waters and Rogers is a division of Univar which operates a chemical blending, storage and distribution facility. The site encompasses about 12 acres in the City of San Jose. The facility contains about 36 underground tanks which store a variety of organic compounds.
- Hazardous Waste Desc : In 1982, soil and ground water contamination was discovered at the site. This contamination was caused by spillage, inadequate handling practices and/or leakage from tanks and piping. The following contaminants have been detected: trichloroethane (TCA), perchloroethylene (PCE), dichloroethane (DCA), dichloroethylene (DCE), methylene chloride, vinyl chloride, toluene, ketones, xylene and alcohols.
- Threat To Public Health & Env : Ground water contamination at the site represents a potential threat to public health and the environment. Domestic wells are located one-half mile downgradient of the site.
- Site Activity Status : Van Waters and Rogers, Inc, has installed and is operating a ground water extraction system. The lead responsibility within DHS for oversight of remedial activities at this site has been transferred to the regional facilities permitting unit.
- Project Revenue Source Co. : Not Reported
- PRS Company Address : Not reported
  Not reported
- Project Revenue Source Desc : Van Waters and Rogers, Inc., the responsible party is conducting cleanup activities under the direction of the RWQCB. The RWQCB will continue to have lead responsibility for monitoring Van Waters and Roger's progress under an existing cooperative agreement between the RWQCB, EPA and DHS. The RWQCB is conducting the work with support from the EPA through a cooperative agreement. Until such time as the RWQCB refers the site to DHS for follow-up using Bond funds, no money will be budgeted from thisfund for this site.

Other Pertinent Environmental Activity Identified at Site:

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

California - Hazardous Waste Tracking System - Datamart

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo Corrective Action Summary:

Event:	Current Human Exposures under Control, Yes, Current Human Exposures Under Control has been verified. Based on a review of information contained in the EI determination, current human exposures are expected to be under control at the facility under current and reasonably expected conditions. This determination will be re-evaluated when the Agency/State becomes aware of significant changes at the facility.
Event Date:	12/28/2000
Event:	Igration of Contaminated Groundwater under Control, Yes, Migration of Contaminated Groundwater Under Control has been verified. Based on a review of information contained in the EI determination, it has been determined that migration of contaminated groundwater is under control at the facility. Specifically, this determination indicates that the migration of contaminated groundwater is under control, and that monitoring will be conducted to confirm that contaminated groundwater remains within the existing area of contaminated groundwater. This determination will be re-evaluated when the Agency becomes aware of significant changes at the facility.
Event Date:	12/28/2000
Event:	Stabilization Construction Completed
Event Date:	07/01/1997

DRAFT

VAN WATERS AND ROGERS INC (Continued) **1000136188**

Event:	Stabilization Measures Evaluation,This facility is not amenable to stabilization activity at the present time for reasons other than 1) it appears to be technically infeasible or inappropriate (NF) or 2) there is a lack of technical information (IN). Reasons for this conclusion may be the status of closure at the facility, the degree of risk, timing considerations, the status of corrective action work at the facility, or other administrative considerations.
Event Date:	07/26/1994
Event:	CA Prioritization, Facility or area was assigned a high corrective action priority.
Event Date:	07/25/1994
Event:	Certification Of Remedy Completion Or Construction Completion
Event Date:	07/15/1993
Event:	Igration of Contaminated Groundwater under Control, Yes, Migration of Contaminated Groundwater Under Control has been verified. RCRAInfo Corrective Action Summary:

Event: Current Human Exposures under Control, Yes, Current Human Exposures Under Control has been verified. Based on a review of information contained in the EI determination, current human exposures are expected to be under control at the facility under current and reasonably expected conditions. This determination will be re-evaluated when the Agency/State becomes aware of significant changes at the facility.
Event Date: 12/28/2000

Event: Igration of Contaminated Groundwater under Control, Yes, Migration of Contaminated Groundwater Under Control has been verified. Based on a review of information contained in the EI determination, it has been determined that migration of contaminated groundwater is under control at the facility. Specifically, this determination indicates that the migration of contaminated groundwater is under control, and that monitoring will be conducted to confirm that contaminated groundwater remains within the existing area of contaminated groundwater. This determination will be re-evaluated when the Agency becomes aware of significant changes at the facility.
Event Date: 12/28/2000

Event: Stabilization Construction Completed
Event Date: 07/01/1997

Event: Stabilization Measures Evaluation,This facility is not amenable to stabilization activity at the present time for reasons other than 1) it appears to be technically infeasible or inappropriate (NF) or 2) there is a lack of technical information (IN). Reasons for this conclusion may be the status of closure at the facility, the degree of risk, timing considerations, the status of corrective action work at the facility, or other administrative considerations.
Event Date: 07/26/1994

Event: CA Prioritization, Facility or area was assigned a high corrective action priority.
Event Date: 07/25/1994

Investigation Report for the site which delineated the extent of soil and groundwater contamination. Soil was contaminated with the following: arsenic, lead, mercury, DDT, chlordane, polycyclic aromatic hydrocarbons (PAHs), perontague Expressway on the south. Between December 20, 2000 and June 15, 2001, approximately 182,600 tons of soils contaminated with hazardous levels of arsenic, lead, mercury and DDT were excavated from Phase 1 and disposed at permitted landfill. Apoperty for residential and other purposes. Alll allowed uses and developments of the property shall preserve the intergrity of the extraction trench, extraction wells, and groundwater treatment system and monitoring wells at the site.Mansion Grove, and an additional extraction trench at the leading edge of the contaminated groundwater. The site cleanup was broken up into four phases to support development schedules for the site.chloroethylene (PCE) and trichloroethylene (TCE). Groundwater investigation showed PCE, TCE, 1,1-dichloroethylene (DCE), cis-1,2-DCE, 1,2-dichloroethane (DCA) and vinyl chloride (VC) to be above the drinking water standards in the area north of thed the Mansion Grove Apartments on the south. Between January 2001 and December 2001, approximately 55,000 cubic yards of contaminated soils were excavated from the Phase 3 area of the site and either disposed offsite or reused in the nearby CalTransrganic constituents will be extracted and treated. The remedy consists of the installation of three extraction wells at the property boundary of Mansion Grove in March 2003 and the extraction trench at the leading edge of the contaminated groundwateproximately 269,400 tons of soil contaminated with non-hazardous levels of arsenic, lead or PAHs were either transported to the CalTrans Highway 87 construction project for reuse, or to permitted landfill for disposal.Mansion Grove Site.r in February 2004.Highway 87 construction project.

EPA Waste Codes Addendum

Code	Description
D001	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
D002	A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
D035	METHYL ETHYL KETONE
D039	TETRACHLOROETHYLENE
F002	THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE LISTED IN F001, F004, OR F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
F003	THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
F005	THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

FEDERAL RECORDS

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

NPL RECOVERY: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991
Date Data Arrived at EDR: 02/02/1994

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 06/19/2006
Date Data Arrived at EDR: 06/22/2006

Number of Days to Update: 62

Source: EPA
Telephone: 703-413-0223
Last EDR Contact: 06/22/2006
Next Scheduled EDR Contact: 09/18/2006
Data Release Frequency: Quarterly

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

RCRA: Resource Conservation and Recovery Act Information

DRAFT

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 06/13/2006
Date Data Arrived at EDR: 06/28/2006
Date Made Active in Reports: 08/23/2006

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

DRAFT

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

DRAFT

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

EDR PROPRIETARY RECORDS

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.
