From at least 1938 to 1953, the Project site was used for agricultural purposes (row crops and orchards) with a few residential dwellings. By the mid-1950s, the Project site became increasingly used for dairy farm purposes with some residences. Currently, the Project site is used for dairy farming and residential purposes. According to observations and interviews during Phase I ESA reconnaissance, which took place on January 22 and January 31, 2025, the Project site contains multiple active agricultural (6) and residential (1) water wells, as well as one idle water well; refer to **Appendix F** for more information. Additionally, Roux observed evidence of staining, unusual odors, petroleum sheens, or distressed vegetation at the Project site during the Phase 1 ESA reconnaissance. In general, Roux observed surficial staining in the milk barns and feed silos areas associated with the dairy farm operations. According to the staff, the staining observed in the milk barn and feed silos areas are a result of acid wash (a concentrated, non-foaming, tri-blend detergent) and molasses (liquid cattle feed), respectively. Roux also observed small areas of surficial staining along the area surrounding diesel above-ground storage tanks (ASTs) within the Project site. Moderate to heavy oil staining was noted on and within the vicinity of the diesel ASTs located within Planning Area 13. This area of Planning Area 13 appeared to be concrete/asphalt paved, although the hardscape appeared to be damaged and/or broken. During the January 2025 site reconnaissance, the surficial staining observed on the different properties located within the Project site appeared to be limited in scale and are not anticipated to present a threat to human health or the environment. The staining observed is considered to be de minimis in nature. Wastewater ponds associated with dairy farm operations were observed on multiple properties within the Project site. These ponds represent permitted features, and no chemical uses were noted to be associated with these features. Additionally, the Phase I

ESA identified the following Recognized Environmental Conditions (RECs) in connection with the Project site:

- REC 1: Based on the historical use of the Project site for agricultural purposes from at least the 1930s through 1950s, it is likely that pesticides were used. In 2005, soil sampling at the eastern portion of the Project site (referred to as the "Swager Property") was conducted to further investigate the potential presence of pesticides. No detectable to low concentrations of organochlorine pesticides were reported in the sample collected and all but one were below regulatory screening levels. The sample that exceeded residential screening levels was collected from the central portion of the Swager Property and contained slightly elevated dieldrin; refer to **Appendix F** for more information.
- REC 2: The Phase I ESA evaluated conditions within the adjoining property, located immediately to the south of Planning Area 14, referred to as the "Hindelang Property"; refer to **Figure 3-8**. Historical records for the south adjoining Hindelang Property indicate that manufacturing of fiberglass camper shells from at least 1986 through 1992 included the use and storage of hazardous materials including polyester resin, polyester gel coat, MEK peroxide catalyst, acetone, 1,1,1-trichloroethane (1,1,1-TCA) and hydrocarbon solvents, rubber adhesive, etc. Previous environmental reports noted poor housekeeping practices and automobile repair operations at the Hindelang Property. Based on the documented use of chlorinated solvents (1,1,1-TCA), poor general housekeeping, and noted automobile repair operations, the south adjoining Hindelang Property represents a potential vapor encroachment concern and a REC; refer to **Appendix F** for more information.

**Criterion 1:** Would the project create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials? *and*

**Criterion 2:** Would the project create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

Project development within Ownership Area 1 would include the development of residential and mixed-use buildings and associated site improvements, which is consistent with the current TOP 2050 land use designation for Ownership Area 1. Operations within Ownership Area 1 could involve the transport and use of materials associated with routine maintenance of the property, such as janitorial supplies for cleaning purposes and/or herbicides and pesticides for landscaping. Additionally, the storage, use, handling, and disposal of any hazardous materials (such as paints and solvents) that might be stored on Ownership Area 1 during construction are addressed by federal, state, and local laws, regulations and programs that govern the use, transport and/or disposal of hazardous materials. Impacts would be less than significant in this regard.

Additionally, prior to the redevelopment of dairy farms, the City of Ontario Building Department requires that an investigation be performed to evaluate the possible build-up of methane gas in shallow soils and to determine the level of methane gas mitigation required. The Project, inclusive of Ownership Area 1, would comply with TOP 2050 Policy S-6.6, Remediation of Methane, which requires that development assess and mitigate the presence of methane, per regulatory standards and guidelines. Proper removal and disposal of manure-laden shallow soil in accordance with local regulatory guidance may also be

required prior to the redevelopment of Ownership Area 1. Therefore, with compliance with existing federal, state, and local regulations, the Project's impacts with respect to Ownership Area 1would be within the limit of impacts identified in the TOP 2050 Supplemental EIR. There is no peculiar impact and no mitigation is required.

**Criterion 3:** Would the project emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?

Additionally, the Project's new land uses within Ownership Area 1 would not emit hazardous emissions or handle hazardous materials, substances or waste within one-quarter mile of a school site. Levi H. Dickey Elementary School is located approximately 1.5 miles north of Ownership Area 1; however, hazardous materials other than supplies used for operational maintenance within Ownership Area 1 are not expected to be on site. Compliance with local, state and federal laws and regulations would reduce the risk of hazardous material incidents to a less than significant impact. Therefore, implementation of the Project within Ownership Area 1 would not create a significant hazard to the public or to the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment; and the Project would not create a significant hazard to existing or proposed school sites. Therefore, the Project's impacts with respect to Ownership Area 1 are within the limit of impacts identified in the TOP 2050 Supplemental EIR. There is no peculiar impact and no mitigation is required.

**Criterion 4:** Would the project be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, create a significant hazard to the public or the environment?

California Government Code Section 65962.5 combines several regulatory lists of sites that pose a hazard related to hazardous materials and substances. These lists are the California Department of Toxic Substances Control (DTSC) EnviroStor database; the SWRCB Geotracker database; the SWRCB list of sites identified with waste constituents above hazardous waste levels outside the waste management unit; and the SWRCB's list of "active" sites with a cease-and-desist order or been issued a cleanup or abatement order. Based on a review of these databases, the Project site, including Ownership Area 1, does not include any sites identified on a hazardous site list, compiled pursuant to California Government Code Section 65962.5, that would create a significant hazard to the public or the environment.[18] Therefore, the Project's impacts with respect to Ownership Area 1 are within the limit of impacts identified in the TOP 2050 Supplemental EIR. There is no peculiar impact and no mitigation is required.

**Criterion 5:** Would the project result in a safety hazard or excessive noise for people residing or working in the project area for a project located within an airport land use plan or, where such a plan has not been adopted, within 2 miles of a public airport or public use airport?

The Project site and Ownership Area 1 are located approximately 0.75 mile north of Chino Airport and within the Chino Airport land use compatibility area.[19] TOP 2050 planning area is within the Chino Airport

[18] California Department of Toxic Substances Control (DTSC). 2024. *Envirostor.* https://www.envirostor.dtsc.ca.gov/public/map/?global_id=60003205, (accessed January 2025).

[19] Riverside County Airport Land Use Commission. 2008. *Chino Airport ALUCP*. https://rcaluc.org/sites/g/files/aldnop421/files/2023-06/Chino.pdf (accessed February 2025).

land use compatibility area (ALUCP). The new land uses within Ownership Area 1 would be consistent with residential land uses within the airport influence area as it would not expose individuals to excessive safety hazards. Therefore, the Project's impacts with respect to Ownership Area 1 are within the limit of impacts identified in the TOP 2050 Supplemental EIR. There is no peculiar impact and no mitigation is required.

**Criterion 6:** Would the project impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

As determined in the TOP 2050 Supplemental EIR, none of the proposed land uses within TOP 2050 would interfere with or impair the implementation of an adopted emergency response or evacuation plan. The OFD reviews development applications to ensure that adequate emergency accessibility is provided based on local and state guidance. Project buildout within Ownership Area 1 would not result in new impacts or a substantial increase in the magnitude of impacts than what was previously analyzed within the TOP 2050 Supplemental EIR. Additionally, Project construction within Ownership Area 1 would not require the partial or temporary closure of adjacent roadways, such as Edison Avenue, identified as an evacuation route for the City, and the Project site, including Ownership Area 1, does not contain any emergency services that would be impacted.[20] Therefore, the Project impact with respect to Ownership Area 1 regarding emergency response would be less than significant. As a result, the Project's impacts are within the limit of impacts identified in the TOP 2050 Supplemental EIR. There is no peculiar impact and no mitigation is required.

**Criterion 7:** Would the project expose people or structures, either directly or indirectly, to a significant risk of loss, injury, or death involving wildland fires?

With regard to wildfire risk and the exposure of people/structures to risks associated with wildfire, TOP 2050 Supplemental EIR found that the City is outside of the State Responsibility Area (SRA), and CAL FIRE determined that the City contains no areas subject to very high wildfire risk. The City, however, recognizes that even though fuel loading is light in Ontario and fire risk comes primarily from urban fires, not wildfires, there is some risk related to wildfires. Overall, with adherence to building practices and resources such as the Local Hazard Mitigation Plan (LHMP), California Fire Code (CFC), and CAL FIRE's Strategic Fire Plan, among others, development associated with TOP 2050 and the Project would not exacerbate risk or result in post-wildfire hazards (i.e., landslides, mudflows, flooding, etc.). In addition, TOP 2050 and the Project, inclusive of Ownership Area 1, would adhere to the policies below in **Section 4.20** to prevent wildfire hazards. As with TOP 2050, Project impacts within Ownership Area 1 would be less than significant with respect to wildfire and no mitigation is necessary. Project implementation within Ownership Area 1 would be consistent with the findings of the TOP 2050 Supplemental EIR.

No peculiar impacts nor a substantial increase in the severity of a previously identified significant impact would occur and impacts from hazards and hazardous materials would remain less than significant.

[20] City of Ontario. 2022. *The Ontario Plan* 2050. Figure S-10, Evacuation Routes. https://content.ontarioca.gov/sites/default/files/2024-12/Figure%20S-10%20Evacuation%20Sites.pdf (accessed February 2025).

### Specific Plan – Ownership Area 2, Future Development Areas

The Ownership Area 2 is being evaluated only at a programmatic level, and there are no specific development proposals at this time. Development of Ownership Area 2 would add to the hazards and hazardous material impacts in the environment when Planning Areas 1 through 5, 7 through 11, and 14 through 16 are completed – similar to the discussion of Ownership Area 1 above. While the structures and operations associated with Ownership Area 2 have the potential to increase hazards and hazardous material impacts of the site, impacts affecting hazards and hazardous materials would be less than significant. As discussed above, Ownership Area 2 would not emit hazardous emissions or involve hazardous or acutely hazardous materials, substances, or waste. However, it would involve the transport and use of materials associated with routine maintenance of the property, such as janitorial supplies for cleaning purposes and/or herbicides and pesticides for landscaping. The storage, use, handling, and disposal of any hazardous materials (such as paints and solvents) that might be stored on Ownership Area 2 during construction are addressed by federal, state, and local laws, regulations and programs that govern the use, transport and/or disposal of hazardous materials. Additionally, Ownership Area 2 would comply with TOP 2050 Policy S-6.6, Remediation of Methane, which requires that development assess and mitigate the presence of methane, per regulatory standards and guidelines.

Furthermore, the CenterPark Specific Plan land use designations within Ownership Area 2 are the same land use designations as contained in TOP 2050. As determined by the TOP 2050 Supplemental EIR, current federal and state regulations, City ordinances, and TOP 2050 policies would regulate the handling of hazardous substances to reduce potential releases; exposure; and risks of transporting, storing, treating, and disposing of hazardous materials and wastes. Accordingly, no mitigation is required other than compliance with applicable plans, policies and programs, including the proposed Specific Plan and TOP 2050.

### The Ontario Plan 2050 Supplemental EIR Applicable Policies:

**Goal S-6** **Reduced potential for hazardous materials exposure and contamination.**

**Policy S-6.1** **Disclosure and Notification.** We enforce disclosure laws that require all users, producers, and transporters of hazardous materials and wastes to clearly identify the materials that they store, use, or transport.

**Policy S-6.2** **Response to Hazardous Materials Releases.** We respond to hazardous materials incidents and coordinate these services with other jurisdictions.

**Policy S-6.4** **Safe Storage and Maintenance Practices.** We require that the users of hazardous materials be adequately prepared to prevent and mitigate hazardous materials releases.

**Policy S-6.5** **Location of Hazardous Material Facilities.** We regulate facilities that will be involved in the production, use, storage, or disposal of hazardous materials, pursuant to federal, state, county, and local regulations, so that impacts to the environment and sensitive land uses are mitigated. We prohibit new hazardous waste facilities in close proximity to sensitive land uses and environmental justice areas.

**Policy S-6.9** **Remediation of Methane.** We require development to assess and mitigate the presence of methane, per regulatory standards and guidelines.

### The Ontario Plan 2050 Supplemental EIR Applicable Mitigation Measures:

None.

### Conclusion

With regards to the issue area of Hazards and Hazardous Materials, the following findings can be made:

1. No peculiar impacts to the Project or its site have been identified.
2. There are no potentially significant off-site and/or cumulative impacts which were not discussed by the TOP 2050 Supplemental EIR.
3. No substantial new information has been identified which results in an impact which is more severe than anticipated by the TOP 2050 Supplemental EIR.
4. No feasible mitigation measures contained within the TOP 2050 Supplemental EIR would be required.

## 4.10 Hydrology and Water Quality

| Environmental Impact Issues | Peculiar Project Impact (*not analyzed in prior EIR and not substantially mitigated by the imposition of uniformly applied development policies or standards)* | Potentially Significant Offsite or Cumulative Impact not Discussed in Prior EIR | Substantially More Severe Impact based on Substantial New Information | No New Impact |
|---|---|---|---|---|
| **Would the project:** | | | | |
| **Criterion 1:** Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality. | ☐ | ☐ | ☐ | ☒ |
| **Criterion 2:** Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin. | ☐ | ☐ | ☐ | ☒ |
| **Criterion 3:** Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:<br>a. Result in substantial erosion or siltation on- or off-site.<br>b. Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site.<br>c. Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff.<br>d. Impede or redirect flood flows. | ☐ | ☐ | ☐ | ☒ |
| **Criterion 4:** In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation. | ☐ | ☐ | ☐ | ☒ |
| **Criterion 5:** Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan. | ☐ | ☐ | ☐ | ☒ |

This section summarizes the Hydrology Report prepared by JLC Engineering & Consulting, Inc., in May 2025, and the Water Quality Management Plan prepared by City of Ontario Engineering Department in September 2024, which are included as **Appendix G.**

### Summary of Impacts Identified in The Ontario Plan 2050 Supplemental EIR

The TOP 2050 Supplemental EIR determined that development resulting from buildout of TOP 2050 would result in less than significant impacts with respect to hydrology and water quality.

### Project Specific-Impacts

#### Specific Plan – Ownership Area 1

**Criterion 1:** Would the project violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?

As determined by the TOP 2050 Supplemental EIR, construction activities have the potential to result in significant water quality impacts. Water quality impacts could occur during the earthwork and construction phase, when the potential for erosion, siltation, and sedimentation would be the greatest. Construction within Ownership Area 1 has the potential to produce typical pollutants, such as heavy metals, pesticides and herbicides, and chemicals related to construction and cleaning, waste materials, including wash water, paints, wood, paper, concrete, food container, sanitary wastes, fuel, and lubricants. Impacts to storm water quality could occur from construction and associated earth moving, and increased pollutant loadings. Similar to TOP 2050 Supplemental EIR, the Project, inclusive of Ownership Area 1, would comply with applicable federal, state, and local water quality controls. Construction activities would disturb more than one acre and therefore would be required to comply with the water quality standards and waste discharge requirements of the NPDES. The Construction General Permit requires implementation of a SWPPP which would include project construction features designed to prevent erosion and protect the quality of storm water runoff (i.e., BMPs). A SWPPP would be prepared during the City's plan review process, prior to issuance of a grading permit. Water quality standards and waste discharge are addressed using the BMPs incorporated in the SWPPP. Compliance with the SWPPP, including the BMPs associated with the Project, would reduce, minimize, treat or even avoid storm water pollution associated with the construction within Ownership Area 1. Implementation of BMPs identified in the SWPPP would eliminate or minimize pollution of downstream receiving waters. Similar to the buildout of TOP 2050, Project implementation within Ownership Area 1 would not result in significant impacts to water quality.

TOP 2050 includes Policies ER-1.6 and ER-1.7 which direct the City to reduce pollutants in the City's stormwater system. The Project would comply with TOP 2050 policies listed below, ensuring compliance with applicable federal, state, and local water quality controls. A Preliminary WQMP has been prepared on behalf of the Project, which establishes BMPs specific to the Project to treat, reduce, or avoid the contamination of downstream waters from waterborne pollutants during operation. Examples of BMPs in the Preliminary WQMP include, among others:

- Minimizing non-stormwater site runoff through efficient irrigation system design and controllers;
- Providing solid roofs over all trash enclosures; and
- Gravity separator devices for pretreatment of sediment, trash/litter, or oil and grease.[21]

[21] National Core, Ontario Housing Authority. 2024. Preliminary Water Quality Management Plan (PWQMP).

**Criterion 2:** Would the project substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?

The TOP 2050 Supplemental EIR identified less than significant impacts to groundwater and groundwater supplies. Similar to TOP 2050, the Project, inclusive of Ownership Area 1, would implement TOP 2050 **Policy ER-1.6**. TOP 2050 **Policy ER-1.6** encourages use of LID strategies to intercept runoff, slow the discharge rate, increase infiltration, and ultimately reduce discharge volumes to traditional storm drain systems. Potential low impact development (LID) strategies that could be implemented by development in the City include bioretention, dry wells, filter strips, grassed swales, infiltration trenches, inlet pollution removal devices, permeable pavement, permeable pavers, rain barrels and cisterns, soil amendments, tree box filters, vegetated buffers, and vegetated roofs. With the implementation of City policies that promote LID and infiltration for new development projects, the potential for the Project to substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the Project may impede sustainable groundwater management of the basin is considered less than significant. Additionally, the City's groundwater supplies are from the Chino Groundwater Basin, which is adjudicated and managed by the Chino Basin Watermaster. As stated within the TOP 2050, adherence to the State Construction General Permit, implementation of the SWPPP, and adherence to the City's Erosion and Sediment Control Plan requirements, would ensure that surface and groundwater quality are not adversely impacted during construction. The Project would be required to comply with the Santa Ana River Basin Plan and to control pollutants in discharges of stormwater from postconstruction activities under NPDES Permit No. CAS618036 through preparation of a WQMP identifying BMPs for prevention of stormwater pollution during the post-construction phase, including site-design, source-control, and/or treatment BMPs. A Preliminary WQMP, included as **Appendix G2** of this consistency analysis, has been prepared for the Project in compliance with the Santa Ana Regional Water Quality Control Board requirements, which includes Low Impact Development (LID) features and BMPs to ensure proper water management practices within Ownership Area 1. Therefore, similar to the TOP 2050 Supplemental EIR, Project implementation within Ownership Area 1 would not obstruct or conflict with any groundwater management plan, and impacts would be less than significant.

**Criterion 3:** Would the project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:

a. Result in substantial erosion or siltation on- or off-site;

b. Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site;

c. Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or

d. Impede or redirect flood flows? *and*

**Criterion 4:** Would the project, in flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?

## Runoff/Flooding

Ownership Area 1 currently features agricultural and residential development and is heavily disturbed. Elevations on-site range from approximately 700 feet amsl in the northeast portion of the site to approximately 680 feet amsl in the southwest portion of the site. The Ownership Area 1 slopes from the northwest to the southeast. The Project site, including Ownership Area 1, does not receive upstream runoff from surrounding areas.

On-site stormwater drainage facilities shall be provided to capture and infiltrate a 2-year, 1 hour storm event, consistent with the San Bernardino County Stormwater Program's WQMP requirements for new development projects. Stormwater capture and infiltration facilities may include the utilization of vegetated swales, depressed landscaped basins, pervious concrete pavement or underground stormwater detention/retention/infiltration vaults. All building roof and paved area runoff shall be directed into depressed landscaped swales, trenches, or basins, within the development, to comply with the requirement to capture and infiltrate the 2-year, 1-hour storm event runoff. As such, similar to buildout of TOP 2050, Project implementation within Ownership Area 1 would not result in significant impacts regarding runoff or flooding.

**Criterion 5:** Would the project conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?

According to the TOP 2050 Supplemental EIR, projects approved under TOP 2050 would be required to comply with the Santa Ana River Basin Plan and to control pollutants in discharges of stormwater from postconstruction activities under NPDES Permit No. CAS618036 through preparation of a WQMP identifying BMPs for prevention of stormwater pollution during the post-construction phase, including site-design, source-control, and/or treatment BMPs. As discussed above the Project would adhere to all applicable State, and local regulatory framework which would ensure that surface and groundwater quality are not adversely impacted during construction. In addition, implementation of the LID and BMP measures at the site, would ensure that water quality is not impacted during the operational phase of the Project. As a result, Project implementation within Ownership Area 1 would not obstruct or conflict with the implementation of the Santa Ana River Basin Water Quality Control Plan. Additionally, existing on-site groundwater wells would be abandoned per the California Department of Water Resources (DWR) Standards and would require a permit from the San Bernardino Department of Environmental Health Services and completion of a DWR 188 Well Completion Form.

Development within the Project site, inclusive of Ownership Area 1, would be connected to the City's public water supply and there would be no on-site wells for use of groundwater. The City manages both the potable and non-potable supplies to ensure withdrawals from the Chino Groundwater Basin do not exceed the safe yield for the Basin, as per the Chino Basin Watermaster's Optimum Basin Management Program. The Chino Basin is listed as "very low" priority pursuant to the Sustainable Groundwater Management Act, and therefore is not operating under a Groundwater Sustainability Plan (GSP) pursuant to the Sustainable Groundwater Management Act. Therefore, consistent with the TOP 2050 Supplemental EIR, Project impacts within Ownership Area 1 would be less than significant with adherence to State and local regulations, including TOP 2050 (includes Policies ER-1.6 and ER-1.7), the City's Erosion and Sediment

Control Plan requirements, the Santa Ana River Basin Water Quality Control Plan, and NPDES Permit No. CAS618036. No peculiar impacts would occur.

### Specific Plan – Ownership Area 2, Future Development Areas

The Ownership Area 2 is being evaluated only at a programmatic level, and there are no specific development proposals at this time. Development of Ownership Area 2 would add to the hydrology and water quality impacts in the environment when Planning Areas 1 through 5, 7 through 11, and 14 through 16 are completed – similar to the discussion of Ownership Area 1 above. As discussed above, Project impacts concerning hydrology and water quality would be less than significant. Furthermore, the CenterPark Specific Plan land use designations within Ownership Area 2 are the same land use designations as contained in TOP 2050. Accordingly, no mitigation is required other than compliance with applicable plans, policies and programs, including the proposed Specific Plan and TOP 2050.

### The Ontario Plan 2050 Supplemental EIR Applicable Policies:

**Policy ER-1.4:** **Supply-Demand Balance:** We require that available water supply and demands be balanced.

**Policy ER-1.6:** **Urban Run-off Quantity:** We encourage the use of low impact development strategies to intercept run-off, slow the discharge rate, increase infiltration and ultimately reduce discharge volumes to traditional storm drain systems.

**Policy ER-1.7:** **Urban Run-off Quality:** We require the control and management of urban run-off, consistent with Regional Water Quality Control Board regulations.

**Policy S-2.1:** **Entitlement and Permitting Process:** We follow State guidelines and building code to determine when development proposals require hydrological studies prepared by a State-certified engineer to assess the impact that the new development will have on the flooding potential of existing development down-gradient.

**Policy S-2.5:** **Stormwater Management:** We maintain the storm drain system to convey a 100-year storm, when feasible, and encourage environmental site design practices to minimize flooding and increase groundwater recharge, including natural drainage, green infrastructure, and permeable ground surfaces.

**Policy S-2.6:** **Use of Flood Control Facilities:** We encourage joint use of flood control facilities as open space or other types of recreational facilities.

### The Ontario Plan 2050 Supplemental EIR Applicable Mitigation Measures:

None.

### Conclusion

With regards to the issue area of Hydrology and Water Quality, the following findings can be made:

1. No peculiar impacts to the Project or its site have been identified.
2. There are no potentially significant off-site and/or cumulative impacts which were not discussed by the TOP 2050 Supplemental EIR.

3. No substantial new information has been identified which results in an impact which is more severe than anticipated by the TOP 2050 Supplemental EIR.
4. No feasible mitigation measures contained within the TOP 2050 Supplemental EIR would be required.

## 4.11 Land Use and Planning

| Environmental Impact Issues | Peculiar Project Impact (*not analyzed in prior EIR and not substantially mitigated by the imposition of uniformly applied development policies or standards)* | Potentially Significant Offsite or Cumulative Impact not Discussed in Prior EIR | Substantially More Severe Impact based on Substantial New Information | No New Impact |
|---|---|---|---|---|
| **Would the project:** | | | | |
| **Criterion 1:** Physically divide an established community. | ☐ | ☐ | ☐ | ☒ |
| **Criterion 2:** Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect. | ☐ | ☐ | ☐ | ☒ |

### Summary of Impacts Identified in The Ontario Plan 2050 Supplemental EIR

The TOP 2050 Supplemental EIR determined that development resulting from implementation of TOP 2050 would have less than significant impacts with respect to land use and planning.

### Project Specific-Impacts

#### Specific Plan – Ownership Area 1

**Criterion 1:** Would the project physically divide an established community?

The Project applicant proposes development that would include up to 115,809 square feet of commercial retail uses, up to 4,293 residential units, and 135,110 square feet of office uses, as described further below. Due to current land ownership, only Ownership Area 1 is proposed at a project-level entitlement. Ownership Area 1 is expected to start construction in 2025, with an anticipated opening year in 2029.

Projects that are typically considered to have the potential to divide an established community include the construction of new freeways, highways, roads, or other uses that physically separate an existing or established neighborhood. Additionally, the Project site, including Ownership Area 1, is developed with existing buildings and structures used for agricultural purposes and does not include an established community.

Project development within Ownership Area 1 would not include improvements which would substantially alter existing roadways and transportation corridors in a manner that would cause the removal or separation of existing adjacent communities from important resources and neighboring units. Roadway improvements associated with the Project would also increase transportation efficiency within the Project site and adjacent roadways without degrading the existing neighborhoods. Therefore, Project implementation within Ownership Area 1 would not physically divide an established community and there would be no impact.

**Criterion 2:** Would the project cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?

The City is currently developing a Compatibility Plan for Chino Airport (Compatibility Plan) that relies upon the California Airport Land Use Planning Handbook (State of California Department of Transportation, Division of Aeronautics) October 2011 (Handbook). As provided for in the Handbook "alternative process," the City functions as the Designated Agency in formulating airport land use compatibility plans for City properties. The Compatibility Plan is based on the Handbook Generic Safety Zones for General Aviation Airports. The Project site is within the Chino Airport ALUCP and is within Zone E, which is within Safety Zone III.[22] Proposed development under the CenterPark Specific Plan is permitted within this zone; however, a departmental review from the lead agency is required prior to development to verify residential compatibility within the Chino Airport Land Use Plan area.

Final site plans and development plans within the Project site would be subject to and required to comply with applicable standards and requirements of the Compatibility Plan as adopted by the City. Please refer also to related discussions presented in **Section 4.9, Hazards and Hazardous Materials**.

The Project site is within the ONT ALUCP. However, it is not within a safety zone, a noise impact zone, or an airspace protection zone of the ONT. Therefore, a less than significant impact would occur.

Project implementation would be consistent with TOP 2050. The Project would not conflict with applicable land use plans, policies, or regulations, including TOP 2050 and other regional plans. The Project is consistent with the underlying land use designation that have been included in local and regional planning efforts. Therefore, the Project would not cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect. The Project would cause neither a new impact, nor an increase in the severity of an impact previously disclosed. No further analysis is required.

### Specific Plan – Ownership Area 2, Future Development Areas

The Ownership Area 2 is being evaluated only at a programmatic level, and there are no specific development proposals at this time. Development of Ownership Area 2 would add to the land use and planning impacts in the environment when Planning Areas 1 through 5, 7 through 11, and 14 through 16 are completed – similar to the discussion of Ownership Area 1 above. As discussed above, Project impacts concerning land use and planning would be less than significant. Furthermore, the CenterPark Specific Plan land use designations within Ownership Area 2 are the same land use designations as contained in TOP 2050. Accordingly, no mitigation is required other than compliance with applicable plans, policies and programs, including the proposed Specific Plan and TOP 2050.

[22] San Bernardino County Land Use Services. 1991. *Chino Airport Land Use Compatibility Plan.* https://www.sbcounty.gov/Uploads/lus/Airports/Chino.pdf. (accessed February 2025).

### The Ontario Plan 2050 Supplemental EIR Applicable Policies:

**Goal LU-1** A community that has a spectrum of housing types and price ranges that match the jobs in the City and that make it possible for people to live and work in Ontario and maintain a quality of life.

**Policy LU-1.1** **Strategic Growth.** We concentrate growth in strategic locations that help create place and identity, maximize available and planned infrastructure, foster the development of transit, and support the expansion of the active and multimodal transportation networks throughout the City.

**Policy LU-1.3** **Adequate Capacity**. We require adequate infrastructure and services for all development.

**Policy LU-1.4** **Multimodal Mobility**. We require development and urban design, where appropriate, that reduces reliance on the automobile and capitalizes on active transportation, transit, electric vehicles, and multimodal transportation opportunities.

**Policy LU-1.6** **Complete Community**. We incorporate a variety of land uses and building types in our land use planning efforts that result in a complete community where residents at all stages of life, employers, workers, and visitors have a wide spectrum of choices of where they can live, work, shop and recreate within Ontario.

**Goal LU-4** **Development that provides short-term value only when the opportunity to achieve our Vision can be preserved.**

**Policy LU-4.2** **Interim Development**. We allow development in urban, mixed use, and transit-oriented Place Types that is not immediately reflective of our ultimate Vision for the Place Type, provided it can be modified or replaced when circumstances are right to support development aligned with the Place Type Vision. We will not allow development that impedes, precludes, or compromises our ability to achieve our Vision.

**Policy LU-4.4** **Shared Infrastructure**. We encourage and facilitate the use of shared infrastructure (including shared or managed parking) in urban, mixed use, and transit-oriented Place Types.

**Goal LU-5** **Integrated airport systems and facilities that minimize negative impacts to the community and maximize economic benefits.**

**Policy LU-5.7** **ALUCP Consistency with Land Use Regulations**. We comply with state law that requires general plans, specific plans, and all new development to be consistent with the policies and criteria set forth within an Airport Land Use Compatibility Plan for any public-use airport.

### The Ontario Plan 2050 Supplemental EIR Applicable Mitigation Measures:

None.

## Conclusion

With regards to the issue area of Land Use and Planning, the following findings can be made:

1. No peculiar impacts to the Project or its site have been identified.
2. There are no potentially significant off-site and/or cumulative impacts which were not discussed by the TOP 2050 Supplemental EIR.
3. No substantial new information has been identified which results in an impact which is more severe than anticipated by the TOP 2050 Supplemental EIR.
4. No feasible mitigation measures contained within the TOP 2050 Supplemental EIR are required.

## 4.12 Mineral Resources

| Environmental Impact Issues | Peculiar Project Impact (*not analyzed in prior EIR and not substantially mitigated by the imposition of uniformly applied development policies or standards*) | Potentially Significant Offsite or Cumulative Impact not Discussed in Prior EIR | Substantially More Severe Impact based on Substantial New Information | No New Impact |
|---|---|---|---|---|
| **Would the project:** | | | | |
| **Criterion 1:** Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state? | ☐ | ☐ | ☐ | ☒ |
| **Criterion 2:** Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan? | ☐ | ☐ | ☐ | ☒ |

### Summary of Impacts Identified in The Ontario Plan 2050 Supplemental EIR

The TOP 2050 Supplemental EIR determined that development resulting from implementation of TOP 2050 would result in less than significant impacts with respect to mineral resources.

### Project Specific-Impacts

#### Specific Plan – Ownership Area 1

**Criterion 1:** Would the project result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state? *and*

**Criterion 2:** Would the project result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?

According to Figure 5.12-1 of the TOP 2050 Supplemental EIR, the Project, including Ownership Area 1, is located within Mineral Resource Zone-3 (MRZ-3), which is indicative of areas of undetermined mineral resource significance.[23] Development in an MRZ-3 area would not result in significant impacts because mineral resources of statewide or local importance are not identified on the California Geological Survey's P-C maps. There are two areas in Ontario that are designated MRZ-2, where significant mineral resources are known or are likely. These areas are located in the northwest and east-central portions of the City. Aggregate resource sectors D-2, D-3, and D-5 are located in the east-central portion of the City. Sectors D-3 and D-5 have been completely developed, as have portions of D-2. The areas of the City that are designated MRZ-2 but are outside of sectors are developed with urban uses and would continue to be designated for urban uses by TOP 2050. Areas designated MRZ-2 outside of the sectors are not available for extraction of mineral resources, and TOP 2050 would not result in changes to the existing conditions of these areas. Therefore, TOP 2050 and Project implementation within Ownership Area 1 would not

[23] City of Ontario. 2022. *The Ontario Plan 2050 Final SEIR*. Pages 5.12-2 and –3. https://content.ontarioca.gov/sites/default/files/2024-12/Final_DraftSEIR_TOP2050.pdf (accessed February 2025).

result in the loss of availability of a known mineral resource in Ontario and impacts to mineral resources would be less than significant.[24]

As such, the Project with respect to Ownership Area 1 would have a less than significant impact regarding mineral resources and no mitigation is needed as determined by the TOP 2050 Supplemental EIR. No peculiar impacts would occur.

### Specific Plan – Ownership Area 2, Future Development Areas

The Ownership Area 2 is being evaluated only at a programmatic level, and there are no specific development proposals at this time. Development of Ownership Area 2 would add to the mineral resource impacts in the environment when Planning Areas 1 through 5, 7 through 11, and 14 through 16 are completed – similar to the discussion of Ownership Area 1 above. As described above, because the entirety of the Project site is located within MRZ-3, future development within Ownership Area 2 would result in less than significant impacts to mineral resources. Furthermore, the CenterPark Specific Plan land use designations within Ownership Area 2 are the same land use designations as contained in TOP 2050. Accordingly, no mitigation is required other than compliance with applicable plans, policies and programs, including the proposed Specific Plan and TOP 2050.

### The Ontario Plan 2050 Supplemental EIR Applicable Policies:

**Policy ER-5.5:** **Mining Operations.** We prohibit future mining operations where the resource extraction activities are incompatible with existing or proposed adjacent land uses.

### The Ontario Plan 2050 Supplemental EIR Applicable Mitigation Measures:

None.

### Conclusion

With regards to the issue area of Mineral Resources, the following findings can be made:

1. No peculiar impacts to the Project or its site have been identified.
2. There are no potentially significant off-site and/or cumulative impacts which were not discussed by the TOP 2050 Supplemental EIR.
3. No substantial new information has been identified which results in an impact which is more severe than anticipated by the TOP 2050 Supplemental EIR.
4. No feasible mitigation measures contained within the TOP 2050 Supplemental EIR, would be required.

[24] City of Ontario. 2022. The Ontario Plan 2050 Final SEIR. Page 5.12-6. https://content.ontarioca.gov/sites/default/files/2024-12/Final_DraftSEIR_TOP2050.pdf (accessed February 2025).

## 4.13 Noise

| Environmental Impact Issues | Peculiar Project Impact (*not analyzed in prior EIR and not substantially mitigated by the imposition of uniformly applied development policies or standards)* | Potentially Significant Offsite or Cumulative Impact not Discussed in Prior EIR | Substantially More Severe Impact based on Substantial New Information | No New Impact |
|---|---|---|---|---|
| **Would the project result in:** | | | | |
| **Criterion 1:** Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies. | ☐ | ☐ | ☐ | ☒ |
| **Criterion 2:** Generation of excessive groundborne vibration or groundborne noise levels. | ☐ | ☐ | ☐ | ☒ |
| **Criterion 3:** For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within 2 miles of a public airport or public use airport, exposure of people residing or working in the project area to excessive noise levels. | ☐ | ☐ | ☐ | ☒ |

This section summarizes the Acoustical Assessment prepared by Kimley-Horn and Associates, Inc. (Kimley-Horn), dated May 2025, which is included as **Appendix H**. The **Appendix H** Acoustical Assessment summarizes the consistency of the Project's impacts, inclusive of both Ownership Areas 1 and 2, with the findings of the TOP 2050 Supplemental EIR. The Project-generated construction noise, stationary source noise, on-site mobile noise, construction vibration, and operational vibration would not exceed the applicable. However, the Project-generated mobile noise would exceed the applicable noise standards and be cumulatively significant. As shown in **Appendix H**, the Project's impacts are within the limit of impacts identified in the TOP 2050 Supplemental EIR. As a result, the Project would not result in any new or more severe impacts than previously analyzed in the TOP 2050 Supplemental EIR.

### Summary of Impacts Identified in The Ontario Plan 2050 Supplemental EIR

The TOP 2050 Supplemental EIR determined that impacts resulting from the implementation of the TOP 2050 would be significant and unavoidable regarding noise and vibration.

### Project Specific-Impacts

#### Specific Plan – Ownership Area 1

**Criterion 1:** Would the project result in generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

The TOP 2050 Supplemental EIR indicates that, upon buildout of TOP 2050, ground-level receivers adjacent plan implementation projects could experience temporary noise level increases from construction activities resulting in a potentially significant impact. However, with implementation of **MM 12-4**, construction noise, including stationary noise sources and traffic noise would not exceed the City's significance thresholds . As shown in the **Appendix H** Acoustical Assessment, the Project's construction noise impacts are within the limit of impacts identified in the TOP 2050 Supplemental EIR. Ownership Area 1 on-site construction noise levels would not exceed accepted significance thresholds for construction noise.[25] Additionally, off-site construction traffic associated with Ownership Area 1 would not exceed Federal Transit Administration residential significance thresholds for construction activities. Additionally, delivery and haul trucks associated with Ownership Area 1 construction would be subject to the TOP 2050 Supplemental EIR **MM 12-4**, which limits, to the extent feasible, construction traffic to approved haul routes established by the City's Engineering Department. Impacts would be less than significant, and no mitigation is required. Similarly, Ownership Area 1 operational impacts would not exceed the City's daytime noise standard[26], and impacts would be less than significant. As discussed previously, the Project is consistent with the land uses designated in TOP 2050, and as a result, noise levels generated by the Project would be consistent with the findings of the Supplemental EIR. No peculiar impact would occur.

**Criterion 2:** Would the project result in generation of excessive groundborne vibration or groundborne noise levels?

Similar to noise levels, the TOP 2050 Supplemental EIR also found that vibrations generated during construction would also result in a significant impact to vibration-sensitive receptors while long-term operations associated with the buildout of TOP 2050 would not generate significant vibration impacts. To minimize vibration impacts, **MM 12-2** would be implemented to preserve integrity of sensitive receptors regarding vibration. As shown in the **Appendix H** Acoustical Assessment, the Project's vibration impacts are less than significant and within the limit of impacts identified in the TOP 2050 Supplemental EIR. Since the Project is consistent with land uses approved in the TOP 2050, vibration impacts with respect to Ownership Area 1 would be consistent with the TOP 2050 Supplemental EIR.

**Criterion 3:** For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within 2 miles of a public airport or public use airport, would the project result in exposure of people residing or working in the project area to excessive noise levels?

The TOP 2050 Supplemental EIR also determined that airport noise would result in potentially significant impacts to sensitive receptors. The TOP 2050 Supplemental EIR found that based on data from the Airport Land Use Compatibility Plan, residents and other sensitive receptors located within the airport noise contours would be exposed to excessive noise levels from airport operations, resulting in a significant and unavoidable impact. TOP 2050 Supplemental EIR **MM 12-1** would require that, for certain projects within the Ontario International Airport influence area, the project applicant retain an acoustical engineer to conduct an acoustic analysis and identify, where appropriate, site design features and/or required

[25] The City does not have a quantitative noise threshold for construction. Therefore, the Federal Transit Administrations (FTA's) construction noise threshold is conservatively used for the **Appendix H** Acoustical Assessment.
[26] Pursuant to City MC Section 5-29.04, the exterior daytime noise standard for single-family residential uses is 65 dBA (A-weighted decibels).

building acoustical improvements to ensure compliance with the City's Noise Compatibility Criteria and the California State Building Code and California Noise Insulation Standards (Titles 24 and 21 of the California Code of Regulations).

As the Project site is located outside of the Chino Airport and Ontario International Airport noise contours, Project implementation would not expose residents or workers to excessive airport noise levels. The Project's impacts are within the limit of impacts identified in the TOP 2050 Supplemental EIR. As a result, the Project would not result in any new or more severe impacts than previously analyzed in the TOP 2050 Supplemental EIR. As shown in the **Appendix H** Acoustical Assessment, the Project's noise impacts are within the limit of impacts identified in the TOP 2050 Supplemental EIR. As a result, Project implementation within Ownership Area 1 would not result in any peculiar or more severe impacts than previously analyzed in the TOP 2050 Supplemental EIR.

### Specific Plan – Ownership Area 2, Future Development Areas

The Ownership Area 2 is being evaluated only at a programmatic level, and there are no specific development proposals at this time. Development of Ownership Area 2 would add to the noise impacts in the environment when Planning Areas 1 through 5, 7 through 11, and 14 through 16 are completed – similar to the discussion of Ownership Area 1 above. As shown in the Appendix H Acoustical Assessment, the Project's construction and operational noise impacts would be less than significant and no mitigation is required. Furthermore, the CenterPark Specific Plan land use designations within Ownership Area 2 are the same land use designations as contained in TOP 2050. Accordingly, no mitigation is required other than compliance with applicable plans, policies and programs, including the proposed Specific Plan and TOP 2050.

### The Ontario Plan 2050 Supplemental EIR Applicable Policies:

**Policy S4-1:** **Noise Mitigation.** Utilize the City's Noise Ordinance, building codes and subdivision and development codes to mitigate noise impacts.

**Policy S4-2:** **Coordination with Transportation Authorities.** Collaborate with airport owners, FAA, Caltrans, SANBAG, SCAG, neighboring jurisdictions, and other transportation providers in the preparation and maintenance of, and updates to transportation related plans to minimize noise impacts and provide appropriate mitigation measures.

**Policy S4-4:** **Truck Traffic.** Manage truck traffic to minimize noise impacts on sensitive land uses.

**Policy S4-5:** **Roadway Design.** Design streets and highways to minimize noise impact.

### The Ontario Plan 2050 Supplemental EIR Applicable Mitigation Measures:

**MM 12-1:** Prior to the issuance of building permits for any project that involves a noise-sensitive use within the 65 dBA CNEL of the Ontario International Airport, the project property owner/developers shall retain an acoustical engineer to conduct an acoustic analysis and identify, where appropriate, site design features and/or required building acoustical improvements (e.g., sound transmission class rated windows, doors, and attic baffling), to ensure compliance with the City's Noise Compatibility Criteria and the California State

Building Code and California Noise Insulation Standards (Titles 24 and 21 of the California Code of Regulations).

**MM 12-2:** Prior to issuance of a building permit, individual projects that involve vibration-intensive construction activities, such as pile drivers, jack hammers, and vibratory rollers near sensitive receptors shall be evaluated for potential vibration impacts. For construction within 135 feet of fragile structures, such as historical resources, within 100 feet of nonengineered timber and masonry buildings (e.g., most residential buildings), or within 75 feet of engineered concrete and masonry (no plaster); or a vibratory roller within 25 feet of any structure, the project applicant shall prepare a noise and vibration analysis to assess and mitigate potential noise and vibration impacts related to these activities. This noise and vibration analysis shall be conducted by a qualified and experienced acoustical consultant or engineer. The vibration levels shall not exceed Federal Transit Administration (FTA) architectural damage thresholds (e.g., 0.12 inches per second [in/sec] peak particle velocity [PPV] for fragile or historical resources, 0.2 in/sec PPV for nonengineered timber and masonry buildings, and 0.3 in/sec PPV for engineered concrete and masonry). If vibration levels would exceed this threshold, alternative uses shall be used, such as drilling piles as opposed to pile driving and static rollers as opposed to vibratory rollers. If necessary, construction vibration monitoring shall be conducted to ensure vibration thresholds are not exceeded.

**MM 12-4:** Construction activities associated with new development that occurs near sensitive receptors shall be evaluated for potential noise impacts. Construction contractors shall implement the following measures for construction activities in the City of Ontario. Construction plans submitted to the City shall identify these measures on demolition, grading, and construction plans. The City of Ontario Planning and Building Departments shall verify that grading, demolition, and/or construction plans submitted include these notations prior to issuance of demolition, grading, and/or building permits.

- Construction activity is limited to the hours between 7:00 am and 6:00 pm Monday through Friday and 9:00 am to 6:00 pm Saturdays and Sundays, as prescribed in Municipal Code Section 5-29.09.
- During the entire active construction period, equipment and trucks used for project construction shall use the best-available noise control techniques wherever feasible (e.g., improved mufflers, equipment re-design, use of intake silencers, ducts, engine enclosures, and acoustically attenuating shields or shrouds).
- Impact tools (e.g., jack hammers and hoe rams) shall be hydraulically or electrically powered wherever possible. Where the use of pneumatic tools is unavoidable, an exhaust muffler on the compressed air exhaust shall be used along with external noise jackets on the tools.
- Stationary equipment such as generators and air compressors shall be located as far as feasible from nearby noise-sensitive uses.
- Stockpiling shall be located as far as feasible from nearby noise-sensitive receptors.

- Construction traffic shall be limited, to the extent feasible, to approved haul routes established by the City's Engineering Department.
- At least 10 days prior to the start of construction activities, a sign shall be posted at the entrance(s) to the job site, clearly visible to the public, that includes permitted construction days and hours as well as the telephone numbers of the City's and contractor's authorized representatives that are assigned to respond in the event of a noise or vibration complaint. If the authorized contractor's representative receives a complaint, he/she shall investigate, take appropriate corrective action, and report the action to the City.
- Signs shall be posted at the job site entrance(s), within the on-site construction zones, and along queueing lanes (if any) to reinforce the prohibition of unnecessary engine idling. All other equipment shall be turned off if not in use for more than 5 minutes.
- During the entire active construction period and to the extent feasible, the use of noise-producing signals, including horns, whistles, alarms, and bells, shall be for safety warning purposes only. The construction manager shall use smart back-up alarms, which automatically adjust the alarm level based on the background noise level or switch off back-up alarms and replace with human spotters in compliance with all safety requirements and laws.
- Erect temporary noise barriers (at least as high as the exhaust of equipment and breaking line-of-sight between noise sources and sensitive receptors), as necessary and feasible, to maintain construction noise levels at or below the performance standard of 80 dBA $L_{eq}$. Barriers shall be constructed with a solid material that has a density of at least 1.5 pounds per square foot with no gaps from the ground to the top of the barrier and may be lined on the construction side with an acoustical blanket, curtain, or equivalent absorptive material.

### Conclusion

With regards to the issue area of Noise, the following findings can be made:

1. No peculiar impacts to the Project or its site have been identified.
2. There are no potentially significant off-site and/or cumulative impacts which were not discussed by the TOP 2050 Supplemental EIR.
3. No substantial new information has been identified which results in an impact which is more severe than anticipated by the TOP 2050 Supplemental EIR.
4. Feasible mitigation measures contained within the TOP 2050 Supplemental EIR (MMs 12-1, 12-2, and 12-4) would be applied to the Project.

## 4.14 Population and Housing

| Environmental Impact Issues | Peculiar Project Impact (*not analyzed in prior EIR and not substantially mitigated by the imposition of uniformly applied development policies or standards)* | Potentially Significant Offsite or Cumulative Impact not Discussed in Prior EIR | Substantially More Severe Impact based on Substantial New Information | No New Impact |
|---|---|---|---|---|
| **Would the project:** | | | | |
| **Criterion 1:** Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure); | ☐ | ☐ | ☐ | ☒ |
| **Criterion 2:** Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere. | ☐ | ☐ | ☐ | ☒ |

### Summary of Impacts Identified in The Ontario Plan 2050 Supplemental EIR

The TOP 2050 Supplemental EIR determined that impacts associated with development resulting from implementation of TOP 2050 would be less than significant with respect to population and housing.

### Project Specific-Impacts

#### Specific Plan – Ownership Area 1

**Criterion 1:** Would the project induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?

Ownership Area 1 of the Project would include the addition of up to 3,095 residential units within the Project site. This could directly contribute to population growth in the area. Utilizing the Department of Finance (DOF) factor of 3.29 persons per household and, conservatively assuming that every resident of the Ownership Area 1 future development areas would be a new resident of the City, these residential uses would potentially result in a population increase in the City of up to 10,183 residents.

Conservative estimate growth predictions of 10,183 residents would be well within the SCAG growth projections assumed for the City and the SCAG region, specifically, 65,200 by 2050 in the City and 448,000 by 2050 in the County (see **Table 6**). The addition of 3,095 housing units would also aid the City in reaching the RHNA requirement of an additional 20,854 housing units by 2029. Therefore, the Project would not result in substantial unplanned population growth, and impacts would be less than significant.

**Criterion 2:** Would the project displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?

Though the Project site is primarily use for agricultural land uses, there are currently single-family residences within Ownership Area 1 that would be displaced upon Project implementation. However, due to the low number of residences that would be displaced compared to the larger housing stock in the region (i.e., the Project as a whole would result in a net increase of approximately 4,273 housing units, conservatively assuming that approximately 20 residences currently exist on-site), the Project would not displace a substantial number of people or houses and would not necessitate the construction of replacement housing elsewhere. Ownership Area 1 of the Project would construct 3,095 housing units within the City, contributing to the City reaching its RHNA goal of 20,854 additional housing units by 2029. As such, displacement would not be substantial or require the construction of replacement housing elsewhere as the Project would construct adequate housing and aid the City in reaching its RHNA goal. As such, implementation of TOP 2050 would have a less than significant impact regarding displacement of housing as determined by the TOP 2050 Supplemental EIR.

This impact determination is consistent with the certified TOP 2050 Supplemental EIR. The Project would cause neither a new impact, nor an increase in the severity of an impact previously disclosed. No further analysis is required.

**Table 7: SCAG Projections – City of Ontario and San Bernardino County**

| | 2019 | 2050 | Projected Change 2019-2050 | Percent Change 2019-2050 |
|---|---|---|---|---|
| **San Bernardino County Forecast** | | | | |
| Population | 2,175,000 | 2,623,000 | 448,000 | 21% |
| Housing | 657,000 | 953,000 | 296,000 | 45% |
| Employment | 860,000 | 1,145,000 | 285,000 | 33% |
| **City of Ontario Forecast** | | | | |
| Population | 174,800 | 240,000 | 65,200 | 37% |
| Housing | 50,500 | 90,500 | 45,000 | 79% |
| Employment | 122,000 | 187,700 | 65,000 | 54% |

## Specific Plan – Ownership Area 2, Future Development Areas

The Ownership Area 2 is being evaluated only at a programmatic level, and there are no specific development proposals at this time. Development of Ownership Area 2 would add to the population and housing impacts in the environment when Planning Areas 1 through 5, 7 through 11, and 14 through 16 are completed – similar to the discussion of Ownership Area 1 above. As discussed above, Project impacts concerning population and housing would be less than significant. Furthermore, the CenterPark Specific Plan land use designations within Ownership Area 2 are the same land use designations as contained in TOP 2050. Accordingly, no mitigation is required other than compliance with applicable plans, policies and programs, including the proposed Specific Plan and TOP 2050.

### The Ontario Plan 2050 Supplemental EIR Applicable Policies:

**Goal H-1:** **Stable neighborhoods of quality housing, ample community services and public facilities, well-maintained infrastructure, and public safety that foster a positive sense of identity.**

**Policy H-1.2** **Neighborhood Conditions.** We direct efforts to improve the long-term sustainability of neighborhoods through comprehensive planning, provision of neighborhood amenities, rehabilitation and maintenance of housing, and community building efforts.

**Policy H-1.3** **Community Amenities.** We shall provide adequate public services, infrastructure, open space, parking and traffic management, pedestrian, bicycle, and equestrian routes and public safety for neighborhoods consistent with City master plans and neighborhood plans.

**Policy H-1.4** **Historical Preservation**. We support the preservation and enhancement of residential structures, properties, street designs, lot configurations, and other reminders of Ontario's past that are considered to be local historical or cultural resources.

**Goal H-2:** **Diversity of types of quality housing that are affordable to a range of household income levels, accommodate changing demographics, and support and reinforce the economic sustainability of Ontario.**

**Policy H-2.1** **Corridor Housing.** We revitalize transportation corridors by encouraging the production of higher density residential and mixed-uses that are architecturally, functionally, and aesthetically suited to corridors.

**Policy H-2.4** **Ontario Ranch.** We support a premier lifestyle community in the Ontario Ranch, distinguished by diverse housing, highest design quality, and cohesive and highly amenitized neighborhoods.

**Policy H-2.5** **Housing Design.** We require architectural excellence through adherence to City design guidelines, thoughtful site planning, environmentally sustainable practices, and other best practices.

**Goal H-5:** **A full range of housing types and community services that meet the special housing needs for all individuals and families in Ontario, regardless of income level, age, or other status.**

**Policy H-5.2** **Family Housing.** We support the development of larger rental apartments that are appropriate for families with children, including, as feasible, the provision of services, recreation, and other amenities.

### The Ontario Plan 2050 Supplemental EIR Applicable Mitigation Measures:

None.

## Conclusion

With regards to the issue area of Population and Housing, the following findings can be made:

1. No peculiar impacts to the Project or its site have been identified.
2. There are no potentially significant off-site and/or cumulative impacts which were not discussed by the TOP 2050 Supplemental EIR.
3. No substantial new information has been identified which results in an impact which is more severe than anticipated by the TOP 2050 Supplemental EIR.

   No feasible mitigation measures contained within the TOP 2050 Supplemental EIR would be required.

## 4.15 Public Services

| Environmental Impact Issues | Peculiar Project Impact (*not analyzed in prior EIR and not substantially mitigated by the imposition of uniformly applied development policies or standards)* | Potentially Significant Offsite or Cumulative Impact not Discussed in Prior EIR | Substantially More Severe Impact based on Substantial New Information | No New Impact |
|---|---|---|---|---|
| **Except as provided in Public Resources Code Section 21099, would the project:** | | | | |
| **Would the project:** | | | | |
| **Criterion 1:** Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services: Fire protection? | ☐ | ☐ | ☐ | ☒ |
| **Criterion 2:** Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services: Police protection? | ☐ | ☐ | ☐ | ☒ |
| **Criterion 3:** Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services: Schools? | ☐ | ☐ | ☐ | ☒ |

| Environmental Impact Issues | Peculiar Project Impact (*not analyzed in prior EIR and not substantially mitigated by the imposition of uniformly applied development policies or standards)* | Potentially Significant Offsite or Cumulative Impact not Discussed in Prior EIR | Substantially More Severe Impact based on Substantial New Information | No New Impact |
|---|---|---|---|---|
| **Criterion 4:** Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services: Parks? | ☐ | ☐ | ☐ | ☒ |
| **Criterion 5:** Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services: Other public facilities? | ☐ | ☐ | ☐ | ☒ |

### Summary of Impacts Identified in The Ontario Plan 2050 Supplemental EIR

The TOP 2050 Supplemental EIR determined that impacts pertaining to public services would be less than significant.

### Project Specific-Impacts

#### Specific Plan – Ownership Area 1

**Criterion 1:** Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services: Fire protection?

Fire protection services within the City are provided by the OFD. It was anticipated in the TOP 2050 Supplemental EIR that the development of land uses proposed within TOP 2050 planning area would likely result in an increase in demand for fire protection services, and that additional fire protection facilities would be required to meet the increase in demand. Specifically, the OFD's recommendation is that three additional fire stations would be needed in the Ontario Ranch to meet projected needs while maintaining response times and meeting National Fire Protection Association (NFPA) recommendations for levels of

service.[27] The TOP 2050 Supplemental EIR added that future projects, including the Project in its totality (Ownership Areas 1 and 2), would be reviewed by the City and the OFD on an individual basis and would be required to comply with requirements in effect at the time building permits are issued, including the payment of development impact fees that contribute to funding for additional staffing, facilities, and equipment. According to the TOP 2050 Supplemental EIR, sufficient revenue would be available for necessary service improvements to provide for adequate fire facilities, equipment, and personnel upon buildout of the TOP 2050. Consistent with TOP 2050, impacts from implementing the Project would be less than significant and no mitigation is necessary.

**Criterion 2:** Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services: Police protection?

Law enforcement services within the City are provided by the Ontario Police Department (OPD). The OPD also participates in mutual aid agreements with the San Bernardino County Sheriff and various jurisdictions surrounding Ontario to help participating jurisdictions when resources are inadequate to meet current service demands at a particular time. The TOP 2050 Supplemental EIR has determined that the OPD will incrementally require additional staffing as the City population increases. The police services required to cover the new development and population growth for Ontario would be assessed and acquired appropriately based on the needs of the City. The TOP 2050 Supplemental EIR found that it is possible that buildout of TOP 2050 would require additional facilities to support the OPD, the construction of which could result in potential environmental impacts. It stated that such facilities would have to complete applicable environmental review under CEQA at that time. Further the TOP 2050 Supplemental EIR found that future projects, such as the Project (both Ownership Areas 1 and 2), would also be reviewed by the City of Ontario on an individual basis and required to comply with regulations in effect at the time building permits are issued. As with TOP 2050, the need for additional structures and personnel would be financed through the City's development impact fee program, and the impacts of TOP 2050 and Project on police services would be less than significant.

**Criterion 3:** Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services: Schools?

The City is served by five school districts: Chaffey Joint Union High School District (CJUHSD); Ontario-Montclair Elementary School District (OMESD); Cucamonga Elementary School District (CESD); Mountain View Elementary School District (MVESD); and Chino Valley Unified School District (CVUSD). CJUHSD, CVUSD, and MVESD indicated they have capacity to accommodate TOP 2050. It is possible OMESD would need additional facilities by horizon year of TOP 2050. CESD could similarly be impacted by increased student population. Project implementation, inclusive of Ownership Areas 1 and 2, may result in a minimal

[27] City of Ontario. 2022. *TOP Final SEIR*. Page 5.15-3. https://content.ontarioca.gov/sites/default/files/2024-12/Final_DraftSEIR_TOP2050.pdf (accessed February 2025).

increase in demand for school services. Residential development in Ontario under TOP 2050, including the Project, would require payments to corresponding school districts, which would go towards the construction of new facilities when and if they are needed. School districts determine their own development impact fees, often dependent on student generation rates for that district. These payments accommodate the need for new facilities based on the increase in student population in each district. Developers would be required to pay the impact fees levied by each school district, set within the limits of Senate Bill (SB) 50. This funding program has been found by the Legislature to constitute "full and complete mitigation of the impacts" on the provision of adequate school facilities (Government Code Section 65995[h]).[28] The payment of impact fees in compliance with SB 50 would reduce the impacts to an acceptable level. Impacts would be less than significant, and the Project would be consistent with the TOP 2050 Supplemental EIR.

**Criterion 4:** Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services: Parks?

Refer to **Section 4.16: Recreation** for a discussion on parks.

**Criterion 5:** Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services: Other public facilities?

The City of Ontario has two library facilities within its library system: the Ovitt Family Community Library at 215 East C Street, and the Lewis Family Branch at 3850 East Riverside Drive. The Ontario library system is a member of the Inland Library System, which includes 19 independent libraries and other resources in San Bernardino, Riverside, and Inyo counties. This allows Ontario library members to use the interlibrary loan between the participating libraries. Buildout of TOP 2050 and the Project would result in an increase in demand for library services in the City of Ontario based on an increase in population. Future projects, including the Project, would be reviewed by the City of Ontario on an individual basis and would be required to comply with requirements in effect at the time building permits are issued (i.e., payment of development impact fees). Since adequate services would be provided and payment of development impact fees would offset the costs associated with library services, impacts on library services would be less than significant.[29]

## Specific Plan – Ownership Area 2, Future Development Areas

The Ownership Area 2 is being evaluated only at a programmatic level, and there are no specific development proposals at this time. Development of Ownership Area 2 would add to the public service

[28] City of Ontario. 2022. *TOP Final SEIR*. Page 5.15-14. https://content.ontarioca.gov/sites/default/files/2024-12/Final_DraftSEIR_TOP2050.pdf (accessed February 2025).

[29] City of Ontario. 2022. *TOP Final SEIR*. Page 5.15-17. https://content.ontarioca.gov/sites/default/files/2024-12/Final_DraftSEIR_TOP2050.pdf (accessed February 2025).

impacts in the environment when Planning Areas 1 through 5, 7 through 11, and 14 through 16 are completed – similar to the discussion of Ownership Area 1 above. As discussed above, Project impacts concerning public services would be less than significant. Furthermore, the CenterPark Specific Plan land use designations within Ownership Area 2 are the same land use designations as contained in TOP 2050. Accordingly, no mitigation is required other than compliance with applicable plans, policies and programs, including the proposed Specific Plan and TOP 2050.

### The Ontario Plan 2050 Supplemental EIR Applicable Policies:

**Policy S-3.1:** **Prevention Services.** We proactively mitigate or reduce the negative effects of fire, hazardous materials release, and structural collapse by implementing the regularly adopted California Fire Code and California Building Code.

**Policy S-3.8:** **Fire Prevention through Environmental Design.** We require new development to incorporate fire prevention consideration in the design of streetscapes, sites, open spaces and buildings.

**Policy S-7.4:** **Crime Prevention through Environmental Design (CPTED).** We require new development to incorporate CPTED in the design of streetscapes, sites, open spaces, and buildings.

### The Ontario Plan 2050 Supplemental EIR Applicable Mitigation Measures:

None.

### Conclusion

With regards to the issue area of Public Services, the following findings can be made:

1. No peculiar impacts to the Project or its site have been identified.
2. There are no potentially significant off-site and/or cumulative impacts which were not discussed by the TOP 2050 Supplemental EIR.
3. No substantial new information has been identified which results in an impact which is more severe than anticipated by the TOP 2050 Supplemental EIR.
4. No feasible mitigation measures contained within the TOP 2050 Supplemental EIR would be required.

## 4.16 Recreation

| Environmental Impact Issues | Peculiar Project Impact (*not analyzed in prior EIR and not substantially mitigated by the imposition of uniformly applied development policies or standards)* | Potentially Significant Offsite or Cumulative Impact not Discussed in Prior EIR | Substantially More Severe Impact based on Substantial New Information | No New Impact |
|---|---|---|---|---|
| **Criterion 1:** Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated? | ☐ | ☐ | ☐ | ☒ |
| **Criterion 2:** Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment? | ☐ | ☐ | ☐ | ☒ |

### Summary of Impacts Identified in The Ontario Plan 2050 Supplemental EIR

The TOP 2050 Supplemental EIR determined that impacts with regard to recreation would be less than significant.

### Project Specific-Impacts

#### Specific Plan – Ownership Area 1

**Criterion 1:** Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

At the time of the TOP 2050 Supplemental EIR, the City provided approximately 2.7 acres of parkland[30] per 1,000 residents within the City and has a goal of providing five acres per 1,000 residents (see **Policy PR-1.5**). TOP 2050 addresses the need for recreation and parkland to preserve natural assets and environmentally sensitive lands. The Parks and Recreation Element contains relevant policies and programs to acquire additional parkland; integrate new park and recreation facilities with existing and future trails, bikeways, and easements; and conduct regular reviews and updates of the City's parks and trails plans to keep pace with demographic trends and recreational needs of Ontario's residents. TOP 2050 **Policy PR-1.14** requires that new multi-family residential developments of five or more units provide recreational facilities or open space, in addition to paying adopted impact fees. The policies and regulations are intended to meet the TOP 2050's standard parkland acreage ratio.[31]

The Project would include the development of 3,095 dwelling units within Ownership Area 1. As such, Project implementation would result in a minimal increase in demand for parks and recreational facilities

[30] (481 existing acres x 1,000)/179,597 people = 2.7.
[31] City of Ontario. 2022. *TOP 2050 Final SEIR*. Page 5.16-13. https://content.ontarioca.gov/sites/default/files/2024-12/Final_DraftSEIR_TOP2050.pdf (accessed February 2025).

within the City. The Project, including Ownership Area 1, would provide recreational amenities for its residents. Consistent with TOP 2050, Ownership Area 1 would include neighborhood parks and open space, as well as access and entryway improvements for the Ontario Grand Park, along Great Park Avenue and the existing Grove Avenue; refer to **Figure 3-13: Conceptual Landscape Plan**. Impacts associated with development of the Project, including its recreational amenities, are evaluated throughout this document. The Project would be consistent with the findings of the TOP 2050 Supplemental EIR and have a less than significant impact.

**Criterion 2:** Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?

The City maintains 32 parks, seven community centers, and three dog parks. The Project (both Ownership Areas 1 and 2) includes a residential component that could generate population growth and increase use of the nearby public parks or facilities. Multiple parks are located near the Project site. The nearest parks to the Project are Centennial Park, which is a City park, and two City of Chino parks: Constellation Park and Cypress Trails Park. These parks are approximately 1.4 miles north, less than one mile southwest and 1.2 miles west of the Project site, respectively. The MU zoning district accommodates a wide variety of retail commercial, office and high-density residential development in conformance with TOP 2050. It is anticipated that the Mixed-Use development will be comprised of 10 percent Office, 20 percent Commercial/Retail, and 70 percent Residential. According to the CenterPark Specific Plan, public parks, community centers, and similar facilities are permitted by right within both the BP and MU zoning districts. Additionally, publicly owned or accessible open space/parks and trails are permitted within the OS-NR zoning district. The Project is required, by TOP 2050 Policy PR-1.4, to provide parks or open space for new multi-family residential developments, in addition to the payment of applicable Development Impact Fees (DIFs).

Under TOP 2050, the City strives to provide five acres of parkland per 1,000 residents, and a minimum of two acres of developed private park space per 1,000 residents in addition to the three acres per 1,000 persons standard. The Project would be in compliance with the land use and zoning designations identified in TOP 2050 and the Project Applicant would pay general DIFs that contribute to funding for parks. Additionally, the Project would directly construct approximately 55.98 acres of parkland/ non-recreation open space within Ownership Area 1. Construction of approximately 3,095 dwelling units during Ownership Area 1 would have the potential to result in 10,183 residents as discussed in **Section 4.14: Population and Housing.** Under the assumption of an additional 10,183 residents and 55.98 acres of parkland within Ownership Area 1, there would be 5.5 acres of parkland per 1,000 residents, consistent with the City's goal of five acres of parkland per 1,000 residents (TOP 2050 Policy PR-1.5). As a result, development of park facilities would keep pace with the anticipated increase in population from buildout of TOP 2050. Furthermore, all future park development would undergo individual CEQA evaluation, which is anticipated to account for any future impacts, and impacts would be less than significant.

Overall, the Project would not result in adverse physical impacts associated with the provision of or need for new or physically altered park facilities and will not adversely affect service ratios or other performance objectives. In addition, the Project would comply with all applicable federal, state, and local regulations and payment of DIFs. Therefore, impacts related to parks would be less than significant.

### Specific Plan – Ownership Area 2, Future Development Areas

The Ownership Area 2 is being evaluated only at a programmatic level, and there are no specific development proposals at this time. Development of Ownership Area 2 would add to the recreation impacts in the environment when Planning Areas 1 through 5, 7 through 11, and 14 through 16 are completed – similar to the discussion of Ownership Area 1 above. As discussed above, Project impacts concerning recreation would be less than significant. That is, the Project would provide for 11.28 acres of open-space parkland and non-recreational uses within Ownership Area 2 (2.9 acres per 1,000 residents) consistent with TOP 2050 Policy PR-1.6. Furthermore, the CenterPark Specific Plan land use designations within Ownership Area 2 are the same land use designations as contained in TOP 2050. Accordingly, no mitigation is required other than compliance with applicable plans, policies and programs, including the proposed Specific Plan and TOP 2050.

### The Ontario Plan 2050 Supplemental EIR Applicable Policies:

**Goal PR-1** A system of safe and accessible parks that meets the needs of the community.

**Policy PR-1.4** **Multi-family Residential Developments**. We require that new multi-family residential developments of five or more units provide recreational facilities or open space, in addition to paying adopted impact fees.

**Policy PR-1.5** **Acreage Standard.** We strive to provide 5 acres or parkland (public and private) per 1,000 residents.

**Policy PR-1.6** **Private Parks.** We expect development to provide a minimum of 2 acres of developed private park space per 1,000 residents.

**Policy PR-1.14:** **Multi-family Residential Developments.** We require that new multi-family residential developments of five or more units provide recreational facilities or open space, in addition to paying adopted impact fees.

### The Ontario Plan 2050 Supplemental EIR Applicable Mitigation Measures:

None.

### Conclusion

With regards to the issue area of Recreation, the following findings can be made:

1. No peculiar impacts to the Project or its site have been identified.
2. There are no potentially significant off-site and/or cumulative impacts which were not discussed by the TOP 2050 Supplemental EIR.
3. No substantial new information has been identified which results in an impact which is more severe than anticipated by the TOP 2050 Supplemental EIR.
4. No feasible mitigation measures contained within the TOP 2050 Supplemental EIR would be required.

## 4.17 Transportation

| Environmental Impact Issues | Peculiar Project Impact (*not analyzed in prior EIR and not substantially mitigated by the imposition of uniformly applied development policies or standards)* | Potentially Significant Offsite or Cumulative Impact not Discussed in Prior EIR | Substantially More Severe Impact based on Substantial New Information | No New Impact |
|---|---|---|---|---|
| **Would the project:** | | | | |
| **Criterion 1:** Conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities. | ☐ | ☐ | ☐ | ☒ |
| **Criterion 2:** Conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b). | ☐ | ☐ | ☐ | ☒ |
| **Criterion 3:** Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment). | ☐ | ☐ | ☐ | ☒ |
| **Criterion 4:** Result in inadequate emergency access. | ☐ | ☐ | ☐ | ☒ |

This section summarizes the Traffic Analysis and Vehicle Miles Traveled Analysis prepared by Urban Crossroads, Inc. (Urban Crossroads), dated March 2025 and November 2024 respectively, which are included as **Appendix I.** The Traffic Analysis includes a Level of Service (LOS) analysis. Please note that this additional information is provided for information purposes only, as vehicle delay is no longer considered a significant impact under CEQA pursuant to SB 743. Specifically, Public Resources Code (PRC) Section 21099(b)(2) states that: "Upon certification of the guidelines by the Secretary of the Natural Resources Agency pursuant to this section, automobile delay, as described solely by level of service or similar measures of vehicular capacity or traffic congestion shall not be considered a significant impact on the environment pursuant to this division, except in locations specifically identified in the guidelines, if any." (emphasis added). As summarized below, with respect to consistency with TOP 2050 level of service policies, with recommended improvements the Project's effects on operational LOS would be consistent with applicable local agency policies. Refer to **Appendix I** for a complete discussion of analysis methodology and findings.

### Summary of Impacts Identified in The Ontario Plan 2050 Supplemental EIR

The TOP 2050 Supplemental EIR determined that development resulting from buildout of TOP 2050 would result in less than significant impacts for conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities, and inadequate emergency access; result in a less than significant impact with mitigation incorporated for hazards due to a geometric design feature; and result in a significant and unavoidable impact for conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b).

As determined by the TOP 2050 Supplemental EIR, buildout of TOP 2050 would be inconsistent with CEQA Section 15064.3 as Vehicle Miles Traveled (VMT) would exceed the City average for VMT per service population. TOP 2050 would comply with TOP 2050 goals surrounding VMT reduction; however, as TOP 2050 does not adequately plan for increased VMT or alternative transportation methods, it would result in a significant and unavoidable impact.

### Project Specific-Impacts

#### Specific Plan – Ownership Area 1

**Criterion 1:** Would the project conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?

Project implementation within Ownership Area 1 would not conflict with the 2020-2045 SCAG RTP/ SCS as determined by the TOP 2050 Supplemental EIR, and transportation infrastructure would comply with City engineering standards to ensure safety and compatibility with existing infrastructure. More specifically, the Project's circulation network across both Ownership Areas would be designed consistently with the existing transportation system by adhering to the transportation guidelines set in the TOP 2050. The Project would comply with the City's DIF program which would require a payment of fees to ensure that the Project's impact would not significantly impact the regional circulation and/or arterial expansions planned by the City and County (i.e., Congestion Management Program). The payment of fees pursuant to the DIF program would also help the City keep pace with improvements associated with the projected population increase or other identified roadway deficiencies. As such, Project buildout within Ownership Area 1 would not increase hazards due to a design feature and impacts would be less than significant.

**Criterion 2:** Would the project conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b)?

Consistent with CEQA Guidelines Section 15064.3, the Project prepared a VMT Analysis (**Appendix I2**), which analyzes Project related VMT based on the San Bernardino County Transportation Analysis Model (SBTAM). The City and SBTAM model determined a significant impact regarding VMT would occur if the Project VMT per service population exceeds the Citywide average VMT per service population under General Plan buildout conditions or if the Project caused total daily VMT per service population within the City to be higher than the no project scenario under cumulative conditions. The VMT Analysis determined that the cumulative effect on VMT with buildout of the Project would not exceed the City impact threshold of 27.6 VMT per service population, as Project generated VMT would be approximately 16.0 VMT per service population. As such, the Project-generated VMT was estimated under baseline and buildout conditions and was found to be below the City's impact threshold. Therefore, a less than significant impact would occur regarding inconsistency with CEQA Guidelines Section 15064.3, and no mitigation is necessary.

**Criterion 3:** Would the project substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

The City has adopted roadway classification standards in TOP 2050 Policy M-1.1, provided below that include roadway design standards as part of TOP 2050, precluding the construction of any unsafe features. Because the Project land uses are consistent with TOP 2050, development of Ownership Area 1 was

accounted for in the environmental documentation for TOP 2050 (i.e., the TOP 2050 Supplemental EIR). Additionally, Project uses within Ownership Area 1 are within the maximum allowable FARs and densities in TOP 2050 Supplemental EIR. Therefore, the FAR and density of Ownership Area 1 are within the land use and zoning assumptions in TOP 2050 Supplemental EIR. Additionally, a Traffic Analysis was prepared that identifies intersection improvement recommendations, which are necessary to maintain LOS standards consistent with the TOP 2050 Supplemental EIR. This Traffic Analysis is included as **Appendix I1**. The Traffic Analysis evaluated traffic impacts on roadway segments and road queuing for existing conditions (year 2024), existing conditions plus the Project, opening year conditions (year 2034), and horizon year impacts (year 2050). Under existing conditions, one roadway segment, Euclid Avenue (SR-83) to Pine Avenue, operates at a deficient LOS E during PM peak hours, which is considered an unacceptable level of service. The Traffic Analysis identifies on-site circulation recommendations that would comply with the circulation recommendations found in TOP 2050. The City has created its own local DIF program to impose and collect fees from new residential, commercial, and industrial development for the purpose of funding roadways and intersections necessary to accommodate City growth as identified in the TOP 2050 Circulation Element. Recommended circulation improvements, consistent with the City's Roadway Classification Plan, and payment of fair share contribution fees would be conditioned by the City and would achieve City transportation policy standards. As such, these roadways would incorporate bicycle and pedestrian facilities consistent with policies described in the TOP 2050 Supplemental EIR, thereby supporting the City's goals for a multimodal transportation network. As impacts are cumulative with surrounding Projects in the City, payment of development impact fees effective January 2023 and fair share contributions would bring impacts to a less than significant impact.

**Criterion 4:** Would the project result in inadequate emergency access?

Implementation of the Project, inclusive of Ownership Area 1, would comply with all adopted emergency response plans, evacuation plans, and maintain adequate emergency access through construction and operation associated with buildout of TOP 2050. All future roadway and access improvements would comply with City engineering and fire department standards to maintain adequate circulation and access throughout the City. Therefore, Project implementation within Ownership Area 1 would have a less than significant impact regarding result in inadequate emergency access.

Additionally, Project construction within Ownership Area 1 would not require the partial or temporary closure of adjacent roadways, such as Edison Avenue, identified as an evacuation route for the City, and the Project site does not contain any emergency services that would be impacted.[32] Additionally, a review of emergency access is included as part of the City's Design Review process. Further, the Ontario Fire Department would review future development applications to ensure that adequate emergency accessibility is provided based on local and state guidance. As a result, the Project would not create new significant impacts than those analyzed and identified in the TOP 2050 Supplemental EIR. Based on the development assumptions for Ownership Area 1 under the TOP 2050 Supplemental EIR, Project implementation within Ownership Area 1 would be consistent with the anticipated land uses for Ownership Area 1 and would not generate unanticipated impacts. As such, impacts would not differ from

[32] City of Ontario. 2022. *The Ontario Plan 2050. Figure S-10, Evacuation Routes*. https://content.ontarioca.gov/sites/default/files/2024-12/Figure%20S-10%20Evacuation%20Sites.pdf. (accessed February 2025).

those identified in TOP 2050 Supplemental EIR and the Project with respect to Ownership Area 1 would result in a less than significant impact.

### Specific Plan – Ownership Area 2, Future Development Areas

The Ownership Area 2 is being evaluated only at a programmatic level, and there are no specific development proposals at this time. Development of Ownership Area 2 would add to the transportation impacts in the environment when Planning Areas 1 through 5, 7 through 11, and 14 through 16 are completed – similar to the discussion of Ownership Area 1 above. As discussed above, Project impacts affecting transportation would be less than significant. Furthermore, the CenterPark Specific Plan land use designations within Ownership Area 2 are the same land use designations as contained in TOP 2050. Accordingly, no mitigation is required other than compliance with applicable plans, policies and programs, including the proposed Specific Plan and TOP 2050.

### The Ontario Plan 2050 Supplemental EIR Applicable Policies:

**Policy M-1.2:** **Mitigation of Impacts.** We require development to mitigate its traffic impacts.

**Policy M-1.5:** **Level of Service.** Maintain a peak hour Level of Service (LOS) E or better at all intersections. Maintain Level of Service D or better on arterial streets in the City. Develop and maintain a list of locations where LOS E or LOS F are considered acceptable and would be exempt from this level of service policy. Considerations for LOS exemption include being restricted by environmental constraints, lacking available right-of-way, deterring an increase in VMT, or degrading other modes of travel (such as bicycle or pedestrian infrastructure).

**Policy M-1.6:** **Reduce Vehicle Miles Traveled.** We will strive to reduce VMT through a combination of land use, transportation projects, travel demand management strategies, and other trip reduction measures in coordination with development projects and public capital improvement projects.

**Policy M-2.1:** **Active Transportation.** We maintain our Active Transportation Master Plan to create a comprehensive system of on- and off-street bikeways and pedestrian facilities that are safe, comfortable, and accessible and connect residential areas, businesses, schools, parks, and other key destination points.

**Policy M-2.2:** **Bicycle System.** We provide off-street multipurpose trails and Class II bikeways as our preferred paths of travel and use the Class III for connectivity in constrained circumstances. When truck routes and bicycle facilities share a right-of-way, we prefer Class I or Class IV bicycle facilities. We require new development to include bicycle facilities, such as bicycle parking and secure storage areas.

**Policy M-2.3:** **Pedestrian Walkways.** We require streets to include sidewalks and visible crosswalks at major intersections where necessary to promote safe and comfortable mobility between residential areas, businesses, schools, parks, recreation areas, and other key destination points.

**Policy M-2.4:** **Network Opportunities.** We use public rights-of-way and easements such as, utility easements, levees, drainage corridors, road rights-of-way, medians, and other potential options to maintain and expand our bicycle and pedestrian network. In urban, mixed-use,

and transit-oriented Place Types, we encourage the use of underutilized public and private spaces to expand our public realm and improve pedestrian and bicycle connectivity.

**Policy M-3.2:** **Alternative Transit Facilities at New Development.** We require new development adjacent to an existing or planned transit stop to contribute to the creation of transit facilities, such as bus shelters, transit bays and turnouts, and bicycle facilities, such as secure storage areas.

**Policy M-3.3:** **Transit-Oriented Development.** We may provide additional development-related incentives to those inherent in the Land Use Plan for projects that promote transit use and reduce vehicle miles traveled.

### The Ontario Plan 2050 Supplemental EIR Applicable Mitigation Measures:

None.

### Conclusion

With regards to the issue area of Transportation, the following findings can be made:

1. No peculiar impacts to the Project or its site have been identified.
2. There are no potentially significant off-site and/or cumulative impacts which were not discussed by the TOP 2050 Supplemental EIR.
3. No substantial new information has been identified which results in an impact which is more severe than anticipated by the TOP 2050 Supplemental EIR.
4. No feasible mitigation measures contained within the TOP 2050 Supplemental EIR, would be required.

## 4.18 Tribal Cultural Resources

| Environmental Impact Issues | Peculiar Project Impact (*not analyzed in prior EIR and not substantially mitigated by the imposition of uniformly applied development policies or standards)* | Potentially Significant Offsite or Cumulative Impact not Discussed in Prior EIR | Substantially More Severe Impact based on Substantial New Information | No New Impact |
|---|---|---|---|---|
| **Except as provided in Public Resources Code Section 21099, would the project:** | | | | |
| **Criterion 1:** Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code § 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:<br>a. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in PRC Section 5020.1(k), or<br>b. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of PRC Section 5024.1. In applying the criteria set forth in subdivision (c) of PRC Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe. | ☐ | ☐ | ☐ | ☒ |

### Summary of Impacts Identified in The Ontario Plan 2050 Supplemental EIR

The TOP 2050 Supplemental EIR determined that development resulting from implementation of TOP 2050 would result in less than significant impacts with mitigation incorporated regarding tribal cultural resources (TCRs).

### Project Specific-Impacts

#### Specific Plan – Ownership Area 1 and Ownership Area 2 Future Development Areas

**Criterion 1:** Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code § 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:

a. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in PRC Section 5020.1(k), or

b. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of PRC Section 5024.1. In applying the criteria set forth in subdivision (c) of PRC Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.

TOP 2050, in consultation with local Native American Tribes, identifies potential areas of significance for TCRs. The Agua Caliente Band of Cahuilla Indians and Quechan Tribe of the Fort Yuma Reservation responded that the City is not within the tribe's traditional use area. The Gabrieleño Band of Mission Indians–Kizh Nation concurred with TOP 2050, and the San Manuel Band of Mission Indian stated that TOP 2050 may impact projects in Serrano ancestral territory and therefore is of interest to the tribe. Additionally, as the Project includes the adoption of a Specific Plan, SB 18 would apply. Therefore, the City has initiated government-to-government tribal consultation, pursuant to SB 18.

In accordance with SB 18, the City sent Tribal consultation letters to the Native American Tribes. The Gabrieleño Band of Mission Indians–Kizh Nation responded and has requested mitigation measures, in conformance with the mitigation requirements set forth in the TOP 2050 Supplemental EIR, be applied to the Project; refer to **MMs TCR-3** through **5**. lt. Additionally, the Morongo Band of Mission Indians responded and requested additional project-specific materials, including the Cultural Resources Assessment. Upon receipt of these materials from the City on September 14, 2025, representatives of the Morongo band of Mission Indians had no further comments on the Project and tribal consultation was concluded. No other responses have been received.

Future development as a result of the implementation of TOP 2050, including the Project, could include grading in portions of the City with sensitivity to TCRs. Grading and construction activities in undeveloped areas or redevelopment that require deeper soil excavation than in the past could potentially disturb TCRs. Therefore, future development could potentially unearth previously unknown/unrecorded TCRs. **MM TCR-2** would reduce potential impacts associated with TCRs inadvertent discoveries to a level that is less than significant by both TOP 2050 and the Project. Therefore, no significant unavoidable adverse impacts relating to TCRs remain. Project findings are consistent with those of TOP 2050.

### The Ontario Plan 2050 Supplemental EIR Applicable Policies:

**Policy CD4-1:** **Cultural Resource Management.** We update and maintain an inventory of historic sites and buildings, professional collections, artifacts, manuscripts, photographs, documents, maps, and other archives.

**Policy CD-4.2:** **Collaboration with Property Owners and Developers.** We educate and collaborate with property owners and developers to implement strategies and best practices that preserve the character of our historic buildings, streetscapes, and unique neighborhoods.

**Policy CD-4.3:** **Collaboration with Outside Agencies.** We pursue opportunities to team with other agencies, local organizations, and nonprofits in order to preserve and promote Ontario's heritage.

**Policy CD-4.6:** **Promotion of Public Involvement in Preservation.** We engage in programs to publicize and promote the City's and the public's involvement in preservation efforts.

**Policy CD-4.7:** **Public Outreach.** We provide opportunities for our residents to research and learn about the history of Ontario through the Planning Department, the Ontario Museum of History and Art, and the Robert E. Ellingwood Model Colony History Room.

### The Ontario Plan 2050 Supplemental EIR Applicable Mitigation Measures:

**MM 5-3** Upon receipt of an application for a proposed project subject to CEQA and is within the City's jurisdiction, the City's representative shall consult with the relevant tribe(s)' representative(s) to determine if the proposed project is within a culturally sensitive area to the tribe. If sufficient evidence is provided to reasonably ascertain that the site is within a [tribal] culturally sensitive area, an archaeologist shall prepare a cultural resources assessment. The findings of the cultural resources assessment shall be incorporated into the CEQA documentation. A copy of the report shall be forwarded to the tribe(s). If mitigation is recommended in the CEQA document, the procedure described in Mitigation Measure 5-4 shall be followed.

**MM 5-4** Prior to the issuance of grading permits for a proposed project for which the CEQA document defines cultural resource mitigation for potential tribal resources, the project applicant shall contact the designated tribe(s) to notify them of the grading, excavation, and monitoring program. The applicant shall coordinate with the City of Ontario and the tribal representative(s) to develop mitigation measures that address the designation, responsibilities, and participation of tribal monitors during grading, excavation, and ground-disturbing activities; scheduling; terms of compensation; and treatment and final disposition of any cultural resources, sacred sites, and human remains discovered on the site. The City of Ontario shall be the final arbiter of the conditions for projects within the City's jurisdiction.

**MM TCR-1** **Tribal Cultural Resources Monitoring.** The project archaeologist, in consultation with interested tribes, the developer, and the City of Ontario, shall develop an archaeological monitoring plan (AMP) to address the details, timing, and responsibility of archaeological and cultural activities that will occur on the project site. Details in the AMP shall include:

1. Project-related ground disturbance (including, but not limited to, brush clearing, grading, trenching, etc.) and development scheduling;
2. The development of a rotating or simultaneous schedule in coordination with the developer and the project archeologist for designated Native American Tribal Monitors from the consulting tribes during grading, excavation and ground disturbing activities on the site: including the scheduling, safety requirements, duties, scope of work, and Native American Tribal Monitors' authority to stop and redirect grading activities in coordination with all project archaeologists (if the tribes cannot come to an agreement on the rotating or simultaneous schedule of tribal monitoring, the Native American Heritage Commission shall designate the schedule for the onsite Native American Tribal Monitor for the proposed project);
3. The protocols and stipulations that the developer, City, Tribes, and project archaeologist will follow in the event of inadvertent cultural resources discoveries,

including any newly discovered cultural resource deposits that shall be subject to a cultural resources evaluation.

At least 30 days prior to application for a grading permit and before any brush clearance, grading, excavation, and/or ground disturbing activities on the site, the developer shall retain a tribal cultural monitor to monitor all ground-disturbing activities in an effort to identify any unknown archaeological resources.

Pursuant to the AMP, a tribal monitor from the consulting tribe shall be present during the initial grading activities. If tribal resources are found during grubbing activities, the tribal monitoring shall be present during site grading activities.

**MM TCR-2** **Treatment and Disposition of Cultural Resources.** In the event that Native American cultural resources are inadvertently discovered during the course of any ground-disturbing activities, including but not limited to brush clearance, grading, trenching, etc., for the proposed project, the following procedures will be carried out for treatment and disposition of the discoveries:

1. Temporary Curation and Storage: During the course of construction, all discovered resources shall be temporarily curated in a secure location on-site or at the offices of the project archaeologist. The removal of any artifacts from the project site will need to be thoroughly inventoried with tribal monitor oversight of the process;
2. Treatment and Final Disposition: The landowner(s) shall relinquish ownership of all cultural resources, including sacred items, burial goods, and all archaeological artifacts and nonhuman remains as part of the required mitigation for impacts to cultural resources. The applicant shall relinquish the artifacts through one or more of the following methods and provide the City of Ontario with evidence of same:
    a. Accommodate the process for on-site reburial of the discovered items with the consulting Native American tribes or bands. This shall include measures and provisions to protect the future reburial area from any future impacts. Reburial shall not occur until all cataloging, basic analysis, other analyses as recommended by the project archaeologist and approved by consulting tribes, and basic recordation have been completed; all documentation should be at a level of standard professional practice to allow the writing of a report of professional quality;
    b. A curation agreement with an appropriate qualified repository in San Bernardino County that meets federal standards per 36 CFR Part 79, and therefore the resource would be professionally curated and made available to other archaeologists/researchers for further study. The collections and associated records shall be transferred, including title, to an appropriate curation facility in San Bernardino County, to be accompanied by payment of the fees necessary for permanent curation;
    c. For purposes of conflict resolution, if more than one Native American tribe or band is involved with the project and cannot come to an agreement as to the

disposition of cultural materials, materials shall be curated at the San Bernardino County Museum by default; and

d. At the completion of grading, excavation, and ground-disturbing activities on the site, a Phase IV Monitoring Report shall be submitted to the City documenting monitoring activities conducted by the project archaeologist and Native Tribal Monitors within 60 days of completion of grading. This report shall document the impacts to the known resources on the property; describe how each mitigation measure was fulfilled; document the type of cultural resources recovered and the disposition of such resources; provide evidence of the required cultural sensitivity training for the construction staff held during the required pre-grade meeting; and, in a confidential appendix, include the daily/weekly monitoring notes from the archaeologist. All reports produced will be submitted to the City, County Museum, and consulting tribes.

In compliance with state law, the following measures, requested for inclusion by the Consulting Tribes (described above), are intended to implement the policies and mitigation requirements set forth in the TOP 2050 Supplemental EIR:

**MM TCR-3** Retain a Native American Monitor Prior to Commencement of Ground-Disturbing Activities

a. The project applicant/lead agency shall retain a Native American Monitor from or approved by the Gabrieleño Band of Mission Indians – Kizh Nation. The monitor shall be retained prior to the commencement of any "ground-disturbing activity" for the subject project at all project locations (i.e., both on-site and any off-site locations that are included in the project description/definition and/or required in connection with the project, such as public improvement work). "Ground-disturbing activity" shall include, but is not limited to, demolition, pavement removal, potholing, auguring, grubbing, tree removal, boring, grading, excavation, drilling, and trenching.

b. A copy of the executed monitoring agreement shall be submitted to the lead agency prior to the earlier of the commencement of any ground-disturbing activity, or the issuance of any permit necessary to commence a ground-disturbing activity.

c. The monitor will complete daily monitoring logs that will provide descriptions of the relevant ground-disturbing activities, the type of construction activities performed, locations of ground-disturbing activities, soil types, cultural-related materials, and any other facts, conditions, materials, or discoveries of significance to the Tribe. Monitor logs will identify and describe any discovered TCRs, including but not limited to, Native American cultural and historical artifacts, remains, places of significance, etc., (collectively, tribal cultural resources, or "TCR"), as well as any discovered Native American (ancestral) human remains and burial goods. Copies of monitor logs will be provided to the project applicant/lead agency upon written request to the Tribe.

d. On-site tribal monitoring shall conclude upon the latter of the following (1) written confirmation to the Kizh from a designated point of contact for the project

applicant/lead agency that all ground-disturbing activities and phases that may involve ground-disturbing activities on the project site or in connection with the project are complete; or (2) a determination and written notification by the Kizh to the project applicant/lead agency that no future, planned construction activity and/or development/construction phase at the project site possesses the potential to impact Kizh TCRs.

MM TCR-4 Unanticipated Discovery of Tribal Cultural Resource Objects (Non-Funerary/Non-Ceremonial)

a. Upon discovery of any TCRs, all construction activities in the immediate vicinity of the discovery shall cease (i.e., not less than the surrounding 50 feet) and shall not resume until the discovered TCR has been fully assessed by the Kizh monitor and/or Kizh archaeologist. The Kizh will recover and retain all discovered TCRs in the form and/or manner the Tribe deems appropriate, in the Tribe's sole discretion, and for any purpose the Tribe deems appropriate, including for educational, cultural and/or historic purposes.

**MM TCR-5:** Unanticipated Discovery of Human Remains and Associated Funerary or Ceremonial Objects.

a. Native American human remains are defined in PRC 5097.98 (d)(1) as an inhumation or cremation, and in any state of decomposition or skeletal completeness. Funerary objects, called associated grave goods in Public Resources Code Section 5097.98, are also to be treated according to this statute.

b. If Native American human remains and/or grave goods are discovered or recognized on the project site, then Public Resource Code 5097.9 as well as Health and Safety Code Section 7050.5 shall be followed.

c. Human remains and grave/burial goods shall be treated alike per California Public Resources Code section 5097.98(d)(1) and (2).

d. Preservation in place (i.e., avoidance) is the preferred manner of treatment for discovered human remains and/or burial goods.

e. Any discovery of human remains/burial goods shall be kept confidential to prevent further disturbance.

## Conclusion

With regards to the issue area of TCRs, the following findings can be made:

1. No peculiar impacts to the Project or its site have been identified.
2. There are no potentially significant off-site and/or cumulative impacts which were not discussed by the TOP 2050 Supplemental EIR.
3. No substantial new information has been identified which results in an impact which is more severe than anticipated by the TOP 2050 Supplemental EIR.

4. Feasible mitigation measures contained within or consistent with the TOP 2050 Supplemental EIR (MMs 5-3, 5-4, TCR-1, and TCR-2), would be applied to the Project.

## 4.19 Utilities and Service Systems

| Environmental Impact Issues | Peculiar Project Impact (*not analyzed in prior EIR and not substantially mitigated by the imposition of uniformly applied development policies or standards)* | Potentially Significant Offsite or Cumulative Impact not Discussed in Prior EIR | Substantially More Severe Impact based on Substantial New Information | No New Impact |
|---|---|---|---|---|
| **Would the project:** | | | | |
| **Criterion 1:** Require or result in the relocation or construction of new or expanded water or wastewater treatment or stormwater drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects. | ☐ | ☐ | ☐ | ☒ |
| **Criterion 2:** Have insufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years. | ☐ | ☐ | ☐ | ☒ |
| **Criterion 3:** Result in a determination by the wastewater treatment provider which serves, or may serve, the project that it has inadequate capacity to serve the project's projected demand in addition to the provider's existing commitments. | ☐ | ☐ | ☐ | ☒ |
| **Criterion 4:** Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals. | ☐ | ☐ | ☐ | ☒ |
| **Criterion 5:** Comply with Federal, State, and local management and reduction statutes and regulations related to solid waste. | ☐ | ☐ | ☐ | ☒ |

This section summarizes the Water Supply Assessment prepared by Albert A. Webb Associates (Webb; December 2024), which is included as **Appendix J**.

### Summary of Impacts Identified in The Ontario Plan 2050 Supplemental EIR

The TOP 2050 Supplemental EIR determined that impacts resulting from buildout of TOP 2050 would be less than significant with respect to utilities and service systems.

## Project Specific-Impacts

### Specific Plan – Ownership Area 1

**Criterion 1:** Would the project require or result in the relocation or construction of new or expanded water or wastewater treatment or stormwater drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?

The City, and thus the Project site inclusive of both Ownership Areas 1 and 2, are within the service area for SCE and SoCalGas. Developments accommodated under the TOP 2050, such as the Project, would be required to comply with the current and future updates to the Building Energy Efficiency Standards and CALGreen, which would contribute to reducing the electricity and natural gas demands in the City.

The Project would include connections to existing facilities on-site. Ownership Area 1 would include development of 3,095 residential units on currently partially developed and disturbed land. Project implementation would result in an increase in demand for water, sewer, trash, and energy services. The Project would be consistent with the existing land use designation of the Project site. As such, the proposed development was anticipated upon approval of the TOP 2050 Supplemental EIR, and it is anticipated that the Project would be adequately served by existing providers. The Project would be consistent with the findings of the TOP 2050 Supplemental EIR.

The TOP 2050 Supplemental EIR found that potential future development as part of TOP 2050, including, as discussed here, from the Project, and the change in land uses could result in an increase in impervious surfaces, could result in an increase in stormwater runoff, higher peak discharges to drainage channels, and the potential to cause nuisance flooding in areas without adequate drainage facilities. All projects in the City are required to install stormwater treatment measures to ensure that post-project runoff does not exceed pre-project runoff for the two-year, 24-hour storm event. This would also minimize the potential for increases in peak runoff from the Project. Per the TOP 2050 Supplemental EIR, TOP 2050 **Policies ER-1.6, ER-1.7, S-2.2,** and **S-2.5** direct the City to incorporate strategies to capture, slow and treat runoff and reduce the downgradient potential for flooding. Compliance with these policies will ultimately reduce discharge volumes to the storm drain system. **Policy S-2.1** requires hydrological studies prepared by a State-certified engineer when development is located in a 100-year or 500-year floodplain to assess the impact that new development will have on the flooding potential of existing downgradient developments. Also, **LU-1.3** requires adequate infrastructure and services for all development and **Policy LU-4.3** requires that the necessary infrastructure and services be in place prior to or concurrent with new development.[33] Consistent with TOP 2050, the Project would also adhere to the aforementioned TOP 2050 policies. Future development under TOP 2050, including the Project, would be required to comply with the City's storm drain policies and MS4 permit, and prepare hydrology reports, drainage plans, and WQMPs. These requirements would minimize the amount of stormwater runoff from potential future development.

[33] Ibid. Page 5.19-43.

**Criterion 2:** Would the project have insufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years?

The City would provide water service to the TOP 2050 plan area and the Project, inclusive of Ownership Area 1. Total water demand associated with TOP 2050 would be 78,128-acre feet per year (afy). Adherence to TOP 2050 policies **LU-1.3** and **LU-4.3** would ensure that the infrastructure and services for all development are adequate and that the necessary infrastructure and services are in place prior to or concurrent with development. The goal of **Policy ER-1.1** is to increase local water supplies to reduce dependence on imported water. **Policy ER-1.2** states the water supply and quality should match the appropriate use and **Policy ER-1.3** requires conservative strategies that reduce water usage. **Policy ER-1.4** requires that water supply and demands be balanced, and **Policy ER-1.5** relates to water quality protection, pollution prevention, and existing contamination and remediation. **Policy S-3.7** requires monitoring the water supply system to ensure that there are adequate supplies for firefighting needs. Consistent with TOP 2050, the Project would also adhere to the aforementioned TOP 2050 policies related to water supply. That is, the Project's water supply system has been designed to be consistent with the City's Water Master Plan. In addition, State requirements and City policies and code requirements would result in enhanced water efficiency and conservation. Applying these measures to the TOP 2050 water demand estimates would result in total water demand below the projections in the IEUA's 2020 Urban Water Management Plan (UWMP) for year 2045. Therefore, there would be sufficient water supplies to meet the demand for TOP 2050 buildout and the Project within Ownership Area 1.[34] Project impacts with respect to Ownership Area 1 would be less than significant and no peculiar impact would occur.

**Criterion 3:** Would the project result in a determination by the wastewater treatment provider which serves, or may serve, the project that it has inadequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

The TOP 2050 Supplemental EIR found that the City's wastewater collection system is adequate to convey the additional 2.55 million gallons per day (mgd) that would occur with implementation of TOP 2050. Sewer infrastructure would be able to accommodate sewer flows associated with TOP 2050. This CIP would serve to benefit development in the area, including the Project. Wastewater treatment services would be provided by IEUA which has two facilities in the City: Recycling Plant (RP)-1 and RP-5. 2040 future capacity of these two facilities is projected at 74 mgd. The wastewater flow rate for TOP 2050 buildout, inclusive of the Project, is 37.1 mgd. The additional flow associated with TOP 2050 would not exceed IEUA wastewater treatment capacity. Even with future increases in population and wastewater flows in the service area, IEUA could continue to provide wastewater treatment to all its customers.[35] Therefore, impacts for Ownership Area 1 would be less than significant and no peculiar impact would occur.

[34] Ibid. Page 5.19-30 through –31.
[35] City of Ontario. 2022. TOP 2050 Supplemental EIR. Page 5.19-11 https://content.ontarioca.gov/sites/default/files/2024-12/Final_DraftSEIR_TOP2050.pdf (accessed February 2025).

**Criterion 4:** Would the project generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals? *and*

**Criterion 5:** Would the project comply with Federal, State, and local management and reduction statutes and regulations related to solid waste?

Buildout under TOP 2050 would generate an additional 87,248 tons/year of solid waste from residents, but this would be offset by a reduction of 42,044 tons/year due to a decrease in the number of employees. This would result in a net increase in solid waste generation at buildout of 45,204 tons/year. This equates to approximately 151 tons/day (assuming 300 disposal days/year). The combined excess capacity of the Badlands Sanitary Landfill and the El Sobrante Landfill is 7,046 tons/day. Therefore, these landfills can the additional 151 tons/day from TOP 2050, which is about 2 percent of the landfills' excess capacity, and both landfills have closure dates beyond the year 2050.[36] As the Project solid waste generation falls within that estimated for buildout of TOP 2050, the excess capacity of the landfills can accommodate the waste generated by Project land uses within Ownership Area 1. TOP 2050 and the Project would also adhere to Assembly Bill 341, which requires recycling for mixed-use land uses. Finally, TOP 2050 and the Project, inclusive of Ownership Area 1, would adhere to **Policies ER-2.1, ER-2.2,** and **ER-2.3** which describe waste diversion requirements, hazardous and electronic waste disposal, and purchasing of products made from recycled materials that would ensure that the City has a cost-effective integrated waste management system that meets or exceeds state and federal recycling and waste diversion mandates. Therefore, impacts within Ownership Area 1 would be less than significant and no peculiar impact would occur.

### Specific Plan – Ownership Area 2, Future Development Areas

The Ownership Area 2 is being evaluated only at a programmatic level, and there are no specific development proposals at this time. Development of Ownership Area 2 would add to the utilities and service system impacts in the environment when Planning Areas 1 through 5, 7 through 11, and 14 through 16 are completed – similar to the discussion of Ownership Area 1 above. While the structures and operations associated with Ownership Area 2 would increase utility and service system impacts of the site, impacts affecting utility and service systems would be less than significant, as described above. Furthermore, the CenterPark Specific Plan land use designations within Ownership Area 2 are the same land use designations as contained in TOP 2050. Accordingly, no mitigation is required other than compliance with applicable plans, policies and programs, including the proposed Specific Plan and TOP 2050.

## The Ontario Plan 2050 Supplemental EIR Applicable Policies:

**Policy ER-1.1:** **Local Water Supply**. We increase local water supplies to reduce our dependence on imported water. New and redevelopment projects are aligned with our available water supply and/or to enhance our available water supply.

**Policy ER-1.2:** **Matching Supply to Use**. We match water supply and quality to the appropriate use.

[36] Ibid. Page 5.19-53.

**Policy ER-1.3:** **Conservation and Sustainable Water Supply**. We work with regional water providers and users to conserve water and ensure sustainable local water supplies as more frequent droughts reduce long term local and regional water availability.

**Policy ER-1.4:** **Supply-Demand Balance**. We require that available water supply and demands be balanced.

**Policy ER-1.5:** **Water Resources Management.** Environmental justice areas are prioritized as we coordinate with local agencies to protect water quality, prevent pollution, address existing contamination, and remediate contaminated surface water and groundwater.

**Policy ER-1-6:** **Urban Runoff Quantity.** We encourage the use of low impact development strategies, including green infrastructure, to intercept runoff, slow the discharge rate, increase infiltration and ultimately reduce discharge volumes to traditional storm drain systems.

**Policy ER-1.8:** **Wastewater Management**. We require the management of wastewater discharge and collection consistent with waste discharge requirements adopted by the Regional Water Quality Control Board.

**Policy ER-2-1:** **Waste Diversion.** We shall meet or exceed AB 939 requirements.

**Policy ER-2-2:** **Hazardous and Electronic Wastes.** We prohibit the disposal of hazardous and electronic waste into the municipal waste stream pursuant to state law.

**Policy ER-2-3:** **Purchase Products Made from Recycled Materials.** We purchase recycled-content products where it is cost-effective.

**Policy S-2-1:** **Entitlement and Permitting Process.** We require hydrological studies prepared by a State-certified engineer when new development is located in a 100-year or 500-year floodplain to assess the impact that the new development will have on the flooding potential of existing development down-gradient.

**Policy S-2-2:** **Floodplain Mapping:** We require any new development partially or entirely in 100-year flood zones to provide detailed floodplain mapping for 100- and 200-year storm events as part of the development approval process.

**Policy S-2-5:** **Stormwater Management.** We maintain the storm drain system to convey a 100-year storm, when feasible, and encourage environmental site design practices to minimize flooding and increase groundwater recharge, including natural drainage, green infrastructure, and permeable ground surfaces.

**Policy S-2-7:** **Collaboration Between Agencies.** Collaborate with the San Bernardino County Flood Control District and other state and federal agencies to maintain flood-control infrastructure to minimize flood damage.

**Policy S-3.7:** **Water Supply and System Redundancy.** We monitor our water system to manage and ensure adequate firefighting water supplies.

**Policy LU-1.3:** **Adequate Capacity**. We require adequate infrastructure and services for all development.

**Policy LU-4.3:** **Infrastructure Timing**. We require that the necessary infrastructure and services be in place prior to or concurrently with development.

**Policy LU-4.4:** **Shared Infrastructure**. We encourage and facilitate the use of shared infrastructure (including shared or managed parking) in urban, mixed use, and transit-oriented Place Types.

### The Ontario Plan 2050 Supplemental EIR Applicable Mitigation Measures:

None.

### Conclusion

With regards to the issue area of Utilities and Service Systems, the following findings can be made:

1. No peculiar impacts to the Project or its site have been identified.
2. There are no potentially significant off-site and/or cumulative impacts which were not discussed by the TOP 2050 Supplemental EIR.
3. No substantial new information has been identified which results in an impact which is more severe than anticipated by the TOP 2050 Supplemental EIR.
4. No feasible mitigation measures contained within the TOP 2050 Supplemental EIR, would be required.

# 4.20 Wildfire

| Environmental Impact Issues | Peculiar Project Impact (*not analyzed in prior EIR and not substantially mitigated by the imposition of uniformly applied development policies or standards)* | Potentially Significant Offsite or Cumulative Impact not Discussed in Prior EIR | Substantially More Severe Impact based on Substantial New Information | No New Impact |

| **Criterion 1:** Substantially impair an adopted emergency response plan or emergency evacuation plan. | ☐ | ☐ | ☐ | ☒ |
| **Criterion 2:** Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire. | ☐ | ☐ | ☐ | ☒ |
| **Criterion 3:** Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the Environment. | ☐ | ☐ | ☐ | ☒ |
| **Criterion 4:** Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes. | ☐ | ☐ | ☐ | ☒ |

### Summary of Impacts Identified in The Ontario Plan 2050 Supplemental EIR

The TOP 2050 Supplemental EIR determined that impacts resulting from buildout of TOP 2050 would be less than significant with respect to wildfire.

### Project Specific-Impacts

#### Specific Plan – Ownership Area 1

**Criterion 1:** Would the project substantially impair an adopted emergency response plan or emergency evacuation plan?

Refer to **Section 4.9, Hazards and Hazardous Materials** and **Section 4.17, Transportation** for further discussion relating to emergency access and evacuation plans. The Project impact regarding emergency response would be less than significant. As a result, the Project's impacts for Ownership Area 1 are within the limit of impacts identified in the TOP 2050 Supplemental EIR. There is no peculiar impact and no mitigation is required.

**Criterion 2:** Would the project, due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?

With regard to wildfire risk and the exposure of people/structures to risks associated with wildfire, TOP 2050 Supplemental EIR found that the City is outside of the State Responsibility Area (SRA), and CAL FIRE determined that the City contains no areas subject to very high wildfire risk. Because the Project land uses are consistent with TOP 2050, development of Ownership Area 1 was accounted for in the environmental documentation for TOP 2050 (i.e., the TOP 2050 Supplemental EIR). There is no peculiar impact and no mitigation is required.

**Criterion 3:** Would the project require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the Environment?

Per TOP 2050 Supplemental EIR, substantial improvements in transportation infrastructure are planned to accommodate the increase in population in the City should an emergency occur. The City has adopted roadway classification standards in **Policy M-1.1** (see below) that include roadway design standards as part of TOP 2050, precluding the construction of any unsafe features. Furthermore, emergency access would be considered during the City's Design Review process, and the Ontario Fire Department reviews development applications to ensure the provision of adequate emergency access based on local and state guidance. The Project, too, would be consistent with **Policy M 1.1**. That is, the Project would undergo the City's Design Review process and review by the OFD to ensure compliance with federal, state, and local design and safety standards. Additionally, the Project's Specific Plan has been designed consistent with the City's Master Plan of Streets and Highways.

The City's 2023 Local Hazard Mitigation Plan (LHMP) identified a mitigation action to continue to reduce fire hazards in the City.[37] Said action, through code enforcement, is to enforce the weed abatement program to reduce fuels available to burn. Therefore, the Project, inclusive of Ownership Area 1, would comply with LHMP Mitigation Action 6.02 for the reduction of fire hazards in the City (Ontario MC Section 5-22.02). Both TOP 2050 and the Project would be consistent with this action and the LHMP. No peculiar impacts would occur.

**Criterion 4:** Would the project expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?

Overall, with adherence to building practices and resources such as the LHMP, California Fire Code, and CAL FIRE's Strategic Fire Plan, among others, development associated with TOP 2050 and the Project would not exacerbate risk or result in post-wildfire hazards (i.e., landslides, mudflows, flooding, etc.). In addition, as required in the TOP 2050, the Project would adhere to the policies below to prevent wildfire hazards. As with TOP 2050, Project impacts with respect to Ownership Area 1 would be less than significant with respect to wildfire and no mitigation is necessary. Project buildout within Ownership

[37] City of Ontario. 2023. *Local Hazard Mitigation Plan*. Page 145. https://www.ontarioca.gov/residents/health-safety/emergency-preparedness/local-hazard-mitigation-plan (accessed February 2025).

Area 1 would be consistent with the findings of the TOP 2050 Supplemental EIR. No peculiar impacts would occur.

### Specific Plan – Ownership Area 2, Future Development Areas

The Ownership Area 2 is being evaluated only at a programmatic level, and there are no specific development proposals at this time. Development of Ownership Area 2 would add to the wildfire impacts in the environment when Planning Areas 1 through 5, 7 through 11, and 14 through 16 are completed – similar to the discussion of Ownership Area 1 above. As discussed above, Project impacts regarding wildfire would be less than significant. Furthermore, the CenterPark Specific Plan land use designations within Ownership Area 2 are the same land use designations as contained in TOP 2050. Accordingly, no mitigation is required other than compliance with applicable plans, policies and programs, including the proposed Specific Plan and TOP 2050.

### The Ontario Plan 2050 Supplemental EIR Applicable Policies:

**Policy M-1.1:** **Roadway Design and Maintenance.** We require our roadways to: 1) Comply with federal, state, and local design and safety standards; 2) Meet the needs of multiple transportation modes and users; 3) Handle the capacity envisioned in the City of Ontario Master Plan of Streets and Highways; 4) Be maintained in accordance with best practices; 5) Be compatible with the streetscape and surrounding land uses; and 6) Promote the efficient flow of all modes of traffic through the implementation of intelligent transportation systems and travel demand management strategies.

**Policy S-3.8:** **Fire Prevention through Environmental Design.** We require new development to incorporate fire prevention considerations in the design of streetscapes, sites, open spaces, and buildings.

**Policy CD-2.8:** **Safe Design.** We incorporate defensible space design into new and existing developments to ensure the maximum safe travel and visibility on pathways, corridors, and open space and at building entrances and parking areas by avoiding physically and visually isolated spaces, maintaining visibility and accessibility, and using lighting.

### The Ontario Plan 2050 Supplemental EIR Applicable Mitigation Measures:

None.

### Conclusion

With regards to the issue area of Wildfire, the following findings can be made:

1. No peculiar impacts to the Project or its site have been identified.
2. There are no potentially significant off-site and/or cumulative impacts which were not discussed by the TOP 2050 Supplemental EIR.
3. No substantial new information has been identified which results in an impact which is more severe than anticipated by the TOP 2050 Supplemental EIR.

4. No feasible mitigation measures contained within the TOP 2050 Supplemental EIR would be required.

## 4.21 Mandatory Findings of Significance

| Environmental Impact Issues | Peculiar Project Impact (*not analyzed in prior EIR and not substantially mitigated by the imposition of uniformly applied development policies or standards)* | Potentially Significant Offsite or Cumulative Impact not Discussed in Prior EIR | Substantially More Severe Impact based on Substantial New Information | No New Impact |
|---|---|---|---|---|
| **Except as provided in Public Resources Code Section 21099, would the project:** | | | | |
| **Criterion 1:** Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory. | ☒ | ☐ | ☐ | ☐ |
| **Criterion 2:** Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.). | ☐ | ☐ | ☐ | ☒ |
| **Criterion 3:** Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly? | ☐ | ☐ | ☐ | ☒ |

A finding of significance is determined if a project "has the potential to substantially degrade the quality of the environment." In practice, this is the same standard as a significant effect on the environment, which is defined in CEQA Guidelines Section 15382 as "a substantial or potentially adverse change in any of the physical conditions within the area affected by the project including land, air, water, minerals, flora, fauna, ambient noise, and objects of historic or aesthetic significance."

TOP 2050 relies on the findings of the original TOP 2050 and incorporates its certified EIR by reference in the TOP 2050 Supplemental EIR. TOP 2050 designated the Project site land use as Mixed Use, Medium Density Residential, and Open Space, subject to PUD at City's discretion. The Project would include the development of residential buildings and associated site improvements, which is consistent with the current TOP 2050 land use designation for the Project site.

The TOP 2050 Supplemental EIR in its entirety addresses and discloses all known potential environmental effects associated with the development of TOP 2050 including direct, indirect, and cumulative impacts in the following resource areas:

- Aesthetics
- Agriculture and Forestry Resources
- Air Quality
- Biological Resources
- Cultural Resources
- Energy
- Geology and Soils
- Greenhouse Gas Emissions
- Hazards and Hazardous Materials
- Hydrology and Water Quality
- Land Use and Planning
- Mineral Resources
- Noise
- Population and Housing
- Public Services
- Recreation
- Transportation
- Tribal Cultural Resources
- Utilities and Service Systems
- Wildfire

A summary of all potential environmental impacts, level of significance and mitigation measures is provided in **Section 4: Environmental Evaluation**.

**Criterion 1:** Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?

Endemic and endangered animals within California and the Project's potential effect on those species are fully discussed in **Section 4.4: Biological Resources**. The section found that implementation of the Project would result in peculiar impacts to biological resources compared to the TOP 2050 Supplemental EIR. Potential impacts to biological resources would be reduced following implementation of recommended Mitigation Measures **MM BIO-1** through **MM BIO-6**. However, impacts to biological resources within Ownership Area 2 are unable to be reduced to a less than significant level, lacking adequate analysis of these resources by the TOP 2050 Supplemental EIR. Therefore, the Project would be inconsistent with the analysis of the TOP 2050 Supplemental EIR in regard to historical resources and the Project would result in new Project-specific effects that are peculiar to the Project and for which the TOP 2050 Supplemental EIR failed to analyze as significant effects.

**Section 4.5: Cultural Resources** of the TOP 2050 Supplemental EIR analyzed the potential historic and prehistoric resource impacts that could occur due to the implementation of TOP 2050 and determined that impacts associated TOP 2050 could potentially significantly impact historical resources categorized under the Development Code as Tier III with implementation of TOP 2050 Land Use Plan. The TOP 2050 Supplemental EIR also determined that future grading and construction activities of undeveloped areas or redevelopment that requires more intensive soil excavation than in the past could potentially cause the disturbance of archeological resources and could potentially unearth previously unrecorded

resources. Potential impacts to historical resources would be reduced following implementation of TOP 2050 Supplemental EIR **MM 5-1** and recommended Mitigation Measures **MM CUL-1** through **MM CUL-7**. However, impacts to Tier II historical resources are unable to be reduced to a less than significant level, lacking adequate analysis of these resources by the TOP 2050 Supplemental EIR. Therefore, the Project would be inconsistent with the analysis of the TOP 2050 Supplemental EIR in regard to historical resources and the Project would result in new Project-specific effects that are peculiar to the Project and for which the Top 2050 Supplemental EIR failed to analyze as significant effects.

Finally, the TOP 2050 Supplemental EIR determined that a less than significant would occur on human remains. As a result of research and field efforts conducted for the Project, no archaeological or historic built environment resources were identified within the Project site. Furthermore, the Project site maintains a low potential for intact buried archaeological resources due to the extent of previous development. However, although no impacts to archaeological or human remains are anticipated to occur from development of the Project site, it is recommended that the Project conditions include language related to inadvertent discoveries in the rare case that such a discovery occurs during Project implementation.

**Section 4.18: Tribal Cultural Resources** of the TOP 2050 Supplemental EIR analyzed the potential prehistoric resource impacts that could occur due to the implementation of TOP 2050 and determined that future grading and construction activities of undeveloped areas or redevelopment that requires more intensive soil excavation than in the past could potentially cause the disturbance of archeological resources and could potentially unearth previously unrecorded resources. **MM TCR-2** would reduce potential impacts associated with TCRs inadvertent discoveries to a level that is less than significant by both TOP 2050 and the Project. Therefore, no significant unavoidable adverse impacts relating to TCRs remain. Project findings are consistent with those of TOP 2050.

Ownership Area 1 of the Project site would contain 3,095 residential units and be consistent with TOP 2050 land use designations. The Project site has been previously disturbed. Utility and infrastructure improvements are present within and adjacent to the Project site. The Project would connect to existing utility infrastructure in adjacent roadways to allow for the use of resources such as electricity and water, and potentially natural gas. The environmental impacts associated with the facility improvements associated with the proposed Project have been analyzed in **Section 4.1, Aesthetics** through **Section 4.20, Wildfire**, above. Impacts identified in these sections included no peculiar impacts to the Project or its site; no potentially significant off-site and/or cumulative impacts which were not discussed by the TOP 2050 Supplemental EIR; and no substantial new information has been identified which results in an impact which is more severe than anticipated by the TOP 2050 Supplemental EIR. These impacts were not associated with the construction or operation of new or expanded facilities that may be required for the Project. Further, the Project would not require the expansion of utility facilities such as water treatment plants or landfills. Adequate capacity was concluded for each of those facilities.

**Criterion 2:** Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.).

CEQA Guidelines Section 15065(a)(3) defines "cumulatively considerable" to mean that "the incremental effects of an individual project are significant when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects." Cumulative impacts are addressed for each of the environmental topics listed above in the TOP 2050 Supplemental EIR (https://www.ontarioca.gov/government/community-development/planning/ontario-plan#environmental-impact-report).

**Criterion 3:** Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?

As required by CEQA Guidelines Section 15065(a)(4), "A lead agency shall find that a project may have a significant effect on the environment and thereby require an EIR to be prepared for the project where there is substantial evidence, in light of the whole record, that any of the following conditions may occur: the environmental effects of a project will cause substantial adverse effects on human beings, either directly or indirectly." Under this standard, a change to the physical environment that might otherwise be minor must be treated as significant if people would be significantly affected. This standard relates to adverse changes to the environment of human beings generally, and not to effects on particular individuals. While changes to the environment that could directly or indirectly affect human beings would be possible in all of the CEQA issue areas previously listed, those that could directly affect human beings include aesthetics, air quality, geology and soils, hazards and hazardous materials, hydrology and water quality, noise, land use and planning, public services and utilities, transportation, water resources, wildfire hazards, and climate change, all of which are addressed in **Sections 4.1** through **4.20**; refer to Table of Contents for specific section numbers. The Project has the potential to create impacts that could cause adverse effects on human beings. The majority of these effects are created during the construction phase of the Project and would be temporary in nature and would mostly occur over the relatively short-term construction phase. Direct impacts to humans during the construction phase as well as effects associated with operation of the Project site would be less than significant or would be mitigated to less than significant levels. Mitigation measures from TOP 2050 Supplemental EIR used for the potential impacts of the Project are detailed in **Sections 4.1** through **4.20** of this memorandum.

# 1. Introduction

## 1.1 PURPOSE OF MITIGATION MONITORING AND REPORTING PROGRAM

This Mitigation Monitoring and Reporting Program (MMRP) has been developed to provide a vehicle by which to monitor mitigation measures and conditions of approval outlined in the Draft Supplemental Environmental Impact Report (Draft SEIR), State Clearinghouse No. 2021070364 for The Ontario Plan 2050 (TOP 2050 or Proposed Project). The MMRP has been prepared in conformance with Section 21081.6 of the Public Resources Code and City of Ontario Monitoring Requirements. Section 21081.6 states:

> (a) When making findings required by paragraph (1) of subdivision (a) of Section 21081 or when adopting a mitigated negative declaration pursuant to paragraph (2) of subdivision (c) of Section 21080, the following requirements shall apply:
>
> (1) The public agency shall adopt a reporting or monitoring program for the changes made to the project or conditions of project approval, adopted in order to mitigate or avoid significant effects on the environment. The reporting or monitoring program shall be designed to ensure compliance during project implementation. For those changes which have been required or incorporated into the project at the request of a responsible agency or a public agency having jurisdiction by law over natural resources affected by the project, that agency shall, if so requested by the lead or responsible agency, prepare and submit a proposed reporting or monitoring program.
>
> (2) The lead agency shall specify the location and custodian of the documents or other material which constitute the record of proceedings upon which its decision is based.

## 1.2 PROJECT LOCATION

The City of Ontario is in the southwestern portion of San Bernardino County and is surrounded by the cities of Chino and Montclair and unincorporated San Bernardino County to the west; the cities of Upland and Rancho Cucamonga to the north; the City of Fontana and unincorporated San Bernardino County to the east; and the cities of Eastvale and Jurupa Valley to the south. The City is in the central part of the Upper Santa Ana River Valley, bounded by the San Gabriel Mountains to the north; the Chino Hills, Puente Hills, and San Jose Hills to the west; the Santa Ana River to the south; and Lytle Creek Wash on the east.

The City comprises approximately 50 square miles (32,022 acres), including the 8,200-acre Ontario Ranch in the southern part of the City—formerly known as the New Model Colony and formerly the City's sphere of influence. The northern, more urbanized part of the City is known as the Original Model Colony in reference to the City's founding as a model colony for cities in terms of layout and infrastructure. Generally, the City is bounded by Benson Avenue and Euclid Avenue on the west; Interstate 10 (I-10), 8th Street, and 4th Street on

the north; Etiwanda Avenue and Hammer Avenue on the east; and Merrill Avenue and the San Bernardino County/Riverside County boundary on the south. Regional circulation to and through the City is provided by I-10 and State Route (SR) 60, east to west, and by I-15 and SR-83 (Euclid Avenue), north to south. The City is also home to the Ontario International Airport and proximate to Chino Airport.

## 1.3 PROJECT DESCRIPTION

The Proposed Project, The Ontario Plan (TOP) 2050, is an update to The Ontario Plan (TOP or Approved Project) to guide the City's development and conservation for the next 30 years through 2050. The Proposed Project is a focused effort, with particular emphasis on technical refinements to the Policy Plan to comply with state housing mandates; conform with new state laws related to community health, environmental justice, climate adaptation, resiliency, and mobility; bring long-term growth and fiscal projections into alignment with current economic conditions; and advance the Tracking and Feedback system and Implementation Plan.

TOP is the City's policy and implementation framework that guides the long-term growth and improvement of the Ontario community through six interrelated components of city governance:

A **Vision** that provides a sense of purpose and mission for city governance and sets the tone for the other components of TOP. The Vision's central theme is a sustained, community-wide prosperity that continuously adds value and yields benefits.

A **Governance Manual** that establishes a set of goals and policies to promote consistent City leadership based on the principles of regional leadership, transparency, long-term value, accountability, and inclusivity.

A **Policy Plan** that serves as the City's legally required general plan and that states long-term goals, principles, and policies to achieve Ontario's Vision through nine elements: land use, housing, mobility, safety, environmental resources, parks and recreation, community economics, community design, and social resources.

A list of **City Council Priorities** that shape the City's ongoing annual budgeting process, with a focus on a variety of short- and long-term goals and objectives.

An **Implementation Plan** that identifies the actions needed to carry out TOP's policies. This includes initiatives by the City such as establishing consistent land use zoning and creating objective development and design standards, as well as decisions on public and private development projects and City activity programs.

A **Tracking and Feedback** system that charts the City's progress toward achieving the Policy Plan goals, providing data and analysis that enables decision makers to make strategic course corrections in response to changing circumstances and monitor ongoing operational effectiveness.

TOP 2050 is an update to TOP to guide the City's development and conservation for the next 30 years through 2050. The Proposed Project is a focused effort, with particular emphasis on technical refinements to the Policy Plan to comply with state housing mandates; conform with new state laws related to community health, environmental justice, climate adaption, resiliency, and mobility; bring long-term growth and fiscal projections into alignment with current economic conditions; and advance the Tracking and Feedback system and Implementation Plan. TOP 2050 fulfills the mandatory Regional Housing Needs Assessment (RHNA)

obligation. TOP 2050 brings long-term growth and fiscal projections into alignment with current economic conditions as well as property owner and stakeholder requests, all in support of the vision for Ontario.

Table 1, *Comparison of Approved TOP to TOP 2050*, provides a statistical summary of the buildout potential of TOP 2050 compared to existing conditions and to the buildout potential under the currently approved TOP. As shown in this table, TOP 2050 would increase population, dwelling units, and nonresidential buildings but would result in a small decrease in employment. The decrease in employment at buildout is largely because of automation in the industrial sector, with large warehousing and logistics buildings expected to create fewer new jobs through 2050 than a similarly sized industrial building was expected to create when the current TOP was adopted in 2010.

**Table 1 Comparison of Approved TOP to TOP 2050**

| Scenario | Units | Population | Nonresidential Square Feet | Employment |
|---|---|---|---|---|
| Existing 2021 Conditions[1] | 52,466 | 179,597 | 156,065,382 | 131,999 |
| Approved TOP | 104,163 | 357,957 | 260,399,271 | 313,067 |
| Proposed TOP | 129,562 | 410,492 | 261,491,779 | 296,002 |
| **Net Difference (Proposed TOP -Approved TOP)** | **25,399** | **52,535** | **1,092,508** | **-17,065** |

Note:
[1] See Chapter 4, *Environmental Setting*, for a summary of existing conditions.

## 1.4 ENVIRONMENTAL IMPACTS

### 1.4.1 Impacts Considered No Impact or Less Than Significant

The EIR identified various thresholds from the CEQA Guidelines among a number of environmental categories that would not be significantly impacts by the proposed project in Chapter 5, *Environmental Analysis*, and Chapter 8, *Impacts Found Not to Be Significant*, and therefore, did not require mitigation. Impacts to the following environmental resources were found to be less than significant or no impact:

- Aesthetics
- Agriculture and Forestry Resources
- Biological Resources
- Energy
- Greenhouse Gas Emissions
- Hydrology and Water Quality
- Land Use and Planning
- Mineral Resources
- Population and Housing
- Public Services
- Recreation
- Utilities and Service Systems
- Wildlife

### 1.4.2 Potentially Significant Adverse Impacts That Can Be Mitigated, Avoided, or Substantially Lessened

The EIR concluded that the proposed project could result in one or more potentially significant impacts in the following topic areas:

- Cultural Resources (Archeological Resources)
- Geology and Soils (Paleontological Resources)
- Tribal Cultural Resources

However, the EIR also found that these impacts would be reduced, avoided, or substantially lessened through the implementation of mitigation measures, which are listed in Table 2, *Mitigation Monitoring Requirements*.

### 1.4.3 Unavoidable Significant Adverse Impacts

The following impact would remain significant and unavoidable after implementation of required mitigation, as identified in the EIR:

- Air Quality (AQMP Consistency, Regional Construction Emissions, Regional Operation Emissions, and Cumulative Health Risk)
- Cultural Resources (Historic Resources)
- Noise (Construction Noise, Construction Vibration, and Airport Land Use Compatibility)
- Transportation (Vehicle Miles Traveled)

# 2. Mitigation Monitoring Requirements

## 2.1 CATEGORIZED MITIGATION MEASURES/MATRIX

Project-specific mitigation measures (MM) have been categorized in matrix format, as shown in Table 2, *Mitigation Monitoring Requirements*. The matrix identifies the environmental factor, specific mitigation measures, schedule, and responsible monitor. The mitigation matrix will serve as the basis for scheduling the implementation of, and compliance with, all mitigation measures.

# 2. Mitigation Monitoring Requirements

*This page intentionally left blank.*

# 2. Mitigation Monitoring Requirements

**Table 2 Mitigation Monitoring Requirements**

| | Mitigation Measure | Responsibility for Implementation | Timing | Responsibility for Monitoring | Monitor (Signature Required) (Date of Compliance) |
|---|---|---|---|---|---|
| **AESTHETICS** | | | | | |
| No Mitigation Measures are applicable. | | | | | |
| **AGRICULTURAL AND FORESTRY RESOURCES** | | | | | |
| No Mitigation Measures are applicable. | | | | | |
| **AIR QUALITY** | | | | | |
| MM 3-1 | Prior to discretionary approval by the City of Ontario for development projects subject to CEQA (California Environmental Quality Act) review (i.e., nonexempt projects), project applicants shall prepare and submit a technical assessment evaluating potential project construction-related air quality impacts to the City of Ontario Planning Department for review and approval. The evaluation shall be prepared in conformance with South Coast Air Quality Management District (South Coast AQMD) methodology for assessing air quality impacts. If construction-related criteria air pollutants are determined to have the potential to exceed the South Coast AQMD–adopted thresholds of significance, the City of Ontario Building Department shall require feasible mitigation measures to reduce air quality emissions. Potential measures shall be incorporated as conditions of approval for a project and may include:<br>• Require fugitive dust control measures that exceed South Coast Air Quality Management District's Rule 403, such as:<br>– Requiring use of nontoxic soil stabilizers to reduce wind erosion.<br>– Applying water every four hours to active soil disturbing activities.<br>– Tarping and/or maintaining a minimum of 24 inches of freeboard on trucks hauling dirt, sand, soil, or other loose materials.<br>• Using construction equipment rated by the United States Environmental Protection Agency as having Tier 4 interim or higher exhaust emission limits.<br>• Ensuring construction equipment is properly serviced and maintained to the manufacturer's standards. | City of Ontario Planning Department in coordination with Landowner/Project Applicant | Prior to individual project approvals and during construction activities | City of Ontario Planning/Building Department | |

# 2. Mitigation Monitoring Requirements

**Table 2 Mitigation Monitoring Requirements**

| | Mitigation Measure | Responsibility for Implementation | Timing | Responsibility for Monitoring | Monitor (Signature Required) (Date of Compliance) |
|---|---|---|---|---|---|
| | • Limiting nonessential idling of construction equipment to no more than five consecutive minutes.<br>• Using Super-Compliant VOC paints for coating of architectural surfaces whenever possible. A list of Super-Compliant architectural coating manufactures can be found on the South Coast Air Quality Management District's website at: http://www.aqmd.gov/prdas/brochures/Super-Compliant_AIM.pdf.<br>These identified measures shall be incorporated into all appropriate construction documents (e.g., construction management plans) submitted to the City and shall be verified by the City's Planning Department. | | | | |
| MM 3-2 | The City of Ontario shall evaluate new development proposals within the City and require all developments to include access or linkages to alternative modes of transportation, such as transit stops, bike paths, and/or pedestrian paths (e.g. sidewalks). | City of Ontario Planning/Engineering Departments in coordination with the Landowner/Project Applicant | Prior to individual project approvals | City of Ontario Planning Department | |
| AQ-1 | Prior to discretionary approval by the City of Ontario for development projects subject to CEQA (California Environmental Quality Act) review (i.e., nonexempt projects), project applicants shall prepare and submit a technical assessment evaluating potential project operation-phase-related air quality impacts to the City of Ontario Planning Department for review and approval. The evaluation shall be prepared in conformance with South Coast Air Quality Management District (South Coast AQMD) methodology in assessing air quality impacts. If operation-related air pollutants are determined to have the potential to exceed the South Coast AQMD–adopted thresholds of significance, the City of Ontario Planning Department shall require that applicants for new development projects incorporate mitigation measures to reduce air pollutant emissions during operational activities. The identified measures shall be included as part of the conditions of approval. Possible | City of Ontario Planning Department in coordination with the Landowner/Project Applicant | Prior to individual project approvals | City of Ontario Planning Department | |

**Table 2 Mitigation Monitoring Requirements**

| | Mitigation Measure | Responsibility for Implementation | Timing | Responsibility for Monitoring | Monitor (Signature Required) (Date of Compliance) |
|---|---|---|---|---|---|
| | mitigation measures to reduce long-term emissions could include, but are not limited to the following:<br>• For site-specific development that requires refrigerated vehicles, the construction documents shall demonstrate an adequate number of electrical service connections at loading docks for plug-in of the anticipated number of refrigerated trailers to reduce idling time and emissions.<br>• Applicants for manufacturing and light industrial uses shall consider energy storage and combined heat and power in appropriate applications to optimize renewable energy generation systems and avoid peak energy use.<br>• Site-specific developments with truck delivery and loading areas and truck parking spaces shall include signage as a reminder to limit idling of vehicles while parked for loading/unloading in accordance with California Air Resources Board Rule 2845 (13 CCR Chapter 10 sec. 2485).<br>• Provide changing/shower facilities as specified in Section A5.106.4.3 of CALGreen (Nonresidential Voluntary Measures).<br>• Provide bicycle parking facilities per Section A4.106.9 of CALGreen (Residential Voluntary Measures).<br>• Provide preferential parking spaces for low-emitting, fuel-efficient, and carpool/van vehicles per Section A5.106.5.1 of CALGreen (Nonresidential Voluntary Measures).<br>• Provide facilities to support electric charging stations per Section A5.106.5.3 and Section A5.106.8.2 of CALGreen (Nonresidential Voluntary Measures; Residential Voluntary Measures).<br>• Applicant-provided appliances shall be Energy Star–certified appliances or appliances of equivalent energy efficiency (e.g., dishwashers, refrigerators, clothes washers, and dryers). Installation of Energy Star–certified or equivalent appliances shall be verified by the City during plan check. | | | | |
| **BIOLOGICAL RESOURCES** | | | | | |
| No Mitigation Measures are applicable. | | | | | |

# 2. Mitigation Monitoring Requirements

**Table 2 Mitigation Monitoring Requirements**

| | Mitigation Measure | Responsibility for Implementation | Timing | Responsibility for Monitoring | Monitor (Signature Required) (Date of Compliance) |
|---|---|---|---|---|---|
| **CULTURAL AND PALEONTOLOGICAL RESOURCES** | | | | | |
| MM 5-1 | Historic or potentially historic resources in the City shall be evaluated for historic significance through the City's tier system prior to the issuance of plan or development approval. Pursuant to City's Development Code (Chapter 4, Permit, Actions, and Decisions, and Chapter 7, Historic Preservation), mitigation measures for all Tier III Historic Resources shall include the following:<br>a) Each historic resource shall be fully documented and cataloged pursuant to Historic American Building Survey/Historic American Engineering Record (HABS/HAER) standards, to provide a record of the resource, including, but not limited to: [i] the preparation of site plans, floor plans, exterior and interior elevations, and detail drawings of character defining features (such as moldings, stairs, etc.); and [ii] photographs of the resource, including the exterior, interior, and interior and exterior character defining features (such as moldings, light fixtures, trim patterns, etc.).<br>b) A mitigation fee established pursuant to Section 7.01.030 (Historic Preservation Mitigation Fee) shall be paid to the City prior to the issuance of a demolition permit for Tier III historic resources. Fees for Tier I and II historic resources shall be determined during the Environmental Impact Report process. The fees established for Tier III will be used as a reference point for establishing fees for Tier I and II historic resources.<br>c) A Certificate of Appropriateness shall not be issued for the demolition of an historic resource, either in whole or in part, until such time that a demolition permit application and a replacement structure has been approved by the City, and appropriate permits have been issued for its construction, unless: [i] a waiver is granted pursuant to Subsection H (Replacement Structure Waiver for Historic Resources Located within Industrial Zoning Districts) of Section 4.02.050; [ii] a deferral of the replacement structure requirement is granted pursuant to Subsection G (Replacement Structure Deferral) of Section 4.02.050; or [iii] demolition is required | City of Ontario Planning Department | Prior to individual project approvals | City of Ontario Planning Department | |

**Table 2 Mitigation Monitoring Requirements**

| | Mitigation Measure | Responsibility for Implementation | Timing | Responsibility for Monitoring | Monitor (Signature Required) (Date of Compliance) |
|---|---|---|---|---|---|
| | pursuant to Section 7.01.050 (Unsafe or Dangerous Conditions) of this Development Code.<br>d) In an effort to preserve features and artifacts from historic resources, a determination whether items within or on the resource should be salvaged must be made by the Planning Department and may include the local historical society prior to the issuance of the demolition permit. The applicant shall be responsible for the removal, relocation, storage, and donation of such items selected for salvaging. The applicant shall provide an inventory of salvaged items to the Planning Department, and shall include a list of each item name, description, and dimension (as necessary), and the location of each item on a floor plan. | | | | |
| MM 5-2 | In areas of documented or inferred from evident archaeological and/or paleontological resource presence, City staff shall require applicants for development permits to provide studies to document the presence/absence of such resources. On properties where resources are identified, such studies shall provide a detailed mitigation plan, including a monitoring program and recovery and/or in situ preservation plan, based on the recommendations of a qualified cultural preservation expert. The mitigation plan shall include the following requirements:<br>a) Archaeologists and/or paleontologist shall be retained for the project and will be on call during grading and other significant ground-disturbing activities.<br>b) Should any cultural resources be discovered, no further grading shall occur in the area of the discovery until the Planning Director or designee is satisfied that adequate provisions are in place to protect these resources.<br>c) Unanticipated discoveries shall be evaluated for significance by a San Bernardino County Certified Professional Archaeologist/Paleontologist. If significance criteria are met, then the project shall be required to perform data recovery, professional identification, radiocarbon dates, and other special studies; submit materials to a museum for permanent curation; | City of Ontario Planning Department in coordination with Landowner/Project Applicant | Prior to individual project approvals and during ground disturbing activities | City of Ontario Planning Department | |

# 2. Mitigation Monitoring Requirements

**Table 2 Mitigation Monitoring Requirements**

| **LAND USE AND PLANNING** | | | | | |
| No Mitigation Measures are applicable. | | | | | |
| **MINERAL RESOURCES** | | | | | |
| No Mitigation Measures are applicable. | | | | | |
| **NOISE** | | | | | |
| MM 12-1 | Prior to the issuance of building permits for any project that involves a noise-sensitive use within the 65 dBA CNEL contour of the Ontario International Airport, the project property owner/developers shall retain an acoustical engineer to conduct an acoustic analysis and identify, where appropriate, site design and/or required building acoustical improvements (e.g., sound transmission class rated windows, doors, and attic baffling), to ensure compliance with the City's Noise Compatibility Criteria and the California State Building Code and California Noise Insulation Standards (Titles 24 and 21 of the California Code of Regulations). | City of Ontario Planning/Building Department in coordination with Landowner/Project Applicant | Prior to individual project approvals | City of Ontario Planning/Building Department | |

# 2. Mitigation Monitoring Requirements

**Table 2 Mitigation Monitoring Requirements**

| | Mitigation Measure | Responsibility for Implementation | Timing | Responsibility for Monitoring | Monitor (Signature Required) (Date of Compliance) |
|---|---|---|---|---|---|
| MM 12-2 | Prior to issuance of a building permit, individual projects that involve vibration-intensive construction activities, such as pile drivers, jack hammers, and vibratory rollers occurring near sensitive receptors shall be evaluated for potential vibration impacts. For construction within 135 feet of fragile structures, such as historical resources, within 100 feet of nonengineered timber and masonry buildings (e.g., most residential buildings), or within 75 feet of engineered concrete and masonry (no plaster); or a vibratory roller within 25 feet of any structure, the project applicant shall prepare a noise and vibration analysis to assess and mitigate potential noise and vibration impacts related to these activities. This noise and vibration analysis shall be conducted by a qualified and experienced acoustical consultant or engineer. The vibration levels shall not exceed Federal Transit Administration (FTA) architectural damage thresholds (e.g., 0.12 inches per second [in/sec] peak particle velocity [PPV] for fragile or historical resources, 0.2 in/sec PPV for nonengineered timber and masonry buildings, and 0.3 in/sec PPV for engineered concrete and masonry). If vibration levels would exceed this threshold, alternative uses shall be used, such as drilling piles as opposed to pile driving and static rollers as opposed to vibratory rollers. If necessary, construction vibration monitoring shall be conducted to ensure vibration thresholds are not exceeded. | City of Ontario Planning/Building Department in coordination with Landowner/Project Applicant's construction contractor | Prior to and during construction | City of Ontario Building Department | |
| MM 12-4 | Construction activities associated with new development that occurs near sensitive receptors shall be evaluated for potential noise impacts. Construction contractors shall implement the following measures for construction activities in the City of Ontario. Construction plans submitted to the City shall identify these measures on demolition, grading, and construction plans. The City of Ontario Planning and Building Departments shall verify that grading, demolition, and/or construction plans submitted include these notations prior to issuance of demolition, grading, and/or building permits.<br>• Construction activity is limited to the hours between 7:00 am and 6:00 pm Monday through Friday and 9:00 am to 6:00 pm | City of Ontario Planning/Building Department in coordination with Landowner/Project Applicant's construction contractor | During construction | City of Ontario Building Department | |

# 2. Mitigation Monitoring Requirements

**Table 2 Mitigation Monitoring Requirements**

| | Mitigation Measure | Responsibility for Implementation | Timing | Responsibility for Monitoring | Monitor (Signature Required) (Date of Compliance) |
|---|---|---|---|---|---|
| | Saturdays and Sundays, as prescribed in Municipal Code Section 5-29.09.<br>• During the entire active construction period, equipment and trucks used for project construction shall use the best-available noise control techniques wherever feasible (e.g., improved mufflers, equipment re-design, use of intake silencers, ducts, engine enclosures, and acoustically attenuating shields or shrouds).<br>• Impact tools (e.g., jack hammers and hoe rams) shall be hydraulically or electrically powered wherever possible. Where the use of pneumatic tools is unavoidable, an exhaust muffler on the compressed air exhaust shall be used along with external noise jackets on the tools.<br>• Stationary equipment such as generators and air compressors shall be located as far as feasible from nearby noise-sensitive uses.<br>• Stockpiling shall be located as far as feasible from nearby noise-sensitive receptors.<br>• Construction traffic shall be limited, to the extent feasible, to approved haul routes established by the City's Engineering Department.<br>• At least 10 days prior to the start of construction activities, a sign shall be posted at the entrance(s) to the job site, clearly visible to the public, that includes permitted construction days and hours as well as the telephone numbers of the City's and contractor's authorized representatives that are assigned to respond in the event of a noise or vibration complaint. If the authorized contractor's representative receives a complaint, he/she shall investigate, take appropriate corrective action, and report the action to the City.<br>• Signs shall be posted at the job site entrance(s), within the on-site construction zones, and along queueing lanes (if any) to reinforce the prohibition of unnecessary engine idling. All other equipment shall be turned off if not in use for more than 5 minutes. | | | | |

**Table 2 Mitigation Monitoring Requirements**

| | Mitigation Measure | Responsibility for Implementation | Timing | Responsibility for Monitoring | Monitor (Signature Required) (Date of Compliance) |
|---|---|---|---|---|---|
| | • During the entire active construction period and to the extent feasible, the use of noise-producing signals, including horns, whistles, alarms, and bells, shall be for safety warning purposes only. The construction manager shall use smart back-up alarms, which automatically adjust the alarm level based on the background noise level or switch off back-up alarms and replace with human spotters in compliance with all safety requirements and laws.<br>• Erect temporary noise barriers (at least as high as the exhaust of equipment and breaking line-of-sight between noise sources and sensitive receptors), as necessary and feasible, to maintain construction noise levels at or below the performance standard of 80 dBA $L_{eq}$. Barriers shall be constructed with a solid material that has a density of at least 1.5 pounds per square foot with no gaps from the ground to the top of the barrier and may be lined on the construction side with an acoustical blanket, curtain, or equivalent absorptive material. | | | | |
| **POPULATION AND HOUSING** | | | | | |
| No Mitigation Measures are applicable. | | | | | |
| **PUBLIC SERVICES** | | | | | |
| No Mitigation Measures are applicable. | | | | | |
| **RECREATION** | | | | | |
| No Mitigation Measures are applicable. | | | | | |
| **TRANSPORTATION** | | | | | |
| T-1 | Prior to approval of discretionary projects subject to VMT reduction analysis, applicants shall demonstrate compliance with the City's VMT Guidelines for CEQA assessment of VMT impacts. For projects with VMT per Service Population exceeding the County's significance threshold, a mitigation plan shall be developed and implemented. Mitigation should consist of Transportation Demand Management (TDM) measures analyzed under a VMT-reduction methodology consistent with the California Air Pollution Control Officers Association's (CAPCOA) *Final Handbook for Analyzing* | City of Ontario Planning/Engineering Departments in coordination with Landowner/Project Applicant | Prior to individual project approvals | City of Ontario Planning Department | |

# 2. Mitigation Monitoring Requirements

**Table 2 Mitigation Monitoring Requirements**

| | Mitigation Measure | Responsibility for Implementation | Timing | Responsibility for Monitoring | Monitor (Signature Required) (Date of Compliance) |
|---|---|---|---|---|---|
| | *Greenhouse Gas Emission Reductions, Assessing Climate Vulnerabilities, and Advancing Health and Equity* (2021) and approved by the City of Ontario (if applicable). Examples of measures include but are not limited to:<br>• Pedestrian Network Improvements: constructing new sidewalks and/or improving damaged or substandard sidewalks that connect to a larger pedestrian network.<br>• Construct or Improve Bike Facilities: constructing new or enhancing a single existing Class I, II or IV bike facility that connects to a larger bike network.<br>• Construct or Improve Bike Boulevards: implementing a Class III bike boulevard on a local or collector street that is one travel lane in each direction, has a design speed of 25 mph or less and a design volume of 5,000 ADT or less.<br>• Expand Bikeway Networks: constructing a network of interconnected new Class I, II, or IV bike facilities.<br>• Provide End of Trip Bicycle Facilities: constructing facilities that support cyclists such as bike parking, lockers, and showers.<br>• Implement Transit-Supportive Roadway Treatments: funding infrastructure improvements such as traffic signal modifications and roadway signing and striping that are dedicated to improving transit travel times and reliability.<br>• Transit Passes: proving discounted or free transit fare to a specific geographic area, population group, or to the general public.<br>• Vanpool Program: providing groups of 5 to 15 people with direct shuttle service between their workplace and residence.<br>• Carshare Program (conventional or EV): providing access to a shared fleet of on-demand vehicles for short-term use/rental. Best practice is to discount carshare membership and provide priority parking for carshare vehicles to encourage use of the service.<br>• Bikeshare Program (conventional or EV): providing access to a shared fleet of on-demand bicycles for short-term use/rental. | | | | |

**Table 2 Mitigation Monitoring Requirements**

| | Mitigation Measure | Responsibility for Implementation | Timing | Responsibility for Monitoring | Monitor (Signature Required) (Date of Compliance) |
|---|---|---|---|---|---|
| | Best practice is to discount bikeshare membership and dedicate bikeshare parking to encourage use of the service.<br>• Rideshare Program: providing access to and encouraging the use of a ridesharing platform or service. This could be an app, website, or other service that provides ride-matching coordination services.<br>• Community-Based Travel Planning (CBTP): CBTP is a residential based approach to outreach, performed by trained advisors, that provides households within a targeted geographic area with customized information, incentives, and support to encourage the use of transportation alternatives in place of single occupancy vehicles.<br>• Commute Trip Reduction (CTR) Program: CTR programs can be mandatory or voluntary, and involve providing information, coordination, services, infrastructure, and/or incentives for alternative modes such as ridesharing, vanpool, transit passes, and cycling. | | | | |
| **TRIBAL CULTURAL RESOURCES** | | | | | |
| MM 5-3 | Upon receipt of an application for a proposed project subject to CEQA and within the City's jurisdiction, the City's representative shall consult with the relevant tribe(s)' representative(s) to determine if the proposed project is within a culturally sensitive area to the tribe. If sufficient evidence is provided to reasonably ascertain that the site is within a [tribal] culturally sensitive area, an archaeologist shall prepare then a cultural resources assessment. The findings of the cultural resources assessment shall be incorporated into the CEQA documentation. A copy of the report shall be forwarded to the tribe(s). If mitigation is recommended in the CEQA document, the procedure described in Mitigation Measure 5-4 shall be followed. | City of Ontario Planning Department | Prior to individual project approvals | City of Ontario Planning Department | |
| MM 5-4 | Prior to the issuance of grading permits for a proposed project for which the CEQA document defines cultural resource mitigation for potential tribal resources, the project applicant shall contact the designated tribe(s) to notify them of the grading, excavation, and | City of Ontario Planning Department in coordination with | Prior to issuance of grading permit(s) | City of Ontario Planning Department | |

# 2. Mitigation Monitoring Requirements

**Table 2 Mitigation Monitoring Requirements**

| | Mitigation Measure | Responsibility for Implementation | Timing | Responsibility for Monitoring | Monitor (Signature Required) (Date of Compliance) |
|---|---|---|---|---|---|
| | monitoring program. The applicant shall coordinate with the City of Ontario and the tribal representative(s) to develop mitigation measures that address the designation, responsibilities, and participation of tribal monitors during grading, excavation, and ground-disturbing activities; scheduling; terms of compensation; and treatment and final disposition of any cultural resources, sacred sites, and human remains discovered on the site. The City of Ontario shall be the final arbiter of the conditions for projects within the City's jurisdiction. | Landowner/Project Applicant | | | |
| TRC-1 | Tribal Cultural Resources Monitoring. The project archaeologist, in consultation with interested tribes, the developer, and the City of Ontario, shall develop an archaeological monitoring plan (AMP) to address the details, timing, and responsibility of archaeological and cultural activities that will occur on the project site. Details in the AMP shall include:<br>1. Project-related ground disturbance (including, but not limited to, brush clearing, grading, trenching, etc.) and development scheduling;<br>2. The development of a rotating or simultaneous schedule in coordination with the developer and the project archeologist for designated Native American Tribal Monitors from the consulting tribes during grading, excavation and ground disturbing activities on the site: including the scheduling, safety requirements, duties, scope of work, and Native American Tribal Monitors' authority to stop and redirect grading activities in coordination with all project archaeologists (if the tribes cannot come to an agreement on the rotating or simultaneous schedule of tribal monitoring, the Native American Heritage Commission shall designate the schedule for the onsite Native American Tribal Monitor for the proposed project);<br>3. The protocols and stipulations that the developer, City, Tribes, and project archaeologist will follow in the event of inadvertent cultural resources discoveries, including any newly discovered cultural resource deposits that shall be subject to a cultural resources evaluation. | City of Ontario Planning Department in coordination with Landowner/Project Applicant's archeologist and interested tribes | Prior to and during construction | City of Ontario Planning Department | |

**Table 2 Mitigation Monitoring Requirements**

| | Mitigation Measure | Responsibility for Implementation | Timing | Responsibility for Monitoring | Monitor (Signature Required) (Date of Compliance) |
|---|---|---|---|---|---|
| | At least 30 days prior to application for a grading permit and before any brush clearance, grading, excavation, and/or ground disturbing activities on the site, the developer shall retain a tribal cultural monitor to monitor all ground-disturbing activities in an effort to identify any unknown archaeological resources.<br>Pursuant to the AMP, a tribal monitor from the consulting tribe shall be present during the initial grading activities. If tribal resources are found during grubbing activities, the tribal monitoring shall be present during site grading activities. | | | | |
| TRC-2 | Treatment and Disposition of Cultural Resources**.** In the event that Native American cultural resources are inadvertently discovered during the course of any ground-disturbing activities, including but not limited to brush clearance, grading, trenching, etc., for the proposed project, the following procedures will be carried out for treatment and disposition of the discoveries:<br>1. Temporary Curation and Storage: During the course of construction, all discovered resources shall be temporarily curated in a secure location on-site or at the offices of the project archaeologist. The removal of any artifacts from the project site will need to be thoroughly inventoried with tribal monitor oversight of the process;<br>2. Treatment and Final Disposition: The landowner(s) shall relinquish ownership of all cultural resources, including sacred items, burial goods, and all archaeological artifacts and nonhuman remains as part of the required mitigation for impacts to cultural resources. The applicant shall relinquish the artifacts through one or more of the following methods and provide the City of Ontario with evidence of same:<br>a. Accommodate the process for on-site reburial of the discovered items with the consulting Native American tribes or bands. This shall include measures and provisions to protect the future reburial area from any future impacts. Reburial shall not occur until all cataloging, basic analysis, other analyses as recommended by the project archaeologist and approved by consulting tribes, and basic recordation have been completed; | City of Ontario Planning Department in coordination with Landowner/Project Applicant's archeologist and interested tribes | During construction | City of Ontario Planning Department | |

# 2. Mitigation Monitoring Requirements

**Table 2 Mitigation Monitoring Requirements**

| | Mitigation Measure | Responsibility for Implementation | Timing | Responsibility for Monitoring | Monitor (Signature Required) (Date of Compliance) |
|---|---|---|---|---|---|
| | all documentation should be at a level of standard professional practice to allow the writing of a report of professional quality;<br>b. A curation agreement with an appropriate qualified repository in San Bernardino County that meets federal standards per 36 CFR Part 79, and therefore the resource would be professionally curated and made available to other archaeologists/researchers for further study. The collections and associated records shall be transferred, including title, to an appropriate curation facility in San Bernardino County, to be accompanied by payment of the fees necessary for permanent curation;<br>c. For purposes of conflict resolution, if more than one Native American tribe or band is involved with the project and cannot come to an agreement as to the disposition of cultural materials, materials shall be curated at the San Bernardino County Museum by default;<br>d. At the completion of grading, excavation, and ground-disturbing activities on the site, a Phase IV Monitoring Report shall be submitted to the City documenting monitoring activities conducted by the project archaeologist and Native Tribal Monitors within 60 days of completion of grading. This report shall document the impacts to the known resources on the property; describe how each mitigation measure was fulfilled; document the type of cultural resources recovered and the disposition of such resources; provide evidence of the required cultural sensitivity training for the construction staff held during the required pregrade meeting; and, in a confidential appendix, include the daily/weekly monitoring notes from the archaeologist. All reports produced will be submitted to the City, County Museum, and consulting tribes. | | | | |

# 1.0 INTRODUCTION

This report documents the results of an Air Quality Assessment completed for the Center Park Specific Plan (Project). The purpose of this Air Quality Assessment is to identify the potential construction and operations emissions associated with the Project and determine the level of impact the Project would have on the environment. A comparative analysis has been undertaken to determine whether the Project would result in any new or substantially more severe significant environmental impacts as compared to the conclusions discussed in The Ontario Plan (TOP) 2050, certified Final Supplemental Environmental Impact Report (FSEIR), pursuant to the California Environmental Quality Act (CEQA) Guidelines Section 15183 (Projects Consistent with a Community Plan, General Plan, or Zoning). Applicable mitigation measures from the FSEIR have been incorporated into this analysis.

## 1.1 Project Location

The Project site is comprised of 29 parcels totaling 257.34 acres within Ontario Ranch, City of Ontario (City), San Bernardino County (County), California; see **Figure 1: Regional Location Map.** The Assessor Parcel Numbers (APNs) comprising the Project site are 1053-301-01, -02; 1053-311-01, -02; 1053-321-01, -02, -03; 1053 331 01, 02, -03, -04; 1053-341-01, -02; 1053-351-01, -02; 1053-361-01, -02, -03; 1053-371-01, -02; 0216-311-01, -02, -09; 0216-321-03, -08; 0216-322-03, -04, -10; see **Figure 2: Project Site Assessor Parcel Numbers**. The Project site is bounded by a Southern California Edison (SCE) Easement to the north, Walker Avenue to the east, Eucalyptus Avenue to the south, and Campus Avenue to the west; see **Figure 3: Local Vicinity Map**. Land uses surrounding the Project site include a nursery, crop farms, rural residential uses, and dairy farm operations.

Regional access to the Project site is provided by State Route 60 (SR-60) located approximately 2.1 miles to the north, Interstate 15 (I-15) located approximately 4.0 miles to the east, State Route 71 (SR-71), which connects to State Route 91 (SR-91) to the south, located approximately 3.5 miles to the southwest, and Euclid Avenue, which connects SR-71, SR-60, and Interstate 10 (I-10) to the north, located approximately 0.8 mile to the west.

TOP 2050 designates the Project site land use as Medium Density Residential (MDR), Mixed-Use – Great Park (MU – Great Park), Open Space – Recreation (OS – R), and Open Space – Non-Recreation (OS – NR); see **Figure 4: Existing Land Use and Zoning**. The MDR designation permits single-family and multi-family residential uses. The MU – Great Park designation permits commercial, office, and multi-family residential uses. The OS – R designation permits recreational uses. The OS – NR designation permits utility easements and drainage channels and prohibits building development. TOP 2050 zones the Project site as Specific Plan (SP) with an Agriculture (AG) and Chino Airport (CNO) Overlay zoning overlay. The AG overlay requires a transition buffer area between the existing agricultural uses and the proposed urban uses. In addition, the Project site areas designated MDR or MU – Great Park have an Affordable Housing (AH) zoning overlay to increase affordable housing opportunities in compliance with the City's Housing Element and State Housing Element law.

## 1.2 Project Description

The proposed SP would implement the TOP 2050 vision, establish development standards and procedures, become the governing zoning standards for the Project site, permit a maximum of 802 single-family dwelling units (DUs), 3,491 multi-family DUs, 250,920 square feet (SF) of commercial

space, 55.98 acres of recreational open space, and 11.28 acres of non-recreational open space. The Project site is currently developed by ruderal vegetation, rural residences, and agricultural uses such as livestock raising, field crop farming, and dairy farm operations. The Project would remove all on-site uses and improvements to implement the proposed Project.

The proposed SP would divide the Project site into 22 planning areas (PAs); see **Figure 5: Land Use Plan**. The Project site land use designations would remain consistent with TOP 2050. The proposed SP would serve as the Project site zoning designation, consistent with TOP 2050. The Project would be classified as a Tier 2 affordable housing project, which designates at least 25 percent of the DUs as affordable housing. The Project would be developed in two phases; see **Figure 6: Project Phasing Plan**. Phase I would be developed by the private Applicant. Phase II would be dedicated to the City and would be developed at an unknown, later date following Phase I. This analysis conservatively evaluates the maximum Project development potential, with Phase II being evaluated at the programmatic level.

Phase I

Phase I would develop 256 single-family DUs, 768 multi-family DUs, 19.64 acres of recreational open space, and 3.38 acres of non-recreational open space within PAs 6, 12, 13, 17, 18, and 22; see **Table 1: Maximum Phase I Buildout**. The recreational open space would be designated as part of the City's Grand Park, a planned regional park within the Ontario Ranch area. The developer would construct the recreational open space in accordance with the City's Recreation and Parks Master Plan. The Applicant would submit a Development Plan and Tentative Parcel Map for the Phase I Project site following Project approval. Phase I is anticipated to begin construction as early as 2025 and be operational as early as 2029. For purposes of this analysis, it is conservatively assumed that Phase I would be operational as soon as construction is completed in 2027. This is a worst-case assumption as Phase I occupancy would be dependent on market conditions and permit approvals.

**Table 1: Maximum Phase I Buildout**

| Planning Area | Land Use | TOP 2050 Acreage (AC) | Maximum Residential Density (DU/AC)[1] | Maximum Residential (DU) |
|---|---|---|---|---|
| 6 | MDR | 7.33 | -- | 161 |
| 12 | MDR | 15.46 | 22.0 | 340 |
| 13 | MDR | 23.75 | 22.0 | 523 |
| 17 | OS – R | 6.20 | -- | -- |
| 18 | OS – R | 13.44 | -- | -- |
| 22 | OS – NR | 3.38 | -- | -- |
| | **Phase I Total** | **69.56** | **--** | **1,024** |

AC = acres; DU/AC = dwelling units/ acre; DU = dwelling unit; SF = square feet; MDR = Medium Density Residential; OS – R = Open Space – Recreation; and OS – NR = Open Space – Non-Recreation
1. Maximum residential density per The Ontario Plan 2050, Final Supplemental Environmental Impact Report.

Phase II

Phase II would develop 546 single-family DUs, 2,723 multi-family DUs, 250,920 SF of commercial space, 36.34 acres of recreational open space, and 7.9 acres of non-recreational open space within PAs 1 through 5, 7 through 11, 14 through 16, and 19 through 2; see **Table 2: Maximum Phase II Buildout**. The recreational open space would be designated as part of the City's Grand Park, a planned regional park within the Ontario Ranch area. The developer would construct the recreational

open space in accordance with the City's Recreation and Parks Master Plan. For construction phasing purposes, Phase II is anticipated to begin construction as early as 2026 and be operational as early as 2034. It is conservatively assumed that Phase II would be operational as soon as construction is completed in 2030. This is a worst-case assumption as Phase II construction and occupancy would be dependent on market conditions and permit approvals.

**Table 2: Maximum Phase II Buildout**

| Planning Area | Land Use | TOP 2050 Acreage (AC) | Maximum Residential Density (DU/AC)[1] | Maximum Residential (DU) | Maximum Retail (SF) | Maximum Office (SF) |
|---|---|---|---|---|---|---|
| 1 | MDR | 15.91 | 22.0 | 350 | -- | -- |

| 21 | OS – NR | 2.96 | -- | -- | -- | -- |
| | **Phase II Total** | **187.79** | **--** | **3,269** | **115,809** | **135,111** |

AC = acres; DU/AC = dwelling units/ acre; DU = dwelling unit; SF = square feet; MDR = Medium Density Residential; MU = Mixed-Use; OS – R = Open Space – Recreation; OS – NR = Open Space – Non-Recreation
1. Maximum residential density per The Ontario Plan 2050, Final Supplemental Environmental Impact Report.

Circulation

The Project would include a Circulation Plan to facilitate the movement of vehicles, pedestrians, and cyclists within the Project area. Local access to the Project site would be provided via Campus Avenue, Bon View Avenue, Cucamonga Avenue, Grove Avenue, Parco Avenue, Walker Avenue, and Edison Avenue/Ontario Ranch Road. Pedestrian circulation would be provided throughout the Project area via a paved sidewalk system that would interconnect with the roadway right-of-way. TOP 2050 proposed Class II bicycle lanes transversing in a north/south direction along the west side of Walker Avenue. The City's Recreation and Parks Master Plan proposed Class I bicycle lanes transversing in an east/west direction along the Project site's southern property line. The Project would be connected to off-site areas through the City's master planned multipurpose trails/bikeways located along the neighborhood edges of the Project site. An Omnitrans Bus Rapid

Transit (BRT) Corridor is proposed along Edison Avenue/Ontario Ranch Road as a part of future development.

On-site and Off-site Improvements

Roadway and utility infrastructure improvements (i.e., storm drains, sewer, potable water, recycled water, fiber optics, and underground electricity) would be constructed prior to the issuance of building occupancy permits. The developer would construct the improvements in accordance with the City's Master Plans, City's Ordinances, and proposed Specific Plan provisions or with the City Engineer's approval. Phasing and construction of the improvements would be determined by the City Engineer and Project requirements.

The Project would include landscaping along roadway frontages and between the pedestrian sidewalk and roadway. Landscaping would be developed in accordance with the City's development code and proposed Specific Plan provisions. Landscape and Construction Irrigation Documentation Plans would be submitted to the City prior to the issuance of building permits. The Project would comply with City Ordinance 2689, which requires the use of recycled water for all approved uses, including but not limited to landscape irrigation.

# 2.0 ENVIRONMENTAL SETTING

## 2.1 Climate and Meteorology

The California Air Resources Board (CARB) divides the State into 15 air basins that share similar meteorological and topographical features.[1] The Project is located within the South Coast Air Basin (SCAB), which includes the non-desert portions of Los Angeles, Riverside, and San Bernardino counties, as well as all of Orange County. The SCAB is on a coastal plain with connecting broad valleys and low hills, bounded by the Pacific Ocean on the southwest and high mountains forming the remainder of the perimeter.[2] Air quality in this area is determined by such natural factors as topography, meteorology, and climate, in addition to the presence of existing air pollution sources and ambient conditions. These factors along with applicable regulations are discussed below.

The SCAB is part of a semi-permanent high-pressure zone in the eastern Pacific. As a result, the climate is mild and tempered by cool sea breezes. This usually mild weather pattern is occasionally interrupted by periods of extreme heat, winter storms, and Santa Ana winds. The annual average temperature throughout the 6,645-square-mile SCAB ranges from low 60 to high 80 degrees Fahrenheit with little variance. With more oceanic influence, coastal areas show less variability in annual minimum and maximum temperatures than inland areas.

Contrasting the steady pattern of temperature, rainfall is seasonally and annually highly variable. Almost all annual rainfall occurs between the months of November and April. Summer rainfall is reduced to widely scattered thundershowers near the coast, with slightly heavier activity in the east and over the mountains.

Although the SCAB has a semiarid climate, the air closer to the Earth's surface is typically moist because of the presence of a shallow marine layer. Except for occasional periods when dry, continental air is brought into the SCAB by offshore winds, the "ocean effect" is dominant. Periods of heavy fog are frequent and low clouds known as high fog are characteristic climatic features, especially along the coast. Annual average humidity is 70 percent at the coast and 57 percent in the eastern portions of the SCAB.

Wind patterns across the SCAB are characterized by westerly or southwesterly onshore winds during the day and easterly or northeasterly breezes at night. Wind speed is typically higher during the dry summer months than during the rainy winter. Between periods of wind, air stagnation may occur in both the morning and evening hours. Air stagnation is one of the critical determinants of air quality conditions on any given day. During winter and fall, surface high-pressure systems over the SCAB, combined with other meteorological conditions, result in very strong, downslope Santa Ana winds. These winds normally continue for a few days before predominant meteorological conditions are reestablished.[3]

The mountain ranges to the east affect the diffusion of pollutants by inhibiting the eastward transport of pollutants. Air quality in the SCAB generally ranges from fair to poor and is similar to air quality in

[3] California Air Resources Board, *Almanac Resources,* https://ww2.arb.ca.gov/resources/documents/almanac-resources, accessed December 2024.

most of coastal Southern California. The entire region experiences heavy concentrations of air pollutants during prolonged periods of stable atmospheric conditions.

In addition to the characteristic wind patterns that affect the rate and orientation of horizontal pollutant transport, two distinct types of temperature inversions control the vertical depth through which air pollutants are mixed. These inversions are the marine inversion and the radiation inversion. The height of the base of the inversion at any given time is called the "mixing height."[4] The combination of winds and inversions is a critical determinant leading to highly degraded air quality for the SCAB in the summer and generally good air quality in the winter.

## 2.2 Air Pollutants of Concern

The air pollutants emitted into the ambient air by stationary and mobile sources are regulated by State and federal laws. These regulated air pollutants are known as "criteria air pollutants" and are categorized into primary and secondary pollutants. Primary air pollutants are emitted directly from sources. Carbon monoxide (CO), reactive organic gases (ROG), nitrogen oxide ($NO_X$), sulfur dioxide ($SO_2$), coarse particulate matter ($PM_{10}$), fine particulate matter ($PM_{2.5}$), and lead are primary air pollutants. Of these, CO, $NO_X$, $SO_2$, $PM_{10}$, and $PM_{2.5}$ are criteria pollutants.[5] ROG and $NO_X$ are criteria pollutant precursors and form secondary criteria pollutants through chemical and photochemical reactions in the atmosphere.[6] For example, the criteria pollutant ozone ($O_3$) is formed by a chemical reaction between ROG and $NO_X$ in the presence of sunlight. $O_3$ and nitrogen dioxide ($NO_2$) are the principal secondary pollutants. Sources and health effects commonly associated with criteria pollutants are summarized in **Table 3: Air Contaminants and Associated Public Health Concerns**.

**Table 3: Air Contaminants and Associated Public Health Concerns**

| Pollutant | Major Man-Made Sources | Human Health Effects |
|---|---|---|
| Particulate Matter ($PM_{10}$ and $PM_{2.5}$) | Power plants, steel mills, chemical plants, unpaved roads and parking lots, wood-burning stoves and fireplaces, automobiles and others. | Increased respiratory symptoms, such as irritation of the airways, coughing, or difficulty breathing; asthma; chronic bronchitis; irregular heartbeat; nonfatal heart attacks; and premature death in people with heart or lung disease. Impairs visibility. |
| Ozone ($O_3$) | Formed by a chemical reaction between reactive organic gases/volatile organic compounds (ROG or VOC)[1] and nitrogen oxides ($NO_X$) in the presence of sunlight. Motor vehicle exhaust industrial emissions, gasoline storage and transport, solvents, paints and landfills. | Irritates and causes inflammation of the mucous membranes and lung airways; causes wheezing, coughing, and pain when inhaling deeply; decreases lung capacity; aggravates lung and heart problems. Damages plants; reduces crop yield. |
| Sulfur Dioxide ($SO_2$) | A colorless gas formed when fuel containing sulfur is burned and when gasoline is extracted from oil. Examples are petroleum refineries, cement manufacturing, metal | Respiratory irritant. Aggravates lung and heart problems. In the presence of moisture and oxygen, sulfur dioxide converts to sulfuric acid which can damage marble, iron and |

[4] South Coast Air Quality Management District, *Final 2016 Air Quality Management Plan,* March 2017, https://www.aqmd.gov/docs/default-source/clean-air-plans/air-quality-management-plans/2016-air-quality-management-plan/final-2016-aqmp/ final2016aqmp.pdf, accessed December 2024.

[6] Ibid.

| Table 3: Air Contaminants and Associated Public Health Concerns | | |
|---|---|---|
| **Pollutant** | **Major Man-Made Sources** | **Human Health Effects** |
| | processing facilities, locomotives, and ships. | steel. Damages crops and natural vegetation. Impairs visibility. Precursor to acid rain. |
| Carbon Monoxide (CO) | An odorless, colorless gas formed when carbon in fuel is not burned completely; a component of motor vehicle exhaust. | Reduces the ability of blood to deliver oxygen to vital tissues, affecting the cardiovascular and nervous system. Impairs vision, causes dizziness, and can lead to unconsciousness or death. |
| Nitrogen Dioxide ($NO_2$) | A reddish-brown gas formed during fuel combustion for motor vehicles and industrial sources. Sources include motor vehicles, electric utilities, and other sources that burn fuel. | Respiratory irritant; aggravates lung and heart problems. Precursor to $O_3$. Contributes to global warming and nutrient overloading which deteriorates water quality. Causes brown discoloration of the atmosphere. |
| Lead (Pb) | Lead is a metal found naturally in the environment as well as in manufactured products. The major sources of lead emissions have historically been motor vehicles (such as cars and trucks) and industrial sources. Due to the phase out of leaded gasoline, metals processing is the major source of lead emissions to the air today. The highest levels of lead in air are generally found near lead smelters. Other stationary sources are waste incinerators, utilities, and lead-acid battery manufacturers. | Exposure to lead occurs mainly through inhalation of air and ingestion of lead in food, water, soil, or dust. It accumulates in the blood, bones, and soft tissues and can adversely affect the kidneys, liver, nervous system, and other organs. Excessive exposure to lead may cause neurological impairments such as seizures, mental retardation, and behavioral disorders. Even at low doses, lead exposure is associated with damage to the nervous systems of fetuses and young children, resulting in learning deficits and lowered IQ. |

1. Volatile Organic Compounds (VOCs or Reactive Organic Gases [ROG]) are hydrocarbons/organic gases that are formed solely of hydrogen and carbon. There are several subsets of organic gases including ROGs and VOCs. Both ROGs and VOCs are emitted from the incomplete combustion of hydrocarbons or other carbon-based fuels. The major sources of hydrocarbons are combustion engine exhaust, oil refineries, and oil-fueled power plants; other common sources are petroleum fuels, solvents, dry cleaning solutions, and paint (via evaporation).

Source: U.S. Environmental Protection Agency, *Criteria Air Pollutants*, https://www.epa.gov/criteria-air-pollutants, accessed December 2024.

### Toxic Air Contaminants

Toxic air contaminants (TACs) are airborne substances that can cause short-term (acute) or long-term (i.e. chronic, carcinogenic or cancer causing) adverse human health effects (i.e. injury or illness). TACs include both organic and inorganic chemical substances. They may be emitted from a variety of common sources including gasoline stations, automobiles, dry cleaners, industrial operations, and painting operations. The current California list of TACs includes more than 200 compounds, including particulate emissions from diesel-fueled engines.[7]

CARB has identified diesel particulate matter (DPM) as a toxic air contaminant. DPM differs from other TACs in that it is not a single substance, but rather a complex mixture of hundreds of substances. Diesel exhaust is a complex mixture of particles (such as DPM) and gases produced

[7] California Air Resources Board, *Common Air Pollutants*, 2024, https://ww2.arb.ca.gov/resources/common-air-pollutants, accessed December 2024.

when an engine burns diesel fuel. DPM includes the particle-phase constituents in diesel exhaust. DPM is a concern because it causes lung cancer; many compounds found in diesel exhaust are carcinogenic. The chemical composition and particle sizes of DPM vary between different engine types (heavy-duty, light-duty), engine operating conditions (idle, accelerate, decelerate), fuel formulations (high/low sulfur fuel), and the year of the engine. Some short-term (acute) effects of diesel exhaust include eye, nose, throat, and lung irritation, and diesel exhaust can cause coughs, headaches, light-headedness, and nausea. DPM poses the greatest health risk among the TACs. Almost all diesel exhaust particle mass is 10 microns or less in diameter. Due to their extremely small size, these particles can be inhaled and eventually trapped in the bronchial and alveolar regions of the lung.[8]

### Ambient Air Quality

CARB monitors ambient air quality at approximately 250 air monitoring stations across the State. These stations usually measure pollutant concentrations ten feet above ground level; therefore, air quality is often referred to in terms of ground-level concentrations. Existing levels of ambient air quality, historical trends, and projections near the Project are documented by measurements made by the South Coast Air Quality Management District (SCAQMD), the air pollution regulatory agency in the SCAB that maintains air quality monitoring stations that process ambient air quality measurements.

Pollutants of concern in the SCAB include $O_3$, $PM_{10}$, and $PM_{2.5}$ because these pollutants are currently in nonattainment. The air monitoring station nearest the Project site that monitors ambient concentrations of $O_3$, $PM_{10}$, and $PM_{2.5}$ is the Upland Monitoring Station (located approximately 7.2 miles to the north). Local air quality data from 2021 to 2023 are provided in **Table 4: Ambient Air Quality Data**, which lists the monitored maximum concentrations and number of exceedances of the National Ambient Air Quality Standards (NAAQS) and California Ambient Air Quality Standards (CAAQS).

**Table 4: Ambient Air Quality Data**

| Criteria Pollutant[1] | 2021 | 2022 | 2023 |
|---|---|---|---|
| **Ozone ($O_3$)** | | | |
| 1-hour Maximum Concentration (ppm) | 0.124 | 0.155 | 0.067 |
| 8-hour Maximum Concentration (ppm) | 0.100 | 0.100 | 0.060 |
| *Number of Days Standard Exceeded* | | | |
| NAAQS 8-hour (>0.070 ppm) | 78 | 67 | 0 |
| CAAQS 1-hour (>0.09 ppm) | 42 | 45 | 0 |

NAAQS = National Ambient Air Quality Standards; CAAQS = California Ambient Air Quality Standards; ppm = parts per million; µg/m$^3$ = micrograms per cubic meter; – = not measured
1. Measurements were taken at the Upland Monitoring Station at 1350 San Bernardino Road, Upland, CA 91786 (CARB# 36175).

Source: All pollutant measurements are from the CARB Aerometric Data Analysis and Management system database (https://www.arb.ca.gov/adam) except for CO, which were retrieved from the CARB Air Quality and Meteorological Information System (https://www.arb.ca.gov/aqmis2/aqdselect.php).

## 2.3 Sensitive Receptors

Sensitive populations are more susceptible to the effects of air pollution than the general population. Land uses considered sensitive receptors include residences, schools, playgrounds, childcare centers, long-term health care facilities, rehabilitation centers, convalescent centers, and retirement homes. Sensitive receptors nearest the Project site are listed in **Table 5: Sensitive Receptors** and shown in **Figure 7: Sensitive Receptor Locations**.

| **Table 5: Sensitive Receptors** | | |
|---|---|---|
| **Receptor Description** | **Distance and Direction from the Project** | |
| | **Phase I[1]** | **Phase II[2]** |
| 1- Residential Uses | 36 feet to the north | 710 feet to the east |
| 2- Residential Uses | 3,172 feet to the southwest | 53 feet to the south |
| 3- On-site Residential Uses[3] | 55 feet to the west | N/A |
| 4- Future Phase I Residential Uses[4] | N/A | 55 feet to the east |
| 5- Residential Uses | 348 feet to the southeast | 1,815 feet to the southeast |
| 6- Residential Uses | 172 feet to the east | 2,134 feet to the east |
| 7- Residential Uses | 590 feet to the northwest | 223 feet to the north |
| 8- Residential Uses | 590 feet to the southwest | 357 feet to the south |
| 9- Residential Uses | 5,070 feet to the west | 460 feet to the west |
| 10- Residential Uses | 3,220 feet to the northwest | 574 feet to the north |
| 11- Residential Uses | 1,207 feet to the northeast | 1,837 feet to the northeast |

N/A = not applicable
1. Distance measured from the Phase I Project site property line to the nearest sensitive receptor property line.
2. Distance measured from the Phase II Project site property line to the nearest sensitive receptor property line.
3. The City would demolish the existing sensitive receptor structures within the Phase II Project site at a future date after construction of Phase I has begun; therefore, the existing sensitive receptors would be exposed to the construction noise associated with the proposed Phase I development.
4. The proposed Phase I Project would develop residential uses that would be exposed to the construction noise associated with the future Phase II development by the City.

# 3.0 REGULATORY SETTING

## 3.1 Federal

### Federal Clean Air Act

Air quality is federally protected by the Federal Clean Air Act (FCAA; 42 U.S.C. §§ 7401 et seq.) and its amendments. Under the FCAA, the United States Environmental Protection Agency (U.S. EPA) developed the primary and secondary NAAQS for the criteria air pollutants including $O_3$, $NO_2$, CO, $SO_2$, $PM_{10}$, $PM_{2.5}$, and lead. Proposed projects in or near nonattainment areas could be subject to more stringent air-permitting requirements. The FCAA requires each state to prepare a State Implementation Plan (SIP) to demonstrate how it will attain the NAAQS within the federally imposed deadlines.

The U.S. EPA can withhold certain transportation funds from states that fail to comply with the planning requirements of the FCAA. If a state fails to correct these planning deficiencies within two years of Federal notification, the U.S. EPA is required to develop a federal implementation plan for the identified nonattainment area or areas. The provisions of 40 Code of Federal Regulations Parts 51 and 93 apply in all nonattainment and maintenance areas for transportation-related criteria pollutants for which the area is designated nonattainment or has a maintenance plan. The U.S. EPA has designated enforcement of air pollution control regulations to the individual states. The applicable federal standards are summarized in **Table 6: State and Federal Ambient Air Quality Standards**.

**Table 6: State and Federal Ambient Air Quality Standards**

| Pollutant | Averaging Time | State Standards[1,2] | Federal Standards[3,4,5] |
|---|---|---|---|
| Ozone ($O_3$)[6] | 1 Hour | 0.09 ppm (180 µg/m$^3$) | NA |
| | 8 Hour | 0.070 ppm (137 µg/m$^3$) | 0.070 ppm (137 µg/m$^3$) |
| Respirable Particulate Matter ($PM_{10}$)[7] | 24-Hour | 50 µg/m$^3$ | 150 µg/m$^3$ |
| | Annual Arithmetic Mean | 20 µg/m$^3$ | NA |
| Fine Particulate Matter ($PM_{2.5}$)[7] | 24-Hour | NA | 35 µg/m$^3$ |
| | Annual Arithmetic Mean | 12 µg/m$^3$ | 9.0 µg/m$^3$ |
| Carbon Monoxide (CO) | 1 Hour | 20 ppm (23 mg/m$^3$) | 35 ppm (40 mg/m$^3$) |
| | 8 Hour | 9.0 ppm (10 mg/m$^3$) | 9.0 ppm (10 mg/m$^3$) |
| Nitrogen Dioxide ($NO_2$)[8] | 1 Hour | 0.18 ppm (339 µg/m$^3$) | 100 ppb (188 µg/m$^3$) |
| | Annual Arithmetic Mean | 0.030 ppm (57 µg/m$^3$) | 0.053 ppm (100 µg/m$^3$) |
| Sulfur Dioxide ($SO_2$)[9] | 1 Hour | 0.25 ppm (655 µg/m$^3$) | 75 ppb (196 µg/m$^3$) |
| | 24 Hour | 0.04 ppm (105 µg/m$^3$) | 0.14 ppm (365 µg/m$^3$) |
| | Annual Arithmetic Mean | NA | 0.03 ppm (80 µg/m$^3$) |
| Lead (Pb)[10,11] | 30-Day Average | 1.5 µg/m$^3$ | NA |
| | Calendar Quarter | NA | 1.5 µg/m$^3$ |
| | Rolling 3-Month Average | NA | 0.15 µg/m$^3$ |
| Visibility Reducing Particles[12] | 8 hours | See Note 11 | NA |
| Sulfates ($SO_4^{-2}$) | 24 Hour | 25 µg/m$^3$ | NA |
| Hydrogen Sulfide ($H_2S$) | 1 Hour | 0.03 ppm (42 µg/m$^3$) | NA |
| Vinyl Chloride ($C_2H_3Cl$)[10] | 24 Hour | 0.01 ppm (26 µg/m$^3$) | NA |

ppm = parts per million; ppb = parts per billion; µg/m$^3$ = micrograms per cubic meter; mg/m$^3$ = milligrams per cubic meter; NA = no information available

ppm = parts per million; µg/m$^3$ = micrograms per cubic meter; mg/m$^3$ = milligrams per cubic meter.

Notes:

[1] California standards for $O_3$, carbon monoxide (except Lake Tahoe), sulfur dioxide (1-hour and 24-hour), nitrogen dioxide, suspended particulate matter ($PM_{10}$, $PM_{2.5}$, and visibility reducing particles), are values that are not to be exceeded. All others are not to be equaled or exceeded. CAAQS are listed in the Table of Standards in Section 70200 of Title 17 of the California Code of Regulations.

**Table 6: State and Federal Ambient Air Quality Standards**

[2] National standards (other than ozone, particulate matter, and those based on annual arithmetic mean) are not to be exceeded more than once a year. The ozone standard is attained when the fourth highest 8-hour concentration measured at each site in a year, averaged over three years, is equal to or less than the standard. For $PM_{10}$, the 24-hour standard is attained when the expected number of days per calendar year with a 24-hour average concentration above 150 µg/m$^3$ is equal to or less than one. For $PM_{2.5}$, the 24-hour standard is attained when 98 percent of the daily concentrations, averaged over three years, are equal to or less than the standard. Contact the U.S. EPA for further clarification and current national policies.

[3] Concentration expressed first in units in which it was promulgated. Equivalent units given in parentheses are based upon a reference temperature of 25° C and a reference pressure of 760 torr. Most measurements of air quality are to be corrected to a reference temperature of 25° C and a reference pressure of 760 torr; ppm in this table refers to ppm by volume, or micromoles of pollutant per mole of gas.

[4] Any equivalent measurement method which can be shown to the satisfaction of the ARB to give equivalent results at or near the level of the air quality standard may be used.

[5] National Primary Standards: The levels of air quality necessary, with an adequate margin of safety to protect the public health.

[6] On October 1, 2015, the national 8-hour ozone primary and secondary standards were lowered from 0.075 to 0.070 ppm.

[7] On February 7, 2024, the national annual $PM_{2.5}$ primary standard was lowered from 12.0 µg/m$^3$ to 9.0 µg/m$^3$. The existing national 24-hour $PM_{2.5}$ standards (primary and secondary) were retained at 35 µg/m$^3$, as was the annual secondary standard of 15.0 µg/m$^3$. The existing 24-hour $PM_{10}$ standards (primary and secondary) of 150 µg/m$^3$ also were retained. The form of the annual primary and secondary standards is the annual mean, averaged over 3 years.

[8] To attain the 1-hour national standard, the 3-year average of the annual 98$^{th}$ percentile of the 1-hour daily maximum concentrations at each site must not exceed 100 ppb. Note that the national 1-hour standard is in units of parts per billion (ppb). California standards are in units of parts per million (ppm). To directly compare the national 1-hour standard to the California standards the units can be converted from ppb to ppm. In this case, the national standard of 100 ppb is identical to 0.100 ppm.

[9] On June 2, 2010, a new 1-hour $SO_2$ standard was established and the existing 24-hour and annual primary standards were revoked. To attain the 1-hour national standard, the 3-year average of the annual 99$^{th}$ percentile of the 1-hour daily maximum concentrations at each site must not exceed 75 ppb. The 1971 $SO_2$ national standards (24-hour and annual) remain in effect until one year after an area is designated for the 2010 standard, except that in areas designated nonattainment for the 1971 standards, the 1971 standards remain in effect until implementation plans to attain or maintain the 2010 standards are approved. Note that the 1-hour standard is in units of parts per billion (ppb). California standards are in units of parts per million (ppm). To directly compare the 1-hour standard to the California standard the units can be converted to ppm. In this case, the national standard of 75 ppb is identical to 0.075 ppm.

[10] The ARB has identified lead and vinyl chloride as "toxic air contaminants" with no threshold level of exposure for adverse health effects determined. These actions allow for the implementation of control measures at levels below the ambient concentrations specified for these pollutants.

[11] The national standard for lead was revised on October 15, 2008 to a rolling 3-month average. The 1978 lead standard (1.5 µg/m$^3$ as a quarterly average) remains in effect until one year after an area is designated for the 2008 standard, except that in areas designated nonattainment for the 1978 standard, the 1978 standard remains in effect until implementation plans to attain or maintain the 2008 standard are approved.

## 3.2 State of California

### California Air Resources Board

CARB administers the air quality policy in California. The CAAQS were established in 1969 pursuant to the Mulford-Carrell Act. These standards, included in **Table 6** with the NAAQS, are generally more stringent and apply to more pollutants than the NAAQS. In addition to the criteria pollutants, CAAQS have been established for visibility reducing particulates, hydrogen sulfide, and sulfates.[9]

The California Clean Air Act (CCAA) was approved in 1988 and requires that each local air district prepare and maintain an Air Quality Management Plan (AQMP) to achieve compliance with the CAAQS. These AQMPs also serve as the basis for the preparation of the SIP for meeting the federal clean air standards for the State.[10] Like the U.S. EPA, CARB also designates areas within California as either attainment or nonattainment for each criteria pollutant based on whether the CAAQS have been achieved. Under the CCAA, areas are designated as nonattainment for a pollutant if air quality data shows that a state standard for the pollutant was violated at least once during the previous

[9] California Air Resources Board, *California Ambient Air Quality Standards*, https://ww2.arb.ca.gov/resources/california-ambient-air-quality-standards, accessed December 2024.

[10] South Coast Air Quality Management District, *Final 2016 Air Quality Management Plan*, March 2017, https://www.aqmd.gov/docs/default-source/clean-air-plans/air-quality-management-plans/2016-air-quality-management-plan/final-2016-aqmp/final2016aqmp.pdf?sfvrsn=15, accessed December 2024.

three calendar years. Exceedances that are affected by highly irregular or infrequent events such as wildfires, volcanoes, etc. are not considered violations of a state standard, and are not used as a basis for designating areas as nonattainment. The applicable State standards are summarized in **Table 6.**

**Title 24 Energy Efficiency Standard and California Building Standards**

The Building Energy Efficiency Standards (Energy Code) was adopted in 1976 by the California Energy Commission (CEC) and has been updated throughout the years. The most recent update to the Energy Code occurred in 2022. The Energy Code requires newly constructed buildings to contain water and energy-efficient measures. The CEC anticipates that the 2022 Energy Code will provide $1.5 billion in consumer benefits and reduce greenhouse gas (GHG) emissions by 10 million metric tons. The Project would be required to comply with the applicable standards in place at the time plan check submittals are made.[11]

CCR, Title 24, Part 11: California Green Building Standards Code (CalGreen) is a comprehensive and uniform voluntary regulatory code for all residential, commercial, and school buildings that went in effect on August 1, 2009, and is administered by the California Building Standards Commission. CalGreen is updated on a regular basis, with the most recent approved update consisting of the 2022 California Green Building Code Standards that became effective on January 1, 2023.

## 3.3 Regional

**South Coast Air Quality Management District**

The SCAQMD is the air pollution control agency for Orange County and the urban portions of Los Angeles, Riverside, and San Bernardino Counties. The agency's primary responsibility is ensuring that the NAAQS and CAAQS are attained and maintained in the SCAB. The SCAQMD is also responsible for adopting and enforcing rules and regulations concerning air pollutant sources, issuing permits for stationary sources of air pollutants, inspecting stationary sources of air pollutants, responding to citizen complaints, monitoring ambient air quality and meteorological conditions, awarding grants to reduce motor vehicle emissions, conducting public education campaigns, and many other activities. All projects are subject to SCAQMD rules and regulations in effect at the time of construction.

The SCAQMD is also the lead agency in charge of developing each AQMP, with input from the Southern California Association of Governments (SCAG) and CARB. The AQMP is a comprehensive plan that includes control strategies to reduce emissions from stationary and area sources, as well as for on-road and off-road mobile sources. SCAG has the primary responsibility for providing future growth projections and the development and implementation of transportation control measures. CARB, in coordination with federal agencies, has jurisdiction over mobile sources.

The 2016 AQMP was adopted by the SCAQMD Governing Board on March 3, 2017.[12] The purpose of

[11] California Energy Commission, *2022 Building Energy Efficiency Standards for Residential and Nonresidential Buildings: For the 2022 Building Energy Efficiency Standards Title 24, Part 6, and Associated Administrative Regulations in Part 1,* https://www.energy.ca.gov/publications/2022/2022-building-energy-efficiency-standards-residential-and-nonresidential, accessed April 2025.

[12] South Coast Air Quality Management District, *Final 2016 Air Quality Management Plan*, March 2017, https://www.aqmd.gov/docs/default-source/clean-air-plans/air-quality-management-plans/2016-air-quality-management-plan/final-2016-aqmp/final2016aqmp.pdf?sfvrsn=15, accessed December 2024.

the 2016 AQMP is to set forth a comprehensive and integrated program that would lead the SCAB into compliance with those NAAQS for which the basin is in nonattainment (i.e., the federal 24-hour $PM_{2.5}$ air quality standard), and to provide an update to the SCAQMD's commitments towards meeting the federal 8-hour $O_3$ standards. The 2016 AQMP incorporated the latest scientific and technological information and planning assumptions, including the *2016-2040 Regional Transportation Plan/Sustainable Communities Strategy* (RTP/SCS) and updated emission inventory methodologies for various source categories.[13]

On October 1, 2015, the U.S. EPA strengthened the NAAQS for ground-level $O_3$. The 2022 AQMP, adopted by the SCAQMD Governing Board on December 2, 2022, was developed to address the strengthened requirements for meeting the 2015 ground-level 8-hour $O_3$ standard.[14] The 2022 AQMP builds upon measures already in place from previous AQMPs. It also includes a variety of additional strategies such as regulation, accelerated deployment of available cleaner technologies (e.g., zero emissions technologies, when cost-effective and feasible, and low $NO_X$ technologies in other applications), best management practices, co-benefits from existing programs (e.g., climate and energy efficiency), incentives, and other FCAA measures to achieve the 2015 8-hour ozone standard. Like earlier AQMPs, the 2022 AQMP incorporates the latest scientific and technological information and planning assumptions, including the *2020-2045* RTP/SCS and updated emission inventory methodologies for various source categories.[15]

The SCAQMD has published the CEQA Air Quality Handbook (approved by the SCAQMD Governing Board in 1993 and augmented with guidance for Local Significance Thresholds [LST] in 2008).[16] The SCAQMD guidance helps local government agencies and consultants to develop environmental documents required by California Environmental Quality Act (CEQA) and suggests thresholds of significance for criteria pollutants for both construction and operation (see discussion of thresholds below). With the help of SCAQMD's CEQA Air Quality Handbook and associated guidance, local land use planners and consultants are able to analyze and document how proposed and existing projects affect air quality in order to meet the requirements of the CEQA review process. The SCAQMD periodically provides supplemental guidance and updates to the handbook on their website.

The State and federal attainment status designations for the SCAB are summarized in **Table 7: South Coast Air Basin Attainment Status**. The SCAB is currently designated as a nonattainment area with respect to the State $O_3$, $PM_{10}$, and $PM_{2.5}$ standards, as well as the national 8-hour $O_3$ and $PM_{2.5}$ standards. The SCAB is designated as attainment or unclassified for the remaining state and federal standards.

**Table 7: South Coast Air Basin Attainment Status**

| Pollutant | State | Federal |
|---|---|---|
| Ozone ($O_3$) (1 Hour Standard) | Non-Attainment | Non-Attainment (Extreme) |
| Ozone ($O_3$) (8 Hour Standard) | Non-Attainment | Non-Attainment (Extreme) |
| Particulate Matter ($PM_{2.5}$) (24 Hour Standard) | – | Non-Attainment (Serious) |
| Particulate Matter ($PM_{2.5}$) (Annual Standard) | Non-Attainment | Non-Attainment (Moderate) |
| Particulate Matter ($PM_{10}$) (24 Hour Standard) | Non-Attainment | Attainment (Maintenance) |
| Particulate Matter ($PM_{10}$) (Annual Standard) | Non-Attainment | – |
| Carbon Monoxide (CO) (1 Hour Standard) | Attainment | Attainment (Maintenance) |
| Carbon Monoxide (CO) (8 Hour Standard) | Attainment | Attainment (Maintenance) |
| Nitrogen Dioxide ($NO_2$) (1 Hour Standard) | Attainment | Unclassifiable/Attainment |
| Nitrogen Dioxide ($NO_2$) (Annual Standard) | Attainment | Attainment (Maintenance) |
| Sulfur Dioxide ($SO_2$) (1 Hour Standard) | Attainment | Unclassifiable/Attainment |
| Sulfur Dioxide ($SO_2$) (24 Hour Standard) | Attainment | – |
| Lead (Pb) (30 Day Standard) | – | Unclassifiable/Attainment |
| Lead (Pb) (3 Month Standard) | Attainment | Nonattainment (Partial)[1] |
| Sulfates ($SO_{4-2}$) (24 Hour Standard) | Attainment | – |
| Hydrogen Sulfide ($H_2S$) (1 Hour Standard) | Unclassified | – |

Source: South Coast Air Quality Management District, *Air Quality Management Plan*, 2022; United States Environmental Protection Agency, *Nonattainment Areas for Criteria Pollutants (Green Book)*, 2024.

The following is a list of SCAQMD rules with which construction activities associated with the Project must comply:

- **Rule 401 (Visible Emissions)** – A person shall not discharge into the atmosphere from any single source of emission whatsoever any air contaminant for a period or periods aggregating more than three minutes in any 1 hour that is dark or darker in shade as that designated No. 1 on the Ringelmann Chart, as published by the United States Bureau of Mines.
- **Rule 402 (Nuisance)** – This rule prohibits the discharge from any source whatsoever such quantities of air contaminants or other material which cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or which endanger the comfort, repose, health, or safety of any such persons or the public, or which cause, or have a natural tendency to cause, injury or damage to business or property. This rule does not apply to odors emanating from agricultural operations necessary for the growing or crops or the raising of fowl or animals.
- **Rule 403 (Fugitive Dust)** - This rule requires fugitive dust sources to implement best available control measures for all sources, and all forms of visible particulate matter are

prohibited from crossing any property line. This rule is intended to reduce PM10 emissions from any transportation, handling, construction, or storage activity that has the potential to generate fugitive dust. $PM_{10}$ suppression techniques are summarized below.

a) Portions of a construction site to remain inactive longer than a period of three months will be seeded and watered until grass cover is grown or otherwise stabilized.

b) All on-site roads are paved as soon as feasible, watered regularly, or chemically stabilized.

c) All material transported off-site will be either sufficiently watered or securely covered to prevent excessive amounts of dust.

d) The area disturbed by clearing, grading, earthmoving, or excavation operations will be minimized at all times.

e) Where vehicles leave a construction site and enter adjacent public streets, the streets will be swept daily or washed down following the work day to remove soil from pavement.

- **Rule 431.2 (Sulfur Content of Liquid Fuels)** - This rule limits the sulfur content in diesel and other liquid fuels for the purpose of both reducing the formation of sulfur oxides and particulates during combustion and to enable the use of add-on control devices for diesel fueled internal combustion engines.
- **Rule 445 (Wood Burning)** – This rule prohibits permanently installed wood-burning devices into any new development. A wood-burning device means any fireplace, wood burning heater, or pellet-fueled wood heater, or any similarly enclosed, permanently installed, indoor or outdoor device burning any solid fuel for aesthetic or space-heating purposes, which has a heat input of less than one million British thermal units per hour.
- **Rule 1113 (Architectural Coatings)** – This rule requires manufacturers, distributors, and end users of architectural and industrial maintenance coatings to reduce ROG emissions from the use of these coatings, primarily by placing limits on the ROG content of various coating categories.

**Southern California Association of Governments**

The SCAG is the regional planning agency for Los Angeles, Orange, Ventura, Riverside, San Bernardino and Imperial counties, and serves as a forum for regional issues relating to transportation, the economy, community development, and the environment. Under federal law, SCAG is designated as a Metropolitan Planning Organization and under State law as a Regional Transportation Planning Agency and a Council of Governments. With respect to air quality planning, SCAG has prepared the Regional Comprehensive Plan and Guide for the region, which includes Growth Management and Regional Mobility chapters that form the basis for the land use and transportation control portions of the 2022 AQMP.

## 3.4 Local

**City of Ontario General Plan**

The City of Ontario General Plan (TOP 2050) is a policy plan that guides the City's long-term development. TOP 2050 establishes goals and policies within the Environmental Resources Element, Land Use Element, and Safety Element to protect residents, workers, and visitors from worsening local pollutant emissions. The following goals and policies are applicable to the Project.

Environmental Resources Element

**Goal ER-3** **Cost-effective and reliable energy system sustained through a combination of low impact buildings, site and neighborhood energy conservation, and diverse sources of energy generation that collectively helps to minimize the region's carbon footprint.**

**Policy ER-3.5** **Fuel-Efficient and Alternative Energy Vehicles and Equipment.** We require purchase and use vehicles and equipment that are fuel efficient and meet or surpass state emissions requirements and/or use renewable sources of energy.

**Goal ER-4** **Improved indoor and outdoor air quality and reduced locally generated pollutant emissions.**

**Policy ER-4.1** **Land Use.** We reduce GHG and other local pollutant emissions through compact, mixed use, and transit-oriented development and development that improves the regional jobs-housing balance.

**Policy ER-4.4** **Indoor Air Quality.** We will comply with State Green Building Codes relative to indoor air quality. We seek funding to improve indoor air quality for households with poor indoor air quality, with priority for lower income households in environmental justice areas.

**Policy ER-4.5** **Transportation.** We promote mass transit and non-motorized mobility options (walking, biking) to reduce air pollutant emissions.

**Policy ER-4.6** **Particulate Matter.** We support efforts to reduce particulate matter to meet State and Federal Clean Air Standards.

**Policy ER-4.7** **Other Agency Collaboration.** We collaborate with other agencies within the South Coast Air Basin to improve regional air quality at the emission source, with a particular focus on sources that affect environmental justice areas in Ontario.

**Policy ER-4.8** **Tree Planting.** We protect healthy trees within the City and plant new trees to increase carbon sequestration and help the regional/local air quality. We expand the tree canopy in environmental justice areas to enhance air quality and reduce the "heat island" effect.

Land Use Element

**Goal LU-2** **Compatibility between a wide range of uses and resultant urban patterns and forms.**

**Policy LU-2.2** **Buffers.** We require new uses to provide mitigation or buffers between existing uses where potential adverse impacts could occur. Additional mitigation is required when new uses could negatively impact environmental justice areas.

**Policy LU-2.4** **Regulation of Nuisances**. We regulate the location, concentration, and operation of potential nuisances

**Policy LU-2.8** **Transitional Areas**. We require development in transitional areas to protect the quality of life of current residents.

Safety Element

**Goal S-9** **Incorporate energy efficient practices and renewable energy systems to improve air quality, comfort, and energy reliability during temporary power outages.**

# 4.0 SIGNIFICANCE CRITERIA AND METHODOLOGY

## 4.1 Air Quality Thresholds

**State CEQA Guidelines Appendix G**

According to the State CEQA Guidelines Appendix G, a project would normally have a significant effect on the environment if the project would:

- Conflict with or obstruct implementation of the applicable air quality plan.
- Result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is in nonattainment under an applicable state or federal ambient air quality standard.
- Expose sensitive receptors to substantial pollutant concentrations.
- Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people.

**South Coast Air Quality Management District**

Mass Emissions Thresholds

The significance criteria established by SCAQMD may be relied upon to make the above determinations. According to the CEQA Appendix G, an air quality impact is considered significant if the Project would violate any ambient air quality standard (AAQS), contribute substantially to an existing or projected air quality violation, or expose sensitive receptors to substantial pollutant concentrations. The SCAQMD has established thresholds of significance for criteria pollutant and precursor emissions during construction and operational activities of land use development projects, as shown in **Table 8: South Coast Air Quality Management District Emissions Thresholds**.

**Table 8: South Coast Air Quality Management District Emissions Thresholds**

| Criteria Pollutants and Precursors | Daily Emissions (pounds per day) | |
|---|---|---|
| | Construction-Related | Operational-Related |
| Volatile Organic Compounds (VOCs)[1] | 75 | 55 |
| Nitrogen Oxides ($NO_X$) | 100 | 55 |
| Carbon Monoxide (CO) | 550 | 550 |
| Sulfur Oxides ($SO_X$) | 150 | 150 |
| Coarse Particulates ($PM_{10}$) | 150 | 150 |
| Fine Particulates ($PM_{2.5}$) | 55 | 55 |

1. VOCs and reactive organic gases (ROGs) are subsets of organic gases emitted from the incomplete combustion of hydrocarbons or other carbon-based fuels. Although they represent slightly different subsets of organic gases, they are used interchangeably for the purposes of this analysis.

Source: South Coast Air Quality Management District, *CEQA Air Quality Significance Thresholds,* March 2023.

Localized Carbon Monoxide

In addition to the daily thresholds listed above, development associated with the Project would also be subject to the AAQS. These are addressed through an analysis of localized CO impacts known as the CO "hot spots" analysis. An analysis of CO "hot spots" determines whether the change in the level of service (LOS) of an intersection as a result of Project activities would have the potential to result in exceedances of the CAAQS or NAAQS. It has long been recognized that one of the greatest

contributors of CO to outdoor air is cars.[17] Vehicle emissions standards have become increasingly stringent in the last 20 years. Currently, the CO standard in California is a maximum of 3.4 grams per mile for passenger cars (requirements for certain vehicles are more stringent).[18] With the turnover of older vehicles, introduction of cleaner fuels, and implementation of control technology on industrial facilities, CO concentrations have steadily declined.[19, 20]

Accordingly, with steadily decreasing CO emissions from vehicles, even very busy intersections do not result in exceedances of the CO standard. An analysis prepared for CO attainment in the SCAB by the SCAQMD is useful for current evaluations of the potential for CO exceedances. CO attainment was thoroughly analyzed as part of the SCAQMD's 2003 AQMP.[21] Considering the region's unique meteorological conditions and the increasingly stringent CO emissions standards, CO modeling was performed as part of air quality management plans. The SCAB was re-designated as attainment (as reported in **Table 5**, above) in 2007 and CO is no longer addressed in the SCAQMD's AQMP.

The 2003 AQMP is the most recent AQMP that addressed CO concentrations. As part of the 2003 AQMP CO Modeling Attainment Demonstration, an analysis was performed utilizing dispersion modeling.[22] The Wilshire Boulevard and Veteran Avenue intersection, one of the most congested intersections in Southern California with an average daily traffic (ADT) volume of approximately 100,000 vehicles per day, was modeled for CO concentrations. This modeling effort identified a CO concentration high of 4.6 parts per million (ppm), which is well below the 35-ppm federal standard.

The Bay Area Air Quality Management District addressed CO concentrations in its most recent CEQA Guidelines. Based on the improvement in mobile-source CO emissions, the CEQA Guidelines established a project would have to increase traffic volumes at a single intersection by more than 44,000 vehicles per hour—or 24,000 vehicles per hour where vertical and/or horizontal air does not mix—in order to generate a significant CO impact. [23]

For purposes of this analysis, a significant impact regarding CO hotspots may occur if an intersection exceeds 24,000 vehicles per hour.

<u>Localized Significance Thresholds</u>

In addition to the CO hot spot analysis, the SCAQMD developed LSTs for emissions of $NO_2$, CO, $PM_{10}$, and $PM_{2.5}$ generated at new development sites (off-site mobile source emissions are not included in the LST analysis). LSTs represent the maximum emissions that can be generated at a project site without expecting to cause or substantially contributing to an exceedance of the most stringent

NAAQS or CAAQS. LSTs are based on the ambient concentrations of that pollutant within the Project source receptor area (SRA), as demarcated by the SCAQMD, and the distance to the nearest sensitive receptor. LST analysis for construction is required for all projects that disturb 5 acres or less on a single day. The Project site is located within SCAQMD SRA 33 (Southwest San Bernardino Valley). LST are provided for source-receptor distances of 25, 50, 100, 200, and 500 meters. LSTs for 1-acre, 2-acre, and 5-acre projects in SRA 33 at 25 meters of the Project site are provided in **Table 9: Local Significance Thresholds for Construction/Operations**.

**Table 9: Local Significance Thresholds for Construction/Operations**

| Project Size | Daily Construction/Operations Emissions (pounds per day) | | | |
|---|---|---|---|---|
| | Nitrogen Oxide ($NO_x$) | Carbon Monoxide (CO) | Coarse Particulates ($PM_{10}$) | Fine Particulates ($PM_{2.5}$) |
| 1 Acre | 118/118 | 863/863 | 5/2 | 4/1 |
| 2 Acres | 170/170 | 1,232/1,232 | 6/2 | 5/2 |
| 5 Acres | 270/270 | 2,193/2,193 | 16/4 | 9/2 |

Source: South Coast Air Quality Management District, *Localized Significance Threshold Methodology,* July 2008.

The sensitive receptors nearest the Phase I Project area are residential uses (Sensitive Receptor 1) located approximately 36 feet (11 meters) to the north and nearest the Phase II Project area are residential uses (Sensitive Receptor 2) located approximately 53 feet (16 meters) to the south. As the LSTs at 25 feet is the closest receptor distance provided by SCAQMD, the LSTs at 25 meters applies to sensitive receptors located closer than 25 meters from the Project site.[24] LSTs associated with all acreage categories at 25 meters are provided in **Table 9** for informational purposes and shows that the LSTs increase as acreages increase. It should be noted that LSTs are screening thresholds and are therefore conservative. The construction LST acreage is determined based daily acreage disturbed. The operational LST acreage is based on the total area of the Project site.

## 4.2 Methodology

This air quality impact analysis considers construction and operational impacts associated with the Project. Where criteria air pollutant quantification was required, emissions were modeled using the CARB approved California Emissions Estimator Model (CalEEMod) version 2022.1. CalEEMod is a Statewide land use emissions computer model designed to quantify potential criteria pollutant emissions for land use development projects based on typical construction requirements. Air quality impacts were assessed according to methodologies recommended by CARB and the SCAQMD.

Construction equipment, trucks, worker vehicles, and ground-disturbing activities associated with Project construction would generate emissions of criteria air pollutants and precursors. Although Project construction would be dependent on market conditions, daily regional construction emissions are estimated by assuming construction occurs at the earliest feasible date (i.e., a conservative estimate of construction activities) and applying off-road, fugitive dust, and on-road emissions factors in CalEEMod. It is assumed that Phase I construction would occur from late-2025 to mid-2027. At this stage of the planning process, the Phase II construction timeline is not yet available. As such, reasonable assumptions have been made as a conservative measure. It is assumed that Phase II construction would occur from late-2026 to early-2030 and would overlap

[24] South Coast Air Quality Management District, *Localized Significance Threshold Methodology*, July 2008, https://www.aqmd.gov/docs/default-source/ceqa/handbook/localized-significance-thresholds/final-lst-methodology-document.pdf, accessed April 2025.

with Phase I construction.

Project operations would result in emissions from mobile sources (Project generated vehicle trips), area sources (architectural coatings, landscaping equipment, and consumer products), energy sources (electricity and natural gas usage), and vehicles idling in the drive-thru lanes. Project-generated operational emissions would be predominantly associated with motor vehicle use. The emissions associated with the mobile, area, and energy sources were quantified in CalEEMod based on land use activity data. The Project vehicle trip generation was obtained from the Traffic Analysis.[25] The emissions generated by vehicles idling in drive-thru lanes were estimated using CARB's EMission FACtor (EMFAC) projected emissions rates in San Bernardino County, the miles traveled on-site, and the vehicle trip generation from the Traffic Analysis.[26] Project occupancy would be dependent on market conditions and permit approvals. As such, it is conservatively assumed Phase I and Phase II would be operational as soon as construction is completed. In addition, operational emissions associated with the maximum potential buildout are conservatively calculated based on an operational year of 2030.

As discussed above, the SCAQMD provides significance thresholds for emissions associated with project construction and operations. The Project's construction and operational emissions are compared to the daily criteria pollutant emissions significance thresholds in order to determine the significance of a Project's impact on regional air quality.

The localized effects from the Project's on-site construction and operational emissions were evaluated in accordance with the SCAQMD's LST methodology, which uses on-site mass emissions rate look-up tables and Project-specific modeling. LSTs represent the maximum emissions from a project that are not expected to cause or contribute to an exceedance of the most stringent applicable NAAQS or CAAQS and are developed based on the ambient concentrations of that pollutant for each source receptor area and distance to the nearest sensitive receptor.

# 5.0 POTENTIAL IMPACTS AND MITIGATION

## Threshold 5.1 Would the Project conflict with or obstruct implementation of the applicable air quality plan?

As part of its enforcement responsibilities, the U.S. EPA requires each state with nonattainment areas to prepare and submit a SIP that demonstrates the means to attain the NAAQS. The SIP must integrate federal, state, and local plan components and regulations to identify specific measures to reduce pollution in nonattainment areas, using a combination of performance standards and market-based programs. Similarly, under State law, the CCAA requires an air quality attainment plan to be prepared for areas designated as nonattainment regarding the NAAQS and CAAQS. Air quality attainment plans outline emissions limits and control measures to achieve and maintain these standards by the earliest practical date.

The Project site is located within SCAB, which is under the jurisdiction of the SCAQMD. The SCAQMD is required, pursuant to the FCAA, to reduce emissions of criteria pollutants for which the SCAB is in nonattainment. To reduce such emissions, the SCAQMD drafted the 2016 AQMP and 2022 AQMP (AQMPs).[27] The AQMPs establish a program of rules and regulations directed at reducing air pollutant emissions and achieving NAAQS and CAAQS. The AQMPs are a regional and multi-agency effort including the SCAQMD, the CARB, the SCAG, and the U.S. EPA. The AQMPs pollutant control strategies are based on the latest scientific and technical information and planning assumptions, including SCAG's RTP/SCS, updated emission inventory methodologies for various source categories, and SCAG's latest growth forecasts. SCAG's latest growth forecasts were defined in consultation with local governments and with reference to local general plans. The Project is subject to the SCAQMD's AQMPs.

The criteria for determining consistency with the AQMPs are defined by the following indicators:

- **Consistency Criterion No. 1**: The Project will not result in an increase in the frequency or severity of existing air quality violations, or cause or contribute to new violations, or delay the timely attainment of air quality standards or the interim emissions reductions specified in the AQMPs.
- **Consistency Criterion No. 2**: The Project will not exceed the assumptions in the AQMPs or increments based on the years of the Project build-out phase.

According to the SCAQMD's *CEQA Air Quality Handbook*, the purpose of the consistency finding is to determine if a project is inconsistent with the assumptions and objectives of the regional air quality plans, and thus if it would interfere with the region's ability to comply with the NAAQS and CAAQS.[28]

[27] The 2016 AQMP was adopted in March 2017 and was developed to address attainment of multiple $O_3$ and $PM_{2.5}$ standards. The 2022 AQMP was adopted in December 2022 and was developed to address attainment of the 2015 8-hour $O_3$ federal standard.
[28] South Coast Air Quality Management District, *CEQA Air Quality Handbook*, 1993.

### Phase I (Proposed Development), Phase II (Future Development, Project Buildout (Phase I + Phase II)

**Criterion No. 1**

Consistency Criterion No. 1 refers to exceedances of the NAAQS and CAAQS. As shown in Threshold 2 below, the construction and operational-generated emissions associated with Project (Phase I and Phase II) implementation would exceed the applicable SCAQMD emission thresholds. Mitigation measures from the FSEIR were incorporated to reduce emissions to the greatest extent feasible. However, the construction and operational-generated emissions would remain above the SCAQMD emissions thresholds. Therefore, the Project would potentially contribute to an existing air quality violation and is consistent with the first criterion.

**Criterion No.2**

Consistency Criterion No. 2 refers to exceedances of the AQMP emission assumptions based on SCAG's latest growth forecasts. The AQMP contains air pollutant reduction strategies based on SCAG's latest growth forecasts, and SCAG's growth forecasts were defined in consultation with local governments and with reference to local general plans.

Growth forecasts prepared by SCAG and contained in the 2024-2050 RTP/SCS indicate that the number of households within the City will increase from 50,500 in 2019 to 95,500 in 2050, an increase of 45,000 households.[29] The Project would develop a maximum of 4,293 DUs, which represents 8.5 percent of the anticipated increase for the City by 2050. The Project site land use designation would be consistent with TOP 2050 and the AQMP. Therefore, the housing growth attributed to the Project would be accounted for within the local and regional population projections under the 2024-2050 RTP/SCS. As such, the Project would be consistent with the AQMP regarding population and housing assumptions.

The Project operational emissions would exceed the applicable SCAQMD emission thresholds. The Project is subject to FSEIR mitigation, which would reduce operational emissions; however, operational emissions would remain significant and would potentially contribute to the nonattainment designations in the SCAB. As such, the Project would be inconsistent with the AQMP regarding emission projections. As concluded in the FSEIR, impacts would be significant and unavoidable.

**FSEIR Mitigation Measures:** Refer to MM 3-2 and MM AQ-1 under Threshold 2 below.

**Mitigation Measures:** No additional mitigation is required.

**Level of Significance:** Significant and unavoidable.

### Conclusion

The criteria pollutant emissions impacts associated with the Project would be significant and unavoidable. The Project's impacts are within the limit of significant and unavoidable impacts

[29] Southern California Association of Governments, Connect SoCal (2024–2050 RTP/SCS), Demographics and Growth Forecast adopted April 4, 2024, https://www.scag.ca.gov/sites/default/files/2024-05/23-2987-tr-demographics-growth-forecast-final-040424.pdf, accessed April 2025.

identified in the FSEIR. As a result, the proposed Project would not result in any new or more severe impacts than previously analyzed in the FSEIR.

### Threshold 5.2 Would the Project result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is non-attainment under an applicable state or federal ambient air quality standard?

Construction associated with the Project would generate short-term emissions of criteria air pollutants. The criteria pollutants of primary concern within the SCAB include ozone-precursor pollutants (i.e., ROG and $NO_X$), $PM_{10}$, and $PM_{2.5}$, as these pollutants are in nonattainment. Construction-generated emissions of these criteria pollutants would be short-term and of temporary duration, lasting only as long as construction activities occur, but would be considered a significant air quality impact if the volume of pollutants generated were to exceed the SCAQMD's thresholds of significance.

Construction activities would result in the temporary generation of criteria pollutant emissions from site grading, road paving, motor vehicle exhaust associated with construction equipment and worker trips, and the movement of construction equipment, especially on unpaved surfaces. Emissions of airborne particulate matter are largely generated by motor vehicle exhaust and ground disturbance; the volume of airborne particulate matter is largely dependent on the amount of ground disturbance associated with site preparation activities, as well as weather conditions and the appropriate application of water.

Project operations would generate emissions from mobile sources (Project generated vehicle trips), area sources (architectural coatings, consumer products, and landscape equipment), and energy sources (electricity and natural gas usage), and vehicles idling in the drive-thru lanes. The primary sources of operational criteria pollutants are from motor vehicle use and area sources.

## Phase I – Proposed Development

### Construction Emissions

Phase I construction is estimated to occur over 1 year and 6 months. Phase I construction would include demolition, site preparation, grading, infrastructure improvements, paving, and architectural coatings. Construction-generated emissions associated with Phase I were calculated using CalEEMod, which is designed to model emissions for land use development projects based on typical construction requirements. It is conservatively assumed that all anticipated construction equipment for each construction phase would operate simultaneously.

Fugitive dust emissions may have a temporary impact on local air quality and may be a nuisance to those living and working in the Phase I Project area. Phase I would be required to comply with SCAQMD rules and regulations, including SCAQMD Rule 402 (Nuisance), Rule 403 (Fugitive Dust), and Rule 1113 (Architectural Coatings). SCAQMD Rule 402 prohibits the discharge of air contaminants or other material that cause a nuisance. SCAQMD Rule 403 requires fugitive dust control measures. SCAQMD Rule 1113 provides specifications on painting practices and regulates the ROG content of paint. Phase I would additionally comply with CARB's anti-idling regulations, which prohibits heavy-duty diesel vehicle idling for more than five minutes.

Phase I construction would be subject to FSEIR Mitigation Measure (MM) 3-1, which requires compliance with SCAQMD Rule 403, the use of Tier 4 interim or higher exhaust emission limits, super-compliant ROG paint for architectural coatings, and prohibits idling of construction equipment for more than five minutes. The following measures from SCAQMD Rule 403 and FSEIR MM 3-1 were accounted for in emissions estimation:

- Exposed areas would be watered three times per day during earthmoving activities, twice per day during demolition, and twice per day for on unpaved roads and vehicle speeds would be limited to 25 miles per hour on unpaved roads.
- Heavy-duty diesel vehicle idling would be limited to five minutes or less.
- Construction equipment would meet the Tier 4 Final engine standards.
- Paints used for architectural coatings would have a ROG content less than ten g/L.

Phase I construction would also comply with laws, ordinances and regulations (LOR) AQ-1 through AQ-2. LOR AQ-1 requires owners to retrofit their existing heavy-duty tractor and trailer fleet with U.S. EPA SmartWay certified vehicles. LOR AQ-2 establishes GHG and fuel efficiency standards for medium- and heavy-duty vehicle engines. See **Appendix A: Air Quality Data** for more information regarding the construction assumptions used in this analysis.

The emissions associated with Phase I construction are reported in **Table 10: Phase I Construction Emissions**.

**Table 10: Phase I Construction Emissions**

| Construction Year | Maximum Daily Emissions (pounds per day)[1,2] | | | | | |
|---|---|---|---|---|---|---|
| | ROG | $NO_X$ | CO | $SO_2$ | $PM_{10}$ | $PM_{2.5}$ |
| 2025 | 1.03 | 9.36 | 49.53 | 0.09 | 7.52 | 3.24 |
| 2026 | 5.99 | 18.78 | 103.75 | 0.15 | 18.99 | 4.71 |
| 2027 | 122.14 | 17.92 | 98.58 | 0.10 | 18.99 | 4.71 |
| SCAQMD Threshold | 75 | 100 | 550 | 150 | 150 | 55 |
| **SCAQMD Threshold Exceeded?** | **Yes** | **No** | **No** | **No** | **No** | **No** |

ROG = Reactive Organic Gases; $NO_X$ = Nitrogen Oxides; CO = Carbon Monoxide; $SO_2$ = Sulfur Dioxide; $PM_{10}$ = Particulate Matter 10 microns in diameter or less; $PM_{2.5}$ = Particulate Matter 2.5 microns in diameter or less

1. SCAQMD Rule 403 Fugitive Dust was applied. Rule 403 reduction/credits include the following: properly maintain mobile and other construction equipment; replace ground cover in disturbed areas quickly; water exposed surfaces three times daily; water all haul roads twice daily. Reductions percentages from the SCAQMD CEQA Handbook (Tables XI-A through XI-E) were applied.
2. Worst-case seasonal daily maximum emissions are reported.

Source: CalEEMod version 2022.1. Refer to **Appendix A** for the model outputs.

As shown in **Table 10**, the Phase I construction emissions would exceed the SCAQMD threshold for ROG emissions. The Phase I construction-generated ROG emissions are primarily from architectural coatings. FSEIR MM 3-1 requires the Applicant to use super-compliant ROG paints for architectural coatings, which have a ROG content lower than the regulatory limits required by SCAQMD Rule 1113. As such, the Phase I construction-generated ROG emissions cannot be reduced below the SCAQMD threshold. As concluded in the FSEIR, Project impacts would be significant and unavoidable.

### Operational Emissions

Phase I operations would be subject to FSEIR MM 3-2 and MM AQ-1, TOP 2050 Policy ER-3.5, and LOR AQ-3 through AQ-4. FSEIR MM 3-2 requires new developments to include access to alternative modes of transportation, such as transit stops, bike paths, and pedestrian paths. FSEIR MM AQ-1

requires new developments to provide bicycle parking, changing/shower, and supportive electric charging station facilities, preferential parking for fuel efficient and carpool vehicles, and Energy Star certified appliances. TOP 2050 Policy ER-3.5 requires Phase I occupants to purchase and use vehicles that comply with the Advanced Clean Cars II and Advanced Clean Trucks. LOR AQ-3 requires new buildings to meet the current Energy Code and CALGreen Code. LOR AQ-4 requires new non-residential buildings to provide bicycle parking according to the CALGreen Code or City ordinance. The following measures from FSEIR MM AQ-1 were accounted for in emissions estimation:

- Non-residential buildings would provide changing/shower facilities, electric vehicle charging infrastructure, and preferential parking for fuel efficient and carpool vehicles.
- Residential buildings would include bicycle parking facilities and Energy Star certified appliances.

The emissions associated with Phase I operations are summarized in **Table 11: Phase I Operational Emissions**.

**Table 11: Phase I Operational Emissions**

| Source | Maximum Daily Emissions (pounds per day)[1] | | | | | |
|---|---|---|---|---|---|---|
| | ROG | $NO_X$ | CO | $SO_2$ | $PM_{10}$ | $PM_{2.5}$ |
| Mobile | 31.48 | 33.73 | 309.01 | 0.81 | 72.35 | 18.73 |
| Area | 52.47 | 0.55 | 58.14 | <0.01 | 0.03 | 0.02 |
| Energy | 0.31 | 5.25 | 2.24 | 0.03 | 0.42 | 0.42 |
| Total Emissions[2] | 84.26 | 39.53 | 369.38 | 0.84 | 72.80 | 19.18 |
| SCAQMD Threshold | 55 | 55 | 550 | 150 | 150 | 55 |
| **SCAQMD Threshold Exceeded?** | **Yes** | **No** | **No** | **No** | **No** | **No** |

ROG = Reactive Organic Gases; $NO_X$ = Nitrogen Oxides; CO = Carbon Monoxide; $SO_2$ = Sulfur Dioxide; $PM_{10}$ = Particulate Matter 10 microns in diameter or less; $PM_{2.5}$ = Particulate Matter 2.5 microns in diameter or less
1. Worst-case seasonal daily maximum emissions are reported.
2. Totals may not add up due to rounding.

Source: CalEEMod version 2022.1. Refer to **Appendix A** for the model outputs.

The operational emissions sources are described in detail below:

- **Mobile Sources.** Mobile sources emissions would be generated from motor vehicles, including tailpipe and evaporative emissions. Depending upon the pollutant being discussed, the potential air quality impact may be of either regional or local concern. For example, ROG, $NO_X$, $PM_{10}$, and $PM_{2.5}$ are all pollutants of regional concern. $NO_X$ and ROG react with sunlight to form $O_3$, known as photochemical smog. Additionally, wind currents readily transport $PM_{10}$ and $PM_{2.5}$. However, CO tends to be a localized pollutant, dispersing rapidly at the source.

  Phase I-generated vehicle emissions are based on the trip generation estimates and have been incorporated into CalEEMod, as recommended by the SCAQMD. Phase I would generate 8,270 total daily vehicle trips.[30]

- **Area Sources**. Area source emissions would be generated due to architectural coatings, consumer products, and landscape equipment.

[30] Urban Crossroads, *Center Park Specific Plan Traffic Analysis*, 2025.

- **Energy Source.** Energy source emissions would be generated due to electrical and natural gas usage associated with Phase I operations. Primary energy uses include space heating and cooling, water heating, ventilation, lighting, appliances, and electronics. However, electrical usage does not emit criteria pollutants and the residential uses would not include natural gas hearths.

As shown in **Table 11**, the Phase I operational emissions would exceed the SCAQMD threshold for ROG emissions. The Phase I operational ROG emissions are primarily from mobile sources and consumer products. Implementation of FSEIR MM 3-2 would reduce mobile emissions to the maximum extent feasible, as motor vehicle emissions are controlled by State and federal standards and neither the Applicant nor the City has control over these standards. For analytical purposes, consumer products include cleaning supplies, aerosols, cosmetics, toiletries, and fertilizer.[31] Phase I could require limitations on the use of ROG emitting products through lease or property agreements. However, this mitigation is not feasible as it would be difficult to enforce. As such, the Phase I operational ROG emissions cannot be reduced below the SCAQMD threshold. As concluded in the FSEIR, Project impacts would be significant and unavoidable.

## Phase II – Future Development

### Construction Emissions

Phase II construction is conservatively assumed to occur over 3 years and 4 months. Phase II construction would include demolition, site preparation, grading, infrastructure improvements, paving, and architectural coatings. Construction-generated emissions associated with Phase II were calculated using CalEEMod, which is designed to model emissions for land use development projects based on typical construction requirements. It is conservatively assumed that all anticipated construction equipment for each construction phase would operate simultaneously.

Fugitive dust emissions may have a temporary impact on local air quality and may be a nuisance to those living and working in the Phase II Project area. Phase I would be required to comply with SCAQMD rules and regulations, including SCAQMD Rule 402 (Nuisance), Rule 403 (Fugitive Dust), and Rule 1113 (Architectural Coatings). SCAQMD Rule 402 prohibits the discharge of air contaminants or other material that cause a nuisance. SCAQMD Rule 403 requires fugitive dust control measures. SCAQMD Rule 1113 provides specifications on painting practices and regulates the ROG content of paint. Phase I would additionally comply with CARB's anti-idling regulations, which prohibits heavy-duty diesel vehicle idling for more than five minutes.

Phase II construction would be subject to FSEIR MM 3-1, which requires compliance with SCAQMD Rule 403, the use of Tier 4 interim or higher exhaust emission limits, super-compliant ROG paint for architectural coatings, and prohibits idling of construction equipment for more than five minutes. The following measures from SCAQMD Rule 403 and FSEIR MM 3-1 were accounted for in emissions estimation:

- Exposed areas would be watered three times per day during earthmoving activities, twice per day during demolition, and twice per day for on unpaved roads and vehicle speeds would be limited to 25 miles per hour on unpaved roads.

[31] California Air Pollution Control Officers Association, *California Emissions Estimator Model User's Guide*, 2022.

- Heavy-duty diesel vehicle idling would be limited to five minutes or less.
- Construction equipment would meet the Tier 4 final engine standards.
- Paints used for architectural coatings would have a ROG content less than ten g/L.

Phase II construction would also comply with LOR AQ-1 through AQ-2. LOR 1 requires owners to retrofit their existing heavy-duty tractor and trailer fleet with U.S. EPA SmartWay certified vehicles. LOR 2 establishes GHG and fuel efficiency standards for medium and heavy-duty vehicle engines. See **Appendix A** for more information regarding the construction assumptions used in this analysis.

The emissions associated with Phase II construction are reported in **Table 12: Phase II Construction Emissions**.

**Table 12: Phase II Construction Emissions**

| Construction Year | Maximum Daily Emissions (pounds per day)[1] | | | | | |
|---|---|---|---|---|---|---|
| | ROG | $NO_X$ | CO | $SO_2$ | $PM_{10}$ | $PM_{2.5}$ |
| 2026 | 1.05 | 12.14 | 50.95 | 0.11 | 10.10 | 3.73 |
| 2027 | 10.55 | 29.02 | 208.66 | 0.17 | 35.72 | 9.18 |
| 2028 | 18.19 | 47.80 | 263.66 | 0.24 | 66.10 | 16.00 |
| 2029 | 8.99 | 24.24 | 151.19 | 0.13 | 33.07 | 8.04 |
| 2030 | 370.37 | 20.83 | 112.42 | 0.11 | 32.85 | 7.96 |
| SCAQMD Threshold | 75 | 100 | 550 | 150 | 150 | 55 |
| **SCAQMD Threshold Exceeded?** | **Yes** | **No** | **No** | **No** | **No** | **No** |

ROG = Reactive Organic Gases; $NO_X$ = Nitrogen Oxides; CO = Carbon Monoxide; $SO_2$ = Sulfur Dioxide; $PM_{10}$ = Particulate Matter 10 microns in diameter or less; $PM_{2.5}$ = Particulate Matter 2.5 microns in diameter or less

1. SCAQMD Rule 403 Fugitive Dust was applied. Rule 403 reduction/credits include the following: properly maintain mobile and other construction equipment; replace ground cover in disturbed areas quickly; water exposed surfaces three times daily; water all haul roads twice daily. Reductions percentages from the SCAQMD CEQA Handbook (Tables XI-A through XI-E) were applied.

Source: CalEEMod version 2022.1. Refer to **Appendix A** for the model outputs.

As shown in **Table 12**, the Phase II construction emissions would exceed the SCAQMD threshold for ROG emissions. The Phase II construction-generated ROG emissions are primarily from architectural coatings. FSEIR MM 3-1 requires the Applicant to use super-compliant ROG paints for architectural coatings, which have a ROG content lower than the regulatory limits required by SCAQMD Rule 1113. As such, Phase II construction-generated ROG emissions cannot be reduced below the SCAQMD threshold. As concluded in the FSEIR, Project impacts would be significant and unavoidable.

### Operational Emissions

Phase II operations would be subject to FSEIR MM 3-2 and MM AQ-1, TOP 2050 Policy ER-3.5, and LOR AQ-3 through AQ-4. FSEIR MM 3-2 requires new developments to include access to alternative modes of transportation, such as transit stops, bike paths, and pedestrian paths. FSEIR MM AQ-1 requires new developments to provide bicycle parking, changing/shower, and supportive electric charging station facilities, preferential parking for fuel efficient and carpool vehicles, and Energy Star certified appliances. TOP 2050 Policy ER-3.5 requires Phase II occupants to purchase and use vehicles that comply with the Advanced Clean Cars II and Advanced Clean Trucks. LOR AQ-3 requires new buildings to meet the current Energy Code and CALGreen Code. LOR AQ-4 requires new non-residential buildings to provide bicycle parking according to the CALGreen Code or City ordinance. The following measures from FSEIR MM AQ-1 were accounted for in emissions estimation:

- Non-residential buildings would provide changing/shower facilities, electric vehicle charging infrastructure, and preferential parking for fuel efficient and carpool vehicles.
- Residential buildings would include bicycle parking facilities and Energy Star certified appliances.

The emissions associated with Phase II operations are summarized in **Table 13: Phase II Operational Emissions**.

**Table 13: Phase II Operational Emissions**

| Source | Maximum Daily Emissions (pounds per day)[1] | | | | | |
|---|---|---|---|---|---|---|
| | ROG | $NO_X$ | CO | $SO_2$ | $PM_{10}$ | $PM_{2.5}$ |
| Mobile | 121.24 | 133.37 | 1,299.39 | 3.69 | 351.10 | 90.64 |
| Area | 156.00 | 1.82 | 197.01 | 0.01 | 0.10 | 0.08 |
| Energy | 1.11 | 19.19 | 9.59 | 0.12 | 1.54 | 1.54 |
| Drive-thru Lanes | <0.01 | <0.01 | 0.04 | <0.01 | <0.01 | <0.01 |
| Total Emissions[2] | 278.36 | 154.39 | 1,506.03 | 3.82 | 352.74 | 92.25 |
| SCAQMD Threshold | 55 | 55 | 550 | 150 | 150 | 55 |
| **SCAQMD Threshold Exceeded?** | **Yes** | **Yes** | **Yes** | **No** | **Yes** | **Yes** |

ROG = Reactive Organic Gases; $NO_X$ = Nitrogen Oxides; CO = Carbon Monoxide; $SO_2$ = Sulfur Dioxide; $PM_{10}$ = Particulate Matter 10 microns in diameter or less; $PM_{2.5}$ = Particulate Matter 2.5 microns in diameter or less
1. Worst-case seasonal daily maximum emissions are reported.
2. Totals may not add up due to rounding.

Source: CalEEMod version 2022.1. Refer to **Appendix A** for the model outputs.

The operational emissions sources are described in detail below:

- **Mobile Sources.** Mobile sources emissions would be generated from motor vehicles, including tailpipe and evaporative emissions. Depending upon the pollutant being discussed, the potential air quality impact may be of either regional or local concern. For example, ROG, $NO_X$, $PM_{10}$, and $PM_{2.5}$ are all pollutants of regional concern. $NO_X$ and ROG react with sunlight to form $O_3$, known as photochemical smog. Additionally, wind currents readily transport $PM_{10}$ and $PM_{2.5}$. However, CO tends to be a localized pollutant, dispersing rapidly at the source.

  Phase II-generated vehicle emissions are based on the trip generation estimates and have been incorporated into CalEEMod, as recommended by the SCAQMD. Phase II would generate 36,446 total daily vehicle trips.[32]

- **Area Sources**. Area source emissions would be generated due to architectural coatings, consumer products, and landscape equipment.

- **Energy Source.** Energy source emissions would be generated due to electrical and natural gas usage associated with Phase II operations. Primary energy uses include space heating and cooling, water heating, ventilation, lighting, appliances, and electronics. However, electrical usage does not emit criteria pollutants and the residential uses would not include nature gas hearths.

- **Drive-thru Lanes.** Drive-thru lanes emissions would be generated from motor vehicles, including tailpipe and evaporative emissions, idling in the drive-thru lanes. The drive-thru were calculated with projected EMFAC emission rates in San Bernardino County, the miles

[32] Urban Crossroads, *Center Park Specific Plan Traffic Analysis*, 2025.

traveled on-site within the MU – Great Park land use (PAs 4, 5, 10, and 11), and the trip generation from the Traffic Analysis.[33] It is conservatively assumed the potential maximum miles traveled on-site within a PA designated as MU – Great Park would be 0.20 miles.[34] Conservatively assuming that 70 percent of drive thru restaurant trips would utilize drive-thru lanes, Phase II would generate 5,022 total daily drive-thru trips.

As shown in **Table 13**, the Phase II operational emissions would exceed the SCAQMD threshold for ROG, $NO_x$, CO, $PM_{10}$, and $PM_{2.5}$ emissions. The Phase II operational-generated ROG, $NO_x$, CO, $PM_{10}$, and $PM_{2.5}$ emissions are primarily from mobile sources and consumer products. FSEIR MM 3-2 would reduce mobile emissions to the maximum extent feasible, as motor vehicle emissions are controlled by State and federal standards and neither the Applicant nor the City has control over these standards. Phase II operational-generated ROG emissions would also be emitted from consumer products. For analytical purposes, consumer products include cleaning supplies, aerosols, cosmetics, toiletries, and fertilizer.[35] Phase II could require limitations on the use of ROG emitting products through lease or property agreements. However, this mitigation is not feasible as it would be difficult to enforce. As such, Phase II operational-generated ROG, $NO_x$, CO, $PM_{10}$, and $PM_{2.5}$ emissions cannot be reduced below the SCAQMD threshold. As concluded in the FSEIR, impacts would be significant and unavoidable.

## Project Buildout (Phase I + Phase II)

### Construction Emissions

As it is speculative to assume the Phase II construction timeline, it is conservatively assumed that Phase I construction would overlap with Phase II construction. As stated above, Project construction would be subject to SCAQMD Rule 402, Rule 403, and Rule 1113, FSEIR MM 3-1, and LOR AQ-1 through AQ-2.

The emissions associated with Phase I and Phase II construction are reported in **Table 14: Project Construction Emissions**.

**Table 14: Project Construction Emissions**

| Construction Year | Maximum Daily Emissions (pounds per day)[1] | | | | | |
|---|---|---|---|---|---|---|
| | ROG | $NO_X$ | CO | $SO_2$ | $PM_{10}$ | $PM_{2.5}$ |
| 2025 | 1.03 | 9.36 | 49.53 | 0.09 | 7.52 | 3.24 |
| 2026 | 7.04 | 30.92 | 154.70 | 0.26 | 29.09 | 8.45 |
| 2027 | 132.69 | 46.94 | 307.24 | 0.27 | 54.70 | 13.90 |
| 2028 | 18.19 | 47.80 | 263.66 | 0.24 | 66.10 | 16.00 |
| 2029 | 8.99 | 24.24 | 151.19 | 0.13 | 33.07 | 8.04 |
| 2030 | 370.37 | 20.83 | 112.42 | 0.11 | 32.85 | 7.96 |
| SCAQMD Threshold | 75 | 100 | 550 | 150 | 150 | 55 |
| **SCAQMD Threshold Exceeded?** | **Yes** | **No** | **No** | **No** | **No** | **No** |

ROG = Reactive Organic Gases; $NO_X$ = Nitrogen Oxides; CO = Carbon Monoxide; $SO_2$ = Sulfur Dioxide; $PM_{10}$ = Particulate Matter 10 microns in diameter or less; $PM_{2.5}$ = Particulate Matter 2.5 microns in diameter or less

1. SCAQMD Rule 403 Fugitive Dust was applied. Rule 403 reduction/credits include the following: properly maintain mobile and other construction equipment; replace ground cover in disturbed areas quickly; water exposed surfaces three times daily; water all haul roads twice daily. Reductions percentages from the SCAQMD CEQA Handbook (Tables XI-A through XI-E) were applied.

Source: CalEEMod version 2022.1. Refer to **Appendix A** for the model outputs.

[33] Ibid.
[34] The distance was measured on Google Earth, 2025.
[35] California Air Pollution Control Officers Association, *California Emissions Estimator Model User's Guide*, 2022.

As shown in **Table 14**, the Project construction emissions would exceed the SCAQMD threshold for ROG emissions. The Project construction-generated ROG emissions are primarily from architectural coatings. FSEIR MM 3-1 requires the Applicant to use super-compliant ROG paints for architectural coatings, which have a ROG content lower than the regulatory limits required by SCAQMD Rule 1113. As such, the Project construction-generated ROG emissions cannot be reduced below the SCAQMD threshold. As concluded in the FSEIR, impacts would be significant and unavoidable.

**Phase I Operations + Phase II Construction**

The Project would be developed in two phases. As Phase I is occupied and Phase II developed, there is the potential overlap of construction and operational emissions. Neither the SCAQMD's *CEQA Air Quality Handbook, Guidance Document for Addressing Air Quality Issues in General Plans and Local Planning*, or *Air Quality Significance Thresholds* imply or explicitly recommend combining emissions from distinct construction and operational activities into a single lump sum emissions total. Rather, each of these documents discusses potential sources, mitigation measures, and thresholds of significance for construction and operational emissions separately. Nonetheless, the potential overlapping of operational activities with ongoing construction activities have been compared to SCAQMD daily operational thresholds.

**Table 15: Potential Phase I Operational and Phase II Construction Emissions Overlap** presents the estimated maximum daily emissions from the worst-case overlap of the Phase I operational emissions and Phase II construction emissions. As stated above, Phase I operations would be subject to FSEIR MM 3-2 and MM AQ-1, TOP 2050 Policy ER-3.5, and LOR AQ-3 through AQ-4. Phase II construction would be subject to SCAQMD Rule 402, Rule 403, Rule 1113, FSEIR MM 3-1, and LOR AQ-1 through LOR AQ-2.

**Table 15: Potential Phase I Operational and Phase II Construction Emissions Overlap**

| Source | Maximum Daily Emissions (pounds per day)[1,2] | | | | | |
|---|---|---|---|---|---|---|
| | ROG | $NO_X$ | CO | $SO_2$ | $PM_{10}$ | $PM_{2.5}$ |
| **Overlap 1** | | | | | | |
| Phase I Operations | 84.27 | 39.54 | 369.45 | 0.84 | 72.82 | 19.18 |

| Phase II Site Preparation | 0.50 | 2.59 | 28.31 | 0.05 | 5.21 | 2.73 |
| Phase II Grading | 0.64 | 4.43 | 35.35 | 0.06 | 2.52 | 1.07 |
| Total Emissions[3] | 85.77 | 51.06 | 451.28 | 0.98 | 83.87 | 23.54 |
| SCAQMD Threshold | 55 | 55 | 550 | 150 | 150 | 55 |
| **SCAQMD Threshold Exceeded?** | **Yes** | **No** | **No** | **No** | **No** | **No** |
| **Overlap 6** | | | | | | |
| Phase I Operations | 84.27 | 39.54 | 369.45 | 0.84 | 72.82 | 19.18 |
| Phase II Architectural Coating | 367.69 | 0.65 | 0.96 | <0.01 | <0.01 | <0.01 |
| Total Emissions[3] | 451.96 | 40.19 | 370.42 | 0.84 | 72.82 | 19.19 |
| SCAQMD Threshold | 55 | 55 | 550 | 150 | 150 | 55 |
| **SCAQMD Threshold Exceeded?** | **Yes** | **No** | **No** | **No** | **No** | **No** |

ROG = Reactive Organic Gases; $NO_X$ = Nitrogen Oxides; CO = Carbon Monoxide; $SO_2$ = Sulfur Dioxide; $PM_{10}$ = Particulate Matter 10 microns in diameter or less; $PM_{2.5}$ = Particulate Matter 2.5 microns in diameter or less

1. Worst-case seasonal daily maximum emissions are reported.
2. Includes the worst-case overlap between the Phase I operational emissions and the Phase II construction emissions.
3. Totals may not add up due to rounding.

As shown in **Table 15**, the worst-case overlap of Phase I operational and Phase II construction emissions would exceed the SCAQMD threshold for ROG emissions. The Phase II construction-generated ROG emissions are primarily from architectural coatings. FSEIR MM 3-1 requires the

Applicant to use super-compliant ROG paints for architectural coatings, which have a ROG content lower than the regulatory limits required by SCAQMD Rule 1113. As such, the combined ROG emissions cannot be reduced below the SCAQMD threshold. As concluded in the FSEIR impacts would be significant and unavoidable.

### Operational Emissions

The Project would include all emission sources from Phase I and Phase II when the entire Project is built and operational. As stated above, Project operations would be subject to FSEIR MM 3-2 and MM AQ-1, TOP 2050 Policy ER-3.5, and LOR AQ-3 through AQ-4. The emissions associated with the Project operations are summarized in **Table 16: Project Operational Emissions**.

**Table 16: Project Operational Emissions**

| Source | Maximum Daily Emissions (pounds per day)[1] | | | | | |
|---|---|---|---|---|---|---|
| | ROG | $NO_X$ | CO | $SO_2$ | $PM_{10}$ | $PM_{2.5}$ |
| Mobile | 147.57 | 159.41 | 1,548.27 | 4.38 | 416.48 | 107.52 |
| Area | 208.40 | 2.37 | 255.30 | 0.01 | 0.13 | 0.10 |
| Energy | 1.42 | 24.44 | 11.82 | 0.15 | 1.96 | 1.96 |
| Drive-thru Lanes | <0.01 | <0.01 | 0.04 | <0.01 | <0.01 | <0.01 |
| Total Emissions[2] | 357.39 | 186.23 | 1,815.44 | 4.54 | 418.57 | 109.58 |
| SCAQMD Threshold | 55 | 55 | 550 | 150 | 150 | 55 |
| **SCAQMD Threshold Exceeded?** | **Yes** | **Yes** | **Yes** | **No** | **Yes** | **Yes** |

ROG = Reactive Organic Gases; $NO_X$ = Nitrogen Oxides; CO = Carbon Monoxide; $SO_2$ = Sulfur Dioxide; $PM_{10}$ = Particulate Matter 10 microns in diameter or less; $PM_{2.5}$ = Particulate Matter 2.5 microns in diameter or less

1. Worst-case seasonal daily maximum emissions are reported.
2. Totals may not add up due to rounding.

Source: CalEEMod version 2022.1. Refer to **Appendix A** for the model outputs.

The operational emissions sources are described in detail below:

- **Mobile Sources.** Mobile sources emissions would be generated from motor vehicles, including tailpipe and evaporative emissions. Depending upon the pollutant being discussed, the potential air quality impact may be of either regional or local concern. For example, ROG, $NO_X$, $PM_{10}$, and $PM_{2.5}$ are all pollutants of regional concern. $NO_X$ and ROG react with sunlight to form $O_3$, known as photochemical smog. Additionally, wind currents readily transport $PM_{10}$ and $PM_{2.5}$. However, CO tends to be a localized pollutant, dispersing rapidly at the source.

  Project-generated vehicle emissions are based on the trip generation estimates and have been incorporated into CalEEMod, as recommended by the SCAQMD. The Project would generate 44,716 total daily vehicle trips.[36]

- **Area Sources**. Area source emissions would be generated due to architectural coatings, consumer products, and landscape equipment.

- **Energy Source.** Energy source emissions would be generated due to electrical and natural gas usage associated with Project operations. Primary energy uses include space heating and cooling, water heating, ventilation, lighting, appliances, and electronics. However, electrical usage does not emit criteria pollutants and residential uses would not include nature gas hearths.

[36] Urban Crossroads, *Center Park Specific Plan Traffic Analysis*, 2025.

- **Drive-thru Lanes.** Drive-thru lanes emissions would be generated from motor vehicles, including tailpipe and evaporative emissions, idling in the drive-thru lanes. The drive-thru were calculated with projected EMFAC emission rates in San Bernardino County, the miles traveled on-site within the MU – Great Park land use (PAs 4, 5, 10, and 11), and the trip generation from the Traffic Analysis.[37] It is conservatively assumed the potential maximum miles traveled on-site within a PA designated as MU – Great Park would be 0.20 miles.[38] Conservatively assuming that 70 percent of drive thru restaurant trips would utilize drive-thru lanes, the Project would generate 5,022 total daily drive-thru trips.

As shown in **Table 16**, the Project operational emissions would exceed the SCAQMD threshold for ROG, $NO_x$, CO, $PM_{10}$, and $PM_{2.5}$ emissions. The Project operational-generated ROG, $NO_x$, CO, $PM_{10}$, and $PM_{2.5}$ emissions are primarily from mobile sources. FSEIR MM 3-2 would reduce mobile emissions to the maximum extent feasible, as motor vehicle emissions are controlled by State and federal standards and neither the Applicant nor the City has control over these standards. Project operational-generated ROG emissions would also be emitted from consumer products. For analytical purposes, consumer products include cleaning supplies, aerosols, cosmetics, toiletries, and fertilizer.[39] The Project could require limitations on the use of ROG emitting products through lease or property agreements. However, this mitigation is not feasible as it would be difficult to enforce. As such, the Project operational-generated ROG, $NO_x$, CO, $PM_{10}$, and $PM_{2.5}$ emissions cannot be reduced below the SCAQMD threshold. As concluded in the FSEIR, impacts would be significant and unavoidable.

## Cumulative Impacts

The nature of air emissions is largely a cumulative impact. As a result, no single project is sufficient in size to, by itself, result in nonattainment of AAQS. Instead, individual project emissions contribute to existing cumulatively significant adverse air quality impacts. The SCAQMD developed the construction and operational thresholds of significance based on the level above which individual project emissions would result in a cumulatively considerable contribution to SCAB's existing air quality conditions. In addition, Appendix D of the SCAQMD White Paper on Potential Control Strategies to Address Cumulative Impacts from Air Pollution (2003) notes that projects that result in emissions that do not exceed the project-specific SCAQMD regional thresholds of significance are considered to result in a less than significant impact on a cumulative basis unless there is other pertinent information to the contrary.[40] Therefore, a project whose emissions would exceed SCAQMD thresholds would also make a cumulatively considerable contribution to a significant cumulative impact and, conversely, a project whose emissions would be below SCAQMD thresholds would not make a cumulatively considerable contribution to a significant cumulative impact.

### Cumulative Construction Impacts

The SCAB is designated nonattainment for $O_3$, $PM_{10}$, and $PM_{2.5}$ under the State standards and nonattainment for $O_3$ and $PM_{2.5}$ under the federal standards. As discussed above, a project that is estimated to result in emissions that do not exceed SCAQMD thresholds, the project's contribution

[37] Ibid.
[38] The distance was measured on Google Earth, 2025.
[39] California Air Pollution Control Officers Association, *California Emissions Estimator Model User's Guide*, 2022.
[40] South Coast Air Quality Management District, *White Paper on Potential Control Strategies to Address Cumulative Impacts from Air Pollution*, August 2003, https://www.aqmd.gov/docs/default-source/Agendas/Environmental-Justice/cumulative-impacts-working-group/cumulative-impacts-white-paper.pdf, accessed December 2024

to the cumulative impact on air quality in the SCAB would not be considered to be cumulatively considerable.[41] As shown above, the Project construction-related emissions would exceed the SCAQMD significance thresholds for ROG emissions. Therefore, the Project would potentially generate a cumulatively considerable contribution to air pollutant emissions during construction.

The SCAQMD has developed strategies to reduce criteria pollutant emissions as outlined in the AQMP pursuant to the FCAA mandates. The analysis assumed fugitive dust controls would be used during construction, including frequent water applications. SCAQMD rules, mandates, and compliance with adopted AQMP emissions control measures would be imposed on construction projects throughout SCAB, which would include the related projects. Project compliance with SCAQMD rules and regulations would further minimize the Project construction-related emissions. However, as concluded above, the Project construction-related impacts would be significant and unavoidable. Therefore, Project-related construction emissions, in combination with those from other, related projects in the area, would potentially substantially deteriorate the local air quality. As concluded in the FSEIR, cumulative impacts would be significant and unavoidable.

**Cumulative Operational Impacts**

As discussed above, projects that would result in operational emissions that do not individually exceed SCAQMD regional thresholds of significance are not considered to make a cumulatively considerable contribution to a significant cumulative impact on air quality in the SCAB. As discussed above, and as concluded in the FSEIR, operational emissions would exceed the SCAQMD thresholds for ROG, $NO_x$, CO, $PM_{10}$, and $PM_{2.5}$ emissions. Therefore, Project operational emissions would potentially result in a cumulatively considerable contribution to significant cumulative air quality impacts. As concluded in the FSEIR, cumulative impacts would be significant and unavoidable.

## Conclusion

The Project construction and operational-generated emissions would exceed the applicable SCAQMD thresholds and result in a cumulatively considerable contribution to the $O_3$, $NO_2$, $PM_{10}$, and $PM_{2.5}$ nonattainment designations within the SCAB. Impacts would be significant and unavoidable. The Project's impacts are within the limit of impacts identified in the FSEIR. As a result, the proposed Project would not result in any new or more severe impacts than previously analyzed in the FSEIR.

## Laws, Ordinances, and Regulations

LORs are existing requirements that are based on local, State, or federal regulations or laws that are frequently required independent of CEQA review. Typical standard conditions and requirements include compliance with the provisions of the Building Code, SCAQMD Rules, etc. The City may impose additional conditions during the approval process, as appropriate. Because LORs are neither project-specific nor a result of development of the Project, they are not considered to be either project design features or mitigation measures.

**LOR AQ-1** Heavy duty tractors and trailers (i.e., trucks that are 53-foot or longer) must use U.S. EPA SmartWay certified tractors and trailers or retrofit their existing fleet with SmartWay verified technologies in accordance with CARB's Heavy-Duty (Tractor-Trailer) GHG Regulation. Owners are responsible for replacing or

[41] Ibid.

retrofitting their affected vehicles with compliant aerodynamic technologies and low rolling resistance tires. Sleeper cab tractors model year 2011 and later must be SmartWay certified. All other tractors must use SmartWay verified low rolling resistance tires. Trailers must have low rolling resistance tires and aerodynamic devices.

**LOR AQ-2** The medium-duty and heavy-duty vehicle engines are required to comply with the U.S. EPA's GHG and fuel efficiency standards. The federal and California Phase 1 standards took effect with model year 2014 tractors, vocational vehicles, and heavy-duty pick-up trucks and vans and the engines powering such vehicles (the Phase 1 standards exclude trailers). The federal Phase 2 standards cover model years 2018-2027 for certain trailers and model years 2021-2027 for semi-trucks and large pick-up trucks, vans and all types and sizes of buses and work trucks. California is aligned with the federal Phase 2 standards in structure, timing, and stringency, but with some minor California differences. The California Phase 2 regulations became effective April 1, 2019.

**LOR AQ-3** New buildings are required to achieve the current Energy Code (Title 24, Part 6) and CALGreen Code. The 2022 Energy Code became effective January 1, 2023. The Energy Code and CALGreen are updated triennially with a goal to achieve zero net energy for residential buildings and non-residential buildings in the future.

**LOR AQ-4** New buildings are required to adhere to the CALGreen requirement to provide bicycle parking for new non-residential buildings, or meet local bicycle parking ordinances, whichever is stricter (CALGreen Section 5.106.4.1, 14.106.4.1, and Section 5.106.4.1.2).

### FSEIR Mitigation Measures

The FSEIR analyzed emission impacts associated with land development throughout the City and implemented the following mitigation measures, which are applicable to the Project.

**3-1** Prior to discretionary approval by the City of Ontario for development projects subject to CEQA (California Environmental Quality Act) review (i.e., nonexempt projects), project applicants shall prepare and submit a technical assessment evaluating potential project construction-related air quality impacts to the City of Ontario Planning Department for review and approval. The evaluation shall be prepared in conformance with South Coast Air Quality Management District (South Coast AQMD) methodology for assessing air quality impacts. If construction-related criteria air pollutants are determined to have the potential to exceed the South Coast AQMD–adopted thresholds of significance, City of Ontario Building Department shall require feasible mitigation measures to reduce air quality emissions. Potential measures shall be incorporated as conditions of approval for a project and may include:

- Require fugitive dust control measures that SCAQMD Rule 403, such as:

  - Requiring use of nontoxic soil stabilizers to reduce wind erosion.
  - Applying water every four hours to active soil disturbing activities.
  - Tarping and/or maintaining a minimum of 24 inches of freeboard on trucks hauling dirt, sand, soil, or other loose materials.
- Using construction equipment rated by the United States Environmental Protection Agency as having Tier 4 interim or higher exhaust emission limits.
- Ensuring construction equipment is properly serviced and maintained to the manufacturer's standards.
- Limiting nonessential idling of construction equipment to no more than five consecutive minutes.
- Using Super-Compliant VOC paints for coating of architectural surfaces whenever possible.

**3-2** The City of Ontario shall evaluate new development proposals within the City and require all developments to include access or linkages to alternative modes of transportation, such as transit stops, bike paths, and/or pedestrian paths (e.g., sidewalks).

**AQ-1** Prior to discretionary approval by the City of Ontario for development projects subject to CEQA (California Environmental Quality Act) review (i.e., nonexempt projects), project applicants shall prepare and submit a technical assessment evaluating potential project operation-phase-related air quality impacts to the City of Ontario Planning Department for review and approval. The evaluation shall be prepared in conformance with SCAQMD methodology in assessing air quality impacts. If operation-related air pollutants are determined to have the potential to exceed the SCAQMD–adopted thresholds of significance, the City of Ontario Planning Department shall require that applicants for new development projects incorporate mitigation measures to reduce air pollutant emissions during operational activities. The identified measures shall be included as part of the conditions of approval. Possible mitigation measures to reduce long-term emissions could include, but are not limited to the following:

- For site-specific development that requires refrigerated vehicles, the construction documents shall demonstrate an adequate number of electrical service connections at loading docks for plug-in of the anticipated number of refrigerated trailers to reduce idling time and emissions.
- Applicants for manufacturing and light industrial uses shall consider energy storage and combined heat and power in appropriate applications to optimize renewable energy generation systems and avoid peak energy use.
- Site-specific developments with truck delivery and loading areas and truck parking spaces shall include signage as a reminder to limit idling of vehicles while parked for loading/unloading in accordance with California Air Resources Board Rule 2845 (13 CCR Chapter 10 sec. 2485).
- Provide changing/shower facilities as specified in Section A5.106.4.3 of

CALGreen (Nonresidential Voluntary Measures).

- Provide bicycle parking facilities per Section A4.106.9 of CALGreen (Residential Voluntary Measures).
- Provide preferential parking spaces for low-emitting, fuel-efficient, and carpool/van vehicles per Section A5.106.5.1 of CALGreen (Nonresidential Voluntary Measures).
- Provide facilities to support electric charging stations per Section A5.106.5.3 and Section A5.106.8.2 of CALGreen (Nonresidential Voluntary Measures; Residential Voluntary Measures).
- Applicant-provided appliances shall be Energy Star–certified appliances or appliances of equivalent energy efficiency (e.g., dishwashers, refrigerators, clothes washers, and dryers). Installation of Energy Star– certified or equivalent appliances shall be verified by the City during plan check.

**Mitigation Measures:** No additional mitigation is required.

**Level of Significance:** Significant and unavoidable impact.

### Threshold 5.3 Would the Project expose sensitive receptors to substantial pollutant concentrations?

To identify impacts to sensitive receptors, the SCAQMD recommends addressing LSTs for construction. LSTs were developed in response to SCAQMD Governing Boards' Environmental Justice Enhancement Initiative (I-4). The SCAQMD provided the *Final Localized Significance Threshold Methodology* (dated June 2003 [revised 2008]) for guidance. The LST methodology assists lead agencies in analyzing localized impacts associated with Project-specific emissions.

The appropriate SRA for the LSTs is SRA 33 (Southwest San Bernardino Valley), since this area includes the Project site. LSTs only take into consideration emissions of $NO_X$, CO, $PM_{10}$, and $PM_{2.5}$.[42] CalEEMod calculates construction emissions based on the number of equipment hours and the maximum daily soil disturbance activity possible for each piece of equipment. Based on CalEEMod modeling, construction of Phase I and Phase II would use the same number of and types of equipment, therefore **Table 17: Equipment-Specific Grading Rates** was used to determine the maximum daily disturbed acreage for the LST analysis.[43]

**Table 17: Equipment-Specific Grading Rates**

| Construction Phase | Equipment Type | Equipment Quantity | Acres Graded per 8-Hour Day | Operating Hours per Day | Acres Graded per Day |
|---|---|---|---|---|---|
| Grading | Tractor/Backhoe | 2 | 0.5 | 8 | 1 |
| | Dozer | 1 | 0.5 | 8 | 0.5 |

[42] South Coast Air Quality Management District, *Final Localized Significance Threshold Methodology*, Revised 2008, http://www.aqmd.gov/home/rules-compliance/ceqa/air-quality-analysis-handbook/localized-significance-thresholds, accessed December 2024

Based on the daily equipment modeled in CalEEMod and **Table 17**, Phase I and Phase II construction is anticipated to disturb approximately 4-acres in a single day. As the Final Localized Significance Threshold Methodology provides thresholds for projects disturbing 1-, 2-, and 5-acres in size and the thresholds increase with size of the project site, the LSTs for a 4-acre threshold were interpolated and utilized for the construction analysis. LSTs are provided for distances to sensitive receptors of 25, 50, 100, 200, and 500 meters. SCAQMD's LST guidance recommends using the LSTs at 25 meters for sensitive receptors located 25 meters (82 feet) or less from the project site.[44]

The SCAQMD's methodology states that "off-site mobile emissions from the project should not be included in the emissions compared to LSTs."[45] Therefore, for purposes of the construction analysis, only the emissions included in the CalEEMod "on-site" emissions outputs were considered.

According to the SCAQMD localized significance threshold methodology, operational LSTs only apply to on-site stationary sources.[46]

## Phase I – Proposed Development

### Localized Construction Significance

The sensitive receptor nearest the Phase I Project site are the residential uses located approximately 36 feet (11 meters) to the north. Therefore, the LSTs for 4-acres at 25 meters in SRA 33 were used for the construction analysis.

**Table 18: Localized Significance of Phase I Construction Emissions** presents the localized emissions during each individual and overlapping construction phase for Phase I. As stated above, Phase I construction would be subject to SCAQMD Rule 402, Rule 403, Rule 1113, FSEIR MM 3-1, and LOR AQ-1 through LOR AQ-2.

1. Worst-case seasonal maximum daily emissions are reported.
2. SCAQMD Rule 403 Fugitive Dust was applied. Rule 403 reduction/credits include the following: properly maintain mobile and other construction equipment; replace ground cover in disturbed areas quickly; water exposed surfaces three times daily; water all haul roads twice daily. Reductions percentages from the SCAQMD CEQA Handbook (Tables XI-A through XI-E) were applied.

Source: CalEEMod version 2022.1. Refer to **Appendix A** for the model outputs.

**Table 18** shows that the construction emissions of these pollutants on the peak day of construction would not exceed the LSTs. Phase I construction would not be expected to create substantial concentrations of pollutants at the sensitive receptors nearest the Phase I Project area. Impacts would be less than significant, and no mitigation is required.

### Localized Operational Significance

Although the Phase I Project site is 69.57 acres, the 5-acre LSTs were conservatively used because the LSTs increase with the size of the project size. This operational analysis uses the LSTs for 5-acres at 25 feet within SRA 33. The on-site operational emissions associated with Phase I are reported in **Table 19: Localized Significance of Phase I Operational Emissions**. On-site Phase I operations would be subject to MM AQ-1and LOR AQ-4.

| Table 19: Localized Significance of Phase I Operational Emissions | | | | |

1. Worst-case seasonal maximum daily emissions are reported.
2. On-site emissions consist of area sources, energy sources, and on-site mobile sources (approximately 2 percent of regional emissions based on percentage of Phase I Project Area width compared to regional trip length)

Source: CalEEMod version 2022.1. Refer to **Appendix A** for the model outputs.

**Table 19** shows the operational emissions of these pollutants would not exceed the LSTs. Phase I operations would not be expected to create substantial concentrations of pollutants at the sensitive receptors nearest the Phase I Project site. Impacts would be less than significant, and no mitigation is required.

## Phase II – Future Development

### Localized Construction Significance

The sensitive receptor nearest the Phase II Project site are the residential uses located approximately 53 feet (16 meters) to the south. Therefore, the LSTs for 4-acres at 25 meters in SRA 33 were used for the construction analysis.

**Table 20: Localized Significance of Phase II Construction Emissions** presents the localized emissions during each individual and overlapping construction phase for Phase II. As stated above, Phase II construction would be subject to SCAQMD Rule 402, Rule 403, Rule 1113, FSEIR MM 3-1, and LOR AQ-1 through LOR AQ-2.

**Table 20: Localized Significance of Phase II Construction Emissions**

2. SCAQMD Rule 403 Fugitive Dust was applied. Rule 403 reduction/credits include the following: properly maintain mobile and other construction equipment; replace ground cover in disturbed areas quickly; water exposed surfaces three times daily; water all haul roads twice daily. Reductions percentages from the SCAQMD CEQA Handbook (Tables XI-A through XI-E) were applied.

Source: CalEEMod version 2022.1. Refer to **Appendix A** for the model outputs.

**Table 20** shows that the that the peak day of construction would not exceed the LSTs. Phase II construction would not be expected to create substantial concentrations of pollutants at the sensitive receptors nearest the Phase II Project area. Impacts would be less than significant, and no mitigation is required.

### Localized Operational Significance

Although the Phase II Project site is 187.79 acres, the 5-acre LSTs were conservatively used because the LSTs increase with the size of the project site. This operational analysis uses the LSTs for 5-acres at 25 feet within SRA 33. The on-site operational emissions associated with Phase II are reported in **Table 21: Localized Significance of Phase II Operational Emissions**. On-site Phase II operations would be subject to MM AQ-1and LOR AQ-4.

**Table 21: Localized Significance of Phase II Operational Emissions**

| Activity | Maximum Daily Emissions (pounds per day)[1] | | | |
|---|---|---|---|---|
| | $NO_X$ | CO | $PM_{10}$ | $PM_{2.5}$ |
| On-site Emissions[2] | 26.35 | 258.57 | 15.68 | 5.24 |
| SCAQMD LST (5.0-acres at 25 meters) | 270 | 2,193 | 4 | 2 |
| **Exceeds SCAQMD Threshold?** | **No** | **No** | **Yes** | **Yes** |

$NO_X$ = Nitrogen Oxides; CO = Carbon Monoxide; $PM_{10}$ = Particulate Matter 10 microns in diameter or less; $PM_{2.5}$ = Particulate Matter 2.5 microns in diameter or less

1. Worst-case seasonal maximum daily emissions are reported.
2. On-site emissions consist of area sources, energy sources, and on-site mobile sources (approximately 4 percent of regional emissions based on percentage of Phase II Project Area width compared to regional trip length) which would include drive-thru lane emissions.

Source: CalEEMod version 2022.1. Refer to **Appendix A** for the model outputs.

As shown above, Phase II operational emissions generated on-site would exceed the thresholds for $PM_{10}$ and $PM_{2.5}$. Therefore, $PM_{10}$ and $PM_{2.5}$ dispersion modeling has been conducted to determine if Project Phase II operations would result in significant $PM_{10}$ and $PM_{2.5}$ concentrations at nearby sensitive receptors in accordance with SCAQMD LST methodology. Localized $PM_{10}$ and $PM_{2.5}$ construction emissions were estimated using the U.S. EPA AERMOD dispersion model to determine the worst-case $PM_{10}$ and $PM_{2.5}$ concentrations. AERMOD is a steady-state, multiple-source, Gaussian dispersion model designed for use with emission sources situated in terrain where ground elevations can exceed the stack heights of the emission sources. AERMOD requires hourly meteorological data consisting of wind vector, wind speed, temperature, stability class, and mixing height. **Table 22: Phase II – Operational Dispersion Modeling** shows on-site operational $PM_{10}$ and $PM_{2.5}$ emissions would not exceeded the SCAQMD's 24-hour average $PM_{10}$ or $PM_{2.5}$ operational standards.[47] Therefore, Phase II would result in a less than significant localized operational impact.

**Table 22: Phase II – Operational Dispersion Modeling**

| Emissions Source | $PM_{10}$ (24-hour) (µg/m$^3$) | $PM_{2.5}$ (24-hour) (µg/m$^3$) |
|---|---|---|
| Phase I On-site Emissions | 2.4 | 0.6 |
| Threshold[1] | 2.5 | 2.5 |
| Exceeds Threshold? | No | No |

1. The $PM_{10}$ and $PM_{2.5}$ thresholds are from South Coast Air Quality Management District, *Air Quality Significance Thresholds*, April 2019. The thresholds are incremental thresholds; therefore, the incremental concentration without background is compared to the threshold.

Source: CalEEMod version 2022.1. Refer to Appendix A for the model outputs.

## Project Buildout (Phase I + Phase II)

### Localized Construction Significance

As it is speculative to assume the Phase II construction timeline, it is conservatively assumed that Phase I construction would overlap with Phase II construction. The sensitive receptor nearest ground

[47] South Coast Air Quality Management District, *Air Quality Significance Thresholds*, April 2019.

disturbing activities within the Phase II Project area are the residential uses located approximately 53 feet (16 meters) to the south. Therefore, the LSTs for 4-acres at 25 meters in SRA 33 were used for the construction analysis.

**Table 23: Localized Significance of Phase I and Phase II Construction Emissions Overlap** presents the localized emissions during each overlapping Phase I and Phase II construction phase.

**Table 23: Localized Significance of Phase I and Phase II Construction Emissions Overlap**

| Construction Activity | Maximum Daily Emissions (pounds per day)[1,2] | | | |
|---|---|---|---|---|
| | $NO_X$ | CO | $PM_{10}$ | $PM_{2.5}$ |
| Phase I Building Construction + Phase II Demolition + Site Preparation (2026) | 10.15 | 47.82 | 3.47 | 0.70 |

| SCAQMD LST (adjusted for 4 acres at 25 meters) | 237 | 1,873 | 13 | 8 |
| **Exceeds SCAQMD Threshold?** | **No** | **No** | **No** | **No** |

$NO_X$ = Nitrogen Oxides; CO = Carbon Monoxide; $PM_{10}$ = Particulate Matter 10 microns in diameter or less; $PM_{2.5}$ = Particulate Matter 2.5 microns in diameter or less

1. Worst-case seasonal maximum daily emissions are reported.
2. SCAQMD Rule 403 Fugitive Dust was applied. Rule 403 reduction/credits include the following: properly maintain mobile and other construction equipment; replace ground cover in disturbed areas quickly; water exposed surfaces three times daily; water all haul roads twice daily. Reductions percentages from the SCAQMD CEQA Handbook (Tables XI-A through XI-E) were applied.

Source: CalEEMod version 2022.1. Refer to **Appendix A** for the model outputs.

**Table 23** shows that the peak day of construction would not exceed the LSTs. The overlap of Phase I and Phase II construction would not be expected to create substantial concentrations of pollutants at the sensitive receptors nearest the Project area. Impacts would be less than significant, and no mitigation is required.

### Localized Operational Significance

As shown in **Table 19, Table 21,** and **Table 22**, emissions for Phase I and Phase II operations do not individually exceed operational LSTs.

**Table 24: Localized Significance of Buildout Operational Emissions**

| Activity | Maximum Daily Emissions (pounds per day)[1] | | | |
|---|---|---|---|---|
| | $NO_X$ | CO | $PM_{10}$ | $PM_{2.5}$ |
| On-site Emissions[2] | 34.78 | 344.58 | 22.91 | 7.43 |
| SCAQMD LST (5.0-acres at 25 meters) | 270 | 2,193 | 4 | 2 |
| **Exceeds SCAQMD Threshold?** | **No** | **No** | **Yes** | **Yes** |

$NO_X$ = Nitrogen Oxides; CO = Carbon Monoxide; $PM_{10}$ = Particulate Matter 10 microns in diameter or less; $PM_{2.5}$ = Particulate Matter 2.5 microns in diameter or less

1. Worst-case seasonal maximum daily emissions are reported.
2. On-site emissions consist of area sources, energy sources, and drive-thru lane emissions.

Source: CalEEMod version 2022.1. Refer to **Appendix A** for the model outputs.

As shown above, Project Buildout operational emissions generated on-site would exceed the thresholds for $PM_{10}$ and $PM_{2.5}$. Therefore, $PM_{10}$ and $PM_{2.5}$ dispersion modeling has been conducted to determine if Project Buildout operations would result in significant $PM_{10}$ and $PM_{2.5}$ concentrations at nearby sensitive receptors in accordance with SCAQMD LST methodology. Localized $PM_{10}$ and $PM_{2.5}$ construction emissions were estimated using the U.S. EPA AERMOD dispersion model to determine the worst-case $PM_{10}$ and $PM_{2.5}$ concentrations. AERMOD is a steady-state, multiple-source, Gaussian dispersion model designed for use with emission sources situated in terrain where ground elevations can exceed the stack heights of the emission sources. AERMOD requires hourly meteorological data consisting of wind vector, wind speed, temperature, stability class, and mixing height. **Table 25: Buildout – Operational Dispersion Modeling** shows on-site operational $PM_{10}$ and $PM_{2.5}$ emissions would not exceeded the SCAQMD's 24-hour average $PM_{10}$ or $PM_{2.5}$ operational standards.[48] Therefore, Project Buildout would result in a less than significant localized operational impact.

**Table 25: Buildout – Operational Dispersion Modeling**

| Emissions Source | $PM_{10}$ (24-hour) (µg/m$^3$) | $PM_{2.5}$ (24-hour) (µg/m$^3$) |
|---|---|---|
| Buildout On-site Emissions | 2.4 | 0.7 |
| Threshold[1] | 2.5 | 2.5 |
| Exceeds Threshold? | No | No |

1. The $PM_{10}$ and $PM_{2.5}$ thresholds are from South Coast Air Quality Management District, *Air Quality Significance Thresholds*, April 2019. The thresholds are incremental thresholds; therefore, the incremental concentration without background is compared to the threshold.

Source: CalEEMod version 2022.1. Refer to Appendix A for the model outputs.

**Construction Diesel Particulate Matter**

Project construction would result in the generation of DPM emissions from the use of required off-road diesel equipment. The amount of DPM emissions to which sensitive receptors are exposed (a function of concentration and duration of exposure) is the primary factor used to determine the health risk to such receptors from DPM exposure (i.e., potential exposure to TAC emission levels that exceed applicable standards). Health-related risks associated with diesel-exhaust emissions are primarily linked to long-term exposure and the associated risk of contracting cancer.

Construction is temporary, and would be transient throughout the site (i.e., move from location to location). The use of diesel-powered construction equipment would also be temporary and episodic; the duration of exposure would be short and exhaust from construction equipment dissipates rapidly. Therefore, construction would not generate emissions in a fixed location for extended periods of time, which would limit the exposure of any proximate individual sensitive receptor to TACs.

Current models and methodologies for conducting health risk assessments are associated with longer-term exposure periods of 9, 30, and 70 years, which do not correlate well with the temporary and highly variable nature of construction activities.[49] The California Office of Environmental Health Hazard Assessment (OEHHA) has not identified short-term health effects from DPM due to the uncertainty in assessing cancer risk from short-term exposures.[50] In addition, SCAQMD guidance

[48] South Coast Air Quality Management District, *Air Quality Significance Thresholds*, April 2019.
[49] Office of Environmental Health Hazard Assessment, *Air Toxics Hot Spots Program Guidance Manual for Preparation of Health Risk Assessments,* February 2015, https://oehha.ca.gov/media/downloads/crnr/2015guidancemanual.pdf, accessed December 2024
[50] Ibid.

on the analysis of cancer risks from mobile source diesel emissions does include recommendations on the analysis of short-term construction activities.[51]

Additionally, construction would be subject to and would comply with pertinent California regulations (e.g., California Code of Regulations, Title 13, Sections 2485 and 2449), the effect of which would be to reduce diesel PM and criteria pollutant emissions from in-use off-road diesel-fueled vehicles and limit the idling of heavy-duty construction equipment to no more than five minutes. These regulations would further reduce nearby sensitive receptors' exposure to the Project's temporary and variable DPM emissions. Given the temporary and intermittent nature of construction activities likely to occur within specific locations in the Project site (i.e., construction is not likely to occur in any one location for an extended time), the dose of DPM of any one receptor is exposed to would be limited.

Therefore, relying on the expert guidance of the SCAQMD, and considering the relatively short duration of DPM-emitting construction activity at any one location, and the highly dispersive properties of DPM, sensitive receptors would not be exposed to substantial concentrations of construction-related TAC emissions. Impacts would be less than significant, and no mitigation is required.

**Operational Diesel Particulate Matter**

The Project does not include a land use that has the potential to significantly impact nearby sensitive receptors during operations as the Project would not generate trips by heavy-duty diesel trucks, which emit DPM. Impacts would be less than significant, and no mitigation is required.

**Carbon Monoxide Hot Spots**

As discussed above, projects that would not produce traffic volumes resulting in more than 100,000 daily vehicles along project area roadway segments would not require preparation of a detailed CO hot spot analysis. The Project would not produce the volume of traffic required to generate a CO hot spot in the context of SCAQMD's 2003 CO hot-spot analysis. Project buildout would generate 44,716 total daily vehicle trips within the Project area and a maximum peak hour volume of 2,700 vehicles at Grove Avenue and Edison Avenue.[52] Phase I and Phase II implementation would generate less trips than the Project buildout. The Project's maximum peak hour volume of 2,700 vehicles would not exceed the Bay Area Air Quality Management District's most stringent screening criteria of 24,000 vehicles per hour. Impacts would be less than significant, and no mitigation is required.

## Conclusion

The Project's localized emissions would not exceed the applicable standards. Therefore, Project implementation would not expose sensitive receptors to substantial pollutant concentrations, create a CO hot spot, or generate concentrations of DPM that would result in carcinogenic, chronic, or acute health risk effects. Impacts would be less than significant in this regard. The Project's impacts are within the limit of impacts identified in the FSEIR. As a result, the proposed Project would

[51] South Coast Air Quality Management District, *Health Risk Assessment Guidance for Analyzing Cancer Risks from Mobile Source Diesel Idling Emissions for CEQA Air Quality Analysis*, August 2002, https://www.aqmd.gov/home/rules-compliance/ceqa/air-quality-analysis-handbook/mobile-source-toxics-analysis, accessed December 2024

[52] Urban Crossroads, *Center Park Specific Plan Traffic Analysis*, 2025.

not result in any new or more severe impacts than previously analyzed in the FSEIR.

**FSEIR Mitigation Measures:** Refer to TOP FSEIR MM 3-1, MM 3-2, and MM AQ-1 under Threshold 2 above.

**Mitigation Measures:** No additional mitigation is required.

**Level of Significance:** Less than significant impact.

### Threshold 5.4 Would the Project result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

### Phase I (Proposed Development), Phase II (Future Development, Project Buildout (Phase I + Phase II)

#### Construction

Project construction activities would generate odors from equipment diesel exhaust, architectural coatings containing volatile organic compounds, and paving activities. The Project would be required to comply with SCAQMD Rule 402: Nuisance, which states:

> *"A person shall not discharge from any source whatsoever such quantities of air contaminants or other material which cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or which endanger the comfort, repose, health or safety of any such persons or the public, or which cause, or have a natural tendency to cause, injury or damage to business or property."*

Additionally, standard construction requirements and Project compliance with established regulations (Code of Federal Regulations [CFR], Part 1926 – *Safety and Health Regulations for Construction,* Subpart H – *Materials Handling, Storage Use and Disposal, et al*.) addressing construction materials storage, use, and disposal would further minimize construction-related odor impacts on sensitive receptors. Therefore, construction-related odors are not expected to affect a substantial number of people, would be temporary, lasting only as long as construction activities occur, and would disperse rapidly. Impacts would be less than significant, and no mitigation is required.

#### Operational

The SCAQMD *CEQA Air Quality Handbook* identifies certain land uses as potentially significant odor sources. These land uses include agriculture (farming and livestock), wastewater treatment plants, food processing plants, chemical plants, composting facilities, refineries, landfills, dairies, and fiberglass molding. The Project would not include these types of uses. The Project would comply with all applicable SCAQMD rules including Rule 402, which prevents discharging nuisance odors. As such, the Project's operational-related odors are not expected to affect a considerable number of people. Impacts would be less than significant, and no mitigation is required.

#### Conclusion

Project construction and operational-related odors would be temporary and are not expected to affect a substantial number of people. Impacts would be less than significant, and no mitigation is

required. The Project's impacts are within the limit of impacts identified in the FSEIR. As a result, the proposed Project would not result in any new or more severe impacts than previously analyzed in the FSEIR.

**Mitigation Measures:** No mitigation is required.

**Level of Significance:** Less than significant impact.

## Conclusion

**Table 26: Project Consistency with the FSEIR** summarizes the consistency of the Project's impacts with the findings of the FSEIR. Project construction and operational-related emissions would exceed the applicable SCAQMD thresholds and would not be consistent with SCAQMD's AQMPs. However, the Project would not expose sensitive receptors to substantial pollutant concentrations, create a CO hot spot, or generate concentrations of DPM that would result in carcinogenic, chronic, or acute health risk effects. As shown in **Table 26**, the Project's impacts are within the limit of impacts identified in the FSEIR. As a result, the proposed Project would not result in any new or more severe impacts than previously analyzed in the FSEIR.

**Table 26: Project Consistency with the FSEIR**

| Impact | FSEIR Findings | Project Findings |
|---|---|---|
| Air Quality Plan Consistency | Significant and Unavoidable | Significant and Unavoidable |
| Air Quality Standard Violation | Significant and Unavoidable | Significant and Unavoidable |
| Cumulative Considerable Net Increase of Criteria Pollutants | Significant and Unavoidable | Significant and Unavoidable |
| Expose Sensitive Receptors to Substantial Pollutant Concentrations | -- | Less than Significant |
| Expose Sensitive Receptors to Substantial Toxic Air Contaminants | Significant and Unavoidable | Less than Significant |
| Expose Sensitive Receptors to Carbon Monoxide Hotspots | Less than Significant | Less than Significant |
| Objectionable Odors | Less than Significant | Less than Significant |

# Appendix A

## Air Quality Data

# Center Park Specific Plan
## CalEEMod Assumptions

# Phase I

Planning Areas

| PA | Total Lot Size (AC)[1] | Land Use[2] | Size[2] | Unit[2] | DU/AC[1] | Building Lot Size (AC)[3] |
|---|---|---|---|---|---|---|
| 6 | 7.32 | Single Family Detached | 40 | DU | 22 | 1.82 |
| | | Multifamily (Low-Rise) Residential | 121 | DU | 22 | 5.50 |
| 12 | 15.45 | Single Family Detached | 85 | DU | 22 | 3.86 |
| | | Multifamily (Low-Rise) Residential | 255 | DU | 22 | 11.59 |
| 13 | 23.77 | Single Family Detached | 131 | DU | 22 | 5.95 |
| | | Multifamily (Low-Rise) Residential | 392 | DU | 22 | 17.82 |
| 17 | 6.20 | Public Park | 6.20 | AC | -- | -- |
| 18 | 13.44 | Active Park | 13.44 | AC | -- | -- |
| 22 | 3.38 | Non-Recreational Park | 3.38 | AC | -- | -- |

PA = planning area, AC = acres; DU = dwelling unit
1. Designated by TOP 2050.
2. Land use, size, and unit were taken from the Urban Crossroads, *Center Park Specific Plan Traffic Analysis*, 2025, except for PA 22, which was taken from TOP 2025.
3. The building lot size was calculated using the following equation: building lot size = dwelling units * (dwelling units/acre).

Land Use

| Land Use | Size | Unit | Building Size (SF) | Landscaping (SF) | Lot Size (AC) |
|---|---|---|---|---|---|
| Single Family Housing[1] | 256 | DU | 506,880 | -- | 11.64 |
| Apartments (Low-Rise)[1] | 768 | DU | 152,0640 | -- | 34.91 |
| City Park[2,3] | 19.64 | AC | -- | 855,518.40 | 19.64 |
| Other Non-Asphalt Surfaces[2,4] | 3.38 | AC | -- | 147,232.80 | 3.38 |

DU = dwelling unit; AC = acres; SF = square feet
1. Assumed the lot would be fully developed by a building. Therefore, the building size was assumed to be equal to the lot size in square feet.
2. The city park and other non-asphalt surfaces was assumed to be fully landscaped with “special landscaping” because the landscaping would be irrigated with recycled water per City of Ontario Ordinance 2689.
3. The public park and active park were modeled as city park.
4. The non-recreational park was modeled as non-asphalt surfaces.

# Construction

## Schedule

| Construction Phase | Start Date | End Date | Workdays |
|---|---|---|---|
| Demolition | 12/1/2025 | 6/1/2026 | 131 |
| Site Preparation | 12/15/2025 | 6/15/2026 | 131 |
| Grading | 4/1/2026 | 12/1/2026 | 175 |
| Infrastructure Improvements | 8/1/2026 | 2/1/2027 | 131 |
| Building Construction | 12/2/2026 | 5/2/2027 | 108 |
| Paving | 2/2/2027 | 3/2/2027 | 21 |
| Architectural Coating | 5/3/2027 | 5/31/2027 | 21 |

## Construction Phase Overlap

| Construction Phase | Start Date | End Date |
|---|---|---|
| Demolition + Site Preparation | 12/15/2025 | 3/31/2026 |
| Demolition + Site Preparation + Grading | 4/1/2026 | 6/1/2026 |
| Site Preparation + Grading | 6/2/2026 | 6/15/2026 |
| Grading + Infrastructure Improvements | 8/1/2026 | 12/1/2026 |
| Infrastructure Improvements + Building Construction | 12/2/2026 | 2/1/2027 |
| Building Construction + Paving | 2/2/2027 | 3/2/2027 |

## Equipment

| Construction Phase | Equipment | Number per Day | Hours per Day |
|---|---|---|---|
| Demolition | Rubber Tired Dozers | 2 | 8 |
| | Excavators | 3 | 8 |
| | Concrete/Industrial Saws | 1 | 8 |
| Site Preparation | Rubber Tired Dozers | 3 | 8 |
| | Tractors/Loaders/Backhoes | 4 | 8 |
| Grading | Graders | 1 | 8 |
| | Excavators | 2 | 8 |
| | Tractors/Loaders/Backhoes | 2 | 8 |
| | Scrapers | 2 | 8 |
| | Rubber Tired Dozers | 1 | 8 |
| Infrastructure Improvements | Forklifts | 3 | 8 |
| | Generator Sets | 1 | 8 |
| | Cranes | 1 | 7 |
| | Welders | 1 | 8 |
| | Tractors/Loaders/Backhoes | 3 | 7 |
| Building Construction | Forklifts | 3 | 8 |
| | Generator Sets | 1 | 8 |
| | Cranes | 1 | 7 |
| | Welders | 1 | 8 |
| | Tractors/Loaders/Backhoes | 3 | 7 |
| Paving | Pavers | 2 | 8 |
| | Paving Equipment | 2 | 8 |
| | Rollers | 2 | 8 |
| Architectural Coating | Air Compressors | 1 | 6 |

## Worker, Vendor, and Haul Trips

| Trip Type | # One-Way Trips/Day | Trip Length (miles) |
|---|---|---|
| **Demolition** | | |
| Worker | 15 | 18.5 |
| Vendor | -- | 10.2 |
| Hauling | 24.32 | 20 |
| On-Site Truck | -- | -- |
| **Site Preparation** | | |
| Worker | 17.5 | 18.5 |
| Vendor | -- | 10.2 |
| Hauling | 0 | 20 |
| On-Site Truck | -- | -- |
| **Grading** | | |
| Worker | 20 | 18.5 |
| Vendor | -- | 10.2 |
| Hauling | 0 | 20 |
| On-Site Truck | -- | -- |
| **Infrastructure Improvements** | | |
| Worker | 645.12 | 18.5 |
| Vendor | 109.47 | 10.2 |
| Hauling | 0 | 20 |
| On-Site Truck | -- | -- |
| **Building Construction** | | |
| Worker | 645.12 | 18.5 |
| Vendor | 109.47 | 10.2 |
| Hauling | 0 | 20 |
| On-Site Truck | -- | -- |
| **Paving** | | |
| Worker | 15 | 18.5 |
| Vendor | -- | 10.2 |
| Hauling | 0 | 20 |
| On-Site Truck | -- | -- |
| **Architectural Coating** | | |
| Worker | 258.05 | 18.5 |
| Vendor | -- | 10.2 |
| Hauling | 0 | 20 |
| On-Site Truck | -- | -- |

## Demolition

| Construction Phase | Amount (tons) |
|---|---|
| Demolition | 12,744 |

## Notes

Construction would include (per SCAQMD Rule 403 and FSEIR MM 3-1)

- watering exposed areas 3 times per day during earthmoving activities (site preparation and grading)
- watering demolished areas 2 times per day during demolition
- watering unpaved roads 2 times per day and limit vehicle speeds on unpaved roads to 25 mph throughout construction

# Operations

## Vehicle Data

| Land Use | Size | Unit | Trip Rate | Daily Trip Generation |
|---|---|---|---|---|
| Single Family Housing | 256 | DU | 9.4375000 | 2,416 |
| Apartments Low Rise | 768 | DU | 6.739583333 | 5,176 |
| City Park | 19.64 | AC | 34.52138493 | 678 |
| Other Non-Asphalt Surfaces | 3.38 | AC | 0 | 0 |
| | | | **Total** | **8,270** |
| DU = dwelling unit; AC = acres | | | | |
| Source: Urban Crossroads, *Center Park Specific Plan Traffic Analysis*, 2025. | | | | |

## Trip Length

| Land Use | Trip Length (miles) | | |
|---|---|---|---|
| | Non-Res H-W / Res H-W | Non-Res W-O / Res H-S | Non-Res O-O / Res H-O |
| Single Family Housing | 18.43607679 | 4.945488532 | 7.468766689 |
| Apartments Low Rise | 18.43607679 | 4.945488532 | 7.468766689 |
| City Park | 18.43607679 | 6.967184162 | 11.74551353 |
| Other Non-Asphalt Surfaces | 18.43607679 | 6.967184162 | 11.74551353 |

## Trip Purpose and Percent

| Land Use | Trip Percent (%) | | | Trip Purpose (%) | | |
|---|---|---|---|---|---|---|
| | Primary | Diverted | Pass-By | Non-Res H-W / Res H-W | Non-Res W-O / Res H-S | Non-Res O-O / Res H-O |
| Single Family Housing | 100 | 0 | 0 | 41.4893616 | 6.3829787 | 52.1276596 |
| Apartments Low Rise | 100 | 0 | 0 | 41.4893616 | 6.3829787 | 52.1276596 |
| City Park | 100 | 0 | 0 | 79.5918367 | 10.2040816 | 10.2040816 |
| Other Non-Asphalt Surfaces | 100 | 0 | 0 | 79.5918367 | 10.2040816 | 10.2040816 |

## Fleet Mix

| Land Use | Fleet Mix (%) | | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | HHD | LDA | LDT1 | LDT2 | LHD1 | LHD2 | MCY | MDV | MH | MHD | OBUS | SBUS | UBUS |

Hearths

| Land Use | # Electric | # Without Fireplaces |
|---|---|---|
| Single Family Housing | 174.4 | 81.6 |
| Apartments Low Rise | 523.2 | 244.8 |
| SCAQMD 445 (Wood Burning) prohibits permanently installed wood burning devices in new developments.<br>The Project would not include natural gas fireplaces.<br>The # wood burning and # gas fireplaces were split 75% to # electric and 25% to # without fireplaces. | | |

## Quantified Measures

| # | Measure | Notes[1] |
|---|---|---|
| **Construction** | | |
| C-2* | Limit Heavy-Duty Diesel Vehicle Idling | Construction equipment idling would be limited to 5 minutes per FSEIR MM 3-1 |
| C-5 | Use Advanced Engine Tiers | Construction equipment would have Tier 4 Final engines per FSEIR MM 3-1 |
| C-13 | Use Low-VOC Paints for Construction | Architectural coatings would have a VOC content <10 g/L per FSEIR MM 3-1 |
| **Operations** | | |
| T-10 | Provide End-of-Trip Bicycle Facilities | End-of-trip facilities (showers and lockers) would be provided for employee use per FSEIR MM AQ-1 |
| T-14* | Provide Electric Vehicle Charging Infrastructure | EV charging infrastructure per FSEIR MM AQ-1 |
| T-34* | Provide Bike Parking | Bicycle parking facilities would be provided for workers, residents, and visitors per FSEIR MM AQ-1 |
| T-39* | Implement Preferential Parking Permit Program | Fuel efficient and carpool vehicles would receive preferential parking per FSEIR MM AQ-1 |
| E-2 | Require Energy Efficient Appliances | Residential appliances (modeled refrigerator, clothes washer, dishwasher, and ceiling fans) would be Energy Star certified per FSEIR MM AQ-1 |

FSEIR = Final Supplemental Environmental Impact Report, MM = Mitigation Measure
* Qualitative or supporting measures. Emission reductions are not included in the mitigated emissions results.
1. Compliance with the applicable FSEIR and SCAQMD regulation has been applied in CalEEMod and is shown as the "Mitigated" emissions in the CalEEMod outputs. The "Mitigated" emission outputs would be unmitigated, as the Project would not include and would not require mitigation measures.

# Phase II

Planning Areas

| PA | Total Lot Size (AC)[1] | Land Use[2] | Size[2] | Unit[2] | DU/AC[1] | Building Lot Size (AC)[3] |
|---|---|---|---|---|---|---|
| 1 | 15.91 | Single Family Detached | 88 | DU | 22 | 4.00 |
| | | Multifamily (Low-Rise) Residential | 262 | DU | 22 | 11.91 |
| 2 | 15.59 | Single Family Detached | 86 | DU | 22 | 3.91 |
| | | Multifamily (Low-Rise) Residential | 257 | DU | 22 | 11.68 |

| 15 | 13.11 | Active Park | 13.11 | AC | -- | -- |
| 16 | 9.90 | Public Park | 9.90 | AC | -- | -- |
| 19 | 2.26 | Non-Recreational Park | 2.26 | AC | -- | -- |
| 20 | 2.68 | Non-Recreational Park | 2.68 | AC | -- | -- |
| 21 | 2.96 | Non-Recreational Park | 2.96 | AC | -- | -- |

PA = planning area; AC = acres; DU = dwelling unit; SF = square feet

1. Designated by TOP 2050.
2. Land use, size, and unit were taken from the Urban Crossroads, *Center Park Specific Plan Traffic Analysis*, 2025, except for PA 19 through 21, which were taken from TOP 2025.
3. The residential building lot size was calculated using the following equation: building lot size = dwelling units *(dwelling units/acre). The retail and general office building lot size was assumed to be equal to the land use size in acres.

## Land Use

| Land Use | Size | Unit | Building Size (SF) | Landscaping (SF) | Lot Size (AC) |
|---|---|---|---|---|---|
| Single Family Housing[1] | 546 | DU | 1,081,080 | -- | 24.82 |
| Apartments Low Rise[1] | 2,723 | DU | 4,592,864 | -- | 105.44 |
| Strip Mall[2,3,4] | 38.603 | KSF | 38,603 | 3,860.3 | 0.975 |
| Fast Food Restaurant w/o Drive Thru[2,3,4] | 38.603 | KSF | 38,603 | 3,860.3 | 0.975 |
| Fast Food Restaurant with Drive Thru[2,3,4] | 38.603 | KSF | 38,603 | 3,860.3 | 0.975 |
| General Office Building[3,4,5] | 67.556 | KSF | 67,556 | 6,755.55 | 1.706 |
| Medical Office Building[3,4,5] | 67.556 | KSF | 67,556 | 6,755.55 | 1.706 |
| City Park[6,7] | 36.34 | AC | -- | 158,2970.4 | 36.34 |
| Other Non-Asphalt Surfaces[6,8] | 7.90 | AC | -- | 344,124 | 7.9 |
| Parking Lot[9] | 6.954 | AC | -- | -- | 6.954 |

DU = dwelling unit; KSF = thousand square feet; AC = acres; SF = square feet

1. Assumed the lot would be fully developed by a building. Therefore, the building size was assumed to be equal to the lot size in square feet.
2. The retail size was evenly divided between the strip mall, fast food restaurant w/o drive thru, and fast food restaurant with drive thru land uses.
3. Per the proposed Specific Plan, the retail and office land uses would include landscaping equal to 10% of the building square footage.
4. The lot size included the building size and landscaping in acres.
5. The general office size was evenly divided between the general office building and medical office building land uses.
6. The city park and other non-asphalt surfaces was assumed to be fully landscaped with "special landscaping" because the landscaping would be irrigated with recycled water per City of Ontario Ordinance 2689.
7. The public park and active park were modeled as city park.
8. The non-recreational park was modeled as non-asphalt surfaces.
9. Assumed the retail and office lot acreage not occupied by buildings or landscaping would be dedicated to parking lots. The lot size in acres was calculated using the following equation: lot size = total lot size – building size – landscaping.

# Construction

## Schedule

| Construction Phase | Start Date | End Date | Workdays |
|---|---|---|---|
| Demolition | 12/2/2026 | 6/2/2027 | 131 |
| Site Preparation | 12/15/2026 | 6/15/2027 | 131 |
| Grading | 4/1/2027 | 12/1/2027 | 175 |
| Infrastructure Improvements | 8/1/2027 | 12/1/2028 | 350 |
| Building Construction | 10/1/2028 | 3/1/2030 | 370 |
| Paving | 8/1/2028 | 2/1/2029 | 133 |
| Architectural Coating | 3/2/2030 | 3/30/2030 | 20 |

## Construction Phase Overlap

| Construction Phase | Start Date | End Date |
|---|---|---|
| Demolition + Site Preparation | 12/15/2026 | 3/31/2027 |
| Demolition + Site Preparation + Grading | 4/1/2027 | 6/2/2027 |
| Site Preparation + Grading | 6/3/2027 | 6/15/2027 |
| Grading + Infrastructure Improvements | 8/1/2027 | 12/1/2027 |
| Infrastructure Improvements + Paving | 8/1/2028 | 9/30/2028 |
| Infrastructure Improvements + Paving + Building Construction | 10/1/2028 | 12/1/2028 |
| Building Construction + Paving | 12/2/2028 | 2/1/2029 |

## Equipment

| Construction Phase | Equipment | Number per Day | Hours per Day |

## Demolition

| Construction Phase | Amount (tons) |
|---|---|
| Demolition | 30,810 |

## Notes

Construction would include (per SCAQMD Rule 403 and FSEIR MM 3-1)

- watering exposed areas 3 times per day during earthmoving activities (site preparation and grading)
- watering demolished areas 2 times per day during demolition
- watering unpaved roads 2 times per day and limit vehicle speeds on unpaved roads to 25 mph throughout construction

## Hearths

| Land Use | # Electric | # Without Fireplaces |
|---|---|---|
| Single Family Housing | 371.96 | 174.04 |
| Apartments Low Rise | 1,855.04 | 867.96 |
| SCAQMD 445 (Wood Burning) prohibits permanently installed wood burning devices in new developments<br>The Project would not include natural gas fireplaces<br>The # wood burning and # gas fireplaces were split 75% to # electric and 25% to # without fireplaces | | |

## Quantified Measures

| # | Measure | Notes[1] |
|---|---|---|
| **Construction** | | |
| C-2* | Limit Heavy-Duty Diesel Vehicle Idling | Construction equipment idling would be limited to 5 minutes per FSEIR MM 3-1 |
| C-5 | Use Advanced Engine Tiers | Construction equipment would have Tier 4 Final engines per FSEIR MM 3-1 |
| C-13 | Use Low-VOC Paints for Construction | Architectural coatings would have a VOC content <10 g/L per FSEIR MM 3-1 |
| **Operations** | | |
| T-10 | Provide End-of-Trip Bicycle Facilities | End-of-trip facilities (showers and lockers) would be provided for employee use per FSEIR MM AQ-1 |
| T-14* | Provide Electric Vehicle Charging Infrastructure | EV charging infrastructure per FSEIR MM AQ-1 |
| T-34* | Provide Bike Parking | Bicycle parking facilities would be provided for workers, residents, and visitors per FSEIR MM AQ-1 |
| T-39* | Implement Preferential Parking Permit Program | Fuel efficient and carpool vehicles would receive preferential parking per FSEIR MM AQ-1 |
| E-2 | Require Energy Efficient Appliances | Residential appliances (modeled refrigerator, clothes washer, dishwasher, and ceiling fans) would be Energy Star certified per FSEIR MM AQ-1 |

FSEIR = Final Supplemental Environmental Impact Report, MM = Mitigation Measure
* Qualitative or supporting measures. Emission reductions are not included in the mitigated emissions results.
1. Compliance with the applicable FSEIR and SCAQMD regulation has been applied in CalEEMod and is shown as the "Mitigated" emissions in the CalEEMod outputs. The "Mitigated" emission outputs would be unmitigated, as the Project would not include and would not require mitigation measures.

| 22 | 3.38 | Non-Recreational Park | 3.38 | AC | -- | -- |

PA = planning area; AC = acres; DU = dwelling unit; SF = square feet

1. Designated by TOP 2050.
2. Land use, size, and unit were taken from the Urban Crossroads, *Center Park Specific Plan Traffic Analysis*, 2025, except for PA 19 through 22, which were taken from TOP 2025.
3. The residential building lot size was calculated using the following equation: building lot size = dwelling units * (dwelling units/acre). The retail and general office building lot size was assumed to be equal to the land use size in acres.

## Land Use

| Land Use | Size | Unit | Building Size (SF) | Landscaping (SF) | Lot Size (AC) |
|---|---|---|---|---|---|
| Single Family Housing[1] | 802 | DU | 1,587,960 | -- | 36.45 |
| Apartments Low Rise[1] | 3,491 | DU | 6,113,504.5 | -- | 140.35 |
| Strip Mall[2,3,4] | 38.603 | KSF | 38,603 | 3,860.3 | 0.975 |

| City Park[6,7] | 55.98 | AC | -- | 2,438,488.8 | 36.34 |
| Other Non-Asphalt Surfaces[6,8] | 11.28 | AC | -- | 491,356.8 | 7.9 |
| Parking Lot[9] | 6.954 | AC | -- | -- | 6.954 |

DU = dwelling unit; KSF = thousand square feet; AC = acres; SF = square feet

1. Assumed the lot would be fully developed by a building. Therefore, the building size was assumed to be equal to the lot size in square feet.
2. The retail size was evenly divided between the strip mall, fast food restaurant w/o drive thru, and fast food restaurant with drive thru land uses.
3. Per the proposed Specific Plan, the retail and office land uses would include landscaping equal to 10% of the building square footage.
4. The lot size included the building size and landscaping in acres.
5. The general office size was evenly divided between the general office building and medical office building land uses.
6. The city park and other non-asphalt surfaces was assumed to be fully landscaped with "special landscaping" because the landscaping would be irrigated with recycled water per City of Ontario Ordinance 2689.
7. The public park and active park were modeled as city park.
8. The non-recreational park was modeled as non-asphalt surfaces.
9. Assumed the retail and office lot acreage not occupied by buildings or landscaping would be dedicated to parking lots. The lot size in acres was calculated using the following equation: lot size = total lot size – building size – landscaping.

## Vehicle Data

| Land Use | Size | Unit | Trip Rate | Daily Trip Generation |
|---|---|---|---|---|
| Single Family Housing | 802 | DU | 7.291317 | 5,848 |
| Apartments Low Rise | 3,491 | DU | 5.685581 | 19,848 |
| Strip Mall | 38.603 | KSF | 15.387405 | 594 |
| Fast Food Restaurant w/o Drive Thru | 38.603 | KSF | 179.091068 | 6,913 |
| Fast Food Restaurant with Drive Thru | 38.603 | KSF | 185.846890 | 7,174 |
| General Office Building | 67.556 | KSF | 7.972543 | 539 |
| Medical Office Building | 67.556 | KSF | 26.488012 | 1789 |

| Apartments Low Rise | 2,378.24 | 1,112.76 |
| SCAQMD 445 (Wood Burning) prohibits permanently installed wood burning devices in new developments<br>The Project would not include natural gas fireplaces<br>The # wood burning and # gas fireplaces were split 75% to # electric and 25% to # without fireplaces | | |

## Quantified Measures

| # | Measure | Notes[1] |
|---|---|---|
| **Operations** | | |
| T-10 | Provide End-of-Trip Bicycle Facilities | End-of-trip facilities (showers and lockers) would be provided for employee use per FSEIR MM AQ-1 |
| T-14* | Provide Electric Vehicle Charging Infrastructure | EV charging infrastructure per FSEIR MM AQ-1 |
| T-34* | Provide Bike Parking | Bicycle parking facilities would be provided for workers, residents, and visitors per FSEIR MM AQ-1 |
| T-39* | Implement Preferential Parking Permit Program | Fuel efficient and carpool vehicles would receive preferential parking per FSEIR MM AQ-1 |
| E-2 | Require Energy Efficient Appliances | Residential appliances (modeled refrigerator, clothes washer, dishwasher, and ceiling fans) would be Energy Star certified per FSEIR MM AQ-1 |

FSEIR = Final Supplemental Environmental Impact Report, MM = Mitigation Measure
* Qualitative or supporting measures. Emission reductions are not included in the mitigated emissions results.
1. Compliance with the applicable FSEIR and SCAQMD regulation has been applied in CalEEMod and is shown as the "Mitigated" emissions in the CalEEMod outputs. The "Mitigated" emission outputs would be unmitigated, as the Project would not include and would not require mitigation measures.

NOTES:

1. total trips per day from Urban Crossroads, *Center Park Specfic Plan Traffic Analysis,* 2025
2. PAs 4, 5, 10, and 11 are designated as MU - Great Park land use and would include restaurants w/ drive-thru lanes the potential maximum drive-thru lane measured across PA 11 from Google Earth, 2025.
3. EMFAC2021 (v1.0.0) Emission Rates, San Bernardino (MD) Sub-Area, Year 2030, Annual.

Source: EMFAC2021 (v1.0.2) Emission Rates
Region Type: Sub-Area
Region: San Bernardino (MD)
Calendar Year: 2030
Season: Annual
Vehicle Classification: EMFAC2007 Categories
Units: miles/day for CVMT and EVMT, trips/day for Trips, g/mile for RUNEX, PMBW and PMTW, g/trip for STREX, HOTSOAK and RUNLOSS, g/vehicle/day for IDLEX and DIURN. PHEV calculated based on total VMT.

# Center Park Specific Plan- Phase I Custom Report

## Table of Contents

1. Basic Project Information

1.1. Basic Project Information

1.2. Land Use Types

1.3. User-Selected Emission Reduction Measures by Emissions Sector

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

2.3. Construction Emissions by Year, Mitigated

2.4. Operations Emissions Compared Against Thresholds

2.6. Operations Emissions by Sector, Mitigated

3. Construction Emissions Details

3.2. Demolition (2025) - Mitigated

3.4. Demolition (2026) - Mitigated

3.6. Site Preparation (2025) - Mitigated

3.8. Site Preparation (2026) - Mitigated

3.10. Grading (2026) - Mitigated

3.12. Building Construction (2026) - Mitigated

3.14. Building Construction (2027) - Mitigated

3.16. Infrastructure Improvements (2026) - Mitigated

3.18. Infrastructure Improvements (2027) - Mitigated

3.20. Paving (2027) - Mitigated

3.22. Architectural Coating (2027) - Mitigated

4. Operations Emissions Details

4.1. Mobile Emissions by Land Use

4.1.2. Mitigated

4.2. Energy

4.2.2. Electricity Emissions By Land Use - Mitigated

4.2.4. Natural Gas Emissions By Land Use - Mitigated

4.3. Area Emissions by Source

4.3.2. Mitigated

4.4. Water Emissions by Land Use

4.4.2. Mitigated

4.5. Waste Emissions by Land Use

4.5.2. Mitigated

4.6. Refrigerant Emissions by Land Use

4.6.2. Mitigated

4.7. Offroad Emissions By Equipment Type

4.7.2. Mitigated

4.8. Stationary Emissions By Equipment Type

4.8.2. Mitigated

4.9. User Defined Emissions By Equipment Type

4.9.2. Mitigated

4.10. Soil Carbon Accumulation By Vegetation Type

4.10.2. Above and Belowground Carbon Accumulation by Land Use Type - Unmitigated

4.10.4. Soil Carbon Accumulation By Vegetation Type - Mitigated

4.10.5. Above and Belowground Carbon Accumulation by Land Use Type - Mitigated

4.10.6. Avoided and Sequestered Emissions by Species - Mitigated

5. Activity Data

5.1. Construction Schedule

5.2. Off-Road Equipment

5.2.2. Mitigated

5.3. Construction Vehicles

5.3.2. Mitigated

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

5.5. Architectural Coatings

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

5.6.2. Construction Earthmoving Control Strategies

5.7. Construction Paving

5.8. Construction Electricity Consumption and Emissions Factors

5.9. Operational Mobile Sources

5.9.2. Mitigated

5.10. Operational Area Sources

5.10.1. Hearths

5.10.1.2. Mitigated

5.10.2. Architectural Coatings

5.10.4. Landscape Equipment - Mitigated

5.11. Operational Energy Consumption

5.11.2. Mitigated

5.12. Operational Water and Wastewater Consumption

5.12.2. Mitigated

5.13. Operational Waste Generation

5.13.2. Mitigated

5.14. Operational Refrigeration and Air Conditioning Equipment

5.14.2. Mitigated

5.15. Operational Off-Road Equipment

5.15.2. Mitigated

5.16. Stationary Sources

5.16.1. Emergency Generators and Fire Pumps

5.16.2. Process Boilers

5.17. User Defined

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.2. Mitigated

5.18.1. Biomass Cover Type

5.18.1.2. Mitigated

5.18.2. Sequestration

5.18.2.2. Mitigated

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

6.2. Initial Climate Risk Scores

6.3. Adjusted Climate Risk Scores

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

7.2. Healthy Places Index Scores

7.3. Overall Health & Equity Scores

7.4. Health & Equity Measures

7.5. Evaluation Scorecard

7.6. Health & Equity Custom Measures

8. User Changes to Default Data

# 1. Basic Project Information

## 1.1. Basic Project Information

| Data Field | Value |
|---|---|
| Project Name | Center Park Specific Plan- Phase I |
| Construction Start Date | 12/1/2025 |
| Operational Year | 2027 |
| Lead Agency | — |
| Land Use Scale | Project/site |
| Analysis Level for Defaults | County |
| Windspeed (m/s) | 2.60 |
| Precipitation (days) | 18.8 |
| Location | 33.99350362244249, -117.62396749625904 |
| County | San Bernardino-South Coast |
| City | Ontario |
| Air District | South Coast AQMD |
| Air Basin | South Coast |
| TAZ | 5260 |
| EDFZ | 10 |
| Electric Utility | Southern California Edison |
| Gas Utility | Southern California Gas |
| App Version | 2022.1.1.29 |

## 1.2. Land Use Types

| Land Use Subtype | Size | Unit | Lot Acreage | Building Area (sq ft) | Landscape Area (sq ft) | Special Landscape Area (sq ft) | Population | Description |
|---|---|---|---|---|---|---|---|---|
| Single Family Housing | 256 | Dwelling Unit | 11.6 | 506,880 | 0.00 | — | 847 | — |

| | | | | | | | | |
|---|---|---|---|---|---|---|---|---|
| Apartments Low Rise | 768 | Dwelling Unit | 34.9 | 1,520,640 | 0.00 | — | 2,542 | — |
| City Park | 19.6 | Acre | 19.6 | 0.00 | 855,518 | 855,518 | — | — |
| Other Non-Asphalt Surfaces | 3.38 | Acre | 3.38 | 0.00 | 147,233 | 147,233 | — | — |

## 1.3. User-Selected Emission Reduction Measures by Emissions Sector

| Sector | # | Measure Title |
|---|---|---|
| Construction | C-2* | Limit Heavy-Duty Diesel Vehicle Idling |
| Construction | C-5 | Use Advanced Engine Tiers |
| Construction | C-13 | Use Low-VOC Paints for Construction |
| Transportation | T-10 | Provide End-of-Trip Bicycle Facilities |
| Transportation | T-14* | Provide Electric Vehicle Charging Infrastructure |
| Transportation | T-34* | Provide Bike Parking |
| Transportation | T-39* | Implement Preferential Parking Permit Program |
| Energy | E-2 | Require Energy Efficient Appliances |

* Qualitative or supporting measure. Emission reductions not included in the mitigated emissions results.

# 2. Emissions Summary

## 2.1. Construction Emissions Compared Against Thresholds

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Un/Mit. | TOG | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Unmit. | 608 | 607 | 79.2 | 90.4 | 0.15 | 3.23 | 12.0 | 13.6 | 2.97 | 4.07 | 7.04 | — | 21,497 | 21,497 | 0.99 | 0.90 | 40.2 | 21,830 |

| | | | | | | | | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Annual | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

## 4.8. Stationary Emissions By Equipment Type

### 4.8.2. Mitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Equipment Type | TOG | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Annual | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

## 4.9. User Defined Emissions By Equipment Type

### 4.9.2. Mitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Equipment Type | TOG | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Annual | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

## 4.10. Soil Carbon Accumulation By Vegetation Type

### 4.10.2. Above and Belowground Carbon Accumulation by Land Use Type - Unmitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Land Use | TOG | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Annual | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

4.10.4. Soil Carbon Accumulation By Vegetation Type - Mitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Vegetation | TOG | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Annual | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

4.10.5. Above and Belowground Carbon Accumulation by Land Use Type - Mitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Land Use | TOG | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Annual | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

4.10.6. Avoided and Sequestered Emissions by Species - Mitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Species | TOG | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |

# 5. Activity Data

## 5.1. Construction Schedule

| Phase Name | Phase Type | Start Date | End Date | Days Per Week | Work Days per Phase | Phase Description |
|---|---|---|---|---|---|---|
| Demolition | Demolition | 12/1/2025 | 6/1/2026 | 5.00 | 131 | — |
| Site Preparation | Site Preparation | 12/15/2025 | 6/15/2026 | 5.00 | 131 | — |
| Grading | Grading | 4/1/2026 | 12/1/2026 | 5.00 | 175 | — |
| Building Construction | Building Construction | 12/2/2026 | 5/2/2027 | 5.00 | 108 | — |
| Infrastructure Improvements | Building Construction | 8/1/2026 | 2/1/2027 | 5.00 | 131 | — |
| Paving | Paving | 2/2/2027 | 3/2/2027 | 5.00 | 21.0 | — |
| Architectural Coating | Architectural Coating | 5/3/2027 | 5/31/2027 | 5.00 | 21.0 | — |

## 5.2. Off-Road Equipment

### 5.2.2. Mitigated

| Phase Name | Equipment Type | Fuel Type | Engine Tier | Number per Day | Hours Per Day | Horsepower | Load Factor |
|---|---|---|---|---|---|---|---|
| Demolition | Rubber Tired Dozers | Diesel | Tier 4 Final | 2.00 | 8.00 | 367 | 0.40 |
| Demolition | Excavators | Diesel | Tier 4 Final | 3.00 | 8.00 | 36.0 | 0.38 |
| Demolition | Concrete/Industrial Saws | Diesel | Tier 4 Final | 1.00 | 8.00 | 33.0 | 0.73 |
| Site Preparation | Rubber Tired Dozers | Diesel | Tier 4 Final | 3.00 | 8.00 | 367 | 0.40 |
| Site Preparation | Tractors/Loaders/Back hoes | Diesel | Tier 4 Final | 4.00 | 8.00 | 84.0 | 0.37 |
| Grading | Graders | Diesel | Tier 4 Final | 1.00 | 8.00 | 148 | 0.41 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| Grading | Excavators | Diesel | Tier 4 Final | 2.00 | 8.00 | 36.0 | 0.38 |
| Grading | Tractors/Loaders/Back hoes | Diesel | Tier 4 Final | 2.00 | 8.00 | 84.0 | 0.37 |
| Grading | Scrapers | Diesel | Tier 4 Final | 2.00 | 8.00 | 423 | 0.48 |
| Grading | Rubber Tired Dozers | Diesel | Tier 4 Final | 1.00 | 8.00 | 367 | 0.40 |
| Building Construction | Forklifts | Diesel | Tier 4 Final | 3.00 | 8.00 | 82.0 | 0.20 |
| Building Construction | Generator Sets | Diesel | Average | 1.00 | 8.00 | 14.0 | 0.74 |
| Building Construction | Cranes | Diesel | Tier 4 Final | 1.00 | 7.00 | 367 | 0.29 |
| Building Construction | Welders | Diesel | Tier 4 Final | 1.00 | 8.00 | 46.0 | 0.45 |
| Building Construction | Tractors/Loaders/Back hoes | Diesel | Tier 4 Final | 3.00 | 7.00 | 84.0 | 0.37 |
| Infrastructure Improvements | Forklifts | Diesel | Tier 4 Final | 3.00 | 8.00 | 82.0 | 0.20 |
| Infrastructure Improvements | Generator Sets | Diesel | Average | 1.00 | 8.00 | 14.0 | 0.74 |
| Infrastructure Improvements | Cranes | Diesel | Tier 4 Final | 1.00 | 7.00 | 367 | 0.29 |
| Infrastructure Improvements | Welders | Diesel | Tier 4 Final | 1.00 | 8.00 | 46.0 | 0.45 |
| Infrastructure Improvements | Tractors/Loaders/Back hoes | Diesel | Tier 4 Final | 3.00 | 7.00 | 84.0 | 0.37 |
| Paving | Pavers | Diesel | Tier 4 Final | 2.00 | 8.00 | 81.0 | 0.42 |
| Paving | Paving Equipment | Diesel | Tier 4 Final | 2.00 | 8.00 | 89.0 | 0.36 |
| Paving | Rollers | Diesel | Tier 4 Final | 2.00 | 8.00 | 36.0 | 0.38 |
| Architectural Coating | Air Compressors | Diesel | Tier 4 Final | 1.00 | 6.00 | 37.0 | 0.48 |

## 5.3. Construction Vehicles

### 5.3.2. Mitigated

| Phase Name | Trip Type | One-Way Trips per Day | Miles per Trip | Vehicle Mix |
|---|---|---|---|---|
| Demolition | — | — | — | — |

| | | | | |
|---|---|---|---|---|
| Demolition | Worker | 15.0 | 18.5 | LDA,LDT1,LDT2 |
| Demolition | Vendor | — | 10.2 | HHDT,MHDT |
| Demolition | Hauling | 24.3 | 20.0 | HHDT |
| Demolition | Onsite truck | — | — | HHDT |

## 5.4. Vehicles

### 5.4.1. Construction Vehicle Control Strategies

| Control Strategies Applied | PM10 Reduction | PM2.5 Reduction |
|---|---|---|
| Water unpaved roads twice daily | 55% | 55% |
| Limit vehicle speeds on unpaved roads to 25 mph | 44% | 44% |

## 5.5. Architectural Coatings

| Phase Name | Residential Interior Area Coated (sq ft) | Residential Exterior Area Coated (sq ft) | Non-Residential Interior Area Coated (sq ft) | Non-Residential Exterior Area Coated (sq ft) | Parking Area Coated (sq ft) |
|---|---|---|---|---|---|
| Architectural Coating | 4,105,728 | 1,368,576 | 0.00 | 0.00 | 8,834 |

## 5.6. Dust Mitigation

### 5.6.1. Construction Earthmoving Activities

| Phase Name | Material Imported (cy) | Material Exported (cy) | Acres Graded (acres) | Material Demolished (Ton of Debris) | Acres Paved (acres) |
|---|---|---|---|---|---|
| Demolition | 0.00 | 0.00 | 0.00 | 12,744 | — |
| Site Preparation | — | — | 197 | 0.00 | — |
| Grading | — | — | 525 | 0.00 | — |
| Paving | 0.00 | 0.00 | 0.00 | 0.00 | 6.20 |

### 5.6.2. Construction Earthmoving Control Strategies

| Control Strategies Applied | Frequency (per day) | PM10 Reduction | PM2.5 Reduction |
|---|---|---|---|
| Water Exposed Area | 3 | 74% | 74% |
| Water Demolished Area | 2 | 36% | 36% |

## 5.7. Construction Paving

| Land Use | Area Paved (acres) | % Asphalt |
|---|---|---|
| Single Family Housing | 2.82 | 0% |
| Apartments Low Rise | — | 0% |
| City Park | 0.00 | 0% |
| Other Non-Asphalt Surfaces | 3.38 | 0% |

## 5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

| Year | kWh per Year | CO2 | CH4 | N2O |
|---|---|---|---|---|
| 2025 | 0.00 | 532 | 0.03 | < 0.005 |
| 2026 | 0.00 | 532 | 0.03 | < 0.005 |
| 2027 | 0.00 | 532 | 0.03 | < 0.005 |

## 5.9. Operational Mobile Sources

### 5.9.2. Mitigated

| Land Use Type | Trips/Weekday | Trips/Saturday | Trips/Sunday | Trips/Year | VMT/Weekday | VMT/Saturday | VMT/Sunday | VMT/Year |
|---|---|---|---|---|---|---|---|---|
| Single Family Housing | 2,416 | 2,416 | 2,416 | 881,840 | 28,649 | 28,649 | 28,649 | 10,456,835 |
| Apartments Low Rise | 5,176 | 5,176 | 5,176 | 1,889,240 | 61,377 | 61,377 | 61,377 | 22,402,558 |

| | | | | | | | | |
|---|---|---|---|---|---|---|---|---|
| City Park | 677 | 677 | 677 | 246,933 | 11,219 | 11,219 | 11,219 | 4,094,910 |
| Other Non-Asphalt Surfaces | 0.00 | 0.00 | 0.00 | 0.00 | 0.00 | 0.00 | 0.00 | 0.00 |

## 5.10. Operational Area Sources

### 5.10.1. Hearths

#### 5.10.1.2. Mitigated

| Hearth Type | Unmitigated (number) |
|---|---|
| Single Family Housing | — |
| Wood Fireplaces | 0 |
| Gas Fireplaces | 0 |
| Propane Fireplaces | 0 |
| Electric Fireplaces | 174 |
| No Fireplaces | 82 |
| Conventional Wood Stoves | 0 |
| Catalytic Wood Stoves | 0 |
| Non-Catalytic Wood Stoves | 0 |
| Pellet Wood Stoves | 0 |
| Apartments Low Rise | — |
| Wood Fireplaces | 0 |
| Gas Fireplaces | 0 |
| Propane Fireplaces | 0 |
| Electric Fireplaces | 523 |
| No Fireplaces | 245 |
| Conventional Wood Stoves | 0 |
| Catalytic Wood Stoves | 0 |
| Non-Catalytic Wood Stoves | 0 |

| | |
|---|---|
| Pellet Wood Stoves | 0 |

### 5.10.2. Architectural Coatings

| Residential Interior Area Coated (sq ft) | Residential Exterior Area Coated (sq ft) | Non-Residential Interior Area Coated (sq ft) | Non-Residential Exterior Area Coated (sq ft) | Parking Area Coated (sq ft) |
|---|---|---|---|---|
| 4105728 | 1,368,576 | 0.00 | 0.00 | 8,834 |

### 5.10.4. Landscape Equipment - Mitigated

| Season | Unit | Value |
|---|---|---|
| Snow Days | day/yr | 0.00 |
| Summer Days | day/yr | 250 |

## 5.11. Operational Energy Consumption

### 5.11.2. Mitigated

Electricity (kWh/yr) and CO2 and CH4 and N2O and Natural Gas (kBTU/yr)

| Land Use | Electricity (kWh/yr) | CO2 | CH4 | N2O | Natural Gas (kBTU/yr) |
|---|---|---|---|---|---|
| Single Family Housing | 1,881,731 | 532 | 0.0330 | 0.0040 | 8,010,167 |
| Apartments Low Rise | 3,415,883 | 532 | 0.0330 | 0.0040 | 12,792,237 |
| City Park | 0.00 | 532 | 0.0330 | 0.0040 | 0.00 |
| Other Non-Asphalt Surfaces | 0.00 | 532 | 0.0330 | 0.0040 | 0.00 |

## 5.12. Operational Water and Wastewater Consumption

### 5.12.2. Mitigated

| Land Use | Indoor Water (gal/year) | Outdoor Water (gal/year) |
|---|---|---|
| Single Family Housing | 10,670,381 | 0.00 |
| Apartments Low Rise | 32,011,142 | 0.00 |

| | | |
|---|---|---|
| City Park | 0.00 | 30,530,835 |
| Other Non-Asphalt Surfaces | 0.00 | 5,254,288 |

## 5.13. Operational Waste Generation

### 5.13.2. Mitigated

| Land Use | Waste (ton/year) | Cogeneration (kWh/year) |
|---|---|---|
| Single Family Housing | 247 | — |
| Apartments Low Rise | 568 | — |
| City Park | 1.69 | — |
| Other Non-Asphalt Surfaces | 0.00 | — |

## 5.14. Operational Refrigeration and Air Conditioning Equipment

### 5.14.2. Mitigated

| Land Use Type | Equipment Type | Refrigerant | GWP | Quantity (kg) | Operations Leak Rate | Service Leak Rate | Times Serviced |
|---|---|---|---|---|---|---|---|
| Single Family Housing | Average room A/C & Other residential A/C and heat pumps | R-410A | 2,088 | < 0.005 | 2.50 | 2.50 | 10.0 |
| Single Family Housing | Household refrigerators and/or freezers | R-134a | 1,430 | 0.12 | 0.60 | 0.00 | 1.00 |
| Apartments Low Rise | Average room A/C & Other residential A/C and heat pumps | R-410A | 2,088 | < 0.005 | 2.50 | 2.50 | 10.0 |
| Apartments Low Rise | Household refrigerators and/or freezers | R-134a | 1,430 | 0.12 | 0.60 | 0.00 | 1.00 |
| City Park | Other commercial A/C and heat pumps | R-410A | 2,088 | < 0.005 | 4.00 | 4.00 | 18.0 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| City Park | Stand-alone retail refrigerators and freezers | R-134a | 1,430 | 0.04 | 1.00 | 0.00 | 1.00 |

## 5.15. Operational Off-Road Equipment

### 5.15.2. Mitigated

| Equipment Type | Fuel Type | Engine Tier | Number per Day | Hours Per Day | Horsepower | Load Factor |
|---|---|---|---|---|---|---|

## 5.16. Stationary Sources

### 5.16.1. Emergency Generators and Fire Pumps

| Equipment Type | Fuel Type | Number per Day | Hours per Day | Hours per Year | Horsepower | Load Factor |
|---|---|---|---|---|---|---|

### 5.16.2. Process Boilers

| Equipment Type | Fuel Type | Number | Boiler Rating (MMBtu/hr) | Daily Heat Input (MMBtu/day) | Annual Heat Input (MMBtu/yr) |
|---|---|---|---|---|---|

## 5.17. User Defined

| Equipment Type | Fuel Type |
|---|---|

## 5.18. Vegetation

### 5.18.1. Land Use Change

### 5.18.1.2. Mitigated

| Vegetation Land Use Type | Vegetation Soil Type | Initial Acres | Final Acres |
|---|---|---|---|

### 5.18.1. Biomass Cover Type

#### 5.18.1.2. Mitigated

| Biomass Cover Type | Initial Acres | Final Acres |
|---|---|---|

### 5.18.2. Sequestration

#### 5.18.2.2. Mitigated

| Tree Type | Number | Electricity Saved (kWh/year) | Natural Gas Saved (btu/year) |
|---|---|---|---|

# 6. Climate Risk Detailed Report

## 6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

| Climate Hazard | Result for Project Location | Unit |
|---|---|---|
| Temperature and Extreme Heat | 19.8 | annual days of extreme heat |
| Extreme Precipitation | 3.10 | annual days with precipitation above 20 mm |
| Sea Level Rise | — | meters of inundation depth |
| Wildfire | 6.78 | annual hectares burned |

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

## 6.2. Initial Climate Risk Scores

| Climate Hazard | Exposure Score | Sensitivity Score | Adaptive Capacity Score | Vulnerability Score |
|---|---|---|---|---|
| Temperature and Extreme Heat | 2 | 0 | 0 | N/A |
| Extreme Precipitation | N/A | N/A | N/A | N/A |
| Sea Level Rise | 1 | 0 | 0 | N/A |
| Wildfire | 1 | 0 | 0 | N/A |
| Flooding | N/A | N/A | N/A | N/A |
| Drought | N/A | N/A | N/A | N/A |
| Snowpack Reduction | N/A | N/A | N/A | N/A |
| Air Quality Degradation | 0 | 0 | 0 | N/A |

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

## 6.3. Adjusted Climate Risk Scores

| Climate Hazard | Exposure Score | Sensitivity Score | Adaptive Capacity Score | Vulnerability Score |
|---|---|---|---|---|
| Temperature and Extreme Heat | 2 | 1 | 1 | 3 |
| Extreme Precipitation | N/A | N/A | N/A | N/A |
| Sea Level Rise | 1 | 1 | 1 | 2 |
| Wildfire | 1 | 1 | 1 | 2 |
| Flooding | N/A | N/A | N/A | N/A |
| Drought | N/A | N/A | N/A | N/A |
| Snowpack Reduction | N/A | N/A | N/A | N/A |
| Air Quality Degradation | 1 | 1 | 1 | 2 |

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

# 7. Health and Equity Details

## 7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

| Indicator | Result for Project Census Tract |
|---|---|
| Exposure Indicators | — |
| AQ-Ozone | 77.1 |
| AQ-PM | 93.4 |
| AQ-DPM | 57.1 |
| Drinking Water | 100.0 |
| Lead Risk Housing | 17.5 |
| Pesticides | 84.9 |
| Toxic Releases | 67.6 |
| Traffic | 18.1 |
| Effect Indicators | — |
| CleanUp Sites | 80.3 |
| Groundwater | 98.1 |
| Haz Waste Facilities/Generators | 86.6 |
| Impaired Water Bodies | 87.0 |
| Solid Waste | 98.9 |
| Sensitive Population | — |
| Asthma | 16.5 |
| Cardio-vascular | 29.1 |
| Low Birth Weights | 49.0 |
| Socioeconomic Factor Indicators | — |
| Education | 52.9 |
| Housing | 59.3 |

| | |
|---|---|
| Linguistic | 68.9 |
| Poverty | 35.4 |
| Unemployment | 36.4 |

## 7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

| Indicator | Result for Project Census Tract |
|---|---|
| Economic | — |
| Above Poverty | 73.60451687 |
| Employed | 6.274862056 |
| Median HI | 76.55588349 |
| Education | — |
| Bachelor's or higher | 64.85307327 |
| High school enrollment | 100 |
| Preschool enrollment | 66.93186193 |
| Transportation | — |
| Auto Access | 63.41588605 |
| Active commuting | 24.5989991 |
| Social | — |
| 2-parent households | 66.95752598 |
| Voting | 70.69164635 |
| Neighborhood | — |
| Alcohol availability | 97.0101373 |
| Park access | 52.77813422 |
| Retail density | 10.02181445 |
| Supermarket access | 6.557166688 |
| Tree canopy | 8.238162453 |
| Housing | — |

| | |
|---|---|
| Homeownership | 60.78532016 |
| Housing habitability | 61.41408957 |
| Low-inc homeowner severe housing cost burden | 71.53856025 |
| Low-inc renter severe housing cost burden | 18.38829719 |
| Uncrowded housing | 64.30129603 |
| Health Outcomes | — |
| Insured adults | 73.78416528 |
| Arthritis | 95.7 |
| Asthma ER Admissions | 84.6 |
| High Blood Pressure | 97.7 |
| Cancer (excluding skin) | 89.7 |
| Asthma | 34.7 |
| Coronary Heart Disease | 98.7 |
| Chronic Obstructive Pulmonary Disease | 94.6 |
| Diagnosed Diabetes | 96.0 |
| Life Expectancy at Birth | 75.7 |
| Cognitively Disabled | 56.3 |
| Physically  Disabled | 69.8 |
| Heart Attack ER Admissions | 68.4 |
| Mental Health Not Good | 54.9 |
| Chronic Kidney Disease | 97.1 |
| Obesity | 68.0 |
| Pedestrian Injuries | 19.6 |
| Physical Health Not Good | 86.2 |
| Stroke | 97.8 |
| Health Risk Behaviors | — |
| Binge Drinking | 28.2 |
| Current Smoker | 59.6 |

| | |
|---|---|
| No Leisure Time for Physical Activity | 76.7 |
| Climate Change Exposures | — |
| Wildfire Risk | 0.0 |
| SLR Inundation Area | 0.0 |
| Children | 9.0 |
| Elderly | 91.7 |
| English Speaking | 35.1 |
| Foreign-born | 48.1 |
| Outdoor Workers | 88.5 |
| Climate Change Adaptive Capacity | — |
| Impervious Surface Cover | 78.1 |
| Traffic Density | 21.6 |
| Traffic Access | 23.0 |
| Other Indices | — |
| Hardship | 45.2 |
| Other Decision Support | — |
| 2016 Voting | 74.7 |

## 7.3. Overall Health & Equity Scores

| Metric | Result for Project Census Tract |
|---|---|
| CalEnviroScreen 4.0 Score for Project Location (a) | 72.0 |
| Healthy Places Index Score for Project Location (b) | 55.0 |
| Project Located in a Designated Disadvantaged Community (Senate Bill 535) | No |
| Project Located in a Low-Income Community (Assembly Bill 1550) | No |
| Project Located in a Community Air Protection Program Community (Assembly Bill 617) | No |

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

## 7.4. Health & Equity Measures

No Health & Equity Measures selected.

## 7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

## 7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

# 8. User Changes to Default Data

| Screen | Justification |
|---|---|
| Land Use | per center park specific plan provisions and traffic study from Urban Crossroads<br>per the City Ordinance 2689, developments within Ontario Ranch would use recycled water to irrigate landscaping |
| Construction: Construction Phases | per construction questionnaire from client |
| Operations: Vehicle Data | per traffic study from Urban Crossroads |
| Operations: Hearths | SCAQMD 445 (Wood Burning) prohibits permanently installed wood-burning devices in new developments<br>the Project would not include natural gas fireplaces |

8. User Changes to Default Data

# 1. Basic Project Information

## 1.1. Basic Project Information

| Data Field | Value |
|---|---|
| Project Name | Center Park Specific Plan - Phase II |
| Construction Start Date | 12/2/2026 |
| Operational Year | 2030 |
| Lead Agency | — |
| Land Use Scale | Project/site |
| Analysis Level for Defaults | County |
| Windspeed (m/s) | 2.60 |
| Precipitation (days) | 18.8 |
| Location | 33.99545776525716, -117.63174085978615 |
| County | San Bernardino-South Coast |
| City | Ontario |
| Air District | South Coast AQMD |
| Air Basin | South Coast |
| TAZ | 5259 |
| EDFZ | 10 |
| Electric Utility | Southern California Edison |
| Gas Utility | Southern California Gas |
| App Version | 2022.1.1.29 |

## 1.2. Land Use Types

| Land Use Subtype | Size | Unit | Lot Acreage | Building Area (sq ft) | Landscape Area (sq ft) | Special Landscape Area (sq ft) | Population | Description |
|---|---|---|---|---|---|---|---|---|
| Single Family Housing | 546 | Dwelling Unit | 24.8 | 1,081,080 | 0.00 | — | 1,807 | — |

| | | | | | | | | |
|---|---|---|---|---|---|---|---|---|
| Apartments Low Rise | 2,723 | Dwelling Unit | 105 | 4,592,865 | 0.00 | — | 9,013 | — |
| Strip Mall | 38.6 | 1000sqft | 0.97 | 38,603 | 3,860 | — | — | — |
| Fast Food Restaurant w/o Drive Thru | 38.6 | 1000sqft | 0.97 | 38,603 | 3,860 | — | — | — |
| Fast Food Restaurant with Drive Thru | 38.6 | 1000sqft | 0.97 | 38,603 | 3,860 | — | — | — |
| General Office Building | 67.6 | 1000sqft | 1.71 | 67,556 | 6,756 | — | — | — |
| Medical Office Building | 67.6 | 1000sqft | 1.71 | 67,556 | 6,756 | — | — | — |
| City Park | 36.3 | Acre | 36.3 | 0.00 | 1,582,970 | 1,582,970 | — | — |
| Other Non-Asphalt Surfaces | 7.90 | Acre | 7.90 | 0.00 | 344,124 | 344,124 | — | — |
| Parking Lot | 6.95 | Acre | 6.95 | 0.00 | 0.00 | — | — | — |

## 1.3. User-Selected Emission Reduction Measures by Emissions Sector

| Sector | # | Measure Title |
|---|---|---|
| Construction | C-2* | Limit Heavy-Duty Diesel Vehicle Idling |
| Construction | C-5 | Use Advanced Engine Tiers |
| Construction | C-13 | Use Low-VOC Paints for Construction |
| Transportation | T-10 | Provide End-of-Trip Bicycle Facilities |
| Transportation | T-14* | Provide Electric Vehicle Charging Infrastructure |
| Transportation | T-34* | Provide Bike Parking |
| Transportation | T-39* | Implement Preferential Parking Permit Program |
| Energy | E-2 | Require Energy Efficient Appliances |

* Qualitative or supporting measure. Emission reductions not included in the mitigated emissions results.

# 2. Emissions Summary

## 2.1. Construction Emissions Compared Against Thresholds

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Un/Mit. | TOG | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Unmit. | 16.2 | 13.6 | 78.2 | 199 | 0.17 | 3.06 | 35.3 | 36.9 | 2.82 | 8.81 | 10.3 | — | 51,258 | 51,258 | 1.54 | 2.88 | 124 | 52,281 |
| Mit. | 12.5 | 10.5 | 27.4 | 209 | 0.17 | 0.37 | 35.3 | 35.7 | 0.37 | 8.81 | 9.18 | — | 51,258 | 51,258 | 1.54 | 2.88 | 124 | 52,281 |
| % Reduced | 23% | 22% | 65% | -5% | — | 88% | — | 3% | 87% | — | 10% | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

### 4.8.2. Mitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Equipment Type | TOG | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Annual | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

## 4.9. User Defined Emissions By Equipment Type

### 4.9.2. Mitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Equipment Type | TOG | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

| | | | | | | | | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Annual | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

## 4.10. Soil Carbon Accumulation By Vegetation Type

### 4.10.2. Above and Belowground Carbon Accumulation by Land Use Type - Unmitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Land Use | TOG | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Annual | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

### 4.10.4. Soil Carbon Accumulation By Vegetation Type - Mitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Vegetation | TOG | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

| | | | | | | | | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Annual | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

4.10.5. Above and Belowground Carbon Accumulation by Land Use Type - Mitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Land Use | TOG | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Annual | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

4.10.6. Avoided and Sequestered Emissions by Species - Mitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Species | TOG | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Avoided | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Subtotal | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Sequestered | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Subtotal | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Removed | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

| | | | | | | | | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Subtotal | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Avoided | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Subtotal | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Sequestered | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Subtotal | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Removed | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Subtotal | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Annual | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Avoided | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Subtotal | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Sequestered | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Subtotal | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Removed | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Subtotal | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

# 5. Activity Data

## 5.1. Construction Schedule

| Phase Name | Phase Type | Start Date | End Date | Days Per Week | Work Days per Phase | Phase Description |
|---|---|---|---|---|---|---|
| Demolition | Demolition | 12/2/2026 | 6/2/2027 | 5.00 | 131 | — |

| | | | | | | |
|---|---|---|---|---|---|---|
| Site Preparation | Site Preparation | 12/15/2026 | 6/15/2027 | 5.00 | 131 | — |
| Grading | Grading | 4/1/2027 | 12/1/2027 | 5.00 | 175 | — |
| Building Construction | Building Construction | 10/1/2028 | 3/1/2030 | 5.00 | 370 | — |
| Infrastructure Improvements | Building Construction | 8/1/2027 | 12/1/2028 | 5.00 | 350 | — |
| Paving | Paving | 8/1/2028 | 2/1/2029 | 5.00 | 133 | — |
| Architectural Coating | Architectural Coating | 3/2/2030 | 3/30/2030 | 5.00 | 20.0 | — |

## 5.2. Off-Road Equipment

### 5.2.2. Mitigated

| Phase Name | Equipment Type | Fuel Type | Engine Tier | Number per Day | Hours Per Day | Horsepower | Load Factor |
|---|---|---|---|---|---|---|---|
| Demolition | Rubber Tired Dozers | Diesel | Tier 4 Final | 2.00 | 8.00 | 367 | 0.40 |
| Demolition | Excavators | Diesel | Tier 4 Final | 3.00 | 8.00 | 36.0 | 0.38 |
| Demolition | Concrete/Industrial Saws | Diesel | Tier 4 Final | 1.00 | 8.00 | 33.0 | 0.73 |
| Site Preparation | Rubber Tired Dozers | Diesel | Tier 4 Final | 3.00 | 8.00 | 367 | 0.40 |
| Site Preparation | Tractors/Loaders/Back hoes | Diesel | Tier 4 Final | 4.00 | 8.00 | 84.0 | 0.37 |
| Grading | Graders | Diesel | Tier 4 Final | 1.00 | 8.00 | 148 | 0.41 |
| Grading | Excavators | Diesel | Tier 4 Final | 2.00 | 8.00 | 36.0 | 0.38 |
| Grading | Tractors/Loaders/Back hoes | Diesel | Tier 4 Final | 2.00 | 8.00 | 84.0 | 0.37 |
| Grading | Scrapers | Diesel | Tier 4 Final | 2.00 | 8.00 | 423 | 0.48 |
| Grading | Rubber Tired Dozers | Diesel | Tier 4 Final | 1.00 | 8.00 | 367 | 0.40 |
| Building Construction | Forklifts | Diesel | Tier 4 Final | 3.00 | 8.00 | 82.0 | 0.20 |
| Building Construction | Generator Sets | Diesel | Average | 1.00 | 8.00 | 14.0 | 0.74 |
| Building Construction | Cranes | Diesel | Tier 4 Final | 1.00 | 7.00 | 367 | 0.29 |
| Building Construction | Welders | Diesel | Tier 4 Final | 1.00 | 8.00 | 46.0 | 0.45 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| Building Construction | Tractors/Loaders/Back hoes | Diesel | Tier 4 Final | 3.00 | 7.00 | 84.0 | 0.37 |
| Infrastructure Improvements | Forklifts | Diesel | Tier 4 Final | 3.00 | 8.00 | 82.0 | 0.20 |
| Infrastructure Improvements | Generator Sets | Diesel | Average | 1.00 | 8.00 | 14.0 | 0.74 |
| Infrastructure Improvements | Cranes | Diesel | Tier 4 Final | 1.00 | 7.00 | 367 | 0.29 |
| Infrastructure Improvements | Welders | Diesel | Tier 4 Final | 1.00 | 8.00 | 46.0 | 0.45 |
| Infrastructure Improvements | Tractors/Loaders/Back hoes | Diesel | Tier 4 Final | 3.00 | 7.00 | 84.0 | 0.37 |
| Paving | Pavers | Diesel | Tier 4 Final | 2.00 | 8.00 | 81.0 | 0.42 |
| Paving | Paving Equipment | Diesel | Tier 4 Final | 2.00 | 8.00 | 89.0 | 0.36 |
| Paving | Rollers | Diesel | Tier 4 Final | 2.00 | 8.00 | 36.0 | 0.38 |
| Architectural Coating | Air Compressors | Diesel | Tier 4 Final | 1.00 | 6.00 | 37.0 | 0.48 |

## 5.3. Construction Vehicles

### 5.3.2. Mitigated

| Phase Name | Trip Type | One-Way Trips per Day | Miles per Trip | Vehicle Mix |
|---|---|---|---|---|
| Demolition | — | — | — | — |
| Demolition | Worker | 15.0 | 18.5 | LDA,LDT1,LDT2 |
| Demolition | Vendor | — | 10.2 | HHDT,MHDT |
| Demolition | Hauling | 58.8 | 20.0 | HHDT |
| Demolition | Onsite truck | — | — | HHDT |
| Site Preparation | — | — | — | — |
| Site Preparation | Worker | 17.5 | 18.5 | LDA,LDT1,LDT2 |
| Site Preparation | Vendor | — | 10.2 | HHDT,MHDT |
| Site Preparation | Hauling | 0.00 | 20.0 | HHDT |

| Infrastructure Improvements | Hauling | 0.00 | 20.0 | HHDT |
| Infrastructure Improvements | Onsite truck | — | — | HHDT |

## 5.4. Vehicles

### 5.4.1. Construction Vehicle Control Strategies

| Control Strategies Applied | PM10 Reduction | PM2.5 Reduction |
|---|---|---|
| Water unpaved roads twice daily | 55% | 55% |
| Limit vehicle speeds on unpaved roads to 25 mph | 44% | 44% |

## 5.6. Dust Mitigation

### 5.6.1. Construction Earthmoving Activities

| Phase Name | Material Imported (cy) | Material Exported (cy) | Acres Graded (acres) | Material Demolished (Ton of Debris) | Acres Paved (acres) |
|---|---|---|---|---|---|
| Demolition | 0.00 | 0.00 | 0.00 | 30,810 | — |
| Site Preparation | — | — | 197 | 0.00 | — |
| Grading | — | — | 525 | 0.00 | — |
| Paving | 0.00 | 0.00 | 0.00 | 0.00 | 20.9 |

### 5.6.2. Construction Earthmoving Control Strategies

| Control Strategies Applied | Frequency (per day) | PM10 Reduction | PM2.5 Reduction |
|---|---|---|---|
| Water Exposed Area | 3 | 74% | 74% |
| Water Demolished Area | 2 | 36% | 36% |

## 5.7. Construction Paving

| Land Use | Area Paved (acres) | % Asphalt |
|---|---|---|
| Single Family Housing | 6.02 | 0% |
| Apartments Low Rise | — | 0% |
| Strip Mall | 0.00 | 0% |
| Fast Food Restaurant w/o Drive Thru | 0.00 | 0% |
| Fast Food Restaurant with Drive Thru | 0.00 | 0% |

| | | |
|---|---|---|
| General Office Building | 0.00 | 0% |
| Medical Office Building | 0.00 | 0% |
| City Park | 0.00 | 0% |
| Other Non-Asphalt Surfaces | 7.90 | 0% |
| Parking Lot | 6.95 | 100% |

## 5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

| Year | kWh per Year | CO2 | CH4 | N2O |
|---|---|---|---|---|
| 2026 | 0.00 | 532 | 0.03 | < 0.005 |
| 2027 | 0.00 | 532 | 0.03 | < 0.005 |
| 2028 | 0.00 | 532 | 0.03 | < 0.005 |
| 2029 | 0.00 | 532 | 0.03 | < 0.005 |
| 2030 | 0.00 | 532 | 0.03 | < 0.005 |

## 5.9. Operational Mobile Sources

### 5.9.2. Mitigated

| Land Use Type | Trips/Weekday | Trips/Saturday | Trips/Sunday | Trips/Year | VMT/Weekday | VMT/Saturday | VMT/Sunday | VMT/Year |
|---|---|---|---|---|---|---|---|---|
| Single Family Housing | 3,432 | 3,432 | 3,432 | 1,252,547 | 36,394 | 36,394 | 36,394 | 13,283,984 |
| Apartments Low Rise | 14,672 | 14,672 | 14,672 | 5,355,413 | 155,609 | 155,609 | 155,609 | 56,797,233 |
| Strip Mall | 593 | 593 | 593 | 216,323 | 9,717 | 9,717 | 9,717 | 3,546,684 |
| Fast Food Restaurant w/o Drive Thru | 6,898 | 6,898 | 6,898 | 2,517,742 | 113,094 | 113,094 | 113,094 | 41,279,181 |
| Fast Food Restaurant with Drive Thru | 7,158 | 7,158 | 7,158 | 2,612,719 | 117,360 | 117,360 | 117,360 | 42,836,349 |

| | | | | | | | | |
|---|---|---|---|---|---|---|---|---|
| General Office Building | 537 | 537 | 537 | 196,143 | 8,811 | 8,811 | 8,811 | 3,215,834 |
| Medical Office Building | 1,785 | 1,785 | 1,785 | 651,668 | 29,272 | 29,272 | 29,272 | 10,684,302 |
| City Park | 1,329 | 1,329 | 1,329 | 485,088 | 21,790 | 21,790 | 21,790 | 7,953,171 |
| Other Non-Asphalt Surfaces | 0.00 | 0.00 | 0.00 | 0.00 | 0.00 | 0.00 | 0.00 | 0.00 |
| Parking Lot | 0.00 | 0.00 | 0.00 | 0.00 | 0.00 | 0.00 | 0.00 | 0.00 |

## 5.10. Operational Area Sources

### 5.10.1. Hearths

#### 5.10.1.2. Mitigated

| Hearth Type | Unmitigated (number) |
|---|---|
| Single Family Housing | — |
| Wood Fireplaces | 0 |
| Gas Fireplaces | 0 |
| Propane Fireplaces | 0 |
| Electric Fireplaces | 372 |
| No Fireplaces | 174 |
| Conventional Wood Stoves | 0 |
| Catalytic Wood Stoves | 0 |
| Non-Catalytic Wood Stoves | 0 |
| Pellet Wood Stoves | 0 |
| Apartments Low Rise | — |
| Wood Fireplaces | 0 |
| Gas Fireplaces | 0 |
| Propane Fireplaces | 0 |
| Electric Fireplaces | 1855 |

| | |
|---|---|
| No Fireplaces | 868 |
| Conventional Wood Stoves | 0 |
| Catalytic Wood Stoves | 0 |
| Non-Catalytic Wood Stoves | 0 |
| Pellet Wood Stoves | 0 |

### 5.10.2. Architectural Coatings

| Residential Interior Area Coated (sq ft) | Residential Exterior Area Coated (sq ft) | Non-Residential Interior Area Coated (sq ft) | Non-Residential Exterior Area Coated (sq ft) | Parking Area Coated (sq ft) |
|---|---|---|---|---|
| 11489737.756275 | 3,829,913 | 376,382 | 125,461 | 38,822 |

### 5.10.4. Landscape Equipment - Mitigated

| Season | Unit | Value |
|---|---|---|
| Snow Days | day/yr | 0.00 |
| Summer Days | day/yr | 250 |

## 5.11. Operational Energy Consumption

### 5.11.2. Mitigated

Electricity (kWh/yr) and CO2 and CH4 and N2O and Natural Gas (kBTU/yr)

| Land Use | Electricity (kWh/yr) | CO2 | CH4 | N2O | Natural Gas (kBTU/yr) |
|---|---|---|---|---|---|
| Single Family Housing | 4,013,379 | 532 | 0.0330 | 0.0040 | 17,084,185 |
| Apartments Low Rise | 12,111,261 | 532 | 0.0330 | 0.0040 | 45,355,810 |
| Strip Mall | 375,543 | 532 | 0.0330 | 0.0040 | 227,584 |
| Fast Food Restaurant w/o Drive Thru | 1,353,678 | 532 | 0.0330 | 0.0040 | 4,411,198 |
| Fast Food Restaurant with Drive Thru | 1,353,678 | 532 | 0.0330 | 0.0040 | 4,411,198 |
| General Office Building | 1,178,980 | 532 | 0.0330 | 0.0040 | 1,853,738 |

| | | | | | |
|---|---|---|---|---|---|
| Medical Office Building | 1,178,980 | 532 | 0.0330 | 0.0040 | 1,853,738 |
| City Park | 0.00 | 532 | 0.0330 | 0.0040 | 0.00 |
| Other Non-Asphalt Surfaces | 0.00 | 532 | 0.0330 | 0.0040 | 0.00 |
| Parking Lot | 265,355 | 532 | 0.0330 | 0.0040 | 0.00 |

## 5.12. Operational Water and Wastewater Consumption

### 5.12.2. Mitigated

| Land Use | Indoor Water (gal/year) | Outdoor Water (gal/year) |
|---|---|---|
| Single Family Housing | 22,757,922 | 0.00 |
| Apartments Low Rise | 113,497,840 | 0.00 |
| Strip Mall | 2,859,422 | 61,993 |

|---|---|---|---|

# 6. Climate Risk Detailed Report

## 6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

| Climate Hazard | Result for Project Location | Unit |
|---|---|---|
| Temperature and Extreme Heat | 17.8 | annual days of extreme heat |
| Extreme Precipitation | 3.00 | annual days with precipitation above 20 mm |
| Sea Level Rise | — | meters of inundation depth |
| Wildfire | 9.13 | annual hectares burned |

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

## 6.2. Initial Climate Risk Scores

| Climate Hazard | Exposure Score | Sensitivity Score | Adaptive Capacity Score | Vulnerability Score |
|---|---|---|---|---|
| Temperature and Extreme Heat | 2 | 0 | 0 | N/A |
| Extreme Precipitation | N/A | N/A | N/A | N/A |
| Sea Level Rise | 1 | 0 | 0 | N/A |
| Wildfire | 1 | 0 | 0 | N/A |
| Flooding | N/A | N/A | N/A | N/A |
| Drought | N/A | N/A | N/A | N/A |
| Snowpack Reduction | N/A | N/A | N/A | N/A |
| Air Quality Degradation | 0 | 0 | 0 | N/A |

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

## 6.3. Adjusted Climate Risk Scores

| Climate Hazard | Exposure Score | Sensitivity Score | Adaptive Capacity Score | Vulnerability Score |
|---|---|---|---|---|
| Temperature and Extreme Heat | 2 | 1 | 1 | 3 |
| Extreme Precipitation | N/A | N/A | N/A | N/A |
| Sea Level Rise | 1 | 1 | 1 | 2 |
| Wildfire | 1 | 1 | 1 | 2 |
| Flooding | N/A | N/A | N/A | N/A |
| Drought | N/A | N/A | N/A | N/A |
| Snowpack Reduction | N/A | N/A | N/A | N/A |
| Air Quality Degradation | 1 | 1 | 1 | 2 |

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

# 7. Health and Equity Details

## 7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

| Indicator | Result for Project Census Tract |
|---|---|
| Exposure Indicators | — |
| AQ-Ozone | 77.1 |
| AQ-PM | 93.4 |
| AQ-DPM | 57.1 |

| | |
|---|---|
| Drinking Water | 100.0 |
| Lead Risk Housing | 17.5 |
| Pesticides | 84.9 |
| Toxic Releases | 67.6 |
| Traffic | 18.1 |
| Effect Indicators | — |
| CleanUp Sites | 80.3 |
| Groundwater | 98.1 |
| Haz Waste Facilities/Generators | 86.6 |
| Impaired Water Bodies | 87.0 |
| Solid Waste | 98.9 |
| Sensitive Population | — |
| Asthma | 16.5 |
| Cardio-vascular | 29.1 |
| Low Birth Weights | 49.0 |
| Socioeconomic Factor Indicators | — |
| Education | 52.9 |
| Housing | 59.3 |
| Linguistic | 68.9 |
| Poverty | 35.4 |
| Unemployment | 36.4 |

## 7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

| Indicator | Result for Project Census Tract |
|---|---|
| Economic | — |
| Above Poverty | 73.60451687 |
| Employed | 6.274862056 |

| | |
|---|---|
| Median HI | 76.55588349 |
| Education | — |
| Bachelor's or higher | 64.85307327 |
| High school enrollment | 100 |
| Preschool enrollment | 66.93186193 |
| Transportation | — |
| Auto Access | 63.41588605 |
| Active commuting | 24.5989991 |
| Social | — |
| 2-parent households | 66.95752598 |
| Voting | 70.69164635 |
| Neighborhood | — |
| Alcohol availability | 97.0101373 |
| Park access | 52.77813422 |
| Retail density | 10.02181445 |
| Supermarket access | 6.557166688 |
| Tree canopy | 8.238162453 |
| Housing | — |
| Homeownership | 60.78532016 |
| Housing habitability | 61.41408957 |
| Low-inc homeowner severe housing cost burden | 71.53856025 |
| Low-inc renter severe housing cost burden | 18.38829719 |
| Uncrowded housing | 64.30129603 |
| Health Outcomes | — |
| Insured adults | 73.78416528 |
| Arthritis | 95.7 |
| Asthma ER Admissions | 84.6 |
| High Blood Pressure | 97.7 |

| | |
|---|---|
| Cancer (excluding skin) | 89.7 |
| Asthma | 34.7 |
| Coronary Heart Disease | 98.7 |
| Chronic Obstructive Pulmonary Disease | 94.6 |
| Diagnosed Diabetes | 96.0 |
| Life Expectancy at Birth | 75.7 |
| Cognitively Disabled | 56.3 |
| Physically  Disabled | 69.8 |
| Heart Attack ER Admissions | 68.4 |
| Mental Health Not Good | 54.9 |
| Chronic Kidney Disease | 97.1 |
| Obesity | 68.0 |
| Pedestrian Injuries | 19.6 |
| Physical Health Not Good | 86.2 |
| Stroke | 97.8 |
| Health Risk Behaviors | — |
| Binge Drinking | 28.2 |
| Current Smoker | 59.6 |
| No Leisure Time for Physical Activity | 76.7 |
| Climate Change Exposures | — |
| Wildfire Risk | 0.0 |
| SLR Inundation Area | 0.0 |
| Children | 9.0 |
| Elderly | 91.7 |
| English Speaking | 35.1 |
| Foreign-born | 48.1 |
| Outdoor Workers | 88.5 |
| Climate Change Adaptive Capacity | — |

| | |
|---|---|
| Impervious Surface Cover | 78.1 |
| Traffic Density | 21.6 |
| Traffic Access | 23.0 |
| Other Indices | — |
| Hardship | 45.2 |
| Other Decision Support | — |
| 2016 Voting | 74.7 |

## 7.3. Overall Health & Equity Scores

| Metric | Result for Project Census Tract |
|---|---|
| CalEnviroScreen 4.0 Score for Project Location (a) | 72.0 |
| Healthy Places Index Score for Project Location (b) | 55.0 |
| Project Located in a Designated Disadvantaged Community (Senate Bill 535) | No |
| Project Located in a Low-Income Community (Assembly Bill 1550) | No |
| Project Located in a Community Air Protection Program Community (Assembly Bill 617) | No |

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

## 7.4. Health & Equity Measures

No Health & Equity Measures selected.

## 7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

## 7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

# 8. User Changes to Default Data

| Screen | Justification |
|---|---|

| | |
|---|---|
| Land Use | per center park specific plan provisions and traffic study from Urban Crossroads<br>per the City Ordinance 2689, developments within Ontario Ranch would use recycled water to irrigate landscaping |
| Construction: Construction Phases | per construction questionnaire from client |
| Operations: Vehicle Data | per traffic study from Urban Crossroads |
| Operations: Hearths | SCAQMD Rule 445 (Wood Burning) - prohibits permanently installed wood-burning devices in new developments<br>the Project would not include natural gas fireplaces |

# 6. Climate Risk Detailed Report

## 6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

| Climate Hazard | Result for Project Location | Unit |
|---|---|---|
| Temperature and Extreme Heat | 17.8 | annual days of extreme heat |
| Extreme Precipitation | 3.00 | annual days with precipitation above 20 mm |
| Sea Level Rise | — | meters of inundation depth |
| Wildfire | 9.13 | annual hectares burned |

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

## 6.2. Initial Climate Risk Scores

| Climate Hazard | Exposure Score | Sensitivity Score | Adaptive Capacity Score | Vulnerability Score |
|---|---|---|---|---|
| Temperature and Extreme Heat | 2 | 0 | 0 | N/A |
| Extreme Precipitation | N/A | N/A | N/A | N/A |
| Sea Level Rise | 1 | 0 | 0 | N/A |
| Wildfire | 1 | 0 | 0 | N/A |
| Flooding | N/A | N/A | N/A | N/A |
| Drought | N/A | N/A | N/A | N/A |
| Snowpack Reduction | N/A | N/A | N/A | N/A |
| Air Quality Degradation | 0 | 0 | 0 | N/A |

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

## 6.3. Adjusted Climate Risk Scores

| Climate Hazard | Exposure Score | Sensitivity Score | Adaptive Capacity Score | Vulnerability Score |
|---|---|---|---|---|
| Temperature and Extreme Heat | 2 | 1 | 1 | 3 |
| Extreme Precipitation | N/A | N/A | N/A | N/A |
| Sea Level Rise | 1 | 1 | 1 | 2 |

| | | | | |
|---|---|---|---|---|
| Wildfire | 1 | 1 | 1 | 2 |
| Flooding | N/A | N/A | N/A | N/A |
| Drought | N/A | N/A | N/A | N/A |
| Snowpack Reduction | N/A | N/A | N/A | N/A |
| Air Quality Degradation | 1 | 1 | 1 | 2 |

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

# 7. Health and Equity Details

## 7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

| Indicator | Result for Project Census Tract |
|---|---|
| Exposure Indicators | — |
| AQ-Ozone | 77.1 |
| AQ-PM | 93.4 |
| AQ-DPM | 57.1 |
| Drinking Water | 100.0 |
| Lead Risk Housing | 17.5 |
| Pesticides | 84.9 |
| Toxic Releases | 67.6 |
| Traffic | 18.1 |
| Effect Indicators | — |
| CleanUp Sites | 80.3 |
| Groundwater | 98.1 |
| Haz Waste Facilities/Generators | 86.6 |

| | |
|---|---|
| Impaired Water Bodies | 87.0 |
| Solid Waste | 98.9 |
| Sensitive Population | — |
| Asthma | 16.5 |
| Cardio-vascular | 29.1 |
| Low Birth Weights | 49.0 |
| Socioeconomic Factor Indicators | — |
| Education | 52.9 |
| Housing | 59.3 |
| Linguistic | 68.9 |
| Poverty | 35.4 |
| Unemployment | 36.4 |

## 7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

| Indicator | Result for Project Census Tract |
|---|---|
| Economic | — |
| Above Poverty | 73.60451687 |
| Employed | 6.274862056 |
| Median HI | 76.55588349 |
| Education | — |
| Bachelor's or higher | 64.85307327 |
| High school enrollment | 100 |
| Preschool enrollment | 66.93186193 |
| Transportation | — |
| Auto Access | 63.41588605 |
| Active commuting | 24.5989991 |
| Social | — |

| | |
|---|---|
| 2-parent households | 66.95752598 |
| Voting | 70.69164635 |
| Neighborhood | — |

## 7.3. Overall Health & Equity Scores

| Metric | Result for Project Census Tract |
|---|---|
| CalEnviroScreen 4.0 Score for Project Location (a) | 72.0 |
| Healthy Places Index Score for Project Location (b) | 55.0 |
| Project Located in a Designated Disadvantaged Community (Senate Bill 535) | No |
| Project Located in a Low-Income Community (Assembly Bill 1550) | No |
| Project Located in a Community Air Protection Program Community (Assembly Bill 617) | No |

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

## 7.4. Health & Equity Measures

No Health & Equity Measures selected.

## 7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

## 7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

# 8. User Changes to Default Data

| Screen | Justification |
|---|---|
| Land Use | per center park specific plan provisions and  traffic study from Urban Crossroads<br>per the City Ordinance 2689, developments within Ontario Ranch would use recycled water to irrigate landscaping |
| Operations: Vehicle Data | per traffic study from Urban Crossroads |
| Operations: Hearths | SCAQMD Rule 445 (Wood Burning) - prohibits permanently installed wood-burning devices in new developments<br>the Project would not include natural gas fireplaces |

Unmitigated

| Pollutant | Averaging Time | Maximum Modeled Concentration | Background Concentration ($\mu g/m^3$)[1] | Total Ground Level Concentration ($\mu g/m^3$) | Threshold ($\mu g/m^3$)[2] | Threshold Exceeded?[3] |
|---|---|---|---|---|---|---|
| **Operations Phase I** | | | | | | |
| $PM_{10}$[1] | 24-hour | 0.5 | -- | 0.5 | 2.5 | No |
| $PM_{2.5}$[1] | 24-hour | 0.3 | -- | 0.3 | 2.5 | No |
| **Operations Phase II** | | | | | | |
| $PM_{10}$[1] | 24-hour | 2.4 | -- | 2.4 | 2.5 | No |
| $PM_{2.5}$[1] | 24-hour | 0.6 | -- | 0.6 | 2.5 | No |
| **Operations Buildout** | | | | | | |
| $PM_{10}$[1] | 24-hour | 2.4 | -- | 2.4 | 2.5 | No |
| $PM_{2.5}$[1] | 24-hour | 0.7 | -- | 0.7 | 2.5 | No |

[1] The thresholds for $PM_{10}$ and $PM_{2.5}$ are incremental thresholds; therefore, the incremental concentration without background is compared to the threshold.

 ***
 - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - -
- - - - - - - - - - - - - - - - - - - - -

 ** Model Options Selected:
      * Model Uses Regulatory DEFAULT Options
      * Model Is Setup For Calculation of Average CONCentration Values.
      * NO GAS DEPOSITION Data Provided.
      * NO PARTICLE DEPOSITION Data Provided.
      * Model Uses NO DRY DEPLETION. DDPLETE  =  F
      * Model Uses NO WET DEPLETION. WETDPLT  =  F
      * Stack-tip Downwash.
      * Model Accounts for ELEVated Terrain Effects.
      * Use Calms Processing Routine.
      * Use Missing Data Processing Routine.
      * No Exponential Decay.
      * Model Uses URBAN Dispersion Algorithm for the SBL for  1077 Source(s),
        for Total of    1 Urban Area(s):
   Urban Population =   2035210.0 ;  Urban Roughness Length =  1.000 m
      * Urban Roughness Length of 1.0 Meter Used.
      * ADJ_U*   - Use ADJ_U* option for SBL in AERMET
      * CCVR_Sub - Meteorological data includes CCVR substitutions
      * TEMP_Sub - Meteorological data includes TEMP substitutions
      * Model Accepts FLAGPOLE Receptor . Heights.
      * The User Specified a Pollutant Type of: PM-2.5

 **Note that special processing requirements apply for the 24-hour PM2.5 NAAQS -
check available guidance.
   Model will process user-specified ranks of high 24-hour values averaged across
the number of years modeled, and
```

the multi-year average of individual ANNUAL values, averaged across the number of years modeled.

```
 **Model Calculates  1 Short Term Average(s) of:  24-HR
     and Calculates ANNUAL Averages

 **This Run Includes:   1077 Source(s);       5 Source Group(s); and     292
Receptor(s)

                with:      0 POINT(s), including
                           0 POINTCAP(s) and      0 POINTHOR(s)
                 and:   1075 VOLUME source(s)
                 and:      2 AREA type source(s)
                 and:      0 LINE source(s)
                 and:      0 RLINE/RLINEXT source(s)
                 and:      0 OPENPIT source(s)
                 and:      0 BUOYANT LINE source(s) with a total of     0 line(s)
                 and:      0 SWPOINT source(s)

 **Model Set To Continue RUNning After the Setup Testing.

 **The AERMET Input Meteorological Data Version Date:  16216

 **Output Options Selected:
          Model Outputs Tables of ANNUAL Averages by Receptor
          Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE
Keyword)
          Model Outputs External File(s) of High Values for Plotting (PLOTFILE
Keyword)
          Model Outputs Separate Summary File of High Ranked Values (SUMMFILE
Keyword)

 **NOTE:  The Following Flags May Appear Following CONC Values:  c for Calm Hours
                                                                 m for Missing Hours
                                                                 b for Both Calm and
Missing Hours

 **Misc. Inputs:  Base Elev. for Pot. Temp. Profile (m MSL) =   198.00 ;  Decay
Coef. =    0.000     ;  Rot. Angle =     0.0
                  Emission Units = GRAMS/SEC                                ;
Emission Rate Unit Factor =   0.10000E+07
                  Output Units   = MICROGRAMS/M**3

 **Approximate Storage Requirements of Model =      4.5 MB of RAM.

 **Input Runstream File:          aermod.inp

 **Output Print File:             aermod.out

 ***
 - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - -
- - - - - - - - - - - - - - - - - - - - -

 ** Model Options Selected:
      * Model Uses Regulatory DEFAULT Options
      * Model Is Setup For Calculation of Average CONCentration Values.
      * NO GAS DEPOSITION Data Provided.
      * NO PARTICLE DEPOSITION Data Provided.
      * Model Uses NO DRY DEPLETION. DDPLETE  =  F
      * Model Uses NO WET DEPLETION. WETDPLT  =  F
      * Stack-tip Downwash.
      * Model Accounts for ELEVated Terrain Effects.
      * Use Calms Processing Routine.
      * Use Missing Data Processing Routine.
      * No Exponential Decay.
      * Model Uses URBAN Dispersion Algorithm for the SBL for  1077 Source(s),
        for Total of    1 Urban Area(s):
   Urban Population =   2035210.0 ;  Urban Roughness Length =  1.000 m
      * Urban Roughness Length of 1.0 Meter Used.
      * ADJ_U*   - Use ADJ_U* option for SBL in AERMET
      * CCVR_Sub - Meteorological data includes CCVR substitutions
      * TEMP_Sub - Meteorological data includes TEMP substitutions
      * Model Accepts FLAGPOLE Receptor . Heights.
      * The User Specified a Pollutant Type of: PM_10

 **Model Calculates  1 Short Term Average(s) of:  24-HR
     and Calculates ANNUAL Averages

 **This Run Includes:   1077 Source(s);       5 Source Group(s); and     292
Receptor(s)
```

```
                with:      0 POINT(s), including
                           0 POINTCAP(s) and      0 POINTHOR(s)
                 and:   1075 VOLUME source(s)
                 and:      2 AREA type source(s)
                 and:      0 LINE source(s)
                 and:      0 RLINE/RLINEXT source(s)
                 and:      0 OPENPIT source(s)
                 and:      0 BUOYANT LINE source(s) with a total of     0 line(s)
                 and:      0 SWPOINT source(s)

 **Model Set To Continue RUNning After the Setup Testing.

 **The AERMET Input Meteorological Data Version Date:  16216

 **Output Options Selected:
          Model Outputs Tables of ANNUAL Averages by Receptor
          Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE
Keyword)
          Model Outputs External File(s) of High Values for Plotting (PLOTFILE
Keyword)
          Model Outputs Separate Summary File of High Ranked Values (SUMMFILE
Keyword)

 **NOTE:  The Following Flags May Appear Following CONC Values:  c for Calm Hours
                                                                 m for Missing Hours
                                                                 b for Both Calm and
Missing Hours

 **Misc. Inputs:  Base Elev. for Pot. Temp. Profile (m MSL) =   198.00 ;  Decay
Coef. =    0.000     ;  Rot. Angle =     0.0
                  Emission Units = GRAMS/SEC                                ;
Emission Rate Unit Factor =   0.10000E+07
                  Output Units   = MICROGRAMS/M**3

 **Approximate Storage Requirements of Model =      4.5 MB of RAM.

 **Input Runstream File:          aermod.inp

 **Output Print File:             aermod.out

 **Detailed Error/Message File:   Center Park OP LST PM10.err

 **File for Summary of Results:   Center Park OP LST PM10.sum
