VINEYARD AVENUE

EUCALYPTUS AVENUE

WEST OF BAKER AVE AND EAST OF CARPENTER AVE

STA 10+00 TO STA 26+16.08

BAKER AVENUE

-AT THE REQUEST OF THE ENGINEER, ADJUST LATERALS C-12 AND C-13 TO NEW CATCH BASIN LOCATION.
-AT THE REQUEST OF THE ENGINEER, ADD TWO TEMPORARY 36" RISERS ON WALKER AVENUE, NORTH OF EUCALYPTUS AVENUE TO CATCH THE WATER FROM THE ADDED SWALES.
THIS DELTA AFFECTS 5 SHEETS, 1, 2 AND 11-13

## CONSTRUCTION NOTES

1. CONSTRUCT PRECAST 13'X8' RCB PER CALTRANS STD. D83A & D83B, ALTERNATE CONSTRUCT CAST-IN-PLACE 13'X8' RCB PER CALTRANS STD. D80 & D82. TRENCH EXCAVATION, BEDDING & BACKFILL PER CALTRANS STD. A62G, PER DETAIL ON SHEETS 21 – 25 (IF CAST-IN-PLACE IS USED, BOTTOM OF RCB IS TO BE "SLOPED")
2. CONSTRUCT 36" RCP. TRENCH EXCAVATION, & BACKFILL PER CITY OF ONTARIO STD. DWG. NO. 1306, BEDDING PER CITY OF ONTARIO STD. DWG. NO. 2104 CLASS B2, D-LOAD PER PLAN
4. CONSTRUCT 18" RCP. TRENCH EXCAVATION, & BACKFILL PER CITY OF ONTARIO STD. DWG. NO. 1306, BEDDING PER CITY OF ONTARIO STD. DWG. NO. 2104 CLASS B2, D-LOAD PER PLAN
5. CONSTRUCT CATCH BASIN NO. 2 PER CITY OF ONTARIO STD. DWG. NO. 3003, "W" AND "V" PER PLAN, INSTALL ALMETEK PLACARD "NO DUMPING DRAINS TO RIVER" OR EQUIVALENT
6. CONSTRUCT LOCAL DEPRESSION FOR CATCH BASIN INLET PER CITY OF ONTARIO STD. DWG. NO. 3005, REFER TO PERMIT PM 20273 STREET IMPROVEMENT PLANS FOR DETAILS.
7. CONSTRUCT 36" STORM DRAIN MANHOLE WITHOUT REDUCER PER SPPWC STD. 326-2, PER DETAIL ON SHEET 20
8. CONSTRUCT CONNECTOR PIPE SCREEN ON 12" PIPE , PER DETAIL 8, SHEET 19 (AFTER TEMPORARY CONCRETE BOTTOM IS REMOVED)
9. INSTALL TEMPORARY CONCRETE BOTTOM TO CATCH BASIN, PER DETAIL 9, SHEET 19
10. CONSTRUCT JUNCTION STRUCTURE PIPE TO RCB PER SPPWC STD. 333-2, PER DETAIL ON SHEET 21
15. CONSTRUCT MANHOLE NO. 1 PER CITY OF ONTARIO STD. DWG. 3008 & 3009
19. REMOVE EXISTING CONCRETE BULKHEAD
22. CONSTRUCT MANHOLE SAFETY LEDGE PER SPPWC 330-2, DETAIL ON SHEET 20

**STORM DRAIN CENTERLINE DATA TABLE**

| LINE/CURVE | BEARING/DELTA | LENGTH | RADIUS |
|---|---|---|---|
| C3 | 032°45'39" | 25.73' | 45.00 |

## CDS5640-10-C DESIGN NOTES

CDS5640-10-C RATED TREATMENT CAPACITY IS 9.0 CFS [254.9 L/s], OR PER LOCAL REGULATIONS. MAXIMUM HYDRAULIC INTERNAL BYPASS CAPACITY IS 50.0 CFS [1416 L/s]. IF THE SITE CONDITIONS EXCEED 50.0 CFS [1416 L/s], AN UPSTREAM BYPASS STRUCTURE IS REQUIRED.

THE STANDARD CDS5640-10-C CONFIGURATION IS SHOWN. ALTERNATE CONFIGURATIONS ARE AVAILABLE AND ARE LISTED BELOW. SOME CONFIGURATIONS MAY BE COMBINED TO SUIT SITE REQUIREMENTS.

| CONFIGURATION DESCRIPTION |
|---|
| GRATED INLET ONLY (NO INLET PIPE) |
| GRATED INLET WITH INLET PIPE OR PIPES |
| CURB INLET ONLY (NO INLET PIPE) |
| CURB INLET WITH INLET PIPE OR PIPES |
| SEPARATE OIL BAFFLE (SINGLE INLET PIPE REQUIRED FOR THIS CONFIGURATION) |
| SEDIMENT WEIR FOR NJDEP / NJCAT CONFORMING UNITS |

**FRAME AND COVER**
(DIAMETER VARIES)
N.T.S.

**SITE SPECIFIC DATA REQUIREMENTS**

| | | | |
|---|---|---|---|
| STRUCTURE ID | | | |
| WATER QUALITY FLOW RATE (CFS OR L/s) | | | * |
| PEAK FLOW RATE (CFS OR L/s) | | | * |
| RETURN PERIOD OF PEAK FLOW (YRS) | | | * |
| SCREEN APERTURE (2400 OR 4700) | | | * |
| PIPE DATA: | I.E. | MATERIAL | DIAMETER |
| INLET PIPE 1 | * | * | * |
| INLET PIPE 2 | * | * | * |
| OUTLET PIPE | * | * | * |
| RIM ELEVATION | | | * |
| ANTI-FLOTATION BALLAST | | WIDTH | HEIGHT |
| | | * | * |
| NOTES/SPECIAL REQUIREMENTS: | | | |

* PER ENGINEER OF RECORD

GENERAL NOTES
1. CONTECH TO PROVIDE ALL MATERIALS UNLESS NOTED OTHERWISE.
2. DIMENSIONS MARKED WITH ( ) ARE REFERENCE DIMENSIONS, ACTUAL DIMENSIONS MAY VARY.
3. FOR FABRICATION DRAWINGS WITH DETAILED STRUCTURE DIMENSIONS AND WEIGHTS, PLEASE CONTACT YOUR CONTECH ENGINEERED SOLUTIONS LLC REPRESENTATIVE. www.ContechES.com
4. CDS WATER QUALITY STRUCTURE SHALL BE IN ACCORDANCE WITH ALL DESIGN DATA AND INFORMATION CONTAINED IN THIS DRAWING.
5. STRUCTURE SHALL MEET AASHTO HS20 AND CASTINGS SHALL MEET HS20 (AASHTO M 306) LOAD RATING, ASSUMING GROUNDWATER ELEVATION AT, OR BELOW, THE OUTLET PIPE INVERT ELEVATION, ENGINEER OF RECORD TO CONFIRM ACTUAL GROUNDWATER ELEVATION.
6. PVC HYDRAULIC SHEAR PLATE IS PLACED ON SHELF AT BOTTOM OF SCREEN CYLINDER. REMOVE AND REPLACE AS NECESSARY DURING MAINTENANCE CLEANING.

INSTALLATION NOTES
A. ANY SUB-BASE, BACKFILL DEPTH, AND/OR ANTI-FLOTATION PROVISIONS ARE SITE-SPECIFIC DESIGN CONSIDERATIONS AND SHALL BE SPECIFIED BY ENGINEER OF RECORD.
B. CONTRACTOR TO PROVIDE EQUIPMENT WITH SUFFICIENT LIFTING AND REACH CAPACITY TO LIFT AND SET THE CDS MANHOLE STRUCTURE (LIFTING CLUTCHES PROVIDED).
C. CONTRACTOR TO ADD JOINT SEALANT BETWEEN ALL STRUCTURE SECTIONS, AND ASSEMBLE STRUCTURE.
D. CONTRACTOR TO PROVIDE, INSTALL, AND GROUT PIPES. MATCH PIPE INVERTS WITH ELEVATIONS SHOWN.
E. CONTRACTOR TO TAKE APPROPRIATE MEASURES TO ASSURE UNIT IS WATER TIGHT, HOLDING WATER TO FLOWLINE INVERT MINIMUM. IT IS SUGGESTED THAT ALL JOINTS BELOW PIPE INVERTS ARE GROUTED.

| 36 | 34.71 |

NOTE: BYPASS FLOW RATES VARY WITH VAULT DEPTH AND BYPASS HEIGHT. CONTACT BIO CLEAN FOR ADDITIONAL INFORMATION.

TOTAL SCREEN LENGTH = 4.7'
SPAN LENGTH = 32"
COMPATIBLE WITH PIPES UP TO Ø24"

TOP SECTION VIEW - U SHAPE

GENERAL NOTES
1. BIO CLEAN TO PROVIDE ALL MATERIALS UNLESS OTHERWISE NOTED.
2. ALL DIMENSIONS, ELEVATIONS, SPECIFICATIONS, AND CAPACITIES ARE SUBJECT TO CHANGE.
3. THIS CPS UNIT IS DESIGNED FOR TREATMENT FLOWS THROUGH THE SCREEN. FLOWS GREATER THAN THE TREATMENT FLOW RATE WILL BYPASS OVER THE SCREEN.
4. A BYPASS LID IS REQUIRED WHEN THE OUTLET PIPE IS DIRECTLY BELOW THE CURB OPENING.
5. CPS IS COMPRISED OF 304 STAINLESS STEEL. THICKNESS IS 16 GAUGE. SCREEN PERFORATIONS ARE 5 MILLIMETERS IN DIAMETER. THE SCREEN AREA IS 51% OPEN SPACE.

INSTALLATION NOTES
1. CONTRACTOR TO PROVIDE ALL LABOR, EQUIPMENT, MATERIALS, AND INCIDENTALS REQUIRED TO INSTALL THE CPS UNIT AND APPURTENANCES IN ACCORDANCE WITH THIS DRAWING AND THE MANUFACTURER'S SPECIFICATIONS, UNLESS OTHERWISE STATED IN MANUFACTURER'S CONTRACT.
2. POSITION THE CPS SO IT IS EVENLY SPACED AROUND THE CONNECTOR PIPE, ENSURING A MIN. OF 4" SPACING AWAY FROM ANY CORNERS. SCREEN BOTTOM SHALL BE FLUSH WITH THE CATCH BASIN FLOOR, OR WITH GAPS NO GREATER THAN 5 MM.
3. IF A BYPASS LID IS REQUIRED, VERIFY THE BYPASS HEIGHT NEEDED AND MARK THAT LOCATION ON THE WALL DIRECTLY ABOVE THE BASE UPRIGHTS. LIFT THE LID IN PLACE AND MARK THE HOLE LOCATIONS FOR THE LID MOUNTING BRACKETS. SECURE THE LID WITH STAINLESS STEEL NUTS.

**MANHOLE PIPE–TO–PIPE (ONE OR BOTH MAIN LINE IDS 33" (825 mm) OR SMALLER)**

USE WITH STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION

STANDARD PLAN 321–2

SHEET 1 OF 3

NOTES

1. WHEN DEPTH M FROM STREET GRADE TO THE TOP OF THE BOX IS LESS THAN 2'-10 1/2" (867 mm) FOR PAVED STREETS OR 3'-6" (1060 mm) FOR UNPAVED STREETS, CONSTRUCT SHAFT PER SECTION C–C AND DETAIL "N". DEPTH M MAY BE REDUCED TO AN ABSOLUTE LIMIT OF 8" (150 mm) WHEN LARGER VALUES OF M WOULD REDUCE H IN SECTION C–C TO 3'-6" (1060 mm) OR LESS.
2. H (IN SECTION A–A AND B–B) SHALL NOT BE LESS THAN 4'-0" (1.2 m), BUT MAY BE INCREASED PROVIDED THAT THE VALUE OF M SHALL NOT BE LESS THAN THE MINIMUM SPECIFIED AND THAT THE REDUCER SHALL BE USED. FOR H (IN SECTION C–C) SEE NOTE 1.
3. L SHALL BE 4'-0" (1.2 m) UNLESS OTHERWISE SHOWN. L MAY BE INCREASED OR LOCATION OF MANHOLE SHIFTED TO MEET PIPE ENDS, BUT ANY CHANGE IN LOCATION OF THE SPUR MUST BE APPROVED BY THE ENGINEER.
4. T SHALL BE 8" (200 mm) FOR VALUES OF H UP TO AND INCLUDING 8'-0" (2.4 m) AND 10" (250 mm) FOR VALUES OF H OVER 8'-0" (2.4 m).
5. STATIONS OF MANHOLES SHOWN ON PLANS APPLY AT CENTERLINE OF SHAFT. ELEVATIONS ARE SHOWN AT CENTERLINE OF SHAFT AND REFER TO THE PROLONGED INVERT GRADE LINES. SEE NOTE 3.
6. REINFORCEMENT SHALL CONFORM TO ASTM A 615, GRADE 40 (ASTM A 615M, GRADE 300), AND SHALL TERMINATE 1 1/2" (40 mm) CLEAR OF CONCRETE SURFACES UNLESS OTHERWISE SHOWN.
7. FLOOR OF MANHOLE SHALL BE STEEL TROWELED TO SPRING LINE.
8. BODY OF MANHOLE SHALL BE POURED IN ONE CONTINUOUS OPERATION EXCEPT THAT A CONSTRUCTION JOINT WITH A LONGITUDINAL KEYWAY MAY BE PLACED AT SPRING LINE.
9. THICKNESS OF THE DECK SHALL VARY WHEN NECESSARY TO PROVIDE A LEVEL SEAT BUT SHALL NOT BE LESS THAN 8" (200 mm).
10. STEPS SHALL CONFORM TO SPPWC 635 OR 636. UNLESS OTHERWISE SHOWN, STEPS SHALL BE UNIFORMLY SPACED 14" (350 mm) TO 15" (375 mm) OC. THE LOWEST STEP SHALL NOT BE MORE THAN 24" (600 mm) ABOVE THE LEDGE AT THE SIDE OF THE MANHOLE.

STANDARD PLANS FOR PUBLIC WORKS CONSTRUCTION

| 72" (1800 mm) | 24" (600 mm) | 12" (300 mm) |

CUT NO. 1: SAW THE TUBE AT AN ANGLE OF A/2 WITH THE TRANSVERSE PLANE. REVERSE ONE SECTION AND TAPE BOTH SECTIONS TOGETHER FORMING THE DEFLECTION ANGLE A.
CUT NO. 2: SAW THE TUBE LONGITUDINALLY REMOVING A STRIP 3.14 (D2–D1) WIDE ON THE SIDE OPPOSITE THE OPEN JOINT. BEND THE ENDS OF THE CUT TOGETHER AND INSERT THE TUBE IN THE PIPE.

STANDARD PLANS FOR PUBLIC WORKS CONSTRUCTION

PROMULGATED BY THE PUBLIC WORKS STANDARDS INC. GREENBOOK COMMITTEE 1992 REV. 1996, 1997, 1998, 2009

**CONCRETE COLLAR FOR RCB 12" (300 mm) THROUGH 72" (1800 mm)**

USE WITH STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION

STANDARD PLAN 380–4

SHEET 1 OF 2

NOTES

1. A CONCRETE COLLAR IS REQUIRED WHERE THE CHANGE IN GRADE EXCEEDS 10%.
2. FOR CURVE JOINTS (SEE DETAIL B, SHEET 1)
   IF THE EXTREME ENDS OF THE PIPE LEAVE A CLEAR SPACE THAT IS GREATER THAN 1" (25 mm), BUT IS LESS THAN 3" (75 mm) A CONCRETE COVER IS REQUIRED IN ACCORDANCE WITH SSPWC 306–1.2.4.
   IF THE EXTREME ENDS OF THE PIPE LEAVE A CLEAR SPACE THAT IS EQUAL TO OR GREATER THAN 3" (75 mm), BUT LESS THAN 6" (150 mm), A CONCRETE COLLAR IS REQUIRED. IF THE CLEAR SPACE IS 6" (150 mm) OR GREATER, A TRANSITION STRUCTURE IS REQUIRED.
3. CONCRETE COLLAR SHALL NOT BE USED FOR A SIZE CHANGE ON THE MAIN LINE.
4. CONNECTOR PIPES
   A. WHERE PIPES OF DIFFERENT DIAMETERS ARE JOINED WITH A CONCRETE COLLAR, L AND T SHALL BE THOSE OF THE LARGER PIPE. D=D1 OR D2, WHICHEVER IS GREATER.
   B. WHEN D1 IS EQUAL TO OR LESS THAN D2, JOIN INVERTS AND WHEN D1 IS GREATER THAN D2, JOIN SOFFITS.
5. FOR PIPE LARGER THAN 72" (1800 mm) SPECIAL COLLAR DETAILS ARE REQUIRED.
6. FOR PIPE SIZE NOT LISTED USE NEXT SIZE LARGER.
7. REINFORCEMENT SHALL CONFORM TO ASTM A 615 (A 615 M) GRADE 40 (300).
8. WHERE REINFORCING IS REQUIRED THE DIAMETER OF THE CIRCULAR TIES SHALL BE D+(2X WALL THICKNESS) + T.
9. REINFORCING SHALL BE USED WHERE THE PIPE DIAMETER IS GREATER THAN 21" (525 mm) AND ON ALL PIPES WHERE THE SPACES BETWEEN THE EXTREME OUTER ENDS IS 3" (75 mm) OR LARGER.

CIRCULAR TIES:

| PIPE DIAMETER | NO. OF CIRCULAR TIES |
|---|---|
| 21" (525 mm) OR LESS | 3 |
| 24" (600 mm) TO 30" (750 mm) | 3 |
| 33" (825 mm) TO 57" (1425 mm) | 4 |
| 60" (1500 mm) TO 72" (1800 mm) | 5 |

WHERE THE SPACE BETWEEN PIPE ENDS EXCEEDS 3" (75 mm), THE NUMBER OF CIRCULAR TIES SHALL BE INCREASED TO MAINTAIN AN APPROXIMATE SPACING OF 6" (150 mm) O.C.

10. WHERE THE PIPE IS 21" (525 mm) OR LESS IN DIAMETER AN INTERIOR FORM OF UNSEALED SONO–TUBE OR EQUAL SHALL BE USED TO PROVIDE A SMOOTH INTERIOR JOINT. THE PAPER FORM MAY BE LEFT IN PLACE (SEE DETAIL A). WHEN THE PIPE IS 24" (600 mm) OR LARGER A REMOVABLE INTERIOR FORM SHALL BE USED OR THE INTERIOR JOINT SHALL BE COMPLETELY FILLED WITH MORTAR AND NEATLY POINTED.

STANDARD PLANS FOR PUBLIC WORKS CONSTRUCTION

CONCRETE COLLAR FOR RCB 12" (300 mm) THROUGH 72" (1800 mm)

STANDARD PLAN 380–4

SHEET 2 OF 2

STANDARD PLANS FOR PUBLIC WORKS CONSTRUCTION

PROMULGATED BY THE PUBLIC WORKS STANDARDS INC. GREENBOOK COMMITTEE 1992 REV. 1996, 2009

**MANHOLE SHAFT 36"(900 mm) WITHOUT REDUCER**

USE WITH STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION

STANDARD PLAN 326–2

SHEET 1 OF 2

NOTES

1. UNLESS OTHERWISE INDICATED THIS STRUCTURE SHALL CONFORM TO ASTM C 478 (ASTM C 478M). ALL STEEL SHALL TERMINATE 1 1/2" (40 mm) CLEAR OF CONCRETE SURFACES AND ALL CONCRETE SHALL BE PER SSPWC.
2. WHERE A 36" (900 mm) MANHOLE IS CONSTRUCTED WITH 36" (900 mm) MANHOLE RCP, THE RCP SECTION SHALL CONTAIN A CIRCULAR CAGE AND HAVE A LOAD CARRYING CAPACITY OF AT LEAST 1000D (50D). SPECIAL MANHOLE SHAFT SHALL BE PER THIS STANDARD AND 36" (900 mm) MANHOLE FRAME AND COVER SHALL BE PER SPPWC 633.
3. THE MANHOLE SHAFT AND RINGS MAY BE PLAIN CONCRETE. FOR PLAIN CONCRETE SECTIONS THE MINIMUM THICKNESS SHALL BE 6" (150 mm).
4. ALL JOINTS SHALL BE SEALED BY FILLING THE ANNULAR SPACES WITH CLASS C MORTAR. THE INSIDE OF THE SHAFT AT EACH JOINT SHALL BE WIPED CLEAN OF EXCESS MORTAR.
5. PROTECTIVE PLASTIC LINER (T LOCK) OR ENGINEER–APPROVED COATINGS WHERE REQUIRED BY THE PLANS SHALL BE IN ACCORDANCE WITH SSPWC AND THE MANUFACTURER'S DIRECTIONS.
6. STEPS SHALL CONFORM TO SPPWC 635 OR 636. THE TOP STEP SHALL BE PLACED 6" (150 mm) BENEATH THE MANHOLE COVER FRAME. UNLESS OTHERWISE SHOWN, STEPS SHALL BE UNIFORMLY SPACED 14" (350 mm) TO 15" (375 mm) OC.
7. THE PRECAST CONCRETE MANHOLE STRUCTURES WILL BE INSPECTED BY THE ENGINEER WHO WILL INDICATE ACCEPTANCE FOR SHIPMENT TO THE JOB BY MARKING THE STRUCTURES WITH THE AGENCY'S STAMP.
8. THE VERTICAL SIDES OF THE MANHOLE SHAFT SHALL BE LOCATED ABOVE AND IN LINE WITH THE SIDE OF THE STORM DRAIN CONDUIT.
9. CONSTRUCT MANHOLE SAFETY LEDGE PER SPPWC 330 IF DEPTH OF MANHOLE TO INVERT IS GREATER THAN 20' (6 m) AND MANHOLE SHAFT IS GREATER THAN 10' (3 m).
10. THE FOLLOWING SPPWC ARE INCORPORATED HEREIN:

633 36" (900 mm) MANHOLE FRAME AND COVER
635 STEEL STEP
636 POLYPROPYLENE PLASTIC STEP

STANDARD PLANS FOR PUBLIC WORKS CONSTRUCTION

MANHOLE SHAFT 36"(900 mm) WITHOUT REDUCER

STANDARD PLAN 326–2

SHEET 2 OF 2

STANDARD PLANS FOR PUBLIC WORKS CONSTRUCTION

PROMULGATED BY THE PUBLIC WORKS STANDARDS INC. GREENBOOK COMMITTEE 1992 REV. 1996, 2009

**MANHOLE SHAFT SAFETY LEDGE**

USE WITH STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION

STANDARD PLAN 330–2

SHEET 1 OF 2

NOTES

1. MANHOLE SHAFT SAFETY LEDGE WILL BE NOTED ON THE PLANS WHEN REQUIRED. IT IS TO BE CONSTRUCTED WHEN DEPTH OF MANHOLE TO INVERT IS GREATER THAN 20' (6 m) AND MANHOLE SHAFT IS GREATER THAN 10' (3 m).
2. A SAFETY LEDGE SHALL NOT BE USED IF A PRESSURE MANHOLE IS REQUIRED.
3. STEPS SHALL CONFORM TO SPPWC 635 OR 636 AND SHALL BE ANCHORED 4" (100 mm) IN THE WALL OF THE STRUCTURE. STEPS SHALL BE PLACED TO MATCH THE SPACING OF THE MANHOLE SHAFT.
4. REINFORCEMENT SHALL BE PER ASTM A 615, GRADE 40 (ASTM A 615M, GRADE 300) AND SHALL TERMINATE 2" (50 mm) CLEAR OF CONCRETE SURFACE UNLESS OTHERWISE SHOWN.
5. GROUT HOLES, PIPE AND FITTINGS SHALL BE PROVIDED IN THE FLOOR SLAB. PRESSURE GROUTING SHALL BE USED TO FILL VOIDS AND TO SECURE UNIFORM BEARING. THE GROUT SHALL BE NEAT CEMENT GROUT AND GROUTING PRESSURES SHALL BE AS DETERMINED IN THE FIELD BY THE ENGINEER.
6. PIPE RAIL SHALL BE FABRICATED OF 1 1/4" (32 mm) STANDARD GALVANIZED PIPE COMPOSED OF TWO SECTIONS 7'-6" (2.25 m) & 18" (450 mm) IN LENGTH JOINED BY A GALVANIZED COUPLING. THE COUPLING SHALL BE THREADED A MINIMUM OF 2" (50 mm) ON EACH PIPE LENGTH.
7. ROOF AND FLOOR SLABS SHALL BE PRECAST AND KEYED FOR REINFORCED CONCRETE PIPE SECTIONS AS SHOWN. ALL JOINTS SHALL BE FILLED WITH CLASS C MORTAR AND NEATLY POINTED OR WIPED ON THE INSIDE.
8. 72" (1800 mm) RCP SHALL BE PROVIDED WITH TWO CIRCULAR CAGES OF REINFORCEMENT.
9. THE FOLLOWING SPPWC ARE INCORPORATED HEREIN:

324 MANHOLE SHAFT – WITH ECCENTRIC REDUCER
326 MANHOLE SHAFT – 36" (900 mm) WITHOUT REDUCER
635 STEEL STEP
636 POLYPROPYLENE PLASTIC STEP

STANDARD PLANS FOR PUBLIC WORKS CONSTRUCTION

PROMULGATED BY THE PUBLIC WORKS STANDARDS INC. GREENBOOK COMMITTEE 1994 REV. 1996, 2009

## JUNCTION STRUCTURE – PIPE TO RCB

USE WITH STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION

STANDARD PLAN 333–2 SHEET 1 OF 2

NOTES

1. VALUES FOR A, B AND C SHALL BE SHOWN ON THE PLANS. *ELEVATION R AND ELEVATION S SHALL BE SHOWN WHEN REQUIRED PER* NOTE 8.
2. STATIONS SPECIFIED ON THE PLANS APPLY AT THE INTERSECTION OF CENTERLINES OF MAIN LINE AND LATERALS, EXCEPT THAT STATIONS FOR CATCH BASIN CONNECTOR PIPES APPLY AT INSIDE WALL OF STRUCTURE.
3. REINFORCING STEEL SHALL CONFORM TO ASTM A 615, GRADE 40, (ASTM A 615M, GRADE 300), AND SHALL TERMINATE 1 1/2" (40 mm) CLEAR OF CONCRETE SURFACE UNLESS OTHERWISE SHOWN.
   a. W BARS ARE OF SIZE AND SPACING SPECIFIED FOR WALL STEEL ON PLANS, AND SHALL BE CUT IN CENTER OF OPENING AND BENT INTO TOP AND BOTTOM OF JUNCTION STRUCTURE.
   b. OMIT H BARS WHEN SOFFIT OF SPUR IS 12" (300 mm) OR LESS BELOW SOFFIT OF MAIN LINE, AND OMIT G BARS WHEN INVERT OF SPUR IS 12" (300 mm) OR LESS ABOVE FLOOR OF MAIN LINE.
4. JUNCTION STRUCTURE SHALL BE POURED MONOLITHICALLY WITH MAIN LINE, MANHOLE OR TRANSITION STRUCTURE.
5. FLOOR OF STRUCTURE SHALL BE STEEL–TROWELED TO THE SPRING LINE.
6. WHEN CONNECTING TO EXISTING RCB, BREAKOUT LIMITS AND DETAILS SHALL BE SHOWN ON THE PLANS.
7. EMBEDMENT, P, SHALL BE 5" (130 mm) FOR B = 96" (2400 mm) OR LESS 8" (200 mm) FOR B OVER 96" (2400 mm).
8. IF ELEVATION R AND ELEVATION S ARE NOT SHOWN ON THE PLANS *THEN THE INLET OPENING SHALL FALL 6" (150 mm) BELOW* THE SOFFIT OF THE MAIN LINE WITH THE INLET PIPE LAID ON A STRAIGHT GRADE FROM MAIN LINE TO CATCH BASIN OR TO GRADE BREAK IN INLET LINE. ELEVATION S SHALL BE SHOWN ON THE PLANS IF THE INLET OPENING FALLS MORE THAN 6" (150 mm) BELOW THE SOFFIT OF THE MAIN LINE WITH THE INLET PIPE LAID ON A STRAIGHT GRADE AS STATED ABOVE.
   ELEVATION R SHALL BE SHOWN ON THE PLANS ONLY WHEN A STUB IS TO BE PROVIDED FOR A FUTURE CONNECTION.
9. LATERALS OR CONNECTOR PIPES 24" (600 mm) OR LESS IN DIAMETER SHALL BE NO MORE THAN 5' (1.5 m) ABOVE THE INVERT. LATERALS OR CONNECTOR PIPES 27" (675 mm) OR LARGER IN DIAMETER SHALL BE NO MORE THAN 18" (450 mm) ABOVE THE INVERT, WITH THE EXCEPTION THAT CATCH BASIN CONNECTOR PIPES LESS THAN 50' (15 m) IN LENGTH SHALL NOT BE MORE THAN 5' (1.5 m) ABOVE THE INVERT.
10. THE NEED FOR AN EDGE BEAM AND/OR ADDITIONAL REINFORCEMENT SHALL BE INVESTIGATED BY THE ENGINEER FOR ANY ONE OF THE FOLLOWING CONDITIONS:
   a. ANGLE A IS LESS THAN 30°
   b. TOP OF INLET PIPE IS LESS THAN 6" (150 mm) BELOW THE SOFFIT
   c. FLOW LINE OF INLET PIPE IS LESS THAN 7" (180 mm) ABOVE THE THE FLOOR OF THE RCB AT THE INSIDE FACE

NOTES:

1. For boxes with span or height less than any of those shown in table, use next greater size box concrete dimensions and reinforcement. Make necessary changes in bar lengths and quantities.
2. Quantities are approximate and for design purposes only.
3. For boxes with span or height or cover greater than those shown in tables, a special design is required.
4. It is permissible to eliminate the 180° hooks on every other bar.
5. "e" bars are at half spacing (spans 10′ - 14′ only).
6. "a" bars are at half spacing (spans 10′ - 14′ only).
7. Provide paving notch when top is exposed and when pavement is concrete, and adjust quantities.
8. For design and details not shown, see Standard Plan D82.
9. For exposed top, provide #4 @ 12 each way, lap "c" bars 2′-0″ or use full span length.
10. Soil pressures shown are factored per AASHTO LRFD and include soil weight of fill over box, self weight of box and live load where applicable.

## DESIGN NOTES:

Design Specifications:
AASHTO LRFD Bridge Design Specifications, 6th Edition with California Amendments.

Loading:
Live load: (AASHTO LRFD 3.6.1.2)
HL-93 consists of design truck or design tandem and design lane load.

Impact Factor: (Apply to roof slab only)
$IM = 33(1.0-0.125D_E) \geq 0\%$ (AASHTO LRFD 3.6.2.2)
$D_E$ = minimum depth of earth cover

Earth load:
Earth pressure for two conditions:
140 pcf vertical, 42 pcf horizontal
140 pcf vertical, 140 pcf horizontal

Load Factors:
AASHTO LRFD Table 3.4.1.1 & Table 3.4.1.2

Unit stresses:
$f'_c$ = 3600 psi
$f_y$ = 60,000 psi

Distribution "d" bars:
Up to and including 10'-0" cover
Express as a percentage of main positive reinforcement required: $\frac{100}{\sqrt{S}}$, Max 50%,
Over 10'-0" cover,
# 4 @ 12 maximum

Shear:
$V_c = \{2.14\sqrt{f'_c}+4600\frac{A_s}{bd_e}\frac{Vud_e}{Mu}\}b.d_e \leq 4.0\sqrt{f'_c}b.d_e$ (Pounds)
$V_c$ shall not be less than $3.00\sqrt{f'_c}b.d_e$ for frame members and $2.5\sqrt{f'_c}b.d_e$ for simply supported members.

Exclusion:
Compressive reinforcement and negative moment reduction (for continuity) do not apply.
Axial loading on members has not been considered.

## CONSTRUCTION NOTES:

Construction loads:
Strutting required as shown on Standard Plan D88.
Strutting may be required on culvert extensions when existing parapet is removed.

Expansion joints:
Invert:
No expansion joints shall be permitted.

Roof and Walls:
When cover is less than span length-
Place ½" premolded expansion joint filler at 30'-0" ± centers outside the paved roadway lanes and place Bridge Detail 3-2, Standard Plan B0-3, at 30'-0" centers under paved roadway lanes.
When cover is more than span length-
Place ½" premolded expansion joint filler at 30'-0" ± centers and additional ½" premolded expansion joints at locations of change in foundation character, as directed by the Engineer.

Construction joints:
Temporary joints may be permitted if normal (or radial) to ℄ of RCB. Otherwise, the contractor is to submit a proposal for consideration.

Cutoff walls:
4'-0" cutoff walls are to be provided at inlet and/or outlet unless adjacent channel is lined and unless otherwise shown. These walls are to be extended if scour conditions warrant.

Earthwork:
See Standard Plan A62E.

Backfill:
See Standard Specifications, except that the difference in level of backfill (against outside walls) shall not exceed 2'-0".

BARRIER SECTION (30'-0" MINIMUM)

## GENERAL NOTES:

Designation:
Standard single or multiple box culverts are shown on plans as span times height with maximum cover over roof thus: 8' x 5' RCB with 10' or double 10' x 5' RCB with 20', followed by alternatives.

Alternatives:
Single cell: Invert will be sloped unless "trapezoidal invert", "flat invert" or "V invert" is included in designation.
Multiple cell: Invert will be vee unless "flat invert" is specified. Ends of culvert will be rounded unless "square ends" are designated. Parapets will be as shown unless designated in plans. Such designations may be different for inlet and outlet ends.

Quantities:
Quantities do not include the following:
- Concrete for parapet, paving notches and cut-off wall.
- Reinforcement for 2X splices, parapets, paving notches, cut-off wall and additional required bars for exposed top slab (D-80, Note 9).

Reinforcement placement:
Main reinforcement is to be placed transversely or, for curved culverts, radially. When radial, reinforcing spacing of the "a", "f" and "g" bars is measured along the centerline. Stagger splices not shown. Hooks may be rotated or tilted, as necessary, for clearance.

Special reinforcement coverage:
Box standard plans are not to be used for culverts in a corrosive environment or where there is a severe abrasive flow condition or in freeze-thaw locations.

Special design:
Required for culverts with conditions, loads, design bearing pressures or sizes greater than those given on this plan or Standard Plans D80 & D81. Also required for multiple cell culverts with unequal spans. For culverts with railroad loading, see the current AREMA design specification.

3 or more cells:
For culverts with more than two cells, use dimensions and reinforcement for the standard "double box culvert" and adjust quantities accordingly.

PARAPET REINFORCEMENT

DETAIL A

20° maximum skew as shown. If existing longitudinal and transverse reinforcing bars in top slab are lap spliced with new longitudinal and transverse reinforcing bars, the 20° skew may be exceeded. Lap splicing may require removal of top slab in excess of 2'-0" shown.

DETAIL B

Single cell only, no skew allowed, 1'-0" minimum cover.

* Measured perpendicular to parapet

* See Note 3 ** See Note 6

NOTES:

1. The inside and outside surfaces of the RCB roof shall be marked "TOP".
2. H1 minimum shall equal the wall thickness. H1 maximum shall be 8" for spans through 8' and 14" for spans over 8'.
3. Quantities are approximate and for design purposes only.
4. For design and details not shown see Standard Plan D83B.
5. For external sealing band applications see Standard Plan A62G.
6. Soil pressures shown are factored per AASHTO LRFD and include soil weight of fill over box, self weight of box and live load where applicable.

REGISTERED CIVIL ENGINEER

May 31, 2018
PLANS APPROVAL DATE

REGISTERED PROFESSIONAL ENGINEER — Carl W. Dunn — No. C59976 — Exp. 6-30-18 — CIVIL — STATE OF CALIFORNIA

*THE STATE OF CALIFORNIA OR ITS OFFICERS OR AGENTS SHALL NOT BE RESPONSIBLE FOR THE ACCURACY OR COMPLETENESS OF SCANNED COPIES OF THIS PLAN SHEET.*

## DESIGN NOTES:

Specifications:

AASHTO LRFD Bridge Design Specifications, 4th Edition with California Amendments.

Earth load:

Earth pressures for two conditions:
140 pcf Vert, 42 pcf Horiz
140 pcf Vert, 140 pcf Horiz

Unit stresses:

$f'c = 5.0$ ksi
$fy = 65.0$ ksi for weld wire fabric
$n = 7$

Shear:

Based on

$V_c = \{2.14\sqrt{f'_c} + 4600 \frac{A_s}{b d_e} \frac{V_u d_e}{M_u}\} b.d_e \leq 4.0\sqrt{f'_c} b.d_e$ (Pounds)

$V_c$ shall not be less than $3.00\sqrt{f'_c} b.d_e$ for frame members and $2.5\sqrt{f'_c} b.d_e$ for simply supported members.

Exclusion:

Axial loading on the members has not been considered.

## GENERAL NOTES:

Designation:

Standard single or multiple precast box culverts are shown on the plans as span times height with maximum cover over roof thus: 8' x 5' RCB with 10'-0" or double 10' x 5' RCB with 20'-0", followed by alternatives.

Alternatives:

Single cell:

Standard dimensions of AASHTO Material Specification 'M259' or 'M273'.

Multiple cell:

Constructed by placing single cells adjacent to each other. Inlet and outlet ends of culvert will be rounded unless square ends are designated. Parapet will be shown unless designated in plans. Such designation may be different for inlet and outlet ends.

Limitations:

Where the overfill is less than 12", Precast RCB culverts are not to be used. Precast RCB culverts are not to be used in siphon or pressurized installations unless appropriate "watertight" jointing is provided.

Special reinforcement coverage:

Precast RCB culvert standard plans are not to be used in a corrosive environment or where there is a severe abrasive flow condition or freeze-thaw locations.

Special design:

Required for culvert with different conditions, loads or design bearing pressures greater than those given on these plans. Required for culverts where end details need higher skew angles, higher parapets or barrier sections.

## CONSTRUCTION NOTES:

Cutoff walls:

4'-0" Cutoff walls are to be provided at inlet and/or outlet unless channel is lined and unless otherwise shown. These walls are to be extended if scour conditions warrant. See Standard Plans D84, D85 and D86A.

Wingwalls:

Wingwalls shall be cast-in-place and shall conform to standard plan details for box culvert wingwalls. See Standard Plans D84, D85 and D86A.

Earthwork:

See Standard Plan A62G.

Construction loads:

Strutting may be required near temporary ends. For construction loads on culverts, See Standard Plan D88.

PRECAST RCB TERMINOLOGY

NOTE: Inner and outer reinforcement to be exposed as required to tie to cast-in-place construction. A minimum of two cross wires shall be exposed on all sides.

PARTIAL PLAN INTERIOR WALL MULTICELL CULVERT

| PARAPET "P" BARS | | | |
|---|---|---|---|
| SPAN \ SKEW ANGLE | 0° TO 15° | 16° TO 30° | 31° TO 45° |

SUPPLEMENTAL
SECTION Z-Z
TO SPPWC STD PLAN 333-2
NO SCALE

NOTES:

1. CLEAR COVER TO ALL BAR REINFORCEMENT IS 2", UNLESS OTHERWISE SHOWN HEREON OR ON THE REFERENCED STANDARD PLANS.
2. CONSTRUCT JUNCTION STRUCTURE (WITH ALL BAR REINFORCEMENT PROPERLY EXTENDED) PER SPPWC STANDARD PLAN 333-2, AS MODIFIED HEREON.
3. FOR BAR REINFORCEMENT AND ADDITIONAL INFORMATION NOT SHOWN, SEE SPPWC STANDARD PLAN 333-2 AND CALTRANS STANDARD PLAN D80 (NOT ALL BARS SHOWN).
4. EDGE BEAM EXTENDS FOR THE FULL LENGTH OF THE 13'X12' RCB (BETWEEN END WALLS), AND ITS LONGITUDINAL REINFORCEMENT EXTENDS INTO THE END WALLS AND TO WITHIN 2" CLEAR OF THE REAR FACE OF EACH END WALL.

## EXCERPT I: STORM DRAIN IMPROVEMENT PLANS FOR LINE C, PM-20537

# STORM DRAIN IMPROVEMENT PLAN

## FOR PM 20537
## GROVE AVENUE
## IN THE CITY OF ONTARIO

## CITY OF ONTARIO GENERAL NOTES:

1. ALL WORK SHALL BE DONE IN STRICT CONFORMANCE WITH THE CURRENT CITY OF ONTARIO STANDARD SPECIFICATIONS AND STANDARD DRAWINGS AND CURRENT STANDARD SPECIFICATIONS AND STANDARD PLANS FOR PUBLIC WORKS CONSTRUCTION AND CALTRANS PERMIT UNLESS OTHERWISE APPROVED BY THE CITY ENGINEER.
2. ANY CONTRACTOR PERFORMING WORK ON THIS PROJECT SHALL FAMILIARIZE HIMSELF/HERSELF WITH THE SITE AND SHALL BE SOLELY RESPONSIBLE FOR ANY DAMAGE TO EXISTING FACILITIES RESULTING DIRECTLY OR INDIRECTLY FROM HIS/HER OPERATIONS, WHETHER OR NOT THE FACILITY IS SHOWN ON THESE PLANS.
3. ALL OBSTRUCTIONS WITHIN THE AREA TO BE IMPROVED SHALL BE REMOVED AND/OR RELOCATED AT THE DIRECTION OF THE CITY ENGINEER. UTILITIES ARE TO BE RELOCATED BY THEIR RESPECTIVE OWNERS UNLESS NOTED OTHERWISE. THE CONTRACTOR IS REFERRED TO SECTION 5 OF THE STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION.
4. UTILITY LINE LOCATIONS WERE TAKEN FROM AVAILABLE RECORD DATA AND WERE NOT LOCATED IN THE FIELD, UNLESS OTHERWISE NOTED ON THE PLAN. THE CONTRACTOR IS REFERRED TO SECTION 5 OF THE STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION.
5. IN CASE OF ANY ACCIDENTS INVOLVING SAFETY MATTERS COVERED BY SECTION 6409(B) OF THE CALIFORNIA LABOR CODE, THE CONTRACTOR SHALL IMMEDIATELY NOTIFY THE STATE DIVISION OF INDUSTRIAL SAFETY.
6. STATE LAW (SB 3019) REQUIRES THE CONTRACTOR TO CONTACT UNDERGROUND SERVICE ALERT AND OBTAIN AN IDENTIFICATION NUMBER PRIOR TO THE ISSUANCE OF CITY'S ENCROACHMENT PERMITS. THE CONTRACTOR SHALL NOTIFY UNDERGROUND SERVICE ALERT AT 1-800-422-4133 A MINIMUM OF 48-HOURS IN ADVANCE OF ANY CONSTRUCTION ACTIVITY.
7. PRIOR TO THE START OF ANY WORK THE CONTRACTOR SHALL OBTAIN A BUSINESS LICENSE FROM THE CITY OF ONTARIO. THE CONTRACTOR SHALL OBTAIN AN ENCROACHMENT PERMIT FROM THE ENGINEERING DEPARTMENT NO LESS THAN 48 HOURS PRIOR TO START OF ANY CONSTRUCTION WITHIN THE PUBLIC RIGHT-OF-WAY.
8. THE CONTRACTOR SHALL OBTAIN A TRAFFIC CONTROL PERMIT 48 HOURS PRIOR TO TIME OF CONSTRUCTION WITHIN THE PUBLIC RIGHT-OF-WAY. THE CONTRACTOR IS REFERRED TO SECTION 7-10.3 OF THE STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION.
9. THE CONTRACTOR SHALL RENEW OR REPLACE ANY EXISTING TRAFFIC STRIPING AND/OR PAVEMENT MARKINGS, WHICH DURING HIS OPERATIONS HAVE BEEN EITHER REMOVED OR THE EFFECTIVENESS OF WHICH HAS BEEN REDUCED. RENEWAL OF TRAFFIC STRIPING AND MARKINGS SHALL BE DONE USING REFLECTIVE THERMO-PLASTIC MARKINGS IN CONFORMANCE WITH SECTION 84 & 85 OF THE CALTRANS STANDARD SPECIFICATIONS AND AS DIRECTED BY THE ENGINEER. ALL REGULATORY, WARNING, AND GUIDE SIGNS SHALL HAVE 3M DIAMOND, VIP GRADE SHEETING WITH SERIES 1160 PROTECTIVE OVERLAY FILM.
10. THE LAND SURVEYORS ACT, SECTION 8771 OF THE BUSINESS & PROFESSIONAL CODE, AND SECTIONS 732.5, 1492-5, 1810-5 OF THE STREETS AND HIGHWAY CODE REQUIRE THAT SURVEY MONUMENTS SHALL BE PROTECTED AND PERPETUATED.

    "IT SHALL BE THE RESPONSIBILITY OF THE DEVELOPER OR OTHERS PERFORMING THE CONSTRUCTION WORK TO RETAIN A QUALIFIED REGISTERED CIVIL ENGINEER AND/OR LICENSED LAND SURVEYOR PRIOR TO THE START OF CONSTRUCTION TO LOCATE, REFERENCE AND FILE THE NECESSARY CORNER RECORDS WITH THE COUNTY SURVEYOR'S OFFICE FOR SURVEY CONTROL POINTS/MONUMENTS THAT EXIST AS SHOWN ON RECORDED TRACT MAPS, PARCEL MAPS, RECORDS OF SURVEYS AND HIGHWAY MAPS, AND MAY BE DISTRIBUTED OR DAMAGED BY THE PROPOSED CONSTRUCTION"

    AFTER THE COMPLETION OF THE PROPOSED CONSTRUCTION, SAID MONUMENTS AND/OR CONTROL SURVEY POINTS SHALL BE RESET TO THE NEW SURFACE IN ACCORDANCE WITH THE CURRENT PROFESSIONAL LAND SURVEYING PRACTICES. CORNER RECORDS SHALL BE FILED WITH THE COUNTY SURVEYOR FOR ALL THE NEW MONUMENTS SET.
11. THE DEVELOPER SHALL PROVIDE THE CITY WITH A COMPLETED SET OF "AS BUILT", MYLAR DRAWINGS PRIOR TO THE FINAL INSPECTION.
12. A CITY ACCEPTED/APPROVED SET OF PLANS SHALL BE KEPT ON THE JOB SITE AT ALL TIMES.
13. A PRE-CONSTRUCTION MEETING SHALL OCCUR PRIOR TO CONSTRUCTION. ATTENDEES SHALL INCLUDE A CITY REPRESENTATIVE AND THE CONTRACTOR WHO WILL PERFORM THE WORK. "CUT-SHEETS" SHALL BE PROVIDED TO THE CITY AT THIS MEETING FOR ITS REVIEW.
14. CITY ACCEPTANCE OF PLANS DOES NOT RELIEVE THE DEVELOPER FROM RESPONSIBILITY FOR THE CORRECTION OF ERROR AND OMISSION DISCOVERED DURING CONSTRUCTION. UPON REQUEST OF THE CITY INSPECTOR, THE REQUIRED PLAN REVISIONS SHALL BE PROMPTLY SUBMITTED TO THE CITY ENGINEER FOR REVIEW.
15. ANY REQUIRED RIGHT-OF-WAY OR EASEMENT SHALL BE DEDICATED TO AND ACCEPTED BY THE CITY PRIOR TO COMMENCEMENT OF CONSTRUCTION OF THE IMPROVEMENTS WITHIN THE REQUIRED RIGHT-OF-WAY OR EASEMENT.
16. WHERE UTILITIES NEED TO BE SUPPORTED, SAID SUPPORTS SHALL BE IN ACCORDANCE WITH A.P.W.A. STANDARD 224-1 UNLESS OTHERWISE INDICATED.
17. PRIOR TO STARTING CONSTRUCTION, THE CONTRACTOR SHALL VERIFY LOCATION AND ELEVATION OF EXISTING SEWER MAIN(S) AND NOTIFY THE DESIGN ENGINEER OF ANY VARIATION FROM DESIGN.
18. THE PIPE SHOWN HEREON SHALL BE INSTALLED IN ACCORDANCE WITH CASE III BEDDING AS SHOWN ON L.A.C.D.P.W. STANDARD 3080-2, UNLESS OTHERWISE SHOWN. "W" VALUE SHALL BE AS SPECIFIED ON L.A.C.D.P.W. STANDARD 3080-2 FOR CASE III BEDDING, NOTES 3 (A), 3 (B), AND 3 (C). IF THE "W" VALUE AT THE TOP OF THE PIPE IS EXCEEDED, THE BEDDING SHALL BE MODIFIED AND/OR PIPE OF ADDITIONAL STRENGTH SHALL BE PROVIDED. ALL PROPOSED MODIFICATIONS TO THIS REQUIREMENT SHALL BE APPROVED BY THE CITY ENGINEER.
19. MINIMUM COVER OF STORM DRAIN MAIN SHALL BE 7 FEET FROM THE FINISHED SURFACE PER STANDARD DRAWING 1302-1304.
20. STORM DRAIN MAIN STATIONING IS PER PIPE CENTERLINE.
21. STREET CENTERLINE STATIONING IS PER THE STREET IMPROVEMENT PLANS AND PROVIDED FOR REFERENCE.
22. CONTRACTOR SHALL NOT BACKFILL TRENCH UNTIL THE CITY INSPECTOR HAS OBTAINED AS-BUILT STATIONING ON ALL STRUCTURES.
23. UPON COMPLETION OF CONSTRUCTION OF ALL STORM DRAIN LINES AND PRIOR TO PAVING, THE DEVELOPER SHALL HIRE A CITY APPROVED VIDEO COMPANY TO VIDEO TAPE THE PIPELINES. CITY SHALL REVIEW SAID VIDEOTAPES FOR POTENTIAL CONSTRUCTION DEFECTS PRIOR TO ACCEPTANCE OF THE PROJECT.

## CIVIL ENGINEERS NOTICE TO CONTRACTOR

1. THE EXISTENCE AND LOCATION OF ANY UNDERGROUND UTILITY PIPES OR STRUCTURES SHOWN ON THE PLANS ARE OBTAINED BY A SEARCH OF THE AVAILABLE RECORDS. TO THE BEST OF MY KNOWLEDGE, THERE ARE NO EXISTING UTILITIES EXCEPT AS SHOWN ON THESE PLANS. THE CONTRACTOR IS REQUIRED TO TAKE DUE PRECAUTION AND ANY MEASURES TO PROTECT THE UTILITIES AND STRUCTURES SHOWN AND OTHER LINES OR STRUCTURES NOT OF RECORD OR NOT SHOWN ON THESE PLANS, AND IS RESPONSIBLE FOR THE PROTECTION OF, AND ANY DAMAGE TO, THESE UTILITY LINES OR STRUCTURES.
2. THE CONTRACTOR AGREES THAT HE WILL ASSUME SOLE AND COMPLETE RESPONSIBILITY FOR JOB SITE CONDITIONS DURING THE COURSE OF CONSTRUCTION OF THIS PROJECT, INCLUDING SAFETY OF ALL PERSONS AND PROPERTY; THAT THIS REQUIREMENT SHALL APPLY AND NOT BE LIMITED TO A NORMAL WORKING HOURS, AND THAT THE CONTRACTOR SHALL DEFEND, INDEMNIFY, AND HOLD THE OWNER AND ENGINEER HARMLESS FROM ANY AND ALL LIABILITY, REAL OR ALLEGED, IN CONNECTION WITH THE PERFORMANCE OF WORK ON THIS PROJECT, EXCEPTING FOR LIABILITY ARISING FROM THE SOLE NEGLIGENCE OF THE OWNER OR THE ENGINEER, OR ANY PUBLIC AGENCY.
3. THE ESTIMATES OF IMPROVEMENT QUANTITIES AS SHOWN HEREON ARE PROVIDED ONLY FOR THE PURPOSE OF SATISFYING CITY PLAN INFORMATION REQUIREMENTS. THE CONTRACTOR SHALL PERFORM AN INDEPENDENT ESTIMATE OF ALL IMPROVEMENT QUANTITIES AND SHALL USE SAME AS A BASIS FOR HIS BID(S) AND CONTRACT(S).
4. CONTRACTOR TO VERIFY CLEARANCE AT ALL UTILITY CROSSINGS. IF INTERFERENCE OCCURS, OTHER THAN NOTED ON PLAN, CONTRACTOR SHALL CONTACT THE DESIGN ENGINEER FOR POSSIBLE REDESIGN. IF REDESIGN IS NOT FEASIBLE, CONTRACTOR TO RELOCATE UTILITY AT NO EXPENSE TO ENGINEER.
5. CONTRACTOR SHALL TAKE EXTREME CARE DURING UNDERGROUND CONSTRUCTION AND IS RESPONSIBLE FOR TRENCHING AND SHORING. CONTRACTOR SHALL SUBMIT A DETAILED SHORING PLAN PER SECTION 7-10.4.2.2 OF SPPWC AND A PERMIT FROM STATE DIVISION OF INDUSTRIAL SAFETY PRIOR TO COMMENCING WORK.
6. CONTRACTOR SHALL VERIFY PAVEMENT ELEVATION AT RIM PRIOR TO SETTING CONE.

## BASIS OF BEARING

BEARINGS ARE BASED UPON THE CENTERLINE OF MERRILL AVENUE BETWEEN BAKER AVENUE AND VINEYARD AVENUE BEING N89°26'19"E AS SHOWN ON RECORD OF SURVEY 92/97 RECORDED AS INSTRUMENT NO. 1991-447293 OF OFFICIAL RECORDS OF THE COUNTY OF SAN BERNARDINO.

## LEGAL DESCRIPTION

THE LAND REFERRED TO HEREIN BELOW IS SITUATED IN THE CITY OF ONTARIO, COUNTY OF SAN BERNARDINO, STATE OF CALIFORNIA, AND IS DESCRIBED AS FOLLOWS:

LOTS 1, 2, 3, 16, 17, 18, 19, 20, 21, 34, 35 AND 36 IN SECTION 19, TOWNSHIP 2 SOUTH, RANGE 7 WEST, SAN BERNARDINO BASE AND MERIDIAN, IN THE CITY OF ONTARIO, COUNTY OF SAN BERNARDINO, STATE OF CALIFORNIA, ACCORDING TO MAP OF SUBDIVISION OF PART OF THE RANCHO SANTA ANA DEL CHINO, RECORDED IN BOOK 6, PAGE 15 OF MAPS, RECORDS OF SAID COUNTY.

NOTE:

1. TO CALCULATE A FLOW RATE FOR THE LATERALS, THE INTERIM FLOW RATE ($Q_{INT}$) AND THE STREET FLOW ($Q_{ST}$) WERE SUMMED TOGETHER FOR A TOTAL FLOW RATE ($Q_{TOT}$).
   A. THE INTERIM FLOW RATE IS BASED ON THE INTERIM CONDITION CATCH BASIN ANALYSIS FOR INTERCEPTING THE 286 CFS FROM UPSTREAM GROVE AVENUE BASIN.
   B. THE STREET FLOW RATE IS BASED ON THE TRIBUTARY STREET AREA TO EACH CATCH BASIN, AS CALCULATED IN THE MCC GROVE AVENUE REPORT. USING A SUM OF THE INTERIM FLOW RATE AND STREET FLOW RATE PROVIDES A CONSERVATIVE ANALYSIS FOR THE STORM DRAIN SYSTEM.

*NOTE:
RISER IS TEMPORARY AND ONLY INTENDED TO BE USED FOR DEWATERING IN THE INTERIM CONDITION.

PLAN
(SHAFT NOT SHOWN)

LONGITUDINAL SECTION

STANDARD PLANS FOR PUBLIC WORKS CONSTRUCTION

PROMULGATED BY: THE PUBLIC WORKS STANDARDS INC. GREENBOOK COMMITTEE
APPROVED:
REV. 1998, 2006, 2021

**MANHOLE – PIPE TO PIPE (LARGE SIDE INLET)**

USE WITH STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION

STANDARD PLAN 322-3
SHEET 1 OF 4

SECTION N-M-P-O

SECTION G-G

SECTION C-C

DETAIL N
MONOLITHIC MANHOLE SHAFT
(RINGS AND COVER NOT SHOWN)
SEE NOTE 2

STANDARD PLANS FOR PUBLIC WORKS CONSTRUCTION

**MANHOLE – PIPE TO PIPE (LARGE SIDE INLET)**

STANDARD PLAN 322-3
SHEET 2 OF 4

CASE 1

NOTE:
CASE I BEDDING (LOAD FACTOR 2.1)
SHALL BE USED WHERE SPECIFIED ON THE PLANS OR WHERE REQUIRED AS AN ALTERNATIVE TO CASE 2 OR CASE 3 BEDDING AS PROVIDED HEREON AND ON SH. 2. CASE 4 BEDDING SHALL BE USED INSTEAD OF CASE I AGAINST SHEETING OR UNSTABLE TRENCH SIDES IF SO REQUIRED BY THE ENGINEER.

CASE 2
VITRIFIED CLAY AND PLAIN CONCRETE PIPE

NOTES:
CASE 2 BEDDING & BACKFILL AROUND PIPE (LOAD FACTOR 1.8)
(a) W AT SPRING LINE SHALL NOT BE LESS THAN 6" (150 mm) FOR ANY DEPTH OF TRENCH. THIS DIMENSION MAY INCLUDE THE THICKNESS OF ANY SHEETING.
(b) WHERE COVER IS GREATER THAN 8'-0" (2.5 m), W MEASURED AT TOP OF PIPE SHALL NOT BE GREATER THAN 8" (200 mm) UNLESS THE CONTRACTOR AT ITS OWN EXPENSE PROVIDES CASE I BEDDING OR STRONGER PIPE. THE STATED 8" (200 mm) INCLUDES THE THICKNESS OF ANY SHEETING.
(c) SCREED BEDDING MATERIAL TO FIT CURVATURE AND GRADE OF PIPE. TYPE OF SCREED AND THE METHOD OF USE TO BE APPROVED BY THE ENGINEER.

LOS ANGELES COUNTY DEPARTMENT OF PUBLIC WORKS

**PIPE BEDDING IN TRENCHES**

APPROVED Thomas P. Stimmler 5/31/1992
DIRECTOR OF PUBLIC WORKS DATE
1995, 1999, 2007
REVISIONS

STANDARD PLAN 3080-3
SHEET 1 OF 3

CASE 6

NOTES:
CASE 6 BEDDING (LOAD FACTOR 1.5)
(a) NOTES (a), (b), AND (c) FROM CASE 3 SHALL APPLY.
(b) WHERE SUBGRADE IS COMPOSED OF OTHER THAN GRANULAR OR SANDY MATERIAL, THE TRENCH SHALL BE EXCAVATED TO DEPTH OF AT LEAST 3" (75 mm) BELOW THE PIPE AND BACKFILLED WITH BEDDING MATERIAL OR OTHER MATERIALS AS MAY BE SPECIFIED OR OTHERWISE APPROVED BY THE AGENCY.

NOTES
1. USE CASE 3 FOR RCP, CASE 2 FOR VITRIFIED CLAY, AND PLAIN CONCRETE PIPE UNLESS OTHERWISE SPECIFIED OR SHOWN ON THE PLANS. SEE PLANS FOR BEDDING DETAILS FOR PIPE OF OTHER MATERIALS.
2. BEDDING MATERIAL SHALL CONFORM TO TABLE 3080-3.1

| TABLE 3080-3.1 | |
|---|---|
| PARTICLE SIZE (MAX.) | 3/4" |
| % PASSING NO. 4 SIEVE (MIN.) | 50 |
| % PASSING NO. 16 SIEVE (MIN.) | 15 |
| SAND EQUIVALENT (MIN.) | 20 |

3. CONCRETE BACKFILL SHALL BE POURED FROM WALL TO WALL OF THE TRENCH AND FROM THE BOTTOM OF THE TRENCH TO A MINIMUM DEPTH OF 4" (100 mm) OVER THE TOP OF THE PIPE.
4. CONCRETE BACKFILL SHALL BE PROVIDED FOR RCP 21" (525 mm) IN DIAMETER OR LESS WHERE THE COVER IS EQUAL TO OR LESS THAN 24" (600 mm), FOR RCP GREATER THAN 21" (525 mm) IN DIAMETER BUT LESS THAN 39" (975 mm) WHERE THE COVER IS LESS THAN 15" (375 mm) AND FOR RCP 39" (975 mm) OR GREATER WHERE THE COVER IS LESS THAN 12" (300 mm). CONCRETE BACKFILL SHALL CONFORM TO NOTE 3.
5. 3-EDGE BEARING TEST LOAD FACTOR (D-LOAD) = 1.0.
6. DIMENSIONS SHOWN ON THIS STANDARD PLAN FOR ENGLISH AND METRIC UNITS ARE NOT EQUIVALENT. IF METRIC UNITS ARE USED, ALL UNITS SHALL BE METRIC. IF ENGLISH UNITS ARE USED, ALL UNITS SHALL BE ENGLISH.
7. TOP OF BEDDING MATERIAL AS SHOWN, UNLESS OTHERWISE SHOWN ON THE PLANS OR SPECIFIED IN THE SPECIAL PROVISIONS.
8. D-LOADS FOR RCP TO BE PLACED IN ACCORDANCE WITH THIS STANDARD PLAN MUST BE DESIGNED FOR AN EMBANKMENT CONDITION, EVEN WHEN PLACED IN A TRENCH.
9. FOR WORK WITHIN THE JURISDICTION OF THE U.S. ARMY CORPS OF ENGINEERS, REFER TO PERMIT REQUIREMENTS.
10. BEDDING MATERIAL BELOW THE PIPE SHALL BE LOOSELY PLACED TO AVOID STRESS CONCENTRATIONS AT THE BOTTOM OF THE PIPE. BEDDING MATERIAL BELOW THE SPRING LINE, UNLESS CONCRETE, SHALL BE COMPACTED AFTER PLACEMENT OF THE PIPE.

LOS ANGELES COUNTY DEPARTMENT OF PUBLIC WORKS

**PIPE BEDDING IN TRENCHES**

| 138" (3450 mm) | 17-1/2" (445 mm) |
| 144" (3600 mm) | 18" (455 mm) |

NOTES

1. VALUES FOR A, B, C, D1, D2, ELEVATION R AND ELEVATION S ARE SHOWN ON THE PLANS. ELEVATION S APPLIES AT INSIDE WALL OF STRUCTURE.
2. WHEN DEPTH M FROM STREET GRADE TO THE TOP OF THE BOX IS LESS THAN 2'-10 1/2" (867 mm) FOR PAVED STREETS OR 3'-6" (1060 mm) FOR UNPAVED STREETS, CONSTRUCT MONOLITHIC SHAFT PER SECTION C-C AND DETAIL "N". SHAFT FOR ANY DEPTH OF MANHOLE MAY BE CONSTRUCTED PER SECTION C-C. WHEN DIAMETER D1 IS 48" (1200 mm) OR LESS, CENTER OF SHAFT MAY BE LOCATED PER NOTE 3.
3. CENTER OF MANHOLE SHAFT SHALL BE LOCATED OVER CENTERLINE OF STORM DRAIN WHEN DIAMETER D1 IS 48" (1200 mm) OR LESS, IN WHICH CASE PLACE E BARS SYMMETRICALLY AROUND SHAFT AT 45° WITH CENTERLINE.
4. LENGTH OF MANHOLE MAY BE INCREASED AT OPTION TO MEET PIPE ENDS, BUT ANY CHANGE IN LOCATION F SPUR MUST BE APPROVED BY THE ENGINEER.
5. P SHALL BE 5" (125 mm) FOR D2=96" (2400 mm) OR LESS AND 8" (200 mm) FOR D2 OVER 96" (2400 mm).
6. REINFORCEMENT SHALL CONFORM TO ASTM A 615M, GRADE 300 (ASTM A 615, GRADE 40), AND SHALL TERMINATE 1-1/2" (40 mm) CLEAR OF CONCRETE SURFACES UNLESS OTHERWISE SHOWN.
7. FLOOR OF MANHOLE SHALL BE STEEL-TROWLED TO SPRING LINE.
8. BODY OF MANHOLE SHALL BE POURED IN ONE CONTINUOUS OPERATION EXCEPT THAT A CONSTRUCTION JOINT WITH A LONGITUDINAL KEYWAY MAY BE PLACED AT SPRING LINE.
9. THICKNESS OF THE DECK SHALL VARY WHEN NECESSARY TO PROVIDE A LEVEL SEAT BUT SHALL NOT BE LESS THAN THE TABULAR VALUES OF F SHOWN ON TABLE, SHEET 1.
10. IF LATERALS ENTER ON BOTH SIDES OF MANHOLE, SHAFT SHALL BE LOCATED ON SIDE RECEIVING THE SMALLER LATERAL.
11. STEPS SHALL CONFORM TO SPPWC 635 OR 636. UNLESS OTHERWISE SHOWN, STEPS SHALL BE UNIFORMLY SPACED 14" TO 15" (350 TO 375 mm) OC. THE LOWEST STEP SHALL NOT BE MORE THAN 24" (600 mm) ABOVE THE INVERT.
12. THE FOLLOWING CRITERIA SHALL BE USED FOR THIS MANHOLE:
    - o THIS STANDARD PLAN IS USED WHEN SPPWC 320 IS INADEQUATE.
    - o MAIN LINE = 900 mm (36") INSIDE DIAMETER OR LARGER.
    - o LATERAL = 300 mm (12") TO 3600 mm (144") INSIDE DIAMETER; HOWEVER, THE INSIDE DIAMETER SHALL NOT EXCEED THE INSIDE DIAMETER OF THE MAIN LINE.
13. MANHOLE FRAME AND COVER SHALL CONFORM TO SPPWC 630 UNLESS OTHERWISE SHOWN.
14. MANHOLE SHAFT SHALL CONFORM TO SPPWC 324 UNLESS OTHERWISE SHOWN.
15. WHERE A MANHOLE SHAFT – 900 mm (36") WITHOUT REDUCER IS SPECIFIED REFER TO SPPWC 326.
16. WHERE A PRESSURE MANHOLE SHAFT – WITH ECCENTRIC REDUCER IS SPECIFIED REFER TO SPPWC 328.
17. WHERE A PRESSURE MANHOLE SHAFT – 914 mm (36") WITHOUT REDUCER IS SPECIFIED REFER TO SPPWC 329.
18. THE FOLLOWING SPPWC ARE INCORPORATED HEREIN:
    - 324 MANHOLE SHAFT – WITH ECCENTRIC REDUCER
    - 326 MANHOLE SHAFT – 900 mm (36") WITHOUT REDUCER
    - 328 PRESSURE MANHOLE SHAFT – WITH ECCENTRIC REDUCER
    - 329 PRESSURE MANHOLE SHAFT – 914 mm (36") WITHOUT REDUCER
    - 630 610 mm (24") MANHOLE FRAME AND COVER
    - 633 914 mm (36") MANHOLE FRAME AND COVER
    - 635 STEEL STEP
    - 636 POLYPROPYLENE PLASTIC STEP

SHEET 3 OF 4

STANDARD PLANS FOR PUBLIC WORKS CONSTRUCTION

**MANHOLE – PIPE TO PIPE (LARGE SIDE INLET)**

STANDARD PLAN 322-3
SHEET 4 OF 4

CASE 3
REINFORCED CONCRETE PIPE

NOTES:
CASE 3 BEDDING & BACKFILL AROUND RCP (LOAD FACTOR 2.2 TO 2.5)
(a) W AT SPRING LINE SHALL NOT BE LESS THAN THE FOLLOWING: 6" (150 mm) FOR RCP 60" (1500 mm) OR LESS IN DIAMETER, 10" (250 mm) FOR RCP 63" (1575 mm) TO 108" (2700 mm) INCLUSIVE IN DIAMETER, AND 12" (300 mm) FOR PIPE LARGER THAN 108" (2700 mm) IN DIAMETER. THESE DIMENSIONS MAY INCLUDE THE THICKNESS OF ANY SHEETING.
(b) WHERE COVER IS GREATER THAN 10'-0" (3 m), W MEASURED AT TOP OF PIPE SHALL NOT BE GREATER THAN 10" (250 mm) FOR RCP 108" (2700 mm) IN DIAMETER OR LESS, OR 12" (300 mm) FOR RCP OVER 108" (2700 mm) IN DIAMETER. THESE DIMENSIONS INCLUDE THE THICKNESS OF ANY SHEETING.
(c) SCREED BEDDING MATERIAL TO FIT CURVATURE AND GRADE OF RCP. TYPE OF SCREED AND THE METHOD OF USE TO BE APPROVED BY THE ENGINEER.
(d) BEDDING MATERIAL BELOW THE SPRING LINE FOR RCP 54" (1350 mm) OR LARGER SHALL BE COMPACTED BEFORE PLACING BEDDING MATERIAL ABOVE THE SPRING LINE.

CASE 4

NOTE:
CASE 4 BEDDING (LOAD FACTOR 3.0)
WHERE REQUIRED BY THE ENGINEER AS AN ALTERNATIVE TO CASE 1 OR CASE 5 TO MEET CONDITIONS ARISING DURING CONSTRUCTION.

CASE 5

NOTE:
CASE 5 BEDDING (LOAD FACTOR 2.7)
SHALL BE USED WHERE SPECIFIED ON THE PLANS. CASE 4 BEDDING SHALL BE USED INSTEAD OF CASE 5 AGAINST SHEETING OR UNSTABLE TRENCH WALLS IF SO REQUIRED BY THE ENGINEER.

LOS ANGELES COUNTY DEPARTMENT OF PUBLIC WORKS

**PIPE BEDDING IN TRENCHES**

STANDARD PLAN 3080-3
SHEET 2 OF 3

**NOTES:**
1. V, $D_1$, $D_2$ AND ELEVATION "A" SHALL BE SHOWN ON THE CONSTRUCTION PLANS.
2. GRATE ASSEMBLY SHALL BE FABRICATED TO FIT C.S.P. OF SIZE "$D_2$".
3. GRATE ASSEMBLY SHALL BE GALVANIZED AFTER FABRICATION.
4. R.C.P. SHALL BE SIZED TO FIT FUTURE CATCH BASIN DESIGN.
5. GRATE ASSEMBLY SHALL BE FABRICATED TO FIT THE OUTSIDE DIAMETER OF STANDARD JUNCTION STRUCTURE SHAFT IF INDICATED ON CONSTRUCTION PLANS.

| 144" (3600 mm) | 18" (455 mm) |

| TABLE OF VALUES FOR M (SEE NOTE 1) | | | | |
|---|---|---|---|---|
| SECTION | PAVED STREET | | UNPAVED STREET | |
| | MAX | MIN | MAX | MIN |
| A-A | | 2'-10 1/2" (867 mm) | | 3'-6" (1060 mm) |
| C-C | 11" (282 mm) | 8 1/2" (217 mm) | 16" (410 mm) | 15" (380 mm) |

NOTES

1. WHEN DEPTH M FROM STREET GRADE TO THE TOP OF THE BOX IS LESS THAN 2'-10 1/2" (867 mm) FOR PAVED STREETS OR 3'-6" (1060 mm) FOR UNPAVED STREETS, CONSTRUCT MONOLITHIC SHAFT PER SECTION C-C AND DETAIL "N". SHAFT FOR ANY DEPTH OF MANHOLE MAY BE CONSTRUCTED PER SECTION C-C. WHEN DIAMETER $D_1$ IS 48" (1200 mm) OR LESS, CENTER OF SHAFT MAY BE LOCATED PER NOTE 2.
2. CENTER OF MANHOLE SHAFT SHALL BE LOCATED OVER CENTER LINE OF STORM DRAIN WHEN DIAMETER $D_1$ IS 48" (1200 mm) OR LESS, IN WHICH CASE PLACE E BARS SYMMETRICALLY AROUND SHAFT AT 45° WITH CENTERLINE AND OMIT J BARS.
3. L AND P SHALL HAVE THE FOLLOWING VALUES UNLESS OTHERWISE SHOWN ON THE PROJECT DRAWINGS:
   A. $D_2$=96" (2400 mm) OR LESS, L=5'-6" (1.7 m), P=5" (130 mm)
   B. $D_2$ OVER 96" (2400 mm), L=6'-0" (1.8 m), P=8" (210 mm)
   L MAY BE INCREASED OR LOCATION OF MANHOLE SHIFTED TO MEET PIPE ENDS. WHEN L GREATER THAN THAT SHOWN ABOVE IS SPECIFIED, D BARS SHALL BE CONTINUED 6" (150 mm) OC.
4. STATIONS OF MANHOLES SHOWN ON PLANS APPLY AT CENTERLINE OF SHAFT. ELEVATIONS ARE SHOWN AT CENTERLINE OF SHAFT AND REFER TO THE PROLONGED INVERT GRADE LINES.
5. REINFORCEMENT SHALL CONFORM TO ASTM A 615M, GRADE 300 (ASTM A 615, GRADE 40), AND SHALL TERMINATE 1 1/2" (40 mm) CLEAR OF CONCRETE SURFACES UNLESS OTHERWISE SHOWN.
6. FLOOR OF MANHOLE SHALL BE STEEL TROWELED TO SPRING LINE.
7. BODY OF MANHOLE SHALL BE POURED IN ONE CONTINUOUS OPERATION EXCEPT THAT A CONSTRUCTION JOINT WITH A LONGITUDINAL KEYWAY MAY BE PLACED AT SPRING LINE.
8. THICKNESS OF THE DECK SHALL VARY WHEN NECESSARY TO PROVIDE A LEVEL SEAT BUT SHALL NOT BE LESS THAN THE TABULAR VALUES FOR F SHOWN ON SHEET 2.
9. D BARS SHALL BE #4 (#13M) FOR $D_2$=39" (975 mm) OR LESS, #5 (#16M) FOR $D_2$= 42" (1050 mm) TO 84" (2100 mm) INCLUSIVE AND #6 (#19M) FOR $D_2$= 90" (2250 mm) OR OVER.
10. CENTERLINE OF INLET PIPE SHALL INTERSECT INSIDE FACE OF CONE AT SPRING LINE UNLESS OTHERWISE SHOWN.
11. STEPS SHALL CONFORM TO SPPWC 635 OR 636. UNLESS OTHERWISE SHOWN, STEPS SHALL BE UNIFORMLY SPACED 14" (350 mm) TO 15" (375 mm) OC. THE LOWEST STEP SHALL NOT BE MORE THAN 24" (600 mm) ABOVE THE INVERT.
12. THE FOLLOWING CRITERIA SHALL BE USED FOR THIS MANHOLE:
   A. MAIN LINE = 36" (900 mm) INSIDE DIAMETER OR LARGER. EXCEPT IF THE MAIN LINE RCP DOWNSTREAM OF MANHOLE IS 36" (900 mm) TO 42" (1050 mm) INSIDE DIAMETER AND THE MAIN LINE RCP UPSTREAM IS 33" (825 mm) OR LESS SPPWC 321 SHALL BE USED.
   B. THE OUTSIDE DIAMETER OF THE LATERAL MUST BE LESS THAN OR EQUAL TO 1/2 THE INSIDE DIAMETER OF THE MAIN LINE. IF THE UPSTREAM AND DOWNSTREAM DIAMETERS OF THE MANHOLE ARE NOT THE SAME, THE GOVERNING INSIDE DIAMETER OF THE MAIN LINE SHALL BE CONSIDERED TO BE THAT WHERE THE EXTENDED CENTERLINE OF THE LATERAL ENTERS THE MANHOLE.
   C. IN NO INSTANCE SHALL THE INSIDE DIAMETER OF THE LATERAL TO THE MANHOLE BE GREATER THAN 30" (750 mm).
13. MANHOLE FRAME AND COVER SHALL CONFORM TO SPPWC 630 UNLESS OTHERWISE SHOWN.
14. MANHOLE SHAFT SHALL CONFORM TO SPPWC 324 UNLESS OTHERWISE SHOWN.
15. WHERE A MANHOLE SHAFT – 36" (900 mm) WITHOUT REDUCER IS SPECIFIED REFER TO SPPWC 326.
16. WHERE A PRESSURE MANHOLE SHAFT – WITH ECCENTRIC REDUCER IS SPECIFIED REFER TO SPPWC 328.
17. WHERE A PRESSURE MANHOLE SHAFT – 914 mm (36") WITHOUT REDUCER IS SPECIFIED REFER TO SPPWC 329.
18. THE FOLLOWING SPPWC ARE INCORPORATED HEREIN:
   324 MANHOLE SHAFT – WITH ECCENTRIC REDUCER
   326 MANHOLE SHAFT – 36" (900 mm) WITHOUT REDUCER
   328 PRESSURE MANHOLE SHAFT – WITH ECCENTRIC
   329 PRESSURE MANHOLE SHAFT 36" (914 mm) WITHOUT REDUCER
   630 24" (610 mm) MANHOLE FRAME AND COVER
   633 36" (914 mm) MANHOLE FRAME AND COVER
   635 STEEL STEP
   636 POLYPROPYLENE PLASTIC STEP

CONCRETE COLLAR FOR RCP
12" (300 mm) THROUGH 72" (1800 mm)
USE WITH STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION
STANDARD PLAN 380-4
SHEET 1 OF 2

NOTES

1. A CONCRETE COLLAR IS REQUIRED WHERE THE CHANGE IN GRADE EXCEEDS 10%.
2. FOR CURVE JOINTS (SEE DETAIL B, SHEET 1)
   IF THE EXTREME ENDS OF THE PIPE LEAVE A CLEAR SPACE THAT IS GREATER THAN 1" (25 mm), BUT IS LESS THAN 3" (75 mm) A CONCRETE COVER IS REQUIRED IN ACCORDANCE WITH SSPWC 306-7.3.2.1.
   IF THE EXTREME ENDS OF THE PIPE LEAVE A CLEAR SPACE THAT IS EQUAL TO OR GREATER THAN 3" (75 mm), BUT LESS THAN 6" (150 mm), A CONCRETE COLLAR IS REQUIRED. IF THE CLEAR SPACE IS 6" (150 mm) OR GREATER, A TRANSITION STRUCTURE IS REQUIRED.
3. CONCRETE COLLAR SHALL NOT BE USED FOR A SIZE CHANGE ON THE MAIN LINE.
4. CONNECTOR PIPES
   A. WHERE PIPES OF DIFFERENT DIAMETERS ARE JOINED WITH A CONCRETE COLLAR, L AND T SHALL BE THOSE OF THE LARGER PIPE. D=$D_1$ OR $D_2$ WHICHEVER IS GREATER.
   B. WHEN $D_1$ IS EQUAL TO OR LESS THAN $D_2$ JOIN INVERTS AND WHEN $D_1$ IS GREATER THAN $D_2$ JOIN SOFFITS.
5. FOR PIPE LARGER THAN 72" (1800 mm) SPECIAL COLLAR DETAILS ARE REQUIRED.
6. FOR PIPE SIZE NOT LISTED USE NEXT SIZE LARGER.
7. REINFORCEMENT SHALL CONFORM TO ASTM A 615 (A 615 M) GRADE 40 (300).
8. WHERE REINFORCING IS REQUIRED THE DIAMETER OF THE CIRCULAR TIES SHALL BE D=(2X WALL THICKNESS) + T.
9. REINFORCING SHALL BE USED WHERE THE PIPE DIAMETER IS GREATER THAN 21" (525 mm) AND ON ALL PIPES WHERE THE SPACES BETWEEN THE EXTREME OUTER ENDS IS 3" (75 mm) OR LARGER.

CIRCULAR TIES:

| PIPE DIAMETER | NO. OF CIRCULAR TIES |
|---|---|
| 21" (525 mm) OR LESS | 3 |
| 24" (600 mm) TO 30" (750 mm) | 3 |
| 33" (825 mm) TO 57" (1425 mm) | 4 |
| 60" (1500 mm) TO 72" (1800 mm) | 5 |

WHERE THE SPACE BETWEEN PIPE ENDS EXCEEDS 3" (75 mm), THE NUMBER OF CIRCULAR TIES SHALL BE INCREASED TO MAINTAIN AN APPROXIMATE SPACING OF 6" (150 mm) O.C.

10. WHERE THE PIPE IS 21" (525 mm) OR LESS IN DIAMETER AN INTERIOR FORM OF UNSEALED SONO-TUBE OR EQUAL SHALL BE USED TO PROVIDE A SMOOTH INTERIOR JOINT. THE PAPER FORM MAY BE LEFT IN PLACE (SEE DETAIL A). WHEN THE PIPE IS 24" (600 mm) OR LARGER A REMOVABLE INTERIOR FORM SHALL BE USED OR THE INTERIOR JOINT SHALL BE COMPLETELY FILLED WITH MORTAR AND NEATLY POINTED.

| 24" (600 mm) | 14 |

CASE 3
RCP OR CSP
D = 24" (600 mm) MAX.

STANDARD PLANS FOR PUBLIC WORKS CONSTRUCTION
PIPE CONNECTIONS TO EXISTING STORM DRAINS
STANDARD PLAN 335-2
SHEET 2 OF 3

NOTES

CASE 1 AND CASE 3

1. OUTSIDE DIAMETER OF THE CONNECTOR PIPE SHALL NOT BE GREATER THAN 1/2 THE INSIDE DIAMETER OF THE RCP MAIN LINE.
2. INSIDE DIAMETER D OF THE CONNECTOR PIPE SHALL NOT BE GREATER THAN 24" (600 mm).
3. THE MINIMUM OPENING INTO THE EXISTING STORM DRAIN SHALL BE THE OUTSIDE DIAMETER OF THE CONNECTING PIPE PLUS 1" (30 mm). THE CONCRETE BACKFILL SUPPORTING THE CONNECTING PIPE MAY BE OMITTED IF THE PIPE IS LAID ON UNDISTURBED EARTH TO STORM DRAIN WALL.
4. ALL CSP AND FITTINGS SHALL BE GALVANIZED. BAND CONNECTORS MAY BE 2 GAGES LIGHTER THAN THE PIPE, BUT WITH A MINIMUM GAGE OF 16. THEY SHALL BE CONNECTED AT THE ENDS BY ANGLES HAVING MINIMUM DIMENSIONS OF 2"x2"x3/16" (50 mm x 50 mm x 5 mm) AND 5 1/2" (140 mm) BOLTS.
5. WHEN JOINING A RCP CONNECTOR PIPE TO A CSP CONNECTOR PIPE, THE INSIDE DIAMETER D OF THE CSP SHALL BE AT LEAST EQUAL TO BUT NOT MORE THAN 3" (75 mm) GREATER THAN THAT OF THE RCP.
6. CONNECTOR PIPES SHALL BE NOT MORE THAN 5' (1.5 m) ABOVE THE INVERT.
7. CONNECTOR PIPES SHALL ENTER MAIN LINE RCP RADIALLY.
8. WHEN CONNECTING TO A RCB, SPPWC 333 SHALL BE USED IF THE TOP OF THE CONNECTOR PIPE IS LESS THAN 12" (300 mm) BELOW THE SOFFIT OF THE RCB OR THE FLOW LINE OF THE PIPE IS LESS THAN 13" (330 mm) ABOVE THE FLOOR OF THE RCB AT THE INSIDE FACE.

CASE 2

9. SADDLE CONNECTIONS SHALL BE USED WHEN CONNECTING TO PIPES 21" (525 mm) OR LESS IN DIAMETER WITHOUT THE USE OF JUNCTION STRUCTURES OR PRECAST Y BRANCHES.
10. TRIM OR CUT SADDLE TO FIT SNUGLY OVER THE OUTSIDE OF THE MAIN PIPE SO ITS AXIS WILL BE ON THE LINE AND GRADE OF THE CONNECTING PIPE.
11. THE OPENING INTO THE PIPE SHALL BE CUT AND TRIMMED TO FIT THE SADDLE SO THAT NO PART WILL PROJECT WITHIN THE BORE OF THE SADDLE PIPE.
12. THE CONNECTOR PIPE SHALL BE SUPPORTED AS SHOWN IN CASE 1 AND CASE 3.

STANDARD PLANS FOR PUBLIC WORKS CONSTRUCTION

PROMULGATED BY THE PUBLIC WORKS STANDARDS INC. GREENBOOK COMMITTEE 1992 REV. 1995, 2009

**MANHOLE SHAFT SAFETY LEDGE**

USE WITH STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION

STANDARD PLAN 330–2

SHEET 1 OF 2

NOTES

1. MANHOLE SHAFT SAFETY LEDGE WILL BE NOTED ON THE PLANS WHEN REQUIRED. IT IS TO BE CONSTRUCTED WHEN DEPTH OF MANHOLE TO INVERT IS GREATER THAN 20' (6 m) AND MANHOLE SHAFT IS GREATER THAN 10' (3 m).
2. A SAFETY LEDGE SHALL NOT BE USED IF A PRESSURE MANHOLE IS REQUIRED.
3. STEPS SHALL CONFORM TO SPPWC 635 OR 636 AND SHALL BE ANCHORED 4" (100 mm) IN THE WALL OF THE STRUCTURE. STEPS SHALL BE PLACED TO MATCH THE SPACING OF THE MANHOLE SHAFT.
4. REINFORCEMENT SHALL BE PER ASTM A 615, GRADE 40 (ASTM A 615M, GRADE 300) AND SHALL TERMINATE 2" (50 mm) CLEAR OF CONCRETE SURFACE UNLESS OTHERWISE SHOWN.
5. GROUT HOLES, PIPE AND FITTINGS SHALL BE PROVIDED IN THE FLOOR SLAB. PRESSURE GROUTING SHALL BE USED TO FILL VOIDS AND TO SECURE UNIFORM BEARING. THE GROUT SHALL BE NEAT CEMENT GROUT AND GROUTING PRESSURES SHALL BE AS DETERMINED IN THE FIELD BY THE ENGINEER.
6. PIPE RAIL SHALL BE FABRICATED OF 1 1/4" (32 mm) STANDARD GALVANIZED PIPE COMPOSED OF TWO SECTIONS 7'–6" (2.25 m) & 18" (450 mm) IN LENGTH JOINED BY A GALVANIZED COUPLING. THE COUPLING SHALL BE THREADED A MINIMUM OF 2" (50 mm) ON EACH PIPE LENGTH.
7. ROOF AND FLOOR SLABS SHALL BE PRECAST AND KEYED FOR REINFORCED CONCRETE PIPE SECTIONS AS SHOWN. ALL JOINTS SHALL BE FILLED WITH CLASS C MORTAR AND NEATLY POINTED OR WIPED ON THE INSIDE.
8. 72" (1800 mm) RCP SHALL BE PROVIDED WITH TWO CIRCULAR CAGES OF REINFORCEMENT.
9. THE FOLLOWING SPPWC ARE INCORPORATED HEREIN:

   324 MANHOLE SHAFT – WITH ECCENTRIC REDUCER
   326 MANHOLE SHAFT – 36" (900 mm) WITHOUT REDUCER
   635 STEEL STEP
   636 POLYPROPYLENE PLASTIC STEP

STANDARD PLANS FOR PUBLIC WORKS CONSTRUCTION

**MANHOLE SHAFT SAFETY LEDGE**

STANDARD PLAN 330–2

SHEET 2 OF 2

STANDARD PLANS FOR PUBLIC WORKS CONSTRUCTION

PROMULGATED BY THE PUBLIC WORKS STANDARDS INC. GREENBOOK COMMITTEE 1992 REV. 1995, 2009

**TRANSITION STRUCTURE RCB TO PIPE**

USE WITH STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION

STANDARD PLAN 342–2

SHEET 1 OF 2

NOTES

1. THE HORIZONTAL ANGLE OF DIVERGENCE OR CONVERGENCE, θ, SHALL NOT EXCEED 5° 45'.
2. REINFORCING STEEL BAR SIZES, SPACING, PATTERN AND COVER OVER THE STEEL SHALL BE AS FOLLOWS:
   RCB TO RCP AND RCB TO ARCH – THAT OF RCB SECTION.
   ARCH TO RCP – THAT OF ARCH SECTION.
   ARCH TO ARCH – THAT OF ARCH SECTION HAVING THE THICKER WALLS. THE BAR LENGTHS SHALL VARY UNIFORMLY THROUGHOUT THE TRANSITION.
3. THE CONCRETE THICKNESS SHALL BE AS FOLLOWS:
   RCB TO RCP AND ARCH TO RCP – THAT OF ARCH OR RCB SECTION UNLESS THE WALL THICKNESS OF THE RCP PLUS 100 mm (4") GREATER, IN WHICH CASE THE CONCRETE THICKNESS SHALL VARY UNIFORMLY FROM THAT OF THE ARCH OR RCB SECTION TO THAT OF THE RCP WALL PLUS 100 mm (4").

   RCB TO ARCH AND ARCH TO ARCH – THAT OF THE ADJOINING RCB OR ARCH SECTION AT EACH END OF THE TRANSITION AND SHALL VARY UNIFORMLY BETWEEN THE TWO ENDS.
4. THE INTERIOR SURFACE SHALL BE SMOOTH AND VARY UNIFORMLY BETWEEN THE TWO ADJOINING SECTIONS.
5. AT RCP JUNCTURE, EMBEDMENT P SHALL BE 130 mm (5") FOR PIPE SIZE OF 2400 mm (96") OR LESS, AND 200 mm (8") FOR PIPE SIZES OVER 2400 mm (96").
6. $f'_c$ = 28 MPa (4000 PSI) AT 28 DAYS AND THE CONCRETE SHALL BE THE SAME MIX AS THE ADJACENT RCB.
7. ALL STEEL, EXCEPT LONGITUDINAL STEEL SHALL BE GRADE 400 (60) BILLET STEEL CONFORMING TO ASTM A 615 M (A 615) AND SHALL TERMINATE 40 mm (1 1/2") CLEAR OF CONCRETE SURFACE UNLESS OTHERWISE SHOWN.
8. KEYED CONSTRUCTION JOINTS OF THE SAME DIMENSIONS AS THOSE OF THE RCB OR ARCH SECTION MAY BE CARRIED THROUGH THE TRANSITION STRUCTURE AT THE CONTRACTOR'S OPTION. SEE SECTION B–B.
9. THE TRANSITION STRUCTURE SHALL BE CONSTRUCTED IN ACCORDANCE THE STRUCTURAL NOTES APPLYING TO RCB OR ARCH STRUCTURES SHOWN ON THE PLANS.

STANDARD PLANS FOR PUBLIC WORKS CONSTRUCTION

**TRANSITION STRUCTURE RCB TO PIPE**

GENERAL NOTES

1. CONTECH TO PROVIDE ALL MATERIALS UNLESS NOTED OTHERWISE.
2. FOR SITE SPECIFIC DRAWINGS WITH DETAILED STRUCTURE DIMENSIONS AND WEIGHT, PLEASE CONTACT YOUR CONTECH ENGINEERED SOLUTIONS LLC REPRESENTATIVE. www.ContechES.com
3. CDS WATER QUALITY STRUCTURE SHALL BE IN ACCORDANCE WITH ALL DESIGN DATA AND INFORMATION CONTAINED IN THIS DRAWING. CONTRACTOR TO CONFIRM STRUCTURE MEETS REQUIREMENTS OF PROJECT.
4. STRUCTURE SHALL MEET AASHTO HS20 LOAD RATING, ASSUMING EARTH COVER OF 0' - 2', AND GROUNDWATER ELEVATION AT, OR BELOW, THE OUTLET PIPE INVERT ELEVATION. ENGINEER OF RECORD TO CONFIRM ACTUAL GROUNDWATER ELEVATION. CASTINGS SHALL MEET AASHTO M306 AND BE CAST WITH THE CONTECH LOGO.
5. IF REQUIRED, PVC HYDRAULIC SHEAR PLATE IS PLACED ON SHELF AT BOTTOM OF SCREEN CYLINDER. REMOVE AND REPLACE AS NECESSARY DURING MAINTENANCE CLEANING.
6. CDS STRUCTURE SHALL BE PRECAST CONCRETE CONFORMING TO ASTM C-478 AND AASHTO LOAD FACTOR DESIGN METHOD.

INSTALLATION NOTES

A. ANY SUB-BASE, BACKFILL DEPTH, AND/OR ANTI-FLOTATION PROVISIONS ARE SITE-SPECIFIC DESIGN CONSIDERATIONS AND SHALL BE SPECIFIED BY ENGINEER OF RECORD.
B. CONTRACTOR TO PROVIDE EQUIPMENT WITH SUFFICIENT LIFTING AND REACH CAPACITY TO LIFT AND SET THE CDS MANHOLE STRUCTURE.
C. CONTRACTOR TO INSTALL JOINT SEALANT BETWEEN ALL STRUCTURE SECTIONS AND ASSEMBLE STRUCTURE.
D. CONTRACTOR TO PROVIDE, INSTALL, AND GROUT INLET AND OUTLET PIPE(S). MATCH PIPE INVERTS WITH ELEVATIONS SHOWN. ALL PIPE CENTERLINES TO MATCH PIPE OPENING CENTERLINES.
E. CONTRACTOR TO TAKE APPROPRIATE MEASURES TO ASSURE UNIT IS WATER TIGHT, HOLDING WATER TO FLOWLINE INVERT MINIMUM. IT IS SUGGESTED THAT ALL JOINTS BELOW PIPE INVERTS ARE GROUTED.

1"=1'-0"

## CONCRETE TYPE LEGEND:

INDICATES BAR-REINFORCED STRUCTURAL CONCRETE CONFORMING TO THE REQUIREMENTS FOR "MODERATE EXPOSURE" IN TABLE 201-1.1.3 OF THE STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION (2021 EDITION).

## NOTES:

1. FOR HORIZONTAL AND VERTICAL ALIGNMENT INFORMATION NOT SHOWN, SEE THE PLAN AND PROFILE SHEETS AND IMPROVEMENT PLANS FOR THE ADJOINING RCB's.
2. MODIFICATIONS TO CALTRANS STANDARD PLAN No. D80 ARE LIMITED TO THE ADDITION OF THE REINFORCED CONCRETE DIVERSION WALL ANCHORED TO THE REINFORCED CONCRETE INVERT SLAB.
3. MANHOLE RISERS, RINGS, FRAME AND COVER PER CITY OF ONTARIO STANDARD DRAWINGS.
4. CONSTRUCT RCB WITH IN ACCORDANCE WITH THE "FLAT INVERT" ALTERNATIVE PER CALTRANS STD PLAN D80.
5. FOR T1, T2, T3, BAR REINFORCEMENT AND INFORMATION NOT SHOWN, SEE CALTRANS STD PLAN D80.
6. CONNECTION OF LATERAL "LINE C-1A" TO RCB DIVERSION STRUCTURE SHALL BE CONSTRUCTED PER SPPWC STANDARD PLAN No. 333-2 AND THE FOLLOWING VALUES:
   B = 24" / C = 5'-0" / ELEVATION "S" = 639.21 / ELEVATION "R" = 639.19
7. ANY LAP SPLICES IN BAR REINFORCEMENT MUST BE A MINIMUM OF 60 BAR DIAMETERS IN LENGTH.
8. FOR CALTRANS STANDARD PLAN D80 AND D82, SEE SHEET 16.

CIVIL
STATE OF CALIFORNIA

THE STATE OF CALIFORNIA OR ITS OFFICERS OR AGENTS SHALL NOT BE RESPONSIBLE FOR THE ACCURACY OR COMPLETENESS OF SCANNED COPIES OF THIS PLAN SHEET.

NOTES:

1. For boxes with span or height less than any of those shown in table, use next greater size box concrete dimensions and reinforcement. Make necessary changes in bar lengths and quantities.
2. Quantities are approximate and for design purposes only.
3. For boxes with span or height or cover greater than those shown in tables, a special design is required.
4. It is permissible to eliminate the 180° hooks on every other bar.
5. Provide paving notch when top is exposed and when pavement is concrete, and adjust quantities.
6. For design and details not shown, see Standard Plan D88.
7. Soil pressures shown are factored per AASHTO LRFD BDS and include soil weight of fill over box, self weight of box, and live load where applicable.
8. Stagger rebars for wall thickness less than 8".

| "I" BARS, FOR EARTH COVERS UP TO AND INCLUDING 10'-0" | | | | | | | |
|---|---|---|---|---|---|---|---|
| SPAN | 4' | 5' | 6' | 7' | 8' | 10' | 12' | 14' |
| NUMBER | 7 | 8 | 9 | 10 | 11 | 12 | 15 | 20 |

NOTE: For earth cover over 10'-0", use #4 @ 12 Max spacing for "I" bars.

**CAST-IN-PLACE REINFORCED CONCRETE SINGLE BOX CULVERT**

NO SCALE

**D80**

2-8-23

2023 STANDARD PLAN D80

234

DESIGN NOTES:

Design Specifications:
AASHTO LRFD Bridge Design Specifications, 8th Edition and CA Amendments.

Loading:
Live loads (AASHTO LRFD 3.6.1.2) and CA Amendments 3.6.1.8:
HL-93 design truck or design tandem
P15 Permit Design Vehicle

Impact Factor (Apply to roof slab only)
$IM = 33(1.0-0.125D_E) \geq 0\%$ (AASHTO LRFD 3.6.2.2)
$D_E$ = minimum depth of earth cover

Earth load:
Earth pressure for two conditions:
140 pcf vertical, 36 pcf horizontal
140 pcf vertical, 120 pcf horizontal

Load Factors:
AASHTO-CA BDS-8 Table 3.4.1.1 & Table 3.4.1.2

Unit stresses:
$f_c$ = 3600 psi
$f_y$ = 60,000 psi

Distribution "I" bars:
Up to and including 10'-0" cover
Express as a percentage of main positive reinforcement required. $\frac{100}{\sqrt{S}}$, Max 50%,
S = span
Over 10'-0" cover, # 4 @ 12 maximum

Shear:
For Slabs less than 16" thick and fill ≥ 2'-0"
$V_c = (0.0676\sqrt{f'c} + \frac{6A \cdot V_u d_v}{B_w \cdot M_u})b_w d_v \leq 0.126\sqrt{f'c}b_w d_v$ (Kips)
$V_c$ shall not be less than $0.0948\lambda\sqrt{f'c}b_w d_v$ for frame
For all other members
$Vc = 0.0316\beta\lambda\sqrt{f'c}b_w d_v$ (Kips)
$\beta$ = 2.0 for members less than 16" thick
= based on iterative $\theta$ and $\beta$ method for all other cases

Control of cracking by distribution of reinforcement:
Class 2 exposure environment Service Limit State

CONSTRUCTION NOTES:

Construction loads:
Strutting required as shown on Standard Plan D88.
Strutting may be required on culvert extensions when existing parapet is removed.

Expansion joints:
Invert:
No expansion joints shall be permitted.

Roof and Walls:
When cover is less than span length-
Place ½" premolded expansion joint filler at 30'-0" ± centers outside the paved roadway lanes and place Bridge Detail 3-2, Standard Plan BD-3, at 30'-0" centers under paved roadway lanes.
When cover is more than span length-
Place ½" premolded expansion joint filler at 30'-0"± centers and additional ½" premolded expansion joints at locations of change in foundation character, as directed by the Engineer.

Construction joints:
Temporary joints may be permitted if normal (or radial) to ℄ of RCB. Otherwise, the contractor is to submit a proposal for consideration.

Cutoff walls:
4'-0" cutoff walls are to be provided at inlet and/or outlet unless adjacent channel is lined and unless otherwise shown. These walls are to be extended if scour conditions warrant.

Earthwork:
See Standard Plan A62E.

Backfill:
See Standard Specifications, except that the difference in level of backfill (against outside walls) shall not exceed 2'-0".

BARRIER SECTION (30'-0" MINIMUM)

GENERAL NOTES:

Designation:
Standard single or multiple box culverts are shown on plans as span times height with maximum cover over roof thus: 8' x 5' RCB with 10' or double 10' x 5' RCB with 20', followed by alternatives.

Alternatives:
Single cell invert will be sloped unless "trapezoidal invert", "flat invert", or "V invert" is included in designation.
Multiple cell invert will be vee unless "flat invert" is specified. Ends of culvert will be rounded unless "square ends" are designated. Parapets will be as shown unless designated in plans. Such designations may be different for inlet and outlet ends.

Quantities:
Quantities do not include the following:
• Concrete for parapet, paving notches, and cut-off wall.
• Reinforcement for 2% splices, parapets, paving notches, cut-off wall, and additional required bars for exposed top slab.

Reinforcement placement:
Main reinforcement is to be placed transversely or, for curved culverts, radially. When radial, reinforcing spacing of the "a" and "f" bars is measured along the centerline. Stagger splices not shown. Hooks may be rotated or tilted, as necessary, for clearance.

Special reinforcement coverage:
Box standard plans are not to be used for culverts in a corrosive environment or where there is a severe abrasive flow condition or in freeze-thaw locations.

Special design:
Required for culverts with conditions, loads, design bearing pressures, or sizes greater than those given on this plan and Standard Plans D80 and D81. Also required for multiple cell culverts with unequal spans. For culverts with railroad loading, see the current AREMA design specification.

Three or more cells:
For culverts with more than two cells, use dimensions and reinforcement for the standard "double box culvert". Reduce spacing of "f" bars and "b" bars by ½" and adjust quantities accordingly.

SINGLE SPAN MULTIPLE SPAN

PARAPET DETAIL

| PARAPET "p" BARS | | |

## IN THE CITY OF ONTARIO

## CITY OF ONTARIO GENERAL NOTES:

1. ALL WORK SHALL BE DONE IN STRICT CONFORMANCE WITH THE CURRENT CITY OF ONTARIO STANDARD SPECIFICATIONS AND STANDARD DRAWINGS AND CURRENT STANDARD SPECIFICATIONS AND STANDARD PLANS FOR PUBLIC WORKS CONSTRUCTION AND CALTRANS PERMIT UNLESS OTHERWISE APPROVED BY THE CITY ENGINEER.
2. ANY CONTRACTOR PERFORMING WORK ON THIS PROJECT SHALL FAMILIARIZE HIMSELF/HERSELF WITH THE SITE AND SHALL BE SOLELY RESPONSIBLE FOR ANY DAMAGE TO EXISTING FACILITIES RESULTING DIRECTLY OR INDIRECTLY FROM HIS/HER OPERATIONS, WHETHER OR NOT THE FACILITY IS SHOWN ON THESE PLANS.
3. ALL OBSTRUCTIONS WITHIN THE AREA TO BE IMPROVED SHALL BE REMOVED AND/OR RELOCATED AT THE DIRECTION OF THE CITY ENGINEER. UTILITIES ARE TO BE RELOCATED BY THEIR RESPECTIVE OWNERS UNLESS NOTED OTHERWISE. THE CONTRACTOR IS REFERRED TO SECTION 5 OF THE STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION.
4. UTILITY LINE LOCATIONS WERE TAKEN FROM AVAILABLE RECORD DATA AND WERE NOT LOCATED IN THE FIELD, UNLESS OTHERWISE NOTED ON THE PLAN. THE CONTRACTOR IS REFERRED TO SECTION 5 OF THE STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION.
5. IN CASE OF ANY ACCIDENTS INVOLVING SAFETY MATTERS COVERED BY SECTION 6409(B) OF THE CALIFORNIA LABOR CODE, THE CONTRACTOR SHALL IMMEDIATELY NOTIFY THE STATE DIVISION OF INDUSTRIAL SAFETY.
6. STATE LAW (SB 3019) REQUIRES THE CONTRACTOR TO CONTACT UNDERGROUND SERVICE ALERT AND OBTAIN AN IDENTIFICATION NUMBER PRIOR TO THE ISSUANCE OF CITY'S ENCROACHMENT PERMITS. THE CONTRACTOR SHALL NOTIFY UNDERGROUND SERVICE ALERT AT 1-800-422-4133 A MINIMUM OF 48-HOURS IN ADVANCE OF ANY CONSTRUCTION ACTIVITY.
7. PRIOR TO THE START OF ANY WORK THE CONTRACTOR SHALL OBTAIN A BUSINESS LICENSE FROM THE CITY OF ONTARIO. THE CONTRACTOR SHALL OBTAIN AN ENCROACHMENT PERMIT FROM THE ENGINEERING DEPARTMENT NO LESS THAN 48 HOURS PRIOR TO START OF ANY CONSTRUCTION WITHIN THE PUBLIC RIGHT-OF-WAY.
8. THE CONTRACTOR SHALL OBTAIN A TRAFFIC CONTROL PERMIT 48 HOURS PRIOR TO TIME OF CONSTRUCTION WITHIN THE PUBLIC RIGHT-OF-WAY. THE CONTRACTOR IS REFERRED TO SECTION 7-10.3 OF THE STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION.
9. THE CONTRACTOR SHALL RENEW OR REPLACE ANY EXISTING TRAFFIC STRIPING AND/OR PAVEMENT MARKINGS, WHICH DURING HIS OPERATIONS HAVE BEEN EITHER REMOVED OR THE EFFECTIVENESS OF WHICH HAS BEEN REDUCED. RENEWAL OF TRAFFIC STRIPING AND MARKINGS SHALL BE DONE USING REFLECTIVE THERMO-PLASTIC MARKINGS IN CONFORMANCE WITH SECTION 84 & 85 OF THE CALTRANS STANDARD SPECIFICATIONS AND AS DIRECTED BY THE ENGINEER. ALL REGULATORY, WARNING, AND GUIDE SIGNS SHALL HAVE 3M DIAMOND, VIP GRADE SHEETING WITH SERIES 1160 PROTECTIVE OVERLAY FILM.
10. THE LAND SURVEYORS ACT, SECTION 8771 OF THE BUSINESS & PROFESSIONAL CODE, AND SECTIONS 732.5, 1492-5, 1810-5 OF THE STREETS AND HIGHWAY CODE REQUIRE THAT SURVEY MONUMENTS SHALL BE PROTECTED AND PERPETUATED.

    "IT SHALL BE THE RESPONSIBILITY OF THE DEVELOPER OR OTHERS PERFORMING THE CONSTRUCTION WORK TO RETAIN A QUALIFIED REGISTERED CIVIL ENGINEER AND/OR LICENSED LAND SURVEYOR PRIOR TO THE START OF CONSTRUCTION TO LOCATE, REFERENCE AND FILE THE NECESSARY CORNER RECORDS WITH THE COUNTY SURVEYOR'S OFFICE FOR SURVEY CONTROL POINTS/MONUMENTS THAT EXIST AS SHOWN ON RECORDED TRACT MAPS, PARCEL MAPS, RECORDS OF SURVEYS AND HIGHWAY MAPS, AND MAY BE DISTRIBUTED OR DAMAGED BY THE PROPOSED CONSTRUCTION"

    AFTER THE COMPLETION OF THE PROPOSED CONSTRUCTION, SAID MONUMENTS AND/OR CONTROL SURVEY POINTS SHALL BE RESET TO THE NEW SURFACE IN ACCORDANCE WITH THE CURRENT PROFESSIONAL LAND SURVEYING PRACTICES. CORNER RECORDS SHALL BE FILED WITH THE COUNTY SURVEYOR FOR ALL THE NEW MONUMENTS SET.
11. THE DEVELOPER SHALL PROVIDE THE CITY WITH A COMPLETED SET OF "AS BUILT", MYLAR DRAWINGS PRIOR TO THE FINAL INSPECTION.
12. A CITY ACCEPTED/APPROVED SET OF PLANS SHALL BE KEPT ON THE JOB SITE AT ALL TIMES.
13. A PRE-CONSTRUCTION MEETING SHALL OCCUR PRIOR TO CONSTRUCTION. ATTENDEES SHALL INCLUDE A CITY REPRESENTATIVE AND THE CONTRACTOR WHO WILL PERFORM THE WORK. "CUT-SHEETS" SHALL BE PROVIDED TO THE CITY AT THIS MEETING FOR ITS REVIEW.
14. CITY ACCEPTANCE OF PLANS DOES NOT RELIEVE THE DEVELOPER FROM RESPONSIBILITY FOR THE CORRECTION OF ERROR AND OMISSION DISCOVERED DURING CONSTRUCTION. UPON REQUEST OF THE CITY INSPECTOR, THE REQUIRED PLAN REVISIONS SHALL BE PROMPTLY SUBMITTED TO THE CITY ENGINEER FOR REVIEW.
15. ANY REQUIRED RIGHT-OF-WAY OR EASEMENT SHALL BE DEDICATED TO AND ACCEPTED BY THE CITY PRIOR TO COMMENCEMENT OF CONSTRUCTION OF THE IMPROVEMENTS WITHIN THE REQUIRED RIGHT-OF-WAY OR EASEMENT.
16. WHERE UTILITIES NEED TO BE SUPPORTED, SAID SUPPORTS SHALL BE IN ACCORDANCE WITH A.P.W.A. STANDARD 224-1 UNLESS OTHERWISE INDICATED.
17. PRIOR TO STARTING CONSTRUCTION, THE CONTRACTOR SHALL VERIFY LOCATION AND ELEVATION OF EXISTING SEWER MAIN(S) AND NOTIFY THE DESIGN ENGINEER OF ANY VARIATION FROM DESIGN.
18. THE PIPE SHOWN HEREON SHALL BE INSTALLED IN ACCORDANCE WITH CASE III BEDDING AS SHOWN ON L.A.C.D.P.W. STANDARD 3080-2, UNLESS OTHERWISE SHOWN. "W" VALUE SHALL BE AS SPECIFIED ON L.A.C.D.P.W. STANDARD 3080-2 FOR CASE III BEDDING, NOTES 3 (A), 3 (B), AND 3 (C). IF THE "W" VALUE AT THE TOP OF THE PIPE IS EXCEEDED, THE BEDDING SHALL BE MODIFIED AND/OR PIPE OF ADDITIONAL STRENGTH SHALL BE PROVIDED. ALL PROPOSED MODIFICATIONS TO THIS REQUIREMENT SHALL BE APPROVED BY THE CITY ENGINEER.
19. MINIMUM COVER OF STORM DRAIN MAIN SHALL BE 7 FEET FROM THE FINISHED SURFACE PER STANDARD DRAWING 1302-1304.
20. STORM DRAIN MAIN STATIONING IS PER PIPE CENTERLINE.
21. STREET CENTERLINE STATIONING IS PER THE STREET IMPROVEMENT PLANS AND PROVIDED FOR REFERENCE.
22. CONTRACTOR SHALL NOT BACKFILL TRENCH UNTIL THE CITY INSPECTOR HAS OBTAINED AS-BUILT STATIONING ON ALL STRUCTURES.
23. UPON COMPLETION OF CONSTRUCTION OF ALL STORM DRAIN LINES AND PRIOR TO PAVING, THE DEVELOPER SHALL HIRE A CITY APPROVED VIDEO COMPANY TO VIDEO TAPE THE PIPELINES. CITY SHALL REVIEW SAID VIDEOTAPES FOR POTENTIAL CONSTRUCTION DEFECTS PRIOR TO ACCEPTANCE OF THE PROJECT.

## CIVIL ENGINEERS NOTICE TO CONTRACTOR

1. THE EXISTENCE AND LOCATION OF ANY UNDERGROUND UTILITY PIPES OR STRUCTURES SHOWN ON THE PLANS ARE OBTAINED BY A SEARCH OF THE AVAILABLE RECORDS. TO THE BEST OF MY KNOWLEDGE, THERE ARE NO EXISTING UTILITIES EXCEPT AS SHOWN ON THESE PLANS. THE CONTRACTOR IS REQUIRED TO TAKE DUE PRECAUTION AND ANY MEASURES TO PROTECT THE UTILITIES AND STRUCTURES SHOWN AND OTHER LINES OR STRUCTURES NOT OF RECORD OR NOT SHOWN ON THESE PLANS, AND IS RESPONSIBLE FOR THE PROTECTION OF, AND ANY DAMAGE TO, THESE UTILITY LINES OR STRUCTURES.
2. THE CONTRACTOR AGREES THAT HE WILL ASSUME SOLE AND COMPLETE RESPONSIBILITY FOR JOB SITE CONDITIONS DURING THE COURSE OF CONSTRUCTION OF THIS PROJECT, INCLUDING SAFETY OF ALL PERSONS AND PROPERTY; THAT THIS REQUIREMENT SHALL APPLY AND NOT BE LIMITED TO A NORMAL WORKING HOURS, AND THAT THE CONTRACTOR SHALL DEFEND, INDEMNIFY, AND HOLD THE OWNER AND ENGINEER HARMLESS FROM ANY AND ALL LIABILITY, REAL OR ALLEGED, IN CONNECTION WITH THE PERFORMANCE OF WORK ON THIS PROJECT, EXCEPTING FOR LIABILITY ARISING FROM THE SOLE NEGLIGENCE OF THE OWNER OR THE ENGINEER, OR ANY PUBLIC AGENCY.
3. THE ESTIMATES OF IMPROVEMENT QUANTITIES AS SHOWN HEREON ARE PROVIDED ONLY FOR THE PURPOSE OF SATISFYING CITY PLAN INFORMATION REQUIREMENTS. THE CONTRACTOR SHALL PERFORM AN INDEPENDENT ESTIMATE OF ALL IMPROVEMENT QUANTITIES AND SHALL USE SAME AS A BASIS FOR HIS BID(S) AND CONTRACT(S).
4. CONTRACTOR TO VERIFY CLEARANCE AT ALL UTILITY CROSSINGS. IF INTERFERENCE OCCURS, OTHER THAN NOTED ON PLAN, CONTRACTOR SHALL CONTACT THE DESIGN ENGINEER FOR POSSIBLE REDESIGN. IF REDESIGN IS NOT FEASIBLE, CONTRACTOR TO RELOCATE UTILITY AT NO EXPENSE TO ENGINEER.
5. CONTRACTOR SHALL TAKE EXTREME CARE DURING UNDERGROUND CONSTRUCTION AND IS RESPONSIBLE FOR TRENCHING AND SHORING. CONTRACTOR SHALL SUBMIT A DETAILED SHORING PLAN PER SECTION 7-10.4.2.2 OF SPPWC AND A PERMIT FROM STATE DIVISION OF INDUSTRIAL SAFETY PRIOR TO COMMENCING WORK.
6. CONTRACTOR SHALL VERIFY PAVEMENT ELEVATION AT RIM PRIOR TO SETTING CONE.

## LEGAL DESCRIPTION

THE LAND REFERRED TO HEREIN BELOW IS SITUATED IN THE CITY OF ONTARIO, COUNTY OF SAN BERNARDINO, STATE OF CALIFORNIA, AND IS DESCRIBED AS FOLLOWS:

LOTS 1, 2, 3, 16, 17, 18, 19, 20, 21, 31, 32, 34, 35 AND 36 IN SECTION 19, TOWNSHIP 2 SOUTH, RANGE 7 WEST, SAN BERNARDINO BASE AND MERIDIAN, IN THE CITY OF ONTARIO, COUNTY OF SAN BERNARDINO, STATE OF CALIFORNIA, ACCORDING TO MAP OF SUBDIVISION OF PART OF THE RANCHO SANTA ANA DEL CHINO, RECORDED IN BOOK 6, PAGE 15 OF MAPS, RECORDS OF SAID COUNTY.

## BASIS OF BEARING

THE BASIS OF BEARINGS FOR THIS SURVEY IS THE CALIFORNIA STATE PLANE COORDINATE SYSTEM (CCS83), ZONE 5, NORTH AMERICAN DATUM 1983 (NAD83) BASED LOCALLY ON CONTINUOUSLY OPERATING REFERENCE STATIONS (CORS) "LORS" AND "EWPP" AS SHOWN HEREON (BASIS OF BEARINGS: S 81°29'26" E). ALL BEARINGS SHOWN HEREON ARE GRID BEARINGS.

## CONSTRUCTION NOTES

1. CONSTRUCT 102" RCP. TRENCH EXCAVATION, & BACKFILL PER CITY OF ONTARIO STD. DWG. NO. 1306, BEDDING PER LACDPW STD. 3080-2 CASE 3, D-LOAD PER PLAN
2. CONSTRUCT MANHOLE NO. 1 PER CITY OF ONTARIO STD. DWG. 3008 & 3009
3. CONSTRUCT JUNCTION STRUCTURE NO. 1 PER CITY OF ONTARIO STD. DWG. 3010, CASE 1
4. CONSTRUCT 18" RCP. TRENCH EXCAVATION, & BACKFILL PER CITY OF ONTARIO STD. DWG. NO. 1306, BEDDING PER LACDPW STD. 3080-2 CASE 3, D-LOAD PER PLAN
5. CONSTRUCT 36" TEMPORARY CSP STANDPIPE PER DETAIL ON SHEET 11
6. CONSTRUCT CATCH BASIN NO. 2 PER CITY OF ONTARIO STD. DWG. NO. 3003, "W" AND "V" PER PLAN, INSTALL ALMETEK PLACARD "NO DUMPING DRAINS TO RIVER" PER CITY OF ONTARIO STD. DWG. NO. 3018
7. CONSTRUCT LOCAL DEPRESSION FOR CATCH BASIN INLET PER CITY OF ONTARIO STD. DWG. NO. 3005, REFER TO PERMIT PM 20161 STREET IMPROVEMENT PLANS FOR DETAILS
8. CONSTRUCT CONNECTOR PIPE SCREEN (CPS) PER CITY OF ONTARIO STD. DWG. NO. 3017
9. CONSTRUCT BRICK AND MORTAR BULKHEAD PER DETAIL ON SHEET 11
16. CONSTRUCT MANHOLE SAFETY LEDGE PER SPPWC STD. PLAN NO. 330-2, PER DETAIL ON SHEET 11
18. CONSTRUCT MANHOLE PIPE-TO-PIPE (LARGE SIDE INLET) PER SPPWC STD. DWG. NO. 322-3, PER DETAIL ON SHEET 12
19. CONSTRUCT 36" RCP. TRENCH EXCAVATION, & BACKFILL PER CITY OF ONTARIO STD. DWG. NO. 1306, BEDDING PER CITY OF ONTARIO STD. DWG. NO. 2104 CLASS B2, D-LOAD PER PLAN
20. CONSTRUCT JUNCTION STRUCTURE NO. 2 PER CITY OF ONTARIO STD. DWG. NO. 3012
21. CONSTRUCT 42" RCP. TRENCH EXCAVATION, & BACKFILL PER CITY OF ONTARIO STD. DWG. NO. 1306, BEDDING PER LACDPW STD. 3080-2 CASE 3, D-LOAD PER PLAN
23. CONSTRUCT CATCH BASIN WITH MANHOLE IN STREET PER SPPWC STD. PLAN. NO. 307-4, PER DETAIL ON SHEET 12

STANDARD PLANS FOR PUBLIC WORKS CONSTRUCTION

PROMULGATED BY THE PUBLIC WORKS STANDARDS INC. GREENBOOK COMMITTEE 1992 REV. 1996, 1997, 1999, 2009

**CONCRETE COLLAR FOR RCP**
**12" (300 mm) THROUGH 72" (1800 mm)**

USE WITH STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION

STANDARD PLAN **380-4**
SHEET 1 OF 2

NOTES

1. A CONCRETE COLLAR IS REQUIRED WHERE THE CHANGE IN GRADE EXCEEDS 10%.
2. FOR CURVE JOINTS (SEE DETAIL B, SHEET 1)
   IF THE EXTREME ENDS OF THE PIPE LEAVE A CLEAR SPACE THAT IS GREATER THAN 1" (25 mm), BUT IS LESS THAN 3" (75 mm) A CONCRETE COVER IS REQUIRED IN ACCORDANCE WITH SSPWC 306-7.3.2.1.
   IF THE EXTREME ENDS OF THE PIPE LEAVE A CLEAR SPACE THAT IS EQUAL TO OR GREATER THAN 3" (75 mm), BUT LESS THAN 6" (150 mm), A CONCRETE COLLAR IS REQUIRED. IF THE CLEAR SPACE IS 6" (150 mm) OR GREATER, A TRANSITION STRUCTURE IS REQUIRED.
3. CONCRETE COLLAR SHALL NOT BE USED FOR A SIZE CHANGE ON THE MAIN LINE.
4. CONNECTOR PIPES
   A. WHERE PIPES OF DIFFERENT DIAMETERS ARE JOINED WITH A CONCRETE COLLAR, L AND T SHALL BE THOSE OF THE LARGER PIPE. $D=D_1$ OR $D_2$ WHICHEVER IS GREATER.
   B. WHEN $D_1$ IS EQUAL TO OR LESS THAN $D_2$ JOIN INVERTS AND WHEN $D_1$ IS GREATER THAN $D_2$ JOIN SOFFITS.
5. FOR PIPE LARGER THAN 72" (1800 mm) SPECIAL COLLAR DETAILS ARE REQUIRED.
6. FOR PIPE SIZE NOT LISTED USE NEXT SIZE LARGER.
7. REINFORCEMENT SHALL CONFORM TO ASTM A 615 (A 615 M) GRADE 40 (300).
8. WHERE REINFORCING IS REQUIRED THE DIAMETER OF THE CIRCULAR TIES SHALL BE D+(2X WALL THICKNESS) + T.
9. REINFORCING SHALL BE USED WHERE THE PIPE DIAMETER IS GREATER THAN 21" (525 mm) AND ON ALL PIPES WHERE THE SPACES BETWEEN THE EXTREME OUTER ENDS IS 3" (75 mm) OR LARGER.

CIRCULAR TIES:

| PIPE DIAMETER | NO. OF CIRCULAR TIES |
|---|---|
| 21" (525 mm) OR LESS | 3 |
| 24" (600 mm) TO 30" (750 mm) | 3 |
| 33" (825 mm) TO 57" (1425 mm) | 4 |
| 60" (1500 mm) TO 72" (1800 mm) | 5 |

WHERE THE SPACE BETWEEN PIPE ENDS EXCEEDS 3" (75 mm), THE NUMBER OF CIRCULAR TIES SHALL BE INCREASED TO MAINTAIN AN APPROXIMATE SPACING OF 6" (150 mm) O.C.

10. WHERE THE PIPE IS 21" (525 mm) OR LESS IN DIAMETER AN INTERIOR FORM OF UNSEALED SONO-TUBE OR EQUAL SHALL BE USED TO PROVIDE A SMOOTH INTERIOR JOINT. THE PAPER FORM MAY BE LEFT IN PLACE (SEE DETAIL A). WHEN THE PIPE IS 24" (600 mm) OR LARGER A REMOVABLE INTERIOR FORM SHALL BE USED OR THE INTERIOR JOINT SHALL BE COMPLETELY FILLED WITH MORTAR AND NEATLY POINTED.

(BASED ON SPPWC 380-4, DETAIL ON SHEET 13)
NOTE: USE ASTM A615 GRADE 60 BAR REINFORCEMENT

STANDARD PLANS FOR PUBLIC WORKS CONSTRUCTION

PROMULGATED BY THE PUBLIC WORKS STANDARDS INC. GREENBOOK COMMITTEE 1992 REV. 1996, 2009

**MANHOLE SHAFT SAFETY LEDGE**

USE WITH STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION

STANDARD PLAN **330-2**
SHEET 1 OF 2

NOTES

1. MANHOLE SHAFT SAFETY LEDGE WILL BE NOTED ON THE PLANS WHEN REQUIRED. IT IS TO BE CONSTRUCTED WHEN DEPTH OF MANHOLE TO INVERT IS GREATER THAN 20' (6 m) AND MANHOLE SHAFT IS GREATER THAN 10' (3 m).
2. A SAFETY LEDGE SHALL NOT BE USED IF A PRESSURE MANHOLE IS REQUIRED.
3. STEPS SHALL CONFORM TO SPPWC 635 OR 636 AND SHALL BE ANCHORED 4" (100 mm) IN THE WALL OF THE STRUCTURE. STEPS SHALL BE PLACED TO MATCH THE SPACING OF THE MANHOLE SHAFT.
4. REINFORCEMENT SHALL BE PER ASTM A 615, GRADE 40 (ASTM A 615M, GRADE 300) AND SHALL TERMINATE 2" (50 mm) CLEAR OF CONCRETE SURFACE UNLESS OTHERWISE SHOWN.
5. GROUT HOLES, PIPE AND FITTINGS SHALL BE PROVIDED IN THE FLOOR SLAB. PRESSURE GROUTING SHALL BE USED TO FILL VOIDS AND TO SECURE UNIFORM BEARING. THE GROUT SHALL BE NEAT CEMENT GROUT AND GROUTING PRESSURES SHALL BE AS DETERMINED IN THE FIELD BY THE ENGINEER.
6. PIPE RAIL SHALL BE FABRICATED OF 1 1/4" (32 mm) STANDARD GALVANIZED PIPE COMPOSED OF TWO SECTIONS 7'-6" (2.25 m) & 18" (450 mm) IN LENGTH JOINED BY A GALVANIZED COUPLING. THE COUPLING SHALL BE THREADED A MINIMUM OF 2" (50 mm) ON EACH PIPE LENGTH.
7. ROOF AND FLOOR SLABS SHALL BE PRECAST AND KEYED FOR REINFORCED CONCRETE PIPE SECTIONS AS SHOWN. ALL JOINTS SHALL BE FILLED WITH CLASS C MORTAR AND NEATLY POINTED OR WIPED ON THE INSIDE.
8. 72" (1800 mm) RCP SHALL BE PROVIDED WITH TWO CIRCULAR CAGES OF REINFORCEMENT.
9. THE FOLLOWING SPPWC ARE INCORPORATED HEREIN:

   324 MANHOLE SHAFT – WITH ECCENTRIC REDUCER
   326 MANHOLE SHAFT – 36" (900 mm) WITHOUT REDUCER
   635 STEEL STEP
   636 POLYPROPYLENE PLASTIC STEP

STANDARD PLANS FOR PUBLIC WORKS CONSTRUCTION

**MANHOLE – PIPE TO PIPE (LARGE SIDE INLET)**

STANDARD PLAN 322-3
SHEET 3 OF 4

NOTES

1. VALUES FOR A, B, C, D1, D2, ELEVATION R AND ELEVATION S ARE SHOWN ON THE PLANS. ELEVATION S APPLIES AT INSIDE WALL OF STRUCTURE.
2. WHEN DEPTH M FROM STREET GRADE TO THE TOP OF THE BOX IS LESS THAN 2'–10 1/2" (867 mm) FOR PAVED STREETS OR 3'–6" (1060 mm) FOR UNPAVED STREETS, CONSTRUCT MONOLITHIC SHAFT PER SECTION C–C AND DETAIL "N". SHAFT FOR ANY DEPTH OF MANHOLE MAY BE CONSTRUCTED PER SECTION C–C. WHEN DIAMETER D1 IS 48" (1200 mm) OR LESS, CENTER OF SHAFT MAY BE LOCATED PER NOTE 3.
3. CENTER OF MANHOLE SHAFT SHALL BE LOCATED OVER CENTERLINE OF STORM DRAIN WHEN DIAMETER D1 IS 48" (1200 mm) OR LESS, IN WHICH CASE PLACE E BARS SYMMETRICALLY AROUND SHAFT AT 45° WITH CENTERLINE.
4. LENGTH OF MANHOLE MAY BE INCREASED AT OPTION TO MEET PIPE ENDS, BUT ANY CHANGE IN LOCATION F SPUR MUST BE APPROVED BY THE ENGINEER.
5. P SHALL BE 5" (125 mm) FOR D2=96" (2400 mm) OR LESS AND 8" (200 mm) FOR D2 OVER 96" (2400 mm).
6. REINFORCEMENT SHALL CONFORM TO ASTM A 615M, GRADE 300 (ASTM A 615, GRADE 40), AND SHALL TERMINATE 1–1/2" (40 mm) CLEAR OF CONCRETE SURFACES UNLESS OTHERWISE SHOWN.
7. FLOOR OF MANHOLE SHALL BE STEEL–TROWLED TO SPRING LINE.
8. BODY OF MANHOLE SHALL BE POURED IN ONE CONTINUOUS OPERATION EXCEPT THAT A CONSTRUCTION JOINT WITH A LONGITUDINAL KEYWAY MAY BE PLACED AT SPRING LINE.
9. THICKNESS OF THE DECK SHALL VARY WHEN NECESSARY TO PROVIDE A LEVEL SEAT BUT SHALL NOT BE LESS THAN THE TABULAR VALUES OF F SHOWN ON TABLE, SHEET 1.
10. IF LATERALS ENTER ON BOTH SIDES OF MANHOLE, SHAFT SHALL BE LOCATED ON SIDE RECEIVING THE SMALLER LATERAL.
11. STEPS SHALL CONFORM TO SPPWC 635 OR 636. UNLESS OTHERWISE SHOWN, STEPS SHALL BE UNIFORMLY SPACED 14" TO 15" (350 TO 375 mm) OC. THE LOWEST STEP SHALL NOT BE MORE THAN 24" (600 mm) ABOVE THE INVERT.
12. THE FOLLOWING CRITERIA SHALL BE USED FOR THIS MANHOLE:
    - o THIS STANDARD PLAN IS USED WHEN SPPWC 320 IS INADEQUATE.
    - o MAIN LINE = 900 mm (36") INSIDE DIAMETER OR LARGER.
    - o LATERAL = 300 mm (12") TO 3600 mm (144") INSIDE DIAMETER; HOWEVER, THE INSIDE DIAMETER SHALL NOT EXCEED THE INSIDE DIAMETER OF THE MAIN LINE.
13. MANHOLE FRAME AND COVER SHALL CONFORM TO SPPWC 630 UNLESS OTHERWISE SHOWN.
14. MANHOLE SHAFT SHALL CONFORM TO SPPWC 324 UNLESS OTHERWISE SHOWN.
15. WHERE A MANHOLE SHAFT – 900 mm (36") WITHOUT REDUCER IS SPECIFIED REFER TO SPPWC 326.
16. WHERE A PRESSURE MANHOLE SHAFT – WITH ECCENTRIC REDUCER IS SPECIFIED REFER TO SPPWC 328.
17. WHERE A PRESSURE MANHOLE SHAFT – 914 mm (36") WITHOUT REDUCER IS SPECIFIED REFER TO SPPWC 329.
18. THE FOLLOWING SPPWC ARE INCORPORATED HEREIN:
    - 324 MANHOLE SHAFT – WITH ECCENTRIC REDUCER
    - 326 MANHOLE SHAFT – 900 mm (36") WITHOUT REDUCER
    - 328 PRESSURE MANHOLE SHAFT – WITH ECCENTRIC REDUCER
    - 329 PRESSURE MANHOLE SHAFT – 914 mm (36") WITHOUT REDUCER
    - 630 610 mm (24") MANHOLE FRAME AND COVER
    - 633 914 mm (36") MANHOLE FRAME AND COVER
    - 635 STEEL STEP
    - 636 POLYPROPYLENE PLASTIC STEP

STANDARD PLANS FOR PUBLIC WORKS CONSTRUCTION

PROMULGATED BY THE PUBLIC WORKS STANDARDS INC. GREENBOOK COMMITTEE 1992
REV. 1995, 2009

**TRANSITION STRUCTURE PIPE TO PIPE**

USE WITH STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION

STANDARD PLAN 340-2
SHEET 1 OF 2

NOTES

1. THE HORIZONTAL ANGLE OF CONVERGENCE OR DIVERGENCE, θ, SHALL NOT EXCEED 5° 45'.
2. VALUES FOR A, B, C, $D_1$ AND $D_2$ ARE SHOWN ON THE PLANS. ELEVATION R AND ELEVATION S ARE SHOWN WHEN REQUIRED BY NOTE 10.
3. FLOOR OF STRUCTURE SHALL BE STEEL TROWELED TO SPRING LINE.
4. REINFORCEMENT STEEL SHALL CONFORM TO ASTM A 615 (A 615 M), GRADE 300 (40), AND SHALL TERMINATE 1 1/2" (40 mm) CLEAR OF CONCRETE SURFACES UNLESS OTHERWISE SHOWN, LONGITUDINAL BARS SHALL BE #3 OR #4 @ 18" (#10M @ 450 mm) OC OR LESS.
5. ELEVATION S APPLIES AT INSIDE WALL OF STRUCTURE.
6. TRANSITION STRUCTURE SHALL BE POURED IN ONE CONTINUOUS OPERATION, EXCEPT THAT THE CONTRACTOR SHALL HAVE THE OPTION OF PLACING AT THE SPRING LINE A CONSTRUCTION JOINT LONGITUDINAL KEYWAY.
7. THE LENGTH OF THE STRUCTURE MAY BE INCREASED AT THE OPTION OF THE CONTRACTOR TO MEET RCP ENDS, USING D BARS, LONGITUDINAL AND BOTTOM REINFORCEMENT IN EXTENDED PORTION OF SAME DIAMETER AND SPACING AS SPECIFIED IN THE TABLE, BUT ANY CHANGE IN THE LOCATION OF SPUR MUST BE APPROVED BY THE ENGINEER.
8. EMBEDMENT P SHALL BE AS SPECIFIED IN THE TABLE, UNLESS OTHERWISE SHOWN ON THE PLANS.
9. WHEN THERE IS NO SPUR REQUIRED, A & B BARS SHALL BE OMITTED.
10. WHEN ELEVATION R AND ELEVATION S ARE NOT SHOWN ON PLANS, INLET PIPE SHALL ENTER MAIN LINE RADIALLY. WHEN INLET PIPE ENTERS MAIN LINE OTHER THAN RADIALLY, ELEVATION S SHALL BE SHOWN ON PLANS, AND INLET PIPE SHALL BE LAID ON A STRAIGHT GRADE FROM ELEVATION S TO CATCH BASIN OR GRADE BREAK IN INLET LINE. ELEVATION R SHALL BE SHOWN ON THE PLANS ONLY WHEN STUB IS TO BE PROVIDED IN MAIN LINE FOR FUTURE CONSTRUCTION OF INLET PIPE.
11. THE MAXIMUM COVER ABOVE THIS STRUCTURE SHALL BE 25' (7.5 m). IF THE COVER EXCEEDS 25' (7.5 m) A SPECIAL STRUCTURE SHALL BE DESIGNED FOR THE COVER AND DETAILED ON THE PLANS.

STANDARD PLANS FOR PUBLIC WORKS CONSTRUCTION

PROMULGATED BY THE PUBLIC WORKS STANDARDS INC. GREENBOOK COMMITTEE 1984
REV. 1992, 1996, 2006, 2021

**CURB OPENING CATCH BASIN WITH MANHOLE IN STREET**

USE WITH STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION

STANDARD PLAN 307-4
SHEET 1 OF 2

NOTES:

1. WHERE THE BASIN IS TO BE CONSTRUCTED WITHIN THE LIMITS OF EXISTING OR PROPOSED SIDEWALK OR IS CONTIGUOUS TO SUCH SIDEWALK, THE TOP SLAB OF THE BASIN MAY BE POURED EITHER MONOLITHIC WITH THE SIDEWALK OR SEPARATELY, USING THE SAME CLASS OF CONCRETE AS IN THE BASIN. WHEN POURED MONOLITHICALLY, THE SIDEWALK SHALL BE PROVIDED WITH A WEAKENED PLANE OR A 1" (25 mm) DEEP SAWCUT CONTINUOUSLY AROUND THE EXTERNAL PERIMETER OF THE CATCH BASIN WALLS, INCLUDING ACROSS THE FULL WIDTH OF THE SIDEWALK. SURFACE OF ALL EXPOSED CONCRETE SHALL CONFORM IN SLOPE, GRADE, COLOR, FINISH, AND SCORING TO EXISTING OR PROPOSED CURB AND WALK ADJACENT TO THE BASIN.
2. ALL CURVED CONCRETE SURFACES SHALL BE FORMED BY CURVED FORMS, AND SHALL NOT BE SHAPED BY PLASTERING.
3. FLOOR OF BASIN SHALL BE GIVEN A STEEL TROWEL FINISH, FLOOR OF MANHOLE CHAMBER SHALL HAVE A LONGITUDINAL AND LATERAL SLOPE OF 1V:12H MINIMUM AND 1V:3H MAXIMUM SLOPE FLOOR FROM ALL DIRECTIONS TO THE OUTLET.
4. CATCH BASIN SHALL BE CASE A UNLESS OTHERWISE SPECIFIED.
5. DIMENSIONS:
   - W = 7' (2 m)
   - B = 20" (500 mm)
   - Y = 24" (600 mm )
   - V = THE DIFFERENCE IN ELEVATION BETWEEN THE TOP OF THE CURB AND THE INVERT OF THE CATCH BASIN AT THE OUTLET = 4.5' (1.35 m).
   - $V_1$= THE DIFFERENCE IN ELEVATION BETWEEN THE TOP OF THE CURB AND THE INVERT OF THE INLET, NOTED ON THE PLANS.
   - H = NOTED ON THE PLANS.
   - A = THE ANGLE, IN DEGREES, INTERCEPTED BY THE CENTERLINE OF THE CONNECTOR PIPE AND THE CATCH BASIN WALL TO WHICH THE CONNECTOR PIPE IS ATTACHED.
6. PLACE CONNECTOR PIPES AS INDICATED ON THE PLANS. UNLESS OTHERWISE SPECIFIED, THE CONNECTOR PIPE SHALL BE LOCATED AT THE DOWNSTREAM END OF THE BASIN. WHERE THE CONNECTOR PIPE IS SHOWN AT A CORNER, THE CENTERLINE OF THE PIPE SHALL INTERSECT THE INSIDE CORNER OF THE BASIN. THE PIPE MAY BE CUT AND TRIMMED AT A SKEW NECESSARY TO ENSURE MINIMUM 3" (75 mm) PIPE EMBEDMENT, ALL AROUND, WITHIN THE CATCH BASIN WALL. AND 3" (75 mm) RADIUS OF ROUNDING OF STRUCTURE CONCRETE, ALL AROUND, ADJACENT TO PIPE ENDS. A MONOLITHIC CATCH BASIN CONNECTION SHALL BE USED TO JOIN THE CONNECTOR PIPE TO THE CATCH BASIN WHENEVER ANGLE "A" IS LESS THAN 70° OR GREATER THAN 110°, OR WHENEVER THE CONNECTOR PIPE IS LOCATED IN A CORNER. THE OPTIONAL USE OF A MONOLITHIC CATCH BASIN CONNECTION IN ANY CASE IS PERMITTED. MONOLITHIC CATCH BASIN CONNECTIONS MAY BE CONSTRUCTED TO AVOID CUTTING STANDARD LENGTHS OF PIPE.
7. STEPS SHALL BE LOCATED AS SHOWN. IF THE CONNECTOR PIPE INTERFERES WITH THE STEPS, THEY SHALL BE LOCATED ON THE FRONT WALL OF THE MANHOLE CHAMBER OR THE DOWNSTREAM WALL OF THE MANHOLE CHAMBER AND THE MANHOLE MOVED DOWNSTREAM 12" (300 mm). STEPS SHALL BE SPACED 12" (300 mm) APART. THE TOP STEP SHALL BE 7" (175 mm) BELOW THE TOP OF THE MANHOLE AND PROJECT 2–1/2" (65 mm). ALL OTHER STEPS SHALL PROJECT 5" (130 mm).
8. DOWELS ARE REQUIRED AT EACH CORNER AND AT 7' (2.0 m) ON CENTER (MAXIMUM) ALONG THE BACKWALL.
9. THE FOLLOWING SPPWC ARE INCORPORATED HEREIN:
   - 308 MONOLITHIC CATCH BASIN CONNECTION
   - 309 CATCH BASIN REINFORCEMENT
   - 310 CATCH BASIN FACE PLATE ASSEMBLY AND PROTECTION BAR
   - 630 24" (610 mm) MANHOLE FRAME AND COVER
   - 635 STEEL STEP

## EXCERPT K: STORM DRAIN IMPROVEMENT PLANS FOR LINE E, PM-20517

# STORM DRAIN IMPROVEMENT PLANS
## FOR
## PARCEL MAP 20517
## CAMPUS AVENUE & EUCALYPTUS AVENUE
## IN THE CITY OF ONTARIO

## GENERAL NOTES:

1. ALL WORK SHALL BE DONE IN STRICT CONFORMANCE WITH THE CURRENT CITY OF ONTARIO STANDARD SPECIFICATIONS AND STANDARD DRAWINGS AND CURRENT STANDARD SPECIFICATIONS AND STANDARD PLANS FOR PUBLIC WORKS CONSTRUCTION UNLESS OTHERWISE APPROVED BY THE CITY ENGINEER.
2. ANY CONTRACTOR PERFORMING WORK ON THIS PROJECT SHALL FAMILIARIZE HIMSELF/HERSELF WITH THE SITE AND SHALL BE SOLELY RESPONSIBLE FOR ANY DAMAGE TO EXISTING FACILITIES RESULTING DIRECTLY OR INDIRECTLY FROM HIS/HER OPERATIONS, WHETHER OR NOT THE FACILITY IS SHOWN ON THESE PLANS.
3. ALL OBSTRUCTIONS WITHIN THE AREA TO BE IMPROVED SHALL BE REMOVED AND/OR RELOCATED AT THE DIRECTION OF THE CITY ENGINEER. UTILITIES ARE TO BE RELOCATED BY THEIR RESPECTIVE OWNERS UNLESS NOTED OTHERWISE. THE CONTRACTOR IS REFERRED TO SECTION 5 OF THE STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION.
4. UTILITY LINE LOCATIONS WERE TAKEN FROM AVAILABLE RECORD DATA AND WERE NOT LOCATED IN THE FIELD, UNLESS OTHERWISE NOTED ON THE PLAN. THE CONTRACTOR IS REFERRED TO SECTION 5 OF THE STANDARD SPECIFICATIONS, FOR PUBLIC WORKS CONSTRUCTION.
5. IN CASE OF ANY ACCIDENTS INVOLVING SAFETY MATTERS COVERED BY SECTION 6409(B) OF THE CALIFORNIA LABOR CODE, THE CONTRACTOR SHALL IMMEDIATELY NOTIFY THE STATE DIVISION OF INDUSTRIAL SAFETY.
6. STATE LAW (SB 3019) REQUIRES THE CONTRACTOR TO CONTACT UNDERGROUND SERVICE ALERT AND OBTAIN AN IDENTIFICATION NUMBER PRIOR TO THE ISSUANCE OF CITY'S ENCROACHMENT PERMITS. THE CONTRACTOR SHALL NOTIFY UNDERGROUND SERVICE ALERT AT 1-800-422-4133 A MINIMUM OF 48-HOURS IN ADVANCE OF ANY CONSTRUCTION ACTIVITY.
7. PRIOR TO THE START OF ANY WORK THE CONTRACTOR SHALL OBTAIN A BUSINESS LICENSE FROM THE CITY OF ONTARIO. THE CONTRACTOR SHALL ALSO OBTAIN AN ENCROACHMENT PERMIT FROM THE ENGINEERING DEPARTMENT NO LESS THAN 48 HOURS PRIOR TO START OF ANY CONSTRUCTION WITHIN THE PUBLIC RIGHT-OF-WAY.
8. THE CONTRACTOR SHALL OBTAIN A TRAFFIC CONTROL PERMIT 48 HOURS PRIOR TO TIME OF CONSTRUCTION WITHIN THE PUBLIC RIGHT-OF-WAY.
9. THE CONTRACTOR SHALL RENEW OR REPLACE ANY EXISTING TRAFFIC STRIPING AND/OR PAVEMENT MARKINGS, WHICH DURING HIS OPERATIONS HAVE BEEN EITHER REMOVED OR THE EFFECTIVENESS OF WHICH HAS BEEN REDUCED. RENEWAL OF TRAFFIC STRIPING AND MARKINGS SHALL BE DONE USING REFLECTIVE THERMO-PLASTIC MARKINGS IN CONFORMANCE WITH SECTION 84 & 85 OF THE CALTRANS STANDARD SPECIFICATIONS AND AS DIRECTED BY THE ENGINEER. ALL REGULATORY, WARNING, AND GUIDE SIGNS SHALL HAVE 3M DIAMOND, VIP GRADE SHEETING WITH SERIES 1160 PROTECTIVE OVERLAY FILM.
10. THE LAND SURVEYORS ACT, SECTION 8771 OF THE BUSINESS & PROFESSIONAL CODE, AND SECTIONS 732.5, 1492-5, 1810-5 OF THE STREETS AND HIGHWAY CODE REQUIRE THAT SURVEY MONUMENTS SHALL BE PROTECTED AND PERPETUATED.

    "IT SHALL BE THE RESPONSIBILITY OF THE DEVELOPER OR OTHERS PERFORMING THE CONSTRUCTION WORK TO RETAIN A QUALIFIED REGISTERED CIVIL ENGINEER AND/OR LICENSED LAND SURVEYOR PRIOR TO THE START OF CONSTRUCTION TO LOCATE, REFERENCE AND FILE THE NECESSARY CORNER RECORDS WITH THE COUNTY SURVEYOR'S OFFICE FOR SURVEY CONTROL POINTS/MONUMENTS THAT EXIST AS SHOWN ON RECORDED TRACT MAPS, PARCEL MAPS, RECORDS OF SURVEYS AND HIGHWAY MAPS, AND MAY BE DISTRIBUTED OR DAMAGED BY THE PROPOSED CONSTRUCTION"

    AFTER THE COMPLETION OF THE PROPOSED CONSTRUCTION, SAID MONUMENTS AND/OR CONTROL SURVEY POINTS SHALL BE RESET TO THE NEW SURFACE IN ACCORDANCE WITH THE CURRENT PROFESSIONAL LAND SURVEYING PRACTICES. CORNER RECORDS SHALL BE FILED WITH THE COUNTY SURVEYOR FOR ALL THE NEW MONUMENTS SET.
11. THE DEVELOPER SHALL PROVIDE THE CITY WITH A COMPLETED SET OF "AS BUILT", MYLAR DRAWINGS PRIOR TO THE FINAL INSPECTION.
12. A CITY ACCEPTED/APPROVED SET OF PLANS SHALL BE KEPT ON THE JOB SITE AT ALL TIMES.
13. A PRE-CONSTRUCTION MEETING SHALL OCCUR PRIOR TO CONSTRUCTION. ATTENDEES SHALL INCLUDE A CITY REPRESENTATIVE AND THE CONTRACTOR WHO WILL PERFORM THE WORK. "CUT-SHEETS" SHALL BE PROVIDED TO THE CITY AT THIS MEETING FOR ITS REVIEW.
14. CITY ACCEPTANCE OF PLANS DOES NOT RELIEVE THE DEVELOPER FROM RESPONSIBILITY FOR THE CORRECTION OF ERROR AND OMISSION DISCOVERED DURING CONSTRUCTION. UPON REQUEST OF THE CITY INSPECTOR, THE REQUIRED PLAN REVISIONS SHALL BE PROMPTLY SUBMITTED TO THE CITY ENGINEER FOR REVIEW.
15. ANY REQUIRED RIGHT-OF-WAY OR EASEMENT SHALL BE DEDICATED TO AND ACCEPTED BY THE CITY PRIOR TO COMMENCEMENT OF CONSTRUCTION OF THE IMPROVEMENTS WITHIN THE REQUIRED RIGHT-OF-WAY OR EASEMENT.
16. WHERE UTILITIES NEED TO BE SUPPORTED, SAID SUPPORTS SHALL BE IN ACCORDANCE WITH A.P.W.A. STANDARD 224-1 UNLESS OTHERWISE INDICATED.
17. PRIOR TO STARTING CONSTRUCTION, THE CONTRACTOR SHALL VERIFY LOCATION AND ELEVATION OF EXISTING SEWER MAIN(S) AND NOTIFY THE DESIGN ENGINEER OF ANY VARIATION FROM DESIGN.
18. THE PIPE SHOWN HEREON SHALL BE INSTALLED IN ACCORDANCE WITH CASE III BEDDING AS SHOWN ON L.A.C.D.P.W. STANDARD 3080-2, UNLESS OTHERWISE SHOWN. "W" VALUE SHALL BE AS SPECIFIED ON L.A.C.D.P.W. STANDARD 3080-2 FOR CASE III BEDDING, NOTES 3 (A), 3 (B), AND 3 (C). IF THE "W" VALUE AT THE TOP OF THE PIPE IS EXCEEDED, THE BEDDING SHALL BE MODIFIED AND/OR PIPE OF ADDITIONAL STRENGTH SHALL BE PROVIDED. ALL PROPOSED MODIFICATIONS TO THIS REQUIREMENT SHALL BE APPROVED BY THE CITY ENGINEER.
19. MINIMUM COVER OF STORM DRAIN MAIN SHALL BE 7 FEET FROM THE FINISHED SURFACE PER STANDARD DRAWING 1302-1304.
20. STORM DRAIN MAIN STATIONING IS PER PIPE CENTERLINE.
21. STREET CENTERLINE STATIONING IS PER THE STREET IMPROVEMENT PLANS AND PROVIDED FOR REFERENCE.
22. CONTRACTOR SHALL NOT BACKFILL TRENCH UNTIL THE CITY INSPECTOR HAS OBTAINED AS-BUILT STATIONING ON ALL STRUCTURES.
23. UPON COMPLETION OF CONSTRUCTION OF ALL STORM DRAIN LINES AND PRIOR TO PAVING, THE DEVELOPER SHALL HIRE A CITY APPROVED VIDEO COMPANY TO VIDEO TAPE THE PIPELINES. CITY SHALL REVIEW SAID VIDEOTAPES FOR POTENTIAL CONSTRUCTION DEFECTS PRIOR TO ACCEPTANCE OF THE PROJECT.

## CIVIL ENGINEERS NOTICE TO CONTRACTOR

1. THE EXISTENCE AND LOCATION OF ANY UNDERGROUND UTILITY PIPES OR STRUCTURES SHOWN ON THE PLANS ARE OBTAINED BY A SEARCH OF THE AVAILABLE RECORDS. TO THE BEST OF MY KNOWLEDGE, THERE ARE NO EXISTING UTILITIES EXCEPT AS SHOWN ON THESE PLANS. THE CONTRACTOR IS REQUIRED TO TAKE DUE PRECAUTION AND ANY MEASURES TO PROTECT THE UTILITIES AND STRUCTURES SHOWN AND OTHER LINES OR STRUCTURES NOT OF RECORD OR NOT SHOWN ON THESE PLANS, AND IS RESPONSIBLE FOR THE PROTECTION OF, AND ANY DAMAGE TO, THESE UTILITY LINES OR STRUCTURES.

## LEGAL DESCRIPTION

THE LAND REFERRED TO HEREIN BELOW IS SITUATED IN THE CITY OF ONTARIO, COUNTY OF SAN BERNARDINO, STATE OF CALIFORNIA, AND IS DESCRIBED AS FOLLOWS:

LOTS 7, 8, 9, 10, 23, 24, 25, AND 26, IN SECTION 20, TOWNSHIP 2 SOUTH, RANGE 7 WEST, SAN BERNARDINO BASE AND MERIDIAN, ACCORDING TO THE MAP OF SUBDIVISION OF RANCHO SANTA ANA DEL CHINO, AS PER PLAT RECORDED IN BOOK 6, PAGE 15 OF MAPS, IN THE OFFICE OF THE COUNTY OF SAN BERNARDINO COUNTY.

## BASIS OF BEARING

THE BASIS OF BEARINGS FOR THIS SURVEY IS THE CALIFORNIA STATE PLANE COORDINATE SYSTEM (CCS83), ZONE 5, NORTH AMERICAN DATUM 1983 (NAD83) BASED LOCALLY ON CONTINUOUSLY OPERATING REFERENCE STATIONS (CORS) "LORS" AND "EWPP" (BASIS OF BEARINGS: S 81°29'26" E). ALL BEARINGS SHOWN HEREON ARE REPRESENTED HEREON BY THE CENTERLINE OF EUCLID AVENUE BEING NORTH 0°25'42" WEST

APPROVED
OCT 03 2018
BY ENGINEERING DEPT

NOTES:
1. GRATE ASSEMBLY SHALL BE FABRICATED TO FIT CSP OF SIZE 24"
2. GRATE ASSEMBLY SHALL BE GALVANIZED AFTER FABRICATION.
3. INSTALL RIP-RAP AND GEOTEXTILE FABRIC AROUND THE RISERS TO REDUCE SEDIMENT TRANSPORT
4. CSP SHALL BE 16 GAGE.

4 **TEMPORARY CSP STANDPIPE DETAIL**

TABLE OF VALUES FOR M (SEE NOTE 1)

| SECTION | PAVED STREET | | UNPAVED STREET | |
|---|---|---|---|---|
| | MAX | MIN | MAX | MIN |
| A-A | | 2'-10 1/2" (867 mm) | | 3'-6" (1060 mm) |
| C-C | 11" (282 mm) | 8 1/2" (217 mm) | 16" (410 mm) | 15" (380 mm) |

STANDARD PLANS FOR PUBLIC WORKS CONSTRUCTION

PROMULGATED BY THE PUBLIC WORKS STANDARDS INC. GREENBOOK COMMITTEE 1992 REV. 1996, 2009

**MANHOLE PIPE-TO-PIPE (ONE OR BOTH MAIN LINE IDS 33" (825 mm) OR SMALLER)**

USE WITH STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION

STANDARD PLAN **321-2** SHEET 1 OF 3

NOTES

1. WHEN DEPTH M FROM STREET GRADE TO THE TOP OF THE BOX IS LESS THAN 2'-10 1/2" (867 mm) FOR PAVED STREETS OR 3'-6" (1060 mm) FOR UNPAVED STREETS, CONSTRUCT SHAFT PER SECTION C-C AND DETAIL "N". DEPTH M MAY BE REDUCED TO AN ABSOLUTE LIMIT OF 6" (150 mm) WHEN LARGER VALUES OF M WOULD REDUCE H IN SECTION C-C TO 3'-6" (1060 mm) OR LESS.
2. H (IN SECTION A-A AND B-B) SHALL NOT BE LESS THAN 4'-0" (1.2 m), BUT MAY BE INCREASED PROVIDED THAT THE VALUE OF M SHALL NOT BE LESS THAN THE MINIMUM SPECIFIED AND THAT THE REDUCER SHALL BE USED. FOR H (IN SECTION C-C) SEE NOTE 1.
3. L SHALL BE 4'-0" (1.2 m) UNLESS OTHERWISE SHOWN. L MAY BE INCREASED OR LOCATION OF THE SPUR MUST BE APPROVED BY THE ENGINEER.
4. T SHALL BE 8" (200 mm) FOR VALUES OF H UP TO AND INCLUDING 8'-0" (2.4 m) AND 10" (250 mm) FOR VALUES OF H OVER 8'-0" (2.4 m).
5. STATIONS OF MANHOLES SHOWN ON PLANS APPLY AT CENTERLINE OF SHAFT. ELEVATIONS ARE SHOWN AT CENTERLINE OF SHAFT AND REFER TO THE PROLONGED INVERT GRADE LINES. SEE NOTE 3.
6. REINFORCEMENT SHALL CONFORM TO ASTM A 615, GRADE 40 (ASTM A 615M, GRADE 300), AND SHALL TERMINATE 1 1/2" (40 mm) CLEAR OF CONCRETE SURFACES UNLESS OTHERWISE SHOWN.
7. FLOOR OF MANHOLE SHALL BE STEEL TROWELED TO SPRING LINE.
8. BODY OF MANHOLE SHALL BE POURED IN ONE CONTINUOUS OPERATION EXCEPT THAT A CONSTRUCTION JOINT WITH A LONGITUDINAL KEYWAY MAY BE PLACED AT SPRING LINE.
9. THICKNESS OF THE DECK SHALL VARY WHEN NECESSARY TO PROVIDE A LEVEL SEAT BUT SHALL NOT BE LESS THAN 8" (200 mm).
10. STEPS SHALL CONFORM TO SPPWC 635 OR 636. UNLESS OTHERWISE SHOWN, STEPS SHALL BE UNIFORMLY SPACED 14" (350 mm) TO 15" (375 mm) OC. THE LOWEST STEP SHALL NOT BE MORE THAN 24" (600 mm) ABOVE THE LEDGE AT THE SIDE OF THE MANHOLE.

STANDARD PLANS FOR PUBLIC WORKS CONSTRUCTION

**MANHOLE PIPE-TO-PIPE (ONE OR BOTH MAIN LINE IDS = 33" (825 mm) OR SMALLER)**

STANDARD PLAN **321-2** SHEET 2 OF 3

11. THE FOLLOWING CRITERIA SHALL BE USED FOR THIS MANHOLE:
    A. MAIN LINE = 33" (825 mm) INSIDE DIAMETER OR LESS. (EXCEPTION – IF THE MAIN LINE RCP DOWNSTREAM OF THE MANHOLE IS 36" (900 mm) TO 42" (1050 mm) INSIDE DIAMETER AND THE MAIN LINE RCP UPSTREAM IS 33" (825 mm) OR LESS.) SPPWC 320 OR 322 IS NOT APPLICABLE WHERE THE MAIN LINE CONDUIT IS LESS THAN 36" (900 mm) IN DIAMETER.
    B. SEE SECTION A – A. THE MAXIMUM SIZE LATERAL THAT MAY BE CONNECTED TO THIS MANHOLE IS SUCH THAT THE DISTANCE FROM THE OUTSIDE (TOP) OF THE LATERAL TO THE BOTTOM OF THE 8" (200 mm) THICK TOP OF THE MANHOLE CHAMBER, MEASURED VERTICALLY FROM THE END OF THE RCP, SHALL BE A MINIMUM OF 6" (150 mm).
    C. IF THE SIZE OF THE LATERAL IS SUCH THAT THE ABOVE-SPECIFIED MINIMUM DISTANCES CANNOT BE MAINTAINED, THEN ONE OF THE FOLLOWING ALTERNATE SOLUTIONS MUST BE USED.
        1. PROVIDE A SPECIAL STRUCTURE.
        2. PROVIDE TWO STANDARD STRUCTURES, CONSISTING OF THIS MANHOLE PLACED UPSTREAM OR DOWNSTREAM FROM THE APPLICABLE JUNCTION STRUCTURE OR TRANSITION STRUCTURE.
12. MANHOLE FRAME AND COVER SHALL CONFORM TO SPPWC 630 UNLESS OTHERWISE SHOWN.
13. MANHOLE SHAFT SHALL CONFORM TO SPPWC 324 UNLESS OTHERWISE SHOWN.
14. WHERE A MANHOLE SHAFT – 36" (900 mm) WITHOUT REDUCER IS SPECIFIED REFER TO SPPWC 336.
15. WHERE A PRESSURE MANHOLE SHAFT – WITH ECCENTRIC REDUCER IS SPECIFIED REFER TO SPPWC 328.
16. WHERE A PRESSURE MANHOLE SHAFT – 36" (900 mm) WITHOUT REDUCER IS SPECIFIED REFER TO SPPWC 329.
17. THE FOLLOWING SPPWC ARE INCORPORATED HEREIN:
    324 MANHOLE SHAFT – WITH ECCENTRIC REDUCER
    326 MANHOLE SHAFT – 36" (900 mm) WITHOUT REDUCER
    328 PRESSURE MANHOLE SHAFT – WITH ECCENTRIC
    329 PRESSURE MANHOLE SHAFT – 36" (900 mm) WITHOUT REDUCER
    630 24" (610 mm) MANHOLE FRAME AND COVER
    633 36" (900 mm) MANHOLE FRAME AND COVER
    635 STEEL STEP
    636 POLYPROPYLENE PLASTIC STEP

## PRELIMINARY WATER QUALITY MANAGEMENT PLAN

# Preliminary Water Quality Management Plan (PWQMP)

For compliance with Santa Ana Regional Water Quality Control Board
Order Number R8-2010-0036 (NPDES Permit No. CAS618036)

| | |
|---|---|
| **Project Name:** | Center Park Specific Plan |
| **Ontario Project #:** | |
| **Applicant Name:** | Ontario Ranch Ventures I, LP & Ontario Ranch Ventures II, LP |
| **Applicant Address:** | C/O RCCD, 8101 E. Kaiser Blvd, Suite 140, Anaheim, CA 92808 |
| **Project Address:** | In between Campus & Walker Ave., south of Edison Ave. |
| **Project Size (acres):** | 210 acre |
| **Project Description:** | Specific Plan with Land use changes for 14 Planning areas. Land use changes consist of Medium Density Residential; Mixed use residential, Retail, Office; Open Spaces for Recreational and Non-Recreational uses. |

**Submittal Date: _____**

# Preliminary Water Quality Management Plan (PWQMP)

## 1. Introduction

The Preliminary Water Quality Management Plan (PWQMP) is a planning tool to improve integration of required water quality elements, stormwater management, water conservation, rainwater harvesting and re-use, and flood management in land use planning and the City's development process. The Preliminary WQMP will assist project applicants and planners in properly designing and laying out project sites so that water quality may be incorporated in the most effective manner and at the lowest cost for the developer.

The San Bernardino County Municipal Separate Storm Sewer System Permit (MS4 Permit) requires project-specific Water Quality Management plans (WQMP) to be prepared for all priority new development and significant redevelopment projects listed in Section 2 of this document. The MS4 Permit stipulates that the City of Ontario require priority project applicants to submit a Preliminary project-specific WQMP, as early as possible, during the environmental review or planning phase of a development project and that the Preliminary WQMP be approved prior to the issuance of land use entitlement.

## 2. Priority Projects (requiring a Preliminary WQMP)

Land Use entitlement shall not be issued for any of the listed projects, below, until a Preliminary WQMP has been approved by the City's Engineering Department. For construction projects not going through entitlement, a Preliminary and Final project specific WQMP shall be approved, prior to the issuance of construction permits:

Check the appropriate project category below, for this project:

| ***Check below*** | **Project Categories** |
|---|---|
| | 1. All significant re-development projects. Significant re-development is defined as the addition or replacement of 5,000 or more square feet of impervious surface on an already developed site subject to discretionary approval of the Permittee. Redevelopment does not include routine maintenance activities that are conducted to maintain original line and grade, hydraulic capacity, original purpose of the facility, or emergency redevelopment activity required to protect public health and safety. Where redevelopment results in an increase of less than fifty percent of the impervious surfaces of a previously existing developed site, and the existing development was not subject to WQMP requirements, the numeric sizing criteria discussed below applies only to the addition or replacement, and not to the entire developed site. Where redevelopment results in an increase of fifty percent or more of the impervious surfaces of a previously existing developed site, the numeric sizing criteria applies to the entire development (new and existing). |
| ✔ | 2. New development projects that create 10,000 square feet or more of impervious surface (collectively over the entire project site) including commercial, industrial, residential housing subdivisions (i.e., detached single family home subdivisions, multi-family attached subdivisions or townhomes, condominiums, apartments, etc.), mixed-use, and public projects. This category includes development projects on public and private land, which fall under the planning and building authority of the permitting agency. |

| *Check below* | **Project Categories** |
|---|---|
| | 3. Automotive repair shops (with SIC codes 5013, 5014, 5541, 7532- 7534, 7536-7539). |
| | 4. Restaurants and Food Service Establishments where the land area of development is 5,000 square feet or more. |
| | 5. Developments of 2,500 square feet of impervious surface or more adjacent to (within 200 feet) or discharging directly into environmentally sensitive areas (ESA's) such as areas designated in the Ocean Plan as areas of special biological significance or waterbodies listed on the CWA Section 303(d) list of impaired waters. |
| | 6. Parking lots of 5,000 square feet or more exposed to storm water. Parking lot is defined as land area or facility for the temporary storage of motor vehicles. |
| | 7. Retail Gasoline Outlets (RGOs) that are either 5,000 sq ft or more or have a projected average daily traffic of 100 or more vehicles per day. |
| | 8. *This project is not covered under any of the categories listed above. |

* If the development is not covered under any of the project categories listed in Section 2, the project is not required to design and install Site Design/LID BMPs or Treatment Control BMPs to treat the design storm event (Design Capture Volume) described in Section 4.

## 3. Preliminary WQMP Objectives

Through a combination of Site Design/LID BMPs (where feasible), Source Control, and/or Treatment Control BMPs, project-specific WQMPs shall address all identified pollutants and hydrologic conditions of concern from new development and significant re-development projects for the categories of projects (priority projects) listed in Section 2. Under each type of BMP, listed below, please indicate which BMPs are planned to be implemented and included in the Final WQMP for the project:

### A. Site Design/LID (Low Impact Design) for Reducing Stormwater Runoff:

The MS4 Permit requires each priority development project to infiltrate, harvest and use, evapotranspire, or bio-treat the runoff from a 2-yr, 24-hour storm event (Design Capture Volume). If site conditions do not permit infiltration, harvest and use, evapotranspiration, and/or bio-treatment of the entire Design Capture Volume, at the project site, Site Design/LID techniques are required to be implemented to the Maximum Extent Practicable, at the project site, and the remainder of the DCV shall be infiltrated, harvested, bio-treated or treated by alternative measures. Project applicants shall submit a Preliminary WQMP that documents the LID/Site Design BMPs, proposed for the project. Please indicate, in the table below, which Site Design/LID BMPs will be utilized on this project to accomplish this requirement:

| Site Design/LID Practice | Planned | Not Planned |
|---|---|---|
| Provide at least the minimum effective area required for LID BMPs, to comply with the WQMP (see Table 3-1 below). | | ✔ |
| Grade parking lot areas/drive aisles/roof drains to sheet flow runoff into landscaped swales, via curb cuts or zero-face curbs or otherwise disconnect direct drainage from MS4. | ✔ | |
| Design landscaped areas as swales and grade to accept runoff from building roofs, parking lots and project roadways. | | ✔ |
| Install surface retention basins or infiltration trenches to receive impervious area runoff. | ✔ | |
| Install pervious pavement in parking stalls, alleys, driveways, gutters, walkways, trails or patios. | | ✔ |
| Install underground stormwater retention chambers where downstream landscaped areas are limited. | ✔ | |
| Install approved Stormwater Drywells in detention areas. | | ✓ |
| Construct streets, sidewalks, and parking lot stalls to the minimum widths necessary. | ✔ | |
| Install on-site Biotreatment basins/trenches with underdrains, where soil type is poorly draining. | | ✔ |
| Install "Engineered Soil" to increase uptake/soil storage capacity and/or evapotranspiration. | | ✔ |
| Install Rainwater Harvesting/Use Equipment. | | ✓ |
| Regional LID BMP facilities are installed, off-site, with the capacity and conveyances to accept post-development storm water runoff from this project and reserved capacity allocation credits have been assigned to the project, in a Certificate or other legally binding document, attached herein | ✔ | |

Table 3-1 Minimum Effective Area[1] Required for LID BMPs (surface + subsurface facilities) for Project WQMP to Demonstrate Infeasibility[2] (% of site)

| Project Type | New Development | Re-Development |
|---|---|---|
| SF/MF Residential < 7 du/ac | 10% | 5% |
| SF/MF Residential < 7 - 18 du/ac | 7% | 3.5% |
| SF/MF Residential > 18 du/ac | 5% | 2.5% |
| Mixed Use, Commercial/Industrial w/FAR< 1.0 | 10% | 5% |
| Mixed Use, Commercial/Industrial w/FAR 1.0-2.0 | 7% | 3.5% |
| Mixed Use, Commercial/Industrial w/FAR> 2.0 | 5% | 2.5% |
| Podium (parking under > 75% of project) | 3% | 1.5% |
| Zoning allowing development to property lines | 2% | 1% |
| Transit Oriented Development[3] | 5% | 2.5% |
| Parking | 5% | 2.5% |

[1] "Effective area" is defined as land area which 1) is suitable for a retention/infiltration BMP (based on infeasibility criteria) and 2) is located down-gradient from building roof or paved areas, so that it may receive gravity flow runoff.
[2] Criteria only required if the project WQMP seeks to demonstrate that the full DCV cannot be feasibly managed on-site.
[3] Transit oriented development is defined as a project with development center within one half mile of a mass transit center.
Key: du/ac = dwelling units/acre, FAR = Floor Area Ratio = ratio of gross floor area of building to gross lot area, MF = Multi Family, SF = Single Family

**B. Source Control BMPs –** The following BMPs are designed to control stormwater pollutants and runoff water at the location where it is generated. Please indicate which of the listed BMPs are planned to be implemented for the project:

| Source Control BMPs | Planned | Not Planned |
|---|---|---|
| Minimize non-stormwater site runoff through efficient irrigation system design and controllers. | ✔ | |
| Minimize trash and debris in storm runoff through a regular parking lot, storage yard and roadway sweeping program. | ✔ | |
| Provide proper covers/roofs and secondary containment for outside material storage & work areas. | | ✔ |
| Provide solid roofs over all trash enclosures. | ✓ | |
| Site Owner(s)/Property Manager/HOA or POA will be familiar with the project WQMP and stormwater BMPs. | ✔ | |
| Owner or HOA or POA to provide Education/Training of site occupants and employees on stormwater BMPs. | ✔ | |
| Install stormwater placards/stenciled messages with a "No Dumping" message on all on-site/off-site storm drain inlets. | ✔ | |
| Provide contained equipment/vehicle wash rack areas that discharge to sanitary sewer. | | ✔ |

**C. Treatment Control BMPs –** The following BMPs are designed to control stormwater pollutants where it is not feasible to install on-site or off-site Site Design/LID BMPs, with the requisite capacity to treat the Design Capture Volume for identified Pollutants of Concern or where pretreatment of stormwater runoff is required, ahead of infiltration BMPs. Please indicate which of the listed BMPs are planned to be implemented for the project:

| Treatment Control BMP | Planned | Not Planned |
|---|---|---|
| Gravity Separator devices for pretreatment of sediment, trash/litter or Oil & Grease | ✔ | |
| Proprietary Biofiltration vaults/devices | | ✓ |
| Media Cartridge Filtration Vaults | | ✓ |
| Proprietary Filter Inserts for on-site storm drain inlets or retention basin/trench overflow drains | | ✔ |

4. **Volume-based calculation (approximate) for sizing on-site or off-site Stormwater Retention/Infiltration, Harvest & Re-Use or Biotreatment facilities**

1) After calculating the "Watershed Imperviousness Ratio", i, which is equal to the percent of impervious area in each Drainage Management Area, divided by 100, calculate the composite runoff coefficient $C_{BMP}$ for the Drainage Area above using the following equation:

$$C_{BMP} = 0.858i^3 - 0.78i^2 + 0.774i + 0.04$$

where: $C_{BMP}$ = composite runoff coefficient; and,

**i** = watershed imperviousness ratio.

3) Determine the area-averaged "6-hour Mean Storm Rainfall", $P_6$, for the Drainage Area. This is calculated by multiplying the area averaged 2-year 1-hour value (0.5"-0.6") by the appropriate regression coefficient (1.4807). The 2-yr, 1-hr value for southern Ontario is approximately to 0.5" ($P_6$ = 0.5*1.4807 = 0.74 and northern Ontario is approximately 0.6" in/hr ($P_6$ = 0.6*1.4807 = 0.89).

4) Determine the appropriate drawdown time. Use the regression constant a = 1.582 for 24 hours and a = 1.963 for 48 hours. *Note: Regression constants are provided for both 24 hour and 48-hour drawdown times; however, 48-hour drawdown times should be used in most areas of California. Drawdown times in excess of 48 hours should be used with caution as vector breeding can be a problem after water has stood in excess of 72 hours. (Use of the 24-hour drawdown time should be limited to drainage areas with coarse soils (Class 'A' soils that readily drain.)*

5) Calculate the "Maximized Detention Volume", $P_0$, using the following equation:

$$P_0 = a \cdot C_{BMP} \cdot P_6$$

where: $P_0$ = Maximized Detention Volume, in inches

**a** = 1.582 for 24 hour and a = 1.963 for 48-hour drawdown,

$C_{BMP}$ = composite runoff coefficient; and,

$P_6$ = 6-hour Mean Storm Rainfall, in inches

6) Calculate the "Target Capture Volume", $V_0$, using the following equation:

$$V_0 = (P_0 \cdot A) / 12$$

where: $V_0$ = Target Capture Volume, in acre-feet

$P_0$ = Maximized Detention Volume, in inches; and,

**A** = BMP Drainage Area, in acres

**Project Volume-based calculation (approximate) for planned on-site or off-site Stormwater Retention/Infiltration, Harvest & Re-Use or Biotreatment facilities:**

| Impervious surface/total surface, ratio | (i) | 0.188 | | | |
| $C_{BMP}$= runoff coefficient | $0.858i^3 - 0.78i^2 + 0.774i + 0.04$ | 0.164 | | | |
| $P_6$ | **$P_6$ = 2-yr,1-hr depth*1.4807 = | 0.865 | | | |
| Detention Volume (acre inches) | $P_0 = a * C_{BMP} * P_6$ = | 0.278 | | | |
| Drawdown rate of basin/trench (a) | 1.963 for 48-hr drawdown = | 1.963 | | | |
| Project Total Area (acre) | (A) | 1.73 | | | |
| Design Capture Volume in cu. ft. | $V_0 = [(P_0 * A)/12] *43560$ = | 1,751 | | | |
| Retention Volume provided in cubic feet. | Retention capacity of basins, trenches, underground storage or biotreatment basin | 2,102 | | | |

**For $P_6$ value, use site coordinates and NOAA website to determine project's average 2-yr, 1-hr rainfall depth, at: http://hdsc.nws.noaa.gov/hdsc/pfds/sa/sca_pfds.html .

# In case of available "Storm Water Treatment Capacity" credit for Mill Creek Wetland watershed, the developer will have the option to use "Offsite Biotreatment Facility (i.e. Mill Creek Wetland)" for the tributary area DCV and not to build any onsite infiltration Basin.

**5. Flow-Based calculation (approximate) for sizing on-site or off-site Biotreatment facilities and proprietary treatment technology BMPs:**

1) After calculating the "Watershed Imperviousness Ratio", i, which is equal to the percent of impervious area in each Drainage Management Area divided by 100, calculate the composite runoff coefficient $C_{BMP}$ for the Drainage Area above using the following equation:

$$C_{BMP} = 0.858i^3 - 0.78i^2 + 0.774i + 0.04$$

where: $C_{BMP}$ = composite runoff coefficient; and,

**i** = watershed imperviousness ratio.

2) Determine BMP design rainfall intensity, **$I_{BMP}$**, using the project site geo-coordinates and the NOAA website to determine project's average 2-yr, 1-hr rainfall intensity, at: http://hdsc.nws.noaa.gov/hdsc/pfds/sa/sca_pfds.html .Multiply this value by 0.2787 (regression coefficient for Ontario) and a minimum safety factor of 2.

4) Calculate the target BMP flowrate, Q, using the following formula (for each DMA <50 acres*):

$$Q = C_{BMP} \cdot I_{BMP} \cdot A$$

Where: **Q** = flow in cfs (Cubic feet per second)
**$I_{BMP}$** = BMP design rainfall intensity, in/hr
**A** = Drainage Area in acres

*For DMAs >50 acres, with $C_{BMP}$ <0.5, the project applicant shall use the unit hydrograph method specified in the San Bernardino County Hydrology Manual, using the design storm pattern with rainfall return frequency such that the peak 1-hr rainfall intensity equals the 85th percentile 1-hr rainfall, multiplied by 2.

**Project Flow-based calculation (approximate) for planned on-site or off-site flow-based Biotreatment facilities or Stormwater Treatment BMPs:**

| Variable | Factor/Formula | DA1 DMA A | DA1 DMA B | DA2 DMA A | DA2 DMA B |
|---|---|---|---|---|---|
| Impervious surface/ total surface, ratio | (i) | | | | |
| $C_{BMP}$= composite runoff coefficient | $0.858i^3 + 0.78i^2 + 0.774i + 0.04$ | | | | |
| $I_{BMP}$ | $I_{BMP}$ = 2-yr,1-hr storm intensity*0.2787*safety factor | | | | |
| Drainage area (ac) | A = DMA sq ft/43,560 | | | | |
| Target BMP flowrate | Q = $C_{BPM}$* $I_{BMP}$ * A | | | | |

**6. Hydrologic Conditions of Concern (HCOC) and use of the on-line San Bernardino County HCOC Map for determining necessary mitigation steps necessary if there are HCOCs downstream of a project:**

Project applicants may access the on-line HCOC Map at: http://permitrack.sbcounty.gov/WAP/. The map will indicate any hydrology concerns with downstream waterways that are hydraulically connected to the project and will indicate if there are any approved regional projects downstream that could be utilized for off-site mitigation of HCOCs. Please indicate here if the project will or will not be able to retain/infilter, harvest and use or biotreat and detain the DCV, on-site, as calculated in Section 4 and if there are HCOCs identified downstream of the project:

| | | | | |
|---|---|---|---|---|
| Retain or Harvest/Use the DCV on site? | Yes | | No | ✔ |
| Biotreat the DCV but not infilter the runoff? | Yes | | No | ✔ |
| HCOCs identified downstream of site? | Yes | ✔ | No | |

If the entire DCV will not be retained on site, the DCV is biotreated but not infiltered or additional detention capacity is needed to address identified HCOCs, downstream of the site, please list here, what additional mitigation measures will be utilized (on-site or off-site) to address HCOCs (see Section 4.2.1-4.2.3 of the SB County WQMP Technical Guidance):

_____

_____

**7. Site Plan and Conceptual Grading/Drainage Plan requirements for submission with the Preliminary WQMP:**

Provide a Site Plan and Conceptual Grading/Drainage Plan along with this Preliminary WQMP, which conceptually shows the proposed locations of buildings, homes, parking lots, parks, new paved roadways, landscaped areas, drainage patterns and drainage sub-areas, methods of conveyance, proposed retention/infiltration, harvest & use or biotreatment facilities that are planned for installation. Where it is determined to be infeasible to capture and detain design storm runoff volumes, on-site, please include other design features, as described in Section 3, above. Include numbered or lettered notes on the Site Plan with a legend detailing other BMPs, as described in Section 3.

**8. BMP Maintenance and Funding Mechanism & Description:**

_____

_____

**9. Acknowledgment:**

As the property owner or developer, I understand that this project is required to install and implement permanent LID Storm Water Best Management Practices pursuant to the requirements of the San Bernardino County MS4 Permit and to document those BMPs in the submittal of a Water Quality Management Plan, which is binding on any current or successive owners of this property.

| Yes | | No | |
|---|---|---|---|

**10. Exemption Signature:**

As the property owner or developer, I understand that this project is not required by the San Bernardino County MS4 Permit to install and implement permanent LID Storm Water Best Management Practices and will not be required to submit a Water Quality Management Plan.

# 1.0 INTRODUCTION

This report documents the results of an Acoustical Assessment completed for the Center Park Specific Plan Project (Project). The purpose of this Acoustical Assessment is to evaluate the potential construction and operational noise and vibration levels associated with the Project and the level of impact the Project would have on the environment. A comparative analysis has been undertaken to determine whether the Project would result in any new or substantially more severe significant environmental impacts as compared to the conclusions discussed in The Ontario Plan (TOP) 2050, certified Final Supplemental Environmental Impact Report (FSEIR), pursuant to the California Environmental Quality Act (CEQA) Guidelines Section 15183 (Projects Consistent with a Community Plan, General Plan, or Zoning). Applicable mitigation measures from the FSEIR have been incorporated into this analysis.

## 1.1 Project Location

The Project site is comprised of 29 parcels totaling 257.34 acres within Ontario Ranch, City of Ontario (City), San Bernardino County (County), California; see **Figure 1: Regional Location Map.** The Assessor Parcel Numbers (APNs) comprising the Project site are 1053-301-01, -02; 1053-311-01, -02; 1053-321-01, -02, -03; 1053 331 01, 02, -03, -04; 1053-341-01, -02; 1053-351-01, -02; 1053-361-01, -02, -03; 1053-371-01, -02; 0216-311-01, -02, -09; 0216-321-03, -08; 0216-322-03, -04, -10; see **Figure 2: Project Site Assessor Parcel Numbers**. The Project site is bounded by a Southern California Edison (SCE) Easement to the north, Walker Avenue to the east, Eucalyptus Avenue to the south, and Campus Avenue to the west; see **Figure 3: Local Vicinity Map**. Land uses surrounding the Project site include a nursery, crop farms, rural residential uses, and dairy farm operations.

Regional access to the Project site is provided by State Route 60 (SR-60) located approximately 2.1 miles to the north, Interstate 15 (I-15) located approximately 4.0 miles to the east, State Route 71 (SR-71), which connects to State Route 91 (SR-91) to the south, located approximately 3.5 miles to the southwest, and Euclid Avenue, which connects SR-71, SR-60, and Interstate 10 (I-10) to the north, located approximately 0.8 mile to the west.

TOP 2050 designates the Project site land use as Medium Density Residential (MDR), Mixed-Use – Great Park (MU – Great Park), Open Space – Recreation (OS – R), and Open Space – Non-Recreation (OS – NR); see **Figure 4: Existing Land Use and Zoning**. The MDR designation permits single-family and multi-family residential uses. The MU – Great Park designation permits commercial, office, and multi-family residential uses. The OS – R designation permits recreational uses. The OS – NR designation permits utility easements and drainage channels and prohibits building development. TOP 2050 zones the Project site as Specific Plan (SP) with an Agriculture (AG) and Chino Airport (CNO) Overlay zoning overlay. The AG overlay requires a transition buffer area between the existing agricultural uses and the proposed urban uses. In addition, the Project site areas designated MDR or MU – Great Park have an Affordable Housing (AH) zoning overlay to increase affordable housing opportunities in compliance with the City's Housing Element and State Housing Element law.

### Project Description

The proposed SP would implement the TOP 2050 vision, establish development standards and procedures, become the governing zoning standards for the Project site, permit a maximum of 802

single-family dwelling units (DUs), 3,491 multi-family DUs, 250,920 square feet (SF) of commercial space, 55.98 acres of recreational open space, and 11.28 acres of non-recreational open space. The Project site is currently developed by ruderal vegetation, rural residences, and agricultural uses such as livestock raising, field crop farming, and dairy farm operations. The Project would remove all on-site uses and improvements to implement the proposed Project.

The proposed SP would divide the Project site into 22 planning areas (PAs); see **Figure 5: Land Use Plan**. The Project site land use designations would remain consistent with TOP 2050. The proposed SP would serve as the Project site zoning designation, consistent with TOP 2050. The Project would be classified as a Tier 2 affordable housing project, which designates at least 25 percent of the DUs as affordable housing. The Project would be developed in two phases; see **Figure 6: Project Phasing Plan**. Phase I would be developed by the private Applicant. Phase II would be dedicated to the City and would be developed at an unknown, later date following Phase I. This analysis conservatively evaluates the maximum Project development potential, with Phase II being evaluated at the programmatic level.

Phase I

Phase I would develop 256 single-family DUs, 768 multi-family DUs, 19.64 acres of recreational open space, and 3.38 acres of non-recreational open space within PAs 6, 12, 13, 17, 18, and 22; see **Table 1: Maximum Phase I Buildout**. The recreational open space would be designated as part of the City's Grand Park, a planned regional park within the Ontario Ranch area. The developer would construct the recreational open space in accordance with the City's Recreation and Parks Master Plan. The Applicant would submit a Development Plan and Tentative Parcel Map for the Phase I Project site following Project approval. Phase I is anticipated to begin construction as early as 2025 and be operational as early as 2029. For purposes of this analysis, it is conservatively assumed that Phase I would be operational as soon as construction is completed in 2027. This is a worst-case assumption as Phase I occupancy would be dependent on market conditions and permit approvals.

**Table 1: Maximum Phase I Buildout**

| Planning Area | Land Use | TOP 2050 Acreage (AC) | Maximum Residential Density (DU/AC)[1] | Maximum Residential (DU) |
|---|---|---|---|---|
| 6 | MDR | 7.33 | -- | 161 |
| 12 | MDR | 15.46 | 22.0 | 340 |
| 13 | MDR | 23.75 | 22.0 | 523 |
| 17 | OS – R | 6.20 | -- | -- |
| 18 | OS – R | 13.44 | -- | -- |
| 22 | OS – NR | 3.38 | -- | -- |
| | **Phase I Total** | **69.56** | **--** | **1,024** |

AC = acres; DU/AC = dwelling units/ acre; DU = dwelling unit; SF = square feet; MDR = Medium Density Residential; OS – R = Open Space – Recreation; and OS – NR = Open Space – Non-Recreation

1. Maximum residential density per The Ontario Plan 2050, Final Supplemental Environmental Impact Report.

Phase II

Phase II would develop 546 single-family DUs, 2,723 multi-family DUs, 250,920 SF of commercial space, 36.34 acres of recreational open space, and 7.9 acres of non-recreational open space within PAs 1 through 5, 7 through 11, 14 through 16, and 19 through 2; see **Table 2: Maximum Phase II Buildout**. The recreational open space would be designated as part of the City's Grand Park, a

Kimley»Horn

planned regional park within the Ontario Ranch area. The developer would construct the recreational open space in accordance with the City's Recreation and Parks Master Plan. For construction phasing purposes, Phase II is anticipated to begin construction as early as 2026 and be operational as early as 2034. It is conservatively assumed that Phase II would be operational as soon as construction is completed in 2030. This is a worst-case assumption as Phase II construction and occupancy would be dependent on market conditions and permit approvals.

**Table 2: Maximum Phase II Buildout**

| Planning Area | Land Use | TOP 2050 Acreage (AC) | Maximum Residential Density (DU/AC)[1] | Maximum Residential (DU) | Maximum Retail (SF) | Maximum Office (SF) |

1. Maximum residential density per The Ontario Plan 2050, Final Supplemental Environmental Impact Report.

Circulation

The Project would include a Circulation Plan to facilitate the movement of vehicles, pedestrians, and cyclists within the Project area. Local access to the Project site would be provided via Campus Avenue, Bon View Avenue, Cucamonga Avenue, Grove Avenue, Parco Avenue, Walker Avenue, and Edison Avenue/Ontario Ranch Road. Pedestrian circulation would be provided throughout the Project area via a paved sidewalk system that would interconnect with the roadway right-of-way. TOP 2050 proposed Class II bicycle lanes transversing in a north/south direction along the west side of Walker Avenue. The City's Recreation and Parks Master Plan proposed Class I bicycle lanes transversing in an east/west direction along the Project site's southern property line. The Project

would be connected to off-site areas through the City's master planned multipurpose trails/bikeways located along the neighborhood edges of the Project site. An Omnitrans Bus Rapid Transit (BRT) Corridor is proposed along Edison Avenue/Ontario Ranch Road as a part of future development.

On-site and Off-site Improvements

Roadway and utility infrastructure improvements (i.e., storm drains, sewer, potable water, recycled water, fiber optics, and underground electricity) would be constructed prior to the issuance of building occupancy permits. The developer would construct the improvements in accordance with the City's Master Plans, City's Ordinances, and proposed Specific Plan provisions or with the City Engineer's approval. Phasing and construction of the improvements would be determined by the City Engineer and Project requirements.

The Project would include landscaping along roadway frontages and between the pedestrian sidewalk and roadway. Landscaping would be developed in accordance with the City's development code and proposed Specific Plan provisions. Landscape and Construction Irrigation Documentation Plans would be submitted to the City prior to the issuance of building permits. The Project would comply with City Ordinance 2689, which requires the use of recycled water for all approved uses, including but not limited to landscape irrigation.

# 2.0 ACOUSTIC FUNDAMENTALS

## 2.1 Sound and Environmental Noise

Acoustics is the science of sound. Sound can be described as the mechanical energy of a vibrating object transmitted by pressure waves through a medium (e.g., air) to human (or animal) ear. If the pressure variations occur frequently enough (at least 20 times per second), they can be heard and are called sound. The number of pressure variations per second is called the frequency of sound and is expressed as cycles per second, or hertz (Hz).[1]

Noise is defined as loud, unexpected, or annoying sound.[2] The fundamental model consists of a noise source, a receptor, and the propagation path between the two.[3] The loudness of the noise source, obstructions, or atmospheric factors affecting the propagation path, determine the perceived sound level and noise characteristics at the receptor. Acoustics deal primarily with the propagation and control of sound.[4] A typical noise environment consists of ambient noise that is the sum of many distant and indistinguishable noise sources. Superimposed on this ambient noise is the sound from individual local sources. These sources can vary from an occasional aircraft or train passing by to continuous noise from traffic on a major highway. Perceptions of sound and noise are highly subjective from person to person.

Measuring sound directly in terms of pressure would require a large range of numbers. To avoid this, the decibel (dB) scale was devised. The dB scale uses the hearing threshold of 20 micro-pascals (μPa) as a point of reference, defined as 0 db.[5] Other sound pressures are then compared to this reference pressure, and the logarithm is taken to keep the numbers in a practical range. The dB scale allows a million-fold increase in pressure to be expressed as 120 dB, and changes in levels correspond closely to human perception of relative loudness. **Table 3: Typical Noise Levels** provides typical noise levels.

**Table 3: Typical Noise Levels**

## Noise Descriptions

The dB scale alone does not adequately characterize how humans perceive noise. The dominant frequencies of a sound have a substantial effect on the human response to that sound. Several rating scales have been developed to analyze the adverse effect of community noise on people. Because environmental noise fluctuates over time, these scales consider that the effect of noise on people is largely dependent on the total acoustical energy content of the noise, as well as the time of day when the noise occurs.[6] The equivalent noise level ($L_{eq}$) represents the equivalent continuous sound pressure level over the measurement period, while the day-night noise level ($L_{dn}$) and Community Equivalent Noise Level (CNEL) are measures of sound energy during a 24-hour period, with dB weighted sound levels from 7:00 p.m. to 7:00 a.m. Most commonly, environmental sounds are described in terms of $L_{eq}$ that has the same acoustical energy as the summation of all the time-varying events. Each is applicable to this analysis and defined in **Table 4: Definitions of Acoustical Terms**.

| Table 4: Definitions of Acoustical Terms | |
|---|---|
| **Term** | **Definitions** |
| Decibel (dB) | A unit describing the amplitude of sound, equal to 20 times the logarithm to the base 10 of the ratio of the pressure of the sound measured to the reference pressure. The reference pressure for air is 20. |
| Sound Pressure Level | Sound pressure is the sound force per unit area, usually expressed in μPa (or 20 micronewtons per square meter), where 1 pascal is the pressure resulting from a force of 1 newton exerted over an area of 1 square meter. The sound pressure level is expressed in dB as 20 times the logarithm to the base 10 of the ratio between the pressures exerted by the sound to a reference sound pressure (e.g. 20 μPa). Sound pressure level is the quantity that is directly measured by a sound level meter. |
| Frequency (Hz) | The number of complete pressure fluctuations per second above and below atmospheric pressure. Normal human hearing is between 20 Hz and 20,000 Hz. Infrasonic sound are below 20 Hz and ultrasonic sounds are above 20,000 Hz. |
| A-Weighted Sound Level (dBA) | The sound pressure level in dB as measured on a sound level meter using the A-weighting filter network. The A-weighting filter de-emphasizes the very low and very high frequency components of the sound in a manner similar to the frequency response of the human ear and correlates well with subjective reactions to noise. |
| Equivalent Noise Level ($L_{eq}$) | The average acoustic energy content of noise for a stated period of time. Thus, the $L_{eq}$ of a time-varying noise and that of a steady noise are the same if they deliver the same acoustic energy to the ear during exposure. For evaluating community impacts, this rating scale does not vary, |

[6] Ibid.

| **Table 4: Definitions of Acoustical Terms** | |
|---|---|
| **Term** | **Definitions** |
| | regardless of whether the noise occurs during the day or the night. |
| Maximum Noise Level ($L_{max}$) Minimum Noise Level ($L_{min}$) | The maximum and minimum dBA during the measurement period. |
| Exceeded Noise Levels ($L_{01}$, $L_{10}$, $L_{50}$, $L_{90}$) | The dBA values that are exceeded 1%, 10%, 50%, and 90% of the time during the measurement period. |
| Day-Night Noise Level ($L_{dn}$) | A 24-hour average $L_{eq}$ with a 10-dBA weighting added to noise during the hours of 10:00 p.m. to 7:00 a.m. to account for noise sensitivity at nighttime. The logarithmic effect of these additions is that a 60 dBA 24-hour $L_{eq}$ would result in a measurement of 66.4 dBA $L_{dn}$. |
| Community Noise Equivalent Level (CNEL) | A 24-hour average $L_{eq}$ with a 5-dBA weighting during the hours of 7:00 a.m. to 10:00 a.m. and a 10-dBA weighting added to noise during the hours of 10:00 p.m. to 7:00 a.m. to account for noise sensitivity in the evening and nighttime, respectively. The logarithmic effect of these additions is that a 60 dBA 24-hour $L_{eq}$ would result in a measurement of 66.7 dBA CNEL. |
| Ambient Noise Level | The composite of noise from all sources near and far. The normal or existing level of environmental noise at a given location. |
| Intrusive | That noise which intrudes over and above the existing ambient noise at a given location. The relative intrusiveness of a sound depends on its amplitude, duration, frequency, and time of occurrence and tonal or informational content as well as the prevailing ambient noise level. |
| Source: California Department of Transportation, *Technical Noise Supplement to the Traffic Noise Analysis Protocol*, September 2013. | |

The A-weighted decibel (dBA) sound level scale gives greater weight to the frequencies of sound to which the human ear is most sensitive. Because sound levels can vary markedly over a short period of time, a method for describing either the average character of the sound or the statistical behavior of the variations must be utilized. Most commonly, environmental sounds are described in terms of an average level that has the same acoustical energy as the summation of all the time-varying events.

The scientific instrument used to measure noise is the sound level meter. Sound level meters can accurately measure environmental noise levels to within about plus or minus 1 dBA.[7] Various computer models are used to predict environmental noise levels from sources, such as roadways and airports. The accuracy of the predicted models depends on the distance between the receptor and the noise source, the character of the ground surface (e.g., hard or soft), and the presence or absence of structures (e.g., walls or buildings) or topography, and how well model inputs reflect these conditions.

## A-Weighted Decibels

The perceived loudness of sounds is dependent on many factors, including sound pressure level and frequency content.[8] However, within the usual range of environmental noise levels, perception of loudness is relatively predictable and can be approximated by dBA values. There is a strong correlation between dBA and the way the human ear perceives sound. For this reason, the dBA has become the standard tool of environmental noise assessment. All noise levels reported in this document are in terms of dBA, but are expressed as dB, unless otherwise noted.

[7] Ibid.
[8] Cyril M. Harris, *Noise Control in Buildings: A Practical Guide for Architects and Engineers*, 1994.

## Addition of Decibels

The dB scale is logarithmic, not linear, and therefore sound levels cannot be added or subtracted through ordinary arithmetic. Two sound levels 10 dB apart differ in acoustic energy by a factor of 10.[9] When the standard logarithmic dB is A-weighted, an increase of 10 dBA is generally perceived as a doubling in loudness. For example, a 70-dBA sound is half as loud as an 80-dBA sound and twice as loud as a 60-dBA sound.[10] When two identical sources are each producing sound of the same loudness, the resulting sound level at a given distance would be 3 dBA higher than one source under the same conditions.[11] Under the dB scale, three sources of equal loudness together would produce an increase of approximately 5 dBA.[12]

## Sound Propagation and Attenuation

Sound spreads (propagates) uniformly outward in a spherical pattern, and the sound level decreases (attenuates) at a rate of approximately 6 dB for each doubling of distance from a stationary or point source. Sound from a line source, such as a highway, propagates outward in a cylindrical pattern. Sound levels attenuate at a rate of approximately 3 dB for each doubling of distance from a line source, such as a roadway, depending on ground surface characteristics.[13] No excess attenuation is assumed for hard surfaces like a parking lot or a body of water. Soft surfaces, such as soft dirt or grass, can absorb sound, so an excess ground-attenuation value of 1.5 dB per doubling of distance is normally assumed when soft ground conditions exist between the source and receptor locations.[14] For line sources, an overall attenuation rate of 3 dB per doubling of distance is assumed in this report.

Noise levels may also be reduced by intervening structures; generally, a single row of buildings between the receptor and the noise source reduces the noise level by about 5 dBA, while a solid wall or berm can reduce noise levels by 5 to 15 dBA.[15] The way older homes in California were constructed generally provides a reduction of exterior-to-interior noise levels of about 20 to 25 dBA with closed windows.

## Human Response to Noise

The human response to environmental noise is subjective and varies considerably from individual to individual. Noise in the community has often been cited as a health problem, not in terms of actual physiological damage, such as hearing impairment, but in terms of inhibiting general well-being and contributing to undue stress and annoyance. The health effects of noise in the community arise from interference with human activities, including sleep, speech, recreation, and tasks that demand concentration or coordination. Hearing loss can occur at the highest noise intensity levels.

Noise environments and consequences of human activities are usually well represented by median

noise levels during the day or night or over a 24-hour period. Environmental noise levels are generally considered low when the CNEL is below 60 dBA, moderate in the 60 to 70 dBA range, and high above 70 dBA.[16] Examples of low daytime levels are isolated, natural settings with noise levels as low as 20 dBA and quiet, suburban, residential streets with noise levels around 40 dBA.[17] Noise levels above 45 dBA at night can disrupt sleep. Examples of moderate-level noise environments are urban residential or semi-commercial areas (typically 55 to 60 dBA) and commercial locations (typically 60 dBA). People may consider louder environments adverse, but most will accept the higher levels associated with noisier urban residential or residential-commercial areas (60 to 75 dBA) or dense urban or industrial areas (65 to 80 dBA). Regarding increases in dBA, the following relationships should be noted:[18]

- Except in carefully controlled laboratory experiments, a 1-dBA change cannot be perceived by humans.
- Outside of the laboratory, a 3-dBA change is considered a just-perceivable difference.
- A minimum 5-dBA change is required before any noticeable change in community response would be expected. A 5-dBA increase is typically considered substantial.
- A 10-dBA change is subjectively heard as an approximate doubling in loudness and would almost certainly cause an adverse change in community response.

## Effects of Noise on People

**Hearing Loss.** While physical damage to the ear from an intense noise impulse is rare, a degradation of auditory acuity can occur even within a community noise environment. Hearing loss occurs mainly due to chronic exposure to excessive noise but may be due to a single event such as an explosion. Natural hearing loss associated with aging may also be accelerated from chronic exposure to loud noise. The Occupational Safety and Health Administration has a noise exposure standard that is set at the noise threshold where hearing loss may occur from long-term exposures. The maximum allowable level is 90 dBA averaged over 8 hours. If the noise is above 90 dBA, the allowable exposure time is correspondingly shorter.[19]

**Annoyance.** Attitude surveys are used for measuring the annoyance felt in a community for noises intruding into homes or affecting outdoor activity areas. In these surveys, it was determined that causes for annoyance include interference with speech, radio and television, house vibrations, and interference with sleep and rest. The $L_{dn}$ as a measure of noise has been found to provide a valid correlation of noise level and the percentage of people annoyed. People have been asked to judge the annoyance caused by aircraft noise and ground transportation noise. There continues to be disagreement about the relative annoyance of these different sources. A noise level of about 55 dBA $L_{dn}$ is the threshold at which a substantial percentage of people begin to report annoyance.[20]

## 2.2 Ground-Borne Vibration

Sources of ground-borne vibrations include natural phenomena (earthquakes, volcanic eruptions, sea waves, landslides, etc.) or man-made causes (explosions, machinery, traffic, trains, construction equipment, etc.). Vibration sources may be continuous (e.g., factory machinery) or transient (e.g., explosions or heavy equipment used during construction). Ground vibration consists of rapidly fluctuating motions or waves with an average motion of zero.[21] Several different methods are typically used to quantify vibration amplitude. One is vibration decibels (VdB) (the vibration velocity level in decibel scale). Other methods are the peak particle velocity (PPV) and the root mean square (RMS) velocity. The PPV is defined as the maximum instantaneous positive or negative peak of the vibration wave and expressed in terms of inches-per-second (in/sec). The RMS velocity is defined as the average of the squared amplitude of the signal and is expressed in terms of VdB.[22] The PPV and RMS vibration velocity amplitudes are used to evaluate human response to vibration.

**Table 5: Human Reaction and Damage to Buildings for Continuous or Frequent Intermittent Vibrations** displays the reactions of people and the effects on buildings produced by continuous vibration levels. The human annoyance levels shown in the table should be interpreted with care since vibration may be found to be annoying at much lower levels than those listed, depending on the level of activity or the sensitivity of the individual. To sensitive individuals, vibrations approaching the threshold of perception can be annoying. Low-level vibrations frequently cause irritating secondary vibration, such as a slight rattling of windows, doors, or stacked dishes. The rattling sound can give rise to exaggerated vibration complaints, even though there is very little risk of actual structural damage. In high noise environments, which are more prevalent where ground-borne vibration approaches perceptible levels, this rattling phenomenon may also be produced by loud airborne environmental noise causing induced vibration in exterior doors and windows.

Ground vibration can be a concern in instances where buildings shake, and substantial rumblings occur. However, it is unusual for vibration from typical urban sources such as buses and heavy trucks to be perceptible.[23] Common sources for ground-borne vibration are planes, trains, and construction activities such as earth-moving, which requires the use of heavy-duty earth moving equipment.[24] For the purposes of this analysis, a PPV descriptor with units of in/sec was used to evaluate construction-generated vibration for building damage and human complaints.

**Table 5: Human Reaction and Damage to Buildings for Continuous or Frequent Intermittent Vibrations**

| Maximum PPV (in/sec) | Caltrans Vibration Annoyance Potential Criteria | Caltrans Vibration Damage Potential Threshold Criteria | FTA Vibration Damage Criteria |
|---|---|---|---|

Source: California Department of Transportation, *Transportation and Construction Vibration Guidance Manual*, 2020 and Federal Transit administration, *Transit Noise and Vibration Assessment Manual*, 2018.

## 2.3 Ground-Borne Noise

Ground-borne noise specifically refers to the rumbling noise emanating from the motion of building room surfaces due to the vibration of floors and walls; it is perceptible only inside buildings.[25] The relationship between ground-borne vibration and ground-borne noise depends on the frequency content of the vibration and the acoustical absorption characteristics of the receiving room. For typical buildings, ground-borne vibration that causes low frequency noise (i.e., the vibration spectrum peak is less than 30 Hz) results in a ground-borne noise level that is approximately 50 decibels lower than the velocity level. For ground-borne vibration that causes mid-frequency noise (i.e., the vibration spectrum peak is between 30 and 60 Hz), the ground-borne noise level will be approximately 35 dB lower than the velocity level. For ground-borne vibration that cause high-frequency noise (i.e., the vibration spectrum peak is greater than 60 Hz), the ground-borne noise level will be approximately 20 dB lower than the velocity level.[26] The Federal Transit Administration (FTA) provides a ground-borne noise threshold of 43 dBA for infrequent vibration events in Category 2 buildings such as residences and buildings where people normally sleep. For frequent and occasional vibratory events, the FTA established ground-borne noise thresholds of 35 dBA and 38 dBA, respectively.[27]

[26] Ibid.
[27] Ibid.

# 3.0 REGULATORY SETTING

To limit population exposure to physically or psychologically damaging, as well as intrusive, noise levels, the federal government, the State, various county governments, and most municipalities in the State have established standards and ordinances to control noise.

## 3.1 Federal

### Federal Transit Administration Noise and Vibration Guidance

The FTA has published the Transit Noise and Vibration Impact Assessment Manual (FTA Transit Noise and Vibration Manual) to provide guidance on procedures for assessing impacts at different stages of transit project development.[28] The report covers both construction and operational noise impacts and describes a range of measures for controlling excessive noise and vibration. In general, the primary concern regarding vibration relates to potential physical damage from construction. The guidance document establishes criteria for evaluating the potential for damage to various structural categories from vibration.

## 3.2 State of California

### California Government Code

California Government Code Section 65302(f) mandates that the legislative body of each county and city adopt a noise element as part of its comprehensive general plan. The local noise element must recognize the land use compatibility guidelines established by the State Department of Health Services.[29] The guidelines rank noise land use compatibility in terms of "normally acceptable", "conditionally acceptable", "normally unacceptable", and "clearly unacceptable" noise levels expressed in CNEL for various land use types. Single-family homes are "normally acceptable" in exterior noise environments up to 60 CNEL and "conditionally acceptable" up to 70 CNEL. Multiple-family residential uses are "normally acceptable" up to 65 CNEL and "conditionally acceptable" up to 70 CNEL. Schools, libraries, and churches are "normally acceptable" up to 70 CNEL, as are office buildings and business, commercial, and professional uses.

### Title 24 – Building Code

The State's noise insulation standards are codified in the California Code of Regulations, Title 24: Part 1, Building Standards Administrative Code, and Part 2, California Building Code. These noise standards are applied to new construction in California for interior noise compatibility from exterior noise sources. The regulations specify that acoustical studies must be prepared when noise-sensitive structures, such as residential buildings, schools, hotel rooms, or hospitals, are located near major transportation noise sources, and where such noise sources create an exterior noise level of 65 dBA CNEL or higher. Acoustical studies that accompany building plans must demonstrate that the structure has been designed to limit interior noise in habitable rooms to acceptable noise levels. For new multi-family residential buildings and habitable rooms (including hotels), the

[28] Ibid.

[29] State of California Governor's Office of Planning and Research, *General Plan Guidelines, Appendix D: Noise Element Guidelines*, page 374, 2017, https://opr.ca.gov/docs/OPR_COMPLETE_7.31.17.pdf, accessed January 2025.

acceptable interior noise limit for new construction is 45 dBA CNEL.

## 3.3 Local

### City of Ontario General Plan

The City of Ontario General Plan (TOP 2050) is a policy plan that guides the City's long-term development. The TOP 2050 Land Use Element and Safety Element establish goals, policies, and land use guidelines to protect residents, workers, and visitors from excessive noise levels.

Land Use Element

The following goals and policies from the Land Use Element are applicable to the Project:

**Goal LU-2** **Compatibility between a wide range of uses and resultant urban patterns and forms.**

**Policy LU-2.2** **Buffers.** We require new uses to provide mitigation or buffers between existing uses where potential adverse impacts could occur. Additional mitigation is required when new uses could negatively impact environmental justice areas.

**Policy LU-2.4** **Regulation of Nuisances**. We regulate the location, concentration, and operation of potential nuisances

**Policy LU-2.8** **Transitional Areas**. We require development in transitional areas to protect the quality of life of current residents.

The City uses the Noise Level Exposure and Land Use Compatibly Guidelines (shown in **Table 6: Noise Level Exposure and Land Use Compatibility Guidelines** below) when siting new developments.

**Table 6: Noise Level Exposure and Land Use Compatibility Guidelines**

| Land Use Categories | | Community Noise Equivalent Level (CNEL) | | | |

1. No special noise insulation required, assuming buildings of normal conventional construction.
2. Acoustical reports will be required for major new residential construction. Conventional construction with closed windows and fresh air supply systems of air conditions will normally suffice.
3. New construction should be discouraged. Noise/aviation easements required for all new construction. If new construction does proceed, a detailed analysis of noise reduction requirements must be made, and necessary noise insulation features included.
4. No new construction should be permitted.

Safety Element

The following goals and policies from the Safety Element are applicable to the Project:

**Goal S4** **An environment where noise does not adversely affect the public's health, safety, and welfare.**

**Policy S4-1** **Noise Mitigation.** Utilize the City's Noise Ordinance, building codes and subdivision and development codes to mitigate noise impacts.

**Policy S4-2** **Coordination with Transportation Authorities.** Collaborate with airport owners, FAA, Caltrans, SANBAG, SCAG, neighboring jurisdictions, and other transportation providers in the preparation and maintenance of, and updates to transportation related plans to minimize noise impacts and provide appropriate mitigation measures.

**Policy S4-4** **Truck Traffic.** Manage truck traffic to minimize noise impacts on sensitive land uses.

**Policy S4-5** **Roadway Design.** Design streets and highways to minimize noise impacts.

**Policy S4-6** **Airport Noise Compatibility.** Utilize the Airport Land Use Compatibility to prevent the construction of new noise-sensitive land uses within the airport noise impact zones.

## City of Ontario Municipal Code

The City of Ontario Municipal Code (Municipal Code) Title 5: Public Welfare, Morals, and Conduct, Chapter 29: Noise establishes noise limits and regulates short-term, excessive noise sources.

**Municipal Code Section 5-29.04** establishes exterior noise limits (shown in **Table 7: City of Ontario Exterior Noise Standards**).

| **Table 7: City of Ontario Exterior Noise Standards** | | |
|---|---|---|
| **Land Use** | **Allowed Equivalent Noise Level ($L_{eq}$)** | |
| | **7:00 a.m. to 10:00 p.m.** | **10:00 p.m. to 7:00 a.m.** |
| Single-Family Residential | 65 dBA | 45 dBA |
| Multi-Family Residential, Mobile Home Parks | 65 dBA | 50 dBA |
| Commercial Property | 65 dBA | 60 dBA |
| Residential Portion of Mixed Use | 70 dBA | 70 dBA |
| Manufacturing and Industrial, Other Uses | 70 dBA | 70 dBA |
| Source: City of Ontario, *Municipal Code, Title 5: Public Welfare, Morals, and Conduct, Chapter 29: Noise, Section 5-29.04: Exterior Noise Standards*, https://codelibrary.amlegal.com/codes/ontarioca/latest/ontario_ca/0-0-0-41849, accessed January 2025. | | |

The noise limits summarized in **Table 7** are subject to the following:

- Noise exceeding the noise standard for any 15-minute period is prohibited.
- Noise exceeding a maximum instantaneous (single-instance) noise level equal to the value of the noise standard plus 20 dBA for any period of time (measured using an A-weighted slow response) is prohibited.
- In the event the ambient noise level exceeds the noise standard, the maximum allowable noise level shall be increased to reflect the maximum ambient noise level.
- The residential portion of mixed-use standard shall apply to that residential property portion falling within 100 feet of a commercial property or use, if the noise originates from that commercial property or use.
- If the measurement location is on a boundary between two different noise zones, the lower noise level standard applicable to the noise zone shall apply.

**Municipal Code Section 5-29.06(e)** exempts the following noise sources from the City's exterior noise regulations:

- Any activity conducted on public property by any public entity, including sporting and recreational activities that are sponsored or permitted by the City or any school district within the City's jurisdictional boundaries;
- occasional outdoor gatherings and entertainment events that are approved by the appropriate public entity, specifically the planning commission or City Council;
- or activity associated with the construction, repair, remodeling, demolition or grading of a public right-of-way.

**Municipal Code Section 5-29.09** restricts construction-related noise that disturbs a person of normal sensitivity or a police or code enforcement officer, to the hours of 7:00 a.m. and 6:00 p.m., Monday through Friday and 9:00 a.m. and 6:00 p.m., Saturday and Sunday.

**Municipal Code Section 5-29.13** requires the following for special events that would use sound amplifying equipment:

- A permit application must be submitted to the Police Chief at least 16 days and no more than 120 days prior to the date on which the sound amplifying equipment is intended to be used;
- the permit application must include illustrations that visualize the dimensions, location, and orientation of the sound amplifying equipment.

- a statement by the applicant that they are willing and able to comply with the noise provisions within the chapter and permit conditions;
- the sound volume may not be audible at a distance greater than 100 feet from the sound amplifying equipment that it creates a disturbance to persons within the audibility range;
- sound amplifying equipment activities are prohibited between the hours of 8:00 p.m. and 8:00 a.m. every day.

# 4.0 EXISTING CONDITIONS

## 4.1 Existing Noise Sources

The Project area is currently impacted by various noise sources. Mobile noise sources are the most common and prominent noise sources within the Project area. The primary station noise sources within the Project area are associated with the surrounding residential, commercial, and agriculture uses. Such stationary noise sources include mechanical equipment (e.g., heating, ventilation, and air conditioning [HVAC] equipment), automobile-related noise (i.e., idling vehicles, opening and closing doors, cars parking, and cars starting), music playing, crop and dairy farming equipment, animal-related noise (i.e., dogs barking, cows mooing, and goats bleating), and people talking. The noise associated with these sources may represent a single-event noise occurrence or short-term noise.

## 4.2 Noise Measurements

To quantify existing ambient noise levels in the Project area, Kimley-Horn conducted six short-term (15-minute) measurements on November 20, 2024; see **Appendix A: Noise Data** for additional details regarding how the ambient noise measurements were taken. The noise measurement sites were selected to be representative of the existing ambient noise levels at the noise-sensitive uses immediately adjacent to and within the Project site. The 15-minute daytime measurements were taken between 9:16 a.m. and 11:21 a.m. Short-term $L_{eq}$ measurements are considered representative of the noise levels throughout the day. The noise measurement locations are shown on **Figure 7: Noise Measurement Locations**. The average noise levels measured at each location are listed in **Table 8: Existing Noise Measurement Locations and Measurements.**

**Table 8: Existing Noise Measurement Locations and Measurements**

| Site | Location | Measurement Period | Duration | Daytime Average (dBA $L_{eq}$) |
|---|---|---|---|---|
| ST-1 | 7469 Edison Avenue | 9:16 a.m. – 9:31 a.m. | 15 minutes | 76.4 |
| ST-2 | 8061 Edison Avenue | 9:39 a.m. – 9:54 a.m. | 15 minutes | 72.8 |
| ST-3 | 8314 Edison Avenue | 9:59 a.m. – 10:14 a.m. | 15 minutes | 74.8 |
| ST-4 | 14300 Walker Avenue | 10:24 a.m. – 10:39 a.m. | 15 minutes | 65.3 |
| ST-5 | 14361 Grove Avenue | 10:45 a.m. – 11: 00 a.m. | 15 minutes | 70.8 |
| ST-6 | 14316 Bon View Avenue | 11:06 a.m. – 11:21 a.m. | 15 minutes | 66.8 |

## 4.3 Sensitive Receptors

Noise sensitive receptors typically include residences, dormitories, hotels, transient lodging, houses of worship, hospitals, schools, and places of assembly. Sensitive receptors nearest the Project site are listed in **Table 9: Sensitive Receptors** and shown on **Figure 8: Sensitive Receptor Locations**.

**Table 9: Sensitive Receptors**

| Receptor Description[1] | Distance and Direction from the Project | |
|---|---|---|
| | Phase I[2] | Phase II[3] |
| 1- Residential Uses (represented by ST-3) | 36 feet to the north | 710 feet to the east |
| 2- Residential Uses (represented by ST-6) | 3,172 feet to the southwest | 53 feet to the south |
| 3- On-site Residential Uses[4] (represented by ST-2) | 55 feet to the west | N/A |
| 4- Future Phase I Residential Uses[5] (represented by ST-3) | N/A | 55 feet to the east |
| 5- Residential Uses (represented by ST-4) | 348 feet to the southeast | 1,815 feet to the southeast |
| 6- Residential Uses (represented by ST-4) | 172 feet to the east | 2,134 feet to the east |
| 7- Residential Uses (represented by ST-2) | 590 feet to the northwest | 223 feet to the north |
| 8- Residential Uses (represented by ST-5) | 590 feet to the southwest | 357 feet to the south |
| 9- Residential Uses (represented by ST-1) | 5,070 feet to the west | 460 feet to the west |
| 10- Residential Uses (represented by ST-1) | 3,220 feet to the northwest | 574 feet to the north |
| 11- Residential Uses (represented by ST-3) | 1,207 feet to the northeast | 1,837 feet to the northeast |

N/A = not applicable

1. Refer to **Table 8** for representative ambient noise measurements.
2. Distance measured from the Phase I Project site property line to the nearest sensitive receptor property line.
3. Distance measured from the Phase II Project site property line to the nearest sensitive receptor property line.
4. The City would demolish the existing sensitive receptor structures within the Phase II Project site at a future date after construction of Phase I has begun; therefore, the existing sensitive receptors would be exposed to the construction noise associated with the proposed Phase I development.
5. The proposed Phase I Project would develop residential uses that would be exposed to the construction noise associated with the future Phase II development by the City.

# 5.0 SIGNIFICANFCE CRITERIA AND METHODOLOGY

## 5.1 CEQA Thresholds

CEQA Guidelines Appendix G contains analysis guidelines related to noise impacts. The City has determined to use these guidelines as thresholds of significance for this analysis. A project would create a significant environmental impact if it would:

- Generate a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies;
- Generate excessive ground-borne vibration or ground-borne noise levels; and
- For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, expose people residing or working in the project area to excessive noise levels.

**Construction Noise**

The City has not established quantitative construction noise standards. Construction noise impacts are conservatively evaluated based on the FTA's threshold of 80 dBA (8-hour $L_{eq}$) for residential uses and an ambient noise level increase of 5 dBA. Municipal Code Section 5-29.09 restricts construction to the hours of 7:00 a.m. and 6:00 p.m., Monday through Friday and 9:00 a.m. to 6:00 p.m., Saturday and Sunday.

**Operational Noise**

Stationary Sources

On-site stationary sources noise impacts are evaluated based on the exterior noise standards established in the Municipal Code Section 5-29.04; refer to **Table 7**.

Mobile Source

Off-site mobile noise impacts are evaluated based on the following significance criterion established in TOP 2050.[30]

- Greater than 1.5 dBA increase for ambient noise environments of 65 dBA CNEL and higher;
- Greater than 3 dBA increase for ambient noise environments of 60 - 64 CNEL; and
- Greater than 5 dBA increase for ambient noise environments of less than 60 dBA CNEL.

**Vibration**

Increases in groundborne vibration levels attributable to the Project would be primarily associated with short-term construction-related activities. Project construction could result in varying degrees of temporary groundborne vibration, depending on the specific construction equipment used, the

[30] City of Ontario, *The Ontario Plan 2050, Final Supplemental Environmental Impact Report, 2022*, https://content.ontarioca.gov/sites/default/files/2024-12/Final_DraftSEIR_TOP2050.pdf, accessed February 2025.

location of that equipment relative to the receptor, and the operations involved.

The City has not established vibration damage criteria. Therefore, this analysis uses the California Department of Transportation's (Caltrans') vibration threshold for ground-borne vibration. The Caltrans *Transportation and Construction Vibration Manual* includes vibration thresholds for structures and human annoyance. The structural damage for older residential buildings and human annoyance threshold is 0.3 in/sec PPV and 0.4 in/sec PPV, respectively. [31]

## 5.2 Methodology

### Construction

Construction noise levels were based on typical noise levels generated by construction equipment published by the FTA and FHWA. Construction noise is assessed in dBA $L_{eq}$. This unit is appropriate because $L_{eq}$ can be used to describe the noise level from the operation of each piece of equipment separately, and the levels can be combined to represent the noise level from all equipment operating concurrently during a given period.

Construction noise was modeled using the FHWA Roadway Construction Noise Model (RCNM). Reference noise levels are used to estimate operational noise levels at nearby sensitive receptors based on a standard noise attenuation rate of 6 dB per doubling of distance (line-of-sight method of sound attenuation for point noise sources). Noise level estimates do not account for the presence of intervening structures or topography, which may reduce noise levels at receptor locations. Therefore, the noise levels presented herein represent a conservative, reasonable worst-case estimate of actual temporary construction noise.

### Operations

The analysis of the Existing and Existing With Project noise environments is based on noise prediction modeling and empirical observations. Reference noise level data are used to estimate the Project operational noise impacts from stationary sources. Noise levels were collected from published sources from similar types of activities and used to estimate noise levels expected from Project stationary sources. The reference noise levels are used to represent a worst-case noise environment as noise level from stationary sources can vary throughout the day. The off-site mobile traffic noise levels in the Project area were calculated using the FHWA-RD-77-108.

### Vibration

Ground-borne vibration levels associated with construction activities for the Project were evaluated utilizing typical ground-borne vibration levels associated with construction equipment, obtained from FTA published data for construction equipment. Potential ground-borne vibration impacts related to building/structure damage and interference with sensitive existing operations were evaluated, considering the distance from construction activities to nearby land uses and typically applied criteria for structural damage.

Construction vibration levels were calculated using the following formula:

[31] California Department of Transportation, *Transportation and Construction Vibration Guidance Manual*, 2020.

$$PPV_{equip} = PPV_{ref} \times (25/D)^{1.5}$$

where: $PPV_{equip}$ = the peak particle velocity in in/sec of the equipment adjusted for the distance

$PPV_{ref}$ = the reference vibration level in in/sec from Table 7-4 of the Federal Transit Administration, *Transit Noise and Vibration Impact Assessment Manual*, 2018.

D = the distance from the equipment to the receiver

# 6.0 POTENTIAL IMPACTS AND MITIGATION

## 6.1 Project-Level Impacts

**Threshold 6.1 Would the Project generate a substantial temporary or permanent increase in ambient noise levels in the vicinity of the Project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?**

### Phase I – Proposed Development

**Construction Noise**

On-site Construction

Construction noise typically occurs intermittently and varies depending on the nature or phase of construction (e.g., land clearing, grading, excavation, paving). Noise generated by construction equipment, including earth movers, material handlers, and portable generators, can reach high levels. During construction, exterior noise levels could affect the receptors near the construction area.

Phase I construction activities would include demolition, site preparation, grading, infrastructure improvements, building construction, paving, and architectural coating applications. Such activities would require dozers, excavators, and concrete saws during demolition; dozers and tractors during site preparation; graders, excavators, tractors, dozers, and scrapers during grading; forklifts, cranes, generators, tractors, and welders during building construction; pavers, rollers, and paving equipment during paving; and air compressors during architectural coating applications. Typical operating cycles for these types of construction equipment may involve 1 or 2 minutes of full power operation followed by 3 to 4 minutes at lower power settings. Other primary sources of acoustical disturbance would be random incidents, which would last less than one minute, such as dropping large pieces of equipment or the hydraulic movement of machinery lifts. The sensitive receptor nearest the Phase I Project site is Sensitive Receptor 1 located approximately 74 feet to the east. **Table 10: Typical Construction Equipment Noise Levels for Phase I** includes the typical noise levels associated with individual construction equipment at 74 feet.

**Table 10: Typical Construction Equipment Noise Levels for Phase I**

| Equipment | Typical Noise Level at 50 feet from the Source (dBA $L_{max}$) | Typical Noise Level at 74 feet from the Source[1] (dBA $L_{max}$) |
|---|---|---|
| Air Compressor | 81 | 78 |
| Backhoe | 80 | 77 |
| Compactor | 82 | 79 |
| Concrete Mixer | 85 | 82 |
| Concrete Pump | 82 | 79 |
| Concrete Vibrator | 76 | 73 |

| 1. Calculated using the inverse square law formula for sound attenuation: $dBA_2 = dBA_1 + 20Log(d_1/d_2)$. Where: $dBA_2$ = estimated noise level at receptor; $dBA_1$ = reference noise level; $d_1$ = reference distance; $d_2$ = receptor location distance. | | |
| Source: Federal Transit Administration, *Transit Noise and Vibration Impact Assessment Manual,* September 2018. | | |

The FHWA's RCNM was used to calculate the construction noise levels at the nearest sensitive receptors. Noise levels at other receptors surrounding the construction area would be located further away and would experience lower construction noise levels than the modeled receptors. Noise levels were based on the equipment used, distance to the nearest receptor, and acoustical use factor for equipment. When calculating construction noise, the loudest piece of anticipated equipment is conservatively assumed to operate at the property line nearest the modeled receptor while all other equipment anticipated for each individual construction phase is assumed to operate at staggering distances throughout the construction area. This methodology accounts for equipment operating throughout the Project site and not at a fixed location for extended periods of time.[32] Phase I construction would be subject to the FSEIR Mitigation Measure (MM) NOI 12-4, which requires development projects near sensitive receptors to use the best available equipment noise control techniques (e.g., mufflers and shrouds) and erect temporary noise barriers. The FHWA guidance states that muffler systems can reduce RCNM reference noise levels by a minimum of 10 dBA.[33] The noise barrier would contain no gaps and would block the line-of-sight between the Phase I construction activities and the noise-sensitive uses to the north, east, south, and west. The RCNM guidance states that a solid barrier without gaping would reduce the RCNM reference noise levels by a minimum of 8 dBA.[34] See **Appendix A** for the construction noise modeling assumptions. The City has not established quantitative construction noise standards. This analysis conservatively uses the FTA's residential threshold of 80 dBA $L_{eq}$ as the significance criteria to evaluate the construction-related noise impact.[35]

**Table 11: Phase I Construction Noise Levels** summarizes the maximum Phase I construction noise levels at the sensitive receptors nearest the proposed Phase I Project

| 11- Residential Uses | 45.4 | | No | 74.8 | -- | No |

dBA = A-weighted decibels, $L_{eq}$ = equivalent noise level

1. Noise levels assume a minimum 18 dBA reduction from FSEIR MM 12-4.
2. The City does not have a quantitative noise threshold for construction. The FTA's construction noise threshold is conservatively used for this analysis (FTA, *Transit Noise and Vibration Impact Assessment Manual*, September 2018).
3. A noise level increase of 5 dBA is considered perceptible and readily noticeable.
4. As Phase II is speculative, it is conservatively assumed the sensitive receptors within the Phase II Project site would be demolished during the Phase I infrastructure improvements construction phase.

Source: Federal Highway Administration, *Roadway Construction Noise Model, 2006*. Refer to **Appendix A** for the noise modeling results.

site.[36] As shown in **Table 11**, the maximum Phase I construction noise levels would not exceed the FTA's residential significance criterion of 80 dBA $L_{eq}$ or substantially increase the ambient noise levels at the nearest sensitive receptors. Construction-related noise would be temporary and would cease with construction. Thus, Phase I construction activities would not result in a permanent increase in ambient noise levels in the area. Furthermore, construction activities would be restricted to the hours of 7:00 a.m. to 6:00 p.m. on weekdays and 9:00 a.m. to 6:00 p.m. on weekends. The City's permitted construction hours recognize that construction activities undertaken during daytime hours are a typical part of living in an urban environment and do not cause a significant impact. Impacts would be less than significant, and no mitigation is required.

Off-Site Construction Traffic

In addition to the on-site construction noise, Phase I construction would generate mobile noise from delivery and haul trucks and construction workers traveling to and from the Phase I Project site. Construction workers are expected to arrive at the Phase I Project site before construction starts and leave when construction ends, and thus, would not overlap with the delivery and haul truck trips

According to modeling assumptions included in the Air Quality Assessment prepared by Kimley-Horn in April 2025, the construction phases with the highest assumed number of trucks would be building construction and infrastructure improvements, where there would be up to 110 daily vendor truck trips. A truck pass-by event would generate noise levels of up to 70 dBA $L_{eq}$ at 50 feet.[37] Assuming the 110 daily trucks would arrive throughout an eight-hour work day, on average up to 14 trucks would arrive at the site hourly. Assuming that all 14 hourly trucks would pass through the same roadway segment within a 15-minute period, the estimated noise level would be 62.0 dBA $L_{eq}$ at 50 feet from the roadway centerline. As a worst-case, assuming all 110 daily trucks could pass through the same roadway segment within a 15-minute period, the estimated noise level from building construction and infrastructure improvements haul truck trips would be 71.0 dBA $L_{eq}$ at 50 feet from the roadway centerline. This worst-case noise level would not exceed the FTA's residential significance criterion of 80 dBA $L_{eq}$ for construction activities. Additionally, delivery and haul trucks associated with Phase I construction would be subject to the FSEIR MM 12-4, which limits, to the extent feasible, construction traffic to approved haul routes established by the City's Engineering Department. Impacts would be less than significant, and no mitigation is required.

**Operational Noise**

Phase I would develop residential, recreational open space, and non-recreational open space uses within PAs 6, 12, 13, 17, 18, and 22. Based on the City's Conceptual Great Park Master Plan, it is assumed that PAs 17 and 18 would include recreational and commercial uses. No building development would occur within PA 22 consistent with the OS – NR land use designation.

Phase I implementation would create new noise sources within the Phase I Project area that would potentially impact existing sensitive receptors. The primary noise sources associated with Phase I operations include mechanical equipment (e.g., HVAC equipment), trash and recycling pick-up, recreational activities (i.e., recreational park crowds and special events), parking areas (i.e., car door

[36] See **Appendix A** for the estimated construction noise level for all of the individual and overlapping construction phases.
[37] Elliott H. Berger, Rick Neitzel, and Cynthia A. Kladden, *Noise Navigator Sound Level Database with Over 1700 Measurement Values*, July 6, 2010.

slamming, car radios, engine start-up, and car pass-by), and on-site traffic.

At this stage of the planning process, the Phase I Project site plan is not yet available. As such, reasonable assumptions have been made regarding potential noise sources and as a conservative measure, it is assumed herein that anticipated noise sources would operate at the nearest potential location to the nearest sensitive receptors. This is a conservative, worst-case estimation as this does not account for the minimum setback standards.

Mechanical Equipment

Mechanical equipment (e.g., HVAC equipment) would be located on the rooftop of the buildings within the MDR (PAs, 6, 12, and 13) OS – R (PAs 17 and 18) land uses. It is assumed the HVAC equipment within the residential and recreational buildings would operate during daytime hours (i.e., 7:00 a.m. to 10:00 p.m.). Mechanical equipment (e.g., HVAC equipment) typically generates noise levels of approximately 52 dBA at 50 feet.[38] It is conservatively assumed that an HVAC unit would operate at the property line nearest the sensitive receptor. **Table 12: Phase I Mechanical Equipment Noise** shows the HVAC noise levels at the nearest sensitive receptors without accounting for shielding provided by potential screening or architectural features would not exceed the City daytime noise standard. Impacts would be less than significant, and no mitigation is required.

**Table 12: Phase I Mechanical Equipment Noise**

| Sensitive Receptor | Noise Level at Receptor (dBA) | Daytime Noise Standard[1] (dBA) | Exceeds Standard? |
|---|---|---|---|
| 1 – Residential Uses (east) | 48.6 | 65 | No |
| 2 – Residential Uses (southwest) | 15.8 | 65 | No |
| 5 – Residential Uses (southeast) | 41.6 | 65 | No |
| 6 – Residential Uses (east) | 40.2 | 65 | No |
| 7 – Residential Uses (northwest) | 27.1 | 65 | No |
| 8 – Residential Uses (southwest) | 29.3 | 65 | No |
| 9 – Residential Uses (west) | 11.9 | 65 | No |
| 10 – Residential Uses (northwest) | 15.8 | 65 | No |
| 11 – Residential Uses (northeast) | 23.8 | 65 | No |

dBA = A-weighted decibels
1. Pursuant to Municipal Code Section 5-29.04, the exterior single-family residential use daytime noise standard is 65 dBA.

Open Space

The Project would include common open space areas for residents. Per Assembly Bill 1307, Public Resources Code Section 21085, the noise generated by residential occupants, their guests, and wireless devices would not have a significant effect on the environment. Impacts would be less than significant, and no mitigation is required.

Trash and Recycling Pick-up

Trash and recycling would be picked up along drive aisles within the Phase I Project site during day-time hours (i.e., from 7:00 a.m. to 10:00 p.m.). Trash and recycling pick-up activity servicing the Phase I Project area currently occurs under existing conditions and would not be a new noise source. However, trash and recycling pick-up activity noise levels have been conservatively estimated based

[38] Ibid.

on the potential drive aisle along the Phase I Project site property line nearest the sensitive receptor. Trash and recycling pickup activities generate noise levels of approximately 85 dBA at approximately 3.3 feet.[39] **Table 13: Phase I Truck and Recycling Pick-up Noise Levels** shows the trash and recycling pick-up noise levels at the nearest sensitive receptors would not exceed the City daytime noise standard. Impacts would be less than significant, and no mitigation is required.

**Table 13: Phase I Truck and Recycling Pick-up Noise Levels**

| Sensitive Receptor | Noise Level at Receptor (dBA) | Daytime Noise Standard[1] (dBA) | Exceeds Standard? |
|---|---|---|---|
| 1 – Residential Uses (east) | 58.0 | 65 | No |
| 2 – Residential Uses (southwest) | 25.2 | 65 | No |
| 5 – Residential Uses (southeast) | 51.0 | 65 | No |
| 6 – Residential Uses (east) | 49.6 | 65 | No |
| 7 – Residential Uses (northwest) | 36.8 | 65 | No |
| 8 – Residential Uses (southwest) | 38.7 | 65 | No |
| 9 – Residential Uses (west) | 21.3 | 65 | No |
| 10 – Residential Uses (northwest) | 25.2 | 65 | No |
| 11 – Residential Uses (northeast) | 33.4 | 65 | No |

dBA = A-weighted decibels
1. Pursuant to Municipal Code Section 5-29.04, the exterior single-family residential use daytime noise standard is 65 dBA.

Recreational Park

The MDR (PAs 6, 12, and 13) and OS – R (PAs 17 and 18) land uses would include recreational parks. As it is speculative to assume the recreational park operational hours, it is conservatively assumed that residents and guests could visit the recreational areas, which could include playgrounds, at any time of day. Assuming that approximately 20 people would visit the neighborhood parks at any given time (ten children and ten adults [half female and half male] with half of the individuals are speaking loudly), the recreational areas would generate noise levels of approximately 69.6 dBA at 3 feet.[40] It is conservatively assumed recreational activity would occur at the property line nearest the sensitive receptor. **Table 14: Phase I Recreational Park Noise Levels** shows the recreational activity noise levels would not exceed the City daytime or nighttime noise standards. Impacts would be less than significant, and no mitigation is required.

**Table 14: Phase I Recreational Park Noise Levels**

| Sensitive Receptor | Noise Level at Receptor (dBA) | Daytime Noise Standard[1] (dBA) | Exceeds Standard? | Nighttime Noise Standard[1] (dBA) | Exceeds Standard? |
|---|---|---|---|---|---|
| 1 – Residential Uses (north) | 41.8 | 65 | No | 45 | No |
| 2 – Residential Uses (southwest) | 9.0 | 65 | No | 45 | No |
| 5 – Residential Uses (southeast) | 34.8 | 65 | No | 45 | No |
| 6 – Residential Uses (northeast) | 33.4 | 65 | No | 45 | No |
| 7 – Residential Uses (northwest) | 20.3 | 65 | No | 45 | No |
| 8 – Residential Uses (southwest) | 22.5 | 65 | No | 45 | No |
| 9 – Residential Uses (northwest) | 5.0 | 65 | No | 45 | No |
| 10 – Residential Uses (northwest) | 8.9 | 65 | No | 45 | No |
| 11 – Residential Uses (northeast) | 16.9 | 65 | No | 45 | No |

dBA = A-weighted decibels
1. Pursuant to Municipal Code Section 5-29.04, the exterior single-family residential use daytime noise standard is 65 dBA and nighttime noise standard is 45 dBA.

[39] Kariel, H. G., Noise in Rural Recreational Environments, Canadian Acoustics 19(5), 3-10, 1991.
[40] American Journal of Audiology, Volume 7, Page 3, 1998.

Special Events

The OS – R (PAs 17 and 18) land use is assumed to include recreational open space that would allow for special events such as festivals, concerts, sporting events, or outdoor gatherings that would require speakers to be brought on-site. The frequency of said special events is uncertain; however, all special events would be required to comply with the Municipal Code Section 5-29.13, which requires special events to submit a permit application to the Police Chief that acknowledges that sound from speakers would not create an audible disturbance at a distance further than 100 feet and includes illustrations of the speaker orientation and location. Therefore, speakers brought on-site for special events would be located and oriented away from the nearest sensitive receptors to not cause a noise impact. In addition, speaker use would be prohibited between the hours of 8:00 p.m. and 8:00 a.m. every day. Impacts would be less than significant, and no mitigation is required.

Parking

The single-family residential buildings would include private attached garages. The multi-family residential buildings would include subterranean parking garages. The Phase I Project area would include on-street parking along internal roadways for residential guests. Noises associated with parking activities include vehicles starting and stopping, vehicle doors closing, car horns and car alarms, loading and unloading, car radios, and conversations. Parking activity noise levels can reach 63 dBA $L_{eq}$ and are short-term in nature.[41] The residential and commercial parking spaces would be enclosed and would not result in measurable increases in ambient noise levels within the Phase I Project area. On-street and surface parking lot parking spaces would be dispersed throughout the interior of the Phase I Project area and shielded by the Phase I buildings and traffic along surrounding roadways. In addition, parking lot noise currently occurs under existing conditions within the Phase I Project area. Impacts would be less than significant, and no mitigation is required.

On-site Traffic

Passenger vehicles would access the Phase I Project site through internal drive isles. On-site traffic noise levels were calculated using the methodology described in the FHWA Traffic Noise Model Technical Manual (1998) and calculations were validated with the results from the FHWA's Traffic Noise Model Version 2.5. According to the Traffic Analysis, the Project would generate 8,270 daily vehicle trips and 687 daytime peak hour auto trips. Based on 687 daytime peak hour auto trips, on-site travel would generate noise levels of 58.0 dBA $L_{eq}$ at 50 feet from the roadway centerline. The on-site traffic noise levels were calculated assuming all 687 daytime vehicle trips would travel simultaneously along the drive aisle nearest the sensitive receptor and without accounting for shielding provided by intervening structures. **Table 15: Phase I On-site Traffic Noise Levels** shows that the on-site traffic noise levels would not exceed the City daytime noise standard.[42] Impacts would be less than significant, and no mitigation is required.

[41] Kariel, H. G., *Noise in Rural Recreational Environments*, Canadian Acoustics 19(5), 3-10, 1991.

[42] Due to the nature of the proposed uses, peak daytime volumes would not occur during nighttime hours and on-site traffic noise impacts during nighttime hours is not anticipated.

| Table 15: Phase I On-site Traffic Noise Levels | | | |
|---|---|---|---|
| **Sensitive Receptor** | **Noise Level at Receptor (dBA)** | **Daytime Noise Standard[1] (dBA)** | **Exceeds Standard?** |
| 1 – Residential Uses (east) | 54.6 | 65 | No |
| 2 – Residential Uses (southwest) | 21.8 | 65 | No |
| 5 – Residential Uses (southeast) | 47.6 | 65 | No |
| 6 – Residential Uses (east) | 46.2 | 65 | No |
| 7 – Residential Uses (northwest) | 33.4 | 65 | No |
| 8 – Residential Uses (southwest) | 35.3 | 65 | No |
| 9 – Residential Uses (west) | 17.9 | 65 | No |
| 10 – Residential Uses (northwest) | 21.8 | 65 | No |
| 11 – Residential Uses (northeast) | 30.0 | 65 | No |

dBA = A-weighted decibels
1. Pursuant to Municipal Code Section 5-29.04, the exterior daytime noise standard for single-family residential uses is 65.

## Phase II – Future Development

### Construction Noise

On-site Construction

Phase II construction activities are analyzed as a worst-case scenario, are assumed to be similar to Phase I, and would include demolition, site preparation, grading, infrastructure improvements, building construction, paving, and architectural coating applications. Such activities would require dozers and tractors during site preparation; excavators, graders, and dozers during grading; cranes, forklifts, generators, tractors, and welders during building construction; pavers, rollers, mixers, and paving equipment during paving; and air compressors during architectural coating. The nearest sensitive receptor to the Phase II Project site is Sensitive Receptor 2 located approximately 78 feet to the south. **Table 16: Typical Construction Equipment Noise Level for Phase II** includes the typical noise levels associated with individual construction equipment at 78 feet.

| Table 16: Typical Construction Equipment Noise Level for Phase II | | |
|---|---|---|
| **Equipment** | **Typical Noise Level at 50 feet from the Source (dBA $L_{max}$)** | **Typical Noise Level at 74 feet from the Source[1] (dBA $L_{max}$)** |

| Truck | 88 | 85 |

1. Calculated using the inverse square law formula for sound attenuation: $dBA_2 = dBA_1 + 20Log(d_1/d_2)$.
   Where: $dBA_2$ = estimated noise level at receptor; $dBA_1$ = reference noise level; $d_1$ = reference distance; $d_2$ = receptor location distance.

The FHWA's RCNM was used to calculate the construction noise levels at the nearest sensitive receptors. Noise levels at other receptors surrounding the construction area would be located further away and would experience lower construction noise levels than the modeled receptors. Noise levels were based on the equipment used, distance to the nearest receptor, and acoustical use factor for equipment. When calculating construction noise, the loudest piece of anticipated equipment is conservatively assumed to operate at the property line nearest to the modeled receptor while all other equipment anticipated for each individual construction phase is assumed to operate at staggering distances throughout the construction area. This methodology accounts for equipment operating throughout the Project site and not at a fixed location for extended periods of time.[43] Phase I construction would be subject to the FSEIR MM NOI 12-4, which requires development projects near sensitive receptors to use the best available equipment noise control techniques (e.g., mufflers and shrouds) and erect temporary noise barriers. The FHWA guidance states that muffler systems can reduce RCNM reference noise levels by a minimum of 10 dBA.[44] The noise barrier would contain no gaps and would block the line-of-sight between the Phase I construction activities and the noise-sensitive uses to the north, east, south, and west. The RCNM guidance states that a solid barrier without gaping would reduce the RCNM reference noise levels by a minimum of 8 dBA.[45] See **Appendix A** for the construction noise modeling assumptions. This analysis uses the FTA's residential threshold of 80 dBA $L_{eq}$ as the significance criteria to evaluate the construction-related noise impact.[46]

**Table 17: Phase II Construction Noise Levels** summarizes the maximum Phase II construction noise levels at the sensitive receptors nearest the proposed Phase II Project site.[47] As shown in **Table 17**, the maximum Phase II construction noise levels would not exceed the FTA's residential significance criterion of 80 dBA $L_{eq}$ or substantially increase the ambient noise levels at the nearest sensitive receptors. Construction-related noise would be temporary and would cease with construction. Thus, Phase II construction activities would not result in a permanent increase in ambient noise levels in the area. Furthermore, construction activities would be restricted to the hours of 7:00 a.m. to 6:00 p.m. on weekdays and 9:00 a.m. to 6:00 p.m. on weekends. The City's

| 10- Residential Uses | 52.3 | | No | 76.4 | -- | No |
| 11- Residential Uses | 43.2 | | No | 74.8 | -- | No |

dBA = A-weighted decibels, $L_{eq}$ = equivalent noise level

1. Noise levels assume a minimum 18 dBA reduction from FSEIR MM 12-4.
2. The City does not have a quantitative noise threshold for construction. The FTA's construction noise threshold is conservatively used for this analysis (FTA, *Transit Noise and Vibration Impact Assessment Manual*, September 2018).
3. A noise level increase of 5 dBA is considered perceptible and readily noticeable.
4. As Phase II is speculative, it is conservatively assumed the sensitive receptors developed by Phase I would be exposed to the noise associated with Phase II construction activities.

Source: Federal Highway Administration, *Roadway Construction Noise Model, 2006*. Refer to **Appendix A** for the noise modeling results.

permitted construction hours recognize that construction activities undertaken during daytime hours are a typical part of living in an urban environment and do not cause a significant impact. Impacts would be less than significant, and no mitigation is required.

Off-site Construction Traffic

In addition to the on-site construction noise, Phase II construction would generate mobile noise from delivery and haul trucks and construction workers traveling to and from the Phase II Project site. Construction workers are expected to arrive at the Phase II Project site before construction starts and leave when construction ends, and thus, would not overlap with the delivery and haul truck trips.

According to modeling assumptions included in the Air Quality Assessment prepared by Kimley-Horn in April 2025, the construction phases with the highest assumed number of trucks would be building construction and infrastructure improvements, where there would be up to 391 daily vendor truck trips. A truck pass-by event would generate noise levels of up to 70 dBA $L_{eq}$ at 50 feet. [48] Assuming the 391 daily trucks would arrive throughout an eight-hour work day, on average up to 14 trucks would arrive at the site hourly. Assuming that all 49 hourly trucks would pass through the same roadway segment within a 15-minute period, the estimated noise level would be 67.4 dBA $L_{eq}$ at 50 feet from the roadway centerline. As a worst-case, assuming all 391 daily trucks could pass through the same roadway segment within a 15-minute period, the estimated noise level from building construction and infrastructure improvements haul truck trips would be 76.5 dBA $L_{eq}$ at 50 feet from the roadway centerline. This worst-case noise level would not exceed the FTA's residential significance criterion of 80 dBA $L_{eq}$ for construction activities. Additionally, delivery and haul trucks associated with Phase II construction would be subject to the FSEIR MM 12-4, which limits, to the extent feasible, construction traffic to approved haul routes established by the City's Engineering Department. Impacts would be less than significant, and no mitigation is required.

**Operational Noise**

Phase II would develop residential, commercial, recreational open space, non-recreational open space uses within PAs 1 through 5, 7 through 11, 14 through 16, and 19 through 21. Based on the City's Conceptual Great Park Master Plan, it is assumed that PAs 14 through 16 would include recreational and commercial uses. No building development would occur within PA 19 through 21 consistent with the OS – NR land use designation.

Phase II implementation would create new noise sources within the Phase II Project area that would potentially impact existing sensitive receptors. The primary noise sources associated with Phase II operations include mechanical equipment (e.g., HVAC equipment), trash and recycling pick-up, recreational activities (i.e., recreational park crowds and special events), parking areas, drive-thru lane operations, truck deliveries and on-site traffic.

As Phase II development is currently not proposed, the Phase II Project site plan is not yet available. As such, reasonable assumptions have been made regarding potential noise sources and as a conservative measure, it is assumed herein that anticipated noise sources would operate at the nearest potential location to the nearest sensitive receptors. This is a conservative, worst-case

[48] Elliott H. Berger, Rick Neitzel, and Cynthia A. Kladden, *Noise Navigator Sound Level Database with Over 1700 Measurement Values*, July 6, 2010.

estimation as this does not account for the minimum setback standards.

Mechanical Equipment

Mechanical equipment (e.g., HVAC equipment) would be located on the rooftop of the buildings within the MDR (PAs 1 through 3 and 7 through 9), MU – Great Park (PAs 4,5, 10, and 11), and OS – R (PA 14, 15, and 16). As the allowable commercial operational hours are unknown, it is conservatively assumed that the HVAC equipment within the commercial buildings would operate 24 hours per day, while the HVAC equipment within the residential and recreational buildings would operate during daytime hours (i.e., 7:00 a.m. to 10:00 p.m.). Mechanical equipment (e.g., HVAC equipment) typically generates noise levels of approximately 52 dBA at 50 feet.[49] It is conservatively assumed the nearest potential location for the HVAC equipment would be located at the MDR, MU – Great Park, and OS – R land uses property line. It is conservatively assumed that an HVAC unit would operate at the property line nearest the sensitive receptor. **Table 18: Phase II Mechanical Equipment Noise Levels** shows the HVAC noise levels at the nearest sensitive receptors without accounting for shielding provided by potential screening or architectural features would not exceed the City daytime or nighttime noise standard. Impacts would be less than significant, and no mitigation is required.

**Table 18: Phase II Mechanical Equipment Noise Levels**

| Sensitive Receptor | Noise Level at Receptor (dBA) | Daytime Noise Standard[1] (dBA) | Exceeds Standard? | Nighttime Noise Standard[1] (dBA) | Exceeds Standard? |
|---|---|---|---|---|---|
| 1 – Residential Uses (east) | 28.7 | 65 | No | 45 | No |
| 2 – Residential Uses (south) | 48.1[2] | 65 | No | 45 | No[2] |
| 5 – Residential Uses (southeast) | 20.6 | 65 | No | 45 | No |
| 6 – Residential Uses (east) | 19.3 | 65 | No | 45 | No |
| 7 – Residential Uses (north) | 36.4 | 65 | No | 45 | No |
| 8 – Residential Uses (south) | 31.9 | 65 | No | 45 | No |
| 9 – Residential Uses (west) | 32.3 | 65 | No | 45 | No |
| 10 – Residential Uses (north) | 30.1 | 65 | No | 45 | No |
| 11 – Residential Uses (northeast) | 20.3 | 65 | No | 45 | No |

dBA = A-weighted decibels

1. Pursuant to Municipal Code Section 5-29.04, the exterior single-family residential use daytime noise standard is 65 dBA and nighttime noise standard is 45 dBA.
2. The commercial HVAC units would be located as near as 1,935 feet from Sensitive Receptor 2, therefore, the noise generated by the commercial HVAC units would not exceed the nighttime noise standard at Sensitive Receptor 2.

Open Space

The Project would include common open space areas for residents. Per Assembly Bill 1307, Public Resources Code Section 21085, the noise generated by residential occupants, their guests, and wireless devices would not have a significant effect on the environment. Impacts would be less than significant, and no mitigation is required.

Trash and Recycling Pick-up

Trash and recycling would be picked up along drive aisles within the Phase II Project site during day-time hours (i.e., from 7:00 a.m. to 10:00 p.m.). Trash and recycling pick-up activity servicing the Phase II Project area currently occurs under existing conditions and would not be a new noise source. However, trash and recycling pick-up activity noise levels have been conservatively

[49] Ibid.

estimated based on the potential drive aisle along the Phase II Project site property line nearest the sensitive receptor. Trash and recycling trucks and pickup activities generate noise levels of approximately 85 dBA at approximately 3.3 feet.[50] **Table 19: Phase II Truck and Recycling Pick-up Noise Levels** shows the trash and recycling pick-up noise levels at the nearest sensitive receptors would not exceed the City daytime noise standard. Impacts would be less than significant, and no mitigation is required.

**Table 19: Phase II Truck and Recycling Pick-up Noise Levels**

| Sensitive Receptor | Noise Level at Receptor (dBA) | Daytime Noise Standard[1] (dBA) | Exceeds Standard? |
|---|---|---|---|
| 1 – Residential Uses (east) | 38.0 | 65 | No |
| 2 – Residential Uses (south) | 57.5 | 65 | No |
| 5 – Residential Uses (southeast) | 30.0 | 65 | No |
| 6 – Residential Uses (east) | 28.7 | 65 | No |
| 7 – Residential Uses (north) | 47.2 | 65 | No |
| 8 – Residential Uses (south) | 41.3 | 65 | No |
| 9 – Residential Uses (west) | 41.7 | 65 | No |
| 10 – Residential Uses (north) | 40.0 | 65 | No |
| 11 – Residential Uses (northeast) | 29.8 | 65 | No |

dBA = A-weighted decibels
1. Pursuant to Municipal Code Section 5-29.04, the exterior single-family residential use daytime noise standard is 65 dBA.

Drive-Thru Lanes

The MU – Great Park (PA 4, 5, 10, and 11) land use would include drive-thru restaurants. Drive-thru lane operations would generate noise from amplified speech from the speaker intercoms, idling vehicles, and vehicles circulating through the drive-thru lanes. Active drive-thru operations generate noise levels of approximately 64 dBA at a distance of 20 feet.[51] It is conservatively assumed that drive-thru lanes would operate at the property line nearest the sensitive receptor during daytime and nighttime hours. **Table 20: Phase II Drive-Thru Lanes Noise Levels** shows the drive-thru lane noise levels at the nearest sensitive receptors would not exceed the City daytime or nighttime noise standard. In addition, noise generated by drive-thru lane operations would fluctuate depending on the time of day and would be lower than the level listed above during non-peak hours. Furthermore, the menu boards and speaker intercoms would be located even further from the sensitive receptor than the drive-thru lane. Impacts would be less than significant, and no mitigation is required.

**Table 20: Phase II Drive-Thru Lanes Noise Levels**

| Sensitive Receptor | Noise Level at Receptor (dBA) | Daytime Noise Standard[1] (dBA) | Exceeds Standard? | Nighttime Noise Standard[1] (dBA) | Exceeds Standard? |
|---|---|---|---|---|---|
| 1 – Residential Uses (east) | 32.7 | 65 | No | 45 | No |
| 2 – Residential Uses (southwest) | 24.3 | 65 | No | 45 | No |
| 5 – Residential Uses (southeast) | 24.5 | 65 | No | 45 | No |
| 6 – Residential Uses (east) | 23.3 | 65 | No | 45 | No |
| 7 – Residential Uses (north) | 40.4 | 65 | No | 45 | No |
| 8 – Residential Uses (south) | 33.4 | 65 | No | 45 | No |
| 9 – Residential Uses (west) | 18.5 | 65 | No | 45 | No |
| 10 – Residential Uses (northwest) | 24.2 | 65 | No | 45 | No |
| 11 – Residential Uses (northeast) | 24.4 | 65 | No | 45 | No |

dBA = A-weighted decibels
1. Pursuant to Municipal Code Section 5-29.04, the exterior single-family residential use daytime noise standard is 65 dBA and nighttime noise standard is 45 dBA.

Truck Deliveries

Truck deliveries would occur infrequently at the commercial uses within the MU – Great Park (PA 4, 5, 10, and 11) land use for goods replenishment. Truck deliveries would generate noise from the trucks' diesel engines, exhaust systems, and brakes during low gear shifting and braking activities; backing up toward the delivery area (known as back-up beepers); dropping down the truck ramps; and maneuvering away from the delivery area. Heavy truck and loading operations typically generate a noise level of approximately 64.4 dBA at a distance of 50 feet.[52] It is conservatively assumed that truck delivery activity would occur at the property line nearest the sensitive receptor and at any time of day. **Table 21: Phase II Truck Delivery Noise Levels** shows the truck deliveries noise levels at the nearest sensitive receptors would not exceed the City daytime or nighttime noise standard. Impacts would be less than significant, and no mitigation is required.

| Table 21: Phase II Truck Delivery Noise Levels | | | | | |
|---|---|---|---|---|---|
| **Sensitive Receptor** | **Noise Level at Receptor (dBA)** | **Daytime Noise Standard[1] (dBA)** | **Exceeds Standard?** | **Nighttime Noise Standard[1] (dBA)** | **Exceeds Standard?** |
| 1 – Residential Uses (east) | 41.1 | 65 | No | 45 | No |
| 2 – Residential Uses (southwest) | 32.6 | 65 | No | 45 | No |
| 5 – Residential Uses (southeast) | 32.9 | 65 | No | 45 | No |
| 6 – Residential Uses (east) | 31.7 | 65 | No | 45 | No |
| 7 – Residential Uses (north) | 38.8[2] | 65 | No | 45 | No |
| 8 – Residential Uses (south) | 41.7 | 65 | No | 45 | No |
| 9 – Residential Uses (west) | 26.8 | 65 | No | 45 | No |
| 10 – Residential Uses (northwest) | 32.6 | 65 | No | 45 | No |
| 11 – Residential Uses (northeast) | 32.7 | 65 | No | 45 | No |

dBA = A-weighted decibels
1. Pursuant to Municipal Code Section 5-29.04, the exterior single-family residential use daytime noise standard is 65 dBA and nighttime noise standard is 45 dBA.
2. Noise level accounts for a 10 dBA reduction, as the City of Ontario Development Code, Section 6.02.025, A. Required Walls and Fences, requires loading areas within non-residential zones to be completely screened with an 8-foot wall. Source: City of Ontario, Development Code, *Chapter 6.0, Development and Subdivision Regulations, Section 6.02.025: Design Standards for Nonresidential Zoning Districts,* https://content.ontarioca.gov/sites/default/files/2025-01/Chapter%206.0%20-%20Development%20%26%20Subdivision%20Regs_Rev%2012-03-2024.pdf, accessed April 2025.

Recreational Park

The MDR (PAs 1 through 3 and 7 through 9) and OS – R (PAs 14 through 16) land uses would include recreational parks. As it is speculative to assume the recreational park operational hours, it is conservatively assumed that residents and guests could visit the recreational areas, which could include playgrounds, at any time of day. Assuming that approximately 20 people would visit the neighborhood parks at any given time (ten children and ten adults [half female and half male] with half of the individuals are speaking loudly), the recreational areas would generate noise levels of approximately 69.6 dBA at 3 feet.[53] It is conservatively assumed recreational activity would occur at

[52] Loading dock reference noise level measurements collected by Kimley-Horn on December 18, 2018.
[53] American Journal of Audiology, Volume 7, Page 3, 1998.

the property line nearest the sensitive receptor. **Table 22: Phase II Recreational Park Noise Levels** shows the recreational activity noise levels would not exceed the City daytime or nighttime noise standards. Impacts would be less than significant, and no mitigation is required.

**Table 22: Phase II Recreational Park Noise Levels**

| Sensitive Receptor | Noise Level at Receptor (dBA) | Daytime Noise Standard[1] (dBA) | Exceeds Standard? | Nighttime Noise Standard[1] (dBA) | Exceeds Standard? |
|---|---|---|---|---|---|
| 1 – Residential Uses (northeast) | 41.8 | 65 | No | 45 | No |
| 2 – Residential Uses (south) | 41.3 | 65 | No | 45 | No |
| 5 – Residential Uses (southeast) | 34.8 | 65 | No | 45 | No |
| 6 – Residential Uses (northeast) | 33.4 | 65 | No | 45 | No |
| 7 – Residential Uses (north) | 23.7 | 65 | No | 45 | No |
| 8 – Residential Uses (south) | 25.1 | 65 | No | 45 | No |
| 9 – Residential Uses (northwest) | 25.5 | 65 | No | 45 | No |
| 10 – Residential Uses (north) | 23.3 | 65 | No | 45 | No |
| 11 – Residential Uses (northeast) | 16.9 | 65 | No | 45 | No |

dBA = A-weighted decibels

1. Pursuant to Municipal Code Section 5-29.04, the exterior single-family residential use daytime noise standard is 65 dBA and nighttime noise standard is 45 dBA.

Special Events

The OS – R (PAs 14 through 16) land use is assumed to include recreational open space that would allow for special events such as festivals, concerts, sporting events, or outdoor gatherings that would require speakers to be brought on-site. The frequency of said special events is uncertain; however, all special events would be required to comply with the Municipal Code 5-29.13, which requires special events to submit a permit application to the Police Chief that acknowledges that sound from speakers would not create an audible disturbance at a distance further than 100 feet and includes illustrations of the speaker orientation and location. Therefore, speakers brought on-site for special events would be located and oriented away from the nearest sensitive receptors to not cause a noise impact. In addition, speaker use would be prohibited between the hours of 8:00 p.m. and 8:00 a.m. every day. Impacts would be less than significant, and no mitigation is required.

Parking

The single-family residential buildings would include private attached garages. The multi-family and commercial uses would include subterranean parking garages. The Phase II Project area would include on-street parking along internal roadways for residential guests and commercial visitors. Noises associated with parking activities include vehicles starting and stopping, vehicle doors closing, car horns and car alarms, loading and unloading, car radios, and conversations. Parking activity noise levels can reach 63 dBA $L_{eq}$ and are short-term in nature.[54] The residential and commercial parking spaces would be enclosed and would not result in measurable increases in ambient noise levels within the Phase II Project area. On-street and surface parking lot parking spaces would be dispersed throughout the interior of the Phase II Project area and shielded by the Phase II buildings and traffic along surrounding roadways. In addition, parking lot noise currently occurs under existing conditions within the Phase II Project area. Impacts would be less than significant, and no mitigation is required.

[54] Kariel, H. G., *Noise in Rural Recreational Environments*, *Canadian Acoustics 19(5), 3-10*, 1991.

On-site Traffic

Passenger vehicles would access the Phase II Project site through internal drive isles. On-site traffic noise levels were calculated using the methodology described in the FHWA Traffic Noise Model Technical Manual (1998) and calculations were validated with the results from FHWA's Traffic Noise Model Version 2.5. According to the Traffic Analysis, Phase II of the Project would generate 36,446 daily vehicle trips and 2,820 peak hour auto trips. Based on 2,820 peak hour auto trips, on-site travel would generate noise levels of 64.1 dBA $L_{eq}$ at 50 feet from the roadway centerline. The on-site traffic noise levels were calculated assuming all 2,820 auto trips would travel simultaneously along the drive aisle nearest the sensitive receptor and without accounting for shielding provided by intervening structures. **Table 23: Phase II On-site Traffic Noise Levels** shows that the on-site traffic noise levels would not exceed the City daytime noise standard.[55] Impacts would be less than significant, and no mitigation is required.

**Table 23: Phase II On-site Traffic Noise Levels**

| Sensitive Receptor | Noise Level at Receptor (dBA) | Daytime Noise Standard[1] (dBA) | Exceeds Standard? |
|---|---|---|---|
| 1 – Residential Uses (east) | 40.8 | 65 | No |
| 2 – Residential Uses (south) | 60.2 | 65 | No |
| 5 – Residential Uses (southeast) | 32.7 | 65 | No |
| 6 – Residential Uses (east) | 31.4 | 65 | No |
| 7 – Residential Uses (north) | 49.9 | 65 | No |
| 8 – Residential Uses (south) | 44.0 | 65 | No |
| 9 – Residential Uses (west) | 44.4 | 65 | No |
| 10 – Residential Uses (north) | 42.7 | 65 | No |
| 11 – Residential Uses (northeast) | 32.5 | 65 | No |

dBA = A-weighted decibels
1. Pursuant to Municipal Code Section 5-29.04, the exterior daytime noise standard for single-family residential uses is 65 dBA.

## Project Buildout (Phase I + Phase II)

### Construction Noise

As it is speculative to assume the Phase II construction timeline, it is conservatively assumed that Phase I construction would overlap with Phase II construction. As stated above under Phase I and Phase II, the construction noise at the nearest sensitive receptors was calculated using the FHWA's RCNM and applying a noise reduction from the FSEIR MM 12-4. **Table 24: Phase I and Phase II Overlapping Construction Noise Levels** summarizes the maximum overlapping Phase I and Phase II construction noise at the nearest sensitive receptors. As shown in **Table 24**, the maximum overlapping construction noise levels would not exceed the FTA's residential significance criterion of 80 dBA $L_{eq,}$or substantially increase the ambient noise levels at the nearest sensitive receptors. Construction-related noise would be temporary and would cease with construction. Thus, Project construction activities would not result in a permanent increase in ambient noise levels in the area. Impacts would be less than significant, and no mitigation is required.

### Operational Noise

As discussed under Phase I and Phase II, Project implementation would create new noise sources

[55] Due to the nature of the proposed uses, peak daytime volumes would not occur during nighttime hours and on-site traffic noise impacts during nighttime hours is not anticipated.

in the Project area. The Project includes all the noise sources from Phase I and Phase II and off-site traffic noise when the entire Project is built and operational. See Phase I and Phase II for more information about each noise source.

Mechanical Equipment

Refer to the mechanical equipment discussion under Phase I and Phase II. Noise generated by mechanical equipment would not exceed the City daytime or nighttime noise standard at the nearest sensitive receptors. Impacts would be less than significant, and no mitigation is required.

Open Space

Refer to the open space discussion under Phase I and Phase II. Open space noise impacts would be less than significant, and no mitigation is required.

Trash and Recycling Pick-up

Refer to the trash and recycling pick-up discussion under Phase I and Phase II. Noise generated by trash and recycling pick-up activity would not exceed the City daytime noise standard at the nearest sensitive receptors. Impacts would be less than significant, and no mitigation is required.

Drive-Thru Lanes

Refer to drive-thru lane discussions under Phase II. Noise generated by drive-thru lane operations would not exceed the City daytime or nighttime noise standard at the nearest sensitive receptors. Impacts would be less than significant, and no mitigation is required.

Truck Deliveries

Refer to truck deliveries discussions under Phase II. Noise generated by truck delivery activity would not exceed the City daytime or nighttime noise standard at the nearest sensitive receptors. Impacts would be less than significant, and no mitigation is required.

Recreational Park

Refer to the recreational park discussion under Phase I and Phase II. Noise generated by recreational park activity would not exceed the City daytime or nighttime noise standard at the nearest sensitive receptors. Impacts would be less than significant, and no mitigation is required.

**Table 24: Phase I and Phase II Overlapping Construction Noise Levels**

| Sensitive Receptor | Maximum Noise Level (dBA $L_{eq}$)[3] | Noise Threshold (dBA $L_{eq}$)[2] | Noise Threshold Exceeded? | Ambient Noise Level (dBA $L_{eq}$) | Construction - Ambient Noise Level Difference (dBA $L_{eq}$) | Difference Exceeds 5 dBA?[3] (dBA $L_{eq}$) |
|---|---|---|---|---|---|---|
| 1- Residential Uses | 65.4 | 80 | No | 74.8 | -- | No |
| 2- Residential Uses | 65.6 | | No | 66.8 | -- | No |
| 5- Residential Uses | 60.1 | | No | 65.3 | -- | No |
| 6- Residential Uses | 59.0 | | No | 65.3 | -- | No |
| 7- Residential Uses | 57.5 | | No | 72.8 | -- | No |
| 8- Residential Uses | 53.5 | | No | 70.8 | -- | No |
| 9- Residential Uses | 52.8 | | No | 76.4 | -- | No |
| 10- Residential Uses | 51.4 | | No | 76.4 | -- | No |
| 11- Residential Uses | 46.4 | | No | 74.8 | -- | No |

dBA = A-weighted decibels, $L_{eq}$ = equivalent noise level

1. Noise levels assume a minimum 18 dBA reduction from FSEIR MM 12-4.
2. The City does not have a quantitative noise threshold for construction. The FTA's construction noise threshold is conservatively used for this analysis (FTA, *Transit Noise and Vibration Impact Assessment Manual*, September 2018).
3. A noise level increase of 5 dBA is considered perceptible and readily noticeable.

Source: Federal Highway Administration, *Roadway Construction Noise Model, 2006*. Refer to **Appendix A** for the noise modeling results.

Special Events

Refer to the special event discussion under Phase I and Phase II. Amplified noise generated from special events would not exceed the City daytime or nighttime noise standard at the nearest sensitive receptors. Impacts would be less than significant, and no mitigation is required.

Parking

Refer to the parking discussion under Phase I and Phase II. Parking noise impacts would be less than significant, and no mitigation is required.

On-site Traffic

Passenger vehicles would access the Project site through internal drive isles. On-site traffic noise levels were calculated using the methodology described in the FHWA Traffic Noise Model Technical Manual (1998) and calculations were validated with the results from FHWA's Traffic Noise Model Version 2.5. According to the Traffic Analysis, the Project would generate 44,716 daily vehicle trips and 3,507 peak hour auto trips at full buildout. Based on 3,507 peak hour auto trips, on-site travel would generate noise levels of 65.1 dBA $L_{eq}$ at 50 feet from the roadway centerline. The on-site traffic noise levels were calculated assuming all 3,507 auto trips would travel simultaneously along the drive aisle nearest the sensitive receptor and without accounting for shielding provided by intervening structures. **Table 25: Project Buildout On-site Traffic Noise Levels** shows that the on-site traffic noise levels would not exceed the City daytime noise standard.[56] Impacts would be less than significant, and no mitigation is required.

**Table 25: Project Buildout On-site Traffic Noise Levels**

| Sensitive Receptor | Noise Level at Receptor (dBA) | Daytime Noise Standard[1] (dBA) | Exceeds Standard? |
|---|---|---|---|
| 1 – Residential Uses (east) | 61.7 | 65 | No |
| 2 – Residential Uses (west) | 61.2 | 65 | No |
| 5 – Residential Uses (southwest) | 54.7 | 65 | No |
| 6 – Residential Uses (east) | 53.3 | 65 | No |
| 7 – Residential Uses (northwest) | 50.9 | 65 | No |
| 8 – Residential Uses (southwest) | 45.0 | 65 | No |
| 9 – Residential Uses (west) | 45.4 | 65 | No |
| 10 – Residential Uses (southwest) | 43.7 | 65 | No |
| 11 – Residential Uses (southwest) | 33.5 | 65 | No |

dBA = A-weighted decibels

1. Pursuant to Municipal Code Section 5-29.04, the exterior daytime noise standard for single-family residential uses is 65 dBA.

On-site Composite Noise

The potential maximum Project-related noise level increase at the nearest sensitive receptors was conservatively quantified by combining the Project operational noise sources and existing ambient noise level (i.e., composite noise level). Given the variability and uncertainty of the recreational amenities and special events, the recreational noise sources (i.e., recreational park crowds and special events) were not included in the composite noise analysis. It is assumed that all the known equipment and operational activity at the Project site would occur in a constant, simultaneous manner. However, noise sources would occur intermittently throughout the day (except for the

[56] Due to the nature of the proposed uses, peak daytime volumes would not occur during nighttime hours and on-site traffic noise impacts during nighttime hours is not anticipated.

HVAC which may operate in a steady-state manner). Since a noise level increase of less than 3 dBA is considered barely perceptible, an ambient noise level increases less than 3 dBA would be considered less than significant. **Table 26: Composite On-site Noise Level** shows the combined noise level increase experienced by the sensitive receptors from Project operations would not exceed 3 dBA. Impacts would be less than significant, and no mitigation is required.

**Table 26: Composite On-site Noise Level**

| Sensitive Receptor | Noise Level (dBA) | Ambient Noise Level (dBA) | Composite Noise Level (dBA) | Incremental Increase (dBA) | Increase Exceeds 3 dBA? (dBA) |
|---|---|---|---|---|---|
| 1 – Residential Uses | 63.4 | 74.8 | 75.1 | 0.3 | No |
| 2 – Residential Uses | 62.9 | 66.8 | 68.3 | 1.5 | No |
| 5 – Residential Uses | 56.4 | 65.3 | 65.8 | 0.5 | No |
| 6 – Residential Uses | 55.0 | 65.3 | 65.7 | 0.4 | No |
| 7 – Residential Uses | 53.0 | 72.8 | 72.8 | 0.0 | No |
| 8 – Residential Uses | 48.0 | 70.8 | 70.8 | 0.0 | No |
| 9 – Residential Uses | 47.1 | 76.4 | 76.4 | 0.0 | No |
| 10 – Residential Uses | 45.6 | 76.4 | 76.4 | 0.0 | No |
| 11 – Residential Uses | 38.3 | 74.8 | 74.8 | 0.0 | No |

dBA = A-weighted decibels

Off-Site Mobile Noise

Project implementation would generate a total of 44,714 daily trips along nearby roadway segments.[57] The Project is consistent with the land uses designated in the TOP 2050, and as a result, traffic noise levels associated with the proposed Project have been contemplated and addressed in the FSEIR. Therefore, traffic noise levels generated by the proposed Project would be consistent with the findings of the FSEIR. The FSEIR concluded that the traffic noise attributable to new land development would have a less than significant impact on nearby sensitive receptors. Therefore, the Project's impacts are within the limits of the impacts identified in the FSEIR and the Project would not result in any new or more severe impacts than previously analyzed.

## Conclusion

Project implementation would result in substantial temporary or permanent increases in ambient noise levels. The mitigated Project construction-related noise would not exceed the FTA's construction noise threshold of 80 dBA for residential uses, nor would it substantially increase the ambient noise level. As discussed above, the operational stationary source noise would not exceed the applicable noise standards, but the on-site and off-site traffic noise levels would. The Project's impacts are within the limit of impacts identified in the FSEIR. As a result, the proposed Project would not result in any new or more severe impacts than previously analyzed in the FSEIR.

### FSEIR Mitigation Measures:

The FSEIR analyzed impacts associated with construction noise throughout the City and implements the following mitigation measure, which is applicable to the Project.

**NOI 12-4** Construction activities associated with new development that occurs near sensitive receptors shall be evaluated for potential noise impacts. Construction contractors

[57] Urban Crossroads, *Center Park Specific Plan Traffic Analysis*, 2025.

shall implement the following measures for construction activities conducted in the City of Ontario. Construction plans submitted to the City shall identify these measures on demolition, grading, and construction plans submitted to the City. The City of Ontario Planning and Building Departments shall verify that grading, demolition, and/or construction plans submitted include these notations prior to issuance of demolition, grading, and/or building permits.

- Construction activity is limited to the hours: 7:00 a.m. and 6:00 p.m. Monday through Friday and 9:00 a.m. to 6:00 p.m. Saturdays and Sundays, as prescribed in the Municipal Code Section 5-29.09.
- During the entire active construction period, equipment and trucks used for project construction shall use the best-available noise control techniques (e.g., improved mufflers, equipment re-design, use of intake silencers, ducts, engine enclosures, and acoustically attenuating shields or shrouds) wherever feasible.
- Impact tools (e.g., jack hammers and hoe rams) shall be hydraulically or electronically powered whenever possible. Where the use of pneumatic tools is unavoidable, an exhaust muffler on the compressed air exhaust shall be used along with external noise jackets on the tools.
- Stationary equipment, such as generators and air compressors shall be located as far as feasible from nearby noise-sensitive uses.
- Stockpiling shall be located as far as feasible from nearby noise-sensitive receptors.
- Construction traffic shall be limited, to the extent feasible, to approved haul routes established by the City's Engineering Department.
- At least 10 days prior to the start of construction activities, a sign shall be posted at the entrance(s) to the job site, clearly visible to the public, that includes permitted construction days and hours, as well as the telephone numbers of the City's and contractor's authorized representatives that are assigned to respond in the event of a noise or vibration complaint. If the authorized contractor's representative receives a complaint, he/she shall investigate, take appropriate corrective action, and report the action to the City.
- Signs shall be posted at the job site entrance(s), within the on-site construction zones, and along queueing lanes (if any) to reinforce the prohibition of unnecessary engine idling. All other equipment shall be turned off if not in use for more than 5 minutes.
- During the entire construction period and to the extent feasible, the use of noise-producing signals, including horns, whistles, alarms, and bells, shall be safety warning purposes only. The construction manager shall use smart back-up alarms, which automatically adjust the alarm level based on the

background noise level or switch of back-up alarms and replace with human spotters in compliance with all safety requirements and laws.

- Erect temporary noise barriers (at least as high as the exhaust of equipment and breaking line-of-sight between noise sources and sensitive receptors) as necessary and feasible, to maintain construction noise levels at or below the performance standard of 80 dBA $L_{eq}$. Barriers shall be constructed with a solid material that has a density of at least 1.5 pounds per square foot with no gaps from the ground to the top of the barrier and may be lined on the construction side with an acoustical blanket, curtain, or equivalent absorptive material.

**Mitigation Measures:** No additional mitigation is required.

**Level of Significance:** Significant and Unavoidable.

**Threshold 6.2 Would the Project generate excessive ground-borne vibration or ground-borne noise levels?**

## Phase I (Proposed Development), Phase II (Future Development), and Project Buildout (Phase I + Phase II)

### On-Site Construction Vibration

Increases in ground-borne vibration levels attributable to the Project would be primarily associated with short-term construction-related activities. Project construction would have the potential to result in varying degrees of temporary ground-borne vibration, depending on the specific construction equipment used and the operations involved.

The types of construction vibration impacts include building damage and human annoyance. Building damage can be cosmetic or structural. Ordinary buildings that are not particularly fragile would not experience any cosmetic damage (e.g., plaster cracks) at distances beyond 30 feet. This distance can vary substantially depending on the soil composition and underground geological layer between vibration source and receiver. In addition, not all buildings respond similarly to vibration generated by construction equipment. Human annoyance occurs when construction vibration rises significantly above the threshold of human perception for extended periods of time. The City has not established vibration standards for construction activities. This analysis uses the Caltrans' structural damage criteria of 0.3 in/sec PPV for older residential structures and human annoyance criterion of 0.4 in/sec PPV.

**Table 27: Typical Construction Equipment Vibration Levels** lists the vibration levels for typical construction equipment at 25 feet (the reference distance), 74 feet (the distance from the Phase I Project area to the nearest structure and sensitive receptor), and 78 feet (the distance from the Phase II Project area to the nearest structure and sensitive receptor).

| Table 27: Typical Construction Equipment Vibration Levels | | | |
|---|---|---|---|
| **Equipment** | **Reference Level PPV at 25 Feet (in/sec)** | **Phase I** | **Phase II** |
| | | **PPV at 74 Feet (in/sec)[1]** | **PPV at 78 Feet (in/sec)[1]** |
| Loaded Trucks | 0.076 | 0.0149 | 0.0138 |
| Large Bulldozer | 0.089 | 0.0175 | 0.0161 |
| Small Bulldozer | 0.003 | 0.0006 | 0.0005 |
| Vibratory Roller | 0.21 | 0.0412 | 0.0381 |

PPV = peak particle velocity.

1. Calculated using the following formula: $PPV_{equip} = PPV_{ref} \times (25/D)^{1.5}$, where: $PPV_{equip}$ = the peak particle velocity in in/sec of the equipment adjusted for the distance; $PPV_{ref}$ = the reference vibration level in in/sec from *Table 7-4 of the Federal Transit Administration, Transit Noise and Vibration Impact Assessment Manual*, 2018; D = the distance from the equipment to the receiver.

Source: Federal Transit Administration, Transit Noise and Vibration Impact Assessment Manual, September 2018

Construction activities are anticipated to occur up to the Phase I and Phase II Project area property line. As shown in **Table 27**, vibration velocities from anticipated Project construction equipment would range from 0.001 to 0.043 in/sec PPV. The vibration velocities associated with Project construction activities would not exceed the Caltrans' older residential damage threshold of 0.3 in/sec or annoyance threshold of 0.4 in/sec at the structure and sensitive receptor nearest Phase I or Phase II Project areas. Impacts would be less then significant, and no mitigation would be required.

### Off-Site Construction Vibration

Project construction would involve truck travel along nearby roadways, generating vibration events with each passing truck. According to the FTA's *Transit Noise and Vibration Impact Assessment*, a heavy truck rarely creates vibration levels that exceeds 0.012 in/sec PPV at 50 feet when on a roadway.[58] The factors influencing levels of ground-borne vibration include vehicle speed, vehicle suspension, and wheel condition and type. The frequency of vibration events is not listed as an influencing factor for vibration velocity by the FTA.[59] As such, multiple trucks traveling along the roadway would increase the frequency of vibration events but would not affect the vibration velocity experienced by sensitive receptors. Impacts would be less than significant, and no mitigation would be required.

### On-site Operational Vibration

Project operations would primarily involve personal automobiles used by residents accessing the surface parking, occasional delivery trucks (such as UPS, FedEx, etc.), and trash and recycling collection trucks. Due to the rapid drop-off rate of ground-borne vibration and the short duration of the associated events, vehicular traffic-induced ground-borne vibration is rarely perceptible beyond the roadway right-of-way, and rarely results in vibration levels that cause damage to buildings in the vicinity.[60] In addition, there are no substantial ground borne vibration sources associated with the Project, such as rail or subways. Impacts would be less than significant.

## Conclusion

As demonstrated in **Table 27** and discussed above, Project implementation would not result in excessive groundborne vibration levels. The Project's impacts are within the limit of impacts

[58] Federal Transit Administration, *Transit Noise and Vibration Impact Assessment Manual*, September 2018.
[59] Ibid.
[60] Ibid.

identified in the FSEIR. As a result, the proposed project would not result in any new or more severe impacts than previously analyzed in the FSEIR.

**Mitigation Measures:** No mitigation is required.

**Level of Significance:** Less than significant impact.

**Threshold 6.3 For a Project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport of public use airport, would the Project expose people residing or working in the Project area to excessive noise levels?**

## Phase I (Proposed Development), Phase II (Future Development), and Project Buildout (Phase I + Phase II)

### Chino Airport

The Project site is located approximately 0.8 miles to the north of the Chino Airport. According to the Riverside Airport Land Use Compatibility Plan (ALUCP), the Project site is located outside of the Chino Airport 55 dBA CNEL contour.[61] However, the Project site is within the Chino Airport Influence Area and would be required to comply with the development regulations within the Riverside ALUCP. Impacts would be less than significant, and no mitigation is required.

### Ontario International Airport

The Project site is located approximately 3.8 miles to the southwest of the Ontario International Airport. According to the Ontario International ALUCP, the Project site is outside of the Ontario International Airport 60 to 65 dB CNEL contour.[62] However, the Project site is located within the Ontario International Airport Influence Area and would be required to comply with the development regulations within the Ontario International ALUCP. Impacts would be less than significant, and no mitigation is required.

## Conclusion

As the Project site is located outside of the Chino Airport and Ontario International Airport noise contours, Project implementation would not expose residents or workers to excessive airport noise levels. The Project's impacts are within the limit of impacts identified in the FSEIR. As a result, the proposed Project would not result in any new or more severe impacts than previously analyzed in the FSEIR.

**Mitigation Measures:** No mitigation is required.

**Level of Significance:** No impact.

## 6.2 Cumulative Noise Impacts

Noise by definition is a localized phenomenon and drastically reduces as distance from the source increases. Cumulative noise impacts involve development of the proposed Project in combination with ambient growth and other related development projects. As noise levels decrease as distance from the source increases, only projects in the nearby area could combine with the proposed Project to potentially result in cumulative noise impacts. Pursuant to TOP 2050, Project implementation would represent a consistent and logical continuation of the existing and planned development pattern in the Ontario Ranch area. The City has long anticipated that this area would transition from dairy and agricultural uses to urban uses.[63]

### Cumulative Construction Noise

Project construction would not result in a substantial temporary increase in ambient noise levels. Construction noise would be periodic and would cease upon completion of construction activities. The Project would contribute to other proximate construction project noise impacts if construction activities were conducted concurrently. Construction activities at other planned and approved projects near the Project site would be required to comply with applicable City rules related to noise and would take place during daytime hours on the days permitted by the applicable Municipal Code regulations, and projects requiring discretionary City approvals would require the City to evaluate construction noise impacts, comply with the City's standard conditions of approval, and implement mitigation, if necessary, to minimize noise impacts. Construction noise impacts are localized by nature. Because noise dissipates as it travels away from its source, noise impacts would be limited to the Project site and immediate area. Therefore, Project construction would not result in a cumulatively considerable contribution to significant cumulative impacts, assuming such a cumulative impact existed, and impacts in this regard would not be cumulatively considerable. Additionally, cumulative construction noise would be consistent with the findings of the FSEIR.

### Cumulative Construction Vibration

Ground-borne vibration decreases rapidly with distance. Potential vibration impacts are generally limited to buildings and structures that are located in close proximity of construction activity. There are no cumulative projects located adjacent to any structures impacted by Project construction. Due to the rapid attenuation characteristics of ground-borne vibration and given the distance of the nearest related project to the Project site, there is no potential for cumulative construction vibration impact.

### Cumulative Operational Noise

Cumulative noise impacts describe how much noise levels are projected to increase over existing conditions with the development of the proposed Project and other foreseeable projects. Cumulative noise impacts would occur primarily as a result of the Project-generated traffic on local roadways in combination with cumulative projects in the area.

[63] City of Ontario, The Ontario Plan 2050, Draft Supplemental Environmental Impact Report, https://content.ontarioca.gov/sites/default/files/2024-12/Final_DraftSEIR_TOP2050.pdf, accessed March 2025.

On-site Stationary Noise

Stationary noise sources of the proposed Project would result in an incremental increase in non-transportation noise sources in the Project area. However, as discussed above, operational noise caused by the Project would be less than significant. Similar to the proposed Project, other planned and approved projects would be required to mitigate for stationary noise impacts at nearby sensitive receptors, if necessary. As stationary noise sources are generally localized, there is a limited potential for other projects to contribute to cumulative noise impacts.

No known past, present, or reasonably foreseeable projects would combine with the operational noise levels generated by the Project to increase noise levels above acceptable standards because each project must comply with applicable Municipal Code regulations that limit operational noise. Therefore, the Project, together with other projects, would not create a significant cumulative impact, and even if there was such a significant cumulative impact, the Project would not make a cumulatively considerable contribution to significant cumulative operational noises.

Off-site Mobile Noise

The Project is consistent with the land uses designated in the TOP 2050, and as a result, traffic noise levels associated with the proposed Project have been contemplated and addressed in the FSEIR. The Project's contribution to cumulative impacts are within the limit of impacts identified in the FSEIR. As a result, the proposed Project would not result in any new or more severe impacts than previously analyzed in the FSEIR.

### Cumulative Operational Vibration Impacts

Operation of the Project would primarily involve personal automobiles used by residents and delivery trucks (e.g., UPS, FedEx, etc.). Due to the rapid drop-off rate of ground-borne vibration, the short duration of the associated events, and the distance of cumulative projects, there is no potential for cumulative operational vibration impact.

**Mitigation Measures:** No mitigation is required.

**Level of Significance:** Significant and Unavoidable.

### Conclusion

**Table 28: Project Consistency with the FSEIR** summarizes the consistency of the Project's impacts with the findings of the FSEIR. The Project-generated construction noise, stationary source noise, on-site mobile noise, construction vibration, and operational vibration would not exceed the applicable. However, the Project-generated mobile noise would exceed the applicable noise standards and be cumulatively significant. As shown in **Table 28**, the Project's impacts are within the limit of impacts identified in the FSEIR. As a result, the proposed Project would not result in any new or more severe impacts than previously analyzed in the FSEIR.

| **Table 28: Project Consistency with the FSEIR** | | |
|---|---|---|
| **Impact** | **FSEIR Findings** | **Project Findings** |
| Construction Noise | Significant and Unavoidable | Less than Significant |
| Cumulatively Considerable Net Increase of Construction Noise | Significant and Unavoidable | Less than Significant |
| Non-Industrial Stationary Source Noise | Less than Significant | Less than Significant |
| Cumulatively Considerable Net Increase of Stationary Source Noise | Less than Significant | Less than Significant |
| Mobile Noise | -- | Significant and Unavoidable |
| Cumulatively Considerable Net Increase of Mobile Noise | Less than Significant | Less than Significant |
| Construction Vibration | Significant and Unavoidable | Less than Significant |
| Operational Vibration | Less than Significant | Less than Significant |
| Airport Noise | Significant and Unavoidable | Less than Significant |

**Construction Noise Impact on Sensitive Receptors w/o FSEIR MM**

***Parameters***

| | | |
|---|---|---|
| **Construction Hours:** | Daytime hours (7 am to 7 pm) | 8.0 |
| | Evening hours (7 pm to 10 pm) | 0.0 |
| | Nighttime hours (10 pm to 7 am) | 0.0 |
| **Leq to L10 factor** | | 3.0 |

| **Sensitive Receptors** | **Land Use** | **Distance to Property Line (feet)** | **Shielding** | **Direction to Project Site** |
|---|---|---|---|---|
| **1** | Residential Uses | 36.0 | 18.0 | N |
| **2** | Residential Uses | 53.0 | 18.0 | S |
| **3** | On-site Residential Uses | 55.0 | 18.0 | W |
| **4** | Future Phase I Residential Uses | 55.0 | 18.0 | E |
| **5** | Residential Uses | 348.0 | 18.0 | SE |
| **6** | Residential Uses | 172.0 | 18.0 | E |
| **7** | Residential Uses | 223.0 | 18.0 | N |
| **8** | Residential Uses | 357.0 | 18.0 | S |
| **9** | Residential Uses | 460.0 | 18.0 | W |
| **10** | Residential Uses | 574.0 | 18.0 | N |
| **11** | Residential Uses | 1207.0 | 18.0 | NE |

| | | | | | **RECEPTOR 7** | | | **RECEPTOR 8** | | | **RECEPTOR 9** | | | **RECEPTOR 10** | | | **RECEPTOR 11** | | |

**Phase I Construction Truck Pass-By Noise**

**Average Hourly Noise (8 - hour workday)**

| Source | Noise Level | Reference Dist. (feet) | Dist. to Receptor (feet) | Distance Attenuation | Duration (minutes) |
|---|---|---|---|---|---|
| Truck passby (arrival, departure) | 70 | 50 | 50 | 70.0 | 2.38 |
| | | | | Total* | 2.38 |

| Results | | |
|---|---|---|
| Truck Pass-by Noise Levels at 50 feet from Roadway Centerline | | Exceeds Daytime Noise Standard? |
| Metric | Exterior | Exterior |
| $L_{eq(15\text{-}min)}$ | 62.0 | No |
| $L_{max}$ | 70.0 | No |

**Worst Case Noise (assumes all trucks would arrive in 15 minutes)**

| Source | Noise Level | Reference Dist. (feet) | Dist. to Receptor (feet) | Distance Attenuation | Duration (minutes) |
|---|---|---|---|---|---|
| Truck passby (arrival, departure) | 70 | 50 | 50 | 70.0 | 18.7 |
| | | | | Total* | 18.7 |

| Results | | |
|---|---|---|
| Truck Pass-by Noise Levels at 50 feet from Roadway Centerline | | Exceeds Daytime Noise Standard? |
| Metric | Exterior | Exterior |
| $L_{eq(15\text{-}min)}$ | 71.0 | No |
| $L_{max}$ | 70.0 | No |

** Duration assumes 0.17 minutes per truck during a pass-by event.*

Source: University of Washington Department of Environmental and Occupational Health Sciences, Noise Navigator Sound Level Database, July 6, 2010.

**Phase II Construction Truck Pass-By Noise**

**Average Hourly Noise (8 - hour workday)**

| Source | Noise Level | Reference Dist. (feet) | Dist. to Receptor (feet) | Distance Attenuation | Duration (minutes) |
|---|---|---|---|---|---|
| Truck passby (arrival, departure) | 70 | 50 | 50 | 70.0 | 8.33 |
| | | | | Total* | 8.33 |

| Results | | |
|---|---|---|
| Truck Pass-by Noise Levels at 50 feet from Roadway Centerline | | Exceeds Daytime Noise Standard? |
| Metric | Exterior | Exterior |
| $L_{eq(15\text{-}min)}$ | 67.4 | No |
| $L_{max}$ | 70.0 | No |

**Worst Case Noise (assumes all trucks would arrive in 15 minutes)**

| Source | Noise Level | Reference Dist. (feet) | Dist. to Receptor (feet) | Distance Attenuation | Duration (minutes) |
|---|---|---|---|---|---|
| Truck passby (arrival, departure) | 70 | 50 | 50 | 70.0 | 66.47 |
| | | | | Total* | 66.47 |

| Results | | |
|---|---|---|
| Truck Pass-by Noise Levels at 50 feet from Roadway Centerline | | Exceeds Daytime Noise Standard? |
| Metric | Exterior | Exterior |
| $L_{eq(15\text{-}min)}$ | 76.5 | No |
| $L_{max}$ | 70.0 | No |

** Duration assumes 0.17 minutes per truck during a pass-by event.*

Source: University of Washington Department of Environmental and Occupational Health Sciences, Noise Navigator Sound Level Database, July 6, 2010.

**Phase I Operational Noise Calculations**

Calculated using the inverse square law formula for sound attenuation: $dBA_2 = dBA_1 + 20Log(d_1/d_2)$, where $dBA_2$ = estimated noise level at receptor; $dBA_1$ = reference noise level; $d_1$ = reference distance; $d_2$ = receptor location distance.

**Mechanical Equipment**

| Sensitive Receptor | Reference Level (dBA) | Reference Distance (feet)[1] | Distance to Receptor (feet)[2] | Noise Level at Receptor (dBA) |

# 1 SUMMARY OF FINDINGS

This report presents the results of the Traffic Analysis (TA) for the Center Park Specific Plan (Project), which is bounded by Campus Avenue to the west, Walker Avenue to the east, and on either side of Edison Avenue in the City of Ontario, as shown in Exhibit 1-1.

The purpose of this TA is to evaluate the potential circulation system deficiencies that may result when the Project is developed and where circulation system (intersection and/or roadway) improvements are needed to maintain acceptable levels of service consistent with the City's General Plan level of service goals and policies, which are described in the City of Ontario's The Ontario Plan: Policy Plan (adopted August 16, 2022). (1) The scope of analysis included in this evaluation is based on the County of San Bernardino's Transportation Impact Study Guidelines (July 9, 2019) (County Guidelines) and consultation with City staff during the traffic study scoping process. (2) The TA Scoping Agreement is included in Appendix 1.1 and has been reviewed and approved by the City of Ontario.

DRAFT

## EXHIBIT 1-1 : LOCATION MAP

## 1.1 PROJECT OVERVIEW

### 1.1.1 Land Use

The Project is anticipated to develop in two phases. Exhibit 1-2 shows the preliminary land use plan. The Project is anticipated to consist of the following:

- 802 Single Family Detached dwelling units
- 3,491 Multifamily (Low-Rise) Residential units
- 115,809 square feet of Commercial Retail use
- 135,111 square feet of General Office use
- 55.98 acres of Parkland use

The first phase of the Project consists of the development of up to 256 Single Family Detached residential dwelling units with 768 Multifamily (Low-Rise) Residential dwelling units and 19.6 acres of Parkland use with an anticipated Opening Year of 2029. The Project Buildout is anticipated in 2034. For purposes of the TA, the mix of uses for each planning area is summarized in Table 1-1. It should be noted that the Commercial Retail square footage within the Mixed-Use areas of the Project would be evenly divided in thirds between Strip Retail Plaza, Fast-Food Restaurant Without Drive-Thru Window, and Fast-Food Restaurant With Drive-Thru Window. Similarly, Office square footage within the Mixed-Use areas assumes up to 10,000 square feet of Medical Office use in each Planning Area (PA). Access to the proposed Project would be provided to the surrounding roadways of Campus Avenue, Edison Avenue, Bon View Avenue, Cucamonga Avenue, Grove Avenue, Parco Avenue, and Walker Avenue.

### 1.1.2 Trip Generation

In order to develop traffic estimates for the proposed Project, trip-generation statistics published by the Institute of Transportation Engineers (ITE) in their Trip Generation Manual (11th Edition, 2021) were utilized to represent the following land uses allowed by the Specific Plan (3):

- Single Family Detached Housing (ITE Land Use Code 210)
- Multifamily (Low-Rise) Residential (ITE Land Use Code 220)
- Public Park (ITE Land Use Code 411)
- General Office (ITE Land Use Code 710)
- Medical Office (ITE Land Use Code 720)
- Strip Retail Plaza (<40,000 square feet (SF)) (ITE Land Use Code 822)
- Fast-Food Restaurant Without Drive-Thru (ITE Land Use Code 933)
- Fast-Food Restaurant With Drive-Thru (ITE Land Use Code 934)

For the purposes of this TA, trip generation estimates for the active park, with ball fields, land use has been based on trip-generation statistics from the San Diego Municipal Code Land Development Code Trip Generation Manual, May 2003: (4)

- Active Park (with Ball Fields)

At buildout, the Project is anticipated to generate a total of 44,716 two-way trips per day with 3,462 AM peak hour trips and 3,507 PM peak hour trips. The assumptions and methods used to estimate the Project's trip generation characteristics are discussed in greater detail in Section 4.1 *Project Trip Generation.*

DRAFT

## Exhibit 1-2: Preliminary Land Use Plan & Phasing

## TABLE 1-1: PROPOSED LAND USES

| PA | Description | Land Use | Quantity | Unit[1] |
|---|---|---|---|---|
| 1 | Medium Density Residential (11.1-25.0 DU/Acre) | Single Family Detached | 88 | DU |
| | | Multifamily (Low-Rise) Residential | 262 | DU |
| 2 | Medium Density Residential (11.1-25.0 DU/Acre) | Single Family Detached | 86 | DU |
| | | Multifamily (Low-Rise) Residential | 257 | DU |
| 3 | Medium Density Residential (11.1-25.0 DU/Acre) | Single Family Detached | 42 | DU |
| | | Multifamily (Low-Rise) Residential | 127 | DU |
| 4 | Mixed-Use | Multifamily (Low-Rise) Residential | 175 | DU |
| | | Retail[2] | 18,635 | SF |
| | | General Office[3] | 21,741 | SF |
| 5 | Mixed-Use | Multifamily (Low-Rise) Residential | 182 | DU |
| | | Retail[2] | 19,367 | SF |
| | | General Office[3] | 22,595 | SF |
| 6 | Medium Density Residential (11.1-25.0 DU/Acre) | Single Family Detached | 40 | DU |
| | | Multifamily (Low-Rise) Residential | 121 | DU |
| 7 | Medium Density Residential (11.1-25.0 DU/Acre) | Single Family Detached | 130 | DU |
| | | Multifamily (Low-Rise) Residential | 391 | DU |
| 8 | Medium Density Residential (11.1-25.0 DU/Acre) | Single Family Detached | 133 | DU |
| | | Multifamily (Low-Rise) Residential | 399 | DU |
| 9 | Medium Density Residential (11.1-25.0 DU/Acre) | Single Family Detached | 67 | DU |
| | | Multifamily (Low-Rise) Residential | 201 | DU |
| 10 | Mixed-Use | Multifamily (Low-Rise) Residential | 345 | DU |
| | | Retail[2] | 36,852 | SF |
| | | General Office[3] | 42,994 | SF |
| 11 | Mixed-Use | Multifamily (Low-Rise) Residential | 384 | DU |
| | | Retail[2] | 40,955 | SF |
| | | General Office[3] | 47,781 | SF |
| 12 | Medium Density Residential (11.1-25.0 DU/Acre) | Single Family Detached | 85 | DU |
| | | Multifamily (Low-Rise) Residential | 255 | DU |
| 13 | Medium Density Residential (11.1-25.0 DU/Acre) | Single Family Detached | 131 | DU |
| | | Multifamily (Low-Rise) Residential | 392 | DU |
| 14 | Open Space/Parkland | Active Park | 13.33 | AC |
| 15 | Open Space/Parkland | Active Park | 13.11 | AC |
| 16 | Open Space/Parkland | Public Park | 9.9 | AC |
| 17 | Open Space/Parkland | Public Park | 6.2 | AC |
| 18 | Open Space/Parkland | Active Park | 13.44 | AC |

[1] DU = dwelling unit; SF = square feet; AC = acres
[2] Square footage to be divided evenly between strip retail plaza and fast-food restaurant without and with drive-thru window uses.
[3] Square footage to be divided evenly between general office and medical office uses.

DRAFT

## 1.2 ANALYSIS SCENARIOS

For the purposes of this TA, peak hour intersection operations have been evaluated for each of the following traffic conditions:

- Existing (2024)
- Existing plus Project (E+P) (Phase 1)
- E+P (Buildout)
- Opening Year Cumulative (2034) Without Project
- Opening Year Cumulative (2034) With Project
- Horizon Year (2050) Without Project
- Horizon Year (2050) With Project

### 1.2.1 Existing (2024) Conditions

Information for Existing (2024) conditions is disclosed to represent the current traffic conditions as they existed at the time this report was prepared.

### 1.2.2 Existing plus Project (E+P) Conditions

The Existing plus Project analysis determines traffic deficiencies that would occur on the existing roadway system with the addition of Project traffic. For the purposes of this TA, the E+P analysis scenario has been evaluated for both Phase 1 and Project Buildout (Phase 1 and Phase 2) in order to determine site-adjacent and off-site improvement needs associated with both phases of development.

### 1.2.3 Opening Year Cumulative (2034) Conditions

The Opening Year Cumulative conditions analysis determines the potential near-term cumulative circulation system deficiencies. The roadway network is similar to Existing conditions except for new connections/driveways to be constructed by the Project or other known Cumulative Projects. To account for background traffic growth, an annual ambient growth rate based on an interpolation between Existing conditions and Horizon Year (2050) traffic conditions is included for Opening Year Cumulative (2034) traffic conditions. The Opening Year Cumulative analysis is intended to identify "Opening Year" deficiencies associated with the development of the proposed Project based on the expected background growth within the study area.

### 1.2.4 Horizon Year (2050) Conditions

Traffic projections for Horizon Year (2050) conditions were derived from the San Bernardino County Transportation Analysis Model (SBTAM) using accepted procedures for model forecast refinement and smoothing and is based on the currently adopted The Ontario Plan (TOP) 2050 General Plan Update. The Horizon Year conditions analysis will be utilized to determine if improvements funded through regional transportation mitigation fee programs can accommodate the long-range cumulative traffic at the target Level of Service (LOS) identified in the City of Ontario (lead agency) General Plan. Each of the applicable transportation fee programs are discussed in more detail In Section 8 *Local and Regional Funding Mechanisms*.

DRAFT

## 1.3 STUDY AREA

For the purposes of this TA, a total of 45 study area intersections were selected for evaluation based on County Guidelines and consultation with City staff. The 45 study area intersections shown in Exhibit 1-3 and listed in Table 1-2 have been selected for assessment based on the County's analysis criteria of 50 or more peak hour trips. The study area intersections will be evaluated using the Highway Capacity Manual (HCM) 7th Edition methodology.

## EXHIBIT 1-3 : STUDY AREA

**LEGEND:**

0 = *Existing Intersection Analysis Location*

0 = *Future Intersection Analysis Location*

## 1.4 General Plan Consistency Requirements for Intersections

This section provides a brief overview of the intersection LOS deficiencies identified in this report. The LOS standards used for this assessment are consistent with those identified in the City of Ontario General Plan. Section 2 *Methodologies* provides a detailed explanation on the methodologies used for this assessment, while Section 3 *Area Conditions*, Section 5 *Existing plus Project Traffic Conditions*, Section 6 *Opening Year Cumulative (2034) Traffic Conditions*, and Section 7 *Horizon Year (2050) Traffic Conditions* include the operations analysis results for each analysis scenario. Additionally, a summary of the peak hour LOS analysis results is presented in Table 1-3.

### 1.4.1 Existing (2024) Conditions

The assessment of Existing (2024) traffic conditions is performed to establish a baseline of current LOS operations from which the effects of the Project's future contribution of traffic can be measured. The following intersection was found to currently operate at a deficient LOS (i.e., below the City of Ontario's adopted General Plan thresholds) during one or both peak hours:

- Euclid Avenue (SR-83) & Pine Avenue (#11) – LOS E PM peak hour only

### 1.4.2 Existing plus Project (E+P) Conditions

The assessment of E+P traffic conditions is performed to identify whether the Project's contribution of traffic has the potential to cause intersection LOS to fall below the City's adopted thresholds.

**E+P (Phase 1)**

No study area intersections are anticipated to operate at an unacceptable LOS during the peak hours under E+P (Phase 1) traffic conditions, in addition to the intersection identified under Existing (2024) traffic conditions.

**E+P (Buildout)**

The following study area intersections are anticipated to operate at an unacceptable LOS during the peak hours under E+P (Buildout) traffic conditions, in addition to the intersection identified under Existing (2024) traffic conditions:

- Bon View Avenue & Riverside Drive (#15) – LOS F AM peak hour only
- Grove Avenue & Chino Avenue (#24) – LOS F AM and PM peak hours
- Grove Avenue & Schaefer Avenue (#25) – LOS F AM and PM peak hours

### 1.4.3 Opening Year Cumulative (2034) and Horizon Year (2050) Conditions

An assessment of opening year and horizon year cumulative traffic conditions is performed to identify whether the traffic contribution associated with both the proposed Project and that of other reasonably foreseeable future development projects in the area have the potential to cause intersection LOS to fall below the City's adopted thresholds. The Project's contribution to these forecasted LOS deficiencies is typically addressed through fee payments to an established fee program (both local and regional).

DRAFT

The results of the LOS assessments for Opening Year Cumulative (2034) and Horizon Year (2050) traffic conditions are also summarized in Table 1-3, while Section 6 *Opening Year Cumulative (2034) Traffic Conditions*, and Section 7 *Horizon Year (2050) Traffic Conditions* provide a more detailed list of the forecast LOS deficiencies.

## 1.5 RECOMMENDATIONS

### 1.5.1 Intersection Improvement Recommendations Necessary to Maintain General Plan Consistency

Based on the results of this TA, intersection improvement recommendations necessary to maintain City of Ontario General Plan LOS standards are listed in Table 1-4. Improvements found to be included in the WRCOG TUMF program or City of Ontario DIF program have been identified as such.

### 1.5.2 On-Site Circulation Recommendations

The following recommendations are based on the minimum improvements needed to accommodate site access and maintain acceptable peak hour operations for the proposed Project. The site-adjacent recommendations are shown in Exhibit 1-4. It should be noted that the Project is to construct pavement for eight lanes (four in each direction) along Edison Avenue, as shown in Exhibit 1-4 which is consistent with the City's Ontario Plan classification for Edison Avenue. However, until such time the receiving lanes are constructed to the west and east of the Project in order to accommodate the additional through lanes, the pavement is to be striped/reduced for interim use. In the interim condition, Edison Avenue within the Project boundaries, consists of through lanes beyond what is available outside the Project site, as such tapers will be necessary to reduce the number of lanes through striping in order to correspond with the available receiving lanes on either side of the Project.

**Phase 1:**

***Recommendation 1 – Grove Avenue & Edison Avenue (#26)*** – The following improvements are necessary to accommodate site access:

- Install a traffic signal.

***Recommendation 2 – Parco Avenue & Edison Avenue (#28)*** – The following improvements are necessary to accommodate site access:

- Install a stop sign on the southbound approach (Parco Avenue).
- Construct a southbound shared left-through-right lane.

***Recommendation 3 – Walker Avenue & Edison Avenue (#31)*** – The following improvements are necessary to accommodate site access:

- Install a traffic signal.

[1] Improvements included in City of Ontario DIF program for local, regional and specific plan components.

[2] Program improvements constructed by project may be eligible for fee credit, at discretion of City. See Table 8-2 for Fair Share Calculations.

DRAFT

## EXHIBIT 1-4 : SITE ACCESS RECOMMENDATIONS

DRAFT

** = The Project is to provide pavement for four lanes along Edison Avenue adjacent to the Project site. These lanes will not be striped for use until such time the receiving lanes are constructed.*

**LEGEND:**

- *= Existing Intersection Analysis Location*
- *= Future Intersection Analysis Location*
- *= Existing Stop Sign*
- *= Existing Lane*
- *= Future Traffic Signal*
- *= Proposed Stop Sign*
- *= Proposed Lane*

**Buildout:**

***Recommendation 4 – Campus Avenue & Edison Avenue (#14)*** – The following improvements are necessary to accommodate site access:

- Install a stop sign on the northbound and southbound approach (Campus Avenue).
- Construct a northbound shared left-through-right lane.
- Construct a southbound shared left-through-right lane.

***Recommendation 5 – Bon View Avenue & Edison Avenue (#17)*** – The following improvements are necessary to accommodate site access:

- Install a traffic signal.
- Construct a northbound left turn lane with a minimum of 275 feet of storage.
- Construct a southbound left turn lane with a minimum of 250 feet of storage.
- Construct an eastbound left turn lane with a minimum of 250 feet of storage, a second through lane, and a right turn lane.
- Construct a westbound left turn lane with a minimum of 425 feet of storage and a second through lane.

***Recommendation 6 – Cucamonga Avenue & Edison Avenue (#19)*** – The following improvements are necessary to accommodate site access:

- Install a traffic signal.
- Construct a shared southbound left-right turn lane.
- Construct an eastbound left turn lane with a minimum of 125 feet of storage and a second through lane.
- Construct a second westbound through lane.

***Recommendation 7 – Grove Avenue & Edison Avenue (#26)*** – The following improvements are necessary to accommodate site access:

- Construct a northbound left turn lane with a minimum of 300 feet of storage.
- Construct a southbound left turn lane with a minimum of 400 feet of storage.
- Construct an eastbound left turn lane with a minimum of 375 feet of storage, a second through lane, and a right turn lane.
- Construct a westbound left turn lane with a minimum of 375 feet of storage, a second through lane, and a right turn lane.

***Recommendation 8 – Parco Avenue & Edison Avenue (#28)*** – The following improvements are necessary to accommodate site access:

- Construct a second eastbound through lane.

DRAFT

***Recommendation 9 – Walker Avenue & Edison Avenue (#31)*** – The following improvements are necessary to accommodate site access:

- Construct a northbound left turn lane with a minimum of 500 feet of storage.
- Construct a southbound left turn lane with a minimum of 250 feet of storage.
- Construct an eastbound left turn lane with a minimum of 125 feet of storage and a right turn lane.
- Construct a westbound left turn lane with a minimum of 600 feet of storage.

***Recommendation 10 – Edison Avenue*** is an east-west oriented roadway located within the Project site. Project to construct Edison Avenue from Campus Avenue to Walker Avenue at its ultimate full-section width as an Other Principal Arterial with 8 lanes (4 lanes in each direction).

***Recommendation 11 – Campus Avenue*** is a north-south oriented roadway located at the Project's western boundary. Project to construct Campus Avenue from the Project's northern boundary to the Project's southern boundary at its ultimate half-section width as a 4-lane Minor Arterial, plus 12 feet of pavement on the west side (southbound direction) to facilitate site access, in compliance with the circulation recommendations found in the City of Ontario General Plan.

***Recommendation 12 – Bon View Avenue*** is a north-south oriented roadway located within the Project site. Project to construct Bon View Avenue from the Project's northern boundary to the Project's southern boundary at its ultimate full-section width as a 2-lane Collector, in compliance with the circulation recommendations found in the City of Ontario General Plan.

***Recommendation 13 – Grove Avenue*** is a north-south oriented roadway located within the Project site. Project to construct Grove Avenue from the Project's northern boundary to the Project's southern boundary at its ultimate full-section width as a 4-lane Principal Arterial, in compliance with the circulation recommendations found in the City of Ontario General Plan.

***Recommendation 14 – Walker Avenue*** is a north-south oriented roadway located at the Project's eastern boundary. Project to construct Walker Avenue from Edison Avenue to the Project's southern boundary at its ultimate half-section width as a 2-lane Collector, plus 12 feet of pavement on the east side (northbound direction) to facilitate site access, in compliance with the circulation recommendations found in the City of Ontario General Plan.

On-site traffic signing and striping for all phases should be implemented agreeable with the provisions of the California Manual on Uniform Traffic Control Devices (CA MUTCD) and in conjunction with detailed construction plans for the Project site. Sight distance at each Project access point should be reviewed with respect to standard California Department of Transportation (Caltrans) and City of Ontario sight distance standards at the time of preparation of final grading, landscape, and street improvement plans.

The Specific Plan proposes to eliminate the future extensions of Cucamonga Avenue and Parco/Comet Avenue south of Edison Avenue. Since these roadways are not classified as collector or higher in the City of Ontario General Plan, they were not included in the Horizon Year (2050) Without or With Project traffic volume forecasts. However, their removal, as reflected in this TA, will likely increase traffic demand on nearby roadways such as Bon View Avenue, Grove Avenue, and Walker Avenue, as vehicles adjust their travel patterns to utilize existing higher-classified roadways.

DRAFT

### 1.5.3 Queuing Analysis at Project Driveway

A queuing analysis was conducted for Horizon Year (2050) With Project, with Improvements, traffic conditions to determine the turn pocket lengths necessary to accommodate 95th percentile queues. The analysis was conducted for the weekday AM and weekday PM peak hours. The results are provided in Appendix 1.2 and summarized in Table 1-5. No queuing issues are anticipated at the Project access point.

SimTraffic is designed to model networks of signalized and unsignalized intersections, with the primary purpose of checking and fine-tuning signal operations. SimTraffic uses the input parameters from Synchro to generate random simulations. The 95$^{th}$ percentile queue is derived from the average queue plus 1.65 standard deviations. The 95$^{th}$ percentile queue is not necessarily ever observed; it is simply based on statistical calculations (or Average Queue plus 1.65 standard deviations). Many agencies utilize the 95$^{th}$ percentile queues for design purposes. A vehicle is considered queued whenever it is traveling at less than 10 feet/second. The random simulations generated by SimTraffic have been utilized to determine the 95$^{th}$ percentile queue lengths observed for each turn movement. A SimTraffic simulation has been recorded five (5) times, during the weekday AM and weekday PM peak hours, and has been seeded for 30-minute periods with 60-minute recording intervals.

DRAFT

## TABLE 1-5: SITE ADJACENT PEAK HOUR QUEUING SUMMARY

| # | Intersection | Movement | Horizon Year (2050) With Project 95th Percentile Queue (Feet) AM Peak | PM Peak |

DRAFT

# 2 METHODOLOGIES

This section of the report presents the methodologies used to perform the traffic analyses summarized in this report. The methodologies described are consistent with the County Guidelines.

## 2.1 LEVEL OF SERVICE

Traffic operations of roadway facilities are described using the term "Level of Service" (LOS). LOS is a qualitative description of traffic flow based on several factors, such as speed, travel time, delay, and freedom to maneuver. Six levels are typically defined ranging from LOS A, representing completely free-flow conditions, to LOS F, representing a breakdown in flow resulting in stop-and-go conditions. LOS E represents operations at or near capacity, an unstable level where vehicles are operating with the minimum spacing for maintaining uniform flow.

## 2.2 INTERSECTION CAPACITY ANALYSIS

The definitions of LOS for interrupted traffic flow (flow restrained by the existence of traffic signals and other traffic control devices) differ slightly depending on the type of traffic control. The LOS is typically dependent on the quality of traffic flow at the intersections along a roadway. The 7th Edition Highway Capacity Manual (HCM) methodology expresses the LOS at an intersection in terms of delay time for the various intersection approaches. (5) The HCM uses different procedures depending on the type of intersection control.

### 2.2.1 Signalized Intersections

The City of Ontario requires signalized intersection operations analysis based on the methodology described in the HCM. (5) Intersection LOS operations are based on an intersection's average control delay. Control delay includes initial deceleration delay, queue move-up time, stopped delay, and final acceleration delay. For signalized intersections, LOS is related to the average control delay per vehicle and is correlated to a LOS designation as described in Table 2-1.

DRAFT

## TABLE 2-1: SIGNALIZED INTERSECTION LOS THRESHOLDS

| Description | Average Control Delay (Seconds), V/C ≤ 1.0 | Level of Service V/C ≤ 1.0[1] |
|---|---|---|
| Operations with very low delay occurring with favorable progression and/or short cycle length. | 0 to 10.00 | A |
| Operations with low delay occurring with good progression and/or short cycle lengths. | 10.01 to 20.00 | B |
| Operations with average delays resulting from fair progression and/or longer cycle lengths. Individual cycle failures begin to appear. | 20.01 to 35.00 | C |
| Operations with longer delays due to a combination of unfavorable progression, long cycle lengths, or high V/C ratios. Many vehicles stop and individual cycle failures are noticeable. | 35.01 to 55.00 | D |
| Operations with high delay values indicating poor progression, long cycle lengths, and high V/C ratios. Individual cycle failures are frequent occurrences. This is considered to be the limit of acceptable delay. | 55.01 to 80.00 | E |
| Operations with delays unacceptable to most drivers occurring due to over saturation, poor progression, or very long cycle lengths. | 80.01 and up | F |

Source: HCM, 7th Edition
[1] If V/C is greater than 1.0, then LOS is F per HCM

DRAFT

Consistent with Appendix B of the San Bernardino County CMP, the following saturation flow rates, in vehicles per hour green per lane (vphgpl), will be utilized in the traffic analysis for signalized intersections:

*Existing, E+P, and Opening Year Cumulative Traffic Conditions:*

- Exclusive through: 1800 vphgpl
- Exclusive left: 1700 vphgpl
- Exclusive right: 1800 vphgpl
- Exclusive dual left: 1600 vphgpl
- Exclusive triple left: 1500 vphgpl

*Horizon Year Traffic Conditions:*

- Exclusive through: 1900 vphgpl
- Exclusive left: 1800 vphgpl
- Exclusive right: 1900 vphgpl
- Exclusive dual left: 1700 vphgpl
- Exclusive triple left: 1600 vphgpl

The traffic modeling and signal timing optimization software package Synchro (Version 12) has been utilized to analyze signalized intersections. Synchro is a macroscopic traffic software program that is based on the signalized intersection capacity analysis as specified in the HCM. Macroscopic level models represent traffic in terms of aggregate measures for each movement at the study intersections. Equations are used to determine measures of effectiveness such as delay and queue length. The level of service and capacity analysis performed by Synchro takes into consideration optimization and coordination of signalized intersections within a network.

The peak hour traffic volumes have been adjusted using a peak hour factor (PHF) to reflect peak 15-minute volumes. Customary practice for LOS analysis is to use a peak 15-minute rate of flow. However, flow rates are typically expressed in vehicles per hour. The PHF is the relationship between the peak 15-minute flow rate and the full hourly volume (e.g., PHF = [Hourly Volume] / [4 x Peak 15-minute Flow Rate]). The use of a 15-minute PHF produces a more detailed analysis as compared to analyzing vehicles per hour. Existing PHFs have been used for all analysis scenarios. Per the HCM, PHF values over 0.95 often are indicative of high traffic volumes with capacity constraints on peak hour flows while lower PHF values are indicative of greater variability of flow during the peak hour. (5)

### 2.2.2 Unsignalized Intersections

The City of Ontario requires the operations of unsignalized intersections be evaluated using the methodology described in the HCM. (5) The LOS rating is based on the weighted average control delay expressed in seconds per vehicle (see Table 2-2). At two-way or side-street stop-controlled intersections, LOS is calculated for each controlled movement and for the left turn movement from the major street, as well as for the intersection as a whole. For approaches composed of a single lane, the delay is computed as the average of all movements in that lane. Delay for the intersection is reported for the worst individual movement at a two-way stop-controlled intersection. For all-way stop controlled intersections, LOS is computed for the intersection as a whole (average delay).

**TABLE 2-2: UNSIGNALIZED INTERSECTION LOS THRESHOLDS**

| Description | Average Control Delay (Seconds), V/C ≤ 1.0 | Level of Service V/C ≤ 1.0[1] |
|---|---|---|
| Little or no delays. | 0 to 10.00 | A |
| Short traffic delays. | 10.01 to 15.00 | B |
| Average traffic delays. | 15.01 to 25.00 | C |
| Long traffic delays. | 25.01 to 35.00 | D |
| Very long traffic delays. | 35.01 to 50.00 | E |
| Extreme traffic delays with intersection capacity exceeded. | > 50.00 | F |

Source: HCM, 7th Edition
[1] If V/C is greater than 1.0, then LOS is F per HCM

DRAFT

## 2.3 TRAFFIC SIGNAL WARRANT ANALYSIS METHODOLOGY

The term "signal warrants" refers to the list of established criteria used by Caltrans and other public agencies to quantitatively justify or determine the potential need for installation of a traffic signal at an otherwise unsignalized intersection. This TA uses the signal warrant criteria presented in the latest edition of the Caltrans California Manual on Uniform Traffic Control Devices (CA MUTCD). (6)

The signal warrant criteria for Existing study area intersections are based upon several factors, including volume of vehicular and pedestrian traffic, frequency of accidents, and location of school areas. The CA MUTCD indicates that the installation of a traffic signal should be considered if one or more of the signal warrants are met. (6) Specifically, this TA utilizes the Peak Hour Volume-based Warrant 3 as the appropriate representative traffic signal warrant analysis for existing traffic conditions and for all future analysis scenarios for existing unsignalized intersections. Warrant 3 is appropriate to use for this TA because it provides specialized warrant criteria for intersections with rural characteristics. For the purposes of this study, the speed limit was the basis for determining whether Urban or Rural warrants were used for a given intersection. Urban warrants have been used where posted speed limits on the major roadways with unsignalized intersections are 40 miles per hour or below while rural warrants have been used where speeds exceed 40 miles per hour.Future intersections that do not currently exist have been assessed regarding the potential need for new traffic signals based on future average daily traffic (ADT) volumes, using the Caltrans planning level ADT-based signal warrant analysis worksheets. Similarly, the speed limit has been used as the basis for determining the use of Urban and Rural warrants.

Traffic signal warrant analyses were performed for the following study area intersections shown in Table 2-3.

### TABLE 2-3: TRAFFIC SIGNAL WARRANT ANALYSIS LOCATIONS

| # | Intersection |
|---|---|
| 14 | Campus Av. & Edison Av. |
| 15 | Bon View Av. & Riverside Dr. |
| 16 | Bon View Av. & Schaefer Av. |
| 17 | Bon View Av. & Edison Av. |
| 18 | Bon View Av. & Eucalyptus Av. |
| 19 | Cucamonga Av. & Edison Av. |
| 24 | Grove Av. & Chino Av. |
| 25 | Grove Av. & Schaefer Av. |
| 26 | Grove Av. & Edison Av. |
| 27 | Grove Av. & Eucalyptus Av. |
| 28 | Parco Av. & Edison Av. |
| 29 | Walker Av. & Riverside Dr. |
| 30 | Walker Av. & Schaefer Av. |
| 31 | Walker Av. & Edison Av. |
| 32 | Walker Av. & Eucalyptus Av. |

DRAFT

The Existing conditions traffic signal warrant analysis is presented in the subsequent section, Section 3 *Area Conditions.* The traffic signal warrant analyses for future conditions are presented in Section 5 *E+P Traffic Conditions*, Section 6 *Opening Year Cumulative (2034) Traffic Conditions*, and Section 7 *Horizon Year (2050) Traffic Conditions.* It is important to note that a signal warrant defines the minimum condition under which the installation of a traffic signal might be warranted. Meeting this threshold condition does not require that a traffic control signal be installed at a particular location, but rather, that other traffic factors and conditions be evaluated in order to determine whether the signal is truly justified. It should also be noted that signal warrants do not necessarily correlate with LOS. An intersection may satisfy a signal warrant condition and operate at or above acceptable LOS or operate below acceptable LOS and not meet a signal warrant.

## 2.4 Roadway Segment Capacity Analysis

Roadway segment operations have been evaluated using the County of San Bernardino Roadway Capacity Thresholds provided in the County's General Plan. These roadway capacities are "rule of thumb" estimates for planning purposes and are affected by such factors as intersections (spacing, configuration and control features), degree of access control, roadway grades, design geometrics (horizontal and vertical alignment standards), sight distance, vehicle mix (truck and bus traffic) and pedestrian bicycle traffic. In other words, while using ADT for planning purposes is suitable with regards to evaluating potential volume to capacity with future forecasts, it is not suitable for operational analysis because it does not account for the factors listed previously. As such, where the ADT-based roadway segment analysis indicates a deficiency (unacceptable LOS), a review of the more detailed peak hour intersection analysis and progression analysis are undertaken. The more detailed peak hour intersection analysis explicitly accounts for factors that affect roadway capacity.

## 2.5 Queuing Analysis

Consistent with Caltrans requirements, the 95$^{th}$ percentile queuing of vehicles has been assessed at the off-ramps to determine potential queuing deficiencies at the freeway ramp intersections at SR-60 Freeway at the Euclid Avenue, Grove Avenue, and Archibald Avenue interchanges, at SR-71 Freeway at the Euclid Avenue interchange, and the I-15 Freeway at the Cantu Galleano Road interchange. Specifically, the off-ramp queuing analysis is utilized to identify any potential queuing and "spill back" onto the freeway mainlines from the off-ramps.

The traffic progression analysis tool and HCM intersection analysis program, Synchro, has been used to assess the potential deficiencies/needs of the intersections with traffic added from the proposed Project. Storage (turn-pocket) length recommendations at the ramps have been based upon the 95$^{th}$ percentile queue resulting from the Synchro progression analysis. The footnote from the Synchro output sheets indicates if the 95$^{th}$ percentile cycle exceeds capacity. Traffic is simulated for two complete cycles of the 95$^{th}$ percentile traffic in Synchro in order to account for the effects of spillover between cycles. In practice, the 95$^{th}$ percentile queue shown will rarely be exceeded and the queues shown with the footnote are acceptable for the design of storage bays. The 95$^{th}$ percentile queue is derived from the average queue plus 1.65 standard deviations. The 95$^{th}$ percentile queue is not necessarily ever observed, it is simply based on statistical calculations.

DRAFT

## 2.6 Minimum Acceptable Levels of Service (LOS)

Minimum Acceptable LOS and associated definitions of intersection deficiencies have been obtained from each of the applicable surrounding jurisdictions.

### 2.6.1 City of Ontario

Per TOP's Policy M-1.5, the City of Ontario utilizes a minimum acceptable LOS of E, where feasible. (7)

### 2.6.2 City of Eastvale

The City of Eastvale General Plan strives to maintain LOS C for commuter roadways but acknowledges that constraints on roadway expansion may result in different LOS. (8) Based on this criterion, where feasible, LOS D is the minimum acceptable LOS at each of the study intersections within the City of Eastvale.

### 2.6.3 City of Chino

According to the City of Chino's General Plan Objective TRA-1.2/Policy P1, LOS D is the minimum acceptable condition that should be maintained during the peak commute hours, where feasible. (9)

### 2.6.4 Caltrans

Caltrans endeavors to maintain a target LOS at the transition between LOS C and LOS D on State Highway System facilities, however, Caltrans acknowledges that this may not always be feasible and recommends that the lead agency consult with Caltrans to determine the appropriate target LOS. (10) If an existing State highway facility is operating at less than this target LOS, the existing LOS should be maintained. In general, the region-wide goal for an acceptable LOS on all freeways and intersections is LOS D. Consistent with the City of Ontario LOS threshold of D and in excess of the City of Ontario stated threshold of LOS E, LOS D will be used as the target LOS.

### 2.6.5 CMP

The CMP definition of deficiency is based on maintaining a level of service standard of LOS E or better, where feasible, except where an existing LOS F condition is identified in the CMP document. However, in an effort to overstate as opposed to understate potential deficiencies, LOS D has been utilized for the CMP intersections for the purposes of this analysis, unless the intersection is located in the City of Ontario (which uses LOS E). (11)

DRAFT

## 2.7 DEFICIENCY CRITERIA

To determine whether the addition of project traffic at a study intersection would result in a traffic deficiency, the following will be utilized:

- When the Without Project condition is at or better than LOS D (or LOS E for CMP intersections and intersections located in the City of Ontario) (i.e., acceptable LOS), and project-generated traffic causes deterioration below LOS D/LOS E (i.e., unacceptable LOS), a deficiency is deemed to occur.

When the Without Project condition is already below LOS D/LOS E (i.e., unacceptable LOS), the Project will be responsible for improving its deficiency to acceptable levels of service. Thus, for intersections operating at unacceptable LOS during either the AM and/or PM peak hour, improvements have been identified to improve the deficiencies of the Project to an intersection LOS that is equal to or better than Without Project conditions (see Table 2-4).

The Project's contribution to a deficiency can be reduced if the Project is required to implement or fund its fair share of improvements designed to alleviate its contribution to the deficient condition.

In the event that an intersection is operating at or is forecast to operate at a deficient LOS, the CMP guidelines have defined a series of steps to be completed to determine the Project's contribution to the deficiency of intersections, which has been applied to both CMP and non-CMP study area intersections. The steps are as follows:

- Determine the improvements necessary to achieve an acceptable service level;
- Calculate the Project's share in the future traffic volume projections for the peak hours;
- Estimate the cost to implement recommended improvements; and
- Calculate the Project's fair-share contribution to improve the Project's traffic deficiencies.

DRAFT

### TABLE 2-4: DEFICIENCY CRITERIA

| Without Project LOS | LOS | Deficient? | Improvement Required? |
|---|---|---|---|
| City of Ontario | | | |
| A | A-D | No | No |
| B | B-D | No | No |
| C | C-D | No | No |
| D | D-E | No | No |
| E | E | No | No |
| A-E | F | Yes | Yes, bring LOS to E or better |
| F | F | Yes | Yes, bring LOS to E or better |
| | | | |
| City of Eastvale, City of Chino | | | |
| A | A-D | No | No |
| B | B-D | No | No |
| C | C-D | No | No |
| D | D-E | No | No |
| A-D | E or F | Yes | Yes, bring LOS to D or better |
| E | E | Yes | Yes, bring LOS to D or better |
| E | F | Yes | Yes, bring LOS to D or better |
| F | F | Yes | Yes, bring LOS to D or better |

DRAFT

## 2.8 PROJECT FAIR SHARE CALCULATION METHODOLOGY

Improvements found to be included in the County TUMF and/or City DIF programs will be identified as such. For improvements that do not appear to be in either of the pre-existing fee programs, a fair share contribution based on the Project's proportional share may be imposed in order to address the Project's share of deficiencies in lieu of construction. It should be noted that fair share calculations are for informational purposes only and the City Traffic Engineer will determine the appropriate improvements to be implemented by a project (to be identified in the conditions of approval). The Project's fair share cost of improvements would be determined based on the following equation, which is the ratio of Project traffic to new traffic, where new traffic is total future traffic less existing baseline traffic

Project Fair Share % = Project AM/PM Traffic / (2050 With Project AM/PM Total Traffic – Existing AM/PM Traffic)

# 3 AREA CONDITIONS

This section provides a summary of the existing circulation network, the 2050 Ontario Plan Circulation Network, and a review of existing peak hour intersection operations, traffic signal warrant, and off-ramp queuing analyses.

## 3.1 EXISTING CIRCULATION NETWORK

Pursuant to the agreement with City of Ontario staff (Appendix 1.1), the study area includes a total of 45 existing and future intersections as shown previously in Exhibit 1-3. Exhibit 3-1 illustrates the study area intersections located near the proposed Project and identifies the number of through traffic lanes for existing roadways and intersection traffic controls.

## 3.2 CITY OF ONTARIO GENERAL PLAN CIRCULATION ELEMENT

The 2050 Ontario Plan circulation element is shown in Exhibit 3-2.

The study area roadways that are classified as 8-lane Principal Arterials are identified as having four lanes of travel in each direction. The following study area roadways within the City of Ontario are classified as 8-lane Principal Arterials:

- Euclid Avenue
- Edison Avenue

The study area roadways that are classified as 6-lane Principal Arterials are identified as having three lanes of travel in each direction and a 14-foot curbed or painted median. The following study area roadways within the City of Ontario are classified as 6-lane Other Principal Arterials:

- Grove Avenue, north of Riverside Drive
- Vineyard Avenue, south of Riverside Drive
- Archibald Avenue
- Hamner Avenue

The study area roadways that are classified as 4-lane Principal Arterials are identified as having two lanes of travel in each direction. The following study area roadways within the City of Ontario are classified as 4-lane Other Principal Arterials:

- Grove Avenue, south of Riverside Drive
- Vineyard Avenue, north of Riverside Drive
- Haven Avenue, south of Riverside Drive

The study area roadway that is classified as a 6-lane Minor Arterial is identified as having three lanes of travel in each direction. The following study area roadway within the City of Ontario is classified as a 6-lane Minor Arterial:

- Riverside Drive

City of Ontario

DRAFT

## Exhibit 3-1 : Existing Number of Through Lanes and Intersection Controls

DRAFT

## EXHIBIT 3-2: CITY OF ONTARIO 2050 GENERAL PLAN CIRCULATION ELEMENT

The study area roadway that is classified as a 4-lane Minor Arterial is identified as having two lanes of travel in each direction. The following study area roadway within the City of Ontario is classified as a 4-lane Minor Arterial:

- Campus Avenue

The study area roadways that are classified as Collector Streets are identified as having two to four lanes of travel in each direction. The following study area roadways within the City of Ontario are classified as Collector Streets:

- Walnut Avenue
- Chino Avenue
- Schaefer Avenue
- Eucalyptus Avenue
- Merrill Avenue
- Bon View Avenue
- Walker Avenue
- Turner Avenue

## 3.3 Bicycle & Pedestrian Facilities

Exhibit 3-3 illustrates the 2050 Ontario Plan bicycle facilities. Existing pedestrian facilities within the study area are shown in Exhibit 3-4. As shown in Exhibit 3-4, there are limited pedestrian facilities in the vicinity of the Project site. Field observations and traffic counts conducted in 2024 indicate light pedestrian and bicycle activity within the study area.

## 3.4 Transit Service

Exhibit 3-5 shows the 2050 Ontario Plan transit routes. The study area within the City of Ontario is currently served by Omnitrans, a public transit agency serving various jurisdictions within San Bernardino County. Exhibit 3-6 shows the existing transit facilities, which indicates that Omnitrans Route 83 could potentially serve the Project site. Transit service is reviewed and updated by Omnitrans periodically to address ridership, budget, and community demand needs. Changes in land use can affect these periodic adjustments which may lead to either enhanced or reduced service where appropriate. As such, it is recommended that the Applicant work in conjunction with Omnitrans to potentially provide bus service to the site.

## 3.5 EXISTING (2024) TRAFFIC COUNTS

The intersection LOS analysis is based on the traffic volumes observed during the peak hour conditions using traffic count data collected in 2024. The following peak hours were selected for analysis:

- Weekday AM Peak Hour (peak hour between 7:00 AM and 9:00 AM)
- Weekday PM Peak Hour (peak hour between 4:00 PM and 6:00 PM)

The 2024 weekday AM and weekday PM peak hour count data is representative of typical weekday peak hour traffic conditions in the study area. There were no observations made in the field that would indicate atypical traffic conditions on the count dates, such as construction activity or detour routes and near-by schools were in session and operating on normal schedules. As such, no additional adjustments were made to the traffic counts to establish the baseline condition. The raw manual peak hour turning movement traffic count data sheets are included in Appendix 3.1.

Existing weekday ADT volumes are shown in Exhibit 3-7. Where actual 24-hour tube count data was not available, Existing ADT volumes were based upon factored intersection peak hour counts collected by Urban Crossroads, Inc. using the following formula for each intersection leg:

Weekday PM Peak Hour (Approach Volume + Exit Volume) x 13.59 = Leg Volume

A comparison of the PM peak hour and daily traffic volumes of various roadway segments within the study area indicated that the peak-to-daily relationship is approximately 7.36 percent. As such, the above equation utilizing a factor of 13.59 estimates the ADT volumes on the study area roadway segments assuming a peak-to-daily relationship of 7.36 percent (i.e., 1/0.0736 = 13.59) and was assumed to sufficiently estimate ADT volumes for planning-level analyses. Existing weekday and weekend peak hour intersection volumes, in actual vehicles, are also shown in Exhibit 3-7.

## 3.6 INTERSECTION OPERATIONS ANALYSIS

Existing peak hour traffic operations have been evaluated for the study area intersections based on the analysis methodologies presented in Section 2.2 *Intersection Capacity Analysis.* The intersection operations analysis results are summarized in Table 3-1, which indicates that the following study area intersection is currently operating at an unacceptable LOS during one of the peak hours:

- Euclid Avenue (SR-83) & Pine Avenue (#11) – LOS E PM peak hour only

The intersection operations analysis worksheets are included in Appendix 3.2 of this TA.

* **BOLD** = Level of Service (LOS) does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

1 Per the Highway Capacity Manual (7th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown. HCM delay reported in seconds.

2 TS = Traffic Signal; AWS = All-way Stop; CSS = Cross-Street Stop

## 3.7 Traffic Signal Warrants Analysis

Traffic signal warrants for Existing traffic conditions are based on existing peak hour intersection turning volumes. The following intersections currently meet a traffic signal warrant under Existing (2024) traffic conditions:

- Bon View Avenue & Riverside Drive (#15)
- Bon View Avenue & Edison Avenue (#17)
- Grove Avenue & Chino Avenue (#24)
- Grove Avenue & Schaefer Avenue (#25)
- Grove Avenue & Edison Avenue (#26)
- Grove Avenue & Eucalyptus Avenue (#27)
- Walker Avenue & Riverside Drive (#29)
- Walker Avenue & Edison Avenue (#31)

Existing conditions traffic signal warrant analysis worksheets are provided in Appendix 3.3.

## 3.8 Roadway Segment Analysis

The roadway capacity utilized for the Edison Avenue, between Euclid Avenue and Campus Avenue, roadway segment analysis is obtained from the County's General Plan. The roadway segment capacity is an approximate figure only and is used at the General Plan level to assist in determining the roadway functional classification (number of through lanes) needed to meet traffic demand. Table 3-2 provides a summary of the Existing (2024) roadway segment capacity analysis. As shown in Table 3-2, the roadway segment is currently operating at an acceptable LOS based on the daily roadway capacity thresholds and minimum LOS criteria.

DRAFT

### TABLE 3-2: EXISTING (2024) ROADWAY SEGMENT ANALYSIS

| # | Roadway | Segment Limits | Jurisdiction | Roadway Section | LOS Capacity[1] | Existing (2024) | | |
|---|---|---|---|---|---|---|---|---|
| | | | | | | 2024 | V/C[2] | LOS[3] |
| 1 | Edison Av. | Euclid Av. to Campus Av. | Ontario | 2U | 16,000 | 11,609 | 0.726 | C |

[1] These maximum roadway capacities are based on the applicable agency's thresholds.

[2] V/C = Volume to Capacity Ratio

[3] LOS = Level of Service

## 3.9 OFF-RAMP QUEUING ANALYSIS

A queuing analysis was performed for the off-ramps at the SR-60 Freeway at the Euclid Avenue, Grove Avenue, and Archibald interchanges, at the SR-71 Freeway at the Euclid Avenue interchange, and at the I-15 Freeway at the Cantu Galleano Road interchange, to assess vehicle queues for the off ramps that may potentially result in deficient peak hour operations at the ramp-to-arterial intersections and may potentially "spill back" onto the freeway mainline. Queuing analysis findings are presented in Table 3-3. It is important to note that off-ramp lengths are consistent with the measured distance between the intersection and the freeway mainline. As shown in Table 3-3, there are no movements that are currently experiencing queuing issues during the weekday AM or weekday PM peak 95th percentile traffic flows. Worksheets for Existing (2024) traffic conditions off-ramp queuing analysis are provided in Appendix 3.4.

DRAFT

[1] Stacking Distance is acceptable if the required stacking distance is less than or equal to the stacking distance provided. An additional 15 feet of stacking which is assumed to be provided in the transition for turn pockets is reflected in the stacking distance shown on this table, where applicable.

[2] 95th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

DRAFT

# 4 PROJECTED FUTURE TRAFFIC

This section presents the traffic volumes estimated to be generated by the Project, as well as the Project's trip assignment onto the study area roadway network. A preliminary land use plan for the Project is shown previously in Exhibit 1-2. The proposed Project is to consist of the following:

- 802 Single Family Detached dwelling units
- 3,491 Multifamily (Low-Rise) Residential units
- 115,809 square feet of Commercial Retail use
- 135,111 square feet of General Office use
- 55.98 acres of Parkland use

## 4.1 PROJECT TRIP GENERATION

Trip generation represents the amount of traffic which is both attracted to and produced by a development. Determining traffic generation for a specific project is therefore based upon forecasting the amount of traffic that is expected to be both attracted to and produced by the specific land uses being proposed for a given development. The Project trip generation is based upon information collected by the ITE as provided in their latest Trip Generation Manual (11th Edition, 2021) for the proposed uses. Table 4-1 summarizes the ITE trip generation rates.

Internal capture is a percentage reduction that can be applied to the trip generation estimates for individual land uses to account for trips internal to the site (trips that travel between uses without leaving the site). In other words, trips may be made between the retail, office, and residential uses proposed on-site which can be made either by walking or using internal roadways without using external streets. The internal capture is based on the National Cooperative Highway Research Program's (NCHRP Report 684) internal capture trip capture estimation tool. The internal capture worksheets are attached to the Scoping Agreement (see Appendix 1.1).

Pass-by trip reductions have been applied to the proposed Project uses consistent with the allowable values per the ITE Trip Generation Manual (11th Edition, 2021). Pass-by trips represent traffic that is already on the roadway today that would make an intermediate stop at the site before continuing on to their ultimate destination.

As shown in Table 4-2, the Project is anticipated to generate a net total of 8,270 two-way trips per day with 513 AM peak hour trips and 687 PM peak hour trips at Phase 1, and a net total of 44,716 two-way trips per day with 3,462 AM peak hour trips and 3,507 PM peak hour trips at Project Buildout.

DRAFT

## TABLE 4-1: TRIP GENERATION RATES

| Land Use[1] | Units[2] | ITE LU Code | AM Peak Hour | | | PM Peak Hour | | | Daily |
|---|---|---|---|---|---|---|---|---|---|
| | | | In | Out | Total | In | Out | Total | |
| Single Family Detached Residential | DU | 210 | 0.18 | 0.52 | 0.70 | 0.59 | 0.35 | 0.94 | 9.43 |

DRAFT

## 4.2 Project Trip Distribution

The Project trip distribution represents the directional orientation of traffic to and from the Project site. Trip distribution is the process of identifying the probable destinations, directions or traffic routes that will be utilized by Project traffic. The potential interaction between the planned land uses and surrounding regional access routes are considered, to identify the route where the Project traffic would distribute. The Project trip distributions are shown for near-term and long-range traffic conditions (see Exhibits 4-1 and 4-2). Long-range trip distribution patterns include future planned roadways as contemplated by TOP.

## 4.3 Modal Split

The potential for Project trips to be reduced by the use of public transit, walking, or bicycling have not been included as part of the Project's estimated trip generation. Essentially, the Project's traffic projections are "conservative" in that these alternative travel modes would reduce the forecasted traffic volumes.

## 4.4 Project Trip Assignment

The assignment of traffic from the Project area to the adjoining roadway system is based upon the Project trip generation, trip distribution, and the arterial highway and local street system improvements that would be in place by the time of initial occupancy of the Project. Based on the identified Project traffic generation and trip distribution patterns, Project peak hour intersection turning movement volumes for Phase 1, Project Buildout (Near-Term), and Project Buildout (2050), are shown in Exhibits 4-3, 4-4, and 4-5, respectively.

## 4.5 Background Traffic

Future year traffic forecasts have been based upon background (ambient) growth based on an interpolation between Existing conditions and Horizon Year (2050) traffic conditions. The ambient growth is intended to approximate regional traffic growth and growth generated by cumulative development projects. Ambient growth has been added to daily and peak hour traffic volumes on surrounding roadways. The traffic generated by the proposed Project was then manually added to the base volume to determine With Project forecasts.

## 4.6 Cumulative Development Traffic

A cumulative project list was developed for the purposes of this analysis through consultation with planning and engineering staff from the City of Ontario and the neighboring jurisdictions of the City of Chino and City of Eastvale. The cumulative projects listed are those that would generate traffic and would contribute traffic to study area intersections. Exhibit 4-6 illustrates the cumulative development location map. A summary of cumulative development projects and their proposed land uses are shown in Table 4-3. Cumulative projects have been included for the long-range forecasts developed from SBTAM based on a comparison of a project's location within a Transportation Analysis Zone (TAZ) and the current socio-economic data (SED) within the TAZ. The SED data was reviewed to ensure that the cumulative projects are accounted for within the traffic model.

## 4.7 HORIZON YEAR (2050) VOLUME DEVELOPMENT

Traffic projections for Horizon Year (2050) without Project conditions were derived from the SBTAM using accepted procedures for model forecast refinement and smoothing for study area intersections located within the County of San Bernardino and are based on the City on Ontario TOP 2050 currently approved General Plan forecasts. The traffic forecasts reflect the area-wide growth anticipated between Existing (2024) conditions and Horizon Year (2050) traffic conditions.

In most instances, the traffic model zone structure is not designed to provide accurate turning movements along arterial roadways unless refinement and reasonableness checking is performed. Therefore, the Horizon Year (2050) peak hour forecasts were refined using the model derived long range forecasts, base (validation) year model forecasts, along with existing peak hour traffic count data collected at each analysis location in 2024. The SBTAM has a base (validation) year of 2019 and a horizon (future forecast) year of 2050. The difference in model volumes (2050-2019) defines the growth in traffic over the 31-year period.

The refined future peak hour approach and departure volumes obtained from the model output data are then entered into a spreadsheet program consistent with the National Cooperative Highway Research Program (NCHRP Report 765), along with initial estimates of turning movement proportions. A linear programming algorithm is used to calculate individual turning movements which match the known directional roadway segment forecast volumes computed in the previous step. This program computes a likely set of intersection turning movements from intersection approach counts and the initial turning proportions from each approach leg.

Typically, the model growth is prorated and is subsequently added to the existing (base validation) traffic volumes to represent Horizon Year traffic conditions. In an effort to conduct a conservative analysis, reductions to traffic forecasts from either Existing or Opening Year Cumulative traffic conditions were not assumed as part of this analysis. As such, in conjunction with the addition of cumulative projects that are not consistent with the General Plan, additional growth has also been applied on a movement-by-movement basis, where applicable, to estimate reasonable Horizon Year (2050) forecasts. Horizon Year (2050) turning volumes were compared to Opening Year Cumulative (2034) volumes in order to ensure a minimum growth as a part of the refinement process.

The future Horizon Year (2050) Without Project peak hour turning movements were then reviewed by Urban Crossroads, Inc. for reasonableness, and in some cases, were adjusted to achieve flow conservation, reasonable growth, and reasonable diversion between parallel routes. Flow conservation checks ensure that traffic flow between two closely spaced intersections, such as two adjacent driveway locations, is verified in order to make certain that vehicles leaving one intersection are entering the adjacent intersection and that there is no unexplained loss of vehicles. The result of this traffic forecasting procedure is a series of traffic volumes which are suitable for traffic operations analysis. Post-processing worksheets for Horizon Year (2050) without Project traffic conditions are provided in Appendix 4.1.

DRAFT

# 5 E+P TRAFFIC CONDITIONS

This section discusses the traffic forecasts for E+P conditions and the resulting intersection operations, traffic signal warrant, and off-ramp queuing analyses.

## 5.1 ROADWAY IMPROVEMENTS

The lane configurations and traffic controls assumed to be in place for E+P conditions are consistent with those shown previously in Exhibit 3-1, with the exception of the following:

- Project driveways and those facilities assumed to be constructed by the Project to provide site access are also assumed to be in place for E+P conditions only (e.g., intersection and roadway improvements at the Project's frontage and driveways).

## 5.2 E+P TRAFFIC VOLUME FORECASTS

This scenario includes Existing traffic volumes plus the addition of Project traffic. The weekday AM and PM peak hour volumes which can be expected for the E+P (Phase 1) and E+P (Buildout) scenarios conditions are shown in Exhibits 5-1 and 5-2, respectively.

## 5.3 INTERSECTION OPERATIONS ANALYSIS

E+P peak hour traffic operations have been evaluated for the study area intersections based on the analysis methodologies presented in Section 2 *Methodologies.* The intersection analysis results are summarized in Table 5-1 for E+P traffic conditions, which indicates that no study area intersections are anticipated to operate at an unacceptable LOS during the peak hours under E+P (Phase 1) traffic conditions, other than the intersection previously identified under Existing (2024) traffic conditions.

The following study area intersections are anticipated to operate at an unacceptable LOS during the peak hours under E+P (Buildout) traffic conditions, in addition to the intersection previously identified under Existing (2024) traffic conditions:

- Bon View Avenue & Riverside Drive (#15) – LOS F AM peak hour only
- Grove Avenue & Chino Avenue (#24) – LOS F AM and PM peak hours
- Grove Avenue & Schaefer Avenue (#25) – LOS F AM and PM peak hours

The intersection operations analysis worksheets for E+P (Phase 1) and E+P (Buildout) traffic conditions are included in Appendices 5.1 and 5.2, respectively.

* **BOLD** = Level of Service (LOS) does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

1 Per the Highway Capacity Manual (7th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown. HCM delay reported in seconds.

2 TS = Traffic Signal; AWS = All-way Stop; CSS = Cross-street Stop; <u>Underline</u> = Improvement

DRAFT

## 5.4 TRAFFIC SIGNAL WARRANTS ANALYSIS

The traffic signal warrant analysis for E+P traffic conditions is based on the peak hour volumes or planning level ADT volume-based traffic signal warrants for each applicable phase. There are no study area intersections anticipated to meet traffic signal warrants for E+P (Phase 1) traffic conditions, in addition to the intersections previously identified under Existing (2024) traffic conditions.

The following additional study area intersections are anticipated to meet a traffic signal warrant for E+P (Buildout) traffic conditions, in addition to the intersections previously identified under Existing (2024) traffic conditions:

- Campus Avenue & Edison Avenue (#14)
- Cucamonga Avenue & Edison Avenue (#19)
- Parco Avenue & Edison Avenue (#28)

Worksheets for E+P (Phase 1) and E+P (Buildout) traffic signal warrants are provided in Appendices 5.3 and 5.4, respectively.

## 5.5 ROADWAY SEGMENT ANALYSIS

Table 5-2 provides a summary of the E+P roadway segment capacity analysis. As shown in Table 5-2, the roadway segment is anticipated to continue to operate at an acceptable LOS under E+P (Phase 1) traffic conditions, however it is anticipated to operate at an unacceptable LOS under E+P (Buildout) traffic conditions, based on the daily roadway capacity thresholds and minimum LOS criteria.

## 5.6 OFF-RAMP QUEUING ANALYSIS

Queuing analysis findings for E+P are presented in Table 5-3. As shown in Table 5-3, there are no movements that are anticipated to experience queuing issues during the weekday AM or weekday PM peak 95$^{th}$ percentile traffic flows, consistent with Existing (2024) traffic conditions. Worksheets for E+P traffic conditions queuing analysis are provided in Appendix 5.3.

DRAFT

## TABLE 5-2: E+P ROADWAY SEGMENT ANALYSIS

| # | Roadway | Segment Limits | Jurisdiction | Roadway Section | LOS Capacity[1] | Existing (2024) | | | E+P (Phase 1) | | | E + P (Buildout) | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | | | | | | 2024 | V/C[2] | LOS[3] | E+P | V/C[2] | LOS[3] | E+P | V/C[2] | LOS[3] |
| 1 | Edison Av. | Euclid Av. to Campus Av. | Ontario | 2U | 16,000 | 11,609 | 0.726 | C | 13,595 | 0.850 | D | **22,343** | **1.396** | **F** |

**BOLD** = LOS does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

[1] These maximum roadway capacities are based on the applicable agency's thresholds.

[2] V/C = Volume to Capacity Ratio

[3] LOS = Level of Service

[1] Stacking Distance is acceptable if the required stacking distance is less than or equal to the stacking distance provided. An additional 15 feet of stacking which is assumed to be provided in the transition for turn pockets is reflected in the stacking distance shown on this table, where applicable.

[2] 95th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

[3] Although 95th percentile queue is anticipated to exceed the available storage for the turn lane, the adjacent through lane has sufficient storage to accommodate any spillover without spilling back and affecting the freeway mainline.

DRAFT

## 5.7 Project Deficiencies and Recommended Improvements

Improvements needed to achieve acceptable LOS have been identified at intersections or off-ramps that are anticipated to operate at a deficient LOS under E+P traffic conditions.

### 5.7.1 Improvements To Address Deficiencies At Intersections

Improvement strategies have been recommended at intersections that have been identified as deficient under E+P traffic conditions in an effort to achieve an acceptable LOS. The effectiveness of the recommended improvement strategies to address E+P traffic deficiencies are presented in Table 5-4. The intersection operations analysis worksheets for E+P conditions, with improvements, are included in Appendix 5.4.

### 5.7.2 Improvements To Address Deficiencies along Roadway Segments

As shown in Table 5-2, Edison Avenue, between Euclid Avenue and Campus Avenue, is anticipated to operate at an unacceptable LOS under E+P (Buildout) traffic conditions. While the intersection operations analysis indicated that additional through lanes are not needed in order to process peak hour volumes at the intersections, roadway segment improvements have been provided in an effort to achieve an acceptable LOS. The roadway segment improvements are summarized in Table 5-5.

### 5.7.3 Improvements To Address Deficiencies On Off-Ramp Queues

As shown in Table 5-3, there are no movements that are anticipated to experience queuing issues during the weekday AM or weekday PM peak 95$^{th}$ percentile traffic flows for E+P traffic conditions. As such, no improvements have been identified.

DRAFT

## TABLE 5-4: E+P INTERSECTION ANALYSIS WITH IMPROVEMENTS

1 When a right turn is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for right turning vehicles to travel outside the through lanes.

L = Left; T = Through; R = Right; **1** = Improvement

2 Per the Highway Capacity Manual (7th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

3 TS = Traffic Signal; **TS** = Improvement

# 6 OPENING YEAR CUMULATIVE (2034) TRAFFIC CONDITIONS

This section discusses the traffic forecasts for Opening Year Cumulative (2034) conditions and the resulting intersection operations, traffic signal warrant, and off-ramp queuing analyses.

## 6.1 ROADWAY IMPROVEMENTS

The lane configurations and traffic controls assumed to be in place for Opening Year Cumulative (2034) conditions are consistent with those shown previously in Exhibit 3-1, with the exception of the following:

- Project driveways and those facilities assumed to be constructed by the Project to provide site access are also assumed to be in place for Opening Year Cumulative (2034) conditions (e.g., intersection and roadway improvements at the Project's frontage and driveways).
- Driveways and those facilities assumed to be constructed by cumulative developments to provide site access are also assumed to be in place for Opening Year Cumulative (2034) conditions (e.g., intersection and roadway improvements along the cumulative development's frontages).

## 6.2 OPENING YEAR CUMULATIVE (2034) TRAFFIC VOLUME FORECASTS

The Opening Year Cumulative (2034) scenario includes Existing traffic volumes plus an ambient growth factor based on an interpolation between Existing conditions and Horizon Year (2050) traffic conditions. The cumulative projects are included in the Horizon Year (2050) traffic conditions. The Opening Year Cumulative (2034) With Project scenario includes Existing traffic volumes, plus the ambient growth factor, and the Project (Buildout) traffic. The weekday peak hour intersection turning movement volumes for Opening Year Cumulative (2034), Without and With Project, traffic conditions are shown in Exhibits 6-1 and 6-2, respectively.

DRAFT

## 6.3 INTERSECTION OPERATIONS ANALYSIS

Opening Year Cumulative (2034) peak hour traffic operations have been evaluated for the study area intersections based on the analysis methodologies presented in Section 2 *Methodologies.* The intersection analysis results are summarized in Table 6-1 , which indicates that the following study area intersections are anticipated to operate at an unacceptable LOS during the peak hours under Opening Year Cumulative (2034) Without Project traffic conditions:

- Euclid Avenue (SR-83) & Kimball Avenue (#10) – LOS E PM peak hour only
- Euclid Avenue (SR-83) & Pine Avenue (#11) – LOS F PM peak hour only
- Bon View Avenue & Riverside Drive (#15) – LOS F AM peak hour only
- Bon View Avenue & Edison Avenue (#17) – LOS F AM and PM peak hours
- Grove Avenue & SR-60 Eastbound Ramps (#21) – LOS E AM and PM peak hours
- Grove Avenue & Riverside Drive (#23) – LOS F PM peak hour only
- Grove Avenue & Chino Avenue (#24) – LOS F AM and PM peak hours
- Grove Avenue & Edison Avenue (#26) – LOS F AM and PM peak hours
- Walker Avenue & Riverside Drive (#29) – LOS F AM and PM peak hours
- Walker Avenue & Edison Avenue (#31) – LOS F AM and PM peak hours
- Hamner Avenue & Ontario Ranch Road (#43) – LOS E PM peak hour only

The following additional study area intersections are anticipated to operate at an unacceptable LOS during the peak hours with the addition of Project traffic under Opening Year Cumulative (2034) With Project traffic conditions:

- Euclid Avenue (SR-83) & Edison Avenue (#7) – LOS F AM and PM peak hours
- Campus Avenue & Edison Avenue (#14) – LOS F AM and PM peak hours
- Grove Avenue & Riverside Drive (#23) – LOS F AM peak hour only
- Grove Avenue & Schaefer Avenue (#25) – LOS F AM and PM peak hours
- Grove Avenue & Eucalyptus Avenue (#27) – LOS F PM peak hour only
- Parco Avenue & Edison Avenue (#28) – LOS F AM and PM peak hours

Grove Avenue and Riverside Drive (#23) is anticipated to operate at an unacceptable LOS (LOS F) during the AM peak hour under Opening Year Cumulative (2034) traffic conditions, in addition to the PM peak hour deficiency identified under Without Project traffic conditions. The following study area intersections are anticipated to degrade from LOS E to LOS F during the peak hours with the addition of Project traffic:

- Grove Avenue & SR-60 Eastbound Ramps (#21) – AM peak hour only
- Hamner Avenue & Ontario Ranch Road (#43) – PM peak hour

With the addition of the Project site access improvements, Bon View Avenue and Edison Avenue (#17) is anticipated to operate at an acceptable LOS during the AM peak hour under Opening Year Cumulative (2034) With Project traffic conditions.

The intersection operations analysis worksheets for Opening Year Cumulative (2034) Without Project and With Project traffic conditions are included in Appendices 6.1 and 6.2, respectively.

DRAFT

* **BOLD** = Level of Service (LOS) does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

1 Per the Highway Capacity Manual (7th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown. HCM delay reported in seconds.

2 TS = Traffic Signal; AWS = All-way Stop; CSS = Cross-street Stop; Underline = Improvement

DRAFT

## 6.4 Traffic Signal Warrants Analysis

The traffic signal warrant analysis for Opening Year Cumulative (2034) traffic conditions are based on the peak hour volumes or planning level ADT volume-based traffic signal warrants. There are no additional unsignalized study area intersections anticipated to meet a traffic signal warrant under Opening Year Cumulative (2034) Without Project conditions, in addition to the intersections identified under Existing and E+P traffic conditions (see Appendix 6.3). The following unsignalized study area intersection is anticipated to meet a traffic signal warrant under Opening Year Cumulative (2034) With Project conditions (see Appendix 6.4):

- Walker Avenue & Eucalyptus Avenue (#32)

## 6.5 Roadway Segment Analysis

Table 6-2 provides a summary of the Opening Year Cumulative (2034) roadway segment capacity analysis. As shown in Table 6-2, the roadway segment is anticipated to operate at an unacceptable LOS under Opening Year Cumulative (2034) traffic conditions, based on the daily roadway capacity thresholds and minimum LOS criteria.

### Table 6-2: 2034 Roadway Segment Analysis

| # | Roadway | Segment Limits | Jurisdiction | Roadway Section | LOS Capacity[1] | Without Project | | | With Project | | |
|---|---|---|---|---|---|---|---|---|---|---|---|
| | | | | | | 2034 | V/C[2] | LOS[3] | 2034 | V/C[2] | LOS[3] |
| 1 | Edison Av. | Euclid Av. to Campus Av. | Ontario | 2U | 16,000 | **20,876** | **1.305** | **F** | **31,610** | **1.976** | **F** |

**BOLD** = LOS does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).
[1] These maximum roadway capacities are based on the applicable agency's thresholds.
[2] V/C = Volume to Capacity Ratio
[3] LOS = Level of Service

## 6.6 Off-Ramp Queuing Analysis

Queuing analysis findings for Opening Year Cumulative (2034) traffic conditions are presented in Table 6-3. As shown in Table 6-3, there are no movements that are anticipated to experience queuing issues during the weekday AM or weekday PM peak 95$^{th}$ percentile traffic flows. Worksheets for Opening Year Cumulative (2034) Without Project and With Project traffic conditions queuing analysis are provided in Appendices 6.4 and 6.5, respectively.

DRAFT

[1] Stacking Distance is acceptable if the required stacking distance is less than or equal to the stacking distance provided. An additional 15 feet of stacking which is assumed to be provided in the transition for turn pockets is reflected in the stacking distance shown on this table, where applicable.

[2] 95th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

[3] Although 95th percentile queue is anticipated to exceed the available storage for the turn lane, the adjacent through lane has sufficient storage to accommodate any spillover without spilling back and affecting the Freeway mainline.

DRAFT

## 6.7 Project Deficiencies and Recommended Improvements

Improvements needed to achieve acceptable LOS have been identified at intersections or off-ramps that are anticipated to operate at a deficient LOS under Opening Year Cumulative (2034) traffic conditions.

### 6.7.1 Improvements To Address Deficiencies At Intersections

Improvement strategies have been recommended at intersections that have been identified as deficient under Opening Year Cumulative (2034) With Project traffic conditions in an effort to achieve an acceptable LOS. The effectiveness of the recommended improvement strategies to address Opening Year Cumulative (2034) With Project traffic deficiencies is presented in Table 6-4. Worksheets for Opening Year Cumulative (2034) With Project traffic conditions, with improvements, HCM calculation worksheets are provided in Appendix 6.7.

### 6.7.2 Improvements To Address Deficiencies along Roadway Segments

As shown in Table 6-2, Edison Avenue, between Euclid Avenue and Campus Avenue, is anticipated to operate at an unacceptable LOS under Opening Year Cumulative (2034) traffic conditions. The roadway segment improvements are summarized in Table 6-5. While the roadway segment is anticipated to continue to operate at an unacceptable LOS with the roadway segment improvements, additional roadway widening has not been recommended as the operations analysis indicates that additional through lanes are not needed in order to process peak hour volumes at the intersections.

### 6.7.3 Improvements To Address Deficiencies On Off-Ramp Queues

As shown previously in Table 6-3, there are no movements that are anticipated to experience queuing issues during the weekday AM or weekday PM peak 95$^{th}$ percentile traffic flows for Opening Year Cumulative (2034) traffic conditions. As such, no improvements have been identified.

DRAFT

[1] These maximum roadway capacities are based on the applicable agency's thresholds.

[2] V/C = Volume to Capacity Ratio

[3] LOS = Level of Service

DRAFT

# 7 HORIZON YEAR (2050) TRAFFIC CONDITIONS

This section discusses the methods used to develop Horizon Year (2050) Without and With Project traffic forecasts, and the resulting intersection operations and traffic signal warrant analyses.

## 7.1 ROADWAY IMPROVEMENTS

The lane configurations and traffic controls assumed to be in place for Horizon Year (2050) conditions are consistent with those shown previously in Exhibit 3-1, with the exception of the following:

- Project driveways and those facilities assumed to be constructed by the Project to provide site access are also assumed to be in place for Horizon Year conditions only (e.g., intersection and roadway improvements along the Project's frontage and driveways).
- If applicable, driveways and those facilities assumed to be constructed by cumulative developments to provide site access are also assumed to be in place for Horizon Year conditions only.

The Specific Plan proposes to eliminate the future extensions of Cucamonga Avenue and Parco/Comet Avenue south of Edison Avenue. Since these roadways are not classified as collector or higher in the City of Ontario General Plan, they were not included in the Horizon Year (2050) Without or With Project traffic volume forecasts. However, their removal, as reflected in this TA, will likely increase traffic demand on nearby roadways such as Bon View Avenue, Grove Avenue, and Walker Avenue, as vehicles adjust their travel patterns to utilize existing higher-classified roadways.

## 7.2 WITHOUT PROJECT TRAFFIC VOLUME FORECASTS

This scenario includes the refined post-process volumes obtained from the SBTAM (see Section 4.7 *Horizon Year (2050) Volume Development* for a detailed discussion on the post-processing methodology). The weekday AM and PM peak hour volumes which can be expected for Horizon Year (2050) Without Project traffic conditions are shown in Exhibit 7-1.

## 7.3 WITH PROJECT TRAFFIC VOLUME FORECASTS

This scenario includes the refined post-process volumes obtained from the SBTAM. The weekday AM and PM peak hour volumes which can be expected for Horizon Year (2050) With Project traffic conditions are shown in Exhibit 7-2.

## 7.4 INTERSECTION OPERATIONS ANALYSIS

LOS calculations were conducted for the study intersections to evaluate their operations under Horizon Year (2050) Without Project conditions with roadway and intersection geometrics consistent with Section 7.1 *Roadway Improvements*. As shown in Table 7-1, the following study area intersections are anticipated to operate at an unacceptable LOS during the peak hours Without Project:

- Euclid Avenue (SR-83) & Riverside Drive (#4) – LOS F AM and PM peak hours
- Euclid Avenue (SR-83) & Chino Avenue (#5) – LOS F AM and PM peak hours
- Euclid Avenue (SR-83) & Schaefer Avenue (#6) – LOS F AM and PM peak hours
- Euclid Avenue (SR-83) & Edison Avenue (#7) – LOS F AM and PM peak hours
- Euclid Avenue (SR-83) & Eucalyptus Avenue (#8) – LOS F PM peak hour only
- Euclid Avenue (SR-83) & Merrill Avenue (#9) – LOS F AM and PM peak hours
- Euclid Avenue (SR-83) & Kimball Avenue (#10) – LOS F AM and PM peak hours
- Euclid Avenue (SR-83) & Pine Avenue (#11) – LOS F AM and PM peak hours
- Campus Avenue & Edison Avenue (#14) – LOS F AM and PM peak hours
- Bon View Avenue & Riverside Drive (#15) – LOS F AM and PM peak hours
- Bon View Avenue & Eucalyptus Avenue (#18) – LOS F PM peak hour only
- Grove Avenue & SR-60 Eastbound Ramps (#21) – LOS F AM and PM peak hours
- Grove Avenue & Riverside Drive (#23) – LOS F AM and PM peak hours
- Grove Avenue & Chino Avenue (#24) – LOS F AM and PM peak hours
- Grove Avenue & Schaefer Avenue (#25) – LOS F AM and PM peak hours
- Grove Avenue & Eucalyptus Avenue (#27) – LOS F AM and PM peak hours
- Parco Avenue & Edison Avenue (#28) – LOS F AM and PM peak hours
- Walker Avenue & Riverside Drive (#29) – LOS F AM and PM peak hours
- Walker Avenue & Edison Avenue (#31) – LOS F AM peak hour, LOS E PM peak hour
- Walker Avenue & Eucalyptus Avenue (#32) – LOS F PM peak hour only
- Archibald Avenue & Chino Avenue (#36) – LOS F PM peak hour only
- Archibald Avenue & Edison Avenue/Ontario Ranch Road (#38) – LOS F AM and PM peak hours
- Archibald Avenue & Limonite Avenue (#40) – LOS F AM and PM peak hours
- Haven Avenue & Ontario Ranch Road (#42) – LOS F PM peak hour only
- Hamner Avenue & Ontario Ranch Road (#43) – LOS F AM and PM peak hours

The following study area intersections are anticipated to operate at an unacceptable LOS during the peak hours with the addition of Project traffic under Horizon Year (2050) With Project traffic conditions, in addition to the intersections identified above:

- Bon View Avenue & Schaefer Avenue (#16) – LOS F PM peak hour only
- Bon View Avenue & Edison Avenue (#17) – LOS F AM and PM peak hours
- Grove Avenue & SR-60 Westbound Ramps (#20) – LOS E PM peak hour only
- Grove Avenue & Edison Avenue (#26) – LOS F AM and PM peak hours
- Walker Avenue & Schaefer Avenue (#30) – LOS F AM peak hour only
- Turner Avenue & Ontario Ranch Road (#41) – LOS F PM peak hour only

* **BOLD** = Level of Service (LOS) does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

1 Per the Highway Capacity Manual (7th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown. HCM delay reported in seconds.

2 TS = Traffic Signal; AWS = All-way Stop; CSS = Cross-street Stop; Underline = Improvement

DRAFT

As shown in Table 7-1, the following study area intersections are anticipated to operate at an unacceptable LOS (LOS F) during the AM peak hour under Horizon Year (2050) With Project traffic conditions, in addition to the PM peak hour deficiency identified under Without Project traffic conditions:

- Euclid Avenue (SR-83) & Eucalyptus Avenue (#8)
- Bon View Avenue & Eucalyptus Avenue (#18)
- Walker Avenue & Eucalyptus Avenue (#32)
- Haven Avenue & Ontario Ranch Road (#42)

The intersection operations analysis worksheets for Horizon Year (2050) Without Project and With Project traffic conditions are included in Appendices 7.1 and 7.2, respectively.

## 7.5 TRAFFIC SIGNAL WARRANTS ANALYSIS

The traffic signal warrant analysis for Horizon Year (2050) Without Project traffic conditions are based on the peak hour volumes or planning level ADT volume-based traffic signal warrants. The following unsignalized study area intersections are anticipated to meet a traffic signal warrant under Horizon Year (2050) Without Project conditions (see Appendix 7.3):

- Bon View Avenue & Schaefer Avenue (#16)
- Bon View Avenue & Eucalyptus Avenue (#18)

All unsignalized study area intersections are anticipated to meet a traffic signal warrant under scenarios prior to Horizon Year (2050) With Project traffic conditions. As such, traffic signal warrants have not been evaluated for Horizon Year (2050) With Project traffic conditions.

## 7.6 ROADWAY SEGMENT ANALYSIS

Table 7-2 provides a summary of the Horizon Year (2050) roadway segment capacity analysis. As shown in Table 7-2, the roadway segment is anticipated to operate at an unacceptable LOS under Horizon Year (2050) traffic conditions, based on the daily roadway capacity thresholds and minimum LOS criteria.

### TABLE 7-2: HORIZON YEAR (2050) ROADWAY SEGMENT ANALYSIS

| # | Roadway | Segment Limits | Jurisdiction | Roadway Section | LOS Capacity[1] | Without Project | | | With Project | | |
|---|---|---|---|---|---|---|---|---|---|---|---|
| | | | | | | 2050 | V/C[2] | LOS[3] | 2050 | V/C[2] | LOS[3] |
| 1 | Edison Av. | Euclid Av. to Campus Av. | Ontario | 2U | 16,000 | 53,386 | 3.337 | **F** | 61,880 | 3.868 | **F** |

**BOLD** = LOS does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

[1] These maximum roadway capacities are based on the applicable agency's thresholds.

[2] V/C = Volume to Capacity Ratio

[3] LOS = Level of Service

## 7.7 OFF-RAMP QUEUING ANALYSIS

Queuing analysis findings for Horizon Year (2050) traffic conditions are presented in Table 7-3. As shown in Table 7-3, no movements are anticipated to experience queuing issues during the weekday AM or weekday PM peak 95$^{th}$ percentile traffic flows. Worksheets for Horizon Year (2050) Without Project and With Project traffic conditions queuing analysis are provided in Appendices 7.5 and 7.6, respectively.

DRAFT

[1] Stacking Distance is acceptable if the required stacking distance is less than or equal to the stacking distance provided. An additional 15 feet of stacking which is assumed to be provided in the transition for turn pockets is reflected in the stacking distance shown on this table, where applicable.

[2] 95th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

[3] Although 95th percentile queue is anticipated to exceed the available storage for the turn lane, the adjacent through lane has sufficient storage to accommodate any spillover without spilling back and affecting the freeway mainline.

DRAFT

## 7.8 Project Deficiencies and Recommended Improvements

Improvements needed to achieve acceptable LOS have been identified at intersections or off-ramps that are anticipated to operate at a deficient LOS under Horizon Year (2050) traffic conditions.

### 7.8.1 Improvements To Address Deficiencies At Intersections

Improvement strategies have been recommended at intersections that have been identified as deficient under Horizon Year (2050) traffic conditions in an effort to achieve an acceptable LOS. The effectiveness of the recommended improvement strategies to address Horizon Year (2050) traffic deficiencies are presented in Table 7-4. Worksheets for Horizon Year (2050) Without Project and With Project traffic conditions, with improvements, HCM calculation worksheets are provided in Appendices 7.7 and 7.8, respectively.

### 7.8.2 Improvements To Address Deficiencies along Roadway Segments

As shown in Table 7-2, Edison Avenue, between Euclid Avenue and Campus Avenue, is anticipated to operate at an unacceptable LOS under Horizon Year (2050) traffic conditions. The roadway segment improvements are summarized in Table 7-5. While the roadway segment is anticipated to continue to operate at an unacceptable LOS with the roadway segment improvements, additional roadway widening has not been recommended as the operations analysis indicates that additional through lanes are not needed in order to process peak hour volumes at the intersections.

### 7.8.3 Improvements To Address Deficiencies On Off-Ramp Queues

As shown previously in Table 7-3, there are no movements that are anticipated to experience queuing issues during the weekday AM or weekday PM peak 95$^{th}$ percentile traffic flows for Horizon Year (2050) conditions. As such, no improvements have been identified.

* **BOLD** = Level of Service (LOS) does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

1 When a right turn is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for right turning vehicles to travel outside the through lanes.

L = Left; T = Through; R = Right; **1** = Improvement

2 Per the Highway Capacity Manual (7th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

3 CSS = Cross-Street Stop; AWS = All-Way Stop; TS = Traffic Signal; TS = Improvement

## TABLE 7-5: HORIZON YEAR (2050) ROADWAY SEGMENT ANALYSIS WITH IMPROVEMENTS

| # | Roadway | Segment Limits | Jurisdiction | Roadway Section | LOS Capacity[1] | No Project | | | With Project | | |
|---|---|---|---|---|---|---|---|---|---|---|---|

**BOLD** = LOS does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

[1] These maximum roadway capacities are based on the applicable agency's thresholds.

[2] V/C = Volume to Capacity Ratio

[3] LOS = Level of Service

DRAFT

# 8 LOCAL AND REGIONAL FUNDING MECHANISMS

Transportation improvements within the City of Ontario are funded through a combination of construction of improvements, development impact fee programs or fair share contributions, such as the City of Ontario Development Impact Fee (DIF) program. Identification and timing of needed improvements is generally determined through local jurisdictions based upon a variety of factors.

## 8.1 CITY OF ONTARIO DEVELOPMENT IMPACT FEE PROGRAM

The City of Ontario has created its own local DIF program to impose and collect fees from new residential, commercial, and industrial development for the purpose of funding roadways and intersections necessary to accommodate City growth as identified in the City's General Plan Circulation Element. The City's DIF includes regional improvements to comply with Measure "I." The fee schedule was last updated in January 2023 and is reviewed/adjusted annually based upon changes in the construction cost index (CCI). Under the City's DIF program, the City may grant to developers a credit against specific components of fees when those developers construct certain facilities and landscaped medians identified in the list of improvements funded by the DIF program.

The timing to use the DIF is established through periodic capital improvement programs which are overseen by the City's Public Works Department. Periodic traffic counts, review of traffic accidents, and a review of traffic trends throughout the City are also periodically performed by City staff and consultants. The City uses this data to determine the timing of implementing the improvements listed in its facilities list. The City also uses this data to ensure that the improvements listed on the facilities list are constructed before the LOS falls below the LOS performance standards adopted by the City. In this way, the improvements are constructed before the LOS falls below the City's LOS performance thresholds.

The Project Applicant will be subject to the City's DIF program and will pay the requisite City DIF at the rates then in effect pursuant to the City's ordinance. The Project Applicant's payment of the requisite DIF at the rates then in effect, pursuant to the City DIF Program, would satisfy the Project's proportional improvement requirements at potentially affected DIF-funded facilities. Table 8-1 summarizes the estimated fee obligation for the Project.

DRAFT

### TABLE 8-1: ESTIMATED FEE OBLIGATION

| Fee Reference | $ PER UNIT |
|---|---|
| Detached Dwellings | $58,575/Unit |
| Attached Dwellings | $42,405/Unit |
| Retail/Service Uses | $24.772/Sq. Ft. |
| Office Uses | $19.148/Sq. Ft. |

Source: City of Ontario (Ontario Ranch) Development Impact Fees (DIF), effective July 1, 2026.

| Fee Calculation | | | | |
|---|---|---|---|---|
| **Program** | **Category** | **Unit Cost** | **Units** | **Local Circulation** |
| Regional Streets | Detached Dwellings | $3,302.00 | 802 | $2,648,204 |
| Local Streets | Detached Dwellings | $2,701.00 | 802 | $2,166,202 |
| Regional Streets | Attached Dwellings | $2,204.00 | 3,491 | $7,694,164 |
| Local Streets | Attached Dwellings | $1,804.00 | 3,491 | $6,297,764 |
| Regional Streets | Retail/Service Uses | $6.671 | 115,809 | $772,562 |
| Local Streets | Retail/Service Uses | $5.458 | 115,809 | $632,086 |
| Regional Streets | Office Uses | $3.813 | 135,111 | $515,178 |
| Local Streets | Office Uses | $3.119 | 135,111 | $421,411 |

| | |
|---|---|
| **Total Transportation Impact Fees** | **$21,147,571** |

## 8.2 MEASURE "I" FUNDS

In 2004, the voters of San Bernardino County approved the 30-year extension of Measure "I," a one-half of one percent sales tax on retail transactions, through the year 2050, for transportation projects including, but not limited to, infrastructure improvements, commuter rail, public transit, and other identified improvements. The Measure "I" extension requires that a regional traffic impact fee be created to ensure development is paying its fair share. A regional Nexus study was prepared by San Bernardino County Transportation Authority (SBCTA) and concluded that each jurisdiction should include a regional fee component in their local programs in order to meet the Measure "I" requirement. The regional component assigns specific facilities and cost sharing formulas to each jurisdiction and was updated in November 2011. Revenues collected through these programs are used in tandem with Measure "I" funds to deliver projects identified in the Nexus Study. While Measure "I" is a self-executing sales tax administered by SBCTA, it bears discussion here because the funds raised through Measure "I" have funded in the past and will continue to fund new transportation facilities in San Bernardino County.

## 8.3 FAIR SHARE CONTRIBUTION

Project improvement may include a combination of fee payments to established programs, construction of specific improvements, payment of a fair share contribution toward future improvements or a combination of these approaches. Improvements constructed by development may be eligible for a fee credit or reimbursement through the program where appropriate (to be determined at the City's discretion).

DRAFT

When off-site improvements are identified with a minor share of responsibility assigned to proposed development, the approving jurisdiction may elect to collect a fair share contribution or require the development to construct improvements. Detailed fair share calculations, for each peak hour, has been provided in Table 8-2 for the applicable deficient study area intersections.

These fees are collected with the proceeds solely used as part of a funding mechanism aimed at ensuring that regional highways and arterial expansions keep pace with the projected population increases.

# APPENDIX 1.1:

# APPROVED TRAFFIC STUDY SCOPING AGREEMENT

*This page intentionally left blank*

MEMORANDUM

URBAN | CROSSROADS

**DATE:** October 16, 2024
**TO:** Rafael Torres, City of Ontario
**FROM:** Charlene So, Urban Crossroads
**JOB NO:** 16036-02 TA REV Scope

## CENTER PARK SPECIFIC PLAN TRAFFIC STUDY SCOPING AGREEMENT (REVISED)

Urban Crossroads, Inc. is pleased to submit the following Traffic Study Scoping Agreement (Revised) for Center Park Specific Plan development (referred to as **Project**), to establish a traffic analysis (**TA**) scope of work that would be prepared in support of the proposed Specific Plan (**SP**). The Project is bounded by Campus Avenue to the west, Walker Avenue to the east, and on either side of Edison Avenue in the City of Ontario. The following memo outlines the project-related trip generation, trip distribution patterns, proposed study area and analysis scenarios expected to be included in the Project traffic analysis.

## PROPOSED PROJECT

Exhibit 1 shows the preliminary land use plan. It is our understanding that the Project is to consist of the following:

- 802 Single Family Detached dwelling units
- 3,491 Multifamily (Low-Rise) Residential units
- 115,809 square feet of Commercial Retail use
- 135,111 square feet of General Office use
- 55.98 acres of Parkland use

The Project is proposing to develop in two phases with the first phase consisting of the development of up to 256 Single Family Detached residential dwelling units with 768 Multifamily (Low-Rise) Residential dwelling units and 19.6 acres of Parkland use with an anticipated Opening Year of 2029. The proposed Project Buildout is anticipated in 2033. For purposes of the TA, the mix of uses for each planning area is summarized in Table 1. It should be noted that the Commercial Retail square footage within the Mixed-Use areas of the Project would be evenly divided in thirds between Strip Retail Plaza, Fast-Food Restaurant Without Drive-Through Window, and Fast-Food Restaurant With Drive-Through Window use. Similarly, Office square footage within the Mixed-Use areas assumes up to 10,000 square feet of Medical Office use in each Planning Area (PA). Access to the proposed Project would be provided to the surrounding roadways of Campus Avenue, Edison Avenue, Bon View Avenue, Cucamonga Avenue, Grove Avenue, Parco Avenue, and Walker Avenue.

**EXHIBIT 1: PRELIMINARY LAND USE PLAN & PHASING**

**TABLE 1: SUMMARY OF PROPOSED LAND USES**

| PA | Description | Land Use | Quantity | Unit[1] |
|---|---|---|---|---|
| 1 | Medium Density Residential (11.1-25.0 DU/Acre) | Single Family Detached | 88 | DU |
| | | Multifamily (Low-Rise) Residential | 262 | DU |
| 2 | Medium Density Residential (11.1-25.0 DU/Acre) | Single Family Detached | 86 | DU |
| | | Multifamily (Low-Rise) Residential | 257 | DU |
| 3 | Medium Density Residential (11.1-25.0 DU/Acre) | Single Family Detached | 42 | DU |
| | | Multifamily (Low-Rise) Residential | 127 | DU |
| 4 | Mixed-Use | Multifamily (Low-Rise) Residential | 175 | DU |
| | | Retail[2] | 18,635 | SF |
| | | General Office[3] | 21,741 | SF |
| 5 | Mixed-Use | Multifamily (Low-Rise) Residential | 182 | DU |
| | | Retail[2] | 19,367 | SF |
| | | General Office[3] | 22,595 | SF |
| 6 | Medium Density Residential (11.1-25.0 DU/Acre) | Single Family Detached | 40 | DU |
| | | Multifamily (Low-Rise) Residential | 121 | DU |
| 7 | Medium Density Residential (11.1-25.0 DU/Acre) | Single Family Detached | 130 | DU |
| | | Multifamily (Low-Rise) Residential | 391 | DU |
| 8 | Medium Density Residential (11.1-25.0 DU/Acre) | Single Family Detached | 133 | DU |
| | | Multifamily (Low-Rise) Residential | 399 | DU |
| 9 | Medium Density Residential (11.1-25.0 DU/Acre) | Single Family Detached | 67 | DU |
| | | Multifamily (Low-Rise) Residential | 201 | DU |
| 10 | Mixed-Use | Multifamily (Low-Rise) Residential | 345 | DU |
| | | Retail[2] | 36,852 | SF |
| | | General Office[3] | 42,994 | SF |
| 11 | Mixed-Use | Multifamily (Low-Rise) Residential | 384 | DU |
| | | Retail[2] | 40,955 | SF |
| | | General Office[3] | 47,781 | SF |
| 12 | Medium Density Residential (11.1-25.0 DU/Acre) | Single Family Detached | 85 | DU |
| | | Multifamily (Low-Rise) Residential | 255 | DU |
| 13 | Medium Density Residential (11.1-25.0 DU/Acre) | Single Family Detached | 131 | DU |
| | | Multifamily (Low-Rise) Residential | 392 | DU |
| 14 | Open Space/Parkland | Active Park | 13.33 | Acres |
| 15 | Open Space/Parkland | Active Park | 13.11 | Acres |
| 16 | Open Space/Parkland | Public Park | 9.9 | Acres |
| 17 | Open Space/Parkland | Public Park | 6.2 | Acres |
| 18 | Open Space/Parkland | Active Park | 13.44 | Acres |

[1] DU = dwelling unit; TSF = thousand square feet, AC = acres

[2] Square footage to be divided evenly between strip retail plaza and fast-food restaurant without and with drive-through window uses.

[3] Square footage to be divided evenly between general office and medical office uses.

## TRIP GENERATION

Trip generation represents the amount of traffic, which is both attracted to, and produced by, a development. Determining traffic generation for a specific project is therefore based upon forecasting the amount of traffic that is expected to be both attracted to and produced by the specific land uses being proposed for a given development. The proposed Project trip generation will be based upon information collected by the Institute of Transportation Engineers (ITE) as provided in their latest Trip Generation Manual (11th Edition, 2021) for the proposed uses. Table 2 summarizes the ITE trip generation rates.

**TABLE 2: TRIP GENERATION RATES**

| Land Use[1] | Units[2] | ITE LU Code | AM Peak Hour In | AM Peak Hour Out | AM Peak Hour Total | PM Peak Hour In | PM Peak Hour Out | PM Peak Hour Total | Daily |
|---|---|---|---|---|---|---|---|---|---|
| Single Family Detached Residential | DU | 210 | 0.18 | 0.52 | 0.70 | 0.59 | 0.35 | 0.94 | 9.43 |
| Multifamily (Low-Rise) Residential | DU | 220 | 0.10 | 0.30 | 0.40 | 0.32 | 0.19 | 0.51 | 6.74 |
| Public Park | Acres | 411 | 0.01 | 0.01 | 0.02 | 0.06 | 0.05 | 0.11 | 0.78 |
| Active Park (With Ball Fields) | Acres | --[3] | 1.00 | 1.00 | 2.00 | 2.00 | 2.00 | 4.00 | 50.00 |
| General Office (Average Rates) | TSF | 710 | 1.34 | 0.18 | 1.52 | 0.24 | 1.20 | 1.44 | 10.84 |
| Medical Office | TSF | 720 | 2.45 | 0.65 | 3.10 | 1.18 | 2.75 | 3.93 | 36.00 |
| Strip Retail Plaza (<40,000 SF) | TSF | 822 | 1.42 | 0.94 | 2.36 | 3.30 | 3.29 | 6.59 | 54.45 |
| Fast-Food Restaurant Without Drive-Thru | TSF | 933 | 25.04 | 18.14 | 43.18 | 16.61 | 16.60 | 33.21 | 450.49 |
| Fast-Food Restaurant With Drive-Thru | TSF | 934 | 22.75 | 21.86 | 44.61 | 17.18 | 15.85 | 33.03 | 467.48 |

[1] Trip Generation Source: Institute of Transportation Engineers (ITE), Trip Generation Manual, 11th Edition (2021).

[2] DU = dwelling units; TSF = thousand square feet

[3] Trip Generation Source: San Diego Municipal Code Land Development Code Trip Generation Manual, May 2003.

Internal capture is a percentage reduction that can be applied to the trip generation estimates for individual land uses to account for trips internal to the site (trips that travel between uses without leaving the site). In other words, trips may be made between the retail, office, and residential uses proposed on-site which can be made either by walking or using internal roadways without using external streets. The internal capture is based on the National Cooperative Highway Research Program's (NCHRP Report 684) internal capture trip capture estimation tool. These internal capture worksheets are attached to this scoping agreement (see Attachment A).

Pass-by trip reductions have been applied to the proposed Project uses consistent with the allowable values per the ITE Trip Generation Manual (11th Edition, 2021). Pass-by trips represent traffic that is already on the roadway today that would make an intermediate stop at the site before continuing on to their ultimate destination.

As shown in Table 3, the proposed Project is anticipated to generate a net total of 44,716 two-way trips per day with 3,462 AM peak hour trips and 3,507 PM peak hour trips at Project Buildout.

**TABLE 3: PROJECT TRIP GENERATION SUMMARY**

| | | | AM Peak Hour | | | PM Peak Hour | | | |
|---|---|---|---|---|---|---|---|---|---|
| Land Use | Quantity | Units[1] | In | Out | Total | In | Out | Total | Daily |
| Project Phase 1 (2029): | | | | | | | | | |
| PA 6, 12 & 13: Single Family Detached | 256 | DU | 47 | 133 | 180 | 152 | 89 | 241 | 2,416 |
| PA 6, 12 & 13: Multifamily (Low-Rise) Residential | 768 | DU | 74 | 233 | 307 | 247 | 145 | 392 | 5,176 |

| PA 1 & 7: Multifamily (Low-Rise) Residential | 653 | DU | 63 | 199 | 262 | 210 | 123 | 333 | 4,402 |
| PA 14: Active Park | 13.33 | Acres | 13 | 13 | 26 | 27 | 27 | 54 | 668 |
| Internal Capture Reduction (8%) | | | -29 | -311 | -340 | -264 | -234 | -498 | -5,400 |
| **Total Project Trips** | | | **1,493** | **1,969** | **3,462** | **2,024** | **1,483** | **3,507** | **44,716** |

[1] DU = dwelling units; TSF = thousand square feet

## TRIP DISTRIBUTION

The Project trip distribution represents the directional orientation of traffic to and from the Project site. Trip distribution is the process of identifying the probable destinations, directions or traffic routes that will be utilized by Project traffic. The potential interaction between the planned land uses and surrounding regional access routes are considered, to identify the route where the Project traffic would distribute. The proposed Project trip distributions are shown for near-term and long-range traffic conditions (see Exhibits 2 and 3). Long-range trip distribution patterns include future planned roadways as contemplated by The Ontario Plan (TOP).

## EXHIBIT 2: PROJECT (NEAR-TERM) TRIP DISTRIBUTION

**LEGEND:**

10 = *Percent To/From Project*

→ = *Trip Distribution*

## EXHIBIT 3: PROJECT (2050) TRIP DISTRIBUTION

**LEGEND:**

10 = *Percent To/From Project*

→ = *Trip Distribution*

## PROPOSED ANALYSIS SCENARIOS

The following analysis scenarios are proposed to be evaluated in the Traffic Study:

1. Existing (2024)
2. Existing plus Project (E+P) – Phase 1
3. E+P (Project Buildout)
4. Opening Year Cumulative (2033) Without Project
5. Opening Year Cumulative (2033) With Project (Project Buildout only)
6. Horizon Year (2050) Without Project
7. Horizon Year (2050) With Project

All study area intersections will be evaluated using the Highway Capacity Manual (HCM) 7th Edition analysis methodology. Horizon Year (2050) traffic forecasts will be derived using the SBTAM Traffic Model and near-term cumulative traffic volumes will be interpolated between Existing and Horizon Year traffic conditions, with cumulative projects being added as applicable for the Opening Year Cumulative traffic conditions.

## INTERSECTION ANALYSIS LOCATIONS

Exhibit 4 depicts the recommended intersection analysis locations, based upon the Project trip generation and trip distribution patterns included as part of this letter.

| # | Intersection | # | Intersection |
|---|---|---|---|
| 1 | Euclid Av. (SR-83) & SR-60 WB Ramps | 20 | Grove Av. & Riverside Dr. |
| 2 | Euclid Av. (SR-83) & SR-60 EB Ramps | 21 | Grove Av. & Chino Av. |
| 3 | Euclid Av. (SR-83) & Walnut St. | 22 | Grove Av. & Schaefer Av. |
| 4 | Euclid Av. (SR-83) & Riverside Dr. | 23 | Grove Av. & Edison Av. |
| 5 | Euclid Av. (SR-83) & Chino Av. | 24 | Parco Av. & Edison Av. |
| 6 | Euclid Av. (SR-83) & Schafer Av. | 25 | Walker Av. & Edison Av. |
| 7 | Euclid Av. (SR-83) & Edison Av. | 26 | Archibald Av. & SR-60 WB Ramps |
| 8 | Euclid Av. (SR-83) & Eucalyptus Av. | 27 | Archibald Av. & SR-60 EB Ramps |
| 9 | Euclid Av. (SR-83) & Merrill Av. | 28 | Archibald Av. & Riverside Dr. |
| 10 | Euclid Av. (SR-83) & Kimball Av. | 29 | Archibald Av. & Chino Av. |
| 11 | Euclid Av. (SR-83) & Pine Av. | 30 | Archibald Av. & Schaefer Av. |
| 12 | SR-71 NB Ramps & Euclid Av. (SR-83) | 31 | Archibald Av. & Edison Av./Ontario Ranch Rd. |
| 13 | SR-71 SB Off-Ramp & Euclid Av. (SR-83) | 32 | Archibald Av. & Merrill Av. |
| 14 | Campus Av. & Edison Av. | 33 | Archibald Av. & Limonite Av. |
| 15 | Bon View Av. & Edison Av. | 34 | Turner Av. & Ontario Ranch Rd. |
| 16 | Cucamonga Av. & Edison Av. | 35 | Haven Av. & Ontario Ranch Rd. |
| 17 | Grove Av. & SR-60 WB Ramps | 36 | Hamner Av. & Ontario Ranch Rd. |
| 18 | Grove Av. & SR-60 EB Ramps | 37 | I-15 SB Ramps & Ontario Ranch Rd. |
| 19 | Grove Av. & Walnut St. | 38 | I-15 NB Ramps & Ontario Ranch Rd. |

## EXHIBIT 4: INTERSECTION ANALYSIS LOCATIONS

**LEGEND:**

*= Existing Intersection Analysis Location*

*= Future Intersection Analysis Location*

## ROADWAY SEGMENT

The roadway segments along Edison Avenue will be evaluated between the study area intersections between Euclid Avenue (SR-83) and Campus Avenue.

## EXISTING COUNT DATA

We are proposing to conduct new traffic counts for the study area intersections and will not apply any further adjustments in establishing the baseline as traffic counts would reflect the current conditions. However, traffic counts will need to be conducted once local schools are back in session for the 2023-2024 school year (after August 19, 2024). There is also construction activity and roadway closures in the area, as such, it is requested the City provide input on whether historic counts be utilized for certain intersections or corridors.

## AMBIENT GROWTH

Near-term cumulative traffic forecasts will be based upon interpolation between Existing and Horizon Year traffic forecasts. However, if applicable, individual cumulative projects will be manually accounted for based on their location and contribution to study area intersections.

## TRAFFIC SIGNAL WARRANTS

Traffic signal warrant analysis will be conducted for all unsignalized full access driveways/intersections following the guidance of the California Manual on Uniform Control Devices (CA MUTCD).

## OPEN ITEMS – CUMULATIVE DEVELOPMENT PROJECTS

It is requested that the City of Ontario provide a current list of cumulative development projects for inclusion in our traffic study. A preliminary list of cumulative development projects is provided in Table 4 and graphically shown in Exhibit 5.

## SPECIAL ISSUES

The Specific Plan proposes to alter the City's General Plan Circulation by eliminating the extension of Cucamonga Avenue and Parco/Comet Avenue south of Edison Avenue. Therefore, the long-range analysis will also evaluate the potential changes associated with the proposed circulation changes. Horizon Year Without Project will evaluate the network as contemplated by the General Plan and Horizon Year With Project conditions will account for the elimination of the aforementioned segments.

The City has completed their Edison Avenue/Ontario Ranch Road Widening Feasibility Study in 2023 and determined that 4-lanes are required along Edison Avenue within the Ontario Ranch area (2-lanes in each direction of travel). The Project Traffic Study will also evaluate the applicable roadway segments of Edison Avenue between Euclid Avenue (SR-83) and Campus Avenue in order to provide an analysis of the proposed 4-lane segment. It is anticipated the Project will be

responsible for the construction of any additional lanes along Edison Avenue needed between Euclid Avenue (SR-83) and Campus Avenue.

## OPEN ITEMS – SIGNAL TIMING

It is requested that the City provide traffic signal timing for any City controlled intersections that we should take into consideration in our operations analysis. Applicable signal timing for Caltrans facilities will be obtained from District 8.

If you have any questions or comments, I can be reached at cso@urbanxroads.com.
