3. Answer "YES" if your facility engages in onsite treatment of hazardous waste. "Treatment" means any method, technique, or process which is designed to change the physical, chemical, or biological character or composition of any hazardous waste or any material contained therein, or removes or reduces its harmful properties or characteristics for any purpose. "Treatment" does not include the removal of residues from manufacturing process equipment for the purposes of cleaning that equipment. There are exemptions from the definition of "treatment" for certain processes under specific, limited conditions described in CHSC section 25123.5(b). If "YES", complete the Onsite Hazardous Waste Treatment Notification- Facility page and one set of Onsite Hazardous Waste Treatment Notification-Unit pages with waste and treatment process information for each unit.
4. Answer "YES" if your facility is subject to Financial Assurance requirements for closure of an onsite treatment unit (for Permit by Rule and Conditional Authorization). Unless they are exempt, Permit by Rule (PBR) and Conditionally Authorized (CA) operations are required to provide financial assurance for closure costs (per 22 CCR §67450.13(b) and HSC §25245.4). If "YES", then complete the Certificate of Financial Assurance page.
5. Answer "YES" if you are a hazardous waste generator that collects hazardous waste initially at remote sites and subsequently transports the hazardous waste to a consolidation site you also operate. You must be eligible pursuant to the conditions in HSC §25110.10. If "YES", complete the Remote Waste Consolidation Site Annual Notification page.
6. Answer "YES" to this question if you generate in any single calendar month 1,000 kilograms (kg) (2,200 pounds) or more of federal RCRA hazardous waste, or generate in any single calendar month, or accumulate at any time, 1 kg (2.2 pounds) of RCRA acute hazardous waste; or generate or accumulate at any time more than 100 kg (220 pounds) of spill cleanup materials contaminated with RCRA acute hazardous waste. If "YES", obtain a Federal EPA ID number, file a biennial report, and satisfy other requirements for RCRA Large Quantity Generators.

Service Request ID: SR0014813
Facility ID: FA0010971

The Business Emergency/Contingency Plan was received on October 10, 2007 by the Hazardous Materials Division.

For future reference, please note the following Business Emergency/Contingency Plan requirements:

1. The contents of this plan are subject to field verification and a current copy of this plan must be available on site.
2. This plan contains important information on preventing, responding to, and reporting releases of hazardous materials/waste. Employees are expected to be familiar with these portions of the plan.
3. The plan is available for public inspection through this Division, with the exception of substantiated trade secrets, the separate confidential emergency contact page, and maps specifying the precise storage locations of hazardous materials/wastes.
4. Two copies of the plan and/or update is required to be filed with this Division. The second copy will be forwarded to the local fire jurisdiction.
5. The annual deadline for submission of business plan inventory is March 1st. Please note that EPA does not allow EPCRA facilities to file a recertification in place of annual inventory. Also, this Division typically does not send individual notices of this statutory deadline, so please note the March 1st date for future annual submissions.

Within 30 days of any of the following events, an amendment to the Business Emergency/Contingency Plan must be filed:

1. A 100 percent or more increase in quantity of a previously disclosed item.
2. Any handling of a previously undisclosed hazardous material (including waste) required to be inventoried or elimination of a previously inventoried item.
3. Change of business address, business ownership, or business name.
4. Change of emergency contact information or other site conditions that may significantly affect emergency response.

For more information please consult the latest version of the San Bernardino County CUPA Business Emergency/Contingency Plan guidelines and forms, available through our website at www.sbcfire.org or by calling this office at (909) 386-8401.

**SPECIAL INSTRUCTIONS:** Information in this location will not be entered into Envision.

**COMMENTS/REMARKS:** Only text in this area will be entered as a blue book comment. Please attach and label additional sheets needed for comments.

Per inspection from 5/4/22, Southwest Dairy is leasing the facility from Craig Gordon. Gordon Hay Inc #3 is still the owner, but Daric Ameye operates Southwest dairy from this location.

- Maintain existing billing dates and anniversary.
- No changes in permits or operation.

**FOR FISCAL USE ONLY:** Fiscal comments / remarks / instruction area (for use between OFM Fiscal and Admin Fiscal)

San Bernardino, CA 92415-0153
(909) 386-8401

Mike Horton, Fire Marshal

THIS PERMIT IS NOT TRANSFERABLE AND IS ISSUED CONDITIONALLY
UPON ADHERENCE TO THE REQUIREMENTS LISTED ON THE BACK OF THIS PERMIT.
THIS FORM MUST BE DISPLAYED CONSPICUOUSLY ON THE PREMISES.

# CUPA PERMIT CONDITIONS

As a condition of the Certified Unified Program Agency (CUPA) permit to operate, the owner, operator, and permit holder shall comply with the following:

a. **Hazardous Materials Release Response Plans and Inventories Program (HMRRP):** California Health and Safety Code (CHSC) Division 20, Chapter 6.95, Article 1 and Title 19 California Code of Regulations (CCR).

b. **California Accidental Release Prevention Program (CalARP):** CHSC Division 20, Chapter 6.95, Article 2 and Title 19 CCR.

c. **Underground Storage Tanks (USTs):** CHSC Division 20, Chapters 6.5, 6.7 and Title 23 CCR, Chapter 16.

   (1) Monitoring, Response and Plot Plans shall be approved by the San Bernardino County CUPA.

   (2) The owner and operator are subject to all applicable requirements of Chapter 6.7 of the CHSC and the applicable regulations.

   (3) This permit and permit conditions including the Monitoring, Response and Plot Plans shall be maintained on site.

   (4) Monitoring or programming for monitoring shall be conducted at the locations of the following UST equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps, dispenser pans, spill containers, or other secondary containment areas (e.g. double-walled piping); mechanical or electronic line leak detectors; and in-tank liquid level probes used for leak detection.
   Note: The UST ID Number is listed on the front of the permit for each UST

d. **Aboveground Petroleum Storage Act SPCC Plans:** CHSC Division 20, Chapter 6.67 and 40 CFR 112.

e. **Hazardous Waste Generator and Hazardous Waste Onsite Treatment:** CHSC Division 20, Chapter 6.5 and Title 22 CCR, Division 4.5, Chapters 10, 11, 12, 20 and 31.

f. **San Bernardino County Fire Protection District Fire Code (SBCFPD FC), Hazardous Materials Management Plans and Inventories:** CHSC Division 12, Part2, Chapter 1,Article 2, Section 13143.9, CHSC Division 20, Chapter 6.95, Article 1, Section 25504, **SBCFPD FC** Chapter 4 Section 407.5, Section 407.6, Chapter 50, Section 5001.5.1 and Section 5001.5.2.

g. **Unified Program Forms and Electronic Reporting:** CHSC Division 20, Chapter 6.11, Section 25404(e)(4) and Title 27 CCR.

**Mike Horton, Fire Marshal**

**THIS PERMIT IS NOT TRANSFERABLE AND IS ISSUED CONDITIONALLY UPON ADHERENCE TO THE REQUIREMENTS LISTED ON THE BACK OF THIS PERMIT. THIS FORM MUST BE DISPLAYED CONSPICUOUSLY ON THE PREMISES.**

# CUPA PERMIT CONDITIONS

As a condition of the Certified Unified Program Agency (CUPA) permit to operate, the owner, operator, and permit holder shall comply with the following:

a. **Hazardous Materials Release Response Plans and Inventories Program (HMRRP):** California Health and Safety Code (CHSC) Division 20, Chapter 6.95, Article 1 and Title 19 California Code of Regulations (CCR).

b. **California Accidental Release Prevention Program (CalARP):** CHSC Division 20, Chapter 6.95, Article 2 and Title 19 CCR.

c. **Underground Storage Tanks (USTs):** CHSC Division 20, Chapters 6.5, 6.7 and Title 23 CCR, Chapter 16.

   (1) Monitoring, Response and Plot Plans shall be approved by the San Bernardino County CUPA.

   (2) The owner and operator are subject to all applicable requirements of Chapter 6.7 of the CHSC and the applicable regulations.

   (3) This permit and permit conditions including the Monitoring, Response and Plot Plans shall be maintained on site.

   (4) Monitoring or programming for monitoring shall be conducted at the locations of the following UST equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps, dispenser pans, spill containers, or other secondary containment areas (e.g. double-walled piping); mechanical or electronic line leak detectors; and in-tank liquid level probes used for leak detection.
   *Note: The UST ID Number is listed on the front of the permit for each UST.*

d. **Aboveground Petroleum Storage Act SPCC Plans:** CHSC Division 20, Chapter 6.67 and 40 CFR 112.

e. **Hazardous Waste Generator and Hazardous Waste Onsite Treatment:** CHSC Division 20, Chapter 6.5 and Title 22 CCR, Division 4.5, Chapters 10, 11, 12, 20 and 31.

f. **San Bernardino County Fire Protection District Code (SBCFPD FC), Hazardous Materials Management Plans and Inventories:** CHSC Division 12, Part 2, Chapter 1, Article 2, Section 13143.9, CHSC Division 20, Chapter 6.95, Article 1, Section 25504, **SBCFPD FC** Chapter 4, Section 407.5, Section 407.6, Chapter 50, Section 5001.5.1 and Section 5001.5.2.

g. **Unified Program Forms and Electronic Reporting:** CHSC Division 20, Chapter 6.11, Section 25404(e)(4) and Title 27 CCR.

# CUPA COMPLIANCE INSPECTION REPORT

| | | |
|---|---|---|
| NAME: **SOUTHWEST DAIRY** | | FACILITY ID: **FA0014875** |
| ADDRESS: **14213 S BON VIEW AVE** | | CERS ID: **10444234** |
| CITY: **ONTARIO** | STATE: **CA** ZIP CODE: **91762** | INSPECTION DATE: **5/4/2022** |

**Consent granted by:**

☒ **Photograph** ☒ **Inspect** **Name:** Daric Ameye **Title:** Operator

An inspection was conducted on 05/04/2022 to determine compliance with applicable hazardous materials and hazardous waste laws and regulations. Daric Amaye, Operator, was the escort during the inspection. Also present during the inspection was Ana Villanueva, Hazardous Materials Specialist with San Bernardino County Fire.

Southwest Dairy is a farm that produces milk. Throughout the production process, the facility handles specialized chemicals such as teat dip, velocity two detergent, acid cleaner EC, and chemclor.
Inventory:

The inventory observed at the facility during the inspection was consistent with that submitted via the California Environmental Reporting System (CERS) on 05/08/2019. CERS ID # 10444234

Document Review:

- CUPA program permits are current; expiration date of 01/31/23
- EPA ID # CAC003121794 was inactive at the time of the inspection. However, the facility is a handler only.
- The Hazardous Materials Business Plan was last updated via the CERS on 05/08/2019.

Complete and submit the Certificate of Compliance (CofC) provided along with all requested documentation, to the attention of Erick Tilus within 30 days of inspection.

Please contact Erick Tilus at (909) 386-8401 or by e-mail at etilus@sbcfire.org with any questions regarding this report.

If you have any questions regarding CERS, please call the CERS Help Desk at (909) 386-8432.

**Refer to Title 19 and Title 22 of the California Code of Regulations (CCR), Chapters 6.5, 6.67 and 6.95 of the California Health Safety Code (CHSC), and Division 3 of Title 2 of the San Bernardino County Code (SBCC). The following lines marked in the V column are violations that must be corrected.**

# CERTIFICATE OF COMPLIANCE

**Return certification to inspector ERICK TILUS within 30 days of inspection unless otherwise specified.**

RESPONDENT: Daric Ameye

VIOLATION(S) CITED ON: 5/4/2022

FACILITY NAME: **SOUTHWEST DAIRY** FACILITY ID: **FA0014875**

SITE ADDRESS: **14213 S BON VIEW AVE** CERS ID: **10444234**

CITY: **ONTARIO** STATE: **CA** ZIP CODE: **91762**

## Summary of Violations:

**IMPORTANT- Attach all requested documentation when returning this certification.**

H203 CORRECTIVE ACTION: Ensure to electronically submit a hazardous materials business plan annually.

I certify under penalty of law that:

- Respondent has corrected violations specified in the above-entitled action.
- I have personally examined any documentation attached to this certification to establish that the violations have been corrected.
- Based on my examination of the attached documentation and inquiry of the individuals, who prepared or obtained them, I believe the information to be true, accurate and complete.
- I am authorized to file this certification on behalf of the Respondent.
- I am aware there are significant penalties for submitting false information, including the possibility of fines and imprisonment for knowing violations.

| | |
|---|---|
| NAME: **GORDON HAY INC DAIRY #3** | FACILITY ID: **FA0014875** |
| ADDRESS: **14213 S BON VIEW AVE** | CERS ID:**10444234** |
| CITY: **ONTARIO** STATE: **CA** ZIP CODE: **91762** | INSPECTION DATE: **12/9/2015** |

Inspector was given permission to: ☐ photograph ☒ inspect

**Inspection Narrative (v020000)**

An inspection was conducted to determine compliance with hazardous waste generator and hazardous material handler laws and regulations. Consent to conduct the inspection and photograph the facility was given by Mario Hernandez, employee of the dairy.

The facility is a dairy. The facility stores hazardous materials as a result of dairy operations, using disinfectants and cleaners in the process of milking cows.

HAZARDOUS MATERIALS INVENTORY: Two 55 gallon drums of Acid Cleaner EC, three 55 gallon drums of Velocity Two detergent, three 55 gallon drums of LA Chemclor, one 500 gallon tank of Teat Dip, and one 500 gallon tank of diesel fuel.

DOCUMENTATION REVIEW: The Business Plan was last submitted on 4/30/14 to the CERS website. The EPA ID# is not required as no hazardous waste is generated at this facility.

Submit a signed Certificate of Compliance with required documentation to this office within 30 days.

If you have any questions, feel free to contact me at 909-754-0453 or dpianalto@sbcfire.org. If you have any questions regarding CERS, please call the CERS helpline at 909-386-8432.

# ACCESS REQUEST to FACILITY RECORD IN CERS - SINGLE FACILITY*

For more information, see: http://www.sbcfire.org/hazmat/efile.aspx or call CERS help line (909) 386-8432

The purpose of the ACCESS REQUST is to ensure that only individuals designated by the facility owner/operator are authorized by the CUPA to access facility records and to create, edit, and submit electronic data on the owner's behalf to the statewide system, known as the California Environmental Reporting System (CERS). The initial business user authorized by the CUPA to have access to a facility on CERS is designated as a lead business user. Lead business users have the ability to add additional lead or standard business users, approve or reject other access requests, or delete other users for any facility for which they are listed as a lead user.

| NAME OF SIGNER (print): Craig Gordon | TITLE OF SIGNER: President / owner | |

*Each facility record that is entered into CERS is assigned to a business/organization. Multiple facilities that have the same owner/operator and that will have the same users managing the facility record in CERS can be grouped together into a single "umbrella" business/organization. If you own or operate multiple facilities and if the same users will be managing all of the facilities in CERS, you may want them to be grouped into a single business/organization. For more information please contact the San Bernardino CERS help line at (909) 386-8432.

PS Form 3800, August 2006

See Reverse for Instructions

## Certified Mail Provides:

- A mailing receipt
- A unique identifier for your mailpiece
- A record of delivery kept by the Postal Service for two years

***Important Reminders:***

- Certified Mail may ONLY be combined with First-Class Mail® or Priority Mail®.
- Certified Mail is *not* available for any class of international mail.
- NO INSURANCE COVERAGE IS PROVIDED with Certified Mail. For valuables, please consider Insured or Registered Mail.
- For an additional fee, a *Return Receipt* may be requested to provide proof of delivery. To obtain Return Receipt service, please complete and attach a Return Receipt (PS Form 3811) to the article and add applicable postage to cover the fee. Endorse mailpiece "Return Receipt Requested". To receive a fee waiver for a duplicate return receipt, a USPS® postmark on your Certified Mail receipt is required.
- For an additional fee, delivery may be restricted to the addressee or addressee's authorized agent. Advise the clerk or mark the mailpiece with the endorsement *"Restricted Delivery"*.
- If a postmark on the Certified Mail receipt is desired, please present the article at the post office for postmarking. If a postmark on the Certified Mail receipt is not needed, detach and affix label with postage and mail.

**IMPORTANT: Save this receipt and present it when making an inquiry.**

# APPLICATION FOR AUTHORITY TO CONSTRUCT AND PERMIT TO OPERATE RULE 65 GASOLINE TANKS

add

**APPLICATION INSTRUCTIONS**

A. Use this form for gasoline tanks which are filled from tank truck or trailer. Gasoline is defined as any petroleum distillate with a Reid vapor pressure of 4 pounds or more.

B. File form in duplicate properly signed, for each group of 5 tanks or less, at same location.

C. Pay $10.00 filing fee for each tank listed, or

D. For transfer of ownership of any tank which has a valid permit at the time of the transfer, pay only a $10.00 filing fee for each tank.

E. Make checks payable to Air Pollution Control District.

# PERMIT TO OPERATE

Permit No.
F87591
A/N 445901

This initial permit must be renewed ANNUALLY unless the equipment is moved, or changes ownership.
If the billing for the annual renewal fee (Rule 301.f) is not received by the expiration date, contact the District.

ID 145099

Legal Owner
or Operator: THREE D DAIRY
8381 EDISON AVE
ONTARIO, CA 91762-7318

**Equipment Location:** 8485 EDISON AVE, ONTARIO, CA 91762-7242

**Equipment Description :**

CONFINED ANIMAL FEED OPERATION CONSISTING OF:

1. MILK COWS, DRY COWS, HEIFERS, AND CALVES
2. MILKING PARLOR
3. SCRAPE TYPE MANURE HANDLING SYSTEM
4. OPEN CORRALS WITH IN-CORRAL MOUNDS
5. TWO STORAGE PONDS
6. FEED STORAGE/COMMODITY BARNS
7. MIXER FEED WAGON/LONG HAY

**Conditions :**

1. OPERATION OF THIS EQUIPMENT SHALL BE CONDUCTED IN ACCORDANCE WITH ALL DATA AND SPECIFICATIONS SUBMITTED WITH THE APPLICATION UNDER WHICH THIS PERMIT IS ISSUED UNLESS OTHERWISE NOTED BELOW.

2. THIS EQUIPMENT SHALL BE PROPERLY MAINTAINED AND KEPT IN GOOD OPERATING CONDITION AT ALL TIMES.

3. THE MAXIMUM NUMBER OF MILKING COWS, DRY COWS, HEIFERS, AND CALVES AT THIS FACILITY SHALL NOT EXCEED 1170 ANIMALS IN ANY ONE DAY.

4. THE MAXIMUM NUMBER OF MILK-PRODUCING COWS AT THIS FACILITY SHALL NOT EXCEED 820 IN ANY ONE DAY.

5. THIS FACILITY IS SUBJECT TO THE APPLICABLE REQUIREMENTS OF THE FOLLOWING RULES AND REGULATIONS:

FILE COPY
South Coast Air Quality Management District
Certified Copy

RULE 1127 EMISSION REDUCTION FROM LIVESTOCK WASTE
RULE 1186 PM10 EMISSIONS FROM PAVED AND UNPAVED ROADS AND LIVESTOCK OPERATIONS

6. THE OPERATOR SHALL USE BEST MANAGEMENT PRACTICES AT ALL TIMES, IN ACCORDANCE WITH RULE 1127. FACILITY MAY BE EXEMPTED FROM ONE CORRAL CLEARING PER YEAR IF ALL THE REQUIREMENTS OF RULE 1127(J)(3) ARE MET. NOTIFICATION TO THE DISTRICT SHALL BE MADE BY CALLING 1 800 CUT SMOG.

7. MANURE DISPOSED OF WITHIN THE JURISDICTION OF THE DISTRICT SHALL ONLY BE REMOVED OR CONTRACTED TO BE REMOVED FROM THIS DAIRY TO:

   A. AN APPROVED MANURE PROCESSING OPERATION; OR

   B. AGRICULTURAL LAND WITHIN THE DISTRICT APPROVED BY LOCAL ORDINANCE AND/OR REGIONAL WATER QUALITY BOARD FOR THE SPREADIING OF MANURE; OR

   C. A COMBINATION OF DESTINATIONS IN A AND B.

8. THE OPERATOR SHALL MAINTAIN COPIES OF ALL MANURE MANIFESTS, TIPPING FEE INVOICES, MANURE MOISTURE TEST RECORDS, CORRAL CLEARING RECORDS, AND STOCKPILE REMOVAL RECORDS.

9. THE OPERATOR SHALL SUBMIT A WRITTEN ANNUAL REPORT BY JANUARY 15TH OF EACH YEAR AFTER JANUARY 1, 2007 PER THE REQUIREMENTS OF RULE 1127. THE REPORT SHALL BE SENT TO: SCAQMD, COMPLIANCE DIVISION, PO BOX 4941, DIAMOND BAR , CA 91765-0941.

10. THE OPERATOR SHALL:

    A. CEASE ALL HAY GRINDING ACTIVITIES BETWEEN 2-5 PM EACH DAY IF VISIBLE EMISSIONS EXTEND MORE THAN 50 FEET FROM A HAY GRINDING SOURCE, AND

    B. TREAT ALL UNPAVED ACCESS CONNECTIONS AND UNPAVED FEED LANE ACCESS AREAS WITH EITHER PAVEMENT, GRAVEL (MAINTAINED TO A DEPTH OF FOUR (4) INCHES), OR ASPHALTIC ROADBASE.

11. THE OPERATOR SHALL MAINTAIN RECORDS, IN A MANNER APPROVED BY THE DISTRICT, TO DEMONSTRATE COMPLIANCE WITH CONDITIONS 3, 4, 7, AND 8. ALL RECORDS SHALL BE RETAINED AT THE FACILITY FOR AT LEAST THREE YEARS AND BE MADE AVAILABLE TO DISTRICT PERSONNEL UPON REQUEST.

**FILE COPY**

**Equipment Location:** 8061 EDISON AVE, ONTARIO, CA 91762-7297

**Equipment Description :**

Confined Animal Facility (CAF), Dairy Operation, Consisting of:

1. Milk cows, dry cows and heifers
2. Milking parlor
3. Scrape type manure handling system
4. Open Corrals with in-corral mounds
5. One (1) Storage pond

**Conditions :**

1. Operation of this equipment shall be conducted in accordance with all data and specifications submitted with the application under which this permit is issued unless otherwise noted below.
2. This equipment shall be properly maintained and kept in good operating condition at all times.
3. This facility shall only house a maximum of 800 milk cows, 200 dry cows, and 450 heifers (15-24 months), for a total head count of not to exceed 1450 cows on any one day.
4. The maximum number of milking cows at this facility shall not exceed 800 in any one day.
5. The operator shall maintain records that specify the monthly average number of animals maintained at this facility.
6. The operator shall submit an annual report to the executive officer in writing by January 15th of each year which shall include:
   A. The information required in condition no. 9,
   B. Animal population for the previous calendar year, broken out by number of milk cows, dry cows, and heifers (15-24 months),

FILE COPY
South Coast Air Quality Management District
Certified Copy

C. Amount of manure removed from the dairy in the previous calendar year broken out by the following destinations:

I. Agricultural lands within the jurisdiction of the south coast air quality management district;
II. Manure processing operation(s) within the jurisdiction of the south coast air quality management district, including the amount of manure that went to each manure processing operation; and/or
III. A location out of the jurisdiction of south coast air quality management district.

The report shall be sent to: SCAQMD, Compliance Division, PO Box 4941, Diamond Bar, CA 91765-0941.

7. This facility is subject to the applicable requirements of Rules 1127 and 1186.

8. The operator shall use best management practices at all times in accordance with Rule 1127 which shall include:

A. Clear corrals such that an even surface of compacted manure remains on top of the soil, and do not scrape down to soil level,
B. Indentify and eliminate water leaks from troughs and piping,
C. Pave feedlanes at least eight (8) feet on the corral side of the feedlane fence,
D. Clear any accumulated manure in excess of three (3) inches in height in each corral at least four (4) times per year with at least sixty (60) days between clearings,
E. Remove all on-dairy stockpiles within three (3) months of last corral clearing day and no more than three (3) months after date that previous stockpiles were last completely cleared.

9. Manure disposed of within the jurisdiction of the District shall only be removed or contracted to be removed from this dairy to:

A. An approved manure processing operation, or
B. Agricultural land within the district approved by local ordinance, and/or regional water quality board for the spreading of manure, or
C. Combination of destinations described in A and B.

10. No later than 30 days after operations begin the operator shall submit a Rule 1127 notification to the executive officer in writing which shall include:

A. Dairy farm operator's name,
B. Name of contact person,
C. Farm name,
D. Farm street address,
E. Mailing address, and
F. Telephone number for the contact person.

The notification shall be sent to: SCAQMD, Compliance Division, PO Box 4941, Diamond Bar, CA 91765-0941.

11. The operator shall:

FILE COPY
South Coast Air Quality Management District
Certified Copy

A. Cease all hay grinding activities between 2 p.m. and 5 p.m. if visible emissions extend more than 50 feet from a hay grinding source,

B. Treat unpaved access connections and unpaved feed lane access areas with either pavement, gravel (maintained to a depth of 4 inches), or asphaltic road-base.

12. The operator shall maintain records, in a manner approved by the District, to demonstrate compliance Rules 1127 and 1186. The records shall include:

A. Monthly average number of animals maintained at the facility,

B. Each clearing of accumulated manure as required by permit condition no. 7 D,

C. Each removal of on-dairy stockpiles as required by permit condition no. 7 E, including date(s) of removal, hauler (if applicable) and manure destination,

D. Manure manifests, tipping fee invoices, and manure moisture test records.

The records shall be retained at the facility for at least three years and be made available to district personnel upon request.

**SURROUNDING SITES: SEARCH RESULTS**

Surrounding sites were identified in the following databases.

# EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

**STANDARD ENVIRONMENTAL RECORDS**

***Lists of state- and tribal hazardous waste facilities***

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 10/21/2024 has revealed that there is 1 ENVIROSTOR site within approximately 1 mile of the target property.

| Lower Elevation | Address | Direction / Distance | Map ID | Page |

| CAL-AERO FIELD / ACA<br>Facility Id: 80000986<br>Status: Inactive - Needs Evaluation | | SSW 1/2 - 1 (0.887 mi.) | 68 | 236 |

***Lists of state and tribal landfills and solid waste disposal facilities***

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, has revealed that there are 5 SWF/LF sites within approximately 0.5 miles of the target property.

# EXECUTIVE SUMMARY

***Local Lists of Registered Storage Tanks***

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 2 SWEEPS UST sites within approximately 0.25 miles of the target property.

***Other Ascertainable Records***

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 09/16/2024 has revealed that there are 13 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

# EXECUTIVE SUMMARY

FINDS: The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 11/11/2024 has revealed that there are 5 FINDS sites within approximately 0.001 miles of the target property.

# EXECUTIVE SUMMARY

CERS: The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

A review of the CERS list, as provided by EDR, and dated 10/15/2024 has revealed that there are 4 CERS sites within approximately 0.001 miles of the target property.

| Citation: | HSC 6.95 25508.1(a)-(f) - California Health and Safety Code, Chapter 6.95, Section(s) 25508.1(a)-(f) |
| Violation Description: | Failure to electronically update business plan within 30 days of any one of the following events: A 100 percent or more increase in the quantity of a previously disclosed material. Any handling of a previously undisclosed hazardous materials at or above reportable quantities. A change of business address, business ownership, or business name. A substantial change in the handler's operations that requires modification to any portion of the business plan. |
| Violation Notes: | Returned to compliance on 11/04/2019. OBSERVATION: Hazardous materials were observed on site during the inspection that are not listed in the most current CERS inventory or are listed in lesser quantities. Also, the emergency response plan submitted in CERS does not list the correct emergency contact number for the local CUPA. Revise the contact number to list either 909-386-8425 or 800-33-TOXIC and resubmit the plan. CORRECTIVE ACTION: Submit a signed statement that updated Business Plan elements have been submitted into CERS. |

Environmental Interest/Information System:
THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES
The National Pollutant Discharge Elimination System (NPDES) module of the Integrated Compliance Information System (ICIS). Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

| Facility Status: | Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements. |
| NPDES Number: | CAG018001 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board |
| Subregion: | 8 |
| Facility Telephone: | Not reported |
| Facility Contact: | JAMES JORRITSMA |
| Agency Name: | JORRITSMA JAMES |
| Agency Address: | 1115 BIG PINE LANE |
| Agency City,St,Zip: | NORCO 92860 |
| Agency Contact: | JAMES JORRITSMA |
| Agency Telephone: | Not reported |
| Agency Type: | Private |
| SIC Code: | 241 |
| SIC Code 2: | Not reported |
| Primary Waste Type: | Nonhazardous Solid Wastes/Influent or Solid Wastes that contain nonhazardous putrescible and non putrescible solid, semisolid, and liquid wastes (E.G., garbage, trash, refuse, paper, demolition and construction wastes, manure, vegetable or animal solid and semisolid waste). |
| Primary Waste: | STORMS |
| Waste Type2: | N |
| Waste2: | Stormwater Runoff |
| Primary Waste Type: | Nonhazardous Solid Wastes/Influent or Solid Wastes that contain nonhazardous putrescible and non putrescible solid, semisolid, and liquid wastes (E.G., garbage, trash, refuse, paper, demolition and construction wastes, manure, vegetable or animal solid and semisolid waste). |
| Secondary Waste: | Solid Wastes |
| Secondary Waste Type: | Nonhazardous Solid Wastes/Influent or Solid Wastes that contain nonhazardous putrescible and non putrescible solid, semisolid, and liquid wastes (E.G., garbage, trash, refuse, paper, demolition and construction wastes, manure, vegetable or animal solid and semisolid waste). |
| Design Flow: | 0 |
| Baseline Flow: | 0 |
| Reclamation: | No reclamation requirements associated with this facility. |
| POTW: | The facility is not a POTW. |
| Treat To Water: | Moderate Threat to Water Quality. A violation could have a major adverse impact on receiving biota, can cause aesthetic impairment to a significant human population, or render unusable a potential domestic or municipal water supply. Awsthetic impairment would include nuisance from a waste treatment facility. |
| Complexity: | Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds. |

Environmental Interest/Information System:
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).
The National Pollutant Discharge Elimination System (NPDES) module of the Integrated Compliance Information System (ICIS). Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The National Pollutant Discharge Elimination System (NPDES) module of the Integrated Compliance Information System (ICIS). Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The Integrated Compliance Information System (ICIS) provides a database that, when complete, will contain integrated enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and it at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.
The National Pollutant Discharge Elimination System (NPDES) module of the Integrated Compliance Information System (ICIS). Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System:
The National Pollutant Discharge Elimination System (NPDES) module of the Integrated Compliance Information System (ICIS). Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).

**THREE D DAIRY (Continued)** **S104156088**

| | |
|---|---|
| SIC Code: | 241 |
| SIC Code 2: | Not reported |
| Primary Waste Type: | Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category. |
| Primary Waste: | STORMS |
| Waste Type2: | N |
| Waste2: | Stormwater Runoff |
| Primary Waste Type: | Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category. |
| Secondary Waste: | Solid Wastes |
| Secondary Waste Type: | Nonhazardous Solid Wastes/Influent or Solid Wastes that contain nonhazardous putrescible and non putrescible solid, semisolid, and liquid wastes (E.G., garbage, trash, refuse, paper, demolition and construction wastes, manure, vegetable or animal solid and semisolid waste). |
| Design Flow: | 0 |
| Baseline Flow: | 0 |
| Reclamation: | No reclamation requirements associated with this facility. |
| POTW: | The facility is not a POTW. |
| Treat To Water: | Moderate Threat to Water Quality. A violation could have a major adverse impact on receiving biota, can cause aesthetic impairment to a significant human population, or render unusable a potential domestic or municipal water supply. Awsthetic impairment would include nuisance from a waste treatment facility. |
| Complexity: | Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds. |

|---|---|
| Site ID: | 569130 |
| Site Name: | Agromin - Ontario |
| Violation Date: | 08-19-2021 |
| Citation: | 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f) |
| Violation Description: | Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date. |
| Violation Notes: | Returned to compliance on 09/07/2021. OBSERVATION: Two 55 gallon drums |

**AGROMIN OC ONTARIO GREEN MATERIAL COMPOSTING OPERATION (Continued)** **S126142007**

of used oil lacked hazardous waste labeling. Labels were provided during the inspection. CORRECTIVE ACTION: Properly label all hazardous waste containers and submit photographs demonstrating the used oil drums been properly labeled.

Violation Division: San Bernardino County Fire Department
Violation Program: HW
Violation Source: CERS,

Site ID: 569130
Site Name: Agromin - Ontario
Violation Date: 08-19-2021
Citation: HSC 6.95 25508(a)(3) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(3)
Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes: Returned to compliance on 08/24/2021. OBSERVATION: The CERS inventory submitted on 1/21/2021 needs to be updated to include the 240 gallon tank of clear diesel. CORRECTIVE ACTION: Submit an updated hazardous materials inventory in CERS to include the 240 gallon clear diesel tank.
Violation Division: San Bernardino County Fire Department

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

## STANDARD ENVIRONMENTAL RECORDS

***Lists of Federal NPL (Superfund) sites***

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 12/19/2024
Date Data Arrived at EDR: 01/02/2025
Date Made Active in Reports: 01/21/2025
Number of Days to Update: 19

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/19/2024

Next Scheduled EDR Contact: 04/07/2025
Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991
Date Data Arrived at EDR: 02/02/1994

Data Release Frequency: No Update Planned

***Lists of Federal Delisted NPL sites***

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 12/19/2024

***Lists of Federal sites subject to CERCLA removals and CERCLA orders***

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/20/2024
Date Data Arrived at EDR: 12/18/2024

Next Scheduled EDR Contact: 04/07/2025
Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 12/19/2024

Next Scheduled EDR Contact: 04/21/2025
Data Release Frequency: Quarterly

***Lists of Federal CERCLA sites with NFRAP***

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 12/19/2024

***Lists of Federal RCRA TSD facilities***

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 09/16/2024
Date Data Arrived at EDR: 09/17/2024

***Lists of Federal RCRA generators***

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 09/16/2024
Date Data Arrived at EDR: 09/17/2024
Date Made Active in Reports: 12/06/2024
Number of Days to Update: 80

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 09/16/2024
Date Data Arrived at EDR: 09/17/2024
Date Made Active in Reports: 12/06/2024
Number of Days to Update: 80

Next Scheduled EDR Contact: 03/31/2025
Data Release Frequency: Quarterly

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 09/16/2024
Date Data Arrived at EDR: 09/17/2024

Last EDR Contact: 02/18/2025
Next Scheduled EDR Contact: 12/02/2024
Data Release Frequency: Varies

US INST CONTROLS: Institutional Controls Sites List

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 11/04/2024

***Lists of state- and tribal hazardous waste facilities***

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Date of Government Version: 10/21/2024

**ADDITIONAL ENVIRONMENTAL RECORDS**

***Local Brownfield lists***

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 05/20/2024

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006
Date Data Arrived at EDR: 03/01/2007

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines
An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS PROJECT: NORTHEASTERN UNIVERSITY PFAS PROJECT

The PFAS Contamination Site Tracker records qualitative and quantitative data from each site in a chart, specifically examining discovery, contamination levels, government response, litigation, health impacts, media coverage, and community characteristics. All data presented in the chart were extracted from government websites, such as state health departments or the Environmental Protection Agency, and news articles.

PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

UST FINDER: UST Finder Database

EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

CHROME PLATING: Chrome Plating Facilities Listing

This listing represents chrome plating facilities the California State Water Resources Control Board staff identified as possibly being a source of Per- and polyfluoroalkyl substance (PFAS) contamination. Sites and locations were identified by staff with the Division of Water Quality in the California State Water Board. Data was collected from the CA Air Resources Board 2013 and 2018 - Cr VI emission survey, CA Emission Inventory, CA HAZ Waste discharge database and by reviewing storm water permits. Former chrome plating sites are also included that are open site investigation or remediation cases with the Regional Water Quality Control Boards and the Department of Toxic Substances Control.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

**EDR HIGH RISK HISTORICAL RECORDS**

***EDR Exclusive Records***

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

**OTHER DATABASE(S)**

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health

EDR’s GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

**GROUNDWATER FLOW DIRECTION INFORMATION**

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

**TOPOGRAPHIC INFORMATION**

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

**TARGET PROPERTY TOPOGRAPHY**

General Topographic Gradient: General South

**SURROUNDING TOPOGRAPHY: ELEVATION PROFILES**

**Target Property Elevation: 691 ft.**

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

**HYDROLOGIC INFORMATION**

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

**FEMA FLOOD ZONE**

| Flood Plain Panel at Target Property | FEMA Source Type |
|---|---|
| 06071C9335H | FEMA FIRM Flood data |

| Additional Panels in search area: | FEMA Source Type |
|---|---|
| 06037C1750F | FEMA FIRM Flood data |
| 06071C8620H | FEMA FIRM Flood data |
| 06071C8638H | FEMA FIRM Flood data |
| 06071C9375H | FEMA FIRM Flood data |

**NATIONAL WETLAND INVENTORY**

| NWI Quad at Target Property | NWI Electronic Data Coverage |
|---|---|
| PRADO DAM | YES - refer to the Overview Map and Detail Map |

**HYDROGEOLOGIC INFORMATION**

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

***Site-Specific Hydrogeological Data*:***

| | |
|---|---|
| Search Radius: | 1.25 miles |
| Status: | Not found |

**AQUIFLOW®**

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

| MAP ID | LOCATION FROM TP | GENERAL DIRECTION GROUNDWATER FLOW |

| Not Reported | | |

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

**GROUNDWATER FLOW VELOCITY INFORMATION**

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

**GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY**

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

**DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY**

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

---

**Soil Map ID: 1**

Soil Component Name: TUJUNGA

Soil Surface Texture: gravelly loamy sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

| Soil Layer Information | | | | | | | |
|---|---|---|---|---|---|---|---|
| | Boundary | | | Classification | | Saturated hydraulic conductivity micro m/sec | Soil Reaction (pH) |
| Layer | Upper | Lower | Soil Texture Class | AASHTO Group | Unified Soil | | |
| 1 | 0 inches | 18 inches | gravelly loamy sand | Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand. | COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand. | Max: 141<br>Min: 42 | Max: 7.8<br>Min: 6.1 |
| 2 | 18 inches | 59 inches | loamy sand | Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand. | COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand. | Max: 141<br>Min: 42 | Max: 7.8<br>Min: 6.1 |

**Soil Map ID: 2**

Soil Component Name: HILMAR

Soil Surface Texture: loamy fine sand

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Somewhat poorly drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

| Soil Layer Information | | | | | | | |
|---|---|---|---|---|---|---|---|
| | Boundary | | | Classification | | Saturated hydraulic conductivity micro m/sec | Soil Reaction (pH) |
| Layer | Upper | Lower | Soil Texture Class | AASHTO Group | Unified Soil | | |
| 1 | 0 inches | 22 inches | loamy fine sand | Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand. | FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay. FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt. | Max: 1.4 Min: 0.42 | Max: 8.4 Min: 7.9 |
| 2 | 22 inches | 59 inches | stratified loamy sand to loam | Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand. | FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay. FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt. | Max: 1.4 Min: 0.42 | Max: 8.4 Min: 7.9 |

**LOCAL / REGIONAL WATER AGENCY RECORDS**

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

## TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

## HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

## HYDROGEOLOGIC INFORMATION

AQUIFLOW[R] Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

## GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

# PHYSICAL SETTING SOURCE RECORDS SEARCHED

## LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

## OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program
State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

Geothermal Wells Listing
Department of Conservation
Telephone: 916-445-9686
Geothermal well means a well constructed to extract or return water to the ground after it has been used for heating or cooling purposes. Geothermal wells in California (except for wells on federal leases which are administered by the Bureau of Land Management) are permitted, drilled, operated, and permanently sealed and closed (plugged and abandoned) under requirements and procedures administered by the Geothermal Section of the Department of Conservations Geologic Energy Management Division (CalGEM, formerly DOGGR).

California Oil and Gas Well Locations
Source: Dept of Conservation, Geologic Energy Management Division
Telephone: 916-323-1779
Oil and Gas well locations in the state.

# PHYSICAL SETTING SOURCE RECORDS SEARCHED

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

State Database: CA Radon
Source: Department of Public Health
Telephone: 916-210-8558
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

California Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines, prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

## Mauricio H. Escobar, PG

### Vice President | Principal Geologist

**CONTACT INFORMATION**

Main: (310) 879-4900
Direct: (310) 879-4920
Email: mescobar@rouxinc.com
Website: www.rouxinc.com

5150 East Pacific Coast Highway
Suite 450
Long Beach, CA 90804

**EDUCATION**

Bachelor of Arts, Earth Science, 1995, University of California, Berkeley

OSHA 40-Hour Hazardous Waste Operations and Emergency Response (HAZWOPER) Certified

Research Assistant to UC Berkeley Ph.D. Candidate Dawnika L. Blatter and Professor Ian S. E. Carmichael in Study of Continental Crustal Deformation from Subduction of the Cocos Plate in Western Mexico and Study of Upper Mantle Petrology in Central Mexico, January to April 1996

**PROFESSIONAL LICENSES**

Professional Geologist, State of California, No. 07506

**EXPERIENCE SUMMARY**

21 years of consulting experience: Principal Geologist with Roux Associates (2011 to Present); Senior Manager, Manager, and Senior Associate with ENVIRON International Corporation (2004 to 2011); Project Geologist with URS Corporation (2001 to 2004); Geologist with Hart Crowser (1998 to 2001).

**TECHNICAL SPECIALTIES**

Professional Geologist with over twenty years of experience designing, managing, and implementing environmental soil and groundwater investigations and remediation strategies for public and private clients. Experience as in-house consultant assisting with management of a $25MM yearly remediation portfolio for a Fortune 100 Company. Practice developing and implementing high-level strategies that consider legal and regulatory issues, communications and government relations, as well as technical challenges and costs. Significant assignments representing clients during Working Group meetings for Superfund sites and participation in technical committee meetings. Expertise in design and field implementation of in-situ chemical oxidation (ISCO) in hard rock and porous media-flow aquifers.

Substantial experience evaluating and remediating industrial, commercial and residential sites impacted with numerous contaminants in multiple media, including crude oil, fuels, volatile organic compounds, chromium VI, 1,4-dioxane, and PCBs. Extensive experience managing implementation of remediation programs that utilize and consider multiple technologies including soil vapor extraction, dual phase extraction, traditional pump and treat, in-well stripping, air sparging, chemical oxidation and reduction, thermal treatment, and natural attenuation. Experience managing large-scale remedial excavations involving the use of heavy earth moving equipment. Significant field experience using numerous drilling, soil sampling, groundwater sampling, and soil vapor sampling techniques.

**CONTINUING EDUCATION**

- Compounds of Emerging Concern in Groundwater, California Groundwater Resources Association, Concord, California, February 2012
- The Remediation Course, Princeton Groundwater, Las Vegas, Nevada, April 2010
- Vapor Intrusion Pathway: A Practical Guideline, Interstate Technology and Regulatory Council (ITRC) in conjunction with the California Department of Toxic Substances (DTSC) and California Water Boards, Long Beach, California, June 2009
- The Groundwater Pollution and Hydrology Course, Princeton Groundwater, Orlando, Florida, February 2007
- Hydrogeologic Analysis of Fractured Bedrock Systems, Midwest GeoSciences Group, University of Nevada Las Vegas and Nevada Test Site at Yucca Mountain, March 2006

**REPRESENTATIVE PROJECTS**

- **PRP Representation of Fortune 100 Company, Omega Chemical Superfund Site, Whittier, California.** Provide ongoing technical consulting to a Fortune 100 Company and major PRP at the Omega Chemical Superfund Site in Whittier, California. Active participant of the Omega PRP Group (OPOG) Technical Committee. Attend all pertinent technical meetings and provide Client with technical and strategic input that protects their best interests. Maintain constant interaction with the legal and finance teams as necessary to ensure the technical and legal strategies are in agreement and that adequate funding is reserved well in advance of regulatory commitments and OPOG cash calls. Pertinent technical issues include soil gas and vapor intrusion, and a regional groundwater plume. Regulatory oversight is provided by USEPA Region IX.

- **PRP Representation of Fortune 100 Company, BKK Corporation Class I Landfill Organized Group, West Covina, California.** Provide ongoing technical consulting to a Fortune 100 Company at the former BKK Corporation Class I Landfill site in West Covina, California. Participant in the BKK Technical Committee and attendant of pertinent technical meetings. Maintain constant communication with the Client's legal and finance teams and responsible for informing Client on the direction the Organized Group is headed. Responsible for identifying financial commitments made as part of technical decisions. Trusted with voicing opinions, concerns, and/or offering direction to the Group (if and when necessary), to ensure the Organized Group's direction is consistent with the Client's strategy. Pertinent technical issues include upgrades to the landfill infrastructure and groundwater remedial investigations in and around the landfill prism. Regulatory oversight is provided by the Department of Toxic Substances Control.
- **Portfolio Project Control - Fortune 100 Company, Torrance, California.** Three years of experience working as a full-time in-house consultant for a Fortune 100 Company assisting with management of all aspects of a complex multi-site portfolio. General role included communication with alliance partners, vendors, corporate finance, attorneys, public relations/communications, and procurement to track and facilitate progress of 9 major projects ($400,000 to $1 MM/year) and 3 mega projects ($3MM to $10MM+/year) that were unique in nature and complexity. Portfolio included former chemical sites, landfills, aerospace facilities, and other heavy use industrial facilities that were undergoing State and RCRA closure, as well as sites under CERCLA Superfund actions with PRP commitments. Charged with helping to develop, evaluate, and refine remedial strategies and lifecycle costs for sites that utilized various cleanup technologies such as application of oxidants and reducing agents, thermal oxidation, groundwater pump and treat, dual-phase and 2-PHASE™ extraction, soil vapor extraction, air sparging, and in-well air stripping. Major role included verifying adequate funding and maintaining documentation consistent with Sarbanes Oxley.
- **Strategy Expert Consulting - Fortune 100 Company, Los Angeles, California.** Ongoing third-party technical and strategic support to a Fortune 100 company for a major project involving former bulk storage and distribution facilities converted to open public space and residential uses. Site is undergoing remedial investigations and remedial alternatives evaluations under heavy regulatory and public scrutiny. Charged with providing opinions and recommendations as to the direction the current consultant and the regulatory agencies want to take the project and evaluating the conceptual site model and long term technical strategy. Active participant on technical team calls and ongoing direct communications with internal legal team.
- **Shipyard Decommissioning - Subsurface Assessment, Remedial Investigation, Demolition and Closure, Campbell Shipyard - Marco, Port of San Diego, California.** Lead geologist in the preparation of a comprehensive subsurface study of the former Campbell Shipyard property at the Port of San Diego, California. Over 200 borings were necessary to delineate the extent of impacted soils. Relevant environmental issues included a former coal works gasification plant immediately adjacent to the Site, a 2 to 4-foot thick lens of polynuclear aromatic hydrocarbon (PAH) laden sediment present throughout the Site below the water table, a former on-site diesel and kerosene tank farm, and numerous leaking fuel USTs. Responsibilities also included management of shipyard abandonment activities, such as abatement of asbestos and lead-based paint containing materials, demolition of on-site structures, crushing of asphalt and concrete into Class II base, and a comprehensive geophysical survey to locate all on-site utilities and buried structures. The work was performed under the regulatory oversight of the San Diego Regional Water Quality Control Board and the San Diego Unified Port District. Total cost of the work was approximately $1.3MM, implemented over a 15-month period.
- **Neutral Third-Party Oversight of Remediation Work, ITT Corporation and Home Depot, Glendale, California.** Provided third party oversight for a site undergoing major remediation of VOCs and chromium VI in soils and groundwater. The site was a former electronics manufacturing facility redeveloped as a major box retailer in Glendale, California. Services were provided on behalf of the former facility owners/operators and the current property owners, both of whom had differing interests and views on the remedial work being performed. Viewed all fieldwork and construction of remediation systems and attended quarterly meetings with consultants, attorneys, and clients to gauge progress, discuss ongoing work, and evaluate projected schedules for completion of remediation. Technical challenges to remediation included dewatering of 20-foot thick perched zone impacted with VOC contamination, despite a leaking slurry wall originally designed to prevent onsite migration from upgradient sources.
- **ISCO Demonstration Plan Using Permanganate, Wyle Laboratories, Riverside County, California.** Designed, managed, and implemented an ISCO Demonstration Plan using sodium permanganate injection at a former industrial manufacturing facility in Southern California. Main goals of the application were to demonstrate effective oxidation of trichloroethene (TCE) in alluvium and fractured granitic bedrock, evaluate potential mobilization of naturally occurring reduced metals, and evaluate the potential application of ISCO

at other areas of the Site, including off-site beneath residential homes. Twelve thousand gallons of 10% permanganate solution were delivered to the subsurface through 47 multi-depth permanent injection probes over a 22-day field event. TCE concentrations were reduced from a maximum of 30,000 microgram per liter (µg/L) to non-detect at the source area. Significantly, elevated hexavalent chromium [Cr(VI)] concentrations were observed in the area of injection and immediately downgradient. Following field observations, a Bench Scale Assessment (BSA) was conducted to evaluate potential significant sources of Cr(VI), evaluate the capacity of the aquifer to naturally attenuate Cr(VI), and provide data sufficient to estimate distance and time Cr(VI) would revert to its trivalent form. BSA and field data showed that principal source of Cr(VI) was from the raw product, with secondary contribution from chromium in the native rock, and deterioration of stainless steel well screens. Natural attenuation of Cr(VI) to background concentrations was estimated at 2 to 3 years post injection. Monitoring of the Demonstration Plan area for the 2+ years has proved those predictions accurate and a Remedial Action Plan (RAP) recommending full-scale on- and off-site treatment of TCE with permanganate was submitted to the California Department of Toxic Substances Control (DTSC). Total cost of the work was more than $1.0 million.

- **Remedial Excavation and ISCO Used to Facilitate Property Transfer, Sanmina, Inc., Irvine, California.** Managed and implemented an aggressive remedial strategy for a former electronics manufacturing facility in Southern California. The site had TCE concentrations in groundwater suggestive of dense non-aqueous phase liquid (DNAPL) and required expedited soil and groundwater remediation, in lieu of ongoing 2-PHASE™ and dual-phase extraction (DPE) efforts, to accommodate its divesture and redevelopment. Groundwater was generally encountered at 15 feet below ground surface (bgs) and contained TCE concentrations in the source area as high as 77,000 µg/L. The project was successfully completed by installing a 90-well dewatering system, excavating 13,000 cubic yards (cy) of soils, and removing 3,200 cy of TCE impacted soil along the axis of a residual TCE DNAPL mass; total depth of the excavation was 32 feet bgs. ISCO using sodium and potassium permanganate was used to remediate residual TCE-impacted soil and groundwater outside the area of excavation. Following implementation of the aggressive remedial strategy, TCE concentrations in groundwater were reduced by one to three orders of magnitude, suggesting the DNAPL had been removed and/or destroyed. The Orange County Health Care Agency (OCHCA) provided soils closure and the Santa Ana Regional Water Quality Control Board provided groundwater closure for the site 16 months after completion of remediation. The site was sold and redeveloped. Total cost of excavation and ISCO application was approximately $1.4 million.

- **Assessment, Remediation and Closure of Former Industrial Facility for Residential Re-development, Former Boeing Plant, Los Angeles, California.** Managed the assessment, remediation, and closure of a former asphalt batch plant and defense contractor facility on behalf of a residential developer. The work was performed simultaneously with planning and entitlement of the property, under the oversight of the County of Los Angeles Fire Department, Hazardous Materials Division. Unique challenges included the discovery of 15+ feet of buried asphalt debris and soils with elevated arsenic and chromium concentrations requiring off-site disposal. Developed site-specific cleanup thresholds for VOCs and heavy metals by preparing a limited human health risk assessment and incorporating Risk Based Screening Levels (RBSLs) developed by the San Francisco Regional Water Quality Control Board. The entire project was implemented in 15 months from initial assessment to site closure at a cost of $250,000.

- **Hydrocarbon Release Characterization and Remedial Investigation, Kinder Morgan Energy Partners, La Habra, California.** Designed, managed, and implemented a subsurface investigation with the primary focus of characterizing lateral and vertical distribution of hydrocarbon impacts to the groundwater and unsaturated zone. The release was related to a pipeline booster station flange rupture dating to the early 1980s. Fractured siltstone bedrock presented unique subsurface conditions and as a result, special consideration was given to drilling techniques and boring/well installations. The project involved 12 months of fieldwork for the installation of soil vapor probes, backhoe trenches, soil borings, and monitoring wells. Discovery of up to 15-feet of light non-aqueous phase liquids (LNAPL) resulted in amendments to the original work scope to provide for LNAPL removal and assessment of pneumatic and hydraulic properties of the soil/rock. A high vacuum DPE test was performed at selected wells to evaluate the feasibility of this technology for the removal of hydrocarbons. All work was conducted under the oversight of the Los Angeles Regional Water Quality Control Board in consideration of future residential development. Work was performed over a 2-year period at an approximate cost of $1.0 million.

- **Resource Conservation and Recovery Act (RCRA) Facility Investigation Work Plan for Bunker C Tank Farm Redevelopment, Long Beach, California.** Managed the preparation of a RCRA Facility Investigation Work Plan for a former power plant tank farm facility in Long Beach, California. The site was being planned for redevelopment with a retail box store and restaurant uses. The RFI Work Plan was prepared as part of a Corrective Action Consent Agreement between the

Client and the DTSC. The purpose of the RFI was to determine the nature and extent of releases at the site and to gather all the necessary data to support completion and implementation of a Corrective Measures Study (CMS).

- **Remedial Investigation of Former Transformer Washing Facility, General Electric and City of Los Angeles Redevelopment Agency, Los Angeles, California.** Prepared, managed, and implemented a Remedial Investigation Work Plan for a former transformer washing facility under the oversight of the DTSC. The field investigation was intended to evaluate and delineate the nature and extent of residual VOC, PCB, and dioxin impacts at the Site, to support decisions regarding the need for, and extent of, future removal or remedial actions. The field program showed that shallow soils at the site were significantly impacted with PCBs and deep soils and groundwater were significantly impacted with TCE and tetrachloroethene (PCE). ISCO Demonstration Plan Using Permanganate, Riverside County, California.
- **Remedial Investigation and Remedial Action Plan for Former Small Arms Firing Range, City of Huntington Beach Community Development Office, Huntington Beach, California.** Managed the preparation of a Remedial Investigation and RAP for the City of Huntington Beach in their effort to assess the extent of contamination and remedial options for a former public and police firing range. The project was performed under the oversight of the OCHCA. Relevant issues included soil berms and coal-tar treated wood posts impregnated with lead-shot, shallow landfill conditions (<5-feet), lack of a landfill cap, heavy hydrocarbon contamination, and landfill gas issues. The RAP included remedial options, costing, and an outline for implementation. Special consideration was given to the fact that the City intended to use the property for future Central Park recreational uses. The project was awarded on technical merit following a public bidding process that required the submittal of a formal proposal and interviews with City officials. Total cost of the project was $150,000, implemented over a 2-year period.

## EXECUTIVE SUMMARY

This report has been prepared to support the conceptual design for the Ontario Ranch project, located in the City of Ontario. The project is located within the City of Ontario's Master Drainage Plan (MDP). The project proposes to construct four segments of the MDP storm drain facilities. These facilities are located in Walker Avenue, Grove Avenue, Bon View Avenue, and Campus Avenue between Eucalyptus Avenue and Edison Avenue. The purpose of this report is to provide documentation that the conceptual design for the project is in compliance with the Master Drainage Plan.

The project site is broken up into four main watersheds, each one tributary to a proposed mainline storm drain system. Each watershed area is documented in a separate section of this report. The following table documents the report sections and storm drain systems:

| Report Section | Storm Drain Facility Name | Street Location | City of Ontario Master Drainage Plan Facility Name |
|---|---|---|---|
| Section C | Walker Storm Drian System | Walker Avenue | WLKR-XII-1 |
| Section D | Grove Storm Drain System | Grove Avenue | GROV-XIII-1 |
| Section E | Bon View Storm Drain System | Bon View Avenue | BNVW-XIV-1 |
| Section F | Campus Storm Drain System | Campus Avenue | MERL-XIV-2 |

In order to demonstrate compliance, this report utilizes four compliance points for comparison, located at the downstream end of each proposed mainline storm drain system. The design flow rates from the Master Drainage Plan were compared to the proposed flow rates calculated within this report.

The findings of the analysis are that the Grove Storm Drain and Bon View Storm Drain have proposed flow rates lower than the MDP design flow rates. The Walker Storm Drain and Campus Storm Drain have flow rates less than 5% higher than the MDP design flow rates. This increase can be considered negligible and is within the acceptable hydrology error tolerance. Therefore, the conclusion is that project will be compliant with the Master Drainage Plan.

# SECTION A

# INTRODUCTION

## A.1 PURPOSE AND SCOPE

The purpose of this study is to perform a preliminary hydrology assessment of the conceptual design for the Ontario Ranch development. This report demonstrates that the project can be developed to mitigate increased runoff impacts and maintain consistency with the City of Ontario Master Drainage Plan (MDP) to the maximum extent practicable

The scope of the study includes the following:

1. Determine the design MDP flow rates for each mainline storm drain system.
2. Assess compliance requirements for each discharge point.
3. Analyze four distinct tributary areas based on ultimate discharge points.
4. Calculate required storage volumes and mitigated outflow rates.
5. Demonstrate regulatory compliance for each tributary area.
6. Preparation of a hydrology and hydraulics report, which consists of hydrological and analytical results and exhibits.

## A.2 PROJECT SITE AND DRAINAGE AREA OVERVIEW

Ontario Ranch is a proposed development in the City of Ontario, County of San Bernardino. The project site is bounded by Campus Avenue to the west, Walker Avenue to the east, Edison Avenue to the north, and Eucalyptus Avenue to the south. A Vicinity Map has been included as Figure 1. The overall project area is approximately 400 acres.

The project site is being developed with a residential development in the northern portion, commercial/industrial developments in the southern portion, and a park along the center which separates the residential and commercial/industrial areas. The following notes are provided about the land uses:

1. The MDP models Mixed Use land uses as Commercial, so a singular hatch representation has been used for both on the figures.
2. The residential areas are modeled as 11+ du/ac in the MDP, as apartments in the Fuscoe Report. The hydrology manuals calls this land use type as 10+ du/ac. All three labels have the same impervious fraction and runoff index values in the hydrology manual.

The City of Ontario Master Drainage Plan Land Use Map has been included in Excerpt D. A figure showing the MDP land uses and the project boundary has been included as Figure 2. A figure showing the proposed land use for Ontario Ranch has been included as Figure 3.

The existing condition within the project site boundary consists of dairy farms and undeveloped areas. The existing topography is relatively flat with a north-to-south sheet flow drainage pattern.

The project site is located within three City of Ontario Master Drainage Plan (MDP) areas: Area XII, Area XIII, and Area XIV. The MDP areas and project boundary are shown on Figure 4. The MDP area boundaries are shown on the MDP Hydrology Map and the MDP Planned Facilities Map, included as Excerpt B and Excerpt C.

The project proposes to construct portions of four MDP facilities: WLKR-XII-1 located in Walker Avenue, GROV-XIII-1 located in Grove Avenue, BNVW-XIV-1 located in Bon View Avenue, and MERL-XIV-2 located in Campus Avenue. This report is organized with four sections, one for each of the proposed MDP systems. The location of the proposed MDP facilities is shown on Figure 7. The MDP Planned Facilities Map is included as Excerpt C.

The City of Ontario Master Drainage Plan was completed by Hunsaker and Associates with updates in 2017 (Reference 2). The MDP was used to establish compliance information for the storm drain systems in Campus, Bon View, and Grove. Excerpts from the MDP are included in Excerpt B through Excerpt E.

In 2021, JLC Engineering prepared a report for the Merrill Commerce Center (MCC) which remodeled the MDP and assessed the Merrill Commerce Center Development (Reference 3). This report was approved in 2022. The MCC development is located to the south and east of the Ontario Ranch project site. The MCC report remodeled the MDP facilities, including the segment of the Walker storm drain located downstream of the Ontario Ranch project site. The MCC analysis of the MDP included revisions to the watershed boundaries. These revisions are shown on Figure 5. The MCC analysis of the MDP was used to establish compliance information for the storm drain system in Walker. Excerpts from the Merrill Commerce Center have been included in Expert F.

This report assumes that all downstream MDP mainline systems will be in place at the time Ontario Ranch begins constructions. The downstream systems are shown on Figure 7. The following table documents the downstream systems:

*Table A.1 Downstream Systems*

| Storm Drain System Name | Downstream System Name | Approval/Construction Status | Plans Location |
|---|---|---|---|
| Walker Storm Drian System | Line C per PM-20273 | Approved Constructed or In Construction | Excerpt H |
| Grove Storm Drain System | Line C per PM-20537 | Approved Constructed or In Construction | Excerpt I |
| Bon View Storm Drain System | Line D per PM-20161 | In Review or Approved | Excerpt J |
| Campus Storm Drain System | Line E per PM-20517 | In Review or Approved | Excerpt K |

The downstream systems for the Walker and Grove storm drains are approved and either constructed on in construction. The downstream systems for Bon View and Campus are currently either in review or approved, and it is expected that they will be in place at the time when Ontario Ranch is constructed.

## A.3 REGULATORY FRAMEWORK AND COMPLIANCE STRATEGY

In order to demonstrate compliance with the Master Drainage Plan, the proposed flow rate for each mainline storm drain system will be compared to the MDP design flow rate. The downstream end of each mainline system, at Eucalyptus Avenue, is being used as the compliance point for comparison. The compliance points are shown on Figure 8 and documented in the table below.

*Table A.1: Compliance Point Documentation*

| Storm Drain System Name | Street Location | City of Ontario Master Drainage Plan Facility Name | Compliance Source | Design Flow Rate ($ft^3/s$) |
|---|---|---|---|---|
| Walker Storm Drian System | Walker Avenue | WLKR-XII-1 | MDP-MCC* | 928 |
| Grove Storm Drain System | Grove Avenue | GROV-XIII-1 | MDP | 1050 |
| Bon View Storm Drain System | Bon View Avenue | BNVW-XIV-1 | MDP | 746 |
| Campus Storm Drain System | Campus Avenue | MERL-XIV-2 | MDP | 124 |

*MDP-MCC=Merrill Commerce Center analysis of the Master Drainage Plan

The flow rates noted in the table above were used to as the design flow rates for comparison with the proposed project outflow rates. This was done in order to demonstrate that the project is in compliance with the City of Ontario Master Drainage Plan.

The following method was used to establish mitigation criteria:

1. Establish the design flow rate per the Master Drainage Plan
2. Create a rational method model for the mainline system which includes all unmitigated tributary areas.
3. Create a rational method model and unit hydrograph model for the onsite area which will be mitigated. Perform a storage analysis to determine the mitigated flowrate leaving this area.
4. Calculate the sum the flow rates from Step 2 and Step 3 to calculate a proposed flow rate at the downstream end of proposed mainline system. This is a conservative

approach since it does not take into consideration any potential differences in timing between the two peak flow rates.

5. Evaluate how the proposed downstream flow rate compares to the design flow rate from the MDP.

# SECTION B

# METHODOLOGY

## B.1 HYDROLOGIC ANALYSIS METHOD

The analysis prepared for this report is broken into four separate analyses and sections based on the four mainline systems being assessed. A rational method analysis was prepared for each of the mainline systems which confluences the various areas tributary to the mainline system. The table below documents the different types of areas tributary to the mainline, listed approximately from north to south.

*Table B.1 Mainline System Tributary Areas*

| Area Description | Onsite or Offsite | Location in Mainline | Source for information |
|---|---|---|---|
| Area upstream of the project site | Offsite | Upstream end of the mainline, at Edison Avenue | City of Ontario MDP |
| Residential Area and Northern Portion of Park Area | Onsite | Northern portion | Fuscoe Engineering |
| Southern Portion of Park Area | Onsite | Middle portion | This report |
| Commercial Area, unmitigated | Onsite | Southern portion | This report |
| Commercial Area, mitigated | Onsite | Southern portion | This report |
| Street areas adjacent to project site | Offsite | Southern portion | This report |
| East/West MDP area (1) | Offsite | Southern portion | City of Ontario MDP |

(1) East/West MDP area is only applicable to the Walker and Campus storm drain systems.

The following method was used to create a rational method for each mainline system:

1. Define a flow rate and time of concentration at the upstream end of the mainline based on the City of Ontario Master Drainage Plan
2. Use a mix of pipe flow, confluences, and initial areas to add the following into the model throughout the system:
    a. Results from the rational method model for the onsite residential area. This will be a user defined entry.
    b. Create an initial area for the onsite park area
    c. Create an initial area for the unmitigated onsite commercial area.
    d. Create an initial area for the street areas adjacent to the project site, if not included in another area.

e. Values from the Master Drainage Plan for the area to the east/west of the mainline. This applies only to the Walker storm drain and Campus storm drain. This will be a user defined entry.

A rational method analysis and unit hydrograph analysis were prepared separately for the onsite commercial area which is being mitigated. A storage analysis was performed on these areas to determine the proposed mitigated outflow. The following process was used for the storage analysis:

1. Storage volumes for each basin were provided as part of the conceptual plan for the project site.
2. The unit hydrograph was assessed to determine the location and magnitude of the peak flow.
3. Two time steps were determined, one before the peak flow rate and one after the peak flow rate. The cumulative volume and flow rate at each time step were noted.
    a. The difference in cumulative volume between the two time steps was checked to ensure that the volume was less than or equal to the conceptual volumes for the basins.
    b. The higher of the two flow rates was used as the mitigated outflow rate.

A graphical representation of the above process has been included as Figure 10. A detailed basin routing analysis will be performed during final engineering when comprehensive data is available for the proposed design. This storage calculation does not take into account storage requirements needed for the storage and treatment of the water quality volume. The water quality treatment will be assessed by a future Water Quality Management Plan (WQMP). The storage analysis is based on a unit hydrograph calculation; therefore it is not possible to confluence the mitigated outflows into the mainline rational method analysis.

The onsite residential areas were assessed by Fuscoe Engineering. Excerpts from the Fuscoe Engineering analysis are included in Excerpt G. JLC recreated the models for the areas with the following notes:

1. All model data, including elevations, areas, flow lengths, land use, and soils were not changed.
2. Fuscoe Engineering models contained multiple streams that were not confluenced. JLC separated each stream into its own model.
3. The rainfall values were changed to match the rainfall values per the City of Ontario Master Drainage Plan. The Fuscoe Engineering models used rainfall from NOAA Atlas 14. This change was made to be in compliance with the Master Drainage Plan.

The onsite park and commercial areas were assessed using simple models consisting of initial areas, pipe flows, and add areas. The project does not have conceptual grading at this time or an onsite storm drain design, so the following assumptions were made:

1. The longest flow path was assumed.
2. Elevations were based on a slope of 1%. This is to ensure surfaces drain appropriately.
3. A single inlet was assumed for each area. The hydrology does not account for all potential inlets or storm drain laterals.

## B.2 HYDROLOGIC PARAMETERS

The San Bernardino County Hydrology Manual (Reference 1) and the MDP Hydrology (Reference 2) were used to develop the hydrological parameters for the hydrology analyses. The rational method and unit hydrograph method were used for the analyses and the computations were performed using the computer program developed by Civil Cadd/Civil Design.

Rainfall depths were obtained from the City of Ontario Master Drainage Plan analysis. The rainfall depths used in the hydrology calculations are as follows:

*Table B.2 Rainfall Information*

| Storm Event & Duration | Rainfall (inches) |
|---|---|
| 10-Year, 1-Hour | 0.8 |
| 100-Year, 1-Hour | 1.2 |
| Slope of Intensity | 0.6 |

The existing soil classification for the project site consists of Hydraulic Soil Groups “A”, “B”, and “C”, as shown in Excerpt A. Excerpt A is a Soils Map obtained from the National Resource Conservation Service Websoil Survey.

The hydrology calculations were performed for the 100-year storm event. And Antecedent Moisture Condition of II was used for the calculations to remain consistent with the City of Ontario Master Drainage Plan analysis.

A land cover type of “Commercial” was used for the commercial and street areas. A land cover type of “Park” was used for the proposed park area. The following table documents the land uses parameters:

*Table B.3 Land Use Information*

| Land Use | Runoff Index (for AMC II) | | | | Impervious Ratio | Pervious Ratio |
|---|---|---|---|---|---|---|
| | Soil A | Soil B | Soil C | Soil D | | |
| Commercial | 32 | 56 | 69 | 75 | 0.9 | 0.1 |
| Park | 32 | 56 | 69 | 75 | 0.15 | 0.85 |

# SECTION C

# WALKER AVENUE STORM DRAIN

## C.1 DRAINAGE AREA CHARACTERISTICS

The project proposes to construct the portion of the MDP system WLKR-XII-1 located on Walker Avenue between Eucalyptus Avenue and Edison Avenue. Within this report, the system is referred to as the Walker Ave Storm Drain or Walker Storm Drain system.

The tributary area to the Walker storm drain consists of the areas to the east and west of Walker Avenue and is bounded by Edison Avenue to the north and Eucalyptus Avenue to the south.

The onsite areas tributary to the Walker storm drain differs from the Master Drainage Plan areas within the project site. All changes to watershed boundary areas are located within the project site area. The project proposes mitigation measures and documentation to demonstrate that the project is consistent with the MDP at the downstream compliance points. Figure 6 shows the revised watershed boundaries. The following table documents the difference

*Table C.1 Walker Storm Drain Tributary Area*

| Land Cover | Area Increase or Decrease (acres) |
|---|---|
| Residential/Park (Fuscoe Report) | Increase 19.9 (from Grove) |
| Commercial | Increase 1.6 (from Grove)<br>Decrease 4.6 (to Grove) |

Overall, there is an increase of 16.9 acres of area that's being redirected to the Walker storm drain. The approved Merrill Commerce Center analysis of the MDP included area changes within the MCC project site, as shown on Figure 5. However, during final engineering for the Grove storm drain, this boundary was revised and 21.2 acres was diverted from the Walker watershed to the Grove watershed. This change was allowable since the area is tributary to a proposed basin which provides increased runoff mitigation. The mainline system in Walker per MCC, which is downstream of the proposed Walker storm drain per this report, is designed based on a flow rate that assumes this 21.2 acres of area in tributary.

The Walker storm drain discharges into the approved MDP system located in Eucalyptus Avenue. The downstream system is shown on Figure 7. The downstream storm drain is constructed or in construction based on approved storm drain improvement plans. The downstream storm drain is referred to as Line C per PM-20273. The storm drain improvement plans for the downstream system are included as Excerpt H.

## C.2 REGULATORY AND COMPLIANCE REQUIREMENTS

The compliance requirements for the Walker storm drain are based on Merrill Commerce Center analysis of the Master Drainage Plan (MCC-MDP). The walker storm drain discharges into a mainline system that was assessed and constructed as part of the Merrill Commerce Center. Based on the MCC-MDP analysis, the design flow rate for the Walker Storm drain at the intersection of Walker and Eucalyptus is 928 $ft^3/s$.

In order to assess compliance with the Master Drainage Plan, a rational method analysis was performed for the areas tributary to the mainline which are not being mitigated. A separate rational method analysis and unit hydrograph analysis were prepared for the onsite area which is being mitigated. A storage assessment was performed to determine storage requirements and the proposed mitigated outflow value.

## C.3 HYDROLOGIC ANALYSIS

A rational method analysis was prepared for the mainline system and the areas tributary to the mainline which are not being mitigated. This analysis includes the offsite MDP area to the east of Walker Avenue. The offsite area matches the watershed sub-boundary per the Master Drainage Plan, so area, flow rate, and time of concentration information from the MDP was entered using a user entry command into the model. The analysis was performed for the 100-year storm event. The results of the analysis are as follows:

*Table C.2 Mainline Rational Method Results*

| Area | Peak Flow Rate ($ft^3/s$) | Time of Concentration (min) |
|---|---|---|
| Area D (excludes Area D2) | 940.8 | 31.7 |

*Results have been rounded to the nearest tenth

A rational method analysis was prepared for the onsite commercial area which will be mitigated before discharging into the mainline system. The analysis was performed for the 100-year storm event. The results of the analysis are as follows:

*Table C.3 Onsite Rational Method Results*

| Area | Peak Flow Rate ($ft^3/s$) | Time of Concentration (min) |
|---|---|---|
| Area D2 | 53.0 | 10.4 |

*Results have been rounded to the nearest tenth

A unit hydrograph analysis was prepared for the onsite commercial area which will be mitigated. The area, runoff index value, impervious area ratio, and time of concentration from the rational method analysis were used for the unit hydrograph calculations. The analysis was performed for the 100-year storm event. The results of the analysis are as follows:

*Table C.4 Onsite Unit Hydrograph Results*

| Area | Peak Flow Rate ($ft^3/s$) | Total Volume (ac-ft) |
|---|---|---|
| Area D2 | 48.6 | 7.8 |

*Results have been rounded to the nearest tenth

The hydrology map for the Walker Avenue storm drain is included as Exhibit A. The rerun Fuscoe engineering models, mainline rational method model, onsite commercial area rational method and unit hydrograph models are included in Appendix A.

## C.4 STORAGE AND COMPLIANCE ANALYSIS

The proposed basin has a storage capacity of approximately 2.5 ac-ft. Using this value, the unit hydrograph output data was assessed to determine how much runoff could be mitigated by the basin. Two time steps were picked, one on either side of the peak flow rate, which have a difference in volume approximately equal to the proposed basin volume. The following table documents the two time steps:

*Table C.5 Unit Hydrograph Values for Storage Analysis*

| Time (hour+min) | Volume (ac-ft) | Flow Rate ($ft^3/s$) | Peak Flow Rate ($ft^3/s$) | Volume Required (ac-ft) |
|---|---|---|---|---|
| **T1** | **V1** | **Q1** | 6.5 | 2.43 |
| 14+45 | 3.61 | 6.47 | | |
| **T2** | **V2** | **Q2** | | |
| 17+00 | 6.04 | 6.28 | | |

A more detailed basin analysis will be performed during final engineering. The above analysis does not take into account storage requirements for the water quality volume which will be addressed as part of a future WQMP.

In order to demonstrate compliance with the Master Drainage Plan, the proposed condition flow rate was compared to the MDP flow rate at the compliance point. The proposed downstream flow rate was calculated based on the sum of the mainline rational method analysis (excluding the onsite area to be mitigated) and the outflow from the mitigated onsite

area. This is a conservative approach as it does not account for potential timing differences between the peak flow rates. The proposed condition flow rate is 947.3 $ft^3/s$ (940.8+6.5).

The MDP design flow rate at the point of compliance is 928 $ft^3/s$ per the Merrill Commerce Center analysis of the Master Drainage Plan. The proposed condition flow rate of 947.3 $ft^3/s$ is 19.3 $ft^3/s$ higher than the design flow rate. This is approximately 2% of the design flow rate and can be considered negligible. Furthermore, this is within the acceptable range for hydrology error tolerances. The Regional Water Quality Board allows for 10% error on hydromodification criteria. The project site is mitigating the onsite area to the maximum extent practicable. During final engineering additional calculations will be performed to ensure no adverse impacts.

An exhibit was developed to document flow rates tributary to and along the mainline storm drain system. The Walker Avenue storm drain flow rate exhibit is included as Exhibit B. The proposed outflow values are shown on Figure 9.

## C.5 FINDINGS & RECOMMENDATIONS

The hydrology analysis evaluated the tributary area to the proposed Walker Avenue Storm Drain. The following findings and recommendations have been developed based on the findings of the analysis:

1. During development of the Merrill Commerce Center, the MCC project made modifications to the Master Drainage Plan hydrology. These revisions have been approved. Due to this, the MCC report was used for compliance comparison for the Walker storm drain.
2. The compliance point being used is located at the downstream end of the proposed Walker storm drain, at the intersection of Walker Avenue and Eucalyptus Avenue.
3. The Merrill Commerce Center analysis of the Master Drainage Plan found a flow rate of 928 $ft^3/s$ at the compliance point.
4. The proposed outflow rate from the project site is 947.3 $ft^3/s$ at the compliance point.
5. The project is mitigating outflow to the maximum extent practicable.
6. The proposed outflow is approximately 2% higher than the MDP design flow rate. This value can be considered negligible and within acceptable error tolerance.
7. During final engineering, additional calculations will be performed to ensure no adverse impacts from the increase in flow rate.

# SECTION D

# GROVE AVENUE STORM DRAIN

## D.1 DRAINAGE AREA CHARACTERISTICS

The project proposes to construct the portion of the MDP system GROV-XII-1 located on Grove Avenue between Eucalyptus Avenue and Edison Avenue. Within this report, the system is referred to as the Grove Ave Storm Drain or Grove Storm Drain system.

The tributary area to the grove storm drain consists of the areas to the east and west of Grove Avenue and is bounded by Edison Avenue to the north and Eucalyptus Avenue to the south.

The onsite areas tributary to the Grove storm drain differs from the Master Drainage Plan areas within the project site. All changes to watershed boundary areas are located within the project site area. The project proposes mitigation measures and documentation to demonstrate that the project is consistent with the MDP at the downstream compliance points. Figure 6 shows the revised watershed boundaries. The following table documents the difference

*Table D.1 Grove Storm Drain Tributary Area*

| Land Cover | Area Increase or Decrease (acres) |
|---|---|
| Residential and Park (Fuscoe Report) | Decrease 19.9 (to Walker) |
| Commercial | Decrease 1.6 (to Walker)<br>Increase 4.6 (from Walker)<br>Increase 4.8 (from Bon View) |

Overall this is a 12.1 acre decrease in the tributary area to the Grove Storm Drain.

The Grove storm drain discharges into the approved MDP system located in Grove Avenue. The downstream system is shown on Figure 7. The downstream storm drain is constructed or in construction based on approved storm drain improvement plans. The downstream storm drain is referred to as Line C per PM-20537. The storm drain improvement plans for the downstream system are included as Excerpt I.

## D.2 REGULATORY AND COMPLIANCE REQUIREMENTS

The compliance requirements for the Grove storm drain are based on the City of Ontario Master Drainage Plan. The Grove storm drain discharges into a mainline system that was assessed and constructed based on the MDP design. Based on the MDP analysis, the design flow rate for the Grove storm drain at the intersection of Grove and Eucalyptus is 1050 $ft^3/s$.

In order to assess compliance with the Master Drainage Plan, a rational method analysis was performed for the areas tributary to the mainline which are not being mitigated. A separate

rational method analysis and unit hydrograph analysis were prepared for the onsite area which is being mitigated. A storage assessment was performed to determine storage requirements and the proposed mitigated outflow value.

## D.3 HYDROLOGIC ANALYSIS

A rational method analysis was prepared for the mainline system and the areas tributary to the mainline which are not being mitigated. The analysis was performed for the 100-year storm event. The results of the analysis are as follows:

*Table D.2 Mainline Rational Method Results*

| Area | Peak Flow Rate ($ft^3/s$) | Time of Concentration (min) |
|---|---|---|
| Area E (excludes Area E3 and Area E4) | 1001.9 | 33.5 |

*Results have been rounded to the nearest tenth

A rational method analysis was prepared for the onsite commercial area which will be mitigated before discharging into the mainline system. The analysis was performed for the 100-year storm event. The results of the analysis are as follows:

*Table D.3 Onsite Rational Method Results*

| Area | Peak Flow Rate ($ft^3/s$) | Time of Concentration (min) |
|---|---|---|
| Area E3 | 67.5 | 10.3 |
| Area E4 | 77.0 | 10.6 |

*Results have been rounded to the nearest tenth

A unit hydrograph analysis was prepared for the onsite mitigated commercial area. The area, runoff index value, impervious area ratio, and time of concentration from the rational method analysis were used for the unit hydrograph calculations. The analysis was performed for the 100-year storm event. The results of the analysis are as follows:

*Table D.4 Onsite Unit Hydrograph Results*

| Area | Peak Flow Rate ($ft^3/s$) | Total Volume (ac-ft) |
|---|---|---|
| Area E3 | 63.6 | 10.0 |
| Area E4 | 69.7 | 11.2 |

*Results have been rounded to the nearest tenth

The hydrology map for the Grove Avenue storm drain is included as Exhibit C. The rerun Fuscoe engineering models, mainline rational method model, onsite commercial area rational method and unit hydrograph models are included in Appendix B.

## D.4 STORAGE AND COMPLIANCE ANALYSIS

The project proposes two basins, one on the eastern side of Grove Avenue and one on the western side of Grove Avenue. Both basins have a proposed storage capacity of approximately 2.5 ac-ft. Rational method Area E3 is tributary to the eastern basin. Rational method Area E4 is tributary to the western basin. Using the proposed volumes, the unit hydrograph output data was assessed to determine how much runoff could be mitigated by each basin. Two time steps were picked, one on either side of the peak flow rate, which have a difference in volume approximately equal to the proposed basin volume. The following tables documents the two time steps:

*Table D.5 Unit Hydrograph Values for Storage Analysis – Eastern Basin (Area E3)*

| Time (hour+min) | Volume (ac-ft) | Flow Rate ($ft^3/s$) | Peak Flow Rate ($ft^3/s$) | Volume Required (ac-ft) |
|---|---|---|---|---|
| **T1** | **V1** | **Q1** | 10.8 | 2.42 |
| 15+20 | 5.12 | 10.72 | | |
| **T2** | **V2** | **Q2** | | |
| 16+40 | 7.54 | 10.58 | | |

*Table D.6 Unit Hydrograph Values for Storage Analysis – Western Basin (Area E4)*

| Time (hour+min) | Volume (ac-ft) | Flow Rate ($ft^3/s$) | Peak Flow Rate ($ft^3/s$) | Volume Required (ac-ft) |
|---|---|---|---|---|
| **T1** | **V1** | **Q1** | 12.9 | 2.28 |
| 15+40 | 6.03 | 12.22 | | |
| **T2** | **V2** | **Q2** | | |
| 16+35 | 8.31 | 12.83 | | |

A more detailed basin analysis will be performed during final engineering. The above analysis does not take into account storage requirements for the water quality volume which will be addressed as part of a future WQMP.

In order to demonstrate compliance with the Master Drainage Plan, the proposed condition flow rate was compared to the MDP flow rate at the compliance point. The proposed downstream flow rate was calculated based on the sum of the mainline rational method

analysis (excluding the onsite area to be mitigated) and the outflow from the mitigated onsite areas. This is a conservative approach as it does not account for potential timing differences between the peak flow rates. The proposed condition flow rate is 1025.6 $ft^3/s$ (1001.9+10.8+12.9).

The design flow rate at the point of compliance is 1050 $ft^3/s$ per the City of Ontario Master Drainage Plan. The proposed condition flow rate is less than the design flow rate. Therefore, the project is in compliance with the Master Drainage Plan

An exhibit was developed to document flow rates tributary to and along the mainline storm drain system. The Grove Avenue storm drain flow rate exhibit is included as Exhibit D. The proposed outflow values are shown on Figure 9.

## D.5 FINDINGS & RECOMMENDATIONS

The hydrology analysis evaluated the tributary area to the proposed Grove Avenue Storm Drain. The following findings and recommendations have been developed based on the findings of the analysis:

1. The City of Ontario Master Drainage Plan was used to determine compliance information.
2. The compliance point being used is located at the downstream end of the proposed Grove storm drain, at the intersection of Grove Avenue and Eucalyptus Avenue.
3. The City of Ontario Master Drainage Plan defines a design flow rate of 1050 $ft^3/s$ at the compliance point.
4. The proposed outflow rate from the project site is 1025.6 $ft^3/s$ at the compliance point.
5. The proposed outflow is less than the design flow rate at the compliance point.
6. The project is in compliance with the Master Drainage Plan.

# SECTION E

# BON VIEW AVENUE STORM DRAIN

## E.1 DRAINAGE AREA CHARACTERISTICS

The project proposes to construct the portion of the MDP system BNVW-XIV-1 located on Bon View Avenue between Eucalyptus Avenue and Edison Avenue. Within this report, the system is referred to as the Bon View Ave Storm Drain or Bon View Storm Drain system.

The tributary area to the Bon View storm drain consists of the areas to the east and west of Bon View Avenue and is bounded by Edison Avenue to the north and Eucalyptus Avenue to the south.

The onsite areas tributary to the Bon View storm drain differs from the Master Drainage Plan areas within the project site. All changes to watershed boundary areas are located within the project site area. The project proposes mitigation measures and documentation to demonstrate that the project is consistent with the MDP at the downstream compliance points. Figure 6 shows the revised watershed boundaries. The following table documents the difference

*Table E.1 Bon View Storm Drain Tributary Area*

| Land Cover | Area Increase or Decrease (acres) |
|---|---|
| Commercial | Decrease 4.8 acres (to Bon View) |

Overall, this is a decrease in the area tributary to the Bon View storm drain.

The Bon View storm drain discharges into the proposed MDP system located in Bon View Avenue. The downstream system is shown on Figure 7. The downstream storm drain is referred to as Line D per PM-20161. The storm drain improvement plans for the downstream system are included as Excerpt J. The storm drain plans are in review or approved. It is assumed that the downstream system will be constructed and in place prior to the construction of the Ontario Ranch project.

## E.2 REGULATORY AND COMPLIANCE REQUIREMENTS

The compliance requirements for the Bon View storm drain are based on the City of Ontario Master Drainage Plan. The Bon View storm drain discharges into a mainline system that was assessed and constructed based on the MDP design. Based on the MDP analysis, the design flow rate for the Bon View storm drain at the intersection of Bon View and Eucalyptus is 746 $ft^3/s$.

In order to assess compliance with the Master Drainage Plan, a rational method analysis was performed for the areas tributary to the mainline which are not being mitigated. A separate rational method analysis and unit hydrograph analysis were prepared for the onsite area which is being mitigated. A storage assessment was performed to determine storage requirements and the proposed mitigated outflow value.

## E.3 HYDROLOGIC ANALYSIS

A rational method analysis was prepared for the mainline system and the areas tributary to the mainline which are not being mitigated. The analysis was performed for the 100-year storm event. The results of the analysis are as follows:

*Table E.2 Mainline Rational Method Results*

| Area | Peak Flow Rate ($ft^3/s$) | Time of Concentration (min) |
|---|---|---|
| Area F (excludes Area F2 and Area F3) | 719.6 | 29.0 |

*Results have been rounded to the nearest tenth

A rational method analysis was prepared for the onsite commercial area which will be mitigated before discharging into the mainline system. The analysis was performed for the 100-year storm event. The results of the analysis are as follows:

*Table E.3 Onsite Rational Method Results*

| Area | Peak Flow Rate ($ft^3/s$) | Time of Concentration (min) |
|---|---|---|
| Area F2 | 68.3 | 10.6 |
| Area F3 | 30.0 | 9.0 |

*Results have been rounded to the nearest tenth

A unit hydrograph analysis was prepared for the onsite commercial area which will be mitigated. The area, runoff index value, impervious area ratio, and time of concentration from the rational method analysis were used for the unit hydrograph calculations. The analysis was performed for the 100-year storm event.

The results of the analysis are as follows:

*Table E.4 Onsite Unit Hydrograph Results*

| Area | Peak Flow Rate ($ft^3/s$) | Total Volume (ac-ft) |
|---|---|---|
| Area F2 | 60.2 | 9.7 |
| Area F3 | 29.3 | 4.2 |

*Results have been rounded to the nearest tenth

The hydrology map for the Bon View Avenue storm drain is included as Exhibit E. The rerun Fuscoe engineering models, mainline rational method model, onsite commercial area rational method and unit hydrograph models are included in Appendix C.

## E.4 STORAGE AND COMPLIANCE ANALYSIS

The project proposes two basins, one on the eastern side of Bon View Avenue and one on the western side of Bon View Avenue. The eastern basin has a proposed storage capacity of 4.1 ac-ft and the western basin has a proposed storage capacity of 2.5 ac-ft. Rational method Area F2 is tributary to the eastern basin. Rational method Area F3 is tributary to the western basin. Using these values, the unit hydrograph output data was assessed to determine how much runoff could be mitigated by each basin. Two time steps were picked, one on either side of the peak flow rate, which have a difference in volume approximately equal to the proposed basin volume. The following tables document the two time steps:

*TableE.5 Unit Hydrograph Values for Storage Analysis – Eastern Basin (Area F2)*

| Time (hour+min) | Volume (ac-ft) | Flow Rate ($ft^3/s$) | Peak Flow Rate ($ft^3/s$) | Volume Required (ac-ft) |
|---|---|---|---|---|
| **T1** | **V1** | **Q1** | 6.0 | 4.04 |
| 13+30 | 3.78 | 5.94 | | |
| **T2** | **V2** | **Q2** | | |
| 17+35 | 7.82 | 5.93 | | |

*Table E.6 Unit Hydrograph Values for Storage Analysis – Western Basin (Area F3)*

| Time (hour+min) | Volume (ac-ft) | Flow Rate ($ft^3/s$) | Peak Flow Rate ($ft^3/s$) | Volume Required (ac-ft) |
|---|---|---|---|---|
| **T1** | **V1** | **Q1** | 2.0 | 2.22 |
| 11+50 | 1.33 | 2.00 | | |
| **T2** | **V2** | **Q2** | | |
| 18+25 | 3.54 | 1.98 | | |

A more detailed basin analysis will be performed during final engineering. The above analysis does not take into account storage requirements for the water quality volume which will be addressed as part of a future WQMP.

In order to demonstrate compliance with the Master Drainage Plan, the proposed condition flow rate was compared to the MDP flow rate at the compliance point. The proposed downstream flow rate was calculated based on the sum of the mainline rational method analysis (excluding the onsite area to be mitigated) and the outflow from the mitigated onsite areas. This is a conservative approach as it does not account for potential timing differences between the peak flow rates. The proposed condition flow rate is 727.6 $ft^3/s$ (719.6+6.0+2.0).

The design flow rate at the point of compliance is 746.0 $ft^3/s$ per the City of Ontario Master Drainage Plan. The proposed condition flow rate is less than the design flow rate. Therefore, the project is in compliance with the Master Drainage Plan

An exhibit was developed to document flow rates tributary to and along the mainline storm drain system. The Bon View Avenue storm drain flow rate exhibit is included as Exhibit F. The proposed outflow values are shown on Figure 9.

## E.5 FINDINGS & RECOMMENDATIONS

The hydrology analysis evaluated the tributary area to the proposed Bon View Avenue Storm Drain. The following findings and recommendations have been developed based on the findings of the analysis:

1. The City of Ontario Master Drainage Plan was used to determine compliance information.
2. The compliance point being used is located at the downstream end of the proposed Bon View storm drain, at the intersection of Bon View Avenue and Eucalyptus Avenue.
3. The City of Ontario Master Drainage Plan defines a design flow rate of 746 $ft^3/s$ at the compliance point.
4. The proposed outflow rate from the project site is 727.6 $ft^3/s$ at the compliance point.
5. The proposed outflow is less than the design flow rate at the compliance point.
6. The project is in compliance with the Master Drainage Plan.

# SECTION F

# CAMPUS AVENUE STORM DRAIN

## F.1 DRAINAGE AREA CHARACTERISTICS

The project proposes to construct the portion of the MDP system MERL-XIV-2 located on Campus Avenue between Eucalyptus Avenue and Edison Avenue. Within this report, the system is referred to as the Campus Ave Storm Drain or Campus Storm Drain system.

The tributary area to the Campus storm drain consists of the areas to the east and west of Campus Avenue and is bounded by Edison Avenue to the north and Eucalyptus Avenue to the south.

The onsite areas tributary to the Campus storm drain do not differ from the Master Drainage Plan areas within the project site. This is shown on Figure 6.

The Campus storm drain discharges into the proposed MDP system located in Campus Avenue. The downstream system is shown on Figure 7. The downstream storm drain is referred to as Line E per PM-20517. The storm drain improvement plans for the downstream system are included as Excerpt K. The storm drain plans are in review or approved. It is assumed that the downstream system will be constructed and in place prior to the construction of the Ontario Ranch project.

## F.2 REGULATORY AND COMPLIANCE REQUIREMENTS

The compliance requirements for the Campus storm drain are based on the City of Ontario Master Drainage Plan. The Campus storm drain discharges into a mainline system that was assessed and constructed based on the MDP design. Based on the MDP analysis, the design flow rate for the Campus storm drain at the intersection of Campus and Eucalyptus is 124 $ft^3/s$.

In order to assess compliance with the Master Drainage Plan, a rational method analysis was performed for the areas tributary to the mainline which are not being mitigated. A separate rational method analysis and unit hydrograph analysis were prepared for the onsite area which is being mitigated. A storage assessment was performed to determine storage requirements and the proposed mitigated outflow value.

## F.3 HYDROLOGIC ANALYSIS

A rational method analysis was prepared for the mainline system and the areas tributary to the mainline which are not being mitigated. The tributary area includes offsite area to the west of Campus Avenue. The watershed boundary for this area does not match the boundary from the MDP, since the MDP area includes the onsite area. Initial areas were used to model

the offsite area. The analysis was performed for the 100-year storm event. The results of the analysis are as follows:

*Table F.1 Mainline Rational Method Results*

| Area | Peak Flow Rate ($ft^3/s$) | Time of Concentration (min) |
|---|---|---|
| Area G (excludes Area G2) | 128.0 | 16.0 |

*Results have been rounded to the nearest tenth

A rational method analysis was prepared for the onsite commercial area which will be mitigated before discharging into the mainline system. The analysis was performed for the 100-year storm event. The results of the analysis are as follows:

*Table F.2 Onsite Rational Method Results*

| Area | Peak Flow Rate ($ft^3/s$) | Time of Concentration (min) |
|---|---|---|
| Area G2 | 31.2 | 8.3 |

*Results have been rounded to the nearest tenth

A unit hydrograph analysis was prepared for the onsite commercial area which will be mitigated. The area, runoff index value, impervious area ratio, and time of concentration from the rational method analysis were used for the unit hydrograph calculations. The analysis was performed for the 100-year storm event. The results of the analysis are as follows:

*Table F.3 Onsite Unit Hydrograph Results*

| Area | Peak Flow Rate ($ft^3/s$) | Total Volume (ac-ft) |
|---|---|---|
| Area G2 | 30.8 | 4.2 |

*Results have been rounded to the nearest tenth

The hydrology map for the Campus Avenue storm drain is included as Exhibit G. The rerun Fuscoe engineering models, mainline rational method model, onsite commercial area rational method and unit hydrograph models are included in Appendix D.

## F.4 STORAGE AND COMPLIANCE ANALYSIS

The proposed basin has a storage capacity of approximately 3.5 ac-ft. Using this value, the unit hydrograph output data was assessed to determine how much runoff could be mitigated

by the basin. Two time steps were picked, one on either side of the peak flow rate, which have a difference in volume approximately equal to the proposed basin volume. The following table documents the two time steps:

*Table F.4 Unit Hydrograph Values for Storage Analysis*

| Time (hour+min) | Volume (ac-ft) | Flow Rate ($ft^3/s$) | Peak Flow Rate ($ft^3/s$) | Volume Required (ac-ft) |
|---|---|---|---|---|
| **T1** | **V1** | **Q1** | 1.5 | 2.98 |
| 8+20 | 0.84 | 1.5 | | |
| **T2** | **V2** | **Q2** | | |
| 20+10 | 3.82 | 1.49 | | |

A more detailed basin analysis will be performed during final engineering. The above analysis does not take into account storage requirements for the water quality volume which will be addressed as part of a future WQMP.

In order to demonstrate compliance with the Master Drainage Plan, the proposed condition flow rate was compared to the MDP flow rate at the compliance point. The proposed downstream flow rate was calculated based on the sum of the mainline rational method analysis (excluding the onsite area to be mitigated) and the outflow from the mitigated onsite area. This is a conservative approach as it does not account for potential timing differences between the peak flow rates. The proposed condition flow rate is 129.5 $ft^3/s$ (128.0+1.5).

The MDP design flow rate at the point of compliance is 124 $ft^3/s$ per the City of Ontario Master Drainage Plan. The proposed condition flow rate of 129.5 $ft^3/s$ is 5.5 $ft^3/s$ higher than the design flow rate. This is approximately 4% of the design flow rate and can be considered negligible. Furthermore, this is within the acceptable range for hydrology error tolerances. The Regional Water Quality Board allows for 10% error on hydromodification criteria The project site is mitigating the onsite area to the maximum extent practicable. During final engineering, an analysis of the downstream systems will be performed to ensure no adverse impacts.

An exhibit was developed to document flow rates tributary to and along the mainline storm drain system. The Campus Avenue storm drain flow rate exhibit is included as Exhibit H. The proposed outflow values are shown on Figure 9.

## F.5 FINDINGS & RECOMMENDATIONS

The hydrology analysis evaluated the tributary area to the proposed Campus Avenue Storm Drain. The following findings and recommendations have been developed based on the findings of the analysis:

1. The City of Ontario Master Drainage Plan was used to determine compliance information.
2. The compliance point being used is located at the downstream end of the proposed Campus storm drain, at the intersection of Campus Avenue and Eucalyptus Avenue.
3. The City of Ontario Master Drainage Plan defines a design flow rate of 124 $ft^3/s$ at the compliance point.
4. The proposed outflow rate from the project site is 129.5 $ft^3/s$ at the compliance point.
5. The project is mitigating outflow to the maximum extent practicable.
6. The proposed outflow is less than the design flow rate at the compliance point.
7. The project is in compliance with the Master Drainage Plan.
8. The proposed outflow is approximately 4% higher than the MDP design flow rate. This value can be considered negligible and within acceptable error tolerance.
9. During final engineering, additional calculations will be performed to ensure no adverse impacts from the increase in flow rate.

# SECTION G

# CONCLUSION AND REFERRENCES

## G.1 CONCLUSION AND SUMMARY

The hydrology report evaluated the tributary areas to the four proposed mainline systems that will be constructed as part of the Ontario Ranch project. The following summarizes the report:

1. Ontario Ranch is a proposed development which consists of Residential, Park, and Commercial areas. The project proposes to construct portions of four City of Ontario Master Drainage Plan systems, which are located within the project site.
2. The purpose of this report is to demonstrate that the conceptual design for the mainline systems and watersheds within the project site is consistent with the City of Ontario Master Drainage Plan.
3. In order to demonstrate compliance with the Master Drainage Plan, a proposed downstream flow rate for the project site was compared to the design flow rates from the Master Drainage Plan. The comparison point is located at the downstream end of each proposed storm drain.
4. The storm drain systems in Grove Avenue, Bon View Avenue, and Campus Avenue were compared to the design flow rate from the City of Ontario Master Drainage Plan.
5. The storm drain system in Walker Avenue was compared to the design flow rate from the Merrill Commerce Center analysis of the Master Drainage Plan. This approved report remodeled a port of the MDP, including the section located downstream of the Walker storm drain.
6. Each mainline has tributary areas consisting of unmitigated onsite residential area, unmitigated onsite park area, unmitigated onsite commercial area, and mitigated onsite park area. The Walker and Campus storm drain systems have additional tributary area from the offsite area across the street from the project site.
7. The residential area and northern potion of the park area were assessed by Fuscoe Engineering. These models were rerun as a part of this report with a revision to the rainfall information to match the rainfall used in the Master Drainage Plan.
8. Proposed onsite basins will mitigate increased runoff from a portion of the commercial area. The analysis in this report does not take into consideration storage requirements for water quality.
9. One rational method analysis was prepared for the systems tributary to the mainline storm drain, excluding the onsite area which was being mitigated. A separate rational method analysis and unit hydrograph analysis were prepared for the onsite area which is being mitigated. A storage analysis was prepared for each basin to determine the mitigated outflow rate.
10. The sum of the mainline rational method and mitigated basin outflow rate was used as the proposed downstream flow rate at the compliance point. This is a conservative approach as it does not take into account any timing differences between the two flow rates.

The MDP design flow rates and the project proposed outflow rates are shown on Figure 9. The following table documents the compliance for the project:

*Table G.1 Compliance Summary Table*

| Storm Drain System Name | Master Drainage Plan Facility Name | Compliance Source | MDP/ MDP-MCC Design Flow Rate ($ft^3/s$) | Proposed Flow Rate ($ft^3/s$) |
|---|---|---|---|---|
| Walker Storm Drian System | WLKR-XII-1 | MDP-MCC* | 928 | 947.3 |
| Grove Storm Drain System | GROV-XIII-1 | MDP | 1050 | 1025.6 |
| Bon View Storm Drain System | BNVW-XIV-1 | MDP | 746 | 727.6 |
| Campus Storm Drain System | MERL-XIV-2 | MDP | 124 | 129.5 |

*MDP-MCC=Merrill Commerce Center analysis of the Master Drainage Plan

The Walker Avenue storm drain has a proposed flow rate that is 2% higher than the MDP-MCC flow rate. This can be considered negligible and within acceptable error tolerance; therefore, the proposed flow rate can be considered within reasonable compliance.

The Grove Avenue Storm Drain has a proposed flow rate that is lower than the design flow rate. Therefore, the system is in compliance with the City of Ontario Master Drainage Plan.

The Bon View Avenue Storm Drain has a proposed flow rate that is lower than the design flow rate. Therefore, the system is in compliance with the City of Ontario Master Drainage Plan.

The Campus Avenue Storm Drain has a proposed flow rate that is 4% higher than the design flow rate. This can be considered negligible and within acceptable error tolerance; therefore, the proposed flow rate can be considered within reasonable compliance.

In conclusion, this report demonstrates that the conceptual design for the Ontario Ranch project is in compliance with the City of Ontario Master Drainage Plan.

********* Hydrology Study Control Information **********

---

Rational hydrology study storm event year is 100.0
Computed rainfall intensity:
Storm year = 100.00 1 hour rainfall = 1.200 (In.)
Slope used for rainfall intensity curve b = 0.6000
Soil antecedent moisture condition (AMC) = 2

++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++
Process from Point/Station 1.000 to Point/Station 2.000
**** INITIAL AREA EVALUATION ****

MOBILE HOME PARK subarea type
Decimal fraction soil group A = 1.000
Decimal fraction soil group B = 0.000
Decimal fraction soil group C = 0.000
Decimal fraction soil group D = 0.000
SCS curve number for soil(AMC 2) = 32.00
Pervious ratio(Ap) = 0.2500 Max loss rate(Fm)= 0.244(In/Hr)
Initial subarea data:
Initial area flow distance = 934.000(Ft.)
Top (of initial area) elevation = 703.000(Ft.)
Bottom (of initial area) elevation = 695.000(Ft.)
Difference in elevation = 8.000(Ft.)
Slope = 0.00857 s(%)= 0.86
TC = k(0.336)*[(length^3)/(elevation change)]^0.2
Initial area time of concentration = 13.425 min.
Rainfall intensity = 2.947(In/Hr) for a 100.0 year storm
Effective runoff coefficient used for area (Q=KCIA) is C = 0.825
Subarea runoff = 24.319(CFS)
Total initial stream area = 10.000(Ac.)
Pervious area fraction = 0.250
Initial area Fm value = 0.244(In/Hr)

```
End of computations, Total Study Area =          10.00 (Ac.)
The following figures may
be used for a unit hydrograph study of the same area.
Note: These figures do not consider reduced effective area
effects caused by confluences in the rational equation.

Area averaged pervious area fraction(Ap) = 0.250
Area averaged SCS curve number =  32.0
```

**** CONFLUENCE OF MAIN STREAMS ****
______________________________________________________________________
The following data inside Main Stream is listed:
In Main Stream number: 2
Stream flow area =      3.400(Ac.)
Runoff from this stream =     10.850(CFS)
Time of concentration =    9.65 min.
Rainfall intensity =     3.592(In/Hr)
Area averaged loss rate (Fm) =    0.0978(In/Hr)
Area averaged Pervious ratio (Ap) = 0.1000
Summary of stream data:

Stream Flow rate    Area    TC     Fm       Rainfall Intensity
 No.    (CFS)   (Ac.)       (min) (In/Hr)     (In/Hr)

1     66.71    20.953     10.55    0.086      3.404
2     10.85     3.400      9.65    0.098      3.592
Qmax(1) =
         1.000 *    1.000 *    66.713) +
         0.946 *    1.000 *    10.850) + =      76.981
Qmax(2) =
         1.056 *    0.915 *    66.713) +
         1.000 *    1.000 *    10.850) + =      75.309

Total of 2 main streams to confluence:
Flow rates before confluence point:
      67.713      11.850
Maximum flow rates at confluence using above data:
       76.981       75.309
Area of streams before confluence:
       20.953        3.400
Effective area values after confluence:
       24.353       22.562

Results of confluence:
Total flow rate =     76.981(CFS)
Time of concentration =    10.555 min.
Effective stream area after confluence  =     24.353(Ac.)
Study area average Pervious fraction(Ap) =  0.100
Study area average soil loss rate(Fm) =    0.087(In/Hr)
Study area total =      24.35(Ac.)
End of computations, Total Study Area =           25.19 (Ac.)
The following figures may
be used for a unit hydrograph study of the same area.
```

Note: These figures do not consider reduced effective area effects caused by confluences in the rational equation.

Area averaged pervious area fraction(Ap) = 0.100
Area averaged SCS curve number = 43.0

Process from Point/Station        8.000 to Point/Station        9.000
**** CONFLUENCE OF MAIN STREAMS ****
______________________________________________________________________
The following data inside Main Stream is listed:
In Main Stream number: 2
Stream flow area =     26.370(Ac.)
Runoff from this stream =     53.277(CFS)
Time of concentration =   18.89 min.
Rainfall intensity =     2.400(In/Hr)
Area averaged loss rate (Fm) =    0.1555(In/Hr)
Area averaged Pervious ratio (Ap) = 0.2000
Summary of stream data:

Stream Flow rate    Area    TC     Fm       Rainfall Intensity
 No.    (CFS)   (Ac.)       (min) (In/Hr)     (In/Hr)

1     32.63    13.260     13.55    0.196      2.930
```

```
2     53.28    26.370     18.89    0.155      2.400
Qmax(1) =
         1.000 *    1.000 *    32.634) +
         1.236 *    0.717 *    53.277) + =      79.863
Qmax(2) =
         0.806 *    1.000 *    32.634) +
         1.000 *    1.000 *    53.277) + =      79.589

Total of 2 main streams to confluence:
Flow rates before confluence point:
      33.634      54.277
Maximum flow rates at confluence using above data:
       79.863       79.589
Area of streams before confluence:
       13.260       26.370
Effective area values after confluence:
       32.173       39.630

Results of confluence:
Total flow rate =     79.863(CFS)
Time of concentration =    13.551 min.
Effective stream area after confluence  =     32.173(Ac.)
Study area average Pervious fraction(Ap) =  0.200
Study area average soil loss rate(Fm) =    0.169(In/Hr)
Study area total =      39.63(Ac.)
End of computations, Total Study Area =           39.63 (Ac.)
The following figures may
be used for a unit hydrograph study of the same area.
Note: These figures do not consider reduced effective area
effects caused by confluences in the rational equation.

Area averaged pervious area fraction(Ap) = 0.200
Area averaged SCS curve number =  45.7

Program License Serial Number 6385

----------------------------------------------------------------------
 *********   Hydrology Study Control Information **********

----------------------------------------------------------------------
Rational hydrology study storm event year is   100.0
Computed rainfall intensity:
Storm year =   100.00   1 hour rainfall =     1.200 (In.)
Slope used for rainfall intensity curve b =  0.6000
Soil antecedent moisture condition (AMC) = 2

++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++
Process from Point/Station       81.000 to Point/Station       82.000
**** INITIAL AREA EVALUATION ****
______________________________________________________________________
RESIDENTIAL(5 - 7 dwl/acre)
Decimal fraction soil group A = 0.590
Decimal fraction soil group B = 0.000
Decimal fraction soil group C = 0.410
Decimal fraction soil group D = 0.000
SCS curve number for soil(AMC 2)  = 47.17
Pervious ratio(Ap) = 0.5000     Max loss rate(Fm)=     0.421(In/Hr)
Initial subarea data:
Initial area flow distance =   998.000(Ft.)
Top (of initial area) elevation =   775.000(Ft.)
Bottom (of initial area) elevation =   767.000(Ft.)
Difference in elevation =     8.000(Ft.)
Slope =    0.00802  s(%)=       0.80
TC = k(0.389)*[(length^3)/(elevation change)]^0.2
Initial area time of concentration =   16.174 min.
Rainfall intensity =      2.635(In/Hr) for a   100.0 year storm
Effective runoff coefficient used for area (Q=KCIA) is C = 0.756
Subarea runoff =     19.326(CFS)
Total initial stream area =        9.700(Ac.)
Pervious area fraction = 0.500
Initial area Fm value =    0.421(In/Hr)

++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++
Process from Point/Station       82.000 to Point/Station       83.000
```

The following data inside Main Stream is listed:
In Main Stream number: 2
Stream flow area =    271.100(Ac.)
Runoff from this stream =    444.448(CFS)
Time of concentration =   27.53 min.
Rainfall intensity =     1.915(In/Hr)
Area averaged loss rate (Fm) =    0.0934(In/Hr)
Area averaged Pervious ratio (Ap) = 0.1000
Summary of stream data:

Stream Flow rate    Area    TC     Fm       Rainfall Intensity
 No.    (CFS)   (Ac.)       (min)  (In/Hr)     (In/Hr)

1   1168.12   910.476     33.14    0.404      1.713
2    444.45   271.100     27.53    0.093      1.915
Qmax(1) =
         1.000 *    1.000 *  1168.120) +
         0.889 *    1.000 *   444.448) + =    1563.374
Qmax(2) =
         1.154 *    0.831 *  1168.120) +
         1.000 *    1.000 *   444.448) + =    1564.331

Total of 2 main streams to confluence:
Flow rates before confluence point:
    1169.120     445.448
Maximum flow rates at confluence using above data:
     1563.374     1564.331
Area of streams before confluence:
      910.476      271.100
Effective area values after confluence:
     1181.576     1027.480
```

```
Results of confluence:
Total flow rate =   1564.331(CFS)
Time of concentration =    27.532 min.
Effective stream area after confluence  =   1027.480(Ac.)
Study area average Pervious fraction(Ap) =  0.366
Study area average soil loss rate(Fm) =    0.333(In/Hr)
Study area total =    1181.58(Ac.)

           0.709 *    1.000 *    13.156) +
           1.000 *    1.000 *    18.937) + =      28.262

Total of 2 main streams to confluence:
Flow rates before confluence point:
      14.156      19.937
Maximum flow rates at confluence using above data:
       30.775       28.262
Area of streams before confluence:
        6.890       13.650
Effective area values after confluence:
       15.957       20.540

Results of confluence:
Total flow rate =     30.775(CFS)
Time of concentration =    18.698 min.
Effective stream area after confluence  =     15.957(Ac.)
Study area average Pervious fraction(Ap) =  0.850
Study area average soil loss rate(Fm) =    0.692(In/Hr)
Study area total =      20.54(Ac.)
End of computations, Total Study Area =           60.17 (Ac.)
The following figures may
be used for a unit hydrograph study of the same area.
Note: These figures do not consider reduced effective area
effects caused by confluences in the rational equation.

Area averaged pervious area fraction(Ap) = 0.422
Area averaged SCS curve number =  47.0
```

Halfstreet flow width =  18.000(Ft.)
Flow velocity =   2.35(Ft/s)
Travel time =    2.78 min.     TC =   25.84  min.
 Adding area flow to street
PARK subarea
Decimal fraction soil group A = 1.000
Decimal fraction soil group B = 0.000
Decimal fraction soil group C = 0.000
Decimal fraction soil group D = 0.000
SCS curve number for soil(AMC 2)  = 32.00
Pervious ratio(Ap) = 0.8500     Max loss rate(Fm)=     0.831(In/Hr)
Rainfall intensity =      2.337(In/Hr) for a   100.0 year storm
Effective runoff coefficient used for area,(total area with modified
rational method)(Q=KCIA) is C = 0.580
Subarea runoff =      4.025(CFS) for    4.040(Ac.)
Total runoff =     18.695(CFS)
Effective area this stream =       13.79(Ac.)
Total Study Area (Main Stream No. 2) =       60.07(Ac.)
Area averaged Fm value =    0.831(In/Hr)
Street flow at end of street =     18.695(CFS)
Half street flow at end of street =      9.348(CFS)
Depth of flow =   0.535(Ft.), Average velocity =   2.458(Ft/s)
Note:  depth of flow exceeds top of street crown.
Flow width (from curb towards crown)=  18.000(Ft.)
```

```
++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++
Process from Point/Station        8.000 to Point/Station        9.000
**** CONFLUENCE OF MAIN STREAMS ****
______________________________________________________________________
The following data inside Main Stream is listed:
In Main Stream number: 2
Stream flow area =     13.790(Ac.)
Runoff from this stream =     18.695(CFS)
Time of concentration =   25.84 min.
Rainfall intensity =     2.337(In/Hr)
Area averaged loss rate (Fm) =    0.8311(In/Hr)
Area averaged Pervious ratio (Ap) = 0.8500
Summary of stream data:

Stream Flow rate    Area    TC     Fm       Rainfall Intensity
 No.    (CFS)   (Ac.)       (min) (In/Hr)     (In/Hr)

1     47.95    20.020     19.94    0.304      2.731
2     18.70    13.790     25.84    0.831      2.337
Qmax(1) =
           1.000 *    1.000 *    47.949) +
           1.261 *    0.772 *    18.695) + =      66.143
Qmax(2) =
           0.838 *    1.000 *    47.949) +
           1.000 *    1.000 *    18.695) + =      58.873

Total of 2 main streams to confluence:
Flow rates before confluence point:
      48.949      19.695
Maximum flow rates at confluence using above data:
       66.143       58.873
Area of streams before confluence:
       20.020       13.790
Effective area values after confluence:
       30.662       33.810

Results of confluence:
Total flow rate =     66.143(CFS)
Time of concentration =    19.939 min.
Effective stream area after confluence  =     30.662(Ac.)
Study area average Pervious fraction(Ap) =  0.531
Study area average soil loss rate(Fm) =    0.519(In/Hr)
Study area total =      33.81(Ac.)
End of computations, Total Study Area =           60.07 (Ac.)
The following figures may
be used for a unit hydrograph study of the same area.
Note: These figures do not consider reduced effective area
effects caused by confluences in the rational equation.

Area averaged pervious area fraction(Ap) = 0.386
Area averaged SCS curve number =  32.0

## CITY OF ONTARIO GENERAL NOTES:

1. ALL WORK SHALL BE DONE IN STRICT CONFORMANCE WITH THE CURRENT CITY OF ONTARIO STANDARD SPECIFICATIONS AND STANDARD DRAWINGS AND CURRENT STANDARD SPECIFICATIONS AND STANDARD PLANS FOR PUBLIC WORKS CONSTRUCTION AND CALTRANS PERMIT UNLESS OTHERWISE APPROVED BY THE CITY ENGINEER.
2. ANY CONTRACTOR PERFORMING WORK ON THIS PROJECT SHALL FAMILIARIZE HIMSELF/HERSELF WITH THE SITE AND SHALL BE SOLELY RESPONSIBLE FOR ANY DAMAGE TO EXISTING FACILITIES RESULTING DIRECTLY OR INDIRECTLY FROM HIS/HER OPERATIONS, WHETHER OR NOT THE FACILITY IS SHOWN ON THESE PLANS.
3. ALL OBSTRUCTIONS WITHIN THE AREA TO BE IMPROVED SHALL BE REMOVED AND/OR RELOCATED AT THE DIRECTION OF THE CITY ENGINEER. UTILITIES ARE TO BE RELOCATED BY THEIR RESPECTIVE OWNERS UNLESS NOTED OTHERWISE. THE CONTRACTOR IS REFERRED TO SECTION 5 OF THE STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION.
4. UTILITY LINE LOCATIONS WERE TAKEN FROM AVAILABLE RECORD DATA AND WERE NOT LOCATED IN THE FIELD, UNLESS OTHERWISE NOTED ON THE PLAN. THE CONTRACTOR IS REFERRED TO SECTION 5 OF THE STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION.
5. IN CASE OF ANY ACCIDENTS INVOLVING SAFETY MATTERS COVERED BY SECTION 6409(B) OF THE CALIFORNIA LABOR CODE, THE CONTRACTOR SHALL IMMEDIATELY NOTIFY THE STATE DIVISION OF INDUSTRIAL SAFETY.
6. STATE LAW (SB 3019) REQUIRES THE CONTRACTOR TO CONTACT UNDERGROUND SERVICE ALERT AND OBTAIN AN IDENTIFICATION NUMBER PRIOR TO THE ISSUANCE OF CITY'S ENCROACHMENT PERMITS. THE CONTRACTOR SHALL NOTIFY UNDERGROUND SERVICE ALERT AT 1-800-422-4133 A MINIMUM OF 48-HOURS IN ADVANCE OF ANY CONSTRUCTION ACTIVITY.
7. PRIOR TO THE START OF ANY WORK THE CONTRACTOR SHALL OBTAIN A BUSINESS LICENSE FROM THE CITY OF ONTARIO. THE CONTRACTOR SHALL OBTAIN AN ENCROACHMENT PERMIT FROM THE ENGINEERING DEPARTMENT NO LESS THAN 48 HOURS PRIOR TO START OF ANY CONSTRUCTION WITHIN THE PUBLIC RIGHT-OF-WAY.
8. THE CONTRACTOR SHALL OBTAIN A TRAFFIC CONTROL PERMIT 48 HOURS PRIOR TO TIME OF CONSTRUCTION WITHIN THE PUBLIC RIGHT-OF-WAY. THE CONTRACTOR IS REFERRED TO SECTION 7-10.3 OF THE STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION.
9. THE CONTRACTOR SHALL RENEW OR REPLACE ANY EXISTING TRAFFIC STRIPING AND/OR PAVEMENT MARKINGS, WHICH DURING HIS OPERATIONS HAVE BEEN EITHER REMOVED OR THE EFFECTIVENESS OF WHICH HAS BEEN REDUCED. RENEWAL OF TRAFFIC STRIPING AND MARKINGS SHALL BE DONE USING REFLECTIVE THERMO-PLASTIC MARKINGS IN CONFORMANCE WITH SECTION 84 & 85 OF THE CALTRANS STANDARD SPECIFICATIONS AND AS DIRECTED BY THE ENGINEER. ALL REGULATORY, WARNING, AND GUIDE SIGNS SHALL HAVE 3M DIAMOND, VIP GRADE SHEETING WITH SERIES 1160 PROTECTIVE OVERLAY FILM.
10. THE LAND SURVEYORS ACT, SECTION 8771 OF THE BUSINESS & PROFESSIONAL CODE, AND SECTIONS 732.5, 1492-5, 1810-5 OF THE STREETS AND HIGHWAY CODE REQUIRE THAT SURVEY MONUMENTS SHALL BE PROTECTED AND PERPETUATED.

    "IT SHALL BE THE RESPONSIBILITY OF THE DEVELOPER OR OTHERS PERFORMING THE CONSTRUCTION WORK TO RETAIN A QUALIFIED REGISTERED CIVIL ENGINEER AND/OR LICENSED LAND SURVEYOR PRIOR TO THE START OF CONSTRUCTION TO LOCATE, REFERENCE AND FILE THE NECESSARY CORNER RECORDS WITH THE COUNTY SURVEYOR'S OFFICE FOR SURVEY CONTROL POINTS/MONUMENTS THAT EXIST AS SHOWN ON RECORDED TRACT MAPS, PARCEL MAPS, RECORDS OF SURVEYS AND HIGHWAY MAPS, AND MAY BE DISTRIBUTED OR DAMAGED BY THE PROPOSED CONSTRUCTION"

    AFTER THE COMPLETION OF THE PROPOSED CONSTRUCTION, SAID MONUMENTS AND/OR CONTROL SURVEY POINTS SHALL BE RESET TO THE NEW SURFACE IN ACCORDANCE WITH THE CURRENT PROFESSIONAL LAND SURVEYING PRACTICES. CORNER RECORDS SHALL BE FILED WITH THE COUNTY SURVEYOR FOR ALL THE NEW MONUMENTS SET.
11. THE DEVELOPER SHALL PROVIDE THE CITY WITH A COMPLETED SET OF "AS BUILT", MYLAR DRAWINGS PRIOR TO THE FINAL INSPECTION.
12. A CITY ACCEPTED/APPROVED SET OF PLANS SHALL BE KEPT ON THE JOB SITE AT ALL TIMES.
13. A PRE-CONSTRUCTION MEETING SHALL OCCUR PRIOR TO CONSTRUCTION. ATTENDEES SHALL INCLUDE A CITY REPRESENTATIVE AND THE CONTRACTOR WHO WILL PERFORM THE WORK. "CUT-SHEETS" SHALL BE PROVIDED TO THE CITY AT THIS MEETING FOR ITS REVIEW.
14. CITY ACCEPTANCE OF PLANS DOES NOT RELIEVE THE DEVELOPER FROM RESPONSIBILITY FOR THE CORRECTION OF ERROR AND OMISSION DISCOVERED DURING CONSTRUCTION. UPON REQUEST OF THE CITY INSPECTOR, THE REQUIRED PLAN REVISIONS SHALL BE PROMPTLY SUBMITTED TO THE CITY ENGINEER FOR REVIEW.
15. ANY REQUIRED RIGHT-OF-WAY OR EASEMENT SHALL BE DEDICATED TO AND ACCEPTED BY THE CITY PRIOR TO COMMENCEMENT OF CONSTRUCTION OF THE IMPROVEMENTS WITHIN THE REQUIRED RIGHT-OF-WAY OR EASEMENT.
16. WHERE UTILITIES NEED TO BE SUPPORTED, SAID SUPPORTS SHALL BE IN ACCORDANCE WITH A.P.W.A. STANDARD 224-1 UNLESS OTHERWISE INDICATED.
17. PRIOR TO STARTING CONSTRUCTION, THE CONTRACTOR SHALL VERIFY LOCATION AND ELEVATION OF EXISTING SEWER MAIN(S) AND NOTIFY THE DESIGN ENGINEER OF ANY VARIATION FROM DESIGN.
18. THE PIPE SHOWN HEREON SHALL BE INSTALLED IN ACCORDANCE WITH CASE III BEDDING AS SHOWN ON L.A.C.D.P.W. STANDARD 3080-2, UNLESS OTHERWISE SHOWN. "W" VALUE SHALL BE AS SPECIFIED ON L.A.C.D.P.W. STANDARD 3080-2 FOR CASE III BEDDING, NOTES 3 (A), 3 (B), AND 3 (C). IF THE "W" VALUE AT THE TOP OF THE PIPE IS EXCEEDED, THE BEDDING SHALL BE MODIFIED AND/OR PIPE OF ADDITIONAL STRENGTH SHALL BE PROVIDED. ALL PROPOSED MODIFICATIONS TO THIS REQUIREMENT SHALL BE APPROVED BY THE CITY ENGINEER.
19. MINIMUM COVER OF STORM DRAIN MAIN SHALL BE 7 FEET FROM THE FINISHED SURFACE PER STANDARD DRAWING 1302-1304.
20. STORM DRAIN MAIN STATIONING IS PER PIPE CENTERLINE.
21. STREET CENTERLINE STATIONING IS PER THE STREET IMPROVEMENT PLANS AND PROVIDED FOR REFERENCE.
22. CONTRACTOR SHALL NOT BACKFILL TRENCH UNTIL THE CITY INSPECTOR HAS OBTAINED AS-BUILT STATIONING ON ALL STRUCTURES.
23. UPON COMPLETION OF CONSTRUCTION OF ALL STORM DRAIN LINES AND PRIOR TO PAVING, THE DEVELOPER SHALL HIRE A CITY APPROVED VIDEO COMPANY TO VIDEO TAPE THE PIPELINES. CITY SHALL REVIEW SAID VIDEOTAPES FOR POTENTIAL CONSTRUCTION DEFECTS PRIOR TO ACCEPTANCE OF THE PROJECT.

## CIVIL ENGINEERS NOTICE TO CONTRACTOR

1. THE EXISTENCE AND LOCATION OF ANY UNDERGROUND UTILITY PIPES OR STRUCTURES SHOWN ON THE PLANS ARE OBTAINED BY A SEARCH OF THE AVAILABLE RECORDS. TO THE BEST OF MY KNOWLEDGE, THERE ARE NO EXISTING UTILITIES EXCEPT AS SHOWN ON THESE PLANS. THE CONTRACTOR IS REQUIRED TO TAKE DUE PRECAUTION AND ANY MEASURES TO PROTECT THE UTILITIES AND STRUCTURES SHOWN AND OTHER LINES OR STRUCTURES NOT OF RECORD OR NOT SHOWN ON THESE PLANS, AND IS RESPONSIBLE FOR THE PROTECTION OF, AND ANY DAMAGE TO, THESE UTILITY LINES OR STRUCTURES.
2. THE CONTRACTOR AGREES THAT HE WILL ASSUME SOLE AND COMPLETE RESPONSIBILITY FOR JOB SITE CONDITIONS DURING THE COURSE OF CONSTRUCTION OF THIS PROJECT, INCLUDING SAFETY OF ALL PERSONS AND PROPERTY; THAT THIS REQUIREMENT SHALL APPLY AND NOT BE LIMITED TO A NORMAL WORKING HOURS, AND THAT THE CONTRACTOR SHALL DEFEND, INDEMNIFY, AND HOLD THE OWNER AND ENGINEER HARMLESS FROM ANY AND ALL LIABILITY, REAL OR ALLEGED, IN CONNECTION WITH THE PERFORMANCE OF WORK ON THIS PROJECT, EXCEPTING FOR LIABILITY ARISING FROM THE SOLE NEGLIGENCE OF THE OWNER OR THE ENGINEER, OR ANY PUBLIC AGENCY.
3. THE ESTIMATES OF IMPROVEMENT QUANTITIES AS SHOWN HEREON ARE PROVIDED ONLY FOR THE PURPOSE OF SATISFYING DISTRICT PLAN INFORMATION REQUIREMENTS. THE CONTRACTOR SHALL PERFORM AN INDEPENDENT ESTIMATE OF ALL IMPROVEMENT QUANTITIES AND SHALL USE SAME AS A BASIS FOR HIS BID(S) AND CONTRACT(S).
4. CONTRACTOR TO VERIFY CLEARANCE AT ALL UTILITY CROSSINGS. IF INTERFERENCE OCCURS, OTHER THAN NOTED ON PLAN, CONTRACTOR SHALL CONTACT THE DESIGN ENGINEER FOR POSSIBLE REDESIGN. IF REDESIGN IS NOT FEASIBLE, CONTRACTOR TO RELOCATE UTILITY AT NO EXPENSE TO ENGINEER.
5. CONTRACTOR SHALL TAKE EXTREME CARE DURING STORM DRAIN CONSTRUCTION AND IS RESPONSIBLE FOR TRENCHING AND SHORING. CONTRACTOR SHALL SUBMIT A DETAILED SHORING PLAN PER SECTION 7-10.4.2.2 OF SPPWC AND A PERMIT FROM STATE DIVISION OF INDUSTRIAL SAFETY PRIOR TO COMMENCING WORK. CONTRACTOR SHALL VERIFY PAVEMENT ELEVATION AT RIM PRIOR TO SETTING CONE.

3 AT THE REQUEST OF THE CONTRACTOR, ADJUST INVERT OF LATERAL E-8 TO MATCH UP WITH ONSITE CONNECTION . THIS DELTA AFFECTS 3 SHEETS, 1, 14, AND 15

4 -AT THE REQUEST OF THE ENGINEER, ADJUST LATERALS C-12 AND C-13 TO NEW CATCH BASIN LOCATION.
-AT THE REQUEST OF THE ENGINEER, ADD TWO TEMPORARY 36" RISERS ON WALKER AVENUE, NORTH OF EUCALYPTUS AVENUE TO CATCH THE WATER FROM THE ADDED SWALES.
THIS DELTA AFFECTS 5 SHEETS, 1, 2, and 11-13

5 AT THE REQUEST OF THE ENGINEER, REMOVE CONCRETE PROTECTION CONSTRUCTION NOTE, ADD 1.5" SPECIAL COVER TO LATERAL B-4. THIS DELTA AFFECTS 2 SHEETS, 1, AND 6

1 AT THE REQUEST OF THE CONTRACTOR, THE 10' DIAMETER CDS UNIT ON VINEYARD AVENUE WAS SHIFTED INTO THE PARKWAY TO ACCOMODATE ONSITE WALL. THIS DELTA AFFECTS 4 SHEETS, 1, 4, 5, AND 18

2 AT THE REQUEST OF THE CONTRACTOR, ADJUST CONNECTION OF LATERAL B-8 & B-9 TO RCB, AND AT THE REQUEST OF THE ENGINEER, SHIFT CDS "C" FIVE FEET EAST TO AVOID CONFLICT WITH SCREEN WALL. THIS DELTA AF[illegible]
